EXECUTIVE SUMMARY

On behalf of Mr. Craig Wilde, Industrial Property Group, Inc., Advanced Environmental Concepts, Inc. (AEC) performed a Phase I Environmental Site Assessment (ESA) during August 2022 on a 52.09-acre undeveloped property in northwest Bakersfield, California. The subject property is bordered to the north by Boughton Drive and to the east by Airport Drive and is described as Kern County Assessor's Parcel Numbers (APNs) of 492-010-13 (38.34-ac) and -17 (13.75-ac). The site is also described within a portion of the East Half of the Southeast Quarter of Section 2; Township 29 South, Range 27 East of the Mount Diablo Base & Meridian (MDB&M). The subject property has no defining features with the exception of the bordering surface streets.

AEC's site inspection of August 2022 indicates the subject property consists of undeveloped fallow ground that is scheduled for mass grading in preparation for future commercial development. In the southeast portion of the subject property, AEC observed both older and newer soil stockpiles that have been dumped onsite; the genesis of the older-dumped material is currently unknown; however, the newer dumped material appears to be derived from construction waste and gardening waste (green waste). In addition, there are a few small areas of illegal dumping surrounding the stockpiles of soil that primarily consist of household-related waste. Also, AEC observed a disconnected metal pipeline trending along the southern property boundary as well as a remnant concrete foundation.

The ESA process under ASTM Standard 1527 was created to identify *recognized environmental conditions* (RECs) which present a material risk of harm to public health or the environment and generally be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. The ESA process additionally identifies *controlled recognized environmental conditions*, which are specified under ASTM Standard 1527 as a REC resulting from a past release that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances allowed to remain in place subject to institutional controls; and/or *historical recognized environmental conditions*, i.e. conditions which may have presented a material risk to public health and/or the environment but have now been mitigated to the satisfaction of a regulatory agency at the subject property. The descriptive term "recognized environmental condition" means the presence, or likely presence, of any hazardous substances or petroleum products in, at, or on a property due to any release to the environment; under conditions that indicate an existing release, a past release, or a material threat of a release to the environment. In addition, AEC will identify non-ASTM conditions which are considered *de minimis* and generally do not present a material risk of harm to public health or the environment and would not be the subject of an enforcement action if brought to the attention of an appropriate governmental agency.

The results of this current August 2022 investigation have identified three *de minimis conditions*, no *recognized environmental conditions* (RECs), no *controlled recognized environmental conditions*, and no *historical recognized environmental conditions*.

De Minimis Conditions

- The subject property has a historical agricultural use as irrigated row crop ground from prior to 1937 to the late 1990s. There is the potential that chlorinated pesticide residues exceeding commercial-use Regional Screening Levels (RSLs) may be present.

AEC would typically recommend that shallow soil across the property be sampled and analyzed for OCPs and/or Arsenic following the guidelines outlined in the Department of Toxic Substances Control (DTSC) Interim Guidance for Sampling Agricultural Properties, Third Revision, dated August 7, 2008. This guidance was designed to evaluate agricultural properties that are proposed for redevelopment as a school site or other residential project where new land use could result in increased human exposure. However, since the subject property has been disturbed on a yearly basis by discing for weed abatement for the past approximate 25 years, it is the opinion of AEC that the guidance does not apply and recommends no further investigation is warranted regarding the former agricultural use of the site.

- In the southeast portion of the subject property, AEC observed both older and newer soil stockpiles that have been dumped onsite; the genesis of the older-dumped material is currently unknown; however, the newer dumped material appears to be derived from construction waste and gardening waste (green waste). In addition, there are a few small areas of illegal dumping surrounding the stockpiles of soil that primarily consist of household-related waste.

AEC recommends removal of the construction debris or material that would be considered "unsuitable" by a geotechnical engineer prior to conducting grading and disposing the inferred non-hazardous waste at an appropriate offsite landfill. Also, AEC recommends posting a "no dumping" sign to deter future illegal dumping.

- A review of historical aerial photographs indicates that the subject property was adjacent to the former location of large aboveground impoundments used for crude oil storage in offsite Section 1 east of Airport Drive. The impoundments were in active use in the open ground east of Airport Drive from at least 1910 through the 1940s and the footprints visible through the early 1990s. Closure of these impoundments typically consisted of pumping out all accessible crude and then pushing the residual crude to the center so that it would dry and then be removed for offsite disposal. However, this mitigation effort did not take into account any crude oil that had previously percolated into the subsurface.

Crude oil is not a designated hazardous material unless elevated concentrations of volatile organic compounds such as benzene are identified. If one of the impoundments adjacent to the subject site had leaked crude oil it generally would have exhibited a greater propensity for vertical migration than lateral dispersion; this has been proven through the prior subsurface investigations in the surface impoundments sited in the northwest portion of Section 1 by Woodward-Clyde and Krazan. Information reviewed by AEC on the Geotracker website indicates that the impoundments in Section 1 have been adequately mitigated and confirmation sampling for both soil gas and soil indicates the contamination remaining is negligible and has not migrated onto or beneath the subject property, nor has it impacted groundwater resources estimated at depths greater than 250' bgs. In addition, AEC reviewed the Closure Letter from the RWQCB dated 12 October 2017 for the offsite impoundments east of the subject property along Airport Drive; the letter states that the impoundments no longer pose a threat to human health and/or the environment to the proposed development in the northwest portion of Section 1. AEC does not recommend further investigation unless crude oil-related waste is discovered onsite during grading.

AEC has conducted this Phase I Environmental Site Assessment for the subject 52.09-acre undeveloped property that is south of Boughton Drive and west of Airport Drive in Bakersfield, California (the Property) in conformance with the scope and limitations of ASTM Standard E1527-13. Any exceptions to, or deletions from this practice are described in Section 5.0 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property; however, three de minimis conditions were identified. Therefore, based on the results of our assessment, AEC recommends that no further action is warranted for the subject property with the exception of what is listed above.

1.0 INTRODUCTION

Advanced Environmental Concepts, Inc. (AEC) was retained by Mr. Craig Wilde of Industrial Property Group, Inc., (“User”), to prepare a Phase I Environmental Site Assessment at the 52.09-acre undeveloped property that is south of Boughton Drive and west of Airport Drive in Bakersfield, California (the “Property”). A location map for the Property is presented as Figure 1 in Appendix A. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and general conformance with ASTM E1527-13.

2.0 PURPOSE

The purpose of this assessment is to identify recognized environmental conditions located at the subject site or adjacent properties which could present material risk of harm to public health or to the environment. Recognized environmental conditions, as defined within ASTM Designation E1527-13, are the presence, or likely presence, of any hazardous substances or petroleum products in, at, or on a property due to any release to the environment; under conditions that indicate an existing release, a past release, or a material threat of a release to the environment.

This assessment is intended to constitute appropriate inquiry into the previous ownership and uses of the property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively the Landowner Liability Protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA) and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

If known or suspected contamination is identified, Users seeking to maintain Landowner Liability Protections have responsibilities in addition to completing an AAI-compliant Phase I Environmental Site Assessment. These “continuing obligations” include taking “appropriate care” and “reasonable steps” with respect to known or suspected releases of hazardous substances during the tenure of property ownership. In addition to these requirements under Federal law there are also different requirements under state law with respect to liability protections. On request, Advanced Environmental Concepts, Inc. can provide support for clients with continuing obligations, as appropriate.

3.0 SCOPE OF SERVICES

To evaluate the potential presence of recognized environmental conditions, this preliminary investigation consisted of the following:

- Contacting appropriate regulatory agencies for hazardous materials information concerning the subject site and surrounding areas located within an approximate 1-mile radius of the site boundaries. Inquiries were made regarding documentation of: (a) toxic spills; (b) underground storage tanks; (c) the use, storage, generation, and/or disposal of hazardous materials; (d) the presence of disposal wells and/or leach fields, drain fields, and septic systems; and, (e) violations of applicable environmental control standards;
- Conducting interviews and researching historical site usage for information regarding past or present recognized environmental conditions;
- Reviewing selected database reports, maps, and aerial photographs for information pertaining to potential sources or visual indications of soil and groundwater contamination;
- Conducting an on-site inspection and off-site reconnaissance to identify visible evidence of the generation, use, storage, spills, or disposal of hazardous materials;

- Evaluating investigational findings and the preparation of a detailed report inclusive of findings and recommendations.

4.0 SPECIAL TERMS AND CONDITIONS

The information included in this report is intended for use exclusively as a preliminary assessment of potential environmental and human health concerns at the project site. Data is generally obtained through telephone conversations, personal interviews, public records, public information, general maps and aerial photographs. These services have been rendered by Advanced Environmental Concepts, Inc. (AEC) in accordance with generally accepted practices by professional geologists and environmental specialists. Also, the report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. Because of the limited nature of this investigation, the firm is precluded from providing a warranty, expressed or implied, regarding the presence of hazardous materials that could potentially adversely affect the subject site.

This report is provided with the understanding that it is the responsibility of the owner to convey the information and recommendations contained herein, to the appropriate regulatory agencies, as required. The services performed in the scope of this project are for the sole use of our client. Others who seek to rely on the findings contained within this report have a duty to determine the adequacy of the information presented herein, for their time, location, and intended use.

5.0 LIMITATIONS AND ASSUMPTIONS

This report presents the results of a Phase I Environmental Site Assessment conducted by **Advanced Environmental Concepts, Inc. (AEC)** for Mr. Craig Wilde, Industrial Property Group, Inc., (client), on the following property:

**52.09-acre Undeveloped Property
South of Boughton Drive and West of Airport Drive
County of Kern • Bakersfield, California**

No other properties were included within the scope of this assessment except as required for the off-site reconnaissance and for the regulatory agency database and file review pertaining to potential sources of offsite recognized environmental concerns. Historical information regarding the subject parcels is limited to review of maps, public documents, interviews with people knowledgeable with the past and present uses of the property, and aerial photography review.

The investigation focused on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by the Federal or state government) or due to the potential for contaminant migration through exposure pathways (e.g., groundwater). Materials that may contain substances which are not currently deemed hazardous by the federal or state of California EPA were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials, lead-based paints, fire safety, vapor intrusion, indoor air quality, mold, and similar matters were not part of this assessment. The Property was not evaluated for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks, (e.g., heavy metals, naturally occurring asbestos, or radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt) is not considered to be of concern unless observation determined that hazardous substances are likely to be present in "actionable" concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Quantitative identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

AEC assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, such as regulatory agency listings. AEC assumes that information collected during this environmental site assessment is accurate and correct. Unless warranted, information collected has not been independently validated as part of this assessment.

The information regarding “purchase price” to “fair market value” is the responsibility of the User (40 CFR 312.22) and is not included in this Phase I Environmental Site Assessment Report. The purchaser of a Property is required to consider whether a difference between the purchase price and the fair market value of the Property is due to the presence of potential releases or identification of hazardous substances at the Property.

The following limitations/restrictions were placed on AEC:

- There were no limiting factors that impeded access to AEC for the entire subject property.

6.0 GENERAL SITE CHARACTERISTICS

6.1 Site Location and General Site Description

The subject 52.09-acre undeveloped property is bordered to the north by Boughton Drive and to the east by Airport Drive and is described as Kern County Assessor's Parcel Numbers (APNs)¹ 492-010-13 (38.34-ac) and -17 (13.75-ac). The site is also described within a portion of the East Half of the Southeast Quarter of Section 2; Township 29 South, Range 27 East of the Mount Diablo Base & Meridian (MDB&M).

The current registered owner of the subject property is:

ARB, Inc. a California Corporation

6.2 Current Use of the Property

The subject property primarily consists of undeveloped ground that is scheduled for mass grading in preparation for future commercial development. Illegal dumping of solid waste primarily consisting of soil, concrete debris, and green waste was observed in the southeast portion of the site.

6.3 Past Uses of the Property

The subject property has been farmed from prior to 1937 into the 1990s primarily with irrigated cover crops. The property has remained fallow from the 1990s to the present.

6.4 Current and Past Uses of Adjoining Properties

The general area has been used historically for agriculture and oil field production commencing prior to the 1910s. Nearby offsite properties to the north, west, and east indicates that those property(s) appear to have been occupied by large crude oil ASTs in the former Chevron Tank Farm. The Kern Front and Poso Creek Oil Fields are a short distance north of the general site area. Oil produced from these nearby fields have been historically stored in large surface impoundments throughout the region during the course of production activities. Surrounding property adjoining the site have been planted to irrigated row crops and orchard crops.

Currently, the surrounding area consists of commercial, residential and industrial development.

North: North of the subject property is asphalt-paved Boughton Drive followed by undeveloped ground.

South: The south boundary is similar undeveloped ground, Hangar Way and a commercial structure and yard.

East: East of the subject property is asphalt-paved Airport Drive; across Airport Drive is a residential neighborhood, restaurant and mini storage facility.

West: West of the subject property is similar undeveloped property along with the Meadows Field hangars, AVIS rental car return facility, and other commercial development.

7.0 SITE AND VICINITY CHARACTERISTICS

7.1 Physiographic Setting

The subject property is located in the southeastern end of the San Joaquin Valley where the Sierra Nevada, Great Valley, and Coastal Range physiographic provinces meet. The southern end of the Sierra Nevada province is composed of a massive block of igneous and metamorphic rock of Mesozoic age and older. This Sierran block, 40 to 100 miles wide and 400 miles long, slopes five to seven degrees beneath the San Joaquin Valley. The Coastal Range province on the west consists of tectonically deformed and fractured marine and non-marine sedimentary rocks of Jurassic, Cretaceous, and Tertiary age which dip eastward beneath the San Joaquin Valley. The Great Valley province is a broad asymmetrical synclinal trough, which is known as the Sacramento Valley in the north and the San Joaquin Valley in the south. Beneath the southern San Joaquin Valley floor, the Sierran plutonic and metamorphic rock is overlain by consolidated marine rocks of Jurassic and Cretaceous age. These rocks are overlain by continental marine and non-marine sedimentary rocks of Tertiary age. These continental deposits are consolidated to semi-consolidated, fossiliferous sandstone, siltstone, and shale which thicken toward the south and west. The Tertiary rocks are overlain by unconsolidated continental deposits consisting of Pliocene to Holocene river and lake sediments of gravel, sand, silt, and clay. Surface features of the floor of the San Joaquin Valley consist of dissected uplands, alluvial fans, overflow areas, and lake bottoms. Dissected uplands lie between the mountains and the nearly flat Valley floor and are manifest in low lying hills through which perennial and intermittent streams flow. These features consist of reworked older alluvium. The alluvial fans are the sites of active stream deposition of sand and silts derived from the Sierra Nevada and the dissected uplands. The overflow lands and lake bottoms lie in the central part of the Valley where silt and clay accumulate in quiet lake and marsh environments.² The subject property is located on a gently sloping southwesterly grade with an average elevation of approximately 524-feet above mean sea level MSL.³ The property is underlain by alluvial fan deposits created from sediments transported and deposited by tributaries of the Kern River. The underlying sediments consist of gravels, sands, silts, and clays.

The Central Valley of California is underlain by a broad and deep hydrogeologic unit consisting of soil and rock of varying porosity and permeability. Physical dimensions are approximately 50 miles wide at the widest point in the Valley, 400 miles long, and as much as 2,000 feet deep. Recharge to regional aquifers consists of infiltration of seasonal precipitation and percolation of surface waters. The Valley aquifer of greatest storage, highest quality, and greatest accessibility for domestic and agricultural use consists of the alluvial and lacustrine continental deposits extending to depths of 1,500 to 2,000 feet beneath the San Joaquin Valley floor. Lithology and hydraulic properties of these sediments are largely the product of the sediment source and the depositional environment. These sediments range in size from clays to boulders and include all mixtures between the extremes. Those of the west side of the Valley are derived largely from the Coastal Ranges, which tend to consist of shales and fine sandstones with limited permeability. The east side sediments are derived mainly from granitic materials of the Sierra Nevada which are generally

coarser and much more permeable. The majority of groundwater pumped from beneath the area occurs within unconsolidated continental deposits. Based on information provided by the Kern County Water Agency⁴ depth to unconfined groundwater is approximately 250-300-feet below grade and the groundwater flow direction (gradient) beneath the site is estimated to be toward the southwest. Intermittent “perched” groundwater may be identified at shallow depths and derived from leakage from the Kern River.

8.0 SITE DESCRIPTION AND INSPECTION

An inspection of the Property and reconnaissance of the surrounding area was conducted on August 17, 2022, by Mr. Anthony Buck, Project Manager of Advanced Environmental Concepts (AEC). AEC’s site inspection of August 2022 indicates the subject property consists of undeveloped fallow ground that is scheduled for mass grading in preparation for future commercial development. In the southeast portion of the subject property, AEC observed both older and newer soil stockpiles that have been dumped onsite; the genesis of the older-dumped material is currently unknown; however, the newer dumped material appears to be derived from construction waste and gardening waste (green waste). In addition, there are a few small areas of illegal dumping surrounding the stockpiles of soil that primarily consist of household-related waste. Also, AEC observed a disconnected metal pipeline trending along the southern property boundary as well as a remnant concrete foundation.

8.1 Hazardous Substances

There were no current visual indications of the presence of hazardous materials within the limits of the subject property during the site inspection.

8.2 Natural Drainage

Surface sheet flow generated from seasonal precipitation drains to the south-southwest.

8.3 Disturbed Areas

The subject property primarily consists of ground that is scheduled for mass grading. Illegal dumping of solid waste primarily consisting of soil, concrete debris, and green waste was observed in the southeast portion of the site.

8.4 Hydraulic Equipment

No in-ground hydraulic equipment was observed on the property.

8.5 Electrical Equipment

Pole-mounted electric power transformers were identified offsite along Airport Drive. There were no transformers observed within the boundaries of the subject property. According to information obtained from the Pacific Gas and Electric Company⁵ (PG&E), all transformers within the PG&E power distribution network suspected of containing PCBs were removed and replaced by 1990. The manufacturing of PCB-containing electric power transformers was discontinued in 1984.

Testing of transformers for the presence of PCBs is not included within the scope of this site assessment.

8.6 Wastewater

With the exception of seasonal storm water runoff, no wastewater or other liquid waste materials appear to be generated at the subject property.

8.6.1 Sewage Disposal Systems

AEC did not identify any current sewage disposal systems during this site assessment. However, there was a former Farm Compound and residence in the northeast portion of the property that most likely used a septic tank and leach field.

8.6.2 Pools of Liquid

AEC did not identify any areas of standing surface water during this site assessment.

8.6.3 Pits, Ponds, or Lagoons

AEC did not identify any current onsite pits, ponds, or lagoons during this site assessment. However, there was a former irrigation water storage reservoir at the northeast corner of the property.

8.6.4 Drains and Sumps

AEC did not identify any drains or sumps during this site assessment.

8.7 Solid Waste Disposal

Solid waste is not currently generated at the subject property. There was no indication that solid waste has historically or is currently being landfilled or buried at the subject property with the exception of the numerous soil piles that have been dumped in the southeast portion of the site. Also, illegal dumping of construction waste, gardening waste (green waste), and household waste was observed in the southeast portion of the subject property.

8.8 Water Supply

Water use for domestic and irrigation purposes was previously obtained from the two wells installed at the adjoining properties; however, these wells were abandoned under Kern County Permit Nos. 10620 and 10627 by Soils Engineering Inc. (SEI) during October 2007. The conductor casing at each well location was filled with 6-sack concrete and the casing cut at approximately 8-feet below ground surface (bgs). Future water for onsite use will be available through the Oildale Mutual Water Company. No current water use occurs at the property.

8.9 Storage Tanks

There were no fill tubes, vent lines, dispensers, islands, or other visual indications of the existence of underground storage tanks (USTs) observed within the limits of the subject property at the time of the site inspection. Also, review of historical aerial photographs indicate that the subject property was not occupied by the former aboveground storage tanks (ASTs) used for crude oil storage as observed in offsite Section 1 east of the site.

8.10 Designated Wetlands

Under the U. S. Army Corps of Engineers regulations, wetlands⁶ are defined as "those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions." Wetlands generally include swamps, marshes, bogs and similar areas such as sloughs, prairie potholes, wet meadows, river overflows, mud flats, and natural ponds.

Based on visual observations made during the site inspection, review of USGS topographic maps, and aerial photography review, the subject site and adjacent parcels are not located in an area that would be classified as Designated Wetlands Areas under USACE regulations. A Wetlands determination is beyond the scope of this assessment.

8.11 Asbestos-Containing Materials (ACMs)

Asbestos Containing Materials (ACMs) were commonly used in a wide variety of building products such as roofing shingles, composite siding, linoleum flooring, acoustic ceiling tiles, furnace and water heater exhaust piping and insulation, glues and mastics, stucco, joint compounds, and composite wallboards prior to 1980, however, use of ACMs post 1980 is known to have occurred at many locations. ACMs can be divided into material considered friable (easily crumbled or reduced to powder) and non-friable. Friable ACMs are regulated as hazardous materials due to the elevated long-term risk of developing lung cancer upon respiratory exposure and must be properly removed prior to renovation or demolition of any structure containing these materials. Also, ACMs have also been found in 'Transite' irrigation piping commonly used in many agricultural areas of California. No indications of Transite irrigation piping were noted within the subject property during this assessment. Based on the absence of construction onsite, ACMs are not suspected.

Asbestos sampling and laboratory analyses are beyond the scope of this site assessment.

8.12 Radon

Radon⁷ is a colorless, odorless, tasteless, naturally occurring radioactive gas formed by the decay of uranium in soil and bedrock. Because uranium and radon occur naturally in varying amounts within rocks and soils found throughout the United States, radon is present in all the air that we breathe. Long-term exposure to elevated concentrations of radon in confined areas has been associated with an increased risk of lung cancer. The present action levels require exposure to concentrations of at least four picocuries/liter (4 pCi/L) of radon over an extended period of time. The State of California Department of Health Services conducted radon surveys across portions of Kern County, during 1990. Kern County has been classified as Zone 2 which has a predicted average indoor radon screening level between 2 and 4 pCi/L. Sampling in the area of the subject property (Zip Code 93308) indicated that out of 38 tests conducted, only 2 samples exhibited concentrations higher than 4 pCi/L. The United States Environmental Protection Agency (EPA) and the Surgeon General presently recommend that all homes in the United States be individually tested for radon.

Radon sampling and laboratory analysis is beyond the scope of this assessment.

8.13 Lead

According to information published by the United States Department of Housing and Urban Development⁸ (HUD), approximately three out of every four pre-1978 buildings contain lead-based paint and/or lead plumbing components. Based on the absence of onsite structures, the presence of lead-based paints and/or plumbing components is not suspected.

Lead sampling is not included within the scope of this site assessment.

8.14 Odors

Strong, pungent, or noxious odors were not identified at the subject property during this site assessment.

8.15 Stains or Corrosion

AEC did not identify any hydrocarbon stains or corrosion during this site assessment.

8.17 Stressed Vegetation

AEC did not observe any areas with stressed vegetation during this site assessment.

9.0 INTERVIEWS, DATA GAPS, AND PRIOR REPORTS

9.1 Interviews

9.1.1 Interview with Owner/Site Representative

AEC was unable to conduct an interview with the current owner of the subject property, ARB, Inc., during this August 2022 site assessment; however, interviews have been conducted during previous ESAs performed by AEC for the subject site and surrounding properties. AEC interviewed Ms. Jessica Okamoto of Muse Management on September 6, 2018 regarding the subject property during a prior Phase I ESA at the subject property. According to Ms. Okamoto, Muse Management owned the property from 1997 to 2018 and since they are based out of Japan, they were not familiar with the daily operations at the site. Ms. Okamoto stated that she was not aware of any unauthorized releases of hazardous substances to the subject property and to the best of her knowledge there were no current or any former underground storage tanks at the property. In addition, Ms. Okamoto was not aware that dumping was occurring at the subject site; however, once she was made aware she affirmed to AEC that no one had permission to dump on the property.

9.1.2 Interview with User

The User, Mr. Craig Wilde of Industrial Property Group, Inc., would only be aware of environmental concerns if disclosed, to which he has received no adverse notifications to date. Also, Mr. Wilde completed the site questionnaires which are attached in Appendix C of this report.

9.1.3 Interview with Local Government Official(s)

The Kern County Environmental Health Services Department (KCEHSD) was provided a written request from AEC regarding any environmental inspection records the County may have for the subject property. Also, AEC contacted the Kern County Building Department, San Joaquin Valley Air Pollution Control District, and Regional Water Quality Control Board for records, however, did not conduct personal interviews. Details of the file reviews are discussed in Section 11.2.

9.2 Data Gaps

A data gap is generally defined as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may include insufficient historical information, the inability to interview person(s) with direct site knowledge, or lack of access to all areas during the investigation.

Based on the availability of aerial photos and topographic maps for the subject site from years 1915 through 2021 in reasonably ascertainable intervals, there are no apparent data gaps related to the subject site with the exception that AEC was unable to conduct an interview with the current property owner; therefore, the absence of a current interview is considered a data gap. However, the absence of an interview will not alter the conclusions and recommendations presented in this report.

9.3 Prior Reports

AEC was given no prior reports that were prepared for the subject property. However, AEC did conduct a prior Phase I Environmental Site Assessment (ESA) at the subject property during September 2018. The findings of the report were consistent with this current August 2022 site assessment and are described below:

"The results of this current September 2018 investigation has identified two housekeeping conditions, no onsite recognized environmental conditions (RECs), no controlled recognized environmental conditions, no onsite historical recognized environmental condition, one offsite recognized environmental condition, and no offsite historical recognized environmental conditions.

Housekeeping Conditions

- "The farm property has a historical agricultural use as irrigated row crop ground from prior to 1937 to the late 1990s. There is the potential that chlorinated pesticide residues exceeding commercial-use Regional Screening Levels (RSLs) may be present.

"However, it is the opinion of AEC that since the site has been disturbed on a yearly basis by discing for weed abatement during the approximate past 20 years; therefore, AEC does not recommend further investigation.

- "In the southeast portion of the subject property, AEC observed both older and newer soil stockpiles that have been dumped onsite; the genesis of the older-dumped material is currently unknown; however, the newer dumped material appears to be derived from construction waste and gardening waste (green waste).

"AEC recommends removal of the construction debris or material that would be considered "unsuitable" by a geotechnical engineer prior to conducting grading and disposing the inferred non-hazardous waste at an appropriate offsite landfill. Also, AEC recommends posting a "no dumping" sign to deter future illegal dumping.

Offsite Historical Recognized Environmental Condition

- "A review of historical aerial photographs indicates that the subject property was adjacent to the former location of large aboveground impoundments used for crude oil storage in offsite Section 1 east of Airport Drive. The impoundments were in active use in the open ground east of Airport Drive from at least 1910 through the 1940s and the footprints visible through the early 1990s. Closure of these impoundments typically consisted of pumping out all accessible crude and then pushing the residual crude to the center so that it would dry and then be removed for offsite disposal. However, this mitigation effort did not take into account any crude oil that had previously percolated into the subsurface.

"Crude oil is not a designated hazardous material unless elevated concentrations of volatile organic compounds such as benzene are identified. If one of the impoundments adjacent to the subject site had leaked crude oil it generally would have exhibited a greater propensity for vertical migration than lateral dispersion; this has been proven through the prior subsurface investigations in the surface impoundments sited in the northwest portion of Section 1 by Woodward-Clyde and Krazean. Information reviewed by AEC on the Geotracker website indicates that the impoundments in Section 1 have been adequately mitigated and confirmation sampling for both soil gas and soil indicates the contamination remaining is negligible and has not migrated onto or beneath the subject property, nor has it impacted groundwater resources estimated at depths greater than 250' bgs. In addition, AEC reviewed the Closure Letter from the RWQCB dated 12 October 2017 for the offsite impoundments east of the subject property along Airport Drive; the letter states that the impoundments no longer pose a threat to human health and/or the environment to the proposed development in the northwest portion of Section 1. AEC does not recommend further investigation unless crude oil-related waste is discovered during grading."

