OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business and Professions Code): Any city or county that requires a permit to construct, alter, improve demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do (_) all of or (_) portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built of improved for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' Stete License Law.).

☐ I am exempt from licensure under the Contractors' State License Law for the following reason:

_____

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: http://www.leginfo.ca.gov/calaw.html.

RE: Grading permit No. PMT 2012-02492
Address: 12459 Arrow Route
Parcel Map 7847 parcels 1-3, inclusive

I hereby approve the final grading for the referenced project in accordance with the responsibilities as defined in Appendix J of the latest California Building Code and as amended by the current adopting ordinance. Final grading has been completed substantially in conformance with the approved grading plan wich includes: completion of all engineered drainage devices and retaining walls, setting of all monuments and lot corners in accordance with the recorded tract map, location and inclination of all manufactured slopes, and construction of earthen berms and positive building pad drainage.

All structures including fences and walls constructed on property corners, property lines or elsewhere have been located in compliance with the approved plot plan or precise grading plan as applicable. All required and approved changes are as shown in the attachments and will be included in the "As-Built" grading plan.

Sincerely,

Kevin J. Richer

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business and Professions Code): Any city or county that requires a permit to construct, alter, improve demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do (_) all of or (_) portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built of improved for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.).

☐ I am exempt from licensure under the Contractors' State License Law for the following reason:

_____

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: http://www.leginfo.ca.gov/calaw.html.

NOTICE TO PROPERTY OWNER

Dear Property Owner:

An applicant for a building permit has been submitted in your name listing you as the builder of the property improvements specified at 12459-B ARROW ROUTE.

We are providing you with an Owner-Builder Acknowledgment and Information Verification Form to make you aware of your responsibilities and possible risk you may incur by having this permit issued in your name as the Owner-Builder.

We will not issue a building permit until you have read, initialed your understanding of each provision, signed and returned this form to us at our official address indicated. An agent of the owner cannot execute this notice unless you, the property owner, obtain the prior approval of the permitting authority.

OWNER'S ACKNOWLEDGMENT AND VERIFICATION OF INFORMATION

DIRECTIONS: Read and initial each statement below to signify you understand or verify this information.

1. I understand a frequent practice of unlicensed persons is to have the property owner obtain an "Owner-Builder" building permit that erroneously implies that the property owner is providing his or her own labor and material personally. I, as an Owner-Builder, may be held liable and subject to serious financial risk for any injuries sustained by an unlicensed person and his or her employees while working on my property. My homeowner's insurance may not provide coverage for those injuries. I am willfully acting as an Owner-Builder and am aware of the limits of my insurance coverage for injuries to workers on my property.

2. I understand building permits are not required to be signed by property owners unless they are *responsible* for the construction and are not hiring a licensed Contractor to assume this responsibility.

3. I understand as an "Owner-Builder" I am the responsible party of record on the permit. I understand that I may protect myself from potential financial risk by hiring a licensed Contractor and having the permit filed in his or her name instead of my own.

4. I understand Contractors are required by law to be licensed and bonded in California and to list their license numbers on permits and contracts.

Mayor L. DENNIS MICHAEL • *Mayor Pro Tem* SAM SPAGNOLO
Council Members WILLIAM J. ALEXANDER, CHUCK BUQUET, DIANE WILLIAMS
City Manager JOHN R. GILLISON

THE CITY OF RANCHO CUCAMONGA

5. I understand if I employ or otherwise engage any persons other than California licensed Constructors, and the total value of my construction is at least five hundred dollars ($500.00), including labor and materials, I may be considered an "employer" under state and federal law.

6. I understand if I am considered an "employer" under state and federal law, I must register with the state and federal government, withhold payroll taxes, provide workers' compensation disability insurance, and contribute to unemployment compensation for each "employee". I also understand my failure to abide by these laws may subject me to serious financial risk.

7. I understand under California Contractors' State License Law, an Owner-Builder who builds single-family residential structures cannot legally build them with the intent to offer them for sale, unless *all* work is performed by licensed subcontractors and the number of structures does not exceed four within any calendar year, or all of the work is performed under contract with a licensed general building Contractor.

8. I understand as an Owner-Builder, if I sell the property for which this permit is issued, I may be held liable for any financial or personal injuries sustained by any subsequent owner(s) that result from any latent construction defects in the workmanship or materials.

9. I understand I may obtain more information regarding my obligations as an "employer" from the Internal Revenue Service, the United States Small Business Administration, the California Department of Benefit Payments, and the California Division of Industrial Accidents. I also understand I may contact the California Division of Industrial Accidents. I also understand I may contact the California Contractors' State License Board (CSLB) at 1-800-321-CSLB (2752) or www.cslb.ca.gov for more information about licensed contractors.

10. I am aware of and consent to an Owner-Builder building permit applied for in my name, and understand that I am the party legally and financially responsible for proposed construction activity at the following address:

11. I agree that, as the party legally and financially responsible for this proposed construction activity, I will abide by all applicable laws and requirements that govern Owner-Builder as well as employers.

12. I agree to notify the issuer of this form immediately of any additions, deletions, or changes to any of the information I have provided on this form.

Licensed contractors are regulated by laws designed to protect the public. If you contract with someone who does not have a license, the Contractors' State License Board may be unable to assist you with any financial loss you may sustain as a result of a complaint. Your only remedy against unlicensed Contractors may be in civil court. It is also important for you to understand that if an unlicensed Contractor or employee of that individual or firm is injured while working on

Mayor L. DENNIS MICHAEL • *Mayor Pro Tem* SAM SPAGNOLO
Council Members WILLIAM J. ALEXANDER, CHUCK BUQUET, DIANE WILLIAMS
City Manager JOHN R. GILLISON

THE CITY OF RANCHO CUCAMONGA

your property, you may be held liable for damages. If you obtain a permits as Owner-Builder and wish to hire Contractors, you will be responsible for verifying whether or not those Contractors are properly licensed and the status of their workers' compensation insurance coverage.

Before a building permit can be issued, this form must be completed and signed by the property owner and returned to the agency responsible for issuing the permit.

Note: Verification of the property owner's signature is required prior to the issuance of a permit. Please provide either a copy of the property owner's official driver's license or have this form notarized prior to submitting your request.

I agree to comply with all city and county ordinances & state laws relating to building construction, & hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

Signature of Applicant or Agent _____ Date 3/27/14

This is a permit when properly completed, and signed, and is subject to expiration if work thereunder is not commenced or suspended or abandoned for 180 days.

DEPARTMENT COPY

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business and Professions Code): Any city or county that requires a permit to construct, alter, improve demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do (_) all of or (_) portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built of improved for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.).

☐ I am exempt from licensure under the Contractors' State License Law for the following reason:

_____

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: http://www.leginfo.ca.gov/calaw.html.

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business and Professions Code): Any city or county that requires a permit to construct, alter, improve demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

- ☐ I, as owner of the property, or my employees with wages as their sole compensation, will do (_) all of or (_) portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built of improved for the purpose of sale.).
- ☐ I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.).
- ☐ I am exempt from licensure under the Contractors' State License Law for the following reason: _____

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: <http://www.leginfo.ca.gov/calaw.html>.

I agree to comply with all city and county ordinances & state laws relating to building construction, & hereby authorize representatives of this city to enter above mentioned property for inspection purposes.

Signature of Applicant or Agent _____ Date 11-3-14

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business and Professions Code): Any city or county that requires a permit to construct, alter, improve demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

- ☐ I, as owner of the property, or my employees with wages as their sole compensation, will do ( ) all of or ( ) portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built of improved for the purpose of sale.).
- ☐ I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.).
- ☐ I am exempt from licensure under the Contractors' State License Law for the following reason:

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: <http://www.leginfo.ca.gov/calaw.html>.

LICENSED CONTRACTOR'S DECLARATION

I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason:

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale.

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project.

☐ I am exempt under Sec. _____, B. & P. C. for the reason: _____

Date _____ Owner _____

WORKERS' COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Workers' Compensation Insurance, or a certified copy thereof. (Sec. 3800, Labor Code.)

Policy No. PC 116 805 Company Great Amer.

☒ Copy is filed with the city. ☐ Certified copy is hereby furnished.

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANC.

(This section need not be completed if the permit is for one hundred dollars ($100) or less.)

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

NOTICE TO APPLICANT: If, after making this Certificate of Exemption you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

LICENSED CONTRACTOR'S DECLARATION

☐ I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the *Business and Professions Code*, and my license is in full force and effect.

OWNER-BUILDER DECLARATION

☒ I hereby affirm that I am exempt from the Contractor's License Law for the following reason: (Sec. 7031.5, *Business and Professions Code*: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law, Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit, subjects the applicant to a civil penalty of not more than five hundred dollars ($500).

☒ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Sec. 7044, *Business and Professions Code*: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project. (Sec. 7044, *Business and Professions Code*: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Sec. 7044 B. & P.C. for this reason

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

(This section need not be completed if the permit is for one hundred dollars ($100) or less.)

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

NOTICE TO APPLICANT: If, after making this Certificate of Exemption you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

LICENSED CONTRACTOR'S DECLARATION

☐ I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 8 of the Business and Professions Code, and my license is in full force and effect.

OWNER-BUILDER DECLARATION

☒ I hereby affirm that I am exempt from the Contractor's License Law for the following reason: (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires it's applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law, Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit, subjects the applicant to a civil penalty of not more than five hundred dollars ($500).

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Sec. _____ B. & P. C. for this reason _____

LICENSED CONTRACTOR'S DECLARATION

☐ I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

OWNER-BUILDER DECLARATION

☑ *I hereby affirm that I am exempt from the Contractor's License Law for the following reason: (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law, Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit, subjects the applicant to a civil penalty of not more than five hundred dollars ($500).*

☑ *I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)*

☐ *I, as owner of the property, am exclusively contracting with licensed contractors to construct the project. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)*

☐ I am exempt under Sec. _____ B. & P. C. for this reason _____

Date 9/1/81 Owner _____

WORKERS' COMPENSATION DECLARATION

☐ I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Workers' Compensation Insurance, or a certified copy thereof. (Sec. 3800, Labor Code.)

Policy No. _____ Company _____

○ Copy is filed with the city. ○ Certified copy is hereby furnished.

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

(This section need not be completed if the permit is for one hundred dollars ($100) or less.)

☑ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

NOTICE TO APPLICANT: If, after making this Certificate of Exemption you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

☐ I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued. (Sec. 3097, Civil Code.)

Lender's Name _____

Lender's Address _____

I certify that I have read this application and state that the foregoing indicated declarations are correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

Signature of Applicant _____ Date 9/1/81

CERTIFICATION OF APPLICANT FOR BUILDING PERMIT

I have read this application and agree to comply with all laws regulating construction. I certify that in the performance of this work I shall not employ any person in any manner violating Workers' Compensation laws.

California Health & Safety Code, Sec. 17922.5, requires applicants for building permits to show that a Division of Industrial Safety permit has been obtained, unless the applicant signs this Certificate below.

☐ I certify that no excavation five (5) or more feet in depth, into which a person is required to descend, will be made in connection with work authorized by this permit, and that no building, structure, scaffolding, falsework, or demolition or dismantling thereof, will be more than thirty-six (36) feet high.

☐ As owner/builder I will not employ anyone to do work which would require a permit from the Division of Industrial Safety, as noted above unless such person has a permit from that division.

Division of Industrial Safety Permit No.

LICENSED CONTRACTOR'S DECLARATION

☐ I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

OWNER-BUILDER DECLARATION

☐ I hereby affirm that I am exempt from the Contractor's License Law for the following reason: (*Sec. 7031.5. Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law, Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit, subjects the applicant to a civil penalty of not more than five hundred Dollars ($500).*

◯ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (*Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.*)

◯ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project. (*Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.*)

◯ I am exempt under Sec. _____ B. & P.C. for this reason _____

Date 7/24/80 Owner [signature]

WORKERS' COMPENSATION DECLARATION

☐ I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Workers' Compensation Insurance, or a certified copy thereof. (*Sec. 3800, Labor Code.*)

Policy No. _____ Company _____

◯ Copy is filed with the city. ◯ Certified copy is hereby furnished.

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

(*This section need not be completed if the permit is for one hundred dollars ($100) or less.*)

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

NOTICE TO APPLICANT: If, after making this Certificate of Exemption you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

☐ I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued. (*Sec. 3097, Civil Code.*)

LICENSED CONTRACTOR'S DECLARATION

I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason: (*Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law, Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit, subjects the applicant to a civil penalty of not more than five hundred dollars ($500).*

☒ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (*Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.*)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project. (*Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.*)

☐ I am exempt under Sec. _____ B. & P. C. for this reason _____

LICENSED CONTRACTOR'S DECLARATION

☐ I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 8 of the Business and Professions Code, and my license is in full force and effect.

OWNER-BUILDER DECLARATION

☐ I hereby affirm that I am exempt from the Contractor's License Law for the following reason: (*Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law, Chapter 9 (commencing with Section 7000) of Division 8 of the Business and Professions Code, or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit, subjects the applicant to a civil penalty of not more than five hundred dollars ($500).*

◯ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (*Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.*)

◯ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project. (*Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.*)

◯ I am exempt under Sec. _____, B. & P. C. for this reason _____

6/25/80 Owner Mark Kelting

WORKERS' COMPENSATION DECLARATION

☐ I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Workers' Compensation Insurance, or a certified copy thereof. (*Sec. 3800, Labor Code.*)

Policy No. _____ Company _____

◯ Copy filed with the city. ◯ Certified copy is hereby furnished.

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

(*This section need not be completed if the permit is for one hundred dollars ($100) or less.*)

☒ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

NOTICE TO APPLICANT: If, after making this Certificate of Exemption you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

☐ I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued. (*Sec. 3097, Civil Code.*)

Lender's Name _____

Lender's Address _____

I certify that I have read this application and state that the foregoing indicated declaration(s) are correct. I agree to comply with all City and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

LICENSED CONTRACTOR'S DECLARATION

☐ I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

OWNER-BUILDER DECLARATION

☒ I hereby affirm that I am exempt from the Contractor's License Law for the following reason: (Sec. 7031.5, Business and Professions Codes: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law, Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit, subjects the applicant to a civil penalty of not more than five hundred dollars ($500).

○ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)

☒ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors' License Law.)

○ I am exempt under Sec. B. & P. C. for this reason

LICENSED CONTRACTOR'S DECLARATION

[ ] I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

OWNER-BUILDER DECLARATION

[X] I hereby affirm that I am exempt from the Contractor's License Law for the following reason: (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law, Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit, subjects the applicant to a civil penalty of not more than five hundred dollars ($500).

[ ] I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)

[X] I, as owner of the property, am exclusively contracting with licensed contractors to construct the project. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

[ ] I am exempt under Sec. _____ B. & P. C. for this reason _____

LICENSED CONTRACTOR'S DECLARATION

☐ I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

OWNER-BUILDER DECLARATION

☒ I hereby affirm that I am exempt from the Contractor's License Law for the following reason: (*Sec. 7031.5. Business and Professions Codes: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law, Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit, subjects the applicant to a civil penalty of not more than five hundred dollars ($500).*

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (*Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.*)

☒ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project. (*Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.*)

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

Date: 11-23-87 Owner: [signature]

WORKERS' COMPENSATION DECLARATION

☐ I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Workers' Compensation Insurance, or a certified copy thereof. (*Sec. 3800, Labor Code.*)

Policy No. _____ Company _____

○ Copy is filed with the city. ○ Certified copy is hereby furnished.

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

(*This section need not be completed if the permit is for one hundred dollars ($100) or less.*)

☒ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

NOTICE TO APPLICANT: If, after making this Certificate of Exemption you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

☐ I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued. (*Sec. 3097, Civil Code.*)

Lender's Name _____

Lender's Address _____

I certify that I have read this application and state that the foregoing indicated declarations are correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

THIS IS A PERMIT WHEN PROPERLY COMPLETED AND SIGNED. THIS PERMIT IS SUBJECT TO EXPIRATION IF THE WORK AS DESCRIBED IN THE PERMIT IS NOT COMMENCED, IS ABANDONED, OR IS SUSPENDED FOR MORE THAN 180 DAYS.

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business and Professions Code): Any city or county that requires a permit to construct, alter, improve demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

- ☐ I, as owner of the property, or my employees with wages as their sole compensation, will do (_) all of or (_) portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built of improved for the purpose of sale.).
- ☐ I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.).
- ☐ I am exempt from licensure under the Contractors' State License Law for the following reason:

_____

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: <http://www.leginfo.ca.gov/calaw.html>.

1.0 EXECUTIVE SUMMARY

Presented below is a brief summary of the conclusions and recommendations of this investigation. Since this summary is not all inclusive, it should be read in complete context with the entire report.

Geotechnical Design Considerations

- Artificial fill soils were encountered at all but one of the borings located, extending from the ground surface (or immediately beneath the existing pavements) to depths of 2½ to 8½± feet. These soils are considered to be undocumented fill materials.
- The fill soils and near-surface alluvial soils possess varying strengths and densities. In addition, some of the near-surface soils (within the upper 5 to 6± feet) possess a moderate to potential for hydrocollapse. The undocumented fill soils and the near-surface alluvial soils, in their present condition, are not considered suitable for support of the foundation loads of the new structures.
- Demolition of the existing pavements and structures is expected to cause extensive disturbance to the near surface soils. Several below-grade concrete pits are present in the southern portion of the site. In addition, some of the existing structures are supported on deep foundations.

Site Preparation Recommendations

- Initial site stripping should include removal of any surficial vegetation from the site. Stripping should include any weeds, grasses, and any organic top soils.
- Demolition of existing asphaltic concrete pavements and numerous existing structures will be necessary throughout the site. Debris resultant from demolition should be disposed of off-site. Alternatively, asphalt and concrete debris may be pulverized to a maximum 2-inch particle size, well mixed with the on-site soils, and incorporated into new structural fills. It may also be crushed into miscellaneous base (CMB), if desired. It may be feasible to abandon some of the existing foundations in place, as discussed in Section 6.3 of this report.
- We recommend that remedial grading be performed within the proposed building areas in order to remove all of the artificial fill soils, any soils disturbed during demolition, and a portion of the near-surface alluvium. The soils present within the proposed building area should be overexcavated to a depth of 5 feet below existing grade and to a depth of at least 4 feet below proposed building pad subgrade elevation. The proposed foundation influence zones should also be overexcavated to a depth of at least 3 feet below proposed foundation bearing grade. Based on conditions encountered at the boring locations, excavation to depths of up to 8½ feet will be required to remove the existing undocumented fill soils.
- After overexcavation has been completed, the resulting subgrade soils should be evaluated by the geotechnical engineer to identify any additional soils that should be overexcavated. The resulting soils should be scarified and moisture conditioned to 0 to 4 percent above the optimum moisture content, to a depth of at least 12 inches. The overexcavation subgrade soils should then be recompacted under the observation of the geotechnical engineer. The previously excavated soils may then be replaced as compacted structural fill.
- The new pavement and flatwork subgrade soils are recommended to be scarified to a depth of 12± inches, thoroughly moisture conditioned and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density.

Foundation Design Recommendations

- Conventional shallow foundations, supported in newly placed compacted fill.
- 3,000 lbs/ft^2 maximum allowable soil bearing pressure.
- Reinforcement consisting of at least two (2) No. 5 rebars (1 top and 1 bottom) in strip footings. Additional reinforcement may be necessary for structural considerations.

Building Floor Slab Design Recommendations

- Conventional Slab-on-Grade: minimum 6-inch thickness.
- Modulus of Subgrade Reaction: k = 150 psi/in.
- Reinforcement is not expected to be necessary for geotechnical considerations.
- The actual thickness and reinforcement of the floor slab should be determined by the structural engineer.

Pavement Design Recommendations

ASPHALT PAVEMENTS (R=50)					
Materials	**Thickness (inches)**				
	Auto Parking and Auto Drive Lanes (TI = 4.0 to 5.0)	Truck Traffic			
		TI = 6.0	TI = 7.0	TI = 8.0	TI = 9.0
Asphalt Concrete	3	3½	4	5	5½
Aggregate Base	3	4	5	5	7
Compacted Subgrade	12	12	12	12	12

PORTLAND CEMENT CONCRETE PAVEMENTS (R=50)				
Materials	**Thickness (inches)**			
	Autos and Light Truck Traffic (TI = 6.0)	Truck Traffic		
		TI = 7.0	TI = 8.0	TI = 9.0
PCC	5	5½	6½	8
Compacted Subgrade (95% minimum compaction)	12	12	12	12

2.0 SCOPE OF SERVICES

The scope of services performed for this project was in accordance with our Proposal No. 21P370, dated August 12, 2021. The scope of services included a visual site reconnaissance, subsurface exploration, field and laboratory testing, and geotechnical engineering analysis to provide criteria for preparing the design of the building foundations, building floor slabs, and parking lot pavements along with site preparation recommendations and construction considerations for the proposed development. The evaluation of the environmental aspects of this site was beyond the scope of services for this geotechnical investigation.

3.0 SITE AND PROJECT DESCRIPTION

3.1 Site Conditions

The site is located at the southwest corner of Arrow Route and Juneberry Drive in Rancho Cucamonga, California. The site is bounded to the north by Arrow Route, to the west by an automobile auction facility, to the south by a railroad easement, and to the east by existing commercial/industrial buildings and Juneberry Drive.

The site consists of an L-shaped area, 94.08± acres in size. Based on our visit to the site, the site is being utilized as a steel manufacturing facility operated by CMC Steel. Large portions of the site appear to be inactive, particularly the southern area of the property. The northern area of the site still appears to be in an active manufacturing condition.

The northwest portion of the site is currently being utilized for scrap metal and raw material storage. Four contiguous, one- or two-story industrial buildings are located in this area. The southwest portion of the site contains a large melt shop building that was previously utilized to melt down scrap metal and raw materials. The areas around this building include conveyors, ventilation ducting, large open areas for materials storage, railroad spurs and areas of pavement. Large stockpiles of sand/gravel and crushed concrete are also present in this area. The southeast portion of the site contains a large furnace building, cooling tower, and structural steel and rebar manufacturing facility. Several below-grade concrete pits are located in this area of the site. Several areas used for materials storage are also present around the buildings associated with the furnace building. The northeast portion of the site was previously utilized for structural steel and re-bar storage. Two single-story industrial structures are present in this area of the site. Ground surface cover throughout the majority of the site consists of asphaltic concrete pavements and Portland cement concrete pavements. The pavements exhibit moderate to severe distress, with cracking and potholes throughout. Several rows of large trees are present along the drive lanes in the northern and central regions of the site.

Detailed topographic information was not available at the time of this report. However, based on topographic information obtained from Google Earth, the site topography ranges from 1,167± to 1,127± feet msl in the northeastern and southwestern portions of the site, respectively. Overall, the site slopes gently toward the south with an average gradient of approximately 1 to 2 percent.

3.2 Proposed Development

Based on a conceptual site plan (Scheme 6) provided to our office by the client, the site will be developed with two (2) warehouses. Building 1 will be located in the western area of the site and will be 1,366,140± ft² in size. Building 2 will be located in the eastern area of the site and will be 549,560± ft² in size. Dock-high doors will be constructed along portions of the east and west building walls for Building 1 and along portions of the north and south building walls for Building 2. The buildings will be surrounded by asphaltic concrete pavements in the parking and drive

lanes, Portland cement concrete pavements in the loading dock areas, and limited areas of concrete flatwork and landscape planters throughout.

Detailed structural information has not been provided. We assume that the new buildings will be single-story structures of tilt-up concrete construction, typically supported on a conventional shallow foundation system with concrete slab-on-grade floors. Based on the assumed construction, maximum column and wall loads are expected to be on the order of 100 kips and 4 to 7 kips per linear foot, respectively.

No significant amounts of below grade construction, such as basements or crawl spaces, are expected to be included in the proposed development. Based on the assumed topography, cuts and fills of up to 3 to 4± feet are expected to be necessary to achieve the proposed site grades.

4.0 SUBSURFACE EXPLORATION

4.1 Scope of Exploration/Sampling Methods

The subsurface exploration conducted for this project consisted of twenty-four (24) borings advanced to depths of 10 to 25± feet below existing site grades. All of the borings were logged during drilling by a member of our staff.

The borings were advanced with hollow-stem augers, by a conventional truck-mounted drilling rig. Representative bulk and relatively undisturbed soil samples were taken during drilling. Relatively undisturbed samples were taken with a split barrel "California Sampler" containing a series of one inch long, 2.416± inch diameter brass rings. This sampling method is described in ASTM Test Method D-3550. Samples were also taken using a 1.4± inch inside diameter split spoon sampler, in general accordance with ASTM D-1586. Both of these samplers are driven into the ground with successive blows of a 140-pound weight falling 30 inches. The blow counts obtained during driving are recorded for further analysis. Bulk samples were collected in plastic bags to retain their original moisture content. The relatively undisturbed ring samples were placed in molded plastic sleeves that were then sealed and transported to our laboratory.

The approximate locations of the borings are indicated on the Boring Location Plan, included as Plate 2 in Appendix A of this report. The Boring Logs, which illustrate the conditions encountered at the boring locations, as well as the results of some of the laboratory testing, are included in Appendix B.

4.2 Geotechnical Conditions

Pavements

Asphaltic concrete (AC) and Portland cement concrete (PCC) were encountered at the ground surface of most of the boring locations. The AC pavements ranged in thickness from 1¾ to 10± inches, with no discernible aggregate base. The PCC pavements ranged in thickness from 6½ to 10± inches. It should be noted that most of the PCC pavements contain rebar reinforcement. Boring No B-14 encountered both AC and PCC pavements, measuring 6 and 8± inches, respectively.

Artificial Fill

Artificial fill and possible fill soils were encountered at the ground surface or beneath the pavements at nearly all of the boring locations, extending to depths ranging from 2½ to 8½± feet below existing site grades. The artificial fill and possible fill soils generally consist of loose to very dense gravelly fine to coarse sands, silty fine to coarse sands, and well-graded sands with varying gravel content. Trace quantities of slag were occasionally encountered within the fill soils. The fill soils at Boring No. B-11 consisted of fine to coarse gravel and cobbles, with some fine to coarse sand.

Additional soils classified as possible fill were encountered at Boring Nos. B-1 and B-21, extending to depths of 4½ to 5½± feet. The possible fill soils are similar in composition to the underlying native alluvium, but also possess a slightly disturbed appearance, resulting in their classification as possible fill.

Native Alluvium

Native alluvial soils were encountered beneath the fill and/or possible fill soils at all of the boring locations, extending to at least the maximum explored depth of 25± feet below existing site grades. The alluvium generally consists of medium dense fine to medium sands, medium dense to dense fine to coarse sands and gravelly fine to coarse sands, dense silty fine to coarse sands, and loose to very dense silty fine sands. Variable quantities of gravel and silt were encountered within these layers, with trace to little clay occasionally observed. Variable calcareous veining was also observed within some of the native alluvial strata.

Groundwater

Free water was not encountered during the drilling of any of the borings. Based on the lack of water within the borings and the moisture contents of the recovered soil samples, the static groundwater is considered to have existed at a depth in excess of 25± feet at the time of the subsurface exploration.

As part of our research, we reviewed readily available groundwater data in order to determine regional groundwater depths. The primary reference used to determine the groundwater depths in the subject site area is the California Department of Water Resources website, http://www.water.ca.gov/waterdatalibrary/. The nearest monitoring well is located approximately 2.3 miles northeast from the site. Water level readings within these monitoring wells indicate high groundwater levels of 574.6± feet below site grades (June 2012).

5.0 LABORATORY TESTING

The soil samples recovered from the subsurface exploration were returned to our laboratory for further testing to determine selected physical and engineering properties of the soils. The tests are briefly discussed below. It should be noted that the test results are specific to the actual samples tested, and variations could be expected at other locations and depths.

Classification

All recovered soil samples were classified using the Unified Soil Classification System (USCS), in accordance with ASTM D-2488. Field identifications were then supplemented with additional visual classifications and/or by laboratory testing. The USCS classifications are shown on the Boring Logs and are periodically referenced throughout this report.

Density and Moisture Content

The density has been determined for selected relatively undisturbed ring samples. These densities were determined in general accordance with the method presented in ASTM D-2937. The results are recorded as dry unit weight in pounds per cubic foot. The moisture contents are determined in accordance with ASTM D-2216, and are expressed as a percentage of the dry weight. These test results are presented on the Boring Logs.

Consolidation

Selected soil samples have been tested to determine their consolidation potential, in accordance with ASTM D-2435. The testing apparatus is designed to accept either natural or remolded samples in a one-inch high ring, approximately 2.416 inches in diameter. Each sample is then loaded incrementally in a geometric progression and the resulting deflection is recorded at selected time intervals. Porous stones are in contact with the top and bottom of the sample to permit the addition or release of pore water. The samples are typically inundated with water at an intermediate load to determine their potential for collapse or heave. The results of the consolidation testing are plotted on Plates C-1 through C-10 in Appendix C of this report.

Maximum Dry Density and Optimum Moisture Content

Two representative bulk samples were tested for their maximum dry densities and optimum moisture contents. The results have been obtained using the Modified Proctor procedure, per ASTM D-1557 and are presented on Sheets C-11 and C-12 in Appendix C of this report. These tests are generally used to compare the in-situ densities of undisturbed field samples, and for later compaction testing. Additional testing of other soil types or soil mixes may be necessary at a later date.

Soluble Sulfates

Representative samples of the near-surface soils were submitted to a subcontracted analytical laboratory for determination of soluble sulfate content. Soluble sulfates are naturally present in soils, and if the concentration is high enough, can result in degradation of concrete which comes

into contact with these soils. The results of the soluble sulfate testing are presented below, and are discussed further in a subsequent section of this report.

Sample Identification	Soluble Sulfates (%)	Sulfate Classification
B-4 @ 0 to 5 feet	0.002	Not Applicable (S0)
B-14 @ 0 to 5 feet	0.019	Not Applicable (S0)

Corrosivity Testing

Representative bulk samples of the near-surface soils were submitted to a subcontracted corrosion engineering laboratory to identify potentially corrosive characteristics with respect to common construction materials. The corrosivity testing included a determination of the electrical resistivity, pH, and chloride and nitrate concentrations of the soils, as well as other tests. The results of some of these tests are presented below.

Sample Identification	Saturated Resistivity (ohm-cm)	pH	Chlorides (mg/kg)	Nitrates (mg/kg)
B-4 @ 0 to 5 feet	15,600	8.5	7.4	14
B-14 @ 0 to 5 feet	4,400	8.4	13	8.6

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of our review, field exploration, laboratory testing and geotechnical analysis, the proposed development is considered feasible from a geotechnical standpoint. The recommendations contained in this report should be taken into the design, construction, and grading considerations.

The recommendations are contingent upon all grading and foundation construction activities being monitored by the geotechnical engineer of record. The recommendations are provided with the assumption that an adequate program of client consultation, construction monitoring, and testing will be performed during the final design and construction phases to verify compliance with these recommendations. Maintaining Southern California Geotechnical, Inc., (SCG) as the geotechnical consultant from the beginning to the end of the project will provide continuity of services. The geotechnical engineering firm providing testing and observation services shall assume the responsibility of Geotechnical Engineer of Record.

The Grading Guide Specifications, included as Appendix D, should be considered part of this report, and should be incorporated into the project specifications. The contractor and/or owner of the development should bring to the attention of the geotechnical engineer any conditions that differ from those stated in this report, or which may be detrimental for the development.

6.1 Seismic Design Considerations

The subject site is located in an area which is subject to strong ground motions due to earthquakes. The performance of a site specific seismic hazards analysis was beyond the scope of this investigation. However, numerous faults capable of producing significant ground motions are located near the subject site. Due to economic considerations, it is not generally considered reasonable to design a structure that is not susceptible to earthquake damage. Therefore, significant damage to structures may be unavoidable during large earthquakes. The proposed structures should, however, be designed to resist structural collapse and thereby provide reasonable protection from serious injury, catastrophic property damage and loss of life.

Faulting and Seismicity

Research of available maps indicates that the subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, SCG did not identify any evidence of faulting during the geotechnical investigation. Therefore, the possibility of significant fault rupture on the site is considered to be low.

The potential for other geologic hazards such as seismically induced settlement, lateral spreading, tsunamis, inundation, seiches, flooding, and subsidence affecting the site is considered low.

Seismic Design Parameters

The 2019 California Building Code (CBC) provides procedures for earthquake resistant structural design that include considerations for on-site soil conditions, occupancy, and the configuration of

the structure including the structural system and height. The seismic design parameters presented below are based on the soil profile and the proximity of known faults with respect to the subject site.

Based on standards in place at the time of this report, the proposed development is expected to be designed in accordance with the requirements of the 2019 edition of the California Building Code (CBC), which was adopted on January 1, 2020.

The 2019 CBC Seismic Design Parameters have been generated using the SEAOC/OSHPD Seismic Design Maps Tool, a web-based software application available at the website www.seismicmaps.org. This software application calculates seismic design parameters in accordance with several building code reference documents, including ASCE 7-16, upon which the 2019 CBC is based. The application utilizes a database of risk-targeted maximum considered earthquake (MCE_R) site accelerations at 0.01-degree intervals for each of the code documents. The table below was created using data obtained from the application. The output generated from this program is included as Plate E-1 in Appendix E of this report.

The 2019 CBC requires that a site-specific ground motion study be performed in accordance with Section 11.4.8 of ASCE 7-16 for Site Class D sites with a mapped S_1 value greater than 0.2. However, Section 11.4.8 of ASCE 7-16 also indicates an exception to the requirement for a site-specific ground motion hazard analysis for certain structures on Site Class D sites. The commentary for Section 11 of ASCE 7-16 (Page 534 of Section C11 of ASCE 7-16) indicates that "In general, this exception effectively limits the requirements for site-specific hazard analysis to very tall and or flexible structures at Site Class D sites." **Based on our understanding of the proposed development, the seismic design parameters presented below were calculated assuming that the exception in Section 11.4.8 applies to the proposed structure at this site. However, the structural engineer should verify that this exception is applicable to the proposed structure.** Based on the exception, the spectral response accelerations presented below were calculated using the site coefficients (F_a and F_v) from Tables 1613.2.3(1) and 1613.2.3(2) presented in Section 16.4.4 of the 2019 CBC.

2019 CBC SEISMIC DESIGN PARAMETERS

Parameter		Value
Mapped Spectral Acceleration at 0.2 sec Period	S_S	1.762
Mapped Spectral Acceleration at 1.0 sec Period	S_1	0.612
Site Class	---	D
Site Modified Spectral Acceleration at 0.2 sec Period	S_{MS}	1.762
Site Modified Spectral Acceleration at 1.0 sec Period	S_{M1}	1.040
Design Spectral Acceleration at 0.2 sec Period	S_{DS}	1.175
Design Spectral Acceleration at 1.0 sec Period	S_{D1}	0.694

It should be noted that the site coefficient F_v and the parameters S_{M1} and S_{D1} were not included in the SEAOC/OSHPD Seismic Design Maps Tool output for the 2019 CBC. We calculated these parameters-based on Table 1613.2.3(2) in Section 16.4.4 of the 2019 CBC using the value of S_1

obtained from the Seismic Design Maps Tool, assuming that a site-specific ground motion hazards analysis is not required for the proposed buildings at this site.

Liquefaction

Liquefaction is the loss of strength in generally cohesionless, saturated soils when the pore-water pressure induced in the soil by a seismic event becomes equal to or exceeds the overburden pressure. The primary factors which influence the potential for liquefaction include groundwater table elevation, soil type and plasticity characteristics, relative density of the soil, initial confining pressure, and intensity and duration of ground shaking. The depth within which the occurrence of liquefaction may impact surface improvements is generally identified as the upper 50 feet below the existing ground surface. Liquefaction potential is greater in saturated, loose, poorly graded fine sands with a mean (d_{50}) grain size in the range of 0.075 to 0.2 mm (Seed and Idriss, 1971). Non-sensitive clayey (cohesive) soils which possess a plasticity index of at least 18 (Bray and Sancio, 2006) are generally not considered to be susceptible to liquefaction, nor are those soils which are above the historic static groundwater table.

The California Geological Survey (CGS) has not yet conducted detailed seismic hazards mapping in the area of the subject site. The general liquefaction susceptibility of the site was determined by research of the San Bernardino County Land Use Plan, General Plan, Geologic Hazard Overlays. The site is located within the Guasti Quadrangle (Map FH28C). There are no mapped areas of high liquefaction susceptibility within this entire quadrangle. Based on the mapping performed by the county of San Bernardino and the subsurface conditions encountered at the boring locations, liquefaction is not considered to be a design concern for this project.

6.2 Geotechnical Design Considerations

General

Artificial fill soils were encountered at the ground surface (or immediately beneath the existing pavements) at all but one of the boring locations. These artificial fill soils extend to depths of 2½ to 8½± feet below grade at the boring locations. Based on the previous industrial development of the site, it is expected that fill soils extend to greater depths at locations not explored by our borings. The fill soils possess variable strengths, variable composition, and variable densities. Laboratory testing indicates that selected samples of the fill soils are subject to hydro-consolidation. Based on these considerations, and a lack of documentation of the placement and compaction of these soils, the existing fill materials are considered to consist of undocumented fill, unsuitable for the support of the proposed structures. The near surface alluvium also possesses variable strengths and densities. Finally demolition of the existing facilities is expected to result in significant disturbance of the upper 5± feet (or more) of existing soils. Based on these considerations, remedial grading is considered necessary within the proposed building areas in order to remove all of the undocumented fill soils in their entirety as well as the upper portion of the near-surface native alluvial soils and replace these materials as compacted fill soils.

Settlement

The recommended remedial grading will remove the existing undocumented fill soils and a portion of the near-surface native alluvial soils and replace these materials as compacted structural fill. The native soils that will remain in place below the recommended depth of overexcavation will not be subject to significant stress increases from the foundations of the new structures. Therefore, following completion of the recommended grading, post-construction settlements are expected to be within tolerable limits.

Expansion

The near-surface soils encountered at the boring locations consist of silty sands, fine sands, and well graded sands. These materials have been visually classified as very low to non-expansive. Therefore, no design considerations related to expansive soils are considered warranted for this site.

Soluble Sulfates

The results of the soluble sulfate testing indicate that the selected samples of the on-site soils to correspond to Class S0 with respect to the American Concrete Institute (ACI) Publication 318-14 Building Code Requirements for Structural Concrete and Commentary, Section 4.3. Therefore, specialized concrete mix designs are not considered to be necessary, with regard to sulfate protection purposes. It is, however, recommended that additional soluble sulfate testing be conducted at the completion of rough grading to verify the soluble sulfate concentrations of the soils which are present at pad grade within the building areas.

Corrosion Potential

The results of laboratory testing indicate that samples of the on-site soils a possesses saturated resistivity values of 4,400 and 15,600 ohm-cm, and pH values of 8.4 and 8.5. These test results have been evaluated in accordance with guidelines published by the Ductile Iron Pipe Research Association (DIPRA). The DIPRA guidelines consist of a point system by which characteristics of the soils are used to quantify the corrosivity characteristics of the site. Sulfides, and redox potential are factors that are also used in the evaluation procedure. We have evaluated the corrosivity characteristics of the on-site soils using resistivity, pH, and moisture content. Based on these factors, and utilizing the DIPRA procedure, the on-site soils are not considered to be corrosive to ductile iron pipe.

Relatively low concentrations (7.4 to 13 mg/kg) of chlorides were detected in the samples submitted for corrosivity testing. In general, soils possessing chloride concentrations in excess of 500 parts per million (ppm) are considered to be corrosive with respect to steel reinforcement within reinforced concrete. Based on the lack of any significant chlorides in the tested sample, the site is considered to have a C1 chloride exposure in accordance with the American Concrete Institute (ACI) Publication 318 Building Code Requirements for Structural Concrete and Commentary. Therefore, a specialized concrete mix design for reinforced concrete for protection against chloride exposure is not considered warranted.

Nitrates present in soil can be corrosive to copper tubing at concentrations greater than 50 mg/kg. The tested samples possess nitrate concentrations of 8.6 to 14 mg/kg. Based on these test results,

the on-site soils are not considered to be corrosive to copper pipe with respect to their nitrate concentration.

SCG does not practice in the area of corrosion engineering. Therefore, the client may also wish to contact a corrosion engineer to provide a more thorough evaluation.

Shrinkage/Subsidence

Based on the results of the laboratory testing, removal and recompaction of near-surface soils, extending to depths of 3 to 6± feet, is estimated to result in an average shrinkage of 6 to 13 percent. It should be noted that this shrinkage estimate is based on the results of dry density testing performed on small-diameter samples of the existing soils taken at the boring locations. If a more accurate and precise shrinkage estimate is desired, SCG can perform a shrinkage study involving several excavated test-pits where in-place densities are determined using in-situ testing methods instead of laboratory density testing on small-diameter samples. Please contact SCG for details and a cost estimate regarding a shrinkage study, if desired.

Several of the existing structures are expected to be supported on deep foundations. Demolition and removal of these foundations will result in additional net shrinkage, beyond the estimates presented above.

Minor ground subsidence is expected to occur in the soils below the zone of removal, due to settlement and machinery working. The subsidence is estimated to be 0.1± feet. This estimate may be used for grading in areas that are underlain by native alluvial soils.

These estimates are based on previous experience in the area of the subject site and the subsurface conditions encountered at the boring locations. The actual amount of subsidence is expected to be variable and will be dependent on the type of machinery used, repetitions of use, and dynamic effects, all of which are difficult to assess precisely.

Grading and Foundation Plan Review

Grading and foundation plans were not available at the time of this report. It is therefore recommended that we be provided with copies of the preliminary grading and foundation plans, when they become available, for review with regard to the conclusions, recommendations, and assumptions contained within this report.

6.3 Site Grading Recommendations

The grading recommendations presented below are based on the subsurface conditions encountered at the boring locations and our understanding of the proposed development. We recommend that all grading activities be completed in accordance with the Grading Guide Specifications included as Appendix D of this report, unless superseded by site-specific recommendations presented below.

Site Stripping and Demolition

Demolition of the existing structures and pavements will be required in order to allow for construction of the new development. The demolition should include removal of all concrete floor-slabs, foundations, pavements, and any existing subsurface improvements which will not be utilized with the new development. Based on previous geotechnical studies at this site, some of the existing structures are supported on deep foundations, such as auger-cast piles. In addition, several below-grade pits, with concrete slabs and walls are present at the site. These foundations may be removed in their entirety. Alternatively, any such foundations may be cut off at a depth of at least 5 feet below any proposed foundations or floor slabs, and the remaining portion abandoned in place. Any below-grade slabs that are abandoned in-place should be punctured with minimum 4-inch diameter holes at 2 feet on-center to allow drainage. Consideration should be given to future utility construction if any foundations or slabs are abandoned in place. Within pavement areas, any foundation remnants should be at least 3 feet blow finished subgrade elevation. Debris resultant from demolition should be disposed of off-site. Alternatively, the asphalt and concrete debris may be crushed to a maximum 2-inch particle size, well mixed with the on-site soils, and incorporated into new structural fills. Any soils disturbed during demolition should be removed during demolition or site grading. On-site soils may be reused as compacted structural fill provided, they are cleaned of any deleterious debris to the satisfaction of the geotechnical engineer.

Initial site stripping should include removal of any surficial vegetation from the site. Stripping should include any grass and weed growth as well as any organic top soils. Removal of any trees that will not remain with the proposed development should include any associated root masses in their entirety. The actual extent of site stripping should be determined in the field by the geotechnical engineer, based on the organic content and stability of the materials encountered.

Treatment of Existing Soils: Building Pads

Remedial grading should be performed within the proposed building pad areas in order to remove any soils disturbed during demolition, the existing undocumented fill soils, and the upper portion of the near-surface native alluvium. Based on conditions encountered at the boring locations, we recommend that the existing soils within the proposed building areas be overexcavated to a depth of at least 5 feet below existing grade and to a depth of at least 4 feet below proposed building pad subgrade elevations, whichever is greater. Additional overexcavation should be performed within the influence zones of the new foundations, extending to a depth of at least 3 feet below proposed bearing grades.

The depth of the overexcavation should also extend to a depth sufficient to remove all undocumented fill soils, which extend to depths of 2½ to 8½± feet at the boring locations.

The overexcavation areas should extend at least 5 feet beyond the building and foundation perimeters, and to an extent equal to the depth of fill below the new foundations. If the proposed structures incorporate any exterior columns (such as for a canopy or overhang) the area of overexcavation should also encompass these areas.

Following completion of the overexcavation, the subgrade soils within the overexcavation areas should be evaluated by the geotechnical engineer to verify their suitability to serve as the structural fill subgrade, as well as to support the foundation loads of the new structures. This

evaluation should include proofrolling and probing to identify any soft, loose or otherwise unstable soils that must be removed. **Some localized areas of deeper excavation may be required if additional fill materials or loose, porous, or low density native soils are encountered at the base of the overexcavation**.

After a suitable overexcavation subgrade has been achieved, the exposed soils should be scarified to a depth of at least 12 inches and moisture treated to 0 to 4 percent above optimum moisture content. The subgrade soils should then be recompacted to at least 90 percent of the ASTM D-1557 maximum dry density. The previously excavated soils may then be replaced as compacted structural fill.

Treatment of Existing Soils: Retaining Walls and Site Walls

The existing soils within the areas of proposed retaining and non-retaining site walls should be overexcavated to a depth of at least 3 feet below foundation bearing grade and replaced as compacted structural fill as discussed above for the proposed building pads. Any undocumented fill soils within any of these foundation areas should be removed in their entirety. The overexcavation areas should extend at least 3 feet beyond the foundation perimeters, and to an extent equal to the depth of fill below the new foundations. Any erection pads for tilt-up concrete walls are considered to be part of the foundation system. Therefore, these overexcavation recommendations are applicable to erection pads. The overexcavation subgrade soils should be evaluated by the geotechnical engineer prior to scarifying, moisture conditioning, and recompacting the upper 12 inches of exposed subgrade soils, as discussed for the building areas. The previously excavated soils may then be replaced as compacted structural fill.

If the recommended remedial grading cannot be completed for walls located along property lines, such walls should be designed for a reduced allowable bearing pressure. The allowable bearing pressure will be determined based on the actual extent of remedial grading that can be accomplished.

Treatment of Existing Soils: Flatwork, Parking and Drive Areas

Based on economic considerations, overexcavation of the existing near-surface existing soils in the new flatwork, parking and drive areas is not considered warranted, with the exception of areas where lower strength or unstable soils are identified by the geotechnical engineer during grading. Subgrade preparation in the new flatwork, parking and drive areas should initially consist of removal of all soils disturbed during stripping and demolition operations.

The geotechnical engineer should then evaluate the subgrade to identify any areas of additional unsuitable soils. Any such materials should be removed to a level of firm and unyielding soil. The exposed subgrade soils should then be scarified to a depth of 12± inches, moisture conditioned to 0 to 4 percent above the optimum moisture content, and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density. **Based on the presence of variable strength surficial soils (including significant depths of undocumented fill) throughout the site, it is expected that some isolated areas of additional overexcavation will be required to remove zones of lower strength, unsuitable soils.**

The grading recommendations presented above for the proposed flatwork, parking and drive areas assume that the owner and/or developer can tolerate minor amounts of settlement within

the proposed flatwork, parking and drive areas. The grading recommendations presented above do not completely mitigate the extent of existing fill soils that may be present in the flatwork, parking and drive areas. As such, some settlement and associated pavement distress could occur. Typically, repair of such distressed areas involves significantly lower costs than completely mitigating these soils at the time of construction. If the owner cannot tolerate the risk of such settlements, the flatwork, parking and drive areas should be overexcavated to a depth of 2 feet below proposed pavement subgrade elevation, with the resulting soils replaced as compacted structural fill.

Fill Placement

- Fill soils should be placed in thin (6± inches), near-horizontal lifts, moisture conditioned to 0 to 4 percent above the optimum moisture content, and compacted.
- On-site soils may be used for fill provided they are cleaned of any debris to the satisfaction of the geotechnical engineer. **Based on the previous development of the site as a steel mill, some materials unsuitable for fill are expected to be encountered during grading.** Pieces of inert debris over 12 inches in size such as slag should be exported from the site, or disposed of as oversized materials in pavement areas or non-structural regions of the development.
- All grading and fill placement activities should be completed in accordance with the requirements of the 2019 CBC and the grading code of the city of Rancho Cucamonga.
- All fill soils should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Fill soils should be well mixed.
- Compaction tests should be performed periodically by the geotechnical engineer as random verification of compaction and moisture content. These tests are intended to aid the contractor. Since the tests are taken at discrete locations and depths, they may not be indicative of the entire fill and therefore should not relieve the contractor of his responsibility to meet the job specifications.

Imported Structural Fill

All imported structural fill should consist of very low expansive (EI < 20), well graded soils possessing at least 10 percent fines (that portion of the sample passing the No. 200 sieve). Additional specifications for structural fill are presented in the Grading Guide Specifications, included as Appendix D.

Utility Trench Backfill

In general, all utility trench backfill soils should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density. It is recommended that materials in excess of 3 inches in size not be used for utility trench backfill. Compacted trench backfill should conform to the requirements of the local grading code, and more restrictive requirements may be indicated by the city of Rancho Cucamonga. All utility trench backfills should be witnessed by the geotechnical engineer. The trench backfill soils should be compaction tested where possible; probed and visually evaluated elsewhere.

Utility trenches which parallel a footing, and extending below a 1h:1v plane projected from the outside edge of the footing should be backfilled with structural fill soils, compacted to at least 90 percent of the ASTM D-1557 standard. Pea gravel backfill should not be used for these trenches.

6.4 Construction Considerations

Excavation Considerations

The near-surface soils generally consist of silty sands and sands. These materials will likely be subject to minor to moderate caving within shallow excavations. Where caving does occur, flattened excavation slopes may be sufficient to provide excavation stability. On a preliminary basis, the inclination of temporary slopes should not exceed 2h:1v. Deeper excavations may require some form of external stabilization such as shoring or bracing. Maintaining adequate moisture content within the near-surface soils will improve excavation stability. All excavation activities on this site should be conducted in accordance with Cal-OSHA regulations.

Groundwater

The static groundwater table is considered to have existed at a depth in excess of 25± feet at the time of the subsurface exploration. Therefore, groundwater is not expected to impact the grading or foundation construction activities.

6.5 Foundation Design and Construction

Based on the preceding grading recommendations, it is assumed that the new building pads will be underlain by structural fill soils used to replace the existing fill soils and a portion of the near-surface alluvial soils. These new structural fill soils are expected to extend to depths of at least 3 feet below proposed foundation bearing grade, underlain by 1± foot of additional soil that has been scarified, moisture conditioned, and recompacted. Based on this subsurface profile, the proposed structures may be supported on conventional shallow foundations.

Foundation Design Parameters

New square and rectangular footings may be designed as follows:

- Maximum, net allowable soil bearing pressure: 3,000 lbs/ft^2.
- Minimum wall/column footing width: 14 inches/24 inches.
- Minimum longitudinal steel reinforcement within strip footings: Two (2) No. 5 rebars (1 top and 1 bottom).
- Minimum foundation embedment: 12 inches into suitable structural fill soils, and at least 18 inches below adjacent exterior grade. Interior column footings may be placed immediately beneath the floor slab.
- It is recommended that the perimeter building foundations be continuous across all exterior doorways. Any flatwork adjacent to the exterior doors should be doweled into the perimeter foundations in a manner determined by the structural engineer.

The allowable bearing pressures presented above may be increased by 1/3 when considering short duration wind or seismic loads. The minimum steel reinforcement recommended above is based on geotechnical considerations; additional reinforcement may be necessary for structural considerations. The actual design of the foundations should be determined by the structural engineer.

Foundation Construction

The foundation subgrade soils should be evaluated at the time of overexcavation, as discussed in Section 6.3 of this report. It is further recommended that the foundation subgrade soils be evaluated by the geotechnical engineer immediately prior to steel or concrete placement. Soils suitable for direct foundation support should consist of newly placed structural fill, compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Any unsuitable materials should be removed to a depth of suitable bearing compacted structural fill, with the resulting excavations backfilled with compacted fill soils. As an alternative, lean concrete slurry (500 to 1,500 psi) may be used to backfill such isolated overexcavations.

The foundation subgrade soils should also be properly moisture conditioned to 0 to 4 percent of the Modified Proctor optimum, to a depth of at least 12 inches below bearing grade. Since it is typically not feasible to increase the moisture content of the floor slab and foundation subgrade soils once rough grading has been completed, care should be taken to maintain the moisture content of the building pad subgrade soils throughout the construction process.

Estimated Foundation Settlements

Post-construction total and differential settlements of shallow foundations designed and constructed in accordance with the previously presented recommendations are estimated to be less than 1.0 and 0.5 inches, respectively. Differential movements are expected to occur over a 30-foot span, thereby resulting in an angular distortion of less than 0.002 inches per inch.

Lateral Load Resistance

Lateral load resistance will be developed by a combination of friction acting at the base of foundations and slabs and the passive earth pressure developed by footings below grade. The following friction and passive pressure may be used to resist lateral forces:

- Passive Earth Pressure: 300 lbs/ft^3
- Friction Coefficient: 0.30

These are allowable values, and include a factor of safety. When combining friction and passive resistance, the passive pressure component should be reduced by one-third. These values assume that footings will be poured directly against compacted structural fill soils. The maximum allowable passive pressure is 3,000 lbs/ft^2.

6.6 Floor Slab Design and Construction

Subgrades which will support the new floor slab should be prepared in accordance with the recommendations contained in the ***Site Grading Recommendations*** section of this report.

Based on the anticipated grading which will occur at this site, the floors of the proposed structures may be constructed as conventional slabs-on-grade supported on newly placed structural fill, extending to a depth of at least 4 feet below finished pad grade. Based on geotechnical considerations, the floor slabs may be designed as follows:

- Minimum slab thickness: 6 inches.

- Modulus of Subgrade Reaction: k = 150 psi/in.

- Minimum slab reinforcement: Reinforcement is not considered necessary from a geotechnical standpoint. The actual floor slab reinforcement should be determined by the structural engineer, based on the imposed slab loading.

- Slab underlayment: If moisture sensitive floor coverings will be used then minimum slab underlayment should consist of a moisture vapor barrier constructed below the entire area of the proposed slab where such moisture sensitive floor coverings are anticipated. The moisture vapor barrier should meet or exceed the Class A rating as defined by ASTM E 1745-97 and have a permeance rating less than 0.01 perms as described in ASTM E 96-95 and ASTM E 154-88. A polyolefin material such as Stego® Wrap Vapor Barrier or equivalent will meet these specifications. The moisture vapor barrier should be properly constructed in accordance with all applicable manufacturer specifications. Given that a rock free subgrade is anticipated and that a capillary break is not required, sand below the barrier is not required. The need for sand and/or the amount of sand above the moisture vapor barrier should be specified by the structural engineer or concrete contractor. The selection of sand above the barrier is not a geotechnical engineering issue and hence outside our purview. Where moisture sensitive floor coverings are not anticipated, the vapor barrier may be eliminated.

- Moisture condition the floor slab subgrade soils to 0 to 4 percent above the Modified Proctor optimum moisture content, to a depth of 12 inches. The moisture content of the floor slab subgrade soils should be verified by the geotechnical engineer within 24 hours prior to concrete placement.

- Proper concrete curing techniques should be utilized to reduce the potential for slab curling or the formation of excessive shrinkage cracks.

The actual design of the floor slab should be completed by the structural engineer to verify adequate thickness and reinforcement.

6.7 Retaining Wall Design and Construction

Although not indicated on the site plan, some small (less than 6 feet in height) retaining walls may be required to facilitate the new site grades. The parameters recommended for use in the design of these walls are presented below.

Retaining Wall Design Parameters

Based on the soil conditions encountered at the boring locations, the following parameters may be used in the design of new retaining walls for this site. The following parameters assume that only the on-site soils will be utilized for retaining wall backfill. The near-surface soils generally consist of silty sands and sands. Based on their classifications, the on-site soils are expected to possess a friction angle of at least 30 degrees when compacted to 90 percent of the ASTM-1557 maximum dry density.

If desired, SCG could provide design parameters for an alternative select backfill material behind the retaining walls. The use of select backfill material could result in lower lateral earth pressures. In order to use the design parameters for the imported select fill, this material must be placed within the entire active failure wedge. This wedge is defined as extending from the heel of the retaining wall upwards at an angle of approximately 60° from horizontal. If select backfill material behind the retaining wall is desired, SCG should be contacted for supplementary recommendations.

RETAINING WALL DESIGN PARAMETERS

Design Parameter		Soil Type
		On-site Silty Sands and Sands
Internal Friction Angle (ϕ)		30°
Unit Weight		130 lbs/ft^3
Equivalent Fluid Pressure:	Active Condition (level backfill)	43 lbs/ft^3
	Active Condition (2h:1v backfill)	70 lbs/ft^3
	At-Rest Condition (level backfill)	65 lbs/ft^3

The walls should be designed using a soil-footing coefficient of friction of 0.30 and an equivalent passive pressure of 300 lbs/ft^3. The structural engineer should incorporate appropriate factors of safety in the design of the retaining walls.

The active earth pressure may be used for the design of retaining walls that do not directly support structures or support soils that in turn support structures and which will be allowed to deflect. The at-rest earth pressure should be used for walls that will not be allowed to deflect such as those which will support foundation bearing soils, or which will support foundation loads directly.

Where the soils on the toe side of the retaining wall are not covered by a "hard" surface such as a structure or pavement, the upper 1 foot of soil should be neglected when calculating passive resistance due to the potential for the material to become disturbed or degraded during the life of the structure.

Seismic Lateral Earth Pressures

In accordance with the 2019 CBC, any retaining walls more than 6 feet in height must be designed for seismic lateral earth pressures. If walls 6 feet or more are required for this site, the geotechnical engineer should be contacted for supplementary seismic lateral earth pressure recommendations.

Retaining Wall Foundation Design

The retaining wall foundations should be supported within newly placed compacted structural fill, extending to a depth of at least 3 feet below proposed foundation bearing grade. Foundations to support new retaining walls should be designed in accordance with the general Foundation Design Parameters presented in a previous section of this report.

Backfill Material

On-site soils may be used to backfill the retaining walls. However, all backfill material placed within 3 feet of the back wall face should have a particle size no greater than 3 inches. The retaining wall backfill materials should be well graded.

It is recommended that a properly installed prefabricated drainage composite such as the MiraDRAIN 6000XL (or approved equivalent), which is specifically designed for use behind retaining walls be used. If the drainage composite material is not covered by an impermeable surface, such as a structure or pavement, a 12-inch thick layer of a low permeability soil should be placed over the backfill to reduce surface water migration to the underlying soils. The drainage composite should be separated from the backfill soils by a suitable geotextile, approved by the geotechnical engineer.

All retaining wall backfill should be placed and compacted under engineering controlled conditions in the necessary layer thicknesses to ensure an in-place density between 90 and 93 percent of the maximum dry density as determined by the Modified Proctor test (ASTM D1557). Care should be taken to avoid over-compaction of the soils behind the retaining walls, and the use of heavy compaction equipment should be avoided.

Subsurface Drainage

As previously indicated, the retaining wall design parameters are based upon drained backfill conditions. Consequently, some form of permanent drainage system will be necessary in conjunction with the appropriate backfill material. Subsurface drainage may consist of either:

- A weep hole drainage system typically consisting of a series of 2-inch diameter holes in the wall situated slightly above the ground surface elevation on the exposed side of the wall and at an approximate 10-foot on-center spacing. Alternatively, 4-inch diameter holes at an approximate 20-foot on-center spacing can be used for this type of drainage system. In addition, the weep holes should include a 2 cubic foot pocket of open graded gravel, surrounded by an approved geotextile fabric, at each weep hole location.

- A 4-inch diameter perforated pipe surrounded by 2 cubic feet of gravel per linear foot of drain placed behind the wall, above the retaining wall footing. The gravel layer should be wrapped

in a suitable geotextile fabric to reduce the potential for migration of fines. The footing drain should be extended to daylight or tied into a storm drainage system. The actual design of this type of system should be determined by the civil engineer to verify that the drainage system possesses the adequate capacity and slope for its intended use.

6.8 Pavement Design Parameters

Site preparation in the pavement area should be completed as previously recommended in the ***Site Grading Recommendations*** section of this report. The subsequent pavement recommendations assume proper drainage and construction monitoring, and are based on either PCA or CALTRANS design parameters for a twenty (20) year design period. However, these designs also assume a routine pavement maintenance program to obtain the anticipated 20-year pavement service life.

Pavement Subgrades

It is anticipated that the new pavements will be primarily supported on a layer of compacted structural fill, consisting of scarified, thoroughly moisture conditioned and recompacted existing soils. The near-surface soils generally consist of silty sands and sands. These soils are generally considered to possess excellent pavement support characteristics, with R-values in the range of 50 to 60. Since R-value testing was not included in the scope of services for this project, the subsequent pavement design is based upon an assumed R-value of 50. Any fill material imported to the site should have support characteristics equal to or greater than that of the on-site soils and be placed and compacted under engineering controlled conditions. It is recommended that R-value testing be performed after completion of rough grading to verify that the pavement design recommendations presented herein are valid.

Asphaltic Concrete

Presented below are the recommended thicknesses for new flexible pavement structures consisting of asphaltic concrete over a granular base. The pavement designs are based on the traffic indices (TI's) indicated. The client and/or civil engineer should verify that these TI's are representative of the anticipated traffic volumes. If the client and/or civil engineer determine that the expected traffic volume will exceed the applicable traffic index, we should be contacted for supplementary recommendations. The design traffic indices equate to the following approximate daily traffic volumes over a 20-year design life, assuming six operational traffic days per week.

Traffic Index	No. of Heavy Trucks per Day
5.0	1
6.0	3
7.0	11
8.0	35
9.0	93

For the purpose of the traffic volumes indicated above, a truck is defined as a 5-axle tractor trailer unit with one 8-kip axle and two 32-kip tandem axles. All of the traffic indices allow for 1,000 automobiles per day.

ASPHALT PAVEMENTS (R=50)					
Materials	**Thickness (inches)**				
	Auto Parking and Auto Drive Lanes (TI = 4.0 to 5.0)	Truck Traffic			
		TI = 6.0	TI = 7.0	TI = 8.0	TI = 9.0
Asphalt Concrete	3	3½	4	5	5½
Aggregate Base	3	4	5	5	7
Compacted Subgrade	12	12	12	12	12

The aggregate base course should be compacted to at least 95 percent of the ASTM D-1557 maximum dry density. The asphaltic concrete should be compacted to at least 95 percent of the Marshall maximum density, as determined by ASTM D-2726. The aggregate base course may consist of crushed aggregate base (CAB) or crushed miscellaneous base (CMB), which is a recycled gravel, asphalt and concrete material. The gradation, R-Value, Sand Equivalent, and Percentage Wear of the CAB or CMB should comply with appropriate specifications contained in the current edition of the "Greenbook" Standard Specifications for Public Works Construction.

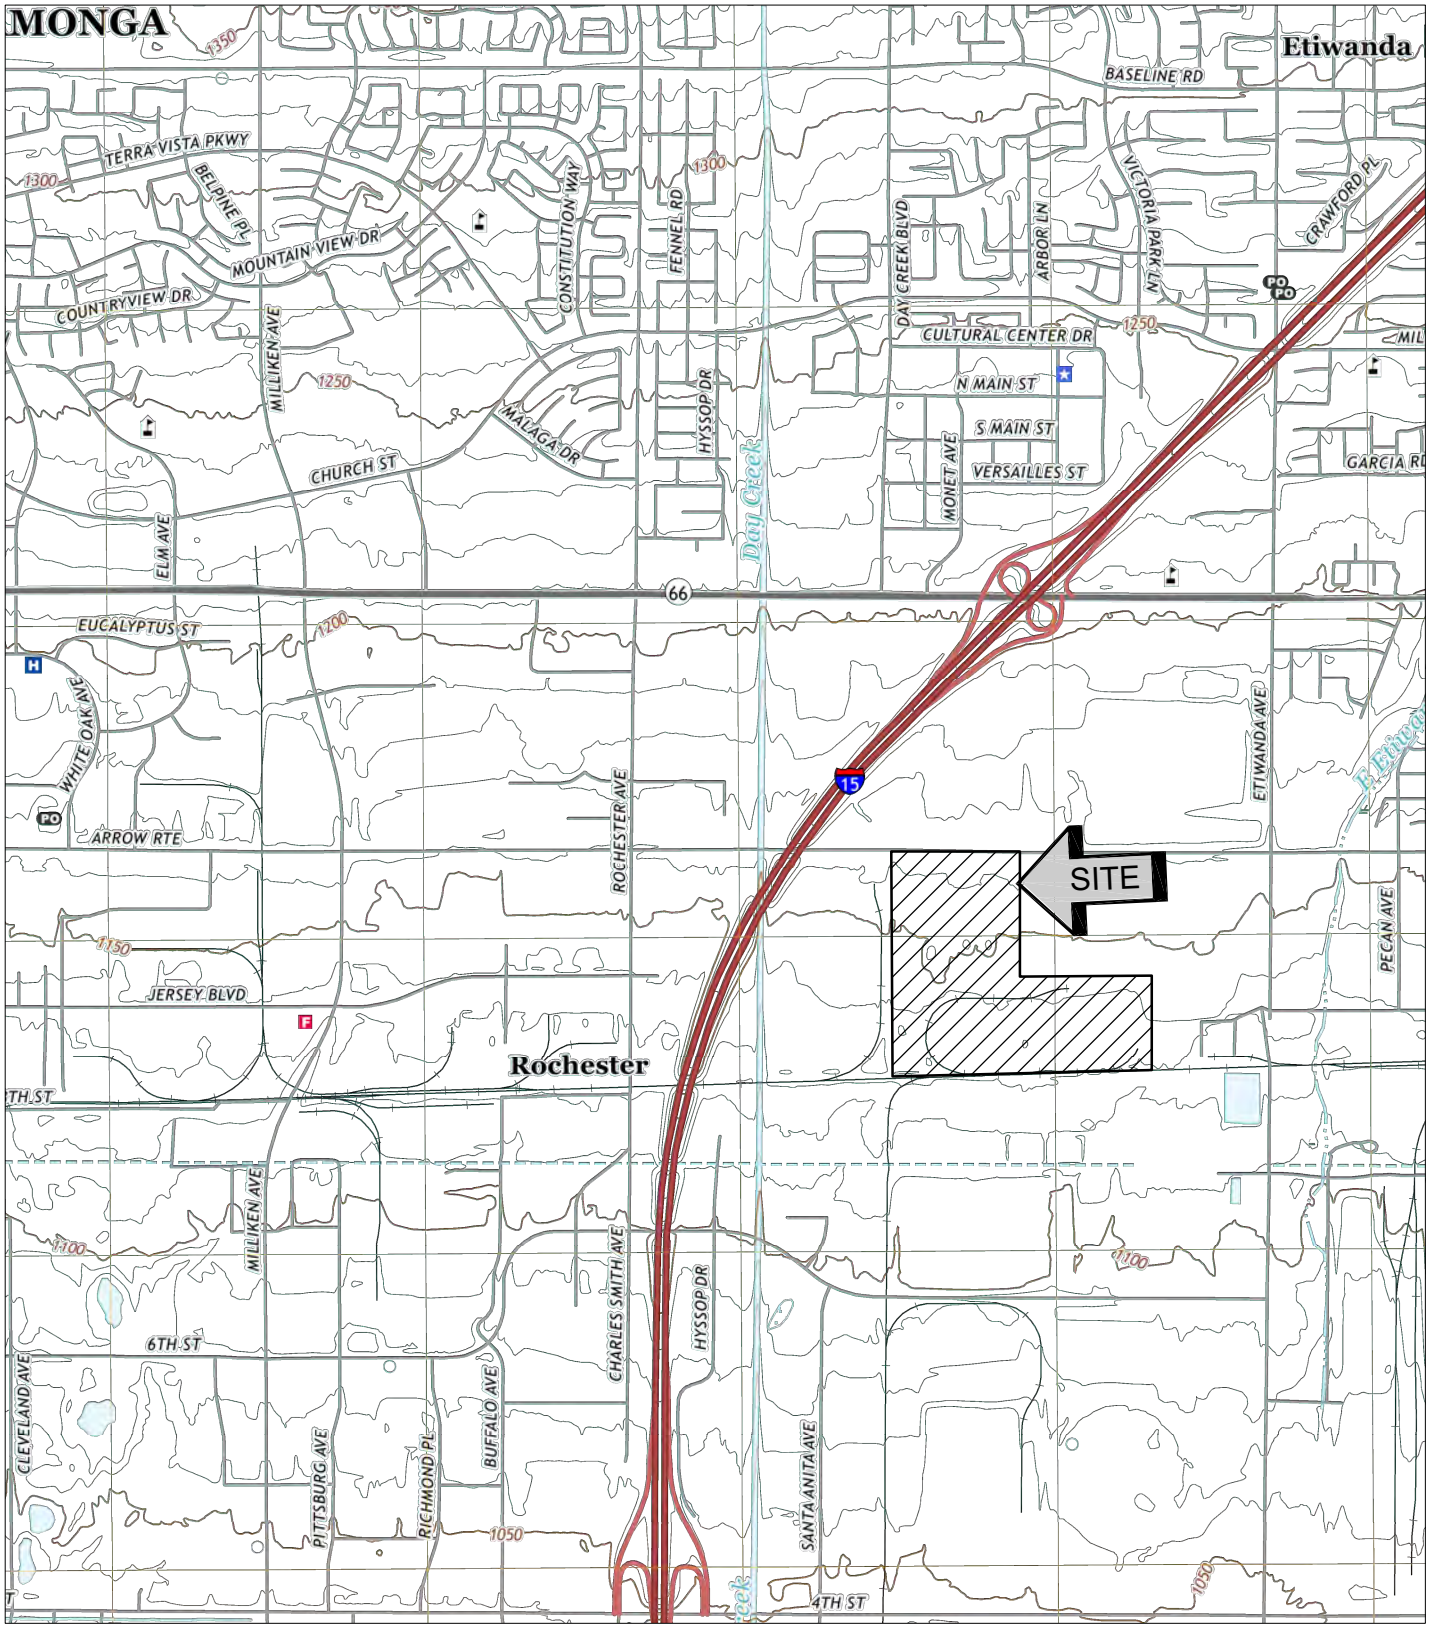
Portland Cement Concrete

The preparation of the subgrade soils within concrete pavement areas should be performed as previously described for proposed asphalt pavement areas. The minimum recommended thicknesses for the Portland Cement Concrete pavement sections are as follows:

PORTLAND CEMENT CONCRETE PAVEMENTS (R=50)				
Materials	**Thickness (inches)**			
	Autos and Light Truck Traffic (TI = 6.0)	Truck Traffic		
		TI = 7.0	TI = 8.0	TI = 9.0
PCC	5	5½	6½	8
Compacted Subgrade (95% minimum compaction)	12	12	12	12

The concrete should have a 28-day compressive strength of at least 3,000 psi. Any reinforcement within the PCC pavements should be determined by the project structural engineer. The maximum joint spacing within all of the PCC pavements is recommended to be equal to or less than 30 times the pavement thickness.

7.0 GENERAL COMMENTS



This report has been prepared as an instrument of service for use by the client, in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project. However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, civil engineer, and/or structural engineer. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur. The client(s)' reliance upon this report is subject to the Engineering Services Agreement, incorporated into our proposal for this project.

The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between boring locations and sample depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted.

The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

BORING LOG LEGEND

SAMPLE TYPE	GRAPHICAL SYMBOL	SAMPLE DESCRIPTION
AUGER		SAMPLE COLLECTED FROM AUGER CUTTINGS, NO FIELD MEASUREMENT OF SOIL STRENGTH. (DISTURBED)
CORE		ROCK CORE SAMPLE: TYPICALLY TAKEN WITH A DIAMOND-TIPPED CORE BARREL. TYPICALLY USED ONLY IN HIGHLY CONSOLIDATED BEDROCK.
GRAB		SOIL SAMPLE TAKEN WITH NO SPECIALIZED EQUIPMENT, SUCH AS FROM A STOCKPILE OR THE GROUND SURFACE. (DISTURBED)
CS		CALIFORNIA SAMPLER: 2-1/2 INCH I.D. SPLIT BARREL SAMPLER, LINED WITH 1-INCH HIGH BRASS RINGS. DRIVEN WITH SPT HAMMER. (RELATIVELY UNDISTURBED)
NSR		NO RECOVERY: THE SAMPLING ATTEMPT DID NOT RESULT IN RECOVERY OF ANY SIGNIFICANT SOIL OR ROCK MATERIAL.
SPT		STANDARD PENETRATION TEST: SAMPLER IS A 1.4 INCH INSIDE DIAMETER SPLIT BARREL, DRIVEN 18 INCHES WITH THE SPT HAMMER. (DISTURBED)
SH		SHELBY TUBE: TAKEN WITH A THIN WALL SAMPLE TUBE, PUSHED INTO THE SOIL AND THEN EXTRACTED. (UNDISTURBED)
VANE		VANE SHEAR TEST: SOIL STRENGTH OBTAINED USING A 4 BLADED SHEAR DEVICE. TYPICALLY USED IN SOFT CLAYS-NO SAMPLE RECOVERED.

COLUMN DESCRIPTIONS

DEPTH: Distance in feet below the ground surface.

SAMPLE: Sample Type as depicted above.

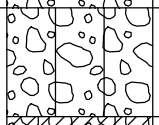
BLOW COUNT: Number of blows required to advance the sampler 12 inches using a 140 lb hammer with a 30-inch drop. 50/3" indicates penetration refusal (>50 blows) at 3 inches. WH indicates that the weight of the hammer was sufficient to push the sampler 6 inches or more.

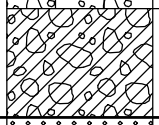
POCKET PEN.: Approximate shear strength of a cohesive soil sample as measured by pocket penetrometer.

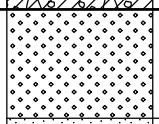
GRAPHIC LOG: Graphic Soil Symbol as depicted on the following page.

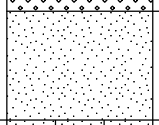
DRY DENSITY: Dry density of an undisturbed or relatively undisturbed sample in lbs/ft^3.

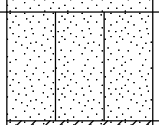
MOISTURE CONTENT: Moisture content of a soil sample, expressed as a percentage of the dry weight.

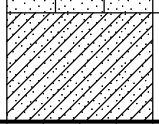


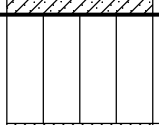


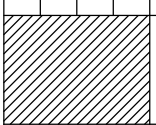


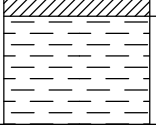


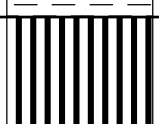


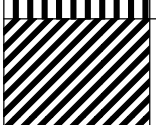


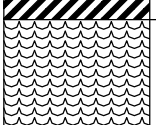


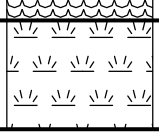












LIQUID LIMIT: The moisture content above which a soil behaves as a liquid.

PLASTIC LIMIT: The moisture content above which a soil behaves as a plastic.

PASSING #200 SIEVE: The percentage of the sample finer than the #200 standard sieve.

UNCONFINED SHEAR: The shear strength of a cohesive soil sample, as measured in the unconfined state.

APPENDIX D

GRADING GUIDE SPECIFICATIONS

These grading guide specifications are intended to provide typical procedures for grading operations. They are intended to supplement the recommendations contained in the geotechnical investigation report for this project. Should the recommendations in the geotechnical investigation report conflict with the grading guide specifications, the more site specific recommendations in the geotechnical investigation report will govern.

General

- The Earthwork Contractor is responsible for the satisfactory completion of all earthwork in accordance with the plans and geotechnical reports, and in accordance with city, county, and applicable building codes.

- The Geotechnical Engineer is the representative of the Owner/Builder for the purpose of implementing the report recommendations and guidelines. These duties are not intended to relieve the Earthwork Contractor of any responsibility to perform in a workman-like manner, nor is the Geotechnical Engineer to direct the grading equipment or personnel employed by the Contractor.

- The Earthwork Contractor is required to notify the Geotechnical Engineer of the anticipated work and schedule so that testing and inspections can be provided. If necessary, work may be stopped and redone if personnel have not been scheduled in advance.

- The Earthwork Contractor is required to have suitable and sufficient equipment on the job-site to process, moisture condition, mix and compact the amount of fill being placed to the approved compaction. In addition, suitable support equipment should be available to conform with recommendations and guidelines in this report.

- Canyon cleanouts, overexcavation areas, processed ground to receive fill, key excavations, subdrains and benches should be observed by the Geotechnical Engineer prior to placement of any fill. It is the Earthwork Contractor's responsibility to notify the Geotechnical Engineer of areas that are ready for inspection.

- Excavation, filling, and subgrade preparation should be performed in a manner and sequence that will provide drainage at all times and proper control of erosion. Precipitation, springs, and seepage water encountered shall be pumped or drained to provide a suitable working surface. The Geotechnical Engineer must be informed of springs or water seepage encountered during grading or foundation construction for possible revision to the recommended construction procedures and/or installation of subdrains.

Site Preparation

- The Earthwork Contractor is responsible for all clearing, grubbing, stripping and site preparation for the project in accordance with the recommendations of the Geotechnical Engineer.

- If any materials or areas are encountered by the Earthwork Contractor which are suspected of having toxic or environmentally sensitive contamination, the Geotechnical Engineer and Owner/Builder should be notified immediately.

- Major vegetation should be stripped and disposed of off-site. This includes trees, brush, heavy grasses and any materials considered unsuitable by the Geotechnical Engineer.

- Underground structures such as basements, cesspools or septic disposal systems, mining shafts, tunnels, wells and pipelines should be removed under the inspection of the Geotechnical Engineer and recommendations provided by the Geotechnical Engineer and/or city, county or state agencies. If such structures are known or found, the Geotechnical Engineer should be notified as soon as possible so that recommendations can be formulated.

- Any topsoil, slopewash, colluvium, alluvium and rock materials which are considered unsuitable by the Geotechnical Engineer should be removed prior to fill placement.

- Remaining voids created during site clearing caused by removal of trees, foundations basements, irrigation facilities, etc., should be excavated and filled with compacted fill.

- Subsequent to clearing and removals, areas to receive fill should be scarified to a depth of 10 to 12 inches, moisture conditioned and compacted

- The moisture condition of the processed ground should be at or slightly above the optimum moisture content as determined by the Geotechnical Engineer. Depending upon field conditions, this may require air drying or watering together with mixing and/or discing.

Compacted Fills

- Soil materials imported to or excavated on the property may be utilized in the fill, provided each material has been determined to be suitable in the opinion of the Geotechnical Engineer. Unless otherwise approved by the Geotechnical Engineer, all fill materials shall be free of deleterious, organic, or frozen matter, shall contain no chemicals that may result in the material being classified as “contaminated,” and shall be very low to non-expansive with a maximum expansion index (EI) of 50. The top 12 inches of the compacted fill should have a maximum particle size of 3 inches, and all underlying compacted fill material a maximum 6-inch particle size, except as noted below.

- All soils should be evaluated and tested by the Geotechnical Engineer. Materials with high expansion potential, low strength, poor gradation or containing organic materials may require removal from the site or selective placement and/or mixing to the satisfaction of the Geotechnical Engineer.

- Rock fragments or rocks less than 6 inches in their largest dimensions, or as otherwise determined by the Geotechnical Engineer, may be used in compacted fill, provided the distribution and placement is satisfactory in the opinion of the Geotechnical Engineer.

- Rock fragments or rocks greater than 12 inches should be taken off-site or placed in accordance with recommendations and in areas designated as suitable by the Geotechnical Engineer. These materials should be placed in accordance with Plate D-8 of these Grading Guide Specifications and in accordance with the following recommendations:

    - Rocks 12 inches or more in diameter should be placed in rows at least 15 feet apart, 15 feet from the edge of the fill, and 10 feet or more below subgrade. Spaces should be left between each rock fragment to provide for placement and compaction of soil around the fragments.

    - Fill materials consisting of soil meeting the minimum moisture content requirements and free of oversize material should be placed between and over the rows of rock or

concrete. Ample water and compactive effort should be applied to the fill materials as they are placed in order that all of the voids between each of the fragments are filled and compacted to the specified density.

- Subsequent rows of rocks should be placed such that they are not directly above a row placed in the previous lift of fill. A minimum 5-foot offset between rows is recommended.

- To facilitate future trenching, oversized material should not be placed within the range of foundation excavations, future utilities or other underground construction unless specifically approved by the soil engineer and the developer/owner representative.

- Fill materials approved by the Geotechnical Engineer should be placed in areas previously prepared to receive fill and in evenly placed, near horizontal layers at about 6 to 8 inches in loose thickness, or as otherwise determined by the Geotechnical Engineer for the project.

- Each layer should be moisture conditioned to optimum moisture content, or slightly above, as directed by the Geotechnical Engineer. After proper mixing and/or drying, to evenly distribute the moisture, the layers should be compacted to at least 90 percent of the maximum dry density in compliance with ASTM D-1557-78 unless otherwise indicated.

- Density and moisture content testing should be performed by the Geotechnical Engineer at random intervals and locations as determined by the Geotechnical Engineer. These tests are intended as an aid to the Earthwork Contractor, so he can evaluate his workmanship, equipment effectiveness and site conditions. The Earthwork Contractor is responsible for compaction as required by the Geotechnical Report(s) and governmental agencies.

- Fill areas unused for a period of time may require moisture conditioning, processing and recompaction prior to the start of additional filling. The Earthwork Contractor should notify the Geotechnical Engineer of his intent so that an evaluation can be made.

- Fill placed on ground sloping at a 5-to-1 inclination (horizontal-to-vertical) or steeper should be benched into bedrock or other suitable materials, as directed by the Geotechnical Engineer. Typical details of benching are illustrated on Plates D-2, D-4, and D-5.

- Cut/fill transition lots should have the cut portion overexcavated to a depth of at least 3 feet and rebuilt with fill (see Plate D-1), as determined by the Geotechnical Engineer.

- All cut lots should be inspected by the Geotechnical Engineer for fracturing and other bedrock conditions. If necessary, the pads should be overexcavated to a depth of 3 feet and rebuilt with a uniform, more cohesive soil type to impede moisture penetration.

- Cut portions of pad areas above buttresses or stabilizations should be overexcavated to a depth of 3 feet and rebuilt with uniform, more cohesive compacted fill to impede moisture penetration.

- Non-structural fill adjacent to structural fill should typically be placed in unison to provide lateral support. Backfill along walls must be placed and compacted with care to ensure that excessive unbalanced lateral pressures do not develop. The type of fill material placed adjacent to below grade walls must be properly tested and approved by the Geotechnical Engineer with consideration of the lateral earth pressure used in the design.

Foundations

- The foundation influence zone is defined as extending one foot horizontally from the outside edge of a footing, and proceeding downward at a ½ horizontal to 1 vertical (0.5:1) inclination.

- Where overexcavation beneath a footing subgrade is necessary, it should be conducted so as to encompass the entire foundation influence zone, as described above.

- Compacted fill adjacent to exterior footings should extend at least 12 inches above foundation bearing grade. Compacted fill within the interior of structures should extend to the floor subgrade elevation.

Fill Slopes

- The placement and compaction of fill described above applies to all fill slopes. Slope compaction should be accomplished by overfilling the slope, adequately compacting the fill in even layers, including the overfilled zone and cutting the slope back to expose the compacted core

- Slope compaction may also be achieved by backrolling the slope adequately every 2 to 4 vertical feet during the filling process as well as requiring the earth moving and compaction equipment to work close to the top of the slope. Upon completion of slope construction, the slope face should be compacted with a sheepsfoot connected to a sideboom and then grid rolled. This method of slope compaction should only be used if approved by the Geotechnical Engineer.

- Sandy soils lacking in adequate cohesion may be unstable for a finished slope condition and therefore should not be placed within 15 horizontal feet of the slope face.

- All fill slopes should be keyed into bedrock or other suitable material. Fill keys should be at least 15 feet wide and inclined at 2 percent into the slope. For slopes higher than 30 feet, the fill key width should be equal to one-half the height of the slope (see Plate D-5).

- All fill keys should be cleared of loose slough material prior to geotechnical inspection and should be approved by the Geotechnical Engineer and governmental agencies prior to filling.

- The cut portion of fill over cut slopes should be made first and inspected by the Geotechnical Engineer for possible stabilization requirements. The fill portion should be adequately keyed through all surficial soils and into bedrock or suitable material. Soils should be removed from the transition zone between the cut and fill portions (see Plate D-2).

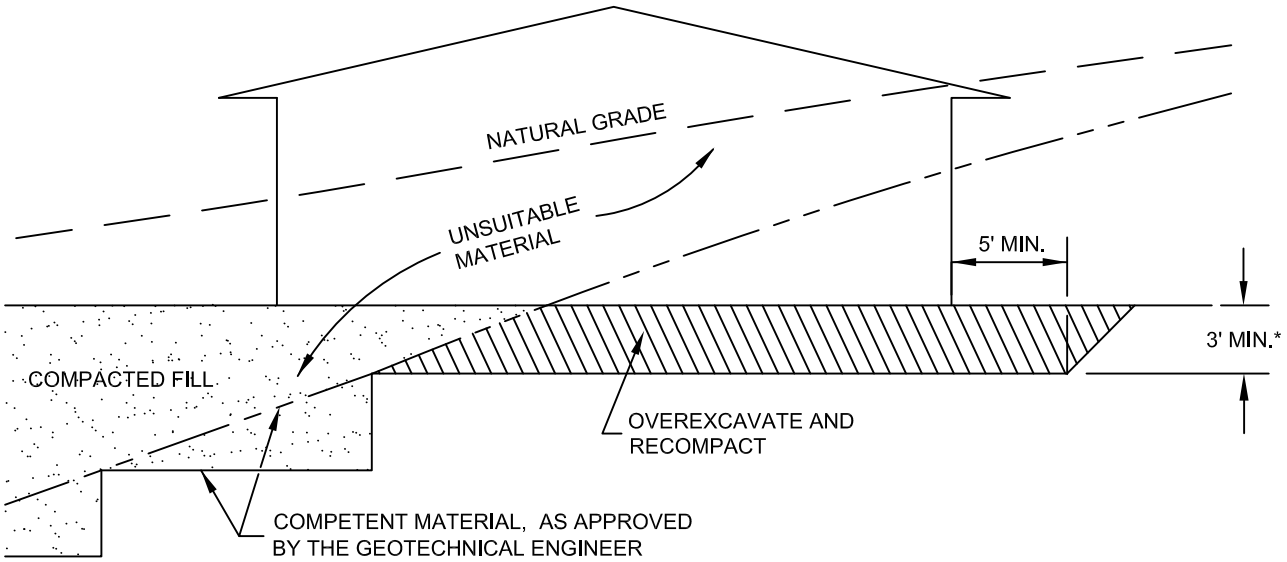
Cut Slopes

- All cut slopes should be inspected by the Geotechnical Engineer to determine the need for stabilization. The Earthwork Contractor should notify the Geotechnical Engineer when slope cutting is in progress at intervals of 10 vertical feet. Failure to notify may result in a delay in recommendations.

- Cut slopes exposing loose, cohesionless sands should be reported to the Geotechnical Engineer for possible stabilization recommendations.

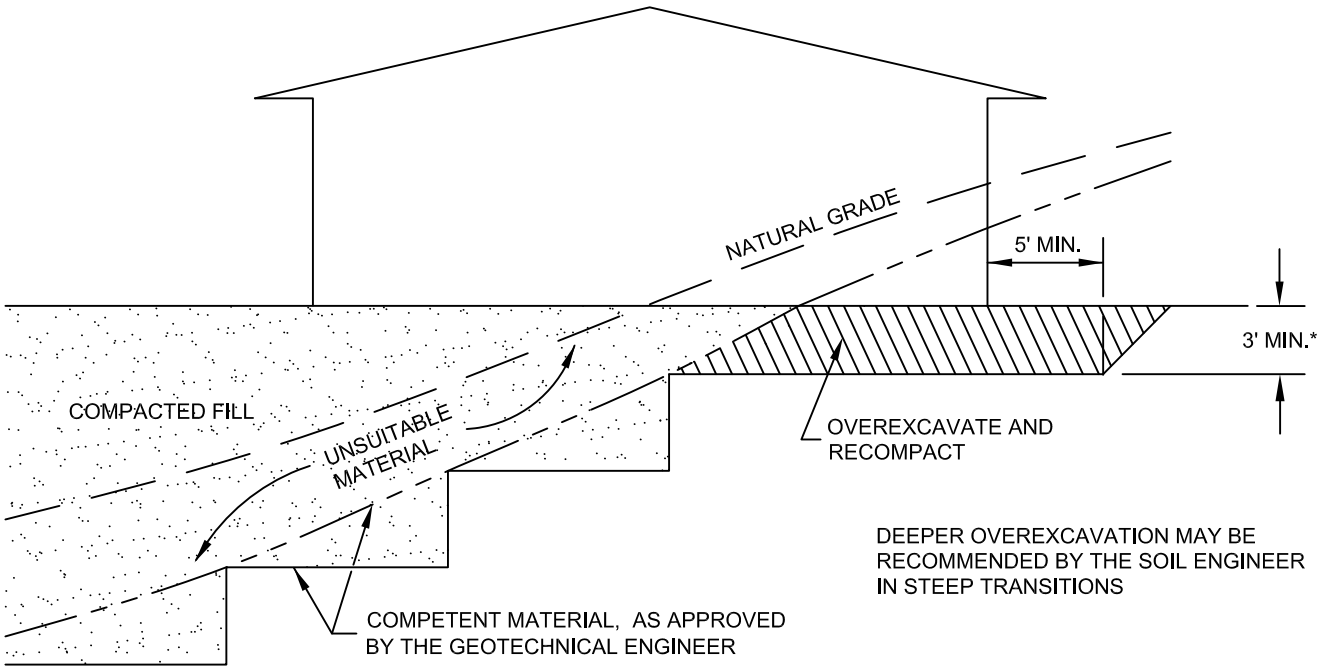
- All stabilization excavations should be cleared of loose slough material prior to geotechnical inspection. Stakes should be provided by the Civil Engineer to verify the location and dimensions of the key. A typical stabilization fill detail is shown on Plate D-5.

- Stabilization key excavations should be provided with subdrains. Typical subdrain details are shown on Plates D-6.



Subdrains

- Subdrains may be required in canyons and swales where fill placement is proposed. Typical subdrain details for canyons are shown on Plate D-3. Subdrains should be installed after approval of removals and before filling, as determined by the Soils Engineer.



- Plastic pipe may be used for subdrains provided it is Schedule 40 or SDR 35 or equivalent. Pipe should be protected against breakage, typically by placement in a square-cut (backhoe) trench or as recommended by the manufacturer.

- Filter material for subdrains should conform to CALTRANS Specification 68-1.025 or as approved by the Geotechnical Engineer for the specific site conditions. Clean ¾-inch crushed rock may be used provided it is wrapped in an acceptable filter cloth and approved by the Geotechnical Engineer. Pipe diameters should be 6 inches for runs up to 500 feet and 8 inches for the downstream continuations of longer runs. Four-inch diameter pipe may be used in buttress and stabilization fills.

Project Owner's Certification

This Water Quality Management Plan (WQMP) has been prepared for ***BTC III Arrow Route CC LP*** by ***Thienes Engineering, Inc***. The WQMP is intended to comply with the requirements of the ***City of Rancho Cucamonga*** and the NPDES Areawide Stormwater Program requiring the preparation of a WQMP.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with the San Bernardino County's Municipal Storm Water Management Program and the intent of the NPDES Permit for San Bernardino County and the incorporated cities of San Bernardino County within the Santa Ana Region. Once the undersigned transfers its interest in the property, its successors in interest and the city/county shall be notified of the transfer. The new owner will be informed of its responsibility under this WQMP. A copy of the approved WQMP shall be available on the subject site in perpetuity.

"I certify under a penalty of law that the provisions (implementation, operation, maintenance, and fund) of the WQMP have been accepted and that the plan will be transferred to future successors."

Form 1-1 Project Information

Project Name	Arrow Route and Juneberry Drive				
Project Owner Contact Name:	Chris Sanford				
Mailing Address:	4675 MacArthur Court, Suite 625 Newport Beach, CA 92660	**E-mail Address:**	chris.sanford@aresmgmt.com	**Telephone:**	(949) 892-4900
Permit/Application Number(s):	PGRXXXX-XXXXX WQMPXXXX-XXXXX		**Tract/Parcel Map Number(s):**		
Additional Information/ Comments:	n/a				
Description of Project:	The project site encompasses approximately 95.59 acres, where 80.65 acres includes onsite improvements, and 14.94 acres includes new public roads or small offsite improvements. Proposed improvements to the onsite include construction of five warehouse type buildings. Truck yards are located on the westerly sides of Buildings 1 and 3, easterly side of Building 2, westerly and easterly sides of Building 4 and northerly and southerly sides of Building 5. The remainder of the onsite will be paved drive aisles, vehicle parking, and landscaping along the site's perimeter and adjacent to the buildings. Proposed improvements to the offsite include the construction of new public streets. Two public storm drain systems will be proposed to collect onsite and offsite runoff. The westerly public storm drain will discharge offsite at the southwest corner of the site while the easterly public storm drain will discharge offsite at the southeast corner of the site. The westerly public storm drain will collect onsite runoff from Buildings 1-4, and offsite runoff from the new public streets located west of Buildings 1 and 4, north of Building 4 (between Buildings 1-3 and Building 4), from a portion of the new public street south of Building 4 and from a portion of Yellow Wood Road. The easterly public storm drain will collect onsite runoff from Building 5 and offsite runoff from the new public streets located west of Building 4 (a portion of Yellow Wood Road), south of Buildings 4 and 5 and from the new public streets located north and east of Building 5. Runoff from Buildings 1-3 will drain to catch basins located in the truck yards and vehicle parking areas. Runoff will then be conveyed southerly via three private storm drain systems and connect to the proposed public storm drain located in the new public street between Buildings 1-3 and Building 4. The public storm drain will convey runoff westerly, then southerly towards the southwest corner of the project site where runoff will outlet via a proposed headwall and continue draining southerly across the railroad tracks via existing CMP pipes. Runoff from Building 4 will drain to catch basins located in the truck yards and in the vehicle parking areas. Runoff will then be conveyed towards the southwest corner of the site via a private storm drain system and connect to the proposed public storm drain located in the new public street that's west of Building 4. Runoff from Building 5 will drain to catch basins located in the truck yards and in the vehicle parking areas. Runoff will then be conveyed towards the southeast corner of the site via a private storm drain system and connect to the proposed public storm drain located in the new public street that's south of Building 5. Runoff will then connect to an existing storm drain located south of the existing railroad tracks. Per the Subsurface Investigation Report prepared by Roux: Environmental Consulting and Management dated April 7, 2023, slag (an operational byproduct containing metals) was found in soils at the southwest portion of the site. Additionally, total petroleum hydrocarbon (TPH) and volatile organic compounds (VOCs) were detected at the southeast portion of the site. Under these conditions, infiltration dependent BMPs are not proposed at these locations. Refer to Attachment K for an excerpt of the Subsurface Investigation Report. Prior to discharging offsite, runoff from the site (with the exception of DA 5 DMA B) will be				

	directed to underground retention facilities for infiltration. The underground retention facility treating DA 4 DMA A was placed further north along the west side of the Building 4 to avoid the affected southwest area. The BMPs treating DA 5 DMA B will consist of solid underground CMPs (for detention) and proprietary biofiltration units. Drain inserts at each catch basin will serve as pretreatment. Approximately 3.19 acres of landscaping (and some driveways) along the perimeters of the project site will sheet flow offsite without being routed to the LID BMPs. However, although these areas are considered self-treating, they are included in the design capture volume (DCV) calculations. Lastly, the project site will utilize the maximum extent practicable (MEP) principle in order to treat disturbed Public Right-of-Way (ROW) impervious areas onsite. This area is approximately 14.94 acres and is included along with the onsite DCV.
Provide summary of Conceptual WQMP conditions (if previously submitted and approved). Attach complete copy.	Pending

Section 2 Project Description

2.1 Project Information

This section of the WQMP should provide the information listed below. The information provided for Conceptual/ Preliminary WQMP should give sufficient detail to identify the major proposed site design and LID BMPs and other anticipated water quality features that impact site planning. Final Project WQMP must specifically identify all BMP incorporated into the final site design and provide other detailed information as described herein.

The purpose of this information is to help determine the applicable development category, pollutants of concern, watershed description, and long term maintenance responsibilities for the project, and any applicable water quality credits. This information will be used in conjunction with the information in Section 3, Site Description, to establish the performance criteria and to select the LID BMP or other BMP for the project or other alternative programs that the project will participate in, which are described in Section 4.

Form 2.1-1 Description of Proposed Project

[1] Development Category (Select all that apply):

☒ Significant re-development involving the addition or replacement of 5,000 ft² or more of impervious surface on an already developed site	☐ New development involving the creation of 10,000 ft² or more of impervious surface collectively over entire site	☐ Automotive repair shops with standard industrial classification (SIC) codes 5013, 5014, 5541, 7532- 7534, 7536-7539	☐ Restaurants (with SIC code 5812) where the land area of development is 5,000 ft² or more
☐ Hillside developments of 5,000 ft² or more which are located on areas with known erosive soil conditions or where the natural slope is 25 percent or more	☐ Developments of 2,500 ft² of impervious surface or more adjacent to (within 200 ft) or discharging directly into environmentally sensitive areas or waterbodies listed on the CWA Section 303(d) list of impaired waters.	☒ Parking lots of 5,000 ft² or more exposed to storm water	☐ Retail gasoline outlets that are either 5,000 ft² or more, or have a projected average daily traffic of 100 or more vehicles per day

☐ Non-Priority / Non-Category Project

May require source control LID BMPs and other LIP requirements. Please consult with local jurisdiction on specific requirements.

[2] Project Area (ft²):	4,163,900 sq-ft 95.59 acres*	**[3] Number of Dwelling Units:**	n/a	**[4] SIC Code:**	4225

[5] Is Project going to be phased? ☐Yes ☒No

If yes, ensure that the WQMP evaluates each phase as a distinct DA, requiring LID BMPs to address runoff at time of completion.

[6] Does Project include roads? ☒Yes ☐No

If yes, ensure that applicable requirements for transportation projects are addressed (see Appendix A of TGD for WQMP)

* This includes approximately 14.94 acres of offsite improvements (new public streets).

2.2 Property Ownership/Management

Describe the ownership/management of all portions of the project and site. State whether any infrastructure will transfer to public agencies (City, County, Caltrans, etc.) after project completion. State if a homeowners or property owners association will be formed and be responsible for the long-term maintenance of project stormwater facilities. Describe any lot-level stormwater features that will be the responsibility of individual property owners.

Form 2.2-1 Property Ownership/Management

Describe property ownership/management responsible for long-term maintenance of WQMP stormwater facilities:

BTC III Arrow Route CC LP
4675 MacArthur Court, Suite 625
Newport Beach, CA 92660
Phone: (949) 892-4900
Contact: Chris Sanford

No infrastructure will be transferred to a public agency after project completion.
A property owner's association (POA) will be formed for long-term maintenance of project stormwater facilities.

2.3 Potential Stormwater Pollutants

Determine and describe expected stormwater pollutants of concern based on land uses and site activities (refer to Table 3-3 in the TGD for WQMP).

Form 2.3-1 Pollutants of Concern

Pollutant	Please check: E=Expected, N=Not Expected		Additional Information and Comments
Pathogens (Bacterial / Virus)	E ☒	N ☐	Including petroleum hydrocarbons. Bacterial indicators are routinely detected in pavement runoff.
Nutrients - Phosphorous	E ☒	N ☐	Expected pollutant if landscaping exists on-site.
Nutrients - Nitrogen	E ☒	N ☐	Expected pollutant if landscaping exists on-site.
Noxious Aquatic Plants	E ☒	N ☐	Expected pollutant if landscaping exists on-site.
Sediment / TSS / pH	E ☒	N ☐	Expected pollutant if landscaping exists on-site.
Metals	E ☒	N ☐	Expected pollutant if parking lots exist on-site.
Oil and Grease	E ☒	N ☐	Expected pollutant if parking lots exist on-site.
Trash & Debris	E ☒	N ☐	Expected pollutant if landscaping and parking lots exists on-site.
Pesticides / Herbicides	E ☒	N ☐	Expected pollutant if landscaping exists on-site.
Organic Compounds	E ☒	N ☐	Expected pollutant if landscaping exists on-site. Including solvents. Bacterial indicators are routinely detected in pavement runoff.
Oxygen Demanding Compounds	E ☐	N ☐	Expected pollutant if landscaping exists on-site.
Other:	E ☐	N ☐	
Other:	E ☐	N ☐	

The expected POCs for the project site are ***Pathogens, Nutrients, and Metals***.

2.4 Water Quality Credits

A water quality credit program is applicable for certain types of development projects if it is not feasible to meet the requirements for on-site LID. Proponents for eligible projects, as described below, can apply for water quality credits that would reduce project obligations for selecting and sizing other treatment BMP or participating in other alternative compliance programs. Refer to Section 6.2 in the TGD for WQMP to determine if water quality credits are applicable for the project.

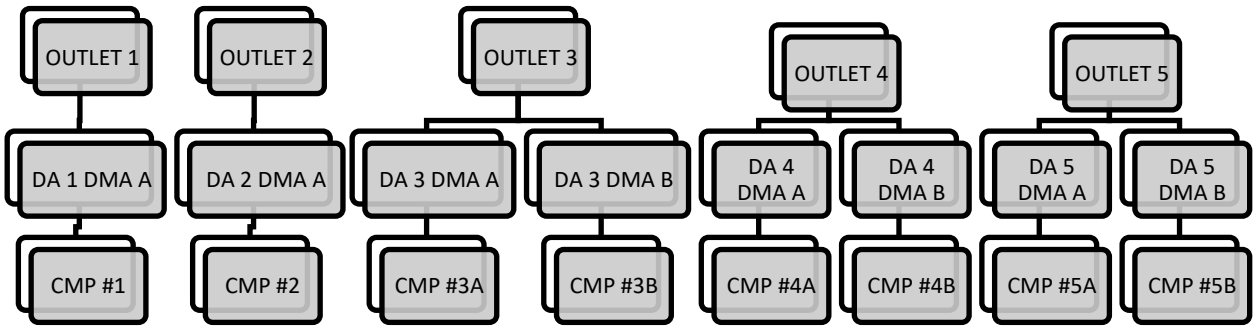
Form 2.4-1 Water Quality Credits

[1] **Project Types that Qualify for Water Quality Credits:** *Select all that apply*			
☐ Redevelopment projects that reduce the overall impervious footprint of the project site. [Credit = % impervious reduced]	Higher density development projects ☐ Vertical density [20%] ☐ 7 units/ acre [5%]	☐ Mixed use development, (combination of residential, commercial, industrial, office, institutional, or other land uses which incorporate design principles that demonstrate environmental benefits not realized through single use projects) [20%]	☐ Brownfield redevelopment (redevelop real property complicated by presence or potential of hazardous contaminants) [25%]
☐ Redevelopment projects in established historic district, historic preservation area, or similar significant core city center areas [10%]	☐ Transit-oriented developments (mixed use residential or commercial area designed to maximize access to public transportation) [20%]	☐ In-fill projects (conversion of empty lots & other underused spaces < 5 acres, substantially surrounded by urban land uses, into more beneficially used spaces, such as residential or commercial areas) [10%]	☐ Live-Work developments (variety of developments designed to support residential and vocational needs) [20%]
[2] **Total Credit %:** n/a *(Total all credit percentages up to a maximum allowable credit of 50 percent)*			
Description of Water Quality Credit Eligibility (if applicable)	n/a		

The proposed project will ***not*** utilize any water quality credits.

Section 3 Site and Watershed Description

Describe the project site conditions that will facilitate the selection of BMP through an analysis of the physical conditions and limitations of the site and its receiving waters. Identify distinct drainage areas (DA) that collect flow from a portion of the site and describe how runoff from each DA (and sub-watershed DMAs) is conveyed to the site outlet(s). Refer to Section 3.2 in the TGD for WQMP. Complete form 3.2 for each DA on the project site.



Form 3-1 Site Location and Hydrologic Features

Site coordinates *Take GPS measurement at approximate center of site*	**Latitude:** 34.095065	**Longitude:** -117.53340	**Thomas Bros Map page:** Page 603

[1] San Bernardino County climatic region: ☒Valley ☐Mountain ☐Desert

[2] Does the site have more than one drainage area (DA): ☒Yes ☐No

If no, proceed to Form 3-2. If yes, then use this form to show a conceptual schematic describing DMAs and hydrologic feature connecting DMAs to the site outlet(s). An example is provided below that can be modified for proposed project or a drawing clearly showing DMA and flow routing may be attached.

Conveyance	*Briefly describe on-site drainage features to convey runoff that is not retained within a DMA*
DA 1 DMA A flows to Outlet 1	Prior to runoff discharging to the proposed onsite storm drain, the low flows from DA 1 DMA A will be directed to an underground retention system for infiltration (CMP #1).
DA 2 DMA A flows to Outlet 2	Prior to runoff discharging to the proposed onsite storm drain, the low flows from DA 2 DMA A will be directed to an underground retention system for infiltration (CMP #2).
DA 3 DMA A flows to Outlet 3	Prior to runoff discharging to the proposed onsite storm drain, the low flows from DA 3 DMA A will be directed to an underground retention system for infiltration (CMP #3A).
DA 3 DMA B flows to Outlet 3	Prior to runoff discharging to the proposed onsite storm drain, the low flows from DA 3 DMA B will be directed to an underground retention system for infiltration (CMP #3B).
DA 4 DMA A flows to Outlet 4	Prior to runoff discharging to the proposed onsite storm drain, the low flows from DA 4 DMA A will be directed to an underground retention system for infiltration (CMP #4A). DA 4 DMA A includes ROW improvements from the new public streets.
DA 4 DMA B flows to Outlet 4	Prior to runoff discharging to the proposed onsite storm drain, the low flows from DA 4 DMA B will be directed to an underground retention system for infiltration (CMP #4B).
DA 5 DMA A flows to Outlet 5	Prior to runoff discharging to the proposed onsite storm drain, the low flows from DA 5 DMA A will be directed to an underground retention system for infiltration (CMP #5A). DA 5 DMA A includes ROW improvements from the new public streets.

DA 5 DMA B flows to Outlet 5	Prior to runoff discharging to the proposed onsite storm drain, the low flows from DA 5 DMA B will be directed to an underground detention system (CMP #5B) and proprietary biofiltration system.

Form 3-2 Existing Hydrologic Characteristics for Drainage Area (DA)

For each drainage area's sub-watershed DMA, provide the following characteristics	Hydrology Nodes (100-102)	Hydrology Nodes (200-204)	Hydrology Nodes (210-212)	Hydrology Nodes (220-226)	Hydrology Nodes (300-303)	Hydrology Nodes (310-314)
[1] **DMA drainage area (ft^2)**	512,701 (11.77 ac)	383,764 (8.81 ac)	835,481 (19.18 ac)	420,354 (9.65 ac)	1,219,680 (28.00 ac)	1,441,836 (33.10 ac)
[2] **Existing site impervious area (ft^2)**	465,192	335,093	567,348	335,091	293,192	186,785
[3] **Antecedent moisture condition** *For desert areas, use http://www.sbcounty.gov/dpw/floodcontrol/pdf/20100412_map.pdf*	AMC II	AMC II	AMC II	AMC II	AMC II	AMC II
[4] **Hydrologic soil group** *Refer to Watershed Mapping Tool – http://sbcounty.permitrack.com/WAP*	HSG A	HSG A	HSG A	HSG A	HSG A	HSG A
[5] **Longest flowpath length (ft)**	1,505	2,629	1,616	1,662	3,314	2,325
[6] **Longest flowpath slope (ft/ft)**	0.0051	0.0131	0.0111	0.0105	0.0110	0.0106
[7] **Current land cover type(s)** *Select from Fig C-3 of Hydrology Manual*	Commercial	Commercial	Commercial	Commercial	Commercial	Commercial
[8] **Pre-developed pervious area condition:** *Based on the extent of wet season vegetated cover good >75%; Fair 50-75%; Poor <50% See Attachment A for photos of site to support rating*	Poor	Poor	Poor	Poor	Poor	Poor

The drainage areas above include an additional 14.92 acres of offsite run-on.

