EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (Phase I ESA) of the property located at 1811 & 1825 Sacramento Street in the city of Los Angeles, California (the Site) was performed by Equipoise Corporation (Equipoise) and an Equipoise subcontractor, Haro Environmental, for Skanska USA Commercial Development. Haro Environmental performed this Phase I ESA consistent with the American Society for Testing and Materials (ASTM) Practice E-1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM Standard). Exceptions to, or deletions from, this practice are described in this report.

The purpose of this assessment was to identify known, potential or historic recognized environmental conditions (RECs) resulting from historic and/or current uses of hazardous substances or petroleum products at the Site. We understand Skanska USA Commercial Development has requested this Phase I ESA in support of a pending real estate transaction. The findings of this environmental assessment are based on Haro Environmental's knowledge of the Site from observations and information gathered during this Phase I ESA.

The Site occupies approximately 1.77 acres at an elevation of 245 feet above mean sea level (MSL). Site topography is generally flat and slopes slightly to the southwest. The nearest surface water body is the Los Angeles River (channelized) located approximately one-half mile east of the Site. The Site is developed with two large warehouse buildings. The majority of the Site is paved with portions of bare soil located in planters and near the former railroad tracks south of the Site.

Current and historic addresses associated with the Site include 1805, 1811, 1813, 1825, and 1899 Sacramento Street. The property located at 1811 Sacramento Street on Site was listed in 7 databases searched by the EDR including the following: Underground Storage Tank (UST), Historical UST Registered Database (HIST UST), Hazardous Waste Manifest Data (HAZNET), Hazardous Waste Tracking System (HWTS), Statewide Environmental Evaluation and Planning System Underground Storage Tank Database (SWEEPS UST), California UST Database (CA FID UST), and Hazardous Materials Management (HAZMAT) Database. Much of the information obtained from the database records search was duplicated in the files maintained by local agencies, and contained listings for former underground storage tanks and hazardous material handling and the most environmentally sensitive information is listed below:

- A 2,000-gallon UST was removed in 1954 in the eastern parking lot and was replaced with a 10,000-gallon gasoline UST. This area was documented as an auto filling station in various documents up until at least 1963. No documents were obtained regarding its removal. A limited soil vapor screening survey was performed in the eastern parking lot at the Site in November 2019 which found that soil vapor was not impacted to 5 feet below ground surface (bgs). Because the Site eastern property line at the time the UST was in operation extended further east of the current eastern property line, this UST is/was likely located beneath the present day Wilson Street.

- Three (3) 550 to 1,000-gallon (documents reference different sizes) waste oil USTs and one 10,000-gallon diesel UST was removed from the central parking lot in 2014 under the oversight of the Los Angeles Fire Department. Soil sampling results indicate concentrations below cleanup standards. However, several soil areas during the removal activities were not sampled including from the sidewalls and below the 10,000-gallon UST. Further soil and soil gas sampling in the area of the USTs would provide additional information regarding subsurface impacts from the USTs.

- A previous Phase I ESA for the Site identified surface staining in the central parking lot and observed used mineral spirits being dumped onto the unpaved ground of the former railroad spur in the northwest corner of the property. A soil and soil vapor investigation was conducted in 2014. The sampling indicated that petroleum hydrocarbons and VOCs detected in the subsurface of these areas represented de minimis concentrations of contamination.

- An offsite soil, soil vapor, and groundwater threat exists from a nearby, upgradient property located at 1901 Sacramento Street which generated small quantities of chlorinated solvents and inorganic solid waste, and from a property north of it at 1910 Bay Street (the 1910-1914 Bay Street Property) where a release of chlorinated solvents occurred which resulted in subsurface investigations having been performed. Elevated concentrations of PCE and TCE have been detected in soil, soil vapor and groundwater. An investigation was conducted at the subject Site in 2019 in the eastern parking lot and included 8 soil vapor probes to 5 feet bgs. Results indicated concentrations of PCE were detected.

Based on a review of historic aerial photographs, topographic maps, Sanborn Fire Insurance Maps, and historic directories listings, the following development summary is provided: In approximately the late 1800s through approximately 1906, the first single family residences, detached garages, and sheds appeared at the Site based on Sanborn Fire Insurance maps. Between 1906 and 1923, the residential structures were removed and a warehouse appeared in the northwest corner and an industrial building appeared in the eastern half of the Site. The central area of the property was vacant. By approximately 1938, the northwest corner warehouse had been removed and a railroad spur was built along the southwest portion of the Site. Between approximately 1949 through 1963, an auto filling station operated on the east side of the Site.

Between at least 1950 and 1976, a magazine and paper company occupied a (new) northwestern warehouse, a truck repair shop (1811 Sacramento General Trucking Service, 1813 General Trucking Service,) and parking lot occupied the central portion of the Site, and the Blue Diamond Bag Company (that manufactured burlap bags) occupied the eastern building on Site. In 1971, the east half of the Site was redeveloped with the current warehouse building and in 1972 the western portion of the Site was redeveloped with the current warehouse. Since the 1990s, the property has been occupied by packing companies, produce companies, an Asian merchant trading, a trucking company, Marsh and Herb Importer, and United Melon.

A reconnaissance of the Site was conducted by an Equipoise representative on April 2, 2020. During the reconnaissance, hazardous materials and petroleum products were not observed at the Site. In addition, hazardous materials or petroleum products were not observed at nearby properties under conditions that could be expected to pose an environmental concern to the Site.

Based on the data gathered and reviewed during this Phase I ESA, Haro Environmental identified the following RECs:

- One 10,000-gallon gasoline UST historically located in the eastern parking lot installed in 1954 associated with an auto filling station in that area. No reports exist documenting its removal; however, because the Site property line at the time extended further east of the current eastern property line, this UST is/was likely located beneath the present day Wilson Street. As such, the potential is low for this historic feature to present a significant environmental concern to soil, soil vapor, and/or groundwater beneath the Site. In addition, soil vapor sampling performed in 2019 at the eastern parking lot did not detect elevated concentrations of petroleum hydrocarbons.

- Soil and/or groundwater impacts in the eastern parking lot associated with the adjacent northeastern property historically used for textile processing and the location of a known release of PCE. Soil vapor sampling performed in the eastern parking lot at the Site in 2019 indicated elevated concentrations of PCE in soil vapor samples, and suggests there is a potential for this offsite release to impact soil, and possibly groundwater, beneath the Site.

- The historic dumping of solvents in the northwestern corner of the property and the limited soil and soil gas sampling conducted in 2014. Because of the illegal dumping, there is a potential for elevated concentrations of solvents which could negatively impact soil and soil vapor beneath the Site.

Based on the data gathered and reviewed during this Phase I ESA, Haro Environmental identified the following Historical REC:

- The former presence of one 10,000-gallon UST and three 550-1,000-gallon waste oil USTs located in the central parking lot associated with the historic trucking service. UST removal and sampling activities were performed under the supervisions of the LAFD, and the LAFD issued a no further action letter for the USTs. Because the former USTs have been closed by the regulatory agency, these for USTs are considered a historical REC.

Based on the findings, Haro Environmental identified the following potential environmental concern:

- The historic presence of railroad tracks to the south of the Site. Railroads can be the source of a release of chemicals including petroleum hydrocarbons, herbicides, and/or heavy metals. As such, there is a potential for elevated concentrations of these chemicals in soil near the former railroad tracks.

1.0 INTRODUCTION

This Phase I Environmental Site Assessment (Phase I ESA) of the property located at 1811 & 1825 Sacramento Street in the city of Los Angeles, California (the Site) was performed by Equipoise Corporation (Equipoise) and an Equipoise subcontractor, Haro Environmental, for Skanska USA Commercial Development. A Site vicinity map is provided on Plate 1. Haro Environmental performed this Phase I ESA consistent with the American Society for Testing and Materials (ASTM) Practice E-1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM Standard). Exceptions to, or deletions from, this practice are described in this report.

