Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

VISTA METALS CORP. (Continued) **1000395229**

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
CEDRI is a web application used by EPA programs and various stakeholders to manage environmental data transmitted to EPA in order to meet EPA's reporting requirements.
THE ELECTRONIC GREENHOUSE GAS REPORTING TOOL (E-GGRT) IS ACCESSIBLE THROUGH AN EPA WEB PAGE AND USED TO SUBMIT ANNUAL REPORTS IN SUPPORT OF THE EPA RULE FOR MANDATORY REPORTING OF GREENHOUSE GASES (GHG) FROM LARGE GHG EMISSIONS SOURCES. IMPLEMENTATION OF 40 CFR PART 98 IS REFERRED TO AS THE GREENHOUSE GAS REPORTING PROGRAM (GHGRP). THIS COMPREHENSIVE, NATIONWIDE EMISSIONS DATA WILL PROVIDE A BETTER UNDERSTANDING OF THE SOURCES OF GHGS AND WILL GUIDE DEVELOPMENT OF THE POLICIES AND PROGRAMS TO REDUCE EMISSIONS. THE PUBLICALLY AVAILABLE DATA WILL ALLOW REPORTERS TO TRACK THEIR OWN EMISSIONS, COMPARE THEM TO SIMILAR FACILITIES, AND AID IN IDENTIFYING COST EFFECTIVE OPPORTUNITIES TO REDUCE EMISSIONS IN THE FUTURE.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will

VISTA METALS CORP. (Continued) **1000395229**

completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).
ALLOWS PERMITTING AUTHORITIES TO SUBMIT NEW SOURCE REVIEW (NSR) AND TITLE V PERMIT ACTIONS TO EPA FOR REVIEW.
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-28-2020
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: An inspection with Cesar Castaneda was conducted by regional board staff, Keith Elliott, Maria Marquez and Reyna Mendoza. The SWPPP was available onsite. The last BMP monthly inspection was dated 1/24/20. Housekeeping appeared to be in good condition. The site sampling point was located at the storage area lot north of Whittram Avenue. The latest discharge from this location was on January 17, 2019. Sampling results identified elevated levels of Aluminum. The facility south of Whittram has an infiltration system that reduces the likelihood for the facility to have discharge.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/22/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2023

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region’s active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/16/2022

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

USGS TOPOGRAPHIC MAP

Target Property Map:	12015973 GUASTI, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

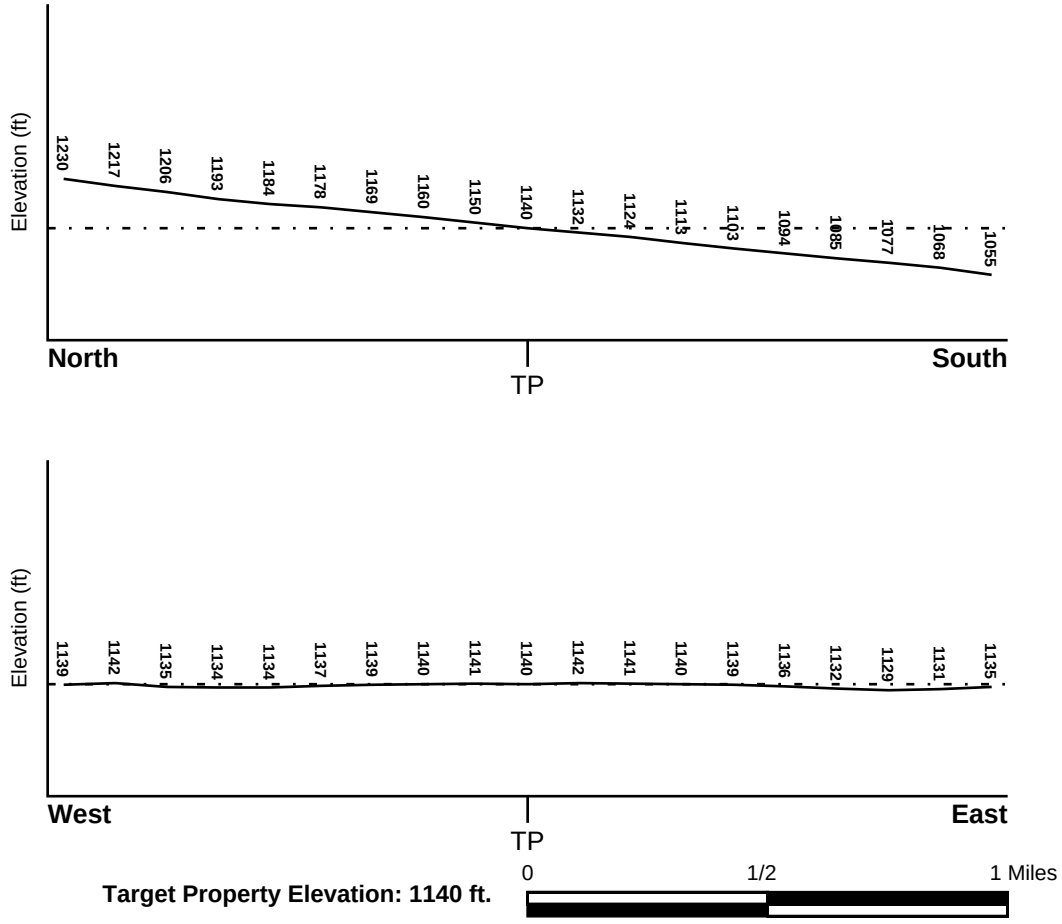
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06071C8635J	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C8633H	FEMA FIRM Flood data
06071C8634J	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
GUASTI	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

THE UNDERSIGNED GRANTOR DECLARES:
The document is exempt from the $75 fee per California Government Code Section 27388.1 because the document is a transfer of real property subject to the imposition of documentary transfer tax. California Government Code Section 27388.1(a)(2).

GRANT DEED

FOR VALUABLE CONSIDERATION, receipt of which is hereby acknowledged,

TAMCO, a California corporation ("**Grantor**"),

hereby GRANTS to

BTC III ARROW ROUTE CC LP, a Delaware limited partnership ("**Grantee**"),

that certain real property located in the City of Rancho Cucamonga, County of San Bernardino, State of California, more particularly described in Exhibit "A" attached hereto and incorporated herein by reference (the "**Land**").

Grantor reserves the water rights associated with the Land and more particularly described on Schedule "1" attached hereto.

This Grant Deed is and made and delivered, and title to the aforesaid property is conveyed, subject to those items set forth on the attached Exhibit "B".

Executed as of this 21 day of December, 2021.
Effective Date: The date this Grant Deed is recorded in the Official Records of San Bernardino County.

GRANTOR:

TAMCO,
a California corporation

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF RANCHO CUCAMONGA, IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

PARCEL A:

PARCEL 3 OF PARCEL MAP NO. 7847, IN THE CITY OF RANCHO CUCAMONGA, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER PLAT RECORDED IN BOOK 82, PAGES 48 THROUGH 51, INCLUSIVE, OF PARCEL MAPS, RECORDS OF SAID COUNTY.

APN: 0229-131-19-0-000.

PARCEL B:

PARCEL 2 OF PARCEL MAP NO. 2421, IN THE CITY OF RANCHO CUCAMONGA, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 22, PAGE 20 OF PARCEL MAPS, RECORDS OF SAN BERNARDINO COUNTY.

APN: 0229-121-33-0-000.

PARCEL C:

THAT PORTION OF THE SOUTHWEST 1/4 OF SECTION 8, TOWNSHIP 1 SOUTH, RANGE 6 WEST, SAN BERNARDINO BASE AND MERIDIAN, IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, ACCORDING TO THE OFFICIAL PLAT OF SAID LAND ON FILE IN THE DISTRICT LAND OFFICE, DESCRIBED AS PARCEL 4 IN DEED TO AMERICAN PIPE AND CONSTRUCTION CO., A CORPORATION, RECORDED SEPTEMBER 18, 1968, IN BOOK 7095, PAGE 764, OFFICIAL RECORDS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY LYING WESTERLY OF A LINE, PARALLEL WITH AND DISTANT EASTERLY, 230.00 FEET, MEASURED AT RIGHT ANGLES FROM THE FOLLOWING DESCRIBED SURVEYED REFERENCED LINE:

BEGINNING AT A POINT ON THE NORTHERLY LINE OF SAID SOUTHWEST 1/4, SAID POINT BEING NORTH 89° 56' 18" WEST 1152.25 FEET, MEASURED ALONG SAID NORTHERLY LINE FROM A FOUND COUNTY SURVEYOR'S MONUMENT SET AT THE NORTHEAST CORNER OF SAID SOUTHWEST 1/4, SAID POINT ALSO BEING SOUTH 89° 56' 18" EAST 1499.15 FEET, MEASURED ALONG SAID NORTHERLY LINE

FROM A FOUND COUNTY SURVEYOR'S MONUMENT SET AT THE WEST 1/4 CORNER OF SAID SECTION 8; THENCE SOUTH 1° 12' 19" WEST 2646.78 FEET TO A POINT IN THE SOUTHERLY LINE OF SAID SECTION, SAID POINT BEING NORTH 89° 59' 30" EAST 1452.58 FEET, MEASURED ALONG SAID SOUTHERLY LINE FROM A FOUND COUNTY SURVEYOR'S MONUMENT SET AT THE SOUTHWEST CORNER OF SAID SECTION 8.

EXCEPTING THEREFROM 1/2 OF ALL OIL, GAS AND OTHER HYDROCARBON SUBSTANCES AND MINERALS IN AND UNDER OR THAT MAY BE PRODUCED FROM A DEPTH BELOW 500 FEET BELOW THE SURFACE OF ALL OF SAID LAND, WITHOUT RIGHT OF ENTRY UPON THE SURFACE OF ANY OF SAID LAND FOR THE PURPOSE OF MINING, DRILLING, EXPLORING OR EXTRACTING SUCH OIL, GAS AND OTHER HYDROCARBON SUBSTANCES, OR MINERALS, OR OTHER USE OF OR RIGHTS IN OR TO ANY PORTION OF THE SURFACE OF SAID LAND TO A DEPTH OF 500 FEET BELOW THE SURFACE THEREOF, BUT WITH THE RIGHT TO DRILL INTO, LOCATE WELLS AND PRODUCE OIL, GAS AND OTHER HYDROCARBON SUBSTANCES OR MINERALS FROM ANY PORTION OF SAID LAND WHICH LIES BELOW 500 FEET FROM THE SURFACE THEREOF, TOGETHER WITH THE RIGHT TO EXPLORE FOR, DRILL AND EXTRACT OIL, GAS OR OTHER HYDROCARBON SUBSTANCES OR MINERAL FROM LANDS OR PREMISES OTHER THAN THE LANDS ABOVE DESCRIBED BY MEANS OF DIRECTIONAL DRILLING OR MINING THROUGH SAID LANDS FROM A WELL SITE, DRILL SITE OR TUNNEL SITE SITUATED UPON LANDS OR PREMISES OTHER THAN THE LANDS ABOVE DESCRIBED, AS RESERVED IN DEED RECORDED MAY 5, 1955, IN BOOK 3637, PAGE 135, OFFICIAL RECORDS.

ALSO EXCEPTING THEREFROM ALL URANIUM, THORIUM AND OTHER FISSIONABLE MATERIALS, ALL OIL, GAS, PETROLEUM, ASPHALTUM, AND OTHER HYDROCARBON SUBSTANCES AND OTHER MINERALS AND MINERAL ORES OF EVERY KIND AND CHARACTER, WHETHER SIMILAR TO THESE HEREIN SPECIFIED OR NOT, AS RESERVED IN DEED RECORDED DECEMBER 19, 1974, IN BOOK 8580, PAGE 21, OFFICIAL RECORDS.

APN: 0229-121-34-0-000.

(End of Legal Description)

EXHIBIT "B"
TO GRANT DEED

PERMITTED EXCEPTIONS

1. Property taxes, including any personal property taxes and any assessments collected with taxes are as follows:
Code Area: 015-080
Tax Identification Nos.: 0229-131-19, 0229-121-33, and 0229-121-34
Fiscal Year: 2021-2022

2. An assessment by the improvement district shown below:
Assessment (or Bond) No: 1915 ACT
Series: AD #85-PD
District: Rancho Cucamonga
For: Rancho Asmt Dist 85-PD
Bond issued: April 27, 1993
Affects: Parcels A, B and C

3. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to the Effective Date of this Grant Deed.

4. The herein described property lies within the boundaries of a Mello-Roos Community Facilities District (CFD) as follows:
CFD No: Community Facilities District No. 85-1
For: To pay for certain public capital facilities, including the payment of principal and interest on bonds
Disclosed by: Notice of Special Tax Lien
Recording Date: March 17, 1987
Recording No.: 1987-86336, Official Records
Affects: Parcels A and B

5. Matters contained in that certain document:
Entitled: Notice of Assessment
Executed by: City Clerk, City of Rancho Cucamonga
Recording Date: April 27, 1993
Recording No: 1993-179130, Official Records

6. Water rights, claims or title to water, whether or not disclosed by the public records.

7. Reservations contained in the Patent:
From: The United States of America
Recording No: Book C, Page 373, of Patents

8. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Southern California Edison Company
Purpose: Pole lines and conduits
Recording Date: January 29, 1957
Recording No: Book 4142, Page 246, Official Records
Affects: Parcel A

9. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: General Telephone Company
Purpose: Either or both pole lines and conduits
Recording Date: February 4, 1957
Recording No: Book 4147, Page 593, Official Records
Affects: Parcel A

10. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Cucamonga County Water District
Purpose: Ingress and egress
Recording Date: September 24, 1970
Recording No: 539, Book 7522, Page 738, Official Records

11. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Chino Basin Municipal Water District
Purpose: Ingress and egress
Recording Date: October 19, 1972
Recording No: Book 8044, Page 982, Official Records
Affects: Parcels B and C

12. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Ameron Inc.
Purpose: Railroad spur track
Recording Date: December 19, 1974
Recording No: Book 8580, Page 19, Official Records
Affects: Parcels B and C

13. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Southern California Edison Company, a corporation
Purpose: Public utilities
Recording Date: March 15, 1976
Recording No: Book 8883, Page 431, Official Records
Affects: Parcel B

14. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Southern California Edison Company
Purpose: Underground conduits
Recording Date: September 27, 1976
Recording No: 689, Book 9020, Page 988, Official Records
Affects: Parcel A

15. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Southern California Edison Company, a corporation
Purpose: Public utilities
Recording Date: September 27, 1976
Recording No: Book 9020, Page 990, Official Records

Matters contained in that certain document
Entitled: Consent to Grant of Easement
Recording Date: September 16, 1977
Recording No: Book 9264, Page 1342, Official Records

27. Matters contained in that certain document
Entitled: Easement Agreement
Recording Date: November 05, 2018
Recording No: 2018-402853, Official Records
Affects: Parcel A

28. Any rights, interests, or claims which may exist or arise by reason of the following matters disclosed by the following survey:
ALTA Survey By: Thienes Engineering
Dated: 10/29/2021
Job No.: 4021

a. An encroachment of rip-rap into an easement for street right of way purposes for Arrow Highway at the northwest corner of the property. Said easement recorded as instrument no. 2018-35390 of official records (item 25).
b. An encroachment of a guy anchor onto the property from a power pole located in the street right of way purposes for Arrow Highway, to undisclosed amounts.
c. An 8" sewer line crosses the south boundary of the property.
d. Railroad tracks cross the south boundary of the property.
e. An encroachment of a building into the 15' parking setback and the 25' building setback along the south boundary of the property.
f. An encroachment of a building over a portion of an easement for electric utility purposes. Said easement recorded in book 8883, page 431 of official records (item 13).

g. An encroachment of 2 buildings over an easement for telephone utility purposes. Said easement recorded in book 4147, page 593 of official records (item 9).
h. Utility structures located over various portions of the property not residing in apparent easements of record.

SCHEDULE "1"
TO GRANT DEED

RESERVED WATER RIGHTS

Grantor (as a successor-in-interest to a portion of the overlying non-agricultural water rights formerly held by Ameron), holds rights to produce groundwater in the Chino Basin as were adjudicated by the Superior Court for the County of San Bernardino in *Chino Basin Municipal Water District v City of Chino, et al.*, Case No. RCV 51010 (formerly Case No. 164327), which resulted in a judgment signed on January 27, 1978, as subsequently amended and restated (the "Water Rights Judgment").

Grantor's reserved water rights include the following water rights in the Chino Basin, as shown by Watermaster's latest Assessment Package approved on November 19, 2020 for Fiscal Year ("FY") 2020/2021 (Production Year 2019/2020):

- 42.6 acre-feet ("AF") of Safe Yield Rights. The Safe Yield Rights represent Grantor's individual share of 7,366 AF/year of the Safe Yield of the Chino Basin allocated to the Overlying (Non-Agricultural) Pool by the Water Rights Judgment.

- 81.0 AF Annual Production Right for FY 2020/2021. The Annual Production Right represents the total amount of groundwater that TAMCO may produce from the Chino Basin during a particular year (July 1 through June 30) without drawing upon Grantor's Local Storage Account (defined below) or incurring additional Watermaster assessments for replenishment water.

- 235.3 AF Local Storage Account. The Local Storage Account represents water-in-storage held by Grantor pursuant to a Local Storage Agreement with Watermaster, based upon Watermaster's accounting for accumulations of past unused Annual Production Right and other storage credits and losses.

THE UNDERSIGNED GRANTOR DECLARES:
DOCUMENTARY TRANSFER TAX is **$66,000.00** ; CITY TRANSFER TAX is _____.

[X] Computed on full value of property conveyed, or
[ ] Computed on full value less value of liens and encumbrances remaining at time of sale.
[ ] Unincorporated Area; [X] City of Rancho Cucamonga.

THE UNDERSIGNED GRANTOR DECLARES:
The document is exempt from the $75 fee per California Government Code Section 27388.1 because the document is a transfer of real property subject to the imposition of documentary transfer tax. California Government Code Section 27388.1(a)(2).

GRANT DEED

FOR VALUABLE CONSIDERATION, receipt of which is hereby acknowledged,

CMC STEEL FABRICATORS, INC., a Texas corporation ("**Grantor**"),

hereby GRANTS to

BTC III ARROW ROUTE CC LP, a Delaware limited partnership ("**Grantee**"),

that certain real property located in the City of Rancho Cucamonga, County of San Bernardino, State of California, more particularly described in Exhibit "A" attached hereto and incorporated herein by reference (the "**Land**").

Grantor reserves the water rights associated with the Land and more particularly described on Schedule "1" attached hereto.

This Grant Deed is and made and delivered, and title to the aforesaid property is conveyed, subject to those items set forth on the attached Exhibit "B".

Executed as of this 21 day of December, 2021.
Effective Date: The date this Grant Deed is recorded in the Official Records of San Bernardino County.

   Recording No: 1993-179130, Official Records

6. Water rights, claims or title to water, whether or not disclosed by the public records.

7. Reservations contained in the Patent:
From: The United States of America
Recording No: Book C, Page 373, of Patents

8. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Cucamonga County Water District
Purpose: Ingress and egress
Recording Date: September 24, 1970
Recording No: 539, Book 7522, Page 738, Official Records

9. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Ameron Inc.
Purpose: Railroad spur track
Recording Date: December 19, 1974
Recording No: Book 8580, Page 19, Official Records

10. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Southern California Edison Company, a corporation
Purpose: Road
Recording Date: March 15, 1976
Recording No: 271, Book 8883, Page 434, Official Records

The effect of a "Partial Quitclaim Deed"
Recording Date: June 13, 1988
Recording No.: 1988-186624, Official Records

11. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Southern California Gas Company
Purpose: Pipe lines
Recording Date: August 05, 1976
Recording No: 598, Book 8984, Page 836, Official Records

12. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Chino Basin Municipal Water District
Purpose: Underground pipe lines
Recording Date: August 19, 1977
Recording No: Book 9245, Page 1728, Official Records

13. The Land described herein is included within a project area of the Redevelopment Agency shown below, and that proceedings for the redevelopment of said project have been instituted under the Redevelopment Law (such redevelopment to proceed only after the adoption of the Redevelopment Plan) as disclosed by a document:
Redevelopment Agency: The Rancho Redevelopment Project Area
Recording Date: December 29, 1981
Recording No: 1981-280450, Official Records

14. Matters contained in that certain document:
Entitled: Resolution No. 82-193
Recording Date: July 26, 1982
Recording No: 1982-144960, Official Records

15. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Chino Basin Municipal Water District, its successors in interest and/or assigns
Purpose: Construction, maintain, repair, replace and operate underground pipelines or surface structures for the purpose of conveying wastewater, liquids or semi-liquids
Recording Date: March 08, 1984
Recording No: 1984-054208, Official Records

16. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Southern California Edison Company
Purpose: Public utilities
Recording Date: April 06, 1989
Recording No: 89-122200, Official Records

17. Matters contained in that certain document:
Entitled: Drainage Acceptance Agreement
Recording Date: April 11, 1989
Recording No: 89-128503, Official Records

18. Matters contained in that certain document:
Entitled: Drainage Acceptance Agreement for TAMCO
Recording Date: April 11, 1989
Recording No: 89-128504, Official Records

19. Any irregularities, reservations, easements or other matters in the proceedings occasioning the abandonment or vacation of the street/road shown below:
Name: Juneberry Drive
Recording Date: April 24, 1989
Recording No: 89-144726, Official Records

Easements, if any, for public utilities, pipelines or facilities installed in any portion of the vacated street or alley lying within the Land, together with the right of ingress and egress to repair, maintain, replace and remove the same.

20. The Land described herein is included within a project area of the Redevelopment Agency shown below, and that proceedings for the redevelopment of said project have been instituted under the Redevelopment Law (such redevelopment to proceed only after the adoption of the Redevelopment Plan) as disclosed by a document:
Redevelopment Agency: The Rancho Cucamonga Redevelopment Project Area
Recording Date: December 14, 2007
Recording No: 2007-0695659, Official Records

21. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Southern California Edison Company, a corporation, its successors and assigns
Purpose: Public utilities
Recording Date: June 30, 2010
Recording No: 2010-262500, Official Records

22. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:
In favor of: Southern California Edison Company, a corporation, its successors and assigns
Purpose: Public utilities
Recording Date: December 11, 2014
Recording No: 2014-473138, Official Records

23. Any rights, interests, or claims which may exist or arise by reason of the following matters disclosed by the following survey:
ALTA Survey By: Thienes Engineering
Dated: 10/29/2021
Job No.: 4021

    a. An encroachment of a guy anchor onto the property from a power pole located in the street right of way purposes for Arrow Highway, to undisclosed amounts.
    b. 7 monitoring wells located over various portions of the property.
    c. Industrial ventilation unit.
    d. Utility structures located over various portions of the property not residing in apparent easements of record.

SCHEDULE "1"
TO GRANT DEED

RESERVED WATER RIGHTS

Grantor (as a successor-in-interest to a portion of the overlying non-agricultural water rights formerly held by Ameron), holds rights to produce groundwater in the Chino Basin as were adjudicated by the Superior Court for the County of San Bernardino in *Chino Basin Municipal Water District v City of Chino, et al.*, Case No. RCV 51010 (formerly Case No. 164327), which resulted in a judgment signed on January 27, 1978, as subsequently amended and restated (the "Water Rights Judgment").

Grantor's reserved water rights include the following water rights in the Chino Basin, as shown by Watermaster's latest Assessment Package approved on November 19, 2020 for Fiscal Year ("FY") 2020/2021 (Production Year 2019/2020):

- 42.6 acre-feet ("AF") of Safe Yield Rights. The Safe Yield Rights represent Grantor's individual share of 7,366 AF/year of the Safe Yield of the Chino Basin allocated to the Overlying (Non-Agricultural) Pool by the Water Rights Judgment.

- 81.0 AF Annual Production Right for FY 2020/2021. The Annual Production Right represents the total amount of groundwater that TAMCO may produce from the Chino Basin during a particular year (July 1 through June 30) without drawing upon Grantor's Local Storage Account (defined below) or incurring additional Watermaster assessments for replenishment water.

- 235.3 AF Local Storage Account. The Local Storage Account represents water-in-storage held by Grantor pursuant to a Local Storage Agreement with Watermaster, based upon Watermaster's accounting for accumulations of past unused Annual Production Right and other storage credits and losses.

RIVERSIDE, CALIFORNIA 92507-2409

ATTENTION: KENNETH R. WILLIAMS, EXECUTIVE OFFICER

SUBJECT: LOCAL OVERSIGHT PROGRAM CASE CLOSURE SUMMARY(S)

Pursuant to requirements of the department's Local Oversight Program contract with the State Water Board, Please find enclosed the "Case Closure Summary(s)" for the following site(s) within your jurisdiction:

TAMCO
12459 Arrow Hwy.
Rancho Cucamonga, CA

As you are aware, conditions of the contract require a 30 day review period in which your agency may reject the recommended closure or request additional time. Therefore, without objection, the department will issue the standardized "Remedial Action Completion Certification" 35 days after the date of this correspondence.

If you have any questions, please call me at (909) 387-3041.

REMEDIATION OF LEAD CONTAMINATED SOIL AT SITE SOUTHWEST OF TAMCO IN ETIWANDA

Dear Mr. Robinson:

We have reviewed the final report for remediation of the lead contaminated soil in adjacent properties southwest of your facility. The report was prepared by Cleanup Technology (CUT) and describes their methods of excavation, treatment and removal of lead contaminated soil from the property. It was noted that CUT re-sampled after the initial excavation and having still found contamination, conducted further excavation and re-sampling until it was fully verifed that all contamination had been removed.

We are satisfied that the cleanup of lead contaminated soil at the site has been completed to concentrations below acceptable levels There will be no further action by this agency with regard to this matter.

We have enjoyed working with you and appreciate your diligence and cooperation in resolving this matter.

If you have any questons please call me or Dan Brown of my staff.

Sincerely,

Gary D. Stewart, Chief
Special Projects Section.

DTSC entered into a VCA with Kaiser Steel on December 22, 2000. DTSC reviewed a PEA for the then vacant 0.5-Acre property located at 12451 Arrow Route (Parcel 1 of Parcel Map 7 as recorded in BOOK 82 pages 48-51. The property was used to dispose of slag from steel recycling. An NFA was issued on December 20, 2021. BTC III Arrow Route CC LP submitted application on August 18, 2021 seeking agency oversight for the original parcel plus other parcels identified by San Bernardino County Assessor's Parcel Numbers 0229-121-34, 0229-1 33, 0229-131-19, and 0229-121-35 totaling 95 acres.

California 91739	)	
	)	

I. INTRODUCTION

1.1 Parties. The California Environmental Protection Agency, Department of Toxic Substances Control (DTSC) enters into this Voluntary Cleanup Agreement (Agreement) with Fontana Steel Inc., 12451 Arrow Route, Rancho Cucamonga, California 91739 (Proponent).

1.2 Site. The property which is the subject of this Agreement is located at 12451 Arrow Route, Rancho Cucamonga, San Bernadino County, California 91739. For the purposes of this Agreement, the Site is defined as three subgrade trenches which were used for disposal of baghouse dust generated at the adjacent steel mill. The Site consists of approximately one-half acre and is identified by the metes and bounds described in Exhibit C

and incorporated herein. A diagram of the Site and a location map are attached as Exhibit A and Exhibit B.

1.3 Jurisdiction. This Agreement is entered into by DTSC and Proponent pursuant to Health and Safety Code (H&SC) section 25355.5(a)(1)(C). This section authorizes DTSC to enter into an enforceable agreement with Proponents to oversee the characterization and cleanup of a Site.

1.4 Purpose. The purpose of this Agreement is for the Proponent to conduct a Preliminary Endangerment Assessment under the oversight of DTSC. DTSC will determine what additional work, if any, will be required to complete the investigation of the Site. If appropriate, DTSC will issue a " No Further Action" letter based upon the PEA. The purpose of this Agreement is also for DTSC to provide a mechanism to assure reimbursement from the Proponent for DTSC's oversight costs.

II. BACKGROUND

2.1 Ownership. The Site is owned by CMC Steel Fabricators Inc., dba Fontana Steel, located at Steel Mill Road, Box 911, Seguin, Texas 78156-0911.

2.2 Substances Found at the Site. Reports, containing the results of environmental media sampling conducted at the Site, indicate that the soil may be contaminated with hazardous substances, including the following metals: arsenic, cadmium,

chromium lead, and zinc.

2.3 Physical Description. For the purposes of this Agreement, the Site is defined as three subgrade trenches which were used for disposal of baghouse dust generated at the adjacent steel mill. The trenches are located approximately 300 feet east of the western property line and 100 feet north of the southern property line of the Fontana Steel property. The Fontana Steel property is surrounded by heavy industrial facilities and vacant land. The property is bounded to the north and west by Arrow Route and vacant land, to the south by TAMCO Steel and to the east by Ameron Concrete & Steel Pipe, and to the southeast by Industrial Wire Products. There are no houses, schools, or churches near the facility.

2.4 Site History. The Fontana Steel property was covered by vineyards until 1955 and was vacant until construction of the existing structures by Fontana Steel, Inc. in 1988. The property had been owned by Ameron, Inc., until 1988. Ameron, the parent company of TAMCO Steel, used the property in the 1970s for material storage and for the disposal of baghouse dust.

III. AGREEMENT

3.0 **IT IS HEREBY AGREED THAT** DTSC will provide review and oversight of the response activities conducted by the Proponent in accordance with the Scope of Work contained in Exhibit D. The

Proponent shall conduct the activities in the manner specified herein and in accordance with the schedule specified in Exhibit E. All work shall be performed consistent with H&SC section 25300 et seq., as amended; the National Contingency Plan (40 Code of Federal Regulations (CFR) Part 300), as amended; U.S. EPA and DTSC Superfund guidance documents regarding site investigation and remediation.

3.1 Scope of Work and DTSC Oversight. DTSC shall review and provide Proponent with written comments on all Proponent deliverables as described in Exhibit D (Scope of Work) and other documents applicable to the scope of the project. DTSC shall provide oversight of field activities, including sampling and remedial activities, as appropriate. DTSC's completion of activities described above shall constitute DTSC's complete performance under this Agreement.

3.2 Additional Activities. Additional activities may be conducted and DTSC oversight provided by amendment to this Agreement or Exhibits hereto in accordance with Paragraph 3.17. If DTSC expects additional oversight costs to be incurred related to these additional activities, it will provide an estimate of the additional oversight cost to the Proponent.

3.3 Agreement Managers. Ms. Nennet Alvarez is designated by DTSC as its Manager for this Agreement. Mr. Tom Kaney is

assigned by the Proponent as its Manager for this Agreement. Each Party to this Agreement shall provide at least ten (10) days advance written notice to the other of any change in its designated manager.

3.4 Notices and Submittals. All notices, documents and communications required to be given under this Agreement, unless otherwise specified herein, shall be sent to the respective parties at the following addresses in a manner that produces a record of the sending of the notice, document or communication such as certified mail, overnight delivery service, facsimile transmission or courier hand delivery service:

3.4.1 To DTSC:

Nennet Alvarez, Chief
Attn: Daniel Zogaib, Project Manager
Southern California Cleanup Operations
Cypress Office
Department of Toxic Substances Control
5796 Corporate Avenue
Cypress, California 90630

3.4.2 To the Proponent:

Mr. Tom Kaney
Fontana Steel, Inc..
12451 Arrow Route
Rancho Cucamonga
California 91739

3.5 DTSC Review and Approval. If DTSC determines that any

report, plan, schedule or other document submitted for approval pursuant to this Agreement fails to comply with this Agreement or fails to protect public health or safety or the environment, DTSC may (a) Return comments to the Proponent with recommended changes; or (b) Modify the document as deemed necessary and approve the document as modified.

3.6 Communications. All DTSC approvals and decisions made regarding submittals and notifications will be communicated to the Proponent in writing by DTSC's Agreement Manager or his/her designee. No informal advice, guidance, or suggestions or comments by DTSC regarding reports, plans, specifications, schedules or any other writings by the Proponent shall be construed to relieve the Proponent of the obligation to obtain such written approvals.

3.7 Endangerment During Implementation. In the event DTSC determines that any activity (whether or not pursued in compliance with this Agreement) may pose an imminent or substantial endangerment to the health and safety of people on the Site or in the surrounding area or to the environment, DTSC may order the Proponent to stop further implementation of this Agreement for such period of time as may be needed to abate the endangerment.

3.8 Payment. The Proponent agrees to pay (1) all costs

incurred by DTSC in association with preparation of this Agreement and for review of documents submitted prior to the effective date of the Agreement, and (2) all costs incurred by DTSC in providing oversight pursuant to this Agreement including review of the documents described in Exhibit D and associated documents, and in providing oversight of field activities. An estimate of DTSC's oversight costs is attached as Exhibit E. It is understood by the parties that Exhibit E is an estimate and cannot be relied upon as the final cost figure. DTSC will bill the Proponent quarterly. Proponent agrees to make payment within sixty (60) days of receipt of DTSC's billing. Such billings will reflect any amounts that have been advanced to DTSC by the Proponent.

3.8.1 In anticipation of services to be rendered, Proponent shall make an advance payment of $13,651 to DTSC. That payment shall be made no later than ten (10) days after this Agreement is fully executed. If the Proponent's advance payment does not cover all costs payable to DTSC under this paragraph, Proponent agrees to pay the additional costs within sixty (60) days of receipt of a bill from DTSC.

3.8.2 If any bill is not paid by the Proponent within sixty (60) days after it is sent by DTSC, the Proponent may be deemed to be in material default of this Agreement.

3.8.3 All payments made by the Proponent pursuant to this Agreement shall be by a cashier's or certified check made payable to the "Department of Toxic Substances Control", and bearing on its face the project code for the site (Calstars Site Code # 400885-11) and the docket number (Docket No. HSA-A 00/01-153) of this Agreement. Payments shall be sent to:

Department of Toxic Substances Control
Accounting/Cashier
400 P Street, 4th Floor
P.O. Box 806
Sacramento, California 95812-0806

A photocopy of the check shall be sent concurrently to DTSC's Agreement Manager.

3.8.4 If the advance payment exceeds DTSC's actual oversight costs, DTSC will provide an accounting for expenses and refund the difference within one hundred-twenty (120) days after termination of this Agreement in accordance with Paragraph 3.18. In no other case shall the Proponent be entitled to a refund from DTSC or to assert a claim against DTSC for any amount paid or expended under this Agreement.

3.9 Condition Precedent. It is expressly understood and agreed that DTSC's receipt of the advance payment described in Paragraph 3.8.1. is a condition precedent to DTSC's obligation to provide oversight, review and/or comment on documents.

3.10 Record Retention. DTSC shall retain all cost records associated with the work performed under this Agreement for such time periods as may be required by applicable state law. The Proponent may request to inspect all documents which support DTSC's cost determination in accordance with the Public Records Act, Government Code section 6250 et seq.

3.11 Project Coordinator. The work performed pursuant to this Agreement shall be under the direction and supervision of a qualified project coordinator, with expertise in hazardous substance site cleanup. The Proponent shall submit: a) the name and address of the project coordinator; and b) in order to demonstrate expertise in hazardous substance site cleanup, the resume of the coordinator. The Proponent shall promptly notify DTSC of any change in the identity of the Project Coordinator. All engineering and geological work shall be conducted in conformance with applicable state law including but not limited to Business and Professions Code sections 6735 and 7835.

3.12 Access. Proponent shall provide, and/or obtain access to the Site and offsite areas to which access is necessary to implement this Agreement. Such access shall be provided to DTSC's employees, contractors, and consultants at all reasonable times. Nothing in this paragraph is intended or shall be construed to limit in any way the right of entry or inspection

that DTSC or any other agency may otherwise have by operation of any law. DTSC and its authorized representatives shall have the authority to enter and move freely about all property at the Site at all reasonable times for purposes including, but not limited to: inspecting records, operating logs, sampling and analytic data, and contracts relating to this Site; reviewing the progress of the Proponent in carrying out the terms of this Agreement; conducting such tests as DTSC may deem necessary; and verifying the data submitted to DTSC by the Proponent.

3.13 Sampling, Data and Document Availability. When requested by DTSC, the Proponent shall make available to DTSC, and shall provide copies of, all data and information concerning contamination at the Site, including technical records and contractual documents, sampling and monitoring information and photographs and maps, whether or not such data and information was developed pursuant to this Agreement.

3.14 Notification of Field Activities. The Proponent shall inform DTSC at least seven (7) days in advance of all field activities pursuant to this Agreement and shall allow DTSC and its authorized representatives to take duplicates of any samples collected by the Proponent pursuant to this Agreement.

3.15 Notification of Environmental Condition. The Proponent shall notify DTSC's Agreement Manager immediately upon

learning of any condition posing an immediate threat to public health or safety or the environment. Within seven (7) days of the onset of such a condition, the Proponent shall furnish a report to DTSC, signed by the Proponent's Agreement Manager, setting forth the events which occurred and the measures taken in the response thereto.

3.16 Preservation of Documentation. The Proponent shall maintain a central repository of the data, reports, and other documents prepared pursuant to this Agreement. All such data, reports and other documents shall be preserved by the Proponent for a minimum of six (6) years after the conclusion of all activities carried out under this Agreement. If DTSC requests that some or all of these documents be preserved for a longer period of time, the Proponent shall either comply with that request, deliver the documents to DTSC, or permit DTSC to copy the documents prior to destruction. The Proponent shall notify DTSC in writing at least ninety (90) days prior to the expiration of the six-year minimum retention period before destroying any documents prepared pursuant to this Agreement. If any litigation, claim, negotiation, audit or other action involving the records has been started before the expiration of the six year period, the related records shall be retained until the completion and resolution of all issues arising therefrom or

until the end of the six-year period, which ever is later.

3.17 Amendments. This Agreement may be amended or modified solely upon written consent of all parties. Such amendments or modifications may be proposed by any party and shall be effective the third business day following the day the last party signing the amendment or modification sends its notification of signing to the other party. The parties may agree to a different effective date.

3.18 Termination for Convenience. Except as otherwise provided in this Paragraph, each party to this Agreement reserves the right unilaterally to terminate this Agreement for any reason. Termination may be accomplished by giving a thirty (30) day advance written notice of the election to terminate this Agreement to the other Party In the event that this Agreement is terminated under this Paragraph, the Proponent shall be responsible for DTSC costs through the effective date of termination.

3.19 Exhibits. All exhibits attached to this Agreement are incorporated herein by this reference.

3.20 Time Periods. Unless otherwise specified, time periods begin from the date this Agreement is fully executed, and "days" means calendar days. "Business days" means all calendar days that are not weekends or official State holidays.

3.21 Proponent Liabilities. Nothing in this Agreement shall constitute or be considered a satisfaction or release from liability for any condition or claim arising as a result of Proponent's past, current, or future operations. Nothing in this Agreement is intended or shall be construed to limit the rights of any of the parties with respect to claims arising out of or relating to the deposit or disposal at any other location of substances removed from the Site.

3.22 Government Liabilities. The State of California (State) shall not be liable for any injuries or damages to persons or property resulting from acts or omissions by the Proponent or by related parties in carrying out activities pursuant to this Agreement, nor shall the State of California be held as a party to any contract entered into by the Proponent or its agents in carrying out the activities pursuant to this Agreement.

3.23 Third Party Actions. In the event that the Proponent is a party to any suit or claim for damages or contribution relating to the Site to which DTSC is not a party, the Proponent shall notify DTSC in writing within ten (10) days after service of the complaint in the third-party action. Proponent shall pay all costs incurred by DTSC relating to such third-party actions, including but not limited to responding to subpoenas.

3.24 Reservation of Rights. DTSC and the Proponent reserve the following rights.

3.24.1 DTSC reserves its right to pursue cost recovery under the Comprehensive Environmental Response, Compensation and Liability act of 1980 (CERCLA), as amended, the California Health and Safety Code section 25360, and any other applicable section of the law.

3.24.2 Nothing in this Agreement is intended or shall be construed to limit or preclude DTSC from taking any action authorized by law or equity to protect public health and safety or the environment and recovering the costs thereof.

3.24.3 Nothing in this Agreement shall constitute or be construed as a waiver of the Proponent's rights, (including any covenant not to sue or release) with respect to any claim, cause of action, or demand in law or equity that the Proponent may have against any "person", as defined in Section 101(21) of CERCLA, or Health and Safety Code section 25319, that is not a signatory to this Agreement.

3.24.4 By entering into this Agreement, Proponent does not admit to any fact, fault or liability under any statute or regulation.

3.25 Compliance with Applicable Laws. Nothing in this Agreement shall relieve the Proponent from complying with all

applicable laws and regulations, and the Proponent shall conform all actions required by this Agreement with all applicable federal, state and local laws and regulations.

3.26 California Law. This Agreement shall be governed, performed and interpreted under the laws of the State of California.

3.27 Severability. If any portion of this Agreement is ultimately determined not to be enforceable, that portion will be severed from the Agreement and the severability shall not affect the enforceability of the remaining terms of the Agreement.

3.28 Parties Bound. This Agreement applies to and is binding, jointly and severally, upon each signatory and its officers, directors, agents, receivers, trustees, heirs, executors, administrators, successors, and assigns, and upon any successor agency of the State of California that may have responsibility for and jurisdiction over the subject matter of this Agreement. No change in the ownership or corporate or business status of any signatory, or of the facility or Site shall alter any signatory's responsibilities under this Agreement.

3.29 Effective Date. The effective date of this Agreement is the date when this Agreement is fully executed.

3.30 Representative Authority. Each undersigned

representative of the parties to this Agreement certifies that she or he is fully authorized to enter into the terms and conditions of this Agreement and to execute and legally bind the parties to this Agreement.

3.31 Counterparts. This Agreement may be executed and delivered in any number of counterparts, each of which when executed and delivered shall be deemed to be an original, but such counterparts shall together constitute one and the same document.

LEGAL DESCRIPTION

The following describes a portion of Parcel 1 of Parcel Map 7822 as recorded in Book 82, Pages 48-51, located in the office of the County Recorder of the County of San Bernadino, State of California

Beginning at the southwesterly corner of said Parcel 1; thence,
Along the Southerly line of Parcel 1 a bearing of S 89° 41' 15" E for a distance of 328.57 feet to the True Point of Beginning; thence,

N 01° 27' 40" E for a distance of 254.51 feet to the southeast corner of the existing steel building support; thence,
N 01° 27' 40" E for a distance of 49.99 feet; thence,
S 89° 41' 15" E for a distance of 300.00 feet; thence,
S 01° 27' 40" W for a distance of 304.50 feet, more or less, to the southerly property line of said Parcel 1; thence
Along said southerly property line N 89° 41' 15" W for a distance of 300.00 feet to the True Point of Beginning.

This description and accompanying Exhibit 'B' sketch were prepared by a licensed surveyor, Lester G. Everard on December 04, 2000

SCOPE OF WORK

EXHIBIT D

SCOPE OF WORK

The following Tasks will be completed as part of this Agreement:

TASK 1. Preliminary Endangerment Assessment (PEA).

Proponent shall conduct a PEA to determine whether a release or threatened release of hazardous substances exists at the Site, which poses a threat to human health or the environment. The PEA shall be conducted in accordance with the DTSC guidance manual for evaluating hazardous substance release sites, titled: "Preliminary Endangerment Assessment Guidance Manual," State of California, Environmental Protection Agency, Department of Toxic Substances Control (January 1994). Documents which may be required as part of the PEA are:

(a) PEA Workplan. This Workplan shall include a sampling plan designed to determine the type and general extent of contamination at the Site; a health and safety plan addressing health and safety issues and safe work practices; and a quality assurance/quality control plan to produce data of known quality.

(b) PEA Report. This report will document whether a release has occurred or threatened release exists, the threat the Site poses to human health and the environment, and whether further action is necessary.

1.0 Introduction

Fontana Steel, Inc. is submitting this Preliminary Endangerment Assessment (PEA) report to the California Environmental Protection Agency (Cal/EPA), Department of Toxic Substances Control (DTSC) for review and approval. The PEA was performed to assess potential environmental impacts associated with the historical disposal of electric arc furnace (EAF) dust at the Fontana Steel, Inc. facility, 12451 Arrow Route, Rancho Cucamonga, California (Figure 1). By definition, the PEA seeks to determine whether current or past waste management practices have resulted in the release of hazardous substances that pose a threat to public health or the environment.

The Fontana Steel facility is a rectangular, 14-acre property on the south side of Arrow Route, approximately 0.5 mile west of the intersection with Etiwanda Avenue. The property has been developed with buildings including a 70,000 square-foot fabrication shop, a 14,000 square-foot office building, and a 4,000 square-foot maintenance shop located west of the fabrication shop. Concrete flatwork surrounds most of the buildings, although the south half of the property is unpaved and covered with crushed rock/gravel. The facility is bounded by Arrow Route to the north and by other industrial facilities to the south, east, and west (notably Tamco Steel to the south, Ameron Concrete and Steel Pipe to the east, and Parallel Products to the west). The vacant land immediately north and across Arrow Route is currently for sale and zoned for commercial/industrial development.

This PEA report was prepared by IT Corporation (IT) in accordance with the Voluntary Cleanup Agreement ([VCA] Docket No. HAS-A 00/01-153; refer to Appendix A) between Fontana Steel, Inc. and the DTSC. In the VCA, the "site" was defined by survey as the approximately 300- by 300-foot area where EAF dust was buried in trenches by a previous property owner. For the purpose of this report, the term "site" typically refers to this surveyed area. The PEA incorporated information acquired during previous reviews of regulatory records and historical information, repeated site inspections, and the phased collection and laboratory analysis of environmental samples. It was prepared in accordance with the *PEA Guidance Manual* (DTSC, 1999), DTSC supplemental guidance (DTSC, 1992), U.S. Environmental Protection Agency (EPA) risk assessment guidance (EPA, 1992 and 1999), and IT's *Preliminary Endangerment Assessment Work Plan, Historic Electric Arc Furnace Dust Trenches, Fontana Steel, Inc., Rancho Cucamonga, California* (IT, February 2001).

The overall objectives of the PEA include the following:

- Evaluation of historical information for indications of the past use, storage, disposal, or release of hazardous wastes/substances, including the historical disposal of EAF dust in trenches.
- Through field sampling and analysis, determination of the presence and concentrations of chemicals of potential concern (COPCs) that may be present in soil at the site.
- Estimation of potential impacts to human health and/or the environment posed by COPCs at the site under the default residential exposure scenario as well as a commercial/industrial exposure scenario.

The information developed during the PEA and the human health evaluations contained herein should enable the DTSC to make an informed decision regarding potential environmental risks and hazards at the site. Based on the information generated during this PEA, Fontana Steel believes that a determination of "No Further Action" is warranted (refer to discussion in Section 11.2).

Consistent with DTSC guidance (DTSC, 1999), the body of the PEA report has been organized as follows:

Section 1.0 – Introduction

Section 2.0 – Site Description

Section 3.0 – Background

Section 4.0 – Hazardous Substance/Waste Management Information

Section 5.0 – Apparent Problem

Section 6.0 – Environmental Setting

Section 7.0 – Sampling Activities and Results

Section 8.0 – Human Health Screening Evaluation

Section 9.0 – Ecological Screening Evaluation

Section 10.0 – Community Profile

Section 11.0 – Conclusions and Recommendations

Section 12.0 - References

2.0 Site Description

The subject site is located at 12451 Arrow Route in the City of Rancho Cucamonga, California (Figure 1). This 14-acre, rectangular industrial property lies on the south side of Arrow Route, approximately 0.5 mile west of the intersection with Etiwanda Avenue. The site neighborhood is located in Township 1 South, Range 6 West, Section 8 as shown on the Guasti 7.5-minute quadrangle map (U.S. Geological Survey [USGS], 1966, photorevised 1981).

The facility has been developed with a 70,000-square-foot fabrication shop, a 14,000-square-foot office building, and a 4,000-square-foot maintenance shop. The site layout is shown on Figure 2. Fontana Steel presently uses the site for fabrication of steel rebar for highway and building construction. Fabrication steps include sorting, bending, shearing, welding, storage, and transport. None of the operations at the facility include wet chemical processing such as degreasing, painting, coating, or other chemical treating. The company maintains trucks, forklifts, and cranes in the aforementioned maintenance shop. The shop has an external wash rack that drains to a subgrade clarifier. An above-grade oil recovery system is used in conjunction with the clarifier to segregate and remove oily residues and sludge. The site has one 12,000-gallon double-walled fiberglass underground storage tank used for diesel fuel, and one 15,000-gallon aboveground propane tank. [Note: For the purpose of the PEA, these structures are not considered part of the "site." The information is provided for context only.]

Fontana Steel is surrounded by industrial manufacturing facilities to the east, northeast, south, and west, and by a vacant parcel slated for commercial/industrial development to the north. The land across Arrow Route includes a newly constructed warehouse building to the northwest, a vacant parcel directly to the north (currently for sale and zoned for commercial/industrial), and Air Liquide, a bulk gas distributor to the northeast. Ameron Concrete & Steel Pipe and Ameron Steel & Wire are located east and southeast of the Fontana Steel facility, while the land south of the site is occupied by the Tamco Steel mill. A narrow strip of vacant land separates the west boundary of the Fontana Steel facility from the neighboring Parallel Products plant. Parallel Products is engaged in the recycling of surplus or dated grain-derived liquids. The closest residential land use is the Victoria Woods Apartments complex, located approximately 0.5 miles east of the site at the northeast corner of Arrow Route and Etiwanda Avenue.

2.1 Site Identification

The following site identification information is presented as required by current PEA guidance:

Site Name:	Fontana Steel, Inc
Contact Person & Telephone Number:	Mr. Dave Otey Manager, Health and Safety (909) 899-9993
Site Address:	12451 Arrow Route Rancho Cucamonga, California 91739
Mailing Address:	Fontana Steel, Inc. P.O. Box 2219 Rancho Cucamonga, California 91739
Other Site Names:	NA
USEPA Identification Number:	CAL000120760
CalSites Database Number:	NA
Assessor's Parcel Number and Maps:	Parcel Number 1 of Parcel Map Number 7847 in the City of Rancho Cucamonga, County of San Bernardino, State of California, as per plat map recorded in Book 82 of Parcel Maps, Pages 48 to 51 inclusive of parcel maps, in the records of said County
Section, Township, Range, and Meridian:	Township 1 South, Range 6 West, Section 8, San Bernardino Base and Meridian
Land Use and Zoning:	Commercial/Industrial

2.2 Site Maps and Figures

The following figures describing the location and specific features of the site are provided herein:

- Figure 1 – Site Location Map
- Figure 2 – Plot Plan and Sample Locations
- Figure 3 – Conceptual Site Model

In addition to the site maps, supporting documentation is presented in the appendices as follows:

- Appendix A Voluntary Cleanup Agreement
- Appendix B Boring Logs
- Appendix C Laboratory Reports
- Appendix D Chain-of-Custody Forms

3.0 Background

The site background is described in the following subsections: Section 3.1 – Summary of Site History; Section 3.2 – Site Reconnaissance; Section 3.3 – Surrounding Land Use; Section 3.4 – Summary of Environmental Concerns from Public Records; and Section 3.5 – Previous Studies.

3.1 Summary of Site History

Based on a review of historical aerial photographs, it appears that the site was used for agricultural purposes until at least 1953. In the 1977 aerial photograph, the site is vacant with the exception of some stored materials in the southeast corner of the property; a change or transition from agricultural to industrial land use appears to have taken place during the intervening period. According to ERT's *Clean Closure Verification Report* (ERT, 1988), Ameron Corporation used the site for the storage and disposal of baghouse dust wastes generated by the Tamco Rolling Mill Operations in the 1970s. Baghouse dust reportedly was buried in three trenches on the south part of the site. In 1987, as part of the sale of the property, Ameron Corporation agreed to remove the baghouse dust. Approximately 4,000 cubic yards of buried dust were excavated and removed from the site, and the excavations were backfilled with slag, a steel-making co-product commonly used as road base, railroad ballast, and fill material. Communications between Ameron, ERT (the environmental consulting firm conducting the work), and Fontana Steel indicate that the remediation criteria were based on State waste classification limits, including Total Threshold Limit Concentrations (TTLC) and Soluble Threshold Limit Concentrations (STLC).

In 1989, the property was acquired by Fontana Steel Inc. via a delayed exchange between Ameron, Inc., Kaiser Foundation Hospitals, and Fontana Steel, Inc. In August 1988, Ameron, Inc. sold the site to Kaiser Foundation Hospitals (Kaiser). After Kaiser completed some unspecified "improvements" to the property, it was exchanged for parcels in the City of Fontana, California that were formerly owned by Fontana Steel and Paul Ware. The 1989 aerial photograph shows the Fontana Steel fabrication plant and attached office.

3.2 Site Reconnaissance

Information concerning present-day waste management practices was gathered during previous site inspections conducted by PEG (Pacific Environmental Group)/IT personnel. As discussed previously, Fontana Steel is engaged in the fabrication of steel rebar for highway and building construction. Fabrication steps include sorting, bending, shearing, welding, storage, and transport; none of the operations include wet chemical processing such as degreasing, painting, coating, or other chemical treating. The on-site maintenance shop has an external wash rack that drains to a subgrade clarifier. An above-grade oil recovery system is used in conjunction with the clarifier to segregate and remove oily residues and sludge. The site has one 12,000-gallon double-walled fiberglass underground storage tank used for diesel fuel, and one 15,000-gallon aboveground propane tank. In accordance with the VCA, these structures are not considered part of the "site."

3.3 Surrounding Land Use

The majority of the land surrounding the site is used for commercial/industrial purposes. Land use at the adjacent properties is summarized below:

North: The land across Arrow Route includes a newly constructed warehouse building to the northwest and adjacent to Interstate 15 (I-15), a vacant parcel directly north of the subject site (currently for sale and zoned commercial/industrial), and Air Liquide, a bulk gas distributor to the northeast.

East: Ameron Concrete & Steel Pipe occupies the parcel immediately east of the site. The plant produces steel-coated concrete pipe that is cured and stored on site. The Ameron Steel & Wire facility is located immediately southeast of the Ameron Concrete & Steel Pipe facility. At this plant, Industrial Wire Products (IWP, formerly the Ameron Steel & Wire Facility) and Ameron manufacture wire in mills using steel rod manufactured at the Tamco Steel mill (see below).

South: Land south of the site is occupied by the Tamco Steel mill. The mill processes scrap steel from various sources and produces both rebar and steel billets. Most of the rebar used by Fontana Steel is supplied by Tamco. The entrance to the Tamco mill runs south from Arrow Route along the east side of the Fontana Steel facility.

West: A narrow strip of vacant land separates the west boundary of the Fontana Steel facility from the neighboring Parallel Products plant. Parallel Products is engaged in the recycling of surplus or dated grain-derived liquids. According to a 1989 appraisal report, the intervening strip of land was slated for the development of a concrete lined storm drainage. The storm drainage apparently was not constructed at that location; a senior engineer for the City of Rancho Cucamonga's Land Development Section, indicated that the storm drainage channel was built at a location west of I-15 in 1992.

3.4 Summary of Environmental Concerns from Public Records

Environmental concerns based on public records were researched through discussions with public agencies and review of files and records maintained by those agencies. Agency inquiries and file research was supplemented with a regulatory database review conducted by Environmental Data Resources, Inc. (EDR). A summary of the identified environmental concerns is presented below.

3.4.1 Regulatory Database Review

Pacific Environmental Group (PEG, now part of IT Corporation) contracted EDR to conduct an environmental database search of California State and Federal databases for the subject site and the surrounding area. The EDR report was previously presented as an appendix in the December 1998 Phase I Environmental assessment for the site (PEG, 1998). The search for each State or Federal database met the minimum radii stipulated by the American Society for Testing and Materials (ASTM) at the time of the Phase I. A total of 29 commonly-referenced databases were included in the search. Although the subject site (and its constituent parcels) was not listed in any of the databases, several governmentally-listed sites were identified in the site vicinity. Listed sites were reported on one or more of the following State and/or Federal databases:

- California Calsites (CAL-SITES, formally known as ASPIS)
- California Hazardous Material Incident Report System (CHMIRS)
- Cortese (CORTESE)
- RCRA Correction Action Activity (CORRACTS)
- Solid Waste Information system (SWIS)
- Leaking Underground Storage Tank Information System (LUSTIS)
- Registered Underground Storage Tanks (UST)
- RCRA Information System Small-Quantity Generator (RCRIS-SQG)

In addition to these Federal/State database listings, the San Bernardino County Fire Department Hazardous Materials Division records showed several permitted facilities within a 0 25-mile radius of the site. A total of 20 facilities within a 1-mile radius of the site were identified in the database search. The following table summarizes the listed facilities that are believed to be the most significant due to their proximity to the site and/or the nature of the environmental issue/release.

Facility Name	Facility Address	Database List	Distance and Direction from Site
Ameron Steel Wire Division	12459 Arrow Route Rancho Cucamonga, CA	CalSites, RCRIS-LQG, HAZNET, CHMIRS, SBCEHS	<1/4 mile E
Vista Metals Corporation	13435 Whittram Ave Fontana, CA	CalSites, RCRIS-SQG, CERCLIS-NFRAP, UST, CA FID	½-1 mile ESE
FNHJEH Env. Management	13579 Whittram Ave Fontana, CA	FINDS, RCRIS-SQG, CORRACTS	½-1 mile ESE

3.4.2 Local Agency File Review

During the previously completed Phase I Environmental Site Assessment (PEG, 1998), the following regulatory agencies were contacted for information concerning the Fontana Steel facility and sites in the vicinity:

- California Regional Water Quality Control Board - Santa Ana Region
- California Department of Toxic Substance Control

San Bernardino County Environmental Health Services and Fire Department

Pertinent information obtained at these agencies is presented below.

California Regional Water Quality Control Board (RWQCB) – Santa Ana Region

RWQCB records included file materials for Ameron Concrete & Steel Pipe at 12455 Arrow Route and Ameron Steel and Wire Facility at 12459 Arrow Route. Relevant information is summarized below.

Ameron Concrete & Steel Pipe: In 1966, the American Pipe and Construction Company requested the RWQCB's permission to discharge as much as 25,000 gallons per day of industrial wastewater. The wastewater was to be discharged "through a drainage swale between Etiwanda Steel Producers railroad spur and the east property line." In response, the RWQCB required that waste waters containing brine wastes be diverted to a lined

pond. A polyethylene-lined pond was constructed in August 1967 to receive these wastes.

In July 1976, a RWQCB resolution was issued to Ameron Pipe Products to bring the older waste discharge requirements (WDRs) into conformance with the RWQCB's Water Quality Control Plan. During a subsequent inspection, the RWQCB noted that "wastewater had been flowing through and ponding outside the fenced area at the southeast end of the plant." The RWQCB required Ameron to "investigate the discharge and indicate actions taken to assure that this discharge will be contained on property owned or controlled by Ameron Pipe." In May 1982, the RWQCB issued an order revising the allowable discharge flow rate and monitoring program.

In a letter dated January 1, 1994, the RWQCB directed Ameron to "cease the use of the pond and arrange acceptable temporary alternative brine disposal." The flow into the pond was stopped by Ameron on March 17, 1994. In January 1995, Ameron submitted a Phase I Subsurface Investigation to the RWQCB addressing removal of the pond and liner, and collection and analysis of subsurface soil samples.

Ameron Wire & Steel Facility: In October 1992, the San Bernardino County Environmental Health Services (SBCEHS) sent a letter to Ameron, Inc. stating that the results of investigations "reveal elevated levels of metals and petroleum hydrocarbons" and that the County "requires that remedial action be undertaken for this site." In response, Ameron identified several locations where "remedial activities may be warranted" including the wire mill, the "old borrow pit", an area of possible dumping, and a "former hole in the southeast yard." Over the next two years, Ameron worked with the SBCEHS and the RWQCB to develop a site-wide soil characterization plan. The site was administratively transferred to the DTSC in May 1995 (see DTSC file information discussed below).

Department of Toxic Substances Control (DTSC) DTSC records included file materials for the Ameron Wire and Steel Facility at 12459 Arrow Route and the Tamco Steel mill at 12459 Arrow Route. Relevant information is summarized below.

Ameron Wire & Steel Facility: An environmental site assessment was conducted at Ameron's facility in 1989 and 1990 (PSM, 1990). The assessment results lead Ameron to develop a comprehensive site characterization plan that was submitted to the DTSC in January 1995 as part of a Voluntary Cleanup Program application. DTSC subsequently required Ameron to perform a hazardous substance characterization and a human health

risk assessment. After the submittal of the risk assessment in January 1996 (PSM, 1996), the DTSC concluded that "...the site does not appear to pose a threat to human health or the environment" and a determination of "no further action" was issued.

Tamco Steel: DTSC files included information concerning a waste shipment/disposal incident that occurred in May 1985, when an outgoing shipment of baghouse dust containing radioactive materials (reportedly Cesium-contaminated scrap metal) was discovered. The radioactivity was detected in a load of waste that was being transported from the Tamco mill to a permitted disposal facility. Although this load was returned to Tamco, a previous (and presumably radioactive) load was received by and disposed of at the Kettleman Hills Class I Landfill. DTSC concluded that the load was not likely to be disturbed or uncovered and did not pose a significant health risk. DTSC files also contained a request from Tamco for a Hazardous Waste Facility Permit Variance that would allow the on-site storage of baghouse dust for periods greater than 90 days.

San Bernardino County Department of Environmental Health Services (SBCEHS)

The Department of Environmental Health Services was reorganized and became part of the County Fire Department. Records discussed below are both from the Environmental Heath Services and the Fire Department.

Fontana Steel, Inc.: In October 1994, the SBCEHS conducted a site-wide inspection of the Fontana Steel facility. The inspection resulted in the issuance of a Notice of Violation based on unlabeled waste containers, waste mixing, and lack of a generator permit and a current Business Plan. A follow-up inspection was conducted on March 13, 1995. According to the inspector, Fontana Steel had made "an unusually large effort to come into full compliance".

Olympic Mill Service: This facility, also known as United Slag Processing, is located at 12459 Arrow Route. According to the documents in the County's file, "the slag produced by Tamco is transported to the slag processing area by United Slag." This area is located immediately northwest of the Tamco furnace.

Tamco Steel: As early as 1986, County correspondence expressed concerns over the discharge of wastes and wastewater to an area located southwest of the Tamco site. The County required Tamco to develop a sampling and analysis plan for the affected areas including a slag quenching area, a drainage ditch, the area around a railroad trestle, and a so-called flood plain and mud flat area. In 1990, approximately 3,300 cubic yards of impacted soil was excavated from the southwest portion of the site and stabilized for

future use as road base; the cleanup levels were 5 mg/l for soluble lead and 50 mg/kg for total lead. In a letter dated November 7, 1990, the RWQCB stated their satisfaction that ". . .the cleanup of lead contaminated soil at the site has been completed to concentrations below acceptable levels. There will be no further action by this agency with regard to this matter." Subsequent to the cleanup, the USEPA initiated a Preliminary Assessment (PA). The PA focused on the presence of approximately 20,000 tons of baghouse dust that had been buried within the slag pile. Samples of slag and "non-slag" (baghouse dust) were collected from the slag pile for chemical analysis. Although the EPA found concentrations of cadmium, chromium, lead, nickel, and zinc greater than three times background concentrations, they concluded that there had not been an "observed or projected release to groundwater" and determined that no further action was required.

3.5 Previous Investigations

As part of the property purchase agreement between Ameron and Kaiser in 1987, Ameron agreed to "legally and safely remove all hazardous substances such as underground tanks, asbestos or asbestos related product, or any other hazardous or toxic waste, substance, material or other contaminant or pollutant." This language included "the complete removal, in accordance with all applicable (Governmental Requirements), of the solid hazardous substance know(n) as 'baghouse dust' presently located on the Property." Therefore, Ameron Corporation retained ERT, Inc. (ERT) to investigate and remediate the EAF dust.

Three trenches, averaging 170 feet long, 20 feet wide, and 12 feet deep, were located and exhumed using a front-end loader in late 1987. Approximately 4,000 cubic yards of EAF dust, which is a listed State and Federal hazardous waste (waste code K061), was removed by Ameron's contractor under ERT's direction. According to ERT's 1988 closure report, the contact between the buried dust and the adjacent soil was readily distinguished based on contrasting color, texture, and consistency. Once the visible limits of the buried dust were reached, confirmation soil samples were collected and analyzed for metals including zinc, lead, and cadmium. ERT's excavation and sampling protocol specified that the Total Threshold Limit Concentration (TTLC) and Soluble Threshold Limit Concentration (STLC) limits would be used as clean-up guidelines. Therefore, depending on the analytical results, additional soil was excavated until the metals concentrations were "significantly less" than the TTLC. According to ERT's report, "Whenever the TTLC or STLC were exceeded, additional soil was removed from that area and then the excavated area was resampled. This procedure was repeated until

the TTLC or STLC limits were met. These data show that the TTLC and STLC limits were met for any soil remaining in place after the excavation was complete." One such area of overexcavation appears to have been the north end of the center trench.

Table 1 presents a summary of the analytical data obtained from confirmation soil samples. Detectable metals in the trench confirmation samples included cadmium (0.1 to 19.2 mg/kg), copper (6.1 to 42.1 mg/kg), lead (3.0 to 1,590 mg/kg), and zinc (38.5 to 12,500 mg/kg). The data included in ERT's report showed that while TTLC limits were not exceeded, the STLC limits were exceeded in several cases. For example, the STLC for lead is 5.0 mg/l (ppm), and the analytical results for the samples ranged from 14.0 to 86.0 mg/l. The STLC for zinc is 250 mg/l, and the sample concentrations ranged from 150.0 to 720.0 mg/l. According to the ERT report, areas with elevated metals (i.e., above State hazardous waste limits) were overexcavated.

Following soil removal, the excavations were backfilled to within 3 feet of the original surface with slag produced at the Rolling Mill. The excavations were then backfilled to the surface using clean soil that had been removed from the surface of the trenches above the baghouse dust. The excavated baghouse dust was transported to another location on the Tamco site.

In 1989, the Ameron Corporation sold the subject site to the current owner, Fontana Steel, Inc. In 1998, Fontana Steel retained the Pacific Environmental Group (PEG) to perform a Phase I environmental site assessment. The assessment evaluated whether current or historical uses of the subject property or the surrounding properties might have resulted in releases of hazardous substances, with adverse impacts to the subject site. The Phase I report recommended, among other things, additional soil assessment in the area of the former EAF dust trenches in the south-central part of the site.

In March 1999, a supplemental site assessment was performed by PEG to implement the recommendations of the Phase I report. Eleven (11) soil borings, ranging in depth from 15 to 23 feet below ground surface, were drilled and sampled in the reported vicinity of the former EAF dust trenches. Prior to drilling the soil borings, a geophysical survey including terrain conductivity, ground-penetrating radar, and electromagnetic techniques, was performed to help confirm the location of the trenches. Although most of the survey results were inconclusive, a terrain conductivity anomaly, suggestive of low-resistivity backfill materials such as slag, was tentatively identified in the reported vicinity of the trenches

The soil borings were drilled and sampled with a truck-mounted hollow-stem auger drill rig. Samples from these borings were carefully logged for the presence of slag backfill and/or the contact between the backfill and the native soil. Three of the borings (B-7, B-10, and B-11) intercepted slag backfill within the trenches; the contact between the slag and the underlying native soils was encountered between the depths of 16 and 18 feet below ground surface. No evidence of remnant (i.e., unexcavated) EAF dust was noted in any of the borings, and the uppermost 3 to 4 feet in these borings was primarily composed of silty sand. Both findings were consistent with the 1988 ERT closure report.

Samples of both the slag backfill and the adjacent native soil were collected and analyzed for Title 22 metals. In general, the slag samples from the "east" and "center" trenches contained the highest metals concentrations, including total chromium (900 mg/kg), copper (230 mg/kg), lead (170 mg/kg), and zinc (1,200 mg/kg); the analytical results are summarized in Table 2.

The PEG supplemental site assessment confirmed the geometry of the trenches as reported by ERT, although the actual trench locations were approximately 80 feet west from the depiction in the 1988 closure report. The absence of EAF dust in the borings also tended to confirm the effectiveness of the 1987 remedial excavation. Nevertheless, metals concentrations in the slag backfill in the "east" and "center" trenches appeared to be elevated.

4.0 Hazardous Substance/Waste Management Information

Fontana Steel is permitted as a "limited quantity" hazardous waste generator by the San Bernardino County Fire Department, and has an EPA generator ID Number (i.e., CAL000120760).

Small quantities of waste products are generated in the maintenance shop including hydraulic and lubricating oils, oil filters, shop rags, spill absorbent, paint cans, ethylene glycol, and solvent. Most of these wastes are temporarily stored in DOT-specification drums, labeled, and shipped off-site for recycling or disposal. Approximately one drum each of waste ethylene glycol and absorbent and approximately two drums of waste oil filters are generated every six months. Waste oil is drained into a 200-gallon, above-ground storage tank, which is pumped out and transported off-site for recycling every 90 days. [Note: For the purpose of the PEA, these wastes are not generated or stored at the "site." The information is provided for context only.]

5.0 Apparent Problem

The site was historically used for the disposal of EAF (a.k.a. baghouse) dust, a RCRA-listed waste, in three trenches. In 1987, the buried dust was remediated by excavation and off-site treatment and disposal, after which, the exposed trenches were backfilled with slag, a steel-making co-product commonly used as road base, railroad ballast, and fill material. This PEA was performed to assess whether residual impacts remain in the native soil surrounding the former trenches or in the slag backfill, and to determine whether such residues, if present, pose a health threat to site workers.

As specified in the PEA work plan (IT, 2001), soil samples were collected and analyzed for Title 22 metals (USEPA 6000/7000 series Methods) and for hexavalent chromium (USEPA Method 7199). In theory, workers at the site who are engaged in construction-related excavation could be exposed to COPCs via inhalation of airborne metals-bearing dust, ingestion of metals-bearing soil, and dermal contact with metals-bearing soil. In practice, construction worker health and safety would typically be ensured through the implementation of protective measures such as health and safety planning/training, personal protective equipment use, dust suppression, and isolation and/or removal of impacted soil. Therefore, the likelihood of exposure via these pathways is considered low, and the results of the human health screening evaluation described herein likely overstate human health risk at the site. Because the PEA defaults to a residential exposure scenario, the health screening results represent a conservative estimate of health hazards for site workers, whose cumulative time on site is significantly less than that of a resident. To more accurately reflect the current and anticipated future land use at the site (and associated exposure potential), health risk including carcinogenic and non-carcinogenic effects was evaluated under a commercial/industrial exposure scenario. The results are discussed in Section 8.5.

6.0 Environmental Setting

This section discusses the influence of site-specific characteristics on potential exposure pathways. A conceptual site model is shown as Figure 3 and discussed in the following sections.

6.1 Factors Related to Soil Pathways

The *PEA Guidance Manual* (DTSC, 1999) requires that risk/hazard due to exposure to soil be calculated as part of the PEA process. The following section describes factors that may influence the potential exposure of on-site workers to site soil through inhalation, dermal contact, and incidental ingestion.

The Fontana Steel facility has an average surface elevation of approximately 1155 feet above mean sea level (USGS, 1966), and the topography in the area slopes gently to the south. Dry Creek, which drains toward the south, is located approximately 0.3 miles to the west. The site is situated near the center of the upper Santa Ana River Valley approximately 5 miles south of the San Gabriel Mountains. The upper Santa Ana River Valley is drained by the Santa Ana River, which flows southwest and lies approximately 10 miles south of the site at its closest approach. According to the California Division of Mines and Geology, the site is underlain by Quaternary alluvium (Geologic Map of California - San Bernardino Sheet, 1969, California Division of Mines and Geology), which consists primarily of sands and gravels that were deposited in coalescing alluvial fans along the base of the San Gabriel Mountains. These alluvial fan deposits are believed to be up to 1,100 feet thick locally. The San Gabriel Mountains, as well as the basement rocks underlying the alluvium, are composed primarily of Pre-Tertiary igneous and metamorphic rocks. Based on previous site investigations (PEG, 1999; ERT, 1988), soil at the site consists primarily of interbedded silts and sands, some of which are gravelly.

6.2 Factors Related to Water Pathways

Based on previously reported information at the nearby Ameron facility (Hemphill, Green & Associates, 1994), groundwater in the site vicinity is present in laterally extensive regional aquifers that occur within the valley fill and the inferred direction of groundwater flow in the area is to the southwest. According to the Santa Ana Regional Water Quality Control Board, the site is located in the Chino I Ground Water Sub-basin.

The beneficial uses of the groundwater in the Sub-basin are municipal and domestic supply, agricultural supply, industrial service supply, and industrial process supply (Order No. 82-142, Ameron Pipe Division).

Based on information provided by the Cucamonga Water District, the depth to groundwater (measured in January 1993) in a well located approximately 1.5 miles northeast of the site was 458 feet below ground surface. In addition, environmental assessments at the former Kaiser Steel site located east of the Fontana Steel facility encountered groundwater at depths ranging from 300 to 400 feet below ground surface.

Stormwater runoff at the site flows from north to south. In an agreement between Tamco Steel and the City of Rancho Cucamonga dated September 15, 1988, Tamco "agrees to accept the drainage water, which will be discharged in a sheet-flow manner, from Parcel 1 of Parcel Map 7847" (Note: Parcel 1 is the Fontana Steel facility). Thus, stormwater runoff from the Fontana Steel facility flows south through nine shallow concrete drains onto the neighboring Tamco Steel property.

As required by California regulations, Fontana Steel has a Storm Water Pollution Prevention Plan (SWPPP) that includes a runoff monitoring and sampling plan for runoff. The sampling points are located along the southern boundary of the site at the fence line between Fontana Steel and Tamco.

Based on preceding information, groundwater in site vicinity reportedly occurs at depths greater than 300 feet below ground surface. Perched groundwater was not encountered during the PEA investigation nor in borings previously drilled in the site vicinity. Given the considerable depth to groundwater and the fact that perched groundwater was not encountered, the likelihood of vadose zone transport of inorganic COPCs to groundwater beneath the site is judged remote. Furthermore, there are no groundwater wells present at the site or in the immediate vicinity. For these reasons, the potential pathway for COPCs via groundwater is considered incomplete.

Neither historical or present-day impacts to surface water were identified or reported during previous site reconnaissance or site background research. As noted above, stormwater runoff is conveyed to the neighboring Tamco facility to the south. Based on this information and considering the effect of the imported fill that presently overlies the former disposal trenches, the likelihood of impacts to surface water by site contaminants that may be present in soil or trench backfill is judged to be low; similarly, the potential

for worker exposure to impacted surface water is believed to be low. For these reasons, the surface-water pathway is judged to be incomplete.

6.3 Factors Related to Air Pathways

The *PEA Guidance Manual* (DTSC, 1999) requires that incremental risk/hazard due to the air pathway be calculated. Although the COPCs for the Fontana Steel facility (i.e., metals) are not volatile, metals present in site soil could, in theory, be spread by the air pathway as fugitive dust. Although the PEA process assumes future unrestricted land use with no soil cover, the mitigating effects of present-day buildings, paved areas, imported earthen cover, and landscaping are discussed in Section 8.6.

7.0 Sampling Activities and Results

The overall objective of the PEA field program was to further characterize metals in soil near the former trenches or in the associated slag backfill. In addition, undisturbed soil samples were collected from the north part of the site (at locations well set-back from historical site operations) to establish background metals concentrations. During the PEA field program, the following samples were collected for laboratory analysis:

Eight (8) soil samples from 7 soil boring locations were collected and analyzed for the following: California Code of Regulations (CCR) Title 22 metals (EPA Methods 6010B and 7471A) and hexavalent chromium (EPA Method 7199)

Four (4) on-site background soil samples were collected from the northern and western perimeter of the site and analyzed for Title 22 metals (EPA Methods 6010B and 7471A).

In general, the soil samples were collected in accordance with the DTSC-approved *PEA Work Plan* (IT, 2001). Exceptions to the specified sample locations or sampling procedures are summarized below:

- Due to the presence of subsurface electrical lines that had been identified by facility personnel, soil boring B-19 was relocated approximately 40 feet north of its original proposed location.

Because slag was not encountered in the uppermost 13 feet in boring B-19, a second boring (B-19A) was drilled at a location approximately 20 feet northwest of B-19 (Figure 2). A shallow soil sample was collected from boring B-19 and a slag sample was collected from boring B-19A.

7.1 Soil Matrix Sampling

On March 13, 2001, eight subsurface soil and slag samples were collected from seven on-site soil borings (B-15 through B-20) whose locations are shown on Figure 2. The boring locations were selected to provide additional data concerning metals in shallow soil and backfill near the former trenches.

Sample locations are shown on Figure 2 and the sample depths are summarized in Table 2. Samples were generally collected at depths ranging from 1.5 feet to 11.5 feet below ground surface. A truck-mounted CME-75 drill rig, equipped with 8-inch diameter hollow-stem augers, was used to collect soil samples in a 2.5-inch diameter split-spoon sampler equipped with brass sleeves.

7.1.1 Site Soil

Based on the soil borings that were drilled and logged during the PEA investigation, the shallow stratigraphy near the former trenches is composed of brown, sandy gravel with cobbles that extends from the surface to approximately 3 feet below ground surface. Beyond the depth of 3 feet below ground surface, these shallow gravels typically grade into brown, fine to medium grained, gravelly sand that extends to an approximate depth of 10 feet. At soil boring B-18, the sand and sandy gravel (which likely represents imported fill) is underlain by slag that extends to at least 13 feet below ground surface (the total depth explored during this investigation). Based on the combined data from the PEA investigation and the previous 1999 site assessment (PEG, 1999), the top of the slag backfill typically occurs between the depths of 6 to 10 feet below ground surface. Above that depth, the excavated trenches appear to have been covered with sand and sandy gravel imported fill. Boring logs for the PEA field program are presented as Appendix B.

7.1.2 Laboratory Analysis and Results

Soil destined for laboratory analysis was retained in six-inch brass sleeves, capped with plastic end-caps lined with Teflon™ tape, and stored on ice pending transport to Del Mar Analytical, an off-site State-certified laboratory.

Soil samples were analyzed for the Title 22 metals (EPA Methods 6010B and 7471A) and hexavalent chromium (EPA Method 7199). The analytical results from the PEA investigation as well as the analytical data from previous site assessments are summarized in Table 2. Laboratory reports are presented as Appendix C.

Soil samples B-15 (1.5'), B-16 (1.5'), B-17 (1.5'), B-18 (1.5' and 11.5'), B-19 (1.5'), B-19A (7.5'), and B-20 (1.5') were analyzed for Title 22 metals and hexavalent chromium. Most metals were present in detectable concentrations in one or more of these samples. Antimony, beryllium, molybdenum, silver, and thallium were non-detect in all samples collected during this investigation. The concentrations for detected metals includes: arsenic (8.8 milligrams per kilograms [mg/kg]), barium (84 to 500 mg/kg), cadmium (11 mg/kg), total chromium (9.8 to 1,200 mg/kg), hexavalent chromium (0.39 to 2.0 mg/kg), cobalt (3.3 to 7.4 mg/kg), copper (6.6 to 110 mg/kg), lead (4.3 to 480 mg/kg), mercury (0.036 mg/kg), nickel (6.5 to 38 mg/kg), selenium (10 mg/kg), vanadium (29 to 200 mg/kg), and zinc (20 to 2,200 mg/kg. The significance of detectable metals in site soils in the context of background concentrations is discussed in Section 8.2.1.

In addition to soil sampling near the former trenches, background hand-auger soil samples were collected from four on-site locations where anthropogenic impacts were least likely, given current and historic site operations (Figure 2). Background soil samples were collected from a depth of approximately one-foot below ground surface. During sampling, careful attention was paid to identifying native soil. Background sample locations are shown on Figure 2, the analytical results for on-site background samples as well as background data from the Kaiser Steel site are summarized in Table 3, and chain-of-custody records are reproduced in Appendix D. Background samples are discussed further in Section 8.2.1.

7.2 Data Evaluation and Quality Control

This section describes data evaluation procedures including field and laboratory QC measures that were used to evaluate precision, accuracy, representativeness, completeness, and comparability (PARCC).

As an initial step, the chain-of-custody records and certified laboratory analyses were scrutinized to ensure that the correct analytical methods were employed (i.e., US EPA Method 6010B for antimony, arsenic, barium, beryllium, cadmium, total chromium, cobalt, copper, lead, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc; U.S. EPA Method 7471A for mercury; and US EPA Method 7199 for Cr^{6+}). Next, the laboratory reports were examined to ensure that the method-specified holding times and the project-specified reporting limits were adhered to.

To evaluate analytical precision and accuracy, results for laboratory control samples (LCS), method blanks, and laboratory matrix spike/matrix spike duplicates (MS/MSDs) were reviewed. Method blanks results were non-detect in all instances and LCS spike recoveries lay within prescribed limits. MS/MSD precision, as measured by relative percent difference (RPD), was acceptable in all but one instance (lead in the 04/19/01 MS which was ascribed to matrix interference effects). Matrix interferences also were manifest as recovery excursions for antimony and barium in this MS/MSD pair. Recoveries and RPDs for the 04/30/01 MS/MSD pair all lay within acceptance limits.

Representativeness expresses the degree to which sample data accurately and precisely represent a characteristic of a population, parameter variations at a sampling point, or an environmental condition. Representativeness is a qualitative parameter that is most concerned with the proper design of the sampling program. The criterion was satisfied by ensuring the selection of the proper number of samples and appropriate sample

locations. These considerations were factored into the PEA work plan (IT, 2001), which was reviewed and approved by the DTSC. Based on the foregoing, IT concluded that the data presented in this PEA report are representative of the environmental conditions of the site, as characterized through selected samples.

Completeness was determined by calculating the number of valid measurements (or results) for each matrix and analyte combination. A valid result is one that has not been "R" qualified. A particular set of data is considered complete if, at a minimum, 90 percent of soil samples meet the completeness criterion. Because no data related to this PEA were rejected, the completeness criteria was satisfied.

Comparability is a qualitative parameter expressing the confidence with which one data set can be compared with another. Sample data should be comparable with other measurements for similar samples and sample conditions. The objective of the QA/QC program is to produce data with the greatest achievable degree of comparability. The number of matrices sampled and the range of field conditions encountered are considered in determining comparability. Comparability is achieved by using standard methods for sampling and analysis, reporting data in standard units, normalizing results to standard conditions, and using standard and comprehensive reporting formats. No significant deviations from these protocols were reported and the PEA data is considered to meet comparability criteria. Based on the aforementioned internal data review, the data collected in support of the Fontana Steel PEA are acceptable and useable as qualified in the tables presented herein.

7.3 Management of Investigation-Derived Waste

The analytical results for soil samples, combined with the results of supplemental waste characterization tests, were used to profile the investigation-derived waste (IDW) generated during the PEA field program. The IDW was transported off-site to Filter Recycling Services, Inc., a State-permitted treatment and disposal facility in Rialto, California.

8.0 Human Health Screening Evaluation

The following health risk screening was conducted in accordance with the *PEA Guidance Manual* (DTSC, 1999) procedures for human health evaluation and current EPA risk assessment guidance (EPA, 1989). According to DTSC, the goal of the screening process is to provide risk managers with an estimate of the potential chronic health hazards from chemicals at a site. Because of the simplified nature of the exposure assumptions built into the PEA, the results are not an absolute measure of the risks or hazards at a site, but rather health-protective estimates. The PEA results may overestimate risks/hazards even to the most highly exposed residents. For reasons discussed later in this section, the actual risks and hazards at the site are likely to be lower. Consequently, if the PEA results indicate that cancer risks are acceptable and non-carcinogenic health hazards are below levels of concern, further risk assessment or investigation is generally not warranted. The following sections discuss the potential human health risks via exposure to COPCs in site soil at the site.

8.1 Exposure Pathways and Media of Concern

The PEA analytical results revealed that the COPCs and affected media at the site consist of metals in soil. As indicated in the conceptual site model (Figure 3), the primary source for the COPCs is residues in soil adjacent to the former disposal trenches or the trench backfill itself. Potential exposure routes include incidental ingestion of soil, inhalation of fugitive dust, and dermal contact. Dermal contact is considered to be a minor pathway for exposure to metals.

Based on the available data, groundwater appears to be present at depths between 300 and 400 feet below ground surface at the site. Impacts to surface water or groundwater were not identified during the site reconnaissance or PEA field work; residential and worker exposure to surface water and groundwater would be non-existent to minimal. The water pathway is judged to be incomplete; therefore, groundwater was not evaluated further as a potential pathway.

The primary population of concern implicit in the PEA process are residents living on the site. By default, residential exposure factors are utilized throughout the risk calculations, which tends to yield conservative estimates. In reality, the present-day and anticipated future receptors at the Fontana Steel facility are workers, specifically those engaged in deeper construction-related excavation. These site workers will have different exposure

factors compared to hypothetical site residents – their potential exposure will generally be shorter and less frequent. Estimated risk and hazard under a commercial/industrial exposure scenario (also referred to as occupational exposure) is evaluated in Section 8.5.

8.2 Chemicals of Potential Concern and Exposure Point Concentrations

The methodology used to determine the COPCs is described in Section 8.2.1 - Chemicals of Potential Concern for Soil Pathways and Section 8.2.2 - Lead Exposure Assessment.