Form 3-3 Watershed Description

Receiving Waters *Refer to Watershed Mapping Tool - http://sbcounty.permitrack.com/WAP* *See 'Drainage Facilities" link at this website*	Day Creek Cucamonga Creek, Reach 1 Mill Creek (Prado Area) Chino Creek, Reach 1A Santa Ana River, Reach 3 Santa Ana River, Reach 2 Santa Ana River, Reach 1 Pacific Ocean
Applicable TMDLs *Refer to Local Implementation Plan*	Day Creek: None Cucamonga Creek, Reach 1: Indicator Bacteria Mill Creek (Prado Area): Indicator Bacteria Chino Creek, Reach 1A: Indicator Bacteria Santa Ana River, Reach 3: Indicator Bacteria Santa Ana River, Reach 2: None Santa Ana River, Reach 1: None Pacific Ocean: None
303(d) listed impairments *Refer to Local Implementation Plan and Watershed Mapping Tool – http://sbcounty.permitrack.com/WAP and State Water Resources Control Board website – http://www.waterboards.ca.gov/santaana/water_iss ues/programs/tmdl/index.shtml*	Day Creek: None Cucamonga Creek, Reach 1: Cadmium, Copper, Lead, and Zinc Mill Creek (Prado Area): Indicator Bacteria, Nutrients and Total Suspended Solids (TSS) Chino Creek, Reach 1A: Indicator Bacteria, and Nutrients Santa Ana River, Reach 3: Copper, Indicator Bacteria and Lead Santa Ana River, Reach 2: None Santa Ana River, Reach 1: None Pacific Ocean: None

Unlined Downstream Water Bodies *Refer to Watershed Mapping Tool – http://sbcounty.permitrack.com/WAP*	Santa Ana River
Hydrologic Conditions of Concern	☐ Yes *Complete Hydrologic Conditions of Concern (HCOC) Assessment. Include Forms 4.2-2 through Form 4.2-5 and Hydromodification BMP Form 4.3-10 in submittal* ☒ No
Watershed–based BMP included in a RWQCB approved WAP	☐ Yes *Attach verification of regional BMP evaluation criteria in WAP* • *More Effective than On-site LID* • *Remaining Capacity for Project DCV* • *Upstream of any Water of the US* • *Operational at Project Completion* • *Long-Term Maintenance Plan* ☒ No

Section 4 Best Management Practices (BMP)

4.1 Source Control BMP

4.1.1 Pollution Prevention

Non-structural and structural source control BMP are required to be incorporated into all new development and significant redevelopment projects. Form 4.1-1 and 4.1-2 are used to describe specific source control BMPs used in the WQMP or to explain why a certain BMP is not applicable. Table 7-3 of the TGD for WQMP provides a list of applicable source control BMP for projects with specific types of potential pollutant sources or activities. The source control BMP in this table must be implemented for projects with these specific types of potential pollutant sources or activities.

The preparers of this WQMP have reviewed the source control BMP requirements for new development and significant redevelopment projects. The preparers have also reviewed the specific BMP required for project as specified in Forms 4.1-1 and 4.1-2. All applicable non-structural and structural source control BMP shall be implemented in the project.

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N1	Education of Property Owners, Tenants and Occupants on Stormwater BMPs	☒	☐	Property owner will familiarize him/herself with the educational materials in Attachment "E" and the contents of the WQMP.
N2	Activity Restrictions	☒	☐	The owner shall develop ongoing activity restrictions that include those that have the potential to create adverse impacts on water quality. Activities include, but are not limited to: handling and disposal of contaminants, fertilizer and pesticide application restrictions, litter control and pick-up, and vehicle or equipment repair as well as any other activities that may potentially contribute to water pollution. Refer to Attachment J.
N3	Landscape Management BMPs	☒	☐	Irrigation must be consistent with City's Water Conservation Ordinance. Fertilizer and pesticide usage will be consistent with County Management Guidelines for Use of Fertilizers and Pesticides.
N4	BMP Maintenance	☒	☐	BMP maintenance, implementation schedules, and responsible parties are included with each specific BMP narrative.
N5	Title 22 CCR Compliance (How development will comply)	☐	☒	No hazardous wastes onsite.
N6	Local Water Quality Ordinances	☒	☐	Owner/tenant will comply with Local Water Ordinances.
N7	Spill Contingency Plan	☒	☐	Owner/tenant will have a spill contingency plan, a separate document, based on specific site needs.
N8	Underground Storage Tank Compliance	☐	☒	No USTs onsite.
N9	Hazardous Materials Disclosure Compliance	☐	☒	No hazardous materials onsite.
N10	Uniform Fire Code Implementation	☒	☐	If applicable, owner will comply with Article 80 of the California Fire Code enforced by the fire protection agency. The facility operators will be educated annually regarding requirements for handling, storage and proper disposal of hazardous substances.
N11	Litter/Debris Control Program	☒	☐	Contract with their landscape maintenance firm to provide this service during regularly schedule maintenance. They are required to implement trash management and litter control procedures in the common areas aimed at reducing pollution of drainage water.
N12	Employee Training	☒	☐	The owner will ensure that tenants are also familiar with onsite BMPs and necessary maintenance required of the tenants. Owner will check with City and County at least once a year to obtain new or updated educational materials and provide these materials to tenants. Employees shall be trained to clean up spills and participate in ongoing maintenance. The WQMP requires annual employee training and new hires within 2 months.

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N13	Housekeeping of Loading Docks	☒	☐	Keep all fluids indoors. Clean up spills immediately and keep spills from entering storm drain system. No direct discharges into the storm drain system. Area shall be inspected weekly for proper containment and practices with spills cleaned up immediately and disposed of properly.
N14	Catch Basin Inspection Program	☒	☐	Monthly inspection by property owner's designee. Inspection consists of immediate repair of any deterioration of the structures and maintenance of drain inserts before and after major rain events. Drain insert maintenance shall be per manufacturer's guidelines.
N15	Vacuum Sweeping of Private Streets and Parking Lots	☒	☐	All landscape maintenance contractors will be required to sweep up all landscape cuttings, mowings and fertilizer materials off paved areas weekly and dispose of properly. Parking areas and drive ways will be swept monthly by sweeping contractor.
N16	Other Non-structural Measures for Public Agency Projects	☐	☒	Not a public agency project.
N17	Comply with all other applicable NDPES permits	☒	☐	Will comply with Construction General Permit and Industrial General Permit (may apply for No Exposure Certification/NEC).

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
S1	Provide storm drain system stenciling and signage (CASQA New Development BMP Handbook SD-13)	☒	☐	"No Dumping – Drains to Waterway" stencils will be applied. Legibility of stencil will be maintained on a yearly basis.
S2	Design and construct outdoor material storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-34)	☐	☒	No outdoor material storage areas onsite.
S3	Design and construct trash and waste storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-32)	☒	☐	Paved with an impervious surface, designed not to allow run-on from adjoining areas, designed to divert drainage from adjoining roofs and pavements diverted around the area, screened or walled to prevent off-site transport of trash. A trash enclosure detail is provided within the Site and Drainage Map.
S4	Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control (Statewide Model Landscape Ordinance; CASQA New Development BMP Handbook SD-12)	☒	☐	Irrigation systems shall include reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines. Timers will be used to avoid over watering and watering cycles and duration shall be adjusted seasonally by the landscape maintenance contractor. The landscaping areas will be grouped with plants that have similar water requirements. Native or drought tolerant species shall also be used where appropriate to reduce excess irrigation runoff and promote surface filtration.
S5	Finish grade of landscaped areas at a minimum of 1-2 inches below top of curb, sidewalk, or pavement	☐	☒	Stormwater runoff from all areas will drain into the proposed infiltration facilities for treatment.
S6	Protect slopes and channels and provide energy dissipation (CASQA New Development BMP Handbook SD-10)	☐	☒	No channels to protect.
S7	Covered dock areas (CASQA New Development BMP Handbook SD-31)	☐	☒	No applicable.
S8	Covered maintenance bays with spill containment plans (CASQA New Development BMP Handbook SD-31)	☐	☒	No maintenance bays onsite.
S9	Vehicle wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	No vehicle wash areas onsite.
S10	Covered outdoor processing areas (CASQA New Development BMP Handbook SD-36)	☐	☒	No outdoor processing areas onsite.

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
S11	Equipment wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	No equipment wash areas onsite.
S12	Fueling areas (CASQA New Development BMP Handbook SD-30)	☐	☒	No fueling areas onsite.
S13	Hillside landscaping (CASQA New Development BMP Handbook SD-10)	☐	☒	No hillsides onsite.
S14	Wash water control for food preparation areas	☐	☒	No food preparation onsite.
S15	Community car wash racks (CASQA New Development BMP Handbook SD-33)	☐	☒	No community cars wash racks onsite.

4.1.2 Preventive LID Site Design Practices

Site design practices associated with new LID requirements in the MS4 Permit should be considered in the earliest phases of a project. Preventative site design practices can result in smaller DCV for LID BMP and hydromodification control BMP by reducing runoff generation. Describe site design and drainage plan including:

- A narrative of site design practices utilized or rationale for not using practices
- A narrative of how site plan incorporates preventive site design practices
- Include an attached Site Plan layout which shows how preventative site design practices are included in WQMP

Refer to Section 5.2 of the TGD for WQMP for more details.

Form 4.1-3 Preventive LID Site Design Practices Checklist

Site Design Practices *If yes, explain how preventative site design practice is addressed in project site plan. If no, other LID BMPs must be selected to meet targets.*
Minimize impervious areas: ☐ Yes ☒ No Explanation: Not applicable, development consists of a light industrial facility. Most areas will be paved; however, disturbed areas will be fully stabilized with landscaping and overflow runoff collected by the underground infiltration/detention chambers and biofiltration system for treatment.
Maximize natural infiltration capacity: ☒ Yes ☐ No Explanation: The proposed underground chambers will maximize natural infiltration into the subsoil below the chambers.
Preserve existing drainage patterns and time of concentration: ☒ Yes ☐ No Explanation: Post-development drainage patterns will mimic pre-development conditions. Stormwater will be retained/detained in underground facilities and mimic the time of concentration compared to existing condition.
Disconnect impervious areas: ☒ Yes ☐ No Explanation: The underground infiltration/detention chambers and biofiltration system will disconnect impervious areas before discharging offsite.
Protect existing vegetation and sensitive areas: ☐ Yes ☒ No Explanation: Not applicable, there is no existing vegetation onsite (see Attachment A for recent site photos). The site is being developed into a light industrial facility. There are no sensitive areas to protect. Landscape will be provided throughout the site.
Re-vegetate disturbed areas: ☐ Yes ☒ No Explanation: Not applicable, development consists of a light industrial facility. Most of the disturbed areas will be paved; however, disturbed areas will be landscaped with drought tolerant plants and overflow runoff collected by the underground infiltration/detention chambers and biofiltration system for treatment.
Minimize unnecessary compaction in stormwater retention/infiltration basin/trench areas: ☒ Yes ☐ No Explanation: Heavy construction vehicles will be prohibited from performing unnecessary soil compaction at the locations of the infiltration chambers.
Utilize vegetated drainage swales in place of underground piping or imperviously lined swales: ☐ Yes ☒ No Explanation: Underground piping and imperviously lined swales are located at truck loading areas that could not be substituted with vegetated swales. All Imperviously lined swales will be taken to the underground infiltration/detention chambers and biofiltration system for treatment.
Stake off areas that will be used for landscaping to minimize compaction during construction : ☒ Yes ☐ No Explanation: Landscaped areas (not located in the compacted building zone area) will be staked to minimize unnecessary compaction during construction. Material storage areas and stockpiles will be located on areas being developed into a parking lot. Access routes for heavy equipment will be located around infiltration locations.

4.2 Project Performance Criteria

The purpose of this section of the Project WQMP is to establish targets for post development hydrology based on performance criteria specified in the MS4 Permit. These targets include runoff volume for water quality control (referred to as LID design capture volume), and runoff volume, time of concentration, and peak runoff for protection of any downstream waterbody segments with a HCOC. ***If the project has more than one outlet for stormwater runoff, then complete additional versions of these forms for each DA / outlet.***

Methods applied in the following forms include:

- For LID BMP Design Capture Volume (DCV), the San Bernardino County Stormwater Program requires use of the P6 method (MS4 Permit Section XI.D.6a.ii) – Form 4.2-1
- For HCOC pre- and post-development hydrologic calculation, the San Bernardino County Stormwater Program requires the use of the Rational Method (San Bernardino County Hydrology Manual Section D). Forms 4.2-2 through Form 4.2-5 calculate hydrologic variables including runoff volume, time of concentration, and peak runoff from the project site pre- and post-development using the Hydrology Manual Rational Method approach. For projects greater than 640 acres (1.0 mi2), the Rational Method and these forms should not be used. For such projects, the Unit Hydrograph Method (San Bernardino County Hydrology Manual Section E) shall be applied for hydrologic calculations for HCOC performance criteria.

Refer to Section 4 in the TGD for WQMP for detailed guidance and instructions.

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume (DA 1 DMA A)

[1] **Project area (ft^2):** 169,884 (DA 1 DMA A – 3.90 ac)	[2] **Imperviousness after applying preventative site design practices (Imp%):** 95%	[3] **Runoff Coefficient (R_c):** 0.807 $R_C = 0.858(Imp\%)^3 - 0.78(Imp\%)^2 + 0.774(Imp\%) + 0.04$
[4] **Determine 1-hour rainfall depth for a 2-year return period $P_{2yr-1hr}$ (in):** 0.534 http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html		
[5] **Compute P6, Mean 6-hr Precipitation (inches):** 0.791 *P6 = Item 4 *C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Valley = 1.4807; Mountain = 1.909; Desert = 1.2371)*		
[6] **Drawdown Rate** *Use 48 hours as the default condition. Selection and use of the 24 hour drawdown time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.*		24-hrs ☐ 48-hrs ☒
[7] **Compute design capture volume, DCV (ft^3):** 17,732 *DCV = 1/12 * [Item 1* Item 3 *Item 5 * C_2], where C_2 is a function of drawdown rate (24-hr = 1.582; 48-hr = 1.963)* *Compute separate DCV for each outlet from the project site per schematic drawn in Form 3-1 Item 2*		

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume (DA 2 DMA A)

[1] **Project area (ft^2):** 79,715 (DA 2 DMA A – 1.83 ac)	[2] **Imperviousness after applying preventative site design practices (Imp%):** 95%	[3] **Runoff Coefficient (R_c):** 0.807 $R_C = 0.858(Imp\%)^3 - 0.78(Imp\%)^2 + 0.774(Imp\%) + 0.04$
[4] **Determine 1-hour rainfall depth for a 2-year return period $P_{2yr-1hr}$ (in):** 0.534 http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html		
[5] **Compute P6, Mean 6-hr Precipitation (inches):** 0.791 *P6 = Item 4 *C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Valley = 1.4807; Mountain = 1.909; Desert = 1.2371)*		
[6] **Drawdown Rate** *Use 48 hours as the default condition. Selection and use of the 24 hour drawdown time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.*		24-hrs ☐ 48-hrs ☒
[7] **Compute design capture volume, DCV (ft^3):** 8,320 *DCV = 1/12 * [Item 1* Item 3 *Item 5 * C_2], where C_2 is a function of drawdown rate (24-hr = 1.582; 48-hr = 1.963)* *Compute separate DCV for each outlet from the project site per schematic drawn in Form 3-1 Item 2*		

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume (DA 3 DMA A)

[1] **Project area (ft²):** 123,710 (DA 3 DMA A – 2.84 ac)	[2] **Imperviousness after applying preventative site design practices (Imp%):** 95%	[3] **Runoff Coefficient (R_c):** 0.807 $R_C = 0.858(Imp\%)^3 - 0.78(Imp\%)^2 + 0.774(Imp\%) + 0.04$

13 Pre-developed time of concentration (min): 0 *Minimum of Item 12 pre-developed DMA*								
14 Post-developed time of concentration (min): 0 *Minimum of Item 12 post-developed DMA*								
15 Additional time of concentration needed to meet HCOC requirement (min): 0 *$T_{C\text{-}HCOC}$ = (Item 13 * 0.95) – Item 14*								

Form 4.2-5 HCOC Assessment for Peak Runoff (DA 1)

Compute peak runoff for pre- and post-developed conditions

Variables		Pre-developed DA to Project Outlet (*Use additional forms if more than 3 DMA)*			Post-developed DA to Project Outlet (*Use additional forms if more than 3 DMA)*		
		DMA A	DMA B	DMA C	DMA A	DMA B	DMA C
1 Rainfall Intensity for storm duration equal to time of concentration *I_{peak} = 10^(LOG Form 4.2-1 Item 4 - 0.6 LOG Form 4.2-4 Item 5 /60)*		0	0	0	0	0	0
2 Drainage Area of each DMA (Acres) *For DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*		0	0	0	0	0	0
3 Ratio of pervious area to total area *For DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*		0	0	0	0	0	0
4 Pervious area infiltration rate (in/hr) *Use pervious area CN and antecedent moisture condition with Appendix C-3 of the TGD for WQMP*		0	0	0	0	0	0
5 Maximum loss rate (in/hr) *F_m = Item 3 * Item 4* *Use area-weighted F_m from DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*		0	0	0	0	0	0
6 Peak Flow from DMA (cfs) *Q_p =Item 2 * 0.9 * (Item 1 - Item 5)*		0	0	0	0	0	0
7 Time of concentration adjustment factor for other DMA to site discharge point *Form 4.2-4 Item 12 DMA / Other DMA upstream of site discharge point (If ratio is greater than 1.0, then use maximum value of 1.0)*	DMA A	*n/a*			*n/a*		
	DMA B		*n/a*			*n/a*	
	DMA C			*n/a*			*n/a*

8 Pre-developed Q_p at T_c for DMA A: 0 *Q_p = Item 6_{DMAA} + [Item 6_{DMAB} * (Item 1_{DMAA} - Item 5_{DMAB})/(Item 1_{DMAB} - Item 5_{DMAB})* Item $7_{DMAA/2}$] + [Item 6_{DMAC} * (Item 1_{DMAA} - Item 5_{DMAC})/(Item 1_{DMAC} - Item 5_{DMAC})* Item $7_{DMAA/3}$]*	**9** Pre-developed Q_p at T_c for DMA B: 0 *Q_p = Item 6_{DMAB} + [Item 6_{DMAA} * (Item 1_{DMAB} - Item 5_{DMAA})/(Item 1_{DMAA} - Item 5_{DMAA})* Item $7_{DMAB/1}$] + [Item 6_{DMAC} * (Item 1_{DMAB} - Item 5_{DMAC})/(Item 1_{DMAC} - Item 5_{DMAC})* Item $7_{DMAB/3}$]*	**10** Pre-developed Q_p at T_c for DMA C: 0 *Q_p = Item 6_{DMAC} + [Item 6_{DMAA} * (Item 1_{DMAC} - Item 5_{DMAA})/(Item 1_{DMAA} - Item 5_{DMAA})* Item $7_{DMAC/1}$] + [Item 6_{DMAB} * (Item 1_{DMAC} - Item 5_{DMAB})/(Item 1_{DMAB} - Item 5_{DMAB})* Item $7_{DMAC/2}$]*
10 Peak runoff from pre-developed condition confluence analysis (cfs): 0 *Maximum of Item 8, 9, and 10 (including additional forms as needed)*		
11 Post-developed Q_p at T_c for DMA A: 0 *Same as Item 8 for post-developed values*	**12** Post-developed Q_p at T_c for DMA B: 0 *Same as Item 9 for post-developed values*	**13** Post-developed Q_p at T_c for DMA C: 0 *Same as Item 10 for post-developed values*
14 Peak runoff from post-developed condition confluence analysis (cfs): 0 *Maximum of Item 11, 12, and 13 (including additional forms as needed)*		
15 Peak runoff reduction needed to meet HCOC Requirement (cfs): 0 *$Q_{p\text{-}HCOC}$ = (Item 14 * 0.95) – Item 10*		

4.3 Project Conformance Analysis

Complete the following forms for each project site DA to document that the proposed LID BMPs conform to the project DCV developed to meet performance criteria specified in the MS4 Permit (WQMP Template Section 4.2). For the LID DCV, the forms are ordered according to hierarchy of BMP selection as required by the MS4 Permit (see Section 5.3.1 in the TGD for WQMP). The forms compute the following for on-site LID BMP:

- Site Design and Hydrologic Source Controls (Form 4.3-2)
- Retention and Infiltration (Form 4.3-3)
- Harvested and Use (Form 4.3-4) or
- Biotreatment (Form 4.3-5).

At the end of each form, additional fields facilitate the determination of the extent of mitigation provided by the specific BMP category, allowing for use of the next category of BMP in the hierarchy, if necessary.

The first step in the analysis, using Section 5.3.2.1 of the TGD for WQMP, is to complete Forms 4.3-1 and 4.3-3) to determine if retention and infiltration BMPs are infeasible for the project. For each feasibility criterion in Form 4.3-1, if the answer is "Yes," provide all study findings that includes relevant calculations, maps, data sources, etc. used to make the determination of infeasibility.

Next, complete Forms 4.3-2 and 4.3-4 to determine the feasibility of applicable HSC and harvest and use BMPs, and, if their implementation is feasible, the extent of mitigation of the DCV.

If no site constraints exist that would limit the type of BMP to be implemented in a DA, evaluate the use of combinations of LID BMPs, including all applicable HSC BMPs to maximize on-site retention of the DCV. If no combination of BMP can mitigate the entire DCV, implement the single BMP type, or combination of BMP types, that maximizes on-site retention of the DCV within the minimum effective area.

If the combination of LID HSC, retention and infiltration, and harvest and use BMPs are unable to mitigate the entire DCV, then biotreatment BMPs may be implemented by the project proponent. If biotreatment BMPs are used, then they must be sized to provide sufficient capacity for effective treatment of the remainder of the volume-based performance criteria that cannot be achieved with LID BMPs (TGD for WQMP Section 5.4.4.2). Under no circumstances shall any portion of the DCV be released from the site without effective mitigation and/or treatment.

Form 4.3-1 Infiltration BMP Feasibility (Entire Site)

Feasibility Criterion – Complete evaluation for each DA on the Project Site	
1 Would infiltration BMP pose significant risk for groundwater related concerns? *Refer to Section 5.3.2.1 of the TGD for WQMP*	☐ Yes ☒ No
If Yes, Provide basis: (attach)	
2 Would installation of infiltration BMP significantly increase the risk of geotechnical hazards (Yes, if the answer to any of the following questions is yes, as established by a geotechnical expert): • The location is less than 50 feet away from slopes steeper than 15 percent • The location is less than eight feet from building foundations or an alternative setback. • A study certified by a geotechnical professional or an available watershed study determines that stormwater infiltration would result in significantly increased risks of geotechnical hazards.	☐ Yes ☒ No
If Yes, Provide basis: (attach)	
3 Would infiltration of runoff on a Project site violate downstream water rights?	☐ Yes ☒ No
If Yes, Provide basis: (attach)	
4 Is proposed infiltration facility located on hydrologic soil group (HSG) D soils or does the site geotechnical investigation indicate presence of soil characteristics, which support categorization as D soils?	☐ Yes ☒ No
If Yes, Provide basis: (attach)	
5 Is the design infiltration rate, after accounting for safety factor of 2.0, below proposed facility less than 0.3 in/hr (accounting for soil amendments)?	☐ Yes ☒ No
If Yes, Provide basis: (attach)	
6 Would on-site infiltration or reduction of runoff over pre-developed conditions be partially or fully inconsistent with watershed management strategies as defined in the WAP, or impair beneficial uses? *See Section 3.5 of the TGD for WQMP and WAP*	☐ Yes ☒ No
If Yes, Provide basis: (attach)	
7 Any answer from Item 1 through Item 3 is "Yes": *If yes, infiltration of any volume is not feasible onsite. Proceed to Form 4.3-4, Harvest and Use BMP. If no, then proceed to Item 8 below.*	☐ Yes ☒ No
8 Any answer from Item 4 through Item 6 is "Yes": *If yes, infiltration is permissible but is not required to be considered. Proceed to Form 4.3-2, Hydrologic Source Control BMP.* *If no, then proceed to Item 9, below.*	☐ Yes ☒ No
9 All answers to Item 1 through Item 6 are "No": *Infiltration of the full DCV is potentially feasible, LID infiltration BMP must be designed to infiltrate the full DCV to the MEP.* *Proceed to Form 4.3-2, Hydrologic Source Control BMP.*	☒ Yes ☐ No

4.3.1 Site Design Hydrologic Source Control BMP

Section XI.E. of the Permit emphasizes the use of LID preventative measures; and the use of LID HSC BMPs reduces the portion of the DCV that must be addressed in downstream BMPs. Therefore, all applicable HSC shall be provided except where they are mutually exclusive with each other, or with other BMPs. Mutual exclusivity may result from overlapping BMP footprints such that either would be potentially feasible by itself, but both could not be implemented. Please note that while there are no numeric standards regarding the use of HSC, if a project cannot feasibly meet BMP sizing requirements or cannot fully address HCOCs, feasibility of all applicable HSC must be part of demonstrating that the BMP system has been designed to retain the maximum feasible portion of the DCV. Complete Form 4.3-2 to identify and calculate estimated retention volume from implementing site design HSC BMP. Refer to Section 5.4.1 in the TGD for more detailed guidance.

Form 4.3-2 Site Design Hydrologic Source Control BMPs (DA)

1 Implementation of Impervious Area Dispersion BMP (i.e. routing runoff from impervious to pervious areas), excluding impervious areas planned for routing to on-lot infiltration BMP: ☐ Yes ☒ No *If yes, complete Items 2-5; If no, proceed to Item 6*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Total impervious area draining to pervious area (ft^2)	0	0	0
3 Ratio of pervious area receiving runoff to impervious area	0	0	0
4 Retention volume achieved from impervious area dispersion (ft^3) *V = Item2 * Item 3 * (0.5/12), assuming retention of 0.5 inches of runoff*	0	0	0
5 Sum of retention volume achieved from impervious area dispersion (ft^3): 0 *$V_{retention}$ =Sum of Item 4 for all BMPs*			
6 Implementation of Localized On-lot Infiltration BMPs (e.g. on-lot rain gardens): ☐ Yes ☒ No *If yes, complete Items 7-13 for aggregate of all on-lot infiltration BMP in each DA; If no, proceed to Item 14*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*

29 Runoff volume retention from residential rain barrels/Cisterns (ft^3): 0 *$V_{retention}$ =Sum of Item 28 for all BMPs*			
30 Total Retention Volume from Site Design Hydrologic Source Control BMPs: 0 *Sum of Items 5, 13, 20, 25 and 29*			

4.3.2 Infiltration BMPs

Use Form 4.3-3 to compute on-site retention of runoff from proposed retention and infiltration BMPs. Volume retention estimates are sensitive to the percolation rate used, which determines the amount of runoff that can be infiltrated within the specified drawdown time. The infiltration safety factor reduces field measured percolation to account for potential inaccuracy associated with field measurements, declining BMP performance over time, and compaction during construction. Appendix D of the TGD for WQMP provides guidance on estimating an appropriate safety factor to use in Form 4.3-3.

If site constraints limit the use of BMPs to a single type and implementation of retention and infiltration BMPs mitigate no more than 40% of the DCV, then they are considered infeasible and the Project Proponent may evaluate the effectiveness of BMPs lower in the LID hierarchy of use (Section 5.5.1 of the TGD for WQMP)

If implementation of infiltrations BMPs is feasible as determined using Form 4.3-1, then LID infiltration BMPs shall be implemented to the MEP (section 4.1 of the TGD for WQMP).

Form 4.3-3 Infiltration LID BMP - including underground BMPs (DA 1 DMA A)

[1] Remaining LID DCV not met by site design HSC BMP (ft^3): 17,732
V = Form 4.2-1 Item 7 - Form 4.3-2 Item 30

BMP Type *Use columns to the right to compute runoff volume retention from proposed infiltration BMP (select BMP from Table 5-4 in TGD for WQMP)*	**DA 1 DMA A**	**n/a**	**n/a**

Retention% = Item 16 / Form 4.2-1 Item 7

[18] Is full LID DCV retained on-site with combination of hydrologic source control and LID retention and infiltration BMPs?
☒ Yes ☐ No
If yes, demonstrate conformance using Form 4.3-10; If no, then reduce Item 3, Factor of Safety to 2.0 and increase Item 8, Infiltrating Surface Area, such that the portion of the site area used for retention and infiltration BMPs equals or exceeds the minimum effective area thresholds (Table 5-7 of the TGD for WQMP) for the applicable category of development and repeat all above calculations.

4.3.3 Harvest and Use BMP

Harvest and use BMP may be considered if the full LID DCV cannot be met by maximizing infiltration BMPs. Use Form 4.3-4 to compute on-site retention of runoff from proposed harvest and use BMPs.

Volume retention estimates for harvest and use BMPs are sensitive to the on-site demand for captured stormwater. Since irrigation water demand is low in the wet season, when most rainfall events occur in San Bernardino County, the volume of water that can be used within a specified drawdown period is relatively low. The bottom portion of Form 4.3-4 facilitates the necessary computations to show infeasibility if a minimum incremental benefit of 40 percent of the LID DCV would not be achievable with MEP implementation of on-site harvest and use of stormwater (Section 5.5.4 of the TGD for WQMP).

Form 4.3-4 Harvest and Use BMPs

[1] **Remaining LID DCV not met by site design HSC or infiltration BMP (ft^3):** V_{unmet} = Form 4.2-1 Item 7 - Form 4.3-2 Item 30 – Form 4.3-3 Item 16			
BMP Type(s) *Compute runoff volume retention from proposed harvest and use BMP (Select BMPs from Table 5-4 of the TGD for WQMP)*	**BMP Type and DA**	**BMP Type and DA**	**BMP Type and DA**
[2] **Describe cistern or runoff detention facility**			
[3] **Storage volume for proposed detention type (ft^3)** *Volume of cistern*

[5] **Average wet season daily irrigation demand (in/day)** *Use local values, typical ~ 0.1 in/day*			
[6] **Daily water demand (ft^3/day)** *Item 4 * (Item 5 / 12)*			
[7] **Drawdown time (hrs)** *Copy Item 6 from Form 4.2-1*			
[8] **Retention Volume (ft^3)** *$V_{retention}$ = Minimum of (Item 3) or (Item 6 * (Item 7 / 24))*			
[9] **Total Retention Volume (ft^3) from Harvest and Use BMP:** *Sum of Item 8 for all harvest and use BMP included in plan*			
[10] **Is the full DCV retained with a combination of LID HSC, retention and infiltration, and harvest and use BMPs?** ☐ Yes ☐ No *If yes, demonstrate conformance using Form 4.3-10. If no, then re-evaluate combinations of all LID BMP and optimize their implementation such that the maximum portion of the DCV is retained on-site (using a single BMP type or combination of BMP types). If the full DCV cannot be mitigated after this optimization process, proceed to Section 4.3.4.*			

4.3.4 Biotreatment BMP

Biotreatment BMPs may be considered if the full LID DCV cannot be met by maximizing retention and infiltration, and harvest and use BMPs. A key consideration when using biotreatment BMP is the effectiveness of the proposed BMP in addressing the pollutants of concern for the project (see Table 5-5 of the TGD for WQMP).

Use Form 4.3-5 to summarize the potential for volume based and/or flow based biotreatment options to biotreat the remaining unmet LID DCV. Biotreatment computations are included as follows:

- Use Form 4.3-6 to compute biotreatment in small volume based biotreatment BMP (e.g. bioretention w/underdrains);
- Use Form 4.3-7 to compute biotreatment in large volume based biotreatment BMP (e.g. constructed wetlands);
- Use Form 4.3-8 to compute sizing criteria for flow-based biotreatment BMP (e.g. bioswales)

4.3.5 Conformance Summary

Complete Form 4.3-9 to demonstrate how on-site LID DCV is met with proposed site design hydrologic source control, infiltration, harvest and use, and/or biotreatment BMP. The bottom line of the form is used to describe the basis for infeasibility determination for on-site LID BMP to achieve full LID DCV, and provides methods for computing remaining volume to be addressed in an alternative compliance plan. If the project has more than one outlet, then complete additional versions of this form for each outlet.

Form 4.3-9 Conformance Summary and Alternative Compliance Volume Estimate (DA 1 DMA A)

[1] **Total LID DCV for the Project (ft^3):** 17,732
Copy Item 7 in Form 4.2-1

[2] **On-site retention with site design hydrologic source control LID BMP (ft^3):** 0
Copy Item 30 in Form 4.3-2

[3] **On-site retention with LID infiltration BMP (ft^3):** 17,775
Copy Item 16 in Form 4.3-3

[4] **On-site retention with LID harvest and use BMP (ft^3):** 0
Copy Item 9 in Form 4.3-4

[5] **On-site biotreatment with volume based biotreatment BMP (ft^3):** 0
Copy Item 3 in Form 4.3-5

[6] **Flow capacity provided by flow based biotreatment BMP (cfs):** 0
Copy Item 6 in Form 4.3-5

[7] **LID BMP performance criteria are achieved if answer to any of the following is "Yes":**

- **Full retention of LID DCV with site design HSC, infiltration, or harvest and use BMP:** ☒Yes ☐No
  If yes, sum of Items 2, 3, and 4 is greater than Item 1
- **Combination of on-site retention BMPs for a portion of the LID DCV and volume-based biotreatment BMP that address all pollutants of concern for the remaining LID DCV:** ☐Yes ☒No
  If yes, a) sum of Items 2, 3, 4, and 5 is greater than Item 1, and Items 2, 3 and 4 are maximized; or b) Item 6 is greater than Form 4.3--5 Item 6 and Items 2, 3 and 4 are maximized
- **On-site retention and infiltration is determined to be infeasible and biotreatment BMP provide biotreatment for all pollutants of concern for full LID DCV:** ☐Yes ☒No
  If yes, Form 4.3-1 Items 7 and 8 were both checked yes

[8] **If the LID DCV is not achieved by any of these means, then the project may be allowed to develop an alternative compliance plan. Check box that describes the scenario which caused the need for alternative compliance:**

☐ **Combination of HSC, retention and infiltration, harvest and use, and biotreatment BMPs provide less than full LID DCV capture.**
Checked yes for Form 4.3-5 Item 7, Item 6 is zero, and sum of Items 2, 3, 4, and 5 is less than Item 1. If so, apply water quality credits and calculate volume for alternative compliance, V_{alt} *= (Item 1 – Item 2 – Item 3 – Item 4 – Item 5) * (100 - Form 2.4-1 Item 2)%*

☐ **An approved Watershed Action Plan (WAP) demonstrates that water quality and hydrologic impacts of urbanization are more effective when managed in at an off-site facility.**
Attach appropriate WAP section, including technical documentation, showing effectiveness comparisons for the project site and regional watershed

Form 4.3-9 Conformance Summary and Alternative Compliance Volume Estimate (DA 2 DMA A)

[1] Total LID DCV for the Project (ft^3): 8,320
Copy Item 7 in Form 4.2-1

[2] On-site retention with site design hydrologic source control LID BMP (ft^3): 0
Copy Item 30 in Form 4.3-2

[3] On-site retention with LID infiltration BMP (ft^3): 8,342
Copy Item 16 in Form 4.3-3

[4] On-site retention with LID harvest and use BMP (ft^3): 0
Copy Item 9 in Form 4.3-4

[5] On-site biotreatment with volume based biotreatment BMP (ft^3): 0
Copy Item 3 in Form 4.3-5

[6] Flow capacity provided by flow based biotreatment BMP (cfs): 0
Copy Item 6 in Form 4.3-5

[7] LID BMP performance criteria are achieved if answer to any of the following is "Yes":

- **Full retention of LID DCV with site design HSC, infiltration, or harvest and use BMP:** ☒Yes ☐No
  If yes, sum of Items 2, 3, and 4 is greater than Item 1
- **Combination of on-site retention BMPs for a portion of the LID DCV and volume-based biotreatment BMP that address all pollutants of concern for the remaining LID DCV:** ☐Yes ☒No
  If yes, a) sum of Items 2, 3, 4, and 5 is greater than Item 1, and Items 2, 3 and 4 are maximized; or b) Item 6 is greater than Form 4.3--5 Item 6 and Items 2, 3 and 4 are maximized
- **On-site retention and infiltration is determined to be infeasible and biotreatment BMP provide biotreatment for all pollutants of concern for full LID DCV:** ☐Yes ☒No
  If yes, Form 4.3-1 Items 7 and 8 were both checked yes

[8] If the LID DCV is not achieved by any of these means, then the project may be allowed to develop an alternative compliance plan. Check box that describes the scenario which caused the need for alternative compliance:

☐ **Combination of HSC, retention and infiltration, harvest and use, and biotreatment BMPs provide less than full LID DCV capture.**
Checked yes for Form 4.3-5 Item 7, Item 6 is zero, and sum of Items 2, 3, 4, and 5 is less than Item 1. If so, apply water quality credits and calculate volume for alternative compliance, V_{alt} *= (Item 1 – Item 2 – Item 3 – Item 4 – Item 5) * (100 - Form 2.4-1 Item 2)%*

☐ **An approved Watershed Action Plan (WAP) demonstrates that water quality and hydrologic impacts of urbanization are more effective when managed in at an off-site facility.**
Attach appropriate WAP section, including technical documentation, showing effectiveness comparisons for the project site and regional watershed

Form 4.3-9 Conformance Summary and Alternative Compliance Volume Estimate (DA 3 DMA A)

[1] Total LID DCV for the Project (ft^3): 12,913
Copy Item 7 in Form 4.2-1

[2] On-site retention with site design hydrologic source control LID BMP (ft^3): 0

Copy Item 30 in Form 4.3-2

[3] On-site retention with LID infiltration BMP (ft^3): 0
Copy Item 16 in Form 4.3-3

[4] On-site retention with LID harvest and use BMP (ft^3): 0
Copy Item 9 in Form 4.3-4

[5] On-site biotreatment with volume based biotreatment BMP (ft^3): 59,390
Copy Item 3 in Form 4.3-5

[6] Flow capacity provided by flow based biotreatment BMP (cfs): 0
Copy Item 6 in Form 4.3-5

[7] LID BMP performance criteria are achieved if answer to any of the following is "Yes":

- **Full retention of LID DCV with site design HSC, infiltration, or harvest and use BMP:** ☐Yes ☒No
  If yes, sum of Items 2, 3, and 4 is greater than Item 1
- **Combination of on-site retention BMPs for a portion of the LID DCV and volume-based biotreatment BMP that address all pollutants of concern for the remaining LID DCV:** ☐Yes ☒No
  If yes, a) sum of Items 2, 3, 4, and 5 is greater than Item 1, and Items 2, 3 and 4 are maximized; or b) Item 6 is greater than Form 4.3--5 Item 6 and Items 2, 3 and 4 are maximized
- **On-site retention and infiltration is determined to be infeasible and biotreatment BMP provide biotreatment for all pollutants of concern for full LID DCV:** ☒Yes ☐No
  If yes, Form 4.3-1 Items 7 and 8 were both checked yes

[8] If the LID DCV is not achieved by any of these means, then the project may be allowed to develop an alternative compliance plan. Check box that describes the scenario which caused the need for alternative compliance:

☐ **Combination of HSC, retention and infiltration, harvest and use, and biotreatment BMPs provide less than full LID DCV capture.**
Checked yes for Form 4.3-5 Item 7, Item 6 is zero, and sum of Items 2, 3, 4, and 5 is less than Item 1. If so, apply water quality credits and calculate volume for alternative compliance, V_{alt} *= (Item 1 – Item 2 – Item 3 – Item 4 – Item 5) * (100 - Form 2.4-1 Item 2)%*

☐ **An approved Watershed Action Plan (WAP) demonstrates that water quality and hydrologic impacts of urbanization are more effective when managed in at an off-site facility.**
Attach appropriate WAP section, including technical documentation, showing effectiveness comparisons for the project site and regional watershed

4.3.6 Hydromodification Control BMP

Use Form 4.3-10 to compute the remaining runoff volume retention, after LID BMP are implemented, needed to address HCOC, and the increase in time of concentration and decrease in peak runoff necessary to meet targets for protection of waterbodies with a potential HCOC. Describe hydromodification control BMP that address HCOC, which may include off-site BMP and/or in-stream controls. Section 5.6 of the TGD for WQMP provides additional details on selection and evaluation of hydromodification control BMP.

Form 4.3-10 Hydromodification Control BMPs (DA 1)

[1] **Volume reduction needed for HCOC performance criteria (ft^3):** *(Form 4.2-2 Item 4 * 0.95) – Form 4.2-2 Item 1*	[2] **On-site retention with site design hydrologic source control, infiltration, and harvest and use LID BMP (ft^3):** *Sum of Form 4.3-9 Items 2, 3, and 4. Evaluate option to increase implementation of on-site retention in Forms 4.3-2, 4.3-3, and 4.3-4 in excess of LID DCV toward achieving HCOC volume reduction*
[3] **Remaining volume for HCOC volume capture (ft^3):** *Item 1 – Item 2*	[4] **Volume capture provided by incorporating additional on-site or off-site retention BMPs (ft^3):** *Existing downstream BMP may be used to demonstrate additional volume capture (if so, attach to this WQMP a hydrologic analysis showing how the additional volume would be retained during a 2-yr storm event for the regional watershed)*

[5] **If Item 4 is less than Item 3, incorporate in-stream controls on downstream waterbody segment to prevent impacts due to hydromodification** ☐
Attach in-stream control BMP selection and evaluation to this WQMP

[6] **Is Form 4.2-2 Item 11 less than or equal to 5%:** ☐Yes ☐No
If yes, HCOC performance criteria is achieved. If no, select one or more mitigation options below:

☐ **Demonstrate increase in time of concentration achieved by proposed LID site design, LID BMP, and additional on-site or off-site retention BMP.**
BMP upstream of a waterbody segment with a potential HCOC may be used to demonstrate increased time of concentration through hydrograph attenuation (if so, show that the hydraulic residence time provided in BMP for a 2-year storm event is equal or greater than the addition time of concentration requirement in Form 4.2-4 Item 15)

☐ **Increase time of concentration by preserving pre-developed flow path and/or increase travel time by reducing slope and increasing cross-sectional area and roughness for proposed on-site conveyance facilities.**

- ☐ **Incorporate appropriate in-stream controls for downstream waterbody segment to prevent impacts due to hydromodification, in a plan approved and signed by a licensed engineer in the State of California.**

[7] **Form 4.2-2 Item 12 less than or equal to 5%:** ☐Yes ☐No
If yes, HCOC performance criteria are achieved. If no, select one or more mitigation options below:

☐ **Demonstrate reduction in peak runoff achieved by proposed LID site design, LID BMPs, and additional on-site or off-site retention BMPs.**
BMPs upstream of a waterbody segment with a potential HCOC may be used to demonstrate additional peak runoff reduction through hydrograph attenuation (if so, attach to this WQMP, a hydrograph analysis showing how the peak runoff would be reduced during a 2-yr storm event)

- ☐ **Incorporate appropriate in-stream controls for downstream waterbody segment to prevent impacts due to hydromodification, in a plan approved and signed by a licensed engineer in the State of California.**

4.4 Alternative Compliance Plan (if applicable)

Describe an alternative compliance plan (if applicable) for projects not fully able to infiltrate, harvest and use, or biotreat the DCV via on-site LID practices. A project proponent must develop an alternative compliance plan to address the remainder of the LID DCV. Depending on project type some projects may qualify for water quality credits that can be applied to reduce the DCV that must be treated prior to development of an alternative compliance plan (see Form 2.4-1, Water Quality Credits). Form 4.3-9 Item 8 includes instructions on how to apply water quality credits when computing the DCV that must be met through alternative compliance. Alternative compliance plans may include one or more of the following elements:

- On-site structural treatment control BMP - All treatment control BMP should be located as close to possible to the pollutant sources and should not be located within receiving waters;
- Off-site structural treatment control BMP - Pollutant removal should occur prior to discharge of runoff to receiving waters;
- Urban runoff fund or In-lieu program, if available

Depending upon the proposed alternative compliance plan, approval by the executive officer may or may not be required (see Section 6 of the TGD for WQMP).

Section 5 Inspection and Maintenance Responsibility for Post Construction BMP

All BMP included as part of the project WQMP are required to be maintained through regular scheduled inspection and maintenance (refer to Section 8, Post Construction BMP Requirements, in the TGD for WQMP). Fully complete Form 5-1 summarizing all BMP included in the WQMP. Attach additional forms as needed. The WQMP shall also include a detailed Operation and Maintenance Plan for all BMP and may require a Maintenance Agreement (consult the jurisdiction's LIP). If a Maintenance Agreement is required, it must also be attached to the WQMP.

Form 5-1 BMP Inspection and Maintenance

BMP	Responsible Party(ies)	Inspection/Maintenance Activities Required	Minimum Frequency of Activities
Contech CMP Underground System	Owner	Contech recommends ongoing quarterly inspections of the accumulated sediment. All systems shall be designed with an access/inspection manhole situated at or near the inlet and the outlet orifice. Maintaining the system should be scheduled during dry weather.	Inspections shall be done quarterly. Maintenance shall be scheduled when accumulated sediment or trash is clogging the discharge orifice.
Proprietary Biofiltration System	Owner	Remove trash from Screening Device, sediment from Separation Chamber and replace cartridge Filter Media, and Drain Down Filter Media. The owner should keep maintenance/inspection record(s) for a minimum of five years from the date of maintenance. These records should be made available to the governing municipality for inspection upon request at any time. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.	Average maintenance interval of 6 to 12 months for removing trash from Screening Device. Average interval of 12 to 24 months for removing sediment, replacing Cartridge Filter Media, replacing Drain Down Filter Media and trimming vegetation.
Drain Inserts	Owner	Visually inspect for defects and illegal dumping. Notify proper authorities if illegal dumping has occurred. Using an industrial vacuum, the collected materials shall be removed from the filter basket and disposed of properly. Inspect biosorb hydrocarbon boom and replace as necessary.	Four times per year or following any rain event that would potentially accumulate a large amount of debris in the system. Replace boom twice per year, at a minimum.
Storm Drain Stenciled Message	Owner	Visually inspect for legibility and replace or repaint as necessary.	Annually
N1: Education of Property Owners, Tenants and Occupants on Stormwater BMPs	Owner	Property owner will familiarize him/herself with the educational materials in Attachment "E" and the contents of the WQMP.	Annually (January) for all employees and within 2 months for new hires.

Form 5-1 BMP Inspection and Maintenance

N2: Activity Restrictions	Owner	Activities are restricted to only those for which a BMP has been implemented. The owner shall develop ongoing activity restrictions that include those that have the potential to create adverse impacts on water quality. Activities include, but are not limited to: handling and disposal of contaminants, fertilizer and pesticide application restrictions, litter control and pick-up, and vehicle or equipment repair as well as any other activities that may potentially contribute to water pollution.	Ongoing
N3: Landscape Management BMPs	Owner	Irrigation must be consistent with City's Water Conservation Ordinance. Fertilizer and pesticide usage will be consistent with County Management Guidelines for Use of Fertilizers and Pesticides.	Ongoing
N4: BMP Maintenance	Owner	BMP maintenance, implementation schedules, and responsible parties are included with each specific BMP narrative.	As described in each BMP listed within this form.
N7: Spill Contingency Plan	Owner	Owner/tenant will have a spill contingency plan, a separate document, based on specific site needs.	Ongoing
N10: Uniform Fire Code Implementation	Owner	If applicable, owner will comply with Article 80 of the Uniform Fire Code enforced by the fire protection agency. The facility operators will be educated annually regarding requirements for handling, storage and proper disposal of hazardous substances.	Ongoing
N11: Litter/Debris Control Program	Owner	Contract with their landscape maintenance firm to provide this service during regularly schedule maintenance. They are required to implement trash management and litter control procedures in the common areas aimed at reducing pollution of drainage water.	Weekly
N12: Employee Training	Owner	The owner will ensure that tenants are also familiar with onsite BMPs and necessary maintenance required of the tenants. Owner will check with City and County at least once a year to obtain new or updated educational materials and provide these materials to tenants. Employees shall be trained to clean up spills and participate in ongoing maintenance. The WQMP requires annual employee training and new hires within 2 months.	Annually (January) for all employees and within 2 months for new hires.
N13: Housekeeping of Loading Docks	Owner	Keep all fluids indoors. Clean up spills immediately and keep spills from entering storm drain system. No direct discharges into the storm drain system. Area shall be inspected weekly for proper containment and practices with spills cleaned up immediately and disposed of properly.	Ongoing
N14: Catch Basin Inspection Program	Owner	Monthly inspection by property owner's designee. Inspection consists of immediate repair of any deterioration of the structures and maintenance of drain inserts before and after major rain events. Drain insert maintenance shall be per manufacturer's guidelines.	Monthly inspection and maintain as necessary.

Form 5-1 BMP Inspection and Maintenance			
N15: Vacuum Sweeping of Private Streets and Parking Lots	Owner	All landscape maintenance contractors will be required to sweep up all landscape cuttings, mowings and fertilizer materials off paved areas weekly and dispose of properly. Parking areas and drive ways will be swept monthly by sweeping contractor.	Monthly
N17: Comply with all other applicable NPDES permits	Owner	Will comply with Construction General Permit and Industrial General Permit (may apply for No Exposure Certification/NEC).	Ongoing
S1: Provide storm drain system stenciling and signage (CASQA New Development BMP Handbook SD-13)	Owner	"No Dumping – Drains to River" stencils will be applied. Legibility of stencil will be maintained on a yearly basis.	Annually (January)
S3: Design and construct trash and waste storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-32)	Owner	Paved with an impervious surface, designed not to allow run-on from adjoining areas, designed to divert drainage from adjoining roofs and pavements diverted around the area, screened or walled to prevent off-site transport of trash. Detail to be provided once available.	Ongoing
S4: Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control (Statewide Model Landscape Ordinance; CASQA New Development BMP Handbook SD-12)	Owner	Irrigation systems shall include reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines. Timers will be used to avoid over watering and watering cycles and duration shall be adjusted seasonally by the landscape maintenance contractor. The landscaping areas will be grouped with plants that have similar water requirements. Native or drought tolerant species shall also be used where appropriate to reduce excess irrigation runoff and promote surface filtration.	Adjust watering cycles and duration seasonally / quarterly (Oct, Jan, Apr, and Jul).

Section 6 WQMP Attachments

6.1 Site Plan and Drainage Plan

Include a site plan and drainage plan sheet set containing the following minimum information:

- Project location
- Site boundary
- Land uses and land covers, as applicable
- Suitability/feasibility constraints
- Structural Source Control BMP locations
- Site Design Hydrologic Source Control BMP locations
- LID BMP details
- Drainage delineations and flow information
- Drainage connections

See Attachment C for Site and Drainage Plan.

6.2 Electronic Data Submittal

Minimum requirements include submittal of PDF exhibits in addition to hard copies. Format must not require specialized software to open. If the local jurisdiction requires specialized electronic document formats (consult the LIP), this section will describe the contents (e.g., layering, nomenclature, geo-referencing, etc.) of these documents so that they may be interpreted efficiently and accurately.

6.3 Post Construction

Attach all O&M Plans and Memorandum of Agreement for BMP to the WQMP (Attachment D).

6.4 Other Supporting Documentation

- BMP Educational Materials (Attachment E)
- Soil/Infiltration Report (Attachment F)
- BMP Maintenance Material (Attachment G)
- Conditions of Approval (Attachment H)
- Class V Injection Well Registration (Attachment I)
- Activity Restrictions (Attachment J)
- Excerpt of Subsurface Investigation Report (Attachment K)

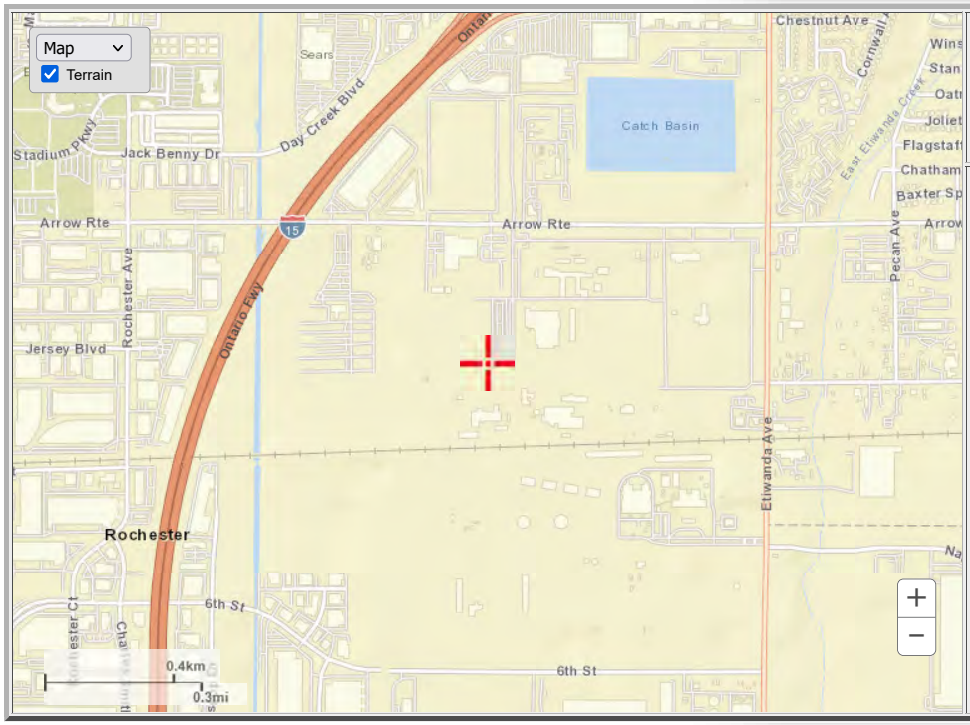
NOAA ATLAS 14 POINT PRECIPITATION FREQUENCY ESTIMATES: CA

Data description

Data type: Precipitation depth | Units: English | Time series type: Partial duration

Select location



1) Manually:

a) By location (decimal degrees, use "-" for S and W): Latitude: 34.095065 Longitude: -117.53340 Submit

b) By station (list of CA stations): Select station

c) By address: Search

2) Use map (if ESRI interactive map is not loading, try adding the host: **https://js.arcgis.com/** to the firewall, or contact us at hdsc.questions@noaa.gov):

POINT PRECIPITATION FREQUENCY (PF) ESTIMATES

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

Worksheet H: Factor of Safety and Design Infiltration Rate Worksheet
DA 1 DMA A, DA 3 DMA A & DA 3 DMA B

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	1	0.25
		Predominant soil texture	0.25	1	0.25
		Site soil variability	0.25	1	0.25
		Depth to groundwater / impervious layer	0.25	1	0.25
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			1.00
B	Design	Tributary area size	0.25	2	0.50
		Level of pretreatment/ expected sediment loads	0.25	3	0.75
		Redundancy	0.25	3	0.75
		Compaction during construction	0.25	1	0.25
		Design Safety Factor, $S_B = \Sigma p$			2.25
Combined Safety Factor, $S_{TOT} = S_A \times S_B$					2.25
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)					4.80
Design Infiltration Rate, in/hr, $K_{DESIGN} = K_M / S_{TOT}$					2.13

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

A site-specific infiltration test will be conducted at the location of the infiltration facility to support a minimum measured infiltration result of 4.80 in/hr. The design infiltration rate is 2.13 in/hr after applying the appropriate safety factor. This design rate is suitable for infiltration facilities.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

Worksheet H: Factor of Safety and Design Infiltration Rate Worksheet
DA 2 DMA A

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	1	0.25
		Predominant soil texture	0.25	1	0.25
		Site soil variability	0.25	1	0.25
		Depth to groundwater / impervious layer	0.25	1	0.25
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			1.00
B	Design	Tributary area size	0.25	1	0.25
		Level of pretreatment/ expected sediment loads	0.25	3	0.75
		Redundancy	0.25	3	0.75
		Compaction during construction	0.25	1	0.25
		Design Safety Factor, $S_B = \Sigma p$			2.0

Combined Safety Factor, $S_{TOT} = S_A \times S_B$	2.0
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)	4.20
Design Infiltration Rate, in/hr, $K_{DESIGN} = K_M / S_{TOT}$	2.10

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

A site-specific infiltration test will be conducted at the location of the infiltration facility to support a minimum measured infiltration result of 4.20 in/hr. The design infiltration rate is 2.10 in/hr after applying the appropriate safety factor. This design rate is suitable for infiltration facilities.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

Worksheet H: Factor of Safety and Design Infiltration Rate Worksheet
DA 4 DMA A

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	1	0.25
		Predominant soil texture	0.25	1	0.25
		Site soil variability	0.25	1	0.25
		Depth to groundwater / impervious layer	0.25	1	0.25
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			1.00
B	Design	Tributary area size	0.25	3	0.75
		Level of pretreatment/ expected sediment loads	0.25	3	0.75
		Redundancy	0.25	3	0.75
		Compaction during construction	0.25	1	0.25
		Design Safety Factor, $S_B = \Sigma p$			2.50

Combined Safety Factor, $S_{TOT} = S_A \times S_B$	2.50
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)	5.25
Design Infiltration Rate, in/hr, $K_{DESIGN} = K_M / S_{TOT}$	2.10

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

A site-specific infiltration test will be conducted at the location of the infiltration facility to support a minimum measured infiltration result of 5.25 in/hr. The design infiltration rate is 2.10 in/hr after applying the appropriate safety factor. This design rate is suitable for infiltration facilities.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

Worksheet H: Factor of Safety and Design Infiltration Rate Worksheet
DA 4 DMA B

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	1	0.25
		Predominant soil texture	0.25	1	0.25
		Site soil variability	0.25	1	0.25
		Depth to groundwater / impervious layer	0.25	1	0.25
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			1.00
B	Design	Tributary area size	0.25	3	0.75
		Level of pretreatment/ expected sediment loads	0.25	3	0.75
		Redundancy	0.25	3	0.75
		Compaction during construction	0.25	1	0.25
		Design Safety Factor, $S_B = \Sigma p$			2.50

Combined Safety Factor, $S_{TOT} = S_A \times S_B$	2.50
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)	1.0
Design Infiltration Rate, in/hr, $K_{DESIGN} = K_M / S_{TOT}$	0.4

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

A site-specific infiltration test has been conducted at the location of the infiltration facility to support a minimum measured infiltration result of 1.0 in/hr. The design infiltration rate is 0.4 in/hr after applying the appropriate safety factor. This design rate is suitable for infiltration facilities.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

Worksheet H: Factor of Safety and Design Infiltration Rate Worksheet
DA 5 DMA A

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	1	0.25
		Predominant soil texture	0.25	1	0.25
		Site soil variability	0.25	1	0.25
		Depth to groundwater / impervious layer	0.25	1	0.25
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			1.00
B	Design	Tributary area size	0.25	3	0.75
		Level of pretreatment/ expected sediment loads	0.25	3	0.75
		Redundancy	0.25	3	0.75
		Compaction during construction	0.25	1	0.25
		Design Safety Factor, $S_B = \Sigma p$			2.50
Combined Safety Factor, $S_{TOT} = S_A \times S_B$					2.50
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)					2.5
Design Infiltration Rate, in/hr, $K_{DESIGN} = K_M / S_{TOT}$					1.0

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

A site-specific infiltration test has been conducted at the project site to support a minimum measured infiltration result of 2.5 in/hr. The design infiltration rate is 1.0 in/hr after applying the appropriate safety factor. This design rate is suitable for infiltration facilities.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

VOLUME-BASED BMP DESIGN

$C_{BMP} = 0.858(imp)^3 - 0.78(imp)^2 + 0.774(imp) + 0.04$
P6 = (0.534)(1.4807) = 0.791 inches
P0 = (1.963)(C_{BMP})(0.791)
DCV = (P0 * Area) / 12

DA 1 DMA A – CONTECH PERFORATED CMP #1

Region		Valley	
Drainage Area (acres)		3.90	acres
Drainage Area (sq-ft)		169,884	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	**C =**	0.807	
1-hr 2-yr from NOAA		0.534	
P6 Coeff		1.4807	
Mean 6-hr (P6)		0.791	
Drawdown Rate (a)		1.963	
DCV		17,732	cu-ft
DCV		0.407	acre-ft

Assumed design infiltration rate = 2.13 in/hr
d_{max} = 102.24 inches = Design infiltration rate x 48 hours = 2.13 in/hr x 48 hrs
d_{BMP} = 100.8 inches = [(6 inches + 6 inches) x 0.40] + 96 inches
$d_{max} > d_{BMP}$

- WIDTH AT SIDES = 12"
- BELOW PIPE = 6"

NOTES

- ALL RISER AND STUB DIMENSIONS ARE TO CENTERLINE. ALL ELEVATIONS, DIMENSIONS, AND LOCATIONS OF RISERS AND INLETS, SHALL BE VERIFIED BY THE ENGINEER OF RECORD PRIOR TO RELEASING FOR FABRICATION.
- ALL FITTINGS AND REINFORCEMENT COMPLY WITH ASTM A998.
- ALL RISERS AND STUBS ARE $2\frac{2}{3}$" x $\frac{1}{2}$" CORRUGATION AND 16 GAGE UNLESS OTHERWISE NOTED.
- RISERS TO BE FIELD TRIMMED TO GRADE.
- QUANTITY OF PIPE SHOWN DOES NOT PROVIDE EXTRA PIPE FOR CONNECTING THE SYSTEM TO EXISTING PIPE OR DRAINAGE STRUCTURES. OUR SYSTEM AS DETAILED PROVIDES NOMINAL INLET AND/OR OUTLET PIPE STUB FOR CONNECTION TO EXISTING DRAINAGE FACILITIES. IF ADDITIONAL PIPE IS NEEDED IT IS THE RESPONSIBILITY OF THE CONTRACTOR.
- BAND TYPE TO BE DETERMINED UPON FINAL DESIGN.
- THE PROJECT SUMMARY IS REFLECTIVE OF THE DYODS DESIGN, QUANTITIES ARE APPROX. AND SHOULD BE VERIFIED UPON FINAL DESIGN AND APPROVAL. FOR EXAMPLE, TOTAL EXCAVATION DOES NOT CONSIDER ALL VARIABLES SUCH AS SHORING AND ONLY ACCOUNTS FOR MATERIAL WITHIN THE ESTIMATED EXCAVATION FOOTPRINT.
- THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

Project Information

Project ID	
Project Name	Arrow Route and Yellowwood Road (DA 5 DMA B)
Project Location	Rancho Cucamonga, CA
Date	4/26/2023

Horizontal Flow Biofiltration System

SIZING CALCULATIONS	Inputs	Units	Notes/References
Impervious Area			
BMP Drainage Area (not required - manual entry - not part of formula)	12.96	Acres	This includes all areas that will contribute runoff to the proposed BMP, including pervious areas, impervious areas, and off-site areas, whether or not they are directly or indirectly connected to the BMP.
Watershed Impervious Ratio (not required - manual entry - not part of formula)			Watershed Imperviousness Ratio", is equal to the percent of total impervious area in the "BMP Drainage Area" divided by 100
Runoff Coefficient "C" (not required - manual entry - not part of formula)			
Water Quality Volume (required)	58925	cubic feet	Use sizing procedures provided by state or local agencies to determine the appropriate Water Quality Volume. Intensities and design storms vary widely by region and method.
Design Storm Duration	0	hours	Varies depending on geographical region. Set at 0 for pump system set up. LA County 3 hours. Call for details.
MWS Sizing			
WetlandMod Model Number (from matrix)	MWS-L-10-20		Please choose size from "Model Size Matrix" Tab
HGL	3.4		Treatment Hydraulic Grade Line
# Of Units	2	quantity	Select the number of systems required to treat the water quality volume. Will very depending on drain down time regulaitons.
Discharge Rate (from matrix)	78.50	gallons/minute	Loading Rate of 0.26 gpm/sq ft or 25 in/hr. Field Verified.
Volume Treated During Event			
Processed through MWS - Linear	0	cubic feet	156.9984 gals/minute
Volume Treated Following Event			
MWS Static Capacity (from matrix)	428.67	cubic feet	
Volume Needed in *Pre-Storage*	58496	cubic feet	Set at zero to start. Size pre-storage system to hold this volume
			Sizing complete when eqaul to value of zero.
TOTAL STORMWATER TREATED	58925	cubic feet	Note: This amount should be equal to the "Water Quality Volume"
Drain Down Time	46.92	hours	Drain down time must be equal to or less than requirement of local juristiction. Default 48 hours.

Feel free to call or email proposed sizing calculations to Modular Wetlands Systems for assistance with sizing, compliance, and design.

NOTES:
1. TROUGH SYSTEM PROVIDES FOR ENTIRE COVERAGE OF INLET OPENING SO TO DIVERT ALL FLOW TO FILTER.
2. TROUGH SYSTEM MANUFACTURED FROM MARINE GRADE FIBERGLASS, GEL COATED FOR UV PROTECTION.
3. SYSTEM ATTACHED TO THE GRATE BASIN WITH NON-CORROSIVE HARDWARE.
4. FILTER MANUFACTURED OF 100# STAINLESS STEEL.
5. FILTER MADE OF NON-CLOGGIN SCREEN WITH 4.7 MM OPENINGS AND MEETS FULL CAPTURE REQUIREMENTS.
6. FILTER CAN BE FITTED WITH HYDROCARBON ABSORBENT BOOM
7. FILTER IS LOCATED DIRECTLY UNDER THE MANHOLE FOR EASY REMOVAL AND MAINTENANCE.
8. LENGTH OF TROUGH CAN VARY FROM 2' TO 30'.
9. OTHER STANDARD AND CUSTOM MODEL SIZES AVAILABLE – CONTACT BIO CLEAN FOR MORE INFORMATION.
10. CONSIDERS A SAFETY FACTOR OF 2.0
11. BYPASS IS FACILITATED VIA OVERFLOW OF THE TROUGH SYSTEM AND IS EQUAL TO THE CAPACITY OF THE CURB OPENING
12. STORAGE CAPACITY BASED ON THE BASKET HALF FULL.
13. ADDITIONAL TREATMENT AND STORAGE CAPACITY CAN BE ACHIEVED BY UTILIZING MULTIPLE FILTER BASKETS.

GRATE INLET FILTER
FULL CAPTURE
STANDARD DETAIL

Form 5-1 BMP Inspection and Maintenance

BMP	Responsible Party(ies)	Inspection/Maintenance Activities Required	Minimum Frequency of Activities
CONTECH CMP Underground System	Owner	Contech recommends ongoing quarterly inspections of the accumulated sediment. All systems shall be designed with an access/inspection manhole situated at or near the inlet and the outlet orifice. Maintaining the system should be scheduled during dry weather.	Inspections shall be done quarterly. Maintenance shall be scheduled when accumulated sediment or trash is clogging the discharge orifice.
Proprietary Biofiltration System	Owner	Remove trash from Screening Device, sediment from Separation Chamber and replace cartridge Filter Media, and Drain Down Filter Media. The owner should keep maintenance/inspection record(s) for a minimum of five years from the date of maintenance. These records should be made available to the governing municipality for inspection upon request at any time. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.	Average maintenance interval of 6 to 12 months for removing trash from Screening Device. Average interval of 12 to 24 months for removing sediment, replacing Cartridge Filter Media, replacing Drain Down Filter Media and trimming vegetation.
Drain Inserts	Owner	Visually inspect for defects and illegal dumping. Notify proper authorities if illegal dumping has occurred. Using an industrial vacuum, the collected materials shall be removed from the filter basket and disposed of properly. Inspect biosorb hydrocarbon boom and replace as necessary.	Four times per year or following any rain event that would potentially accumulate a large amount of debris in the system. Replace boom twice per year, at a minimum.
Storm Drain Stenciled Message	Owner	Visually inspect for legibility and replace or repaint as necessary.	Annually
N1: Education of Property Owners, Tenants and Occupants on Stormwater BMPs	Owner	Property owner will familiarize him/herself with the educational materials in Attachment "E" and the contents of the WQMP.	Annually (January) for all employees and within 2 months for new hires.
N2: Activity Restrictions	Owner	The owner shall develop ongoing activity restrictions that include those that have the potential to create adverse impacts on water quality. Activities include, but are not limited to: handling and disposal of contaminants, fertilizer and pesticide application restrictions, litter control and pick-up, and vehicle or equipment repair as well as any other activities that may potentially contribute to water pollution.	Ongoing

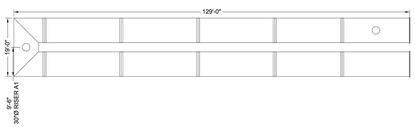
Form 5-1 BMP Inspection and Maintenance

BMP	Responsible Party(ies)	Inspection/Maintenance Activities Required	Minimum Frequency of Activities
N3: Landscape Management BMPs	Owner	Irrigation must be consistent with City's Water Conservation Ordinance. Fertilizer and pesticide usage will be consistent with County Management Guidelines for Use of Fertilizers and Pesticides.	Ongoing
N4: BMP Maintenance	Owner	BMP maintenance, implementation schedules, and responsible parties are included with each specific BMP narrative.	As described in each BMP listed within this form.
N7: Spill Contingency Plan	Owner	Owner/tenant will have a spill contingency plan, a separate document, based on specific site needs.	Ongoing
N10: Uniform Fire Code Implementation	Owner	If applicable, owner will comply with Article 80 of the Uniform Fire Code enforced by the fire protection agency. The facility operators will be educated annually regarding requirements for handling, storage and proper disposal of hazardous substances.	Ongoing
N11: Litter/Debris Control Program	Owner	Contract with their landscape maintenance firm to provide this service during regularly schedule maintenance. They are required to implement trash management and litter control procedures in the common areas aimed at reducing pollution of drainage water.	Weekly
N12: Employee Training	Owner	The owner will ensure that tenants are also familiar with onsite BMPs and necessary maintenance required of the tenants. Owner will check with City and County at least once a year to obtain new or updated educational materials and provide these materials to tenants. Employees shall be trained to clean up spills and participate in ongoing maintenance. The WQMP requires annual employee training and new hires within 2 months.	Annually (January) for all employees and within 2 months for new hires.
N13: Housekeeping of Loading Docks	Owner	Keep all fluids indoors. Clean up spills immediately and keep spills from entering storm drain system. No direct discharges into the storm drain system. Area shall be inspected weekly for proper containment and practices with spills cleaned up immediately and disposed of properly.	Ongoing

Form 5-1 BMP Inspection and Maintenance

BMP	Responsible Party(ies)	Inspection/Maintenance Activities Required	Minimum Frequency of Activities
N14: Catch Basin Inspection Program	Owner	Monthly inspection by property owner's designee. Inspection consists of immediate repair of any deterioration of the structures and maintenance of drain inserts before and after major rain events. Drain insert maintenance shall be per manufacturer's guidelines.	Monthly inspection and maintain as necessary.
N15: Vacuum Sweeping of Private Streets and Parking Lots	Owner	All landscape maintenance contractors will be required to sweep up all landscape cuttings, mowings and fertilizer materials off paved areas weekly and dispose of properly. Parking areas and drive ways will be swept monthly by sweeping contractor.	Monthly
N17: Comply with all other applicable NPDES permits	Owner	Will comply with Construction General Permit and Industrial General Permit (may apply for No Exposure Certification/NEC).	Ongoing
S1: Provide storm drain system stenciling and signage (CASQA New Development BMP Handbook SD-13)	Owner	"No Dumping – Drains to River" stencils will be applied. Legibility of stencil will be maintained on a yearly basis.	Annually (January)
S3: Design and construct trash and waste storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-32)	Owner	Paved with an impervious surface, designed not to allow run-on from adjoining areas, designed to divert drainage from adjoining roofs and pavements diverted around the area, screened or walled to prevent off-site transport of trash. Detail to be provided once available.	Ongoing
S4: Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control (Statewide Model Landscape Ordinance; CASQA New Development BMP Handbook SD-12)	Owner	Irrigation systems shall include reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines. Timers will be used to avoid over watering and watering cycles and duration shall be adjusted seasonally by the landscape maintenance contractor. The landscaping areas will be grouped with plants that have similar water requirements. Native or drought tolerant species shall also be used where appropriate to reduce excess irrigation runoff and promote surface filtration.	Adjust watering cycles and duration seasonally / quarterly (Oct, Jan, Apr, and Jul).

DRAIN INSERTS



PROJECT SUMMARY

CALCULATION DETAILS
- LOADING = HS20/HS25
- APPROX. LINEAR FOOTAGE = 261 LF

STORAGE SUMMARY
- STORAGE VOLUME REQUIRED = 17,732 CF
- PIPE STORAGE VOLUME = 13,119 CF
- BACKFILL STORAGE VOLUME = 4,656 CF
- TOTAL STORAGE PROVIDED = 17,775 CF

PIPE DETAILS
- DIAMETER = 96"
- CORRUGATION = 5x1
- GAGE = 16
- COATING = ALT2
- WALL TYPE = PERFORATED
- BARREL SPACING = 36"

BACKFILL DETAILS
- WIDTH AT ENDS = 12"
- ABOVE PIPE = 6"
- WIDTH AT SIDES = 12"
- BELOW PIPE = 6"

NOTES
- ALL RISER AND STUB DIMENSIONS ARE TO CENTERLINE. ALL ELEVATIONS, DIMENSIONS, AND LOCATIONS OF RISERS AND INLETS, SHALL BE VERIFIED BY THE ENGINEER OF RECORD PRIOR TO RELEASING FOR FABRICATION.
- ALL FITTINGS AND REINFORCEMENT COMPLY WITH ASTM A998.
- ALL RISERS AND STUBS ARE 2⅔" x ½" CORRUGATION AND 16 GAGE UNLESS OTHERWISE NOTED.
- RISERS TO BE FIELD TRIMMED TO GRADE.
- QUANTITY OF PIPE SHOWN DOES NOT PROVIDE EXTRA PIPE FOR CONNECTING THE SYSTEM TO EXISTING PIPE OR DRAINAGE STRUCTURES. OUR SYSTEM AS DETAILED PROVIDES NOMINAL INLET AND/OR OUTLET PIPE STUB FOR CONNECTION TO EXISTING DRAINAGE FACILITIES. IF ADDITIONAL PIPE IS NEEDED IT IS THE RESPONSIBILITY OF THE CONTRACTOR.
- BAND TYPE TO BE DETERMINED UPON FINAL DESIGN.
- THE PROJECT SUMMARY IS REFLECTIVE OF THE DYODS DESIGN, QUANTITIES ARE APPROX. AND SHOULD BE VERIFIED UPON FINAL DESIGN AND APPROVAL. FOR EXAMPLE, TOTAL EXCAVATION DOES NOT CONSIDER ALL VARIABLES SUCH AS SHORING AND ONLY ACCOUNTS FOR MATERIAL WITHIN THE ESTIMATED EXCAVATION FOOTPRINT.
- THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

INSTALLATION NOTES

1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS REQUIRED TO OFFLOAD AND INSTALL THE SYSTEM AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURERS' SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURER'S CONTRACT.
2. UNIT MUST BE INSTALLED ON LEVEL BASE. MANUFACTURER RECOMMENDS A MINIMUM 6" LEVEL ROCK BASE UNLESS SPECIFIED BY THE PROJECT ENGINEER. CONTRACTOR IS RESPONSIBLE FOR VERIFYING PROJECT ENGINEER'S RECOMMENDED BASE SPECIFICATIONS.
4. CONTRACTOR TO SUPPLY AND INSTALL ALL EXTERNAL CONNECTING PIPES. ALL PIPES MUST BE FLUSH WITH INSIDE SURFACE OF CONCRETE (PIPES CANNOT INTRUDE BEYOND FLUSH). INVERT OF OUTFLOW PIPE MUST BE FLUSH WITH DISCHARGE CHAMBER FLOOR. ALL PIPES SHALL BE SEALED WATERTIGHT PER MANUFACTURER'S STANDARD CONNECTION DETAIL.
5. CONTRACTOR RESPONSIBLE FOR INSTALLATION OF ALL PIPES, RISERS, MANHOLES, AND HATCHES. CONTRACTOR TO USE GROUT AND/OR BRICKS TO MATCH COVERS WITH FINISHED SURFACE UNLESS SPECIFIED OTHERWISE.
6. VEGETATION SUPPLIED AND INSTALLED BY OTHERS, ALL UNITS WITH VEGETATION MUST HAVE DRIP OR SPRAY IRRIGATION SUPPLIED AND INSTALLED BY OTHERS.
7. CONTRACTOR RESPONSIBLE FOR CONTACTING BIO CLEAN FOR ACTIVATION OF UNIT. MANUFACTURER'S WARRANTY IS VOID WITHOUT PROPER ACTIVATION BY A BIO CLEAN REPRESENTATIVE.

GENERAL NOTES

1. MANUFACTURER TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS AND CAPACITIES ARE SUBJECT TO CHANGE. FOR PROJECT SPECIFIC DRAWINGS DETAILING EXACT DIMENSIONS, WEIGHTS AND ACCESSORIES PLEASE CONTACT BIO CLEAN.

MEMORANDUM OF AGREEMENT OF STORM WATER QUALITY MANAGEMENT PLAN

The undersigned hereby enters into this Memorandum of Storm Water Quality Management Plan (the "Memorandum") on this _____ day of MONTH, 2023 with reference to the following:

A. The undersigned is the owner of certain real property located in the City of Rancho Cucamonga, County of San Bernardino, State of California legally described below and hereto referred to as "Exhibit A" (the "Real Property") and "Exhibit B" (Vicinity Map). Each exhibit is attached hereto and incorporated herein by this reference and also in the Water Quality Management Plan document, on file with the owner or its successors or assigns, and the City and hereinafter is referred to as "WQMP".

B. The undersigned is seeking certain permits and approvals from the City of Rancho Cucamonga ("City") for the development of the Real Property as follows: Precise Grading and Building Permit (the "Approvals").

C. In consideration of the City granting the Approvals, I the undersigned, agree to and accept the terms and conditions of the Storm Water Quality Management Plan (the "Plan") approved by the City's Engineering Services Department on MM/DD/2023, and bind the Real Property with the provisions of the Plan, which is on file with the City of Rancho Cucamonga's Engineering Services Department, File No. DRCXXXX-XXXXX, PGRXXXX-XXXXX, WQMPXXXX-XXXXX.

D. In consideration of the City granting the Approvals, the undersigned has agreed to and accepts the terms and conditions of the Plan as it relates to the Real Property and agrees that the Real Property shall be bound by and subject to the Plan.

E. The owner has chosen to install structures as required by Best Management Practices (BMPs) and to implement non-structural BMPs as described in Exhibit "C" (List of BMP Maintenance Items) and depicted in Exhibit "D" (BMP Site Map). The purpose of the WQMP is to minimize pollutants in urban runoff and to minimize other adverse impacts of urban runoff;

F. Said WQMP has been certified by the Owner and reviewed and approved by the City;

G. Said BMPs, with installation and/or implementation on private property and draining only private property, are part of a private facility with all implementation, maintenance or replacement, therefore, the sole responsibility of the Owner in accordance with the terms of this Agreement;

NOW, THEREFORE, it is hereby agreed by the undersigned as follows:

1. Owner hereby provides the City of Rancho Cucamonga's designee complete inspection access, of any duration, to the areas in which BMPs are applied and their immediate vicinity at any time, upon reasonable notice, or in the event of emergency, as determined by the City's Engineer, no advance notice, for the purpose of inspection, sampling, testing of device(s), and in case of emergency, to undertake all necessary repairs or other preventative measures at owner's expense as provided in paragraph 3 below. City shall make every effort at all times to minimize or avoid interference with Owner's use of the property.

2. The undersigned hereby agrees to the terms and conditions of the Plan, the provisions of which are incorporated by reference as though set out herein in full, and agrees that the Real Property shall be bound by and subject to the terms and conditions of the Plan, subject to minor modifications incorporated during construction, as approved by the City of Rancho Cucamonga Engineering Services Director.

3. The undersigned agrees to conduct the necessary routine maintenance of any structural devices designed into or installed as part of the storm water drainage system on the Real Property to reduce

pollutants in storm water runoff to the maximum extent practicable or to reestablish infiltration through the lifetime of the development which is the subject of Approvals.

4. The undersigned agrees to hold the City, its officials, officers, employees, volunteers, and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage, or injury, in law or equity, to property or persons, arising from the imposition of the Plan by the City.

5. The agreements contained herein and the terms and conditions of the Plan are covenants intended to run with the land and shall burden the Real Property and shall be binding upon future owners of all or any portion of the Real Property. Upon a transfer of the Real Property, the transferor (including the undersigned) shall be relieved of any obligations under this Memorandum or the Plan arising from and after the effective date of the transfer.

6. The provisions of this Memorandum are intended to constitute equitable servitudes which shall encumber the Real Property and be binding upon future owners of the Real Property or any portion thereof.

7. The provisions of the Memorandum may be enforced by the City, which, among other remedies, shall have the remedy of injunctive relief and other equitable remedies.

8. This Memorandum shall not be amended, modified or terminated without the prior written consent of the City, which consent to be effective shall be contained in a document executed by the City and recorded against the Real Property.

Non-Stormwater Discharges SC-10

Description

Non-stormwater discharges (NSWDs) are flows that do not consist entirely of stormwater. Some non-stormwater discharges do not include pollutants and may be discharged to the storm drain if local regulations allow. These include uncontaminated groundwater and natural springs. There are also some non-stormwater discharges that typically do not contain pollutants and may be discharged to the storm drain with conditions. These include: potable water sources, fire hydrant flushing, air conditioner condensate, landscape irrigation drainage and landscape watering, emergency firefighting, etc. as discussed in Section 2.

However there are certain non-stormwater discharges that pose an environmental concern. These discharges may originate from illegal dumping of industrial material or wastes and illegal connections such as internal floor drains, appliances, industrial processes, sinks, and toilets that are illegally connected to the nearby storm drainage system through on-site drainage and piping. These unauthorized discharges (examples of which may include: process waste waters, cooling waters, wash waters, and sanitary wastewater) can carry substances such as paint, oil, fuel and other automotive fluids, chemicals and other pollutants into storm drains.

Non-stormwater discharges will need to be addressed through a combination of detection and elimination. The ultimate goal is to effectively eliminate unauthorized non-stormwater discharges to the stormwater drainage system through implementation of measures to detect, correct, and enforce against illicit connections and illegal discharges of

pollutants on streets and into the storm drain system and downstream water bodies.

Approach

Initially the Discharger must make an assessment of non-stormwater discharges to determine which types must be eliminated or addressed through BMPs. The focus of the following approach is the elimination of unauthorized non-stormwater discharges. See other BMP Fact Sheets for activity-specific pollution prevention procedures.

General Pollution Prevention Protocols

- Implement waste management controls described in SC-34 Waste Handling and Disposal.

- Develop clear protocols and lines of communication for effectively prohibiting non-stormwater discharges, especially those that are not classified as hazardous. These are often not responded to as effectively as they need to be.

- Stencil or demarcate storm drains, where applicable, to prevent illegal disposal of pollutants. Storm drain inlets should have messages such as "Dump No Waste Drains to Stream" or similar stenciled or demarcated next to them to warn against ignorant or unintentional dumping of pollutants into the storm drainage system.

- Manage and control sources of water such as hose bibs, faucets, wash racks, irrigation heads, etc. Identify hoses and faucets in the SWPPP, and post signage for appropriate use.

Non-Stormwater Discharge Investigation Protocols

Identifying the sources of non-stormwater discharges requires the Discharger to conduct an investigation of the facility at regular intervals. There are several categories of non-stormwater discharges:

- Visible, easily identifiable discharges, typically generated as surface runoff, such as uncontained surface runoff from vehicle or equipment washing; and

- Non-visible, (e.g., subsurface) discharges into the site drainage system through a variety of pathways that are not obvious.

The approach to detecting and eliminating non-stormwater discharges will vary considerably, as discussed below:

Visible and identifiable discharges

- Conduct routine inspections of the facilities and of each major activity area and identify visible evidence of unauthorized non-stormwater discharges. This may include:

  - ✓ Visual observations of actual discharges occurring;

- ✓ Evidence of surface staining, discoloring etc. that indicates that discharges have occurred;
- ✓ Pools of water in low lying areas when a rain event has not occurred; and
- ✓ Discussions with operations personnel to understand practices that may lead to unauthorized discharges.

- ☐ If evidence of non-stormwater discharges is discovered:
  - ✓ Document the location and circumstances using Worksheets 5 and 6 (Section 2 of the manual), including digital photos;
  - ✓ Identify and implement any quick remedy or corrective action (e.g., moving uncovered containers inside or to a proper location); and
  - ✓ Develop a plan to eliminate the discharge. Consult the appropriate activity-specific BMP Fact Sheet for alternative approaches to manage and eliminate the discharge.
- ☐ Consult the appropriate activity-specific BMP Fact Sheet for alternative approaches to manage and eliminate the discharge. Make sure the facility SWPPP is up-to-date and includes applicable BMPs to address the non-stormwater discharge.

Other Illegal Discharges (Non visible)

Illicit Connections

- ☐ Locate discharges from the industrial storm drainage system to the municipal storm drain system through review of "as-built" piping schematics.
- ☐ Isolate problem areas and plug illicit discharge points.
- ☐ Locate and evaluate discharges to the storm drain system.
- ☐ Visual Inspection and Inventory:
  - ✓ Inventory and inspect each discharge point during dry weather.
  - ✓ Keep in mind that drainage from a storm event can continue for a day or two following the end of a storm and groundwater may infiltrate the underground stormwater collection system.
  - ✓ Non-stormwater discharges are often intermittent and may require periodic inspections.

Review Infield Piping

- ☐ A review of the "as-built" piping schematic is a way to determine if there are any connections to the stormwater collection system.

- Inspect the path of loading/unloading area drain inlets and floor drains in older buildings.

- Never assume storm drains are connected to the sanitary sewer system.

Monitoring for investigation/detection of illegal discharges

- If a suspected illegal or unknown discharge is detected, monitoring of the discharge may help identify the content and/or suggest the source. This may be done with a field screening analysis, flow meter measurements, or by collecting a sample for laboratory analysis. Section 5 and Appendix D describe the necessary field equipment and procedures for field investigations.

- Investigative monitoring may be conducted over time. For example if, a discharge is intermittent, then monitoring might be conducted to determine the timing of the discharge to determine the source.

- Investigative monitoring may be conducted over a spatial area. For example, if a discharge is observed in a pipe, then monitoring might be conducted at accessible upstream locations in order to pinpoint the source of the discharge.

- Generally, investigative monitoring requiring collection of samples and submittal for lab analysis requires proper planning and specially trained staff.

Smoke Testing

Smoke testing of wastewater and stormwater collection systems is used to detect connections between the two piping systems. Smoke testing is generally performed at a downstream location and the smoke is forced upstream using blowers to create positive pressure. The advantage to smoke testing is that it can potentially identify multiple potential discharge sources at once.

- Smoke testing uses a harmless, non-toxic smoke cartridges developed specifically for this purpose.

- Smoke testing requires specialized equipment (e.g., cartridges, blowers) and is generally only appropriate for specially trained staff.

- A Standard Operating Procedure (SOP) for smoke testing is highly desirable. The SOP should address the following elements:

  - ✓ Proper planning and notification of nearby residents and emergency services is necessary since introducing smoke into the system may result in false alarms;

  - ✓ During dry weather, the stormwater collection system is filled with smoke and then traced back to sources;

- ✓ Temporary isolation of segments of pipe using sand bags is often needed to force the smoke into leaking pipes; and
- ✓ The appearance of smoke in a waste vent pipe, at a sewer manhole, or even the base of a toilet indicates that there may be a connection between the sanitary and storm water systems.

- Most municipal wastewater agencies will have necessary staff and equipment to conduct smoke testing and they should be contacted if cross connections with the sanitary sewer are suspected. See SC-44 Drainage System Maintenance for more information.

Dye Testing

- Dye testing is typically performed when there is a suspected specific pollutant source and location (i.e., leaking sanitary sewer) and there is evidence of dry weather flows in the stormwater collection system.
- Dye is released at a probable upstream source location, either the facility's sanitary or process wastewater system. The dye must be released with a sufficient volume of water to flush the system.
- Operators then visually examine the downstream discharge points from the stormwater collection system for the presence of the dye.
- Dye testing can be performed informally using commercially available products in order to conduct an initial investigation for fairly obvious cross-connections.
- More detailed dye testing should be performed by properly trained staff and follow SOPs. Specialized equipment such as fluorometers may be necessary to detect low concentrations of dye.
- Most municipal wastewater agencies will have necessary staff and equipment to conduct dye testing and they should be contacted if cross connections with the sanitary sewer are suspected.

TV Inspection of Drainage System

- Closed Circuit Television (CCTV) can be employed to visually identify illicit connections to the industrial storm drainage system. Two types of CCTV systems are available: (1) a small specially designed camera that can be manually pushed on a stiff cable through storm drains to observe the interior of the piping, or (2) a larger remote operated video camera on treads or wheels that can be guided through storm drains to view the interior of the pipe.
- CCTV systems often include a high-pressure water jet and camera on a flexible cable. The water jet cleans debris and biofilm off the inside of pipes so the camera can take video images of the pipe condition.

- CCTV units can detect large cracks and other defects such as offsets in pipe ends caused by root intrusions or shifting substrate.
- CCTV can also be used to detect dye introduced into the sanitary sewer.
- CCTV inspections require specialized equipment and properly trained staff and are generally best left to specialized contractors or municipal public works staff.

Illegal Dumping

- Substances illegally dumped on streets and into the storm drain systems and creeks may include paints, used oil and other automotive fluids, construction debris, chemicals, fresh concrete, leaves, grass clippings, and pet wastes. These wastes can cause stormwater and receiving water quality problems as well as clog the storm drain system itself.
- Establish a system for tracking incidents. The system should be designed to identify the following:
  - ✓ Illegal dumping hot spots;
  - ✓ Types and quantities (in some cases) of wastes;
  - ✓ Patterns in time of occurrence (time of day/night, month, or year);
  - ✓ Mode of dumping (abandoned containers, "midnight dumping" from moving vehicles, direct dumping of materials, accidents/spills);
  - ✓ An anonymous tip/reporting mechanism; and
  - ✓ Evidence of responsible parties (e.g., tagging, encampments, etc.).
- One of the keys to success of reducing or eliminating illegal dumping is increasing the number of people at the facility who are aware of the problem and who have the tools to at least identify the incident, if not correct it. Therefore, train field staff to recognize and report the incidents.

Once a site has been cleaned:

- Post "No Dumping" signs with a phone number for reporting dumping and disposal.
- Landscaping and beautification efforts of hot spots may also discourage future dumping, as well as provide open space and increase property values.
- Lighting or barriers may also be needed to discourage future dumping.
- See fact sheet SC-11 Spill Prevention, Control, and Cleanup.

Inspection

- Regularly inspect and clean up hot spots and other storm drainage areas where illegal dumping and disposal occurs.
- Conduct field investigations of the industrial storm drain system for potential sources of non-stormwater discharges.
- Pro-actively conduct investigations of high priority areas. Based on historical data, prioritize specific geographic areas and/or incident type for pro-active investigations.

Spill and Leak Prevention and Response

- On paved surfaces, clean up spills with as little water as possible. Use a rag for small spills, a damp mop for general cleanup, and absorbent material for larger spills. If the spilled material is hazardous, then the used cleanup materials are also hazardous and must be sent to a certified laundry (rags) or disposed of as hazardous waste.
- Never hose down or bury dry material spills. Sweep up the material and dispose of properly.
- Use adsorbent materials on small spills rather than hosing down the spill. Remove the adsorbent materials promptly and dispose of properly.
- For larger spills, a private spill cleanup company or Hazmat team may be necessary.
- See SC-11 Spill Prevention Control and Cleanup.

Employee Training Program

- Training of technical staff in identifying and documenting illegal dumping incidents is required. The frequency of training must be presented in the SWPPP, and depends on site-specific industrial materials and activities.
- Consider posting a quick reference table near storm drains to reinforce training.
- Train employees to identify non-stormwater discharges and report discharges to the appropriate departments.
- Educate employees about spill prevention and cleanup.
- Well-trained employees can reduce human errors that lead to accidental releases or spills. The employee should have the tools and knowledge to immediately begin cleaning up a spill should one occur. Employees should be familiar with the Spill Prevention Control and Countermeasure Plan. Employees should be able to identify work/jobs with high potential for spills and suggest methods to reduce possibility.
- Determine and implement appropriate outreach efforts to reduce non-permissible non-stormwater discharges.

- Conduct spill response drills annually (if no events occurred) in order to evaluate the effectiveness of the plan.
- When a responsible party is identified, educate the party on the impacts of his or her actions.

Quality Assurance and Record Keeping

Performance Evaluation

- Annually review internal investigation results; assess whether goals were met and what changes or improvements are necessary.
- Obtain feedback from personnel assigned to respond to, or inspect for, illicit connections and illegal dumping incidents.
- Develop document and data management procedures.
- A database is useful for defining and tracking the magnitude and location of the problem.
- Report prohibited non-stormwater discharges observed during the course of normal daily activities so they can be investigated, contained, and cleaned up or eliminated.
- Document that non-stormwater discharges have been eliminated by recording tests performed, methods used, dates of testing, and any on-site drainage points observed.
- Annually document and report the results of the program.
- Maintain documentation of illicit connection and illegal dumping incidents, including significant conditionally exempt discharges that are not properly managed.
- Document training activities.

Potential Limitations and Work-Arounds

Some facilities may have space constraints, limited staffing and time limitations that may preclude implementation of BMPs. Provided below are typical limitations and recommended "work-arounds."

- Many facilities do not have accurate, up-to-date 'as-built' plans or drawings which may be necessary in order to conduct non-stormwater discharge assessments.
  - ✓ Online tools such as Google Earth™ can provide an aerial view of the facility and may be useful in understanding drainage patterns and potential sources of non-stormwater discharges
  - ✓ Local municipal jurisdictions may have useful drainage systems maps.

- Video surveillance cameras are commonly used to secure the perimeter of industrial facilities against break-ins and theft. These surveillance systems may also be useful for capturing illegal dumping activities. Minor, temporary adjustments to the field of view of existing surveillance camera systems to target known or suspected problem areas may be a cost-effective way of capturing illegal dumping activities and identifying the perpetrators.

Potential Capital Facility Costs and Operation & Maintenance Requirements

Facilities

- Capital facility cost requirements may be minimal unless cross-connections to storm drains are detected.
- Indoor floor drains may require re-plumbing if cross-connections are detected.
- Leaky sanitary sewers will require repair or replacement which can have significant costs depending on the size and industrial activity at the facility.

Maintenance (including administrative and staffing)

- The primary effort is for staff time and depends on how aggressively a program is implemented.
- Costs for containment, and disposal of any leak or discharge is borne by the Discharger.
- Illicit connections can be difficult to locate especially if there is groundwater infiltration.
- Illegal dumping and illicit connection violations requires technical staff to detect and investigate them.

Supplemental Information

Permit Requirements

The IGP authorizes certain Non-Storm Water Discharges (NSWDs) provided BMPs are included in the SWPPP and implemented to:

- Reduce or prevent the contact of authorized NSWDs with materials or equipment that are potential sources of pollutants;
- Reduce, to the extent practicable, the flow or volume of authorized NSWDs;
- Ensure that authorized NSWDs do not contain quantities of pollutants that cause or contribute to an exceedance of a water quality standards (WQS); and,

- Reduce or prevent discharges of pollutants in authorized NSWDs in a manner that reflects best industry practice considering technological availability and economic practicability and achievability."

Spill Prevention, Control & Cleanup SC-11

Description

Many activities that occur at an industrial or commercial site have the potential to cause accidental spills. Preparation for accidental spills, with proper training and reporting systems implemented, can minimize the discharge of pollutants to the environment.

Spills and leaks are one of the largest contributors of stormwater pollutants. Spill prevention and control plans are applicable to any site at which hazardous materials are stored or used. An effective plan should have spill prevention and response procedures that identify hazardous material storage areas, specify material handling procedures, describe spill response procedures, and provide locations of spill clean-up equipment and materials. The plan should take steps to identify and characterize potential spills, eliminate and reduce spill potential, respond to spills when they occur in an effort to prevent pollutants from entering the stormwater drainage system, and train personnel to prevent and control future spills. An adequate supply of spill clean-up materials must be maintained onsite.

Approach

General Pollution Prevention Protocols

- ☐ Develop procedures to prevent/mitigate spills to storm drain systems.
- ☐ Develop and standardize reporting procedures, containment, storage, and disposal activities, documentation, and follow-up procedures.
- ☐ Establish procedures and/or controls to minimize spills and leaks. The procedures should address:
  - ✓ Description of the facility, owner and address, activities, chemicals, and quantities present;

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION®

- ✓ Facility map of the locations of industrial materials;
- ✓ Notification and evacuation procedures;
- ✓ Cleanup instructions;
- ✓ Identification of responsible departments; and
- ✓ Identify key spill response personnel.

- ☐ Recycle, reclaim, or reuse materials whenever possible. This will reduce the amount of process materials that are brought into the facility.

Spill and Leak Prevention and Response

Spill Prevention

- ☐ Develop procedures to prevent/mitigate spills to storm drain systems. Develop and standardize reporting procedures, containment, storage, and disposal activities, documentation, and follow-up procedures.

- ☐ If illegal dumping is observed at the facility:

  - ✓ Post "No Dumping" signs with a phone number for reporting illegal dumping and disposal. Signs should also indicate fines and penalties applicable for illegal dumping.
  - ✓ Landscaping and beautification efforts may also discourage illegal dumping.
  - ✓ Bright lighting and/or entrance barriers may also be needed to discourage illegal dumping.

- ☐ Store and contain liquid materials in such a manner that if the container is ruptured, the contents will not discharge, flow, or be washed into the storm drainage system, surface waters, or groundwater.

- ☐ If the liquid is oil, gas, or other material that separates from and floats on water, install a spill control device (such as a tee section) in the catch basins that collects runoff from the storage tank area.

Preventative Maintenance

- ☐ Place drip pans or absorbent materials beneath all mounted taps, and at all potential drip and spill locations during filling and unloading of tanks. Any collected liquids or soiled absorbent materials must be reused/recycled or properly disposed.

- ☐ Store and maintain appropriate spill cleanup materials in a location known to all near the tank storage area; and ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.

- ☐ Sweep and clean the storage area monthly if it is paved, *do not hose down the area to a storm drain.*

- ☐ Check tanks (and any containment sumps) daily for leaks and spills. Replace tanks that are leaking, corroded, or otherwise deteriorating with tanks in good condition. Collect all spilled liquids and properly dispose of them.

- ☐ Label all containers according to their contents (e.g., solvent, gasoline).

- ☐ Label hazardous substances regarding the potential hazard (corrosive, radioactive, flammable, explosive, poisonous).

- ☐ Prominently display required labels on transported hazardous and toxic materials (per US DOT regulations).

- ☐ Identify key spill response personnel.

Spill Response

- ☐ Clean up leaks and spills immediately.

- ☐ Place a stockpile of spill cleanup materials where it will be readily accessible (e.g., near storage and maintenance areas).

- ☐ On paved surfaces, clean up spills with as little water as possible.

  - ✓ Use a rag for small spills, a damp mop for general cleanup, and absorbent material for larger spills.

  - ✓ If the spilled material is hazardous, then the used cleanup materials are also hazardous and must be sent to a certified laundry (rags) or disposed of as hazardous waste.

  - ✓ If possible use physical methods for the cleanup of dry chemicals (e.g., brooms, shovels, sweepers, or vacuums).

- ☐ Never hose down or bury dry material spills. Sweep up the material and dispose of properly.

- ☐ Chemical cleanups of material can be achieved with the use of adsorbents, gels, and foams. Use adsorbent materials on small spills rather than hosing down the spill. Remove the adsorbent materials promptly and dispose of properly.

- ☐ For larger spills, a private spill cleanup company or Hazmat team may be necessary.

Reporting

- Report spills that pose an immediate threat to human health or the environment to the Regional Water Quality Control Board or local authority as location regulations dictate.
- Federal regulations require that any oil spill into a water body or onto an adjoining shoreline be reported to the National Response Center (NRC) at 800-424-8802 (24 hour).
- Report spills to 911 for dispatch and clean-up assistance when needed. Do not contact fire agencies directly.
- Establish a system for tracking incidents. The system should be designed to identify the following:
  - ✓ Types and quantities (in some cases) of wastes;
  - ✓ Patterns in time of occurrence (time of day/night, month, or year);
  - ✓ Mode of dumping (abandoned containers, "midnight dumping" from moving vehicles, direct dumping of materials, accidents/spills);
  - ✓ Clean-up procedures; and
  - ✓ Responsible parties.

Employee Training Program

- Educate employees about spill prevention and cleanup.
- Well-trained employees can reduce human errors that lead to accidental releases or spills:
  - ✓ The employee should have the tools and knowledge to immediately begin cleaning up a spill should one occur; and
  - ✓ Employees should be familiar with the Spill Prevention Control and Countermeasure Plan.
- Employees should be educated about aboveground storage tank requirements. Employees responsible for aboveground storage tanks and liquid transfers should be thoroughly familiar with the Spill Prevention Control and Countermeasure Plan and the plan should be readily available.
- Train employees to recognize and report illegal dumping incidents.

Other Considerations (Limitations and Regulations)

- State regulations exist for facilities with a storage capacity of 10,000 gallons or more of petroleum to prepare a Spill Prevention Control and Countermeasure (SPCC) Plan (Health & Safety Code Chapter 6.67).
- State regulations also exist for storage of hazardous materials (Health & Safety Code Chapter 6.95), including the preparation of area and business plans for emergency response to the releases or threatened releases.
- Consider requiring smaller secondary containment areas (less than 200 sq. ft.) to be connected to the sanitary sewer, prohibiting any hard connections to the storm drain.

Requirements

Costs (including capital and operation & maintenance)

- Will vary depending on the size of the facility and the necessary controls.
- Prevention of leaks and spills is inexpensive. Treatment and/or disposal of contaminated soil or water can be quite expensive.

Maintenance (including administrative and staffing)

- Develop spill prevention and control plan, provide and document training, conduct inspections of material storage areas, and supply spill kits.
- Extra time is needed to properly handle and dispose of spills, which results in increased labor costs.

Supplemental Information

Further Detail of the BMP

Reporting

Record keeping and internal reporting represent good operating practices because they can increase the efficiency of the facility and the effectiveness of BMPs. A good record keeping system helps the facility minimize incident recurrence, correctly respond with appropriate cleanup activities, and comply with legal requirements. A record keeping and reporting system should be set up for documenting spills, leaks, and other discharges, including discharges of hazardous substances in reportable quantities. Incident records describe the quality and quantity of non-stormwater discharges to the storm sewer. These records should contain the following information:

- Date and time of the incident;
- Weather conditions;
- Duration of the spill/leak/discharge;

- Cause of the spill/leak/discharge;
- Response procedures implemented;
- Persons notified; and
- Environmental problems associated with the spill/leak/discharge.

Separate record keeping systems should be established to document housekeeping and preventive maintenance inspections, and training activities. All housekeeping and preventive maintenance inspections should be documented. Inspection documentation should contain the following information:

- Date and time the inspection was performed;
- Name of the inspector;
- Items inspected;
- Problems noted;
- Corrective action required; and
- Date corrective action was taken.

Other means to document and record inspection results are field notes, timed and dated photographs, videotapes, and drawings and maps.

Aboveground Tank Leak and Spill Control

Accidental releases of materials from aboveground liquid storage tanks present the potential for contaminating stormwater with many different pollutants. Materials spilled, leaked, or lost from tanks may accumulate in soils or on impervious surfaces and be carried away by stormwater runoff.

The most common causes of unintentional releases are:

- Installation problems;
- Failure of piping systems (pipes, pumps, flanges, couplings, hoses, and valves);
- External corrosion and structural failure;
- Spills and overfills due to operator error; and
- Leaks during pumping of liquids or gases from truck or rail car to a storage tank or vice versa.

Storage of reactive, ignitable, or flammable liquids should comply with the Uniform Fire Code and the National Electric Code. Practices listed below should be employed to enhance the code requirements:

- Tanks should be placed in a designated area.
- Tanks located in areas where firearms are discharged should be encapsulated in concrete or the equivalent.
- Designated areas should be impervious and paved with Portland cement concrete, free of cracks and gaps, in order to contain leaks and spills.
- Liquid materials should be stored in UL approved double walled tanks or surrounded by a curb or dike to provide the volume to contain 10 percent of the volume of all of the containers or 110 percent of the volume of the largest container, whichever is greater. The area inside the curb should slope to a drain.
- For used oil or dangerous waste, a dead-end sump should be installed in the drain.
- All other liquids should be drained to the sanitary sewer if available. The drain must have a positive control such as a lock, valve, or plug to prevent release of contaminated liquids.
- Accumulated stormwater in petroleum storage areas should be passed through an oil/water separator.

Maintenance is critical to preventing leaks and spills. Conduct routine inspections and:

- Check for external corrosion and structural failure.
- Check for spills and overfills due to operator error.
- Check for failure of piping system (pipes, pumps, flanges, coupling, hoses, and valves).
- Check for leaks or spills during pumping of liquids or gases from truck or rail car to a storage facility or vice versa.
- Visually inspect new tank or container installation for loose fittings, poor welding, and improper or poorly fitted gaskets.
- Inspect tank foundations, connections, coatings, and tank walls and piping system. Look for corrosion, leaks, cracks, scratches, and other physical damage that may weaken the tank or container system.
- Frequently relocate accumulated stormwater during the wet season.

- Periodically conduct integrity testing by a qualified professional.

Vehicle Leak and Spill Control

Major spills on roadways and other public areas are generally handled by highly trained Hazmat teams from local fire departments or environmental health departments. The measures listed below pertain to leaks and smaller spills at vehicle maintenance shops.

In addition to implementing the spill prevention, control, and clean up practices above, use the following measures related to specific activities:

Vehicle and Equipment Maintenance

- Perform all vehicle fluid removal or changing inside or under cover to prevent the run-on of stormwater and the runoff of spills.
- Regularly inspect vehicles and equipment for leaks, and repair immediately.
- Check incoming vehicles and equipment (including delivery trucks, and employee and subcontractor vehicles) for leaking oil and fluids. Do not allow leaking vehicles or equipment onsite.
- Always use secondary containment, such as a drain pan or drop cloth, to catch spills or leaks when removing or changing fluids.
- Immediately drain all fluids from wrecked vehicles.
- Store wrecked vehicles or damaged equipment under cover.
- Place drip pans or absorbent materials under heavy equipment when not in use.
- Use absorbent materials on small spills rather than hosing down the spill.
- Remove the adsorbent materials promptly and dispose of properly.
- Promptly transfer used fluids to the proper waste or recycling drums. Don't leave full drip pans or other open containers lying around.
- Oil filters disposed of in trashcans or dumpsters can leak oil and contaminate stormwater. Place the oil filter in a funnel over a waste oil recycling drum to drain excess oil before disposal. Oil filters can also be recycled. Ask your oil supplier or recycler about recycling oil filters.
- Store cracked batteries in a non-leaking secondary container. Do this with all cracked batteries, even if you think all the acid has drained out. If you drop a battery, treat it as if it is cracked. Put it into the containment area until you are sure it is not leaking.

Vehicle and Equipment Fueling

- Design the fueling area to prevent the run-on of stormwater and the runoff of spills:

  Cover fueling area if possible.

  Use a perimeter drain or slope pavement inward with drainage to a sump.

  Pave fueling area with concrete rather than asphalt.

- If dead-end sump is not used to collect spills, install an oil/water separator.
- Install vapor recovery nozzles to help control drips as well as air pollution.
- Discourage "topping-off' of fuel tanks.
- Use secondary containment when transferring fuel from the tank truck to the fuel tank.
- Use absorbent materials on small spills and general cleaning rather than hosing down the area. Remove the absorbent materials promptly.
- Carry out all Federal and State requirements regarding underground storage tanks, or install above ground tanks.
- Do not use mobile fueling of mobile industrial equipment around the facility; rather, transport the equipment to designated fueling areas.
- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Train employees in proper fueling and cleanup procedures.

Industrial Spill Prevention Response

For the purposes of developing a spill prevention and response program to meet the stormwater regulations, facility managers should use information provided in this fact sheet and the spill prevention/response portions of the fact sheets in this handbook, for specific activities.

The program should:

- Integrate with existing emergency response/hazardous materials programs (e.g., Fire Department).
- Develop procedures to prevent/mitigate spills to storm drain systems.
- Identify responsible departments.