10.0 SITE HISTORY

10.1 Historical Use Information

10.1.1 Aerial Photograph and Topographic Map Review

Historical aerial photograph coverage and USGS Map coverage of the site were reviewed in order to evaluate past site usage and are described chronologically as follows:

Map Date: 1915 **Quad: Bakersfield** **Scale: 1"=5,208'**

The subject property and immediately surrounding properties appear to be undeveloped native ground. Oil field development is depicted offsite to the northeast.

Map Date: 1935 **Quad: Oildale** **Scale: 1"=2,640'**

The subject property has been developed with a structure along the east boundary which is currently depicted as a hard-packed dirt road. Multiple crude oil impoundments are visible to the east in Section 1 across Airport Drive and further west in Section 3. The Kern County Landing Field is described offsite to the south of the subject site.

Flight Date: 1937 **Flyer: USDA** **Scale: 1"=620'**

The subject property is under agricultural cultivation of cover crops and in the northeast portion an orchard has been planted. There is a Farm Compound between the orchard and hard-packed dirt Boughton Drive and numerous structures are present. Also, at the northeast corner an irrigation water storage reservoir is evident. There are large crude oil storage impoundments located offsite in adjoining Section 1 east of Airport Drive and the Kern County Landing Field is evident to the south.

Flight Date: 1942 **Flyer: USDA** **Scale: 1"=620'**

The subject property remains under agricultural cultivation of cover crops and orchard crops; there continues to be the Farm Compound and reservoir along the north boundary. The southeast portion of the subject property appears to be used by the airport to the south and there are offsite protective berms for the airplanes west of the site. The large crude oil storage impoundments are still visible offsite in Section 1 east of Airport Drive.

Flight Date: 1952 **Flyer: USGS** **Scale: 1"=620'**

The subject property remains under agricultural cultivation of cover crops and orchard crops; there continues to be the Farm Compound and reservoir along the north boundary. The southeast portion of the subject property no longer appears to be used by the airport to the south and the offsite protective berms for the airplanes have been removed west of the site. The large crude oil storage impoundments are still visible offsite in Section 1 east of Airport Drive.

Map Date: 1954 **Quad: Oildale** **Scale: 1"=2,000'**

The subject property is depicted as being in agricultural use with an orchard in the northeast portion of the site. The structure along the east boundary is no longer depicted, however, a structure is depicted north of the orchard along the north boundary. There is an offsite irrigation water storage reservoir depicted to the north. Approximately 23 crude oil ASTs are visible to the east in Section 1 and five of the original ASTs have been removed for the construction of North High School. Five of the ASTs in offsite Section 3 remain. Airport Drive remains depicted along the east boundary as a hard-packed dirt road. The Kern County Airport has expanded significantly offsite to the south.

Flight Date: 1956**Flyer: USDA****Scale: 1"=620'**

As before, the subject property remains under agricultural cultivation of cover crops and orchard crops; there continues to be the Farm Compound and reservoir along the north boundary. The large crude oil storage impoundments are still visible offsite in Section 1 east of Airport Drive. The offsite airport to the south is expanding and more buildings are being constructed.

Map Date: 1968**Quad: Oildale****Scale: 1"=2,000'**

There are no significant changes on the 1968 topographic map from the 1954 topographic map in the area of the subject property with the exception that a reservoir is now depicted in the northeast corner of the site.

Flight Date: 1968**Flyer: USGS****Scale: 1"=620'**

Again, the subject property remains under agricultural cultivation of cover crops and an orchard; there continues to be the Farm Compound and reservoir along the north boundary. The large crude oil storage impoundments are still visible offsite in Section 1 east of Airport Drive. The offsite airport to the south is expanding and more buildings are being constructed; Hangar Way is now visible.

Map Date: 1973**Quad: Oildale****Scale: 1"=2,000'**

Again, there are no significant changes on the 1973 topographic map from the 1968 topographic. The offsite irrigation water storage reservoir remains depicted to the north and the airport runways continue to be evident to the south. Also, the various crude oil ASTs remain depicted in the adjoining Sections 1 and 3.

Flight Date: 1973**Flyer: USDA****Scale: 1"=610'**

The orchard remains visible along with the irrigation water storage reservoir, however, the structures in the Farm Compound have been removed. Also, the remainder of the subject property is fallow. The offsite property to the north is planted to irrigated cover crops and the southern and western properties are constructed with hangars associated with the airport. As before, the large crude oil storage impoundments remain offsite in Section 1 east of the subject property.

Flight Date: 1984**Flyer: USDA****Scale: 1"=610'**

By 1984 the offsite crude oil tanks to the east appear to have been removed but their footprints remain. The subject property appears as fallow ground and the reservoir has been removed. The offsite airport runways and hangar development remain visible south and west of the subject property.

Flight Date: 1994**Flyer: Google****Scale: 1"=445'**

The subject property appears to have been plowed and may be planted to irrigated cover crops. There is a shallow trench depicted in the southeast portion of the site paralleling Airport Drive. The offsite property to the east has been graded in preparation of the residential and commercial development. The offsite Meadows Field is still visible south and west of the subject site.

Flight Date: 2003**Flyer: Google****Scale: 1"=445'**

Again, the subject property appears to have been plowed and may be planted to irrigated cover crops. There remains a shallow depression depicted in the southeast portion of the site paralleling Airport Drive. The housing tract has been developed east of the site and the offsite property to the south has been graded. The offsite Meadows Field is still visible south and west of the subject site.

Flight Date: 2008**Flyer: Google****Scale: 1"=445'**

The subject property is an undeveloped field and there are dirt roads that appear to access a central dumping area for soil in the southeast portion of the site. The offsite mini storage has been constructed east of Airport Drive.

Flight Date: 2013**Flyer: Google****Scale: 1"=445'**

The subject property continues to be undeveloped fallow ground and it appears there are numerous stockpiles of soil dumped in the southeast portion of the site.

Flight Date: 2017**Flyer: Google****Scale: 1"=445'**

The subject property continues to be undeveloped fallow ground with numerous soil piles dumped in the southeast portion of the site.

Flight Date: 2021**Flyer: Google****Scale: 1"=445'**

The subject and surrounding property generally appear as they do today.

11.0 ENVIRONMENTAL DATABASE AND AGENCY FILE REVIEW

11.1 Review of Federal, State, Tribal, and Local Government Databases

AEC contracted Environmental Data Resources (EDR)⁹ to perform database searches of readily available Federal, State, and Local database information systems for the purpose of identifying known recognized environmental conditions present on nearby properties which have the potential to adversely impact the site being assessed in this study.

A database search for sites listed on various federal, state, tribal, and local databases in the area around the Property was obtained. A description of each of the databases searched is included in the report, which is attached as Appendix B. Among the databases included in the EDR report are NPL (federal, tribal, and state-equivalent), proposed and delisted NPL, CORRACTS (RCRA facilities subject to corrective actions), hazardous waste sites identified for investigation or remediation (CERCLIS, State CERCLIS, VCP, Brownfields, Calsites, etc.), LUST, sites with engineering controls, former CERCLIS (NFRAP), RCRA and state hazardous waste generators, ERNS, SWLF, USTs, and Toxic Pits.

The review of the records satisfies all requirements as set forth in 40 CFR Section 312.26 (b) and (c) with regard to the review of federal, tribal, and state government records of databases of such government records and local government records and databases of such records pertaining to both the subject property and the nearby or adjoining properties. Further, the search distances for each particular database are as specified in 40 CFR 312.26.

Any known or suspected contaminated sites included on these lists within 0.25 miles of the Property are discussed in the following text. As a general rule, sites beyond 0.25 miles are not anticipated to impact a site significantly. Any sites beyond 0.25 miles with a high potential to impact the Property are also discussed. (Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.)

Sites such as TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with permitting requirements - into the air, water, or land as reported under SARA Title III) use or store hazardous materials and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites, there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Property.

The subject property was not identified in the EDR Site Report. However, there were numerous nearby properties within 0.25-miles of the subject property identified in the database; the majority of these sites are associated with Meadows Field. The following table lists the number of sites according to specific regulatory database information within the prescribed minimum search distance appearing in the EDR Report.

Databases Reviewed	Search Distance (SD)	Number of Sites Within SD
Federal National Priorities List (NPL) Site List	1-Mile	0
Federal Delisted NPL Site List	1-Mile	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)	1/2-Mile	0
Federal CERCLIS No Further Remedial Action Planned (NFRAP) Sites	1/2-Mile	0
Federal RCRA CORRACTS List	1-Mile	2
Federal RCRA non-CORRACTs TSD List	1/2-Mile	0
Federal RCRA Generators List	1/4-Mile	2
Federal Institutional/Engineering Control Registries	1/2-Mile	0
Federal ERNS List	On-Site	0
California and Tribal Lists of NPL Equivalent Hazardous Waste Sites Identified for Investigation and/or Remediation	1-Mile	0
California and Tribal Lists of CERCLIS Equivalent Hazardous Waste Sites Identified for Investigation and/or Remediation	1-Mile	6
California and Tribal Landfills or Solid Waste Facilities List	1/2-Mile	0
California and Tribal Leaking Underground Storage Tank (LUST) Facility List	1/2-Mile	7
California and Tribal Registered Storage Tank Facility List	1/4-Mile	19
California and Tribal Voluntary Cleanup Sites	1/2-Mile	0
Local Brownfields Sites	1/2-Mile	0
Local Landfill/Solid Waste Disposal Sites	On-Site to 1/2-Mile	0
Local List of Hazardous Waste/Contaminated Sites	On-Site to 1-Mile	5
Local List of Registered Storage Tanks	1/4-Mile	32
Local Land Records	On-Site to 1/2-Mile	0
Records of Emergency Release Reports	On-Site	0
Other Ascertainable Records/Cortese	On-Site to 1-Mile	34

11.2 Regulatory Agency Records

11.2.1 Kern County Agricultural Commission¹⁰

The Kern County Agricultural Commissioner's Office maintains records of restricted herbicides and pesticides registered for application to the subject site for a period of 5 years. Since there has been no agricultural production on the subject property during the past 25+ years there is no requirement for a Restricted Materials Permit.

11.2.2 Kern County Building Department¹¹

The Kern County Building Department maintains records of building permits issued for construction undertaken in the unincorporated areas of the County. AEC researched the online database on August 4, 2022 and identified the following permits:

Date	Record No.	Status	Type
01/18/2013	C050517	Closed	Case Violation: Excessive accumulation of weeds on exterior premises
08/05/2020	C068562	Closed	Case Violation: Excessive accumulation of weeds on exterior premises; Failure to keep premises free from creating a public nuisance

11.2.3 Kern County Environmental Health Services Department¹²

The Kern County Environmental Health Services Department (KCEHSD) maintains records of underground storage tanks (USTs), Hazardous Materials Management Plans (HMMPs), Hazardous Materials inventories, and incidents of unauthorized release of hazardous materials from underground storage tanks at the subject site and surrounding areas. AEC submitted a request for records on August 4, 2022 and on August 15, 2022, the County responded by email that there are no records for the subject property.

11.2.4 San Joaquin Valley Air Pollution Control District¹³

The San Joaquin Valley Air Pollution Control District (SJVAPCD) maintains records of Air Discharge permits for facilities located throughout the SJVAPCD. A request for a records review was submitted to the SJVAPCD on August 4, 2022 (#C-2022-8-18) and on August 11, 2022, Ms. Nannette Diaz provided AEC with one Complaint Investigation dated October 31, 2007 regarding a company that was dumping dirt and concrete at the subject property and creating dust. The findings of the complaint are described below:

“October 19, 2007; 1:30 PM Contact by Field Visit: Finding by Cari Long: RI met with the RP to determine specifically where the dust was coming from. The RP stated that the people causing the dust, AA Excavation (661-665-1120, left already. The company is dumping dirt on property on the west side of Airport Drive adjacent to Park Meadows. RI drove onto the property to examine the piles. The piles appear moist and stable. There is a pile of debris and concrete further back on the property near the airport.

“October 31, 2007; 9:45 AM Contact by Telephone: Finding by Cari Long: RI telephoned AA Excavation, who stated that they were dumping dirt there from a swimming pool construction. Each truck load is about 6 cubic yards of dirt and they dropped off only one load of dirt. They stated that most of the dust was coming from the truck traffic on the dirt road leading up to the storage piles. RI advised AA Excavation that the trucks needed to slow down and water may need to be added to the road to help mitigate dust.”

The SJVAPCD inspector wrote a letter to the property owner advising them of the situation and the steps they may need to take to mitigate dust. It does not appear that a violation was ever issued and no other records were identified related to the subject property.

11.2.5 California Department of Conservation – Geologic Energy Management Division (CalGEM)¹⁴

The subject property is located south of the Kern Front, Poso Creek, and Mount Poso Oil Fields, north of the Fruitvale Oil Field, and west of the Kern River Oil Field. The Kern Front Oil Field, located approximately 5 miles north of the site, was originally discovered by

Standard Oil Company of California's Well No. 1 in 1912. The larger Kern River Oil Field was discovered in 1899 by the Elwood Brothers in Section 3, Township 29 South, Range 28 East. This discovery was located approximately six miles east of the subject property. According to CalGEM (formerly DOGGR) Map Nos. 435 and 438, no oil and/or gas wells have been drilled at the subject property.

11.2.6 Central Valley Regional Water Quality Control Board¹⁵

The Central Valley Regional Water Quality Control Board (RWQCB) maintains a database of contaminated groundwater sites (GeoTracker). AEC has accessed GeoTracker to identify if the subject property, or adjoining and/or nearby properties have former or current soil and/or groundwater contamination from leaking underground storage tanks (USTs). The results of AEC's database review indicate that the subject property was not identified in the database. However, the Avis Rent A Car facility at 2620 Hanger Way that adjoins the southwest corner of the subject property was listed for operating a former leaking UST. According to GeoTracker, the site received case closure on June 25, 2010. Also, the Kern County Department of Airports facility at 1401 Skyway Drive (west of Hanger Way) was listed as cleanup program site with potential contaminants of concern described as pesticides and herbicides. The status of the facility is listed as "Open – Site Assessment as of 1/14/2021" and there were no documents available to review in the GeoTracker database regarding this offsite property.

Also, AEC submitted a Public Records Request to the RWQCB on August 4, 2022 regarding the site and an email response from Mr. Nicholas Handcock on August 12, 2022 indicates that the RWQCB does not have any "haz mat" and/or UST records regarding the subject property.

11.2.7 Department of Toxic Substances Control¹⁶

The Department of Toxic Substances Control (DTSC) provides access to detailed information on hazardous waste permitted and corrective action facilities, as well as existing site cleanup information through their website EnviroStor. AEC has accessed this database and determined that the subject property was not identified in the database. The only nearby facility within 1,000-feet of the subject property was the Bakersfield Municipal Airport to the southwest. A Site Screening Assessment date June 2013 prepared by the DTSC indicates that a limited passive soil gas survey was conducted to determine whether the 280-acre airport facility is a potential source of the PCE contamination that has been found in municipal groundwater wells 650- to 1,950-feet south of the southern boundary of the Airport. Although the three samples collected during the soil gas survey did not detect PCE, and the limited historical records for hazardous substance storage at the Airport, the DTSC recommended that additional investigations would be necessary to determine whether this offsite facility is a source of groundwater contamination. The site is currently listed as "Inactive – Needs Evaluation as of 10/23/2014".

11.2.8 Office of the State Fire Marshal Pipeline Safety Division¹⁷

AEC located the subject property on the National Pipeline Mapping System and determined that there is an active crude oil Shell pipeline along Airport Drive which forms the east boundary.

12.0 VAPOR ENCROACHMENT SCREENING

ASTM Standard E 2600-15 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (VES) was used as guidance for conducting a VES for the subject property. The purpose of the screening is to determine whether a Vapor Encroachment Condition (VEC) exists from chemicals of concern (COC) that may migrate as vapors onto a property as a result of contaminated soil and groundwater on or near the subject property. The screening involves a two tiered approach to assessing VEC risk as described below.

12.1 VES Tier I

12.1.1 Search Distance Test/Chemicals of Concern Test

The search distance test is conducted in conjunction with the Phase I ESA using ASTM E1527 and involves a review of the regulatory database report and available historical records to make a determination if any *known or suspect potentially contaminated* properties exist within the Area of Concern (AOC). High risk sites are typically current and former gas stations, former and current dry cleaners, manufactured gas plants, and industrial sites (Brownfields). The AOC is defined by the approximate minimum search distance of 1/3-mile surrounding the target property or 1/10-mile for petroleum hydrocarbon products. Note: the default AOC may be expanded or reduced by AEC using experience and professional judgement based on consideration of groundwater flow direction, subsurface characteristics, surficial features and/or man-made features.

If no known or potentially contaminated sites with Contaminants of Concern (COCs) exist within the AOC, a VEC does not exist and no further inquiry is necessary. If the contamination is evident at the known site, or the potentially contaminated site within the AOC consists of COCs, then a Vapor Encroachment Condition (VEC) exists and Tier II is recommended.

12.2 VES Tier II

12.2.1 Data Collection

Tier II applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to provide greater certainty to whether or not a VEC exists using non-invasive and invasive data collection. The non-invasive investigation includes review of available regulatory files to identify the source of contamination and the migration pathway of the COC. If this information is not accessible, invasive data collection can be conducted and may include sampling of soil, soil gas, and/or groundwater on the target property, target property boundary, and/or offsite.

12.2.2 Plume Test

The Plume Test assesses whether or not a plume is close enough to the property to result in a VEC using information obtained from non-invasive data collection.

1. Critical Distance Determination – Determine lineal distance from property to edge of plume in any direction (vertical, horizontal, lateral).
2. VEC exists if a plume of volatile organic compounds (VOCs), semi-volatile organic compounds (S-VOCs), or Volatile Inorganic compounds or free petroleum product accumulating above water table within 100-feet of the property or if a plume of dissolved volatile petroleum hydrocarbons within 30-feet of the property.

The subject property is not considered an area of potential Vapor Encroachment.

13.0 USER PROVIDED INFORMATION

Specific information provided by the User is discussed below.

13.1 Title Records

A chain-of-title report was provided to AEC for review.

13.2 Environmental Liens or Activity and Use Limitations

No information pertaining to environmental liens or activity/use limitations filed against the Property was provided by the User or identified by AEC during this assessment.

13.3 Specialized Knowledge

The User has provided no historical investigation reports pertaining to the Property and/or the area around the Property.

13.4 Valuation Reduction for Environmental Issues

No information pertaining to Property valuation was provided by the User.

14.0 FINDINGS AND CONCLUSION

On behalf of Mr. Craig Wilde, Industrial Property Group, Inc., Advanced Environmental Concepts, Inc. (AEC) performed a Phase I Environmental Site Assessment (ESA) during August 2022 on a 52.09-acre undeveloped property in northwest Bakersfield, California. The subject property is bordered to the north by Boughton Drive and to the east by Airport Drive and is described as Kern County Assessor's Parcel Numbers (APNs) of 492-010-13 (38.34-ac) and -17 (13.75-ac). The site is also described within a portion of the East Half of the Southeast Quarter of Section 2; Township 29 South, Range 27 East of the Mount Diablo Base & Meridian (MDB&M). The subject property has no defining features with the exception of the bordering surface streets.

AEC's site inspection of August 2022 indicates the subject property consists of undeveloped fallow ground that is scheduled for mass grading in preparation for future commercial development. In the southeast portion of the subject property, AEC observed both older and newer soil stockpiles that have been dumped onsite; the genesis of the older-dumped material is currently unknown; however, the newer dumped material appears to be derived from construction waste and gardening waste (green waste). In addition, there are a few small areas of illegal dumping surrounding the stockpiles of soil that primarily consist of household-related waste. Also, AEC observed a disconnected metal pipeline trending along the southern property boundary as well as a remnant concrete foundation.

The ESA process under ASTM Standard 1527 was created to identify *recognized environmental conditions* (RECs) which present a material risk of harm to public health or the environment and generally be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. The ESA process additionally identifies *controlled recognized environmental conditions*, which are specified under ASTM Standard 1527 as a REC resulting from a past release that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances allowed to remain in place subject to institutional controls; and/or *historical recognized environmental conditions*, i.e. conditions which may have presented a material risk to public health and/or the environment but have now been mitigated to the satisfaction of a regulatory agency at the subject property. The descriptive term "recognized environmental condition" means the presence, or likely presence, of any hazardous substances or petroleum products in, at, or on a property due to any release to the environment; under conditions that indicate an existing release, a past release, or a material threat of a release to the environment. In addition, AEC will identify non-ASTM conditions which are considered *de minimis* and generally do not present a material risk of harm to public health or the environment and would not be the subject of an enforcement action if brought to the attention of an appropriate governmental agency.

The results of this current August 2022 investigation have identified three *de minimis conditions*, no *recognized environmental conditions* (RECs), no *controlled recognized environmental conditions*, and no *historical recognized environmental conditions*.

De Minimis Conditions

- The subject property has a historical agricultural use as irrigated row crop ground from prior to 1937 to the late 1990s. There is the potential that chlorinated pesticide residues exceeding commercial-use Regional Screening Levels (RSLs) may be present.

AEC would typically recommend that shallow soil across the property be sampled and analyzed for OCPs and/or Arsenic following the guidelines outlined in the Department of Toxic Substances Control (DTSC) Interim Guidance for Sampling Agricultural Properties, Third Revision, dated August 7, 2008. This guidance was designed to evaluate agricultural properties that are proposed for redevelopment as a school site or other residential project where new land use could result in increased human exposure. However, since the subject property has been disturbed on a yearly basis by discing for weed abatement for the past approximate 25 years, it is the opinion of AEC that the guidance does not apply and recommends no further investigation is warranted regarding the former agricultural use of the site.

- In the southeast portion of the subject property, AEC observed both older and newer soil stockpiles that have been dumped onsite; the genesis of the older-dumped material is currently unknown; however, the newer dumped material appears to be derived from construction waste and gardening waste (green waste). In addition, there are a few small areas of illegal dumping surrounding the stockpiles of soil that primarily consist of household-related waste.

AEC recommends removal of the construction debris or material that would be considered “unsuitable” by a geotechnical engineer prior to conducting grading and disposing the inferred non-hazardous waste at an appropriate offsite landfill. Also, AEC recommends posting a “no dumping” sign to deter future illegal dumping.

- A review of historical aerial photographs indicates that the subject property was adjacent to the former location of large aboveground impoundments used for crude oil storage in offsite Section 1 east of Airport Drive. The impoundments were in active use in the open ground east of Airport Drive from at least 1910 through the 1940s and the footprints visible through the early 1990s. Closure of these impoundments typically consisted of pumping out all accessible crude and then pushing the residual crude to the center so that it would dry and then be removed for offsite disposal. However, this mitigation effort did not take into account any crude oil that had previously percolated into the subsurface.

Crude oil is not a designated hazardous material unless elevated concentrations of volatile organic compounds such as benzene are identified. If one of the impoundments adjacent to the subject site had leaked crude oil it generally would have exhibited a greater propensity for vertical migration than lateral dispersion; this has been proven through the prior subsurface investigations in the surface impoundments sited in the northwest portion of Section 1 by Woodward-Clyde and Krazan. Information reviewed by AEC on the Geotracker website indicates that the impoundments in Section 1 have been adequately mitigated and confirmation sampling for both soil gas and soil indicates the contamination remaining is negligible and has not migrated onto or beneath the subject property, nor has it impacted groundwater resources estimated at depths greater than 250’ bgs. In addition, AEC reviewed the Closure Letter from the RWQCB dated 12 October 2017 for the offsite impoundments east of the subject property along Airport Drive; the letter states that the impoundments no longer pose a threat to human health and/or the environment to the proposed development in the northwest portion of Section 1. AEC does not recommend further investigation unless crude oil-related waste is discovered onsite during grading.

AEC has conducted this Phase I Environmental Site Assessment for the subject 52.09-acre undeveloped property that is south of Boughton Drive and west of Airport Drive in Bakersfield, California (the Property) in conformance with the scope and limitations of ASTM Standard E1527-13. Any exceptions to, or deletions from this practice are described in Section 5.0 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property; however, three de minimis conditions were identified. Therefore, based on the results of our assessment, AEC recommends that no further action is warranted for the subject property with the exception of what is listed above.

16.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Advanced Environmental Concepts, Inc. appreciates the opportunity to provide our professional assistance to Mr. Craig Wilde and Industrial Property Group, Inc., on this project. If you have any questions regarding this assessment or if AEC can be of further service, please call us at (661) 395-1646.

In addition, I declare to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 Code of Federal Regulations (CFR) 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Sincerely,

Advanced Environmental Concepts, Inc.

This report has been prepared by:

Anthony R. Buck
Project Manager

This report has been reviewed by:

Jonathan L. Buck
Principal Geologist

52.09-acre Airport & Boughton - 2022

17.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

AEC staff is composed of three primary environmental professionals that perform Phase I Environmental Site Assessments on a routine basis. Qualifications profile for these individuals is provided in the following section.

Jonathan L. Buck

Mr. Buck received a Bachelor of Science degree in Geology from the University of California, Santa Barbara, in 1981 and was professionally engaged in the petroleum industry in various capacities through 1985. Mr. Buck joined the environmental industry in 1985 and formed **Advanced Environmental Concepts Inc.** in 1989. Since its inception, **AEC** has been a full service environmental consulting firm specializing in Phase I Environmental Site Assessments, UST programs, and soil and groundwater assessment and cleanup programs. Mr. Buck is a State of California Registered Geologist (#7468) and has performed numerous ESAs on diverse properties throughout California, Arizona, Oregon, and Washington.

April J. Saceaux

Ms. Saceaux joined AEC in June 2008 and is in her fourteenth year as a Project Manager preparing Environmental Site Assessments under the direct supervision of a California Registered Geologist.

Anthony R. Buck

Anthony Buck has three years of experience as a Project Manager under the direct supervision of a California Registered Geologist. His environmental industry experience entails soil and groundwater characterization studies, removal of soils impacted with petroleum hydrocarbons, groundwater monitoring well construction, sampling and analysis as well as conducting Phase I Environmental Site Assessments.

52.08-acre Undeveloped Property
August 17, 2022

1. View west along the north boundary (Boughton Drive) from the northeast corner of subject property.

2. View south along the east boundary (Airport Drive) from the northeast corner of the subject property.

52.08-acre Undeveloped Property
August 17, 2022

3. View southwest across the northeastern portion of the subject property from the northeast corner.

4. View of signs and a petroleum pipeline marker at the northeast corner of the subject property.

52.08-acre Undeveloped Property
August 17, 2022

5. View south along the partial west boundary (Hangar Way) from the northwest corner.

6. View east along the partial south boundary of the western portion of the subject property.

52.08-acre Undeveloped Property
August 17, 2022

7. View of Avis rental car return facility adjoining the west boundary.

8. View east along the partial south boundary of the eastern portion of the subject property.

52.08-acre Undeveloped Property
August 17, 2022

9. View along a disconnected pipeline that trends east-west along the south boundary in the eastern portion of property.

10. View of soil piles overgrown with weeds in southeast portion of site.

52.08-acre Undeveloped Property
August 17, 2022

11. Typical view of concrete rubble stockpiled in the southeast portion of the subject property.

12. Typical view of illegal dumping within the southeast portion of the subject property primarily consisting of household-related waste.