8.2.1 Chemicals of Potential Concern for Soil Pathways

The following soil exposure pathways for future residents and workers were identified at the site: inhalation of fugitive dust, dermal contact, and incidental ingestion of soil. The identified COPCs consisted of metals that were present above background levels. As specified in the PEA, the site was defined as a 300-foot by 300-foot area where burial of electric arc furnace dust occurred in the past. Maximum concentrations for each chemical were identified in the soil samples that were collected in the depth interval 0 to 10 feet below ground surface (depths where human contact could occur) as specified in the *PEA Work Plan* (IT, 2001). PEA soil sample analytical results are summarized in Table 2.

Based on the selection criteria, nine metals were retained for evaluation in the health screening. As part of the PEA investigation, 10 on-site soil samples and four background soil samples were collected between 0 and 10 feet below ground surface. Below this depth, future human contact (i.e., construction excavation) is unlikely and the probability of worker exposure is low.

67 background soil samples from the Operable Unit No. 3 (West Slag Pile) at the Kaiser Steel site, located approximately 1.5 miles southeast of the site, were included in the evaluation of background metal concentrations. Many of the metals detected appear to be localized, as illustrated by the maximum detected concentrations for seven metals (Table 4) found in the 1.5 foot sample from boring B-19.

To establish background concentrations for metals in soil, shallow soil samples were collected on-site at locations set-back more than 100 feet from present-day or historical operations. These data were compiled with additional soil samples from Operable Unit No. 3 (West Slag Pile) at the Kaiser Steel site, which is similar to the site geologic and

hydrogeologic setting. Background sample locations are shown on Figure 2 and the analytical results are summarized in Table 3.

Metal concentrations in on-site soil were compared to those concentrations found in background soil in accordance with the *PEA Guidance Manual* (DTSC, 1999). Table 4 presents the minimum, maximum, and average background concentrations; the average and maximum detected concentrations for on-site soil samples; and maximum detection sample depth and location. Metal concentrations in soil samples from the site were considered to lie within the background range if either the maximum or the average detected on-site concentrations were less than the maximum background concentration.

The first step in this approach was to compare the maximum on-site concentration with the maximum background concentration. The second step was to compare the average on-site concentration with the maximum background concentration. Using the data provided in Table 4, these steps eliminated arsenic, barium, beryllium, cobalt, and nickel from consideration as COPCs.

Per the *PEA Guidance Manual* (DTSC, 1999), lead was evaluated using the DTSC's *Leadspread Version 7* model (DTSC, 2000); the results are discussed in Sections 8.2.2 and 8.4.3.

As a result of the screening and identification of COPCs, nine metals were included in the PEA risk/hazard evaluation for dermal exposure to soil, incidental ingestion of soil, and inhalation of fugitive dust. A summary of the COPCs is presented in Table 5, and the results of the evaluation are discussed in Section 8.4.1. The evaluation of risk and hazard for the inhalation pathway was based on exposure to fugitive dust for non-VOCs.

8.2.2 Lead Exposure Assessment

Lead in air, soil, and (drinking) water was evaluated for the site using the current version (Version 7) of the *Leadspread* lead risk assessment spreadsheet (DTSC, 2000) (Table 6). Although drinking water was not sampled, it was assumed that the lead concentration in drinking water would be equal to the maximum contaminant level (MCL) (15 micrograms per liter [µg/L]). Consequently, the MCL was used as input to the model. SCAQMD air quality data (SCAQMD, 2001) for Air Station #32 (located in northwest San Bernardino Valley and representing the closest station with lead data), reported a monthly and quarterly average lead concentration for the year 2000 of 0.07 micrograms per cubic meter (µg/m^3) and 0.05 µg/m^3, respectively. Both values are

above the model default value of 0.028 $\mu g/m^3$. Therefore, the quarterly average of 0.05 $\mu g/m^3$ was utilized in the model as the more relevant concentration. The maximum detected concentration for lead in soil was 480 mg/kg (B-19-1.5). With the exceptions noted, the default exposure values for the *Leadspread* model were used. The results of *Leadspread* modeling are discussed further in Section 8.4.2.

8.3 Toxicity Values

Standard reference sources mentioned in the *PEA Guidance Manual* (DTSC, 1999) were researched for toxicity information. This included toxicity information available through the Office of Environmental Health and Hazard Assessment (OEHHA, 2001), the Integrated Risk Information System (IRIS) (EPA, 2001a), the Agency for Toxic Substances and Disease Registry (ATSDR, 2001), and the Hazardous Substances Data Bank (HSDB) (TOXNET, 2001).

Dermal absorption fraction values for organic chemicals and metals in soil were taken from Table 2 of the *PEA Guidance Manual* (DTSC, 1999). Toxicity values for chemicals that were evaluated are shown in Tables 5, 9, and 10.

Cancer slope factors (SFs), oral and inhalation reference doses (RfD_o and RfD_i, respectively), and reference concentrations (RfCs) were obtained according to the following hierarchy of sources:

- For carcinogens, California-specific oral and inhalation cancer slope factors (SF_o and SF_i, respectively) and unit risk factors (URFs) were obtained from the DTSC OEHHA cancer potency factors (OEHHA, 2001). If a URF value was not available from these sources, one was obtained by converting the SF_i value by multiplying by 20 m^3/day and dividing by 70 kg (EPA, 2001b).
- For noncarcinogens, RfD_o or RfD_i values (if available) were obtained from the OEHHA Toxicity Criteria Database Search, IRIS, TPH Working Group Reports, the National Center for Environmental Assessment (NCEA), or Health Effects Assessment Summary Tables (HEAST). RfC values were obtained from IRIS, HEAST, and the Association for Environmental Health of Soils (AEHS). RfC values were also obtained by converting RfD_i values by dividing by 20 m^3/day and multiplying by 70 kg (EPA, 2001b).
- For noncarcinogens that did not have an RfD_i listed in the aforementioned sources, OEHHA's chronic reference exposure levels (RELs) were used to determine an RfD_i, or the RfD_o for the chemical was used as the RfD_i in a cross-route extrapolation.

8.4 Residential Risk and Hazard Characterization Summary

Carcinogenic risk from both soil and soil gas is estimated as the incremental probability of an individual developing cancer over a lifetime as a result of exposure to one or more of the COPCs. The noncarcinogenic health hazard (expressed as the hazard quotient) is estimated by comparing the estimated exposure levels with the exposure level at which no adverse health effects are expected to occur as a result of chronic exposure (i.e., RfD_o and RfC). Human health risk and hazard index evaluations were performed in accordance with the *PEA Guidance Manual* (DTSC, 1999). Individual chemical cancer risks were estimated for soil using the following simplified equations that were based on the reduced equations in the PEA guidance:

For dermal contact and oral ingestion:

$$Risk_{soil} = (SF_o * C_s * 1.57x10^{-6}) + (SF_o * C_s * 1.87x10^{-5} * ABS)$$

Where:
- SF_o = Oral slope factor
- C_s = Concentration in soil
- ABS = Skin absorption factor

For inhalation of dust:

$$Risk_{soil} = SF_i * C_a * 0.149$$

Where:
- SF_i = Inhalation slope factor
- C_a = Concentration in air ($C_a=C_s/PEF$)
- C_s = Concentration in soil
- PEF = Particulate emission factor, m^3/kg (DTSC, 2001)

A total estimated carcinogenic risk was determined by summing the individual cancer risks. The health risk results were compared to the DTSC and EPA *de minimis* and maximum acceptable risk ranges of one in one million (10^{-6}) to one in ten thousand (10^{-4}), respectively. Risks between $1x10^{-6}$ and $1x10^{-4}$ define a discretionary range where risk managers balance risks with other criteria in assessing the need for mitigation.

Individual chemical noncarcinogenic hazard quotients for soil were estimated using the following PEA equations:

For dermal contact and oral ingestion:

$$Hazard_{soil} = (C_s/RfD_o * 1.28x10^{-5}) + (C_s/RfD_o * 1.28x10^{-4} * ABS)$$

Where: C_s = Concentration in soil
RfD_o = Oral reference dose
ABS = Skin absorption factor

For inhalation of dust:

$$Hazard_{soil} = (C_a/RfD_i) * 0.639$$

Where: C_a = Concentration in air
RfD_i = Inhalation reference dose

Once the compound-specific hazards were calculated, a hazard index was developed as the sum of the individual hazard quotients. The hazard index then was compared to the threshold value of 1.0.

8.4.1 Cumulative Residential Risk and Hazard

For the purposes of the PEA, cumulative cancer risk and hazard appear to be restricted to the presence of metals in soil. Three soil exposure pathways were evaluated at the site: inhalation of fugitive dust, dermal contact, and incidental ingestion of soil utilizing the maximum concentration for each of the metals.

The sum of carcinogenic risks for the soil pathway is $7x10^{-6}$ (Table 5). This estimated cancer risk slightly exceeds the $1x10^{-6}$ risk threshold, and is primarily due to dermal contact and incidental ingestion of soil containing cadmium. Estimated cancer risk was based on maximum detected concentrations in soil rather than average detected concentrations.

The hazard index at the site was 0.9 (Table 5), which is slightly below the hazard index threshold criterion of 1.0. These results suggest that chronic noncarcinogenic health effects are not anticipated, even for a resident living at the site.

8.4.2 Lead-Related Risk

The maximum detected lead concentration in soil was 480 mg/kg in the 1.5-foot sample from soil boring B-19. Modeling results are presented in Table 6. The *Leadspread* model predicted blood-lead concentrations of approximately 4.8 micrograms per deciliter

(μg/dL) for the 99th percentile of adults. Additionally, the model also predicted that the 99th percentile blood-lead levels for non-pica children will be 14.8 μg/dL. Although the predicted blood lead levels for children lie above the 10 μg/dL action level (ATDSR, 1990), the current and anticipated future land use at the site (i.e., industrial) precludes exposure to lead by children. In contrast, the predicted blood lead level for adult receptors (a more plausible receptor given the use of the site) lies below the 10 μg/dL threshold.

8.5 Occupational Risk and Hazard Characterization Summary

The three exposure routes that are considered potentially complete for the occupational receptor population are incidental ingestion of soil, soil dermal contact, and soil particulate inhalation. In this section, pathway-specific doses are estimated for each receptor using DTSC-approved values for the exposure factors (Table 7), which includes such variables as intake rate, exposure frequency, and exposure duration. The resulting chemical dose estimates are in units of milligrams per kilogram body weight per day (mg/kg-day). These doses are integrated with chemical toxicity information to estimate potential effects. Based on the mechanism of toxicity, different measures of dose have been estimated for carcinogenic risk and noncarcinogenic hazard estimates.

For the purposes of risk assessment, carcinogens are believed not to have a threshold, that is, any exposure is likely to increase an individual's potential to develop cancer over his or her lifetime. The Lifetime Average Daily Dose (LADD) has been estimated to characterize carcinogenic effects. Noncarcinogenic chemicals are believed to have thresholds, that is, there is a chronic daily dose above which adverse health effects are likely to occur. To characterize noncarcinogenic effects, the Average Daily Dose (ADD) for each pathway has been estimated.

The following equations have been used to estimate doses via inhalation of particulates in breathing air:

$$LADD_{inh} = ((C_a/PEF)*IR*EF*ED)/(BW*AT_c)$$

$$ADD_{inh} = ((C_a/PEF)*IR*EF*ED)/(BW*AT_{nc})$$

Where:

C_a = Concentration of fugitive dust of chemicals in air, mg/kg soil

PEF = Particulate emission factor, m^3/kg

IR = Inhalation rate, m^3 air/hour
EF = Exposure frequency, days/year
ED = Exposure duration, years
BW = Body weight, kg body weight
AT_c = Averaging time, days, for carcinogenic endpoint assessment, and
AT_{nc} = Averaging time, days, for noncarcinogenic endpoint assessment.

The averaging time has been set equal to exposure duration multiplied by 365 days/year for ADD calculations and 25,550 days based on an EPA (1989) definition, for LADD calculations.

The following equations have been used to estimate doses via incidental ingestion of soil:

$$LADD_{ing} = (C_s * SI * EF * ED)/(BW_c * AT_c)$$
$$ADD_{ing} = (C_s * SI * EF * ED)/(BW_{nc} * AT_{nc})$$

Where:

C_s = Concentration of chemical in soil, mg/kg
SI = Soil ingestion rate, kg soil/day

The following equation has been used to estimate doses via skin contact with soil:

$$LADD_{skin} = (C_s * SA * AF * ABS * EF * ED)/(BW * AT_c)$$
$$ADD_{skin} = (C_s * SA * AF * ABS * EF * ED)/(BW * AT_{nc})$$

Where:

SA = Exposed skin surface area available for contact, cm^2/day
AF = Soil-to-skin adherence factor, kg soil/cm^2 skin area
ABS = Dermal absorption factor for chemical, unitless

The cancer risk is the product of the calculated LADD and the SF:

$$Risk = LADD * SF$$

The SF_o was used to characterize oral and dermal exposures, pursuant to EPA (1989) guidance. The SF_i was used to characterize hazards via the inhalation pathway. If an inhalation slope factor was not available, a route-to-route extrapolation of the slope factor was used if this was assumed to be appropriate as documented in the PRG tables (EPA, 1999). In addition to calculating cancer risk for individual chemicals, cumulative risks have been calculated by assuming that effects of each chemical are additive, regardless of the target organs for each chemical.

The noncarcinogenic hazards were evaluated by the calculation of a hazard quotient (HQ) The HQ is the ratio of the calculated ADD to the RfD:

$$HQ = ADD / RfD$$

The RfD_o was used to characterize oral and dermal exposures following EPA (1989) guidance, and the RfD_i was used to characterize hazards via the inhalation pathway. If an RfD_i was not available, a route-to-route extrapolation of the RfD_o was used, if this was assumed to be appropriate.

In addition to calculating HQs, a hazard index (HI) was calculated by summing the individual HQ's regardless of the toxicity mechanism and target organs for each chemical. An HQ or HI less than or equal to 1 indicates that adverse health effects are not expected to occur (EPA, 1989). An HQ or HI greater than 1 indicates only that further evaluation is warranted and does not necessarily mean that adverse health effects will occur

Table 7 provides the exposure factors used in this PEA for the evaluation of occupational risks and hazards. Table 8 provides the LADD and ADD estimates for workers at the site

8.5.1 Cumulative Occupational Risk and Hazard

The projected cancer risk for occupational exposures to on-site workers is $9x10^{-7}$ (Table 9), which is below the *de minimus* level of $1x10^{-6}$ The hazard index for site workers is 0 05 (Table 10) These results suggest that carcinogenic or noncarcinogenic health effects are not expected to occur to individuals working at the Fontana Steel site as a result of exposure to the metals in the soil.

8.6 Uncertainty Analysis

As stated in the *PEA Guidance Manual,* the purpose of the human health screening evaluation is not to predict individual health risks but to provide risk managers with an estimate of the potential chronic health hazards from chemicals at the site There are multiple sources of uncertainty in the risk and hazard estimates presented in this PEA, many of which are inherent to the amount of scientific knowledge and to the risk assessment process. The estimated values involve uncertainties that stem from modeled COPC concentrations; assumptions for model input variables such as exposure duration,

intake rates, soil type, and additional site-specific variables that influence health risk estimates.

If the site-specific data was incomplete, health-protective values were selected for input to estimate the risk and hazard from the soil pathway. The underlying assumptions in the PEA tend to overestimate risk/hazard even to the most highly exposed residents. The use of maximum concentrations and residential exposure parameters (when in fact, the receptors are workers whose exposures are typically shorter and less frequent) also serves to overestimate risk/hazard at the Fontana Steel site. Potential exposure to fugitive dust is likely overstated, because inhalation of fugitive, metals-bearing dust is mitigated by the cover provided by contemporary buildings and pavement, and the imported fill that presently overlies the former disposal trenches. Nevertheless, the air pathway involving inhalation of fugitive dust could be complete if deeper excavations were performed in the vicinity of the former trenches.

Most of the toxicity data used to characterize risks is based on studies in animals and/or occupational exposures that involve exposures to multiple chemicals. It is assumed that the effects and potencies of chemicals in humans are similar to those found in animals used for toxicological research. The technical approaches used in this screening risk assessment have been designed to compensate for those uncertainties to the extent possible (i.e., the assumptions and approaches used are designed to overestimate potential exposures and health effects), rather than underestimate risks.

In calculating the dermal contact and ingestion risk and hazard, the dermal absorption factors listed in the *PEA Guidance Manual* (DTSC, 1999) were utilized for all detected compounds in soil. Recent EPA guidance, as cited in the Region IX PRG document, no longer recommends dermal absorption factors for inorganic chemicals in soil. These factors were nevertheless utilized based on DTSC guidance for PEAs.

9.0 Ecological Screening Evaluation

The Fontana Steel, Inc. site is located in a largely developed, industrial area in the southeast part of the city of Rancho Cucamonga, California. The majority of the land use surrounding the site is industrial, including steel mills, steel and concrete pipe and wire products manufacturers, bulk gas distributors, and bulk liquid and grain recyclers. An undeveloped parcel lies north of the site across Arrow Route and is currently for sale and is zoned for commercial/industrial development. The nature and history of the site, when considered with that of the surrounding industrial neighborhood, preclude the presence of significant wildlife habitats or sensitive, endangered, or threatened flora or fauna.

10.0 Community Profile

The purpose of the community profile was to assess community concerns about the investigation of environmental conditions at the Fontana Steel facility. To accomplish this objective, the following tasks were implemented during the PEA:

- Development of a PEA informational letter describing the sited background and PEA objectives
- Compilation of a mailing list for distribution of the PEA letter
- Distribution of the initial PEA informational letter
- Telephone survey of neighboring property owners

Collection and review of the recipient's responses

The PEA letter identified the agency involved in the investigation (i.e., the DTSC); presented background information regarding the use, characterization, and remediation of the former dust disposal trenches; briefly described the proposed soil sampling; and discussed the PEA human health screening process. The letter also indicated that concerned or interested citizens can review copies of the PEA results and/or final report at the DTSC's Cypress, California office. Two forms were attached to the letter encouraging the recipients to identify their concerns, languages spoken, and level of interest in the project.

In June 2001, the PEA letter was mailed to over 400 recipients, including elected officials, the nearby residents of an apartment complex, and businesses located within a 2- to 3-block radius of the site. As of June 28, 2001, the DTSC had received two responses from the recipients. One phone call was from an apartment resident who was house shopping and wanted to obtain information regarding the environmental condition of properties in the area. The second caller was a journalist with the Inland Empire Business Journal; he requested additional information and expressed an interest in writing a newspaper article applauding Fontana Steel's proactive approach to site assessment and remediation.

The telephone survey of neighboring property owners was conducted on July 12 and 17, 2001; save for a request to mail an additional copy of the letter, no new issues or concerns were raised during the interviews

11.0 Conclusions and Recommendations

The following sections present the conclusions and recommendations of the PEA performed for the Fontana Steel site

11.1 Conclusions

Taken as a whole, the data gathered during background research, site reconnaissance, and soil sampling and analysis during the PEA were sufficient to perform a screening level health risk assessment for the site. Potential exposure pathways associated with soil (including dermal contact, incidental ingestion, and inhalation of fugitive dust) were evaluated during this process. The conclusions arising from the health screening are summarized below:

- Based on the selection criteria, nine metals including cadmium, total chromium, hexavalent chromium, copper, lead, mercury, selenium, vanadium, and zinc were retained for evaluation in the health screening
- Using the default residential exposure parameters, the sum of carcinogenic risks for the soil pathway is 7×10^{-6}, which slightly exceeds the de minimus value of 1×10^{-6}. Soil risks exceeding 1×10^{-6}, which represents the lower end of the US EPA discretionary range of 1×10^{-6} to 1×10^{-4}, are attributable to dermal contact and incidental ingestion of soil. The hazard index for all soil pathways is 0.9, which is less than the benchmark threshold of 1.0.
- Using DTSC-approved commercial/industrial exposure parameters, the sum of carcinogenic risks for the soil pathway is 9×10^{-7}, which lies well below the USEPA's de minimus value of 1×10^{-6} Under the commercial/industrial scenario, the hazard index for all soil pathways is 0 05, well below the benchmark threshold of 1.0.

The *Leadspread* model predicted blood-lead concentrations for the 99th percentile of adults and non-pica children; the predicted concentrations were 4.8 µg/dL and 14.8 µg/dL, respectively. Although the predicted blood lead levels for non-pica children lies above the 10 µg/dL action level (ATDSR, 1990), the current and anticipated future land use at the site (i.e., industrial) precludes exposure to lead by children. In contrast, the predicted blood lead level for adult receptors (a more plausible receptor given the use of the site) lies below the 10 µg/dL threshold.

11.2 Recommendations

Based on the PEA screening assessment, and employing a commercial/industrial exposure scenario, the health risk and hazard associated with inorganic COPCs in soil

and backfill at the site are within acceptable levels and no further investigation or remedial action is recommended. The commercial/industrial exposure scenario best reflects the current and anticipated future land use at the site, and the associated exposure potential. Furthermore, the commercial/industrial scenario comports with the neighboring land use, zoning restrictions, and present-day pattern of development in the site vicinity.

Notes:

LeadSpread Model Version 7.0 from California Department of Toxic Substances Control, 2000, Leadspread Lead Risk Assessment Spreadsheet, Version 7, available for download from the DTSC LeadSpread web site at http://www.cwo.com/~herd1/ledspred.htm

All default values for the LeadSpread Version 7.0 were used with the exception of lead in air and lead in soil dust that was the maximum detected concentration of lead in soil.

Value 0.05 µg/m^3 for lead in air is from SCAQMD Air station #87 (central Los Angeles). This is the nearest station with lead data. This was the monthly, quarterly, and annual average concentration for lead at this air station.

cm^2 - square centimeter
kg/day - kilograms per day
l/day - liter per day
m^3/day - cubic meters per day
mg/day - milligrams per day
µg/cm^2 - micrograms per square centimeter
µg/day - micrograms per day
µg/dl - micrograms per deciliter
µg/g - micrograms per gram
µg/kg - micrograms per kilogram
µg/L - micrograms per liter
µg/m^3 - micrograms per cubic milligram

TABLE 7
Exposure Parameters for Risk and Hazard Calculations
Fontana Steel, Inc.

Parameter	Definition	Units	Industrial Scenario
EF	Exposure frequency	day/year	250
ED	Exposure duration	years	25
SI	Soil ingestion from site	kg/day mg/day	5.0E-05 50
IR	Inhalation Rate - Daily	m^3/day	20.0
AT_c	Averaging time - carcinogens	days	25,550
AT_{nc}	Averaging time - noncarcinogens	days	9,125
BW	Body weight	kg	70
SA	Exposed surface area	cm^2/day	3,300
AF	Adherence factor	kg/cm^2 mg/cm^2	1.0E-06 1.00
PEF	Particulate emission factor	m^3/kg	1.3E+09

Notes:

cm^2/day - centimeters squared per day

kg - kilograms

kg/cm^2 - kilograms per squared centimeter

kg/day - kilograms per day

kg/m^3 - kilograms per cubic meter

$\mu g/m^3$ - micrograms per cubic meter

m^3/day - meters cubed per day

mg/cm^2 - milligrams per squared centimeter

mg/day - milligrams per day

TABLE 8
Worker Exposure Dose Estimates
Fontana Steel, Inc.

Zinc	2200.00	0.01	3.27E-07	1.17E-07	1.08E-03	3.84E-04	7.10E-04	2.54E-04

Notes:

Airborne Soil Particulate Inhalation Pathway Dose: $LADD/ADD = ((C_a / PEF) * IR * EF * ED)/(AT * BW)$

Soil Ingestion Pathway Dose: $LADD/ADD = (C_s * SI * EF * ED)/(AT * BW)$

Dermal Contact Pathway Dose: $LADD/ADD = (C_s * SA * AF * ABS * EF * ED)/(AT * BW)$

ABS - Dermal Absorption Fraction

ADD - Average Daily Dose, mg/kg-day, calculated with AT_{nc} *for AT value*

C_a *- concentration in air*

C_s *- concentration in soil*

LADD - Lifetime Average Daily Dose, mg/kg-day, calculated with AT_c *for AT value*

Definitions for other parameters are provided in Exposure Parameters Table.

Appendix A - Voluntary Cleanup Agreement

STATE OF CALIFORNIA
ENVIRONMENTAL PROTECTION AGENCY
DEPARTMENT OF TOXIC SUBSTANCES CONTROL

In the Matter of: Fontana Steel, Inc. (Historic Slag Trenches) 12451 Arrow Route Rancho Cucamonga California 91739 Project Proponent Fontana Steel, Inc. 12451 Arrow Route Rancho Cucamonga California 91739	)	Docket No. HSA-A 00/01-153 Voluntary Cleanup Agreement Health and Safety Code Section 25355.5(a)(1)(C)

I. INTRODUCTION

1.1 Parties. The California Environmental Protection Agency, Department of Toxic Substances Control (DTSC) enters into this Voluntary Cleanup Agreement (Agreement) with Fontana Steel Inc., 12451 Arrow Route, Rancho Cucamonga, California 91739 (Proponent).

1.2 Site. The property which is the subject of this Agreement is located at 12451 Arrow Route, Rancho Cucamonga, San Bernadino County, California 91739. For the purposes of this Agreement, the Site is defined as three subgrade trenches which were used for disposal of baghouse dust generated at the adjacent steel mill. The Site consists of approximately one-half acre and is identified by the metes and bounds described in Exhibit C

and incorporated herein. A diagram of the Site and a location map are attached as Exhibit A and Exhibit B.

1.3 Jurisdiction. This Agreement is entered into by DTSC and Proponent pursuant to Health and Safety Code (H&SC) section 25355.5(a)(1)(C). This section authorizes DTSC to enter into an enforceable agreement with Proponents to oversee the characterization and cleanup of a Site.

1.4 Purpose. The purpose of this Agreement is for the Proponent to conduct a Preliminary Endangerment Assessment under the oversight of DTSC. DTSC will determine what additional work, if any, will be required to complete the investigation of the Site. If appropriate, DTSC will issue a " No Further Action" letter based upon the PEA. The purpose of this Agreement is also for DTSC to provide a mechanism to assure reimbursement from the Proponent for DTSC's oversight costs.

II. BACKGROUND

2.1 Ownership. The Site is owned by CMC Steel Fabricators Inc., dba Fontana Steel, located at Steel Mill Road, Box 911, Seguin, Texas 78156-0911.

2.2 Substances Found at the Site. Reports, containing the results of environmental media sampling conducted at the Site, indicate that the soil may be contaminated with hazardous substances, including the following metals: arsenic, cadmium,

chromium lead, and zinc.

2.3 Physical Description. For the purposes of this Agreement, the Site is defined as three subgrade trenches which were used for disposal of baghouse dust generated at the adjacent steel mill. The trenches are located approximately 300 feet east of the western property line and 100 feet north of the southern property line of the Fontana Steel property. The Fontana Steel property is surrounded by heavy industrial facilities and vacant land. The property is bounded to the north and west by Arrow Route and vacant land, to the south by TAMCO Steel and to the east by Ameron Concrete & Steel Pipe, and to the southeast by Industrial Wire Products. There are no houses, schools, or churches near the facility.

2.4 Site History. The Fontana Steel property was covered by vineyards until 1955 and was vacant until construction of the existing structures by Fontana Steel, Inc. in 1988. The property had been owned by Ameron, Inc., until 1988. Ameron, the parent company of TAMCO Steel, used the property in the 1970s for material storage and for the disposal of baghouse dust.

III. AGREEMENT

3.0 **IT IS HEREBY AGREED THAT** DTSC will provide review and oversight of the response activities conducted by the Proponent in accordance with the Scope of Work contained in Exhibit D. The

Proponent shall conduct the activities in the manner specified herein and in accordance with the schedule specified in Exhibit E. All work shall be performed consistent with H&SC section 25300 et seq., as amended; the National Contingency Plan (40 Code of Federal Regulations (CFR) Part 300), as amended; U.S. EPA and DTSC Superfund guidance documents regarding site investigation and remediation.

3.1 Scope of Work and DTSC Oversight. DTSC shall review and provide Proponent with written comments on all Proponent deliverables as described in Exhibit D (Scope of Work) and other documents applicable to the scope of the project. DTSC shall provide oversight of field activities, including sampling and remedial activities, as appropriate. DTSC's completion of activities described above shall constitute DTSC's complete performance under this Agreement.

3.2 Additional Activities. Additional activities may be conducted and DTSC oversight provided by amendment to this Agreement or Exhibits hereto in accordance with Paragraph 3.17. If DTSC expects additional oversight costs to be incurred related to these additional activities, it will provide an estimate of the additional oversight cost to the Proponent.

3.3 Agreement Managers. Ms. Nennet Alvarez is designated by DTSC as its Manager for this Agreement. Mr. Tom Kaney is

assigned by the Proponent as its Manager for this Agreement. Each Party to this Agreement shall provide at least ten (10) days advance written notice to the other of any change in its designated manager.

3.4 Notices and Submittals. All notices, documents and communications required to be given under this Agreement, unless otherwise specified herein, shall be sent to the respective parties at the following addresses in a manner that produces a record of the sending of the notice, document or communication such as certified mail, overnight delivery service, facsimile transmission or courier hand delivery service:

3.4.1 To DTSC:

Nennet Alvarez, Chief
Attn: Daniel Zogaib, Project Manager
Southern California Cleanup Operations
Cypress Office
Department of Toxic Substances Control
5796 Corporate Avenue
Cypress, California 90630

3.4.2 To the Proponent:

Mr. Tom Kaney
Fontana Steel, Inc.
12451 Arrow Route
Rancho Cucamonga
California 91739

3.5 DTSC Review and Approval. If DTSC determines that any

report, plan, schedule or other document submitted for approval pursuant to this Agreement fails to comply with this Agreement or fails to protect public health or safety or the environment, DTSC may (a) Return comments to the Proponent with recommended changes; or (b) Modify the document as deemed necessary and approve the document as modified.

3.6 Communications. All DTSC approvals and decisions made regarding submittals and notifications will be communicated to the Proponent in writing by DTSC's Agreement Manager or his/her designee. No informal advice, guidance, or suggestions or comments by DTSC regarding reports, plans, specifications, schedules or any other writings by the Proponent shall be construed to relieve the Proponent of the obligation to obtain such written approvals.

3.7 Endangerment During Implementation. In the event DTSC determines that any activity (whether or not pursued in compliance with this Agreement) may pose an imminent or substantial endangerment to the health and safety of people on the Site or in the surrounding area or to the environment, DTSC may order the Proponent to stop further implementation of this Agreement for such period of time as may be needed to abate the endangerment.

3.8 Payment. The Proponent agrees to pay (1) all costs

incurred by DTSC in association with preparation of this Agreement and for review of documents submitted prior to the effective date of the Agreement, and (2) all costs incurred by DTSC in providing oversight pursuant to this Agreement including review of the documents described in Exhibit D and associated documents, and in providing oversight of field activities. An estimate of DTSC's oversight costs is attached as Exhibit E. It is understood by the parties that Exhibit E is an estimate and cannot be relied upon as the final cost figure. DTSC will bill the Proponent quarterly. Proponent agrees to make payment within sixty (60) days of receipt of DTSC's billing. Such billings will reflect any amounts that have been advanced to DTSC by the Proponent.

3.8.1 In anticipation of services to be rendered, Proponent shall make an advance payment of $13,651 to DTSC. That payment shall be made no later than ten (10) days after this Agreement is fully executed. If the Proponent's advance payment does not cover all costs payable to DTSC under this paragraph, Proponent agrees to pay the additional costs within sixty (60) days of receipt of a bill from DTSC.

3.8.2 If any bill is not paid by the Proponent within sixty (60) days after it is sent by DTSC, the Proponent may be deemed to be in material default of this Agreement.

3.8.3 All payments made by the Proponent pursuant to this Agreement shall be by a cashier's or certified check made payable to the "Department of Toxic Substances Control", and bearing on its face the project code for the site (Calstars Site Code # 400885-11) and the docket number (Docket No. HSA-A 00/01-153) of this Agreement. Payments shall be sent to:

Department of Toxic Substances Control
Accounting/Cashier
400 P Street, 4th Floor
P.O. Box 806
Sacramento, California 95812-0806

A photocopy of the check shall be sent concurrently to DTSC's Agreement Manager.

3.8.4 If the advance payment exceeds DTSC's actual oversight costs, DTSC will provide an accounting for expenses and refund the difference within one hundred-twenty (120) days after termination of this Agreement in accordance with Paragraph 3.18. In no other case shall the Proponent be entitled to a refund from DTSC or to assert a claim against DTSC for any amount paid or expended under this Agreement.

3.9 Condition Precedent. It is expressly understood and agreed that DTSC's receipt of the advance payment described in Paragraph 3.8.1. is a condition precedent to DTSC's obligation to provide oversight, review and/or comment on documents.

3.10 Record Retention. DTSC shall retain all cost records associated with the work performed under this Agreement for such time periods as may be required by applicable state law. The Proponent may request to inspect all documents which support DTSC's cost determination in accordance with the Public Records Act, Government Code section 6250 et seq.

3.11 Project Coordinator. The work performed pursuant to this Agreement shall be under the direction and supervision of a qualified project coordinator, with expertise in hazardous substance site cleanup. The Proponent shall submit: a) the name and address of the project coordinator; and b) in order to demonstrate expertise in hazardous substance site cleanup, the resume of the coordinator. The Proponent shall promptly notify DTSC of any change in the identity of the Project Coordinator. All engineering and geological work shall be conducted in conformance with applicable state law including but not limited to Business and Professions Code sections 6735 and 7835.

3.12 Access. Proponent shall provide, and/or obtain access to the Site and offsite areas to which access is necessary to implement this Agreement. Such access shall be provided to DTSC's employees, contractors, and consultants at all reasonable times. Nothing in this paragraph is intended or shall be construed to limit in any way the right of entry or inspection

that DTSC or any other agency may otherwise have by operation of any law. DTSC and its authorized representatives shall have the authority to enter and move freely about all property at the Site at all reasonable times for purposes including, but not limited to: inspecting records, operating logs, sampling and analytic data, and contracts relating to this Site; reviewing the progress of the Proponent in carrying out the terms of this Agreement; conducting such tests as DTSC may deem necessary; and verifying the data submitted to DTSC by the Proponent.

3.13 Sampling, Data and Document Availability. When requested by DTSC, the Proponent shall make available to DTSC, and shall provide copies of, all data and information concerning contamination at the Site, including technical records and contractual documents, sampling and monitoring information and photographs and maps, whether or not such data and information was developed pursuant to this Agreement.

3.14 Notification of Field Activities. The Proponent shall inform DTSC at least seven (7) days in advance of all field activities pursuant to this Agreement and shall allow DTSC and its authorized representatives to take duplicates of any samples collected by the Proponent pursuant to this Agreement.

3.15 Notification of Environmental Condition. The Proponent shall notify DTSC's Agreement Manager immediately upon

learning of any condition posing an immediate threat to public health or safety or the environment. Within seven (7) days of the onset of such a condition, the Proponent shall furnish a report to DTSC, signed by the Proponent's Agreement Manager, setting forth the events which occurred and the measures taken in the response thereto.

3.16 Preservation of Documentation. The Proponent shall maintain a central repository of the data, reports, and other documents prepared pursuant to this Agreement. All such data, reports and other documents shall be preserved by the Proponent for a minimum of six (6) years after the conclusion of all activities carried out under this Agreement. If DTSC requests that some or all of these documents be preserved for a longer period of time, the Proponent shall either comply with that request, deliver the documents to DTSC, or permit DTSC to copy the documents prior to destruction. The Proponent shall notify DTSC in writing at least ninety (90) days prior to the expiration of the six-year minimum retention period before destroying any documents prepared pursuant to this Agreement. If any litigation, claim, negotiation, audit or other action involving the records has been started before the expiration of the six year period, the related records shall be retained until the completion and resolution of all issues arising therefrom or

until the end of the six-year period, which ever is later.

3.17 Amendments. This Agreement may be amended or modified solely upon written consent of all parties. Such amendments or modifications may be proposed by any party and shall be effective the third business day following the day the last party signing the amendment or modification sends its notification of signing to the other party. The parties may agree to a different effective date.

3.18 Termination for Convenience. Except as otherwise provided in this Paragraph, each party to this Agreement reserves the right unilaterally to terminate this Agreement for any reason. Termination may be accomplished by giving a thirty (30) day advance written notice of the election to terminate this Agreement to the other Party In the event that this Agreement is terminated under this Paragraph, the Proponent shall be responsible for DTSC costs through the effective date of termination.

3.19 Exhibits. All exhibits attached to this Agreement are incorporated herein by this reference.

3.20 Time Periods. Unless otherwise specified, time periods begin from the date this Agreement is fully executed, and "days" means calendar days. "Business days" means all calendar days that are not weekends or official State holidays.

3.21 Proponent Liabilities. Nothing in this Agreement shall constitute or be considered a satisfaction or release from liability for any condition or claim arising as a result of Proponent's past, current, or future operations. Nothing in this Agreement is intended or shall be construed to limit the rights of any of the parties with respect to claims arising out of or relating to the deposit or disposal at any other location of substances removed from the Site.

3.22 Government Liabilities. The State of California (State) shall not be liable for any injuries or damages to persons or property resulting from acts or omissions by the Proponent or by related parties in carrying out activities pursuant to this Agreement, nor shall the State of California be held as a party to any contract entered into by the Proponent or its agents in carrying out the activities pursuant to this Agreement.

3.23 Third Party Actions. In the event that the Proponent is a party to any suit or claim for damages or contribution relating to the Site to which DTSC is not a party, the Proponent shall notify DTSC in writing within ten (10) days after service of the complaint in the third-party action. Proponent shall pay all costs incurred by DTSC relating to such third-party actions, including but not limited to responding to subpoenas.

3.24 Reservation of Rights. DTSC and the Proponent reserve the following rights.

3.24.1 DTSC reserves its right to pursue cost recovery under the Comprehensive Environmental Response, Compensation and Liability act of 1980 (CERCLA), as amended, the California Health and Safety Code section 25360, and any other applicable section of the law.

3.24.2 Nothing in this Agreement is intended or shall be construed to limit or preclude DTSC from taking any action authorized by law or equity to protect public health and safety or the environment and recovering the costs thereof.

3.24.3 Nothing in this Agreement shall constitute or be construed as a waiver of the Proponent's rights, (including any covenant not to sue or release) with respect to any claim, cause of action, or demand in law or equity that the Proponent may have against any "person", as defined in Section 101(21) of CERCLA, or Health and Safety Code section 25319, that is not a signatory to this Agreement.

3.24.4 By entering into this Agreement, Proponent does not admit to any fact, fault or liability under any statute or regulation.

3.25 Compliance with Applicable Laws. Nothing in this Agreement shall relieve the Proponent from complying with all

applicable laws and regulations, and the Proponent shall conform all actions required by this Agreement with all applicable federal, state and local laws and regulations.

3.26 California Law. This Agreement shall be governed, performed and interpreted under the laws of the State of California.

3.27 Severability. If any portion of this Agreement is ultimately determined not to be enforceable, that portion will be severed from the Agreement and the severability shall not affect the enforceability of the remaining terms of the Agreement.

3.28 Parties Bound. This Agreement applies to and is binding, jointly and severally, upon each signatory and its officers, directors, agents, receivers, trustees, heirs, executors, administrators, successors, and assigns, and upon any successor agency of the State of California that may have responsibility for and jurisdiction over the subject matter of this Agreement. No change in the ownership or corporate or business status of any signatory, or of the facility or Site shall alter any signatory's responsibilities under this Agreement.

3.29 Effective Date. The effective date of this Agreement is the date when this Agreement is fully executed.

3.30 Representative Authority. Each undersigned

representative of the parties to this Agreement certifies that she or he is fully authorized to enter into the terms and conditions of this Agreement and to execute and legally bind the parties to this Agreement.

3.31 Counterparts. This Agreement may be executed and delivered in any number of counterparts, each of which when executed and delivered shall be deemed to be an original, but such counterparts shall together constitute one and the same document.

LEGAL DESCRIPTION

The following describes a portion of Parcel 1 of Parcel Map 7822 as recorded in Book 82, Pages 48-51, located in the office of the County Recorder of the County of San Bernadino, State of California

Beginning at the southwesterly corner of said Parcel 1; thence,
Along the Southerly line of Parcel 1 a bearing of S 89° 41' 15" E for a distance of 328.57 feet to the True Point of Beginning; thence,

N 01° 27' 40" E for a distance of 254.51 feet to the southeast corner of the existing steel building support; thence,
N 01° 27' 40" E for a distance of 49.99 feet; thence,
S 89° 41' 15" E for a distance of 300.00 feet; thence,
S 01° 27' 40" W for a distance of 304.50 feet, more or less, to the southerly property line of said Parcel 1; thence,
Along said southerly property line N 89° 41' 15" W for a distance of 300.00 feet to the True Point of Beginning.

This description and accompanying Exhibit 'B' sketch were prepared by a licensed surveyor, Lester G. Everard on December 04, 2000

SCOPE OF WORK

EXHIBIT D

SCOPE OF WORK

The following Tasks will be completed as part of this Agreement:

TASK 1. Preliminary Endangerment Assessment (PEA).

Proponent shall conduct a PEA to determine whether a release or threatened release of hazardous substances exists at the Site, which poses a threat to human health or the environment. The PEA shall be conducted in accordance with the DTSC guidance manual for evaluating hazardous substance release sites, titled: "Preliminary Endangerment Assessment Guidance Manual," State of California, Environmental Protection Agency, Department of Toxic Substances Control (January 1994). Documents which may be required as part of the PEA are:

(a) PEA Workplan. This Workplan shall include a sampling plan designed to determine the type and general extent of contamination at the Site; a health and safety plan addressing health and safety issues and safe work practices; and a quality assurance/quality control plan to produce data of known quality.
(b) PEA Report. This report will document whether a release has occurred or threatened release exists, the threat the Site poses to human health and the environment, and whether further action is necessary.

PROJECT SCHEDULE

EXHIBIT F

PROJECT SCHEDULE

TASK	TIMELINE
Agreement Execution	December 2000
Proponent to submit advance payment.	Within 10 days of Agreement execution.
Proponent to submit all existing data and reports of previous investigations	Within 10 days of Agreement execution
If appropriate, a scoping meeting may be scheduled to coordinate project activities	Within 15 days of Agreement execution
DTSC to review and comment on existing data and reports of previous investigations and determine what additional work, if any, will be required to complete the investigation of the Site	Within 15 days of receiving documents to be reviewed
DTSC to review and comment on PEA Report	Within 30 days of receiving PEA Report

Sampled: 04/13/01
Received: 04/13/01

DATA QUALIFIERS AND DEFINITIONS

M1	The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M2	The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
R	The RPD exceeded the method control limit due to sample matrix effects. The individual analyte QA/QC recoveries, however, were within acceptance limits.
RL-1	Reporting limit raised due to sample matrix interference.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
NR	Not reported.
RPD	Relative Percent Difference

FONTANA STEEL, INCORPORATED PROPERTY
12451 ARROW ROUTE RANCHO CUCAMONGA, CALIFORNIA
VOLUNTARY CLEANUP AGREEMENT (VCA) DOCKET NO. HSA-A 00/01-153

Dear Mr. Kaney:

The Department of Toxic Substances Control (DTSC) has completed review of the Preliminary Endangerment Assessment (PEA) dated September 2001 (revised October 2001) for the subject Site. The Site referenced by this letter, according to Exhibit A of the above mentioned VCA, is a portion of Parcel Map 7822 as recorded in Book 82, pages 48-51, located in the office of the County Recorder of the County of San Bernardino, California. A copy of the legal description of the Site is enclosed.

DTSC provided guidance and oversight for the development and implementation of the PEA. The refereneced Site was once used as a disposal area for electric arc furnace dust. Soil sampling and analysis were conducted for the following chemicals of concern: antimony, arsenic, barium, beryllium, cadmium, chromium (total and hexavalent), cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, titanium, vanadium, and zinc. The PEA compared the chemical levels found with health based criteria for unrestricted land use and evaluated the threat of these chemicals to public health and the environment.

Based on DTSC's review of the PEA, the Site does not appear to pose a threat to human health or the environment under any land use. Therefore, DTSC determines that no further action is necessary with respect to investigation and remediation of hazardous substances at the Site.

As with any real property, if previously unidentified contamination is discovered at the Site, additional assessment, investigation and/or cleanup may be required.

If you have any questions regarding this determination, please contact Dan Zogaib, Project Manager, at (714) 484-5483, or me at (714) 484-5459.

Sincerely,

Thomas M. Cota, Chief
Southern California Cleanup Operations Branch - Cypress

ENVIRONMENTAL PROTECTION AGENCY

DEPARTMENT OF TOXIC SUBSTANCES CONTROL

In the Matter of: BTC III Arrow Route 12451 Arrow Route Rancho Cucamonga, California 91739 Proponent: BTC III Arrow Route CC LP 4675 MacArthur Court, Suite 625 Newport Beach, California 92660	Docket No. HSA-FY22/23-019 Standard Voluntary Agreement Health and Safety Code Section 25355.5(a)(1)(C)”

The California Department of Toxic Substances Control (DTSC) and BTC III Arrow Route CC LP (Proponent) enter into this Standard Voluntary Agreement (Agreement) and agree as follows:

1. Site. This Agreement applies to the Site located at 12451 Arrow Route; Rancho Cucamonga, in San Bernardino County, California 91739 (Site), identified by San Bernardino County Assessor's Parcel Number(s) 0229-121-34, 0229-121- 33, 0229-131-19, and 0229-121-35, and any off-site area to which hazardous substances have or may have migrated from the Site. The Site is approximately 95.0 acres in size and is bounded to the north by Arrow Route and to the south by the Atchison Topeka and Santa Fe Railroad. The Site and surrounding area are zoned for commercial/industrial land use. Parallel Products (a chemical manufacturer) is located adjacent to the west of the Site. Adjacent to the north is a warehousing/distribution facility. Warehousing and distribution facilities are located to the east of the subject property. A former Southern California Edison generating station, which is currently under industrial redevelopment, is located across the railroad tracks to the south of the Site. The closest residential properties are located approximately 0.4 miles northwest of the Site. No churches or schools have been identified within 0.5 miles from the Site. A Site location map and a Site diagram are attached as Exhibits A and B.

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

2. Jurisdiction. This Agreement is entered into by DTSC and Proponent pursuant to Health and Safety Code section 25355.5(a)(1)(C), which authorizes DTSC to enter into an enforceable agreement to oversee investigation and/or remediation of a release or a threatened release of any hazardous substance at or from the Site.

3. Purpose. The purpose of this Agreement is for Proponent to investigate, remediate, and/or evaluate a release, a threatened release, or a potential release of any hazardous substance at or from the Site under the oversight of DTSC. The purpose of this Agreement is also for DTSC to obtain reimbursement from Proponent for DTSC's oversight costs incurred pursuant to this Agreement.

4. Ownership and Notification.

4.1. The Site is owned by BTC III Arrow Route CC LP.

4.2. Prior to DTSC providing oversight or review or comment on any document, Proponent shall provide DTSC with all of the following: (a) proof of the identity of all current record owners of fee title to the Site and their mailing addresses; (b) written evidence that the owners of record have been sent a notice that describes the actions completed or proposed by Proponent; and (c) an acknowledgment of the receipt of the notice required in subparagraph (b) from the property owners or proof that Proponent has made reasonable efforts to deliver the notice to the property owner and was unable to do so.

4.3. Proponent shall notify DTSC of any changes in ownership of the Site subsequent to the Effective Date of this Agreement and provide written evidence that Proponent notified the new owner(s) of record of the actions completed or proposed by Proponent under this Agreement.

5. Substances Found at the Site. Based on the information available to DTSC and Proponent, the Site is or may be contaminated with hazardous substances, including volatile organic compounds, pesticides/herbicides, petroleum hydrocarbons and metals.

6. Scope of Work and DTSC Oversight. DTSC shall review and provide Proponent with written comments on all Proponent’s deliverables as described in Exhibit C (Scope of Work) and other documents applicable to the scope of the project. DTSC shall provide oversight of field activities, including sampling and remedial activities, as appropriate. Proponent agrees to perform all the work required by this Agreement. Proponent shall perform the work in accordance with applicable local, state and federal

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

statutes, regulations, ordinances, rules and guidance documents, in particular, Health and Safety Code section 25300 et seq., as amended.

7. Additional Activities. DTSC and Proponent may amend this Agreement to include additional activities in accordance with Paragraph 18 of this Agreement. If DTSC expects to incur additional oversight costs for these additional activities, it will provide an estimate of the additional oversight costs to Proponent.

8. Endangerment During Implementation.

8.1 Proponent shall notify DTSC's Project Manager immediately upon learning of any condition that may pose an immediate threat to public health or safety or the environment. Within seven days of the onset of such a condition, Proponent shall furnish a report to DTSC, signed by Proponent's Project Manager, setting forth the conditions and events that occurred and the measures taken in response thereto.

8.2 In the event DTSC determines that any activity (whether or not pursued in compliance with this Agreement) may pose an imminent or substantial endangerment to the health or safety of people on the Site or in the surrounding area or to the environment, DTSC may order Proponent to conduct additional activities in accordance with Paragraph 7 of this Agreement or to stop further implementation of this Agreement for such period of time as may be needed to abate the endangerment. DTSC may request that Proponent implement interim measures to address any immediate threat or imminent or substantial endangerment.

9. Access. Proponent shall provide, and/or obtain access to the Site and take all reasonable efforts to obtain access to offsite areas to which access is necessary to implement the Agreement. Such access shall be provided to DTSC's employees, contractors, and consultants at all reasonable times. Nothing in this paragraph is intended or shall be construed to limit in any way the right of entry or inspection that DTSC or any other agency may otherwise have by operation of law.

10. Sampling, Data and Document Availability. When requested by DTSC, and as necessary to implement the Agreement, Proponent shall make available for DTSC's inspection, and shall provide copies of, all data and information concerning contamination at or from the Site, including technical records and contractual documents, sampling and monitoring information and maps, whether or not such data and information was developed pursuant to this Agreement (subject to applicable attorney-client or work product privileges that may apply). For all final reports,

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

Proponent shall submit one hard (paper) copy and one electronic copy with all applicable signatures and certification stamps as a text-readable Portable Document Formatted (pdf) file compatible with Adobe Acrobat or a formatted file compatible with Microsoft Word. Proponent shall provide the electronic copy via EnviroStor's Electronic Submittal of Information (ESI) portal unless otherwise instructed by DTSC. Additionally, Proponent shall upload sampling data to the ESI portal in the Electronic Deliverable Format (EDF). Proponent reserves the right to claim confidential business information with respect to such documents.

11. Photographs and Drawings. Proponent shall allow DTSC to take photographs of the Site, as necessary to implement the Agreement, when DTSC accesses the Site pursuant to Paragraph 9. DTSV shall request written approval from Proponent prior to any distribution, transmission, publication, or copying, in any medium, either in whole or in part, the photographs or drawings DTSC obtains pursuant to this paragraph, including, but not limited to, project documentation, public outreach, web and social media content, and marketing materials. Proponent reserves the right to claim confidential business information with respect to such photographs and drawings.

12. Record Preservation. Proponent shall retain, during the implementation of this Agreement and for a minimum of six years after its termination, all data, reports, and other documents that relate to the performance of this Agreement. If DTSC requests that some or all of these documents be preserved for a longer period of time, Proponent shall either comply with the request, deliver the documents to DTSC, or permit DTSC to copy the documents at Proponent's expense prior to destruction.

13. Notification of Field Activities. Proponent shall inform DTSC at least seven days in advance of all field activities pursuant to this Agreement and shall allow DTSC and its authorized representatives to take duplicates of any samples collected by Proponent pursuant to this Agreement.

14. Project Managers. Within 14 days of the effective date of this Agreement, DTSC and Proponent shall each designate a Project Manager and shall notify each other in writing of the Project Manager selected. The Proponent's Project Manager shall have the technical expertise in project management, regulatory compliance, and hazardous substance site investigation and remediation sufficient to fulfill his or her responsibilities. Each Project Manager shall be responsible for overseeing the implementation of this Agreement and for designating a person to act in his/her absence. All communications between DTSC and Proponent, and all notices,

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

documents and correspondence concerning the activities performed pursuant to this Agreement shall be directed through the Project Managers. Each party may change its Project Manager with at least seven days prior written notice.

15. Proponent's Consultant and Contractor. All engineering work performed pursuant to this Agreement shall be under the direction and supervision of a registered professional engineer licensed in California, with expertise in hazardous substance site investigation and remediation. All geological work performed pursuant to this Agreement shall be under the direction and supervision of a registered professional geologist licensed in California, with expertise in hazardous substance site investigation and remediation. Proponent's contractors and consultants shall have the technical expertise sufficient to fulfill his or her responsibilities. Within 14 days of the effective date of this Agreement, Proponent shall notify DTSC's Project Manager in writing of the name, title, and qualifications of the registered professional engineer and/or professional geologist and of any contractors or consultants and their personnel to be used in carrying out the work under this Agreement in conformance with applicable state law, including but not limited to, Business and Professions Code sections 6735 and 7835.

16. DTSC Review and Approval. All work performed pursuant to this Agreement is subject to DTSC's review and approval. If DTSC determines that any report, plan, schedule or other document submitted for approval pursuant to this Agreement fails to comply with this Agreement or fails to protect public health or safety or the environment, DTSC may (a) return comments to Proponent with recommended changes and a date by which the Proponent must submit to DTSC a revised document incorporating or addressing the recommended changes; or (b) modify the document in consultation with Proponent and approve the document as modified. All DTSC approvals and decisions made regarding submittals and notifications will be communicated to Proponent in writing by DTSC's Branch Chief or his/her designee. No informal advice, guidance, suggestions or comments by DTSC regarding reports, plans, specifications, schedules or any other writings by the Proponent shall be construed to relieve Proponent of the obligation to obtain such written approvals.

17. Payment.

17.1 Proponent is required to pay (a) all costs incurred by DTSC in association with preparation of this Agreement, and for oversight activities, including review of documents, conducted prior to the effective date of this Agreement; and (b) all costs

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

incurred by DTSC in providing oversight pursuant to this Agreement, including review of the documents and activities described in Exhibit C and associated documents, and oversight of field activities. Costs incurred include interest on unpaid amounts that are billed and outstanding more than 60 days from the date of the invoice.

17.2 An estimate of DTSC's oversight costs is attached as Exhibit D. It is understood by the parties that Exhibit D is an estimate and cannot be relied upon as the final cost figure. DTSC may provide an adjusted cost estimate as the work progresses. Prior to adjusting the cost estimate, DTSC will provide Proponent with a written notice and a detailed explanation of the change to the cost estimate. DTSC will bill Proponent quarterly. Proponent agrees to make payment within 30 days of receipt of DTSC's billing. Such billings will reflect any amounts that have been advanced to DTSC by Proponent.

17.3 In anticipation of oversight activities to be conducted, Proponent shall make an advance payment of $42,357 to DTSC no later than 10 days after this Agreement is fully executed. It is expressly understood and agreed that DTSC's receipt of the entire advance payment as provided in this paragraph is a condition precedent to DTSC's obligation to provide oversight, review of or comment on documents. DTSC will draw-down from the advance payment, which will be documented in DTSC's invoice. When the advance payment is depleted, DTSC will continue to request payment through the invoice process.

17.4 All payments made by Proponent pursuant to this Agreement shall be by check payable to the "Department of Toxic Substances Control" and bearing on its face the project code for the Site (Site # 400885) and the docket number HSA-FY22/23-019 of this Agreement. Upon request by Proponent, DTSC may accept payments made by credit cards or electronic funds transfer. Payments by check shall be sent to:

Accounting Office
Department of Toxic Substances Control
P.O. Box 806
Sacramento, California 95812-0806

A photocopy of the check shall be sent concurrently to DTSC's Project Manager.

17.5 DTSC shall retain all cost records associated with the work performed under this Agreement as may be required by state law. DTSC will make all documents

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

that support DTSC's cost determination available for inspection upon request in accordance with the Public Records Act, Government Code section 6250 et seq.

17.6 In addition to direct costs incurred by DTSC, DTSC also bills its indirect costs associated with direct staff costs. Such indirect costs are only applied to DTSC direct labor costs and not to DTSC contractor costs or DTSC staff travel costs. DTSC calculates separate indirect cost rates (salary/benefits and general operating costs) for each of its major programs (Site Mitigation and Restoration, Hazardous Waste Management, and Safer Products and Workplaces Programs). Because the ratio of direct to indirect costs varies among DTSC's various programs, the indirect cost rates associated with those programs will also vary. Pursuant to Health and Safety Code section 25269.4, the Department calculates and updates its indirect cost rates every six months. These indirect rates are reflected in the Cost Estimate in Exhibit D.

18. Amendments. This Agreement may be amended in writing by mutual agreement of DTSC and Proponent. Such amendment shall be effective the third business day following the day the last party signing the amendment sends its notification of signing to the other party. The parties may agree to a different effective date.

19. Termination for Convenience.

19.1 Except as otherwise provided in this paragraph, each party to this Agreement reserves the right to unilaterally terminate this Agreement for any reason. Termination may be accomplished by giving a 30-day advance written notice of the election to terminate this Agreement to the other party. In the event that this Agreement is terminated under Paragraph 19.1, Proponent shall be responsible for DTSC costs through the effective date of termination.

19.2 If operation and maintenance activities are required for the final remedy, Proponent may not terminate the Agreement under Paragraph 19.1 upon DTSC's approval of an Operation and Maintenance Plan as proposed by Proponent, unless an Operation and Maintenance Agreement is entered into between DTSC and Proponent or between DTSC and a party responsible for the required operation and maintenance activities.

20. Calendar of Tasks and Schedules. The attached Exhibit E (Calendar of Tasks and Schedules) is merely for the convenience of listing in one location the submittals required by this Agreement. The Calendar of Tasks and Schedules lists activities specific to this project based on the available information. DTSC and

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

Proponent shall make a reasonable effort to complete the activity within the schedule outlined in Exhibit E. A schedule for each related activity shall be established as part of this Agreement.

If Proponent is unable to meet the activity's schedule, Proponent will notify DTSC's Project Manager 10 days prior to the scheduled action or submittal date. If DTSC is unable to meet the activity's schedule, DTSC will notify Proponent 10 days prior to the scheduled action or submittal date.

21. Incorporation of Exhibits, Plans and Reports. All exhibits are incorporated into this Agreement by reference. All plans, schedules and reports that require DTSC's approval and are submitted by Proponent pursuant to this Agreement are incorporated in this Agreement upon DTSC's approval.

22. Reservation of Rights. DTSC reserves all of its statutory and regulatory powers, authorities, rights, and remedies under applicable laws to protect public health or the environment, including the right to recover its costs incurred therefor. Proponent reserves all of its statutory and regulatory rights, defenses and remedies available to the Proponent under applicable laws.

23. Non-Admission of Liability. By entering into this Agreement, Proponent does not admit to any finding of fact or conclusion of law set forth in this Agreement or any fault or liability under applicable laws.

24. Proponent Liabilities. Nothing in this Agreement shall constitute or be considered a covenant not to sue, release or satisfaction from liability by DTSC for any condition or claim arising as a result of Proponent's past, current, or future operations or ownership of the Site.

25. Government Liabilities. The State of California or DTSC shall not be liable for any injuries or damages to persons or the Site resulting from acts or omissions by Proponent or by related parties in carrying out activities pursuant to this Agreement, nor shall the State of California or DTSC be held as a party to any contract entered into by Proponent or its agents in carrying out the activities pursuant to this Agreement.

26. Third Party Actions. In the event that Proponent is a party to any suit or claim for damages or contribution relating to the Site to which DTSC is not a party, Proponent shall notify DTSC in writing within 10 days after service of the complaint in the third-party action. Proponent shall pay all costs incurred by DTSC relating to such third-party actions, including but not limited to responding to subpoenas.

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

27. California Law. This Agreement shall be governed, performed and interpreted under the laws of the State of California.

28. Severability. If any portion of this Agreement is ultimately determined not to be enforceable, that portion will be severed from the Agreement and the severability shall not affect the enforceability of the remaining provisions of the Agreement.

29. Parties Bound. This Agreement applies to and is binding, jointly and severally, upon Proponent and its agents, receivers, trustees, successors and assignees, and upon DTSC and any successor agency that may have responsibility for and jurisdiction over the subject matter of this Agreement. Proponent shall ensure that its contractors, subcontractors and agents receive a copy of this Agreement and comply with this Agreement.

30. Effective Date. The effective date of this Agreement is the date of signature by DTSC's authorized representative after this Agreement is first signed by Proponent's authorized representative. Except as otherwise specified, "days" means calendar days.

31. Representative Authority. Each undersigned representative of the party to this Agreement certifies that she or he is fully authorized to enter into the terms and conditions of this Agreement and to execute and legally bind the party to this Agreement.

32. Counterparts. This Agreement may be executed and delivered in any number of counterparts, each of which when executed and delivered shall be deemed to be an original, but such counterparts shall together constitute one and the same document. This Agreement and documents related to it may be executed and transmitted by facsimile or pdf copy, which copies shall be deemed to be, and utilized in all respects as, an original. However, Proponent must provide the wet-inked signed original of each counterpart to DTSC by mail within 14 calendar days of signing.

EXHIBIT C
SCOPE OF WORK

In the event that DTSC determines that further action is needed upon completion of Task xxx, the following additional tasks may be requested. Additional tasks will be included as a new cost estimate and scope of work to this Agreement.

The following tasks will be completed as part of this Agreement:

TASK 1 Document Review

Proponent will submit to DTSC available background information, environmental assessment reports, and any other information pertinent to the hazardous substance management, release, characterization, and/or cleanup of the Site. DTSC may review some or all the information to identify areas and media of concern and to determine the additional work, if any, required to complete the investigation (which includes assessment/evaluation activities not requiring field sampling) and/or remediation of the Site. Proponent may also provide environmental investigation and/or cleanup-related documents for a specific review to determine if actions conducted without DTSC oversight were protective of human health and the environment. The information submitted by Proponent shall be reviewed for conformance with DTSC standards for quality assurance/quality control, investigation, and remediation.

Based on DTSC's review, these documents may be considered to be Preliminary Endangerment Assessment equivalent documents.

Subsequent to its review, DTSC may issue correspondence to the Proponent describing deficiencies of the environmental investigation or cleanup, indicate a limited concurrence with the findings, or make a different determination based on specific circumstances and documents included in the review. For projects where the scope of work is limited to document review only, a formal scoping meeting may not be required, based on mutual agreement between DTSC and the Proponent.

Documents included in this task are:

1. Phase I Environmental Site Assessment (Roux Associates, Inc., October 28, 2021)
2. Phase II Environmental Site Assessment Report (Roux Associates, Inc. 2022)
3. Soil Vapor Extraction Pilot Test Technical Memorandum (Roux Associates, Inc. 2022)
4. Preliminary Endangerment Assessment Equivalent Report (Roux Associates, Inc. 2022)

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

TASK 2 Scoping Meeting

Scoping meetings are required for all voluntary projects where investigation or cleanup is an anticipated aspect of the scope of work; these are conducted shortly after the agreement has been executed, or depending on specific circumstances, may be held during the agreement-negotiation period. During the scoping meeting, potential issues, concerns, opportunities to optimize and expedite the investigation (which includes assessment/evaluation activities not requiring field sampling) and cleanup process, as applicable, and end-points/exit criteria will be discussed.

An abbreviated version of the scoping meeting is recommended prior to submittal of work plans, reports and cleanup plans to ensure that both the Proponent and DTSC are moving forward with clear and well-defined expectations.

The following elements may be addressed during the Scoping Meeting:

a) **Site Objectives**: current and proposed future land uses and redevelopment plans and timetables, etc.

b) **Site History**: historic operations and land uses, chemical uses, hazardous substance releases, permits, etc.

c) **Conceptual Site Model**: identification of size, location, geology, lithology, hydrogeology, areas of concern, contaminants of concern, recognized environmental conditions, historic sampling locations and results, data gaps, risk assessments, offsite concerns, etc.

d) **Scope of Work**: scope of work (phases) as specified in the Agreement based on the available information and preliminary document review; may include discussion about the cleanup determination (e.g., "No Further Action") and decision document proposed for the Site, e.g., Preliminary Endangerment Assessment, Removal Action Work Plan for removal action with costs below $2 million, or Remedial Action Plan for projects exceeding $2 million in capital costs, or proposing innovative technologies, etc.

e) **Data Quality Objectives and Remedial Action Objectives**: discussion of specific Data Quality Objectives to ensure that appropriate data of sufficient quality is collected to facilitate decision-making; discussion of potential cleanup goals and objectives.

f) **Risk Assessment and Models**: evaluation of published screening levels, if available and appropriate, or use of project-specific risk assessments; discuss risk management and risk communication strategies.

g) **California Environmental Quality Act (CEQA) requirements**: identification of project-specific requirements where applicable, e.g., cultural resources, traffic concerns, ecological resource protection, etc.; identify what DTSC's CEQA role is

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

predicted to be, which documents will be developed, and how to integrate CEQA needs within the overall schedule.

h) **Public Participation & Tribal Outreach**: discussion of community and tribal involvement and public outreach process, methods, translation needs, and schedule.

i) **Schedule**: agreed-upon submittal and review dates and timelines for work plans, fact sheets, reports and other key documents; development of optimal sequencing of activities to efficiently reach project goals.

j) **Resources**: Review checklists, quick reference sheets, and templates are available for use by those developing documents for DTSC review and approval. (These tools will be periodically updated and may be made available to Proponents by the DTSC Project Manager)

k) **Exit Strategy & Completion of Agreement**: proposed future land use, Site acquisition and construction dates, funding limitations or requirements, approval for occupancy, etc. to ensure alignment of Proponent and DTSC goals.

l) **Site Visit:** A visit to the Site will be conducted to verify and confirm current conditions and project discussions; the visit may take place on the same date as the scoping meeting. Subsequent visits may be needed if Site conditions change, if new staff are assigned, or for field oversight.

TASK 3 Supplemental Site Investigation (SSI)

3.1 SSI Work Plan. Proponent will submit a work plan that describes the activities proposed to further characterize soil, soil gas, surface water and/or groundwater. The work plan should also include a health and safety plan, quality assurance/quality control plan, sampling plan, and implementation schedule. Proponent will begin implementation of the approved work plan in accordance with the approved implementation schedule. DTSC may provide oversight of work plan implementation.

3.2 SSI Report. Proponent will submit an SSI Report that, at a minimum, presents the data, summarizes the findings of the investigation, validates the data, and includes recommendations and conclusions.

TASK 4 Health Risk Assessment

Proponent will conduct a risk evaluation consistent with U.S. EPA Risk Assessment Guidance for Superfund and the most current version of the applicable DTSC guidance documents. This evaluation must identify chemicals of concern and potential routes of exposure; characterize the potential risk and/or non-cancer hazard; evaluate potential threats to environmental receptors; consider existing and contemplate uses; and identify cleanup goals.

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

TASK 5 Remedy Selection Document

5.1 Removal Action Work Plan. If DTSC determines a removal action is appropriate, Proponent will prepare a Removal Action Work Plan (RAW) in accordance with Health and Safety Code sections 25323.1 and 25356.1. The Removal Action Work Plan will include:

- A description of the onsite contamination;
- The goals to be achieved by the removal action;
- An analysis of the alternative options considered and rejected and the basis for that rejection. This should include a discussion for each alternative which covers its effectiveness, implementability and cost;
- A description of the recommended alternative (including any required land use covenants, financial assurance, and operation and maintenance plan and agreement requirements).
- Administrative record list;
- Sampling and Analysis Plan with corresponding Quality Assurance Plan to confirm the effectiveness of the RAW, if applicable; and
- Health and Safety Plan describing methods that will be employed during the removal action to ensure the health and safety of workers and the public during the removal action. A detailed community air monitoring plan shall be included if requested by DTSC.

5.2 Remedial Action Plan. If the proposed removal action does not meet the requirements of Health and Safety Code section 25356.1(h), Proponent will prepare a Remedial Action Plan (RAP) in accordance with Health and Safety Code section 25356.1(c) for DTSC review and approval.

The RAP summarizes the results of the site characterization, risk evaluation and feasibility study and sets forth in detail appropriate steps to remedy soil, surface water and groundwater contamination at the Site and adjacent areas. In addition, the RAP shall contain a schedule for implementation of all proposed removal and remedial actions.

TASK 6 California Environmental Quality Act (CEQA)

In order to meet CEQA obligations, DTSC will prepare the necessary CEQA documents. If required, the Proponent shall submit the information necessary for DTSC to prepare these documents.

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

TASK 7 Remedial Design and Implementation Plan

Proponent will either (a) prepare and submit a Remedial Design and Implementation Plan (RDIP) in accordance with the agreed upon schedule contained in the approved Remedy Selection Document; or (b) depending on the complexity of the proposed removal or remedial action, incorporate the factors typically addressed in a RDIP into the Remedy Selection Document.

The factors typically addressed in a RDIP are:

a) technical and operational plans and engineering designs for implementation of the approved remedial or removal action alternative(s);
b) a schedule for implementing the construction phase;
c) a description of the construction equipment to be employed;
d) a site specific hazardous waste transportation plan (if necessary);
e) any required registration requirements for contractors, transporters and other persons conducting the removal and remedial activities for the Site;
f) post-remedial sampling and monitoring procedures for air, soil, surface water and groundwater;
g) operation and maintenance procedures and schedules;
h) a health and safety plan; and
i) a community air monitoring plan, if required by DTSC.

TASK 8 Implementation of Remedy

Upon DTSC approval of the final RAW or RAP and RDIP (if required), the Proponent shall implement the remedy, as approved.

TASK 9 Remedial Action Completion Report

Proponent shall submit a report documenting the implementation of the final RAW or RAP and RDIP and noting any deviations from the approved plan.

During implementation of the final RAW or RAP and RDIP, DTSC may specify such additions, modifications and revisions to the RAW or RDIP as deemed necessary to protect human health and safety or the environment or to implement the RAW or RAP.

TASK 10 Public Participation

DTSC requires that specific public engagement activities be conducted for projects undergoing a PEA, RAW, or RAP. However, based on the level of community interest, media interest, sensitive land uses, demographics and other factors, as determined by DTSC, public engagement activities may be requested for other projects types as well.

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

Proponent will be responsible for all costs associated with the translation and/or interpretation of public participation content required under DTSC's policies, procedures, guidance documents, and state and federal law.

The following tasks apply only if a RAW or RAP is being required by DTSC:

10.1 Proponent shall conduct appropriate public participation activities given the nature of the community surrounding the Site and the level of community interest, if needed. Proponent shall work cooperatively with DTSC to ensure that the affected and interested public and community are involved in DTSC's decision-making process. Any such public participation activities shall be conducted in accordance with Health and Safety Code sections 25358.7 (and 25356.1(e), if conducting a RAP) and with DTSC's review and approval.

10.2 A scoping meeting regarding the RAW or RAP will include a discussion on the appropriate activities that will be conducted to address public participation.

10.3 DTSC may conduct an assessment of community interest in the Site, which may include, but will not be limited to, the development of a survey, outreach to local elected and public officials and community members, distribution of the survey through mail and/or social media, analysis of survey results, and community interviews. Results of the survey will be shared with the Proponent and should be included in the community profile.

10.4 Proponent, working collaboratively with DTSC, shall prepare a community profile to examine the level of the community's knowledge of the Site; the types of community concerns; the proximity of the Site to homes and/or schools, day care facilities, churches, etc.; the current and proposed use of the Site; media interest; surrounding land uses; demographic profile and languages; CalEnviroScreen results; information repositories; recommended public engagement activities; and involvement of community groups and elected officials. The community profile may also include a quarter-mile radius mailing list for the Site, a list of applicable elected officials, and any known community members who may have expressed an interest in the Site.

10.5 Proponent, working collaboratively with DTSC, shall develop and submit fact sheets or community updates to DTSC for review and approval when specifically requested by DTSC. Proponent may be responsible for printing and distribution of fact sheets or community updates upon DTSC approval using the approved community mailing list.

10.6 Proponent, as directed by DTSC, shall publish, in a major local newspaper(s), a public notice announcing the availability of the RAW/RAP for public review and comment. The public comment period shall last a minimum of thirty (30) days.

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

10.7 DTSC may require that Proponent hold a public meeting to inform the public of the proposed activities and to receive public comments on the RAW/RAP.

10.8 After the close of the public comment period, DTSC will prepare a response to the public comments received. If required, Proponent shall submit the information necessary for DTSC to prepare this document.

10.9 If appropriate, Proponent will revise the RAW/RAP on the basis of comments received from the public and submit the revised RAW/RAP to DTSC for review and approval. If significant or fundamental changes are required, additional public participation activities, including an additional review and comment period, may be required. Proponent will also notify the public of any significant changes from the action proposed in the RAW/RAP.

TASK 11 Tribal Outreach and Consultation

DTSC's assigned Project Manager will coordinate with DTSC's Office of Environmental Equity to ensure compliance with DTSC's Tribal Consultation Policy. This process may include consultation with California tribes to determine whether or not they have an interest in Site activities.

TASK 12 Land Use Covenant

A land use covenant (LUC) pursuant to California Code of Regulations, title 22, section 67391.1 may be necessary to ensure full protection of the environment and human health. DTSC may require such a LUC in a DTSC-approved remedy based on a RAW, RAP, PEA, or other decision document. If Proponent is the owner of the Site, Proponent agrees to record the LUC as approved by DTSC within ten (10) days of receipt of a fully executed original.

If the Proponent is not the owner of the Site and a LUC is required, Proponent will work with the owner to provide DTSC with written confirmation that the owner will cooperate in implementing the DTSC-approved remedy, which may include a LUC. The Proponent must provide DTSC with the owner's written confirmation prior to the date the draft decision document is to be circulated for public notice and comment. If the Proponent is unable to provide DTSC with written confirmation from the owner, a LUC may not be executed for the Site and the proposed remedy will be reevaluated.

TASK 13 Operation and Maintenance (O&M)

Proponent shall comply with any and all operation and maintenance requirements in accordance with the final RAW, final RAP, or a DTSC-approved RDIP or O&M Plan. If deemed necessary, DTSC may require Proponent to enter into an O&M Agreement with DTSC.

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

TASK 14 Financial Assurance

Proponent shall establish and maintain a financial assurance mechanism pursuant to California Health and Safety Code section 25355.2 and DTSC's costs incurred in overseeing these activities prior to implementing any required O&M activities, LUC-related activities, and five-year review activities. Proponent shall demonstrate and maintain one or more of the financial assurance mechanisms set forth in subdivisions (a) to (e), inclusive, of Section 66265.143 of Title 22 of the California Code of Regulations.

TASK 15 Discontinuation of Remedial Technology

Any remedial technology employed in implementation of the final RAP/RAW shall be left in place and operated by Proponent until and except to the extent that DTSC authorized Proponent in writing to discontinue, move or modify some or all of the remedial technology because Proponent has met the criteria specified in the final RAW/RAP for its discontinuance, or because the modifications would better achieve the goals of the final RAW/RAP.

TASK 16 Health and Safety Plan

The Proponent will submit a Site Health and Safety Plan in accordance with California Code of Regulations, Title 8, section 5192. The Health and Safety Plan shall be submitted before field activities begin.

TASK 17 Quality Assurance/Quality Control (QA/QC) Plan

All sampling and analysis conducted by Proponent under this Agreement shall be performed in accordance with a QA/QC Plan submitted by Proponent and approved by DTSC. The QA/QC Plan will describe:

a) The procedures for the collection, identification, preservation and transport of samples;
b) The calibration and maintenance of instruments;
c) The processing, verification, storage and reporting of data, including chain of custody procedures and identification of qualified person(s) conducting the sampling and of a laboratory certified or approved by DTSC pursuant to Health and Safety Code section 25198; and
d) How the data obtained pursuant to this Agreement will be managed and preserved in accordance with the Preservation of Documentation section of this Agreement.

EXHIBIT E
CALENDAR OF TASKS AND SCHEDULE

Activity	Schedule
Scoping Meeting	During Agreement negotiation, or shortly after Agreement execution based on DTSC evaluation of project needs
Advance Payment	Within 10 days of Agreement execution
Submit existing data	Within 10 days of Agreement execution, or as requested by DTSC
Submit investigation work plan	Within 30 days of scoping meeting, or as decided during scoping meeting
DTSC decision on investigation work plan	Within 75 days of date received by DTSC[1]
Submit investigation report	Within 45 days of completion of field work[2]
DTSC decision on investigation report	Within 100 days of receipt by DTSC[1]. May include recommendation for further investigation or cleanup, no further action, or no further action with conditions.
Submit draft cleanup plan	As directed by DTSC
Submit Community Profile	Within 30 days of DTSC's request
Submit CEQA documentation	Concurrent with the cleanup plan
Public Review/Comment Period, mailing of fact sheet to site mailing list and placement of public notice.	Upon DTSC's approval of cleanup plan for public review and comment.

1 Note that DTSC approvals in the target timeframes are contingent upon receiving documents that meet industry standards, comply with DTSC's direction, and that responses to DTSC questions and/or comments are received in a timely manner.

2 If workplan activities are not initiated within six months of the date of DTSC approval, DTSC may require additional investigation, public participation activities, and/or revision to the document.

DocuSign Envelope ID: 88B32DD4-98E1-4712-A1D6-96FAB1A7C391

DTSC decision on cleanup plan	DTSC to approve cleanup plan, if appropriate, after addressing public comments, within ~150 days of receipt of draft.
Implement cleanup	Within 90 days of DTSC approval of cleanup plan, or as directed by DTSC in conjunction with Proponent[3]
Submit cleanup completion report	Within 90 days from the date of implementation of cleanup plan
DTSC decision on cleanup completion report	Within 100 days of received by DTSC[1]. May include recommendation for no further action, or no further action with conditions.
Submit Operation and Maintenance Plan	As directed by DTSC
Operations and Maintenance Agreement	As directed by DTSC
Land Use Covenant	As directed by DTSC
Invoices	DTSC issues quarterly
Cost estimate and Scope of Work Updates and Amendments	DTSC updates the scope and cost estimate annually, or as needed, based on work needed to complete the Agreement. Amendments are issued on an as-need basis.

Signature:

Email: Javier.Hinojosa@dtsc.ca.gov

3 If cleanup plan activities are not initiated within one year of the date of DTSC approval, DTSC may require additional investigation, public participation activities, or revision to the document.

1. INTRODUCTION

Ramboll US Consulting, Inc. (Ramboll) was retained by Commercial Metals Company (CMC) to perform a Phase II Subsurface Investigation of the property located at 12459-B Arrow Route in Rancho Cucamonga, California (herein referred to as the "facility" or the "Site;" Figure 1). The objective of the subsurface investigation was to assess current soil and soil vapor conditions at the Site as part of CMC's shut down of ongoing operations and pending property divestiture. As part of this investigation, sampling was performed on a Site-wide basis incorporating areas of historical and current operations and features, as well as areas where prior environmental work was previously completed under various regulatory agency oversight.

2. BACKGROUND

2.1 Site Setting

CMC owns and operates a steel fabrication facility, as well as an inoperative steel mill and steel rolling facility at the Site. The approximately 94-acre Site consisting of 4 parcels (Parcel 1 through 4) is located approximately 40 miles east of downtown Los Angeles, California (Figures 1 and 2).

Most of the Site is paved with asphalt or concrete, notably the operational areas. Most of the perimeter of the Site is fenced, except along the northern/northeastern boundary shared with TI Wire and Ameron (these properties are fenced along their remaining perimeters).

The Site is developed with the following structures and areas, as depicted in Figure 2:

- Parcel 1: There are no permanent structures on Parcel 1. An equipment “boneyard” containing spare parts and equipment is operated by the CMC rebar facility. Slag storage piles are located in the central part of the parcel. Steel billets, received via rail, are stored in the southern portion of the parcel.
- Parcel 2: The former steel mill, which is currently inoperative and slated for decommissioning, is located in the southeast portion of Parcel 2. The mill includes a primary processing building containing an electric arc furnace (EAF), along with ancillary structures including lime silos, a cooling tower, and a warehouse and maintenance building. Slag piles are stored on the northern portion of the parcel, although these piles are reducing in size over time, as the facility no longer receives steel scrap and slag-producing operations have been discontinued. Additionally, Phoenix Industries (an independent company) operates as a slag processing contractor on-Site. While the contractor does not sub-lease any land areas of the Site, it does operate a maintenance building on Parcel 2.
- Parcel 3: Ancillary operations for the currently inoperative steel mill and steel rolling operations are located on the southern portion of Parcel 3. A baghouse and several cooling towers associated with the former steel mill are located in the southwest area of Parcel 3. The roll shop and roll mill are located in a structure adjacent to two maintenance structures. A bundling station is located in the eastern portion of the parcel. Rebar is stored outdoors throughout the northeast portion of the parcel. An underground storage tank (UST) fueling area is located in the northwest portion of the parcel.
- Parcel 4: A “T”-shaped rebar fabrication shop is located on Parcel 4, with an adjacent maintenance structure to the west, and a detached office building to the north. Rebar storage occurs outdoors to the south, east, and west of the buildings.

Landscaped areas are located north of the rebar fabrication shop on Parcel 4. Active rail spurs are located on the southwestern and southeastern portions of the Site. A storm water infiltration area is located at the southeastern corner of the Site. Additionally, concrete-lined wastewater treatment ponds are located adjacent to each of the cooling towers located at the Site and a concrete lined evaporation pond is located west of the rolling mill. A groundwater withdrawal well is located at the southeastern corner of the Site.

The primary Site access is via Arrow Route at the northern Site boundary for the rebar fabrication facility and an access road from Arrow Route leading to a guard shack for access to the remaining areas of the Site.

2.2 Site History

The Site was used for agriculture from at least the 1930s, a use which continued until the on-Site parcels were developed as part of a steel mill between the 1950s and the 1970s (as described in chronological order below).

- On Parcel 3, the Site has been producing rebar from metal scrap since 1956 on the southern portion. The Roll Mill and Roll Shop appear to have been constructed during this part of the Site's initial development, and subsequent structures including the Mobile Maintenance building and the Bundling Station appear to have been constructed in the early 1980s and late 1990s, respectively.
- Parcel 2 was developed with some industrial activity by the early 1970s (grading and small structures), and was developed with structures in the present-day location of the EAF and Warehouse Maintenance Building by the mid-1980s, although additions and modifications to the structures continued through the 1990s and 2000s.
- The southern portion of Parcel 1 was developed by the early 1970s with outdoor industrial storage, but industrial storage was not visible in other portions of Parcel 1 until the late 1990s.
- Parcel 4 was developed with what appears to be outdoor storage of materials in the late 1970s and subsequently was developed with the current Fabrication Shop building in 1988; the building has operated since that time as a steel rebar fabrication shop.

The major operations at the Site, including receiving of steel scrap, melting of steel scrap, production of rebar, fabrication of rebar, and processing of slag, did not change significantly since the 1980s until the furnace and scrap melting operations were shut down in 2019.

Parcel 3 was developed in 1956 as a coiled rebar manufacturing facility operated by Etiwanda Steel Producers. By 1970, its name had changed to Ameron Steel & Wire. In 1974, a joint venture was created between Tokyo Steel, Ameron Steel & Wire, and Mitsuit trading, creating the entity TAMCO, and expanding operations into Parcels 1 and 2. The facility, operated by the TAMCO consortium, expanded in 1976-1977, adding an EAF and baghouse to its operations, fabricating billets, and selling the billets to Ameron Steel & Wire (located off-Site to the northeast). In 2005-2006, a new storm water capture and treatment system was constructed in the southwestern portion of Parcel 2.

Since the TAMCO consortium was established in 1974, TAMCO has operated at Parcels 1 and 2. In 1983, the melt shop and rolling mill on Parcel 3 also came under ownership by TAMCO, producing steel reinforcing bars from steel scrap. Off-Site wire manufacturing operations conducted on the property to the north of Parcel 3, were sold and now operate under the name TI Wire. Although this property was historically operated by TAMCO, it is no longer part of the Site. In 2010, the Site was acquired by Gerdau Ameristeel. TAMCO (a subsidiary of Gerdau Ameristeel US Inc.) purchased the Site from Ameron Inc. on April 26, 2013. In November 2018, CMC acquired the stock of TAMCO.

The fabrication shop on Parcel 4 initially operated as Ameron, Inc. until 1988, when it began operating as Fontana Steel Inc. Ameron also operated off-Site properties to the east of Parcel 4; however, those properties have since been developed for other uses and are not

part of the Site. In approximately 2000, CMC Steel Fabricators, Inc. purchased certain assets from Fontana Steel, which included Parcel 4.

2.3 Site Geology and Hydrogeology

The Site is located approximately 40 miles east of downtown Los Angeles and approximately 5 miles south of the San Gabriel Mountains. The Site is underlain by the Chino sub-basin which is bound on the east by the Rialto-Colton fault; on the southeast by the contact with impermeable rocks forming the Jurupa Mountains and low divides connecting the exposures; on the south by contact with impermeable rocks of the Puente Hills and by the Chino fault; on the northwest by the San Jose fault; and on the north by impermeable rocks of the San Gabriel Mountains and by the Cucamonga fault (DWR, 2020.

Regional soils are somewhat excessively drained gravelly loamy sands with high infiltration rates. Based on a Water Well Drillers Log dated September 1956 for the on-Site water supply well, soils beneath the Site consist of sandy soils to a depth of 5 feet below ground surface (bgs), dry sand and gravel to a depth of 9 feet bgs, sandy clay with embedded gravel to a depth of 348 feet bgs, and sandy clay to a depth of 390 feet bgs. These soils are in turn underlain predominantly by sandy clay, interspersed with layers of sand and gravel to a depth of approximately 600 feet. From approximately 600 feet to 728 feet bgs, soils encountered at the Site were predominantly clays interspersed with layers of sand and gravel.