1.1 PURPOSE

This Phase I ESA was conducted in an effort to identify known, potential or historic recognized environmental conditions (RECs) resulting from historic and/or current uses of the Site. We understand Skanska USA Commercial Development has requested this Phase I ESA in support of a pending real estate transaction. The ASTM Standard defines a REC as:

> "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions"

The ASTM Standard defines a historical REC as:

> "An environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently." For example, a historical REC could be identified if a past release of any hazardous substances or petroleum products has occurred in connection with the property and has

been remediated to the satisfaction of the lead regulatory agency as evidenced by a no further action letter or a case closure determination.

At the request of Skanska USA Commercial Development, whom we understand is considering purchasing the Site, Haro Environmental has completed this Phase I ESA. This report is subject to the limitations presented in this Phase I ESA report.

This report describes Haro Environmental's assessment methodology, presents our findings, and provides our opinion as to the potential presence of RECs in connection with the Site.

1.2 SCOPE OF SERVICES

The scope of services conducted for this study included the following tasks:

- Perform an on-site reconnaissance to identify indicators of the existence of hazardous materials or petroleum products.

- Observe adjacent or nearby properties from the Site and public thoroughfares in an attempt to see if such properties are likely to use, store, generate, or dispose of hazardous materials or petroleum products.

- Obtain and review an environmental records database search from Environmental Data Resources, Inc. (EDR) to acquire information about the potential for hazardous materials to exist on-site or at nearby properties.

- Review the current U.S. Geological Survey (USGS) topographic map to obtain information about topography and uses of the Site and nearby properties.

- Review historic aerial photographs, topographic maps, Sanborn Fire Insurance maps, and historic city directories listings to obtain information about historic uses of the Site and adjacent properties.

- Review California Division of Oil and Gas records to obtain information about historic oil and gas activity in the vicinity of the Site.

- Conduct interviews with persons familiar with the Site development and local and/or State government agencies, as warranted, to obtain information about current and historic uses of the property.

- Prepare this report documenting the findings of the Phase I study.

Our scope of services did not include any inquiries with respect to non-scope ASTM considerations including but not limited to asbestos containing materials, lead-based paint, mold, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, electromagnetic fields or geologic hazards.

2.0 SITE SETTING

The Site setting presented in this section describes the condition of the Site at the time of the Phase I ESA. Tables 2-1 and 2-2 summarize the physical characteristics of the Site and adjoining properties. A Site and Adjacent Land Use Map is provided on Plate 2.

2.1 SITE DESCRIPTION

Table 2-1 provides a summary of the physical location and size of the Site, as well as the current uses. This information was obtained from review of various maps (such as topographic maps and tax assessor maps), aerial photographs, and a site visit. Additional site description information was obtained during the site visit; please refer to the Section 5.0 of the report that covers site reconnaissance information.

TABLE 2-1
SITE LOCATION AND LAND USE

Parameter	Information/Comments
Location	The Site is located in the City of Los Angeles, and is bound by commercial properties to the north and southwest, by Sacramento Street to the south, Wilson Street to the east, and Lawrence Street to the west.
Assessor's Parcel Nos. (APNs)	5166-030-008 (1811 Sacramento) and 5166-030-009 (1825 Sacramento)
Section, Township, and Range	Section 3, Township 2 South, Range 13 West of the San Bernardino Base and Meridian.
Current Use	Warehouse and manufacturing
Current Ownership	Evangelos P Ambatielos

2.2 REGIONAL GEOLOGY AND HYDROGEOLOGY

Information on regional geology and hydrogeology is presented in Table 2-2. This information was obtained from published data and maps of the Site vicinity.

TABLE 2-2
PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Geologic/Hydrogeologic Parameter	Information/Comments
Site Topography	Based on a review of the USGS Los Angeles 7.5-Minute Topographic Quadrangle Map dated 2012; elevation at the Site is approximately 245 feet above mean sea level (MSL), and the relief across the Site slopes gently to the south. Storm water runoff at the Site empties onto the adjoining streets.
Site Geology and Soil Types	The Site is located within the Peninsular Ranges of the California Geomorphic Provinces (CGS, 2002). The Peninsular ranges are separated by northwest trending valleys, subparallel to faults branching from the San Andreas Fault. The trend of topography is similar to the Coast Ranges, but the geology is more like the Sierra Nevada, with granitic rock intruding the older metamorphic rocks. The Peninsular Ranges extend into lower California and are bound on the east by the Colorado Desert. The Los Angeles Basin and the island group (Santa Catalina, Santa Barbara, and the distinctly terraced San Clemente and San Nicolas islands), together with the surrounding continental shelf (cut by deep submarine fault troughs), are included in this province. According to the Preliminary Geologic Map of the Los Angeles 30' X 60' Quadrangle, the Site is underlain by Quaternary-aged alluvium (Campbell et. al., 2014). According to information obtained from subsurface investigations at the 1910-1914 Bay Street and 1901 Sacramento Street Properties release case located approximately 73 feet to the northeast of the Site, the Site vicinity is underlain by interbedded silty and clayey sands and sands with some gravel/cobble layers from ground surface to approximately 135 feet below ground surface (bgs). This unit is underlain by an unknown thickness of silty clay down to at least 140 feet bgs. Environmental Data Resources, Inc. (EDR, 2018) indicates that the dominant soil composition in the general area of the subject-site is "urban land." This classification reflects the fact that the subject-site vicinity has been heavily developed for many years. The Web Soil Survey site (United States Department of Agriculture, 2005) indicates that the subject-site vicinity has no soil data available.
Site Hydrogeologic Setting	The Site is located near the northern boundary of the Coastal Plain of Los Angeles Groundwater Basin – Central Subbasin. The Central Subbasin occupies a large portion of the southeastern part of the Coastal Plain of Los Angeles Groundwater Basin. This subbasin is commonly referred to as the "Central Basin" and is bounded on the north by a surface divide called the La Brea high, and on the northeast and east by emergent less permeable Tertiary rocks of the Elysian, Repetto, Merced and Puente Hills. The southeast boundary between Central Basin and Orange County Groundwater Basin roughly follows Coyote Creek, which is a regional drainage province boundary. The southwest boundary is formed by the Newport Inglewood fault system and the associated folded rocks of the

	Newport Inglewood uplifeet. Throughout the Central Basin, groundwater occurs in Holocene and Pleistocene age sediments at relatively shallow depths. (California Department of Water Resources, 1961). According to the GeoCheck® section of the EDR report, no groundwater wells are located within a one-quarter mile radius of the Site. No groundwater wells were observed at or adjacent to the Site. The nearest surface water body is the Los Angeles River (channelized) located approximately one-half mile east of the Site.

2.3 ADJOINING AREA LAND USE

A drive-by survey of the area adjoining the Site was performed by Equipoise personal on April 2, 2020. The results of this survey commercial land uses surround the Site. Site and adjoining land uses are depicted on Plate 2.

2.4 LOCATION AND LEGAL DESCRIPTIONS

The Site is located in the City of Los Angeles, and is bound by commercial properties to the north and southwest, by Sacramento Street to the south, Wilson Street to the east, and Lawrence Street to the west.

2.5 USER PROVIDED INFORMATION

User provided information was not obtained during preparation of this Phase I ESA.

2.5.1 Title Records

Haro Environmental was not provided and did not review a preliminary title report for the Site.

2.6 ENVIRONMENTAL LIENS

No environmental lien search was conducted by the preparer or the User of this Phase I ESA.

3.0 RECORDS REVIEW

Government agency database records are sources of information that may be helpful in evaluating activities that may have contributed to a release of hazardous substances or petroleum products to soil and/or groundwater. Haro Environmental contracted a government agency database search from Environmental Data Resource, Inc. (EDR). A copy of the EDR report, which specifies the approximate minimum search distance for each public list as defined in the American Society for Testing and Materials (ASTM) Standard, is included as Appendix A.