52.08-acre Undeveloped Property
August 17, 2022

13. View of a remnant concrete foundation associated with a former structure. This area was previously improved with a Farm Compound.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/20/2022 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where

EXECUTIVE SUMMARY

environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/25/2022 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

CA FID UST: The Facility Inventory Database contains active and inactive underground storage tank locations. The source is the State Water Resource Control Board.

A review of the CA FID UST list, as provided by EDR, and dated 10/31/1994 has revealed that there are 8 CA FID UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that there are 14 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date: 02-26-2021
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 02/26/2021. OBSERVATION: Observed unlabeled drums of Used Oil and Used Fuel Filters and multiple hazardous waste containers lacking the accumulation start date. All containers of hazardous waste must be labeled properly. CORRECTIVE ACTION: Label all containers holding hazardous waste with the following information: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the hazardous waste, and starting accumulation date. Drums containing used oil must also be marked with the words "USED OIL"; drums containing used oil filters must also be marked with the words "USED OIL FILTERS." Corrected on site.

Violation Notes: quantities.
Returned to compliance on 04/08/2016. Facility did not submit their 2015 annual HMBP in CERS. Sent a reminder notice on February 18, 2016 and did not comply by provided deadline of March 18, 2016. Current deadline is April 8, 2016 or will pursue Administrative Enforcement Order and office hearing for non-compliance.

Violation Division: Kern County Env Health Services Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 48088
Site Name: Mercury Air Centers -DBA Atlantic BFL
Violation Date: 02-26-2021
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)

Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.

Violation Notes: Returned to compliance on 07/11/2021. OBSERVATION: The "Primary Emergency Contact", "Secondary Emergency Contact", "Environmental Contact", and "Billing Contact" on the Business Owner/Operator Identification page in the California Environmental Reporting System (CERS) are no longer accurate. The person listed for the "Primary Emergency Contact", "Environmental Contact" and "Billing Contact" has not been with the company for over 30 days. The storage location of the drum of Prist- High Flash (FSII) is reported incorrectly in the "Hazardous Materials Inventory"; the drum was relocated to another area on site over 30 days ago. CORRECTIVE ACTION: Please make the following corrections to CERS and resubmit: 1) Correct the "Primary Emergency Contact" on the Business Owner/Operator Identification page; 2) Correct the "Secondary Emergency Contact" on the Business Owner/Operator Identification page; 3) Correct the "Environmental Contact" on the Business Owner/Operator Identification page; 4) Correct the [Truncated]

ENVIROSTOR:

Actual:
491 ft.

Name: BAKERSFIELD MUNICIPAL AIRPORT - (J09CA0230)
Address: Not reported
City,State,Zip: BAKERSFIELD, CA
Facility ID: 80000136
Status: Inactive - Needs Evaluation
Status Date: 10/23/2014
Site Code: Not reported
Site Type: Military Evaluation
Site Type Detailed: FUDS
Acres: 353.89
NPL: NO
Regulatory Agencies: SMBRP
Lead Agency: SMBRP
Program Manager: Carrie Tatoian-Cain
Supervisor: Ajit Vaidya
Division Branch: Cleanup Sacramento
Assembly: 34
Senate: 16
Special Program: EPA - PASI
Restricted Use: NO
Site Mgmt Req: NONE SPECIFIED
Funding: MMRP
Latitude: 35.42777
Longitude: -119.0444
APN: NONE SPECIFIED
Past Use: FIRING RANGE - SMALL ARMS ETC...
Potential COC: Under Investigation Explosives (UXO, MEC)
Confirmed COC: 30011-NO Under Investigation
Potential Description: SOIL
Alias Name: Meadows Field Airport
Alias Type: Alternate Name
Alias Name: CA99799F535800
Alias Type: Federal Facility ID
Alias Name: J09CA0230
Alias Type: INPR
Alias Name: 80000136

Site ID: 45297
Site Name: LOYDS AVIATION
Violation Date: 05-03-2016
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to have a professional engineer certify and review the SPCC Plan.
Violation Notes: Returned to compliance on 09/23/2016. CERTIFICATION BY A LICENSED PROFESSIONAL ENGINEER IS INCOMPLETE AND DOES NOT MEET THE REQUIREMENT. LICENSED PROFESSIONAL ENGINEER MUST REVIEW AND CERTIFY A PLAN FOR IT TO BE EFFECTIVE TO SATISFY THE REQUIREMENTS OF THIS PART. (I) BY MEANS OF THIS CERTIFICATION THE PROFESSIONAL ENGINEER ATTESTS: (I) THAT HE IS FAMILIAR WITH THE REQUIREMENTS OF THIS PART; (II) THAT HE OR HIS AGENT HAS VISITED AND EXAMINED THE FACILITY; (III) THAT THE PLAN HAS BEEN PREPARED IN ACCORDANCE WITH GOOD ENGINEERING PRACTICE, INCLUDING CONSIDERATION OF APPLICABLE INDUSTRY STANDARDS, AND WITH THE REQUIREMENTS OF THIS PART; (IV) THAT PROCEDURES FOR REQUIRED INSPECTIONS AND TESTING HAVE BEEN ESTABLISHED; AND (V) THAT THE PLAN IS ADEQUATE FOR THE FACILITY. (VI) THAT, IF APPLICABLE, FOR A PRODUCED WATER CONTAINER SUBJECT TO 112.9(C)(6), ANY PROCEDURE TO MINIMIZE THE AMOUNT OF FREE-PHASE OIL IS DESIGNED TO REDUCE THE ACCUMULATION OF FREE-PHASE OIL AND THE PROCEDURES AND FREQUENCY [Truncated]

CHEVRON - NORTH MEADOWS/AIRPORT PLAZA PROPERTY (Continued)

S118154688

Longitude: -119.037570439148
Case Type: Cleanup Program Site
Case Worker: Not reported
Local Agency: Not reported
RB Case Number: SLT5FS000
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Soil
Potential Contaminants of Concern: Diesel, Other Petroleum, Total Petroleum Hydrocarbons (TPH)
Site History: This site was originally given closure in a 27 June 1989 letter. The letter stated that Water Board concerns regarding a potential threat to groundwater had been addressed and that no further action was required. Development work on the northeastern corner of the site in April 2015 found buried material on the property (primarily petroleum hydrocarbon related). Based on the discovery of the buried material, the case was reopened.

Quarterly Update:

The Property, totaling approximately 26.68 acres, is located in the area generally bounded by Airport Drive to the West, Petrol Road to the North, undeveloped property to the south, and residential property to the east. This property is more specifically described as Kern County Assessor's Parcel Number 483-040-35-00. The primary use for the Property was storage of crude oil from the 1930's until 1997. The storage reservoir was located in the northern portion of the Property and was demolished in 1997. The remainder of the Property, other than the location of the former reservoir, was used to dispose of treated and untreated acidic tar. This tar was originally generated at the Golden Bear (formerly Witco Corporation) Refinery in Bakersfield, California. As part of the closure activities required for the hazardous waste facility located at the Property, the untreated acidic tar was removed and disposed of off-site. On December 21, 2001, DTSC and the Crompton Corporation entered into a Land Use Covenant restricting the site use, and requiring DTSC approval of a Soil Management Plan prior to any excavation. 06/05/2018- The facility submitted a Part A application 11/18/1980 but was never graded Interim Status nor did they ever submit a Part B. Instead, the facility began the closure process. See the RCRA Facility Assessment Report dated June 1997, which summarizes regulatory involvement and states that no further action is needed at this facility. The Facility Assessment Streamlining Team Records Review Checklist (FAST) dated 8/21/2009 also recommends no further action and suggests that this facility be removed from the RCRA database.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Consent Order
Completed Date: 07/25/1994
Comments: KW Plastics signed a Consent Order [HWCA No. 93/94-043(KW)] on July 18, 1994. DTSC alleged KW Plastics received hazardous waste without a permit, and disposed of hazardous waste without a permit, beginning sometime prior to October 12, 1989. Wiley Sanders Truck Lines also signed a Consent Order [HWCA No. 93/94-043(WS)] on July 18, 1994. DTSC alleged that, on or about February 21, 1990 and March 14, 1990, Wiley Sanders Truck Lines used trucks which were not water-tight to transport polypropylene chips from the GNB, Incorporated facility in Vernon, California to KW Plastics in Bakersfield. DTSC determined the chips are hazardous waste, and samples taken from leachate falling from the trucks onto the highway on those dates showed that this leachate was contaminated with California hazardous waste levels of lead.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Historical Operating Permit Authority
Completed Date: 06/28/1994
Comments: The Permit authorizes the recycling of hazardous polypropylene chips.

CERS:

Name: KW CALIFORNIA
Address: 1861 SUNNYSIDE CT
City,State,Zip: BAKERSFIELD, CA 93308
Site ID: 535163
CERS ID: 235297
CERS Description: Industrial Facility Storm Water

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-15-2016
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The KW Plastics facility was inspected on 15 November 2016, to determine compliance with the NPDES General Permit for Storm Water Discharges Associated with Industrial Activities, NPDES No. CAS000001 (2014-0057-DWQ). I met with Mike Shulke at approximately 8:01 am. The facility maintains their Storm Water Pollution Prevention Plan and Facility Site Map onsite. The Level 1 Exceedance Response Action (ERA) Evaluation and the Level 1 ERA Technical Report were submitted by a Qualified Industrial Storm water Practitioner for Total Zinc. Good housekeeping was observed along the asphalt area. Industrial materials were located atop of pallets, to prevent exposure to sheet flow from storm water. 55-gallons drums of oil were contained and covered by a roof. Mesh screens were implemented inside drain inlets leading to an offsite drainage basin. Inspection was concluded at approximately 8:58 am.

Quarterly Update: One June 20, 2019, a closure notification was submitted by KW Plastics to notify DTSC that KW Plastics plans to end hazardous waste operation and begin closure on August 30, 2019. DTSC acknowledged the closure notification notice on July 8, 2019. DTSC has completed review and approved the Sampling and Analysis Plan for the closure. KW Plastic will be implementing the work specified the Sampling and Analysis Plan in April 2020. The closure work was delayed due to Covid-19 related issues but the final closure certification report was submitted on October 12, 2020. DTSC accepted the closure certification on November 9, 2020 and KW Plastics is no longer operating as a hazardous waste

facility. Permit Activity: An application for the renewal of a RCRA permit was received on January 27, 2014. KW has requested an authorization to continue to treat hazardous waste at the facility located at Bakersfield, California. DTSC reviewed the application and issued a series of Notice of Deficiencies to the Facility. The Part A and Part B application submitted on February 9, 2016 was the final approved version of the application. A Technical Completeness letter was issued on February 24, 2016. Public Notice was issued on March 29, 2016. A Public Hearing was held on March 29, 2016. A draft permit package was made available to public during the Public Comment period of February 29, 2016 to April 18, 2016. FACILITY DESCRIPTION/ HISTORY KW Plastic is located just north of California Highway 99 on the northwestern edge of Bakersfield, California in Kern County. It is approximately 90 miles north of Los Angeles. The facility address is 1861 Sunnyside Court, Bakersfield, CA 93308. The site is approximately 650 feet long and 350 feet wide. The population within 3 miles of a radius from facility is approximately 1500. The nearest sizable community is Bakersfield, CA (population of approximately 360,000), in which the KW Plastic facility is located. KW Plastic was built in 1986 for the sole purpose of recycling hazardous waste polypropylene

Comments:	Not reported
Unit Names:	Tank C, Tank G, Tank P, Tank U
Event Description:	Closure - RECEIVE CLOSURE CERTIFICATION
Actual Date:	03/08/2010
EPA ID:	CAD982435026
Facility Type:	Historical - Non-Operating
Facility Name:	KW PLASTICS OF CALIFORNIA
Project Manager:	MICHAEL CHOE
Project Manager Lead:	MICHAEL CHOE
Supervisor:	WILLIAM HEUNG
Facility Size:	Large Treatment
Facility Status:	CLOSED
Activity Type:	Closure Final
Final Date:	Not reported
Type:	RCRA
Title Description:	KW Plastics Closure
Due Date:	Not reported
Comments:	Not reported
Unit Names:	1- Float Separator Tank, 10- Water Holding Tank, 11- Water Transfer Tank, 12- Wastewater Collection Tank, 13- Receiving Hopper, 14- Baler, 15- Filter Press, 16- Bale Storage Rack, 17- Granulator (Grinder), 2- Water Recycling Tank, 3- Wash Tank, 4- Water Recycling Tank, 5- Wash Tank, 6- Water Recycling Tank, 7- Rinse Tank, 8- Water Recycling Tank, 9- Water Recovery Tank, TANKSTR1-Unloading (GPRA Unit), TANKTRT1 (GPRA Unit), TANKTRT2, Tank C, Tank G, Tank P, Tank U
Event Description:	Closure - RESPONSE TO 2ND NOD RECEIVED
Actual Date:	01/20/2020
EPA ID:	CAD982435026
Facility Type:	Historical - Non-Operating
Facility Name:	KW PLASTICS OF CALIFORNIA
Project Manager:	MICHAEL CHOE
Project Manager Lead:	MICHAEL CHOE
Supervisor:	WILLIAM HEUNG
Facility Size:	Large Treatment
Facility Status:	CLOSED
Activity Type:	Closure Administrative
Final Date:	Not reported
Type:	RCRA
Title Description:	Input errors in units
Due Date:	Not reported
Comments:	Administratively closing units due to error (it should have been close with the Class I* Modification that was approved in 2013). Units had incorrect information inconsistent with permits. This is for the purpose of data cleanup.
Unit Names:	TANKSTR1-Unloading (GPRA Unit), TANKTRT1 (GPRA Unit), TANKTRT2
Event Description:	Closure Administrative - ISSUE CLOSURE VERIFICATION

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Universal Transverse Mercator:	Zone 11
UTM X (Meters):	314725.5
UTM Y (Meters):	3922688.0
Elevation:	524 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	11998695 OILDALE, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06029C1825E	FEMA FIRM Flood data

06029C1817E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
OILDALE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: KIMBERLINA

Soil Surface Texture:
Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches		Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	9 inches	44 inches		Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9
3	44 inches	70 inches		Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: KIMBERLINA

Soil Surface Texture:
Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches		Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	9 inches	44 inches		Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9
3	44 inches	70 inches		Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

SITE QUESTIONNAIRES

Environmental Site Assessment Owner Questionnaire

As part of the Phase I environmental site assessment standard process, adopted by ASTM International, this questionnaire was constructed in accordance with "E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process."

Purpose: In conducting an environmental site assessment, **Advanced Environmental Concepts, Inc. (AEC)** will evaluate the following subject property for any indication of hazardous waste or hazardous material releases into the environment. The purpose of this questionnaire is to assist **AEC** in conducting a more thorough investigation with information from the property Owner, Owner's representative, or current lessee/tenant that is not readily available in public records. When answering this questionnaire, please be as thorough as possible. If an employee has pertinent knowledge of the property, please have them finish a copy of the questionnaire, as well. You may fax the completed questionnaire(s) to **(661) 395-1616** or email them to **vanessa@advanced-ec.com**.

Subject Property: **52.08-acres South of Boughton Drive and West of Airport Drive**
 APNs: 492-010-13 and -17
 Bakersfield, California

1. Please list the legal description of the property. APN: 492-010-17 / 492-010-13

2. Are you aware of any violations for unauthorized use, toxic spill incidents, or unauthorized releases of hazardous materials listed for the subject property? No

3. What is the onsite water supply for potable use and irrigation use? Irrigation wells and/or district water? Any groundwater monitoring wells? North of the River Sewer District (Municipal) for potable water.

4. Please list the dates of construction for all structures on the property. N/A

5. Please list the current and historical ownership (name and address of owners) for the property. Is the property being leased? N/A

6. Do you have a current Restricted Materials Permit with the County for any ag chemical application?
(Please attach a copy) No

7. Are there any onsite oil or gas wells? No

8. Are you aware of any prior investigations conducted at the subject property? No

9. Are there any former or current Underground Storage Tanks (USTs) onsite? Unknown

10. Please list all of the Aboveground Storage Tanks (ASTs) on the property. N/A

11. What company provides electrical service for the property? Pacific Gas and Electric

12. Are there any subsurface leachfields and/or septic systems onsite? Unknown

13. Are you operating under Regulatory Permits? If so, please provide copies. No

a. Regional Water Board (Treatment Ponds, etc.)? _____

b. Community Water System (Well Water)? _____

c. Air Quality Permits? _____

d. UST/AST Compliance Permits? _____

14. Has fill material been imported to the subject property? Please explain. Unknown

Environmental Site Assessment User Questionnaire

To qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the User must provide the following information to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

Purpose: In conducting an environmental site assessment, **Advanced Environmental Concepts, Inc. (AEC)** will evaluate the following subject property for any indication of hazardous waste or hazardous material releases into the environment. The purpose of this questionnaire is to assist **AEC** in conducting a more thorough investigation with information from the User or User's representative that is not readily available in public records. When answering this questionnaire, please be as thorough as possible. If an employee has pertinent knowledge of the property, please have them finish a copy of the questionnaire, as well. You may fax the completed questionnaire(s) to **(661) 395-1616** or email them to **vanessa@advanced-ec.com**.

Subject Property: **52.08-acres South of Boughton Drive and West of Airport Drive**
 APNs: 492-010-13 and -17
 Bakersfield, California

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state, or local law? (40 CFR 312.25) Please checkmark the most appropriate response:

- ☒ I *have not* reviewed the records and **do not know** if there are any filed or recorded environmental liens.
- ☐ I *have* reviewed the records, and **No, there aren't any** filed or recorded environmental liens.
- ☐ I *have* reviewed the records, and **Yes, there are** environmental liens. Explain:

2. Are you aware of any activity and land use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law? (40 CFR 312.26) Please checkmark the most appropriate response:

- ☒ I *have not* reviewed the records and **do not know** if there are any filed or recorded AULs or any AULs in place at the site.
- ☐ I *have* reviewed the records, and **No, there aren't any** filed or recorded AULs or any AULs in place at the site.
- ☐ I *have* reviewed the records, and **Yes, there are** AULs or any AULs in place at the site. Explain:

3. Does the Title Report provide any information pertaining to environmental cleanup liens or activity and use limitations (AULs) for the subject property? Please checkmark the most appropriate response:

- ☒ I *have not* reviewed the Title Report and **do not know** if it provides environmental cleanup liens or AULs information.
- ☐ I *have* reviewed the Title Report, and **No, it does not** provide environmental cleanup liens or AULs information.
- ☐ I *have* reviewed the Title Report, and **Yes, it does** provide environmental cleanup liens or AULs information. Explain:
-
-
-

4. As the User of the ESA and the person seeking to qualify for the LLP, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? (40 CFR 312.28) Please checkmark the most appropriate response:

- ☒ **No, I do not** have any specialized knowledge and/or experience related to the property or nearby properties.
- ☐ **Yes, I do** have specialized knowledge and/or experience related to the property or nearby properties. Explain:
-
-
-

5. As the User of this ESA, based on your knowledge and experience related to the property, are you aware of any information pertaining to a reduction in value for the subject property relative to any known environmental issues? Please checkmark the most appropriate response:

- ☒ **No, I do not** have any information about a reduction in property value relative to environmental issues.
- ☐ **Yes, I do** have information about a reduction in property value relative to environmental issues. Explain:
-
-
-

6. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? Please checkmark the most appropriate response:

- ☐ **No, I do not** believe the purchase price being paid for this property reasonably reflects the fair market value of the property. Proceed to question #6a.
- ☒ **Yes, I do** believe the purchase price being paid for this property reasonably reflects the fair market value of the property. Skip to question #7.

- a. If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? (40 CFR 312.29) Please checkmark the most appropriate response:

- ☐ **No, I have not** considered the idea that known or believed contamination at the site has caused the lower purchase price.
- ☐ **Yes, I have** considered the idea that known or believed contamination at the site has caused the lower purchase price. Explain:

7. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? (40 CFR 312.30)

- a. What are the past uses of the property?

- ☒ I **do not** know.
- ☐ I **do** know. Explain:

- b. What (if any) specific chemicals are present, or once were present, at the property?

- ☒ I **do not** know.
- ☐ I **do** know. Explain:

- c. What (if any) spills or other chemical releases have taken place at the property?

- ☒ I **do not** know.
- ☐ I **do** know. Explain:

- d. What (if any) environmental cleanups have taken place at the property?

- ☒ I **do not** know.
- ☐ I **do** know. Explain:

8. As the User of this ESA, based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property? (40 CFR 312.31) Please checkmark the most appropriate response:

- ☒ **No, I do not know and/or do not have any** experience with any obvious indicators that point to the presence or likely presence of contamination at the property.
- ☐ **Yes, I do know and/or do have** experience with obvious indicators that point to the presence or likely presence of contamination at the property. Explain:

9. Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the site? Please checkmark the most appropriate response:

- ☒ **No, I am not** aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the site.
- ☐ **Yes, I am** aware of pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the site. Explain:

10. Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site? Please checkmark the most appropriate response:

- ☒ **No, I am not** aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products, in, on, or from the site.
- ☐ **Yes, I am** aware of pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products, in, on, or from the site. Explain:

11. Are you aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? Please checkmark the most appropriate response:

- ☒ **No, I am not** aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.
- ☐ **Yes, I am** aware of a notice from a government entity (or multiple government entities) regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products. Explain:

**** DETERMINATION OF NO HAZARD TO AIR NAVIGATION ****

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

Structure:	Commercial Use Building Bldg 1 (NE Corner)
Location:	Bakersfield, CA
Latitude:	35-26-01.00N NAD 83
Longitude:	119-02-24.00W
Heights:	535 feet site elevation (SE) 45 feet above ground level (AGL) 580 feet above mean sea level (AMSL)

This aeronautical study revealed that the structure does not exceed obstruction standards and would not be a hazard to air navigation provided the following condition(s), if any, is(are) met:

It is required that FAA Form 7460-2, Notice of Actual Construction or Alteration, be e-filed any time the project is abandoned or:

- ☐ At least 10 days prior to start of construction (7460-2, Part 1)
☒ Within 5 days after the construction reaches its greatest height (7460-2, Part 2)

Based on this evaluation, marking and lighting are not necessary for aviation safety. However, if marking/lighting are accomplished on a voluntary basis, we recommend it be installed in accordance with FAA Advisory circular 70/7460-1 M.

The structure considered under this study lies in proximity to an airport and occupants may be subjected to noise from aircraft operating to and from the airport.

This determination expires on 02/02/2024 unless:

- (a) the construction is started (not necessarily completed) and FAA Form 7460-2, Notice of Actual Construction or Alteration, is received by this office.
- (b) extended, revised, or terminated by the issuing office.

- (c) the construction is subject to the licensing authority of the Federal Communications Commission (FCC) and an application for a construction permit has been filed, as required by the FCC, within 6 months of the date of this determination. In such case, the determination expires on the date prescribed by the FCC for completion of construction, or the date the FCC denies the application.

NOTE: REQUEST FOR EXTENSION OF THE EFFECTIVE PERIOD OF THIS DETERMINATION MUST BE E-FILED AT LEAST 15 DAYS PRIOR TO THE EXPIRATION DATE. AFTER RE-EVALUATION OF CURRENT OPERATIONS IN THE AREA OF THE STRUCTURE TO DETERMINE THAT NO SIGNIFICANT AERONAUTICAL CHANGES HAVE OCCURRED, YOUR DETERMINATION MAY BE ELIGIBLE FOR ONE EXTENSION OF THE EFFECTIVE PERIOD.

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights, and frequencies or use of greater power, except those frequencies specified in the Colo Void Clause Coalition; Antenna System Co-Location; Voluntary Best Practices, effective 21 Nov 2007, will void this determination. Any future construction or alteration, including increase to heights, power, or the addition of other transmitters, requires separate notice to the FAA. This determination includes all previously filed frequencies and power for this structure.

If construction or alteration is dismantled or destroyed, you must submit notice to the FAA within 5 days after the construction or alteration is dismantled or destroyed.

This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of the structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

If we can be of further assistance, please contact our office at (847) 294-7575, or vivian.vilaro@faa.gov. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2022-AWP-13421-OE.

**** DETERMINATION OF NO HAZARD TO AIR NAVIGATION ****

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

Structure:	Commercial Use Building Bldg 1 (SE Corner)
Location:	Bakersfield, CA
Latitude:	35-25-51.00N NAD 83
Longitude:	119-02-24.00W
Heights:	515 feet site elevation (SE) 65 feet above ground level (AGL) 580 feet above mean sea level (AMSL)

This aeronautical study revealed that the structure does not exceed obstruction standards and would not be a hazard to air navigation provided the following condition(s), if any, is(are) met:

It is required that FAA Form 7460-2, Notice of Actual Construction or Alteration, be e-filed any time the project is abandoned or:

- ☐ At least 10 days prior to start of construction (7460-2, Part 1)
☒ Within 5 days after the construction reaches its greatest height (7460-2, Part 2)

Based on this evaluation, marking and lighting are not necessary for aviation safety. However, if marking/lighting are accomplished on a voluntary basis, we recommend it be installed in accordance with FAA Advisory circular 70/7460-1 M.

The structure considered under this study lies in proximity to an airport and occupants may be subjected to noise from aircraft operating to and from the airport.

This determination expires on 02/02/2024 unless:

- (a) the construction is started (not necessarily completed) and FAA Form 7460-2, Notice of Actual Construction or Alteration, is received by this office.
- (b) extended, revised, or terminated by the issuing office.

- (c) the construction is subject to the licensing authority of the Federal Communications Commission (FCC) and an application for a construction permit has been filed, as required by the FCC, within 6 months of the date of this determination. In such case, the determination expires on the date prescribed by the FCC for completion of construction, or the date the FCC denies the application.

NOTE: REQUEST FOR EXTENSION OF THE EFFECTIVE PERIOD OF THIS DETERMINATION MUST BE E-FILED AT LEAST 15 DAYS PRIOR TO THE EXPIRATION DATE. AFTER RE-EVALUATION OF CURRENT OPERATIONS IN THE AREA OF THE STRUCTURE TO DETERMINE THAT NO SIGNIFICANT AERONAUTICAL CHANGES HAVE OCCURRED, YOUR DETERMINATION MAY BE ELIGIBLE FOR ONE EXTENSION OF THE EFFECTIVE PERIOD.

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights, and frequencies or use of greater power, except those frequencies specified in the Colo Void Clause Coalition; Antenna System Co-Location; Voluntary Best Practices, effective 21 Nov 2007, will void this determination. Any future construction or alteration, including increase to heights, power, or the addition of other transmitters, requires separate notice to the FAA. This determination includes all previously filed frequencies and power for this structure.

If construction or alteration is dismantled or destroyed, you must submit notice to the FAA within 5 days after the construction or alteration is dismantled or destroyed.

This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of the structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

**** DETERMINATION OF NO HAZARD TO AIR NAVIGATION ****

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

Structure:	Commercial Use Building Bldg 2 (SW Corner)
Location:	Bakersfield, CA
Latitude:	35-25-41.00N NAD 83
Longitude:	119-02-27.00W
Heights:	498 feet site elevation (SE)
	55 feet above ground level (AGL)
	553 feet above mean sea level (AMSL)

This aeronautical study revealed that the structure does not exceed obstruction standards and would not be a hazard to air navigation provided the following condition(s), if any, is(are) met:

It is required that FAA Form 7460-2, Notice of Actual Construction or Alteration, be e-filed any time the project is abandoned or:

- ☐ At least 10 days prior to start of construction (7460-2, Part 1)
☒ Within 5 days after the construction reaches its greatest height (7460-2, Part 2)

Based on this evaluation, marking and lighting are not necessary for aviation safety. However, if marking/lighting are accomplished on a voluntary basis, we recommend it be installed in accordance with FAA Advisory circular 70/7460-1 M.