During the subsurface investigation conducted at the Site by Ramboll (December 2020 through February 2021), the following lithologic conditions were noted at each of the Site parcels:

- Sand with gravel and/or slag was observed on Parcel 1 at depths of up to 5 feet bgs. Varying layers of sand and sand with silt were noted between depths of 7 feet and 18 feet bgs. Sandy silt was noted between depths of 18 feet and 25 feet bgs (maximum depth explored).
- On Parcel 2, sand with gravel and/or slag was observed to a depth of 5 feet bgs. Towards the eastern portion of Parcel 2, silty sand was noted between the surface and 5 feet bgs. Varying layers of sand and sand with silt were observed between approximately 5 feet and 12 feet bgs. Silty sand and sand layering was noted from approximately 16 feet to 30 feet (maximum depth explored) in the southeast corner of the parcel.
- On Parcel 3, sand was observed to a depth of 5 feet bgs in most of areas. Varying layers of sand and silty sand were noted to a depth of 5 feet bgs in the southern portion of this parcel, near features including but not limited to the reheat oven, cooling towers, and wash station. A dense silt layer was observed between approximately 29 feet and 34 feet bgs under the Parts Warehouse where the deepest boring at this Parcel as drilled.
- On Parcel 4, varying layers of sand and silty sand were observed to a depth of 5 feet bgs. Sand was noted between 5 feet and 25 feet bgs at the deepest boring that was investigated at this parcel.

The general topographic gradient in the vicinity of the Site is to the south. Based on information provided by the Chino Basin Watermaster, the gradient of the shallowest groundwater in the vicinity of the Site is to the south and southwest. There is one on-Site deep groundwater extraction well near the southeastern corner of the Site. Based on a Water

Well Drillers Log dated September 1956, the on-Site well is approximately 728 feet deep. Groundwater at the time of installation reportedly was first measured at 378 feet bgs. No current data regarding to depth to groundwater was available for review. During Site investigation activities conducted by Ramboll in 2020/2021, groundwater was not encountered to maximum depth drilled (30 feet bgs).

3. PRIOR INVESTIGATIONS

Several investigations have been conducted at the Site between 1988 and 2020. A primary component of these investigations was the evaluation of waste extent and distribution. The results are summarized below:

3.1 1988 Clean Closure Verification Report (Parcel 4)

In 1988, an environmental assessment was performed to evaluate the areas of potential contamination from baghouse dust that had been buried during the late 1970s in three approximately parallel trenches. The trenches were approximately 170 feet long, 14 to 20 feet wide, and 12 feet deep. The buried baghouse dust was covered with 3 to 4 feet of clean soil. Remediation of the area consisted of excavating and removing the baghouse dust and backfilling the trenches with clean slag material and the three upper feet with the clean soil that previously covered the baghouse dust. Laboratory analytical tests of exposed surfaces before backfilling the trenches demonstrated that remaining soil had metal concentrations below the Total Threshold Limit Concentration (TTLC) and Soluble Threshold Limit Concentration (STLC) thresholds. The baghouse dust was temporarily stored on a concrete pad and covered with plastic until it was removed off-Site. Based on the review of a PEA conducted in 2001 (discussed below in Section 3.6), the Department of Toxic Substances Control (DTSC) concluded in a letter dated December 20, 2001, that "*the Site does not appear to pose a threat to human health or the environment under any land use*," and determined that no further action was necessary with respect to investigation and remediation of hazardous substances at the Site.

3.2 1990 Remediation of Lead Contaminated Soil at Southwest Corner of the Site (Parcel 1)

Discharge water from the slag cooling water, cooling tower overflows, clarifier overflows, and overflows and leaks from the water truck loading area were documented flowing from the Site into an adjacent open field to the southwest. Reportedly, the contamination generally did not extend below a depth of 3 feet; however, in some areas it reached a depth of 6 feet. The proposed remediation technology was in-situ detoxification; and the treated soil would be used as backfill, or hauled to a sanitary landfill, depending on determinations by California Department of Health Services. A letter from the Regional Water Quality Control Board - Santa Ana Region (RWQCB-SA) dated November 7, 1990, indicates that the agency reviewed the final report for remediation of lead contaminated soil in the southwestern corner of the Site and adjacent southwestern neighboring properties prepared by Cleanup Technology (CUT). The letter indicates that CUT excavated, treated, and removed the lead contaminated soil from the property, and that CUT re-sampled and excavated additional soil until all contaminated soil had been removed "to concentrations below acceptable levels" (assumed to be 50 milligram per kilogram [mg/kg]). The November 7, 1990 RWQCB-SA letter indicated that the cleanup of lead impacted soil at the Site was completed to concentrations below acceptable levels and that the RWQCB-SA issued a "No Further Action" (NFA) determination with regard to this matter.

3.3 1993 UST Removals (Parcel 3)

Four USTs reportedly contained a total of approximately 52,000 gallons of fuel oil (it appears that these USTs are referred to in some other documents as 50,000-gallon USTs; however, this appears to be incorrect). Two of the USTs were removed on November 4, 1993, while

the other two were removed in November 18, 1993. The USTs were shipped off-Site for decontamination and cutting, and then shipped back to TAMCO as scrap for processing.

The San Bernardino County Environmental Health Services Department issued a letter dated April 28, 1994 confirming completion of the remedial actions related to these leaking USTs and determination of NFA.

3.4 1994 CERCLA Preliminary Assessment (Parcels 1, 2, and 3)

Based on the results of the 1994 Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Preliminary Assessment (PA), further remedial Site assessment under CERCLA was not required. According to the document, the PA was performed after the United States Environmental Protection Agency (USEPA) received a "notification of hazardous waste site" (no other information provided) from TAMCO. The 1994 CERCLA PA report indicates that the facility generated baghouse dust, is a listed (K061) RCRA hazardous waste. The baghouse dust generally was disposed at a permitted off-Site facility; however, some baghouse dust was disposed on-Site at the northwestern portion of the slag pile, on Parcel 4. Additionally, some K061 waste was irradiated when a canister containing radioactive cesium was loaded into the furnace. This incident resulted in the creation of radioactive baghouse dust, a portion of which was disposed at the Chemical Waste Management Kettleman Hills facility on May 21, 1985. The Kettleman Hills disposal facility was not permitted to receive radioactive waste. The remaining portion of the radioactive baghouse waste, a total of 1,752 drums, had not yet been shipped to Kettleman Hills and was eventually disposed at a U.S. Ecology disposal facility in Richland, Washington, which was permitted to receive radioactive materials. According to the investigation of the incident summarized in the 1994 CERCLA PA report, a truckload of radioactive material was detected by a California Highway Patrol weigh station and returned to TAMCO. An investigation of the Kettleman Hills disposal facility revealed that approximately 20 cubic yards of radioactive material had been disposed in cell B-9 of the Kettleman Hills facility. Testing conducted on June 3, 1985 by the Radiologic Health Branch of the California Department of Health Services "*determined that the waste could be left in place, and that there were no significant health or safety risks associated with the quantity and concentration of the radioactive material*". The rebar produced by TAMCO with the radioactive scrap metal was tested and found to have only background levels of radioactivity. Subsequent to this incident, TAMCO installed and operated a radiation detection system to screen trucks and railcars with scrap metal entering the Site, a procedure that was implemented until scrap receiving operations were ceased in November 2019.

The 1994 CERCLA PA also summarizes the activities related to the investigation and remediation of the impacted soils near the southwestern corner of the Site and adjacent properties to the southwest of the Site. According to the information in this report, analysis of the soils prior to the remediation activities contained concentrations of up to 135 milligrams per liter (mg/l) of lead, 1,860 mg/l of zinc, and 5.7 mg/l of cadmium, which were above the corresponding California STLC values of 5 mg/l, 250 mg/l, and 1 mg/l, respectively. Approximately 3,300 cubic yards of impacted soils were excavated and stabilized under the supervision of DTSC; details regarding how the soils were stabilized was not provided. Treated soils were stockpiled on-Site, and a portion of this material was used as backfill during excavation of USTs. The report did not identify a "release" to groundwater, indicating that "*an observed release is when chemical analysis of an environmental sample from a Site is found to be three or more times above the background concentration*."

The 1994 CERCLA PA report indicated that materials from the Ameron Steel and Wire facility (likely referring to the current neighboring TI Wire property) had been observed discharging stormwater runoff onto the Site (known at that time as TAMCO). Waste solvents and degreasers used in the maintenance shop were collected in drums and transported off-Site by Solvent Service, Inc. According to the report, the maintenance shop generated less than 55 gallons of wastes per month and the wastes were not stored for more than 90 days. The hazardous materials, including solvents (type not specified, but the material was collected in drums and transported off-Site for disposal by Solvent Service, Inc.) and lubricants, were stored in a bermed storage area, which appeared in good condition.

The 1994 CERCLA PA report summarized the hydrology of the region and the Site and concluded that "*based on the depth to groundwater and the mobility of substances on-Site, a release to groundwater is not expected*". Also, according to the report, emergency actions at the Site were not considered necessary because "*a) wastes located on-Site had not migrated off-Site, b) the TAMCO facility was fenced preventing public access; and c) the Site is located in an industrial area with only 538 people living within 1 mile of the Site.*" According to the 1994 CERCLA PA report, the Site did not qualify for further remedial Site assessment under CERCLA based on the results of this investigation.

3.5 2000 Voluntary Cleanup Agreement (Parcel 4)

A VCA was executed on December 22, 2000 between Fontana Steel, Inc. and the DTSC. The document pertained to historic slag trenches located on the southern portion of Parcel 4, where baghouse dust from the steel mill on Parcel 2 had been buried. Hazardous substances of concern were identified as metals including arsenic, cadmium, chromium, lead, and zinc. The DTSC indicated that a PEA would be performed to determine what additional work would be needed and that it would require reimbursement from Fontana Steel for associated oversight costs.

3.6 2001 Preliminary Endangerment Assessment (Parcel 4)

In November 2001, IT Corporation (IT) conducted a PEA at Parcel 4 on behalf of Fontana Steel Inc. and CMC Steel Group Inc. Baghouse wastes from the TAMCO steel mill furnace (located on Parcel 2) had been buried in trenches on the southern portion of Parcel 4 in the 1970s and 1980s. In 1987, Ameron agreed to remove the buried baghouse wastes, as summarized in the Clean Closure Verification Report discussed above. The excavations reportedly were backfilled with slag from the steel-making operations and soil from other areas of the Site. In 1989, Parcel 4 was acquired by Kaiser Foundation Hospitals, but was subsequently exchanged for other properties in Fontana, California that were formerly owned by Fontana Steel and Paul Ware.

Soil sampling and a human health screening evaluation were performed. Sampling included collection of eight soil samples from seven boring locations along the former trenches and four on-Site background soil samples (near the northern and western perimeters of Parcel 4). Samples were analyzed for Title 22 metals via USEPA Methods 6010B and 7471A and hexavalent chromium via USEPA Method 7199. Slag was typically encountered to depths of approximately 6 to 10 feet bgs but was as deep as 13 feet bgs in some areas. Antimony, beryllium, molybdenum, silver, and thallium were not detected in any of the samples. Maximum concentrations of other metals included arsenic (8.8 mg/kg), barium (500 mg/kg), cadmium (11 mg/kg), total chromium (1,200 mg/kg), hexavalent chromium (2.0 mg/kg), cobalt (7.4 mg/kg), copper (110 mg/kg), lead (480 mg/kg), mercury (0.036 mg/kg), nickel (38 mg/kg), selenium (10 mg/kg), vanadium (200 mg/kg), and zinc (2,200 mg/kg).

On December 20, 2001, the DTSC issued a letter to Fontana Steel indicating that it had completed its review of the 2001 PEA. The soil sampling and analysis results had been compared to health-based criteria for unrestricted land use for antimony, arsenic, barium, beryllium, cadmium, chromium (total and hexavalent), cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, titanium, vanadium, and zinc. DTSC concluded that "*the Site does not appear to pose a threat to human health or the environment under any land use*," and provided a NFA determination with respect to this matter.

3.7 2002 Baghouse Dust Commingled with Slag Stockpile Remediation (Parcels 1 and 2)

In July 1999, TAMCO's consultant, Dr. David Leu, presented a pilot demonstration project to treat the baghouse dust that was commingled with slag by RDSS. The pilot test, which included testing, characterization, and separation of slag from baghouse dust in the slag stockpile, was approved by the San Bernardino County Fire Department (Fire Department) on September 8, 1999. Initial results of the test indicated that the RDSS-separated material qualified as non-RCRA waste. Subsequently and at the request of the Fire Department, a Remedial Action Plan (RAP) for treatment of Slag/Non-Slag stockpile was issued by Clayton Environmental Consultants in November 1999 and approved by the Fire Department in January 2000. The RAP indicates that baghouse dust was commingled with the slag fines portion until it was classified as hazardous waste and listed as RCRA K061 waste in November 1980. The RAP identified the areas of the Site where slag, slag fines, and baghouse dust were stored. The RAP estimated a volume of approximately 41,500 cubic yards (approximately 61,600 tons) of slag commingled with non-slag material that needed to be treated. In November 2000, the following data were prepared for a status presentation regarding the remediation project, indicating among other issues: a) more K061 was found than the initially estimated approximately 21,000 tons; and b) the RDSS system "performed better than expected achieving 440 to 580 tons per day of treated material." A letter from the Fire Department dated July 2, 2002 stated that after reviewing the June 2001 report submitted by Clayton Group Services, Inc. (not available for Ramboll's review), NFA was issued regarding the remediation of slag and non-slag stockpile at the Site.

3.8 2006 UST Closure (Parcel 3)

Sharp Environmental Technologies, Inc. prepared a UST Closure report on removal of four USTs from the southern portion of Parcel 3, presumably in the approximate location of the prior set of four fuel oil USTs that had been removed in late 1993. According to this document, between March 30 and May 31, 2006, Ecology Control Industries (ECI) excavated and removed four 12,000-gallon USTs used to store diesel fuel. Approximately 18,600 gallons of rinseate and UST contents were disposed as part of the UST closure. Solids from inside the UST were transported to TPST Soil Recyclers of California in Adelanto, California for disposal. The tanks were recycled by TAMCO on-Site. Eight soil samples were collected from beneath the ends of the tanks and tested for total petroleum hydrocarbons by USEPA Method 8015 and volatile organic compounds by USEPA Method 8260B. The analytical test results were "Non Detect" for all soil samples. Soil from the Site was used to backfill the excavation. Upon reviewing the 2006 UST Closure report, the Fire Department issued a NFA determination to TAMCO on October 6, 2006.

3.9 2007 Remediation of Soils Impacted by Heavy Metals North of Pad 16 (Parcel 2)

During an inspection on January 20, 2005, DTSC collected soil samples and conducted analytical tests. The results of these tests indicated that there were elevated concentrations of selected heavy metals in the area north of the scrap metal storage concrete pad. A handheld X-Ray Fluorescent (XERF) analyzer was used to identify areas of soil to be excavated, although additional laboratory sampling was performed for confirmation purposes. The initial excavated soil was placed in 10-cubic yard drop boxes and the XRF analyzer was used to determine additional areas to be excavated. This process was repeated until the screening indicated acceptable levels. Soil samples were collected from each square of a grid of the entire impacted area. After reviewing the laboratory test results from the soil sampling event, additional soil was excavated from certain grid areas (namely, two of the grids labeled A-4 and A-9). Cleanup levels established to define “clean soils” were 1) TTLC less than hazardous waste criteria for inorganics; 2) STLC less than hazardous waste criteria for inorganics; and 3) Preliminary Remediation Goals (PRGs) for inorganics. Impacted soil was transported and disposed at US Ecology in Beatty, Nevada. Soil sampling was performed subsequently after additional excavation at A-4 and A-9 to confirm that sufficient quantities of soil had been removed and that remaining soils met the cleanup criteria. Soils passing the cleanup criteria (passing the TTLC, STLC, and PRG criteria) were returned to the excavations as backfill. Clean crushed slag was used to bring the excavation area to surrounding grade. The entire area to the north of the scrap and adjacent slag stockpiles was paved with asphalt by TAMCO during spring 2006. DTSC and TAMCO (former Site owner) signed a Consent Order dated April 26, 2007 describing the successful remediation of this area.

3.10 2011 UST Removal (Parcel 2)

One 300-gallon, steel, diesel fuel UST located northeast of cooling tower #4, on the southwest side of an emergency generator, was removed on November 30, 2010, as documented in an Environmental Logistics UST closure report dated January 7, 2010. The UST closure report was submitted to the Fire Department. Approximately 100 gallons of rinseate from the UST were removed and disposed off-Site, and the steel UST was transported off-Site for recycling. One soil sample was collected from beneath the excavation, at a depth of approximately 6.5 feet bgs. The sample was analyzed for total petroleum hydrocarbon as diesel (TPHd) via USEPA Method 8015B and BTEX via USEPA Method 8260B. TPHd was detected at a concentration of 1,720 mg/kg, ethylbenzene was detected at a concentration of 57 micrograms per kilogram (µg/kg), and xylenes were detected at a concentration of 423 µg/kg. Benzene, toluene, and other fuel oxygenates were not detected. The excavation was subsequently backfilled with concrete slurry. The Fire Department issued a letter dated March 7, 2011 stating that *based on the closure report dated January 7, 2011, the extent of contamination, or lack thereof, indicated that no further investigation was warranted at that time.*

3.11 2014 UST Removal (Parcel 4)

One 12,000-gallon, double-walled, fiberglass, diesel fuel UST and associated dispensing station were installed on Parcel 4 in June 1989, along the central portion of the eastern boundary of the parcel. The dispensing station consisted of two dispensers and underground double-walled piping connecting the dispensers to the UST.

According to 2014 UST removal records contained in the Fire Department files, the southern dispenser reportedly previously had been abandoned in place with slurry, but the northern

dispenser had not been abandoned. In March 1999, during a UST upgrade, soil samples were collected beneath each of the two dispensers in preparation for the installation of piping upgrades and under dispenser containment. One soil sample was collected from approximately 2.5 feet beneath the northern dispenser and analyzed for TPHd via USEPA Method 8015B and BTEX and MTBE via USEPA Method 8020. No TPHd, BTEX, or MTBE were detected. Additionally, soil samples were collected at approximately 2.5 feet, 3 feet, and 4 feet beneath the southern dispenser. At the 2.5-foot, 3-foot, and 4-foot depths, TPHd was detected at concentrations of 3,298 mg/kg, 914 mg/kg, and 1,263 mg/kg, respectively and xylenes were detected at concentrations of 0.031 mg/kg, 0.037 mg/kg, and 0.217 mg/kg, respectively. No benzene, toluene, ethylbenzene, or MTBE were detected in the samples.

Based on a UST Removal Inspection Form prepared by the Fire Department, the UST was removed in June 2014. The UST was triple rinsed and the resulting rinseate was hauled off-Site for disposal. The UST was destroyed on-Site and disposed off-Site. On removal of the UST, three soil samples were collected and analyzed for TPHd via USEPA Method 8015B and the full suite of volatile organic compounds (VOCs) via USEPA Method 8260B. Two soil samples were collected from the north and south ends of the UST from a depth of approximately 16 feet bgs, and one soil sample was collected from beneath the dispenser at a depth of approximately 6 feet bgs. TPHd was detected in the two soil samples from beneath the UST at concentrations of 1.26 mg/kg and 1.02 mg/kg, respectively, and in the soil sample from beneath the dispenser at a concentration of 1.52 mg/kg. VOCs were not detected in any of the samples. In a letter dated October 29, 2014, the Fire Department stated that based on the closure information reviewed, *no further action was required* with respect to the UST removal.

4. SUBSURFACE INVESTIGATION ACTIVITIES

Ramboll's procedures that were implemented as part of its the subsurface investigation are presented in this Section. Site investigation activities were conducted between December 2020 and February 2021, in three phases and as described in the following sections. All field activities conducted by Ramboll were performed under the direct supervision of a California-registered Professional Geologist or Engineer.

4.1 Sampling rationale

Ramboll initially installed a total of 69 borings to assess current conditions at the Site consisting of 43 borings from which soil samples were collected and 26 borings from which soil and soil vapor samples were collected, as described in greater detail in the attached Table 1. In summary, the sampling rationale targeted:

- Side-wide grid sampling to evaluate soil and soil vapor conditions and to assess the presence and extent of subsurface slag.
- Existing features such as USTs, clarifiers, cooling towers, etc.
- Areas of former features such as USTs and storage areas.
- Areas where formerly remediation was performed under regulatory agency oversight and "closure" or NFA was issued.

The total depth of each of the borings was decided based on the known or assumed depth of the feature in the vicinity of the boring that was being assessed. Grid borings were drilled to a total depth of 5 feet bgs (or until slag was no longer encountered). Soil vapor probes were installed at locations in the vicinity of features/conditions that were suspected to have potential impacts in soil vapor.

Based on a review of the results from the initial sampling program, Ramboll re-mobilized to the Site to perform additional soil delineation from 30 step-out borings in January and February 2021. Further, soil vapor probes were installed and sampled at 5 of the 30 step-out borings in January 2021.

4.2 Pre-field Activities and Utility Clearance

Ramboll prepared a Site-specific Health and Safety Plan (HASP) and COVID-19 Response Plan for the Site, which are designed to minimize exposure of Ramboll's field personnel to potentially hazardous materials. All Ramboll field personnel involved in the project were required to implement the procedures presented in the HASP while conducting the planned field work.

Prior to work plan implementation, Ramboll notified Underground Services Alert (USA) of its intent to conduct the proposed subsurface investigation. The proposed locations of the subsurface investigation were clearly marked with white paint, as required by USA. Ramboll also retained Spectrum Geophysics of Chatsworth, California and GPRS of Los Angeles, California to clear boring locations for the presence of underground pipes and utilities using geophysical methods. Boring locations were also hand augered to a depth of 5 feet bgs, prior to any drilling activity as an additional cautionary measures.[1]

[1] Some of the borings that could not be hand augered to a depth of 5 feet bgs due to tight geologic formations, were directly drilled using a rig to total depth, after review of available existing utility maps and review and approval from representatives of the facility who have been on-Site for several years and are knowledgeable of the Site and utility locations.

4.3 Drilling, Soil Sampling, and Soil Vapor Probe Installation

Initial drilling and sampling activities were conducted between December 14, 2020 and January 8, 2021. Concrete at 48 of the total 69 original boring locations was cored, following which each boring location was hand augered to a depth of 5 feet bgs.[2] The deeper borings (total depth greater than 5 feet bgs) were advanced to total depth using a truck mounted direct-push rig.

Original Borings RSB-01 through RSB-24, RSB-26, RSB-31, RSB-38 through RSB-42, RSB-45 through RSB-58, RSB 60 through RSB-63, and RSB-65 were advanced to a total depth of approximately 5 feet bgs. Soil samples were collected from these borings at approximate depth intervals of 0.5 foot to 1 foot bgs, 2.5 to 3 feet bgs, and 4.5 to 5 feet bgs. The Boring RSB-36 was advanced to a total depth of approximately 10 feet bgs and Boring RSB-37 was advanced to a total depth of approximately 12 feet bgs, both with soil sample intervals at approximate depths of 0.5 foot to 1 foot bgs, 2.5 to 3 feet bgs, 4.5 to 5 feet bgs, and 9.5 to 10 feet bgs.

Borings RSB-25, RSB-27, RSB-30, RSB-33, RSB-43, RSB-44, RSB-59, RSB-64, and RSB-69, which were situated at/near current/former subsurface features (see Table 1), were advanced to a total depth of approximately 16 feet bgs. Soil samples were collected from these borings at approximate depth intervals of 0.5 foot to 1 foot bgs, 2.5 to 3 feet bgs, 4.5 to 5 feet bgs, 9.5 to 10 feet bgs, and 14.5 to 15 feet bgs. Borings RSB-34, RSB-35, and RSB-66 through RSB-68 were advanced to a total depth of 25 feet bgs. Soil samples were collected from these borings at approximate depth intervals of 0.5 to 1 foot bgs, 2.5 to 3 feet bgs, and 4.5 to 5 feet bgs, 9.5 to 10 feet bgs, 14.5 to 15 feet bgs, 19.5 to 20 feet bgs, and 24.5 to 25 feet bgs.

Borings RSB-28, RSB 29, and RSB-32 were advanced to a total depth of approximately 31 feet bgs. Soil samples were collected from these borings at approximate depth intervals of 0.5 to 1 foot bgs, 2.5 to 3 feet bgs, and 4.5 to 5 feet bgs, 9.5 to 10 feet bgs, 14.5 to 15 feet bgs, 19.5 to 20 feet bgs, 24.5 to 25 feet bgs, and 29.5 to 30 feet bgs.

At three of the above boring locations (Borings RSB-01, -13, and -37), the original intended depth was exceeded due to soil conditions that warranted further investigation. Boring RSB-01 was originally proposed to be advanced to approximately 5 feet bgs. Due to slag material encountered at 5 feet bgs, the boring was further advanced to a total depth of 12 feet bgs. Boring RSB-37 was originally to be advanced to approximately 10 feet bgs. Due to slag material encountered at 10 feet bgs, the boring was further advanced to a total depth of approximately 12 feet bgs. Boring RSB-13 was originally to be advanced to approximately 5 feet bgs. Due to slag material encountered at approximately 5 feet bgs, the boring was further advanced to a total depth of 5.5 feet bgs. Slag was present at the total depth advanced at Boring RSB-13; however, refusal conditions were encountered at approximately 5.5 feet bgs, preventing further drilling. See Figure 3 for all original and step-out boring locations.

[2] Some of the borings that could not be hand augered to a depth of 5 feet bgs due to tight geologic formations, were drilled with a direct push rig to total depth, after review of available existing utility maps and review and approval from representatives of the facility who have been on-Site for several years and are knowledgeable of the Site and utility locations.

As described in Section 4.1 and Table 1, soil vapor probes were installed in 26 of the 69 borings at depths of 5 and/or 15, and/or 30 feet bgs. Soil vapor probes were installed at an approximate depth of 5 feet bgs in Borings RSB-31, RSB-38, RSB-46 through RSB-49, RSB-51 through RSB-56, RSB 60, and RSB-61. Soil samples were collected at these borings at depth intervals of 0.5 to 1 foot bgs, 2.5 to 3 feet bgs, and 4.5 to 5 feet bgs. Soil vapor probes were installed in Borings RSB-25, RSB-27, RSB-30, RSB-33, RSB-43, RSB-44, RSB-59, RSB-64, and RSB-69 at approximate depths of 5 and 15 feet bgs. Soil vapor probes were installed in Borings RSB-28, RSB 29, and RSB-32 at approximate depths of 5 and 30 feet bgs.

Each probe consisted of a temporary 6-inch stainless steel probe placed in a sand pack extending approximately 6 inches above and below the probe. The probes were connected to the surface with Nylaflow tubing. Hydrated bentonite was used to create a seal above each of the sand packs. A flush-mounted well box was installed with the ground surface at each of the soil vapor borings to allow for future access to the probes. Soil vapor samples collected from the dual-nested borings were analyzed sequentially from shallow to deep.

4.4 Step-Out Boring, Soil Sampling, and Soil Vapor Probe Installation

Based on a review of the results from the initial drilling event that identified elevated concentrations of total petroleum hydrocarbon (TPH), lead, and thallium in soil, as well as elevated VOC concentrations in soil vapor, Ramboll re-mobilized to the Site to conduct step-out drilling, soil vapor probe installation, and sampling activities from January 26 through 28, 2021 and on February 11, 2021. Step-out borings were initially located approximately 25 feet in each direction (north, east, south, and west) of the original Borings RSB-02 through RSB-05, RSB-54 and RSB-57, and two co-located borings at RSB-04 and RSB-54 (see Figures 4A and 4B).

Concrete at 10 of the 26 initial step-out boring locations was cored. Each boring location was hand augered to a total depth of 3 or 5 feet bgs[3] and the deeper borings (total depth greater than 5 feet bgs) were advanced to total depth using a truck mounted direct-push rig.

A total of 8 borings (step-out locations at RSB-03 and RSB-05) were advanced to a total depth of 3 feet bgs. Soil samples were collected at these borings at approximate depth intervals of 0.5 to 1 foot bgs and 2.5 to 3 feet bgs (analyzed for TPH using USEPA Method 8015M).

A total of 8 borings (step-out locations at Borings RSB-02 and RSB-57) were advanced to a total depth of approximately 5 feet bgs. Soil samples were collected at these borings at approximate depth intervals of 0.5 to 1 foot bgs, 2.5 to 3 feet bgs, and 4.5 to 5 feet bgs (analyzed for lead using USEPA Method 6010B).

A total of 4 step-out borings and one co-located Boring at RSB-04 were advanced to a total depth of approximately 15 feet bgs. Soil samples were collected from these borings at approximate depth intervals of 0.5 to 1 foot bgs, 2.5 to 3 feet bgs, 4.5 to 5 feet bgs, 9.5 to 10 feet bgs, and 14.5 to 15 feet bgs (analyzed for thallium using USEPA Method 6010B). The 1- and 3-foottsoil samples from these borings were placed on hold.

[3] Some of the borings that could not be hand augered to a depth of 5 feet bgs due to tight geologic formations, were drilled with a direct push rig to total depth, after review of available existing utility maps and review and approval from representatives of the facility who have been on-Site for several years and are knowledgeable of the Site and utility locations.

A total of 4 step-out borings and one co-located boring at Boring RSB-54 were advanced to a total depth of approximately 36 feet bgs. Soil vapor probes were installed at the co-located boring at approximate depths of 15 and 35 feet bgs. Soil vapor probes were installed in the step-out borings at approximate depths of 5, 15, and 35 feet bgs (analyzed for VOCs using USEPA Method 8260B). Each probe at these step-out locations consists of a temporary 6-inch stainless steel probe placed in a sand pack extending approximately 6 inches above and below the probe. The probes were connected to the surface with Nylaflow tubing. Bentonite was used to create a seal above each of the sand packs. A well box was installed flush with the ground surface at each of the soil vapor step-out borings to allow for future access to the probes.

Additional step-out borings were installed further to the south and co-located with the south step-out boring (RSB-05S) at RSB-05 (Figure 4A) on February 11, 2021. These additional step-out borings were advanced to a total depth of approximately 15 feet bgs using a combination of hand augering and a direct-push rig. Soil samples were collected at these borings at approximate depth intervals from surface to 0.5 foot bgs, 2.5 to 3 feet bgs, 4.5 to 5 feet bgs, 9.5 to 10 feet bgs, and 14.5 to 15 feet bgs (analyzed for TPH using USEPA Method 8015M). The 15-foot soil samples from these borings were placed on hold.

4.5 Soil Sampling and Analysis

A total of approximately 305 soil samples were collected and analyzed from the Site. Soil samples collected from depths between surface and 5 feet bgs were collected by a slide hammer or hand collected in a 8-ounce glass jar[4]. Soil samples deeper than 5 feet bgs were collected in acetate sampling sleeves. Soil samples were collected for VOC analyses from the sampling sleeve and/or 8-ounce jar using an EnCore T-handle device loaded with a Teflon sampler. Soil samples were screened for VOCs with a photoionization detector (PID) in the field, labeled with a unique sample number, the sample time and date, and placed in an ice chilled cooler.

The soil samples were transported under chain-of-custody protocol to Jones Environmental, Inc., a California-certified fixed analytical laboratory within 24 hours of collection. Soil samples were submitted for analyses of VOCs using USEPA Method 8260/5035, TPH using USEPA Method 8015M, and/or metals using USEPA Method 6010B/7471A. A total of 6 samples from two borings (in the vicinity of former PCB storage and/or transformers) were additionally analyzed for polychlorinated biphenyls (PCBs) using USEPA Method 8082. A total of 15 samples from 5 borings that were situated near the cooling towers were also analyzed for hexavalent chromium (Cr VI) using USEPA Method 7199.

Based on a review of the initial analytical results, selected soil samples with higher reported concentrations of total chromium were also analyzed for hexavalent chromium. Select soil samples were also analyzed for STLC and/or Toxicity Characteristic Leaching Procedure (TCLP) for barium (one soil sample), cadmium (3 soil samples), chromium (12 soil samples), copper (2 soil samples), lead (7 soil samples), and/or zinc (1 soil sample).

Soil lithology was classified in general accordance with the Unified Soil Classification System (USCS) by Ramboll field personnel, and lithologic logs together with PID readings were recorded in the field on boring log forms.

[4] Soil samples collected from depths between ground surface and 5 feet bgs from some of the borings, that could not be hand augered to a depth of 5 feet bgs (see previous note), were collected in acetate sampling sleeves.

4.6 Soil Vapor Sampling and Analysis

Soil vapor samples from the vapor probes were collected and analyzed in the field by A&R Laboratories, Inc. (A&R), California-certified mobile laboratory, in general accordance with the California Environmental Protection Agency, DTSC, LARWQCB, and San Francisco RWQCB (SFRWQCB) Advisory for Active Soil Gas Investigations (July 2015) (the "Advisory"). Quality control samples were also collected per the Advisory. The soil vapor samples were analyzed for VOCs using USEPA Method 8260.

4.7 Investigation-Derived Waste Management

Investigation-derived waste (IDW) from on-Site activities including soil cuttings and decontamination fluids (water) was staged at Cooling Tower #4, directly west from the office building at the Site, in 11 55-gallon DOT-rated drums.. The drums were labeled with "pending analysis," with the date accumulation began, contents, source, and contact information clearly marked. The drums were appropriately disposed on March 9, 2021, upon receipt of analytical results of the soil samples.

5. SUBSURFACE INVESTIGATION RESULTS

5.1 Field Observations

During drilling activities, soil was logged in general accordance with the USCS, screened with a PID, and recorded in the field. No subjective evidence related to possible hydrocarbon contamination, such as soil discoloration or product odor, was encountered in the borings, except for some staining noted in the soil samples collected from Borings RSB-28 and RSB-29. Soil was screened in the field with a PID by placing an aliquot of soil in a Ziploc® plastic bag and sampling the headspace with the PID. PID readings generally did not exceed background levels at all locations, and recorded readings ranged from 0.1 parts per million by volume (ppmv) to 1.7 ppmv. Boring logs are included as Appendix A.

5.1.1 Presence of Slag

Slag is a co-product from steel-making operations. It is generally noted to be black, grayish black, or dark bluish gray in color. Slag noted at the Site varied in color from black, grayish black, light gray, to dark bluish gray, It was also noted to be dull or even sparkly at some locations in the subsurface at the Site. The pieces of slag noted in the subsurface at the Site were generally between 2 inches and 6 inches in maximum dimension, although there were some fines that primarily ranged from sand to dust size. Larger pieces of slag were noted to be stored at the Site on the ground surface.

Based on prior sampling of the slag material (from the steel-making process) by on-Site facility personnel, slag was found to contain trace concentrations (less than one percent by weight) of combined metals including antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc.

Slag material was found in 33 of 99 boring locations at depths ranging from 0 to 10 feet bgs at the Site, mainly on the western, northern, and southwestern portions, and are shown on Figure 5. Thickness of slag encountered in the Site subsurface ranged between approximately 0.1 and 10 feet.

5.2 Screening Criteria

Ramboll evaluated the results of the investigation by comparing to appropriate regulatory screening thresholds as described below.

5.2.1 Soil Samples

Soil sample results were compared to USEPA Regional Screening Levels (RSLs) – November 2020 in a commercial/industrial soil scenario and the DTSC Office of Human and Ecological Risk (HERO), Human Health Risk Assessment (HHRA) Note No. 3 (June 2020) modified screening levels (DTSC-SLs).

Soil sample results were also compared to respective TTLC. If any analyte exceeded the TTLC limit, then the soil was classified as a California (non-RCRA) hazardous waste for handling and disposal purposes. STLC analysis was performed if the TTLC analyte result equaled or exceeded the STLC by a factor of 10 or more. If the STLC result was equal or greater than the STLC limit, then the soil was classified as California (non-RCRA) hazardous waste. TCLP analysis was also performed for the eight federally regulated metals if the TTLC result equaled or exceeded the TCLP threshold by a factor of 20 or more to assess whether the soil would be classified as a RCRA hazardous waste for handling and disposal purposes.

5.2.2 Soil Vapor Samples

The screening levels for soil vapor were calculated by dividing the conservative of the two commercial/ industrial screening levels, November 2020 USEPA Commercial/ Industrial RSLs or the June 2020 DTSC SLs for air, by the current default attenuation factor (AF) of 0.001 and the more conservative AF of 0.03. Given that the existing buildings at the Site will be demolished for redevelopment purposes, the soil vapor screening level using an AF of 0.001 would be the applicable criteria to use for a future building scenario at the Site as it is consistent with Ramboll's recent experience at properties where the DTSC has been involved and DTSC's general policy as to whether mitigation/remediation might be required for future buildings at a property.

5.3 Laboratory Results

Current analytical results for TPH and VOCs in soil, metals in soil, and PCBs in soil are presented in Tables 2, 3, and 4, respectively. Current analytical results for VOCs in soil vapor are presented in Table 5. Laboratory analytical reports and chain-of-custody documentation are provided in Appendix B.

Borings with soil and soil vapor analytical results exceeding respective regulatory screening criteria are depicted on Figure 6.

Soil

Total Petroleum Hydrocarbons

- TPH as gasoline (TPHg) was detected above its reporting limit (RL) in one soil sample analyzed at a concentration of 0.00034 mg/kg at a depth of 3 feet bgs at Boring RSB-46. This detected concentration was well below the commercial screening level for TPHg (420 mg/kg). TPHg was not reported in any of the step-out soil samples analyzed.
- TPHd was reported in 15 initial soil samples analyzed and ranged in concentrations between 11.8 mg/kg (RSB-20 at 3 feet bgs) and 9,230 mg/kg (1 foot bgs at RSB-03). The reported concentrations of TPHd in Boring RSB-03 (9,230 mg/kg) at 1 foot bgs and in Boring RSB-05 at 1 foot bgs (2,210) exceeded the commercial screening level for TPHd (560 mg/kg). The remaining reported concentrations of TPHd in soil were well below its commercial screening level. TPHd was reported in 11 step-out soil samples analyzed in the vicinity of original Borings RSB-03 and RSB-05 and ranged in concentrations between 48.8 mg/kg in RSB-03-N at 1 foot bgs and 7,590 mg/kg in RSB-05-S2 at 0.5 feet bgs. The reported TPHd concentrations in step-out Borings RSB-05-S (1 foot and 3 feet bgs), RSB-05-SCL (0.5 foot bgs), RSB-05-SSW (0.5 foot bgs), RSB-05-S2 (0.5 foot bgs), RSB-05-SSE (0.5 foot bgs), RSB-03-E (1 foot bgs), and RSB-03-S (1 foot bgs) exceeded its commercial screening level of 560 mg/kg.
- TPH as oil (TPHo) was reported in 19 initial soil samples analyzed and ranged in concentration between 19.8 mg/kg (Boring RSB-66 at 2 feet bgs) and 11,000 mg/kg (1 foot bgs at Boring RSB-03). These reported concentrations were well below the commercial screening level for TPHo (30,000 mg/kg). TPHo was reported in 7 step-out soil samples analyzed and ranged in concentrations between 141 mg/kg in Boring RSB-03-W at 1 foot bgs and 7,310 mg/kg in Boring RSB-05-S at 3 feet bgs. None of the reported TPHo concentrations in the step-out samples exceeded its commercial screening level of 30,000 mg/kg.

Volatile Organic Compounds

- VOCs detected above their respective RLs in the initial soil samples analyzed included 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benzene, ethylbenzene, m,p-xylene, o-xylene, p-cymene, and tetrachloroethene (PCE). However, none of the reported VOC concentrations exceeded their respective commercial screening levels.

Metals

Several metals were detected at concentrations above their respective RLs in the original soil samples analyzed. However only lead and thallium[5] in the initial borings exceeded their respective commercial screening levels. A summary of the lead exceedances is provided below.

- Lead was detected at concentrations ranging between 1 and 2,910 mg/kg (Boring RSB-02 at 3 feet bgs). The concentrations of lead reported in Boring RSB-02 (2,910 mg/kg) at 3 foot bgs and in Boring RSB-57 at 1 foot bgs (918 mg/kg) and 3 feet bgs (401 mg/kg) exceeded the commercial screening level for lead (320 mg/kg). The remaining reported concentrations of lead in soil were below its commercial screening level. Lead was reported in the step-out soil samples analyzed in the vicinity of initial Borings RSB-02 and RSB-57 and ranged in concentrations between 2.7 mg/kg in Boring RSB-57-N at 1 foot bgs and 775 mg/kg in Boring RSB-57-S at 1 foot bgs. The reported lead concentrations in step-out Borings RSB-02-W at 3 feet bgs, RSB-57-S at 1 foot bgs, and RSB-57-W at 1 foot bgs exceeded its commercial screening level of 320 mg/kg.

Hazardous Waste Criteria for Metals

- Cadmium, lead, and zinc were detected at concentrations exceeding their respective TTLC limits (cadmium – 100 mg/kg, lead - 1,000 mg/kg, and zinc - 5,000 mg/kg) in 3 soil samples analyzed, Boring RSB-43 at 1 foot bgs (cadmium – 105 mg/kg), Boring RSB-02 at 3 feet bgs (lead - 2,910 mg/kg and zinc - 11,900 mg/kg), and Boring RSB-02-W at 3 feet bgs (lead 2,040 mg/kg). No other analytes exceeded their respective TTLC limits in the soil samples analyzed.
- Soil samples that were analyzed for STLC and/or TCLP for barium, cadmium, chromium, copper, lead, and zinc did not exceed their respective STLC and/or TCLP limits, except for lead in one sample, Boring RSB-02 at 3 feet bgs (31.8 mg/l), that exceeded the TCLP limit of 5 mg/l.

PCBs

PCBs were not detected at concentrations above their respective RLs in the 6 soil samples (from Borings RSB-51 and RSB-65) analyzed.

Soil Vapor

Several VOCs including 1,1,1,2-tetrachloroethane, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 4-isopropyltoluene, benzene, chloroform, ethylbenzene, m,p-xylene,

[5] Thallium was initially detected in only one soil sample from initial Boring RSB-04 at a depth of 5 feet bgs and at a concentration of 22.1 mg/kg, which exceeded the commercial screening level for thallium (12 mg/kg). Thallium was not detected at the co-located and step-out samples analyzed in the vicinity of RSB-04. It was later discovered that the reported concentration of thallium in initial Boring RSB-04 at a depth of 5 feet bgs was a laboratory reporting error and the laboratory report was corrected accordingly.

o-xylene, PCE, toluene, and trichloroethene (TCE) were detected at concentrations above respective RLs in the original soil samples analyzed. However, chloroform and PCE were the only VOCs detected at concentrations above their respective screening levels using an AF of 0.001 at the Site. A summary of the chloroform and PCE exceedances is provided below.

- Chloroform was reported in soil vapor at concentrations ranging between 0.06 micrograms per liter (µg/l) in Boring RSB-25 at 5 feet bgs and 1 µg/l in Boring RSB-32 at 30 feet bgs. The concentration of chloroform in soil vapor in the Boring RSB-32 at 30 feet bgs exceeded its respective screening level of 0.53 µg/l (using an AF of 0.001) during the January 2021 sampling event.
- PCE was reported in soil vapor at concentrations ranging between 0.08 µg/l in Boring RSB-30 at 15 feet bgs and 100 µg/l in RSB-54 at 5 feet bgs. PCE concentrations in Boring RSB-54 at 5 feet bgs exceeded its respective screening level of 2 µg/l (using an AF of 0.001) during the January 2021 sampling event. The remaining reported concentrations of PCE in soil vapor were below its commercial screening level (using an AF of 0.001). PCE was reported in the step-out soil vapor samples analyzed in the vicinity of original Boring RSB-54 and ranged in concentrations between 0.01 µg/l in RSB-54-N at 35 feet bgs and 7.8 µg/l in RSB-54-CL at 15 feet bgs during the February 2021 sampling event. The concentration of PCE in soil vapor probe at RSB-54 at 5 feet bgs, when it was re-sampled during the February 2021 sampling event was reported at 34 µg/l. The detected concentrations of PCE in the soil vapor probes at Boring RSB-54 at 5 feet bgs, RSB-54-CL at 15 feet bgs, and RSB-E at 5 feet bgs exceeded its respective screening level of 2 µg/l (using an AF of 0.001) during the February 2021 sampling event.

5.4 Summary of Findings from Ramboll's 2020/2021 Investigation

Based on the subsurface Site investigation of the VOCs in soil and soil vapor conducted between December 2020 and February 2021, Ramboll presents the following findings.

5.5 Findings

- During Site investigation activities, slag material was found in 33 of 99 boring locations at depths ranging from 0 to 10 feet bgs at the Site, mainly on the western, northern, and southwestern portions. Thickness of slag encountered in the Site subsurface ranged between 0.1 and 10 feet.
- Although concentrations of lead in soil at the original and step-out soil Borings RSB-02 and RSB-57 exceeded its commercial screening level of 320 mg/kg at shallow depths (up to 3 feet bgs), lead concentrations in soil appeared to decrease in concentration with depth and away from original Borings RSB-02 and RSB-57. The remaining metals were not detected above their respective commercial screening levels in the soil samples analyzed at the Site. Lead was detected at concentrations exceeding their respective TTLC limits in 2 soil samples analyzed, RSB-02 at 3 feet bgs, and RSB-02-W at 3 feet bgs. Soil samples that were analyzed for STLC and/or TCLP for lead did not exceed their respective STLC and/or TCLP limits, except at RSB-02 at 3 feet bgs (31.8 mg/l), that exceeded the TCLP limit of 5 mg/l.
- Cadmium and zinc were detected at concentrations exceeding their respective TTLC limits in RSB-43 at 1 foot bgs and RSB-02 at 3 feet bgs, respectively. Soil samples that were analyzed for STLC and/or TCLP for barium, cadmium, chromium, copper, and zinc did not exceed their respective STLC and/or TCLP limits.

- TPHd concentrations at shallow soil samples from two locations, around Borings RSB-03 and -05 were reported to exceed its commercial screening level. Although concentrations of TPHd detected in soil at original and step-out borings at Boring RSB-03 exceeded its commercial screening level of 560 mg/kg at shallow depths (up to 5 feet bgs), TPHd concentrations in soil were noted to decrease in concentration with depth and away from initial Boring RSB-03. TPHd concentrations in soil at the original and step-out borings at RSB-05 exceeded its commercial screening level and appeared to decrease in concentration with depth and away from initial Boring RSB-05, with the exception of soil samples at shallow depth in step-out borings to the south of initial boring at RSB-05.
- TPHo were not reported above their respective commercial screening levels in the soil samples analyzed at the Site.
- VOCs in soil were not reported above their respective commercial screening levels in the soil samples analyzed at the Site.
- PCBs were not detected at concentrations above respective RLs in the 6 soil samples (from 2 borings) analyzed.
- PCE was reported in soil vapor at concentrations exceeding its respective screening level of 2 µg/l (using an AF of 0.001) at shallow depths (up to 5 feet bgs) at the original and step-out soil borings at RSB-54. However, the concentrations of PCE in soil vapor were decreased in concentration with depth and away from the initial Boring RSB-54. Additionally, PCE concentrations in soil vapor at Boring RSB-54 at 5 feet bgs decreased when it was re-sampled during the February 2021 sampling event compared to the January sampling event.

6. CONCLUSIONS

This section presents Ramboll's conclusions for the Site based on the recent subsurface investigations performed in 2020/2021, and taking into account the prior environmental work performed under the oversight of environmental regulatory agencies.

Since the late 1980s, several investigations and soil cleanups have taken place at the Site. Such activities were performed to address specific areas of environmental concern identified at the Site under the oversight of various environmental agencies including the Fire Department, DTSC, and the RWQCB-SA and have received respective agency closures. These areas consist of:

- Excavation of lead-impacted soil at the southwest corner of the Site (Parcel 1) - 1990.
- UST removals – 1993 (4 fuel oil USTs on Parcel 3), 2006 (4 diesel USTs on Parcel 3), 2011 (1 diesel UST on Parcel 2), 2014 (1 diesel UST on Parcel 4).
- Excavation of metals-impacted soil in EAF dust trenches (Parcel 4) - 2001.
- Slag stockpile commingled with baghouse dust remediation (Parcels 1 and 2) – 2002.
- Excavation of metals-impacted soil from area north of Pad 16 (Parcel 2) - 2007.

Based on the 2020/2021 Phase II Subsurface Investigation conducted at the Site, Ramboll presents the following conclusions.

- As part of historical on-Site operations, slag has been processed over the years. Slag is produced from former steel-making operations and has been both utilized on-Site in the past for fill and pavement needs, as well as sold to other facilities as a product. Prior sampling of the slag material (from the steel-making process) by on-Site facility personnel has found trace concentrations (less than one percent by weight) of combined metals including antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc. In 2001, when overseeing excavation of metal-impacted soil within a portion of Parcel 4, the DTSC approved leaving slag in place and concluded that "*the Site did not pose a threat to human health or the environment under any land use.*" During Ramboll's recent investigations, slag material was observed at several borings at depths ranging from 0 to 10 feet bgs and in thickness ranging between approximately 0.1 and 10 feet, primarily on the western, northern, and southwestern portions of the Site. As part of future earthwork activities associated with the redevelopment of the Site that may disturb the slag, such slag may be managed in accordance with a Site-specific Soil Management Plan (SMP) prepared by a developer. The SMP may be implemented during any future grading and/or redevelopment activities at the Site for the management of potentially-impacted soils and/or subsurface features encountered during earthwork activities.
- The results of the recent subsurface investigation indicate that concentrations of TPHd and lead exceeding regulatory commercial screening levels in soil appear to be limited in aerial extent and depth. Further, due to the concentrations of lead, zinc, and/or cadmium, if soil is removed for off-Site disposal from limited portions of the Site (in the vicinity of Borings RSB-02, RSB-02W, and RSB-43), such soil will need to be managed in compliance with California and federal law.

- Based on a review of soil vapor data collected at the Site, Site-wide vapor mitigation measures are not necessary. PCE impacts in soil vapor at the Site appear to be localized to one area (in the east portion of the current Parts Warehouse building) and generally contained in the upper approximately 15 feet. Depending on the redevelopment plans for the Site, further soil vapor assessment and/or mitigation may be warranted by a developer within this limited portion of the Site.
- Groundwater has historically been measured at a depth of approximately 378 feet bgs in the on-Site water well. The investigations performed to date at the Site do not suggest that on-Site operations have adversely impacted groundwater.
- A Site-specific SMP could be prepared by a developer during any future grading and/or redevelopment activities at the Site for the management of soils and/or subsurface features encountered during earthwork activities. The SMP could incorporate any additional soil sampling that may be necessary prior to inform the redevelopment effort at the Site.

24 locations in a grid - blue circles on Figure	RSB-01 through RSB-24	NA*	Each boring to a depth of 5 feet bgs. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Evaluation of the extent of slag material at the site.
Three additional deep locations scattered throughout the grid - red circles on Figure	RSB-66, RSB-67, RSB-68	NA*	Each boring to a depth of 25 feet bgs. Hand auger to 5 feet bgs, then direct push to 25 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15 19.5-20 24.5-25	Metals, VOCs & TPH	-	Evaluation of the extent of slag material at the site. Further deeper sampling to provide spatial coverage on native soil material.
One boring inside maintenance shop, near hydraulic lift in northwest portion of site, on Parcel 4 - green circle in grid B-2 on Figure	RSB-61	NA*	One boring to a depth of 5 feet bgs. Hand auger to 5 feet bgs. Vapor probe at 5 feet bgs	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near clarifier in northwest portion of site (Parcel 4) south of maintenance shop - purple circle in grid B-2 on Figure	RSB-59	NA*	One boring to a depth of 5 feet bgs. Hand auger to 5 feet bgs, then direct push to 15 feet bgs. Vapor probe at 5 & 15 feet bgs	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near drain in northwest portion of site (Parcel 4) south of maintenance shop - green circle in grid B-2 on Figure	RSB-58	NA*	One boring to a depth of 5 feet bgs. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Two borings in slag trench remediation area on parcel 4 (yellow hatched area) - red circles in grid B-3 on Figure	RSB-34, RSB-35	B borings	2 borings to depths of 25 feet bgs. Hand auger to 5 feet bgs, then direct push to 25 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15 19.5-20 24.5-25	Metals, VOCs & TPH	-	On December 20, 2001, the DTSC issued a letter to Fontana Steel indicating that it had completed its review of the 2001 PEA. The soil sampling and analysis results had been compared to health-based criteria for unrestricted land use for 17 metals. DTSC concluded that “the Site does not appear to pose a threat to human health or the environment under any land use,” and concluded that no further action was necessary. This issue is characterized as a HREC in Ramboll’s 2020 Phase I ESA. Confirm current soil conditions in this area.
Pad 16 remediation area (orange hatched area) - blue circle in grid C-4 on Figure	RSB-18	A, B, C borings (no data?)	Grid sampling will cover shallow depths. One grid sample located within this area (approximate location).	No additional samples	-	-	One sample of the 24 grid samples (line item 2) is located in the former Pad 16 area. No additional samples proposed. The Consent Order described the successful remediation of the area and indicated that the remediation constituted full settlement of the issued violation. An acknowledgment from DTSC regarding payment of imposed penalties was received by TAMCO on December 3, 2008, presumably completing regulatory closure of the area. Although remedial activities in the area resulted in issuance of regulatory closure, because it is not known if soils allowed to remain in place were cleaned up to current residential standards, this issue is characterized as a CREC in Ramboll’s 2020 Phase I ESA.
Two borings in slag remediation area in central portion of Parcel 2 (pink hatched area) - orange circles on Figure	RSB-36, RSB-37	Exact sampling locations unclear. S (1-10) samples	2 borings to depths of 10 feet bgs. Hand auger to 5 feet bgs, then direct push to 10 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10	Metals, VOCs & TPH	-	A letter from the County Fire Department dated July 2, 2002 indicated that after reviewing the June 2001 report submitted by Clayton Group Services, Inc. (not available for Ramboll’s review), “No Further Action” was necessary regarding the remediation of slag and non-slag stockpile at the Site. Although remedial activities in the area resulted in regulatory closure for the case, because documentation was not available as to whether the cleanup standards met residential criteria, this issue is characterized as a CREC in Ramboll’s 2020 Phase I ESA. Confirm current soil conditions in this area.
One boring near stormwater channel in the southwest portion of site - green circle in grid G-2 on Figure	RSB-39	NA*	1 boring to a depth of 5 feet bgs from bottom of channel. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Lead remediation area (green hatched area) - blue circle in grid G-1 on Figure	RSB-01	Exact sampling locations unclear	Grid sampling will cover shallow depths. Two borings already located in this area (approximate location)	No additional samples	Metals, VOCs & TPH	-	One sample of the 24 grid samples (line item 2) is located in the former Pad 16 area. No additional samples proposed. Parcel 1 in the southwestern corner of the Site, including areas of adjacent neighboring properties, were remediated for lead impacts. This area received a NFA status from the RWQCB-SA on November 7, 1990. As a result of these activities, the Site is listed in the SLIC database with closed status. This issue is characterized as a HREC in Ramboll’s 2020 Phase I ESA.
One boring between emergency generator & approximate location of the former diesel UST - purple circle by feature 28 on Figure	RSB-25	TAMCO-1 (high diesel conc at 6.5 feet)	1 boring to a depth of to 15 feet bgs. Hand auger to 5 feet bgs, then direct push to 15 feet bgs. Vapor probes at 5 & 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15	One soil sample was collected from beneath the excavation, at a depth of approximately 6.5 feet bgs. The sample was analyzed for TPHd via USEPA Method 8015B and BTEX via USEPA Method 8260B. TPHd was detected at a concentration of 1,720 mg/kg, ethylbenzene was detected at a concentration of 57 µg/kg, and xylenes were detected at a concentration of µg/kg. Benzene, toluene, and other fuel oxygenates were not detected. The excavation was subsequently backfilled with concrete slurry. Surface indications of the UST were observed during ENVIRON’s 2010 Site visit but were not observed during Ramboll’s 2020 Site visit. Based on high diesel concentration observed in the soil sample from 2010, Ramboll will sample in the vicinity of the former UST to confirm soil conditions in area of this former feature.

Table 1. Sampling Rationale
12459-B Arrow Route
Rancho Cucamonga, California

Location	Current Borings	Historical borings	Scope of Work	Soil Sample Depth (feet bgs)	Analytical Suite	Soil Vapor Probe Depth (feet bgs)	Rationale
One boring near inside/outside area of large building in SW portion, vicinity of cooling water channel - black circle in grid F-4 on Figure	RSB-32	NA*	1 boring to a depth of 30 feet bgs. Hand auger to 5 feet bgs, then direct push to 30 feet bgs. Vapor probes at 5 & 30 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15 19.5-20 24.5-25 29.5-30	Metals, VOCs & TPH	5, 30	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Two borings near clarifiers by baghouse, one near each clarifier - purple circles in grid G-4 on Figure	RSB-43, RSB-44	NA*	2 borings to a depth of 15 feet bgs, one at each clarifier. Hand auger to 5 feet bgs, then direct push to 15 feet bgs. Vapor probes at 5 & 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15 5, 15	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Five borings near cooling towers (one at each) in south-southwest portion of site - green circles in grids F-4, G-4, and G-5 on Figure	RSB-40, RSB-41, RSB-42, RSB-45, RSB-62	NA*	5 borings to depth of 5 feet bgs, one at each cooling tower. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals & Cr VI	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near reheat oven - green circle near feature 17 on Figure	RSB-63	NA*	One borings to a depth of 5 feet bgs. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near active fuel UST - purple circle near feature 22 on Figure	RSB-27	NA*	1 boring to a depth of 15 feet bgs. Hand auger to 5 feet bgs, then direct push to 15 feet bgs. Vapor probes at 5 & 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near approximate location of former 4 oil and 4 diesel USTs - purple circle near feature 26 on Figure	RSB-33	TM-1 through TM-8 (TPHs analyzed only at 16 feet bgs)	1 boring to a depth of 15 feet bgs. Hand auger to 5 feet bgs, then direct push to 15 feet bgs. Vapor probes at 5 & 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15	Based on historical review conducted as part of Ramboll's 2020 Phase I ESA, four approximately 12,000-gallon USTs on Parcel 3, formerly used to store fuel oil were removed from the Site in 1993. (There are some discrepancies as to the size of these tanks, which are sometimes reported with a volume or 50,000 gallons each and sometimes listed with a collective volume of 50,000 or 52,000 gallons). Soil samples from the excavation were collected and tested, and the removal of the USTs and remediation of the excavation area received a NFA status from the Health Department dated April 28, 1994. However, based on the data reviewed, there appear to be data gaps at shallower depths of the historical borings in this area. This issue is characterized as a HREC in Ramboll's 2020 Phase I ESA. Confirm current soil conditions in this area.
Two borings (one at north end & one at south end) near open top clarifier - black circles near feature 25 on Figure	RSB-28, RSB-29	NA*	2 borings to depths of 30 feet bgs, one on north end and one on south end. Hand auger to 5 feet bgs, then direct push to 30 feet bgs. Vapor probes at 5 & 30 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15 19.5-20 24.5-25 29.5-30	Metals, VOCs & TPH	5, 30 5, 30	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Two borings near wash station (east and west sides) - green circles near feature 23 on Figure	RSB-46, RSB-47	NA*	2 borings to a depth of 5 feet bgs, one at east end and one at west end. Hand auger to 5 feet bgs. Vapor probe at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5 5	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near former oil cellar within production/ roll mill building - purple circle in grid F-6 on Figure	RSB-64	NA*	1 boring to a depth of 15 feet bgs. Hand auger to 5 feet bgs, then direct push to 15 feet bgs. Vapor probes at 5 & 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Four borings in main production line building - green circles near features 12, 18, 19 (grids F-6 and G-6) on Figure	RSB-48, RSB-49, RSB-50, RSB-52	NA*	4 borings to a depth of 5 feet bgs. One by PCB material storage, one by hazardous material storage, 2 borings on north & south sides of the production line. Hand auger to 5 feet bgs. Vapor probes at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs, & TPH, (PCBs only at PCB storage)	5 5 5 5	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring in roll shop south of main production line building - green circle near feature 12 on Figure	RSB-51	NA*	1 boring to a depth of 5 feet bgs. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near transformers - green circle near feature 21 (not SCE property) in grid G-6 on Figure	RSB-65	NA*	1 boring to a depth of 5 feet bgs. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH, PCBs	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Two borings in lubricant storage area - green circles west of feature 9 on Figure	RSB-55, RSB-56	NA*	2 boring to depths of 5 feet bgs, one on new material & one by used material storage. Hand auger to 5 feet bgs. Vapor probe at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5 5	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).

Table 1. Sampling Rationale
12459-B Arrow Route
Rancho Cucamonga, California

Location	Current Borings	Historical borings	Scope of Work	Soil Sample Depth (feet bgs)	Analytical Suite	Soil Vapor Probe Depth (feet bgs)	Rationale
One (possibly angled) boring near ASTs south of mobile maintenance building - green circle in grid G-7 on Figure	RSB-38	NA*	1 angled borings under AST to a depth of 5 feet bgs. Vapor probe at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5	Based on historical review conducted as part of Ramboll's 2020 Phase I ESA, the area in the vicinity of the ASTs located south of the Mobile Maintenance building at the Site on Parcel 3 exhibited significant staining, which "*could impact the subsurface and stormwater runoff*." The ASTs in this area were used to store oils, grease, and antifreeze used in the Mobile Maintenance building; diesel fuel was also reportedly stored in this area in 2010. At the time of Ramboll's 2020 Site visit, the area remained concrete paved and concrete-bermed, and three oil ASTs and one oil tote were observed in the area; the contents of the ASTs were piped inside the building and into dispensers for filling of vehicles and equipment inside the building. Ramboll has not been provided with information indicating that a soil investigation of the area was performed nor that the significantly stained area, as noted in the 1998 Arcadis report, was remediated. Based on the foregoing, Ramboll could not rule out the possibility that impacts to the soil from the contents of the ASTs stored in this area remain and as such, characterized this issue as a REC in the 2020 Phase I ESA. Confirm current soil conditions in this area.
Two borings within mobile maintenance building - photo 17 - purple and green circles near feature 13 on Figure	RSB-30, RSB-60	NA*	2 borings, one boring near drain to a depth of 15 feet bgs, one boring near broken asphalt to a depth of 5 feet bgs. Hand auger to 5 feet bgs, then direct push to 15 feet bgs. Vapor probes at 5 & 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10	Metals, VOCs & TPH	5 5, 15	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring east of mobile maintenance building - green circle in grid G-7 on Figure	RSB-57	NA*	1 boring to a depth of 5 feet bgs. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Two borings within building in central portion of Parcel 3 - green circles in grids F-6 and F-7 on Figure	RSB-53, RSB-54	NA*	2 borings to depths of 5 feet bgs. Hand auger to 5 feet bgs. Vapor probes at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5 5	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring at stormwater infiltration channel (east side) - green circle near feature 20 on Figure	RSB-26	NA*	1 boring to a depth of 5 feet bgs. Hand auger to 5 feet bgs. Vapor probes at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring at hazardous waste storage, near east most building on Parcel 3 - green circle in grid F-8 on Figure	RSB-31	NA*	1 boring to a depth of 5 feet bgs. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near former septic system - purple circle near feature 29 on Figure	RSB-69	NA*	1 borings to a depth of 15 feet bgs. Hand auger to 5 feet bgs, then direct push to 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).

Notes:
AST - aboveground storage tank
bs - below ground surface
CREC - controlled recognized environmental condition
DTSC - Department of Toxic Substances Control
ESA- environmental site assessment
HREC - historical recognized environmental condition
mg/kg - milligram per kilogram
µg/kg - microgram per kilogram
NA* - Based on Ramboll's review, no historical borings were noted; however, there were missing appendices (not available for Ramboll's review) may show additional sampling locations
PEA - preliminary endangerment assessment
REC - recognized environmental condition
RWQCB - Regional Water Quality Control Board
SLIC - Spills, Leaks, Investigations, and Cleanup
TPH - total petroleum hydrocarbon
TPHd - total petroleum hydrocarbon as diesel
UST - underground storage tank
VOC - volatile organic compound
Decision to analyze for Cr VI and TCLP/STLC in soil will be based on total metals analytical results

			TPH using USEPA 8015M/8260B (mg/kg)			Detected VOCs using USEPA 8260B/5035 (mg/kg)

Regulatory Screening Criteria (mg/kg)														
USEPA RSL/DTSC HERO Note 3 Commercial Screnning Level*			**420**	**560**	**30,000**	**1,800**	**1,500**	**1.4**	**25**	**2,400**	**2,800**	**NE**	**2.7**	**5,300**

Notes
Bold indicates concentration above the USEPA/DTSC Screening Level
* - the most conservative screening level was used for comparison
Only compounds reported above the laboratory reporting limit in at least one sample are shown.
< X - Not Reported above laboratory reporting limit (X)
bgs - below ground surface
DTSC - Department of Toxic Substances Control
DTSC HERO HHRA Note 3 - DTSC Human and Ecological Risk Office (HERO) Human Health Risk assessment (HHRA) Note Number 3, Issue: DTSC-Modified Screening Levels (DTSC-SLs). Dated June 2020.
ID - Identification
mg/kg - milligram per kilogram
NA - not applicable
NE - not established
TPH - total petroleum hydrocarbons
USEPA - United States Environmental Protection Agency
USEPA RSL - United States Environmental Protection Agency Regional Screening Level, commercial/industrial land use, updated November 2020
VOCs - volatile organic compounds

Table 3. Summary of Metals in Soil
12459-B Arrow Route
Rancho Cucamonga, California

			Detected Metals using USEPA 6010B/7471A (mg/kg)

Notes
Bold indicates concentration above the respective USEPA/DTSC Screening Level
Italics & blue highlight indicates concentration above the respective TTLC limit
* - the most conservative screening level was used for comparison
[a] - Arsenic occurs naturally in soil. An evaluation by the Department of Toxic Substances Control of arsenic soil from school sites in Southern California found arsenic concentrations ranging from 0.15 mg/kg to 20 mg/kg, with an upper-bound background arsenic concentration of 12 mg/kg (G. Chernoff, W. Bosan, D. Oudiz, 2008, entitled - Determination of a Southern California Regional Background Arsenic Concentration in Soil). Arsenic concentrations in soil samples collected at the site were conservatively screened
[b] - Excluding barium sulfate
Only compounds reported above the laboratory reporting limit in at least one sample are shown.
< X - Not Reported above laboratory reporting limit (X)
bgs - below ground surface
DTSC - California Department of Toxic Substances Control
DTSC HERO HHRA Note 3 - DTSC Human and Ecological Risk Office (HERO) Human Health Risk assessment (HHRA) Note Number 3, Issue: DTSC-Modified Screening Levels (DTSC-SLs). Dated June 2020.
ID - Identification
mg/kg - milligram per kilogram
mg/l - milligram per liter
N/A - not applicable
NA - not analyzed
NE - not established
STLC - Soluble Threshold Limit Concentration
TCLP - Toxicity Characteristic Leaching Procedure
TTLC - Total Threshold Limit Concentration
USEPA - United States Environmental Protection Agency
USEPA RSL - United States Environmental Protection Agency Regional Screening Level, commercial/industrial land use, updated November 2020

Notes
Bold indicates concentration above attenuation factor 0.03
Underline indicates concentration above attenuation factor 0.001
* - non cancer endpoint
Only compounds reported above the laboratory limit in at least one sample are shown.
< X - Not reported above laboratory reporting limit (X).
bgs - below ground surface
DTSC - Department of Toxic Substances Control
DTSC HERO HHRA Note 3 - DTSC Human and Ecological Risk Office (HERO) Human Health Risk assessment (HHRA) Note Number 3, Issue: DTSC-Modified Screening Levels (DTSC-SLs). Dated June 2020.
ID - Identification
µg/l - microgram per liter
NE - Screening level not established
USEPA - United States Environmental Protection Agency
USEPA RSL - United States Environmental Protection Agency Regional Screening Level, commercial/industrial land use, updated November 2020
VOCs - Volatile Organic Compounds

Response to Comments: Subsurface Investigation Report
BTC III Arrow Route (Site Code: 301642)
12451 Arrow Route, Rancho Cucamonga, CA

Comment Number	DTSC Comment	Roux Response	Location in Text
Human and Ecological Risk Office (HERO):			
Reviewer: Vada Kyonga Yoon, DEnv (Doctor of Environmental Science and Engineering), Staff Toxicologist			
1	Comment Numbers 1a and 1c *(from HERO's April 28, 2023 Memorandum)* : To be addressed in the future document (i.e., a workplan portion of the forthcoming current conditions report).	No additional response.	
2	Comment Number 1b *(from HERO's April 28, 2023 Memorandum)* : Additional soil vapor sampling at depth is proposed only at Parcel 2. HERO is unable to determine whether additional soil vapor sampling at depth only from Parcel 2 are sufficient for the entire Site characterization. HERO will determine this once the upcoming current condition report is submitted for HERO's review.	No additional response.	
3	Comment Number 2 *(from HERO's April 28, 2023 Memorandum)* : To be addressed in the future document.	No additional response.	
4	Comment Number 3 *(from HERO's April 28, 2023 Memorandum)* : To be addressed in the future document (i.e., current condition report).	No additional response.	
5	HERO recommends providing a table which summarizes historical operations and available data per parcel in the upcoming current condition report in order to facilitate HERO's review. HERO recommends that the summary table provide a per parcel summary, which will specify historical activities and constituent of potential concerns, sample media, sampling depths, and analytes of available data, and a proposed additional sampling or a lack of additional sampling proposed with rationale.	The suggested table and details will be included in the Current Conditions Report	
Geological Services Branch (GSB):			
Reviewer: Alexandra Ruiz, P.G., Engineering Geologist			
10	Section 4.2.6 Mobile Maintenance Building and Former ASTs (Parcel 3) – The 5-feet bgs bullet states that additional delineation of PCE is needed to the west of RSB-30-R4 at 5 feet bgs; however, according to Figure 13, PCE at this location was delineated below the screening level. Instead, GSB recommends further delineation west of RSB-30-R5, which had a PCE detection of 66 micrograms per cubic meter (µg/m3). Additionally, the 15-feet bgs bullet states that TCE is not delineated west of boring RSB-60-R6; the direction should be corrected to east.	The reference to RSB-30-R4 is a typo and has been revised to reference further delineation west of RSB-**60**-R4. As noted by GSB, PCE was detected at 66 micrograms per cubic meter (µg/m3) at RSB-30-R5, which is below the screening criteria for PCE with the default conservative 0.03 attenuation factor applied (i.e. delineation is complete). Soil vapor concentrations will be considered during full-scale soil vapor extraction (SVE) design/planning document preparation. The description of TCE delineation at 15-feet bgs has been corrected to note that additional delineation is needed east of RSB-60-R6.	Section 4.2.6, 5-feet bgs bullet and 15-feet bgs bullet.
11	Section 4.2.7 Parts Warehouse (Parcel 3) – The 35-feet bgs bullet states that TCE lacks delineation to the east and south of RSB-54-SE. The section should also note that TCE has not been delineated vertically at this location nor vertically near location RSB-54-E3.	Noted. The description of TCE delineation at 35-feet bgs has been corrected.	Section 4.2.7, 35-feet bgs bullet
12	Figure 14 Benzene Iso-Contours 5 Feet Bgs – There appears to be a discrepancy on Figure 14. The benzene concentration at RSB-54-E is displayed as 3,100 micrograms per cubic meter µg/m3. Please confirm that this is not accurate.	The benzene concentration at RSB-54-E at 5 feet bgs is <25 µg/m3. 3,100 µg/m3 is the PCE concentration at that probe and depth, and was displayed in error.	Figure 14
Additional Roux Changes:			
1	Table 2 has been amended to include all historical Ramboll results.		Table 2

Executive Summary

Roux Associates, Inc. (Roux), on behalf of BTC III Arrow Route CC LP (BTC III, CLIENT), has prepared this *Subsurface Investigation Report* (Report) for the 95-acre Former Commercial Metals Company (CMC) facility located at 12451 Arrow Route, Rancho Cucamonga, California (Site; Figure 1). The Site was formerly owned and occupied by CMC and included an inactive rebar fabrication facility and inactive steel mill. The Site is comprised of four parcels (Parcels 1 through 4; Figure 2), which were historically used as follows:

- Parcel 1 was formerly used as an equipment yard, slag material storage, and steel billets storage and had no permanent structures;
- Parcel 2 was formerly developed with a melt shop, warehouse and maintenance building, an old bag house, and a guard shack;
- Parcel 3 was formerly developed with a new bag house, the main office, a parts warehouse, a roll mill, and a bundling station; and
- Parcel 4 was formerly developed with an office and a fabrication shop that included a vehicle wash area.

The Site was acquired by CLIENT in December 2021 and as of the date of this Report had been cleared of all structures in preparation for industrial redevelopment (Figure 3).

Ramboll US Consulting, Inc. (Ramboll) conducted a Phase I Environmental Site Assessment (ESA) and a Phase II Subsurface Investigation of the Site (Ramboll, 2021b and 2021a) in late 2020 and early 2021 on behalf of the former owner. The stated objectives of Ramboll's Phase II investigation were to evaluate: (1) soil and soil vapor conditions across the Site; (2) the extent of subsurface slag, a byproduct of the steel manufacturing process; and (3) subsurface conditions near current and former features such as underground storage tanks (USTs), cooling towers, and storage areas for slag, steel billet, scrap metal and rebar.

Ramboll's key findings included the following:

- Lead was detected in shallow soil samples (up to 3 feet below ground surface [bgs]) at concentrations greater than the DTSC SL for Commercial/Industrial Soil (320 milligrams per kilogram [mg/kg] at the time of the Ramboll investigation[1]) at the original and step-out borings near the Warehouse and Maintenance building and in the east part of the Mobile Maintenance building (Figure 6 in Appendix B). However, lead concentrations in soil decreased with depth and distance from original borings.
- Diesel-range organics (DRO) were detected in shallow soil samples (up to 5 feet bgs) at concentrations greater than the United States Environmental Protection Agency (USEPA) Regional Screening Level (RSL; 560 mg/kg) in original and step-out borings south of the Bundling Station

[1] The DTSC SL for lead in soil has been updated from 320 mg/kg to 500 mg/kg per the Human Health Risk Assessment (HHRA) Note Number 3, updated in May 2022 by the DTSC Human and Ecological Risk Office (HERO). https://dtsc.ca.gov/wp-content/uploads/sites/31/2022/02/HHRA-Note-3-June2020-Revised-May2022A.pdf

and near the west boundary of Parcel 2 (Figure 6 in Appendix B). DRO concentrations in soil decreased with depth and distance from original borings.

- Groundwater has historically been measured at a depth of approximately 378 feet bgs in the onsite water well. The investigations performed by Ramboll did not suggest that on Site operations had adversely impacted groundwater.

- Soil vapor data collected at the Site suggests that Site-wide vapor mitigation measures are not necessary. PCE and benzene were detected in shallow soil vapor at concentrations exceeding the DTSC SL for a commercial/industrial scenario using an attenuation factor of 0.03 (67 and 14 micrograms per cubic meter [$\mu g/m^3$], respectively) at shallow depths (less than 35 feet bgs) in the western portion of the Roll Mill and in the area of the Parts Warehouse at Parcel 3 (Figure 6 in Appendix B). Detections of PCE ranged from 10 to 100,000 $\mu g/m^3$ and benzene detections ranged from 29 to 220 $\mu g/m^3$.

- Slag material was observed in several borings at depths ranging from 0 to 10 feet bgs and in thickness ranging between approximately 0.1 and 10 feet, primarily on the western, northern, and southwestern portions of the Site.

- Ramboll recommended that, in a redevelopment scenario, certain soils would need to be managed in compliance with California and federal law, due to encountered concentrations of lead, zinc, and/or cadmium in soil samples collected during their investigation.

As part of due diligence prior to Site acquisition by BTC III, Roux conducted a Phase I ESA in September 2021 (Roux, 2021) and identified the following Recognized Environmental Conditions (RECs):

- DRO and metals impacts to shallow soils in Parcels 2 and 3, and VOC impacts (primarily PCE) to shallow soil vapor in Parcel 3, as identified by Ramboll. This included SL exceedances in soil vapor for chloroform (three locations), benzene (two locations), and PCE (six locations) and in soil for DRO, cadmium and lead.

- Rail spurs at Parcels 2 and 3 were installed by at least 1959. Railroad spurs represent environmental concerns due to potential historical application of oils, herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical practice of using coal cinders for track fill material, and hazardous spills.

- A 12,000-gallon dual-compartment diesel and gasoline underground storage tank (UST) at Parcel 3, north of the main office building.

- A former chemical storage area was located northwest of the melt shop on Parcel 2. Moderate staining and cracks were observed, and this area was not previously assessed.

- A wash rack located in the northern portion of Parcel 2. This area was not previously assessed.

- An inactive subsurface clarifier and aboveground oil recovery system in Parcel 4, which had not been previously assessed.

- Potential inactive on-Site USTs were identified in previous reports and regulatory agency records.

In order to address the RECs and supplement Ramboll's data, Roux conducted a Subsurface Investigation in two mobilizations: the first in November 2021 and the second in March 2022 (Figures 4 through 7).

Mobilization 1 was implemented to confirm Site environmental conditions prior to BTC III's ownership. Key findings from Mobilization 1 summarized below:

- PCBs and benzo(a) pyrene were detected at concentrations greater than the SLs in soil samples collected from borings RR-3 (PCBs) and RR-12 (benzo(a)pyrene) located along the rail spurs at Parcels 2 and 3.

- Concentrations of target analytes in soil and soil vapor samples at an existing UST, a former chemical storage area, a wash rack, and former USTs were less than commercial/industrial RSLs or SLs.

- Pesticide and herbicide concentrations across the Site were less than the commercial/industrial RSLs or SLs.

- Shallow soils (less than 5 feet bgs) in limited areas near the southern portion of the Site (Parcels 2 and 3) contained DRO and metals concentrations exceeding the commercial/industrial RSLs or SLs.

- PCE and benzene concentrations in soil vapor samples in portions of Parcel 3 exceeded applicable SLs.

Mobilization 2 was implemented after BTC III became owner to delineate VOC impacts to shallow soil and soil vapor at Parcel 3. Key findings from Mobilization 2 are summarized below:

- VOCs are not present in soil at concentrations greater than USEPA RSLs or DTSC SLs.

- Soil vapor analytical results indicate that PCE, TCE, benzene, and chloroform are present at a small portion of Parcel 3. VOC impacts are highest in concentration between 5 and 15 feet bgs, with significant attenuation at 35 feet bgs. Some additional lateral and vertical delineation are needed.

Based on the results of the Subsurface Investigation, Roux recommends:

1. Additional shallow soil sampling to delineate identified DRO, metals, and SVOC impacts at Parcels 2 and 3, in order to define soils that may need to be removed from the Site or evaluated for potential on-Site treatment and reuse.[2]

2. Additional soil vapor delineation sampling and evaluation of soil vapor extraction (SVE) as a remedial alternative for shallow soil vapor VOC impacts to Parcel 3.[3]

[2] A proposed scope of work will be presented in a forthcoming Current Conditions Report (CCR).

[3] On July 15, 2022, Roux conducted an SVE pilot, which was documented in a Soil Vapor Extraction Pilot Test Technical Memorandum, dated October 4, 2022. Additional soil vapor delineation activities and an extended SVE pilot test are proposed in the *Soil Vapor Delineation and Soil Vapor Extraction Extended Pilot Test Workplan* dated September 1, 2023.

3. Additional sampling at the rail spurs to delineate the extent of PCB impacts. [4]

4. Additional evaluation of the physical distribution and chemical composition of slag materials in the western portions of the Site.[5]

[4] A shallow soil investigation in the area of identified polychlorinated biphenyls (PCBs) was conducted in November 2022 with additional sampling completed in May and June 2023, which was documented in a *Technical Memorandum, Targeted Shallow Soil Investigation for Polychlorinated Biphenyls near RR-3 and Recommended Additional Sampling, Southeastern Corner of Parcel 3*, dated August 25, 2023. The November 2022 sampling was documented in a previous memorandum dated April 7, 2023.

[5] A focused slag investigation was conducted between September and October 2022, which was documented in a *Slag Investigation Technical Memorandum*, dated April 7, 2023 (revised August 25, 2023).

1. Introduction

Roux Associates, Inc. (Roux), on behalf of BTC III Arrow Route CC LP (BTC III, CLIENT), has prepared this *Subsurface Investigation Report* (Report) for the former Commercial Metals Company (CMC) facility located at 12451 Arrow Route, Rancho Cucamonga, California (Site; Figure 1). The Site was formerly owned and occupied by CMC and included an inactive rebar fabrication facility and inactive steel mill (Figure 2). The Site was purchased by BTC III in December 2021 and as of the date of this Report had been cleared of all structures in preparation for industrial redevelopment. A conceptual industrial development plan, which is subject to change, is shown on Figure 3.

Ramboll US Consulting, Inc. (Ramboll) conducted a Phase I Environmental Site Assessment (ESA) and Phase II Subsurface Investigation on behalf of CMC (the former owner) in 2020 and 2021 (Ramboll, 2021a and 2021b). Ramboll's Site-wide Phase II investigation was intended to assess soil and soil vapor conditions as part of CMC's shut down of operations (Ramboll, 2021b). The Phase II investigation evaluated point-source features of concern, including former underground storage tanks (USTs), clarifiers, cooling towers, chemical storage areas, and former remediation areas. Ramboll evaluated the extent and presence of buried slag by implementing unbiased, Site-wide grid sampling in areas that had not previously been sampled.

As part of due diligence prior to Site acquisition by BTC III, Roux conducted a Phase I ESA in December 2021 (Roux, 2021), which identified the six (6) Recognized Environmental Conditions (RECs). In order to assess the identified RECs, Roux conducted a Subsurface Investigation in two mobilizations: the first in October and November 2021 and the second in March 2022 (Figures 4 through 7). The Subsurface Investigation was conducted to evaluate Site conditions relative to intended industrial redevelopment.

1.1 Objectives

The objectives of the Subsurface Investigation were to:

- Evaluate total petroleum hydrocarbon (TPH) concentrations in the diesel range ("diesel range organics" or "DRO") and metals impacts to shallow soil at Parcels 2 and 3, and VOC impacts (primarily tetrachloroethene [PCE]) to shallow soil vapor at Parcel 3, as identified by Ramboll;
- Evaluate shallow soils in the area of former rail spurs at Parcels 2 and 3;
- Evaluate soil and soil vapor at a then-existing[6] 12,000 gallon dual-compartment diesel and gasoline underground storage tank (UST) at Parcel 3;
- Evaluate soil and soil vapor at a former chemical storage area northwest of the former melt shop on Parcel 2;
- Evaluate soil and soil vapor at a wash rack in the northern portion of Parcel 2;

[6] The UST was removed by December 12, 2022, in accordance with permits from the San Bernardino County Fire Protection District (SBCFPD) and Rancho Cucamonga Fire Protection District (RCFPD). Soil sampling was conducted per the permits and showed no indication of hydrocarbon-related impacts; case closure was granted by SBCFPD on July 18, 2023.

- Evaluate soil in the vicinity of an inactive subsurface clarifier and aboveground oil recovery system in Parcel 4; and

- Evaluate soil and soil vapor at an inactive former on-Site UST at Parcel 3, which historical records suggested had been removed from the Site.

The subsurface investigation was completed in two mobilizations; Mobilization 1 was conducted from October to November 2021 and Mobilization 2 was conducted in March 2022. The results of the Subsurface Investigation are presented herein.

1.2 Report Organization

The remaining sections of this Report are organized as follows:

- Section 2 presents general background information, including Site description, Site history, Site geology and hydrogeology, and a summary of previous environmental investigations;
- Section 3 describes the Subsurface Investigation activities;
- Section 4 provides a summary of results and discussion;
- Section 5 summarizes the findings of the investigation and provides conclusions;
- Section 6 presents Roux's recommendations for the Site;
- Section 7 provides a list of references used in this Report.

2. General Background

2.1 Site Information and History

The Site consists of approximately 95 acres of land bounded by Arrow Route to the north and the Atchison Topeka and Santa Fe Railroad (Railroad) to the south and is accessible via Arrow Route and Juneberry Drive. The nearest surface water feature to the Site is Day Creek, approximately 0.24-mile to the west. The Site is generally flat with a stormwater retention basin located along the southern boundary of Parcel 3.

The Site was formerly occupied by several related entities: CMC, a steel mill; CMC Rebar, a limited rebar manufacturing facility; and Phoenix Industries, a slag processing facility (slag is an inert byproduct of steel production). The Site operated as a steel mill from the 1950s until 2019 when milling operations were phased out. BTC III purchased the property in 2021. The Site is currently vacant and all structures have been demolished in preparation for industrial redevelopment.

