Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the

ETIWANDA GENERATING STATION (Continued) **1001217613**

estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
CAMDBS (Clean Air Markets Division Business System) is a national information system that supports the implementation of market-based air pollution control programs administered by the Clean Air Markets Division, within the Office of Air and Radiation. These programs include the Acid Rain Program, established by Title IV of the Clean Air Act Amendments of 1990, and regional programs designed reduce the transport of ozone. These emissions trading programs allows regulated facilities (primarily electric utilities) to adopt the most cost-effective strategies to reduce emissions at their units. Units that reduce their emissions below the number of allowances they hold -- each allowance is equivalent to one ton of sulfur dioxide or nitrogen oxides -- may trade allowances with other units in their system, sell them to other utilities on the open market or through EPA auctions, or bank them to cover emissions in future years. CAMDBS functions include registering responsible officials, establishing allowance accounts, reporting hourly emissions data, and transferring allowances between accounts.
TSCA SUBMITTER
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
HAZARDOUS AIR POLLUTANT MAJOR
US Emissions & Generation Resource Database (EGRID) contains data on emissions and resource mix for virtually every power plant and company that generates electricity in the United States.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Description:	An operator made rounds at midnight & everything was fine. Around 4am, the release was discovered, aprox 3-5 gpm from the cooling towers and entering Chadwick Channel, a storm water conveyance that runs thru the property. It was soaking into the saand and mud at bottom of channel & not going off the property. It lasted

(Continued) **S104766087**

for no more then 4 hrs and was stopped immediately upon discovery.

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No

CALIFORNIA HOME BRANDS INC (Continued) **1000252224**

Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Historical Generators:

Date form received by agency: 1990-04-10 00:00:00.0

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

SIMSMETAL AMERICA (Continued) **1000367428**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

BURNELL HYDROLICS (Continued) **1004675774**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-15-2012
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Staff performed inspection of the facility's south side perimeter during a light rain event to observe any run-off from the site. Site did not generate run-off during a 0.20in storm event for the area on this day (reported by the San Bernardino Flood Control District for this area). Staff would contact site's representative to notify the need for housekeeping along the south perimeter.

Click Here:

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:
Site ID: 37713
Site Name: IEUA REGIONAL PLANT #4
Violation Date: 09-28-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 10/11/2017. Observed facility added (1) ~2,400 gallon double walled tank of bleach and (2) ~275 gallon totes of bleach. Update the inventory with the increased amount of bleach stored on site. Operator indicated that these were added temporarily due to the construction of a new area for liquid bleach storage. Make necessary updates as the processes of the facility change. Update information electronically via CERS http://cers.calepa.ca.gov
Violation Division: San Bernardino County Fire Department

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Type:	Out-of-County Facility
Site SWIS Number:	36-AA-0423
Beginning Operation Date:	N/A
Ending Operation Date:	N/A
Local Enforcement Agency:	County of San Bernardino Div. of Environmental Health Services
Maximun Depth Fill(Ft):	Not reported
Permitted Capacity:	420
Present Use:	Solid Waste Operation
Remaining Capacity(Million):	N/A
Status:	Active
Waste Accepted:	Green Materials;
Hours of Operation:	Monday - Friday 7 am - 5 pm
Disposal Area (Acre):	Not reported

Site History:	Pond Construction - The SARWQCB records indicate that a wastewater pond was installed at the site in September 1966. The pond was used to hold industrial wastewater on-site. Brine Pond Permitting - The SARWQCB approved the operation of the pond under Resolution 66-26, which required testing of the effluent every two months. In 1967, site operations arranged for the construction of a small saline discharge pond to hold the waste segregated from the water softening process. Brine Pond Expansion - A larger brine pond was constructed on-site in 1970. The expanded pond was reportedly lined with polyethylene. The SARWQCB updated the sites waste discharge requirements in Resolution 70-22 in 1970. Permitting - The SARWQCB updated the 1976 Resolution with a Monitoring and Reporting Program Order (No. 82-142) in 1982 for industrial wastewater discharge monitoring at the site. The order No. 82-142 outlines ongoing monitoring and reporting of recycled cure yard water. Request for Soil Investigation - In 1994, the SARWQCB noted the brine pond had a liner fabricated with polyvinylchloride (PVC); however, the barrier was not equipped with a leak detection system. The SARWQCB requested soil sampling around the brine pond to evaluate soil impacts associated with the liner leakage. The memo also stated that use of the pond had to cease while pond retrofitting was implemented. If contamination was found to exist below the pond, which could not be removed by soil excavation, then a surface cap would have to be constructed to prevent water infiltration. Discharges to the brine pond ceased in March 1994. Brine Pond Abandonment Work Plan - On August 18, 1994, a brine pond abandonment work plan was prepared and submitted to the SARWQCB to conduct the following: (1) evaporate the water in the soil; (2) remove the soil above the pond liner; (3) remove the pond liner; (4) conduct field analytical tests, and; (5) submit samples to the laboratory for testing. Liner Removal, Excavation, and Soil Disposal - A report prepared by Hemphill Green

GOODMAN LOGISTICS CENTER (Continued) **S104156558**

and Associates indicates that the liner from the brine pond was removed in October of 1994 and 555 tons of soil were removed from the site. Soil Investigation - On June 29, 1995, subsurface soil samples were collected and a soil investigation report was prepared. Based on a subsurface investigation, subsurface soil had been impacted above SARWQCB limits by the pond wastewater which had leaked through the liner material. Lateral Delineation - It was determined that the lateral extent of total dissolved solids (TDS) impacts was delineated. In 2005, all the liquid had been removed from the pond, material above the liner was removed, and the pond was backfilled with approximately 6.5 feet of compacted fill from the site. An engineered brine pond cap had been placed on the former pond in accordance with the technical specifications approved by the SARWQCB. Closure Report - The Final Cap Closure Report was approved by the SARWQCB in 2007. A Declaration of Restrictions was signed during the same year. An annual cap monitoring and maintenance plan is in effect at the site. Cap and Liner Design - Encon installed a cap that incorporated a reinforced block retaining wall, backfill material, and a 30-mil polyvinyl liner over the brine pond area for leak detection (Figure 6). The brine pond area abandonment and cap construction were performed based on the Encon Brine Pond Permanent Cap Work Plan (ENCON, 2003). The 30-mil liner was installed between a 6-inch layer of sand below the liner, and a 12- inch layer of sand above the liner. An 8-inch thick concrete rebar-reinforced cap was installed above the liner with a 6-inch gravel base. The purpose of the cap is to prevent infiltration of water through the TDS-impacted soil and to prevent migration of TDS mass into the aquifer. The purpose of the liner is to act as a secondary barrier; combined with a monitoring well, it is designed to detect and contain cap leaks. Goodman Birtcher acquired the Ameron site property in late 2013, and redeveloped the site into a warehouse distribution center, Goodman Logistic Center. The existing brine pond cap has been modified and the former brine pond area has been used as a parking lot. Board files for this case has been renamed from "Ameron Pipe Division, Southern California (Arrow Plant), Etiwanda" to "Goodman Logistic Center, Rancho Cucamonga"

Title:	13267 for Ameron International - Etiwanda
Description:	Requiring Ameron International to inspect and maintain the closure cap for the closed brine pond at the site in accordance with the cap maintenance program approved by Board staff on June 20, 2007 (see attached). The cap inspection and maintenance program was revised via the Board's March 13, 2012 letter (see attachments).

CERS Description:	Industrial Facility Storm Water

Evaluation:

Eval General Type:	Case Development Inspection
Eval Date:	05-19-2009
Violations Found:	No
Eval Type:	Industrial Storm Water Enforcement Follow-up
Eval Notes:	Meeting of four companies to address pollutant loads issues. Staff met with four companies to address the undersized stormwater treatment system on Tamco's property, due to the high stormwater run-offs draining towards it from the adjacent properties to the north, north-east, and eastern borders. At least two representatives from each company are present at the meeting to discuss Tamco's treatment system expansion, or each company will establish its own treatment system its property stormwater run-off. Stormwater samples analysis report from annual reports submitted to the Board by the four companies for 2004-2005 to 2007-2008 were presented by RB staff for discussion. Based on the analytical results, each company confirmed the need for corrective action and and acknowledged that the issues will be dealt with swifty.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 06/08/1995
Comments: Due to evidence of contamination, DTSC recommends a PEA. A Voluntary Cleanup Agreement has been signed between DTSC and RP to remediate the site. The purpose of the agreement is for DTSC to provide an oversight for a Removal Action Workplan for the site based on health-based risk assessment (HRA).

Eval Type:	Industrial Storm Water Enforcement Follow-up
Eval Notes:	Meeting of four companies to address pollutant loads issues. Staff met with four companies to address the undersized stormwater treatment system on Tamco's property, due to the high stormwater run-offs draining towards it from the adjacent properties to the north, north-east, and eastern borders. At least two representatives from each company are present at the meeting to discuss Tamco's treatment system expansion, or each company will establish its own treatment system its property stormwater run-off. Stormwater samples analysis report from annual reports submitted to the Board by the four companies for 2004-2005 to 2007-2008 were presented by RB staff for discussion. Based on the analytical results, each company confirmed the need for corrective action and and acknowledged that the issues will be dealt with swifty.

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	09-09-2009
Violations Found:	No
Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	Staff arrived at 1300: At the request of Mr. Peter Maitland, the technical services manager engineer from main headquarter in Canada (pmaitland@treeisland.com), staff visited the site to discuss options in retrofitting new structural BMPs for the site. With him is Harold Manifold, the director of operations from HQ (hmanifold@treeisland.com), and the various colleges from the past meetings during the four companies gathering to discuss about the Tamco's undersized treatment systems for all four companies. Tree Island had contacted various consultants and engineers to pre-calculate the required structural upgrades, as well as the treatment systems' options for retrofitting, in order to meet the EPA multi-sector benchmarks for their exceeding stormwater samples parameters. In addition, Tree Island also would like to prevent any discharge of stormwater run-off, treated or untreated, onto Tamco's property, located south and southwest of its property. Tree Island's preliminary conclusion is to perform an aerial and land survey of its property, including property borders assessment, a possibility of a structural trench line for diverting all stormwater run-offs to the eastern culvert/ditch, which ultimately discharges directly to the energy company about 2000 feet downstream, by-passing Tamco-+s treatment systems completely. Due to the economy, Tree Island is unable to perform drastic structural modification. However, the company is doing everything it could within its meager budget for

TI WIRE (Continued) **S109035898**

stormwater improvement project without causing the company to file for bankruptcy. The company will provide Board staff with updates within a month or two. Awaiting updates from company.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

VISTA METALS CORPORATION (Continued) **1000395229**

OSHA ESTABLISHMENT
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RISK AND TECHNOLOGY REVIEW
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS AIR POLLUTANT MAJOR
AIR MAJOR
STATE MASTER
HAZARDOUS WASTE BIENNIAL REPORTER
AIR MINOR
US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

. Waste code: 133
. Waste name: Aqueous solution with 10% or more total organic residues

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 135
. Waste name: Unspecified aqueous solution

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 171
. Waste name: Metal sludge (see 121)

. Waste code: 172
. Waste name: Metal dust (see 121) and machining waste

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 221
. Waste name: Waste oil and mixed oil

. Waste code: 222
. Waste name: Oil/water separation sludge

. Waste code: 223
. Waste name: Unspecified oil-containing waste

. Waste code: 241
. Waste name: Tank bottom waste

. Waste code: 261
. Waste name: Polychlorinated biphenyls and material containing PCB’s

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 341
. Waste name: Organic liquids (nonsolvents) with halogens

. Waste code: 342
. Waste name: Organic liquids with metals (see 121)

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 491
. Waste name: Unspecified sludge waste

ADVANCED ENVIRONMENTAL, INC. DBA WORLD OIL ENVIRONMENTAL SER (Continued) **1000367263**

. Waste code: 511
. Waste name: Empty pesticide containers 30 gallons or more

. Waste code: 521
. Waste name: Drilling mud

. Waste code: 611
. Waste name: Contaminated soil from site clean-ups

. Waste code: 612
. Waste name: Household waste

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D008
. Waste name: LEAD

CHEMWEST INDUSTRIES (Continued) **S103442717**

Completed Document Type: Site Screening
Completed Date: 05/01/1995
Comments: Site is owned by Kaiser Resources, Inc. and was leased to Chemwest Indutries. Site consists of an upper facility and a lower facility. The upper facility is being remediated under a consent order signed 8/88. The lower facility is being addressed by an approved closure plan. Chemwest has filed for bankruptcy. Kaiser is conducting the remediation efforts. NFA for Site Mitigation Operations.

Completed Area Name: PROJECT WIDE

Click Here:

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/12/2020

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

8996 ETIWANDA AVENUE
8996 ETIWANDA AVENUE
RANCHO CUCAMONGA, CA 91739

TARGET PROPERTY COORDINATES

Latitude (North):	34.09114 - 34° 5' 28.10''
Longitude (West):	117.527679 - 117° 31' 39.64''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	451320.8
UTM Y (Meters):	3772192.5
Elevation:	1123 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5620426 GUASTI, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

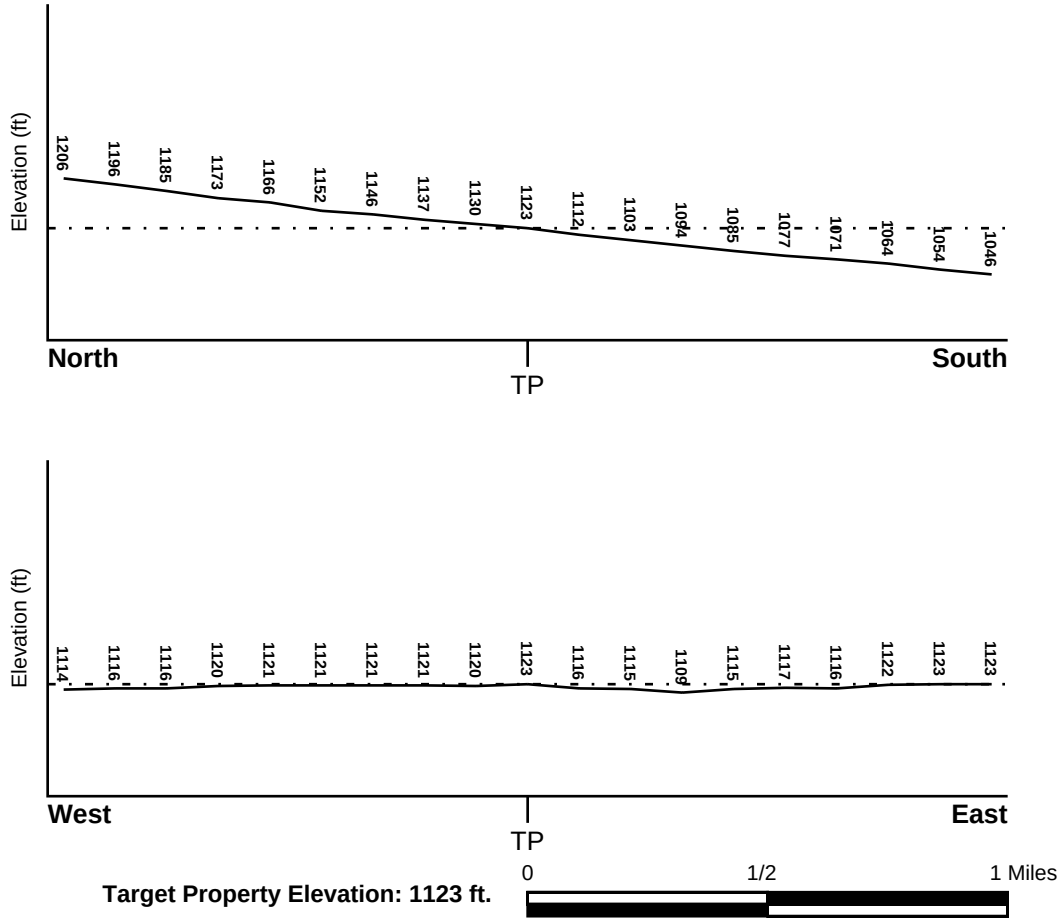
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06071C8634J	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C8635J	FEMA FIRM Flood data
06071C8633H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
GUASTI	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

Soil Map ID: 2

Soil Component Name: Hanford

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6
2	11 inches	59 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6

Soil Map ID: 3

Soil Component Name: Water

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

PATH FORWARD
Environmental Engineering & Geology

RESUME

Mr. Grunat is a Partner and Principal Geologist at Path Forward Partners. He has over ten years of experience as a technical consultant in the fields of geology, hydrogeology, and contaminated site investigation and remediation. His work includes: project management; remediation of soil, groundwater, and soil vapor through traditional and innovative technologies; contaminant fate and transport; hydrogeology; regulatory negotiations; and litigation support.

PROFESSIONAL LICENSES

Professional Geologist in California, Washington, and Texas

Certified Hydrogeologist in California and Washington

EDUCATION

Master of Science in Environmental Geology, Rutgers – 2013

Bachelor of Science, Environmental Science, Indiana University – 2007

WORK HISTORY

2018-Present – Path Forward Partners (CA)

2016-2018 - RPS (CA)

2014-2016 – Roux Associates (CA)

2013-2014 – URS (CA)

2011-2012 – Fleming Lee Shue (NY)

2008-2011 – Conestoga Rovers and Associates (CA)

2007 – Indiana Geological Survey (IN)

DAVID A. GRUNAT, P.G., C.H.G.

Partner/Principal Geologist

RELEVANT EXPERIENCE

Brownfield Redevelopment

Managed a large mixed-use redevelopment project including investigating the liabilities associated with the property including significant chlorinated solvent impacts from surrounding superfund sites.

Managed a large commercial redevelopment project under a California Land Reuse and Revitalization Act (CLRRA) agreement utilizing innovative techniques to pre-characterize the extent of pesticides, metals, and petroleum hydrocarbons to allow for accurate excavation estimation saving both time and money during the planning and implementation of the response action.

