Existing Substation

Subtransmission Structures
- New, TSP

Distribution Structures
- Existing Wood Pole - Replace

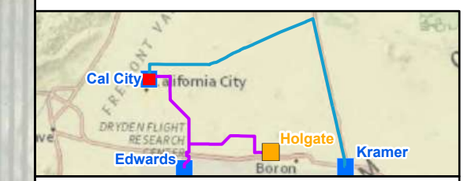
Telecommunication Structure
- New, Manhole

Telecommunication Alignment
- New, Overhead

Subtransmission Alignment
- New Cal City-Edwards-Holgate 115 kV Subtransmission Line
- New Kramer-Cal City 115 kV Subtransmission Line

Substation Facility Area
- Existing
- New
- Cal City Substation (Fee Owned) Property

Civil Mechanical Stabilization Area
- Water Bar



Access Roads
- *New Access Road

Construction Areas
- General Disturbance Area
- Pull Site
- Staging Area

Grading Disturbance
- Permanent
- Temporary

ROW
- Proposed Project - 30 ft ROW

*Includes proposed new (design) access roads and/or heavy improvements to existing roads.

Cal City Substation 115 kV Upgrade Project

Appendix A
Page 61 of 157

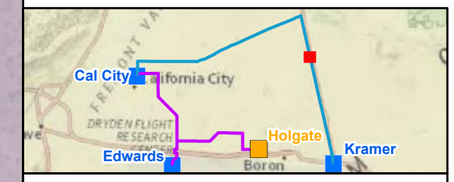
Subtransmission Structures
- New, LWS

Telecommunication Alignment
- New, Overhead

Subtransmission Alignment
- New Kramer-Cal City 115 kV Subtransmission Line

Civil Mechanical Stabilization Area
- Water Bar

Access Roads
- *New Access Road



Grading Disturbance
- Permanent
- Temporary

ROW
- *Existing ROW
- Proposed Project - 30 ft ROW

Land Ownership
- Bureau of Land Management

*Includes proposed new (design) access roads and/or heavy improvements to existing roads.

*Existing ROW is based on best available information but has not been formally land surveyed at this time.

SCOPING REPORT

Cal City Substation 115 kV Upgrade Project

1. Introduction

In its California Public Utilities Commission (CPUC) application (A.23-03-005), filed on March 14, 2023, Southern California Edison Company (SCE) requests a Permit to Construct (PTC) the Cal City Substation 115 kilovolt (kV) Upgrade Project (Project). The CPUC is serving as the lead agency for the purposes of the California Environmental Quality Act (CEQA) review. Based on its review of the application and the Proponent's Environmental Assessment (PEA), the CPUC is preparing an Environmental Impact Report (EIR) to evaluate potential effects of the Project, pursuant to CEQA.

The CPUC issued a Notice of Preparation (NOP) of an EIR for the Project on November 8, 2023, which initiated agency consultation about the scope and content of information to be analyzed in the EIR (a process called "scoping") and invited early public input about potential environmental concerns (Pub. Res. Code § 21080.4(a); CEQA Guidelines §§ 15082(b), 15083). CEQA Guidelines Section 15083 provides that a "Lead Agency may…consult directly with any person…it believes will be concerned with the environmental effects of the project." Section 15083(a) states that scoping can be "helpful to agencies in identifying the range of actions, alternatives, mitigation measures, and significant effects to be analyzed in depth in an EIR and in eliminating from detailed study issues found not to be important." Scoping is an effective way to bring together and consider the concerns of affected State, regional, and local agencies, the project proponent, and other interested persons (CEQA Guidelines § 15083(b)).

This scoping report provides an overview and summary of the written and oral comments provided by agencies and individuals during the 30-day scoping period, which commenced November 8, 2023, and closed on December 8, 2023. The CPUC will use this scoping report to inform the preparation of a comprehensive EIR tailored to agency and community concerns. Pursuant to CEQA Guidelines Section 15082, all public comments within the scope of CEQA will be considered in the EIR process.[1]

[1] Comments not within the scope of CEQA will not be addressed through the CEQA process.

2. Description of the Project

2.1 Project Summary

As proposed by SCE, the Project would include expansion of the existing 5-acre Cal City Substation by approximately 10 acres to upgrade the substation from 33/12 kV to 115/33 kV and 115/12 kV. Fourteen new underground 12 kV distribution getaways and two new underground 33 kV distribution getaways from Cal City Substation are proposed. The Project would also include construction of two new 115 kV subtransmission lines, a 42-mile overhead line from Kramer Substation to Cal City Substation, and a new overhead 28-mile line from Cal City Substation to Holgate Switchyard with a tap line to serve Edwards Substation located on Edwards Air Force Base. The proposed new 115 kV subtransmission lines would be installed with telecommunication cables and telecommunication improvements would also be installed at the existing Holgate Switchyard and Cal City, Kramer, and Edwards substations. The Project would require electrical infrastructure improvements to accommodate the new 115 kV lines within the existing fence lines at Edwards Substation, Holgate Switchyard, and Kramer Substation.

The Project would also include the transfer of several miles of distribution lines onto the proposed new subtransmission line structures, including: the transfer of a total of approximately 7 miles of existing 33 kV distribution line to the new Kramer-Cal City 115 kV line structures, and removal of approximately 151 existing distribution structures along the line segments; and the transfer of approximately 2 miles of existing 33 kV and approximately 2 miles of existing 12 kV distribution lines to the new Cal City- Edwards-Holgate 115 kV line structures, and removal of approximately 90 existing distribution structures along the line segments.

2.2 Project Location

The Project would be in the Mojave Desert region of southern California on lands managed by unincorporated Kern and San Bernardino Counties, the City of California City, state agencies (California Department of Fish and Wildlife [CDFW] and California Department of Transportation [Caltrans]), and federal agencies (Bureau of Land Management [BLM] and the U.S. Department Of Defense [DoD]), and on private lands and lands owned and managed by SCE.

3. Scoping Process

3.1 Notification

On November 8, 2023, the CPUC published and distributed an NOP to solicit input from federal, state, and local agencies, and the public to inform the scope and content to be considered in the EIR being prepared for the Project. A copy of the NOP was provided to the State Clearinghouse of the Governor’s Office of Planning and Research, which assigned State Clearinghouse Number 2023110218 as the Project’s unique State identification number for the CEQA review. The Notice of Scoping Meetings and Release of the NOP was mailed to property owners within 300 feet of the Project routes and locations, and the NOP was mailed directly to responsible and trustee agencies, and individuals that had previously shown interest in the Project. The NOP provided a

brief description of the Project, included a map showing the location of proposed components of the Project, identified potential areas of environmental impacts, and provided notice for virtual public scoping meetings, which were held on Thursday, November 30, 2023. **Appendix A** includes documentation of the State Clearinghouse submittal, and the mailing list of agencies and organizations that were directly mailed the NOP to street or electronic addresses, and **Appendix B** includes a copy of the Notice of Scoping Meetings and Release of Notice of Preparation (NOP) of an Environmental Impact Report, and the NOP.

To announce the release of the NOP and provide details about the public scoping meetings, the CPUC published a legal notice in the Mojave Desert News, a weekly periodical in general circulation in the Project vicinity. The legal notice was published for two successive weeks, on November 8, 2023, and November 15, 2023. Proof of the publication is provided in **Appendix C**. The meeting announcement and an electronic copy of the NOP was also posted on the CPUC's website established for the Project at: https://ia.cpuc.ca.gov/environment/info/esa/CalCity/index.html.

The NOP was also posted on November 8, 2023, for a 30-day review period with the Kern County Clerk and the San Bernardino County Clerk of the Board. Proof of the postings is provided in **Appendix C**.

3.2 Opportunities for Comment

3.2.1 Public Workshops and Scoping Meetings

The CPUC conducted two virtual scoping meetings on November 30, 2023. The meetings were held from 2:30 to 4:00 p.m. and from 6:30 to 8:00 p.m. Fourteen people attended the afternoon meeting, and four attended the evening meeting. Boris Sanchez of the CPUC, as well as Matt Fagundes, Maria Hensel, and Olivia Silverstein of Environmental Science Associates (ESA), consultant to the CPUC, hosted the meetings.

During the meetings, the CPUC summarized the lead agency's decision and environmental review process and noted the opportunities for public participation within the CEQA process. A brief description of the Project identified by SCE in its PEA was presented and the range of environmental issue areas to be addressed in the EIR was discussed. The types of alternatives that can be considered in the EIR and the next steps in the environmental review process were also addressed at the scoping meetings. Following the presentation, the public was provided with an opportunity to submit oral and/or written comments. A copy of the scoping meeting presentation is included in **Appendix D**.

3.2.2 Agency Consultation

In October of 2023, on behalf of the CPUC, ESA conducted early outreach to local agencies and officials and resource agencies to inform them about the upcoming Project and its scoping period. Agencies and officials contacted included the city of California City, Kern and San Bernardino counties, Eastern Kern Air Pollution Control District, Mojave Desert Air Quality Management District, CDFW, California Regional Water Quality Control Board, Federal Regulatory Energy Commission, and the BLM. The CPUC conducted a conference call with BLM on October 10,

2023, to coordinate the environmental reviews of the two agencies and to receive any early BLM input on the scope of the EIR analysis. The BLM provided input about the status of its review of the Project under the National Environmental Protection Act and suggested cumulative projects to be considered as part of the environmental review.

4. Scoping Comments

Three members of the public provided oral comments on the Project during the November 30, 2023, afternoon scoping meeting, and one person commented during the evening meeting session. Transcripts from the virtual scoping meetings are included in **Appendix E**.

The CPUC received five written comments during the scoping period. Copies of the written comments are provided in **Appendix F**. Commenting parties are listed in **Table 1** and summaries of the issues identified by the commenters are provided in Section 4.1, *Issues to be Considered under CEQA*, and Section 4.2, *Issues Not Analyzed under CEQA*.

TABLE 1
PARTIES THAT SUBMITTED EIR SCOPING COMMENTS

Name	Title, Organization/Affiliation	Date
Oral Comments		
Judy Hermann	Property Owner	11/30/2023
Karen Macedonio	Council Member, City of California City	11/30/2023
J. Gerhard	Property Owner	11/30/2023
Joan Schmitt	Property Owner	11/30/2023
Written Comments		
Cameron Vela	Cultural Resources Analyst, Native American Heritage Commission	11/16/2023
Judy Hermann	Property Owner	11/30/2023 and 12/4/2023
Jeff Flores	Chairman, Kern County Board of Supervisors	11/30/2023
Joan Schmitt	Property Owner	12/4/2023
Julie A. Vance	Regional Manager, California Department of Fish and Wildlife	12/7/2023

4.1 Raised Issues to be Considered under CEQA

The following discussions are summaries of the issues identified by the public that will be considered under CEQA in the EIR. The summaries are grouped by topic with oral comments listed first alphabetically by last name/organization, followed by written comments listed alphabetically by last name/organization.

Biological Resources

***J. Gerhard*:** The commenter noted that the Project alignment appeared to be near desert tortoise critical habitat areas and inquired about how discovery of tortoises during construction would be managed.

***California Department of Fish and Wildlife*:** The CDFW noted that special-status species have been documented in the study area per the California Natural Diversity Database (CNDDB). Protected species with potential to occur in the project area include State protected furbearing mammal desert kit fox; the State fully protected golden eagle; the State candidate endangered Crotch's bumble bee; the State and federally threatened desert tortoise; the State threatened Swainson's hawk, and Mohave ground squirrel; the State watch list prairie falcon; and the State species of special concern American badger, pallid bat, Townsend's big-eared bat, spotted bat, loggerhead shrike, burrowing owl, and gray vireo. Special-status plant species have been documented in the study area that include but are not limited to State candidate threatened western Joshua tree; the State endangered and California Rare Plant Rank (CRPR) 1B.2 Barstow woolly sunflower, Charlotte's phacelia, alkali mariposa-lily, Red Rock poppy, desert cymopterus, and recurved larkspur; the CRPR 1B.3 Creamy blazing star; the CRPR 2B.2 sagebrush loefingia and pink funnel lily; the CRPR 2B.3 Booth's evening-primrose; and the CRPR 4.2 Mojave fish-hook cactus, golden goodmania, solitary blazing star, Mojave spineflower, white pygmy-poppy, and crowned muilla.

CDFW recommends that a qualified biologist conduct a habitat assessment during biological studies in support of the EIR in advance of Project implementation to determine if the Project area or its immediate vicinity contains suitable habitat for any of the special-status species mentioned and what follow-up measures may be necessary. Focus surveys were recommended in the comment for western Joshua tree in support of the Draft EIR. CDFW also recommends that the Draft EIR include measures to avoid, minimize, and/or mitigate impacts related to riparian and wetland habitats. The comment letter noted that the Project applicant is responsible for ensuring that implementation of the Project does not result in violation of the Migratory Bird Treaty Act or relevant Fish and Game Codes sections. CDFW is required to comply with CEQA in the issuance of a Lake and Streambed Alteration Agreement; therefore, it is recommended that the CEQA document adequately describe the Project and its impacts to lakes or streams.

Cultural Resources

***Native American Heritage Commission*:** The Native American Heritage Commission (NAHC) noted the tribal consultation requirements set forth by Assembly Bill 52 (AB 52) and Senate Bill 18 (SB 18) are applicable to the project. This letter also includes the NAHC's recommendations for conducting cultural resource assessments. The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Regulatory requirements and guidance for best practices specific to AB 52 and SB 18 were included with the comment letter.

4.2 Raised Issues Not to be Analyzed under CEQA

The EIR will be used to guide Project decision-making by the CPUC by providing an assessment of the potential environmental impacts that would result from the Project. The weighing of Project benefits (environmental, economic, or otherwise) against adverse environmental effects is

outside the scope of the EIR. When the CPUC considers whether to approve SCE's application for the Project, it will consider the EIR along with economic and other considerations.

Summaries of the scoping comments received on issues that will not be analyzed under the CEQA review for the Project as well as the associated discussions are presented below.

Economics-Related Comments Received

J. Schmitt: The commenter indicated that an 85-foot tower proposed for the property next to theirs would affect their property value.

Discussion

Under CEQA, the analysis of potential impacts "shall be limited to substantial, or potentially substantial, adverse changes in physical conditions" in the environment (Pub. Res. Code §21151(b); CEQA Guidelines §15358(b)). CEQA's definition of the environment includes "the physical conditions which exist within the area which will be affected by a proposed project, including land, air, water, minerals, flora, fauna, noise, objects of historic or aesthetic significance" (Pub. Res. Code §21060.5). CEQA's definition of the environment does not include economic or social effects (including psychological or social impacts on community character) unless those effects result in a change in the physical environment. The CEQA Guidelines are clear in emphasizing this point. Pursuant to CEQA Guidelines Section 15131, subdivision (a):

> Economic or social effects of a project shall not be treated as significant effects on the environment. An EIR may trace a chain of cause and effect from a proposed decision on a project through anticipated economic or social changes resulting from the project to physical changes caused in turn by the economic or social changes. The intermediate economic or social changes need not be analyzed in any detail greater than necessary to trace the chain of cause and effect. The focus of the analysis shall be on the physical changes.

Additionally, CEQA Guidelines Section 15064 states, "Economic and social changes resulting from a project shall not be treated as significant effects on the environment. Economic or social changes may be used, however, to determine that a physical change shall be regarded as a significant effect on the environment."

A potential change in property value is considered an economic concern. There is no evidence that potential changes in property values would result in physical changes to the environment. Therefore, CEQA does not require analysis of this issue. Additionally, projecting the magnitude of any decrease in property values, which would be affected by multiple factors, would require real estate market analysis and is beyond the scope of environmental review under CEQA.

Project Need-Related Comments Received

***Kern County Board of Supervisors*:** The comment letter from Kern County expresses general support and requests that the CPUC expedite the Project. The comment letter notes that the Kern County economy is in transition and that the board of supervisors is working to improve

economic viability within the County. Among the reasons for supporting the Project and requesting that it be expedited, the comment notes the need for increased electrical capacity to facilitate the creation of new jobs. The letter also notes the potential of the Project to provide resiliency to Edwards Air Force Base and capacity for renewable (energy) projects in the region, which is needed to enable the State to meet its greenhouse gas reduction goals.

Discussion

The EIR will not consider comments that pertain to Project need. The CEQA process does not require the EIR to assess Project need. In addition, CPUC General Order 131-D does not require an affirmative showing of need for projects under 200 kV and this issue is not generally litigated in PTC proceedings. The EIR will include analysis of a "No Project Alternative," which will examine the environmental impacts of not building the Project. Thus, the analysis of the No Project Alternative will consider what would happen from an electrical standpoint if the Project objectives were not met.

General Comments

***J. Hermann*:** The commenter asked if their family property would be next to a tower and how tall would the towers be.

Discussion

An electronic mail response was provided to J. Hermann on December 4, to address the question about the property and to state that the light-weight steel structures near the property would have a height of 85 feet.

***K. Macedonio, Council Member for the City of California City*:** The council member requested a copy of the scoping meeting presentation and asked about logistics related to submittal of scoping comments.

Discussion

The CPUC's CEQA team responded to K. Macedonio's questions about scoping comment submittal logistics at the afternoon Scoping Meeting on November 30, 2024, and followed-up with an electronic mail on December 8, 2023, that provided the scoping meeting presentation as an attachment.

***J. Schmitt*:** The commenter indicated that a 85-foot tower is proposed for the property next to theirs and requested information about whether properties would be purchased for the Project.

Discussion

The EIR will not consider comments related to whether SCE has the proper easements or rights-of-way (ROWs) for construction, operation, or maintenance of the Project. Negotiations of ROWs or easements occur between SCE and affected property owner(s) and generally do not require discretionary approval from a State or local agency. Consequently, such agreements would be outside the scope of CEQA. Any environmental impacts that would occur within a newly acquired ROW as part of the Project would be assessed in the EIR.

Regardless, an electronic mail response was provided to J. Schmitt on January 11, 2024, to address the question.

Lead Agency
California Public Utilities Commission (CPUC)

Document Title
SCE Cal City Substation 115kV Upgrade Project

Document Type
NOP - Notice of Preparation of a Draft EIR

Received
11/8/2023

Present Land Use
Various: Commercial, Industrial, Public Facilities, Residential, Resource, State, and Federal: California Desert Conservation Area, Desert Renewable Energy Conservation Area, Edwards Air Force Base

Document Description
The Project would include the expansion of the existing 5-acre Cal City Substation by approximately 10 acres to upgrade the substation from 33/12 kV to 115/33 kV and 115/12 kV. Fourteen new underground 12 kV distribution getaways and two new underground 33 kV distribution getaways from Cal City Substation are also proposed. The Project would include construction of two new 115 kV subtransmission lines, a 42-mile overhead line from Kramer Substation to Cal City Substation, and a new overhead 28-mile line from Cal City Substation to Holgate Switchyard with a tap line to serve Edwards Substation located on EAFB. The proposed new 115 kV subtransmission lines would be installed with telecommunication cables and telecommunication improvements would also be installed at the existing Holgate Switchyard and Cal City, Kramer, and Edwards substations. The Project would require electrical infrastructure improvements to accommodate the new 115 kV lines within the existing fence lines at Edwards Substation, Holgate Switchyard, and Kramer Substation. The Project would include the transfer of several miles of distribution lines onto the proposed new subtransmission lines, including: the transfer of a total of approximately 5 miles of existing 33 kV distribution lines to the new Kramer-Cal City 115 kV line structures, and removal of approximately 151 existing distribution structures along the line segments; and the transfer of approximately 2 miles of existing 33 kV and approximately 2 miles of existing 12 kV distribution lines to the new Cal City-Edwards-Holgate 115 kV line structures, and removal of approximately 90 existing distribution structures along the line segments.

Notice of Scoping Meetings and Release of the Notice of Preparation and Notice of Preparation

California Public Utilities Commission

Notice of Scoping Meetings and Release of Notice of Preparation (NOP) of an Environmental Impact Report (EIR) for the Cal City Substation 115 kV Upgrade Project

Notice is hereby given that the California Public Utilities Commission (CPUC), as lead agency for the purposes of the California Environmental Quality Act (CEQA) review, has released a Notice of Preparation (NOP) of an Environmental Impact Report (EIR) and will be hosting scoping meetings for the proposed Cal City Substation 115 kV Upgrade Project (Project). The Project would be located in unincorporated Kern and San Bernardino Counties, the City of California City, lands managed by the U.S. Bureau of Land Management (BLM), and in Edwards Air Force Base (EAFB) in the Mojave Desert region of California. The primary components of the Southern California Edison (SCE) Project include expansion of the existing Cal City Substation, construction of two new overhead 115 kV subtransmission lines with telecommunication cables, and telecommunication and electrical infrastructure improvements at the existing Holgate Switchyard, Kramer Substation, and Edwards Substation. SCE is proposing the Project to provide the necessary capacity to meet the electrical needs of its customers in the Electrical Needs Area (ENA) identified for the Project.

Pursuant to CEQA, the CPUC is preparing an EIR for the Project and is requesting comments to inform the scope and content of the EIR and help identify the actions, alternatives, mitigation measures, and environmental effects to be analyzed in it. The NOP may be accessed online at the CPUC's website for the Project: https://ia.cpuc.ca.gov/environment/info/esa/CalCity/index.html. The NOP is also available for public review by request at the California City Branch Library: 9507 California City Blvd. in California City. Initiated by the release of the NOP, the 30-day scoping period is from Wednesday, November 8, 2023, through Friday, December 8, 2023. Scoping comments may be submitted in writing during the 30-day NOP scoping period by mail to: Boris Sanchez, CPUC Cal City Project; Attn. M. Hensel c/o Environmental Science Associates at 775 Baywood Drive, Suite 100, Petaluma, CA 94954; or by email to CalCitySub@esassoc.com. In order for the public and regulatory agencies to have an opportunity to submit verbal comments on the scope of the EIR, two virtual meetings will be held on Thursday, November 30, 2023. One meeting will be from 2:30 to 4:00 p.m. and one will be from 6:30 to 8:00 p.m. The meetings will be accessible via Zoom: https://bit.ly/CPUCScopingMeeting or by phone at: (888) 788-0099. Webinar ID: 850 0342 5465

To: **State Clearinghouse, Responsible and Trustee Agencies, Property Owners & Interested Parties**

From: **Mr. Boris Sanchez, CPUC Project Manager**

Subject: **NOTICE OF PREPARATION (NOP) OF AN ENVIRONMENTAL IMPACT REPORT (EIR) AND NOTICE OF PUBLIC SCOPING MEETING for the Cal City Substation 115 kV Upgrade Project (A.23-03-005)**

Date: **November 8, 2023**

INTRODUCTION

Southern California Edison (SCE) has filed an application (A.23-03-005) with the California Public Utilities Commission (CPUC) for a Permit to Construct (PTC) its proposed Cal City Substation 115 kilovolt (kV) Upgrade Project (Project). SCE is proposing the Project to provide the necessary capacity to meet the electrical needs of its customers in the Electrical Needs Area (ENA) identified for the Project. The CPUC, as lead agency under the California Environmental Quality Act (CEQA), will prepare an Environmental Impact Report (EIR) to analyze the effects of the proposed Project in compliance with CEQA. The CPUC has reviewed the application submitted March 14, 2023, and deemed the application complete. In order to obtain early feedback on the environmental issues to be addressed in the EIR, the CPUC is initiating the scoping process to inform the CEQA review with a scoping period from November 8 through December 8, 2023.

PUBLIC SCOPING MEETINGS NOTICE

Two Zoom meetings will be held Thursday, November 30, 2023

Meeting Information	**Virtual Meeting No. 1**	**Virtual Meeting No. 2**
Day and Date	Thursday, November 30, 2023	Thursday, November 30, 2023
Time	2:30 to 4:00 p.m.	6:30 to 8:00 p.m.
Attend by	Zoom Link: https://bit.ly/CPUCScopingMeeting or by phone: (888) 788-0099 Webinar ID: 850 0342 5465	

What is Scoping?

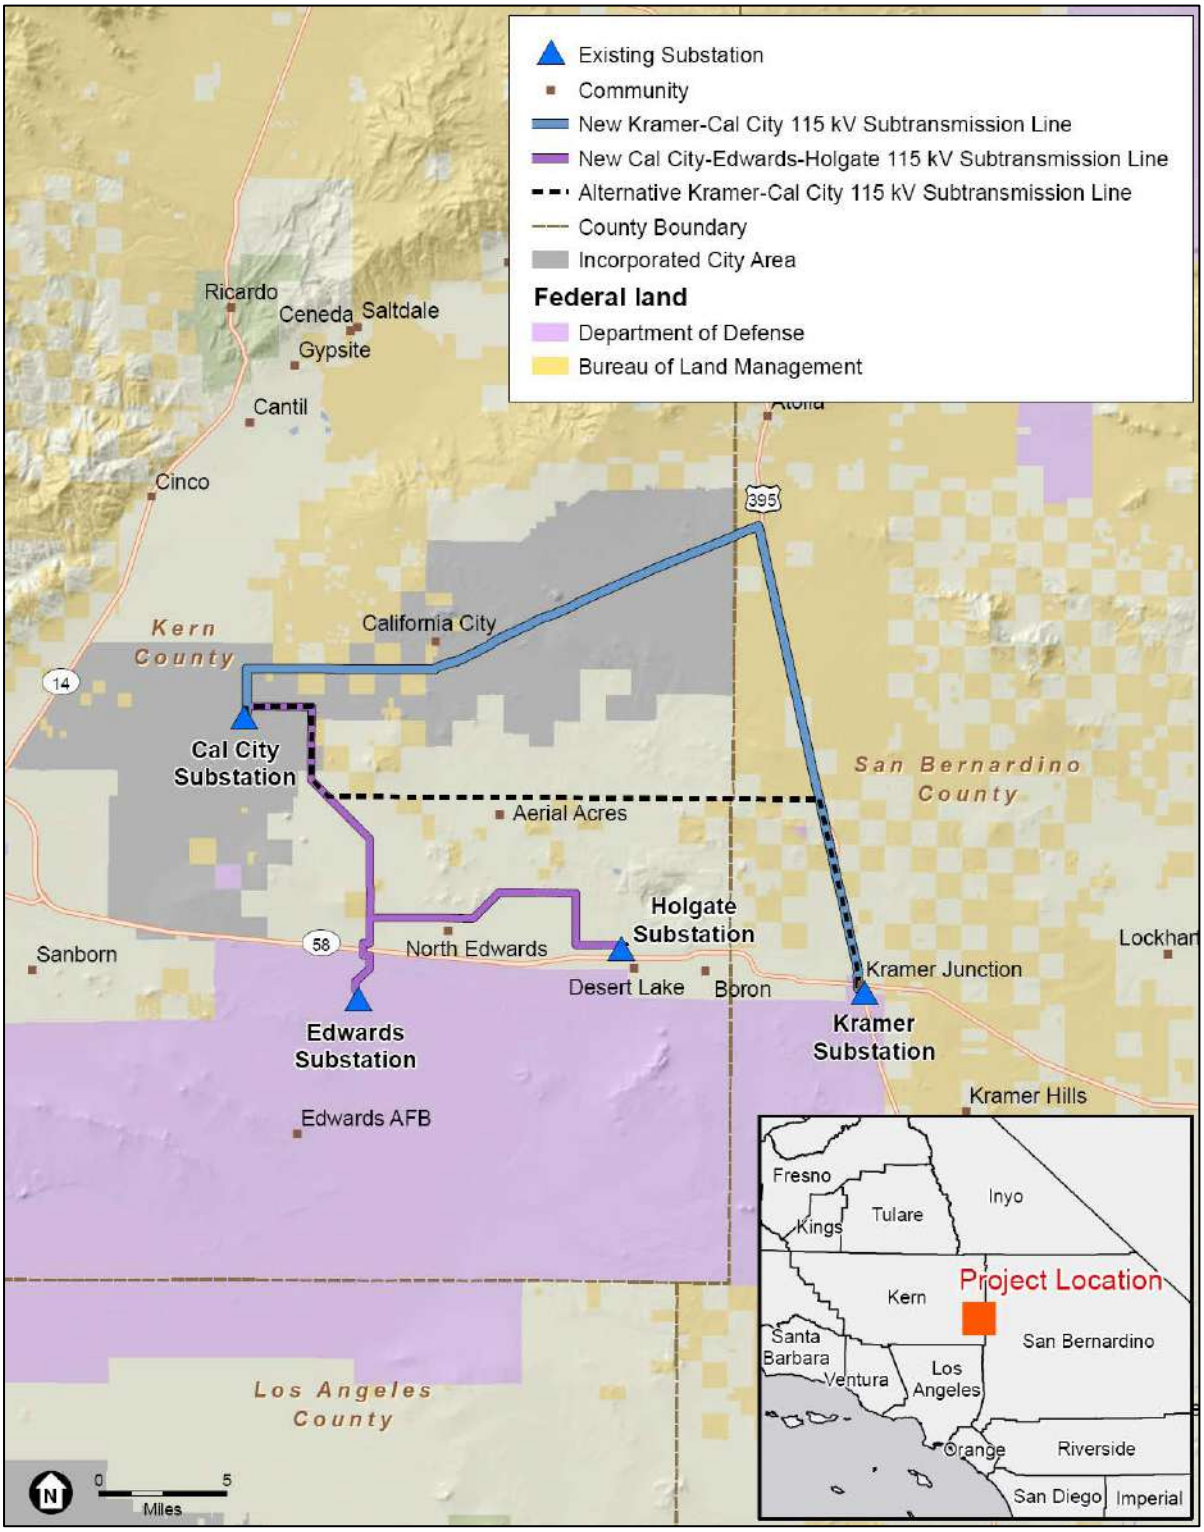
The purpose of this NOP is to inform recipients that the CPUC is beginning the scoping process and preparing an EIR for the proposed Project. Scoping is the process of soliciting public and agency input regarding the scope and content of an EIR, in advance of its preparation. Pursuant to CEQA, the CPUC is requesting comments to inform the scope and content of the EIR and help identify the actions, alternatives, mitigation measures, and environmental effects to be analyzed in the EIR.

This notice includes a brief description of the Project, a brief summary of the anticipated potential impacts, information on public meetings, and how to provide input on the scope and content of the EIR. After the public scoping period has ended, a Scoping Report will be prepared to summarize the comments received. This NOP and the Scoping Report will be included as an appendix to the EIR and is also available on the CPUC's website for the Project with other Project documents and reports, including SCE's application and PEA, at the following link:

https://ia.cpuc.ca.gov/environment/info/esa/CalCity/index.html

Separate NEPA Review

As described below, portions of the Project would be constructed and operated on federal lands managed by the U.S. Bureau of Land Management (BLM) and the U.S. Department of Defense (DoD) at Edwards Air Force Base (EAFB); therefore, the Project will also be subject to environmental review under the National Environmental Policy Act (NEPA). The federal environmental review process will occur independent of the CEQA review process and is anticipated to begin mid-2024.



PROJECT LOCATION

The Project would be located in unincorporated Kern and San Bernardino Counties, the City of California City, and lands managed by BLM and DoD in the Mojave Desert region of California. Figure 1, *Project Location*, depicts an overview of the proposed Project in the context of regional jurisdictions.

PROJECT DESCRIPTION

The Project would include the expansion of the existing 5-acre Cal City Substation by approximately 10 acres to upgrade the substation from 33/12 kV to 115/33 kV and 115/12 kV. Fourteen new underground 12 kV distribution getaways and two new underground 33 kV distribution getaways from Cal City Substation are also proposed. The Project would include construction of two new 115 kV subtransmission lines, a 42-mile overhead line from Kramer Substation to Cal City Substation, and a new overhead 28-mile line from Cal City Substation to Holgate Switchyard with a tap line to serve Edwards Substation located on EAFB. The proposed new 115 kV subtransmission lines would be installed with telecommunication cables and telecommunication improvements would also be installed at the existing Holgate Switchyard and Cal City, Kramer, and Edwards substations. The Project would require electrical infrastructure improvements to accommodate the new 115 kV lines within the existing fence lines at Edwards Substation, Holgate Switchyard, and Kramer Substation.

The Project would also include the transfer of several miles of distribution lines onto the proposed new subtransmission lines, including: the transfer of a total of approximately 5 miles of existing 33 kV

SOURCE: ESA, 2023; SCE, 2023

Figure 1
Project Location

distribution lines to the new Kramer-Cal City 115 kV line structures, and removal of approximately 151 existing distribution structures along the line segments; and the transfer of approximately 2 miles of existing 33 kV and approximately 2 miles of existing 12 kV distribution lines to the new Cal City-Edwards-Holgate 115 kV line structures, and removal of approximately 90 existing distribution structures along the line segments.

Applicant Proposed Measures

As part of the Project, SCE has committed to implementing applicant proposed measures (APMs) to reduce its potential impacts. The EIR will evaluate these measures as part of the SCE's Project, and the CPUC will develop additional mitigation measures to reduce or avoid any significant impacts of the Project identified in its analysis.

Project Objectives

SCE's stated purpose of the Project is to add load-serving capacity in the identified ENA to serve current and long-term forecast electrical demand. The Project would improve system operational flexibility for SCE to provide power to the ENA (adjacent to military base) by minimizing reliance on the Edwards Substation (located on a military base with restricted access). By providing diverse routes of power supply to the region, including a second 115 kV source line to Edwards Substation, the Project would improve overall system reliability within the ENA.

SCE has identified the following basic objectives for the Project:

- Add load-serving capacity in the ENA to serve current and long-term forecast electrical demand;
- Improve system reliability within the ENA by providing diverse routes of power supply to the region;
- Improve system operational flexibility by minimizing the reliance on Edwards Substation (located on military base with restricted access) to provide power to the ENA (adjacent to military base); and
- Improve system reliability within the ENA by providing a diversely-routed second 115 kV source line to Edwards Substation.

As lead agency under CEQA, the CPUC is responsible for identifying appropriate Project objectives, which may differ from SCE's objectives described above, to inform the CEQA process/evaluation, including the development and screening of Project alternatives. The CPUC has not yet identified the CEQA objectives for the Project.

ISSUES TO BE ADDRESSED IN THE EIR

It has been determined that an EIR is required for the CEQA review because the Project could result in potentially significant impacts to environmental resources. The EIR will address all of the issues identified in the CEQA Environmental Checklist Form (see CEQA Guidelines Appendix G), including aesthetics, air quality, biological resources, cultural and tribal resources, energy conservation, geology and soils (including paleontology), greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, noise, population and housing, public services, recreation, transportation, utilities and service systems, and wildfire.

Probable Environmental Effects

SCE has indicated that the Project environmental impacts that would be most severe would be associated with: aesthetics, air quality, biological resources, cultural resources, paleontological resources, hazards and hazardous materials, hydrology, noise, and recreation. Those impacts identified by SCE are summarized below.

- ***Aesthetics:*** In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings (public views are those that are experienced from publicly accessible vantage points); the Project would potentially impact the visual character of public lands used for recreational purposes;
- ***Air Quality:*** Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard; expose sensitive receptors to substantial pollutant concentrations;
- ***Biological Resources:*** Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or the U.S Fish and Wildlife Service (USFWS); the Project would be located in designated critical habitat of Mohave Desert Tortoise and may effect habitats of other listed species; have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the CDFW or USFWS; have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, and coastal) through direct removal, filling, hydrological interruption, or other means; conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance;
- ***Cultural Resources:*** Inadvertent disturbance of any cultural resources or human remains, including those interred outside of dedicated cemeteries;
- ***Paleontology:*** Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature;
- ***Hazards and Hazardous Materials:*** Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials or reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment; emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school; create a significant hazard to air traffic from the installation of new power lines and structure; expose people to a significant risk of injury or death involving unexploded ordnance;
- ***Hydrology and Water Quality:*** Based on the current design, the proposed Project would result in approximately 16 acres of temporary impacts to potentially jurisdictional wetlands or waters during construction. Site disturbance may violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality; substantially alter the existing drainage pattern of the site or area in a manner which could: result in substantial erosion or siltation on site or off site; substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site; and/or contribute runoff water which would exceed the

capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff. The Project could also impede or redirect flood flows; risk release of pollutants due to project inundation; and may conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan;

- ***Noise:*** Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies; and
- ***Recreation:*** Reduce or prevent access to a designated recreation facility or area.

Mitigation Measures, Cumulative Impacts, and Alternatives

The EIR will include CPUC's independent evaluation of the effects described above and other potentially significant environmental effects of the Project, including those resulting from its construction, operation, and maintenance. Where necessary and feasible, mitigation measures will be recommended (in addition to or to supersede SCE APMs) to avoid or reduce potentially significant impacts. The EIR will also address potential cumulative environmental impacts of the Project, when considered with past, other current, and reasonably foreseeable future projects in the region.

The EIR will include a discussion and analysis of a reasonable range of alternatives to the Project, including a No Project alternative scenario, and alternatives to the Project that could attain most of its basic CEQA objectives while avoiding or reducing any of its significant environmental effects. SCE has identified several alternatives in its PEA, including the Sequoia Boulevard Alternative (depicted as the Alternative Kramer-Cal City 115 kV Substation Line on Figure 1), that will be considered by the CPUC's environmental review team and potentially carried forward for full analysis in the EIR. Other alternatives may be added to the analysis based on input received during the 30-day scoping period following issuance of this NOP, or by the EIR team to reduce or eliminate potentially significant environmental impacts identified during the EIR process.

Public Resources Code Section 21092.6(a)

Per Public Resources Code Section 21092.6(a), if the Project site or site of any project alternative to be analyzed is a site listed on the "Cortese list" of hazardous waste site, then this information must be included in the NOP. According to SCE, EAFB is a known hazardous materials release site and is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (Cortese List) and two Cleanup and Abatement Orders were issued on EAFB in 1987 and 1988, which have an active status and pertain to a Leaking Underground Storage Tank case located approximately 3 miles south of the Project alignment on EAFB.

ISSUES THAT WILL NOT BE ADDRESSED IN THE EIR

Non-environmental issues such as economic impacts and assessment of Project need are outside the scope of CEQA and will not be addressed in the EIR, but those issues may be addressed through the CPUC's concurrent proceeding for the Project. The EIR will also not consider electric and magnetic fields (EMFs) that would be generated by the Project in the context of the CEQA analysis of potential environmental

impacts, for two reasons: (1) There is no agreement among scientists that EMFs create a potential health risk; and (2) there are no defined or adopted CEQA standards for defining health risk from EMFs.

PUBLIC SCOPING PERIOD FOR THIS NOTICE OF PREPARATION

Information to be included in the EIR will be based in part on input and comments received during the scoping period. Decision-makers, responsible and trustee agencies under CEQA, property owners, and members of the public will also have an opportunity to comment on the Draft EIR once it is issued. Pursuant to CEQA, the scoping period will be 30 days following the release of this NOP. The scoping period for this Project begins on Wednesday, November 8, 2023, and closes at 5:00 p.m. on Friday, December 8, 2023. Please include the name, organization (if applicable), mailing address, and e-mail address of the contact person for all future notifications related to this process. Public comments will become part of the public record and will be published in a Scoping Report.

Please send your comments by mail to:

or via electronic mail: CalCitySub@esassoc.com

SCOPING MEETINGS

In order for the public and regulatory agencies to have an opportunity to submit comments on the scope of the EIR for the Project, virtual meetings will be held November 30, 2023 during the NOP scoping period. Information about the virtual meetings is included in the table below. For the first half hour of the meetings, CPUC will host a workshop to clarify a) the CPUC's process for reviewing the application; b) the environmental review process; and c) details on how the public can become involved with each of these processes. Following the workshop, the CPUC will hold the official scoping meeting beginning with a brief presentation providing an overview of the Project and alternatives identified to date. Following this presentation, agencies and the public will have an opportunity to provide verbal comments to inform the scope of the environmental review. Written comments will be accepted throughout the NOP scoping period to the address and/or email. A QR code to join either meeting is also provided.

California Public Utilities Commission Notice of Preparation (NOP) of an Environmental Impact Report (EIR) and Notice of Scoping Meetings for the Cal City Substation 115 kV Upgrade Project

Notice is hereby given that the California Public Utilities Commission (CPUC), as lead agency for the purposes of the California Environmental Quality Act (CEQA) review, has released a Notice of Preparation (NOP) of an Environmental Impact Report (EIR) and will be hosting scoping meetings for the proposed Cal City Substation 115 kV Upgrade Project (Project). The Project would be located in unincorporated Kern and San Bernardino Counties, the City of California City, lands managed by the U.S. Bureau of Land Management (BLM), and in Edwards Air Force Base (EAFB) in the Mojave Desert region of California. The primary components of the Southern California Edison (SCE) Project include expansion of the existing Cal City Substation, construction of two new overhead 115 kV subtransmission lines with telecommunication cables, and telecommunication and electrical infrastructure improvements at the existing Holgate Switchyard, Kramer Substation, and Edwards Substation. SCE is proposing the Project to provide the necessary capacity to meet the electrical needs of its customers in the Electrical Needs Area (ENA) identified for the Project.

Pursuant to CEQA, the CPUC is preparing an EIR for the Project and is requesting comments to inform the scope and content of the EIR and help identify the actions, alternatives, mitigation measures, and environmental effects to be analyzed in it. The NOP may be accessed online at the CPUC's website for the Project: https://ia.cpuc.ca.gov/environment/info/esa/CalCity/index.html. The NOP is also available for public review by request at the California City Branch Library: 9507 California City Blvd. in California City. Initiated by the release of the NOP, the 30-day scoping period is from Wednesday, November 8, 2023, through Friday, December 8, 2023. Scoping comments may be submitted in writing during the 30-day NOP scoping period by mail to: Boris Sanchez, CPUC Cal City Project: Attn. M. Hensel c/o Environmental Science Associates at 775 Baywood Drive, Suite 100, Petaluma, CA 94954; or by email to CalCitySub@esassoc.com. In order for the public and regulatory agencies to have an opportunity to submit verbal comments on the scope of the EIR, two virtual meetings will be held on Thursday, November 30, 2023. One meeting will be from 2:30 to 4:00 p.m. and one will be from 6:30 to 8:00 p.m. The meetings can be accessed via Zoom: https://bit.ly/CPUCScopingMeeting (the QR code may be used to join either meeting) or by phone at (888) 788-0099. Scoping Meeting Agenda

- Introductions
- Purpose of the Meeting
- Application and Permitting Process
- Environmental Review Process (CEQA)
- Project Overview
- Scoping: Environmental Impacts and Alternatives
- Public Comments
- Next Steps

Introductions

State Lead Agency (CEQA): California Public Utilities Commission (CPUC)

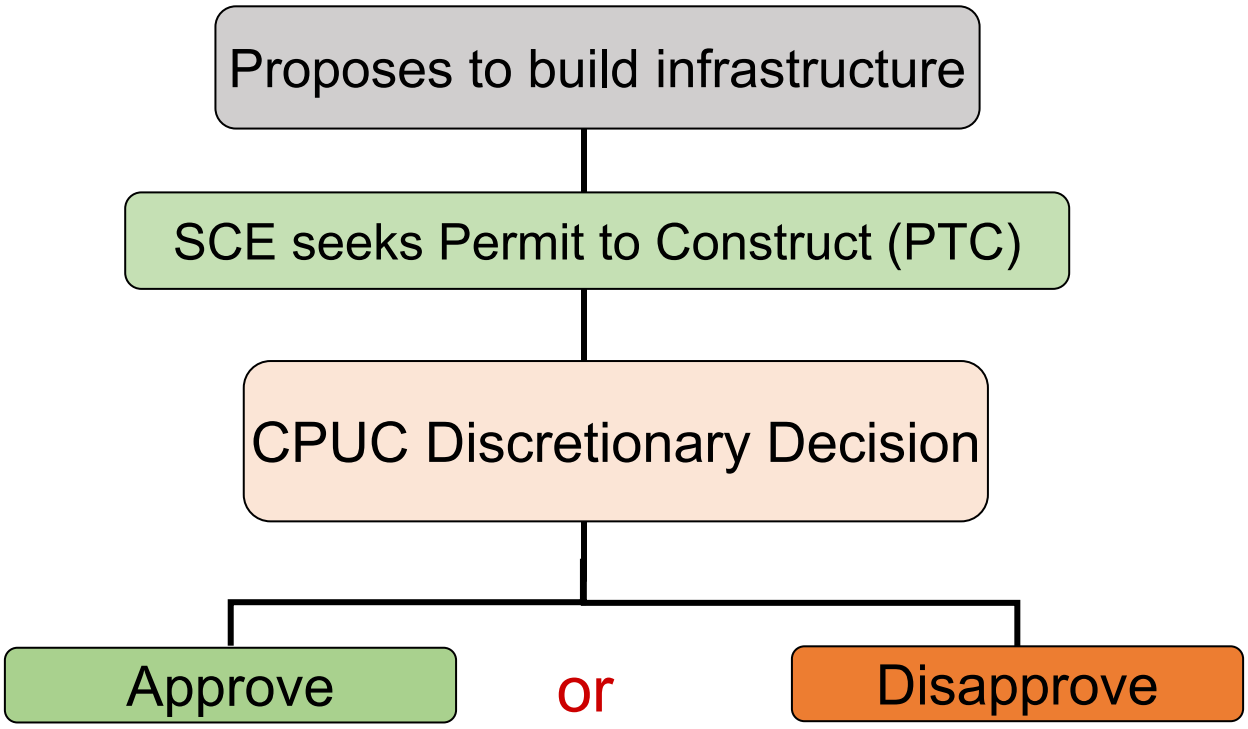
- Boris Sanchez, CPUC Project Coordinator

Consultant: Environmental Science Associates (ESA)

- Matt Fagundes, ESA Project Manager
- Maria Hensel, ESA
- Olivia Silverstein, ESA

Project Applicant: Southern California Edison Company (SCE)

Purpose of this Meeting

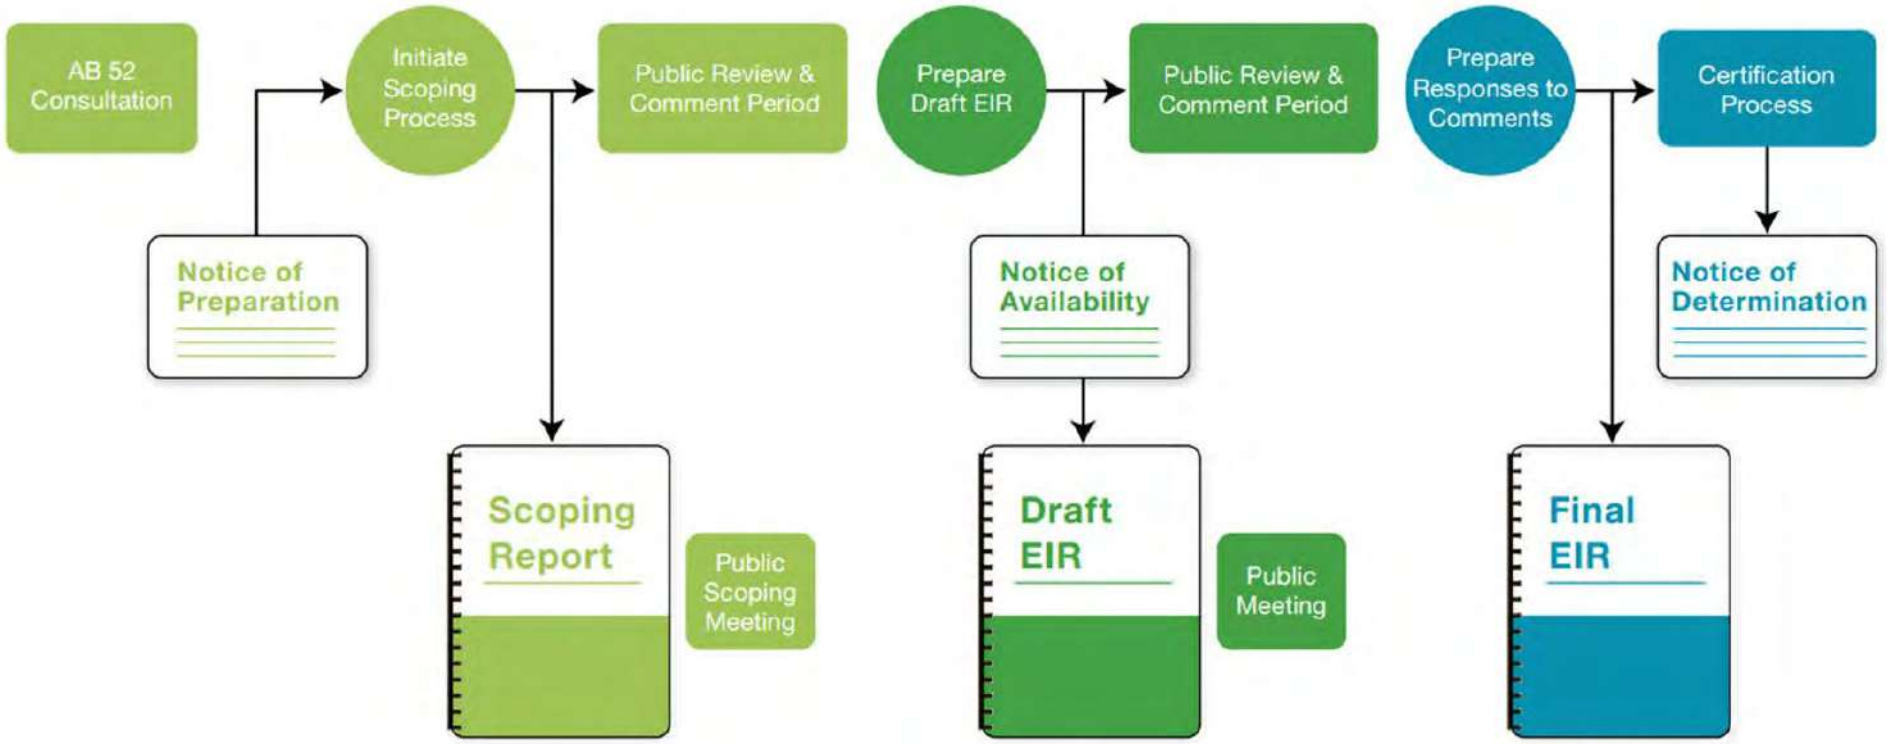


To receive input from the public, agencies, and interested parties to inform the scope and content of the environmental review.
Your ideas are welcome and invited.

What is Scoping?

- Scoping is the process of soliciting public and agency input regarding the scope and content of an EIR, in advance of its preparation.
- CPUC is requesting comments to inform the scope and content of the EIR and help identify the actions, alternatives, mitigation measures, and environmental effects to be analyzed in the EIR.

Application Process



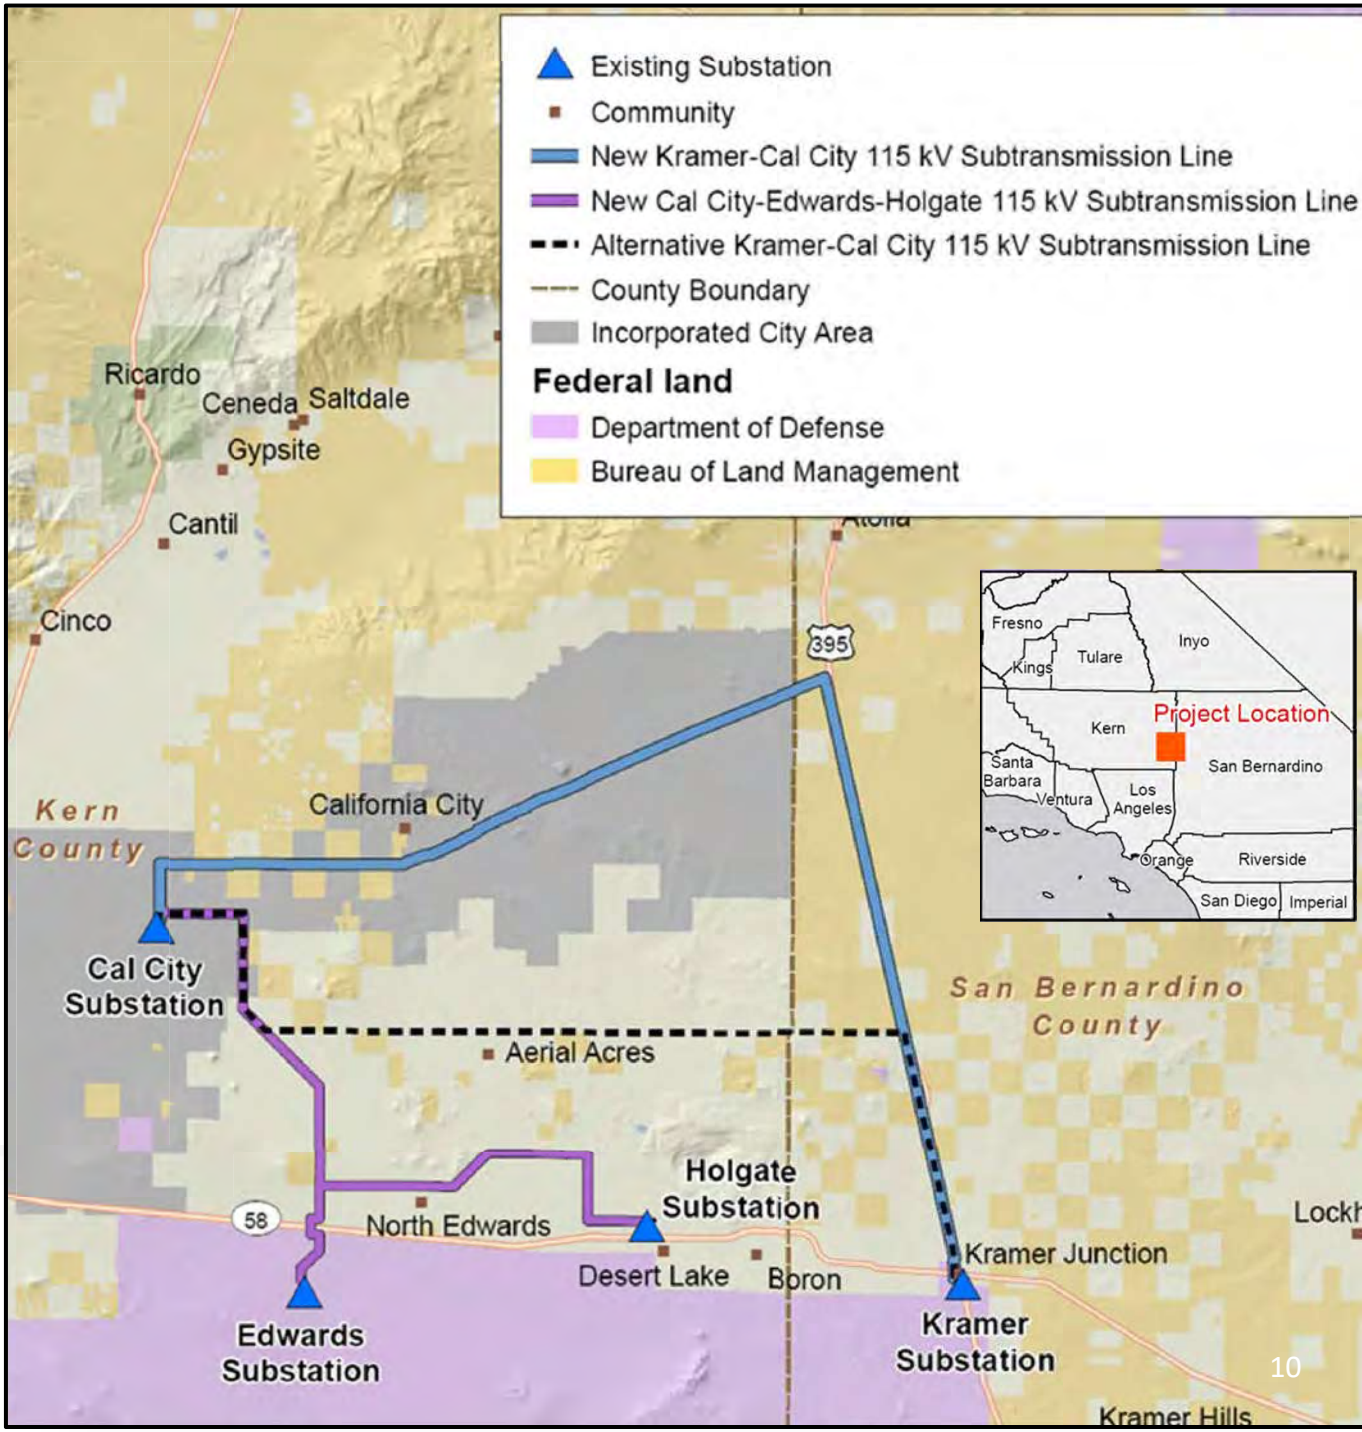
Southern California Edison (SCE)

CEQA Overview

- The California Environmental Quality Act
  - Inform decision makers and the public about the potential significant environmental effects of a proposed project
  - Identify ways that environmental damage can be avoided or significantly reduced
  - Prevent significant, avoidable damage to the environment through the use of alternatives or mitigation measures
  - Disclose to the public the reasons why a governmental agency approved the project if significant environmental effects are involved
- Focus on physical impacts to the environment

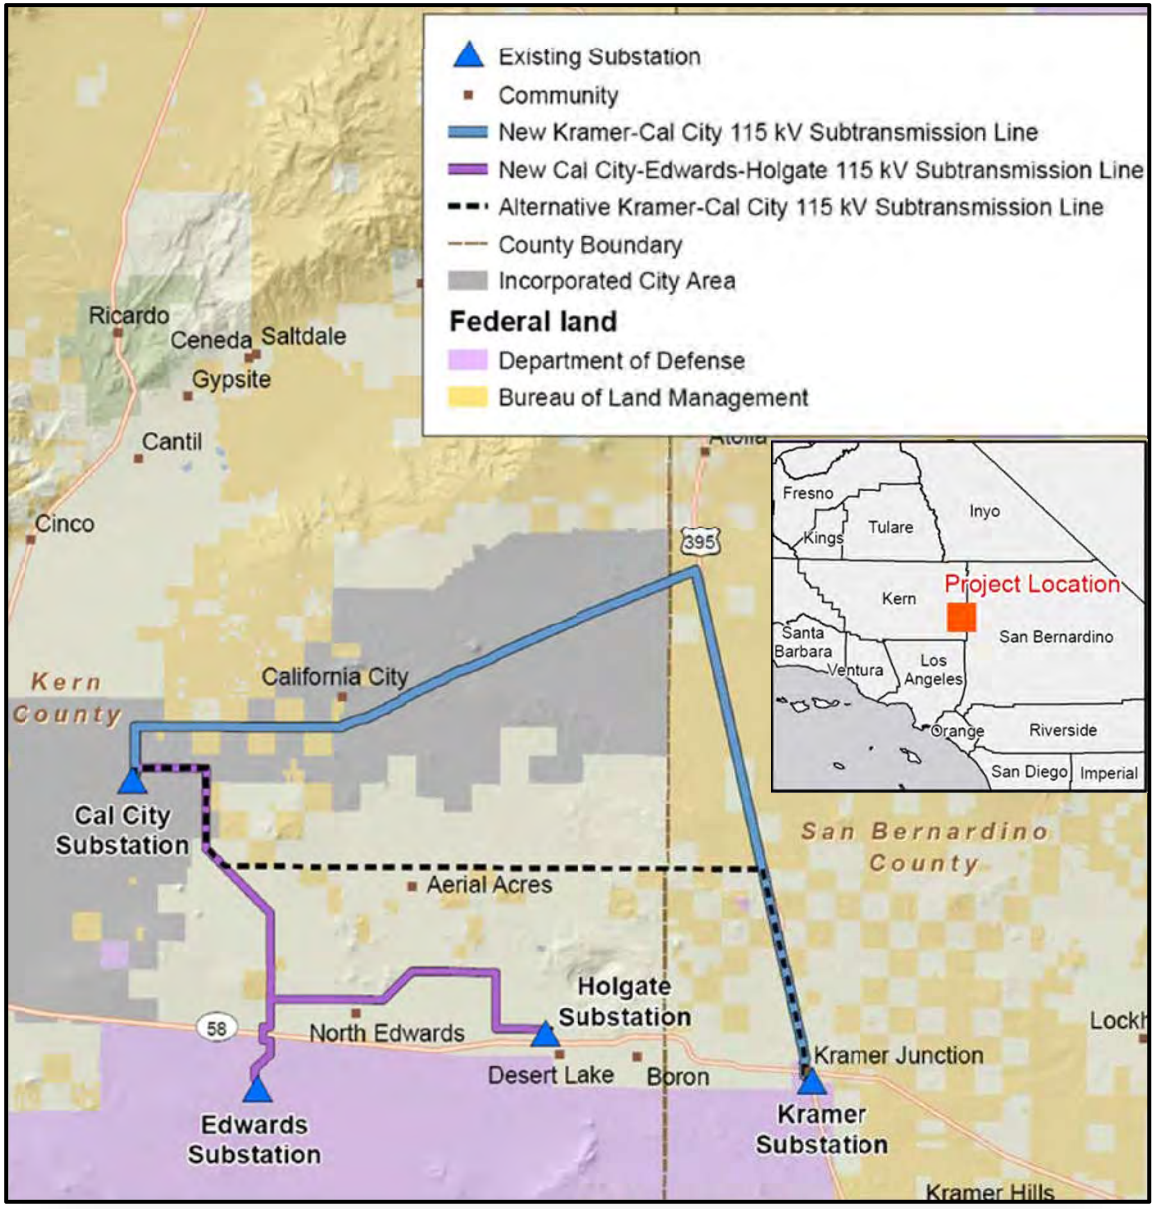
CEQA EIR Process

CEQA: Project Description



- **Construction**
  - What would be built
  - How would the project be built
    - Construction methodology
    - Equipment required
    - Workers required
  - Project schedule- duration/phases

- **Operations**
  - How would the project be operated
  - Operational personnel required

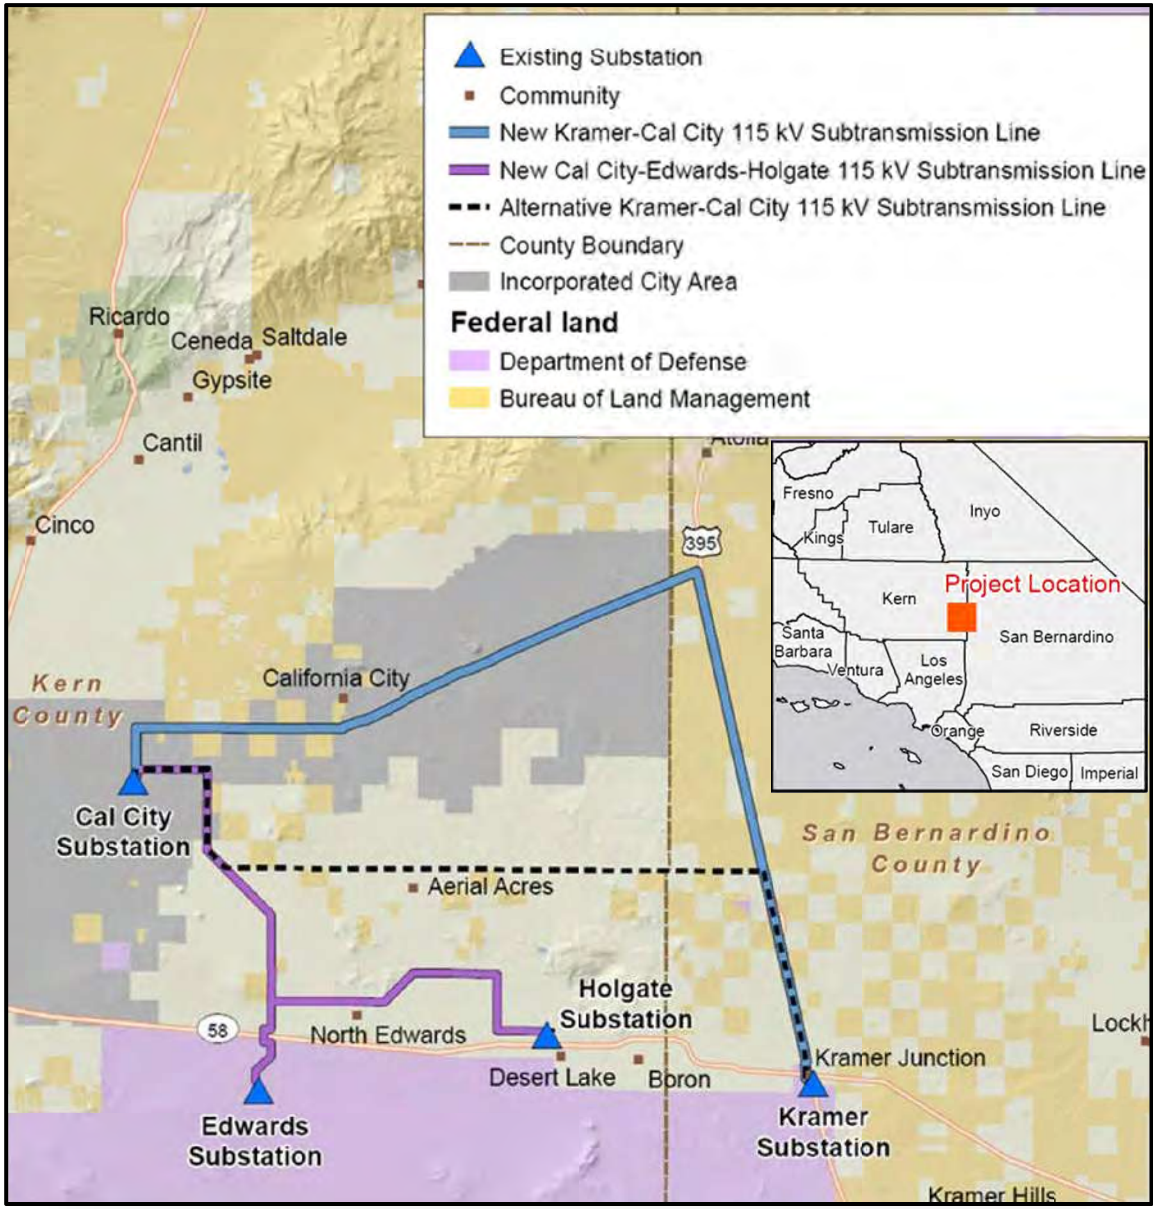


- **Maintenance**
  - How is the project maintained
  - When is maintenance performed
  - Maintenance personnel required

Project Location

Project Description

- 10-acre expansion of the existing (5-acre) Cal City Substation
- Upgrade the Cal City substation from 33/12 kV to 115/33 kV and 115/12 kV
- Fourteen new underground 12 kV distribution getaways
- Two new underground 33 kV distribution getaways from Cal City Substation



Existing Cal City Substation

Project Description

- Two new 115 kV subtransmission lines
  - 42-mile overhead line from Kramer Substation to Cal City Substation
  - 28-mile overhead line from Cal City Substation to Holgate Switchyard with a tap to Edwards Substation.
- Electrical and telecommunication upgrades
  - Kramer Substation
  - Edwards Substation (EAFB)
  - Holgate Switchyard

CEQA: Environmental Resource Areas

- Aesthetics
- Agriculture and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Noise
- Population and Housing
- Public Services
- Recreation
- Transportation and Traffic
- Tribal Cultural Resources
- Utilities and Service Systems
- Wildfire

For Each Resource Area . . .