The current main address for the Site is 12451 Arrow Route, Rancho Cucamonga, San Bernardino County, California. Over the years, the Site has been owned, developed, and operated by multiple entities and has used a variety of street addresses, including, but not limited to: 12459 Arrow Route (Parcels 2, 3, and 4); 12459-B Arrow Route (Parcels 2 and 3); 12451 Arrow Route (Parcel 4); and 12301 Arrow Highway (Parcel 1).The Site consists of four parcels (Parcels 1 through 4), which are described below and shown on Figure 2:

- Parcel 1 is located in the western portion of the Site and was not historically developed with any permanent structures. CMC utilized the northern portion of Parcel 1 as an equipment boneyard and the southern portion for storage of steel billets. At the time of Roux's Phase I ESA, the majority of Parcel 1 was vacant with some equipment storage in the northern portion and processed slag storage in its central portion.

- Parcel 2 is located in the central and southern portions of the Site. The northern area of Parcel 2 was partially occupied by Phoenix Industries for storage of scrap metal for processing and steel slag that was produced on-Site. On-Site operations consisted of mechanical crushing and sorting of steel slag for off-Site use as aggregate material. No chemical processing of steel slag was conducted on-Site, and no permanent structures were located at this area. The southern portion of Parcel 2 was occupied by the CMC steel mill. The steel mill's primary processing building (melt shop) was previously equipped with an electric arc furnace (EAF) for melting scrap metal.

- Parcel 3 is located in the eastern portion of the Site. The northern area of Parcel 3 was occupied by CMC's main office building, a fueling station, and a vacant area used for rebar storage. The southern portion of Parcel 3 was developed with the former milling and rolling building.

- Parcel 4 is located in the northern portion of the Site and was occupied by CMC Rebar, which operated a small rebar fabrication facility. An office and fabrication building were located at the northwestern portion of the parcel, which included a maintenance area and a vehicle wash area with an oil collection trench and clarifier. The southern and eastern portions of the parcel were used for parking and rebar storage.

The Site was developed for agricultural use (row crops) from at least 1938 until 1954. A small structure was added to the southeastern corner of the Site in 1953, in the approximate present-day location of an existing groundwater well and water tower. By 1959, the eastern portion of Parcel 3 was developed with the milling

and rolling improvements, paved parking areas, outdoor storage yard, office building, water tower, and multiple rail spurs. The remaining parcels continued to be used for agricultural purposes through at least 1973. By 1975, Parcel 2 and the southern portion of Parcel 1 were graded and likely used for storage of raw, finished, or used materials. The northern portion of the Site remained agricultural until the 1980s when Parcel 4 was developed with the fabrication building. By 1985, agricultural operations had ceased, and the Site was primarily developed for industrial use. The current office building and melt shop at Parcel 2 were added by 1990. Major operations from the 1980s through 2019 included receiving of steel scrap, melting of steel scrap, production and fabrication of rebar, and processing of steel slag.

2.2. Site Geology & Hydrogeology

2.2.1 Site Geology

The Site is located roughly 5 miles to the south of the San Gabriel Mountain Ranges. The Site is underlain by the Chino Subbasin. The Chino Subbasin is bound by geological features such as the Rialto Fault to the east, the Jurupa Mountains to the South, the San Jose Fault to the northwest, and the Cucamonga Fault to the north. Regional source rocks consist of consolidated and semi-consolidated Quaternary fluvial and marine deposits. Depositional facies are primarily alluvium, lake, playa, and terrace deposits. Regional soils are mostly gravelly loamy sands (California Department of Conservation, 2010 Geologic Map).

According to Ramboll's 2021 Phase II Subsurface Investigation Report (Ramboll, 2021a), soil on-Site generally consists of sands and gravel in the upper 5 feet below ground surface (bgs), followed by lenses of sand and silts. This was confirmed during Roux's subsurface investigation conducted in 2021 and 2022.

Lithologic conditions observed by Ramboll and Roux at each parcel are as follows:

- Parcel 1– Sand with gravel and/or slag to 5 feet bgs (slag was observed to 7.7 feet bgs by Ramboll in some locations), sand and sand with silt to 18 feet bgs, sandy silt to 25 feet bgs
- Parcel 2 – Sand with gravel and/or slag to 5 feet bgs (slag was observed to 10 feet bgs by Ramboll in some locations), sand and sand with silt to 12 feet bgs, silty sand and sand layering to 30 feet bgs
- Parcel 3 – Sand or silty sand to 29 feet bgs and dense silty layer from 29 to 34 feet bgs
- Parcel 4 – Sand and silty sand layers to 5 feet bgs, and sand to 25 feet bgs

Soil boring logs from Roux's Subsurface Investigation are provided in Appendix A.

2.2.2 Site Hydrogeology

The Site is situated along the northeastern portion of the Chino Subbasin within the Upper Santa Ana Valley Groundwater Basin. The Chino Subbasin is bounded on the north by the San Gabriel Mountains (California's Groundwater Bulletin 118, 2004). Nearest tributaries to the Site drain from north to south from the San Gabriel mountains. The nearest surface water feature to the Site is Day Creek, a concrete lined stormwater drainage channel, approximately 0.24-miles to the west.

Based on monitoring well information from the Etiwanda Generating Station (P. Hamilton, 2010) groundwater is estimated at a depth of 430 feet bgs. Ramboll's Phase II Report notes that historical well drillers logs from a well installed at the southeastern corner of the Site to 728 feet bgs in 1956, had depth

to water at 378 feet bgs (Ramboll, 2021a). During Site investigations by Ramboll and Roux, groundwater was not encountered to the maximum depth drilled of 35 feet bgs.

2.3 Key Previous Environmental Investigations

Environmental investigations have been conducted at the Site by various consultants starting in 1987. Some investigations and on-Site environmental work have warranted regulatory agency oversight from the Department of Toxic Substance Control (DTSC); the Santa Ana Regional Water Quality Control Board (SA-RWQCB), or the County of San Bernardino Environmental Management Group. Ramboll's Phase I ESA provided summaries of selected previous Site investigations, as follows (corresponding reports provided in Appendix D of Ramboll's Phase I ESA):

- 1988 Clean Closure Verification (Parcel 4), Slag Trench Remediation Area;
- 1990 Remediation of Lead Contaminated Soil at Southwest Corner of the Site (Parcel 1);
- 1993 UST Removals (Parcel 3);
- 1994 Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Preliminary Assessment (PA; Parcels 2, and 3);
- 1999 Baghouse Dust Commingled with Slag Stockpile Remediation (Parcel 2);
- 2001 Preliminary Endangerment Assessment (Parcel 4), Slag Trench Remediation Area;
- 2006 UST Removals (Parcel 3);
- 2005 Remediation of Soils Impacted with Heavy Metals North of Pad 16 (Parcel 2);
- 2010 UST Removal (Parcel 2); and
- 2014 UST Removal (Parcel 4).

Additional details can be found in the referenced documents and will be included in Roux's forthcoming Current Conditions Report (CCR) to be submitted to DTSC in September 2023.

2.3.1 Phase II Subsurface Investigation Report (Ramboll, 2021a)

Ramboll's Phase II investigation was performed between December 2020 and February 2021, as CMC was shutting down steel mill operations, and was intended to establish "current" soil and soil vapor conditions in preparation for Site closure (Ramboll, 2021a). The Phase II investigation evaluated point-source features of concern, including former USTs, clarifiers, cooling towers, chemical storage areas, and former remediation areas, as well as the extent and presence of buried slag in areas that had not previously been assessed through unbiased, Site-wide grid sampling. Ramboll's figures are included in Appendix B.

Ramboll collected soil and soil vapor samples from 104 borings drilled throughout the Site to depths ranging from 5 to 35 feet bgs. Soil samples were collected and analyzed for metals, VOCs, and TPH at most locations, with select samples also analyzed for hexavalent chromium and/or PCBs. Soil vapor samples were collected at 26 locations and analyzed for VOCs. Ramboll reported that TPH in the diesel range ("diesel range organics" or "DRO"), lead, cadmium, and zinc concentrations were greater than their respective screening levels (SLs) in soil; and chloroform and tetrachloroethene (PCE) concentrations exceeded their respective SLs in soil vapor.

More specifically, Ramboll's key findings included the following:

- Lead was detected in shallow soil samples (up to 3 feet bgs) at concentrations greater than the DTSC SL for Commercial/Industrial Soil (320 milligrams per kilogram [mg/kg] at the time of the Ramboll investigation[7]) at the original and step-out borings near the Warehouse and Maintenance building and in the east part of the Mobile Maintenance building (Figure 6 in Appendix B). However, lead concentrations in soil decreased with depth and distance from original borings.

- DRO was detected in shallow soil samples (up to 5 feet bgs) at concentrations greater than the United States Environmental Protection Agency (USEPA) Regional Screening Level (RSL; 560 mg/kg) in original and step-out borings south of the Bundling Station and near the west boundary of Parcel 2 (Figure 6 in Appendix B). DRO concentrations in soil decreased with depth and distance from original borings.

- Groundwater has historically been measured at a depth of approximately 378 feet bgs in the on-Site water well. The investigations performed to date at the Site do not suggest that on Site operations have adversely impacted groundwater.

- Soil vapor data collected at the Site suggests that Site-wide vapor mitigation measures are not necessary. PCE and benzene were detected in shallow soil vapor (less than 35 feet bgs) at concentrations exceeding the DTSC SL for a commercial/industrial scenario using an attenuation factor of 0.03 (67 and 14 micrograms per cubic meter [$\mu g/m^3$], respectively) at shallow depths in the western portion of the Roll Mill and in the area of the Parts Warehouse at Parcel 3 (Figure 6 in Appendix B). Detections of PCE ranged from 10 to 100,000 $\mu g/m^3$ and benzene detections ranged from 29 to 220 $\mu g/m^3$; and

- Slag material was observed in several borings at depths ranging from 0 to 10 feet bgs and in thickness ranging between approximately 0.1 and 10 feet, primarily on the western, northern, and southwestern portions of the Site.

- Ramboll recommended that, in a redevelopment scenario, certain soils would need to be managed in compliance with California and federal law, due to encountered concentrations of lead, zinc, and/or cadmium in soil samples collected during their investigation.

2.3.2 Phase I Environmental Site Assessment (Roux, 2021)

Prior to acquisition of the Site by BTC III and as part of due diligence activities, Roux conducted a Phase I ESA of the Site in December 2021. The following RECs were identified:

- DRO and metals impacts to shallow soils in Parcels 2 and 3, and VOC impacts (primarily PCE) to shallow soil vapor in Parcel 3, as identified by Ramboll. This included SL exceedances in soil vapor for chloroform (three locations), benzene (two locations), and PCE (six locations) and in soil for DRO, cadmium and lead.

- Rail spurs at Parcels 2 and 3 were installed by at least 1959. Railroad spurs represent environmental concerns due to potential historical application of oils, herbicides, and arsenic for pest and weed

[7] The DTSC SL for lead in soil has been updated from 320 mg/kg to 500 mg/kg per the Human Health Risk Assessment (HHRA) Note Number 3, updated in May 2022 by the DTSC Human and Ecological Risk Office (HERO).

control, as well as the potential presence of creosote on the rail ties, and the historical practice of using coal cinders for track fill material, and hazardous spills.

- A 12,000-gallon dual-compartment diesel and gasoline underground storage tank (UST) at Parcel 3, north of the main office building.
- A former chemical storage area was located northwest of the melt shop on Parcel 2. Moderate staining and cracks were observed, and this area was not previously assessed.
- A wash rack located in the northern portion of Parcel 2. This area was not previously assessed.
- An inactive subsurface clarifier and aboveground oil recovery system in Parcel 4, which had not been previously assessed.
- Potential inactive on-Site USTs were identified in previous reports and regulatory agency records.

In addition to the RECs, Roux identified several historical RECs (hRECs), one controlled REC (cREC) and several other environmental features (OEFs) pertaining to the Site. The hRECs consist of the lead remediation area in Parcel 1, the former fuel oil USTs located in Parcel 3, slag trench remediation in Parcel 4, slag remediation area in Parcel 2, and former diesel UST on Parcels 2 and 4. The identified cREC is the pad 16 remediation area. The OEFs consist of the historical Site-wide agricultural use, the nearby DP Etiwanda Site, and the Site-wide buried slag material. Based on a review of historical environmental documents for the Site, Ramboll's investigation data, and RECs identified in the Phase I ESA, Roux recommended and conducted a Subsurface Investigation, as detailed in the following sections.

3. Subsurface Investigation Activities

The Subsurface Investigation was conducted in two mobilizations; the first from October to November 2021 and the second in March 2022. Mobilization 1 was performed prior to BTC III's purchase of the Site and the scope of work was focused on confirming Site environmental conditions prior to BTC III's ownership of the Site. Mobilization 2 was performed after BTC III became owner and the scope of work targeted delineation of PCE impacts to shallow soil and soil vapor at Parcel 3. All activities performed and detailed in this Report were conducted under the supervision of a registered California Professional Geologist or a registered California Professional Engineer.

3.1 Pre-Field Activities

Prior to the start of field activities, Roux prepared a Site-specific health and safety plan (HASP) to ensure worker safety. In addition to containing information regarding Roux's standard safety practices, the HASP describes potential hazards relating to Site activities and provides the locations and contact information of nearby emergency services. The HASP was kept on-Site when fieldwork occurred and was reviewed and signed by Site workers during the daily tailgate health and safety meeting prior to work each day.

Before each mobilization began, Roux performed a Site visit to mark areas intended for intrusive work. Work areas were marked in white paint along the Site boundaries, and Underground Service Alert of Southern California was notified at least 2 business days prior to the start of intrusive field activities. A private geophysical services and utility locating firm, Atlas Geophysics (Atlas) of San Diego, California, performed a geophysical survey to assess the proposed boring locations prior to each round of drilling. Atlas utilized a variety of tools, including mini ground penetrating radar, to assess locations of buried utilities (i.e., natural gas, electric, water, sewer, telephone, fiber optic, etc.) or obstructions in the area of each boring. Atlas did not identify any subsurface utilities or structures during the geophysical survey that would interfere with the proposed sampling locations and no proposed boring locations were modified.

3.2 Subsurface Investigation Procedures

Investigation procedures, including drilling, soil sampling, soil vapor probe installation, and soil vapor sampling, were generally consistent between Mobilizations 1 and 2. Those procedures are described in this section, and the specific scopes of work for each mobilization are described in Section 3.3.

3.2.1 Drilling and Soil Sampling Procedures

In Mobilizations 1 and 2, soil borings were drilled at the Site by C-57 licensed drillers under the direction of Roux. Borings were drilled using a truck mounted Geoprobe direct-push drill rig. All soil borings were hand augured to 5 feet bgs to minimize the risk of damage to unmarked or unidentified subsurface utilities.

Each soil boring was logged using United Soil Classification System (USCS). Soils were field screened using a photoionization detector (PID) at regular intervals. PID readings and general observations regarding material color and odor encountered at each boring were noted on boring logs. Boring logs can be found in Appendix A.

In the top 5 feet, soil samples were collected directly from the hand auger bucket. Soil samples from deeper than 5 feet bgs were collected directly from dedicated acetate liners. All soil samples were collected in laboratory supplied containers and samples selected for VOC analysis were collected using USEPA Method

5035 TerraCore sampling kits. All soil samples were transported under proper chain-of-custody procedures to Enthalpy Analytical, LLC (Enthalpy) of Orange, California, a California state-certified analytical laboratory. Laboratory analytical methods that were used are described below:

- Title 22 metals by USEPA method 6010B;
- Lead by USEPA method 6010B;
- VOCs by USEPA method 8260B with 5035 extraction;
- TPH (Gasoline Range Organics [GRO; C6 to C10], DRO [C10 to C28], and Oil Range Organics [ORO; C28 to C44]) by USEPA method 8015B;
- PCBs by USEPA method 8082;
- OCPs by USEPA method 8081;
- SVOCs by USEPA method 8270C; and
- Chlorinated herbicides by USEPA method 8151.

Drilling equipment was decontaminated with a solution of laboratory-grade detergent and rinsed with distilled water prior to reuse.

3.2.2 Soil Vapor Probe Installation and Sampling Procedures

All soil vapor probes were constructed with new stainless-steel filter probe tip with a 1/4-inch push-to-connect fitting attached to 1/4-inch-diameter Teflon tubing. The probes were constructed by first placing approximately 6 inches of #3 coarse-grained sand into the bottom of the borehole. The sampling tubing with the stainless-steel filter probe tip was then placed within the borehole with a length of polyvinyl chloride (PVC) pipe. Additional sand was then placed in the borehole to create an approximately 1-foot sand pack interval around the vapor tip. Approximately 1-foot of dry granular bentonite was placed on top of the sand pack, followed by hydrated bentonite to the surface. The tubing was labeled with depth of placement and capped using a gas-tight valve set to the "off" position. Each probe was completed with a 6-inch-diameter traffic rated well box. The soil vapor probes were installed in general accordance with the DTSC and Los Angeles Regional Water Quality Control Board and San Francisco Regional Water Quality Control Board Advisory – Active Soil Gas Investigations (Soil Gas Advisory; DTSC, 2015).

Prior to purging or sampling, a minimum 60-second shut-in test at a vacuum of 100 inches of water column was performed at each probe to confirm that the above-ground lines and three-way valves were properly sealed. As a secondary test, a leak check compound (LCC), 1,1-difluoroethane (1,1-DFA), was utilized to check for leaks during sampling and was included among the laboratory analyte list for soil vapor. Upon successful completion of the shut-in test, three purge volumes were subsequently extracted from the sampling system.

Soil vapor samples were collected in 1-liter laboratory supplied batch-certified SUMMA® canisters at a flow with 200 milliliters per minute (mL/min) flow controllers. Upon collection, each sample was immediately labeled with a unique sample identifier. Soil vapor samples were then transported under chain-of-custody to Enthalpy. Soil vapor samples were analyzed for VOCs by USEPA Method TO-15.

Drilling equipment was either dedicated to the sampling location (i.e., it was not reused), or was cleaned with a solution of laboratory-grade detergent and rinsed with distilled water prior to reuse. Soil vapor sampling equipment was not re-used between sampling locations or depth intervals.

Soil vapor probe construction is shown on boring logs (Appendix A).

3.3 Subsurface Investigation – Mobilization 1 (November 2021)

Mobilization 1 was implemented from October 27 through November 8, 2021. The work was intended to address RECs identified in Roux's Phase I ESA and build upon the results of Ramboll's Phase II investigation. In order to accomplish the objectives of the investigation, Confluence Environmental (C-57 License #913194), of Rio Linda, California, was contracted to drill 95 soil borings at the Site under the direction of Roux. Borings were drilled to depths up to 15 feet bgs. Activities included:

- Investigation of the extent of shallow soil lead and DRO exceedances in the vicinity of Ramboll borings RSB-02, RSB-03, RSB-05, and RSB-57 (Figure 6 and 7):
    - 7 samples were collected from three step-out borings at depths of 1, 3, and 5 feet bgs in the vicinity of Ramboll boring RSB-02-W and analyzed for lead;
    - 7 samples were collected from five step-out borings at depths of 1 and 3 feet bgs in the vicinity of Ramboll boring RSB-57 and analyzed for lead;
    - 10 samples were collected from five step-out borings at depths of 1 and 3 feet bgs in the vicinity of Ramboll borings RSB-03-E and RSB-03-S and analyzed for TPH; and
    - 10 samples were collected from seven step-out borings at depths of 1, 3, and 5 feet bgs in the vicinity of Ramboll boring RSB-05 and analyzed for TPH.
- Investigation of shallow soils in the former rail spurs located on Site (borings RR-1 through RR-19, Figures 6 and 7). 38 soil samples were collected from 20 borings at depths of 0.5 and 1.5 feet bgs and analyzed for metals, TPH, VOCs, PCBs, OCPs, SVOCs, and chlorinated herbicides.
- Investigation of the extent of impacted soil vapor in the areas where Ramboll reported elevated concentrations of benzene and PCE (in the vicinity of Ramboll borings RSB-28, RSB-29, RSB-30, RSB-38, RSB-53, RSB-54, RSB-60, and RSB-61, Figures 5 and 7). Soil vapor probes were installed at depths of 5, 10, and 15 feet bgs at 40 locations and samples were analyzed for VOCs. See Table 1 and Appendix A for soil vapor probe construction details.
- Investigation of soil conditions in the vicinity of the existing (at the time of the investigation) underground storage tank and dispenser at Parcel 3. The UST was formerly used to for storage of gasoline and diesel fuel. Two samples were collected at 1 and 3 feet bgs from one boring (SB-4, Figure 7) and analyzed for TPH.
- Investigation of soil conditions in the vicinity of the four former diesel USTs at Parcel 3 which were removed in 1993. Four soil samples were collected at depths of 1 and 3 feet bgs from two borings (SB-2 and SB-3, Figures 6 and 7)and analyzed for metals, VOCs, and TPH.
- Investigation of soil conditions in the drum storage area adjacent to the former 300-gallon diesel fuel UST on Parcel 2. During Site reconnaissance performed as part of the 2021 Phase I ESA, Roux

observed signage in the former drum storage area indicating it was previously used for storage of new and used oils. Two soil samples were collected at depths of 1 and 3 feet bgs from one boring (SB-1, Figure 6) and analyzed for metals, VOCs, and TPH.

- Investigation of soil conditions in the vicinity of the vehicle wash rack located in the northern portion of Parcel 2. Six soil samples were collected at depths of 1, 3, and 5 feet bgs from two borings (RSB-70-W and RSB-70-E, Figure 5) and analyzed for metals, VOCs, and TPH.

- Investigation of soil conditions in the vicinity of the former subsurface clarifier and aboveground oil recovery system in Parcel 4. Six soil samples were collected at depths of 1, 3, and 5 feet bgs from two borings (RSB-58-S and RSB-58-W, Figure 5) and analyzed for metals, VOCs, and TPH.

All Ramboll and Roux sample locations are shown on Figures 4 through 7, and soil and soil vapor sampling are summarized in the following sections. Refer to Table 1 for sampling rationale and soil vapor probe construction details for the Subsurface Investigation.

3.4 Subsurface Investigation – Mobilization 2 (March 2022)

Mobilization 2 was implemented in March 2022 after BTC became owner to further delineate the extent of VOC impacted soil and soil vapor at Parcel 3 (Figure 7). From March 2 through March 4, 2022, Cascade Drilling and Technical Services (Cascade; C-57 License #1058336), of Santa Ana, California, drilled 34 soil borings at the Site under the direction of Roux.

- Borings were drilled to depths between 15 and 35 feet bgs.

- Soil samples were collected at depths of 5, 15, and 35 feet bgs.

- Soil vapor probes were installed at the same locations and depths as soil samples.

- A total of 63 soil samples were collected and analyzed for VOCs by USEPA method 8260B.

- A total of 63 soil vapor samples were collected and analyzed for VOCs by USEPA Method TO-15.

All sample depths and laboratory analyses are summarized in Table 1. Soil vapor samples were collected on March 7 and 8, 2022, following a 48-hour equilibration period.

3.5 Soil Observations

Soil lithology observed during the Subsurface Investigation was generally consistent with previous investigations. PID screening measurements of soil samples collected ranged from 0.0 to 10.9 parts per million by volume (ppmv) above ambient background. No odor or staining was observed in soil samples. Groundwater was not encountered in this investigation to the maximum depth explored of 35 feet bgs. Slag was observed in some borings placed at the western portion of the Site during drilling. Soil boring logs are provided in Appendix A.

3.6 Investigation Derived Waste

Investigation derived waste (IDW) from Site activities included soils cuttings, concrete/asphalt, coring water, and decontamination water. IDW was stored in 55-gallon drums. Ten drums containing soil and seven drums containing rinsate water were generated and staged within the mobile maintenance warehouse at the

southern portion of Parcel 3. Drums were labeled and clearly marked with “pending analysis” labels. Roux collected samples to profile the soil drums and decontamination rinseate. The drums were transported as non-hazardous waste to Soil Safe in Adelanto, California (soil) and Crosby & Overton in Long Beach, California (water) on October 20, 2022, under proper manifest (Appendix C).

4. Subsurface Investigation Results

This section presents a summary of the findings of Roux's Subsurface Investigation. Results for detected analytes in soil and soil vapor are provided in Tables 2 through 9. Data from Ramboll's investigation are also included, where relevant. Analytical laboratory reports are provided in Appendix D.

4.1 Screening Levels

Soil analytical results were compared to the following soil screening levels:

- USEPA RSLs, dated May 2022 (USEPA, 2022);
- DTSC Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note Number 3 Screening Levels (DTSC SLs), dated May 2022 (DTSC, 2022);
- Petroleum hydrocarbon analytical results were compared to San Francisco Regional Water Quality Control Board (SFRWQCB) Environmental Screening Levels (ESLs), dated January 24, 2019 (SFRWQCB, 2019);
- DTSC HERO HHRA Note Number 11 Southern California Ambient Arsenic Screening Level (DTSC, 2020); and
- Kearney Foundation Special Report, Kearney Foundation of Soil Science, Division of Agriculture and Natural Resources, University of California, Background Concentrations of Trace and Major Elements in California Soil (Kearney, 1996).

Soil vapor analytical results were compared to soil vapor screening levels (SVSLs) which were calculated by applying an attenuation factor (AF) of 0.03 to the USEPA Industrial Indoor Air RSLs and DTSC Industrial Indoor Air SLs, in accordance with the February 2023 DTSC Supplemental Guidance: Screening and Evaluating Vapor Intrusion (Final Draft Supplemental Guidance; DTSC, 2023).

4.2 Analytical Results

4.2.1 TPH (DRO) in Soil (Parcels 2 and 3)

In 2020 and 2021, Ramboll collected soil samples in a sitewide grid to evaluate the extent of slag material at the Site (RSB-01 through RSB-24; Figure 4). TPH impacts were identified in a subset of those samples (RSB-03 and RSB-05). Step-out samples were subsequently collected and analyzed, but delineation was not completed. Based on those results, Roux drilled borings RSB-03-R1 through R5 and RSB-05-R1 through R7 to delineate observed TPH impacts in the vicinity of RSB-03 and RSB-05. TPH concentrations were compared to the SFRWQCB ESLs for commercial/industrial shallow soil exposure for GRO (1,800 mg/kg), DRO (1,200 mg/kg), and ORO (54,000 mg/kg). Boring locations in the vicinity of RSB-03 and RSB-05 are shown on Figures 8 and 9, respectively, and analytical results are presented in Table 4 and summarized below.

- **Borings RSB-03-R1 through R5:** Samples from Ramboll borings RSB-03 and RSB-03-E had reported DRO concentrations of 9,230 mg/kg and 4,500 mg/kg, respectively, at a depth of 1-foot bgs. In both borings, DRO concentrations in samples collected from 3 feet bgs were less than 10 mg/kg. In order to delineate DRO impacts, Roux collected ten soil samples from five borings (RSB-03-R1 through R5; Figure 8) at depths of 1 and 3 feet bgs and analyzed all the 1-foot samples for the full TPH carbon

chain range, with the 3-foot samples placed on hold pending results for the shallower sample set . All reported TPH concentrations in the gasoline and oil ranges were less than the SFRWQCB ESLs of 1,800 and 54,000 mg/kg, respectively. DRO was detected at concentrations greater than the SFRWQCB ESL in three samples; therefore, samples collected from 3 feet bgs were analyzed for DRO only. DRO concentrations were less than the SFRWQCB ESL in all samples from 3 feet bgs. Analytical results for DRO are summarized in the table below. Based on data collected to date in this area, vertical delineation is complete; however, additional lateral delineation is required to the southwest (RSB-03-R1), south (RSB-03-R2), and northeast (RSB-03-R5) of RSB-03.

Boring ID		RSB-03-R1	RSB-03-R2	RSB-03-R3	RSB-03-R4	RSB-03-R5
Direction relative to RSB-03		Southwest	South	Southeast	East	Northeast
		DRO concentration (mg/kg)				
Depth	1 ft bgs	**5,700**	**2,900**	650	740	**4,500**
	3 ft bgs	850	650	560	660	370

Note: Results in **bold text** exceed the SFRWQCB ESL of 1,200 mg/kg.

- **Borings RSB-05-R1 through R7:** Samples from Ramboll borings RSB-05, RSB-05-SSW, RSB-05-S2, and RSB-05-S had reported DRO concentrations that exceeded the SFRWQB commercial/industrial ESL of 1,200 mg/kg at 0.5- or 1-foot bgs. Additionally, the DRO concentration from a sample collected at 3 feet bgs in boring RSB-05-S also exceeded 1,200 mg/kg. In order to delineate DRO impacts, Roux collected thirteen soil samples from seven borings (RSB-05-R1 through R7; Figure 9). In all boring locations except RSB-05-R5 and RSB-05-R6, samples were collected at 1 and 3 feet bgs, with the deeper samples placed on hold pending results of the shallower sample set. At RSB-05-R6, a sample was collected at 1 foot bgs only. At RSB-05-R5, samples were collected at 5 and 10 feet bgs to obtain vertical delineation in the vicinity of Ramboll boring RSB-05-S, with the sample from 10 feet bgs placed on hold pending results of the shallower sample. Analytical results are summarized in the table below. While three samples from 1 foot bgs had DRO concentrations greater than the SFRWQCB ESL, all samples collected at 3 feet bgs and 5 feet bgs had concentrations less than the SFRWQCB ESL. Based on data collected to date in this area, further delineation is warranted, both laterally to the southwest (RSB-05-R1 and R2), south (RSB-05-S2), and southeast (RSB-05-R6) of RSB-05, and vertically at RSB-05-R6.

Boring ID		RSB-05-R1	RSB-05-R2	RSB-05-R3	RSB-05-R4	RSB-05-R5	RSB-05-R6	RSB-05-R7
Direction relative to RSB-05-S		West	South-west	South-west	South	South-east	South-east	East
		DRO concentration (mg/kg)						
Depth	1 ft bgs	**2,300**	**2,200**	1,000	440	--	**3,100**	52
	3 ft bgs	<10	20	<10	NA	--	NA	NA
	5 ft bgs	--	--	--	--	<10	--	--

Note: Results in **bold text** exceed the SFRWQCB ESL of 1,200 mg/kg. NA = not analyzed; -- = no sample collected at that depth/location.

Based on the results presented above, TPH impacts identified by Ramboll appear to be limited in aerial extent and depth. Further delineation and/or hot spot removal with confirmation soil sampling during redevelopment activities may be appropriate.

4.2.2 Metals in Soil (Parcels 2 and 3)

Ramboll's Phase II identified lead impacts in one of their sitewide grid boring locations (RSB-02) as well as in boring RSB-57, installed east of the former Mobile Maintenance Building in Parcel 3. Step-out samples were subsequently collected and analyzed but delineation was not completed. Based on those results, Roux drilled step-out borings RSB-02-R1 through -R3 and RSB-57-R1 through -R5 to delineate observed lead impacts. Boring locations in the vicinity of RSB-02 and RSB-57 are shown on Figures 10 and 11, respectively, and analytical results are presented in Table 2 and summarized below.

- **Borings RSB-02-R1 through R3:** Samples collected from 3 feet bgs in Ramboll borings RSB-02 and RSB-02-W contained lead concentrations greater than the DTSC SL of 500 mg/kg. Samples collected from those same borings from 1 and 5 feet bgs were below applicable SLs. Step-out samples collected by Ramboll to the north, east, and south provided horizontal delineation at these depths. In order to delineate lead impacts to the west, Roux collected nine soil samples from three borings (RSB-02-R1 through -R3) placed north, south, and west of RSB-02-W. Samples were collected at depths of 1 and 3 feet bgs, with deeper samples from 5 feet bgs placed on hold pending the results of the shallower data set. Sample results are summarized in the table below. Based on data collected to date in this area, vertical delineation is complete but further lateral delineation is warranted west (RSB-02-R2) of RSB-02.

• Boring ID		RSB-02-R1	RSB-02-R2	RSB-02-R3
Direction relative to RSB-02-W		South	West	North
		Lead concentration (mg/kg)		
Depth	1 ft bgs	10	120	34
	3 ft bgs	28	**1,700**	57
	5 ft bgs	NA	5.9	NA

Note: Results in **bold text** exceed the DTSC Commercial/Industrial Soil SL of 500 mg/kg. NA = not analyzed.

- **Borings RSB-57-R1 through R5:** Ramboll borings RSB-57, RSB-57-W, and RSB-57-S had reported lead concentrations in the 1-foot bgs samples greater than the DTSC Commercial/Industrial Soil SL of 500 mg/kg. In all three borings lead concentrations in samples collected from 3 and 5 feet bgs were less than the DTSC Commercial/Industrial Soil SL. In order to delineate lead impacts, Roux collected ten soil samples from five borings (RSB-57-R1 through R5) at depths of 1 and 3 feet bgs, with the deeper samples placed on hold pending the results of the shallower data set. Analytical results are summarized in the table below. Concentrations of lead were below the DTSC SL in all samples except at RSB-57-R4 (located south of RSB-57), where samples at both 1 and 3 feet bgs exceeded the DTSC SL. Based on data collected to date in this area, further vertical and lateral delineation is warranted south (RSB-57-R4) of RSB-57.

• Boring ID		RBS-57-R1	RSB-57-R2	RSB-57-R3	RSB-57-R4	RSB-57-R5
Direction relative to RSB-57		Northwest	West	Southwest	South	Southeast
		Lead concentration (mg/kg)				
Depth	1 ft bgs	7.4	170	94	**780**	330
	3 ft bgs	NA	NA	NA	**2,300**	9.1

Note: Results in **bold text** exceed the DTSC Commercial/Industrial Soil SL of 500 mg/kg. NA = not analyzed.

Ramboll's Phase II also identified cadmium impacts in boring RSB-43, installed east of the former Warehouse and Maintenance building in the southeast corner of Parcel 2 (Figure 10). The 1-foot bgs contained a cadmium concentration (105 mg/kg) greater than the DTSC Commercial/Industrial Soil SL of 79 mg/kg. This is delineated vertically by the 3-feet bgs sample in boring RSB-43, but is not delineated laterally. No additional sampling was conducted at RSB-43 by Roux during the Subsurface Investigation.

4.2.2 Rail Spur (Parcels 2 and 3)

Roux's Phase I ESA identified the on-Site railroad spurs as a REC. Due to the potential historical application of oils, herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material, the on-Site rail spurs were considered a REC in the context of the Phase I ESA. To address this REC, shallow soil samples were collected from 19 borings (RR-1 through RR-19) placed along the rail spurs that encircle the southern half of Parcels 2 and all of 3 (Figure 12). Samples were collected from each boring at depths of 0.5 and 1.5 feet bgs and were analyzed for metals, VOCs, TPH, PCBs, OCPs, SVOCs, and chlorinated herbicides. Analytical results are summarized below.

- **Metals:** Arsenic concentrations exceeded the DTSC Commercial/Industrial Soil SL of 0.36 mg/kg in all samples but one (RR-16-.5), but all were less than the California Upper Confidence Limit background concentration of 12 mg/kg, with the exception of three samples (RR-12-.5, RR-12-1.5, and RR-14-.5), which were between 13 and 15 mg/kg. No other metals exceeded their respective DTSC SLs and/or USEPA RSLs (Table 2). Total chromium concentrations varied with a maximum concentration of 1,100 mg/kg in soil sample RR-3-0.5; total chromium does not have a corresponding DTSC Commercial/Industrial SL or USEPA RSL.

- **VOCs:** Four VOC constituents were detected in 18 of 28 rail spur soil samples. All VOC concentrations were less than their respective DTSC Commercial/Industrial SLs and/or USEPA RSLs (Table 3).

- **TPH:** GRO was not detected in any samples collected along the rail spurs. DRO and ORO were detected in 30 of 38 rail spur soil samples (Table 4). Concentrations of DRO in four samples from three borings (RR-5, RR-8, and RR-9) exceeded the SFRWQCB Commercial/Industrial ESL of 1,200 mg/kg. Detected concentrations of ORO were less than the Commercial/Industrial DTSC SL of 54,000 mg/kg.

- **Polychlorinated Biphenyls (PCBs):** 24 rail spur soil samples were analyzed for PCBs (Table 5). Aroclor-1260 was detected in three samples from two borings (RR-7 and RR-9) at concentrations below applicable SLs. Aroclor-1242 was detected in two samples from one boring (RR-3) at concentrations of 130 mg/kg (0.5 feet bgs) and 170 mg/kg (1.5 feet bgs), greater than applicable SLs.

- **Organochlorine Pesticides (OCPs):** One OCP, endrin ketone, was detected in one of 24 rail spur soil samples at 0.011 mg/kg (RR-7-0.5; Table 6). There are no established screening levels for this compound.

- **Semi-Volatile Organic Compounds (SVOCs):** SVOCs were detected at concentrations greater than laboratory reporting limits in 10 of 24 rail spur soil samples. Only one detection, benzo(a)pyrene in RR-12-1.5 (1.8 mg/kg), exceeded the DTSC Commercial/Industrial SL of 1.3 mg/kg (Table 7).

- **Chlorinated Herbicides:** Three of 24 rail spur soil samples contained detections of pentachlorophenol (PCP) at concentrations greater than laboratory reporting limits, but all concentrations were less than their respective USEPA Commercial/Industrial RSLs and DTSC SLs. No other chlorinated herbicides were detected (Table 8).

Based on the results presented above, further delineation is warranted in the vicinity of RR-3 (PCBs), RR-5 (DRO), RR-8 (DRO), RR-9 (DRO), RR-12 (arsenic and one SVOC), and RR-14 (arsenic). PCBs in the area of boring RR-3 were further investigated in November 2022 and May and June 2023 and were documented in a *Technical Memorandum, Targeted Shallow Soil Investigation for Polychlorinated Biphenyls, Southeastern Corner of Parcel 3,* dated April 7, 2023, and *Technical Memorandum, Targeted Shallow Soil Investigation for Polychlorinated Biphenyls near RR-3 and Recommended Additional Sampling, Southeastern Corner of Parcel 3* dated August 25, 2023. A Workplan for further delineation of limited shallow areas with metals, DRO, and/or SVOC screening level exceedances will be presented in the forthcoming Current Conditions Report, which will be submitted to DTSC in September 2023. Depending on the results of these investigations, hot spot removal with confirmation soil sampling during redevelopment activities may be appropriate.

4.2.3 Former Vehicle Wash Area (Parcel 2)

Two shallow soil borings (RSB-70-E and RSB-70-W, Figure 5) were drilled east and west of a former vehicle wash area at Parcel 2 to screen for metals, VOCs, and TPH associated with former operations in this area. Six soil samples were collected from borings RSB-70-E and RSB-70-W at depths of 1, 3, and 5 feet bgs. Concentrations of all metals were less than their respective screening criteria or background concentrations (Table 2). VOCs were not detected at concentrations greater than laboratory reporting limits in any samples (Table 3). DRO and ORO were detected in three of the samples at concentrations less than SFRWQCB Commercial/Industrial ESLs (Table 4). No impacts were identified associated with former operations in the vicinity of the former vehicle wash area.

4.2.4 Former Drum Storage Area (Parcel 2)

One shallow boring (SB-1, Figure 6) was drilled in a former drum storage area in Parcel 2 to a depth of 3 feet bgs. Samples were collected at depths of 1 and 3 feet bgs, and analyzed for metals, VOCs, and TPH. Eleven metals were detected at concentrations less than their respective screening criteria or background concentrations (Table 2). ORO was detected at 820 mg/kg at 1-foot bgs, which is less than the SFRWQCB Commercial/Industrial ESL. The only VOC constituent detected was tert-butyl alcohol (TBA), for which there is no established screening level. No impacts associated with former operations (storage of new and used oils) in the vicinity of the former drum storage area were identified.

4.2.5 Open Top Clarifier (Parcel 3)

Soil and soil vapor samples were collected to delineate PCE and benzene impacts around Ramboll borings RSB-28 and RSB-29, initially drilled, and sampled by Ramboll to assess potential leak/spills in the vicinity of a former open top clarifier, at the southwestern portion of Parcel 3 (Figure 7). Ramboll collected soil samples at various depths down to 30 feet bgs, which were analyzed for metals, VOCs, and TPH and soil vapor samples were collected from 5 and 30 feet bgs for VOC analysis. No impacts to soil were identified by Ramboll; however, benzene was detected in shallow (5-foot bgs) soil vapor samples at concentrations that

exceeded the DTSC Commercial/Industrial SL of 14 ug/m^3. No VOCs exceeded their respective SLs in the soil vapor samples collected at 30 feet bgs.

Nineteen step-out borings (RSB-28-R1 through -R8, RSB-29-R1 through -R9, and two borings at Ramboll locations RSB-28 and RSB-29) were drilled by Roux in the vicinity of RSB-28 and RSB-29 (Figure 7). Samples were collected for soil and soil vapor analysis as follows:

- **Soil:** Soil samples were collected at depths of 5 and 15 feet bgs borings RSB-28-R4 through -R8 and RSB-28-R4 through -R9 and analyzed for VOCs. No VOCs were detected at concentrations greater than laboratory reporting limits (Table 3).

- **Soil Vapor:** Thirty-one soil vapor samples (including 4 duplicates) were collected at depths of 5 and 15 feet bgs and analyzed for VOCs . Twenty VOC constituents were detected, however only benzene and PCE were detected at concentrations greater than the USEPA and/or DTSC SVSLs (Table 9, Figure 13 through 16).

Based on the results presented above, no VOC impacts to soil were identified. PCE and benzene impacts in soil vapor in the vicinity of Ramboll borings RSB-28 and RSB-29 are presented in Figures 13 through 16 and 19. PCE and benzene impacts have been delineated at 5 feet bgs (Figures 13 and 14), but have not been delineated at 15 feet bgs (Figures 15 and 16).

4.2.6 Mobile Maintenance Building and Former ASTs (Parcel 3)

Soil and soil vapor samples were collected to delineate PCE impacts around Ramboll borings RSB-30, RSB-60, and RSB-38 in the vicinity of the former mobile maintenance building, at the southern portion of Parcel 3 (Figure 7). RSB-30 and RSB-60 were initially drilled and sampled by Ramboll to assess potential soil and soil vapor impacts in the vicinity of the mobile maintenance building, and RSB-38 was drilled near the former ASTs south of the mobile maintenance building. Soil samples were collected by Ramboll at various depths up to 15-feet bgs. Soil vapor samples were collected from 5 and 15 feet bgs at boring RSB-30, and from 5-feet bgs at borings RSB-60 and RSB-38. All soil and soil vapor samples were analyzed for VOCs. No impacts to soil were identified by Ramboll; however, PCE concentrations in soil vapor exceeded the DTSC Commercial/Industrial SVSL of 67 µg/m^3 for all samples.

Twenty-one step-out borings (RSB-30-R1 through -R6, RSB-38-R1 through -R7, and RSB-60-R1 through -R8; Figure 7) were drilled by Roux in the vicinity of RSB-30, RSB-38, and RSB-60, as well as three additional borings (RSB-30, RSB-38, and RSB-60) installed in the vicinity of the original borings for vertical delineation. Samples were collected for soil and soil vapor analysis as follows:

- **Soil:** Eighteen soil samples were collected from a subset of borings (RSB-30-R4 through -R6, RSB-38-R4 through -R7, and RSB-60-R5, -R6, and R-8) at depths ranging from 5- to 35-feet bgs and analyzed for VOCs (Table 3). TBA was the only VOC detected at four locations ranging in concentration from 8.1 µg/kg (RSB-60-R8-15) to 19 µg/kg (RSB-60-R5-5; Table 3). No screening levels are established for TBA.

- **Soil Vapor:** Thirty-nine soil vapor samples (including 3 duplicates) were collected at depths ranging from 5 to 35 feet bgs and analyzed for VOCs. Benzene, chloroform, PCE, and TCE were detected at concentrations exceeding the USEPA and/or DTSC Commercial/Industrial SVSLs (Table 9) as summarized below:

- **Benzene:** Benzene was detected in 20 soil vapor samples, one of which exceeded the DTSC SVSL of 14 μg/m^3 (29 μg/m^3; RSB-60-R3 at a depth of 5 feet bgs).

- **PCE:** PCE was detected in all 39 soil vapor samples, 26 of which exceeded the DTSC SVSL of 67 μg/m^3. The maximum detected PCE concentration was 680 μg/m^3 in RSB-30-R3 at a depth of 5 feet bgs.

- **TCE:** TCE was detected in 29 soil vapor samples, five of which exceeded the DTSC SVSL of 100 μg/m^3. The maximum detected TCE concentration was 550 μg/m^3 in RSB-30-R6 at 35 feet bgs.

- **Chloroform:** Chloroform was detected in 14 soil vapor samples, four of which exceeded the USEPA SVSL of 18 μg/m^3. The maximum detected chloroform concentration was 86 μg/m^3 in RSB-30-R6 at 35 feet bgs.

Based on the results presented above, no VOC impacts to soil were identified. Figures 13 through 21 present interpreted extents of benzene, PCE, TCE, and chloroform in soil vapor at depths of 5, 15, and 35 feet bgs. Based on the results presented above, additional delineation of VOC impacts in the area of Ramboll borings RSB-30, RSB-38, and RSB-60 may be warranted, as further elaborated below:

- **5 feet bgs:** PCE and benzene were both detected at concentrations greater than regulatory screening criteria (67 and 14 μg/m^3, respectively) at five feet bgs. Additional delineation of PCE at 5 feet bgs is needed to the west of RSB-60-R4 and RSB-60-R5 (Figure 13). Benzene impacts at 5 feet bgs are fully delineated laterally (Figure 14). There were no exceedances of TCE or chloroform from samples collected at 5 feet bgs in Parcel 3.

- **15 feet bgs:** PCE, TCE, and chloroform were detected at concentrations greater than regulatory screening criteria (100 μg/m^3 for TCE and 18 μg/m^3 for chloroform) at 15 feet bgs in Parcel 3. PCE is not delineated to the west of borings RSB-30-R3, RSB-30-R4, and RSB-60-R5 (Figure 15). TCE is not delineated east of boring RSB-60-R6 (Figure 17). Chloroform is not delineated west of RSB-30-R4 (Figure 18). There were no exceedances of benzene in the vicinity of RSB-30, RSB-38, and RSB-60 at 15 feet bgs (Figure 16).

- **35 feet bgs:** At 35 feet bgs, PCE, TCE, and chloroform were detected at concentrations greater than regulatory screening criteria. PCE is not delineated to the west, northwest, and east of RSB-60-R8, to the south and west of RSB-30-R6 (Figure 19). TCE and chloroform are not delineated to the south, east, and west of RSB-60-R8, RSB-30-R6, and RSB-38-R7 as well as vertically at each of those locations (Figures 20 and 21). There were no exceedances of benzene at 35 feet bgs.

4.2.7 Parts Warehouse (Parcel 3)

Ramboll drilled borings RSB-53 and RSB-54 near the former Parts Warehouse in the northern portion of Parcel 3. Soil samples were collected from 1, 3, and 5 feet bgs and soil vapor samples were collected from 5 feet bgs; all samples were analyzed for VOCs. PCE was detected at low concentrations in the 1- and 5-feet bgs soil samples from boring RSB-54. PCE concentrations in soil vapor at both locations exceeded the DTSC Commercial/Industrial SVSL of 67 μg/m^3. The reported PCE soil vapor concentration in the 5-foot probe at RSB-54 was 100,000 μg/m^3. Ramboll resampled the 5-foot probe at RSB-54 and the reported PCE concentration was 30,000 μg/m^3.

Based on the above, Ramboll drilled multiple step-out borings at RSB-54 with soil vapor probes at 5, 15, and 35 feet bgs (15 probes total); all samples were analyzed for VOCs. Laboratory results showed detectable PCE in all vapor samples, with 14 of 15 greater than the DTSC SVSL of 67 $\mu g/m^3$.

Twenty-six step-out borings (RSB-53-R1 through -15; RSB-54-E1 through -E4; RSB-54-N-R1 through -R3; RSB-54-NE; RSB-54-S1 through -S2; and RSB-SE; Figure 7) were drilled by Roux in the vicinity of RSB-53 and 54, as well as one additional borings (RSB-53) installed in the vicinity of the original boring for vertical delineation. Samples were collected for soil and soil vapor analysis as follows:

- **Soil:** Twenty-six soil samples were collected and analyzed for VOCs from the same depths as corresponding soil vapor probes. Depths for sample collection included 5, 15, and/or 35 feet bgs; all samples were analyzed for VOCs. Laboratory results only showed the VOC constituent TBA at 5 locations and at low concentrations (maximum was 23 $\mu g/kg$). There are no established screening levels for TBA.

- **Soil Vapor:** Forty-four soil vapor samples (including 2 duplicates) were collected at depths of 5, 15, and/or 35 feet bgs and analyzed for VOCs. A total of 20 VOC analytes were reported, but only PCE and TCE were detected at concentrations exceeding the USEPA and/or DTSC Commercial/Industrial SVSLs:

    - **PCE:** PCE was detected in all 44 soil vapor samples, 24 of which exceeded the DTSC SVSL of 67 $\mu g/m^3$. The maximum detected PCE concentration was 2,500 $\mu g/m^3$ in RSB-54-E1 at a depth of 15 feet bgs.

    - **TCE:** TCE was detected in 25 soil vapor samples, two of which exceeded the DTSC SVSL of 100 $\mu g/m^3$. The maximum detected TCE concentration was 520 $\mu g/m^3$ in RSB-54-SE at 35 feet bgs.

Based on the results presented above, no VOC impacts to soil were identified. Figures 13 through 21 present interpreted extents of benzene, PCE, TCE, and chloroform in soil vapor at depths of 5, 15, and 35 feet bgs. Based on the results presented above, additional delineation of VOC impacts in the area of Ramboll borings RSB-53 and RSB-54 may be warranted as elaborated below:

- **5 feet bgs:** PCE was detected at concentrations greater than regulatory screening criteria (67 $\mu g/m^3$) at five feet bgs (Figure 13), with additional delineation needed to the west and southwest of RSB-53-R5 and RSB-53-R8 (Figure 14). There were no exceedances of benzene, TCE or chloroform from samples collected at 5 feet bgs in the vicinity of RSB-53 and RSB-54.

- **15 feet bgs:** PCE was detected at concentrations greater than regulatory screening criteria at 15 feet bgs. PCE is not delineated southwest of boring RSB-53-R8 (Figure 15). There were no exceedances of benzene, TCE or chloroform from samples collected at 15 feet bgs in the vicinity of RSB-53 and RSB-54.

- **35 feet bgs:** PCE and TCE were detected at concentrations greater than regulatory screening criteria (100 $\mu g/m^3$ for TCE) at 35 feet bgs. PCE is not delineated to the north, west and south of RSB-54-N, RSB-53-R15, RSB-53-R14, and RSB-54-W as well as vertically at those locations and RSB-54-E3 (Figure 19). TCE lacks delineation to the east and south of RSB-54-SE as well as vertically there and

at RSB-54-E3 (Figure 20). There were no exceedances of benzene or chloroform from samples collected at 35 feet bgs in the vicinity of RSB-53 and RSB-54.

4.2.8 Former 1993 UST Footprint (Parcel 3)

Two shallow soil borings (SB-2 and SB-3) were placed within the excavation footprint (east and west ends) at a former fuel UST, which had been removed in 1993 (Figure 6). The objective of the sampling was to evaluate the backfill for metals, VOCs, and TPH; therefore, soil samples were collected from depths of 1 and 3 feet bgs at each boring. Concentrations of all metals were less than their respective screening criteria or background concentrations (Table 2). There were only two VOCs analytes detected, TBA and benzene, both at low concentrations. TBA does not have a screening level, but the reported benzene concentration was less than its USEPA RSL and DTSC SL (Table 3). DRO and ORO were detected in all four samples at concentrations less than the SFRWQCB Commercial/Industrial ESLs (Table 4). Based on the above results, no impacts associated with the backfill material for the former 1993 UST were identified.

4.2.9 UST and Dispenser (Parcel 3)

One shallow soil boring (SB-4) was drilled within the tank pit and adjacent to a former 12,000 gallon dual-compartment diesel and gasoline UST, which has since been removed, but which was formerly located at the northwestern portion of Parcel 3 (Figure 7). The UST had a dispenser directly over top and the objective was to evaluate whether the dispenser and associated piping may have leaked. Soil samples were collected at 1 and 3 feet bgs and analyzed for TPH. Laboratory results did not show DRO or ORO at concentrations greater than the SFRWQCB Commercial/Industrial ESLs. Based on these results, no impacts associated with the UST and dispenser were identified. The UST was removed in December 2022 and the San Bernardino County Fire Protection District issued a closure let er for the UST on July 18, 2023.

4.2.10 Clarifier & Oil Recovery System South of Maintenance Shop (Parcel 4)

Ramboll drilled two borings, RSB-58, and RSB-59, in the vicinity of an inactive subsurface clarifier and aboveground oil recovery system in Parcel 4 (Figure 5). Soil samples were collected down to 15 feet bgs and analyzed for TPH, metals, and VOCs; soil vapor samples were collected from RSB-59 from 5 and 15 feet bgs and analyzed for VOCs. VOCs were detected in soil and soil vapor samples below applicable screening criteria. None of the metals concentrations in soil exceeded their respective screening levels or background; TPH was not detected above laboratory reporting levels.

To provide additional shallow lateral coverage, Roux drilled two shallow soil borings (RSB-58-S and RSB-58-W) south and west of RSB-58. Soil samples were collected from each boring at depths of 1, 3, and 5 feet bgs; all samples were analyzed for metals, VOCs, and TPH. Concentrations of all detected metals were less than their respective screening criteria or background concentrations (Table 2). VOC concentrations were less than the laboratory reporting limits (Table 3). DRO and ORO were detected at 1-foot bgs in two sample locations at concentrations less than their respective SFRWQCB Commercial/Industrial ESLs (Table 4).

Based on these results, no impacts associated with the inactive clarifier and oil recovery system were identified.

4.3 Quality Control and Data Validation and Verification

4.3.1 Field Sample Collection Quality Control

Two trip blanks were included in each cooler containing soil samples to be analyzed for VOCs to confirm that cross-contamination did not occur during sample transportation. Samples were labeled TB-01 and TB-02 and were analyzed for VOCs. Neither sample contained detectable concentrations of any VOC analytes.

Four soil vapor duplicate samples and seven soil vapor duplicate samples were collected during the November 2021 and March 2022 investigations, respectively. Duplicate samples were collected at RSB-28-15, RSB-29-15, RSB-30-R1-15, RSB-38-15, RSB-28-R8-15, RSB-29-R4-5, RSB-30-R4-5, RSB-53-R13-15, RSB-54-NE-35, RSB-60-R5-5, and RSB-60-R5-15. All duplicate samples were within a 30% relative precent difference (RPD) from respective parent samples except for RSB-38-15-DUP for TCE, RSB-29-R4-5-DUP for acetone and isopropanol, RSB-30-R4-5-DUP and RSB-60-R5-5-DUP for acetone, RSB-54-NE-35-DUP for isopropanol and RSB-60-R5-15-DUP for acetone and 2-butanone. In each of these cases, the primary and duplicate sample detections were at trace concentrations or non-detect and the difference between the samples was less than one order of magnitude and the data can be considered reliable.

The leak check compound (LCC), 1,1-DFA, was detected in four soil vapor samples (RSB-54-S1-5, RSB-29-R5-5, RSB-38-R4-5, and RSB-60-R6-5). According to the Soil Gas Advisory, "If the concentration of the [liquid] leak check compound is greater than or equal to 10 times the reporting limit for the target analyte(s), then corrective action is necessary" (DTSC, 2015). Detected concentrations of 1,1-DFA were less than the RL provided by the laboratory, except for RSB-60-R6-5 (1,100 µg/m^3). Therefore, the data for RSB-54-S1-5, RSB-29-R5-5, and RSB-38-R4-5, are usable for their intended purpose. However, data reported for RSB-60-R6-5 may not be reliable for its intended purpose.

The case narratives in some of the laboratory reports from Mobilization 1 noted that numerous samples required dilution due to the dark color of sample extracts for soils or elevated non-target analytes present in soil vapor samples. Roux discussed this with the laboratory and was told that the dark color is most likely due to organic material in the samples and non-target petroleum hydrocarbon compounds for soils and soil vapor, respectively. The laboratory also stated that when a dark color is observed in certain samples, the sample will be diluted as a precaution to not clog the laboratory equipment. All samples having a dark sample extract or containing non-target compounds were reanalyzed to the method detection limit (MDL) and flagged accordingly. In some limited instances the revised reporting limits exceeded the screening levels, particularly for some of the soil vapor samples. However, this factor did not affect the results of the investigation.

4.3.2 Laboratory Quality Control Samples

Laboratory QC samples included matrix spikes and matrix spike duplicates (MS/MSD) to provide information to assess the precision and accuracy of the analysis of the target parameters within the environmental media collected at the Site. The MS portion of the sample is an aliquot of a sample that is spiked (by the laboratory) with a known concentration of the target analyte(s), which provides a measure of the method accuracy. The MSD portion of the sample is a laboratory split sample of the MS and is used to evaluate the precision of the analysis. Appendix D provides all laboratory reports including QC data.

4.3.3 Data Validation and Verification

A Stage 1 data validation was performed by Roux as defined by USEPA's *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use*, dated January 2009 (USEPA, 2009). Data validation was performed in accordance with the guidelines presented in and USEPA's *National Functional Guidelines for Inorganic Superfund Methods Data Review,* dated January 2017 (USEPA, 2017a) and USEPA's *National Functional Guidelines for Organic Superfund Methods Data Review*, dated January 2017 (USEPA, 2017b). Stage 1 validation includes verification based on "completeness and compliance checks of sample receipt conditions and only sample-related QC results."

Sample analyses were found generally compliant with the method requirements, and the sample data, with the possible exception of RSB-60-R6-5, were determined to be useable, with qualification of some sample results/detection limits as quantitatively estimated ("b" qualifier). Samples with high dilution and analyzed to the lab MDLs were flagged with a "J" qualifier. All data were considered useable for their intended purpose.

5. Summary and Conclusions

Roux implemented a Subsurface Investigation in two mobilizations at the Site to build on Ramboll's investigations and to address RECs identified by Roux in a Phase I ESA. The objectives of the investigations were met, and the bullet list below provides a summary of the investigation results.

- Metals, DRO, and one SVOC (RR-12 only) are present in shallow soils at localized areas of the Site.
- VOC concentrations in soil across the Site were either non-detect or detected at concentrations less than their respective DTSC SLs or USEPA RSLs in all samples.
- Soil vapor analytical results indicate that PCE, TCE, benzene, and chloroform are present at concentrations greater than their respective SVSLs in a small portion of Parcel 3. PCE and benzene impacts are highest in concentration between 5 and 15 feet bgs, with significant attenuation at 35 feet bgs.
- Limited impacts from PCBs in the vicinity of RR-3 are being investigated as documented in a separate Technical Memorandum[8].
- Physical distribution and chemical makeup of slag materials has been investigated and are documented in a separate Technical Memorandum[9].

[8] *Technical Memorandum, Targeted Shallow Soil Investigation for Polychlorinated Biphenyls near RR-3 and Recommended Additional Sampling, Southeastern Corner of Parcel 3*, dated August 25, 2023.

[9] *Slag Investigation Technical Memorandum* dated April 7, 2023, and revised August 25, 2023.

6. Recommendations

Site data confirm that industrial redevelopment of the Site is feasible; however, additional environmental investigations and remedial evaluation will be necessary prior to initiation of Site development activities. Roux provides the following recommendations, some of which have been implemented, as summarized below:

1. Additional shallow soil sampling to define DRO and metals impacts at Parcels 2 and 3, and SVOC impacts at Parcel 3. The additional sampling will be presented in the forthcoming Current Conditions Report.

2. Additional soil vapor delineation and evaluation of soil vapor extraction (SVE) as a remedial alternative for shallow soil vapor VOC impacts to Parcel 3.

   An SVE pilot test was performed on July 15 and 16, 2022, to evaluate SVE as a potentially viable full-scale remedial technology for cleanup of VOCs (namely PCE and benzene) at Parcel 3. Roux prepared a SVE Pilot Test technical memorandum (TM), dated October 4, 2022, to document SVE pilot testing activities conducted on July 15 and 16, 2022 at the Site. The SVE Pilot Test TM provides the technical details, rationale, and results of the pilot testing activities conducted at the Site, including SVE well installation on June 24, 2022. Based on the results of the SVE pilot test, SVE was confirmed as an effective technology for remediation of VOC-impacted soil vapor at the Site.

   Additional soil vapor sampling to complete delineation of VOC impacts to soil vapor in Parcel 3 and an SVE Extended Pilot Test to be performed over a larger area and at multiple depth horizons has been presented in a Soil Vapor Delineation and Soil Vapor Extraction Extended Pilot Test Workplan, submitted to DTSC on September 1, 2023.

3. Additional sampling at the rail spurs to delineate the extent of PCB impacts.

   A shallow soil investigation was conducted on November 10, 2022, and targeted a small area in the vicinity of RR-3. Based on the results of PCB sampling, Roux concluded that PCB impacts at the Site do not appear to be significant and/or widespread. Roux prepared a TM, dated April 7, 2023, to document the targeted soil investigation procedures and findings. Additional investigation was conducted in May and June 2023, and further delineation has been proposed, as documented in a subsequent TM dated August 25, 2023.

4. Evaluation of slag materials along the western portion of the Site.

   Pothole and trenching investigation and sampling activities were conducted at the Site between September 14 and October 11, 2022. The slag investigations were performed to further assess the distribution, as well as the physical and chemical characteristics of subsurface slag at the Site. Based on the results of the slag investigation, the distribution and thickness of slag materials are well understood, as are the physical characteristics of slag and slag materials. Leachability analysis performed by Roux and Ramboll at locations with the highest concentrations of metals indicated that slag materials do not have a significant leaching potential, with only one location (Ramboll location RSB-02) exceeding STLC or TCLP limits. Roux prepared a Slag Investigation TM, dated April 7, 2023, to document the slag investigation procedures and findings.

12451 Arrow Route, Rancho Cucamonga, California

Location	Current Borings	Boring Dates	Historical Borings	Scope of Work	Soil Sample Depth (feet bgs)	Analytical Suite	Soil Vapor Probe Depth (feet bgs)	Rationale
24 locations in a sitewide grid	RSB-01 to RSB-24	12/2020 - 02/2021	NA	Each boring to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Evaluation of the extent of slag material at the site. Parcel 1 and 2 in the southwestern corner of the Site, including areas of adjacent neighboring properties, were remediated for lead impacts. This area received a NFA status from the RWQCB-SA on November 7, 1990. As a result of these activities, the Site is listed in the SLIC database with closed status.
3 locations N, S, and W of RSB-02-W	RSB-02-R1 to R3	11/2021	RSB-02-W	Delineation of lead impacts around RSB-02-W	1, 3, 5 (R2 only)	Lead	-	Delineation of shallow lead impacts in Parcel 2
5 locations N, S, and E of RSB-03-E and W and S of RSB-03-S	RSB-03-R1 to R5	11/2021	RSB-03-E and -S	Delineation of TPH impacts around RSB-03	1, 3	TPH	-	Delineation of shallow TPH impacts in Parcel 3
7 locations N, S, E, and W of RSB-05-S	RSB-05-R1 to R7	11/2021	RSB-05, -SCL, -S, -SSW, -S2, and -SSE	Delineation of TPH impacts around RSB-05	1, 3, 5 (R5 only)	TPH	-	Delineation of shallow TPH impacts in Parcel 2
Pad 16 remediation area (orange hatched area on Figure 2)	RSB-18		A, B, C borings (no data?)	Grid sampling will cover shallow depths. One grid sample located within this area (approximate location).	No additional samples	-	-	One sample of the 24 grid samples is located in the former Pad 16 area.
One boring between emergency generator & approximate location of the former diesel UST (Figure 6)	RSB-25		TAMCO-1 (high diesel conc at 6.5 feet)	1 boring to a depth of to 15 feet bgs. Hand auger to 5 feet bgs, then direct push to 15 feet bgs. Vapor probes at 5 & 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15	One soil sample was collected from beneath the excavation, at a depth of approximately 6.5 feet bgs. The sample was analyzed for TPHd via USEPA Method 8015B and BTEX via USEPA Method 8260B. TPHd was detected at a concentration of 1,720 mg/kg, ethylbenzene was detected at a concentration of 57 µg/kg, and xylenes were detected at a concentration of µg/kg. Benzene, toluene, and other fuel oxygenates were not detected. The excavation was subsequently backfilled with concrete slurry.
One boring at stormwater infiltration channel (Figure 7)	RSB-26		NA*	1 boring to a depth of 5 feet bgs. Hand auger to 5 feet bgs. Vapor probes at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near active fuel UST (Figure 7)	RSB-27		NA*	1 boring to a depth of 15 feet bgs. Hand auger to 5 feet bgs, then direct push to 15 feet bgs. Vapor probes at 5 & 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Two borings (one at north end & one at south end) near open top clarifier in Parcel 3 (Figure 7)	RSB-28, RSB-29	12/1/2020	NA	2 borings to 30 feet bgs, one on north end and one on south end. Vapor probes at 5 & 30 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15 19.5-20 24.5-25 29.5-30	Metals, VOCs & TPH	5, 30	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One soil vapor boring adjacent to RSB-28	RSB-28	12/2020	RSB-28	1 boring to 15 feet	NA	VOCs	15	Evaluate 15 foot sample at RSB-28 in Parcel 3
Three step-out soil vapor borings NW, NE, and SW of RSB-28	RSB-28-R1 to R3	11/2021	RSB-28	3 borings to 5 feet bgs	NA	VOCs	5	Delineate benzene and PCE impacts around RSB-28 in Parcel 3
Five step-out soil vapor borings N, S, E, and W of RSB-28	RSB-28-R4 to R8	3/2022	RSB-28	5 borings to 15 feet bgs	5, 15 (R8 only 15)	VOCs	5, 15 (R8 only 15)	Delineate benzene and PCE impacts around RSB-28 in Parcel 3
One soil vapor boring adjacent to RSB-29	RSB-29	12/2020	RSB-29	1 boring to 15 feet	NA	VOCs	15	Evaluate 15 foot sample at RSB-29
Three step-out soil vapor borings N, S, and W of RSB-29	RSB-29-R1 to R3	11/2021	RSB-29	3 borings to 5 feet bgs	NA	VOCs	5	Delineate benzene and PCE impacts around RSB-29 in Parcel 3
Six step-out soil vapor borings N, S, E, and W of RSB-29	RSB-29-R4 to R9	3/2022	RSB-29	6 borings to 15 feet bgs	5, 15 (R8 and R9 only 15)	VOCs	5, 15 (R8 and R9 only 15)	Delineate benzene and PCE impacts around RSB-29 in Parcel 3
Two borings within mobile maintenance building in Parcel 3 (Figure 7)	RSB-30, RSB-60	12/2020 - 1/2021	NA	2 borings, one boring near drain to 15 feet bgs, one boring near broken asphalt to 5 feet bgs. Vapor probes at 5 & 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10	Metals, VOCs & TPH	5, 15 (RSB-60 only 5)	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Three step-out soil vapor borings E, S, and W of RSB-30	RSB-30-R1 to R3	11/2021	RSB-30	3 borings to 5 feet bgs	NA	VOCs	5, 15	Delineate PCE impacts around RSB-30 in Parcel 3
Two step-out soil vapor borings NW and SW of RSB-30	RSB-30-R4 and R5	3/2022	RSB-30	6 borings to 15 feet bgs	5, 15	VOCs	5, 15	Delineate PCE impacts around RSB-30 in Parcel 3
One deep soil vapor boring adjacent to RSB-30	RSB-30-R6	3/2022	RSB-30	1 boring to 35 feet bgs	35	VOCs	35	Delineate PCE impacts around RSB-30 in Parcel 3
Two step-out soil vapor borings NW and NE of RSB-60	RSB-60-R5 and R6	3/2022	RSB-60	2 borings to 15 feet bgs	5, 15	VOCs	5, 15	Delineate PCE impacts around RSB-60 in Parcel 3
One deep soil vapor boring adjacent to RSB-60	RSB-60-R8	3/2022	RSB-60	1 boring to 35 feet bgs	15, 35	VOCs	35	Delineate PCE impacts around RSB-60 in Parcel 3
One boring at hazardous waste storage, near east most building on Parcel 3 (Figure 7)	RSB-31		NA*	1 boring to a depth of 5 feet bgs. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near inside/outside area of large building in SW portion, vicinity of cooling water channel (Figure 6)	RSB-32		NA*	1 boring to a depth of 30 feet bgs. Hand auger to 5 feet bgs, then direct push to 30 feet bgs. Vapor probes at 5 & 30 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15 19.5-20 24.5-25 29.5-30	Metals, VOCs & TPH	5, 30	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near approximate location of former diesel USTs (Figure 7)	RSB-33		TM-1 to TM-8 (TPHs analyzed only at 16 feet bgs)	1 boring to a depth of 15 feet bgs. Hand auger to 5 feet bgs, then direct push to 15 feet bgs. Vapor probes at 5 & 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15	Based on historical review conducted as part of Ramboll's 2020 Phase I ESA, four approximately 12,000-gallon USTs on Parcel 3, formerly used to store fuel oil were removed from the Site in 1993. (There are some discrepancies as to the size of these tanks, which are sometimes reported with a volume or 50,000 gallons each and sometimes listed with a collective volume of 50,000 or 52,000 gallons). Soil samples from the excavation were collected and tested, and the removal of the USTs and remediation of the excavation area received a NFA status from the Health Department dated April 28, 1994.
Two borings in slag trench remediation area on parcel 4 (yellow hatched area on Figure 5)	RSB-34, RSB-35		B borings	2 borings to depths of 25 feet bgs. Hand auger to 5 feet bgs, then direct push to 25 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15 19.5-20 24.5-25	Metals, VOCs & TPH	-	On December 20, 2001, the DTSC issued a letter to Fontana Steel indicating that it had completed its review of the 2001 PEA. The soil sampling and analysis results had been compared to health-based criteria for unrestricted land use for 17 metals. DTSC concluded that "the Site does not appear to pose a threat to human health or the environment under any land use," and concluded that no further action was necessary.

Table 1
Sampling Analysis Plan
12451 Arrow Route, Rancho Cucamonga, California

Location	Current Borings	Boring Dates	Historical Borings	Scope of Work	Soil Sample Depth (feet bgs)	Analytical Suite	Soil Vapor Probe Depth (feet bgs)	Rationale
Two borings in slag remediation area in central portion of Parcel 2 (pink hatched area in Figures 5 and 6)	RSB-36, RSB-37		Exact sampling locations unclear. S (1-10) samples	2 borings to depths of 10 feet bgs. Hand auger to 5 feet bgs, then direct push to 10 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10	Metals, VOCs & TPH	-	A letter from the County Fire Department dated July 2, 2002 indicated that after reviewing the June 2001 report submitted by Clayton Group Services, Inc. (not available for Ramboll's review), "No Further Action" was necessary regarding the remediation of slag and non-slag stockpile at the Site.
One boring near ASTs south of mobile maintenance building in Parcel 3 (Figure 7)	RSB-38	12/1/2020	NA	1 angled boring under AST to 5 feet bgs. Vapor probe at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5	The area in the vicinity of the ASTs located south of the Mobile Maintenance building at the Site on Parcel 3 exhibited significant staining.
One soil vapor boring adjacent to RSB-38	RSB-38	11/2021	RSB-38	1 boring to 15 feet	NA	VOCs	15	Evaluate 15 foot sample at RSB-38
Three step-out soil vapor borings N, S, and E of RSB-38	RSB-38-R1 to R3	11/2021	RSB-38	3 borings to 5 feet bgs	NA	VOCs	5	Delineate PCE impacts around RSB-38 in Parcel 3
Two step-out soil vapor borings NW and SW of RSB-38	RSB-38-R4 and R6	3/2022	RSB-38	3 borings to 15 feet bgs	5, 15	VOCs	5, 15	Delineate PCE impacts around RSB-38 in Parcel 3
One deep soil vapor boring adjacent to RSB-38	RSB-38-R7	3/2022	RSB-38	1 boring to a depth of 35 feet bgs	35	VOCs	35	Delineate PCE impacts around RSB-38 in Parcel 3
One boring near stormwater channel in the southwest portion of site (Figure 6)	RSB-39		NA*	1 boring to a depth of 5 feet bgs from bottom of channel. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Five borings near cooling towers (one at each) in south-southwest portion of site (Figure 6)	RSB-40, RSB-41, RSB-42, RSB-45, RSB-62		NA*	5 borings to depth of 5 feet bgs, one at each cooling tower. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals & Cr VI	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Two borings near clarifiers by baghouse, one near each clarifier (Figure 6)	RSB-43, RSB-44		NA*	2 borings to a depth of 15 feet bgs, one at each clarifier. Hand auger to 5 feet bgs, then direct push to 15 feet bgs. Vapor probes at 5 & 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15 5, 15	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Two borings near wash station (east and west sides) (Figure 7)	RSB-46, RSB-47		NA*	2 borings to a depth of 5 feet bgs, one at east end and one at west end. Hand auger to 5 feet bgs. Vapor probe at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5 5	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Four borings in main production line building - green circles near features (Figure 7)	RSB-48, RSB-49, RSB-50, RSB-52		NA*	4 borings to a depth of 5 feet bgs. One by PCB material storage, one by hazardous material storage, 2 borings on north & south sides of the production line. Hand auger to 5 feet bgs. Vapor probes at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs, & TPH, (PCBs only at PCB storage)	5 5 5 5	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring in roll shop south of main production line building (Figure 7)	RSB-51		NA*	1 boring to a depth of 5 feet bgs. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Two borings within building in central portion of Parcel 3 (Figure 7)	RSB-53, RSB-54	12/1/2020	NA	2 borings to 5 feet bgs. Vapor probes at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Five step-out borings adjacent to RSB-54 (Figure 7)	RSB-54-CL, -E, -N, -S, -W	2/1/2021	NA	5 borings to 35 feet bgs, vapor probes at 5, 15, and 35 feet bgs.	NA	VOCs	5, 15, 35	Delineate PCE impacts around RSB-54 in Parcel 3
One soil vapor boring adjacent to RSB-53	RSB-53	11/2021	RSB-53	1 boring to 15 feet	NA	VOCs	15	Evaluate 15 foot sample at RSB-53
Seven step-out soil vapor borings N, S, E, and W of RSB-53	RSB-53-R1 to R7	11/2021	RSB-53	7 borings to 5 feet bgs	NA	VOCs	5	Delineate PCE impacts around RSB-53 in Parcel 3
Six step-out soil vapor borings N, W, and S of RSB-53	RSB-53-R8 to R13	3/2022	RSB-53	6 borings to 15 feet bgs	5, 15 (R11 and R12 only 15)	VOCs	5, 15 (R11 and R12 15 only)	Delineate PCE impacts around RSB-53 in Parcel 3
Two deep soil vapor borings E and W of RSB-53	RSB-53-R14 and R15	3/2022	RSB-53	2 borings to 35 feet bgs	15 and 35 (R14 only 35)	VOCs	15 and 35 (R14 only 35)	Delineate PCE impacts around RSB-53 in Parcel 3
Two step-out soil vapor borings E of RSB-54-E	RSB-54-E1 and E2	11/2021	RSB-54-E	2 borings to 15 feet bgs	NA	VOCs	5, 15	Delineate PCE impacts around RSB-54 in Parcel 3
One deep step-out soil vapor borings E of RSB-54-E	RSB-54-E3	3/2022	RSB-54-E	1 boring to 35 feet bgs	35	VOCs	35	Delineate PCE impacts around RSB-54 in Parcel 3
One deep step-out soil vapor borings E of RSB-54-E	RSB-54-E4	3/2022	RSB-54-E	1 boring to 35 feet bgs	5, 15, 35	VOCs	5, 15, 35	Delineate PCE impacts around RSB-54 in Parcel 3
Three step-out soil vapor borings W and N of RSB-54-N	RSB-54-E1 and E2	11/2021	RSB-54-N	2 borings to 15 feet bgs	NA	VOCs	15	Delineate PCE impacts around RSB-54 in Parcel 3
Two borings in lubricant storage area (Figure 7)	RSB-55, RSB-56		NA*	2 boring to depths of 5 feet bgs, one on new material & one by used material storage. Hand auger to 5 feet bgs. Vapor probe at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5 5	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring east of mobile maintenance building in Parcel 3 (Figure 7)	RSB-57	12/2020-1/2021	NA	1 boring to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Five step-out borings S and W of RSB-57	RSB-57-R1 to R5	11/2021	RSB-57 and step-outs	3 borings to 1 foot, 2 borings to 3 feet bgs	1, 3	Lead	-	Delineation of shallow lead impacts in Parcel 3
One boring near drain in Parcel 4 south of maintenance shop (Figure 5)	RSB-58	12/2020	N/A	One boring to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Two step-out borings S and W of RSB-58	RSB-58-S and W	11/2021	RSB-58	2 borings to 5 feet	1, 3, 5	Metals, VOCs & TPH	-	Additional sampling in area of oil collection trench and clarifier in Parcel 4
One boring near clarifier in northwest portion of site (Parcel 4) south of maintenance shop (Figure 5)	RSB-59		NA*	One boring to 5 feet bgs. Hand auger to 5 feet bgs, then direct push to 15 feet bgs. Vapor probe at 5 & 15 feet bgs	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring inside maintenance shop, near hydraulic lift in northwest portion of site, on Parcel 4 (Figure 5)	RSB-61		NA*	One boring to 5 feet bgs. Hand auger to 5 feet bgs. Vapor probe at 5 feet bgs	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near reheat oven (Figure 7)	RSB-63		NA*	One borings to 5 feet bgs. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near former oil cellar within production/ roll mill building (Figure 7)	RSB-64		NA*	1 boring to 15 feet bgs. Hand auger to 5 feet bgs, then direct push to 15 feet bgs. Vapor probes at 5 & 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One boring near transformers - green circle near feature 21 (not SCE property) (Figure 7)	RSB-65		NA*	1 boring to 5 feet bgs. Hand auger to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH, PCBs	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).

Table 1
Sampling Analysis Plan
12451 Arrow Route, Rancho Cucamonga, California

Location	Current Borings	Boring Dates	Historical Borings	Scope of Work	Soil Sample Depth (feet bgs)	Analytical Suite	Soil Vapor Probe Depth (feet bgs)	Rationale
Three additional deep locations scattered throughout the grid (Figure 6)	RSB-66, RSB-67, RSB-68		NA*	Each boring to 25 feet bgs. Hand auger to 5 feet bgs, then direct push to 25 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15 19.5-20 24.5-25	Metals, VOCs & TPH	-	Evaluation of the extent of slag material at the site. Further deeper sampling to provide spatial coverage on native soil material.
One boring near former septic system (Figure 7)	RSB-69		NA*	1 borings to 15 feet bgs. Hand auger to 5 feet bgs, then direct push to 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10 14.5-15	Metals, VOCs & TPH	5, 15	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Two shallow soil borings on the east and west ends of the vehicle wash area (Figure 5)	RSB-70-E and W	11/2021	NA*	2 borings to 5 feet	1, 3, 5	Metals, VOCs & TPH	-	Assess the former Vehicle Wash Area in Parcel 2
Shallow soil boring in the former drum storage area in Parcel 2 (Figure 6)	SB-1	11/2021	NA*	1 boring to 3 feet	1, 3	Metals, VOCs & TPH	-	Assess the former drum storage area in Parcel 2
Two shallow soil borings on the east and west ends of the former 1993 UST footprint in Parcel 3 (Figure 7)	SB-2 and SB-3	11/2021	NA*	2 borings to 3 feet	1, 3	Metals, VOCs & TPH	-	Assess conditions in the former tank footprint in Parcel 3
Shallow soil boring adjacent to the existing (at the time) UST and dispenser in Parcel 3 (Figure 7)	SB-4	11/2021	NA*	1 borings to 3 feet	1, 3	TPH	-	Assess conditions adjacent to the tank in Parcel 3
19 borings along the rail spur in Parcels 2 and 3 (Figures 6 and 7)	RR-1 to RR-19	11/2021	NA*	19 borings to 1.5 feet	0.5, 1.5	Metals, VOCs, TPH. PCBs, OCPs, SVOCs, chlorinated herbicides in 12 of 19 borings only.	-	Assess conditions along the rail spurs in Parcels 2 and 3

Notes:

Shading indicates Ramboll boring locations
bgs = below ground surface
NA = Not applicable
NA* = Based on Ramboll's review, no historical borings were noted
VOCs = Volatile Organic Chemicals
TPH = Total Petroleum Hydrocarbons
PCBs = Polychlorinated Biphenyls
PCE = Tetrachloroethene
UST = Underground Storage Tank
DTSC = Department of Toxic Substances Control
AST = Aboveground Storage Tank
NFA = No Further Action letter
RWQCB-SA = Regional Water Quality Control Board - Santa Ana
SLIC = Spills, Leaks, Investigation, and Cleanup sites
OCPs = Organochlorine Pesticides
SVOCs = Semi-Volatile Organic Compounds
Cl Herbicides = Chlorinated Herbicides
ESA = environmental site assessment
REC = recognized environmental condition
PEA = preliminary endangerment assessment
mg/kg = milligram per kilogram

Table 2
Soil Analytical Results - Metals
12451 Arrow Route, Rancho Cucamonga, California

Notes:
ft bgs = feet below ground surface
USEPA = United States Environmental Protection Agency
mg/kg = milligrams per kilogram
DTSC Commercial/Industrial Soil SL = California Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note 3 Screening Level for Commercial/Industrial Soil (June 2020)
USEPA Commercial/Industrial Soil RSL = USEPA Regional Screening Level for Commercial/Industrial Soil (May 2022)
[1]California Upper Confidence Limit = background arsenic concentration of 12.0 mg/kg; DTSC HERO HHRA Note 11 (December 2020)
NS = no standard established
NA = not applicable
Shading indicates sample collected by Ramboll
Bold indicates that value exceeds laboratory reporting limit
Italics indicate sample is a duplicate
<X = analyte not detected above laboratory reporting limit
Cells highlighted in orange exceed either one or both SLs
Lowest of the cancer and non-cancer endpoint screening levels are listed

Table 3
Soil Analytical Results - Volatile Organic Compounds (VOCs)
12451 Arrow Route, Rancho Cucamonga, California

Sample ID	Depth (ft bgs)	Date Sampled	1,2,4-Trimethylbenzene	Acetone	Benzene	Ethylbenzene	m,p-Xylenes	Methylene Chloride	Naphthalene	o-Xylene	tert-Butyl Alcohol (TBA)	Tetrachloroethene	Toluene	Trichloroethene	Other Analyzed VOCs
Analytical Method			USEPA Method 8260B												
Unit			µg/kg

Notes:

ft bgs = feet below ground surface

Shading indicates data collected by Ramboll

µg/kg = micrograms per kilogram

USEPA = United States Environmental Protection Agency

USEPA Industrial Soil RSL = USEPA Regional Screening Level for Industrial Soil (May 2022)

DTSC Commercial/Industrial Soil SL = California Department of Toxic Substances Control (DTSC) Screening Level for Commercial/Industrial Soil (June 2020)

NS = No standard established

NA = Not Analyzed

ND = Not detected above laboratory reporting limits

Bold indicates that value exceeds laboratory reporting limit

<X = analyte not detected above laboratory reporting limit

Lowest of the cancer and non-cancer endpoint screening levels are listed

Notes:
ft bgs = feet below ground surface
GRO = Gasoline Range Organics
DRO = Diesel Range Organics
ORO = Oil Range Organics
SFRWQCB = San Francisco Regional Water Quality Control Board
ESL = Environmental Screening Level for Commercial/Industrial: Shallow Soil Exposure (2019)
Bold indicates that value exceeds laboratory reporting limit
Italics indicate sample is a duplicate
<X = analyte not detected above laboratory reporting limit
NA = Not applicable
Shading indicates data collected by Ramboll
Cells highlighted in orange exceed the SFRWQCB ESL

Notes:
ft bgs = feet below ground surface
USEPA = United States Environmental Protection Agency
mg/kg = milligrams per kilogram
USEPA Industrial Soil RSL = USEPA Regional Screening Level for Industrial Soil (May 2021)
DTSC Commercial/Industrial Soil SL = California Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note 3 Screening Level for Commercial/Industrial Soil (June 2020)
NS = No standard established
Bold indicates that value exceeds laboratory reporting limit
<X = analyte not detected above laboratory reporting limit
Cells highlighted in orange exceed either one or both SLs
ND = Not detected above laboratory reporting limits
Lowest of the cancer and non-cancer endpoint screening levels are listed
J = Estimated concentration above the method detection limit but below the laboratory reporting limit

Notes:

ft = feet

VOCs = volatile organic compounds

USEPA = United States Environmental Protection Agency

$\mu g/m^3$ = micrograms per cubic meter

USEPA Industrial Indoor Air RSL = USEPA Industrial Indoor Air Regional Screening Level with screening attenuation factor of 0.03, according to the California Department of Toxic Substances Control (DTSC) Draft Supplemental Guidance: Screening and Evaluating Vapor Intrusion (May 2021)

DTSC Commercial/Industrial Indoor Air SL = DTSC Commercial/Industrial Indoor Air SL with screening attenuation factor of 0.03, according to the DTSC Draft Supplemental Guidance: Screening and Evaluating Vapor Intrusion (June 2020)

AF = Attenuation Factor

NA = Not applicable

NS = No standard established

<X or ND = analyte not detected above laboratory reporting limit

J = Estimated concentration above the method detection limit but below the laboratory reporting limit

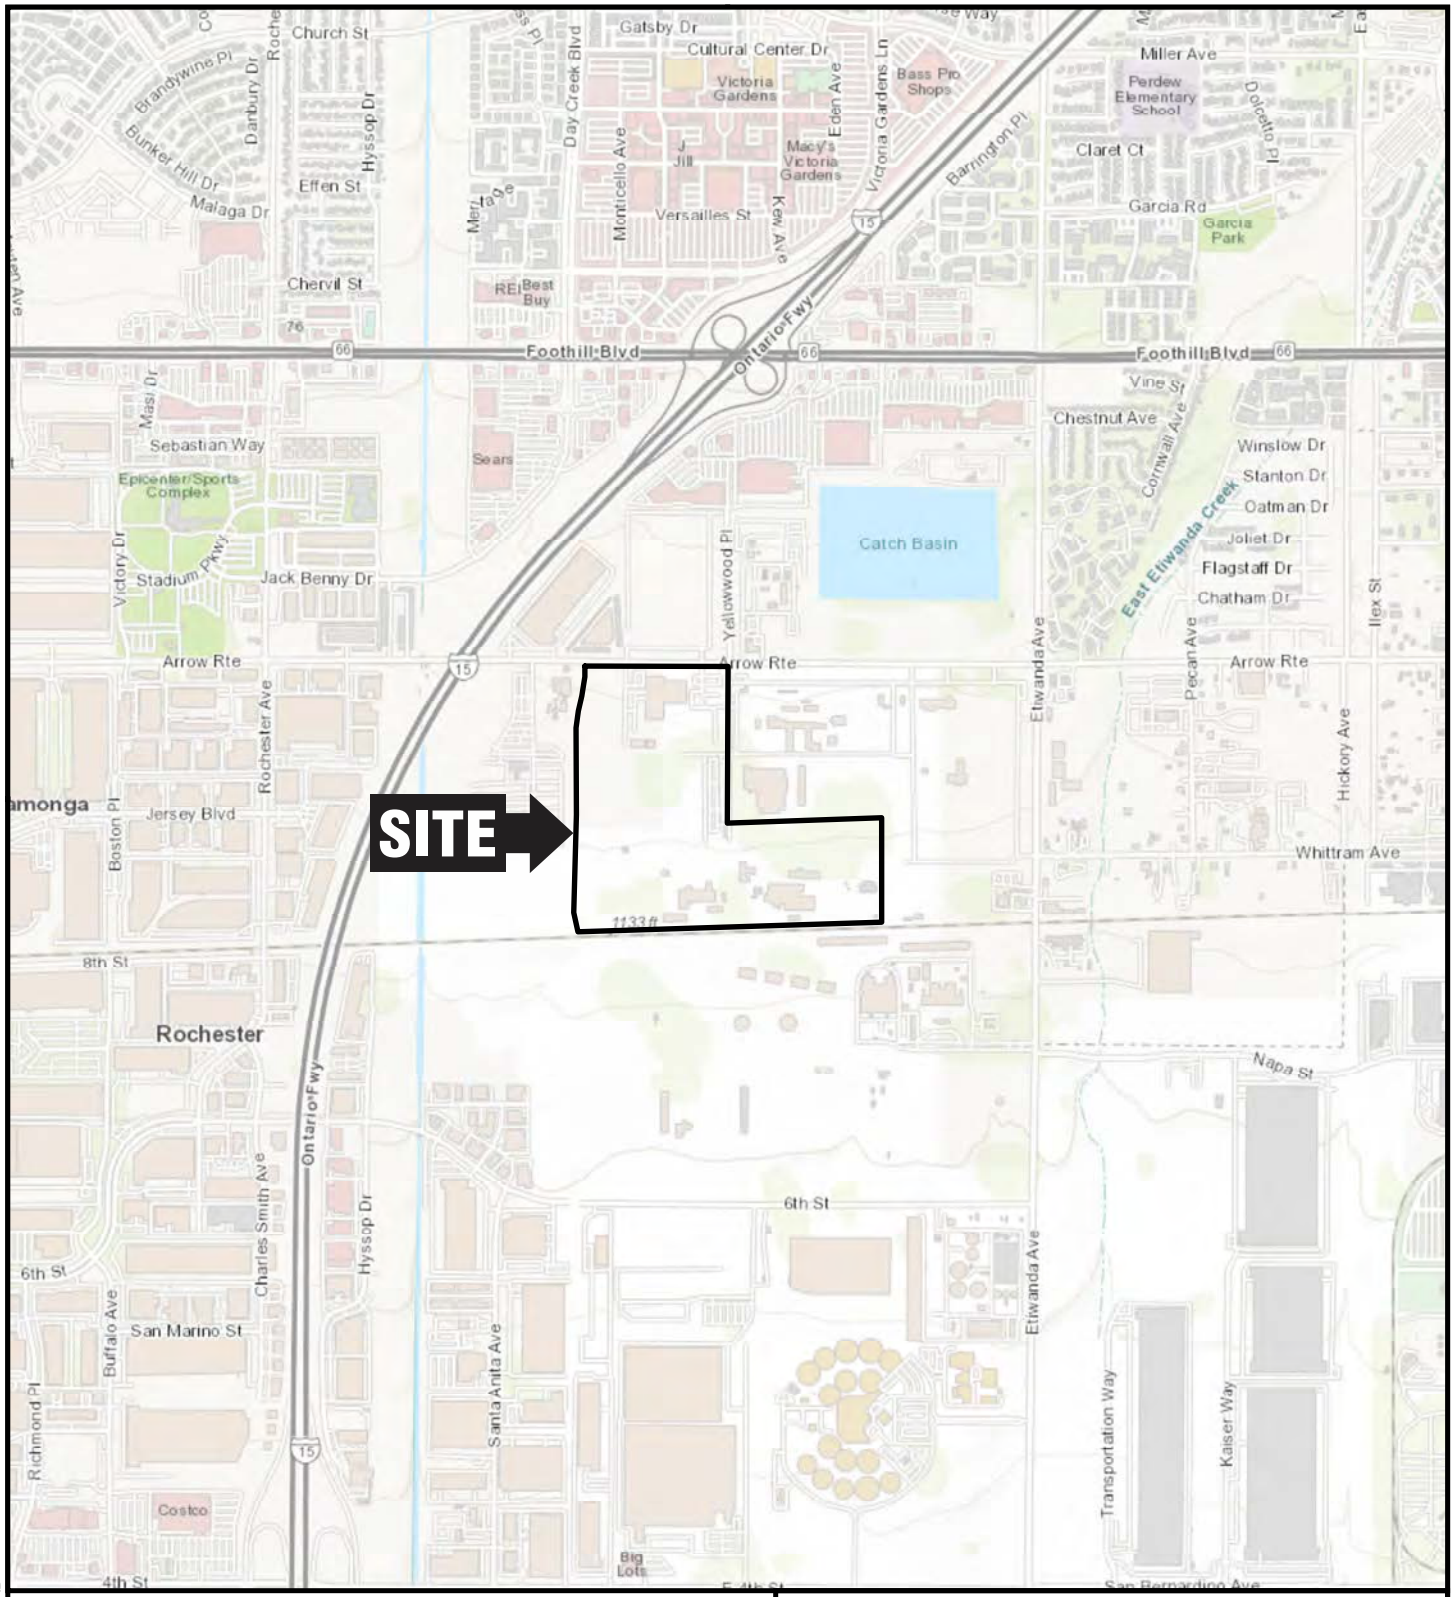
B = analyte was detected in the method blank

b = Data affected by high ICAL percent relative standard deviation for the analyte in the calibration analyzed

Bold indicates that value exceeds laboratory reporting limit

Italics indicate sample is a duplicate

** Trichloroethene DTSC SL from HHRA Note 5 - "HERO strongly recommends consulting with the HERO toxicologist" when indoor air concentrations exceed 3 ug/m3*



Cells highlighted in gray indicate that data may not be reliable for its intended purpose due to leak check compound detection greater than 10 times the reporting limit.