- Develop and standardize reporting procedures, containment, storage, and disposal activities, documentation, and follow-up procedures.
- Address spills at municipal facilities, as well as public areas.
- Provide training concerning spill prevention, response and cleanup to all appropriate personnel.

Outdoor Loading/Unloading SC-30

Description

The loading/unloading of materials usually takes place outside on docks or terminals; therefore, materials spilled, leaked, or lost during loading/unloading may collect in the soil or on other surfaces and have the potential to be carried away by wind, stormwater runoff or when the area is cleaned. Additionally, rainfall may wash pollutants from machinery used to unload or move materials. Implementation of the following protocols will prevent or reduce the discharge of pollutants to stormwater from outdoor loading/unloading of materials.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

General Pollution Prevention Protocols

- Park tank trucks or delivery vehicles in designated areas so that spills or leaks can be contained.
- Limit exposure of material to rainfall whenever possible.
- Prevent stormwater run-on.
- Check equipment regularly for leaks.

Good Housekeeping

- Develop an operations plan that describes procedures for loading and/or unloading.
- Conduct loading and unloading in dry weather if possible.

Objectives
■ *Cover*
■ *Contain*
■ *Educate*
■ *Reduce/Minimize*
■ *Product Substitution*

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION®

- Cover designated loading/unloading areas to reduce exposure of materials to rain.
- Consider placing a seal or door skirt between delivery vehicles and building to prevent exposure to rain.
- Design loading/unloading area to prevent stormwater run-on, which would include grading or berming the area, and position roof downspouts so they direct stormwater away from the loading/unloading areas.
- Have employees load and unload all materials and equipment in covered areas such as building overhangs at loading docks if feasible.
- Load/unload only at designated loading areas.
- Use drip pans underneath hose and pipe connections and other leak-prone spots during liquid transfer operations, and when making and breaking connections. Several drip pans should be stored in a covered location near the liquid transfer area so that they are always available, yet protected from precipitation when not in use. Drip pans can be made specifically for railroad tracks. Drip pans must be cleaned periodically, and drip collected materials must be disposed of properly.
- Pave loading areas with concrete instead of asphalt.
- Avoid placing storm drains inlets in the area.
- Grade and/or berm the loading/unloading area with drainage to sump; regularly remove materials accumulated in sump.

Spill Response and Prevention Procedures

- Keep your spill prevention and control plan up-to-date or have an emergency spill cleanup plan readily available, as applicable.
- Contain leaks during transfer.
- Store and maintain appropriate spill cleanup materials in a location that is readily accessible and known to all employees.
- Ensure that employees are familiar with the site's spill control plan and proper spill cleanup procedures.
- Use drip pans or comparable devices when transferring oils, solvents, and paints.

Material Handling and Waste Management

- Spot clean leaks and drips routinely to prevent runoff of spillage.
- Do not pour liquid wastes into floor drains, sinks, outdoor storm drain inlets, or other storm drains or sewer connections.

- Do not put used or leftover cleaning solutions, solvents, and automotive fluids in the storm drain or sanitary sewer.
- Collect leaking or dripping fluids in drip pans or containers. Fluids are easier to recycle if kept separate.
- Promptly transfer used fluids to the proper waste or recycling drums. Do not leave drip pans or other open containers lying around.
- Minimize the possibility of stormwater pollution from outside waste receptacles by doing at least one of the following:
  - ✓ Use only watertight waste receptacle(s) and keep the lid(s) closed.
  - ✓ Grade and pave the waste receptacle area to prevent run-on of stormwater.
  - ✓ Install a roof over the waste receptacle area.
  - ✓ Install a low containment berm around the waste receptacle area.
  - ✓ Use and maintain drip pans under waste receptacles.
- Post "no littering" signs.
- Perform work area clean-up and dry sweep after daily operations.

Employee Training Program

- Train employees (e.g., fork lift operators) and contractors on proper spill containment and cleanup.
- Have employees trained in spill containment and cleanup present during loading/unloading.
- Train employees in proper handling techniques during liquid transfers to avoid spills.
- Make sure forklift operators are properly trained on loading and unloading procedures.

Quality Assurance and Record Keeping

- Keep accurate maintenance logs that document activities performed, quantities of materials removed, and improvement actions.
- Keep accurate logs of spill response actions that document what was spilled, how it was cleaned up, and how the waste was disposed.
- Establish procedures to complete logs and file them in the central office.
- Keep accurate logs of daily clean-up operations.

Potential Limitations and Work-Arounds

Some facilities may have space constraints, limited staffing and time limitations that may preclude implementation of BMPs. Provided below are typical limitations and recommended "work-arounds."

- Space and time limitations may preclude all transfers from being performed indoors or under cover.
  - ✓ Designate specific areas for outdoor loading and unloading.
  - ✓ Require employees to understand and follow spill and leak prevention BMPs.
- It may not be possible to conduct transfers only during dry weather.
  - ✓ Limit materials and equipment rainfall exposure to all extents practicable.
  - ✓ Require employees to understand and follow spill and leak prevention BMPs.

Potential Capital Facility Costs and Operation & Maintenance Requirements

Facilities

Many facilities will already have indoor or covered areas where loading/unloading takes place and will require no additional capital expenditures.

If outdoor activities are required, construction of berms or other means to retain spills and leaks may require appropriate constructed systems for containment. These containment areas may require significant new capital investment.

Capital investments will likely be required at some sites if adequate cover and containment facilities do not exist and can vary significantly depending upon site conditions.

Maintenance

Most of the operations and maintenance activities associated with implementing this BMP are integrally linked to routine operations as previously described. Therefore additional O&M is not required.

- Conduct regular inspections and make repairs and improvements as necessary.
- Check loading and unloading equipment regularly for leaks.
- Conduct regular broom dry-sweeping of area. Do not wash with water.

Supplemental Information

Loading and Unloading of Liquids

- Loading or unloading of liquids should occur in the manufacturing building so that any spills that are not completely retained can be discharged to the sanitary sewer,

treatment plant, or treated in a manner consistent with local sewer authorities and permit requirements.

- For loading and unloading tank trucks to above and below ground storage tanks, the following procedures should be used:
  - ✓ The area where the transfer takes place should be paved. If the liquid is reactive with the asphalt, Portland cement should be used to pave the area.
  - ✓ The transfer area should be designed to prevent run-on of stormwater from adjacent areas. Sloping the pad and using a curb, like a speed bump, around the uphill side of the transfer area should reduce run-on.
  - ✓ The transfer area should be designed to prevent runoff of spilled liquids from the area. Sloping the area to a drain should prevent runoff. The drain should be connected to a dead-end sump or to the sanitary sewer. A positive control valve should be installed on the drain.
- For transfer from rail cars to storage tanks that must occur outside, use the following procedures:
  - ✓ Drip pans should be placed at locations where spillage may occur, such as hose connections, hose reels, and filler nozzles. Use drip pans when making and breaking connections.
  - ✓ Drip pan systems should be installed between the rails to collect spillage from tank cars.

Outdoor Equipment Operations SC-32

Description

Outside process equipment operations and maintenance can contaminate stormwater runoff. Activities, such as grinding, painting, coating, sanding, degreasing or parts cleaning, landfills and waste piles, and solid waste treatment and disposal are examples of process operations that can lead to contamination of stormwater runoff. The targeted constituents will vary for each site depending on the operation being performed.

Approach

Implement source control BMPs to limit exposure of outdoor equipment to direct precipitation and stormwater run-on. Refer to SC-22 Vehicle and Equipment Repair for additional information.

General Pollution Prevention Protocols

- ☐ Perform the activity during dry periods whenever possible.
- ☐ Install secondary containment measures where leaks and spills may occur.
- ☐ Use non-toxic chemicals for maintenance and minimize or eliminate the use of solvents.
- ☐ Connect process equipment area to public sanitary sewer or facility wastewater treatment system when possible. Some jurisdictions require that secondary containment areas be connected to the sanitary sewer, prohibiting any hard connections to the storm drain.

Good Housekeeping

- ☐ Manage materials and waste properly (see Material Handling and Waste Management) to reduce adverse impacts on stormwater quality.

Objectives
■ *Cover*
■ *Contain*
■ *Educate*
■ *Reduce/Minimize*

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION®

- Cover the work area with a permanent roof if possible.
- Use drop cloths for sanding and painting operations.
- Use a vacuum for fine particle clean-up in pavement cracks and crevices.
- Minimize contact of stormwater with outside process equipment operations through berming and drainage routing (run-on prevention).
- "Spot clean" leaks and drips routinely. Leaks are not cleaned up until the absorbent is picked up and disposed of properly.
- Paint signs on storm drain inlets to indicate that they are not to receive liquid or solid wastes.
- Use roll down or permanent walls when windy/breezy to prevent wind transport of particulates/pollutants.

Preventative Maintenance

- Design outdoor equipment areas to prevent stormwater runoff and spills. Use a perimeter drain or slope pavement inward with drainage to sump.
- Dry clean the work area regularly. Do not wash outdoor equipment with water if there is a direct connection to the storm drain.
- Pave area with concrete rather than asphalt.
- Inspect outdoor equipment regularly for leaks or spills. Also check for structural failure, spills and overfills due to operator error, and/or failure of piping system.
- Inspect and clean, if necessary, storm drain inlets and catch basins within the outdoor equipment area before October 1 each year.

Spill Response and Prevention Procedures

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Have employees trained in emergency spill cleanup procedures present when dangerous waste, liquid chemicals, or other wastes are delivered.
- Place a stockpile of spill cleanup materials where it will be readily accessible.
- Prevent operator errors by using engineering safe guards and thus reducing accidental releases of pollutant.

Material Handling and Waste Management

- Do not pour liquid wastes into floor drains, sinks, outdoor storm drain inlets, or other storm drain or sewer connections.
- Collect leaking or dripping fluids in drip pans or containers. Fluids are easier to recycle if kept separate.
- Promptly transfer used fluids to the proper waste or recycling drums. Do not leave drip pans or other open containers lying around.
- Minimize the possibility of stormwater pollution from outside waste receptacles by doing at least one of the following:
  - ✓ Use only watertight waste receptacle(s) and keep the lid(s) closed.
  - ✓ Grade and pave the waste receptacle area to prevent run-on of stormwater.
  - ✓ Install a roof over the waste receptacle area.

Employee Training Program

- Educate employees about pollution prevention measures and goals.
- Train employees on proper equipment operation and maintenance procedures.
- Train all employees upon hiring and annually thereafter on proper methods for handling and disposing of waste. Ensure that all employees understand stormwater discharge prohibitions, wastewater discharge requirements, and these best management practices.
- Use a training log or similar method to document training.
- Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.

Quality Assurance and Record Keeping

- Keep accurate maintenance logs that document minimum BMP activities performed for outdoor equipment, types and quantities of materials removed and disposed of, and any improvement actions.
- Keep accurate logs of spill response actions that document what was spilled, how it was cleaned up, and how the waste was disposed.
- Establish procedures to complete logs and file them in the central office.

Potential Limitations and Work-Arounds

Some facilities may have space constraints, limited staffing and time limitations that may preclude implementation of BMPs. Provided below are typical limitations and recommended "work-arounds."

- Providing cover over outdoor equipment may be impractical or cost-prohibitive.
  - ✓ Operate outdoor equipment only during periods of dry weather.
- Regular operations and time limitations may require outdoor activities during wet weather.
  - ✓ Designate specific areas for outdoor activities.
  - ✓ Allow time for work area clean-up after each shift.
  - ✓ Require employees to understand and follow preventive maintenance and spill and leak prevention BMPs.
  - ✓ Design and install secondary containment and good housekeeping BMPs for outdoor equipment area.
- Storage sheds often must meet building and fire code requirements.

Potential Capital Facility Costs and Operation & Maintenance Requirements

Facilities

- Many facilities will already have indoor covered areas where vehicle and equipment repairs take place and will require no additional capital expenditures.
- If outdoor activities are required, construction of berms or other means to retain spills and leaks may require appropriate constructed systems for containment. These containment areas may require significant new capital investment.
- Capital investments will likely be required at some sites if adequate cover and containment facilities do not exist and can vary significantly depending upon site conditions.

Maintenance

- Most of the operations and maintenance activities associated with implementing this BMP are integrally linked to routine operations as previously described. Therefore additional O&M is not required.
- For facilities responsible for pre-treating their wastewater prior to discharging, the proper functioning of structural treatment system is an important maintenance consideration.
- Routine cleanout of oil and grease is required for the devices to maintain their effectiveness, usually at least once a month. During periods of heavy rainfall, cleanout is required more often to ensure pollutants are not washed through the trap. Sediment removal is also required on a regular basis to keep the device working efficiently.

Waste Handling & Disposal SC-34

Description

Improper storage and handling of solid wastes can allow toxic compounds, oils and greases, heavy metals, nutrients, suspended solids, and other pollutants to enter stormwater runoff. The discharge of pollutants to stormwater from waste handling and disposal can be prevented and reduced by tracking waste generation, storage, and disposal; reducing waste generation and disposal through source reduction, reuse, and recycling; and preventing run-on and runoff.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

General Pollution Prevention Protocols

- ☐ Accomplish reduction in the amount of waste generated using the following source controls:
  - ✓ Production planning and sequencing;
  - ✓ Process or equipment modification;
  - ✓ Raw material substitution or elimination;
  - ✓ Loss prevention and housekeeping;
  - ✓ Waste segregation and separation; and
  - ✓ Close loop recycling.
- ☐ Establish a material tracking system to increase awareness about material usage. This may reduce spills and minimize contamination, thus reducing the amount of waste produced.
- ☐ Recycle materials whenever possible.

Objectives
■ *Cover*
■ *Contain*
■ *Educate*
■ *Reduce/Minimize*
■ *Product Substitution*

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION®

- Use the entire product before disposing of the container.
- To the extent possible, store wastes under cover or indoors after ensuring all safety concerns such as fire hazard and ventilation are addressed.
- Provide containers for each waste stream at each work station. Allow time after shift to clean area.

Good Housekeeping

- Cover storage containers with leak proof lids or some other means. If waste is not in containers, cover all waste piles (plastic tarps are acceptable coverage) and prevent stormwater run-on and runoff with a berm. The waste containers or piles must be covered except when in use.
- Use drip pans or absorbent materials whenever grease containers are emptied by vacuum trucks or other means. Grease cannot be left on the ground. Collected grease must be properly disposed of as garbage.
- Dispose of rinse and wash water from cleaning waste containers into a sanitary sewer if allowed by the local sewer authority. Do not discharge wash water to the street or storm drain. Clean in a designated wash area that drains to a clarifier.
- Transfer waste from damaged containers into safe containers.
- Take special care when loading or unloading wastes to minimize losses. Loading systems can be used to minimize spills and fugitive emission losses such as dust or mist. Vacuum transfer systems can minimize waste loss.
- Keep the waste management area clean at all times by sweeping and cleaning up spills immediately.
- Use dry methods when possible (e.g., sweeping, use of absorbents) when cleaning around restaurant/food handling dumpster areas. If water must be used after sweeping/using absorbents, collect water and discharge through grease interceptor to the sewer.
- Stencil or demarcate storm drains on the facility's property with prohibitive message regarding waste disposal.
- Cover waste piles with temporary covering material such as reinforced tarpaulin, polyethylene, polyurethane, polypropylene or hypalon.
- If possible, move the activity indoor after ensuring all safety concerns such as fire hazard and ventilation are addressed.

Preventative Maintenance

- Prevent stormwater run-on from entering the waste management area by enclosing the area or building a berm around the area.
- Prevent waste materials from directly contacting rain.

- Cover waste piles with temporary covering material such as reinforced tarpaulin, polyethylene, polyurethane, polypropylene or hypalon.
- Cover the area with a permanent roof if feasible.
- Cover dumpsters to prevent rain from washing waste out of holes or cracks in the bottom of the dumpster.
- Check waste containers weekly for leaks and to ensure that lids are on tightly. Replace any that are leaking, corroded, or otherwise deteriorating.
- Sweep and clean the waste management area regularly. Use dry methods when possible (e.g., sweeping, vacuuming, use of absorbents) when cleaning around restaurant/food handling dumpster areas. If water must be used after sweeping/using absorbents, collect water and discharge through grease interceptor to the sewer.
- Inspect and replace faulty pumps or hoses regularly to minimize the potential of releases and spills.
- Repair leaking equipment including valves, lines, seals, or pumps promptly.

Spill Response and Prevention Procedures

- Keep your spill prevention and plan up-to-date.
- Have an emergency plan, equipment and trained personnel ready at all times to deal immediately with major spills.
- Collect all spilled liquids and properly dispose of them.
- Store and maintain appropriate spill cleanup materials in a location known to all near the designated wash area.
- Ensure that vehicles transporting waste have spill prevention equipment that can prevent spills during transport. Spill prevention equipment includes:
  - ✓ Vehicles equipped with baffles for liquid waste; and
  - ✓ Trucks with sealed gates and spill guards for solid waste.

Material Handling and Waste Management

Litter Control

- Post "No Littering" signs and enforce anti-litter laws.
- Provide a sufficient number of litter receptacles for the facility.
- Clean out and cover litter receptacles frequently to prevent spillage.

Waste Collection

- Keep waste collection areas clean.

- Inspect solid waste containers for structural damage regularly. Repair or replace damaged containers as necessary.
- Secure solid waste containers; containers must be closed tightly when not in use.
- Do not fill waste containers with washout water or any other liquid.
- Ensure that only appropriate solid wastes are added to the solid waste container. Certain wastes such as hazardous wastes, appliances, fluorescent lamps, pesticides, etc., may not be disposed of in solid waste containers (see chemical/ hazardous waste collection section below).
- Do not mix wastes; this can cause chemical reactions, make recycling impossible, and complicate disposal. Affix labels to all waste containers.

Chemical/Hazardous Wastes

- Select designated hazardous waste collection areas on-site.
- Store hazardous materials and wastes in covered containers and protect them from vandalism.
- Place hazardous waste containers in secondary containment.
- Make sure that hazardous waste is collected, removed, and disposed of only at authorized disposal areas.
- Hazardous waste cannot be reused or recycled; it must be disposed of by a licensed hazardous waste hauler.

Employee Training Program

- Educate employees about pollution prevention measures and goals.
- Train employees how to properly handle and dispose of waste using the source control BMPs described above.
- Train employees and subcontractors in proper hazardous waste management.
- Use a training log or similar method to document training.
- Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.

Quality Assurance and Record Keeping

- Keep accurate maintenance logs that document minimum BMP activities performed for waste handling and disposal, types and quantities of waste disposed of, and any improvement actions.
- Keep accurate logs of spill response actions that document what was spilled, how it was cleaned up, and how the waste was disposed.

- Establish procedures to complete logs and file them in the central office.

Potential Capital Facility Costs and Operation & Maintenance Requirements

Facilities

- Capital costs will vary substantially depending on the size of the facility and the types of waste handled. Significant capital costs may be associated with reducing wastes by modifying processes or implementing closed-loop recycling.
- Many facilities will already have indoor covered areas where waste materials will be stored and will require no additional capital expenditures for providing cover.
- If outdoor storage of wastes is required, construction of berms or other means to prevent stormwater run-on and runoff may require appropriate constructed systems for containment.
- Capital investments will likely be required at some sites if adequate cover and containment facilities do not exist and can vary significantly depending upon site conditions.

Maintenance

- Check waste containers weekly for leaks and to ensure that lids are on tightly. Replace any that are leaking, corroded, or otherwise deteriorating.
- Sweep and clean the waste management area regularly. Use dry methods when possible (e.g., sweeping, use of absorbents) when cleaning around restaurant/food handling dumpster areas. If water must be used after sweeping/using absorbents, collect water and discharge through grease interceptor to the sewer.
- Inspect and replace faulty pumps or hoses regularly to minimize the potential of releases and spills.
- Repair leaking equipment including valves, lines, seals, or pumps promptly.

Safer Alternative Products SC-35

Description

Promote the use of less harmful products and products that contain little or no TMDL and 303(d) list pollutants. Alternatives exist for most product classes including chemical fertilizers, pesticides, cleaning solutions, janitorial chemicals, automotive and paint products, and consumables (batteries, fluorescent lamps).

Approach

Pattern a new program after the many established programs around the state and country. Integrate this best management practice as much as possible with existing programs at your facility.

Develop a comprehensive program based on:

- The "Precautionary Principle," which is an alternative to the "Risk Assessment" model that says it's acceptable to use a potentially harmful product until physical evidence of its harmful effects are established and deemed too costly from an environmental or public health perspective. For instance, a risk assessment approach might say it's acceptable to use a pesticide until there is direct proof of an environmental impact. The Precautionary Principle approach is used to evaluate whether a given product is safe, whether it is really necessary, and whether alternative products would perform just as well.
- Environmentally Preferable Purchasing Program to minimize the purchase of products containing hazardous ingredients used in the facility's custodial services, fleet maintenance, and facility maintenance in favor of using alternate products that pose less risk to employees and to the environment.
- Integrated Pest Management (IPM) or Less-Toxic Pesticide Program, which uses a pest management approach that minimizes the use of toxic chemicals and gets rid of pests

Objectives
■ *Educate*
■ *Reduce/Minimize*
■ *Product Substitution*

by methods that pose a lower risk to employees, the public, and the environment.

- Energy Efficiency Program including no-cost and low-cost energy conservation and efficiency actions that can reduce both energy consumption and electricity bills, along with long-term energy efficiency investments.

Consider the following mechanisms for developing and implementing a comprehensive program:

- Policies
- Procedures
  - ✓ Standard operating procedures (SOPs);
  - ✓ Purchasing guidelines and procedures; and
  - ✓ Bid packages (services and supplies).
- Materials
  - ✓ Preferred or approved product and supplier lists;
  - ✓ Product and supplier evaluation criteria;
  - ✓ Training sessions and manuals; and
  - ✓ Fact sheets for employees.

Implement this BMP in conjunction with the Vehicle and Equipment Management fact sheets (SC-20 – SC-22) and SC-41 Building and Grounds Maintenance.

Employee Training Program

- Employees who handle potentially harmful materials should be trained in the use of safer alternatives.
- Purchasing departments should be trained on safer alternative products and encouraged to procure less hazardous materials and products that contain little or no harmful substances or TMDL pollutants.
- Employees and contractors / service providers can both be educated about safer alternatives by using information developed by a number of organizations including the references and resources provided in this fact sheet.

Potential Limitations and Work-Arounds

Some facilities may have space constraints, limited staffing and time limitations that may preclude implementation of BMPs. Provided below are typical limitations and recommended "work-arounds"

- Alternative products may not be available, suitable, or effective in every case.

- ✓ Minimize use of hazardous/harmful products if no alternative product is available.

Regulatory Considerations

This BMP has no regulatory requirements unless local/municipal ordinance applies. Existing regulations already encourage facilities to reduce the use of hazardous materials through incentives such as reduced:

- Specialized equipment storage and handling requirements;
- Storm water runoff sampling requirements;
- Training and licensing requirements; and
- Record keeping and reporting requirements.

Cost Considerations

- The primary cost is for staff time to: 1) develop new policies and procedures and 2) educate purchasing departments and employees who handle potentially harmful materials about the availability, procurement, and use of safer alternatives.
- Some alternative products may be slightly more expensive than conventional products.

Supplemental Information

The following discussion provides some general information on safer alternatives. More specific information on particular hazardous materials and the available alternatives may be found in the references and resources listed below.

- Automotive products – Less toxic alternatives are not available for many automotive products, especially engine fluids. But there are alternatives to grease lubricants, car polishes, degreasers, and windshield washer solution. Refined motor oil is also available.
- Vehicle/Trailer lubrication – Fifth wheel bearings on trucks require routine lubrication. Adhesive lubricants are available to replace typical chassis grease.
- Cleaners – Vegetables-based or citrus-based soaps are available to replace petroleum-based soaps/detergents.
- Paint products – Water-based paints, wood preservatives, stains, and finishes with low VOC content are available.
- Pesticides – Specific alternative products or methods exist to control most insects, fungi, and weeds.
- Chemical Fertilizers – Compost and soil amendments are natural alternatives.
- Consumables – Manufacturers have either reduced or are in the process of reducing the amount of heavy metals in consumables such as batteries and fluorescent lamps.

All fluorescent lamps contain mercury, however low-mercury containing lamps are now available from most hardware and lighting stores. Fluorescent lamps are also more energy efficient than the average incandescent lamp.

- Janitorial chemicals – Even biodegradable soap can harm fish and wildlife before it biodegrades. Biodegradable does not mean non-toxic. Safer products and procedures are available for floor stripping and cleaning, as well as carpet, glass, metal, and restroom cleaning and disinfecting. Use paper products with post-consumer recycled content and implement electric had dryers.

Examples

There are a number of business and trade associations, and communities with effective programs. Some of the more prominent are listed below in the references and resources section.

References and Resources

Note: Many of these references provide alternative products for materials that typically are used inside and disposed to the sanitary sewer as well as alternatives to products that usually end up in the storm drain.

Building & Grounds Maintenance SC-41

Description

Stormwater runoff from building and grounds maintenance activities can be contaminated with toxic hydrocarbons in solvents, fertilizers and pesticides, suspended solids, heavy metals, abnormal pH, and oils and greases. Utilizing the protocols in this fact sheet will prevent or reduce the discharge of pollutants to stormwater from building and grounds maintenance activities by washing and cleaning up with as little water as possible, following good landscape management practices, preventing and cleaning up spills immediately, keeping debris from entering the storm drains, and maintaining the stormwater collection system.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

General Pollution Prevention Protocols

- ☐ Switch to non-toxic chemicals for maintenance to the maximum extent possible.
- ☐ Choose cleaning agents that can be recycled.
- ☐ Encourage proper lawn management and landscaping, including use of native vegetation.
- ☐ Encourage use of Integrated Pest Management techniques for pest control.
- ☐ Encourage proper onsite recycling of yard trimmings.
- ☐ Recycle residual paints, solvents, lumber, and other material as much as possible.

Objectives
■ *Cover*
■ *Contain*
■ *Educate*
■ *Reduce/Minimize*
■ *Product Substitution*

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION®

- Clean work areas at the end of each work shift using dry cleaning methods such as sweeping and vacuuming.

Good Housekeeping

Pressure Washing of Buildings, Rooftops, and Other Large Objects

- In situations where soaps or detergents are used and the surrounding area is paved, pressure washers must use a water collection device that enables collection of wash water and associated solids. A sump pump, wet vacuum or similarly effective device must be used to collect the runoff and loose materials. The collected runoff and solids must be disposed of properly.

- If soaps or detergents are not used, and the surrounding area is paved, wash runoff does not have to be collected but must be screened. Pressure washers must use filter fabric or some other type of screen on the ground and/or in the catch basin to trap the particles in wash water runoff.

- If you are pressure washing on a grassed area (with or without soap), runoff must be dispersed as sheet flow as much as possible, rather than as a concentrated stream. The wash runoff must remain on the grass and not drain to pavement.

Landscaping Activities

- Dispose of grass clippings, leaves, sticks, or other collected vegetation as garbage, or by composting. Do not dispose of collected vegetation into waterways or storm drainage systems.

- Use mulch or other erosion control measures on exposed soils. See also SC-40, Contaminated and Erodible Areas, for more information.

Building Repair, Remodeling, and Construction

- Do not dump any toxic substance or liquid waste on the pavement, the ground, or toward a storm drain.

- Use ground or drop cloths underneath outdoor painting, scraping, and sandblasting work, and properly dispose of collected material daily.

- Use a ground cloth or oversized tub for activities such as paint mixing and tool cleaning.

- Clean paintbrushes and tools covered with water-based paints in sinks connected to sanitary sewers or in portable containers that can be dumped into a sanitary sewer drain. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents (e.g., paint thinner, turpentine, etc.) for recycling or proper disposal.

- Use a storm drain cover, filter fabric, or similarly effective runoff control mechanism if dust, grit, wash water, or other pollutants may escape the work area and enter a catch basin. This is particularly necessary on rainy days. The containment device(s) must be in place at the beginning of the work day, and accumulated dirty runoff and

solids must be collected and disposed of before removing the containment device(s) at the end of the work day.

- If you need to de-water an excavation site, you may need to filter the water before discharging to a catch basin or off-site. If directed off-site, you should direct the water through hay bales and filter fabric or use other sediment filters or traps.
- Store toxic material under cover during precipitation events and when not in use. A cover would include tarps or other temporary cover material.

Mowing, Trimming, and Planting

- Dispose of leaves, sticks, or other collected vegetation as garbage, by composting or at a permitted landfill. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Use mulch or other erosion control measures when soils are exposed.
- Place temporarily stockpiled material away from watercourses and drain inlets, and berm or cover stockpiles to prevent material releases to the storm drain system.
- Consider an alternative approach when bailing out muddy water: do not put it in the storm drain; pour over landscaped areas.
- Use hand weeding where practical.

Fertilizer and Pesticide Management

- Do not use pesticides if rain is expected.
- Do not mix or prepare pesticides for application near storm drains.
- Use the minimum amount needed for the job.
- Calibrate fertilizer distributors to avoid excessive application.
- Employ techniques to minimize off-target application (e.g., spray drift) of pesticides, including consideration of alternative application techniques.
- Apply pesticides only when wind speeds are low.
- Fertilizers should be worked into the soil rather than dumped or broadcast onto the surface.
- Irrigate slowly to prevent runoff and then only as much as is needed.
- Clean pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.

Inspection

- Inspect irrigation system periodically to ensure that the right amount of water is being applied and that excessive runoff is not occurring. Minimize excess watering and repair leaks in the irrigation system as soon as they are observed.

Building & Grounds Maintenance SC-41

Spill Response and Prevention Procedures

- ☐ Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- ☐ Place a stockpile of spill cleanup materials, such as brooms, dustpans, and vacuum sweepers (if desired) near the storage area where it will be readily accessible.
- ☐ Have employees trained in spill containment and cleanup present during the loading/unloading of dangerous wastes, liquid chemicals, or other materials.
- ☐ Familiarize employees with the Spill Prevention Control and Countermeasure Plan.
- ☐ Clean up spills immediately.

Material Handling and Waste Management

- ☐ Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers and pesticides and training of applicators and pest control advisors.
- ☐ Use less toxic pesticides that will do the job when applicable. Avoid use of copper-based pesticides if possible.
- ☐ Dispose of empty pesticide containers according to the instructions on the container label.
- ☐ Use up the pesticides. Rinse containers, and use rinse water as product. Dispose of unused pesticide as hazardous waste.
- ☐ Implement storage requirements for pesticide products with guidance from the local fire department and County Agricultural Commissioner. Provide secondary containment for pesticides.

Employee Training Program

- ☐ Educate and train employees on pesticide use and in pesticide application techniques to prevent pollution.
- ☐ Train employees and contractors in proper techniques for spill containment and cleanup.
- ☐ Be sure the frequency of training takes into account the complexity of the operations and the needs of individual staff.

Quality Assurance and Record Keeping

- ☐ Keep accurate logs that document maintenance activities performed and minimum BMP measures implemented.
- ☐ Keep accurate logs of spill response actions that document what was spilled, how it was cleaned up, and how the waste was disposed.
- ☐ Establish procedures to complete logs and file them in the central office.

Potential Capital Facility Costs and Operation & Maintenance Requirements

Facilities

- Additional capital costs are not anticipated for building and grounds maintenance. Implementation of the minimum BMPs described above should be conducted as part of regular site operations.

Maintenance

- Maintenance activities for the BMPs described above will be minimal, and no additional cost is anticipated.

Supplemental Information

Fire Sprinkler Line Flushing

Site fire sprinkler line flushing may be a source of non-stormwater runoff pollution. The water entering the system is usually potable water, though in some areas it may be non-potable reclaimed wastewater. There are subsequent factors that may drastically reduce the quality of the water in such systems. Black iron pipe is usually used since it is cheaper than potable piping, but it is subject to rusting and results in lower quality water. Initially, the black iron pipe has an oil coating to protect it from rusting between manufacture and installation; this will contaminate the water from the first flush but not from subsequent flushes. Nitrates, poly-phosphates and other corrosion inhibitors, as well as fire suppressants and antifreeze may be added to the sprinkler water system. Water generally remains in the sprinkler system a long time (typically a year) and between flushes may accumulate iron, manganese, lead, copper, nickel, and zinc. The water generally becomes anoxic and contains living and dead bacteria and breakdown products from chlorination. This may result in a significant BOD problem and the water often smells. Consequently dispose fire sprinkler line flush water into the sanitary sewer. Do not allow discharge to storm drain or infiltration due to potential high levels of pollutants in fire sprinkler line water.

Building Repair and Construction SC-42

Description

Site modifications are common, particularly at large industrial sites. The activity may vary from minor and normal building repair to major remodeling, or the construction of new facilities. These activities can generate pollutants including solvents, paints, paint and varnish removers, finishing residues, spent thinners, soap cleaners, kerosene, asphalt and concrete materials, adhesive residues, and old asbestos installation. Protocols in this fact sheet are intended to prevent or reduce the discharge of pollutants to stormwater from building repair, remodeling, and minor construction by using soil erosion controls, enclosing or covering building material storage areas, using good housekeeping practices, using safer alternative products, and training employees.

This fact sheet is intended to be used for minor repairs and construction. If major construction is required, the guidelines in the Construction BMP Handbook should be followed.

Approach

The BMP approach is to reduce potential for pollutant discharges through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

General Pollution Prevention Protocols

- ☐ Recycle residual paints, solvents, lumber, and other materials to the maximum extent practicable.
- ☐ Avoid outdoor repairs and construction during periods of wet weather.
- ☐ Use safer alternative products to the maximum extent practicable. See also SC-35 Safer Alternative Products for more information.

Objectives

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION®

- Buy recycled products to the maximum extent practicable.
- Inform on-site contractors of company policy on these matters and include appropriate provisions in their contract to ensure certain proper housekeeping and disposal practices are implemented.
- Make sure that nearby storm drains are well marked to minimize the chance of inadvertent disposal of residual paints and other liquids.

Good Housekeeping

Repair & Remodeling

- Keep the work site clean and orderly. Remove debris in a timely fashion. Sweep and vacuum the area regularly to remove sediments and small debris.
- Cover raw materials of particular concern that must be left outside, particularly during the rainy season. See also SC-33 Outdoor Storage of Raw Materials for more information.
- Use equipment and tools such as bag sanders to reduce accumulation of debris.
- Limit/prohibit work on windy days; implement roll-down walls or other measures to reduce wind transport of pollutants.
- Do not dump waste liquids down the storm drain.
- Dispose of wash water, sweepings, and sediments properly.
- Store liquid materials properly that are normally used in repair and remodeling such as paints and solvents. See also SC-31 Outdoor Liquid Container Storage for more information.
- Sweep out rain gutters or wash the gutter and trap the particles at the outlet of the downspout. A sock or geofabric placed over the outlet may effectively trap the materials. If the downspout is tight lined, place a temporary plug at the first convenient point in the storm drain and pump out the water with a vactor truck, and clean the catch basin sump where you placed the plug.
- Clean the storm drain system in the immediate vicinity of the construction activity after it is completed. See also SC-44 Drainage System Maintenance for more information.

Painting

- Enclose painting operations consistent with local air quality regulations and OSHA.
- Local air pollution regulations may, in many areas of the state, specify painting procedures which if properly carried out are usually sufficient to protect water quality.
- Develop paint handling procedures for proper use, storage, and disposal of paints.

- Transport paint and materials to and from job sites in containers with secure lids and tied down to the transport vehicle.
- Test and inspect spray equipment prior to starting to paint. Tighten all hoses and connections and do not overfill paint containers.
- Mix paint indoors before using so that any spill will not be exposed to rain. Do so even during dry weather because cleanup of a spill will never be 100 percent effective.
- Transfer and load paint and hot thermoplastic away from storm drain inlets.
- Do not transfer or load paint near storm drain inlets.
- Plug nearby storm drain inlets prior to starting painting and remove plugs when job is complete when there is risk of a spill reaching storm drains.
- Cover nearby storm drain inlets prior to starting work if sand blasting is used to remove paint.
- Use a ground cloth to collect the chips if painting requires scraping or sand blasting of the existing surface. Dispose of the residue properly.
- Cover or enclose painting operations properly to avoid drift.
- Clean the application equipment in a sink that is connected to the sanitary sewer if using water based paints.
- Capture all cleanup-water and dispose of properly.
- Dispose of paints containing lead or tributyl tin and considered a hazardous waste properly.
- Store leftover paints if they are to be kept for the next job properly, or dispose properly.
- Recycle paint when possible. Dispose of paint at an appropriate household hazardous waste facility.

Spill Response and Prevention Procedures

- Keep your spill prevention and control plan up-to-date.
- Place a stockpile of spill cleanup materials where it will be readily accessible.
- Clean up spills immediately.
- Excavate and remove the contaminated (stained) soil if a spill occurs on dirt.

Material Handling and Waste Management

- Post “No Littering” signs and enforce anti-litter laws.

- Provide a sufficient number of litter receptacles for the facility.
- Clean out and cover litter receptacles frequently to prevent spillage.
- Keep waste collection areas clean.
- Inspect solid waste containers for structural damage regularly. Repair or replace damaged containers as necessary.
- Secure solid waste containers; containers must be closed tightly when not in use.
- Do not fill waste containers with washout water or any other liquid.
- Ensure that only appropriate solid wastes are added to the solid waste container. Certain wastes such as hazardous wastes, appliances, fluorescent lamps, pesticides, etc., may not be disposed of in solid waste containers (see chemical/ hazardous waste collection section below).
- Do not mix wastes; this can cause chemical reactions, make recycling impossible, and complicate disposal. Affix labels to all waste containers.
- Make sure that hazardous waste is collected, removed, and disposed of properly. See also SC-34, Waste Handling and Disposal for more information.

Sediment and Erosion Controls

- Limit disturbance to bare soils and preserve natural vegetation whenever possible. See also EC-2, Preservation of Existing Vegetation, in the Construction BMP Handbook.
- Stabilize loose soils by re-vegetating whenever possible. See also EC-4 Hydroseeding, in the Construction BMP Handbook.
- Utilize non-vegetative stabilization methods for areas prone to erosion where vegetative options are not feasible. Examples include:
  - ✓ Areas of vehicular or pedestrian traffic such as roads or paths;
  - ✓ Arid environments where vegetation would not provide timely ground coverage, or would require excessive irrigation;
  - ✓ Rocky substrate, infertile or droughty soils where vegetation would be difficult to establish; and
  - ✓ Areas where vegetation will not grow adequately within the construction time frame.

  There are several non-vegetative stabilization methods and selection should be based on site-specific conditions. See also EC-16 Non-Vegetative Stabilization, in the Construction BMP Handbook.

- Utilize chemical stabilization when needed. See also EC-5 Soil Binders, in the Construction BMP Handbook.
- Use geosynthetic membranes to control erosion if feasible. See also EC-7 Geotextiles and Mats, in the Construction BMP Handbook.
- Stabilize all roadways, entrances, and exits to sufficiently control discharges of erodible materials from discharging or being tracked off the site. See also TC 1-3 Tracking Control, in the Construction BMP Handbook.
- Refer to the supplemental information provided below for projects that involve more extensive soil disturbance activities.

Employee Training Program

- Educate employees about pollution prevention measures and goals.
- Train employees how to properly implement the source control BMPs described above. Detailed information for Sediment and Erosion Control BMPs is provided in the Construction BMP Handbook.
- Proper education of off-site contractors is often overlooked. The conscientious efforts of well trained employees can be lost by unknowing off-site contractors, so make sure they are well informed about pollutant source control responsibilities.
- Use a training log or similar method to document training.

Quality Assurance and Record Keeping

- Keep accurate maintenance logs that document minimum BMP activities performed for building repair and construction, types and quantities of waste disposed of, and any improvement actions.
- Keep accurate logs of spill response actions that document what was spilled, how it was cleaned up, and how the waste was disposed.
- Establish procedures to complete logs and file them in the central office.

Potential Limitations and Work-Arounds

Some facilities may have space constraints, limited staffing and time limitations that may preclude implementation of BMPs. Provided below are typical limitations and recommended "work-arounds."

- This BMP is for minor construction only. The State's General Construction Activity Stormwater Permit has more extensive requirements for larger projects that would disturb one or more acres of surface.
  - ✓ Refer to the companion "Construction Best Management Practice Handbook" which contains specific guidance and best management practices for larger-scale projects.

- Time constraints may require some outdoor repairs and construction during wet weather.
  - ✓ Require employees to understand and follow good housekeeping and spill and leak prevention BMPs.
  - ✓ Inspect sediment and erosion control BMPs daily during periods of wet weather and repair or improve BMP implementation as necessary.
- Hazardous waste that cannot be reused or recycled must be disposed of by a licensed hazardous waste hauler.
  - ✓ Minimize use of hazardous materials to the maximum extent practicable.
- Be certain that actions to help stormwater quality are consistent with Cal- and Fed-OSHA and air quality regulations.
- Prices for recycled/safer alternative materials and fluids may be higher than those of conventional materials.

Potential Capital Facility Costs and Operation & Maintenance Requirements

Facilities

- Limited capital investments may be required at some sites if adequate cover and containment facilities do not exist for construction materials and wastes.
- Purchase and installation of erosion and sediment controls, if needed will require additional capital investments, and this amount will vary depending on site characteristics and the types of BMPs being implemented.
- Minimize costs by maintaining existing vegetation and limiting construction operations on bare soils.

Maintenance

- The erosion and sediment control BMPs described above require periodic inspection and maintenance to remain effective. The cost of these actions will vary depending on site characteristics and the types of BMPs being implemented.
- Irrigation costs may be required to establish and maintain vegetation.

Supplemental Information

Soil/Erosion Control

If the work involves exposing large areas of soil, employ the appropriate soil erosion and control techniques. See the Construction Best Management Practice Handbook. If old buildings are being torn down and not replaced in the near future, stabilize the site using measures described in SC-40 Contaminated or Erodible Areas.

If a building is to be placed over an open area with a storm drainage system, make sure the storm inlets within the building are covered or removed, or the storm line is connected to the sanitary sewer. If because of the remodeling a new drainage system is to be installed or the existing system is to be modified, consider installing catch basins as they serve as effective "in-line" treatment devices. Include in the catch basin a "turn-down" elbow or similar device to trap floatables.

Parking Area Maintenance SC-43

Description

Parking lots can contribute a number of substances, such as trash, suspended solids, hydrocarbons, oil and grease, and heavy metals that can enter receiving waters through stormwater runoff or non-stormwater discharges. The protocols in this fact sheet are intended to prevent or reduce the discharge of pollutants from parking areas and include using good housekeeping practices, following appropriate cleaning BMPs, and training employees.

BMPs for other outdoor areas on site (loading/unloading, material storage, and equipment operations) are described in SC-30 through SC-33.

Approach

The goal of this program is to ensure stormwater pollution prevention practices are considered when conducting activities on or around parking areas to reduce potential for pollutant discharge to receiving waters. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

General Pollution Prevention Protocols

- ☐ Encourage advanced designs and maintenance strategies for impervious parking lots. Refer to the treatment control BMP fact sheets in this manual for additional information.
- ☐ Keep accurate maintenance logs to evaluate BMP implementation.

Good Housekeeping

- ☐ Keep all parking areas clean and orderly. Remove debris, litter, and sediments in a timely fashion.
- ☐ Post "No Littering" signs and enforce anti-litter laws.

	*Preventative Maintenance*	✓
	*Spill and Leak Prevention and Response*	✓
	*Material Handling & Waste Management*	
	*Erosion and Sediment Controls*	
	*Employee Training Program*	✓
	*Quality Assurance Record Keeping*	✓

- ☐ Provide an adequate number of litter receptacles.
- ☐ Clean out and cover litter receptacles frequently to prevent spillage.

Preventative Maintenance

Inspection

Have designated personnel conduct inspections of parking facilities and stormwater conveyance systems associated with parking facilities on a regular basis.

- ☐ Inspect cleaning equipment/sweepers for leaks on a regular basis.

Surface Cleaning

- ☐ Use dry cleaning methods (e.g., sweeping, vacuuming) to prevent the discharge of pollutants into the stormwater conveyance system if possible.
- ☐ Establish frequency of public parking lot sweeping based on usage and field observations of waste accumulation.
- ☐ Sweep all parking lots at least once before the onset of the wet season.
- ☐ Dispose of parking lot sweeping debris and dirt at a landfill.
- ☐ Follow the procedures below if water is used to clean surfaces:
  - ✓ Block the storm drain or contain runoff.
  - ✓ Collect and pump wash water to the sanitary sewer or discharge to a pervious surface. Do not allow wash water to enter storm drains.
- ☐ Follow the procedures below when cleaning heavy oily deposits:
  - ✓ Clean oily spots with absorbent materials.
  - ✓ Use a screen or filter fabric over inlet, then wash surfaces.
  - ✓ Do not allow discharges to the storm drain.
  - ✓ Vacuum/pump discharges to a tank or discharge to sanitary sewer.
  - ✓ Dispose of spilled materials and absorbents appropriately.

Surface Repair

- ☐ Check local ordinance for SUSMP/LID ordinance.
- ☐ Preheat, transfer or load hot bituminous material away from storm drain inlets.
- ☐ Apply concrete, asphalt, and seal coat during dry weather to prevent contamination from contacting stormwater runoff.
- ☐ Cover and seal nearby storm drain inlets where applicable (with waterproof material or mesh) and manholes before applying seal coat, slurry seal, etc. Leave covers in

place until job is complete and all water from emulsified oil sealants has drained or evaporated. Clean any debris from these covered manholes and drains for proper disposal.

- Use only as much water as necessary for dust control during sweeping to avoid runoff.
- Catch drips from paving equipment that is not in use with pans or absorbent material placed under the machines. Dispose of collected material and absorbents properly.

Spill Response and Prevention Procedures

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Place a stockpile of spill cleanup materials where it will be readily accessible or at a central location.
- Clean up fluid spills immediately with absorbent rags or material.
- Dispose of spilled material and absorbents properly.

Employee Training Program

- Provide regular training to field employees and/or contractors regarding cleaning of paved areas and proper operation of equipment.
- Train employees and contractors in proper techniques for spill containment and cleanup.
- Use a training log or similar method to document training.

Quality Assurance and Record Keeping

- Keep accurate maintenance logs that document minimum BMP activities performed for parking area maintenance, types and quantities of waste disposed of, and any improvement actions.
- Keep accurate logs of spill response actions that document what was spilled, how it was cleaned up, and how the waste was disposed.
- Establish procedures to complete logs and file them in the central office.

Potential Capital Facility Costs and Operation & Maintenance Requirements

Facilities

- Capital investments may be required at some sites to purchase sweeping equipment, train sweeper operators, install oil/water/sand separators, or implement advanced BMPs. These costs can vary significantly depending upon site conditions and the amount of BMPs required.

Maintenance

- Sweep and clean parking lots regularly to minimize pollutant transport into storm drains from stormwater runoff.
- Clean out oil/water/sand separators regularly, especially after heavy storms.
- Maintain advanced BMPs such as vegetated swales, infiltration trenches, or detention basins as appropriate. Refer to the treatment control fact sheets for more information.

Supplemental Information

Advanced BMPs

Some parking areas may require advanced BMPs to further reduce pollutants in stormwater runoff, and a few examples are listed below. Refer to the Treatment Control Fact Sheets and the New Development and Redevelopment Manual for more information.

- When possible, direct sheet runoff to flow into biofilters (vegetated strip and swale) and/or infiltration devices.
- Utilize sand filters or oleophilic collectors for oily waste in low quantities.
- Arrange rooftop drains to prevent drainage directly onto paved surfaces.
- Design lot to include semi-permeable hardscape.

Drainage System Maintenance SC-44

Description

As a consequence of its function, the stormwater drainage facilities on site convey stormwater that may contain certain pollutants either to the offsite conveyance system that collects and transports urban runoff and stormwater, or directly to receiving waters. The protocols in this fact sheet are intended to reduce pollutants leaving the site to the offsite drainage infrastructure or to receiving waters through proper on-site conveyance system operation and maintenance. The targeted constituents will vary depending on site characteristics and operations.

Approach

Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

General Pollution Prevention Protocols

- ☐ Maintain catch basins, stormwater inlets, and other stormwater conveyance structures on a regular basis to remove pollutants, reduce high pollutant concentrations during the first flush of storms, prevent clogging of the downstream conveyance system, restore catch basins' sediment trapping capacity, and ensure the system functions properly hydraulically to avoid flooding.
- ☐ Develop and follow a site specific drainage system maintenance plan that describes maintenance locations, methods, required equipment, water sources, sediment collection areas, disposal requirements, and any other pertinent information.

Good Housekeeping

Illicit Connections and Discharges

- ☐ Look for evidence of illegal discharges or illicit connections during routine maintenance of conveyance system and drainage structures:

Objectives
■ *Cover*
■ *Contain*
■ *Educate*
■ *Reduce/Minimize*

Targeted Constituents

Preventative Maintenance	✓
Spill and Leak Prevention and Response	✓
Material Handling & Waste Management	
Erosion and Sediment Controls	
Employee Training Program	✓
Quality Assurance Record Keeping	✓

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION®

- ✓ Identify evidence of spills such as paints, discoloring, odors, etc.
- ✓ Record locations of apparent illegal discharges/illicit connections.
- ✓ Track flows back to potential discharges and conduct aboveground inspections. This can be done through visual inspection of upgradient manholes or alternate techniques including zinc chloride smoke testing, fluorometric dye testing, physical inspection testing, or television camera inspection.
- ✓ Eliminate the discharge once the origin of flow is established.

- ☐ Stencil or demarcate storm drains, where applicable, to prevent illegal disposal of pollutants. Storm drain inlets should have messages such as "Dump No Waste Drains to Stream" or similar stenciled next to them to warn against ignorant or intentional dumping of pollutants into the storm drainage system.
- ☐ Refer to fact sheet SC-10 Non-Stormwater Discharges for additional information.

Illegal Dumping

- ☐ Inspect and clean up hot spots and other storm drainage areas regularly where illegal dumping and disposal occurs.
- ☐ Establish a system for tracking incidents. The system should be designed to identify the following:
  - ✓ Illegal dumping hot spots;
  - ✓ Types and quantities (in some cases) of wastes;
  - ✓ Patterns in time of occurrence (time of day/night, month, or year);
  - ✓ Mode of dumping (abandoned containers, "midnight dumping" from moving vehicles, direct dumping of materials, accidents/spills); and
  - ✓ Responsible parties.
- ☐ Post "No Dumping" signs in problem areas with a phone number for reporting dumping and disposal. Signs should also indicate fines and penalties for illegal dumping.
- ☐ Refer to fact sheet SC-10 Non-Stormwater Discharges for additional information.

Preventative Maintenance

Catch Basins/Inlet Structures

- ☐ Staff should regularly inspect facilities to ensure compliance with the following:
  - ✓ Immediate repair of any deterioration threatening structural integrity.
  - ✓ Cleaning before the sump is 40% full. Catch basins should be cleaned as frequently as needed to meet this standard.

- Clean catch basins, storm drain inlets, and other conveyance structures before the wet season to remove sediments and debris accumulated during the summer.
- Conduct inspections more frequently during the wet season for problem areas where sediment or trash accumulates more often. Prioritize storm drain inlets; clean and repair as needed.
- Keep accurate logs of the number of catch basins cleaned.
- Store wastes collected from cleaning activities of the drainage system in appropriate containers or temporary storage sites in a manner that prevents discharge to the storm drain.
- Dewater the wastes if necessary with outflow into the sanitary sewer if permitted. Water should be treated with an appropriate filtering device prior to discharge to the sanitary sewer. If discharge to the sanitary sewer is not allowed, water should be pumped or vacuumed to a tank and properly disposed. Do not dewater near a storm drain or stream.

Storm Drain Conveyance System

- Locate reaches of storm drain with deposit problems and develop a flushing schedule that keeps the pipe clear of excessive buildup.
- Collect and pump flushed effluent to the sanitary sewer for treatment whenever possible.

Pump Stations

- Clean all storm drain pump stations prior to the wet season to remove silt and trash.
- Do not allow discharge to reach the storm drain system when cleaning a storm drain pump station or other facility.
- Conduct routine maintenance at each pump station.
- Inspect, clean, and repair as necessary all outlet structures prior to the wet season.

Open Channel

- Modify storm channel characteristics to improve channel hydraulics, increase pollutant removals, and enhance channel/creek aesthetic and habitat value.
- Conduct channel modification/improvement in accordance with existing laws. Any person, government agency, or public utility proposing an activity that will change the natural state of any river, stream, or lake in California, must enter into a Steam or Lake Alteration Agreement with the Department of Fish and Wildlife. The developer-applicant should also contact local governments (city, county, special districts), other state agencies (SWRCB, RWQCB, Department of Forestry, Department of Water Resources), and Army Corps of Engineers and USFWS.

Spill Response and Prevention Procedures

- Keep your spill prevention control plan up-to-date.

- Investigate all reports of spills, leaks, and/or illegal dumping promptly.
- Place a stockpile of spill cleanup materials where it will be readily accessible or at a central location.
- Clean up all spills and leaks using "dry" methods (with absorbent materials and/or rags) or dig up, remove, and properly dispose of contaminated soil.

Employee Training Program

- Educate employees about pollution prevention measures and goals.
- Train employees how to properly handle and dispose of waste using the source control BMPs described above.
- Train employees and subcontractors in proper hazardous waste management.
- Use a training log or similar method to document training.
- Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.
- Have staff involved in detection and removal of illicit connections trained in the following:
  - ✓ OSHA-required Health and Safety Training (29 CFR 1910.120) plus annual refresher training (as needed).
  - ✓ OSHA Confined Space Entry training (Cal-OSHA Confined Space, Title 8 and Federal OSHA 29 CFR 1910.146).
  - ✓ Procedural training (field screening, sampling, smoke/dye testing, TV inspection).

Quality Assurance and Record Keeping

- Keep accurate maintenance logs that document minimum BMP activities performed for drainage system maintenance, types and quantities of waste disposed of, and any improvement actions.
- Keep accurate logs of spill response actions that document what was spilled, how it was cleaned up, and how the waste was disposed.
- Keep accurate logs of illicit connections, illicit discharges, and illegal dumping into the storm drain system including how wastes were cleaned up and disposed.
- Establish procedures to complete logs and file them in the central office.

Potential Limitations and Work-Arounds

Provided below are typical limitations and recommended "work-arounds" for drainage system maintenance:

- Clean-up activities may create a slight disturbance for local aquatic species. Access to items and material on private property may be limited. Trade-offs may exist between channel hydraulics and water quality/riparian habitat. If storm channels or basins are recognized as wetlands, many activities, including maintenance, may be subject to regulation and permitting.

  - ✓ Perform all maintenance onsite and do not flush accumulated material downstream to private property or riparian habitats.

- Storm drain flushing is most effective in small diameter pipes (36-inch diameter pipe or less, depending on water supply and sediment collection capacity). Other considerations associated with storm drain flushing may include the availability of a water source, finding a downstream area to collect sediments, and liquid/sediment disposal.

  - ✓ Develop and follow a site specific drainage system maintenance plan that describes maintenance locations, methods, required equipment, water sources, sediment collection areas, disposal requirements, and any other pertinent information.

- Regulations may include adoption of substantial penalties for illegal dumping and disposal.

  - ✓ Do not dump illegal materials anywhere onsite.

  - ✓ Identify illicit connections, illicit discharge, and illegal dumping.

  - ✓ Cleanup spills immediately and properly dispose of wastes.

- Local municipal codes may include sections prohibiting discharge of soil, debris, refuse, hazardous wastes, and other pollutants into the sanitary sewer system.

  - ✓ Collect all materials and pollutants accumulated in drainage system and dispose of according to local regulations.

  - ✓ Install debris excluders in areas with a trash TMDL.

Potential Capital Facility Costs and Operation & Maintenance Requirements

Facilities

- Capital costs will vary substantially depending on the size of the facility and characteristics of the drainage system. Significant capital costs may be associated with purchasing water trucks, vacuum trucks, and any other necessary cleaning equipment or improving the drainage infrastructure to reduce the potential .

- Developing and implementing a site specific drainage system maintenance plan will require additional capital if a similar program is not already in place.

Maintenance

- Two-person teams may be required to clean catch basins with vactor trucks.
- Teams of at least two people plus administrative personnel are required to identify illicit discharges, depending on the complexity of the storm sewer system.
- Arrangements must be made for proper disposal of collected wastes.
- Technical staff are required to detect and investigate illegal dumping violations.
- Methods used for illicit connection detection (smoke testing, dye testing, visual inspection, and flow monitoring) can be costly and time-consuming. Site-specific factors, such as the level of impervious area, the density and ages of buildings, and type of land use will determine the level of investigation necessary.

Supplemental Information

Storm Drain Flushing

Flushing is a common maintenance activity used to improve pipe hydraulics and to remove pollutants in storm drainage systems. Flushing may be designed to hydraulically convey accumulated material to strategic locations, such as an open channel, another point where flushing will be initiated, or the sanitary sewer and the treatment facilities, thus preventing re-suspension and overflow of a portion of the solids during storm events. Flushing prevents "plug flow" discharges of concentrated pollutant loadings and sediments. Deposits can hinder the designed conveyance capacity of the storm drain system and potentially cause backwater conditions in severe cases of clogging.

Storm drain flushing usually takes place along segments of pipe with grades that are too flat to maintain adequate velocity to keep particles in suspension. An upstream manhole is selected to place an inflatable device that temporarily plugs the pipe. Further upstream, water is pumped into the line to create a flushing wave. When the upstream reach of pipe is sufficiently full to cause a flushing wave, the inflated device is rapidly deflated with the assistance of a vacuum pump, thereby releasing the backed up water and resulting in the cleaning of the storm drain segment.

To further reduce impacts of stormwater pollution, a second inflatable device placed well downstream may be used to recollect the water after the force of the flushing wave has dissipated. A pump may then be used to transfer the water and accumulated material to the sanitary sewer for treatment. In some cases, an interceptor structure may be more practical or required to recollect the flushed waters.

It has been found that cleansing efficiency of periodic flush waves is dependent upon flush volume, flush discharge rate, sewer slope, sewer length, sewer flow rate, sewer diameter, and population density. As a rule of thumb, the length of line to be flushed should not exceed 700 feet. At this maximum recommended length, the percent removal efficiency ranges between 65-75% for organics and 55-65% for dry weather grit/inorganic material. The percent removal efficiency drops rapidly beyond that. Water is commonly supplied by a water truck, but fire hydrants can also supply water. To make the best use of water, it is recommended that reclaimed water be used if allowed or that fire hydrant line flushing coincide with storm sewer flushing.

Efficient Irrigation SD-12

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Irrigation water provided to landscaped areas may result in excess irrigation water being conveyed into stormwater drainage systems.

Approach

Project plan designs for development and redevelopment should include application methods of irrigation water that minimize runoff of excess irrigation water into the stormwater conveyance system.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Designing New Installations

The following methods to reduce excessive irrigation runoff should be considered, and incorporated and implemented where determined applicable and feasible by the Permittee:

- Employ rain-triggered shutoff devices to prevent irrigation after precipitation.
- Design irrigation systems to each landscape area's specific water requirements.
- Include design featuring flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.
- Implement landscape plans consistent with County or City water conservation resolutions, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Design timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water drainage system.
- Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider design features such as:
  - Using mulches (such as wood chips or bar) in planter areas without ground cover to minimize sediment in runoff
  - Installing appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant materials where possible and/or as recommended by the landscape architect
  - Leaving a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible
  - Choosing plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth
- Employ other comparable, equally effective methods to reduce irrigation water runoff.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Storm Drain Signage SD-13

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- ☑ Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Waste materials dumped into storm drain inlets can have severe impacts on receiving and ground waters. Posting notices regarding discharge prohibitions at storm drain inlets can prevent waste dumping. Storm drain signs and stencils are highly visible source controls that are typically placed directly adjacent to storm drain inlets.

Approach

The stencil or affixed sign contains a brief statement that prohibits dumping of improper materials into the urban runoff conveyance system. Storm drain messages have become a popular method of alerting the public about the effects of and the prohibitions against waste disposal.

Suitable Applications

Stencils and signs alert the public to the destination of pollutants discharged to the storm drain. Signs are appropriate in residential, commercial, and industrial areas, as well as any other area where contributions or dumping to storm drains is likely.

Design Considerations

Storm drain message markers or placards are recommended at all storm drain inlets within the boundary of a development project. The marker should be placed in clear sight facing toward anyone approaching the inlet from either side. All storm drain inlet locations should be identified on the development site map.

Designing New Installations

The following methods should be considered for inclusion in the project design and show on project plans:

- Provide stenciling or labeling of all storm drain inlets and catch basins, constructed or modified, within the project area with prohibitive language. Examples include “NO DUMPING

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

– DRAINS TO OCEAN" and/or other graphical icons to discourage illegal dumping.

- Post signs with prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area.

Note - Some local agencies have approved specific signage and/or storm drain message placards for use. Consult local agency stormwater staff to determine specific requirements for placard types and methods of application.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. If the project meets the definition of "redevelopment", then the requirements stated under " designing new installations" above should be included in all project design plans.

Additional Information

Maintenance Considerations

- Legibility of markers and signs should be maintained. If required by the agency with jurisdiction over the project, the owner/operator or homeowner's association should enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards or signs.

Placement

- Signage on top of curbs tends to weather and fade.

- Signage on face of curbs tends to be worn by contact with vehicle tires and sweeper brooms.

Supplemental Information

Examples

- Most MS4 programs have storm drain signage programs. Some MS4 programs will provide stencils, or arrange for volunteers to stencil storm drains as part of their outreach program.

Other Resources

A Manual for the Standard Urban Stormwater Mitigation Plan (SUSMP), Los Angeles County Department of Public Works, May 2002.

Model Standard Urban Storm Water Mitigation Plan (SUSMP) for San Diego County, Port of San Diego, and Cities in San Diego County, February 14, 2002.

Model Water Quality Management Plan (WQMP) for County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County, Draft February 2003.

Ventura Countywide Technical Guidance Manual for Stormwater Quality Control Measures, July 2002.

Maintenance Bays & Docks SD-31

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- ☑ Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

Description

Several measures can be taken to prevent operations at maintenance bays and loading docks from contributing a variety of toxic compounds, oil and grease, heavy metals, nutrients, suspended solids, and other pollutants to the stormwater conveyance system.

Approach

In designs for maintenance bays and loading docks, containment is encouraged. Preventative measures include overflow containment structures and dead-end sumps. However, in the case of loading docks from grocery stores and warehouse/distribution centers, engineered infiltration systems may be considered.

Suitable Applications

Appropriate applications include commercial and industrial areas planned for development or redevelopment.

Design Considerations

Design requirements for vehicle maintenance and repair are governed by Building and Fire Codes, and by current local agency ordinances, and zoning requirements. The design criteria described in this fact sheet are meant to enhance and be consistent with these code requirements.

Designing New Installations

Designs of maintenance bays should consider the following:

- Repair/maintenance bays and vehicle parts with fluids should be indoors; or designed to preclude urban run-on and runoff.
- Repair/maintenance floor areas should be paved with Portland cement concrete (or equivalent smooth impervious surface).

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Repair/maintenance bays should be designed to capture all wash water leaks and spills. Provide impermeable berms, drop inlets, trench catch basins, or overflow containment structures around repair bays to prevent spilled materials and wash-down waters form entering the storm drain system. Connect drains to a sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is prohibited. If required by local jurisdiction, obtain an Industrial Waste Discharge Permit.

- Other features may be comparable and equally effective.

The following designs of loading/unloading dock areas should be considered:

- Loading dock areas should be covered, or drainage should be designed to preclude urban run-on and runoff.

- Direct connections into storm drains from depressed loading docks (truck wells) are prohibited.

- Below-grade loading docks from grocery stores and warehouse/distribution centers of fresh food items should drain through water quality inlets, or to an engineered infiltration system, or an equally effective alternative. Pre-treatment may also be required.

- Other features may be comparable and equally effective.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Additional Information

Stormwater and non-stormwater will accumulate in containment areas and sumps with impervious surfaces. Contaminated accumulated water must be disposed of in accordance with applicable laws and cannot be discharged directly to the storm drain or sanitary sewer system without the appropriate permit.

Other Resources

A Manual for the Standard Urban Stormwater Mitigation Plan (SUSMP), Los Angeles County Department of Public Works, May 2002.

Model Standard Urban Storm Water Mitigation Plan (SUSMP) for San Diego County, Port of San Diego, and Cities in San Diego County, February 14, 2002.

Model Water Quality Management Plan (WQMP) for County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County, Draft February 2003.

Ventura Countywide Technical Guidance Manual for Stormwater Quality Control Measures, July 2002.

Trash Storage Areas SD-32

Description

Trash storage areas are areas where a trash receptacle (s) are located for use as a repository for solid wastes. Stormwater runoff from areas where trash is stored or disposed of can be polluted. In addition, loose trash and debris can be easily transported by water or wind into nearby storm drain inlets, channels, and/or creeks. Waste handling operations that may be sources of stormwater pollution include dumpsters, litter control, and waste piles.

Approach

This fact sheet contains details on the specific measures required to prevent or reduce pollutants in stormwater runoff associated with trash storage and handling. Preventative measures including enclosures, containment structures, and impervious pavements to mitigate spills, should be used to reduce the likelihood of contamination.

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Design requirements for waste handling areas are governed by Building and Fire Codes, and by current local agency ordinances and zoning requirements. The design criteria described in this fact sheet are meant to enhance and be consistent with these code and ordinance requirements. Hazardous waste should be handled in accordance with legal requirements established in Title 22, California Code of Regulation.

Wastes from commercial and industrial sites are typically hauled by either public or commercial carriers that may have design or access requirements for waste storage areas. The design criteria in this fact sheet are recommendations and are not intended to be in conflict with requirements established by the waste hauler. The waste hauler should be contacted prior to the design of your site trash collection areas. Conflicts or issues should be discussed with the local agency.

Designing New Installations

Trash storage areas should be designed to consider the following structural or treatment control BMPs:

- Design trash container areas so that drainage from adjoining roofs and pavement is diverted around the area(s) to avoid run-on. This might include berming or grading the waste handling area to prevent run-on of stormwater.
- Make sure trash container areas are screened or walled to prevent off-site transport of trash.

- Use lined bins or dumpsters to reduce leaking of liquid waste.
- Provide roofs, awnings, or attached lids on all trash containers to minimize direct precipitation and prevent rainfall from entering containers.
- Pave trash storage areas with an impervious surface to mitigate spills.
- Do not locate storm drains in immediate vicinity of the trash storage area.
- Post signs on all dumpsters informing users that hazardous materials are not to be disposed of therein.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Additional Information

Maintenance Considerations

The integrity of structural elements that are subject to damage (i.e., screens, covers, and signs) must be maintained by the owner/operator. Maintenance agreements between the local agency and the owner/operator may be required. Some agencies will require maintenance deed restrictions to be recorded of the property title. If required by the local agency, maintenance agreements or deed restrictions must be executed by the owner/operator before improvement plans are approved.

Attachment F
Infiltration Report

October 15, 2021

Black Creek Group
4675 MacArthur Court, Suite 625
Newport Beach, California 92660

Attention: Mr. Chris Sanford
Senior Vice President

Project No.: **21G209-2**

Subject: **Results of Infiltration Testing**
Proposed Warehouse Development
12459 Arrow Route
Rancho Cucamonga, California

Reference: Geotechnical Investigation, Proposed Warehouse Development, 12459 Arrow Route, Rancho Cucamonga, California, prepared by Southern California Geotechnical, Inc. (SCG) for Black Creek Group, SCG Project No. 21G209-1, dated October 15, 2021.

Mr. Sanford:

In accordance with your request, we have conducted infiltration testing at the subject site. We are pleased to present this report summarizing the results of the infiltration testing and our design recommendations.

Scope of Services

The scope of services performed for this project was in general accordance with our Proposal No. 21P370, dated August 12, 2021. The scope of services included site reconnaissance, subsurface exploration, field testing, and engineering analysis to determine the infiltration rates of the on-site soils. The infiltration testing was performed in general accordance with the guidelines published in the Riverside County – Low Impact Development BMP Design Handbook – Section 2.3 of Appendix A, prepared for the Riverside County Department of Environmental Health (RCDEH), dated December, 2013. The San Bernardino County standards defer to the guidelines published by the RCDEH.

Site and Project Description

The site is located at the southwest corner of Arrow Route and Juneberry Drive in Rancho Cucamonga, California. The site is bounded to the north by Arrow Route, to the west by an automobile auction facility, to the south by a railroad easement, and to the east by existing commercial/industrial buildings and Juneberry Drive. The general location of the site is illustrated on the Site Location Map, enclosed as Plate 1 of this report.

The site consists of an L-shaped area, 94.08± acres in size. Based on our visit to the site, the site is being utilized as a steel manufacturing facility operated by CMC Steel. Large portions of the

site appear to be inactive, particularly the southern area of the property. The northern area of the site still appears to be in an active manufacturing condition.

The northwest portion of the site is currently being utilized for scrap metal and raw material storage. Four contiguous, one- or two-story industrial buildings are located in this area. The southwest portion of the site contains a large melt shop building that was previously utilized to melt down scrap metal and raw materials. The areas around this building include conveyors, ventilation ducting, large open areas for materials storage, railroad spurs and areas of pavement. Large stockpiles of sand/gravel and crushed concrete are also present in this area. The southeast portion of the site contains a large furnace building, cooling tower, and structural steel and rebar manufacturing facility. Several below-grade concrete pits are located in this area of the site. Several areas used for materials storage are also present around the buildings associated with the furnace building. The northeast portion of the site was previously utilized for structural steel and re-bar storage. Two single-story industrial structures are present in this area of the site. Ground surface cover throughout the majority of the site consists of asphaltic concrete pavements and Portland cement concrete pavements. The pavements exhibit moderate to severe distress, with cracking and potholes throughout. Several rows of large trees are present along the drive lanes in the northern and central regions of the site.

Detailed topographic information was not available at the time of this report. However, based on topographic information obtained from Google Earth, the site topography ranges from 1,167± to 1,127± feet msl in the northeastern and southwestern portions of the site, respectively. Overall, the site slopes gently toward the south with an average gradient of approximately 1 to 2 percent.

Proposed Development

Based on a conceptual site plan (Scheme 6) provided to our office by the client, the site will be developed with two (2) warehouses. Building 1 will be located in the western area of the site and will be 1,366,140± ft² in size. Building 2 will be located in the eastern area of the site and will be 549,560± ft² in size. Dock-high doors will be constructed along portions of the east and west building walls for Building 1 and along portions of the north and south building walls for Building 2. The buildings will be surrounded by asphaltic concrete pavements in the parking and drive lanes, Portland cement concrete pavements in the loading dock areas, and limited areas of concrete flatwork and landscape planters throughout.

Based on our conversations with representatives of Thienes Engineering, Inc., the project civil engineer, the proposed development will include on-site stormwater infiltration. The infiltration system will consist of four (4) areas of below-grade infiltration chambers located in the southwest, south-central, and southeastern areas of the site. The bottom of the infiltration chambers will be approximately 12 feet below the existing site grades.

Concurrent Study

SCG concurrently conducted a geotechnical investigation at the subject site, referenced above. As a part of this study, twenty-four (24) borings were advanced to depths of 10 to 25± feet below the existing site grades. Artificial fill and possible fill soils were encountered beneath the existing pavements at all of the boring locations, extending to depths of 2½ to 8½± feet below the existing site grades. The artificial fill and possible fill soils generally consist of loose to very dense

gravelly fine to coarse sands, silty fine to coarse sands, and well-graded sands with varying gravel content. Trace quantities of slag were occasionally encountered within the fill soils. Native alluvium was encountered beneath the artificial fill soils at all of the boring locations, extending to at least the maximum depth explored of 25± feet below existing site grades. The alluvium generally consisted of medium dense to very dense, silty fine to coarse sands, fine to coarse sands, and gravelly fine to coarse sands.

Groundwater

Free water was not encountered during the drilling of any of the borings. Based on the lack of any water within the borings, and the moisture contents of the recovered soil samples, the static groundwater table is considered to have existed at a depth in excess of 25± feet at the time of the subsurface exploration.

As part of our research, we reviewed readily available groundwater data in order to determine regional groundwater depths. The primary reference used to determine the groundwater depths in the subject site area is the California Department of Water Resources website, http://www.water.ca.gov/waterdatalibrary/. The nearest monitoring well is located approximately 2.3 miles northeast from the site. Water level readings within these monitoring wells indicate high groundwater levels of 575± feet below site grades (June 2012).

Subsurface Exploration

Scope of Exploration

The subsurface exploration conducted for the infiltration testing consisted of eight (8) infiltration test borings, advanced to depths of 7 to 12± feet below the existing site grades. The infiltration borings were advanced using a truck-mounted drilling rig, equipped with 8-inch-diameter hollow-stem augers and were logged during drilling by a member of our staff. The approximate locations of the infiltration test borings (identified as I-1 and I-8) are indicated on the Infiltration Test Location Plan, enclosed as Plate 2 of this report.

Upon the completion of the infiltration borings, the bottom of each test boring was covered with 2± inches of clean ¾-inch gravel. A sufficient length of 3-inch-diameter perforated PVC casing was then placed into each test hole so that the PVC casing extended from the bottom of the test hole to the ground surface. Clean ¾-inch gravel was then installed in the annulus surrounding the PVC casing.

Geotechnical Conditions

Artificial fill soils were encountered beneath the pavements at most of the infiltration boring locations, extending to depths of 3 to 10½± below the existing site grades. The fill soils generally consist of medium dense silty fine sands, silty fine to medium sands, and silty fine to coarse sands with varying amount of fine gravel content. The fill soils possess a disturbed mottled appearance and some metal debris resulting in their classification as artificial fill. It should be noted that a concrete slab was encountered at a depth of 7± feet at Infiltration Boring No. I-4. Refusal conditions were encountered at 7± feet due to the concrete slab. Native alluvial soils were encountered beneath the pavements or beneath the fill soils at all of the infiltration boring

locations, extending to at least the maximum depth explored of 12± feet below the existing site grades. The alluvial soils generally consist of medium dense silty sands and gravelly sands. The Boring Logs, which illustrate the conditions encountered at the boring locations, are included with this report.

Infiltration Testing

As previously mentioned, the infiltration testing was performed in general accordance with the guidelines published in Riverside County – Low Impact Development BMP Design Handbook – Section 2.3 of Appendix A, which apply to San Bernardino County.

Pre-soaking

In accordance with the county infiltration standards for sandy soils, all infiltration test borings were pre-soaked 2 hours prior to the infiltration testing or until all of the water had percolated through the test holes. The pre-soaking process consisted of filling test borings by inverting a full 5-gallon bottle of clear water supported over each hole so that the water flow into the hole holds constant at a level at least 5 times the hole's radius above the gravel at the bottom of each hole. Pre-soaking was completed after all of the water had percolated through the test holes.

Infiltration Testing

Following the pre-soaking process of the infiltration test borings, SCG performed the infiltration testing. Each test hole (with exception of I-4) was filled with water to a depth of at least 5 times the hole's radius above the gravel at the bottom of the test holes. In accordance with the Riverside County guidelines, since "sandy soils" were encountered at the bottom of both of the infiltration test borings (where 6 inches of water infiltrated into the surrounding soils for two consecutive 25-minute readings), readings were taken at 10-minute intervals for a total of 1 hour at each test location. After each reading, water was added to the borings so that the depth of the water was at least 5 times the radius of the hole. The water level readings are presented on the spreadsheets enclosed with this report. The infiltration rates for each of the timed intervals are also tabulated on the spreadsheets.

The infiltration rates from the test are tabulated in inches per hour. In accordance with the typically accepted practice, it is recommended that the most conservative reading from the latter part of the infiltration tests be used as the design infiltration rate. The rates are summarized below:

Infiltration Test No.	Depth (feet)	Soil Description	Infiltration Rate (inches/hour)
I-1	12	Silty fine to medium Sand	10.0
I-2	12	Silty fine to medium Sand	12.5
I-3	12	fine to medium Sandy Silt	1.2
I-4	7	Gravelly fine to coarse Sand, trace Silt	Not Tested
I-5	12	Silty fine to coarse Sand	4.6
I-6	12	Silty fine to medium Sand, trace coarse Sand	2.5
I-7	12	Silty fine to medium Sand	10.3
I-8	12	Silty fine to medium Sand, trace coarse Sand	12.7

Laboratory Testing

Moisture Content

The moisture contents for the recovered soil samples within the borings were determined in accordance with ASTM D-2216 and are expressed as a percentage of the dry weight. These test results are presented on the Boring Logs.

Grain Size Analysis

The grain size distribution of selected soils collected from the base of each infiltration test boring have been determined using a range of wire mesh screens. These tests were performed in general accordance with ASTM D-422 and/or ASTM D-1140. The weight of the portion of the sample retained on each screen is recorded and the percentage finer or coarser of the total weight is calculated. The results of these tests are presented on Plates C-1 and C-8 of this report.

Design Recommendations

Seven (7) infiltration tests were performed at the subject site. As noted above, the infiltration rates at these locations vary from 1.2 to 12.7 inches per hour. The major factors affecting the difference in infiltration rate at these borings is the presence of silt in the soils at the test depths. Based on the infiltration test results, we recommend the following infiltration rates:

Infiltration System	Location	Infiltration Rate (in/hr)
"A"	Southwest	10.0
"B"	South-Central	1.0
"C"	East	2.5
"D"	Southeast	10.0

We recommend that a representative from the geotechnical engineer be on-site during the construction of the proposed infiltration system to identify the soil classification at the base of the system. It should be confirmed that the soils at the base of the proposed infiltration system correspond with those presented in this report to ensure that the performance of the system will be consistent with the rate reported herein.

The design of the storm water infiltration system should be performed by the project civil engineer, in accordance with the City of Rancho Cucamonga and/or County of San Bernardino guidelines. It is recommended that the system be constructed so as to facilitate removal of silt and clay, or other deleterious materials from any water that may enter the system. The presence of such materials would decrease the effective infiltration rate. **It is recommended that the project civil engineer apply an appropriate factor of safety. The infiltration rate recommended above is based on the assumption that only clean water will be introduced to the subsurface profile. Any fines, debris, or organic materials could significantly impact the infiltration rate.** It should be noted that the recommended infiltration rates are based on infiltration testing at eight (8) discrete locations and that the overall infiltration rate of the proposed infiltration system could vary considerably.

Infiltration Rate Considerations

The infiltration rates presented herein was determined in accordance with the San Bernardino County guidelines and are considered valid only for the time and place of the actual test. Varying subsurface conditions will exist in other areas of the site, which could alter the recommended infiltration rates presented above. The infiltration rates will decline over time between maintenance cycles as silt or clay particles accumulate on the BMP surface. The infiltration rate is highly dependent upon a number of factors, including density, silt and clay content, grainsize distribution throughout the range of particle sizes, and particle shape. Small changes in these factors can cause large changes in the infiltration rates.

Infiltration rates are based on unsaturated flow. As water is introduced into soils by infiltration, the soils become saturated and the wetting front advances from the unsaturated zone to the saturated zone. Once the soils become saturated, infiltration rates become zero, and water can only move through soils by hydraulic conductivity at a rate determined by pressure head and soil permeability. Changes in soil moisture content will affect the infiltration rate. Infiltration rates should be expected to decrease until the soils become saturated. Soil permeability values will then govern groundwater movement. Permeability values may be on the order of 10 to 20 times less than infiltration rates. The system designer should incorporate adequate factors of safety and allow for overflow design into appropriate traditional storm drain systems, which would transport storm water off-site.

Construction Considerations

The infiltration rates presented in this report are specific to the tested locations and tested depths. Infiltration rates can be significantly reduced if the soils are exposed to excessive disturbance or compaction during construction. Compaction of the soils at the bottom of the infiltration system can significantly reduce the infiltration ability of the basins. Therefore, the subgrade soils within proposed infiltration system areas should not be over-excavated, undercut or compacted in any

significant manner. **It is recommended that a note to this effect be added to the project plans and/or specifications.**

We recommend that a representative from the geotechnical engineer be on-site during the construction of the proposed infiltration systems to identify the soil classification at the base of each system. It should be confirmed that the soils at the base of the proposed infiltration systems correspond with those presented in this report to ensure that the performance of the systems will be consistent with the rates reported herein.

We recommend that scrapers and other rubber-tired heavy equipment not be operated on the basin bottom, or at levels lower than 2 feet above the bottom of the system, particularly within basins. As such, the bottom 24 inches of the infiltration systems should be excavated with non-rubber-tired equipment, such as excavators.

Basin Maintenance

The proposed project may include infiltration basins. Water flowing into these basins will carry some level of sediment. Wind-blown sediments and erosion of the basin side walls will also contribute to sediment deposition at the bottom of the basin. This layer has the potential to significantly reduce the infiltration rate of the basin subgrade soils. Therefore, a formal basin maintenance program should be established to ensure that these silt and clay deposits are removed from the basin on a regular basis. Appropriate vegetation on the basin sidewalls and bottom may reduce erosion and sediment deposition.

Basin maintenance should also include measures to prevent animal burrows, and to repair any burrows or damage caused by such. Animal burrows in the basin sidewalls can significantly increase the risk of erosion and piping failures.

Location of Infiltration Systems

The use of on-site storm water infiltration systems carries a risk of creating adverse geotechnical conditions. Increasing the moisture content of the soil can cause the soil to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. Overlying structures and pavements in the infiltration area could potentially be damaged due to saturation of the subgrade soils. **The proposed infiltration systems for this site should be located at least 25 feet away from any structures, including retaining walls.** Even with this provision of locating the infiltration system at least 25 feet from the building(s), it is possible that infiltrating water into the subsurface soils could have an adverse effect on the proposed or existing structures. It should also be noted that utility trenches which happen to collect storm water can also serve as conduits to transmit storm water toward the structure, depending on the slope of the utility trench. Therefore, consideration should also be given to the proposed locations of underground utilities which may pass near the proposed infiltration system.

The infiltration system designer should also give special consideration to the effect that the proposed infiltration systems may have on nearby subterranean structures, open excavations, or descending slopes. In particular, infiltration systems should not be located near the crest of descending slopes, particularly where the slopes are comprised of granular soils. Such systems

will require specialized design and analysis to evaluate the potential for slope instability, piping failures and other phenomena that typically apply to earthen dam design. This type of analysis is beyond the scope of this infiltration test report, but these factors should be considered by the infiltration system designer when locating the infiltration systems.

General Comments

This report has been prepared as an instrument of service for use by the client in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project. However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, structural engineer, and/or civil engineer. The design of the proposed storm water infiltration system is the responsibility of the civil engineer. The role of the geotechnical engineer is limited to determination of infiltration rate only. By using the design infiltration rate contained herein, the civil engineer agrees to indemnify, defend, and hold harmless the geotechnical engineer for all aspects of the design and performance of the proposed storm water infiltration system. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur.

The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between boring locations and testing depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted. The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

Closure

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

Respectfully Submitted,

BORING LOG LEGEND

SAMPLE TYPE	GRAPHICAL SYMBOL	SAMPLE DESCRIPTION
AUGER		SAMPLE COLLECTED FROM AUGER CUTTINGS, NO FIELD MEASUREMENT OF SOIL STRENGTH. (DISTURBED)
CORE		ROCK CORE SAMPLE: TYPICALLY TAKEN WITH A DIAMOND-TIPPED CORE BARREL. TYPICALLY USED ONLY IN HIGHLY CONSOLIDATED BEDROCK.
GRAB		SOIL SAMPLE TAKEN WITH NO SPECIALIZED EQUIPMENT, SUCH AS FROM A STOCKPILE OR THE GROUND SURFACE. (DISTURBED)
CS		CALIFORNIA SAMPLER: 2-1/2 INCH I.D. SPLIT BARREL SAMPLER, LINED WITH 1-INCH HIGH BRASS RINGS. DRIVEN WITH SPT HAMMER. (RELATIVELY UNDISTURBED)
NSR		NO RECOVERY: THE SAMPLING ATTEMPT DID NOT RESULT IN RECOVERY OF ANY SIGNIFICANT SOIL OR ROCK MATERIAL.
SPT		STANDARD PENETRATION TEST: SAMPLER IS A 1.4 INCH INSIDE DIAMETER SPLIT BARREL, DRIVEN 18 INCHES WITH THE SPT HAMMER. (DISTURBED)
SH		SHELBY TUBE: TAKEN WITH A THIN WALL SAMPLE TUBE, PUSHED INTO THE SOIL AND THEN EXTRACTED. (UNDISTURBED)
VANE		VANE SHEAR TEST: SOIL STRENGTH OBTAINED USING A 4 BLADED SHEAR DEVICE. TYPICALLY USED IN SOFT CLAYS-NO SAMPLE RECOVERED.

COLUMN DESCRIPTIONS

DEPTH: Distance in feet below the ground surface.

SAMPLE: Sample Type as depicted above.

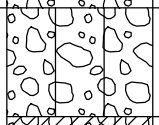
BLOW COUNT: Number of blows required to advance the sampler 12 inches using a 140 lb hammer with a 30-inch drop. 50/3" indicates penetration refusal (>50 blows) at 3 inches. WH indicates that the weight of the hammer was sufficient to push the sampler 6 inches or more.

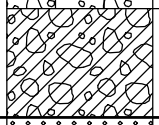
POCKET PEN.: Approximate shear strength of a cohesive soil sample as measured by pocket penetrometer.

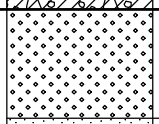
GRAPHIC LOG: Graphic Soil Symbol as depicted on the following page.

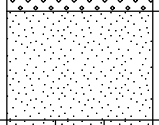
DRY DENSITY: Dry density of an undisturbed or relatively undisturbed sample in lbs/ft^3.

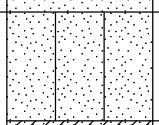
MOISTURE CONTENT: Moisture content of a soil sample, expressed as a percentage of the dry weight.

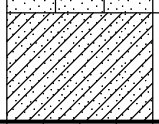


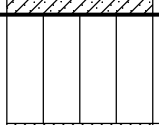


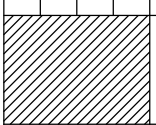


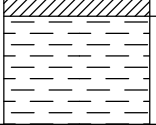


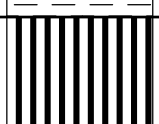


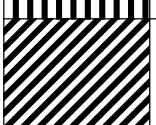


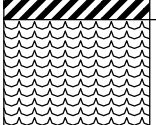


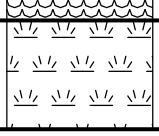












LIQUID LIMIT: The moisture content above which a soil behaves as a liquid.

PLASTIC LIMIT: The moisture content above which a soil behaves as a plastic.

PASSING #200 SIEVE: The percentage of the sample finer than the #200 standard sieve.

UNCONFINED SHEAR: The shear strength of a cohesive soil sample, as measured in the unconfined state.

INFILTRATION CALCULATIONS

Project Name	Proposed Warehouse Development
Project Location	Rancho Cucamonga, California
Project Number	21G209-2
Engineer	Sam Bergeland

Test Hole Radius	4	(in)
Test Depth	12.20	(ft)

Infiltration Test Hole	I-1

Soil Criteria Test

Interval Number		Time	Time Interval (min)	Water Depth (ft)	Change in Water Level (in)	Did 6 inches of water seep away in less than 25 minutes?	Sandy Soils or Non-Sandy Soils?
1	Initial	11:08 AM	25.00	10.50	24.00	YES	SANDY SOILS
	Final	11:33 AM		12.50			
2	Initial	11:33 AM	25.00	10.50	24.00	YES	SANDY SOILS
	Final	11:58 AM		12.50			

Test Data

Interval Number		Time	Time Interval (min)	Water Depth (ft)	Change in Water Level (ft)	Average Head Height (ft)	Infiltration Rate Q (in/hr)
1	Initial	12:01 PM	10.00	10.50	1.30	1.05	12.82
	Final	12:11 PM		11.80			
2	Initial	12:11 PM	10.00	10.50	1.27	1.07	12.37
	Final	12:21 PM		11.77			
3	Initial	12:21 PM	10.00	10.50	1.17	1.12	10.95
	Final	12:31 PM		11.67			
4	Initial	12:31 PM	10.00	10.50	1.13	1.14	10.42
	Final	12:41 PM		11.63			
5	Initial	12:41 PM	10.00	10.50	1.11	1.15	10.16
	Final	12:51 PM		11.61			
6	Initial	12:51 PM	10.00	10.50	1.10	1.15	10.03
	Final	1:01 PM		11.60			

Per County Standards, Infiltration Rate calculated as follows:

$$Q = \frac{\Delta H(60r)}{\Delta t(r + 2H_{avg})}$$

Where:

Q = Infiltration Rate (in inches per hour)
ΔH = Change in Height (Water Level) over the time interval
r = Test Hole (Borehole) Radius
Δt = Time Interval
H_{avg} = Average Head Height over the time interval

INFILTRATION CALCULATIONS

Project Name	Proposed Warehouse Development

Drain Inlet Insert MP-52

General Description

Drain inlet inserts, also known as catch basin, drop inlet or curb inlet inserts, are used to remove pollutants at the point of entry to the storm drain system. There are a multitude of inserts of various shapes and configurations including baffles, baskets, boxes, fabrics, sorbent media, screens, and skimmers. The effectiveness of drain inlet inserts depends on their design, application, loading, and frequency of maintenance to remove accumulated sediment, trash, and debris.

Inspection / Maintenance Considerations

Routine inspection and maintenance is necessary to maintain functionality of drain inlet inserts and to prevent re-suspension and discharge of accumulated pollutants. Maintenance activities vary depending on the type of drain inlet insert being implemented; refer to the manufacturer's recommendations for more information.

Advanced BMPs Covered

Maintenance Concerns

- *Sediment, Trash, and Debris Accumulations*
- *Pollutant Re-suspension and Discharge*

Targeted Constituents*

Sediment	✓
Nutrients	✓
Trash	✓
Metals	✓
Bacteria	
Oil and Grease	✓
Organics	✓

**Removal Effectiveness varies for different manufacturer designs. See New Development and Redevelopment Handbook-Section 5 for more information.*

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION®

Inspection Activities	Suggested Frequency
☐ Verify that stormwater enters the unit and does not leak around the perimeter.	After construction.
☐ Inspect for sediment, trash, and debris buildup and proper functioning.	At the beginning of the wet season and after significant storms
Maintenance Activities	**Suggested Frequency**
☐ Remove accumulated sediment, trash, and debris. ☐ Replace sorbent media.	At the beginning of the wet season and as necessary

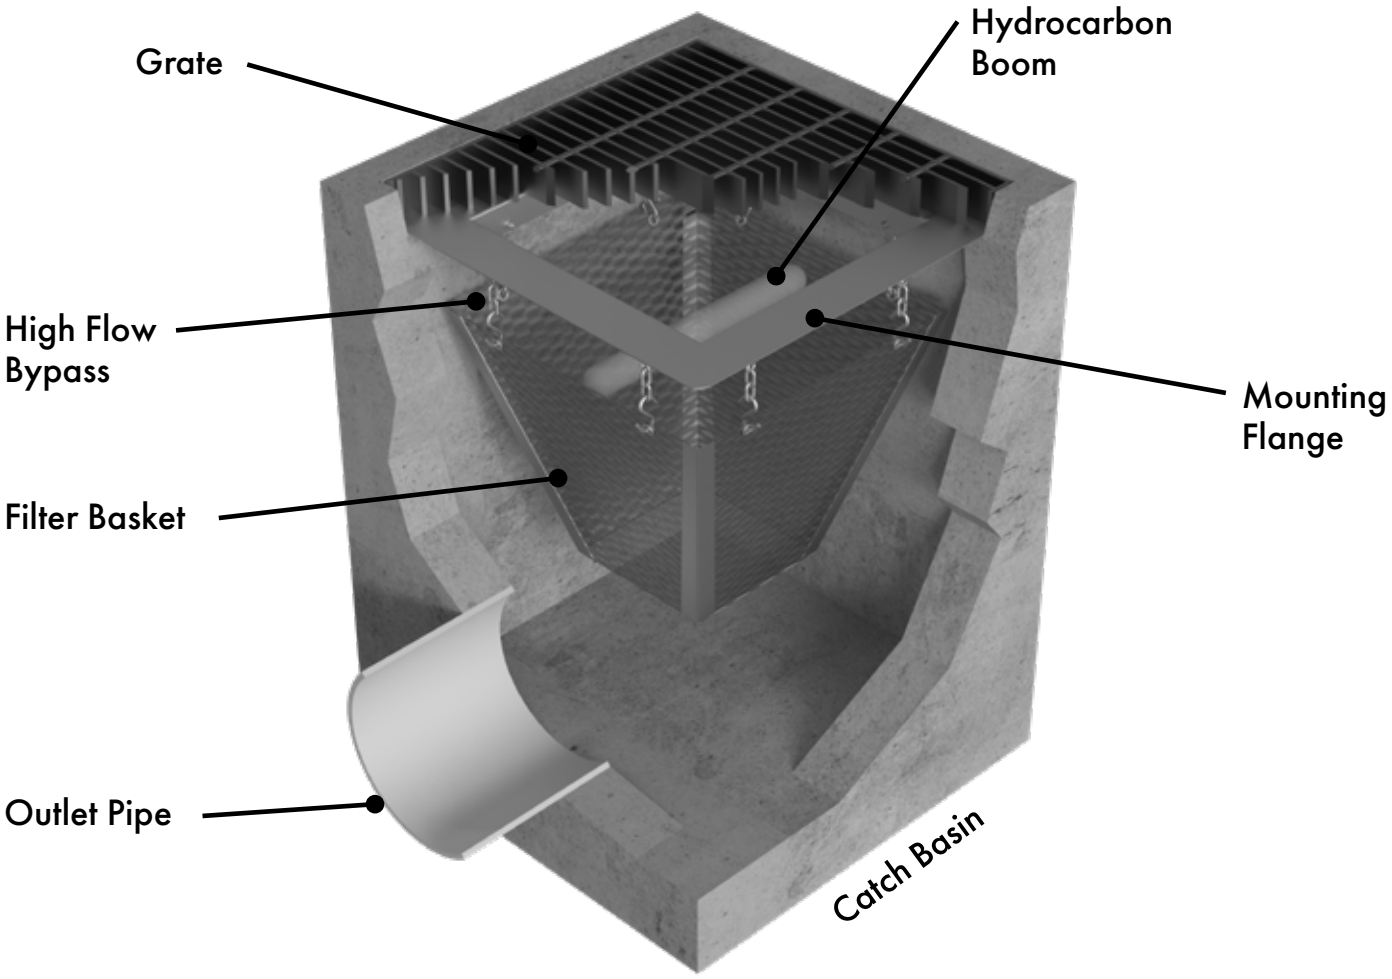
Bio Clean® Grate Inlet Filter
Operation & Maintenance Manual



Bio Clean®

Operation & Maintenance

Contech's Bio Clean® Grate Inlet Filter is a stormwater device designed to remove high levels of trash, debris, sediments and hydrocarbons. The filter is available in several configurations including trash full capture, Kraken® membrane filter, and fabric filter variations. This manual covers maintenance procedures of the trash full capture and fabric filter configurations. A supplemental manual is available for the Kraken variation. The trash full capture filter is made of 100% stainless steel, while the fabric filter is made of a woven monofilament geotextile fabric. Both filters are available at various sizes and depths allowing them to fit in any grated catch basin inlet. The filters heavy duty construction allows for cleaning with any vacuum truck. The filter can also easily be cleaned by hand.

As with all stormwater BMPs, inspection and maintenance on the Grate Inlet Filter is necessary. Stormwater regulations require BMPs be inspected and maintained to ensure they are operating as designed to allow for effective pollutant removal and provide protection to receiving water bodies. It is recommended that inspections be performed multiple times during the first year to assess site-specific loading conditions. This is recommended because pollutant loading can vary greatly from site to site. Variables such as nearby soil erosion or construction sites, winter sanding of roads, amount of daily traffic and land use can increase pollutant loading on the system. The first year of inspections can be used to set inspection and maintenance intervals for subsequent years. Without appropriate maintenance, a BMP can exceed its storage capacity which can negatively affect its continued performance in removing and retaining captured pollutants.

System Diagram

Inspection Equipment

Following is a list of equipment to allow for simple and effective inspection of the Grate Inlet Filter:

- Contech Inspection Form (contained within this manual).
- Manhole hook or appropriate tools to remove access hatches and covers.
- Appropriate traffic control signage and procedures.
- Protective clothing and eye protection.
- Note: entering a confined space requires appropriate safety and certification. It is generally not required for routine inspections or maintenance of the system.

Inspection Steps

The core to any successful stormwater BMP maintenance program is routine inspections. The inspection steps required on the Grate Inlet Filter are quick and easy. As mentioned above, the first year should be seen as the maintenance interval establishment phase. During the first year, more frequent inspections should occur in order to gather loading data and maintenance requirements for that specific site. This information can be used to establish a base for long-term inspection and maintenance interval requirements.

The Grate Inlet Filter can be inspected though visual observation. All necessary pre-inspection steps must be carried out before inspection occurs, such as safety measures to protect the inspector and nearby pedestrians from any dangers associated with an open grated inlet. Once the grate has been safely removed, the inspection process can proceed:

- Prepare the inspection form by writing in the necessary information including project name, location, date & time, unit number and other info (see inspection form).
- Observe the filter with the grate removed.
- Look for any out of the ordinary obstructions on the grate or in the filter and its bypass. Write down any observations on the inspection form.
- Through observation and/or digital photographs estimate the amount of trash, foliage and sediment accumulated inside the filter basket. Record this information on the inspection form.
- Observe the condition and color of the hydrocarbon boom. Record this information on the inspection form.
- Finalize inspection report for analysis by the maintenance manager to determine if maintenance is required.

Maintenance Indicators

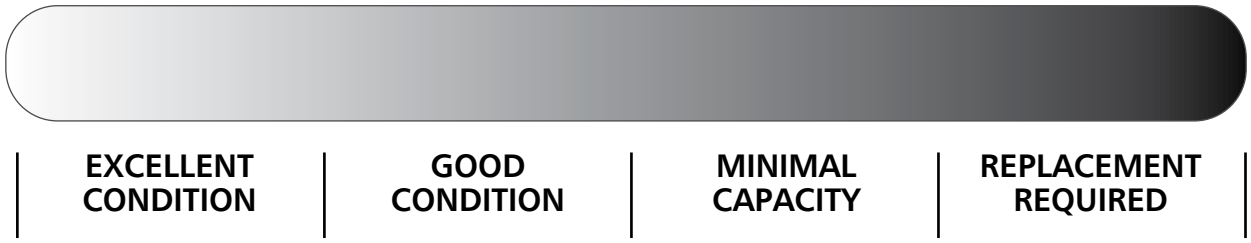
Based upon observations made during inspection, maintenance of the system may be required based on the following indicators:

- Missing or damaged internal components.
- Obstructions in the filter basket and its bypass.
- Excessive accumulation of trash, foliage and sediment in the filter basket. Maintenance is required when the basket is greater than half-full.
- The following chart shows the 50% and 100% storage capacity of each filter height:

Basket Model	Height[1] (inches)	Top Width (inches)	Top Length (inches)	Bottom Width (inches)	Bottom Length (inches)	50% Storage Capacity (CF)	100% Storage Capacity (CF)
BIO-GRATE-FULL/ FABRIC-12-12-12	6.00	10.00	10.00	8.31	8.31	0.15	0.30
BIO-GRATE-FULL/ FABRIC-18-18-12	6.00	15.00	15.00	12.50	12.50	0.33	0.66
BIO-GRATE-FULL/ FABRIC-24-24-12	6.00	20.00	20.00	16.69	16.69	0.59	1.18
BIO-GRATE-FULL/ FABRIC-24-24-24	18.00	20.00	20.00	10.00	10.00	1.22	2.44
BIO-GRATE-FULL/ FABRIC-24-40-12	6.00	20.00	30.00	16.69	25.00	0.88	1.76
BIO-GRATE-FULL/ FABRIC-24-40-24	18.00	20.00	30.00	10.00	15.00	1.82	3.64
BIO-GRATE-FULL/ FABRIC-36-36-24	18.00	30.00	30.00	15.00	15.00	2.73	5.46
BIO-GRATE-FULL/ FABRIC-24-40-24	18.00	20.00	30.00	10.00	15.00	1.82	3.64
BIO-GRATE-FULL/ FABRIC-36-36-24	18.00	30.00	30.00	15.00	15.00	2.73	5.46

[1] Refers to basket height, total system height is equal to basket height plus 6 inches for bypass.

Maintenance Equipment



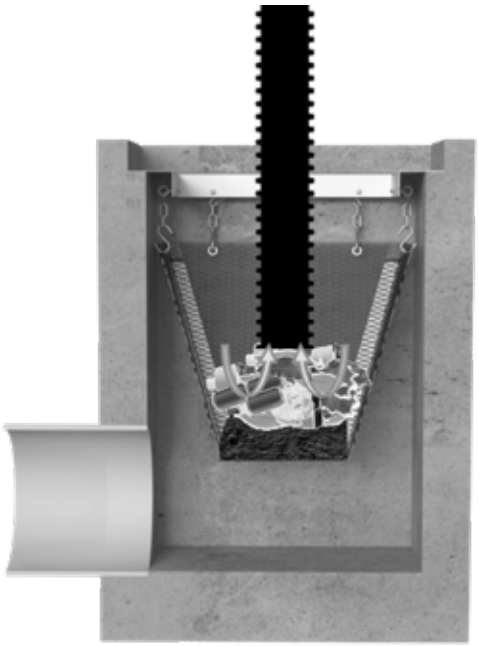
It is recommended that a vacuum truck be utilized to minimize the time required to maintain the Curb Inlet Filter, though it can easily be cleaned by hand:

- Contech Maintenance Form (contained in O&M Manual).
- Manhole hook or appropriate tools to remove the grate.
- Appropriate safety signage and procedures.
- Protective clothing and eye protection.
- Note: entering a confined space requires appropriate safety and certification. It is generally not required for routine maintenance of the system. Small or large vacuum truck (with pressure washer attachment preferred).

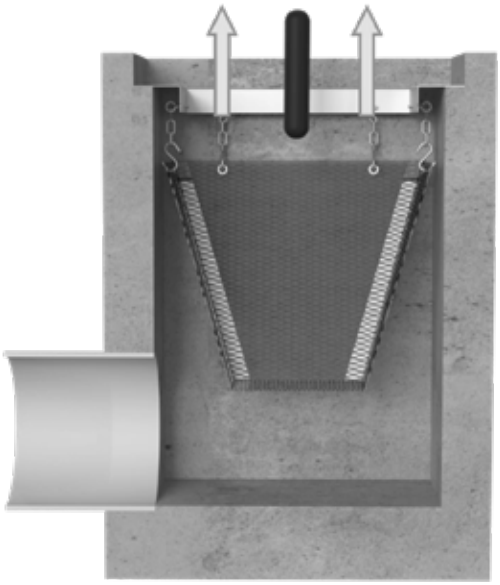
Maintenance Procedures

It is recommended that maintenance occurs at least two days after the most recent rain event to allow debris and sediments to dry out. Maintaining the system while flows are still entering it will increase the time and complexity required for maintenance. Cleaning of the Grate Inlet Filter can be performed utilizing a vacuum truck. Once all safety measures have been set up, cleaning of the Grate Inlet Filter can proceed as followed:

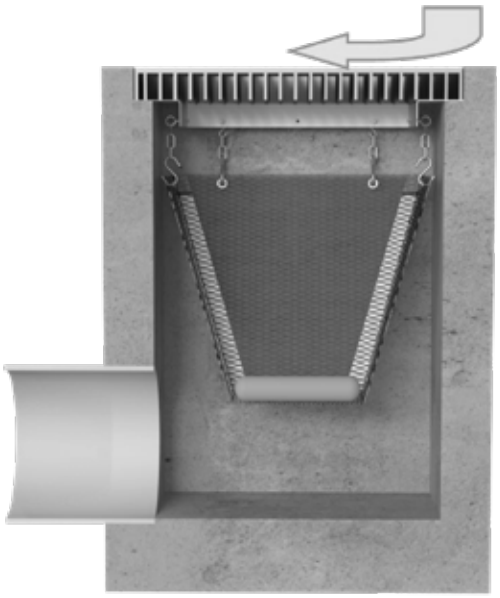
- Remove grate (traffic control and safety measures to be completed prior)
- Using an extension on a vacuum truck, position the hose over the opened catch basin. Insert the vacuum hose down into the filter basket and suck out trash, foliage and sediment. A pressure wash is recommended and will assist in spraying off any debris stuck on the side or bottom of the filter basket. Power wash off the filter basket sides and bottom.
- Next, remove the hydrocarbon boom that is attached to the inside of the filter basket. The hydrocarbon boom is fastened to rails on two opposite sides of the basket (vertical rails). Assess the color and condition of the boom using the following information in the next bullet point. If replacement is required, install and fasten on a new hydrocarbon boom. Booms can be ordered directly from the manufacturer.
- The following is a replacement indication color chart for the hydrocarbon booms:



- The last step is to replace the grate and remove all traffic control.
- All removed debris and pollutants shall be disposed of following local and state requirements.
- Disposal requirements for recovered pollutants may vary depending on local guidelines. In most areas the sediment, once dewatered, can be disposed of in a sanitary landfill. It is not anticipated that the sediment would be classified as hazardous waste.
- In the case of damaged components, replacement parts can be ordered from the manufacturer. Hydrocarbon booms can also be ordered directly from the manufacturer as previously noted.



Maintenance Sequence



1. Remove grate and set up vacuum truck to clean the filter basket.

2. Insert the vacuum hose down into the filter basket and suck out debris. Use a pressure washer to assist in vacuum removal. Pressure wash off screens.

3. Remove the hydrocarbon boom that is attached to the inside of the filter basket. The hydrocarbon boom is fastened to rails on two opposite sides of the basket (vertical rails). Assess the color and condition of the boom using the information in the chart above. If replacement is required, install and fasten on a new hydrocarbon boom.

4. Close up and replace the grate and remove all traffic control. All removed debris and pollutants shall be disposed of following local and state requirements.

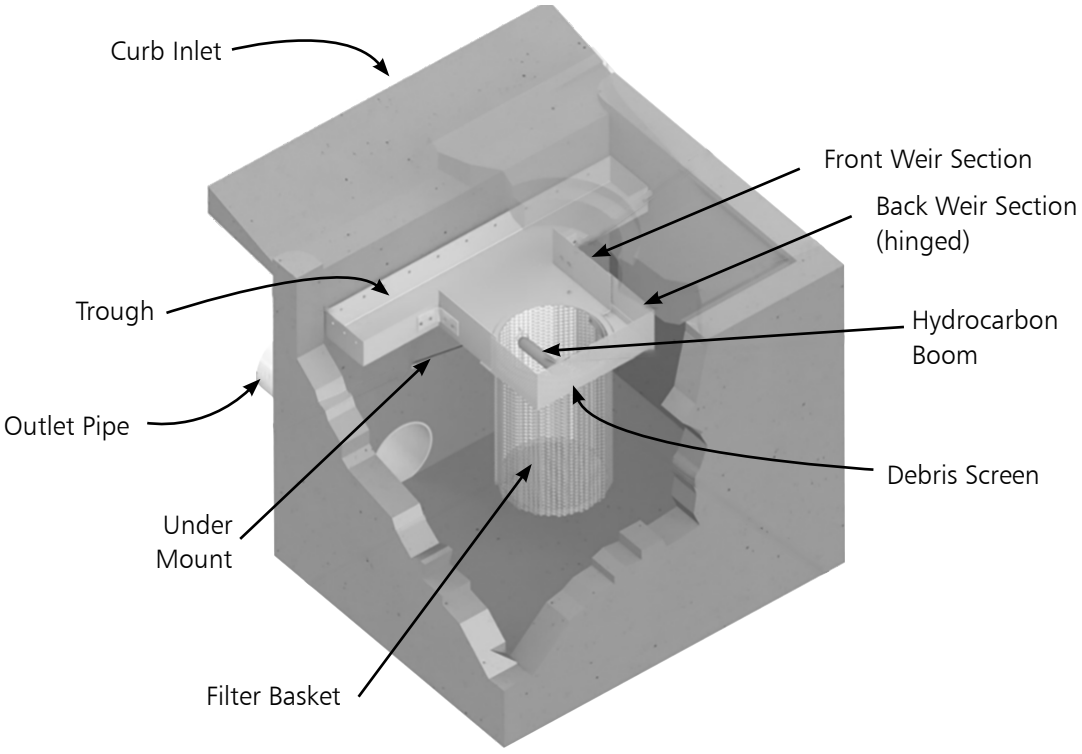
Bio Clean® Curb Inlet Filter
Operation & Maintenance Manual



Bio Clean®

Operation & Maintenance

Contech's Bio Clean® Curb Inlet Filter is a stormwater device designed to remove high levels of trash, debris, sediments and hydrocarbons. The filter is available in several configurations including trash full capture,filter fabric, and Kraken membrane filter variations. This manual covers maintenance procedures of the trash full capture and filter fabric configurations. A supplemental manual is available for the Kraken variations. The innovative trough & weir system is mounted along the curb face and directs incoming stormwater toward the filter basket which is positioned "directly" under the manhole access opening regardless of its location in the catch basin. This innovative design allows the filter to be cleaned from finish surface without access into the catch basin, therefore drastically reducing maintenance time and eliminating confined space entry. The filter has a lifting handle allowing for the filter to be removed easily through the manhole. The weir also folds up to allow for unimpeded access into the basin for routine maintenance or pipe jetting.