- Define and Describe Existing Setting
  - Environmental setting
  - Regulatory setting
- Establish Thresholds of Significance
  - What defines a “significant” impact
- Identify Project Impacts and Mitigation
  - CPUC Mitigations
  - Significance after mitigation
- Evaluate Cumulative Impacts
- Impacts of Alternatives

CEQA: Project Alternatives

- Identify a range of reasonable alternatives to avoid or substantially lessen significant effects of the project
- Feasible
  - Legal, regulatory, technical
- Meet most basic project objectives

Project Objectives

SCE has identified the following objectives for the Project:

- Add load-serving capacity in the electrical needs area (ENA) to serve current and long-term forecast electrical demand;
- Improve system reliability within the ENA by providing diverse routes of power supply to the region;
- Improve system operational flexibility by minimizing the reliance on Edwards Substation (located on military base with restricted access) to provide power to the ENA (adjacent to military base); and
- Improve system reliability within the ENA by providing a diversely-routed second 115 kV source line to Edwards Substation.

Alternatives may include . . .

- Those considered or suggested by the
  - Southern California Edison
  - Public/agencies
  - Developed by CEQA team
- Project Alternatives:
  - Locations
  - Routes
  - Technology (e.g., underground lines)
  - Others?
- “No Project” alternative

To Get Involved in the CEQA Process

- You're on the right track!
  - Please stay on and provide your scoping input
- Scoping Process
  - Notice of Preparation sent on November 8, 2023
  - Scoping Period closes on December 8, 2023, at 5:00 p.m.
  - How to comment:
    - Verbally at this Scoping Meeting and/or by submitting a Comment Letter via Mail, or via Email
- Draft EIR
  - Anticipated release is March 2024

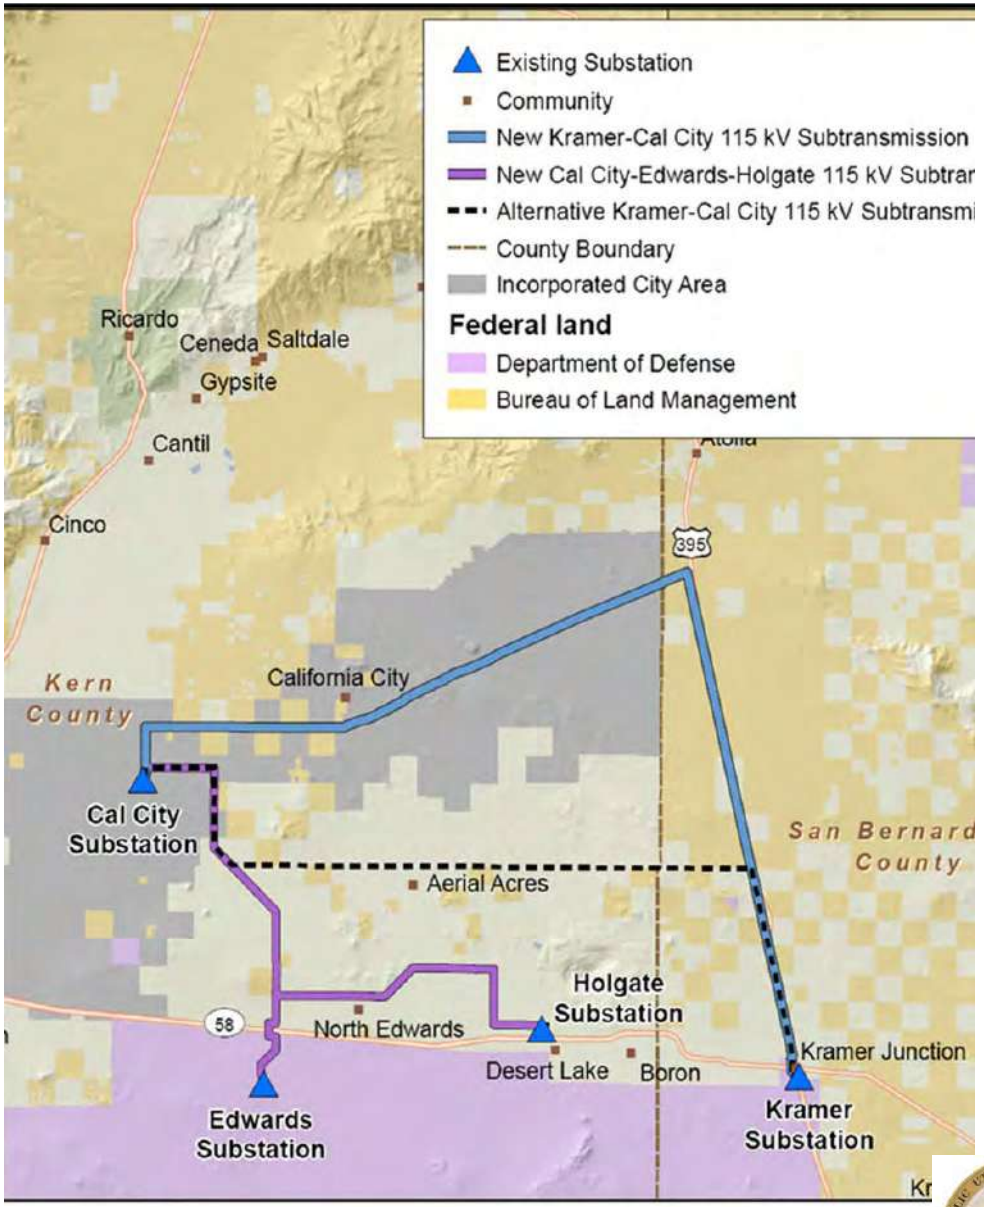
CPUC Project Webpage:

https://ia.cpuc.ca.gov/environment/info/esa/CalCity/index.html

How to Submit a Scoping Comment

Public Comment Mailing Address:

Boris Sanchez, CPUC



C/O Environmental Science Associates, Attn. M. Hensel

775 Baywood Drive; Suite 100, Petaluma, CA 94954

E-mail: CalCitySub@esassoc.com

Scoping Comment Deadline: (5 p.m.) December 8, 2023

Public Comments

Discussion Guidelines

- Be concise
- Stay on topic
- Respect others' opinions
- Comments will be recorded
- Written comments are encouraged

Public Comments

Via the Zoom Platform

- Click the Raise Hand icon to be called on
- Submit comments in the Q&A box

By Telephone

- Dial *9 to request to raise hand

Thank you for joining!

Mailing Address:

Boris Sanchez, CPUC

C/O Environmental Science Associates, Attn. M. Hensel

775 Baywood Drive; Suite 100 Petaluma, CA 94954

E-mail: CalCitySub@esassoc.com

Scoping comments will be accepted through December 8, 2023

Webpage: https://ia.cpuc.ca.gov/environment/info/esa/CalCity/index.html

Appendix E
Scoping Meeting Transcripts

WEBVTT

1
00:00:00.560 --> 00:00:01.240
Maria Hensel, ESA: Hmm!

2
00:00:04.030 --> 00:00:06.089
Maria Hensel, ESA: A few discussion guidelines

3
00:00:07.780 --> 00:00:16.350
Maria Hensel, ESA: for the scoping meeting. Be concise if you can. Stay on topic. please respect others opinions.

4
00:00:18.070 --> 00:00:20.119
Maria Hensel, ESA: comments will be recorded.

5
00:00:21.160 --> 00:00:22.880
Maria Hensel, ESA: Written comments are encouraged.

6
00:00:23.230 --> 00:00:29.310
Maria Hensel, ESA: And please limit your comments to 3 min to give everyone a chance to provide input today.

7
00:00:34.140 --> 00:00:36.010
Maria Hensel, ESA: If you're calling in by phone.

8
00:00:36.710 --> 00:00:42.910
Maria Hensel, ESA: and you'd like to speak, please dial star 9 on your phone's keypad to request to speak.

9
00:00:44.350 --> 00:00:49.010
Maria Hensel, ESA: or if using the Zoom Platform, please press the raised hand icon.

10
00:00:49.780 --> 00:00:52.599
Maria Hensel, ESA: or submit your comments in the Q And A Box.

11
00:00:55.930 --> 00:00:57.840
Maria Hensel, ESA: And now we'd like to hear your input.

12
00:00:59.170 --> 00:01:02.589
Maria Hensel, ESA: it looks like we have one hand raised so far.

13
00:01:02.880 --> 00:01:06.899
Maria Hensel, ESA: Judy Herman. So I'm gonna hand it over to Stephen to

14
00:01:13.730 --> 00:01:23.330
Judy Hermann: mute. Okay, my property is section 25, township 11, range 10,

15
00:01:23.660 --> 00:01:30.020
Judy Hermann: and it looks like the yeah when I did the habitat

16
00:01:30.110 --> 00:01:46.099
Judy Hermann: site map, it looks like it's going right through the property. Is this going to be where the underground cables are? Or is this the wired

17
00:01:46.210 --> 00:01:51.740
Judy Hermann: terminals I'm see north of?

18
00:01:52.370 --> 00:01:57.190
Judy Hermann: Right at the you know. Do you see where I am

19
00:01:57.380 --> 00:01:58.990
Judy Hermann: where my property is.

20
00:02:02.810 --> 00:02:04.070
Judy Hermann: can you?

21
00:02:04.250 --> 00:02:09.550
Matt Fagundes, ESA: I'm sorry I don't. I don't think we have a map up it.

22
00:02:09.850 --> 00:02:17.580
Judy Hermann: That indicates where that property is. Is in the vicinity of Cal City substation. Yes. is

23
00:02:17.780 --> 00:02:29.420
Judy Hermann: Let me see, I think it's Rosamond Boulevard. It goes it. It's right right north of the freeway interchange.

24
00:02:31.080 --> 00:02:39.570
Judy Hermann: and it's east of way east of California City Boulevard, and it's between California City Boulevard and

25
00:02:39.700 --> 00:02:42.440
Judy Hermann: what is that Castle Butte drive?

26
00:02:42.470 --> 00:02:45.940
Judy Hermann: I think it's Rosamond

27
00:02:46.700 --> 00:02:49.609
Judy Hermann: boulevard that it's right.

28
00:02:49.750 --> 00:02:51.330
Judy Hermann: It's right off of right.

29
00:02:51.490 --> 00:02:56.389
Judy Hermann: But east west of that. Oh, gosh! Like

30
00:02:57.150 --> 00:03:01.559
Matt Fagundes, ESA: Judy, if I can give you my email address. Can you

31
00:03:02.560 --> 00:03:06.550
Matt Fagundes, ESA: provide me that information? We can get back to you on that?

32
00:03:07.080 --> 00:03:09.080
Judy Hermann: Okay, sure. What is it?

33
00:03:09.660 --> 00:03:21.999
Matt Fagundes, ESA: It's M FAGUNDES at ESA ssoc.com

34
00:03:22.480 --> 00:03:26.239
Judy Hermann: ESAS SOC

35
00:03:26.280 --> 00:03:28.320
Matt Fagundes, ESA: dot com correct.

36
00:03:29.650 --> 00:03:53.510
Matt Fagundes, ESA: we'd be glad to look at those maps and and find out exactly where your property is relative to the property tower. That is right next door. The underground component is right, pretty much on the grounds of the substation. So it's likely that there are towers in that area.

37
00:03:54.010 --> 00:03:56.540

Judy Hermann: Okay? And how tall are the Towers.

38
00:03:57.370 --> 00:04:04.080
Matt Fagundes, ESA: I don't have that information offhand. But again, if you send me those questions, we can get right back to you.

39
00:04:04.410 --> 00:04:05.430
Judy Hermann: Okay.

40
00:04:05.580 --> 00:04:16.179
Boris Sanchez, CPUC: And, Judy, if you have any trouble with that email address that you wrote down, the website will have all the information as well for an email and where to leave a voicemail and we'll be sure to get back to you.

41
00:04:16.339 --> 00:04:20.040
Judy Hermann: Okay. thank you very much, of course. Thank you.

42
00:04:32.490 --> 00:04:41.189
Maria Hensel, ESA: Okay, I don't currently see any other hands raised. Does anyone else have interest in providing some input or have questions?

43
00:04:42.240 --> 00:04:43.410
Maria Hensel, ESA: If so.

44
00:04:45.200 --> 00:04:46.300
Maria Hensel, ESA: raise your hand.

45
00:04:57.800 --> 00:04:59.689
Matt Fagundes, ESA: Maybe we could wait another

46
00:05:00.690 --> 00:05:04.289
Matt Fagundes, ESA: 5 min, 10 min or so. See if anyone else joins.

47
00:05:08.390 --> 00:05:15.740
Matt Fagundes, ESA: And again, if you do not want to provide verbal input, please feel free to provide written input.

48
00:05:16.520 --> 00:05:21.499
Matt Fagundes, ESA: the addresses we provided earlier.

49
00:05:31.660 --> 00:05:34.379

Maria Hensel, ESA: Okay, we have a few

50
00:05:37.160 --> 00:05:42.659
Maria Hensel, ESA: Karen Macedonian. Macedonio is requesting to speak.

51
00:05:43.970 --> 00:05:45.579
Maria Hensel, ESA: and there are a few others.

52
00:05:45.910 --> 00:05:55.990
Karen Macedonio: Macedonio. I am a council member for the city of California City. I'm wondering if these slides are accessible so that I can

53
00:05:56.150 --> 00:06:02.689
Karen Macedonio: tell residents where they can go get more information. Or if there's a recording of this.

54
00:06:06.100 --> 00:06:10.889
Boris Sanchez, CPUC: the slides will be available once this meeting is concluded, and you can

55
00:06:11.030 --> 00:06:16.889
Boris Sanchez, CPUC: feel free to share this information for the next meeting that will be taking place at 6 30 as well.

56
00:06:17.120 --> 00:06:25.930
Karen Macedonio: Okay. So do you just sign in with our email to get in, do you just automatically send the slides out? Or are they on your website.

57
00:06:27.510 --> 00:06:33.469
Matt Fagundes, ESA: Matt? Stephen? Do you know, if it's just to be posted on the website, it will be posted on the website. But

58
00:06:35.050 --> 00:06:39.429
Matt Fagundes, ESA: oh, actually it, it's a pretty big file, that PowerPoint presentation.

59
00:06:39.780 --> 00:06:44.709
Matt Fagundes, ESA: I was going to offer to send it out. But some email accounts can't

60
00:06:44.910 --> 00:06:46.479

Matt Fagundes, ESA: handle it.

61
00:06:46.820 --> 00:06:49.719
Matt Fagundes, ESA: we will eventually be posting this on

62
00:06:51.050 --> 00:06:52.910
Matt Fagundes, ESA: the CPUC’s

63
00:06:52.960 --> 00:06:55.370
Matt Fagundes, ESA: web page, though not immediately.

64
00:06:55.480 --> 00:06:57.299
Matt Fagundes, ESA: we provided a link to the project web page.

65
00:06:58.010 --> 00:07:10.630
Karen Macedonio: okay. So if our residents didn't get a chance to know about this today, and they're not available tonight, their next opportunity is the EIR draft correct?

66
00:07:10.960 --> 00:07:24.689
Matt Fagundes, ESA: They can still provide written comments through next Friday related to this scoping, and then after that, right correct, it'll be We anticipate that draft EIR will be ready sometime.

67
00:07:24.860 --> 00:07:27.099
Matt Fagundes, ESA: early to mid

68
00:07:27.290 --> 00:07:37.799
Karen Macedonio: next year. Okay, so could you please email me the addresses where the written comments could go so that I can make that available on the city website?

69
00:07:39.540 --> 00:07:42.270
Matt Fagundes, ESA: Yes, Steven, do you want? Can you? So, I think on the next slide we have that information as well.

70
00:07:42.860 --> 00:07:49.830
Karen Macedonio:

71
00:07:54.320 --> 00:08:00.640
Maria Hensel, ESA: And, Karen, I can get you a copy of this presentation. After this call.

72
00:08:01.110 --> 00:08:03.500
Maria Hensel, ESA: if you'd like to.

73
00:08:04.470 --> 00:08:08.879
Maria Hensel, ESA: do you submit a comment. Through the scoping email.

74
00:08:08.990 --> 00:08:13.299
Maria Hensel, ESA: The email is: calcitysub@esassoc.com.

75
00:08:13.380 --> 00:08:18.259
Maria Hensel, ESA: Yeah, I can send it to you. Okay, that would be perfect calcity.

76
00:08:19.960 --> 00:08:30.250
Karen Macedonio: I'm sorry I have a broken left wrist, so I only have one hand to use. Even writing is difficult calcity sub at Esa.

77
00:08:31.780 --> 00:08:34.510
Maria Hensel, ESA: ssoc.com.

78
00:08:34.539 --> 00:08:41.759
Karen Macedonio: Okay, perfect cause. I wanna make sure that if any of our residents have comments that they have the opportunity to make them

79
00:08:42.400 --> 00:08:44.389
Matt Fagundes, ESA: absolutely, we appreciate that.

80
00:08:44.630 --> 00:08:45.610
Karen Macedonio: Thank you.

81
00:08:49.490 --> 00:08:57.990
Maria Hensel, ESA: Okay. Next up looks like we have. J. Gerhard. To comment.

82
00:09:00.600 --> 00:09:09.699
jgerhard: yeah, Hi, I had a question. I have a couple pieces of land that are affected by this this project, and one of them is pretty close to

83
00:09:09.870 --> 00:09:12.329
jgerhard: the tortoise preserve, and I just wondered.

84

00:09:12.440 --> 00:09:24.470
jgerhard: how do you guys handle work if you're you know digging or come across one of these critters? What do you do? Do you stop work? And a team comes out and relocates it, or what do you do? In that case?

85
00:09:31.470 --> 00:09:32.180
Maria Hensel, ESA:

86
00:09:33.200 --> 00:09:42.960
Maria Hensel, ESA: I guess I could take that one. We understand that some of the project will be traversing critical critical habitat areas for the desert tortoise.

87
00:09:44.330 --> 00:09:47.850
Maria Hensel, ESA: So this will be evaluated as part of the EIR.

88
00:09:48.150 --> 00:09:52.729
Maria Hensel, ESA: and there'll be mitigation measures. Most likely, and/or avoidance measures

89
00:09:53.350 --> 00:09:54.510
Maria Hensel, ESA: to address that.

90
00:09:56.470 --> 00:09:58.230
jgerhard: Okay, thank you.

91
00:10:08.010 --> 00:10:12.749
Maria Hensel, ESA: Okay. Looks like Judy Herman has raised her hand again.

92
00:10:16.830 --> 00:10:27.490
Judy Hermann: Actually, you answered it because I know I wanted clarification of the email address for Boris Sanchez. So thank you.

93
00:10:36.340 --> 00:10:46.009
Boris Sanchez, CPUC: And again, we'll be displaying that information on the next slide, for you know. Full. Thank you. And then the best way to to gather all this information is the project web page.

94
00:11:11.320 --> 00:11:20.639
Maria Hensel, ESA: Okay, if anyone else has a comment or would like to speak. I just want to remind you you can dial star 9 on your phone

95

00:11:21.140 --> 00:11:30.270
Maria Hensel, ESA: or press the raise hand, icon, if you can't find it, it's if you look at the more at the base of your screen, it should be a

96
00:11:30.870 --> 00:11:38.230
Maria Hensel, ESA: Icon it says more, and it has 3 dots above it, and it could click on it. And it'll give you an option to raise your hand.

97
00:12:13.900 --> 00:12:21.440
Matt Fagundes, ESA: whereas maybe we can wait 5 more minutes or so. See if anyone else decides to provide a comment.

98
00:12:22.120 --> 00:12:23.779
Boris Sanchez, CPUC: Okay, sounds great

99
00:12:27.200 --> 00:12:32.300
Matt Fagundes, ESA: and just want to reiterate that. You know it's not only verbal comments. If you

100
00:12:32.360 --> 00:12:36.349
Matt Fagundes, ESA: would rather submit your written comments, please go ahead and do that as well.

101
00:13:41.540 --> 00:13:44.280
Maria Hensel, ESA: Stephen. Maybe we could just go ahead to the next slide

102
00:13:58.030 --> 00:14:11.660
Boris Sanchez, CPUC: again. Thank you. Thanks everyone for joining the email address is listed on this slide to be made out to myself or bsanchezcpuc. Care of Environmental Science Associates.

103
00:14:11.900 --> 00:14:19.079
Boris Sanchez, CPUC: Attention to M. Hensel. 775, Baywood Drive, Suite 100 Petaluma, California.

104
00:14:19.160 --> 00:14:24.680
Boris Sanchez, CPUC: 94954. The email again is calcitysub@esassoc.com

105
00:14:24.840 --> 00:14:28.979
Boris Sanchez, CPUC:

106
00:14:29.950 --> 00:14:35.390

Boris Sanchez, CPUC: And as a reminder, you'll be able to the easiest way if you're online

107
00:14:35.960 --> 00:14:41.400
Boris Sanchez, CPUC: calling in, you'll be able to Google search CPUC, calcity, current projects.

108
00:14:41.580 --> 00:14:48.230
Boris Sanchez, CPUC: CPUC, and it'll take you to the CPUC website, and you can scroll utilities. SCE

109
00:14:48.320 --> 00:14:51.889
Boris Sanchez, CPUC: Calcity and the project information will be there.

110
00:14:51.900 --> 00:14:57.879
Boris Sanchez, CPUC: including phone numbers, emails, mailing address, and all information pertaining to this project

111
00:15:02.660 --> 00:15:11.160
Boris Sanchez, CPUC: and feel free to join us for the meeting at 6 30. If you feel like you had any questions that you wanted to answer in person.

112
00:15:15.980 --> 00:15:23.510
Maria Hensel, ESA: It looks like we have another person raising their hand. Karen Macedonia. Hope I got your name right.

113
00:15:24.520 --> 00:15:36.859
Karen Macedonio: Macedonia. We're getting better by the third time we've got it perfect. Could you repeat the Google search, whether the search words and the Google search that's going to be something easy for me to spread there. Yeah, that should be easier. So CPUC.

114
00:15:37.560 --> 00:15:38.869
Boris Sanchez, CPUC: Cal City

115
00:15:40.270 --> 00:15:47.209
Boris Sanchez, CPUC: current projects and the first link will lead everybody to a list of utilities and the projects.

116
00:15:47.510 --> 00:16:05.139
Boris Sanchez, CPUC: and as long as they search SCE, it's the second one currently listed. And that'll link directly to the project website. Okay, that's something I think I can do even with my technology demons. And

then I can tell other people how to find it. Thank you very much. I appreciate that. Yes.

117
00:16:19.590 --> 00:16:21.159
Boris Sanchez, CPUC: wait 2 more minutes.

118
00:16:22.170 --> 00:16:25.909
We'll finish the meeting at 305. If no one has any further questions.

119
00:17:57.430 --> 00:18:09.210
Boris Sanchez, CPUC: Okay, with that, if there's no further questions, I think we conclude the first virtual meeting and again feel free to join the 6 30 virtual meeting and to follow up on the project website

120
00:18:09.450 --> 00:18:13.190
Boris Sanchez, CPUC: to find more ways to get in touch with us. Thank you very much.

121
00:18:14.830 --> 00:18:15.900
Matt Fagundes, ESA: Thank you. Everyone.

122
00:18:16.600 --> 00:18:17.549
Maria Hensel, ESA: Thank you.

WEBVTT

1
00:00:45.370 --> 00:00:50.319
Boris Sanchez: Good evening, everyone. We'll give everyone a few minutes before we get started today.

2
00:02:28.500 --> 00:02:30.760
Boris Sanchez: Welcome everyone. I'm starting in 2 minutes.

3
00:03:53.620 --> 00:04:05.610
Boris Sanchez: Okay, let's get started. This is CPUC. CEQA Scoping meeting second Virtual meeting for today for SCE’s calcity substation 115 kv upgrade project.

4
00:04:06.250 --> 00:04:11.840
This meeting is being recorded, and the presentation will also be available once the meeting is concluded.

5
00:04:12.520 --> 00:04:22.530
Boris Sanchez: If you know anybody that would like to attend this meeting. Please go ahead and share the Zoom link or the phone number listed on the slide. Right now.

6
00:04:22.630 --> 00:04:34.160
Boris Sanchez: you can also share the QR code as well. And the project website is listed as well. And that website's going to have all the important information regarding this project, including

7
00:04:34.230 --> 00:04:40.089
Boris Sanchez: phone numbers mailing address and just any updates following along.

8
00:04:40.210 --> 00:04:43.679
Boris Sanchez: And for anybody on the phone.

9
00:04:43.990 --> 00:04:58.409
Boris Sanchez: you can reach this website by googling the keywords CPUC calcity current projects. It should be the first link. You can scroll through the utilities in bold and find calcity underneath the SCE

10
00:05:00.860 --> 00:05:04.569
Boris Sanchez: thread of the project Information. next slide.

11

00:05:06.300 --> 00:05:10.289
Boris Sanchez: So for the scoping meeting, the agenda is, we're going to start with introductions.

12
00:05:11.300 --> 00:05:24.749
Boris Sanchez: the purpose of the meeting, the application and permitting process, the environmental review process for CEQA, project overview, scoping environmental impacts and alternatives.

13
00:05:24.990 --> 00:05:29.090
Boris Sanchez: and we'll pause for public comments and then discuss next steps.

14
00:05:32.010 --> 00:05:44.420
Boris Sanchez: So for introductions. My name is Boris Sanchez. I'm the CPUC Project Coordinator, and with the lead agency. and the consultant is ESA Matt Fagundes is the ESA Project manager.

15
00:05:44.690 --> 00:05:48.899
Boris Sanchez: Maria Hensel, supporting staff along with the Olivia Silverstein who's on the call as well.

16
00:05:50.100 --> 00:05:54.389
Boris Sanchez: and the project applicant is Southern California, Edison, SCE.

17
00:05:57.720 --> 00:06:06.550
Olivia Silverstein: The purpose of the scope of meeting is to receive input from agencies and the public on the scope and content of the environmental impact report.

18
00:06:06.570 --> 00:06:09.229
Olivia Silverstein: Your ideas are welcome and invited.

19
00:06:12.500 --> 00:06:35.040
Olivia Silverstein: Scoping is the process of soliciting public and agency input regarding the scope and content of an EIR in advance of its preparation. CPUC Is requesting comments to inform the scope and content of the EIR and help identify the actions, alternatives, mitigation measures, and environmental effects to be analyzed In the EIR.

20
00:06:38.200 --> 00:06:45.210
Olivia Silverstein: This flow chart shows a high-level overview of the CPUC's Permit to construct application process.

21
00:06:45.380 --> 00:06:59.500
Olivia Silverstein: In this case, Southern California, Edison is proposing to construct and operate the Cal City substation 115 KV Upgrade project and is seeking a permit to construct the project from the CPUC.

22
00:07:00.110 --> 00:07:07.780
Olivia Silverstein: The CPUC will have a discretionary decision to make as to whether or not to approve the permit to construct application.

23
00:07:11.120 --> 00:07:17.729
Olivia Silverstein: In order to inform the CPUC's decision on the project. The CPUC must comply with CEQA.

24
00:07:18.300 --> 00:07:33.499
Olivia Silverstein: The purpose of CEQA is to inform decision makers and the public about potential significant environmental effects of a proposed project, identify ways that environmental damage can be avoided or significantly reduced.

25
00:07:33.580 --> 00:07:49.569
Olivia Silverstein: prevent significant avoidable damages to the environment through the use of alternatives or mitigations, and disclose the public the reason why a governmental agency approves the project if significant environmental effects are involved.

26
00:07:49.750 --> 00:07:53.820
Olivia Silverstein: CEQA Review focuses on physical impacts to the environment.

27
00:07:57.400 --> 00:08:01.559
Olivia Silverstein: This flow chart shows the CEQA process in general terms.

28
00:08:01.690 --> 00:08:07.710
Olivia Silverstein: scoping is one of the initial stages of the CEQA process and the stage we are currently in.

29
00:08:07.750 --> 00:08:10.360
Olivia Silverstein: It's shown in light green. In this chart

30
00:08:10.930 --> 00:08:31.600
Olivia Silverstein: the CPUC will document all public and agency input received during the scoping period in a scoping report to inform preparation of the draft EIR. There will also be a public review period

for the draft. EIR when it's available. And then a full EIR will be prepared to address all comments received on the draft EIR.

31
00:08:36.380 --> 00:08:50.639
Matt Fagundes, ESA: thanks, Olivia. So for the next few slides, we'll go over some of the content of an environmental impact report. The project. Description's an important part of an EIR. It needs to consider the whole of the project, including all construction.

32
00:08:50.990 --> 00:09:02.670
Matt Fagundes, ESA: operation and maintenance activities. The following slides will provide an overview of SCE's proposed Cal City 115 KV. Substation upgrade project.

33
00:09:09.030 --> 00:09:19.579
Matt Fagundes, ESA: The proposed project, as shown in this overview map, would be located in the city of California City, depicted by Gray on the map. and an unincorporated Kern and San Bernardino counties.

34
00:09:19.840 --> 00:09:30.599
Matt Fagundes, ESA: and also on lands managed by Federal agencies, including the Bureau of Land Management, shown as tan here. and the US Department of Defense shown as purple on the map.

35
00:09:33.820 --> 00:09:42.520
Matt Fagundes, ESA: The project would include a 10 acre expansion of the existing 5 acre Cal City substation to upgrade the substation from 33,

36
00:09:42.690 --> 00:09:54.100
Matt Fagundes, ESA: 12 kv To 115 33 kv. And 115 12 kv. The substation will include 14 new underground, 12 kv. Distribution, getaways.

37
00:09:54.260 --> 00:09:58.220
Matt Fagundes, ESA: and 2 new underground 33 kv. Distribution getaways.

38
00:09:58.690 --> 00:10:06.819
Matt Fagundes, ESA: distribution getaways are the lower voltage distribution cables and conduit and vaults that go out just beyond the substation

39
00:10:07.070 --> 00:10:14.190
Matt Fagundes, ESA: where featured distribution lines that would connect to Southern California Edison customers would enter or exit the substation.

40
00:10:17.690 --> 00:10:25.530
Matt Fagundes, ESA: Let's see, here's a photo of Southern California, Edison's calcity substation just for reference of the topography out there.

41
00:10:28.090 --> 00:10:32.570
Matt Fagundes, ESA: The project will also include 2 new, 115 KV sub transmission lines.

42
00:10:32.870 --> 00:10:38.010
including a 42-mile overhead line from Kramer, substation to calcity, substation

43
00:10:38.560 --> 00:10:51.209
Matt Fagundes, ESA: shown here as the blue light and a 28-mile overhead line from cal city substation to Holgate Switchyard with that tap to Edward substation shown as the purple lights in this map.

44
00:10:51.900 --> 00:10:55.600
Matt Fagundes, ESA: There'll also be electrical and telecom upgrades

45
00:10:55.610 --> 00:10:59.670
Matt Fagundes, ESA: at the existing Kramer substation, Edwards substation

46
00:11:00.180 --> 00:11:07.659
Matt Fagundes, ESA: that Edwards Air Force Base. and at Holgate Switchyard indicated Here is the blue triangles at the bottom of the map.

47
00:11:11.290 --> 00:11:21.240
Matt Fagundes, ESA: with regards to the environmental analysis, the EIR will evaluate all the environmental resource areas shown here consistent with the CEQA guidelines. Appendix G.

48
00:11:24.380 --> 00:11:32.140
Matt Fagundes, ESA: EIR will include a section for each resource area that will define and describe the existing environmental and regulatory setting.

49
00:11:32.380 --> 00:11:45.699
Matt Fagundes, ESA: establish thresholds of significance, to define what would be considered a significant impact identify impacts of the proposed project and mitigation measures to reduce impacts, if significant impacts are identified.

50
00:11:46.590 --> 00:11:52.419
Matt Fagundes, ESA: and the sections will also identify any residual impacts after application mitigation measures.

51
00:11:52.970 --> 00:12:00.199
Matt Fagundes, ESA: In addition, cumulative impacts of the project and the impacts of the alternatives will also be evaluated for each issue.

52
00:12:03.590 --> 00:12:11.230
Matt Fagundes, ESA: In addition to environmental issues associated with the project. We're also looking for your input regarding the project alternatives to be evaluated in EIR

53
00:12:11.670 --> 00:12:18.769
Matt Fagundes, ESA: The EIR must identify a range of reasonable alternatives to avoid or substantially lessen significant effects of the project.

54
00:12:19.910 --> 00:12:28.930
Matt Fagundes, ESA: and the alternatives must be feasible from a legal, regulatory and technical standpoint, and must meet most of the basic objectives of the project

55
00:12:31.890 --> 00:12:46.779
Matt Fagundes, ESA: here are Southern California Edison’s project objectives that are identified for the project and SCE’s application materials. they are to add boat serving capacity and electrical needs. Area

56
00:12:47.080 --> 00:12:59.409
Matt Fagundes, ESA: improve system reliability within electrical needs, area improve system, operational flexibility by maintaining reliance. by minimizing reliance on Edwards substation

57
00:12:59.820 --> 00:13:18.359
Matt Fagundes, ESA: and to provide system reliability within electrical needs area by providing a diverse sub transmission line route to Edwards substation. As a CEQA lead agency. The CPUC may identify additional or different objectives during the environmental review to be considered for the purposes of alternative screening.

58
00:13:21.300 --> 00:13:28.570
Matt Fagundes, ESA: The alternatives that will be included in the EIR may include those considered or suggested by Southern California, Edison, the public.

59
00:13:28.810 --> 00:13:31.540
Matt Fagundes, ESA: Other agencies other than CPUC.

60
00:13:31.680 --> 00:13:42.590
Matt Fagundes, ESA: Or those developed by the CPUC CEQA Review team. The project alternatives could consist of different locations, different sub transmission, mine routes or other technology

61
00:13:42.650 --> 00:13:50.059
Matt Fagundes, ESA: for the proposed facilities or anything else that you could think of that adheres to the criteria. We discussed a couple slides ago.

62
00:13:50.920 --> 00:13:57.200
Matt Fagundes, ESA: The EIR must also evaluate a no project alternative, which is a scenario where neither the proposed project

63
00:13:57.500 --> 00:14:01.350
Matt Fagundes, ESA: nor a project alternative is approved or developed.

64
00:14:05.380 --> 00:14:14.880
Matt Fagundes, ESA: We're just about ready to hear your input. But first we wanted to remind you how to get involved in the CEQA Process for the CPUC’s evaluation of Southern California Edison's project

65
00:14:15.930 --> 00:14:26.810
Matt Fagundes, ESA: for starters. If you're participating in the scoping meeting, you're on the right track. So please stay on, Provide your scoping input and we'll be starting that part of the meeting In a couple minutes.

66
00:14:28.140 --> 00:14:35.400
Matt Fagundes, ESA: the scoping process was kicked off with the publication of the notice of preparation of the EIR on November eighth.

67
00:14:36.040 --> 00:14:46.709
Matt Fagundes, ESA: and will be open through close of business on December eighth, which is next Friday. You can comment verbally at this meeting, or submit written comments via mail or email.

68
00:14:47.790 --> 00:15:02.839
Matt Fagundes, ESA: You'll also have an opportunity to comment on the draft, EIR. When that's released. Estimated to be some time in the

spring. Next year. You can also obtain information and updates on the project, including SCE’s application materials

69
00:15:03.380 --> 00:15:10.180
Matt Fagundes, ESA: at the CPUC‘s web page for the project at the link at the bottom of the screen. There's also voicemail

70
00:15:10.400 --> 00:15:15.129
Matt Fagundes, ESA: number at that web page where you can leave us a message. If you have any questions.

71
00:15:18.740 --> 00:15:30.090
Matt Fagundes, ESA: excuse me. In addition to providing any verbal input at this meeting, we want to also encourage you to provide written comments by mail to Boris Sanchez at the CPUC.

72
00:15:30.720 --> 00:15:41.739
Matt Fagundes, ESA: There are environmental science associates. Attention. M. Hensel. At 775 Baywood Drive, Suite, 100 in Petaluma, California, 94954.

73
00:15:42.250 --> 00:15:54.070
Matt Fagundes, ESA: Or you can email Boris at calcitysub@esassoc.com. And just another reminder that all scoping comments and input must be provided by the scoping deadline

74
00:15:54.500 --> 00:15:59.640
Matt Fagundes, ESA: of next Friday by 5 PM. Which is December eighth.

75
00:16:02.540 --> 00:16:11.999
Matt Fagundes, ESA: Okay, now we're ready to open the meeting up to public comment. If anyone wants to provide a verbal comment on

76
00:16:12.630 --> 00:16:14.269
Matt Fagundes, ESA: the scope of the EIR

77
00:16:16.520 --> 00:16:21.879
Olivia Silverstein: thanks, Matt. Discussion. Guidelines are as follows, be concise.

78
00:16:22.100 --> 00:16:26.530
Olivia Silverstein: stay on topic. respect others opinions.

79

00:16:26.750 --> 00:16:31.669
Olivia Silverstein: comments will be recorded and written comments are also encouraged.

80
00:16:34.160 --> 00:16:38.729
Olivia Silverstein: If calling in by phone, please dial star 9 to request to speak.

81
00:16:38.850 --> 00:16:48.100
Olivia Silverstein: And if you're using the online Zoom Platform, please press the raise hand icon, or submit your comments in the Q and A Box.

82
00:16:48.350 --> 00:16:50.850
Olivia Silverstein: And now we would like to hear input.

83
00:17:17.069 --> 00:17:18.359
Olivia Silverstein: Joan Schmidt.

84
00:17:27.819 --> 00:17:34.699
Olivia Silverstein: Joan, you can go ahead and unmute yourself, and let us know what your comment is when you're ready.

85
00:17:36.240 --> 00:17:37.710
Joan Schmitt: Okay, can you hear me?

86
00:17:37.760 --> 00:17:46.650
Joan Schmitt: Yes, we can. Okay. My question is on the the purple line. It's going up from Edwards.

87
00:17:46.820 --> 00:17:48.260
Joan Schmitt: My!

88
00:17:48.520 --> 00:18:07.189
Joan Schmitt: Our property is really close to that would there be an easement there for that We would have to grant Or are you proposing to buy our property? Depending on how tall the tower would be? Cause? I

89
00:18:07.530 --> 00:18:14.130
Joan Schmitt: do believe that it's going to be above ground wires that's going to be going there and

90
00:18:14.190 --> 00:18:21.289

Joan Schmitt: Could you give me some information about the tower and the wires and that kind of stuff?

91
00:18:21.890 --> 00:18:26.929
Matt Fagundes, ESA: Yeah, I can. I think, answers some of those questions. So

92
00:18:27.590 --> 00:18:35.129
Matt Fagundes, ESA: Joan, it might be helpful if you could provide us some information on

93
00:18:35.510 --> 00:18:50.320
Matt Fagundes, ESA: the exact location of your property. If you could maybe provide us that information via email that we could get back to you and tell you exactly where the line is relative to your property.

94
00:18:50.880 --> 00:18:53.640
Matt Fagundes, ESA: The property does have a

95
00:18:54.740 --> 00:18:58.790
Matt Fagundes, ESA: I believe it's a 50. Let me check here.

96
00:18:59.910 --> 00:19:09.070
Matt Fagundes, ESA: A 50 foot wide ride of way 50 foot wide. Right of way.

97
00:19:09.630 --> 00:19:14.940
Matt Fagundes, ESA: And the towers are about 85 feet tall in that area.

98
00:19:17.050 --> 00:19:21.010
Matt Fagundes, ESA: I forget if you had any other questions.

99
00:19:21.420 --> 00:19:25.490
Matt Fagundes, ESA: that I didn't get to yet.

100
00:19:27.090 --> 00:19:35.389
Joan Schmitt: Okay, I will. I can go ahead and and send you an email with where the property is

101
00:19:37.700 --> 00:19:46.709
Matt Fagundes, ESA: that would be great. And that email is calcitysub@ESASSoc.com.

102
00:19:46.830 --> 00:19:53.639
Matt Fagundes, ESA: and we can get back to you. on specifically, if the line does cross your property.

103
00:19:53.810 --> 00:19:54.800
Joan Schmitt: Okay.

104
00:19:58.760 --> 00:19:59.570
Matt Fagundes, ESA: thank you.

105
00:20:06.280 --> 00:20:17.500
Matt Fagundes, ESA: And addition to providing verbal comments, just want to remind you that you can send written comments if you prefer, if you prefer to do that in lieu of providing oral comments, and that

106
00:20:17.640 --> 00:20:23.260
Matt Fagundes, ESA: you can use that same email address: calcitysub@esassoc.com.

107
00:20:41.330 --> 00:20:45.770
Matt Fagundes, ESA: I don't see any other hands raised, but maybe if we can wait for another

108
00:20:47.180 --> 00:20:48.530
Matt Fagundes, ESA: 5 min or so

109
00:21:01.820 --> 00:21:08.509
Boris Sanchez: while we wait as well. Stephen, do you mind just displaying the next slide so that the mailing list and the website information is available?

110
00:21:10.410 --> 00:21:11.240
Boris Sanchez: Thank you.

111
00:21:21.620 --> 00:21:25.859
Boris Sanchez: People who would be joining online.

112
00:21:26.650 --> 00:21:28.040
Boris Sanchez: for this recording

113
00:21:28.710 --> 00:21:33.930

it will be really helpful for you to just go through the web page and find the

114
00:21:34.710 --> 00:21:40.379
Boris Sanchez: the project website so that you can find all the information, including this mailing address, email.

115
00:21:40.850 --> 00:21:44.530
all current information on the project as we move along as well, so

116
00:21:45.020 --> 00:21:48.050
Boris Sanchez: feel free to to search that web page.

117
00:23:43.820 --> 00:23:48.819
Boris Sanchez: Yeah, we'll give it another minute. If you guys decide you have any more questions for verbal.

118
00:24:58.560 --> 00:25:06.299
Boris Sanchez: Okay, with that, since there are no further questions, I'd like to thank everybody for participating. I'd like to thank the ESA team for

119
00:25:06.680 --> 00:25:12.110
creating this presentation. The slides that we're working with today and for anybody

120
00:25:12.260 --> 00:25:16.430
Boris Sanchez: listening to this recording again, please visit the web page to

121
00:25:16.840 --> 00:25:24.319
Boris Sanchez: gather all the information that you need to have communication as this project. Move along. Thank you very much. Appreciate your time.

122
00:25:27.320 --> 00:25:29.239
Matt Fagundes, ESA: Thank you, everybody. Bye, bye.

123
00:25:29.980 --> 00:25:31.210
Olivia Silverstein: thank you.

Written Scoping Comments

NATIVE AMERICAN HERITAGE COMMISSION

Governor's Office of Planning & Research

Nov 17 2023

STATE CLEARING HOUSE

November 16, 2023

Boris Sanchez
CPUC
505 Van Ness Avenue
San Francisco, CA 94102

Re: 2023110218, SCE Cal City Substation 115kV Upgrade Project, Kern and San Bernardino Counties

Dear Mr. Sanchez:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015. If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). Both SB 18 and AB 52 have tribal consultation requirements. If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe. (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:

a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.

b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.

b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.

c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Cameron.Vela@nahc.ca.gov.

Sincerely,

Cameron Vela

RE: Southern California Edison Company's Cal City Substation 115 kV Upgrade Project (Application No. A.23-03-005)

Dear Mr. Boris,

I write on behalf of the Kern County Board of Supervisors to request that California Public Utilities Commission (CPUC) expedite Southern California Edison Company's Cal City Substation 115 kV Upgrade Project (Application No. A.23-03-005).

Among the most critical reasons that we support this project and request that it be expedited are:

1. Kern County's economy is in transition. The Board of Supervisors, in partnership with the community, is working to improve the economic viability of Kern County by facilitating the creation and retention of new jobs. To do this, we must have increased electrical capacity.

2. In addition to resolving electrical capacity in California City, this project will provide resiliency to Edwards Air Force Base and has the potential of providing capacity for additional renewable projects in the region that will enable the State to meet its Green House Gas reduction goals.

We respectfully ask that CPUC commit to expediting the aforementioned project within Kern County and appreciate your consideration of our request. If you would like to discuss this matter further, please contact our Chief Administrative Officer, James Zervis, at zervisj@kerncounty.com or (661) 868-3198.

Sincerely,

Jeff Flores, Chairman
Kern County Board of Supervisors

775 Baywood Drive, Suite 100
Petaluma, California 94954

Subject: Cal City Substation 115kV Upgrade Project (Project)
Notice of Preparation (NOP)
State Clearinghouse No. 2023110218

Dear Boris Sanchez:

The California Department of Fish and Wildlife (CDFW) received a NOP for an Environmental Impact Report (EIR) from the California Public Utilities Commission, as Lead Agency for the Project pursuant the California Environmental Quality Act (CEQA) and CEQA Guidelines.[1]

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, CDFW appreciates the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under Fish and Game Code.

CDFW ROLE

CDFW is California's **Trustee Agency** for fish and wildlife resources and holds those resources in trust by statute for all the people of the State (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a)). CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (*Id.*, § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public

[1] CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

DocuSign Envelope ID: 64C7B1B4-CE4F-485C-B54E-2A6D531A2E47

agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources. CDFW is also submitting comments as a **Responsible Agency** under CEQA (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code. As proposed, for example, the Project may be subject to CDFW's lake and streambed alteration regulatory authority (Fish & G. Code, § 1600 et seq.). Likewise, to the extent implementation of the Project as proposed may result in "take" as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), related authorization as provided by the Fish and Game Code will be required.

CDFW has jurisdiction over actions with potential to result in the disturbance or destruction of active nest sites or the unauthorized take of birds. Fish and Game Code sections that protect birds, their eggs, and nests include section 3503 (regarding unlawful take, possession or needless destruction of the nest or eggs of any bird), section 3503.5 (regarding the take, possession or destruction of any birds-of-prey or their nests or eggs), and section 3513 (regarding unlawful take of any migratory nongame bird).

PROJECT DESCRIPTION SUMMARY

Proponent: Southern California Edison

Description and Objective: The Project is proposed to include the expansion of the existing five-acre Cal City Substation by approximately 10 acres to upgrade the substation from 33/12 kV to 115/33 kV and 115/12 kV. Fourteen new underground 12 kV distribution getaways and two new underground 33 kV distribution getaways from the Cal City Substation are also proposed. The Project would include construction of two new 115 kV subtransmission lines, a 42-mile overhead line from Kramer Substation to Cal City Substation, and a new overhead 28-mile line from Cal City Substation to Holgate Switchyard with a tap line to serve Edwards Substation location on Edwards Air Force Base. The proposed new 115 kV subtransmission lines would be installed with telecommunication cables and telecommunication improvements would also be installed at the existing Holgate Switchyard and Cal City, Kramer, and Edwards substations. The Project would require electrical infrastructure improvements to accommodate the new 115 kV lines within the existing fence lines at Edwards Substation, Holgate Switchyard, and Kramer Substation.

The Project would also include the transfer of several miles of distribution lines onto the proposed new subtransmission lines. This would entail the transfer of approximately five total miles of existing 33 kV distribution lines to the Kramer-Cal City 115kV line structures and the removal of approximately 151 existing distribution structures along

DocuSign Envelope ID: 64C7B1B4-CE4F-485C-B54E-2A6D531A2E47

the line segments. Also included would be the transfer of approximately two miles of existing 33 kV and approximately two miles of existing 12 kV distribution lines to the new Cal City-Edwards-Holgate 115 kV lines structures and removal of approximately 90 existing distribution structures along the line segments.

Timeframe: Construction start date in 2026, and estimated construction would last 18 months

COMMENTS AND RECOMMENDATIONS

The NOP lacks detailed information with regard to the footprint of the entire Project and does not address methods and materials, ground disturbance related to each activity, staging and laydown areas, and other specific Project-related activities that could threaten biological resources and result in potentially significant environmental impacts within the Project area. CDFW anticipates these details to be provided in the draft EIR, in addition to details such as specific locations of activities relative to private or public property and adjacent roads and the need for any night work.

Special-status species are known to exist in the vicinity of the Project, and the Project could potentially impact State and federally listed species. Aerial imagery of the Project boundary and its surroundings confirms that the Project area supports allscale saltbush (*Atriplex polycarpa*) and creosote bush (*Larrea tridentata*) habitats. Records from the California Natural Diversity Database (CNDDB) document species that could potentially be impacted by Project activities. Special-status animal species that could be impacted include the State protected furbearing mammal desert kit fox (*Vulpes macrotis arsipus*); the State fully protected golden eagle (*Aquila chrysaetos*); the State candidate endangered Crotch's bumble bee (*Bombus crotchii*); the State and federally threatened desert tortoise (*Gopherus agassizii)*; the State threatened Swainson's hawk (*Buteo swainsoni*), and Mohave ground squirrel (*Xerospermophilus mohavensis*); the State watch list prairie falcon (*Falco mexicanus*); and the State species of special concern American badger (*Taxidea taxus*), pallid bat (*Antrozous pallidus*), Townsend's big-eared bat (*Corynorhinus townsendii*), spotted bat (*Euderma maculatum*), loggerhead shrike (*Lanius ludovicianus*), burrowing owl (*Athene cunicularia*), and gray vireo (*Vireo vicinior*).

The Project alignment is also within the geographic range of several special status plant species, including but not limited to the State candidate threatened western Joshua tree (*Yucca brevifolia*); the State endangered and California Rare Plant Rank (CRPR) 1B.2 Barstow woolly sunflower (*Eriophyllum mohavense*), Charlotte's phacelia (*Phacelia nashiana*), alkali mariposa-lily (*Calochortus striatus*), Red Rock poppy (*Eschscholzia minutiflora* ssp. *twisselmannii*), desert cymopterus (*Cymopterus deserticola*), and recurved larkspur (*Delphinium recurvatum*); the CRPR 1B.3 Creamy blazing star (*Mentzelia tridentata*); the CRPR 2B.2 sagebrush loefingia (*Loeflingia squarrosa var.*

DocuSign Envelope ID: 64C7B1B4-CE4F-485C-B54E-2A6D531A2E47

artemisiarum) and pink funnel lily (*Androstephium breviflorum*); the CRPR 2B.3 Booth's evening-primrose (*Eremothera boothii* ssp. *boothii*); and the CRPR 4.2 Mojave fish-hook cactus (*Sclerocactus polyancistrus*), golden goodmania (*Goodmania luteola*), solitary blazing star (*Mentzelia eremophila*), Mojave spineflower (*Chorizanthe spinosa*), white pygmy-poppy (*Canbya candida*), and crowned muilla (*Muilla coronate*).

Mohave Ground Squirrel

The Project is within the historical range of Mohave ground squirrel and is located within the species' current distribution. Based on aerial imagery, the Project area contains suitable habitat (CDFW 2023a), which comprises all broadly described plant communities in the western Mojave Desert including saltbush scrub, creosote bush scrub, western Joshua tree woodland, and sagebrush scrub (Gustafson 1993).

CDFW recommends that a qualified biologist conduct a Mohave ground squirrel habitat assessment for a biological study report to be included with the draft EIR. If suitable habitat is identified, consultation with CDFW is recommended for guidance on developing a Project-specific survey methodology in advance of Project activity. CDFW recommends that the draft EIR require consultation regarding surveys and, if the surveys reveal the presence of Mohave ground squirrel, additional consultation with CDFW for guidance on whether the Project can avoid take of Mohave ground squirrel or for guidance on obtaining an Incidental Take Permit, pursuant to Fish and Game Code section 2081, subdivision (b).

Swainson's Hawk

Swainson's hawks exhibit high nest-site fidelity (CDFW 2016) and the Project may involve noise, groundwork, and movement of workers that could affect any nests that are present and potentially result in nest abandonment or other forms of reduced productivity. CDFW recommends that a qualified biologist conduct a habitat assessment for nest sites suitable for the species within the Project area and a 0.5-mile buffer, for a biological study report to be included with the draft EIR. CDFW recommends that the draft EIR describe protocol surveys to be conducted following the survey methods developed by the Swainson's Hawk Technical Advisory Committee (2000) within the nesting season immediately prior to Project activity in areas of suitable nesting habitat within the Project area and a 0.5-mile buffer. CDFW recommends maintaining a minimum no-disturbance buffer of 0.5 mile around active nests until the breeding season has ended or until a qualified biologist has determined that the birds have fledged and are no longer reliant upon the nest site for survival. If an active Swainson's hawk nest is detected during surveys and a 0.5-mile buffer is not feasible, it is also recommended that consultation with CDFW occur for guidance on how to implement the Project and avoid take or to obtain an Incidental Take Permit, pursuant to Fish and Game Code section 2081, subdivision (b).

DocuSign Envelope ID: 64C7B1B4-CE4F-485C-B54E-2A6D531A2E47

CDFW also recommends compensation for the loss of Swainson's hawk foraging habitat as described in the "Staff Report Regarding Mitigation for Impacts to Swainson's Hawks" (Staff Report) (CDFG 1994) to reduce impacts to foraging habitat to less than significant. The Staff Report recommends that mitigation for habitat loss occur within a minimum distance of 10 miles from known nest sites; CDFW has the following recommendations for the Draft EIR:

- For projects within one mile of an active nest tree, a minimum of one acre of habitat management (HM) land for each acre of development is advised.
- For projects within five miles of an active nest but greater than one mile, a minimum of 0.75 acre of HM land for each acre of development is advised.
- For projects within 10 miles of an active nest tree but greater than five miles from an active nest tree, a minimum of 0.5 acre of HM land for each acre of development is advised.

Desert Tortoise

The Project area is within the known geographic range of desert tortoise (CDFW 2023a). Desert tortoise is most common in desert scrub, desert wash, and Joshua tree habitats (CDFW 2018a). Based on aerial imagery, the Project alignments contain desert scrub communities. CDFW recommends that a qualified biologist conduct a desert tortoise habitat assessment, for a biological study report to be included with the Draft EIR. Within areas of suitable habitat, CDFW recommends that the Draft EIR require protocol surveys over all areas (i.e., 100 percent coverage) proposed to be directly or indirectly affected by the Project, conducted following the United States Fish and Wildlife Service (USFWS) (2019) "Preparing for Any Action That May Occur Within the Range of the Desert Tortoise (*Gopherus agassizii*)" prior to the start of Project activity, with survey results submitted to CDFW prior to Project activity.

To reduce the likelihood of nonconcurrence with proposed surveys, methodology, and qualifications of biologists, CDFW recommends working with the USFWS and CDFW concurrently to ensure a consistent and adequate approach to Project planning (USFWS 2019). If surveys reveal the presence of desert tortoise, it is also recommended that the Draft EIR require consultation with CDFW for guidance on how to implement the Project and avoid take of the species or for guidance on obtaining an Incidental Take Permit, pursuant to Fish and Game Code section 2081, subdivision (b).

Crotch's Bumble Bee

Crotch's bumble bee has been documented in the vicinity of the Project, which is within the current range of the species (CDFW 2023a and 2023b). The species is known to inhabit areas of grasslands and scrub that contain requisite habitat elements for nesting,

DocuSign Envelope ID: 64C7B1B4-CE4F-485C-B54E-2A6D531A2E47

such as small mammal burrows and bunch or thatched grasses. Based on aerial imagery, the Project appears to contain habitat suitable to support Crotch's bumble bee.

CDFW recommends that a qualified biologist conduct a habitat assessment for Crotch's bumble bee for a biological study report to be included with the Draft EIR. Foraging resources and potential nesting sites, which include all small mammal burrows, perennial bunch grasses, thatched annual grasses, brush piles, old bird nests, dead trees, and hollow logs are advised to be documented as part of the assessment. In areas of suitable habitat, CDFW recommends that the Draft EIR require a qualified biologist to conduct a bumble bee survey using a protocol developed according to the CDFW (2023b) "Survey Considerations for California Endangered Species Act (CESA) Candidate Bumble Bee Species," to identify bumble bees and potential nesting sites during the vegetation blooming period prior to activities at Project sites. If any Crotch's bumble bees or nests are detected, CDFW advises consultation with CDFW to develop adequate take avoidance measures, and if a nest is observed at any time, avoidance would also include protection for underground overwintering queens. If avoidance of take is not feasible, CDFW advises take authorization via an Incidental Take Permit, pursuant to Fish and Game Code section 2081, subdivision (b).

Burrowing Owl

Burrowing owls have been documented to occur near the Project alignment (CDFW 2023a). Burrowing owls inhabit open, dry grassland and desert habitats, and other landscape features containing small mammal burrows, a requisite habitat feature for nesting and cover (CDFW 2018b). Burrowing owls rely on burrow habitat year-round for their survival and reproduction. Based on aerial photography, potential habitat occurs both within and bordering the Project alignment.

CDFW recommends that a qualified biologist conduct a habitat assessment for burrowing owls, for a biological study report to be included with the Draft EIR. In areas of suitable habitat, CDFW recommends that the Draft EIR require presence/absence surveying for burrowing owl by a qualified biologist following the California Burrowing Owl Consortium (1993) "Burrowing Owl Survey Protocol and Mitigation Guidelines" and CDFW's "Staff Report on Burrowing Owl Mitigation" (CDFG 2012). If burrowing owls are detected, CDFW recommends no-disturbance buffers as outlined in the Staff Report on Burrowing Owl Mitigation during any ground-disturbing activities, as shown in the following table.

DocuSign Envelope ID: 64C7B1B4-CE4F-485C-B54E-2A6D531A2E47

Location	Time of Year	Level of Disturbance		
		Low	Med	High
Nesting sites	April 1-Aug 15	200 m*	500 m	500 m
Nesting sites	Aug 16-Oct 15	200 m	200 m	500 m
Nesting sites	Oct 16-Mar 31	50 m	100 m	500 m

* meters (m)

In the event that burrowing owls are found within these recommended buffers and avoidance is not possible, CDFW recommends that the Draft EIR analyze the potentially significant impact of excluding owls from a burrow. CDFW recommends that any burrow exclusion be conducted by qualified biologists and only during the non-breeding season, before breeding behavior is exhibited and after the burrow is confirmed empty through non-invasive surveillance methods. CDFW also recommends replacement of occupied burrows with artificial burrows at a ratio of one burrow collapsed to one artificial burrow constructed (1:1) as mitigation for evicting owls.

Desert Kit Fox

The Project is within the known geographic range of desert kit fox and this species is known to inhabit sparsely vegetated scrub habitats within the California desert that support small mammal populations (McGrew 1979). Based on aerial imagery, the Project area appears to have suitable habitat for desert kit fox denning and foraging.

Desert kit fox is protected under the California Code of Regulations, Chapter 5, Section 460, which prohibits take of the species for any reason. CDFW therefore cannot permit the incidental take of this species. CDFW recommends that a qualified biologist conduct a desert kit fox habitat assessment for the Project area, for a biological study report to be included with the Draft EIR. In areas of suitable habitat, CDFW recommends that the Draft EIR prescribe focused field surveys for the species and any sign, such as potential dens, prior to the start of Project activity. If any individuals or any active or potential dens are found, CDFW recommends consultation with CDFW for guidance on take avoidance measures for desert kit fox.

Special Status and Other Bat Species

The Project area is within the known geographic range of Townsend's big-eared bat, pallid bat, and spotted bat, and suitable habitat may be present for these species within the Project alignment (CDFW 2023a). CDFW recommends that a qualified biologist conduct a habitat assessment for day-roosting roosting bats in areas that could be impacted by Project activities, for a biological study report to be included with the draft EIR. CDFW recommends that for any suitable roosting sites, the draft EIR prescribe development of a robust study design by a qualified biologist to survey for bats. If

DocuSign Envelope ID: 64C7B1B4-CE4F-485C-B54E-2A6D531A2E47

roosting bats are found, CDFW recommends avoidance of occupied roosts, and consultation with CDFW for guidance on eviction of bats, if roost structures cannot be avoided, while avoiding nursery/maternal roosts where dependent young could be present.

Other Special Status Animal Species

The Project is within the known geographic range of American badger and suitable habitat for this species may be present within the Project area (CDFW 2023a). CDFW recommends that a qualified biologist conduct a habitat assessment for American badger for a biological study report to be included with the draft EIR. If potential habitat is present, CDFW recommends that the draft EIR direct a qualified biologist to conduct focused surveys for American badger and their requisite habitat features to evaluate potential Project impacts, and describe avoidance, minimization, and mitigation as warranted to address potentially significant impacts.

Western Joshua Tree

The Project is within the known geographic range of western Joshua tree, and the Project area provides habitat that is suitable for the species. CDFW recommends that a qualified botanist conduct focused surveys to identify the locations, number, and health of individuals as part of the biological technical studies conducted in support of the Draft EIR. If any western Joshua trees are identified at any time, CDFW recommends that the Draft EIR require a 290-foot no-disturbance buffer, which is warranted to avoid impacts to individual trees as well as potential impacts to the seed bank. Vander Wall et al. (2006) documented 290 feet as the maximum distance of seed dispersal when carried by rodents. If 290-foot buffers cannot be maintained to avoid trees and seeds, consultation with CDFW would be warranted regarding take authorization as allowed under CESA or the Western Joshua Tree Conservation Act.

Other Special-Status Plant Species

Other plants listed pursuant to federal Endangered Species Act, CESA, and the Native Plant Protection Act, as well as other special status plants, may also occur in the Project area. Special-status plant species are threatened with habitat loss and habitat fragmentation resulting from development, vehicle and foot traffic, and introduction of non-native plant species (CNPS 2023). The Project has the potential to significantly impact populations of the species mentioned above if present.