Properties that (1) were identified within the approximate minimum search distance from the Site as stated in the ASTM Standard; and (2) are listed in databases indicative of a potential environmental concern (i.e. release or underground storage tank sites) and which based on distance and topography could potentially impact the Site are listed in Table 3-1, EDR Listing Summary of Selected Properties (see Appendix A for a complete listing of properties reported and acronyms used by EDR).

The Site has several current and historic addresses associated with it including: 1805, 1811, 1813, 1825, and 1899 Sacramento Street. The Site address of 1811 Sacramento Street was listed in 7 databases searched by EDR including the following: Underground Storage Tank (UST), Historical UST Registered Database (HIST UST), Hazardous Waste Manifest Data (HAZNET), Hazardous Waste Tracking System (HWTS), Statewide Environmental Evaluation and Planning System Underground Storage Tank Database (SWEEPS UST), California UST Database (CA FID UST), and Hazardous Materials Management (HAZMAT) Database. None of the other Site addresses were listed in the databases searched by EDR. Nearby properties were listed in the following databases: HAZMAT, Cleaner Facilities (DRYCLEANERS), Emissions Inventory Data (EMI), HAZNET, HWTS, UST, Spills, Leaks, Investigations, and Cleanups Program (SLIC), Cleanup Program Sites (CPS-SLIC), HAZNET, California Environmental Reporting System (CERS), Enforcement Action Listing (ENF), National Pollutant Discharge Elimination System (NPDES), California Integrated Water Quality System Project (CIWQS), CERS Hazardous Waste (CERS HAZWASTE), and Resource Conservation and Recovery Act Non Generator/No Longer Regulated (RCRA NONGEN / NLR).

TABLE 3-1
EDR LISTING SUMMARY OF SELECTED PROPERTIES

Site Name	Site Address	Distance/Direction from Subject Site	Database Reference
United Melon Distributors Inc. and Albert and Elain Borchard Foundation, Inc.	1811 E. Sacramento Street	Site	UST, HIST UST, HAZNET, HWTS, SWEEPS UST, CA FID UST, HAZMAT
Geltman Industry, Wave Enterprises, and 1910-1914 Bay Street and 1901 Sacramento Street Properties	1901 E. Sacramento Street and 1910-1914 Bay Street	73 feet - Northeast	HAZMAT, DRYCLEANERS, EMI, HAZNET, HWTS, UST, CPS-SLIC, CERS,
DHL Express ELA, First Vehicle Services #48590, and 1900 Sacramento St.	1900 Sacramento Street	96 feet – South southeast	HWTS, ENF, NPDES, HAZMAT, CIWQS, CERS, CERS HAZWASTE, RCRA NONGEN / NLR
Coast Produce Company	1791 Bay Street	208 feet - North	HAZMAT, CERS
1010-1122 S Wilson Street	1010-1122 S Wilson Street	243 feet – North northeast	UST
1918 S Bay Street	1918 S Bay Street	267 feet - Northeast	UST

* = Listing generated and maintained by EDR (non-ASTM)

3.1 RESULTS OF DATABASE SEARCH

The following sections contain information on the results of the government records search conducted by EDR. Opinions presented below are based on information provided in EDR's report (unless otherwise noted) and on criteria such as nature of listing (release vs. non-release) and any reported violations. In assessing the potential impact to buildings materials, soil, soil vapor, and/or groundwater beneath the Site, the shallowest groundwater was considered with an anticipated groundwater movement direction assumed to flow to the southwest. Based on information from the nearby 1910-1914 Bay Street and 1901 Sacramento Street Properties Los Angeles Regional Water Quality Control Board (LARWQCB) Region 4 case # 1412, groundwater was found at 117-138 feet below ground surface (bgs) in March 2020.

3.1.1 Subject Property

Results of the regulatory agency database search performed by EDR indicate the Site property at 1811 Sacramento Street was listed as United Melon Distributors Inc. and Albert and Elain Borchard Foundation, Inc. The property was listed in multiple databases searched by EDR (Table 3-1) including the Hist UST databases for two 10,000-gallon gasoline tanks (diesel and unleaded) that were installed. Information

regarding this property was obtained from the City of Los Angeles Fire Department (CLAFD) and the State Water Resources Control Board (SWRCB) Geotracker website (www.geotracker.waterboards.ca.gov). Between approximately 1949 and 1963, the eastern portion of the property was listed as an auto fueling station. In 1949, a 2,000-gallon UST was installed located between 14 and 15 feet north of the south property line and 35 to 48 feet west of the east property line. In 1954, the 2,000-gallon UST was removed and replaced with a 10,000-gallon gasoline UST located 15 feet north of the south property line and 40 feet west of the east property line. Records report the auto filling station closed around 1963. No information pertaining to the removal of the 10,000-gallon UST was provided in the CLAFD files or on the Geotracker website. The possible presence, or past presence, of a gasoline UST in the eastern parking lot of the property represents a recognized environmental condition (REC); however, the property line was further to the east when this UST was referenced. Therefore, this UST is/was likely located beneath the present day Wilson Street.

Between 1958 and 1976, General Trucking Service operated at the Site at 1811 Sacramento Street. In approximately the 1970s, a three chamber 500-gallon waste fluid collection tank/sump/clarifier (clarifier) with associated piping was installed outside the northwest corner of the 1811 Site building. In 1971, one 9,940-gallon UST and three 550-gallon USTs were installed west of the 1811 Site building in the central parking. Between October 15 and 17, 2014, the clarifier was removed. During the removal activities the pit was excavated and soil samples were collected, one from 2 feet below the clarifier at 8 feet below ground surface (bgs) and one from the stockpiled soils. Soil analytical results indicated concentrations of total petroleum hydrocarbons (TPH) in the gasoline range (TPHg), TPH in the diesel range (TPHd), TPH in the oil range (TPHgo), volatile organic compounds (VOCs), and fuel oxygenating compounds were below the reporting limits (RLs) and California Administrative Manual (CAM) 17 metals were below background levels. The excavated pit was backfilled with the stockpiled soils. On October 17, 2014 and November 12, 2014, the three 550-gallon waste oil USTs and one 10,000-gallon diesel UST were removed. During the removal activities the pits were excavated and soil samples were collected from 2 feet beneath the former waste-oil USTs, from 3 feet bgs near the remote fill location, from 10 feet below the associated ventilation lines, and from the excavated soil. In addition, soil samples were collected from 14 feet bgs from each end of the former diesel UST and from the stockpiled soils. No soil samples were collected from the side walls or underneath the UST. Soil analytical results indicated VOCs, TPHg, TPHd, TPHo, and fuel oxygenates were not detected above the laboratory reporting limits. Soil analytical results did indicate the VOC tetrachloroethene (PCE) was detected at concentrations of 1.2 micrograms per kilogram (ug/kg) in one sample collected from below one of the former 550-gallon waste oil USTs and at 5.7 ug/kg from one sample collected below one end of the 10,000-gallon diesel UST. CAM 17 metals were below background levels. On February 11, 2015 the LAFD issued a Further Action (NFA) letter regarding the removal of the

three waste oil USTs and diesel UST. The UST removals represents a historical recognized environmental condition (Historic REC).

The property was also listed on the UST, SWEEPS UST, CA FID UST, and HAZMAT databases under the United Melon Distributors Inc. related to the fore mentioned USTs located at the Site. In addition, the property was listed in the HAZNET and HWTS databases, under the Albert and Elain Borchard Foundation, Inc., for the offsite removal of tank bottom waste associated with the 2014 UST removals and disposal.

3.1.2 Adjacent and Nearby Properties

Multiple nearby properties were listed in the databases searched by EDR; however, most of these nearby by listed properties would not be expected to pose an environmental concern based on either distance from the Site or on the nature of the listings (i.e., non-release sites or sites with no violations). One listed property which could pose an environmental concern to the Site is the 1910-1914 Bay Street and 1901 Sacramento Street Properties and is discussed further below.