Cells highlighted in green indicates data collected by Ramboll

Cells highlighted in orange exceed either one or both SLs

STATE OF CALIFORNIA
ENVIRONMENTAL PROTECTION AGENCY
DEPARTMENT OF TOXIC SUBSTANCES CONTROL

In the Matter of: Tamco, a California Corporation, Doing Business As Tamco and as Tamco Steel, Inc. 12459-B Arrow Highway Rancho Cucamonga, California 91739 (San Bernardino County) ID No. CAD982361404 Respondent.	Docket No. HWCA 2005 0964 CONSENT ORDER Health and Safety Code Section 25187

The State Department of Toxic Substances Control (Department) and Tamco, a California Corporation Doing Business As (DBA) in California as Tamco Steel, Inc., (Respondent) enter into this Consent Order and agree as follows:

1. Respondent is a generator (California Code of Regulations, title 22, section 66260.10) of hazardous waste at the Tamco facility at 12459-B Arrow Highway, Rancho Cucamonga, California 91739 (Site). Respondent receives large quantities of metal scraps, including shavings and turnings, for smelting to produce reinforcing metal bars, and has stored them in piles without lateral or overhead containment. Respondent handles and stores scrap materials containing lead, chromium, copper, nickel and zinc in these scrap piles.

2. The Department inspected the Site on January 20, 2005.

3. Respondent violated California Code of Regulations, title 22, section 66262.34, by violating California Code of Regulations, title 22, section 66265.31, in

that on or about January 20, 2005, Respondent failed to maintain and operate its facility in a manner to minimize the possibility of any unplanned sudden or non-sudden release of hazardous constituents to air, soil, or surface water which could threaten human health or the environment, and once released, may fail hazardous waste classification levels for selected heavy metals. Specifically, Respondent allowed release(s) of residual fine powder (dry, solid form having particle size smaller than 100 micrometer in diameter), containing levels of lead, chromium, copper, nickel and zinc to adjacent soil(s) that exceeded Total Threshold Level Concentrations as provided in 22 CCR 66261.24.

4. During the Spring of 2006, TAMCO completed the sampling, removal and proper disposal of impacted soils. In addition, TAMCO instituted controls to prevent contamination of soils in the future by paving the area to the north and south of the scrap metal piles and it installed barriers (k-rails) to help segregate the scrap metal piles. TAMCO also constructed a storm water collection and treatment system to keep potential contaminants from leaving the pavement and impacting surface waters.

5. The parties wish to avoid the expense of litigation and to ensure prompt compliance.

6. Jurisdiction exists pursuant to Health and Safety Code section 25187.

7. Respondent waives any right to a hearing in this matter.

8. This Consent Order shall constitute full settlement of the violation alleged above, but does not limit the Department from taking appropriate enforcement action concerning other violations.

SCHEDULE FOR COMPLIANCE

9. Respondent shall comply with the following terms and conditions:

9.1 Respondent shall minimize the dispersion of any hazardous materials to the environment. Such measures shall include wind breaks or barriers to prevent wind dispersal of residuals at the Site that contain fine powder (dry, solid form having particle size smaller than 100 micrometer in diameter, which contain lead, chromium, copper, nickel and zinc), routine removal of residuals from the scrap metal pile areas of the Site, track-out controls to prevent trucks that enter and leave the Site from spreading residuals to public streets, and additional mitigation measures when wind gusts exceed 25 mph. Respondent shall comply with the South Coast Air Quality Management District's fugitive dust control requirements (Rule 303) at all times.

9.2 The Respondent shall immediately notify the Department verbally, and within five (5) calendar days in writing, when any hazardous material is released to the environment as a result of any activity at the Site.

9.3. Submittals: All submittals from Respondent pursuant to this Consent Order shall be sent simultaneously to:

Florence Gharibian, Chief
Glendale Branch of Statewide Compliance Division
Department of Toxic Substances Control
1011 North Grandview Avenue
Glendale, California 91201

9.4. Communications: All approvals and decisions of the Department made regarding such submittals and notifications shall be communicated to Respondent in writing by a Branch Chief, Department of Toxic Substances Control, or his/her

designee. No informal advice, guidance, suggestions, or comments by the Department regarding reports, plans, specifications, schedules, or any other writings by Respondent shall be construed to relieve Respondent of its obligation to obtain such formal approvals as may be required.

9.5. Department Review and Approval: If the Department determines that any report, plan, schedule, or other document submitted for approval pursuant to this Consent Order fails to comply with the Order or fails to protect public health or safety or the environment, the Department may return the document to Respondent with recommended changes and a date by which Respondent must submit to the Department a revised document incorporating the recommended changes.

9.6. Compliance with Applicable Laws: Respondent shall carry out this Order in compliance with all local, State, and federal requirements, including but not limited to requirements to obtain permits and to assure worker safety.

9.7. Endangerment during Implementation: In the event that the Department determines that any circumstances or activity (whether or not pursued in compliance with this Consent Order) are creating an imminent or substantial endangerment to the health or welfare of people on the site or in the surrounding area or to the environment, the Department may order Respondent to stop further implementation for such period of time as needed to abate the endangerment. Any deadline in this Consent Order directly affected by a Stop Work Order under this section shall be extended for the term of such Stop Work Order.

9.8. Liability: Nothing in this Consent Order shall constitute or be construed as a satisfaction or release from liability for any conditions or claims arising as a result of past, current, or future operations of Respondent, except as provided in this Consent Order. Notwithstanding compliance with the terms of this Consent Order, Respondent may be required to take further actions as are necessary to protect public health or welfare or the environment.

9.9. Site Access: Access to the Site shall be provided at all reasonable times to employees, contractors, and consultants of the Department, and any agency having jurisdiction. Nothing in this Consent Order is intended to limit in any way the right of entry or inspection that any agency may otherwise have by operation of any law. The Department and its authorized representatives may enter and move freely about all property at the Site at all reasonable times for purposes including but not limited to: inspecting records, operating logs, and contracts relating to the Site; reviewing the progress of Respondent in carrying out the terms of this Consent Order; and conducting such tests as the Department may deem necessary. Respondent shall permit such persons to inspect and copy all records, documents, and other writings, including all sampling and monitoring data, in any way pertaining to work undertaken pursuant to this Consent Order.

9.10. Sampling, Data, and Document Availability: Respondent shall permit the Department and its authorized representatives to inspect and copy all sampling, testing, monitoring, and other data generated by Respondent or on Respondent's behalf in any way pertaining to work undertaken pursuant to this Consent Order.

9.11. Government Liabilities: The State of California shall not be liable for injuries or damages to persons or property resulting from acts or omissions by Respondent or related parties specified in paragraph 12.3, in carrying out activities pursuant to this Consent Order, nor shall the State of California be held as a party to any contract entered into by Respondent or its agents in carrying out activities pursuant to this Consent Order.

9.12. Incorporation of Plans and Reports: All plans, schedules, and reports that require Department approval and are submitted by Respondent pursuant to this Consent Order are incorporated in this Consent Order upon approval by the Department.

9.13. Extension Requests: If Respondent is unable to perform any activity or submit any document within the time required under this Consent Order, the Respondent may, prior to expiration of the time, request an extension of time in writing. The extension request shall include a justification for the delay.

9.14. Extension Approvals: If the Department determines that good cause exists for an extension, it will grant the request and specify in writing a new compliance schedule.

PAYMENTS

10. Within 30 days of the effective date of this Consent Order, Respondent shall deliver to the Department a total of forty-nine thousand five hundred dollars ($49,500), of which $40,000 is an administrative penalty, $5,000 is a supplemental environmental project, and $4,500 will reimburse the Department's costs in this matter.

10.1 Respondent's check or money order for $44,500 in penalties and costs shall be made payable to Department of Toxic Substances Control, shall be annotated with the docket number of this matter, and shall be delivered together with the attached Payment Voucher to:

Department of Toxic Substances Control
Accounting Office
1001 I Street, 21st floor
P. O. Box 806
Sacramento, California 95812-0806

A photocopy of the check shall be sent to both:

Florence Gharibian, Chief
Glendale Branch of Statewide Compliance Division
Department of Toxic Substances Control
1011 North Grandview Avenue
Glendale, California 91201

and

Vivian Murai, Staff Counsel
Office of Legal Affairs
Department of Toxic Substances Control
1001 I Street, 23rd floor (MS-23A)
P.O. Box 806
Sacramento, California 95812-0806

10.2 Respondent shall pay five thousand dollars ($5,000) as a supplemental environmental project by check or money order made payable to the Secretary of the California Environmental Protection Agency for deposit in the Environmental Enforcement Training Account as set forth in Penal Code section 14300 et seq., and delivered with two photocopies of this check or money order to Vivian Murai at the address listed above.

10.3 If Respondent fails to make any payment as provided above, Respondent agrees:

A) To pay interest at the rate established pursuant to Health and Safety Code section 25360.1 and to pay all costs incurred by the Department in pursuing collection including attorney's fees; and

B) That all balances due shall be deemed a penalty for enforcement and collection purposes, regardless of its original characterization under this document.

OTHER PROVISIONS

11.1. Additional Enforcement Actions: By agreeing to this Consent Order, the Department does not waive the right to take further enforcement actions, except to the extent provided in this Consent Order.

11.2. Penalties for Noncompliance: Failure to comply with the terms of this Consent Order may subject Respondent to civil penalties and/or punitive damages for any costs incurred by the Department or other government agencies as a result of such failure, as provided by Health and Safety Code section 25188 and other applicable provisions of law.

11.3. Parties Bound: This Consent Order shall apply to and be binding upon Respondent and its officers, directors, agents, receivers, trustees, employees, contractors, consultants, successors, and assignees, including but not limited to individuals, partners, and subsidiary and parent corporations, and upon the Department and any successor agency that may have responsibility for and jurisdiction over the subject matter of this Consent Order.

11.4. Effective Date: The effective date of this Consent Order is the date it is signed by the Department.

11.5. Integration: This agreement constitutes the entire agreement between the parties and may not be amended, supplemented, or modified, except as provided in this agreement.

11.6. Compliance with Waste Discharge Requirements: Respondent shall comply with all applicable waste discharge requirements issued by the State Water Resources Control Board or a California Regional Water Quality Control Board.

CERTIFIED MAIL

October 7, 2005

Matthew Jalali
Environmental Manager
TAMCO Steel
P.O. Box 325
Rancho Cucamonga, CA 91739-0325

Dear Mr. Jalali:

Thank you for your August 25, 2005, letter outlining TAMCO's proposal for removing contaminated soil at the TAMCO facility. On September 16, 2005, The Department of Toxic Substances Control (DTSC) contacted your consultant, Dr. David Leu to request additional information on the project. The information Dr. Leu provided in response to our request was very helpful. We do have some additional questions. We have tentatively scheduled a conference call for October 12, 2005, at 2:00 PM to discuss the issues outlined below (the issues were also outlined in our September 16, 2005 correspondence).

1. DTSC comment; please provide Information demonstrating verification of compliance with all applicable portions of the Cal-OSHA General Industry and Construction Safety Orders found within Title 8 of the California Code of Regulations.

   TAMCO's response: The project will be conducted under a Health and Safety Plan that meets Title 8 requirements and all site personnel will be 40-hour HAZWOPER certified. Dr. Leu provided the Health and Safety plan on September 30, 2005.

2. DTSC comment; Provide a diagram showing the area where the soil removal will occur.

   TAMCO's response: The attached diagram was drawn by TAMCO on the day DTSC took its samples (January 20, 2005). We have indicated the approximate area to be excavated in green. This location is based on the sampling results we received from the splits of the samples that DTSC gave TAMCO. The results show that the only sample that was not on a concrete pad and failed hazardous

Printed on Recycled Paper

waste criteria was Sample 5. This sample was taken of surface dirt located just north of the concrete pad that was holding the scrap pile designated COMP P16. The exact dimensions of the excavation will be determined by sampling results of samples to be taken during the removal project.

DTSC comment: The diagram submitted to DTSC indicates sample location 1x rather than sample location 5x. Please indicate the correct sample location in the diagram. It is also important to point out that DTSC's sampling strategy would not be adequate to determine the full extent of contaminated soil in the metal turnings pile work area. TAMCO sample #5 taken on February 2, 2005, from soil north of the storage pad exceeded the limit for lead. Samples collected from the base of composite piles and from the turning piles exceeded the limits of lead, chromium, copper, nickel and/or zinc. Contaminated soil must be removed from all of these areas.

3. DTSC Comment; provide a description of the criteria that will be used to determine the number of samples to be taken from the soil after it is removed. A description of the metals and other contaminants to be included in the laboratory analysis and the test methods that will be used to analyze for these contaminants.

TAMCO's response: Based on the sampling results obtained from the splits generated from DTSC's January 20, 2005 sampling episode, CAM metals will be the constituents of concern to be analyzed for. TTLC analysis will be first conducted on all samples collected. Any samples failing 10 times STLC will also be analyzed for STLC results. Each sample will be analyzed for metals using USEPA Method 6000-series (except Hg, which will be by USEPA Method 7470) by a state certified laboratory (Associated Laboratory in Anaheim, CA.) We plan on taking sidewall and bottom samples from the excavation every 50 linear feet. Pile(s) to be sampled will be sampled following SW-846 Chapter 9 protocols. The "n" statistic will be run to determine if an adequate number of samples have been taken to generate statistically valid results.

DTSC comment: Also, explain the criteria used to excavate soil every 50 linear feet and to analyze samples failing 10X the STLC. In your response, you have stated that the pile(s) will be sampled following SW-846 Chapter 9 protocols. Please provide a diagram clearly indicating the areas that will be sampled and the number of samples that will be taken.

3. DTSC comment; please provide a schedule for the soil removal and sampling activities.

TAMCO's response: A definitive start date cannot be stated given that DTSC is reviewing the proposed program and TAMCO is not sure when approval will be granted. However, TAMCO is anxious to start and finish the project as soon as

possible to avoid the impacts of the up coming rainy season. Only 1 day is needed for the initial removal and sampling activities described in TAMCO's August 25, 2005 letter to Mrs. Gharibian. It is anticipated that the laboratory will report the sampling results within three to five days. If, based on the first round of results, additional soil removal and sampling is required, this will be accomplished as soon as possible and will again be completed within one day. Once the sample results demonstrated the remaining soils meet the cleanup criteria, the area will then be backfilled with clean soil.

DTSC comment: Please discuss the criteria used in determining the extent of the contamination.

4. DTSC comment; please provide information on where the soil removed from the scrap metal area will be stored while the sampling is being conducted.

   TAMCO's response: The topsoil will be placed scraped off and placed in a 10-yard roll off(s) and covered with plastic, awaiting transportation and disposal. The soil beneath this layer will be excavated and placed on an adjacent concrete pad and covered with plastic awaiting sampling results. If the soil is clean, it will be returned to the excavation. If the soil fails the cleanup up objectives, it will be placed into 10-yard bins, covered with plastic and transported and disposed of legally.

   DTSC comment: discuss how the clean up levels will be applied to the soil in the roll off(s).

5. DTSC comment: Information on the hazardous waste treatment, storage or disposal facility TAMCO would use in the event that the soil is determined to be hazardous waste.

   TAMCO's response: The topsoil will be placed scraped off and placed in a 10-yard roll off(s) and covered with plastic, awaiting transportation and disposal. The soil beneath this layer will be excavated and placed on an adjacent concrete pad and covered with plastic awaiting sampling results. If the soil is clean, it will be returned to the excavation. If the soil fails the cleanup up objectives, it will be placed into 10-yard bins, covered with plastic and transported and disposed of legally.

6. DTSC comment: Information on dust control measures to be implemented during the soil removal process.

   TAMCO's response: The area will be watered prior to excavation to minimize any significant dust issues. Additional water will be made available is dust issues arise. Excavation will not begin or proceed if winds are above 20 mph.

DTSC comment: The soil removal activities must comply with the SCAQMD guidelines on dust control.

7. DTSC comment; Provide Information on the process to determine that fill materials used to replace the excavated soil will be free of any contamination.

   TAMCO's response: Any excavated soils that are sampled and found to pass the clean soils criteria will be used to backfill the excavation. Any additional backfill materials needed will come from the slag operation that is present at the facility. Analytical data of this slag shows it to pass the clean soils criteria. Clean soils criteria will be either CalEPA's industrial PRGs for inorganics or California hazardous waste criteria (TTLC and SLTC), which ever is lowest.

8. DTSC comment; provide an outline of the information that will be included in the completion report.

   TAMCO's response: The completion report will contain the following information:

   Introduction
   Site Description
   Project Background Information
   Remediation Objective
   Cleanup Levels
   Field Activities
   Results
   Conclusions
   Figures
   Tables
   Laboratory Reports
   Signatory and Professional Stamp Page

Your August 25, 2005, letter addressed the implementation of scrap metal program which compliments the existing program. Please plan to discuss the operational changes Tamco made to prevent recurrence of soil contamination. DTSC remains concerned regarding how the scrap metals piles are managed. The 10-inch concrete storage pad does not have a secondary containment. The piles are stored in an open area; contamination is likely to migrate to the unpaved areas located north, south and west of the storage pad.

anticipates discussions on each of the above topics during our conference call. If you prefer meeting in lieu of the conference call or would like to change the time and date of the call please let us know.

Sincerely,

Florence Gharibian

Hello
I went out to this site again.
They have process water which I believe may contain hazardous levels of metals. This is stored in a concrete pit.
Our agency has requirements for ponds/pits to be permitted since groundwater has the potential to be impacted.
However, our landfill Supervisor thinks that there is a MOU with DTSC and if the pit contains hazardous materials/waste this may be given to your agency for permitting issues, is that correct? Would you be abl to help me find out if this is true?
Attached are photos of the pit empty and full.
Thanks,
Ann

August 25, 2005

Florence Gharibian, Branch Chief
Statewide Compliance Division
1011 North Grandview Avenue
Glendale, California 91201

Dear Mrs. Gharibian

I am in receipt of your letter dated July 27, 2005 which describes the results of your Department's January 20, 2005 sampling inspection. In your letter you requested that TAMCO submit a written response within 30 days describing the corrective actions that have been taken, or are proposed to be taken, to bring our facility into compliance. This letter represents the requested response.

We have consulted with Dr. Leu of The Leu Group, one of our environmental and compliance consulting firms. We understand that Dr. Leu has discussed our situation with you and has proposed that TAMCO will remove those soils that appear to be impacted by the residuals of scrap metal that were temporarily stored on soil. Once removed, the soils will be sampled and a waste determination will be conducted to determine the proper disposal of such soils. Once the soils are excavated, soil samples will be taken from the bottom and sidewalls of the excavation area to demonstrate that any soils impacted above either hazardous waste levels or CalEPA's industrial preliminary remediation goals (PRGs) have been removed. If the initial round of samples fails to make that demonstration, then additional soils will be removed until that demonstration can be made. Once the impacted soils are removed, clean fill will be used to return the area to grade. At the completion of this project, a letter report will be sent to you confirming the removal of the impact soils and identifying the permitted offsite disposal facility that we sent the impacted soil to.

We anticipate this work to be completed in September, 2005. Accounting for time needed by the laboratory to return the analytical results, we expect to be able to submit our letter report to your office in October, 2005.

To minimize this issue from recurring in the future, TAMCO's has implemented a scrap metal storage program where all scrap metal received is stored on paved storage pads. This compliments our existing program of stormwater and air management programs described in our March 30, 2005 letter.

If you have any questions regarding our approach to proactively address your concerns, please call me at (909) 646-7803. TAMCO appreciates you assistance on this matter.

Sincerely,

Matthew Jalali

September 16, 2005

Mr. Matthew Jalali, Environmental Manager
TAMCO Steel
P.O. Box 325
12459-B Arrow Highway
Rancho Cucamonga, CA 91739

NOTICE OF VIOLATION: FAILURE TO COMPLY WITH THE GENERAL PERMIT FOR STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITIES, ORDER NO. 97-03-DWQ, NPDES NO. CA0000001 (GENERAL PERMIT), WDID 8361002257

Dear Mr. Jalali:

As you are aware, the General Permit prohibits the discharge of materials other than storm water and authorized non-storm water from industrial sites. The General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP), emphasizing the utilization of best management practices (BMPs) designed to reduce/eliminate migration of sediment and other pollutants to storm drains and/or receiving waters.

On August 16, 2005, Mr. Muhammad Bashir, Mr. Chuck Griffin and Ms. Ann Iaali of this office inspected your facility, located at 12459 Arrow Highway, Rancho Cucamonga. This facility is covered under the General Permit is identified by WDID No. 8361002257. The following violations were noted during the inspection of the facility (selected photographs taken during the inspection are also enclosed):

- The SWPPP does not satisfy the requirements specified in Section A: Storm Water Pollution Prevention Plan Requirements of the General Permit. A SWPPP must present BMPs to control/eliminate pollutants during the wet and dry seasons. Specific BMPs need to be mentioned (for example, sweeping the area daily, containerizing cutting wastes daily, sweeping complete site weekly, and so on). For any proposed future structural BMPs, an implementation schedule should be included.

- The SWPPP does not identify all of the potential pollutants. We observed unlabeled super-sacs of materials and pallets with bags of material that had their contents spilled on to the ground. These materials are not identified in the SWPPP. It was also unclear how these materials were used at the site. The inventory of materials needs to include all additives and raw materials that are used at the facility.

- A SWPPP should indicate where specific BMPs are to be implemented and include a mechanism to routinely update the SWPPP should those BMPs prove inadequate to eliminate pollutant transport and/or unauthorized non-storm water discharges. Staff observed recent improvements, such as a cover over the container storage area, a small wall around the North side of the furnace adjacent to the office, and a silt fence and sand bags. During the March 1, 2005 meeting TAMCO stated that it would complete other changes in the scrap yard and other areas of the site. These changes have not been implemented. The site still has major housekeeping problems. Additional BMP implementation is required in order to improve the housekeeping practices.

- The SWPPP map needs to truly represent the facility and it should be legible. Also, sampling locations need to be noted. Please revise the map.

- The SWPPP does not indicate as to how or where the samples for stormwater annual report compliance are obtained. More details are needed in this SWPPP section. Also, during our March 2005 meeting we requested to include testing for copper and ferrous iron. Tamco's response letter acknowledged that it would add testing for those two parameters, but this change has not been included in the SWPPP.

- Employees at the site were not properly trained in the implementation of BMPs designed to prevent migration of pollutants to the storm drain system. You indicted that supervisors had been trained, but the line staff did not receive the same level of training. We request that appropriate training be provided to all to eliminate/reduce the discharge of pollutants by maintaining good housekeeping practices and other control measures.

- A May 16, 2005 letter to us indicated that BMPs for protection of drainage inlets were completed. This letter also indicated that the design and implementation of plans to improve drainage system would be completed by September of 2005. However, Board staff observed storm drain inlets were not protected. Piles of dust and other materials were on and around the drains. The use of geotextile mats was supposed to have been implemented, but was not. We were told that this improvement was no longer going to be implemented and the drainage improvements were being reconsidered. Tamco was unsure of the schedules for any of the other improvements. Please note that any changes to the BMPs must be documented in the SWPPP. Some of the problems we identified during previous inspections have not been fully resolved. Please note that it is critical to have adequate control measures prior to the onset of the 2005/2006-winter season.

- Spills of oil and grease were observed on the ground at several locations. At the maintenance building area, the maintenance crew was fixing a large machinery outside and the oil was dripping onto the unpaved ground. Also at this location, a

hose was discharging dirty water from a dirty black sink inside the building. This is an unauthorized non-storm water discharge and is a violation of the General Permit.

- Another non-storm water discharge was observed leaving the facility in the southeast corner of the site.

- Dust from facility operations appeared to be noticeably worse than previous inspections.

- In the scrap metal area of the site, we observed piles of auto-shredder waste. We were told that this came from the neighboring business, Pacific Coast Recycling (PCR). Later staff confirmed that 60-70% of PCR's materials are shipped to Tamco. The materials from PCR contain foam that comes mainly from car seats. This foam was observed at various areas of Tamco's facility, including near the south perimeter fence. We have previously sampled the foam that came from the PCR site and it contained PCBs. Tamco must ensure the proper containment of this material so that it does not migrate off-site with storm water or wind.

- In the scrap metal area, we observed sprinklers were spraying water over piles of hot slag material. This material, from the melt shop, is stored in stockpiles without any cover. Staff observed that water was coming in contact with the slag and then allowed to flow or percolate into the ground, which is also an unauthorized non-storm water discharge. Up on contact with water or storm water, the scrap piles can be a potential source of dissolved metals and other contaminants including petroleum hydrocarbons. The area is not paved, so some of the contaminants could be percolating into the ground. The SWPPP did not mention depth to groundwater at this site. So we are unsure if this wastewater could impact groundwater. BMPs must be implemented to prevent the percolation of contaminated wastewaters into the ground and to prevent offsite migration of dissolved metals, debris, sediments, and petroleum hydrocarbons during storm events.

- In the middle of the facility there is a silo, just north of the furnace, where white powder (soda ash) is stored. This was on the ground and being tracked around by equipment. It was also windy at the site and this material has a possibility for wind dispersal. Just to the east of the silo area, staff observed an area with metal planks connected to bases that had some unknown bluish chips on the ground. Improved housekeeping is needed in these areas.

- At the cooling tower area, adjacent to the office, we observed water from the tower splashing out to the ground and a puddle around the valves to the cooling tower. Non-storm water flows were observed draining to the adjacent storm drain inlet. This area drains to the southwest area of the site. We also observed there was an area full of non-storm water, and this is located right before the valve area that empties into the percolation pond. It appears that Tamco generates a lot of non-

storm water discharges. These non-storm waters, generated at different locations of the facility, must be properly managed.

- At the cooling bed/ bundling station, we observed that with every cut a fine black dust is generated. This dust accumulates under the cutting area, and also along the sides of the bundling area. Piles of this black dust were also found in a few other areas of the site. This waste metal dust needs to be managed properly. There was a sink at the cutting area that was leaking water and carried the cutting dust to a storm drain inlet.

- The storm drain inlet adjacent to PCR was unprotected. This drain goes directly south and off-site to a channel that runs through Reliant Energy's site. We observed water flowing from this area and noted an orange absorbent boom in the discharge area.

- At the south side of the facility, across from the roll mill, there is a pit where maintenance is done. There are stairs leading down to an underground vault. There are drains in the topside of the maintenance area that empty to the underground area. This underground area was full of oily liquid all the way to the top step of the stairs. This condition was observed during the last inspections as well.

  There was also a hose and pump leading to the underground vault. We were told that Tamco staff had pumped out the southern drainage channel and put it into the underground vault so as to prevent runoff from going down the drainage channel and off-site. It appears that Tamco uses this vault as a containment area. It is not clear if this vault was designed to contain such wastes. It is critical to test the integrity of this system to contain such wastes.

- We are also concerned with the concrete pit containing contact wastewater from the "mill scales". Piles of mill scale waste was stored adjacent to the roll mill, out in the open and uncovered. Piles were also placed on a concrete pad adjacent to a concrete pit. This pit was full of contact wastewater. This pit was being utilized as a storage pit. The wastewater and mill scale waste needs to be analyzed as soon as possible for various constituents to see what potential pollutants it contains. We would like to be present during sampling and obtain split samples at the same time. Please schedule a time with us.

  There was a hose leading away from this pit. The SWPPP does not disclose the specific final destination/disposal for the mill scale or its wastewater. The wastewater used to be discharged into the sewer line but the site no longer has a sewer discharge permit. Tamco staff stated the wastewater is recycled in the mill process. After a while the wastewater will become full of solids that it will not be reusable. Please clarify this process and how storm water and groundwater contamination is prevented.

There is concern that this pit has not been designed to prevent wastewater from seeping from the structure into the underlying soil and groundwater. We have seen the pit when it was not completely full and observed that its integrity for containment was questionable.

If Tamco still wants to utilize this pit as a process wastewater containment area, then its capacity to meet Title 27 requirements must be demonstrated. Also the site would have to submit a Report of Waste Discharge to our office for the continued use of this pit. The process wastewater needs to be sampled, as mentioned earlier, for hazardous waste parameters. If the wastewater and mill scale sample analysis indicate high levels of hazardous constituents, then Tamco would have to build a surface impoundment that complies with the requirements in Title 23, Division 3, Chapter 15, and may need permits from other agencies. Tamco would also need to conduct groundwater monitoring to ensure the waste has not contaminated groundwater.

We have concerns that your facility's industrial operations have potentially contributed pollutants to the subsurface soil. Therefore we request that by October 31, 2005, you develop a sampling plan to gather representative soil samples for analysis of potential pollutants from your facility. Your proposed sampling and analytical plan should be submitted to us for approval.

This site remains in violation of the General Permit, the California Water Code and the federal Clean Water Act.

We request that you address the problems outlined above by implementing BMPs to control pollutants and to eliminate non-storm water discharges. By October 31, 2005, please submit to this office a description of the actions taken to address the above-mentioned problems along with a copy of the revised site-specific SWPPP and a soil sampling plan. Failure to submit the requested information may result in further enforcement action, including civil monetary penalties of up to $ 10,000 for each day of violation. Further enforcement action is being considered at this time for the violations cited above.

If you have any questions, please contact Ms. Ann Iaali at (951) 320-2182.

Sincerely,

Michael J. Adackapara
Division Chief

Mr. Jack Stutz
TAMCO Steel
12459 Arrow Highway
Rancho Cucamonga, CA 91739

NOTICE OF VIOLATION: FAILURE TO COMPLY WITH THE GENERAL PERMIT FOR STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITIES, ORDER NO. 97-03-DWQ, NPDES NO. CA0000001 (GENERAL PERMIT), WDID 836I002257

Dear Mr. Stutz:

As you are aware, the General Permit prohibits the discharge of materials other than storm water and authorized non-storm water from industrial sites. The General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP), emphasizing best management practices (BMPs), designed to reduce/eliminate migration of sediment and other pollutants to storm drains and/or receiving waters.

On December 15, 2004, Mr. Muhammad Bashir and Ms. Ann Iaali of this office inspected your facility, located at 12459 Arrow Highway, Rancho Cucamonga. This facility is covered under the General Permit and is identified by WDID No. 836I002257. The following violations were noted during the inspection of the facility:

- The SWPPP does not satisfy the requirements specified in Section A: Storm Water Pollution Prevention Plan Requirements of the General Permit. A SWPPP must present BMPs to control/eliminate pollutants during the wet and dry seasons. A SWPPP should indicate where those BMPs are to be implemented and include a mechanism to update the SWPPP should those BMPs prove inadequate to eliminate pollutant transport and/or unauthorized non-storm water discharges.

- The SWPPP is not signed in the certification section as required per the General Permit.

- The SWPPP does not include an up-to-date list of personnel responsible for monitoring and SWPPP implementation.

- The SWPPP does not identify the percolation pond on the southwest corner of the facility.

- The SWPPP does not identify all of the potential pollutants.

- The Monitoring Program must be developed as per guidelines provided in Section B: Monitoring Program and Reporting Requirements of the General Permit.

- Sections B3 and B4 of the General Permit require the facility owners to visually observe all drainage areas within their facility for the presence of unauthorized non-storm and storm water discharges. A record of visual observation was not available at the site.

- Employees at the site were not properly trained in the implementation of BMPs designed to prevent migration of pollutants to the storm drain system. There were no records of any training.

- Used equipment parts containing grease and oil were stored on the ground without any protection and were exposed to storm water.

- Spills of oil and grease were observed on the ground at several locations.

- Some of the used materials were rusted and rust stains were observed on the ground. Rusty metal particulates can be transported by storm water.

- Some of the fluid storage facilities lacked proper secondary containment.

- Non-storm water discharge was observed from the facility. Most of the non-storm water discharge was from dust control operations. This sediment-laden non-storm water was being discharged into the on-site storm drain system.

- Dust from facility operations was noted throughout the facility including the grates on the storm drain systems.

- Used batteries were stored in the open. Some of them were leaking and create a threat of storm water pollution.

- Waste water was dripping from one of the pipes and was being discharged into the storm drain.

- In some areas, potentially hazardous and other materials were stored on the ground without adequate protection or BMPs to prevent the pollutants from transporting off-site.

- A lack of proper BMPs and good housekeeping practices was noted throughout the facility, including the following:
  - Waste materials were discarded at several locations without proper control measures.
  - Facility-generated dust was observed throughout the facility, including in storm drain grates.
  - Stains and other evidence of spills and leaks were noted at a number of locations.
  - Storage areas for waste materials and raw materials lacked proper controls.
  - Storm drain inlet structures within the facility were not protected properly. The grates were full of sediment and in some areas oil was allowed to drip on to the storm drain grates.

The Annual Reports for previous years show that two storm water samples were collected during the rainy seasons. Analytical results of samples collected during the last four years indicated high concentrations of total suspended solids (TSS), specific conductance (SC), zinc (Zn), aluminum (Al) and manganese (Mn.) Most of the constituent concentrations exceed EPA benchmark values. Please see the chart below:

Discharge Location	Date sampled	TSS		SC		Zn		Al	
		Observed	EPA	Observed	EPA	Observed	EPA	Observed	EPA
S/E	11/29/01	101	100	1870	200	2.22	0.12	10.9	0.75
S/E	4/24/02	12140	100	880	200	5.84	0.12	68.3	0.75
S/E	11/08/02	1870	100	759	200	2.01	0.12	82.1	0.75
S/E	12/17/02	2990	100	448	200	5.58	0.12	71.1	0.75
S/E	1/14/03	264	100	2760	200	3.94	0.12	47.3	0.75
S/E	11/12/03	2220	100	440	200	3.83	0.12	51.7	0.75

The high concentration of pollutants reflects a lack of adequate control measures at the site. You are required to implement effective control measures at the site to control the discharges of pollutants from the site.

During the inspection, our staff discussed with your staff various measures to improve storm water and non-storm water quality at the site. Our staff also expressed concern about the pond at the southwest corner that was not able to contain the wastewater and the presence of gullies under the fence and off-site. Staff requested that your staff eliminate the colored wastewater discharges from the channel at the southeast corner

of the site. During the storm event on January 11, 2005, we were told by SBCFCD that this channel was still discharging colored wastewater.

On January 11, 2005, storm water discharges were observed coming off the southern perimeter of your site at a high rate. This caused erosion of the soil adjacent to the railroad tracks. The southwestern corner pond discharged as well. The basin that catches the wet slag stockpile's wastewater also discharged off-site and caused the area adjacent to the railroad tracks to be covered in an oil-like substance. Water draining from the southeast portion of the site was grey.

Your company is allowing non-storm water discharges containing contaminants to leave the site. This must cease immediately. Your staff needs to ensure that control measures are in place to prevent contaminated discharges from leaving your site.

This site is currently in violation of the General Permit, the California Water Code and the federal Clean Water Act. We request that you immediately address the problems outlined above by implementing BMPs to control pollutants. By February 28, 2005, please submit to our office a description of the actions taken to address the above-mentioned problems along with a copy of the revised site-specific SWPPP. Failure to submit the requested information may result in further enforcement action, including civil monetary penalties of up to $ 10,000 for each day of violation. Further enforcement action is being considered at this time for the violations cited above.

If you have any questions, please contact Ms. Ann Iaali at (951) 320-2182.

Sincerely,

Gerard J. Thibeault

Mr. Matthew Jalali, Environmental Manager
TAMCO Steel
P.O. Box 325
12459-B Arrow Highway
Rancho Cucamonga, CA 91739

NOTICE OF VIOLATION: FAILURE TO COMPLY WITH THE GENERAL PERMIT FOR STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITIES, ORDER NO. 97-03-DWQ, NPDES NO. CA0000001 (GENERAL PERMIT), WDID 8361002257

Dear Mr. Jalali:

As you are aware, the General Permit prohibits the discharge of materials other than storm water and authorized non-storm water from industrial sites. The General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP), emphasizing the utilization of best management practices (BMPs) designed to reduce/eliminate migration of sediment and other pollutants to storm drains and/or receiving waters.

On August 16, 2005, Mr. Muhammad Bashir, Mr. Chuck Griffin and Ms. Ann Iaali of this office inspected your facility, located at 12459 Arrow Highway, Rancho Cucamonga. This facility is covered under the General Permit is identified by WDID No. 8361002257. The following violations were noted during the inspection of the facility (selected photographs taken during the inspection are also enclosed):

- The SWPPP does not satisfy the requirements specified in Section A: Storm Water Pollution Prevention Plan Requirements of the General Permit. A SWPPP must present BMPs to control/eliminate pollutants during the wet and dry seasons. Specific BMPs need to be mentioned (for example, sweeping the area daily, containerizing cutting wastes daily, sweeping complete site weekly, and so on). For any proposed future structural BMPs, an implementation schedule should be included.

- The SWPPP does not identify all of the potential pollutants. We observed unlabeled super-sacs of materials and pallets with bags of material that had their contents spilled on to the ground. These materials are not identified in the SWPPP. It was also unclear how these materials were used at the site. The inventory of materials needs to include all additives and raw materials that are used at the facility.

- A SWPPP should indicate where specific BMPs are to be implemented and include a mechanism to routinely update the SWPPP should those BMPs prove inadequate to eliminate pollutant transport and/or unauthorized non-storm water discharges. Staff observed recent improvements, such as a cover over the container storage area, a small wall around the North side of the furnace adjacent to the office, and a silt fence and sand bags. During the March 1, 2005 meeting TAMCO stated that it would complete other changes in the scrap yard and other areas of the site. These changes have not been implemented. The site still has major housekeeping problems. Additional BMP implementation is required in order to improve the housekeeping practices.

- The SWPPP map needs to truly represent the facility and it should be legible. Also, sampling locations need to be noted. Please revise the map.

- The SWPPP does not indicate as to how or where the samples for stormwater annual report compliance are obtained. More details are needed in this SWPPP section. Also, during our March 2005 meeting we requested to include testing for copper and ferrous iron. Tamco's response letter acknowledged that it would add testing for those two parameters, but this change has not been included in the SWPPP.

- Employees at the site were not properly trained in the implementation of BMPs designed to prevent migration of pollutants to the storm drain system. You indicted that supervisors had been trained, but the line staff did not receive the same level of training. We request that appropriate training be provided to all to eliminate/reduce the discharge of pollutants by maintaining good housekeeping practices and other control measures.

- A May 16, 2005 letter to us indicated that BMPs for protection of drainage inlets were completed. This letter also indicated that the design and implementation of plans to improve drainage system would be completed by September of 2005. However, Board staff observed storm drain inlets were not protected. Piles of dust and other materials were on and around the drains. The use of geotextile mats was supposed to have been implemented, but was not. We were told that this improvement was no longer going to be implemented and the drainage improvements were being reconsidered. Tamco was unsure of the schedules for any of the other improvements. Please note that any changes to the BMPs must be documented in the SWPPP. Some of the problems we identified during previous inspections have not been fully resolved. Please note that it is critical to have adequate control measures prior to the onset of the 2005/2006-winter season.

- Spills of oil and grease were observed on the ground at several locations. At the maintenance building area, the maintenance crew was fixing a large machinery outside and the oil was dripping onto the unpaved ground. Also at this location, a

hose was discharging dirty water from a dirty black sink inside the building. This is an unauthorized non-storm water discharge and is a violation of the General Permit.

- Another non-storm water discharge was observed leaving the facility in the southeast corner of the site.

- Dust from facility operations appeared to be noticeably worse than previous inspections.

- In the scrap metal area of the site, we observed piles of auto-shredder waste. We were told that this came from the neighboring business, Pacific Coast Recycling (PCR). Later staff confirmed that 60-70% of PCR's materials are shipped to Tamco. The materials from PCR contain foam that comes mainly from car seats. This foam was observed at various areas of Tamco's facility, including near the south perimeter fence. We have previously sampled the foam that came from the PCR site and it contained PCBs. Tamco must ensure the proper containment of this material so that it does not migrate off-site with storm water or wind.

- In the scrap metal area, we observed sprinklers were spraying water over piles of hot slag material. This material, from the melt shop, is stored in stockpiles without any cover. Staff observed that water was coming in contact with the slag and then allowed to flow or percolate into the ground, which is also an unauthorized non-storm water discharge. Up on contact with water or storm water, the scrap piles can be a potential source of dissolved metals and other contaminants including petroleum hydrocarbons. The area is not paved, so some of the contaminants could be percolating into the ground. The SWPPP did not mention depth to groundwater at this site. So we are unsure if this wastewater could impact groundwater. BMPs must be implemented to prevent the percolation of contaminated wastewaters into the ground and to prevent offsite migration of dissolved metals, debris, sediments, and petroleum hydrocarbons during storm events.

- In the middle of the facility there is a silo, just north of the furnace, where white powder (soda ash) is stored. This was on the ground and being tracked around by equipment. It was also windy at the site and this material has a possibility for wind dispersal. Just to the east of the silo area, staff observed an area with metal planks connected to bases that had some unknown bluish chips on the ground. Improved housekeeping is needed in these areas.

- At the cooling tower area, adjacent to the office, we observed water from the tower splashing out to the ground and a puddle around the valves to the cooling tower. Non-storm water flows were observed draining to the adjacent storm drain inlet. This area drains to the southwest area of the site. We also observed there was an area full of non-storm water, and this is located right before the valve area that empties into the percolation pond. It appears that Tamco generates a lot of non-

storm water discharges. These non-storm waters, generated at different locations of the facility, must be properly managed.

- At the cooling bed/ bundling station, we observed that with every cut a fine black dust is generated. This dust accumulates under the cutting area, and also along the sides of the bundling area. Piles of this black dust were also found in a few other areas of the site. This waste metal dust needs to be managed properly. There was a sink at the cutting area that was leaking water and carried the cutting dust to a storm drain inlet.

- The storm drain inlet adjacent to PCR was unprotected. This drain goes directly south and off-site to a channel that runs through Reliant Energy's site. We observed water flowing from this area and noted an orange absorbent boom in the discharge area.

- At the south side of the facility, across from the roll mill, there is a pit where maintenance is done. There are stairs leading down to an underground vault. There are drains in the topside of the maintenance area that empty to the underground area. This underground area was full of oily liquid all the way to the top step of the stairs. This condition was observed during the last inspections as well.

  There was also a hose and pump leading to the underground vault. We were told that Tamco staff had pumped out the southern drainage channel and put it into the underground vault so as to prevent runoff from going down the drainage channel and off-site. It appears that Tamco uses this vault as a containment area. It is not clear if this vault was designed to contain such wastes. It is critical to test the integrity of this system to contain such wastes.

- We are also concerned with the concrete pit containing contact wastewater from the "mill scales". Piles of mill scale waste was stored adjacent to the roll mill, out in the open and uncovered. Piles were also placed on a concrete pad adjacent to a concrete pit. This pit was full of contact wastewater. This pit was being utilized as a storage pit. The wastewater and mill scale waste needs to be analyzed as soon as possible for various constituents to see what potential pollutants it contains. We would like to be present during sampling and obtain split samples at the same time. Please schedule a time with us.

  There was a hose leading away from this pit. The SWPPP does not disclose the specific final destination/disposal for the mill scale or its wastewater. The wastewater used to be discharged into the sewer line but the site no longer has a sewer discharge permit. Tamco staff stated the wastewater is recycled in the mill process. After a while the wastewater will become full of solids that it will not be reusable. Please clarify this process and how storm water and groundwater contamination is prevented.

There is concern that this pit has not been designed to prevent wastewater from seeping from the structure into the underlying soil and groundwater. We have seen the pit when it was not completely full and observed that its integrity for containment was questionable.

If Tamco still wants to utilize this pit as a process wastewater containment area, then its capacity to meet Title 27 requirements must be demonstrated. Also the site would have to submit a Report of Waste Discharge to our office for the continued use of this pit. The process wastewater needs to be sampled, as mentioned earlier, for hazardous waste parameters. If the wastewater and mill scale sample analysis indicate high levels of hazardous constituents, then Tamco would have to build a surface impoundment that complies with the requirements in Title 23, Division 3, Chapter 15, and may need permits from other agencies. Tamco would also need to conduct groundwater monitoring to ensure the waste has not contaminated groundwater.

We have concerns that your facility's industrial operations have potentially contributed pollutants to the subsurface soil. Therefore we request that by October 31, 2005, you develop a sampling plan to gather representative soil samples for analysis of potential pollutants from your facility. Your proposed sampling and analytical plan should be submitted to us for approval.

This site remains in violation of the General Permit, the California Water Code and the federal Clean Water Act.

We request that you address the problems outlined above by implementing BMPs to control pollutants and to eliminate non-storm water discharges. By October 31, 2005, please submit to this office a description of the actions taken to address the above-mentioned problems along with a copy of the revised site-specific SWPPP and a soil sampling plan. Failure to submit the requested information may result in further enforcement action, including civil monetary penalties of up to $ 10,000 for each day of violation. Further enforcement action is being considered at this time for the violations cited above.

If you have any questions, please contact Ms. Ann Iaali at (951) 320-2182.

Sincerely,

Michael J. Adackapara
Division Chief

Subject: Remediation Completion Report for Surface Soils Impacted By Heavy Metals Located North of Pad 16, TAMCO Steel, Rancho Cucamonga, CA

Dear Mrs. Gharibian,

This letter-report presents to you the results of a soil remediation effort conducted at the TAMCO Steel site. The objective of the soil remediation effort was: 1) to delineated the extent of impacted soils, 2) to remove, containerize and dispose of such impacted soils as hazardous waste, 3) to characterize the remaining soils and, if meeting the cleanup criteria, 4) to bring the area back to grade with clean slag.

Introduction/Project Background

On January 20, 2005, the Department of Toxic Substances Control (DTSC) conducted a site visit of the TAMCO Steel (TAMCO) facility, located at 12459 Arrow Highway, Rancho Cucamonga, CA (**Figure 1**). During that visit DTSC collected a number of surface samples in and around TAMCO's scrap metal storage area. The results of that sampling effort showed an area of soil, located just north of scrap piles 12 and 16 (**Figure 2**) that was impacted with selected heavy metals above hazardous waste classification criteria. Once informed of

DTSC's sampling results, TAMCO, and its consulting firm, The Leu Group, began a series of discussions with the agency on how to best address DTSC's findings.

During a meeting with DTSC held on October 20, 2005, a plan of action was agreed to by both parties. This agreement was captured in a memo sent to Florence Gharibian (DTSC) by David Leu (The Leu Group) on October 25, 2005 (**Attachment 1**). That memo served as a action plan which defined the program to remove impacted soils and demonstrate that the remaining soils met the agreed upon cleanup criteria.

Site Description

The TAMCO site is located at 12459 Arrow Highway, Rancho Cucamonga, California. The site is located approximately 4 miles northeast of the Ontario Airport and 0.5 miles northwest of the former Kaiser Steel facility. The TAMCO facility operations are dedicated to the recycling of scrap metals for the production of steel-reinforcing bars (rebar) that are utilized in reinforced concrete structures.

As shown in **Figure 1**, the site is located in an industrial setting. Facilities located adjacent to the site include steel and concrete pile fabrication shops, a scrap metal processor, and a power plant. The nearest residence is approximately one half mile northeast of the subject property.

The TAMCO site encompasses approximately 60 acres, including an access road from Arrow Highway. Based on the U.S.G.S Guasti, California 7.5-minute topographic map, the site is at an elevation of approximately 1,140 feet above mean sea level (msl). It slopes from north to south, with a change of elevation across of the site of approximately 10 feet. Site structures at the facility include an office building, a furnace building, a baghouse, a rolling mill, maintenance shops, cooling towers, rail spurs, and storage yards.

The facility was constructed in 1956 and operated as Etiwanda Steel Producers. The products were coiled rebar made from ingots and straight reinforcing bar (rebar) made from billets. Later the plant was named Ameron Steel & Wire. In 1976, the Melt Shop was built by a consortium of Ameron, Tokyo Steel and Mitsui Corporation and called TAMCO. TAMCO made and sold billets to Ameron Steel & Wire to be finished into straight rebar. In 1983, both the Melt Shop and Roll Mill became TAMCO. The sole product from TAMCO was and still is straight rebar.

Shredded steel scrap, much of it from automobiles, is delivered to the TAMCO site as raw material. Upon entering the site, truckloads of scrap metal are surveyed for radioactive materials. The scrap metal is then inspected and separated into various piles and kept as inventory on concrete pads until it is ready to be processed. Prior to being recycled, the steel scrap is spread out on

the concrete pads and checked for anomalous objects. The scrap is then loaded into charge buckets that are hoisted to the furnace where the scrap is melted. After the steel is molten, it is poured from a large bucket and shaped into steel billets that are used as raw material for the rolling mill. At the rolling mill, billets are heated and pressed into rebar.

Remediation Objectives

The remediation objectives were established with DTSC. They were defined to be the identification and removal of impacted soils and the demonstration that any remaining soils meet the agreed upon cleanup levels.

Cleanup Levels

Three numeric sets of cleanup levels were established to define clean soils. These were:

1. Total Threshold Limit Concentrations (TTLC) to be less than hazardous waste criteria of inorganics;
2. Soluble Threshold Limit Concentrations (STLC) to be less than hazardous waste criteria for inorganics;
3. The exposure point concentration calculated using the Cal EPA Preliminary Remediation Goals (PRGs) for inorganics.

The TTLC and STLC criteria are applied to each sample. The PRG exposure point concentration criteria are applied following the PRG guidance, which states:

> "For commercial/industrial properties, soil sample data can be averaged within affected areas of open spaces."[1]

The exposure point concentration is the lesser of the maximum-detected concentration and the 95% upper confidence limit (UCL) of the arithmetic mean of sample data.[2]

The specific constituents and their respective cleanup levels are shown in **Table 1**.

---

[1] Page 2-5, Step 6 in "Use of California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties", California Environmental Protection Agency, January 2005.
[2] Ibid, page 2-4, Step 6.

inches of soils from grids A-9 and A-5. These soils were placed on the concrete pad and the obvious impacted soils shoveled into Drop-off Box #2 and managed as hazardous waste. The remaining small amount of soil within each pile (approximate 1 cubic yard each) was sampled and the samples were sent to Associated Laboratory for analysis.

After receiving the laboratory results, it was thought that the RXF analysis was a reasonable screening tool but, in general, seemed to report higher results when compared to the analytical results being reported by the laboratory. Based on this belief, Drop off box #1 (which contained the deeper level soils as compared to Drop off box #2 which contained the surface soils) was sampled following SW-846 protocol to determine if those soils failed the established cleanup criteria.

Once all analytical results were reviewed, those soils that passed the cleanup criteria were returned to the excavation as backfill. A small amount of clean slag was used to bring the area to grade. Soils contained in Drop-off Box #2 were managed as hazardous waste and were disposed of at U.S. Ecology, of Beatty, Nevada, using a registered hauler and under a hazardous waste manifest. A copy of the manifest is contained in **Attachment 3**. Because the weight of the soils in Drop-off Box #2, was approximately 50,000 pounds, half of the material was transferred to a second drop-off box and both were shipped under to US. Ecology under Manifest # 22863575.

It should be noted that in order to preclude these soils from becoming recontaminated in the future, TAMCO has paved the dirt area to the north of the concrete pad with asphalt.

Laboratory Analysis

All soil samples collected were submitted to Associated Laboratory, in Anaheim, California. Associated Laboratory is a state certified laboratory. As samples were collected, they were placed on ice in a cooler. At the end of the day they were transported to the laboratory under a chain of custody sheet. All samples were submitted for total heavy metal (TTLC) analysis using EPA Methods 6010B and 7471A. Based on previous sample results obtained by DTSC and by TAMCO, it was determined that hexavalent chromium is not present in TAMCO's scrap metal piles, so hexavalent chromium was not analysis for.

Samples that yielded TTLC values greater than 10 times of the STLC criteria were also analyzed for STLC using the Waste Extraction Test (WET)[3]. The one sample that had the highest total chromium was analyzed using the federal toxicity characteristic leaching procedure (TCLP). This was done to determine which total chromium STLC criteria (5 or 560 mg/L) was applicable. Because the

[3] The Waste Extraction Test, which is used to determine the STLC values, uses a volume of extract that is 10 times the weight of the sample. Therefore, if all of the analyte in the sample was extracted, a maximum of one tenth of its concentration as a solid (i.e., the TTLC value) would be detected in the extract.

TCLP result was less than 5.0 mg/L, the 560 mg/L STCL value was determined to be applicable based on 22 CCR 66261.24.

Four samples from the floor of the excavation area were selected using a random number generator and analyzed for total petroleum hydrocarbons (TPH) using EPA Method 8015M-ccid. One sample and its duplicate taken from the soil pile were also analyzed for TPH.

Results

The results of the laboratory analyses are summarized in **Tables 2 – 13.** The Laboratory Reports and chain of custody sheets are contained in **Attachment 4.**

All samples were analyzed for TTLC metals. Only those analytes that exceeded 10 times the STLC criterion were analyzed for STLCs. For those analytes that did not exceed 10 times their respective STLC, their soluble concentrations were calculated by dividing the TTLC by 10. While this is a conservative position to take, it resulted in significant cost savings.

Table 2 summarizes the TTLC results from the footprint of the excavation. As shown, all samples passed the TTLC criteria. However, a number of samples failed the 10 times the STLC screening values and analytes from selected samples required the additional WET analysis for STLC determination. **Table 3** shows the results of the WET analysis for those samples. **Table 4** combines that WET analysis results with the calculated soluble concentrations.

Two samples, A-5 and A-9, failed the STLC cleanup criteria. Based on these results, additional soils were excavated from grids A-5 and A-9, respectively. Once the additional soils were removed, a new sample was collected from each grid and analyzed. Sample A10 represented the new sample from grid A-9 and Sample A-11 represented the new sample from grid A-5. The results of these two new samples are shown in **Table 5.**

Once the additional soils were excavated from grids A-5 and A-9, they were placed in two small piles (less than one cubic yard, each) on the adjacent concrete pad. The obvious areas with contamination were shoveled into Drop Off Box #2 for disposal as hazardous waste and the remaining soils were resampled. Each pile of soil contained less than a cubic yard of soil. The results of the samples taken from each pile are shown in **Table 5**. As shown, the soil piles passed TTLC and STLC cleanup criteria.

Table 6 presents the TTLC results from the samples taken from the soil pile that was created from the excavation of the impacted area after the upper few inches were scrapped off and placed into the drop off boxes. All samples passed the TTLC cleanup criteria but a few analytes within each sample did not pass the 10

times STLC screening values. Therefore, the WET analysis was conducted on those analytes. The resulting soluble results are reported in **Table 7**. As show in **Table 7**, all samples passed the STLC cleanup criteria.

The results of samples taken from Drop Off Box #1 are presented in **Table 8**. Inspection of these results shows all samples passed the TTLC cleanup criteria but selected analytes in each sample failed the 10 times STLC screening values. These analytes were subjected to the WET analysis and their resulting STLC values are reported in **Table 9**. As shown, all samples passed the STLC cleanup criteria.

Prior to backfilling the excavation area with those soils that passed the TTLC and STLC cleanup criteria, the excavation samples and the soil samples representing the soils to be used as backfill were analyzed and compared to the Cal EPA PRGs. **Tables 10, 11** and **12** present the results of the PRG analyses based on the footprint samples, the soil pile samples and the Drop Off Box #1 soils respectively. As shown, each of these backfill sources also passed the PRG criteria.

Because these backfill sources each passed all three of the cleanup criteria, they were returned to the excavation area and used as backfill. Clean crushed slag was then used to bring the site the grade.

Table 13 presents the results of TPH analysis on the six samples analyzed. No TPH was detected in the gasoline (C6 – C12) or diesel (C12 – C22) ranges. Only trace amounts were detected in the motor oil or beyond (C22 – C36) range. The maximum concentration reported was 72 mg/kg in sample SA2.

Conclusions

Based on sampling conducted in January 2005 by DTSC, an unpaved area to the north of Pads 12 and 16 (**Figure 2**) was determined to have been impacted by selected heavy metals that exceeded hazardous waste classification levels. To restore this area to pre-impact conditions, a remediation project was negotiated with DTSC and then implemented. The remediation project consisted of scrapping off the upper few inches of soil and placing it into a 10 cubic yard drop off box. Additional soils were also scrapped off and placed into a second 10 cubic yard drop off box. The next foot or so of soil was then excavated and placed into a single pile located on a concrete pad. The excavation area, the soil pile and the second drop off box were then sampled to determine if enough soil had been removed and to see if the soils were impacted or could be returned to the excavation area as clean fill.

Once the analytical results were received, it was determined that soils within two grids of the excavation area (grids A-5 and A-9), failed the STLC cleanup criteria for lead. Therefore, additional soils were excavated from there grids and placed

on the adjacent concrete pad. From these piles, the obviously impacted soils were placed into Drop-off Box #2, which held soils that were being managed as hazardous waste. The residual soils were sampled and analyzed, along with the bottom of grids A-4 and A-9. Analysis of these soils showed the soils to be under the established cleanup criteria.

Once it was determined that the excavation area and the remaining soils met the established cleanup criteria, the excavation phase of the project was terminated. The solis that met the cleanup criteria were used as clean fill to backfill the excavation. A small amount of crushed slag was used to bring the area to grade. After the area was restored, TAMCO made a decision to asphalt the entire dirt area to the north of the concrete pad to preclude these soils from being coming contaminated in the future. The paving has been completed and the area no longer has any soils that could come into contact with scrap metal.

The soils that were placed into the first drop off box (labeled as Drop-off Box #2) were managed as hazardous waste by TAMCO and disposed of at US Ecology in Beatty, Nevada using a registered hauler and under manifest.

If you have any questions or comments regarding this letter report or the remediation project itself, please contact Dr. Leu at the letterhead address or telephone number.

Sincerely,

David J. Leu, Ph. D.

*1 STLC for chromium is 560 mg/kg when the TLCP is less than 5
The TCLP for sample B-4, which had the highest TTLC chromium concentration of all samples was only 0.061 mg/L.

Soluble values were based on either dividing the TTLC value by 10 or conducting the Waste Extraction Test (WET) and reporting the resultant STLC value. The WET based STLC values are **bold.**

6.36 Represents a vlaue that exceeds the STLC criteria

All units in mg/L

Memo

To: Florence Gharibian

From: David J. Leu, Ph. D.

CC: Matthew Jalali

Date: October 25, 2005

Re: Notes of the October 20, 2005 meeting between DTSC and TAMCO

On Thursday, October 20, 2005 Matthew Jalali (TAMCO) and I met with Florence Gharibian (DTSC Branch Chief, Statewide Compliance Division) and her staff to discuss the up coming soil removal and characterization project to be conducted along the northern portion of TAMCO's scrap pile concrete pad. The purpose of the meeting was to work out any differences we had regarding the status of and removal of soils impacted by metals that was documented in a compliance inspection conducted by DTSC on January 20, 2005. Discussions have been on going regarding this subject since shortly after the January inspection.

During the January 20, 2005 inspection, 13 samples were taken by DTSC and analyzed for heavy metals. The sample results showed selected heavy metal values above hazardous waste criteria at selected locations on TAMCO's concrete storage pad and in soil to the north to the pad.

Regarding the impacted soil to the north of the pad, we came to agreement on the following items:

- The Leu Group will review the comments it was given at the meeting regarding its HASP and modify it as needed.
- The Leu Group will provide a larger site plan showing the area of impacted soils and the approximate location of where remediation will occur.
- The top few inches of the impacted soils will be scraped off and placed in 10-yard bin(s) and handled as hazardous waste.

- The next foot or so of soil will be excavated and placed on the concrete pad. The piled soils will be sampled following SW-846 methodology to determine if it fails the clean soils criteria, which will be TTLC and STCL values. This sampling approach is similar to the sampling protocols contained within DTSC's California's Automobile Shredder Waste Initiative report. If the soil is shown to be clean, it will be used to backfill the excavation. Clean crushed slag will be used to bring the area to grade
- The number of confirmation samples and their spacing was agreed upon. We will be taking 8 samples running along the north edge of the concrete pad; 5 samples down the center of the excavation running east to west, approximately 10 feet from the north edge of the concrete pad; and three samples along the northern most edge of the excavation, which is approximately 20 feet north of the edge of the concrete pad. It is estimated by TAMCO and The Leu Group that the footprint of the impacted soils is approximately 150 feet by 20 feet.
- All samples will be analyzed for CAM metals and four samples will be analyzed for TPH. The selection of the 4 TPH samples will be random, unless there is an indication of the presence of TPH in any of the samples. If so, then that sample(s) will be selected as part of the 4 samples to be analyzed for TPH.
- If any of the excavation's 5 samples taken down the center fail the clean soils criteria, another foot or two of soil will be removed, stockpiled, sampled and managed according the sampling results.
- If any of the confirmation samples taken along the perimeter of the excavation fail the clean soils criteria, additional soils will be removed and sampled until all impacted soils are removed.
- The Leu Group will provide DTSC with a minimum 7-day notice prior to mobilizing to TAMCO to remove the soils. We are hoping to mobilize within the next month (November).
- The Leu Group will contact San Bernardino County inspector Catherine Richards to inform her of what we are doing under the oversight of DTSC.
- The Leu Group will sample the existing stockpile of soil that was removed during the recent construction of the concrete storm water convenience located between the railway line and the storage area for the metal turnings.
- The Leu Group will take pictures of this area and email them to DTSC.
- DTSC would provide a copy of its Field Sampling Report to The Leu Group.
- Future discussions will be held at TAMCO regarding potential exposure concerns that DTSC has to determine if any actions beyond what TAMCO is already doing are needed.

If you find that the above list is either incomplete or inaccurate, I request that you notify me immediately.

SAMPLING AND ANALYSIS PLAN FOR EXCAVATION CONFIRMATION AND STOCKPILE CHARACTERIZATION AT TAMCO, INC.

APPENDICES

Appendix A Sample Analysis Request Sheet

1.0 INTRODUCTION

As part of a remediation of an area of approximately 3,000 square yards of potentially impacted soil at TAMCO Inc. facility in Rancho Cucamonga, California sampling of a soil stockpile and the surface below excavated soils must be conducted.

2.0 SAMPLING OBJECTIVE

This sampling and analysis plan is being prepared for the purpose of generating true representative samples of the stockpiled material prior to it being used as backfill or disposed of, depending on characteristics. The plan also concerns the collection of confirmation samples from within the excavation area to determine if a sufficient amount of soil has been excavated.

This sampling and analysis plan was developed based on two documents. The first are the guidelines contained in the "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW-846, 3rd edition, USEPA, 1987 (SW-846)." The second was from Appendix A of the DTSC's, November 2002, Draft Report titled "California's Automobile Shredder Waste Initiative". The latter included specific procedures for the sampling of shredder aggregate and waste piles, from which initial ferrous separation had been preformed. The procedures were generated by the DTSC's to provide for reprehensive samples of these piles to fulfill the requirements of SW-846. These procedures will be used for the stockpile sampling.

3.0 RATIONALE FOR SELECTION OF ANALYTES

Based on the types of materials managed at the facility and an agreement with the California Department of Toxic Substances Controls (DTSC) each sample will be analyzed for California Title 22 Metals relative to clean soils criteria which are TTLC and STLC hazardous waste criteria for this project. In addition a portion of the samples will also be analyzed for Total Petroleum Hydrocarbons (TPH).

Table 1 presents the analytical methodologies to be used for the analysis of these samples along with the normal quantification limit (minimum detection limit) and maximum holding time for the samples. Each of the EPA methods quoted are taken from SW-846. The soluble metals extraction and analysis shall only be performed for those constituents who's analytical results are greater than 10 times the California Soluble Threshold Limit Concentration (STLC).

Table 1

Analytical Methods

Item	Analytes	Sample Preparation Method	Analytical Method
1	Total Metals Antimony Arsenic Barium Beryllium Cadmium Chromium Cobalt Copper Lead Molybdenum Nickel Selenium Silver Thallium Vanadium Zinc	EPA 3050	EPA 6010
2	Total Mercury		EPA 7471
3	Total Petroleum Hydrocarbons (motor oil & diesel)		EPA 8015
4	California Soluble Metals (if necessary) Antimony Arsenic Barium Beryllium Cadmium Chromium Cobalt Copper Lead Molybdenum Nickel Selenium Silver Thallium Vanadium Zinc	California Waste Extraction Test (WET, 22 CCR 261, Appendix II)	EPA 6010
5	Soluble Mercury (if necessary)	California Waste Extraction Test	EPA 7471

4.0 SAMPLING PROTOCOL

4.1. Stockpile Sampling

The locations, number, and methodology to be used to sample each stockpile is based on the Appendix A of the DTSC's Draft Automobile Shredder Waste Initiative document for small waste or aggregate piles. The pile will be formed into a rectangle of approximately uniform height.

One sample will be collected from each sample point as indicated in Figure 1. Samples from sample points A-1, B-1, and C-1 will be collected from the top of the pile. Samples from sample points A-2, B-2, and C-2 will be collected from the base of the pile. A sample from point C-3 will be collected at the vertical midpoint at the center of the pile.

Prior to sampling of <u>each</u> pile, the seven (7) sample locations will be tabulated. Four (4) of the locations will then be chosen at random by creating an Excel spreadsheet which generates random numbers for each sample. These numbers will then be ranked and the first four (4) samples identified. These selected samples will be those to be analyzed. Additionally, a second set of random numbers will be generated to identify which of the original four samples will be identified for the collection of two (2) duplicate samples to make up a total of (6) samples for analysis. *Note, the initiative specified only three (3) original samples to be selected for analysis from the seven (7) samples taken from each pile. The number was raised to four (4) samples which is more statistically appropriate for sampling in accordance SW-846.*

All samples will be collected by pressing stainless steel soil sample sleeves into the soil. The sleeves will be capped on both ends for transfer to the laboratory. The four statistically chosen samples for initial analysis, see above, will be numbered SP-1 through SP-4, based on the rank of the sample. Numbers SP-5 and SP-6 used for the duplicates. The remaining three (3) samples will be numbered SP-7 through SP-9. Samples SP-1 through SP-6 from each pile then will be submitted to the laboratory (4 original plus 2 duplicates) and shall be identified on a Chain-of-Custody form (as discussed later).

Each of these samples will be analyzed for Title 22 metals. One of the four samples will also be analyzed for TPH as well. Sample SP-1 will be used for this analysis, unless another of the samples appears to have evidence of potential hydrocarbon contamination.

4.2. Excavation Confirmation Samples

Based on an agreement with the DTSC, 16 soil samples will be taken within the excavation to confirm that a sufficient depth has been excavated. The location of these samples will be as follows:

- 8 samples will be taken in the excavation along the north edge of the concrete pad (i.e., the south end of the excavation).

- 5 sample will be taken along the bottom center of the excavation, approximately 10 feet from the concrete pad (east to west)

- 3 samples will be taken at the northern edge of the excavation, approximately 20 feet from the concrete pad.

All samples will be collected by pressing stainless steel soil sample sleeves into the soil. The sleeves will be capped on both ends for transfer to the laboratory. Each sample will be analyzed for Title 22 metals. Four (4) of the locations will then be chosen at random by creating an Excel spreadsheet which generates random numbers for each sample. These samples will also be analyzed for TPH, unless alternative samples appear to have evidence of potential hydrocarbon contamination.

5.0 SAMPLE MANAGEMENT AND CUSTODY

5.1. Sample Management

Samples will be managed to ensure that proper tracking, chain-of-custody, and documentation procedures are followed.

5.1.1. Field Log

Sampling personnel will record general information about each sampling event and specific information about each sample on a series of pre printed forms generated specifically for this sampling effort. Photographs of each sampling location will also be taken just prior to taking each sample.

General sampling information will be recorded in sufficient detail so that such information can be reconstructed at a later time. Where applicable, the following general sampling information will be recorded:

- Facility name
- Purpose of sampling
- Location at sampling site
- Field contact
- Description of sampling procedures
- Date and time sampling event
- Weather and other pertinent conditions at time of sample collection
- Signature of person responsible for sampling

Previously generated maps showing the sample locations for each pile will be marked up in the

field. The approximate dimensions and distances between all samples from each pile will be marked on these drawings.

Specific information for each sample will also be logged on a separate sample location log and cross reference. The following information will be identified for each sample:

- Sample Number (i.e., TRP-0#)
- Sample Location (i.e., 1, 2, etc.) [Not to be included on Chain of Custody]
- Elevation in Pile [Not to be included on Chain of Custody]
- Date
- Time
- Photo numbers [Not to be included on Chain of Custody]

This information will be arranged in columns and a separate page will be prepared for each pile. The field sample log will be prepared as the samples are collected and before they are transported from the site. The information in the field sample log will then be used to fill out the chain of custody record. Section 5.2 provides information about completing the chain of custody record. The field sample log will serve as a checklist to check the information on the sample labels before sealing the sample cooler and transporting the samples to the laboratory.

5.1.2. Sample Labels and Seals

Each sample container will be labeled and sealed. Each sample container will be labeled using a waterproof pen with the following information at the time of sampling:

- Sample Number
- Sample Date
- Sample Time
- Project Name
- Initials of Sampling Personnel

5.2. Sample Transportation and Custody

After labeling, all samples will be placed in a container, for transportation to the laboratory. In accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW-846, 3rd edition, USEPA, 1987 (SW-846), a chain of custody record will document sample possession from the time of collection until the samples are analyzed. The record also serves as a sample inventory and analysis order form.

When possession of the samples is transferred from sampling personnel to a courier or to the

laboratory, the chain of custody will be signed by both parties. The chain of custody record will be included with the analytical data in an appendix to the final report. A copy of the Sample Analysis Request Sheet, contained in Appendix A, will be attached to the chain of custody to ensure that the laboratory is informed of the proper sample preparation and analysis methods.

Samples will be transported to the laboratory by sampling personnel, a courier, a laboratory representative, or a commercial carrier. The means of transportation will be selected and the laboratory will be notified of the time by which analysis must begin so that the sample holding times are not exceeded.

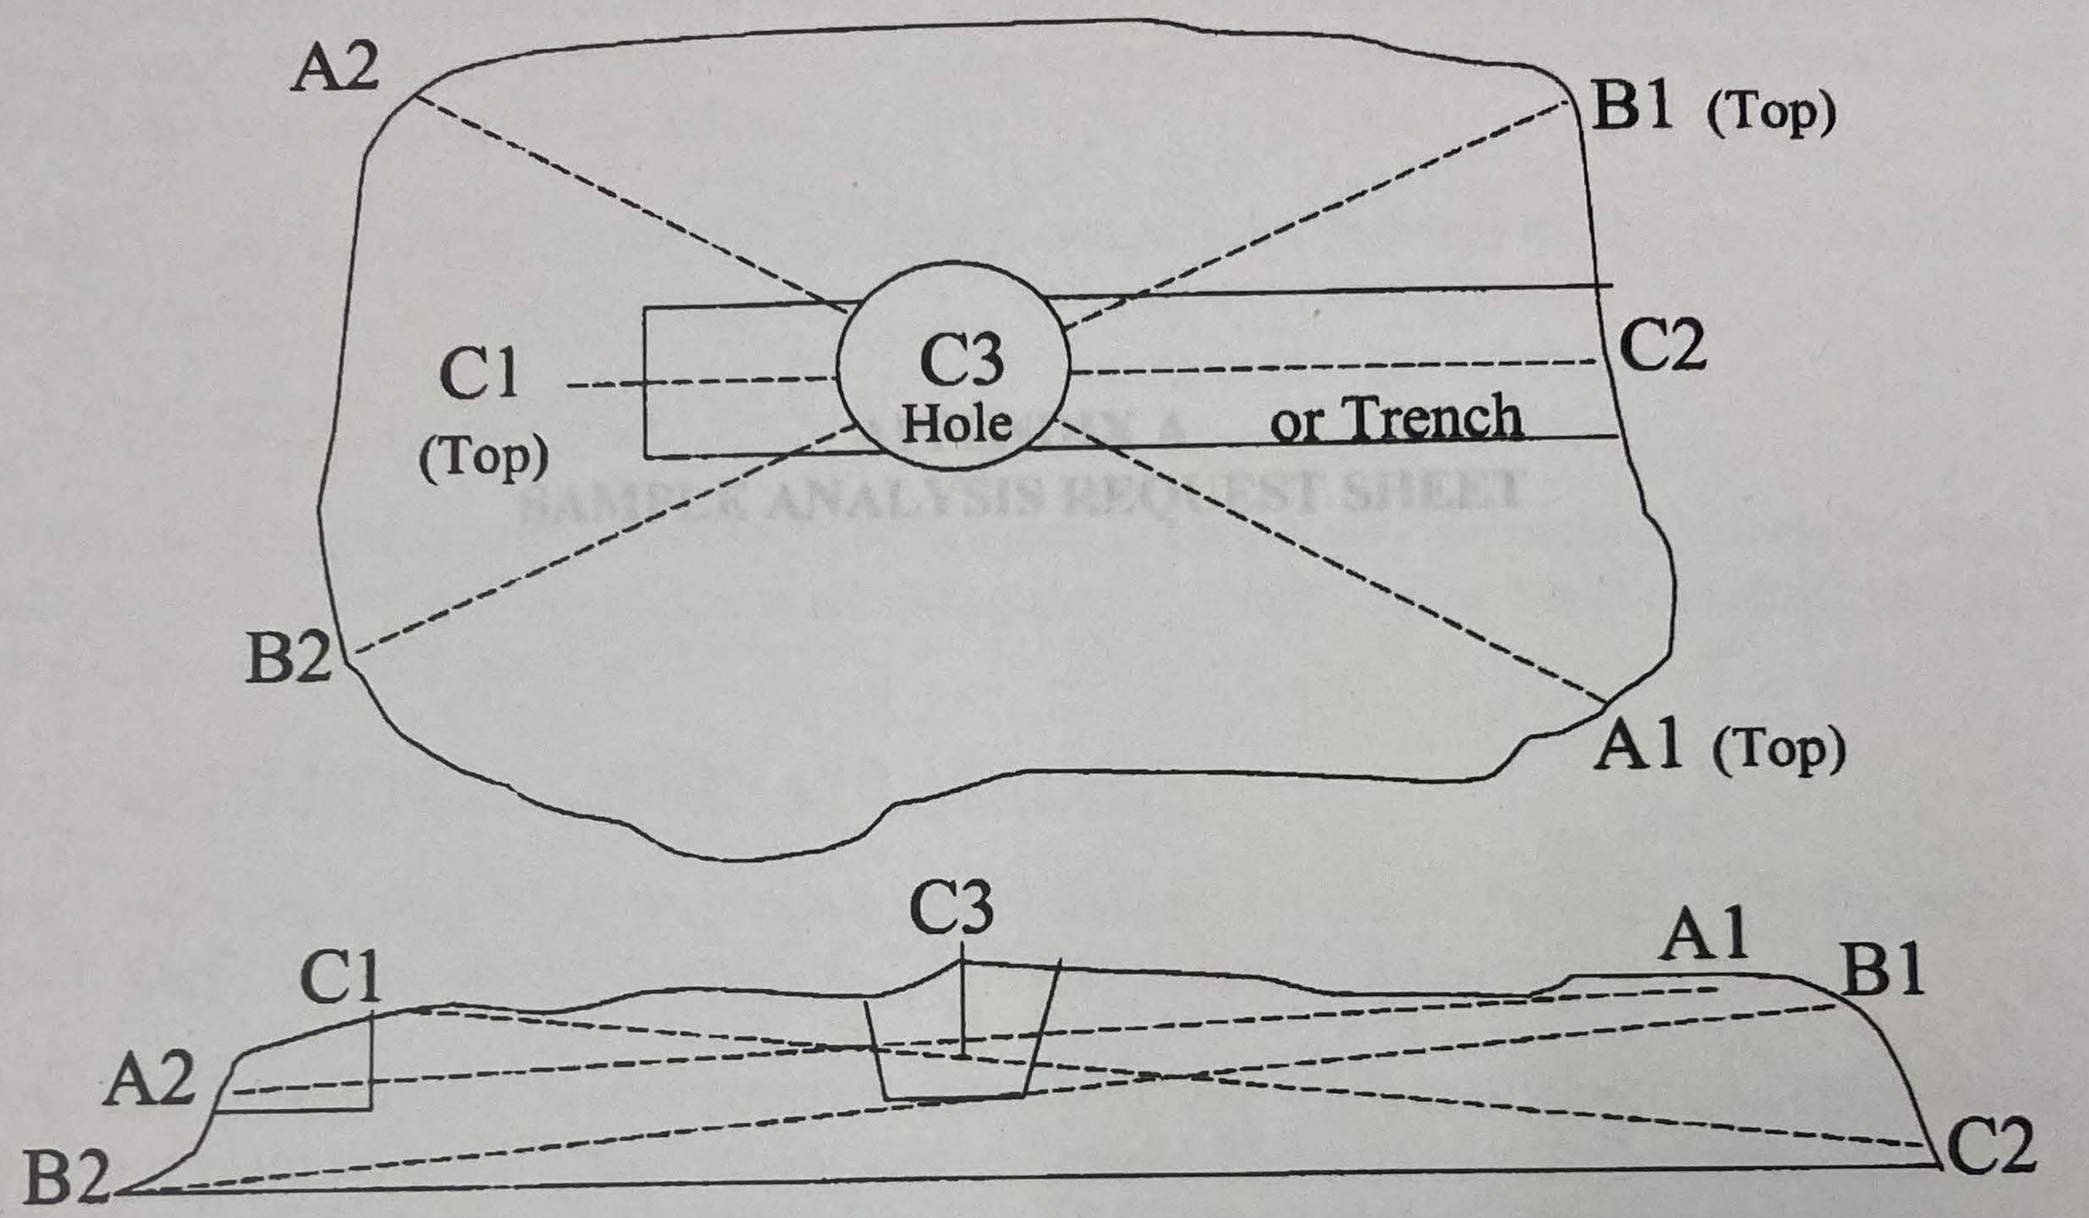
6.0 QUALITY CONTROL

The samples will be submitted to a California DHS accredited laboratory for analysis. The laboratory will be instructed to prepare and analyze a matrix spike, a matrix spike duplicate, and a blank spike for 5 percent of the samples it receives.