CDFW recommends that a qualified botanist conduct a habitat assessment for special-status plant species, for a biological study report to include with the Draft EIR. If suitable habitat is present, CDFW recommends that the Draft EIR prescribe individual Project sites to be surveyed for special-status plants by a qualified botanist following the

DocuSign Envelope ID: 64C7B1B4-CE4F-485C-B54E-2A6D531A2E47

"Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities" (CDFW 2018c) during the blooming season prior to Project activities. If non-listed special-status plants are detected, CDFW recommends that they be avoided using a no-disturbance buffer of at least 50 feet from the outer edge of the plant population(s) or specific habitat type(s) required by special-status plant species. If buffers cannot be maintained, consultation with CDFW is recommended to determine appropriate minimization or mitigation measures. If a State-listed plant species is identified during botanical surveys, consultation with CDFW would be warranted to determine if the Project can avoid take or to comply with the Native Plant Protection Act and/or obtain take authorization pursuant to Fish and Game Code section 2081, subdivision (b) or California Code of Regulations, title 14, section 786.9, subdivision (b).

Riparian and Wetland Habitat Impacts

Based on aerial imagery, the Project area contains multiple streams and drainages. CDFW recommends that the Draft EIR include mapping and describe the methodology used in determining the extent of all streams, and associated wetlands in the Project area. CDFW recommends that the potential direct and indirect impacts to stream/riparian and associated wetland habitats be analyzed according to each Project activity. Based on those potential impacts, CDFW recommends that the Draft EIR include measures to avoid, minimize, and/or mitigate those impacts. CDFW recommends that impacts to riparian habitat, including biotic and abiotic features, take into account the effects to stream function and hydrology from riparian habitat loss or damage, as well as potential effects from the loss of riparian habitat to special-status species already identified herein.

CDFW recommends that the Draft EIR require that losses to riparian habitats be offset with corresponding, appropriate habitat restoration.. If on-site restoration to replace habitats is not feasible, CDFW recommends offsite mitigation by restoring or enhancing in-kind riparian or wetland habitat and providing for the long-term management and protection of the mitigation area, to ensure its persistence.

EDITORIAL COMMENTS AND/OR SUGGESTIONS

Impacts to CDFW Lands: The NOP states that the Project would traverse one property within the CDFW West Mojave Desert Ecological Reserve in San Bernardino County. It is not clear from the materials provided where work would occur relative to the West Mojave Desert Ecological Reserve, which supports both Mohave ground squirrel and desert tortoise and is managed by CDFW for the protection of these and many other special status species.

California Code of Regulations, Title 14, section 630 states "All ecological reserves are maintained for the primary purpose of developing a statewide program for protection of

DocuSign Envelope ID: 64C7B1B4-CE4F-485C-B54E-2A6D531A2E47

rare, threatened, or endangered native plants, wildlife, aquatic organisms, and specialized terrestrial or aquatic habitat types" and therefore, public access on these lands is restricted. CDFW requests that the draft EIR clearly describe the location(s) of and Project activities that are proposed on or adjacent to the properties, in addition to the details of any right-of-way or an easement that may exist on CDFW properties in the Project alignment. Absent an existing easement, encroachment onto the West Mojave Desert Ecological Reserve would not be allowed. Ongoing coordination with CDFW is necessary to address the Project alignment and work areas.

Lake and Streambed Alteration: Jurisdictional activities are subject to CDFW's authority pursuant to Fish and Game Code section 1600 et seq. Fish and Game Code section 1602 requires an entity to notify CDFW prior to commencing any activity that may (a) substantially divert or obstruct the natural flow of any river, stream, or lake; (b) substantially change or use any material from the bed, bank, or channel of any river, stream, or lake (including the removal of riparian vegetation): (c) deposit debris, waste or other materials that could pass into any river, stream, or lake. "Any river, stream, or lake" includes those that are ephemeral, intermittent, or episodic, as well as those that are perennial, regardless of the duration, frequency, or volume of flow.

CDFW is required to comply with CEQA in the issuance of a Lake or Streambed Alteration Agreement; therefore, if the CEQA document approved for the Project does not adequately describe the Project and its impacts to lakes or streams, a subsequent CEQA analysis may be necessary for a Lake or Streambed Alteration Agreement issuance. For information on notification requirements, please refer to CDFW's website (https://wildlife.ca.gov/Conservation/LSA) or contact the CDFW staff listed below or the Lake and Streambed Alteration Program: the Central Region office at (559) 243-4593 or R4LSA@wildlife.ca.gov and the Inland Deserts Region at (909) 484-0523 or R6LSA@wildlife.ca.gov.

California Natural Diversity Database (CNDDB): Please note that the CNDDB is populated by and records voluntary submissions of species detections. As a result, species may be present in locations not depicted in the CNDDB but where there is suitable habitat and features capable of supporting species. A lack of an occurrence record in the CNDDB does not mean that a species is not present. In order to adequately assess any potential Project-related impacts to biological resources, surveys conducted by a qualified biologist during the appropriate survey period(s) and using the appropriate protocol survey methodology are warranted in order to determine whether or not any special status species are present.

Wildlife Movement and Connectivity: The Project area supports numerous biological resources and contains habitat connections and migratory pathways for many wildlife species. The Project area also supports movement across the broader landscape, sustaining both transitory, migratory, and permanent wildlife populations. CDFW

DocuSign Envelope ID: 64C7B1B4-CE4F-485C-B54E-2A6D531A2E47

recommends that on-site features that contribute to habitat connectivity be evaluated and maintained, and that aspects of the Project that could create physical barriers to wildlife movement and migration, including direct or indirect Project-related activities, be identified and addressed in the Draft EIR.

Project Alternatives Analysis: CDFW recommends that the information and results obtained from the biological technical surveys, studies, and analyses conducted in support of the Draft EIR be used to develop and modify the Project's alternatives to avoid and minimize impacts to biological resources to the maximum extent possible. When efforts to avoid and minimize have been exhausted, remaining impacts to sensitive biological resources may need to be mitigated to reduce impacts to a less than significant level, if feasible.

Cumulative Impacts: CDFW recommends that a cumulative impact analysis be conducted for all biological resources that will either be significantly or potentially significantly impacted by implementation of the Project, including those whose impacts are determined to be less than significant with mitigation incorporated or for those resources that are rare or in poor or declining condition and will be impacted by the Project, even if those impacts are relatively small (i.e., less than significant). CDFW recommends that cumulative impacts be analyzed using an acceptable methodology to evaluate the impacts of past, present, and reasonably foreseeable future projects on resources and be focused specifically on the resource, not the Project. An appropriate resource study area identified and utilized for this analysis is advised. CDFW staff is available for consultation in support of cumulative impacts analyses as a trustee and responsible agency under CEQA.

Federally Listed Species: CDFW recommends consulting with the USFWS on potential impacts to federally listed species, including but not limited to desert tortoise. Take under the federal Endangered Species Act (ESA) is more broadly defined than CESA; take under ESA also includes significant habitat modification or degradation that could result in death or injury to a listed species by interfering with essential behavioral patterns such as breeding, foraging, or nesting. Consultation with the USFWS in order to comply with ESA is advised well in advance of any ground-disturbing activities.

Nesting Birds: CDFW encourages that Project implementation occur outside the bird nesting season; however, if ground-disturbing or vegetation-disturbing activities must occur during the breeding season of February through mid-September, the Project applicant is responsible for ensuring that implementation of the Project does not result in violation of the Migratory Bird Treaty Act or relevant Fish and Game Codes as referenced above.

To evaluate Project-related impacts on nesting birds, CDFW recommends that a qualified wildlife biologist conduct pre-activity surveys for active nests no more than

DocuSign Envelope ID: 64C7B1B4-CE4F-485C-B54E-2A6D531A2E47

10 days prior to the start of ground or vegetation disturbance to maximize the probability that nests that could potentially be impacted are detected. CDFW also recommends that surveys cover a sufficient area around the Project site to identify nests and determine their status. A sufficient area means any area potentially affected by the Project. In addition to direct impacts (i.e. nest destruction), noise, vibration, and movement of workers or equipment could also affect nests. Prior to initiation of construction activities, CDFW recommends that a qualified biologist conduct a survey to establish a behavioral baseline of all identified nests. Once construction begins, CDFW recommends having a qualified biologist continuously monitor nests to detect behavioral changes resulting from the Project. If behavioral changes occur, CDFW recommends halting the work causing that change and consulting with CDFW for additional avoidance and minimization measures.

If continuous monitoring of identified nests by a qualified wildlife biologist is not feasible, CDFW recommends a minimum no-disturbance buffer of 250 feet around active nests of non-listed bird species and a 500-foot no-disturbance buffer around active nests of non-listed raptors. These buffers are advised to remain in place until the breeding season has ended or until a qualified biologist has determined that the birds have fledged and are no longer reliant upon the nest or on-site parental care for survival. Variance from these no-disturbance buffers is possible when there is compelling biological or ecological reason to do so, such as when the construction area would be concealed from a nest site by topography. CDFW recommends that a qualified wildlife biologist advise and support any variance from these buffers and notify CDFW in advance of implementing a variance.

CDFW appreciates the opportunity to comment on the NOP to assist the California Public Utilities Commission in identifying and mitigating Project impacts to biological resources. If you have any questions, please contact Benessa Galvan, Senior Environmental Scientist Specialist, at (559) 580-3197 or by email at Benessa.Galvan@wildlife.ca.gov.

Appendix C

Mailing List and Certificate of Service

Certificate of Service

I, Stan Williams, of Pheonix 1, certify that we have on this date caused the following:

Publication of the Draft EIR for Southern California Edison's (SCE) Application to the California Public Utilities Commission (CPUC) pursuant to General Order (GO) 131-D to construct and operate the Cal City Substation 115 kV Upgrade Project (A.23-03-005). Hard copies of the Draft EIR Notice of Availability are to be served by first class or certified mail service by United States Postal Service (USPS) mail to listed parties on the CPUC service list; agencies, organizations, and individuals that submitted comments on the Notice of Preparation (NOP); local agencies in the vicinity of the proposed Project, and property owners within 300 feet of the proposed Project. A comprehensive mailing list is included in Appendix C of the Draft EIR.

I declare under penalty of perjury pursuant to the laws of the State of California that the foregoing is true and correct.

Executed on February 27, 2026 in Martinez, California.

Stan Williams

I. Executive Summary

This document is Southern California Edison Company's (SCE) Field Management Plan (FMP) for the Cal City Substation 115 kilovolt (kV) Upgrade Project (Project). This FMP has been prepared in accordance with CPUC Decision No. 93-11-013 and Decision No. 06-01-042 relating to extremely low frequency (ELF)[1] electric and magnetic fields (EMF). SCE has prepared this FMP in order to inform the public, the California Public Utilities Commission (CPUC), and other interested parties of its evaluation of "no-cost and low-cost" magnetic field reduction design options, and Edison's plan to apply these design options to this project. This FMP also provides background on the current status of scientific research related to possible health effects of EMF, and a description of the CPUC's EMF policy.

The Proposed Project would occur in portions of the City of California City and surrounding areas of unincorporated Kern County, unincorporated San Bernadino County, and Edwards Air Force Base (EAFB) (Figure 1). The Proposed Project consists of two new subtransmission lines: one line from Cal City Substation to Kramer Substation and one three-terminal line connecting Cal City Substation, Edwards Substation, and Holgate Switchyard. The Proposed Project also includes upgrades for the four related substations, but only the Cal City Substation EMF reduction measures were evaluated in this FMP as the other substations will only have minor terminal upgrades. The Proposed Project includes the following major electrical components that were evaluated for application of the CPUC's EMF design guidelines:

- Construct one new Kramer-Cal City 115 kV Subtransmission Line (approximately 42 miles)
- Construct one new Cal City-Edwards-Holgate 115 kV Subtransmission Line (approximately 28 miles)
- Expand the existing Cal City Substation by approximately 10 acres[2] to include new 115 kV, 33 kV, and 12 kV switchracks, two 115 kV/33 kV transformers, four 115 kV/12 kV transformers, one 115 kV capacitor bank, two 33 kV capacitor banks, and four 12 kV capacitor banks

This project description is based on planning level assumptions. Exact details would be determined following completion of final engineering, identification of field conditions, availability of labor, material, and equipment, and compliance with applicable environmental and permitting requirements.

The "no-cost and low-cost" magnetic field reduction design options that are incorporated into the design of the Project are as follows:

- Utilize structure heights that meet or exceed SCE's EMF preferred design criteria.

---

1 The extremely low frequency is defined as the frequency range from 3 Hz to 3,000 Hz.

2 The Proposed Project would expand the Cal City Substation property by approximately 10 acres into parcels currently owned by SCE. The Proposed Project does not include acquisition of any additional parcels.

- Utilize subtransmission line construction that reduces the space between conductors as compared with other designs.

- Place major substation electrical equipment (such as transformers, switchracks, buses and underground duct banks) away from the substation property lines.

- Configure the transfer and operating buses with the transfer bus closest to the nearest property line.

The "no-cost and low-cost" magnetic field reduction design options that SCE considered for the Project are summarized in Table 1. For the purpose of evaluating "no-cost and low-cost" magnetic field reduction design options, the evaluation of magnetic fields associated with the Project has been divided into various areas that contain similar magnetic field models.

SCE's plan for applying the above "no-cost and low-cost" magnetic field reduction design options for the Project is consistent with CPUC's EMF policy and with the direction of leading national and international health agencies. Furthermore, the plan complies with SCE's EMF Design Guidelines[3], and with applicable national and state safety standards for new electrical facilities.

Area No.	**Location**	**Adjacent Land Use Codes**	**MF Reduction Design Options Considered**	**Estimated Cost to Adopt**	**Design Option(s) Adopted? (Yes/No)**	**Reason(s) if not adopted**
Cal City Substation	Located just north of the corner of Hacienda Boulevard and Mendiburu Road in California City, California	6	• Placing major substation electrical equipment (such as transformers, switchracks, buses and underground duct banks) away from the substation property lines • Configuring the transfer and operating buses with the transfer bus closest to the nearest property line	• No-Cost[10] • No-Cost	• Yes • Yes, on 33 and 12 kV only	N/A

10 This option was included in the preliminary design and continues to be included in the design of the project.

II. Background Regarding EMF And Public Health Research On EMF

There are many sources of power frequency[11] electric and magnetic fields, including internal household and building wiring, electrical appliances, and electric power transmission and distribution lines. There have been numerous scientific studies about the potential health effects of EMF. After many years of research, the scientific community has been unable to determine if exposures to EMF cause health hazards. State and federal public health regulatory agencies have determined that setting numeric exposure limits is not appropriate.[12]

Many of the questions about possible connections between EMF exposures and specific diseases have been successfully resolved due to an aggressive international research program. However, potentially important public health questions remain about whether there is a link between EMF exposures and certain diseases, including childhood leukemia and a variety of adult diseases (e.g., adult cancers and miscarriages). As a result, some health authorities have identified magnetic field exposures as a possible human carcinogen. As summarized in greater detail below, these conclusions are consistent with the following published reports: the National Institute of Environmental Health Sciences (NIEHS) 1999[13], the National Radiation Protection Board (NRPB) 2001[14], the International Commission on non-Ionizing Radiation Protection (ICNIRP) 2001, the California Department of Health Services (CDHS) 2002[15], the International Agency for Research on Cancer (IARC) 2002[16] and the World Health Organization (WHO) 2007[17] .

The federal government conducted EMF research as a part of a $45-million research program managed by the NIEHS. This program, known as the EMF RAPID (Research and Public Information Dissemination), submitted its final report to the U.S. Congress on June 15, 1999. The report concluded that:

- "The scientific evidence suggesting that ELF-EMF exposures pose any health risk is weak."[18]
- "The NIEHS concludes that ELF-EMF exposure cannot be recognized as entirely safe because of weak scientific evidence that exposure may pose a leukemia hazard."[19]

19 *Ibid.*, p. iii

- "The NIEHS suggests that the level and strength of evidence supporting ELF-EMF exposure as a human health hazard are insufficient to warrant aggressive regulatory actions; thus, we do not recommend actions such as stringent standards on electric appliances and a national program to bury all transmission and distribution lines. Instead, the evidence suggests passive measures such as a continued emphasis on educating both the public and the regulated community on means aimed at reducing exposures. NIEHS suggests that the power industry continue its current practice of siting power lines to reduce exposures and continue to explore ways to reduce the creation of magnetic fields around transmission and distribution lines without creating new hazards."[20]

In 2001, Britain's NRPB arrived at a similar conclusion:

> "After a wide-ranging and thorough review of scientific research, an independent Advisory Group to the Board of NRPB has concluded that the power frequency electromagnetic fields that exist in the vast majority of homes are not a cause of cancer in general. However, some epidemiological studies do indicate a possible small risk of childhood leukemia associated with exposures to unusually high levels of power frequency magnetic fields."[21]

In 2002, three scientists for CDHS concluded:

> "To one degree or another, all three of the [CDHS] scientists are inclined to believe that EMFs can cause some degree of increased risk of childhood leukemia, adult brain cancer, Lou Gehrig's disease, and miscarriage.
>
> They [CDHS] strongly believe that EMFs do not increase the risk of birth defects, or low birth weight.
>
> They [CDHS] strongly believe that EMFs are not universal carcinogens, since there are a number of cancer types that are not associated with EMF exposure.
>
> To one degree or another they [CDHS] are inclined to believe that EMFs do not cause an increased risk of breast cancer, heart disease, Alzheimer's disease, depression, or symptoms attributed by some to a sensitivity to EMFs. However, all three scientists had judgments that were "close to the dividing line between believing and not believing" that EMFs cause some degree of increased risk of suicide. For adult leukemia, two of the scientists are 'close to the dividing line between believing or not believing' and one was 'prone to believe' that EMFs cause some degree of increased risk."[22]

22 CDHS, An Evaluation of the Possible Risks From Electric and Magnetic Fields (EMFs) From Power Lines, Internal Wiring, Electrical Occupations and Appliances, p. 3, 2002.

Also in 2002, the World Health Organization's (WHO) IARC concluded:

> "ELF magnetic fields are possibly carcinogenic to humans"[23], based on consistent statistical associations of high-level residential magnetic fields with a doubling of risk of childhood leukemia...Children who are exposed to residential ELF magnetic fields less than 0.4 microTesla (4.0 milligauss) have no increased risk for leukemia…. In contrast, "no consistent relationship has been seen in studies of childhood brain tumors or cancers at other sites and residential ELF electric and magnetic fields."[24]

In June of 2007, the WHO issued a report on their multi-year investigation of EMF and the possible health effects. After reviewing scientific data from numerous EMF and human health studies, they concluded:

> "Scientific evidence suggesting that everyday, chronic low-intensity (above 0.3-0.4 μT [3-4 mG]) power-frequency magnetic field exposure poses a health risk is based on epidemiological studies demonstrating a consistent pattern of increased risk for childhood leukemia."[25]
>
> "In addition, virtually all of the laboratory evidence and the mechanistic evidence fail to support a relationship between low-level ELF magnetic fields and changes in biological function or disease status. Thus, on balance, the evidence is not strong enough to be considered causal, but sufficiently strong to remain a concern."[26]
>
> "A number of other diseases have been investigated for possible association with ELF magnetic field exposure. These include cancers in both children and adults, depression, suicide, reproductive dysfunction, developmental disorders, immunological modifications and neurological disease. The scientific evidence supporting a linkage between ELF magnetic fields and any of these diseases is much weaker than for childhood leukemia and in some cases (for example, for cardiovascular disease or breast cancer) the evidence is sufficient to give confidence that magnetic fields do not cause the disease"[27]
>
> "Furthermore, given both the weakness of the evidence for a link between exposure to ELF magnetic fields and childhood leukemia, and the limited impact on public health if there is a link, the benefits of exposure reduction on health are unclear. Thus the costs of precautionary measures should be very low."[28]

III. Application Of the CPUC's "No-Cost And Low-Cost" EMF Policy To This Project

Recognizing the scientific uncertainty over the connection between EMF exposures and health effects, the CPUC adopted a policy that addresses public concern over EMF with a combination of education, information, and precaution-based approaches. Specifically, Decision 93-11-013 established a precautionary based "no-cost and low-cost" EMF policy for California's regulated electric utilities based on recognition that scientific research had not demonstrated that exposures to EMF cause health hazards and that it was inappropriate to set numeric standards that would limit exposure.

In 2006, the CPUC completed its review and update of its EMF Policy in Decision 06-01-042. This decision reaffirmed the finding that state and federal public health regulatory agencies have not established a direct link between exposure to EMF and human health effects,[29] and the policy direction that (1) use of numeric exposure limits was not appropriate in setting utility design guidelines to address EMF,[30] and (2) existing "no-cost and low-cost" precautionary-based EMF policy should be continued for proposed electrical facilities. The decision also reaffirmed that EMF concerns brought up during Certificate of Public Convenience and Necessity (CPCN) and Permit to Construct (PTC) proceedings for electric and transmission and substation facilities should be limited to the utility's compliance with the CPUC's "no-cost and low-cost" policies.[31]

The decision directed regulated utilities to hold a workshop to develop standard approaches for EMF Design Guidelines and such a workshop was held on February 21, 2006. Consistent design guidelines have been developed that describe the routine magnetic field reduction measures that regulated California electric utilities consider for new and upgraded transmission line and transmission substation projects. SCE filed its revised EMF Design Guidelines with the CPUC on July 26, 2006.

"No-cost and low-cost" measures to reduce magnetic fields would be implemented for this Project in accordance with SCE's EMF Design Guidelines. In summary, the process of evaluating "no-cost and low-cost" magnetic field reduction measures and prioritizing within and between land usage classes considers the following:

1. SCE's priority in the design of any electrical facility is public and employee safety. Without exception, design and construction of an electric power system must comply with all applicable federal, state, and local regulations, applicable safety codes, and each electric utility's construction standards. Furthermore, transmission

---

29 CPUC Decision 06-01-042, Conclusion of Law No. 5, mimeo. p. 19 ("As discussed in the rulemaking, a direct link between exposure to EMF and human health effects has yet to be proven despite numerous studies including a study ordered by this Commission and conducted by DHS.").

30 CPUC Decision 06-01-042, mimeo. p. 17 - 18 ("Furthermore, we do not request that utilities include non-routine mitigation measures, or other mitigation measures that are based on numeric values of EMF exposure, in revised design guidelines or apply mitigation measures to reconfigurations or relocations of less than 2,000 feet, the distance under which exemptions apply under GO 131-D. Non-routine mitigation measures should only be considered under unique circumstances.").

31 CPUC Decision 06-01-042, Conclusion of Law No. 2, ("EMF concerns in future CPCN and PTC proceedings for electric and transmission and substation facilities should be limited to the utility's compliance with the Commission's low-cost/no-cost policies.").

and subtransmission lines and substations must be constructed so that they can operate reliably at their design capacity. Their design must be compatible with other facilities in the area and the cost to operate and maintain the facilities must be reasonable.

2. As a supplement to Step 1, SCE follows the CPUC's direction to undertake "no-cost and low-cost" magnetic field reduction measures for new and upgraded electrical facilities. Any proposed "no-cost and low-cost" magnetic field measures, must, however, meet the requirements described in Step 1 above. The CPUC defines "no-cost and low-cost" measures as follows:

   - Low-cost measures, in aggregate, should:
     - Cost in the range of 4 percent of the total project cost.
     - Result in magnetic field reductions of "15% or greater at the utility ROW [rights-of-way]…"[32]

   The CPUC Decision stated,

   > "We direct the utilities to use 4 percent as a benchmark in developing their EMF mitigation guidelines. We will not establish 4 percent as an absolute cap at this time because we do not want to arbitrarily eliminate a potential measure that might be available but costs more than the 4 percent figure. Conversely, the utilities are encouraged to use effective measures that cost less than 4 percent."[33]

3. The CPUC provided further policy direction in Decision 06-01-042, stating that, "[a]lthough equal mitigation for an entire class is a desirable goal, we will not limit the spending of EMF mitigation to zero on the basis that not all class members can benefit."[34] While Decision 06-01-042 directs the utilities to favor schools, day-care facilities and hospitals over residential areas when applying low-cost magnetic field reduction measures, prioritization within a class can be difficult on a project case-by-case basis because schools, day-care facilities, and hospitals are often integrated into residential areas, and many licensed day-care facilities are housed in private homes, and can be easily moved from one location to another. Therefore, it may be practical for public schools, licensed day-care centers, hospitals, and residential land uses to be grouped together to receive highest prioritization for low-cost magnetic field reduction measures. Commercial and industrial areas may be grouped as a second priority group, followed by recreational and agricultural areas as the third group. Low-cost magnetic field reduction measures will not be considered for undeveloped land, such as open space, state and national parks, and Bureau of Land Management and U.S. Forest Service lands. When spending for low-cost measures would otherwise disallow equitable magnetic field reduction for all areas within a single land-use class, prioritization can be achieved by

---

32 CPUC Decision 06-01-042, p. 10

33 CPUC Decision 93-11-013, § 3.3.2, p.10.

34 CPUC Decision 06-01-042, p. 10

considering location and/or density of permanently occupied structures on lands adjacent to the projects, as appropriate.

This FMP contains descriptions of various magnetic field models and the calculated results of magnetic field levels based on those models. These calculated results are provided only for purposes of identifying the relative differences in magnetic field levels among various transmission or subtransmission line design alternatives under a specific set of modeling assumptions and determining whether particular design alternatives can achieve magnetic field level reductions of 15 percent or more. The calculated results are not intended to be predictors of the actual magnetic field levels at any given time or at any specific location if and when the project is constructed. This is because magnetic field levels depend upon a variety of variables, including load growth, customer electricity usage, and other factors beyond SCE's control. The CPUC affirmed this in D. 06-01-042 stating:

> "Our [CPUC] review of the modeling methodology provided in the utility [EMF] design guidelines indicates that it accomplishes its purpose, which is to measure the relative differences between alternative mitigation measures. Thus, the modeling indicates relative differences in magnetic field reductions between different transmission line construction methods, but does not measure actual environmental magnetic fields."[35]

[35] CPUC Decision 06-01-042, p. 11

IV. Project Description

Southern California Edison (SCE) is proposing to construct the Cal City 115 kV Substation Upgrade Project. The Proposed Project would occur in portions of the City of California City and surrounding areas of unincorporated Kern County, unincorporated San Bernadino County, and Edwards Air Force Base (EAFB) (Figure 1). The Proposed Project consists of two new subtransmission lines: one line from Kramer Substation to Cal City Substation and one three-terminal line connecting Cal City Substation, and Edwards Substation, and Holgate Switchyard. The Proposed Project also includes minor upgrades for the three related substations and the switchyard.

The Proposed Project would include two new 115 kV subtransmission lines, which are anticipated to be built on new structures within the approximately 70-mile total alignment. However, existing structures adjacent to Cal City, Edwards, and Kramer Substations, and Holgate Switchyard may be modified to accommodate the new lines connecting into the substations. The location, quantities, and dimensions of existing structures that may be modified adjacent to substations will be determined later.

New subtransmission structures (i.e., tubular steel poles (TSPs), light-weight steel (LWS) poles, and guy stub TSPs) would be installed for the Proposed Project. TSPs are engineered structures constructed from galvanized steel; the design of a given TSP is specific to the location and engineering considerations. TSPs would be either installed on a drilled, poured-in-place, concrete foundation, or would be installed on drilled micro-piles. LWS poles are structures constructed from galvanized steel; LWS poles are non-engineered wood pole-equivalents. LWS poles would be direct-buried.

As part of the Proposed Project, new non-specular 954 Standard Aluminum Conductor (SAC) and/or Aluminum Core Steel Reinforced (ACSR) would be installed along the lengths of the new Kramer-Cal City and Cal City-Edwards-Holgate 115 kV Subtransmission Lines. The conductor would have a diameter of approximately 1.124 or 1.165 inches, respectively. Approximately 70 circuit miles of new 954 SAC and/or ACSR would be installed. Optical Ground Wire (OPGW) would be installed along the lengths of the new Kramer-Cal City and Cal City-Edwards-Holgate 115 kV Subtransmission Lines. The OPGW would have a diameter of approximately 0.773 inches. Approximately 70 miles of new OPGW would be installed overhead at the top of structures. Portions of the existing 115 kV subtransmission pole line are shared by both 33 kV and 12 kV distribution circuits.

The following facilities would be installed in the new Kramer-Cal City 115 kV Subtransmission Line:

- Approximately 685 single-circuit LWS poles and TSPs with approximate heights between 40 and 132 feet above ground.
- Approximately 42 circuit miles of new 954 SAC and/or ACSR in a single-circuit configuration on new structures.
- Approximately 42 miles of OPGW on new structures.

The following facilities would be installed in the new Cal City-Edwards-Holgate 115 kV Subtransmission Line:

- Approximately 463 single-circuit LWS poles and TSPs with approximate heights between 40 and 109 feet above ground.
- Approximately 28 circuit miles of new 954 SAC Magnolia and/or ACSR single circuit on new structures.
- Approximately 28 miles of OPGW on new structures.

Kramer-Cal City Subtransmission Line

The proposed route for the Kramer-Cal City Line would exit the west side of the Kramer Substation, turn north, cross over the US Highway 395/CA State Route 58 Highway interchange and run approximately 18 miles north along the west side of the existing utility corridor containing the Bureau of Land Management (BLM) West-Kramer 220 kV transmission line, Kramer-Inyokern-Randsburg #3 115 kV Subtransmission Line, and Kramer-Inyokern-Randsburg #1 115 kV Subtransmission Line. At the intersection of Cuddeback Road and the existing utility corridor in unincorporated San Bernadino County, the overhead subtransmission line would turn west/southwest for approximately 13.9 miles roughly paralleling 20 Mule Team Parkway and Cuddeback Road (entering California City). The line would continue west another 7.3 miles to Rudnick Boulevard before turning south for 1.8 miles south along the west side of 90th Street to the termination at Cal City Substation, located in California City.

Cal City-Edwards-Holgate Subtransmission Line

The proposed route for the Cal City-Edwards-Holgate Line exits Cal City Substation, located in California City, from the north and run approximately 0.3 miles north along the west side of 90th Street to Lindbergh Boulevard where it would turn east. From Lindbergh Boulevard, the line would continue east for approximately 2.5 miles before turning south for about 2.9 through open land, leaving California City into unincorporated Kern County and turning southeast just north of the intersection of 115th Street and California City Boulevard. The line follows on the north side of California City Boulevard and continues southeast where the Boulevard turns to the south. After approximately 3.3 miles, the line turns south at Joshua Boulevard, extending approximately 3.1 miles to the intersection of 140th Street and Suckow Road. At this intersection, this line taps into two directions.

The tap towards Holgate Switchyard turns west along Suckow Road for approximately 4 miles before turning northeast for approximately 1.4 miles from the intersection of Suckow Road and Schultz Road to the intersection of Alomar Street and an unnamed dirt road. The tap continues east just north of the dirt road for approximately 3 miles to Gephart Road before turning south for approximately 2 miles on the west side of Gephart Road. At this location, the line turns east for approximately 2 miles before entering the south side of the Holgate Substation. This tap is in unincorporated Kern County, crossing through North Edwards.

The tap towards Edwards Substation continues through unincorporated Kern County an additional approximately 2 miles south along 140th Street (which turns into Rosamond Boulevard at the interchange with CA State Route 58) on to Edwards Air Force Base. The line turns southwest running just north of the existing Edwards-Holgate-South Base 115 kV Subtransmission Line. After approximately 0.8 miles, the line turns south for approximately 0.5 miles before terminating

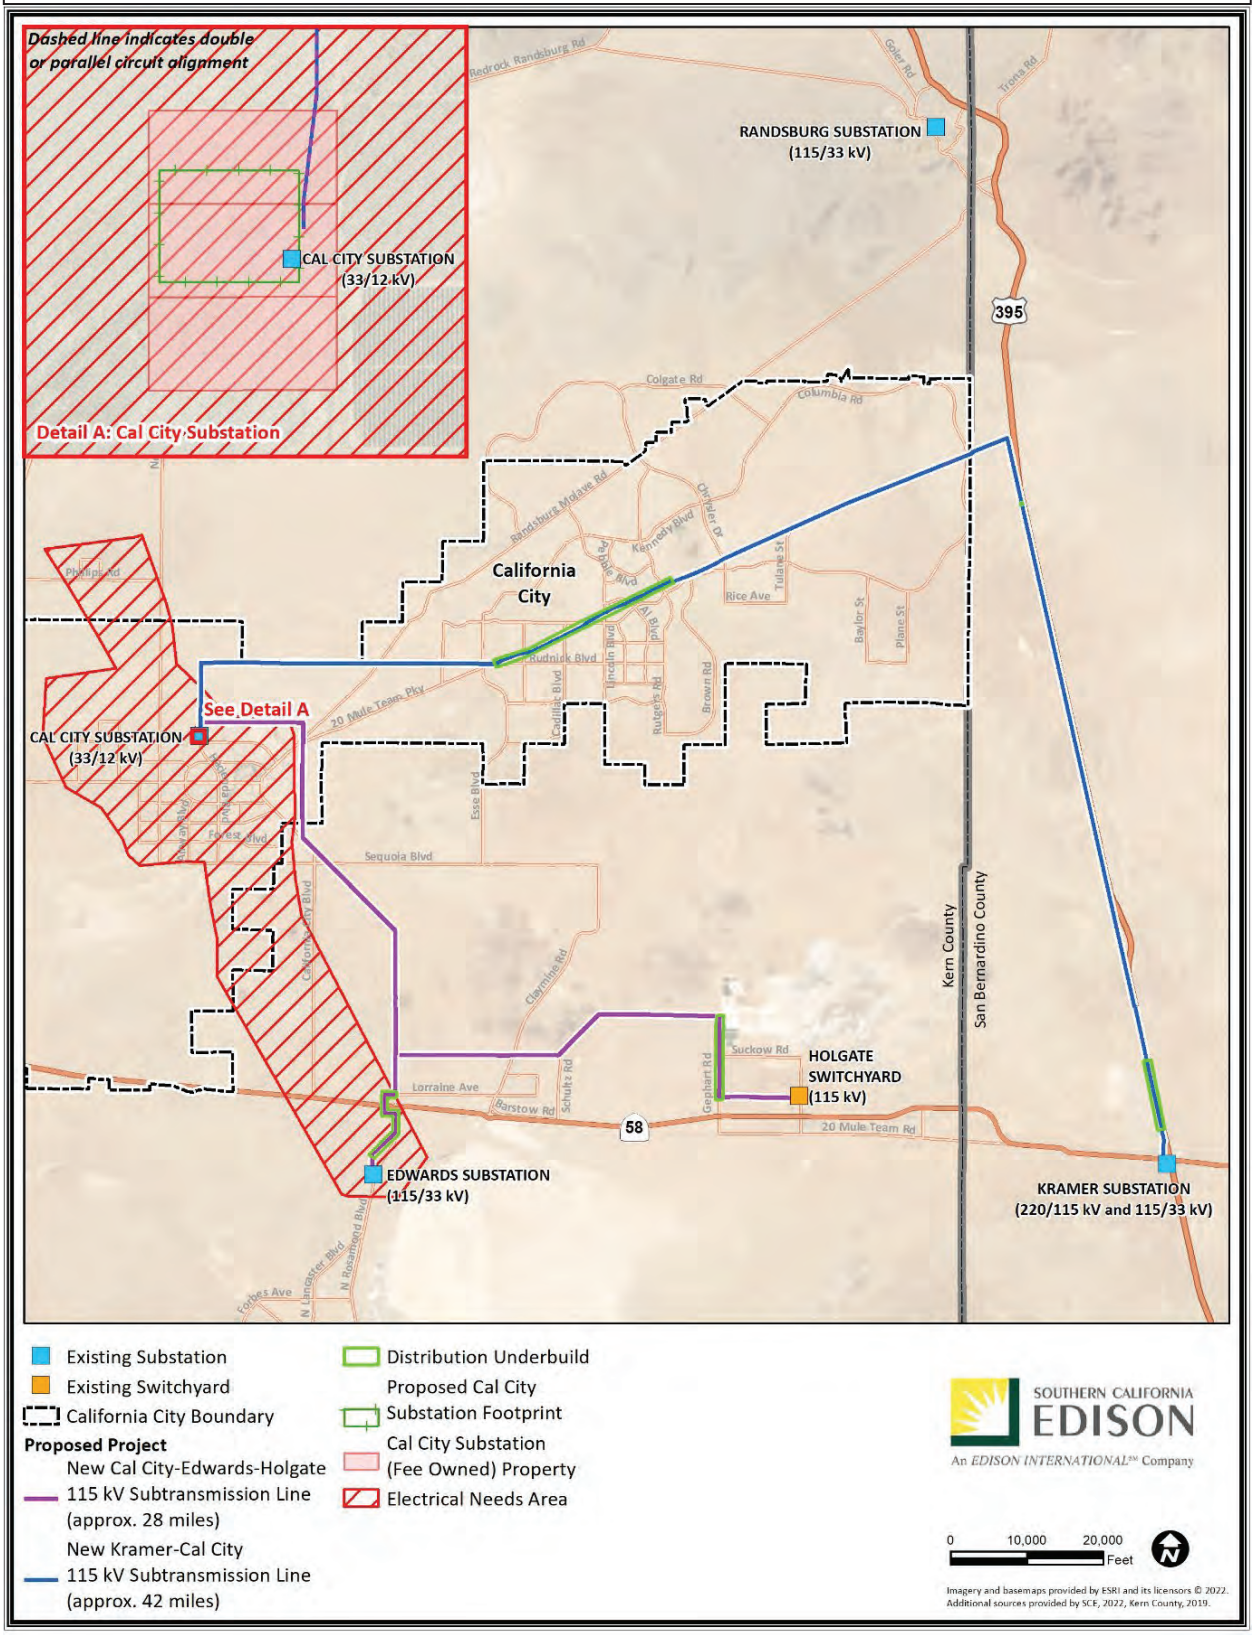
on the north side of Edwards Substation adjacent to the Edwards-Holgate-South Base 115 kV Subtransmission Line.

Cal City Substation Improvements

- Expand the existing substation by approximately 10 acres
- Install new five-position 115 kV switchrack with five positions initially equipped
- Install new five-position 33 kV switchrack with five positions initially equipped
- Install new 21-position 12 kV switchrack with 19 positions initially equipped
- Install two 115 kV/33kV, 28 MVA transformers
- Install four 115 kV/12 kV, 28 MVA transformers
- Install one 115 kV, 28.8 MVAR capacitor
- Install two 33 kV, 4.8 MVAR capacitors
- Install four 12 kV, 4.8 MVAR capacitors

Kramer Substation Improvements

- Equip one existing 115 kV line position
- Convert two 115 kV bank positions to a double bus, double breaker configuration
- Expand existing 115 kV switchrack to a breaker-and-a-half configuration



Edwards Substation Improvements

- Equip one existing 115 kV line position
- Expand existing 115 kV switchrack to a breaker-and-a-half configuration
- Convert two 115 kV bank positions to a double bus, double breaker configuration
- Install or upgrade protection for two 115 kV lines and two buses

Holgate Switchyard Improvements

- Equip one existing 115 kV line position

Figure 1. Proposed Cal City Substation 115 kV Upgrade Project Line Routes

V. Evaluation of "No-Cost and Low-Cost" Magnetic Field Reduction Design Options

Please note that the following magnetic field models and the calculated results of magnetic field levels are intended only for purposes of identifying the relative differences in magnetic field levels among various subtransmission line and subtransmission line design alternatives under a specific set of modeling assumptions (see §VII-Appendix A for more detailed information about the calculation assumptions and loading conditions) and determining whether particular design alternatives can achieve magnetic field level reductions of 15 percent or more. The calculated results are not intended to be predictors of the actual magnetic field levels at any given time or at any specific location when the Project is constructed.

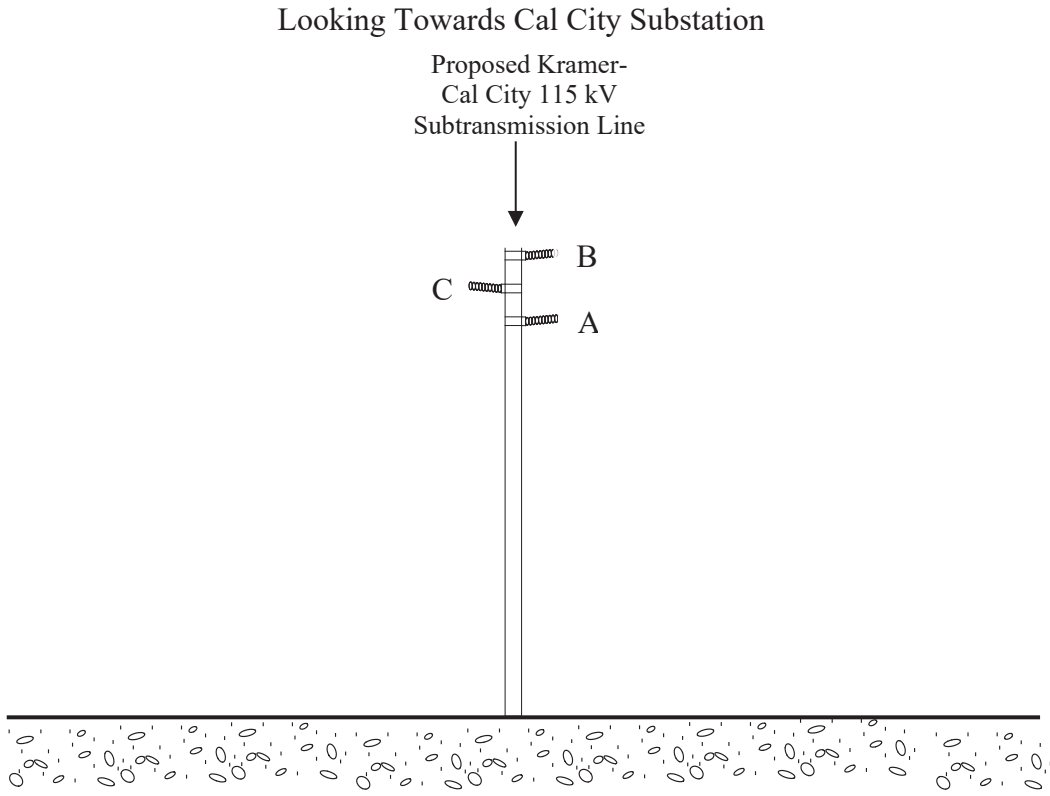
For the purpose of evaluating "no-cost and low-cost" magnetic field reduction design options, the evaluation of magnetic fields associated with the Project has been divided into the two lines that contain similar magnetic field models. This section has been split into two parts: Part 1 covers the Subtransmission Lines and Part 2 covers the Substations.

Part 1: Subtransmission Lines

Kramer-Cal City 115 kV:

This portion of the evaluation would consist of the standard delta Kramer-Cal City 115 kV Subtransmission Line which would consist of one SCE circuit with single-circuit overhead construction on LWS poles. The proposed design is shown in Figure 2 with recommended phasing. Portions of this line parallel an existing transmission corridor that was not separately analyzed as it is in undeveloped land.

For EMF analysis, calculated field levels were evaluated at a distance of approximately 25 feet away from the center of the structures. Presently, there are no schools adjacent to the Kramer-Cal City line. The proposed route for the Kramer-Cal City line is adjacent to residential (scarcely populated), commercial/industrial, recreational, and undeveloped land in Kern County and San Bernardino County.



No-Cost Field Reduction Measures: The proposed design for the delta structures for the Kramer-Cal City line includes the following no-cost field reduction measures:

1. Utilize subtransmission structure heights that meet or exceed SCE's preferred EMF design criteria.

2. Utilize subtransmission line construction that reduces the space between conductors as compared with other designs.

Low-Cost Field Reduction Options: Because the proposed design incorporates the above no-cost field reduction measures that meet SCE's preferred design criteria, no low- cost reduction measures were considered for this section of the Project.

Figure 2. Proposed 115 kV Single-Circuit Structure Design – Kramer-Cal City[36]

Magnetic Field Calculations: Figure 3 and Table 2 show the calculated magnetic field levels for the proposed design. These calculations were made using the proposed LWS pole with an overall minimum length of 80 feet.

[36] Figure is not to scale.

Figure 3. Calculated Magnetic Field Levels[37] for the Proposed Kramer-Cal City 115 kV Subtransmission Line (Two Conductor Side to North or East)

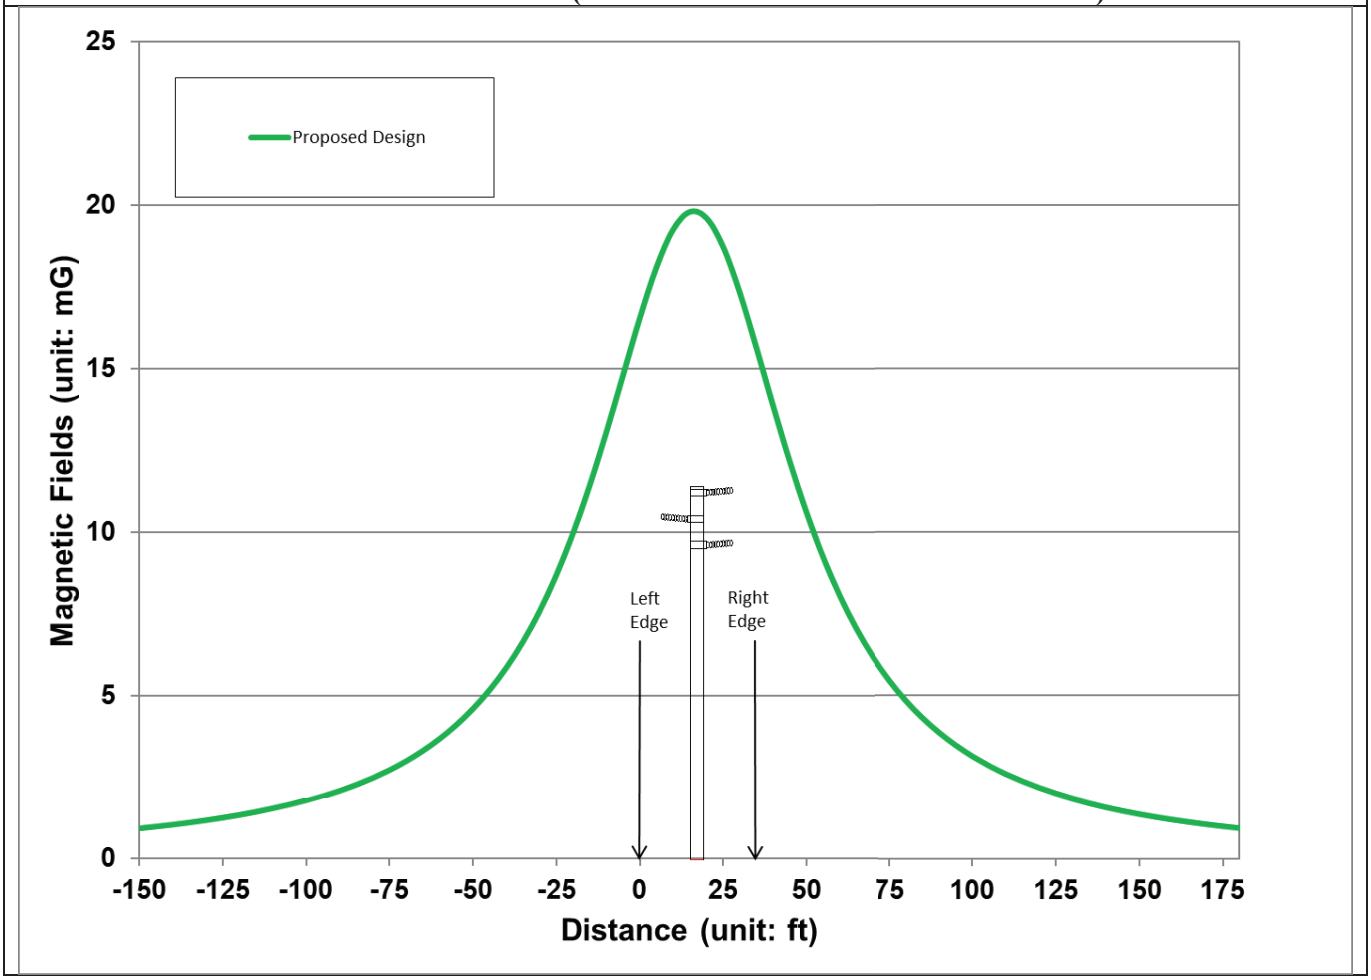


Table 2. Calculated Magnetic Field Levels[38] for Kramer-Cal City

Design Options	Left Edge of Evaluation (mG)	% Reduction	Right Edge of Evaluation (mG)	% Reduction
Existing	N/A	-	N/A	-
Proposed	16.5	-	17.3	-

Recommendations for the Kramer-Cal City Line: *The proposed design includes no-cost field reduction measures. Because the proposed design already incorporates structures with heights meeting or exceeding SCE's preferred design criteria and utilizes subtransmission line*

37 This figure shows calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

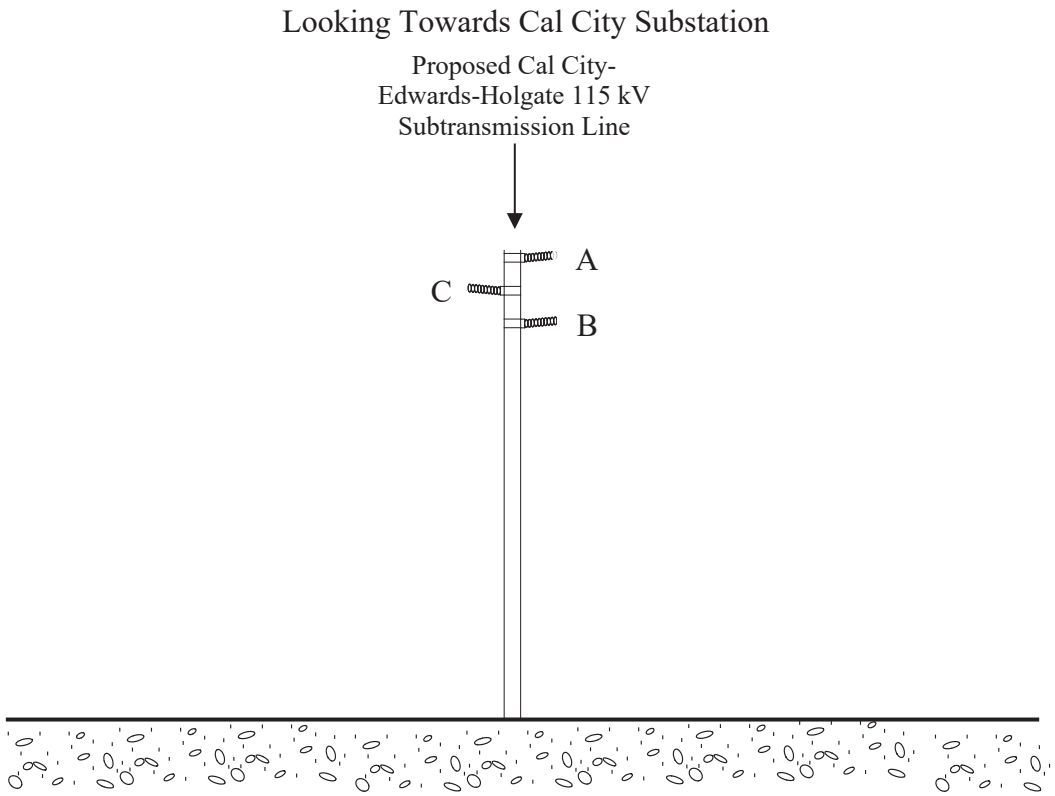
38 This table lists calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

construction that reduces the space between conductors as compared with other designs, no low-cost field reduction measures are recommended.

Cal City-Edwards-Holgate 115 kV:

This portion of the evaluation consists of the Cal City-Edwards-Holgate 115 kV Subtransmission Line which would consist of one SCE circuit with single-circuit overhead construction. The proposed design is shown in Figure 4 with the proposed phasing.

For EMF analysis, calculated field levels were evaluated at a distance of approximately 25 feet away from the center of the structures. Presently, there are no schools adjacent to the Cal City-Edwards-Holgate Line. The proposed route for the Cal City-Edwards-Holgate Line is adjacent to residential (scarcely populated), commercial/industrial, and undeveloped land.



No-Cost Field Reduction Measures: The proposed design for the delta structures for the Cal City-Edwards-Holgate Line includes the following no-cost field reduction measures:

1. Utilize subtransmission structure heights that meet or exceed SCE's preferred EMF design criteria.

2. Utilize subtransmission line construction that reduces the space between conductors as compared with other designs.

Low-Cost Field Reduction Options: Because the proposed design incorporates the above no-cost field reduction measures that meet SCE's preferred design criteria, no low- cost reduction measures were considered for this section of the Project.

Figure 4. Proposed 115 kV Single-Circuit Structure Design – Cal City-Edwards-Holgate 115 kV Subtransmission Line[39]

Magnetic Field Calculations: Figure 5 and Table 3 show the calculated magnetic field levels for the proposed design. These calculations were made using the proposed LWS pole with a minimum overall length of 80 feet.

[39] Figure is not to scale.

Table 3. Calculated Magnetic Field Levels[41] for Cal City-Edwards-Holgate

Design Options	Left Edge of Evaluation (mG)	% Reduction	Right Edge of Evaluation (mG)	% Reduction
Existing	N/A	-	N/A	-
Proposed	18.9	-	19.9	-

Recommendations for the Cal City-Edwards-Holgate Line: *The proposed design includes the no-cost field reduction measure of incorporating structures with heights meeting or exceeding SCE's preferred design in the Project design.*

Part 2: Substations and Switchyard

40 This figure shows calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

41 This table lists calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

Generally, magnetic field values along the substation perimeter are low compared to the substation interior because of the distance from the perimeter to the energized equipment. Normally, the highest magnetic field values around the perimeter of a substation result from overhead power lines and underground duct banks entering and leaving the substation and are not caused by substation equipment. Therefore, the magnetic field reduction design options generally applicable to a substation project are as follows:

- Site selection for a new substation.
- Setback of substation structures and major substation equipment (such as bus, transformers, and underground cable duct banks, etc.) from perimeter.
- Field reduction for transmission lines and subtransmission lines entering and exiting the substation.

Only the proposed Cal City 115/33 kV Substation was reviewed as the other stations have minor work (terminal upgrades) that would not modify equipment that could utilize no-cost or low-cost mitigation measures.

Cal City 115/33 and 115/12 kV Substation

The proposed Cal City 115/33 kV Substation will be built in the location of the expanded Cal City 33/12 kV Substation. A Substation Checklist, as shown in Table 4 for the proposed Cal City 115/33 kV Substation, is used for evaluating the no-cost and low-cost design options considered for the substation project, the design options adopted, and reasons that certain design options were not adopted if applicable.

Table 4. Cal City Substation Checklist for Examining No-cost and Low-cost Magnetic Field Reduction Design Options

No.	No-Cost and Low-Cost Magnetic Field Reduction Design Options Evaluated for a Substation Project	Design Options Adopted? (Yes/No)	Reason(s) if not Adopted
1	Are 115 kV rated transformer(s) 15 feet or more from the substation property line?	Yes	
2	Are 115 kV rated switch-racks, capacitor banks & bus 8 feet (or more) from the substation property line?	Yes	
3	Are transfer & operating buses configured with the transfer bus facing the nearest property line?	Yes, on 33 and 12 kV only[42]	
4	Are underground cable duct banks greater than 12 feet from side of property line?	Yes	

[42] The 115 kV switchrack is a breaker-and-a-half configuration

VI. Final Recommendations for Implementing "No-Cost and Low-Cost" Magnetic Field Reduction Design Options

In accordance with the "EMF Design Guidelines", filed with the CPUC in compliance with CPUC Decisions 93-11-013 and 06-01-042, SCE would implement the following "no-cost and low-cost" magnetic field reduction design options for the Project:

Kramer-Cal City – The proposed Kramer-Cal City 115 kV Subtransmission Line would be single-circuit construction:

- Utilize subtransmission structure heights that meet or exceed SCE's preferred EMF design criteria.
- Utilize subtransmission line construction that reduces the space between conductors as compared with other designs.
- Arrange the phase conductors of the proposed Kramer-Cal City 115 kV Subtransmission Line as **B-C-A** top to bottom, as shown in Figure 2 due to nearby lines for portions of the project.

Cal City-Edwards-Holgate – The proposed Cal City-Edwards-Holgate 115 kV Subtransmission Line would be single-circuit construction:

- Utilize subtransmission structure heights that meet or exceed SCE's preferred EMF design criteria.
- Utilize subtransmission line construction that reduces the space between conductors as compared with other designs.
- Arrange the phase conductors of the proposed Cal City-Edwards-Holgate 115 kV Subtransmission Line as **A-C-B** top to bottom, as shown in Figure 4 due to nearby lines for portions of the project.

Cal City Substation:

- Place major substation electrical equipment (such as transformers, switchracks, buses and underground duct banks) away from the substation property lines.
- Configure the transfer and operating buses with the transfer bus closest to the nearest property line (for 33 and 12 kV only).

NOTE: It is acceptable to deviate from the proposed pole-head configuration or structural types for a few structures in all segments for constructability or engineering reasons. Deviation from the proposed design for a few structures would not have a significant impact to EMF levels.

The recommended "no-cost and low-cost" magnetic field reduction design options listed above are based upon preliminary engineering design, and therefore, they are subject to change during the final engineering design. If the preliminary engineering design is significantly modified (in the context of evaluating and implementing CPUC's "no-cost and low-cost" EMF Policy), then an Addendum to the FMP will be prepared.

SCE's plan for applying the above "no-cost and low-cost" magnetic field reduction design options uniformly for the Project is consistent with the CPUC's EMF Decisions No. 93-11-013 and No. 06-01-042. Furthermore, the recommendations above meet the CPUC approved EMF Design Guidelines as well as all applicable national and state safety standards for new electrical facilities.

VII. Appendix A: Two-Dimensional Model Assumptions and Year 2028 Forecasted Loading Conditions

Magnetic Field Model Assumptions:

SCE uses a computer program titled "MFields"[43] to model the magnetic field characteristics of various transmission designs options. All magnetic field models and the calculated results of magnetic field levels presented in this document are intended only for purposes of identifying the relative differences in magnetic field levels among various transmission line and subtransmission line design alternatives under a specific set of modeling assumptions and determining whether particular design alternatives can achieve magnetic field level reductions of 15 percent or more. The calculated results are not intended to be predictors of the actual magnetic field levels at any given time or at any specific location if and when the Project is constructed.

Typical two-dimensional magnetic field modeling assumptions include:

- All transmission and subtransmission lines were modeled using forecasted peak loads (see Table 5).
- All conductors were assumed to be straight and infinitely long.
- Average conductor heights accounted for line sag used in the calculation for the subtransmission line designs.
- Magnetic field strength was calculated at a height of three feet above ground.
- Resultant magnetic fields values were presented in this FMP.
- All line currents were assumed to be balanced. (i.e., neutral or ground currents are not considered).
- Terrain was assumed to be flat.
- Project dominant power flow directions were used.

43 SCE, MFields for Excel, Version 2.0, 2007.

Table 5. Year 2028 Forecasted Loading Conditions for Proposed Project (After Project Completion)		
Line Name	**Current (Amps)**	**Power Flow Direction**
Kramer-Cal City 115 kV	375	Kramer to Cal City
Cal City-Edwards-Holgate 115 kV	423	Holgate to Cal City

Notes:

1. Forecasted loading data is based upon scenarios representing load forecasts for 2028. The forecasting data is subject to change depending upon availability of generations, load increase, changes in load demand, and by many other factors.

memorandum

date	February 6, 2025
to	Boris Sanchez, CPUC Project Manager
cc	Matt Fagundes, ESA Project Manager
from	Dave Davis, AICP, Aesthetics Analyst
subject	Cal City Substation 115 kV Subtransmission Upgrade Project

As part of its visual impact assessment for the Cal City Substation 115 kV Upgrade Project (Project), the U.S. Bureau of Land Management (BLM) has selected seven key observation points (KOPs) upon which to base its assessment. The Southern California Edisson (SCE) team prepared calibrated visual simulations of the Project as viewed from these KOPs and shared them with CPUC, the Lead Agency for the Project's review under the California Environmental Quality Act (CEQA). CPUC requested the ESA team review the new SCE KOPs to determine whether any of those would provide additional and useful information for the CEQA analysis beyond the KOPs SCE included in its Proponent's Environmental Assessment (PEA) and responses to CPUC Data Request No. 2, Question 19 (DR2, Q19). Following is a summary of our review.

BLM KOP 1 is a view similar to PEA KOP 3. In both views, the Project may be seen from public roads and other publicly accessible vantage points in residential neighborhoods. The distinction is that BLM KOP 1 is closer to the Project, parallels an existing line, and BLM land is adjacent to the east of the Project, where that is not the case at PEA KOP 3. PEA KOP 3 shows two lines where none previously existed, creating the significant visual impact. Based on the existing view from BLM KOP 1 with an existing line in place, the project would not create a significant impact because the visual change, or contrast, would not be as strong as that shown in PEA KOP 3.

BLM KOP 2 is not in the vicinity of any PEA KOPs, but does not demonstrate usefulness for the CEQA analysis due to the lack of viewers, distance, and intervening topography.

BLM KOP 3 is a view looking west-southwest on 20-Mule Team Parkway from its intersection with US 395. The visual character of this view is considered similar to PEA KOP 2. Both views exhibit uninterrupted visual distance and perspective, although the visual background at PEA KOP 2 is the Tehachapi Mountains, whereas the background at BLM KOP 3 is defined by the level horizon line. The high level of visual contrast would constitute a significant visual impact to BLM KOP 3, as well. The Project would create a similar visual contrast at either KOP and be representative of views along 20-Mule Team Parkway altogether.

In other cases, BLM selected KOPs showing similar visual character to others previously provided by SCE. These include BLM KOP 4 on northbound U.S. Highway 395 (US 395) and BLM KOP 5 on westbound State Route 58. These are similar to PEA KOPs 5 and 4, respectively. These BLM KOPs provide an alternate view of the project and would support CPUC's impact findings at PEA KOP's 4 and 5.

BLM included CPUC's EIR KOP 6 (called KOP X in SCE's response to CPUC DR2, Q19) for its assessment. As it is a redundant KOP, it is not included herein.

BLM KOP 7 seems to represent the visual conditions near Sequoia Boulevard at the northern terminus of Claymine Road at Aerial Acres. This is a view of the Sequoia Boulevard Alternative in CPUC's CEQA analysis. This viewpoint can be added to further support CPUC's Alternatives Analysis.

Based on this brief review, ESA finds that:

- although CPUC's impact findings would not change, the BLM KOPs 1, 3, 4, 5, and 7 would provide further support of CPUC's findings for the reasons presented above;
- BLM KOP 2 does not add meaningfully to the CEQA analysis; and,
- the BLM KOPs more appropriately represent BLM's interests in the area and are more appropriate for BLM's purposes.

Subject: Cal City Substation 115 kV Upgrade Project Construction Health Risk Assessment

Dear Mr. Gonzales:

This memorandum assesses construction-related air emissions associated with the development of the Cal City Substation 115 Kilovolt (kV) Upgrade Project (Proposed Project). A health risk assessment (HRA) was prepared by Rincon Consultants, Inc. (Rincon), under contract to Southern California Edison (SCE). The purpose of this HRA is to determine the potential for construction to pose health risks to sensitive receptors near construction activities anticipated at Cal City Substation, specifically. Construction health risks associated with the Proposed Project have been compared to Eastern Kern Air Pollution Control District (EKAPCD) cancer and hazard risk thresholds.

The Cal City Substation is the primary focus of this analysis due to its proximity to nearby residential receptors. Additionally, the anticipated construction emissions are considerably larger at Cal City Substation than from construction activities associated with the Proposed Project at other substations and laydown yards, which are also located further from residential receptors than Cal City Substation. Linear construction activities under the Proposed Project generally are not as intensive and would only expose nearby sensitive receptors, where present, for a very brief amount of time as work progresses along the route. Therefore, construction activities at Cal City Substation are expected to yield the highest potential health risk impacts and construction activities associated with any other components of the Proposed Project are expected to be less impactful.

Project Summary

The Proposed Project would add load-serving capacity in the Electrical Needs Area (ENA) to serve current and long-term forecast electrical demand, improve system reliability within the ENA by providing diverse routes of power supply to the region, improve system operational flexibility by minimizing reliance on Edwards Substation (located on military base with restricted access) to provide power to the ENA (adjacent to military base), and improve system reliability within the ENA by providing a diversely-routed second 115 kV source line to Edwards Substation. The Proposed Project is divided into four major component categories, which include subtransmission, substation, distribution, and telecommunication. This HRA focuses on the substation component of the Proposed Project, including construction activities anticipated at the existing Cal City Substation.