The structure considered under this study lies in proximity to an airport and occupants may be subjected to noise from aircraft operating to and from the airport.

This determination expires on 02/02/2024 unless:

- (a) the construction is started (not necessarily completed) and FAA Form 7460-2, Notice of Actual Construction or Alteration, is received by this office.
- (b) extended, revised, or terminated by the issuing office.

- (c) the construction is subject to the licensing authority of the Federal Communications Commission (FCC) and an application for a construction permit has been filed, as required by the FCC, within 6 months of the date of this determination. In such case, the determination expires on the date prescribed by the FCC for completion of construction, or the date the FCC denies the application.

NOTE: REQUEST FOR EXTENSION OF THE EFFECTIVE PERIOD OF THIS DETERMINATION MUST BE E-FILED AT LEAST 15 DAYS PRIOR TO THE EXPIRATION DATE. AFTER RE-EVALUATION OF CURRENT OPERATIONS IN THE AREA OF THE STRUCTURE TO DETERMINE THAT NO SIGNIFICANT AERONAUTICAL CHANGES HAVE OCCURRED, YOUR DETERMINATION MAY BE ELIGIBLE FOR ONE EXTENSION OF THE EFFECTIVE PERIOD.

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights, and frequencies or use of greater power, except those frequencies specified in the Colo Void Clause Coalition; Antenna System Co-Location; Voluntary Best Practices, effective 21 Nov 2007, will void this determination. Any future construction or alteration, including increase to heights, power, or the addition of other transmitters, requires separate notice to the FAA. This determination includes all previously filed frequencies and power for this structure.

If construction or alteration is dismantled or destroyed, you must submit notice to the FAA within 5 days after the construction or alteration is dismantled or destroyed.

This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of the structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

**** DETERMINATION OF NO HAZARD TO AIR NAVIGATION ****

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

Structure: Commercial Use Building Bldg 1 (NW Corner)
Location: Bakersfield, CA
Latitude: 35-26-01.00N NAD 83
Longitude: 119-02-33.00W
Heights: 529 feet site elevation (SE)
51 feet above ground level (AGL)
580 feet above mean sea level (AMSL)

This aeronautical study revealed that the structure does not exceed obstruction standards and would not be a hazard to air navigation provided the following condition(s), if any, is(are) met:

It is required that FAA Form 7460-2, Notice of Actual Construction or Alteration, be e-filed any time the project is abandoned or:

- ☐ At least 10 days prior to start of construction (7460-2, Part 1)
☒ Within 5 days after the construction reaches its greatest height (7460-2, Part 2)

Based on this evaluation, marking and lighting are not necessary for aviation safety. However, if marking/lighting are accomplished on a voluntary basis, we recommend it be installed in accordance with FAA Advisory circular 70/7460-1 M.

The structure considered under this study lies in proximity to an airport and occupants may be subjected to noise from aircraft operating to and from the airport.

This determination expires on 02/02/2024 unless:

- (a) the construction is started (not necessarily completed) and FAA Form 7460-2, Notice of Actual Construction or Alteration, is received by this office.
- (b) extended, revised, or terminated by the issuing office.

- (c) the construction is subject to the licensing authority of the Federal Communications Commission (FCC) and an application for a construction permit has been filed, as required by the FCC, within 6 months of the date of this determination. In such case, the determination expires on the date prescribed by the FCC for completion of construction, or the date the FCC denies the application.

NOTE: REQUEST FOR EXTENSION OF THE EFFECTIVE PERIOD OF THIS DETERMINATION MUST BE E-FILED AT LEAST 15 DAYS PRIOR TO THE EXPIRATION DATE. AFTER RE-EVALUATION OF CURRENT OPERATIONS IN THE AREA OF THE STRUCTURE TO DETERMINE THAT NO SIGNIFICANT AERONAUTICAL CHANGES HAVE OCCURRED, YOUR DETERMINATION MAY BE ELIGIBLE FOR ONE EXTENSION OF THE EFFECTIVE PERIOD.

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights, and frequencies or use of greater power, except those frequencies specified in the Colo Void Clause Coalition; Antenna System Co-Location; Voluntary Best Practices, effective 21 Nov 2007, will void this determination. Any future construction or alteration, including increase to heights, power, or the addition of other transmitters, requires separate notice to the FAA. This determination includes all previously filed frequencies and power for this structure.

If construction or alteration is dismantled or destroyed, you must submit notice to the FAA within 5 days after the construction or alteration is dismantled or destroyed.

This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of the structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

If we can be of further assistance, please contact our office at (847) 294-7575, or vivian.vilaro@faa.gov. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2022-AWP-13422-OE.

**** DETERMINATION OF NO HAZARD TO AIR NAVIGATION ****

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

Structure: Commercial Use Building Bldg 2 (NW Corner)
Location: Bakersfield, CA
Latitude: 35-25-49.00N NAD 83
Longitude: 119-02-27.00W
Heights: 510 feet site elevation (SE)
43 feet above ground level (AGL)
553 feet above mean sea level (AMSL)

This aeronautical study revealed that the structure does not exceed obstruction standards and would not be a hazard to air navigation provided the following condition(s), if any, is(are) met:

It is required that FAA Form 7460-2, Notice of Actual Construction or Alteration, be e-filed any time the project is abandoned or:

☐ At least 10 days prior to start of construction (7460-2, Part 1)
☒ Within 5 days after the construction reaches its greatest height (7460-2, Part 2)

Based on this evaluation, marking and lighting are not necessary for aviation safety. However, if marking/lighting are accomplished on a voluntary basis, we recommend it be installed in accordance with FAA Advisory circular 70/7460-1 M.

The structure considered under this study lies in proximity to an airport and occupants may be subjected to noise from aircraft operating to and from the airport.

This determination expires on 02/02/2024 unless:

- (a) the construction is started (not necessarily completed) and FAA Form 7460-2, Notice of Actual Construction or Alteration, is received by this office.
- (b) extended, revised, or terminated by the issuing office.

- (c) the construction is subject to the licensing authority of the Federal Communications Commission (FCC) and an application for a construction permit has been filed, as required by the FCC, within 6 months of the date of this determination. In such case, the determination expires on the date prescribed by the FCC for completion of construction, or the date the FCC denies the application.

NOTE: REQUEST FOR EXTENSION OF THE EFFECTIVE PERIOD OF THIS DETERMINATION MUST BE E-FILED AT LEAST 15 DAYS PRIOR TO THE EXPIRATION DATE. AFTER RE-EVALUATION OF CURRENT OPERATIONS IN THE AREA OF THE STRUCTURE TO DETERMINE THAT NO SIGNIFICANT AERONAUTICAL CHANGES HAVE OCCURRED, YOUR DETERMINATION MAY BE ELIGIBLE FOR ONE EXTENSION OF THE EFFECTIVE PERIOD.

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights, and frequencies or use of greater power, except those frequencies specified in the Colo Void Clause Coalition; Antenna System Co-Location; Voluntary Best Practices, effective 21 Nov 2007, will void this determination. Any future construction or alteration, including increase to heights, power, or the addition of other transmitters, requires separate notice to the FAA. This determination includes all previously filed frequencies and power for this structure.

If construction or alteration is dismantled or destroyed, you must submit notice to the FAA within 5 days after the construction or alteration is dismantled or destroyed.

This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of the structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

If we can be of further assistance, please contact our office at (847) 294-7575, or vivian.vilaro@faa.gov. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2022-AWP-13426-OE.

**** Extension ****

A Determination was issued by the Federal Aviation Administration (FAA) concerning:

Structure:	Commercial Use Building Bldg 2 (NW Corner)
Location:	Bakersfield, CA
Latitude:	35-25-49.00N NAD 83
Longitude:	119-02-27.00W
Heights:	510 feet site elevation (SE) 43 feet above ground level (AGL) 553 feet above mean sea level (AMSL)

In response to your request for an extension of the effective period of the determination, the FAA has reviewed the aeronautical study in light of current aeronautical operations in the area of the structure and finds that no significant aeronautical changes have occurred which would alter the determination issued for this structure.

Accordingly, pursuant to the authority delegated to me, the effective period of the determination issued under the above cited aeronautical study number is hereby extended and will expire on 08/27/2025 unless otherwise extended, revised, or terminated by this office. You must adhere to all conditions identified in the original determination.

This extension issued in accordance with 49 U.S.C., Section 44718 and, if applicable, Title 14 of the Code of Federal Regulations, part 77, concerns the effect of the structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

If we can be of further assistance, please contact our office at (404) 305-6430, or kelly.r.nelson@faa.gov. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2022-AWP-13426-OE.

4. CONCLUSIONS AND RECOMMENDATIONS	4

APPENDIX

Appendix A – Soil Map

Appendix B – Hydrology Calculations

Appendix C – Basin Exhibits

Appendix D – Drainage Exhibit

1. PURPOSE

The purpose for this Drainage Report is as follows:

1. To provide a storm drainage system in accordance with Kern County Hydrology Manual and Kern County's Division Four Standards for Drainage, and the requirements and guidelines.
2. To provide an economical and reasonable design for storm drain conveyance and retention.

2. GUIDELINES

The following design standards were used in the development of the report:

1. The soil group was obtained from the US Department of Agriculture Soils Survey.
Soil group for this site is Type C;
 - 146ne – Delano sandy loam, 1 to 5 percent slopes (approx. 94% of project)
 - 180 Kimberlina-Urban land-Cajon complex, 0 to 2 percent slopes (approx. 6% of project)
2. The runoff coefficient of 0.90 – Commercial, was used
3. The Curve Numbers used (in HydroCAD) are:
 - 98 - Roof
 - 98 - Paved Parking
 - 74 – Grass cover >78%, Good
4. Rainfall Depth for 10-year, 5-day storm event is 2.32" (0.19ft) per NOAA Precipitation Frequency Data Server.

3. DESIGN APPROACH

The purpose for this study is to show the retention of the 10-year, 5-day storm event, for the developed project site, utilizing retention earthen basins and underground prefabricated basins.

The site is divided into 3 drainage areas. All runoff will be retained on-site. The required retaining basin volumes were calculated using the equation $V=0.19 \times (C \times A)$. There are three (3) retaining earthen basins and 3 underground prefabricated retaining basins for the storage of the overflow from its respective earthen basin. The weighted coefficient values are provided for each area, and the calculations for the provided volumes are shown on the Retention Basin Exhibits (see Appendix C)

The SCS TR-20 method for the 10-year, 5-day event was performed using HydroCAD 10.00-20. This program routes the flows for the system and calculates the runoff volumes and creates Hydrographs. (see Appendix B)

4. CONCLUSIONS AND RECOMMENDATIONS

The main objective of this report was to design a storm drain system and meet the Kern County Design Standards. The basins will have designed water surface depths (see Appendix C) with a minimum of 1 foot of freeboard. The total capacity of the earthen basins and the underground basins will be able to store 371,897 cubic-feet of water with a required volume of 371,680 cubic-feet.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
 Web Soil Survey URL:
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Kern County, California, Northwestern Part
 Survey Area Data: Version 15, Sep 1, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 12, 2022—Mar 22, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
146ne	Delano sandy loam, 1 to 5 percent slopes	C	63.7	85.4%
180	Kimberlina-Urban land-Cajon complex, 0 to 2 percent slopes	A	10.9	14.6%
Totals for Area of Interest			74.6	100.0%

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition

Component Percent Cutoff: None Specified

1 INTRODUCTION

1.1 PURPOSE OF WATER SUPPLY ASSESSMENT

On January 1, 2002, the California Senate Bill 610 (SB 610) amended state law to improve the link between information on water supply availability and land use decisions made by cities and counties. SB 610, codified in Water Code Sections 19010 to 19015, promotes collaborative planning between local water suppliers, cities, and counties. It requires detailed information regarding water supply availability be provided to city and county decision-makers prior to the approval of specified development projects. The purpose of this coordination is to ensure that prudent water supply planning has been conducted, and that planned water supplies are adequate to meet existing demands, plus anticipated demands from approved projects and tentative maps, and the demands of proposed projects.

Projects are subjected to SB 610 if the project is subject to the California Environmental Quality Act (CEQA), and it meets the criteria of a "project" as defined in Water Code Section 10912. The "project" criteria are as follows:

- A proposed residential development of more than 500 dwelling units
- A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space
- A proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space
- A proposed hotel or motel, or both, having more than 500 rooms
- A proposed industrial, manufacturing, or processing plant, or industrial park planned to employ more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area
- A mixed-use project that includes one or more of the projects specified above
- A project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500 dwelling unit project

Once the project is determined to be subject to SB 610, the land use agencies must identify any public water purveyor that may supply water for the proposed development project; and request a Water Supply Assessment (WSA) from the identified water purveyor. If no public water purveyor is identified, the lead agency must prepare the WSA. The WSA must analyze the sufficiency of the proposed water supplies to meet a project's projected future water demands, under all hydrologic conditions (Normal Years, Single Dry Years, and Multiple Dry Years), in addition to the existing and future water uses of the area within a 20-year planning horizon.

1.2 PROJECT SUMMARY

This WSA was prepared for the Airport & Boughton Drive Project (Project) in the western center of Kern County. The Project is located in the City of Bakersfield, approximately 1.8 miles east of Highway 99, in the southwest corner of Boughton Drive and Airport Drive (**Figure 1**). The site includes two parcels totaling approximately 52.09 acres (Accessor's Parcel Numbers [APNs]: 492-010-13 and 492-010-17). Both parcels are zoned for the light industrial land use designation. The existing site is currently undeveloped vacant land.

FIGURE 1 PROJECT LOCATION

DATE	NOVEMBER, 2023
SCALE	NTS
DRAWN BY	KDH
JOB NO.	A22364-1

The proposed Project shall consist of two industrial warehousing buildings with a total area of 923,128 square feet and is anticipated to have approximately 1,630 employees. The Project site will include parking spaces, landscaping, and stormwater systems around each building. The water supply source for the site will be sourced from both surface water and groundwater pumped from the Kern County Subbasin.

1.3 PROJECT DESCRIPTION

The first building (building 1) site is approximately 38.34 acres and adjacent to Boughton Drive and Airport Drive. Building 1 has a total area of 655,690 SF, with approximately 622,906 SF in warehouse space and 32,785 SF in office space (**Figure 2**). Approximately 47 loading dock doors are on the north and south sides of building 1. There is a total of 384 standard parking spaces, 13 parking spaces compliant with the American Disabilities Act (ADA), and 231 truck parking stalls. This building is anticipated to have two shifts resulting in a total of 1,158 employees per day. Stormwater is to flow toward onsite storm drain inlets and discharge into the two detention basins. The eastern side of the building will consist of a total of 3 access driveways adjacent to Airport Drive.

The second building (building 2) site is approximately 13.75 acres, located south of building 1 and adjacent to Airport Drive. Building 2 has a total area of 267,438 SF, with 254,066 SF in warehouse space and 13,372 SF in office space (**Figure 2**). The western face of building 2 will have approximately 34 loading dock doors. There are a total of 135 standard parking spaces, 7 ADA compliant parking spaces, and 78 truck parking stalls. This building is anticipated to have two shifts resulting in a total of 472 employees per day. Stormwater flows toward onsite storm drain inlets and discharges into a detention basin. The eastern side of the building will consist of a total of 2 access driveways adjacent to Airport Drive.

The Oildale Mutual Water Company (OMWC) is the public water supplier for the Project. OMWC's water supply source comes from purchased or imported water from the North of the River Municipal Water District (NORMWD)/Kern County Water Agency (KCWA) and groundwater from the Kern County Subbasin. OMWC has provided a will serve letter for the Project.

1.4 PREPARATION OF WATER SUPPLY ASSESSMENT

The Project is considered a "project", as defined by SB 610 Water Code Section 10912, because it includes a proposed industrial building having more than 650,000 SF of floor area, is greater than 40 acres, and has more than 1,000 employees. To satisfy the aforementioned CEQA requirements, a Precise Development Plan (PD Plan) and an Environmental Impact Report (EIR) are being prepared for the proposed Project. This WSA was prepared to support the two CEQA documents.

The PD Plan is required by the Kern County Planning and Natural Resources Department to ensure new developments in areas with unique site characteristics, environmental conditions, or sensitive land uses are compatible with the existing land uses and constraints. An EIR document is required by CEQA when the project has been determined to have possible significant effects on the environment. The Kern County Planning and Natural Resources Department, in coordination with environmental consultants, is the lead agency preparing the EIR.

The OMWC is the public water supplier for the Project and therefore responsible for presenting water supply sufficiency for the Project. Kier + Wright Civil Engineers and Land Surveys (KW) has prepared this WSA on behalf of the Industrial Property Group, Inc (IPG). As part of the assessment, the 2020 OMWC Urban Water Management Plan (UWMP) was used in evidentiary record.

DRAWN BY KDH

JOB NO. A22364-1

1.5 PROJECT CONSIDERATION IN URBAN WATER MANAGEMENT PLAN

The Project is entirely located within the OMWC service area. The OMWC's 2020 UWMP projected future water supplies and demands based on two methodologies: a land use methodology and a population growth methodology. The land use methodology projections were based on specific plans for areas of the City of Shafter within the OMWC and the anticipated industrial developments, which includes the proposed project area. In proportion with the general population growth, the industrial section is expected to increase at about 2.3% in the next ten years. Though the UWMP does not specifically mention the Project, it is understood that the Project's water demands are included under the anticipated industrial growth as detailed in the UWMP.

2 PROJECT WATER DEMAND

2.1 EXISTING SITE WATER DEMAND

The existing site is and has historically been vacant land. Therefore, it is assumed that the existing site water demand is zero.

2.2 CONSTRUCTION WATER DEMAND

Construction water is assumed to be used during construction for the purpose of prewatering and grading. Construction water is considered a temporary use and will not occur at the same time as the other project water demands as its use will occur prior to the installation of the water systems. For a standard 52 acre-site, water use for prewatering is approximately 1,000,000 gpd for 21 days and 350,000 gpd per 35 days for grading. Therefore the construction water demand is approximately 102 AFY.

2.3 PROPOSED PROJECT WATER DEMAND

The Project's indoor water demand was determined using an employee-based water demand estimate. The number of warehousing employees were determined using the average of 1,500 SF per warehouse employee from the 2016 Commercial Building Energy Consumption Survey published by the Energy Information Administration. The number of office employees was determined using an industry standard of 200 SF per office employee. The employee factors and the estimated warehouse and office areas were then used to determine the total number of employees. The number of employees is expected to double under the assumption of two shifts a day, which yields a total of 1,631 employees. Fixture rates from the Non-Residential Baseline Water Use Worksheet published by the California Green Building Standards Code were then used to determine the average water use per employee. This value was determined to be approximately 10 gpd per employee. This yields a total indoor water use of 18 AFY. A summary of the Project's anticipated indoor water demand is provided in Table 2-1.

Table 2-1: Project Indoor Water Demands			
	Total Employees	Water use per Employee (gpd)	Total water use (gpd)
Proposed Project	1,631	10	16,310
Project Indoor Demand (AFY) =			18.3

The Project's landscaping irrigation water demand was determined using an area-based water demand estimate. Approximately 15 percent of the developed area (approximately 6.64 acres) was

assumed to be landscaped. Chapter 2.7 of the 2015 California Code of Regulations Model Water Efficient Landscape Ordinance was used to obtain the non-residential irrigation water use factor of 1.9 af/ac/yr. The non-residential water use factor and estimated landscaping area were then used to determine the yearly landscaping irrigation demand. Therefore, the landscaping irrigation demand determined for the site is 12.6 AFY. A summary of the landscaping irrigation water demand is provided in Table 2-2.

Table 2-2: Project Landscaping Irrigation Demand			
	Landscaping Area (Acre)	Non-Residential Irrigation Demand Factor (af/ac/yr)	Project Landscaping Irrigation Demand (AFY)
Proposed Project	6.64	1.9	12.6

The total water demand for the Project is estimated to be 31 AFY. The Project water demands are not expected to change and shall remain the same at buildout and through the year 2040. A summary of the total Project water demand is provided in Table 2-3.

Table 2-3: Project's Annual Water Demands			
	Indoor (AFY)	Landscaping Irrigation (AFY)	Total Water Demand (AFY)
Proposed Project	18.3	12.6	30.9
Total Water Demand (AFY) =			31