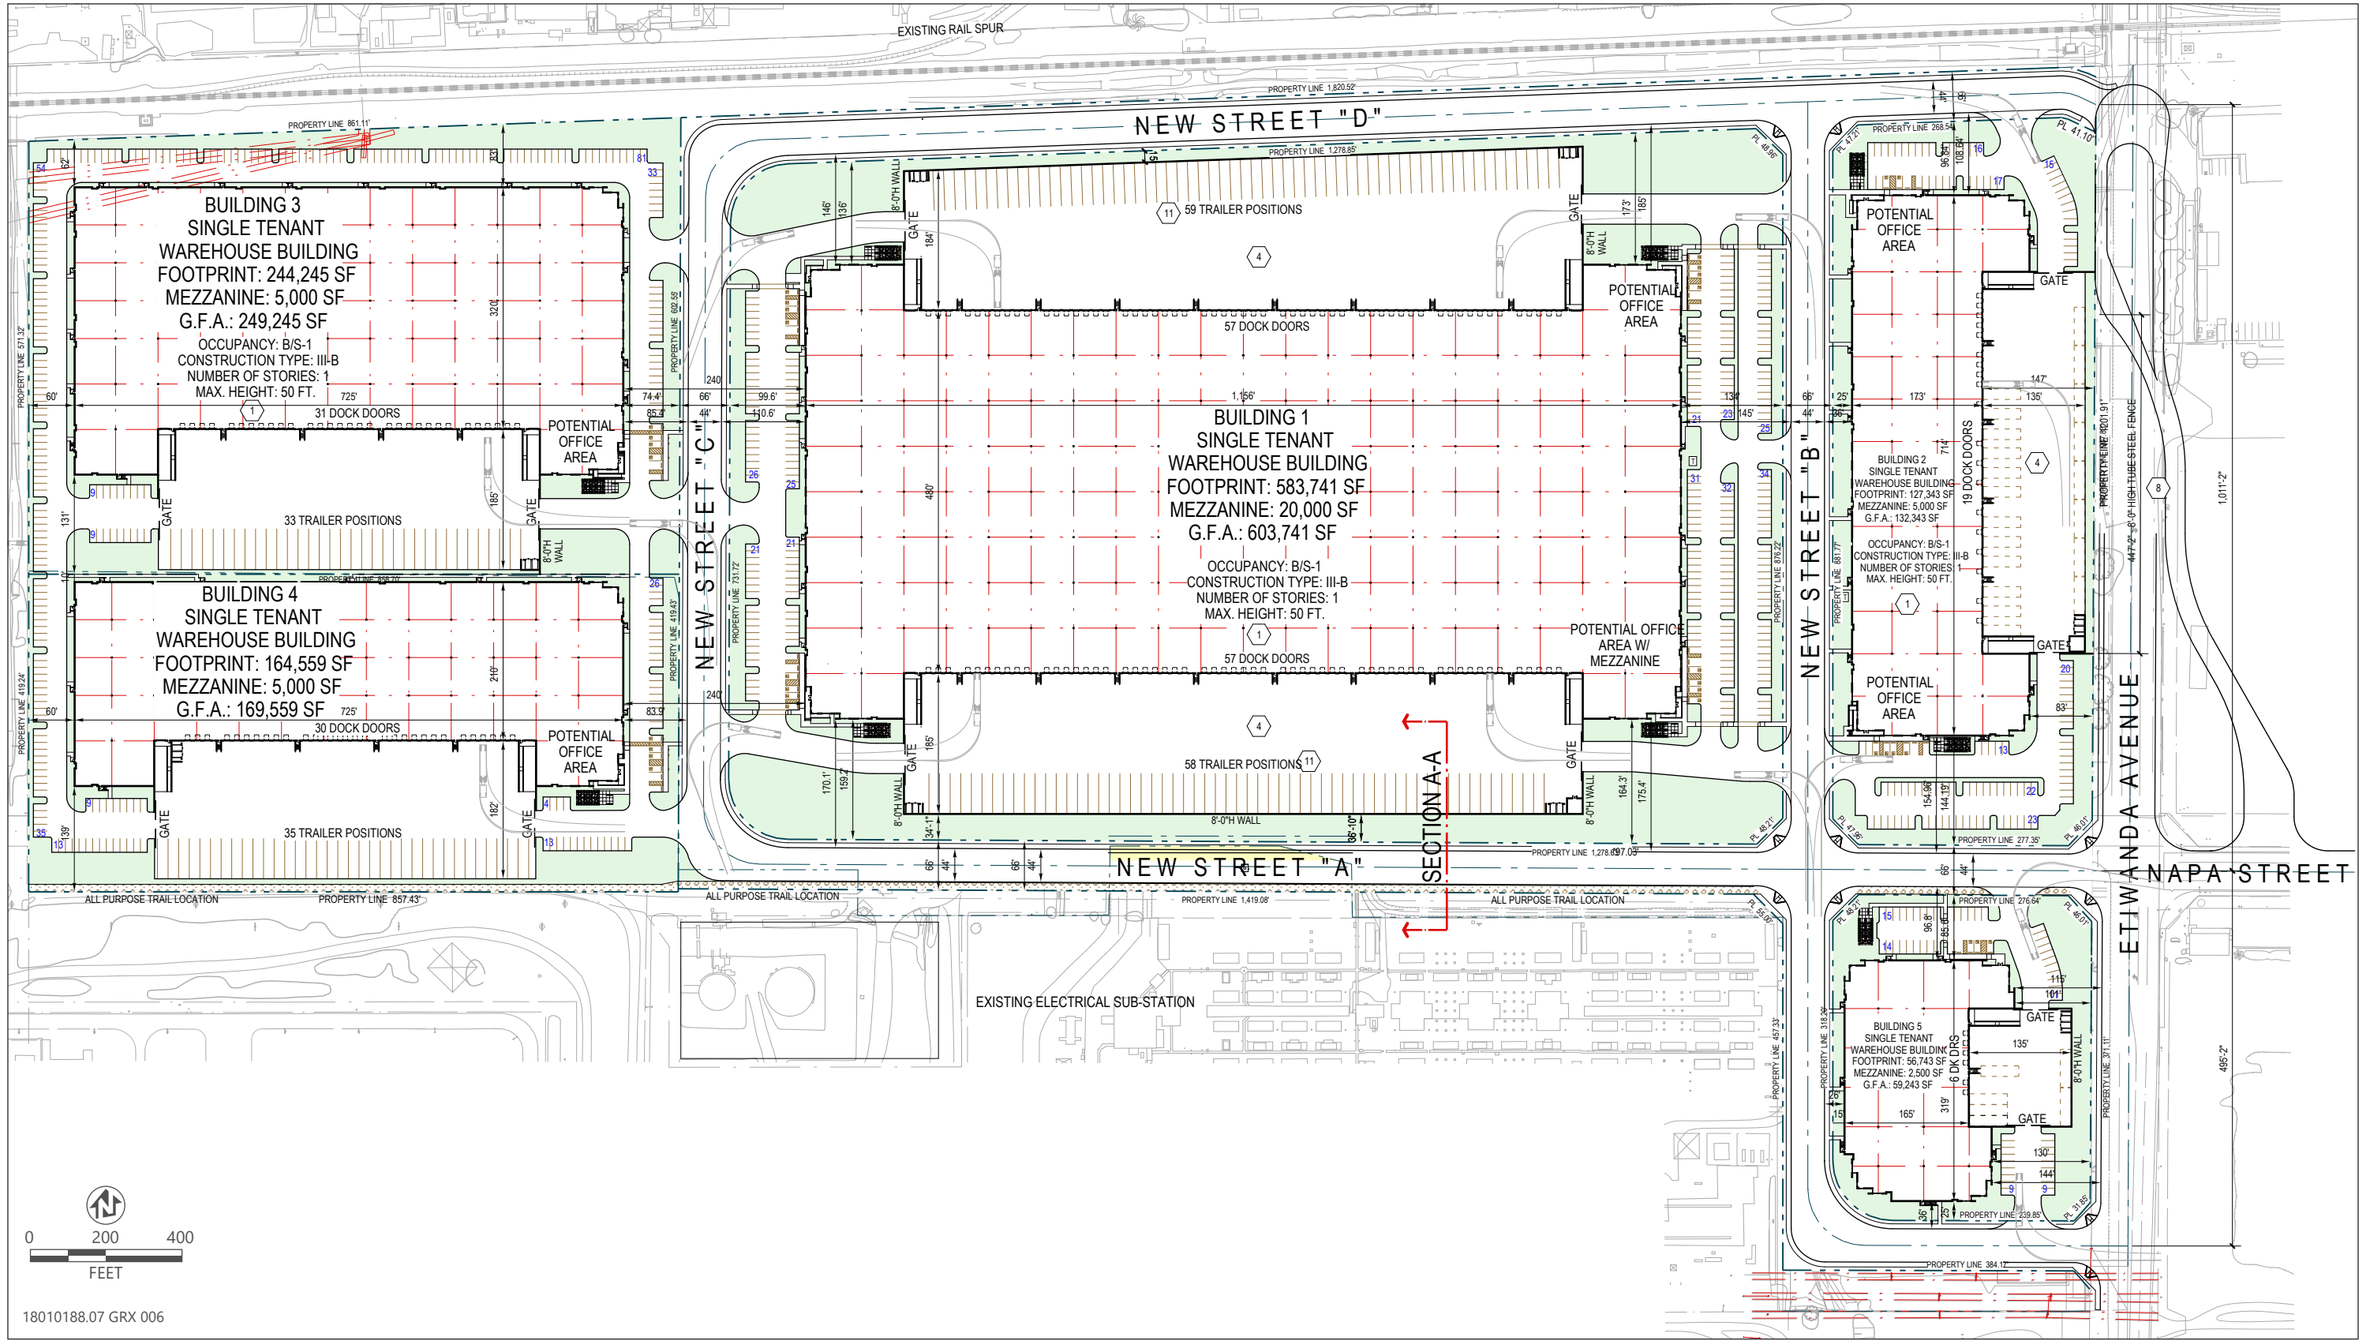
After development of a high-rise residential multi-family building, conducted indoor air monitoring and water sampling to show through a variation in geochemical parameters that infiltrating water was a result of a leaking supply line and not contaminated groundwater infiltrating through an in-place vapor/moisture barrier.

Managed due diligence Phase I and Phase II environmental site assessments (ESAs) at numerous properties including evaluating properties for potential liability due to hazardous waste contamination; collection of soil, groundwater, and soil vapor samples; and preparing remedial cost estimates.

Petroleum

Project Manager of a portfolio of over 40 active and former service station cleanup sites for a Fortune 500 Oil Company.

Successfully negotiated the reduction of sampling and demonstrated further remediation of NAPL at a petroleum bulk terminal was not warranted although persistent NAPL was present in various monitoring wells.



Acted as the lead technical expert to respond to inquiries from the Ministry of Environment of British Columbia during a hydrogeological study to assess the conditions on a tidal foreshore due to petroleum seeps from the upstream refinery activities.

Industrial

Completed a site re-evaluation after exceedances of elemental mercury above action levels were detected in monitoring wells including evaluating current and historical data to determine the pre-remediation and post-remediation mass in soil and groundwater. Successfully negotiated that site groundwater is not suitable for beneficial use regardless of site contamination.

Project Site Plan

DRAFT

Proposed Project
Air Quality, GHG, Energy, and Noise data request

1. **Construction:**
   a) Provide phase names, start and end dates, and duration in the table below. Multiple phases of the same type could occur at different times and some phase types may not be used, depending on the construction needs.
      - See table below.

Phase	Estimated Start	Estimated End Date	Working Days
Demolition (remaining)	9/1/24	9/30/24	20
Grading	10/1/24	11/15/24	30
Construction	11/15/24	2/15/26	360

   b) Please provide construction equipment including:
      - Quantity/type of equipment used for each construction activity
      - Equipment engine size in horsepower (hp) (if available/applicable)
      - Hours of operation for each equipment type (hours/day or hours/construction phase)
      - Quantity of stationary generators and horsepower (hp)
      - Fuel use for construction equipment (diesel or non-diesel type [e.g., gasoline])
      - See table below.

Phase	Equipment Type	Fuel	Quantity	Hours of Use/Day	Engine Tier	Days of Use	HP
Demolition	Crawler Tractors	Diesel	2	4	Tier 4 Interim	120	100
Demolition	Crushing/Proc. Equipment	Diesel	1	4	Tier 4 Interim	10	475
Grading	Scrappers	Diesel	6	8	Tier 3	20	500
Grading	Bull Dozers	Diesel	2	8	Tier 3	20	325
Grading	Motor Graders	Diesel	2	8	Tier 3	10	185
Grading	Front End Loaders	Diesel	4	8	Tier 3	110	225
All Phases	Sweepers/Scrubbers	Diesel	1	3	Tier 3	120	50

Construction	Excavators	Diesel	4	8	Tier 3	150	175
Construction	Crane (Crawler)	Diesel	1		Tier 3	36	400
Construction	Rough Terrain Forklifts	Diesel	4	8	Tier 3	275	100
Construction	Concrete Boom Pump	Diesel	1	12	Tier 3	25	485

c) Provide tons of debris or total cubic yards of material imported and exported during demolition and building construction. For each phase with material import or export, please provide the number of truck trips.
   - See table below. Example shown in *italics*.

Phase	**Amount of Material**		**Unit (specify tons or cubic yards of debris)**	**Number of truck Trips**	
	Imported	**Exported**		**Import**	**Export**
Demolition	NA	8,000	tons	NA	450
Grading	Balanced	Balanced	CY	NA	NA

- Specify the average distance in miles between the project site and the construction material sources or material disposal, if available.
- Anticipated daily construction schedule (e.g., 7:00 am to 7:00 p.m. Monday-Friday) - Typical Construction Hours will be 7am – 5pm. See night time construction for concrete pours.
- Provide narrative description of construction phases/activity types, including anticipated overlap in activities.
  We plan to complete the Demolition of the site and move directly into the grading (earthwork) phase. This should last 6 weeks. Once we have the building pad certified we will move into the construction phase. The construction phase will last approximately 72 weeks. We estimate that there will be up to 150 persons onsite. The activities during the construction phase include excavation for foundations and utilities, concrete pours, carpentry, steel erection, and building finishes.
- If nighttime construction is proposed, provide description of activities and equipment type/number that would be used at night, including location on the site of these activities. – Concrete pours will start at 1 am.
- If pile driving would occur, provide the following: NA
  - Construction phases in which pile driving will occur and the start and end date for each phase
  - Frequency (per day) of piles to be driven
  - Type of pile driver (sonic or vibratory)

2. Operational Activities

a. Vehicles (No known tenants at this time – refer to traffic analysis or use industry standards)

i. Indicate how many office workers and warehouse workers would report to the facility on a daily basis.
ii. Indicate the typical schedule for loading and drive through
iii. Describe how trucks would enter and exit the project area
iv. Describe the daily schedule (e.g., x trips between 3am and 6am) for inbound and outbound trucks
v. Provide the average trip length of deliveries/round trip from the facility?
vi. Narrative description of on and onsite truck loading/unloading and travel activity
vii. Location of truck routes (on and offsite). Can be ESRI shapefile, GE KMZ, or graphic.
viii. Truck fleet mix, as a percentage of total truck trips (heavy= 3+axle, GVW > 26k lbs/medium=2+axle, GVW >9k)
ix. Time of day truck activity occurs, including peak trucks/hour and average trucks/day
x. Duration of typical load/unload operation, including locations on site plan

b. Equipment
   i. List any warehouse equipment to be used on-site, including but not limited to forklifts and yard trucks. For each piece, provide the fuel type (e.g., diesel, electric), daily hours per use. Use best practice and industry standard. City's requirements (anticipated to be electric)
   ii. Identify all types of external mechanical equipment (e.g., HVAC, heat pumps, exhaust, fans, generators). For all identified equipment, please provide the following: (No known tenants at this time – refer to traffic analysis or use industry standards)
      1. Location on site plan and building
      2. Size (e.g., HP, kwh)
      3. Anticipated daily and annual operating hours
      4. Manufacturer-included enclosure/louvre or other noise attenuating technology, with specifications, if available.
      5. Enclosed (full or partial) or not? If, enclosed, what type of enclosure (e.g., masonry/brick, wood, aluminum, within building)
      6. Manufacture specification sheet (if available)

c. Utility consumption
   i. Please estimate the following for the project:
      1. Electricity consumption (in kilowatt-hours per year). (No known tenants at this time – refer to traffic analysis or use industry standards)
      2. Natural gas consumption (in therms per year). (None anticipated)
      3. Water consumption (gallons or acre-feet per year), separated into indoor and outdoor consumption. (Refer to the Water Supply Assessment)

4. Identify any proposed stationary sources (e.g., electrical and combustion equipment, HVAC units, emergency generators, pumps), including anticipated size, capacity, and anticipated daily hours per use. (Tenant specific – refer to traffic analysis or use industry standards)
5. Area (acres) that will require landscape maintenance. (7.5 acres)

d. Design Features
   i. Please provide details regarding design features that will be incorporated into the project design. Examples include rooftop solar with battery storage, seeking LEED certification, electric truck and vehicle outputs, drought-tolerant landscaping, among others.
      - LEED certification will be procured for this project.
      - Solar to provide power for conditioned office space
      - 15% of the roof to be solar ready
      - EV chargers will be provided for the project
      - Conduits for EV truck charging to be provided at truck yards
      - LED lighting throughout
      - Low flow plumbing fixtures
      - Drought tolerant landscaping

CITY OF RANCHO CUCAMONGA

HAZARDOUS WASTE SITE STATEMENT

I have been informed by the City of Rancho Cucamonga of my responsibilities pursuant to California Government Code Section 65962.5 (http://leginfo.legislature.ca.gov/) to notify the City as to whether the site for which a development application has been submitted is located within an area which has been designated as the location of a hazardous waste site (attached) by the Office of Planning and Research, State of California (OPR).

I have also been informed by the City of Rancho Cucamonga that, as the date of executing this statement, OPR has not yet compiled and distributed a list of hazardous waste site as required by said Section 65962.5.

I am informed and believe that the proposed site for which a development application has been submitted is not within an area specified in said Section 65962.5 as a hazardous waste site.

I declare under penalty of perjury of the laws of the State of California that the foregoing is true and correct.

STREET SECTION A-A

SCALE: 1" = 10'-0"

SITE PLAN GENERAL NOTES:

1. TYPICAL 90 DEG. PARKING STALLS SIZES ARE 9'W X 18' LONG INCLUDING A 1' LANDSCAPE OVERHANG TYPICAL EXCEPT AT ACCESSIBLE STALLS.

2. PARALLEL STALLS ARE 9' X 24'.

3. SETBACK REQUIREMENTS:

BUILDING SETBACK:	
FRONT:	25 FEET FROM CURBFACE
INTERIOR SIDEYARD:	5 FEET
PARKING SETBACK:	15 FEET FROM CURBFACE

FIRE DEPT. GENERAL NOTES:

1. FIRE ACCESS LANES SHALL COMPLY WITH THE FOLLOWING:

MIN. WIDTH:	26 FEET
MIN. CLEARANCE:	14'-6"
INSIDE RADIUS:	20 FT.
OUTSIDE RADIUS:	46 FT.
WEIGHT CAPACITY:	80,000 LBS.

2. ALL GATES SHALL BE INSTALLED PER THE FIRE DISTRICT REQUIREMENTS.

3. SIGNAGE STANDARDS PER RANCHO CUCAMONGA FIRE PROTECTION DISTRICT DECEMBER 2016.

ASSESSOR'S NUMBERS:

APN: 0229-283-79

KEYNOTES: (00)

1. PROPOSED PAINTED CONCRETE TILT-UP 40' CLEAR INDUSTRIAL BUILDING.

2. TYPICAL PARKING STALL - 9' X 18'. MAY BE REDUCED TO 9' X 17' W/ 1'-0" OVERHANG. STRIPING PER CITY STANDARDS.

3. TYPICAL LOW EMITTING / FUEL EFFICIENT / CARPOOL / VANPOOL PARKING STALL - 9' X 18'. MAY BE REDUCED TO 9' X 17' W/ 1'-0" OVERHANG. STRIPING PER CITY STANDARDS. MINIMUM 8% OF ALL PARKING SPACES PROVIDED PER BUILDING. A MINIMUM OF 6% OF ALL PARKING SPACES PROVIDED PER BUILDING SHALL BE EQUIPPED FOR FUTURE EV CHARGING CAPACITY.

4. 7" THICK CONCRETE YARD W/ GRADE LEVEL TRUCK DOORS AND TRAILER PARKING AREAS.

5. FULLY IRRIGATED LANDSCAPE AREA BOUNDED BY 6" CONCRETE CURB - SEE CONCEPT LANDSCAPE PLAN.

6. PRIMARY BUILDING ENTRANCE W/ DECORATIVE CONCRETE ENTRY WALK.

7. LOCATION OF 8'-0" HIGH TRASH AND RECYCLABLE BINS. SEE SHEET A2-1 FOR ELEVATION AND SECTIONS.

8. NEW 8'-0" HIGH BLACK TUBE STEEL FENCE.

9. PROPERTY LINES.

10. PROPOSED TRANSFORMER LOCATION.

11. 14' X 50' TRUCK TRAILER PARKING AREA.