As part of the Proposed Project, the existing Cal City Substation would be expanded to the north and south, adding approximately 10 acres to the total facility area.[1] The entire area would be graded,

[1] The Proposed Project would expand the approximately 5-acre Cal City Substation by approximately 10 acres onto parcels acquired by SCE in 2022. A portion of the expanded substation property would accommodate the expanded substation footprint and security fence line; the remainder of the property would be used for drainage improvements and material staging.

compacted, and leveled to create a generally flat surface. The expansion area would be prepared for the installation of the new substation equipment, drainage improvements, and creation of staging areas. Construction activities at Cal City Substation would occur over approximately 24 months starting in March 2026. Soil excavated during project construction would be stored on-site and used for backfill. Construction hours would generally occur between 6:00 am and 7:00 pm, Monday through Saturday.

Methodology

Air Dispersion Modeling

The Proposed Project's Cal City Substation construction activities would be located within the jurisdiction of EKAPCD. EKAPCD does not have modeling guidance for the American Meteorological Society/Environmental Protection Agency Regulatory Model (AERMOD). As a result, the modeling guidance for AERMOD from South Coast Air Quality Management District (SCAQMD), a nearby air district also located in southern California, was utilized. In addition, the analysis contained herein was conducted in accordance with Office of Environmental Health Hazard Assessment (OEHHA)-recommended procedures. This HRA estimates health risks associated with temporary emissions of toxic air contaminants (TACs) during Cal City Substation construction activities, specifically, construction activities requiring diesel-fueled heavy equipment and trucks, resulting in diesel particulate matter emissions (DPM). Site-specific air dispersion modeling was conducted using Lakes Environmental's AERMOD View model (version 23132). Dispersion modeling was used to characterize DPM emissions and ground-level concentrations associated with on-site construction activities over the approximately 24-month construction period. Construction activity and staging areas were modeled as area sources in AERMOD with an assumed release height of five meters, corresponding to the approximate height of off-road equipment mufflers from which exhaust emissions would be released (SCAQMD 2008). Line volume sources were used to represent the construction haul route and on-road mobile equipment route. It is assumed the height of the trucks would be 4.26 meters, with a width of 2.59 meters (California Department of Transportation [Caltrans] 2024; Schneider 2024). Construction emissions would not be generated during nighttime hours; therefore, the dispersion modeling allocates the emissions during active construction hours, Monday to Saturday, from 6:00 a.m. to 7:00 p.m.

In the AERMOD model, 202 receptors were placed with a spacing of 20 meters or less to represent existing residential and school receptors around Cal City Substation. The model did not apply a flagpole height for receptors, consistent with SCAQMD modeling guidance (SCAQMD 2024). Sensitive receptors selected for the model were located at sensitive land uses, such as residences and schools within approximately 1,000 feet of Cal City Substation and along the haul truck route on Hacienda Boulevard. Sites that were not explicitly modeled would result in risk that would be less than the risk modeled for those receptors included in the analysis due to a lesser ground-level concentrations than sensitive receptors immediately near Cal City Substation. The nearest sensitive receptors, approximately 280 feet southeast of anticipated staging activities at the Cal City Substation (including proposed Staging Area 1-17), are single-family units along Hacienda Boulevard and Mendiburu Road. Additional sensitive receptors were sited at the California City High School, approximately 700 feet southwest of anticipated construction activities at Cal City Substation.

The AERMOD model requires hourly meteorological data consisting of wind vector, wind speed, temperature, stability class, and mixing height. The Edwards Air Force Base is the nearest representative air monitoring station with meteorological data and is approximately 15.5 miles southeast of Cal City Substation. AERMOD's 10-meter National Elevation Dataset data was applied to produce terrain base elevation data for each receptor and source, and a hill height scale value for

each receptor. AERMOD's urban option was applied based on SCAQMD guidance for Eastern Kern County (United States Census Bureau 2020, SCAQMD 2024). The presence of buildings and other structures disturbs downwind air flow. However, building downwash is only calculated for point sources and it is not appropriate to include in AERMOD for this HRA because there are no point sources in the analysis.

Emissions Calculations and Source Modeling

Emissions calculations for the Proposed Project's Cal City Substation construction activities were provided in the Proponent's Environmental Assessment Section 5.3, *Air Quality*, and are shown in Attachment A. Table 1 summarizes the approximate construction schedule used as part of the air quality analysis (Attachment A).

Table 1 Anticipated Construction Schedule at Cal City Substation

[1]Conseratively assumes that all daily construction staging activity for the Proposed Project would occur at Cal City Substation staging areas. The on-road mobile equipment's vehicle miles traveled length per trip during staging activity is adjusted to match the haul route segment length modeled in AERMOD from the construction center.

Note: This table includes an estimated construction schedule and is subject to change.

See Attachment A for construction assumptions

DPM emissions are produced by the burning of diesel fuel in vehicles and off-road equipment during construction. Estimates for dust emissions are provided in Attachment A and were subtracted from particulate matter 10 micrometers or less in diameter (PM_{10}) emission estimates during off-road and on-road construction activities to calculate PM_{10} exhaust emissions. PM_{10} exhaust contains DPM and other air toxics, so using PM_{10} exhaust as an estimate for DPM emissions is a conservative approach.

Risk Analysis

Health risk was calculated using in-house spreadsheets and is consistent with the OEHHA Air Toxics Hot Spots Program Risk Assessment Guidelines: The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2015) and SCAQMD's Supplemental Guidelines for Preparing Risk Assessments for the Air Toxics "Hot Spots" Information and Assessment Act

(SCAQMD 2020). The single-family residences located southeast of the Proposed Project's Cal City Substation construction activities are the nearest sensitive receptors. As a conservative (i.e., health protective) approach, residential risk factors were applied to the school, which includes greater age sensitive factor (ASF) from the 3rd trimester to two years old and increased breathing rates. In addition, as there is a school within the 1,000-foot buffer, fraction of time at home (FAH) was assumed to be 1 for all receptors under 17 years of age.

Significance Threshold

EKAPCD recommends the use of this risk level (also reportable as 10 in one million) as the significance threshold for TACs The EKAPCD also recommends that the non-carcinogenic hazards of TACs should not exceed a hazard index (the summation of the hazard quotients for all chemicals to which an individual would be exposed) of 1 for either chronic or acute effects (EKAPCD 2020). DPM is not associated with acute health risks; therefore, acute risk was not evaluated (OEHHA 2023).

Results

Air Dispersion Modeling and Risk Analysis Results

Maximum cancer risks are presented in Table 2. The Maximum Exposed Individual Receptor (MEIR) is the modeled receptor experiencing the highest incremental excess cancer risk under the total exposure duration (24 months). The MEIR was determined through an iterative process evaluating potential receptors based on model-generated risk contours to ensure the maximum incremental excess cancer risk is captured. The MEIR was determined to be located at edge of a single-family residence located approximately 280 feet south of the Proposed Project's construction activities anticipated along Hacienda Boulevard. The model outputs are available in Attachment B. As shown in Table 2, the cancer risk and chronic hazard index at the MEIR would be below EKAPCD health risk thresholds under the unmitigated construction emissions scenario.

Table 2 Unmitigated Health Risks Associated with Construction Activity at Cal City Substation

Scenario	Excess Cancer Risk (per million)	Chronic Health Risk[1]
Maximally Exposed Individual Receptor (MEIR)	8.15	0.019
EKAPCD Significance Threshold	>10	>1
Threshold Exceeded?	**No**	**No**

µg/m³ = micrograms per cubic meter; EKAPCD = East Kern Air Pollution Control District

[1]Noncancer health impacts are determined by dividing the airborne concentration at the receptor by the appropriate Reference Exposure Level (REL) for that substance. A REL is defined as the concentration at which no adverse noncancer health effects are anticipated. Because noncancer health impacts are assessed as the ratio of airborne concentration versus the REL, the resulting hazard index is unitless.

For health risk calculations, see Attachment B

As described in the Proponent's Environmental Assessment Section 5.3, Air Quality, PM_{10} emissions would exceed EKAPCD thresholds. Therefore, to reduce construction emissions, SCE would implement Applicant Proposed Measures (APM) AIR-1 and AIR-2:

AIR-1: Tier 4 Construction Equipment: All construction equipment with rating between 100 and 750 horsepower will be required to use engines compliant with the Environmental Protection Agency Tier 4 non-road engine standards. In the event a Tier 4 engine is not available for any off-road construction

equipment with rating at or higher than 100 horsepower, that documentation of the unavailability will be provided.

AIR-2: Dust Control: During construction, fugitive dust will be controlled by implementing the following measures:

- Surfaces disturbed by construction activities will be covered or treated with a dust suppressant or water until the completion of activities at each site of disturbance.
- Inactive, disturbed (e.g., excavated or graded areas) soil and soil piles will be sufficiently watered or sprayed with a soil stabilizer to create a surface crust or will be covered.
- Drop heights from excavators and loaders will be minimized to a distance of no more than approximately 5 feet. Vehicles hauling soil and other loose material will be covered with tarps or maintain at least 6 inches of freeboard.
- Vehicles will adhere to a speed limit of 15 miles per hour on Proposed Project-specific construction routes and within temporary work areas.

For informational purposes, this HRA also evaluates the health risk at the MEIR with implementation of APM AIR-1 and AIR-2. As shown in Table 3, the cancer risk and chronic hazard index at the MEIR would be further reduced and would continue to be less than EKAPCD's recommended health risk thresholds.

Table 3 Mitigated Health Risks Associated with Construction Activity at Cal City Substation

Scenario	Excess Cancer Risk (per million)	Chronic Health Risk[1]
Maximally Exposed Individual Receptor (MEIR)	5.84	0.014
EKAPCD Significance Threshold	>10	>1
Threshold Exceeded?	**No**	**No**

µg/m³ = micrograms per cubic meter; EKAPCD = East Kern Air Pollution Control District

[1]Noncancer health impacts are determined by dividing the airborne concentration at the receptor by the appropriate Reference Exposure Level (REL) for that substance. A REL is defined as the concentration at which no adverse noncancer health effects are anticipated. Because noncancer health impacts are assessed as the ratio of airborne concentration versus the REL, the resulting hazard index is unitless.

For health risk calculations, see Attachment B

Conclusion

As detailed herein, the Proposed Project's construction activities at Cal City Substation would not result in health risks to nearby sensitive receptors that exceed EKAPCD's cancer and hazard risk thresholds. Other construction activities related to the Proposed Project, like those associated with the other substations or linear construction activities, are expected to produce fewer emissions of toxic air contaminants and would be located farther away from sensitive receptors than Cal City Substation. Furthermore, construction activities at the existing Kramer Substation, Edwards Substation, and Holgate Switchyard would be of shorter duration because, unlike Cal City Substation, none of these existing SCE facilities would be expanded. Therefore, construction and staging activities at Cal City Substation would likely have the greatest impact on nearby sensitive receptors in comparison to other proposed construction activities, and the health risk impacts from other construction activities are expected to be below those presented in Table 3.

Executive Summary

The Cal City Substation 115 kilovolt (kV) Upgrade Project (Proposed Project) consists of upgrades to Southern California Edison Company's (SCE) existing Cal City Substation, located in the City of California City, and construction of two new 115 kV subtransmission lines to serve the expanded substation. SCE has also identified one feasible alternative to a portion of the Proposed Project route alignment. The Proposed Project is in the Mojave Desert in eastern Kern County and northwestern San Bernardino County. The Proposed Project traverses the City of California City and Edwards Air Force Base. Land ownerships in the project area include federally owned lands managed by the Bureau of Land Management (BLM) and the Department of Defense, state owned lands managed by the California Department of Fish and Wildlife (CDFW), California City-owned lands, and privately owned lands.

This Biological Resources Technical Report documents vegetation communities, aquatic resources, special status species, and habitat for special status species that were observed in the Proposed Project biological study area (study area) from September through December 2021, March through April 2022, and September through November 2022. An assessment of the potential for special status species to occur in the study area is also provided. The study area for this analysis included Proposed Project disturbance areas, access roads, and material yards; each of which included an appropriate buffer to account for direct and indirect impacts to biological resources. Biological resource data from other SCE projects that overlapped the study area are also included in this report.

Twenty-five natural vegetation communities, one semi-natural community, and five other land cover types were identified in the study area. Vegetation communities were categorized to the alliance level; communities were further categorized to the association level when necessary to determine whether any CDFW sensitive natural communities were present. Of the vegetation communities and land cover types found in the study area, seven are considered sensitive natural communities by CDFW, including one community, Nevada Joint Fir – Cooper's goldenbush, mapped in historical project data provided by SCE:

- Joshua tree woodland (*Yucca brevifolia* Woodland Alliance)
- Nevada joint fir – Cooper's goldenbush scrub (*Ephedra nevadensis – Ericameria cooperi* Association)
- Nevada joint fir – Anderson's boxthorn scrub (*Lycium andersonii* Provisional Association)
- Spinescale scrub (*Atriplex spinifera* Shrubland Alliance)
- White bursage scrub (*Ambrosia dumosa* Shrubland Association)
- White bursage – Rayless goldenhead scrub (*Ambrosia dumosa – Acamptopappus sphaerocephalus* Association)
- Winterfat scrubland (*Krascheninnikovia lanata* Association)

Four special status plant species were observed in the study area during the 2021 and 2022 Proposed Project surveys or during surveys conducted within the study area from 2016 through 2019 for previous SCE projects:

- Pink funnel lily (*Androstephium breviflorum*) – California Rare Plant Rank (CRPR) 2B.2
- Mojave spineflower (*Chorizanthe spinosa*) – CRPR 4.2

- Desert cymopterus (*Cymopterus deserticola*) – CRPR 1B.2, BLM Sensitive Species (BLM S), Desert Renewable Energy Conservation Plan (DRECP) Focus Species
- Western Joshua tree (*Yucca brevifolia* var. *brevifolia*) – State Candidate Threatened

One additional special status plant species is likely to occur in the study area, but was not observed during 2021 or 2022 surveys:

- Barstow woolly sunflower (*Eriophyllum mohavense*) – CRPR 1B.2, BLM S, DRECP Focus Species

Eight special status wildlife species were observed in the study area during the 2021 and 2022 surveys:

- Mojave desert tortoise (*Gopherus agassizii*) – Federally Threatened (FT), State Threatened (ST)
- Cooper's hawk (*Accipiter cooperii*) – CDFW Watch List (WL)
- Burrowing owl (*Athene cunicularia*) – CDFW Species of Special Concern (SSC), BLM S, DRECP Focus Species, United States Fish and Wildlife Service (USFWS) Bird of Conservation Concern (BCC)
- California horned lark (*Eremophila alpestris actia*) – WL
- Prairie falcon (*Falco mexicanus*) – WL, BCC
- Loggerhead shrike (*Lanius ludovicianus*) – SSC, BCC
- LeConte's thrasher (*Toxostoma lecontei*) – BCC
- Desert kit fox (*Vulpes macrotis arsipus*) – California Fish and Game Code

Three additional special status wildlife species are likely to occur in the study area but were not observed during the 2021 or 2022 surveys:

- Golden eagle (*Aquila chrysaetos*, foraging only) – CDFW Fully Protected, WL, BLM S, DRECP Focus Species, BCC
- American badger (*Taxidea taxus*) – SSC
- Mohave ground squirrel (*Xerospermophilus mohavensis*) – ST, BLM S, DRECP Focus Species

Federally designated critical habitat for Mojave desert tortoise coincides with the eastern portion of the study area (see Figure 3: Conservation Areas).

Aquatic resources potentially subject to Lahontan Regional Water Quality Control Board and CDFW jurisdictions are present in the study area. Potential jurisdictional areas in the study area include isolated intrastate waters including vegetated channels, unvegetated channels, and culverts. No areas potentially meeting the state or federal wetland definitions were identified in the study area. Cache Creek is the only named aquatic resource in the study area.

1 Introduction

This Biological Resources Technical Report (BRTR) has been prepared for the Southern California Edison Company's (SCE) Cal City Substation 115 kilovolt (kV) Upgrade Project (Proposed Project). The purpose of this BRTR is to summarize the methods and results of vegetation community, habitat assessment, and aquatic resources surveys conducted for the Proposed Project. The BRTR is intended to assist SCE with project planning, Proponent's Environmental Assessment preparation, and to provide a framework for potential permitting, as needed.

1.1 Project Overview

The Proposed Project consists of upgrades to SCE's existing Cal City Substation, located in the City of California City, as well as construction of two new 115 kV subtransmission lines to serve the upgraded substation. The Proposed Project is intended to serve current and long-term forecasted electrical demand in portions of the City of California City and surrounding areas of unincorporated Kern County and Edwards Air Force Base (EAFB), provide diverse routes of power supply to the region, minimize reliance on Edwards Substation (located on military base) to provide power to surrounding off-base areas, and improve system reliability by providing a second 115 kV source line to Edwards Substation.

The Proposed Project is planned to be operational by 2028 and would include the following major components.

Subtransmission

The Proposed Project would include the following subtransmission-related components:

- Construct one new Kramer-Cal City 115 kV Subtransmission Line (approximately 42 miles)
- Construct one new Cal City-Edwards-Holgate 115 kV Subtransmission Line (approximately 28 miles)

Substation

The Proposed Project would include the following substation-related components:

- **Cal City Substation Improvements**
  - Expand the existing substation by approximately 10 acres
  - Install new five-position 115 kV switchrack with five positions initially equipped
  - Install new five-position 33 kV switchrack with five positions initially equipped
  - Install new 21-position 12 kV switchrack with 19 positions initially equipped
  - Install two 115 kV/33kV, 28 megavolt-ampere (MVA) transformers
  - Install four 115 kV/12 kV, 28 MVA transformers
  - Install one 115 kV, 28.8 megavolt-ampere reactive (MVAR) capacitor
  - Install two 33 kV, 4.8 MVAR capacitors
  - Install four 12 kV, 4.8 MVAR capacitors

  - Install a new MEER with the associated communication, control and protection for the expanded substation

- **Edwards Substation Improvements**
  - Equip one existing 115 kV line position
  - Expand existing 115 kV switchrack to a breaker-and-a-half configuration
  - Convert two 115 kV bank positions to a double bus, double breaker configuration
  - Install or upgrade protection for two 115 kV lines and two buses

- **Holgate Switchyard Improvements**
  - Equip one existing 115 kV line position
  - Upgrade protection for four 115 kV lines and the north 115 kV bus

- **Kramer Substation Improvements**
  - Equip one existing 115 kV line position
  - Convert two 115 kV bank positions to a double bus, double breaker configuration
    Install or upgrade protection for two 115 kV lines and two banks

Distribution

The Proposed Project would include the following distribution-related components:

- Construct two new underground 33 kV distribution getaways at Cal City Substation
- Construct 14 new underground 12 kV distribution getaways at Cal City Substation
- Transfer approximately 4.7 miles of existing Castle Butte 33 kV and approximately 1.7 miles of existing Isner 33 kV Distribution Lines to new Kramer-Cal City 115 kV Subtransmission Line structures and remove approximately 151 existing distribution structures along these line segments
- Transfer approximately 2.3 miles of existing Castle Butte 33 kV and approximately 2 miles of existing Conte 12 kV Distribution Lines to new Cal City-Edwards-Holgate 115 kV Subtransmission Line structures and remove approximately 90 existing distribution structures along these line segments

Telecommunication

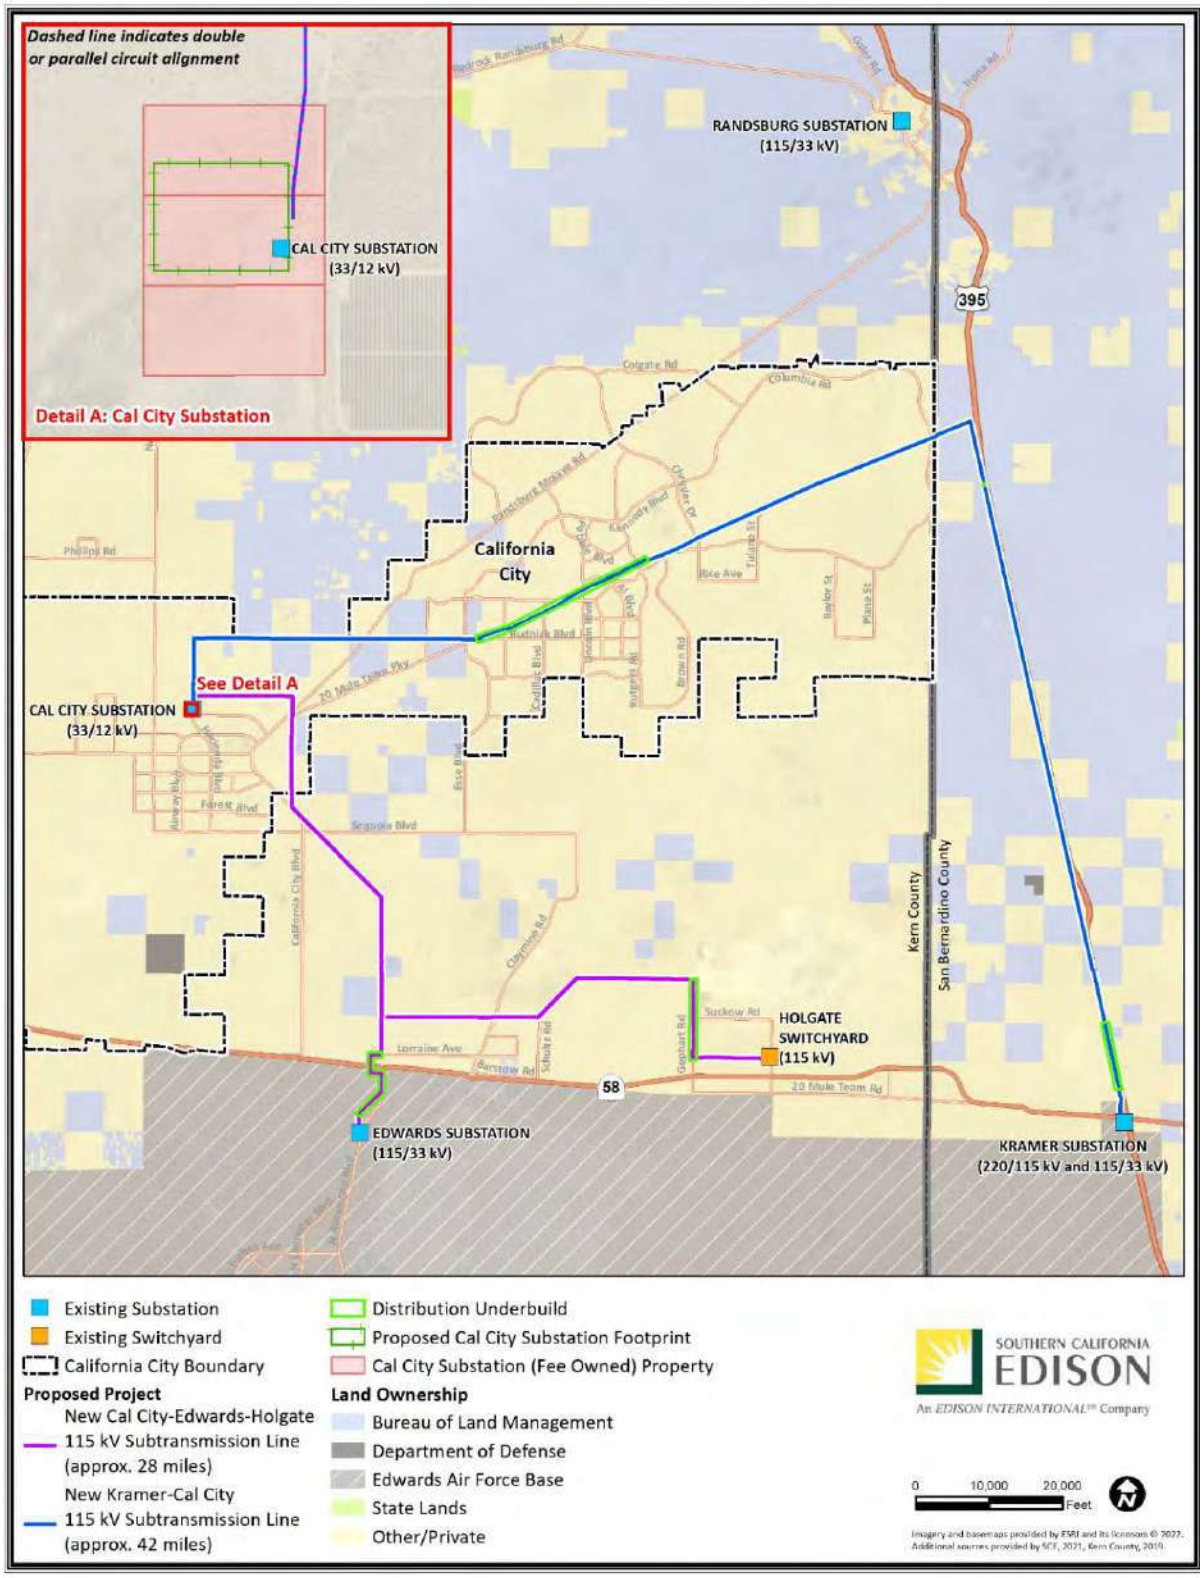
The Proposed Project would include the following telecommunication-related components:

- Install equipment to support substation automation and protection requirements at Cal City Substation
- Install optical ground wire (OPGW) on new Kramer-Cal City 115 kV Subtransmission Line (approximately 42 miles)
- Install OPGW on new Cal City-Edwards-Holgate 115 kV Subtransmission Line (approximately 28 miles)
- Install equipment at Kramer and Edwards Substations and Holgate Switchyard in support of the new OPGW

1.2 Project Location

The Proposed Project is located within unincorporated Kern and San Bernardino counties and the incorporated City of California City (Figure 1). The proposed approximately 42-mile Kramer-Cal City 115 kV Subtransmission Line would extend northeast from Cal City Substation and cross the county line into San Bernardino County before continuing south along U.S. Route 395 (U.S. 395) and connecting to Kramer Substation. The proposed approximately 28-mile Cal City-Edwards-Holgate 115 kV Subtransmission Line would generally extend east and then south from Cal City Substation before turning east at Suckow Road to connect to Holgate Switchyard. The Cal City-Edwards-Holgate 115 kV Subtransmission Line would also include a tap line to serve Edwards Substation located on Edwards Air Force Base. The Edwards tap line would extend south from the intersection of Suckow Road and 140th Street for approximately 3 miles to connect to Edwards Substation.

In addition to the proposed 115 kV subtransmission lines described above, the Proposed Project includes a telecommunications scope that consists of telecommunications improvements at Holgate Switchyard and Cal City, Kramer, and Edwards Substations, as well as along both proposed new subtransmission lines.



The locations of the start and end of the Proposed Project subtransmission and telecommunications components described above are summarized in Table 1.

Table 1 Study Area Start and End Locations

Project Component	Approximate Start Coordinates (WGS84)	Approximate End Coordinates (WGS84)
New Kramer-Cal City 115 kV Subtransmission Line	34.99032224, -117.54365076	35.14289368, -117.96832962
New Cal City-Edwards-Holgate 115 kV Subtransmission Line[1]	35.01385181, -117.70839072	35.14289368, -117.96832962

[1] This line includes an approximately three-mile tap line serving Edwards Substation. The approximate start coordinates for the proposed Edwards tap line are 35.02830628, -117.88136771. The approximate end coordinates for the proposed Edwards tap line are 34.98499339, -117.89113969.

Figure 1 Proposed Project Alignment

The proposed Kramer-Cal City 115 kV Subtransmission Line occurs within the following United States Geological Survey (USGS) 7.5-minute topographic quadrangles: California City North, Galileo Hill, Boron NW, Boron NE, Saddleback Mountain, and Kramer Junction (USGS 2011). The proposed Cal City-Edwards-Holgate 115 kV Subtransmission Line is depicted on the following USGS 7.5-minute topographic quadrangles: California City North, California City South, North Edwards, Edwards, and Boron (USGS 2011). The townships and ranges of each quadrangle are summarized in Table 2.

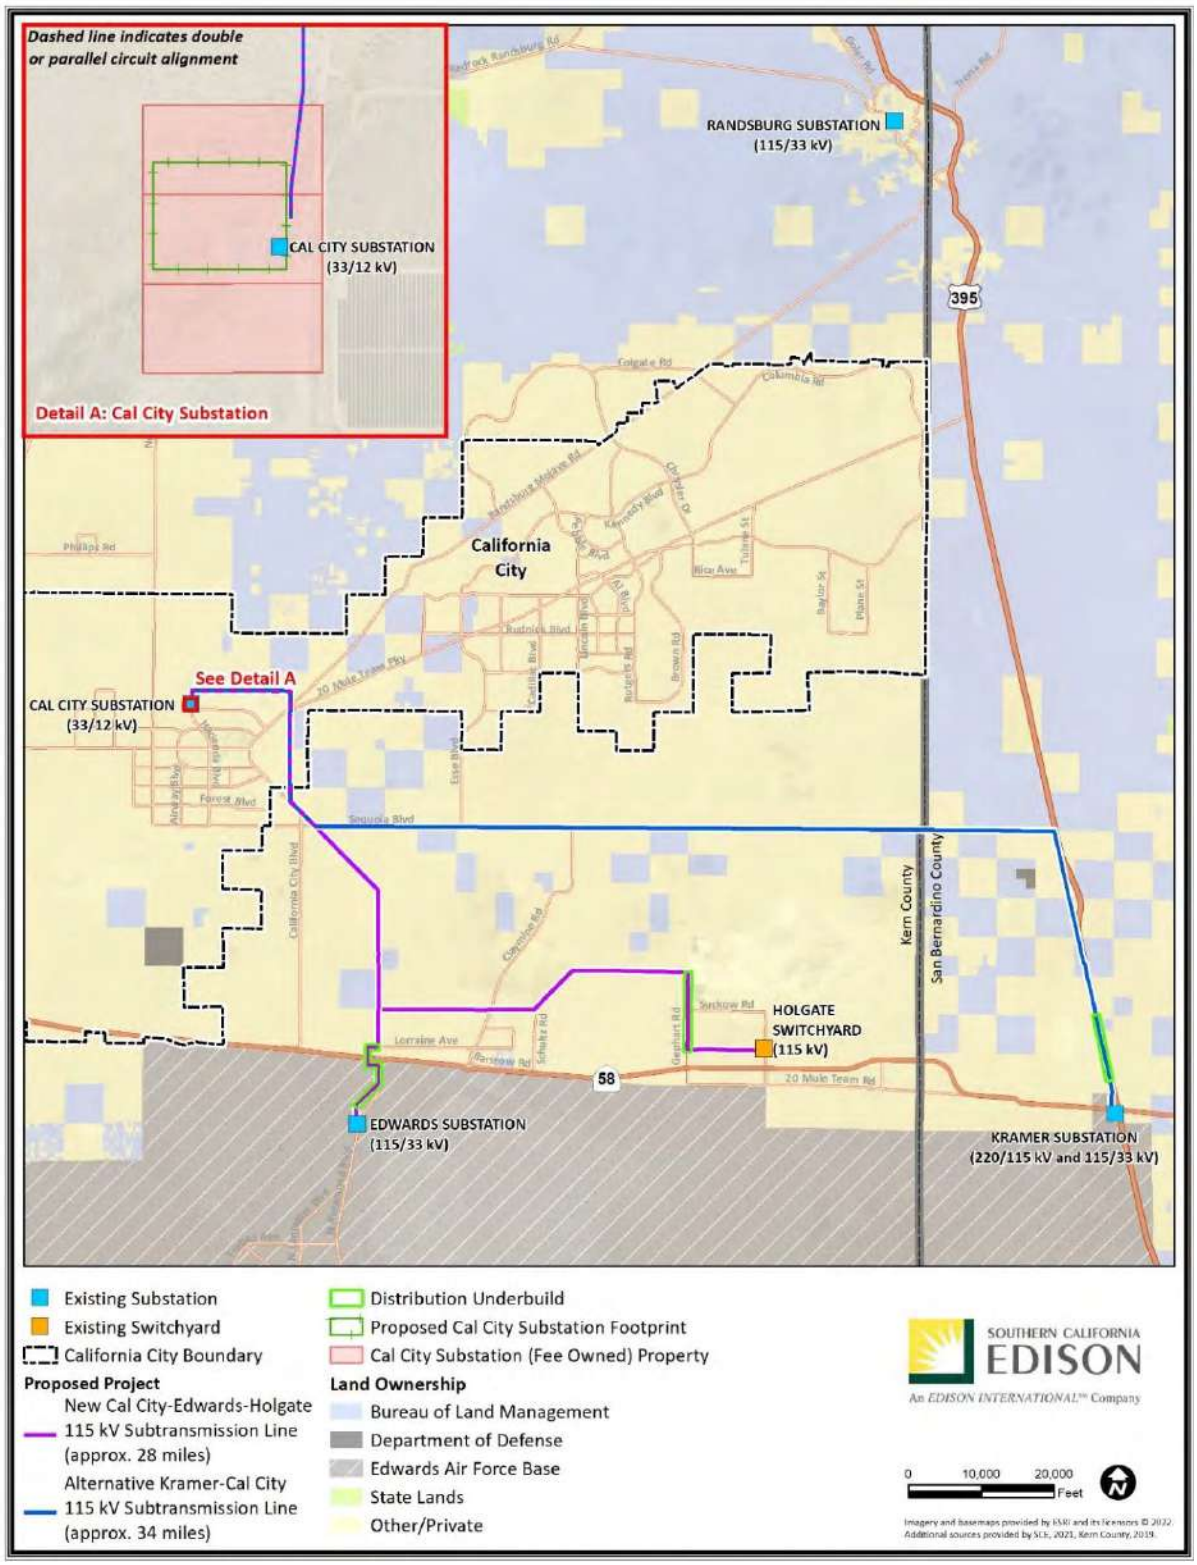


Table 2 7.5-Minute Topographical Quadrangle Locations

Project Component	USGS Quadrangle	Township and Range
New Kramer-Cal City 115 kV Subtransmission Line	California City North	32.0S37.0E, 32.0S38.0E
	Galileo Hill	31.0S39.0E, 32.0S38.0E, 32.0S39.0E

1.3 Project Alternative

SCE has identified one feasible alternative to a portion of the Proposed Project route alignment described above. Under this Project Alternative (Figure 2), the Cal City-Edwards-Holgate 115 kV Subtransmission Line would remain unchanged from the Proposed Project; however, the proposed Kramer-Cal City 115 kV Subtransmission Line would extend from Cal City Substation following the proposed Cal City-Edwards-Holgate line in a parallel or double circuit configuration for approximately 7 miles before turning east along Sequoia Boulevard, an existing unpaved road, for approximately 19 miles. The alternative alignment for the Kramer-Cal City 115 kV Subtransmission Line would then continue south for approximately 8 miles along U.S. 395 and connect to Kramer Substation, similar to the Proposed Project. Under the Project Alternative, the proposed Kramer-Cal City 115 kV Subtransmission Line would extend for approximately 34 miles, as compared to approximately 42 miles under the Proposed Project. All other components of the Proposed Project would remain the same for the Project Alternative.

Figure 2 Proposed Alternative Alignment

1.4 Regulatory Overview

Regulated or sensitive resources evaluated in this BRTR include special status plant and wildlife species, nesting birds and raptors, sensitive plant communities, jurisdictional waters and wetlands, wildlife movement corridors, and locally protected resources. Regulatory authority over biological and aquatic resources is shared by Federal, State, and local agencies. A detailed regulatory background for the Proposed Project is in Appendix A – Regulatory Framework.

1.4.1 Sensitive Biological Resources

For this BRTR, vegetation communities and plant and wildlife taxa were considered sensitive or special status if they were classified as one or more of the following:

- Species listed as threatened, endangered, or candidates for listing under the Federal Endangered Species Act (FESA)
- Species listed as rare, threatened, endangered, or candidates for listing under the California Endangered Species Act (CESA)
- Plants listed as rare or endangered under the California Native Plant Protection Act (California Fish and Game Code [CFGC], Section 1900 et seq.)
- Species designated as Fully Protected, Species of Special Concern (SSC), or Watch List (WL) by CDFW
- Species designated as Sensitive by the BLM (BLM S)
- Birds designated as Birds of Conservation Concern (BCC) by the United States Fish and Wildlife Service (USFWS)
- Focus Species in the Desert Renewable Energy Conservation Plan (DRECP) Land Use Plan Amendment (LUPA) (BLM et al. 2016)
- Plants assigned a California Rare Plant Rank (CRPR) of 1 through 4 by the California Native Plant Society (CNPS)
- Natural communities designated as sensitive by CDFW, based on NatureServe's (2012) methodologies to rank communities at both the Global (G) and State (S) levels, resulting in a rank ranging from 1 (very rare and threatened) to 5 (demonstrably secure). Natural communities with ranks of S1-S3 are considered sensitive natural communities (CDFW 2022c).
- Species protected under the Federal Bald and Golden Eagle Protection Act
- Bats considered by the Western Bat Working Group to be "high" or "medium" priority (WBWG 2017)
- Species designated as locally important by the Local Agency (San Bernardino County, Kern County, and City of California City) and/or otherwise protected through ordinance or local policy

1.4.2 Environmental Regulatory Framework

The following laws, regulations, and management policies provide the regulatory framework for assessing the potential impacts of the Proposed Project on biological resources (Appendix A):

- California Environmental Quality Act (CEQA)
- National Environmental Policy Act (NEPA)
- FESA

- CESA
- Federal Clean Water Act (CWA)
- CFGC
- Migratory Bird Treaty Act (MBTA)
- The Bald and Golden Eagle Protection Act
- Porter-Cologne Water Quality Control Act (Porter-Cologne Act)
- Wetland Riparian Area Protection Policy
- Executive Order 11990 – Wetlands
- Executive Order 13112 – Invasive Species
- Native Plant Protection Act
- California Desert Native Plant Act
- DRECP LUPA
- San Bernardino Countywide Plan
- Kern County General Plan
- City of California City General Plan

1.4.3 Preliminary Agency Consultation

This section summarizes informal agency consultation that has occurred for the Proposed Project. Table 3 provides a summary of this history, including the dates, agencies involved, purpose, and outcome of meetings conducted in 2021 and 2022.

Table 3 Agency Coordination

Date	Communication	Agencies	Purpose
October 4, 2021	Meeting (Virtual)	CDFW	Discussed survey access to parcels owned/managed by CDFW Region 4.
October 22, 2021	Meeting (Virtual)	CDFW	Discussed species survey and permitting approach for the Proposed Project with Region 4 staff. Agency staff indicated species protocol surveys are typically only valid for approximately one year and would be completed closer to Incidental Take Permit application submittal.
November 23, 2021	Meeting (Virtual)	CDFW	Discussed survey access to parcels owned/managed by CDFW Region 6.
December 10, 2021	Meeting (Virtual)	CDFW	Discussed species survey and permitting approach for the Proposed Project with Region 6 staff. Agency staff concurred with approach of using habitat assessment results to inform impact analysis, while completing species protocol surveys closer to project permitting.
August 1, 2022	Meeting (Virtual)	BLM	Discussed Proposed Project purpose and need, scope, and environmental review process, including surveys completed to date and anticipated permitting needs.
November 7, 2022	Meeting (Virtual)	California Public Utilities Commission (CPUC)	Discussed Proposed Project purpose and need, scope, and environmental review process, including surveys completed to date and anticipated permitting needs.

2 Methodology

2.1 Biological Study Area

The Proposed Project biological study area (study area) for this BRTR was initially identified in 2021 to include the Proposed Project disturbance area plus buffers to account for direct and indirect impacts to biological resources. A 100-foot buffer was used for the aquatic resource delineation and a 250-foot buffer was used for the habitat assessment, vegetation community mapping, and rare plant surveys completed in 2021 and 2022. Between the Cal City Substation and Sequoia Boulevard, the buffer for the aquatic resource survey was widened to 200 feet to accommodate the potential SCE right-of-way (ROW). Buffer widths for all surveys were reduced along the east side of the Proposed Project area to include only areas west of U.S. 395. Due to project design updates in September and October 2022, the 2021 study area was expanded in various locations along the Proposed Project and Project Alternative alignments (expanded areas). Areas for which vegetation community, habitat assessment, and aquatic resource survey data from the SCE Ivanpah-Coolwater-Kramer-Inyokern 115 kV Subtransmission Line Project Transmission Line Rating Remediation (TLRR) Project (IC Project) were available were generally excluded from all surveys except those for rare plants, as described in Section 2.2 and shown in Appendix G.

2.2 Database Queries and Literature Review

Database queries and a literature review were conducted to obtain baseline project information and compile lists of special status plant and wildlife species and sensitive biological resources that occur or potentially occur in the study area. Databases and other resources were initially accessed for 2021 surveys, and were then backchecked in 2022 to confirm accuracy.

The following databases and other resources were reviewed:

- **Aerial imagery of the study area.** (Google Earth Pro 2021, 2022)
- **CDFW California Natural Diversity Database (CNDDB) RareFind5.** Queries of the CNDDB included the study area plus a 5-mile buffer (CDFW 2021a, 2022a)
- **CNPS Online Inventory of Rare and Endangered Plants of California.** Query of the study area quadrangles (CNPS 2021a, 2022a)
- **USFWS Information for Planning and Consultation (IPaC).** An unofficial IPaC report was generated for the approximate Proposed Project study area to determine what federally listed species, critical habitat, migratory birds, or other federally regulated natural resources potentially occur (USFWS 2021b, 2022a) (Appendix B)
- **CDFW Special Animals List.** Results of the database queries were cross-referenced with CDFW's Special Animals List to determine the current conservation status of each species identified (CDFW 2021b, 2022b)
- **National Wetlands Inventory (NWI).** (USFWS 2021c, 2022b)
- **National Hydrology Dataset (NHD).** (USGS 2021, 2022)
- **Watershed Boundary (WBD) Dataset.** (USGS 2021, 2022)
- **Natural Resources Conservation Service (NRCS) Web Soil Survey.** (United States Department of Agriculture [USDA], NRCS 2021a, 2022a)
- **National List of Hydric Soils.** (USDA, NRCS 2021b, 2022b)

Reports and Geographic Information System (GIS) data in the study area from the following sources were reviewed prior to field surveys and for report preparation:

- SCE Ivanpah-Coolwater-Kramer-Inyokern 115 kV Subtransmission Line Project Transmission Line Rating Remediation (TLRR) Project (IC Project)
- SCE Kramer-Holgate 115kV Circuit TLRR Project
- SCE TESS Grid Technology and Modernization Project
- SCE Kramer Inyokern-Randsburg No. 3 TLRR Project
- SCE Kramer Junction TLRR Project
- DRECP – Vegetation Mapping
- Golden eagle (*Aquila chrysaetos*) survey GIS data from BioResource Consultants, BLM, USFWS Carlsbad Field Office, WEST Inc., and unidentified sources
- Protocol Mohave ground squirrel (*Xerospermophilus mohavensis*) surveys conducted by Aardvark Biological Services, LLC within the parcel containing the Cal City Substation and a portion of the parcel to the south between April and June in 2020 and 2021

Survey data from two previous projects, the SCE IC Project and a Rincon Consultants, Inc. (Rincon) due diligence project, are included in this report and in maps in Appendices G, H, I, and J. Survey data for the SCE IC Project was from surveys conducted by BRC-Equals3, Arcadis, Artemis Environmental Services, Inc., and Environmental Intelligence LLC along the west side of U.S. 395 and around the Kramer Substation in 2016, 2017, 2018, and 2019 as follows:

- Vegetation community mapping by BRC-Equals3 in 2017 and Arcadis in 2017 and 2018
- Habitat assessment by BRC-Equals3 in 2017, Environmental Intelligence in 2016 and 2017, and Artemis Environmental in 2019
- Jurisdictional delineations by BRC-Equals3 in 2017, including desktop revisions in 2019 (jurisdictional features only)

Rincon biologists conducted a biological and aquatic resource due diligence assessment (due diligence assessment) in the two parcels adjacent to the Cal City Substation parcel (Assessor's Parcel Numbers [APNs] 229-020-34 and 229-020-36) on September 1, 2021. Survey data from vegetation community mapping, an aquatic resources delineation, a habitat assessment, and a special status species occurrence evaluation survey are included in this BRTR.

2.3 Special Status Species Occurrence Evaluation

All special status species identified during the database queries and literature review were evaluated for their potential to occur within the study area. Potential occurrence was evaluated based on species' ranges, habitat preferences, occurrence records from the database queries, other SCE projects referenced in Section 2.2, and the results of Proposed Project field surveys. The potential for each special status species to occur in the study area was evaluated according to the following criteria:

- **Occurs.** The species or positive sign was definitively determined to be present in the study area during a site visit or field survey.

- **Absent.** The species or positive sign was not observed in the study area during protocol/focused surveys (wildlife), during the identifiable period after observation at a reference site (plants), and/or the study area lacks key habitat features.
- **Likely.** All study area features indicate this species is very likely present and should be expected according to the following criteria:
  - study area is within the species' geographic range/floristic province;
  - suitable habitat (e.g., soils, vegetation communities, elevation, roost sites, leaf litter/debris, water, host plants) is present; and
  - distance to CNDDB or other records from the past 25 years is within 1 mile (fish), 2 miles (plants), or 5 miles (mammals/birds/herps).
- **Unlikely.** Study area is within the species' geographic range and suitable habitat is present, but the species would not be expected to occur or be encountered according to the following criteria:
  - CNDDB or other records within 5 miles of the study area are over 25 years old; or
  - distance to records from the past 25 years is greater than one mile (fish), 2 miles (plants), or 5 miles (mammals/birds/herps).
- **Does Not Occur.** Species would not occur (or is very unlikely to occur) because the study area is outside the known or current geographic/elevation range, lacks habitat or suitable conditions, and/or there is reasonable certainty to assume absence. Other criteria include:
  - CNDDB or other records within 5 miles of the study area are over 75 years old and the lack of recent records is not due to:
  - the cryptic nature of the species;
  - delayed growth and/or long-lived seed bank;
  - a species that is rarely studied or hard to observe;
  - the study area has a paucity of records due to remoteness; or
  - there are few records for similar taxa.
  - CNDDB or other records within 5 miles of the study area are from the past 75 years but the locations are noted as a "best guess" or are otherwise inaccurate.

2.4 Survey Methodology

Vegetation community mapping, rare plant surveys, and reconnaissance-level field surveys of special status species' habitat and aquatic resources were conducted to determine the occurrence or potential occurrence of special status and sensitive biological resources in the study area. Vegetation community mapping, habitat assessment, and aquatic resource delineation surveys included the Proposed Project, Project Alternative, and the existing Kramer-Holgate Subtransmission Line between the Kramer Substation and Holgate Switchyard. Survey data related to the existing Kramer-Holgate Subtransmission Line will be used to support a separate SCE project. The field survey methods were informed by the desktop analysis and preliminary list of species with potential to occur in the study area. The study area was surveyed by walking transects where safe and accessible to attain 100 percent visual coverage of the study area. In areas where pedestrian access was restricted to public roads and approved access roads, the study area was viewed in the field with binoculars and/or assessed using desktop aerial imagery in Google Earth Pro© (Google

Earth Pro 2021, 2022). Data were collected using hand-held global positioning system units, photographs, and aerial field maps. Areas within the study area previously surveyed for the IC Project and due diligence assessment referenced in Section 2.2 were not included in field surveys.

No regulatory agency coordination was required for these surveys. Agency protocols were required only for the rare plant surveys. Additional surveys for specific special status species and protected resources, such as species-specific protocol surveys and jurisdictional delineations, will be conducted as needed and identified in further regulatory and permitting coordination closer to project implementation.

2.4.1 Vegetation Community Mapping

Bargas Environmental Consulting (Bargas) biologists conducted vegetation community mapping from September 20 through 24, October 25 through 29, and December 13 through 16, 2021. Bargas completed additional field mapping on September 27 and 28, October 26 and 27, 2022, and desktop analysis on November 8, 2022 in the expanded areas. As described in Section 2.1, the study area for vegetation community mapping consisted of a 250-foot buffer around the currently estimated Proposed Project disturbance footprint. Mapped white bursage scrub (*Ambrosia dumosa* Shrubland Alliance) locations were revisited and reclassified where needed by SummitWest Environmental, Inc. (SummitWest) from April 11 through April 16, 2022, when characteristic species were more identifiable. Representative site photographs were taken throughout the study area (Appendix C).

Natural and semi-natural vegetation community classification was based on the systems provided in the online database of *A Manual of California Vegetation, Second Edition* (CNPS 2021b, 2022b). Vegetation classifications were assigned, where applicable, at the two finest levels – alliance and association. All vegetation communities were categorized to the alliance level; communities were further categorized to the association level when necessary to determine whether any CDFW sensitive natural communities were present (CDFW 2022c). Classifications were modified as appropriate to reflect the existing site conditions (Sawyer et al. 2009, CNPS 2021b, 2022b). *The Jepson Manual: Vascular Plants of California, Second Edition* and online Jepson eFlora were used for plant identification and nomenclature (Baldwin et al. 2012; Jepson Flora Project 2021, 2022).

The study area overlaps with several SCE projects for which vegetation community data were already collected and recorded in ArcGIS Online (AGOL). In addition, AGOL documents vegetation community data imported from external sources for the DRECP area. These data were cross-referenced in the field during the fall 2021 mapping effort, and communities were updated as needed based on current field conditions.

Incidental observations of special status plant and wildlife species and other locally protected or sensitive resources such as cactus species, desert pavement, and cryptobiotic crust were recorded, if observed, during the vegetation community mapping surveys.

2.4.2 Habitat Assessment

SummitWest biologists conducted a field habitat assessment of the study area on September 27 through 30, and October 1, 11 through 14, and 19, 2021. A desktop habitat assessment was conducted for the expanded ROW between Cal City Substation and Sequoia Boulevard on December 8, 2021. SummitWest completed additional wildlife habitat assessment field surveys on September 27 and 28, October 26 and 27, 2022 and desktop analysis on November 8, 2022 in expanded areas. In the field, biologists evaluated habitat suitability and quality for sensitive wildlife species with potential to occur in the study area and documented the location of special status species

incidentally observed. Potential habitat for sensitive wildlife species was documented in field data. Polygons representing varying levels of habitat quality and inaccessible areas were later digitized and quantified using GIS. Habitat was mapped for sensitive species that would potentially require protocol-level surveys in the future, including Mojave desert tortoise (*Gopherus agassizii*), burrowing owl (*Athene cunicularia*), and Mohave ground squirrel, in Appendix I. Habitat for these three species mapped for the IC Project is also included in Appendix I. Habitat was not mapped or quantified for species with suitable habitat throughout the entire study area or for special status birds with no nesting habitat in the study area (e.g., golden eagle foraging habitat). Representative site photographs of species' habitat were taken throughout the study area and are included in Appendix C.

Habitat quality was categorized as "medium- to high-quality" or "low-quality to unsuitable" based on vegetation density, plant species composition, and disturbance level. Medium- to high-quality habitats consisted of pristine desert scrub with little to no disturbance. Low-quality to unsuitable habitats were heavily disturbed, developed, and/or lacked connectivity to surrounding suitable habitat.

2.4.3 Rare Plant Survey

SummitWest biologists conducted a rare plant survey and habitat assessment for rare plant species with potential to occur in the study area between March 24 and April 16, 2022. The rare plant survey was limited to the Proposed Project alignment and existing Kramer-Holgate Subtransmission Line, while the rare plant habitat assessment survey included those areas plus the Project Alternative. SummitWest completed additional rare plant habitat assessment surveys on September 27 and 28, and October 26 and 27, 2022 and desktop analysis on November 8, 2022 in the expanded areas. Details on survey methods, including photographs, are provided in Appendix F, Rare Plant Survey Report.

2.4.4 Aquatic Resources Survey

Bargas biologists conducted a reconnaissance-level aquatic resources delineation from September 20 through 24, October 11 through 15, October 18 through 19, and December 13 through 15 of 2021. Bargas completed additional delineation surveys on September 27 and 28, and October 26 and 27, 2022, and a desktop analysis on November 8, 2022 in expanded areas. This reconnaissance-level aquatic resources delineation is intended to support the Proposed Project design and maximize avoidance and minimization of impacts on jurisdictional waters, as the Proposed Project design is currently in development. It is anticipated that a formal jurisdictional delineation will be conducted when more final Proposed Project design data are available. The study area was surveyed for potential wetlands and non-wetland aquatic resources, including streams and ephemeral drainages, that exhibited an ordinary high water mark (OHWM) and would constitute waters of the U.S. and/or State. Biologists recorded general site characteristics, vegetation communities, soils, and hydrology associated with aquatic features. Current federal and state policies, methods, and guidelines were used to identify and delineate potential jurisdictional waters and are described below. For a more detailed description of the applicable jurisdictional regulations, see Appendix A. Since the reconnaissance-level aquatic resources delineation was not intended to be a formal jurisdictional delineation, the Arid West Ephemeral and Intermittent Stream OHWM Datasheet and Arid West Region Wetland Determination Data Forms were not completed.

Non-Wetland Waters of the United States

The lateral limits of United States Army Corps of Engineers (USACE) jurisdiction (i.e., width) of non-wetland waters were determined by the presence of physical characteristics indicative of the OHWM. The OHWM was identified in accordance with the applicable Code of Federal Regulations (CFR) sections (33 CFR 328.3 and 33 CFR 328.4) and Regulatory Guidance Letter 05-05 (USACE 2005), and in reference to various relevant technical publications, including, but not limited to: *Review of Ordinary High Water Mark Indicators for Delineating Arid Streams in the Southwestern United States* (USACE 2004), *Distribution of OHWM Indicators and Their Reliability in Identifying the Limits of "Waters of the United States" in Arid Southwestern Channels* (USACE 2006), and *A Field Guide to Identification of the OHWM in the Arid West Region of the United States* (USACE 2008b). The regulations were also reviewed in the determination of non-jurisdictional features including ephemeral drainages, artificially irrigated areas, and roadway ditches excavated in uplands.

Bargas biologists evaluated sources of water, potential connections, distances to traditional navigable waters (TNW) and streams that are perennial or intermittent in nature, and other factors that affect whether waters qualify as "waters of the United States" under the current USACE guidance. A more detailed regulatory definition of USACE jurisdiction is provided in Appendix A.

Wetland Waters of the United States

Potential wetland features were evaluated for presence of wetland indicators including hydrophytic vegetation, hydric soils, and wetland hydrology, according to routine delineation procedures in the Wetlands Delineation Manual (Environmental Laboratory 1987) and Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region (USACE 2008a). The USACE *Arid West 2018 Regional Wetland Plant List* was used to determine the wetland status of the examined vegetation by the following indicator status categories: Upland (UPL), Facultative Upland (FACU), Facultative (FAC), Facultative Wetland (FACW), and Obligate Wetland (OBL) (Lichvar et al. 2018). Representative sample points were sited in areas most likely to exhibit wetland characteristics (i.e., those with a prevalence of hydrophytic vegetation and suitable landform) and examined in the field for potential wetland indicators. Sample points were not located in areas with an obvious prevalence of upland vegetation or in areas where the landform would not support wetland features, such as concrete channels and slopes.

Waters of the State

The limits of "waters of the State," as defined under the Porter-Cologne Act, are any surface water or groundwater, including saline waters, within the boundaries of the state. In those areas where an OHWM was present, the OHWM was used to represent the limits of non-wetland waters of the State. In those areas where an OHWM was not present, but a bed and bank were present and indicated the capacity to hold surface water (e.g., detention basins, agricultural ditches, and roadside ditches that are hydrologically connected to tributaries and TNWs) the limits of waters of the State were determined to be coterminous with the top of slope or top of "bank." Roadside ditches that may periodically convey ephemeral surface waters but are hydrologically isolated from tributaries and/or TNWs were determined to be non-jurisdictional as they did not exhibit an OHWM.

The State Water Resources Control Board's (SWRCB) *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (SWRCB 2021) excludes certain activities from the procedures; however, the exclusion does not "affect the [SWRCB]'s authority to

issue or waive waste discharge requirements or take other actions for the following activities or areas to the extent authorized by the Water Code." These exclusions do not relieve entities of "their responsibility to avoid and minimize adverse impacts to aquatic resources and beneficial uses from these activities."

Potential State wetland features were evaluated pursuant to the SWRCB's *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State*. The SWRCB's definition relies on the same three parameters as the USACE definition (hydrophytic vegetation, wetland hydrology, and hydric soils) but allows for naturally unvegetated areas meeting the other two parameters to be considered wetlands. A more detailed regulatory definition of Regional Water Quality Control Board (RWQCB) jurisdiction is provided in Appendix A.

CDFW Streambeds

The extent of potential streambeds, streambanks, lakes, and riparian habitat subject to CDFW jurisdiction under Sections 1600 et seq. of the CFGC was delineated by reviewing the topography and morphology of potentially jurisdictional features to determine the outer limit of riparian vegetation, where present, or the tops of banks for stream features. A more detailed regulatory definition of CDFW jurisdiction is provided in Appendix A.

3 Existing Conditions

3.1 Physical Conditions

3.1.1 Topography and Soils

The study area is in the high desert region bounded by the Sierra Nevada Mountains and the Transverse Ranges, in the Mojave Desert geographic subdivision, as described in *The Jepson Manual: Vascular Plants of California, Second Edition* (Baldwin et al. 2012). Most of the study area is relatively flat, ranging between 2,250 and 2,600 feet above mean sea level (amsl), and includes portions of the Peerless Valley, Antelope Valley, and Fremont Valley. The study area is bordered by the Rand Mountains and Red Mountain to the north and the Gravel Hills to the east.

Landscapes in the study area include alluvial fans, flood plains, terraces, basin floors, fan piedmonts, gravel pits, hills, mountains, quarries, rock pediments, and sand sheets. Soils include parent material derived from mixed alluvium and granitic rock. Some of the general soil types documented in the study area include sand, loam, and clay soils. These include alkaline soils and soils with a neutral pH, and have textures ranging from fine to coarse and from well-drained to excessively drained (USDA, NRCS 2021a, 2022a). There are no hydric soils present in the study area (USDA, NRCS 2021b, 2022b).

3.1.2 Climate

The study area is in a desert climate region characterized by hot, dry summers and mild, dry winters. In summer, temperatures can reach 110 degrees Fahrenheit (°F). Winter temperatures range from 20°F to 40°F with an occasional freeze. Average annual temperature ranges from approximately 45°F in the winter months to approximately 84°F in the summer. The Mojave, California Station (Station ID: 045756) is the closest weather station to the study area with reliable monthly rainfall totals from 1904 through 2016. The Lancaster, California Station (Station ID: 044749) is located approximately 25 miles south of the Proposed Project site at a similar elevation and has reliable monthly rainfall totals from 1974 through 2016. Monthly precipitation data and monthly historical averages for the Mojave and Lancaster stations are provided in Table 4 and Table 5, respectively (Western Regional Climate Center [WRCC] 2022).

Table 4 Monthly Precipitation – Mojave (inches)

Season	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	Total

3.1.3 Hydrology

The Proposed Project is in the Antelope-Fremont Valleys Watershed (Hydrologic Unit Code 8: 18090206). This watershed is composed of two sub-watersheds, the Antelope Valley Watershed and the Fremont Valley Watershed, and encompasses approximately 2,158,828 acres. The Fremont Valley Watershed receives surface water runoff from Lone Tree Canyon, Cache Creek, and other ridges adjacent to the area. Most of the surface water in this watershed drains toward Koehn Dry Lake, approximately 20 miles northeast of Mojave. The Antelope Valley Watershed receives surface water runoff from the San Gabriel Mountains and the Tehachapi Mountains, including Big Rock Creek, Littlerock Creek, Oak Creek, and Cottonwood Creek. Most of the surface waters drain to Rosamond Lake on Edwards Air Force Base. The Antelope-Fremont Valleys Watershed is a closed basin with no outlets to the ocean. All waters that enter the watershed either infiltrate into the groundwater basin or flow toward three playa lakes (Rosamond Lake, Rogers Dry Lake, and Buckhorn Dry Lake) located near the center of the watershed (Aspen Environmental Group 2006).

The study area is in the South Lahontan Basin hydrologic region subject to RWQCB Region 6 (Lahontan) jurisdiction.

3.2 Vegetation Communities and Land Cover Types

Twenty-five natural vegetation communities (alliances and associations), one semi-natural community, and five other land cover types were identified in the study area during the vegetation community mapping surveys and the 2022 validation of the white bursage scrub (*Ambrosia dumosa* Shrubland Alliance) locations. Descriptions of vegetation communities and other land cover types documented in surveys are provided below and shown in Table 6. Included in the description of each alliance is the Global and State conservation status ranking. Communities dominated by non-native species are considered semi-natural alliances and have no Global and State rankings (ranking denoted as GNA SNA). One vegetation community was documented during IC Project fieldwork and 2022 surveys only (Nevada joint fir – Anderson's boxthorn – spiny hop sage scrub alliance) and is included in Table 6. Neither cryptobiotic crust nor desert pavement were observed during any of the surveys. The one cactus species observed, golden cholla (*Cylindropuntia echinocarpa*) was mapped when incidentally observed; those locations are not included in this report.

A list of plant species observed during the rare plant surveys is provided in Appendix F. Plant species observed during the habitat assessment, vegetation community mapping, and aquatic resources

surveys are included in Appendix D. Vegetation communities identified in the study area during vegetation community mapping surveys and validated in 2022, as well as those mapped by the IC Project, are provided in Appendix H.

Table 6 Vegetation Communities in the Study Area

[1] Vegetation community ranks are from CDFW (2022c). CDFW sensitive natural communities are indicated in **bold**. Communities were categorized only to the alliance level when 1) all associations are CDFW sensitive natural communities, 2) the alliance contains no CDFW sensitive natural communities, or 3) all CDFW sensitive natural communities were determined to be absent.

GNA SNA – Not applicable; community is not a suitable target for conservation
GNR – Global Rank not assessed

N/A – Not a vegetation community

[2] Acreages are rounded from GIS calculations

3.2.1 Natural Vegetation Communities

Creosote Bush Scrub (*Larrea tridentata* Shrubland)

Creosote bush scrub (*Larrea tridentata* Shrubland Alliance) is typically found on alluvial fans, bajadas, upland slopes, and minor intermittent washes with well drained soils or desert pavement, between -246 to 4,265 feet amsl. This vegetation community is typically characterized by intermittent to open shrub and herbaceous layers, with seasonal annuals or perennial grasses. Creosote (*Larrea tridentata*) is dominant in the shrub canopy. This alliance is not considered sensitive, where mapped to the alliance level only.

Creosote Bush (Larrea tridentata Association)

Creosote is dominant in the open shrub layer in this association, with white bursage (*Ambrosia dumosa*), allscale (*Atriplex polycarpa*), Cooper's boxthorn (*Lycium cooperi*), Mojave rabbitbrush (*Ericameria nauseosa* var. *mohavensis*), and cheesebush (*Ambrosia salsola*) present at low cover. The sparse herbaceous layer is primarily composed of turkey-mullein (*Croton setiger*), summer mustard (*Hirschfeldia incana*), *Erodium* sp., and cheeseweed (*Malva parviflora*). In the study area, this community contains patches of bare ground and is disturbed by tracks made by off-highway vehicle use. Creosote bush scrub is widespread throughout the study area. This association is ranked G5S5 and is not considered a CDFW sensitive community.

Creosote Bush – White Bursage Scrub (*Larrea tridentata – Ambrosia dumosa* Shrubland)

Creosote bush – white bursage scrub (*Larrea tridentata – Ambrosia dumosa* Shrubland Alliance) is generally found on washes and rills, alluvial fans, bajadas, valleys, basins, upland slopes, mesas, or erosional highlands. Soils are typically well-drained, alluvial, colluvial, sandy, and sometimes underlain by a hardpan that may be calcareous, igneous, and/or covered with desert pavement. This community is generally found between -246 to 5,249 feet amsl. The alliance is characterized by an open to intermittent two-tiered shrub canopy and an absent to intermittent herbaceous layer composed of seasonal annuals. Creosote and white bursage have at least one percent absolute cover in the shrub canopy and the cover of both species combined is over twice the cover of other shrub species. This community is not considered sensitive, where mapped to the alliance level only.