The laboratory will calculate percent relative differences and percent recoveries for the matrix spikes and matrix spike duplicates. If the percent relative differences or percent recoveries fall outside the ranges specified in the methods in SW-846 or the laboratory's acceptable ranges, the laboratory will investigate the reason for the discrepancy. The investigation may include checking calculations, verifying analytical procedures, recalibrating instruments, preparing new reference standards, or reanalyzing samples.

6.1. Sample Preparation and Analysis

The sample preparation and analysis methods for the samples are listed in Appendix A, the Sample Analysis Request Sheet. The analytical results will be evaluated as described in Section



6.2. Laboratory Report

As a minimum, the laboratory report will indicate the laboratory name; DHS accreditation number, a statement that it is accredited for the constituents that were analyzed, and the accreditation expiration date; sample numbers, times, and dates; sample preparation and analysis method numbers; and analytical results. The laboratory report should also include quality control data for each sample batch and a description of any deviations from the published sample preparation or analytical method.

6.3. Analytical Data Evaluation Procedures

All analytical data will be evaluated for the constituents analyzed for using the methodologies contained in SW-846. 90 percent upper confidence level (UCL_{90}) values will be determined for each constituent using California's Total Threshold Limit Concentrations (TTLC) or Soluble Threshold Limit Concentrations (STLC) as the regulatory threshold values.

Rancho Cucamonga, California 91739-0325

SAMPLING REPORT, JANUARY 20, 2005, SAMPLING INSPECTION: TAMCO STEEL, 12459-B ARROW HWY, RANCHO CUCAMONGA, CALIFORNIA, 91739, SAN BERNARDINO COUNTY, EPA ID NO. CAD982361404

Dear Messrs. Jalai and Perchan:

The Department of Toxic Substances Control (DTSC) conducted a sampling inspection at Tamco Steel (Tamco) on January 20, 2005. The enclosed sampling report describes the findings of that inspection, including a violation and actions to be taken by the facility to correct the violation.

The following violation which is described in this inspection report, was found subsequent to the inspection.

Violation

1. Title 22, California Code of Regulations, section 66265.31.

Tamco failed to maintain and operate it's facility in a manner to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents.

Tamco allowed residual fines from the scrap metal piles, containing hazardous waste levels of lead, chromium, copper, nickel and zinc, to be released to adjacent soil areas.

The sampling results show that residual fines from the base of the scrap metal piles exceed hazardous waste levels for lead, chromium, copper, nickel and zinc. Exposed soils at the facility, near the piles, show contamination by the same constituents. These results show that a strong potential exists for heavy metal contamination to spread, from

Tamco's operations, and contaminate the surrounding environment through pathways such as air dispersion and storm water runoff.

Tamco must take corrective action, and implement control measures to manage, mitigate and prevent any further contamination due to releases at their facility. DTSC appreciates the additional information included in the March 30, 2005, letter from Tamco. The information includes: employee-breathing zone monitoring data; a report from a remediation project, conducted in 2000, by Clayton Group Services, Inc.; and surface soil sampling results from areas adjacent to the north and west sides of the scrap metal pile storage concrete pad.

Tamco is required to submit a written response to DTSC within 30 days describing the corrective actions that have been taken, or are proposed to be taken, to bring it's facility into compliance [Health & Safety Code, section 25185(c) (3)]. If you dispute the violation, you should explain your disagreement in this written response. The issuance of this letter and report does not preclude DTSC from taking administrative, civil, or criminal action as a result of the violation noted in the report. All pertinent information derived from the inspection, including documents, photographs, and sampling results, are included as attachments to the report, except copies of documents provided by your facility at the time of the inspection. In order to reduce copying and mailing costs, these have not been returned to you with the report; copies will be provided if you request them. This report will become a public document; you may request that any trade secret or facility security information be withheld from public disclosure. (See Health & Safety Code, section 25173, attached.)

If you wish to assert the trade secret privilege after you have reviewed the report, please provide specific answers to each of the following questions for each item:

- To what extent is there knowledge of the information conveyed by the photograph/document outside of your business?
- To what extent is there knowledge of the information conveyed by the photograph/document, by employees and others in your business?
- To what extent have measures been taken to guard the secrecy of the information?
- Is the information valuable to competitors? If so, why?
- Has there been substantial monetary expenditure in the development of the information?
- Could the information be easily and properly acquired or duplicated by others?

DTSC will review your response to these questions to determine if the information should be treated as trade secret and will notify you of its decision.

If you have any questions regarding this letter, or if you wish to meet with

RANCHO CUCAMONGA CA
CAD982361404

DTSC to discuss any questions or concerns you have with the inspection, the report, the violation, or the required corrective action, please call Ms. Razel Trigilio at (818) 551-2836.

DTSC will review your response to these questions to determine if the information should be treated as trade secret and will notify you of its decision.

Sincerely,

Florence Gharibian, Branch Chief

4.0 SAMPLING PROTOCOL & SUMMARY:

4.1 On January 20, 2005, at approximately 0930 hours, we arrived at TAMCO located at 12459-B Arrow Highway, Rancho Cucamonga, California. We met with Michael Perchan, Michelle Runyan and Kenny Diederich. Michael Perchan, Environmental/Safety Technician, granted us consent to collect samples. We told them that our visit is a follow-up to the August and October 2003 inspections. We told him that three (3) out of the seven (7) samples collected had particle size less than 100 microns which had metals above the regulatory limit. Perchan said that they just received the DTSC letter eleven days ago and that their response in writing is under way. The DTSC letter pertains to the sample results from the August and October 2003 inspections, and the concerns for the potential contamination at the site.

Perchan and Diederich escorted us to the scrap yard to collect samples. Wu and Trigilio identified the locations to be sampled. Wu used XRF (a real time, direct reading instrument) to screen for presence of heavy metals. Flags were placed, by Trigilio, on each identified sample location. Stuck and Narvaez collected thirteen (13) samples, including split samples, from the identified locations. Pinon assisted in labeling and sealing the jars, taking photographs, and in completing the photolog (Appendix E – Field Logs). Samples were labeled with ID numbers TAMCO-1 thru TAMCO-13. Split samples were labeled as ID numbers TAMCO-1S thru TAMCO-13S. A total of thirteen (13) samples were collected. Eight (8) samples were collected from the concrete slab, one (1) from the turning pile and four (4) from the soil located north, south and west of the scrap yard. See Figure 2 for a map of sample locations and section 4.5 of this report for specific sample observations. Before we left the facility, we gave Perchan a signed copy of the split sample receipt (Appendix G).

4.2 TAMCO is approximately 60 acres in size (Figures 1-4). The scrap yard is located in the northern part of the facility. For ease of understanding, the scrap yard was delineated into two sampling areas, slab area vs. unpaved areas. See Figure 5 for the Sample Location Map.

4.2.1 The Slab

The "slab" is a 5.5 acre paved area containing zones with separate piles of different forms of scrap metal. However, there are no physical boundaries or painted lines delineating these zones on the slab. At the time of our inspection, the slab was divided into zones distinguishing between turnings, shreds, bales, heavy melt (P-14, P-16 and P-17) and composites (P-12). Heavy melt is composed of larger pieces of metal such as automobile parts.

Composite is composed of shreds, bales and other scrap metal. Nine (9) samples (TAMCO-1, 2, 3, 4, 6, 7, 8, 11 and 12) were collected from the slab. Test results revealed that five (5) out of the nine (9) samples (both sieved and unsieved) (TAMCO 3, 4, 6, 7 and 8) had one or more metals (Cr, Cu, Ni, Pb, Zn) above the regulatory limit. See Figures 6 & 7 and Appendix D – Summary of Test Results & Laboratory Data.

4.2.2 Unpaved Areas

Unpaved areas located to the North, West & South of the "slab" were delineated as the crossed hatched area on Figure 5. This area appeared to be covered with gravel. One pile closest to the parking lot, (between samples TAMCO-1 and TAMCO-6) extended onto the gravel area by about 10 feet. The unpaved area to the south is along the railroad track. The unpaved area to the west is adjacent to the slag piles. Four (4) samples. (TAMCO-5, 9, 12 and 13) were collected from Area II. Test results revealed that one (1) out of the four (4) samples (TAMCO 5 - both sieved and unsieved) had lead above the regulatory limit. See Figure 2 and Appendix D – Summary of Test Results & Laboratory Data.

4.3 RATIONALE FOR SAMPLE LOCATIONS:

4.3.1 Slab Residual Samples/Waste Pile Sample. Sample locations were chosen on an authoritative basis by visual observation and in-situ field screening with an XRF device. Samples TAMCO-1, 2, 3, 4, 6, 7, 10 and 11 were collected from the "slab" around the piles. Sample TAMCO-8 was collected from the turning pile.

4.3. Soil Samples. Sample locations were chosen on an authoritative basis by visual observation and in-situ field screening with an XRF device. Samples TAMCO-5, TAMCO-9, TAMCO-12, and TAMCO-13 were all collected from the unpaved areas.

4.4 SAMPLING PROCEDURES:

Surface samples were collected using new individually wrapped and sealed disposable plastic scoops that were discarded after each use. Each of the surface samples were taken at a depth of one to three inches of soil/fines. Each sample was placed into a new clean plastic paint bucket, stirred and was split between two clean 500 ml jars. The soil /fines were placed into pre-labeled, decontaminated, 500 ml glass jars with Teflon-lined screw caps. The jars were secured with evidence tape, and photographed at the point of collection.

Each sample location was documented using a Leica laser range finder to document the location of the sample. The Leica rangefinder has a manufacturer's stated accuracy of 1 yard at 1,000 yards.

4.5 SAMPLE POINTS and OBSERVATIONS:

Sample TAMCO-1/1S

The location for sample TAMCO-1/1S was at the base of a composite pile, located 16 yards west from the fence of the parking area and 186 yards, north from the furnace building. Sample TAMCO-1/1S was collected from the concrete slab surface consisting primarily of fine dirt type of material. (Attachment C, Photos # 1 & 2)

Sample TAMCO-2/2S

The location for sample TAMCO-2/2S was at the base of a composite pile, located 10 yards west from the fence of the parking area and 238 yards, north from the furnace building. Sample TAMCO-2/2S was collected from the concrete slab surface consisting primarily of fine dirt type of material (Attachment C, Photo # 3).

Sample TAMCO-3/3S

The location for sample TAMCO-3/3S was at the base of a composite pile, located 13 yards west from the fence of the parking area and 313 yards, north from the furnace building. Sample TAMCO-3/3S was collected from the concrete slab surface consisting primarily of fine dirt type of material (Attachment C, Photo # 4).

Sample TAMCO-4/4S

The location for sample TAMCO-4/4S was chosen at the base of a composite pile, located 12 yards west from the fence of the parking area and 326 yards, north from the furnace building. Sample TAMCO-4/4S was collected from the concrete slab surface consisting primarily of fine dirt type of material (Attachment C, Photo # 5).

Sample TAMCO-5/5S

The location for sample TAMCO-5/5S was chosen at a soil area, located north and near the base of a heavy melt pile. The sample point was located 66 yards west from the fence of the parking area and 42 yards, south from the fence on the north property line. Sample TAMCO-5/5S was collected from the soil surface consisting primarily of fine dirt type of material (Attachment C, Photo # 6).

Sample TAMCO-6/6S

The location for sampleTAMCO-6/6S was chosen at the base of a heavy melt pile, located 199 yards from the steel tanks, on the west the parking area and 303 yards

from the concrete slab surface. Sample TAMCO-6/6S was collected from the soil surface consisting primarily of fine dirt type of material (Attachment C, Photo # 7).

Sample TAMCO-7 /7S

The location for sample TAMCO7/7S was chosen at the base of a heavy melt pile, located 199 yards east from the steel tanks and 266 yards, north from the furnace building. Sample TAMCO-7/7S was collected from the concrete slab surface consisting primarily of fine dirt type of material (Attachment C, Photo # 8).

Sample TAMCO-8/8S

The location for sample TAMCO-8/8S was chosen at a lower portion of a turning pile, located 168 yards from the weigh station. That was the only meaningful measurement that could be collected. Sample TAMCO-8/8S was collected from the turning pile consisting fine dirt type of material (Attachment C, Photo # 9). Wisps of smoke from the pile were observed during the inspection (Attachment C - Photos # 10, 11 & 12).

Sample TAMCO-9/9SB

The location for sample TAMCO-9/9S was chosen at a soil area located south and near the base of a turning pile. The sample point was located 153 yards from the weigh station and 155 yards from the furnace building. Sample TAMCO-9/9S was collected from the soil surface consisting primarily of fine dirt type of material (Attachment C, Photo # 13).

Sample TAMCO-10/10S

The location for sample TAMCO-10/10S was chosen at the base of a bale pile and east of the slag piles. Sample Tamco-10/10SB was collected from the concrete slab surface consisting primarily of fine dirt type of material (Attachment C, Photo # 14).

Sample TAMCO11/11S

The location for sample TAMCO-11/11S was chosen at the base of a bale pile and east of the slag piles. The sample was located 867 yards from the freeway and 193 yards from the furnace building. Sample TAMCO-11/11SB was collected from the concrete slab surface consisting primarily of fine dirt type of material (Attachment C, Photo # 15).

Sample TAMCO-12/12S

The location for sample TAMCO-12/12S was chosen at a soil area located east and

near the slag piles. The sample point was located 142 yards from the fence of the north property line. Sample TAMCO-12/12S was collected from the soil surface consisting primarily of fine dirt type of material (Attachment C, Photo # 16).

Sample TAMCO-13/13S

Sample location TAMCO-13/13S was chosen at the soil area located east and near the slag piles. The sample point was located 102 yards from the fence of the north property line. Sample TAMCO-13/13S was collected from the soil surface consisting primarily of fine dirt type of material (Attachment C, Photo # 17).

5.0 LABORATORY ANALYSIS REQUEST:

Soil samples collected at the site were analyzed by Advance Technology Laboratories (ATL), DTSC's contract laboratory, using the methodologies described in SW 846. All samples were sent for screening to PTS Laboratory, ATL's subcontractor. Analyses were subject to quality assurance procedures defined by DTSC's Hazardous Materials Laboratory (HML) Quality Assurance Program, as referenced in Section 6.0 of the HML Laboratory Services Users Manual.

A. Metals Scan: EPA Method #6010.

B. TCLP for metals: EPA Method #1311.

C. Total Petroleum Hydrocarbons: Oil and Grease, Diesel Range Organics HML Method #816-S.

D. Semi-Volatile Organic Compounds: EPA Method # 8270.

E. Diesel Range Organics (DRO), Motor Oil Range Organics MORO): HML Method #816-S

The samples were held overnight in the DTSC Evidence Locker/Refrigerator and were hand delivered to ATL, the day after collection. Brian Wu retained the custody of the key to the locker and delivered the samples to the laboratory. Chain of custody records are in Attachment F. A Summary of the requested analyses for each sample is in Figure 8. The complete laboratory sample analyses report can be found in Appendix D.

Razel Trigilio submitted a supplemental request on February 22, 2005, to analyze for hexavalent chromium in both the sieved and unsieved samples that had a total chromium above the TTLC limit of 500 mg/kg in the initial request. The analyses were performed by American Scientific Laboratories, ATL's subcontractor.

The sample locations and contaminants in each sample, both sieved and unsieved, is in Figure 5, 6 & 7.

F. Hexavalent Chromium: EPA Method #7199.

6.0 QA/QC DATA REVIEW SUMMARY – See Appendix E for QA/QC data review.

6.1 Corrective Actions

Corrective Actions were not required.

6.2 Chain of custody procedures were maintained from the collector to the laboratory.

7.0 SAMPLE RESULTS:

A summary of sample results is presented in presented in Figure 8. The laboratory analytical results are found in Appendix D.

7.1 Metals

Three (3) sieved (TAMCO-6, 7 & 8) and one (1) unsieved sample (TAMCO-8) exceeded the TTLC for total chromium at 2700 to 6900 mg/kg. Two (2) sieved (TAMCO-6 & 8) and one (1) unsieved sample (TAMCO-8) exceeded the TTLC for copper at 2600 to 7700 mg/kg. Two (2) sieved (TAMCO-7 & 8) and one (1) unsieved sample (TAMCO-8) exceeded the TTLC for nickel at 2100 to 3500 mg/kg. Three (3) sieved (TAMCO-3, 4 & 5) and four (4) unsieved samples (TAMCO-3, 4, 5 & 6) exceeded the TTLC limit for lead at 1200 to 2000 mg/kg. One (1) sieved (TAMCO-8) and four (4) unsieved samples (TAMCO-4, 6, 7 & 8) exceeded the TTLC for zinc at 5700 to 7600 mg/kg. No samples exceeded the TTLC for hexavalent chromium. See Figures 6, 7 & 8 – Sieved and Unsieved Samples and Summary of Test Results.

7.2 Sieved Samples

The fines in six samples (TAMCO-3 thru 8) were hazardous after sieving. Three (3) were hazardous for chromium, two (2) were hazardous for copper, two (2) were hazardous for nickel, three (3) were hazardous for lead, one (1) were hazardous for zinc. One (1) sample (TAMCO- 8) exceeded the limits for each chromium, copper and nickel.

7.3 Motor Oil Range Organics

Virtually every soil sample collected at the TAMCO site contained oil/grease ranging from 360 to 19,000 mg/kg.

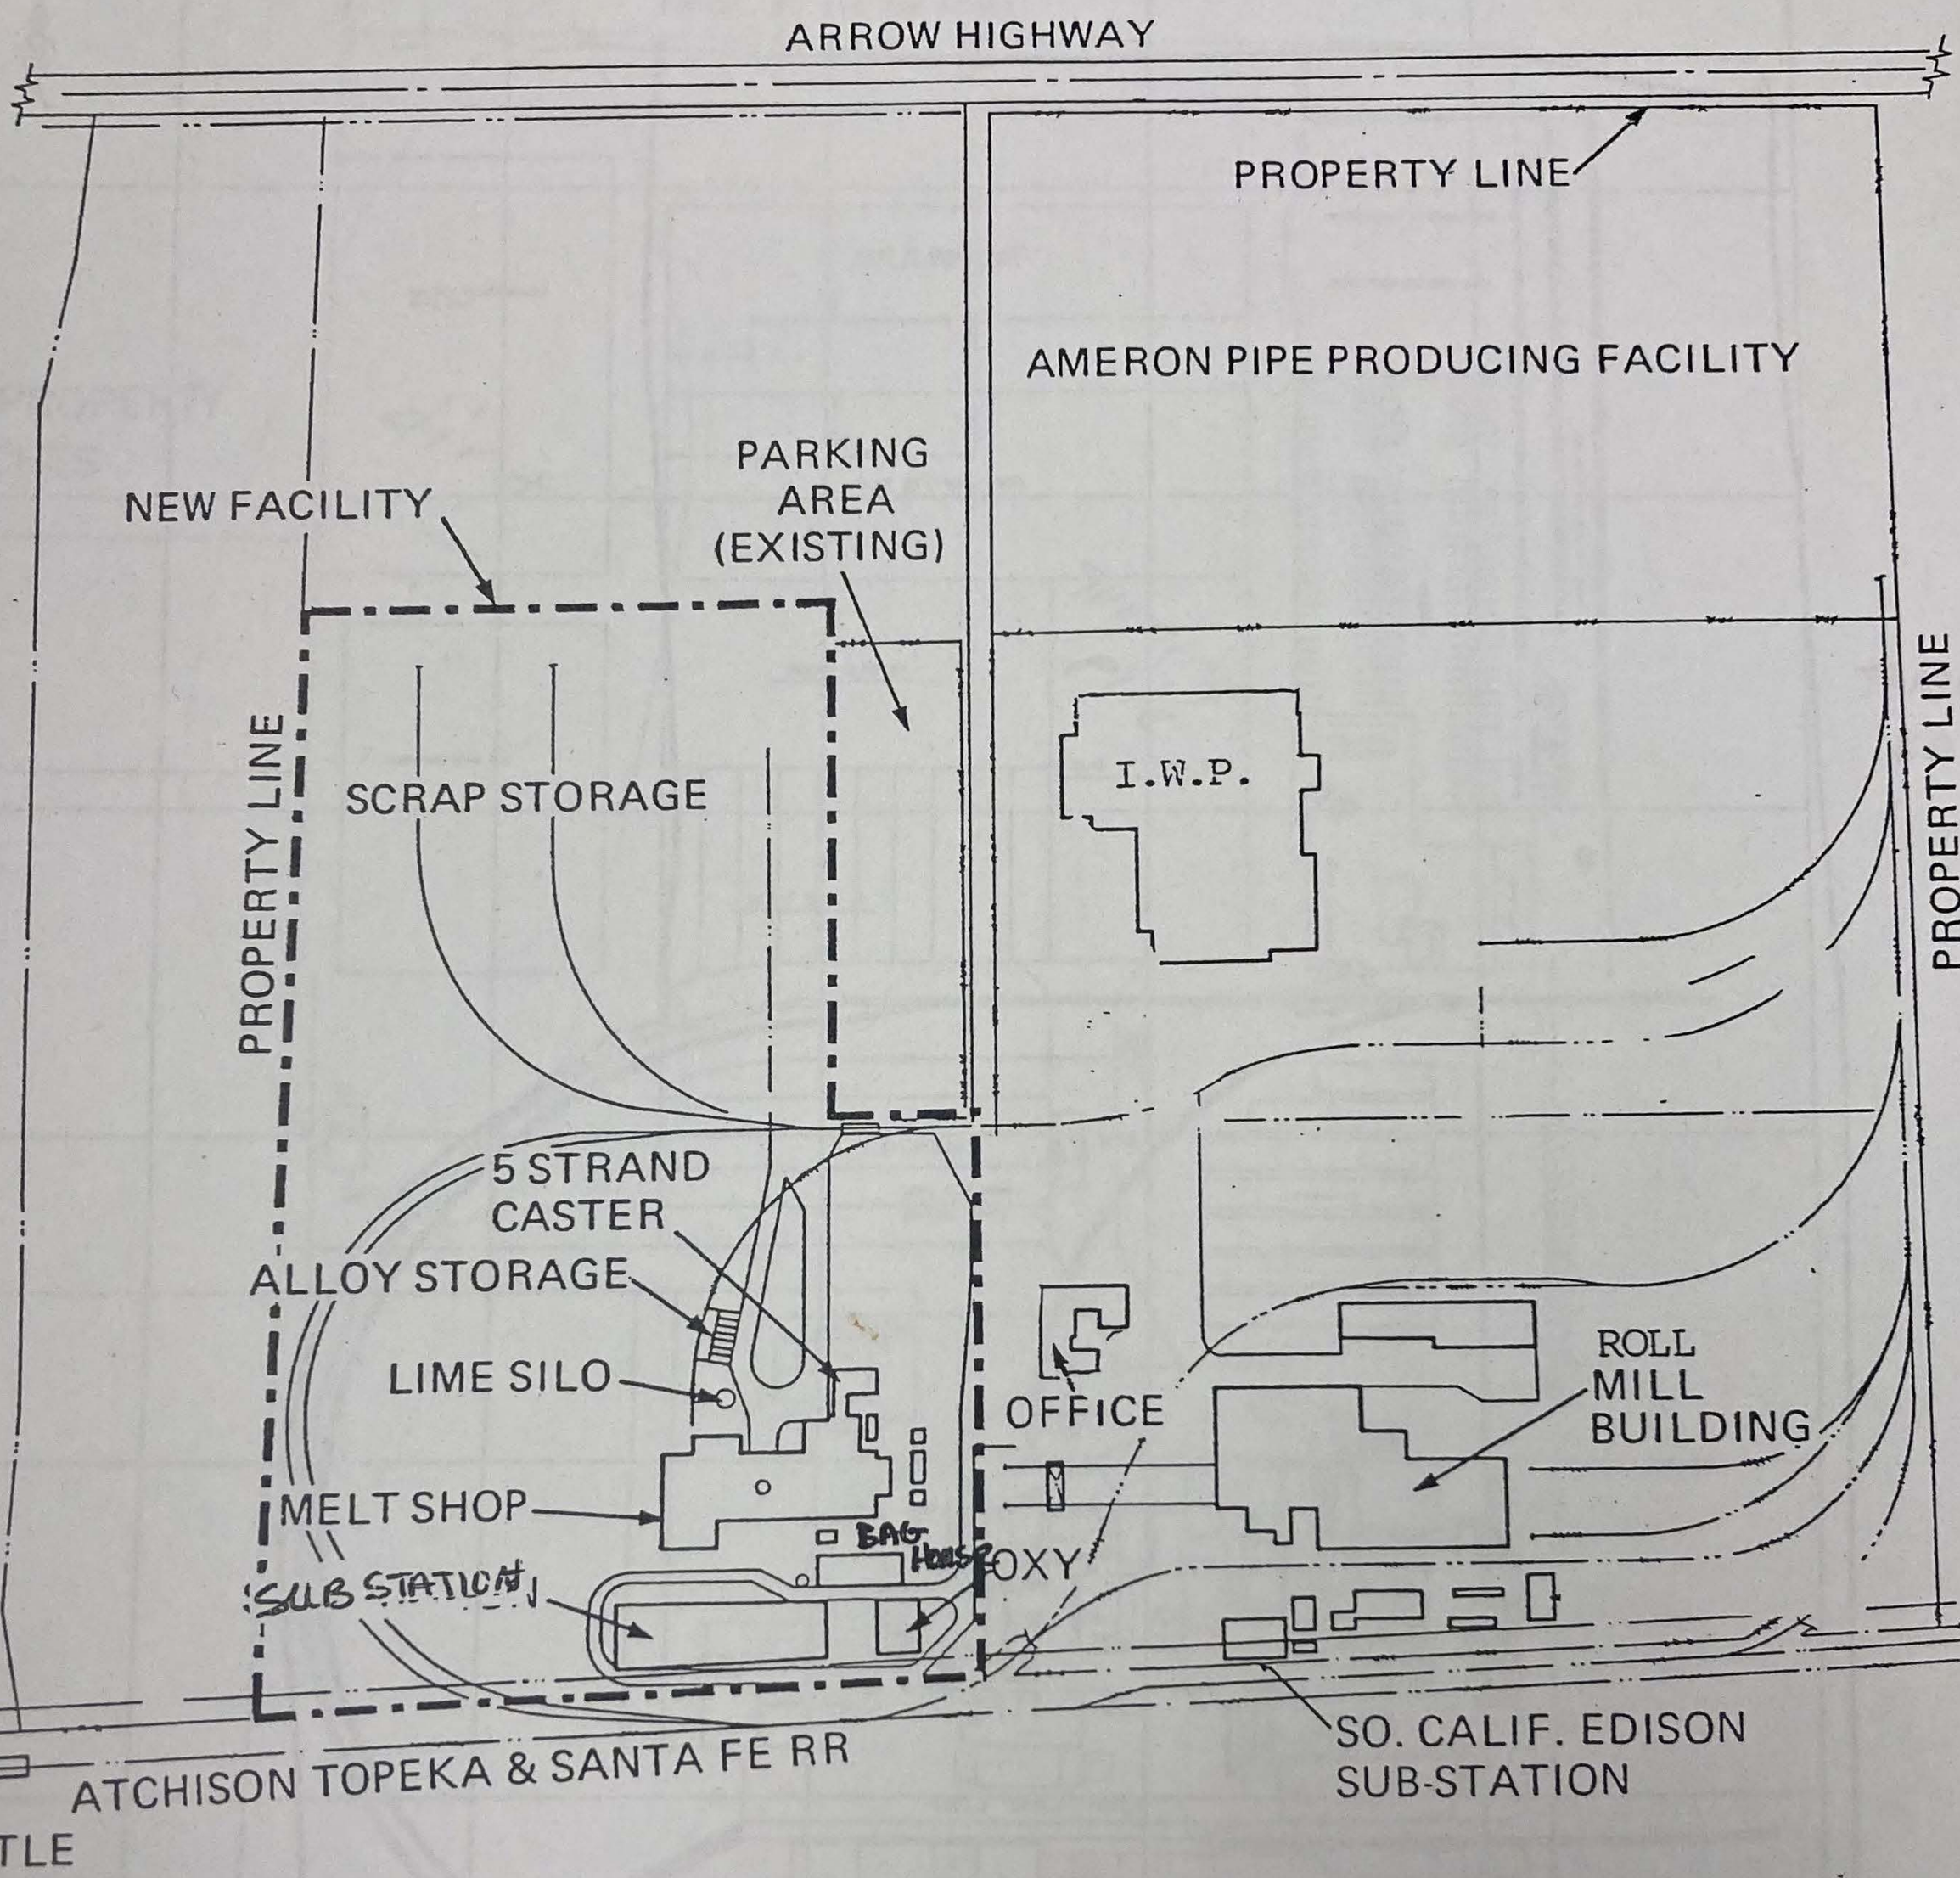
7.4 Semi-Volatiles

All samples came back non-detect for volatile organics except sample TAMCO-2 which entailed Fluoranthene 4,600 ug/kg and Pyrene 4,000 ug/kg.

7.5 Hexavalent Chromium

None of the samples exceeded TTLC for hexavalent chromium.

8.0 PERSONAL MONITORING RESULTS



Sharzad Nouri, Industrial Hygienist, conducted personal air monitoring as part of the DTSC procedure to comply with OSHA requirements on potential chrome sites. The monitoring activity was apart from the waste sampling, but is included here for informational purposes. Samplers David Stuck and Julio Narvaez were fitted with Gillian pumps and paper filters, to measure personal occupational exposure for potential chromium dusts in the air at the TAMCO site. Two other pump/filter apparatus were set at locations in the sampling area to record undisturbed air quality. The pumps pulled a total air flow of 240 liters. All samples were below the detection limits for chromium. See Appendix H – IH Report.

All results were below the detectible range for potential compounds of interest.

9.0 SUMMARY

Samples collected from the surface of the slab at TAMCO exhibited residual fines, at the base of the scrap metal piles, which exceeded the hazardous waste levels for lead, chromium, copper, nickel and zinc. These fines are available for wind and rain dispersal. These residual fines were also found uncontained in areas designated by the facility as soil areas. One of the “soil” areas had lead above the hazardous waste level. Soil does not need to exceed hazardous waste levels to be considered contaminated. There is a strong potential for offsite migration of these contaminants from the TAMCO site to the surrounding area.

1.0 Introduction

The U.S. Environmental Protection Agency (EPA), Region IX, under authority of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) and the Superfund Amendments and Reauthorization Act of 1986 (SARA) has tasked URS Consultants, Inc. (URS) to conduct a Preliminary Assessment (PA) of the TAMCO site in Rancho Cucamonga, San Bernardino County, California.

The TAMCO site was entered into the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) on March 29, 1993 after EPA received a notification of hazardous waste site from the Chief Executive Officer of TAMCO. TAMCO was originally assigned to URS under the EPA I.D. No. CAD983662560. This conflicted with the I.D. No. issued to TAMCO at an earlier date under the Resource Conservation Recovery Act (RCRA) program: CAD982361404. EPA decided to continue this investigation under the EPA I.D. No. CAD982361404. The purpose of the PA is to review existing information on the site and its environs to assess the threat(s), if any, posed to public health, welfare, or the environment and to determine if further investigation under CERCLA/SARA is warranted. The scope of the PA includes the review of information available from federal, state, and local agencies, and performance of an on-site reconnaissance visit (2).

Using these sources of information, the site is then evaluated using EPA's Hazard Ranking System (HRS) criteria to assess the relative threat associated with actual or potential releases of hazardous substances at the site. The HRS has been adopted by EPA to help set priorities for further evaluation and eventual remedial action at hazardous waste sites. The HRS is the primary method of determining a site's eligibility for placement on EPA's National Priorities List (NPL). The NPL identifies sites at which EPA may conduct remedial response actions. This report summarizes URS' findings of these preliminary investigative activities (12).

1.1 Apparent Problem

The TAMCO site is an active steel minimill that uses scrap metal to produce steel reinforcing bar (rebar). During the production of the rebar, nonhazardous slag and hazardous baghouse waste are generated. The baghouse waste is a RCRA waste (K061). Baghouse waste is regularly disposed of at a permitted treatment, storage, and disposal facility; however, some baghouse waste was disposed of on-site at the northwestern portion of the slag pile. Additionally, some baghouse waste was irradiated when a canister containing radioactive cesium went into the furnace. This resulted in the generation of radioactive baghouse waste, a portion of which was disposed of at the Chemical Waste Management Kettleman Hills facility, which is not permitted for radioactive waste disposal (3,4,5,6).

2.0 Site Description

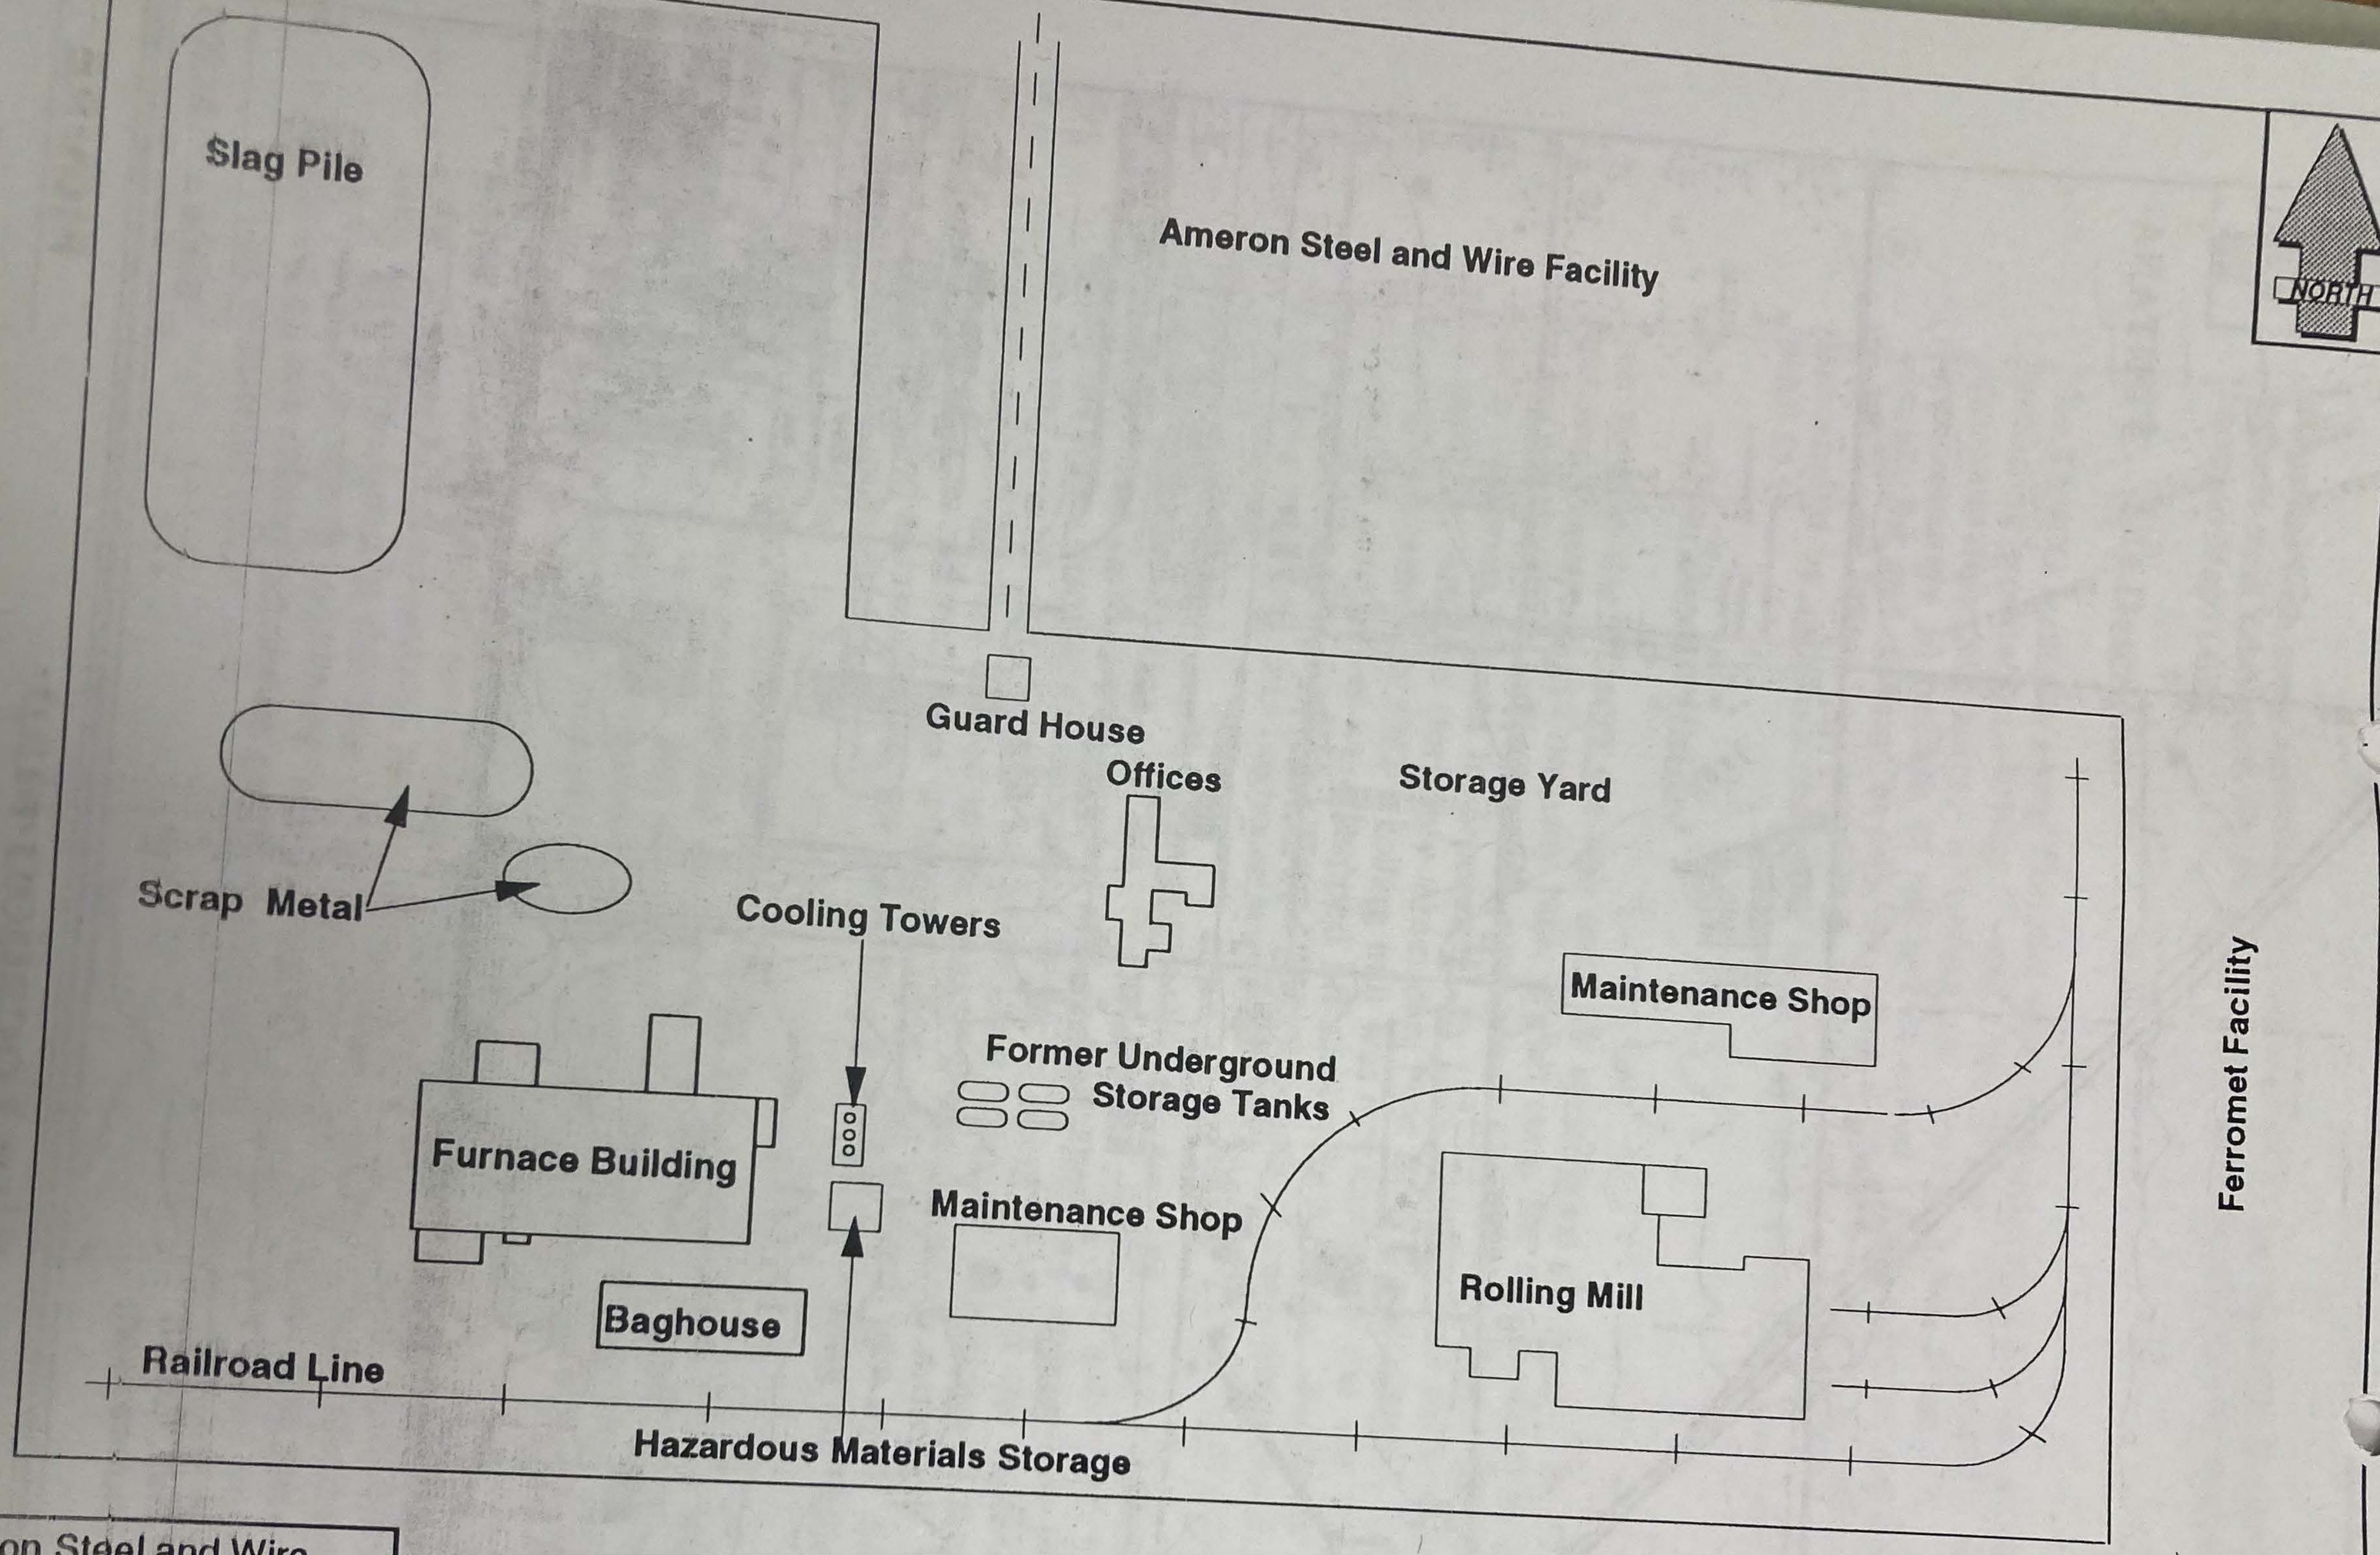
2.1 Site Location

The TAMCO site is located at 12459 Arrow Highway in Rancho Cucamonga, San Bernardino County, California. The geographical coordinates for the site are Latitude 34° 05' 37" North and Longitude 117° 31' 57" West, Mount San Bernardino baseline and meridian. TAMCO is located in Township 1 South, Range 6 West, Section 8. The site is located approximately 4 miles northeast of the Ontario Airport and 0.5 miles northwest of the former Kaiser Steel facility. Land use in the vicinity of the site is principally

industrial with some agricultural and residential uses. Facilities located adjacent to the site include steel fabrication shops, scrap metal dealers, and power plants (see Figure 1, Site Location Map) (4,7).

2.2 Site Description

The TAMCO facility is a steel minimill that produces rebar for use in concrete structures, including roadways, bridges, and buildings. The TAMCO site encompasses approximately 60 acres, including an access road from the Arrow Highway. Approximately 10 percent of the site is paved or covered by buildings. The site is virtually flat and contains an office building, a furnace building, a baghouse, a rolling mill, maintenance shops, cooling towers, rail spurs, and storage yards. The TAMCO site is surrounded by an 8-foot chain-link fence and has a 24-hour guard (see Figure 2, Facility Map) (3,4).



2.3 Operational History

Prior to 1956 the TAMCO site was used for agricultural purposes. In 1956 the American Pipe and Construction Company built a melt shop for the production of steel billets at the site. In 1968 the property was purchased by American Pipe and Construction from Illinois California Express Incorporated. In 1974 TAMCO was formed by a consortium that included Ameron (formerly American Pipe and Construction), Tokyo Steel, and Mitsui Corporation. In 1982 a rolling mill was introduced to the site to produce rebar. Prior to 1982 steel billets were shipped off-site for processing. Products currently made include rebar and steel billets. Wastes or byproducts of site operations include slag, sold for use as a road bed, and baghouse waste, recycled off-site for its zinc content (4).

Shredded steel scrap, usually from automobiles, is brought to the TAMCO site as a raw material. Upon entering the site, truckloads of steel are surveyed for radioactive materials. The steel is then graded and dumped into the appropriate pile where it is stored until it is ready to be processed. Prior to being recycled, the steel scrap is spread out on the ground and checked for anomalous objects. The scrap is then loaded into charge buckets that are hoisted to the furnace where the scrap is melted. After the steel is molten, it is poured from a large bucket and shaped into steel billets that are sometimes used as raw material for the rolling mill. At the rolling mill billets are heated and pressed into rebar (3,4).

Byproducts produced during the steel milling process include a slag material and a baghouse waste. Slag is stockpiled on-site and sold for use as road bedding. Currently, baghouse waste is collected and shipped off-site by rail car to Horsehead Resource Development in Illinois and Tennessee for recycling. TAMCO produces approximately 700 tons of baghouse waste monthly (4).

Four former underground storage tanks were being excavated and removed from the site during the time of the URS reconnaissance visit in November 1993. Underground storage tanks contained fuel oil used to fire the rolling mill furnace. These underground tanks, which were excavated at the time of the URS site reconnaissance visit, were observed to be in good condition, and there was no visible evidence of leakage from the tanks. Heating oil is a refined petroleum product and exempt by the petroleum exclusion from CERCLA evaluation (1,4).

2.4 Regulatory Involvement

The TAMCO site is listed in EPA's RCRA database as a large quantity generator of RCRA hazardous waste (8).

The California Environmental Protection Agency Department of Toxic Substances Control (Cal EPA DTSC) has been involved with the TAMCO site regarding the disposal of radioactive baghouse waste and the stabilization of metal contaminated soil. The TAMCO facility formerly disposed of baghouse waste at the Kettleman Hills disposal facility operated by Chemical Waste Management, Inc. On May 21, 1985, several loads of this baghouse waste were disposed of at the Kettleman Hills Facility. On May 23, 1985, radioactivity was detected in a truckload of baghouse waste by the California Highway Patrol at a weigh station. This truckload of baghouse waste was returned to the TAMCO site. Subsequent analysis of samples collected from truckloads of baghouse waste received by the Kettleman Hills Facility on May 21, 1985 revealed radiation levels above background levels in one sample, representing approximately 20 cubic yards of radioactive baghouse waste. This waste was disposed of in burial cell B-9 of the Kettleman Hills Facility. The Kettleman Hills Facility is not permitted to accept radioactive waste. Further testing of radioactive wastes accepted by the Kettleman Hills facility was conducted on June 3, 1985 by Mr. Don Honey of the Radiologic Health Branch of the California Department of Health Services (now the California Environmental Protection Agency). The California Department of Health Services determined that wastes could be left in place, and that there are no significant heath or safety risks associated with the quantity and concentration of the radioactive material (3,4,5,6,15).

It is believed that radioactivity was introduced into the baghouse waste when a vial of radioactive cesium was placed into the electric arc furnace. Additional testing was completed on finished rebar produced by TAMCO during the time period that the radioactive baghouse dust was generated. The rebar was not found to contain levels of radiation above background levels. A total of 1,752 drums of baghouse dust were found to be radioactive prior to disposal and were taken to the U.S. Ecology facility located in Richland, Washington, a facility permitted to receive radioactive materials. Since this incident, TAMCO has installed radiation detectors that screen each truckload of scrap metal brought to the site (15).

Cal EPA DTSC also provided a variance to TAMCO to conduct a pilot soil stabilization study. In 1988 soils on property located southwest of the site were found to be contaminated by surface runoff carrying baghouse waste. Baghouse waste was deposited on-site when transferred from the baghouse to trucks and roll-off bins. A change in facility procedures has halted the deposition of baghouse waste on-site. Soil samples collected from the property southwest of TAMCO were analyzed for soluble metals. Analytical results revealed the presence of lead up to 135 milligrams per liter (mg/L), zinc up to 1,860 mg/L, and cadmium up to 5.7 mg/L. These concentrations of metals are above the State of California Soluble Threshold Limit Concentration (STLC) of 5 mg/L for lead, 250 mg/L for zinc, and 1 mg/L for cadmium, and a cleanup was required by CAL EPA DTSC. Under the supervision of Cal EPA DTSC, soils were excavated and stabilized. The volume of soil excavated and treated is estimated to be 3,300 cubic yards. Stabilized soils were stockpiled on-site, and a portion of this material was used as backfill during the excavation of underground storage tanks (3,4,5,9).

The California Regional Water Quality Control Board's involvement with the TAMCO site has been limited to providing regulatory oversight of the contaminated soils investigation and on-site stabilization of heavy metals (10).

The San Bernardino County Environmental Health Department is currently overseeing the excavation and removal of underground storage tanks at the site. The four underground storage tanks at the site contained fuel oil. Underground storage tanks were being excavated at the time of the November 15, 1993 URS site visit (4,11).

The South Coast Air Quality Management District is also involved with the TAMCO site. Currently the facility has 10 air permits, and another two air permits are pending approval. Air permits cover everything from office heaters to the electric arc furnace used to melt steel. The South Coast Air Quality Management District conducts regular on-site inspections of the facility (12,13).

3.0 Hazard Ranking System Factors

The Hazard Ranking System (HRS) is a scoring system used to assess the relative threat associated with actual or potential releases of hazardous substances from sites. It is the principal mechanism EPA uses to place sites on the National Priorities List (NPL). URS has evaluated the following HRS factors relative to this site (1).

3.1 Sources of Contamination

URS has identified three sources at the TAMCO site where hazardous materials or hazardous wastes are present: the stabilized soil, the slag pile, and the radioactive baghouse waste (4).

Stabilized Soil

Three thousand three hundred cubic yards of soil containing soluble lead, zinc, and cadmium were excavated from property located southwest of the TAMCO site and stabilized. Stabilized soils were stockpiled on-site. A portion of this material was used as backfill during the excavation of underground storage tanks. The HRS does not consider stabilization as a qualifying removal (1,3,4,9).

Slag Pile

The slag pile is a large pile of grayish material located in the northwestern portion of the TAMCO site. The dimensions of the slag pile are approximately 250 feet long by 100 feet wide and up to 25 feet in height. A layer of baghouse waste is incorporated within the slag pile. The slag pile was sampled by Mittelhauser Corporation for TAMCO in January 1993. Three trenches were dug into the pile to facilitate sampling of wastes within the pile. A lithologic cross section of the slag pile was generated during trenching activities. The cross section indicated that the layer of non-slag material, believed to be baghouse waste, is up to 10 feet thick in some areas. A total of 10 samples were collected on January 4, 1993 from the three trenches. Samples were categorized as either soil, slag, or non-slag. Samples were analyzed by Brown and Caldwell laboratories for total metals by EPA Method 6010. Chemical analytical results of the sampling are presented in Table 1.

Sampling of baghouse waste in conjunction with the stabilized soil suggests that at least some portion of the metals found within the slag pile is soluble. Samples collected from the slag pile were not analyzed for soluble metals (4,9,14).

Table 1

TAMCO Slag Pile Sampling Results
from Mittelhauser 1993 Sampling Event
(mg/Kg)

Sample Number	Location	Depth (ft)	Sample Type	Cadmium	Chromium	Lead	Nickel	Zinc
S-1	T-1	0.5	Soil	<0.7	19	6.2	11	50
S-2	T-1	5	Soil	<0.7	23	8.6	10	57

STLC				1	5	5	20	250

mg/Kg = milligrams per kilogram
ft = feet
RfD = Reference Dose Screening Concentration
CRSC = Cancer Risk Screening Concentration
--- = Benchmark concentration not available
STLC = Soluble Threshold Limit Concentration
TTLC = Total Threshold Limit Concentration
illigrams per liter (mg/L)

Radioactive Baghouse waste

On May 21, 1985, one truck-load, or approximately 20 cubic yards, of radioactive baghouse waste was disposed of at the Kettleman Hills Facility. Radioactivity was believed to have been introduced into the baghouse waste when a vial of radioactive cesium was placed into the electric arc furnace. This waste was disposed of in burial cell B-9 of the Kettleman Hills Facility (1,4,5).

3.2 Groundwater Pathway

3.2.1 Hydrogeologic Setting

The TAMCO site is situated over the Chino Groundwater Basin. The Chino Basin and the Cucamonga Groundwater Basin supply drinking water to the Cucamonga County Water District (CCWD) and the Fontana Water Company (Fontana). Both the CCWD and Fontana pump groundwater from multiple (6-8) aquifers ranging from a depth of approximately 350 feet to 1,200 feet below ground surface (bgs). The thickness of the groundwater aquifers varies from 10 to 100 feet. Subsurface geology of the area is provided in Table 2 (16).

The groundwater elevation in the vicinity of the site is between 1,080 and 1,200 feet above mean sea level (msl). Depth to groundwater in the shallow aquifer in the vicinity of the site is estimated at 420 feet bgs. The shallow aquifer is unconfined, while the deeper aquifers are confined (17,18).

Municipal wells are screened through all aquifers. Groundwater flow direction in the vicinity of the site is to the southwest (17). The net annual precipitation in the Rancho Cucamonga area is approximately 15 inches (19).

Table 2
Subsurface Geology of the Rancho Cucamonga Area

Depth (feet bgs)	Formation
0-36	Soil, Sand, and Gravel
37-246	Brown Clay with Sand and Gravel
247-285	Sand, Gravel, Boulders*
286-538	Brown Sandy, Silty Clay
539-576	Sand and Gravel*
577-602	Brown Clay
603-668	Sand and Gravel*
669-690	Brown Clay
691-826	Sand and Gravel*
827-852	Brown Clay
853-988	Sand and Gravel*
989-1,016	Hard Brown Clay
1,017-1,032	Sand and Gravel*
1,033-1,180	Brown and Red Clay

* Indicates probable water-bearing zone.

3.2.2 Groundwater Targets

The CCWD services the communities of Rancho Cucamonga, Etiwanda, Alta Loma, and portions of Fontana and Ontario. The CCWD receives its water as follows (20):

Metropolitan Water District - 53 percent
Municipal Groundwater Wells - 28 percent
Surface Water - 19 percent

There are a total of 110,000 people in the Rancho Cucamonga City Limits (which includes Etiwanda and Alta Loma). The Metropolitan Water District relies entirely on surface water deliveries from northern and northeastern California. Approximately 72 percent of the population receives drinking water from non-groundwater sources; 28 percent of the population, or 30,800 people, is served by 21 municipal wells operated by CCWD. Two municipal wells are located between 1 and 2 miles of the site, and four additional municipal wells are located between 3 and 4 miles from site. Pumpage data were not available for the 21 wells operated by CCWD; however, all wells are believed to contribute equally to the CCWD system (17,21).

Fontana services approximately 100,000 people in the communities of Fontana, Glen Avon, and Mira Loma. Fontana pumps groundwater from 20 wells, three of which are located within 4 miles of the TAMCO site. Fontana uses groundwater to supplement its supply of surface water. Surface water supplies between 20 and 100 percent of the water used by the system, depending on the availability of surface water. Assuming that surface water supplies 20 percent of the water to the system, approximately 80,000 people are served by groundwater wells operated by Fontana (22).

3.2.3 Groundwater Conclusions

The groundwater pathway is the primary pathway of concern at the TAMCO site because groundwater is used extensively as a source of drinking water. There has not been an observed or projected release to groundwater. An observed release is when the chemical analysis of an environmental sample from a site is found to be three or more times above the background concentration, and some portion of the release is attributable to the site. Based on the depth to groundwater and the mobility of substances on-site, a release to groundwater is not expected.

3.3 Surface Water Pathway

3.3.1 Hydrologic Setting

The annual rainfall for the Rancho Cucamonga area is 15 inches. The 2-year, 24-hour rainfall for the area is 3 inches. The site is located in the only natural floodplain zone in Rancho Cucamonga. This site is in Zone A-4, which floods every 100 years. Chadwick Channel, an unlined drainage ditch, extends approximately 4 miles downstream from the site. The discharge from the ditch flows to the Santa Ana River. Storm water runoff from the site flows southeast toward Chadwick Channel located approximately 800 feet from the site. Storm water also flows southwest. Storm water used to pond in an off-site location. Currently, storm water flowing southwest at the site is now captured in an on-site concrete lined retention pond and redirected toward Chadwick Channel (4,18,23,24).

3.3.2 Surface Water Targets

Surface water runoff from the flood wash drainage ditch is not used for drinking. There are no drinking water intakes, fisheries, or sensitive environments within 15 miles downstream of the site (25).

3.3.3 Surface Water Conclusions

The surface water exposure pathway is not a pathway of concern at the TAMCO site. Surface water within 15 miles downstream of the site is not used as a source of drinking water, as a fishery, or by any known sensitive species.

3.4 Soil Exposure and Air Pathways

3.4.1 Physical Conditions

The TAMCO site is situated in a depositional environment. The site lies on an alluvial plain beneath the San Gabriel Mountains. Materials from the mountains are slowly eroded and deposited on the alluvial plain below. The TAMCO site is located in a predominantly industrial area with intermingled agricultural and residential areas (4,7).

The TAMCO site is surrounded by an 8-foot chain-link fence and has a 24-hour guard. Approximately 10 percent of the site is paved or covered by buildings. The slag pile and the stabilized soil are the only sources of contamination within 2 feet of the ground surface. The slag pile is an estimated 25,000 square feet in area, and the stabilized soil covers an estimated 1,000 square feet. The baghouse waste contained within the slag pile is believed to be greater than 2 feet below the surface of the slag pile (4,14).

3.4.2 Soil and Air Targets

Approximately 300 of the 340 employees may come in contact with on-site sources of contamination. Residential population in the vicinity of the TAMCO facility, based on 1980 census data, is presented in Table 3. There are no residents, schools, or day care centers within 0.25 miles of the site. There are 36,972 residents within 4 miles of the site, and the nearest residential dwelling is approximately 0.4 miles from the site (3,4,26).

Areas within 4 miles of the TAMCO facility provide habitat for the San Diego Horned Lizard (*Phrynosoma coronatum blainvillii*). The San Diego Horned Lizard is a category 2 species that is not currently under review as to its federal endangered or threatened status (27,28).

3.4.3 Soil and Air Conclusions

Contaminant concentrations in sources available to the soil or air pathways are greater than three times background concentrations but do not exceed health-based benchmarks. Because of the limited access and the relatively small population in the vicinity of the site, both the soil and air pathways are of minimal concern.

Table 3

Residential Population within 4 Miles of TAMCO

Distance from Site (miles)	Population
0 - 0.25	0
0.25 - 0.50	538
0.50 - 1.0	0
1 - 2	739
2 - 3	8,322
3 - 4	27,373
Total	36,972

4.0 Emergency Response Considerations

The National Contingency Plan [40 CFR 300.415 (b) (2)] authorizes the Environmental Protection Agency to consider emergency response actions at those sites which pose an imminent threat to human health or the environment. For the following reasons emergency actions do not appear to be necessary for this site:

- Wastes located on-site currently have not migrated off-site.
- The TAMCO site is surrounded by a fence which prevents public access.
- The site is located in an industrialized area with only 538 people living within 1 mile of the site.

5.0 Summary

The TAMCO site is an active steel minimill that uses scrap metal to produce steel reinforcing bar (rebar). During the production of the rebar, wastes generated include a nonhazardous slag and hazardous baghouse waste. The baghouse waste is classified as a Resource Conservation and Recovery Act (RCRA) waste (K061).

The TAMCO site is located at 12459 Arrow Highway in Rancho Cucamonga, San Bernardino County, California. The geographical coordinates for the site are Latitude 34° 05' 37" North and Longitude 117° 31' 57" West. TAMCO is located in Township 1 South, Range 6 West, Section 8. Land use in the vicinity of the site is principally industrial with some nearby agricultural and residential areas.

Prior to 1956 the TAMCO site was used for agricultural purposes. In 1956 the American Pipe and Construction Company built a melt shop for the production of steel billets that were shipped off-site for processing. In 1982 a rolling mill was constructed on the site to produce reinforcing bar (rebar). Currently, rebar and steel billets are produced on-site, and non-hazardous slag and baghouse waste are generated.

The TAMCO site encompasses approximately 60 acres, including an access road. The site is virtually flat and contains an office building, a furnace building, a baghouse, a rolling mill, maintenance shops, cooling towers, rail spurs, and storage yards. URS has identified three sources associated with the TAMCO site where hazardous materials or hazardous wastes are present: the slag pile, the radioactive baghouse waste, and the stabilized soil.

The slag pile is the largest potential source of contamination on-site. It is a pile of grayish material located in the northwestern portion of the TAMCO site. The slag pile is approximately 250 feet long by 100 feet wide and up to 25 feet in height. Based on a 1993 investigation of the slag pile by Mittelhauser Consultants, a layer of what appears to be baghouse waste disposed of on-site is incorporated within the slag pile. Samples collected from baghouse wastes and analyzed for total metals revealed levels of cadmium that exceed Reference Dose Screening Concentrations for soil contaminants. Analysis also revealed concentrations of cadmium, chromium, lead, nickel, and zinc greater than three times background concentrations. Samples collected from slag materials revealed concentrations of chromium and lead greater than three times background concentrations.

The groundwater pathway is the primary pathway of concern at the TAMCO site because groundwater is used extensively as a source of drinking water. There has not been an observed or projected release to groundwater. An observed release is when the chemical analysis of an environmental sample from a site is found to be three or more times above the background concentration, and some portion of the release is attributable to the site. Based on the depth to groundwater and the mobility of substances on-site, a release to groundwater is not expected.

The following are the Hazard Ranking System factors pertinent to this site:

- There is no documented release of contaminants attributable to the TAMCO site to groundwater beneath the site.
- The site is located in an industrialized area with approximately 538 people living within 1 mile of the site.
- Groundwater wells located within 4 miles of the site supply drinking water to an estimated 25,203 people.

REMEDIAL SITE ASSESSMENT DECISION - EPA REGION IX

Site Name: TAMCO **EPA ID #:** CAD982361404

Alias Site Names:

City: Rancho Cucamonga **County or Parish:** San Bernardino County **State:** CA

Refer to Report Dated: January 4, 1994 **Report Type:** Preliminary Assessment

Report developed by: URS Consultants, Inc.

DECISION:

☒ **1. Further Remedial Site Assessment under CERCLA (Superfund) is not required because:**

☒ 1a. Site does not qualify for further remedial site assessment under CERCLA (Site Evaluation Accomplished - SEA)

☐ 1b. Site may qualify for further action, but is deferred to: ☐ RCRA ☐ NRC

☐ **2. Further Assessment Needed Under CERCLA** 2a. (optional) Priority: ☐ Higher ☐ Lower

2b. Activity Type ☐ PA ☐ ESI ☐ SI ☐ HRS evaluation

☐ Other_____

DISCUSSION/RATIONALE: No evidence of release of hazardous waste.

Report Reviewed and Approved by: J. Johnson **Signature:** J. Johnson **Date:** 6.21.94

III. Identify the operation for which you are requesting a variance and reasons for request.

Baghouse dust collection from Steel Manufacturing. The waste classified as KO61 waste is currently is currently a Hard Hammer Waste: The three (3) disposal sites meeting the minimum technological standards utilized by TAMCO all have limited capacities for the acceptance of KO61 waste, thus disposal is based on "available space only" status, resulting in varying degrees of difficulty in regards to TAMCO's consistent conversancy to the less than 90 day generator on-site storage parameters.

SUPPORTING DOCUMENTATION FOR VARIANCE APPLICATION

1. On-site Waste Generator.

2. Waste is stored less than 90 days from date of generation.

3.
   a. 15, 20, and 40 cubic yard Roll-Off Boxes.
   b. Roll-Off boxes are constructed of steel.
   c. Roll-Off boxes are designed to prohibit spillage of contents. They are also lined with 6 mil polyethylene liners and are sealed and locked to prevent tampering of contents.
   d. See attached topographic map.
   e. M-1 and Heavy Industrial.

4.
   a. The baghouse waste is classified as:
      i KO61 - Emission control dust from the primary production of Steel in Electric Furnace by 40 CFR Section 261.32 (EPA/RCRA).
      ii Hazardous Waste Solid ORM-E NA 9189 per 49 CFR 172.101 (DOT).
      iii Baghouse Waste by Title 22, Section 66680 of the CCR.
   b. 8000 tons per annum.
   c. Waste is an inorganic product produced from the manufacturing of steel. Because the waste is neither acidic or basic, there is no reaction with the Roll-Off Boxes of Polyethylene Liners.
   d. See attached analysis.

5.
   a. Baghouse Waste from Dust Collector during the manufacture of steel.
   b. Waste is collected in loading hopper and off-load into 15, 20 and 40 cubic yard Roll-Off Boxes.
   c. No On-Site treatment is performed.

d. Waste is disposed at the following E.P.A. permitted disposal sites that meet the minimum technology criteria for "Soft Hammer" wastes:

i ENVIROSAFE SERVICES OF IDAHO (ESI)
IDD 073114654

ii UNITED STATES POLLUTION CONTROL, INC. (USPCI)
UTD 991301743

iii CHEMICAL WASTE MANAGEMENT, KETTLEMAN HILLS
CAT 000646117

6.

a. Entire plant is guarded 24-hours per day, 7 days a week by plant security. The hazardous waste area is one of the locations that is checked frequently.

The entire TAMCO plant is totally fenced in and it is locked in the evening. The only ingress is by the Security Office which is manned 24-hours per day, 7 days a week.

b. All personnel in manufacturing and production undergo training that includes:

i 20 CFR Hazardous Communication Standard

ii Prop 65 Notification (safe Drinking Water and Enforcement Act)

iii Personal Protection Training

iv Hazardous Waste Training and all other Federal, State and Local Regulations, Acts and Agencies that impact the production and hazardous waste management protocols and procedures at TAMCO.

7.

a. Waste in Underground Storage Tanks at TAMCO is not involved and have no need for variance at this time. It is a separate wastestream.

b. TAMCO is not a transfer facility.

Mr. William J. Nelson
Tamco Steel
P.O. Box 325
Etiwanda, CA 91739

Dear Mr. Nelson:

THE TREZEK GROUP, INC. - POLYSILICATE TREATMENT OF HEAVY METAL CONTAMINATED SOIL, AT THE TAMCO STEEL PLANT, RANCHO CUCAMONGA

The Toxic Substances Control Division, Alternative Technology Section has reviewed the information submitted on your behalf by The Trezek Group, Inc., to support a request for a variance from the Hazardous Waste Facility permit requirements of Chapter 30, Division 4, Title 22, California Code of Regulations (CCR). These submissions include a variance application package dated July 13, 1988, and a health and safety plan dated July 18, 1988. The variance is to demonstrate the efficacy of a full-scale polysilicate process applied to excavated soil contaminated with heavy metals. The demonstration will be located at the Tamco Steel plant in Rancho Cucamonga.

The variance request is based primarily on the following supportive facts:

1. The proposed stabilization process has previously been demonstrated effective in a pilot test on a representative sample of the same material that will be treated under this variance.

2. Demonstration of the treatment process will proceed within 30 days from the date of issuance of this variance and will be completed within 90 days. The process will be used to stabilize heavy metals in a soil matrix. A maximum of 4,000 cubic yards of contaminated soil will be treated during the demonstration.

3. The purpose of the demonstration is to obtain data from a full-scale test to demonstrate and verify that the proposed treatment process is capable of dependably reducing soluble metal concentrations in the test site soil so as to render them nonhazardous.

4. The soil to be treated for this demonstration contains three metals at average concentrations which exceed their respective STLC values: e.g., lead (135 mg/l), zinc (1,860 mg/l), and cadmium (5.7 mg/l).

P-B

Based on the authority granted to the Department in Section 25143 of the Health and Safety Code and in Section 66310(a)(1) of Title 22 of the CCR, we find the heavy metal contaminated soils to be insignificant as a potential hazard to human health and safety and livestock or wildlife because of its low concentration, and chemical and physical characteristics. Therefore, the Department of Health Services, Toxic Substances Control Division, hereby grants a variance from the hazardous waste facility permit requirements for the limited term demonstration project you plan to conduct, subject to the following conditions:

1. All other federal, state or local statutes, regulations, ordinances, requirements, or limitations which are applicable to your project shall be followed.

2. The data from all measurements, and the results of all analytical procedures including those not required by this order, and copies of all other relevant data are to be forwarded to the following sections of the Division:

   Alternative Technology Section
   Toxic Substances Control Division

3. The project will be installed and operated, and environmental samples taken and analyzed according to the Demonstration Protocol contained in Attachment A.

4. The contact for the Department will be Ken Smarkel at (916) 324-1942. The Department reserves the right to change the contact for the Department by either telephone or written notification.

5. The Department reserves the right to have personnel present at any time during the demonstration and to take or split samples of soil. The Department contact should be notified at least 72 hours before the demonstration project begins.

6. The Department contact shall be notified within 24 hours by telephone and within 72 hours in writing if any emergencies, hazardous waste releases, or lost time accidents occur during the operation of the treatment process described in the application. Also, 24 hour notification is required if any changes in the treatment process occur.

7. This variance shall apply only to the treatment process described in the submitted materials referred to above.

8. The demonstration test will be terminated at any time if the Department's representative believes that the health or safety of the participants or the general public is endangered or if the demonstration deviates from the approved workplan.

9. The Department reserves the right to modify or revoke this variance for any reason and at any time.

10. A brief final report of the results of the treatment process and the information obtained during the demonstration will be submitted to the Department contacts within one month of the conclusion of the demonstration activities.

11. This variance expires 120 calendar days after the date of issuance but may be renewed or extended by this Department upon written request.

12. The on-site storage of any hazardous wastes generated by the demonstration activities or remaining on-site following the demonstration will not exceed 90 days.

Sincerely,

Alex R. Cunningham

Project Title
Demonstration of heavy metal stabilization process

Project Location - Specific
Tamco, Inc.
Rancho Cucamonga Plant

Project Location - City
Rancho Cucamonga

Project Location - County
San Bernardino

Description of Nature, Purpose, and Beneficiaries of Project
Treatment of approximately 5,000 tons of heavy metal contaminated soil to stabilize the soluble metal fraction. Process has already been demonstrated effective on a 100 ton sample of the same materials. This project will demonstrate the effectiveness of the technology at a full-scale site remediation.

Name of Public Agency Approving Project

Signature Date Title

Revised August 1987

ATTACHMENT A

TEST PROTOCOL

All contaminated material to be treated will first be seived to remove the 0.5 in + nodules of previously treated K061 waste. The K061 waste will be separately stockpiled for later shipment and disposal at a Class I, hazardous waste landfill.

Sample aliquots of equal volume shall be obtained every thirty minutes from the belt feed before any chemical addition and at the treated soil discharge belt. The before treatment and after treatment aliquots shall be separately composited to generate two daily, composite samples one each for both before and after treatment. Two subsamples from each composite shall be used for analysis. A third subsample from each composite shall be sent to a second laboratory for a quality assurance check. Each subsample shall be analyzed for total and extractable (WET test) copper, lead, zinc, cadmium, and nickel as defined in Section 66700 of Title 22, CCR at a laboratory certified by the Department for these analyses.

A daily log shall be maintained for the duration of the project which includes total before treatment weight of processed material, K20 feed rate, water feed rate, and cementatious material feed rate. This log shall be submitted with the final project report.

Treated material from each day shall be stockpiled individually and labeled (signed) pending the results of laboratory analysis.

SO. CALIFORNIA SECTION
TOXIC SUBSTANCES
DEPT. OF HEALTH SER.

May 14, 1987

Department of Health Services
107 South Broadway
Room 7011
Los Angeles, CA 90012-4601

Attention: Mr. John Hinton
Toxic Substances Control Division

Dear Mr. Hinton,

Ameron Steel and Wire Division, located in Etiwanda, California, is prepared to purchase and install a "Ferrous Sulfate Heptahydrate Recovery System" which processes "spent" or "waste" sulfuric acid pickle liquor. We need to know if this process requires permitting by the Department of Health Services as a "Hazardous Waste Treatment Facility", or if Ameron would qualify for exemption as a "recycler". Also, are there any other Federal, State, or Local agencies that we should contact for permitting, etc?

Ameron Steel and Wire Division is a manufacturer of carbon steel wire and wire products. We purchase hot-rolled carbon steel rod, which must be "descaled" prior to our "cold-drawing" operations. "Descaling" is achieved through pickling in a solution of dilute sulfuric acid. When the iron content of the pickling solution reaches a saturation level of about 10%, the solution is no longer effective and must be disposed of. The system which we intend to purchase will process 100% of this "spent pickle liquor", producing two by-products;

1. Ferrous sulfate heptahydrate, a marketable commodity, and

2. Recovered dilute sulfuric acid, which will be 100% reused at our facility.

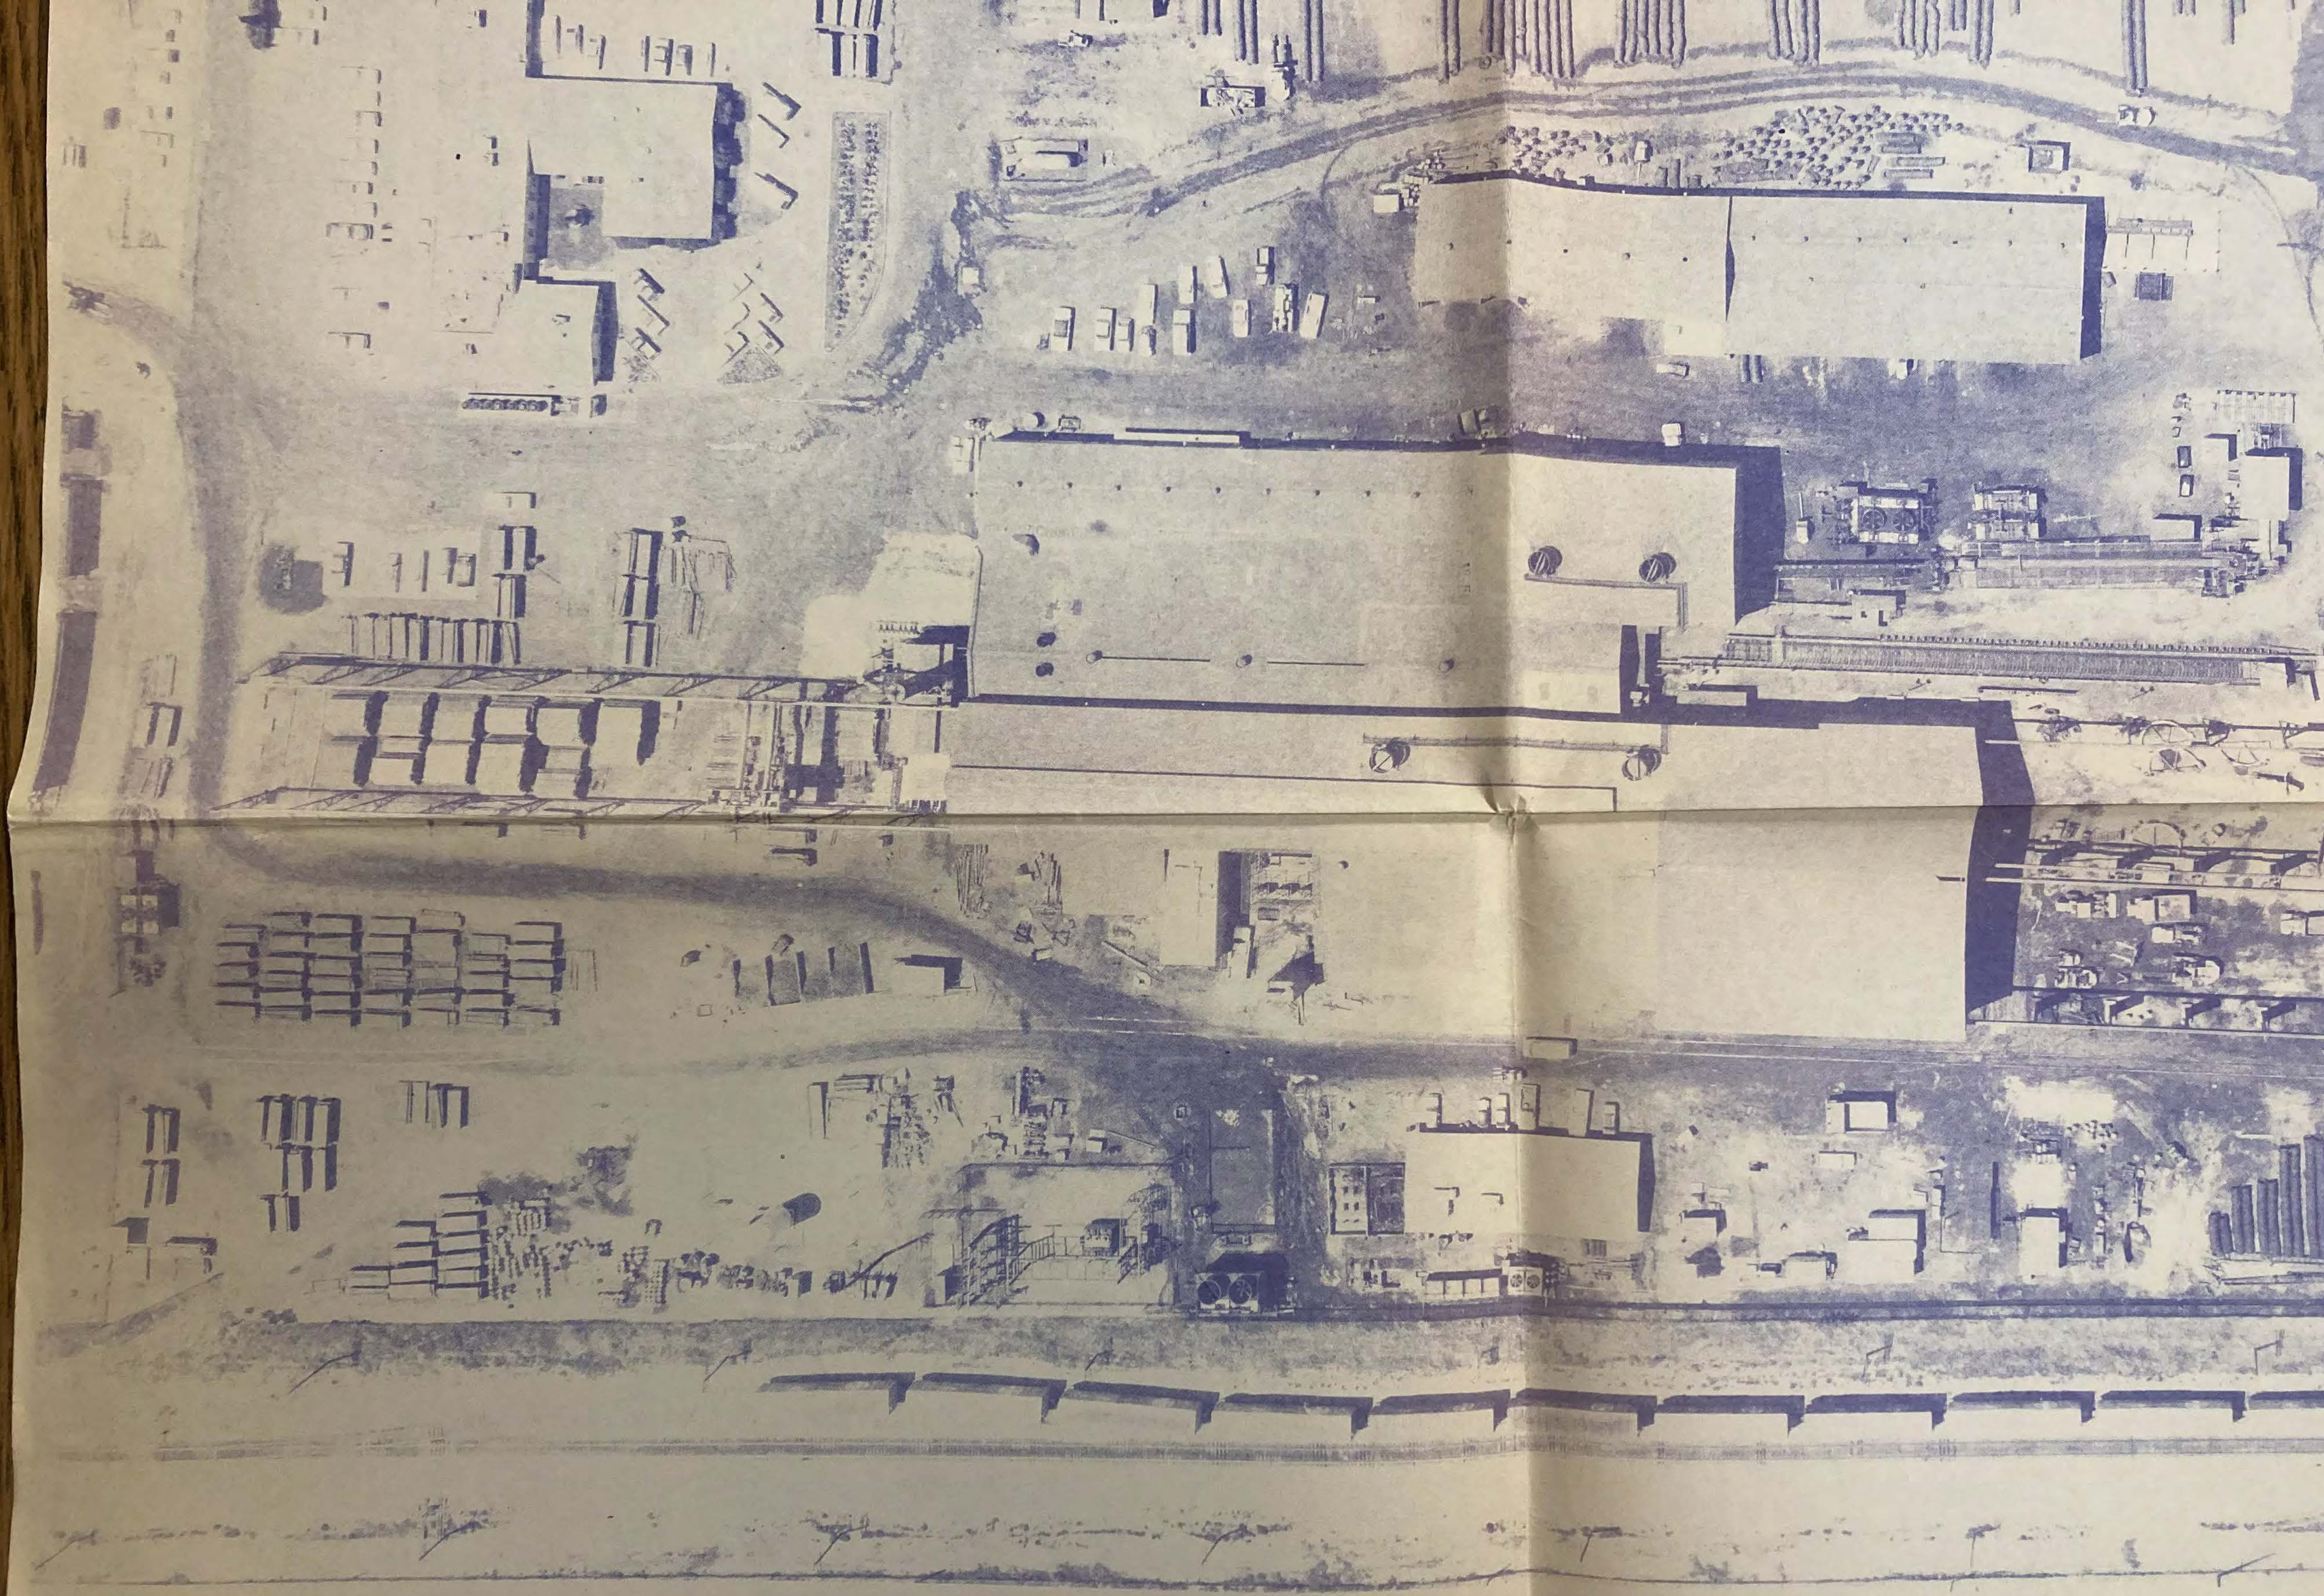
No disposable waste, either hazardous or non-hazardous will be generated from this recovery system.