3 PUBLIC WATER SUPPLIER DESCRIPTION

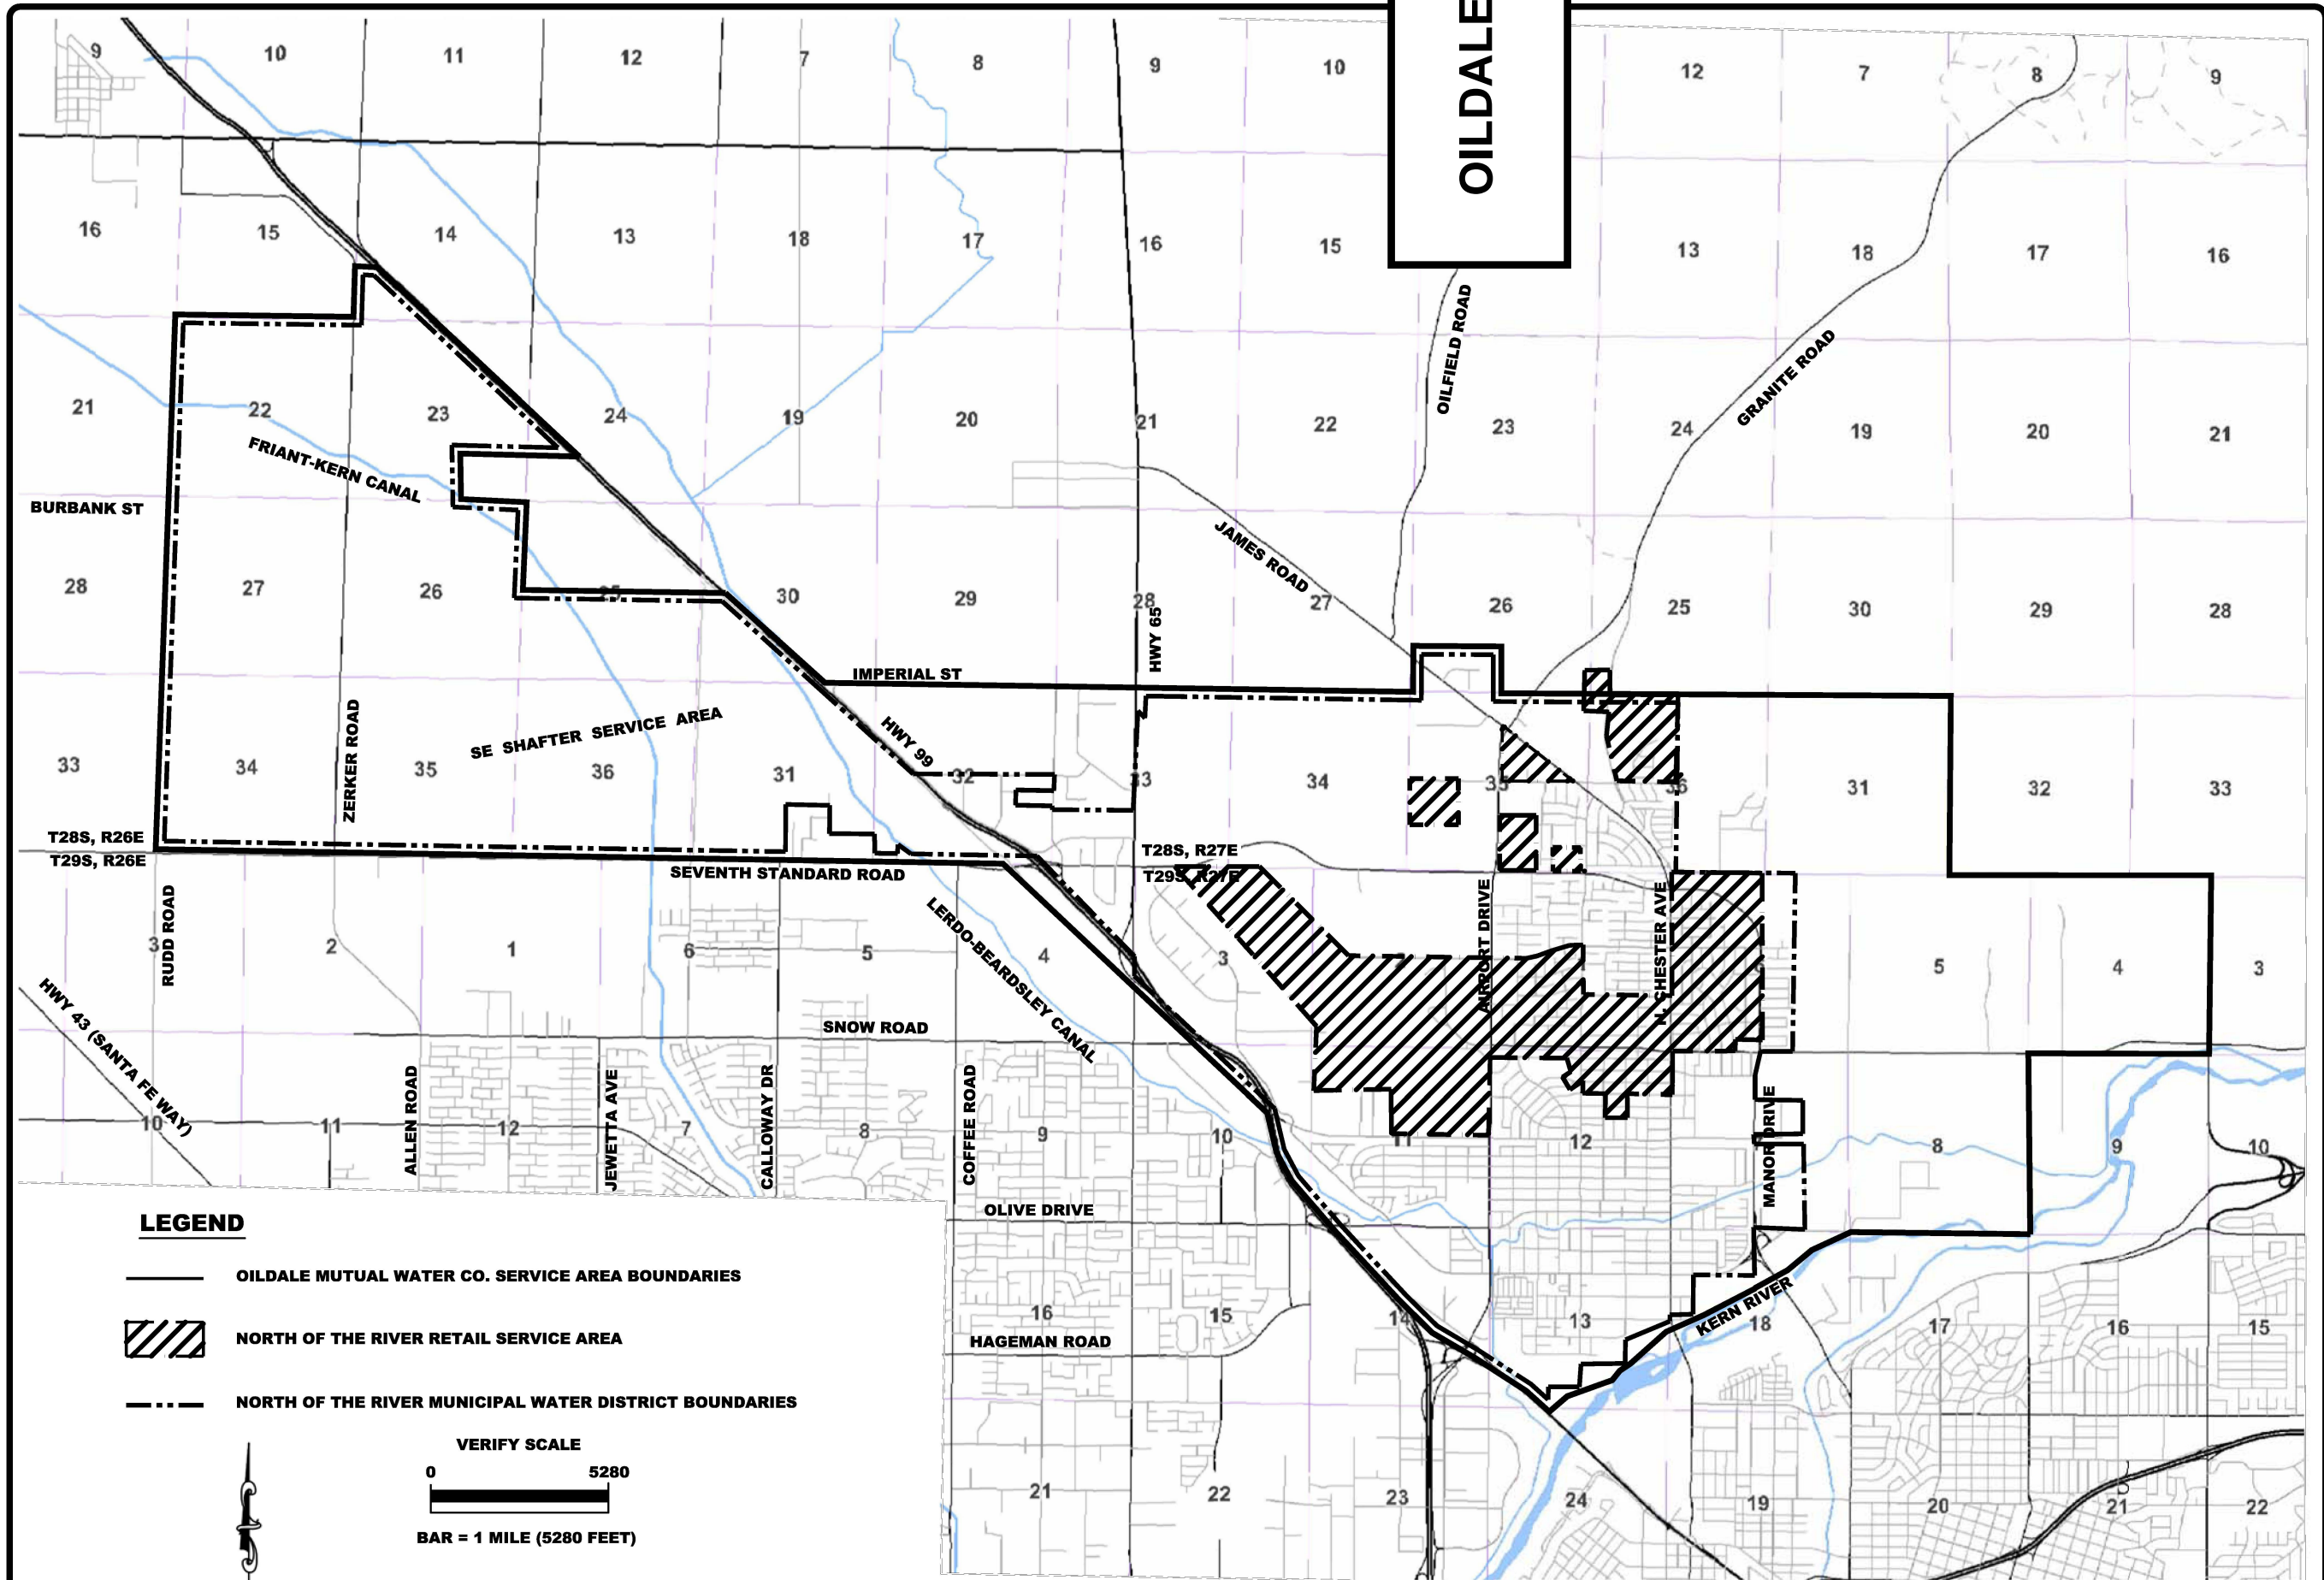

3.1 SERVICE AREA

The OMWC's service area encompasses approximately 26.3 square miles. The service area is in the southern portion of San Joaquin Valley, just north of Bakersfield, approximately 110 miles north of Los Angeles, and 290 miles southwest of San Francisco. The OMWC's service area includes the southeast Shafter area and the easterly half of Kern County, including Bakersfield and portions of Oildale. The OMWC merged the retail portion of the NORMDWD's service area in 2014. The OMWC serves a total of approximately 37,726 customers with a total of 11,693 municipal connections. Services are mostly residential connections with some commercial and industrial customers. OMWC's water service area is shown in **Figure 3**.

3.2 CLIMATE

The OMWC's service area is located within the San Joaquin Valley Unified Air Pollution Control District. This includes the climate region of the eastern side of Kern County, such as Bakersfield and Oildale. Water usage in the region is greatly influenced by the temperatures and local precipitation. The local climate offers a hot arid climate with hot dry summers and cool winters. The average monthly low temperature in the winter is approximately 39.6 degrees Fahrenheit while the average monthly high temperature is approximately 98.3 degrees Fahrenheit in the summer (Table 3-1). The area experiences the wet season from November to April, with an annual average precipitation of 6.3 inches (Table 3-2). The average annual evapotranspiration (Eto) is over

Source: Table 3-3 in the 2020 OMWC UWMP

3.3 POPULATION AND DEMOGRAPHICS

The 2020 estimated population for the OMWC's service area population is 36,726 residents. A population growth rate of 2.5% was derived from the Southeast Shafter Region and the Oildale 2010-2020 average growth rate data from the U.S. Census Bureau's population data. The 2.5% growth rate was therefore used to project the OMWC service area population from years 2020 to 2040. The population projection from the year 2020 to year 2040 may be observed in Table 3-4.

Table 3-4: Current and Projected Population					
Population Served	2020^(a)	2025	2030	2035	2040
	36,726	41,938	45,382	53,498	58,397

^(a)Source: 2020 Electronic Annual Report for OMWC

Source: Table 3-4 in the 2020 OMWC UWMP

3.3.1 DEMOGRAPHICS AND SOCIOECONOMICS

A large growth in residential and commercial developments is anticipated over the next twenty years within the Company's service area. The Southeast Shafter region is expected to experience substantial residential growth leading to a projected 4,824 single family homes by 2040. The Oildale area is expected to experience moderate growth in residential developments. The northwestern area of Oildale is expected to experience a growth in industrial development.

Within the Company's service area, 11.7% of the population is 65 years old or older, 26.3% are under the age of 18, and 7.3% are under the age of 5. Nearly 79.4% of the population for those 25 years old or older have a minimum of high school education and 8.3% of the same age group has a bachelor's degree or higher. The median household income was \$40,773 for the years 2016 to 2020, with an estimated 28.8% of the population living in poverty. Additionally, approximately 98% of the developed area is classified as a Disadvantaged Community per State Bill 535.

4 GROUNDWATER AS A SOURCE

Groundwater is an existing water supply source for the OMWC. However, since the California State Water Project delivery system was initiated in 1977, local groundwater has only been used as a supplemental source which has historically been approximately 10% of the OMWC's supply. Groundwater supplied by the OMWC is drawn from the Kern County Subbasin within the Tulare Lake Hydrologic Region of the San Joaquin Valley Basin (**Figure 4**). The Kern County Subbasin is overseen by the Kern Groundwater Authority's basin manager. The Kern County Subbasin is not adjudicated.

4.1 DESCRIPTION OF KERN COUNTY GROUNDWATER SUBBASIN

The California Department of Water Resources (DWR) SB 610 and SB 221 guidebook states that the description of the groundwater basin may be excerpted from a reputable published document. The following are the basin characteristics of the Kern County groundwater subbasin as stated in OMWC's 2020 UWMP:

- *The Kern County Subbasin is bounded to the north by the Tulare Lake and Tule Subbasin, to the east and south by crystalline bedrock of the Sierra Nevada and San Emigdio Mountains, and to the west by the marine sediments of the San Emigdio Mountains and Coast Ranges.*
- *Continental deposits shed from the surrounding mountains form an alluvial wedge that thickens from the valley margins toward the axis of the structural trough.*
- *Sediments that comprise the shallow intermediate depth water-bearing deposits in the groundwater subbasin are primarily continental deposits of Tertiary and Quaternary age. From oldest to youngest the deposits include Olcese and Santa Margarita Formations; the Tulare Formation (western subbasin) and its eastern subbasin equivalent, the Kern River Formation; older alluvium/stream deposits; and younger alluvium and coeval flood basin deposits.*
- *Specific yield values for the unconfined aquifer (Tulare and Kern River Formations and overlying alluvium) were compiled from two sources. The DWR's San Joaquin District office estimates (unpublished) ranges from 5.3 to 19.6 percent and averages 11.8 percent for the interval from surface to 300 feet below grade. The DWR (1977) groundwater model of Kern County lists the range as 8.0 to 19.5 percent with an average value of 12.4 percent representing an interval thickness of 175 to 2,900 feet and averaging approximately 600 feet.*
- *The greatest thickness of unconfined aquifer occurs along the eastern subbasin margin. The highest specific yield values are associated with sediments of the Kern River Fan west of Bakersfield.*

DATE NOVEMBER, 2023

SCALE NTS

DRAWN BY KDH

JOB NO. A22364-1

- *The Kern County Water Agency estimates the total water in storage to be 40,000,000 acre-feet and dewatered aquifer storage to be 10,000,000 acre-feet.*

4.2 GROUNDWATER LEVEL TRENDS

The average subbasin water level has remained consistent from years 1970 to 2000, having experienced a 15-foot decrease through 1978, a 15-foot increase through 1988, and an 8-foot decrease through 1997. However, the net water level changes were variable for the following portions of the subbasin:

- Increase in over 30-feet at the southeast valley margin
- Decreases of over 25 feet in the Lost Hills/Buttonwillow areas
- Decrease of 50 feet in the Bakersfield area and the McFarland/Shafter areas

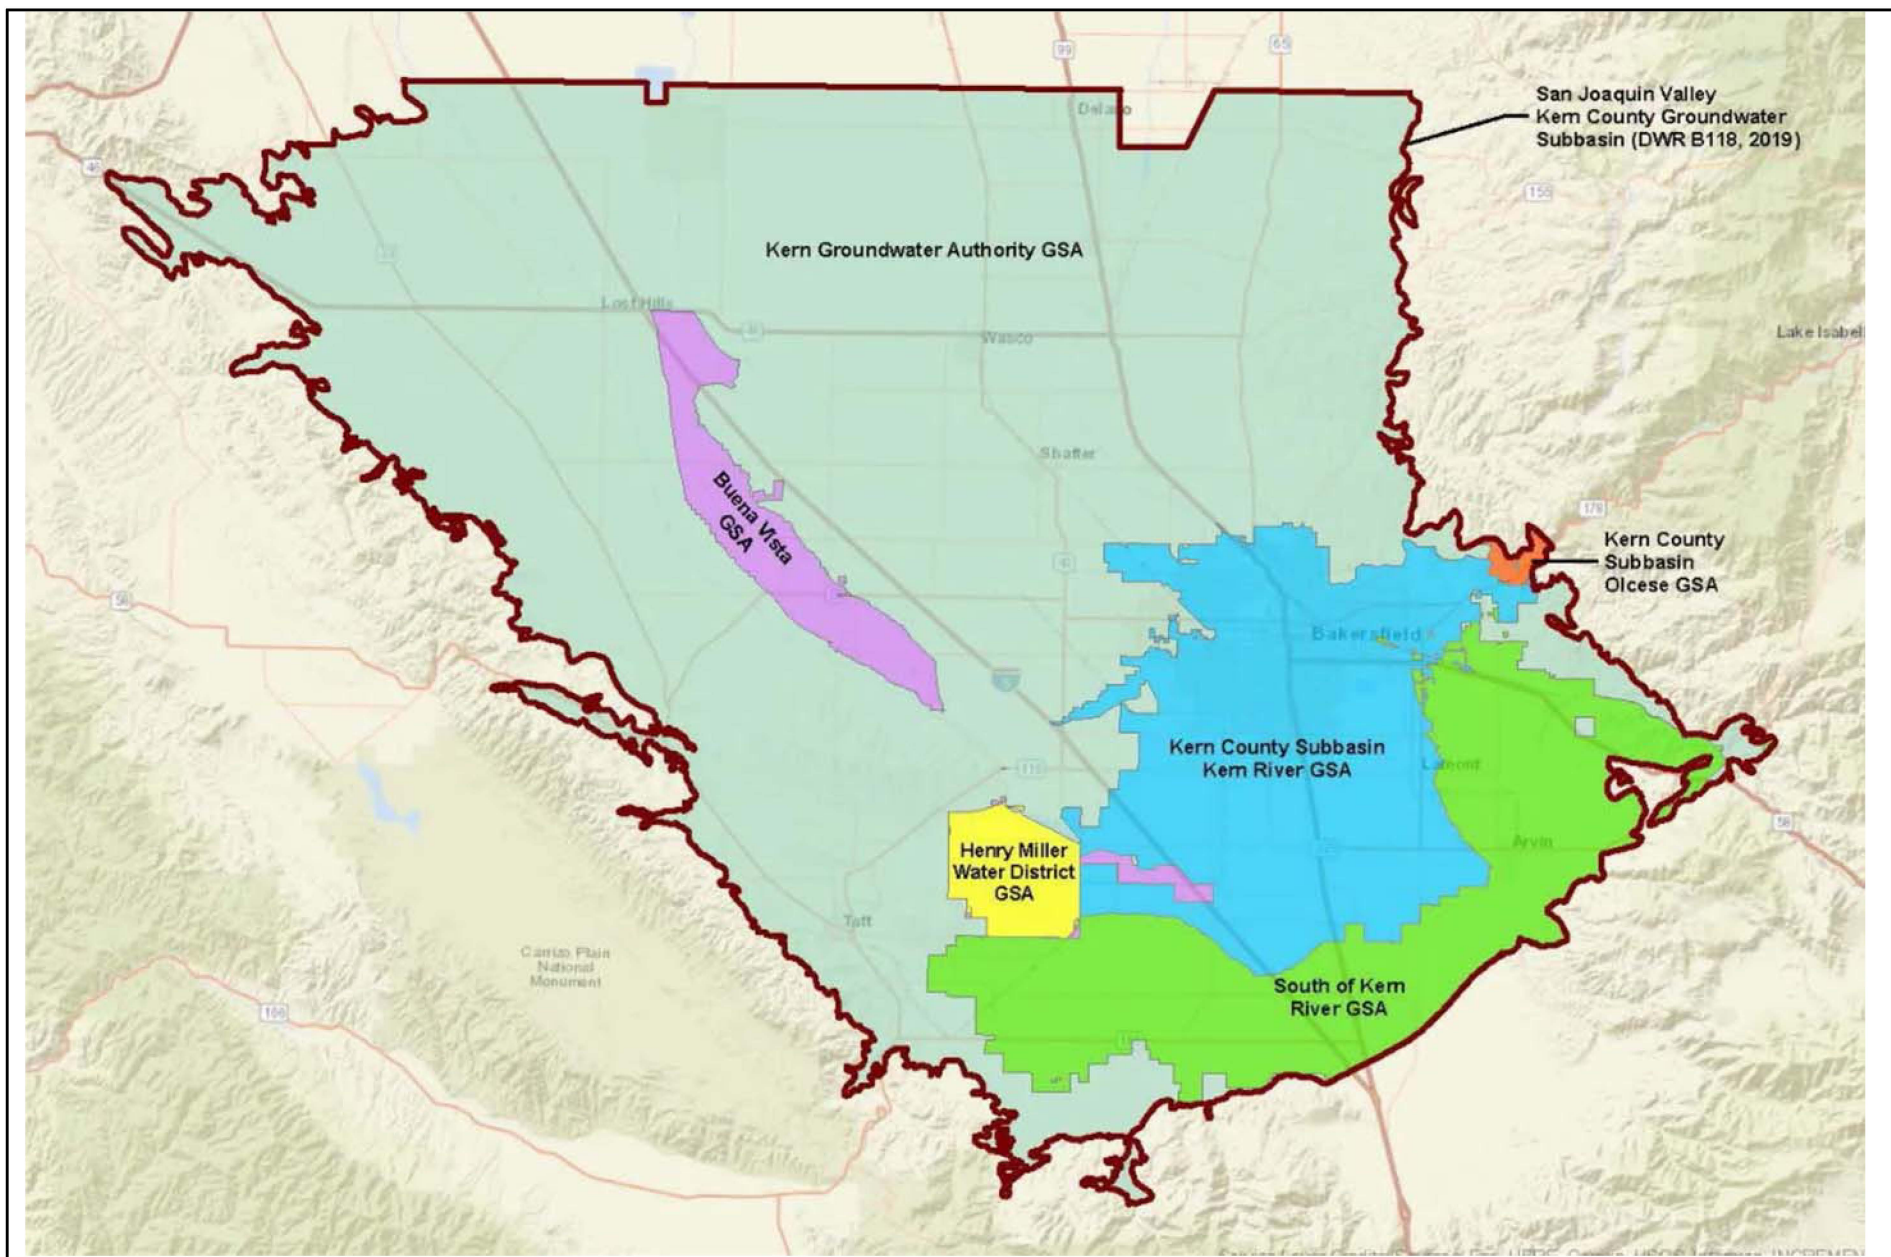

4.3 GROUNDWATER MANAGEMENT

The Sustainable Groundwater Management Act (SGMA) was implemented in 2014 to ensure the protection of groundwater in California. The SGMA set forth a statewide directive to bring groundwater basins to a sustainable level through groundwater management and planning. The act requires that groundwater basin/subbasins designated as medium or high priority (critical overdraft) by the DWR, develop Groundwater Sustainable Agencies (GSAs) to implement Groundwater Sustainability Plans (GSPs) that manage groundwater sustainability over a 20-year period.

DWR has determined that the Kern County Subbasin is critically over drafted and therefore a high priority subbasin. The Kern County Subbasin is managed by 14 different GSAs. The OMWC's service area lies primarily within the boundary of the Kern River GSA, with the rest of the service area in the boundaries of the Kern Groundwater Authority GSA, and the Cawelo Water District GSA. The following six GSAs have submitted GSPs: Kern River GSA, Buena Vista GSA, South of the Kern River GSA, Olcese Water District GSA, and Henry Miller GSA. Each GSP covers a certain area of the Kern County Subbasin (**Figure 5**).

The six GSPs were determined to be inadequate by the DWR due to inconsistencies. These inconsistencies are being addressed by the six GSAs to satisfy the requirements of SGMA. The GSP will aim to alleviate overdraft conditions in the Kern County Subbasin by implementing actions that help negate a negative change in groundwater storage. These implementation actions will aim to maintain groundwater levels as well as prevent water quality degradation and land subsidence. The GSPs will implement actions that achieve sustainability in the subbasin by year 2042.

Presently, the KCWA implemented a groundwater recharge program which subsequently reduced the pumping of the OMWC. This has stabilized the water table beneath the OMWC service area. Additionally, the Kern Groundwater Authority GSA, Kern River GSA, and the Cawelo Water District GSA are currently managing groundwater levels within a safe basin operating range. The OMWC continues to aid these efforts by recommending water use reductions to its customers.

5 EXISTING AND PROJECTED SUPPLY AND DEMAND

5.1 EXISTING DEMAND

As part of the monthly reporting, the OMWC records and submits production volumes to the State Water Resources Control Board. Residential customers, such as single family and multi-family, were approximately 79% of the water delivered to customers in 2020. The OMWC does not currently provide non-potable water to any of its customers. Water use within the OMWC service area has primarily been single-family residential, multi-family residential, and commercial / institutional. Industrial and landscaping water uses were delivered the least. Water losses are accounted for but considered very minuscule. The 2020 water demands per use category may be observed in Table 5-1. The historical water demands from the previous five years may be observed in Table 5-2.

Table 5-1: 2020 Water Demands by Category	
Category	Annual Demands, acre-feet
	2020
Single Family	6,309.68
Multi Family	1,037.25
Commercial / Institutional	1,474.05
Industrial	191.04
Landscape	234.11
Water Loss	3.19
Total Demand =	9,249

Source: Table 4-1 from the 2020 OMWC UWMP

Table 5-2: Historic Water Use 2016 to 2020					
Category	Annual Demands, acre-feet				
	2016	2017	2018	2019	2020
NORMWD/KCWA Surface Water	7,762	8,150	8,630	8,116	8,475
OMWC Groundwater Pumped	345	501	595	714	774
Total Demand =	7,886	8,772	9,225	8,830	9,249

Source: Table 6-3 from the 2020 OMWC UWMP

5.2 EXISTING SUPPLY

The OMWC's surface water supply comes from the KCWA Improvement District 4's (ID#4) Henry C. Garnett Water Purification Plant. The KCWA ID#4 receives a municipal & industrial supply of 77,000 acre-feet and 5,846 acre-feet of agricultural Table A water from the State Water Project (SWP). ID#4 historically treats a minimum of 25,000 acre-feet for delivery to its treated water contractors. The NORMWD is contracted with the KCWA to receive 15,000 acre-feet per year of the treated water supply. The OMWC is contracted with the NORMWD to receive 100% of the 15,000 acre-feet supply. The total amount of surface water available to OMWC is 15,000 acre-feet per year. The ID#4 has operated banking programs for a number of years and therefore the surface water supply is projected to be available 100% of the time regardless of drought conditions.

The OMWC operates a total of eight (8) groundwater production wells that are all equipped with flow meters to measure water production. However, a public map that pertains the location of the

existing eight (8) wells was unavailable. Only five (5) of the eight (8) wells are active. Under the assumption that the five (5) active groundwater wells are operating for 8 hours a day, the total pumping capacity of the five (5) wells is approximately 7,500 gpm. The groundwater supply available to the OMWC is approximately 8,500 AFY. As the owner of the land where the groundwater well sites are, the OMWC maintains a prescriptive water right. OMWC maintains a prescriptive water right to the groundwater pumped as the owner of the land of the groundwater wells. This prescriptive water right is dedicated to public use.

The total available water supply to the OMWC is 23,500 AFY. A summary of OMWC's total water supplies may be observed in Table 5-3.

Table 5-3: Oildale Mutal Water Company's Existing Water Supply				
Supply	Source	Authorization	Ever Used	Volume (AFY)
Purchased Surface Water	NORWM (Wholesaler)	Contract	Yes	15,000
OMWC Groundwater	OMWC Wells	Prescriptive Right	Yes	8,500
Total Water Supply =				23,500

Source: Table 6-8 from the 2020 OMWC UWMP

5.3 PROJECTED DEMANDS

The total water demand is projected to increase between the years 2020 to 2040, while water use per capita is projected to decrease through 2040. The water uses for commercial and industrial is projected to increase at a moderate rate as growth in development is anticipated. The landscaping irrigation water use is projected to remain consistent to account for new residential developments with water efficient landscaping. Groundwater pumping is expected to increase by an estimated 1,000% from year 2020 to the next twenty years in anticipation of the projected residential growth Southeast Shafter area.

The land use method of projection was utilized by the OMWC in accordance with the 2020 UWMP Guidebook. The land use water use projection was prepared based on the Gossamer Grove, Heritage Ranch, and Mission Lakes Specific Plans for the City of Shafter as well as the anticipated growth in industrial development. Table 5-4 summarizes the projected water demands for the next 20-years in 5-year increments.

Table 5-4: Projected Water Use				
Use Type	Annual Demands, acre-feet			
	2025	2030	2035	2040
Single Family Residential	6,950.5	8,877.6	11,707.1	14,280.6
Multi-Family Residential	939.4	916.1	839.4	871.3
Commercial / Institutional	1,384.9	1,350.6	1,723.1	1,744.5
Industrial	239.7	241.1	242.5	244.6
Landscape Irrigation	212.1	206.8	212.1	238.5
Water Loss (Non-revenue Water)	315.9	376.2	479.8	564.4
Surface Water Total =	8,053.4	7,903	8,229	8,210
Groundwater Total =	1,989	4,058	7,026	9,734
Total =	10,042.4	11,961.1	15,254.9	17,943.9

Source: Table 4-4 and Table 6-5 from the 2020 OMWC UWMP

5.4 PROJECTED SUPPLY

Per the contracted agreement with the NORMWD, the purchased surface water of 15,000 AFY is projected to remain the same. The OMWC is developing five additional irrigation wells to increase the supply volume to 15,000 gpm. This will increase the groundwater supply to an estimated 12,802 AFY. The OMWC's groundwater supply is not anticipated to be impaired because of the SGMA compliance actions in the six aforementioned GSPs. Additionally, California law states municipal water rights and uses have a higher priority and are entitled to more protection than other uses of groundwater. Table 5-5 summarizes the projected water supplies for the next 20-years in 5-year increments.

Table 5-5: Projected Water Supply					
Water Supply	Source	Projected Water Supply, acre-feet			
		2025	2030	2035	2040
Purchased or Imported Water	NORMWD/KCWA	15,000	15,000	15,000	15,000
Groundwater (Reasonably Available Volume)	OMWC Wells	10,651	11,726	12,802	12,802
Total =		25,651	26,726	27,802	27,802

Source: Table 6-9 from the 2020 OMWC UWMP

6 SUPPLY SUFFICIENCY ANALYSIS

This section will compare the projected demands to the projected supply in all hydrologic conditions required in SB 610. According to the 2020 OMWC UWMP, the comparison tables included in the analysis account for the effect of climate change.

6.1 COMPARISON OF PROJECT DEMANDS TO PROJECTED SUPPLY

The comparison of OMWC's supply and demand in normal years is presented in Table 6-1 below. Under the normal hydrologic conditions, there is a surplus of water supply from the year 2025 to 2040. The surplus water supply volume is greater than 9,000 AF through year 2040. In the first year, the Project water demand will consist only of the construction water demand of 102 AFY. The Project water demand will be 31 AFY in the following years. In a normal year condition, the OMWC has more than enough water supplies to serve the Projects water demand.

Table 6-1: Normal Year Supply and Demand				
	Annual Demands, acre-feet			
	2025	2030	2035	2040
Supply Totals	25,651	26,726	27,802	27,802
Demand Totals	10,042.4	11,961.1	15,254.9	17,943.9
Difference =	15,609	14,765	12,547	9,858

Source: Table 7-2 from the 2020 OMWC UWMP

6.2 COMPARISON OF PROJECT DEMANDS TO PROJECTED SUPPLY IN DRY YEARS

The comparison of OMWC's supply and demand with a single dry year is presented in Table 6-2 below. Under this hydrologic condition, there is a surplus of water supply from the year 2025 to

2040. The surplus water supply volume is greater than 8,000 AF through year 2040. The Project water demand in the first year will be 102 AFY and 31 AFY in the following years. In a normal with a single dry year condition, the OMWC has more than enough water supplies to serve the Projects water demand.

Table 6-2: Single Dry Year Supply and Demand				
	Annual Demands, acre-feet			
	2025	2030	2035	2040
Supply Totals	25,651	26,726	27,802	27,802
Demand Totals	10,544.5	12,559.2	16,017.6	18,841.1
Difference =	15,107	14,167	11,784	8,961

Source: Table 7-3 from the 2020 OMWC UWMP

The comparison of OMWC's supply and demand with multiple dry years is presented in Table 6-3 below. Under the hydrologic condition with multiple dry years, there still exists a surplus of water from the year 2025 to 2040. The surplus water supply volume never decreases past 8,000 acre-feet even in the fifth dry year. This surplus exists through the year 2025 to year 2024. The Project water demand in the first year will be 102 AFY and 31 AFY in the following years. In the multiple dry years condition, the OMWC has more than enough water supplies to serve the Projects water demand.