Creosote Bush – White Bursage Scrub (Larrea tridentata – Ambrosia dumosa Association)

Creosote bush – white bursage scrub has an open shrub layer that is composed primarily of creosote and white bursage, while western Joshua tree (*Yucca brevifolia* var. *brevifolia*), allscale, cheesebush, and winterfat (*Krascheninnikovia lanata*) are present at low cover. The ground is generally bare between shrubs. This community is found throughout the study area. This association is ranked G5S5 and is not considered a CDFW sensitive community.

Creosote Bush – White Bursage – Cheesebush Scrub (Larrea tridentata – Ambrosia dumosa – Ambrosia salsola Association)

The creosote bush – white bursage – cheesebush scrub association has a shrub layer that is dominated by creosote, white bursage, and cheesebush. It is found only in one patch in the western

portion of the study area, north of Sequoia Boulevard. This association is not ranked and is not considered a CDFW sensitive community.

Allscale Scrub (*Atriplex polycarpa* Shrubland)

Allscale scrub shrubland is typically found on washes, playas, dissected alluvial fans, rolling hills, terraces, and edges of large, low-gradient washes. Soils are generally carbonate rich, alkaline, sandy, or sandy clay loams, and elevations range between -246 to 4,921 feet amsl. This community is characterized by an open to continuous shrub layer and a seasonally variable annual herbaceous layer. Allscale consists of over two percent absolute cover in the shrub canopy or at least 50 percent relative cover in the shrub canopy. This community is not considered sensitive, where mapped to the alliance level only.

Allscale Scrub (Atriplex polycarpa Association)

This association has an open shrub layer that is dominated by allscale. Other species present include cheesebush, creosote, and Cooper's boxthorn. Parts of the allscale scrub community in the study area are highly disturbed by human activity. This association found throughout the study area. It is not ranked and is not considered a CDFW sensitive community.

Cheesebush – Sweetbush Scrub (*Ambrosia salsola – Bebbia juncea* Shrubland)

Cheesebush – sweetbush scrub (*Ambrosia salsola – Bebbia juncea* Shrubland Alliance) is typically found on intermittently flooded channels, arroyos and washes, valleys, flats, and rarely flooded low-gradient deposits. Soils are generally alluvial and sandy or gravelly, including disturbed desert pavement. This community is generally found between sea level and 5,250 feet amsl. Cheesebush – sweetbush scrub is characterized by an open to intermittent shrub canopy and sparse, seasonally variable herbaceous layer. Cheesebush has over one percent absolute cover or 50 percent relative cover in the shrub layer, or sweetbush (*Bebbia juncea*) has over 50 percent relative cover in the shrub layer.

Cheesebush – sweetbush scrub is found in a limited portion of the study area. Cheesebush is the dominant species in the shrub layer. Other species present include Anderson's boxthorn (*Lycium andersonii*), fourwing saltbush (*Atriplex canescens*), and white bursage.

Cheesebush Scrub (Ambrosia salsola Association)

Cheesebush is the dominant species in the shrub layer in this association. Other shrubs present include Anderson's boxthorn, Cooper's goldenbush (*Ericameria cooperi* var. *cooperi*), and scattered golden cholla (*Cylindropuntia echinocarpa*). This vegetation association occurs in a limited portion of the study area, is not ranked, and is not considered a CDFW sensitive community.

Sweetbush Scrub (Bebbia juncea Association)

Sweetbush is the dominant species in the shrub layer of this association. It occurs only in two patches on the western side of the study area, is not ranked, and is not considered a CDFW sensitive natural community.

Cheesebush – Creosote Bush Scrub (Ambrosia salsola – Larrea tridentata Association)

Cheesebush and creosote bush are the dominant species in the shrub layer of this association. It occurs in a limited portion of the study area, is not ranked, and is not considered a CDFW sensitive community.

California Buckwheat **– Parish's Goldeneye Scrub (***Eriogonum fasciculatum* **–** *Viguiera parishii* Shrubland)

California buckwheat scrub (*Eriogonum fasciculatum* Shrubland Alliance) is generally found on wash and arroyo margins with rocky to bouldery alluvium, canyons, and moderate to steep colluvial slopes and ridges. Soils are typically well drained and derived from granitic or volcanic rock. Elevations range between 1,312 and 6,562 feet amsl. This alliance is characterized by an open to intermittent shrub canopy and a seasonally variable open to intermittent herbaceous layer. California buckwheat (*Eriogonum fasciculatum*) may be dominant, with over two percent absolute cover or over 50 percent relative cover in the shrub canopy, or Parish's goldeneye (*Viguiera parishii*) may be dominant, with at least two percent absolute cover.

California Buckwheat – White Bursage Scrub (Eriogonum fasciculatum – Ambrosia dumosa Association)

California buckwheat and white bursage are dominant in the shrub canopy of this association, and other species present include Mojave rabbitbrush and creosote. This association is located only in one patch in the southwestern portion of the study area. It is not ranked and is not considered a CDFW sensitive community (CDFW 2022c).

Fourwing Saltbush Scrub (*Atriplex canescens* Shrubland)

Fourwing saltbush scrub (*Atriplex canescens* Shrubland Alliance) is typically found on playas, old beaches and shores, lake deposits, dissected alluvial fans, rolling hills or channel beds at elevations between -246 and 4,921 feet amsl. Soils are generally carbonate rich, alkaline, sandy, or sandy clay loams. Fourwing saltbush scrub is characterized by an open to intermittent shrub canopy and a variable herbaceous layer composed of seasonal herbs and non-native grasses. Fourwing saltbush has over two percent absolute cover and over 50 percent relative cover in the shrub layer.

In the study area, fourwing saltbush scrub is found only in one patch near the western boundary of the study area. The shrub canopy was intermittent and dominated by fourwing saltbush. Anderson's boxthorn was also present, and large patches of bare ground were present between the shrubs. This community is ranked G5S4 and is not considered a CDFW sensitive community.

Joshua Tree Woodland (*Yucca brevifolia* Woodland)

Joshua tree woodland (*Yucca brevifolia* Woodland Alliance) is generally found on gentle alluvial fans, ridges, and gentle to moderate slopes between 2,460 and 5,905 feet amsl. Soils are typically coarse sands, very fine silts, gravel, or sandy loams. Many sites have bimodal soils with both coarse sands and fine silts. This alliance is characterized by open to intermittent tree and shrub canopies, and an open to intermittent herbaceous layer composed of perennial grasses and seasonal annuals. Joshua tree is evenly distributed with at least one percent absolute cover, while junipers (*Juniperus* spp.) and pines (*Pinus* spp.) have less than one percent absolute cover in the tree canopy.

Joshua tree woodland is found along the southeastern portion of the study area. Western Joshua tree is the only species in the open tree canopy. The diverse shrub layer is composed of creosote, white bursage, allscale, cheesebush, and spinescale (*Atriplex spinifera*). Joshua tree woodland is ranked G4S3 and is considered sensitive.

Rubber Rabbitbrush Scrub (*Ericameria nauseosa* Shrubland)

Rubber rabbitbrush scrub (*Ericameria nauseosa* Shrubland Alliance) can be found on all topographic settings, especially in disturbed areas with well-drained sandy and gravelly soils between sea level and 10,500 feet amsl. This community is characterized by an open to continuous shrub canopy and a sparse, grassy herbaceous layer. Rubber rabbitbrush has over 50 percent relative cover or at least two percent absolute cover in the shrub canopy.

In the study area, rubber rabbitbrush scrub is found in a depression between two unpaved roads. Mojave rabbitbrush is the dominant species. This alliance is ranked G5S5 and is not considered sensitive, where mapped to the alliance level only.

Rubber Rabbitbrush Scrub (Ericameria nauseosa Association)

This association has the same characteristics and is found in the same location as the alliance. It is not considered a CDFW sensitive community.

Spinescale Scrub (*Atriplex spinifera* Shrubland)

Spinescale scrub (*Atriplex spinifera* Shrubland Alliance) is typically found on alluvial fans and old lake beds perched above current drainages, between 164 and 2,625 feet amsl. Soils are generally moderately sandy clay loams to fine, silty clays that may be carbonate rich. Stands in the Coast Ranges may be on moderate to steep slopes on sedimentary substrate. Spinescale scrub is characterized by an open shrub layer and a seasonally variable herbaceous layer. Spinescale is dominant in the shrub canopy, with over 50 percent relative cover.

Spinescale scrub is located throughout the study area. Spinescale is dominant in the shrub canopy, and other species present include allscale, boxthorn (*Lycium* spp.), cheesebush, and creosote. All associations in this alliance are considered sensitive.

White Bursage Scrub (*Ambrosia dumosa* Shrubland)

White bursage scrub (*Ambrosia dumosa* Shrubland Alliance) is typically found on older washes and river terraces, alluvial fans, bajadas, rocky hills, partially stabilized and stabilized sand fields, and upland slopes with sandy, clay-rich, or calcareous soils or desert pavement surfaces. Elevations range between sea level and 5,577 feet amsl. The alliance is characterized by an open to intermittent shrub layer and open to intermittent herbaceous layer composed of seasonal annuals. White bursage has over one percent absolute cover and exceeds the cover of other shrubs, including creosote.

White Bursage Scrub (Ambrosia dumosa Association)

This community is found throughout the study area. White bursage is dominant in the shrub layer while creosote, allscale, cheesebush, and spinescale are present at low cover. The white bursage scrub association of this alliance is unranked and is considered a CDFW sensitive community.

White Bursage – Rayless Goldenhead Scrub (Ambrosia dumosa – Acamptopappus sphaerocephalus Association)

This association is only found in the central portion of the study area south of Sequoia Boulevard to the west of Peerless Valley. White bursage is dominant in the shrub layer, and rayless goldenhead (*Acamptopappus sphaerocephalus*) is present as a subdominant species. The white bursage – rayless goldenhead scrub association is unranked and is considered a CDFW sensitive natural community.

Winterfat Scrubland (*Krascheninnikovia lanata* Shrubland)

Winterfat scrubland (*Krascheninnikovia lanata* Shrubland Alliance) is generally found on alkaline flats around playas and along drainages, plains, and old lakebeds above current drainages between 328 and 8,858 feet amsl. Soils are thin to moderately deep and generally consist of rocky to silty clay loams that are calcareous, moderately alkaline, and sometimes saline. This community is characterized by an open to continuous shrub canopy and an open or grassy herbaceous layer. Winterfat is dominant with over 50 percent relative cover in the shrub canopy.

Winterfat scrubland is found in the eastern portion of the study area along U.S. 395. Winterfat is dominant in the shrub canopy. All associations in this alliance are considered sensitive.

Shadscale Scrub (*Atriplex confertifolia* Shrubland)

Shadscale scrub (*Atriplex confertifolia* Shrubland Alliance) is typically found on bajadas, flats, lower slopes, rocky hills, exposed bedrock, erosional highlands, valleys, minor rills, washes, and edges of playas. Soils are variable and may be carbonate rich, clay rich, or have a high sand content, and may be covered with desert pavement. Elevations range between 1,476 and 8,202 feet amsl. Shadscale scrub is characterized by an open to continuous shrub canopy and a sparse to abundant herbaceous layer. Shadscale (*Atriplex confertifolia*) is dominant with at least two percent absolute cover in the shrub canopy.

Shadscale scrub is found throughout the study area. Shadscale is dominant in the shrub layer. This community is ranked G5S4 and is not considered sensitive. Some associations of this community are considered CDFW sensitive communities; however, these sensitive associations were confirmed to be absent.

Nevada Joint Fir **– Anderson's** Boxthorn **–** Spiny Hop Sage Scrub (*Ephedra nevadensis* **–** *Lycium andersonii* **–** *Grayia spinosa* Shrubland)

Nevada joint fir – Anderson's boxthorn – spiny hop sage scrub (*Ephedra nevadensis – Lycium andersonii – Grayia spinosa* Shrubland Alliance) is typically found on dry, open slopes, ridges, rocky highlands, canyons, sides of arroyos, bajadas, floodplains, valleys, and washes. Soils may be gravelly or rocky, and may be alkaline or saline. Elevations range between 1,312 and 6,234 feet amsl. This alliance is characterized by an open to continuous shrub canopy and a sparse to intermittent herbaceous layer. Nevada joint fir (*Ephedra nevadensis*) has over two percent absolute cover or over 30 percent relative cover in the shrub layer, Anderson's boxthorn has over 30 percent relative cover in the shrub cover, spiny hop sage (*Grayia spinosa*) has over two percent absolute cover or over 30 percent relative cover in the shrub canopy, or Cooper's boxthorn has over 30 percent relative cover in the shrub canopy. Cooper's goldenbush may also be dominant in the shrub canopy.

Nevada Joint Fir – Cooper's Goldenbush Scrub (Ephedra nevadensis – Ericameria cooperi Association)

This association is found only in the historical IC Project area along the eastern boundary of the study area. This community is ranked G3G4 S3S4 and is considered a CDFW sensitive community.

Nevada Joint Fir – Anderson's Boxthorn Scrub (Ephedra nevadensis – Lycium andersonii Association)

This association is found along the eastern boundary of the study area along the proposed Cal City-Edwards-Holgate 115 kV Subtransmission Line, and in the western portion of the study area along the proposed Kramer-Cal City 115 kV Subtransmission Line. This vegetation community is dominated by Nevada joint fir and Anderson's boxthorn, with spiny hop sage, California buckwheat, Cooper's boxthorn, white bursage, and winterfat present as subdominant species. This association is not ranked and is not considered a CDFW sensitive community.

Anderson's Boxthorn Scrub (Lycium andersonii Provisional Association)

This provisional association is found along the eastern boundary of the study area along the proposed Cal City-Edwards-Holgate 115 kV Subtransmission Line. This vegetation community is dominated by Anderson's boxthorn, with Cooper's goldenbush and winterfat present as subdominant species. This provisional association is not ranked and is considered a CDFW sensitive community.

Cooper's Boxthorn Scrub (Lycium cooperi Provisional Association)

This provisional association is found along the eastern boundary of the study area along the proposed Cal City-Edwards-Holgate 115 kV Subtransmission Line, and in the central portion of the study area south of Sequoia Boulevard near Peerless Valley. This vegetation community is dominated by Cooper's boxthorn, with Cooper's goldenbush and white bursage present as subdominant species. This provisional association is not ranked and is not considered a CDFW sensitive community.

Buckhorn Cholla/Big Galleta Grass Scrub (*Cylindropuntia acanthocarpa/ Pleuraphis rigida* Shrubland Alliance)

Buckhorn cholla/Big Galleta Grass Scrub (*Cylindropuntia acanthocarpa*/*Pleuraphis rigida* Shrubland Alliance) is typically found on upper alluvial fans, mid-elevation flats, and lower to upper hillslopes, with soils ranging from coarse sands to loams. Elevations range between 1,969 and 5,577 feet amsl. The alliance is characterized by an open to intermittent shrub layer and open to intermittent herbaceous layer composed of seasonal annuals. Buckhorn cholla (*Cylindropuntia acanthocarpa*), Cooper's goldenbush, rayless goldenhead, and/or a diverse mixture of mid-successional shrubs are dominant in the shrub layer, while big galleta (*Pleuraphis rigida*) may be dominant or co-dominant with other grasses such as Porter's muhly (*Muhlenbergia porteri*) in the herbaceous layer. In some configurations, Cooper's goldenbush contains more than 50 percent relative cover in the shrub layer.

Cooper's Goldenbush disturbance (Ericameria cooperi Disturbance Provisional Association)

This provisional association is found in the central portion of the study area south of Sequoia Boulevard near Peerless Valley. This vegetation community is dominated by Cooper's goldenbush in the shrub layer, with white bursage, Cooper's boxthorn, and cheesebush present at low cover. This provisional association is not ranked and is not considered a CDFW sensitive community.

3.2.2 Semi-natural Vegetation Communities

Tamarisk Thickets (*Tamarix* spp. Shrubland)

Tamarisk thickets (*Tamarix* spp. Shrubland Semi-Natural Alliance) is typically found along arroyo margins, lake margins, ditches, washes, rivers, and other watercourses between 245 to 2,625 feet amsl. Tamarisk (*Tamarix* spp.) contributes to at least 60 percent relative cover in the shrub layer. This vegetation community is ranked GNA SNA and is not considered sensitive (CDFW 2022c).

The tamarisk thickets in the study area are composed of Athel tamarisk (*Tamarisk aphylla*). Athel tamarisk is ranked as invasive with a designation of "Limited" by the California Invasive Plant Council (Cal-IPC 2021). A "Limited" ranking indicates the species is invasive but their ecological impacts are minor on a statewide level or there is not enough information to justify a higher score. This community is present as several small, isolated patches along Sequoia Boulevard in the center of the study area.

3.2.3 Other Land Cover

Developed

Developed areas in the study area consist of paved and unpaved roadways, road shoulders with little to no vegetation, residential, commercial, and industrial buildings, and associated infrastructure. This land cover type is present throughout the study area.

Dry Lake/Mudflats/Playa

In the study area, this land cover type consists of playas on the margins of dry lakes. These areas are unvegetated or contain sparse, annual herbaceous plants, and in some cases are highly disturbed by human activities.

Open Water

The open water land cover type consists of a human-made concrete-lined basin near the Kramer Substation mapped for the IC Project in 2017.

Streambed

The streambed land cover type consists of unvegetated dry stream channels. In the study area, this land cover type shows evidence of disturbance by vehicle traffic.

Disturbed

Disturbed land cover in the study area has been temporarily impacted by human activities. This land cover type includes lands which have been impacted by human use but which do not fall into the previous categories.

3.2.4 Invasive Plant Species

Natural portions of the study area are dominated by widely spaced native shrubs surrounded by mostly barren ground and scattered herbaceous plants. Many non-native species in the Mojave Desert are characterized by an annual lifecycle with a spring growth and blooming period. The floral compendia included in Appendix D and Appendix F list all plant species observed during the 2021 and 2022 surveys.

Invasive plant species as defined by Cal-IPC (Cal-IPC 2022) observed in the study area include Sahara mustard (*Brassica tournefortii*; Cal-IPC High), ripgut brome (*Bromus diandrus*; Cal-IPC Moderate), red brome (*Bromus madritensis* ssp. *Rubens*; Cal-IPC High), cheatgrass (*Bromus tectorum*; Cal-IPC High), flix weed (*Descurainia sophia*; Cal-IPC Limited) redstem filaree (*Erodium cicutarium*; Cal-IPC Limited), summer mustard (Cal-IPC Moderate), hare barley (*Hordeum murinum*; Cal-IPC Moderate), Russian thistle (*Salsola tragus*; Cal-IPC Limited), schismus (*Schismus* spp.; Cal-IPC Limited), London rocket (*Sisymbrium irio*; Cal-IPC Limited), Athel tamarisk (Cal-IPC Limited), and saltcedar (*Tamarix ramosissima*; Cal-IPC High). A “High” ranking indicates a species has severe ecological impacts on physical processes, plant and animal communities, and vegetation structure, while a “Moderate” ranking indicates a species has substantial and apparent-but generally not severe-ecological impacts on physical processes, plant and animal communities, and vegetation structure. “Limited” ranking indicates an invasive species with minor ecological impacts on a statewide level, or there was not enough information to justify a higher score (Cal-IPC 2022).

3.3 General Wildlife Species

The study area includes suitable habitats for desert wildlife species typical of the region, including reptiles such as zebra-tailed lizard (*Callisaurus draconoides*) and common side-blotched lizard (*Uta stansburiana*), birds such as common raven (*Corvus corax)*, California quail (*Callipepla californica*), and Say’s phoebe (*Sayornis saya*), and mammals such as coyote (*Canis latrans*) and black-tailed jackrabbit (*Lepus californicus*). A complete list of wildlife observed in the study area during the September, October, and December 2021, and September and October 2022 vegetation community and habitat assessment surveys and during the rare plant surveys in 2022 is included in Appendix D.

4 Sensitive Biological Resources

Sensitive natural communities identified during the field surveys are described in Section 4.1 . Based on the literature and database review and field survey results, 30 special status plant species and 37 special status wildlife species were evaluated for potential to occur in the study area. Species that were determined to occur or to be likely to occur in the study area are described in Sections 4.2 and 4.3. Occurrence determinations, listing status, suitable habitats, and presence of suitable habitat in the study area are provided for all species evaluated in Appendix E.

The Proposed Project design is currently in development. Therefore, the results reported herein do not include potential impacts to sensitive biological resources. One of the objectives of this BRTR is to facilitate design and construction strategies that will minimize impacts to sensitive biological resources to the extent feasible. It is anticipated that impacts will be quantified when final design is completed closer to implementation of the Proposed Project.

4.1 Sensitive Natural Communities

Seven sensitive natural communities occur in the study area (Joshua tree woodland, spinescale scrub, white bursage scrub, white bursage – rayless goldenhead scrub, Nevada joint fir – Cooper's goldenbush scrub, Anderson's boxthorn scrub [Provisional association], and winterfat scrubland). Joshua tree woodland is ranked G4S3.2, Nevada joint fir – Cooper's goldenbush scrub is ranked G3G4 S3S4, and winterfat scrubland is ranked G4S3. Spinescale scrub, Anderson's boxthorn scrub (Provisional association), white bursage scrub, and white bursage – rayless goldenhead scrub are not ranked; however, they are considered sensitive by CDFW. The remaining fourteen natural communities identified in the study area are ranked S4 or S5 or are unranked and are not considered sensitive by the CDFW. Sensitive natural communities, including those recorded during previous surveys referenced in Section 2.2, are mapped in Appendix H. Rarity rankings for the vegetation communities in the study area are included in Table 5.

4.2 Special Status Plants

Of the 30 special status plant species evaluated for potential to occur, four species were determined to occur in the study area: pink funnel lily (*Androstephium breviflorum*), Mojave spineflower (*Chorizanthe spinosa*), desert cymopterus (*Cymopterus deserticola*), and western Joshua tree. One species, Barstow woolly sunflower (*Eriophyllum mohavense*), was determined to likely occur. The remaining 25 special status plants were determined to be unlikely to occur or not to occur.

Based on literature searches, database reviews, and field surveys, no federally listed plant species were determined to occur or to likely occur in the study area. One State listed plant species occurs in the study area (western Joshua tree, State Candidate Threatened); no State listed plant species were determined to be likely to occur in the study area.

Special status plant species that either occur in the study area or were determined to likely occur in the study area based on the results of the literature review and the field surveys are described below. Special status plant species that were documented in the study area during the 2021 and 2022 field surveys are shown in Appendix H. Historical observations of rare plants from the IC project are also included in Appendix H.

Pink Funnel Lily (*Androstephium breviflorum*)

Pink funnel lily is designated CRPR 2B.2 by CNPS. This species is native to the southwest and the Great Basin region and endemic to the United States (Flora of North America 2022). The pink funnel lily is a perennial bulbiferous herb found in desert dunes, Mojavean desert scrub, and bajadas at elevations between 720 and 2,625 feet amsl. This species generally blooms in March and April. Some populations of pink funnel lily are threatened by habitat loss, including the threat of off-road vehicle recreation (Flora of North America 2022).

Occurrence in the Study Area

Pink funnel lily was observed at two locations on the eastern side of the study area along U.S. 395 during field surveys conducted in April 2017 by BRC Equals 3. The species was not observed during the fall 2021 surveys. One plant in seed was observed during the 2022 rare plant surveys in the southern portion of the Proposed Project near 20 Mule Team Road. A photo of the plant is included in the Rare Plant Survey Report in Appendix F (Photograph 4).

Mojave Spineflower (*Chorizanthe spinosa*)

Mojave spineflower is designated as CRPR 4.2 by CNPS. Mojave spineflower is an annual herb that generally flowers from March through July and grows on sandy to gravelly flats and slopes, often in saltbush communities. Mojave spineflower grows only in southern California, including southeastern Kern and northwestern San Bernardino counties, and also southern Inyo and northeastern Los Angeles counties. Mojave spineflower tolerates moderate salinity, low moisture regimes with 7 to 15 inches of annual precipitation, and has been found from 985 to 4,365 feet amsl.

Occurrence in the Study Area

Twelve Mojave spineflower plants were observed growing in finer soils with some clay and silt components and variable pebble cover forming the substrate during the 2022 rare plant survey (Appendix F, Photograph 12). These plants were located largely on the southern portion of the study area and on both the Proposed Project and Alternative alignments. Plants typically were found growing on low-angle slopes and in some areas disturbed by off-highway vehicle (OHV) use.

Desert Cymopterus (*Cymopterus deserticola*)

Desert cymopterus is designated CRPR 1B.2 by CNPS, a BLM S species, and a DRECP Focus Species. This species is endemic to the western Mojave Desert in California (Charlton 1993). Desert cymopterus is a perennial herb found on fine to coarse, loose, sandy soil of flats in old dune areas with well-drained sand. Suitable habitats include Joshua tree woodlands and Mojavean desert scrub habitats at elevations between 2,066 and 4,900 feet amsl. This species generally blooms between March and May. Populations of desert cymopterus are declining due to threats from human disturbance in the form of grazing, vehicles, urbanization, predation by native wildlife and off-road vehicle recreation (Charlton 1993).

Occurrence in the Study Area

Desert cymopterus was observed in several locations along the southern portion of the study area during field surveys conducted in April 2017 by BRC Equals 3. Biologists observed a single flowering desert cymopterus during the April 2022 surveys (Appendix F, Photographs 1-3). The plant was

found in a Joshua tree woodland with a white bursage and allscale in the understory with loamy sand and scattered pebbles and was near habitat polygons mapped historically for the species. This species was not observed during the fall 2021 surveys.

Western Joshua Tree (*Yucca brevifolia* var. *brevifolia*)

Western Joshua tree is designated as State Candidate Threatened (as of December 1, 2022). Western Joshua tree is a perennial tree which is endemic to the United States. This species grows on fine, loose, well-drained or gravelly silts, loams, and sands in sagebrush scrub, desert scrub, southwestern shrubsteppe, pinyon and juniper woodland, and desert grassland habitats. This species is generally found in hot, dry sites on flats, mesas, bajadas, and gentle slopes in the Mojave Desert at elevations between 1,600 and 6,600 feet amsl. Western Joshua tree is threatened by fire, drought, climate change, and numerous threats related to habitat loss including off road vehicle use (Cole et al. 2011).

Occurrence in the Study Area

Multiple individual western Joshua trees were observed in the southern portion of the study area during the fall 2021 and spring 2022 field surveys. One individual was observed in the study area during habitat assessment surveys in October 2022 (Appendix H). This species was found in the allscale scrub, creosote bush scrub, spinescale scrub, and Joshua tree woodland vegetation communities. Observations of individual western Joshua trees are shown in Appendix H, while communities of western Joshua trees were not mapped as individual points; instead, these communities are mapped as the Joshua Tree Woodland Alliance (see Section 3.2.1).

Barstow Woolly Sunflower (*Eriophyllum mohavense*)

Barstow woolly sunflower is designated CRPR 1B.2 by CNPS, a BLM S species, and a DRECP Focus Species. Barstow woolly sunflower is restricted to a portion of the western Mojave Desert in Kern and San Bernardino Counties in California (CDFW 2021a, 2022a). This is an annual herb that is found in open, silty or sandy areas, barren ridges, or margins of playas in chenopod scrub, Mojavean desert scrub, and playa habitats. Its elevational range is between 1,640 and 3,150 feet amsl, and it generally blooms between March and May. This species is threatened by human activities in the desert, including development, grazing, off-road vehicle recreation, and mining (BLM 2013).

Occurrence in the Study Area

Barstow woolly sunflower is likely to occur in the study area. Suitable chenopod scrub, Mojavean desert scrub, and playas are present in the study area. Open areas with silty and sandy soils are present. Multiple CNDDB occurrences have been recorded within 5 miles of the study area, including six occurrences from 2017 that overlap the study area. This species was not observed during surveys conducted in 2017 for the IC project, nor during 2021 fall surveys. Barstow woolly sunflower was not observed during the 2022 spring surveys conducted during the bloom period. Medium- to high-quality habitat for Barstow woolly sunflower in mapped in the Rare Plant Survey Report in Appendix F.

4.3 Special Status Wildlife

Based on the database queries and literature review, a total of 22 special status wildlife species were evaluated for their potential to occur in the study area (Appendix E). Eight special status wildlife species occur in the study area, and three special status wildlife species likely occur in the study area. Medium- to high-quality habitat for Mojave desert tortoise, burrowing owl, and Mohave ground squirrel were identified during the habitat assessment surveys. The habitat for these three species, including habitat data from IC Project surveys (Section 2.2), are mapped in Appendix I. Locations of special status wildlife species observed during 2021 and 2022 field surveys are also mapped in Appendix I.

The IC Project data used for this BRTR did not classify habitat quality levels within mapped suitable habitat. Habitat quality levels in the IC Project survey area were therefore assumed to be the same as in the surrounding habitat mapped in the Proposed Project study area and these areas were included in habitat acreage calculations in the sections that follow, where appropriate.

The eleven special status wildlife species that occur in the study area or are likely to occur are described below.

4.3.1 Reptiles

Mojave Desert Tortoise (*Gopherus agassizii*)

Mojave desert tortoise inhabits the Mojave, Colorado, and Sonoran Deserts in the southwestern United States and adjacent Mexico (USFWS 1994a). The Mojave population of the desert tortoise (all tortoises north and west of the Colorado River in Arizona, Utah, Nevada, and California) are considered a separate lineage from the Sonoran population. Within the once relatively continuous distribution of habitat occupied by the Mojave population, desert tortoises now remain in scattered portions of Antelope, Indian Wells, and Searles valleys which have not yet been developed for urban uses (USFWS 1994b).

The Mojave desert tortoise is a federally and State listed threatened species most commonly found in gently sloped terrain at elevations between 1,000 to 3,000 feet amsl with friable sandy-gravel soils suitable for burrows and sparse vegetative cover that is highly diverse in both the perennial and annual plants that they feed on (USFWS 1994b). Burrows are often dug at the base of a shrub or soil or rock overhangs and are used as refuge from direct sunlight and cold winter temperatures, both of which can be lethal to tortoises (California Wildlife Habitat Relationships [CWHR] 2000).

Mojave desert tortoises are most active during the rainy season between March and June, or later in areas with late summer rains. Outside the rainy season, during which they can be active all day, they are active above ground for less than an hour in the early morning and hibernate from approximately November to February. Female tortoises lay clutches of two to nine eggs in early summer that hatch three to four months later. Periods of low rainfall resulting in reduced annual plant populations can result in nest failure. Young tortoises are vulnerable to predation by raptors, ravens, coyotes, and foxes.

At the time of listing, populations had decreased dramatically due to urbanization, fragmentation, loss of habitat, off-road vehicle use, illegal dumping, the introduction of invasive species, and a serious respiratory disease (*Mycoplasma agassizii*) (USFWS 1994b).

Occurrence in the Study Area

Mojave desert tortoises have been recorded most frequently, and are likely to occur in the highest concentrations, in the southeastern corner of the study area near the community of Boron and Edwards Air Force Base (Arcadis 2019). The study area contains approximately 320 acres of USFWS-designated critical habitat for the desert tortoise, as described in Section 4.5.

During vegetation community mapping and habitat assessment surveys for the Proposed Project in October 2021, two live tortoises, two carcasses, one deteriorated pallet, one burrow in good condition but with no evidence of recent use, four deteriorated burrows, and two burrows with evidence of use were observed in the study area. During rare plant surveys for the Proposed Project in March and April 2022, 11 live tortoises, three carcasses, three pallets, five Class 1 burrows (currently active, with tortoise or recent tortoise sign), two Class 2 burrows, six Class 3 burrows (deteriorated condition; definitely belonging to desert tortoise), three Class 4 burrows (deteriorated condition; possibly belonging to desert tortoise), two Class 5 burrows (good condition; possibly belonging to desert tortoise), and one burrow of unknown class were observed in the study area. One live tortoise in a previously mapped burrow, one live tortoise in a newly mapped burrow, one Class 1 burrow, four Class 2 burrows (two with scat), one Class 3 burrow, and two Class 5 burrows were observed in the study area during aquatic resources and habitat assessment surveys in September and October 2022 (Appendix I).

Medium- to high-quality habitat for Mojave desert tortoise included relatively undisturbed, low density, creosote scrub vegetation with friable soils and low levels of human activity and development. Approximately 6,672 acres of medium- to high quality habitat for Mojave desert tortoise was identified in the study area during habitat assessment surveys and in the IC Project area.

4.3.2 Birds

Cooper's Hawk (*Accipiter cooperii*)

Cooper's hawk (*Accipiter cooperii*) is a CDFW WL species that generally inhabits extensive riparian bottomlands in southern California (Garrett and Dunn 1981). This species nests in deciduous trees approximately 20 to 50 feet above the ground. Cooper's hawks are highly territorial, and males defend an area approximately 100 feet in diameter around a nest site but can forage up to 2 miles away. The diet of Cooper's hawks consists primarily of small mammals, such as squirrels and bats, and medium-sized birds such as mourning doves and quail (Kennedy 1980).

Within California, the species is found throughout most of the wooded portion of the state and breeds in the southern Sierra Nevada foothills, New York Mountains, Owens Valley, and other areas in southern California (Zeiner et al. 1990).

Occurrence in the Study Area

Suitable deciduous trees for nesting are absent from the study area. However, suitable open habitats for foraging and appropriate prey species are present. This species was observed in the study area during the October 2021 vegetation community mapping and habitat assessment surveys (Appendix I).

Golden Eagle (*Aquila chrysaetos*)

The golden eagle is designated as a fully protected and a WL species by CDFW. The species is also considered a BLM S species, is a DRECP Focus Species and a USFWS BCC. This species feeds primarily on rabbits, hares, and ground squirrels and may also consume carrion (Koechert et al. 2002). Golden eagles generally inhabit open and semi-open habitats such as prairies, sagebrush scrub, savannahs, and barren areas, especially in hilly or mountainous regions with sufficient mammalian prey base and nearby suitable nesting sites. Nesting sites are most often on rock ledges or cliffs but may also be found in large trees, on steep hillsides, or on the ground (Great Basin Bird Observatory [GBBO] 2010). Golden eagles are a permanent resident and migrant throughout California except the center of the Central Valley (Zeiner et al. 1990).

Occurrence in the Study Area

Suitable grassland and shrub foraging habitats are present in the study area. Suitable prey species, including ground squirrels and rabbits, were observed during the October 2021 habitat assessment and vegetation community mapping. Transmission towers in the study area may provide suitable nesting habitat. Two golden eagle nests recorded as inactive and destroyed in 2012 in historical data collected by BioResource Consultants are present within 5 miles of the study area. Both nests are located on cliffs, which are absent from the study area.

Burrowing Owl (*Athene cunicularia*)

The western burrowing owl is listed as a CDFW Species of Special Concern, a BLM S species, and is a DRECP Focus Species. The burrowing owl is a grassland specialist dependent on the presence of fossorial mammals, whose burrows are used for nesting and roosting (Klute et al. 2003). The burrowing owl is a yearlong resident of open grasslands, especially prairie, plains, and savanna, and sometimes other open areas such as vacant lots near human habitation or airports. This species spends much time on the ground or on low perches such as fence posts, and nests in abandoned burrows such as those dug by ground squirrels, desert kit foxes (*Vulpes macrotis arsipus*), and American badgers (*Taxidea taxus*) (Zeiner et al. 1990). During migration and winter, burrowing owls are more widespread in lowland areas of the state and reach offshore islands (Shuford et al. 2008).

Occurrence in Study Area

Two burrowing owls and five potentially active burrowing owl burrows were observed in the study area during vegetation community mapping and habitat assessment surveys in October 2021. Three active burrows were observed in the study area during rare plant surveys in March 2022. Two inactive burrows were observed in the study area during habitat and aquatic resources surveys in September 2022 (Appendix I).

Approximately 7,773 acres of medium- to high-quality habitat for burrowing owl were recorded within the study area during habitat assessment surveys and in the IC Project area. Medium- to high-quality habitat for burrowing owl included relatively undisturbed, low density, creosote scrub vegetation with friable soils, had low levels of human activity and development, and was distant from developed roads or highways.

California Horned Lark (*Eremophila alpestris actia*)

The California horned lark (*Eremophila alpestris actia*) is a CDFW WL species that inhabits open areas dominated by sparse, low herbaceous vegetation or widely scattered low shrubs, including short-grass prairies, mountain meadows, fallow grain fields, and alkali flats. The species nests in hollows on the ground, often next to grass tufts or clods of earth or manure (Beason 1995). The species is distributed from northern Baja California northward through California in the coast range, north to Humboldt County and the San Joaquin Valley (AOU 1957).

Occurrence in the Study Area

Several observations of California horned larks were recorded during vegetation community mapping and habitat assessment surveys in October 2021 (Appendix I). Approximately 4,205 acres of medium- to high-quality habitat was recorded within the study area.

Prairie Falcon (*Falco mexicanus*)

The prairie falcon (*Falco mexicanus*) is CDFW WL species and is a USFWS BCC. The species inhabits perennial grasslands, savannahs, rangeland, some agricultural fields, and desert scrub areas. In California, the habitat for this species includes mountainous areas, steppes, plains, or prairies. Prairie falcon usually nests on rocky cliffs or steep earth embankments (Kaiser 1986), and nests may be located in man-made excavations on otherwise unsuitable cliffs (AOU 1983). This species primarily feeds on mammals (especially ground squirrels), lizards, and birds, generally up to the size of quail. Foraging areas are large, and individuals defend only a small area around the nest site. The range of prairie falcon in California spans from southwestern deserts northwest through the Central Valley and along the inner Coast Ranges and Sierra Nevada (AOU 1983).

Occurrence in the Study Area

Several observations of foraging prairie falcons were recorded in the study area during vegetation community mapping and habitat assessment surveys in October 2021 and during rare plant surveys in April 2022. One individual was observed during habitat assessment surveys in October 2022, outside the breeding season (Appendix I). Cliffs required for nesting are absent from the study area. However, suitable foraging habitat is present.

Loggerhead Shrike (*Lanius ludovicianus*)

The loggerhead shrike (*Lanius ludovicianus*) is a CDFW Species of Special Concern. It inhabits open country with scattered trees and shrubs, savannah, desert scrub, and occasionally open woodland with suitable hunting perches. The species is territorial throughout the year, constructing a nest of course twigs and animal hair that is typically placed in shrubs or small trees. Throughout California, this species is a common resident and winter visitor in lowlands and foothills (AOU 1983).

Occurrence in the Study Area

Several observations of loggerhead shrike were recorded during vegetation community mapping and habitat assessment surveys in October 2021 and September and October 2022, and during rare plant surveys in April 2022 (Appendix I). Approximately 1,067 acres of medium- to high-quality habitat for loggerhead shrike was mapped in the study area, which includes relatively undisturbed desert scrub vegetation with trees or shrubs at the appropriate height for nesting.

LeConte's Thrasher (*Toxostoma lecontei*)

LeConte's thrasher (*Toxostoma lecontei*) is a permanent resident of California and is considered a BCC in coastal California and the Sonoran and Mojave Deserts by USFWS. This species inhabits open desert wash, desert scrub, alkali desert scrub, and desert succulent scrub habitats. Habitat may also consist of sparsely vegetated desert flats, dunes, alluvial fans, or gently rolling hills having high proportion of one or more species of saltbush or shadscale and/or cylindrical cholla (*Cylindropuntia* spp.) cactus (Sheppard 1996). Nests are usually placed in shaded locations in dense and thorny desert shrubs or small trees or cholla cactus, or in artificial sites, usually at 2 to 8 feet above the ground (Sheppard 1996).

Occurrence in the Study Area

Several observations of LeConte's thrasher were recorded during vegetation community mapping and habitat assessment surveys in October 2021 and during rare plant surveys in April 2022 (Appendix I). Approximately 1,066 acres of medium- to high-quality habitat was mapped in the study area, including relatively undisturbed desert scrub vegetation with trees, shrubs, or cactus at the appropriate height for nesting.

Migratory Bird Treaty Act and CA Fish and Game Code – Protected Birds

The federal Migratory Bird Treaty Act (MBTA) protects most native birds and their nests, including many species that are non-migratory in California. Under MBTA, it is illegal to take, possess, buy, sell, purchase, or barter any bird listed in 50 CFR Part 10. MBTA also restricts any disturbance that causes direct injury, death, nest abandonment, or forced fledging of migratory birds. California Fish and Game Code (CFGC) Section 3513 protects all migratory nongame birds covered by the MBTA at the state level. CFGC Section 3503 also protects most birds and their nests, and CFGC Section 3503.5 further protects birds of prey, including eagles, hawks, falcons, and owls. Suitable nesting habitat for birds protected under MBTA and/or CFGC, including trees, shrubs, man-made structures, and the ground surface, is present in the study area. During the Proposed Project-related surveys between September and December 2021, 10 nests were observed in the study area. These nests, located in trees or power poles, were determined to be inactive corvid or raptor nests. No avian activity was observed at any of the nests; however, the surveys were conducted outside the normal nesting season (February 1 through August 30). A list of bird species observed in the study area during surveys is included in Appendix D.

4.3.3 Mammals

American Badger (*Taxidea taxus*)

The American badger is a CDFW SSC that inhabits drier open stages of most shrub, forest, and herbaceous habits with friable soils. Cropland, desert, grassland, savanna, and shrubland/chaparral are preferred habitat types for the American badger. The species is chiefly nocturnal, mostly solitary, and feeds primarily on small rodents that are captured by digging out the rodent burrows. American badgers are an uncommon, permanent resident throughout most of California, except in the northern North Coast area (Zeiner et al. 1990).

Occurrence in the Study Area

American badgers have historically been detected in the study area and the surrounding region (CDFW 2021a, 2022a) Neither badgers nor their burrows were observed during field surveys. Three CNDDB occurrences were recorded approximately 6 miles west of the study area in 2014 and 2015. During the habitat assessment surveys in October 2021, approximately 7,091 acres of medium- to high-quality habitat for American badger was recorded in the study area. This habitat includes relatively undisturbed, low density, creosote scrub vegetation with friable soils, has low levels of human activity and development, and is distant from developed roads or highways.

Desert Kit Fox (*Vulpes macrotis arsipus*)

The desert kit fox is protected from take per CFGC Chapter 5, Sec, 460 "Fisher, Marten, River Otter, Desert Kit Fox, and Red Fox" (CFGC 2019). This species inhabits open, level desert areas with loose-textured soils supporting scattered, shrubby vegetation with little human disturbance. The species has historically been broadly distributed across the California desert, relying on creosote scrub communities that support abundant rodent populations. The desert kit fox is an uncommon to rare resident of the Mojave and Colorado deserts of California (Kadaba et al. 2013).

Occurrence in the Study Area

One active kit fox den and 11 potential kit fox dens were observed during vegetation community mapping and habitat assessment surveys in October 2021. Three additional active kit fox dens were observed during rare plant surveys in April 2022. One active and three inactive dens were observed in the study area during habitat and aquatic resources surveys in September and October 2022 (Appendix I). Approximately 7,405 acres of medium- to high-quality habitat for desert kit fox was identified in the study area during habitat assessment surveys and in the IC Project area. This habitat includes relatively undisturbed, low density, creosote scrub vegetation with friable soils and has low levels of human activity and development.

Mohave Ground Squirrel (*Xerospermophilus mohavensis*)

The Mohave ground squirrel is listed as State-threatened, is a BLM S Species, and a DRECP Focus Species. It is endemic to the western Mojave Desert and inhabits desert areas with flat or moderately sloping topography, deep sandy or gravelly friable soils, and an abundance of annual herbaceous vegetation. The species is found in creosote bush scrub, shadscale scrub, alkali sink scrub, and Joshua tree woodlands. Mohave ground squirrel nests in underground burrows, often beneath large shrubs (Wessman 1977). It has one of the smallest geographic ranges of any North American ground squirrel and spends most of the year in underground burrows (Zeiner et al. 1990).

Occurrence in the Study Area

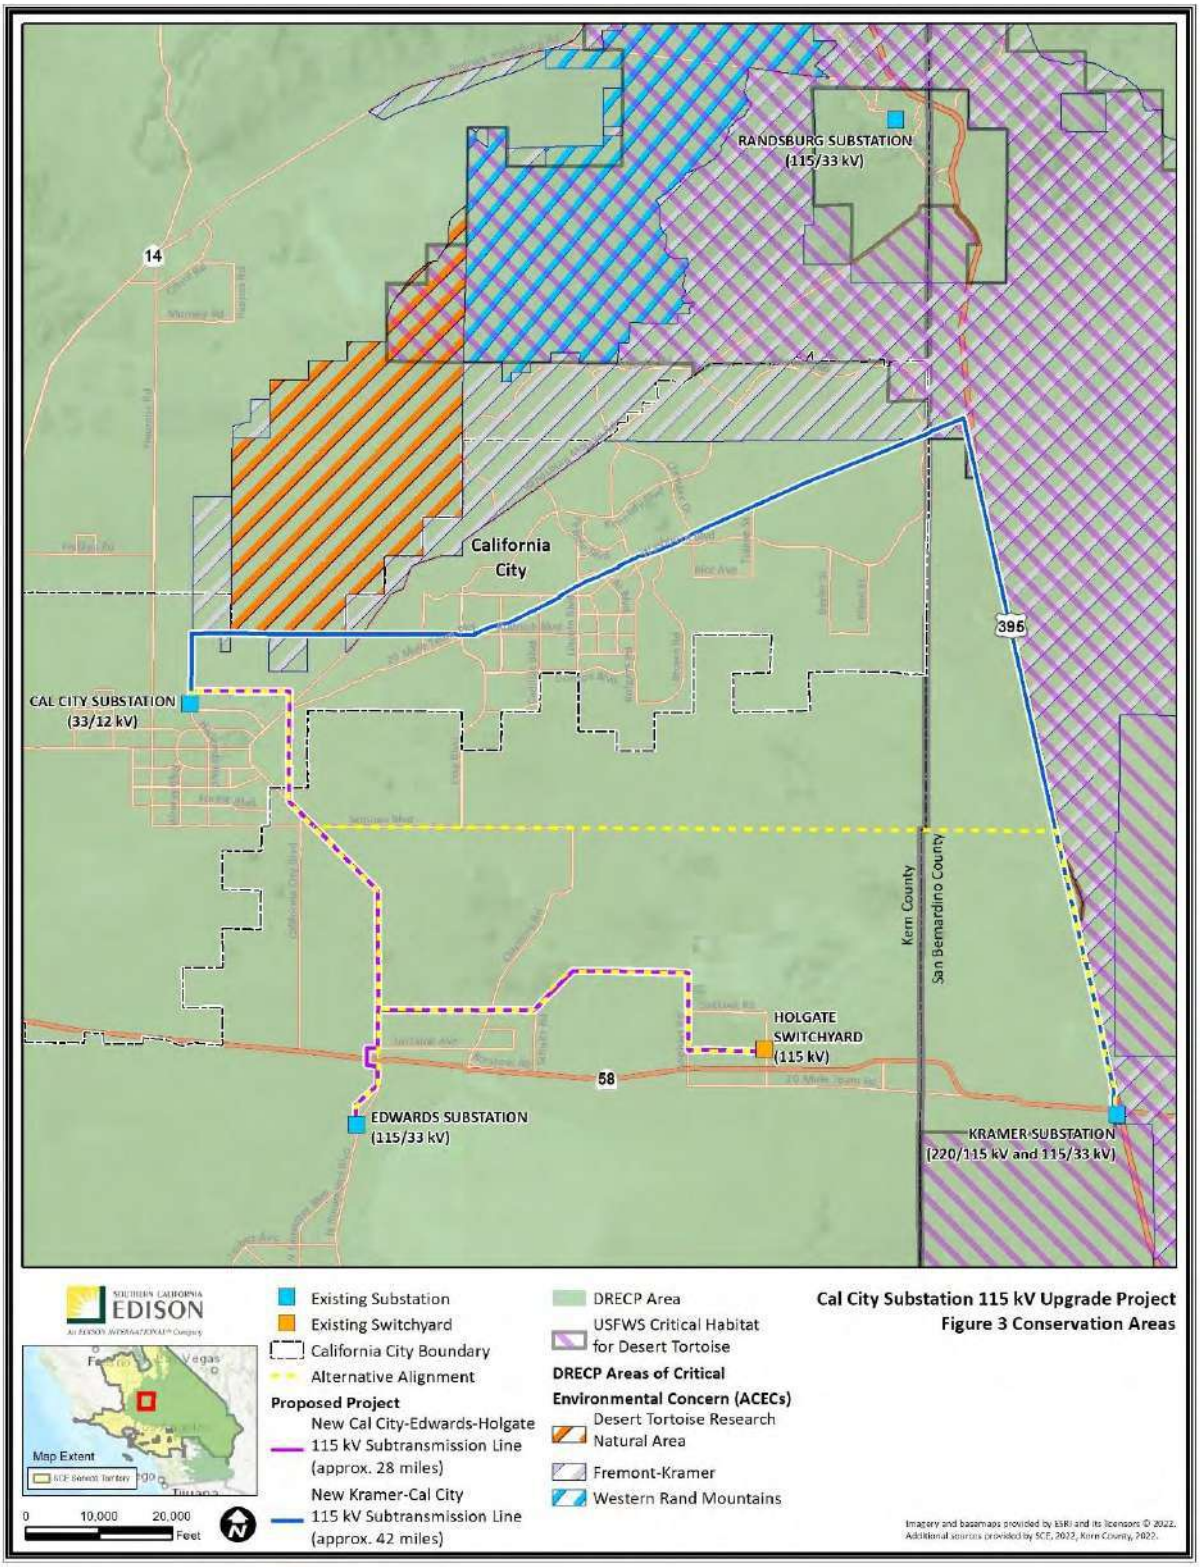
The study area is within the known range of Mohave ground squirrel and suitable scrub habitat is present in the study area (Leitner et al. 2008). In addition, the study area is located in an identified core area that supports relatively abundant Mohave ground squirrel populations (CDFW 2021d). This core area is connected to other core areas by potential habitat corridors that allow gene flow between different populations of Mohave ground squirrel (CDFW 2021d). There are 49 CNDDB records within 5 miles of the study area recorded between 1999 and 2017 (CDFW 2021a, 2022a). Approximately 7,182 acres of medium- to high-quality habitat for Mohave ground squirrel was identified in the study area during habitat assessment surveys and in the IC Project area. This habitat includes relatively undisturbed creosote scrub vegetation, presence of the plant boxthorn

(*Lycium* sp.), presence of small mammal burrows, has low levels of human activity and development, and is distant from developed roads or highways.

4.4 Wildlife Movement

Scrub vegetation communities in the study area provide connectivity to other larger stretches of similar habitat. These provide potential local migration corridors for birds, mammals, and reptiles. Near the study area, mountain ranges and passes under State Highway 58 also provide corridors for wildlife movement. The Pacific Flyway, a major north-south corridor for migratory birds, intersects the study area and habitat in the Proposed Project site may provide foraging and/or shelter habitats for migrating birds that move through the California desert ecosystem in spring and fall.

A network of wildlife linkages identified in the DRECP LUPA cross the Proposed Project alignment. In addition, the Proposed Project is located near several designated conservation areas. The Desert Tortoise Areas of Critical Environmental Concern (ACEC) and Western Rand Mountains ACEC, which are located northwest of the study area, were specifically established by BLM to create and protect wildlife linkages to other conservation and wilderness areas (Figure 3; BLM et al. 2016). The northwestern and eastern extents of the study area are also near the Fremont-Kramer ACEC, which includes essential wildlife movement corridors that link habitats in the Western Rand Mountains and Fremont Valley to the Cuddleback Lake area and to both the Golden Valley and Grass Valley Wildernesses (BLM et al. 2016).



The study area also contains potential habitat corridors between Mohave ground squirrel core areas and known populations (Leitner 2009).

4.5 USFWS Designated Critical Habitat

USFWS-designated critical habitat for Mojave desert tortoise is located along the eastern boundary of the study area. The study area coincides with critical habitat at the intersection of U.S. 395 and Twenty Mule Team Parkway in the northeast, and near Kramer Junction in the southeast (Figure 3). The study area contains approximately 322.4 acres of critical habitat in the Fremont Kramer Recovery Unit (USFWS 2021a).

The physical or biological features for desert tortoise critical habitat include sufficient space for individual and population growth and normal behavior, which can range anywhere from 100 to 200 acres; food, water, or other nutritional or physiological requirements; cover or shelter; sites for breeding, reproducing, and rearing of offspring; and habitats that are protected from disturbance or are representative of the historical geographical and ecological distribution of the species (55 FR 12178-12191).

Figure 3 Conservation Areas

4.6 Aquatic Resources

Based upon the findings of the aquatic resource delineation surveys, including data from previous surveys referenced in Section 2.2, many features in the study area are subject to RWQCB and/or CDFW jurisdiction. Additionally, several non-jurisdictional features (e.g., erosional features, roadside swales) were observed in the study area. The aquatic resources delineation surveys did not constitute a formal jurisdictional delineation. Jurisdiction could not be determined for playas, which were mapped as possibly jurisdictional.

A characterization summary of observed features that were jurisdictional or potentially jurisdictional, including features mapped for the IC project, is presented in Table 7; non-jurisdictional features are not included and are discussed in Section 4.6.5. These areas are identified in Appendix J. Jurisdictional features with flow that changed to diffuse surface flow across roads are depicted as single features with a gap where an ordinary high water mark (OHWM) could not be defined in Appendix J. Representative photographs of the features observed are included in Appendix C.

Table 7 Aquatic Resources within the Study Area

Jurisdictional Water Type	Amount (acres)[2]
USACE Jurisdiction	
Non-Wetland Waters of the U.S.	0.0
Culverted Non-Wetland Waters of the U.S.	0.0
Wetland Waters of the U.S.	0.0
Total Waters of the U.S.	0.0
RWQCB Jurisdiction	
Non-Wetland Waters of the State	8.54
Culverted Non-Wetland Waters of the State	0.15
Wetland Waters of the State	0
Total Waters of the State	8.70
CDFW Jurisdiction	
CDFW Jurisdictional Streambed	28.10
Possibly Jurisdictional	
Jurisdiction To Be Determined[1]	25.84

[1] Playas were mapped as possibly jurisdictional; jurisdiction may be determined by a formal jurisdictional

[2] Acreages are rounded from GIS calculations

4.6.1 USACE Jurisdiction

All aquatic features in the study area are isolated, intrastate waters which do not possess a hydrologic connection or a significant nexus to any TNW. Cache Creek, the only named aquatic resource in the study area, flows northward approximately 10 miles into Koehn Dry Lake. All other drainages in the study area flow into Cache Creek, Harper Dry Lake (approximately 12 miles east of the study area), Rogers Dry Lake (approximately 2 miles south of the study area), or into smaller basins. Koehn Dry Lake, Harper Dry Lake, and Rogers Dry Lake are dry lakes with no outlet[1]. Due to the absence of a hydrologic connection or significant nexus to any TNW, no USACE jurisdictional waters are present in the study area.

4.6.2 RWQCB Jurisdiction

No areas potentially meeting the State wetland definition were identified in the study area. Hydrology indicators including shallow mud cracks and drainage patterns were observed in some features in the study area. Two hydrophytic vegetation communities are present in the study area: allscale scrub and tamarisk thickets. No hydric soil types are mapped in the study area (USDA, NRCS 2021b); however, no sample points were assessed as part of the aquatic resource delineation. Due to the highly ephemeral flood regime of drainages in the Mojave Desert and the dominance of upland plant species, the aquatic resource delineation determined that no wetland waters of the State are present in the study area. A formal jurisdictional delineation would be required to confirm this.

Jurisdictional non-wetland waters of the State delineated in the study area include vegetated channels, unvegetated channels, and culverts. All these features, including Cache Creek, are non-tributary features considered intrastate isolated waters of the State, as they do not possess a hydrologic connector or significant nexus to any TNW. See Appendix J for the locations of these features mapped in 2021 and from the IC Project surveys.

4.6.3 CDFW Jurisdiction

Many jurisdictional features in the study area, including Cache Creek, are likely CDFW-jurisdictional streambeds pursuant to Section 1600 et. Seq. of the CFGC, based on the presence of a well-defined bed and bank and/or presence of riparian vegetation. See Appendix J for the locations of these features mapped in 2021 and from the IC Project surveys.

4.6.4 Potentially Jurisdictional Features

Playa features present in the study area were mapped; however, the jurisdictions of these features were not determined during the aquatic resource survey. The playas were characterized by a lack of vegetation and light surface cracking. A formal jurisdictional delineation is required to determine whether these features are subject to RWQCB or CDFW jurisdiction. See Appendix J for the locations of these features mapped in 2021 and from the IC Project surveys.

[1] On June 20, 2017, the USACE determined that Cache Creek is within the drainage basin of Koehn Dry Lake, and has no physical, chemical or biological connection or effect on the nearest TNW. (see approved jurisdictional determination for USACE File No. SPL-2017-00401-TS available at: https://www.spl.usace.army.mil/Portals/17/docs/regulatory/JD/AJD/2017/AJD201700401.pdf).
On March 3, 2014, the USACE determined that Rogers Dry Lake and Harper Dry Lake are isolated with no connection to a downstream TNW, and thus are non-jurisdictional. (see approved jurisdictional determination for USACE File No. SPL-2013-00162-BEM available at: https://www.spl.usace.army.mil/Portals/17/docs/regulatory/JD/AJD/2014/SPL201300162-BEM.pdf). USACE determinations are generally valid for 5 years. Although this determination may no longer be valid, the conclusions remain the same that these dry lakes do not form any connection with a TNW.

4.6.5 Non-Jurisdictional Features

Non-jurisdictional features in the study area did not contain a OHWM or natural streambed characteristics, were not perennial or intermittent tributaries that contribute surface flow to or have any significant nexus to TNWs or were roadside ditches that were hydrologically isolated from tributaries and/or TNWs. See Appendix J for the locations of these features mapped in 2021. Non-jurisdictional features from the IC Project are not included in Appendix J.

Types of non-jurisdictional features mapped in the study area include erosional features, culverts with no associated jurisdictional feature, inaccessible detention basins, small ponding areas in a dumping yard, manmade roadside ditches, old roadways, depressions, and roadside swales.

5 Limitations, Assumptions, and Use Reliance

The surveys described in this BRTR have been performed in accordance with professionally accepted biological investigation practices conducted at this time and in this geographic area. The biological investigation is limited by the scope of work performed. The biological surveys are limited by the environmental conditions present at the time of the surveys. In addition, negative results of general biological and protocol surveys do not guarantee that any given taxa are not present and will not be discovered in the study area in the future. In particular, mobile wildlife species could occupy the study area on a transient basis or re-establish populations in the future. Our field studies were based on current industry practices, which change over time and may not be applicable in the future. No other guarantees or warranties, expressed or implied, are provided. The findings and opinions conveyed in this report are based on findings derived from site reconnaissance, jurisdictional areas, review of CNDDB RareFind5, and specified historical and literature sources. Standard data sources relied upon during the completion of this report, such as the CNDDB, may vary with regard to accuracy and completeness. In particular, the CNDDB is compiled from research and observations reported to CDFW that may or may not have been the result of comprehensive or site-specific field surveys. Although Rincon believes the data sources are reasonably reliable, Rincon cannot and does not guarantee the authenticity or reliability of the data sources it has used. Additionally, pursuant to our contract, the data sources reviewed included only those that are practically reviewable without the need for extraordinary research and analysis.

Regulatory Framework

Regulatory Framework

The following is a brief summary of the regulatory context under which biological resources are managed at the federal, state, and local levels. A number of federal and State statutes provide a regulatory structure that guides the protection of biological resources. Agencies with the responsibility for protection of biological resources within the project site include:

- U.S. Army Corps of Engineers (wetlands and other waters of the United States);
- U.S. Fish and Wildlife Service (federally listed species and migratory birds);
- National Marine Fisheries Service (marine animals and anadromous fishes);
- Lahontan Regional Water Quality Control Board (waters of the State);
- California Department Fish and Wildlife (riparian areas, streambeds, and lakes; State-listed species; nesting birds, marine resources);
- Bureau of Land Management (species designated as sensitive);
- Desert Renewable Energy Conservation Plan (DRECP); and
- California Desert Conservation Area (CDCA).

United States Army Corps of Engineers

The United States Army Corps of Engineers (USACE) is responsible for administering several federal programs related to ensuring the quality and navigability of the nation's waters.

Clean Water Act Section 404

Congress enacted the Clean Water Act (CWA) "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." Section 404 of the CWA authorizes the Secretary of the Army, acting through the USACE, to issue permits regulating the discharge of dredged or fill materials into the "navigable waters at specified disposal sites."

Section 502 of the CWA further defines "navigable waters" as "waters of the United States, including the territorial seas." "Waters of the United States" are broadly defined at 33 CFR Part 328.3 to include navigable waters, perennial and intermittent streams, lakes, rivers, ponds, as well as wetlands, marshes, and wet meadows. In recent years the USACE and US Environmental Protection Agency (USEPA) have undertaken several efforts to modernize their regulations defining "waters of the United States" (e.g., the 2015 Clean Water Rule and 2020 Navigable Waters Protection Rule), but these efforts have been frustrated by legal challenges which have invalidated the updated regulations. Thus, the agencies' longstanding definition of "waters of the United States," which dates from 1986, remains in effect albeit with supplemental guidance interpreting applicable court decisions as described below.

Waters of the U.S.

In summary, USACE and USEPA regulations define "waters of the United States" as follows:

1. All waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
2. All interstate waters including interstate wetlands;
3. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce including any such waters:
    i. Which are or could be used by interstate or foreign travelers for recreational or other purposes; or
    ii. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
    iii. Which are used or could be used for industrial purpose by industries in interstate commerce;
4. All impoundments of waters otherwise defined as waters of the United States;
5. Tributaries of waters identified in paragraphs (a)(1)-(4) of this section;
6. The territorial sea; or
7. Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in items 1-6 above.

Waters of the United States do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the CWA, the final authority regarding CWA jurisdiction remains with the USEPA.

Waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA are not waters of the United States.

The lateral limits of USACE jurisdiction in non-tidal waters is defined by the “ordinary high-water mark” (OHWM) unless adjacent wetlands are present. The OHWM is a line on the shore or edge of a channel established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed upon the bank, shelving, changes in the character of soil, destruction of vegetation, or the presence of debris (33 CFR 328.3(e)). As such, waters are recognized in the field by the presence of a defined watercourse with appropriate physical and topographic features. If wetlands occur within, or adjacent to, waters of the United States, the lateral limits of USACE jurisdiction extend beyond the OHWM to the outer edge of the wetlands (33 CFR 328.4 (c)). The upstream limit of jurisdiction in the absence of adjacent wetlands is the point beyond which the OHWM is no longer perceptible (33 CFR 328.4; see also 51 FR 41217).

Wetlands

The USACE defines wetlands as “those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions” (33 CFR 328.3). The USACE’s delineation procedures identify wetlands in the field based on indicators of three wetland parameters: hydrophytic vegetation, hydric soils, and wetland hydrology. The following is a discussion of each of these parameters.

Hydrophytic Vegetation

Hydrophytic vegetation dominates areas where frequency and duration of inundation or soil saturation exerts a controlling influence on the plant species present. Plant species are assigned wetland indicator status according to the probability of their occurring in wetlands. More than fifty percent of the dominant plant species must have a wetland indicator status to meet the hydrophytic vegetation criterion. The USACE published the National Wetland Plant List (USACE 2018), which separates vascular plants into the following four basic categories based on plant species frequency of occurrence in wetlands:

- **Obligate Wetland (OBL).** Almost always occur in wetlands
- **Facultative Wetland (FACW).** Usually occur in wetlands, but occasionally found in non-wetlands
- **Facultative (FAC).** Occur in wetlands or non-wetlands
- **Facultative Upland (FACU).** Usually occur in non-wetlands, but may occur in wetlands
- **Obligate Upland (UPL).** Almost never occur in wetlands

The USACE considers OBL, FACW and FAC species to be indicators of wetlands. An area is considered to have hydrophytic vegetation when greater than 50 percent of the dominant species in each vegetative stratum (tree, shrub, and herb) fall within these categories. Any species not appearing on the United States Fish and Wildlife Service's list is assumed to be an upland species, almost never occurring in wetlands. In addition, an area needs to contain at least 5% vegetative cover to be considered as a vegetated wetland.