Ameron believes that this program is in direct compliance with EPA's directive to reduce the volume and toxicity of waste generated, in an economically practical manner, which minimizes the present and future threat to human health and the enviroment.

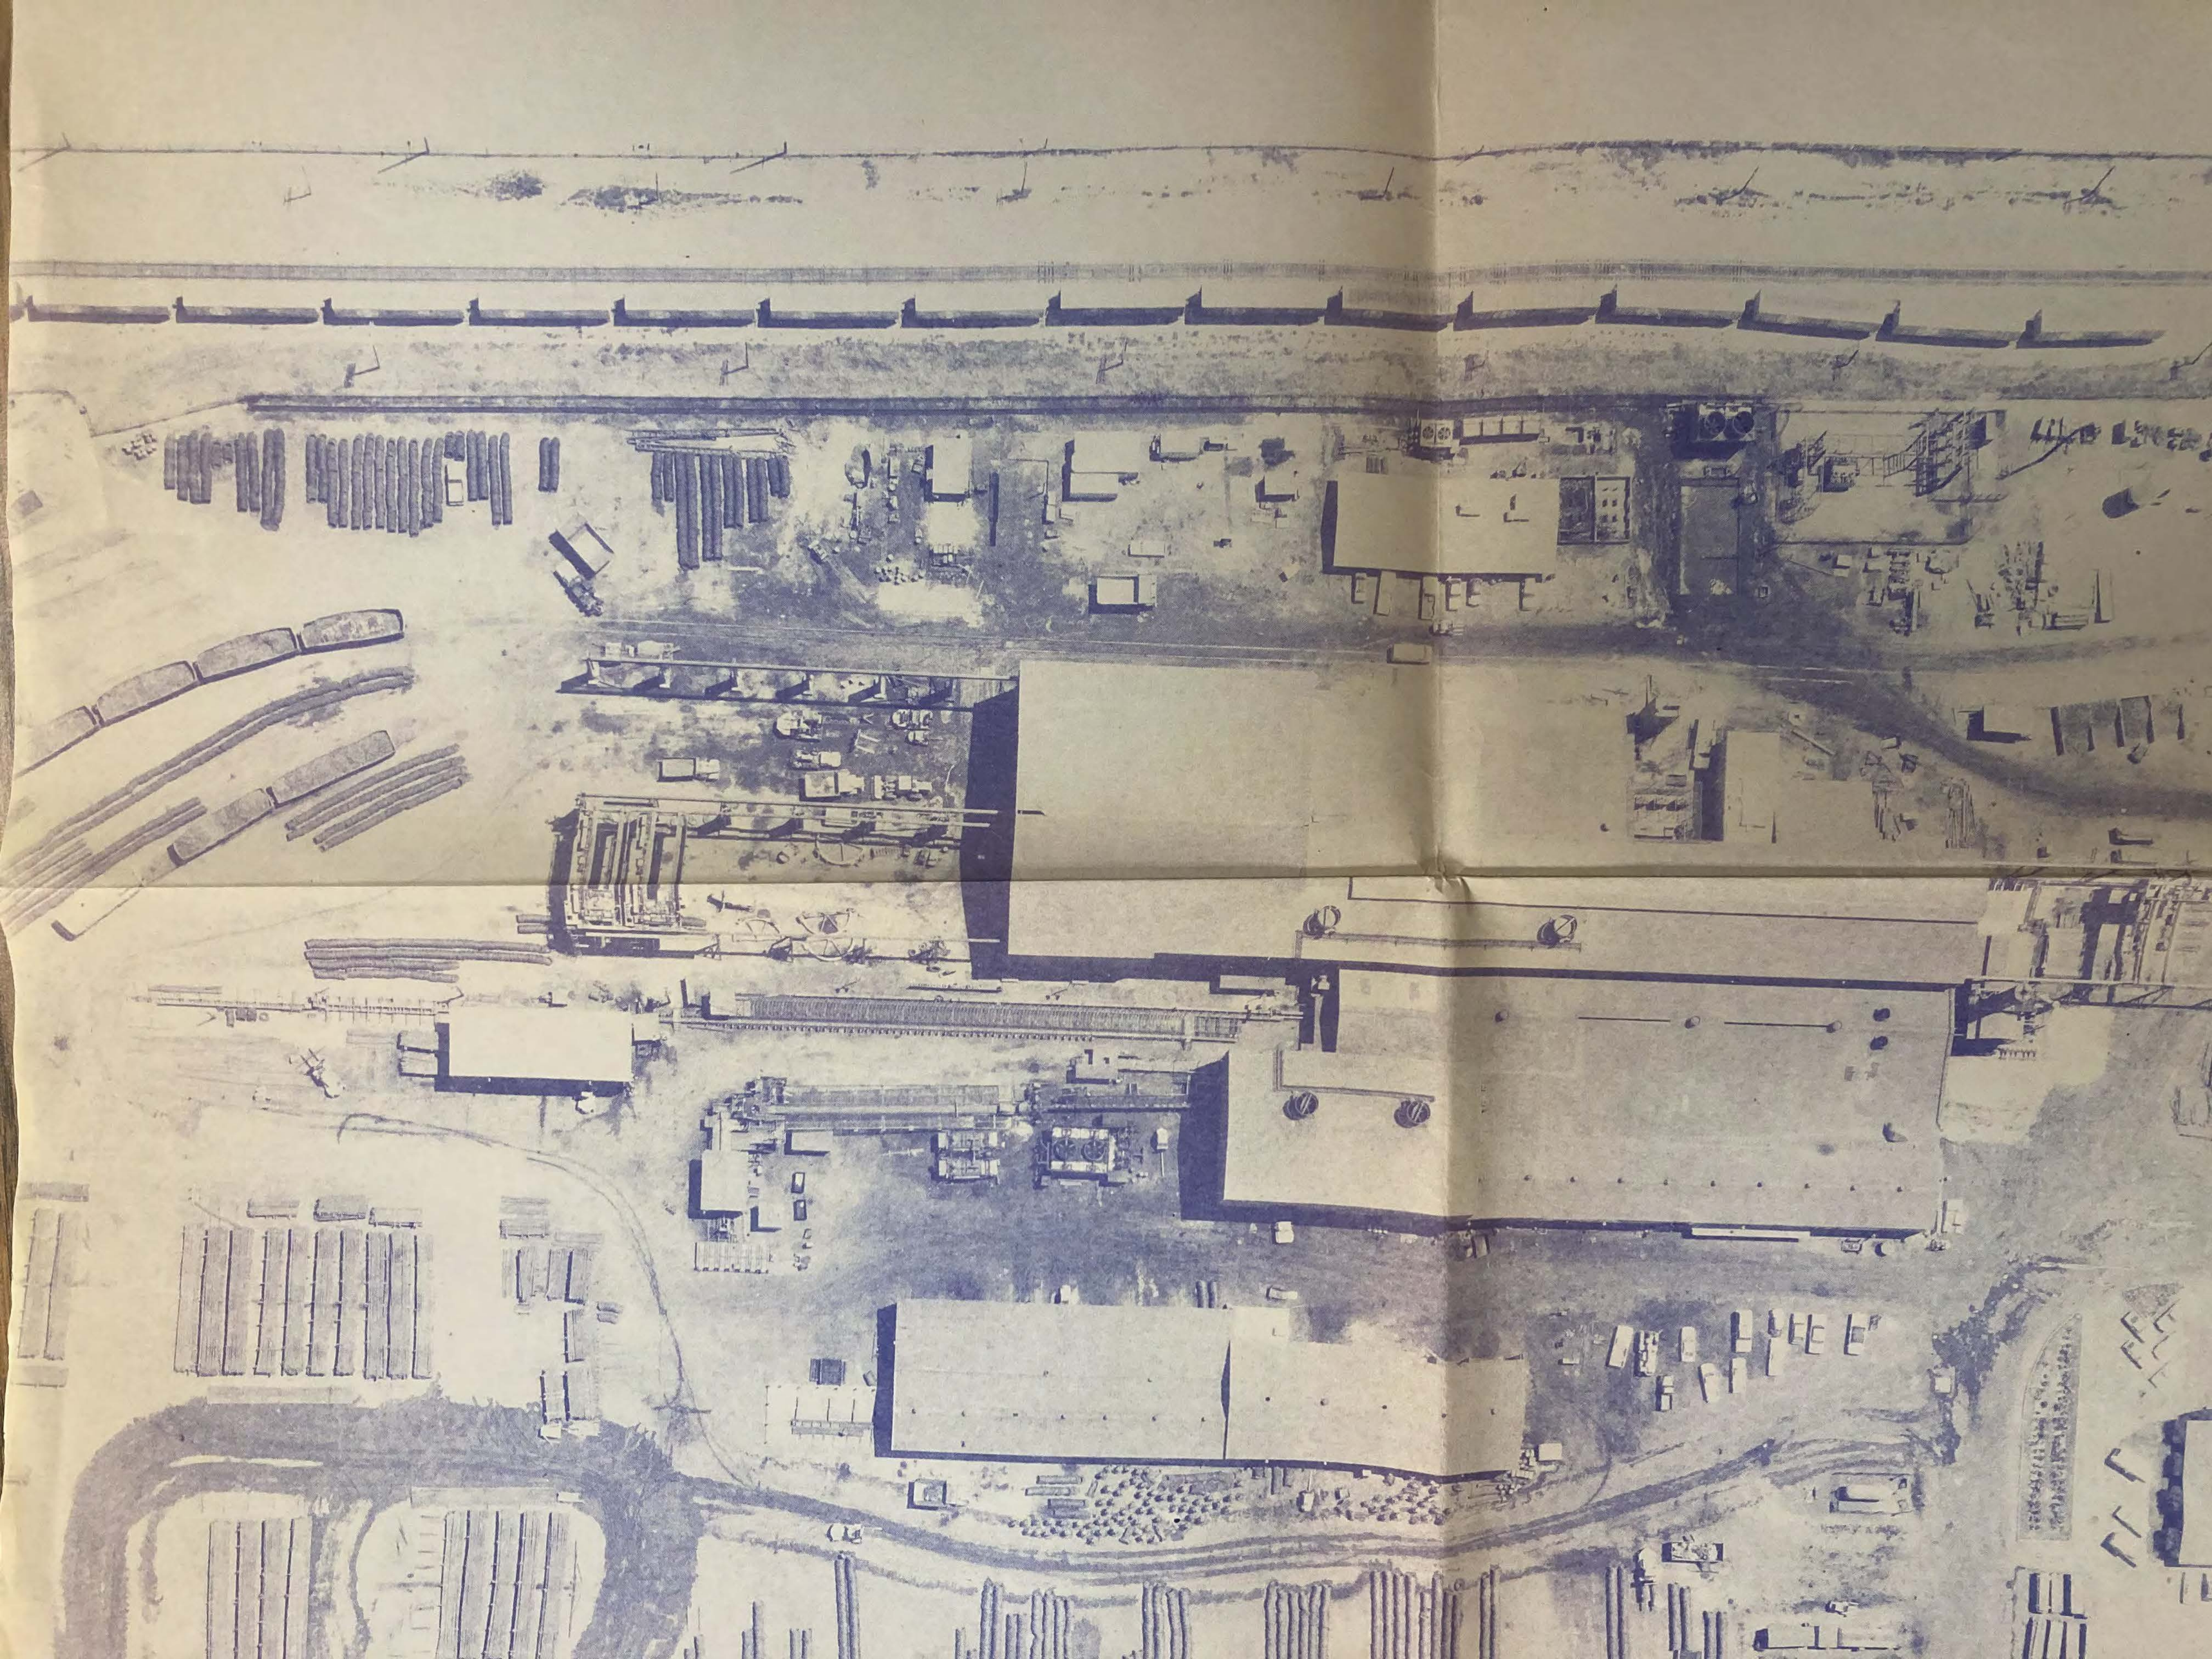
Letter sent 12/15/87 -
Ken Chang -
I told him he needs to notify our
under 40 CFR 261.6(c)
A.D.

We are prepared to issue a purchase order to begin construction of the recovery unit, with installation tentatively scheduled for the first quarter of 1988. We will await your response before proceeding as assurance that our actions are in compliance with Federal and State Regulatory Agencies.

Should you have any questions or require additional information, please do not hesitate to contact me at Ameron Steel and Wire Division, (714) 899-1723.



Sincerely,



Frank E Sanske

Site History

Ameron, Inc. currently owns the property has sold the Steel and Wire Manufacturing Operation to Industrial Wire Products, Inc., the current operator, and selling the land to IWP. The operation at the site consits of manufactring wire in mills inside the large wire mill building in the western portion of the facility using steel rod manufactrued from the steel mill facility (adjacent to the south of the property) from the time the Wire Mill Building was constru- cted (in early 1960s) until sale to the present operator. The east portion of the facilty was used from the mid 1960s to the late 1970s for the storage, processing and staging of scrap metal feed stock. Years of operation: Ameron - 1962 to 1990 IWP: - 1990 to Present date

Site History

The Site is a vacant property located at 8822 Etiwanda Avenue in the City of Rancho Cucamonga. The 11.82-acre property is located at the northwest corner of the Burlington Northern Santa Fe Railway and Etiwanda Avenue, in a heavily industrial land use area. The Site is currently vacant with various paved asphalt, concrete, and unimproved dirt surfaces. It historically consisted of agricultural land, a railroad spur (which currently still exists), and a single-family residence from 1938 until 1966. Automobile and scrap metal recycling operations began at the site in 1975 and continued to operate under various tenants until 2017.

The Site is planned for a redevelopment project, consisting of construction of a new ground-up tilt-up concrete 56,560 square foot (SF) industrial transportation facility, utilized for office space, storage, freight handling, shipping, and trucking services. The new building will consist of 10,000 SF of office space, 46,560 SF of warehouse space, 101 dock positions/doors, and approximately 144 trailer parking stalls and 88 auto parking stalls on-site. The development will include the construction of landscaping, street, utility, and circulation improvements.

In a letter dated February 14, 2018, DTSC provided comments on the Initial Study/Mitigated Negative Declaration for Design Review (MND) submitted by Dedeaux Properties. DTSC requested further evaluation of soil and soil vapor conditions at the Site to evaluate whether the former operations and features and historical uses of chemical or hazardous uses of chemical or hazardous materials have potentially resulted in environmental impacts to the Site.

Dedeaux agreed to perform an environmental investigation to address DTSC's stated concerns. On May 3, 2018 DTSC and Dedeaux entered into a Voluntary Cleanup Agreement (VCA) (Docket Number HSA-FY17/18-111) for DTSC's oversight of the environmental investigation and/or cleanup at the Site.

Previous Phase I Environmental Site Assessments were provided to DTSC as background information. A scoping meeting conference call was held on May 10, 2018 between for the project to discuss the scope of environmental investigation.

A Site Assessment Workplan (Ramboll, July 2018) was prepared for the Site with proposed environmental investigation activities to evaluate potential impact to soil and soil gas from past operations. DTSC approved the Workplan on August 2, 2018 for implementation. Preliminary data were provided to DTSC during the implementation of the Workplan that revealed elevated concentrations of metals, total petroleum hydrocarbons (TPH) and polychlorinated biphenyls (PCBs) in soil samples. Additional samples were collected to define extent of soil contamination. DTSC issued a letter on October 12, 2018 requesting a Preliminary Environmental Assessment (PEA) Report summarizing the findings of Site investigation.

A PEA Report was provided to DTSC (Ramboll, February 2020) that included a summary of excavation activities and confirmation sampling conducted at the Site. Residual concentrations of metals and PCBs left in place were below their established commercial/industrial screening levels, except for a few locations along the northern, western, and southern property lines. Clean imported soil was used to backfill the Site. The PEA Report included a human health risk assessment (HHRA) for an evaluation of on-site concentrations of contaminants left in place. The HHRA evaluation confirmed that residual concentrations were below appropriate risk thresholds under a commercial/industrial land use scenario. DTSC approved the PEA Report on August 5, 2020 and concurred with its conclusion that the Site was acceptable for its intended use provided a Land Use Covenant (LUC) was executed between DP Etiwanda, LLC and DTSC, restricting the property to commercial/industrial land use.

A subsequent limited site investigation was conducted at previously identified areas along the property boundary to determine extent of lead and/or PCBs contamination in shallow soil. Results of the limited investigation were summarized in the Limited Supplemental Site Investigation Report to Delineate Residual Soil Impact Along the Property Boundary (Ramboll, September 2020). Based on the limited investigation findings, residual concentrations of lead along the southern and northwest boundary were localized and slightly above the commercial/industrial screening level. PCBs detected in one area along the western boundary were within a risk management range and deemed acceptable for the Site’s commercial/industrial use. No additional investigation or cleanup is required at the Site for its current intended use. A LUC between DP Etiwanda, LLC and DTSC was executed on August 19, 2020 and recorded with the San Bernardino County Recorder’s Office on October 22, 2020. The LUC will ensure Site use is restricted to commercial/industrial. The LUC will prohibit certain Site uses including residential, hospital, and school; as well as require annual inspections and five-year reviews to ensure the LUC is still protective. The LUC will remain in place as long as concentrations of constituents of concern exceed limits appropriate for unrestricted Site use. The LUC requires a soil management plan in the case of soil disturbance at the four areas along the property boundary where PCB and/or lead exceed commercial/industrial screening.

In 1996, SCE implemented a water quality monitoring program in response to a final judgment pursuant to a Stipulation, from the Superior Court of California, LA County, Number 12121 02/01/1995. The Stipulation alleged that Edison had stored hazardous wastes in non-permitted wastewater retention basins at their electrical generating stations in southern CA. Edison agreed to clean close the basins according to Chapter 15 of Title 22, CCR. The remainder of the property will be evaluated under corrective action.

As of 7-12-2018: The retention basins have been closed as of 2011. RCRA Facility Investigation is taking place at the moment, Inland Empire Utilities Agency (IEUA) has been determin be the property owner a portion of the facility and is proactive in expediting the corrective action for their portion of the facility. A RCRA Facility Investigation is underway. Comments have provided to both SCE and IEUA regarding the investigation.

Facility History

Facility Description / History:
Southern California Edison facilities are located in Los Angeles County. In the 1980s, the facilities generated and then stored hazardous waste in two surface impoundments.

Permitting Regulatory Description / History:
Southern California Edison facilities applied for a RCRA Permit. However, DTSC did not issue the facilities a permit and were exempted from Hazardous Waste RCRA Permit fee requirements. The facilities were then granted an Interim Status documented on March 30, 1981. Then granted a Variance Status on January 29, 1987, valid for 180 days, allowing the fa to perform on-site treatment for their liquid hazardous waste.

On February 1, 1995, a Final Judgement Pursuant to Stipulation, court order No. BC121219, was issued to close the Southern California Edison facilities: Alamitos, Cool Water, El Segu Etiwanda, Huntington Beach, Highgrove, Long Beach, Mandalay, Ormond Beach, Redondo Beach, and San Bernardino. The facilities had violated Hazardous Waste Laws and received penalties.

In response to the court order, the Southern California Edison (SCE) performed the investigation and activities to close two wastewater retention basins that had operated without a perm other form of authorization from the DTSC. The facilities were passed onto Corrective Action for closure. On December 21, 2011, EPTC-Etiwanda received a closure certification for thei closed units.

Records searched include permit database systems for facilities with permits as hazardous waste generators, hazardous materials handlers, and/or underground storage tanks, including inactive and/or out of business records; logs of permits issued for the removal and/or installation of underground storage tanks; records and databases pertaining to illicit dumping and releases; records of non-permitted facilities; sites undergoing remediation for contaminated soil and/or groundwater; and incidents responded to by the hazardous materials emergency response team. Records searched date back to the mid-1980's.

Records consist of 41 file(s), approximately 60" thick, combined. You may contact us at hazmatrecords@sbcfire.org to request and schedule a file review appointment to view the file(s).

RE: Underground Storage Tank Removal

Dear Ms. Holst:

The two remaining 50,000-gallon underground storage tanks (USTs) are scheduled to be removed on Thursday, November 18th at 1:00 pm. The removal will be handled in the same manner as the other two USTs that were removed on 11/04/93. This schedule is contingent, of course, on the weather conditions.

If there are any questions, please feel free to contact me at (909) 899-0660.

Environmentally,

Leonard E. Robinson
ENVIRONMENTAL/SAFETY MANAGER

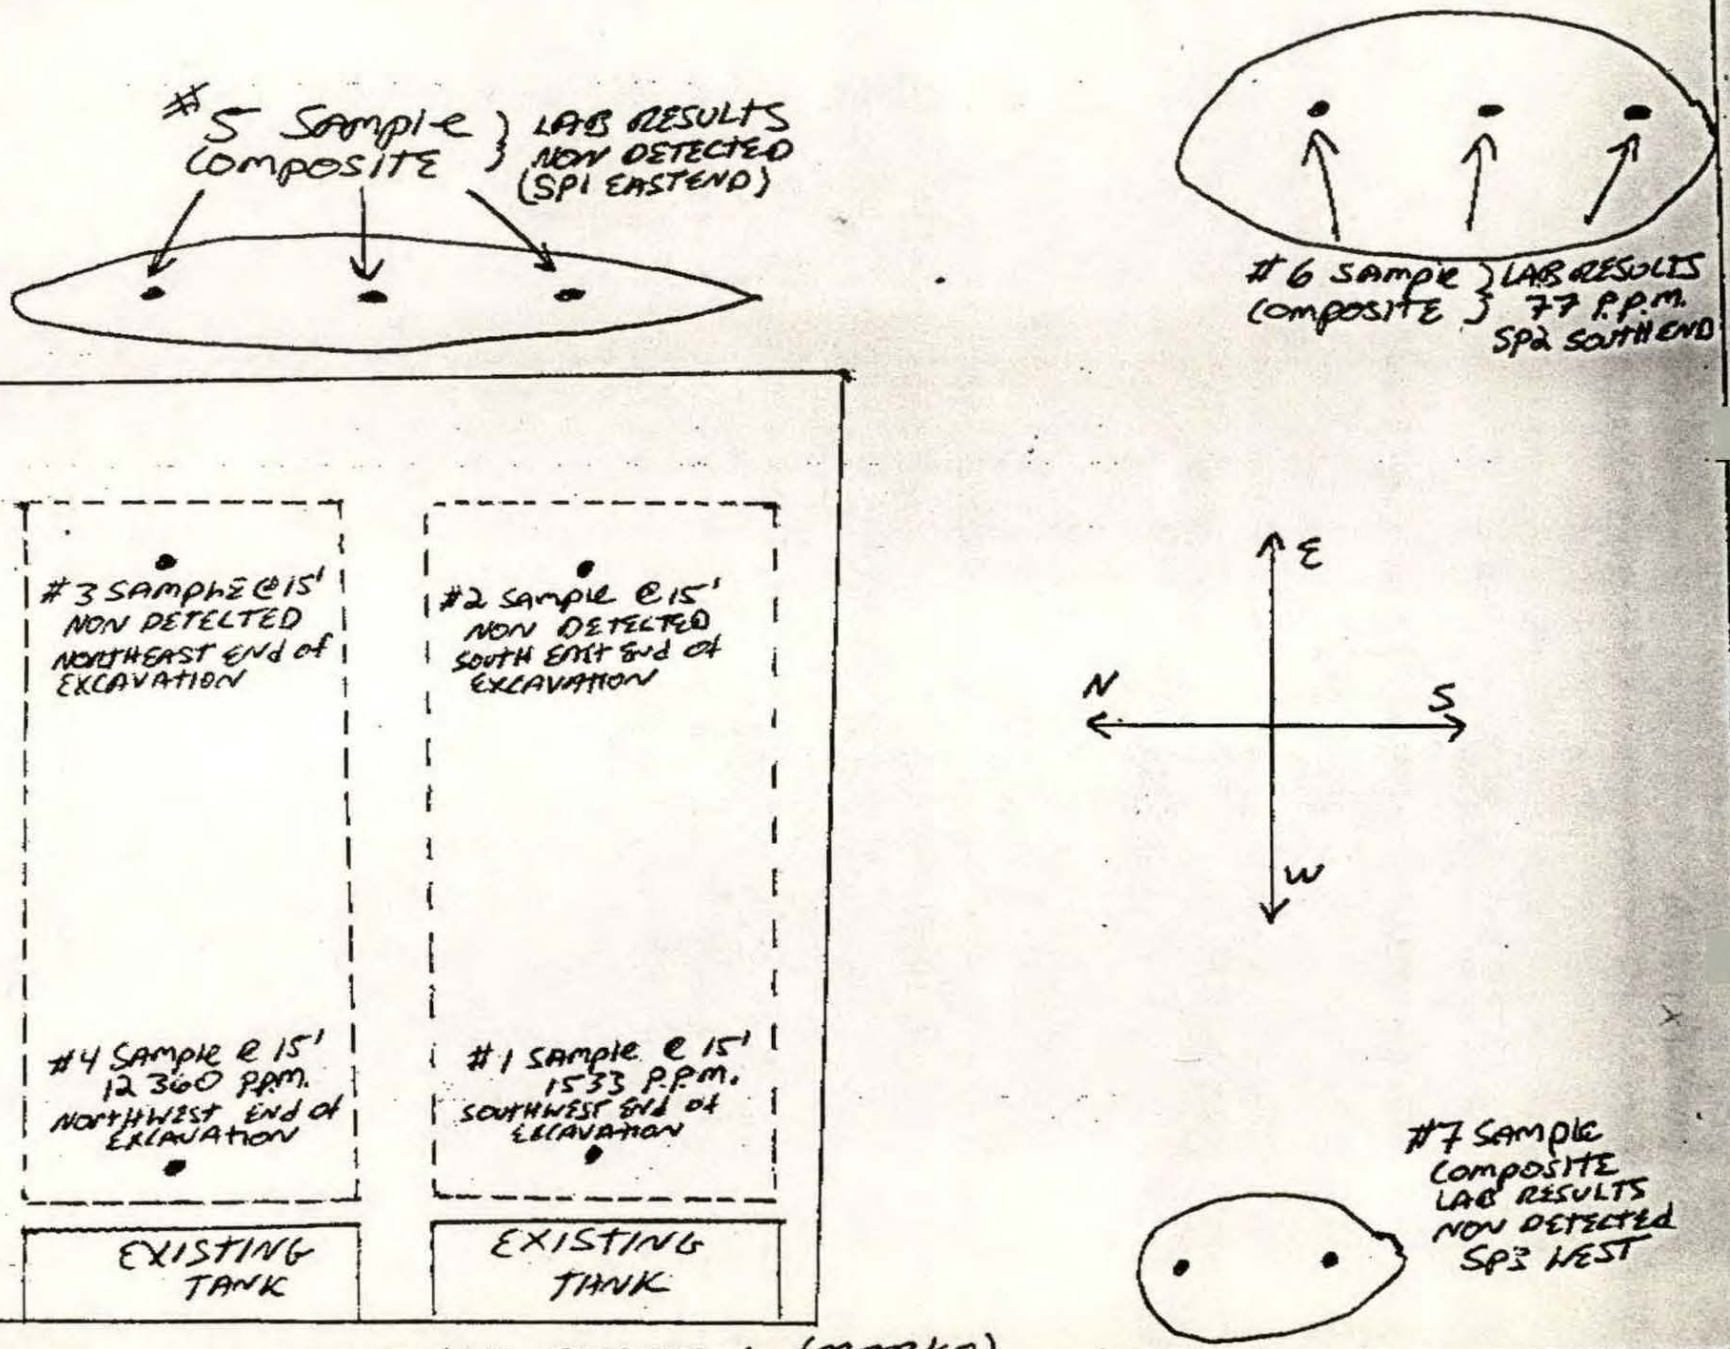
FAX TO: Lisa Holst
SAN BERNARDINO COUNTY DEPARTMENT OF ENVIRONMENTAL HEALTH SERVICES



FROM: Leonard E. Robinson
TAMCO

SUBJECT: Soil Samples for 11/05/93 UST Removal

Please find following, the analytical soil sampling results of the above-referenced UST removal. The east end of both USTs are clean. The west end needs to be excavated.

We would like to backfill the east end of area where USTs used to be (approximately 50% of tank length east to west). This would allow access for our forklifts to continue to load billets into the Roll Mill while the other USTs are being removed. The contaminated soil will be excavated until an acceptable level can be reached. That area is scheduled be excavated anyways to allow the other USTs to be removed. At the same time any contamination from the other USTs could potentially be excavated also.

If there are any questions or more information is required, please feel free to contact me at (909) 899-0660 extension 203. We will not do anything until we hear back from you.

This letter is to inform you that Gibson Environmental has accepted your material for recycling.

Gibson certifies that the material received on the manifests indicated below has been properly treated and recycled.

Date	Manifest	Movement	Quantity	UOM
11/05/93	13846	00088343	28	CYD
11/05/93	13847	00088342	27	CYD

If this information does not agree with your records, please notify us within ten days so we can resolve any discrepancies.

Generators, know your wastestream. Gibson Bakersfield is only permitted to accept the following wastes that are varying combinations of oil, water and solids under California Waste Codes 221, 222, 223, 241. In addition, Gibson at Bakersfield may accept waste codes D004 through D043.

For information as to approved codes for Gibson's Wilmington and Redwood City facilities, please call (800) 582-3935.

This notice is required by the Department of Toxic Substance Control.

YELLOW: GENERATOR RETAINS

REMOVAL OF FOUR 50,000-GALLON

UNDERGROUND STORAGE TANKS

AT TAMCO

REMOVAL OF FOUR 50,000-GALLON UNDERGROUND STORAGE TANKS AT TAMCO

BACKGROUND

In 1975, TAMCO installed four 50,000-gallon Buehler underground storage tanks (UST)s to store #2 and #3 fuel oil. The fuel oil was to be used as an alternative fuel for the BRICKMONT Re-Heat Furnace. The BRICKMONT Re-Heat Furnace was used to heat billets to an operating temperature of approximately 2100 degrees F prior to being converted into steel reinforcing bar. The Re-Heat Furnace, under normal conditions, was fueled by natural gas. However, in the event of curtailment of natural gas due to supply shortage, fuel oil could be used to keep billet production going.

In 1990, TAMCO replaced the BRICKMONT Re-Heat Furnace with the current ITAM Re-Heat Furnace. The ITAM can use either natural gas or propane; thus, eliminating the need for the fuel oil or the UST(s).

Initially plans for the UST(s) included decontamination and conversion into subterranean water-retention vessels for a proposed wastewater treatment plant. That plan was dropped when it was discovered that a Municipal Wastewater Treatment Plant was going to be built nearby.

After getting an extension from SAN BERNARDINO COUNTY DEPARTMENT OF ENVIRONMENT HEALTH SERVICES (SBDEHS) to remove the UST(s), TAMCO evaluated proposals from approximately 15 contractors. After reviewing the proposals it was determined that none was acceptable to the particular challenges of UST removal at TAMCO. It was decided that TAMCO had the resources to effect a safe and methodical UST removal. After meetings with the various agencies, TAMCO filed permit applications to remove the UST(s) as a builder owner. Permission was granted by:

SAN BERNARDINO COUNTY DEPARTMENT OF ENVIRONMENTAL HEALTH SERVICES (SBDHES)

CITY OF RANCHO CUCAMONGA FIRE PROTECTION DISTRICT (RCFPD)

CALIFORNIA OCCUPATION SAFETY & HEALTH (CAL/OSH)
SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (SCAQMD)
STATE CONTRACTOR'S LICENSING BOARD

It was determined that the four UST(s) contained a total of 52,000 gallons of fuel oil. The fuel oil was donated to the ORANGE EMPIRE RAILWAY MUSEUM in Perris, California for use as fuel in the antique locomotive. Once empty, the UST(s) were ready for removal.

The first set of UST(s) was removed on 11/04/93. The second set was removed two weeks later on 11/18/93. All of the UST(s) were manifested as Hazardous Waste and shipped to ERICKSON, INC. facility in Fontana to be decontaminated and cut in sections. Once decontaminated and sectioned, the UST(s) were shipped back to TAMCO as scrap for processing into steel reinforcing bar (rebar).

REQUIRED PERMITS

Subject: Administrative Opinion For Owner Builder Exemption

File No: 1764-93

Dear Mr. Robinson:

Your October 27, 1993, letter on the above referenced subject was referred to me for reply. During our phone communication on 10-28-93 you said your employer was a steel mill and wanted to remove their own underground fuel storage tanks. The City of Rancho Cucamonga had refused to issue permits unless a licensed contractor with a hazardous certification was performing the work.

The Contractors State License Board doesn't have jurisdiction over other government agency's acts or omissions. The Board may give administrative opinions on license law only. The legal obligations for the city or county regarding permits and business practices are provided by their legal department. Sections of the Contractors State License Law are listed for your review and reference.

7044. This chapter does not apply to any of the following:

(a) An owner of property, building or improving structures thereon, or appurtenances thereto, who does the work himself or herself or through his or her own employees with wages as their sole compensation, provided none of the structures, with or without the appurtenances thereto, are intended or offered for sale.

(b) An owner of property, building or improving structures thereon, or appurtenances thereto, who contracts for such a project with a subcontractor or subcontractors licensed pursuant to this chapter. However, this exemption shall apply to the construction of single-family residential structures only if four or fewer of these structures are intended or offered for sale in a calendar year. This limitation shall not apply if the owner of property contracts with a general contractor for the construction.

(c) A homeowner improving his or her principal place of

NOV 3 1993

residence or appurtenances thereto, provided that all of the following conditions exist:

(1) The work is performed prior to sale.
(2) The homeowner has actually resided in the residence for the 12 months prior to completion of the work.
(3) The homeowner has not availed himself or herself of the exemption in this subdivision on more than two structures more than once during any three-year period.

Section 7058.7 of the Business and Professions Code states in part that, "On and after January 1, 1992, a contractor shall not bid for the installation or removal of, or install or remove, an underground storage tank, unless the contractor has passed the hazardous substance removal certification examination developed pursuant to this section."

Under current Board policy, only those contractors holding one of the following classifications are properly licensed to contract solely for the installation and/or removal of underground storage tanks.

* General Engineering Contractors (A)
* Plumbing Contractors (C-36)
* Limited Specialty, Service Station Equipment Contractors (C-61, D/40)
* General Building Contractor (B) if a habitable structure is part of the project.

Based on the information that you have provided, it is my administrative determination that the owner builder is exempt from licensing and hazardous certification on this project under Section 7044 of the B & P code.

I have enclosed copies of Section 7044 and 7058.7 of the B & P Code.

I hope this information is helpful.

Sincerely,

Dale F. Stewart

Dale F. Stewart
License Classifications Deputy

Owner Doing Own Work or Having Employees With Wages as Sole Compensation; Owner Having Licensed Contractors; Improvement of Residence by Homeowner; Presumptions; Injunctions; Discipline; Violations of Sec. 7028

7044. This chapter does not apply to any of the following:

(a) An owner of property, building or improving structures thereon, or appurtenances thereto, who does the work himself or herself or through his or her own employees with wages as their sole compensation, provided none of the structures, with or without the appurtenances thereto, are intended or offered for sale.

(b) An owner of property, building or improving structures thereon, or appurtenances thereto, who contracts for such a project with a subcontractor or subcontractors licensed pursuant to this chapter.

However, this exemption shall apply to the construction of single-family residential structures only if four or fewer of these structures are intended or offered for sale in a calendar year. This limitation shall not apply if the owner of property contracts with a general contractor for the construction.

(c) A homeowner improving his or her principal place of residence or appurtenances thereto, provided that all of the following conditions exist:

(1) The work is performed prior to sale.

(2) The homeowner has actually resided in the residence for the 12 months prior to completion of the work.

(3) The homeowner has not availed himself or herself of the exemption in this subdivision on more than two structures more than once during any three-year period.

In all actions brought under this chapter, proof of the sale or offering for sale of any such structure by the owner-builder within one year after completion of same constitutes a rebuttable presumption affecting the burden of proof that such structure was undertaken for purposes of sale. Except as otherwise provided in this section, proof of the sale or offering for sale of five or more structures by the owner-builder within one year after completion constitutes a conclusive presumption that the structures were undertaken for purposes of sale.

In addition to all other remedies, any (1) licensed contractor, or association of contractors, (2) labor organization, (3) consumer affected by the violation, (4) district attorney, or (5) the Attorney General, shall be entitled to seek injunctive relief prohibiting any violation of this chapter by an owner-builder who is neither licensed nor exempted from licensure by this section or any other section according to the provisions specified in Section 7028.3 or Section 7028.4. The plaintiff in any such action shall not be required to prove irreparable injury and

shall be entitled to attorneys' fees and all costs incurred in the prosecution of such action, provided the plaintiff is the prevailing party. The defendant in any such action, shall be entitled to attorneys' fees and all costs incurred in the defense against such action, provided the defendant is the prevailing party.

The registrar pursuant to Section 7090 may take disciplinary action as provided in this chapter against any person whenever the grounds or cause for disciplinary action arose upon any project undertaken by him or her as a licensee licensed pursuant to this chapter.

Any person, firm, or corporation which has violated Section 7028 by engaging in contracting work as an owner-builder without having a license or an exemption from licensure under this section or any other section shall not be entitled to become a licensee under this chapter for a period of one year following the violation.

(Amended by Stats. 1988, Chapter 1035.)

Finished Products

7045. This chapter does not apply to the sale or installation of any finished products, materials or articles of merchandise, which do not become a fixed part of the structure, nor shall it apply to a material supplier or manufacturer furnishing finished products, materials, or articles of merchandise who does not install or contract for the installation of those items. The term "finished products" shall not include installed carpets or mobilehomes or mobilehome accessory structures as defined in Section 7026.2.

This chapter shall apply to the installation of home improvement goods, as defined in Section 7151.

(Amended by Stats. 1991, Chapter 1160 (AB 2190).)

Personal Property

7046. This chapter does not apply to any construction, alteration, improvement, or repair of personal property. The term "personal property" shall not include mobilehomes or mobilehome accessory structures as defined in Section 7026.2.

(Amended by Stats. 1991, Chapter 1160 (AB 2190).)

Small Operations

7048. This chapter does not apply to any work or operation on one undertaking or project by one or more contracts, the aggregate contract price for which for labor, materials, and all other items, is less than three hundred dollars ($300), that work or operations being considered as of casual, minor, or inconsequential nature.

This exemption does not apply in any case wherein the work of construction is only a part of a larger or major operation, whether undertaken by the same or a different contractor, or in which a division of

(d) With regard to a public entity, if an emergency condition arises, as defined in Section 10122 or 22035 of the Public Contract Code, then all asbestos-related and hazardous substance removal shall be contracted and performed pursuant to Section 10122 or 22035 of the Public Contract Code, respectively. Contractors performing the work shall have all registration and certificates required pursuant to the Labor Code and the Business and Professions Code.

Certification Requirement; Bids

25914.3. Notwithstanding any other provision of law, a contractor who is not certified pursuant to Section 7058.6 of the Business and Professions Code may bid on a project involving asbestos related work so long as the asbestos related work is performed by a contractor who is registered pursuant to Section 6501.5 of the Labor Code and certified pursuant to Section 7058.6 of the Business and Professions Code.

(Added by Stats. 1991, Chapter 789 (AB 1639).)

Hazardous Substance Removal Certification Examination; Advisory Committee

7058.7. (a) No contractor shall engage in a removal or remedial action, as defined in subdivision (d), unless the applicant for the license has passed an approved hazardous substance removal certification examination.

(b) (1) The Contractors State License Board, the Division of Occupational Safety and Health of the Department of Industrial Relations, and the State Department of Health Services shall jointly select an advisory committee, which shall be composed of two representatives of hazardous substance removal workers in California, two general engineering contractors in California, and two representatives of insurance companies in California who shall be selected by the Insurance Commissioner.

(2) The Contractors State License Board shall develop a written test for the certification of contractors engaged in hazardous substance removal or remedial action, in consultation with the Division of Occupational Safety and Health, the State Water Resources Control Board, the State Department of Health Services, and the advisory committee.

(c) The Contractors State License Board may require additional updated approved hazardous substance removal certification examinations of licensees currently certified based on new public or occupational health and safety information. The Contractors State License Board, in consultation with the State Department of Health Services, shall approve initial and updated hazardous substance removal certification examinations and determine whether to require an updated

certification examination of all current certificate holders.

(d) For purposes of this section "removal or remedial action" has the same meaning as found in Chapter 6.8 (commencing with Section 25300) of Division 20 of the Health and Safety Code, if the action requires the contractor to dig into the surface of the earth and remove the dug material and the action is at a site listed pursuant to Section 25356 of the Health and Safety Code or any other site listed as a hazardous waste site by the State Department of Health Services or a site listed on the National Priorities List compiled pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, (42 U.S.C. Sec. 9601 et seq.). "Removal or remedial action" does not include asbestos-related work, as defined in Section 6501.8 of the Labor Code, or work related to a hazardous substance spill on a highway.

(e) (1) On and after January 1, 1992, a contractor shall not bid for the installation or removal of, or install or remove, an underground storage tank, unless the contractor has passed the hazardous substance removal certification examination developed pursuant to this section.
(2) For purposes of this subdivision, "underground storage tank" has the same meaning as defined in subdivision (x) of Section 25281 of the Health and Safety Code.

(Amended by Stats. 1990, Chapter 1366 (SB 2004), eff. Sept. 26, 1990.)

EXTRACT FROM THE HEALTH AND SAFETY CODE

Definitions

25281. For purposes of this chapter, the following definitions apply:

(a) "Automatic line leak detector" means any method of leak detection, as determined in regulations adopted by the board, which alerts the owner or operator of an underground storage tank to the presence of a leak. "Automatic line leak detector" includes, but is not limited to, any device or mechanism which alerts the owner or operator of an underground storage tank to the presence of a leak by restricting or shutting off the flow of hazardous substance through piping, or by triggering an audible or visual alarm, and which detects leaks of three gallons or more per hour at 10 pounds per square inch line pressure within one hour.

(b) "Board" means the State Water Resources Control Board. "Regional board" means a California regional water quality control board.

(c) "Department" means the State Department of Health Services.

(d) "Facility" means any one, or combination of, underground storage tanks used by a single business entity at a single location or site.

PERMIT

Permit Issued To
(Insert Employer's Name, Address and Telephone No.)

Tamco
12459 Arrow Hwy
Rancho Cucamonga, CA 91739
909 899-0660

No. _____

Date 10-26-93

Region 3

District 3

Tel. 909 383-4321

Type of Permit Provisional

Pursuant to Labor Code Sections 6500 and 6502, this Permit is issued to the above-named employer for the projects described below.

State Contractor's License Number		Permit Valid through		
Description of Project	Location Address	City and County	Anticipated Dates: Starting	Completion
Single Project	12459 Arrow Hwy	Rancho Cucamonga San Bernardino	10-26-93	12-1-93
Provisional upon the condition of obtaining local building permits. Not otherwise required to have a permit.				

This Permit is issued upon the following conditions:

1. That the work is performed by the same employer. If this is an annual permit the appropriate District Office shall be notified, in writing, of dates and location of job site prior to commencement.
2. That employer will comply with all occupational safety and health standards or orders applicable to the above projects, and any other lawful orders of the Division.
3. That if any unforeseen condition causes deviation from the plans or statements contained in the Permit Application Form the employer will notify the Division immediately.
4. Any variation from the specification and assertions of the Permit Application Form or violation of safety orders may be cause to revoke the permit.
5. This permit shall be posted at or near each place of employment as provided in 8 CAC 341.4.

PHASE 1 SCOPE OF WORK

The UST(s) are identified as:

NORTHEAST UST
SOUTHEAST UST
NORTHWEST UST
SOUTHWEST UST

Phase 1 describes the removal of the Northeast and Southeast UST(s).

Because of the above special considerations and TAMCO's production schedule, the UST(s) had to be removed in two phases. This did not interfere with production.

REMOVAL AND TIME DATE: 11/04/93 AT 1:00 P.M.

BARRICADES AND "NO SMOKING OR OPEN FLAME WITHIN 50 FEET" SIGNS WERE PLACED AROUND THE EXCAVATION FOR THE ENTIRE LENGTH OF THE PROJECT. FIRE EXTINGUISHERS WERE PLACED IN THE IMMEDIATE AREA DURING THE ENTIRE LENGTH OF THE PROJECT. THE CAL/OSHA EXCAVATION PERMIT WAS POSTED.

ALL UTILITY LINES TO THE FOUR UST(s) WERE DOUBLE-CHECKED TO ASSURE DISCONNECTION.

THE MATERIAL OVER AND AROUND THE TWO UST(s) ON THE NORTHEAST AND SOUTHEAST SECTORS WAS EXCAVATED AND STOCKPILED EXPOSING THE TWO UST(s).

CONTINUOUS AIR MONITORING WAS PERFORMED DURING EXCAVATION AND REMOVAL. THE ALARM WAS SET AT 20 PERCENT OF THE LEVEL OF FUEL OIL. NO ALARM WAS RECEIVED.

INSPECTORS WERE SCHEDULED FROM REQUIRED AGENCIES.

SBDEHS - Lisa Holst (909) 387-3082
RCFPD - Kevin Walton (909) 987-6405

THE UST(s) WERE PURGED USING 750+ POUNDS OF DRY ICE IN EACH UST.

THE UST(s) WERE MONITORED BY CWI AND RCFPD PERSONNEL AND WERE CLEARED TO BE PULLED.

THE TWO UST(s) WERE REMOVED WITHOUT INCIDENT AND TRANSPORTED AS HAZARDOUS WASTE TO THE ERICKSON INC. FACILITY IN FONTANA.

SEVEN SOIL SAMPLES WERE TAKEN BY CWI UNDER THE DIRECTION OF SBDEHS:

#1 West vector of Southeast UST
#2 East vector of Southeast UST
#3 East vector of Northeast UST
#4 West vector of Northeast UST
#5 Composite of stockpile at east end of Phase 1 excavation
#6 Composite of stockpile at south end of Phase 1 excavation
#7 Composite of stockpiles at north and west end of Phase 1 excavation.

SOIL SAMPLES WERE TRANSPORTED BY CWI TO ENVIRO-CHEM LAB IN POMONA, CALIFORNIA AND ANALYZED UTILIZING EPA TEST METHOD 8015 (MODIFIED) FOR PETROLEUM HYDROCARBONS:

#1 1,533 PPM
#2 ND
#3 ND
#4 12,360 PPM
#5 ND
#6 77 PPM
#7 ND

PPM = PARTS PER MILLION
*** ND = NONE DETECTED**

SOILS IN THE WEST VECTOR OF THE SOUTHEAST UST; THE WEST VECTOR OF NORTHEAST UST; AND THE NORTH WALL OF THE SOUTHEAST UST HAD FUEL OIL CONTAMINATION BUT NO SIGNIFICANT AMOUNT OF HEAVY METALS. THE SOIL WAS EXCAVATED, LOADED AND SHIPPED AS NON-HAZARDOUS WASTE TO THE GIBSON OIL & REFINING FACILITY IN BAKERSFIELD TO BE PROCESSED INTO ASPHALT MATERIAL.

THE TWO AREAS WERE RE-SAMPLED DURING PHASE 2 OF THE UST REMOVAL PROJECT.

PHASE 2 SCOPE OF WORK

The UST(s) are identified as:

NORTHEAST UST
SOUTHEAST UST
NORTHWEST UST
SOUTHWEST UST

Phase 2 describes the removal of the Northwest and Southwest UST(s).

On November 8, permission was requested of SBDEHS to backfill 50 percent of area on the east side where the two eastern UST(s) were removed. Conditional permission was granted by SBDEHS provided that:

1) **Undisturbed soil area backfilled did not exceed 1000 ppm Petroleum Hydrocarbons**

2) **Soil used to backfill did not exceed 100 ppm Petroleum Hydrocarbons**

This area needed to be backfilled in order to have access to excavate the Northwest and Southwest UST(s), and to re-sample the Phase 1 areas that had fuel oil contamination.

The Phase 2 segment of the UST removal was a challenge because an eight-inch wastewater discharge line and an electrical conduit from the INDUSTRIAL WIRE PRODUCTS (IWP) Plant ran across the UST(s). The discharge line from IWP was shut down and the electrical disconnected. The discharge line and conduit were removed in order to remove the UST(s).

UST(s) REMOVAL AND TIME DATE: 11/18/93 AT 1:00 P.M.

BARRICADES AND "NO SMOKING OR OPEN FLAME WITHIN 50 FEET" SIGNS WERE PLACED AROUND THE EXCAVATION FOR THE ENTIRE LENGTH OF THE PROJECT. FIRE EXTINGUISHERS WERE PLACED IN THE IMMEDIATE AREA DURING THE ENTIRE LENGTH OF THE PROJECT. THE CAL/OSHA EXCAVATION PERMIT WAS POSTED.

ALL UTILITY LINES TO THE UST(s) WERE DOUBLE-CHECKED TO ASSURE DISCONNECTION.

THE MATERIAL OVER AND AROUND THE TWO UST(s) ON THE NORTHWEST AND SOUTHWEST SECTORS WAS EXCAVATED AND STOCKPILED EXPOSING THE TWO UST(s).

CONTINUOUS AIR MONITORING WAS PERFORMED DURING EXCAVATION AND REMOVAL. THE ALARM WAS SET AT 20 PERCENT OF THE LEVEL OF FUEL OIL. NO ALARM WAS RECEIVED.

INSPECTORS WERE SCHEDULED FROM REQUIRED AGENCIES,

SBDEHS - Lisa Holst (909) 387-3082
RCFPD - Kevin Walton (909) 987-6405

THE UST(s) WERE PURGED USING 750+ POUNDS OF DRY ICE IN EACH UST.

THE UST(s) WERE MONITORED BY CWI AND RCFPD PERSONNEL AND WERE CLEARED TO BE PULLED.

THE TWO UST(s) WERE REMOVED WITHOUT INCIDENT AND TRANSPORTED AS HAZARDOUS WASTE TO THE ERICKSON INC. FACILITY IN FONTANA.

EIGHT SOIL SAMPLES WERE TAKEN BY CWI UNDER THE DIRECTION OF SBDEHS:

TK1 #1	**West vector of Southwest UST**
TK1 #2	**East vector of Southwest UST**
TK2 #1	**West vector of Northwest UST**
TK2 #2	**East vector of Northwest UST**
SP-1	**Phase 2 excavation stockpile**
SP-2	**Phase 2 excavation stockpile**
SP-3	**Phase 2 excavation stockpile**
SP-4	**Phase 2 excavation stockpile**

SOIL SAMPLES WERE TRANSPORTED BY CWI TO ENVIRO-CHEM LAB IN POMONA, CALIFORNIA AND ANALYZED UTILIZING EPA TEST METHOD 8015 (MODIFIED) FOR PETROLEUM HYDROCARBONS:

TK1 #1	**ND**
TK1 #2	**ND**
TK2 #1	**ND**
TK2 #2	**ND**
SP-1	**ND**
SP-2	**ND**
SP-3	**ND**
SP-4	**ND**

PPM = PARTS PER MILLION
*** ND = NONE DETECTED**

BECAUSE NO DETECTABLE PETROLEUM HYDROCARBONS WERE PRESENT, THE AREA WHERE THE NORTHWEST AND SOUTHWEST UST(s) HAD BEEN REMOVED WAS BACKFILLED WITH THE STOCKPILED SOIL WHICH ALSO HAD NO DETECTABLE PETROLEUM HYDROCARBONS.

THE AREA WHERE THE PHASE 1 CONTAMINATION HAD BEEN EXCAVATED WAS RE-SAMPLED AND ANALYZED PER EPA METHOD 8015 (MODIFIED) FOR PETROLEUM HYDROCARBONS ON 11/24/93.

THE EXCAVATED CONTAMINATED SOIL WAS TRANSPORTED AS NON-HAZARDOUS WASTE TO THE GIBSON OIL & REFINING FACILITY IN BAKERSFIELD, CALIFORNIA FOR PROCESSING INTO ASPHALT MATERIAL.

SE1	**ND**
S2	**3500 PPM**
SW3	**ND**
SB4	**2200 PPM**
NW1	**ND**
N2	**ND**
NE3	**50 PPM**
NB4	**ND**

THE PHASE 1 AREA DESCRIBED AS S2 AND SB4 WAS EXCAVATED, RE-SAMPLED AND ANALYZED PER EPA METHOD 8015 (MODIFIED) FOR PETROLEUM HYDROCARBONS ON 12/03/93.

THE EXCAVATED CONTAMINATED SOIL WAS TRANSPORTED AS NON-HAZARDOUS WASTE TO THE GIBSON OIL & REFINING FACILITY IN BAKERSFIELD, CALIFORNIA FOR PROCESSING INTO ASPHALT MATERIAL.

THE RESULTS FROM BOTH SAMPLES REVEAL NO PETROLEUM HYDROCARBONS DETECTED.

THIS WEST END OF THE PHASE 1 PROJECT WAS BACKFILLED AND COMPACTED.

MANAGEMENT OF
PETROLEUM HYDROCARBON-CONTAMINATED SOIL (FUEL OIL)

The location of the soil contamination was located around the fill pipe area of the UST. There was no visible or otherwise noticeable contamination underneath any of the UST(s). No indication of impact to groundwater, as groundwater proximity is approximately 100-200 feet.

Twenty-eight truckloads of hydrocarbon-contaminated soil (fuel oil) totaling 633 cubic yards was shipped as non-hazardous waste to the GIBSON OIL & REFINING FACILITY in Bakersfield. The contaminated soil was processed into asphalt material.

EPA# CA* (020525)

This letter is to inform you that Gibson Environmental has accepted your material for recycling.

Gibson certifies that the material received on the manifests indicated below has been properly treated and recycled.

Date	Manifest	Movement	Quantity	UOM
10/21/93	13534	00087448	22	CYD
10/21/93	13535	00087450	27	CYD
10/21/93	13710	00087463	28	CYD
10/21/93	13712	00087454	26	CYD
10/21/93	13713	00087455	13	CYD

If this information does not agree with your records, please notify us within ten days so we can resolve any discrepancies.

Generators, know your wastestream. Gibson Bakersfield is only permitted to accept the following wastes that are varying combinations of oil, water and solids under California Waste Codes 221, 222, 223, 241. In addition, Gibson at Bakersfield may accept waste codes D004 through D043.

For information as to approved codes for Gibson's Wilmington and Redwood City facilities, please call (800) 582-3935.

This notice is required by the Department of Toxic Substance Control.

16. GENERATOR'S CERTIFICATION: I hereby declare that the contents of the consignment are fully and accurately described above by proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transport by highway according to applicable federal, state and international laws.

If I am a large quantity generator, I certify that I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment; OR, if I am a small quantity generator, I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford.

ATTENTION: LEONARD ROBINSON

SUBJECT: REMEDIATION OF SLAG AND NON-SLAG STOCKPILED SOIL FOR TAMCO, LOCATED AT 12459 ARROW HIGHWAY, RANCHO CUCAMONGA, CALIFORNIA

esi # 80008874

The Department has reviewed the subject document dated June 2001 submitted by Clayton Group Services, Inc. This letter confirms the completion of the site investigation and remedial action for the contaminated soil at the above site. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is the position of the Department that no further action is required at this time. Residual concentrations of contaminants remain in the soil; however, verification sampling has revealed the concentrations to be below hazardous waste thresholds.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional, or previously unidentified conditions at the site, which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

If you have any questions, please call me at (909) 387-3041.

COUNTY FIRE
HAZARDOUS MATERIALS
00 DEC 15 AM 9:54

November 22, 2000

Mrs. Catherine Richards, R. E. H. S.
San Bernardino County Fire Department
Hazardous Materials Division
385 North Arrowhead Avenue
San Bernardino, CA 92415-0153

est # 0600088 74

Dear Mrs. Richards:

On behave of TAMCO, Clayton Group Services (Clayton) and The Leu Group, I wish to formally request approval to use clean slag generated from the Rotary Drum Separation System ((RDSS) as cover material at the site of the former slag pile. The clean slag in question was generated during the second phase of TAMCO's remediation project (subsurface removal). It has been tested and found to meet the clean slag criteria cited in the Remedial Action Plan dated November 1999 as approved by your agency. The attached Table provides the results of the analytical testing.

This modification to the approved Rap will allow TAMCO to directly use the slag as surface cover material instead of having to give the slag to Olympic Mills and then buy it back (without any further processing) for use of cover material as required under the current RAP. Up to 7000 tons of clean slag may be used by TAMCO for this purpose.

If you have additional questions on the use of this slag, please contact Leonard Robinson (TAMCO; 909-899-0660 x203) or myself at the letterhead telephone number.

Sincerely,

David J. Leu, Ph. D.
President
The Leu Group

☐ **Urgent** ☑ **For Review** ☐ **Please Comment** ☐ **Please Reply** ☑ **Please File**

• Comments

Here is a copy of the Quarterly Report on the TAMCO remediation project. A hard copy is being put into the mail. The next few weeks will be spent removing the upper few feet of the slag/dust material. Once enough "dirty" slag is stockpiled, we will start the RDSS unit back up to process it. My guess that will not be until the end of September. I will call you when I have a firmer date. So far, everything has gone very smoothly and according to plan. This material found underneath the footprint is it only unexpected event.

If you have any questions, please give me a call.

August 29, 2000

Mrs. Catherine Richards
San Bernardino County Fire Department
Hazardous Materials Division
385 North Arrowhead Avenue
San Bernardino, CA 92415-0153

Dear Mrs. Richards:

The Leu Group in conjunction with Clayton Environmental Consultants, a division of Clayton Group Services, Inc. (Clayton), and TAMCO is submitting this letter report in fulfillment of the quarterly reporting requirements contained in the TAMCO Remediation Workplan approval letter issued by your department and dated January 10, 2000.

Clayton and its subcontractor, The Leu Group, was contracted by TAMCO to conduct the remediation of a 41,000-cubic-yard (approximately 62,500 ton) stockpile of slag and non-slag material located at the TAMCO facility, at 12459 Arrow Highway, Rancho Cucamonga, California.

The slag material in the stockpile is a co-product of the steel rebar produced at TAMCO. The material in the stockpile can be classified as clean slag, dirty slag (clean slag mixed with baghouse dust), and baghouse dust. A workplan, dated November 1999, that described the remediation of this stockpile was submitted to the County of San Bernardino Fire Department, Hazardous Materials Division (SBCFD) as the lead regulatory agency. The remediation approach called for the materials to be segregated through excavation into three general groups: clean slag, dirty slag, and baghouse dust. The clean slag, once tested and shown to be clean, would be placed in a clean slag pile. It would then be crushed and sized onsite by Olympic Mills (a contractor to TAMCO) and sold in the open market.

A Rotary Drum Separation System (RDSS) unit would be used on the dirty slag to separate the baghouse dust from the clean slag. The separated slag, once tested and shown to be clean, would be given to Olympic Mills for sizing and sold on the open market. The separated baghouse dust would either be recycled offsite, fixated on site and then disposed of, or sent directly to a Class I hazardous waste disposal site as K061 (RCRA listed electric arc furnace dust) where it will be treated to meet Land Disposal Treatment Standards and then disposed of.

Any "pure" baghouse dust that was to be excavated directly from the stockpile would also be sent to a Class I hazardous waste disposal site as where it will be treated to meet Land Disposal Treatment Standards and then disposed of.

Approval to implement the workplan was granted by the SBCFD in a letter dated January 2000. While that approval was pending, Clayton worked with the Department of Toxic Substances Control (DTSC) and the South Coast Air Quality Management District to receive a hazardous waste transportable treatment unit permit and air permits from each respective agency. Once those permits were received, Clayton started to mobilize the remediation equipment to TAMCO's facility during the later part of March 2000.

The remediation of the stockpile began on April 3, 2000. It continued with brief interruptions due to weather and holidays through the end of July. During that period, approximately 62,500 tons of material was removed from the stockpile. Specifically, approximately 24,900 tons of baghouse dust was removed and manifested to the US ECOLOGY facility in Beatty, Nevada. Another approximately 37,600 tons of slag was tested and shown to meet the clean slag standards specified in the workplan. This material was either stockpiled for processing by Olympic Mills (~10,450 tons) or was crushed to three inch minus by Dan Copp Crushing under contract to TXI (Riverside Cement) (~27,150 tons). Once the material was reduced to three inch minus, it was transported to TXI's Oro Grande's cement plant and used as iron based feedstock in the production of cement. The use Dan Copp Crushing to crush and size this material and then use it as cement feedstock was reviewed and verbally approved by SBCFD in a conversation between the two of us on May 16, 2000. I sent a confirmation letter to you on that date.

None of the baghouse dust removed from the stockpile was fixated at TAMCO. Right before the project mobilized, a decision was made by TAMCO to handle all of the baghouse dust as if it was K061, even though the majority of the baghouse dust was produced before the K061 listing was promulgated by the U. S. Environmental Protection Agency. Thus, the baghouse dust removed from the stockpile was trucked under a hazardous waste manifest to the US ECOLOGY Facility in Beatty, Nevada. Once there, it was fixated to meet land-ban standards and disposed of.

Once the stockpile containing clean slag, dirty slag and baghouse dust was removed to a little below ground surface, a discrete layer of baghouse dust with slag was found beneath the stockpile footprint. Additionally, a few small depressions of principally baghouse dust were discovered. To delineate the extent of these materials, two trenches were dug that transversed the site in the north/south and east/west directions. From these trenches, it was discovered that the bottom or "root" of the stockpile extends from less than one foot to approximately 4 feet below current grade. Furthermore, a number of small depressions containing baghouse dust were found that ranged in depth from approximately four feet to approximately 12 feet below grade. Because this material appears to be affiliated with the stockpile that had just been remediated, TAMCO has decided to continue removing this material down to clean, native soil.

It is estimated that the subsurface material will add another approximately 12,000 to 15,000 tons to the remediation project. Therefore, the former estimate of 62,500 tons is being increased to approximately 77,500 tons. The actual final tonnage will be reported to the SBCFD after the completion of the project.

At this time, it is estimated that another six to eight weeks will be needed to remove the sub grade portion of the stockpile. A project completion date of mid-October is anticipated. A brief project hiatus occurred during the month of August while the trenching of the sub grade material was conducted, the additional volume calculated, and new project costs were estimated. Fieldwork to remove the remaining material is scheduled to start the last week of August 2000.

If you have any questions regarding this report or any aspects of the remediation project, please contact myself, Gustavo Valdivia (Clayton, telephone: 714-431-4100) or Leonard Robinson (TAMCO, telephone: 909-899-0660).

Sincerely,

David J. Leu, Ph.D.

Enclosed is a letter that confirms my understanding of your verbal approval for TXI to use TAMCO's clean, old slag at their Oro Grande facility.

Thanks for your prompt review of the data and approval.

Dave Leu

May 16, 2000

Mrs. Catherine Richards, R. E. H. S.
San Bernardino County Fire Department
Hazardous Materials Division

Dear Mrs. Richards:

On behave of TAMCO, TXI (Riverside Cement), Clayton Group Services (Clayton) and myself, I wish to thank you for your prompt review and approval of TXI receiving processed clean slag from the old slag pile at TAMCO. Based on our telephone conversation this morning, I have informed TAMCO, TXI, and Clayton that you have reviewed the old and new slag data that I sent you yesterday. From this review, you verbally approved TXI receiving the old slag that is tested and shown to be clean as per the requirements of the Remedial Action Plan (RAP) for TAMCO's old slag pile that your agency has approved.

It is my understanding that this slag will be used by TXI as a feedstock material in the manufacturing of cement at their Oro Grande facility. It is valued by TXI as low silica, high iron material.

Now with the receipt of your verbal approval, TXI will begin to mobilize a crushing plant to the TAMCO facility. This plant will be used to crush 3 inch plus old slag. It is anticipated that this plant will be operational sometime next week. Starting sometime this week, TAMCO is expected to release to TXI 3 inch minus old slag that has been processed by the RDSS unit. All old slag that will be released to TXI will have been tested and shown to meet the clean slag standards specified in the above referenced RAP.

The exact amount of old slag that will be sent to TXI is not known at this time. However, it has been estimated that the amount will be in excess of 30,000 CY or 45,000 tons.

If you have additional questions on the use of TAMCO's old slag, please contact Leonard Robinson (TAMCO; 909-899-0660 x203) or me at the letterhead telephone number.

Sincerely,

David J. Leu, Ph. D.

COMMENTS

Kathryn,

Dave Leu asked me to send the analytical report for the major elements analysis at Tamco to you. Please let me know if it is readable; all I have is a fax copy so your fax may not be clear.

Please call me at 714-431-4127 if you have any questions.

May 15, 2000

Mrs. Catherine Richards, R. E. H. S.
San Bernardino County Fire Department
Hazardous Materials Division

Dear Mrs. Richards:

Enclosed you will find analytical information on the major elements contained in TAMCO's newly produced steel slag and the old steel slag that is currently being processed under the Remedial Action Plan (RAP) overseen by your agency. The major elements (elements with concentrations greater than 1% by weight) found in TAMCO's steel slag are aluminum, calcium, iron, magnesium, and manganese.

I have also included analytical information on the secondary elements found in this slag material. Those secondary elements are defined as non-heavy metal elements whose concentrations are below 1% by weight. The secondary elements are boron, phosphorus, potassium, silicon, sodium, and tin.

I am also including pH information that has been collected during the processing of the old slag. You had voiced an interest in seeing data that confirms our earlier analysis which showed that the old slag did not possess hazardous waste characteristics due to corrosivity.

The above referenced information is being sent to you in response to your recent request made during a telephone conversation that we had during the week of May 5, 2000. This data is meant to supplement the data already submitted to your agency regarding heavy metal concentrations. That data already shows that the new slag and the old slag being processed under the RAP are very similar and in all cases is nonhazardous. Additional data that is being collected throughout the project's duration will be sent to your agency in a project completion report.

Inspection of the enclosed element concentrations shows that the old slag and the new slag are very similar. The new slag has somewhat higher average major element concentrations of aluminum, calcium, magnesium, and manganese. The new slag has a somewhat higher average iron concentration. The minor element concentrations are also very similar with both the new slag and the old slag possessing very low concentrations (all secondary element average concentrations are below 1000 mg/kg).

The pH data taken from the old slag that is being managed under the RAP shows that it is very consistent. Both the clean slag that was being used as cover material and the slag that is being processed by the RDSS unit possess pH values that fall within the narrow range of 11.12 to 11.54. This is below the corrosivity characteristic threshold value of 12.5.

Based upon the similar analytical characteristics of the new and the old slag, I request that you verbally contact me at your earliest convenience to discuss this information. TAMCO is anxious to get your permission to have TXI (Riverside Cement) crush the clean old slag at TAMCO's facility and send it to TXI's Oro Grande facility. TXI will be using the slag as an iron source in the manufacturing of cement. While we recognize this is a modification to the RAP, we feel that it is a minor modification. The RAP

05/15/00 11:57A P.002 (949) 587-1666 the leu group

states that the old slag, once processed and shown to be clean, would be given to Olympic Mills for onsite crushing. Olympic Mills currently is crushing and sizing the new slag produced by TAMCO and sends that material to TXI as an iron source in the manufacturing of cement. Under the proposed modification, TXI will bring to TAMCO's facility a crushing plant that it will directly use to crush the old slag that is clean. This plant has its own South Coast Air Quality Management District permit. Thus, the only change in the RAP is that TXI will be doing the crushing at TAMCO's facility instead of Olympic Mills.

Because we are producing up to 1000 tons a day of clean old slag, storage of this slag is becoming problematic to TAMCO. The expanding area of their facility that is needed to store this slag is decreasing the area they require to store the steel scrap that is the feedstock to their steel making process. With that in mind, I am requesting that you review the enclosed information and, if it meets your approval, please contact me to verbally approve the above stated change to the RAP.

If you have any questions regarding this request or the information contained herein, please contact either Leonard Robinson (TAMCO) or myself. I may be reached at the telephone number on the letterhead.

Sincerely,

David J. Leu, Ph. D.
President

May 15, 2000

Mrs. Catherine Richards, R. E. H. S.
San Bernardino County Fire Department
Hazardous Materials Division

Dear Mrs. Richards:

Enclosed you will find analytical information on the major elements contained in TAMCO's newly produced steel slag and the old steel slag that is currently being processed under the Remedial Action Plan (RAP) overseen by your agency. The major elements (elements with concentrations greater than 1% by weight) found in TAMCO's steel slag are aluminum, calcium, iron, magnesium, and manganese.

I have also included analytical information on the secondary elements found in this slag material. Those secondary elements are defined as non-heavy metal elements whose concentrations are below 1% by weight. The secondary elements are boron, phosphorus, potassium, silicon, sodium, and tin.

I am also including pH information that has been collected during the processing of the old slag. You had voiced an interest in seeing data that confirms our earlier analysis which showed that the old slag did not possess hazardous waste characteristics due to corrosivity.

The above referenced information is being sent to you in response to your recent request made during a telephone conversation that we had during the week of May 5, 2000. This data is meant to supplement the data already submitted to your agency regarding heavy metal concentrations. That data already shows that the new slag and the old slag being processed under the RAP are very similar and in all cases is nonhazardous. Additional data that is being collected throughout the project's duration will be sent to your agency in a project completion report.

Inspection of the enclosed element concentrations shows that the old slag and the new slag are very similar. The new slag has somewhat higher average major element concentrations of aluminum, calcium, magnesium, and manganese. The new slag has a somewhat higher average iron concentration. The minor element concentrations are also very similar with both the new slag and the old slag possessing very low concentrations (all secondary element average concentrations are below 1000 mg/kg).

The pH data taken from the old slag that is being managed under the RAP shows that it is very consistent. Both the clean slag that was being used as cover material and the slag that is being processed by the RDSS unit possess pH values that fall within the narrow range of 11.12 to 11.54. This is below the corrosivity characteristic threshold value of 12.5.

Based upon the similar analytical characteristics of the new and the old slag, I request that you verbally contact me at your earliest convenience to discuss this information. TAMCO is anxious to get your permission to have TXI (Riverside Cement) crush the clean old slag at TAMCO's facility and send it to TXI's Oro Grande facility. TXI will be using the slag as an iron source in the manufacturing of cement. While we recognize this is a modification to the RAP, we feel that it is a minor modification. The RAP

states that the old slag, once processed and shown to be clean, would be given to Olympic Mills for onsite crushing. Olympic Mills currently is crushing and sizing the new slag produced by TAMCO and sends that material to TXI as an iron source in the manufacturing of cement. Under the proposed modification, TXI will bring to TAMCO's facility a crushing plant that it will directly use to crush the old slag that is clean. This plant has its own South Coast Air Quality Management District permit. Thus, the only change in the RAP is that TXI will be doing the crushing at TAMCO's facility instead of Olympic Mills.

Because we are producing up to 1000 tons a day of clean old slag, storage of this slag is becoming problematic to TAMCO. The expanding area of their facility that is needed to store this slag is decreasing the area they require to store the steel scrap that is the feedstock to their steel making process. With that in mind, I am requesting that you review the enclosed information and, if it meets your approval, please contact me to verbally approve the above stated change to the RAP.

If you have any questions regarding this request or the information contained herein, please contact either Leonard Robinson (TAMCO) or myself. I may be reached at the telephone number on the letterhead.

Sincerely,

David J. Leu, Ph. D.
President

Cc: Leonard Robinson (TAMCO)

SUBJECT: UNDERGROUND STORAGE TANK REMOVAL FOR TAMCO 12459-B ARROW HIGHWAY RANCHO CUCAMONGA, CA.

The Department has received the sample results and closure report submitted by Sharp Environmental Technologies, Inc. on 09/27/06. After review of the report prepared by you or your agent, it has been determined that the extent of contamination, or lack thereof, would indicate that no further investigation is warranted at this time.

It is important to note that this letter cannot be construed as a release of liability for the site or declaration that the site is free from contamination. Should further projects or environmental investigations reveal additional contaminants on site, you will be responsible and held liable for the investigation and remedial actions.

If you have any questions, please call (909) 386-8464.

NOTES:

* TAMCO discovered 4 USTs at the southern edge of the property just north of the railroad tracks. The tanks are filled with slurry and need to be removed and then the slurry will be broken up inside the tanks and disposed. Due to the tanks being so close to the "drainage culvert" + other obstructions, the tanks will be removed on two separate days. Also, tank had to be "hot" cut in order to remove them. This caused additional safety precautions to be enacted. No evidence of contamination. CB

3.0 LABORATORY ANALYSIS *2*

4.0 RECORD KEEPING *2*

5.0 HEALTH AND SAFETY *2*

6.0 PLAN AMENDMENTS *2*

7.0 REPORTING *3*

1.0 INTRODUCTION

This Work Plan discusses procedures for the removal of 4 12,000 gal underground fuel storage tanks at the TAMCO Steel facility in the City of Rancho Cucamonga.

Specifically, this Work Plan describes the procedures for the field activities to be performed to remove the 4 tanks 2 at a time.

1.1 Background

The TAMPO Steel facility is located at 12459-B Arrow Hwy in the city of Rancho Cucamonga. The facility is used for recycling metal and the 4 fuel storage tanks contained fuel oil used to heat furnaces used in the process of melting steel. The tanks are no longer in use and needs to be closed by removal.

1.2 Scope of Work

ECI will perform the following scope of work to accomplish the project objectives:

- Permit through the County of San Bernardino Fire Dept. The removal of 4 12,000 gal fuel storage tanks.
- Remove remanding liquid from tanks and properly dispose of.
- Excavate for removal of the 2 western tanks (Note Drawing) and leave the 2 eastern tanks covered to be removed the following week.
- Cut openings at the top of the tanks for cleaning
- The 2 western tanks will be removed with a crane and the tanks will stay on site to be recycled by TAMCO Steel.
- Soil samples will be collected from under the tanks and Analyzed for TPH
- Excavation will be backfilled with clean fill dirt on site.
- The same procedures will be completed for the 2 eastern tanks upon completion of backfilling the 2 western tanks.

2.0 FIELD ACTIVITIES

Field activities will include the collection of soil samples to be included in a tank closure along with all tank documentation and field activities.

2.1 Soil Sampling Locations

A total of 8 soil samples will be collected from under the tanks. 1 sample at each end of each tank will be analyzed TPH using EPA Method 8015, along with any analysis requested by the County Fire inspector.

3.0 LABORATORY ANALYSIS

Soil samples collected will be maintained, prepared and analyzed according to Test Methods for Evaluating Solid Waste, (SW-846), Third Edition, Update #4A, May 1998. The laboratory analysis will be performed in a laboratory that is certified by the State of California Department of Health Services.

The soil samples will be analyzed for Total Petroleum Hydrocarbons as diesel (TPH) by EPA Method 8015.

4.0 RECORD KEEPING

ECI will maintain records of all field activities including personnel, time and dates of activities, types of activities performed and site conditions throughout the project. A tailgate safety meeting will be held and documented with the meeting time, personnel present and subjects recorded in the logbook..

5.0 HEALTH AND SAFETY

ECI personnel will follow and abide by the provisions and procedures as described in the Daley tail safety meetings. Level D protection is anticipated for the work areas.

6.0 PLAN AMENDMENTS

Amendments to this work plan may be implemented as additional site information is gathered. The amendments, if any, to the work plan may include additional removal of impacted soil delineated from soil sampling, removal of other objects and special considerations in the event that the removal of impacted soil creates unstable conditions

to surrounding structures, transportation structures or off-site property. All changes will be documented and recorded with the information presented to TAMCO Steel.

7.0 REPORTING

Upon completion of the fieldwork and receipt of laboratory analysis, ECI will prepare and submit a soil assessment report. This will include:

- Vicinity and site maps;
- Field observations and procedures;
- Boring logs and organic vapor readings;
- Analytical methods, results, and chain of custody documentation;
- Regional geology; and
- Conclusions and recommendations.

EXECUTIVE SUMMARY

Ecology Control Industries (ECI) was contracted to remove four (4) underground storage tanks (USTs) at the TAMCO facility located at 12459-A Arrow Highway, Rancho Cucamonga, California.

Under permit from the County of San Bernardino Fire Department, ECI removed the USTs from the excavation with TAMCO recycling the USTs on-site at their facility. Laboratory analytical results of eight soil samples collected beneath the former 4 12,000-gallon USTs indicated concentrations of Total Petroleum Hydrocarbons – Carbon Chain and Volatile Organic Compounds below laboratory detection limits.

Approximately 18,600 gallons of rinsate and UST contents were removed from the USTs as part of the UST cleaning. Solids present in the USTs were removed from the USTs after the tops of the USTs were cut off for access. Approximately 120 tons of solids were removed from inside the USTs with the material loaded and transported to TPST Soil Recyclers of California located in Adelanto, California for recycling. TAMCO provided soil on-site for use as backfill. The UST excavation was backfilled following the removal of the USTs.

Based on the findings of this report and the analytical results presented by an independent California certified laboratory, SET recommends the site be granted closure.

1.0 INTRODUCTION

This report summarizes underground storage tank (UST) closure operations completed at the TAMCO facility located at 12459-B Arrow Highway in Rancho Cucamonga, California. Refer to ***Figure 1*** for a site vicinity map of the subject area.

The site is owned and operated by TAMCO Steel. Ecology Control Industries (ECI) was contracted to remove four (4) 12,000-gallon diesel/fuel oil USTs at the above referenced site. The approximate location of the former USTs are shown on ***Figure 2***.

ECI performed the removal in accordance with San Bernardino County Fire Department (SBCFD) guidelines. In addition, ECI received a permits from SBCFD and the city of Rancho Cucamonga to remove the four underground storage tanks (USTs). Refer to ***Appendix A*** for copies of these permits.

2.0 FIELD ACTIVITIES

2.1 UST REMOVAL OPERATIONS

The four USTs were cleaned and rinsed on March 30, April 10 & 11 and May 24, 2006. A copy of the Uniform Hazardous Waste Manifests for the approximately 18,600 gallons of rinsate and UST liquids from the USTs are included as ***Appendix B***. On May 5, 2006, ECI began excavation of the USTs by exposing the USTs with an excavator. Two of the USTs were removed from the excavation and soil samples collected beneath the two USTs on May 5, 2006. The two other USTs were removed on May 31, 2006 and soil samples collected beneath these two other USTs on the same date. The solids present in the USTs were removed after the USTs had been removed from the excavation and prior to inspection of the tank atmospheres by a marine chemist. A marine chemist inspected the UST and certified it safe for transport on June 9, 2006. The UST atmosphere was monitored to demonstrate that satisfactory lower explosive limits (LEL), hydrogen sulfide and total oxygen content levels were achieved. For the marine chemist certification refer to ***Appendix C***. All excavated soil was stockpiled near the excavation. On June 14, 19 and 21, 2006, ECI transported approximately 120 tons of solids removed from within USTs to TPST Soil Recyclers of CA located in Adelanto, California in roll-off bins. Manifests for the solids removed from the four USTs are provided in ***Appendix B***.

2.2 SOIL SAMPLING

Upon completion of UST removal operations, a total of eight (8) soil samples, one from each end of each of the four USTs were collected. Four soil samples collected on May 5, 2006 and four samples collected on May 31, 2006 were delivered to a state of California certified laboratory for analysis. The approximate location where the soil samples were collected are shown on ***Figure 2***.

The soil samples were packaged in 8 oz. Qorpak glass jars, sealed with Teflon® lined plastic lids, labeled and stored on ice in a cooler at 4 degrees Celsius (°C). The samples were immediately delivered to a state certified analytical laboratory for testing. Refer to ***Appendix D*** for a copy of laboratory and quality assurance/quality control (QA/QC) reports and chain-of-custody records. All sampling activities were performed under the direction of a California professional geologist.

3.0 SITE GEOLOGY AND HYDROGEOLOGY

The site is located within the San Bernardino Valley, which marks the boundary between the Peninsular Range Province to the south, and the Transverse Range Province to the north. The Transverse Ranges consist of a set of easterly-trending mountains and geologic structures that are distinct from the general northwest-southeast trend of the other provinces of California. Regional uplift of the Transverse Ranges has occurred along the San Andreas Fault zone, located approximately 10 miles to the northeast of the site. A series of thrust faults and sub-parallel strike slip faults creates the well-defined San Andreas Fault zone along the southern foothills of the Transverse Ranges through the Cajon Pass.

The Peninsular Range Province is characterized generally by structurally controlled, elongated northwesterly-trending valleys and mountains with elevated erosional surfaces. The eastern portion of the province has been extensively uplifted by faulting and represents the highest and most rugged terrain. From the east, the province gradually descends to the west toward the Pacific Ocean. The Peninsular Ranges are traversed by numerous northwest trending faults creating and subdividing the province into many sub-parallel, northwest trending ranges and valleys. The northwesterly trending mountains and valleys are flanked by regional faults, many of them remain active today, including the San Andreas, San Jacinto, and Elsinore Fault zones.

Locally, the site is underlain by alluvial deposits that have accumulated within the greater San Bernardino Valley area mainly as outwash from the Deer Canyon and Day Canyon drainages to the north. These deposits consist mainly of sands, silt, sand and gravel with minor occurrences of clay. Boulders and cobbles are also present in the northern portion of the valley near the drainage source. The alluvial sediments near the ground surface consist of primarily of unconsolidated silts and sands with minor amounts of gravels.

The Geotracker database from the Regional Water Quality Control Board indicated depth to water at the ARCO Station # 5205 located at 25715 Rancho Cucamonga Boulevard in Rancho Cucamonga, CA 92373 was approximately 150 feet below the ground surface as measured on May, 2002. The ARCO station is approximately 5 miles southwest of the subject site at a surface elevation of the ARCO station at approximately 1120 feet above MSL, which is approximately 40 feet lower in elevation then the subject site.

4.0 LABORATORY ANALYSIS

4.1 METHODS OF ANALYSIS

Soil samples were collected, maintained, prepared and analyzed according to Test Methods for Evaluating Solid Waste, (SW-846), Third Edition, Update #4A, May 1998. These methods, as prescribed by the Environmental Protection Agency (EPA), provide test procedures which determine whether the sample is a hazardous waste within the definition of the Resource Conservation and Recovery Act (RCRA).

All of the eight soil samples (TM-1@16' thru TM-8@16') collected during UST removal activities were analyzed by Enviro-Chem Inc. of Pomona, California for Total Petroleum Hydrocarbons – Carbon Chain (TPH-CC) and for Volatile Organic Compounds (VOCs) by EPA Method 8260B.

4.2 RESULTS OF ANALYSIS

Concentrations of TPH-CC and VOCs in the eight soil samples analyzed were reported below laboratory detection limits. Refer to ***Table 1*** for a summary of TPH-CC and VOCs analytical results. The laboratory analytical report and quality control/quality assurance reports including chain of custodies are provided in ***Appendix D***.

5.0 CONCLUSIONS AND RECOMMENDATIONS

On May 5 and 31, 2006 ECI performed the removal of 4 12,000-gallon USTs at the TAMCO facility located at 12459-B Arrow Highway in Rancho Cucamonga, California. ECI followed all applicable state, county and local guidelines during the site activities at the above referenced site.

Eight soil samples TM-1@16' through TM-8@16'were collected beneath the former USTs. Analytical results for TPH-CC and VOCs in all eight samples were reported with concentrations below laboratory detection limits. Groundwater was not encountered during field activities.

Based on the findings and analytical results as presented in this report, SET recommends the site be granted closure.

6.0 LIMITATIONS

SET performs professional services using that degree of care and skill ordinarily exercised by environmental consultants practicing in this or similar localities. The findings are based primarily upon analytical results provided by an independent laboratory. Interpretations of the subsurface conditions at the site, for the purpose of this investigation, are made from a limited number of available soil sample locations. Subsurface conditions may vary from one location to another location.

SET appreciates the opportunity to provide environmental management services for Ecology Control Industries. If you have any questions regarding the report or require additional information, please feel free to call us at (310) 505-3675.

Sincerely,
Sharp Environmental Technologies, Inc.

Jeffrey E. Sharp
Principal Geologist, P.G. # 6777

BUILDING INSPECTION REQUESTS
909/477-2777 SELECTION # 1
or at www.rctops.org.

FINAL INSPECTION NOTICE

When calling for FINAL INSPECTIONS, the following must occur prior to utility releases:

The Building and Safety Division requires Engineering, Planning, and Fire Construction Services Divisions to inspect and final projects prior to the final inspection from the Building and Safety Division.

1. **BUILDING INSPECTION:**
   Concerns – a. On-site grading, slope erosion control (planting, irrigation), grading certification, as-built grading plans.
   b. All building, electrical, plumbing, and mechanical code requirements.

2. **ENGINEERING INSPECTION:**
   Concerns – a. New driveways, sidewalks, curbs, gutters, and street paving.

3. **FIRE CONSTRUCTION SERVICES:**
   Concerns – a. Fire hydrants, fire sprinkler systems, fire extinguishers, fire alarm systems, and restaurant hood extinguishing systems.
   b. Exit facilities in assembly occupancies. c. Fire Department access.

4. **PLANNING DIVISION:**
   Concerns – a. Landscaping, irrigation systems, parking lot improvements, trash enclosures, and equipment screening.

16. GENERATOR'S CERTIFICATION: I hereby declare that the contents of this ... marked, and labeled, and are in all respects in proper condition for ... by highway according to applicable international and national government regulations.