12. ACCESSIBLE PARKING STALLS 9' X 18'-0" MIN.

13. DASHED LINE INDICATES : NEW 5'-0" WIDE SURFACE WALK ACCESSIBLE PATH OF TRAVEL FROM PUBLIC SIDEWALK & PARKING STALLS TO PRIMARY BUILDING ENTRANCE - CONSTRUCT NEW CONCRETE SIDEWALK. MAX SLOPE OF SURFACE WALK IN THE DIRECTION OF TRAVEL 4.9%. MAX CROSS SLOPE 2%.

14. PROVIDE BREAK AREA / LUNCH PATIO WITH SEATING. SEE PROJECT DATA ON A1-0 FOR MIN SF AREA AND NUMBER OF SEATS.

15. PROPOSED LOCATION FOR FIRE WATER METER AND 2" SUPPLY LINE INTO BUILDING. ABOVE GROUND BACKFLOWS AND DETECTOR CHECK ASSEMBLIES SHALL BE SCREENED BY A 3' MIN. / 4' MAX. CMU WALL ON 3 SIDES, 3' CLEAR TO THE ASSEMBLY. SEE PLAN VIEW.

16. PROPOSED SEWER LATERAL FROM PUBLIC RIGHT OF WAY SERVING BOTH BUILDINGS 1 & 2.

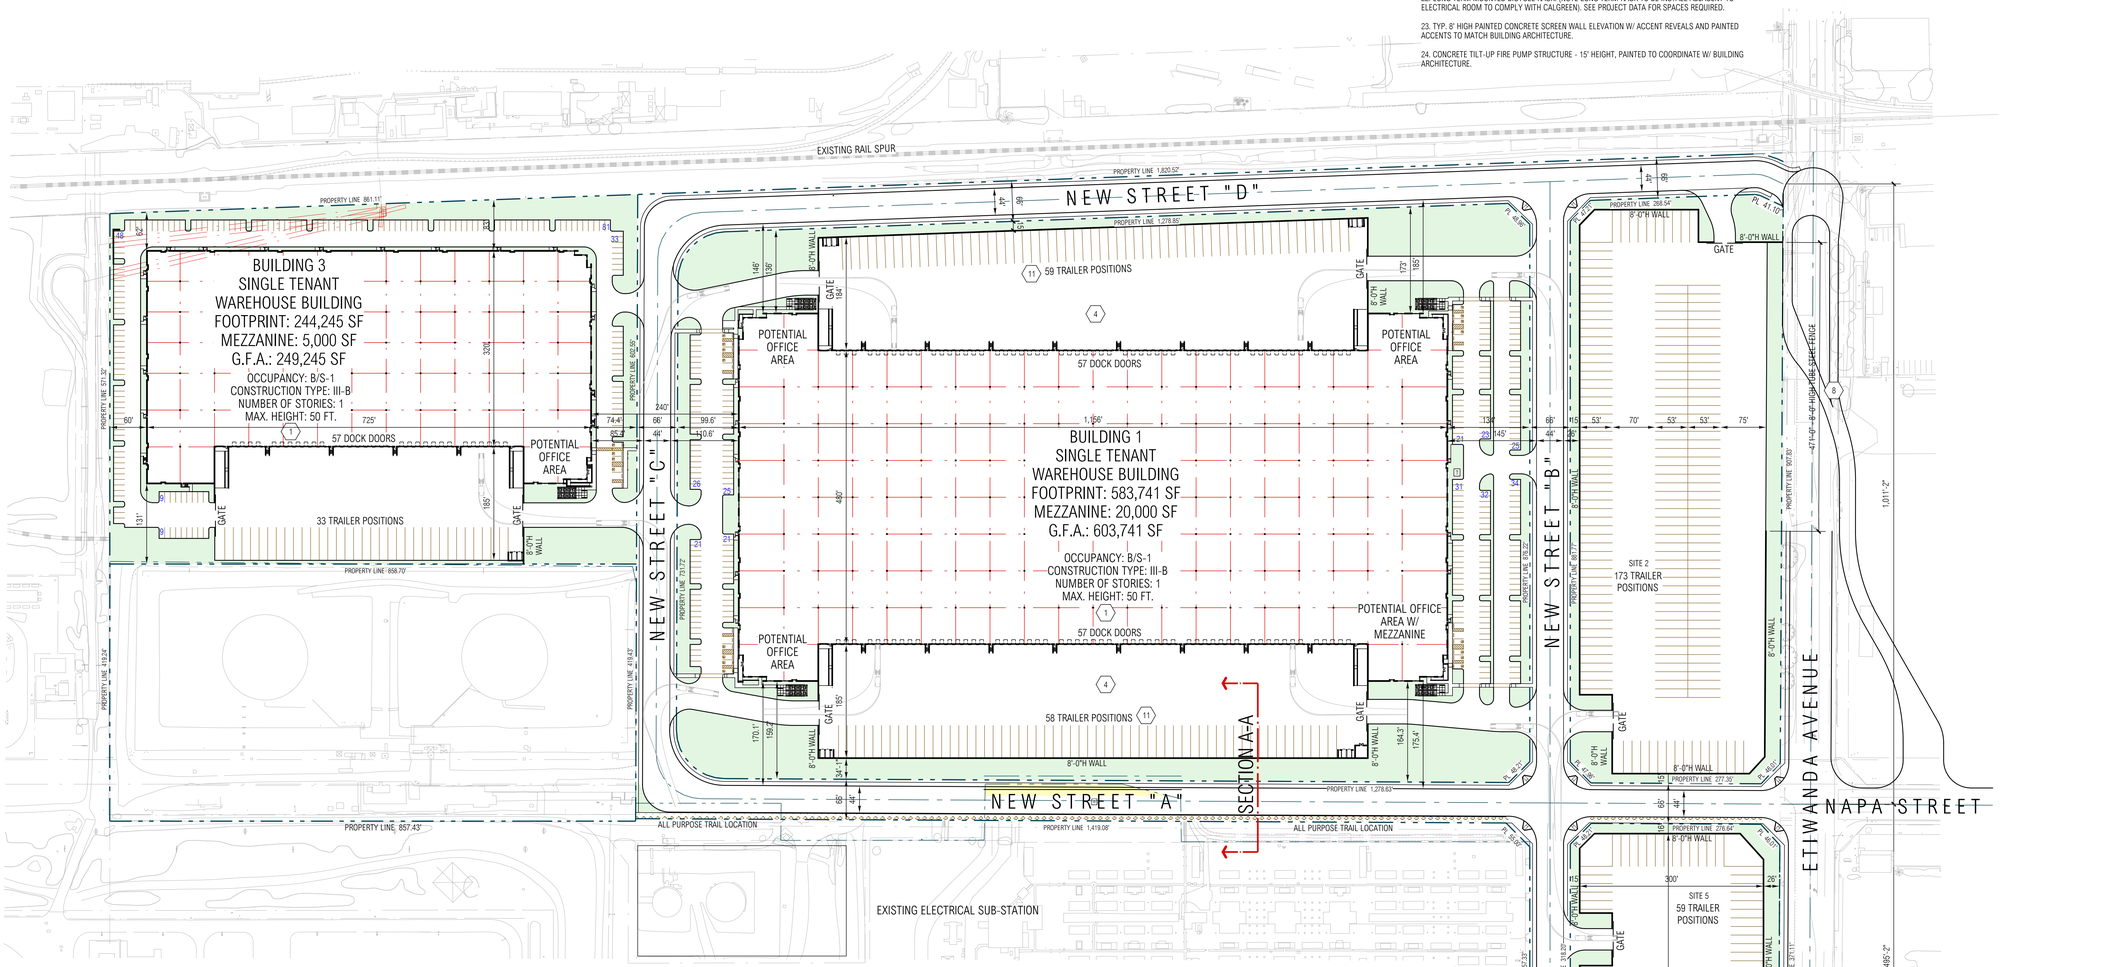
17. NOT USED.

18. NEW CURB AND GUTTER PER CITY STANDARD.

19. PROPOSED ONSITE FIRE HYDRANT LOCATIONS.

20. ALL UTILITY STRUCTURES SUCH AS TRANSFORMERS AND BACK FLOW DEVICES SHALL BE SCREENED BY LANDSCAPE, SEE LANDSCAPE PLAN.

21. CONCRETE LANDING AND BICYCLE RACK FOR BIKES. SEE PROJECT DATA FOR SPACES REQUIRED.



22. LONG TERM MOUNTED BICYCLE RACK. (NOTE LONG TERM RACK TO BE INSTALL ADJACENT TO ELECTRICAL ROOM TO COMPLY WITH CALGREEN). SEE PROJECT DATA FOR SPACES REQUIRED.

23. TYP. 8' HIGH PAINTED CONCRETE SCREEN WALL ELEVATION W/ ACCENT REVEALS AND PAINTED ACCENTS TO MATCH BUILDING ARCHITECTURE.

24. CONCRETE TILT-UP FIRE PUMP STRUCTURE - 15' HEIGHT, PAINTED TO COORDINATE W/ BUILDING ARCHITECTURE.

FENCE PLAN - PHASE 1

SHEET: A1-2P-1

KEY PLAN:

KEYNOTES: (00)

1. PROPOSED PAINTED CONCRETE TILT-UP 40' CLEAR INDUSTRIAL BUILDING.

2. TYPICAL PARKING STALL - 9' X 18'. MAY BE REDUCED TO 9' X 17' W/ 1'-0" OVERHANG. STRIPING PER CITY STANDARDS.

3. TYPICAL LOW EMITTING / FUEL EFFICIENT / CARPOOL / VANPOOL PARKING STALL - 9' X 18'. MAY BE REDUCED TO 9' X 17' W/ 1'-0" OVERHANG. STRIPING PER CITY STANDARDS. MINIMUM 8% OF ALL PARKING SPACES PROVIDED PER BUILDING. A MINIMUM OF 6% OF ALL PARKING SPACES PROVIDED PER BUILDING SHALL BE EQUIPPED FOR FUTURE EV CHARGING CAPACITY.

4. 7" THICK CONCRETE YARD W/ GRADE LEVEL TRUCK DOORS AND TRAILER PARKING AREAS.

5. FULLY IRRIGATED LANDSCAPE AREA BOUNDED BY 6" CONCRETE CURB - SEE CONCEPT LANDSCAPE PLAN.

6. PRIMARY BUILDING ENTRANCE W/ DECORATIVE CONCRETE ENTRY WALK.

7. LOCATION OF 8'-0" HIGH TRASH AND RECYCLABLE BINS. SEE SHEET A2-1 FOR ELEVATION AND SECTIONS.

8. NEW 8'-0" HIGH BLACK TUBE STEEL FENCE.

9. PROPERTY LINES.

10. PROPOSED TRANSFORMER LOCATION.

11. 14' X 50' TRUCK TRAILER PARKING AREA.

12. ACCESSIBLE PARKING STALLS 9' X 18'-0" MIN.

13. DASHED LINE INDICATES : NEW 5'-0" WIDE SURFACE WALK ACCESSIBLE PATH OF TRAVEL FROM PUBLIC SIDEWALK & PARKING STALLS TO PRIMARY BUILDING ENTRANCE - CONSTRUCT NEW CONCRETE SIDEWALK. MAX SLOPE OF SURFACE WALK IN THE DIRECTION OF TRAVEL 4.9%. MAX CROSS SLOPE 2%.

14. PROVIDE BREAK AREA / LUNCH PATIO WITH SEATING. SEE PROJECT DATA ON A1-0 FOR MIN SF AREA AND NUMBER OF SEATS.

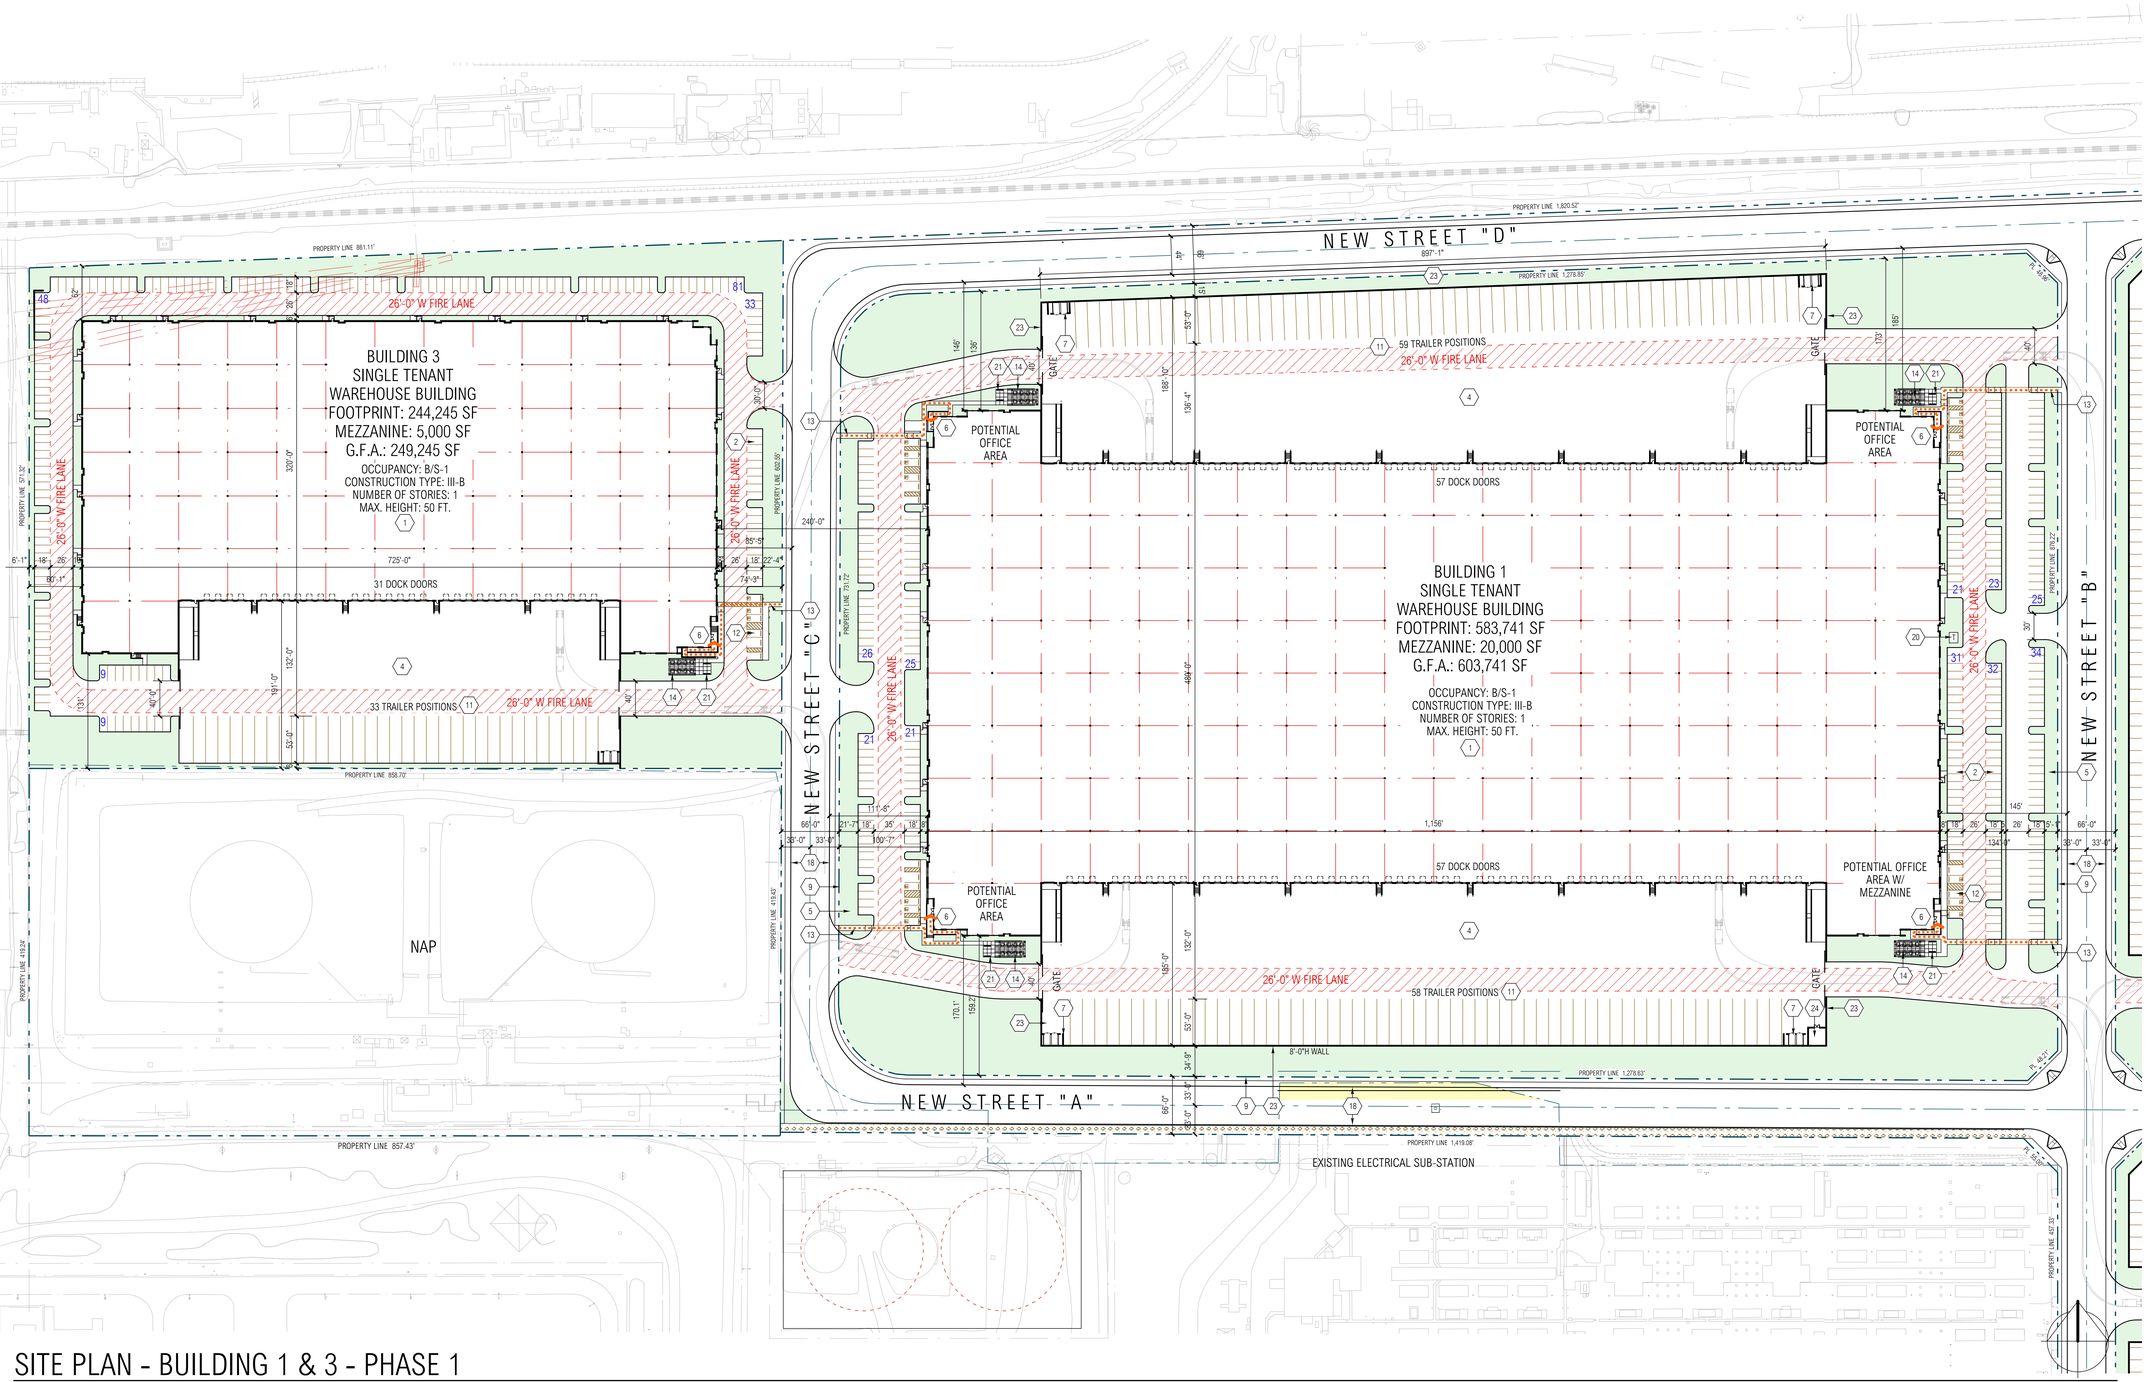
15. PROPOSED LOCATION FOR FIRE WATER METER AND 2" SUPPLY LINE INTO BUILDING. ABOVE GROUND BACKFLOWS AND DETECTOR CHECK ASSEMBLIES SHALL BE SCREENED BY A 3' MIN. / 4' MAX. CMU WALL ON 3 SIDES, 3' CLEAR TO THE ASSEMBLY. SEE PLAN VIEW.