As with all stormwater BMPs, inspection and maintenance on the Curb Inlet Filter is necessary. Stormwater regulations require BMPs be inspected and maintained to ensure they are operating as designed to allow for effective pollutant removal and provide protection to receiving water bodies. It is recommended that inspections be performed multiple times during the first year to assess site-specific loading conditions. This is recommended because pollutant loading can vary greatly from site to site. Variables such as nearby soil erosion or construction sites, winter sanding of roads, amount of daily traffic and land use can increase pollutant loading on the system. The first year of inspections can be used to set inspection and maintenance intervals for subsequent years. Without appropriate maintenance a BMP can exceed its storage capacity which can negatively affect its continued performance in removing and retaining captured pollutants.

Inspection Equipment

Following is a list of equipment to allow for simple and effective inspection of the Curb Inlet Filter:

- Contech Inspection Form (contained within this manual).
- Manhole hook or appropriate tools to remove access hatches and covers.
- Appropriate traffic control signage and procedures.
- Protective clothing and eye protection.
- Note: entering a confined space requires appropriate safety and certification. It is generally not required for routine inspections or maintenance of the system.

Inspection Steps

The core to any successful stormwater BMP maintenance program is routine inspections. The inspection steps required on the Curb Inlet Filter are quick and easy. As mentioned above the first year should be seen as the maintenance interval establishment phase. During the first year more frequent inspections should occur in order to gather loading data and maintenance requirements for that specific site. This information can be used to establish a base for long-term inspection and maintenance interval requirements.

The Curb Inlet Filter can be inspected though visual observation without entry into the catch basin. All necessary pre-inspection steps must be carried out before inspection occurs, such as safety measures to protect the inspector and nearby pedestrians from any dangers associated with an open access hatch or manhole. Once the manhole has been safely opened the inspection process can proceed:

- Prepare the inspection form by writing in the necessary information including project name, location, date & time, unit number and other info (see inspection form).
- Observe the inside of the catch basin through the manhole. If minimal light is available and vision into the unit is impaired utilize a flashlight to see inside the catch basin.
- Look for any out of the ordinary obstructions in the catch basin, trough, weir, filter basket, basin floor our outlet pipe. Write down any observations on the inspection form.
- Through observation and/or digital photographs estimate the amount of trash, foliage and sediment accumulated inside the filter basket. Record this information on the inspection form.
- Observe the condition and color of the hydrocarbon boom. Record this information on the inspection form.
- Finalize inspection report for analysis by the maintenance manager to determine if maintenance is required.

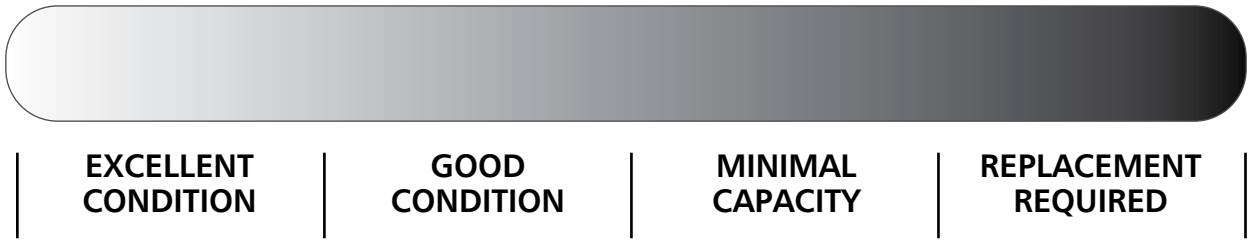
Maintenance Indicators

Based upon observations made during inspection, maintenance of the system may be required based on the following indicators:

- Missing or damaged internal components.
- Obstructions in the filter basket and its bypass.
- Excessive accumulation of trash, foliage and sediment in the filter basket. Maintenance is required when the basket is greater than half-full.
- The following chart shows the 50% and 100% storage capacity of each filter height:

Basket Model	Filter Basket Diameter (inches)	Filter Basket Height (inches)	50% Storage Capacity (CF)	100% Storage Capacity (CF)
BC-CURB-24	16	24	1.77	3.53
BC-CURB-12	16	12	0.88	1.77

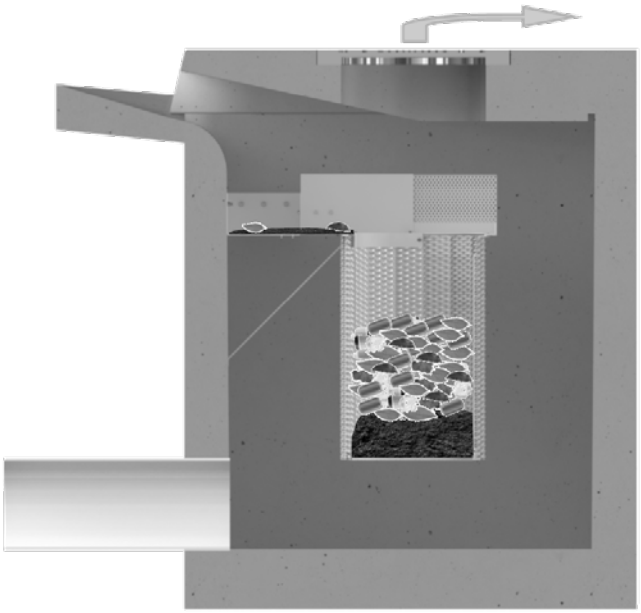
Maintenance Equipment



It is recommended that a vacuum truck be utilized to minimize the time required to maintain the Curb Inlet Filter though it can easily cleaned by hand:

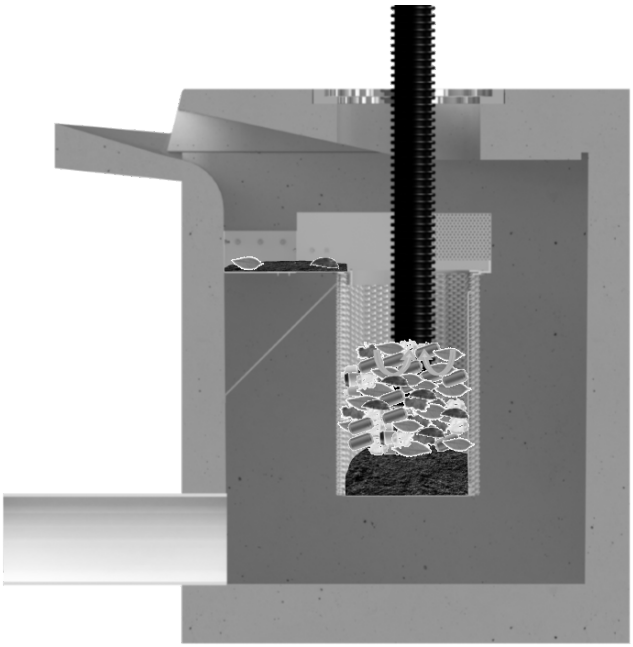
- Contech Maintenance Form (contained in O&M Manual).
- Manhole hook or appropriate tools to access hatches and covers.
- Appropriate safety signage and procedures.
- Protective clothing and eye protection.
- Note: entering a confined space requires appropriate safety and certification. It is generally not required for routine maintenance of the system. Small or large vacuum truck (with pressure washer attachment preferred).

Maintenance Procedures

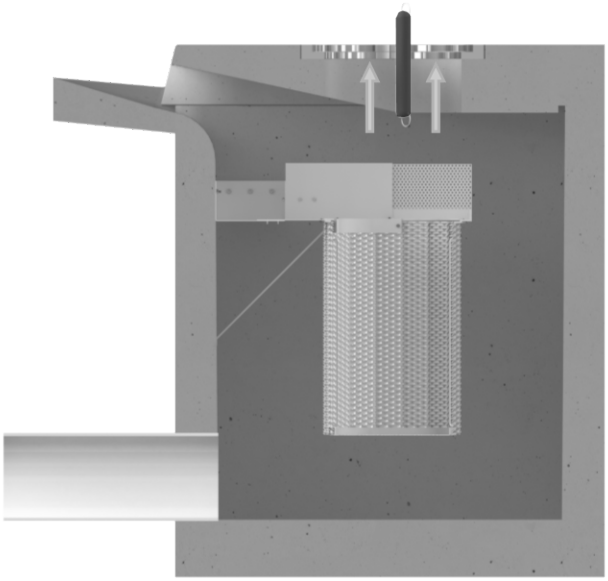


It is recommended that maintenance occurs at least two days after the most recent rain event to allow debris and sediments to dry out. Maintaining the system while flows are still entering it will increase the time and complexity required for maintenance. Cleaning of the Curb Inlet Filter can be performed from finish surface without entry into catch basin utilizing a vacuum truck. Some unique and custom configurations may create conditions which would require entry for some or all of the maintenance procedures. Once all safety measures have been set up cleaning of the Curb Inlet Filter can proceed as followed:

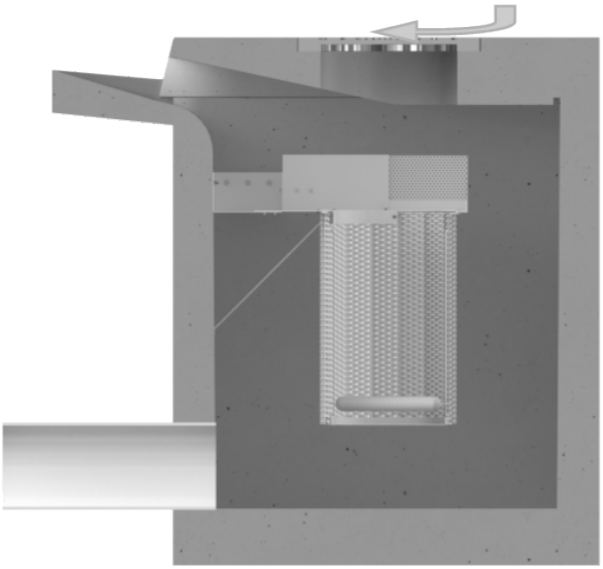
- Remove all manhole cover or access hatches (traffic control and safety measures to be completed prior).
- Using an extension on a vacuum truck position the hose over the opened manhole or hatch opening. Insert the vacuum hose down into the filter basket and suck out trash, foliage and sediment. A pressure wash is recommended and will assist in spraying of any debris stuck on the side or bottom of the filter basket. If the filter basket is full, trash, sediment, and debris will accumulate inside the trough and weir sections of the system. Once the filter basket is clean power wash the weir and trough pushing these debris into the filter basket (leave the hose in the filter basket during this process so entering debris will be sucked out). Power wash off the trough, weir, debris screen, and filter basket sides and bottom.
- Next remove the hydrocarbon boom that is attached to the inside of the filter basket. The hydrocarbon boom is fastened to rails on two opposite sides of the basket (vertical rails). Assess the color and condition of the boom using the following information in the next bullet point. If replacement is required install and fasten on a new hydrocarbon boom. Booms can be ordered directly from the manufacturer.
- Follow is a replacement indication color chart for the hydrocarbon booms:



- The last step is to close up and replace the manhole or hatch and remove all traffic control.
- All removed debris and pollutants shall be disposed of following local and state requirements.
- Disposal requirements for recovered pollutants may vary depending on local guidelines. In most areas the sediment, once dewatered, can be disposed of in a sanitary landfill. It is not anticipated that the sediment would be classified as hazardous waste.
- In the case of damaged components, replacement parts can be ordered from the manufacturer. Hydrocarbon booms can also be ordered directly from the manufacturer as previously noted.



Maintenance Sequence



1. *Remove manhole cover and set up vacuum truck to clean the filter basket. Ensure all traffic control and safety measures are in place.*

2. *Insert the vacuum hose down into the filter basket and suck out debris. Use a pressure washer to assist in vacuum removal. Pressure wash off the weir and trough and vacuum out any remaining debris.*

3. *Remove the hydrocarbon boom that is attached to the inside of the filter basket. The hydrocarbon boom is fastened to rails on two opposite sides of the basket (vertical rails). Assess the color and condition of the boom using the following information in the next bullet point. If replacement is required install and fasten on a new hydrocarbon boom.*

4. *Close up and replace the manhole or hatch and remove all traffic control. All removed debris and pollutants shall be disposed of following local and state requirements.*

Contech® CMP Detention & Infiltration Maintenance Guide

CONTECH®
CMP DETENTION SYSTEMS

Maintenance

Underground storm water detention and retention systems should be inspected at regular intervals and maintained when necessary to ensure optimum performance. The rate at which the system collects pollutants will depend more heavily on site activities than the size or configuration of the system.

Inspection

Inspection is the key to effective maintenance and is easily performed. CONTECH recommends ongoing quarterly inspections of the accumulated sediment. Sediment deposition and transport may vary from year to year and quarterly inspections will help insure that systems are cleaned out at the appropriate time. Inspections should be performed more often in the winter months in climates where sanding operations may lead to rapid accumulations, or in equipment washdown areas. It is very useful to keep a record of each inspection. A sample inspection log is included for your use.

Systems should be cleaned when inspection reveals that accumulated sediment or trash is clogging the discharge orifice. CONTECH suggests that all systems be designed with an access/inspection manhole situated at or near the inlet and the outlet orifice. Should it be necessary to get inside the system to perform maintenance activities, all appropriate precautions regarding confined space entry and OSHA regulations should be followed.

Cleaning

Maintaining an underground detention or retention system is easiest when there is no flow entering the system. For this reason, it is a good idea to schedule the cleanout during dry weather.

Accumulated sediment and trash can typically be evacuated through the manhole over the outlet orifice. If maintenance is not performed as recommended, sediment and trash may accumulate in front of the outlet orifice. Manhole covers should be securely seated following cleaning activities.

Inspection & Maintenance Log Sample Template

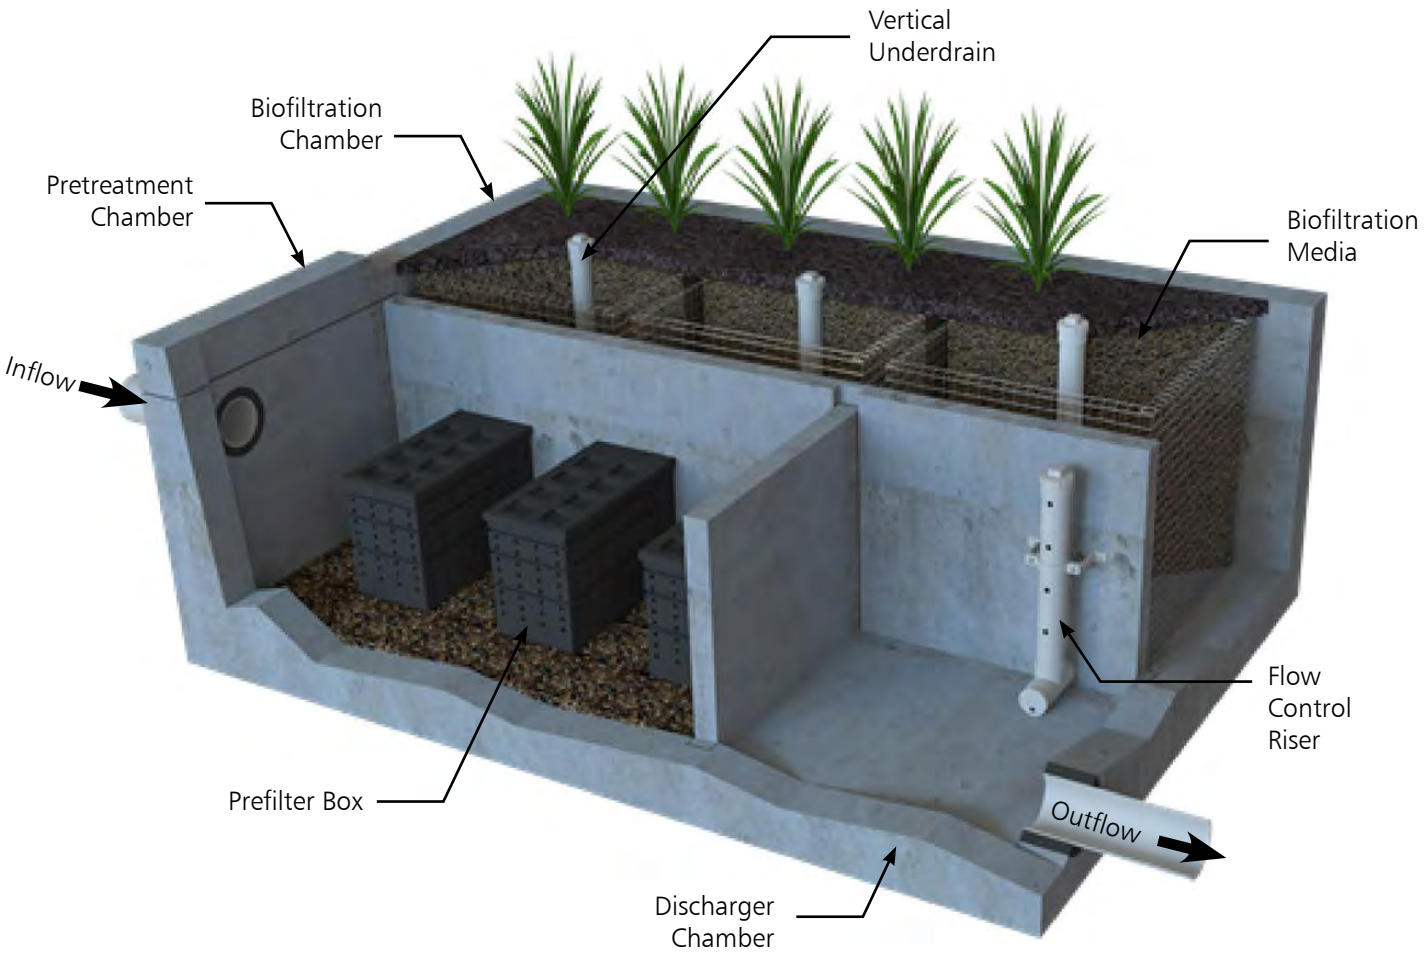
- Biofiltration Chamber 11
- Discharge Chamber 12

Inspection Report 13



Cleaning and Maintenance Report 14

OVERVIEW

The Modular Wetlands® Linear Biofilter is designed to remove high levels of trash, debris, sediments, nutrients, metals, and hydrocarbons. Its simple design allows for quick and easy installation. The system is housed in a standard precast structure and can be installed at various depths to meet site-specific conditions.

INTRODUCTION

This is the Modular Wetlands Linear Biofilter operation and maintenance manual. Before starting, read the instructions and equipment lists closely. It is important to follow all necessary safety procedures associated with state and local regulations. Some steps required confined space entry. Please contact Contech for more information on pre-authorized third party contractors who can provide installation services in your area. For a list of service providers in your area please visit: www.conteches.com/maintenance.

INSTRUCTIONS

INSPECTION SUMMARY

Stormwater regulations require BMPs be inspected and maintained to ensure they are operating as designed to allow for effective pollutant removal and provide protection to receiving water bodies. It is recommended that inspections be performed multiple times during the first year to assess the site specific loading conditions. The first year of inspections can be used to set inspection and maintenance intervals for subsequent years to ensure appropriate maintenance is provided.

- Inspect pre-treatment, biofiltration, and discharge chambers an average of once every six to twelve months. Varies based on site specific and local conditions.
- Average inspection time is approximately 15 minutes. Always ensure appropriate safety protocol and procedures are followed.

The following is a list of equipment required to allow for simple and effective inspection of the Modular Wetlands Linear:

- Modular Wetlands Linear Inspection Form
- Flashlight
- Manhole hook or appropriate tools to remove access hatches and covers
- Appropriate traffic control signage and procedures
- Measuring pole and/or tape measure
- Protective clothing and eye protection
- 7/16" open or closed ended wrench
- Large permanent black marker (initial inspections only - first year)

Note: entering a confined space requires appropriate safety and certification. It is generally not required for routine inspections of the system

INSPECTION AND MAINTENANCE NOTES

1. Following maintenance and/or inspection, it is recommended that the maintenance operator prepare a maintenance/inspection record. The record should include any maintenance activities performed, amount and description of debris collected, and condition of the system and its various filter mechanisms.
2. The owner should keep maintenance/inspection record(s) for a minimum of five years from the date of maintenance. These records should be made available to the governing municipality for inspection upon request at any time.
3. Transport all debris, trash, organics, and sediments to approved facility for disposal in accordance with local and state requirements.
4. Entry into chambers may require confined space training based on state and local regulations.
5. No fertilizer shall be used in the biofiltration chamber.
6. Irrigation should be provided as recommended by manufacturer and/or landscape architect. Amount of irrigation required is dependent on plant species. Some plants may not require irrigation after initial establishment.

INSPECTION PROCESS

1. Prepare the inspection form by writing in the necessary information including project name, location, date & time, unit number and other information (see inspection form).
2. Observe the inside of the system through the access covers. If minimal light is available and vision into the unit is impaired, utilize a flashlight to see inside the system and all of its chambers.
3. Look for any out of the ordinary obstructions in the inflow pipe, pre-treatment chamber, biofiltration chamber, discharge chamber or outflow pipe. Write down any observations on the inspection form.
4. Through observation and/or digital photographs, estimate the amount of trash, debris accumulated in the pre-treatment chamber. Utilizing a tape measure or measuring stick, estimate the amount of sediment in this chamber. Record this depth on the inspection form.
5. Through visual observation, inspect the condition of the pre-filter cartridges. Look for excessive build-up of sediment on the cartridges, any build-up on the tops of the cartridges, or clogging of the holes. Record this information on the inspection form. The prefilter cartridges can be further inspected by removing the cartridge tops and assessing the color of the BioMediaGREEN filter cubes (requires entry into pre-treatment chamber - see notes previous notes regarding confined space entry). Record the color of the material. New material is a light green color. As the media becomes clogged, it will turn darker in color, eventually becoming dark brown or black. The closer to black the media is the higher percentage that the media is exhausted and is in need of replacement.

6. The biofiltration chamber is generally maintenance-free due to the system's advanced pre-treatment chamber. For units which have open planters with vegetation, it is recommended that the vegetation be inspected. Look for any plants that are dead or showing signs of disease or other negative stressors. Record the general health of the plants on the inspection form and indicate through visual observation or digital photographs if trimming of the vegetation is required.
7. The discharge chamber houses the orifice control structure, drain down filter (only in California - older models), and is connected to the outflow pipe. It is important to check to ensure the orifice is in proper operating conditions and free of any obstructions. It is also important to assess the condition of the drain down filter media which utilizes a block form of the BioMediaGREEN. Assess in the same manner as the cubes in the pre-filter cartridge as mentioned above. Generally, the discharge chamber will be clean and free of debris. Inspect the water marks on the side walls. If possible, inspect the discharge chamber during a rain event to assess the amount of flow leaving the system while it is at 100% capacity (pre-treatment chamber water level at peak HGL - top of bypass weir). The water level of the flowing water should be compared to the watermark level on the side walls, which is an indicator of the highest discharge rate the system achieved when initially installed. Record on the form if there is any difference in level from the watermark in inches.

NOTE: During the first few storms, the water level in the outflow chamber should be observed and a 6" long horizontal watermark line drawn (using a large permanent marker) at the water level in the discharge chamber while the system is operating at 100% capacity. The diagram below illustrates where the line should be drawn. This line is a reference point for future inspections of the system.

Water level in the discharge chamber is a function of flow rate and pipe size. Observation of the water level during the first few months of operation can be used as a benchmark level for future inspections. The initial mark and all future observations shall be made when the system is at 100% capacity (water level at maximum level in the pre-treatment chamber). If future water levels are below this mark when the system is at 100% capacity, this is an indicator that maintenance to the pre-filter cartridges may be needed.

8. Finalize the inspection report for analysis by the maintenance manager to determine if maintenance is required.

MAINTENANCE INDICATORS

Based upon the observations made during inspection, maintenance of the system may be required based on the following indicators:

- Missing or damaged internal components or cartridges
- Obstructions in the system or its inlet and/or outlet pipes
- Excessive accumulation of floatables in the pretreatment chamber in which the length and width of the chamber is fully impacted more than 18". See photo below.
- Excessive accumulation of sediment in the pretreatment chamber of more than 6" in depth.
- Excessive accumulation of sediment on the BioMediaGREEN media housed within the pretreatment cartridges. The following chart shows photos of the condition of the BioMediaGREEN contained within the pre-filter cartridges. When media is more than 85% clogged, replacement is required.
- Excessive accumulation of sediment on the BioMediaGREEN media housed within the pretreatment cartridges. When media is more than 85% clogged, replacement is required. The darker the BioMediaGREEN, the more clogged it is and in need of replacement.

INSPECTION PROCESS

- Excessive accumulation of sediment on the BioMediaGREEN media housed within the drain down filter (California only - older models). The following photos show the condition of the BioMediaGREEN contained within the drain down filter. When media is more than 85% clogged, replacement is required.

- Overgrown vegetation.

- Water level in the discharge chamber during 100% operating capacity (pretreatment chamber water level at max height) is lower than the water mark by 20%.

MAINTENANCE SUMMARY

The time has come to maintain your Modular Wetlands® Linear. All necessary pre-maintenance steps must be carried out before maintenance occurs. Once traffic control has been set up per local and state regulations and access covers have been safely opened, the maintenance process can begin. It should be noted that some maintenance activities require confined space entry. All confined space requirements must be strictly followed before entry into the system. In addition, the following is recommended:

- Prepare the maintenance form by writing in the necessary information including project name, location, date & time, unit number and other info (see maintenance form).
- Set up all appropriate safety and cleaning equipment.
- Ensure traffic control is set up and properly positioned.
- Prepared pre-checks (OSHA, safety, confined space entry) are performed.

The following is a list of equipment to required for maintenance of the Modular Wetlands® Linear:

- Modular Wetlands Linear Maintenance Form
- Manhole hook or appropriate tools to access hatches and covers
- Protective clothing, flashlight, and eye protection
- 7/16" open or closed ended wrench
- Vacuum assisted truck with pressure washer
- Replacement BioMediaGREEN for pre-filter cartridges if required (order from one of Contech's Maintenance Team members at https://www.conteches.com/maintenance).

MAINTENANCE | PRETREATMENT CHAMBER

1. Remove access cover over pre-treatment chamber and position vacuum truck accordingly.
2. With a pressure washer, spray down pollutants accumulated on walls and pre-filter cartridges.
3. Vacuum out pre-treatment chamber and remove all accumulated pollutants including trash, debris, and sediments. Be sure to vacuum the floor until the pervious pavers are visible and clean.
4. If pre-filter cartridges require media replacement, continue to step 5. If not, replace access cover and move to step 11.

MAINTENANCE | PREFILTER CARTRIDGES

5. After successfully cleaning out the pre-treatment chamber (previous page) enter the pre-treatment chamber.
6. Unscrew the two bolts (circles shown below) holding the lid on each cartridge filter and remove lid.

7. Place the vacuum hose over each individual media filter to suck out filter media.

8. Once filter media has been sucked out, use a pressure washer to spray down the inside of the cartridge and it's media cages. Remove cleaned media cages and place to the side. Once removed, the vacuum hose can be inserted into the cartridge to vacuum out any remaining material near the bottom of the cartridge.
9. Reinstall media cages and fill with new media from the manufacturer or outside supplier. Manufacturer will provide specification of media and sources to purchase. Utilize the manufacture-provided refilling tray and place on top of the cartridge. Fill the tray with new bulk media and shake down into place. Using your hands, lightly compact the media into each filter cage. Once the cages are full, remove the refilling tray and replace the cartridge top, ensuring bolts are properly tightened.

10. Exit the pre-treatment chamber. Replace access hatch or manhole cover.

MAINTENANCE | BIOFILTRATION CHAMBER

11. In general, the biofiltration chamber is maintenance-free with the exception of maintaining the vegetation. The Modular Wetlands Linear utilizes vegetation similar to surrounding landscape areas, therefore trim vegetation to match surrounding vegetation. If any plants have died, replace them with new ones.

12. Each vertical under drain on the biofiltration chamber has a removable (threaded cap) that can be taken off to check any blockages or root growth. Once removed, a jetting attachment can be used to clean out the under drain and orifice riser.
13. As with all biofilter systems, at some point the biofiltration media (WetlandMedia) will need to be replaced. Either because of physical clogging of sorptive exhaustion of the media ion exchange capacity (to remove dissolved metals and phosphorous). The general life of this media is 10 to 20 years based on site specific conditions and pollutant loading. Utilize the vacuum truck to vacuum out the media by placing the hose into the chamber. Once all the media is removed use the power washer to spray down all the netting on the outer metal cage. Inspect the netting for any damage or holes. If the netting is damaged it can be repaired or replaced with guidance by the manufacturer.
14. Contact one of Contech's Maintenance Team members at https://www.conteches.com/maintenance to order new WetlandMedia. The quantity of media needed can be determined by providing the model number and unit depth. Media will be provided in super sacks for easy installation. Each sack will weigh between 1000 and 2000 lbs. A lifting apparatus (backhoe, boom truck, or other) is recommended to position the super sack over the biofiltration chamber. Fill the media cages up to the same level as the old media. Replant with vegetation.

MAINTENANCE | DISCHARGE CHAMBER

15. Remove access hatch or manhole cover over discharge chamber.
16. Enter chamber to gain access to the drain down filter. Unlock the locking mechanism and lift up drain down filter housing to remove used BioMediaGREEN filter block as shown below. *NOTE: Drain down filter is only found on units installed in California prior to 2023. If no drain down filter is present, skip steps 16 and 17.*

17. Insert a new BioMediaGREEN filter block and lock drain down filter housing back in place.
18. Replace access hatch or manhole cover over discharge chamber.

Inspection Checklist

Modular Wetland System Type (Curb, Grate or UG Vault): _____ Size (22', 14' or etc.): _____

Structural Integrity:	**Yes**	**No**	**Comments**
Damage to pre-treatment access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?			
Damage to discharge chamber access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?			
Does the MWS unit show signs of structural deterioration (cracks in the wall, damage to frame)?			
Is the inlet/outlet pipe or drain down pipe damaged or otherwise not functioning properly?			
Working Condition:			
Is there evidence of illicit discharge or excessive oil, grease, or other automobile fluids entering and clogging the unit?			
Is there standing water in inappropriate areas after a dry period?			
Is the filter insert (if applicable) at capacity and/or is there an accumulation of debris/trash on the shelf system?			
Does the depth of sediment/trash/debris suggest a blockage of the inflow pipe, bypass or cartridge filter? If yes, specify which one in the comments section. Note depth of accumulation in in pre-treatment chamber.			Depth:
Does the cartridge filter media need replacement in pre-treatment chamber and/or discharge chamber?			Chamber:
Any signs of improper functioning in the discharge chamber? Note issues in comments section.			
Other Inspection Items:			
Is there an accumulation of sediment/trash/debris in the wetland media (if applicable)?			
Is it evident that the plants are alive and healthy (if applicable)? Please note Plant Information below.			
Is there a septic or foul odor coming from inside the system?			

Waste:	**Yes**	**No**
Sediment / Silt / Clay		
Trash / Bags / Bottles		
Green Waste / Leaves / Foliage

Activity Restrictions

Activity Restrictions

It is the responsibility of the owner to prohibit:

- Vehicle washing, maintenance or repair outside of designated areas
- Hosing down paved areas
- Disposal of animal waste not in appropriate locations
- Use of chemicals, pesticides, toxins, etc. on paved or landscape areas
- Dumping of any waste into drainage facilities
- Blowing or sweeping of debris (leaf litter, grass clippings, litter, etc.) into drainage facilities.
- Discharge of fertilizer or pesticides to drainage facilities
- Keeping dumpsters lids open
- Washing kitchen wastes or kitchen equipment to storm water drainage features
- The owner will inform employees, contractors, etc. that spills are to be swept or vacuumed
- Connections of pool/spa drains to streets or storm drains.
- Discharges of paint or masonry wastes to streets or storm drains

Roux Associates, Inc.
5150 East Pacific Coast Highway, Suite 450
Long Beach, California 90804

Executive Summary

Roux Associates, Inc. (Roux), on behalf of BTC III Arrow Route CC LP (BTC, CLIENT), has prepared this *Subsurface Investigation Report* (Report) for the 95-acre Former Commercial Metals Company (CMC) facility located at 12451 Arrow Route, Rancho Cucamonga, California (Site; Figure 1). The Site was formerly owned and occupied by CMC and included an inactive rebar fabrication facility and inactive steel mill. The Site is comprised of four parcels (Parcels 1 through 4; Figure 2), which were historically used as follows:

- Parcel 1 was formerly used as an equipment yard, slag material storage, and steel billets storage and had no permanent structures;
- Parcel 2 was formerly developed with a melt shop, warehouse and maintenance building, an old bag house, and a guard shack;
- Parcel 3 was formerly developed with a new bag house, the main office, a parts warehouse, a roll mill, and a bundling station; and
- Parcel 4 was formerly developed with an office and a fabrication shop that included a vehicle wash area.

The Site was acquired by CLIENT in December 2021 and as of the date of this Report was being cleared of all structures in preparation for industrial redevelopment (Figure 3).

Ramboll US Consulting, Inc. (Ramboll) conducted a Phase I Environmental Site Assessment (ESA) and a Phase II Subsurface Investigation of the Site (Ramboll, 2021b and 2021a) in late 2020 and early 2021 on behalf of the former owner. The stated objectives of Ramboll's Phase II investigation were to evaluate: (1) soil and soil vapor conditions across the Site; (2) the extent of subsurface slag, a byproduct of the steel manufacturing process; and (3) subsurface conditions near current and former features such as underground storage tanks (USTs), cooling towers, and storage areas for slag, steel billet, scrap metal and rebar.

Ramboll's key findings included the following:

- Lead was detected in shallow soil samples above the Department of Toxic Substance Control (DTSC) screening level (SL) for Commercial/Industrial Soil (320 milligrams per kilogram [mg/kg] at the time of the Ramboll investigation[1]) in initial borings and in step-out borings near the former warehouse and maintenance buildings (Parcels 2 and 3);
- Total petroleum hydrocarbon (TPH) concentrations in the diesel range ("diesel range organics" or "DRO") in shallow soil samples exceeded the United States Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs; 560 mg/kg) in borings at the southeast corner of Parcel 3 and the western portion of Parcel 2;

[1] The DTSC SL for lead in soil has been updated from 320 mg/kg to 500 mg/kg per the Human Health Risk Assessment (HHRA) Note Number 3, updated in May 2022 by the DTSC Human and Ecological Risk Office (HERO). ht ps://dtsc.ca.gov/wp-content/uploads/sites/31/2022/02/HHRA-Note-3-June2020-Revised-May2022A.pdf

- Volatile organic compounds (VOCs), primarily tetrachloroethene (PCE), were detected in shallow soil vapor at concentrations exceeding the DTSC SL for a commercial/industrial scenario using an at enuation factor of 0.03 (67 micrograms per cubic meter [$\mu g/m^3$]) in the southeastern portion of the Site at Parcel 3; and

- Slag, an operational byproduct containing metals, was found in shallow soils across the western, and southwestern portions of the Site at Parcels 1, 2, and 4.

As part of due diligence prior to Site acquisition by BTC, Roux conducted a Phase I ESA in September 2021 (Roux, 2021) and identified the following Recognized Environmental Conditions (RECs):

- TPH and metals impacts to shallow soil at Parcels 2 and 3, and PCE impacts to shallow soil vapor at Parcel 3, as identified by Ramboll;
- Rail spurs at Parcels 2 and 3;
- An existing 12,000 gallon dual-compartment diesel and gasoline underground storage tank (UST) at Parcel 3;
- A former chemical storage area northwest of the former melt shop on Parcel 2;
- A wash rack in the northern portion of Parcel 2, which had not been previously assessed;
- An inactive former on-Site UST, which historical records suggested had been removed from the Site;
- An inactive subsurface clarifier and aboveground oil recovery system in Parcel 4; and
- Slag materials in soils along the western portion of the Site.

In order to address the RECs and build on Ramboll's data, Roux conducted a Subsurface Investigation in two mobilizations: the first in November 2021 and the second in March 2022 (Figures 4 through 7). Mobilization 1 was implemented to confirm Site environmental conditions prior to BTC's ownership and Mobilization 2 was implemented after BTC became owner to delineate VOC impacts to shallow soil and soil vapor at Parcel 3.

The results of Mobilization 1 confirmed that:

- Soil samples collected along rail spurs at Parcels 2 and 3 indicated that one boring location had PCB concentrations greater than the SLs and one boring location had a SVOC constituent (benzo(a)pyrene) concentration greater than the SL;

- Target chemical concentrations in soil and soil vapor samples at an existing UST, a former chemical storage area, a wash rack, and former USTs were less than commercial/industrial RSLs or SLs;

- Pesticide and herbicide concentrations across the Site were less than the commercial/industrial RSLs or SLs;

- Shallow soils (less than 5 feet bgs) in limited areas near the southern portion of the Site (Parcels 2 and 3) contained DRO and metals concentrations exceeding the commercial/industrial RSLs or SLs; and

- PCE and benzene concentrations in soil vapor samples in portions of Parcel 3 exceeded the conservative SLs.

The results of Mobilization 2 confirmed that:

- VOCs in soil are not present at concentrations above USEPA RSLs or DTSC SLs; and
- PCE concentrations in soil vapor at Parcel 3 were detected within a limited area and significantly decrease with depth, and are laterally and vertically defined.

Based on the results of the Subsurface Investigation, Roux recommends:

1. Evaluation of soil vapor extraction (SVE) as a remedial alternative for shallow VOC impacts to Parcel 3.[2]
2. Additional, limited sampling along the rail spur to delineate the extent of PCB impacts.[3]
3. Additional evaluation of the physical distribution and chemical composition of slag materials in the western portions of the Site.[4]
4. Additional shallow soil sampling to define the limits of metals and DRO impacts to shallow soils at Parcels 2 and 3, and SVOC impacts at Parcel 3.

[2] On July 15, 2022, Roux conducted an SVE pilot, which was documented in a, Soil Vapor Extraction Pilot Test Technical Memorandum, dated October 4, 2022.

[3] A shallow soil investigation in the area of identified polychlorinated biphenyls (PCBs) was conducted in November 2022, which was documented in a *Technical Memorandum, Targeted Shallow Soil Investigation for Polychlorinated Biphenyls, Southeastern Corner of Parcel 3*, dated April 7, 2023.

[4] A focused slag investigation was conducted between September and October 2022, which was documented in a *Slag Investigation Technical Memorandum*, dated April 7, 2023.

1. Introduction

Roux Associates, Inc. (Roux), on behalf of BTC III Arrow Route CC LP (BTC, CLIENT), has prepared this *Subsurface Investigation Report* (Report) for the former Commercial Metals Company (CMC) facility located at 12451 Arrow Route, Rancho Cucamonga, California (Site; Figure 1). The Site was formerly owned and occupied by CMC and included an inactive rebar fabrication facility and inactive steel mill (Figure 2). BTC purchased the Site in December 2021. Demolition of Site structures to facilitate industrial redevelopment began in June 2022 and is anticipated to be completed by mid-2023. A conceptual industrial development plan, which is subject to change, is shown on Figure 3.

Ramboll US Consulting, Inc. (Ramboll) conducted a Phase I Environmental Site Assessment (ESA) and Phase II subsurface investigation on behalf of CMC (the former owner) in 2020 and 2021 (Ramboll, 2021a and 2021b). Ramboll's Site-wide Phase II investigation was intended to assess soil and soil vapor conditions as part of CMC's shut down of operations (Ramboll, 2021b). The Phase II investigation evaluated point-source features of concern, including former underground storage tanks (USTs), clarifiers, cooling towers, chemical storage areas, and former remediation areas. Ramboll evaluated the extent and presence of buried slag by implementing unbiased, Site-wide grid sampling in areas that had not previously been sampled.

As part of due diligence prior to Site acquisition by BTC, Roux conducted a Phase I ESA in September 2021 (Roux, 2021), which identified the six (6) Recognized Environmental Conditions (RECs). In order to assess the identified RECs, Roux conducted a Subsurface Investigation in two mobilizations: the first in October and November 2021 and the second in March 2022 (Figures 4 through 7). The Subsurface Investigation was conducted to evaluate Site conditions relative to intended industrial redevelopment.

1.1 Objectives

The objectives of the Subsurface Investigation were to:

- Evaluate total petroleum hydrocarbon (TPH) concentrations in the diesel range ("diesel range organics" or "DRO") and metals impacts to shallow soil at Parcels 2 and 3, and VOC impacts (primarily tetrachloroethene [PCE]) to shallow soil vapor at Parcel 3, as identified by Ramboll;
- Evaluate shallow soils in the area of former rail spurs at Parcels 2 and 3;
- Evaluate soil and soil vapor at a then-existing[5] 12,000 gallon dual-compartment diesel and gasoline underground storage tank (UST) at Parcel 3;
- Evaluate soil and soil vapor at a former chemical storage area northwest of the former melt shop on Parcel 2;
- Evaluate soil and soil vapor at a wash rack in the northern portion of Parcel 2;

[5] The UST was removed by December 12, 2022 in accordance with permits from the San Bernardino County Fire Protection District (SBCFPD) and Rancho Cucamonga Fire Protection District (RCFPD). Soil sampling was conducted per the permits and showed no indication of hydrocarbon-related impacts; case closure will be requested from the SBCFPD and RCFPD.

- Evaluate soil in the vicinity of an inactive subsurface clarifier and aboveground oil recovery system in Parcel 4; and

- Evaluate soil and soil vapor at an inactive former on-Site UST at Parcel 3, which historical records suggested had been removed from the Site.

The subsurface investigation was completed in two mobilizations; Mobilization 1 was conducted from October to November 2021 and Mobilization 2 was conducted in March 2022. The results of the Subsurface Investigation are presented herein.

1.2 Report Organization

The remaining sections of this Report are organized as follows:

- Section 2 presents general background information, including Site description, Site history, Site geology and hydrogeology, and a summary of previous environmental investigations;
- Section 3 describes the Subsurface Investigation activities;
- Section 4 provides a summary of results and discussion;
- Section 5 summarizes the findings of the investigation and provides conclusions;
- Section 6 presents Roux's recommendations for the Site;
- Section 7 provides a list of references used in this Report.

2. General Background

2.1 Site Information and History

The Site consists of approximately 95 acres of land bounded by Arrow Route to the north and the Atchison Topeka and Santa Fe Railroad (Railroad) to the south and is accessible via Arrow Route and Juneberry Drive. The nearest surface water feature to the Site is Day Creek, approximately 0.24-mile to the west.

The Site was formerly occupied by several related entities: CMC, an inactive steel mill; CMC Rebar, a limited rebar manufacturing facility; and Phoenix Industries, a slag processing facility (slag is an inert byproduct of steel production). The Site operated as a steel mill from the 1950s until 2019 when milling operations were phased out. BTC purchased the property in 2021. The Site is currently vacant and is undergoing demolition in preparation for industrial redevelopment. The Site is generally flat with a stormwater retention basin located along the southern boundary of Parcel 3.

The main address for the Site is 12451 Arrow Route, Rancho Cucamonga, San Bernardino County, California. Additional street addresses historically used at the Site include: 12343, 12353, 12455, and 12459-B Arrow Route. The Site consists of four parcels (Parcels 1 through 4), which are described below and shown on Figure 2:

- Parcel 1 is located in the western portion of the Site and was not historically developed with any permanent structures. CMC utilized the northern portion of Parcel 1 as an equipment boneyard and the southern portion for storage of steel billets. At the time of Roux's Phase I ESA, the majority of Parcel 1 was vacant with some equipment storage in the northern portion and processed slag storage in its central portion.

- Parcel 2 is located in the central and southern portions of the Site. The northern area of Parcel 2 was partially occupied by Phoenix Industries for storage of scrap metal for processing and steel slag that was produced on-Site. On-Site operations consisted of mechanical crushing and sorting of steel slag for off-Site use as aggregate material. No chemical processing of steel slag was conducted on-Site, and no permanent structures were located at this area. The southern portion of Parcel 2 was occupied by the CMC steel mill. The steel mill's primary processing building (melt shop) was previously equipped with an electric arc furnace (EAF) for melting of scrap metal.

- Parcel 3 is located in the eastern portion of the Site. The northern area of Parcel 3 was occupied by CMC's main office building, a fueling station, and a vacant area used for rebar storage. The southern portion of Parcel 3 was developed with the former milling and rolling building.

- Parcel 4 is located in the northern portion of the Site and was occupied by CMC Rebar, which operated a small rebar fabrication facility. An office and fabrication building were located at the northwestern portion of the parcel, which included a maintenance area and a vehicle wash area with an oil collection trench and clarifier. The southern and eastern portions of the parcel were used for parking and rebar storage.

The Site was developed for agricultural use (row crops) from at least 1938 until 1954. A small structure was added to the southeastern corner of the Site in 1953, in the approximate present-day location of an existing groundwater well and water tower. By 1959, the eastern portion of Parcel 3 was developed with the milling and rolling improvements, paved parking areas, outdoor storage yard, office building, water tower, and

multiple rail spurs. The remaining parcels continued to be used for agricultural purposes through at least 1973. By 1975, Parcel 2 and the southern portion of Parcel 1 were graded and likely used for storage of raw, finished, or used materials. The northern portion of the Site remained agricultural until the 1980s when Parcel 4 was developed with the fabrication building. By 1985, agricultural operations had ceased, and the Site was primarily developed for industrial use. The current office building and melt shop at Parcel 2 were added by 1990. Major operations from the 1980s through 2019 included receiving of steel scrap, melting of steel scrap, production and fabrication of rebar, and processing of steel slag.

2.2. Site Geology & Hydrogeology

2.2.1 Site Geology

The Site is located roughly 5 miles to the south of the San Gabriel Mountain Ranges. The Site is underlain by the Chino Subbasin. The Chino Subbasin is bound by geological features such as the Rialto Fault to the east, the Jurupa Mountains to the South, the San Jose Fault to the northwest, and the Cucamonga Fault to the north. Regional source rocks consist of consolidated and semi-consolidated Quaternary fluvial and marine deposits. Depositional facies are primarily alluvium, lake, playa, and terrace deposits. Regional soils are mostly gravelly loamy sands (California Department of Conservation, 2010 Geologic Map).

According to Ramboll's 2021 Phase II Subsurface Investigation Report (Ramboll, 2021a), soil on-Site generally consists of sands and gravel in the upper 5 feet below ground surface (bgs), followed by lenses of sand and silts. This was confirmed during Roux's subsurface investigation conducted in 2021 and 2022.

Lithologic conditions observed by Ramboll and Roux at each parcel are as follows:

- Parcel 1–- Sand with gravel and/or slag to 5 feet bgs (slag was observed to 7.7 feet bgs by Ramboll in some locations), sand and sand with silt to 18 feet bgs, sandy silt to 25 feet bgs
- Parcel 2 – Sand with gravel and/or slag to 5 feet bgs (slag was observed to 10 feet bgs by Ramboll in some locations), sand and sand with silt to 12 feet bgs, silty sand and sand layering to 30 feet bgs
- Parcel 3 – Sand or silty sand to 29 feet bgs and dense silty layer from 29 to 34 feet bgs
- Parcel 4 – Sand and silty sand layers to 5 feet bgs, and sand to 25 feet bgs

Soil boring logs from Roux's Subsurface Investigation are provided in Appendix A.

2.2.2 Site Hydrogeology

The Site is situated along the northeastern portion of the Chino Subbasin within the Upper Santa Ana Valley Groundwater Basin. The Chino Subbasin is bounded on the north by the San Gabriel Mountains (California's Groundwater Bulletin 118, 2004). Nearest tributaries to the Site drain from north to south from the San Gabriel mountains. The nearest surface water feature to the Site is Day Creek, a concrete lined stormwater drainage channel, approximately 0.24-miles to the west.

Based on monitoring well information from the Etiwanda Generating Station (P. Hamilton, 2010) groundwater is estimated at a depth of 430 feet bgs. Ramboll's Phase II Report notes that historical well drillers logs from a well installed at the southeastern corner of the Site to 728 feet bgs in 1956, had depth

to water at 378 feet bgs (Ramboll, 2021a). During Site investigations by Ramboll and Roux, groundwater was not encountered to the maximum depth drilled of 35 feet bgs.

2.3 Key Previous Environmental Investigations

Environmental investigations have been conducted at the Site by various consultants starting in 1987. Some investigations and on-Site environmental work have warranted regulatory agency oversight from the Department of Toxic Substance Control (DTSC); the Santa Ana Regional Water Quality Control Board (SA-RWQCB), or the County of San Bernardino Environmental Management Group. Ramboll's Phase I ESA provided summaries of selected previous Site investigations, as follows (corresponding reports provided in Appendix D of Ramboll's Phase I ESA):

- 1988 Clean Closure Verification (Parcel 4), Slag Trench Remediation Area;
- 1990 Remediation of Lead Contaminated Soil at Southwest Corner of the Site (Parcel 1);
- 1993 UST Removals (Parcel 3);
- 1994 Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Preliminary Assessment (PA; Parcels 1, 2, and 3);
- 2001 Preliminary Endangerment Assessment (Parcel 4), Slag Trench Remediation Area;
- 2002 Baghouse Dust Commingled with Slag Stockpile Remediation (Parcels 1 and 2);
- 2006 UST Closure (Parcel 3);
- 2007 Remediation of Soils Impacted with Heavy Metals North of Pad 16 (Parcel 2);
- 2011 UST Removal (Parcel 2); and
- 2014 UST Removal (Parcel 4).

Additional details can be found in the referenced documents and will be included in Roux's forthcoming Preliminary Environmental Assessment Equivalent (PEA-E) Report to be finalized by May 2023.

2.3.1 Phase II Subsurface Investigation Report (Ramboll, 2021a)

Ramboll's Phase II investigation was performed between December 2020 and February 2021, as CMC was shutting down steel mill operations, and was intended to establish "current" soil and soil vapor conditions in preparation for Site closure (Ramboll, 2021a). The Phase II investigation evaluated point-source features of concern, including former USTs, clarifiers, cooling towers, chemical storage areas, and former remediation areas, as well as the extent and presence of buried slag in areas that had not previously been assessed through unbiased, Site-wide grid sampling. Ramboll's figures are included in Appendix B.

Ramboll collected soil and soil vapor samples from 104 borings drilled throughout the Site to depths ranging from 5 to 35 feet bgs. Soil samples were collected and analyzed for metals, VOCs, and TPH at most locations, with select samples also analyzed for hexavalent chromium and/or PCBs. Soil vapor samples were collected at 26 locations and analyzed for VOCs. Ramboll reported that TPH in the diesel range ("diesel range organics" or "DRO"), lead, cadmium, and zinc concentrations were greater than their respective screening levels (SLs) in soil; and chloroform and tetrachloroethene (PCE) concentrations exceeded their respective SLs in soil vapor.

More specifically, Ramboll's key findings included the following:

- Lead concentrations in shallow soil samples exceeded the DTSC SL for Commercial/Industrial Soil (320 milligrams per kilogram [mg/kg] at the time of the Ramboll investigation[6]) in initial borings and in step-out borings near the warehouse and maintenance buildings at Parcel 2 and in the southeast corner of Parcel 3 (Figure 6 in Appendix B);

- DRO concentrations in shallow soil samples exceeded the United States Environmental Protection Agency (USEPA) Regional Screening Level (RSL; 560 mg/kg) in initial borings and in step-out borings in the western boundary of Parcel 2 and the southeast corner of Parcel 3 (Figure 6 in Appendix B);

- PCE and benzene were detected in shallow soil vapor at concentrations exceeding the DTSC SL for a commercial/industrial scenario using an at enuation factor of 0.03 (67 and 14 micrograms per cubic meter [$\mu g/m^3$], respectively) at shallow depths in the western portion of the roll mill and in the area of the parts warehouse at Parcel 3 (Figure 6 in Appendix B). Detections of PCE ranged from 10 to 100,000 $\mu g/m^3$ and benzene detections ranged from 29 to 220 $\mu g/m^3$; and

- Slag was observed in several borings at depths ranging from 0 to 10 feet bgs, primarily on the western portions of the Site.

Ramboll concluded that the investigations did not suggest that on-Site operations had adversely affected groundwater, which was known to be occur at a depth over 400 feet bgs.

2.3.2 Phase I Environmental Site Assessment (Roux, 2021)

Prior to acquisition of the Site by BTC and as part of due diligence activities, Roux conducted a Phase I ESA of the Site in September 2021. The following RECs were identified:

- VOC impacts to soil vapor, and DRO and metals impacts to shallow soils, as identified by Ramboll. This included SL exceedances in soil vapor for chloroform (three locations), benzene (two locations), and PCE (six locations) and in soil for DRO, total cadmium, lead, and zinc.

- Rail spurs at Parcels 2 and 3 were installed by at least 1959. Railroad spurs represent environmental concerns due to potential historical application of oils containing PCBs, herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical practice of using coal cinders for track fill material.

- A 12,000-gallon dual-compartment diesel and gasoline underground storage tank (UST) and former fueling station was located at Parcel 3, north of the main office building.

- A former chemical storage area was located northwest of the melt shop on Parcel 2. Moderate staining and cracks were observed, and this area was not previously assessed.

- A wash rack located in the northern portion of Parcel 2. This area was not previously assessed.

[6] The DTSC SL for lead in soil has been updated from 320 mg/kg to 500 mg/kg per the Human Health Risk Assessment (HHRA) Note Number 3, updated in May 2022 by the DTSC Human and Ecological Risk Office (HERO). ht ps://dtsc.ca.gov/wp-content/uploads/sites/31/2022/02/HHRA-Note-3-June2020-Revised-May2022A.pdf

- An inactive subsurface clarifier and aboveground oil recovery system in Parcel 4, which had not been previously assessed.

- Potential inactive on-Site USTs were identified in previous reports and regulatory agency records.

A number of historical RECs (hRECs) also were identified including areas of the Site formerly remediated for slag and lead impacts. Based on a review of historical environmental documents for the Site, Ramboll's investigation data, and RECs identified in the Phase I ESA, Roux recommended and conducted a Subsurface Investigation, as detailed in the following sections.

3. Subsurface Investigation Activities

The Subsurface Investigation was conducted in two mobilizations; the first from October to November 2021 and the second in March 2022. Mobilization 1 was performed prior to BTC's purchase of the Site and the scope of work was focused on confirming Site environmental conditions prior to BTC's ownership of the Site. Mobilization 2 was performed after BTC became owner and the scope of work targeted delineation of PCE impacts to shallow soil and soil vapor at Parcel 3. All activities performed and detailed in this Report were conducted under the supervision of a registered California Professional Geologist or a registered California Professional Engineer.

3.1 Pre-Field Activities

Prior to the start of field activities, Roux prepared a Site-specific HASP to ensure worker safety. In addition to containing information regarding Roux's standard safety practices, the HASP describes potential hazards relating to Site activities and provides the locations and contact information of nearby emergency services. The HASP was kept on-Site when fieldwork occurred and was reviewed and signed by Site workers during the daily tailgate health and safety meeting prior to work each day.

Before each mobilization began, Roux performed a Site visit to mark areas intended for intrusive work. Work areas were marked in white paint along the Site boundaries, and Underground Service Alert of Southern California was notified at least 2 business days prior to the start of intrusive field activities. A private geophysical services and utility locating firm, Atlas Geophysics (Atlas) of San Diego, California, performed a geophysical survey to assess the proposed boring locations prior to each round of drilling. Atlas utilized a variety of tools, including mini ground penetrating radar, to assess locations of buried utilities (i.e., natural gas, electric, water, sewer, telephone, fiber optic, etc.) or obstructions in the area of each boring. Atlas did not identify any subsurface utilities or structures during the geophysical survey that would interfere with the proposed sampling locations and no proposed boring locations were modified.

3.2 Subsurface Investigation Procedures

Investigation procedures, including drilling, soil sampling, soil vapor probe installation, and soil vapor sampling, were generally consistent between Mobilizations 1 and 2. Those procedures are described in this section, and the specific scopes of work for each mobilization are described in Section 3.3.

3.2.1 Drilling and Soil Sampling Procedures

In Mobilizations 1 and 2, soil borings were drilled at the Site by C-57 licensed drillers under the direction of Roux. Borings were drilled using a truck mounted Geoprobe direct-push drill rig. All soil borings were hand augured to 5 feet bgs to minimize the risk of damage to unmarked or unidentified subsurface utilities.

Each soil boring was logged using United Soil Classification System (USCS). Soils were field screened using a photoionization detector (PID) at regular intervals. PID readings and general observations regarding material color and odor encountered at each boring were noted on boring logs. Boring logs can be found in Appendix A.

In the top 5 feet, soil samples were collected directly from the hand auger bucket. Soil samples from deeper than 5 feet bgs were collected directly from acetate liners. All soil samples were collected in laboratory supplied containers and samples selected for VOC analysis were collected using USEPA Method 5035

TerraCore sampling kits. All soil samples were transported under proper chain-of-custody procedures to Enthalpy Analytical, LLC (Enthalpy) of Orange, California, a California state-certified analytical laboratory. Laboratory analytical methods that were used are described below:

- Title 22 metals by USEPA method 6010B;
- Lead by USEPA method 6010B;
- VOCs by USEPA method 8260B with 5035 extraction;
- TPH (Gasoline Range Organics [GRO; C6 to C10], DRO [C10 to C28], and Oil Range Organics [ORO; C28 to C44]) by USEPA method 8015B;
- PCBs by USEPA method 8082;
- OCPs by USEPA method 8081;
- SVOCs by USEPA method 8270C; and
- Chlorinated herbicides by USEPA method 8151.

Drilling equipment was decontaminated in a solution of laboratory-grade detergent and rinsed with distilled water prior to reuse.

3.2.2 Soil Vapor Probe Installation and Sampling Procedures

All soil vapor probes were constructed with new stainless-steel filter probe tip with a 1/4-inch push-to-connect fitting at ached to 1/4-inch-diameter Teflon tubing. The probes were constructed by first placing approximately 6 inches of #3 coarse-grained sand into the bot om of the borehole. The sampling tubing with the stainless-steel filter probe tip was then placed within the borehole with a length of PV. Additional sand was then placed in the borehole to create an approximately 1-foot sand pack interval around the vapor tip. Approximately 1 foot of dry granular bentonite was placed on top of the sand pack, followed by hydrated bentonite to the surface. The tubing was labeled with depth of placement and capped using a gas-tight valve set to the "off" position. Each probe was completed with a 6-inch-diameter traffic rated well box. The soil vapor probes were installed in general accordance with the DTSC and Los Angeles Regional Water Quality Control Board and San Francisco Regional Water Quality Control Board Advisory – Active Soil Gas Investigations (Soil Gas Advisory; DTSC, 2015).

Prior to purging or sampling, a minimum 60-second shut-in test at a vacuum of 100 inches of water column was performed at each probe to confirm that the above-ground lines and three-way valves were properly sealed. As a secondary test, a leak check compound (LCC), 1,1-difluoroethane (1,1-DFA), was utilized to check for leaks during sampling and was included among the laboratory analyte list for soil vapor. Upon successful completion of the shut-in test, three purge volumes were subsequently extracted from the sampling system.

Soil vapor samples were collected in 1-liter laboratory supplied batch-certified SUMMA® canisters at a flow with 200 milliliters per minute (mL/min) flow controllers. Upon collection, each sample was immediately labeled with a unique sample identifier. Soil vapor samples were then transported under proper chain-of-custody procedures to Enthalpy. Soil Vapor samples were analyzed for VOCs by USEPA Method TO-15.

Drilling equipment was either dedicated to the sampling location (i.e., it was not reused), or was cleaned in a solution of laboratory-grade detergent and rinsed with distilled water prior to reuse. Soil vapor sampling equipment was not re-used between sampling locations or depth intervals.

Soil vapor probe construction is shown on boring logs (Appendix A).

3.3 Subsurface Investigation – Mobilization 1 (November 2021)

Mobilization 1 was implemented from October 27 through November 8, 2021. The work was intended to address RECs identified in Roux's Phase I ESA and build upon the results of Ramboll's Phase II investigation. In order to accomplish the objectives of the investigation, Confluence Environmental (C-57 License #913194), of Rio Linda, California, was contracted to drill 95 soil borings at the Site under the direction of Roux. Borings were drilled to depths up to 15 feet bgs. Activities included:

- Investigation of the extent of shallow soil lead and DRO exceedances in the vicinity of Ramboll borings RSB-02, RSB-03, RSB-05, and RSB-57 (Figure 6 and 7).
    - 7 samples were collected from three step-out borings at depths of 1, 3, and 5 feet bgs in the vicinity of Ramboll boring RSB-02-W and analyzed for lead;
    - 7 samples were collected from five step-out borings at depths of 1 and 3 feet bgs in the vicinity of Ramboll boring RSB-57 and analyzed for lead;
    - 10 samples were collected from five step-out borings at depths of 1 and 3 feet bgs in the vicinity of Ramboll borings RSB-03-E and RSB-03-S and analyzed for TPH; and
    - 10 samples were collected from seven step-out borings at depths of 1, 3, and 5 feet bgs in the vicinity of Ramboll boring RSB-05 and analyzed for TPH.
- Investigation of shallow soils in the former rail spurs located on Site (borings RR-1 through RR-19, Figures 6 and 7). 38 soil samples were collected from 20 borings at depths of 0.5 and 1.5 feet bgs and analyzed for metals, TPH, VOCs, PCBs, OCPs, SVOCs, and chlorinated herbicides.
- Investigation of the extent of impacted soil vapor in the areas where Ramboll reported elevated concentrations of benzene and PCE (in the vicinity of Ramboll borings RSB-28, RSB-29, RSB-30, RSB-38, RSB-53, RSB-54, RSB-60, and RSB-61, Figures 5 and 7). Soil vapor probes were installed at depths of 5, 10, and 15 feet bgs at 40 locations and samples were analyzed for VOCs. See Table 1 and Appendix A for soil vapor probe construction details.
- Collection of shallow soil samples on the east side of the existing underground storage tank and dispenser at Parcel 3 (boring SB-4, Figure 7). Two samples were collected at 1 and 3 feet and analyzed for TPH.
- Collection of shallow soil samples in the vicinity of the four former diesel USTs at Parcel 3 which were removed in 1993 (borings SB-2 and SB-3, Figures 6 and 7). Four soil samples were collected at depths of 1 and 3 feet bgs in 2 borings and analyzed for metals, VOCs, and TPH.
- Collection of shallow soil samples in the drum storage area adjacent to the former 300-gallon diesel fuel UST on Parcel 2 (boring SB-1, Figure 6). Two soil samples were collected at depths of 1 and 3 feet bgs in 1 boring and analyzed for metals, VOCs, and TPH.

- Collection of shallow soil samples in the vicinity of the vehicle wash rack located in the northern portion of Parcel 2 (borings RSB-70-W and RSB-70-E, Figure 5). 6 soil samples were collected at depths of 1, 3, and 5 feet bgs in 2 borings and analyzed for metals, VOCs, and TPH.

- Collection of shallow soil samples in the vicinity of the former subsurface clarifier and aboveground oil recovery system in Parcel 4 (boring RSB-58-S and RSB-58-W, Figure 5). 6 soil samples were collected at depths of 1, 3, and 5 feet bgs in 2 borings and analyzed for metals, VOCs, and TPH.

All Ramboll and Roux sample locations are shown on Figures 4 through 7, and soil and soil vapor sampling are summarized in the following sections. Refer to Table 1 for sampling rationale and soil vapor probe construction details for the Subsurface Investigation.

3.4 Subsurface Investigation – Mobilization 2 (March 2022)

Mobilization 2 was implemented in March 2022 after BTC became owner to further delineate the extent of VOC impacted soil and soil vapor at Parcel 3 (Figure 7). From March 2 through March 4, 2022, Cascade Drilling and Technical Services (Cascade; C-57 License #1058336), of Santa Ana, California, drilled 34 soil borings at the Site under the direction of Roux.

- Borings were drilled to depths between 15 and 35 feet bgs.

- Soil samples were collected at depths of 5, 15, and 35 feet bgs.

- Soil vapor probes were installed at the same locations and depths as soil samples.

- A total of 63 soil samples were collected and analyzed for VOCs by USEPA method 8260B.

- A total of 63 soil vapor samples were collected and analyzed for VOCs by USEPA Method TO-15.

All sample depths and laboratory analyses are summarized in Table 1. Soil vapor samples were collected on March 7 and 8, 2022, following a 48-hour equilibration period.

3.5 Soil Observations

Soil lithology observed during the Subsurface Investigation was generally consistent with previous investigations. PID screening measurements of soil samples collected ranged from 0.0 to 10.9 parts per million by volume (ppmv) above ambient background. No odor or staining was observed in soil samples. Groundwater was not encountered in this investigation to the maximum depth explored of 35 feet bgs. Slag was observed in some borings placed at the western portion of the Site during drilling. Soil boring logs are provided in Appendix A.

3.6 Investigation Derived Waste

Investigation derived waste (IDW) from Site activities included soils cuttings, concrete/asphalt, coring water, and decontamination water. IDW was stored in 55-gallon drums. Ten drums containing soil and seven drums containing rinsate water were generated and staged within the mobile maintenance warehouse at the southern portion of Parcel 3. Drums were labeled and clearly marked with “pending analysis” labels. Roux collected samples to profile the soil drums and decontamination rinseate. The drums were transported as

non-hazardous waste to Soil Safe in Adelanto, California (soil) and Crosby & Overton in Long Beach, California (water) on October 20, 2022, under proper manifest (Appendix C).

4. Subsurface Investigation Results

This section presents a summary of the findings of Roux's Subsurface Investigation. Results for detected analytes in soil and soil vapor are provided in Tables 2 through 9. Data for select Ramboll boring locations within areas investigated by Roux are also included. Analytical laboratory reports are provided in Appendix D.

4.1 Screening Levels

Soil analytical results were compared to the following soil screening levels:

- USEPA RSLs, dated May 2022 (USEPA, 2022);
- DTSC Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note Number 3 Screening Levels (DTSC SLs), dated May 2022 (DTSC, 2022);[7]
- DTSC HERO HHRA Note Number 11 Southern California Ambient Arsenic Screening Level (DTSC, 2020);
- Kearney Foundation Special Report, Kearney Foundation of Soil Science, Division of Agriculture and Natural Resources, University of California, Background Concentrations of Trace and Major Elements in California Soil (Kearney, 1996)

Soil vapor analytical results were compared to soil vapor screening levels (SVSLs) which were calculated by applying an at enuation factor (AF) of 0.03 to the USEPA Industrial Indoor Air RSLs and DTSC Industrial Indoor Air SLs, in accordance with the February 2023 DTSC Supplemental Guidance: Screening and Evaluating Vapor Intrusion (Final Draft Supplemental Guidance; DTSC, 2023).

4.2 Analytical Results

4.2.1 Lead and TPH Delineation in Soil (Parcels 2 and 3)

In 2020 and 2021, Ramboll collected soil samples in a sitewide grid to evaluate the extent of slag material at the Site (RSB-01 through RSB-24; Figure 4). Lead or TPH impacts were identified in a subset of those samples (RSB-02, RSB-03, and RSB-05). Lead impacts were also identified in Ramboll boring RSB-57, which was installed east of the former mobile maintenance building on Parcel 3. Step-out samples were subsequently collected and analyzed but delineation was not completed. Based on those results, Roux collected additional step-out samples to delineate lead impacts around borings RSB-02-W and RSB-57, and TPH impacts around borings RSB-03 and RSB-05.

- **Borings RSB-02-R1 through R3:** Ramboll boring RSB-02-W had reported lead concentrations of 92.4 mg/kg, 2,040 mg/kg, and 5.0 mg/kg at depths of 1, 3, and 5 feet bgs, respectively. In order to delineate lead impacts, Roux collected seven soil samples from 3 borings placed around RSB-02-W. Roux collected soil samples at depths of 1 and 3 feet bgs in all borings with an additional sample

[7] Although the DTSC SLs for TPH in the aromatic medium carbon range (C9-C16) and aromatic high carbon range (C17-C32) both overlap the DRO analysis carbon range (C10-C28), the aromatic medium SL was lower (500 mg/kg). Thus, it is more conservative and protective of future site users to screen DRO results against the TPH aromatic medium carbon range SL. The TPH aromatic high carbon range SL was used to screen the ORO results.

collected at 5 feet bgs in boring RSB-02-R2 (Figure 8 and Table 2). All samples were analyzed for total lead and reported concentrations ranged between 5.9 mg/kg and 1,700 mg/kg. The sample collected at a depth of 3 feet bgs in the boring placed to the west of Ramboll boring RSB-02-W (RSB-02-R2-3) had a total lead concentration of 1,700 mg/kg, which exceeded the DTSC Commercial/Industrial Soil SL of 500 mg/kg. Based on data collected to date in this area, lead impacts at RSB-02-W occur primarily at 3 feet bgs, and were delineated to the north, south, and east, but not to the west.

- **Borings RSB-57-R1 through R5:** Ramboll borings RSB-57, RSB-57-W, and RSB-57-S had reported lead concentrations of 918 mg/kg, 692 mg/kg, and 775 mg/kg, respectively at a depth of 1 foot bgs. In all three borings lead concentrations in samples collected from 3 and 5 feet bgs were below the DTSC Commercial/Industrial Soil SL of 500 mg/kg. In order to delineate lead impacts, Roux collected seven soil samples from 5 borings at a depth of 1 foot bgs; additionally, 3 foot samples were collected from two borings (RSB-57-R4 and RSB-57-R5). All samples were analyzed for total lead and reported concentrations ranged between 7.4 mg/kg (RSB-57-R1-1) and 2,300 mg/kg (RSB-57-R4-3); see Figure 9 and Table 2. Lead concentrations in two samples collected from boring RSB-57-R4 at 1 foot bgs (780 mg/kg) and 3 feet bgs (2,300 mg/kg) exceeded the DTSC Commercial/Industrial Soil SL of 500 mg/kg (RSB-57-R4-1 and RSB-57-R4-3). Based on data collected to date in this area, lead impacts at RSB-57 primarily occur at 1 foot bgs and need to be further delineated at boring RSB-57-R4.

- **Borings RSB-03-R1 through R5:** Ramboll borings RSB-03, RSB-03-S, and RSB-03-E had reported TPH concentrations in the in diesel range (also referred to as "DRO") of 9,230 mg/kg, 811 mg/kg, and 4,500 mg/kg, respectively, at a depth of 1 foot bgs. In all three borings, DRO concentrations in samples collected from 3 feet bgs were below 10 mg/kg, which is also below the DTSC Commercial/Industrial Soil SL of 500 mg/kg. In order to delineate DRO impacts, Roux collected 10 soil samples from 5 borings at depths of 1 and 3 feet bgs and analyzed all the 1-foot samples for the full TPH carbon chain range and the 3 foot samples for DRO only (Figure 10 and Table 4). Nine of 10 soil samples had reported DRO concentrations above the DTSC Commercial/Industrial Soil SL of 500 mg/kg, with a maximum concentration of 5,700 mg/kg reported for the 1-foot bgs sample collected from boring RSB-03-R1 . All reported TPH concentrations in the gasoline range were less than the reporting limit and all TPH concentrations in the oil range were below the DTSC Commercial/Industrial Soil SL of 18,000 mg/kg. Based on data collected to date in this area, DRO impacts need to be further delineated to the south and west of boring RSB-03.

- **Borings RSB-05-R1 through R7:** Ramboll borings RSB-05, RSB-05-SSW, RSB-05-S2, RSB-05-SSE, and RSB-05-S had reported DRO concentrations that exceeded the DTSC Commercial/Industrial Soil SL of 500 mg/kg at 0.5 and/or 1 foot bgs. Additionally, the DRO concentration from a sample collected at 3 feet bgs in boring RSB-05-S also exceeded 500 mg/kg. In order to delineate DRO impacts, Roux collected 10 soil samples from 7 borings. Samples were collected from 1 foot bgs in all 7 boring locations; a sample from 3 feet bgs was collected at boring locations RSB-05-R1 through R3. Roux analyzed all of the 1-foot bgs samples for the full TPH carbon chain range and the 3 feet bgs samples for DRO only (Figure 11 and Table 4). Four of 10 soil samples had reported DRO concentrations above the DTSC Commercial/Industrial Soil SL of 500 mg/kg, with a maximum concentration of 3,100 mg/kg reported for the 1-foot bgs sample collected from boring RSB-05-R6-1. TPH concentrations in the gasoline range were less than the reporting limit and all TPH concentrations in the oil range were below the DTSC Commercial/Industrial Soil SL of 18,000 mg/kg. Based on data

collected to date in this area, DRO impacts need to be further delineated to the east and west of boring RSB-05.

Based on the results presented above, lead and TPH impacts identified by Ramboll appear to be limited in aerial extent and depth. Further delineation during a future Data Gap Investigation and/or hot spot removal with confirmation soil sampling during redevelopment activities may be appropriate.

4.2.2 Rail Spur (Parcels 2 and 3)

Roux's Phase I ESA identified the lack of sampling along the railroad rail spurs as a REC. Specifically, the Phase I ESA noted that rail spurs have been in place on-Site at Parcels 2 and 3 since at least 1959. Due to the historical application of oils containing PCBs, herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material, the on-Site rail spurs were considered a REC in the context of the Phase I ESA. To address this REC, shallow soil samples were collected from 19 borings (RR-1 through RR-19) placed along the rail spurs that encircle the southern half of Parcels 2 and all of 3 (Figure 12). Samples were collected from each boring at depths of 0.5 and 1.5 feet bgs and were analyzed for metals, VOCs, TPH, PCBs, OCPs, SVOCs, and chlorinated herbicides. Analytical results are summarized below.

- **Metals:** Arsenic concentrations exceeded the DTSC Commercial/Industrial Soil SL of 0.36 mg/kg in all samples but one (RR-16-.5), but all were less than the California Upper Confidence Limit background concentration of 12 mg/kg, with the exception of three samples (RR-12-.5, RR-12-1.5, and RR-14-.5), which were between 13 and 15 mg/kg. No other metals exceeded their respective DTSC SLs and/or USEPA RSLs (Table 2). Total chromium concentrations varied with a maximum concentration of 1,100 mg/kg in soil sample RR-3-0.5; total chromium does not have a corresponding DTSC Commercial/Industrial SL or USEPA RSL.

- **VOCs:** Four VOC constituents were detected in 18 of 28 rail spur soil samples. All VOC concentrations were less than their respective DTSC Commercial/Industrial SLs and/or USEPA RSLs (Table 3).

- **TPH:** DRO and ORO were detected in 30 of 38 rail spur soil samples. Concentrations of DRO ranged from 15 to 2,700 mg/kg and 12 samples exceeded the DTSC Commercial/Industrial SL of 500 mg/kg. ORO detections ranged from 22 to 3,200 mg/kg, but were less than the Commercial/Industrial DTSC SL of 18,000 mg/kg (Table 4).

- **Polychlorinated Biphenyls (PCBs):** 24 rail spur soil samples were analyzed for PCBs, and Aroclor-1242 and Aroclor-1260 were the only two PCBs detected. Specifically, samples RR-3-0.5 and RR-3-1.5 had reported Aroclor-1242 concentrations of 130 and 170 mg/kg, respectively, which exceeded the USEPA RSL and DTSC Commercial/Industrial SL of 0.95 and 0.58 mg/kg, respectively. Aroclor-1260 was reported in soil samples RR-7-1.5, RR-9-0.5, and RR-9-1.5 at concentrations of 0.13, 0.22, and 0.32 mg/kg, below the USEPA Commercial/Industrial RSL of 0.99 mg/kg and the DTSC SL of 0.60 mg/kg (Table 5).

- **Organochlorine Pesticides (OCPs):** One OCP, endrin ketone, was detected in one of 24 rail spur soil samples at 11 micrograms per kilogram (µg/kg) (RR-7-0.5; Table 6). There are no established screening levels for this compound.

- **Semi-Volatile Organic Compounds (SVOCs):** SVOCs were detected above laboratory reporting limits in 10 of 24 rail spur soil samples at 0.5 and 1.5 feet bgs. Only one detection, benzo(a)pyrene in RR-12-1.5 (1,800 µg/kg), exceeded the DTSC Commercial/Industrial SL of 1,300 µg/kg (Table 7).

- **Chlorinated Herbicides:** Three of 24 rail spur soil samples contained detections of pentachlorophenol (PCP) above laboratory reporting limits. PCP ranged from 10.2 µg/kg wet (RR-12-1.5) to 52.6 µg/kg wet (RR-4-0.5), less than their respective USEPA Commercial/Industrial RSLs and DTSC SLs. No other chlorinated herbicides were detected (Table 8).

Based on the results presented above, PCBs in the area of boring RR-3 were further investigated in November 2022 and will be documented in a *Technical Memorandum, Targeted Shallow Soil Investigation for Polychlorinated Biphenyls, Southeastern Corner of Parcel 3,* dated April 7, 2023. Further delineation of limited shallow areas with metals, DRO, and/or SVOC screening level exceedances will be presented in a future Data Gap Investigation. Depending on the results of these investigations, hot spot removal with confirmation soil sampling during redevelopment activities may be appropriate.

4.2.3 Former Vehicle Wash Area (Parcel 2)

Two shallow soil borings (RSB-70-E and RSB-70-W, Figure 5) were drilled east and west of a former vehicle wash area at Parcel 2 to screen for metals, VOCs, and TPH associated with former operations in this area. Six soil samples were collected from borings RSB-70-E and RSB-70-W at depths of 1, 3, and 5 feet bgs. 17 metals were detected above laboratory reporting limits; all concentrations were less than their respective screening criteria or background concentrations (Table 2). VOCs were not detected above laboratory reporting limits in any samples (Table 3). DRO and ORO were detected in 3 of the samples at concentrations less than DTSC Commercial/Industrial SLs (Table 4). No impacts were identified associated with former operations in the vicinity of the former vehicle wash area.

4.2.4 Former Drum Storage Area (Parcel 2)

One shallow boring (SB-1, Figure 6) was drilled in a former drum storage area in Parcel 2 to a depth of 3 feet bgs. Samples were collected at depths of 1 and 3 feet bgs, and analyzed for metals, VOCs, and TPH. Eleven metals were detected at concentrations less than their respective screening criteria or background concentrations (Table 2). ORO was detected at 820 mg/kg at 1-foot bgs, which is less than the DTSC Commercial/Industrial SL. The only VOC constituent detected was tert-butyl alcohol (TBA), for which there is no established screening level. No impacts associated with former operations in the vicinity of the former drum storage area were identified.

4.2.5 Open Top Clarifier (Parcel 3)

Soil and soil vapor samples were collected to delineate PCE and benzene impacts around Ramboll borings RSB-28 and RSB-29 at the north and south end of a former open top clarifier, at the southwestern portion of Parcel 3 (Figure 13). RSB-28 and -29 were initially installed and sampled by Ramboll to assess potential leaks/spills in the vicinity of the open top clarifier. Soil samples were collected at various depths up to 30 feet bgs, and analyzed for metals, VOCs, and TPH. Soil vapor samples were collected from 5 and 30 feet bgs for VOC analysis. No impacts to soil were identified by Ramboll; however, benzene was detected in shallow (5 foot bgs) soil vapor samples at concentrations that exceeded the DTSC Commercial/Industrial SL of 14 ug/m^3. No VOCs exceeded their respective SLs in the soil vapor samples collected at 30 feet bgs.

Soil

Nineteen soil samples were collected from 11 borings at depths of 5 and 15 feet bgs and analyzed for VOCs. No VOCs were detected above laboratory reporting limits (Table 3).

Soil Vapor

Thirty-one soil vapor samples were collected and analyzed for VOCs (including 4 duplicates) from 19 step-out boring locations around RSB-28 and RSB-29 at depths of 5 and 15 feet bgs. 20 VOCs were detected, however only benzene and PCE were detected above the USEPA and/or DTSC SVSLs (Table 9).

- **Benzene:** Benzene was detected in 23 soil vapor samples at concentrations ranging from 1.0 $\mu g/m^3$ (RSB-28-R7-15) to 190 $\mu g/m^3$ (RSB-28-R2-5). Of the 23 benzene detections, 11 exceeded the DTSC SVSL of 14 $\mu g/m^3$.

- **PCE**: PCE was detected in 29 soil vapor samples at concentrations ranging from 2.5 $\mu g/m^3$ (RSB-29-R6-5) to 250 $\mu g/m^3$ (RSB-28-R2-5). Of the 29 PCE detections, 12 exceeded the DTSC Commercial/Industrial SVSL of 67 $\mu g/m^3$.

Based on the results presented above, PCE and benzene impacts were delineated vertically and laterally in the area of Ramboll borings RSB-28 and RSB-29; refer to Figures 13, 16, and 17.

4.2.6 Mobile Maintenance Building (Parcel 3)

Soil and soil vapor samples were collected to delineate PCE impacts around Ramboll borings RSB-30 and RSB-60 inside the footprint of the former mobile maintenance building, at the southern portion of Parcel 3 (Figure 14). RSB-30 and -60 were initially installed and sampled by Ramboll to assess potential soil and soil vapor impacts in the vicinity of the mobile maintenance building. Soil samples were collected at various depths up to 15 feet bgs, and analyzed for VOCs. Soil vapor samples were collected from 5 and 15 feet bgs at boring RSB-30 and from 5 feet bgs at boring RSB-60; all soil vapor samples were analyzed for VOCs. No impacts to soil were identified by Ramboll; however, PCE concentrations in soil vapor exceeded the DTSC Commercial/Industrial SVSL of 67 $\mu g/m^3$ for all samples.

Soil

Eleven soil samples were collected at depths ranging from 5 to 35 feet bgs and analyzed for VOCs. TBA was the only VOC detected at 3 locations ranging in concentration from 8.1 $\mu g/kg$ (RSB-60-R8-15) to 19 $\mu g/kg$ (RSB-60-R5-5; Table 3). No screening levels are established for TBA.

Soil Vapor

Twenty-seven soil vapor samples were collected and analyzed for VOCs (including 2 duplicates) from 13 step-out locations at depths ranging from 5 to 35 feet bgs. 26 VOCs were detected in one or more samples, however only benzene, chloroform, PCE, and TCE were detected at concentrations exceeding the USEPA and/or DTSC Commercial/Industrial SVSLs (Table 9).

- **Benzene:** Benzene was detected in 20 soil vapor samples at concentrations ranging from 1.1 $\mu g/m^3$ (RSB-60-R4-5) to 29 $\mu g/m^3$ (RSB-60-R3-5). Of the 20 benzene detections, only one exceeded the DTSC SVSL of 14 $\mu g/m^3$.

- **Chloroform:** Chloroform was detected in 12 soil vapor samples at concentrations ranging from 2.6 μg/m^3 (RSB-60-R8-15) to 86 μg/m^3 (RSB-30-R6-35). Of the 12 chloroform detections, only three exceeded the USEPA SVSL of 18 μg/m^3.

- **PCE**: PCE was detected in all 27 soil vapor samples at concentrations ranging from 13 μg/m^3 (RSB-60-R6-15) to 680 μg/m^3 (RSB-30-R3-5). Of the 27 PCE detections, 22 exceeded the DTSC SVSL of 67 μg/m^3.

- **TCE**: TCE was detected in 25 soil vapor samples at concentrations ranging from 3.8 μg/m^3 (RSB-60-R1-5) to 550 μg/m^3 (RSB-30-R6-35). Of the 25 TCE detections, only four exceeded the USEPA SVSL of 100 μg/m^3.

Based on the results presented above, VOC impacts were delineated vertically and laterally in the area of Ramboll borings RSB-30 and RSB-60; refer to Figures 14, 16, 17, and 18.

4.2.7 ASTs South of Mobile Maintenance Building (Parcel 3)

Soil and soil vapor samples were collected from seven step-out borings to delineate PCE impacts identified in Ramboll boring RSB-38, drilled near the former ASTs south of the mobile maintenance building (Figure 14). Ramboll collected soil samples from boring RSB-38 at 1, 3, and 5 feet bgs and one soil vapor sample from 5 feet bgs; all soil and soil vapor samples were analyzed for VOCs. No impacts to soil were identified by Ramboll; however, the reported PCE concentrations in the 5-foot soil vapor sample exceeded the DTSC Commercial/Industrial SVSL of 67 μg/m^3.

Soil

Seven soil samples were collected at depths ranging from 5 to 15 feet bgs and analyzed for VOCs (Figure 14 and Table 3). The only analyte detected was TBA, which was detected in one boring at 5 and 15 feet bgs at concentrations of 8.6 μg/kg (RSB-38-R5-5) and 14 μg/kg (RSB-38-R5-15). No screening levels are established for TBA.

Soil Vapor

Twelve soil vapor samples were collected and analyzed for VOCs (including 1 duplicate) from 8 step-out locations around RSB-38 ranging in depth from 5 to 35 feet bgs. 16 VOC analytes were detected, with only chloroform, PCE, and TCE were detected at concentrations exceeding the USEPA and/or DTSC Commercial/Industrial SVSLs.

- **Chloroform:** Chloroform was detected in two soil vapor samples at concentrations of 8.0 μg/m^3 (RSB-38-R2-5) and 25 μg/m^3 (RSB-38-R7-35), the lat er of which exceeded the USEPA SVSL of 18 μg/m^3.

- **PCE**: PCE was detected in 12 soil vapor samples at concentrations ranging from 3.1 μg/m^3 (RSB-38-R4-15) to 1,000 μg/m^3 (RSB-38-15). Of the 11 PCE detections, four exceeded the DTSC SVSL of 67 μg/m^3.

- **TCE**: TCE was detected in four soil vapor samples at concentrations ranging from 1.8 μg/m^3 (RSB-38-15) to 270 μg/m^3 (RSB-38-R7-35). Of the four TCE detections, one exceeded the USEPA SVSL of 100 μg/m^3.

Based on the results presented above, VOC impacts were delineated vertically and laterally in the area of Ramboll boring RSB-38; refer to Figures 14, 16, 17, and 18.

4.2.8 Parts Warehouse (Parcel 3)

Soil and soil vapor samples were collected from 23 step-out borings to delineate PCE impacts around Ramboll borings RSB-53 and RSB-54 near the former Parts Warehouse in the northern portion of Parcel 3. . Ramboll collected soil samples from borings RSB-53 and RSB-54 at 1, 3, and 5 feet bgs and analyzed them for VOCs; PCE was detected at low concentrations in the 1- and 5-feet bgs samples from boring RSB-54. Ramboll also initially collected soil vapor samples from 5-feet bgs and analyzed them for VOCs; PCE at both locations exceeded the DTSC Commercial/Industrial SVSL of 67 μg/m^3. However, the reported PCE soil vapor concentration in the 5-foot probe at RSB-54 was 100,000 μg/m^3. Ramboll resampled the 5-foot probe at RSB-54 and the reported PCE concentration was 30,000 μg/m^3.

Based on the above, Ramboll installed multiple step-out borings at RSB-54 with soil vapor probes at 5, 15, and 35 feet bgs (15 probes total); all samples were analyzed for VOCs. Laboratory results showed detectable PCE in all vapor samples, with 14 of 15 above the DTSC SVSL of 67 μg/m^3.

Soil

Twenty-six soil samples were collected and analyzed for VOCs from the same depths as corresponding soil vapor probes. Depths for sample collection included 5, 15, and/or 35 feet bgs; all samples were analyzed for VOCs. Laboratory results only showed the VOC constituent TBA at 5 locations and at low concentrations (maximum was 23 μg/kg). There are no established screening levels for TBA.

Soil Vapor

Forty-four soil vapor samples (including 2 duplicates) were collected at depths of 5, 15, and/or 35 feet bgs and analyzed for VOCs. A total of 20 VOC analytes were reported, with PCE and TCE at concentrations exceeding the USEPA and/or DTSC Commercial/Industrial SVSLs.

- **PCE**: PCE was detected in 44 soil vapor samples at concentrations ranging from 2.2 μg/m^3 (RSB-54-E4-15) to 2,500 μg/m^3 (RSB-54-E1-15). Of the 44 PCE detections, 24 exceeded the DTSC SVSL of 67 μg/m^3.
- **TCE**: TCE was detected in 25 soil vapor samples at concentrations ranging from 2.4 μg/m^3 (RSB-54-SE-5) to 520 μg/m^3 (RSB-54-SE-35). Of the 25 TCE detections, two exceeded the USEPA SVSL of 100 μg/m^3.

Based on the results presented above, VOC impacts were delineated vertically and laterally in the area of Ramboll borings RSB-53 and RSB-54; refer to Figures 15, 16, 17, and 18.

4.2.9 Former 1993 UST Footprint (Parcel 3)

Two shallow soil borings (SB-2 and SB-3) were placed within the excavation footprint (east and west ends) at a former fuel UST , which had been removed in 1993 (Figure 6). The objective of the sampling was to evaluate the backfill for metals, VOCs, and TPH; therefore, soil samples were collected from depths of 1 and 3 feet bgs at each boring. 15 metals were detected above laboratory reporting limits, all concentrations were less than their respective screening criteria or background concentrations (Table 2). There were only two VOCs analytes detected, TBA and benzene, both at low concentrations. TBA does not have a screening

level, but the reported benzene concentration was below its respective USEPA RSL and DTSC SL (Table 3). DRO and ORO were detected in all four samples at concentrations less than the DTSC SLs (Table 4). Based on the above results, no impacts associated with the backfill material for the former 1993 UST were identified.

4.2.10 UST and Dispenser (Parcel 3)

One shallow soil boring (SB-4) was drilled within the tank pit and adjacent to a former 12,000 gallon dual-compartment diesel and gasoline UST, which has since been removed, but which was formerly located at the northwestern portion of Parcel 3. (Figure 7). The UST had a dispenser directly over top and the objective was to evaluate whether the dispenser and associated piping may have leaked. Soil samples were collected at 1 and 3 feet bgs and analyzed for TPH. Laboratory results did not show DRO or ORO at concentrations greater than the DTSC Commercial/Industrial SLs. Based on these results, no impacts associated with the UST and dispenser were identified.

4.2.11 Clarifier & Oil Recovery System South of Maintenance Shop (Parcel 4)

Two shallow soil borings (RSB-58-S and RSB-58-W) were drilled in the vicinity of an inactive subsurface clarifier and aboveground oil recovery system in Parcel 4 (Figure 5). Soil samples were collected from each boring at depths of 1, 3, and 5 feet bgs; all samples were analyzed for metals, VOCs, and TPH. 11 metals were detected at concentrations exceeding the laboratory reporting limits, but all concentrations were less than their respective screening criteria or background concentrations (Table 2). VOC concentrations were less than the laboratory reporting limits (Table 3). DRO and ORO were detected at 1-foot bgs in two sample locations at concentrations less than their respective DTSC Commercial/Industrial SLs (Table 4).

Based on these results, no impacts associated with the inactive clarifier and oil recovery system were identified.

4.3 Quality Control and Data Validation and Verification

4.3.1 Field Sample Collection Quality Control

Two trip blanks were included in each cooler containing VOC samples to confirm that cross-contamination did not occur during sample transportation. Samples were labeled TB-01 and TB-02 and were analyzed for VOCs. Neither sample contained detectable concentrations of any VOC analytes.

Four soil vapor duplicate samples and seven soil vapor duplicate samples were collected during the November 2021 and March 2022 investigations, respectively. Duplicate samples were collected at RSB-28-15, RSB-29-15, RSB-30-R1-15, RSB-38-15, RSB-28-R8-15, RSB-29-R4-5, RSB-30-R4-5, RSB-53-R13-15, RSB-54-NE-35, RSB-60-R5-5, and RSB-60-R5-15. All duplicate samples were within a 30% relative precent difference (RPD) from respective parent samples except for RSB-38-15-DUP for TCE, RSB-29-R4-5-DUP for acetone and isopropanol, RSB-30-R4-5-DUP and RSB-60-R5-5-DUP for acetone, RSB-54-NE-35-DUP for isopropanol and RSB-60-R5-15-DUP for acetone and 2-butanone. In each of these cases, the primary and duplicate sample detections were at trace concentrations or non-detect and the difference between the samples was less than one order of magnitude and the data can be considered reliable.

The leak check compound (LCC), 1,1-DFA, was detected in four soil vapor samples (RSB-54-S1-5, RSB-29-R5-5, RSB-38-R4-5, and RSB-60-R6-5). According to the Soil Gas Advisory, “If the concentration of the [liquid] leak check compound is greater than or equal to 10 times the reporting limit for the target analyte(s), then

corrective action is necessary" (DTSC, 2015). Detected concentrations of 1,1-DFA were less than the RL provided by the laboratory, except for RSB-60-R6-5 (1,100 µg/m^3). Therefore, the data for RSB-54-S1-5, RSB-29-R5-5, and RSB-38-R4-5, are usable for their intended purpose. However, data reported for RSB-60-R6-5 may not be reliable for its intended purpose.

The case narratives in some of the laboratory reports from Mobilization 1 noted that numerous samples required dilution due to the dark color of sample extracts for soils or elevated non-target analytes present in soil vapor samples. Roux discussed this with the laboratory and was told that the dark color is most likely due to organic material in the samples and non-target petroleum hydrocarbon compounds for soils and soil vapor, respectively. The laboratory also stated that when a dark color is observed in certain samples, the sample will be diluted as a precaution to not clog the laboratory equipment. A dark color in the sample extract was not observed with all contaminants. All samples having a dark sample extract or containing non-target compounds were reanalyzed to the method detection limit (MDL) and flagged accordingly. In some limited instances the revised reporting limits exceeded the screening levels, particularly for some of the soil vapor samples. However, this factor did not affect the results of the investigation.

4.3.2 Laboratory Quality Control Samples

Laboratory QC samples included matrix spikes and matrix spike duplicates (MS/MSD) to provide information to assess the precision and accuracy of the analysis of the target parameters within the environmental media collected at the Site. The MS portion of the sample is an aliquot of a sample that is spiked (by the laboratory) with a known concentration of the target analyte(s), which provides a measure of the method accuracy. The MSD portion of the sample is a laboratory split sample of the MS and is used to evaluate the precision of the analysis. Appendix D provides all laboratory reports including QC data.

4.3.3 Data Validation and Verification

A Stage 1 data validation was performed by Roux as defined by USEPA's *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use*, dated January 2009 (USEPA, 2009). Data validation was performed in accordance with the guidelines presented in and USEPA's *National Functional Guidelines for Inorganic Superfund Methods Data Review,* dated January 2017 (USEPA, 2017a) and USEPA's *National Functional Guidelines for Organic Superfund Methods Data Review*, dated January 2017 (USEPA, 2017b). Stage 1 validation includes verification based on "completeness and compliance checks of sample receipt conditions and only sample-related QC results."

Sample analyses were found generally compliant with the method requirements, and the sample data, with the possible exception of RSB-60-R6-5, were determined to be useable, with qualification of some sample results/detection limits as quantitatively estimated ("b" qualifier). Samples with high dilution and analyzed to the lab MDLs were flagged with a "J" qualifier. All data were considered useable for their intended purpose.

5. Summary and Conclusions

Roux implemented a Subsurface Investigation in two mobilizations at the Site to build on Ramboll's investigations and to address RECs identified by Roux in a Phase I ESA. The objectives of the investigations were met, and the bullet list below provides a summary of the investigation results.

- Metals, DRO, and SVOC (RR-12 only) concentrations in shallow soils at localized areas of the Site will require additional delineation and potential hot spot removal during redevelopment activities.

- VOC concentrations in soil across the Site were either non-detect or detected at concentrations less than their respective DTSC SLs or USEPA RSLs in all samples.

- Soil vapor analytical results indicate that PCE is elevated in a small portion of Parcel 3. PCE impacts have been delineated both vertically and laterally and are highest in concentration between 5 and 15 feet bgs, with significant at enuation at 35 feet bgs. A soil vapor extraction pilot test was implemented at the Site and is documented in a separate Technical Memorandum.

- Limited impacts from PCBs have been investigated and are documented in a separate Technical Memorandum.

- Physical distribution and chemical makeup of slag materials has been investigated and are documented in a separate Technical Memorandum.

6. Recommendations

Site data confirm that industrial redevelopment of the Site is feasible; however, additional environmental investigations and remedial evaluation will be necessary prior to initiation of Site development activities. Roux provides the following recommendations, some of which have been implemented, as summarized below:

1. Evaluation of soil vapor extraction (SVE) as a remedial alternative for shallow soil vapor VOC impacts to Parcel 3.

   An SVE pilot test was performed on July 15 and 16, 2022, to evaluate SVE as a potentially viable full-scale remedial technology for cleanup of VOCs (namely PCE and benzene) at Parcel 3. Roux prepared a SVE Pilot Test technical memorandum (TM), dated October 4, 2022, to document SVE pilot testing activities conducted on July 15 and 16, 2022 at the Site. The SVE Pilot Test TM provides the technical details, rationale, and results of the pilot testing activities conducted at the Site, including SVE well installation on June 24, 2022. Based on the results of the SVE pilot test, SVE was confirmed as an effective technology for remediation of VOC-impacted soil vapor at the Site.

2. Additional sampling at the rail spurs to delineate the extent of PCB impacts.

   A targeted shallow soil investigation was conducted on November 10, 2022, and targeted a small area of Parcel 3, near the southeastern corner of the Site, where shallow soil sampling showed PCBs at concentrations greater than screening levels along a former rail spur. Based on the results of PCB sampling, Roux concluded that PCB impacts at the Site do not appear to be significant and/or widespread. Roux prepared a TM, dated March 2, 2023, to document the targeted soil investigation procedures and findings.

3. Evaluation of slag materials along the western portion of the Site.

   Pothole and trenching investigation and sampling activities were conducted at the Site between September 14 and October 11, 2022. The slag investigations were performed to further assess the distribution, as well as the physical and chemical characteristics of subsurface slag at the Site. Based on the results of the slag investigation, the distribution and thickness of slag materials are well understood, as are the physical characteristics of slag and slag materials. Leachability analysis performed by Roux and Ramboll at locations with the highest concentrations of metals indicated that slag materials do not have a significant leaching potential, with only one location (Ramboll location RSB-02) exceeding STLC or TCLP limits. Roux prepared a Slag Investigation TM, dated March 24, 2023, to document the slag investigation procedures and findings.

4. Additional shallow soil sampling to define DRO and metals impacts at Parcels 2 and 3, and SVOC impacts at Parcel 3. The additional sampling will be presented in a forthcoming Data Gap Investigation Workplan and will define soils that may need to be removed from the Site or evaluated for potential on-Site treatment and reuse.

One soil vapor boring adjacent to RSB-29	RSB-29	12/2020	RSB-29	1 boring to 15 feet	NA	VOCs	15	Evaluate 15 foot sample at RSB-29
Three step-out soil vapor borings N, S, and W of RSB-29	RSB-29-R1 to R3	11/2021	RSB-29	3 borings to 5 feet bgs	NA	VOCs	5	Delineate benzene and PCE impacts around RSB-29 in Parcel 3
Six step-out soil vapor borings N, S, E, and W of RSB-29	RSB-29-R4 to R9	3/2022	RSB-29	6 borings to 15 feet bgs	5, 15 (R8 and R9 only 15)	VOCs	5, 15 (R8 and R9 only 15)	Delineate benzene and PCE impacts around RSB-29 in Parcel 3
Two borings within mobile maintenance building in Parcel 3	RSB-30, RSB-60	12/2020 - 1/2021	N/A	2 borings, one boring near drain to 15 feet bgs, one boring near broken asphalt to 5 feet bgs. Vapor probes at 5 & 15 feet bgs.	0.5-1 2.5-3 4.5-5 9.5-10	Metals, VOCs & TPH	5, 15 (RSB-60 only 5)	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).

Table 1
Sampling Analysis Plan
12451 Arrow Route, Rancho Cucamonga, California

Location	Current Borings	Boring Dates	Historical Borings	Scope of Work	Soil Sample Depth (feet bgs)	Analytical Suite	Soil Vapor Probe Depth (feet bgs)	Rationale
Three step-out soil vapor borings E, S, and W of RSB-30	RSB-30-R1 to R3	11/2021	RSB-30	3 borings to 5 feet bgs	NA	VOCs	5, 15	Delineate PCE impacts around RSB-30 in Parcel 3
Two step-out soil vapor borings NW and SW of RSB-30	RSB-30-R4 and R5	3/2022	RSB-30	6 borings to 15 feet bgs	5, 15	VOCs	5, 15	Delineate PCE impacts around RSB-30 in Parcel 3
One deep soil vapor boring adjacent to RSB-30	RSB-30-R6	3/2022	RSB-30	1 boring to 35 feet bgs	35	VOCs	35	Delineate PCE impacts around RSB-30 in Parcel 3
Two step-out soil vapor borings NW and NE of RSB-60	RSB-60-R5 and R6	3/2022	RSB-60	2 borings to 15 feet bgs	5, 15	VOCs	5, 15	Delineate PCE impacts around RSB-60 in Parcel 3
One deep soil vapor boring adjacent to RSB-60	RSB-60-R8	3/2022	RSB-60	1 boring to 35 feet bgs	15, 35	VOCs	35	Delineate PCE impacts around RSB-60 in Parcel 3
One boring near ASTs south of mobile maintenance building in Parcel 3	RSB-38	12/1/2020	N/A	1 angled boring under AST to 5 feet bgs. Vapor probe at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5	Based on historical review conducted as part of Ramboll's 2020 Phase I ESA, the area in the vicinity of the ASTs located south of the Mobile Maintenance building at the Site on Parcel 3 exhibited significant staining.
One soil vapor boring adjacent to RSB-38	RSB-38	11/2021	RSB-38	1 boring to 15 feet	NA	VOCs	15	Evaluate 15 foot sample at RSB-38
Three step-out soil vapor borings N, S, and E of RSB-38	RSB-38-R1 to R3	11/2021	RSB-38	3 borings to 5 feet bgs	NA	VOCs	5	Delineate PCE impacts around RSB-38 in Parcel 3
Two step-out soil vapor borings NW and SW of RSB-38	RSB-38-R4 and R6	3/2022	RSB-38	3 borings to 15 feet bgs	5, 15	VOCs	5, 15	Delineate PCE impacts around RSB-38 in Parcel 3
One deep soil vapor boring adjacent to RSB-38	RSB-38-R7	3/2022	RSB-38	1 boring to a depth of 35 feet bgs	35	VOCs	35	Delineate PCE impacts around RSB-38 in Parcel 3
Two borings within building in central portion of Parcel 3	RSB-53, RSB-54	12/1/2020	N/A	2 borings to 5 feet bgs. Vapor probes at 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	5	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
One soil vapor boring adjacent to RSB-53	RSB-53	11/2021	RSB-53	1 boring to 15 feet	NA	VOCs	15	Evaluate 15 foot sample at RSB-53
Seven step-out soil vapor borings N, S, E, and W of RSB-53	RSB-53-R1 to R7	11/2021	RSB-53	7 borings to 5 feet bgs	NA	VOCs	5	Delineate PCE impacts around RSB-53 in Parcel 3
Six step-out soil vapor borings N, W, and S of RSB-53	RSB-53-R8 to R13	3/2022	RSB-53	6 borings to 15 feet bgs	5, 15 (R11 and R12 only 15)	VOCs	5, 15 (R11 and R12 15 only)	Delineate PCE impacts around RSB-53 in Parcel 3
Two deep soil vapor borings E and W of RSB-53	RSB-53-R14 and R15	3/2022	RSB-53	2 borings to 35 feet bgs	15 and 35 (R14 only 35)	VOCs	15 and 35 (R14 only 35)	Delineate PCE impacts around RSB-53 in Parcel 3
Two step-out soil vapor borings E of RSB-54-E	RSB-54-E1 and E2	11/2021	RSB-54-E	2 borings to 15 feet bgs	NA	VOCs	5, 15	Delineate PCE impacts around RSB-54 in Parcel 3
One deep step-out soil vapor borings E of RSB-54-E	RSB-54-E3	3/2022	RSB-54-E	1 boring to 35 feet bgs	35	VOCs	35	Delineate PCE impacts around RSB-54 in Parcel 3
One deep step-out soil vapor borings E of RSB-54-E	RSB-54-E4	3/2022	RSB-54-E	1 boring to 35 feet bgs	5, 15, 35	VOCs	5, 15, 35	Delineate PCE impacts around RSB-54 in Parcel 3

Table 1
Sampling Analysis Plan
12451 Arrow Route, Rancho Cucamonga, California

Location	Current Borings	Boring Dates	Historical Borings	Scope of Work	Soil Sample Depth (feet bgs)	Analytical Suite	Soil Vapor Probe Depth (feet bgs)	Rationale
Three step-out soil vapor borings W and N of RSB-54-N	RSB-54-E1 and E2	11/2021	RSB-54-N	2 borings to 15 feet bgs	NA	VOCs	15	Delineate PCE impacts around RSB-54 in Parcel 3
One boring east of mobile maintenance building in Parcel 3	RSB-57	12/2020-1/2021	N/A	1 boring to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Five step-out borings S and W of RSB-57	RSB-57-R1 to R5	11/2021	RSB-57 and step-outs	3 borings to 1 foot, 2 borings to 3 feet bgs	1, 3	Lead	-	Delineation of shallow lead impacts in Parcel 3
One boring near drain in Parcel 4 south of maintenance shop	RSB-58	12/2020	N/A	One boring to 5 feet bgs.	0.5-1 2.5-3 4.5-5	Metals, VOCs & TPH	-	Assess potential leaks/spills in the vicinity of the noted feature (during site walks conducted by Ramboll in 2020).
Two step-out borings S and W of RSB-58	RSB-58-S and W	11/2021	RSB-58	2 borings to 5 feet	1, 3, 5	Metals, VOCs & TPH	-	Additional sampling in area of oil collection trench and clarifier in Parcel 4
Two shallow soil borings on the east and west ends of the vehicle wash area	RSB-70-E and W	11/2021	NA*	2 borings to 5 feet	1, 3, 5	Metals, VOCs & TPH	-	Assess the former Vehicle Wash Area in Parcel 2
Shallow soil boring in the former drum storage area in Parcel 2	SB-1	11/2021	NA*	1 boring to 3 feet	1, 3	Metals, VOCs & TPH	-	Assess the former drum storage area in Parcel 2
Two shallow soil borings on the east and west ends of the former 1993 UST footprint in Parcel 3	SB-2 and SB-3	11/2021	NA*	2 borings to 3 feet	1, 3	Metals, VOCs & TPH	-	Assess conditions in the former tank footprint in Parcel 3
Shallow soil boring adjacent to the existing (at the time) UST and dispenser in Parcel 3	SB-4	11/2021	NA*	1 borings to 3 feet	1, 3	TPH	-	Assess conditions adjacent to the tank in Parcel 3
19 borings along the rail spur in Parcels 2 and 3	RR-1 to RR-19	11/2021	NA*	19 borings to 1.5 feet	0.5, 1.5	Metals, VOCs, TPH. PCBs, OCPs, SVOCs, chlorinated herbicides in 12 of 19 borings only.	-	Assess conditions along the rail spurs in Parcels 2 and 3

Notes:

Shading indicates Ramboll boring locations
bgs = below ground surface
NA = Not applicable
VOCs = Volatile Oragnic Chemicals
TPH = Total Petroleum Hydrocarbons
PCBs = Polychlorinated Biphenyls
PCE = Tetrachloroethene
UST = Underground Storage Tank
AST = Aboveground Storage Tank
NFA = No Further Action letter
RWQCB-SA = Regional Water Quality Control Board - Santa Ana
SLIC = Spills, Leaks, Investigation, and Cleanup sites
OCPs = Organochlorine Pesticides
SVOCs = Semi-Volatile Organic Compounds
Cl Herbicides = Chlorinated Herbicides

Notes:
ft bgs = feet below ground surface
USEPA = United States Environmental Protection Agency
mg/kg = milligrams per kilogram

DTSC Commercial/Industrial Soil SL = California Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note 3 Screening Level for Commercial/Industrial Soil (June 2020)

USEPA Commercial/Industrial Soil RSL = USEPA Regional Screening Level for Commercial/Industrial Soil (May 2022)
[1]California Upper Confidence Limit = background arsenic concentration of 12.0 mg/kg; DTSC HERO HHRA Note 11 (December 2020)
NS = no standard established
Shading indicates sample collected by Ramboll
Bold indicates that value exceeds laboratory reporting limit
Italics indicate sample is a duplicate
<X = analyte not detected above laboratory reporting limit
Cells highlighted in orange exceed either one or both SLs
Lowest of the cancer and non-cancer endpoint screening levels are listed

Notes:
ft bgs = feet below ground surface
Shading indicates data collected by Ramboll
µg/kg = micrograms per kilogram
USEPA = United States Environmental Protection Agency
USEPA Industrial Soil RSL = USEPA Regional Screening Level for Industrial Soil (May 2022)
DTSC Commercial/Industrial Soil SL = California Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note 3 Screening Level for Commercial/Industrial Soil (June 2020)
NS = No standard established
NA = Not Analyzed
ND = Not detected above laboratory reporting limits
Bold indicates that value exceeds laboratory reporting limit
<X = analyte not detected above laboratory reporting limit
Lowest of the cancer and non-cancer endpoint screening levels are listed

Notes:
ft bgs = feet below ground surface
GRO = Gasoline Range Organics
DRO = Diesel Range Organics
ORO = Oil Range Organics
SFBRWQCB = San Francisco Regional Water Quality Control Board
SFBRWQCB ESL = USEPA Regional Screening Level for Commercial/Industrial Soil (2019)
Bold indicates that value exceeds laboratory reporting limit
Italics indicate sample is a duplicate
<X = analyte not detected above laboratory reporting limit
NA = Not applicable
Shading indicates data collected by Ramboll
Cells highlighted in orange exceed the RSL

Notes:
ft bgs = feet below ground surface
USEPA = United States Environmental Protection Agency
µg/kg = micrograms per kilogram
USEPA Industrial Soil RSL = USEPA Regional Screening Level for Industrial Soil (May 2021)
DTSC Commercial/Industrial Soil SL = California Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note 3 Screening Level for Commercial/Industrial Soil (June 2020)
NS = No standard established
Bold indicates that value exceeds laboratory reporting limit
<X = analyte not detected above laboratory reporting limit
Cells highlighted in orange exceed either one or both SLs
ND = Not detected above laboratory reporting limits
Lowest of the cancer and non-cancer endpoint screening levels are listed

Notes:
ft = feet
VOCs = volatile organic compounds
USEPA = United States Environmental Protection Agency
µg/m³ = micrograms per cubic meter
USEPA Industrial Indoor Air RSL = USEPA Industrial Indoor Air Regional Screening Level with screening attenuation factor of 0.03, according to the California Department of Toxic Substances Control (DTSC) Draft Supplemental Guidance: Screening and Evaluating Vapor Intrusion (May 2021)
DTSC Commercial/Industrial Indoor Air SL = DTSC Commercial/Industrial Indoor Air SL with screening attenuation factor of 0.03, according to the DTSC Draft Supplemental Guidance: Screening and Evaluating Vapor Intrusion (June 2020)
AF = Attenuation Factor
NA = Not applicable
NS = No standard established
<X or ND = analyte not detected above laboratory reporting limit
Bold indicates that value exceeds laboratory reporting limit
Italics indicate sample is a duplicate
** Trichloroethene DTSC SL from HHRA Note 5 - "HERO strongly recommends consulting with the HERO toxicologist" when indoor air concentrations exceed 3 ug/m3*
Cells highlighted in gray indicate that data may not be reliable for its intended purpose due to leak check compound detection greater than 10 times the reporting limit.
Cells highlighted in green indicates data collected by Ramboll
Cells highlighted in orange exceed either one or both SLs

SUBJECT: Biological Due Diligence Investigation for the Proposed Arrow Route and Juneberry Drive Project Located in the City of Rancho Cucamonga, San Bernardino County, California

Introduction

This report contains the findings of ELMT Consulting's (ELMT) preliminary biological due diligence investigation for proposed Arrow Route and Juneberry Drive Project (CMC Rancho) located in the City of Rancho Cucamonga, California. The biological due diligence investigation was conducted by ELMT biologist Travis J. McGill on October 15, 2021 to document baseline conditions and to determine the potential for special-status plant and wildlife species to occur on the project site that could pose a constraint to implementation of the proposed project.