1910-1914 Bay Street and 1901 Sacramento Street Properties – 73 Feet Northeast

The properties, located approximately 73 feet northeast, upgradient, of the subject Site, was listed as 1910-1914 Bay Street and 1901 Sacramento Street Properties, Geltman Industry, and Wave Enterprises in multiple databases searched by the EDR. The combined facility was primarily listed in the databases for contaminated soil and groundwater related to historic above and below ground USTs used to hold PCE and trichloroethene (TCE) and railroad spurs that were once routed through the Bay Street property.

Information regarding these facilities was found on the Los Angeles Regional Water Quality Control Board (LARWQCB) Geotracker website (www.geotracker.waterboards.ca.gov). Currently, there is one Open – Assessment & Interim Remedial Action case listed for this property. The case (Region 4 Case #1412) involves subsurface contamination related to the historic release of chlorinated solvents at 1910 Bay Street. The facility was historically used for textile manufacturing and processing by Geltman Industries and Rezex Corporation dating back to at least the 1970s. Records indicate several USTs (above ground and below) have been used to contain PCE, TCE, and diesel fuel. Soil contamination was discovered during a limited subsurface investigation in December 1993 through January 1994 which included the installation of seven soil borings. Soil samples collected near the former railroad tracks and around the edges of the property indicated elevated concentrations of PCE and total recoverable petroleum hydrocarbons (TRPH). In 1999, a Phase I Environmental Site Assessment was conducted at the facility which determined historic uses and above ground and below ground tanks historically used at the properties. In February 2016, a soil

gas survey was conducted that included the installation of 25 semi-permanent gas probes to 3 to 5 feet bgs in target areas. Soil gas samples collected indicated elevated concentrations of PCE in all soil gas samples and concentrations of TCE and cis-1,2 DCE were detected in most samples. Detected concentrations exceeded the Department of Toxic Substance Control (DTSC) guidelines. In April 2016, eight single and multiple completion vapor extraction wells (VEWs) were installed from 10 to 110 feet bgs for soil vapor extraction remediation and vapor intrusion mitigation. Most soil samples collected during the well installations detected concentrations of PCE, TCE, cis-1,2 DCE, chloroform, and naphthalene. In March 2017, an additional VEW was installed to 135 feet below grade. Soil samples collected during installation indicated detectable concentrations of PCE. In August 2017, one groundwater monitoring well was installed to 140 feet below grade. Soil samples collected during installation indicated detectable concentrations of PCE and TCE. Additional site assessment was required by the LARWQCB to determine groundwater conditions. In 2018, six groundwater monitoring wells were installed to 140 feet below grade including several with multi-level soil gas sampling tips. A silty clay layer located at approximately 140 to 142 feet bgs interval was encountered during well installation. It was suggested that there was a possible perched groundwater zone. Soil samples collected during installation indicated detectable concentrations of PCE and TCE. Soil gas samples indicated low concentrations of PCE and TCE in most samples. In December 2018, groundwater sampling was conducted. During this event many wells produced low volumes of water and had slow recharge times. Groundwater samples collected indicated concentrations of PCE, DCE, and Cis 1,2 DCE in all samples.

Between April and June 2016, a vapor extraction pilot test was conducted utilizing 14 available wells and a mobile extraction devise. In July 2016, the vapor extraction system used in the interim remedial action program was started for continuous operation. As of the first quarter of 2020, the system has removed a total of 3,608.8 pounds of PCE in the vapor phase.

The closest groundwater monitoring well to the subject Site is MW2 (approximately 85 feet northeast) located at 1901 Sacramento Street on the southwest corner of the property. The well is installed to 140 feet bgs and includes soil gas sampling tips at 15, 30, 60, and 90 feet bgs. Results from groundwater sampling conducted on December 15, 2019 indicated concentrations of PCE, TCE, and cis-1,2-DCE at 990 ug/L, 210 ug/L, and 28 ug/L, repspectively. Soil gas samples collected from MW2 on December 3, 2018 indicate PCE concentrations were present in most samples ranging from 4.5 ug/L (15 feet bg) to 150 ug/L (90 feet bg) and TCE concentrations were present in one sample at 0.80 ug/L (90 feet bg). The closest vapor extraction well to the subject Site is (VE6) located at 1901 Sacramento Street, at approximately 134 feet northeast. Recent vapor samples collected during the first quarter of 2020 indicate PCE and TCE concentrations were present in both the shallow and deep sample locations ranging from 73 ug/L (deep-100 feet bg) to 160 ug/L (shallow- 45 feet bg) and 0.72 (shallow) to 2.5 (deep).

Currently, workplans for additional investigation are required by the LARWQCB and include requirements to define the extent of groundwater contamination and to define the current soil gas conditions.

Based on the soil, soil vapor, and groundwater contamination associated with this site, the upgradient position of this facility from the subject Site, and the (current) lack of offsite data, this facility could pose an environmental concern to subsurface soil vapor and/or groundwater beneath the Site.

3.1.3 EDR Orphan List

Three sites not plotted by EDR due to poor or inadequate address information are referred to as orphan sites. The orphan summary/unmapped sites report was reviewed by Haro Environmental to assess the potential for off-site properties to affect the subject-site. Because they have incomplete addresses, orphan sites are not practically reviewable as defined by the ASTM standard. However, based upon the street name, location reported, and Haro Environmental's knowledge of the area, the three orphan/unmapped sites identified by EDR do not have the potential to pose a significant environmental concern to subsurface soil vapor and groundwater beneath the Site.

3.1.4 Non-ASTM Issues

Assessment of non-ASTM issues including but not limited to asbestos containing materials, lead-based paint, mold, regulatory compliance, wetlands, radon, flood plains, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, electromagnetic fields or geologic hazards were not included as part of this Phase I ESA.

3.2 OTHER RECORDS REVIEWED

The following additional sources of information were reviewed as part of this Phase I ESA.

3.2.1 Public Agency Records

Building permit information for the Site was requested from the City of Los Angeles Department of Building and Safety (CLADBS). As of the writing of this report, the CLADBS has not responded to our request for information. If the CLADBS provides information after publication of this Phase I ESA that

alters the published findings, an addendum letter will be prepared that summarizes the information obtained and provides the updated findings.

Files maintained by the CLAFD for information regarding Historic USTs located at the 1811 Sacramento Street Site were reviewed. CLAFD indicated they did not have files for 1813 or 1825 Sacramento Street. The following is a summary of the file information provided:

- 1949 - Permit Renewal for one 2,000-gallon UST located 14-feet north of curb line and 48-feet west of east property line and Certificate of Occupancy for repair garage;
- 1951 - Permit Renewals for public garage repairs on trucks and one 2,000-gallon UST located 20-feet north of south property line and 35-feet west of east property line, Inspection by CLAFD for Fire code violations (no hazardous materials involved), and LAFD Recommendation Memorandum (no hazardous materials involved);
- 1954 - CLAFD Final Notice regarding violations including one "provide metal containers for combustible waste" (all violations appeared to have been corrected); Transfer of Permit for one 10,000-gallon gasoline UST installed and one 2,000-gallon tank to be removed, Tank Abandonment Form for 2,000-gallon UST removed from ground, and Fire permit index for one 10,000-gallon UST installed and one 2,000-gallon UST removed;
- 1955 – Permit for 10,000-gallon gas UST 15-feet north of south property line and 40-feet west of east property line;
- 1957 - Inspection by CLAFD noted Fire code violations (no hazardous materials involved);
- 1958 - Transfer of Permit for Public garage;
- 1960 - Inspection by CLAFD noted Fire code violations (no hazardous materials involved), Note from building and safety regarding garage building approved, and LAFD Recommendation Memorandum (no hazardous materials involved);
- 1962 - Fire permit duplicate;
- 1963 - Fire permit index for Auto Fueling Station;
- 1965 - Inspection by CLAFD noted Fire code violations (no hazardous materials involved);
- 1966 - Inspection by CLAFD noted Fire code violations (no hazardous materials involved) and CLAFD Notice of Hazard for lack of signage regarding smoking near the pumps and location of remote control for switch for gas pumps;
- 1967 - Inspection by CLAFD noted Fire code violations (no hazardous materials involved);
- 1968 - Inspection by CLAFD noted Fire code violations (no hazardous materials involved);
- 1971 - Permit to Install 4 USTs;
- 1978 – Permit to Install pipe for diesel pump and set pump on island and Permit to Install, add, or alter piping;