Table 6-3: Multiple Dry Years Supply and Demand					
		2025	2030	2035	2040
Year 1	Supply Totals	23,500	25,651	26,726	27,802
	Demand Totals	9,564	10,920	13,185	16,546
	Difference =	13,936	14,731	13,541	11,256
Year 2	Supply Totals	23,500	25,651	26,726	27,802
	Demand Totals	9,555	11,309	13,843	17,093
	Difference =	13,945	14,342	12,884	10,710
Year 3	Supply Totals	24,575	25,651	26,726	27,802
	Demand Totals	9,667	11,711	14,533	17,657
	Difference =	14,908	13,940	12,193	10,145
Year 4	Supply Totals	24,575	25,651	26,726	27,802
	Demand Totals	10,107	12,128	15,257	18,240
	Difference =	14,468	13,523	11,469	9,562
Year 5	Supply Totals	25,651	26,726	27,802	27,802
	Demand Totals	10,545	12,559	16,018	18,841
	Difference =	15,107	14,167	11,784	8,961

Source: Table 7-4 from the 2020 OMWC UWMP

6.3 WATER SHORTAGE CONTINGENCY PLAN

The DWR mandated that a water shortage contingency plan (WSCP) be adopted by water suppliers following the drought of 2012 to 2016. The WSCPs are to serve as a critical alleviation tool during drought emergencies and should be implemented to the extent practicable as stated in the CWC Section 10632.3. The OMWC maintains a WSCP that provides the appropriate response

should the need for water shortage contingencies arise. Water shortage contingencies could occur when OMWC water supplies are insufficient in meeting water demands. Many factors could play a role in causing a water shortage contingency such as droughts, climate change, population growth, and more.

The OMWC WSCP includes 6 stages of mitigation measures that address shortage conditions of up to 10%, to greater than 50%. The first stage includes a shortage condition increment of up to 10%, then each stage subsequently increases by 10%, with stage 6 having a shortage condition of greater than 50%. Each stage includes a shortage response action with a varying degree of use reductions. Some of the demand reductions include penalties, charges, or other forms of enforcement. The full detailed shortage plan and response actions per stage may be observed in Tables 8-1 and 8-2 of the 2020 OMWC UWMP.

7 CONCLUSION

The goal of this WSA is to analyze the sufficiency of the OMWC to meet the Project's projected future water demands, under all hydrologic conditions, in addition to the existing and future water uses of the area within a 20-year planning horizon. The analysis in this WSA demonstrates that the OMWC will have sufficient water supplies to serve the existing and future water uses of the area, including the proposed Project, under normal, single dry, and multiple dry years.

VdB	Vibration Decibels

1 INTRODUCTION

This noise analysis has been completed to determine the noise impacts associated with the development of the proposed Airport Drive Warehouse ("Project"). This noise study briefly describes the proposed Project, provides information regarding noise fundamentals, sets out the local regulatory setting, presents the study methods and procedures for transportation related CNEL traffic noise analysis, and evaluates the future exterior noise environment. In addition, this study includes an analysis of the potential Project-related long-term stationary-source operational noise and short-term construction noise, and construction vibration impacts.

1.1 SITE LOCATION

The proposed Project is located on the southwest corner of the intersection of Airport Drive and Boughton Drive in unincorporated Kern County, as shown on Exhibit 1-A. The site is bounded to the north by Boughton Drive and vacant/undeveloped land; to the south by Skyway Drive and commercial buildings that provide services related to aircrafts; to the east by Airport Drive, residential area, and a storage provider business; and to the west by Hanger Way and Meadows Field Airport.

1.2 PROJECT DESCRIPTION

The proposed project consists of two speculative multi-tenant warehouse buildings with a total area of 923,130 square feet. Building 1 is the northernmost building on the site and is proposed to be a 655,690 square foot warehouse building, including 10,000 square feet of office area. Building 2 is the southernmost building on the site and is proposed to be a 267,440 square foot warehouse, including 5,000 square feet of office area. A preliminary site plan for the proposed Project is shown on Exhibit 1-B.

At the time this noise analysis was prepared, the future tenants of the proposed Project were unknown, and therefore, this noise study includes a conservative analysis of the proposed Project uses. The on-site Project-related noise sources are expected to include: outdoor loading dock activity, roof-top air conditioning units, trash enclosure activity, parking lot vehicle movements, and truck movements. This noise analysis is intended to describe the noise level impacts associated with the expected typical operational activities at the Project site.

2 FUNDAMENTALS

Noise is simply defined as "unwanted sound." Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). A-weighted decibels (dBA) approximate the subjective response of the human ear to broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear. Exhibit 2-A presents a summary of the typical noise levels and their subjective loudness and effects that are described in more detail below.

EXHIBIT 2-A: TYPICAL NOISE LEVELS

COMMON OUTDOOR ACTIVITIES	COMMON INDOOR ACTIVITIES	A - WEIGHTED SOUND LEVEL dBA	SUBJECTIVE LOUDNESS	EFFECTS OF NOISE	
THRESHOLD OF PAIN		140	INTOLERABLE OR DEAFENING	HEARING LOSS	
NEAR JET ENGINE		130			
		120			
JET FLY-OVER AT 300m (1000 ft)	ROCK BAND	110			
LOUD AUTO HORN		100	VERY NOISY	SPEECH INTERFERENCE	
GAS LAWN MOWER AT 1m (3 ft)		90			
DIESEL TRUCK AT 15m (50 ft), at 80 km/hr (50 mph)	FOOD BLENDER AT 1m (3 ft)	80	LOUD		SLEEP DISTURBANCE
NOISY URBAN AREA, DAYTIME	VACUUM CLEANER AT 3m (10 ft)	70			
HEAVY TRAFFIC AT 90m (300 ft)	NORMAL SPEECH AT 1m (3 ft)	60	MODERATE	NO EFFECT	
QUIET URBAN DAYTIME	LARGE BUSINESS OFFICE	50			
QUIET URBAN NIGHTTIME	THEATER, LARGE CONFERENCE ROOM (BACKGROUND)	40	FAINT	NO EFFECT	
QUIET SUBURBAN NIGHTTIME	LIBRARY	30			
QUIET RURAL NIGHTTIME	BEDROOM AT NIGHT, CONCERT HALL (BACKGROUND)	20	VERY FAINT		NO EFFECT

LOWEST THRESHOLD OF HUMAN HEARING	LOWEST THRESHOLD OF HUMAN HEARING	0			

Source: Environmental Protection Agency Office of Noise Abatement and Control, *Information on Levels of Environmental Noise Requisite to Protect Public Health and Welfare with an Adequate Margin of Safety* (EPA/ONAC 550/9-74-004) March 1974.

2.1 RANGE OF NOISE

Since the range of intensities that the human ear can detect is so large, the scale frequently used to measure intensity is a scale based on multiples of 10, the logarithmic scale. The scale for measuring intensity is the decibel scale. Each interval of 10 decibels indicates a sound energy ten times greater than before, which is perceived by the human ear as being roughly twice as loud. (2) The most common sounds vary between 40 dBA (very quiet) to 100 dBA (very loud). Normal conversation at three feet is roughly at 60 dBA, while loud jet engine noises equate to 110 dBA

at approximately 1,000 feet, which can cause serious discomfort. (3) Another important aspect of noise is the duration of the sound and the way it is described and distributed in time.

2.2 NOISE DESCRIPTORS

Environmental noise descriptors are generally based on averages, rather than instantaneous, noise levels. The most used metric is the equivalent level (L_{eq}). Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (L_{eq}) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period and is commonly used to describe the “average” noise levels within the environment.

Peak hour or average noise levels, while useful, do not completely describe a given noise environment. Noise levels lower than peak hour may be disturbing if they occur during times when quiet is most desirable, namely evening and nighttime (sleeping) hours. To account for this, the Community Noise Equivalent Level (CNEL), representing a composite 24-hour noise level is utilized. The CNEL is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time-of-day corrections require the addition of 5 decibels to dBA L_{eq} sound levels in the evening from 7:00 p.m. to 10:00 p.m., and the addition of 10 decibels to dBA L_{eq} sound levels at night between 10:00 p.m. and 7:00 a.m. These additions are made to account for the noise sensitive time periods during the evening and night hours when noise can become more intrusive. CNEL does not represent the actual sound level heard at any time, but rather represents the total sound exposure. The Kern County relies on the 24-hour CNEL level to assess land use compatibility with transportation related noise sources.

2.3 SOUND PROPAGATION

When sound propagates over a distance, it changes in level and frequency content. The way noise reduces with distance depends on the following factors.

2.3.1 GEOMETRIC SPREADING

Sound from a localized source (i.e., a stationary point source) propagates uniformly outward in a spherical pattern. The sound level attenuates (or decreases) at a rate of 6 dB for each doubling of distance from a point source. Highways consist of several localized noise sources on a defined path and hence can be treated as a line source, which approximates the effect of several point sources. Noise from a line source propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of 3 dB for each doubling of distance from a line source. (2)

2.3.2 GROUND ABSORPTION

The propagation path of noise from a highway to a receiver is usually very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the attenuation associated with geometric spreading. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is usually

sufficiently accurate for distances of less than 200 ft. For acoustically hard sites (i.e., sites with a reflective surface between the source and the receiver, such as a parking lot or body of water), no excess ground attenuation is assumed. For acoustically absorptive or soft sites (i.e., those sites with an absorptive ground surface between the source and the receiver such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dB per doubling of distance is normally assumed. When added to the cylindrical spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance from a line source. (4)

2.3.3 ATMOSPHERIC EFFECTS

Receivers located downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Sound levels can be increased at large distances (e.g., more than 500 feet) due to atmospheric temperature inversion (i.e., increasing temperature with elevation). Other factors such as air temperature, humidity, and turbulence can also have significant effects. (2)

2.3.4 SHIELDING

A large object or barrier in the path between a noise source and a receiver can substantially attenuate noise levels at the receiver. The amount of attenuation provided by shielding depends on the size of the object and the frequency content of the noise source. Shielding by trees and other such vegetation typically only has an “out of sight, out of mind” effect. That is, the perception of noise impact tends to decrease when vegetation blocks the line-of-sight to nearby residents. However, for vegetation to provide a substantial, or even noticeable, noise reduction, the vegetation area must be at least 15 feet in height, 100 feet wide and dense enough to completely obstruct the line-of-sight between the source and the receiver. This size of vegetation may provide up to 5 dBA of noise reduction. The Federal Highway Administration (FHWA) does not consider the planting of vegetation to be a noise abatement measure. (5)

2.4 NOISE CONTROL

Noise control is the process of obtaining an acceptable noise environment for an observation point or receiver by controlling the noise source, transmission path, receiver, or all three. This concept is known as the source-path-receiver concept. In general, noise control measures can be applied to these three elements.

2.5 NOISE BARRIER ATTENUATION

Effective noise barriers can reduce noise levels by 10 to 15 dBA, cutting the loudness of traffic noise in half. A noise barrier is most effective when placed close to the noise source or receiver. Noise barriers, however, do have limitations. For a noise barrier to work, it must block the line-of-sight path of sound from the noise source.

2.6 LAND USE COMPATIBILITY WITH NOISE

Some land uses are more tolerant of noise than others. For example, schools, hospitals, churches, and residences are more sensitive to noise intrusion than are commercial or industrial developments and related activities. As ambient noise levels affect the perceived amenity or livability of a development, so too can the mismanagement of noise impacts impair the economic health and growth potential of a community by reducing the area's desirability as a place to live, shop and work. For this reason, land use compatibility with the noise environment is an important consideration in the planning and design process. The FHWA encourages State and Local government to regulate land development in such a way that noise-sensitive land uses are either prohibited from being located adjacent to a highway, or that the developments are planned, designed, and constructed in such a way that noise impacts are minimized. (6)

2.7 COMMUNITY RESPONSE TO NOISE

Approximately sixteen percent of the population has a very low tolerance for noise and will object to any noise not of their making. Consequently, even in the quietest environment, some complaints may occur. Twenty to thirty percent of the population will not complain even in very severe noise environments. (7 pp. 8-6) Thus, a variety of reactions can be expected from people exposed to any given noise environment.

Surveys have shown that community response to noise varies from no reaction to vigorous action for newly introduced noises averaging from 10 dB below existing to 25 dB above existing. (8) According to research originally published in the Noise Effects Handbook (7), the percentage of high annoyance ranges from approximately 0 percent at 45 dB or less, 10 percent are highly annoyed around 60 dB, and increases rapidly to approximately 70 percent being highly annoyed at approximately 85 dB or greater. Despite this variability in behavior on an individual level, the population can be expected to exhibit the following responses to changes in noise levels as shown on Exhibit 2-B. A change of 3 dBA is considered barely perceptible, and changes of 5 dBA are considered readily perceptible. (4)

EXHIBIT 2-B: NOISE LEVEL INCREASE PERCEPTION

2.8 VIBRATION

Per the Federal Transit Administration (FTA) *Transit Noise Impact and Vibration Impact Assessment Manual* (8), vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure-borne noise. Sources of ground-borne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as factory machinery, or transient, such as explosions. As is the case with airborne sound, ground-borne vibrations may be described by amplitude and frequency.

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings but is not always suitable for evaluating human response (annoyance) because it takes some time for the human body to respond to vibration signals. Instead, the human body responds to average vibration amplitude often described as the root mean square (RMS). The RMS amplitude is defined as the average of the squared amplitude of the signal and is most frequently used to describe the effect of vibration on the human body. Decibel notation (VdB) is commonly used to measure RMS. Decibel notation (VdB) serves to reduce the range of numbers used to describe human response to vibration. Typically, ground-borne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Sensitive receivers for vibration include structures (especially older masonry structures), people (especially residents, the elderly, and sick), and vibration-sensitive equipment and/or activities.

The background vibration-velocity level in residential areas is generally 50 VdB. Ground-borne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the ground-borne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. Exhibit 2-C illustrates common vibration sources and the human and structural response to ground-borne vibration.

EXHIBIT 2-C: TYPICAL LEVELS OF GROUND-BORNE VIBRATION

3 REGULATORY SETTING

To limit population exposure to physically and/or psychologically damaging as well as intrusive noise levels, the federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise. In most areas, automobile and truck traffic is the major source of environmental noise. Traffic activity generally produces an average sound level that remains constant with time. Air and rail traffic, and commercial and industrial activities are also major sources of noise in some areas. Federal, state, and local agencies regulate different aspects of environmental noise. Federal and state agencies generally set noise standards for mobile sources such as aircraft and motor vehicles, while regulation of stationary sources is left to local agencies.

3.1 STATE OF CALIFORNIA NOISE REQUIREMENTS

The State of California regulates freeway noise, sets standards for sound transmission, provides occupational noise control criteria, identifies noise standards, and provides guidance for local land use compatibility. State law requires that each county and city adopt a General Plan that includes a Noise Element which is to be prepared per guidelines adopted by the Governor's Office of Planning and Research (OPR). (10) The purpose of the Noise Element is to *limit the exposure of the community to excessive noise levels*. In addition, the California Environmental Quality Act (CEQA) requires that all known environmental effects of a project be analyzed, including environmental noise impacts.

3.2 KERN COUNTY GENERAL PLAN NOISE ELEMENT

Kern County has adopted a Noise Element of the General Plan to establish reasonable standards for maximum desired noise levels in Kern County and developed an implementation program which could effectively deal with the noise problem. (11) The Noise Element specifies the maximum exterior and interior noise levels for new developments impacted by transportation noise sources such as arterial roads, freeways, airports and railroads. In addition, the Noise Element identifies noise policies designed to protect, create, and maintain an environment free from noise that may jeopardize the health or welfare of sensitive receptors, or degrade quality of life. **To ensure the that residents of Kern County are protected from excessive noise, the Noise Element identifies policy 1 to review discretionary industrial, commercial, or other noise-generating land use projects for compatibility with nearby noise-sensitive land uses.**

In addition, Kern County General Plan Noise Element implementation measure F requires *proposed commercial and industrial uses or operations to be designed or arranged so that they will not subject residential or other noise sensitive land uses to exterior noise levels in excess of 65 dBA L_{dn} and interior noise levels in excess of 45 dBA L_{dn}*. The interior noise level represents the difference between the predicted exterior noise level at the building facade and the estimated noise reduction of the structure. Typical building construction will provide a Noise Reduction (NR) of approximately 20 dBA noise reduction with *windows closed*. (4 p. 31)

Since the nighttime interior residential noise levels standards of 45 dBA are within 20 dBA of the 65 dBA exterior, compliance with the exterior limits will also demonstrate compliance with the interior limits. The County of Kern General Plan Noise Element identifies residential areas, schools, convalescent and acute care hospitals, parks and recreational areas, and churches as noise sensitive land uses. The County of Kern Noise Element is included in Appendix 3.1 of this report.

3.3 OPERATIONAL NOISE STANDARDS

To analyze noise impacts originating from a designated fixed location or private property such as the Airport Drive Warehouse Project, stationary-source (operational) noise such as the expected outdoor loading dock activity, roof-top air conditioning units, trash enclosure activity, parking lot vehicle movements, and truck movements are typically evaluated against standards established under a jurisdiction's municipal code.

The Project operational (stationary source) noise impacts are governed by the Kern County Code of Ordinances, Title 8 - Health and Safety, Chapter 8.36 - Noise Control. (12) Section 8.36 focuses on loud and raucous noise, public address systems, broadcasting, and construction noise. Section 8.36 of the Kern County Code of Ordinances is included in Appendix 3.2. While Section 8.36 of the Kern County Code of Ordinances describes prohibited sounds, Section 19.80.030 requires that the Project M-1 land use *shall not generate noise that exceeds an average sixty-five (65) dB L_{dn} (twenty-four (24) hour median) between the hours of seven (7:00) a.m. and ten (10:00) p.m. and shall not generate noise that exceeds 65 dB, or which would result in an increase of five (5) dB or more from ambient sound levels, whichever is greater, between the hours of ten (10:00) p.m. and seven (7:00) a.m.* The requirements outlined in Section 19.80.030 are consistent with the Kern County General Plan Noise Element implementation measure F.

3.4 CONSTRUCTION NOISE STANDARDS

The Kern County Code of Ordinances does not specifically address construction noise limits; however, it does provide prohibited hours during which no construction activity may take place. According to Section 8.36.020.H, *it is unlawful for any person...to create noise from construction between the hours of 9:00 p.m. and 6:00 a.m. on weekdays and 9:00 p.m. and 8:00 a.m. on weekends, which is audible to a person with average hearing faculties or capacity at a distance 150 feet from the construction site...* Since neither the Kern County General Plan Noise or Municipal Code establish numeric maximum acceptable construction source noise levels at potentially affected receivers, which would allow for a quantified determination of what CEQA constitutes a *substantial temporary or periodic noise increase*. Therefore, a numerical construction threshold based on Federal Transit Administration (FTA) *Transit Noise and Vibration Impact Assessment Manual* (8) is used for analysis of construction impacts, as discussed below.

According to the FTA, local noise ordinances are typically not very useful in evaluating construction noise. They usually relate to nuisance and hours of allowed activity, and sometimes specify limits in terms of maximum levels, but are generally not practical for assessing the impact of a construction project. Project construction noise criteria should account for the existing noise environment, the absolute noise levels during construction activities, the duration of the

construction, and the adjacent land use. Due to the lack of standardized construction noise thresholds, the FTA provides guidelines that can be considered reasonable criteria for construction noise assessment. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise sensitive residential land use with a nighttime exterior construction noise level of 70 dBA L_{eq} . (8 p. 179)

3.5 CONSTRUCTION VIBRATION STANDARDS

Construction activity can result in varying degrees of ground-borne vibration, depending on the equipment and methods used, distance to the affected structures and soil type. Construction vibration is generally associated with pile driving and rock blasting. Other construction equipment such as air compressors, light trucks, hydraulic loaders, etc., generates little or no ground vibration. (8) To analyze vibration impacts originating from the operation and construction of the Airport Drive Warehouse, vibration-generating activities are appropriately evaluated against standards established under a Kern County's Municipal Code, if such standards exist. However, the Kern County does not identify specific vibration level limits. Therefore, for analysis purposes, the Caltrans *Transportation and Construction Vibration Guidance Manual*, (13 p. 38) Table 19, vibration damage are used in this noise study to assess potential temporary construction-related impacts at adjacent building locations. The nearest noise sensitive buildings adjacent to the Project site can best be described as "older residential structures" with a maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec).

3.6 MEADOWS FIELD AIRPORT

The Meadows Field Airport (BFL) runway 30R is located approximately 1,500 feet southeast of the Project site. This places the Project site within the Airport Influence Area (AIA) according to the County of Kern Airport Land Use Compatibility Plan (ALUCP) as shown on Exhibit 3-B. (14) The purpose of the ALUCP is to establish procedures and criteria by which the County of Kern and the affected incorporated cities can address compatibility issues when making planning decisions regarding airports and the land uses around them. In addition, the ALUCP requires that the supporting compatibility criteria consider the future Community Noise Equivalent Level (CNEL) contours. Exhibit 3-B shows that the Project site is located within the 60-65 dBA CNEL noise level contour boundary of the Meadows Field Airport. According to the ALUCP noise compatibility criteria shown on Exhibit 3-C, the Project industrial land use is considered *normally acceptable* with exterior noise levels of 60-65 dBA CNEL. For *normally acceptable* land use, *noise is a factor to be considered in that slight interference with outdoor activity may occur. Conventional construction methods will eliminate most noise intrusions upon indoor activity.*

LAND USE AVAILABILITY

INTERPRETATION/COMMENTS

++	Clearly Acceptable	The activities associated with the specified land use can be carried out with essentially no interference from the noise exposure.
+	Normally Acceptable	Noise is a factor to be considered in that slight interference with outdoor activities may occur. Conventional construction methods will eliminate most noise intrusions upon indoor activities.
o	Marginally Acceptable	The indicated noise exposure will cause moderate interference with outdoor activities and with indoor activities when windows are open. The land use is acceptable on the conditions that outdoor activities are minimal and construction features which provide sufficient noise attenuation are used (e.g., installation of air conditioning so that windows can be kept closed). Under other circumstances, the land use should be discouraged.
—	Normally Unacceptable	Noise will create substantial interference with both outdoor and indoor activities. Noise intrusion upon indoor activities can be mitigated by requiring special noise insulation construction. Land uses which have conventionally constructed structures and/or involve outdoor activities which would be disrupted by noise should generally be avoided.
— —	Clearly Unacceptable	Unacceptable noise intrusion upon land use activities will occur. Adequate structural noise insulation is not practical under most circumstances. The indicated land use should be avoided unless strong overriding factors prevail and it should be prohibited if outdoor activities are involved.

4 SIGNIFICANCE CRITERIA

The following significance criteria are based on currently adopted guidance provided by Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1) For the purposes of this report, impacts would be potentially significant if the Project results in or causes:

- A. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
- B. Generation of excessive ground-borne vibration or ground-borne noise levels?
- C. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

4.1 NOISE LEVEL INCREASES (THRESHOLD A)

Noise level increases resulting from the Project are evaluated based on the Appendix G CEQA Guidelines described above at the closest sensitive receiver locations. Under CEQA, consideration must be given to the **magnitude of the increase**, the **existing baseline ambient noise levels**, and the **location of noise-sensitive receivers** to determine if a noise increase represents a significant adverse environmental impact. This approach recognizes *that there is no single noise increase that renders a noise impact significant*. (15) This is primarily because of the wide variation in individual thresholds of annoyance and differing individual experiences with noise. Thus, an important way of determining a person's subjective reaction to a new noise is the comparison of it to the existing environment to which one has adapted—the so-called *ambient* environment. In general, the more a new noise level exceeds the previously existing ambient noise level, the less acceptable the new noise level will typically be judged.

The Federal Interagency Committee on Noise (FICON) (16) developed guidance to be used for the assessment of project-generated increases in noise levels that consider the ambient noise level. The FICON recommendations are based on studies that relate aircraft noise levels to the percentage of persons highly annoyed by aircraft noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, these recommendations are often used in environmental noise impact assessments involving the use of cumulative noise exposure metrics, such as the average-daily noise level (CNEL) and equivalent continuous noise level (L_{eq}).

As previously stated, the approach used in this noise study recognizes *that there is no single noise increase that renders a noise impact significant*, based on a 2008 California Court of Appeal ruling on *Gray v. County of Madera*. (15) For example, if the ambient noise environment is quiet (<60 dBA) and the new noise source greatly increases the noise levels, an impact may occur if the noise criteria may be exceeded. **Therefore, for this analysis, a readily perceptible 5 dBA or greater project-related noise level increase is considered a significant impact when the without project noise levels are below 60 dBA.** Per the FICON, in areas where the without project noise levels range from **60 to 65 dBA, a 3 dBA barely perceptible noise level increase appears to be appropriate for most people.** **When the without project noise levels already exceed 65 dBA, any**

increase in community noise louder than 1.5 dBA or greater is considered a significant impact if the noise criteria for a given land use is exceeded, since it likely contributes to an existing noise exposure exceedance. The FICON guidance provides an established source of criteria to assess the impacts of substantial temporary or permanent increase in baseline ambient noise levels. Based on the FICON criteria, the amount to which a given noise level increase is considered acceptable is reduced when the without Project (baseline) noise levels are already shown to exceed certain land-use specific exterior noise level criteria. The specific levels are based on typical responses to noise level increases of 5 dBA or *readily perceptible*, 3 dBA or *barely perceptible*, and 1.5 dBA depending on the underlying without Project noise levels for noise-sensitive uses. These levels of increases and their perceived acceptance at noise sensitive receiver locations are consistent with guidance provided by both the Federal Highway Administration (4 p. 9) and Caltrans (17 p. 2_48).

4.2 VIBRATION (THRESHOLD B)

As described in Section 3.5, the vibration impacts originating from the construction of Airport Drive Warehouse, vibration-generating activities are appropriately evaluated using the Caltrans vibration damage thresholds to assess potential temporary construction-related impacts at adjacent building locations. The nearest noise sensitive buildings adjacent to the Project site can best be described as “older residential structures” with a maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec).

4.3 CEQA GUIDELINES NOT FURTHER ANALYZED (THRESHOLD C)

The closest airport which would require additional noise analysis under CEQA Significance Criteria C is the Meadows Field Airport (BFL) runway 30R located approximately 1,500 feet southeast of the Project site. As previously indicated in Section 3.6, the noise contour boundaries of Meadows Field Airport are presented on Exhibit 3-B of this report shows that the Project is located within the 60-65 dBA CNEL noise level contour boundary. According to the ALUCP noise compatibility criteria shown on Exhibit 3-C, the Project industrial land use is considered *normally acceptable* with exterior noise levels of 60-65 dBA CNEL.

4.4 SIGNIFICANCE CRITERIA SUMMARY

Noise impacts shall be considered significant if any of the following occur as a direct result of the proposed development. Table 4-1 shows the significance criteria summary matrix that includes the allowable criteria used to identify potentially significant incremental noise level increases.