16. PROPOSED SEWER LATERAL FROM PUBLIC RIGHT OF WAY SERVING BOTH BUILDINGS 1 & 2.

17. NOT USED.

18. NEW CURB AND GUTTER PER CITY STANDARD.

19. PROPOSED ONSITE FIRE HYDRANT LOCATIONS.



20. ALL UTILITY STRUCTURES SUCH AS TRANSFORMERS AND BACK FLOW DEVICES SHALL BE SCREENED BY LANDSCAPE, SEE LANDSCAPE PLAN.

21. CONCRETE LANDING AND BICYCLE RACK FOR BIKES. SEE PROJECT DATA FOR SPACES REQUIRED.

22. LONG TERM MOUNTED BICYCLE RACK. (NOTE LONG TERM RACK TO BE INSTALL ADJACENT TO ELECTRICAL ROOM TO COMPLY WITH CALGREEN). SEE PROJECT DATA FOR SPACES REQUIRED.

23. TYP. 8' HIGH PAINTED CONCRETE SCREEN WALL ELEVATION W/ ACCENT REVEALS AND PAINTED ACCENTS TO MATCH BUILDING ARCHITECTURE.

24. CONCRETE TILT-UP FIRE PUMP STRUCTURE - 15' HEIGHT, PAINTED TO COORDINATE W/ BUILDING ARCHITECTURE.

3. TYPICAL LOW EMITTING / FUEL EFFICIENT / CARPOOL / VANPOOL PARKING STALL - 9' X 18'. MAY BE REDUCED TO 9' X 17' W/ 1'-0" OVERHANG. STRIPING PER CITY STANDARDS. MINIMUM 8% OF ALL PARKING SPACES PROVIDED PER BUILDING. A MINIMUM OF 6% OF ALL PARKING SPACES PROVIDED PER BUILDING SHALL BE EQUIPPED FOR FUTURE EV CHARGING CAPACITY.

4. 7" THICK CONCRETE YARD W/ GRADE LEVEL TRUCK DOORS AND TRAILER PARKING AREAS.

5. FULLY IRRIGATED LANDSCAPE AREA BOUNDED BY 6" CONCRETE CURB - SEE CONCEPT LANDSCAPE PLAN.

6. PRIMARY BUILDING ENTRANCE W/ DECORATIVE CONCRETE ENTRY WALK.

7. LOCATION OF 8'-0" HIGH TRASH AND RECYCLABLE BINS. SEE SHEET A2-1 FOR ELEVATION AND SECTIONS.

8. NEW 8'-0" HIGH BLACK TUBE STEEL FENCE.

9. PROPERTY LINES.

10. PROPOSED TRANSFORMER LOCATION.

11. 14' X 50' TRUCK TRAILER PARKING AREA.

12. ACCESSIBLE PARKING STALLS 9' X 18'-0" MIN.

13. DASHED LINE INDICATES : NEW 5'-0" WIDE SURFACE WALK ACCESSIBLE PATH OF TRAVEL FROM PUBLIC SIDEWALK & PARKING STALLS TO PRIMARY BUILDING ENTRANCE - CONSTRUCT NEW CONCRETE SIDEWALK. MAX SLOPE OF SURFACE WALK IN THE DIRECTION OF TRAVEL 4.9%. MAX CROSS SLOPE 2%.

14. PROVIDE BREAK AREA / LUNCH PATIO WITH SEATING. SEE PROJECT DATA ON A1-0 FOR MIN SF AREA AND NUMBER OF SEATS.

15. PROPOSED LOCATION FOR FIRE WATER METER AND 2" SUPPLY LINE INTO BUILDING. ABOVE GROUND BACKFLOWS AND DETECTOR CHECK ASSEMBLIES SHALL BE SCREENED BY A 3' MIN. / 4' MAX. CMU WALL ON 3 SIDES, 3' CLEAR TO THE ASSEMBLY. SEE PLAN VIEW.

16. PROPOSED SEWER LATERAL FROM PUBLIC RIGHT OF WAY SERVING BOTH BUILDINGS 1 & 2.

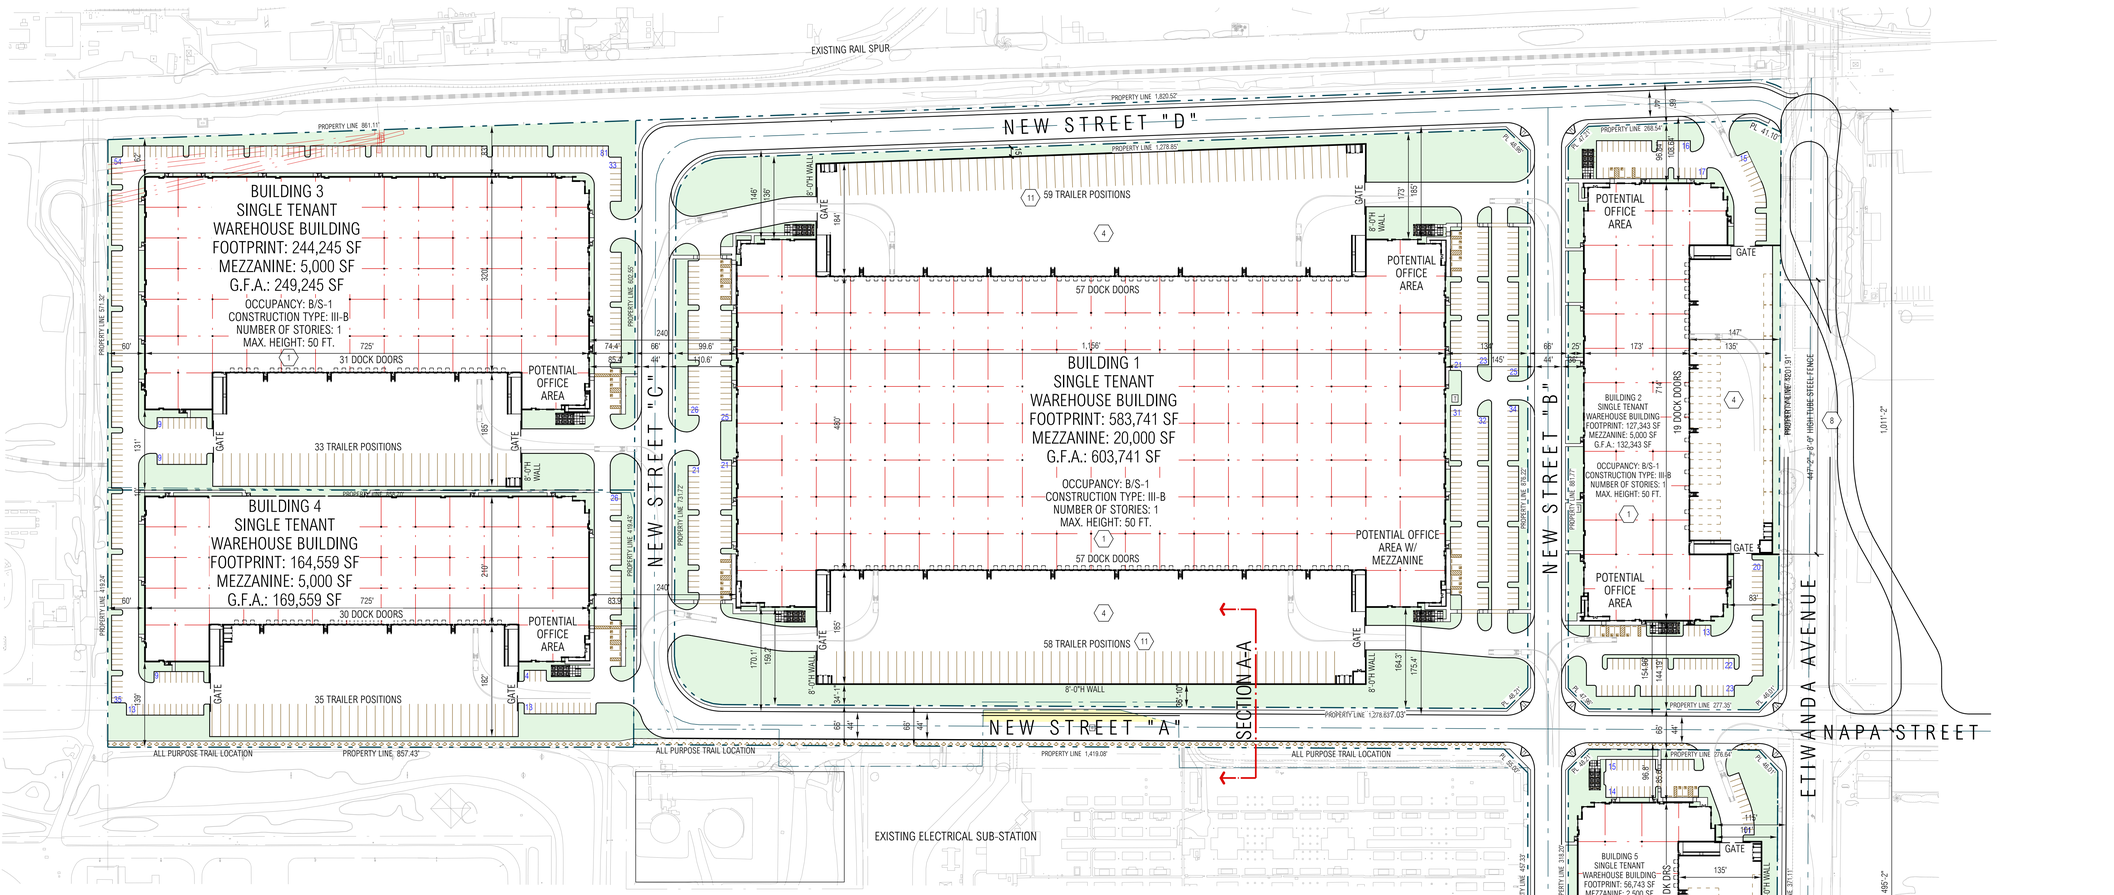
17. NOT USED.

18. NEW CURB AND GUTTER PER CITY STANDARD.

19. PROPOSED ONSITE FIRE HYDRANT LOCATIONS.

20. ALL UTILITY STRUCTURES SUCH AS TRANSFORMERS AND BACK FLOW DEVICES SHALL BE SCREENED BY LANDSCAPE, SEE LANDSCAPE PLAN.

21. CONCRETE LANDING AND BICYCLE RACK FOR BIKES. SEE PROJECT DATA FOR SPACES REQUIRED.



22. LONG TERM MOUNTED BICYCLE RACK. (NOTE LONG TERM RACK TO BE INSTALL ADJACENT TO ELECTRICAL ROOM TO COMPLY WITH CALGREEN). SEE PROJECT DATA FOR SPACES REQUIRED.

23. TYP. 8' HIGH PAINTED CONCRETE SCREEN WALL ELEVATION W/ ACCENT REVEALS AND PAINTED ACCENTS TO MATCH BUILDING ARCHITECTURE.

24. CONCRETE TILT-UP FIRE PUMP STRUCTURE - 15' HEIGHT, PAINTED TO COORDINATE W/ BUILDING ARCHITECTURE.

DRAFT

MEMORANDUM

TO: Carlos Palafox & Christopher Sanford, BTC III Acquisitions, LLC

FROM: Patrick A. Gibson, P.E., PTOE
Eugene Tang, AICP

DATE: August 12, 2022

RE: Transportation Analysis and Evacuation Evaluation for the Etiwanda Avenue and Arrow Route Warehouse Projects
Rancho Cucamonga, California **Ref:** J1940

Gibson Transportation Consulting, Inc. (GTC) prepared a transportation analysis for a warehouse project (Project) situated on multiple parcels (Project Sites), generally located near the intersections of Etiwanda Avenue & Arrow Route and Etiwanda Avenue & Napa Street in the City of Rancho Cucamonga (City), California. The methodology and assumptions used in this analysis were established in conjunction with the City. This memorandum summarizes our analysis and also provides an evaluation of evacuation routes due to the Project's location and proposed land uses.

BACKGROUND

The City has identified transportation improvements in the Southeast Area (SEA) of the City, the general area of the Project Sites, as part of its General Plan. The SEA, which is comprised of existing industrial, logistics, and warehouse uses, is planned for a future potential development of over six million new square feet (sf) of floor area.

PROJECT DESCRIPTION

BTC III Acquisitions, LLC (Applicant) has proposed two development concepts on the Project Sites:

- Etiwanda Site (also known as the GenOn Site) – A 64-acre site located on the west side of Etiwanda Avenue between the Burlington Northern Santa Fe (BNSF) Railroad tracks on the north and Napa Street on the south. A total of 1,266,019 sf of warehouse space is proposed on this site within five buildings:
    - Building 1: 669,237 sf
    - Building 2: 127,343 sf
    - Building 3: 219,750 sf
    - Building 4: 162,810 sf
    - Building 5: 86,951 sf

Primary vehicular access will be provided by a Project-constructed extension of Napa Street, west of Etiwanda Avenue. A secondary access point onto Napa Street will be provided east of Etiwanda Avenue[1], under the Etiwanda Avenue Grade Separation[2] that will be constructed by the City.

Figure 1A illustrates the proposed Etiwanda Site layout.

- Arrow Route Site (also known as the CMC Site) – A 94-acre site located on the south side of Arrow Route, generally along both sides of Juneberry Drive and extending southerly to the BNSF Railroad tracks. The proposed development concept consists of 1,793,790 sf of warehouse uses provided in five buildings:

    - Building 1: 88,400 sf
    - Building 2: 91,520 sf
    - Building 3: 64,060 sf
    - Building 4: 1,048,530 sf
    - Building 5: 501,280 sf

    Vehicular access to the Arrow Route Site would be provided by two roadways: the existing Juneberry Drive and a new north-south public street to be located along the west side of the Arrow Route Site. Internal to the site, the Project will construct a new east-west street along the BNSF Railroad tracks, which will connect Juneberry Drive to the new westerly public street.

    Figure 1B illustrates the proposed Arrow Route Site layout.

This analysis also includes the Newcastle Project (also known as the Tree Island Site), which is a separately proposed project located immediately north of Building 5 on the Arrow Route Site, east of Juneberry Drive. The Newcastle Project proposes a total of 327,000 sf of warehouse space and is anticipated to share access along Juneberry Drive with portions of the Arrow Route Site. The completion date is also anticipated to be concurrent with the Project. For the purposes of this analysis, the Newcastle Project was considered concurrently with the Project due to its proximity and shared access with the Arrow Route Site along with the anticipated concurrent timing.

The general location of the Newcastle Project relative to the Arrow Route Site is illustrated in Figure 1B.

[1] The Project proposes to construct an access point on Napa Street, east of Etiwanda Avenue, to provide secondary access to the Etiwanda Site. Completion of the Etiwanda Avenue Grade Separation will facilitate the construction of this access point, which will consist of a two-lane roadway below the Etiwanda Avenue Grade Separation overpass.

[2] The Etiwanda Avenue Grade Separation is identified as a General Plan improvement that involves the construction of a new overpass (grade separation) on Etiwanda Avenue, over the BNSF Railroad tracks. In addition, Etiwanda Avenue will be widened to provide a four-lane cross-section between Napa Street and Whittram Avenue. The City is anticipated to complete this project by Year 2025.

The following development phases of the Project have been identified:

- Phase 1 – Completion of the entire Arrow Route Site and the construction of Buildings 1, 2, and 5 on the Etiwanda Site, anticipated in Year 2025, and the concurrent completion of the Newcastle Project

- Phase 2A – In addition to Phase 1, construction of Building 3 on the Etiwanda Site, with anticipated completion in Year 2026

- Phase 2B (full buildout) – In addition to Phases 1 and 2A, construction of Building 4 on the Etiwanda Site, with anticipated completion in Year 2027

The development phasing above also represents the Project's analysis scenarios. For purposes of this analysis, the Project will also consider potential delayed and planned completion scenarios of the Etiwanda Avenue Grade Separation, so Year 2025 conditions without and with the Etiwanda Avenue Grade Separation were analyzed.

TRIP GENERATION

The Project trip generation analysis utilized assumptions from *Etiwanda Warehouse Due Diligence Traffic Assessment* (Urban Crossroads, December 2020), as well as an evaluation of the local roadway system surrounding the Project Sites. A detailed review and analysis of 11 study intersections was conducted for typical weekday morning (7:00 AM to 10:00 AM) and afternoon (4:00 PM to 7:00 PM) peak periods under Existing Conditions (Year 2022) and multiple Future Conditions (Years 2025, 2026, and 2027). The analysis of Future Conditions (Years 2025, 2026, 2027) respectively correspond with the anticipated buildout year the Project's development phases (Phases 1, 2A, and 2B).

Figure 2 illustrates the location of the Project Sites in relation to the surrounding street system and identifies the 11 study intersections, including 10 signalized locations and one unsignalized location:

1. Interstate 15 (I-15) Southbound Ramps & Foothill Boulevard
2. I-15 Northbound Ramps & Foothill Boulevard
3. Etiwanda Avenue & Foothill Boulevard
4. Etiwanda Avenue & Arrow Route
5. Etiwanda Avenue & Whittram Avenue
6. Etiwanda Avenue & Napa Street
7. Etiwanda Avenue & 6th Street (unsignalized)
8. Etiwanda Avenue & Fourth Street / San Bernardino Avenue
9. Etiwanda Avenue & Ontario Mills Parkway / Valley Boulevard
10. Etiwanda Avenue & Interstate 10 (I-10) Westbound Ramps
11. Etiwanda Avenue & I-10 Eastbound Ramps

Project Traffic

Trip generation rates from *Trip Generation Manual, 11th Edition* (Institute of Transportation Engineers [ITE], 2021), along with assumptions from *Etiwanda Warehouse Due Diligence Traffic Assessment,* were used to develop trip generation forecasts for the Project. Additionally, Passenger Car Equivalent (PCE) assumptions were applied to estimate the number of trucks in the fleet mix.