Hydric Soils

Hydric soils are saturated or inundated for a sufficient duration during the growing season to develop anaerobic or reducing conditions that favor the growth and regeneration of hydrophytic vegetation. Field indicators of wetland soils include observations of ponding, inundation, saturation, dark (low chroma) soil colors, bright mottles (concentrations of oxidized minerals such as iron), gleying (indicates reducing conditions by a blue-grey color), or accumulation of organic material. Additional supporting information includes documentation of soil as hydric or reference to wet conditions in the local soils survey, both of which must be verified in the field.

Wetland Hydrology

Wetland hydrology is inundation or soil saturation with a frequency and duration long enough to cause the development of hydric soils and plant communities dominated by hydrophytic vegetation. If direct observation of wetland hydrology is not possible (as in seasonal wetlands), or records of wetland hydrology are not available (such as stream gauges), assessment of wetland hydrology is frequently supported by field indicators, such as water marks, drift lines, sediment deposits, or drainage patterns in wetlands.

Applicable Case Law and Agency Guidance

The USACE's regulations defining "waters of the United States" have been subject to legal interpretation, and two influential Supreme Court decisions have narrowed the definition to exclude certain classes of waters that bear an insufficient connection to navigable waters. In *Solid Waste Agency of Northern Cook County v. Army Corps of Engineers* (2001), the United States Supreme Court stated that the USACE's CWA jurisdiction does not extend to ponds that "are not adjacent to open water." In reaching its decision, the Court concluded that the "Migratory Bird Rule," which

served as the basis for the USACE's asserted jurisdiction, was not supported by the CWA. The Migratory Bird Rule extended CWA jurisdiction to intrastate waters "which are or would be used as habitat by birds protected by Migratory Bird Treaties or which are or would be used as habitat by other migratory birds which cross state lines…" The Court was concerned that application of the Migratory Bird Rule resulted in "reading the term 'navigable waters' out of the statute. Highlighting the language of the CWA to determine the statute's jurisdictional reach, the Court stated, "the term 'navigable' has at least the import of showing us what Congress had in mind as its authority for enacting the CWA: its traditional jurisdiction over waters that were or had been navigable in fact or which could reasonably be so made." This decision stands for the proposition that non-navigable isolated, intrastate waters are not waters of the United States and thus are not jurisdictional under the CWA.

In 2006 the United States Supreme Court decided *Rapanos v. United States* and *Carabell v. United States* (collectively "Rapanos"), which were consolidated cases determining the extent of CWA jurisdiction over waters that carry only an infrequent surface flow. The court issued no majority opinion in Rapanos. Instead, the justices authored five separate opinions including the "plurality" opinion, authored by Justice Scalia (joined by three other justices), and a concurring opinion by Justice Kennedy. To guide implementation of the decision, the USACE and USEPA issued a joint guidance memorandum ("Rapanos Guidance Memorandum") in 2008 stating that "regulatory jurisdiction under the CWA exists over a water body if either the plurality's or Justice Kennedy's standard is satisfied."

According to the plurality opinion in Rapanos, "the waters of the United States include only relatively permanent, standing or flowing bodies of water" and do not include "ordinarily dry channels through which water occasionally or intermittently flows." In addition, while all wetlands that meet the USACE definition are considered adjacent wetlands, only those adjacent wetlands that have a continuous surface connection because they directly about the tributary (e.g., they are not separated by uplands, a berm, dike, or similar feature) are considered jurisdictional under the plurality standard.

Under Justice Kennedy's opinion, "the USACE's jurisdiction over wetlands depends upon the existence of a significant nexus between the wetlands in question and navigable waters in the traditional sense. Wetlands possess the requisite nexus, and thus come within the statutory phrase 'navigable waters,' if the wetlands, either alone or in combination with similarly situated lands in the region, significantly affect the chemical, physical, and biological integrity of other covered waters more readily understood as 'navigable.' When, in contrast, wetlands' effects on water quality are speculative or insubstantial, they fall outside the zone fairly encompassed by the statutory term 'navigable waters.'" Justice Kennedy identified "pollutant trapping, flood control, and runoff storage" as some of the critical functions wetlands can perform relative to other waters. He concluded that, given wetlands' ecological role, "mere adjacency" to a non-navigable tributary was insufficient to establish CWA jurisdiction, and that "a more specific inquiry, based on the significant nexus standard, is therefore necessary."

Interpreting these decisions, and according to the Rapanos Guidance Memorandum, the USACE and USEPA will assert jurisdiction over the following waters:

- Traditional navigable waters (TNWs);
- Wetlands adjacent to traditional navigable waters;

- Non-navigable tributaries of traditional navigable waters that are relatively permanent where the tributaries typically flow year-round or have continuous flow at least seasonally (e.g., typically three months); and
- Wetlands that directly abut such tributaries.

The USACE and USEPA will decide jurisdiction over the following waters based on a fact-specific analysis to determine whether they have a significant nexus with a TNW:

- Non-navigable tributaries that are not relatively permanent;
- Wetlands adjacent to non-navigable tributaries that are not relatively permanent; and,
- Wetlands adjacent to but that do not directly abut a relatively permanent non-navigable tributary.

Where a significant nexus analysis is required, the USACE and USEPA will apply the significant nexus standard as follows:

- A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by all wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical and biological integrity of downstream TNWs; and,
- Significant nexus includes consideration of hydrologic and ecologic factors.

The USACE and USEPA generally will not assert jurisdiction over the following features:

- Swales or erosional features (e.g., gullies, small washes characterized by low volume, infrequent, or short duration flow); and,
- Ditches (including roadside ditches) excavated wholly in and draining only uplands and that do not carry a relatively permanent flow of water.

Rivers and Harbors Act Section 10

Section 10 of the Rivers and Harbors Act of 1899 requires authorization from the USACE for the construction of any structure in or over any navigable water of the United States. Structures or work outside the limits defined for navigable waters of the United States require a Section 10 permit if the structure or work affects the course, location, or condition of the water body. The law applies to any dredging or disposal of dredged materials, excavation, filling, re-channelization, or any other modification of a navigable water of the United States, and applies to all structures and work. It further includes, without limitation, any wharf, dolphin, weir, boom breakwater, jetty, groin, bank protection (e.g., riprap, revetment, bulkhead), mooring structures such as pilings, aerial or subaqueous power transmission lines, intake or outfall pipes, permanently moored floating vessel, tunnel, artificial canal, boat ramp, aids to navigation, and any other permanent, or semi-permanent obstacle or obstruction. It is important to note that Section 10 applies only to navigable waters, and thus does not apply to work in non-navigable wetlands or tributaries. In some cases, Section 10 authorization is issued by the USACE concurrently with CWA Section 404 authorization, such as when certain Nationwide Permits are used.

Regional Water Quality Control Board

The State Water Resources Control Board (SWRCB) and nine Regional Water Quality Control Boards (RWQCBs) have jurisdiction over "waters of the State," which are defined as any surface water or groundwater, including saline waters, within the boundaries of the state (California Water Code sec. 13050(e)). These agencies also have responsibilities for administering portions of the CWA.

Clean Water Act Section 401

Section 401 of the CWA requires an applicant requesting a federal license or permit for an activity that may result in any discharge into navigable waters (such as a Section 404 Permit) to provide State certification that the proposed activity will not violate State and federal water quality standards. In California, CWA Section 401 Water Quality Certification (Section 401 Certification) is issued by the RWQCBs and by the SWRCB for multi-region projects. The process begins when an applicant submits an application to the RWQCB and informs the USACE (or the applicable agency from which a license or permit was requested) that an application has been submitted. The USACE will then determine a "reasonable period of time" for the RWQCB to act on the application; this is typically 60 days for routine projects and longer for complex projects but may not exceed one year. When the period has elapsed, if the RWQCB has not either issued or denied the application for Section 401 Certification, the USACE may determine that Certification has been waived and issue the requested permit. If a Section 401 Certification is issued it may include binding conditions, imposed either through the Certification itself or through the requested federal license or permit.

Porter-Cologne Water Quality Control Act

The Porter-Cologne Act is the principal law governing water quality regulation in California. It establishes a comprehensive program to protect water quality and the beneficial uses of water. The Porter-Cologne Act applies to surface waters, wetlands, and ground water and to both point and nonpoint sources of pollution. Pursuant to the Porter-Cologne Act (California Water Code section 13000 et seq.), the policy of the State is as follows:

- The quality of all the waters of the State shall be protected.
- All activities and factors affecting the quality of water shall be regulated to attain the highest water quality within reason.
- The State must be prepared to exercise its full power and jurisdiction to protect the quality of water in the State from degradation.

The Porter-Cologne Act established nine RWQCBs (based on watershed boundaries) and the SWRCB, which are charged with implementing its provisions and which have primary responsibility for protecting water quality in California. The SWRCB provides program guidance and oversight, allocates funds, and reviews RWQCB decisions. In addition, the SWRCB allocates rights to the use of surface water. The RWQCBs have primary responsibility for individual permitting, inspection, and enforcement actions within each of nine hydrologic regions. The SWRCB and RWQCBs have numerous nonpoint source related responsibilities, including monitoring and assessment, planning, financial assistance, and management.

Section 13260 of the Porter-Cologne Act requires any person discharging or proposing to discharge waste that could affect the quality of waters of the State to file a Report of Waste Discharge with

the appropriate RWQCB. The RWQCB may then authorize the discharge, subject to conditions, by issuing Waste Discharge Requirements (WDRs). While this requirement was historically applied primarily to outfalls and similar point source discharges, the SWRCB's *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State*, effective May 2020, make it clear that the agency will apply the Porter-Cologne Act's requirements to discharges of dredge and fill material as well. The *Procedures* state that they are to be used in issuing CWA Section 401 Certifications and WDRs, and largely mirror the existing review requirements for CWA Section 404 Permits and Section 401 Certifications, incorporating most elements of the USEPA's *Section 404(b)(1) Guidelines*. Following issuance of the *Procedures*, the SWRCB produced a consolidated application form for dredge/fill discharges that can be used to obtain a CWA Section 401 Water Quality Certification, WDRs, or both.

Non-Wetland Waters of the State

The SWRCB and RWQCBs have not established regulations for field determinations of waters of the State except for wetlands currently. In many cases the RWQCBs interpret the limits of waters of the State to be bounded by the OHWM unless isolated conditions or ephemeral waters are present. However, in the absence of statewide guidance each RWQCB may interpret jurisdictional boundaries within their region and the SWRCB has encouraged applicants to confirm jurisdictional limits with their RWQCB before submitting applications. As determined by the RWQCB, waters of the State may include riparian areas or other locations outside the OHWM, leading to a larger jurisdictional area over a given water body compared to the USACE.

Wetland Waters of the State

Procedures for defining wetland waters of the State pursuant to the SWRCB's *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* went into effect May 28, 2020. The SWRCB defines an area as a wetland if, under normal circumstances:

(i) the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both;

(ii) the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and

(iii) the area's vegetation is dominated by hydrophytes or the area lacks vegetation.

The SWRCB's Implementation Guidance for the Wetland Definition and Procedures for Discharges of Dredge and Fill Material to Waters of the State (2021), states that waters of the U.S. and waters of the State should be delineated using the standard USACE delineation procedures, taking into consideration that the methods shall be modified only to allow for the fact that a lack of vegetation does not preclude an area from meeting the definition of a wetland.

United States Fish and Wildlife Service

The United States Fish and Wildlife Service (USFWS) implements several laws protecting the Nation's fish and wildlife resources, including the Endangered Species Act (ESA; 16 United States Code [USC] Sections 153 et seq.), the Migratory Bird Treaty Act (MBTA; 16 USC Sections 703-711) and the Bald and Golden Eagle Protection Act (16 USC Section 668).

Endangered Species Act

The USFWS and National Marine Fisheries Service (NMFS) share responsibility for implementing the ESA. Generally, the USFWS implements the FESA for terrestrial and freshwater species, while the NMFS implements the FESA for marine and anadromous species. Projects that would result in "take" of any threatened or endangered wildlife species, or a threatened or endangered plant species if occurring on federal land, are required to obtain permits from the USFWS or NMFS through either Section 7 (interagency consultation with a federal nexus) or Section 10 (Habitat Conservation Plan) of the ESA, depending on the involvement by the federal government in funding, authorizing, or carrying out the project. The permitting process is used to determine if a project would jeopardize the continued existence of a listed species and what measures would be required to avoid jeopardizing the species. "Take" under federal definition means to harass, harm (which includes habitat modification), pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct. Proposed or candidate species do not have the full protection of the ESA; however, the USFWS and NMFS advise project applicants that they could be elevated to listed status at any time.

Migratory Bird Treaty Act

The MBTA of 1918 implements four international conservation treaties that the U.S. entered into with Canada in 1916, Mexico in 1936, Japan in 1972, and Russia in 1976. It is intended to ensure the sustainability of populations of all protected migratory bird species. The law has been amended with the signing of each treaty, as well as when any of the treaties were amended, such as with Mexico in 1976 and Canada in 1995. The MBTA prohibits the take (including killing, capturing, selling, trading, and transport) of protected migratory bird species without prior authorization by the USFWS.

The list of migratory bird species protected by the law, in regulations at 50 CFR Part 10.13, is primarily based on bird families and species included in the four international treaties. A migratory bird species is included on the list if it meets one or more of the following criteria:

- It occurs in the United States or U.S. territories as the result of natural biological or ecological processes and is currently, or was previously listed as, a species or part of a family protected by one of the four international treaties or their amendments.
- Revised taxonomy results in it being newly split from a species that was previously on the list, and the new species occurs in the United States or U.S. territories as the result of natural biological or ecological processes.
- New evidence exists for its natural occurrence in the United States or U.S. territories resulting from natural distributional changes and the species occurs in a protected family.

In 2004, the Migratory Bird Treaty Reform Act limited the scope of the MBTA by stating the MBTA applies only to migratory bird species that are native to the United States or U.S. territories, and that a native migratory bird species is one that is present as a result of natural biological or ecological processes. The MBTRA requires the USFWS to publish a list of all nonnative, human-introduced bird species to which the MBTA does not apply, and an updated list was published in 2020. The 2020 update identifies species belonging to biological families referred to in treaties the MBTA implements but are not protected because their presence in the United States or U.S. territories is solely the result of intentional or unintentional human-assisted introductions.

Bald and Golden Eagle Protection Act

The Bald and Golden Eagle Protection Act prohibits anyone, without a permit issued by the USFWS, from "taking" bald or golden eagles, including their parts (including feathers), nests, or eggs. The Act provides criminal penalties for persons who "take, possess, sell, purchase, barter, offer to sell, purchase or barter, transport, export or import, at any time or any manner, any bald eagle ... [or any golden eagle], alive or dead, or any part, nest, or egg thereof." The Act defines "take" as "pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest or disturb."

"Disturb" means "to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause, based on the best scientific information available, 1) injury to an eagle, 2) a decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior, or 3) nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior."

In addition to immediate impacts, this definition also covers impacts that result from human-induced alterations initiated around a previously used nest site during a time when eagles are not present, if, upon the eagle's return, such alterations agitate or bother an eagle to a degree that interferes with or interrupts normal breeding, feeding, or sheltering habits, and causes injury, death or nest abandonment.

California Department of Fish and Wildlife

The California Department of Fish and Wildlife (CDFW) derives its authority from the Fish and Game Code of California and administers several State laws protecting fish and wildlife resources and the habitats upon which they depend.

California Endangered Species Act

The California Endangered Species Act (CESA) (Fish and Game Code Section 2050 et. seq.) prohibits take of State listed threatened or endangered. Take under CESA is defined as "Hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill" (Fish and Game Code sec. 86). This definition does not prohibit indirect harm by way of habitat modification, except where such harm is the proximate cause of death of a listed species. Where incidental take would occur during construction or other lawful activities, CESA allows the CDFW to issue an Incidental Take Permit upon finding, among other requirements, that impacts to the species have been minimized and fully mitigated. Unlike the federal ESA, CESA's protections extend to candidate species during the period (typically one year) while the California Fish and Game Commission decides whether the species warrants CESA listing.

Native Plant Protection Act

The CDFW also has authority to administer the Native Plant Protection Act (NPPA) (Fish and Game Code Section 1900 et seq.). The NPPA requires the CDFW to establish criteria for determining if a species, subspecies, or variety of native plant is endangered or rare, and prohibits the take of listed plant species. Effective in 2015, CDFW promulgated regulations (14 CCR 786.9) under the authority of the NPPA, establishing that the CESA's permitting procedures would be applied to plants listed

under the NPPA as "Rare." With this change, there is little practical difference for the regulated public between plants listed under CESA and those listed under the NPPA.

Fully Protected Species Laws

The CDFW enforces Sections 3511, 4700, 5050, and 5515 of the Fish and Game Code, which prohibit take of species designated as Fully Protected. The CDFW is not allowed to issue an Incidental Take Permit for Fully Protected species; therefore, impacts to these species must be avoided. The exception is situations where a Natural Community Conservation Plan (NCCP) is in place that authorizes take of the fully protected species.

Avian Protection Laws

California Fish and Game Code sections 3503, 3503.5, and 3513 describe unlawful take, possession, or destruction of native birds, nests, and eggs. Section 3503.5 of the Code protects all birds-of-prey and their eggs and nests against take, possession, or destruction of nests or eggs. Section 3513 makes it a State-level offense to take any bird in violation of the federal Migratory Bird Treaty Act.

CDFW Burrowing Owl Staff Report

CDFW's 2012 Staff Report on Burrowing Owl Mitigation describes CDFW's comprehensive conservation and mitigation strategy for burrowing owls (*Athene cunicularia*), a California SSC. CDFW determined that reversing declining population and range trends for burrowing owls will require implementing more effective conservation actions, including developing more rigorous burrowing owl survey methods; working to improve the adequacy of impacts assessments; developing clear and effective avoidance and minimization measures; and developing mitigation measures to ensure impacts to the species are effectively addressed at the project, local, and/or regional level. The 2012 Staff Report (CDFW 2012) takes into account the California Burrowing Owl Consortium's (CBOC) Survey Protocol and Mitigation Guidelines (CBOC 1993) and supersedes the survey, avoidance, minimization, and mitigation recommendations in the earlier 1995 Staff Report.

Protection of Lakes and Streambeds

California Fish and Game Code section 1602 states that it is unlawful for any person to "substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake" without first notifying the California Department of Fish and Wildlife (CDFW) of that activity. Thereafter, if CDFW determines and informs the entity that the activity will not substantially adversely affect any existing fish or wildlife resources, the entity may commence the activity. If, however, CDFG determines that the activity may substantially adversely affect an existing fish or wildlife resource, the entity may be required to obtain from CDFW a Streambed Alteration Agreement (SAA), which will include reasonable measures necessary to protect the affected resource(s), before the entity may conduct the activity described in the notification. Upon receiving a complete Notification of Lake/Streambed Alteration, CDFW has 60 days to present the entity with a Draft SAA. Upon review of the Draft SAA by the applicant, any problematic terms are negotiated with CDFW and a final SAA is executed.

The CDFW has not defined the term "stream" for the purposes of implementing its regulatory program under Section 1602, and the agency has not promulgated regulations directing how

jurisdictional streambeds may be identified, or how their limits should be delineated. However, four relevant sources of information offer insight as to the appropriate limits of CDFW jurisdiction as discussed below.

- **The plain language of Section 1602 of CFGC** establishes the following general concepts:
  - References "river," "stream," and "lake"
  - References "natural flow"
  - References "bed," "bank," and "channel"
- **Applicable court decisions**, in particular *Rutherford v. State of California* (188 Cal App. 3d 1276 (1987), which interpreted Section 1602's use of "stream" to be as defined in common law. The Court indicated that a "stream" is commonly understood to:
  - Have a source and a terminus
  - Have banks and a channel
  - Convey flow at least periodically, but need not flow continuously and may at times appear outwardly dry
  - Represent the depression between the banks worn by the regular and usual flow of the water
  - Include the area between the opposing banks measured from the foot of the banks from the top of the water at its ordinary stage, including intervening sand bars
  - Include the land that is covered by the water in its ordinary low stage
  - Include lands below the OHWM
- **CDFW regulations** defining "stream" for other purposes, including sport fishing (14 CCR 1.72) and streambed alterations associated with cannabis production (14 CCR 722(c)(21)), which indicate that a stream:
  - Flows at least periodically or intermittently
  - Flows through a bed or channel having banks
  - Supports fish or aquatic life
  - Can be dry for a period of time
  - Includes watercourses where surface or subsurface flow supports or has supported riparian vegetation
- **Guidance documents**, including *A Field Guide to Lake and Streambed Alteration Agreements* (CDFG 1994) and *Methods to Describe and Delineate Episodic Stream Processes on Arid Landscapes for Permitting Utility-Scale Solar Power Plants* (Brady and Vyverberg 2013), which suggest the following:
  - A stream may flow perennially or episodically
  - A stream is defined by the course in which water currently flows, or has flowed during the historical hydrologic course regime (approximately the last 200 years)
  - Width of a stream course can reasonably be identified by physical or biological indicators
  - A stream may have one or more channels (single thread vs. compound form)
  - Features such as braided channels, low-flow channels, active channels, banks associated with secondary channels, floodplains, islands, and stream-associated vegetation, are interconnected parts of the watercourse

- Canals, aqueducts, irrigation ditches, and other means of water conveyance can be considered streams if they support aquatic life, riparian vegetation, or stream-dependent terrestrial wildlife
- Biologic components of a stream may include aquatic and riparian vegetation, all aquatic wildlife including fish, amphibians, reptiles, invertebrates, and terrestrial species which derive benefits from the stream system
- The lateral extent of a stream can be measured in different ways depending on the particular situation and the type of fish or wildlife resource at risk

The tenets listed above, among others, are applied to establish the boundaries of streambeds in various environments. Importance of each factor may be weighted based on site-specific considerations and the applicability of the indicators to the streambed at hand.

Bureau of Land Management

Bureau of Land Management Special Status Species Management Manual

The BLM's Special status Species Management Manual 6840 (BLM 2008) identifies special status species as species listed or proposed for listing under the FESA and species recognized as requiring special management consideration to lessen the likelihood for future listing. According to Manual 6840, they shall retain in federal ownership habitats that are essential for the conservation of any listed species, particularly those that are part of a broader, logical public land ownership management unit. If a BLM special status species (i.e., designated as a BLM Sensitive species), or any federal candidate species or proposed species, is delisted, it will be monitored for the five years following its delisting as a BLM Sensitive species.

Federal Land Policy Management Act of 1976

In 1976, Congress passed the Federal Land Policy Management Act (FLPMA), which governs the manner by which public lands administered by the BLM are managed. The FLPMA requires BLM to develop land use plans, also known as Resource Management Plans, to guide BLM's management of public land.

Desert Renewable Energy Conservation Plan

The Desert Renewable Energy Conservation Plan (DRECP) is a collaborative effort between the California Energy Commission, California Department of Fish and Wildlife, BLM, and USFWS to help provide effective protection and conservation of desert ecosystems while allowing for the appropriate development of renewable energy projects (BLM et al. 2016). The DRECP is focused on 22.5 million acres on public and private lands across Imperial, Inyo, Kern, Los Angeles, Riverside, San Bernardino, and San Diego Counties. The DRECP amends the 1980 CDCA Plan and serves as an HCP under section 10(a)(1)(B) of the FESA. The project lies entirely within the DRECP area.

As part of the DRECP effort, BLM prepared a Land Use Planning Amendment (LUPA) that amends the CDCA Plan applicable to BLM-managed public lands (BLM et al. 2016). This LUPA identified and mapped areas for renewable energy development and areas for long-term natural resource conservation, consistent with the FLPMA multiple-use and sustained yield requirements. Conservation areas within BLM land under the LUPA for the DRECP include existing, modified, and

new ACECs. Portions of the project fall within the Fremont-Kramer ACEC and the Desert Tortoise Research Natural Area ACEC.

Local Jurisdiction

San Bernardino County Policy Plan

The Natural Resources Element of the *San Bernardino County Policy Plan* contains policies and guidance that are designed to protect and conserve environmental resources in San Bernardino County. The purpose of this element is to establish policies that presence and enhance natural resources and to provide guidance on coordination for managing and conserving watersheds, wildlife habitat areas and corridors, and open space areas within the County. The element also provides guidance on the location and distribution of new development to protect natural resources. The Natural Resources Element includes the protection and preservation of natural resources including agricultural/grazing lands, watersheds, minerals, native plants and wildlife, and plant and wildlife habitat areas.

Project-applicable policies within the Natural Resources Element include:

- **Policy NR-5.1: Coordinated habitat planning**. We participate in landscape-scale habitat conservation planning and coordinate with existing or proposed habitat conservation and natural resource management plans for private and public lands to increase certainty for both the conservation of species, habitats, wildlife corridors, and other important biological resources and functions; and for land development and infrastructure permitting.
- **Policy NR-5.2: Capacity for resource protection and management**. We coordinate with public and nongovernmental agencies to seek funding and other resources to protect, restore, and maintain open space, habitat, and wildlife corridors for threatened, endangered, and other sensitive species.
- **Policy NR-5.7: Development review, entitlement, and mitigation**. We comply with State and federal regulations regarding protected species of animals and vegetation through the development review, entitlement, and environmental clearance processes.
- **Policy NR-5.8: Invasive species.** We require the use of non-invasive plant species with new development and encourage the management of existing invasive plant species that degrade ecological function.

San Bernardino County Code of Ordinances

The following San Bernardino County Ordinances apply to the project:

- Chapter 88.01: Plant Protection and Management
- § 88.01.040 Regulated Trees and Plants
- A regulated tree or plant shall be any of the trees or plants identified in Section 88.01.060 (c), Section 88.01.070 (b), or Section 88.01.080 (b).
- A Tree or Plant Removal Permit shall be required for the removal of regulated trees and plants.
- § 88.01.060 Desert Native Plant Protection

- c) *Regulated Desert Native Plants*. The following desert native plants or any part of them, except the fruit, shall not be removed except under a Tree or Plant Removal Permit in compliance with § 88.01.050.
  1) The following desert native plants with stems two inches or greater in diameter or six feet or greater in height:
     A) *Dalea spinosa* (smoketree)
     B) All species of the genus *Prosopis* (mesquites)
  2) All species of the family Agavaceae (century plants, nolinas, yuccas).
  3) Creosote Rings, ten feet or greater in diameter
  4) All Joshua trees
  5) Any part of any of the following species, whether living or dead:
     A) *Olneya tesota* (desert ironwood)
     B) All species of the genus *Prosopis* (mesquites)
     C) Al species of the genus *Cercidium* (palos verdes)
- § 88.01.070 Mountain Forest and Valley Tree Conservation
- b) *Regulated Trees.* The following trees shall only be removed with an approved Tree or Plant Removal Permit issues in compliance with § 88.01.050.
  1) Native Trees: A living, native tree with a six inch or greater stem diameter or 19 inches in circumference measured four and one-half feet above natural grade level.
  2) Palm Trees: Three or more palm trees in linear plantings, which are 50 feet or greater in length with established windrows or parkway plantings, shall be considered to be heritage trees and shall be subject to the provisions of this Chapter regarding native trees.
- § 88.01.080 Riparian Plant Conservation: The provisions of this Section shall apply to all riparian areas located on private land is all zones within the unincorporated areas of the County and to riparian areas on public land owned by the County.
- b) *Regulated Riparian Plants*. The removal of vegetation within 200 feet of the bank of a stream, or in an area indicated as a protected riparian area on an overlay map or Specific Plan, shall require approval of a Tree or Plant Removal Permit in compliance with § 88.01.050.

Kern County General Plan

The Land Use, Open Space, and Conservation Element of the Kern County General Plan contains policies relating to the conservation, development, and utilization of natural resources including water, soils, wildlife, minerals, and other natural resources.

Project-applicable policies within the Conservation Element include:

- **Policy 27**: Threatened or endangered plant and wildlife species should be protected in accordance with State and federal laws.
- **Policy 28**: County should work closely with State and federal agencies to assure that discretionary projects avoid or minimize impacts to fish, wildlife, and botanical resources.
- **Policy 29**: The County will seek cooperative efforts with local, State, and federal agencies to protect listed threatened and endangered plant and wildlife species through the use of

conservation plans and other methods promoting management and conservation of habitat lands.

- **Policy 32**: Riparian areas will be managed in accordance with United States Army Corps of Engineers, and the California Department of Fish and Game rules and regulations to enhance the drainage, flood control, biological, recreational, and other beneficial uses while acknowledging existing land use patterns.

City of California City General Plan

The Open Space and Conservation Element of the *City of California City General Plan* contains goals, policies, and implementation measures that aim to preserve and protect conservation resources that are unique to the City of California City environs. These natural resources include water, floodplains, mineral resources, air quality, sensitive biological resources, and historical and cultural resources.

Project-applicable policies within the Conservation Element include:

- Protect sensitive vegetation and wildlife species, in accordance with State and federal laws and regulations, and to provide for maintenance of supportive habitat for such species in balance with the needs of humans.
- Maintain and promote the retention of natural setting and use of native or adaptable vegetation.
- Encourage the preservation of Joshua trees, known wildflower displays, or other biologically sensitive flora determined during biological surveys.

The project-applicable implementation measure within the Conservation Element states:

- **C-13**: The City shall require the preservation of biological resources by implementation of the following measures:
  - Prior to issuance of a grading or building permit, new development proposals, including on previously disturbed land, shall be required to complete a general biological resources assessment to identify the presence of any sensitive biological resources, including but not limited to, sensitive habitat, sensitive plant species, sensitive wildlife species, jurisdictional drainage features, and wildlife corridors on the project site. Recommendations and/or mitigation measures shall be incorporated into project as conditions of approval.

Appendix B

IPaC Resource List

IPaC **U.S. Fish & Wildlife Service**

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Log in to IPaC.
2. Go to your My Projects list.
3. Click PROJECT HOME for this project.
4. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

---

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information. IPaC only shows species that are regulated by USFWS (see FAQ).
2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of

Desert Tortoise Gopherus agassizii https://ecos.fws.gov/ecp/species/4481#crithab	Final

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern https://www.fws.gov/program/migratory-birds/species
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide conservation measures for birds https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON

NOT FOR CONSULTATION

Bald Eagle *Haliaeetus leucocephalus* — Breeds Oct 15 to Aug 31

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Black-chinned Sparrow *Spizella atrogularis* — Breeds Apr 15 to Jul 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9447

California Thrasher *Toxostoma redivivum* — Breeds Jan 1 to Jul 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Clark's Grebe *Aechmophorus clarkii* — Breeds Jun 1 to Aug 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Costa's Hummingbird *Calypte costae* — Breeds Jan 15 to Jun 10

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9470

Golden Eagle *Aquila chrysaetos* — Breeds Dec 1 to Aug 31

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
https://ecos.fws.gov/ecp/species/1680

Lawrence's Goldfinch *Carduelis lawrencei* — Breeds Mar 20 to Sep 20

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9464

Long-eared Owl *asio otus* — Breeds Mar 1 to Jul 15

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/3631

NOT FOR CONSULTATION

Marbled Godwit Limosa fedoa — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9481

Pinyon Jay Gymnorhinus cyanocephalus — Breeds Feb 15 to Jul 15
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9420

Tricolored Blackbird Agelaius tricolor — Breeds Mar 15 to Aug 10
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/3910

Western Grebe aechmophorus occidentalis — Breeds Jun 1 to Aug 31
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/6743

Willet Tringa semipalmata — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

NOT FOR CONSULTATION

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

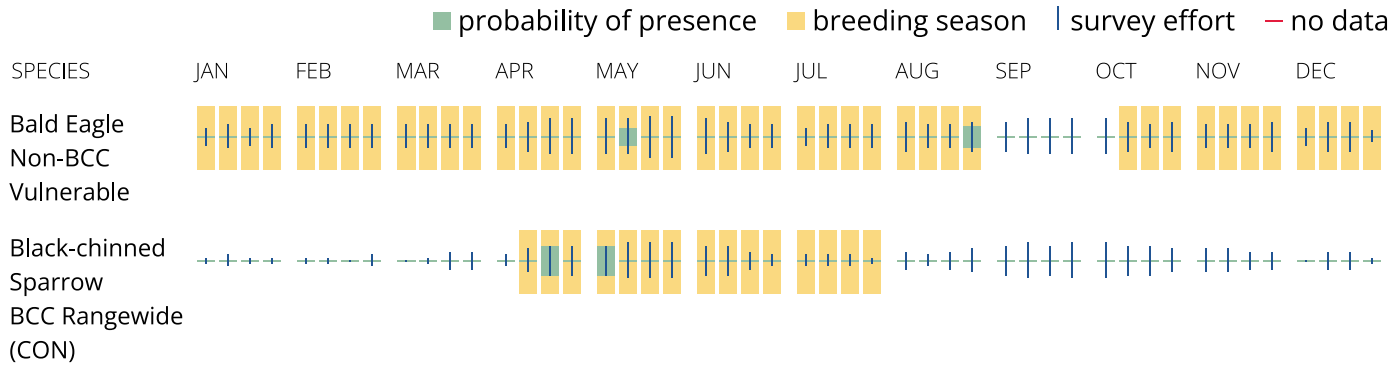
1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events

for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.

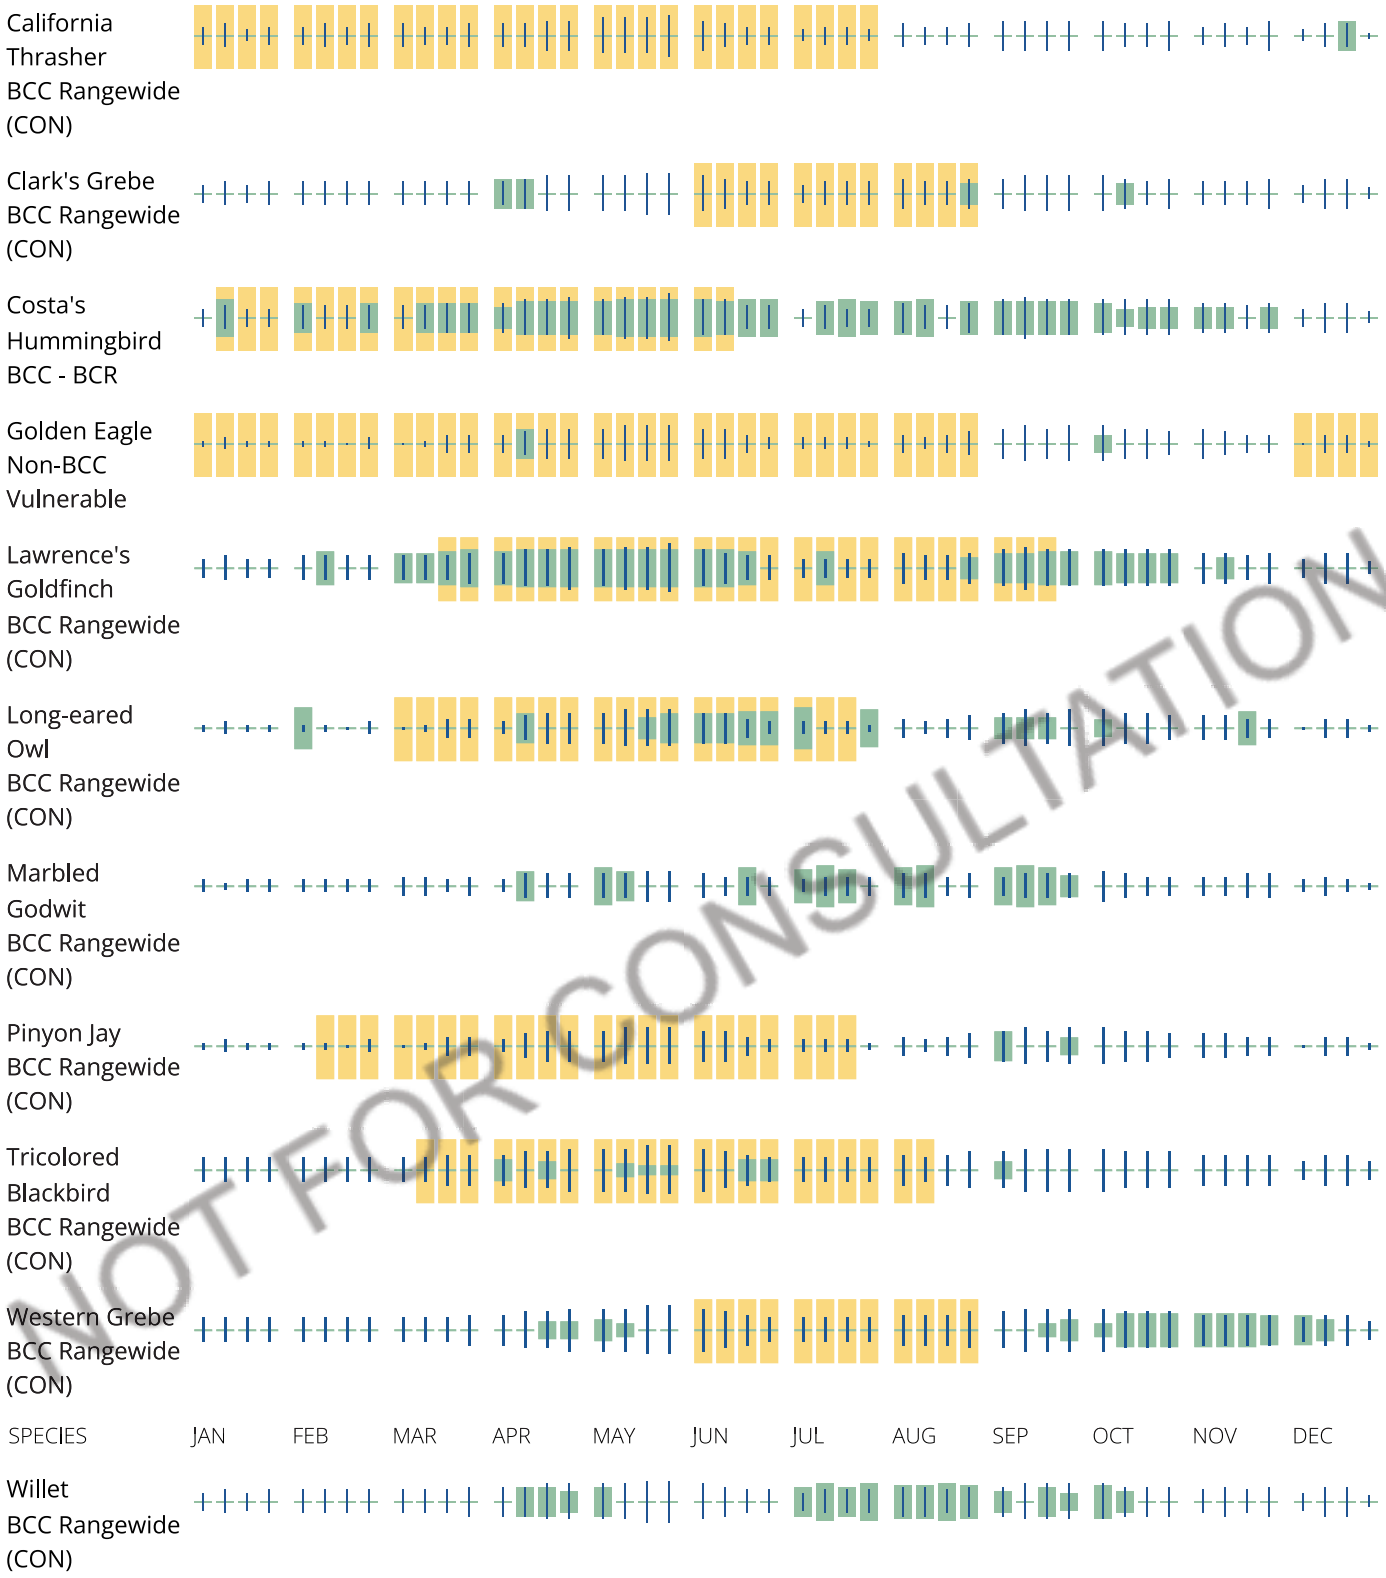
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (▪)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.



Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.



To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

NOT FOR CONSULTATION

NOT FOR CONSULTATION

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure.

To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets.

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may query your location using the RAIL Tool and look at the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in

NOT FOR CONSULTATION

offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

NOT FOR CONSULTATION

Coastal Barrier Resources System

Projects within the John H. Chafee Coastal Barrier Resources System (CBRS) may be subject to the restrictions on Federal expenditures and financial assistance and the consultation requirements of the Coastal Barrier Resources Act (CBRA) (16 U.S.C. 3501 et seq.). For more information, please contact the local Ecological Services Field Office or visit the CBRA Consultations website. The CBRA website provides tools such as a flow chart to help determine whether consultation is required and a template to facilitate the consultation process.

There are no known coastal barriers at this location.

Data limitations

The CBRS boundaries used in IPaC are representations of the controlling boundaries, which are depicted on the official CBRS maps. The boundaries depicted in this layer are not to be considered authoritative for in/out determinations close to a CBRS boundary (i.e., within the "CBRS Buffer Zone" that appears as a hatched area on either side of the boundary). For projects that are very close to a CBRS boundary but do not clearly intersect a unit, you may contact the Service for an official determination by following the instructions here: https://www.fws.gov/service/coastal-barrier-resources-system-property-documentation

Data exclusions

CBRS units extend seaward out to either the 20- or 30-foot bathymetric contour (depending on the location of the unit). The true seaward extent of the units is not shown in the CBRS data, therefore projects in the offshore areas of units (e.g., dredging, breakwaters, offshore wind energy or oil and gas projects) may be subject to CBRA even if they do not intersect the CBRS data. For additional information, please contact CBRA@fws.gov.

NOT FOR CONSULTATION

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

There are no refuge lands at this location.

Fish hatcheries

There are no fish hatcheries at this location.

Wetlands in the National Wetlands Inventory (NWI)

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Wetland information is not available at this time

This can happen when the National Wetlands Inventory (NWI) map service is unavailable, or for very large projects that intersect many wetland areas. Try again, or visit the NWI map to view wetlands at this location.

NOT FOR CONSULTATION

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

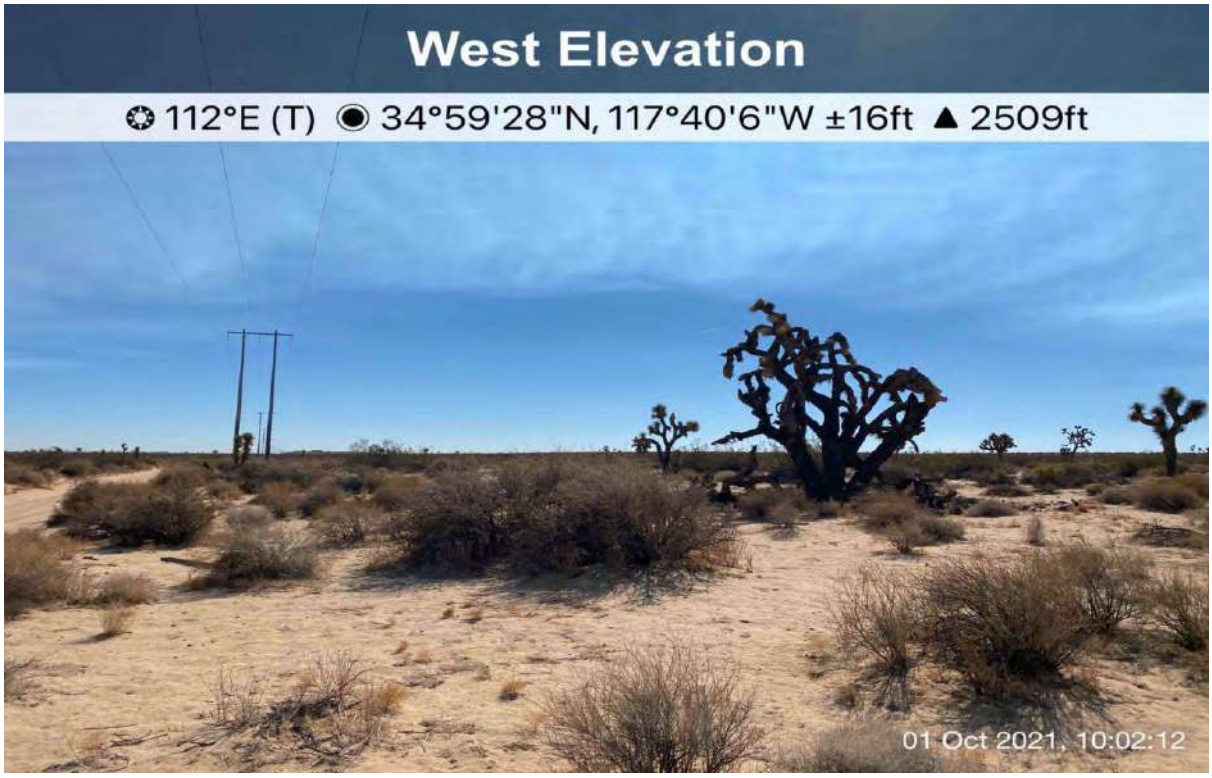
The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also

been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.



Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Appendix D

Floral and Faunal Compendium

Plants Species Observed in the Study Area

Scientific Name	Common Name	Status[1]	Native or Introduced[2]
Trees			
Chilopsis linearis ssp. *Arcuata*	desert willow	–	Native
Prosopis sp.	mesquite	–	Native
Yucca brevifolia var. *brevifolia*	western Joshua tree	SC Threatened	Native
Shrubs			
Acamptopappus sphaerocephalus	rayless goldenhead	–	Native
Ambrosia acanthicarpa	annual bursage	–	Native
Ambrosia dumosa	white bursage	–	Native
Ambrosia salsola	cheesebush	–	Native
Atriplex canescens	fourwing saltbush	–	Native
Atriplex confertifolia	shadscale	–	Native
Atriplex polycarpa	allscale	–	Native
Atriplex spinifera	spinescale	–	Native
Baccharis pilularis	coyotebrush	–	Native
Baccharis salicifolia ssp. *Salicifolia*	mulefat	–	Native
Cylindropuntia echinocarpa	golden cholla	–	Native
Encelia farinosa	brittlebush	–	Native
Ephedra nevadensis	Nevada ephedra	–	Native
Ericameria cooperi var. *cooperi*	Cooper's goldenbush	–	Native
Ericameria nauseosa var. *mohavensis*	Mojave rabbitbrush	–	Native
Eriastrum eremicum	desert wollystar	–	Native
Grayia spinosa	hop sage	–	Native
Krascheninnikovia lanata	winterfat	–	Native
Larrea tridentata	creosote bush	–	Native
Lepidospartum squamatum	scalebroom	–	Native
Lycium andersonii	Anderson's boxthorn	–	Native
Lycium cooperi	Cooper's boxthorn	–	Native
Scutellaria mexicana	Mexican bladdersage	–	Native
Tetradymia stenolepis	Mojave cottonthorn	–	Native
Tamarix aphylla	Athel tamarisk	–	Introduced. Invasive; Cal-IPC Limited
Herbs			
Croton setiger	turkey-mullein	–	Native
Distichlis spicata	saltgrass	–	Native
Eriogonum inflatum	desert trumpet	–	Native
Eriogonum sp.	buckwheat	–	Native
Erodium sp.	filaree	–	Introduced
Euphorbia albomarginata	rattlesnake sandmat	–	Native
Hirschfeldia incana	summer mustard	–	Introduced. Invasive; Cal-IPC Moderate

Scientific Name	Common Name	Status[1]	Native or Introduced[2]
Malva parviflora	cheeseweed	–	Introduced
Petalonyx thurberi	sandpaper plant	–	Native
Phacelia sp.	phacelia	–	Native
Salsola tragus	Russian thistle	–	Introduced. Invasive; Cal-IPC Limited
Salvia carduacea	thistle sage	–	Native
Stephanomeria pauciflora	wire lettuce	–	Native
Grasses			
Bromus rubens	red brome	–	Introduced. Invasive; Cal-IPC High
Bromus tectorum	cheat grass	–	Introduced. Invasive; Cal-IPC High
Schismus sp.	schismus	–	Introduced. Invasive; Cal-IPC Limited
Stipa sp.	needlegrass	–	Native

Wildlife Species Observed in the Study Area

Scientific Name	Common Name
Birds	
*Accipiter cooperii**	Cooper's hawk
Aeronautes saxatalis	white-throated swift
Amphispiza bilineata	black-throated sparrow
Artemisiospiza belli	Bell's sparrow
Artemisiospiza nevadensis	sagebrush sparrow
*Athene cunicularia**	burrowing owl
Buteo jamaicensis	red-tailed hawk
Callipepla californica	California quail
Campylorhynchus brunneicapillus	cactus wren
Cathartes aura	turkey vulture
Chamaea fasciata	wrentit
Charadrius vociferus	killdeer
Chondestes grammacus	lark sparrow
Colaptes auratus	northern flicker
Corvus brachyrhynchos	American crow
Corvus corax	common raven
*Eremophila alpestris**	horned lark
Euphagus cyanocephalus	Brewer's blackbird
Falco sparverius	American kestrel
Haemorhous mexicanus	house finch
Junco hyemalis	dark-eyed junco
*Lanius ludovicianus**	loggerhead shrike
Larus delawarensis	ring-billed gull
Melozone crissalis	California towhee
Mimus polyglottos	northern mockingbird
Passer domesticus	house sparrow
Pipilo maculatus	spotted towhee
Piranga ludoviciana	western tanager
Polioptila melanura	black-tailed gnatcatcher
Regulus calendula	ruby-crowned kinglet
Sayornis saya	Say's phoebe
Setophaga coronata	yellow-rumped warbler
Spinus psaltria	lesser goldfinch
Streptopelia decaocto	Eurasian collared dove
Sturnella neglecta	western meadowlark
Sturnus vulgaris	European starling
Tachycinetaa bicolor	tree swallow
*Toxostoma lecontei**	LeConte's thrasher

Scientific Name	Common Name
Toxotstoma redivivum	California thrasher
Zenaida macroura	mourning dove
Zonotrichia leucophrys	white-crowned sparrow
Invertebrates	
Aphonopelma chalcodes	desert tarantula
Mammals	
Ammospermophilus leucurus	white-tailed antelope ground squirrel
Canis latrans	coyote
Dipodomys panamintinus	Panamint kangaroo rat
Lepus californicus	black-tailed jackrabbit
Lynx rufus	bobcat
Sylvilagus audubonii	desert cottontail
Reptiles	
Aspidoscelis tigris	Great Basin whiptail
Callisaurus draconoides	zebra-tailed lizard
Dipsosaurus dorsalis	desert iguana
Gambelia wislizenii	long-nosed leopard lizard
*Gopheruss agassizii**	Mojave desert tortoise
Phrynosoma platyrhinos calidiarum	desert horned lizard
Sceloporus sp.	spiny lizard
Uta stansburiana	common side-blotched lizard

* Indicates special status species

Appendix E

Special Status Species Evaluation Tables

Special Status Plant Species in the Regional Vicinity of the Project Site

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur
Allium shevockii Spanish needle onion	G2/S2 1B.3 BLM S	Perennial bulbiferous herb found on soil pockets on rock outcrops and talus slopes in pinyon and juniper woodland and upper montane coniferous forest habitats at 2,800-8,200 feet above mean sea level (amsl). Blooms May-Jun.	**Does not occur.** Suitable pinyon and juniper woodland and upper montane coniferous forest are not present in the study area. No CNDDB occurrences have been recorded within 5 miles of the study area.
Androstephium breviflorum pink funnel lily	G4/S2? 2B.2	Perennial bulbiferous herb found in desert dunes, Mojavean desert scrub, and bajadas at 720-2,625 feet amsl. Blooms Mar-Apr.	**Occurs.** Suitable Mojavean desert scrub is present in the study area. One individual was observed in the study area during field surveys conducted in April 2022 by SummitWest. This species was also observed at two locations in the study area during field surveys conducted in April 2017 by BRC Equals 3.
Calochortus striatus alkali mariposa-lily	G3?/S2S3 1B.2 BLM S DRECP	Perennial bulbiferous herb found on alkaline meadows and ephemeral washes in chaparral, chenopod scrub, meadows and seeps, and Mojavean desert scrub habitats at 230-5,250 feet amsl. Blooms Apr-Jun.	**Does not occur.** Suitable Mojavean desert scrub, chenopod scrub, and ephemeral washes are present in the study area. However, no CNDDB occurrences have been recorded within 5 miles of the study area.
Camissonia kernensis ssp. *Kernensis* Kern County evening-primrose	G4T3/S3 4.3	Annual herb found on granitic, sometimes gravelly or sandy soils in chaparral, Joshua tree woodland, and pinyon and juniper woodland habitats at 2,592-6,988 feet amsl. Blooms Mar-May.	**Does not occur.** Suitable Joshua tree woodland is present, and granitic, gravelly, and sandy soils are present in the study area. However, no CNDDB occurrences have been recorded within 5 miles of the study area.
Canbya candida white pygmy-poppy	G3G4/S3S4 4.2	Annual herb found on gravelly, sandy, granitic soils in Joshua tree woodland, Mojavean desert scrub, and pinyon and juniper woodland at 1,970-4,790 feet amsl. Blooms Mar-Jun.	**Does not occur.** Suitable Joshua tree woodland and Mojavean desert scrub are present, and gravelly, sandy, and granitic soils are present in the study area. However, the only CNDDB occurrence within 5 miles of the study area is from 1935.
Chorizanthe spinosa Mojave spineflower	G4/S4 4.2	Annual herb found on alkaline soils in chenopod scrub, Joshua tree woodland, Mojavean desert scrub, and playa habitats at 20-4,265 feet amsl. Blooms Mar-Jul.	**Occurs.** Suitable chenopod scrub, Joshua tree woodland, Mojavean desert scrub, and playas are present, and alkaline soils are present in the study area. Several populations and individual plants were observed in the study area during field surveys conducted in March through April 2022 by SummitWest.
Cryptantha clokeyi Clokey's cryptantha	G3/S3 1B.2	Annual herb found on sandy or gravelly soils in Mojavean desert scrub habitats at 2,378-4,478 feet amsl. Blooms Apr.	**Does not occur.** Mojavean desert scrub is present, and sandy and gravelly soils are present in the study area. However, no CNDDB occurrences have been recorded within 5 miles of the study area.

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur
Cymopterus deserticola desert cymopterus	G2/S2 1B.2 BLM S DRECP	Perennial herb found on fine to coarse, loose, sandy soil of flats in old dune areas with well-drained sand in Joshua tree woodland and Mojavean desert scrub habitats at 2,066-4,900 feet amsl. Blooms Mar-May.	**Occurs.** Suitable Joshua tree woodland and Mojavean desert scrub are present in the study area, and sandy soils are present. This species was observed at several locations in the study area during field surveys conducted in April 2017 by BRC Equals 3. Multiple CNDDB occurrences have been recorded within 5 miles of the study area, including two from 2009 which overlap the study area.
Deinandra arida Red Rock tarplant	SR G1/S1 1B.2	Annual herb found on volcanic tuff and dry to moist sites where water has collected along ephemeral streams or road edges in Mojavean desert scrub habitats at 985-3,100 feet amsl. Blooms Apr-Nov.	**Does not occur.** Suitable Mojavean desert scrub, ephemeral streams, and road edges are present in the study area, though volcanic tuff is not present. No CNDDB occurrences have been recorded within 5 miles of the study area.
Deinandra mohavensis Mojave tarplant	SE G2/S3 1B.3 BLM S DRECP	Annual herb found on low sand bars in riverbeds, mostly in riparian areas or ephemeral grassy areas in chaparral, coastal scrub and riparian scrub habitats at 2,100-2,250 feet amsl. Blooms (Jan-May) Jun-Oct.	**Does not occur.** Suitable ephemeral riparian areas are present in the study area. However, no CNDDB occurrences have been recorded within 5 miles of the study area.
Delphinium recurvatum recurved larkspur	G2?/S2? 1B.2 BLM S	Perennial herb found on alkaline soils in chenopod scrub, cismontane woodland, and valley and foothill grassland habitats at 10-2,600 feet amsl. Blooms Mar-Jun.	**Unlikely.** Suitable chenopod scrub is present and alkaline soils are present in the study area. The only CNDDB occurrence within 5 miles of the study area overlaps the study area, but it is from 1952.
Dudleya abramsii ssp. *calcicola* limestone dudleya	G4T4/S4 4.3	Perennial herb found on rocky limestone places in chaparral and pinyon and juniper woodland habitats at 1,640-8,530 feet amsl. Blooms Apr-Aug.	**Absent.** No chaparral or pinyon and juniper woodland habitats are present in the study area. No CNDDB occurrences have been recorded within 5 miles of the study area.
Eremothera boothii ssp. *boothii* Booth's evening-primrose	G5T4/S3 2B.3	Annual herb found in Joshua tree woodland and pinyon and juniper woodland habitats at 2,674-7,874 feet amsl. Blooms Apr-Sep.	**Does not occur.** Suitable Joshua tree woodland habitat is present in the study area. However, the study area is outside the geographic range of this subspecies as described in Baldwin et al. (2012). The only CNDDB occurrence located within 5 miles of the study area is from 1988 and mapped as a best guess.
Eriophyllum mohavense Barstow woolly sunflower	G2/S2 1B.2 BLM S DRECP	Annual herb found in open silty or sandy areas, barren ridges, or margins of playas in chenopod scrub, Mojavean desert scrub and playa habitats at 1,640-3,150 feet amsl. Blooms Mar-May.	**Likely.** Suitable chenopod scrub, Mojavean desert scrub, and playas are present in the study area. Open areas with silty and sandy soils are present. Multiple CNDDB occurrences have been recorded within 5 miles of the study area, including one occurrence from 2017 which is located approximately 0.5 mile east of the study area.

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur
Erythranthe rhodopetra Red Rock Canyon monkeyflower	G1/S1 1B.1 BLM S	Annual herb found on sandy soils in washes derived from sedimentary rock of the Ricardo formation in Mojavean desert scrub habitat at 2,000-3,000 feet amsl. Blooms Mar-Apr.	**Does not occur.** Suitable Mojavean desert scrub and sandy soils are present in the study area. However, no CNDDB occurrences have been recorded within 5 miles of the study area.
Eschscholzia minutiflora ssp. *twisselmannii* Red Rock poppy	G5T2/S2 1B.2 BLM S	Annual herb found on volcanic tuff in Mojavean desert scrub habitat with *Larrea*, *Lycium*, *Eriogonum*, *Isomeris*, and *Hemizonia* at 2,230-4,040 feet amsl. Blooms Mar-May.	**Unlikely.** Suitable Mojavean desert scrub is present in the study area. This species was observed approximately 4.5 miles north of the study area during field surveys conducted in April 2017 by BRC Equals 3. However, no CNDDB occurrences have been recorded within 5 miles of the study area.
Euphorbia vallis-mortae Death Valley sandmat	G3/S3 4.2	Perennial herb found on sandy or gravelly sites in Mojavean desert scrub habitat at 755-4,790 feet amsl. Blooms May-Oct.	**Does not occur.** Suitable Mojavean desert scrub is present, and sandy and gravelly soils are present in the study area. However, no CNDDB occurrences have been recorded within 5 miles of the study area.
Goodmania luteola golden goodmania	G3/S3 4.2	Annual herb found on alkaline or clay soils in meadows and seeps, Mojavean desert scrub, playas, and valley and foothill grassland habitats at 65-7,200 feet amsl. Blooms Apr-Aug.	**Does not occur.** Suitable Mojavean desert scrub, and playas are present, and alkaline and clay soils are present in the study area. However, no CNDDB occurrences have been recorded within 5 miles of the study area.
Hecastocleis shockleyi prickle-leaf	G4/S4 3	Perennial shrub found on rocky slopes and washes, often on carbonate or slate in chenopod scrub and Mojavean desert scrub habitats at 3,937-7,217 feet amsl. Blooms May-Jul.	**Does not occur.** Suitable chenopod scrub and Mojavean desert scrub habitats are present in the study area. However, no CNDDB occurrences have been recorded within 5 miles of the study area.
Layia heterotricha pale-yellow layia	G2/S2 1B.1 BLM S	Annual herb found on alkaline or clay soils in open areas in cismontane woodland, coastal scrub, pinyon and juniper woodland, and valley and foothill grassland habitats at 984-5,594 feet amsl. Blooms Mar-Jun.	**Does not occur.** No suitable cismontane woodland, coastal scrub, pinyon and juniper woodland, or valley and foothill grassland habitats are present, though suitable alkaline and clay soils are present in the study area. No CNDDB occurrences have been recorded within 5 miles of the study area.
Loeflingia squarrosa var. *artemisiarum* sagebrush loeflingia	G5T3/S2 2B.2 BLM S	Annual herb found on sandy flats and dunes and sandy areas around clay slicks with *Sarcobatus*, *Atriplex*, and *Tetradymia* in desert dunes, Great Basin scrub, and Sonoran desert scrub habitats at 2,297-5,300 feet amsl. Blooms Apr-May.	**Unlikely.** Suitable desert dune habitats are present in the study area. Sandy and clay soils and *Atriplex* spp. Are also present. One CNDDB occurrence from 2006 is located approximately 2.5 miles from the study area.
Mentzelia eremophila solitary blazing star	G4/S3S4 4.2	Annual or perennial herb found in Mojavean desert scrub habitat at 2,300-4,000 feet amsl. Blooms Mar-May.	**Does not occur.** Suitable Mojavean desert scrub habitat is present in the study area. However, no CNDDB occurrences have been recorded within 5 miles of the study area.

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur
Mentzelia tridentata creamy blazing star	G3/S3 1B.3	Annual herb found in Mojavean desert scrub habitat at 2,300-3,850 feet amsl. Blooms Mar-May.	**Does not occur.** Suitable Mojavean desert scrub habitat is present in the study area. However, no CNDDB occurrences have been recorded within 5 miles of the study area.
Muilla coronata crowned muilla	G3/S3 4.2	Perennial bulbiferous herb found on barren flats and ridges in sandy, granitic soils in chenopod scrub, Joshua tree woodland, Mojavean desert scrub, and pinyon and juniper woodland habitats at 2,200-6,430 feet amsl. Blooms Mar-Apr (May).	**Does not occur.** Suitable chenopod scrub, Joshua tree woodland, and Mojavean desert scrub habitats are present, and sandy, granitic soils are present in the study area. However, no CNDDB occurrences have been recorded within 5 miles of the study area.
Nemacladus gracilis slender nemacladus	G4/S4 4.3	Annual herb found on sandy or gravelly places in cismontane woodland and valley and foothill grassland habitats at 394-6,234 feet amsl. Blooms Mar-May.	**Does not occur.** No suitable cismontane woodland or valley and foothill grassland habitats are present, though sandy and gravelly soils are present in the study area. No CNDDB occurrences have been recorded within 5 miles of the study area.
Pediomelum castoreum Beaver Dam breadroot	G3/S2 1B.2 BLM S	Perennial herb found on sandy soils in washes and roadcuts in Joshua tree woodland and Mojavean desert scrub habitats at 2,000-5,000 feet amsl. Blooms Apr-May.	**Does not occur.** Suitable Joshua tree woodland and Mojavean desert scrub habitats are present, and sandy soils are present in the study area. However, the only CNDDB occurrence recorded within 5 miles of the study area is an undated observation from before 1996, exact location unknown.
Phacelia nashiana Charlotte's phacelia	G3/S3 1B.2 BLM S	Annual herb found on granitic soils and sandy or rocky areas on steep slopes or flats in Joshua tree woodland, Mojavean desert scrub, and pinyon and juniper woodland habitats at 1,970-7,220 feet amsl. Blooms Mar-Jun.	**Does not occur.** Suitable Joshua tree woodland and Mojavean desert scrub habitats are present, and granitic, sandy, and rocky soils are present in the study area. However, no CNDDB occurrences have been recorded within 5 miles of the study area.
Sclerocactus polyancistrus Mojave fish-hook cactus	G3/S3 4.2	Perennial shrub found on well-drained soil, sometimes on limestone, on rocky, gravelly mesas, slopes, and outcrops in Great Basin scrub, Joshua tree woodland, and Mojavean desert scrub habitats at 2,100-7,612 feet amsl. Blooms Apr-Jul.	**Does not occur.** Suitable Joshua tree woodland and Mojavean desert scrub habitats are present, and rocky, gravelly soils are present in the study area. However, no CNDDB occurrences have been recorded within 5 miles of the study area.
Senna covesii Cove's cassia	G5/S3 2B.2	Perennial herb found on dry, sandy desert washes and slopes in Sonoran desert scrub habitat at 738-4,250 feet amsl. Blooms Mar-Jun (Aug).	**Does not occur.** No suitable Sonoran desert scrub habitat is present in the study area, though dry, sandy desert washes are present in the study area. The only CNDDB occurrence recorded within 5 miles of the study area is a 2013 occurrence which overlaps the study area and is believed to consist of transplants outside the native range. The study area is outside the known range of this species

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur
Yucca brevifolia var. *brevifolia* western Joshua tree	SC Threatened	Perennial tree found on fine, loose, well-drained or gravelly silts, loams, and sands in sagebrush scrub, desert scrub, southwestern shrubsteppe, pinyon and juniper woodland, and desert grassland habitats in hot, dry sites on flats, mesas, bajadas, and gentle slopes in the Mojave Desert at 1,600-6,600 feet amsl. Blooms Mar-Jun.	**Occurs.** This species was observed in several locations in the study area during field surveys conducted in October 2021 by Bargas and during surveys conducted in March through April 2022 and October 2022 by SummitWest.