TABLE 4-1: SIGNIFICANCE CRITERIA SUMMARY

Analysis	Condition(s)	Significance Criteria	
		Daytime	Nighttime
Off-Site Traffic	If ambient is < 60 dBA CNEL ¹	≥ 5 dBA CNEL Project increase	
	If ambient is 60 - 65 dBA CNEL ¹	≥ 3 dBA CNEL Project increase	
	If ambient is > 65 dBA CNEL ¹	≥ 1.5 dBA CNEL Project increase	
Operational	Exterior Noise Level Standards ²	65 dBA CNEL	
	If ambient is < 60 dBA CNEL ¹	≥ 5 dBA CNEL Project increase	
	If ambient is 60 - 65 dBA CNEL ¹	≥ 3 dBA CNEL Project increase	
	If ambient is > 65 dBA CNEL ¹	≥ 1.5 dBA CNEL Project increase

5 EXISTING NOISE LEVEL MEASUREMENTS

To assess the existing noise level environment, 24-hour noise level measurements were taken at five locations in the Project study area. The receiver locations were selected to describe and document the existing noise environment within the Project study area. Exhibit 5-A provides the boundaries of the Project study area and the noise level measurement locations. To fully describe the existing noise conditions, noise level measurements were collected by Urban Crossroads, Inc. on Tuesday, June 13, 2023. Appendix 5.1 includes study area photos.

5.1 MEASUREMENT PROCEDURE AND CRITERIA

To describe the existing noise environment, the hourly noise levels were measured during typical weekday conditions over a 24-hour period. By collecting individual hourly noise level measurements, it is possible to describe the equivalent daytime and nighttime hourly noise levels and calculate the 24-hour CNEL. The long-term noise readings were recorded using Piccolo Type 2 integrating sound level meter and dataloggers. The Piccolo sound level meters were calibrated using a Larson-Davis calibrator, Model CAL 150. All noise meters were programmed in “slow” mode to record noise levels in “A” weighted form. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013. (18)

5.2 NOISE MEASUREMENT LOCATIONS

The long-term noise level measurements were positioned as close to the nearest sensitive receiver locations as possible to assess the existing ambient hourly noise levels surrounding the Project site. Both Caltrans and the FTA recognize that it is not reasonable to collect noise level measurements that can fully represent every part of a private yard, patio, deck, or balcony normally used for human activity when estimating impacts for new development projects. This is demonstrated in the Caltrans general site location guidelines which indicate that *sites must be free of noise contamination by sources other than sources of interest. Avoid sites located near sources such as barking dogs, lawnmowers, pool pumps, and air conditioners unless it is the express intent of the analyst to measure these sources.* (2) Further, FTA guidance states, *that it is not necessary nor recommended that existing noise exposure be determined by measuring at every noise-sensitive location in the project area. Rather, the recommended approach is to characterize the noise environment for clusters of sites based on measurements or estimates at representative locations in the community.* (8)

Based on recommendations of Caltrans and the FTA, it is not necessary to collect measurements at each individual building or residence, because each receiver measurement represents a group of buildings that share acoustical equivalence. (8) In other words, the area represented by the receiver shares similar shielding, terrain, and geometric relationship to the reference noise source. Receivers represent a location of noise sensitive areas and are used to estimate the future noise level impacts. Collecting reference ambient noise level measurements at the nearby sensitive receiver locations allows for a comparison of the before and after Project noise levels

and is necessary to assess potential noise impacts due to the Project's contribution to the ambient noise levels.

5.3 NOISE MEASUREMENT RESULTS

The noise measurements presented below focus on the equivalent or the energy average hourly sound levels (L_{eq}). The equivalent sound level (L_{eq}) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period. Table 5-1 identifies the hourly daytime (7:00 a.m. to 10:00 p.m.) and nighttime (10:00 p.m. to 7:00 a.m.) noise levels at each noise level measurement location.

TABLE 5-1: AMBIENT NOISE LEVEL MEASUREMENTS

Location ¹	Description	Energy Average Noise Level (dBA L_{eq}) ²		CNEL
		Daytime	Nighttime	
L1	Located northeast of the site near the residence at 855 Greenwood Meadow Ln	73.2	70.4	77.6
L2	Located northeast of the site near the residence at 3117 Alhambra Meadow Ct.	70.9	65.2	73.4
L3	Located east of the site near the residence at 840 Park Meadows Ave.	56.2	54.0	61.6
L4	Located east of the site near the Park Meadows Apartments building at 840 Park Meadows Av.	67.9	66.5	73.5
L5	Located southeast of the site near the residence at 2101 Wingland Dr.	71.3	69.4	76.4

¹ See Exhibit 5-A for the noise level measurement locations.

² Energy (logarithmic) average levels. The long-term 24-hour measurement worksheets are included in Appendix 5.2.

"Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

Table 5-1 provides the equivalent noise levels used to describe the daytime and nighttime ambient conditions. These daytime and nighttime energy average noise levels represent the average of all hourly noise levels observed during these time periods expressed as a single number. Appendix 5.2 provides summary worksheets of the noise levels for each hour as well as the minimum, maximum, L_1 , L_2 , L_5 , L_8 , L_{25} , L_{50} , L_{90} , L_{95} , and L_{99} percentile noise levels observed during the daytime and nighttime periods.

6 TRAFFIC NOISE METHODS AND PROCEDURES

The following section outlines the methods and procedures used to estimate and analyze the future traffic noise environment. All transportation-related noise levels are presented in terms of the 24-hour CNEL's.

6.1 FHWA TRAFFIC NOISE PREDICTION MODEL

The expected roadway noise level increases from vehicular traffic were calculated by Urban Crossroads, Inc. using a computer program that replicates the Federal Highway Administration (FHWA) Traffic Noise Prediction Model- FHWA-RD-77-108. (19) The FHWA Model arrives at a predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). In California the national REMELs are substituted with the California Vehicle Noise (Calveno) Emission Levels. (20) Adjustments are then made to the REMEL to account for: the roadway classification (e.g., collector, secondary, major or arterial), the roadway active width (i.e., the distance between the center of the outermost travel lanes on each side of the roadway), the total average daily traffic (ADT), the travel speed, the percentages of automobiles, medium trucks, and heavy trucks in the traffic volume, the roadway grade, the angle of view (e.g., whether the roadway view is blocked), the site conditions ("hard" or "soft" relates to the absorption of the ground, pavement, or landscaping), and the percentage of total ADT which flows each hour throughout a 24-hour period. Research conducted by Caltrans has shown that the use of soft site conditions is appropriate for the application of the FHWA traffic noise prediction model used in this analysis. (21)

The traffic noise levels presented in the Noise Study are used to assess the relative traffic noise increase attributed to the Project as required to satisfy Appendix G of the California Environmental Quality Act (CEQA) Guidelines. In effect, we are primarily concerned with the relative changes in traffic noise and are not focused on the absolute noise levels. The FHWA RD-77-108 noise prediction model used in the analysis has been updated to reflect the California Vehicle Noise ("Calveno") Emission Levels, based on the Use of California Vehicle Noise Reference Energy Mean Emission Levels in FHWA Highway Traffic Noise Prediction prepared by Caltrans. (19) According to the Development of National Reference Energy Mean Emission Levels (REMEL) for the FHWA Traffic Noise Model (TNM) (FHWA-PD-96-008) the Calveno REMELS are within 0.21 dBA of the TNM REMEL. In addition, the Noise Study methodology is consistent with the Kern County General Plan which also relies on the FHWA RD-77-108 model. The use of FHWA's TNM is only required, per 23 Code of Federal Regulations (CFR) 772.7 for all Federal or Federal-aid Highway Projects authorized under title 23, United States Code, and therefore, is not a requirement of the Project. The Project site is also not located adjacent to a major highway or freeway which TNM was specifically developed to analyze. Since the methodology used in the Noise Study is consistent with standard industry practice in Kern County, and there is no Federal requirement to use TNM, this noise analysis relies on the FHWA RD-77-108 traffic noise prediction model to assess the off-site Project traffic noise levels.

6.2 OFF-SITE TRAFFIC NOISE PREDICTION MODEL INPUTS

Table 6-1 presents the roadway parameters used to assess the Project's off-site transportation noise impacts. Table 6-1 identifies the 10 off-site study area roadway segments, the distance from the centerline to adjacent land use based on the functional roadway classifications per the Kern County General Plan Circulation Element, and the vehicle speeds. The ADT volumes used in this study area presented on Table 6-2 are based on the *Proposed Airport Drive Warehouse in Kern County Traffic Impact Analysis Report (TIA)*, prepared by David Evans and Associates, Inc. for the following traffic scenarios (22).

- Existing (E)
- Existing plus Project (E+P)
- Opening Year (2025) without Project Conditions
- Opening Year (2025) with Project Conditions
- Cumulative (2046) without Project Conditions
- Cumulative (2046) with Project Conditions

The ADT volumes vary for each roadway segment based on the existing traffic volumes and the combination of project traffic distributions. This analysis relies on a comparative evaluation of the off-site traffic noise impacts at the boundary of the right-of-way of the receiving adjacent land use, without and with project ADT traffic volumes from the Project traffic analysis. The Project is anticipated to generate a net total of 99 two-way trips per day (actual vehicles) that includes 27 truck trips.

¹ Proposed Airport Drive Warehouse in Kern County, Traffic Impact Analysis Report, David Evans & Associates, Inc.

To quantify the off-site noise levels, the Project related truck trips were added to the heavy truck category in the FHWA noise prediction model. The addition of the Project related truck trips increases the percentage of heavy trucks in the vehicle mix. This approach recognizes that the FHWA noise prediction model is significantly influenced by the number of heavy trucks in the vehicle mix. Table 6-3 provides the time of day (daytime, evening, and nighttime) vehicle splits. The daily Project truck trip-ends were assigned to the individual off-site study area roadway segments based on the Project truck trip distribution percentages documented in the *Airport Drive Warehouse Traffic Analysis*. Using the Project truck trips in combination with the Project trip distribution, Urban Crossroads, Inc. calculated the number of additional Project truck trips and vehicle mix percentages for each of the study area roadway segments. Table 6-4 shows the traffic flow by vehicle type (vehicle mix) used for all without Project traffic scenarios, and Tables 6-5 to 6-7 show the vehicle mixes used for the with Project traffic scenarios.

TABLE 6-3: TIME OF DAY VEHICLE SPLITS

Vehicle Type	Time of Day Splits			Total of Time of Day Splits
	Daytime	Evening	Nighttime	
Autos	77.50%	12.90%	9.60%	100.00%
Medium Trucks	84.80%	4.90%	10.30%	100.00%
Heavy Trucks	86.50%	2.70%	10.80%	100.00%

"Daytime" = 7:00 a.m. to 7:00 p.m.; "Evening" = 7:00 p.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

TABLE 6-4: WITHOUT PROJECT VEHICLE MIX

Classification	Total % Traffic Flow			Total
	Autos ¹	Medium Trucks ²	Heavy Trucks ³	
All Segments	92.00%	3.00%	5.00%	100.00%

¹ All vehicles with two axles and four wheels designed primarily for transportation of nine or fewer passengers (automobiles) or transportation of cargo (light trucks).

² All vehicles with two axles and six wheels designed for transportation of cargo.

³ All vehicles with three or more axles designed for the transportation of cargo.

Due to the added Project truck trips, the increase in Project traffic volumes and the distributions of trucks on the study area road segments, the percentage of autos, medium trucks and heavy trucks will vary for each of the traffic scenarios. This explains why the existing and future traffic volumes and vehicle mixes vary between seemingly identical study area roadway segments.

7 OFF-SITE TRAFFIC NOISE ANALYSIS

To assess the off-site transportation CNEL noise level impacts associated with development of the proposed Project, noise contours were developed based on the TIA traffic volume forecasts. Noise contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway.

7.1 TRAFFIC NOISE CONTOURS

Noise contours were used to assess the Project's incremental traffic-related noise impacts at land uses adjacent to roadways conveying Project traffic. The noise contours represent the distance to noise levels of a constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA noise levels. The noise contours do not consider the effect of any existing noise barriers or topography that may attenuate ambient noise levels. In addition, because the noise contours reflect modeling of vehicular noise on area roadways, they appropriately do not reflect noise contributions from the surrounding stationary noise sources within the Project study area. Tables 7-1 to 7-6 present a summary of the exterior traffic noise levels for each traffic condition. Appendix 7.1 includes the traffic noise level contours worksheets for each traffic condition.

7.2 EXISTING PROJECT TRAFFIC NOISE LEVEL INCREASES

An analysis of existing traffic noise levels plus traffic noise generated by the proposed Project has been included in this report for informational purposes and to fully analyze all the existing traffic scenarios identified in the TIA. However, the analysis of existing off-site traffic noise levels plus traffic noise generated by the proposed Project scenario will not actually occur since the Project would not be fully constructed and operational until Opening Year (OY) 2025 conditions. Table 7-1 shows the Existing without Project conditions CNEL noise levels. The Existing without Project exterior noise levels range from 56.2 to 74.5 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-2 shows the Existing with Project conditions ranging from 59.9 to 74.5 dBA CNEL. Table 7-7 shows that the Project off-site traffic noise level increases range from 0.0 to 0.7 dBA CNEL on the study area roadway segments.

7.3 OY 2025 TRAFFIC NOISE LEVEL INCREASES

Table 7-3 presents the OY without Project conditions CNEL noise levels. The OY without Project exterior noise levels range from 56.2 to 74.8 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-4 shows that the OY with Project conditions will range from 56.9 to 74.8 dBA CNEL. Table 7-8 shows that the Project off-site traffic noise level increases range from 0.0 to 0.7 dBA CNEL.

7.4 CUMULATIVE 2046 TRAFFIC NOISE LEVEL INCREASES

Table 7-5 presents the Cumulative 2046 without Project conditions CNEL noise levels. The Cumulative 2046 without Project exterior noise levels range from 58.6 to 74.7 dBA CNEL, without

accounting for any noise attenuation features such as noise barriers or topography. Table 7-6 shows that the Cumulative 2046 with Project conditions will range from 59.0 to 74.7 dBA CNEL. Table 7-9 shows that the Project off-site traffic noise level increases range from 0.0 to 0.4 dBA CNEL.

TABLE 7-7: EXISTING WITH PROJECT TRAFFIC NOISE LEVEL INCREASES

8 SENSITIVE RECEIVER LOCATIONS

To assess the potential for long-term operational and short-term construction noise impacts, the following sensitive receiver locations, as shown on Exhibit 8-A, were identified as representative locations for analysis. Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include schools, hospitals, single-family dwellings, mobile home parks, churches, libraries, and recreation areas. Moderately noise-sensitive land uses typically include multi-family dwellings, hotels, motels, dormitories, outpatient clinics, cemeteries, golf courses, country clubs, athletic/tennis clubs, and equestrian clubs. Land uses that are considered relatively insensitive to noise include business, commercial, and professional developments. Land uses that are typically not affected by noise include: industrial, manufacturing, utilities, agriculture, undeveloped land, parking lots, warehousing, liquid and solid waste facilities, salvage yards, and transit terminals.

To describe the potential Project noise levels, five receiver locations were identified. Other sensitive land uses in the Project study area that are located at greater distances than those identified in this noise study will experience lower noise levels than those presented in this report due to the additional attenuation from distance and the shielding of intervening structures. Distance is measured in a straight line from the project boundary to each receiver location.

- R1: Location R1 represents the existing noise sensitive residence at 855 Greenwood Meadow Lane, approximately 667 feet northeast of the Project site. Receiver R1 is placed in the private outdoor living areas (backyard) facing the Project site. A 24-hour noise measurement was taken near this location, L1, to describe the existing ambient noise environment.
- R2: Location R2 represents the existing noise sensitive residence at 3117 Alhambra Meadow Court, approximately 173 feet northeast of the Project site. Receiver R2 is placed in the private outdoor living areas (backyard) facing the Project site. A 24-hour noise measurement was taken near this location, L2, to describe the existing ambient noise environment.
- R3: Location R3 represents the existing noise sensitive residence at 720 Meadow Grove Court approximately 809 feet east of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receiver R3 is placed at the building façade. A 24-hour noise measurement was taken near this location, L3, to describe the existing ambient noise environment.

EXHIBIT 8-A: RECEIVER LOCATIONS

- R4: Location R4 represents the noise sensitive Park Meadows Apartment community residence at 840 Park Meadows Avenue, approximately 102 feet east of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receiver R4 is placed at the building façade. A 24-hour noise measurement was taken near this location, L4, to describe the existing ambient noise environment.
- R5: Location R5 represents the existing noise sensitive residence west of 2101 Wingland Drive, approximately 910 feet southeast of the Project site. Receiver R5 is placed in the private outdoor living areas (backyard) facing the Project site. A 24-hour noise measurement was taken near this location, L5, to describe the existing ambient noise environment.

9 OPERATIONAL NOISE IMPACTS

This section analyzes the potential stationary-source operational noise impacts at the nearest receiver locations, identified in Section 8, resulting from the operation of the proposed Project. Exhibit 9-A of the Noise Study includes over 38 individual noise sources to conservatively describe the potential worst-case noise environment.

9.1 OPERATIONAL NOISE SOURCES

This operational noise analysis is intended to describe noise level impacts associated with the expected typical of daytime and nighttime activities at the Project site. Consistent with similar warehouse uses, the Project business operations would primarily be conducted within the enclosed building, except for traffic movement, parking, as well as loading and unloading of trucks at designated loading bays. The on-site Project-related noise sources are expected to include: outdoor loading dock activity, roof-top air conditioning units, trash enclosure activity, parking lot vehicle movements, and truck movements.

9.2 REFERENCE NOISE LEVELS

To estimate the Project operational noise impacts, reference noise level measurements were collected from similar types of activities to represent the noise levels expected with the development of the proposed Project. This section provides a detailed description of the reference noise level measurements shown on Table 9-1 used to estimate the Project operational noise impacts. It is important to note that the following projected noise levels assume the worst-case noise environment with the outdoor loading dock activity, roof-top air conditioning units, trash enclosure activity, parking lot vehicle movements, and truck movements all operating at the same time. These sources of noise activity will likely vary throughout the day.

9.2.1 MEASUREMENT PROCEDURES

The reference noise level measurements presented in this section were collected using Piccolo Type 2 integrating sound level meter and dataloggers. The Piccolo sound level meters were calibrated using a Larson-Davis calibrator, Model CAL 150. All noise meters were programmed in "slow" mode to record noise levels in "A" weighted form. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013. (18)

EXHIBIT 9-A: OPERATIONAL NOISE SOURCE LOCATIONS

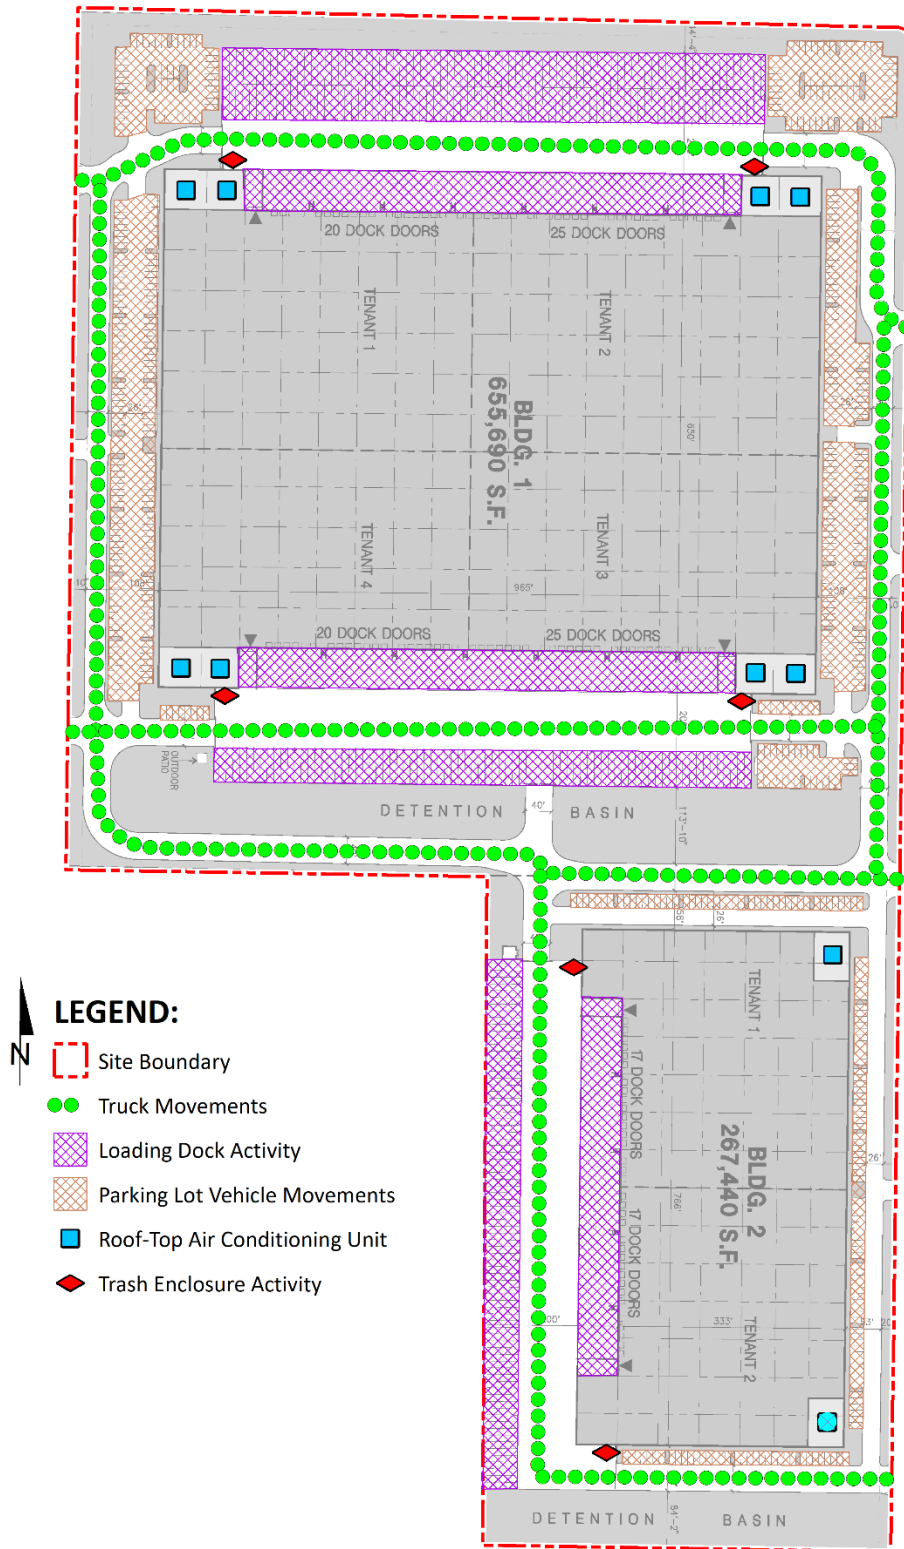

TABLE 9-1: REFERENCE NOISE LEVEL MEASUREMENTS

Noise Source ¹	Noise Source Height (Feet)	Min./Hour ²		Reference Noise Level (dBA L _{eq}) @ 50 Feet	Sound Power Level (dBA) ³
		Day	Night		
Outdoor Loading Dock Activity	8'	60	60	64.4	109.7
Roof-Top Air Conditioning Units	5'	39	28	57.2	88.9
Trash Enclosure Activity	5'	60	30	57.3	89.0
Parking Lot Vehicle Movements	5'	60	60	55.7	87.8
Truck Movements	8'	60	60	59.9	91.6

¹ As measured by Urban Crossroads, Inc.

² Anticipated duration (minutes within the hour) of noise activity during typical hourly conditions expected at the Project site. "Daytime" = 7:00 a.m. - 10:00 p.m.; "Nighttime" = 10:00 p.m. - 7:00 a.m.

³ Sound power level represents the total amount of acoustical energy (noise level) produced by a sound source independent of distance or surroundings. Sound power levels calculated using the CadnaA noise model at the reference distance to the noise source.

9.2.2 OUTDOOR LOADING DOCK ACTIVITY

To describe the outdoor loading dock activities, reference noise level measurements were collected at the Tejon Ranch Commerce Center located west of the I-5 Freeway in unincorporated Kern County. The 24-hour reference noise level measurements were collected adjacent to the Dollar General Distribution Center loading docks entry gate and represent the typical outdoor operational noise activities associated with the planned Project warehouse land uses. This includes heavy tractor trailer truck deliveries, air brakes, backup alarms, trailer docking and background operation activities. To ensure that the reference noise level accurately describes the peak hourly noise source activities, sixty of the highest one-minutes individual measurements observed over the 1,440 minute or 24-hour measurement period, were used to describe the outdoor loading dock activities. At a uniform distance of 50 feet from the source the outdoor loading dock activities representing multiple concurrent noise sources produced a combined noise level of 64.4 dBA L_{eq}.

The outdoor loading dock activity reference noise level measurements collected at the Tejon Ranch Commerce Center are generally consistent with similar levels collected by Urban Crossroads, Inc. This includes the noise levels generated by cold storage loading dock activity that can be slightly higher due to the use of refrigerated trucks or reefers. Previous measurements collected at the Nature's Best distribution facility located at 16081 Fern Avenue in the City of Chino suggest that reefer activity (refrigerator truck/cold storage) generate a combined noise level of 65.7 dBA L_{eq} at a uniform distance of 50 feet. Since the warehouse floor space is reasonably expected to be occupied by 80% high-cube transload warehouse center and 20% high cube cold storage warehouse (22), a reference noise level of 65.7 dBA L_{eq} is used in this operational noise analysis to fully describe all the Project outdoor loading dock activities.

9.2.3 ROOF-TOP AIR CONDITIONING UNITS

To assess the noise levels created by the roof-top air conditioning units, reference noise level measurements were collected from a Lennox SCA120 series 10-ton model packaged air conditioning unit. At 5 feet from the roof-top air conditioning unit, the exterior noise levels were measured at 77.2 dBA L_{eq} . At the uniform reference distance of 50 feet, the reference noise level is 57.2 dBA L_{eq} . Based on the typical operating conditions observed over a four-day measurement period, the roof-top air conditioning units are estimated to operate for an average 39 minutes per hour during the daytime hours, and 28 minutes per hour during the nighttime hours. These operating conditions reflect peak summer cooling requirements with measured temperatures approaching 96 degrees Fahrenheit (°F) with average daytime temperatures of 82°F. For this noise analysis, the air conditioning units are expected to be located on the roof of the Project buildings. This reference noise level describes the expected roof-top air conditioning units located 5 feet above the roof for the planned air conditioning units at the Project site.

9.2.4 TRASH ENCLOSURE ACTIVITY

To describe the noise levels associated with a trash enclosure activity, Urban Crossroads collected a reference noise level measurement at an existing trash enclosure containing two dumpster bins. The trash enclosure noise levels describe metal gates opening and closing, metal scraping against concrete floor sounds, dumpster movement on metal wheels, and trash dropping into the metal dumpster. The reference noise levels describe trash enclosure noise activities when trash is dropped into an empty metal dumpster, as would occur at the Project Site. The measured reference noise level at the uniform 50-foot reference distance is 57.3 dBA L_{eq} for the trash enclosure activity. The reference noise level describes the expected noise source activities associated with the trash enclosures for the Project's proposed building.

9.2.5 PARKING LOT VEHICLE MOVEMENTS

To describe the on-site parking lot vehicle movement activity, a long-term 24-hour reference noise level measurement was collected in the center of activity within the employee parking lot of the Dollar General Distribution Center. To ensure that the reference noise level accurately describes the peak hourly noise source activities, sixty of the highest one-minute individual measurements observed over the 1,440 minute or 24-hour measurement period, were used to describe the parking lot vehicle movements. At 50 feet from the center of activity, the parking lot produced a reference noise level of 55.7 dBA L_{eq} . Parking activities are expected to take place during the full hour (60 minutes) throughout the daytime and evening hours. The parking lot noise levels are mainly due to cars pulling in and out of parking spaces in combination with car doors opening and closing.