Project Location

The project site is generally located north of Interstate 10, east of Interstate 15, south of State Route 210 and west of Etiwanda Avenue in the City of Rancho Cucamonga, California. The site is depicted on the Guasti quadrangle of the United States Geological Survey's (USGS) 7.5-minute map series within Section 8 of Township 1 South, Range 6 West. Specifically, the project site is located at 12451, 12343, 12353, and 12455 Arrow Route, Rancho Cucamonga, California. Refer to Exhibits 1 and 2 in Attachment A.

Project Description

The project proposes the development of two industrial buildings totaling 1,891,420 square feet (Building 1 – 1,366,140 square feet, Building 2 – 525,280 square feet), and associated parking and landscaping. Refer to Attachment B, *Site Plan*.

Methodology

Literature Review

A literature review and records search was conducted for special-status biological resources potentially occurring on or within the vicinity of the project site. Previously recorded occurrences of special-status plant and wildlife species and their proximity to the project site were determined through a query of the California Departments (CDFW's) QuickView Tool in the Biogeographic Information and Observation System (BIOS), California Natural Diversity Database (CNDDB) Rarefind 5, and the California Native Plant Society's (CNPS) Electronic Inventory of Rare and Endangered Vascular Plants of California. The following resources were also reviewed:

- Environmental Protection Agency (EPA) Water Program "My Waters" data layers
- Google Earth Pro historic aerial imagery (1985-2021);
- United States Department of Agriculture (USDA) Natural Resource Conservation Service (NRCS), Soil Survey[1];
- USFWS Critical Habitat designations for Threatened and Endangered Species; and
- USFWS National Wetlands Inventory (NWI).

Habitat Assessment/Field Investigation

Following the literature review, biologist Travis J. McGill inventoried and evaluated the condition of the habitat within the project site on October 15, 2021. Plant communities and land cover types identified on aerial photographs during the literature review were verified by walking meandering transects throughout the project site. In addition, site characteristics such as soil condition, topography, hydrology, anthropogenic disturbances, indicator species, condition of on-site plant communities and land cover types, and presence of potential jurisdictional drainage and/or wetland features were noted.

Topography and Soils

Elevation on the project site ranges from 1,130 to 1,160 feet above mean sea level and generally slopes form north to south. The project site is relatively flat with no areas of significant topographic relief. Based on the NRCS USDA Web Soil Survey, the project site is only underlain by Tujunga loamy sand (0 to 5 percent slopes) and Tujunga gravelly loamy sand (0 to 9 percent slopes). Soils onsite have been mechanically disturbed and heavily compacted from existing site development.

Existing Site Conditions

The entire project site has been subject to a variety of anthropogenic disturbances associated with existing onsite development. Due to historical and current land uses, no undisturbed native plant communities or natural communities of special concern were observed on the project site. These disturbances have eliminated the natural plant communities that once occurred on and surrounding the project site. The project site supports one (1) land cover type that would be classified as developed. Developed areas generally encompass all building/structures, and paved/impervious surfaces. The developed areas within the project site are comprised of the existing industrial development, paved and loose gravel parking areas, and landscaped areas. No native plant communities will be impacted from implementation of the proposed project.

Migratory Corridors and Linkages

The proposed project will be confined to existing disturbed and developed land, which has removed natural plant communities from the project site. Further, the project site is surrounded by existing developments, which have eliminated connection to nearby wildlife movement corridors. As a result, implementation of the proposed project will not disrupt or have any adverse effects on any migratory corridors or linkages in the surrounding area.

1 A soil series is defined as a group of soils with similar profiles developed from similar parent materials under comparable climatic and vegetation conditions. These profiles include major horizons with similar thickness, arrangement, and other important characteristics, which may promote favorable conditions for certain biological resources.

Jurisdictional Areas

No discernible drainage courses, inundated areas, or wetland features/obligate plant species that would be considered jurisdictional by the United States Army Corps of Engineers (Corps), Regional Water Quality Control Board (Regional Board), or CDFW were observed within the proposed project site. Based on the proposed site plan, project activities will not result in impacts to Corps, Regional Board, or CDFW jurisdictional areas and regulatory approvals will not be required. Further, no resources were observed onsite during the review of the USFWS National Wetland Inventory (NWI).

It should be noted that two detention basins were observed on the southern boundary of the project site. These basins were constructed in the uplands to collect and store surface runoff before existing the project site. Water within these basins is confined to the project site and does not have any upstream or downstream surface connections to jurisdictional features. Therefore, the constructed basins would not qualify as waters of the U.S. under the jurisdictional authority of the Corps, waters of the State under the jurisdictional authority of the Regional Board, or jurisdictional streambed or bank under the jurisdictional authority of CDFW.

Special-Status Biological Resources

The literature search identified thirteen (13) special-status plant species and thirty-four (34) special-status wildlife species as having the potential to occur within the Guasti 7.5-minute quadrangle. No special-status plant communities haven been recorded within the Guasti USGS 7.5-minute quadrangle. Special-status plant and wildlife species were evaluated for their potential to occur within the project site based on habitat requirements, availability and quality of suitable habitat, and known distributions. Species determined to have the potential to occur within the general vicinity of the project site is presented in Attachment B*: Potentially Occurring Special-Status Biological Resources*.

No special-status plant or wildlife species, or special-status plant communities were observed on-site during the habitat assessment. The proposed project site consists of existing development areas that have been subject to a high level of anthropogenic disturbances. These disturbances have eliminated the natural plant communities that once occurred onsite. Based on habitat requirements for specific species and the availability and quality of on-site habitat, it was determined that the project site does not provide suitable habitat for special-status plant or wildlife species and are presumed to be absent from the project site.

Critical Habitat

The project site is not located within federally designated Critical Habitat. The nearest designated Critical Habitat is located approximately 3.5 miles north of the project site for San Bernardino kangaroo rat (*Dipodomys merriami parvus*) and approximately 3.7 miles southeast for coastal California gnatcatcher (*Polioptila californica californica*). Therefore, the loss or adverse modification of Critical Habitat from site development will not occur and consultation with the USFWS for impacts to Critical Habitat will not be required for implementation of the proposed project.

Conclusion

Based on the proposed project footprint and existing site conditions discussed in this report, none of the special-status plant or wildlife species known to occur in the general vicinity of the project site are expected to be directly or indirectly impacted from implementation of the proposed project. It was determined that

implementation of the project will have “no effect” on federally or State listed species known to occur in the general vicinity of the project site. Additionally, the development of the project will not impact designated Critical Habitats, regional wildlife movement corridors/linkages, or jurisdictional drainages.

Please do not hesitate to contact Tom McGill at (951) 285-6014 or tmcgill@elmtconsulting.com or Travis McGill at (909) 816-1646 or travismcgill@elmtconsulting.com should you have any questions.

Sincerely,

Thomas J. McGill, Ph.D.

MAXIMUM BUILDING HEIGHT ALLOWED

Height - 75' (building exceeded 35' of heigth shall be set back an additional 1' from the front setback for each 1' of height up to a maximum setback of 70'.

MAXIMUM FLOOR AREA RATIO

FAR - 40% - 50%

LANDSCAPE REQUIREMENT

Percentage - 5%

SETBACKS

Street	Building	Landscape	Parking
Arrow Rt. - Arterial	45' min.	45' min	25' min.
Local St.	25' min.	25' min	15' min.
Side - 5'			
Rear - none			

Note: This is a conceptual plan. It is based on preliminary information which is not fully verified and may be incomplete. It is meant as a comparative aid in examining alternate development strategies and any quantities indicated are subject to revision as more reliable information becomes available.

Scheme 13

Attachment C

Potentially Occurring Special-Status Biological Resources

Scientific Name	Common Name	Federal Status	State Status	CDFW Listing	CNPS Rare Plant Rank	Potential to Occur
Special-Status Wildlife Species						
Accipiter cooperii	Cooper's hawk	None	None	WL	-	Presumed Absent
Agelaius tricolor	tricolored blackbird	None	Threatened	SSC	-	Presumed Absent
Aimophila ruficeps canescens	southern California rufous-crowned sparrow	None	None	WL	-	Presumed Absent
Anniella stebbinsi	Southern California legless lizard	None	None	SSC	-	Presumed Absent
Ardea alba	great egret	None	None	-	-	Presumed Absent
Ardea herodias	great blue heron	None	None	-	-	Presumed Absent
Arizona elegans occidentalis	California glossy snake	None	None	SSC	-	Presumed Absent
Aspidoscelis tigris stejnegeri	coastal whiptail	None	None	SSC	-	Presumed Absent
Athene cunicularia	burrowing owl	None	None	SSC	-	Presumed Absent
Bombus crotchii	Crotch bumble bee	None	None	-	-	Presumed Absent
Calypte costae	Costa's hummingbird	None	None	-	-	Presumed Absent
Chaetodipus fallax fallax	northwestern San Diego pocket mouse	None	None	SSC	-	Presumed Absent
Circus hudsonius	northern harrier	None	None	SSC	-	Presumed Absent
Dipodomys merriami parvus	San Bernardino kangaroo rat	Endangered	Candidate Endangered	SSC	-	Presumed Absent
Dipodomys nitratoides brevinasus	short-nosed kangaroo rat	None	None	SSC	-	Presumed Absent
Dipodomys simulans	Dulzura kangaroo rat	None	None	-	-	Presumed Absent
Dipodomys stephensi	Stephens' kangaroo rat	Endangered	Threatened	-	-	Presumed Absent
Egretta thula	snowy egret	None	None	-	-	Presumed Absent
Elanus leucurus	white-tailed kite	None	None	FP	-	Presumed Absent
Eremophila alpestris actia	California horned lark	None	None	WL	-	Presumed Absent
Eumops perotis californicus	western mastiff bat	None	None	SSC	-	Presumed Absent
Lanius ludovicianus	loggerhead shrike	None	None	SSC	-	Presumed Absent
Larus californicus	California gull	None	None	WL	-	Presumed Absent
Lasiurus xanthinus	western yellow bat	None	None	SSC	-	Presumed Absent
Laterallus jamaicensis coturniculus	California black rail	None	Threatened	FP	-	Presumed Absent
Lepus californicus bennettii	San Diego black-tailed jackrabbit	None	None	SSC	-	Presumed Absent
Neotoma lepida intermedia	San Diego desert woodrat	None	None	SSC	-	Presumed Absent
Nycticorax nycticorax	black-crowned night heron	None	None	-	-	Presumed Absent
Perognathus longimembris brevinasus	Los Angeles pocket mouse	None	None	SSC	-	Presumed Absent
Phrynosoma blainvillii	coast horned lizard	None	None	SSC	-	Presumed Absent
Polioptila californica californica	coastal California gnatcatcher	Threatened	None	SSC	-	Presumed Absent
Rhaphiomidas terminatus abdominalis	Delhi Sands flower-loving fly	Endangered	None	-	-	Presumed Absent
Spizella breweri	Brewer's sparrow	None	None	-	-	Presumed Absent
Vireo bellii pusillus	least Bell's vireo	Endangered	Endangered	-	-	Presumed Absent
Special-Status Plant Species						
Calochortus catalinae	Catalina mariposa-lily	None	None	-	4.2	Presumed Absent
Calochortus plummerae	Plummer's mariposa-lily	None	None	-	4.2	Presumed Absent
Chorizanthe parryi var. parryi	Parry's spineflower	None	None	-	1B.1	Presumed Absent
Cladium californicum	California saw-grass	None	None	-	2B.2	Presumed Absent
Deinandra paniculata	paniculate tarplant	None	None	-	4.2	Presumed Absent
Horkelia cuneata var. puberula	mesa horkelia	None	None	-	1B.1	Presumed Absent
Juglans californica	southern California black walnut	None	None	-	4.2	Presumed Absent

Muhlenbergia californica	California muhly	None	None	-	4.3	Presumed Absent
Muhlenbergia utilis	aparejo grass	None	None	-	2B.2	Presumed Absent
Navarretia prostrata	prostrate vernal pool navarretia	None	None	-	1B.2	Presumed Absent
Phacelia stellaris	Brand's star phacelia	None	None	-	1B.1	Presumed Absent
Pseudognaphalium leucocephalum	white rabbit-tobacco	None	None	-	2B.2	Presumed Absent
Symphyotrichum defoliatum	San Bernardino aster	None	None	-	1B.2	Presumed Absent

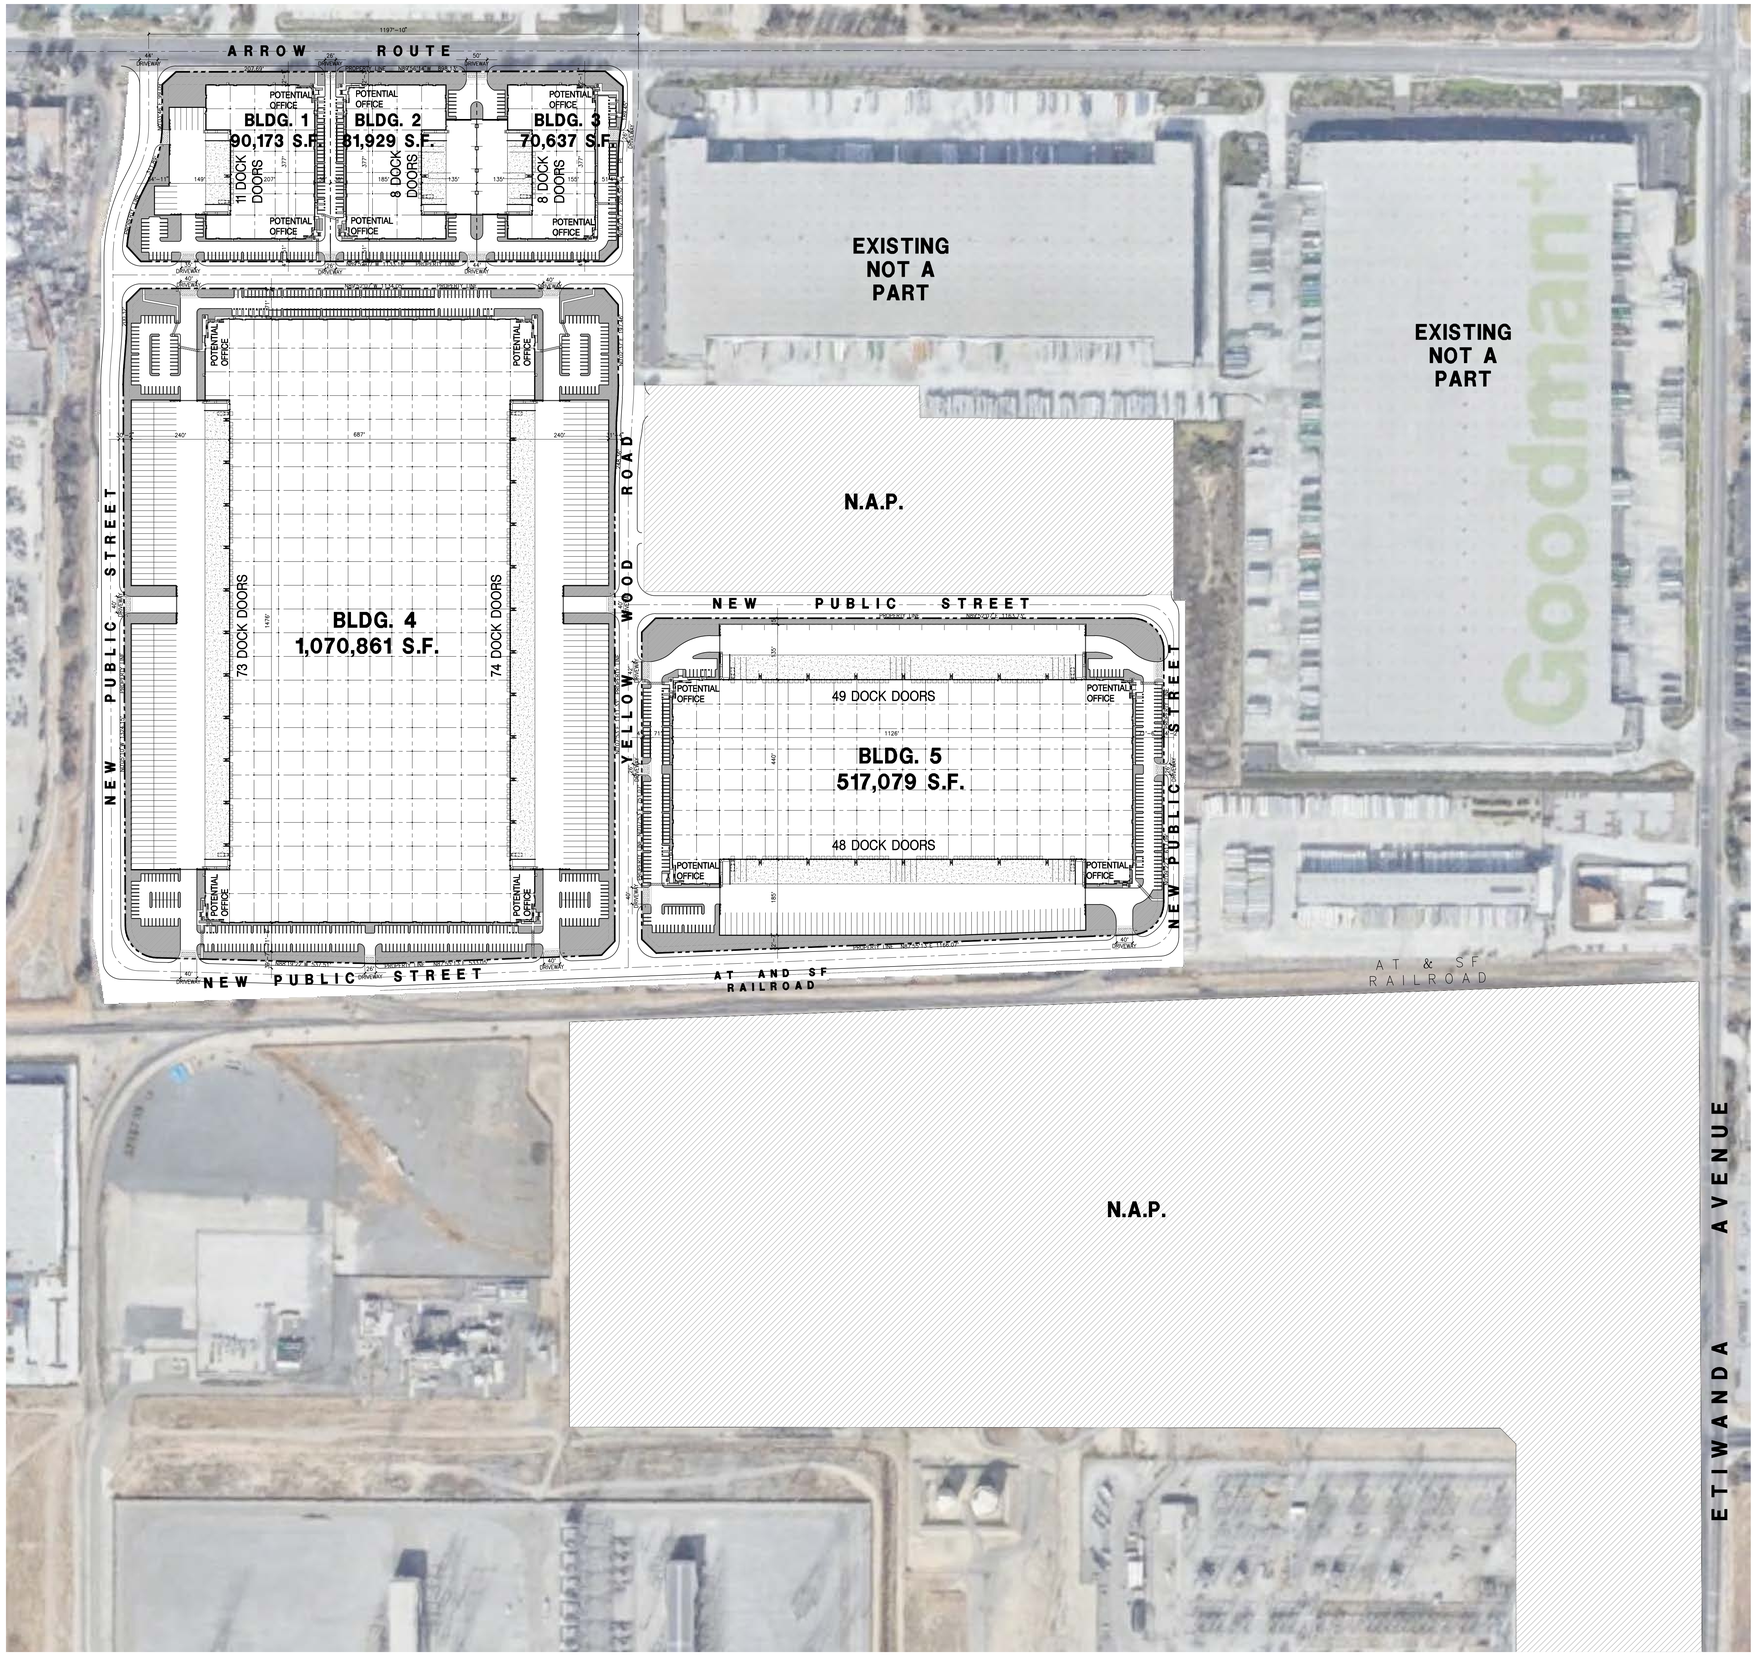
U.S. Fish and Wildlife Service (Fed) - Federal

END- Federal Endangered
THR- Federal Threatened
DL- Delisted

California Department of Fish and Wildlife (CA) - California

END- California Endangered
THR- California Threatened
Candidate- Candidate for listing under the California Endangered Species Act
FP- California Fully Protected
SSC- Species of Special Concern
WL- Watch List
CE- Candidate Endangered

California Native Plant Society (CNPS)



California Rare Plant Rank

1B Plants Rare, Threatened, or Endangered in California and Elsewhere
2B Plants Rare, Threatened, or Endangered in California, But More Common Elsewhere
3 Plants About Which More Information is Needed – A Review List
4 Plants of Limited Distribution – A

CNPS Threat Ranks

0.1- Seriously threatened in California
0.2- Moderately threatened in California
0.3- Not very threatened in California

CAUTION: IF THIS SHEET IS NOT 30"X42" IT IS A REDUCED PRINT

SITE PLAN GENERAL NOTES

1. THE SITE PLAN BASED ON THE SOILS REPORT PREPARED BY: TBD

2. IF SOILS ARE EXPANSIVE IN NATURE, USE STEEL REINFORCING FOR ALL SITE CONCRETE.

3. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE WALL, FACE OF CONCRETE CURB OR GRID LINE U.N.O.

4. SEE "C" PLANS FOR ALL CONCRETE CURBS, GUTTERS AND SWALES.

5. THE ENTIRE PROJECT SHALL BE PERMANENTLY MAINTAINED WITH AN AUTOMATIC IRRIGATION SYSTEM.

6. SEE "C" DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR SHALL VERIFY ACTUAL UTILITY LOCATIONS.

7. PROVIDE POSITIVE DRAINAGE AWAY FROM BLDG. SEE "C" DRAWINGS.

8. CONTRACTOR TO REFER TO "C" DRAWINGS FOR ALL HORIZONTAL CONTROL DIMENSIONS. SITE PLANS ARE FOR GUIDANCE AND STARTING LAYOUT POINTS.

9. SEE "C" DRAWINGS FOR FINISH GRADE ELEVATIONS.

10. CONCRETE SIDEWALKS TO BE A MINIMUM OF 4" THICK W/ TOOLED JOINTS AT 6' O.C. EXPANSION/CONSTRUCTION JOINTS SHALL BE A MAXIMUM 12' EA. WAY. EXPANSION JOINTS TO HAVE COMPRESSIVE EXPANSION FILLER MATERIAL OF 1/4". FINISH TO BE A MEDIUM BROOM FINISH U.N.O.

11. PAINT CURBS AND PROVIDE SIGNS TO INFORM OF FIRE LANES AS REQUIRED BY FIRE DEPARTMENT.

12. CONSTRUCTION DOCUMENTS PERTAINING TO THE LANDSCAPE AND IRRIGATION OF THE ENTIRE PROJECT SITE SHALL BE SUBMITTED TO THE BUILDING DEPARTMENT AND APPROVED BY PUBLIC FACILITIES DEVELOPMENT PRIOR TO ISSUANCE OF BUILDING PERMITS.

13. PRIOR TO FINAL CITY INSPECTION, THE LANDSCAPE ARCHITECT SHALL SUBMIT A CERTIFICATE OF COMPLETION TO PUBLIC FACILITIES DEVELOPMENT.

14. ALL LANDSCAPE AND IRRIGATION DESIGNS SHALL MEET CURRENT CITY STANDARDS AS LISTED IN GUIDELINES OR AS OBTAINED FROM PUBLIC FACILITIES DEVELOPMENT.

1. CONCRETE TILT-UP PANEL.
2. STRUCTURAL STEEL COLUMN.
3. TYPICAL STOREFRONT SYSTEM WITH GLAZING. SEE OFFICE BLOW-UP AND ELEVATIONS FOR SIZE, COLOR AND LOCATIONS.
4. CONCRETE RAMP W/ 42"HIGH CONC TILT-UP GUARD WALL OR BUILDING WALL ON BOTH SIDE OF RAMP.
5. 5'-6"X5'-6"X4" THICK CONCRETE EXTERIOR LANDING PAD TYP. AT ALL EXTERIOR MAN DOORS TO LANDSCAPED AREAS. FINISH TO BE MEDIUM BROOM FINISH. PROVIDE WALK TO PUBLIC WAY OR DRIVE WAY AS REQ. BY CITY INSPECTOR.
6. EXTERIOR CONCRETE STAIR WITH GUARDRAIL AND HANDRAIL.
7. 9' X 10' TRUCK DOOR, SECTIONAL O.H., STANDARD GRADE.
8. LOUVERED OPENING FOR VENTILATION.
9. DOCK DOOR BUMPER TYPICAL.
10. 12' X 14' DRIVE THRU. SECTIONAL O.H., STANDARD GRADE.
11. 3' X 7' HOLLOW METAL EXTERIOR MAN DOOR.
12. SOFFIT LINE ABOVE
13. CONC. FILLED GUARD POST. 6" DIA. U.N.O.. 42"H.
14. NOT USED.
15. Z GUARD.
16. RECESSED KNOX BOX 5' HIGH FROM FINISH SURFACE. PER FIRE DEPARTMENT STANDARD.
17. ROOF ACCESS LADDER.
18. INTERIOR LONG-TERM BIKE RACK. BIKE RACK TO BE PERMANENTLY ANCHORED.
19. TUBE STEEL CANOPY.
20. EXTERIOR DOWN SPOUTS W/ 2 OVERFLOW SCUPPERS.
21. INTERIOR DOWN SPOUTS W/ 2 OVERFLOW SCUPPERS.

FLOOR SLAB & POUR STRIPS REQ.

THESE NOTES ARE VERY MIN. REQUIREMENT. SEE "S" DWGS FOR ADDITIONAL REQUIREMENTS

1. FLOOR COMPACTION - 95%
2. TRENCH COMPACTION - 90%
3. BUILDING FLOOR SLAB: SEE STRUCTURAL DRAWINGS.
4. CONTRACTOR TO BUILD FOR CLASS V FLOOR PER A.C.I. 302-1R-96
5. CONCRETE SLAB TO HAVE STEEL FLOAT HARD TROWEL BURNISHED FINISH.
6. CONTRACTOR TO CURE SLAB TO BE WET CURING USING BURLINE FOR 7 DAYS MIN.
7. ALL EQUIPMENT & MOVING VEHICLES SHALL BE DIAPERED.
8. NO CRANES, CONCRETE TRUCKS, OR ANYTHING HEAVIER WILL BE PLACED ON THE SLAB.
9. SLAB TO BE FF50 FL35 MEASURED WITHIN 24 HOURS.
10. NO FLY ASH IN THE CONCRETE.
11. WHERE [▨] INDICATED, PROVIDE VAPOR BARRIER (15MIL STEGO OR EQUAL) UNDER THE CONCRETE SLAB. PROVIDE SAND PER SOILS ENGINEER OR MANUFACTURER'S RECOMMENDATION.

CONCRETE SLAB IN FUTURE OFFICE AREAS, WHERE SAND OVER VIQUEEN ARE REQUIRED, SHALL BE NATURALLY HYDRATED WITHOUT USE OF BURLENE, CURING COMPOUND, OR RELEASE AGENTS.
CONTROL/CONSTRUCTION JOINTS SHALL NOT BE FILLED WITH MM-80 JOINT FILLER IN FUTURE OFFICE AREAS.
12. SEAL CONCRETE SLAB W/ "LIPIDOLITH" SEALER
13. 10' POUR STRIP AT TRUCK DOOR, 4FT. MAX. ELSEWHERE.
14. ALL FLOOR SLAB NAIL OR BRACE FRAME HOLES FILLED WITH APPROVED 2 PAR EPOXY COMPOUND TO MATCH CONCRETE COLOR. PEGA BOND LV 2000,BURKE EPOXY INJECTION RESIN OR EQUAL.
15. PROVIDE FIRE EXTINGUISHERS PER FIRE DEPARTMENT REQUIREMENT.
16. MM-80 AT SPEED BAY ONLY

NOTE:
ALL FIRE RISER AND UNPROTECTED ROOF DRAIN TO RECEIVE TO PROTECTIVE BOLLARDS.

FLOOR PLAN GENERAL NOTES

1. THIS BUILDING IS DESIGNED FOR HIGH PILE STORAGE WITH FIRE ACCESS MAN DOORS AT APPROXIMATELY 125' O.C. A SEPARATE PERMIT WILL BE REQUIRED FOR ANY RACKING/CONVEYER SYSTEMS.
2. FIRE HOSE LOCATIONS SHALL BE APPROVED PER FIRE DEPARTMENT.
3. SEE "C" DRAWINGS FOR FINISH SURFACE ELEVATIONS.
4. WAREHOUSE INTERIOR CONCRETE WALLS ARE PAINTED WHITE. COLUMNS ARE TO RECEIVE PRIMER ONLY. ALL GYP. BD. WALLS IN WAREHOUSE TO RECEIVE 1 COAT OF WHITE TO COVER.
5. SLOPE POUR STRIP 1/2" TO EXTERIOR AT ALL MANDOOR EXITS. SEE "S" DRAWINGS FOR POUR STRIP LOCATION.
6. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE PANEL WALL, GRID LINE, OR FACE OF STUD U.N.O.
7. SEE CIVIL DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR TO VERIFY ACTUAL UTILITY LOCATIONS. PLUMBING/ELECTRICAL COORDINATION.
8. SEE BELOW FOR DOOR TYPES AND SIZES.
NOTE: ALL DOORS PER DOOR SCHEDULE ARE FINISH OPENINGS.
9. CONTRACTOR TO PROTECT AND KEEP THE FLOOR SLAB CLEAN. ALL EQUIPMENT TO BE DIAPERED INCLUDING CARS AND TRUCKS.
10. ALL EXIT MAN DOORS IN WAREHOUSE TO HAVE ILLUMINATED EXIT SIGN HARDWARE.
11. HIGHLY FLAMMABLE AND COMBUSTIBLE MATERIAL SHALL NOT BE USED OR STORED IN THIS BUILDING.
12. EACH EXTERIOR EXIT DOOR SHALL BE IDENTIFIED BY A TACTILE EXIT SIGN WITH THE WORDS "EXIT". THE MOUNTING HEIGHT FOR SUCH SIGNAGE SHALL BE 60" FROM FINISH FLOOR LEVEL TO THE CENTER OF THE SIGN.
13. NON-ACCESSIBLE DOOR. PROVIDE WARNING SIGN LOCATED IN THE INTERIOR SIDE PER CBC 11B-703.5
14. ALL ROOF MOUNTED MATERIALS SHALL BE FULLY SCREENED FROM PUBLIC VIEW, SEE A/A4.1 OFFICE SECTION.
15. PROVIDE FIRE RATED PANEL JOINTS AND CAULKING AT ALL OPENINGS ON 3HR FIRE RATED WALL. SEE A DRAWING FOR LOCATIONS.
16. PROVIDE FIRE EXTINGUISHERS PER FIRE MARSHALL

ROOF PLAN KEYNOTES

1. CONCRETE PARAPET.
2. NOT USED
3. 4'X8' CURB MOUNTED SKYLIGHT.
4. NOT USED
5. **PROVIDE 4-PLY BUILT-UP ROOFING OVER ROOF SHEATHING OVER ROOF FRAMING. U.N.O.. ROOFING TO BE ND-24 CAP ROOFING BY JOHNS-MANVILLE OR EQUAL (CLASS A RATED). 10 YEAR NO DOLLAR LIMIT WARRANTY AND 2 YEAR LABOR GUARANTEE**
6. ROOF HATCH LOCATION.
7. ROOF ADDRESS PAINTED BLACK WITH 4' HIGH AND 1' WIDE STROKE PER LETTER.
8. PARAPET RETURN.
9. STRUCTURAL JOIST.
10. EXTERIOR DOWNSPOUT WITH OVERFLOW SCUPPERS.
11. INTERIOR ROOF DRAIN WITH OVERFLOW SCUPPERS.
12. INTERIOR ROOF DRAIN WITH OVERFLOW DRAIN.

ROOF PLAN GENERAL NOTES

A. ALL DIMENSIONS ARE TO FACE OF CONCRETE WALL, GRIDLINE, OR FACE OF STUD. (U.N.O.)

B. VERIFY THAT ALL ROOF AREAS HAVE POSITIVE DRAINAGE(1/4" FT.) PRIOR TO ROOF INSULATION INSTALLATION.

C. REFER TO "S" DRAWINGS FOR ROOF HEIGHT ELEVATIONS IN REGARDS TO ROOF DRAINAGE.

D. CONTRACTOR TO VERIFY AND COORDINATE WITH ALL SUBCONTRACTORS, ALL LOCATIONS AND SIZES OF ROOF OPENINGS.

E. FOR TYP. ROOF PENETRATIONS, SEE DETAIL 6, 9, 10/AD.3 CONTRACTOR TO VERIFY ALL LOCATIONS WITH MECHANICAL AND PLUMBING DRAWINGS

F. CONTRACTOR TO VERIFY ALL ROOF DRAIN DEPRESSIONS W/ "S" DRAWINGS.

G. CONTRACTOR TO COORDINATE EXACT SKYLIGHT LOCATION W/ FIRE SPRINKLER AND ROOF FRAMING SUBCONTRACTORS. LOCATIONS ON DRAWINGS ARE APPROXIMATE.

H. ALL SKYLIGHTS TO BE DESIGNED PER WIND SPEED DESIGN CRITERIA W/ STRONGER FRAMES, SUPPORTS AND DOMES. MANUFACTURER TO CONFIRM IN WRITING.

I. ROOF DRAINS AND OVERFLOW DRAINS TO BE A MIN. 8" DIA., SEE "P" DRAWINGS FOR EXACT SIZE.

J. PROVIDE SHAPED CRICKETS AS REQUIRED FOR PROPER ROOF DRAINAGE OF 1/4" PER FOOT (MIN.).

K. **BUILT UP ROOFING TO BE DESIGNED FOR I 90 AND TO BE A U.L. CLASS A ROOF. FLASHING: 6AF TYPE 5MB MOPPED AP SHEET, U.L. TYPE 63 BUR.**

L. ALL ROOFING FASTENERS SHALL MEET ALL CODE AND REGULATION REQUIREMENTS. PROPER REQUIREMENTS ARE IN PROJECTS JURISDICTION AND ALSO, FACTORY MUTUAL (FM) WIND UPLIFT PRESSURE REQUIREMENTS.

M. ALL SKYLIGHTS TO BE PLACED A MIN. OF 18'-0" FROM INSIDE FACE OF PARAPET

N. USE WHITE SCRIM FOIL INSULATION IN THE WAREHOUSE AREA.

O. SMOKE VENTS SHALL BE REQUIRED IF AREAS FOR "POTENTIAL OFFICES" WILL BE USED FOR HIGH PILE COMBUSTIBLE STORAGE.

P. ROOF DRAINS, OVERFLOW DRAINS AND RAINWATER PIPING WITHIN THE INTERIOR OF THE BUILDING SHALL BE TESTED IN ACCORDANCE WITH THE PROVISIONS OF THE PLUMBING CODE FOR TESTING DRAIN, WASTE AND VENT SYSTEMS

Q. ROOF DRAINS, OVERFLOW PIPING WITHIN THE BUILDING SHALL UTILIZE APPROVED DRAINAGE FITTINGS.

R. MANUFACTURED ROOF DRAINS AND OVERFLOWS(FIXTURES) SHALL BE IAPMO LISTED

ROOF LEGEND

- 4' X 8' SKYLIGHT
- ROOF HATCH
- STRUCTURAL JOISTS SEE "S" DRAWINGS.
- BUILDING PARAPET LINE
- EXTERIOR DOWNSPOUT W/ OVERFLOW SCUPPER
- INTERIOR ROOF DRAIN W/ OVERFLOW SCUPPERS
- PROPOSED 15% SOLAR ZONE AREA

SKYLIGHT/SMOKEHATCH CALCULATION

scale: 1/8"= 1'-0"

ENLARGED SOUTH ELEVATION E
scale: 1/8"= 1'-0"

ELEVATION GENERAL NOTES

1. ALL PAINT COLOR CHANGES TO OCCUR AT INSIDE CORNERS UNLESS NOTED OTHERWISE.

2. ALL PAINT FINISHES ARE TO BE FLAT UNLESS NOTED OTHERWISE.

3. T.O.P. EL.= TOP OF PARAPET ELEVATION.

4. F.F. = FINISH FLOOR ELEVATION.

5. STOREFRONT CONSTRUCTION: GLASS, METAL ATTACHMENTS AND LINTELS SHALL BE DESIGNED TO RESIST -- MPH. EXPOSURE "C" WINDS. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS PRIOR TO INSTALLATION.

6. CONTRACTOR SHALL FULLY PAINT ONE CONCRETE PANEL W/ SELECTED COLORS. ARCHITECT AND OWNER SHALL APPROVE PRIOR TO PAINTING REMAINDER OF BUILDING.

7. BACK SIDE OF PARAPETS TO HAVE SMOOTH FINISH AND BE PAINTED WITH ELASTOMERIC PAINT.

8. FOR SPANDREL GLAZING, ALLOW SPACE BEHIND SPANDREL TO BREATH. PROVIDE 1" DIAMETER HOLES AT CONCRETE WALL.

9. USE ADHESIVE BACK WOOD STRIPS FOR ALL REVEAL FORMS.

10. THE FIRST COAT OF PAINT TO BE ROLLED--ON AND THE SECOND COAT TO BE SPRAYED--ON

11. ALL ROLL--UP DOORS AND SERVICE DOORS TO BE PAINTED TO MATCH BUILDING COLOR.

ELEVATION KEYNOTES

1. CONCRETE TILT--UP PANEL.
2. PANEL JOINT.
3. PANEL REVEAL. ALL REVEALS TO HAVE A MAX. OF 3/8" CHAMFER. REVEAL COLOR TO MATCH ADJACENT BUILDING FIELD COLOR. U.N.O.
4. 12' X 14' OVERHEAD DOOR @ DRIVE THRU. PROVIDE COMPLETE WEATHER--STRIPPING PROTECTION ALL AROUND.
5. 9' X 10' OVERHEAD DOOR @ DRIVE THRU. PROVIDE COMPLETE WEATHER--STRIPPING PROTECTION ALL AROUND.
6. CONCRETE STAIR, LANDING AND GUARDRAIL W/ METAL PIPE HANDRAIL. PROVIDE NON SKID NOSING TO MEET ADA REQUIREMENTS. PROVIDE CONTRASTING COLORED 3" WIDE WARNING STRIPE INTEGRAL TO CONCRETE AT TOP LANDING AND BOTTOM TREAD PER ADA REQUIREMENTS.
7. 4' X 8' METAL LOUVER OPENING FOR VENTILATION. PAINT TO MATCH BUILDING COLOR.
8. HOLLOW METAL DOORS. PROVIDE COMPLETE WEATHER STRIPING ALL AROUND DOOR.
9. ROOF LINE BEYOND.
10. DOCK DOOR BUMPER TYPICAL.
11. ALUMINUM STOREFRONT FRAMING WITH TEMPERED GLAZING AT ALL DOORS, SIDELITES ADJACENT TO DOORS AND GLAZING WITH BOTTOMS LESS THAN 18" ABOVE FINISH FLOOR ELEVATION.
12. METAL CANOPY.
13. KNOCK--OUT PANEL.
14. INTERIOR ROOF DRAIN W/ 2 OVERFLOW SCUPPERS.
15. CONC. FILLED GUARD POST. 6" DIA. U.N.O.. 42"H.
16. EXTERIOR LIGHTING FIXTURE.
17. APPROXIMATE LOCATION OF ADDRESS ON WALL.
18. EXTERIOR DOWN SPOUTS W/ 2 OVERFLOW SCUPPERS.

ELEVATION COLOR LEGEND/SCHED.

1. PAINT. COLOR : SW 7667 ZIRCON
2. PAINT. COLOR : SW 7670 GRAY SHINGLE
3. PAINT. COLOR : SW 7674 PEPPERCORN
4. PAINT. COLOR : SW 6243 DISTANCE
5. MULLIONS COLOR : BLACK ANODIZED
6. GLAZING COLOR : BLUE REFLECTIVE
7. METAL CANOPY: SHERWIN WILLIAMS ACRYLIC LATEX SYSTEMS HIGH GLOSS/HIGH PERFORMANCE SHERWIN WILLIAMS SW 7674 PEPPERCORN

21. BREAK AREA
22. RETAINING WALL

SITE PLAN GENERAL NOTES

1. THE SITE PLAN BASED ON THE SOILS REPORT PREPARED BY: TBD

2. IF SOILS ARE EXPANSIVE IN NATURE, USE STEEL REINFORCING FOR ALL SITE CONCRETE.

3. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE WALL, FACE OF CONCRETE CURB OR GRID LINE U.N.O.

4. SEE "C" PLANS FOR ALL CONCRETE CURBS, GUTTERS AND SWALES.

5. THE ENTIRE PROJECT SHALL BE PERMANENTLY MAINTAINED WITH AN AUTOMATIC IRRIGATION SYSTEM.

6. SEE "C" DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR SHALL VERIFY ACTUAL UTILITY LOCATIONS.

7. PROVIDE POSITIVE DRAINAGE AWAY FROM BLDG. SEE "C" DRAWINGS.

8. CONTRACTOR TO REFER TO "C" DRAWINGS FOR ALL HORIZONTAL CONTROL DIMENSIONS. SITE PLANS ARE FOR GUIDANCE AND STARTING LAYOUT POINTS.

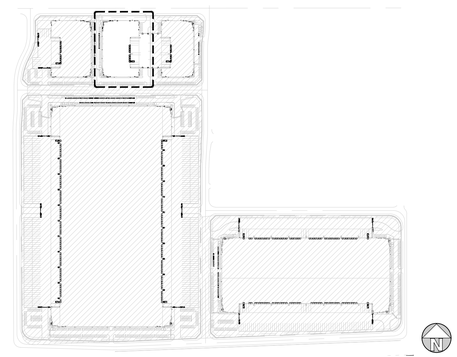
9. SEE "C"DRAWINGS FOR FINISH GRADE ELEVATIONS.

10. CONCRETE SIDEWALKS TO BE A MINIMUM OF 4" THICK W/ TOOLED JOINTS AT 6' O.C. EXPANSION/CONSTRUCTION JOINTS SHALL BE A MAXIMUM 12' EA. WAY. EXPANSION JOINTS TO HAVE COMPRESSIVE EXPANSION FILLER MATERIAL OF 1/4". FINISH TO BE A MEDIUM BROOM FINISH U.N.O.

11. PAINT CURBS AND PROVIDE SIGNS TO INFORM OF FIRE LANES AS REQUIRED BY FIRE DEPARTMENT.

12. CONSTRUCTION DOCUMENTS PERTAINING TO THE LANDSCAPE AND IRRIGATION OF THE ENTIRE PROJECT SITE SHALL BE SUBMITTED TO THE BUILDING DEPARTMENT AND APPROVED BY PUBLIC FACILITIES DEVELOPMENT PRIOR TO ISSUANCE OF BUILDING PERMITS.

13. PRIOR TO FINAL CITY INSPECTION, THE LANDSCAPE ARCHITECT SHALL SUBMIT A CERTIFICATE OF COMPLETION TO PUBLIC FACILITIES DEVELOPMENT.



14. ALL LANDSCAPE AND IRRIGATION DESIGNS SHALL MEET CURRENT CITY STANDARDS AS LISTED IN GUIDELINES OR AS OBTAINED FROM PUBLIC FACILITIES DEVELOPMENT.

15. LANDSCAPED AREAS SHALL BE DELINEATED WITH A MINIMUM SIX INCHES (6") HIGH CURB.

SITE LEGEND

- LANDSCAPED AREA
- CONCRETE PAVING SEE "C" DRWGS. FOR THICKNESS

21. INTERIOR DOWN SPOUTS W/ 2 OVERFLOW SCUPPERS.

FLOOR SLAB & POUR STRIPS REQ.

THESE NOTES ARE VERY MIN. REQUIREMENT. SEE "S" DWGS FOR ADDITIONAL REQUIREMENTS

1. FLOOR COMPACTION - 95%
2. TRENCH COMPACTION - 90%
3. BUILDING FLOOR SLAB: SEE STRUCTURAL DRAWINGS.
4. CONTRACTOR TO BUILD FOR CLASS V FLOOR PER A.C.I. 302-1R-96
5. CONCRETE SLAB TO HAVE STEEL FLOAT HARD TROWEL BURNISHED FINISH.
6. CONTRACTOR TO CURE SLAB TO BE WET CURING USING BURLINE FOR 7 DAYS MIN.
7. ALL EQUIPMENT & MOVING VEHICLES SHALL BE DIAPERED.
8. NO CRANES, CONCRETE TRUCKS, OR ANYTHING HEAVIER WILL BE PLACED ON THE SLAB.
9. SLAB TO BE FF50 FL35 MEASURED WITHIN 24 HOURS.
10. NO FLY ASH IN THE CONCRETE
11. WHERE [▨] INDICATED, PROVIDE VAPOR BARRIER (15MIL STEGO OR EQUAL) UNDER THE CONCRETE SLAB. PROVIDE SAND PER SOILS ENGINEER OR MANUFACTURER'S RECOMMENDATION.

CONCRETE SLAB IN FUTURE OFFICE AREAS, WHERE SAND OVER VIQUEEN ARE REQUIRED, SHALL BE NATURALLY HYDRATED WITHOUT USE OF BURLENE, CURING COMPOUND, OR RELEASE AGENTS.
CONTROL/CONSTRUCTION JOINTS SHALL NOT BE FILLED WITH MM-80 JOINT FILLER IN FUTURE OFFICE AREAS.
12. SEAL CONCRETE SLAB W/ "LIPIDOLITH" SEALER
13. 10' POUR STRIP AT TRUCK DOOR. 4FT. MAX. ELSEWHERE.
14. ALL FLOOR SLAB NAIL OR BRACE FRAME HOLES FILLED WITH APPROVED 2 PAR EPOXY COMPOUND TO MATCH CONCRETE COLOR. PEGA BOND LV 2000,BURKE EPOXY INJECTION RESIN OR EQUAL.
15. PROVIDE FIRE EXTINGUISHERS PER FIRE DEPARTMENT REQUIREMENT.
16. MM-80 AT SPEED BAY ONLY

NOTE:
ALL FIRE RISER AND UNPROTECTED ROOF DRAIN TO RECEIVE TO PROTECTIVE BOLLARDS.

FLOOR PLAN GENERAL NOTES

1. THIS BUILDING IS DESIGNED FOR HIGH PILE STORAGE WITH FIRE ACCESS MAN DOORS AT APPROXIMATELY 125' O.C. A SEPARATE PERMIT WILL BE REQUIRED FOR ANY RACKING/CONVEYER SYSTEMS.
2. FIRE HOSE LOCATIONS SHALL BE APPROVED PER FIRE DEPARTMENT.
3. SEE "C" DRAWINGS FOR FINISH SURFACE ELEVATIONS.
4. WAREHOUSE INTERIOR CONCRETE WALLS ARE PAINTED WHITE. COLUMNS ARE TO RECEIVE PRIMER ONLY. ALL GYP. BD. WALLS IN WAREHOUSE TO RECEIVE 1 COAT OF WHITE TO COVER.
5. SLOPE POUR STRIP 1/2" TO EXTERIOR AT ALL MANDOOR EXITS. SEE "S" DRAWINGS FOR POUR STRIP LOCATION.
6. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE PANEL WALL, GRID LINE, OR FACE OF STUD U.N.O.
7. SEE CIVIL DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR TO VERIFY ACTUAL UTILITY LOCATIONS. PLUMBING/ELECTRICAL COORDINATION.
8. SEE BELOW FOR DOOR TYPES AND SIZES.
NOTE: ALL DOORS PER DOOR SCHEDULE ARE FINISH OPENINGS.
9. CONTRACTOR TO PROTECT AND KEEP THE FLOOR SLAB CLEAN. ALL EQUIPMENT TO BE DIAPERED INCLUDING CARS AND TRUCKS.
10. ALL EXIT MAN DOORS IN WAREHOUSE TO HAVE ILLUMINATED EXIT SIGN HARDWARE.
11. HIGHLY FLAMMABLE AND COMBUSTIBLE MATERIAL SHALL NOT BE USED OR STORED IN THIS BUILDING.
12. EACH EXTERIOR EXIT DOOR SHALL BE IDENTIFIED BY A TACTILE EXIT SIGN WITH THE WORDS "EXIT". THE MOUNTING HEIGHT FOR SUCH SIGNAGE SHALL BE 60" FROM FINISH FLOOR LEVEL TO THE CENTER OF THE SIGN.
13. NON-ACCESSIBLE DOOR. PROVIDE WARNING SIGN LOCATED IN THE INTERIOR SIDE PER CBC 11B-703.5
14. ALL ROOF MOUNTED MATERIALS SHALL BE FULLY SCREENED FROM PUBLIC VIEW, SEE A/A4.1 OFFICE SECTION.
15. PROVIDE FIRE RATED PANEL JOINTS AND CAULKING AT ALL OPENINGS ON 3HR FIRE RATED WALL. SEE A DRAWING FOR LOCATIONS.
16. PROVIDE FIRE EXTINGUISHERS PER FIRE MARSHALL

ROOF PLAN KEYNOTES

1. CONCRETE PARAPET.
2. NOT USED
3. 4'X8' CURB MOUNTED SKYLIGHT.
4. NOT USED
5. **PROVIDE 4-PLY BUILT-UP ROOFING OVER ROOF SHEATHING OVER ROOF FRAMING. U.N.O.. ROOFING TO BE NO-24 CAP ROOFING BY JOHNS-MANVILLE OR EQUAL (CLASS A RATED). 10 YEAR NO DOLLAR LIMIT WARRANTY AND 2 YEAR LABOR GUARANTEE**
6. ROOF HATCH LOCATION.
7. ROOF ADDRESS PAINTED BLACK WITH 4' HIGH AND 1' WIDE STROKE PER LETTER.
8. PARAPET RETURN.
9. STRUCTURAL JOIST.
10. EXTERIOR DOWNSPOUT WITH OVERFLOW SCUPPERS.
11. INTERIOR ROOF DRAIN WITH OVERFLOW SCUPPERS.
12. INTERIOR ROOF DRAIN WITH OVERFLOW DRAIN.

ROOF PLAN GENERAL NOTES

A. ALL DIMENSIONS ARE TO FACE OF CONCRETE WALL, GRIDLINE, OR FACE OF STUD. (U.N.O.)

B. VERIFY THAT ALL ROOF AREAS HAVE POSITIVE DRAINAGE(1/4" FT.) PRIOR TO ROOF INSULATION INSTALLATION.

C. REFER TO "S" DRAWINGS FOR ROOF HEIGHT ELEVATIONS IN REGARDS TO ROOF DRAINAGE.

D. CONTRACTOR TO VERIFY AND COORDINATE WITH ALL SUBCONTRACTORS, ALL LOCATIONS AND SIZES OF ROOF OPENINGS.

E. FOR TYP. ROOF PENETRATIONS, SEE DETAIL 6, 9, 10/AD.3 CONTRACTOR TO VERIFY ALL LOCATIONS WITH MECHANICAL AND PLUMBING DRAWINGS

F. CONTRACTOR TO VERIFY ALL ROOF DRAIN DEPRESSIONS W/ "S" DRAWINGS.

G. CONTRACTOR TO COORDINATE EXACT SKYLIGHT LOCATION W/ FIRE SPRINKLER AND ROOF FRAMING SUBCONTRACTORS. LOCATIONS ON DRAWINGS ARE APPROXIMATE.

H. ALL SKYLIGHTS TO BE DESIGNED PER WIND SPEED DESIGN CRITERIA W/ STRONGER FRAMES, SUPPORTS AND DOMES. MANUFACTURER TO CONFIRM IN WRITING.

I. ROOF DRAINS AND OVERFLOW DRAINS TO BE A MIN. 8" DIA., SEE "P" DRAWINGS FOR EXACT SIZE.

J. PROVIDE SHAPED CRICKETS AS REQUIRED FOR PROPER ROOF DRAINAGE OF 1/4" PER FOOT (MIN.).

K. **BUILT UP ROOFING TO BE DESIGNED FOR I 90 AND TO BE A U.L. CLASS A ROOF. FLASHING: 6AF TYPE 5MB MOPPED AP SHEET, U.L. TYPE 63 BUR.**

L. ALL ROOFING FASTENERS SHALL MEET ALL CODE AND REGULATION REQUIREMENTS. PROPER REQUIREMENTS ARE IN PROJECTS JURISDICTION AND ALSO, FACTORY MUTUAL (FM) WIND UPLIFT PRESSURE REQUIREMENTS.

M. ALL SKYLIGHTS TO BE PLACED A MIN. OF 18'-0" FROM INSIDE FACE OF PARAPET

N. USE WHITE SCRIM FOIL INSULATION IN THE WAREHOUSE AREA.

O. SMOKE VENTS SHALL BE REQUIRED IF AREAS FOR "POTENTIAL OFFICES" WILL BE USED FOR HIGH PILE COMBUSTIBLE STORAGE.

P. ROOF DRAINS, OVERFLOW DRAINS AND RAINWATER PIPING WITHIN THE INTERIOR OF THE BUILDING SHALL BE TESTED IN ACCORDANCE WITH THE PROVISIONS OF THE PLUMBING CODE FOR TESTING DRAIN, WASTE AND VENT SYSTEMS

Q. ROOF DRAINS, OVERFLOW PIPING WITHIN THE BUILDING SHALL UTILIZE APPROVED DRAINAGE FITTINGS.

R. MANUFACTURED ROOF DRAINS AND OVERFLOWS(FIXTURES) SHALL BE IAPMO LISTED

ROOF LEGEND

- 4" X 8" SKYLIGHT
- ROOF HATCH
- STRUCTURAL JOISTS SEE "S" DRAWINGS.
- BUILDING PARAPET LINE
- EXTERIOR DOWNSPOUT W/ OVERFLOW SCUPPER
- INTERIOR ROOF DRAIN W/ OVERFLOW SCUPPERS
- PROPOSED 15% SOLAR ZONE AREA

scale: 1/16"=1'-0"

ENLARGED WEST ELEVATION (E)
scale: 1/8"= 1'-0"

ELEVATION GENERAL NOTES

1. ALL PAINT COLOR CHANGES TO OCCUR AT INSIDE CORNERS UNLESS NOTED OTHERWISE.
2. ALL PAINT FINISHES ARE TO BE FLAT UNLESS NOTED OTHERWISE.
3. T.O.P. EL.= TOP OF PARAPET ELEVATION.
4. F.F. = FINISH FLOOR ELEVATION.
5. STOREFRONT CONSTRUCTION: GLASS, METAL ATTACHMENTS AND LINTELS SHALL BE DESIGNED TO RESIST – MPH. EXPOSURE "C" WINDS. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS PRIOR TO INSTALLATION.
6. CONTRACTOR SHALL FULLY PAINT ONE CONCRETE PANEL W/ SELECTED COLORS. ARCHITECT AND OWNER SHALL APPROVE PRIOR TO PAINTING REMAINDER OF BUILDING.
7. BACK SIDE OF PARAPETS TO HAVE SMOOTH FINISH AND BE PAINTED WITH ELASTOMERIC PAINT.
8. FOR SPANDREL GLAZING, ALLOW SPACE BEHIND SPANDREL TO BREATH. PROVIDE 1" DIAMETER HOLES AT CONCRETE WALL.
9. USE ADHESIVE BACK WOOD STRIPS FOR ALL REVEAL FORMS.
10. THE FIRST COAT OF PAINT TO BE ROLLED–ON AND THE SECOND COAT TO BE SPRAYED–ON
11. ALL ROLL–UP DOORS AND SERVICE DOORS TO BE PAINTED TO MATCH BUILDING COLOR.

ELEVATION KEYNOTES

1. CONCRETE TILT–UP PANEL.
2. PANEL JOINT.
3. PANEL REVEAL. ALL REVEALS TO HAVE A MAX. OF 3/8" CHAMFER. REVEAL COLOR TO MATCH ADJACENT BUILDING FIELD COLOR. U.N.O.
4. 12' X 14' OVERHEAD DOOR @ DRIVE THRU. PROVIDE COMPLETE WEATHER–STRIPPING PROTECTION ALL AROUND.
5. 9' X 10' OVERHEAD DOOR @ DRIVE THRU. PROVIDE COMPLETE WEATHER–STRIPPING PROTECTION ALL AROUND.
6. CONCRETE STAIR, LANDING AND GUARDRAIL W/ METAL PIPE HANDRAIL. PROVIDE NON SKID NOSING TO MEET ADA REQUIREMENTS. PROVIDE CONTRASTING COLORED 3" WIDE WARNING STRIPE INTEGRAL TO CONCRETE AT TOP LANDING AND BOTTOM TREAD PER ADA REQUIREMENTS.
7. 4' X 8' METAL LOUVER OPENING FOR VENTILATION. PAINT TO MATCH BUILDING COLOR.
8. HOLLOW METAL DOORS. PROVIDE COMPLETE WEATHER STRIPING ALL AROUND DOOR.
9. ROOF LINE BEYOND.
10. DOCK DOOR BUMPER TYPICAL.
11. ALUMINUM STOREFRONT FRAMING WITH TEMPERED GLAZING AT ALL DOORS, SIDELITES ADJACENT TO DOORS AND GLAZING WITH BOTTOMS LESS THAN 18" ABOVE FINISH FLOOR ELEVATION.
12. METAL CANOPY.
13. KNOCK–OUT PANEL.
14. INTERIOR ROOF DRAIN W/ 2 OVERFLOW SCUPPERS.
15. CONC. FILLED GUARD POST. 6" DIA. U.N.O.. 42"H.
16. EXTERIOR LIGHTING FIXTURE.
17. APPROXIMATE LOCATION OF ADDRESS ON WALL.
18. EXTERIOR DOWN SPOUTS W/ 2 OVERFLOW SCUPPERS.

ELEVATION COLOR LEGEND/SCHED.

1. PAINT. COLOR : SW 7667 ZIRCON
2. PAINT. COLOR : SW 7670 GRAY SHINGLE

18. ACCESSIBLE ENTRY SIGN.
19. 8'H WROUGHT IRON FENCE.
20. TRASH COMPACTOR
21. BREAK AREA
22. RETAINING WALL

SITE PLAN GENERAL NOTES

1. THE SITE PLAN BASED ON THE SOILS REPORT PREPARED BY: TBD

2. IF SOILS ARE EXPANSIVE IN NATURE, USE STEEL REINFORCING FOR ALL SITE CONCRETE.

3. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE WALL, FACE OF CONCRETE CURB OR GRID LINE U.N.O.

4. SEE "C" PLANS FOR ALL CONCRETE CURBS, GUTTERS AND SWALES.

5. THE ENTIRE PROJECT SHALL BE PERMANENTLY MAINTAINED WITH AN AUTOMATIC IRRIGATION SYSTEM.

6. SEE "C" DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR SHALL VERIFY ACTUAL UTILITY LOCATIONS.

7. PROVIDE POSITIVE DRAINAGE AWAY FROM BLDG. SEE "C" DRAWINGS.

8. CONTRACTOR TO REFER TO "C" DRAWINGS FOR ALL HORIZONTAL CONTROL DIMENSIONS. SITE PLANS ARE FOR GUIDANCE AND STARTING LAYOUT POINTS.

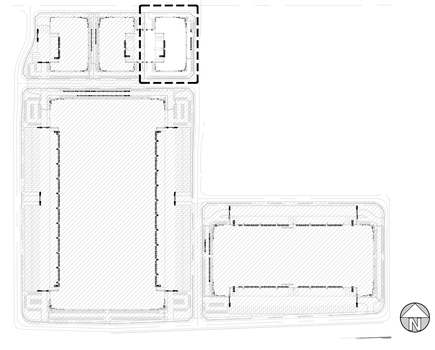
9. SEE "C"DRAWINGS FOR FINISH GRADE ELEVATIONS.

10. CONCRETE SIDEWALKS TO BE A MINIMUM OF 4" THICK W/ TOOLED JOINTS AT 6' O.C. EXPANSION/CONSTRUCTION JOINTS SHALL BE A MAXIMUM 12' EA. WAY. EXPANSION JOINTS TO HAVE COMPRESSIVE EXPANSION FILLER MATERIAL OF 1/4". FINISH TO BE A MEDIUM BROOM FINISH U.N.O.

11. PAINT CURBS AND PROVIDE SIGNS TO INFORM OF FIRE LANES AS REQUIRED BY FIRE DEPARTMENT.

12. CONSTRUCTION DOCUMENTS PERTAINING TO THE LANDSCAPE AND IRRIGATION OF THE ENTIRE PROJECT SITE SHALL BE SUBMITTED TO THE BUILDING DEPARTMENT AND APPROVED BY PUBLIC FACILITIES DEVELOPMENT PRIOR TO ISSUANCE OF BUILDING PERMITS.

13. PRIOR TO FINAL CITY INSPECTION, THE LANDSCAPE ARCHITECT SHALL SUBMIT A CERTIFICATE OF COMPLETION TO PUBLIC FACILITIES DEVELOPMENT.



14. ALL LANDSCAPE AND IRRIGATION DESIGNS SHALL MEET CURRENT CITY STANDARDS AS LISTED IN GUIDELINES OR AS OBTAINED FROM PUBLIC FACILITIES DEVELOPMENT.

15. LANDSCAPED AREAS SHALL BE DELINEATED WITH A MINIMUM SIX INCHES (6") HIGH CURB.

SITE LEGEND

- LANDSCAPED AREA
- CONCRETE PAVING SEE "C" DRWGS. FOR THICKNESS

13. CONC. FILLED GUARD POST. 6" DIA. U.N.O.. 42"H.
14. NOT USED.
15. Z GUARD.
16. RECESSED KNOX BOX 5' HIGH FROM FINISH SURFACE. PER FIRE DEPARTMENT STANDARD.
17. ROOF ACCESS LADDER.
18. INTERIOR LONG-TERM BIKE RACK. BIKE RACK TO BE PERMANENTLY ANCHORED.
19. TUBE STEEL CANOPY.
20. EXTERIOR DOWN SPOUTS W/ 2 OVERFLOW SCUPPERS.
21. INTERIOR DOWN SPOUTS W/ 2 OVERFLOW SCUPPERS.

FLOOR SLAB & POUR STRIPS REQ.

THESE NOTES ARE VERY MIN. REQUIREMENT. SEE "S" DWGS FOR ADDITIONAL REQUIREMENTS

1. FLOOR COMPACTION - 95%
2. TRENCH COMPACTION - 90%
3. BUILDING FLOOR SLAB: SEE STRUCTURAL DRAWINGS.
4. CONTRACTOR TO BUILD FOR CLASS V FLOOR PER A.C.I. 302-1R-96
5. CONCRETE SLAB TO HAVE STEEL FLOAT HARD TROWEL BURNISHED FINISH.
6. CONTRACTOR TO CURE SLAB TO BE WET CURING USING BURLINE FOR 7 DAYS MIN.
7. ALL EQUIPMENT & MOVING VEHICLES SHALL BE DIAPERED.
8. NO CRANES, CONCRETE TRUCKS, OR ANYTHING HEAVIER WILL BE PLACED ON THE SLAB.
9. SLAB TO BE FF50 FL35 MEASURED WITHIN 24 HOURS.
10. NO FLY ASH IN THE CONCRETE
11. WHERE [▨] INDICATED, PROVIDE VAPOR BARRIER (15MIL STEGO OR EQUAL) UNDER THE CONCRETE SLAB. PROVIDE SAND PER SOILS ENGINEER OR MANUFACTURER'S RECOMMENDATION.

CONCRETE SLAB IN FUTURE OFFICE AREAS, WHERE SAND OVER VIQUEEN ARE REQUIRED, SHALL BE NATURALLY HYDRATED WITHOUT USE OF BURLENE, CURING COMPOUND, OR RELEASE AGENTS.
CONTROL/CONSTRUCTION JOINTS SHALL NOT BE FILLED WITH MM-80 JOINT FILLER IN FUTURE OFFICE AREAS.
12. SEAL CONCRETE SLAB W/ "LIPIDOLITH" SEALER
13. 10' POUR STRIP AT TRUCK DOOR. 4FT. MAX. ELSEWHERE.
14. ALL FLOOR SLAB NAIL OR BRACE FRAME HOLES FILLED WITH APPROVED 2 PART EPOXY COMPOUND TO MATCH CONCRETE COLOR. PEGA BOND LV 2000,BURKE EPOXY INJECTION RESIN OR EQUAL.
15. PROVIDE FIRE EXTINGUISHERS PER FIRE DEPARTMENT REQUIREMENT.
16. MM-80 AT SPEED BAY ONLY

NOTE:
ALL FIRE RISER AND UNPROTECTED ROOF DRAIN TO RECEIVE TO PROTECTIVE BOLLARDS.

FLOOR PLAN GENERAL NOTES

1. THIS BUILDING IS DESIGNED FOR HIGH PILE STORAGE WITH FIRE ACCESS MAN DOORS AT APPROXIMATELY 125' O.C. A SEPARATE PERMIT WILL BE REQUIRED FOR ANY RACKING/CONVEYER SYSTEMS.
2. FIRE HOSE LOCATIONS SHALL BE APPROVED PER FIRE DEPARTMENT.
3. SEE "C" DRAWINGS FOR FINISH SURFACE ELEVATIONS.
4. WAREHOUSE INTERIOR CONCRETE WALLS ARE PAINTED WHITE. COLUMNS ARE TO RECEIVE PRIMER ONLY. ALL GYP. BD. WALLS IN WAREHOUSE TO RECEIVE 1 COAT OF WHITE TO COVER.
5. SLOPE POUR STRIP 1/2" TO EXTERIOR AT ALL MANDOOR EXITS. SEE "S" DRAWINGS FOR POUR STRIP LOCATION.
6. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE PANEL WALL, GRID LINE, OR FACE OF STUD U.N.O.
7. SEE CIVIL DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR TO VERIFY ACTUAL UTILITY LOCATIONS. PLUMBING/ELECTRICAL COORDINATION.
8. SEE BELOW FOR DOOR TYPES AND SIZES.
NOTE: ALL DOORS PER DOOR SCHEDULE ARE FINISH OPENINGS.
9. CONTRACTOR TO PROTECT AND KEEP THE FLOOR SLAB CLEAN. ALL EQUIPMENT TO BE DIAPERED INCLUDING CARS AND TRUCKS.
10. ALL EXIT MAN DOORS IN WAREHOUSE TO HAVE ILLUMINATED EXIT SIGN HARDWARE.
11. HIGHLY FLAMMABLE AND COMBUSTIBLE MATERIAL SHALL NOT BE USED OR STORED IN THIS BUILDING.
12. EACH EXTERIOR EXIT DOOR SHALL BE IDENTIFIED BY A TACTILE EXIT SIGN WITH THE WORDS "EXIT". THE MOUNTING HEIGHT FOR SUCH SIGNAGE SHALL BE 60" FROM FINISH FLOOR LEVEL TO THE CENTER OF THE SIGN.
13. NON-ACCESSIBLE DOOR. PROVIDE WARNING SIGN LOCATED IN THE INTERIOR SIDE PER CBC 11B-703.5
14. ALL ROOF MOUNTED MATERIALS SHALL BE FULLY SCREENED FROM PUBLIC VIEW, SEE A/A4.1 OFFICE SECTION.
15. PROVIDE FIRE RATED PANEL JOINTS AND CAULKING AT ALL OPENINGS ON 3HR FIRE RATED WALL. SEE A DRAWING FOR LOCATIONS.
16. PROVIDE FIRE EXTINGUISHERS PER FIRE MARSHALL

ROOF PLAN KEYNOTES

1. CONCRETE PARAPET.
2. NOT USED
3. 4'X8' CURB MOUNTED SKYLIGHT.
4. NOT USED
5. **PROVIDE 4-PLY BUILT-UP ROOFING OVER ROOF SHEATHING OVER ROOF FRAMING. U.N.O.. ROOFING TO BE ND-24 CAP ROOFING BY JOHNS-MANVILLE OR EQUAL (CLASS A RATED). 10 YEAR NO DOLLAR LIMIT WARRANTY AND 2 YEAR LABOR GUARANTEE**
6. ROOF HATCH LOCATION.
7. ROOF ADDRESS PAINTED BLACK WITH 4' HIGH AND 1' WIDE STROKE PER LETTER.
8. PARAPET RETURN.
9. STRUCTURAL JOIST.
10. EXTERIOR DOWNSPOUT WITH OVERFLOW SCUPPERS.
11. INTERIOR ROOF DRAIN WITH OVERFLOW SCUPPERS.
12. INTERIOR ROOF DRAIN WITH OVERFLOW DRAIN.

ROOF PLAN GENERAL NOTES

A. ALL DIMENSIONS ARE TO FACE OF CONCRETE WALL, GRIDLINE, OR FACE OF STUD. (U.N.O.)

B. VERIFY THAT ALL ROOF AREAS HAVE POSITIVE DRAINAGE(1/4" FT.) PRIOR TO ROOF INSULATION INSTALLATION.

C. REFER TO "S" DRAWINGS FOR ROOF HEIGHT ELEVATIONS IN REGARDS TO ROOF DRAINAGE.

D. CONTRACTOR TO VERIFY AND COORDINATE WITH ALL SUBCONTRACTORS, ALL LOCATIONS AND SIZES OF ROOF OPENINGS.

E. FOR TYP. ROOF PENETRATIONS, SEE DETAIL 6, 9, 10/AD.3 CONTRACTOR TO VERIFY ALL LOCATIONS WITH MECHANICAL AND PLUMBING DRAWINGS

F. CONTRACTOR TO VERIFY ALL ROOF DRAIN DEPRESSIONS W/ "S" DRAWINGS.

G. CONTRACTOR TO COORDINATE EXACT SKYLIGHT LOCATION W/ FIRE SPRINKLER AND ROOF FRAMING SUBCONTRACTORS. LOCATIONS ON DRAWINGS ARE APPROXIMATE.

H. ALL SKYLIGHTS TO BE DESIGNED PER WIND SPEED DESIGN CRITERIA W/ STRONGER FRAMES, SUPPORTS AND DOMES. MANUFACTURER TO CONFIRM IN WRITING.

I. ROOF DRAINS AND OVERFLOW DRAINS TO BE A MIN. 8" DIA., SEE "P" DRAWINGS FOR EXACT SIZE.

J. PROVIDE SHAPED CRICKETS AS REQUIRED FOR PROPER ROOF DRAINAGE OF 1/4" PER FOOT (MIN.).

K. **BUILT UP ROOFING TO BE DESIGNED FOR I 90 AND TO BE A U.L. CLASS A ROOF. FLASHING: 6AF TYPE 5MB MOPPED AP SHEET, U.L. TYPE 63 BUR.**

L. ALL ROOFING FASTENERS SHALL MEET ALL CODE AND REGULATION REQUIREMENTS. PROPER REQUIREMENTS ARE IN PROJECTS JURISDICTION AND ALSO, FACTORY MUTUAL (FM) WIND UPLIFT PRESSURE REQUIREMENTS.

M. ALL SKYLIGHTS TO BE PLACED A MIN. OF 18'-0" FROM INSIDE FACE OF PARAPET

N. USE WHITE SCRIM FOIL INSULATION IN THE WAREHOUSE AREA.

O. SMOKE VENTS SHALL BE REQUIRED IF AREAS FOR "POTENTIAL OFFICES" WILL BE USED FOR HIGH PILE COMBUSTIBLE STORAGE.

P. ROOF DRAINS, OVERFLOW DRAINS AND RAINWATER PIPING WITHIN THE INTERIOR OF THE BUILDING SHALL BE TESTED IN ACCORDANCE WITH THE PROVISIONS OF THE PLUMBING CODE FOR TESTING DRAIN, WASTE AND VENT SYSTEMS

Q. ROOF DRAINS, OVERFLOW PIPING WITHIN THE BUILDING SHALL UTILIZE APPROVED DRAINAGE FITTINGS.

R. MANUFACTURED ROOF DRAINS AND OVERFLOWS(FIXTURES) SHALL BE IAPMO LISTED

ROOF LEGEND

- 4" X 8" SKYLIGHT
- ROOF HATCH
- STRUCTURAL JOISTS SEE "S" DRAWINGS.
- BUILDING PARAPET LINE
- EXTERIOR DOWNSPOUT W/ OVERFLOW SCUPPER
- INTERIOR ROOF DRAIN W/ OVERFLOW SCUPPERS
- PROPOSED 15% SOLAR ZONE AREA

SKYLIGHT/SMOKEHATCH CALCULATION

PROJECT:
CLEAR HEIGHT IN WAREHOUSE ARE = **32** FT. CLEAR FROM 6" BEYOND COLUMN **"5"** SEE A2.1 FOR LOCATIONS

ELEVATION KEYNOTES

1. CONCRETE TILT-UP PANEL.
2. PANEL JOINT.
3. PANEL REVEAL. ALL REVEALS TO HAVE A MAX. OF 3/8" CHAMFER. REVEAL COLOR TO MATCH ADJACENT BUILDING FIELD COLOR. U.N.O.
4. 12' X 14' OVERHEAD DOOR @ DRIVE THRU. PROVIDE COMPLETE WEATHER-STRIPPING PROTECTION ALL AROUND.
5. 9' X 10' OVERHEAD DOOR @ DRIVE THRU. PROVIDE COMPLETE WEATHER-STRIPPING PROTECTION ALL AROUND.
6. CONCRETE STAIR, LANDING AND GUARDRAIL W/ METAL PIPE HANDRAIL. PROVIDE NON SKID NOSING TO MEET ADA REQUIREMENTS. PROVIDE CONTRASTING COLORED 3" WIDE WARNING STRIPE INTEGRAL TO CONCRETE AT TOP LANDING AND BOTTOM TREAD PER ADA REQUIREMENTS.
7. 4' X 8' METAL LOUVER OPENING FOR VENTILATION. PAINT TO MATCH BUILDING COLOR.
8. HOLLOW METAL DOORS. PROVIDE COMPLETE WEATHER STRIPING ALL AROUND DOOR.
9. ROOF LINE BEYOND.
10. DOCK DOOR BUMPER TYPICAL.
11. ALUMINUM STOREFRONT FRAMING WITH TEMPERED GLAZING AT ALL DOORS, SIDELITES ADJACENT TO DOORS AND GLAZING WITH BOTTOMS LESS THAN 18" ABOVE FINISH FLOOR ELEVATION.
12. METAL CANOPY.
13. KNOCK-OUT PANEL.
14. INTERIOR ROOF DRAIN W/ 2 OVERFLOW SCUPPERS.
15. CONC. FILLED GUARD POST. 6" DIA. U.N.O.. 42"H.
16. EXTERIOR LIGHTING FIXTURE.
17. APPROXIMATE LOCATION OF ADDRESS ON WALL.
18. EXTERIOR DOWN SPOUTS W/ 2 OVERFLOW SCUPPERS.

ELEVATION GENERAL NOTES

1. ALL PAINT COLOR CHANGES TO OCCUR AT INSIDE CORNERS UNLESS NOTED OTHERWISE.
2. ALL PAINT FINISHES ARE TO BE FLAT UNLESS NOTED OTHERWISE.
3. T.O.P. EL.= TOP OF PARAPET ELEVATION.
4. F.F. = FINISH FLOOR ELEVATION.
5. STOREFRONT CONSTRUCTION: GLASS, METAL ATTACHMENTS AND LINTELS SHALL BE DESIGNED TO RESIST -- MPH. EXPOSURE "C" WINDS. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS PRIOR TO INSTALLATION.
6. CONTRACTOR SHALL FULLY PAINT ONE CONCRETE PANEL W/ SELECTED COLORS. ARCHITECT AND OWNER SHALL APPROVE PRIOR TO PAINTING REMAINDER OF BUILDING.
7. BACK SIDE OF PARAPETS TO HAVE SMOOTH FINISH AND BE PAINTED WITH ELASTOMERIC PAINT.
8. FOR SPANDREL GLAZING, ALLOW SPACE BEHIND SPANDREL TO BREATH. PROVIDE 1" DIAMETER HOLES AT CONCRETE WALL.
9. USE ADHESIVE BACK WOOD STRIPS FOR ALL REVEAL FORMS.
10. THE FIRST COAT OF PAINT TO BE ROLLED-ON AND THE SECOND COAT TO BE SPRAYED-ON
11. ALL ROLL-UP DOORS AND SERVICE DOORS TO BE PAINTED TO MATCH BUILDING COLOR.

ELEVATION COLOR LEGEND/SCHED.

1. PAINT. COLOR : SW 7667 ZIRCON
2. PAINT. COLOR : SW 7670 GRAY SHINGLE

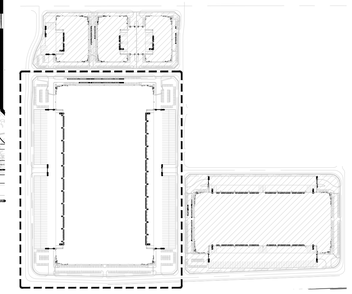
SITE PLAN KEYNOTES

1. HEAVY BROOM FINISH CONC. PAVEMENT,
2. AC PAVING.
3. CONCRETE WALKWAY
4. DECORATIVE DRIVEWAY APRONS TO BE CONSTRUCTED PER "L" DRAWINGS.
5. 5'-6"X5'-6"X4" MIN. THICK CONCRETE EXTERIOR LANDING PAD TYP. AT ALL EXTERIOR MAN DOORS TO LANDSCAPED AREAS. FINISH TO BE MEDIUM BROOM FINISH. SLOPE TO BE 1/4" : 12" MAX. PROVIDE WALK TO PUBLIC WAY OR DRIVE WAY W/ 1:20 MAX. AS REQ. BY CITY INSPECTOR.
6. 8' H PROVIDE METAL, MANUAL OPERATED GATES W/ KNOX-PAD LOCK PER FIRE DEPARTMENT STANDARDS PER DRIVEWAY.
7. EXTERIOR CONC. STAIR.
8. LANDSCAPE.
9. 14'H CONCRETE TILT-UP SCREEN WALL
10. 2X2 EV CONDUIT CONCRETE PAD.
11. APPROXIMATE LOCATION OF TRANSFORMER.
12. BIKE RACK.
13. TRASH ENCLOSURE
14. CONCRETE FILLED GUARD POST "6 DIA. U.N.O. 42" H.
15. TRUNCATED DOME.
16. PRE-CAST CONCRETE WHEEL STOP.
17. ACCESSIBLE PARKING STALL SIGN.
18. ACCESSIBLE ENTRY SIGN.
19. 8'H WROUGHT IRON FENCE.
20. TRASH COMPACTOR
21. BREAK AREA
22. RETAINING WALL



SITE PLAN GENERAL NOTES

1. THE SITE PLAN BASED ON THE SOILS REPORT PREPARED BY: TBD
2. IF SOILS ARE EXPANSIVE IN NATURE, USE STEEL REINFORCING FOR ALL SITE CONCRETE.
3. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE WALL, FACE OF CONCRETE CURB OR GRID LINE U.N.O.
4. SEE "C" PLANS FOR ALL CONCRETE CURBS, GUTTERS AND SWALES.
5. THE ENTIRE PROJECT SHALL BE PERMANENTLY MAINTAINED WITH AN AUTOMATIC IRRIGATION SYSTEM.
6. SEE "C" DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR SHALL VERIFY ACTUAL UTILITY LOCATIONS.
7. PROVIDE POSITIVE DRAINAGE AWAY FROM BLDG. SEE "C" DRAWINGS.
8. CONTRACTOR TO REFER TO "C" DRAWINGS FOR ALL HORIZONTAL CONTROL DIMENSIONS. SITE PLANS ARE FOR GUIDANCE AND STARTING LAYOUT POINTS.
9. SEE "C" DRAWINGS FOR FINISH GRADE ELEVATIONS.
10. CONCRETE SIDEWALKS TO BE A MINIMUM OF 4" THICK W/ TOOLED JOINTS AT 6' O.C. EXPANSION/CONSTRUCTION JOINTS SHALL BE A MAXIMUM 12' EA. WAY. EXPANSION JOINTS TO HAVE COMPRESSIVE EXPANSION FILLER MATERIAL OF 1/4". FINISH TO BE A MEDIUM BROOM FINISH U.N.O.
11. PAINT CURBS AND PROVIDE SIGNS TO INFORM OF FIRE LANES AS REQUIRED BY FIRE DEPARTMENT.
12. CONSTRUCTION DOCUMENTS PERTAINING TO THE LANDSCAPE AND IRRIGATION OF THE ENTIRE PROJECT SITE SHALL BE SUBMITTED TO THE BUILDING DEPARTMENT AND APPROVED BY PUBLIC FACILITIES DEVELOPMENT PRIOR TO ISSUANCE OF BUILDING PERMITS.
13. PRIOR TO FINAL CITY INSPECTION, THE LANDSCAPE ARCHITECT SHALL SUBMIT A CERTIFICATE OF COMPLETION TO PUBLIC FACILITIES DEVELOPMENT.
14. ALL LANDSCAPE AND IRRIGATION DESIGNS SHALL MEET CURRENT CITY STANDARDS AS LISTED IN GUIDELINES OR AS OBTAINED FROM PUBLIC FACILITIES DEVELOPMENT.
15. LANDSCAPED AREAS SHALL BE DELINEATED WITH A MINIMUM SIX INCHES (6") HIGH CURB.

SITE LEGEND

- LANDSCAPED AREA
- CONCRETE PAVING SEE "C" DRWGS. FOR THICKNESS
- 26' FIRE WIDE FIRELANE
- CLEAN AIR VANPOOL/EV (9' X 19')

FLOOR PLAN KEYNOTES

1. CONCRETE TILT-UP PANEL.
2. STRUCTURAL STEEL COLUMN.
3. TYPICAL STOREFRONT SYSTEM WITH GLAZING. SEE OFFICE BLOW-UP AND ELEVATIONS FOR SIZE, COLOR AND LOCATIONS.
4. CONCRETE RAMP W/ 42"HIGH CONC TILT-UP GUARD WALL OR BUILDING WALL ON BOTH SIDE OF RAMP.
5. 5'-6"X5'-6"X4" THICK CONCRETE EXTERIOR LANDING PAD TYP. AT ALL EXTERIOR MAN DOORS TO LANDSCAPED AREAS. FINISH TO BE MEDIUM BROOM FINISH. PROVIDE WALK TO PUBLIC WAY OR DRIVE WAY AS REQ. BY CITY INSPECTOR.
6. EXTERIOR CONCRETE STAIR WITH GUARDRAIL AND HANDRAIL.
7. 9' X 10' TRUCK DOOR, SECTIONAL O.H., STANDARD GRADE.
8. LOUVERED OPENING FOR VENTILATION.
9. DOCK DOOR BUMPER TYPICAL.
10. 12' X 14' DRIVE THRU. SECTIONAL O.H., STANDARD GRADE.
11. 3' X 7' HOLLOW METAL EXTERIOR MAN DOOR.
12. SOFFIT LINE ABOVE
13. CONC. FILLED GUARD POST. 6" DIA. U.N.O.. 42"H.
14. NOT USED.
15. Z GUARD.
16. RECESSED KNOX BOX 5' HIGH FROM FINISH SURFACE. PER FIRE DEPARTMENT STANDARD.
17. ROOF ACCESS LADDER.
18. INTERIOR LONG-TERM BIKE RACK. BIKE RACK TO BE PERMANENTLY ANCHORED.
19. TUBE STEEL CANOPY.
20. EXTERIOR DOWN SPOUTS W/ 2 OVERFLOW SCUPPERS.
21. INTERIOR DOWN SPOUTS W/ 2 OVERFLOW SCUPPERS.

FLOOR PLAN GENERAL NOTES

1. THIS BUILDING IS DESIGNED FOR HIGH PILE STORAGE WITH FIRE ACCESS MAN DOORS AT APPROXIMATELY 125' O.C. A SEPARATE PERMIT WILL BE REQUIRED FOR ANY RACKING/CONVEYER SYSTEMS.

2. FIRE HOSE LOCATIONS SHALL BE APPROVED PER FIRE DEPARTMENT.

3. SEE "C" DRAWINGS FOR FINISH SURFACE ELEVATIONS.

4. WAREHOUSE INTERIOR CONCRETE WALLS ARE PAINTED WHITE. COLUMNS ARE TO RECEIVE PRIMER ONLY. ALL GYP. BD. WALLS IN WAREHOUSE TO RECEIVE 1 COAT OF WHITE TO COVER.

5. SLOPE POUR STRIP 1/2" TO EXTERIOR AT ALL MANDOOR EXITS. SEE "S" DRAWINGS FOR POUR STRIP LOCATION.

6. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE PANEL WALL, GRID LINE, OR FACE OF STUD U.N.O.

7. SEE CIVIL DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR TO VERIFY ACTUAL UTILITY LOCATIONS. PLUMBING/ELECTRICAL COORDINATION.

8. SEE BELOW FOR DOOR TYPES AND SIZES.
NOTE: ALL DOORS PER DOOR SCHEDULE ARE FINISH OPENINGS.

9. CONTRACTOR TO PROTECT AND KEEP THE FLOOR SLAB CLEAN. ALL EQUIPMENT TO BE DIAPERED INCLUDING CARS AND TRUCKS.

10. ALL EXIT MAN DOORS IN WAREHOUSE TO HAVE ILLUMINATED EXIT SIGN HARDWARE.

11. HIGHLY FLAMMABLE AND COMBUSTIBLE MATERIAL SHALL NOT BE USED OR STORED IN THIS BUILDING.

12. EACH EXTERIOR EXIT DOOR SHALL BE IDENTIFIED BY A TACTILE EXIT SIGN WITH THE WORDS "EXIT". THE MOUNTING HEIGHT FOR SUCH SIGNAGE SHALL BE 60" FROM FINISH FLOOR LEVEL TO THE CENTER OF THE SIGN.

13. NON-ACCESSIBLE DOOR. PROVIDE WARNING SIGN LOCATED IN THE INTERIOR SIDE PER CBC 11B-703.5

14. ALL ROOF MOUNTED MATERIALS SHALL BE FULLY SCREENED FROM PUBLIC VIEW, SEE A/A4.1 OFFICE SECTION.

15. PROVIDE FIRE RATED PANEL JOINTS AND CAULKING AT ALL OPENINGS ON 3HR FIRE RATED WALL. SEE A DRAWING FOR LOCATIONS.

16. PROVIDE FIRE EXTINGUISHERS PER FIRE MARSHALL

FLOOR SLAB & POUR STRIPS REQ.

THESE NOTES ARE VERY MIN. REQUIREMENT. SEE "S" DWGS FOR ADDITIONAL REQUIREMENTS

1. FLOOR COMPACTION - 95%
2. TRENCH COMPACTION - 90%
3. BUILDING FLOOR SLAB: SEE STRUCTURAL DRAWINGS.
4. CONTRACTOR TO BUILD FOR CLASS V FLOOR PER A.C.I. 302-1R-96
5. CONCRETE SLAB TO HAVE STEEL FLOAT HARD TROWEL BURNISHED FINISH.
6. CONTRACTOR TO CURE SLAB TO BE WET CURING USING BURLINE FOR 7 DAYS MIN.
7. ALL EQUIPMENT & MOVING VEHICLES SHALL BE DIAPERED.
8. NO CRANES, CONCRETE TRUCKS, OR ANYTHING HEAVIER WILL BE PLACED ON THE SLAB.
9. SLAB TO BE FF50 FL35 MEASURED WITHIN 24 HOURS.
10. NO FLY ASH IN THE CONCRETE
11. WHERE INDICATED, PROVIDE VAPOR BARRIER (15MIL STEGO OR EQUAL) UNDER THE CONCRETE SLAB. PROVIDE SAND PER SOILS ENGINEER OR MANUFACTURER'S RECOMMENDATION.

CONCRETE SLAB IN FUTURE OFFICE AREAS, WHERE SAND OVER VIQUEEN ARE REQUIRED, SHALL BE NATURALLY HYDRATED WITHOUT USE OF BURLENE, CURING COMPOUND, OR RELEASE AGENTS.
CONTROL/CONSTRUCTION JOINTS SHALL NOT BE FILLED WITH MM-80 JOINT FILLER IN FUTURE OFFICE AREAS.
12. SEAL CONCRETE SLAB W/ "LIPIDOLITH" SEALER
13. 10' POUR STRIP AT TRUCK DOOR. 4FT. MAX. ELSEWHERE.
14. ALL FLOOR SLAB NAIL OR BRACE FRAME HOLES FILLED WITH APPROVED 2 PART EPOXY COMPOUND TO MATCH CONCRETE COLOR. PEGA BOND LV 2000,BURKE EPOXY INJECTION RESIN OR EQUAL.
15. PROVIDE FIRE EXTINGUISHERS PER FIRE DEPARTMENT REQUIREMENT.
16. MM-80 AT SPEED BAY ONLY

NOTE:
ALL FIRE RISER AND UNPROTECTED ROOF DRAIN TO RECEIVE TO PROTECTIVE BOLLARDS.

ROOF PLAN GENERAL NOTES

A. ALL DIMENSIONS ARE TO FACE OF CONCRETE WALL, GRIDLINE, OR FACE OF STUD. (U.N.O.)

B. VERIFY THAT ALL ROOF AREAS HAVE POSITIVE DRAINAGE(1/4" FT.) PRIOR TO ROOF INSULATION INSTALLATION.

C. REFER TO "S" DRAWINGS FOR ROOF HEIGHT ELEVATIONS IN REGARDS TO ROOF DRAINAGE.

D. CONTRACTOR TO VERIFY AND COORDINATE WITH ALL SUBCONTRACTORS, ALL LOCATIONS AND SIZES OF ROOF OPENINGS.

E. FOR TYP. ROOF PENETRATIONS, SEE DETAIL 6, 9, 10/AD.3 CONTRACTOR TO VERIFY ALL LOCATIONS WITH MECHANICAL AND PLUMBING DRAWINGS

F. CONTRACTOR TO VERIFY ALL ROOF DRAIN DEPRESSIONS W/ "S" DRAWINGS.

G. CONTRACTOR TO COORDINATE EXACT SKYLIGHT LOCATION W/ FIRE SPRINKLER AND ROOF FRAMING SUBCONTRACTORS. LOCATIONS ON DRAWINGS ARE APPROXIMATE.

H. ALL SKYLIGHTS TO BE DESIGNED PER WIND SPEED DESIGN CRITERIA W/ STRONGER FRAMES, SUPPORTS AND DOMES. MANUFACTURER TO CONFIRM IN WRITING.

I. ROOF DRAINS AND OVERFLOW DRAINS TO BE A MIN. 8" DIA., SEE "P" DRAWINGS FOR EXACT SIZE.

J. PROVIDE SHAPED CRICKETS AS REQUIRED FOR PROPER ROOF DRAINAGE OF 1/4" PER FOOT (MIN.).

K. **BUILT UP ROOFING TO BE DESIGNED FOR I 90 AND TO BE A U.L. CLASS A ROOF. FLASHING: 6AF TYPE 5MB MOPPED AP SHEET, U.L. TYPE 63 BUR.**

L. ALL ROOFING FASTENERS SHALL MEET ALL CODE AND REGULATION REQUIREMENTS. PROPER REQUIREMENTS ARE IN PROJECTS JURISDICTION AND ALSO, FACTORY MUTUAL (FM) WIND UPLIFT PRESSURE REQUIREMENTS.

M. ALL SKYLIGHTS TO BE PLACED A MIN. OF 18'-0" FROM INSIDE FACE OF PARAPET

N. USE WHITE SCRIM FOIL INSULATION IN THE WAREHOUSE AREA.

O. SMOKE VENTS SHALL BE REQUIRED IF AREAS FOR "POTENTIAL OFFICES" WILL BE USED FOR HIGH PILE COMBUSTIBLE STORAGE.

P. ROOF DRAINS, OVERFLOW DRAINS AND RAINWATER PIPING WITHIN THE INTERIOR OF THE BUILDING SHALL BE TESTED IN ACCORDANCE WITH THE PROVISIONS OF THE PLUMBING CODE FOR TESTING DRAIN, WASTE AND VENT SYSTEMS

Q. ROOF DRAINS, OVERFLOW PIPING WITHIN THE BUILDING SHALL UTILIZE APPROVED DRAINAGE FITTINGS.

R. MANUFACTURED ROOF DRAINS AND OVERFLOWS(FIXTURES) SHALL BE IAPMO LISTED

ROOF LEGEND

- 4' X 8' SKYLIGHT
- ROOF HATCH
- STRUCTURAL JOISTS SEE "S" DRAWINGS.
- BUILDING PARAPET LINE
- EXTERIOR DOWNSPOUT W/ OVERFLOW SCUPPER
- INTERIOR ROOF DRAIN W/ OVERFLOW SCUPPERS
- PROPOSED 15% SOLAR ZONE AREA

SKYLIGHT/SMOKEHATCH CALCULATION

PROJECT:
CLEAR HEIGHT IN WAREHOUSE ARE = **42** FT. CLEAR FROM 6" BETWEEN COLUMN "**C**" AND "N"
SEE DAB-A2.1 FOR LOCATIONS

REQUIRED

BUILDING FOOTPRINT	=	1,042,581 S.F.	
SKYLIGHTS REQUIRED	=	2.5% =	19,872 S.F. (621 E.A.)
SMOKE HATCH REQUIRED	=	0.5% =	3,968 S.F. (124 E.A.)

PROVIDED

SKYLIGHTS PROVIDED	=	(619 E.A.)
SMOKE HATCH REQUIRED	=	(124 E.A.)

MODEL

SKYLIGHT MODEL — MANUFACTURED BY BRISTOLITE DAYLIGHTING SYSTEM
MODEL # T4896-SS-CM-1-HS1 OR EQUAL
ICC-ESR-3177

ELEVATION KEYNOTES

1. CONCRETE TILT-UP PANEL.
2. PANEL JOINT.
3. PANEL REVEAL. ALL REVEALS TO HAVE A MAX. OF 3/8" CHAMFER. REVEAL COLOR TO MATCH ADJACENT BUILDING FIELD COLOR, U.N.O.
4. 12' X 14' OVERHEAD DOOR @ DRIVE THRU. PROVIDE COMPLETE WEATHER-STRIPPING PROTECTION ALL AROUND.
5. 9' X 10' OVERHEAD DOOR @ DRIVE THRU. PROVIDE COMPLETE WEATHER-STRIPPING PROTECTION ALL AROUND.
6. CONCRETE STAIR, LANDING AND GUARDRAIL W/ METAL PIPE HANDRAIL. PROVIDE NON SKID NOSING TO MEET ADA REQUIREMENTS. PROVIDE CONTRASTING COLORED 3" WIDE WARNING STRIPE INTEGRAL TO CONCRETE AT TOP LANDING AND BOTTOM TREAD PER ADA REQUIREMENTS.
7. 4' X 8' METAL LOUVER OPENING FOR VENTILATION. PAINT TO MATCH BUILDING COLOR.
8. HOLLOW METAL DOORS. PROVIDE COMPLETE WEATHER STRIPING ALL AROUND DOOR.
9. ROOF LINE BEYOND.
10. DOCK DOOR BUMPER TYPICAL.
11. ALUMINUM STOREFRONT FRAMING WITH TEMPERED GLAZING AT ALL DOORS, SIDELITES ADJACENT TO DOORS AND GLAZING WITH BOTTOMS LESS THAN 18" ABOVE FINISH FLOOR ELEVATION.
12. METAL CANOPY.
13. KNOCK-OUT PANEL.
14. INTERIOR ROOF DRAIN W/ 2 OVERFLOW SCUPPERS.
15. CONC. FILLED GUARD POST. 6" DIA. U.N.O.. 42"H.
16. EXTERIOR LIGHTING FIXTURE.
17. APPROXIMATE LOCATION OF ADDRESS ON WALL.
18. EXTERIOR DOWN SPOUTS W/ 2 OVERFLOW SCUPPERS.

ELEVATION GENERAL NOTES

1. ALL PAINT COLOR CHANGES TO OCCUR AT INSIDE CORNERS UNLESS NOTED OTHERWISE.
2. ALL PAINT FINISHES ARE TO BE FLAT UNLESS NOTED OTHERWISE.
3. T.O.P. EL.= TOP OF PARAPET ELEVATION.
4. F.F. = FINISH FLOOR ELEVATION.
5. STOREFRONT CONSTRUCTION: GLASS, METAL ATTACHMENTS AND LINTELS SHALL BE DESIGNED TO RESIST – MPH, EXPOSURE "C" WINDS. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS PRIOR TO INSTALLATION.
6. CONTRACTOR SHALL FULLY PAINT ONE CONCRETE PANEL W/ SELECTED COLORS. ARCHITECT AND OWNER SHALL APPROVE PRIOR TO PAINTING REMAINDER OF BUILDING.
7. BACK SIDE OF PARAPETS TO HAVE SMOOTH FINISH AND BE PAINTED WITH ELASTOMERIC PAINT.
8. FOR SPANDREL GLAZING, ALLOW SPACE BEHIND SPANDREL TO BREATH. PROVIDE 1" DIAMETER HOLES AT CONCRETE WALL.
9. USE ADHESIVE BACK WOOD STRIPS FOR ALL REVEAL FORMS.
10. THE FIRST COAT OF PAINT TO BE ROLLED-ON AND THE SECOND COAT TO BE SPRAYED-ON
11. ALL ROLL-UP DOORS AND SERVICE DOORS TO BE PAINTED TO MATCH BUILDING COLOR.

ELEVATION COLOR LEGEND/SCHED.

1. PAINT. COLOR : SW 7667 ZIRCON
2. PAINT. COLOR : SW 7670 GRAY SHINGLE
3. PAINT. COLOR : SW 7674 PEPPERCORN
4. PAINT. COLOR : SW 6243 DISTANCE
5. MULLIONS COLOR : BLACK ANODIZED
6. GLAZING COLOR : BLUE REFLECTIVE
7. METAL CANOPY: SHERWIN WILLIAMS ACRYLIC LATEX SYSTEMS HIGH GLOSS/HIGH PERFORMANCE SHERWIN WILLIAMS SW 7674 PEPPERCORI

GLAZING LEGEND

NOTE: ALL EXTERIOR AND INTERIOR GLAZING SHALL BE TEMPERED.

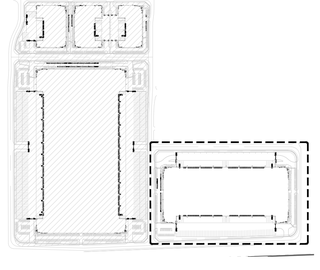
OVERALL SITE PLAN
scale: 1"=40'-0"

SCALE: 1" = 40'-0"
0 40' 80' 120'
TRUE NORTH

SITE PLAN KEYNOTES

1. HEAVY BROOM FINISH CONC. PAVEMENT,
2. AC PAVING.
3. CONCRETE WALKWAY
4. DECORATIVE DRIVEWAY APRONS TO BE CONSTRUCTED PER "L" DRAWINGS.
5. 5'-6"X5'-6"X4" MIN. THICK CONCRETE EXTERIOR LANDING PAD TYP. AT ALL EXTERIOR MAN DOORS TO LANDSCAPED AREAS. FINISH TO BE MEDIUM BROOM FINISH. SLOPE TO BE 1/4" : 12" MAX. PROVIDE WALK TO PUBLIC WAY OR DRIVE WAY W/ 1:20 MAX. AS REQ. BY CITY INSPECTOR.
6. 8' H PROVIDE METAL, MANUAL OPERATED GATES W/ KNOX-PAD LOCK PER FIRE DEPARTMENT STANDARDS PER DRIVEWAY.
7. EXTERIOR CONC. STAIR.
8. LANDSCAPE.
9. 14'H CONCRETE TILT-UP SCREEN WALL
10. 2X2 EV CONDUIT CONCRETE PAD.
11. APPROXIMATE LOCATION OF TRANSFORMER.
12. BIKE RACK.
13. TRASH ENCLOSURE
14. CONCRETE FILLED GUARD POST "6 DIA. U.N.O. 42" H.
15. TRUNCATED DOME.
16. PRE-CAST CONCRETE WHEEL STOP.
17. ACCESSIBLE PARKING STALL SIGN.
18. ACCESSIBLE ENTRY SIGN.
19. 8'H WROUGHT IRON FENCE.
20. TRASH COMPACTOR
21. BREAK AREA
22. RETAINING WALL



SITE PLAN GENERAL NOTES

1. THE SITE PLAN BASED ON THE SOILS REPORT PREPARED BY: TBD
2. IF SOILS ARE EXPANSIVE IN NATURE, USE STEEL REINFORCING FOR ALL SITE CONCRETE.
3. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE WALL, FACE OF CONCRETE CURB OR GRID LINE U.N.O.
4. SEE "C" PLANS FOR ALL CONCRETE CURBS, GUTTERS AND SWALES.
5. THE ENTIRE PROJECT SHALL BE PERMANENTLY MAINTAINED WITH AN AUTOMATIC IRRIGATION SYSTEM.
6. SEE "C" DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR SHALL VERIFY ACTUAL UTILITY LOCATIONS.
7. PROVIDE POSITIVE DRAINAGE AWAY FROM BLDG. SEE "C" DRAWINGS.
8. CONTRACTOR TO REFER TO "C" DRAWINGS FOR ALL HORIZONTAL CONTROL DIMENSIONS. SITE PLANS ARE FOR GUIDANCE AND STARTING LAYOUT POINTS.
9. SEE "C"DRAWINGS FOR FINISH GRADE ELEVATIONS.
10. CONCRETE SIDEWALKS TO BE A MINIMUM OF 4" THICK W/ TOOLED JOINTS AT 6' O.C. EXPANSION/CONSTRUCTION JOINTS SHALL BE A MAXIMUM 12' EA. WAY. EXPANSION JOINTS TO HAVE COMPRESSIVE EXPANSION FILLER MATERIAL OF 1/4". FINISH TO BE A MEDIUM BROOM FINISH U.N.O.
11. PAINT CURBS AND PROVIDE SIGNS TO INFORM OF FIRE LANES AS REQUIRED BY FIRE DEPARTMENT.
12. CONSTRUCTION DOCUMENTS PERTAINING TO THE LANDSCAPE AND IRRIGATION OF THE ENTIRE PROJECT SITE SHALL BE SUBMITTED TO THE BUILDING DEPARTMENT AND APPROVED BY PUBLIC FACILITIES DEVELOPMENT PRIOR TO ISSUANCE OF BUILDING PERMITS.
13. PRIOR TO FINAL CITY INSPECTION, THE LANDSCAPE ARCHITECT SHALL SUBMIT A CERTIFICATE OF COMPLETION TO PUBLIC FACILITIES DEVELOPMENT.
14. ALL LANDSCAPE AND IRRIGATION DESIGNS SHALL MEET CURRENT CITY STANDARDS AS LISTED IN GUIDELINES OR AS OBTAINED FROM PUBLIC FACILITIES DEVELOPMENT.
15. LANDSCAPED AREAS SHALL BE DELINEATED WITH A MINIMUM SIX INCHES (6") HIGH CURB.