- 1980 - Memo regarding small fire;
- 1991 – CLAFD Intradepartmental Memorandum regarding 1811 E. Sacramento Street (note states "These occupancies no longer meet FPB criteria.");
- 2014 - Soil Report Log Sheet for verification of soil samples taken, Hazardous waste tank closure Certification from Certified Industrial Hygiene (CIH) that tanks were clean, Permit to remove 4 USTs, various permits and correspondents, related to permitting and removal of one 10,000 diesel UST and three 1,000 gallon waste oil USTs, Soil Report Log Sheet for verification of soil samples taken, Manifest for 325 gallons waste liquid from tanks (water with hydrocarbons noted), Tank Certification Report for CIH verification of Low Explosive Limit (LEL) for one 10,000-gallon gasoline UST, and Manifest 250 gallons waste liquid from tanks (water with trace hydrocarbons noted);
- 2015 – No Further Action (NFA) Letter from LAFD; and
- 2016 - UST Oversight Report by Wayne Perry (See Section XXX for summary of this report).

The NFA letter from the CLAFD for the removal of the one 10,000-gallon diesel UST and three 550 to 1,000-gallon waste oil USTs represents a historical recognized environmental condition (Historic REC). In 1949, a 2,000-gallon UST was installed on the east side of the subject property. This UST was located between 14 and 15 feet north of the south property border and 35 to 48 feet west of the east property border. In 1954 this 2,000-gallon UST was replaced with a 10,000-gallon gasoline UST. This tank was reported to have been located 15 feet north of the south property border and 40 feet west of the east property border. No reports could be located that indicated that the 10,000-gallon gasoline UST has been removed. The possible presence, or past presence, of a gasoline UST in the east parking lot represents a recognized environmental condition (REC).

3.2.2 Previous Environmental Reports

Six previous environmental reports have been prepared for the Site and were provided by the seller. Copies of the full reports are provided in Appendix B. The reports include the following:

- *Limited Environmental Assessment, 1805, 1811, 1825, 1899 Sacramento Street, Los Angeles, California* prepared by Iris Environmental, and dated January 29, 2014.

- *Phase II Environmental Site Assessment, 1805, 1811, 1825, 1899 Sacramento Street, Los Angeles, California* prepared by Anderson Environmental, and dated July 2, 2014.

- *Environmental Oversight for Clarifier Removal and Soil Sampling Activities Report, Marsh and Herb Importer, Inc., 1811 Sacramento Street, Los Angeles, California* prepared by Wayne Perry Inc., and dated January 7, 2015.

- *Submittal of Revised Environmental Oversight for UST Removal and Soil Sampling Activities Report, Marsh and Herb Importer, Inc., 1811 Sacramento Street, Los Angeles, California* prepared by Wayne Perry Inc., and dated January 7, 2015.

- *Phase I Environmental Site Assessment, Sacramento Street Industrial Buildings, 1811 and 1825 Sacramento Street, Los Angeles, California* prepared by Environmental Solutions, and dated November 8, 2019.

- *Limited Phase II Environmental Site Assessment Subsurface Soil-Vapor Screening Test Report, The Sacramento Street Property East Parking Lot Portion, 1811 Sacramento Street, Los Angeles, California* prepared by Environmental Solutions, and dated November 22, 2019.

January 29, 2014: Limited Environmental Assessment, 1805, 1811, 1825, 1899 Sacramento Street, Los Angeles, California: This report presented the findings from the limited environmental assessment of the Borchard Foundation property at the Site. The assessment included: historical information review; Site visit; interviews with individuals knowledgeable about the Site; review of regulatory records; review of CLABD records; and review of CLAFD records for UST records. Their findings included the following:

- Observed staining on the ground located at the north end of the parking lot in the center of the property.

- "Operations in the western portion of the 1805 building were observed to dump used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest portion of the Site. The observed dumping of waste solvent onto the unpaved ground surface is an environmental concern and will cause environmental impairment. Depending on additional information obtained, further investigation into this matter may be prudent."

- "The apparent fuel UST, waste fluid disposal collection tank/sump/clarifier, and associated piping appear to have been installed in the 1970s during the use of the 1811 building as a truck maintenance facility. The remaining presence and unknown conditions and contents, if any, represent an environmental concern. These features should be brought in compliance with current regulations or removed from the Site under permit from the CLAFD UST Program."

July 24, 2014: Phase II Environmental Site Assessment, 1805, 1811, 1825, 1899 Sacramento Street, Los Angeles, California: In response to the Phase I conducted at the Site, a Phase II was conducted which included soil and soil vapor sampling and a geophysical survey. Eight (8) soil borings were completed to ten feet below ground surface (bgs) (in the northeastern area) and 2 (2) soil borings were completed to five feet bgs (north end of central parking lot) to assess possible impacts from the observed dumping of waste solvents onto the unpaved ground surface and areas of surface staining. Soil samples were collected from 2, 5, and 10 feet bgs. Of those, eight (8) samples collected from 2 feet bgs from the borings located in northwestern corner, were tested for extractable range petroleum hydrocarbons (ERPH) and Stoddard solvent using EPA Method 8015M, and VOCs using EPA Method 8260B, and two (2) soil samples collected from 2 feet bgs from borings located at the north end of the central parking lot were tested for ERPH using EPA Method 8015M. A photoionization detector (PID) was used to screen a small amount of soils for VOCs from each sampling location. The results from the PID screenings were not provided and could not be located. TPHd was detected in all 10 samples analyzed at concentrations ranging from 2.7 to 18.6 milligrams per kilogram (mg/kg). TPHo was detected in 6 of the 10 samples analyzed at concentrations ranging from 140 to 216 mg/kg. Stoddard solvent was not detected above analytical detection limits in any of the soil samples. PCE was detected in 2 samples analyzed at concentrations of 4.36 µg/kg and 5.45 µg/kg, ethylbenzene was detected in one sample at 2.61 µg/kg, xylenes were detected in two samples at 3.02 µg/kg and 11.96 µg/kg. No other VOCs were detected. Three soil borings were converted to soil vapor probes at five (5) feet bgs. Soil vapor samples were tested for VOCs and fuel oxygenates using EPA Method 8260B. No VOCs were detected in any of the samples. A geophysical survey, including ground penetrating radar, was conducted to determine presence of buried USTs and/or backfilled excavations associated with UST removal, as well as the presence of detectable underground utilities in the vicinity of suspected fill ports and clarifier features. Results indicate two suspected USTs of approximately 6,000 to 10,000-gallon capacities in the central parking lot area and the detection of an inlet, an outlet, and a vent line in the area of the clarifier at the north side of the 1811 Sacramento Street building.

The report concluded "that a significant release to the subsurface in the areas of dumping of used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest portion of the site and limited surface staining in the central portion of the site has not occurred, therefore further subsurface investigation is not warranted." However, they did recommend further assessment to determine potential subsurface releases in the vicinity of the suspected USTs and clarifier at the site. Soil testing for laboratory analysis did not appear to be performed at the 5 and 10-foot bgs intervals.