9.2.6 TRUCK MOVEMENTS

The truck movements reference noise level measurement was collected on Tejon Industrial Drive at the intersection of Industrial Parkway Drive. The truck movements at this location include the heavy tractor trailers truck movements associated with the Dollar General, Vision Media, and the IKEA distribution centers. Using the sixty highest one-minute measurements collected over a 24-

hour period, the heavy trucks entering and exiting the outdoor loading dock area produced a reference noise level of 59.9 dBA L_{eq} at 50 feet.

9.3 CADNAA NOISE PREDICTION MODEL

To fully describe the exterior operational noise levels from the Project, Urban Crossroads, Inc. developed a noise prediction model using the CadnaA (Computer Aided Noise Abatement) computer program. CadnaA can analyze multiple types of noise sources using the spatially accurate Project site plan, georeferenced Nearmap aerial imagery, topography, buildings, and barriers in its calculations to predict outdoor noise levels. Using the ISO 9613-2 protocol, CadnaA will calculate the distance from each noise source to the noise receiver locations, using the ground absorption, distance, and barrier/building attenuation inputs to provide a summary of noise level at each receiver and the partial noise level contributions by noise source. Consistent with the ISO 9613-2 protocol, the CadnaA noise prediction model relies on the reference sound power level (L_w) to describe individual noise sources.

While sound pressure levels (e.g., L_{eq}) quantify in decibels the intensity of given sound sources at a reference distance, sound power levels (L_w) are connected to the sound source and are independent of distance. Sound pressure levels vary substantially with distance from the source and diminish because of intervening obstacles and barriers, air absorption, wind, and other factors. Sound power is the acoustical energy emitted by the sound source and is an absolute value that is not affected by the environment. The operational noise level calculations provided in this noise study account for the distance attenuation provided due to geometric spreading, when sound from a localized stationary source (i.e., a point source) propagates uniformly outward in a spherical pattern. A default ground attenuation factor of 0.5 was used in the CadnaA noise analysis to account for mixed ground representing a combination of hard and soft surfaces. Appendix 9.1 includes the detailed noise model inputs including the planned screenwall used to estimate the Project operational noise levels presented in this section.

9.4 PROJECT OPERATIONAL NOISE LEVELS

Using the reference noise levels to represent the proposed Project operations that include outdoor loading dock activity, roof-top air conditioning units, trash enclosure activity, parking lot vehicle movements, and truck movements, Urban Crossroads, Inc. calculated the operational source noise levels that are expected to be generated at the Project site and the Project-related noise level increases that would be experienced at each of the sensitive receiver locations. Table 9-2 shows the Project operational noise levels are expected to range from 51.2 to 63.1 dBA CNEL.

TABLE 9-2: PROJECT OPERATIONAL NOISE LEVELS

Noise Source ¹	Operational Noise Levels by Receiver Location (dBA CNEL)				
	R1	R2	R3	R4	R5
Outdoor Loading Dock Activity	58.9	62.3	54.9	62.6	51.0
Roof-Top Air Conditioning Units	35.0	37.6	34.6	41.3	30.6
Trash Enclosure Activity	31.7	36.6	30.4	39.2	28.4
Parking Lot Vehicle Movements	36.8	43.4	37.9	48.6	33.6
Truck Movements	38.0	42.6	39.2	51.5	35.0
Total (All Noise Sources)	59.0	62.4	55.2	63.1	51.2

¹ See Exhibit 9-A for the noise source locations. CadnaA noise model calculations are included in Appendix 9.1.

² On-site receiver locations are included to describe the noise levels from the warehouse building to Seaton Park. Noise source activities from Seaton Park are not included in the overall operational noise level totals.

9.5 PROJECT OPERATIONAL NOISE LEVEL COMPLIANCE

To demonstrate compliance with local noise regulations, the Project-only operational noise levels are evaluated against the exterior noise level thresholds adjusted to reflect the ambient noise levels at the nearest noise-sensitive receiver locations. Table 9-3 shows the operational noise levels associated with the Project will not exceed the exterior noise level standards.

TABLE 9-3: OPERATIONAL NOISE LEVEL COMPLIANCE

Receiver Location ¹	Project Operational Noise Levels (dBA CNEL) ²	Noise Level Standards (dBA CNEL) ³	Noise Level Standards Exceeded? ⁴
R1	59.0	65	No
R2	62.4	65	No
R3	55.2	65	No
R4	63.1	65	No
R5	51.2	65	No

² Proposed Project unmitigated operational noise levels as shown on Table 9-2.

³ Exterior noise level standards, as shown on Table 4-1.

⁴ Do the estimated Project operational noise source activities exceed the noise level standards?

"Daytime" = 7:00 a.m. - 10:00 p.m.; "Nighttime" = 10:00 p.m. - 7:00 a.m.

9.6 PROJECT OPERATIONAL NOISE LEVEL INCREASES

To describe the Project operational noise level increases, the Project operational noise levels are combined with the existing ambient noise levels measurements for the nearby receiver locations that may be potentially impacted by Project operational noise sources. Since the units used to measure noise, decibels (dB), are logarithmic units, the Project-operational and existing ambient noise levels cannot be combined using standard arithmetic equations. (2) Instead, they must be logarithmically added using the following base equation:

$$SPL_{Total} = 10 \log_{10} [10^{SPL1/10} + 10^{SPL2/10} + \dots 10^{SPLn/10}]$$

where “SPL1,” “SPL2,” etc. are equal to the sound pressure levels being combined, or in this case, the Project-operational and existing ambient noise levels. The difference between the combined Project and ambient noise levels describes the Project noise level increases to the existing ambient noise environment. Noise levels that would be experienced at receiver locations when Project-source noise is added to the ambient conditions are presented on Table 9-4. As indicated on Table 9-4, the Project will generate a operational noise level increase ranging from 0.0 to 0.9 dBA CNEL at the nearest receiver locations. The Project-related operational noise level increases would not exceed the operational noise level increase significance criteria presented in Table 4-1.

TABLE 9-4: DAYTIME PROJECT OPERATIONAL NOISE LEVEL INCREASES (CNEL)

10 CONSTRUCTION IMPACTS

This section analyzes potential impacts resulting from the short-term construction activities associated with the development of the Project. Exhibit 10-A shows the on-site construction noise source activity in relation to the nearest sensitive receiver locations previously described in Section 8. According to Section 8.36.020.H of the Kern County Code of Ordinances, *it is unlawful for any person...to create noise from construction between the hours of 9:00 p.m. and 6:00 a.m. on weekdays and 9:00 p.m. and 8:00 a.m. on weekends, which is audible to a person with average hearing faculties or capacity at a distance 150 feet from the construction site...* However, neither the Kern County General Plan or Municipal Code establish numeric maximum acceptable construction source noise levels at potentially affected receivers for CEQA analysis purposes, a numerical construction threshold based on Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual is used for analysis of daytime construction impacts. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise sensitive residential land use with a nighttime exterior construction noise level of 70 dBA L_{eq} (8 p. 179).

10.1 CONSTRUCTION NOISE LEVELS

The FTA *Transit Noise and Vibration Impact Assessment Manual* recognizes that construction projects are accomplished in several different stages and outlines the procedures for assessing noise impacts during construction. Each stage has a specific equipment mix, depending on the work to be completed during that stage. As a result of the equipment mix, each stage has its own noise characteristics; some stages have higher continuous noise levels than others, and some have higher impact noise levels than others. The Project construction activities are expected to occur in the following stages:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

10.2 CONSTRUCTION REFERENCE NOISE LEVELS

To describe construction noise activities, this construction noise analysis was prepared using reference construction equipment noise levels from the Federal Highway Administration (FHWA) published the Roadway Construction Noise Model (RCNM), which includes a national database of construction equipment reference noise emission levels. (23) The RCNM equipment database, provides a comprehensive list of the noise generating characteristics for specific types of construction equipment. In addition, the database provides an acoustical usage factor to estimate the fraction of time each piece of construction equipment is operating at full power (i.e., its loudest condition) during a construction operation. Table 10-1 presents the combined noise levels for the loudest construction equipment, assuming they operate at the same time.

EXHIBIT 10-A: CONSTRUCTION NOISE SOURCE LOCATIONS

TABLE 10-1: CONSTRUCTION REFERENCE NOISE LEVELS

Construction Stage	Reference Construction Equipmnet ¹	Reference Noise Level @ 50 Feet (dBA L _{eq})	Composite Reference Noise Level (dBA L _{eq}) ²	Reference Power Level (dBA L _w) ³

¹ FHWA Road Construction Noise Model.

² Represents the combined noise level for all equipment assuming they operate at the same time.

³ Sound power level represents the total amount of acoustical energy (noise level) produced by a sound source independent of distance or surroundings.

10.3 CONSTRUCTION NOISE ANALYSIS

Using the reference construction equipment noise levels and the CadnaA noise prediction model, calculations of the Project construction noise level impacts at the nearby sensitive receiver locations were completed. For construction noise assessment, construction equipment can be considered to operate in two modes: stationary and mobile. As defined, stationary equipment operates in a single location for one or more days at a time, with either fixed-power operation (e.g., pumps, generators, and compressors) or variable-power operation (e.g., pile drivers, rock drills, and pavement breakers). Mobile equipment moves around the construction site with power applied in cyclic fashion, such as bulldozers, graders, and loaders. (8)

The FTA and FHWA recommend noise impacts from stationary equipment be assessed from the center of the equipment location, while noise impacts from mobile construction equipment should be assessed from the center of the equipment activity area. Consistent with industry practice, construction activities are evaluated as mobile sources since these activities tend to vary considerably, not only as the speed and power of the equipment varies, but also as the equipment constantly changes in terms of its distance from the receivers and its relative location. (24). Thus, to assess a more realistic and reasonable worst-case construction scenario while accounting for the dynamic nature of construction activities, this Project construction noise analysis models the equipment with the highest combined reference noise level as a moving

point source within the construction area (Project site boundary). As shown on Table 10-2, the construction noise levels are expected to range from 46.7 to 65.1 dBA L_{eq} at the nearby receiver locations. Appendix 10.1 includes the detailed CadnaA construction noise model calculations.

TABLE 10-2: CONSTRUCTION EQUIPMENT NOISE LEVEL SUMMARY

Receiver Location ¹	Construction Noise Levels (dBA L_{eq})					
	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	Highest Levels ²
R1	57.1	56.4	53.7	51.0	49.3	59.9
R2	61.2	60.5	57.8	55.1	53.4	64.0
R3	57.2	56.5	53.8	51.1	49.4	60.0
R4	65.1	64.4	61.7	59.0	57.3	67.9
R5	54.5	53.8	51.1	48.4	46.7	57.3

¹ Construction noise source and receiver locations are shown on Exhibit 10-A.

² Construction noise level calculations based on distance from the construction activity, which is measured from the Project site boundary to the nearest receiver locations. CadnaA construction noise model inputs are included in Appendix 10.1.

10.4 PROJECT SITE CONSTRUCTION NOISE LEVEL COMPLIANCE

To evaluate whether the Project will generate potentially significant short-term noise levels at nearest receiver locations, a construction-related daytime noise level threshold of 80 dBA L_{eq} is used as a reasonable threshold to assess the daytime construction noise level impacts. The construction noise analysis shows that the nearest receiver locations will satisfy the reasonable daytime 80 dBA L_{eq} significance threshold during Project construction activities as shown on Table 10-3.

TABLE 10-3: PROJECT SITE CONSTRUCTION NOISE LEVEL COMPLIANCE

Receiver Location ¹	Construction Noise Levels (dBA L_{eq})		
	Highest Construction Noise Levels ²	Threshold ³	Threshold Exceeded? ⁴
R1	57.1	80	No
R2	61.2	80	No
R3	57.2	80	No
R4	65.1	80	No
R5	54.5	80	No

¹ Construction noise source and receiver locations are shown on Exhibit 10-A.

² Highest construction noise level calculations based on distance from the construction noise source activity to the nearest receiver locations as shown on Table 10-2.

³ Construction noise level thresholds as shown on Table 4-1.

⁴ Do the estimated Project construction noise levels exceed the construction noise level threshold?

10.5 NIGHTTIME CONCRETE POUR NOISE ANALYSIS

It is our understanding that nighttime concrete pouring activities may occur as a part of Project building construction activities. Nighttime concrete pouring activities are often used to support reduced concrete mixer truck transit times and lower air temperatures than during the daytime hours and are generally limited to the actual building pad area. Since the nighttime concrete pours will take place outside the daytime hours, the Project Applicant will be required to obtain authorization for nighttime work from the Kern County.

10.5.1 NIGHTTIME CONCRETE POUR REFERENCE NOISE LEVEL MEASUREMENTS

To estimate the noise levels due to nighttime concrete pouring activities, sample reference noise level measurements were taken during a nighttime concrete pouring at a construction site. Urban Crossroads, Inc. collected short-term nighttime concrete pour reference noise level measurements during the noise-sensitive nighttime hours between 1:00 a.m. to 2:00 a.m. at 27334 San Bernardino Avenue in the City of Redlands. The reference noise levels describe the expected concrete pour noise sources that may include concrete mixer truck movements and pouring activities, concrete paving equipment, rear mounted concrete mixer truck backup alarms, engine idling, air brakes, generators, and workers communicating/whistling. To describe the nighttime concrete pour noise levels associated with the construction of the Project, this analysis relies on reference sound pressure level of 67.7 dBA L_{eq} at 50 feet.

10.5.2 NIGHTTIME CONCRETE POUR NOISE LEVEL COMPLIANCE

As shown on Table 10-4, the noise levels associated with the nighttime concrete pour activities are estimated to range from 39.2 to 49.8 dBA L_{eq} at the existing noise sensitive receiver locations. The analysis shows that the unmitigated nighttime concrete pour activities will not exceed the FTA 70 dBA L_{eq} nighttime residential noise level threshold at all the nearest noise sensitive receiver locations. Appendix 10.3 includes the CadnaA nighttime concrete pour noise model inputs.

TABLE 10-4: NIGHTTIME CONCRETE POUR NOISE LEVEL COMPLIANCE

Receiver Location ¹	Concrete Pour Construction Noise Levels (dBA L_{eq})		
	Exterior Noise Levels ²	Threshold ³	Threshold Exceeded? ⁴
R1	41.8	70	No
R2	45.9	70	No
R3	41.9	70	No
R4	49.8	70	No
R5	39.2	70	No

² Nighttime Concrete Pour noise model inputs are included in Appendix 10.2.

³ Construction noise level thresholds as shown on Table 4-1.

⁴ Do the estimated Project construction noise levels exceed the construction noise level threshold?

10.6 CONSTRUCTION VIBRATION ANALYSIS

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods employed. The operation of construction equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Ground vibration levels associated with various types of construction equipment are summarized in Table 10-5. Based on the representative vibration levels presented for various construction equipment types, it is possible to estimate the potential for human response (annoyance) and building damage using the following vibration assessment methods defined by the FTA. To describe the vibration impacts the FTA provides the following equation: $PPV_{\text{equip}} = PPV_{\text{ref}} \times (25/D)^{1.5}$

TABLE 10-5: VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT

Equipment	PPV (in/sec) at 25 feet
Small bulldozer	0.003
Jackhammer	0.035
Loaded Trucks	0.076
Large bulldozer	0.089
Vibratory Roller	0.210

Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual

Table 10-6 presents the expected Project related vibration levels at the nearby receiver locations. At distances ranging from 102 to 910 feet from Project construction activities, construction vibration velocity levels are estimated to range from 0.001 to 0.025 PPV in/sec. Based on maximum acceptable continuous vibration threshold of 0.3 PPV in/sec), the typical Project construction vibration levels will fall below the building damage thresholds at all the noise sensitive receiver locations.

TABLE 10-6: PROJECT CONSTRUCTION VIBRATION LEVELS

Location ¹	Distance to Const. Activity (Feet) ²	Typical Construction Vibration Levels PPV (in/sec) ³						Thresholds PPV (in/sec) ⁴	Thresholds Exceeded? ⁵
		Small bulldozer	Jack- hammer	Loaded Trucks	Large bulldozer	Vibratory Roller	Highest Vibration Level		
R1	667'	0.000	0.000	0.001	0.001	0.002	0.002	0.3	No
R2	173'	0.000	0.002	0.004	0.005	0.012	0.012	0.3	No
R3	809'	0.000	0.000	0.000	0.000	0.001	0.001	0.3	No
R4	102'	0.000	0.004	0.009	0.011	0.025	0.025	0.3	No
R5	910'	0.000	0.000	0.000	0.000	0.001	0.001	0.3	No

¹ Construction noise source and receiver locations are shown on Exhibit 10-A.

² Distance from receiver building facade to Project construction boundary (Project site boundary).

³ Based on the Vibration Source Levels of Construction Equipment (Table 10-5).

⁴ Caltrans Transportation and Construction Vibration Guidance Manual, April 2020, Table 19, p. 38.

⁵ Does the peak vibration exceed the acceptable vibration thresholds?

"PPV" = Peak Particle Velocity

Noise Element

Chapter 3

3. NOISE ELEMENT

3.1 INTRODUCTION

The Noise Element is a mandatory element of the General Plan (California Government Code Section 65302 (f)). The State, recognizing the effects of noise upon people's health and well being, required that local jurisdictions prepare statements of policy indicating their intentions regarding noise and noise sources, establish desired maximum noise levels according to land use categories, set standards for noise emission from transportation facilities and fixed-point sources, and prepare a program for implementation of noise control measures. Noise Elements are prepared in accordance with Guidelines for the Preparation and Content of Noise Elements of the General Plan published by the California Office of Noise Control in 1976. Those Guidelines are found in Appendix A of the General Plan Guidelines prepared by the State Office of Planning and Research (OPR).

The major purpose of the Noise Element is to: (1) establish reasonable standards for maximum desired noise levels in Kern County, and; (2) develop an implementation program which could effectively deal with the noise problem.

Considerable research has been done to determine the effects of various sound pressure levels on human health and on the successful performance of various human activities. It is known that noises of 120 dB(A) and higher will cause ear pain in most people; much lower levels may have permanent adverse effects on hearing.

The federal standards for industrial safety regulate the amount of time workers may be exposed to sound levels above 90 dB(A). This level was selected on the assumption that inability to hear at frequencies above 2,000 Hz is unimportant to speech communication. Tests show, however, that hearing loss of this extent will have an adverse effect on hearing low-level conversation and on hearing ordinary speech in the presence of background noise levels which commonly occur in everyday listening conditions.

It is desirable to control ambient noise level to reduce the adverse effects of noise. Ambient noise is the all-encompassing noise associated with a given environment; it usually is a composite of sounds from many sources, near and far.

The U.S. Environmental Protection Agency and the California Department of Health have suggested standards for ambient noise. These suggestions have been utilized in developing noise standards in Kern County.

Of primary importance in controlling noise in Kern County is protection of the public health, particularly insuring against hearing loss resulting from community noise. Next in importance is minimization of adverse effects of noise on the economic well-being of the community, and third, minimization of annoyance caused by noise.

Good land use planning should be employed to insure that the quality of the noise environment in Kern County does not deteriorate, and whenever practical be improved. Where noise sensitive uses are proposed, appropriate noise control measures shall be required as a condition of approval for discretionary projects. Measures to control the quality of the noise environment could include architectural design to reduce noise impact, acoustical insulation of exterior walls and construction of sound barriers.

The following major noise sources were considered in the preparation of the Noise Element:

- Highways and freeways
- Primary arterial and major local streets
- Railroad operations
- Aircraft and airport operations
- Local industrial facilities
- Other stationary sources

Railroad noise, although louder than highway noise, generally affects smaller areas. Railroad yards and rail alignments adjacent to residential areas should have noise barriers. Acoustical noise barriers could reduce existing rail noise up to 20 dB (A).

Little can be done to control airport noise. Through Federal standards more rigid noise controls are being required on aircraft. By adjusting the times of arrival and departure, flight patterns, and the time of day that high noise levels occur, noise levels from airports can be made more tolerable.

Noise contours have been prepared for all airports in the County, major railroad and highways within urban areas. Airport noise contours should be used to determine where noise insulation might be required and are located in the Airport Land Use Compatibility Plan (ALUCP). Any new airport or airport extension will be required to provide estimates of noise impact in conjunction with the required Master Plan updates to the ALUCP. The highway noise contours are contained in Appendix G. Noise contours for Interstate 5; State Route 14, 33, 43, 58, 99, 119, 155, 166, 178, 184, 202, 204, 223, and 395 are shown in Appendix G. Noise contours for the AT & SF Railroad, Southern Pacific Railroad, and Sunset Railroad are shown in Appendix G. The highway and railroad contours are not intended to provide distinct boundaries between noise levels, but as approximations of noise levels that can serve as the basis for further studies. As

these studies are completed, noise treatment may be needed to compensate for higher noise levels.

Definitions

1. Community Noise Equivalent Level (CNEL) – A measure of the cumulative noise exposure in the community, with greater weights applied to evening and nighttime periods. For CNEL calculations, day is defined as 7 a.m. to 7 p.m., and this period has a weighting factor of one; evening is 7 p.m. to 10 p.m. and has a weighting factor of three; and night is from 10 p.m. to 7 a.m. and has a weighting factor of ten. Noises occurring at night are given a substantially heavier weight, since for most people, this is the time when noise is most disturbing.
2. Day Night Average Sound Level, Ldn – The same as CNEL except that the evening time period is not considered separately, but instead it is included as part of the daytime period. Noise contours developed using CNEL and Ldn procedures will normally agree within one dB(A), which is an insignificant difference. The Ldn is a computational simplification of the CNEL.

3.2 NOISE SENSITIVE AREAS

The following noise sensitive land uses have been identified in the County:

- Residential areas
- Schools
- Convalescent and acute care hospitals
- Parks and recreational areas
- Churches

Goals

- 1) Ensure that residents of Kern County are protected from excessive noise and that moderate levels of noise are maintained.
- 2) Protect the economic base of Kern County by preventing the encroachment of incompatible land uses near known noise producing roadways, industries, railroads, airports, oil and gas extraction, and other sources.

Policies

- 1) Review discretionary industrial, commercial, or other noise-generating land use projects for compatibility with nearby noise-sensitive land uses.
- 2) Require noise level criteria applied to all categories of land uses to be consistent with the recommendations of the California Division of Occupational Safety and Health (DOSH).
- 3) Encourage vegetation and landscaping along roadways and adjacent to other noise sources in order to increase absorption of noise.
- 4) Utilize good land use planning principles to reduce conflicts related to noise emissions.
- 5) Prohibit new noise-sensitive land uses in noise-impacted areas unless effective mitigation measures are incorporated into the project design. Such mitigation shall be designed to reduce noise to the following levels:
 - a) 65 dB L_{dn} or less in outdoor activity areas;
 - b) 45 dB L_{dn} or less within interior living spaces or other noise sensitive interior spaces.

- 6) Ensure that new development in the vicinity of airports will be compatible with existing and projected airport noise levels as set forth in the ALUCP.
- 7) Employ the best available methods of noise control.
- 8) Enforce the State Noise Insulation Standards (California Administrative Code, Title 24) and Chapter 35 of the Uniform Building Code concerning the construction of new multiple-occupancy dwellings such as hotels, apartments, and condominiums.

Implementation Measures

The following are programs to be carried out by the Kern County to implement the goals and policies of the Noise Element.

- A) Utilize zoning regulations to assist in achieving noise-compatible land use patterns.
- B) Require proper acoustical treatment of transportation facilities, including highways, airports, and railroads.
- C) Review discretionary development plans, programs and proposals, including those initiated by both the public and private sectors, to ascertain and ensure their conformance to the policies outlined in this element.
- D) Review discretionary development plans for proposed residential or other noise sensitive land uses in noise-impacted areas to ensure their conformance with the noise standards of 65 dB L_{dn} or less in outdoor activity areas and 45 dB L_{dn} or less within interior living spaces.
- E) Review discretionary development plans to ensure compatibility with adopted Airport Land Use Compatibility Plans.
- F) Require proposed commercial and industrial uses or operations to be designed or arranged so that they will not subject residential or other noise sensitive land uses to exterior noise levels in excess of 65 dB L_{dn} and interior noise levels in excess of 45 dB L_{dn} .
- G) At the time of any discretionary approval, such as a request for a General Plan Amendment, zone change or subdivision, the developer may be required to submit an acoustical report indicating the means by which the developer proposes to comply with the noise standards. The acoustical report shall:
 - a) Be the responsibility of the applicant.

- b) Be prepared by a qualified acoustical consultant experienced in the fields of environmental noise assessment and architectural acoustics.
 - c) Be subject to the review and approval of the Kern County Planning Department and the Environmental Health Services Department. All recommendations therein shall be complied with prior to final approval of the project.
- H) Encourage cooperation between the County and the incorporated cities within the County to control noise.
- I) Noise analyses shall include recommended mitigation, if required, and shall:
 - a) Include representative noise level measurements with sufficient sampling periods and locations to adequately describe local conditions.
 - b) Include estimated noise levels, in terms of CNEL, for existing and projected future (10 – 20 years hence) conditions, with a comparison made to the adopted policies of the Noise Element.
 - c) Include recommendations for appropriate mitigation to achieve compliance with the adopted policies and standards of the Noise Element.
 - d) Include estimates of noise exposure after the prescribed mitigation measures have been implemented. If compliance with the adopted standards and policies of the Noise Element will not be achieved, a rationale for acceptance of the project must be provided.
- J) Develop implementation procedures to ensure that requirements imposed pursuant to the findings of an acoustical analysis are conducted as part of the project permitting process.

24-Hour Noise Level Measurement Summary

Date: Tuesday, June 13, 2023
Project: Airport Dr. and Boughton Dr.

Location: L5 - Located southeast of the site near the residence at 2101
Source: Wingland Dr.

Meter: Piccolo II

JN: 15369
Analyst: Z. Ibrahim

Hourly L_{eq} dBA Readings (unadjusted)

APPENDIX 9.1:

OPERATIONAL NOISE CALCULATIONS

This page intentionally left blank

15369 - Airport Drive Warehouse

CadnaA Noise Prediction Model: 15369-02.cna

Date: 09.01.24

Analyst: B. Lawson

Calculation Configuration

Configuration	
Parameter	Value
General	
Max. Error (dB)	0.00
Max. Search Radius (#(Unit,LEN))	2000.01
Min. Dist Src to Rcvr	0.00
Partition	
Raster Factor	0.50
Max. Length of Section (#(Unit,LEN))	999.99
Min. Length of Section (#(Unit,LEN))	1.01
Min. Length of Section (%)	0.00
Proj. Line Sources	On
Proj. Area Sources	On
Ref. Time	
Daytime Penalty (dB)	0.00
Recr. Time Penalty (dB)	5.00
Night-time Penalty (dB)	10.00
DTM	
Standard Height (m)	0.00
Model of Terrain	Triangulation
Reflection	
max. Order of Reflection	2
Search Radius Src	100.00
Search Radius Rcvr	100.00
Max. Distance Source - Rcvr	1000.00 1000.00
Min. Distance Rcvr - Reflector	1.00 1.00
Min. Distance Source - Reflector	0.10
Industrial (ISO 9613)	
Lateral Diffraction	some Obj
Obst. within Area Src do not shield	On
Screening	Incl. Ground Att. over Barrier
	Dz with limit (20/25)
Barrier Coefficients C1,2,3	3.0 20.0 0.0
Temperature (#(Unit,TEMP))	10
rel. Humidity (%)	70
Ground Absorption G	0.50
Wind Speed for Dir. (#(Unit,SPEED))	3.0
Roads (TNM)	
Railways (FTA/FRA)	
Aircraft (???)	
Strictly acc. to AzB