SITE LEGEND

- LANDSCAPED AREA
- CONCRETE PAVING SEE "C" DRWGS. FOR THICKNESS
- 26' FIRE WIDE FIRELANE
- CLEAN AIR VANPOOL/EV (9' X 19')
- STANDARD PARKING STALL (9' X 19')
- HANDICAP PARKING STALL (9' X 19') VANPOOL (12' X 19')
- PATH OF TRAVEL
- 12' WIDE MONOLITHIC CONCRETE CURB ADJACENT TO PLANTER AT PARKING SPACES PER LOCAL JURISDICTION STANDARD

FLOOR PLAN KEYNOTES

1. CONCRETE TILT-UP PANEL.
2. STRUCTURAL STEEL COLUMN.
3. TYPICAL STOREFRONT SYSTEM WITH GLAZING. SEE OFFICE BLOW-UP AND ELEVATIONS FOR SIZE, COLOR AND LOCATIONS.
4. CONCRETE RAMP W/ 42"HIGH CONC TILT-UP GUARD WALL OR BUILDING WALL ON BOTH SIDE OF RAMP.
5. 5'-6"X5'-6"X4" THICK CONCRETE EXTERIOR LANDING PAD TYP. AT ALL EXTERIOR MAN DOORS TO LANDSCAPED AREAS. FINISH TO BE MEDIUM BROOM FINISH. PROVIDE WALK TO PUBLIC WAY OR DRIVE WAY AS REQ. BY CITY INSPECTOR.
6. EXTERIOR CONCRETE STAIR WITH GUARDRAIL AND HANDRAIL.
7. 9' X 10' TRUCK DOOR, SECTIONAL O.H., STANDARD GRADE.
8. LOUVERED OPENING FOR VENTILATION.
9. DOCK DOOR BUMPER TYPICAL.
10. 12' X 14' DRIVE THRU. SECTIONAL O.H., STANDARD GRADE.
11. 3' X 7' HOLLOW METAL EXTERIOR MAN DOOR.
12. SOFFIT LINE ABOVE
13. CONC. FILLED GUARD POST. 6" DIA. U.N.O.. 42"H.
14. NOT USED.
15. Z GUARD.
16. RECESSED KNOX BOX 5' HIGH FROM FINISH SURFACE. PER FIRE DEPARTMENT STANDARD.
17. ROOF ACCESS LADDER.
18. INTERIOR LONG-TERM BIKE RACK. BIKE RACK TO BE PERMANENTLY ANCHORED.
19. TUBE STEEL CANOPY.
20. EXTERIOR DOWN SPOUTS W/ 2 OVERFLOW SCUPPERS.
21. INTERIOR DOWN SPOUTS W/ 2 OVERFLOW SCUPPERS.

FLOOR PLAN GENERAL NOTES

1. THIS BUILDING IS DESIGNED FOR HIGH PILE STORAGE WITH FIRE ACCESS MAN DOORS AT APPROXIMATELY 125' O.C. A SEPARATE PERMIT WILL BE REQUIRED FOR ANY RACKING/CONVEYER SYSTEMS.

2. FIRE HOSE LOCATIONS SHALL BE APPROVED PER FIRE DEPARTMENT.

3. SEE "C" DRAWINGS FOR FINISH SURFACE ELEVATIONS.

4. WAREHOUSE INTERIOR CONCRETE WALLS ARE PAINTED WHITE. COLUMNS ARE TO RECEIVE PRIMER ONLY. ALL GYP. BD. WALLS IN WAREHOUSE TO RECEIVE 1 COAT OF WHITE TO COVER.

5. SLOPE POUR STRIP 1/2" TO EXTERIOR AT ALL MANDOOR EXITS. SEE "S" DRAWINGS FOR POUR STRIP LOCATION.

6. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE PANEL WALL, GRID LINE, OR FACE OF STUD U.N.O.

7. SEE CIVIL DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR TO VERIFY ACTUAL UTILITY LOCATIONS. PLUMBING/ELECTRICAL COORDINATION.

8. SEE BELOW FOR DOOR TYPES AND SIZES.
NOTE: ALL DOORS PER DOOR SCHEDULE ARE FINISH OPENINGS.

9. CONTRACTOR TO PROTECT AND KEEP THE FLOOR SLAB CLEAN. ALL EQUIPMENT TO BE DIAPERED INCLUDING CARS AND TRUCKS.

10. ALL EXIT MAN DOORS IN WAREHOUSE TO HAVE ILLUMINATED EXIT SIGN HARDWARE. (X)

11. HIGHLY FLAMMABLE AND COMBUSTIBLE MATERIAL SHALL NOT BE USED OR STORED IN THIS BUILDING.

12. EACH EXTERIOR EXIT DOOR SHALL BE IDENTIFIED BY A TACTILE EXIT SIGN WITH THE WORDS "EXIT". THE MOUNTING HEIGHT FOR SUCH SIGNAGE SHALL BE 60" FROM FINISH FLOOR LEVEL TO THE CENTER OF THE SIGN.

13. NON-ACCESSIBLE DOOR. PROVIDE WARNING SIGN LOCATED IN THE INTERIOR SIDE PER CBC 11B-703.5

14. ALL ROOF MOUNTED MATERIALS SHALL BE FULLY SCREENED FROM PUBLIC VIEW, SEE A/A4.1 OFFICE SECTION.

15. PROVIDE FIRE RATED PANEL JOINTS AND CAULKING AT ALL OPENINGS ON 3HR FIRE RATED WALL. SEE A DRAWING FOR LOCATIONS.

16. PROVIDE FIRE EXTINGUISHERS PER FIRE MARSHALL

FLOOR SLAB & POUR STRIPS REQ.

THESE NOTES ARE VERY MIN. REQUIREMENT. SEE "S" DWGS FOR ADDITIONAL REQUIREMENTS

1. FLOOR COMPACTION - 95%
2. TRENCH COMPACTION - 90%
3. BUILDING FLOOR SLAB: SEE STRUCTURAL DRAWINGS.
4. CONTRACTOR TO BUILD FOR CLASS V FLOOR PER A.C.I. 302-1R-96
5. CONCRETE SLAB TO HAVE STEEL FLOAT HARD TROWEL BURNISHED FINISH.
6. CONTRACTOR TO CURE SLAB TO BE WET CURING USING BURLINE FOR 7 DAYS MIN.
7. ALL EQUIPMENT & MOVING VEHICLES SHALL BE DIAPERED.
8. NO CRANES, CONCRETE TRUCKS, OR ANYTHING HEAVIER WILL BE PLACED ON THE SLAB.
9. SLAB TO BE FF50 FL35 MEASURED WITHIN 24 HOURS.
10. NO FLY ASH IN THE CONCRETE
11. WHERE [▨] INDICATED, PROVIDE VAPOR BARRIER (15MIL STEGO OR EQUAL) UNDER THE CONCRETE SLAB. PROVIDE SAND PER SOILS ENGINEER OR MANUFACTURER'S RECOMMENDATION.

CONCRETE SLAB IN FUTURE OFFICE AREAS, WHERE SAND OVER VIQUEEN ARE REQUIRED, SHALL BE NATURALLY HYDRATED WITHOUT USE OF BURLENE, CURING COMPOUND, OR RELEASE AGENTS.
CONTROL/CONSTRUCTION JOINTS SHALL NOT BE FILLED WITH MM-80 JOINT FILLER IN FUTURE OFFICE AREAS.
12. SEAL CONCRETE SLAB W/ "LIPIDOLITH" SEALER
13. 10' POUR STRIP AT TRUCK DOOR. 4FT. MAX. ELSEWHERE.
14. ALL FLOOR SLAB NAIL OR BRACE FRAME HOLES FILLED WITH APPROVED 2 PART EPOXY COMPOUND TO MATCH CONCRETE COLOR. PEGA BOND LV 2000,BURKE EPOXY INJECTION RESIN OR EQUAL.
15. PROVIDE FIRE EXTINGUISHERS PER FIRE DEPARTMENT REQUIREMENT.
16. MM-80 AT SPEED BAY ONLY

NOTE:
ALL FLOOR RISER AND UNPROTECTED ROOF DRAIN TO RECEIVE TO PROTECTIVE BOLLARDS.

ROOF PLAN KEYNOTES

1. CONCRETE PARAPET.
2. NOT USED
3. 4'X8' CURB MOUNTED SKYLIGHT.
4. NOT USED
5. **PROVIDE 4-PLY BUILT-UP ROOFING OVER ROOF SHEATHING OVER ROOF FRAMING. U.N.O.. ROOFING TO BE ND-24 CAP ROOFING BY JOHNS-MANVILLE OR EQUAL (CLASS A RATED). 10 YEAR NO DOLLAR LIMIT WARRANTY AND 2 YEAR LABOR GUARANTEE**
6. ROOF HATCH LOCATION.
7. ROOF ADDRESS PAINTED BLACK WITH 4' HIGH AND 1' WIDE STROKE PER LETTER.
8. PARAPET RETURN.
9. STRUCTURAL JOIST.
10. EXTERIOR DOWNSPOUT WITH OVERFLOW SCUPPERS.
11. INTERIOR ROOF DRAIN WITH OVERFLOW SCUPPERS.
12. INTERIOR ROOF DRAIN WITH OVERFLOW DRAIN.

ROOF PLAN GENERAL NOTES

A. ALL DIMENSIONS ARE TO FACE OF CONCRETE WALL, GRIDLINE, OR FACE OF STUD. (U.N.O.)

B. VERIFY THAT ALL ROOF AREAS HAVE POSITIVE DRAINAGE(1/4" FT.) PRIOR TO ROOF INSULATION INSTALLATION.

C. REFER TO "S" DRAWINGS FOR ROOF HEIGHT ELEVATIONS IN REGARDS TO ROOF DRAINAGE.

D. CONTRACTOR TO VERIFY AND COORDINATE WITH ALL SUBCONTRACTORS, ALL LOCATIONS AND SIZES OF ROOF OPENINGS.

E. FOR TYP. ROOF PENETRATIONS, SEE DETAIL 6, 9, 10/AD.3 CONTRACTOR TO VERIFY ALL LOCATIONS WITH MECHANICAL AND PLUMBING DRAWINGS

F. CONTRACTOR TO VERIFY ALL ROOF DRAIN DEPRESSIONS W/ "S" DRAWINGS.

G. CONTRACTOR TO COORDINATE EXACT SKYLIGHT LOCATION W/ FIRE SPRINKLER AND ROOF FRAMING SUBCONTRACTORS. LOCATIONS ON DRAWINGS ARE APPROXIMATE.

H. ALL SKYLIGHTS TO BE DESIGNED PER WIND SPEED DESIGN CRITERIA W/ STRONGER FRAMES, SUPPORTS AND DOMES. MANUFACTURER TO CONFIRM IN WRITING.

I. ROOF DRAINS AND OVERFLOW DRAINS TO BE A MIN. 8" DIA., SEE "P" DRAWINGS FOR EXACT SIZE.

J. PROVIDE SHAPED CRICKETS AS REQUIRED FOR PROPER ROOF DRAINAGE OF 1/4" PER FOOT (MIN.).

K. **BUILT UP ROOFING TO BE DESIGNED FOR I 90 AND TO BE A U.L. CLASS A ROOF. FLASHING: 6AF TYPE 5MB MOPPED AP SHEET, U.L. TYPE 63 BUR.**

L. ALL ROOFING FASTENERS SHALL MEET ALL CODE AND REGULATION REQUIREMENTS. PROPER REQUIREMENTS ARE IN PROJECTS JURISDICTION AND ALSO, FACTORY MUTUAL (FM) WIND UPLIFT PRESSURE REQUIREMENTS.

M. ALL SKYLIGHTS TO BE PLACED A MIN. OF 18'-0" FROM INSIDE FACE OF PARAPET

N. USE WHITE SCRIM FOIL INSULATION IN THE WAREHOUSE AREA.

O. SMOKE VENTS SHALL BE REQUIRED IF AREAS FOR "POTENTIAL OFFICES" WILL BE USED FOR HIGH PILE COMBUSTIBLE STORAGE.

P. ROOF DRAINS, OVERFLOW DRAINS AND RAINWATER PIPING WITHIN THE INTERIOR OF THE BUILDING SHALL BE TESTED IN ACCORDANCE WITH THE PROVISIONS OF THE PLUMBING CODE FOR TESTING DRAIN, WASTE AND VENT SYSTEMS

Q. ROOF DRAINS, OVERFLOW PIPING WITHIN THE BUILDING SHALL UTILIZE APPROVED DRAINAGE FITTINGS.

R. MANUFACTURED ROOF DRAINS AND OVERFLOWS(FIXTURES) SHALL BE IAPMO LISTED

ROOF LEGEND

- 4' X 8' SKYLIGHT
- ROOF HATCH
- STRUCTURAL JOISTS SEE "S" DRAWINGS.
- BUILDING PARAPET LINE
- EXTERIOR DOWNSPOUT W/ OVERFLOW SCUPPER
- INTERIOR ROOF DRAIN W/ OVERFLOW SCUPPERS
- PROPOSED 15% SOLAR ZONE AREA

SKYLIGHT/SMOKEHATCH CALCULATION

PROJECT:
CLEAR HEIGHT IN WAREHOUSE ARE = **40** FT. CLEAR FROM 6" BETWEEN COLUMN **"B"** & **"N"**
SEE A2.1 FOR LOCATIONS

REQUIRED

ELEVATION GENERAL NOTES

1. ALL PAINT COLOR CHANGES TO OCCUR AT INSIDE CORNERS UNLESS NOTED OTHERWISE.
2. ALL PAINT FINISHES ARE TO BE FLAT UNLESS NOTED OTHERWISE.
3. T.O.P. EL.= TOP OF PARAPET ELEVATION.
4. F.F. = FINISH FLOOR ELEVATION.
5. STOREFRONT CONSTRUCTION: GLASS, METAL ATTACHMENTS AND LINTELS SHALL BE DESIGNED TO RESIST -- MPH, EXPOSURE "C" WINDS. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS PRIOR TO INSTALLATION.
6. CONTRACTOR SHALL FULLY PAINT ONE CONCRETE PANEL W/ SELECTED COLORS. ARCHITECT AND OWNER SHALL APPROVE PRIOR TO PAINTING REMAINDER OF BUILDING.
7. BACK SIDE OF PARAPETS TO HAVE SMOOTH FINISH AND BE PAINTED WITH ELASTOMERIC PAINT.
8. FOR SPANDREL GLAZING, ALLOW SPACE BEHIND SPANDREL TO BREATH. PROVIDE 1" DIAMETER HOLES AT CONCRETE WALL.
9. USE ADHESIVE BACK WOOD STRIPS FOR ALL REVEAL FORMS.
10. THE FIRST COAT OF PAINT TO BE ROLLED-ON AND THE SECOND COAT TO BE SPRAYED-ON
11. ALL ROLL-UP DOORS AND SERVICE DOORS TO BE PAINTED TO MATCH BUILDING COLOR.

ELEVATION COLOR LEGEND/SCHED.

1. PAINT. COLOR : SW 7667 ZIRCON
2. PAINT. COLOR : SW 7670 GRAY SHINGLE
3. PAINT. COLOR : SW 7674 PEPPERCORN
4. PAINT. COLOR : SW 6243 DISTANCE
5. MULLIONS COLOR : BLACK ANODIZED
6. GLAZING COLOR : BLUE REFLECTIVE
7. METAL CANOPY: SHERWIN WILLIAMS ACRYLIC LATEX SYSTEMS HIGH GLOSS/HIGH PERFORMANCE SHERWIN WILLIAMS SW 7674 PEPPERCORI

I hereby certify that the necessary water quality management plan best management practice devices have been constructed under my supervision and are functional to the best of my knowledge as of the date below.

Signature _____ Date _____

Wet Seal

INSTALL ONE 4" ALUMINUM STORM DRAIN PLACARD, PAINTED BLUE WITH A 1/4" SQUARE MOUNTING HOLE (NO DUMPING DRAINS TO WATERWAY) FISH WITH WAVE (PROVIDED BY ENGINEERING SERVICES DEPARTMENT) ON CENTER OF CATCH BASIN BETWEEN SCORING LINE AND CURB LINE. STORM DRAIN PLACARD MUST BE INSTALLED WITH "NO DUMPING DRAINS TO WATERWAY" READING TOWARD THE STREET. MUST INSTALL PLACARD WITH A 1/4"x1" HAMMER SET RIVET (PROVIDED BY ENGINEERING SERVICES DEPARTMENT) AND MASONRY ADHESIVE.

BIO CLEAN FULL CAPTURE FILTER WITH TROUGH SYSTEM

FOR USE IN CURB INLETS

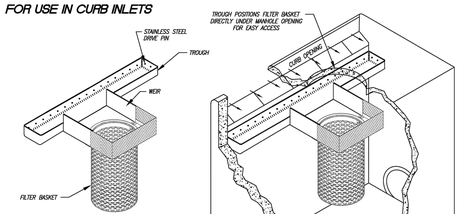

FIGURE 1:
DETAIL OF PARTS

FIGURE 2:
DETAIL OF CONFIGURATION

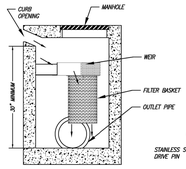

FIGURE 4:
DETAIL OF PROFILE

FIGURE 3:
DETAIL OF MOUNTING

NOTES:

1. TROUGH SYSTEM PROVIDES FOR ENTIRE COVERAGE OF INLET OPENING SO TO DIVERT ALL FLOW TO FILTER.
2. TROUGH SYSTEM MANUFACTURED FROM MARINE GRADE FIBERGLASS, GEL COATED FOR UV PROTECTION.
3. SYSTEM ATTACHED TO THE CATCH BASIN WITH NON-CORROSIVE HARDWARE.
4. FILTER MANUFACTURED OF 1008 STAINLESS STEEL.
5. FILTER MADE OF NON-CLOGGIN SCREEN WITH 4.7 MM OPENINGS AND MEETS FULL CAPTURE REQUIREMENTS.
6. FILTER CAN BE FITTED WITH HYDROCARBON ABSORBENT BOOM
7. FILTER IS LOCATED DIRECTLY UNDER THE MANHOLE FOR EASY REMOVAL AND MAINTENANCE.
8. LENGTH OF TROUGH CAN VARY FROM 3' TO 30'.
9. OTHER STANDARD AND CUSTOM MODEL SIZES AVAILABLE – CONTACT BIO CLEAN FOR MORE INFORMATION.
10. CONSIDERS A SAFETY FACTOR OF 2.0
11. BYPASS IS CALCULATED VIA OVERFLOW OF THE TROUGH SYSTEM AND IS EQUAL TO THE CAPACITY OF THE CURB OPENING.
12. STORAGE CAPACITY BASED ON THE BASKET HALF FULL.
13. ADDITIONAL TREATMENT AND STORAGE CAPACITY CAN BE ACHIEVED BY UTILIZING MULTIPLE FILTER BASKETS.

MODEL NUMBER	TREATMENT FLOW (cfs)*	SOLIDS STORAGE CAPACITY (cu ft)

GRATE INLET FILTER
FULL CAPTURE
STANDARD DETAIL

Form 5-1 BMP Inspection and Maintenance

BMP	Responsible Party(ies)	Inspection/Maintenance Activities Required	Minimum Frequency of Activities
CONTECH CMP Underground System	Owner	Contech recommends ongoing quarterly inspections of the accumulated sediment. All systems shall be designed with an access/inspection manhole situated at or near the inlet and the outlet orifice. Maintaining the system should be scheduled during dry weather.	Inspections shall be done quarterly. Maintenance shall be scheduled when accumulated sediment or trash is clogging the discharge orifice.
Proprietary Biofiltration System	Owner	Remove trash from Screening Device, sediment from Separation Chamber and replace cartridge Filter Media, and Drain Down Filter Media. The owner should keep maintenance/inspection record(s) for a minimum of five years from the date of maintenance. These records should be made available to the governing municipality for inspection upon request at any time. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.	Average maintenance interval of 6 to 12 months for removing trash from Screening Device. Average interval of 12 to 24 months for removing sediment, replacing Cartridge Filter Media, replacing Drain Down Filter Media and trimming vegetation.
Drain Inserts	Owner	Visually inspect for defects and illegal dumping. Notify proper authorities if illegal dumping has occurred. Using an industrial vacuum, the collected materials shall be removed from the filter basket and disposed of properly. Inspect biosorb hydrocarbon boom and replace as necessary.	Four times per year or following any rain event that would potentially accumulate a large amount of debris in the system. Replace boom twice per year, at a minimum.
Storm Drain Stenciled Message	Owner	Visually inspect for legibility and replace or repaint as necessary.	Annually
N1: Education of Property Owners, Tenants and Occupants on Stormwater BMPs	Owner	Property owner will familiarize him/herself with the educational materials in Attachment "E" and the contents of the WQMP.	Annually (January) for all employees and within 2 months for new hires.
N2: Activity Restrictions	Owner	The owner shall develop ongoing activity restrictions that include those that have the potential to create adverse impacts on water quality. Activities include, but are not limited to: handling and disposal of contaminants, fertilizer and pesticide application restrictions, litter control and pick-up, and vehicle or equipment repair as well as any other activities that may potentially contribute to water pollution.	Ongoing

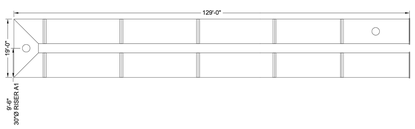
Form 5-1 BMP Inspection and Maintenance

BMP	Responsible Party(ies)	Inspection/Maintenance Activities Required	Minimum Frequency of Activities
N3: Landscape Management BMPs	Owner	Irrigation must be consistent with City's Water Conservation Ordinance. Fertilizer and pesticide usage will be consistent with County Management Guidelines for Use of Fertilizers and Pesticides.	Ongoing
N4: BMP Maintenance	Owner	BMP maintenance, implementation schedules, and responsible parties are included with each specific BMP narrative.	As described in each BMP listed within this form.
N7: Spill Contingency Plan	Owner	Owner/tenant will have a spill contingency plan, a separate document, based on specific site needs.	Ongoing
N10: Uniform Fire Code Implementation	Owner	If applicable, owner will comply with Article 80 of the Uniform Fire Code enforced by the fire protection agency. The facility operators will be educated annually regarding requirements for handling, storage and proper disposal of hazardous substances.	Ongoing
N11: Litter/Debris Control Program	Owner	Contract with their landscape maintenance firm to provide this service during regularly schedule maintenance. They are required to implement trash management and litter control procedures in the common areas aimed at reducing pollution of drainage water.	Weekly
N12: Employee Training	Owner	The owner will ensure that tenants are also familiar with onsite BMPs and necessary maintenance required of the tenants. Owner will check with City and County at least once a year to obtain new or updated educational materials and provide these materials to tenants. Employees shall be trained to clean up spills and participate in ongoing maintenance. The WQMP requires annual employee training and new hires within 2 months.	Annually (January) for all employees and within 2 months for new hires.
N13: Housekeeping of Loading Docks	Owner	Keep all fluids indoors. Clean up spills immediately and keep spills from entering storm drain system. No direct discharges into the storm drain system. Area shall be inspected weekly for proper containment and practices with spills cleaned up immediately and disposed of properly.	Ongoing

Form 5-1 BMP Inspection and Maintenance

BMP	Responsible Party(ies)	Inspection/Maintenance Activities Required	Minimum Frequency of Activities
N14: Catch Basin Inspection Program	Owner	Monthly inspection by property owner's designee. Inspection consists of immediate repair of any deterioration of the structures and maintenance of drain inserts before and after major rain events. Drain insert maintenance shall be per manufacturer's guidelines.	Monthly inspection and maintain as necessary.
N15: Vacuum Sweeping of Private Streets and Parking Lots	Owner	All landscape maintenance contractors will be required to sweep up all landscape cuttings, mowings and fertilizer materials off paved areas weekly and dispose of properly. Parking areas and drive ways will be swept monthly by sweeping contractor.	Monthly
N17: Comply with all other applicable NPDES permits	Owner	Will comply with Construction General Permit and Industrial General Permit (may apply for No Exposure Certification/NEC).	Ongoing
S1: Provide storm drain system stenciling and signage (CASQA New Development BMP Handbook SD-13)	Owner	"No Dumping – Drains to River" stencils will be applied. Legibility of stencil will be maintained on a yearly basis.	Annually (January)
S3: Design and construct trash and waste storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-32)	Owner	Paved with an impervious surface, designed not to allow run-on from adjoining areas, designed to divert drainage from adjoining roofs and pavements diverted around the area, screened or walled to prevent off-site transport of trash. Detail to be provided once available.	Ongoing
S4: Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control (Statewide Model Landscape Ordinance; CASQA New Development BMP Handbook SD-12)	Owner	Irrigation systems shall include reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines. Timers will be used to avoid over watering and watering cycles and duration shall be adjusted seasonally by the landscape maintenance contractor. The landscaping areas will be grouped with plants that have similar water requirements. Native or drought tolerant species shall also be used where appropriate to reduce excess irrigation runoff and promote surface filtration.	Adjust watering cycles and duration seasonally / quarterly (Oct, Jan, Apr, and Jul).

DRAIN INSERTS



PROJECT SUMMARY

CALCULATION DETAILS
- LOADING = HS20/HS25
- APPROX. LINEAR FOOTAGE = 281 LF

STORAGE SUMMARY
- STORAGE VOLUME REQUIRED = 17,732 CF
- PIPE STORAGE VOLUME = 13,119 CF
- BACKFILL STORAGE VOLUME = 4,656 CF
- TOTAL STORAGE PROVIDED = 17,775 CF

PIPE DETAILS
- DIAMETER = 96"
- CORRUGATION = 5x1
- GAGE = 16
- COATING = ALT2
- WALL TYPE = PERFORATED
- BARREL SPACING = 36"

BACKFILL DETAILS
- WIDTH AT ENDS = 12"
- ABOVE PIPE = 6"
- WIDTH AT SIDES = 12"
- BELOW PIPE = 6"

NOTES

- ALL RISER AND STUB DIMENSIONS ARE TO CENTERLINE. ALL ELEVATIONS, DIMENSIONS, AND LOCATIONS OF RISERS AND INLETS, SHALL BE VERIFIED BY THE ENGINEER OF RECORD PRIOR TO RELEASING FOR FABRICATION.
- ALL FITTINGS AND REINFORCEMENT COMPLY WITH ASTM A998.
- ALL RISERS AND STUBS ARE $2\frac{2}{3}$" x $\frac{1}{2}$" CORRUGATION AND 16 GAGE UNLESS OTHERWISE NOTED.
- RISERS TO BE FIELD TRIMMED TO GRADE.
- QUANTITY OF PIPE SHOWN DOES NOT PROVIDE EXTRA PIPE FOR CONNECTING THE SYSTEM TO EXISTING PIPE OR DRAINAGE STRUCTURES. OUR SYSTEM AS DETAILED PROVIDES NOMINAL INLET AND/OR OUTLET PIPE STUB FOR CONNECTION TO EXISTING DRAINAGE FACILITIES. IF ADDITIONAL PIPE IS NEEDED IT IS THE RESPONSIBILITY OF THE CONTRACTOR.
- BAND TYPE TO BE DETERMINED UPON FINAL DESIGN.
- THE PROJECT SUMMARY IS REFLECTIVE OF THE DYODS DESIGN, QUANTITIES ARE APPROX. AND SHOULD BE VERIFIED UPON FINAL DESIGN AND APPROVAL. FOR EXAMPLE, TOTAL EXCAVATION DOES NOT CONSIDER ALL VARIABLES SUCH AS SHORING AND ONLY ACCOUNTS FOR MATERIAL WITHIN THE ESTIMATED EXCAVATION FOOTPRINT.
- THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

PROJECT SUMMARY

CALCULATION DETAILS
- LOADING = HS20/HS25
- APPROX. LINEAR FOOTAGE = 1,173 LF

STORAGE SUMMARY
- STORAGE VOLUME REQUIRED = 58,925 CF
- PIPE STORAGE VOLUME = 58,961 CF
- BACKFILL STORAGE VOLUME = 0 CF
- TOTAL STORAGE PROVIDED = 58,961 CF

PIPE DETAILS
- DIAMETER = 96"
- CORRUGATION = 5x1
- GAGE = 16
- COATING = ALT2
- WALL TYPE = SOLID
- BARREL SPACING = 36"

BACKFILL DETAILS
- WIDTH AT ENDS = 12"
- ABOVE PIPE = 6"
- WIDTH AT SIDES = 12"
- BELOW PIPE = 6"

NOTES
- ALL RISER AND STUB DIMENSIONS ARE TO CENTERLINE. ALL ELEVATIONS, DIMENSIONS, AND LOCATIONS OF RISERS AND INLETS, SHALL BE VERIFIED BY THE ENGINEER OF RECORD PRIOR TO RELEASING FOR FABRICATION.
- ALL FITTINGS AND REINFORCEMENT COMPLY WITH ASTM A998.
- ALL RISERS AND STUBS ARE 2⅔" x ½" CORRUGATION AND 16 GAGE UNLESS OTHERWISE NOTED.
- RISERS TO BE FIELD TRIMMED TO GRADE.
- QUANTITY OF PIPE SHOWN DOES NOT PROVIDE EXTRA PIPE FOR CONNECTING THE SYSTEM TO EXISTING PIPE OR DRAINAGE STRUCTURES. OUR SYSTEM AS DETAILED PROVIDES NOMINAL INLET AND/OR OUTLET PIPE STUB FOR CONNECTION TO EXISTING DRAINAGE FACILITIES. IF ADDITIONAL PIPE IS NEEDED IT IS THE RESPONSIBILITY OF THE CONTRACTOR.
- BAND TYPE TO BE DETERMINED UPON FINAL DESIGN.
- THE PROJECT SUMMARY IS REFLECTIVE OF THE DYODS DESIGN. QUANTITIES ARE APPROX. AND SHOULD BE VERIFIED UPON FINAL DESIGN AND APPROVAL. FOR EXAMPLE. TOTAL EXCAVATION DOES NOT CONSIDER ALL VARIABLES SUCH AS SHORING AND ONLY ACCOUNTS FOR MATERIAL WITHIN THE ESTIMATED EXCAVATION FOOTPRINT.
- THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

ASSEMBLY
SCALE: 1" = 40'

INSTALLATION NOTES

1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS REQUIRED TO OFFLOAD AND INSTALL THE SYSTEM AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURERS' SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURER'S CONTRACT.
2. UNIT MUST BE INSTALLED ON LEVEL BASE. MANUFACTURER RECOMMENDS A MINIMUM 6" LEVEL ROCK BASE UNLESS SPECIFIED BY THE PROJECT ENGINEER. CONTRACTOR IS RESPONSIBLE FOR VERIFYING PROJECT ENGINEER'S RECOMMENDED BASE SPECIFICATIONS.
4. CONTRACTOR TO SUPPLY AND INSTALL ALL EXTERNAL CONNECTING PIPES. ALL PIPES MUST BE FLUSH WITH INSIDE SURFACE OF CONCRETE (PIPES CANNOT INTRUDE BEYOND FLUSH). INVERT OF OUTFLOW PIPE MUST BE FLUSH WITH DISCHARGE CHAMBER FLOOR. ALL PIPES SHALL BE SEALED WATERTIGHT PER MANUFACTURER'S STANDARD CONNECTION DETAIL.
5. CONTRACTOR RESPONSIBLE FOR INSTALLATION OF ALL PIPES, RISERS, MANHOLES, AND HATCHES. CONTRACTOR TO USE GROUT AND/OR BRICKS TO MATCH COVERS WITH FINISHED SURFACE UNLESS SPECIFIED OTHERWISE.
6. VEGETATION SUPPLIED AND INSTALLED BY OTHERS. ALL UNITS WITH VEGETATION MUST HAVE DRIP OR SPRAY IRRIGATION SUPPLIED AND INSTALLED BY OTHERS.
7. CONTRACTOR RESPONSIBLE FOR CONTACTING BIO CLEAN FOR ACTIVATION OF UNIT. MANUFACTURER'S WARRANTY IS VOID WITHOUT PROPER ACTIVATION BY A BIO CLEAN REPRESENTATIVE.

GENERAL NOTES

1. MANUFACTURER TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS AND CAPACITIES ARE SUBJECT TO CHANGE. FOR PROJECT SPECIFIC DRAWINGS DETAILING EXACT DIMENSIONS, WEIGHTS AND ACCESSORIES PLEASE CONTACT BIO CLEAN.

CITY OF RANCHO CUCAMONGA

HAZARDOUS WASTE SITE STATEMENT

I have been informed by the City of Rancho Cucamonga of my responsibilities pursuant to California Government Code Section 65962.5 (http://leginfo.legislature.ca.gov/) to notify the City as to whether the site for which a development application has been submitted is located within an area which has been designated as the location of a hazardous waste site (attached) by the Office of Planning and Research, State of California (OPR).

I have also been informed by the City of Rancho Cucamonga that, as the date of executing this statement, OPR has not yet compiled and distributed a list of hazardous waste site as required by said Section 65962.5.

I am informed and believe that the proposed site for which a development application has been submitted is not within an area specified in said Section 65962.5 as a hazardous waste site.

I declare under penalty of perjury of the laws of the State of California that the foregoing is true and correct.

INTRODUCTION

A: PROJECT LOCATION

The project site is located along the south side of Arrow Route between Interstate 15 and Etiwanda Avenue, in the City of Rancho Cucamonga, California. Please see following page for vicinity map.

B: STUDY PURPOSE

The purpose of this study is to determine the existing and proposed condition 100-year peak flow rate from the site that drains southerly to two different discharge points which are conveyed southerly under the existing railroad.

C: PROJECT STAFF:

Thienes Engineering staff involved in this study include:

Reinhard Stenzel
Brian Weil

ARROW ROUTE AND JUNEBERRY DRIVE
RANCHO CUCAMONGA, CA

NTS

DISCUSSION

The project site encompasses approximately 96.50 acres. There is an additional approximate 14.0 acres of offsite area that is tributary to the project site. The existing condition is generally developed with buildings, stockpiles, and paved surfaces. Landscape in the existing condition is limited to the area surrounding the building in the northeast corner.

Proposed improvements to the site consist of three building along Arrow Route and two larger warehouse type buildings to the south. The warehouse buildings will have truckyards along both sides. Vehicle parking is generally along the permitter of the projects.

Off-Site Drainage

There is an existing warehouse type building and storage yard north of the proposed building 5 that drains to the project site. In the existing condition, this area drains southerly to a swale which conveys low flows easterly. High flows appear to top the swale and continue south. In the proposed condition, several drainage inlets will be provided along the property line to intercept the drainage into the proposed storm drain system.

Existing Condition

The project site is generally divided into two distinct drainage zones. The eastern portion of the site drains southeasterly, while the western portion of the site drains southwesterly. Both discharge points are along the southern property line.

North of the eastern portion of the project site, offsite area drains to a channel along the northern property line (Nodes 100-102, 11.8 acres). The channel doesn't discharge to a single location, but rather overtops and spills to the project site. The 100-year peak flow rate for this offsite area is approximately 29.9 cfs.

The eastern drive aisle from Arrow Route drains southerly through a series of open channels and underground conduits to the southeast portion of the site (Nodes 200-226, 37.6 acres). There is an existing detention basin near the southeast property corner. Runoff is discharged from this basin via a 24" storm drain which daylights out a head wall and continues southeasterly following the existing drainage pattern offsite. The runoff is then conveyed under the railroad and continues southerly. The 100-year peak flow rate for the eastern portion of the site is approximately 98.2 cfs.

The west portion of the site drains southerly towards the southwest corner of the project site (Nodes 300-314, 61.1 acres). Here the runoff from the existing building along Arrow route and the associated parking/storage areas drain southwesterly towards an existing catch basin. An existing storm drain conveys this runoff westerly and southerly towards an existing headwall into a small basin. The runoff from the areas south of the existing building drains southwesterly towards the southwest corner of the site. The runoff is then conveyed under the railroad and continues southerly. The 100-year peak flow rate for the western portion of the site is approximately 147.9 cfs.

See Appendix "B" for existing condition hydrology calculations and Appendix "D" for existing condition hydrology map.

Proposed Condition

Buildings 1 – 3, along Arrow Route, and Building 4, the westerly warehouse building, will drain to the southwest of the project site. The offsite area and Building 5, the easterly warehouse building, will drain to the southeast of the project site.

Drainage from the areas associated with Buildings 1 – 3, the drive aisle south of these buildings, and the western access road will be collected into a storm drain system and conveyed to a proposed headwall at the southwest portion of the project site (Nodes 100-138, 19.4 acres). The undetained flows will leave the project site, be conveyed under the railroad, and continue south. The 100-year peak flow rate for the Buildings 1 – 3 storm drain system is approximately 59.7 cfs.

Drainage from the areas associated with Building 4 will be collected into a storm drain system and conveyed to a proposed headwall at the southwest portion of the project site (Nodes 140-173, 43.1 acres). Storm flows in this storm drain system will be detained using both the west and east truck yards. The detained flows will leave the project site, be conveyed under the railroad, and continue south. The 100-year undetained peak flow rate for the Building 4 storm drain system is approximately 146.8 cfs.

Drainage from the areas associated with Building 5, Juneberry Drive, the eastern access road, and the southern access road will be collected into a storm drain system and conveyed to a proposed headwall at the southeast portion of the project site (Nodes 200-257, 46.9 acres). Storm flows in this storm drain system will be detained using both the south and north truck yards. The detained flows will leave the project site, be conveyed under the railroad, and continue south. The 100-year undetained peak flow rate for the Building 5 storm drain system is approximately 150.5 cfs.

See Appendix "B" for proposed condition hydrology calculations and Appendix "D" for proposed condition hydrology map.

Detention Analysis

Onsite storm flow detention will be utilized to reduce the proposed condition flow rate below the existing condition rate. The truck yard areas of Buildings 4 and 5 provide the storage volume, storm drain size restrictions reduce the discharge.

A small area unit hydrograph was established for the tributary area to the truck yards. A rating curve was developed using the available ponding in the truck yards for storage and an orifice equation for the reduced storm drain size discharge.

The discharge from the truck yard on the west side of Building 4 (Nodes 140-151, 25.1 acres) is reduced from 81.1 cfs to 46.4 cfs with the remaining volume temporarily stored in the truck yard at a depth of about 0.50'.

The discharge from the truck yard on the east side of Building 4 (Nodes 160-169, 16.9 acres) is reduced from 64.4 cfs to 35.9 cfs with the remaining volume temporarily stored in the truck yard at a depth of about 0.43'.

The discharge from the truck yard on the south side of Building 5 (Nodes 220-226, 11.4 acres) is reduced from 41.0 cfs to 23.5 cfs with the remaining volume temporarily stored in the truck yard at a depth of about 0.52'.

The discharge from the truck yard on the north side of Building 5 (Nodes 230-238, 10.0 acres) is reduced from 44.6 cfs to 24.0 cfs with the remaining volume temporarily stored in the truck yard at a depth of about 0.39'.

See Appendix "C" for detention calculations.

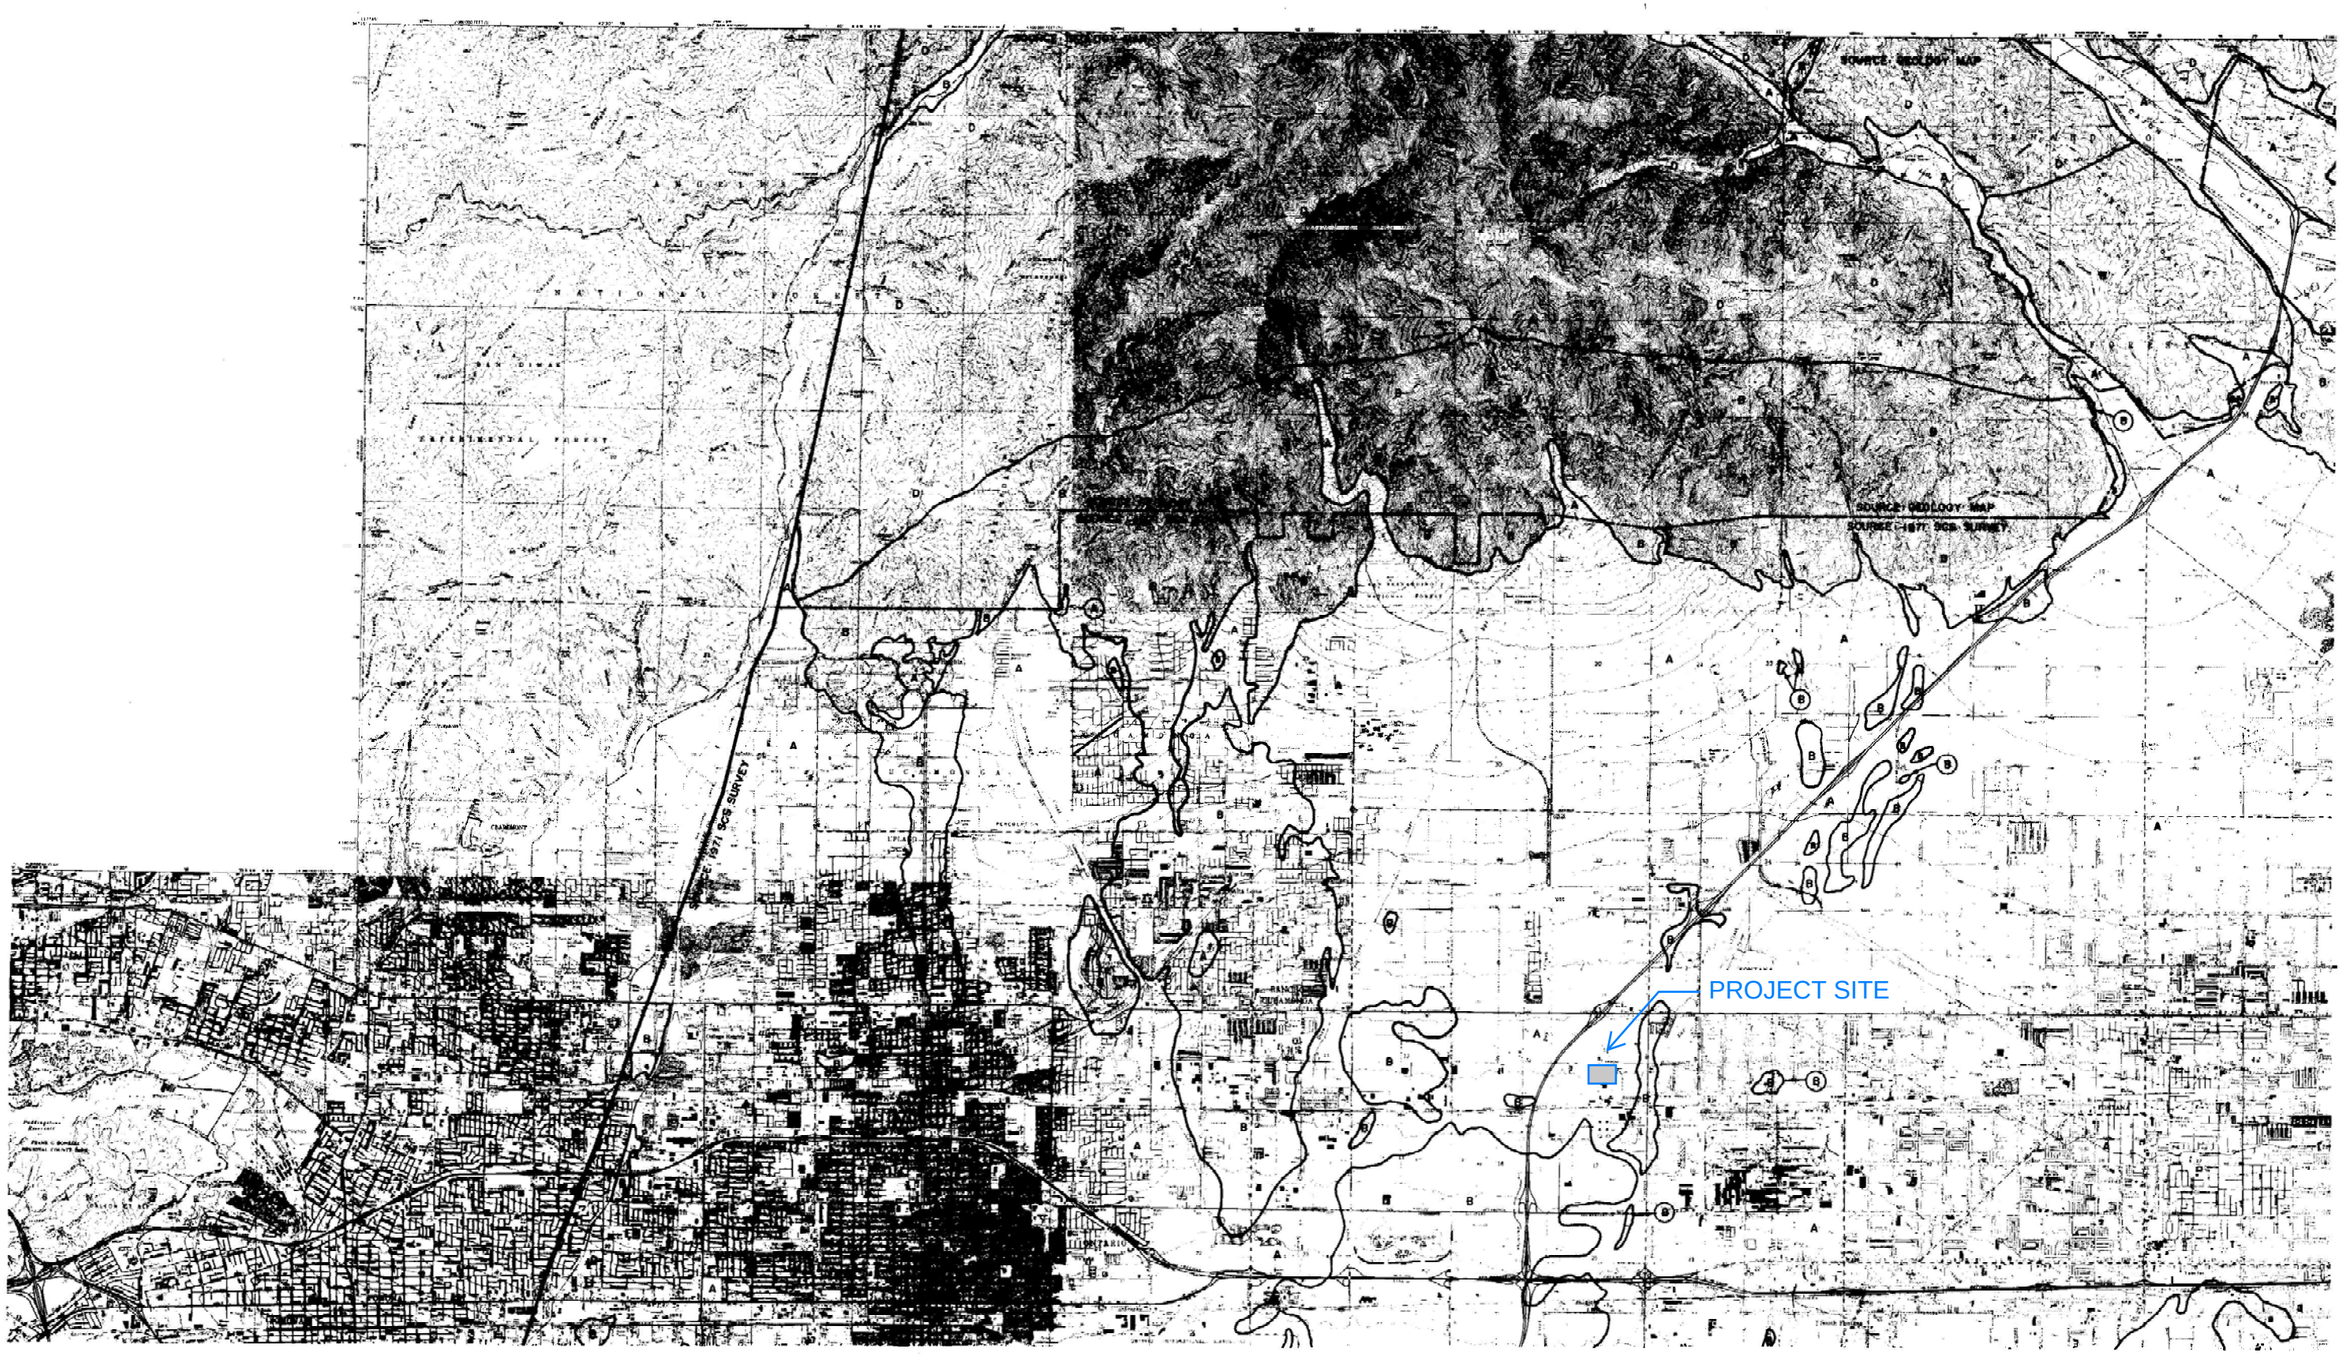
Summary

The following is a summary of the existing and proposed 100-year site runoff.

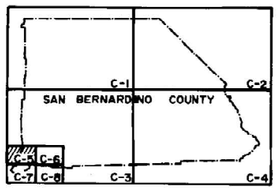
Existing Condition		
Node Number ()	Tributary Area (ac)	Q100 (cfs)
102	11.8	29.9
226	37.6	98.2
314	61.1	147.9
Total	110.5	276.0

Proposed Condition			
Node Number ()	Tributary Area (ac)	Unmitigated Q100 (cfs)	Mitigated Q100 (cfs)
138	19.4	59.7	59.7
151	25.1	81.1	46.4
169	16.9	64.4	35.9
170	0.5	1.9	1.9
171	0.6	2.0	2.0
216	7.5	19.8	19.8
226	11.4	41.0	23.5
238	10.0	44.6	24.0
239	0.8	3.2	3.2
255	17.2	56.0	56.0
Total	109.4	373.7	272.4

Note: There is 1.1 acres of landscape that drains to the south.



Methodology



The hydrology calculations were computed using the San Bernardino County Rational Method Program (by AES software). The detention analysis was computed using the San Bernardino County Flood Routing Analysis (by AES Software). The soil type is “A” per the San Bernardino County Hydrology Manual.

  TIME/DATE OF STUDY: 16:00 05/05/2023

   The Small Area Unit Hydrograph Procedures in Section J
   of the Hydrology Manual provides estimates of runoff
   hydrograph and runoff volume for watersheds whose time of
   concentration is less than 25 minutes. The PROGRAM User
   should check the applicability of using the small area unit
   hydrograph procedures, and follow the guidelines in
   Sections J and K.5 in complex watershed modeling.

  FLOW PROCESS FROM NODE    151.00 TO NODE    151.00 IS CODE = 3.2
--------------------------------------------------------------------------
  >>>>>FLOW-THROUGH DETENTION BASIN ROUTING MODEL APPLIED TO STREAM #1<<<<<
==========================================================================
```