January 7, 2015: Environmental Oversight for Clarifier Removal and Soil Sampling Activities Report, Marsh and Herb Importer, Inc., 1811 Sacramento Street, Los Angeles, California: This report presented the findings from the clarifier removal and associated soil sampling at the Site. One three chamber 500-gallon clarifier was removed, located northwest of the northwest corner of the building at 1811 Sacramento Street. Excavated soil was monitored for VOCs using a PID and readings did not exceed 50 parts per million (ppm) during activities. One soil sample was collected from 2 feet below the excavation floor (8 feet bgs) to determine subsurface impacts from the clarifier and was tested for petroleum hydrocarbons using EPA Method 8015, VOCs and fuel oxygenates using EPA Method 8260B Full Scan, and CAM 17 metals using EPA Method 6010B and EPA Method 7471. Petroleum hydrocarbons, VOCs, and fuel oxygenates were not detected and CAM 17 metal concentrations did not exceed naturally occurring background levels. Stockpiled soils were used as backfill in the excavated area. The report concluded that petroleum hydrocarbons, VOCs, and fuel oxygenates were not detected above their respective laboratory reporting limits, and metals concentrations were below levels of concern. Soil testing from the side walls of the excavated area for laboratory analysis was not performed. However, there were no VOCs detected with the PID from the east or west side of the clarifier during the removal process.

January 7, 2015: Submittal of Revised Environmental Oversight for UST Removal and Soil Sampling Activities Report, Marsh and Herb Importer, Inc., 1811 Sacramento Street, Los Angeles, California: This report presented the findings from the UST removal and associated soil sampling at the Site. Three 550-gallon (also referred to as 1,000-gallons in other records) waste oil USTs and one 10,000-gallon diesel fuel UST were removed, located west of building 1811 Sacramento Street in the (former) trucking parking lot. Excavated soil was monitored for VOCs using a PID and readings did not exceed 50 ppm during activities. Three (3) soil samples were collected from 2 feet beneath the excavation of each of the waste-oil USTs, one (1) soil sample was collect from 3 feet below the remote fill location, one (1) soil sample was collected from 10 feet below the UST ventilation line, and one sample was collected from the excavation waste oil soil to determine subsurface impacts from the 550-gallon USTs and were tested for petroleum hydrocarbons using EPA Method 8015, VOCs and fuel oxygenates using EPA Method 8260B Full Scan, and CAM 17 metals using EPA Method 6010B and EPA Method 7471. PCE was detected in one sample at a concentration of 1.2 µg/kg. No other VOCs or fuel oxygenates, petroleum hydrocarbons were detected, CAM 17 metal concentrations did not exceed naturally occurring background levels. Two (2) soil samples were collected beneath each end of the UST at a total depth of 14 feet bgs and one (1) soil sample was collected from excavated diesel fuel soil. All soil samples were tested for petroleum hydrocarbons using EPA Method 8015, VOCs and fuel oxygenates using EPA Method 8260B Full Scan, and CAM 17 metals using EPA Method 6010B and EPA Method 7471. PCE was detected in one sample at a concentration of 5.7 ug/kg. No other VOCs or fuel oxygenates, petroleum hydrocarbons were detected,

CAM 17 metal concentrations did not exceed naturally occurring background levels. Stockpiled soils were used as backfill in the excavated area.

November 8, 2019: Phase I Environmental Site Assessment, Sacramento Street Industrial Buildings, 1811 and 1825 Sacramento Street, Los Angeles, California: This report presented the findings from the Phase I report. Their findings included: no controlled recognized environmental conditions; one recognized REC; one historical REC, one de minimis condition, and one offsite vapor intrusion threat. The one REC included a 10,000-gallon UST that was installed in 1954, in the eastern parking lot, to replace an existing 2,000-gallon UST. No records exist of the 10,000-gallon UST being removed. The historical REC included the 2015 removal of one 10,000-gallon diesel UST and three 1,000-gallon oil waste USTs located west of the 1811 Sacramento building. The De Minimis Condition included the previously observed dumping of used mineral spirits (solvents) onto the unpaved ground of the former railroad spur in the northwest subject property corner and the previously observed surface staining in the central parking lot. Both were investigated. The offsite vapor intrusion threat included the 1901 Sacramento Street generation of chlorinated solvents and inorganic solid waste for off-site disposal or recycling and 1910-1914 Bay Street property release of chlorinated solvents. The report recommended that subsurface investigations be performed in the east parking lot in the two areas where the tanks were reported to have existed, including soil vapor testing with probes set to 5 feet bgs which could provide info regarding the presence of the USTs and/or impacts from the REC related to the northeastern property located at 1901 Sacramento Street.

November 22, 2019: Limited Phase II Environmental Site Assessment Subsurface Soil-Vapor Screening Test Report, The Sacramento Street Property East Parking Lot Portion, 1811 Sacramento Street, Los Angeles, California: This report presented the findings from the subsurface soil-vapor screening conducted in the eastern parking lot located at the Site. Eight (8) soil-vapor/gas probes were installed to 5 feet bgs in the eastern parking lot to screen for possible chlorinated solvents and aromatic hydrocarbons in soil vapor. Vapor samples were analyzed onsite for: gasoline vapors and compounds, PCE, TCE, chlorinated solvents, and aromatic hydrocarbons using EPA Method 8260B on a mobile gas chromatograph. PCE was detected in (8) samples (includes one duplicate sample) at concentrations ranging from 0.21 micrograms per liter (µg/l) to 0.90 µg/l. No other concentrations were detected above their respective laboratory reporting limits. The report concluded "that, presence of a REC as discussed in the Phase I report is not likely to the extent that gasoline vapors were suspected and that the subsurface of this portion of property has not been adversely impacted by its historic use. Further assessment is not recommended at this time."

4.0 SITE HISTORY

The history of the site was researched to identify obvious uses of the site back to the first developed use, or at least 40 years ago, whichever is earlier or readily available.

Several data gaps since 1940 of greater than 5 years were identified in the historical records reviewed and included the years from 1940 to 1948, 1983 to 1989 and from 1994 to 2000. These data gaps are considered insignificant because the Site use appears to be similar during the data gaps.

4.1 GENERAL SITE HISTORY

In approximately the late 1800s through approximately 1906, the first single family residences, detached garages, and sheds appeared in Sanborn Fire Insurance maps at the Site. Between 1906 and 1923, the residential structures were removed and a warehouse was built in the northwest corner and an industrial building was built in the eastern half of the Site. The central area of the property was vacant. By approximately 1938, the northwest corner warehouse had been removed and a railroad spur was built along the southwest portion of the Site. Between approximately 1949 through 1963, an auto filling operated on the east side of the Site (referenced at the 2,000-gallon UST replaced by a 10,000-gallon UST in historic records). Between at least 1950 and 1976, a magazine and paper company occupied a (new) northwestern warehouse, a truck repair shop (1811 Sacramento General Trucking Service, 1813 General Trucking Service,) and parking lot occupied the central portion of the Site, and the Blue Diamond Bag Company (that manufactured burlap bags) occupied the eastern building on Site. In 1971 the east half of the Site was redeveloped with the current warehouse building and in 1972 the western portion of the Site was redeveloped with the current warehouse. Since the 1990s, the property has been occupied by packing companies, produce companies, an Asian merchant trading, a trucking company, Marsh and Herb Importer, and United Melon.

4.2 AERIAL PHOTOGRAPHS

A review of historical aerial photography may indicate past activities at a property that may not be documented by other means, or observed during a site visit. The effectiveness of this technique depends on the scale and quality of the photographs and the available coverage. Aerial photographs were obtained from several historical photograph collections through EDR. A tabulation of the aerial photographs reviewed is presented in Table 4-1.

TABLE 4-1
HISTORICAL AERIAL PHOTOGRAPHS REVIEWED

Date	Approximate Scale	Source
1923	1" = 500'	FAIR
1928	1" = 500'	FAIR
1938	1" = 500'	USDA
1948	1" = 500'	USGS
1952	1" = 500'	USDA
1964	1" = 500'	USGS
1972	1" = 500'	EDR Proprietary Brewster Pacific
1977	1" = 500'	EDR Proprietary Brewster Pacific
1983	1" = 500'	EDR Proprietary Brewster Pacific
1989	1" = 500'	USDA
1994	1" = 500'	USGS/DOQQ
2002	1" = 500'	USDA
2005	1" = 500'	USDA/NAIP
2009	1" = 500'	USDA/NAIP
2012	1" = 500'	USDA/NAIP
2016	1" = 500'	USDA/NAIP

Note: Aerial photographs only provide information on indications of land use and no conclusions regarding the release of hazardous substances or petroleum products can be drawn from the review of photographs alone.
DOQQ = Digital Ortho Quarter Quads
NAIP = National Agriculture Industry Program

Copies of the reviewed aerial photographs are included in Appendix A. The following is a summary of our review of these photographs.