Consistent with *Etiwanda Warehouse Due Diligence Traffic Assessment,* the total building area on each Project Site was assumed to operate as 90% high-cube fulfillment center and 10% high-cube cold storage warehouse; the corresponding ITE land use categories for high-cube fulfillment center (non-sort) and high-cube cold storage warehouse uses were referenced to develop the trip generation estimates.[3]

Trip Generation Estimates. The development of the trip generation estimates for each development phase is detailed in Tables 1A-1C, respectively. A summary of those trip generation estimates, adjusted for PCE, is described below.

- Phase 1 – Completion of the Arrow Route Site is estimated to generate 4,566 new daily trips, including 356 morning (256 inbound, 100 outbound) and 321 afternoon (132 inbound, 189 outbound) peak hour trips. The Newcastle Project is estimated to generate 832 new daily trips, with 65 morning (47 inbound, 18 outbound) and 58 afternoon (25 inbound, 33 outbound) peak hour trips. The construction of Buildings 1, 2, and 5 on the Etiwanda Site are estimated to generate 2,249 new daily trips with 176 morning (127 inbound, 49 outbound) and 158 afternoon (64 inbound, 94 outbound) peak hour trips.

  The total Phase 1 PCE trip generation estimate is 7,647 new daily trips, including 597 morning (430 inbound, 167 outbound trips) and 537 afternoon (221 inbound, 316 outbound) peak hour trips.

- Phase 2A – The Etiwanda Site trip generation estimate increases to 2,809 new daily trips, including 219 morning (159 inbound, 60 outbound) and 197 afternoon (82 inbound, 115 outbound) peak hour trips. The trip generation estimates for both the Arrow Route Site and Newcastle Project are unchanged.

The resulting total Phase 1 + Phase 2A PCE trip generation estimate is 8,207 new daily trips, including 640 morning (462 inbound, 178 outbound) and 576 afternoon (239 inbound, 337 outbound) peak hour trips.

- Phase 2B (full buildout) – The Etiwanda Site trip generation estimate increases to 3,222 new daily trips, including 251 morning (180 inbound, 71 outbound) and 226 afternoon (93 inbound, 133 outbound) peak hour trips. The trip generation estimates for both the Arrow Route Site and Newcastle Project are unchanged.

[3] The split of 90% high-cube fulfillment center and 10% high-cube cold storage use represents a conservative tenant scenario, as indicated by the Applicant.

The resulting total Phase 2B (full buildout with the Newcastle project) PCE trip generation estimate is 8,620 new daily trips, including 672 morning (483 inbound, 189 outbound) and 605 afternoon (250 inbound, 355 outbound) peak hour trips.

The summary below identifies the Project's incremental trip generations by development phase. As shown, the Phase 1 development (which includes the Newcastle Project) generates the largest increment of new trips associated with the overall Project:

Phase	Net New Trips		
	Daily	Morning Peak Hour	Afternoon Peak Hour
1	7,647	597	537
2A	560	43	39
2B	413	32	29
TOTAL	8,620	672	605

Trip Distribution and Assignment. The traffic volumes entering and exiting the Project Sites were distributed and assigned to the local street system based on demographics and existing/anticipated travel patterns in the Study Area. Localized routes of travel through the Study Area were developed based on existing traffic patterns and relative travel times on various corridors and the level of accessibility of the route to and from the Project Sites. The Project trip distribution at the Etiwanda Site is illustrated in Figures 3A and 3B for trucks and light vehicles, respectively. The Project trip distribution at the Arrow Route Site and Newcastle Project is illustrated in Figures 3C and 3D for trucks and light vehicles, respectively.

Project truck traffic was assigned to the surrounding street system based on the following general distribution pattern:

- 25% to/from the north (I-15)
- 30% to/from the east (I-10)
- 25% to/from the south (I-15)
- 30% to/from the west (I-10)

Project light vehicle traffic was assigned to the surrounding street system based on the following general distribution pattern:

- 15% to/from the north (I-15, Etiwanda Avenue)
- 30% to/from the east (I-10, Foothill Boulevard, Arrow Route)
- 10% to/from the south (I-15, Etiwanda Avenue)
- 45% to/from the west (I-10, Foothill Boulevard, Arrow Route)

The trip distribution patterns illustrated in Figures 3A-3D were applied to the trip generation estimates detailed in Tables 1A-1C to develop the Project-only traffic assignments by development phase. Figures 4A-4C illustrate each phase of the Project traffic volumes through the study intersections.

LEVEL OF SERVICE (LOS) ANALYSIS

Existing with Project Conditions

The Existing Conditions are defined by the traffic volumes, roadways, and intersection configurations that exist in Year 2022.

Intersection turning movement counts were conducted during the typical weekday morning (7:00 AM to 10:00 AM) and afternoon (4:00 PM to 7:00 PM) commuter peak periods on February 5, 2020 and March 11, 2020. Local schools were in session at the time the traffic counts were conducted and traffic patterns were typical and not impacted at that time by the State of California and City Stay at Home orders as a response to the COVID-19 pandemic. These traffic counts were adjusted by applying an annual growth factor of 2%, consistent with *Etiwanda Warehouse Due Diligence Traffic Assessment,* to represent Existing Conditions in Year 2022 and are depicted in Figure 5. The turning movement count summary worksheets are available in Attachment A.

For informational purposes, the Project Phase 2B (full buildout) traffic volumes were added to the Existing Conditions traffic volumes to develop the Existing with Project Conditions (Year 2022) peak hour traffic volumes shown in Figure 6.

Future with Project Conditions

The Future with Project Conditions are defined by the traffic volumes, roadways, and intersection configurations that would exist in the respective year of the Project's proposed development phase.

Consistent with *Etiwanda Warehouse Due Diligence Traffic Assessment*, an ambient growth factor of 2% per year was used to adjust the existing traffic volumes to reflect the effects of regional growth and development by Years 2025 (Phase 1), 2026 (Phase 2A), and 2027 (Phase 2B) to correspond with the proposed development phasing.

The Future with Project Conditions analyses also considered the effects of the Project in relation to other developments either proposed, approved, or under construction in the Study Area and expected to be implemented prior to the buildout date of the Project (collectively, the Related Projects). The locations of two Related Projects are provided in Figure 7. It is assumed that the growth factor also accounts for increases in traffic due to other Related Projects. The trip generation estimates for the two Related Projects were assigned to the local street system using trip distribution information from *Bridge Point Rancho Cucamonga High-Cube Fulfillment Center Traffic Memo* (Urban Crossroads, April 2021) (Related Project 1) and *Traffic Impact Analysis and CEQA Transportation Impact Analysis Warehouse Scenario, E-Commerce Scenario and 100% E-Commerce Scenario TIA and VMT* (Translutions, Inc., February 2021) (Related Project 2).

The traffic volumes from the two Related Projects are illustrated in Figure 8.

The Future without Project Conditions intersection traffic volumes illustrated in Figures 9A-9C reflect the addition of trips anticipated to be generated by the Related Projects to the Existing Conditions traffic volumes plus the application of the ambient growth prior to the respective development phase in Years 2025, 2026, and 2027. To be conservative, both Related Projects were assumed to be fully operational in Year 2025.

The Project-only traffic volumes by development phase in Figures 4A-4C were added to the Future without Project Conditions traffic volumes to develop the respective Future with Project Conditions peak hour traffic volumes shown in Figures 10A-10C.

Operational Evaluation

The intersection delay analyses for the operational evaluation were conducted using the *Highway Capacity Manual, 6th Edition* (Transportation Research Board, 2016) (HCM) methodology, which was implemented using Synchro software to analyze intersection operating conditions. The HCM signalized methodology calculates the average delay, in seconds, for each vehicle passing through the intersections. The HCM two-way stop-control unsignalized methodology calculates the control delay, in seconds, for individual approaches of an intersection. Table 2 presents a description of the LOS categories, which range from excellent, nearly free-flow traffic at LOS A, to stop-and-go conditions at LOS F, for signalized and unsignalized intersections.

LOS worksheets for each analysis scenario are provided in Attachment B.

Existing Conditions. Table 3 summarizes the analysis of the Existing Conditions during the weekday morning and afternoon peak hours for the study intersections. As shown, nine of the 11 study intersections currently operate at LOS D or better during both analyzed peak hours under Existing Conditions. The remaining two study intersections operate at LOS E or F during either the morning or afternoon peak hour under Existing Conditions:

- Intersection #4: Etiwanda Avenue & Arrow Route (LOS E morning peak hour)
- Intersection #5: Etiwanda Avenue & Whittram Avenue (LOS F morning peak hour)

Future with Project Phase 1 Conditions (Year 2025). The Future with Project Phase 1 Conditions (Year 2025) includes analysis of the Project Phase 1 (including the Newcastle project) both without and with completion of the Etiwanda Avenue Grade Separation. Table 4 summarizes the analysis during the weekday morning and afternoon peak hours for the study intersections.

- *Without Etiwanda Avenue Grade Separation* - Seven of the 11 study intersections are anticipated to operate at LOS D or better during both the morning and afternoon peak hours during the Future with Project Phase 1 Conditions. Three of the remaining four study intersections are anticipated to continue to operate at LOS E or F during either the morning or afternoon peak hour under Future with Project Phase 1 Conditions:
    - Intersection #3: Etiwanda Avenue & Foothill Boulevard (LOS E morning peak hour)
    - Intersection #4: Etiwanda Avenue & Arrow Route (LOS F morning peak hour)
    - Intersection #5: Etiwanda Avenue & Whittram Avenue (LOS F morning peak hour)

The fourth intersection, Intersection #7: Etiwanda Avenue & 6th Street, is anticipated to result in an afternoon peak hour degradation from LOS D in the Future with Project Conditions (Year 2025) to LOS E with the addition of Project Phase 1 traffic.

- *With Etiwanda Avenue Grade Separation* - Seven of the 11 study intersections are also anticipated to operate at LOS D or better during both the morning and afternoon peak hours during the Future with Project Phase 1 Conditions. Three of the remaining four study intersections are anticipated to continue to operate at LOS E or F during either the morning or afternoon peak hour under Future with Project Phase 1 Conditions:

    - Intersection #3: Etiwanda Avenue & Foothill Boulevard (LOS E morning peak hour)
    - Intersection #4: Etiwanda Avenue & Arrow Route (LOS F morning peak hour)
    - Intersection #5: Etiwanda Avenue & Whittram Avenue (LOS F morning peak hour)

    The fourth intersection, Intersection #7: Etiwanda Avenue & 6th Street, is anticipated to result in an afternoon peak hour degradation from LOS D in the Future without Project Conditions (Year 2025) to LOS E with the addition of Project Phase 1 traffic.

Completion of the Etiwanda Avenue Grade Separation results in minor changes in the projected delay at select intersections and the overall LOS pattern is similar without or with completion of the grade separation. It should be noted that the Etiwanda Avenue Grade Separation facilitates completion of the Etiwanda Site's secondary access point

Future with Project Phases 1 + 2A Conditions (Year 2026). The Future with Project Phases 1 + 2A Conditions (Year 2026) includes analysis of the Project through Phase 2A and assumes completion of the Etiwanda Avenue Grade Separation.

Table 5 summarizes the analysis during the weekday morning and afternoon peak hours for the study intersections. As shown, six of the 11 study intersections are anticipated to operate at LOS D or better during both the morning and afternoon peak hours both without and with Project Phases 1 + 2A. Four of the remaining five study intersections are anticipated to continue to operate at LOS E or F during either the morning or afternoon peak hour under the Future without Project Conditions (Year 2026) and Future with Project Phases 1 + 2A Conditions (Year 2026):

- Intersection #1: I-15 Southbound Ramps & Foothill Boulevard (LOS E afternoon peak hour)
- Intersection #3: Etiwanda Avenue & Foothill Boulevard (LOS E morning peak hour)
- Intersection #4: Etiwanda Avenue & Arrow Route (LOS E morning peak hour)
- Intersection #5: Etiwanda Avenue & Whittram Avenue (LOS F morning peak hour)

The last study intersection, Intersection #7: Etiwanda Avenue & 6th Street, is anticipated to result in an afternoon peak hour degradation from LOS D in the Future without Project Conditions (Year 2026) to LOS E with the addition of Project Phase 2A traffic.

Future with Project Phases 1 + 2A + 2 B Conditions (Year 2027) (Full Project). The Future with Full Project Conditions (Year 2027) includes analysis of the Project through Phase 2B (buildout) and assumes completion of the Etiwanda Avenue Grade Separation.

Table 6 summarizes the analysis during the weekday morning and afternoon peak hours for the study intersections. As shown, five of the 11 study intersections are anticipated to operate at LOS

D or better during both the morning and afternoon peak hours without and with Project Phase 2B. Five of the remaining six study intersections are anticipated to continue to operate at LOS E or F during either the morning or afternoon peak hour under the Future without Project Conditions (Year 2027) and Future with Project Phase 2B Conditions (Year 2027):

- Intersection #1: I-15 Southbound Ramps & Foothill Boulevard (LOS E afternoon peak hour)
- Intersection #3: Etiwanda Avenue & Foothill Boulevard (LOS E morning peak hour)
- Intersection #4: Etiwanda Avenue & Arrow Route (LOS F morning peak hour)
- Intersection #5: Etiwanda Avenue & Whittram Avenue (LOS F morning peak hour)
- Intersection #8: Etiwanda Avenue & 4th Street/San Bernardino Avenue (LOS E morning peak hour)

The last intersection, Intersection #7: Etiwanda Avenue & 6th Street, is anticipated to result in an afternoon peak hour degradation from LOS D in the Future with Project Conditions (Year 2027) to LOS E with the addition of Full Project traffic.

Intersections with Deficient Operations

As identified in the analysis of each Future Condition (Years 2025, 2026, 2027), multiple analyzed intersections are projected to operate at LOS E or LOS F in the Future Conditions before the addition of Project traffic (and with completion of the Etiwanda Avenue Grade Separation). With the addition of each development phase of Project traffic, the study intersections will continue to operate at LOS E or LOS F. This continued operation at LOS E or LOS F indicates a cumulative condition of deficient operations and suggests that roadway improvements may be necessary to address the projected deficient operations.

These improvements can include those physical measures identified in the General Plan's roadway improvement program and potentially other improvements beyond those identified by the General Plan, where determined necessary. For the purposes of this analysis, the General Plan roadway improvements include: 1) the widening of Etiwanda Avenue to four lanes between Arrow Route and 6th Street and 2) the widening of Arrow Route to four lanes from Etiwanda Avenue to the east City limit. Further assumptions were developed at affected study intersections based on the General Plan roadway improvements.

Future with Project Phase 1 Conditions (Year 2025). The following study intersections were projected to experience cumulatively deficient operations in Year 2025. Both General Plan improvements and additional improvements developed to restore acceptable operations are identified for each study intersection.

- Intersection #3: Etiwanda Avenue & Foothill Boulevard (LOS E morning peak hour) – Widen Etiwanda Avenue to provide two lanes in each direction between Foothill Boulevard and Arrow Route; install a dedicated southbound right-turn lane and additional northbound left-turn lane (for two left-turn lanes).

- Intersection #4: Etiwanda Avenue & Arrow Route (LOS E morning peak hour) – Provide two eastbound and westbound through lanes with a dedicated westbound right-turn lane, consistent with General Plan improvements. Install a second southbound right-turn lane and implement signal control/phasing modifications.

- Intersection #5: Etiwanda Avenue & Whittram Avenue (LOS F morning peak hour) – Reconfigure the eastbound and westbound approaches to provide one left-turn lane and one shared through/right-turn lane.

- Intersection #7: Etiwanda Avenue & 6th Street (LOS E afternoon peak hour) – Provide two northbound and southbound through lanes with a southbound right-turn lane, consistent with General Plan improvements. Add a two way left-turn median on Etiwanda Avenue, north of 6th Street, as a refuge area for eastbound left-turning vehicles from 6th Street.

As summarized in Table 4, implementation of the two General Plan improvements is not projected to alleviate deficient intersection operations. The four additional improvements identified above are projected to improve the deficient operations to LOS D or better during the affected peak hour.

Future with Project Phases 1 + 2A Conditions (Year 2026). Under Year 2026 conditions, the four study intersections previously identified in Year 2025 are projected to continue cumulatively deficient operations and an additional intersection, Intersection #1: I-15 Southbound Ramps & Foothill Boulevard (LOS E afternoon peak hour), is projected to experience cumulatively deficient operations. Implementation of signal control/phasing modifications is recommended as an improvement for this sixth intersection.

As summarized in Table 5, implementation of the two General Plan improvements (identified in Phase 1) is not projected to alleviate the deficient operations at the respectively affected study intersections; the additional improvements identified with Phase 1 in addition to the one developed for Phase 2A are projected to improve the cumulatively deficient intersection operation to LOS D or better during the affected peak hour.

Future with Full Project Conditions (Year 2027). The five study intersections previously identified in Years 2025 and 2026 are projected to continue cumulatively deficient operations and an additional intersection, Intersection #8: Etiwanda Avenue & 4th Street/San Bernardino Avenue (LOS E morning peak hour), is projected to experience cumulatively deficient operations. Implementation of signal control/phasing modifications is recommended as an improvement for this seventh intersection.

As summarized in Table 6, implementation of the two General Plan improvements (identified in Phase 1) is not projected to alleviate the deficient operations at the respectively affected intersections; the additional improvements identified with Phases 1 and 2A, in addition to the one developed for Phase 2B, are projected to improve the cumulatively deficient intersection operation to LOS D or better during the affected peak hour.

Intersection Improvements

As cumulatively deficient locations, the implementation of the identified additional improvements (beyond the General Plan improvement program) may not be attributable to any one specific development; rather, the implementation should be shared by proposed development projects in the area. An improvements fee program based on a pro-rata financial contribution by area development should be developed to assist the funding and implementation of the improvements.

For the purposes of this analysis, cost estimates[4] were identified for the additional improvements; some improvements may be subject to right-of-way (ROW) acquisition and those ROW costs are not included. The estimated costs of the additional improvements include:

- Intersection #1: I-15 Southbound Ramps & Foothill Boulevard (LOS E afternoon peak hour) – Implement signal control/phasing modifications: $300,000.

- Intersection #3: Etiwanda Avenue & Foothill Boulevard (LOS E morning peak hour) – Widen Etiwanda Avenue to provide two lanes in each direction between Foothill Boulevard and Arrow Route (approximately 0.5 miles); install a dedicated southbound right-turn lane and additional northbound left-turn lane (for two left-turn lanes): $6,000,000.

- Intersection #4: Etiwanda Avenue & Arrow Route (LOS E morning peak hour) – Install a second southbound right-turn lane and implement signal control/phasing modifications: $800,000.

- Intersection #5: Etiwanda Avenue & Whittram Avenue (LOS F morning peak hour) – Reconfigure the eastbound and westbound approaches to provide one left-turn lane and one shared through/right-turn lane: $300,000.

- Intersection #7: Etiwanda Avenue & 6th Street (LOS E afternoon peak hour) – Add a two way left-turn median on Etiwanda Avenue, north of 6th Street, as a refuge area for eastbound left-turning vehicles from 6th Street: $500,000.

- Intersection #8: Etiwanda Avenue & 4th Street/San Bernardino Avenue (LOS E morning peak hour) – Implement signal control/phasing modifications: $300,000.

The estimated cost of the additional improvements identified above is approximately $8,200,000, excluding ROW costs.