```
          ROUTE RUNOFF HYDROGRAPH FROM STREAM NUMBER 1
          THROUGH A FLOW-THROUGH DETENTION BASIN
          SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:
            DEAD STORAGE(AF) =      0.000
            SPECIFIED DEAD STORAGE(AF) FILLED =      0.000
            SPECIFIED EFFECTIVE VOLUME(AF) FILLED ABOVE OUTLET =      0.000
            DETENTION BASIN CONSTANT LOSS RATE(CFS) =    0.00
```

BASIN DEPTH VERSUS OUTFLOW AND STORAGE INFORMATION:

INTERVAL NUMBER	DEPTH (FT)	OUTFLOW (CFS)	STORAGE (AF)
1	0.00	0.00	0.000
2	0.10	45.35	0.003
3	0.20	45.61	0.022
4	0.30	45.86	0.076
5	0.40	46.10	0.178
6	0.50	46.35	0.328
7	0.60	46.60	0.522
8	0.70	46.84	0.746

==========

MODIFIED-PULS BASIN ROUTING MODEL RESULTS(1-MINUTE COMPUTATION INTERVALS):
(Note: Computed EFFECTIVE DEPTH and VOLUME are estimated at the clock time; MEAN OUTFLOW is the average value during the unit interval.)

CLOCK TIME (HRS)	DEAD-STORAGE FILLED(AF)	INFLOW (CFS)	LOSS (CFS)	EFFECTIVE DEPTH(FT)	MEAN OUTFLOW (CFS)	EFFECTIVE VOLUME(AF)

  FILE NAME: 4021P1BC.FLD
  TIME/DATE OF STUDY: 16:00 05/05/2023

   The Small Area Unit Hydrograph Procedures in Section J
   of the Hydrology Manual provides estimates of runoff
   hydrograph and runoff volume for watersheds whose time of
   concentration is less than 25 minutes. The PROGRAM User
   should check the applicability of using the small area unit
   hydrograph procedures, and follow the guidelines in
   Sections J and K.5 in complex watershed modeling.

******************************************************************************

TIME DURATION(minutes) OF PERCENTILES OF ESTIMATED PEAK FLOW RATE:
(Note: 100% of Peak Flow Rate estimate assumed to have
an instantaneous time duration)

Percentile of Estimated Peak Flow Rate	Duration (minutes)
0%	1455.0
10%	730.0
20%	150.0
30%	90.0
40%	75.0
50%	60.0
60%	45.0
70%	35.0
80%	25.0
90%	10.0

****
FLOW PROCESS FROM NODE 169.00 TO NODE 169.00 IS CODE = 3.2

>>>>>FLOW-THROUGH DETENTION BASIN ROUTING MODEL APPLIED TO STREAM #1<<<<<
==========

ROUTE RUNOFF HYDROGRAPH FROM STREAM NUMBER 1
THROUGH A FLOW-THROUGH DETENTION BASIN
SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:
DEAD STORAGE(AF) = 0.000
SPECIFIED DEAD STORAGE(AF) FILLED = 0.000
SPECIFIED EFFECTIVE VOLUME(AF) FILLED ABOVE OUTLET = 0.000
DETENTION BASIN CONSTANT LOSS RATE(CFS) = 0.00

BASIN DEPTH VERSUS OUTFLOW AND STORAGE INFORMATION:

INTERVAL NUMBER	DEPTH (FT)	OUTFLOW (CFS)	STORAGE (AF)
1	0.00	0.00	0.000
2	0.10	34.82	0.003
3	0.20	35.15	0.022
4	0.30	35.47	0.076
5	0.40	35.80	0.176
6	0.50	36.11	0.319
7	0.60	36.43	0.498
8	0.70	36.74	0.709
9	0.80	37.05	0.949
10	0.90	37.36	1.214
11	1.00	37.67	1.496
12	1.10	37.97	1.795
13	1.20	38.27	2.112

==========

MODIFIED-PULS BASIN ROUTING MODEL RESULTS(1-MINUTE COMPUTATION INTERVALS):
(Note: Computed EFFECTIVE DEPTH and VOLUME are estimated at the clock time; MEAN OUTFLOW is the average value during the unit interval.)

CLOCK TIME (HRS)	DEAD-STORAGE FILLED(AF)	INFLOW (CFS)	LOSS (CFS)	EFFECTIVE DEPTH(FT)	MEAN OUTFLOW (CFS)	EFFECTIVE VOLUME(AF)

  FILE NAME: 4021P2AC.FLD
  TIME/DATE OF STUDY: 16:00 05/05/2023

   The Small Area Unit Hydrograph Procedures in Section J
   of the Hydrology Manual provides estimates of runoff
   hydrograph and runoff volume for watersheds whose time of
   concentration is less than 25 minutes. The PROGRAM User
   should check the applicability of using the small area unit
   hydrograph procedures, and follow the guidelines in
   Sections J and K.5 in complex watershed modeling.

  TIME/DATE OF STUDY: 16:00 05/05/2023

   The Small Area Unit Hydrograph Procedures in Section J
   of the Hydrology Manual provides estimates of runoff
   hydrograph and runoff volume for watersheds whose time of
   concentration is less than 25 minutes. The PROGRAM User
   should check the applicability of using the small area unit
   hydrograph procedures, and follow the guidelines in
   Sections J and K.5 in complex watershed modeling.

ASTM E1527-21
Phase I Environmental Site Assessment
User Questionnaire

INTRODUCTION

In order to qualify for one of the *Landowner Liability Protections (LLPs)*[1] offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"),[2] the *user* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that "*all appropriate inquiries*" is not complete.

(1.) Environmental liens that are filed or recorded against the *property* (40 CFR 312.25).

Did a search of *recorded land title records* (or judicial records where appropriate, see *Note 1* below) identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law? Search performed and did not find or not aware of any environmental lines.

Note 1—In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

(2.) Activity and use limitations that are in place on the *property* or that have been filed or recorded against the *property* (40 CFR 312.26(a)(1)(v) and vi)).

Did a search of *recorded land title records* (or judicial records where appropriate, see *Note 1* above) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state or local law? Search performed and did not find or not aware of any AULs.

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business? Not in the same line of business and do not have any knowledge related to these issues.

[1] *Landowner Liability Protections*, or *LLPs*, is the term used to describe the three types of potential defenses to Superfund liability in EPA's *Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability* ("*Common Elements*" Guide) issued on March 6, 2003.
[2] P.L. 107-118.

(4.) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*? The property was purchased in December 2021.

(5.) Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? Refer to the Current Conditions Report provided.

For example,

(a.) Do you know the past uses of the *property*? Former steel fabrication facility.

(b.) Do you know of specific chemicals that are present or once were present at the *property*? No. Refer to the Current Conditions Report provided.

(c.) Do you know of spills or other chemical releases that have taken place at the *property*? No. Refer to the Current Conditions Report provided.

(d.) Do you know of any environmental cleanups that have taken place at the *property*? Refer to the Current Conditions Report provided.

(6.) The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the *property*? Refer to the Current Conditions Report provided.

In addition, certain information should be collected, if available, and provided to the *environmental professional* conducting the *Phase I Environmental Site Assessment*. This information is intended to assist the *environmental professional*, but is not necessarily required to qualify for one of the *LLPs*. The information includes:

(a) the reason why the Phase I is being performed,

(b) the type of *property* and type of *property* transaction, for example, sale, purchase, exchange, etc.,

(c) the complete and correct address for the *property* (a map or other documentation showing *property* location and boundaries is helpful),

(d) the scope of services desired for the Phase I ESA (including whether any parties to the *property* transaction may have a required standard scope of services or whether any considerations beyond the requirements of Practice E1527 are to be considered),

(e) identification of all parties who will rely on the Phase I *report*,

(f) identification of the site contact and how the contact can be reached,

(g) any special terms and conditions which must be agreed upon by the *environmental professional*, and

(h) any other knowledge or experience with the *property* that may be pertinent to the *environmental professional* (for example, copies of any available prior *environmental site assessment reports*, documents, correspondence, etc., concerning the *property* and its environmental condition).

The *USER* QUESTIONNAIRE was completed by:

Name: Carlos Palafox

Title: Vice President, Development

Executive Summary

BTC III Acquisitions LLC (the User) retained Roux Associates, Inc. (Roux) to perform a Phase I Environmental Site Assessment (ESA) of the property located at 12451 Arrow Route, Rancho Cucamonga, San Bernardino County, California (the Site), Assessor's Parcel Numbers (APNs) 0229-121-34, 0229-121-33, 0229-131-19, and 0229-121-35 (Parcels 1 through 4, respectively). Roux performed this Phase I ESA in general accordance with the American Society for Testing Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13) in an effort to identify, to the extent feasible, the presence of recognized environmental conditions (RECs) with respect to the Site as defined in ASTM E1527-13. Exceptions to, or deletions from, this practice are described in Section 8.1 of this report.

The Site consists of approximately 95 acres of land bound by Arrow Route to the north and the Atchison Topeka and Santa Fe Railroad (Railroad) to the south and is accessible via Arrow Route and Juneberry Drive. The Site is primarily occupied by Commercial Metals Company (CMC), an inactive steel mill. The Site is also occupied by CMC Rebar, a limited rebar manufacturing facility, and Phoenix Industries, a slag processing facility. The Site operated as a steel mill from the 1950s until 2019 when milling operations were phased out. The main address for the Site is 12451 Arrow Route. However, additional addresses used at the Site include 12343, 12353, 12455, and 12459-B Arrow Route. As noted above, the Site consists of four parcels (Parcels 1 through 4) described below and shown on Figure 2.

- Parcel 1 is located in the western portion of the Site and is not developed with any permanent structures. CMC utilized the northern portion of Parcel 1 as an equipment boneyard and the southern portion for storage of steel billets. The majority of Parcel 1 is vacant with some equipment storage in the northern portion and processed slag storage in the central portion.

- Parcel 2 is located in the central and southern portions of the Site. The northern area of Parcel 2 is partially occupied by Phoenix Industries, a steel slag processing tenant. On-Site operations consist of mechanical crushing and sorting of steel slag for off-Site use as aggregate material. No chemical processing of steel slag is conducted on Site. No permanent structures were observed in this area. The northern portion of Parcel 2 was historically used for storage of scrap metal for processing and steel slag that was produced on Site. The southern portion of Parcel 2 is developed with the inactive CMC steel mill. The primary structure in this area is the primary processing building (melt shop) previously equipped with an electric arc furnace (EAF) for melting scrap metal.

- Parcel 3 is located in the eastern portion of the Site. The northern area of Parcel 3 is equipped with the CMC main office building, fueling station, and a vacant area previously used for rebar storage. The southern portion of Parcel 3 is developed with the inactive milling and rolling building.

- Parcel 4 is located in the northern portion of the Site and is occupied by CMC Rebar which operates a limited rebar fabrication facility.

Based on Roux's review of historical sources, the following is a summary of the history of the Site. The Site was developed for agricultural use (row crops) from at least 1938 until 1954. A small structure was added to the southeastern corner of the Site in 1953. This feature is in the approximate location of a groundwater well and water tower. By 1959, the eastern portion of Parcel 3 was developed with the milling and rolling improvements, paved parking areas, an outdoor storage yard, office building, water tower, and multiple rail spurs. The remaining Site Parcels continued to be developed for agricultural use through at least 1973. By 1975, Parcel 2 and the southern portion of Parcel 1 were graded and likely used for storage of raw, finished,

or waste materials including billets, scrap metals, and slag. The northern portion of the Site remained agricultural until 1981. By 1985, agricultural operations had ceased, and the Site was primarily developed for industrial use. The melt shop and EAF improvements as well as outdoor storage yards were added to Parcels 2 and 3. The current office and fabrication building in Parcel 2 was added by 1990. Major operations from the 1980s through 2019 included receiving of steel scrap, melting of steel scrap, production and fabrication of rebar, and processing of steel slag.

On September 2, 2021, Roux visually assessed the Site during the site reconnaissance for potential RECs, including, but not limited to, potential underground storage tanks (USTs), aboveground storage tanks (ASTs), polychlorinated biphenyl (PCB)-containing equipment, hazardous materials storage or handling areas, containerized or bulk wastes, and visual indications of impacted soil.

Roux also performed a records review in an effort to identify RECs in connection with the Site. This records review addressed the Site and surrounding properties. Roux reviewed commercially available records associated with the Site and nearby properties to assess potential concerns associated with the migration of hazardous substances. The records review also included reasonably ascertainable historical data, which can be helpful in identifying the past uses of the Site and surrounding areas, as it may relate to the environmental condition of the Site.

Roux performed interviews and/or file reviews with various government agencies and other parties with possible knowledge of the Site and surrounding properties in an effort to identify current and past uses of the Site and surrounding areas, as they may relate to the environmental condition of the Site.

ASTM E 1527-13 defines a Recognized Environmental Condition (REC) as:

> "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."

A Controlled Recognized Environmental Condition (cREC) as:

> "A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

And a Historical Recognized Environmental Condition (hREC) as:

> "A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a *recognized* environmental condition at the time the Phase I Environmental Site Assessment is

conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."

This Executive Summary provides a brief overview of the findings of this Phase I ESA. Although the Executive Summary is an integral part of a report, it does not substitute for reading the entire report or the appended or referenced documents in order to fully understand the findings and potential environmental concerns associated with the Site.

Recognized Environmental Conditions (RECs)

Based on the information obtained through the performance of this ESA, Roux identified the following RECs in connection with the current and historical operations at the Site or adjacent properties. To the extent possible, the locations of the RECs are shown in Figure 2. To avoid confusion, all RECs, cRECs, hRECs, and other environmental features (OEFs) are numbered sequentially.

REC 1 - Site-Wide TPH and Metals Impacts to Soil and VOC impacts to Soil Vapor. Ramboll US Consulting, Inc. (Ramboll) conducted a Phase I ESA and Phase II Subsurface Investigation of the Site in April and June 2021. The subsurface investigation targeted features of concerns (discussed below) and included Site-wide grid sampling. Soil vapor data collected by Ramboll showed screening level (SL) exceedances for chloroform (in three locations), benzene (in two locations), and tetrachloroethene (PCE) (in six locations). Soil data collected by Ramboll and historically by other investigators identified SL exceedances of total petroleum hydrocarbons in the diesel range (TPH-d) and metals in soil. Metals concentrations for cadmium, lead, and zinc exceeded total threshold limit concentration (TTLC) and/or toxicity characteristic leaching procedure (TCLP), which for disposal purposes would classify these soils as hazardous. Detections of volatile organic compounds (VOCs), TPH-d, and metals above SLs are considered a REC in the context of this Phase I ESA.

REC 2 – Rail Spurs. Rail spurs have been in place on Site at Parcels 2 and 3 since at least 1959. Railroad spurs represent environmental concerns due to the historical application of oils containing PCBs, herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material. In addition, due to the historical use of the subject property for industrial purposes, the possibility for spills of hazardous substances and/or petroleum products during loading and unloading of railcars represents a concern. Based on the historical industrial use of the Site and age of these features, the on-Site rail spurs are considered a REC in the context of this Phase I ESA.

REC 3 – Current Diesel and Gasoline Underground Storage Tank. The Site features a fueling station equipped with one 12,000-gallon dual-compartment UST, located to the north of the main office building on Parcel 3. The UST is of steel and fiberglass construction and consists of one 10,000-gallon diesel compartment and one 2,000-gallon gasoline compartment. According to on-Site personnel, both tank compartments were drained within the last year and there are no plans to refill them. The active UST area was assessed as part of Ramboll's 2021 Site investigation. No constituents of concern were identified above regulatory screening levels in soil and soil vapor samples collected in the vicinity of the active UST. Based on the long history of industrial operations at the Site and unknown age of this tank, there is a reasonable likelihood of a release of gasoline and/or diesel to the subsurface at the Site.

Further investigation may be warranted during removal of this feature part of future redevelopment activities. The current 12,000-gallon gasoline and diesel UST is considered a REC in the context of this Phase I ESA.

REC 4 – Former Chemical Storage Area (Parcel 2). During the Site reconnaissance, Roux observed a former chemical storage area located northwest of the melt shop on Parcel 2. Observed signage indicates the area was previously used for storage of new and used oils. The former chemical storage area consists of an asphalt and concrete paved area that is partially bermed. Moderate staining and cracks were observed in the former chemical storage area. This area was not assessed as part of Ramboll's 2021 Site investigation. The former chemical storage area is considered a REC in the context of the Phase I ESA for the Site.

REC 5 – Wash Rack (Parcel 2). During the Site reconnaissance, Roux observed a wash rack on the northern portion of Parcel 2. The wash rack appears to consist of a wheel wash system and was equipped with a sump. The sump area appeared to be equipped with a pump for removal of sludge waste into a neighboring roll off bin. Sludge waste removed from the area may be impacted with automotive fluids from vehicles and metals from processed slag piles. Wastewater stored in the wash rack could potentially be impacted with petroleum-related products and VOCs, and therefore there is a reasonable likelihood that a release would have occurred. This area was not assessed as part of Ramboll's 2021 Site investigation. The wash rack area is considered a REC in the context of the Phase I ESA for the Site.

REC 6 - Potential Inactive on-Site USTs. Based on a review of previous reports and regulatory agency records, the Site has been equipped with at least 24 USTs previously used to stored gasoline, diesel, fuel oil, or waste-oil. Limited information was available regarding the location, installation, or removal for 10 of the 24 documented USTs. Records indicating a subsurface investigation associated with the reported removal of some of the tanks were not available to review. Additional information regarding on-Site USTs may be on file with the San Bernardino County Fire Department (SBCFD). These inactive USTs may be present on-Site and may have resulted in a release of petroleum products. The potentially inactive USTs are therefore considered a REC in the context of this Phase I ESA.

Historical Recognized Environmental Conditions (hRECs)

Roux identified the following hRECs in connection with the current and historical operations at the Site or adjacent properties. To the extent possible, the locations of the hRECs are shown in Figure 2.

hREC 1 – Lead Remediation Area (Parcel 1). Lead-contaminated soil at the southwestern corner of the Site (Parcel 1) was remediated via detoxification (stabilization) between 1989 and 1990. On November 7, 1990, the Santa Ana Regional Water Quality Control Board (SA-RWQCB) issued a letter of no further action for this area. The former lead-impacted soil at the southwestern corner of the Site is considered an hREC in the context of this Phase I ESA.

hREC 2 – Former Fuel Oil USTs (Parcel 3). In November 1993, four fuel oil USTs, totaling approximately 50,000 gallons, were removed from Parcel 3. Approximately 474 cubic yards of impacted soil were excavated and removed from the Site. In a letter dated April 28, 1994, the San Bernardino County Department of Environmental Health Services (SBCDEHS) determined no further action was required. The former fuel oil USTs are considered an hREC in the context of this Phase I ESA.

hREC 3 – Metals-Impacted Soil (Parcel 1). According to a previous report, metals-impacted soil from the southwest corner of the Site (Parcel 1), which were treated and stabilized under Department of Toxic Substance Control (DTSC) oversight between 1989 and 1990, was used as backfill for the excavation of the four fuel oil USTs removed in 1993. The backfilled fuel oil UST excavation is considered an hREC in the context of this Phase I ESA.

hREC 4 – Slag Trench Remediation (Parcel 4). Baghouse dust wastes and slag generated from the steel mill furnace were historically buried in trenches on Parcel 4. In 1988, baghouse dusts were excavated from the area and confirmation sampling was performed under DTSC oversight. DTSC concluded that remaining metals concentrations met health-based criteria for unrestricted land use and issued a letter of approval dated December 20, 2001. The slag trench remediation area in Parcel 4 is considered an hREC in the context of the Phase I ESA.

hREC 5 – Slag Remediation Area (Parcels 1 and 2). Baghouse dust waste commingled with slag was historically stockpiled on Parcels 1 and 2. Under oversight of the SBCFD, a remedial action plan (RAP) was prepared and implemented to treat impacted materials. In a letter dated July 2, 2002, the SBCFD determined no further action was required. However, a copy of the RAP and SBCFD closure letter were not provided to Roux. The former slag stockpile remediation area on Parcels 1 and 2 are considered an hREC in the context of the Phase I ESA.

hREC 6 – Former Diesel USTs (Parcel 3). A total of four 12,000-gallon diesel USTs were removed from Parcel 3 in 2006. Confirmation sampling did not identify reportable concentrations of TPH or VOCs in soil. In a letter dated October 6, 2006, the SBCFD determined no further action was required. The four former diesel USTS removed from Parcel 3 are considered an hREC in the context of the Phase I ESA.

hREC 7 – Former Diesel UST (Parcel 2). In November 2010, one 300-gallon diesel fuel UST located southwest of an emergency generator was removed from Parcel 2. One confirmation soil sample was collected from beneath the tank excavation at approximately 6.5 feet below ground surface (bgs). A UST closure report was submitted to the SBCFD for review. In a letter dated March 7, 2011, the SBCFD determined that no further investigation was warranted at the time. The former 300-gallon diesel fuel UST previously located on Parcel 2 is considered an hREC in the context of the Phase I ESA.

hREC 8 – Former Diesel UST (Parcel 4). In June 2014, one 12,000-gallon diesel UST and associated dispenser equipment was removed from the eastern portion of Parcel 4. Confirmation sampling identified residual concentrations of TPH-d in all three soil samples. In a letter dated October 29, 2014, SBCFD determined that no further action was required regarding the former diesel UST. The former 12,0000-gallon diesel fuel UST previously located on Parcel 4 is considered an hREC in the context of the Phase I ESA.

Controlled Recognized Environmental Conditions (cRECs)

Roux identified the following cRECs in connection with the current and historical operations at the Site or adjacent properties. To the extent possible, the locations of the cRECs are shown in Figure 2.

cREC 1 – Pad 16 Remediation Area. In January 2005, DTSC collected surface soil samples in and around a scrap metal storage area in Parcel 2 during a Site visit. Analysis of the samples indicated an

area of soil located north of scrap piles 12 and 16 was impacted with heavy metals above hazardous waste classification criteria. In November 2005, metals-impacted soils were excavated, and surface soils were screened until the screening demonstrated acceptable levels. Excavated soils that passed the cleanup criteria were returned to the excavation as backfill and "a small amount" of crushed slag was used to bring the area to grade. The remediated area was paved with asphalt to avoid future recontamination. Soils that exceeded cleanup criteria were transported off Site for disposal. Tamco, the Site owner at the time, and DTSC signed a Consent Order dated April 26, 2007, detailing the completed remediation activities. Based on the completed remediation of metals-impacted soils and implementation of a DTSC Consent Order, the former metals-impacted soils north of Pad 16 in Parcel 2 are considered a cREC in the context of the Phase I ESA.

Other Environmental Features (OEFs)

The term recognized environmental condition is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Other environmental features (OEFs) are environmental conditions that do not meet the definition of a REC, but which may warrant mention in a comprehensive Phase I ESA. Based on the subject Phase I ESA, Roux identified the following OEFs. To the extent possible, the locations of the OEFs are shown in Figure 2.

OEF 1 – Historical Site-Wide Agricultural Use. Based on a review of historical sources, the Site was used for agricultural purposes (row crops) as early as 1938 through approximately 1981. It is likely that agricultural chemicals were used on Site. It is likely that agricultural chemicals (possibly lead-or arsenic-based and organochlorine pesticides) were used on Site. The Site was developed for commercial/industrial use by the 1950s. Shallow soils that may have been impacted by agricultural chemicals were likely removed or shifted during grading and development activities. Based on the time elapsed since agricultural use and redevelopment of the Site, Roux considers the historical agricultural use to be an OEF in the context of the Phase I ESA.

OEF 2 – Nearby DP Etiwanda Site. The east adjacent site, identified as DP Etiwanda at 8822 Etiwanda Avenue, was listed in several databases including the ENVIROSTOR database. The status of the EnviroStor case is listed as "Certified Operations and Maintenance (O&M) – Land Use Restrictions as of 10/22/2020". Roux accessed the DTSC EnviroStor database to obtain more information. According to the EnviroStor site history summary, previous site investigations have identified elevated concentrations of metals, TPH, and PCBs in soil. A land use covenant was recorded between the site owners and DTSC, restricting the site to commercial/industrial land use. Based on the proximity to the Site and known impacts to the subsurface, this adjacent site is considered an OEF in the context of this Phase I ESA.

OEF 3 – Site-Wide Buried Slag Material. Buried slag material, measuring generally between 2 and 6 inches in diameter, has reportedly been encountered during previous Site investigations. The slag material was primarily encountered in the western, northern, and southwestern portions of the Site at depths ranging from 1 to 10 feet with a thickness ranging between 0.1 and 10 feet. Slag fines (ranging from sand to dust size) and larger pieces of slag were also reportedly encountered. Slag material typically is not considered a hazardous or petroleum-containing material. Buried slag materials present throughout the Site is considered an OEF in the context of this Phase I ESA.

1. Introduction

Roux Associates, Inc. (Roux) completed this Phase I Environmental Site Assessment (ESA) of the commercial property located at 12451 Arrow Route, Rancho Cucamonga, San Bernardino County, California (the Site). The Site location is shown in Figure 1 and the Site and vicinity is shown in Figure 2. Roux performed this Phase I ESA in compliance with the scope and limitations of American Society for Testing Materials (ASTM) E1527-13 and the terms and conditions of Roux' proposal dated August 13, 2021. Roux conducted this Phase I ESA for the benefit of BTC III Acquisitions LLC (the User).

The following sections of this report present our Phase I ESA findings and conclusions. A glossary containing terms and definitions presented in ASTM E1527-13 is included in Appendix A – Glossary of Terms. Other appendices presented at the end of the report include historical topographic maps, historical aerial photographs, regulatory records review documentation, applicable historical records, and personnel qualifications.

1.1 Purpose

The purpose of this Phase I ESA is to identify and report, to the extent feasible, recognized environmental conditions (RECs) with respect to the Site. Performing a Phase I ESA in general compliance with ASTM E 1527-13 may enable a User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability. That is, the practice that constitutes one of the requirements for "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in 42 USC Section 9601(35) (B).

1.2 Scope of Services

The scope of services for this Phase I ESA included, but was not limited to, the activities listed below.

- A review of reasonably ascertainable and practicably reviewable topographic maps, historical aerial photographs, and city directories, if available, to investigate past Site conditions;
- A review of specific government lists pursuant to ASTM Standard E 1527-13 regarding environmental activities for the Site and local area properties;
- A review of recorded land title records, building, assessors, and fire department records, for permits, citations, and reports connected to the Site that were reasonably ascertainable, practicably reviewable, and publicly available within reasonable time and cost;
- An inspection by an environmental professional to investigate the current use of the Site and to identify environmental concerns including but not limited to, the presence of hazardous substances or petroleum products, wastes, underground storage tanks (USTs), aboveground storage tanks (ASTs), or other environmental concerns;
- Interviews with available representatives of the owner of the Site, occupants, and local government officials by an environmental professional; and
- Preparation of this Phase I ESA report.

Roux initiated this Phase I ESA pursuant to receipt of written authorization to proceed on August 24, 2021.

1.3 Standard of Care

Roux conducted this Phase I ESA using a defined scope of services considered appropriate and agreed upon by all parties on the date the service was authorized, unless the scope of services or the methods used were later modified, in writing, and accepted by all parties prior to performance. Roux conducted this Phase I ESA in accordance with generally accepted practices in a manner consistent with that level of care exercised by other members of our profession in the same locality and under similar conditions of time and accessibility of improvements and information. No other representations, expressed or implied, and no warranty or guarantee is included or intended to be part of this Phase I ESA.

Please note that the scope of services performed in execution of this assessment may not be appropriate to satisfy the needs of other parties. We, therefore, are not responsible for independent conclusions, opinions, or recommendations of others based on our assessment. Furthermore, this Phase I ESA relates to the environmental conditions of the Site and does not address issues raised in transactions such as business risk, purchase of business entities, or interests therein, or of their assets, that may well involve environmental liabilities pertaining to properties previously owned or operated or other offsite liabilities.

Additionally, the findings of this Phase I ESA are based on Roux' observations, inquiries, and historical research using reasonably ascertainable and practically reviewable information obtained within reasonable time and cost constraints. Roux does not represent that this Phase I ESA is an exhaustive investigation that reflects the findings of all of the information available for the Site, nor is it representative of future Site conditions. If additional information is generated from the Site, it should be provided to Roux so that we may evaluate its impact on our conclusions. As such, activities or episodes that transpire subsequent to this Phase I ESA are not considered in this assessment. It is not intended that a Phase I ESA in accordance with ASTM E1527-13 be an exhaustive assessment of a property nor can it wholly eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with a property.

1.4 Assumptions

This Phase I ESA Report, including the exhibits attached hereto, describes the results of Roux' investigation to identify the presence of *recognized environmental conditions* connected with the Site in accordance with ASTM E1527-13, as allowed by and consistent with the regulatory requirements of the All Appropriate Inquiry Rule, 40 CFR Part 312, Amendment to Standards and Practices for All Appropriate Inquires Under CERCLA, Final Rule, published December 30, 2013 (AAI Rule). Specifically, the preamble to the amended AAI Rule states:

> *The Environmental Protection Agency (EPA) today is taking final action to amend the standards and practices for conducting all appropriate inquiries under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) to reference a standard practice recently made available by ASTM International, a widely recognized standards development organization. Specifically, this final rule amends the "All Appropriate Inquiries Rule" at 40 CFR Part 312 to reference ASTM International's E1527–13 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" and make clear that persons conducting all appropriate inquiries may use the procedures included in this standard to comply with the All Appropriate Inquiries Rule*[1].

[1] Federal Register: December 30, 2013 (Volume 78, Number 250) Page 79319

One of the requirements that a person acquiring real property must meet in order to qualify for either the innocent landowner, contiguous owner, or bona fide prospective purchaser (collectively hereinafter "Prospective Purchaser") defense to liability under the federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by the Superfund Amendments and Reauthorization Act of 1986, and the Small Business Liability Relief and Brownfields' Revitalization Act of 2002, 42 U.S.C. 9601-9675 (collectively referred to hereafter as "CERCLA") is that person must conduct all appropriate inquiries into the previous ownership and uses of the property in conformance with the AAI Rule (or the ASTM E1527-13) prior to acquisition of the property. The User has acknowledged that, under the AAI Rule, Roux' performance of this Phase I ESA in accordance with ASTM E1527-13 will not alone result in the User satisfying all requirements of the AAI Rule and will not in itself provide a defense to CERCLA liability. The User has acknowledged that the AAI Rule also requires that the Prospective Purchaser undertake certain additional inquiries and post-acquisition activities to satisfy the CERCLA AAI requirements. Accordingly, Roux makes no guarantees or warranties, expressed or implied, regarding this Phase I ESA, including without limitation, that this Phase I ESA will qualify the User for a defense to CERCLA liability.

Roux has performed this Phase I ESA in a professional manner using that degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. Professional judgments expressed herein are based on the facts currently available to Roux.

The AAI Rule requires, and the conclusions and recommendations stated herein represent, the application of a variety of engineering and technical disciplines to material facts and conditions associated with the Site. As such, these conclusions and recommendations are based on subjective interpretations and the exercise of discretion based on the facts available to Roux and conditions at the time of the performance of this Phase I ESA. Many of these facts and conditions are subject to change over time. Accordingly, the conclusions and recommendations must be considered within this context.

The User has agreed that Roux shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time this Phase I ESA was performed. To the extent practicable, Roux has identified data gaps, and has evaluated the potential significance of such data gaps. Recommendations to address those data gaps are presented herein and are based on the data available at the time of the performance of this Phase I ESA. Implementation of the recommendations may not fully address the data gaps, and the information obtained from execution of those recommendations may alter and/or modify the interpretation of the Site conditions and conclusions, herein. This Phase I ESA does not include consideration of matters specifically excluded by ASTM E1527-13, including but not limited to, asbestos-containing building materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, and mold unless specifically identified herein.

Roux has not collected any soil and/or groundwater samples on the Site for Phase I purposes, and is relying on information presented by others, often in preliminary, draft, or verbal form. By referencing this information, Roux does not accept responsibility for the accuracy of the underlying data, sampling methods, laboratory analysis, or documentation.

This Phase I ESA Report should not be considered a legal interpretation of existing environmental laws and regulations. This Phase I ESA was conducted with a reasonable degree of inquiry to identify *recognized environmental conditions*, but uncertainty is not eliminated. No Phase I ESA can wholly eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with a property.

The Phase I ESA process is intended to reduce, but not eliminate, the uncertainty involved with identifying *recognized environmental conditions*.

This Phase I ESA Report is not an appraisal or value judgment of the Site. The User has agreed that Roux shall not be liable for any use of this Phase I ESA Report as an appraisal or value judgment of the Site.

This Phase I ESA Report has been prepared for the exclusive use of the User for specific application to the Site covered by this Phase I ESA Report. The User has agreed that any third-party use of this Phase I ESA Report, upon disclosure by the User, is the sole responsibility and at the sole liability of the User.

1.5 User Reliance

No additional parties may use the information contained in this report without obtaining the written permission of Roux or the User. Roux' duties and obligations extend to the User and to no other party. Roux' duties and obligations to the User are not transferable to persons, corporations, or organizations without the express written consent of the User and Roux. The User may rely upon the information provided in this Phase I ESA report for a period of 180 days from the date of issue. After 180 days, this Phase I ESA should be updated in accordance with ASTM guidance. Roux will not be liable for any consequential damages arising from the use of this report for other than its intended purpose, for use of this report beyond 180 days of its issue date, or from unauthorized use by third parties.

This Phase I ESA report must be read and interpreted as a whole and can only be considered representative of the conditions of the Site as of the date of our site reconnaissance described herein. Roux makes no representation whatsoever concerning the condition of the Site beyond the date of our site reconnaissance described herein. Individual sections and appendices of this report are dependent on the balance of this report, and on the terms, conditions, and stipulations contained in the proposal and written amendments accepted by Roux.

2. Site Description

2.1 Site Location and Description

Site Information	
Site Name	BCG CMC
Street Address(es)	Main address: 12451 Arrow Route Additional addresses: 12343, 12353, 12455, and 12459-B Arrow Route *Note: 12459-A Arrow Route address has historically been used by the east adjoining property occupied by Tree Island Wire (TI Wire).*
City	City of Rancho Cucamonga
County	San Bernardino
State	California
Location	Bound by Arrow Route to the north and Atchison Topeka and Santa Fe Railroad to the south. Site is accessible via Arrow Route and Juneberry Drive
Assessor's Parcel Numbers (APNs)	Parcel 1: 0229-121-34-0000 Parcel 2: 0229-121-33-0000 Parcel 3: 0229-131-19-0000 Parcel 4: 0229-121-35-0000
Site Acreage (per San Bernardino County Assessor Website)	Approximately 95 acres
Site Occupant(s)	Commercial Metals Company (CMC) Rebar (Parcel 4), Phoenix Industries (Parcel 2) CMC (Parcels 1, 2, 3)
Onsite Operations	CMC Rebar – rebar manufacturing Phoenix Industries – slag processing CMC – inactive steel mill
Description of Onsite Structures	Parcel 1 – No permanent structures Parcel 2 – Melt shop (housing electric arc furnace), warehouse and maintenance building, old baghouse, guard shack Parcel 3 – New baghouse, main office, warehouses, roll mill, bundling station Parcel 4 – Office and fabrication shop
Site Paving	Asphalt and concrete paving
Site Grading	Graded to drain at a gentle slope oriented to the south
Site Vicinity	Commercial and industrial use

Refer to Section 5.0 for a detailed description of the current condition of the Site and operations.

2.2 Vicinity General Characteristics

The facilities and improvements which are located immediately adjacent to the Site are provided in the following table.

Direction from Site	Improvements / Use (Addresses)
North	Arrow Route, followed by Planet Storage / self-storage facility (12330 Arrow Route), Steelcase / warehouse (12400 Arrow Route), Air Liquide America / industrial gas supplier (12550 Arrow Route)
East	Juneberry Drive, followed by Goodman Logistics Center / warehouse (12521 Arrow Route and 8600 Etiwanda Avenue), Tree Island Wire / rebar manufacturing facility (12459-A Arrow Route), and vacant land (8822 Etiwanda Avenue)
South	Atchison Topeka Santa Fe Railroad, followed by Etiwanda Generating Station (8998 Etiwanda Avenue)
West	Parallel Products / chemical manufacturer (12281 Arrow Route) and Copart / vehicle auction (12167 Arrow Route)

2.3 Past Use of the Site

Based on Roux's review of historical sources, the following is a summary of the history of the Site. The Site was developed for agricultural use (row crops) from at least 1938 until 1954. A small structure was added to the southeastern corner of the Site in 1953. This feature is in the approximate location of a groundwater well and water tower. By 1959, the eastern portion of Parcel 3 was developed with the milling and rolling improvements, paved parking areas, outdoor storage yard, office building, water tower, and multiple rail spurs. The remaining Site Parcels continued to be developed for agricultural use through at least 1973. By 1975, Parcel 2 and the southern portion of Parcel 1 were graded and likely used for storage of raw, finished, or waste materials. The northern portion of the Site remained agricultural until 1981. By 1985, agricultural operations had ceased, and the Site was primarily developed for industrial use. The melt shop and EAF improvements as well as outdoor storage yards were added to Parcels 2 and 3. The current office and fabrication building in Parcel 2 was added by 1990. Major operations from the 1980s through 2019 included receiving of steel scrap, melting of steel scrap, production and fabrication of rebar, and processing of steel slag.

2.4 Physical Setting

Roux obtained and reviewed published, reasonably ascertainable information concerning the physical setting of the Site. The following is a summary of the information reviewed from those physical setting sources.

Physical Setting Summary	
United States Geological Survey (USGS) Topographic Map	Guasti, California Quadrangle
Approximate Site Elevation / Source	1,130 to 1,165 feet above mean sea level (msl) / Guasti, California (2012) 7.5-minute quadrangle topographic map published by the USGS
Nearest Surface Water Features / Approximate Distance	Day Creek, a concrete-lined stormwater drainage channel / 0.25 mile west of the Site
Regional Geology / Source	Quaternary deposits: alluvium, lake, playa and terrace, consolidated and semi-consolidated / California Department of Conservation, 2010 Geologic Map of California
Site Topography / Source	Generally flat with a gradual slope to the south / Site observation and USGS topographic map

Physical Setting Summary	
Hydrogeological Region / Source	Located along the northeastern portion of the Chino Subbasin within the Upper Santa Ana Valley Groundwater Basin / *California Department of Water Resources Bulletin 118, Update 2003 and Interim Update 2016*
Depth to Groundwater / Source	Approximately 430 feet bgs / Monitoring well information for adjacent Etiwanda Generating Station (P. Hamilton, 2010)
Groundwater Gradient Direction / Source	Southwest / Monitoring well information for adjacent Etiwanda Generating Station (P. Hamilton, 2010)
Onsite Soil	Parcel 1 - Sand with gravel and/or slag to 5 feet bgs, sand and sand with silt to 18 feet bgs, sandy silt to 25 feet bgs Parcel 2 – Sand with gravel and/or slag to 5 feet bgs, sand and sand with silt to 12 feet bgs, silty sand and sand layering to 30 feet bgs Parcel 3 – Sand or sand with silty sand to 5 feet bgs and dense silty layer from 29 to 34 feet bgs Parcel 4 – Sand and silty sand layers to 5 feet bgs, and sand to 25 feet bgs (Ramboll, 2021B)

3. Sources of Information

Sources of information utilized in preparing this Phase I ESA report included historical topographic maps; historical aerial photographs; a walkover survey of the Site and adjoining properties; in-person discussions with User and tenant personnel; a review of records available at selected local and state regulatory agencies; a review of databases maintained by local, state, and federal government agencies; and other records available from commercial and online sources.

3.1 Historical Sources

To help understand the history of the Site and past land uses, historical sources were obtained from Environmental Data Resources, Inc. (EDR), of Shelton, Connecticut. The sources and locations within the Appendices are provided in the table below.

EDR Historical Sources		
Historical Range	**Source**	**Appendix**
1897 - 2012	U.S. Geological Survey Topographic Maps Nationwide Environmental Title Research LLC (NETR) Historical Aerials Database	B
1938 - 2016	EDR Aerial Photographs “Decade Package”	C
No Available Coverage	EDR “Certified Sanborn® Map Report”	D
1922 - 2017	EDR “City Directory Image Report”	E

Note: Due to copyright restrictions, the topographic maps reviewed on NETR Historical Aerials Database were not included in the appendices.

3.2 Site Reconnaissance

On September 2, 2021, Roux personnel conducted a reconnaissance of the Site. During the Site reconnaissance, Roux interacted Mr. Wade Fultz, plant engineer for CMC. Mr. Fultz provided information regarding recent and historical operations of the Site which are referenced, as appropriate, throughout the remainder of this Phase I ESA report. Photographs taken during the Site reconnaissance are provided in Appendix G.

3.3 Regulatory Agencies

Roux contacted governmental agencies for reasonably ascertainable information concerning environmental conditions at the Site. Roux contacted or reviewed information from the agencies provided in the following table. Refer to Appendix H – Pertinent Historical Documentation for copies of the records reviewed. A summary of the information gathered from the regulatory agencies is provided in the table and details regarding the records were incorporated into applicable sections as noted.

Agency	Date Requested / Accessed	Response Date	Description of Records	Section Discussed
Federal				
U.S. Environmental Protection Agency (EPA) – FOIAonline	08/30/2021	9/2/2021	Received instruction to query U.S. EPA MyProperty online database. See below	N/A
U.S. EPA EnviroFacts	11/30/2021	N/A	Several records were associated with the Site including records for TAMCO, Tervita-LLC, and TI Wire. Facility records indicate hazardous waste generation, USTs, release cases associated with leaking USTs, and stormwater discharge permits.	N/A
U.S EPA MyProperty Database	8/30/2021	N/A	Several records were associated with the Site including enforcement and compliance summaries.	3.3.1
National Pipeline Mapping System (NPMS) Online Database	11/30/2021	N/A	One natural gas transmission pipeline (Operator ID 18484) located along Arrow Route. No other pipelines were located within 500 feet of the Site.	N/A
State				
State Water Resources Control Board (SWRCB): GeoTracker Online Database	11/30/2021	N/A	Two release cases (Global IDs T0607100309 and T0607100046) were associated with Site (see Section 7.0). Adjacent release cases were identified for Air Liquide (12550 Arrow Route).	6.0 7.1.2
SWRCB: Storm Water Multiple Application and Report Tracking System (SMARTS) Online Database	11/30/2021	N/A	Several records were associated with the Site including terminated and expired construction stormwater permits	N/A
Department of Toxic Substances Control (DTSC)	08/30/2021	09/03/2021	Records provided include a 1994 CERCLA Preliminary Assessment. Additional Site records available on DTSC EnviroStor online database.	6.0.

Agency	Date Requested / Accessed	Response Date	Description of Records	Section Discussed
DTSC: EnviroStor Online Database	11/30/2021	N/A	Two release cases (IDs 36340066 and 36340064) were associated with the Site. Adjacent and nearby release cases were identified for DP Etiwanda (8822 Etiwanda Avenue), Etiwanda Generating Station (8998 Etiwanda Avenue), and Kaiser Steel (7400 Cherry Avenue).	6.0 7.1.2
DTSC: Hazardous Waste Tracking System (HWTS) Online Database	11/30/2021	N/A	Several records were associated with the Site including waste manifests indicating generation of halogenated solvents, hydrocarbon solvents, oil/water separation sludge, tank bottom waste, polychlorinated biphenyls (PCBs), baghouse waste, contaminated soils from site clean-up.	N/A
California Air Resources Board (CARB)	08/30/2021	09/08/2021	No records were associated with the Site.	N/A
California Office of Environmental Health Hazard Assessment (OEHHA)	08/30/2021	09/10/2021	No records were associated with the Site.	N/A
CalEPA CalRecycle	08/30/2021	09/13/2021	No records were associated with the Site.	N/A
CalEPA CalRecycle Solid Waste Information System (SWIS) Online Database	11/30/2021	N/A	No records were associated with the Site.	N/A
State of California Department of Conservation: Geological Energy Management (CalGEM) Online Database	11/30/2021	N/A	No oil or gas wells are located within 1,000 feet of the Site.	N/A
County / Regional				
Santa Ana Regional Water Quality Control Board (SARWQCB)	08/30/2021	09/01/2021	No records were associated with the Site.	N/A
South Coast Air Quality Management District (SCAQMD)	08/30/2021	09/10/2021	Records identified for the Site included facility equipment list reports, permits to operate, and notices of violation (NOVs) dated between 1977 and 2021.	3.3.2
County of San Bernardino Department of Building and Safety	08/30/2021 12/01/2021	Pending	No records associated with the Site, directed to City of Rialto.	N/A
County of San Bernardino Department of Environmental Health Services (EHS)	08/30/2021 12/01/2021	Pending	No records associated with the Site.	N/A

Agency	Date Requested / Accessed	Response Date	Description of Records	Section Discussed
San Bernardino County Fire Department	08/30/2021	Pending	Indicates that an inactive permit and compliance response activity are associated with Southland Pipe at the Site. Records review pending as of this report date.	N/A
City / Local				
City of Rancho Cucamonga City Clerk (Building Permits, Code Violations, Fire Violations)	08/30/2021	09/23/2021	City of Rancho Cucamonga provided digital copies of stormwater inspection and sampling records data from 2007 to 2020, Hazardous Materials and Wastes Inventory Matrix Reports from 2021, UST installation permits dated from 1977 to 1992, and UST removal permits dated from 1989 to 2010.	3.3.3

3.3.1 U.S. EPA MyProperty Database

The following pertinent information was obtained from the U.S. EPA MyProperty Database for the Site:

- **Fontana Steel, Inc. (12451 Arrow Route):** Listed as a voluntary cleanup site on the DTSC EnviroStor online database. A Preliminary Endangerment Assessment Report (PEA) prepared by IT Corporation on behalf of Fontana Steel, Inc. and CMC Steel Group, Inc., dated September 2001, evaluated potential environmental impacts at the site associated with historical operations including the disposal of electric arc furnace (EAF) dust. The PEA concluded chemicals of potential concern (COPCs) including several heavy metals, in on-site soil did not represent an unacceptable level of risk under the commercial/industrial exposure scenario relevant to the current and anticipated future land use at the site. The DTSC issued a closure letter dated December 20, 2021 and the case was closed. Previous Site investigations are discussed below in Section 6.0.

3.3.2 South Coast Air Quality Management District (SCAQMD)

Records returned by the SCAQMD or obtained from the SCAQMD Facility Information Detail (FIND) online database were available for the following on-Site operators:

- **TAMCO (Facility ID 18931) -** Inactive permits were on file for equipment including storage tank lime & limestone, baghouse, heaters, heaters/furnaces, storage tank minerals mic, furnace arc iron-steel, service station storage and dispensing gasoline, amine treating, storage tank fuel oil, storage tank petroleum light distillate, storage tank liquefied petroleum gas (LPG), diesel- and natural-gas powered emergency generators, and cooling towers. Active permits were on file for service station and dispensing gasoline, storage silo minerals misc., and baghouse.

- **Fontana Steel Inc (Facility ID 69235) –** Inactive permit for service station and dispensing gasoline.

- **United Slag Processing (Facility ID 100547) –** Inactive permits for aggregate production and crushing.

- **Tube City, IMS, Inc. (Facility ID 115558) –** Inactive permits for aggregate production and crushing.

- **Clayton Group Services Inc (Facility ID 121664)** – Cancelled permit applications for soil treatment, baghouse, and miscellaneous minerals conveying.

- **Industrial Wire Products – Arrow Division (Facility ID 126975)** – permit for boiler.

- **International Mill Service, Inc. (Facility ID 131774) -** Cancelled permit application for aggregate production and crushing.

- **Tervita (US Operations) LLC (Facility ID 172593) –** Active permit for aggregate production and crushing and inactive permit for dust collector.

- **Phoenix Services LLC (Facility ID 185588) –** Active permits for aggregate production and crushing and dust collector.

Environmental concerns associated with historical steel mill and mill-related operations are discussed below in Section 6.0.

3.3.3 City of Rancho Cucamonga City Clerk

The following pertinent information was obtained from the City of Rancho Cucamonga for the Site:

Facility Name	Document	Document Date	Description
12451 Arrow Route			
Fontana Steel	Application for Fire Agency Permit	1989	Store, use, and install 15,000-gallon LPG tank
	Application for Permit	1989	Store, use, and install 12,000-gallon diesel tank
	Underground Storage Tank Inspection Form	1990	Monitoring for one 12,000-gallon diesel tank
	Permit	1992	Store and use 15,000 gallon LPG
	Application for Permit	1998	Installation of 12,000-gallon gallon diesel UST
	Permit	1998	Void permit for fuel dispenser (diesel, 11,000 gallons)
TAMCO	Permit Application	2006	Removal of four 12,000-gallon fuel oil tanks
CMC Fabricators	Application for Permit	2009	Remove one 15,000-gallon propane storage tank and install one 1,150-gallon propane storage tank
CMC Rebar	Permit	2013	Fuel dispensing station with unattended self-serve 8,000-gallon diesel UST
	Permit	2013	1,150-gallon liquefied petroleum gas / propane tank
	Application for Permit	2014	Removal of one 12,000-gallon diesel tank
	Hazardous Materials and Wastes Inventory Matrix Report	2020	Chemical inventory includes oxygen, acetylene, propane, waste sludge, diesel fuel, ethylene glycol, used oil, and motor oil
	Hazardous Materials and Wastes Inventory Matrix Report	2021	Chemical inventory includes oxygen, acetylene, propane, waste sludge, diesel fuel, ethylene glycol, oil filters, rags, used oil, waste aerosols liquid, motor oil

Facility Name	Document	Document Date	Description
12455 Arrow Route			
Ameron	Permit	Potentially 1980	Store and dispense gasoline (two 3,000-gallon tanks) and diesel fuel (one 10,000-gallon tank)
	Application for Permit	1980	Install two (new) 3,000-gallon gasoline USTs and one (relocated) 10,000-gallon diesel UST
	Permit	1998	Remove three USTs –10,000-gallon diesel and two 3,000-gallon gasoline tanks
	Permit	1999	Maintain the storage, use, and handling of flammable and combustible liquids: Type: Tank storage, aboveground flammable combustible liquid. Quantity: 2,000 gallons Type: Diesel and Gasoline. Quantity: 2,000 gallons (tank installation)
	Permit	2012	Operate a motor vehicle fuel-dispensing station, 1,500-gallon diesel, 500-gallon gasoline.
	Hazardous Materials and Wastes Inventory Matrix Report	2014	Chemical inventory includes waste oil, diesel fuel (aboveground tank), gasoline (aboveground tank), gear lubricant, transmission fluid, oils, grease, paint & epoxies, acetylene, concrete add mix, LPG, oxygen, waste paint & thinner, primer, and resin
12459 Arrow Route			
Ameron Steel Wire Division	Permit	Undated	Store and dispense diesel fuel for boiler 10,000-gallon capacity underground tank.
J.D. Brodine & Son, Inc. (Contractor for Ameron Steel + Wire Division)	Permit	Undated	Remove 10,000-gallon UST of diesel from

Facility Name	Document	Document Date	Description
Ameron Steel and Wire Division	Application for Permit	1977	Install one 10,000-gallon diesel fuel tank underground to furnish fuel to a boiler
Tamco	Application for Permit	1979	Installation of two 8,000-gallon diesel fuel tanks and one 4,000-gallon gasoline tank
Ameron Pipe	Application for Fire Agency Permit	1987	Remove three underground tanks used to store waste oil. Capacities of tanks not provided.
Ameron Pipe	Application for Fire Agency Permit	1987	Remove three underground tanks used to store diesel. Capacities of tanks not provided.
Ameron Steel Wire Div.	Application for Permit	1989	Remove 10,000-gallon underground storage tank (diesel fuel)
Tamco	Application for Permit	1980	Install one 280-gallon diesel fuel tank underground to furnish fuel to the diesel engine
	Permit	1993	Remove two of four 50,000-gallon underground tanks which previously held fuel oil. Earlier version of permit identified four 50,000-gallon fuel oil USTs
	Construction Inspection Report	1993	Inspection for UST removal: two of tanks totaling 50,000 gallons
Tamco Steel	Application for Permit to Alter and Install Underground Storage Tanks	2006	Removal of four 12,000-gallon fuel oil tanks
	Permit	2010	Remove one 300-gallon diesel fuel underground tank
SCE Pipe Substation	Hazardous Materials and Wastes Inventory Matrix Report	2021	Chemical inventory includes mineral oil

Summary of Former Underground Storage Tanks

Roux Tank ID	Quantity	Capacity (gallons)	Product Stored	Year Installed	Year Removed	Associated Facility Address
USTs with known locations and documented removal						
A	1	12,000	Diesel	1998 (original UST installed in 1989)	2014	12451 Arrow Route
B, C	2	3,000	Gasoline	1980	1998	12459 Arrow Route
D	1	10,000	Diesel	1980	1998	12459 Arrow Route
E	1	10,000	Diesel	1977	1989	12459 Arrow Route
F	1	280-300	Diesel	1980	2010	12459 Arrow Route
G, H, I, J	4	Totaling 50,000	Fuel oil	Unknown	1993	12459 Arrow Route
K, L, M, N	4	12,000	Fuel oil or diesel	Unknown	2006	12459 Arrow Route
USTs with limited information available*						
O	1	8,000	Diesel	Unknown, permitted in 2013	Unknown	12451 Arrow Route
P, Q	2	8,000	Diesel	1979	Unknown	12459 Arrow Route
R	1	4,000	Gasoline	1979	Unknown	12459 Arrow Route
S, T, U	3	Unknown	Waste oil	Unknown	1987	12459 Arrow Route
V, W, X	3	Unknown	Diesel	Unknown	1987	12459 Arrow Route

**Based on records reviewed as of this report date. Review of records on file with the San Bernardino County Fire Department (SBCFD) is currently pending.*

Based on a review of previous reports and regulatory agency records, the Site has been equipped with at least 24 USTs (identified as Tanks A through X) previously used to stored gasoline, diesel, fuel oil, or waste oil. Limited information was available regarding the location, installation, or removal for 10 of the 24 documented USTs. Records indicating a subsurface investigation associated with the reported removal of some of the tanks were not available to review. Additional information regarding on-Site USTs may be on file with the SBCFD. These inactive USTs may be present on Site and may have resulted in a release of petroleum products. The potentially inactive USTs are therefore considered a REC in the context of this Phase I ESA.

3.4 Government Databases

To document potential sources of contamination at or near the Site, a government records search was conducted by EDR. The search included local, state, and federal records for the Site and for other properties within ASTM-standard distances of the Site. The records search is summarized in Section 7.0 and a copy of "The EDR Radius Map™ Report with GeoCheck®," dated August 31, 2021, is included in its entirety as Appendix F. As recommended by ASTM, all but a few of the databases searched were "current," i.e., had been updated within 90 days prior to the search date.

3.5 User Provided Information

ASTM E1527-13 provides that the User perform certain tasks. The purpose of this section is to present select User-provided information that can assist in identifying possible *recognized environmental conditions* in connection with the Site. According to ASTM E1527-13, these tasks do not require the technical expertise of an environmental professional and the environmental professional generally does not perform these tasks. Roux administered a questionnaire to the User at the beginning of this Phase I ESA to assist them with these tasks; however, the completed questionnaire has not been returned to Roux as of this report date.

4. Site History

This section documents the history of the Site and describes current conditions and existing or former environmental features.

4.1 Site History

The history of the Site and, to a lesser extent, the surrounding area, including previous land use, has been compiled based on information from the exhaustive list of sources provided in Section 3.

Summary of Historical Sources				
Decade	**Year**	**Source**	**Site Description**	**Vicinity Description**
Predevelopment History				
Pre-1900	1897	Historical Topographic Map: Cucamonga (15-minute)	Site consists of vacant land with an unpaved north-south trending stream-like feature (potential dry wash). Site is in a rural area identified as West Etiwanda.	Site is located north of railroad. Adjacent sites appear as vacant land with similar unpaved north-south trending stream-like features. Nearby arterial roads are to the west and east
1900s	1900	Historical Topographic Map: Cucamonga (15-minute)	No significant changes noted from prior Site history.	No significant changes noted from prior history.
	1903	Historical Topographic Map: Cucamonga (15-minute)	No significant changes noted from prior Site history.	No significant changes noted from prior history.
1910s	1912	Historical Topographic Map: Cucamonga (15-minute)	No significant changes noted from prior Site history.	No significant changes noted from prior history.
1920s	1927	Historical Topographic Map: Cucamonga (15-minute)	No significant changes noted from prior Site history.	No significant changes noted from prior history.
Agricultural Development				
1930s	1932	Historical Topographic Map: Cucamonga (15-minute)	No significant changes noted from prior Site history.	No significant changes noted from prior history.

Summary of Historical Sources				
Decade	**Year**	**Source**	**Site Description**	**Vicinity Description**
	1938	EDR Aerial Photograph	Site appears developed for agricultural use (row crops). Dry wash is depicted along the western boundary of the Site. Small feature is depicted on the southeastern corner of the Site. Addition of main road adjacent to the north.	Adjacent and nearby properties appear developed for agricultural and residential use.
1940s	1941	Historical Topographic Map: Guasti Vicinity (7.5-minute)	No significant changes noted from prior Site history.	Addition of new arterial roads in the general vicinity and aqueduct to the south. No other significant changes noted from prior history.
	1944	Historical Topographic Map: Cucamonga (15-minute)	No significant changes noted from prior Site history.	Agricultural development to the east and northeast. No other significant changes noted from prior history.
	1949	EDR Aerial Photograph	No significant changes noted from prior Site history.	No significant changes noted from prior history.
Industrial Use				
1950s	1953	Historical Topographic Map: Guasti (7.5-minute)	Earliest topographic map depicting agricultural development of the Site. Unpaved road, trending north-south, transects the southern portion of the Site. Small structure is depicted in the southeastern corner.	Agricultural development to general surrounding area. Power plant, featuring multiple oil tanks, is present to the south of the adjacent railroad. Rail spur is depicted adjacent to the west. Etiwanda Creek is located approximately 0.25 mile to the east. Large industrial facility, identified as Kaiser Steel, is approximately 0.75 mile to the southeast.
		EDR Aerial Photograph	No significant changes noted from prior Site history.	Addition of large structure (potential cooling towers) to south adjacent facility. No other significant changes noted from prior history.
	1954	Historical Topographic Map: Ontario (15-minute)	No significant changes noted from prior Site history.	No significant changes noted from prior history.
	1959	EDR Aerial Photograph	Southeastern portion of the Site appears developed with an early configuration of the milling and rolling improvements, paved parking areas, outdoor storage yard, office building, water tower, and multiple rail spurs. Remaining areas of the Site remain developed for agricultural use.	Increased residential development to the east. No other significant changes noted from prior history.

Summary of Historical Sources				
Decade	**Year**	**Source**	**Site Description**	**Vicinity Description**
1960s	1966	Historical Topographic Map: Guasti (7.5-minute)	No significant changes noted from prior Site history.	Increased residential development to the east. Addition of Day Creek to the west. No other significant changes noted from prior history.
		EDR Aerial Photograph	Expansion of steel mill operations. Small structure on southeast corner identified as a water tank (WT). No other significant changes noted from prior Site history.	Development of industrial facilities to the northeast and west adjacent sites. Addition of industrial features to south adjacent power plant.
1970s	1973	Historical Topographic Map: Guasti (7.5-minute)	No significant changes noted from prior Site history.	Increased industrial development to nearby areas. No other significant changes noted from prior history.
	1975	EDR Aerial Photograph	Central portion of the Site appears graded and likely used for storage of raw, finished, or waste materials. Northern portion of the Site remains developed for agricultural use.	Increased industrial development in formerly agricultural areas. Addition of Highway I-15 to the west.
		General Telephone (GTE) Directories	Site occupied by Ameron Pipe Products, Steel Producing Division at 12459 Arrow Highway.	N/A
	1976	Historical Topographic Map: Ontario (15-minute)	Agricultural land use is no longer depicted on-Site.	Decreased agricultural development to nearby areas. No other significant changes noted from prior history.

Historical Agricultural Use

Based on a review of historical sources, the Site was used for agricultural purposes (row crops) as early as 1938 through approximately 1981. It is likely that agricultural chemicals were used on Site. It is likely that agricultural chemicals (possibly lead-or arsenic-based and organochlorine pesticides) were used on Site. The Site was developed for commercial/industrial use by the 1950s. Shallow soils that may have been impacted by agricultural chemicals were likely removed or shifted during grading and development activities. Based on the time elapsed since agricultural use and redevelopment of the Site, Roux considers the historical agricultural use to be an OEF in the context of the Phase I ESA.

Rail Spurs

Railroad spurs represent environmental concerns due to the historical application of oils containing PCBs, herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material. In addition, due to the historical use of the subject property for industrial purposes, the possibility for spills of hazardous substances and/or petroleum products during loading and unloading of railcars represents a concern. .

4.2 Environmental Lien Search

Roux requested from EDR a search for environmental liens on the property. No environmental liens or other Activity and Use Limitations were identified. Review of the environmental lien search did not reveal a recognized environmental condition (REC) at the Site not otherwise addressed in this report.

4.3 Building Permit Report

Roux requested from EDR a search for building permits from the City of Rancho Cucamonga, Building and Safety Department and San Bernardino County, Land Use, Building & Safety for the Site. The table below summarizes the permits identified by EDR. It is noted that the list below is non-exhaustive and that multiple building permits and similar were identified during the online and in-person file reviews. Review of the EDR permit report did not reveal evidence of a REC at the Site not otherwise addressed in this report.

Date	Owner or Permit Applicant	Permit Type	Permit Description
2006	TAMCO	Fire	Removal (4) 12,000-gallon underground fuel/oil tanks
2009	CMC Fabricators Inc – Fontana Steel	Structures	Remove existing 15,000-gallon liquefied petroleum gas (LPG) tank and replace with 1,150-gallon LPG tank with foundation
2009	TAMCO STEEL	Fire	Add enhanced vapor recovery (EVR) to existing underground storage tanks

5. Current Site Conditions

Roux representatives conducted a reconnaissance of the Site and surrounding areas on September 2, 2021. During the Site visit, Roux representatives Mr. Matthew Nelson and Mrs. Rocio Quinones met with Mr. Wade Fultz, plant engineer for CMC. Roux also visually and/or physically observed adjoining properties from reasonably accessible locations on the Site and public thoroughfares. During the Site reconnaissance, the weather was overcast, and the temperature was approximately 80° Fahrenheit. The following sections summarize observations during the inspection. Photographs taken during the Site reconnaissance are provided in Appendix G.

5.1 Site Reconnaissance

The Site consists of approximately 95 acres of land identified by Assessor's Parcel Numbers (APNs) 0229-121-34, 0229-121-33, 0229-131-19, and 0229-121-35 (Parcels 1 through 4, respectively). The Site is generally inactive and primarily occupied by CMC Rebar, which operates as a limited rebar manufacturing facility. The Site operated as a steel mill from the 1950s until 2019 when milling operations were phased out. The Site is bound by Arrow Route to the north and Atchison Topeka and Santa Fe Railroad (Railroad) to the south and is accessible via Arrow Route and Juneberry Drive. The main address for the Site is 12451 Arrow Route. However, additional addresses used at the Site include 12343, 12353, 12455, and 12459-B Arrow Route. As noted above, the Site consists of four parcels described below and shown on Figure 2.

- **Parcel 1** is located on the western portion of the Site and is not developed with any permanent structures. CMC utilized the northern portion of Parcel 1 as an equipment boneyard and the southern portion for storage of steel billets. The majority of Parcel 1 is vacant with some equipment storage in the northern portion and processed slag storage in the central portion.

- **Parcel 2** is located on the central and southern portions of the Site. The northern portion of Parcel 2 is partially occupied by Phoenix Industries, a steel slag processing tenant. On-Site operations consist of mechanical crushing and sorting of steel slag for off-Site use as aggregate material. No chemical processing of steel slag is conducted on Site. Chemical storage observed in this area is discussed below. No permanent structures were observed in this area. The northern portion of Parcel 2 was historically used for storage of scrap metal for processing and steel slag that was produced on Site. The southern portion of Parcel 2 is developed with the inactive CMC steel mill. The primary structure in this area is the primary processing building (melt shop) previously equipped with an electric arc furnace (EAF) for melting scrap metal. Additional structures and features located within this area include the following:

    - A guard shack;
    - Warehouse and maintenance building;
    - Silos;
    - Transformer station;
    - Baghouses;
    - A vehicle wash area;
    - Cooling towers; and
    - Rail spurs.

- **Parcel 3** is located on the eastern portion of the Site. The northern portion of Parcel 3 is equipped with the CMC main office building, fueling station, and a vacant area previously used for rebar

storage. The southern portion of Parcel 3 is developed with the inactive milling and rolling building. Additional structures and features located within this area include the following:

- A wash pad;
- Cooling tower;
- Weir (open-top clarifier);
- Reheat ovens;
- Mobile maintenance area;
- Warehouses;
- Bundling station;
- Rail spurs;
- Groundwater well; and
- Water tower.

- **Parcel 4** is located on the northern portion of the Site and is occupied by CMC Rebar which operates a limited rebar fabrication facility. Parcel 4 is equipped with the following:
  - Office and fabrication building;
  - Maintenance area;
  - Vehicle/equipment wash area with an oil collection trench and clarifier;
  - Parking area; and
  - Rebar storage yard.

The southeastern and southwestern portions of the Site are equipped with active rail spurs. A stormwater retention pond is located on the southwestern portion of the Site, between Parcels 1 and 2. A smaller stormwater retention pond is also located west of the water tower on the southeastern corner of Parcel 3.

Due to the size of the property and quantity of materials stored on Site, Roux was unable to observe all floor and ground surface areas. Features may be present that were not observed during the Site reconnaissance.

5.2 Phase I ESA Observations

During Site reconnaissance, Roux personnel attempted to identify any environmental features that may be relevant in the context of the Phase I ESA. The features identified are summarized in the table below. Any such features are discussed in the following subsections.

Feature	Observed on the Site	Observed on an Adjacent Property
Areas of stressed vegetation		
Areas which receive flood or storm water from potentially contaminated areas		
Air Compressor Vent Discharges		
Chemical Storage and/or Use	X	
Discharge Areas		
Discolored or Spill Areas	X	

Feature	Observed on the Site	Observed on an Adjacent Property
Drainage Swales and Culverts	X	
Drums (55 Gallons or Larger)	X	
Electrical Transformers	X	
Former Agricultural Applied Pesticide Area		
Hydraulic Lifts	X	
Incinerators		
Landfills or Landfarms	X	
Loading and Unloading Areas		
Non-Contact Cooling Water Discharge	X	
Oil-Water Separator(s) and Sump(s)	X	
Open Areas Away from Production Areas		
Process Area Sinks and Piping		
Rail Cars/Railroad Spurs	X	
Septic Systems Leach Fields or Seepage Pits		
Silos	X	
Sprayfields		
Storm Sewer and Spill Containment Collection System		
Stormwater Detention Pond	X	
Surface Impoundments and Lagoons		
Underground / Aboveground Storage Tanks and Associated Piping	X	
Waste Piles		
Wells	X	

5.2.1 Chemical Storage and/or Use

At the time of Roux' Site reconnaissance, CMC operations in Parcels 1, 2, and 3 has ceased and maintenance areas were vacant. Temporary hazardous waste storage areas were observed within a portion of the parts warehouse and along the southern boundary of Parcel 3. Chemical storage is further discussed below in Section 5.2.5.

Roux observed a former chemical storage area located northwest of the melt shop on Parcel 2. Observed signage indicates the area was previously used for storage of new and used oils. The former chemical storage area consists of an asphalt and concrete paved area that is partially bermed. Moderate staining and cracks were observed in the former chemical storage area. This area was not assessed as part of Ramboll's 2021 Site investigation. The former chemical storage area is considered a REC in the context of the Phase I ESA for the Site.

5.2.2 Cooling Water Discharge

A series of inactive concrete-paved, open-top, in-ground holding tanks were observed on the south and east sides of the melt shop building. The holding tanks previously used for storage of wastewater generated during operation of the former electric arc furnace. Wastewater stored in the holding tanks was reportedly pumped to nearby cooling towers. Potential subsurface impacts associated with these features were addressed as part of a previous Site investigation discussed in Section 6.0.

5.2.3 Discolored or Spill Areas

Minor to moderate staining was observed on asphalt- and concrete-paved ground surfaces throughout the former operational areas of the Site. Potential subsurface impacts associated with historical chemical use in these areas were addressed as part of a previous Site investigation discussed in Section 6.0.

Moderate staining was also observed in the parking area south of the temporary Phoenix Industrial maintenance shop. Based on the surficial nature of staining, chemical use in this area is not expected to represent a significant environmental concern.

5.2.4 Drainage Swales and Culverts

Roux observed drainage swales and trench drains throughout the southern portion of the Site (within Parcels 2 and 3). This feature appears to be utilized for stormwater runoff. Stormwater runoff is discharged into one of two stormwater detention basins and/or stormwater infiltration basin discussed below in Section 5.2.12.

Trench drains were also observed on ground areas in the vicinity of select cooling towers. According to Mr. Fultz, wastewater from the cooling towers was discharged into an oil/water separator (also identified as a clarifier) located south of the old baghouse building. Potential subsurface impacts associated with this feature were addressed as part of a previous Site investigation discussed in Section 6.0.

5.2.5 Drums (55 Gallons or Larger)

As discussed above, the Site is equipped with a temporary hazardous waste storage area located along the southern Site boundary. Roux personnel observed 55-gallon drums containing new and waste maintenance chemicals and hydraulic oils including non-PCB transformer oil and waste oil. Minor staining was observed on the concrete grounds area surrounding the drums. No cracks, drains, or other subsurface conduits were observed in this area.

Roux observed a temporary hazardous waste storage area located within the parts warehouse in Parcel 3. Several 55-gallon drums and carboard boxes containing 275-gallon totes in this area were observed or reported to contain waste disinfectant, waste detergent, waste oily water, and waste paint. No secondary containment was observed for any of the drums noted above and no significant staining or evidence of a release was noted. No cracks, drains, or other subsurface conduits were observed in this area.

Phoenix Industries operates as a slag processing facility on Parcels 1 and 2. Roux personnel observed a concrete-paved and bermed hazardous waste storage area located east of their maintenance shop building. Several 55-gallon drums and one 275-gallon tote in this area were observed or reported to contain antifreeze, hydraulic fluid, lubricant, used oil filters, and diesel exhaust fluid. Staining was observed within the concrete bermed area. No staining or evidence of a release was noted outside of the bermed area. Several 55-gallon drums were also stored outside of the storage area on an asphalt-paved area no secondary containment. Drums within this area were observed or reported to contain hydraulic fluid, diesel exhaust fluid, and lubricant. No staining or evidence of a release was noted, and no cracks, drains, or other subsurface conduits were observed in this area.

CMC Rebar operates as a maintenance shop on the east side of the fabrication building on Parcel 4. Roux personnel observed 2-gallon drums, used to used waste oily, on a secondary containment unit. Moderate staining and absorbent material were observed on the concrete floor surrounding the drums. One 275-gallon tote containing diesel exhaust fluid was observed adjacent to a diesel AST. No cracks, drains, or other subsurface conduits were observed in these areas. Roux also observed a metal hazardous waste storage structure equipped with several 55-gallon tanks and an empty AST. Drums within this area were observed or reported to contain used antifreeze and used oil filters. Significant staining and absorbent material were observed on the metal floor of the containment structure.

5.2.6 Electrical Transformers

Pad-mounted transformers were observed along the northern boundary of the Site. The observed transformers were pad-mounted with no observable staining. Based on the construction and appearance of the transformers, they do not appear to be wet-type, with the potential to contain polychlorinated biphenyls (PCBs). Roux does not consider the presence of these transformers to be an environmental concern.

According to Site personnel and previous reports, facility-owned transformers were located south of the rolling mill building. These transformers were reportedly installed in the 1950s during early Site development. According to a 2010 Phase I ESA reviewed by Ramboll, dielectric oil within the transformer was determined to contain PCBs at a maximum concentration of 17 parts per million. Roux personnel observed three empty transformer oil tanks and a 55-galon drum containing non-PCB transformer oil in a temporary hazardous waste storage area along the southern boundary of the Site. Mr. Fultz indicated that all former facility-owned transformer were drained and removed off Site. No staining or evidence of a release was observed in the temporary hazardous waste storage area. Potential subsurface impacts associated with PCB storage in the main production line area were addressed as part of a previous Site investigation discussed in Section 6.0.

5.2.7 Hydraulic Lifts

One aboveground hydraulic lift was observed in the maintenance shop area for CMC Rebar on Parcel 4. The lift was equipped with a small aboveground reservoir of hydraulic fluid. Minor surficial staining was observed at the base of the unit. Based on the surficial nature of the staining, the lift is not expected to represent a significant environmental concern in the context of this Phase I ESA.

5.2.8 Landfills or Landfarms

Baghouse dust wastes and slag generated from the steel mill furnace were historically buried in trenches on Parcel 4. Baghouse dust waste commingled with slag was historically stockpiled on Parcels 1 and 2. Previous remedial actions performed in these areas are discussed in Section 6.0.

Buried slag material, measuring generally between 2 and 6 inches in diameter, has reportedly been encountered during previous Site investigations. The slag material was primarily encountered in the western, northern, and southwestern portions of the Site at depths ranging from 1 to 10 feet with a thickness ranging between 0.1 and 10 feet. Slag fines (ranging from sand to dust size) and larger pieces of slag were also reportedly encountered. Buried slag materials present throughout the Site is considered an OEF in the context of this Phase I ESA.

5.2.9 Oil-Water Separator(s) and Sump(s)

Roux personnel observed a concrete-paved, open-top, in-ground trench, also identified as a weir, located southeast of the roll mill building. Cooling water from the roll mill was discharged into the weir and recirculated. At the time of Roux' Site reconnaissance, the weir was observed to be empty, with no cracks or damage to the floor. Potential subsurface impacts associated with this feature were addressed as part of a previous Site investigation discussed in Section 6.0.

The Site is equipped with a concrete-paved wash pad located southeast of the roll mill building. This feature was historically used for steam cleaning and pressure washing parts. Dark and oily staining, likely built up from years of use, was observed on this area. Wastewater discharged from the wash pad drained to two nearby concrete-paved sumps that function as a clarifier. Potential subsurface impacts associated with these features were addressed as part of a previous Site investigation discussed in Section 6.0.

Roux observed a three-stage oil-water separator located in the east of the CMC Rebar Fabrication building on Parcel 4. Wastewater from the neighboring wash area enters a trench drain and is discharged into the oil-water separator prior to being discharged into the municipal sewer system. The oil-water separator was not opened for inspection at the time of the Site reconnaissance. Staining and small pools of cleaning water were observed throughout the wash area. Potential subsurface impacts associated with this feature were addressed as part of a previous Site investigation discussed in Section 6.0.

During the Site reconnaissance, Roux observed a wash rack on the northern portion of Parcel 2. The wash rack appears to consist of a wheel wash system and was equipped with a sump. The sump area appeared to be equipped with a pump for removal of sludge waste into a neighboring roll off bin. Sludge waste removed from the area may be impacted with automotive fluids from vehicles and metals from processed slag piles. Wastewater stored in the wash rack could potentially be impacted with petroleum-related products and volatile organic compounds (VOCs), and therefore there is a reasonable likelihood that a release would have occurred. This area was not assessed as part of Ramboll's 2021 Site investigation. The wash rack area is considered a REC in the context of the Phase I ESA for the Site.

5.2.10 Rail Cars/Railroad Spurs

Roux personnel observed active rail spurs throughout Parcels 2 and 3. Environmental concerns associated with rail spurs are discussed above in Section 4.1.

5.2.11 Silos

Roux personnel observed two large silos north of the melt shop on Parcel 2. These silos were reportedly empty at the time of the Site reconnaissance and previously stored lime for use in the melt shop. Based on the solid nature of the materials, the former storage of lime at the Site is not expected to represent a significant environmental concern in the context of this Phase I ESA.

5.2.12 Stormwater Detention Pond

The Site features a stormwater detention pond located on the southwest corner. Stormwater runoff from central and western portions of the Site is reportedly routed via drainage swales into intermediate treatment points for separation of solids, oil, and grease and deposited into the detention pond. Based on the use of the detention pond solely for stormwater runoff, the presence of the pond is not expected to represent a significant environmental concern.

The Site also features a stormwater infiltration basin and stormwater detention pond located on the southeast corner. Stormwater runoff from the eastern portion of the Site and adjacent TI Wire facility is routed to the stormwater infiltration basin or detention basin. Based on the use of the infiltration basin and detention pond solely for stormwater runoff, the presence of these features is not expected to represent a significant environmental concern.

5.2.13 Underground / Aboveground Storage Tanks and Associated Piping

The Site features a fueling station equipped with one 12,000-gallon dual-compartment UST, located north of the main office building on Parcel 3. The UST is of steel and fiberglass construction and consists of one 10,000-gallon diesel compartment and one 2,000-gallon gasoline compartment. According to Mr. Fultz, both tank compartments were drained within the last year and there are no plans to refill them. The active UST area was assessed as part of Ramboll's 2021 Site investigation. No constituents of concern were identified above regulatory screening levels in soil and soil vapor samples collected in the vicinity of the active UST. Based on the long history of industrial operations at the Site and unknown age of this tank, there is a reasonable likelihood of a release of gasoline and/or diesel to the subsurface at the Site. Further investigation may be warranted during removal of this feature part of future redevelopment activities. The current 12,000-gallon gasoline and diesel UST is considered a REC in the context of this Phase I ESA.

Summary of Aboveground Storage Tanks					
Status	**Approximate Capacity (gallons)**	**Product Stored**	**Location**	**Construction**	**Secondary Containment**
Active	500	Diesel	Parcel 4 Maintenance Shop	Steel	Steel berm
Active	250	Dyed diesel	Parcel 4 Maintenance Shop	Steel	Steel pan
Active	500	Motor oil	Parcel 1, East of shop area	Steel	Concrete berm
Active	1,000	Diesel	Parcel 1, East of shop area	Steel	Concrete berm
Active	500	Hydraulic fluid	Parcel 1, East of shop area	Steel	Concrete berm
Active	500	Waste oil	Parcel 1, East of shop area	Steel	Concrete berm

No significant staining or evidence of a release was observed in the vicinity of the ASTs. No drains or other subsurface conduits were observed in the immediate vicinity of the ASTs.

5.2.14 Wells

A groundwater well was observed on the southeastern corner of the Site. According to a previous Phase I ESA report, the well is approximately 728 feet deep, and groundwater has been measured at a depth of 378 feet bgs. Water pumped from the well is used for dust suppression and not for potable use. Roux personnel observed an AST for water storage and an inactive water tower in the vicinity of the well. Although hazardous substances and petroleum products have been previously stored on Site, these materials were reportedly not stored in the immediate vicinity of the well. Therefore, the presence of the wells is not expected to represent a significant environmental concern.

5.3 Vapor Intrusion

Roux performed a vapor migration/intrusion pathway assessment. Historical use of the Site as a steel mill, including various fuel-related tanks and solvent use constitute a known source for potential vapor intrusion. Adjacent and nearby properties (specifically DP Etiwanda site adjacent to the east) may also constitute possible sources for vapor intrusion.

The former on-Site and nearby operations have been identified elsewhere in this report as RECs or OEFs.

6. Summary of Key Previous Investigations

The following sections provide a summary of previous environmental investigations at the Site, particularly in regard to the former steel milling operations at the Site.

6.1 Phase I Environmental Site Assessment (Ramboll, 2021A)

The following on-Site environmental hazards were identified by Ramboll during a Site reconnaissance conducted on March 19, 2021.

- Hazardous substances and petroleum products;
- ASTs;
- UST - one active 12,000-gallon dual compartment UST containing diesel and gasoline;
- Pools of liquid, standing surface water, or sumps;
- Transformer and hydraulic equipment likely containing PCBs;
- Stains or corrosion on interior floors, walls, or ceilings;
- Pits, ponds, and lagoons;
- Stained soil or pavement;
- Solid waste disposal areas; and
- Water well.

Ramboll provided summaries of previous Site investigations, discussed below. Copies of the previous investigation reports, as well as relevant regulatory documentation, were provided in Appendix D of the Ramboll 2021 Phase I ESA report (Ramboll, 2021A). Subsequent soil and soil vapor sampling conducted by Ramboll in these areas of concern are discussed below and in Ramboll's Phase II Subsurface Investigation Report (Ramboll, 2021B).

- 1988 Clean Closure Verification (Parcel 4), Slag Trench Remediation Area;
- 1990 Remediation of Lead Contaminated Soil at Southwest Corner of the Site (Parcel 1);
- 1993 UST Removals (Parcel 3);
- 1994 Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Preliminary Assessment (PA; Parcels 1, 2, and 3);
- 2001 Preliminary Endangerment Assessment (Parcel 4), Slag Trench Remediation Area;
- 2002 Baghouse Dust Commingled with Slag Stockpile Remediation (Parcels 1 and 2);
- 2006 UST Closure (Parcel 3);
- 2007 Remediation of Soils Impacted with Heavy Metals North of Pad 16 (Parcel 2);
- 2011 UST Removal (Parcel 2); and
- 2014 UST Removal (Parcel 4)

Ramboll discussed the findings of a concurrent Phase II Subsurface Investigation report (summarized below). Ramboll identified localized detections of total petroleum hydrocarbons in the diesel range (TPH-d), metals, and tetrachloroethene (PCE) in exceedance of screening levels and/or hazardous waste criteria as a REC.

6.2 Phase II Subsurface Investigation Report (Ramboll, 2021B)

Based on the findings of their Phase I ESA and at the direction of CMC, Ramboll performed a Site-wide Phase II Subsurface Investigation. At the time of the assessment, CMC was shutting down steel mill operations.

The objectives of the Phase II investigation, as stated by Ramboll, were to assess current soil and soil vapor conditions as part of CMC's shut down of operations (Ramboll, 2021b). The Phase II investigation evaluated point-source features of concern, including former USTs, clarifiers, cooling towers, chemical storage areas, and former remediation areas. Ramboll also conducted unbiased, Site-wide grid sampling to assess the extent and presence of buried slag and areas that had not previously been sampled.

Summary of Ramboll's General Phase II Findings

A total of 99 borings were advanced throughout the Site to depths ranging from 5 to 30 feet bgs. The initial phase of sampling consisted of the drilling of 69 borings. Based on the initial results, an additional 30 step-out borings were advanced during the second phase of fieldwork. Soil samples were collected and analyzed for metals, VOCs, and TPH at most locations, with select samples also analyzed for hexavalent chromium and/or PCBs. Soil vapor samples were collected at 26 locations and analyzed for VOCs.

Soil

Soil sample results were compared to US Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) and Department of Toxic Substances Control (DTSC) Office of Human and Ecological Risk (HERO) Human Health Risk Assessment (HHRA) Note No. 3 modified screening levels (SLs) for commercial/industrial soil. Soil samples were also compared to their respective total threshold limit concentration (TTLC) and soluble threshold limit concentration (STLC) criteria for hazardous waste characterization. The following constituents of concern were detected above commercial screening levels during the soil sampling phase of this investigation:

- **TPH-d** was detected above its SL of 560 milligrams per kilogram (mg/kg) in two locations during the initial sampling around: RSB-03 at 1-foot bgs (9,230 mg/kg) and RSB-05 at 1-foot bgs (2,210 mg/kg). Step-out samples were subsequently collected in the vicinity of the borings RSB-03 and RSB-05. TPH-d was reported in 11 step-out samples with 7 detections exceeding its SL. The highest detections of TPH-d were in samples collected at 1 foot and 3 feet bgs. Ramboll stated that the extent of TPH-d impacts was limited in lateral extent and depth. However, lateral extents at the 1-foot depth are undefined and the vertical extent at one location (RSB-05-S) was not defined.

- **Total lead** was detected above its SL of 320 mg/kg at two locations during the initial sampling round: RSB-02 at 3 feet bgs (2,910 mg/kg) and RSB-57 at 1-foot bgs (918 mg/kg) and 3 feet bgs (401 mg/kg). Several step-out samples were collected in the vicinity of borings RSB-02 and RSB-57 and lead was detected above its SL in three samples collected in step-out locations. Ramboll stated that the extent of lead impacts was limited in lateral extent and depth. However, lateral extents at the 1-foot depth are undefined.

- **Total cadmium, lead, and zinc** were detected at concentrations exceeding their respective TTLC limits. Exceedances were specifically identified in samples collected at RSB-43 (cadmium), RSB-02 (lead and zinc), and RSB-02-W (lead). One detection of soluble lead (31.8 milligrams per liter [mg/L]), collected from RSB-02 at 3 feet bgs, also exceeded its toxicity characteristic leaching procedure (TCLP) limit of 5 mg/L. No other metals exceeded their hazardous waste criteria limits. Ramboll made the general statement that removal of metals-impacted soil would need to be managed in compliance with state and federal law.

Soil Vapor

Soil vapor samples results were compared to USEPA commercial/industrial RSLs and DTSC SLs for air. Attenuation factors (AFs) used by Ramboll for the DTSC SLs were 0.001 AF and the more conservative 0.03 AF. Several VOCs were detected in soil vapor samples collected during the initial phase of the investigation; chloroform and PCE were the only constituents above their respective SLs (using an AF of 0.001).

- **Chloroform** was detected above its screening level of 530 micrograms per meter cubed (µg/m^3) in one soil vapor sample collected at RSB-32 at 30 feet bgs. Ramboll did not provide further discussion of chloroform impacts detected in soil vapor at the Site.

- **PCE** was detected above its SL of 2,000 µg/m^3 in soil vapor samples collected at RSB-54 at 5 feet bgs, RSB-54-CL at 15 feet bgs, and RSB-54-E at 5 feet bgs. According to Ramboll, PCE impacts in soil vapor were localized to one area (east portion of Parts Warehouse building) and were contained in the upper 15 feet. Ramboll stated that further soil vapor assessment and/or mitigation may be warranted in this area.

No additional soil vapor sampling was conducted during Ramboll's second phase of Phase II investigations.

Slag Material

Slag material, measuring generally between 2 and 6 inches in diameter, was encountered in 33 of 99 boring locations. The slag material was primarily encountered in the western, northern, and southwestern portions of the Site at depths ranging from 1 to 10 feet with a thickness ranging between 0.1 and 10 feet. According to Ramboll, slag fines (ranging from sand to dust size) and larger pieces of slag were also encountered. Ramboll recommended preparation of a Site-specific Soil Management Plan (SMP) to address slag material that may be encountered during excavation/earthwork and future redevelopment activities.

Groundwater was not encountered during Ramboll's Phase II investigation, which only extended to a maximum depth of 30 feet bgs. Groundwater has historically been encountered over 300 feet bgs.

ROUX OBSERVATIONS & COMMENTS

Soil

Ramboll collected step out soil samples at locations where TPH-d and total lead exceeded their respective SLs. The lateral extent of TPH-d and total lead impacts were not laterally or vertically delineated by some of the step out sample locations.

- **TPH-d** was detected above its SL of 560 mg/kg in two step out locations for RSB-03 at 1 foot bgs (RSB-03-E and RSB-S). At RSB-05, SL exceedances were detected at four step out locations at 0.5-foot bgs (RSB-05-SCL, RSB-05-S2, RSB-05-SSW, and RSB-05-SSE), at one step out location at 1-foot bgs (RSB-05-S), and at one step out location at 3 feet bgs (RSB-05-S).

- **Total lead** was detected above its SL of 320 mg/kg at one step out location for RSB-02 at 3 feet bgs (RSB-02-W) and at two step out locations for RSB-57 at 1 foot bgs (RSB-57-S and RSB-57-W).

Soil data collected by Ramboll in 2021 and historically by other investigators identified SL exceedances of TPH-d and metals in soil. Metals concentrations for cadmium, lead, and zinc exceeded TTLC and/or TCLP, which for disposal purposes would classify these soils as hazardous. TPH-d and metals SL exceedances are considered a REC in the context of Roux's Phase I ESA for the Site.

Soil Vapor

Ramboll compared VOCs detected in soil vapor samples using screening levels calculated with an AF of 0.001. Ramboll also presented screening levels using a more conservative AF of 0.03, which is used by regulatory agencies, including the Department of Toxic Substances Control (DTSC), but did not use those in its conclusions (Table 5 of the Phase II Report). The following VOCs exceeded their respective soil vapor commercial SLs using an AF of 0.03.

- **Chloroform** was detected above its SL of 17 $\mu g/m^3$ in four samples: RSB-25 at 5 feet bgs (60 $\mu g/m^3$) and 15 feet bgs (260 $\mu g/ m^3$), RSB-32 at 30 feet bgs (1,000 $\mu g/ m^3$), and RSB-43 at 15 feet bgs (30 $\mu g/ m^3$).

- **Benzene** was detected above its SL of 14 $\mu g/m^3$ in two samples: RSB-28 at 5 feet bgs (20 $\mu g/m^3$) and RSB-29 at 5 feet bgs (220 $\mu g/m^3$).

- **PCE** was detected above its SL of 67 $\mu g/m^3$ in 21 samples. The soil vapor samples in exceedance were collected from the following boring locations: RSB-30, RSB-38, RSB-53, RSB-54, RSB-60, and RSB-61.

Soil vapor data collected by Ramboll in 2021 showed SL exceedances for chloroform, benzene, and PCE. VOC SL exceedances are considered a REC in the context of Roux's Phase I ESA for the Site.

7. Database Records Review

7.1 Standard Environmental Record Sources

According to ASTM Standard E1527-13, the purpose of reviewing regulatory records is to obtain and review records that will help identify *recognized environmental conditions* in connection with the Site. In addition, some records to be reviewed pertain not only to the Site, but also to properties within an additional "approximate minimum search distance" in order to help assess the likelihood of problems from migrating hazardous substances or petroleum products. The basis of the "approximate minimum search distance" is the Site boundary.

Roux retained EDR of Shelton, Connecticut to provide an ASTM Radius Map Report (EDR Report) for this Site. This report is a computerized search of select state and federal environmental databases that identify various properties with a record of environmental activity. Roux reviewed the report and summarized the relevant findings in the following sections. A copy of the compiled EDR Report has been included as Appendix F. The EDR report includes a detailed description of each of the databases searched, providing a summary of the type of information provided by each. A summary of Roux' review of the EDR Report listings is provided in Table 1.

The following section describes the findings of the database search. Roux used professional judgement in determining which EDR-listed sites to include in the narrative of this report. Facilities adjacent to the Site were included due to their proximity to the Site and the potential for surface water discharges (e.g., storm water runoff, surface water effluent discharges) to enter the Site or through the migration of groundwater. Sites with listings indicative of a release (e.g., SHWS, LUST, RELEASE) are likewise discussed below. Nonadjacent facilities with database listings not necessarily indicative of a release (hazardous waste generator, FINDS, ECHO, NPDES, HAZNET, AST, or UST) will not be discussed unless considered potentially relevant in context of the Phase I ESA.

7.1.1 Site (Target Property)

Address	Owner/Operator	Database
12459-B Arrow Route	Phoenix Services LLC	San Bern. Co. Permit, CERS, CERS TANKS, CERS HAZ WASTE
	TAMCO	SEMS-ARCHIVE, PRP, RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC, UST, VCP, CERS HAZ WASTE, SWEEPS UST, HIST UST, EPA WATCH LIST, Cortese, HIST CORTESE, San Bern. Co. Permit, HWTS, HAZNET, FINDS, ECHO, NPDES, CIWQS, CERS, TSCA, ICIS, US AIRS, EMI, NPDES
	TERVITA LLC	RCRA NonGen/NLR, FINDS, ECHO, HAZNET, HWTS, ICIS, EMI, CERS
12459 Arrow Route	TAMCO	EMI, UST, LUST, AST, CHMIRS, NPDES, CIWQS, CERS, San Bern. Co. Permit, RGA LUST, FINDS, ECHO, ICIS, AST, WDS, HWTS,

Address	Owner/Operator	Database
		HAZNET, TSCA, CERS HAZ WASTE, CERS TANKS, TRIS, ENVIROSTOR
	SCE-AMERON SUBSTATION	AST, HAZNET, HWTS, CERS, San Bern. Co. Permit
	IWPAD INC	WDS, EMI
	PHOENIX SERVICES LLC	RCRA NonGen/NLR, FINDS, ECHO, HWTS, HAZNET

	FONTANA STEEL	WDS, FINDS, HWTS, HAZNET, UST

The EDR database report identified several listings for the CMC California Steel and historical operations at 12459 and 12459-B Arrow Route. Other entities for the Site identified in the database report include Phoenix Services, TAMCO, Tervita LLC, SCE Ameron Substation, IWPAD, Ameron Steel and Wire, Pipe Substation, TubeCity IMS LLC, United Slag Processing, Logistics Express, Gerdau Steel, and Olympic Mill Service. Pertinent Site listings are summarized here; however, detailed discussion of historical manufacturing activities, subsurface investigations, and completed remedial actions can be found in Section 6.0.

- The Site was listed as a “no further remedial action planned” (NFRAP) site in the SEMS-ARCHIVE database, a “no further action” site in the ENVIROSTOR database, a “case closed” site in the LUST

database, and a "completed – case closed" site in the CPS-SLIC database. Previous site investigations including regulatory oversight are discussed above in Section 6.0.

7.1.2 Adjoining and Nearby Properties

Discussions of adjoining (adjacent) and nearby properties of potential environmental concern as noted in Table 1 are provided below.

- **Parallel Products of California (12281 Arrow Route)**, located adjacent to the west, was listed several databases including the SLIC REG 8 database. According to the listing, Parallel Products in a "closed" SLIC for a release of total dissolved solids (TDS) and biochemical oxygen demand (BOD) substances in soil and groundwater. Roux accessed the SWRCB GeoTracker database to obtain more information; however, no release case number was listed. TDS and BOD are parameters used to measure water quality. Based on the lack of information indicating a release of hazardous substances or petroleum products, this adjacent site is not expected to represent a significant environmental concern in the context of this Phase I ESA.

- **Air Liquide (12550 Arrow Route)**, located adjacent to the north (across Arrow Route), was listed in several database including the LUST database. According to the listing, a release of diesel to soil was cleaned up with oversight of the County of San Bernardino. Impacted soil was reportedly excavated and disposed in an approved site. The release case was closed in February 1996. Roux accessed the SWRCB GeoTracker database to obtain more information; however, no additional pertinent information was available. Based on the affected media (soil only) and regulatory status, this adjacent site is not expected to represent a significant environmental concern in the context of this Phase I ESA.

- **Ameron International Co., Brine Facility (12455 Arrow Route),** located adjacent to the east, was listed in several database including the DEED database. According to the information obtained from the SWRCB GeoTracker database, this site was used as a landfill and has a land use/deed restriction due to elevated concentrations of soluble salts in underlying soils. According to a *Final Brine Pond Report* prepared by Fuscoe Engineering (dated June 28, 2016), the site was previously developed with a brine pond by AMERON International Corporation, a manufacturer of reinforced concrete pipe. As of 2014, the brine pone was lined and backfilled and a new concrete cap was constructed with approval of the Santa Ana RWQCB. A new deed restriction was issued in 2015 and the GeoTracker case was closed 2016. Based on the completed remediation, regulatory status, and media affected (soil only), this adjacent site is not expected to represent a significant environmental concern in the context of this Phase I ESA.

- **DP Etiwanda (8822 Etiwanda Avenue)**, located adjacent to the east, was listed in several databases including the ENVIROSTOR database. The status of the EnviroStor case is listed as "Certified O&M – Land Use Restrictions as of 10/22/2020." Roux accessed the DTSC EnviroStor database to obtain more information. According to the EnviroStor site history summary, previous site investigations have identified elevated concentrations of metals, TPH, and PCBs in soil. A land use covenant was recorded between the site owners and DTSC, restricting the site to commercial/industrial land use. Based on the proximity to the Site and known impacts to the subsurface, this adjacent site is considered an OEF in the context of this Phase I ESA.

- **Southern California Edison (SCE) – Etiwanda Generating Station (8998 Etiwanda Avenue)**, located adjacent to the south, was listed in several databases including the ENVIROSTOR database. The status of the EnviroStor case is listed as an active corrective action facility with oversight of DTSC. Roux accessed the DTSC EnviroStor database to obtain more information. According to the EnviroStor site history summary, SCE stored hazardous wastes in non-permitted wastewater retention basins. The site is divided into the following sub-areas: Inland Empire Utilities Agency (EIUA) Parcel and Black Creek Parcel. The Black Creek Parcel consists of the boiler chemical

cleaning basin, north wastewater retention basin, south wastewater retention basin, units 3 and 4 fireside wash system sediment trap, units 1 and 2 boiler acid wash drain system, units 1 and 2 fireside wash drain system, units 3 and 4 boiler acid wash drain system, and units 3 and 4 fireside wash drain system. According to records available from the DTSC EnviroStor database, previous site investigations identified limited VOC impacts to soil and soil vapor. In 2011, the retention basins were closed by SCE with DTSC oversight in 2011. In a letter dated December 29, 2011, DTSC issued a closure certification for the retention basin site. Based on the regulatory status and affected media (soil only), this adjacent site is not expected to represent a significant environmental concern in the context of this Phase I ESA.

- **Kaiser Steel (9400 Cherry Avenue)**, located approximately 0.8 mile to the southeast, was listed in several databases including the ENVIROSTOR database. The status of the EnviroStor case is listed as an active voluntary cleanup facility with oversight of DTSC for several releases to the subsurface. Roux accessed the DTSC EnviroStor database to obtain more information. According to a 2016 Remedial Action Plan, the former facility operations resulted in off-site groundwater plumes of TDS and total organic carbon (TOC), located over 1 mile southeast of the Site. Groundwater in this area has been encountered at depths greater than 300 feet bgs. Based on the off-Site location of the groundwater plume and depth to groundwater, this nearby release site is not expected to represent a significant environmental concern in the context of this Phase I ESA.

7.1.3 Orphan Sites

The EDR Report includes a section addressing “Orphan Sites.” Orphan sites are sites, which, due to incomplete geographic location data, incomplete address information or incorrect address information, cannot be plotted correctly. The database report identified four unmapped facilities. Based on the lack of a documented release and distance to the Site, these listings are not expected to represent a significant environmental concern in the context of this Phase I ESA.

8. Findings

Roux has performed this Phase I ESA in general compliance with the scope and limitations of ASTM Standard Practice E1527-13. Roux separated the findings of this assessment into the following four categories: *recognized environmental conditions*, *controlled recognized environmental conditions*, *historical recognized environmental conditions* and *other environmental features*.

8.1 Data Gaps

During conduct of this ESA, the following data gaps, as defined in ASTM Standard E1527-13 were identified:

- The timing of the report did not allow for all contacted agencies to respond to the records requests issued. This data gap is not considered significant due to sufficient information available from previous environmental reports, the EDR report, and city, county, and state websites.
- Previous Site owners/operators were not available for an interview. This data gap is not considered significant due to sufficient information regarding Site history available from EDR historical documents and PRA/FOIA requests.
- Due to the size of the property and quantity of materials stored on Site, Roux was unable to observe all floor and ground surface areas. Features may be present that were not observed during the Site reconnaissance.

8.2 Recognized Environmental Conditions

Based on the information obtained through the performance of this ESA, Roux identified the following RECs in connection with the current and historical operations at the Site or adjacent properties. To the extent possible, the locations of the RECs are shown in Figure 2. To avoid confusion, all RECs, cRECs, and hRECs, and OEFs are numbered sequentially.

REC 1 - Site-Wide TPH and Metals Impacts to Soil and VOC impacts to Soil Vapor. Ramboll conducted a Phase I ESA and Phase II Subsurface Investigation of the Site in April and June 2021. The subsurface investigation targeted features of concerns (discussed below) and included Site-wide grid sampling. Soil vapor data collected by Ramboll showed SL exceedances for chloroform (in three locations), benzene (in two locations), and PCE (in six locations). Soil data collected by Ramboll and historically by other investigators identified SL exceedances of TPH-d and metals in soil. Metals concentrations for cadmium, lead, and zinc exceeded TTLC and/or TCLP, which for disposal purposes would classify these soils as hazardous. Detections of VOCs, TPH-d, and metals above SLs are considered a REC in the context of this Phase I ESA.

REC 2 – Rail Spurs. Rail spurs have been in place on Site at Parcels 2 and 3 since at least 1959. Railroad spurs represent environmental concerns due to the historical application of oils containing PCBs, herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material. In addition, due to the historical use of the subject property for industrial purposes, the possibility for spills of hazardous substances and/or petroleum products during loading and unloading of railcars represents a concern. Based on the historical industrial use of the Site and age of these features, the on-Site rail spurs are considered a REC in the context of this Phase I ESA.

REC 3 – Current Diesel and Gasoline Underground Storage Tank. The Site features a fueling station equipped with one 12,000-gallon dual-compartment UST, located to the north of the main office building on Parcel 3. The UST is of steel and fiberglass construction and consists of one 10,000-gallon diesel compartment and one 2,000-gallon gasoline compartment. According to on-Site personnel, both tank compartments were drained within the last year and there are no plans to refill them. The active UST area was assessed as part of Ramboll's 2021 Site investigation. No constituents of concern were identified above regulatory screening levels in soil and soil vapor samples collected in the vicinity of the active UST. Based on the long history of industrial operations at the Site and unknown age of this tank, there is a reasonable likelihood of a release of gasoline and/or diesel to the subsurface at the Site. Further investigation may be warranted during removal of this feature part of future redevelopment activities. The current 12,000-gallon gasoline and diesel UST is considered a REC in the context of this Phase I ESA.

REC 4 – Former Chemical Storage Area (Parcel 2). During the Site reconnaissance, Roux observed a former chemical storage area located northwest of the melt shop on Parcel 2. Observed signage indicates the area was previously used for storage of new and used oils. The former chemical storage area consists of an asphalt and concrete paved area that is partially bermed. Moderate staining and cracks were observed in the former chemical storage area. This area was not assessed as part of Ramboll's 2021 Site investigation. The former chemical storage area is considered a REC in the context of the Phase I ESA for the Site.

REC 5 – Wash Rack (Parcel 2). During the Site reconnaissance, Roux observed a wash rack on the northern portion of Parcel 2. The wash rack appears to consist of a wheel wash system and was equipped with a sump. The sump area appeared to be equipped with a pump for removal of sludge waste into a neighboring roll off bin. Sludge waste removed from the area may be impacted with automotive fluids from vehicles and metals from processed slag piles. Wastewater stored in the wash rack could potentially be impacted with petroleum-related products and VOCs, and therefore there is a reasonable likelihood that a release would have occurred. This area was not assessed as part of Ramboll's 2021 Site investigation. The wash rack area is considered a REC in the context of the Phase I ESA for the Site.

REC 6 - Potential Inactive On-Site USTs. Based on a review of previous reports and regulatory agency records, the Site has been equipped with at least 24 USTs previously used to stored gasoline, diesel, fuel oil, or waste-oil. Limited information was available regarding the location, installation, or removal for 10 of the 24 documented USTs. Records indicating a subsurface investigation associated with the reported removal of some of the tanks were not available to review. Additional information regarding on-Site USTs may be on file with the San Bernardino County Fire Department (SBCFD). These inactive USTs may be present on-Site and may have resulted in a release of petroleum products. The potentially inactive USTs are therefore considered a REC in the context of this Phase I ESA.

8.3 Historical Recognized Environmental Conditions

Roux identified the following hRECs in connection with the current and historical operations at the Site or adjacent properties. To the extent possible, the locations of the hRECs are shown in Figure 2.

hREC 1 – Lead Remediation Area (Parcel 1). Lead-contaminated soil at the southwestern corner of the Site (Parcel 1) was remediated via detoxification (stabilization) between 1989 and 1990. On

November 7, 1990, the SA-RWQCB issued a letter of no further action for this area. The former lead-impacted soil at the southwestern corner of the Site is considered an hREC in the context of this Phase I ESA.

hREC 2 – Former Fuel Oil USTs (Parcel 3). In November 1993, four fuel oil USTs, totaling approximately 50,000 gallons, were removed from Parcel 3. Approximately 474 cubic yards of impacted soil were excavated and removed from the Site. In a letter dated April 28, 1994, the SBCDEHS determined no further action was required. The former fuel oil USTs are considered an hREC in the context of this Phase I ESA.

hREC 3 – Metals-Impacted Soil (Parcel 1). According to a previous report, metals-impacted soil from the southwest corner of the Site (Parcel 1), which were treated and stabilized under DTSC oversight between 1989 and 1990, was used as backfill for the excavation of the four fuel oil USTs removed in 1993. The backfilled fuel oil UST excavation is considered an hREC in the context of this Phase I ESA.

hREC 4 – Slag Trench Remediation (Parcel 4). Baghouse dust wastes and slag generated from the steel mill furnace were historically buried in trenches on Parcel 4. In 1988, baghouse dusts were excavated from the area and confirmation sampling was performed under DTSC oversight. DTSC concluded that remaining metals concentrations met health-based criteria for unrestricted land use and issued a letter of approval dated December 20, 2001. The slag trench remediation area in Parcel 4 is considered an hREC in the context of the Phase I ESA.

hREC 5 – Slag Remediation Area (Parcels 1 and 2). Baghouse dust waste commingled with slag was historically stockpiled on Parcels 1 and 2. Under oversight of the SBCFD, a RAP was prepared and implemented to treat impacted materials. In a letter dated July 2, 2002, the SBCFD determined no further action was required. However, a copy of the RAP and SBCFD closure letter were not provided to Roux. The former slag stockpile remediation area on Parcels 1 and 2 are considered an hREC in the context of the Phase I ESA.

hREC 6 – Former Diesel USTs (Parcel 3). A total of four 12,000-gallon diesel USTs were removed from Parcel 3 in 2006. Confirmation sampling did not identify reportable concentrations of TPH or VOCs in soil. In a letter dated October 6, 2006, the SBCFD determined no further action was required. The four former diesel USTS removed from Parcel 3 are considered an hREC in the context of the Phase I ESA.

hREC 7 – Former Diesel UST (Parcel 2). In November 2010, one 300-gallon diesel fuel UST located southwest of an emergency generator was removed from Parcel 2. One confirmation soil sample was collected from beneath the tank excavation at approximately 6.5 feet bgs. A UST closure report was submitted to the SBCFD for review. In a letter dated March 7, 2011, the SBCFD determined that no further investigation was warranted at the time. The former 300-gallon diesel fuel UST previously located on Parcel 2 is considered an hREC in the context of the Phase I ESA.

hREC 8 – Former Diesel UST (Parcel 4). In June 2014, one 12,000-gallon diesel UST and associated dispenser equipment was removed from the eastern portion of Parcel 4. Confirmation sampling identified residual concentrations of TPH-d in all three soil samples. In a letter dated October 29, 2014, SBCFD determined that no further action was required regarding the former diesel UST. The former 12,0000-

gallon diesel fuel UST previously located on Parcel 4 is considered an hREC in the context of the Phase I ESA.

8.4 Controlled Recognized Environmental Conditions

Roux identified the following cRECs in connection with the current and historical operations at the Site or adjacent properties. To the extent possible, the locations of the cRECs are shown in Figure 2.

cREC 1 – Pad 16 Remediation Area. In January 2005, DTSC collected surface soil samples in and around a scrap metal storage area in Parcel 2 during a Site visit. Analysis of the samples indicated an area of soil located north of scrap piles 12 and 16 was impacted with heavy metals above hazardous waste classification criteria. In November 2005, metals-impacted soils were excavated, and surface soils were screened until the screening demonstrated acceptable levels. Excavated soils that passed the cleanup criteria were returned to the excavation as backfill and "a small amount" of crushed slag was used to bring the area to grade. The remediated area was paved with asphalt to avoid future recontamination. Soils that exceeded cleanup criteria were transported off Site for disposal. Tamco, the Site owner at the time, and DTSC signed a Consent Order dated April 26, 2007, detailing the completed remediation activities. Based on the completed remediation of metals-impacted soils and implementation of a DTSC Consent Order, the former metals-impacted soils north of Pad 16 in Parcel 2 are considered a cREC in the context of the Phase I ESA.

8.5 Other Environmental Features

OEFs are environmental conditions that do not meet the definition of a REC, cREC, or hREC, but which may warrant mention in a comprehensive Phase I ESA. Based on the subject Phase I ESA, Roux identified the following OEFs at or in the vicinity of the Site. To the extent possible, the locations of the OEFs are shown in Figure 2.

OEF 1 – Historical Site-Wide Agricultural Use. Based on a review of historical sources, the Site was used for agricultural purposes (row crops) as early as 1938 through approximately 1981. It is likely that agricultural chemicals were used on-Site. It is likely that agricultural chemicals (possibly lead-or arsenic-based and organochlorine pesticides) were used on-Site. The Site was developed for commercial/industrial use by the 1950s. Shallow soils that may have been impacted by agricultural chemicals were likely removed or shifted during grading and development activities. Based on the time elapsed since agricultural use and redevelopment of the Site, Roux considers the historical agricultural use to be an OEF in the context of the Phase I ESA.

OEF 2 – Nearby DP Etiwanda Site. The east adjacent site, identified as DP Etiwanda at 8822 Etiwanda Avenue, was listed in several databases including the ENVIROSTOR database. The status of the EnviroStor case is listed as "Certified O&M – Land Use Restrictions as of 10/22/2020". Roux accessed the DTSC EnviroStor database to obtain more information. According to the EnviroStor site history summary, previous site investigations have identified elevated concentrations of metals, TPH, and PCBs in soil. A land use covenant was recorded between the site owners and DTSC, restricting the site to commercial/industrial land use. Based on the proximity to the Site and known impacts to the subsurface, this adjacent site is considered an OEF in the context of this Phase I ESA.

OEF 3 – Site-Wide Buried Slag Material. Buried slag material, measuring generally between 2 and 6 inches in diameter, has reportedly been encountered during previous Site investigations. The slag

material was primarily encountered in the western, northern, and southwestern portions of the Site at depths ranging from 1 to 10 feet with a thickness ranging between 0.1 and 10 feet. Slag fines (ranging from sand to dust size) and larger pieces of slag were also reportedly encountered. Slag material typically is not considered a hazardous or petroleum-containing material. Buried slag materials present throughout the Site is considered an OEF in the context of this Phase I ESA.

10. Signature of Environmental Professional

Roux performed this assessment in accordance with the generally accepted practices for environmental assessments at the time of implementation. Roux made a reasonable effort to ensure that the information presented in this report is materially complete and accurate.

Roux completed a Phase I ESA in general compliance with the scope and limitations of ASTM Practice E1527-13 of the industrial property located at 12451 Arrow Route, Rancho Cucamonga, San Bernardino County, California.

“We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312” and,

“We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.”

Roux performed this Phase I ESA by, or under direct supervision of, the undersigned environmental professionals.

Respectfully Submitted,

ROUX ASSOCIATES, INC.

Matthew Nelson, P.E.
Senior Engineer

Mauricio Escobar, P.G.
Principal Geologist

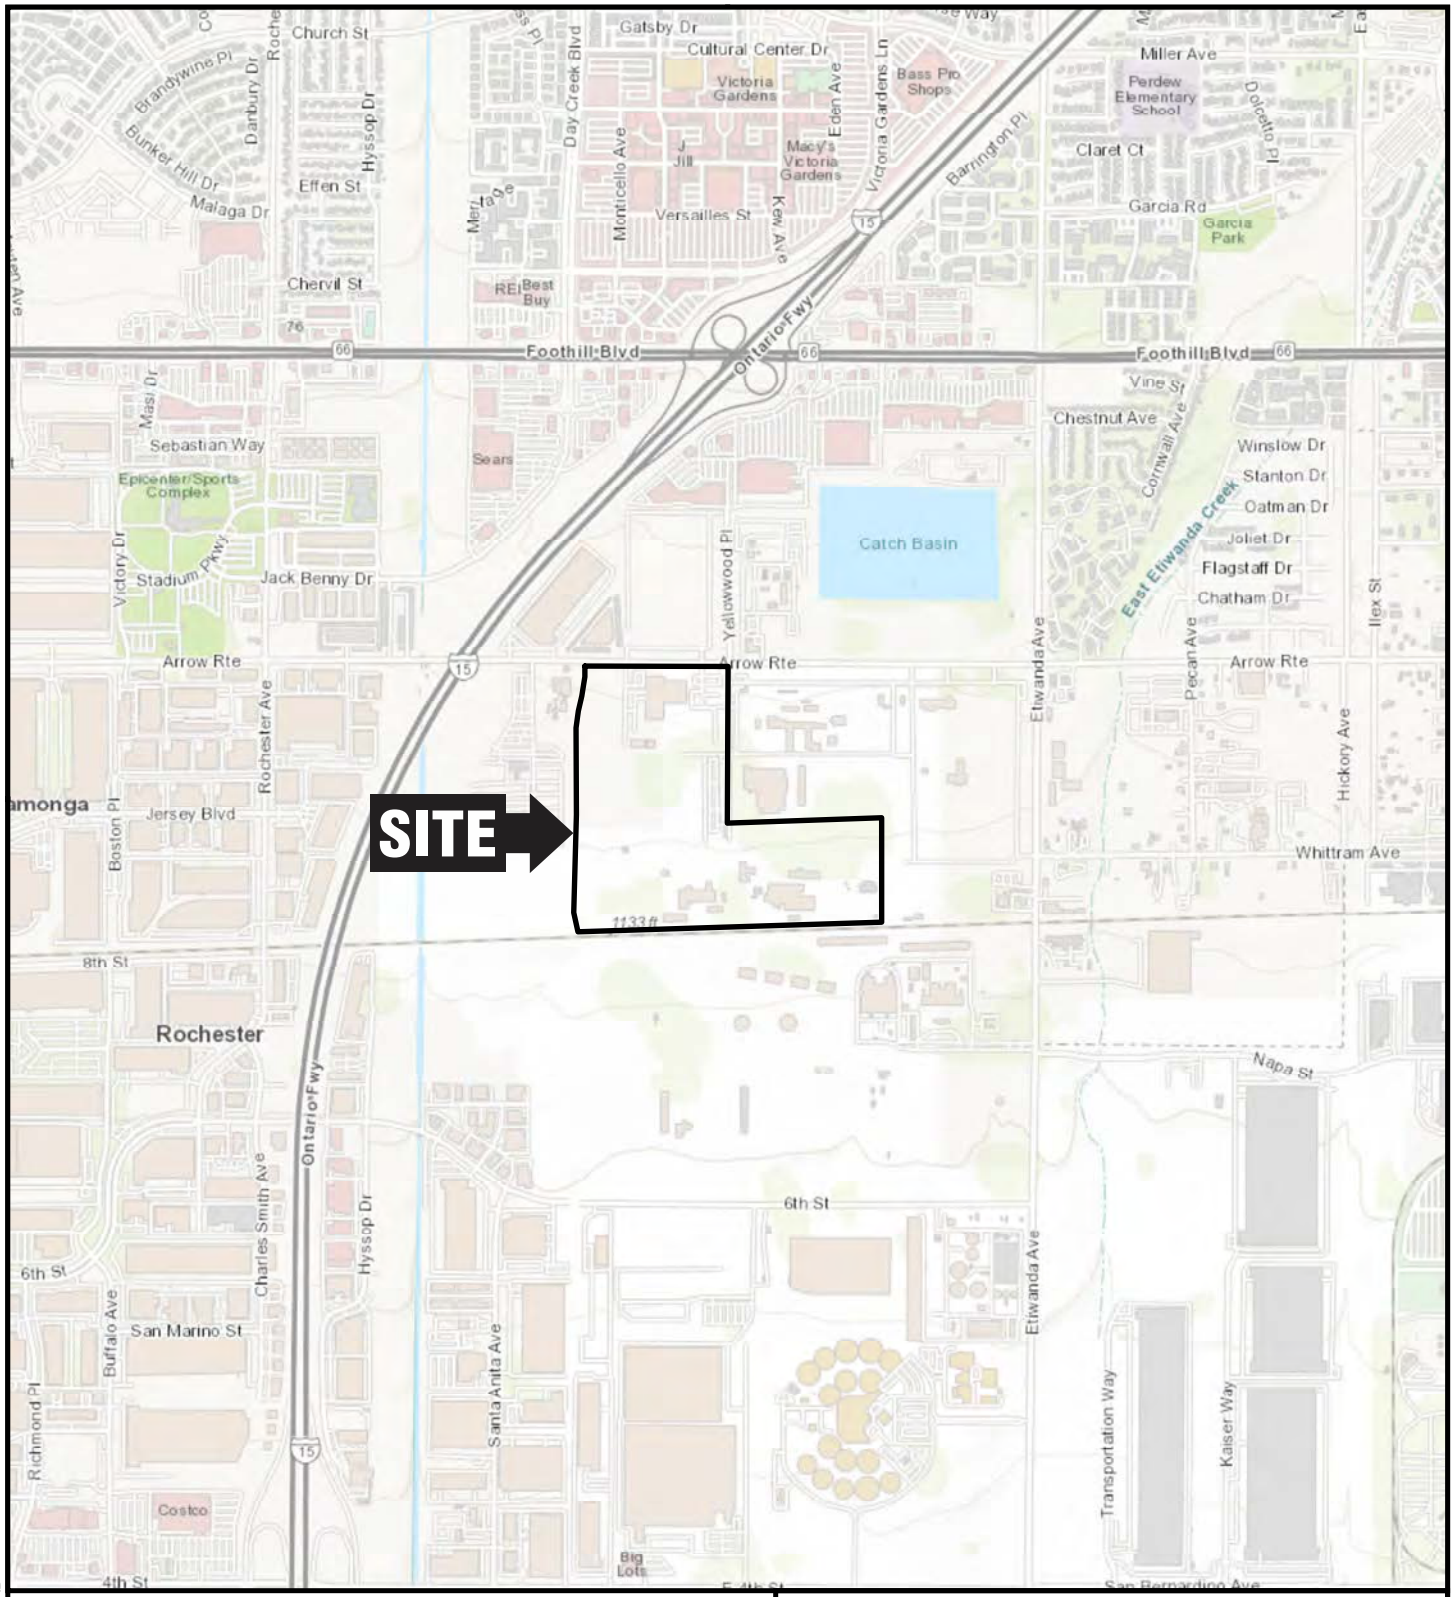
Notes



Blue: Facility does not have associated database listings indicative of a release or contamination

Green: Facility is hydraulically downgradient or crossgradient and/or is a closed release case

Orange: Facility has an associated release case impacting soil only and/or VOCs are not a potential contaminant of concern

Current Conditions Report
Former Commercial Metals Company (CMC) Facility
12451 Arrow Route
Rancho Cucamonga, California

October 24, 2023

Prepared By:

Peter Shimer, P.G.
Senior Geologist

Mauricio H. Escobar, P.G.
Vice President / Principal Geologist

Roux Associates, Inc.
5150 East Pacific Coast Highway, Suite 450
Long Beach, California 90804

Executive Summary

Roux Associates, Inc. (Roux), on behalf of BTC III Arrow Route CC LP (BTC III), prepared this *Current Conditions Report* (CCR) for the approximately 95-acre Former Commercial Metals Company (CMC) facility located at 12451 Arrow Route, Rancho Cucamonga, California (Site; Figure 1). The Site operated as a steel mill from the 1950s until 2019 when milling operations were phased out (Figure 2A). The Site was acquired by BTC III in December 2021 for industrial redevelopment (Figure 3). A photographic log of Roux's 2021 Site reconnaissance is included as Appendix A. In 2022 and 2023, all aboveground features of the Site were demolished along with most hardscape surfaces and footings.

The Site is located in an industrial area of the City of Rancho Cucamonga (Figure 2B) and consists of four (4) individual parcels, referred to as Parcels 1 through 4. Based on historical environmental reports, the Site was agricultural (row crops) until 1956, when it was developed as a steel mill and rebar fabrication facility in various phases and by various owners between the mid-1950s and the 1990s. The following is a brief history of the Site use and development.

- In 1956, the American Pipe and Construction Company started operation of a roll mill on the southern portion of Parcel 3. Production at the Site included coiled rebar made from ingots and straight rebar made from billets. The plant was later named Ameron Steel & Wire.
- Between 1974 and 1976, Tokyo Steel, Ameron (formerly American Pipe and Construction), and Mitsui Corporation formed by a consortium called TAMCO. TAMCO built a Melt Shop at the southern portion of Parcel 2. TAMCO made and sold billets to Ameron Steel & Wire (in Parcel 3) for production of straight rebar.
- In 1982 or 1983, the Melt Shop (Parcel 2) and Roll Mill (Parcel 3) became a part of TAMCO.
- In 1988 or 1989, Fontana Steel (a separate entity) acquired Parcel 4, which was vacant, and improved it with a steel rebar fabrication shop, an office building, and a maintenance shop.
- In 1995, Fontana Steel constructed a washrack area south of the maintenance shop in Parcel 4, which included a concrete wash pad, a three-stage clarifier, and an aboveground oil removal system.
- Between approximately 1996 and 2000, Parcel 1 was purchased by TAMCO from Southern California Edison (SCE). Parcel 1 was historically vacant, unimproved land.
- In approximately 2000, CMC Steel Fabricators, Inc. (CMC) purchased certain assets from Fontana Steel, which included Parcel 4.
- In approximately 2010, TAMCO became owner of Parcel 3, which was owned by Ameron.
- In 2018, CMC acquired the stock of TAMCO and the current 95-acre Site (Parcels 1 through 4) was formed.

As summarized above, on-Site industrial activities have been generally uniform and consistent across the Site. Parcel 1 has never been developed with any permanent structures and was historically used as an easement by SCE. Historical records show that during the time of SCE's ownership, the southern portion of Parcel 1 was raised in elevation using slag as fill. After acquisition by TAMCO, the central and southern portions of Parcel 1 were used for surface storage and processing of slag; the northern portion (adjacent to the west of Parcel 4) was used as an equipment boneyard. Parcel 2 was improved by TAMCO in the mid-1970s with a Melt Shop and associated infrastructure. Until decommissioned in 2019 and subsequent demolition, structures and uses of Parcel 2 remained the same as when originally developed. Similarly, in the 1950s Parcel 3 was developed as a Roll Mill and in 1989 Parcel 4 was developed as a rebar fabrication facility; both parcels were used for the same purposes until decommissioned in 2019.

In general, the facility produced steel rebar from scrap steel. Production of billets and rebar began with receipt of shredded scrap metal. The metal was sorted and stored in piles on the northern portion of Parcel 2 (and later on Parcel 1) and was eventually transported to the Melt Shop (Photograph A-3) where alloys were added to obtain the desired grades of steel. The molten steel was poured and cast into billets for use as raw material for the Roll Mill (Photograph A-2), or to sell to outside parties. The billets were stored outside in the southwestern portion of Parcel 2 (and later on Parcel 1) until they were transported to the reheat oven at the Roll Mill in Parcel 3. The hot billets were rolled into steel rebar of different diameters. The rebars were cut, bundled, and then stored outside on the northeastern portion of Parcel 3, or loaded into trucks or railcars for shipment to customers. At Parcel 4, reinforcing steel was purchased from outside vendors (including TAMCO) and received in lengths of stock up to 72 feet. The steel was sheared using electric or hydraulic powered shearlines, then bent to specification using electric bending machines. Coiled steel was also brought in for cutting and forming. Once cut to specification, welding was sometimes needed to complete the product. Fabrication activities at Parcel 4 included sorting, bending, shearing, welding, storage, and transport. No melting of steel occurred, and no wet chemical processing was conducted (i.e., degreasing, painting, coating, or other chemical treatment) on Parcel 4. The finished product was loaded onto flatbed trucks and transported off-Site for use.

Former underground storage tanks (USTs) containing fuel oil were originally used to fire the Roll Mill furnace. The USTs were removed in the 1990s and fuel oil was replaced by natural gas.

The primary raw materials used at the Site included scrap metal, lime, carbon, silicomanganese, and refractory additives. In addition, TAMCO used maintenance-related materials, such as fuels, oils, lubricants, greases, solvents, welding gases, cooling tower treatment chemicals, and sanitizers and detergents. The facility operated six cooling water loops that provided non-contact cooling water (four systems for the Melt Shop, continuous molds, and reheat furnace) and contact cooling water (two systems for the continuous caster sprays and roll mill sprays) to the facility. Byproducts produced during the steel milling process included slag and baghouse dust.

Slag produced during the melting of scrap metal was physically broken off the molten ore buckets with pneumatic hammers and transported to stockpiles in the central portion of the Site. In the 1970s, slag material was reportedly stored on the northern portion of Parcel 2 and southern portion of Parcel 4, and it is known that some slag was historically buried in Parcel 4 and used by SCE to raise the elevation of the southern portion of Parcel 1. Slag was also used over the years as base material in areas that were unpaved and as fill where needed. Slag was stockpiled on-Site and sold by independent contractors to outside industries, including for use as road base.

Baghouse dust was generated at the Melt Shop and for disposal purposes has been regulated under the Resource Conservation and Recovery Act (RCRA) since the late 1970s/early 1980s because of the heavy metal content in its composition. Baghouse dust was the primary hazardous waste generated at the Site and was managed by TAMCO and its successors in accordance with South Coast Air Quality Management District (SCAQMD) and RCRA regulations. Prior to RCRA regulations, baghouse dust was stored on-Site and some materials mixed with slag were buried (later removed) in Parcel 4. After regulation, baghouse dust was removed from the Site by rail and exported for recycling.

Beginning in the late 1980s, Parcels 2, 3, and 4 were the subject of environmental investigations, remedial actions, and UST removals that involved oversight from various environmental regulatory agencies, including the California Department of Health Services (DHS), the Santa Ana Regional Water Quality Control

Board (SA-RWQCB), San Bernardino County Environmental Health Services Department (SBCEHSD), United States Environmental Protection Agency (USEPA), Department of Toxic Substances Control (DTSC), San Bernardino County Fire Department (SBCFD), San Bernardino County Fire Protection District (SBCFPD), and the Rancho Cucamonga Fire Protection District (RCFPD).

Sections 2.6 and 3 of this CCR detail historical environmental investigation and remediation activities conducted at the Site, including regulatory oversight. As of the date of this CCR, no open regulatory cases for historical releases or investigation activities were open with any oversight agency.

Subsurface investigations were conducted by CMC, the former Site owner, in 2020 as part of Site disposition. Roux, on behalf of BTC III, continued those investigations prior to acquisition in 2021 and post-acquisition in 2022 and 2023, in preparation for Site redevelopment. Roux conducted Site-wide, as well as targeted, investigations, including shallow soil sampling for metals and total petroleum hydrocarbons (TPH) as diesel range organics (DRO) at Parcels 2 and 3; targeted polychlorinated biphenyl (PCB) investigations on Parcels 2 and 3; soil vapor sampling and soil vapor extraction (SVE) pilot testing on Parcel 3; and potholing and trenching to investigate slag and slag materials (combined soils and slag) on Parcels 1 and 2 (with some limited work in Parcels 3 and 4). Based on the comprehensive work completed to date, Roux reached the following conclusions:

- DRO and metals concentrations exceed commercial/industrial screening levels (SLs) in shallow soils (less than 5 feet bgs) in limited areas of Parcels 2 and 3. These areas require additional investigation and potentially remediation.
- PCE, benzene, TCE, and chloroform concentrations in soil vapor in the central portion of Parcel 3 exceed screening levels and will require remediation. An initial short-term pilot test suggests that SVE is a viable remedial alternative. However, additional delineation has been requested by DTSC and Roux recommends an extended SVE pilot test.
- Two small areas at the southern portion of the Site (one each in Parcels 2 and 3) have limited PCB impacts, which require additional sampling and remediation.
- Slag, where present, will need to be evaluated for geotechnical purposes, but is generally inert and does not present a human health risk to future commercial/industrial construction workers or occupants of the Site. In support of ruling out whether slag has the potential to leach metals that could impact groundwater, DTSC has suggested that a Site-specific leaching model (i.e., SESOIL or VLEACH) be used in a future evaluation. Roux will incorporate this suggestion into future work at the Site.
- Parcel 1 was never developed with permanent structures, and is generally unaffected by former industrial activities. The southern portion of Parcel 1 was reportedly raised using slag as fill when SCE was owner and a small portion of the southwestern corner was remediated for surface lead impacts in the early 1990s. Slag has been investigated by Roux and prior investigators, and lead impacts were remediated to the satisfaction of SA-RWQCB. No additional investigation or remediation is considered necessary for Parcel 1.
- Parcel 4 was historically impacted by burial of slag and baghouse dust prior to its development. Impacts from baghouse dust were remediated in the late 1980s and in 2001 re-evaluated and further investigated under the oversight of DTSC. DTSC provided concurrence that no additional investigation/remediation was warranted. Additionally, features of interest after development were

investigated by Roux and prior investigators. To date no impacts have been identified, and Parcel 4 is not expected to require additional investigation or remediation.

Section 6 of this CCR provides the current conceptual site model (CSM) and identifies data gaps. Section 7 provides a Workplan to close data gaps associated with DRO and metals in soil across the Site as well as two areas of chloroform impacted soil vapor in Parcel 2. In addition, under separate cover, Roux has submit ed the following documents, which propose characterization and delineation activities at specific areas of the Site:

- Soil Vapor Delineation and SVE Extended Pilot Test Workplan, dated September 1, 2023;
- Technical Memorandum, Targeted Shallow Soil Investigation for Polychlorinated Biphenyls (shallow soil sampling near RR-3 in Parcel 3), dated August 25, 2023.

The recommended scopes of work included in the above documents along with the investigation recommended in Section 7 of this CCR will be implemented with DTSC approval to complete the remedial investigation for the Site so that remedial strategies can be developed to facilitate commercial/industrial redevelopment.

1. Introduction

Roux Associates, Inc. (Roux), on behalf of BTC III Arrow Route CC LP (BTC III), prepared this *Current Conditions Report* (CCR) for the approximately 95-acre Former Commercial Metals Company (CMC) facility located at 12451 Arrow Route, Rancho Cucamonga, California (Site; Figures 1, 2A, and 2B). Specifically, BTC III is in the process of redeveloping the Site for commercial purposes with five warehouse buildings ranging from approximately 70,000 to 1,000,000 square feet (Figure 3). A Standard Voluntary Agreement (SVA), docket number I-FY20/21-129, between BTC III Arrow Route CC LP and the California Department of Toxic Substances Control (DTSC) was signed by BTC III Arrow Route CC LP and sent to DTSC via email on October 4, 2022. The DTSC executed the SVA, docket I-FY20/21-129, on October 12, 2022. This CCR was prepared at the request of DTSC as part of the Site assessment process. Where appropriate, this CCR incorporates comments received from DTSC on June 5, 2023, related to Roux's Subsurface Investigation Report, dated April 6, 2023. The CCR includes a conceptual site model (CSM) and includes a Workplan for additional sampling to close the remaining data gaps.

1.1 Objectives

This CCR provides a detailed summary of the ownership and operational history of the Site, a summary of all known and applicable environmental investigations and remediation completed at the Site, and a CSM, which identifies current Site conditions and remaining data gaps. The CCR also includes a Supplemental Site Investigation Workplan to address remaining data gaps, complete the Remedial Investigation (RI) for the Site, and allow for development and implementation of remedial strategies.

The objectives of this CCR are to:

- Present the complete history of the Site, including former uses and historical environmental activities;
- Evaluate the nature and extent of chemicals of potential concern (COPCs) in Site soils and soil vapor;
- Identify all remaining data gaps to complete the RI; and
- Propose additional investigation activities to address remaining data gaps.

This CCR relies upon numerous reports prepared by multiple consultants for multiple Site owners beginning in the late 1980s. Where appropriate, the documents are referenced and summarized.

1.2 Report Organization

The remaining sections of this CCR are organized as follows:

- Section 2.0 presents a complete history of the former facility;
- Section 3.0 presents a summary of all pertinent and available environmental documents for the Site;
- Section 4.0 presents the Site's environmental setting;
- Section 5.0 describes the most recent sampling results for the Site and DTSC's recent review comments;
- Section 6.0 presents the CSM and includes a data gap evaluation;