If I am a large quantity generator, I certify that I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment; OR, if I am a small quantity generator, I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford.

ATMOSPHERE SAFE FOR WORKERS
SAFE FOR HOT-WORK

RAE SYST. MOD. PGM-3000, S.N. 180-000976 CALIBRATED 9 JUN '06

In the event of any physical or atmospheric changes affecting the STANDARD SAFETY DESIGNATIONS assigned to any of the above spaces this certificate is voided; or if there is any question about the conditions, immediately stop all work and contact the undersigned Marine Chemist.

QUALIFICATIONS: Transfer of ballast, cargo, fuel, or manipulation of valves or closure equipment tending to alter conditions in pipelines, tanks, or compartments subject to gas accumulation, unless specifically approved on this Certificate, requires inspection and a new Certificate for spaces so affected. All lines, vents, heating coils, valves, and similar enclosed appurtenances shall be considered 'not safe' unless otherwise specifically designated. Movement of the vessel from its specific location voids the Certificate unless shifting of the vessel within the facility has been specifically authorized on this Certificate.

STANDARD SAFETY DESIGNATIONS: (partial list, paraphrased from NFPA 306, Subsections 4.3.1 through 4.3.6).

ATMOSPHERE SAFE FOR WORKERS: In the compartment or space so designated (a) the oxygen content of the atmosphere is at least 19.5 percent and not greater than 22 percent by volume; (b) the concentration of flammable materials is below 10 percent of the lower explosive limit; (c) any toxic materials in the atmosphere associated with cargo, fuel, tank coatings, inerting mediums, or fumigants are within permissible concentrations at the time of the inspection.

NOT SAFE FOR WORKERS: In the compartment or space so designated, entry is not permitted.

ENTER WITH RESTRICTIONS: In the compartment or space so designated, entry for work is permitted only if conditions of proper protective equipment, or clothing, or time, or all of the aforementioned, as appropriate, are as specified.

SAFE FOR HOT WORK: In the compartment or space so designated (a) the oxygen content of the atmosphere is not greater than 22 percent by volume; (b) the concentration of flammable materials in the atmosphere is less than 10 percent of the lower explosive limit; (c) the residues, scale, or preservative coatings are deemed sufficiently to prevent the spread of fire and are not capable of producing a higher concentration than permitted by (a) or (b); (d) all adjacent spaces, containing or having contained flammable or combustible materials shall be sufficiently cleaned of residues, scale, or preservative coatings to prevent the spread of fire, or they are inerted. Ship's fuel tanks, tube tanks, or engine room or fire room bilges, or other machinery spaces, are treated in accordance with the Marine Chemist's requirements.

SAFE FOR LIMITED HOT WORK: In the compartment or space so designated (a) portions of the space meet the requirements for Safe for Hot Work and Partial Gas Free, as applicable, or (b) the space is inerted, adjacent spaces meet the requirements for Safe for Hot Work, and hot work is restricted to specific locations, (c) portions of the space shall meet the requirements for Safe for Hot Work, as applicable, and the nature or type of hot work is limited or restricted.

NOT SAFE FOR HOT WORK: In the compartment or space so designated, hot work is not permitted.

CHEMISTS ENDORSEMENT. This is to certify that I have personally determined that all spaces in the foregoing list are in accordance with NFPA 306 Control of Gas Hazards on Vessels and have found the condition of each to be in accordance with its assigned designation.

The undersigned acknowledges receipt of this Certificate of the NFPA 306 and understands limitations not limitations under which it was issued, and the requirements for maintaining its validity.

This Certificate is based on conditions existing at the time the inspection herein set forth was completed and is issued subject to certain assumptions and explanations.

Signed ECI (Company) 9 Jun '06 (Date)

Signed (Marine Chemist) #467 (Certificate #)

Dear Mr. Rodriguez:

The **analytical results** for the soil samples, received by our laboratory on May 31, 2006, are attached. The samples were received chilled, intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

SUBJECT: REMOVAL OF (2) UNDERGROUND STORAGE TANK AT 12459 ARROW ROUTE, RANCHO CUCAMONGA, CA 91739

The Department has received the sample results and/or closure report submitted by SHARP ENVIRONMENTAL TECHNOLOGIES, dated January 7, 2011. After review of the report prepared by you or your agent, it has been determined that the extent of contamination, or lack thereof, would indicate that no further investigation is warranted at this time.

It is important to note that this cannot be construed as a release of liability for the site or declaration that the site is free from contamination. Should further projects or environmental investigations reveal additional contaminants on site, you will be responsible and held liable for the investigation and remedial actions.

If you have any questions, please call me at (909) 386-8419.

EXECUTIVE SUMMARY

Environmental Logistics was contracted to remove one (1) 300-gallon steel diesel underground storage tank (UST) at the TAMCO facility located at 12459 Arrow Route B, Rancho Cucamonga, California.

Under permit from the County of San Bernardino Fire Department and the Rancho Cucamonga Fire Protection District, Environmental Logistics removed the UST from the excavation with the UST delivered for recycling to American Metal Recycling. Laboratory analytical results of one soil sample collected beneath the former 300-gallon UST indicated concentrations of total petroleum hydrocarbons – diesel, ethylbenzene and total xylenes reported above lab detection limits. Benzene, toluene and fuel oxygenates were reported in the soil sample collected beneath the former UST at below laboratory detection limits.

Approximately 100 gallons of rinsate and UST contents were removed from the UST as part of the UST cleaning. TAMCO backfilled the excavation with a concrete slurry following the removal of the UST.

Based on the findings in this report and the analytical results presented by an independent California certified laboratory, SET recommends submittal of this report to the San Bernardino County Fire Department for their review and determination on whether further action or no further action is required at the site.

1.0 INTRODUCTION

This report summarizes underground storage tank (UST) closure operations completed at the TAMCO facility located at 12459 Arrow Route B in Rancho Cucamonga, California. Refer to ***Figure 1*** for a site vicinity map of the subject area.

The site is owned and operated by TAMCO Steel. Environmental Logistics was contracted to remove one (1) 300-gallon diesel UST at the above referenced site. The approximate location of the former UST is shown on ***Figures 2 and 3***.

Environmental Logistics performed the removal in accordance with San Bernardino County Fire Department (SBCFD) and Rancho Cucamonga Fire Protection District guidelines. In addition, Environmental Logistics received permits from SBCFD and the city of Rancho Cucamonga to remove the one underground storage tank (UST). Refer to ***Appendix A*** for copies of these permits.

2.0 FIELD ACTIVITIES

2.1 UST REMOVAL OPERATIONS

The one UST was cleaned and rinsed on November 30, 2010. A copy of the Uniform Hazardous Waste Manifest for the approximately 100 gallons of rinsate and UST liquids from the UST is provided in ***Appendix B***. On November 30, 2010, Environmental Logistics began excavation of the UST by exposing the UST with an excavator. The UST was removed from the excavation and a soil sample was collected beneath the UST on November 30, 2010 following monitoring of the UST atmosphere by a marine chemist. Refer to ***Appendix C*** for a copy of the Hazardous Waste Tank Closure Certificate. The UST atmosphere was monitored to demonstrate that satisfactory lower explosive limits (LEL), hydrogen sulfide and total oxygen content levels were achieved. All excavated soil was stockpiled near the excavation. On November 30, 2010 the UST was transported to American Metal Recycling in Fontana, California under a bill of lading. The UST recycling certificate and bill of lading are provided in ***Appendix D***.

2.2 SOIL SAMPLING

Upon completion of UST removal operations, a total of one (1) soil sample was collected from the UST excavation. The soil sample was delivered to Enviro-Chem, Inc.; a state of California certified laboratory for analysis. The approximate location where the soil sample was collected is shown on ***Figure 3***.

The soil sample was packaged in an 8 oz. Qorpak glass jar, sealed with Teflon® lined plastic lid, labeled and stored on ice in a cooler at approximately 4 degrees Celsius (°C). The sample was immediately delivered to Enviro-Chem, Inc. for testing. Refer to ***Appendix E*** for a copy of laboratory and quality assurance/quality control (QA/QC)

reports and chain-of-custody records. All sampling activities were performed under the direction of a California professional geologist.

3.0 SITE GEOLOGY AND HYDROGEOLOGY

The site is located within the San Bernardino Valley, which marks the boundary between the Peninsular Range Province to the south, and the Transverse Range Province to the north. The Transverse Ranges consist of a set of easterly-trending mountains and geologic structures that are distinct from the general northwest-southeast trend of the other provinces of California. Regional uplift of the Transverse Ranges has occurred along the San Andreas Fault zone, located approximately 10 miles to the northeast of the site. A series of thrust faults and sub-parallel strike slip faults creates the well-defined San Andreas Fault zone along the southern foothills of the Transverse Ranges through the Cajon Pass.

The Peninsular Range Province is characterized generally by structurally controlled, elongated northwesterly-trending valleys and mountains with elevated erosional surfaces. The eastern portion of the province has been extensively uplifted by faulting and represents the highest and most rugged terrain. From the east, the province gradually descends to the west toward the Pacific Ocean. The Peninsular Ranges are traversed by numerous northwest trending faults creating and subdividing the province into many sub-parallel, northwest trending ranges and valleys. The northwesterly trending mountains and valleys are flanked by regional faults, many of them remain active today, including the San Andreas, San Jacinto, and Elsinore Fault zones.

Locally, the site is underlain by alluvial deposits that have accumulated within the greater San Bernardino Valley area mainly as outwash from the Deer Canyon and Day Canyon drainages to the north. These deposits consist mainly of sands, silt, sand and gravel with minor occurrences of clay. Boulders and cobbles are also present in the northern portion of the valley near the drainage source. The alluvial sediments near the ground surface consist of primarily of unconsolidated silts and sands with minor amounts of gravels.

The Geotracker database from the Regional Water Quality Control Board indicated depth to water at the ARCO Station # 5205 located at 25715 Rancho Cucamonga Boulevard in Rancho Cucamonga, CA 92373 was approximately 150 feet below the ground surface as measured on May, 2002. The ARCO station is approximately 5 miles southwest of the subject site at a surface elevation of the ARCO station at approximately 1120 feet above MSL, which is approximately 40 feet lower in elevation then the subject site.

4.0 LABORATORY ANALYSIS

4.1 METHODS OF ANALYSIS

Soil samples were collected, maintained, prepared and analyzed according to Test Methods for Evaluating Solid Waste, (SW-846), Third Edition, Update #4A, May 1998. These methods, as prescribed by the U.S. Environmental Protection Agency (EPA), provide test procedures, which determine that petroleum based hydrocarbons are not considered a hazardous waste within the definition of the Resource Conservation and Recovery Act.

The soil sample (Tamco 1 @ 6'. 5") collected during UST removal activities was analyzed by Enviro-Chem Inc. of Pomona, California for total petroleum hydrocarbons – diesel (TPH-D) and for BTEX and oxygenates by EPA Method 8260B.

4.2 RESULTS OF ANALYSIS

Concentrations of TPH-D were reported at 1,720 milligrams per kilogram (mg/kg). Additionally, elevated concentrations of ethylbenzene and total xylenes were reported in soil sample Tamco 1 @ 6'. 5" at 57 micrograms per kilogram (µg/kg) and 423 µg/kg, respectively.

Benzene, toluene and fuel oxygenates were reported below laboratory detection limits in soil sample Tamco 1 @ 6'. 5". Refer to ***Table 1*** for a summary of TPH-D, BTEX and oxygenates analytical results. The laboratory analytical report and quality control/quality assurance reports including chain of custodies are provided in ***Appendix E***.

5.0 CONCLUSIONS AND RECOMMENDATIONS

On November 30, 2010 Environmental Logistics performed the removal of 1 300-gallon steel diesel UST at the TAMCO facility located at 12459 Arrow Route B in Rancho Cucamonga, California. Environmental Logistics followed all applicable state, county and local guidelines during the site activities at the above referenced site.

One soil sample (Tamco 1 @ 6'.5") was collected beneath the former UST. Analytical results for TPH-D, ethylbenzene and total xylenes were reported with elevated concentrations above the laboratory detection limits. Groundwater was not encountered during field activities.

Based on the findings and analytical results as presented in this report, SET recommends submittal of this report to the local oversight agency (San Bernardino County Fire Department) for their review and comment whether they consider any further action necessary at this site based on the soil analytical results.

6.0 LIMITATIONS

SET performs professional services using that degree of care and skill ordinarily exercised by environmental consultants practicing in this or similar localities. The findings are based primarily upon analytical results provided by an independent laboratory. Interpretations of the subsurface conditions at the site, for the purpose of this investigation, are made from a limited number of available soil sample locations. Subsurface conditions may vary from one location to another location.

SET appreciates the opportunity to provide environmental management services for Environmental Logistics. If you have any questions regarding the report or require additional information, please feel free to call us at (310) 505-3675.

Sincerely,
Sharp Environmental Technologies, Inc.

Jeffrey E. Sharp
Principal Geologist, P.G. # 6777

NOTE: The State of California has determined that tanks used for the storage of any hazardous or flammable substance shall be considered hazardous even if all contents have been removed.

All storage tanks shall be hauled as hazardous waste, accompanied by a state hazardous waste manifest, and taken to a licensed treatment, storage and disposal facility (TSDF); or if the tanks are triple rinsed on site and the rinsate manifested and hauled to a licensed TSDF, the tank may be handled as nonhazardous.

For information on licensed TSDFs that can accept nonrinsed tanks, contact the State of California Department of Health Services, Toxic Substance Control at (800) 258-6942.

SUBJECT: CLOSURE OF UNDERGROUND STORAGE TANK(S) (USTS)
LOCATED AT 12459 ARROW ROUTE B
RANCHO CUCAMONGA, CA 91739
(FA0006582, SR0202355, CERS ID 10152245)

On **6/28/2023** Inspector **Mary Zakhary** of San Bernardino County Fire Protection District Certified Unified Program Agency (CUPA) witnessed closure of UST(s) and associated soil and/or groundwater sampling at the above referenced location.

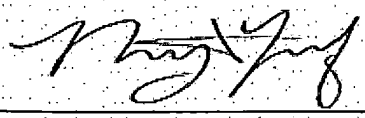
The following UST(s) were removed:

- One (1) 10,000-gallon single walled Found UST

No other USTs remain on site.

A copy of the closure report prepared by Roux Associates, Inc. has been received by this CUPA.

This CUPA has reviewed the UST closure documentation and approves the UST closure as properly completed in accordance with California Health and Safety Code (HSC), Chapter 6.7, Section 25298(c) and the California Code of Regulations (CCR), Title 23, Section 2670 & 2672.



Please be advised that the inactivation of the UST operating permit does not relieve you of the responsibility to clean up existing, additional, or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance, or otherwise pose a threat to water quality or public health. This correspondence and a copy of the closure report will be provided to the local Regional Water Quality Control Board which may have additional requirements.

If you have any questions, please contact our office at (909) 386-8401.

1. Introduction

Roux Associates, Inc, (Roux) has prepared this *Underground Storage Tank Closure Report* (Report) on behalf of BTC III Arrow Route CC LP. This Report summarizes the findings, observations, soil sampling, and laboratory analysis conducted during the excavation, permanent removal, and closure of a dual-compartment underground storage tank (UST) comprised of one 10,000-gallon diesel compartment and one 2,000-gallon gasoline compartment and the associated product piping. The UST was removed from the industrial property located at 12451 Arrow Route, Rancho Cucamonga, California (the Site; Figure 1).

The purpose of this Report is to provide all necessary documentation (including permitting, disposal manifests, and certificate of recycling), general observations during UST removal, and laboratory analytical results of soil confirmation samples collected beneath the UST. This Report satisfies the requirements of the San Bernardino County Fire Protection District (SBCFPD) and the Rancho Cucamonga Fire Protection District (RCFPD) UST closure reporting requirements.

The property owner and responsible party is:

BTC III Arrow Route CC LP
12459 Arrow Route
Rancho Cucamonga, CA

1.1 Site Description and Background

The Site is located at 12451 Arrow Route, Rancho Cucamonga, San Bernardino County, California, Assessor's Parcel Numbers (APNs) 0229-121-34, 0229-121-33, 0229-131-19, and 0229-121-35 (Parcels 1 through 4, respectively) and consists of approximately 95 acres of land bound by Arrow Route to the north and the Atchison Topeka and Santa Fe Railroad to the south, see Figure 2. Additional addresses used at the Site include 12343, 12353, 12455, and 12459-B Arrow Route. The Site was historically occupied by Commercial Metals Company (CMC), a steel mill which was primarily located on Parcel 3. The Site was also occupied by CMC Rebar, a limited rebar manufacturing facility, and Phoenix Industries, a slag processing facility located on Parcels 4 and 2, respectively. Parcel 1 was not developed with any permanent structures and was primarily used for equipment and material storage. Steel mill operations existed on Site from the 1950s until 2019 when milling operations were phased out.

The location of the UST at the northwest portion of Parcel 3 (Figures 2 and 3) was determined by surface features and prior geophysical investigation conducted by Roux and others.

1.2 Regional Geology

The Site is located along the northeastern portion of the Chino Subbasin within the Upper Santa Ana Valley Groundwater Basin. The regional geology at the Site consists of consolidated and semi-consolidated Quaternary deposits of alluvium, lake, playa, and terrace. Soils on the site can generally be described as sand, sand with gravel, and sand with silt. The soil on Parcel 3 where the UST was located consists of sand or sand with silt to 5 feet below ground surface (bgs), sand with silt to 29 feet bgs, and a dense silty layer from 29 to 34 feet bgs. Depth to groundwater is approximately 430 feet bgs and the groundwater has an overall southwest gradient.

2. Field Activities

All activities performed and detailed as part of this Report were conducted under the supervision of a registered California Professional Geologist.

2.1 Pre-Field Activities

Prior to the start of UST removal field activities, Roux prepared a Site-specific HASP to ensure worker safety. In addition to containing information regarding Roux's standard safety practices, the HASP describes potential hazards relating to Site activities and provides the locations and contact information of nearby emergency services. The HASP was kept on Site when fieldwork occurred and was reviewed and signed by Site workers during the daily tailgate health and safety meeting prior to work each day.

2.2 Permitting

Three permits were required during removal of the UST. An SBCFPD UST Closure Permit (SR0202355) was obtained and dated February 18, 2022 (Appendix A). An RCFPD Permit to Abandon/Remove Hazardous Materials Storage Tank (FSE2022-00007) was obtained and dated November 1, 2022 (Appendix B). A Building Permit issued by the City of Rancho Cucamonga Building and Safety Department was obtained on November 2, 2022 (Appendix C).

2.3 UST Removal

The location of the UST in the northwest portion of Parcel 3 (Figures 2 and 3) was determined by surface features and prior geophysical investigations conducted by Roux and others. The dual-compartment UST was comprised of one 10,000-gallon diesel compartment and one 2,000-gallon gasoline compartment with a double wall steel construction. The product dispensers were located directly above the tank and all piping was located above the tank as well.

The UST removal activities were conducted from December 5, 2022 through December 12, 2022. On December 5, 2022, Silverado Contractors, Inc. (Silverado) began excavation activities under the oversight of RCFPD Inspector Graciano. Overlying concrete debris was stockpiled north of the UST. During the excavation, Roux personnel monitored the excavated soil with a photo-ionization detector (PID) calibrated to 100 parts per million (ppm) hexane gas per South Coast Air Quality Management District (SCAQMD) Rule 1166 requirements; performed under Roux's Various Locations Permit (ID 189893). Excavation of the soil continued until the top portion of the tank was exposed, allowing access to clean the UST.

On December 6, 2022, West Coast Environmental Solutions (West Coast) began to clean the tank compartments with pressurized water. The residual tank contents and cleaning rinsate were evacuated via vacuum truck. Approximately 3,100 gallons of liquid were collected and transported off-Site by South Bay Industrial Services, Inc. as non-RCRA hazardous waste under Hazardous Waste Generator ID CAD982361404. A copy of the hazardous waste manifest is included as an attachment to this Report (Appendix D). At the end of the day, the tank could not be certified clean so activities were ceased.

On December 12, 2022, West Coast resumed UST cleaning activities with Inspector Graciano (RCFPD) and Inspector Kovach (SBCFPD) present. An additional 1,800 gallons of rinsate were removed from the UST and transported off-Site by West Coast under Hazardous Waste Generator ID CAD982361404 (Appendix D). Both UST compartments were certified clean by Ms. Nancy Carraway, Certified Industrial Hygienist

(CIH), as recyclable metal. A flame ionization detector (FID) was used to confirm the tank atmosphere was safe for cutting. The Hazardous Waste Tank Closure Certification is included in Appendix E.

Two windows were cut in the top of the tank (one for each compartment) to place dry ice into the UST to render it inert per RCFPD guidelines (25 pounds of dry ice per 1,000 gallons of UST capacity). Once the Lower Explosive Limit (LEL) was again confirmed to be zero percent and the concentration of oxygen 20.9 percent, the UST was deemed ready for removal. The UST and associated piping was then removed and placed on a truck for immediate transport and disposal. The UST was transported to SA Recycling located at 15615 Arrow Highway, Fontana, California 92335. The Tank Recycling Receipt is included in Appendix F. The tank was observed to be in very good condition, with no visible holes, corrosion, or wear, and there were no field observations (visual or olfactory) of impacted soil beneath the tank that may indicate a release. Tank piping was also observed to be in good condition with no indications of a release.

Following removal of the UST, confirmation soil samples were collected and the excavation was secured pending receipt of laboratory analytical results, discussed below. A photographic log is included as Appendix G.

2.4 Confirmation Sampling Procedures and Laboratory Analysis

Roux personnel collected confirmation soil samples per the UST removal permit requirements and under the supervision/direction of the SBCFPD and RCFPD inspectors on December 6 and December 12, 2022. Two composited soil samples (SS-1 and SS-2) were collected from the two stockpiles generated on December 6, 2022. The samples were collected at randomized locations within the stockpiles at least 6 inches below the stockpile surface with a spade.

On December 12, 2022 following removal of the UST, two discrete confirmation samples were collected from each end of the tank invert. The samples were collected directly into the sample jars from the excavator bucket, which had been filled with soil taken from a minimum depth of 2 feet vertically into the native soil. Given the tank's north-south orientation, the samples collected were labeled accordingly as TANK-NORTH and TANK-SOUTH. During collection, no visual or olfactory evidence of hydrocarbon impact was observed, and PID readings taken from the excavator bucket at the time of sampling were below 1 ppm. Sampling equipment was decontaminated with Alconox and triple-rinsed in between sampling locations.

All soil samples were collected in laboratory provided 8-ounce jars and 40-milliliter (mL) volatile organic analysis (VOA) glass jars. Samples from each location were sub-cored and preserved in the field using procedures consistent with United States Environmental Protection Agency (USEPA) Method 5035. Soil samples were labeled, stored under proper chain-of-custody protocol, placed in an ice chest, and transported to Enthalpy Analytical, a state certified analytical laboratory in Orange, California.

All samples collected were analyzed for total petroleum hydrocarbons (TPH) in the gasoline range (C_5-C_{12}) and the diesel range (C_{10}-C_{24}) using USEPA Method 8015B and for a select list of volatile organic compounds (VOCs) including benzene, toluene, ethylbenzene, and xylenes (BTEX) and fuel oxygenates methyl-tertiary-butyl ether (MTBE), tertiary-butyl alcohol (TBA), and naphthalene by USEPA Method 8260B.

3. Results

Analytical results from the soil sampling are summarized in Tables 1 and 2. VOC results were compared to Department of Toxic Substances Control (DTSC) and USEPA industrial soil screening levels (SLs) and TPH results were compared to San Francisco Regional Water Quality Control Board (SFRWQCB) commercial/industrial shallow soil screening levels. Detected analytes are summarized in the table below.

Table: Detected Analytes in Confirmation Soil Samples

Analyte [1]	Screening Level [2]	Tank bottom confirmation samples		Stockpile samples	
		TANK-NORTH	TANK-SOUTH	SS-1	SS-2
TPH-g	2,000 (SFBRWQCB)	--	--	--	--
TPH-d	1,200 (SFBRWQCB)	--	--	39	--
TBA	6,500 (USEPA)	0.013	0.012	0.0083	--
Toluene	5,300 (DTSC)	--	--	0.010	--
Ethylbenzene	25 (USEPA)	--	--	0.0084	--
Total Xylenes	2,500 (USEPA)	--	--	0.069	--
Naphthalene	6.5 (DTSC)	--	--	0.022	--

Notes:

[1] All results in units of milligrams per kilogram (mg/kg). "—" = not detected above laboratory reporting limits.

[2] Most conservative applicable screening level shown for comparison to analytical results. Refer to Tables 1 and 2 for all applicable screening levels used in the evaluation of analytical results.

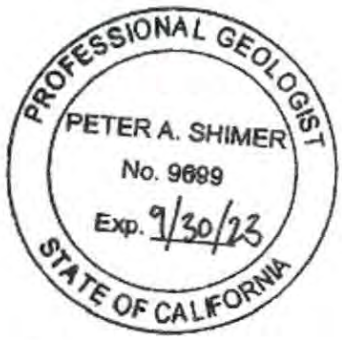
As shown above, the tank bottom confirmation samples (TANK-NORTH and TANK-SOUTH) contained no detectable TPH or VOCs with the exception of tertbutyl alcohol, detected at trace concentrations several orders of magnitude below its applicable screening level. Neither TPH nor VOCs were detected in stockpile sample SS-1, and only trace concentrations of VOCs and TPH in the diesel range were detected in stockpile sample SS-2. Concentrations of all detected analytes were well below their respective screening levels.

Laboratory reports are included as Appendix H.

4. Conclusions and Recommendations

In accordance with SBCFPD and RCFPD UST closure requirements, one dual-compartment UST comprised of one 10,000-gallon diesel compartment and one 2,000-gallon gasoline compartment. The UST was excavated and removed from the Site under the supervision of a CIH and inspectors from both the SBCFPD and RCFPD on December 12, 2022. Prior to its removal, the UST was triple rinsed, certified clean by a CIH, and rendered inert by placing dry ice within the UST. The UST was lifted onto a truck, removed from the Site, and disposed of at a recycling facility.

During the UST removal, the tank appeared to be in very good condition and there was no evidence of staining or of a release beneath the UST or in the UST excavation. Confirmation soil samples collected beneath the UST showed no indication of hydrocarbon-related impacts. Based on the results of the confirmation soil sampling and the permanent removal of the UST, Roux requests formal closure be issued for the former UST at the Site.



Removal and sampling activities described in this Report were performed under the supervision of the undersigned California Professional Geologist.

Roux is available to answer any questions regarding this *Underground Storage Tank Closure Report*. Please contact Peter Shimer at 925-818-6276 or via email at pshimer@rouxinc.com or Mauricio H. Escobar at 310-879-4920 or via email at mescobar@rouxinc.com.

Additional information regarding attempted service, etc.:

Federal Rule of Civil Procedure 45 (c), (d), (e), and (g) (Effective 12/1/13)

(c) Place of Compliance.

(1) ***For a Trial, Hearing, or Deposition.*** A subpoena may command a person to attend a trial, hearing, or deposition only as follows:

(A) within 100 miles of where the person resides, is employed, or regularly transacts business in person; or

(B) within the state where the person resides, is employed, or regularly transacts business in person, if the person

(i) is a party or a party's officer; or

(ii) is commanded to attend a trial and would not incur substantial expense.

(2) ***For Other Discovery.*** A subpoena may command:

(A) production of documents, electronically stored information, or tangible things at a place within 100 miles of where the person resides, is employed, or regularly transacts business in person; and

(B) inspection of premises at the premises to be inspected.

(d) Protecting a Person Subject to a Subpoena; Enforcement.

(1) ***Avoiding Undue Burden or Expense; Sanctions.*** A party or attorney responsible for issuing and serving a subpoena must take reasonable steps to avoid imposing undue burden or expense on a person subject to the subpoena. The court for the district where compliance is required must enforce this duty and impose an appropriate sanction—which may include lost earnings and reasonable attorney's fees—on a party or attorney who fails to comply.

(2) ***Command to Produce Materials or Permit Inspection.***

(A) *Appearance Not Required.* A person commanded to produce documents, electronically stored information, or tangible things, or to permit the inspection of premises, need not appear in person at the place of production or inspection unless also commanded to appear for a deposition, hearing, or trial.

(B) *Objections.* A person commanded to produce documents or tangible things or to permit inspection may serve on the party or attorney designated in the subpoena a written objection to inspecting, copying, testing, or sampling any or all of the materials or to inspecting the premises—or to producing electronically stored information in the form or forms requested. The objection must be served before the earlier of the time specified for compliance or 14 days after the subpoena is served. If an objection is made, the following rules apply:

(i) At any time, on notice to the commanded person, the serving party may move the court for the district where compliance is required for an order compelling production or inspection.

(ii) These acts may be required only as directed in the order, and the order must protect a person who is neither a party nor a party's officer from significant expense resulting from compliance.

(3) ***Quashing or Modifying a Subpoena.***

(A) *When Required.* On timely motion, the court for the district where compliance is required must quash or modify a subpoena that:

(i) fails to allow a reasonable time to comply;

(ii) requires a person to comply beyond the geographical limits specified in Rule 45(c);

(iii) requires disclosure of privileged or other protected matter, if no exception or waiver applies; or

(iv) subjects a person to undue burden.

(B) *When Permitted.* To protect a person subject to or affected by a subpoena, the court for the district where compliance is required may, on motion, quash or modify the subpoena if it requires:

(i) disclosing a trade secret or other confidential research, development, or commercial information; or

(ii) disclosing an unretained expert's opinion or information that does not describe specific occurrences in dispute and results from the expert's study that was not requested by a party.

(C) *Specifying Conditions as an Alternative.* In the circumstances described in Rule 45(d)(3)(B), the court may, instead of quashing or modifying a subpoena, order appearance or production under specified conditions if the serving party:

(i) shows a substantial need for the testimony or material that cannot be otherwise met without undue hardship; and

(ii) ensures that the subpoenaed person will be reasonably compensated.

(e) Duties in Responding to a Subpoena.

(1) ***Producing Documents or Electronically Stored Information.*** These procedures apply to producing documents or electronically stored information:

(A) *Documents.* A person responding to a subpoena to produce documents must produce them as they are kept in the ordinary course of business or must organize and label them to correspond to the categories in the demand.

(B) *Form for Producing Electronically Stored Information Not Specified.* If a subpoena does not specify a form for producing electronically stored information, the person responding must produce it in a form or forms in which it is ordinarily maintained or in a reasonably usable form or forms.

(C) *Electronically Stored Information Produced in Only One Form.* The person responding need not produce the same electronically stored information in more than one form.

(D) *Inaccessible Electronically Stored Information.* The person responding need not provide discovery of electronically stored information from sources that the person identifies as not reasonably accessible because of undue burden or cost. On motion to compel discovery or for a protective order, the person responding must show that the information is not reasonably accessible because of undue burden or cost. If that showing is made, the court may nonetheless order discovery from such sources if the requesting party shows good cause, considering the limitations of Rule 26(b)(2)(C). The court may specify conditions for the discovery.

(2) ***Claiming Privilege or Protection.***

(A) *Information Withheld.* A person withholding subpoenaed information under a claim that it is privileged or subject to protection as trial-preparation material must:

(i) expressly make the claim; and

(ii) describe the nature of the withheld documents, communications, or tangible things in a manner that, without revealing information itself privileged or protected, will enable the parties to assess the claim.

(B) *Information Produced.* If information produced in response to a subpoena is subject to a claim of privilege or of protection as trial-preparation material, the person making the claim may notify any party that received the information of the claim and the basis for it. After being notified, a party must promptly return, sequester, or destroy the specified information and any copies it has; must not use or disclose the information until the claim is resolved; must take reasonable steps to retrieve the information if the party disclosed it before being notified; and may promptly present the information under seal to the court for the district where compliance is required for a determination of the claim. The person who produced the information must preserve the information until the claim is resolved.

(g) Contempt.

The court for the district where compliance is required—and also, after a motion is transferred, the issuing court—may hold in contempt a person who, having been served, fails without adequate excuse to obey the subpoena or an order related to it.

For access to subpoena materials, see Fed. R. Civ. P. 45(a) Committee Note (2013).

ATTACHMENT A

FORMAT OF ELECTRONIC DOCUMENTS

This request includes, but is not limited to, electronic documents or files such as e-mails, images, and spreadsheets. All electronically stored information should be produced in its original machine readable electronic form if the information is saved in a commonly accessible file format that does not require proprietary software to access. Thus, files saved in common word processing, text, presentation (such as PowerPoint), web page, image, audio, video, or spreadsheet (such as Excel) format should be produced in their original machine readable format. Where a document is stored in an electronic format and a printed form, both should be produced. If you are uncertain of how to produce particular electronic documents, please contact counsel serving this subpoena prior to the production to discuss the proper production format and limit any burden you may have in responding to this subpoena.

DEFINITIONS

As used herein, the following definitions apply:

1. **"DOCUMENT"** and **"DOCUMENTS"** mean all "writings," "recordings," and "photographs" as those terms are defined in Rule 1001(a), (b) and (c) of the Federal Rules of Evidence, and includes the "original" and any "duplicate" as those terms are defined in Rule 1001(d) and (e) of the Federal Rules of Evidence. Consistent with those definitions, "DOCUMENT" and "DOCUMENTS" include but are not limited to writings, recordings and photographs produced by hand, typewriter, printer, camera, copier or stored in electronic versions including but not limited to metadata, email, text messages, recordings onto computer storage media (such as tapes, discs, hard drives, flash memory devices and backup memory devices), and every other means of recording upon any tangible thing, and any other form of communicating letters, words, pictures, sounds or symbols. Specific examples would include but not be limited to, correspondence, emails (including attachments), meeting agendas and minutes or other means by which meeting events were recorded, contracts, diaries, calendars, ledgers,

memoranda, reports, studies, notes, spreadsheets, databases, photographs, maps, charts, and graphs.

2. **"RELATING TO"** means commenting on, concerning, contradicting or calling into question, describing, discussing, evidencing, explaining, mentioning, pertaining to, referring to, reflecting, or summarizing.

3. **"PERSON"** or **"PERSONS"** means all individuals, corporations, partnerships, nonprofit organizations, associations, agencies, firms, trusts, consultants, attorneys at law, divisions, governmental bodies, municipal bodies, or other legal or business entities.

Re: TankGuard Liability Insurance Program
Insured: Gerdau Ameristeel US Inc.

Policy Number: 007510666
Policy Period: 7/01/12 to 7/01/13

Dear Sheila:

On behalf of Commerce and Industry Insurance Company, we are pleased to attach your client's TankGuard Liability Insurance Policy and related documents. The delivery of these policy documents completes the placement of this coverage for the captioned year.

The captioned policy was issued based on the representations, contained in your client's most recent application.

Thank you for placing this important insurance protection. Should you require further assistance, do not hesitate to call us at 1-800-475-4055. You may also contact us at our web-site address, which is www.policymanagers.com

Sincerely,

POLICY MANAGERS®

POLICYHOLDER NOTICE

Thank you for purchasing insurance from the Chartis companies. Chartis insurance Companies generally pay compensation to brokers and independent agents, and may have paid compensation in connection with your policy. You can review and obtain information about the nature and range of compensation paid by Chartis insurance companies to brokers and independent agents in the United States by visiting our website at www.chartisinsurance.com/producercompensation or by calling 1-800-706-3102.

STORAGE TANK THIRD-PARTY LIABILITY, CORRECTIVE ACTION AND CLEAN-UP COSTS POLICY

NOTICE: THIS IS A CLAIMS-MADE-AND-REPORTED POLICY. PLEASE READ CAREFULLY. ADDITIONALLY, THIS POLICY HAS CERTAIN PROVISIONS AND REQUIREMENTS UNIQUE TO IT AND MAY BE DIFFERENT FROM OTHER POLICIES THE INSURED MAY HAVE PURCHASED. DEFINED TERMS, OTHER THAN HEADINGS, APPEAR IN BOLD FACE TYPE.

THE DESCRIPTIONS IN ANY HEADINGS OR SUB-HEADINGS OF THIS POLICY ARE INSERTED SOLELY FOR CONVENIENCE AND DO NOT CONSTITUTE ANY PART OF THE TERMS OR CONDITIONS HEREOF.

In consideration of the payment of the premium, in reliance upon the statements in the Declarations and the Application, annexed hereto and made a part of this Policy or, if not annexed hereto, which are deemed to be annexed hereto and made a part of this Policy, and pursuant to all of the terms of this Policy, the Company agrees with the **Named Insured** as follows:

I. INSURING AGREEMENT

1. COVERAGES:

COVERAGE A - THIRD PARTY BODILY INJURY AND PROPERTY DAMAGE DUE TO A STORAGE TANK RELEASE

To pay on behalf of the **Insured**, **Loss** that the **Insured** becomes legally obligated to pay as a result of **Claims** for **Bodily Injury** or **Property Damage** resulting from **Pollution Conditions** from a covered **Storage Tank System**, provided such **Claims** are first made against the **Insured** and reported to the Company in writing during the **Policy Period** or during the **Extended Reporting Period**, if applicable. The **Pollution Condition** must commence on or after the Retroactive Date as shown in Item 6 of the Declarations.

COVERAGE B - CLEAN-UP COSTS OR CORRECTIVE ACTION DUE TO A STORAGE TANK RELEASE

To pay on behalf of the **Insured**, **Clean-Up Costs** or **Corrective Action** that the **Insured** becomes legally obligated to pay as a result of a **Confirmed Release** from a covered **Storage Tank System**, provided such **Confirmed Release** is first reported to the Company in writing during the **Policy Period** or during the **Extended Reporting Period**, if applicable. The **Pollution Condition** must commence on or after the Retroactive Date as shown in Item 6 of the Declarations.

2. DEFENSE:

The Company shall have the right and duty to defend any **Claims** covered under Coverage A or any civil or administrative proceedings or suits which seek to impose a legal obligation upon the **Insured** to undertake **Clean-Up Costs** or **Corrective Action** for a **Confirmed Release** to which Coverage B applies. The Company's duty to defend or continue defending any such **Claims**, civil or administrative proceedings or suits and to pay any **Loss**, **Corrective Action**, **Clean-Up Costs** or defense costs, charges and expenses, shall cease once the applicable limit of liability, as described in Section **V. LIMITS OF LIABILITY AND DEDUCTIBLE**, has been exhausted.

3. INDEPENDENT COUNSEL:

In the event the **Insured** is entitled by law to select independent counsel to defend the **Insured** at the Company's expense, the attorney fees and all other litigation expenses the Company must pay to that counsel are limited to the rates the Company would actually pay to counsel that the Company retains in the ordinary course of business in the defense of similar **Claims** in the community where the **Claim** arose or is being defended.

Additionally, the Company may exercise the right to require that such counsel have certain minimum qualifications with respect to their competency, including experience in defending **Claims** similar to the one pending against the **Insured**, and to require such counsel to have errors and omissions insurance coverage. As respects any such counsel, the **Insured** agrees that counsel will timely respond to the Company's request for information regarding the **Claim**. The **Insured** may at any time, by its signed consent, freely and fully waive its right to select independent counsel.

4. SETTLEMENT:

The Company will present any settlement offers to the **Insured**, and if the **Insured** refuses to consent to any settlement within the limits of liability of this Policy recommended by the Company and acceptable to the claimant, the Company's duty to defend the **Insured** shall then cease and the **Insured** shall thereafter negotiate or defend such **Claim** independently of the Company and the Company's liability shall not exceed the amount, less the Deductible or any outstanding Deductible balance, for which the **Claim** could have been settled if such recommendation was consented to.

II. EXCLUSIONS

1. COMMON EXCLUSIONS - APPLICABLE TO ALL COVERAGES:

This Policy does not apply to **Claims**, **Clean-Up Costs** or **Corrective Action**, or **Loss**:

A. CRIMINAL FINES, PENALTIES, AND ASSESSMENTS:

Due to any criminal fines, criminal penalties or criminal assessments.

B. CONTRACTUAL LIABILITY:

Arising from liability of others assumed by the **Insured** under any contract or agreement, unless the liability of the **Insured** would have attached in the absence of such contract or agreement or the contract or agreement is an **Insured Contract**.

C. INTENTIONAL NONCOMPLIANCE:

Arising from **Pollution Conditions** based upon or attributable to any **Responsible Insured's** intentional, willful or deliberate noncompliance with any statute, regulation including those set forth in Title 40 of the Code of Federal Regulations, ordinance, administrative complaint, notice of violation, notice letter, executive order, or instruction of any governmental agency or body.

D. INTERNAL EXPENSES:

For costs, charges or expenses incurred by the **Insured** for goods supplied or services performed by the staff or salaried employees of the **Insured**, or its parent, subsidiary or affiliate, except if in response to an emergency or pursuant to **Environmental Laws** that require immediate remediation of **Pollution Conditions**, or unless such costs, charges or expenses are incurred with the prior written approval of the Company in its sole discretion.

E. INSURED vs. INSURED:

Arising from a **Claim** brought by any **Insured** against any other person or entity who is also an **Insured** under this Policy. This exclusion does not apply to **Claims** initiated by third parties or **Claims** that arise out of an indemnification given by one **Named Insured** to another **Named Insured** in an **Insured Contract**.

F. **EMPLOYER LIABILITY:**

Arising from **Bodily Injury** to an **Insured** or its parent, subsidiary or affiliate arising out of and in the course of employment by the **Insured** or its parent, subsidiary or affiliate. This exclusion applies whether the **Insured** may be liable as an employer or in any other capacity and to any obligation to share damages with or repay third parties who must pay damages because of the injury.

G. **PRIOR KNOWLEDGE/NON-DISCLOSURE:**

Arising from **Pollution Conditions** existing prior to the **Inception Date** and known by a **Responsible Insured** and not disclosed in the application for this Policy, or any previous policy for which this Policy is a renewal thereof.

H. **COST TO CONFIRM A RELEASE FROM A STORAGE TANK SYSTEM:**

For any costs, charges or expenses incurred to investigate or certify that a **Confirmed Release** has taken place.

I. **COST TO REPAIR, REPLACE OR UPGRADE A STORAGE TANK SYSTEM:**

For any costs arising out of the reconstruction, repair, replacement, upgrading or rebuilding of any **Storage Tank System** or for any other improvements, site enhancements or routine maintenance on, within or under the site at which **Storage Tank Systems** are located.

J. **DIVESTED STORAGE TANK SYSTEMS OR SITES:**

Arising from **Pollution Conditions** or **Confirmed Releases** which commence after the date that a covered **Storage Tank System**, or the site at which the **Storage Tank System** is located, is sold, given away, abandoned, or subleased, unless the sublease has been approved in writing by the underwriter prior to the commencement of the sublease.

K. **STORAGE TANK SYSTEM CONTENTS:**

1. Arising from physical injury, including but not limited to contamination, of the contents of a **Storage Tank System**; or
2. Arising out of **Property Damage** due to physical injury, including but not limited to contamination, of the contents of a **Storage Tank System**; or
3. For any costs arising out of the removing, replacing or recycling of the contents of any **Storage Tank System**.

L. **WAR**

Arising directly or indirectly as a result of or in connection with war, whether declared or not, or any act or condition incident to war. War includes civil war, insurrection, act of foreign enemy, civil commotion, factional civil commotion, military or usurped power, rebellion or revolution.

III. NOTICE REQUIREMENTS AND CLAIM PROVISIONS

The **Insured** shall provide the Company with notice of **Confirmed Release**, Claim and **Pollution Conditions**, as follows:

1. In the event of a **Confirmed Release**, **Claim** or **Pollution Condition**, the **Insured** shall give written notice to:

   Manager, Pollution Insurance Products Dept.
   Chartis Claims, Inc.
   Attn.: CID
   101 Hudson Street, 31st Floor
   Jersey City, NJ 07302
   Fax: 866-260-0104
   Email: severityfnol@chartisinsurance.com

   or other address(es) as substituted by the Company in writing.

2. The **Insured** shall give written notice of **Claims**, a **Confirmed Release** or **Pollution Conditions** as soon as possible, but in any event during the **Policy Period** or during the **Extended Reporting Period**, if applicable. Notice under all coverages shall include, at a minimum, information sufficient to identify the **Named Insured**, the **Storage Tank System**, the names of persons with knowledge of the **Pollution Conditions** and all known and reasonably obtainable information regarding the time, place, cause, nature of and other circumstances of the **Pollution Conditions**. The **Insured** shall forward the following to the Company as soon as possible:

   (a) All reasonably obtainable information with respect to the time, place and circumstances thereof, and the names and addresses of the claimant(s) and available witnesses;
   (b) All correspondence between the **Insured** and any third party Claimant, including but not limited to any **Implementing Agency**; and all demands, summonses, notices or other process or papers filed with a court of law, administrative agency, **Implementing Agency** or an investigative body; and
   (c) Other information in the possession of the **Insured** or its hired experts which the Company reasonably deems necessary.

IV. RIGHTS OF THE COMPANY AND DUTIES OF THE INSURED IN THE EVENT OF POLLUTION CONDITIONS

A. The Company's Rights

The Company shall have the right but not the duty to clean up or mitigate **Pollution Conditions** upon receiving notice as provided in Section III. of this Policy. Any sums expended in taking such action by the Company will be deemed incurred or expended by the **Insured** and shall be applied against the limits of liability and deductible under this Policy.

B. Duties of the Insured

The **Named Insured** shall have the duty to clean up **Pollution Conditions** to the extent required by **Environmental Laws**, by retaining competent professional(s) or contractor(s) mutually acceptable to the Company and the **Named Insured**. The Company shall have the right but not the duty to review and approve all aspects of any such clean-up. The **Named Insured** shall notify the Company of actions and measures taken pursuant to this Paragraph.

V. LIMITS OF LIABILITY AND DEDUCTIBLE

Regardless of the number of **Claims**, Claimants, **Confirmed Releases**, **Pollution Conditions** or **Insureds** under this Policy, the following limits of liability apply:

A. Coverage A and B Aggregate

The Company's total liability for all **Loss** covered under Coverage A and **Clean-Up Costs** and **Corrective Action** covered under Coverage B shall not exceed the "Aggregate Limit" stated in Item 3 of the Declarations.

B. Each Incident Limit

Subject to Paragraph V.A. above, the most the Company will pay for all **Loss** and **Clean-Up Costs** and **Corrective Action** arising from the same, related or continuous **Pollution Conditions** is the "Each Incident" limit of coverage stated in Item 3 of the Declarations. "Each Incident" as used within this Policy shall mean each same, related or continuous **Pollution Condition**.

C. Related Claims

1. If the **Insured** first reports a **Claim**, **Confirmed Release** or discovers **Pollution Conditions** during the **Policy Period** and reports them to the Company in accordance with Section III., all continuous or related **Pollution Conditions** reported to the Company under a subsequent policy issued by the Company or its affiliate providing substantially the same coverages as this Policy shall be deemed to have been first discovered and reported during this **Policy Period** and shall be subject to the same Limit of Liability.

2. All **Claims** and reports of **Confirmed Releases** made during one or more policy periods issued by the Company or its affiliate providing substantially the same coverages, resulting in **Loss**, or **Clean-Up Costs** or **Corrective Action**, or in any combination thereof, and arising out of the same, or continuous or related **Pollution Conditions**, shall be considered one incident and will be subject to the same Limit of Liability. Such **Claims** or reports of **Confirmed Releases** shall be deemed first reported to the Company during the policy period in which the first such **Claim** or report of **Confirmed Release** was reported to the Company or an affiliate and will be subject to the Limit of Liability applicable to that policy period.

D. Deductible

Subject to Paragraphs V. A., and V. B. above, this Policy will pay **Clean-Up Costs, Corrective Action** or **Loss** in excess of the Deductible amount stated in Item 4 of the Declarations up to but not exceeding the applicable "Each Incident" limit of coverage.

The **Insured** shall promptly reimburse the Company for advancing any element of **Clean-Up Costs** or **Corrective Action** or **Loss** falling within the Deductible.

VI. CONDITIONS

A. **Assignment** - This Policy may be assigned with the prior written consent of the Company, which consent shall not be unreasonably withheld or delayed. Assignment of interest under this Policy shall not bind the Company until its consent is endorsed thereon.

B. **Subrogation** - In the event of any payment under this Policy, the Company shall be subrogated to all the **Insured's** rights of recovery therefor against any person or organization and the **Insured** shall execute and deliver instruments and papers and do whatever else is necessary to secure such rights including without limitation, assignment of the **Insured's** rights against any person or organization who caused **Pollution Conditions** on account of which the Company made any payment under this Policy. The **Insured** shall do nothing to prejudice the Company's rights under this Paragraph subsequent to **Loss**.

Any recovery as a result of subrogation proceedings arising out of the payment of **Loss, Clean-Up Costs** or **Corrective Action** covered under this Policy shall accrue first to the **Insured** to the extent of any payments in excess of the limit of coverage; then to the Company to the extent of its payment under the

Policy; and then to the **Insured** to the extent of its Deductible. Expenses incurred in such subrogation proceedings shall be apportioned among the interested parties in the recovery in the proportion that each interested party's share in the recovery bears to the total recovery.

C. **Cooperation** - The **Insured** shall cooperate with the Company and offer all reasonable assistance in the investigation and defense of **Claims** under the applicable Coverages purchased. The Company may require that the **Insured** submit to examination under oath, and attend hearings, depositions and trials. In the course of investigation or defense, the Company may require written statements or the **Insured's** attendance at meetings with the Company. The Insured must assist the Company in effecting settlement, securing and providing evidence and obtaining the attendance of witnesses.

D. **Changes** - Notice to any agent or knowledge possessed by any agent or by any other person shall not effect a waiver or a change in any part of this Policy or estop the Company from asserting any rights under the terms of this Policy; nor shall the terms of this Policy be waived or changed, except by endorsement issued by the Company to form a part of this Policy.

E. **Voluntary Payments** - No **Insured** shall voluntarily enter into any settlement, or make any payment or assume any obligation unless in response to an emergency or pursuant to **Environmental Laws** that require immediate remediation of **Pollution Conditions**, without the Company's consent which shall not be unreasonably withheld, except at the **Insured's** own cost.

F. **Concealment or Fraud** - This entire Policy shall be void if, whether before or after **Clean-Up Costs** or **Corrective Action** are incurred or a **Claim** is first made, the **Named Insured** has willfully concealed or misrepresented any fact or circumstance material to the granting of coverage under this Policy, including but not limited to, the description of the **Storage Tank System**, or the interest of the **Insured** therein.

G. **Cancellation** - This Policy may be cancelled by the **Named Insured** by surrender thereof to the Company or any of its authorized agents or by mailing to the Company written notice stating when thereafter the cancellation shall be effective. This Policy may be cancelled by the Company only for the reasons stated below by mailing to the **Named Insured** at the address shown in the Policy, written notice stating when, not less than 60 days (10 days for nonpayment of premium or material misrepresentation by the **Insured**), thereafter such cancellation shall be effective. Proof of mailing of such notice shall be sufficient proof of notice.

1. Material misrepresentation by the **Insured**;

2. The **Insured's** failure to comply with the material terms, conditions or contractual obligations under this Policy, including failure to pay any premium when due;

3. A change in operations at a facility containing a **Storage Tank System** during the **Policy Period** that materially increases a risk covered under this Policy.

The time of surrender or the effective date and hour of cancellation stated in the notice shall become the end of the **Policy Period**. Delivery of such written notice either by the **Named Insured** or by the Company shall be equivalent to mailing. If the **Named Insured** cancels, earned premium shall be computed in accordance with the customary short rate table and procedure. If the Company cancels, earned premium shall be computed pro-rata. Premium adjustment may be either at the time cancellation is effected or as soon as practicable after cancellation becomes effective, but payment or tender of unearned premium is not a condition of cancellation.

H. **Other Insurance** - If other valid and collectible insurance or funds from any **Tank Fund** are available to the **Insured** for **Loss, Clean-Up Costs** or **Corrective Action** covered by this Policy, the **Insured** shall promptly, upon the request of the Company, provide the Company with copies of all such policies or fund documentation. The Company's obligations are limited as follows:

1. Except as set forth in subparagraph 3. of this Paragraph, this insurance is primary, and the Company's obligations are not affected unless any of the other insurance is also primary. In that case, the Company will share with all such other insurance by the method described in Paragraph 2. below.

2. If all of the other insurance permits contribution by equal shares, the Company will follow this method also. Under this approach each insurer contributes equal amounts until it has paid its applicable limit of insurance or none of the loss remains, whichever comes first. If any of the other insurance does not permit contribution by equal shares, the Company will contribute by limits. Under this method, each insurer's share is based on the ratio of its applicable limit of insurance to the total applicable limits of insurance of all insurers.

3. This insurance shall apply as excess insurance over any **Tank Fund**, provided that in the event of the receivership, insolvency, or inability to pay of any state fund or program, this insurance shall act as primary insurance. Where this insurance is excess, the Company will pay only its share of the amount of **Loss, Clean-Up Costs** or **Corrective Action**, if any, that exceeds the total amount available through the **Tank Fund**.

I. **Right of Access and Inspection** - To the extent the **Insured** has such rights, any of the Company's authorized representatives shall have the right and opportunity but not the obligation to interview persons employed by the **Insured** and to inspect at any reasonable time, during the **Policy Period** or thereafter, the **Storage Tank System** or the site at which the **Storage Tank System** is located. Neither the Company nor its representatives shall assume any responsibility or duty to the **Insured** or to any other party, person or entity, by reason of such right or inspection. Neither the Company's right to make inspections, sample and monitor, nor the actual undertaking thereof nor any report thereon shall constitute an undertaking on behalf of the **Insured** or others, to determine or warrant that property or operations are safe, healthful or conform to acceptable engineering practices or are in compliance with any law, rule or regulation. The **Named Insured** agrees to provide appropriate personnel to assist the Company's representatives during any inspection.

J. **Access to Information** - The **Named Insured** agrees to provide the Company with access to any information developed or discovered by the **Insured** concerning **Loss, Clean-Up Costs** or **Corrective Action**, or **Pollution Conditions** covered under this Policy, whether or not deemed by the **Insured** to be relevant to such **Loss, Clean-Up Costs** or **Corrective Action**, or **Pollution Conditions** and to provide the Company access to interview any **Insured** and review any documents of the **Insured**.

K. **Representations** - By acceptance of this Policy, the **Named Insured** agrees that the statements in the Declarations, the Application and, if applicable, the Report/Worksheet are their warranties, agreements and representations, that this Policy is issued in reliance upon the truth of such warranties, agreements and representations and that this Policy embodies all agreements existing between the **Insured** and the Company or any of its agents relating to this insurance.

L. **Action Against Company** - No third-party action shall lie against the Company, unless as a condition precedent thereto there shall have been full compliance with all of the terms of this Policy, nor until the amount of the **Insured's** obligation to pay shall have been finally determined either by judgment against the **Insured** after actual trial or by written agreement of the **Insured**, the claimant and the Company.

Any person or organization or the legal representative thereof who has secured such judgment or written agreement shall thereafter be entitled to recover under this Policy to the extent of the insurance afforded by the Policy. No person or organization shall have any right under this Policy to join the Company as a party to any action against the **Insured** to determine the **Insured's** liability, nor shall the Company be impleaded by the **Insured** or his legal representative. Bankruptcy or insolvency of the **Insured** or of the **Insured's** estate shall not relieve the Company of any of its obligations hereunder.

M. **Arbitration** - It is hereby understood and agreed that all disputes or differences that may arise under or in connection with this Policy, whether arising before or after termination of this Policy, including any determination of the amount of **Loss**, may be submitted to the American Arbitration Association ("AAA") under and in accordance with the United States Arbitration Act (9 U.S.C.) and the then prevailing commercial arbitration rules of the AAA. The arbitrators shall be chosen in the manner and within the time frames provided by such rules. If permitted under such rules, the arbitrators shall be three disinterested individuals having knowledge of the legal, corporate management, or insurance issues relevant to the matters in dispute.

Any party may commence such arbitration proceeding and the arbitration shall be conducted in the **Insured's** state of domicile. The arbitrators shall give due consideration to the general principles of the law of the **Insured's** state of domicile in the construction and interpretation of the provisions of this Policy; provided, however, that the terms, conditions, provisions and exclusions of this Policy are to be construed in an evenhanded fashion as between the parties. Where the language of this Policy is alleged to be ambiguous or otherwise unclear, the issue shall be resolved in the manner most consistent with the relevant terms, conditions, provisions or exclusions of the Policy (without regard to the authorship of the language, the doctrine of reasonable expectation of the parties and without any presumption or arbitrary interpretation or construction in favor of either party or parties, and in accordance with the intent of the parties).

The written decision of the arbitrators shall set forth its reasoning, shall be provided simultaneously to both parties and shall be binding on them. The arbitrators' award shall not include attorney fees or other costs. Judgment on the award may be entered in any court of competent jurisdiction. Each party shall bear equally the expenses of the arbitration.

N. **Choice of Law** - In the event that the **Insured** and the Company dispute the validity or formation of this Policy or the meaning, interpretation or operation of any term, condition, definition or provision of this Policy resulting in litigation, arbitration or other form of dispute resolution, the **Insured** and the Company agree that the law of the State of New York shall apply.

O. **Acknowledgment of Shared Limits** - By acceptance of this Policy, the **Named Insureds** understand, agree and acknowledge that the Policy contains an Aggregate Limit that is applicable to, and will be shared by, all **Named Insureds** and all other **Insureds** who are or may become insured hereunder. In view of the operation and nature of this shared Aggregate Limit, the **Named Insureds** and all other **Insureds** understand and agree that prior to filing a **Claim** or reporting a **Confirmed Release** under the Policy, the Aggregate Limit may be exhausted or reduced by prior payments for other **Claims**, **Clean-Up Costs** or Corrective Action under the Policy.

VII. EXTENDED REPORTING PERIOD FOR CLAIMS

The **Named Insured** shall be entitled to an Automatic **Extended Reporting Period**, and (with certain exceptions as described in Paragraph B. of this Section) be entitled to purchase an Optional **Extended Reporting Period** for any Coverages terminated, upon termination of coverage as defined in Paragraph B.3. of this Section. Neither the Automatic nor the Optional **Extended Reporting Period** shall reinstate or increase any of the Limits of Liability of this Policy.

A. **Automatic Extended Reporting Period**

Provided that the **Named Insured** has not purchased any other insurance to replace this insurance and which applies to a **Claim** or a **Confirmed Release** otherwise covered hereunder, the **Named Insured** shall have the right to the following: a period of six (6) months following the effective date of such termination of coverage in which to provide written notice to the Company of a **Claim** first made during the **Policy Period** or Automatic **Extended Reporting Period** and first reported within the Automatic **Extended Reporting Period**, or **Confirmed Release** first reported within the Automatic **Extended Reporting Period**.

A **Claim** first made during the **Policy Period** or Automatic **Extended Reporting Period** and first reported within the Automatic **Extended Reporting Period**, or **Confirmed Release** first reported within the Automatic **Extended Reporting Period** will be deemed to have been made on the last day of the **Policy Period**, provided that the **Claim** or **Confirmed Release** arises from **Pollution Conditions** that commenced before the end of the **Policy Period** and is otherwise covered by this Policy. No part of the Automatic **Extended Reporting Period** shall apply if the Optional **Extended Reporting Period** is purchased.

B. Optional Extended Reporting Period

The **Named Insured** shall be entitled to purchase an Optional **Extended Reporting Period** upon termination of coverage as defined herein (except in the event of nonpayment of premium), as follows:

1. A **Claim** first made during the **Policy Period** or during the Optional **Extended Reporting Period** and first reported during the Optional **Extended Reporting Period**, or a **Confirmed Release** first reported within the Optional **Extended Reporting Period**, if purchased in accordance with the provisions contained in Paragraph 2. below, will be deemed to have been made on the last day of the **Policy Period**, provided that the **Claim** or **Confirmed Release** arises from **Pollution Conditions** that commenced before the end of the **Policy Period** and is otherwise covered by this Policy.

2. The Company shall issue an endorsement providing an Optional **Extended Reporting Period** of up to forty (40) months from termination of coverage hereunder for all **Storage Tank Systems**, or for a Storage Tank System located at a specific facility, provided that the **Named Insured**:

   (a) makes a written request for such endorsement which the Company receives within sixty (60) days after termination of coverage as defined herein; and

   (b) pays when due an amount equal to the premium for the Optional **Extended Reporting Period** plus any premium for the **Policy Period** which is owed and has not yet been paid. If these premiums are paid when due, the **Extended Reporting Period** may not be cancelled, provided that all other terms and conditions of the Policy are met.

3. Termination of coverage occurs:

   (a) at the end of the **Policy Period**, or

   (b) at the time the Policy or renewal policy becomes effective with a decrease in the limit of liability, a reduction of coverage, an increased deductible or self-insured retention, new exclusion or any other change in coverage less favorable to the **Insured**.

4. The Optional **Extended Reporting Period** is available to the **Named Insured** for not more than 100% of the policy premium of this Policy.

VIII. DEFINITIONS

A. **Bodily Injury** means physical injury, or sickness, disease, mental anguish or emotional distress sustained by any person including death resulting therefrom.

B. **Claim** means a written demand received by an **Insured** seeking a remedy and alleging liability or responsibility on the part of the **Insured** for **Loss**.

C. **Clean-Up Costs** means:

Reasonable and necessary expenses for the investigation, removal or remediation of **Pollution Conditions** including associated monitoring, or disposal of soil, surfacewater, groundwater or other contamination:

(a) To the extent required by **Environmental Laws**; or

(b) That have been actually incurred by the government or any political subdivision of the United States of America or any state thereof or Canada or any province thereof, or by third parties.

Clean-Up Costs also include **Restoration Costs.**

D. **Confirmed Release** means **Pollution Conditions** from a **Storage Tank System**, including those from an overfill of a **Storage Tank System**, that has been investigated and confirmed by or on behalf of the **Insured** during the **Policy Period** through a system tightness test, site check, or other procedure approved by the **Implementing Agency** in accordance with **Environmental Law.**

E. **Corrective Action** means:

1. Reasonable and necessary costs for response, abatement, investigative, and removal actions resulting from a **Confirmed Release** as legally required by Subpart F of the federal underground storage tank regulations, 40 C.F.R. 280.60 through 280.66, and 280.72, or as legally required by other applicable federal regulations or by other applicable regulations promulgated by a state under an underground storage tank program approved by the United States Environmental Protection Agency in accordance with Section 9004 of the Resource Conservation and Recovery Act of 1976, as amended;

2. Reasonable and necessary costs for the cleanup, pursuant to a written order from the **Implementing Agency** and with the prior written approval of the Company, of **Pollution Conditions** in soil or groundwater due to a **Confirmed Release**, including the preparation, development, modification and implementation of a "corrective action plan" as defined in 40 C.F.R. 280.66, and the monitoring, evaluation and reporting of the results of the implementation of such plan.

F. **Environmental Laws** means any federal, state, provincial or local laws (including, but not limited to, statutes, rules, regulations, ordinances, guidance documents, and governmental, judicial or administrative orders and directives) that are applicable to **Pollution Conditions.**

G. **Extended Reporting Period** means either the automatic additional period of time or the optional additional period of time, whichever is applicable, in which to report Claims or **Confirmed Releases** following termination of coverage, as described in Section VII. of this Policy.

H. **Implementing Agency** means the Federal Environmental Protection Agency or a state or local agency having jurisdiction pursuant to **Environmental Laws.**

I. **Inception Date** means the first date set forth in Item 2 of the Declarations.

J. **Insured** means the **Named Insured**, and any past or present director, officer, partner or employee thereof, including a temporary or leased employee, while acting within the scope of his or her duties as such.

K. **Insured Contract** means a contract or agreement submitted to and approved by the Company, and listed on a Scheduled Insured Contract Endorsement to this Policy.

L. **Loss** means, under the applicable Coverages:

1. Monetary awards or settlements of compensatory damages; where allowable by law, punitive, exemplary, or multiple damages; and civil fines, penalties, or assessments for **Bodily Injury** or **Property Damage**; or

2. **Clean-Up Costs** or **Corrective Action**.

M. **Named Insured** means the person or entity named in Item 1 of the Declarations acting on behalf of all other **Insureds**, if any, for the payment or return of any premium, payment of any deductible, receipt and acceptance of any endorsement issued to form a part of this Policy, giving and receiving notice of cancellation or nonrenewal, and the exercise of the rights provided in the **Extended Reporting Period** clause.

N. **Policy Period** means the period set forth in Item 2 of the Declarations, or any shorter period arising as a result of:

1. Cancellation of this Policy; or

2. With respect to particular **Storage Tank System(s)**:

   (a) the deletion or addition of such **Storage Tank System** from this Policy by the Company at the **Named Insured's** written request, but solely with respect to that **Storage Tank System**.

   (b) the sale, giving away or abandonment of a **Storage Tank System**, or the sub-leasing of such **Storage Tank System**, unless the sub-lease has been approved in writing by the Company prior to the commencement of the sub-lease.

O. **Pollution Conditions** means the discharge, dispersal, release or escape of any solid, liquid, gaseous or thermal irritant or contaminant, including, but not limited to, smoke, vapors, soot, fumes, acids, alkalis, toxic chemicals, medical waste and waste materials into or upon land, or any structure on land, the atmosphere or any watercourse or body of water, including groundwater, provided such conditions are not naturally present in the environment in the amounts or concentrations discovered.

P. **Property Damage** means:

1. Physical injury to or destruction of tangible property of parties other than the **Insured** including the resulting loss of use thereof;

2. Loss of use of tangible property of parties other than the **Insured** that has not been physically injured or destroyed;

Property Damage does not include **Clean-Up Costs** or **Corrective Action**.

Q. **Responsible Insured** means the manager or supervisor of the **Named Insured** responsible for environmental affairs, control or compliance, or any owner or operator of a **Storage Tank System**, or any officer, director or partner of the **Named Insured**.

R. **Restoration Costs** means reasonable and necessary costs incurred by the **Insured** with the Company's written consent, which consent shall not be unreasonably withheld or delayed, to repair, replace or restore real or personal property to substantially the same condition it was in prior to being damaged during work performed in the course of incurring **Clean-Up Costs** or **Corrective Action**. However, such **Restoration Costs** shall not exceed the net present value of such property prior to incurring **Clean-Up Costs** or **Corrective Action**. **Restoration Costs** do not include costs associated with improvements or betterments.

S. **Storage Tank System** means a stationary tank or tanks owned or operated by the **Insured** and shown in Item 5 of the Declarations. **Storage Tank System** includes any on site integral piping or dispensing equipment, ancillary equipment and containment system associated with the tanks.

T. **Tank Fund** means any state storage tank trust fund, state administered insurance program, or restoration funding for **Storage Tank Systems** whose owners qualify for reimbursement, or any self insurance fund established for the purpose of funding **Clean-Up Costs** or **Corrective Action** for **Pollution Conditions** from a **Storage Tank System**.

SEPARATION OF INSUREDS CONDITION ENDORSEMENT

It is agreed that the Policy is amended by the addition of the following condition to Section VI. **CONDITIONS:**

Separation of Insureds - It is agreed that except with respect to the Limit of Liability, Section II. E. (Insured vs. Insured exclusion), and any rights and duties specifically assigned to the first **Named Insured**, this insurance applies:

1. As if each **Named Insured** were the only **Named Insured**; and

2. Separately to each **Named Insured** against whom a **Claim** is made.

Misrepresentation, concealment, breach of a term or condition, or violation of any duty under this Policy by one **Named Insured** shall not prejudice the interest of coverage for another **Named Insured** under this Policy. Provided, however, that this Condition shall not apply to any **Named Insured** who is a parent, subsidiary or affiliate of the first **Named Insured.**

All other terms, conditions, and exclusions shall remain the same.

TERRORISM EXCLUSION - CERTIFIED ACTS OF TERRORISM EXCLUSION ENDORSEMENT

Pursuant to the requirements of the Terrorism Risk Insurance Act of 2002, the "Act," the **Insured** has been provided notice that the **Insured** may elect to purchase coverage for loss covered under this Policy arising directly or indirectly as a result of a certified "act of terrorism" as defined by Section 102., Definitions, of the Act and any revisions or amendments thereto and the premium charge for such coverage.

After receiving such notice, the **Insured** has elected not to purchase coverage for such certified "acts of terrorism" and has agreed to the attachment of a Terrorism Exclusion excluding coverage for such certified "acts of terrorism."

Therefore, this Policy shall be amended by the addition of the following exclusion:

> The Company has no obligation to make any payment or to provide or to pay for a defense under this Policy due to or arising directly or indirectly as a result of or in connection with **Terrorism** including but not limited to, any contemporaneous or ensuing loss caused by fire, looting, or theft.

Terrorism means an Act of Terrorism defined as follows in Section 102., Definitions of the Terrorism Risk Insurance Act of 2002 and any revisions or amendments thereto:

(1) Act of Terrorism –

(A) Certification. – The term "act of terrorism" means any act that is certified by the Secretary of the Treasury of the United States, in concurrence with the Secretary of State, and the Attorney General of the United States --

(i) to be an act of terrorism;

(ii) to be a violent act or an act that is dangerous to --

(I) human life;

(II) property; or

(III) infrastructure;

(iii) to have resulted in damage within the United States, or outside of the United States in the case of –

(I) an air carrier or vessel described in paragraph (5)(B); [for the convenience of this endorsement, paragraph (5)(B) reads: occurs to an air carrier (as defined in Section 40102 of title 49, United States Code) to a United States flag vessel (or a vessel based principally in the United States, on which United States income tax is paid and whose insurance coverage is subject to regulation in the United States), regardless of where the loss occurs, or at the premises of any United States mission];

(II) the premises of a United States mission; and to have been committed by an individual or individuals acting on behalf of any foreign person or foreign interest, as part of an effort to coerce the civilian population of the United States or to influence the policy or affect the conduct of the United States Government by coercion.

(B) Limitation. -- No act shall be certified by the Secretary as an act of terrorism if --

(i) the act is committed as part of the course of a war declared by the Congress, except that this clause shall not apply with respect to any coverage for workers' compensation; or

(ii) property and casualty insurance losses resulting from the act, in the aggregate, do not exceed $5,000,000.

(C) Determinations Final. – Any certification of, or determination not to certify, an act as an act of terrorism under this paragraph shall be final, and shall not be subject to judicial review.

(D) Nondelegation. – The Secretary may not delegate or designate to any other officer, employee, or person, any determination under this paragraph of whether, during the effective period of the Program, an act of terrorism has occurred.

All other terms, conditions, and exclusions shall remain the same.

Gaining the Ultimate Value-Added Advantage Through Chartis

Insured: Gerdau Ameristeel US Inc.

Policy #: 007510666
Effective Date: 07/01/12

Thank you for purchasing your environmental insurance policy through Chartis!

At Chartis, we enhance the coverage of every environmental insurance policy by providing insureds complimentary access to the following tools and programs to help manage environmental risk, mitigate environmental loss, and conduct loss control:

PIER (Pollution Incident and Environmental Response)®
Policyholders have access to pre-screened crisis management specialists who respond in a timely manner to environmental incidents, including indoor air quality issues such as mold and Legionella pneumophila. Rates are pre-negotiated, thus helping insureds to minimize or mitigate loss associated with such incidents. Environmental insurance policyholders are automatically enrolled in this program.

- To access the right resources to respond to an environmental incident, call 1-877-PIER-NOW (743-7669) and speak with a Chartis representative regarding the nature of your incident

Claims Expertise
Our pollution claims operation, with 80+ claims specialists, is the largest in the industry. The depth and breadth of our operation means we can devote expertise to environmental claims of all types.

- Report your claim by sending a fax to 866-260-0104 or emailing SeverityFNOL@chartisinsurance.com.

GLP RiskTool System®
The complimentary, web-based system brings together a myriad of information that a company needs to manage Environmental, Health and Safety (EH&S) programs in one virtual "reference desk." By supporting on-line management and tracking of EH&S issues and providing templates, GLP RiskTool System presents a turnkey approach to establish your own EH&S program.

- Register for GLP RiskTool System by visiting www.risktool.com. All you need is your environmental insurance policy number.

Transportation Loss Control Programs
We provide a number of transportation-related programs for insureds that reinforce positive driving behavior and potential improvements in loss reduction. These programs include preventive driving sessions and mock Department of Transportation audits.

- To learn more, contact environmental@chartisinsurance.com.

Environmental Portal
Portal is a secure, Internet-based system that allows our clients to track environmental insurance policies for multiple site portfolios. Policyholders can check the status of coverage requests 24/7, upload and download policy-related reports and documents, and more.

- Register for Environmental Portal by visiting www.chartisinsurance.com.

Chartis is committed to the achievement of effective risk management objectives for clients as well as providing them access to incident response assistance in the event of a pollution-release event.

Thank you,

Lana Fulton Keppel
Environmental Division Executive
Chartis US and Canada

Chartis is the marketing name for the worldwide property-casualty and general insurance operations of Chartis Inc. For additional information, please visit our website at www.chartisinsurance.com. All products are written by insurance company subsidiaries or affiliates of Chartis Inc. Coverage may not be available in all jurisdictions and is subject to actual policy language. Non-insurance products and services may be provided by independent third parties. Certain coverage may be provided by a surplus lines insurer. Surplus lines insurers do not generally participate in state guaranty funds and insureds are therefore not protected by such funds.

DEDICATED LIMITS ENDORSEMENT

It is hereby agreed that **SECTION V. LIMITS OF LIABILITY AND DEDUCTIBLE** includes the following:

Dedicated Limits

Subject to Paragraphs V.A., and V.B. above, the limits of liability are dedicated for each category of storage tank systems as follows:

All covered Underground Storage Tank Systems	$ 1,000,000	EACH INCIDENT LIMIT
	$ 1,000,000	AGGREGATE LIMIT
All covered Aboveground Storage Tank Systems at sites in the state of Florida	$ 1,000,000	EACH INCIDENT LIMIT
	$ 1,000,000	AGGREGATE LIMIT
All covered Aboveground Storage Tank Systems at sites in the state of Virginia	$	EACH INCIDENT LIMIT
	$	AGGREGATE LIMIT
All covered Aboveground Storage Tank Systems at sites in the state of Delaware	$	EACH INCIDENT LIMIT
	$	AGGREGATE LIMIT
All covered Aboveground Storage Tank Systems at sites in any state not listed above	$ 1,000,000	EACH INCIDENT LIMIT
	$ 1,000,000	AGGREGATE LIMIT

It is also agreed that **SECTION VIII. DEFINITIONS** includes the following:

Aboveground means not **Underground.**

Underground means having 10% or more of its volume below the surface of the ground including the volume of underground pipes connected thereto.

All other terms, conditions, and exclusions shall remain the same.

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

FLORIDA CANCELLATION/NONRENEWAL ENDORSEMENT

Wherever used in this endorsement: 1) "we", "us", "our", and "Insurer" mean the insurance company which issued this policy, and 2) "you", "your", "named Insured" and "Insured" mean the Named Corporation, Named Organization, Named Sponsor, Named Insured, or Insured stated in the declarations page; and 3) "Other Insured(s)" means all other persons or entities afforded coverage under this policy.

It is agreed and understood that the cancellation provision of this policy is to be deleted in its entirety and to be replaced with the following:

A. The Insured shown in the Declarations may cancel this policy by mailing or delivering to the Insurer advance written notice of cancellation.

B.1. Cancellation for Policies in Effect Ninety (90) Days or Less

If this policy has been in effect ninety (90) days or less the Insurer may cancel this policy by mailing or delivering to the Insured written notice of cancellation, accompanied by the reasons for cancellation, at least:

a) Ten (10) days before the effective date of cancellation if the Insurer cancels for nonpayment of premium; or

b) Twenty (20) days before the effective date of cancellation if the Insurer cancels for any other reason, except the Insurer may cancel immediately if there has been:

1. A material misstatement or misrepresentation; or
2. A failure to comply with underwriting requirements established by the Insurer.

B.2. Cancellation for Policies in Effect for More Than Ninety (90) Days

If this policy has been in effect for more than ninety (90) days the Insurer may cancel this policy only for one or more of the following reasons:

a) Nonpayment of premium;

b) The policy was obtained by a material misstatement;

c) There has been a failure to comply with underwriting requirements established by us within ninety (90) days of the date of effectuation of coverage;

d) There has been a substantial change in the risk covered by the policy; or

e) The cancellation is for all insureds under such policies for a given class of insureds.

If the Insurer cancels this policy for any of these reasons, the Insurer will mail or deliver to the Named Insured written notice of cancellation, accompanied by the reasons for the cancellation, at least:

1. Ten (10) days before the effective date of cancellation if cancellation is for the reason stated in B.2. (a) above; or
2. Forty-five (45) days before the effective date of cancellation if cancellation is for the reasons stated in B.2. (b), (c), (d), or (e) above.

B.3. If this policy is cancelled, the Insurer will send the Named Insured any premium refund due. If the Insurer cancels, the refund will be pro rata. If the Named Insured cancels, the refund may be less than pro rata. If the return premium is not refunded with the notice of cancellation or when this policy is returned to us, we will mail the refund within 15 working days after the date cancellation takes effect.

The following is added:

C.1. Non-Renewal

(a) If the Insurer decides not to renew this policy the Insurer will mail or deliver to the Insured written notice of nonrenewal, accompanied by the reason for nonrenewal, at least forty-five (45) days prior to the expiration of this policy.

(b) Any notice of nonrenewal will be mailed or delivered to the Insured's last mailing address known to the Insurer. If notice is mailed, proof of mailing will be sufficient proof of notice.

C.2. Renewal

The Insurer shall give the Named Insured at least forty-five (45) days advance written notice of the renewal premium.

All other terms, conditions, and exclusions shall remain the same.

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

STORAGE TANK PROGRAM
FLORIDA AMENDATORY ENDORSEMENT

The Policy is amended as follows:

Section VI. **CONDITIONS**, Paragraph **K. Representations**, is deleted in its entirety, and replaced with the following:

K. Representations - By acceptance of this Policy, the **Named Insured** agrees that the statements in the Declarations, the Application and, if applicable, the Report/Worksheet are their agreements and representations, that this Policy is issued in reliance upon the truth of such agreements and representations and that this Policy embodies all agreements existing between the **Insured** and the Company or any of its agents relating to this insurance.

Section VI. **CONDITIONS**, Paragraph **M. Arbitration**, is deleted in its entirety, and replaced with the following:

M. Arbitration - It is hereby understood and agreed that all disputes or differences that may arise under or in connection with this Policy, whether arising before or after termination of this Policy, including any determination of the amount of **Loss**, may be submitted to the American Arbitration Association ("AAA") under and in accordance with the United States Arbitration Act (9 U.S.C.) and the then prevailing commercial arbitration rules of the AAA. The arbitrators shall be chosen in the manner and within the time frames provided by such rules. If permitted under such rules, the arbitrators shall be three disinterested individuals having knowledge of the legal, corporate management, or insurance issues relevant to the matters in dispute.

Any party may commence such arbitration proceeding and the arbitration shall be conducted in the **Insured's** county of domicile. The arbitrators shall give due consideration to the general principles of the law of the **Insured's** county of domicile in the construction and interpretation of the provisions of this Policy; provided, however, that the terms, conditions, provisions and exclusions of this Policy are to be construed in an evenhanded fashion as between the parties. Where the language of this Policy is alleged to be ambiguous or otherwise unclear, the issue shall be resolved in the manner most consistent with the relevant terms, conditions, provisions or exclusions of the Policy (without regard to the authorship of the language, the doctrine of reasonable expectation of the parties and without any presumption or arbitrary interpretation or construction in favor of either party or parties, and in accordance with the intent of the parties).

The written decision of the arbitrators shall set forth its reasoning, shall be provided simultaneously to both parties and shall be binding on them. The arbitrators' award shall not include attorney fees or other costs. Judgment on the award may be entered in any court of competent jurisdiction. Each party shall bear equally the expenses of the arbitration.

Section VI. CONDITIONS, Paragraph N. Choice of Law, is deleted in its entirety, and replaced with the following:

N. Choice of Law - In the event that the Insured and the Company dispute the validity or formation of this Policy of the meaning, interpretation or operation of any term, condition, definition or provision of this Policy resulting in litigation, arbitration or other form of dispute resolution, the Insured and the Company agree that the law of the State of Florida shall apply.

All other terms, conditions, and exclusions shall remain the same.

FLORIDA NOTICE OF LOSS CONTROL SERVICES

Pursuant to Florida Administrative Code ("FAC") 690-166.040, we would like to inform you of the risk management programs that we have developed and that are available to you.

For your consideration, we offer the services of Global Loss Prevention, Inc., a Chartis company. Global Loss Prevention, Inc. is a professional risk management company with more than 25 years experience and expertise in assisting with the prevention and mitigation of losses. Global Loss Prevention, Inc. can help address a range of problems related to loss control in various lines of business. Certain risk management programs are available to you, free of charge, as part of your commercial insurance coverage; contact your insurance broker for more details on these plans. Other, more substantive risk management programs can be purchased which include, but are not limited to the following services: surveys/analysis for identifying exposures related to your specific operations, safety management training and counseling for your staff, adoption of relevant testing strategies, and evaluations of current loss control practices.

Upon your written request, we could provide you with specific guidelines for risk management programs as established by FAC 690-166.040. Such guidelines would provide instructions and offer basic criteria to assist you in creating your own risk management plan. Should you request such guidelines and, subsequently, wish to further explore the purchase of a risk management plan, developed by Global Loss Prevention, Inc., which is specific to your company's needs, we would be willing to discuss with you both the availability of such a plan, and if available, its specific content and cost.

Again, we welcome all inquiries regarding the services of Global Loss Prevention, Inc.

POLICYHOLDER DISCLOSURE STATEMENT UNDER TERRORISM RISK INSURANCE ACT OF 2002 Pol#: 007510666

You are hereby notified that under the federal Terrorism Risk Insurance Act of 2002 (the "Act") effective November 26, 2002, you now have a right to purchase insurance coverage for losses arising out of an Act of Terrorism, which is defined in the Act as an act certified by the Secretary of the Treasury (i) to be an act of terrorism, (ii) to be a violent act or an act that is dangerous to (A) human life; (B) property or (C) infrastructure, (iii) to have resulted in damage within the United States, or outside of the United States in case of an air carrier or vessel or the premises of a U.S. mission and (iv) to have been committed by an individual or individuals acting on behalf of any foreign person or foreign interest, as part of an effort to coerce the civilian population of the United States or to influence the policy or affect the conduct of the United States Government by coercion. You should read the Act for a complete description of its coverage. The Secretary's decision to certify or not to certify an event as an Act of Terrorism and thus covered by this law is final and not subject to review. There is a $100 billion dollar annual cap on all losses resulting from Acts of Terrorism above which no coverage will be provided under this policy and under the Act unless Congress makes some other determination.

For your information, coverage provided by this policy for losses caused by an Act of Terrorism may be partially reimbursed by the United States under a formula established by the Act. Under this formula the United States pays 90% of terrorism losses covered by this law exceeding a statutorily established deductible that must be met by the insurer, and which deductible is based on a percentage of the insurer's direct earned premiums for the year preceeding the Act of Terrorism.

Unless you sign this form and return it to us rejecting Terrorism Coverage under the Federal Act, you will be covered for Terrorism as defined in the Act and your premium for that coverage is based upon which coverage option you choose (Coverage options setting forth limits, policy term, etc. are set forth in the attached letter of indication).

Option 1 Terrorism Act Premium: $497

Endorsement: Not Applicable

Period of Coverage: From 07/01/12 To 07/01/13

Name Of Insurer: Commerce and Industry Insurance Company
Address Of Insurer: 175 Water Street
New York, NY 10038

Name Of Insured: Gerdau Ameristeel US Inc.

Address Of Insured: PO Box 31328
Tampa, FL 33631

CERTIFICATION:

1. COMMERCE & INDUSTRY INSURANCE COMPANY, the Insurer, as identified above, hereby certifies that it has issued liability insurance covering the following underground storage tank(s):

See "Item 5. Covered Storage Tank System(s)" on policy referenced above,

for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases, in accordance with and subject to the limits of liability, exclusions, conditions and other terms of the policy arising from operating the underground storage tank(s) identified above.

The limits of liability are $ 1,000,000 each occurrence and $ 2,000,000 annual aggregate exclusive of legal defense costs which are subject to a separate limit under the policy. This coverage is provided under 007510666. The effective date of said policy is 07/01/12.

2. The Insurer further certifies the following with respect to the insurance described in Paragraph 1:

a. Bankruptcy or insolvency of the Insured shall not relieve the Insurer of its obligations under the policy to which this certificate applies.

b. The Insurer is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third-party, with a right of reimbursement by the insured for any such payment made by the Insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280.102.

c. Whenever requested by a Director of an implementing agency, the Insurer agrees to furnish to the Director a signed duplicate original of the policy and all endorsements.

d. Cancellation or any other termination of the insurance by the Insurer, except for non-payment of premium or misrepresentation by the Insured, will be effective only upon written notice and only after the expiration of sixty(60) days after a copy of such written notice is received by the Insured. Cancellation for non-payment of premium or misrepresentation by the Insured will be effective only upon written notice and only after expiration of a minimum of ten(10) days after a copy of such written notice is received by the Insured.

e. The insurance covers claims otherwise covered by the policy that are reported to the Insurer within six months of the effective date of cancellation or non-renewal of the policy except where the new or renewed policy has the same retroactive date or a retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability and exclusions of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 280.97(b)(2) and that the Insurer is licensed to transact the business of insurance in one or more states.