Based on review of the projected Future Conditions (Year 2027) traffic volume (including background and Project traffic) at the affected intersections and the Project Phases 1 + 2A + 2B (full buildout) traffic assigned to the intersection, the percentage of traffic added by the Project was estimated by peak hour (calculated by dividing the Project-only traffic by the total Future Conditions in Year 2027. The identification of the fair share percentage represents the higher of the Project's peak hour percentage share of overall traffic.

[4] The improvement cost estimates presented here are for informational purposes only and subject to confirmation and/or further study.

The table below estimates the Project's potential fair share percentage to calculate the potential pro-rata contribution.

Int #	N/S Street	E/W Street	Future AM	Project AM	% share	Future PM	Project PM	% share	Fair Share	Impt Cost	Pro-rata
1	I-15 SB Ramps	Foothill Blvd	5,391	72	**1.3%**	6,507	53	0.8%	1.3%	$300,000	$4,000
3	Etiwanda Ave	Foothill Blvd	4,134	262	6.3%	4,272	547	**12.8%**	12.8%	$6,000,000	$768,000
4	Etiwanda Ave	Arrow Route	3,187	523	16.4%	3,699	836	**22.6%**	22.6%	$800,000	$181,000
5	Etiwanda Ave	Whittram Ave	1,710	345	**20.2%**	2,116	350	16.5%	20.2%	$300,000	$61,000
7	Etiwanda Ave	6th St	1,575	304	**19.3%**	1,930	346	17.9%	19.3%	$500,000	$97,000
8	Etiwanda Ave	Fourth St/San Bernardino A	2,810	302	10.7%	3,785	502	**13.3%**	13.3%	$300,000	$40,000

The potential fair share percentage varies by location and ranges from 1.3% to 22.6%, based on the amount of added Project traffic.

Applying the respective fair share percentages to the above cost estimates for the additional improvements at each intersection potentially results in a pro-rata contribution of $1,151,000 (rounded to the nearest $1,000) by the Project.

This pro-rata contribution is in addition to any fees or contributions that may be required by the General Plan.

QUEUING ANALYSIS

A queuing analysis was conducted at the analyzed locations to identify the potential operations at each intersection. This analysis was based on the traffic volumes developed for Future with Full Project Conditions (Year 2027) using the HCM methodology to identify the 95th percentile queue. The 95th percentile queue is expressed in feet and represents the estimated length of vehicle queuing for specific movements or lane groups at an analyzed intersection; this value is compared to the estimated queuing capacity at each intersection (the storage length of a given lane, typically expressed in feet). The queuing analysis is summarized in Table 7 and detailed in Attachment C.

Future with Full Project Conditions (Year 2027)

Prior to the addition of Full Project traffic in Year 2027, the overall intersection operation is projected to exceed the available storage capacity at the following locations in either peak hour:

- Intersection #3: Etiwanda Avenue & Foothill Boulevard
- Intersection #6: Etiwanda Avenue & Napa Street
- Intersection #8: Etiwanda Avenue & 4th Street/San Bernardino Avenue

The addition of Full Buildout Project traffic (Phases 1 + 2A + 2B) is anticipated to result in queue impacts on intersection movements where the projected queue increases by 50 feet (two vehicles) or more.

These locations include:

- Intersection #2: I-15 Northbound Ramps & Foothill Boulevard
- Intersection #3: Etiwanda Avenue & Foothill Boulevard
- Intersection #4: Etiwanda Avenue & Arrow Route
- Intersection #6: Etiwanda Avenue & Napa Street
- Intersection #8: Etiwanda Avenue & 4th Street/San Bernardino Avenue

The General Plan and additional intersection improvements identified above were developed to potentially address deficient operations at affected intersections; the improvements were also evaluated relative to alleviating the queue impacts noted above. While those improvements addressed deficient intersection operations, queuing impacts are anticipated to remain at selected movements at seven intersections in either peak hour; these locations include:

- Intersection #1: I-15 Southbound Ramps & Foothill Boulevard
- Intersection #2: I-15 Northbound Ramps & Foothill Boulevard (additional improvements not previously identified)
- Intersection #3: Etiwanda Avenue & Foothill Boulevard
- Intersection #4: Etiwanda Avenue & Arrow Route
- Intersection #5: Etiwanda Avenue & Whittram Avenue
- Intersection #6: Etiwanda Avenue & Napa Street
- Intersection #8: Etiwanda Avenue & 4th Street/San Bernardino Avenue

The queue impacts at each affected intersection should be further investigated for additional improvement measures.

EVACUATION EVALUATION

As part of the General Plan, an evacuation evaluation was prepared that focused primarily on residential evacuations from the foothill neighborhoods.

GTC prepared an evaluation to provide insight, based on the Project's proposed industrial land uses and its location at the southeastern quadrant of the City, on the potential roadway operation of a mass evacuation event. The evaluation included the determination of the approximate vehicular delays that would be experienced during an evacuation if all evacuating traffic from the SEA zones were forced to travel east on Arrow Route or south on Etiwanda Avenue. The analysis focused on the intersection of Arrow Route & Etiwanda Avenue for the eastbound traffic and on the intersections along the Etiwanda Avenue corridor between Arrow Route and 4th Street/San Bernardino Avenue (the southern City limits) under the Future with Full Project Conditions (2027). The nearest fire department facilities were also identified as part of this evaluation.

For the purposes of this evaluation, the Etiwanda Avenue Corridor includes the following intersections:

- Intersection #4: Etiwanda Avenue & Arrow Route
- Intersection #5: Etiwanda Avenue & Whittram Avenue
- Intersection #6: Etiwanda Avenue & Napa Street

- Intersection #7: Etiwanda Avenue & 6th Street
- Intersection #8: Etiwanda Avenue & 4th Street/San Bernardino Avenue

As described earlier, the Project sites are located in the City's SEA, which is characterized as primarily industrial, logistics, and warehouse land uses with adjacent residential development. Etiwanda Avenue provides north-south access; east-west access is primarily available on Arrow Route.

Methodology

The evacuation analysis was based on the following assumptions:

- The designated route evacuates traffic in a southbound direction on Etiwanda Avenue from Arrow Route to 4th Street/San Bernardino Avenue toward I-10; an additional route, eastbound on Arrow Route from Etiwanda Avenue, was also evaluated.

- In the event of an emergency in the Study Area, it is assumed that traffic would be prohibited from entering the area and would be diverted away from the area at Foothill Boulevard on the north, Cherry Avenue on the east, I-10 on the south, and I-15 on the west.

- Future with Full Project Conditions (2027) traffic volumes were utilized for the morning and afternoon peak hours.

- Additional trip generation from adjacent parcels was estimated based on Traffic Analysis Zone (TAZ) information developed for the General Plan and distributed through the evacuation route.

- While a lane of traffic along an arterial street can accommodate up to 1,900 vehicles per lane per hour of green time, a reduced vehicular flow rate of 1,280 vehicles per lane per hour was assumed to be the capacity of the evacuation routes in order to account for limited cross traffic and emergency vehicles.

- The roadway lane configurations were based on the lane configurations from the operational intersection analysis.

The evaluation considered the total time needed to evacuate the Project site and adjacent parcels through the Etiwanda Avenue and Arrow Route corridors. The total time for evacuation was calculated by dividing the total number of vehicles by the flow rate of 1,280 vehicles per lane per hour. The critical point of congestion was presumed to be the movement that would take the longest for traffic to clear.

Under true evacuation conditions (and as noted by the General Plan), there are many variables the City may utilize that would change the assumptions in this evaluation. These include, but are not limited to, traffic control officers stationed at intersections, signal timing changes, turning movement restrictions, and strategically rerouting traffic away from the area. The time of day, whether school is in session, and the location of the evacuation areas may also affect this

analysis. However, this evaluation presumes an evacuation scenario during peak hour traffic conditions.

Evacuation Trip Generation

Trip generation estimates were developed from the TAZ population and employment projections developed with the General Plan. A total of eight TAZs were selected for this analysis, which are generally located on each side of Etiwanda Avenue between Arrow Route and 4th Street/San Bernardino Avenue. Both the population and employment projections were expressed as number of persons, which requires conversion into vehicle trips for the purposes of this analysis.

- The population projections were understood to represent residents; to convert into vehicle trips, an Average Vehicle Ridership (AVR) of two persons per vehicle was conservatively assumed for evacuation purposes.

- The employment projections were understood to represent employees; to convert into vehicle trips, an AVR of one person per vehicle was conservatively assumed for evacuation purposes.

The table below summarizes the assumptions by specific TAZ and the trip generation development.

		Persons		Trips		
TAZ	Location / Description	Population	Employment	Resident	Employee	Total TAZ
53700201	S of RR, W of Etiwanda Av		180	0	180	180
53700501	NW corner of Etiwanda Av & 4th St	2,641	2,295	1,321	2,295	3,616
53702101	NE corner of Etiwanda Av & Arrow Rte	1,941	18	971	18	989
53702201	NW corner of Etiwanda Av & Arrow Rte	2	1,644	1	1,644	1,645
53702202	SW corner of Etiwanda Av & Arrow Rte		1,242	0	1,242	1,242
53702401	SE corner of Etiwanda Av & Arrow Rte	150	590	75	590	665
53702402	S of RR, E of Etiwanda Av	36	126	18	126	144
53706302	NE corner of Etiwanda Av & 4th St		193	0	193	193

In total, approximately 8,674 trips from residents and employees were distributed through the analyzed intersections along the evacuation routes.

Future with Full Project Conditions (2027)

The evacuation delay evaluation was based on the intersection approach volumes shown in Figure 10C for the selected intersections under Future with Full Project Conditions for the morning and afternoon peak hour. The adjacent TAZ trips were distributed through the network and added to the selected intersections to estimate the volume of evacuating traffic through the designated routes. The time to clear the intersection (congestion) was calculated by dividing the total volume by the evacuation flow rate (flow rate multiplied by number of lanes).

Tables 8A and 8B present the estimated evacuation volume through the selected intersections, along with the projected approach delay (as calculated with the HCM methodology) and the estimated time to clear the intersection.

As shown in Table 8A, the morning peak hour evacuation along eastbound Arrow Route is estimated to experience 19 minutes of congestion to clear the Etiwanda Avenue intersection and the evacuation along Etiwanda Avenue is estimated to experience 47 to 84 minutes of congestion, depending on location. The maximum congestion is estimated to occur at Etiwanda Avenue & 4th Street/San Bernardino Avenue, which effectively functions as the gateway out of the City and into the neighboring jurisdictions.

As shown in Table 8B, the afternoon peak hour evacuation along eastbound Arrow Route is estimated to experience 48 minutes of congestion to clear the Etiwanda Avenue intersection and the evacuation along Etiwanda Avenue is estimated to experience 43 to 88 minutes of congestion, depending on location. Similar to the morning peak hour, the maximum congestion is estimated to occur at Etiwanda Avenue & 4th Street/San Bernardino Avenue.

These evacuation time represent conservative, worst-case conditions assuming that no evacuation routes to the north or the west would be available.

Emergency Services Access

The ability of emergency services to access the evacuation area is a corresponding component of this evaluation. This evaluation reasonably assumed that law enforcement or other emergency services will institute access restrictions into the emergency area and traffic diversions within the evacuation area itself, effectively creating a reduced traffic volume condition along the evacuation routes. This operating condition will allow emergency service vehicles to more freely travel to the emergency evacuation site because they will effectively be going against the flow of evacuating traffic for at least the final portion of their trip.

For informational purposes, Table 9 summarizes the Fire Department facilities within the City along with nearby facilities from adjacent agencies, along with the approximate distances[5] and estimated travel times[6] to the Project sites.

As shown, two Rancho Cucamonga Fire Department facilities are located in the vicinity of the Project sites. The nearest facility, Station #174, is located to the west approximately 1.9 to 3.1 miles away from the Project sites; estimated travel time ranges from 5.1 to 6.9 minutes to reach the Project sites. The furthest facility, Station #173, is located to the northwest approximately 2.9 to 3.1 miles away from the Project sites; estimated travel time is approximately 7.7 minutes to either Project site.

In the event assistance is requested from outside agencies, the nearest facility is San Bernardino County Fire Department Station #73 located to the northeast at a distance of 2.5 to 2.6 miles from the Project sites; travel times within the evacuation cordon are estimated at approximately 3.8 to 3.9 minutes. Additional San Bernardino County Fire Department and Ontario Fire Department facilities are located a minimum of 4.0 to 4.4 miles, respectively, from the Project sites; the minimum travel times to the Project sites from these facilities ranges from 7.7 to 11.3 minutes.

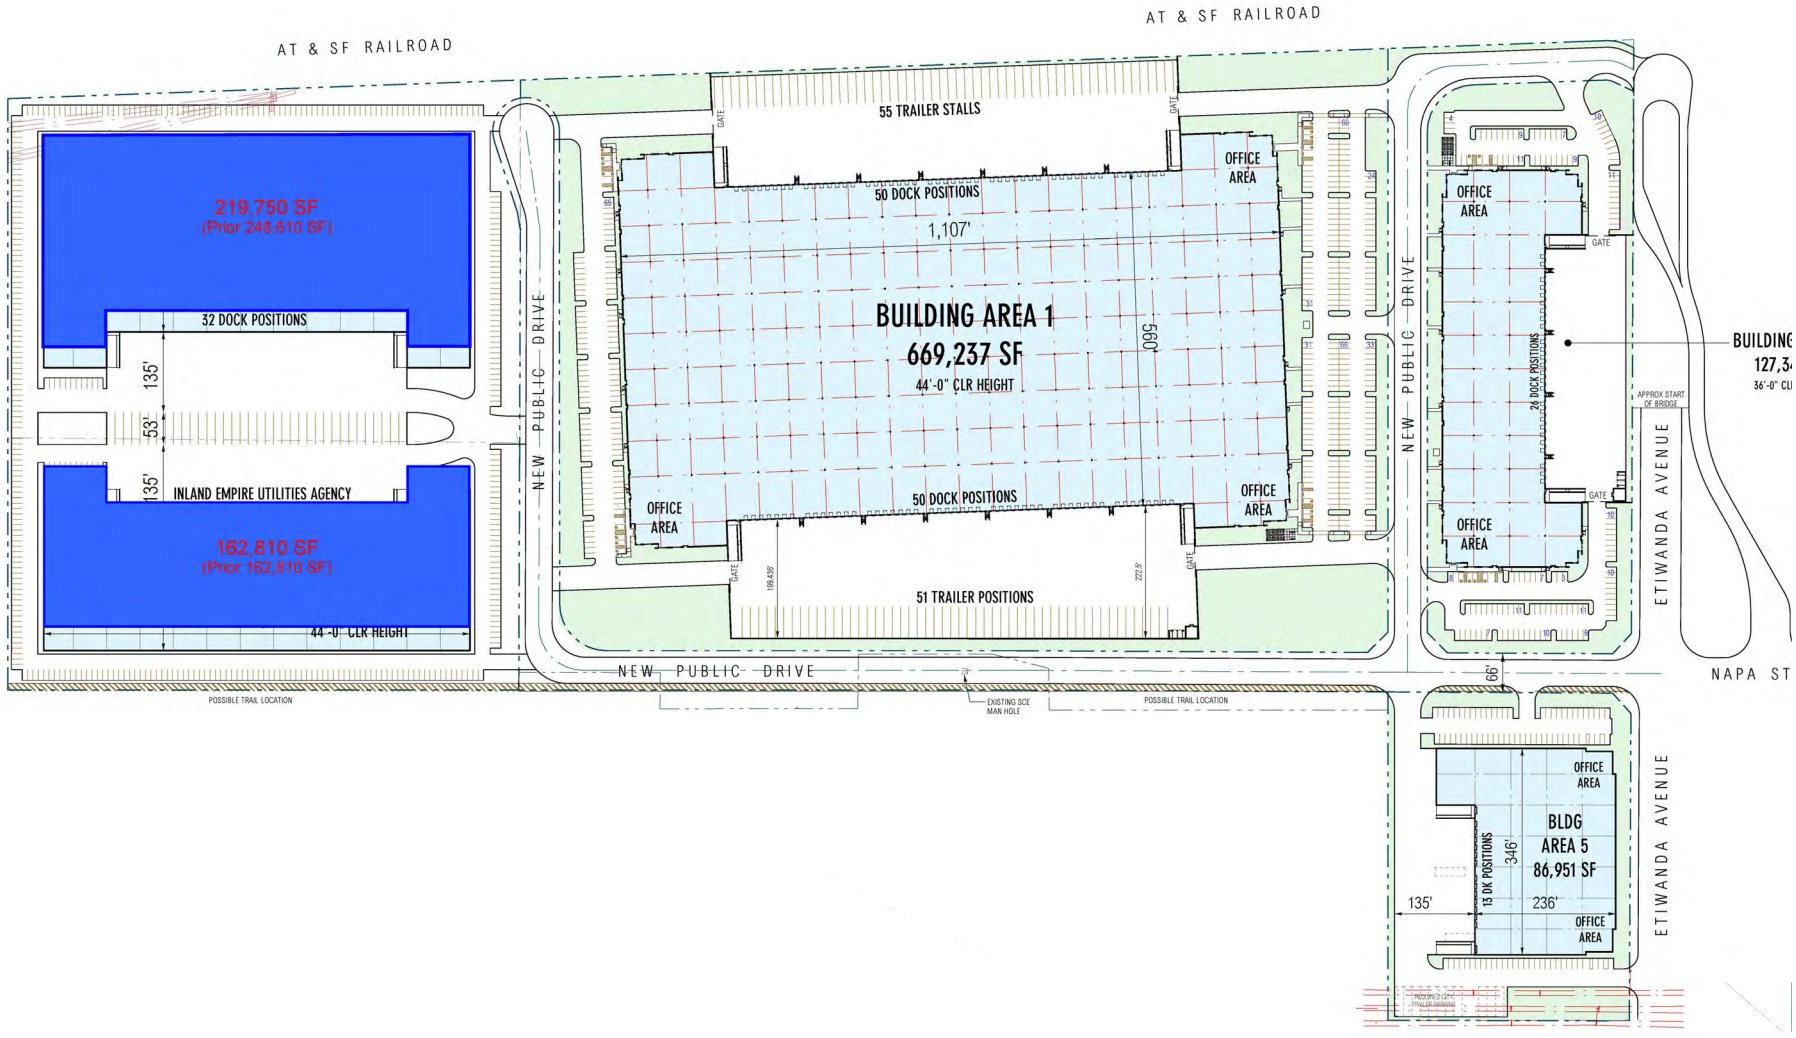
[5] Approximate distances estimated from the facility to the evacuation cordon and from the cordon to the Project sites, based on routing from Google Maps.

[6] Approximate travel times based on an assumed speed of 20 miles per hour outside the evacuation cordon and 40 miles per hour inside the evacuation cordon.

At intersections outside of the evacuation area or along congested segments, the emergency service vehicles are reasonably anticipated to utilize lights, sirens, public address systems, and signal pre-emption equipment to inform traffic to pull over and may also use opposite lanes or other means to bypass traffic where necessary.

SUMMARY

This analysis is based on the revised land use program for both the Arrow Route Site and Etiwanda Site, along with the inclusion of the Newcastle Project due to shared site access and a concurrent development schedule. This analysis also reflects the Project's proposed development phasing along with existing and proposed developments both north and south of the BNSF Railroad tracks through the SEA.