Regional Vicinity refers to within a five-mile search radius of the study area.

CRPR (CNPS California Rare Plant Rank)

1A = Presumed extirpated in California, and rare or extinct elsewhere
1B = Rare, Threatened, or Endangered in California and elsewhere
2A = Presumed extirpated in California, but common elsewhere
2B= Rare, Threatened, or Endangered in California, but more common elsewhere
3 = Need more information (Review List)
4 = Limited Distribution (Watch List)

CRPR Threat Code Extension

.1 = Seriously endangered in California (>80% of occurrences threatened/high degree and immediacy of threat)
.2 = Moderately threatened in California (20-80% of occurrences threatened/ moderate degree and immediacy of threat)
.3 = Not very endangered in California (<20% of occurrences threatened/ low degree and immediacy of threat)

Status (Federal/State)

SE = State Endangered
SC = State Candidate
SR = State Rare
BLM S = BLM Sensitive Species

Other Statuses

G1 or S1 Critically Imperiled Globally or Subnationally (state)
G2 or S2 Imperiled Globally or Subnationally (state)
G3 or S3 Vulnerable to extirpation or extinction Globally or Subnationally (state)
G4/5 or S4/5 Apparently secure, common and abundant

Status (Regional)

DRECP = Desert Renewable Energy Conservation Plan Focus Species

[1] **Definitions Regarding Potential for Occurrence**

Occurs = The species and/or positive sign was observed on-site during site visit or field survey.
Absent = The species and/or positive sign was not observed on-site during focused survey(s) during the appropriate blooming/activity period (and, for plants, observed at a reference population).
Likely = All site features indicate this species is very likely present and should be expected. Criteria include:
- Project site within geographic range;
- Suitable habitat present (e.g., soils, vegetation communities, elevation, roost sites, leaf litter/debris, water, host plants, etc.); and
- Distance to historical record(s) less than 25 years old is/are less than 500 feet (plants/fish), 1,000 feet (riparian wildlife), 1 mile (birds/bats), 2 miles (large mammals), or 3 miles (small mammals/herps).

Unlikely = The species could occur given presence of marginal habitat, but records of the species are not locally known or are greater than 25 years old.
Does Not Occur = The species would not occur because the project site is outside known or current geographic/elevation range, lacks habitat or suitable conditions, and/or there is reasonable certainty to assume absence based on historical records.

Special Status Wildlife Species in the Regional Vicinity of the Project Site

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur[1]
Reptiles			
Gopherus agassizii Mojave desert tortoise	FT ST DRECP	Widely distributed in the Mojave, Sonoran, and Colorado Deserts from below sea level to 2,200 meters (7,220 feet). Most common in desert scrub, desert wash, and Joshua tree habitats, but occurs in almost every desert habitat except those on the most precipitous slopes.	**Occurs:** Suitable habitat is present, and this species was observed in the study area. Two live tortoises, two carcasses, one Class 3 pallet, one Class 2 burrow, two Class 3 burrows, and two burrows of unknown class were observed in the study area during vegetation community mapping and habitat assessment surveys in October 2021. Eleven live tortoises, three carcasses, three pallets, five Class 1 burrows, two Class 2 burrows, six Class 3 burrows, three Class 4 burrows, two Class 5 burrows, and one burrow of unknown class were observed in the study area during rare plant surveys in March and April 2022. One live tortoise in a previously mapped burrow, one live tortoise in a newly mapped burrow, one Class 1 burrow, four Class 2 burrows (two with scat), one Class 3 burrow, and two Class 5 burrows were observed during aquatic resources and habitat assessment surveys in September and October 2022.
Birds			
Accipiter cooperii Cooper's hawk	WL	Inhabits woodlands, chiefly of open, interrupted, or marginal type. Nest sites are found mainly in riparian growths of deciduous trees, as in canyon bottoms on river floodplains; also, in live oaks.	**Occurs:** Suitable nesting habitat is absent from the study area; however, suitable foraging habitat is present. In addition, this species was observed during the October 2021 vegetation community mapping and habitat assessment surveys.
Agelaius tricolor tricolored blackbird	ST SSC BLM S DRECP BCC	A highly colonial species that is most numerous in the Central Valley and vicinity. Largely endemic to California. Requires open water, protected nesting substrate, and foraging area with insect prey within a few kilometers of the nesting colony.	**Does Not Occur:** Suitable open water with protected nesting substrate is absent from the study area. In addition, the only CNDDB record within 5 miles of the study area from within 25 years states the population is possibly extirpated.
Aquila chrysaetos golden eagle	FP WL BLM S DRECP BCC	Found in rolling foothills, mountain areas, sage-juniper flats, and desert habitats. Cliff-walled canyons provide nesting habitat in most parts of range; also nests in large trees in open areas.	**Likely (Foraging); Does Not Occur (Nesting):** Suitable grassland and shrub foraging habitats are present in the study area. Transmission towers in the study area may provide marginal nesting habitat. Two historical golden eagle nests that were once active, but have been inactive since 2012, are present within 5 miles of the study area. Both nests were located on cliffs, which are absent from the study area.

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur[1]
Asio otus long-eared owl	SSC	Inhabits riparian bottomlands in tall willows and cottonwoods. Also inhabits belts of live oak trees paralleling stream courses. This species requires adjacent open land that is productive with mice. This species also requires the presence of old nests created by crows, hawks, or magpies for breeding.	**Does Not Occur:** The study area is outside of the known breeding range of this species and suitable tall willows, cottonwoods, and live oak trees are absent from the study area.
Athene cunicularia burrowing owl	SSC BLM S DRECP BCC	A yearlong resident of open, dry grassland and desert habitats, and in grass, forb, and open shrub stages of pinyon-juniper and ponderosa pine habitats. Subterranean nester and is dependent upon burrowing mammals, most notably the California ground squirrel. Formerly common in appropriate habitats throughout the state, excluding the humid northwest coastal forests and high mountains.	**Occurs**: Two non-breeding burrowing owls and five potentially active wintering burrowing owl burrows were observed in the study area during vegetation community mapping and habitat assessment surveys in October 2021. Three active burrows were observed in the study area during rare plant surveys in March 2022. Two inactive burrows were observed in the study area during habitat and aquatic resources surveys in September 2022. Suitable nesting, migration, and wintering habitats are present.
Charadrius montanus mountain plover	SSC BLM S DRECP BCC	Winter resident from September through March. Southern California range includes Imperial Valley, plowed fields of Los Angeles and western San Bernardino counties, and along the central Colorado River valley. Uses open grasslands, plowed fields with little vegetation, and open sagebrush areas.	**Unlikely:** Migration and wintering habitat is present, and the study area is in the known winter range of this species. However, the nearest CNDDB record from within the past 25 years is approximately 10 miles northwest of the study area.
Charadrius nivosus western snowy plover	FT SSC BCC	Inhabits sandy beaches, salt pond levees, and shores of large alkali lakes. Requires sandy, gravelly, or friable soils for nesting.	**Does Not Occur:** Suitable habitat is absent and the study area is outside of the known range of this species.
Eremophila alpestris actia California horned lark	WL	Resident of coastal regions, chiefly from Sonoma County to San Diego County. Also found in the main part of the San Joaquin Valley and east to the foothills. Inhabits short-grass prairies, bald hills, mountain meadows, open coastal plains, fallow grain fields, and alkali flats. Nests in hollows on the ground	**Occurs:** Suitable nesting habitat is present, and several observations of this species were recorded during vegetation community mapping and habitat assessment surveys in October 2021, outside of the breeding season.

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur[1]
Falco mexicanus prairie falcon	WL BCC	Uncommon permanent resident that ranges from southeastern deserts, northwest throughout the Central Valley and along the inner Coast Ranges and Sierra Nevada. Distributed from annual grasslands to alpine meadows, but associated primarily with perennial grasslands, savannahs, rangeland, some agricultural fields, and desert scrub areas. Usually nests in a scrape on a sheltered ledge of a cliff overlooking a large, open area.	**Does Not Occur (Nesting); Occurs (Foraging):** Suitable nesting habitat is absent from the study area; however, suitable foraging habitat is present. Several observations of this species were recorded during vegetation community mapping and habitat assessment surveys in October 2021, outside of the breeding season. This species was also observed during rare plant surveys in April 2022, during the breeding season. One individual was observed during habitat assessment surveys in October 2022, outside the breeding season.
Gymnogyps californianus California condor	FE SE FP DRECP	Requires vast expanses of open savannah, grasslands, and foothill chaparral in mountain ranges of moderate altitude. Nesting sites are found in deep canyons containing clefts in the rocky walls. Forages up to 100 miles from the roost/nest.	**Does Not Occur:** The study area is outside of the known range of this species and there are no records within 5 miles of the study area.
Lanius ludovicianus loggerhead shrike	SSC	A common resident and winter visitor in lowlands and foothills throughout California. Nests in densely foliaged shrubs or trees.	**Occurs**: Suitable nesting habitat is present in the study area. In addition, several observations of this species were recorded during vegetation community mapping and habitat assessment surveys in October 2021, and September and October 2022, outside of the breeding season. This species was also observed during rare plant surveys in April 2022, during the breeding season.
Toxostoma crissale Crissal thrasher	SSC BLM S	Resident of southeastern deserts in desert riparian and desert wash habitats. Nests in dense vegetation along streams/washes. Preferred nesting substrate includes mesquite, screwbean mesquite, ironwood, catclaw, acacia, arrow weed, and willow.	**Does Not Occur:** The study area is outside of the known range of this species.
Toxostoma lecontei LeConte's thrasher	BCC	Desert resident; primarily of open desert wash, desert scrub, alkali desert scrub, and desert succulent scrub habitats. Commonly nests in a dense, spiny shrub or densely branched cactus in desert wash habitat, usually two to eight feet above ground.	**Occurs:** Suitable nesting habitat is present in the study area. In addition, several observations of this species were recorded during vegetation community mapping and habitat assessment surveys in October 2021, outside of the breeding season. This species was also observed during rare plant surveys in April 2022, during the breeding season.

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur[1]
Vireo vicinior gray vireo	SSC BLM S BCC	Inhabits dry chaparral and chamise-dominated habitats in the mountains of the Mojave Desert. Also associated with juniper and *Artemisia* sp. This species forages, nests, and sings in areas formed by a continuous growth of twigs approximately 1 to 5 feet above the ground.	**Does Not Occur:** The study area is outside of the known range of this species.
Mammals			
Antrozous pallidus pallid bat	SSC BLM S DRECP WBWG H	Prefers rocky outcrops, cliffs, and crevices with access to open habitats for foraging. Day roosts are in caves, crevices, mines, and occasionally in hollow trees and buildings. Night roosts may be in more open sites, such as porches and open buildings. A wide variety of habitats are occupied, including grasslands, shrublands, woodlands, and forests from sea level up through mixed conifer forests.	**Does Not Occur:** Suitable caves, crevices, mines, and hollow trees for roosting are absent from the study area. In addition, the only two CNDDB observations from the region are over 25 years old and are not within 5 miles of the study area.
Corynorhinus townsendii Townsend's big-eared bat	SSC BLM S DRECP WBWG H	Resident of California in a wide variety of habitats. Most common in mesic sites. Roosts in the open, hanging from walls and ceilings. Extremely sensitive to human disturbance.	**Does Not Occur:** Suitable walls and ceilings for roosting are absent from the study area. In addition, the only two CNDDB observations from the region are over 25 years old and are not within 5 miles of the study area.
Euderma maculatum spotted bat	SSC BLM S WBWG H	Occupies a wide variety of habitats from arid deserts and grasslands through mixed conifer forests. Typically forages in open terrain, over water and along washes. Feeds almost entirely on moths. Roosts in rock crevices in cliffs or caves. Occasionally roosts in buildings.	**Does Not Occur:** Suitable rock crevices for roosting and water sources for foraging are absent from the study area. In addition, the only two CNDDB observations from the region are over 25 years old and are not within 5 miles of the study area.
Onychomys torridus tularensis Tulare grasshopper mouse	BLM S SSC	Inhabits hot, arid valleys and scrub deserts in the southern San Joaquin Valley. The species' diet is almost exclusively composed of arthropods and therefore an abundant supply of insects is required.	**Does Not Occur:** The study area is outside of the known range of this species and there are no records within 5 miles of the study area.
Taxidea taxus American badger	SSC	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats. Needs sufficient food, friable soils, and open, uncultivated ground. Preys on burrowing rodents and digs burrows.	**Likely:** Suitable habitat is present in the study area. In addition, there are three CNDDB records within 6 miles of the study area from the past 25 years.

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur[1]
Xerospermophilus mohavensis Mohave ground squirrel	ST BLM S DRECP	Inhabits open desert scrub, alkali scrub, and Joshua tree woodland in the Mojave Desert. Prefers sandy to gravelly soils and avoids rocky areas. Uses burrows at the base of shrubs for cover and nesting.	**Likely:** Suitable habitat is present in the study area. In addition, there are multiple CNDDB records within 5 miles of the study area from the past 25 years. This species was not detected during protocol surveys conducted at the Cal City Substation in 2020 and 2021.[2]
Vulpes macrotis arsipus desert kit fox	CFGC	Inhabits open, level desert areas with loose-textured soils supporting scattered, shrubby vegetation with little human disturbance.	**Occurs**: One active kit fox den was observed in the study area during habitat assessment surveys in October 2021. Three active kit fox dens were observed in the study area during rare plant surveys in April 2022. One active and three inactive den complexes were observed in the study area during habitat and aquatic resources surveys in September and October 2022.

Regional Vicinity refers to within a 5-mile search radius of site.

Status (Federal/State)

FE = Federal Endangered
FT = Federal Threatened
SE = State Endangered
ST = State Threatened
SSC = CDFW Species of Special Concern
FP = CDFW Fully Protected
WL = CDFW Watch List
BLM S = BLM Sensitive Species
BCC= Birds of Conservation Concern
CFGC = California Fish and Game Code

Status (Regional)

DRECP – Desert Renewable Energy Conservation Plan Focus Species
WBWG H – Western Bat Working Group – High Priority

Definitions Regarding Potential for Occurrence[1]

Occurs = The species and/or positive sign was observed on-site during site visit or field survey.

Absent = The species and/or positive sign was not observed on-site during focused survey(s) during the appropriate blooming/activity period (and, for plants, observed at a reference population).

Likely = All site features indicate this species is very likely present and should be expected. Criteria include:

- Project site within geographic range;
- Suitable habitat present (e.g., soils, vegetation communities, elevation, roost sites, leaf litter/debris, water, host plants, etc.); and
- Distance to historical record(s) less than 25 years old is/are less than 500 feet (plants/fish), 1,000 feet (riparian wildlife), 1 mile (birds/bats), 2 miles (large mammals), or 3 miles (small mammals/herps).

Unlikely = The species could occur given presence of marginal habitat, but records of the species are not locally known or are greater than 25 years old.

Does Not Occur = The species would not occur because the project site is outside known or current geographic/elevation range, lacks habitat or suitable conditions, and/or there is reasonable certainty to assume absence based on historical records.

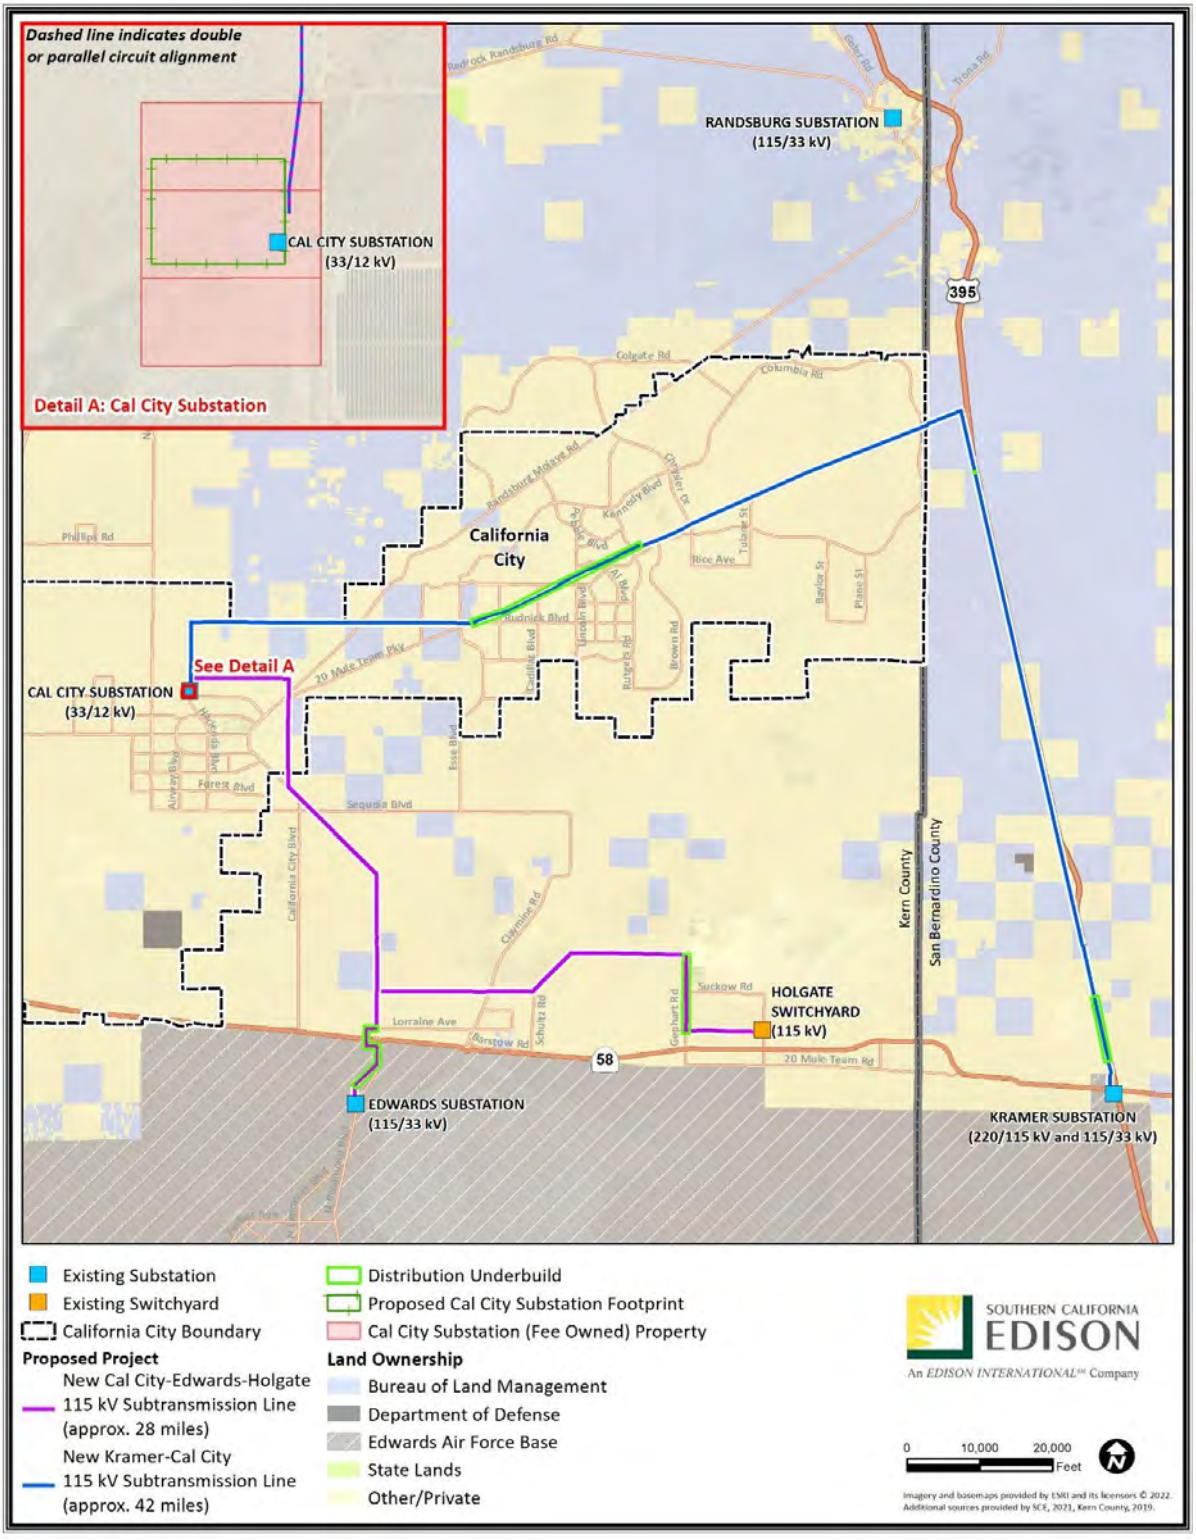
1 Introduction

This Rare Plant Protocol Field Survey Report was prepared by SummitWest Environmental Inc. (SummitWest) Consultants to assist Southern California Edison (SCE) with planning the proposed Cal City Substation 115 Kilovolt (kV) Upgrade Project (Proposed Project). The Proposed Project is located in Antelope Valley, north of the city of Lancaster in Kern County (Figure 1). The Proposed Project is in the Mojave Desert in eastern Kern County and northwestern San Bernardino County and traverses the incorporated City of California City and Edwards Air Force Base (EAFB). SCE has also identified one feasible alternative to a portion of the Proposed Project route alignment (Alternative). Land ownerships in the Proposed Project include federally owned lands managed by the Bureau of Land Management (BLM) and the Department of Defense, state owned lands managed by the California Department of Fish and Wildlife (CDFW), California City-owned lands, and privately owned lands.

This report includes an analysis of all rare plant survey data collected for the Proposed Project, the Alternative Project, and the existing Kramer-Holgate subtransmission line to support a separate SCE project. The analysis considers historical special status plant observations documented within the Proposed Project area within the last five years, as well as observations made by SummitWest botanists during surveys conducted between March 24-April 16, September 27-28, and October 26-28, 2022.



The surveys detected four out of the five rare plant species determined to occur or to likely occur in the survey area (Table 1): pink funnel lily (*Androstephium breviflorum*), desert cymopterus (*Cymopterus deserticola*), Mojave spineflower (*Chorizanthe spinosa*), and western Joshua tree (*Yucca brevifolia* var. *brevifolia*). Undetected, despite the presence of suitable habitat, was the Barstow woolly sunflower (*Eriophyllum mohavense*).

Table 1 List of target species[1]

Scientific Name	Common Name	Status	Native or Introduced
Androstephium breviflorum	Pink funnel lily	2B.2	Native
Chorizanthe spinosa	Mojave spineflower	4.2	Native
Cymopterus deserticola	Desert cymopterus	1B.2	Native
Eriophyllum mohavense	Barstow woolly sunflower	1B.2	Native
Yucca brevifolia var. *brevifolia*	Western Joshua tree	SCT	Native

[1] Species status designations and target species determination are derived from the Rincon / SCE "California City Special Status Plant Species Potential to Occur" list (see Appendix B, also included in the BRTR). For details on designation status, also see the BRTR, and the Regulatory Overview below.
SCT- State Candidate Threatened

Figure 1 Proposed Project Location

2 Project Overview

The Proposed Project consists of upgrades to SCE's existing Cal City Substation, located in the City of California City, as well as construction of two new 115 kV subtransmission lines to serve the upgraded substation. The Proposed Project is intended to serve current and long-term forecasted electrical demand for electricity and maintain electric system reliability in the Electrical Needs Area, which includes the City of California City and surrounding portions of unincorporated Kern County, as well as Edwards Substation.

The Proposed Project is planned to be operational by 2028 and would include the following major components:

Subtransmission

The Proposed Project would include the following subtransmission-related components:

- Construct one new Kramer-Cal City 115 kV Subtransmission Line (approximately 42 miles)
- Construct one new Cal City-Edwards-Holgate 115 kV Subtransmission Line (approximately 28 miles)

Substation

The Proposed Project would include the following substation-related components:

- Cal City Substation Improvements:
  - Expand the existing substation by approximately 10 acres
  - Install new five-position 115 kV switchrack with five positions initially equipped
  - Install new five-position 33 kV switchrack with five positions initially equipped
  - Install new 21-position 12 kV switchrack with 19 positions initially equipped
  - Install four 115 kV/12 kV, 28 MVA transformers
  - Install one 115 kV, 28.8 megavolt-ampere reactive (MVAR) capacitor
  - Install two 33 kV, 4.8 MVAR capacitors
  - Install four 12 kV, 4.8 MVAR capacitors
  - Install a new MEER with the associated communication, control and protection for the expanded substation
- Edwards Substation Improvements:
  - Equip one existing 115 kV line position
  - Expand existing 115 kV switchrack to a breaker-and-a-half configuration
  - Convert two 115 kV bank positions to a double bus, double breaker configuration
  - Install or upgrade protection for two 115 kV lines and two buses
- Holgate Switchyard Improvements:
  - Equip one existing 115 kV line position
  - Upgrade protection for four 115 kV lines and the north 115 kV bus
- Kramer Substation Improvements:

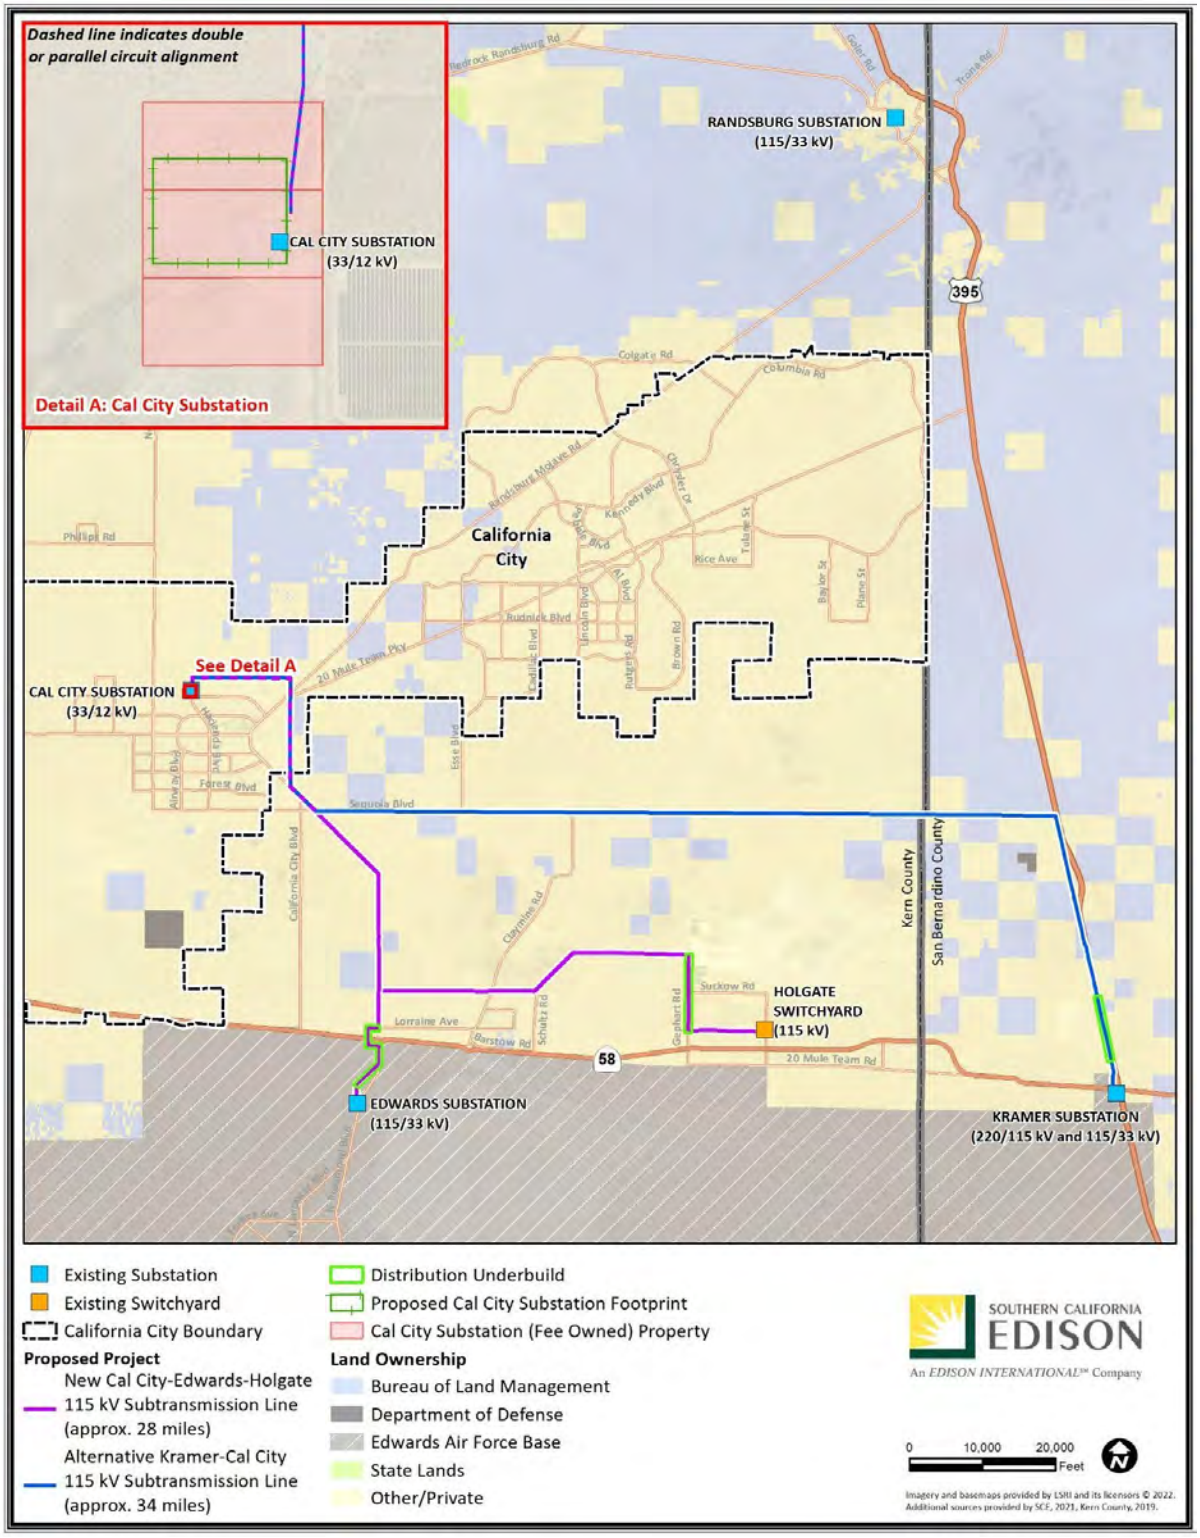
- Equip one existing 115 kV line position
- Convert two 115 kV bank positions to a double bus, double breaker configuration
- Install or upgrade protection for two 115 kV lines and two banks

Distribution

The Proposed Project would include the following distribution-related components:

- Construct two new underground 33 kV distribution getaways at Cal City Substation
- Construct 14 new underground 12 kV distribution getaways at Cal City Substation
- Transfer approximately 4.7 miles of existing Castle Butte 33 kV and approximately 1.7 miles of existing Isner 33 kV Distribution Lines to new Kramer-Cal City 115 kV Subtransmission Line structures and remove approximately 151 existing distribution structures along these line segments
- Transfer approximately 2.3 miles of existing Castle Butte 33 kV and approximately 2 miles of existing Conte 12 kV Distribution Lines to new Cal City-Edwards-Holgate 115 kV Subtransmission Line structures and remove approximately 90 existing distribution structures along these line segments

Telecommunication



The Proposed Project would include the following telecommunication-related components:

- Install equipment to support substation automation and protection requirements at Cal City Substation
- Install optical ground wire (OPGW) on new Kramer-Cal City 115 kV Subtransmission Line (approximately 42 miles)
- Install OPGW on new Cal City-Edwards-Holgate 115 kV Subtransmission Line (approximately 28 miles)
- Install equipment at Kramer and Edwards Substations and Holgate Switchyard in support of the new OPGW

2.1 Project Alternative

SCE has identified one feasible alternative to a portion of the Proposed Project route alignment described above. Under this Project Alternative (Figure 2), the Cal City-Edwards-Holgate 115 kV Subtransmission Line would remain unchanged from the Proposed Project; however, the proposed Kramer-Cal City 115 kV Subtransmission Line would extend from Cal City Substation following the proposed Cal City-Edwards-Holgate line in a parallel or double circuit configuration for approximately seven miles before turning east along Sequoia Boulevard, an existing unpaved road, for approximately 19 miles. The alternative alignment for the Kramer-Cal City 115 kV Subtransmission Line would then continue south for approximately eight miles along U.S. 395 and connect to Kramer Substation, similar to the Proposed Project. Under the Project Alternative, the proposed Kramer-Cal City 115 kV Subtransmission Line would extend for approximately 34 miles, as compared to approximately 42 miles under the Proposed Project. All other components of the Proposed Project would remain the same for the Project Alternative.

Figure 2 Project Alternative Alignment

3 Project Location

The Proposed Project is located within unincorporated Kern and San Bernardino counties and the incorporated City of California City (Figure 1). The proposed approximately 42-mile Kramer-Cal City 115 kV Subtransmission Line would extend northeast from Cal City Substation and cross the county line into San Bernardino County before continuing south along the U.S. Route 395 (U.S. 395) and connecting to Kramer Substation. The proposed approximately 28-mile Cal City-Edwards-Holgate 115 kV Subtransmission Line would generally extend east and then south from Cal City Substation before turning east at Suckow Road to connect to Holgate Switchyard. The Cal City-Edwards-Holgate 115 kV Subtransmission Line would also include a tap line to serve Edwards Substation located on EAFB. The Edwards tap line would extend south from the intersection of Suckow Road and 140th Street for approximately three miles to connect to Edwards Substation.

In addition to the proposed 115 kV subtransmission lines described above, the Proposed Project includes a telecommunications scope that consists of telecommunications improvements at Holgate Switchyard, Cal City, Kramer, and Edwards Substations, as well as along both proposed new subtransmission lines.

The locations of the start and end of the Proposed Project subtransmission and telecommunications components described above are summarized in Table 2.

Table 2 Project Study Area Start and End Locations

Project Component	Approximate Start Coordinates (WGS84)	Approximate End Coordinates (WGS84)
New Kramer-Cal City 115 kV Subtransmission Line	34.99032224, -117.54365076	35.14289368, -117.96832962
New Cal City-Edwards-Holgate 115 kV Subtransmission Line[1]	35.01385181, -117.70839072	35.14289368, -117.96832962

[1]This line includes an approximately three-mile tap line serving Edwards Substation. The approximate start coordinates for the proposed Edwards tap line are 35.02830628, -117.88136771. The approximate end coordinates for the proposed Edwards tap line are 34.98499339, -117.89113969.

The proposed Kramer-Cal City 115 kV Subtransmission Line is depicted on the following United States Geological Survey (USGS) 7.5-minute topographic quadrangles: California City North, Galileo Hill, Boron NW, Boron NE, Saddleback Mountain, and Kramer Junction (USGS 2011). The proposed Cal City-Edwards-Holgate 115 kV Subtransmission Line is depicted on the following USGS 7.5-minute topographic quadrangles: California City North, California City South, North Edwards, Edwards, and Boron (USGS 2011). The townships and ranges of each quadrangle are summarized in Table 3.

Table 3 7.5-Minute Topographical Quadrangle Locations

Project Component	USGS Quadrangle	Township and Range
New Kramer-Cal City 115 kV Subtransmission Line	California City North	32.0S37.0E, 32.0S38.0E
	Galileo Hill	31.0S39.0E, 32.0S38.0E
	Boron NW	31.0S39.0E, 31.0S41.0E
	Boron NE	31.0S41.0E, 32.0S41.0E
	Saddleback Mtn.	11.0N06.0W, 11.0N07.0W, 12.0N07.0W, 32.0S41.0E
	Kramer Junction	10.0N06.0W, 11.0N06.0W
New Cal City-Edwards-Holgate 115 kV Subtransmission Line	California City North	32.0S37.0E, 32.0S38.0E
	California City South	11.0N09.0W, 11.0N10.0W, 12.0N10.0W, 32.0S38.0E
	North Edwards	11.0N08.0W, 11.0N09.0W
	Edwards	10.0N10.0W, 11.0N09.0W
	Boron	11.0N08.0W

4 Regulatory Overview

Regulated or sensitive resources evaluated include special status plant species and their habitats. Regulatory authority over biological and aquatic resources is shared by Federal, State, and local agencies. A detailed regulatory background for the Proposed Project can be found in the 2022 *Cal City Sub Station 115kV Upgrade Project Draft Biological Resources Technical Report* (BRTR; see here for all references pertinent to regulatory agencies).

Plant taxa and incidental wildlife recorded during surveys was considered sensitive or special status if they were classified as one or more of the following:

- Species listed as threatened, endangered, or candidates for listing under the Federal Endangered Species Act (FESA)
- Species listed as rare, threatened, endangered, or candidates for listing under the California Endangered Species Act (CESA)
- Plants listed as rare or endangered under the California Native Plant Protection Act (California Fish and Game Code (CFGC, Section 1900 et seq.)
- Species designated as Fully Protected (FP), Species of Special Concern (SSC), or Watch List (WL) by CDFW
- Species designated as Sensitive by the BLM (BLM S)
- Planning and Focus species in the Desert Renewable Energy Conservation Plan (DRECP)
- Plants assigned a California Rare Plant Rank (CRPR) of 1 through 4 by the California Native Plant Society (CNPS)
- Species designated as locally important by the Local Agency (San Bernardino County, Kern County, and City of California City) and/or otherwise protected through ordinance or local policy.

5 Methods

5.1 Database Search and Literature Review

Target species and survey methodology for the Proposed Project were informed by a prior literature review conducted to obtain baseline project information and compile lists of special status plants that occur or potentially occur in the survey area. Potential occurrence was evaluated based on species' ranges, habitat preferences, occurrence records from the database queries of other SCE projects and the results of previous surveys conducted on the Proposed Project (see full details on this review in the BRTR).

Of the 30 special status plant species evaluated for potential to occur, three species were determined to occur in the Proposed Project: pink funnel lily, desert cymopterus, and Joshua tree. One species, Barstow woolly sunflower, was determined to likely occur. The remaining 26 special status plants were determined to be unlikely to occur or not to occur. The resulting list of Species with Potential to Occur in the Proposed Project (Appendix B) was used to generate our list of target rare or special status species that were likely to be encountered for this study (see Table 1 and below). The target species list was used as a guide for field botanists on what species to focus their knowledge and plant morphology research in preparation for the field surveys in addition to understanding the more common species that they may encounter.

Based on literature searches, database reviews, and field surveys, no federally listed plant species were determined to occur or to likely occur in the Proposed Project. One State listed plant species occurs in the Proposed Project (Joshua tree, State Candidate Threatened); no State listed plant species were determined to be likely to occur in the Proposed Project area. As a consequence, no other State listed plant species were targeted during the field surveys and desktop analysis.

5.2 Survey Methodology

The rare plant surveys were floristic in nature (i.e., all plants encountered were identified to the lowest taxonomic level necessary to determine rarity) and generally followed the CNPS Botanical Survey Guidelines (CNPS 2001) and the Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities (CDFW 2018).

The rare plant habitat quality mapping was completed by assessing suitability for the five target species. No regulatory agency coordination or agency communication protocols were required for these surveys. The Proposed and Alternative Project alignments plus a 250-foot buffer on either side were surveyed March 24-April 16, September 27-28, and October 26-28, 2022. The surveys were performed by SummitWest lead botanists Marc Baker, Wendy Boes, and Karin Edwards. Lead botanists were supported by SummitWest botanists Kristina Baker, Lisa Foster, Katelyn Hammel, Christian Hicks, Allison Johnson, Sepanta Jozani, Sam Kille, Samantha Love, Cynthia Martinson, Alexiana Pou, Thomas Shields, Jacon Sloboda, Vincent Spadone, David Tafoya, Samuel Toth, Brian Weller, Katja Whithman. Data were collected via hand-held, sub-meter, global positioning system units, photographs, and Survey123 daily reports.

5.2.1 Reference Site Check

SummitWest lead botanist Marc Baker and support botanists Brian Weller and Jacob Sloboda, performed three separate preemptive visitations of reference sites (Table 4) with known populations of target species and higher habitat quality (March 8, 13, 17, 2022). These visits confirmed the timing of desert species blooming periods and enabled the survey team to optimize species detection. The only rare plant detected during the reference site checks was *Eriophylum mohavense* (March 17th) but other desert plant species similar in phenology to our target list of species were observed in bloom.

Table 4 Reference Site Descriptions

Plant	Location / Elevation	Previous Occurrence Records and Source
Eriophyllum mohavense #1	East of Mojave, CA 35.0649 x -118.0555 2,570-ft	2016. Hyundai test track site, about 3.5 air miles northeast of Sanborn Hill, southwest of California City. Many colonies mapped mostly in a large portion of section 9 and the western half of section 16. 500+ plants observed in 6 "pools" in 2003. 214,280 plants seen throughout occurrence in 2005 by Laberteaux. 122,772 plants seen throughout occurrence in 2015 by Laberteaux (Sighting years and site details retrieved from California Natural Diversity Database [NDDB;CDFW 2021]).
Eriophyllum mohavense #2	Kramer Junction 35.00972 x -117.56278 2,480-ft	1987. Low hill in sandy-clay soil, very gentle slopes. Open areas in saltbush scrub, with *Atriplex spinifera* dominant. Other annuals in vicinity: *Schismus arabicus, Erodium cicutarium, Lepidium flavum, Malacothrix glabrata*, etc. Approximately 1,700 individuals counted, scattered in patches; in flower. Yellow (Sighting years and site details retrieved from Consortium of California Herbaria Portal 2 [CCH2; CCH2 2022]).
Eriophyllum mohavense #3	Kramer Junction, CA 35.0129862 x -117.5748252 WGS84, 2,495-ft	1987. 2.5 miles northwest of Kramer Junction. On a very gentle SE-facing alluvial slope. Spiny saltbush scrub; dominated by *Atriplex spinifera* with scattered patches of annuals, most common are: *Schismus arabicus, Eriogonum trichopes,* and *Coreopsis calliopsidea.* Total number observed unknown (Sighting years and site details retrieved from CCHC2).
Cymopterus deserticola #1	Kramer Junction, CA 34.992 x -117.555 2,490-ft	2009. South of highway 58, 0.7 to 0.9 mile west of Kramer junction, NE of Edwards Air Force Base. Mapped as 3 polygons, based on 7 sets of GPS coordinates in close proximity to one another. Dominated by *Larrea tridentata, Atriplex confertifolia*, and *Atriplex polycarpa*. Associated with *Lomatium mohavense, Malacothrix glabrata, Lasthenia californica, Krascheninnikovia lanata*. Sandy soil with low density of vegetation 1-10 plants were observed at each of the 7 GPS points provided by Snider in 2009. (Sighting years and site details retrieved from CNDDB).
Cymopterus deserticola #2	Kramer Junction, CA 34.98583 x -117.57028 2,509-ft	2009. Habitat: Creosote bush scrub with a few *Yucca brevifolia* var. *brevifolia*. San Bernardino, gas line route north of Adelanto, c. 1.7 miles west of Kramer Junction Total number observed unknown. (Sighting years and site details retrieved from CCHC2).
Cymopterus deserticola #3	East of Mojave, CA 35.082222 x -117.818333 2,400-ft	1978. About 1.5 miles W on dirt road to fossil diggings off Claymine Road, Boron Dry Lake 17 miles east of Mojave. Associated with *Lycium andersonii, Mentzelia sp, Camissonia claviformis, Cryptantha dumetorum, C. pterocarya, Astragalus.* Total number observed unknown. (Sighting years and site details retrieved from CCHC2).

5.2.2 Rare Plant Surveys

Surveys were conducted by walking systematic transect lines at 50-foot spacing between botanists. Predetermined transects were visible as layers on in-hand GIS mapping units. For maps: reference Figure 1 and Figure 2, and Appendix D. Rare plants were mapped as point features, except in the case of multiple individuals of Mojave spineflower, in which they were mapped as polygons. Rare plant surveys occurred between March 24 and April 16, 2022 across the full, approximately 82-mile length of the Proposed Project alignment. The scope of work provided by Rincon did not include focused rare plant surveys but did include rare plant habitat mapping in the Project Alternative. However, botanists did record rare plants observed during the habitat mapping, the methods of which are described in Section 5.2.3, below. Access to the portion of the Proposed Project alignment that traversed through Edwards Airforce Base was approved and surveys were performed by Karin Edwards (lead botanist), and support botanists: Katelyn Hammel, David Tafoya, Vincent Spadone, and Brian Weller on April 7-8, 2022.

Lead botanists provided subject matter expertise to support botanists, ensuring all plant species were seen and identified.

5.2.3 Rare Plant Habitat Quality Mapping

Rare plant habitat quality mapping was conducted in the survey area for all herbaceous target species (*Androstephium breviflorum, Cymopterus deserticola, Eriophyllum mohavense, Chorizanthe spinosa*). Habitat data were collected for each species, recorded in GIS polygons, and ranked as "high" or "medium." Habitats were considered high quality if they possessed all or most environmental conditions (soil, topography, and cohabitating plants and wildlife) necessary to sustain the rare plant population under average weather conditions. Habitats that were ranked as medium displayed most of the environmental characteristics to sustain the rare plant population under average weather conditions, but may have been lacking one or multiple variables necessary for optimal plant survival; for example, human caused disturbance or non-optimal soil characteristics. Areas that did not provide potential habitat, such as developed areas, were not mapped.

Rare plant habitat quality was mapped in the field on both the Proposed Project and the Project Alternative on March 24-April 16, September 27-28, and October 26-28, 2022 (Appendix D). Additional rare plant habitat quality mapping was conducted via desktop analysis with Google Earth on November 8, 2022 in areas added to the original survey area (Google Earth 2022). Project Alternative alignment rare plant habitat mapping took the form of meandering transects with variable spacing (50-feet to 100-feet) that traversed the entirety of the project footprint and 250-foot buffers. Proposed Project alignment mapping was conducted with 50-feet linear transects and in conjunction with rare plant surveys.

6 Results

Rare plant surveys results from March 24 to April 16, 2022, and rare plant habitat quality mapping results from the March-April and September-October 2022, are summarized below. Historic observations of pink funnel lily and desert cymopterus documented during 2017 and 2021 surveys within the survey area are also included.

All plant species observed during the 2022 survey period are found in Appendix A. Results of rare plant habitat mapping, rare plant species point locations, and the locations of any desert tortoise (Appendix C, Photographs 13-14) incidentally encountered during the field surveys can be viewed in Appendix D.

6.1 Pink funnel lily, *Androstephium breviflorum*

Pink funnel lily is designated CRPR 2B.2 by CNPS. This species is native to the southwest and the Great Basin region and endemic to the United States (Flora of North America 2022). The pink funnel lily is a perennial bulbiferous herb found in open Mojavean desert scrub, desert dunes, and bajadas with sandy soils at elevations between 720 and 2,625 feet amsl. Some populations of pink funnel lily are threatened by habitat loss, including the threat of off-road vehicle recreation (Flora of North America, 2022). Pink funnel lily have been known to grow in alkaline areas, near disturbances, on sandy slopes with scattered rocks, and in deep sandy soils.

This species generally blooms in March and April. Pink funnel lily's diagnostic flowers, fruits, and stature are recognizable even after they have gone through seed dispersal. The lily is a perennial herb with a bulb that remains in the ground to reproduce during seasons with favorable conditions.

Species Occurrence and Habitat Quality in the Survey Area

Pink funnel lily was positively identified at two locations on the eastern side of the Proposed Project along U.S. 395 during field surveys conducted in April 2017 (see BRTR). The species was not observed during surveys conducted in fall of 2021 (see BRTR). On April 8th, 2022, botanists identified a flowering and seeding pink funnel lily located at 34.991287; -117.685855, along the existing Kramer-Holgate subtransmission line near 20 Mule Team Road (Appendix C, Photographs 4-5). No other occurrences were definitively observed, although there were numerous bulbed plants belonging to either the genus: *Dichelostemma* or *Androstephium* (vegetative only) throughout the Proposed Project that were unable to be identified to species, due to lack of flowers or seeds (plants were dried and withered).

Habitat for pink funnel lily was high quality through much of the survey area based on soil and plant communities (Appendix C, Photograph 6). High quality habitat included open desert scrub with dry sandy areas to rocky soils. Low quality habitat largely occurred in highly disturbed areas or areas with increased rock cover and coarse rocky soils without sandy soils between rocks. The highest quality habitat occurred in the southern portion of the Proposed Project along the survey area paralleling Mojave Barstow Highway, in the northwest corner to the north of City of California City, and along the Project Alternative alignment both to the east and west of the center (see Appendix D).

6.2 Desert cymopterus, *Cymopterus deserticola*

Desert cymopterus is designated CRPR 1B.2 by CNPS and is a BLM Sensitive species and a DRECP Focus Species. This species is endemic to the western Mojave Desert in California (Charlton 1993). Desert cymopterus is a perennial herb found on fine to coarse, loose, sandy soil of flats in old dune areas with well-drained sand. Suitable habitats include Joshua tree woodlands and Mojavean desert scrub habitats at elevations between 2,066 and 4,900 feet amsl. Desert cymopterus plants tolerate low moisture regimes, and are often found in creosote bush scrub and Joshua tree woodlands. Desert cymopterus individuals can survive as taproots underground when conditions are unfavorable and are not always visible aboveground. Populations of desert cymopterus are declining due to threats from human disturbance in the form of grazing, vehicles, urbanization, predation by native wildlife and off-road vehicle recreation (Charlton 1993). Desert cymopterus tends to bloom in March, April, and May and has diagnostic flowers, fruits, and growth form.

Species Occurrence and Habitat Quality in the Survey Area

Desert cymopterus was observed in several locations along the southern portion of the survey area during field surveys conducted in April 2017. This species was not observed during fall 2021 surveys. Botanists observed a single flowering desert cymopterus on April 5th, 2022 at 34.991412; -117.554771 (Appendix C, Photographs 1-3). This specimen was found within a Joshua tree and mixed shrubland vegetation community with loamy sand and scattered pebbles and was located near historic habitat polygons mapped for the species. No other desert cymopterus plants were observed in the 2022 field surveys. High quality desert cymopterus habitat including sandy and loamy soils in desert shrublands were prevalent across the survey area (see Appendix D).

6.3 Western Joshua tree, *Yucca brevifolia* var. *brevifolia*

Joshua tree, a perennial tree that is endemic to the United States, was designated as State Candidate Threatened in 2020. This species grows on fine, loose, well-drained or gravelly silts, loams, and sands in sagebrush scrub, desert scrub, southwestern shrub steppe, pinyon and juniper woodland, and desert grassland habitats. This species is generally found in hot, dry sites on flats, mesas, bajadas, and gentle slopes in the Mojave Desert at elevations between 1,600 and 6,600 feet amsl. Joshua tree is threatened by fire, drought, climate change, and numerous threats related to habitat loss including off road vehicle use (Cole et al. 2011).

Species Occurrence in the Survey Area

Multiple Joshua trees were observed in the southern portion of the survey area during the fall 2021 field surveys (Appendix C, Photographs 9-11). This species was identified in allscale scrub, creosote bush scrub, spinescale scrub, and Joshua tree woodland vegetation communities (Appendix D). During 2022 surveys, botanists corroborated 2021 field findings of previously mapped Joshua tree woodland alliances and recorded the location of Joshua tree individuals that were not captured during the previous year's survey. Fifteen Joshua trees were identified in the survey area that were not previously mapped and are included in Appendix D. Other regions of the survey area, for example along the western part of the Alternative Project alignment, could likely support Joshua trees, but populations may have been limited by historic disturbances.

6.4 Barstow woolly sunflower, *Eriophyllum mohavense*

Barstow woolly sunflower is designated CRPR 1B.2 by CNPS and is a BLM Sensitive species and a DRECP Focus Species. Barstow woolly sunflower is restricted to a portion of the western Mojave Desert in Kern and San Bernardino counties in California (CDFW 2021). This is an annual herb that is found in open, silty or sandy areas, barren ridges, or margins of playas in chenopod scrub, Mojavean desert scrub, and playa habitats. Its elevational range is between 1,640 and 3,150 feet amsl, and it generally blooms between March and May. This species is threatened by human activities in the desert, including development, grazing, off-road vehicle recreation, and mining (BLM 2013).

Species Occurrence and Habitat Quality in the Survey Area

Barstow woolly sunflower is likely to occur in the Proposed Project given the presence of suitable chenopod scrub, Mojavean desert scrub, and playas (Appendix C, Photograph 15-16) along with silty and sandy soils. Multiple CNDDB occurrences have been recorded within five miles of the survey area, including six occurrences from 2017 that overlap the survey area (but were not within the project footprint). This species was not observed during the 2022 field surveys. However, small pockets of high- and medium-quality habitat for Barstow woolly sunflower were designated and mapped throughout the Proposed and Alternative alignments (see Appendix D).

6.5 Mojave spineflower, *Chorizanthe spinosa*

Mojave spineflower (*Chorizanthe spinosa*) is designated as CRPR 4.2, defined as limited in distribution. Mojave spineflower is an annual herb that generally flowers from March through July and grows on sandy to gravelly flats and slopes, often in saltbush communities. The Mojave spineflower grows only in southern California, including southeastern Kern and northwestern San Bernardino counties, and also southern Inyo and northeastern Los Angeles counties. Mojave spineflower tolerates moderate salinity, low moisture regimes with 7-15 inches of annual precipitation, and has been found from 985 to 4,365 feet amsl.

Species Occurrence and Habitat Quality in the Survey Area

Mojave spineflower was not deemed likely to occur in the Proposed Project based on previous surveys and survey of habitat suitability data. However, twelve Mojave spineflower plants (Appendix C, Photograph 12) were found growing in finer soils with some clay and silt components and variable pebble cover forming the substrate (March 26th - April 13th 2022). These plants were located largely on the southern portion of the survey area and on both the Proposed Project and Alternative alignments. Plants typically were found growing on low-angle slopes. Some of the plants were located in areas where they were not anticipated to occur due to disturbances caused by OHV use. High and medium quality Mojave spineflower habitat (Appendix C, Photograph 17) were mapped to coincide with that of the Barstow woolly sunflower, given shared habitat needs (see Appendix D).

7 Discussion

Pink funnel lily, desert cymopterus, Western Joshua tree, and Mojave spineflower were all detected during the 2022 surveys of the rare plant survey area. For the Barstow woolly sunflower, suitable habitat conditions were detected during the 2022 rare plant surveys, but no specimens were observed in the survey area. Overall plant germination and growth was limited compared to typical years, likely due to the abnormally low rainfall experienced by Kern county in the winter of 2020 and the spring of 2021 seasons. Drought conditions may have reduced the detectability for the Barstow woolly sunflower, without impacting the long term potential to occur because this species' seeds survive seasonal dry spells and remain dormant below ground. Additionally, there is suitable habitat present within the Proposed Project for other rare plant species (e.g., alkali mariposa lily [*Calochortus striatus*] and white pygmy-poppy [*Canbya candida*]); however, these species would have been detectable during the surveys and were not observed. Overall plant germination and growth was limited compared to typical years, likely due to the abnormally low rainfall experienced by Kern county in the winter of 2020 and the spring of 2021 seasons.