- ***1923*** – The Site appears developed with a warehouse in the northwest corner and industrial buildings on the east half. The center of the Site is vacant. The surrounding properties appear developed with railroad spurs and industrial buildings. The Southern Pacific Railroad appears to the west of the Site. Sacramento Street appears in its present day location and Wilson Street appears further east of the Site.

- ***1928*** – The Site and nearby properties appear similar to the 1923 aerial photograph.

- ***1938*** – The Site and nearby properties appear similar to the 1928 aerial photograph with the exception that the warehouse in the northwest corner has been demolished, a railroad spur appears along the southwest Site border, and the industrial buildings appear at 1901 Sacramento Street.

- ***1948*** – The Site and nearby properties appear similar to the 1938 aerial photograph with the exception that an unidentified square structure appears in the northern portion of the central parking lot.

- ***1952*** – The Site and nearby properties appear similar to the 1948 aerial photograph with the exception that a warehouse (old magazine and paper) appears in the northwest corner, a parking lot and an industrial building appear in the center of the Site (old truck yard and service building), and the east portion of the Site appears as a parking lot.

- ***1964*** – The Site and nearby properties appear similar to the 1952 aerial photograph.

- ***1972*** – The Site and nearby properties appear similar to the 1964 aerial photograph with the exception that Site has been redeveloped with the current two warehouse buildings, the central parking lot which includes a recently paved cement area, and the eastern property boundary has been realigned to its current configuration and Wilson Street appears in its present day location.

- ***1977*** – The Site and nearby properties appear similar to the 1972 aerial photograph with the exception that the railroad spur tracks no longer appear.

- ***1983*** – The Site and nearby properties appear similar to the 1977 aerial photograph.

- ***1989*** – The Site and nearby properties appear similar to the 1983 aerial photograph.

- ***1994*** – The Site and nearby properties appear similar to the 1989 aerial photograph.

- ***2002*** – The Site and nearby properties appear similar to the 1994 aerial photograph.

- ***2005*** – The Site and nearby properties appear similar to the 2002 aerial photograph.

- ***2009*** – The Site and nearby properties appear similar to the 2005 aerial photograph.

- ***2012*** – The Site and nearby properties appear similar to the 2009 aerial photograph.

- ***2016*** – The Site and nearby properties appear similar to the 2012 aerial photograph.

4.3 HISTORICAL TOPOGRAPHIC MAPS

Haro Environmental reviewed historical topographic maps of the Site vicinity. The topographic maps reviewed for this assessment are listed below in Table 4-2.

TABLE 4-2
HISTORICAL TOPOGRAPHIC MAPS REVIEWED

Year
1894
1896
1900
1928
1953
1966
1972
1981
1991, 1994
2012

The Site is located southeast of downtown Los Angeles at an elevation of approximately 242 feet above MSL. The Los Angeles River is located approximately 2335 feet to the east of the Site and the 10 Freeway is located approximately 1184 feet to the southeast of the Site. Copies of the reviewed historic topographic maps are included in Appendix A. The following is a summary of our review of the maps.

- ***1894*** – The Site and surrounding properties are primarily depicted as developed land. Several small dwellings are depicted on the Site. Sacramento Street is depicted to the south of the Site and Wilson Street is depicted to the east of the Site. Railroad tracks are depicted west of the Site. Small commercial/industrial and residential dwellings are depicted on the surrounding properties.

- ***1896*** – The Site and surrounding properties are depicted similar to the 1894 map.

- ***1900*** – The Site and surrounding properties are depicted similar to the 1896 map.

- ***1928*** – The Site is depicted with a small industrial structure on the northwest corner, a large industrial structure on the eastern half, and two small, unidentified structures appear east of the large building. A railroad spur traverses the northwest portion of the Site from northeast to southwest. A large industrial structure is depicted southeast of the Site, on the southeast corner of Sacramento and Wilson Street.

- ***1953*** – The Site and surrounding properties are depicted similar to the 1928 map with the exception that individual structures are no longer depicted and the Site and surround areas are depicted with pink shading, indicating urban development.

- ***1966*** – The Site is depicted with structures again including: the small industrial structure on the northwest corner, the large industrial structure on the eastern half, and a new rectangular industrial structure in the central lot. The railroad spur in the northwest portion of the Site is depicted. Several industrial buildings are depicted immediately to the north, south, and west of the Site. The surrounding properties are depicted with dark pink shading, indicating urban development, with the exception of a few school structures.

- ***1972*** – The Site and surrounding properties are depicted similar to the 1966 map.

- ***1981*** – The Site and surrounding properties are depicted similar to the 1972 map.

- ***1994*** – The Site and surrounding properties are depicted similar to the 1981 map.

- ***2012*** – The Site and surrounding properties are depicted similar to the 1994 map with the exception that all buildings and color have been removed.

4.4 SANBORN® FIRE INSURANCE MAPS

Sanborn® Fire Insurance Maps provide historical land use information in some metropolitan areas and small, established towns. Copies of the reviewed Sanborn® Fire Insurance Maps are included in Appendix A. The following is a summary of our review of these photographs.

- ***1906*** – The Site is depicted as developed in the eastern half with residential dwellings along Sacramento Street and several sheds and small unidentified structures along Bay Street. Railroad spurs traverse the northwest portion of the Site from northeast to southwest. Large dwellings are depicted northeast and southeast of the Site along Wilson Street, and south of Sacramento Street. A large iron works facility is depicted slightly southeast of the Site across Wilson Street.

- ***1950*** – The Site is no longer depicted with residential dwellings. A magazine and paper warehouse is depicted in the northwestern corner, a trucking yard is depicted in the central portion, and a truck and service warehouse to the east of the trucking yard is depicted. The Pacific Diamond Burlap Bag Manufacturing Company facility occupies the eastern portion of the Site including: a cleaning room with an above ground storage tank (AST) , a patching room, a sewing room, a thru-out room

with an AST, several bag stage areas, and a parking lot to the east of the building. A railroad spur traverses the northwestern Site boundary from the northwest to the southeast. A truck loading facility is depicted slightly northeast of the Site, across Wilson Street. The American Can Co is depicted north of the truck loading facility. A large freight lines facility is depicted slightly southeast of the Site where the former iron works facility was across Wilson Street.

- ***1953*** – The Site and surrounding areas are depicted similar to the 1950 map with the exception that a produce packing plant is depicted southeast, adjacent to the Site on the northeast corner of Lawrence and Sacramento Street.

- ***1954*** – The Site and surrounding areas are depicted similar to the 1953 map with the exception that the Firestone Tire and Rubber Company occupy the facility northeast of the Site previously the American Can Co.

- ***1959*** – The Site and surrounding areas are depicted similar to the 1954 map with the exception that a textile processing facility is depicted northeast of the Site on the northeast corner of Wilson and Bay Street where the former Firestone Tire and Rubber Company was located.

- ***1960*** – The Site and surrounding areas are depicted similar to the 1959 map.

- ***1967*** – The Site and surrounding areas are depicted similar to the 1960 map with the exception that a second textile processing facility is depicted northeast of the Site, across Wilson Street, where the former truck loading facility was located and the General Trucking Company is depicted southwest of the Site, south of Sacramento Street.

- ***1970*** – The Site and surrounding areas are depicted similar to the 1967 map with the exception that the large freight lines facility southeast of the Site is no longer depicted.