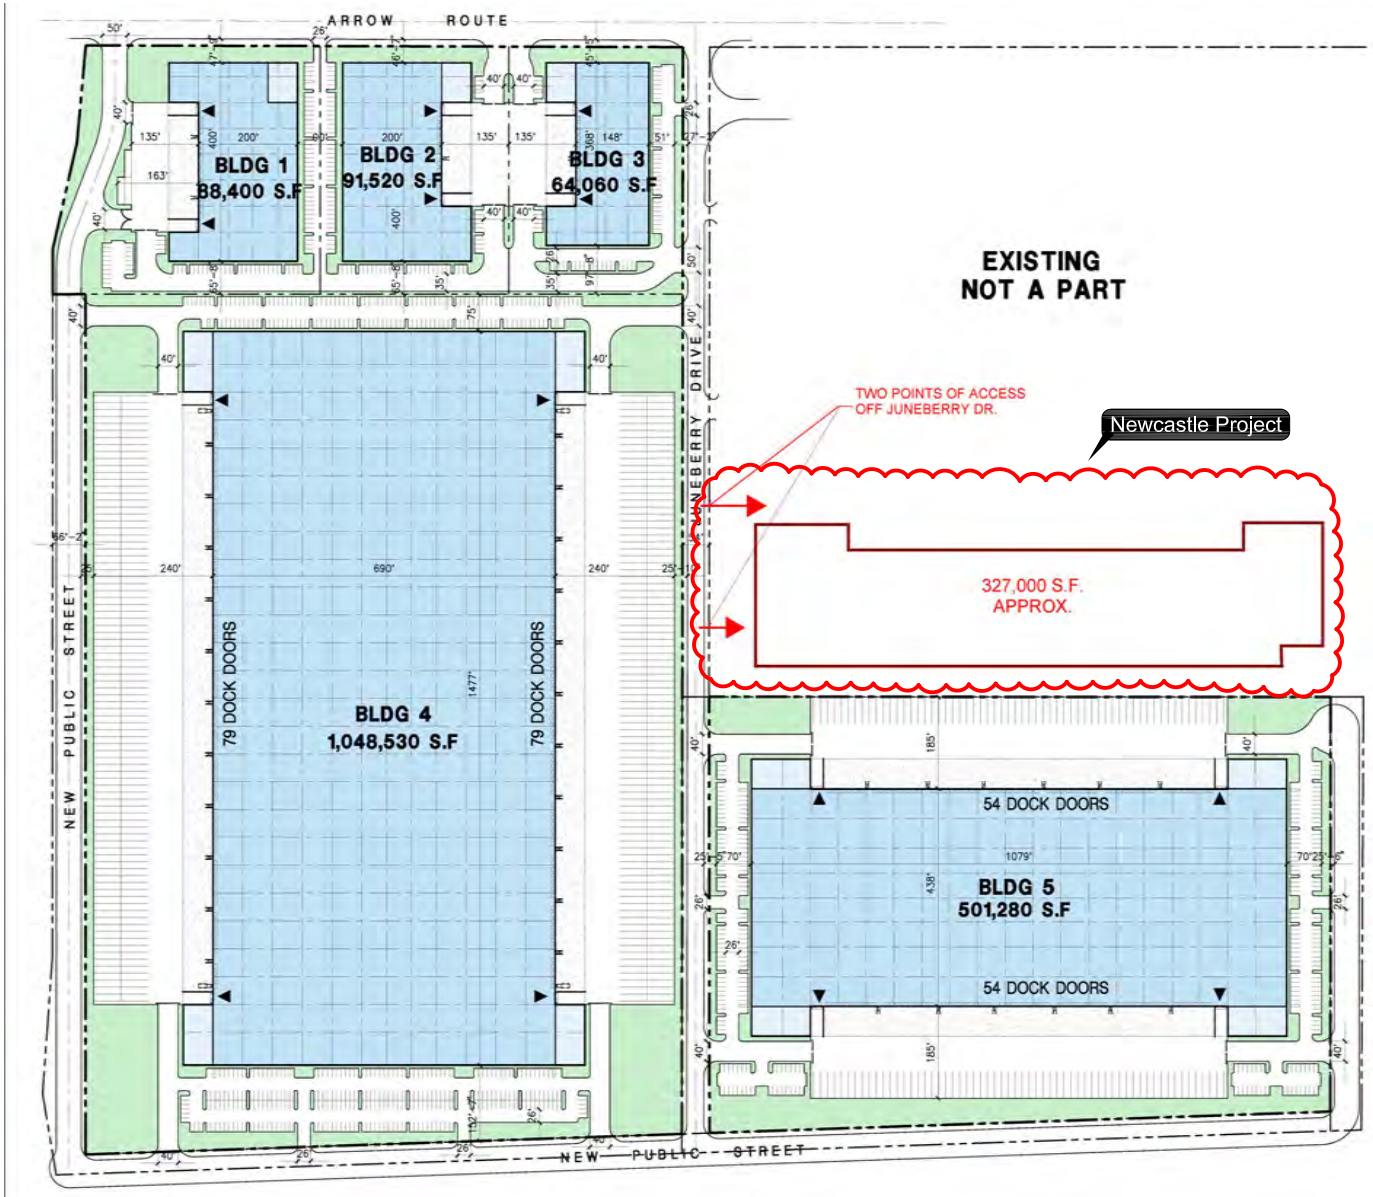


The Future Conditions analyses indicate that intersection operating conditions, depending on the proposed development year (Phase 1 in Year 2025, Phases 1 + 2A in Year 2026, Full Buildout in Year 2027), are projected to be deficient at four to six of the 11 study intersections before the addition of Project traffic in each Future Conditions scenario.

With the addition of Project traffic, Etiwanda Avenue & 6th Street is also projected to experience deficient operations.

This analysis identified a combination of General Plan and individual intersection improvements that would allow the study intersections to operate at LOS D or better in both peak hours with the Full Buildout of the Project in place. This improvement program is estimated to cost approximately $8,200,000, excluding ROW costs. The Project's fair share payment of this set of improvements is estimated at approximately $1,151,000, in addition to any fees required by the General Plan.

An intersection queuing analysis conducted for the Project full buildout condition suggests that select movements at several intersections are projected to experience queuing impacts before and after the addition of Project traffic. The General Plan and additional intersection improvements identified above were developed to potentially address deficient operations at affected intersections; the improvements were also evaluated relative to alleviating the queue impacts noted above. The queue impacts at each affected intersection should be further investigated for additional improvement measures.



An evaluation of evacuation conditions and emergency services access was conducted.

Notes:

ksf: 1,000 square feet

[a] Trip rates by vehicle type (light vehicle vs truck) as indicated in *Trip Generation, 11th Edition* (Institute of Transportation Engineers, 2021). Total trip rates is provided for reference.

[b] The truck trip rates were adjusted by the Passenger Car Equivalent (PCE) factor of 2.5 light vehicles per truck. The total trip rate is provided for reference, as the trip rate of the vehicle type was applied.

[c] Consistent with *Etiwanda Due Diligence Traffic Assessment* , the total building area on each site is assumed to operate as 90% high-cube fulfillment center and 10% high-cube cold storage warehouse.

[d] The Arrow Route Site assumes completion of the full land use program as part of the overall Phase 1 of the Project.

[e] The Newcastle Project is a separate development but is included here due to the proximity and anticipated concurrent development with the Arrow Route Site.

[f] The Etiwanda Site, Phase 1 includes development of Buildings 1, 2, and 5.

[a] Trip rates by vehicle type (light vehicle vs truck) as indicated in *Trip Generation, 11th Edition* (Institute of Transportation Engineers, 2021). Total trip rates is provided for reference.

[b] The truck trip rates were adjusted by the Passenger Car Equivalent (PCE) factor of 2.5 light vehicles per truck. The total trip rate is provided for reference, as the trip rate of the vehicle type was applied.

[c] Consistent with *Etiwanda Due Diligence Traffic Assessment* , the total building area on each site is assumed to operate as 90% high-cube fulfillment center and 10% high-cube cold storage warehouse.

[d] The Arrow Route Site assumes completion of the full land use program during Phase 1 of the Project.

[e] The Newcastle Project is a separate development but is included here due to the proximity and anticipated concurrent development with the Arrow Route Site.

[f] The Etiwanda Site, Phase 2B includes development of Buildings 1, 2, 3, 4, and 5.

TABLE 2
INTERSECTION LEVEL OF SERVICE DEFINITIONS

Level of Service	Description	Delay [a] Signalized Intersections	Delay [a] Unsignalized Intersections
A	EXCELLENT. No vehicle waits longer than one red light and no approach phase is fully used.	≤ 10	≤ 10
B	VERY GOOD. An occasional approach phase is fully utilized; many drivers begin to feel somewhat restricted within groups of vehicles.	> 10 and ≤ 20	> 10 and ≤ 15
C	GOOD. Occasionally drivers may have to wait through more than one red light; backups may develop behind turning vehicles.	> 20 and ≤ 35	> 15 and ≤ 25
D	FAIR. Delays may be substantial during portions of the rush hours, but enough lower volume periods occur to permit clearing of developing lines, preventing excessive backups.	> 35 and ≤ 55	> 25 and ≤ 35
E	POOR. Represents the most vehicles intersection approaches can accommodate; may be long lines of waiting vehicles through several signal cycles.	> 55 and ≤ 80	> 35 and ≤ 50
F	FAILURE. Backups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. Tremendous delays with continuously increasing queue lengths.	> 80	> 50

Notes:

Source: *Highway Capacity Manual, 6th Edition* (Transportation Research Board, 2016).

[a] Measured in seconds.

TABLE 3
EXISTING CONDITIONS (YEAR 2022)
INTERSECTION LEVELS OF SERVICE

No	Intersection	Peak Hour	Existing Conditions	
			Delay	LOS

7. [b]	Etiwanda Avenue & 6th Street	AM PM	11.7 14.7	B B
8. [a]	Etiwanda Avenue & Fourth Street/San Bernardino Avenue	AM PM	37.7 36.7	D D
9. [a]	Etiwanda Avenue & Ontario Mills Parkway/Valley Boulevard	AM PM	18.8 21.6	B C
10. [a]	Etiwanda Avenue & I-10 WB Ramps	AM PM	18.9 15.0	B B
11. [a]	Etiwanda Avenue & I-10 EB Ramps	AM PM	19.3 10.4	B B

Notes:

Delay is measured in seconds per vehicle. LOS = Level of Service.

[a] Intersection analysis based on HCM 6th Edition Signalized methodology, which calculates the average intersection delay, in seconds, for each vehicle passing through the intersection.

[b] Intersection analysis based on the HCM 6th Edition Two-Way Stop Control Unsignalized methodology, which calculates the control delay, in seconds, for each individual approach of an intersection. The reported control delay represents the worst-case approach, and does not account for traffic gaps created by adjacent traffic signals.

Notes:

Delay is measured in seconds per vehicle. LOS = Level of Service.

[a] Intersection analysis based on HCM 6th Edition Signalized methodology, which calculates the average intersection delay, in seconds, for each vehicle passing through the intersection.

[b] Intersection analysis based on the HCM 6th Edition Two-Way Stop Control Unsignalized methodology, which calculates the control delay, in seconds, for each individual approach of an intersection. The reported control delay represents the worst-case approach, and does not account for traffic gaps created by adjacent traffic signals.

[d] Future Conditions assumes the completion of the Eitwanda Avenue Grade Separation, which consists of an overpass over the BNSF Railroad tracks generally between Whittram Avenue and Napa Street with a connection to the east side of Etiwanda Avenue along Napa Street.

[e] General Plan improvements consist of the widening of Etiwanda Avenue to four total lanes betweeh 6th Street and Arrow Route along with related improvements at affected intersecitons.

[f] Includes the General Plan identified roadway improvements along with additional improvements to address deficient operations.

TABLE 8A
SUMMARY OF EVACUATION DELAY
MORNING PEAK HOUR

Future with Full Project Conditions (2027) + Adjacent TAZs						
No.	**Intersection**	**Approach**	**Approach Lanes**	**Volume [a]**	**Approach Delay [b]**	**Minutes to Clear [c]**
4	Etiwanda Avenue & Arrow Route	Eastbound	2	826	39.1	19
5	Etiwanda Avenue & Whittram Avenue	Southbound	2	2,530	22.2	59
6	Etiwanda Avenue & Napa Street	Southbound	2	1,993	32.9	47
7	Etiwanda Avenue & 6th Street	Southbound	2	2,356	n/a	55
8	Etiwanda Avenue & 4th Street / San Bernardino Avenue	Southbound	2	3,583	19.3	**84**
CONGESTION = 84 MINUTES (1.3 HOURS)						

Notes:

[a] Volume conservatively assumes the Future 2027 Project Full Buildout Conditions with trip generation assumptions from adjacent TAZs.

[b] Approach Delay determined by using HCM 6th Edition methodology.

[c] Minutes t Indicates highest congestion for exiting Canyon traffic

Indicates highest congestion for evacuating traffic.

TABLE 8B
SUMMARY OF EVACUATION DELAY
AFTERNOON PEAK HOUR

Future with Full Project Conditions (2027) + Adjacent TAZs						
No.	**Intersection**	**Approach**	**Approach Lanes**	**Volume [a]**	**Approach Delay [b]**	**Minutes to Clear [c]**
4	Etiwanda Avenue & Arrow Route	Eastbound	2	2,036	46.7	48
5	Etiwanda Avenue & Whittram Avenue	Southbound	2	2,549	28.7	60
6	Etiwanda Avenue & Napa Street	Southbound	2	1,820	28.9	43
7	Etiwanda Avenue & 6th Street	Southbound	2	2,358	n/a	55
8	Etiwanda Avenue & 4th Street / San Bernardino Avenue	Southbound	2	3,765	29.4	**88**
CONGESTION = 88 MINUTES (1.4 HOURS)						

Notes:

[a] Volume conservatively assumes the Future 2027 Project Full Buildout Conditions with trip generation assumptions from adjacent TAZs.

[b] Approach Delay determined by using HCM 6th Edition methodology.

[c] Minutes to Clear (congestion) determined by using an assumed vehicular flow of 1,280 vehicles per lane per hour.

Indicates highest congestion for evacuating traffic.

TABLE 9
ESTIMATED EMERGENCY SERVICES ACCESS TIMES

Fire Station	Location	Arrow Route Site

INTRODUCTION

A: PROJECT LOCATION

The project site is located at 8996 Etiwanda Avenue, north of 6th Street, south of Arrow Route and east of the Interstate 15 Freeway in the City of Rancho Cucamonga, California. Please see next page for vicinity map.

B: STUDY PURPOSE

The purpose of this study is to determine 100-year existing and proposed condition peak flow rates from the project site.

C: PROJECT STAFF:

Thienes Engineering staff involved in this study include:

Reinhard Stenzel
James Wickenhaeuser

Last Update: 11/10/21

NTS

DISCUSSION

The project site encompasses approximately 70.85 acres. Proposed improvements to the site include two industrial buildings of 1,422,500 square feet (Building 1), and 738,270 square feet (Building 2). There will be truck yards on the north and south sides of Building 1, east side of Building 2, and a separate trailer parking lot in the southeasterly portion of the project. Vehicle parking and landscape will be scattered throughout the site. A 3'H x 7'W reinforced concrete box will be constructed to convey northerly offsite tributary flows in lieu of the existing concrete channel bisecting the westerly portion of the site. Similarly, the existing 30-inch storm drain traversing through the easterly portion of the site will be re-routed around the proposed Building 1.

Master Plan Hydrology

Per the City of Rancho Cucamonga – Etiwanda / San Sevaine Area Master Plan of Drainage, by AKM Consulting Engineers dated January 2009, 100-year commercial runoff from the easterly portion of the project site is tabled to a proposed master plan storm drain (54-inch between Nodes 2.09 and 2.14, 60-inch between Nodes 2.14 and 2.16) in Etiwanda Avenue. The existing Etiwanda Avenue storm drain appears to be undersized (42-inch fronting the project site and 54-inch downstream of site per as-built plans by Albert A. Webb dated August 2015). Therefore, proposed condition discharge to the Etiwanda Avenue storm drain will match existing condition discharge.

The westerly portion of the project site is not tabled to the Etiwanda Avenue storm drain. However, it is currently discharging to a concrete channel bisecting the site. Likewise, proposed condition discharge to the 3'H x 7'W reinforced concrete box – which will convey northerly offsite flows in place of the existing concrete channel – will match existing condition discharge.

Please see Appendix "A" for the Master Plan of Drainage, as-built storm drain plans and other pertinent reference materials.

Existing Condition

Areas tributary to Etiwanda Avenue storm drain:

The westerly half of Etiwanda Avenue fronting the project site (Nodes 100-103, 2.30 acres), plus a grass lot south of the site (at Node 103, 1.60 acres), drain southerly to a 42-inch lateral accepting runoff in the grass lot and tributary to the Etiwanda Avenue storm drain. The existing condition 100-year peak flow rate from these offsite areas is approximately 10.0 cfs.

An offsite dirt lot and several warehouse buildings near the project site's northeast corner, plus a portion of the railroad right-of-way (Nodes 110-111, 11.40 acres), drain to a 30-inch storm drain accepting runoff within the railroad right-of-way. The 30-inch traverses southerly through the site, accepts runoff from the center portion of the site (Nodes 300-332, 22.15 acres, inclusive of 1.15 acres offsite from railroad right-of-way), and discharges to the southerly offsite grass lot, which drains via the previously mentioned 48-inch lateral to the Etiwanda Avenue storm drain. The grass lot also accepts runoff from the easterly portion of the site (Nodes 200-202, 6.90 acres) via surface flow. The existing condition 100-year peak flow rate from the 11.40-acre offsite area is approximately 40.7 cfs. The 100-year peak flow rate from the 22.15-acre center portion of the site is approximately 68.1 cfs (subtract 40.7 cfs from 108.8 cfs total at Node 132). Lastly, the 100-year peak flow rate from the 6.90-acre easterly portion of the site is approximately 23.7 cfs.

The total existing condition 100-year peak flow rate from the above onsite plus offsite areas, tributary to the Etiwanda Avenue storm drain via the 42-inch lateral, is 142.5 cfs.

Areas tributary to existing concrete channel:

The northwest portion of the project site and the areas adjacent to the existing concrete channel surface drain to the concrete channel, which continues southerly into a neighboring property (Existing Condition Hydrology Map Nodes 400-403, 17.95 acres). The existing condition 100-year peak flow rate from Nodes 400-403 is approximately 37.2 cfs. The concrete channel also accepts offsite flows from a north of the project site (Offsite Hydrology Map Nodes 100-106, 50.05 acres). The 100-year peak flow rate from this 50.05 acre offsite area is approximately 119.1 cfs.

The total existing condition 100-year peak flow rate from the above onsite plus offsite areas, tributary to the existing concrete channel, is 156.3 cfs.

Areas tributary to southerly neighboring property:

The southwest portion of the project site (Nodes 500-502, 7.60 acres) and a small southerly portion of the site east of the concrete channel (Nodes 600-601, 0.25 acres) surface drain southerly to a neighboring property. The existing condition 100-year peak flow rates from these onsite areas are approximately 15.1 cfs (leaving the site at Node 502) and 1.4 cfs (at Node 601)

Self-contained areas not draining from site:

There are several areas within the project site that are currently self-contained, thus not draining from the site. Some are chemical waste basins protected by berms (4.15-acre, 1.45-acre and 0.45-acre areas in the easterly portion of site adjacent to Etiwanda Avenue, plus 0.15-acre area in the southerly portion near Node 600). Others are located at cooling towers with concrete storage channels (two 1.20-acre areas in the northerly portion of site adjacent to railroad right-of-way, plus 1.80-acre area in the westerly portion). Totaling 10.40 acres, these areas do not contribute any runoffs to downstream drainage facilities.

See Appendix "B" for existing condition hydrology calculations and Appendix "D" for existing condition hydrology map.