- Section 7.0 presents a Workplan for investigations to address data gaps identified in the CSM and complete the RI;
- Section 8.0 presents an implementation schedule for upcoming activities at the Site; and
- Section 9.0 provides a list of references used in this CCR.

Supporting figures are presented in this CCR; additional relevant information is presented in the following appendices:

- Appendix A – Photographic Log
- Appendix B – Historical Documents
- Appendix C – Health and Safety Plan (HASP)
- Appendix D – Standard Operating Procedures (SOPs)

2. Site History

2.1 Site Description

The Site consists of four parcels totaling approximately 95-acres (Figures 2A and 2B). The individual parcels are described as follows:

- "Parcel 1" – 19.03-acre parcel in the western portion of the property (Assessor's Parcel Number [APN] 0229-121-34-0000);
- "Parcel 2" – 30.04-acre parcel in the southern and western portions of the property (APN 0229-121-33-0000);
- "Parcel 3" – 30.72-acre parcel in the southern and eastern portions of the property (APN 0229-131-19-0000); and
- "Parcel 4" – 14.34-acre parcel in the northern portion of the property (APN 0229-121-35-0000).

As presented in Figure 2B, the Site is bounded to the south by Atchison Topeka Santa Fe Railroad, followed by the former Etiwanda Generating Station (8998 Etiwanda Avenue); to the west by Parallel Products, a chemical manufacturer (12281 Arrow Route), and Copart, a vehicle auction facility (12167 Arrow Route); to the north by Arrow Route, followed by Planet Storage, a self-storage facility (12330 Arrow Route), Steelcase, a warehouse (12400 Arrow Route), and Air Liquide America, an industrial gas supplier (12550 Arrow Route); and to the east by Juneberry Drive, followed by Goodman Logistics Center, a warehouse complex (12521 Arrow Route and 8600 Etiwanda Avenue), Tree Island Wire, a rebar manufacturing facility (12459-A Arrow Route), and vacant land (8822 Etiwanda Avenue). The closest residential development is approximately 2,000 feet to the east-northeast beyond the intersection of Arrow Route and Etiwanda Avenue.

The current main address for the Site is 12451 Arrow Route, Rancho Cucamonga, San Bernardino County, California. However, over the years, the Site has been owned, developed, and operated by multiple entities and has used a variety of street addresses, including, but not limited to: 12301 Arrow Highway (Parcel 1); 12459-B Arrow Route (Parcels 2 and 3); 12459 Arrow Route (Parcels 2, 3, and 4); and 12451 Arrow Route (Parcel 4).

2.2 Ownership History

Various parties have owned the various Parcels at different times. The below summary was compiled using historical documents for the Site. As previously stated, there are some discrepancies between specific entity names and specific dates, but the overall ownership history is considered complete.

- Parcel 1
    - Unknown date to late 1990s: Southern California Edison (SCE)
    - Late 1990s to 2018: TAMCO (a consortium that included Tokyo Steel, Ameron, and Mitsui Corporation)
    - 2018 to 2021: CMC Steel Fabricators, Inc. (CMC)
- Parcel 2

- Mid-1950s to mid-1970s: American Pipe and Construction Company (later became Ameron, Inc.)
- 1970s to 2018: TAMCO
- 2018 to 2021: CMC

- Parcel 3
  - Mid-1950s to 2010: American Pipe and Construction Company (later became Ameron, Inc.)
  - 2010 to 2018: TAMCO
  - 2018 to 2021: CMC
- Parcel 4
  - Mid-1950s to 1988: American Pipe and Construction Company (later became Ameron, Inc.)
  - 1988 to 2000: Fontana Steel, Inc.
  - 2000 to 2021: CMC

The approximately 95-acre Site (Parcels 1 through 4) was purchased by BTC III from CMC in December 2021.

2.3 Historical Development, Features, and Operations

The Site was developed in separate phases, beginning in 1956 with the construction in Parcel 3 of a melt shop ("the old melt shop") and Roll Mill (Appendix A, Photographs A-1 and A-2) for the production of steel billets and rebar by American Pipe and Construction Company (renamed Ameron in the 1970s). Between 1974 and 1976, TAMCO constructed a new Melt Shop (Photographs A-3 and A-4) on the southern portion of Parcel 2 and made improvements to the Roll Mill on Parcel 3 (the old melt shop was presumably decommissioned and demolished). At the time, TAMCO owned Parcel 2 and made and sold billets to Ameron in Parcel 3. By 1983, TAMCO operated at both Parcels 2 and 3 (Figures 4A through 4C; Parcel 3 was initially leased from Ameron).

In approximately 1988 or 1989, Fontana Steel acquired Parcel 4 and constructed a steel rebar fabrication shop, an office building, and a maintenance shop. Fontana Steel was not affiliated with TAMCO and operated separately. Between approximately 1996 and 2000, TAMCO acquired Parcel 1, which was unimproved vacant land historically used as an easement, from SCE. TAMCO used Parcel 1 for surface storage of materials including slag, a solid, inert byproduct of melting of scrap metal. In approximately 2000, CMC purchased certain assets from Fontana Steel, which included Parcel 4. In approximately 2010, TAMCO acquired Parcel 3 from Ameron. In 2018, CMC acquired the stock of TAMCO and became the owner of Parcels 1, 2, and 3; the approximately 95-acre Site (Parcels 1 through 4) was formed at that time. In December 2021, BTC III purchased the Site from CMC.

As previously stated, there have been multiple owners and operators of the four parcels that comprise the Site. However, on-Site industrial activities at each of those parcels were consistent over time. Although the history of Site development and industrial activities are well known and documented across numerous technical reports, some discrepancies exist on specific details, such as dates or names of entities; these discrepancies are not considered significant in the context of the historical on-Site activities.

Sections 2.3.1 through 2.3.3 provide a detailed summary of the activities conducted over time at each of the parcels; the historical documents used to summarize the history of activities at the Site are described in

greater detail in Section 3, and included as Appendix B. Where helpful to the historical narrative, figures were selected from the above documents to illustrate the features and activities that were present on the various parcels across different time periods. Refer to Figures 4A through 4E and Appendix A for a photographic log.

2.3.1 Parcel 1

Parcel 1 consists of an elongated property running north to south along the entire western boundary of the Site. Parcel 1 was historically vacant land and has never been developed with permanent structures. At the time of a 1996 Phase I ESA conducted for TAMCO (prior to acquisition), Parcel 1 was owned by SCE and a majority of the parcel was characterized as vacant land with natural vegetation. According to the Phase I ESA, historical records showed the parcel was vacant unimproved land between at least 1953 and 1992. Aside from small rubble piles reported along the western parcel boundary, the only other on-Site features noted in the Phase I ESA were a concrete vault with trash and a 30-inch concrete pipe with a drainage channel. The Phase I ESA noted that a large portion of the southern end of the parcel was higher in elevation than the surrounding properties to the south and west and appeared to have been filled with slag materials by SCE (Figure 4B).

After acquisition by TAMCO, Parcel 1 was exclusively used for surface storage. Specifically, the southern portion was used for storage of billets (Photograph A-5) until they were transported to the reheat oven at the beginning of the rolling mill process in Parcel 3. The central portion of Parcel 1 was used for stockpiling of slag by an independent contractor (Photograph A-6). The slag was physically transported from the Melt Shop to areas of Parcel 1 immediately west of metal scrap stockpiles, located in the northern portion of Parcel 2. The stockpiled slag was crushed and sorted into different gravel-size products. The slag was then sold to various industries including as road base material. Finally, the northern portion of Parcel 1 (adjacent to Parcel 4) was used as an equipment boneyard (Photograph A-7).

2.3.2 Parcels 2 and 3

Parcel 3 was the first area of the Site to be developed. In 1956 the old melt shop and a Roll Mill were constructed by Ameron for the production of steel billets from scrap steel and for the production of rebar, respectively. In the mid-1970s, TAMCO constructed a new Melt Shop (Photograph A-3) on the southern portion of Parcel 2 and made improvements to the Roll Mill (Photograph A-2) on Parcel 3 (Figure 4A). The principal on-Site structures included an office building (Photograph A-8), a baghouse (Photograph A-9), a Melt Shop, a Roll Mill, maintenance areas (Photograph A-10), cooling towers (Photograph A-11), rail spurs (Photograph A-12), and storage yards (Photographs A-5, A-7, and A-13).

On-Site production of billets and rebar began with receipt of shredded steel scrap, most commonly from automobiles, which was brought to the Site by truck or railroad car as raw material. The steel was sorted and stored in piles on the northern portion of Parcel 2. When ready for use, the scrap metal was loaded into large trucks for transport to the electric arc furnace (EAF), located in the Melt Shop to the south of the scrap metal storage area (Photograph A-4). The scrap metal was melted and alloys were added to obtain the desired grades of steel. The molten steel was poured and cast into billets for use as raw material for the Roll Mill, or to sell to outside parties. The billets were stored outside in the southwestern portion of Parcel 2 (and later on Parcel 1) until they were transported to the reheat oven (Photograph A-14) at the Roll Mill. Depending on the production schedule, some billets were transported directly from the casting process into the reheat oven of the Roll Mill. The hot billets were rolled into steel rebar of different diameters. The

rebars were cut, bundled, and then stored outside on the northeastern portion of Parcel 3, or loaded into trucks or railcars for final shipment to customers.

Byproducts produced during the steel milling process included slag and baghouse dust. Slag was stockpiled on-Site and sold to outside industries and used on-Site as road base and fill material. Historically, baghouse dust was collected and shipped off-Site by rail car for recycling.

The facility operated six cooling water loops that provided non-contact cooling water (four systems for the Melt Shop, continuous molds, and reheat furnace) and contact cooling water (two systems for the continuous caster sprays and roll mill sprays) to the facility. The facility also performed packaging, shipping and administrative operations, none of which involved the use of chemicals. Lastly, the following activities were conducted in support of the major on-Site operations:

- General building and machinery/equipment maintenance, including a maintenance area equipped with grinders, lathes, and welding equipment (Photographs A-10 and A-15).
- Operation of a single, multi-compartment UST (permit ed as two USTs) for gasoline and diesel fueling of on-Site equipment and vehicles (Photograph A-16).
- Dust suppression using water trucks for unpaved areas, with associated water withdrawal from an on-Site groundwater production well (southeast corner of Parcel 3; Photograph A-17) and application of soil binders.
- Backup power supply from four diesel-powered emergency generators (Photograph A-18).
- Non-emergency power supply from one diesel-powered generator.
- Transfer of materials using loaders, haul trucks, and forklifts.

Two power substations operated by SCE were formerly present at the Site (Photograph A-19); TAMCO did not own or operate this equipment.

2.3.3 Parcel 4

Parcel 4 was acquired by Fontana Steel in the late 1980s and developed in 1989 with a fabrication shop and an at ached office building. A maintenance shop was added to the west side of the fabrication shop in 1992. The northern half of Parcel 4 was primarily concrete including parking areas located on the east and west sides of the office building (Figure 4D). The southern portion of Parcel 4 was unpaved with a gravel base surface mixed with slag from the adjacent TAMCO operations. Prior to development, Parcel 4 was vacant land owned by Ameron and was used in the 1970s by TAMCO for storage of slag and baghouse dust generated at Parcels 2 and 3.

The primary operation at Parcel 4 was the fabrication of steel rebar for use in freeway and building construction. Fabrication included sorting, bending, shearing, welding, storage and transport. Fontana Steel received reinforcing steel from outside vendors (including TAMCO) in lengths of stock up to 72 feet. It was then sheared using electric or hydraulic powered shearlines, and bent to specification using electric bending machines. Coiled steel also was used for cutting and forming. Once cut to specification, welding was sometimes conducted. Finished product was loaded onto flatbed trucks and transported off-Site for use. Raw and finished product was stored on the southern and eastern areas of Parcel 4 on the gravel area. Loading and unloading of product also occurred in this area (Appendix A).

2.4 Raw Materials and Waste Generation

2.4.1 Parcels 2 and 3

The primary raw materials used in billet and rebar production in Parcels 2 and 3 included scrap metal, lime, carbon, silicomanganese, and refractory additives. In addition, maintenance-related materials (fuels, oils, lubricants, greases, solvents, welding gases, cooling tower treatment chemicals, and sanitizers and detergents) were also used at the Site. Specifically,

- Inert materials used during the manufacturing process (i.e. nitrogen, lime, dolomite, and cooling water) were stored in aboveground storage tanks (ASTs) at Parcels 2 and 3.
- Chlorine and corrosion inhibitors were used for cooling water used in the towers in Parcel 2.
- Propane ASTs for forklifts were located near the multiple maintenance shops at Parcels 2 and 3.
- New motor oil was stored in central portion of Parcel 2.

Four electrical transformers, owned by TAMCO, were located on the southern portion of Parcel 2. According to a Phase I ESA prepared by Arcadis, labels on the transformers indicated they did not contain PCB fluids. Arcadis reported that PCB containing transformers were historically located in a fabrication room in the southern portion of Parcel 3, which became a part of a warehouse in the 1980s (Figures 4A and 4E). The transformers were removed and a new concrete floor was added during remodeling of the building.

Numerous former USTs were used in support of manufacturing activities at Parcels 2 and 3. Additional documentation is included in Section 3. These included:

- Four (4) 50,000-gallon USTs which contained fuel oil used to fire the rolling mill reheat furnace were located at the western portion of Parcel 3 adjacent to the Roll Mill and south of the main offices; these were excavated and removed in 1993 (see Section 3.4).
- Four (4) 12,000-gallon USTs which contained diesel/fuel oil were located at the southwestern corner of Parcel 3; these were excavated and removed in 2006 (see Section 3.11).
- One (1) 300-gallon diesel UST located north of the Melt Shop in Parcel 2; this was excavated and removed in 2010 (see Section 3.13).
- One (1) 12,000-gallon (double compartment) UST storing diesel (10,000 gallon) and unleaded gasoline (2,000 gallon) was located near the security shack in the northern portion of Parcel 3; this was excavated and removed in 2022 (see Section 3.26).
- One (1) 10,000-gallon diesel UST located under the former Melt Shop in Parcel 2; this was excavated and removed in 2023 (see Section 3.27).
- One (1) 1,000-gallon gasoline UST located outside the southwest corner of the maintenance building in Parcel 3; it is unknown when this was excavated and removed.

According to multiple Phase I ESAs prepared by ENVIRON/Ramboll between 2010 and 2020, the primary chemicals used at Parcels 2 and 3 included lubricants, hydraulic and motor oils, grease, and diesel fuel. In addition, TAMCO used maintenance-related materials, such as paints, cooling tower treatment chemicals, spot degreasers, refrigerant chemicals, and detergents. The facility maintained several dedicated drum and materials storage areas with emergency spill clean-up kits distributed near the main chemicals storage

areas. Flammable cabinets with small quantity containers and spray cans with general maintenance products including Rust-oleum, WD-4, paints, etc. were reported. A 2010 Phase I ESA reported that one degreaser containing polydimethylsiloxane (a non-chlorinated solvent) was observed in the mobile maintenance building. Finally, cylinders of acetylene used to cut metal and welding gas cylinders were generally observed in the maintenance building, and near the EAF building.

Baghouse dust was generated at the Melt Shop during melting of scrap metal and was contained in the baghouse building before being shipped off-Site by rail. Baghouse dust has been regulated under the Resource Conservation and Recovery Act (RCRA) since the late 1970s/early 1980s because of elevated heavy metal contents. Baghouse dust was the primary hazardous waste generated at the Site and was managed by TAMCO and its successors in accordance with South Coast Air Quality Management District (SCAQMD) and RCRA regulations. Baghouse dust was removed from the Site by rail and exported for recycling.

The Roll Mill used water to cool the equipment. The water was captured in a trench and transported to the cooling tower. Parts from the rolling mill were steam cleaned and pressure washed in an outside area located near the southwestern corner of the rolling mill building.

Several aboveground storage tanks (ASTs) were located at Parcels 2 and 3. Most of the ASTs stored inert materials used during the manufacturing process (i.e. nitrogen, lime, dolomite, and cooling water). The maintenance shop to the north of the Rolling Mill had an aboveground AST for storage of waste oil.

2.4.2 Parcel 4

In Parcel 4, Fontana Steel fabricated steel rebar for use in freeway and building construction. Fabrication steps included sorting, bending, shearing, welding, storage, and transport. No wet chemical processing (i.e., degreasing, painting, coating, or other chemical treating) was conducted. Fontana Steel had a fleet of trucks, forklifts, and cranes that were maintained in the on-site maintenance shop (Photograph A-20).

A wash rack was located immediately south of the former maintenance shop. A drainage line connected the wash rack to a subgrade clarifier, which was used to segregate oily residues from water and sludge in connection with an oil recovery system (Photograph A-21). One (1) 12,000-gallon diesel UST (excavated and removed in 2014; see Section 3.14) and one 15,000 gallon propane AST were located at the southeastern portion of Parcel 4. Transformers containing PCBs were not located at Parcel 4.

Wastes generated at Parcel 4 included waste oil, oil filters, spill absorbent, paint cans, ethylene glycol, and solvents. With the exception of various lubricants, all of the products used in the maintenance shop were reported to be spray cans or other containers smaller than 1 gallon. Waste oil was stored in an above-ground 200 gallon AST (Photograph A-22); other wastes were stored in 55-gallon drums (Photographs A-22 and A-23). Waste oil was stored near the wash rack south of the maintenance shop in an oil recovery system.

2.5 Slag Management

The main byproduct generated during former Site operations in Parcels 2 and 3 by TAMCO and Ameron was slag. The slag, which consisted primarily of oxides of calcium, magnesium, silicon, and iron, with lesser amounts of other metals depending on the recycled materials used, was generated during melting of scrap metal for manufacturing of billets, initially in Parcel 3 and later in Parcel 2. Slag was stockpiled on-Site and allowed to cool before it was processed (sorted and crushed) by a third party to sizes suitable for use as

road base material and other industry products. Slag was also used as fill and base material in areas that were unpaved.

Over the years numerous third parties (including: IMS Tube City, Olympic Mill Services, Tervita LLC) recovered and processed slag produced during the melting of scrap metal. The slag was physically broken off the molten ore buckets with pneumatic hammers and transported to stockpiles in the central portions of Parcels 1 and 2, west of the metal scrap stockpiles (Photograph A-6). Slag is inert and has the appearance of dark gray gravel or small diameter rock. In the 1970s, slag material appears to have been stored on the northern portion of Parcel 2 and southern portion of Parcel 4, and it is known that some slag and baghouse dust were historically buried by TAMCO in portions of Parcel 4, and slag was used to raise the elevation of the southern portion of Parcel 1 by SCE. Slag was used over the years as base material in areas that were unpaved and as fill where needed.

2.6 Regulatory History

Beginning in the late 1980s, Parcels 1, 2, 3, and 4 were the subject of investigations, remedial actions, and UST removals that involved oversight from various environmental regulatory agencies. Below is a brief chronological summary by parcel of the regulatory oversight history for the Site. Additional details, where applicable, are provided in Section 3 as referenced below, as well as Table 1.

- Parcel 4: In approximately 1989 or 1990, the California Department of Health Services (DHS), Toxic Substances Control Program, Alternative Technology Division, conducted a full-scale demonstration to evaluate the effectiveness of silicate/portland cement stabilization technology in decreasing lead, zinc, and cadmium concentrations below their respective California Soluble Threshold Limit Concentrations (STLC). Approximately 160 tons of an existing 5,000-ton stockpile, which had originated at Parcel 4, was successfully treated. The demonstration concluded that concentrations of these metals could be reduced to below their respective STLC (see Section 3.1.).

- Parcels 1 and 2: Between 1990 and 1991, Clean-Up Technology, Inc., conducted remediation of lead impacted soils at the southwestern corner of Parcel 2 and southern portion of Parcel 1, under Santa Ana Regional Water Quality Control Board (SA-RWQCB) and DHS oversight (Figure 2A). On November 7, 1990, the SA-RWQCB issued a let er of no further action to TAMCO for successful completion of remedial activities (see Section 3.2).

- Parcel 3: In 1993, the San Bernardino County Environmental Health Services Department (SBCEHSD) oversaw the removal of four USTs located west of the Roll Mill in Parcel 3 (Figure 4A). The USTs contained fuel oil used at the Roll Mill to fire the reheat furnace and were estimated to have a capacity of approximately 50,000 gallons each. After removal of the USTs in November 1993, soil was overexcavated and confirmation soil samples collected. On April 28, 1994, the SBCEHSD issued a let er of no further action to TAMCO for successful completion of UST removal and remedial activities (see Section 3.4).

- Parcel 2: In 1993 and 1994, URS Consultants, Inc. (URS) on behalf of the United States Environmental Protection Agency (USEPA) under authority of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) and the Superfund Amendments and Reauthorization Act of 1986 (SARA) conducted a CERCLA Preliminary Assessment (PA) of the Site. The purpose of the PA was to review information related to disposal of baghouse dust at the northwestern portion of a large slag stockpile located in the northern portion of Parcel 2.

Additionally, the PA also investigated baghouse waste which was reportedly irradiated when a canister containing radioactive cesium inadvertently went into the furnace resulting in baghouse waste with radioactivity. Under the oversight of the California Environmental Protection Agency, Department of Toxic Substances Control (Cal EPA DTSC) TAMCO disposed of the waste at the Chemical Waste Management, Ket leman Hills facility. The January 4, 1994 PA concluded that further remedial site assessment under CERCLA was not required (see Section 3.5).

- Parcel 2: In December 1997, TAMCO engaged the San Bernardino County Fire Department (SBCFD) to review a technical feasibility study and proposed field pilot tests for remediation of the slag stockpile containing baghouse dust located in the northern portion of Parcel 2. Clayton Environmental Consultants (Clayton), on behalf of TAMCO, submit ed a Demonstration Report in August 1999 which was approved by SBCFD on September 8, 1999. In November 1999 Clayton submit ed a Remedial Action Plan (RAP) to EHD and began implementation of the work in 2000. On July 2, 2002, SBCFD issued a let er of no further action to TAMCO related to remediation of the slag stockpile (see Section 3.8).

- Parcel 4: In December 2000, Fontana Steel, Inc. (owner of Parcel 4) entered into a Voluntary Cleanup Agreement (VCA) with the DTSC. The purpose of the VCA was for Fontana Steel to conduct a Preliminary Endangerment Assessment (PEA) as related to former trenches at Parcel 4, which Ameron/TAMCO used to dispose of slag and baghouse dust. IT Corporation (IT) on behalf of Fontana Steel, submit ed a PEA document to DTSC in September 2001, which was revised in November 2001. The PEA concluded that removal actions that had occurred in 1987 as part of Parcel 4 disposition by Ameron had successfully removed baghouse dust and confirmation soil sampling conducted by IT did not exhibit metals concentrations that presented a risk under a commercial/industrial exposure scenario. On December 20, 2001, DTSC issued a let er to Fontana Steel requiring no further action for investigation and remediation of soils at the former trenches at Parcel 4 (see Section 3.9).

- Parcel 2: In January 2005, DTSC conducted a Site visit of the TAMCO facility and identified an area at the northern portion of Parcel 2 (Pad 16), which was impacted with metals from scrap metals storage operations. In November 2005, the Leu Group, on behalf of TAMCO, conducted an excavation and confirmation soil sampling. The Leu Group submit ed a Remediation Completion report to DTSC dated January 27, 2006. The report stated that metals impacted soils had been successfully removed and the area had been paved to prevent future recontamination. In May 2007, DTSC and TAMCO entered into a Consent Order acknowledging that the contaminated soils had been remediated and that TAMCO would put measures into place to prevent future contamination and be assessed a fine of $49,500 (see Section 3.10).

- Parcel 3: In 2006, the SBCFD oversaw the removal of four 12,000-gallon diesel/fuel oil USTs located at the southwestern portion of Parcel 3. After removal of the USTs in May 2006, confirmation soil samples were collected. On October 6, 2006, the SBCFD issued a let er of no further action to TAMCO for successful completion of UST removal activities (see Section 3.11).

- Parcel 2: In 2010, the SBCFD oversaw the removal of one 300-gallon diesel UST located at the western portion of Parcel 2. After removal of the UST in November 2010, confirmation soil samples were collected. On March 7, 2011, the SBCFD issued a let er of no further action to TAMCO for successful completion of UST removal activities (see Section 3.13).

- Parcel 4: In 2014, the SBCFD oversaw the removal of one 12,000-gallon diesel UST located at the southeastern portion of Parcel 4 (Figure 4D). After removal of the UST and dispenser island in August 2014, confirmation soil samples were collected. On October 29, 2014, the SBCFD issued a let er of no further action to CMC Steel Fabricators for successful completion of UST removal activities (see Section 3.14).

- Parcels 1 through 4: On October 12, 2022, BTC III entered into a SVA with DTSC for regulatory oversight of assessment and remediation activities as part of redevelopment of the Site with five warehouse buildings ranging from approximately 70,000 to 1,000,000 square feet.

- Parcel 3: In 2022, the San Bernardino County Fire Protection District (SBCFPD) and the Rancho Cucamonga Fire Protection District (RCFPD) oversaw the removal of one dual-compartment 12,000-gallon UST (2,000-gallon gasoline and 10,000-gallon diesel) from the northwestern corner of Parcel 3. After removal of the UST and dispenser island in December 2022, confirmation soil samples were collected. On July 18, 2023, the SBCFPD issued a let er to BTC III approving UST closure (see Section 3.26).

- Parcel 2: In 2023, SBCFPD and RCFPD oversaw the removal of one 10,000-gallon diesel UST from within the former footprint of the former Melt Shop at the southern portion of Parcel 2. The UST was discovered by BTC in April 2023 during facility wide demolition activities. Confirmation soil samples were collected after removal. On August 29, 2023, the SBCFPD issued a let er to BTC III approving UST closure (see Section 3.27).

3. Historical Environmental Documents

This Section provides a summary of all available and pertinent environmental documents and correspondence for the Site. Documents not prepared by Roux have been gathered from a variety of sources including the former owners (CMC) and various regulatory agencies (DTSC, SA-RWQCB, and San Bernardino County). Although the documents have been provided to DTSC, they are included as Appendix B for completeness. Because of the number and size of the documents, Appendix B is provided as a standalone electronic transmit al.

3.1 Parcel 4: Clean Closure Verification Report: TAMCO Rolling Mill Site (ERT, March 1988) and Remedial Technology Demonstration Project Report (California Department of Health Services, Toxic Substances Control Program, Alternative Technology Division, 1990)

Between 1987 and 1988, Ameron Corporation retained ERT for the management of environmental issues associated with the removal of electric arc furnace baghouse dust. The dust was buried on Site in the late 1970s in three trenches located in the southern portion of Parcel 4, north of the metal scrap yard (Figure 4D). The trenches had approximate dimensions of 14-20 feet in width, 170 feet in length, and 12 feet in depth, and were covered with approximately 4 feet of soil. To evaluate the areas of potential contamination and to prepare cleanup plans, ERT performed field investigations and collected soil samples from the waste material removed from the trenches for chemical analysis. The analysis of the soil demonstrated that the soil contained concentrations of cadmium, copper, lead, and zinc that exceeded the screening levels (SLs) applicable at the time. The contaminated soil and the baghouse dust were excavated and removed from the affected area until confirmation samples of the remaining soil showed that its trace metal concentrations were well below the applicable SLs. The excavated area was then backfilled using slag, which was produced at Parcels 2 and 3 by TAMCO, after it has been analyzed to verify that its trace metal content was below the applicable SLs. After the trenches were filled with slag to within three feet of the original surface, stockpiled topsoil was placed over the top and compacted. The waste removed from the trenches was temporarily stockpiled on a fenced, asphalted parking area on Parcel 4, and covered with a weighted plastic cover to prevent dispersion by wind and contact with rain.

In approximately 1990, the California Department of Health Services (DHS), Toxic Substances Control Program, Alternative Technology Division, conducted a full-scale demonstration of a silicate stabilization process to reduce leachable metals concentrations (lead, zinc, and cadmium) with addition of a polysilicate/portland cement mixture. The demonstration project treated approximately 160 tons of an estimated 5,000-ton stockpile that had been generated during excavation of trenches in Parcel 4. Sampling results before and after treatment confirmed that addition of the mixture significantly reduced leachable concentrations of zinc, lead and cadmium to well below their California STLC values, and increased the median particle size by over six times. These results, combined with fish bioassay results, allowed the treated material to be profiled as nonhazardous after treatment.

According to a subsequent Preliminary Endangerment Assessment Report prepared in 2001 by IT Corporation (see Section 3.9), the excavated dust was treated and disposed off-Site.

3.2 Parcels 1 and 2: Remediation of Contaminated Soils, Southwest Property Adjacent to TAMCO (Clean-Up Technology, Inc., 1990)[1]

In August 1990, Clean-Up Technology, Inc. (CUT) was retained by TAMCO to prepare a workplan for submit al to the Santa Ana Regional Water Quality Control Board (SA-RWQCB) for the remediation of metals contaminated soils at the southwest corner of Parcel 2. According to CUT, surface water with elevated concentrations of lead and zinc flowed from Parcel 2 onto the southern portion of Parcel 1, and south of the adjoining railroad tracks. The releases were believed to have occurred periodically during operation of the TAMCO facility, causing development of a surficial layer of metal contaminated soils. To perform the remediation, CUT cleared the areas of vegetation; segregated soils into multiple stockpiles depending on contaminant levels (3,300 cubic yards total); collected verification soil samples to confirm all impacted soils had been excavated; and treated soils through chemical fixation. After sampling showed the effectiveness of treatment, CUT placed the treated soils in a stockpile at the southwestern corner of Parcel 2 for on-Site use as foundation materials, sub-base for concrete slabs, and/or as road base for internal haul roads. All of the remediation work was documented in an October 1990 Closure Plan prepared by CUT and submit ed to the SA-RWQCB. A No Further Action let er was issued by the SA-RWQCB on November 7, 1990.

3.3 Parcel 2: TAMCO Stockpile Sampling Report (Mittelhauser Corporation, March 1993)

In January 1993, on behalf of TAMCO, Mit lehauser Corporation (Mit elhauser) sampled slag, non-slag materials, and native soils from a slag stockpile located at the northwestern corner of Parcel 2. The objective of the sampling was to evaluate whether the slag stockpile had affected the underlying soil. Mit elhauser excavated three trenches (T-1 through T-3) at the northwestern edge of the stockpile and collected a total of ten (10) slag, non-slag[2], and soil samples for analysis of total cadmium, chromium, lead, nickel, and zinc. Native soil samples had relatively low metals concentrations; slag samples also had low metals concentrations with the exception of chromium (maximum of 1,500 mg/kg). By contrast the non-slag materials had elevated concentrations of all metals.

Slag stockpile remediation was subsequently conducted starting in 1997, as described further in Section 3.8.

3.4 Parcel 3: 11/05/93 UST Removal (TAMCO, November 6, 1993)[3]

On November 4, 1993, four (4) 50,000-gallon fuel oil USTs (listed as diesel) were removed from the western portion of Parcel 3 immediately adjacent to the Roll Mill. According to a let er from TAMCO to SBCEHSD, dated November 6, 1993, soil contamination was discovered after removal of the two eastern USTs, which required over excavation. On April 28, 1994, SBCEHSD issued a let er of Remedial Action Completion

---

[1] The following documents associated with this work are included in Appendix B:

- Clean-Up Technology, Inc, *Work Plan for Remediation of Contaminated Soils,* August 20, 1990
- Clean-Up Technology, Inc, *Permit By Rule Site Specific Notification for Soil Remediation,* August 21, 1990
- California Toxic Substances Control Program, *Acknowledgement of Notification,* August 29, 1990
- Clean-Up Technology, Inc, *Closure Plan for Remediation of Contaminated Soils,* October 19, 1990
- Santa Ana Regional Water Quality Control Board, *Remediation of Lead Contaminated Soil at Site Southwest of TAMCO in Etiwanda,* November 7, 1990

[2] According to the *Concept Paper for Slag Pile Remediation*, prepared by Clayton Environmental Consultants in December 1997, non-slag material consisted primarily of slag fines and baghouse dust; see Section 3.8.

[3] The following documents associated with this work are included in Appendix B:

- TAMCO, *Soil Samples for 11/05/93 UST Removal*, November 6, 1993
- County of San Bernardino Environmental Health Services, *Remedial Action Completion Certification*, April 28, 1994

Certification to TAMCO. The Closure Summary at ached to SBCEHSD's let er indicated that a piping leak at the turbine had caused a release. In response, TAMCO removed and exported approximately 633 cubic yards of diesel-impacted soils after which clean confirmation samples were collected. SBCEHSD stated that no further action associated with the UST release was needed.

3.5 Parcels 2 and 3: CERCLA Preliminary Assessment (URS Consultants, Inc., January 4, 1994)

In 1993, URS conducted a CERCLA PA of the Site on behalf of USEPA. The PA was initiated after USEPA received a notification of hazardous waste generation at the Site from TAMCO. The objective of the assessment was to review existing information for the Site to assess if hazardous waste generation posed any threat to public health or the environment, and to determine if further investigation was warranted under CERCLA/SARA. Specifically, URS reviewed information related to baghouse waste disposal at the northwestern portion of a large slag stockpile located in the northern portion of Parcel 2. Additionally, the PA further investigated baghouse waste, which was reportedly irradiated when a canister containing radioactive cesium inadvertently went into the furnace resulting in baghouse waste with radioactivity.

According to the PA, a portion of the radioactive baghouse waste was reported to have been disposed of at the Ket leman Hills chemical waste management facility, which was not permit ed to accept radioactive waste. USEPA then conducted testing at the Ket leman Hills facility and concluded that the waste could remain in place because the quantity and concentration of the radioactive material did not pose a significant health or safety risk. Separately, the PA reported that radioactive materials were detected in a truckload of baghouse waste originating at TAMCO at a weigh station by the California Highway Patrol and the waste was returned to the Site. URS reported that the baghouse waste was placed into 1,752 drums and taken to US Ecology in Richland, Washington, which was permit ed to accept radioactive waste. Following the incident, TAMCO was reported to have installed radiation detectors at the Site for the testing of each truckload of scrap metal that entered the facility.

During the assessment, URS concluded that three potential sources of hazardous waste existed at the Site: the slag pile; the radioactive baghouse waste; and stabilized soil from prior remedial efforts.

- According to URS, the slag pile was reported to be composed of greyish material with incorporated baghouse waste and was located in the northwestern portion of Parcel 2. The stockpile was reported to have dimensions of 250 feet in length, 100 feet in width, and up to 25 feet in height.
- The stabilized soil referenced by the PA was created during treatment of lead impacted soils (Section 3.3) and consisted of a stockpile of approximately 3,300 yards of stabilized soil. At that time, a portion of the stabilized soil had reportedly been used as backfill following the removal of the four (4) 50,000-gallon fuel oil USTs (Section 3.4).

URS cited sample results of slag and baghouse waste which were analyzed for total metals, which showed that cadmium exceeded soil screening levels applicable at the time, and cadmium, chromium, lead, nickel, and zinc were detectable at concentrations greater than three times background (refer to Section 3.3). URS identified the groundwater pathway to be of primary concern at the Site due to groundwater being used as a drinking water source. However, URS determined that there have not been any observed releases to groundwater and due to the depth of groundwater and the mobility of the on-Site substances, a release to groundwater was unlikely. The PA concluded that further remedial site assessment under CERCLA was not required for the Site.

3.6 Parcel 1: Phase I Environmental Assessment, Undeveloped Property, 12301 Arrow Highway (Kinworthy/Patton Environmental, Inc., December 2, 1996)

In December 1996, Kinworthy/Pat on Environmental, Inc. (KPE), on behalf of TAMCO, performed a Phase I ESA of Parcel 1; the Phase I ESA was presumably conducted in consideration of acquisition of Parcel 1 by TAMCO. KPE described Parcel 1 as an undeveloped property with the street address of 12301 Arrow Highway, Rancho Cucamonga, California, and stated that Parcel 1 was owned by SCE. KPE reported that the approximately 19-acre parcel was undeveloped and had never been developed. The parcel was reported to be covered in natural vegetation except for a circular area near the central portion of the property (with an approximate 150-foot radius), which appeared to have been cleared and graded. KPE identified liquid coming onto the property from the Parallel Products facility to the west, along with an approximately 12-foot-long stained area. KPE also identified a 30-inch concrete pipe opening with a stained drainage channel and a 5-foot by 5-foot concrete vault with trash. Finally, KPE noted that the southern portion of Parcel 1 appeared higher in elevation than the surrounding landscape and stated that fill, including slag, appeared to have been placed on this portion of Parcel 1 during SCE's ownership.

3.7 Parcels 1, 2, and 3: Phase I Environmental Site Assessment (Arcadis Geraghty & Miller, October 7, 1998)

Arcadis Geraghty & Miller (Arcadis) prepared a Phase I ESA of Parcels 1, 2, and 3 in October 1998 for Latham & Watkins, LLC in connection with a potential sale of the equity interest in TAMCO. During the assessment, Arcadis identified three (3) Recognized Environmental Conditions (RECs):

- An active fuel UST located at the northern portion of Parcel 3, near the guard shack (since removed, see Section 3.26);
- A slag stockpile located at the northern portion of Parcel 2 (which was subsequently remediated; see Section 3.8); and
- Poor housekeeping and staining observed in the area of an AST to the south of the maintenance area in Parcel 3.

3.8 Parcel 2: Slag Stockpile Remediation (Clayton Environmental Consultants, 1997 through 2001)[4]

In 1997, Clayton was engaged by TAMCO to evaluate and remediate an approximately 41,150 cubic yard slag stockpile made up of clean slag (low in heavy metals), dirty slag (a combination of clean slag and fines with slightly elevated metals content), and non-slag material (slag fines and baghouse dust, high in metals content). The work was done under the oversight of the SBCFD and involved the submit al of several workplans. The slag stockpile was reportedly created from roll mill operations at TAMCO between the 1970s through the early 1980s and was managed on-Site at the northern portion of Parcel 2. Based on work conducted by Mit elhauser in 1993 (Refer to Section 3.3) and Clayton in 1997, it was estimated that the stockpiled was comprised of 22% clean slag, 55% dirty slag, and 23% non-slag materials.

[4] The following documents associated with this work are included in Appendix B:

- Clayton Environmental Consultants, *Concept Paper for Slag Pile Remediation*, December 18, 1997
- Clayton Environmental Consultants, *Work Plan for Field Pilot Plant Operations*, May 28, 1998
- Clayton Environmental Consultants, *Remedial Action Plan for Treatment of Slag/Non-Slag Stockpile,*,November 24, 1999
- San Bernardino County Fire Department Hazardous Materials Division, *Remediation of Slag and Non-Slag Stockpiled Soil*, July 2, 2002.

In April and May 1999, Clayton conducted a pilot project to separate the stockpile into slag and non-slag materials. The pilot test used a combination of screening and treatment with a rotary drum separation system (RDSS). In a let er to TAMCO, dated September 8, 1999, SBCFD indicated that the specified separation technique was a successful treatment option for slag/non-slag material and that the sorted fines and associated contaminated slag material qualified as non-RCRA waste.

On November 24, 1999, Clayton submit ed a RAP to SBCFD for full-scale remediation of the slag stockpile. The RAP proposed to handle the slag materials in various staging areas. First, an initial excavation and segregation was proposed at the slag stockpile. After that, the non-slag materials would be taken to the treatment pad and placed into one of two areas designated for either the RDSS Unit or a Fixation Unit. The clean slag segregated at the stockpile would be sampled and once confirmed as clean slag, hauled to a clean slag stockpile to be used by TAMCO. Clayton estimated that treated material would be transported off-Site for disposal or recycling. It was estimated that a lit le more than 14,000 tons of California Hazardous Waste (Non-RCRA) would require off-Site disposal due to total cadmium, lead, and zinc concentrations.

Clayton prepared a Remediation Completion Report dated June 2001 confirming that the slag stockpile had been successfully remediated. SBCFD issued a let er to TAMCO on July 2, 2002, confirming that no further action was required.

3.9 Parcel 4: Final Preliminary Endangerment Assessment Report, Historical Electric Arc Furnace Dust Trenches, Fontana Steel, Inc. (IT Corporation, September 2001, Revised November 2001), and DTSC Review Letter (DTSC, December 20, 2001)[5]

In December 2000, Fontana Steel and DTSC entered into a VCA to conduct a PEA report at Parcel 4 under the oversight of DTSC, and to provide assurance for the reimbursement by Fontana Steel to DTSC for oversight costs.

In November 2001, IT submit ed a PEA report to the DTSC on behalf of Fontana. The stated purpose of the PEA was to assess the potential environmental impacts associated with the historical disposal of slag and baghouse dust in trenches on Parcel 4 (Refer to Section 3.1). The PEA stated that in 1987, buried baghouse dust was remediated by excavation. According to the PEA, approximately 4,000 cubic yards of buried dust was excavated, treated, and disposed off-Site (the off-Site disposal location was not specified). The open trenches were reportedly backfilled with slag and brought to grade with clean soil removed from the trenches. As part of the PEA investigation, 10 on-Site soil samples from the vicinity of the trenches and four background soil samples from elsewhere on Parcel 4 were collected between 0 and 10 feet bgs. The evaluation also included analysis of 67 background soil samples from the "West Slag Pile" at the off-Site Kaiser Steel facility, located 1.5 miles southeast of the Site. Based on analytical results, the PEA identified nine metals as chemicals of potential concern (COPCs): cadmium, total chromium, hexavalent chromium, copper, lead, mercury, selenium, vanadium, and zinc. The PEA evaluated inhalation of fugitive dust, dermal contact, and incidental ingestion of soil utilizing the maximum concentration of each of the COPCs as possible pathways of soil exposure on Site. Overall, the PEA concluded that the health and hazard risks

[5] The following documents associated with this work are included in Appendix B:

- DTSC, *Voluntary Cleanup Agreement Docket No HAS-A 00/01-153,* December 22, 2000
- IT Corporation, *Final Preliminary Endangerment Assessment Report*, November 2001
- DTSC, Review of PEA and NFA, December 20, 2001

associated with inorganic COPCs in soil and backfill at the Site were within the acceptable levels for a commercial/industrial exposure scenario and recommended no further investigation or remedial action.

On December 20, 2001, DTSC issued a letter to Fontana Steel stating that, based on their review of the PEA, the Site did not appear to pose human health or environmental risk. On this basis, DTSC concluded that no further action was needed for the Site with respect to the investigation and remediation of hazardous substances.

3.10 Parcel 2: Remediation Completion Report for Surface Soils Impacted by Heavy Metals Located North of Pad 16 (The Leu Group, January 27, 2006) and Consent Order (TAMCO and DTSC, Docket No. HWCA 2005 0964, May 2, 2007)

In January 2005, DTSC conducted a Site visit of the TAMCO facility and collected surface soil samples in and around TAMCO's scrap metals storage area on Parcel 2. DTSC's sampling showed that an area north of scrap piles 12 and 16 at the northern portion of Parcel 2 (Pad 16) was impacted with metals. In October 2005, a series of meetings were held with DTSC, and it was agreed that impacted soils would be removed from the Site with confirmation samples collected to demonstrate that remediation had been completed. In November 2005, the Leu Group, on behalf of TAMCO, conducted excavation and confirmation soil sampling. The Leu Group submitted a Remediation Completion Report to DTSC on January 27, 2006. The report stated that metals impacted soils were removed by scraping off the upper few inches of soil and placing them into 10-cubic-yard boxes. Soil was removed until it was determined that the remaining soil within the excavation area met the established cleanup criteria. The excavated area was backfilled using stockpiled soil that met the cleanup criteria, along with a small amount of slag to bring the excavated area up to grade. Soil that did not meet cleanup criteria was managed as hazardous waste and transported for off-Site disposal to US Ecology in Beatty, Nevada. Following the cleanup, TAMCO paved the treated area to prevent future contamination of area soils due to Site activities.

In May 2007, TAMCO and DTSC entered into a Consent Order acknowledging that the contaminated soils had been remediated and that TAMCO would put measures into place to prevent future contamination and be assessed a fine of $49,500. In the Consent Order, TAMCO agreed to comply with DTSC terms and conditions, including using measures to minimize the dispersion of any hazardous materials to the environment, such as wind breaks and barriers, routine removal of residuals from the scrap metal pile area of the Site, utilizing track-out controls, and notifying DTSC of any hazardous material release.

3.11 Parcel 3: Underground Storage Tank Closure Report (Sharp Environmental Technologies, Inc., September 27, 2006) and Approval Letter (San Bernardino County Fire Department, October 6, 2006)[6]

In May 2006, four (4) 12,000-gallon diesel/fuel oil USTs that had been previously abandoned-in-place in December 1985, were removed from the southwestern portion of Parcel 3. Sharp Environmental Technologies, Inc. (SET) on behalf of Ecology Control Industries (ECI) prepared a UST closure report indicating that the removal of the USTs was performed in accordance with SBCFD guidelines and under permits from SBCFD and the City of Rancho Cucamonga. Eight soil samples were collected from under the USTs and

[6] The following documents associated with this work are included in Appendix B:

- Sharp Environmental Technologies, Inc. *Underground Storage Tank Closure Report*, September 27, 2006
- San Bernardino County Fire Department, NFA Letter for UST Removal, October 6, 2006

sampled for total petroleum hydrocarbons (TPH) as carbon chain (TPH-cc) and VOCs, none of which were detected at concentrations greater than the laboratory detection limits. It was reported that USTs were recycled as scrap steel by TAMCO and the UST excavation was backfilled with on-Site soil. On October 6, 2006, SBCFD issued a letter of no further action to TAMCO for successful completion of UST removal activities.

3.12 Parcels 1, 2, and 3: Phase I Environmental Site Assessment (Environ International Corporation, June 9, 2010)

Environ International Corporation (Environ, now Ramboll) prepared a Phase I ESA report for Parcels 1, 2, and 3 in June of 2010 on behalf of Latham & Watkins, LLC in connection with a potential sale of the equity interest in TAMCO. During the assessment, Environ identified a REC at the Site based on information presented in a Phase I ESA conducted by Arcadis in 1998 concerning ASTs, which were being used for the storage of oils, grease, and diesel, to the south of the Mobile Maintenance building in Parcel 3. Environ stated that due to the significant depth to groundwater and the low mobility of oil and diesel, potential subsurface impacts from the ASTs would be unlikely to present a significant environmental liability at the Site. In addition to the REC, Environ identified one UST used for an emergency generator located near cooling tower No. 4 in Parcel 2 as a REC. This UST was subsequently removed in 2010 (see Section 3.13).

3.13 Parcel 2: Underground Storage Tank Closure Report (Sharp Environmental Technologies, Inc., January 7, 2011) and Approval Letter (San Bernardino County Fire Department, March 7, 2011)[7]

In November 2010, one (1) 300-gallon diesel UST was removed adjacent to the former cooling tower in the southern area of Parcel 2. SET, on behalf of Environmental Logistics, prepared a UST closure report indicating that the removal of the UST was performed in accordance with SBCFD guidelines and under permits from SBCFD and the City of Rancho Cucamonga. One soil sample was collected from under the UST and sampled for DRO and benzene, toluene, ethylbenzene, and xylenes (BTEX). SET reported that the soil sample contained DRO and BTEX concentrations greater than screening criteria. SET recommended that the report be submitted to SBCFD. On March 7, 2011, SBCFD issued a letter of no further action to TAMCO for successful completion of UST removal activities. Additional sampling in the vicinity of the former tank is described in Sections 3.17 and 3.20.

3.14 Parcel 4: Removal of Underground Storage Tank(s) located at CMC Rebar-Etiwanda (San Bernardino County Fire Department, October 29, 2014)

In August 2014, one (1) 12,000-gallon diesel UST was removed from the southeastern portion of Parcel 4. After removal, soil samples were collected from 16 feet bgs within the excavation and 6 feet bgs from the area where the dispenser was removed. Soil samples were analyzed for DRO and VOCs, with all analytes below the laboratory detection limits. On October 29, 2014, the SBCFD issued a letter of no further action to CMC Steel Fabricators for successful completion of UST removal activities.

[7] The following documents associated with this work are included in Appendix B:

- Sharp Environmental Technologies, Inc. *Underground Storage Tank Closure Report*, January 7, 2011
- San Bernardino County Fire Department, NFA Letter for UST Removal, March 7, 2011

3.15 Parcels 1, 2, and 3: Phase I Environmental Site Assessments (Ramboll/Environ, July 2017 and August 6, 2018)

In July 2017 and August 2018, Ramboll Environ (now known as Ramboll) was retained by CMC to perform Phase I ESAs of the Parcels 1, 2, and 3 in connection with a potential business transaction. During both ESAs, Ramboll identified one (1) REC at the Site associated with its historic industrial use. According to the ESAs, the Site had operated as a steel mill since 1956, which presented potential contamination concerns. The potential contamination concerns included:

- Potential burial of hazardous materials and waste during the facility's historical operations;
- The historical presence of a septic system and drain field prior to the 1980s;
- The presence of an "oil cellar" with an abandoned 10,000-gallon lubricating oil tank in a below-grade area of the Roll Mill;
- A suspected waste sludge or ink disposal area near a cooling tower;
- An area of significant staining noted in 1998 near ASTs with no known investigation or remediation (see discussion of Arcadis Phase I ESA in Section 3.7);
- Standing oil and/or staining observed in exterior waste storage areas in 2012;
- Staining observed on paved surfaces in various interior and exterior areas of the facility in 2012 and primarily in the Roll Mill during the 2017 and 2018 site reconnaissance;
- The presence of aging below-grade pipes, vaults, and wastewater collection systems associated with process wastewater (contact cooling water);
- Recent operation of active diesel and gasoline USTs, and lack of soil or groundwater investigations in the vicinity of these tanks (as of 2017/2018, current operations did not suggest a contamination concern as the USTs were observed to have been retrofit ed and passed routine environmental testing/inspections);
- Potential presence of one or more USTs that may not have been closed under regulatory oversight; and
- A potential former sludge pit.

Given the above conditions, Ramboll was unable to rule out the possibility of soil or groundwater impacts, but noted that the groundwater beneath the Site was deep and there were no known environmental triggers for investigation or remedial activities.

In addition to the RECs, Ramboll identified controlled RECs (cRECs) at the Site, including potential residual impacts to soil from baghouse dust remediation, residual impacts to soil following the remediation of slag and non-slag stockpiled material, potential for residual metal impacts to soil following remediation of the area north of the scrap metal yard, and residual diesel contamination to soil identified during a 2011 UST closure. Lastly, Ramboll identified one non-scope consideration pertaining to potential asbestos-containing materials at the Site.

3.16 Parcels 1-4: Phase I Environmental Site Assessment (Ramboll US Corporation, September 2020)

In 2020, CMC retained Ramboll to perform a Phase I ESA of Parcels 1, 2, 3, and 4 in connection with a potential business transaction. During the assessment, Ramboll identified one REC associated with an AST located south of the Mobile Maintenance building on Parcel 3. This condition was also defined as a REC during Ramboll's (then known as Environ) 2010 Phase I ESA (Section 3.12). Ramboll noted that during their Site visit, the area remained concrete-paved and concrete-bermed, and three oil ASTs and one oil tote were observed; the contents of the ASTs were piped inside the building and into dispensers for filling of vehicles and equipment inside the building.

In addition to one REC, Ramboll identified cRECs and Historical RECs (hRECs) at the Site. The cRECs were associated with the remediation of the area north of Pad 16 (Section 3.10) on Parcel 2 and the slag stockpile remediation on the northern portion of Parcel 2 (Section 3.8). The hRECs were associated with the historical remediation of lead impacted soils in Parcel 1 (Section 3.2), diesel-impacted soils related to former USTs in Parcel 3 (Section 3.4), and slag trench remediation in Parcel 4 (Sections 3.1 and 3.9).

3.17 Parcels 1-4: Phase II Subsurface Investigation Report (Ramboll US Consulting, Inc., April 28, 2021)

Between 2020 and 2021, Ramboll was retained by CMC to perform a Phase II Subsurface Investigation at the Site. The purpose of the Phase II was to evaluate the existing soil and soil vapor conditions at the Site as a component of CMC's cessation of ongoing activities and pending property divestiture. During the investigations, Ramboll performed Site-wide sampling, incorporating areas of historical and current operations and features, as well as areas of prior environmental work (Table 2; Figures 5 through 8, orange boring locations). Through implementation of their work, Ramboll arrived at the following conclusions:

- Slag material was observed at several borings at depths ranging from 0 to 10 feet bgs and in thickness ranging between approximately 0.1 and 10 feet, primarily on the western, northern, and southwestern portions of the Site (Parcels 1 and 2).

- Lead was detected in shallow soils (up to 3 feet bgs) at concentrations greater than the DTSC commercial screening level in borings placed in Parcels 2 and 3 to the north of the Warehouse and Maintenance building and the east part of the Mobile Maintenance building. However, lead concentrations in soil appeared to decrease in concentration with depth.

- DRO was detected in shallow soils (up to 5 feet bgs) at concentrations greater than the DTSC commercial screening level (560 mg/kg at the time of the investigation) in borings located south of the bundling station in Parcel 3 and near the west boundary of Parcel 2. DRO concentrations in soil appeared to decrease with depth.

- Elevated concentrations of total lead, zinc, and/or cadmium were observed in some shallow soil samples collected in Parcels 2 and 3 in the vicinity of the northwest part of the Warehouse and Maintenance building and the northwest part of the Old Baghouse.

- Soil vapor data collected at the Site suggests that Site-wide vapor mitigation measures are not necessary. However, VOC impacts (particularly PCE) were observed in Parcel 3 in the east portion of the Parts Warehouse building generally within the upper 15 feet.

- Groundwater was historically measured at a depth of greater than 375 feet bgs in an on-Site water well. The results of the Phase II investigation did not suggest that on-Site operations had adversely impacted groundwater.

3.18 Parcels 1-4: Phase I Environmental Site Assessment (Ramboll US Consulting, Inc., June 24, 2021)

Ramboll was engaged by CMC in 2021 to prepare a Phase I ESA for the Site. Ramboll identified localized areas of impacted soil or soil vapor contamination as one (1) REC. Specifically, Ramboll identified the areas sampled during their 2020 and 2021 Phase II investigation (Section 3.17), which showed shallow soils with elevated concentrations of lead and DRO and shallow soil vapor with elevated PCE, as RECs. Additionally, Ramboll identified cRECs pertaining to the remediation of area north of Pad 16 on Parcel 2 (see Section 3.10), and remediation of baghouse dust commingled with slag stockpile on Parcel 2 (see Section 3.8). An hREC was also identified by Ramboll in connection with the historical remediation of impacted soils in Parcels 1, 3, and 4.

3.19 Parcels 1-4: Phase I Environmental Site Assessment (Roux Associates, Inc., December 2021)

As part of due diligence prior to Site acquisition, Roux conducted a Phase I ESA for BTC III in December of 2021. Roux identified the following six (6) RECs:

- TPH and metals impacts to shallow soil in Parcels 2 and 3, and VOC impacts (primarily PCE) to shallow soil vapor in Parcel 3, as identified by Ramboll during their 2020-2021 Phase II subsurface investigation;
- Rail spurs at Parcels 2 and 3, which have been present on-Site since at least 1959 (Photograph A-12);
- An existing 12,000 gallon dual-compartment diesel and gasoline UST at Parcel 3 (Photograph A-16);
- A former chemical storage area with staining and cracks (Photograph A-13), located northwest of the former melt shop on Parcel 2;
- A wash rack in the northern portion of Parcel 2 (Photograph A-24); and
- Potential inactive on-Site USTs.

In addition to the RECs, Roux identified several hRECs, one cREC, and several other environmental features (OEFs) pertaining to the Site. The hREcs consisted of the lead remediation area in Parcel 1, the former fuel oil USTs located in Parcel 3, treated metals impacted soil in Parcel 1, slag trench remediation in Parcel 4, slag remediation area in Parcels 1 and 2, and former diesel UST on Parcels 2 and 4. The identified cREC consisted of the Pad 16 remediation area. The OEFs consisted of the historical Site-wide agricultural use, the nearby DP Etiwanda Site, and the Site-wide buried slag material.

3.20 Parcels 1-4: Subsurface Investigation Report (Roux Associates, Inc., April 6, 2023; revised September 12, 2023)

On behalf of BTC III, Roux conducted a Subsurface Investigation (SI) in 2021 and 2022. During the investigation, Roux performed two field mobilizations to confirm Site environmental conditions and to delineate VOC impacts to shallow soil and soil vapor.

The Subsurface Investigation was intended to address RECs identified by Roux in the 2021 Phase I ESA, as well as to build on data generated by Ramboll during Phase II Subsurface Investigation. Roux's Subsurface Investigation was conducted in late 2021 and early 2022 in two mobilizations: Mobilization 1 was implemented in November 2021 to confirm Site environmental conditions prior to BTC III's ownership, and Mobilization 2 was implemented in March 2022 after BTC III became owner, specifically to delineate VOC impacts to shallow soil and soil vapor at Parcel 3. Including both mobilizations, Roux drilled 120 borings and collected 175 soil samples and 119 soil vapor samples (Table 2; Figures 5 through 8, blue boring locations).

The results of Mobilization 1 confirmed that:

- Soil samples collected along rail spurs at Parcels 2 and 3 indicated that one boring location had PCB concentrations greater than the SLs and one boring location had a SVOC constituent (benzo(a)pyrene) concentration greater than the SL;
- Target chemical concentrations in soil and soil vapor samples at an existing UST, a former chemical storage area, a wash rack, and former USTs were below commercial/industrial RSLs or SLs;
- Pesticide and herbicide concentrations across the Site were less than the commercial/industrial RSLs or SLs;
- Shallow soils (less than 5 feet bgs) in limited areas near the southern portion of the Site (Parcels 2 and 3) contained DRO and metals concentrations exceeding the commercial/industrial RSLs or SLs; and
- PCE and benzene concentrations in soil vapor samples in portions of Parcel 3 exceeded SLs.

The results of Mobilization 2 confirmed that:

- VOCs in soil are not present at concentrations greater than USEPA RSLs or DTSC SLs; and
- PCE concentrations in soil vapor at Parcel 3 were detected within a limited area and significantly at enuate with depth, however additional lateral and vertical delineation is needed.

Based on the results of the Subsurface Investigation, Roux recommended:

1. Additional shallow soil sampling to define the limits of metals and DRO impacts to shallow soils at Parcels 2 and 3, and SVOC impacts at Parcel 3.
2. Additional soil vapor delineation and evaluation of soil vapor extraction (SVE) as a remedial alternative for shallow VOC impacts in Parcel 3.
3. Additional sampling along the rail spur to delineate the extent of PCB impacts.
4. Additional evaluation of the physical distribution and chemical composition of slag materials in the western portions of the Site (conducted in September and October 2022).

3.21 Parcels 1-4: Soil Management Plan (Roux Associates, Inc., October 3, 2022)

In October 2022, in preparation for demolition of Site structures, Roux prepared an SMP on behalf of BTC III, with the purpose of establishing protocols and procedures to be followed by Site workers during removal of subsurface features. The SMP included procedures for soil management and sampling that may be necessary to address potentially impacted soils at the Site or unexpected conditions, such as encountering subsurface structures.

3.22 Parcel 3: Soil Vapor Extraction Pilot Test Technical Memorandum (Roux Associates, Inc., October 4, 2022)

On July 15 and 16, 2022, Roux conducted a SVE pilot test at Parcel 3 to evaluate SVE as a potentially viable full-scale remedial technology for cleanup of VOCs in soil vapor. The objectives of the pilot test were to gather Site-specific data to be used for the design and implementation of a full-scale SVE system within Parcel 3. Based on the results of the SVE pilot test, Roux concluded that SVE was an effective technology for remediation of VOC-impacted soil vapor at the Site. Roux determined that the estimated radius of influence (ROI) at 5 feet bgs ranged from approximately 71 to 82 feet, and the estimated ROI at 15 feet bgs ranged from approximately 125 to 158 feet, and that these ROIs were considered sufficient for application of SVE technology. The SVE pilot test activities and conclusions were documented in an October 4, 2022, SVE Pilot Test Technical Memorandum.

3.23 Parcels 1-4: Slag Investigation Technical Memorandum (Roux Associates, Inc., April 7, 2023, revised August 25, 2023)

Between September 14 and October 11, 2022, Roux conducted a pothole and trenching investigation to evaluate the distribution and physical and chemical characteristics of subsurface slag at the Site. The slag investigation was performed to further evaluate the sampling results of Roux's Subsurface Investigation and those reported by Ramboll in their 2020 Phase II investigation. Using the information generated during the slag investigation, Roux concluded the following:

- Slag material is limited to western portion of the Site (majority of Parcel 1, the western and southern portion of Parcel 2, and the southwest portion of Parcel 4) and the southeastern corner of Parcel 3 (Figure 9).
- The southern portion of Parcel 1 was observed to have more dense and consolidated slag materials, as well as slag material that was observed to be larger than 2-inches in diameter (cobble sized material).
- The depth, thickness, and characteristics of slag material is generally understood.
- Slag at the Site was observed at depths that ranged from the soil surface to the maximum excavation depth of 13 feet bgs.
- The majority of the slag material observed on Site ranged from sand grain to gravel sized, which is typically less than 2-inches in diameter.
- Slag encountered just below the surface pavement often appeared layered, with materials cemented or hardened in some locations.
- Concentrations of metals that exceeded industrial SLs were limited to thallium in two adjacent sampling locations down a depth of 11 feet bgs, and arsenic in one location at a depth of 3 feet bgs, which exceeded the California background soil concentration of 12 mg/kg.

- Title 22 TTLC waste criteria were not exceeded for any samples; Title 22 STLC and RCRA waste criteria were not exceeded for chromium, copper, lead, and/or nickel in the select samples analyzed during Roux's investigation. Based on the results of Roux's investigation slag materials, aside from those encountered by Ramboll at RSB-02 and RSB-43, would be considered non-hazardous if excavated and managed as waste.
- Geotechnical, soluble sulfate, and corrosivity were evaluated by Southern California Geotechnical (SCG), who recommended engaging a corrosion engineer to provide a more thorough evaluation of results.

Roux documented all slag investigation activities in a revised TM, dated August 25, 2023.

3.24 Parcel 3: Technical Memorandum, Targeted Shallow Soil Investigation for Polychlorinated Biphenyls, Southeastern Corner of Parcel 3 (Roux Associates, Inc., August 25, 2023)

To characterize PCB impacts identified by Roux along a rail spur in the southeastern area of Parcel 3 (Section 3.20), Roux conducted targeted shallow soil sampling activities in November 2022 and May and June 2023. These results were documented in a technical memorandum dated August 25, 2023.

In November 2022, eleven shallow soil samples from the approximate location of RR-3, forty feet to the east, north and west, and 20 feet to the south were analyzed for PCBs. The results confirmed that PCB impacts near RR-3 did not appear to be significant and/or widespread. To provide tighter delineation, in May and June 2023, six additional soil borings were drilled to a maximum depth of 4 feet bgs at step-out locations to the north, south, east, and west of RR-3 and analyzed for PCBs. Based on the 2023 data, Roux concluded that PCB impacts were fully delineated laterally and vertically to the east, west, and south of RR-3, but not to the north.

As a result, Roux recommended additional soil delineation to the north of RR-3, as well as delineation of surficial asphalt in the immediate vicinity of RR-3.

3.25 Parcel 3: Technical Memorandum, Proposed Characterization and Performance Based Cleanup of Polychlorinated Biphenyls Impacted Concrete, Parcel 3 (Roux Associates, Inc., April 11, 2023) and Parcel 3: Technical Memorandum, Characterization of Polychlorinated Biphenyls Impacted Concrete, Parcel 3 (Roux Associates, Inc., August 25, 2023)

In August 2023, Roux prepared a TM documenting sampling of pink stained concrete discovered on January 18, 2023, during demolition activities of the former Roll Mill on Parcel 3. Initial sampling confirmed that the concrete had PCBs at concentrations greater than 50 mg/kg. Based on the reported PCBs concentrations, further characterization was recommended so that PCB impacts could be bet er defined and an appropriate remediation plan developed. Following the initial sampling of the concrete on January 19, 2023, a 40-foot buffer was established around the stained concrete, and the entire area of pink stained concrete was covered with plastic sheeting.

The TM documents characterization sampling of the concrete completed in May and June of 2023 as well as inspection of the condition of the concrete (cracks, chips, etc.). Samples were collected on a grid interval of 10 feet (approximately 3 meters) and analyzed for PCBs.

Roux concluded that PCBs were detected in concrete samples at concentrations greater than DTSC screening criteria; that vertical profile concrete samples indicate that PCB concentrations decrease significantly with depth; and that delineation was complete, with the exception of an area immediately east of the pink concrete, which was inaccessible due to the presence of an active transformer and switchgear. Roux recommended cleanup of all identified concrete and soil with PCB concentrations greater than DTSC Note 3 SLs and disposal in accordance with TSCA's performance-based disposal option under 40 CFR §761.61(b) under a DTSC-approved remedial action workplan (RAW).

3.26 Parcel 3: Underground Storage Tank Closure Report (Roux Associates, Inc., June 23, 2023) and Approval Letter (San Bernardino County Fire Protection District, July 18, 2023, 2023)

In April 2023, Roux prepared an Underground Storage Tank Closure Report to document the excavation, permanent removal, and closure of a dual-compartment UST at the Site, comprised of one 10,000-gallon diesel compartment and one 2,000-gallon gasoline compartment and the associated product piping. The report indicates that the UST was excavated and removed from the Site under the supervision of a California Professional Geologist, as well as a Certified Industrial Hygienist (CIH) and inspectors from both the San Bernardino County Fire Protection District and the Rancho Cucamonga Fire Protection District on December 12, 2022. The tank appeared to be in very good condition and there was no evidence of staining or of a release beneath the UST or in the UST excavation. Confirmation soil samples collected beneath the UST showed no indication of hydrocarbon-related impacts. On July 18, 2023, the SBCFPD issued a let er to BTC III approving UST closure.

3.27 Parcel 2: Underground Storage Tank Removal Report (Roux Associates, Inc., August 25, 2023) and Approval Letter (San Bernardino County Fire Protection District, August 29, 2023)

On April 5, 2023 an estimated 10,000-gallon single walled tank was discovered during building demolition activities related to site redevelopment. The tank was found following removal of a concrete slab and associated footings in the former melt shop. No product pipelines, vents, or other infrastructure associated with the tank was observed, nor was any reference to the tank noted in available historical site documentation. The UST was removed on June 28, 2023 under the supervision of a California Professional Geologist, as well as a CIH and inspectors from both the San Bernardino County Fire Protection District and the Rancho Cucamonga Fire Protection District.

The tank was observed to be in poor condition, with visible holes and corrosion. No impacted soil was observed (visual or olfactory) beneath the tank. Confirmation soil samples collected beneath the UST showed no indication of hydrocarbon-related impacts and are not indicative of a release, however stockpiled soil that was removed from the top of the damaged tank did indicate elevated concentrations of diesel range organics. On August 29, 2023, the SBCFPD issued a let er to BTC III approving UST closure.

4. Environmental Setting

4.1 Location and Land Use

The Site is located approximately 40 miles east of Los Angeles, in an industrial area Rancho Cucamonga. The City of Rancho Cucamonga zoning designation for the Site and surrounding properties is Neo Industrial (NI), and the Site is bounded to the south by Atchison Topeka Santa Fe Railroad, followed by the former Etiwanda Generating Station (8998 Etiwanda Avenue); to the west by Parallel Products, a chemical manufacturer (12281 Arrow Route), and Copart, a vehicle auction facility (12167 Arrow Route); to the north by Arrow Route, followed by Planet Storage, a self-storage facility (12330 Arrow Route), Steelcase, a warehouse (12400 Arrow Route), and Air Liquide America, an industrial gas supplier (12550 Arrow Route); and to the east by Juneberry Drive, followed by Goodman Logistics Center, a warehouse complex (12521 Arrow Route and 8600 Etiwanda Avenue), Tree Island Wire, a rebar manufacturing facility (12459-A Arrow Route), and vacant land (8822 Etiwanda Avenue). The closest residential development is approximately 2,000 feet to the east-northeast beyond the intersection of Arrow Route and Etiwanda Avenue (Figure 2B).

4.2 Physiography, Topography, and Surface Drainage

Site topography is relatively flat, with a gentle slope to the south (similar to regional topography). Elevation of the Site ranges from approximately 1,129 feet above mean sea level (AMSL) to the south and 1,169 feet AMSL to the north. Stormwater runoff either percolates into the subsurface in unpaved areas or flows into stormwater infrastructure to the south and southwest.

4.3 Site Geology

The Site is located roughly 5 miles to the south of the San Gabriel Mountain Ranges and is part of the Chino Subbasin. The Chino Subbasin is bound by geological features such as the Rialto Fault to the east, the Jurupa Mountains to the South, the San Jose Fault to the northwest, and the Cucamonga Fault to the north. Regional strata consist of consolidated and semi-consolidated Quaternary fluvial and marine deposits. Depositional facies are primarily alluvium, lake, playa, and terrace deposits. Regional soils are mostly gravelly loamy sands (California Department of Conservation, 2010 Geologic Map).

According to Ramboll's 2021 Phase II Subsurface Investigation Report, soil on Site generally consists of sands and gravel in the upper 5 feet bgs, followed by lenses of sand and silts. This was confirmed during Roux's subsequent investigations from 2021 to 2023.

Lithologic conditions observed by Ramboll and Roux at each parcel are as follows:

- Parcel 1 – Sand with gravel and/or slag to 5 feet bgs (slag was observed to 7.7 feet bgs by Ramboll in some locations), sand and sand with silt to 18 feet bgs, sandy silt to 25 feet bgs;
- Parcel 2 – Sand with gravel and/or slag to 5 feet bgs (slag was observed to 10 feet bgs by Ramboll in some locations), sand and sand with silt to 12 feet bgs, silty sand and sand to 30 feet bgs;
- Parcel 3 – Sand or sand with silty sand to 29 feet bgs with dense silt observed from 29 to 34 feet bgs; and
- Parcel 4 – Sand and silty sand layers to 5 feet bgs, and sand to 25 feet bgs.

4.4 Site Hydrogeology

The Site is situated along the northeastern portion of the Chino Subbasin within the Upper Santa Ana Valley Groundwater Basin. The Chino Subbasin is bounded on the north by the San Gabriel Mountains (California's Groundwater Bulletin 118, 2004). Nearest tributaries to the Site drain from north to south from the San Gabriel mountains. The nearest surface water feature to the Site is Day Creek, a concrete lined stormwater drainage channel, approximately 0.24 miles to the west.

Based on monitoring well information from the Etiwanda Generating Station (P. Hamilton, 2010) groundwater is estimated at a depth of 430 feet bgs. Ramboll's Phase II Report notes that historical Well Drillers logs from 1956 place groundwater depths at 728 feet bgs, with depth to water at the time of well installation at 378 feet bgs (Ramboll, 2021a). During site investigations by Ramboll and Roux, groundwater was not encountered to the maximum depth drilled of 30 feet bgs.

4.5 Drinking Water Wells

According to the Ramboll Phase I ESA performed in June 2021, there are no federally registered water supply wells within one mile of the site. Additionally, there are no state registered private or municipal wells used for water supply present within one mile of the site.

5. Current Environmental Status

As detailed in Sections 2 and 3 of this CCR, the history and use of the Site are well understood and numerous environmental investigations have been conducted by various consultants for various owners of the Site, including by Roux on behalf of BTC III between 2021 and 2023. From initial development through facility decommissioning in 2019, Site uses, features of environmental interest, and waste generation were generally consistent. For that reason, most of the environmental investigations and/or remedial activities conducted to date have focused on features and activities on Parcels 2 and 3 and to a lesser extent on Parcels 1 and 4. As of the date of this CCR, there are no open cases with any regulatory agencies and all known releases or suspected releases have been investigated and where necessary, remediated to agency satisfaction (Table 2). Subject to additional investigations, as detailed in Section 7, the current suite of data for the Site confirms that Parcels 1 and 4 will likely not require remedial action prior to Site redevelopment. Conversely, Parcels 2 and 3, which were the most heavily used and will be the subject of upcoming soil and soil vapor investigations, will likely require remedial action(s) prior to Site redevelopment.

The results of Roux's SI, combined with the results of targeted PCB investigations on Parcels 2 and 3; soil vapor sampling and SVE pilot testing on Parcel 3; and potholing and trenching to investigate slag and slag materials on Parcels 1 and 2 (with some limited work in Parcels 3 and 4) support the following conclusions:

- DRO and metals concentrations exceed commercial/industrial SLs in shallow soils (less than 5 feet bgs) in limited areas of Parcels 2 and 3. These areas require additional investigation and potentially remediation.

- PCE, TCE, chloroform, and benzene concentrations in soil vapor in the central portion of Parcel 3 exceed screening levels and will require remediation. An initial short-term pilot test suggest that SVE is a viable remedial alternative. However, additional delineation has been requested by DTSC and Roux recommends an extended SVE pilot test.

- Two small areas at the southern portion of the Site (one each in Parcels 2 and 3) have limited PCB impacts which require additional sampling and remediation.

- Slag, where present, will need to be considered for geotechnical purposes but is generally inert and does not present a human health risk to future commercial/industrial construction workers or occupants of the Site. In support of ruling out whether slag has the potential to leach metals that could impact groundwater, DTSC has suggested that a Site-specific leaching model (i.e., SESOIL or VLEACH) be used in a future evaluation. Roux will incorporate this suggestion into future work at the Site.

- Parcel 1 was never developed with permanent structures, and is generally unaffected by former industrial activities. The southern portion of Parcel 1 was reportedly raised using slag as fill when SCE was owner and a small portion of the southwestern corner was remediated for surface lead impacts in the early 1990s. Slag has been investigated and lead impacts were remediated to the satisfaction of SA-RWQCB. No additional investigation or remediation is considered necessary for Parcel 1.

- Parcel 4 was historically impacted by burial of baghouse dust prior to its development. Impacts from baghouse dust were remediated in the late 1980s and in 2001 re-evaluated and further

investigated under the oversight of DTSC; DTSC provided concurrence that no additional investigation/remediation was warranted. Additionally, features of interest after development were investigated by Ramboll and Roux. To date no impacts have been identified, and no additional investigation or remediation is considered necessary for Parcel 4.

Section 6 of this CCR provides the current CSM and identifies data gaps. Section 7 provides a Workplan to close data gaps associated with DRO and metals in soil across the Site as well as limited areas of chloroform impacted soil vapor in Parcel 2 and SVOC impacted soil in Parcel 3. In addition to the proposed field activities described in Section 7, additional characterization and delineation activities have been proposed in Roux's Soil Vapor Delineation and SVE Extended Pilot Test Workplan, dated September 1, 2023, and the updated Technical Memorandum, Targeted Shallow Soil Investigation for Polychlorinated Biphenyls (shallow soil sampling near RR-3 in Parcel 3), dated August 25, 2023.

6. Conceptual Site Model

ASTM E1689-20 (Standard Guide for Developing Conceptual Site Models for Contaminated Sites) defines a conceptual site model (CSM) as a writ en and/or pictorial representation of an environmental system and the biological, physical, and chemical processes that determine the transport of contaminants from sources through environmental media to environmental receptors within the system. The CSM is based on all available information and identifies the potential risk(s) a site may pose to human health and/or the environment such that appropriate assessment or sampling strategies can be developed. The findings of these assessments may, in turn, be used to update the CSM.

A simplified CSM for the Site is presented in the table below, including only complete or potentially complete exposure pathways. The current use and expected future use of the property will consist of an industrial/commercial space. As discussed below, points of potential current and future human contact are limited to soil and indoor air. The Site may pose a risk to human receptors via exposure to COPCs in soils or via exposure to volatilized COPCs present in soil vapor.

Primary Source	Secondary Source	Exposure Media	Exposure Route	Receptor
Historical on Site Releases	Impacted Soil	Soil	Ingestion, dermal contact, or inhalation of particles	• Future Construction Worker • Future Outdoor Commercial/Industrial Worker
	Impacted Soil Vapor	Indoor Air	Inhalation	• Future Indoor Commercial/Industrial Worker

A steel mill occupied the Site from the 1950s until 2019 when milling operations were phased out. Historical processes on the Site may have introduced certain heavy metals (arsenic, lead, and cadmium) to shallow Site soils. As a result, these constituents have been shown to be present at concentrations that exceed regulatory thresholds in near-surface soils at a few specific locations. Therefore, a potentially complete exposure pathway exists for future construction workers and future commercial/industrial workers to be impacted by near-surface soils. This exposure could involve risk to human health resulting from inhalation, ingestion, and/or dermal contact with the potentially impacted materials.

Based on the available data, it appears that VOCs (primarily PCE, benzene, TCE and chloroform) associated with the former metal processing operations were released at the Site and impacted shallow soil vapor at Parcel 3. Conservatively considering the potential for vapor intrusion into a future on Site building, there is a potentially complete pathway for exposure of future construction workers and future commercial/industrial workers to inhalation risks associated with VOCs.

6.1 Soil Pathway

Aboveground portions and most footings of all former structures which supported or contained metal processing activities have been demolished. The Site will be redeveloped as commercial/industrial warehouse complex. The soil pathway is considered a complete exposure pathway for construction workers during Site redevelopment. Once construction is complete, present soil surfaces will be capped by either

concrete for building footings or asphalt for auto and truck traffic, mitigating the potential exposure to shallow soils.

6.2 Groundwater/Surface Water Pathway

Groundwater was not encountered during any previous investigations on the Site. A groundwater well is located on the Site, which is a regional monitoring well and is not used for production of potable or industrial process water. A previous Phase I ESA report reported that the well is approximately 728 feet deep, and groundwater has been measured at a depth of 378 feet bgs. Therefore, no complete exposure pathway exists.

6.3 Air Pathway

Given the presence of VOCs in soil vapor at the Site, the indoor air pathway is considered a potentially complete exposure pathway via vapor intrusion and inhalation of indoor air.

6.4 Data Gaps Evaluation

Based on a review of the Site's operational history and previous Site investigations, Roux has identified data gaps described in the following sections. The locations of areas in which data gaps exist are shown on Figures 5 through 8, and analytical data for each area is provided on the figures referenced below.

6.4.1 TPH in Soil (DRO)

DRO impacts to shallow soils were observed during the Ramboll and Roux Site investigations. Locations where those impacts are not fully delineated in Parcels 2 and 3 are summarized below and will be addressed by the proposed Additional Sampling Workplan presented in Section 7:

- Ramboll borings RSB-03 and RSB-05 were two of 24 borings drilled by Ramboll on a sitewide grid to evaluate slag material at the site; samples from these borings were analyzed for metals, VOCs, and TPH. Samples collected from RSB-03 (south of the former bundling station in the southeast corner of Parcel 3) and RSB-05 (near the rail spur on the west side of Parcel 2) contained diesel range organics (DRO) at concentrations greater than screening criteria, as did samples from subsequent step-out borings by Ramboll and Roux. Additional lateral delineation is needed to the northeast and southwest at the RSB-03 Area (Figure 13), and to the east and west at the RSB-05 Area (Figure 14).

- Boring RR-5, located on the rail spur east of RSB-03 in the southeast corner of Parcel 3 (Figure 12), contained diesel in the 0.5 foot sample at a concentration of 1,700 mg/kg, and is delineated vertically by the 1.5 foot sample (420 mg/kg) but not laterally in any direction.

- Boring RR-8, located on the rail spur north of the former parts warehouse in the northeast corner of Parcel 3 (Figure 12), contained diesel in the 0.5 foot sample at a concentration of 2,700 mg/kg, and is delineated vertically by the 1.5 foot sample (420 mg/kg) but not laterally in any direction.

- Boring RR-9, located on the rail spur northeast of RR-8 in Parcel 3 (Figure 12), contained diesel in both the 0.5 and 1.5 foot sample at concentrations of 1,300 mg/kg, and is not delineated vertically or laterally in any direction.

6.4.2 Metals in Soil

Lead, arsenic, and cadmium impacts to shallow soils were observed during the Ramboll and Roux Site investigations. Locations where those impacts are not fully delineated in Parcels 2 and 3 are summarized in the sections below and will be addressed by the proposed additional sampling described in Section 7.

6.4.2.1 Lead

Analytical results for lead were compared to the DTSC HERO Note 3 Industrial SL of 500 mg/kg. Two locations were identified with concentrations of lead exceeding this SL:

- Borings RSB-02, RSB-02W, and RSB-02-R2, located adjacent to the former warehouse and maintenance building in Parcel 2 (RSB-02 Area; Figure 10), contained lead at concentrations exceeding the SL (2,910 mg/kg, 2,040 mg/kg, and 1,700 mg/kg, respectively) in samples collected from 3 feet bgs. Lead impacts are delineated vertically by the five-foot bgs sample in the same borings but are not delineated laterally to the north, south, or west of RSB-02-R2.

- Borings RSB-57, RSB-57-W, RSB-57-S, and RSB-57-R4, located southeast of the former Roll Mill in Parcel 3 (RSB-57 Area, Figure 11), contained lead exceedances at 1 and 3 feet bgs. The exceedances at RSB-57-R4 are not delineated vertically or to the south, east, or west.

6.4.2.2 Arsenic

Analytical results for arsenic were compared to the DTSC HERO Note 3 Industrial SL of 0.36 mg/kg and the California Upper Confidence Limit and Background Concentrations of 12 mg/kg. While numerous samples Site-wide contained arsenic at concentrations exceeding the SL, only two locations were identified with concentrations of arsenic exceeding regional background levels, both adjacent to the on-Site rail spurs:

- Boring RR-12, located along the rail spur north of the former Main Office in Parcel 3 (Figure 12), contained arsenic concentrations greater than regulatory criteria and regional background levels at 0.5 and 1.5 feet bgs (13 and 14 mg/kg, respectively). These exceedances are not delineated vertically or laterally.

- Boring RR-14, located along the rail spur north of the former Melt Shop in Parcel 2 (Figure 12), contained elevated arsenic concentrations at 0.5 feet bgs (15 mg/kg), which is delineated vertically by the 1.5 foot sample in RR-14 but not laterally.

6.4.2.3 Cadmium

Analytical results for cadmium were compared to the DTSC HERO Note 3 Industrial SL of 79 mg/kg. Only one sample location contained cadmium at a concentration exceeding the SL:

- Boring RSB-43, located east of the former warehouse and maintenance building in the southeast corner of Parcel 2 (RSB-43 Area, Figure 10) contained a cadmium exceedance at 1 foot bgs (105 mg/kg), which is delineated vertically by the 3 foot sample in the same boring but is not delineated laterally.

6.4.2.4 Chromium

A majority of the 323 soil samples analyzed for total chromium during the 2020/2021 Ramboll and 2022 Roux investigations did not include analysis of hexavalent chromium (CrVI). Although there is no USEPA RSL or DTSC Note 3 screening level established for total chromium, the USEPA RSL User's Guide[8] notes that the RSLs were calculated assuming a CrVI to trivalent chromium (CrIII) ratio of 1:6 (or a CrVI to total chromium ratio of 1:7). Applying this assumption to the DTSC commercial/industrial SL for CrVI (6.2 mg/kg), we can imply an informal first-pass screening level for total chromium of 43.4 mg/kg. Seventy-seven of 321 soil samples analyzed for total chromium during the 2020/2021 Ramboll and 2022 Roux investigations contained concentrations greater than 43.4 mg/kg, including a maximum total chromium concentration of 2,460 mg/kg.

Though limited, there is Sitewide speciated chromium data available. The 2020 Phase II conducted by Ramboll analyzed 20 samples from 10 boring locations in Parcels 1, 2, and 3 for total chromium and CrVI. These twenty samples contained total chromium concentrations ranging from 6.6 to 1,540 mg/kg and CrVI concentrations ranging from 0.102 to 0.319 mg/kg (CrVI was not detected at concentrations greater than the laboratory reporting limit of 0.04 mg/kg in 18 of the 20 samples). Seven of these twenty samples contained total chromium concentrations greater than 43.4 mg/kg, none or which contained CrVI concentrations greater than the DTSC SL of 6.2 mg/kg. In addition, the 2001 PEA Report prepared by IT Corporation for Fontana Steel (Parcel 4) involved analysis of 8 samples for total chromium and CrVI from trenches filled with electric arc furnace (EAF) baghouse dust. The 2001 Parcel 4 EAF dust trench samples contained total chromium concentrations ranging from 9.8 to 1,200 mg/kg and CrVI concentrations ranging from 0.39 to 2.0 mg/kg.

None of the 28 samples from Parcels 1 through 4 exceeded the DTSC commercial/industrial screening level for CrVI of 6.2 mg/kg. Conservatively assuming each of the non-detectable results is a detection at the reporting limit, the CrVI to total chromium ratios for each of these samples range from 1:4800 to 1:49 and the average of the ratios is 1:255. Applying this average to the DTSC CrVI commercial/industrial CL yields a calculated site-specific total chromium screening level of 1,581 mg/kg. Of the 321 soil samples analyzed for total chromium during the 2020/2021 Ramboll and 2022 Roux Phase II investigations, only two samples from borings RSB-66 (2,460 mg/kg at 2 feet bgs) and RSB-67 (1,760 mg/kg at 1 foot bgs) contained concentrations greater than 1,590 mg/kg.

In addition to the fact that all detected concentrations of CrVI are below the DTSC SL of 6.2 mg/kg, this analysis reinforces the indication that site soils are not likely to be impacted by CrVI. However, to refine this analysis and reduce the effects of outliers, additional sampling is proposed in order to produce a more robust speciated chromium data set from areas where higher total chromium concentrations have been observed in previous investigations.

6.4.3 SVOCs in Soil

Analytical results for SVOCs were compared to the DTSC HERO Note 3 Industrial SLs. One SVOC, benzo(a)pyrene, was detected at a concentration exceeding the DTSC SL of 1.3 mg/kg in boring RR-13 at 1.5

[8] ht ps://www.epa.gov/risk/regional-screening-levels-rsls-users-guide#chromium; "although this may overestimate or underestimate the risk calculated"

feet bgs (1.8 mg/kg; Figure 12). This exceedance is not delineated vertically or laterally. Additional sampling is proposed in Section 7 to address this data gap.

6.4.4 PCBs in Concrete and Soil

PCBs have been identified at concentrations greater than DTSC commercial/industrial screening criteria in two areas of Parcel 3. During demolition of the former Roll Mill, a pink stained concrete slab was observed in the southwestern corner of the former building underneath a newer concrete slab. A 1998 Phase I ESA for the site prepared by Arcadis states that "PCB containing transformers were also formerly located in the FAR room (now the warehouse)" adding that a "new concrete floor has been added during the remodeling of the building." The Phase I did not contain any photographs or maps identifying the FAR room, but a 1983 TAMCO Property Layout labels a room in the approximate position of the pink stained concrete as FAB, with other Ameron (1981) and Tamco (1984) maps noting a Fabrication Shop. The PCB impacts are documented in a Technical Memorandum dated August 25, 2023, and PCB impacted concrete has been delineated consistent with the Toxic Substances Control Act (TSCA) laterally to the north, south, and west, with additional delineation needed to the east.

As documented by a separate Technical Memorandum dated August 25, 2023, PCBs were also detected at concentrations greater than DTSC screening criteria in shallow soils at boring RR-3 in the southeast corner of Parcel 3. PCB impacted soils have been delineated to the east, west, and south with additional delineation needed to the north.

Additional sampling and removal activities related to PCB impacts at the Site will be addressed separately and are not discussed further in Section 7.

6.4.5 VOCs in Soil Vapor

Several VOCs have been identified in soil vapor at the Site by Roux and Ramboll, with PCE, TCE, benzene, and chloroform observed at concentrations exceeding regulatory screening criteria in Parcels 2, 3, and 4. The most widespread impacts are associated with historical maintenance operations in Parcel 3, with limited exceedances observed in Parcels 2 and 4 which are generally associated with historical operational features.

The lone PCE exceedance in Parcel 4 (90 micrograms per cubic meter [µg/m^3] at 5 feet bgs in RSB-61, greater than the DTSC SL of 67 µg/m^3) was fully delineated with step-out samples collected during Roux's subsurface investigation in November 2021. Soil vapor data gaps in Parcels 2 and 3 are described in the sections that follow.

6.4.5.1 Soil Vapor in Parcel 2

Chloroform analytical results were greater than the USEPA RSL of 18 µg/m^3 at two locations in Parcel 2 (RSB-25 Area and RSB-32 Area; Figure 18):

- Chloroform was detected at 5 and 15 feet bgs (60 and 260 µg/m^3, respectively) in Ramboll boring RSB-25, which was located near an emergency generator and the excavation footprint of a former diesel UST in the northwest portion of Parcel 2. Although no fuel related VOCs were detected in soil vapor, chloroform was detected at concentrations exceeding regulatory screening criteria (18 µg/m^3) in both samples, with no lateral delineation in any direction.

- Chloroform was also detected at a concentration greater than the regulatory criteria in the 30 foot sample at Ramboll boring RSB-32, targeting a cooling water channel in the southeast corner of Parcel 2. Chloroform was detected below regulatory criteria in the 5 foot sample at the same boring.

Proposed sampling to delineate chloroform impacts in Parcel 2 is detailed in Section 7.

6.4.5.2 Soil Vapor in Parcel 3

Based on the results of Ramboll's and Roux investigation, Roux concluded the following about VOC impacts including PCE, benzene, TCE, and chloroform, to soil vapor in Parcel 3:

- PCE and benzene were both detected at concentrations exceeding regulatory screening criteria (67 and 14 µg/m^3, respectively) at five feet bgs in Parcel 3 (Figures 19 and 20), with the benzene impacts fully delineated laterally. There were no exceedances of TCE or chloroform in soil vapor samples collected at 5 feet bgs in Parcel 3.
- PCE, benzene, TCE, and chloroform were detected at concentrations exceeding regulatory screening criteria (100 µg/m^3 for TCE and 18 µg/m^3 for chloroform) at 15 feet bgs in Parcel 3 (Figures 21 through 24).
- At 35 feet bgs, PCE, TCE, and chloroform were detected at concentrations exceeding regulatory screening criteria. Benzene was not detected in any soil vapor samples collected at 35 feet bgs, or at 30 feet from borings RSB-28 and RSB-29 (Figures 25 through 27).

Additional delineation of PCE (5, 15, and 35 feet bgs), benzene (15 feet bgs), TCE (15 and 35 feet bgs), and chloroform (15 and 35 feet bgs) has been proposed in the Soil Vapor Delineation and Soil Vapor Extraction Extended Pilot Test Workplan submit ed to DTSC on September 1, 2023, and is not further discussed herein.

7. Supplemental Site Investigation Workplan

The data gaps detailed in Section 6 will be addressed by the activities and procedures listed in the following workplan. Work will be performed under responsible charge of a California-registered Professional Geologist or Professional Civil Engineer.

7.1 Pre-Field Activities

7.1.1 DigAlert & Geophysical Survey

Prior to intrusive work, Roux will pre-mark the Site with white paint and notify Underground Service Alert of Southern California (DigAlert) at least 48 hours in advance of drilling to demarcate utilities coming to and through the Site. Previous geophysical surveys conducted by Roux at the Site provide coverage to a majority of the proposed boring locations. In the event a boring location falls outside (or is moved outside) of previously surveyed areas, a private geophysical services and utility locating firm will be contracted to evaluate the proposed boring locations and mitigate the risk of disrupting potentially buried utility lines. As part of the investigation, the geophysical services company may use a variety of tools, including ground penetrating radar (GPR), radio detection (RD-4000), Dynatel diagnostic testing equipment, and M-Scope metal detection equipment, as appropriate. The intended drilling locations may be modified or relocated, as necessary, to avoid detected or suspected subsurface utilities and structures.

7.1.2 Health and Safety Plan

Roux has prepared a Site-specific Health and Safety Plan (HASP) to identify significant risks and hazards potentially encountered during implementation of field work, which is included in Appendix C. During the implementation of field work, exclusion and work zones will be clearly demarcated with orange cones, delineators, and/or caution tape to indicate limited access areas for drilling and sampling activities. Field workers will acknowledge their familiarity with all safety procedures and indicate their intent to follow the HASP by signing the HASP after tailgate safety meetings, which will take place at the beginning of each field day. All personnel working in the exclusion zone will be Occupational Safety and Health Administration trained, consistent with federal regulation 29 CFR 1910.120.

7.2 Field Activities

7.2.1 Soil Borings and Sampling

Proposed sample locations and depths are summarized in the Sampling and Analysis Plan (SAP; Table 3), Figures 10 through 17, and Sections 7.2.2 through 7.2.4 below. Standard operating procedures (SOPs) for sample collection and decontamination are included in Appendix D. Soil boring will be hand augered to the depths listed in Table 3 for the collection of soil samples. Soil samples will be collected directly from the hand auger into laboratory provided 8-oz. glass jars. Care will be taken to exclude concrete, asphalt, plant debris, and other foreign objects. The jars will be filled and gently compacted by hand to ensure minimal void space. All soil samples will be labeled with the boring ID, date, time, and depth per the SAP. Additional samples may be collected and held by the laboratory pending initial analytical results. Soil samples will be delivered on ice and under chain-of-custody protocol, to Eurofins Calscience of Tustin, California, a California state-certified laboratory.

Soils encountered during hand augering will be classified based on the Unified Soil Classification System (USCS) and ASTM International Standard ASTM-D 2488 "*Standard Practice for Description and Identification of Soils (Visual-Manual Procedure)*."

7.2.2 DRO Delineation in Soil

Consistent with previous investigations, proposed borings are spaced at approximately 25-foot intervals from existing borings. The following samples will be collected and analyzed for DRO (C10-C28) by USEPA Method 8015B.

RSB-03

Roux proposes six soil borings (RSB-03-R6 to RSB-03-R11) to the north and east of RSB-03-R5, west and south of RSB-03-R1, and south, east, and west of RSB-03-R2 (Figure 13). A total of 6 soil samples (not including duplicates) are proposed to be collected at 1 feet bgs from each location. Additional soil samples will be collected from each boring at 3 feet bgs and held by the laboratory pending analytical results for the shallower sample set.

RSB-05

Roux proposes nine soil borings (RSB-05-R5-R, RSB-05-R6-R, RSB-05-R7-R and RSB-05-R8 to RSB-05-R13) to the north, west, and south of RSB-05-R2 at 1 feet bgs, east of RSB-05-S2 at 1 foot bgs, to the north, east, and south of RSB-05-R6 at 1 feet bgs, east of RSB-05-S at 3 feet bgs, and at RSB-05-R6 at 3 feet bgs (Figure 14). Additional deeper soil samples will be collected from each boring and held by the laboratory pending analytical results for the shallower sample set.

RR-5, RR-8, and RR-9

Roux proposes thirteen borings to delineate DRO impacts in the vicinity of RR-5, RR-8, and RR-9 (Figure 12):

- Borings approximately 10 feet to the north, south, east, and west of RR-5, with samples collected from 0.5 feet bgs from each boring;
- Borings approximately 10 feet to the north, south, east, and west of RR-8, with samples collected from 0.5 feet from each boring; and
- Borings approximately 10 feet to the north, south, east, and west of RR-9, with samples collected from 0.5 and 1.5 feet bgs from each boring. In addition, a sample will be collected from 3 feet bgs from a replicate boring at the approximate location of RR-9 (RR-9-R).

Additional deeper soil samples will be collected from each boring and held by the laboratory pending analytical results for the shallower sample set.

1.2.3 Metals in Soil

7.2.3.1 Lead Delineation

The following samples will be collected and analyzed for lead by USEPA Method 6010B.

RSB-02

Roux proposes three soil borings (RSB-02-R4 to RSB-02-R6) ten feet to the north, east, and south of RSB-02-R2 (Figure 10). A total of three soil samples (not including duplicates) are proposed to be collected at 3 feet bgs.

RSB-57

Roux proposes four soil borings (RSB-57-R4-R, RSB-57-R6 to RSB-57-R8) ten feet to the east, west, and south of RSB-57-R4 (Figure 11). A total of seven soil samples (not including duplicates) are proposed to be collected at depths of 1 and 3 feet bgs from each boring, exception for RSB-57-R4-R where a 5-foot sample will be collected.

7.2.3.2 Arsenic Delineation

The following samples will be collected and analyzed for arsenic by USEPA Method 6010B.

RR-12

Roux proposes five borings to delineate arsenic impacts in the vicinity of boring RR-12 (Figure 12). At RR-12-R a soil sample will be collected at 3 feet bgs. Four step-out borings will be advanced approximately 10 feet to the north, south, east, and west of the RR-12, with soil samples collected at 0.5 and 1.5 feet bgs.

RR-14

Roux proposes four step-out borings to the north, south, east, and west of boring RR-14 (Figure 12). Step-out borings will be located approximately 10 feet away from the original boring in each cardinal direction, and soil samples will be collected from each step-out boring at 0.5 feet bgs.

7.2.3.3 Cadmium Delineation

The following samples will be collected and analyzed for cadmium by USEPA Method 6010B.

RSB-43

Roux proposes four step-out borings to the north, south, east, and west of the RSB-43 (Figure 10). Step-out borings will be located approximately 10 feet away from the original boring in each cardinal direction, and soil samples will be collected from each step-out boring at 1 foot bgs.

7.2.3.4 Chromium VI Sampling

To generate additional speciated chromium data to support the analysis of potential CrVI impacts at the Site, Roux proposes to collect samples from the following boring locations with previously-detected elevated total chromium concentrations (Figure 28):

- RSB-04 at 3 feet bgs (Parcel 1, total chromium 676 mg/kg)
- RSB-66 at 2 feet bgs (Parcel 1, total chromium 2,460 mg/kg)
- RSB-05 at 1 foot bgs (Parcel 2, total chromium 542 mg/kg)
- RSB-17 at 1 foot bgs (Parcel 2, total chromium 813 mg/kg)
- RSB-25 at 1 foot bgs (Parcel 2, total chromium 842 mg/kg)
- RSB-36 at 3 feet bgs (Parcel 2, total chromium 1,060 mg/kg)
- RSB-67 at 1 foot bgs (Parcel 2, total chromium 1,760 mg/kg)

- RR-4 at 0.5 feet bgs (Parcel 3, total chromium 600 mg/kg)
- RR-12 at 1.5 feet bgs (Parcel 3, total chromium 770 mg/kg)

Each sample will be analyzed for total chromium by USEPA Method 6010B and CrVI by USEPA Method 7199.

7.2.4 SVOC Delineation in Soil

Roux proposes five borings to delineate benzo(a)pyrene impacts in the vicinity of boring RR-13 (Figure 12). At RR-13-R a soil sample will be collected at 3 feet bgs. Step-out borings will be located approximately 10 feet away from the original boring in each cardinal direction (4 borings total). Soil samples will be collected from each step-out boring at 0.5 feet bgs. Each sample will be analyzed for benzo(a)pyrene by USEPA Method 8270C.

7.2.5 VOC Delineation in Soil Vapor at Parcel 2

A California licensed driller will drill 5 soil vapor borings (RSB-25-R1 through R4 and RSB-32-R; Figure 18) to 15 feet bgs using a direct-push drilling rig. Dual-nested soil vapor probes will be installed at 5 and 15 feet bgs in borings located approximately 25 feet north, south, east and west of RSB-25 (RSB-25-R1 through R4). A single-nested soil vapor probe will be installed at 15 feet bgs (RSB-32-R) at the approximate location of former soil vapor sample RSB-32.

All soil vapor probes will be installed in general accordance with the *Advisory - Active Soil Gas Investigations* published by DTSC in July 2015 and will consist of a new stainless-steel filter probe tip with a 1/4 -inch push-to-connect fitting at ached to 1/4-inch diameter Teflon tubing. The probes will be constructed by first placing approximately six inches of #3 coarse-grained sand into the bot om of the borehole. The sampling tubing with the filter probe tip will then be placed within the borehole. Additional sand will be placed in the borehole to create an approximately one-foot sand pack interval around the vapor tip. Approximately one foot of dry granular bentonite will be placed on top of the sand pack, followed by hydrated bentonite to the surface. The tubing will be labeled with depth of placement and capped using a gas-tight valve set to the "off" position.

Soil vapor samples will be collected from the nine probes installed in RSB-25-R1 through R4 and RSB-32-R. Prior to purging or sampling, a minimum 60-second shut-in test at a vacuum of 100 inches of water will performed at each probe to confirm that the above-ground lines and three-way valves are properly sealed. Upon completion of the shut-in test, three purge volumes of air will be extracted from the probe at a flow rate of 200 milliliters per minute (mL/min). A leak check compound, 1,1-difluoroethane (1,1-DFA), will be utilized during sampling and will be included among the laboratory analyte list. A vacuum gauge will be used to ensure the applied vacuum remained below 100 inches of water during purging and sampling.

Soil vapor samples will be collected in one-liter batch-certified SUMMA® canisters equipped with 200 mL/min flow controllers. Upon collection, each sample will be labeled with a unique sample identifier and transported under proper chain-of-custody procedures to Eurofins Calscience of Tustin, California, to be analyzed for VOCs via USEPA Method TO-15.

7.2.6 Decontamination Procedures

Drilling and sampling equipment will be cleaned prior to first use and between borings and sampling at empts as appropriate. Equipment cleaning will include an Alconox® detergent scrub followed by distilled water rinses.

7.2.7 Quality Assurance/Quality Control

Field duplicates will be collected as a check for sample homogeneity and laboratory precision. The duplicate samples will be collected, labeled, packaged and sealed in the same manner as the primary sample, and analyzed for the same suite of analytes. Duplicate samples will be collected at a rate equal to 10% of the number of primary samples and at minimum of one per day. The effectiveness of the decontamination process will be evaluated by collecting and analyzing one equipment decontamination blank sample per day of field work.

7.2.8 Surveying

Soil boring locations will be mapped using a handheld Global Positioning System (GPS) with an integrated beacon and satellite differential antenna. Differential GPS measurements typically have horizontal accuracy radii of less than 1 meter when five or more satellites signals are available.

7.2.9 Investigation Derived Waste

Investigation derived waste (IDW) generated from drilling and decontamination activities will be containerized in 55-gallon drums. The drums will be labeled, temporarily stored on Site, and then disposed off-Site under proper manifest following the completion of field activities.

7.2.10 Reporting

Upon performance of the field activities and receipt of the final laboratory reports, Roux will prepare a Supplemental Site Investigation Report documenting results of the investigation field observations, supporting figures and tables, boring logs, and laboratory reports. An HHSE will be prepared incorporating all recent sampling data as a standalone document and will be appended to the Supplemental Site Investigation Report.

Sample analytical results will be compared to the following soil screening levels:

- USEPA RSLs, dated November 2022 (USEPA, 2022);
- DTSC Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note Number 3 Screening Levels (DTSC SLs), dated May 2022 (DTSC, 2022);
- DTSC HERO HHRA Note Number 11 Southern California Ambient Arsenic Screening Level (DTSC, 2020);
- San Francisco Regional Water Quality Control Board Environmental Screening Levels for TPH (SFRWQCB, 2019); and,

- Kearney Foundation Special Report, Kearney Foundation of Soil Science, Division of Agriculture and Natural Resources, University of California, Background Concentrations of Trace and Major Elements in California Soil (Kearney, 1996)

7.2.11 Implementation Schedule

In addition to the proposed field activities described in Section 7 of this Report, additional characterization and delineation activities have been proposed in the *SV Delineation and SVE Extended Pilot Test Workplan* (soil vapor sampling in Parcel 3) and the updated *Technical Memorandum, Targeted Shallow Soil Investigation for Polychlorinated Biphenyls* (shallow soil sampling near RR-3 in Parcel 3). The schedule below provides a general implementation schedule from Workplan submit al to remedial action plan (RAP) or remedial action workplan (RAW) submit al.

Additional Investigation Workplan (Section 7, Roux CCR)

- 10/25/23 – CCR submit ed to DTSC
- 10/30/23 – "At-risk" implementation of SSI Workplan
- 11/29/23 – DTSC approval of SSI Workplan included in CCR
- 12/15/24 – Supplemental Site Investigation (SSI) Report (and HHSE) to DTSC
- 1/31/24 – DTSC approval of SSI/HHSE

VOCs (SV Delineation and SVE Extended Pilot Test Workplan)

- 9/1/23 – SV Delineation and SVE Extended Pilot Workplan to DTSC
- 10/01/23 – DTSC approval of Workplan
- 9/18/23 to 10/13/23 – Implementation of Delineation Sampling
- 10/25/23 to 11/21/23 – Extended Pilot Test
- 10/18/2023 – Data transmit al to DTSC & discussion re: Pilot Test startup
- 11/6/2023 – Soil Vapor Report Submit to DTSC
- 12/27/23 – Pilot Test Report Submit to DTSC

PCBs (Targeted Shallow Soil Investigation for PCBs)

- 8/25/23 – PCB Characterization TMs submit ed to DTSC
- 10/15/23 – DTSC approval of additional delineation in RR-3 TM
- 11/1/23 – Implementation of RR-3 additional delineation

Slag Memorandum

- 8/25/23 – Slag TM to DTSC
- 10/01/23 – DTSC approval of Slag TM
- 10/24/23 – Submit al of Leaching Modeling Workplan to DTSC
- 11/17/23 – DTSC approval of Leaching Modeling Workplan
- 12/12/23 – Slag Potential Leaching Report

2a. Summary of Sampling Results – Soil

2b. Summary of Sampling Results – Soil Vapor

3. Sampling Analysis Plan: Supplemental Site Investigation Workplan

Table 1
Regulatory or Delineation Status of Impacted Areas
12451 Arrow Route, Rancho Cucamonga, California

Area	Description	Parcel(s)	Summary	Regulatory Agency	Status	Section(s) of CCR
Closed Areas						
Green Area in Parcels 1 and 2	Metals-contaminated soil remediation	Parcels 1 and 2	In 1990, 3,300 cubic yards of metals-impacted soils were excavated and treated through chemical fixation. Treated soils were sampled to confirm effectiveness of treatment, and stockpiled at southwestern portion of Parcel 2 for on-Site use as foundation material, sub-base for concrete slabs, and/or as road base for internal haul roads.	SA-RWQCB	Cleanup documented in an October 1990 Closure Plan. NFA letter issued by SA-RWQCB on November 7, 1990.	Section 3.2
Purple Area in Parcel 2	Slag stockpile evaluation and remediation	Parcel 2	Sampling was conducted at a slag stockpile in the northwestern corner of Parcel 2 to evaluate whether the slag stockpile had affected the underlying soil. Native soil samples and slag samples had low metals concentrations. By contrast the non-slag materials had elevated concentrations of all metals, including lead and zinc. A pilot test was conducted under SBCFD oversight, which inidcated that roatry drum separation prior to treatment or offsite disposal was a successful option. Following remediation of the approximately 41,150 cubic yard stockpile, SBCFD issued a letter to TAMCO on July 2, 2002 confirming that no further action was required.	SBCFD	Cleanup documented in Remediation Completion Report dated June 2001. SBCFD issued NFA letter on July 2, 2002.	Sections 3.3, 3.8
	Baghouse waste disposal	Parcel 2	In 1993, baghouse waste at Parcel 2 was further investigated when the waste was reportedly irradiated when a canister containing radioactive cesium inadvertently went into the furnace resulting in baghouse waste with radioactivity. A portion of the radioactive baghouse waste was reportedly disposed of at the Kettleman Hills chemical waste management facility, not permitted to accept radioactive waste. USEPA then conducted testing at the Kettleman Hills facility and concluded that the waste could remain in place because the quantity and concentration of the radioactive material did not pose a significant health or safety risk. Additional radioactive waste was placed into 1,752 drums and taken to US Ecology in Richland, Washington, permitted to accept radioactive waste.	Cal EPA, DTSC	The January 4, 1994 URS Preliminary Assessment concluded that further remedial site assessment under CERCLA was not required	Section 3.5
Orange Area in Parcel 2	Pad 16 remediation	Parcel 2	In January 2005, DTSC identified an area at the northern portion of Parcel 2 (Pad 16) to be impacted with metals from scrap metals storage operations. In November 2005, impacted soil was excavated and confirmation soil samples were collected. The Remediation Completion report, dated January 27, 2006, stated that metal impacted soils had been successfully removed and the area had been backfilled and paved to prevent future recontamination. In May 2007, DTSC and TAMCO entered into a Consent Order acknowledging that the contaminated soils were remediated and control measures were instituted to prevent future contamination.	DTSC	May 2, 2007 Consent Order between DTSC and TAMCO confirms completion of remedial action and implementation of control measures.	Section 3.10
Southern/Central Parcel 2	300-gallon diesel UST	Parcel 2	In 2010, the SBCFD oversaw the removal of one 300-gallon diesel UST located at the southern/central portion of Parcel 2. After removal of the UST in November 2010, one confirmation soil sample was collected and reportedly contained DRO and BTEX concentrations greater than screening criteria. On March 7, 2011, the SBCFD issued a letter of no further action to TAMCO for successful completion of UST removal activities. Between 2020 and 2021, soil and soil vapor samples were collected by Ramboll (RSB-25) between 1 and 15 feet bgs and shallow soil samples were collected by Roux (SB-1) between 1 and 3 feet bgs with no TPH and metals (soil) or VOC (soil and soil vapor) detections exceeding applicable screening criteria.	SBCFD	SBCFD issued NFA letter on March 7, 2011	Sections 3.13, 3.17, 3.20
Southern Parcel 2	10,000-gallon diesel UST within former Melt Shop	Parcel 2	In 2023, one 10,000-gallon diesel UST was removed from within the former footprint of the former Melt Shop at the southern portion of Parcel 2. The UST was discovered by BTC in April 2023 during facility wide demolition activities. Confirmation soil samples were collected after removal. On August 29, 2023, the SBCFPD issued a letter to BTC III approving UST closure	SBCFPD, RCFPD	SBCFPD issued NFA letter on August 29, 2023	Section 3.27
East Parcel 3	50,000-gallon fuel oil USTs adjacent to Roll Mill	Parcel 3	Four 50,000-gallon fuel oil USTs were removed from the western portion of Parcel 3 in November 1993. Over-excavation was conducted at two eastern USTs to address discovered soil contamination following UST removal. Additional diesel-impacted soils were subsequently removed and disposed of offsite, after which clean confirmation samples were collected.	SBCEHSD	SBCEHSD issued a letter of Remedial Action Completion Certification and NFA on April 28, 1994.	Section 3.4
Southwest Parcel 3	Four aboandoned in-place 12,000-gallon diesel/fuel oil USTs	Parcel 3	In 2006, four abandoned-in-place 12,000-gallon diesel/fuel oil USTs located at the southwestern portion of Parcel 3 were removed. After removal of the USTs in May 2006, confirmation soil samples were collected. On October 6, 2006, the SBCFD issued a letter of no further action to TAMCO for successful completion of UST removal activities.	SBCFD	SBCFD issued NFA letter on October 6, 2006	Section 3.11
Northwest Parcel 3	Dual-compartment 12,000-gallon UST	Parcel 3	In 2022, one dual-compartment 12,000-gallon UST (2,000-gallon gasoline and 10,000-gallon diesel) was removed from the northwestern corner of Parcel 3. After removal of the UST and dispenser island in December 2022, confirmation soil samples were collected. On July 18, 2023, the SBCFPD issued a letter to BTC III approving UST closure.	SBCFPD, RCFPD	SBCFPD issued NFA letter on July 18, 2023	Section 3.26
Yellow Area in Parcel 4	Baghouse dust trench disposal and remediation	Parcel 4	Ameron used Parcel 4 for storage and disposal of baghouse dust wastes generated by roll mill operations in the 1970s. Baghouse dust was reportedly buried in three trenches on the south part of Parcel 4. In 1987, approximately 4,000 cubic yards of baghouse dust were excavated, treated, and disposed of offsite, and the excavations were backfilled with slag. Soil samples were collected from the former trench areas as part of a 2001 Preliminary Endangerment Assessment to confirm residual risk was within acceptable thresholds for commercial/industrial use. According to the PEA Report, the health risk and hazard associated with inorganic COPCs in soil and backfill at the site are within acceptable levels and no further investigation or remedial action is recommended.	DTSC	NFA associated with PEA was issued by DTSC on December207, 2001.	Sections 3.1, 3.9
East Parcel 4	12,000-gallon diesel UST	Parcel 4	In 2014, the SBCFD oversaw the removal of one 12,000-gallon diesel UST located at the southeastern portion of Parcel 4. After removal of the UST and dispenser island in August 2014, confirmation soil samples were collected. On October 29, 2014, the SBCFD issued a letter of no further action to CMC Steel Fabricators for successful completion of UST removal activities.	SBCFD	SBCFD issued NFA letter on October 29, 2014	Section 3.14

Table 1
Regulatory or Delineation Status of Impacted Areas
12451 Arrow Route, Rancho Cucamonga, California

Area	Description	Parcel(s)	Summary	Regulatory Agency	Status	Section(s) of CCR
Open Areas						
RSB-05 Area	TPH in Soil (DRO) Delineation	Parcel 2	Samples collected from RSB-05 (near the rail spur on the west side of Parcel 2) contained DRO at concentrations greater than screening criteria, as did samples from subsequent step-out borings. Additional lateral delineation is needed to the east and west at RSB-05.	DTSC	Delineation incomplete; additional sampling proposed in Section 7.2.2	Section 6.4.1, 7.2.2
RSB-02 Area	Metals in Soil (Lead) Delineation	Parcel 2	Borings RSB-02, RSB-02W, and RSB-02-R2, located adjacent to the former warehouse and maintenance building in Parcel 2, contained lead concentrations exceeding the screening criteria in samples collected from 3 feet bgs. Lead impacts are delineated vertically by the five-foot bgs sample in the same borings but are not delineated laterally to the north, south, or west of RSB-02-R2.	DTSC	Delineation incomplete; additional sampling proposed in Section 7.2.3	Section 6.4.2, 7.2.3.1
RR-14 Area	Metals in Soil (Arsenic) Delineation	Parcel 2	Boring RR-14, located along the rail spur north of the former Melt Shop in Parcel 2, contained elevated arsenic concentrations at 0.5 feet bgs, which is delineated vertically by the 1.5 foot sample in RR-14 but not laterally.	DTSC	Delineation incomplete; additional sampling proposed in Section 7.2.3	Section 6.4.2, 7.2.3.2
RSB-43 Area	Metals in Soil (Cadmium) Delineation	Parcel 2	Boring RSB-43, located east of the former warehouse and maintenance building in the southeast corner of Parcel 2 contained a cadmium exceedance at 1 foot bgs, which is delineated vertically by the 3 foot sample in the same boring but is not delineated laterally.	DTSC	Delineation incomplete; additional sampling proposed in Section 7.2.3	Section 6.4.2, 7.2.3.3
RSB-25 and RSB-32 Areas	VOCs in Soil Vapor	Parcel 2	Chloroform was detected at 5 and 15 feet bgs in boring RSB-25, which was located near an emergency generator and the excavation footprint of a former diesel UST in the northwest portion of Parcel 2. Chloroform was detected at concentrations exceeding regulatory screening criteria in both samples, with no lateral delineation in any direction. Chloroform was also detected at a concentration greater than the regulatory criteria in the 30 foot sample at boring RSB-32, targeting a cooling water channel in the southeast corner of Parcel 2. Chloroform was detected below regulatory criteria in the 5 foot sample at the same boring. Further vertical and lateral delineation is warranted.	DTSC	Delineation incomplete; additional sampling proposed in Section 7.2.5	Section 6.4.5, 7.2.5
RSB-03 Area	TPH in Soil (DRO) Delineation	Parcel 3	Samples collected from RSB-03 (south of the former bundling station in the southeast corner of Parcel 3) contained DRO at concentrations greater than screening criteria, as did samples from subsequent step-out borings. Additional lateral delineation is needed to the northeast and southwest at RSB-03.	DTSC	Delineation incomplete; additional sampling proposed in Section 7.2.2	Section 6.4.1, 7.2.2
RR-5 Area	TPH in Soil (DRO) Delineation	Parcel 3	Borings RR-5, located on the rail spur east of RSB-03 in the southeast corner of Parcel 3, and RR-8, located on the rail spur north of the former parts warehouse in the northeast corner of Parcel 3, contained diesel in the 0.5 foot sample above the screening criteria, and are delineated vertically by the 1.5 foot sample, but not laterally in any direction.	DTSC	Delineation incomplete; additional sampling proposed in Section 7.2.2	Section 6.4.1, 7.2.2
RR-9 Area	TPH in Soil (DRO) Delineation	Parcel 3	Boring RR-9, located on the rail spur northeast of RR-8 in Parcel 3, contained diesel in both the 0.5 and 1.5 foot samples at concentrations exceeding the screening criteria, and is not delineated vertically or laterally in any direction.	DTSC	Delineation incomplete; additional sampling proposed in Section 7.2.2	Section 6.4.1, 7.2.2
RSB-57 Area	Metals in Soil (Lead) Delineation	Parcel 3	Borings RSB-57, RSB-57-W, RSB-57-S, and RSB-57-R4, located southeast of the former Roll Mill in Parcel 3, contained lead exceedances at 1 and 3 feet bgs. The exceedances at RSB-57-R4 are not delineated vertically or to the south, east, or west.	DTSC	Delineation incomplete; additional sampling proposed in Section 7.2.3	Section 6.4.2, 7.2.3.1
RR-12 Area	Metals in Soil (Arsenic) and SVOCs in Soil Delineation	Parcel 3	Boring RR-12, located along the rail spur north of the former Main Office in Parcel 3, contained arsenic concentrations greater than regulatory criteria and regional background levels at 0.5 and 1.5 feet bgs. Additionally, One SVOC, benzo(a)pyrene, was detected at a concentration exceeding the screening criteria in boring RR-12 at 1.5 feet bgs. These exceedances are not delineated vertically or laterally.	DTSC	Delineation incomplete; additional sampling proposed in Section 7.2	Section 6.4.2, 6.4.5, 7.2.3.2, 7.2.4
Roll Mill	PCBs in Concrete and Soil Delineation	Parcel 3	During demolition of the former Roll Mill, a pink stained concrete slab was observed in the southwestern corner of the former building underneath a newer concrete slab. The concrete slab was identified to be impacted with PCBs. PCB impacted concrete has been delineated consistent with TSCA laterally to the north, south, and west, with additional delineation needed to the east.	DTSC	Delineation complete, with exception of inaccessible enclosure to the east (active electrical equipment), Roll Mill PCB TM dated August 25, 2023.	Section 6.4.4
RR-3 Area	PCBs in Concrete and Soil Delineation	Parcel 3	PCBs were detected at concentrations greater than DTSC screening criteria in shallow soils at boring RR-3 in the southeast corner of Parcel 3. PCB impacted soils have been delineated to the east, west, and south with additional delineation needed to the north.	DTSC	Delineation incomplete; additional sampling proposed in RR-3 PCB TM dated August 25, 2023.	Section 6.4.4
Parcel 3 VOCs in SV Area	VOCs in Soil Vapor	Parcel 3	PCE, TCE, benzene, and chloroform were detected at concentrations exceeding regulatory screening criteria at depths ranging from 5 to 35 feet bgs in Parcel 3.	DTSC	Delineation incomplete, additional sampling proposed in Soil Vapor and Soil Vapor Extraction Extended Pilot Test Workplan dated September 1, 2023.	Section 6.4.5
Former Clarifier in Parcel 4	VOCs in Soil Vapor	Parcel 4	PCE concentrations in soil vapor were previously identified on Parcel 4 exceeding the screening criteria for the sample located at 5 feet bgs in RSB-61. These impacts were fully delineated with step-out samples.	DTSC	Delineation complete	Section 6.4.5

Slag evaluation (site-wide)	RSB-67	1/6/21	Ramboll	1, 3, 5, 10, 15, 20, 25	Metals, VOCs, TPH	Results below SLs
Former diesel UST	RSB-25	12/24/20	Ramboll	1, 3, 5, 10, 15	Metals, VOCs, TPH [3]	Results below SLs
Cooling water channel	RSB-32	12/24/20	Ramboll	1, 3, 5, 10, 15, 20, 25, 30	Metals, VOCs, TPH [3]	Results below SLs
Slag remediation area	RSB-36	12/23/20 and 1/6/21	Ramboll	1, 3, 5, 10	Metals, VOCs, TPH	Results below SLs
	RSB-37	1/7/21	Ramboll	1, 3, 5, 10	Metals, VOCs, TPH	
Stormwater infiltration channel	RSB-39	1/4/21	Ramboll	1, 3, 5	Metals, VOCs, TPH	Results below SLs
Cooling towers	RSB-40	12/29/20 and 12/30/20	Ramboll	1, 3, 5	Metals + Cr(VI)	Results below SLs
	RSB-41	12/30/20	Ramboll	1, 3, 5	Metals + Cr(VI)	
	RSB-62	12/30/20	Ramboll	1, 3, 5	Metals + Cr(VI)	
Clarifiers by baghouse (RSB-43 Area)	RSB-43	12/23/20	Ramboll	1, 3, 5, 10, 15	Metals, VOCs, TPH [3]	Cadmium detected above SL at RSB-43 at 1 foot bgs. Additional sampling proposed to delineate cadmium impacts in the vicinity of RSB-43.
	RSB-44	12/21/20	Ramboll	1, 3, 5, 10, 15	Metals, VOCs, TPH [3]	
Former vehicle wash area	RSB-70-E	11/3/21	Roux	1, 3, 5	Metals, VOCs, TPH	Results below SLs
	RSB-70-W	11/3/21	Roux	1, 3, 5	Metals, VOCs, TPH	
Former drum storage area	SB-1	11/4/21	Roux	1, 3	Metals, VOCs, TPH	Results below SLs
Parcel 3						
Railroad spur	RR-1	11/8/21	Roux	0.5, 1.5	Metals, VOCs, TPH, PCBs, OCPs, SVOCs, chlorinated herbicides	PCBs were detected above SLs at 0.5 and 1.5 feet bgs at RR-3. Additional sampling was previously proposed to delineate PCB impacts in the vicinity of RR-3. [4] DRO was detected above SLs at 0.5 feet bgs at RR-5 and RR-8, and at 0.5 and 1.5 feet bgs at RR-9. Additional sampling proposed to delineate DRO impacts in the vicinity of RR-5, RR-8, and RR-9. Arsenic was detected above SLs at 0.5 and 1.5 feet bgs at RR-12. Additional sampling proposed to delineate arsenic impacts in the vicinity of RR-12. Results below SLs at all other sample locations.
	RR-2	11/8/21	Roux	0.5, 1.5	Metals, VOCs, TPH, PCBs, OCPs, SVOCs, chlorinated herbicides	
	RR-3	11/8/21	Roux	0.5, 1.5	Metals, VOCs, TPH, PCBs, OCPs, SVOCs, chlorinated herbicides	
	RR-4	11/8/21	Roux	0.5, 1.5	Metals, VOCs, TPH, PCBs, OCPs, SVOCs, chlorinated herbicides	
	RR-5	11/8/21	Roux	0.5, 1.5	Metals, VOCs, TPH	
	RR-6	11/8/21	Roux	0.5, 1.5	Metals, VOCs, TPH	
	RR-7	11/8/21	Roux	0.5, 1.5	Metals, VOCs, TPH, PCBs, OCPs, SVOCs, chlorinated herbicides	
	RR-8	11/8/21	Roux	0.5, 1.5	Metals, VOCs, TPH	
	RR-9	11/8/21	Roux	0.5, 1.5	Metals, VOCs, TPH, PCBs, OCPs, SVOCs, chlorinated herbicides	
	RR-10	11/8/21	Roux	0.5, 1.5	Metals, VOCs, TPH	
	RR-11	11/8/21	Roux	0.5, 1.5	Metals, VOCs, TPH	
	RR-12	11/8/21	Roux	0.5, 1.5	Metals, VOCs, TPH, PCBs, OCPs, SVOCs, chlorinated herbicides

	RSB-38-R6	3/3/22	Roux	5, 15	VOCs [3]	
	RSB-38-R7	3/3/22	Roux	35	VOCs [3]	
	RSB-60-R5	3/4/22	Roux	5, 15	VOCs [3]	
	RSB-60-R6	3/4/22	Roux	5, 15	VOCs [3]	
	RSB-60-R8	3/4/22	Roux	15, 35	VOCs [3]	
Hazardous waste storage	RSB-31	1/4/21	Ramboll	1, 3, 5	Metals, VOCs, TPH [3]	Results below SLs
Former oil and diesel USTs	RSB-33	12/21/20	Ramboll	3, 5, 10, 15	Metals, VOCs, TPH [3]	
Cooling towers	RSB-42	12/30/20	Ramboll	1	Metals + Cr(VI)	Results below SLs
	RSB-42-Stepout	12/30/20	Ramboll	1, 3, 5	Metals + Cr(VI)	
	RSB-45		Ramboll	1, 3, 5	Metals + Cr(VI)	
Wash station	RSB-46	12/18/20	Ramboll	1, 3	Metals, VOCs, TPH [3]	Results below SLs
	RSB-46-Stepout	1/5/21	Ramboll	1, 3, 5	Metals, VOCs, TPH	
	RSB-47-Stepout	1/5/21	Ramboll	1, 3, 5	Metals, VOCs, TPH [3]	
Main production line building	RSB-48	12/28/20	Ramboll	1, 3, 5	Metals, VOCs, TPH [3]	Results below SLs
	RSB-49	12/28/20	Ramboll	1, 3, 5	Metals, VOCs, TPH [3]	
	RSB-50	12/29/20	Ramboll	1, 3, 5	Metals, VOCs, TPH	
	RSB-51	12/28/20	Ramboll	1, 3, 5	Metals, VOCs, TPH, PCBs [3]	
	RSB-52	12/30/20	Ramboll	1, 3, 5	Metals, VOCs, TPH [3]	
Parts Warehouse	RSB-53	12/30/20	Ramboll	1, 3, 5	Metals, VOCs, TPH [3]	Results below SLs; additional VOC sampling conducted as part of soil vapor delineation sampling.
	RSB-53-R8	3/3/22	Roux	5, 15	VOCs [3]	
	RSB-53-R9	3/2/22	Roux	5, 15	VOCs [3]	
	RSB-53-R10	3/3/22	Roux	5, 15	VOCs [3]	
	RSB-53-R11	3/3/22	Roux	5, 15	VOCs [3]	
	RSB-53-R12	3/3/22	Roux	15	VOCs [3]	
	RSB-53-R13	3/3/22	Roux	15	VOCs [3]	
	RSB-53-R14	3/3/22	Roux	35	VOCs [3]	
	RSB-53-R15	3/3/22	Roux	15, 35	VOCs [3]	
	RSB-54	12/30/20	Ramboll	1, 3, 5	Metals, VOCs, TPH [3]	
	RSB-54-E3	3/3/22	Roux	35	VOCs [3]	
	RSB-54-E4	3/3/22	Roux	5, 15, 35	VOCs [3]	
	RSB-54-NE	3/3/22	Roux	5, 15, 35	VOCs [3]	
	RSB-54-S2	3/3/22	Roux	5, 15, 35	VOCs [3]	
	RSB-54-SE	3/3/22	Roux	5, 15, 35	VOCs [3]	
Lubricant storage area	RSB-55	12/31/20	Ramboll	3, 5	Metals, VOCs, TPH [3]	Results below SLs
	RSB-56	12/31/20	Ramboll	1, 3, 5	Metals, VOCs, TPH [3]	
East of mobile maintenance building (RSB-57 Area)	RSB-57	12/31/20 and 1/7/21	Ramboll	1, 3, 5	Metals, VOCs, TPH	Lead detected above SLs in sample collected from 1 foot bgs at RSB-57. Additional step-out samples collected to delineate lead in the area east of the mobile maintenance building. Additional sampling proposed to complete lead delineation in area east of the mobile maintenance building.
	RSB-57-E	1/27/21	Ramboll	1, 3, 5	Lead	
	RSB-57-N	1/27/21	Ramboll	1, 3, 5	Lead	
	RSB-57-R1	11/5/21	Roux	1	Lead	
	RSB-57-R2	11/5/21	Roux	1	Lead	
	RSB-57-R3	11/5/21	Roux	1	Lead	
	RSB-57-R4	11/5/21	Roux	1, 3	Lead	
	RSB-57-R5	11/5/21	Roux	1, 3	Lead	
	RSB-57-S	1/27/21	Ramboll	1, 3, 5	Lead	
	RSB-57-W	1/27/21	Ramboll	1, 3, 5	Lead	
Reheat oven	RSB-63	12/29/20	Ramboll	1, 3, 5	Metals, VOCs, TPH	Results below SLs
Former oil cellar in production/roll mill building	RSB-64	1/4/21	Ramboll	3, 5, 10, 15	Metals, VOCs, TPH [3]	Results below SLs
Transformers	RSB-65	12/29/20	Ramboll	1, 3, 5	Metals, VOCs, TPH, PCBs	Results below SLs
Former septic system	RSB-69	12/21/20	Ramboll	1, 3, 5, 10, 15	Metals, VOCs, TPH [3]	Results below SLs
Former 1993 UST footprint	SB-2	11/4/21	Roux	1, 3	Metals, VOCs, TPH	Results below SLs
	SB-3	11/4/21	Roux	1, 3	Metals, VOCs, TPH	
UST and Dispenser	SB-4	11/5/21	Roux	1, 3	TPH	Results below SLs

Table 2a
Summary of Sampling Results - Soil
12451 Arrow Route, Rancho Cucamonga, California

Area of Historical Operations	Boring ID	Date(s)	Consultant	Sample depth(s) (feet bgs)	Analyses [1]	Results Summary and Proposed Delineation
Parcel 4						
Sitewide grid - No impacts found	RSB-20	12/14/20 and 1/7/21	Ramboll	1, 2, 3, 5	Metals, VOCs, TPH	Results below SLs
	RSB-20-Stepout	12/16/20	Ramboll	1, 3	Metals, VOCs, TPH	
	RSB-22	12/14/20	Ramboll	1, 3, 5	Metals, VOCs, TPH-GRO	
	RSB-23	12/14/20 and 1/8/21	Ramboll	1, 3, 5	Metals, VOCs, TPH	
	RSB-23-Stepout	12/15/20	Ramboll	1, 3	Metals, VOCs, TPH	
	RSB-24	12/15/20	Ramboll	2, 3, 5	Metals, VOCs, TPH	
Slag trench remediation area	RSB-34	12/28/20 and 1/7/21	Ramboll	1, 3, 5, 10, 15, 20, 25	Metals, VOCs, TPH	Results below SLs
	RSB-35	12/23/20	Ramboll	1, 3, 5, 10, 15, 20, 25	Metals, VOCs, TPH	
Clarifier & Oil recovery system south of Maintenance Shop	RSB-58	12/16/20	Ramboll	1, 3, 5	Metals, VOCs, TPH	Results below SLs
	RSB-59	12/24/20 and 1/6/21	Ramboll	1, 3, 5, 10, 15	Metals, VOCs, TPH [3]	
	RSB-58-S	11/3/21	Roux	1, 3, 5	Metals, VOCs, TPH	
	RSB-58-W	11/3/21	Roux	1, 3, 5	Metals, VOCs, TPH	
Maintenance shop near hydraulic lift	RSB-61	12/15/20	Ramboll	1, 3, 5	Metals, VOCs, TPH [3]	Results below SLs

Notes:

1. See the following tables in the Subsurface Investigation Report (Roux, 2023) for analytical results:
   Table 2: Metals
   Table 3: Volatile Organic Compounds (VOCs)
   Table 4: Total Petroleum Hydrocarbons (TPH)
   Table 5: Polychlorinated Biphenyls (PCBs)
   Table 6: Organochlorine Pesticides (OCPs)
   Table 7: Semi-Volatile Organic Compounds (SVOCs)
   Table 8: Chlorinated Herbicides
2. RSB-04 thallium discussion from Ramboll's Phase II Subsurface Investigation Report (Ramboll, 2021): Thallium was initially detected in only one soil sample from RSB-04 at a depth of 5 feet bgs and a concentration of 22.1 mg/kg. Thallium was not detected at the co-located and step-out samples analyzed in the vicinity of RSB-04. It was later discovered that the reported concentration of thallium in initial boring RSB-04 was a laboratory reporting error and the laboratory report was corrected accordingly.
3. Soil vapor sampling and analysis also conducted at this location; refer to Table 2b.
4. Proposed PCB delineation sampling at RR-3 provided in Technical Memorandum, Targeted Shallow Soil Investigation for PCBs near RR-3 and Recommended Additional Sampling (Roux, 2023).

Table 2b
Summary of Sampling Results - Soil Vapor
12451 Arrow Route, Rancho Cucamonga, California

Area of Historical Operations	Boring ID	Date(s)	Collected By	Sample depth(s) (feet bgs)	Results Summary and Proposed Delineation
Parcel 2					
Former diesel UST (RSB-25 Area)	RSB-25	1/7/2021	Ramboll	5, 15	Chloroform detected above SL at 5 and 15 feet bgs. Additional sampling proposed at lateral stepout borings.
Cooling water channel (RSB-32 Area)	RSB-32	1/7/2021	Ramboll	5, 30	Chloroform detected above SL at 30 feet and below SL at 5 feet bgs. Additional sampling at 15 feet bgs proposed.
Clarifiers by baghouse	RSB-43	1/7/2021	Ramboll	5, 15	Results below SLs
	RSB-44	1/6/2021	Ramboll	5, 15

- BORING LOCATION (RAMBOLL 2020/2021; ROUX 2021)
- DRO EXCEEDANCE IN SOIL (RAMBOLL 2020/2021; ROUX 2021)
- PROPOSED SOIL BORING

NOTES

1. DEPTH IS IN FEET BELOW GROUND SURFACE (BGS)
2. DRO = TOTAL PETROLEUM HYDROCARBONS IN THE DIESEL RANGE
3. TPH = TOTAL PETROLEUM HYDROCARBONS
4. TPH MEASURED IN UNITS OF MILLIGRAMS PER KILOGRAM (MG/KG)
5. ORANGE HIGHLIGHT INDICATES RESULTS EXCEED THE SCREENING LEVEL
6. SAN FRANCISCO BAY REGIONAL WATER QUALITY CONTROL BOARD (SFBRWQCB) ENVIRONMENTAL SCREENING LEVEL (ESL) FOR COMMERCIAL/INDUSTRIAL: SHALLOW SOIL EXPOSURE (2019) FOR DRO IS 1,200 MG/KG
7. <X = ANALYTE NOT DETECTED ABOVE LABORATORY REPORTING LEVEL
8. GREEN HIGHLIGHT INDICATES DATA SET INCLUDES SAMPLES COLLECTED BY RAMBOLL
9. ADDITIONAL STEP-OUT SAMPLES WILL BE COLLECTED AS NECESSARY TO DELINEATE EACH AREA HORIZONTALLY AND VERTICALLY

EDR Inquiry # 7435473.3	Contact: Lindsey Dandridge-Perry

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Kleinfelder, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Project 24001666.001A

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: EC69-4C32-8D8B

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Kleinfelder, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E1527 - 21 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

BUILD FAX PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Kleinfelder, Inc. on Sep 05, 2023.

TARGET PROPERTY

12343, 12353,12451, 12455, and 12459 Arrow Route
Rancho Cucamonga, CA 91739

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **NO PERMITS IDENTIFIED**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

ADJOINING PROPERTY FINDINGS

ADJOINING PROPERTY DETAIL

The following Adjoining Property addresses were researched for this report. Detailed findings are provided for each address.

No Permits Found

GLOSSARY

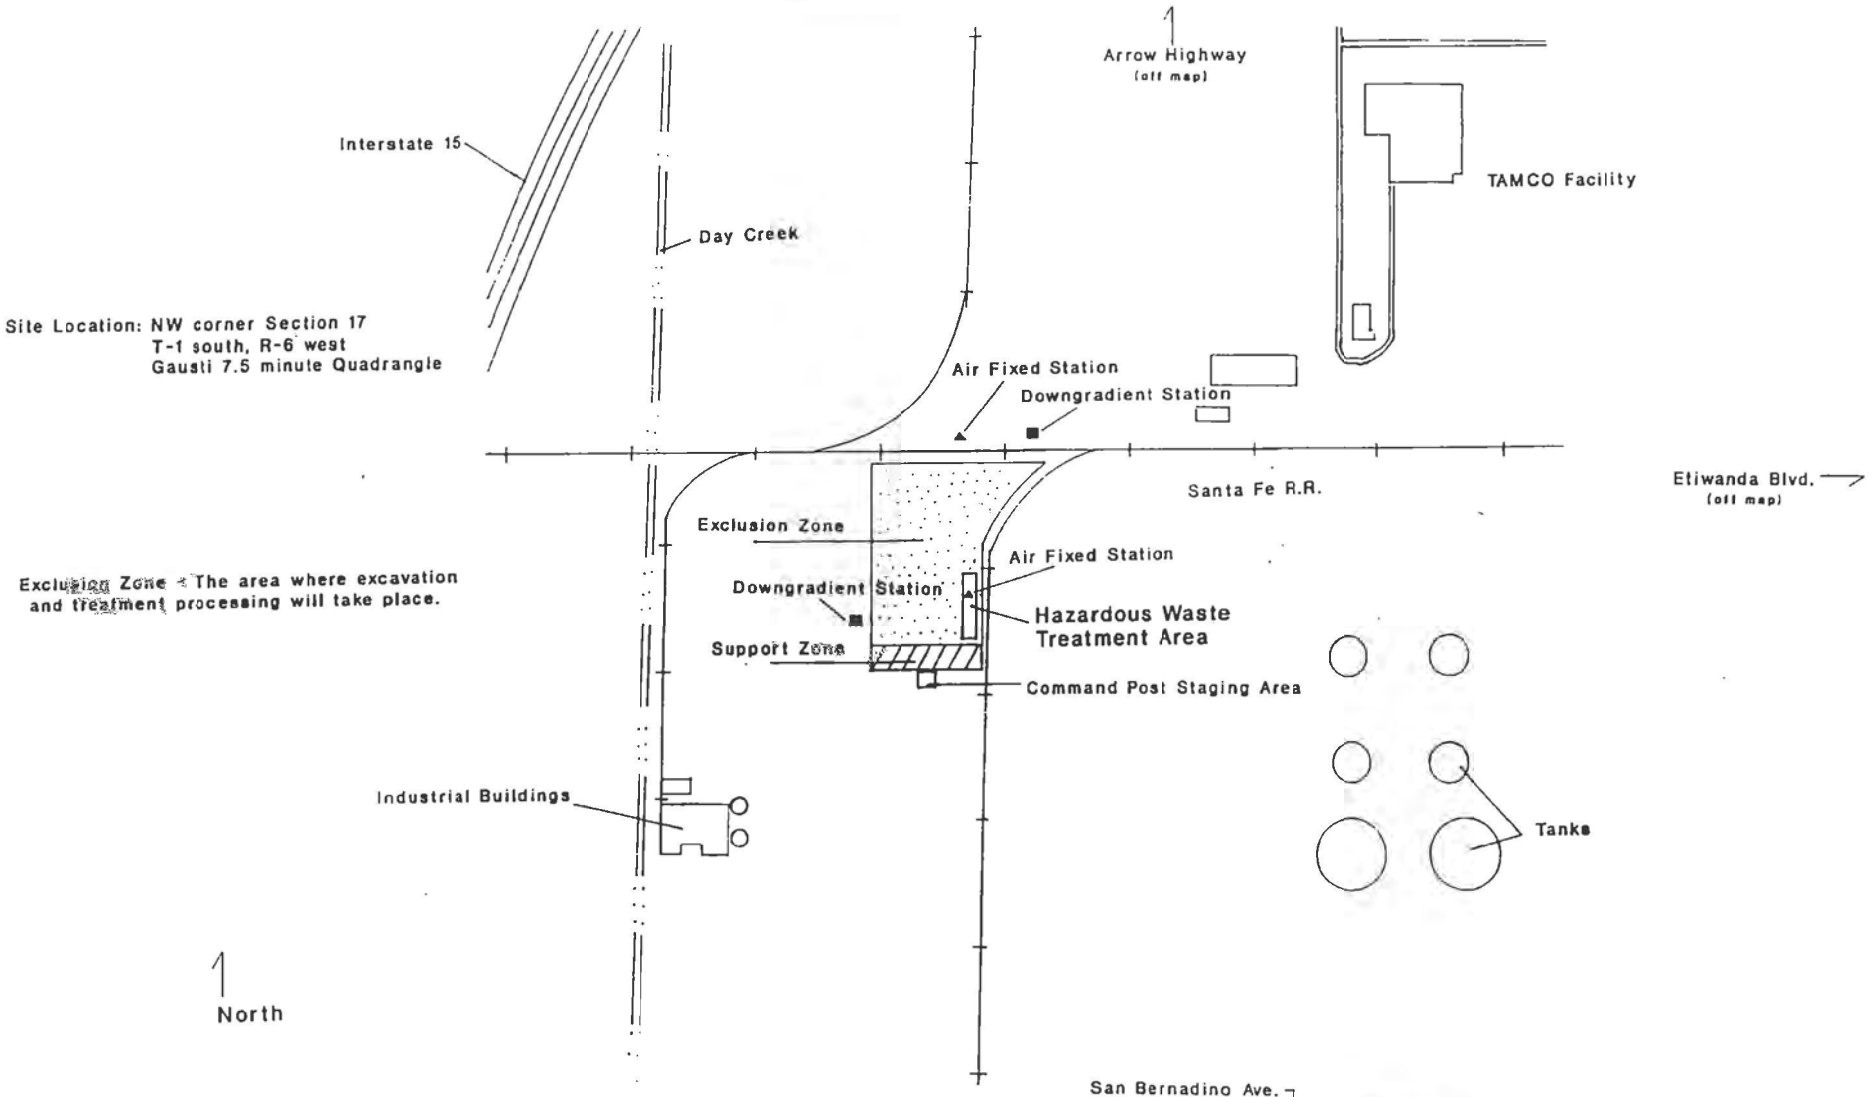
General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.



Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

PROJECT: 1690010XXXX | DATED: 4/27/2021 | DESIGNER: AHIGGINS

Slag Thickness (feet) at Boring Locations

- No slag encountered
- 0 - 2.5
- 2.6 - 5.0
- 5.1 - 7.5
- 7.6 - 10
- Site Boundary
- Slag Trench Remediation Area (DTSC, December 20, 2001) *
- Slag Remediation Area (SBCFD, July 2, 2002)
- Pad 16 Remediation Area (DTSC, April 26, 2007)
- Lead Remediation Area (RWQCB-SA, November 7, 1990)

Notes

1. Slag thickness depicted in feet (ft) below ground surface at boring locations where slag is identified.
2. All borings from 2020/2021 are depicted on the map.

0 125 250 Feet

Confidential - Subject to Non-Disclosure Agreement