Floral Compendium

Scientific Name	Common Name	Status[1]	Native or Introduced[2]
Trees			
Populus fremontii subsp. fremontii	Alamo Or Fremont Cottonwood	–	Native
Tamarix aphylla	Athel tamarisk Athel	–	Not Native
Tamarix ramosissima	Saltcedar	–	Not Native
Shrubs			
Acamptopappus sphaerocephalus	Rayless goldenhead	–	Native
Ambrosia dumosa	Burro weed White Bur-Sage	–	Native
Atriplex canescens	Fourwing saltbush	–	Native
Atriplex confertifolia	Shadscale	–	Native
Atriplex polycarpa	Allscale saltbush	–	Native
Atriplex spinifera	Mojave saltbush Spiny Saltbush	–	Native
Baccharis sergiloides	Desert baccharis	–	Native
Cylindropuntia echinocarpa	Wiggins' cholla Silver Or Golden Cholla	–	Native
Echinocactus polycephalus var. polycephalus	Barrel cactus	–	Native
Ephedra nevadensis	Nevada ephedra	–	Native
Ericameria cooperi var. cooperi	Cooper goldenbush	–	Native
Ericameria nauseosa	Rubber rabbitbrush	–	Native
Ericameria paniculata	Black-banded rabbitbrush	–	Native
Eriogonum fasciculatum	California buckwheat	–	Native
Grayia spinosa	Hop sage	–	Native
Krascheninnikovia lanata	Winter fat	–	Native
Larrea tridentata	South american creosote bush	–	Native
Lepidospartum squamatum	California broomsage	–	Native
Lycium andersonii	Anderson thornbush	–	Native
Lycium cooperi	Cooper's box thorn	–	Native
Opuntia basilaris	Beavertail cactus	–	Native
Petalonyx thurberi	Sandpaper plant	–	Native
Psorothamnus arborescens	California dalea Mojave Indigo-Bush	–	Native
Scutellaria mexicana	Mexican bladdersage Bladder-Sage	–	Native
Sphaeralcea ambigua	Apricot mallow	–	Native
Tetradymia stenolepis	Mojave cottonthorn	–	Native
Yucca brevifolia var. *brevifolia*	Joshua tree	–	Native

Scientific Name	Common Name	Status[1]	Native or Introduced[2]
Herbs			
Abronia turbinata	Trans montane sand verbena	–	Native
Acmispon brachycarpus	Short podded lotus	–	Native
Adenophyllum cooperi	Cooper dyssodia	–	Native
Allium fimbriatum var. mohavense	Mojave fringed onion	–	Native
Ambrosia acanthicarpa	Annual burrweed Annual Bur-Sage	–	Native
Amsinckia menziesii	Menzies' fiddleneck Common Fiddleneck Small-Flowered Fiddleneck	–	Native
Amsinckia tessellata	Bristly fiddleneck	–	Native
Androstephium breviflorum	Pink funnel lily Small-Flowered Androstephium	2B.2	Native
Astragalus acutirostris	Beaked rattle weed	–	Native
Astragalus didymocarpus	Dwarf white milkvetch Two-Seeded Milkvetch	–	Native
Astragalus layneae	Layne locoweed Layne Milkvetch	–	Native
Astragalus lentiginosus var. variabilis	Freckled milk vetch	–	Native
Brassica tournefortii	Brassica tournefortii	–	Not Native
Camissonia campestris	Field primrose	–	Native
Caulanthus inflatus	Desert candle	–	Native
Caulanthus lasiophyllus	California mustard	–	Native
Chaenactis carphoclinia	Pebble pincushion	–	Native
Chaenactis fremontii	Fremont pincushion	–	Native
Chaenactis stevioides	Desert pincushion	–	Native
Chorizanthe brevicornu var. brevicornu	Brittle spineflower	–	Native
Chorizanthe rigida	Devil's spineflower	–	Native
Chorizanthe spinosa	Mojave spineflower	4.2	Native
Chylismia brevipes	Yellow cups	–	Native
Chylismia claviformis	Clavate fruited primrose	–	Native
Chylismia claviformis subsp. claviformis	Clavate fruited primrose	–	Native
Croton californicus	California croton	–	Native
Croton setiger	Doveweed Turkey-Mullein	–	Native
Cryptantha angustifolia	Narrow leaved cryptantha	–	Native
Cryptantha circumscissa	Cushion cryptantha	–	Native

Scientific Name	Common Name	Status[1]	Native or Introduced[2]
Cryptantha micrantha	Purple root cryptantha	–	Native
Cryptantha nevadensis	Nevada cryptantha	–	Native
Cryptantha pterocarya	Winged nut forget me not	–	Native
Cucurbita sp.	Gourd Field Pumpkin Squash	–	Variable; species dependent
Cuscuta sp.	Dodder	–	Variable; species dependent
Cymopterus deserticola	Desert cymopterus	1B.2	Native
Descurainia pinnata	Western tansy mustard	–	Native
Descurainia sophia	Flix weed	–	Not Native
Dichelostemma capitatum	Blue dicks	–	Native
Eremalche exilis	White mallow	–	Native
Eremothera boothii	Booth's sun cup	–	Native
Eriastrum densifolium subsp. mohavense	Perennial wool star	–	Native
Eriastrum eremicum subsp. eremicum	Desert wool star	–	Native
Eriogonum gracillimum	Rose and white buckwheat	–	Native
Eriogonum inflatum	Desert trumpet	–	Native
Eriogonum maculatum	Angle stemmed buckwheat Spotted Wild Buckwheat	–	Native
Eriogonum reniforme	Kidney leaf buckwheat	–	Native
Eriogonum trichopes	Little desert buckwheat	–	Native
Eriophyllum mohavense	Barstow woolly sunflower	1B.2	Native
Eriophyllum wallacei	Wallace eriophyllum Wallace's Woolly Daisy	–	Native
Erodium cicutarium	Coastal heron's bill Redstem Filaree	–	Not Native
Eschscholzia minutiflora	Coville s poppy	–	Native
Euphorbia albomarginata	Rattlesnake Sandmat	–	Native
Euphorbia polycarpa	Smallseed Sandmat	–	Native
Gilia cana subsp. speciosa	Showy gilia	–	Native
Gilia latiflora	Broad flowered gilia	–	Native
Gilia minor	Little gilia	–	Native
Heliotropium curassavicum var. oculatum	Linanthus parryae	–	Native
Hirschfeldia incana	Mediterranean hoary mustard	–	Not Native

Scientific Name	Common Name	Status[1]	Native or Introduced[2]
Lasthenia californica	California goldfields	–	Native
Lasthenia gracilis	Needle goldfields Common Goldfields	–	Native
Layia glandulosa	White layia	–	Native
Lepidium flavum	Yellow pepper grass	–	Native
Lepidium fremontii	Desert allysum	–	Native
Lepidium lasiocarpum subsp. lasiocarpum	Shaggyfruit pepperweed	–	Native
Leptosyne calliopsidea	Leafy stemmed coreopsis	–	Native
Lessingia glandulifera	Valley lessingia	–	Native
Linanthus parryae	Parry's linanthus	–	Native
Loeseliastrum matthewsii	Desert calico	–	Native
Logfia depressa	Dwarf cottonrose Hierba Limpia	–	Native
Lomatium mohavense	Mohave wild parsley	–	Native
Lupinus microcarpus	Chick lupine	–	Native
Lupinus microcarpus var. horizontalis	Chick lupine	–	Native
Lupinus odoratus	Mojave lupine	–	Native
Lupinus shockleyi	Purple desert lupine Desert Lupine	–	Native
Malacothrix coulteri	Snake's head	–	Native
Malacothrix glabrata	Desert dandelion	–	Native
Malva neglecta	Common mallow	–	Not Native
Matricaria discoidea	Pineapple weed Rayless Chamomile	–	Native
Mentzelia affinis	Yellow blazing star	–	Native
Mentzelia albicaulis	Small flowered blazing star	–	Native
Mentzelia veatchiana	Veatch's blazing star	–	Native
Mirabilis laevis	Desert wishbone bush	–	Native
Nama demissa	Purplemat	–	Native
Nama depressa	Narrow Leaf Nama	–	Native
Oenothera deltoides	Birdcage evening primrose Devil's Lantern Lion-In-A-Cage Basket Evening-Primrose	–	Native
Oenothera primiveris	Yellow desert evening primrose	–	Native
Oxytheca perfoliata	Roundleaf oxytheca Round-Leaf Puncturebract	–	Native

Scientific Name	Common Name	Status[1]	Native or Introduced[2]
Pectocarya penicillata	Sleeping combseed Northern Pectocarya	–	Native
Pectocarya platycarpa	Broad fruited combseed Wide-Toothed Pectocarya	–	Native
Phacelia distans	Common phacelia	–	Native
Phacelia fremontii	Fremont's phacelia	–	Native
Phacelia tanacetifolia	Lacy phacelia	–	Native
Plagiobothrys arizonicus	Arizona popcorn flower	–	Native
Rafinesquia neomexicana	California chicory Desert Chicory	–	Native
Salsola tragus	Prickly Russian thistle Tumbleweed	–	Not Native
Salvia carduacea	Thistle sage	–	Native
Sisymbrium altissimum	Tall tumblemustard	–	Not Native
Sisymbrium irio	London rocket	–	Not Native
Stanleya pinnata var. pinnata	Desert princesplume	–	Native
Stephanomeria exigua	Small wirelettuce	–	Native
Stephanomeria pauciflora	Brownplume wirelettuce Wire-Lettuce	–	Native
Stillingia paucidentata	Mojave stillingia	–	Native
Streptanthella longirostris	Long beaked twist flower	–	Native
Tiquilia plicata	Fanleaf crinklemat Fan-Leaved Tiquilia	–	Native
Toxicoscordion brevibracteatum	Desert death camas	–	Native
Tropidocarpum gracile	Dobie pod	–	Native
Xylorhiza tortifolia var. tortifolia	Desert aster	–	Native
Grasses			
Bromus diandrus	Bromegrass Ripgut Grass	–	Not Native
Bromus madritensis	Foxtail chess	–	Not Native
Bromus tectorum	Cheatgrass Downy Chess	–	Not Native
Elymus elymoides	Bottlebrush squirreltail Squirreltail	–	Native
Festuca microstachys	Small fescue	–	Native
Hordeum murinum	Farmer's foxtail Wall Barley	–	Not Native
Schismus barbatus	Common Mediterranean grass	–	Not Native
Stipa hymenoides	Indian rice grass Sand Rice Grass	–	Native
Stipa speciosa	Desert needle grass	–	Native

Appendix B

Special Status Plant Species Potential to Occur

Special Status Plant Species Potential to Occur

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur
Allium shevockii Spanish needle onion	G2/S2 1B.3 BLM S	Perennial bulbiferous herb found on soil pockets on rock outcrops and talus slopes in pinyon and juniper woodland and upper montane coniferous forest habitats at 2,800-8,200 feet above mean sea level (amsl). Blooms May-Jun.	**Does not occur.** Suitable pinyon and juniper woodland and upper montane coniferous forest are not present in the study area. No CNDDB occurrences have been recorded within five miles of the study area.
Androstephium breviflorum pink funnel lily	G4/S2? 2B.2	Perennial bulbiferous herb found in desert dunes, Mojavean desert scrub, and bajadas at 720-2,625 feet amsl. Blooms Mar-Apr.	**Occurs.** Suitable Mojavean desert scrub is present in the study area. This species was observed at two locations in the study area during field surveys conducted in April 2017 by BRC Equals 3.
Calochortus striatus alkali mariposa-lily	G3?/S2S3 1B.2 BLM S USFS S DRECP	Perennial bulbiferous herb found on alkaline meadows and ephemeral washes in chaparral, chenopod scrub, meadows and seeps, and Mojavean desert scrub habitats at 230-5,250 feet amsl. Blooms Apr-Jun.	**Does not occur.** Suitable Mojavean desert scrub, chenopod scrub, and ephemeral washes are present in the study area. However, no CNDDB occurrences have been recorded within five miles of the study area.
Camissonia kernensis ssp. *kernensis* Kern County evening-primrose	G4T3/S3 4.3	Annual herb found on granitic, sometimes gravelly or sandy soils in chaparral, Joshua tree woodland, and pinyon and juniper woodland habitats at 2,592-6,988 feet amsl. Blooms Mar-May.	**Does not occur.** Suitable Joshua tree woodland is present, and granitic, gravelly, and sandy soils are present in the study area. However, no CNDDB occurrences have been recorded within five miles of the study area.
Canbya candida white pygmy-poppy	G3G4/S3S4 4.2 USFS S	Annual herb found on gravelly, sandy, granitic soils in Joshua tree woodland, Mojavean desert scrub, and pinyon and juniper woodland at 1,970-4,790 feet amsl. Blooms Mar-Jun.	**Does not occur.** Suitable Joshua tree woodland and Mojavean desert scrub are present, and gravelly, sandy, and granitic soils are present in the study area. However, the only CNDDB occurrences within five miles of the study area is from 1935.
Chorizanthe spinosa Mojave spineflower	G4/S4 4.2	Annual herb found on alkaline soils in chenopod scrub, Joshua tree woodland, Mojavean desert scrub, and playa habitats at 20-4,265 feet amsl. Blooms Mar-Jul.	**Occurs.** Suitable chenopod scrub, Joshua tree woodland, Mojavean desert scrub, and playas are present, and alkaline soils are present in the study area. Observed in 2022 field surveys.
Cryptantha clokeyi Clokey's cryptantha	G3/S3 1B.2	Annual herb found on sandy or gravelly soils in Mojavean desert scrub habitats at 2,378-4,478 feet amsl. Blooms Apr.	**Does not occur.** Mojavean desert scrub is present, and sandy and gravelly soils are present in the study area. However, no CNDDB occurrences have been recorded within five miles of the study area.
Cymopterus deserticola desert cymopterus	G2/S2 1B.2 BLM S DRECP	Perennial herb found on fine to coarse, loose, sandy soil of flats in old dune areas with well-drained sand in Joshua tree woodland and Mojavean desert scrub habitats at	**Occurs.** Suitable Joshua tree woodland and Mojavean desert scrub are present in the study area, and sandy soils are present. This species was observed at several locations in the study area during field surveys conducted in April

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur
		2,066-4,900 feet amsl. Blooms Mar-May.	2017 by BRC Equals 3. Multiple CNDDB occurrences have been recorded within five miles of the study area, including two from 2009 which overlap the study area.
Deinandra arida Red Rock tarplant	SR G1/S1 1B.2	Annual herb found on volcanic tuff and dry to moist sites where water has collected along ephemeral streams or road edges in Mojavean desert scrub habitats at 985-3,100 feet amsl. Blooms Apr-Nov.	**Does not occur.** Suitable Mojavean desert scrub, ephemeral streams, and road edges are present in the study area, though volcanic tuff is not present. No CNDDB occurrences have been recorded within five miles of the study area.
Deinandra mohavensis Mojave tarplant	SE G2/S3 1B.3 BLM S USFS S DRECP	Annual herb found on low sand bars in riverbeds, mostly in riparian areas or ephemeral grassy areas in chaparral, coastal scrub and riparian scrub habitats at 2,100-2,250 feet amsl. Blooms (Jan-May) Jun-Oct.	**Does not occur.** Suitable ephemeral riparian areas are present in the study area. However, no CNDDB occurrences have been recorded within five miles of the study area.
Delphinium recurvatum recurved larkspur	G2?/S2? 1B.2 BLM S	Perennial herb found on alkaline soils in chenopod scrub, cismontane woodland, and valley and foothill grassland habitats at 10-2,600 feet amsl. Blooms Mar-Jun.	**Unlikely.** Suitable chenopod scrub is present and alkaline soils are present in the study area. The only CNDDB occurrence within five miles of the study area overlaps the study area, but it is from 1952.
Dudleya abramsii ssp. *calcicola* limestone dudleya	G4T4/S4 4.3	Perennial herb found on rocky limestone places in chaparral and pinyon and juniper woodland habitats at 1,640-8,530 feet amsl. Blooms Apr-Aug.	**Absent.** No chaparral or pinyon and juniper woodland habitats are present in the study area. No CNDDB occurrences have been recorded within five miles of the study area.
Eremothera boothii ssp. *boothii* Booth's evening-primrose	G5T4/S3 2B.3	Annual herb found in Joshua tree woodland and pinyon and juniper woodland habitats at 2,674-7,874 feet amsl. Blooms Apr-Sep.	**Does not occur.** Suitable Joshua tree woodland habitat is present in the study area. However, the study area is outside the geographic range of this subspecies as described in Baldwin et al. (2012). The only CNDDB occurrence located within five miles of the study area is from 1988 and mapped as a best guess.
Eriophyllum mohavense Barstow woolly sunflower	G2/S2 1B.2 BLM S DRECP	Annual herb found in open silty or sandy areas, barren ridges, or margins of playas in chenopod scrub, Mojavean desert scrub and playa habitats at 1,640-3,150 feet amsl. Blooms Mar-May.	**Likely.** Suitable chenopod scrub, Mojavean desert scrub, and playas are present in the study area. Open areas with silty and sandy soils are present. Multiple CNDDB occurrences have been recorded within five miles of the study area, including one occurrence from 2017 which is located approximately 0.5 mile east of the study area.

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur
Erythranthe rhodopetra Red Rock Canyon monkeyflower	G1/S1 1B.1 BLM S	Annual herb found on sandy soils in washes derived from sedimentary rock of the Ricardo formation in Mojavean desert scrub habitat at 2,000-3,000 feet amsl. Blooms Mar-Apr.	**Does not occur.** Suitable Mojavean desert scrub and sandy soils are present in the study area. However, no CNDDB occurrences have been recorded within five miles of the study area.
Eschscholzia minutiflora ssp. *twisselmannii* Red Rock poppy	G5T2/S2 1B.2 BLM S	Annual herb found on volcanic tuff in Mojavean desert scrub habitat with *Larrea*, *Lycium*, *Eriogonum*, *Isomeris*, and *Hemizonia* at 2,230-4,040 feet amsl. Blooms Mar-May.	**Unlikely.** Suitable Mojavean desert scrub is present in the study area. This species was observed approximately 4.5 miles north of the study area during field surveys conducted in April 2017 by BRC Equals 3. However, no CNDDB occurrences have been recorded within five miles of the study area.
Euphorbia vallis-mortae Death Valley sandmat	G3/S3 4.2	Perennial herb found on sandy or gravelly sites in Mojavean desert scrub habitat at 755-4,790 feet amsl. Blooms May-Oct.	**Does not occur.** Suitable Mojavean desert scrub is present, and sandy and gravelly soils are present in the study area. However, no CNDDB occurrences have been recorded within five miles of the study area.
Goodmania luteola golden goodmania	G3/S3 4.2	Annual herb found on alkaline or clay soils in meadows and seeps, Mojavean desert scrub, playas, and valley and foothill grassland habitats at 65-7,200 feet amsl. Blooms Apr-Aug.	**Does not occur.** Suitable Mojavean desert scrub, and playas are present, and alkaline and clay soils are present in the study area. However, no CNDDB occurrences have been recorded within five miles of the study area.
Hecastocleis shockleyi prickle-leaf	G4/S4 3	Perennial shrub found on rocky slopes and washes, often on carbonate or slate in chenopod scrub and Mojavean desert scrub habitats at 3,937-7,217 feet amsl. Blooms May-Jul.	**Does not occur.** Suitable chenopod scrub and Mojavean desert scrub habitats are present in the study area. However, no CNDDB occurrences have been recorded within five miles of the study area.
Layia heterotricha pale-yellow layia	G2/S2 1B.1 BLM S USFS S	Annual herb found on alkaline or clay soils in open areas in cismontane woodland, coastal scrub, pinyon and juniper woodland, and valley and foothill grassland habitats at 984-5,594 feet amsl. Blooms Mar-Jun.	**Does not occur.** No suitable cismontane woodland, coastal scrub, pinyon and juniper woodland, or valley and foothill grassland habitats are present, though suitable alkaline and clay soils are present in the study area. No CNDDB occurrences have been recorded within five miles of the study area.
Loeflingia squarrosa var. *artemisiarum* sagebrush loeflingia	G5T3/S2 2B.2 BLM S	Annual herb found on sandy flats and dunes and sandy areas around clay slicks with *Sarcobatus*, *Atriplex*, and *Tetradymia* in desert dunes, Great Basin scrub, and Sonoran desert scrub habitats at 2,297-5,300 feet amsl. Blooms Apr-May.	**Unlikely.** Suitable desert dune habitats are present in the study area. Sandy and clay soils and *Atriplex* spp. are also present. One CNDDB occurrence from 2006 is located approximately 2.5 miles from the study area.
Mentzelia eremophila solitary blazing star	G4/S3S4 4.2	Annual or perennial herb found in Mojavean desert scrub habitat at 2,300-4,000 feet amsl. Blooms Mar-May.	**Does not occur.** Suitable Mojavean desert scrub habitat is present in the study area. However, no CNDDB occurrences have been recorded within five miles of the study area.

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur
Mentzelia tridentata creamy blazing star	G3/S3 1B.3	Annual herb found in Mojavean desert scrub habitat at 2,300-3,850 feet amsl. Blooms Mar-May.	**Does not occur.** Suitable Mojavean desert scrub habitat is present in the study area. However, no CNDDB occurrences have been recorded within five miles of the study area.
Muilla coronata crowned muilla	G3/S3 4.2	Perennial bulbiferous herb found on barren flats and ridges in sandy, granitic soils in chenopod scrub, Joshua tree woodland, Mojavean desert scrub, and pinyon and juniper woodland habitats at 2,200-6,430 feet amsl. Blooms Mar-Apr (May).	**Does not occur.** Suitable chenopod scrub, Joshua tree woodland, and Mojavean desert scrub habitats are present, and sandy, granitic soils are present in the study area. However, no CNDDB occurrences have been recorded within five miles of the study area.
Nemacladus gracilis slender nemacladus	G4/S4 4.3	Annual herb found on sandy or gravelly places in cismontane woodland and valley and foothill grassland habitats at 394-6,234 feet amsl. Blooms Mar-May.	**Does not occur.** No suitable cismontane woodland or valley and foothill grassland habitats are present, though sandy and gravelly soils are present in the study area. No CNDDB occurrences have been recorded within five miles of the study area.
Pediomelum castoreum Beaver Dam breadroot	G3/S2 1B.2 BLM S	Perennial herb found on sandy soils in washes and roadcuts in Joshua tree woodland and Mojavean desert scrub habitats at 2,000-5,000 feet amsl. Blooms Apr-May.	**Does not occur.** Suitable Joshua tree woodland and Mojavean desert scrub habitats are present, and sandy soils are present in the study area. However, the only CNDDB occurrence recorded within five miles of the study area is an undated observation from before 1996, exact location unknown.
Phacelia nashiana Charlotte's phacelia	G3/S3 1B.2 BLM S	Annual herb found on granitic soils and sandy or rocky areas on steep slopes or flats in Joshua tree woodland, Mojavean desert scrub, and pinyon and juniper woodland habitats at 1,970-7,220 feet amsl. Blooms Mar-Jun.	**Does not occur.** Suitable Joshua tree woodland and Mojavean desert scrub habitats are present, and granitic, sandy, and rocky soils are present in the study area. However, no CNDDB occurrences have been recorded within five miles of the study area.
Sclerocactus polyancistrus Mojave fish-hook cactus	G3/S3 4.2	Perennial shrub found on well-drained soil, sometimes on limestone, on rocky, gravelly mesas, slopes, and outcrops in Great Basin scrub, Joshua tree woodland, and Mojavean desert scrub habitats at 2,100-7,612 feet amsl. Blooms Apr-Jul.	**Does not occur.** Suitable Joshua tree woodland and Mojavean desert scrub habitats are present, and rocky, gravelly soils are present in the study area. However, no CNDDB occurrences have been recorded within five miles of the study area.
Senna covesii Cove's cassia	G5/S3 2B.2	Perennial herb found on dry, sandy desert washes and slopes in Sonoran desert scrub habitat at 738-4,250 feet amsl. Blooms Mar-Jun (Aug).	**Does not occur.** No suitable Sonoran desert scrub habitat is present in the study area, though dry, sandy desert washes are present in the study area. The only CNDDB occurrence recorded within five miles of the study area is a 2013 occurrence which overlaps the study area and is believed to consist of transplants outside the native range.

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur
			The study area is outside the known range of this species
Yucca brevifolia var. *brevifolia* western Joshua tree	SC Endangered	Perennial tree found on fine, loose, well-drained or gravelly silts, loams, and sands in sagebrush scrub, desert scrub, southwestern shrubsteppe, pinyon and juniper woodland, and desert grassland habitats in hot, dry sites on flats, mesas, bajadas, and gentle slopes in the Mojave Desert at 1,600-6,600 feet amsl. Blooms Mar-Jun.	**Occurs.** This species was observed in several locations in the study area during field surveys conducted in October 2021 by Bargas and March / April 2022 by SummitWest.

Regional Vicinity refers to within a five-mile search radius of the study area.

CRPR (CNPS California Rare Plant Rank)

1A = Presumed extirpated in California, and rare or extinct elsewhere

1B = Rare, Threatened, or Endangered in California and elsewhere

2A = Presumed extirpated in California, but common elsewhere

2B= Rare, Threatened, or Endangered in California, but more common elsewhere

3 = Need more information (Review List)

4 = Limited Distribution (Watch List)

CRPR Threat Code Extension

1 = Seriously endangered in California (>80% of occurrences threatened/high degree and immediacy of threat)

2 = Moderately threatened in California (20-80% of occurrences threatened/ moderate degree and immediacy of threat)

3 = Not very endangered in California (<20% of occurrences threatened/ low degree and immediacy of threat)

Status (Federal/State)

SE = State Endangered

SC = State Candidate

SR = State Rare

BLM S = BLM Sensitive Species

Other Statuses

G1 or S1 Critically Imperiled Globally or Subnationally (state)

G2 or S2 Imperiled Globally or Subnationally (state)

G3 or S3 Vulnerable to extirpation or extinction Globally or Subnationally (state)

G4/5 or S4/5 Apparently secure, common and abundant

Status (Regional)

DRECP = Desert Renewable Energy Conservation Plan

USFS S = United States Forest Service Sensitive

[1] **Definitions Regarding Potential for Occurrence**

Occurs = The species and/or positive sign was observed on-site during site visit or field survey.

Absent = The species and/or positive sign was not observed on-site during focused survey(s) during the appropriate blooming/activity period (and, for plants, observed at a reference population).

Likely = All site features indicate this species is very likely present and should be expected. Criteria include:

- Project site within geographic range;
- Suitable habitat present (e.g., soils, vegetation communities, elevation, roost sites, leaf litter/debris, water, host plants, etc.); and
- Distance to historical record(s) less than 25 years old is/are less than 500 feet (plants/fish), 1,000 feet (riparian wildlife), 1 mile (birds/bats), 2 miles (large mammals), or 3 miles (small mammals/herps).

Unlikely = The species could occur given presence of marginal habitat, but records of the species are not locally known or are greater than 25 years old.

Does Not Occur = The species would not occur because the project site is outside known or current geographic/elevation range, lacks habitat or suitable conditions, and/or there is reasonable certainty to assume absence based on historical records.

Appendix H
Geology Technical Report

Subject: **GEOTECHNICAL INVESTIGATION REPORT**
Cal City Substation Expansion Project
California City, Kern County, California

Southern California Edison Project No. 21-070
Geotechnical Soilution Inc. Project No. GS-21B01

Geotechnical Soilutions Inc., has prepared this report to present the findings of the geotechnical investigation performed for the expansion of Cal City Substation. The proposed project will include Drop-in MEER, 115kV transformer bank, switchracks, capacitor banks and other electrical equipment, paved access road and internal paved roadways throughout the substation. The substation will be surrounded by a concrete lined channel. The subject substation can be developed from a geotechnical standpoint, provided the findings, conclusions, and recommendations presented in this report are incorporated in the preparation of the final grading plan, foundation design, and construction of the project.

The recommendations contained herein are contingent upon adequate monitoring of the geotechnical aspects of the construction by a representative of Geotechnical Soilutions Inc., and SCE Geotechnical Group.

If you should have any questions, please feel free to contact the undersigned.

Respectfully Submitted,
Geotechnical Soilutions, Inc.,

Mesrop A. Mesrop
Geotechnical Engineer

1.0 Introduction

This report presents the findings of the geotechnical investigation performed for the proposed Cal City Substation Expansion Project located in California City, Kern County, California. For the site location, see Plate 1*, Location Map.*

The purposes of this investigation were to determine the nature and engineering properties of the subsurface soils and to provide recommendations regarding general site grading and foundation design and construction. The recommendations provided in this report are based on our field exploration, which included fourteen soil borings drilled on November 30 through December 1, 2021. The proposed development and the approximate boring locations are shown on Plate 2 in Appendix A.

The site earthwork and design recommendations provided in this report are based on DRAFT Site Development Plan (Grading), prepared by Wilson Mikami Corporation, dated April 26, 2022, provided to us on June 8, 2022.

2.0 Project Description

2.1 Site Location and Description

The project site for the proposed California City, Substation Expansion 115kV project is located on an extension of Hacienda Boulevard (labeled as 90th Street), approximately 700 feet north of the intersection of Mendiburu Road in California City. The site can be found at coordinates 35.1526N, 117.9686W. It is bounded by open land on the south, west and north, and by the roadway and a solar panel facility beyond to the east.

The area of the electrical components portion of the proposed Expansion Project is located to the west and north of the existing substation, but the project site will also include additional areas to the south and north that will be used for laydown/material storage and a construction yard. The entire site will be fenced and enclosed by a concrete lined channel that will discharge surface water to a channel velocity dissipator in the northeast portion of the property. Development will also include a water quality basin in the north portion of the site.

The existing substation, as well as the area proposed for expansion, is generally relatively flat, with a slight gradient to the northeast.

The expansion area is largely in native condition, and consists of typical desert terrain sparsely vegetated with low height plants.

The existing substation is within a poorly defined drainage system that flows northeasterly from near the intersection of Mendiburu Road and 88th Street southwest of the site. The raised pad of the existing substation has diverted this drainage system into an incised

gully west of the substation pad that then flows northeasterly in the expansion area north of the substation. The gully deepens to a depth of 6-8 feet as it flows to 90th Street where it is channeled below the road and continues to the northeast. Several smaller incised drainage channels are also present to the west and north of the existing substation, and these channels were avoided during the field exploration process.

2.2 Proposed Development

The project will consist of expansion of the existing Cal City substation. The existing substation is located next to a dirt road, the north extension of Hacienda Boulevard [labeled on the plans as 90th street] in California City (coordinates 35.1426n 117.9686w). The new substation site will comprise an area with a 670 by 1000-foot footprint.

The Site Development Plan (Grading) indicates that the site will be graded with a 1% grade to the east. The site grading will consist of few feet of fill on the west side and minor cut on the east side.

The Substation will be surrounded by a 62-foot-wide concrete lined channel with 2:1 side slopes. The bottom of the channel (flat portion) is 30 feet wide and the depth ranges from approximately 5 feet at the southeast side to 8.5 feet at the northeast side. The channel will route surface run-off from the south around the substation and discharge at the north east corner of the site along Hacienda Boulevard. A storm water detention basin will be constructed in the north east portion of the site, with a capacity of a minimum 5,700 cubic feet.

Substation structures will be constructed in the central portion of the site and will include Drop-in MEER, 115kV transformer bank, 12kV, 33kv and 115kV Switchracks, capacitor banks and other electrical equipment. Portions of the north area of the site will be used as a laydown/material yard, and the southern portion will be used as a construction staging yard, both covered with 4 inches of crushed rock. The site will be accessed by three driveways from Hacienda Boulevard. The Substation site will be surrounded by security Beta fence and chain-link fence.

3.0 Field Exploration & Laboratory Testing

The scope of our investigation included a review of existing information, site reconnaissance, subsurface exploration for geotechnical soil sampling, percolation testing, laboratory testing and preparation of this report.

3.1 Field Exploration

Fourteen soil borings (B-1 through B-15) and two percolation borings were drilled by Geotechnical Soilutions for the project site utilizing a limited access, track mounted drill rig equipped with 8-inch diameter hollow-stem augers and an auto hammer for soil sampling. Boring 14 was eliminated due to underground utility conflicts. The soil boring

depths ranged from 15 to 50 feet below the existing ground surface (bgs), and the percolation borings drilled to a depth of 5 feet. Prior to conducting the borings, the boring locations were staked by our personnel and Underground Service Alert was contacted to mark underground utilities. In addition, a Geophysical survey was performed to identify, mark and clear underground utilities. Upon completion, the borings were backfilled with drill cuttings and the ground surface restored to original condition.

3.2 Soil Sampling

The subsurface materials were sampled utilizing Standard Penetration Test (SPT) samplers and Modified California samplers (MCS) in accordance with the guidelines of ASTM D1586, *Standard Test Method for Penetration Test and Split-Barrel Sampling of Soils.* The SPT sampler has an inside diameter of 1.375 inches and outside diameter of 2.0 inches. The MCS sampler has a 2.42 inch inside diameter and a 3.0 inch outside diameter. The samplers were driven 18 inches into the soil using a 140-pound automatic hammer falling 30 inches. The number of blows required to drive the sampler for each 6 inches of penetration is referred to as the blow count and is noted in the "*Blows"* column of the boring logs. In general, MCS samples were collected at depths of 5, 7 and 10 feet bgs, then SPT and MCS samples were alternated at 5-foot intervals to the total depth of each boring. Bulk samples were collected from the upper five feet of some of the boring.

3.3 Geotechnical Laboratory Testing

Representative samples of the site soils were tested in the laboratory to aid in the soil classification and to evaluate relevant engineering properties of the site soils. These tests included:

- *In situ moisture contents and dry densities (ASTM Standard D2216)*
- *Grain size distribution and Percent Passing Sieve No. 200 (ASTM Standards D6913/D1140)*
- *Atterberg Limits (ASTM D4318)*
- *Maximum dry density and optimum-moisture content relationship (ASTM Standard D1557)*
- *Direct shear (ASTM Standard D3080), undisturbed and remolded*
- *Consolidation (ASTM D2435)*
- *Swell / Collapse (ASTM D4546-14, Method B)*
- *Expansion Index*
- *R-Value (D2844)*
- *Soil corrosivity tests (Caltrans 643, 422, 417, and 532)*

3.4 Percolation Testing

Two percolation borings (PT-1 and PT-2) were excavated for the percolation testing at the site to a depth of 5 feet below grade. Percolation test results are provided in Appendix E, and the locations of the borings are shown on Plate 2 in Appendix A.

4.0 Geologic Setting

The site is located in an area known as the Mojave Desert Geomorphic Province. The province is characterized as a broad, interior expanse of isolated mountain ranges separated by desert plains. The Cal City Substation and project site are located on a desert plain underlain by a thick sequence of alluvial soils. The attached Regional Geologic Map [CDMG Geologic Maps of the Trona and Bakersfield Sheets], show the relationship of the site area to the surrounding geologic terrain, Plate 3 in Appendix A.

The field investigation, which consisted of fourteen borings to depths ranging from 15 to 50 feet below ground surface, generally confirmed the published soil conditions. In general, the upper approximately 3-4 feet of soil consisted of clayey sand, underlain primarily by clayey and silty sand with slight to heavy cementation of calcium carbonate (caliche) to the total depth explored. The cemented soils are generally dense to very dense.

Although the site is not within an Alquist-Priolo Earthquake Fault Zone and no active faults are projected to intersect the site area, the active Garlock Fault is located approximately 8 miles to the northwest of the site and the San Andreas Fault is located approximately 38 miles southwest of the site.

5.0 Site Conditions

5.1 General

This section contains a general description of the subsurface conditions and various materials encountered at the site during the field exploration and a discussion of laboratory test results.

5.2 Subsurface Conditions

Based on the boring logs by Geotechnical Soilutions Inc., alluvial deposits of predominantly sand and gravel, slightly clayey and silty, were encountered to the total depth drilled (50 feet).

5.3 Groundwater

Groundwater was not encountered in all borings drilled to maximum 50 feet depth. Based on the nearest State Well located about 1 mile north of site, the depth to groundwater was 250 feet in 2010.

5.4 Geotechnical Laboratory Testing Results

Laboratory testing was performed to determine the physical characteristics and engineering properties of the subsurface soils. Results of *in situ* moisture and dry density tests are presented on the Logs of Borings in *Appendix B*, *Field Exploration,* and remaining test results are presented in *Appendix C*, *Laboratory Testing Program.* Discussion on the various test results is presented below:

In situ Moisture and Dry Density – In situ dry density and the moisture content of the surficial soils are shown on the boring logs in Appendix B.

Grain Size Distribution – Results of the gradation analysis tests are presented in the following table.

Table No. 1, Grain Size Distribution

Sample Location	Soil Classification	Percent Fines, %	Percent Sand and Gravel, %
B-1 @ 5’	Clayey Sand (SC)	16	84
B-1 @ 15’	Clayey Sand (SC)	22	78
B-4 @ 0-4’	Clayey Sand (SC)	22	78
B-4 @ 10’	Sand with Silt (SW-SM)	6	94
B-5 @ 5’	Clayey Sand (SC)	22	78
B-5 @ 10’	Sand with Silt (SP-SM)	11	89
B-5 @ 20’	Silty Sand (SM)	39	61
B-5 @ 30’	Sand with Silt (SW-SM)	6	94
B-6 @ 20’	Silty Sand (SM)	13	87
B-7 @ 0-5’	Clayey Sand (SC)	47	53
B-7 @ 7.5’	Silty Sand (SM)	23	77
B-10 @ 0-5’	Clayey Sand (SC)	49	51
B-13 @ 0-5’	Silty Sand (SM)	26	74

Maximum Dry Density and Optimum Moisture Content – Typical moisture-density relationship of the representative surficial soils are summarized in the following table.

Table No. 2, Maximum Dry Density and Optimum Moisture

Sample Location	Soil Classification	Maximum Dry Density (pcf)	Optimum Moisture Content (%)
B-4 @ 0-4’	Clayey Sand (SC)	123.7	10.9
B-7 @ 0-5	Clayey Sand (SC)	123.2	11.8
B-10 @ 0-5’	Clayey Sand (SC)	119.6	12.3
B-13 @ 0-5’	Silty Sand (SM)	128.4	8.8

Direct Shear – Direct shear tests were performed on representative samples. Tests were performed on relatively undisturbed samples in saturated moisture conditions. Each direct shear test was performed on three ring samples collected at the same depth with a range of normal loads. Results of direct shear tests are provided in the following table.

Table No. 3, Direct Shear

Sample Location	Soil Classification	Test Results (Peak Shear Strength)		Test Results (Ultimate Shear Strength)	
		Friction Angle (degrees)	Cohesion, (psf)	Friction Angle (degrees)	Cohesion, (psf)
B-1@ 10’	Clayey Sand (SC)	41	900	37	150
B-1@ 20’	Silty Sand (SM)	38	100	32	50
B-2@ 5’	Silty Sand (SM)	35	100	31	100
B-3 @ 5’	Silty Sand (SM)	41	250	36	100
B-4 @ 0-4’	Clayey Sand (SC)	30	300	30	150
B-5 @ 7.5’	Silty Sand w/ gravel (SM)	41	200	39	100
B-6 @ 5’	Clayey Sand (SC)	36	350	36	250
B-6 @ 10’	Silty Sand (SM)	38	150	33	50
B-7 @ 0-5’	Clayey Sand (SC)	28	350	28	200
B-7 @ 5’	Silty Sand (SM)	37	200	34	150
B-8 @ 5’	Silty Sand (SM)	38	350	35	200
B-8 @ 10’	Silty Sand (SM)	32	200	31	100

Expansion Index Test –Expansion Index test was performed on representative bulk soil samples from the surficial soils. The test results are presented in the table below. These values indicate that the subgrade soil in general has a very low potential for expansion.

Table No. 4, Expansion Index

Sample Location	Soil Classification	Expansion Index	Expansion Potential
B-4 @ 0-4’	Clayey Sand (SC)	7	Very Low

R-value Test –R-value tests were performed on representative bulk soil samples from upper 5 feet. The test results are presented in the table below. These values indicate that the subgrade soil in general has a low resistance to traffic loading.

Table No. 5, R-Value

Sample Location	Soil Classification	R-Value
B-2 @ 0-5’	Clayey Sand (SC)	19
B-4 @ 0-4’	Clayey Sand (SC)	22
B-10 @ 0-5’	Clayey Sand (SC)	18
B-13 @ 0-5’	Silty Sand (SM)	62

6.0 Faulting

6.1 Faulting

Based on the available geologic data, the site is not in a designated Alquist-Priolo Earthquake Fault Zone. The active Garlock Fault is located approximately eight miles to the northwest of the site, and the San Andreas Fault approximately 38 miles to the southwest

The potential for surface rupture at the site due to fault plane displacement propagating to the ground surface during the design life of the project is considered nil. An active fault is defined as one that has had surface displacement within Holocene time (about the last 11,000 years).

Although the site could be subjected to strong ground shaking in the event of an earthquake, this hazard is common in Southern California and the effects of ground shaking on the structures can be mitigated by proper engineering design and construction in conformance with latest version of California Building Code (CBC).

6.2 Seismic Coefficient

The site is located within the seismically active Southern California region. As a minimum, we recommend that the proposed structures be designed in accordance with the requirements of the latest edition of the California Building Code (CBC).

The structure may be designed to resist earthquake forces following the 2019 edition of California Building Code (CBC), which is based on the 2018 edition of the International Building Code (IBC). Based on the regional geologic maps and our subsurface investigation, the Site Classification, as defined in Section 1613.2.2 of the CBC, may be considered to be a Site Class D, Stiff Soil Profile.

The mapped maximum considered earthquake spectral response accelerations, Ss and S1, are obtained from Figures 1613.2.1(1) and 1613.2.1(2) from the CBC and are evaluated as 1.034 and 0.394 respectively. Site coefficients Fa and Fv of 1.086 and 1.7 respectively, may be used for the calculation of the spectral response accelerations, however given that S1 is greater than 0.2, based on ASCE 7-16 (Section 11.4.8), a site response analysis may be required. With the above coefficients however, spectral response accelerations **SMS** and **SM1** of 1.124g and 0.669g and **SDS** and **SD1** of 0.749 g and 0.446g may be used for a Site Class D.

The Design Maps Summary Report and Detailed Report are included in Appendix D.

7.0 Summary of Engineering Conclusions

7.1 Fault Rupture

The site is not located in an Alquist-Priolo Earthquake Fault Zone and the closest active fault is approximately eight miles away. The potential for fault rupture is considered to be nil.

7.2 Liquefaction

Liquefaction is defined as the phenomenon in which a soil mass due to the development of excess pore pressures, suffers a substantial reduction in its shear strength. During earthquakes, excess pore pressures may develop in saturated soil deposits as a result of induced cyclic shear stresses, resulting in liquefaction. Soil liquefaction occurs in submerged fine granular soils during or after strong ground shaking. Based on the depth to groundwater determined in the Groundwater Data Library of the Department of Water Resources, which is approximately 250 feet below ground surface, there is no potential for liquefaction at the site.

7.3 Slope Stability

The proposed substation site is located in flat terrain. The potential for slope stability is nil.

7.4 Expansive Soils

The on-site soils are primarily granular with expansion index of 7, which is considered “Very Low”. The mitigation of expansive soils will not be required.

7.5 Collapsible Soils

Collapsible soils are defined as soils with a potential for a significant decrease in strength and increase in compressibility when wet or saturated (hydro-collapse). Collapsible soils typically consist of relatively sandy soils that exhibit a degree of cementation. Based on the results of our laboratory testing, we anticipate some collapse potential. However, the earthwork, removal and compaction recommendations presented in this report will assist in mitigating the collapse potential that may affect proposed development. Our professional opinion is that the collapse potential will be within tolerable limits following the implementation of the earth work.

8.0 Earthwork/Site Grading Recommendations

8.1 General

The following recommendations are based on DRAFT Site Development Plan dated April 26, 2022. These recommendations will need to be modified if the grading plan is significantly revised, and based on observation of the actual field conditions during grading.

This section contains the general recommendations regarding earthwork and site grading for the proposed development. These recommendations are based on the results of the field exploration, laboratory testing, and data evaluation as presented in the preceding sections.

Prior to the start of any earthwork, site should be cleared of all vegetation, roots, organic materials, and debris. The materials resulting from the clearing and grubbing operations should be removed from the site by the contractor and disposed at an SCE approved disposal facility.

8.2 Placement of Engineered Fill

Prior to placement of fill, all vegetation, debris and roots should be removed. The upper 12 inches of site native soils (outside of existing substation) should be over excavated and the resulting excavation bottom should be scarified to a minimum depth of 6 inches and re-compacted to a minimum 90 percent of laboratory maximum dry density in accordance with ASTM D1557.

Excavated site soils, free of deleterious materials, organics, and rock particles larger than three inches in the largest dimension, should be suitable for placement as compacted fill. Organic content of excavated and processed soils should not exceed 3 percent, based on the laboratory testing during construction.

The bottom of all excavations should be observed and approved by a geotechnical representative prior to placing fill. The approved bottom of the excavations should be scarified to a depth of at least 6 inches. The scarified soils should be moisture conditioned to within three percent of optimum moisture content and compacted to at least 90 percent of the laboratory maximum dry density to produce a firm and unyielding surface. Deeper excavation may be required to remove loose or disturbed soils, based on observations of the geotechnical representative.

All engineered fill should be placed on competent, scarified and compacted soils as determined by the soil engineer and in accordance with the specifications presented in this section.

Prior to compaction, fill materials should be thoroughly mixed and moisture conditioned where necessary, to within three percent of optimum moisture content. All fill placed within substation pad should be compacted to at least 90 percent (except where 95 percent is specified for structural fill) of the laboratory maximum dry density in accordance with the ASTM Standard D1557 test method.

At the time of the field investigation, in-situ moisture content of the upper few feet of native soils was lower than the optimum moisture, refer to the previous tables. Therefore, some moisture conditioning will be necessary prior to the material being placed as compacted fill. The amount of processing required for proper moisture conditioning at the site will depend on the seasonal variations in the in-situ moisture conditions, the depth of over-excavation, the equipment, and the processing method.

8.3 Excavation for Concrete Lined Channel

The Substation will be surrounded by a 62-foot-wide concrete lined channel with 2:1 side slopes. The bottom of the channel (flat portion) is 30 feet wide and the depth ranges from approximately 5 feet at the southeast side to 8.5 feet at the northeast side. The bottom and side walls of the excavation will expose dense to very dense clayey, silty sand. Overexcavation is not required unless determined by the geotechnical engineer. Excavation should be performed such not to disturb the bottom and the sites of the channel. Buckets with blades or plates could be used as opposed to buckets with teeth. Any fill placed alongside the channel should be compacted as recommended in this report.

8.4 Over-Excavation for Pavement Areas

In areas receiving asphalt concrete or PCC paving sections, including driveways, curbs and gutters, and other flatwork, the existing native soils should be over-excavated a minimum of 12 inches and replaced with properly compacted fill. The over-excavation should extend at least 12 inches beyond the pavement edges. The pavement sections (including asphalt concrete and aggregate base) should be placed on at least 12 inches of compacted fill, moisture conditioned as necessary, and compacted to at least 95 percent of the laboratory maximum dry density.

Prior to placing fill, the bottom of the excavations should be scarified an additional 6 inches and compacted to at least 90 percent of the maximum dry density in accordance with ASTM D1557.

8.5 Over-Excavation for Crushed Rock Areas

In areas receiving 4 inches of crushed rock, the existing native soils should be overexcavated a minimum of 12 inches and replaced with properly compacted fill. The crushed rock should be placed on at least 12 inches of compacted fill, moisture conditioned as necessary, and compacted to at least 90 percent of the laboratory maximum dry density.

Prior to placing fill, the bottom of the excavations should be scarified an additional 6 inches and compacted to at least 90 percent of the maximum dry density in accordance with ASTM D1557.

8.6 Over-Excavation for Structures

Overexcavation for structures supported on shallow footings should extend at least 3 feet below bottom of continuous/ pad footings and 3 feet outside of footing edges. The excavated soil should be compacted to minimum of 95 % of laboratory maximum dry density within 3 percent of optimum moisture content. Prior to placing fill, the bottom of the foundation excavations should be scarified an additional 6 inches and compacted to at least 90 percent of the maximum dry density in accordance with ASTM D1557.

8.7 Substation Subgrade Preparation

After completion of grading, any soils disturbed by grading or other construction activities should be scarified to 6 inches, moisture conditioned and re-compacted to at least 90 percent of laboratory maximum dry density.

8.8 Soil Shrinkage

The shrinkage of the on-site surficial soil would depend on, among other factors, the depth of overexcavation, degree of compaction achieved, grading method and equipment utilized. The soil shrinkage calculations below are for information only, the contractor should make his own assumptions for earthwork shrinkage estimates.

Table No. 6. Shrinkage Calculations

Boring No.	Soil Classification	Max Density (pcf)	In-Situ Density (pcf)	Shrinkage (+)/ Bulkage (-) (%)	
				(90%)	(95%)
B-4@ 2.5’	Clayey Sand (SC)	123.7	114.1	(-) 2.5	3.0
B-7@ 2.5’	Clayey Sand (SC)	123.2	107.0	3.6	9.4
B-10@ 2.5’	Clayey Sand (SC)	119.6	104.2	3.3	9.0
B-13@ 2.5’	Silty Sand (SC)	124.0	112.0	0	5.2

8.9 Temporary Excavations

All excavations should be designed and constructed in accordance with OSHA regulations. All applicable safety requirements and regulations, including OSHA (Section 1541.1, Appendix A) regulations, should be met. Temporary excavations for the channel could be made up to 4 feet in vertical height. Excavation over 4 feet should be sloped to 1:1, or as determined by the geotechnical engineer at the site.

If shoring is required to support temporary excavations, shoring system should be selected and designed by the contractor’s engineer. The selection of an excavation shoring system

for the proposed excavations depends on nature of site soils, depth of proposed excavation, and on existing foundations lateral distances, types, depths, and loadings of the adjacent structures among other parameters.

8.10 Site Drainage

Adequate positive drainage should be provided away from structures to prevent ponding and to reduce percolation of water into the foundation soils. According to the Site Development Plan, the proposed grade slopes 1% towards the east. Surface drainage should be directed to suitable non-erosive devices.

8.11 Backfilling of Existing Drainage Channels

All loose soil, vegetation, debris and roots should be removed. The upper 12 inches of site native soils should be over excavated and the resulting excavation bottom should be scarified to a minimum depth of 6 inches and re-compacted to a minimum 90 percent of laboratory maximum dry density in accordance with ASTM D1557. If existing drainage channel is within proposed structures, deeper over excavation is required as recommended in previous sections.

The scarified soils should be moisture conditioned to within three percent of optimum moisture content and compacted to at least 90 percent of the laboratory maximum dry density.

Deeper excavation may be required to remove loose or disturbed soils, based on observations of the geotechnical representative.

8.12 Trench Backfill

All utility trenches should be backfilled and compacted to 90 percent relative compaction per ASTM D1557-91, depending on the compaction of the area the trench traverses.

Jetting or flooding of backfill materials should not be permitted. A representative of SCE should observe and test trench backfill as they are placed. In backfill areas where mechanical compaction of soil backfill is impractical due to space constraints, the space may be backfilled with pea gravel, or a two-sack mix of sand-cement slurry as approved by the city.

If rock and / or pea gravel is used as backfill, the material should be placed in lifts and mechanically densified. Rock/ gravel should be separated from the on-site soils by a suitable filter fabric (Mirafi 140N or equivalent).

9.0 Design and Construction Recommendations

9.1 General Evaluation

The various design recommendations provided in this section are based on the assumption that the earthwork and grading recommendations presented in this letter will be implemented in preparing the site.

The proposed structures may be supported by shallow spread footings or drilled piers. Design recommendations for foundations are presented below.

9.2 Shallow Spread Footing Design Parameters

Footings should be placed on at least 18 inches of compacted fill, as recommended in the grading section, compacted to a minimum 95 percent, and extending at least 18 inches beyond the edge of the footings. An allowable net vertical bearing pressure for 18-inch-wide footings with minimum embedment of 18 inches below adjacent grade is 2,500 pounds per square foot. The allowable bearing capacity may be increased by 500 psf for each additional foot of embedment depth, and 250 psf for each additional foot of width to a maximum value of 3,500 psf.

The net allowable bearing values indicated above are for the dead loads and frequently applied live loads and are obtained by applying a factor of safety of 3.0 to the net ultimate bearing capacity. The above vertical bearing value may be increased by 33 percent for short duration loadings, which will include loadings induced by wind or seismic forces.

9.3 Lateral Earth Pressures

The bearing values recommended above are for the total of dead and frequently applied live loads. Resistance to lateral loading may be provided by friction acting at the base of foundations and by passive earth pressure within the compacted fill. Passive earth pressure at the compacted fill surface is assumed to be zero and may be increased at the rate of 250 pounds per square foot per foot of embedment into compacted fill to a maximum value of 2500 psf.

When combining passive and friction for lateral resistance, the passive component should be reduced by one-third. A one-third increase may be used for wind and seismic loading conditions.

9.4 Drilled Cast-In-Place Piles

The following soil parameters may be used for the design of drilled pile foundations. These parameters are based on the boring logs information and laboratory testing.

Soil Layer	Depth to Layer, Bottom (ft)	Soil Classification	Dry Unit Weight (pcf)	Average Blow Count, N (blows/ft)	Cohesion, (psf)	Friction Angle (degrees)	Skin Friction (psf)	End Bearing (psf)
1	5	Clayey Sand (SC)	101	50	150	33	148	4000
2	10	Silty Sand (SM)	109	50	100	35	219	6500
3	15	Silty Sand (SM)	109	45	50	32	263	7500
4	20	Silty Sand (SM)	110	40	50	32	248	7500
5	25	Silty Sand (SM)	111	45	50	32	434	7500
6	30	Silty Sand (SM)	114	40	50	32	522	7500

We recommend cleaning the bottom of the drilled piles from loose soil by using a special clearing bucket.

Pile drilling and concrete placement should be performed in accordance with the recommendations presented in the Standards and Specifications of ADSC, An International Association of Foundation Drilling Contractors.

9.5 Mat Foundation

For design of mat foundations founded on granular fill, the following equation may be used to calculate the modulus of subgrade reaction, k:

$k = 300[(B+1)/2B]^2$
k = modulus of subgrade reaction, kips per cubic feet
B = foundation width, feet

Mat foundation should be placed on at least 18 inches of compacted fill, as recommended in the grading section, compacted to a minimum 95 percent, and extending at least 18 inches beyond the edge of the footings.

9.6 Slabs-On-Grade

The slabs-on-grade should be at least four inches thick. Care should be taken to avoid slab curling if slabs are poured in hot weather. Moisture sensitive slabs-on-grade should be protected by 10-mil polyethylene vapor barrier, installed per ACI 302 guidelines.

Subgrade for slabs-on-grade should be firm and uniform. All slab subgrade should be moisture-conditioned between optimum and two percent above optimum at subgrade soils prior to the placement of concrete. All loose or disturbed soils including under slab utility trench backfills should be recompacted prior to the placement of clean sand underneath the moisture barriers if utilized.

9.7 Soil Corrosivity Evaluation

Soil corrosivity was evaluated based on representative samples from borings within the upper 10 feet depth. Test results are included in Appendix B, and presented in the following table.

Table No. 7. Soil Corrosivity Test Results

Test Location	Soil Classification	Minimum Saturated Resistivity, ohm-cm	pH	Sulfate Content, ppm	Chloride Content, ppm
B-3 @ 10’	Silty Sand	935	9.3	74	244
B-4 @ 0-4’	Clayey Sand	3,496	9.2	18	21
B-6 @ 7.5’	Clayey Sand	2,126	9.3	77	47
B-7 @ 0-5’	Clayey Sand	1,752	9.3	40	40
B-11 @ 5’	Silty Sand	780	9.6	131	205

These tests are only an indicator of the soil corrosivity at the site. A corrosion expert should be consulted to further evaluate the corrosion potential for the onsite soils, and may suggest additional testing if needed, and to provide further recommendations for corrosion mitigation as applicable to the specific project and improvements.

9.8 Pavement Design

Pavement design recommendations are summarized in the following table, based Traffic Index (TI) of 5 and 7 and an R-value of 20. Analysis was based on Caltrans' design procedure for flexible and rigid pavement structural sections and Caltrans Pervious Pavement Design Guidance.

Table No. 8. Pavement Design Sections

R-Value	Facility Type	Traffic Index (TI)	Pavement Sections	
			Asphalt Concrete (inches)	Aggregate Base (inches)
Asphalt Concrete Pavement				
20	Driveways: inside substation	5.0	3.0	8.0
	Driveways: outside substation, laydown yard and staging yard	7.0	4.0	12.0

At or near the completion of grading, subgrade soil samples from compacted fill may need to be tested to re-evaluate the actual subgrade R-Value for final pavement design.

Base materials should conform with Section 200-2.2.2, "*Crushed Aggregate Base*," of the current Standard Specifications for Public Works Construction (SSPWC) and should be placed in accordance with Section 301.2 of the SSPWC. All base materials should be compacted to minimum 95 percent of laboratory maximum dry density.

The PCC material should confirm to Section 201 of the Specifications for Public Works Construction (SSPWC) and should be constructed in accordance with Section 302-6 of the SSPWC. Transverse and longitudinal joints should be provided.

Asphaltic concrete materials should conform to Section 203 of the SSPWC and should be placed in accordance with Section 302.5 of the SSPWC.

Class 2 aggregate base should be compacted to 95 percent of laboratory maximum dry density within 3 percent of optimum moisture content.

9.9 Settlement

Total settlement of the proposed structures placed on compacted fill, designed as recommended above, from structural load-induced settlements should be 3/4-inch or less. The differential settlement can be taken as equal to one half of the total settlement over a distance of 25 feet.

Laboratory testing shows relatively high consolidation ratio in boring 8. However, it is our opinion that the samples may be disturbed due to the pounding (hammering) on the samples as indicated by the very high blow counts.

9.10 Percolation

Two percolation borings were excavated for the percolation testing at the site to a depth of 5 feet below grade. Underlying soil consisted of slightly clayey and silty sand. Percolation tests results are provided in Appendix E, and the locations of the borings are shown on the Plate 1 in Appendix A.

The borings were presoaked immediately prior to the percolation testing, by filling the hole with 5 feet of water.

The Percolation test was performed at depths from 0 to 5 feet. The percolation rate was relatively fast (water dropped more than 12 inches in 30 minutes) therefore readings were taken every 10 minutes.

Eight readings were taken and the water being replenished subsequent to each reading interval. It was decided to terminate the test since the last few readings were virtually identical with near negligible changes in percolation rates as the test proceeded. The results of the tests are presented in Appendix E. Percolation Testing are summarized in the following table.

The measured percolation rates, shown below, were reduced in accordance with the County of Los Angeles guidelines (GS-200.1).

Table No. 9, Percolation Test Results

Perc Test No.	Zone of Percolation Below GS (ft)	Field Percolation Rate (inch/hr.) Preadjusted	Reduction Factor	Reduced Infiltration Rate (inch/hr.) Adjusted
PT-1	0 to 5	29	15.4	1.9
PT-2	0 to 5	40	15.2	2.6

9.11 Geotechnical Observation

Prior to construction, the SCE Project Manager for Construction or representative should contact SCE Geotechnical Group to coordinate field observations during construction.

The grading permits for the project should be obtained by the contractor. In the case that the permit was obtained prior to awarding the contractor, the contractor should be familiar with permit terms and conditions. The contractor should comply with the jurisdictional requirements of city and county prior to commencement of construction. The governmental agencies having jurisdiction over the project should be notified prior to beginning of construction. The contractor should be familiar with the inspection requirements of the SCE, reviewing agencies and the content of this report.

Grading observations, observations of excavation for substation structures, the re-working of the upper soils and excavation bottoms should be made by a representative of the SCE Geotechnical Group. Structural fill and backfill should be placed and compacted during continuous observation and testing. Footing excavations should be observed by the Soils Engineer/Engineering Geologist prior to placement of steel and concrete so that footings are founded on satisfactory materials and excavations are free of loose and disturbed materials. Continuous observation by the soils engineer or representative during construction allows for evaluation of the soil conditions as they are encountered, and allows the opportunity to recommend appropriate revisions where necessary.

As-built report, including compaction test results should be prepared by a soil engineer after completion of grading. The report shall include the description of project and compaction procedures, methods of in-place density testing and provide locations and results of density tests. Laboratory compaction test should be performed for each soil type to verify maximum dry density and optimum moisture content. The report should certify fill placement and compaction in accordance with project plans and this geotechnical report, based on continuous observations and test results.

10.0 Closure

This report has been prepared to aid in the evaluation of the site, prepare site grading recommendations and to assist the civil and structural engineers in the design of the proposed substation structures and associated foundations.

The final grading plan when become available should be reviewed by SCE Geotechnical

Engineering Group for compliance with the design recommendations.

Recommendations presented herein, are based upon the assumption that adequate earthwork monitoring will be provided. Excavation bottoms should be observed, any imported fill materials should be tested and approved by SCE Geotechnical Engineer/Engineering Geologist prior to the delivery to the site. Structural fill and backfill should be placed and compacted during continuous observation and testing. Footing excavations and drilling for drilled pier foundations should be observed by SCE Geotechnical Engineer/Engineering Geologist prior to placement of steel and concrete so that footings are founded on satisfactory materials and excavations are free of loose and disturbed materials.

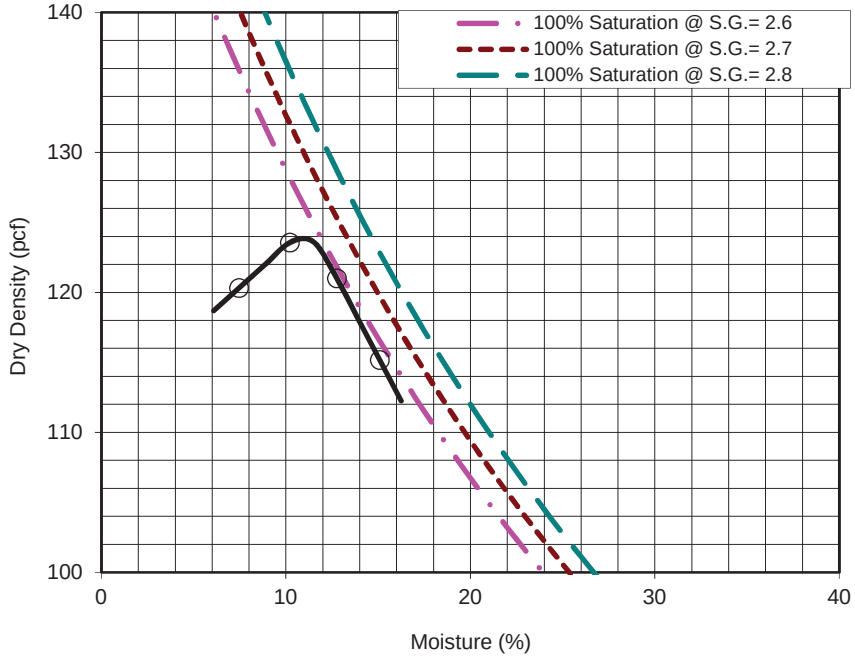
COMPACTION TEST

Client: Geotechnical Soilutions Inc./SCE — AP Number: 21-1162
Project Name: Cal City Substation — Tested By: JT — Date: 12/17/21
Project No. : GS21B01 — Calculated By: NR — Date: 12/20/21
Boring No.: B-4 — Checked By: AP — Date: 12/23/21
Sample Type: B — Depth (ft.): 0-4
Visual Sample Description: Clayey Sand

METHOD: A
MOLD VOLUME (CU.FT): 0.0333

Compaction Method: [X] ASTM D1557 [ ] ASTM D698
Preparation Method: [ ] Moist [X] Dry

Wt. Comp. Soil + Mold (gm.)	3802	3906	3910	3851		
Wt. of Mold (gm.)	1847	1847	1847	1847		
Net Wt. of Soil (gm.)	1955	2059	2063	2004		
Container No.						
Wt. of Container (gm.)	135.72	143.48	138.74	142.33		
Wet Wt. of Soil + Cont. (gm.)	352.41	387.43	520.48	588.18		
Dry Wt. of Soil + Cont. (gm.)	337.36	364.83	477.28	529.74		
Moisture Content (%)	7.46	10.21	12.76	15.08		
Wet Density (pcf)	129.30	136.18	136.44	132.54		
Dry Density (pcf)	120.32	123.56	121.00	115.17		



Maximum Dry Density (pcf): **123.7**
Maximum Dry Density w/ Rock Correction (pcf): **N/A**
Optimum Moisture Content (%): **10.9**
Optimum Moisture Content w/ Rock Correction (%): **N/A**

PROCEDURE USED

[X] *METHOD A: Percent of Oversize:* 1.9%
Soil Passing No. 4 (4.75 mm) Sieve
Mold : 4 in. (101.6 mm) diameter
Layers : 5 (Five)
Blows per layer : 25 (twenty-five)

[ ] *METHOD B: Percent of Oversize:* N/A
Soil Passing 3/8 in. (9.5 mm) Sieve
Mold : 4 in. (101.6 mm) diameter
Layers : 5 (Five)
Blows per layer : 25 (twenty-five)

[ ] *METHOD C: Percent of Oversize:* N/A
Soil Passing 3/4 in. (19.0 mm) Sieve
Mold : 6 in. (152.4 mm) diameter
Layers : 5 (Five)
Blows per layer : 56 (fifty-six)

Remarks	Gf = 1.34, and 0.0 % Retained on the ¾" *Not Applicable	

APPENDIX D

SEISMIC PARAMETERS
&
PAVEMENT DESIGN

Cal City Substation

Latitude, Longitude: 35.14245963, -117.96774169

Date	12/30/2021, 5:48:55 PM
Design Code Reference Document	ASCE7-16
Risk Category	II
Site Class	D - Stiff Soil

Type	Value	Description
S_S	1.034	MCE_R ground motion. (for 0.2 second period)
S_1	0.394	MCE_R ground motion. (for 1.0s period)
S_{MS}	1.124	Site-modified spectral acceleration value
S_{M1}	null -See Section 11.4.8	Site-modified spectral acceleration value
S_{DS}	0.749	Numeric seismic design value at 0.2 second SA
S_{D1}	null -See Section 11.4.8	Numeric seismic design value at 1.0 second SA

Type	Value	Description
SDC	null -See Section 11.4.8	Seismic design category
F_a	1.086	Site amplification factor at 0.2 second
F_v	null -See Section 11.4.8	Site amplification factor at 1.0 second
PGA	0.46	MCE_G peak ground acceleration
F_{PGA}	1.14	Site amplification factor at PGA
PGA_M	0.524	Site modified peak ground acceleration
T_L	8	Long-period transition period in seconds
SsRT	1.034	Probabilistic risk-targeted ground motion. (0.2 second)
SsUH	1.147	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration
SsD	1.5	Factored deterministic acceleration value. (0.2 second)
S1RT	0.394	Probabilistic risk-targeted ground motion. (1.0 second)
S1UH	0.437	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration.
S1D	0.6	Factored deterministic acceleration value. (1.0 second)
PGAd	0.518	Factored deterministic acceleration value. (Peak Ground Acceleration)
C_{RS}	0.902	Mapped value of the risk coefficient at short periods
C_{R1}	0.903	Mapped value of the risk coefficient at a period of 1 s

APPENDIX E

PERCOLATION TESTING

Boring/ Excavation Percolation Testing Field Log

Date 11/29/2021

Project Location	Cal City Substation	Boring /Test Number	PT-1
Earth Description	Alluvium	Diameter of Boring	8"
Tested By	Anselm	Diameter of Casing	3"
Liquid Description	Clear tap water	Depth of Boring	5' / Perc Test (0' to 5')
Measurement Method	Sounding	Depth to Water Table	Deeper than 30'
		Initial Water Depth (d1)	5'

1st Pre-Soak	9:13 to 9:43 am, 22" drop	Water Remaining in Boring (Y/N)	Y
2nd Pre-Soak	9:45 to 10:15 am, 20" drop	Standard Time Interval Between Readings	10 Min

Reading Number	Time Start/End (hrs:mins)	Measurements Start/End (in)	Elapsed Time (mins)	Water Drop During Standard Time Interval (in)	Percolation Rate for Reading (in/hr.)	Soil Description/ Notes/ Comments
	10:36	2.8				Silty, clayey sand (SM-SC)
1	10:46	9.1	10	6.30	37.8	
	10:48	4.0				
2	10:58	9.2	10	5.20	31.2	
	10:59	4.4				
3	11:09	9.4	10	5.00	30.0	
	11:10	4.0				
4	11:20	8.9	10	4.90	29.4	
	11:21	5.0				
5	11:31	10.1	10	5.10	30.6	
	11:32	6.8				
6	11:42	11.6	10	4.80	28.8	
	11:43	3.0				
7	11:53	7.8	10	4.80	28.8	
	11:54	3.3				
8	11:04	8.2	10	4.90	29.4

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

CALIFORNIA CITY
EDWARDS, CA 93523

TARGET PROPERTY SEARCH RESULTS

The Target Property was identified in the following databases.

Page Numbers and Map Identifcations refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

A review of the NPL list, as provided by EDR, and dated 07/29/2021 has revealed that there is 1 NPL site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
EDWARDS AIR FORCE BA Cerclis ID:: 902725 EPA Id: CA1570024504	***AFFTC EDWARDS AFB***	***Region / **********	***161***

Federal CERCLIS list

SEMS: Superfund Enterprise Management System

A review of the SEMS list, as provided by EDR, and dated 07/29/2021 has revealed that there is 1 SEMS site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
EDWARDS AIR FORCE BA Site ID: 0902725 EPA Id: CA1570024504	***AFFTC EDWARDS AFB***	***Region / **********	***161***

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 CORRACTS site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
EDWARDS AIR FORCE BA EPA ID:: CA1570024504	***AFFTC EDWARDS AFB***	***Region / **********	***161***

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-TSDF site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
EDWARDS AIR FORCE BA EPA ID:: CA1570024504	***AFFTC EDWARDS AFB***	***Region / **********	***161***

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-LQG site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
EDWARDS AIR FORCE BA EPA ID:: CA1570024504	***AFFTC EDWARDS AFB***	***Region / **********	***161***

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A review of the US ENG CONTROLS list, as provided by EDR, and dated 05/17/2021 has revealed that there is 1 US ENG CONTROLS site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
EDWARDS AIR FORCE BA EPA ID:: CA1570024504 EPA ID:: CA1570024504	***AFFTC EDWARDS AFB***	***Region / **********	***161***

EXECUTIVE SUMMARY

US INST CONTROLS: Institutional Controls Sites List

A review of the US INST CONTROLS list, as provided by EDR, and dated 05/17/2021 has revealed that there is 1 US INST CONTROLS site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
EDWARDS AIR FORCE BA	***AFFTC EDWARDS AFB***	***Region / **********	***161***
EPA ID:: CA1570024504			

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there is 1 ENVIROSTOR site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
EDWARDS AIR FORCE BA	***AFFTC EDWARDS AFB***	***Region / **********	***161***
Facility Id: 15970001			
Status: Active			

State and tribal registered storage tank lists

UST: Active UST Facilities

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
SEGS III-VII	41100 HIGHWAY 395	B3 / 54	623
Database: UST, Date of Government Version: 06/03/2021			
Facility Id: 87014100			

AST: Aboveground Petroleum Storage Tank Facilities

A review of the AST list, as provided by EDR, has revealed that there is 1 AST site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
SEGS III-VII	41100 HWY 395	B4 / 54	623
Database: AST, Date of Government Version: 07/06/2016			

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

HIST Cal-Sites: Historical Calsites Database

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 HIST Cal-Sites site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
EDWARDS AIR FORCE BA	***AFFTC EDWARDS AFB***	***Region / **********	***161***

PFAS: PFAS Contamination Site Location Listing

A review of the PFAS list, as provided by EDR, and dated 06/04/2021 has revealed that there is 1 PFAS site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
EDWARDS AIR FORCE BA	***AFFTC EDWARDS AFB***	***Region / **********	***161***

Local Land Records

DEED: Deed Restriction Listing

A review of the DEED list, as provided by EDR, and dated 05/28/2021 has revealed that there is 1 DEED site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
EDWARDS AIR FORCE BA Status: ACTIVE Envirostor ID: 15970001	***AFFTC EDWARDS AFB***	***Region / **********	***161***

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 3 RCRA NonGen / NLR sites within the requested target property.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Page Numbers and Map Identifcations refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2021 has revealed that there

is 1 SEMS-ARCHIVE site within approximately 1.5 miles of the requested target property.