Proposed Condition

Areas tributary to Etiwanda Avenue storm drain:

The westerly truck and auto parking lots west of Building 1 (nodes 100-104) will surface drain to series of catch basins and be added to a private storm drain (Line A). The storm drain will travel southerly then turn easterly through the southern truck yard. A series of low points with catch basins will collect the runoff from the southerly half of the building and the truck yard (Nodes 105-114). The storm drain will continue easterly to a major confluence at node 214.

The northerly half of Building 1 and the northerly truck yard will drain to a series of low points with catch basins within the truck yard (nodes 200-210). A private storm drain (Line B) will convey the runoff easterly then turn southerly through the easterly auto parking lot. Runoff from the auto parking will be collected and added to this stream (Nodes 211-213). Finally this storm drain will confluence with the stream from the southerly portion of the building at node 214. The 100-year peak flow rate from Building 1 will be approximately 142.5 cfs.

The storm drain will continue from node 214 easterly into the street then turn southerly towards node 306. This is a second major confluence.

Runoff from Building 2, the northerly auto parking, and the truck yard will drain to a series of low points with catch basins (Nodes 300-304). A private storm drain (Line C) will convey this runoff southerly through the easterly truck yard then turn westerly. The southerly auto parking area will drain to a catch basin then join this stream at node 305. The storm drain will confluence with the storm drain in the street at node 306 and continue southerly. The 100-year peak flow rate from Building 2 will be approximately 27.1 cfs.

Finally, the storm drain will turn easterly for Etiwanda Avenue. Runoff from a portion of the streets will be collected in catch basins added to the stream (1.95 ac and 3.50 ac). The storm drain will connect to the existing 42" storm drain in Etiwanda Avenue. The peak

100-year flow rate from Buildings 1 & 2 and the street areas will be approximately 167.2 cfs. Note that this flow rate is less than the direct sum of flow rates from the individual areas. This is because the time of concentration for the entire stream is not taken into account in the direct sum.

Runoff from the southeasterly truck yard and portions of the street (Nodes 400-504) are also tributary to the existing 42" storm drain in Etiwanda Avenue. A private storm drain will collect runoff from a catch basin in the truck yard and the street flows and convey it to the existing drain. The 100-year peak flow rate will be approximately 15.2 cfs.

The total 100-year peak flow rate from the proposed project to the Etiwanda Avenue storm drain will be approximately 182.4 cfs (167.2 cfs + 15.2 cfs, Nodes 100-308, 400-504).

Areas tributary to existing concrete channel:

The westerly street and portion of the southerly street will surface drain within the street to catch basins and into the existing channel (Nodes 600-603). The 100-year peak runoff will be approximately 12.8 cfs.

Offsite runon from the north will be conveyed through the site in a proposed 3'H x 7'W RCB. The culvert will wrap around the west side of the building and convey approximately 119.1 cfs to the channel. This is the existing flow rate, so there will not be a negative effect on the channel.

Summary

The total 100-year peak flow rate from the proposed project to both Etiwanda Avenue storm drain and the existing channel will be approximately 195.2 cfs (167.2 cfs + 15.2 cfs + 12.8 cfs, Nodes 100-308, 400-504, 600-603).

See Appendix "B" for proposed condition hydrology calculations and Appendix "D" for proposed condition hydrology map.

Detention Analysis

Onsite storm water detention will be utilized to reduce the proposed condition flow rate below the existing condition rate. The 100-year peak existing condition flow rate from the project area to the Etiwanda Avenue storm drain is approximately 142.5 cfs, while the peak flow rate to the channel is approximately 37.2 cfs. No detention will be required to reduce the peak flow rate to the channel (37.2 cfs existing, 12.8 cfs proposed).

Runoff from Building 1 will be stored in the northerly and southerly truck yards. The southerly truck yard (Nodes 100-114, 21.1 acres) experiences approximately 68.1 cfs (rational method) of inflow during a 100-year storm event. The storm drain leaving this truck yard will intentionally be undersized to force runoff to pond on the surface of the

truck yard. A 24" HDPE pipe will limit the discharge to 48.5 cfs during a peak event. Approximately 0.77 ac-ft of runoff will pond to a depth of 0.95'. This ponding event will last approximately 40-minutes and will only occur during a 100-year storm event.

The northerly truck yard (Nodes 200-210, 22.1 acres) experiences approximately 73.6 cfs (rational method) of inflow during a 100-year storm event. The storm drain leaving this truck yard will intentionally be undersized to force runoff to pond on the surface of the truck yard. A 24" HDPE pipe will limit the discharge to 46.3 cfs during a peak event. Approximately 0.73 ac-ft of runoff will pond to a depth of 0.64'. This ponding event will last approximately 40-minutes and will only occur during a 100-year storm event.

Runoff from Building 2 will also be detained in the easterly truck yard (Nodes 300-304). The truck yard experiences approximately 26.0 cfs (rational method) of inflow during a 100-year storm event. The storm drain leaving this truck yard will intentionally be undersized to force runoff to pond on the surface of the truck yard. A 12" HDPE pipe will limit the discharge to 9.7 cfs during a peak event. Approximately 0.20 ac-ft of runoff will pond to a depth of 0.83'. This ponding event will last approximately 30-minutes and will only occur during a 100-year storm event.

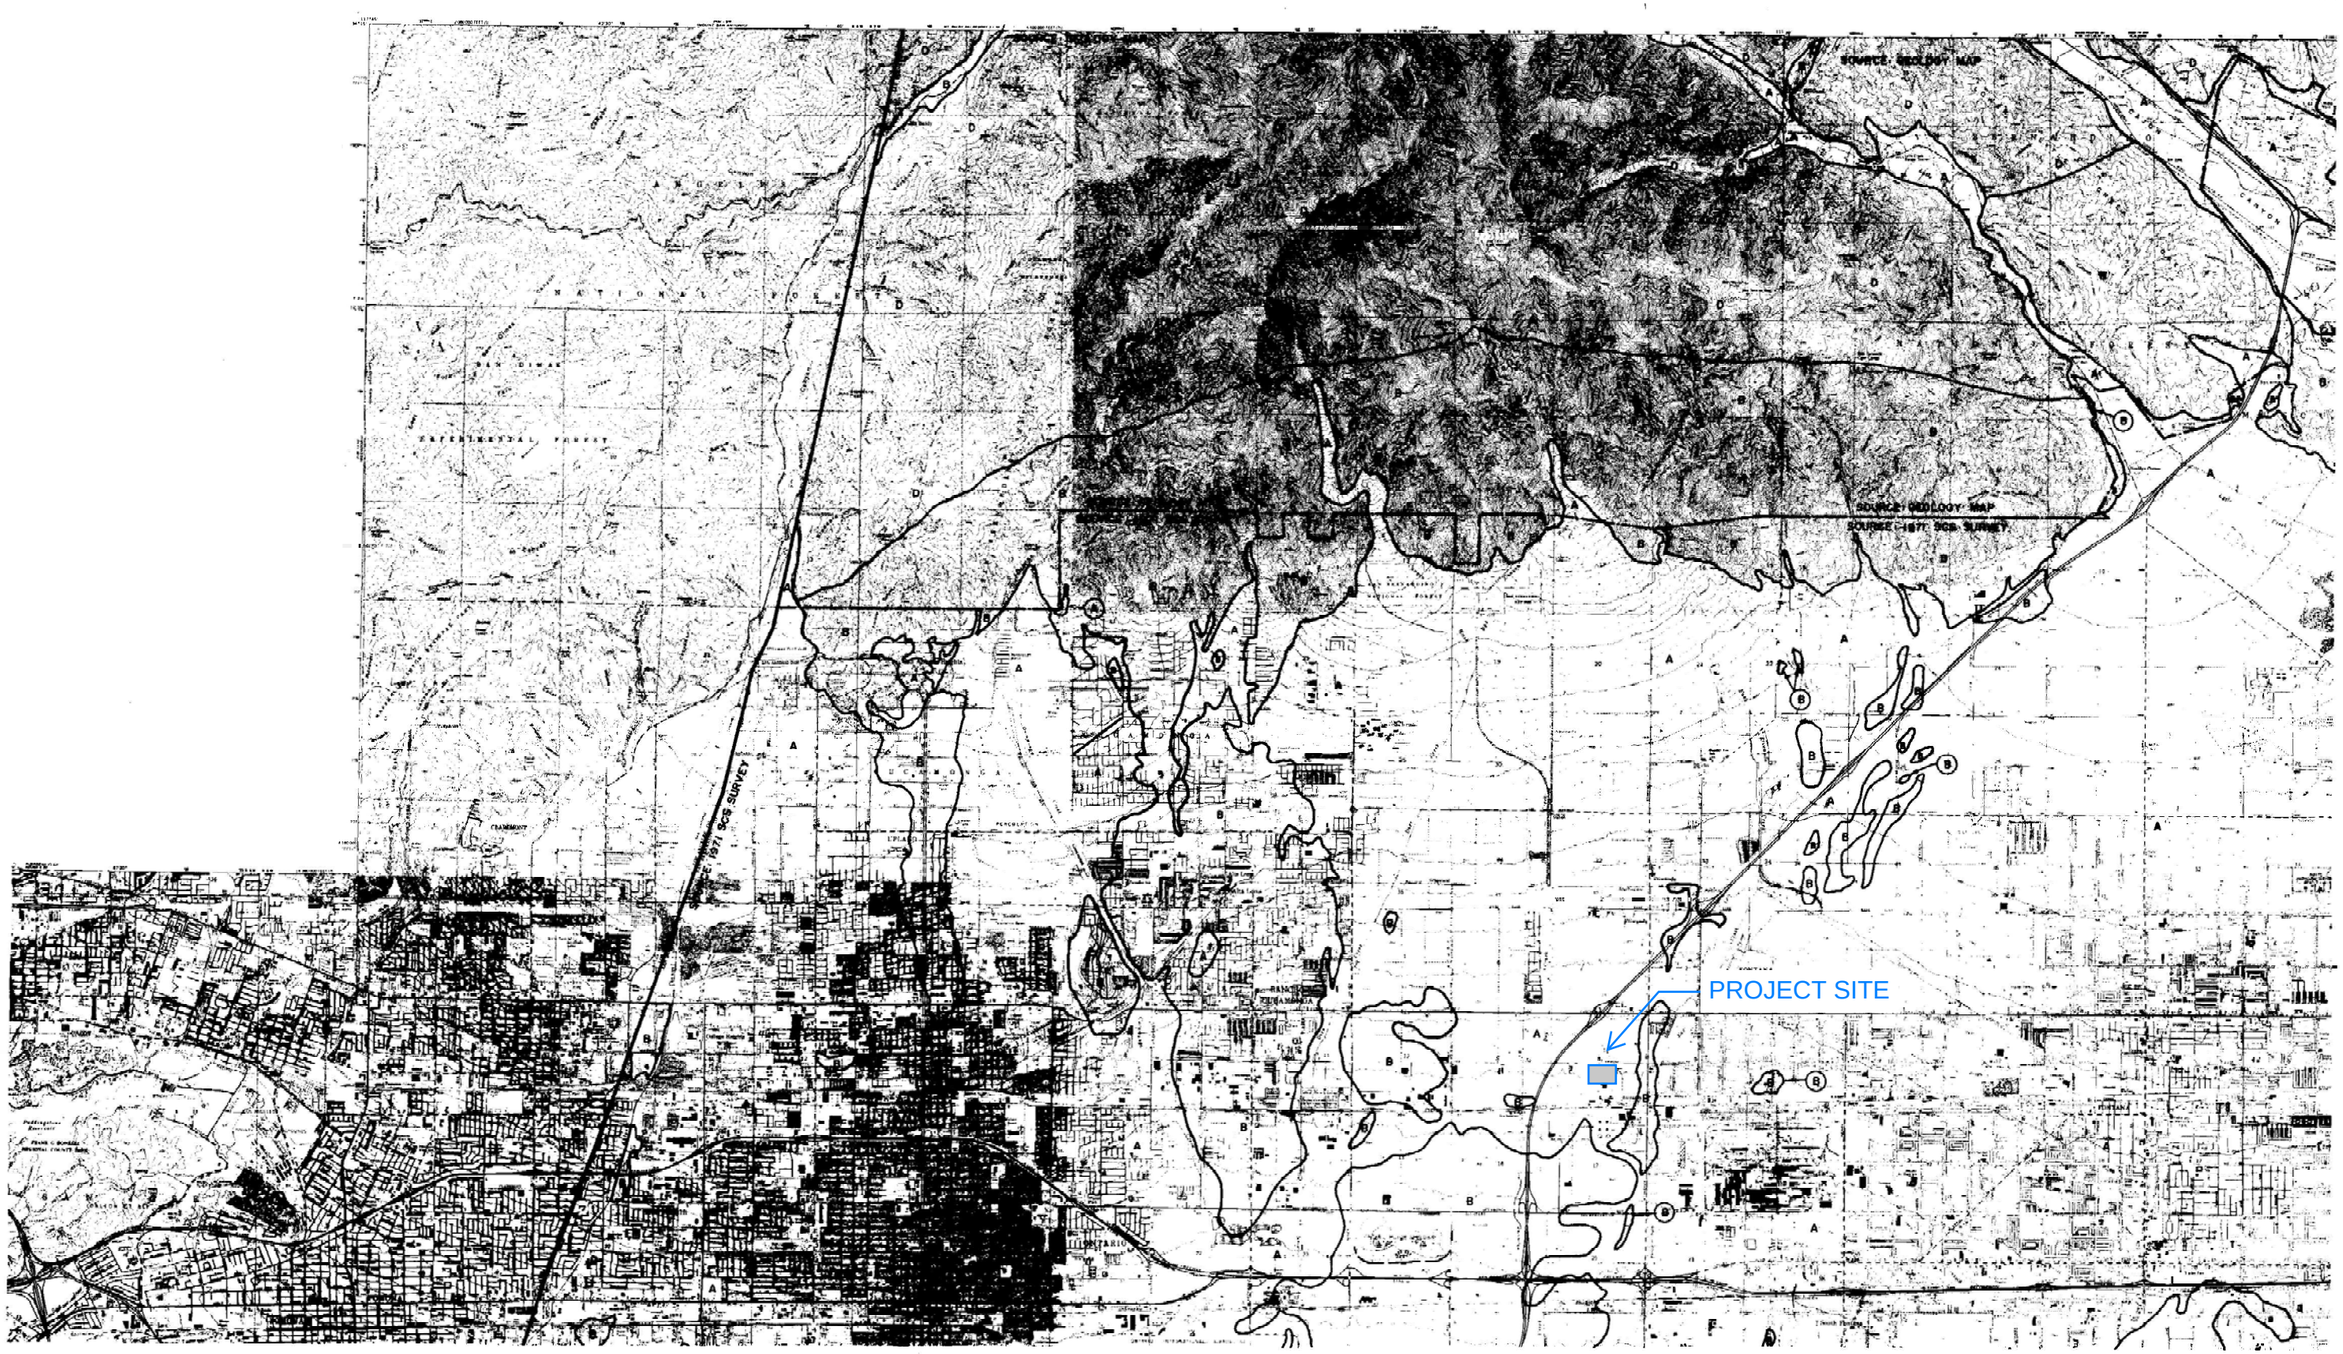
After detention, the peak 100-year flow rate to the Etiwanda Avenue storm drain via Line A will be approximately 110.3 cfs. With the addition of the runoff from the southeasterly truck parking lot, the total 100-year peak flow rate to the Etiwanda Avenue storm drain will be approximately 125.5 cfs. This is approximately 88% of the existing condition peak flow rate of 142.5 cfs.

Since proposed condition discharge will be less than the existing condition discharge to both the existing Etiwanda Avenue storm drain and the existing concrete channel, proposed site improvements will not negatively impact any existing downstream drainage facilities. Onsite storm drain pipe lateral sizes and hydraulics will be determined during the project's final design phase to reduce proposed condition discharge to below existing condition discharge.

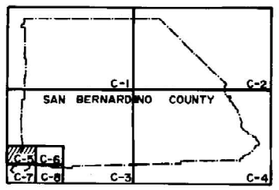
Truck Yard	Nodes	Area (acre)	Peak Q (cfs)	Tc (min)	Discharge Q (cfs)	Depth (ft)	Volume (ac-ft)	Difference (cfs)
Building 1 - North	200-210	21.1	73.6	11.5	48.5	0.95	0.77	25.1
Building 1 - South	100-114	22.1	68.1	13.4	46.3	0.64	0.73	21.8
Building 2 - East	300-304	5.75	26.0	7.7	9.7	0.83	0.20	16.3
Totals			**167.7**		**104.5**			**63.2**

See Appendix "C" for detention analysis.

Methodology



Hydrology calculations were computed using San Bernardino County Rational Method program (by AES Software). The soil types are "A" "and "B" per the San Bernardino County Hydrology Manual. See Appendix "A" for reference materials. The San Bernardino



County Flood Routing Analysis (also by AES Software) was used for detention calculations.

PLAN

CONSTRUCTION NOTES:

(1) INSTALL 54" DIAMETER R.C.P. STORM DRAIN, D-LOAD PER PLAN.
(2) INSTALL 42" DIAMETER R.C.P. STORM DRAIN, D-LOAD PER PLAN.
(5) INSTALL 48" DIAMETER R.C.P. STORM DRAIN, D-LOAD PER PLAN.
(9) REMOVE AND DISPOSE OF INTERFERING PORTIONS OF EXISTING STORM DRAIN.
(10) POTHOLE TO VERIFY LOCATION AND ELEVATION PRIOR TO STORM DRAIN CONSTRUCTION.
(16) CONSTRUCT MANHOLE NO. 2 PER CITY OF RANCHO CUCAMONGA STD. DWG. NO. 319.
(18) CONSTRUCT TRANSITION STRUCTURE NO. 3. PER CITY OF RANCHO CUCAMONGA STD. DWG. NO. 336.
(19) CONSTRUCT P.C.C. COLLAR PER CITY OF RANCHO CUCAMONGA STD. DWG. NO. 329.
(20) CONSTRUCT SUPPORT FOR CONDUITS CROSSING TRENCHES PER CITY OF RANCHO CUCAMONGA STD. DWG. NO. 339.
(22) REMOVE AND DISPOSE OF EXISTING BULKHEAD.
(23) PLUG DOWNSTREAM END AND FILL ABANDONED PIPE WITH CONTROLLED LOW STRENGTH MATERIAL (CLSM) @ 1/4 SACK MIN.
(24) INSTALL 36" MANHOLE FRAME AND COVER PER SPPWC STD. DWG. NO. 633-3 (SEE SHEET 2A) AND 36" SHAFT WITHOUT REDUCER PER SPPWC STD. DWG. NO. 326-2 (SEE SHEET 8A).
(25) REPLACE EXISTING PAVEMENT AND AGGREGATE BASE AFFECTED BY STORM DRAIN CONSTRUCTION IN LIKE AND KIND PER STD. DWG. 120 AS MODIFIED BY TRENCH DETAIL ON SHEET 2A. OVERLAY ENTIRE TRAVELED LANE WIDTH WHEN REQUIRED BY STD. DWG. 120.

NOTE: INCORPORATION LIMITS FOR THE CITY OF RANCHO CUCAMONGA ARE: N/O 4TH ST. ℄, W/O ETIWANDA AVE. ℄ BETWEEN 4TH ST. AND NAPA ST., & N/O NAPA ST. R/W.

CONTRACTOR SHALL OBTAIN ENCROACHMENT PERMIT FROM THE COUNTY OF SAN BERNARDINO FOR ALL WORK OUTSIDE CITY LIMITS.