4.5 CITY DIRECTORIES

Haro Environmental contacted EDR to obtain a historical City Directory Abstract, which lists the names and/or businesses that historically occupied an address. The City Directory Abstract, which covers the period from 1920 to 2014, provides tenant information for an address and/or adjoining streets. Information for 1825 Sacramento Street was not provided. The following summarizes the findings for the Site properties and details years where listings were found.

- ***1924*** – 1815 Sacramento (Royal Packing Company Louis M Cole Pres C J Walden Sec Canning Chill Peppers and Pimientos).
- ***1929*** – 1815 Sacramento (Royal Packing Company Louis M Cole Pres C J Walden Sec Canning Chill Peppers and Pimientos).
- ***1933*** – 1815 Sacramento (Royal Packing Co C J Walden Pros Canners).
- ***1942*** – 1815 Sacramento (Ortega E C Co Inc C J Walden Pres Mgr Vegetable Canners and Royal Packing Co C J Walden Pres Mgr Vegetable Canner).
- ***1951*** – 1815 Sacramento (Sacramento L A Sack Co and Sacramento Pac Diamond H Bag Co) and 1811 Sacramento (Sacramento General Trucking Service).
- ***1958*** – 1815 Sacramento (Pac Diamond H Bag Co), 1811 Sacramento (So Cal Magazine Distributing Co), and 1813 Sacramento (General Trucking Service).
- ***1962*** – 1815 Sacramento (Package Fast Freight and Weiss I Second Hand Bag Co) and 1811 Sacramento (So Cal Magazine Distributing Co).
- ***1967*** – 1811 Sacramento (So Cal Magazine Distributing Co).
- ***1976*** – 1811 Sacramento (General Trucking Service and So Calif Magazine Distributing Co) and 1899 Sacramento (Atlas Textile Co).
- ***1990*** – 1811 Sacramento (United Melon & Xmas Tree) and 1899 Sacramento (S & H Packing Co and Season Produce Warehouse).
- ***2000*** – 1811 Sacramento (Asia Merchant Trading Inc, Gin Trading, and Natural Produce Inc.), 1899 Sacramento (S & H Packing Co and Season Produce Warehouse), and 1805 Sacramento (El Tocho Produce).
- ***2006*** – 1811 Sacramento (Importer & Inc., Marsh & Herb, and TN Trucking) and 1899 Sacramento (Eternity Trading, Green Island, Produce, and Taebong America).
- ***2010*** – 1811 Sacramento (Marsh & Herb Importer Inc. and TN Trucking).
- ***2014*** – 1811 Sacramento (Golden Medal Mushroom Inc., Good Luck Produce Inc., and Marsh & Herb Importer Inc).

The historic use of the property for trucking and trucking services has the potential to pose an environmental concern to the Site. The complete EDR City Directory Abstract listing results is provided in Appendix A.

The nearby Light Industrial Property to the northeast (1910-1914 Bay Street & 1901 Sacramento Street) was not listed in the City Directories. However, based on the information reviewed from offsite environmental reports, there is the potential for this offsite property to impact the subject Site.

4.6 OIL AND GAS MAPS AND PIPELINES

Maps provided online by the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources were reviewed to determine the current or historic presence of oil or gas wells in the vicinity of the Site (DOGGR, 2020). The maps reviewed indicated that no oil or gas wells are located on or adjacent to the Site.

The National Pipeline Mapping System maintained by the Pipeline and Hazardous Materials Safety Administration was reviewed for the presence of gas and hazardous liquid transmission pipelines, and the results indicate there are two mapped pipelines near the Site (PHMSA, 2020). One mapped hazardous liquid pipeline is located approximately 730 feet west of the Site beneath S Alameda Street (PHMSA, 2019). This pipeline is reportedly owned by the Plains Pipeline, L.P. and contains crude oil. Based on its downgradient position from the Site, the potential for this pipeline to impact soil, soil vapor, and groundwater beneath the Site is low. A gas transmission pipeline is located approximately 1,350 feet east of the Site, slightly east of S Santa Fe Avenue. The pipeline is listed as permanently abandoned, empty gas. Based on its permanently abandoned status, the potential for this pipeline to impact soil, soil vapor, and groundwater beneath the Site is low.

4.7 CHAIN OF TITLE RECORDS

Haro Environmental was not provided and therefore did not review a 50-Year Chain of Title for the Site.

5.0 SITE RECONNAISSANCE AND INTERVIEWS

Haro Environmental's assessment activities included a site reconnaissance. This section summarizes the findings from the site reconnaissance.

5.1 SITE RECONNAISSANCE

5.1.1 Methodology and Limiting Conditions

Ms. Donna White of Equipoise performed a reconnaissance of the Site on April 2, 2020 accompanied by a gentleman named Alex who identified himself as the Facilities Manager. The site reconnaissance was conducted by: 1) observing the Site from public thoroughfares, 2) observing the adjoining properties from public thoroughfares, 3) observing the interior of the onsite structures, 4) observing the exterior of the onsite structures, 5) backtracking to correlate exterior features with interior features, as necessary, and 6) observing the Site from walking paths. The purpose of the site reconnaissance was to identify the presence or likely presence of hazardous substances or petroleum products under conditions that indicate an existing release, a past release, or threat of release into soil, groundwater, or surface water at the Site (recognized environmental conditions). Observations from the site reconnaissance are summarized in the following sections. A photolog of photographs taken during the site reconnaissance is provided in Appendix C.

5.1.2 Current Use of the Property and Adjoining Properties

The Site is currently developed with two large warehouse buildings. Site uses include offices and coolers for produce storage.

Solid waste services are provided by Los Angeles Sanitation Services. Electricity is provided to the Site by Southern California Edison. Water and sewer services are provided by the City of Los Angeles. Natural gas is provided by Southern California Gas Company. Heating and cooling is provided by roofeetop-mounted HVAC units.

Adjoining properties are in commercial land use. Site and adjoining land uses are depicted on Plate 2.

5.1.3 General Description of Structures

The Site is currently developed with two large warehouse structures. The buildings are tilt-up constructed slab-on-grade.

5.1.4 Interior and Exterior Observations

All internal and external areas of the Site were accessible at the time of the site reconnaissance. The interiors of the buildings are used for produce storage using large coolers. Propane is present to power the forklifts.

The exterior portions of the Site are paved with either asphalt or concrete and used for parking or storage.

5.1.5 Hazardous Substances and Petroleum Products

Hazardous substances and petroleum products were not observed during the site reconnaissance.

5.1.6 Unidentified Substance Containers

Unidentified hazardous substance containers or unidentified containers that might contain hazardous substances were not observed during the site reconnaissance

5.1.7 Storage Tanks

During the site reconnaissance, above-ground storage tanks (ASTs) or evidence of underground storage tanks (USTs) at the Site were not observed with the exception of propane ASTs within the warehouse buildings and former USTs as discussed in Section 3.2.2.

5.1.8 Odors

During the site reconnaissance, strong, pungent, or noxious odors were not identified.

5.1.9 Pools of Liquid

During the site reconnaissance, pools of liquid under conditions indicative or a release of hazardous substances or petroleum products were not observed. Water on the ground was observed at several locations as condensate from the coolers.

5.1.10 Drums

One empty 55-gallon drum was observed at the exterior of the building at 1825 Sacramento.

Evidence of drums on any other areas of the Site were not observed.

5.1.11 Indications of Polychlorinated Biphenyls (PCBs)

During the site reconnaissance, no evidence of PCBs were observed onsite. Two electrical transformers were observed within the building at 1811 Sacramento and are reportedly used to charge the forklifts.

5.1.12 Other Conditions of Concern

During the site reconnaissance, none of the following was observed:

- Corrosion
- Pits, ponds, and/or lagoons
- Stressed vegetation
- Septic Tanks
- Stormwater drains
- Floor drains
- Solid waste
- Groundwater wells

5.2 INTERVIEWS

No interviews with present or past owners, operations, or site occupants were completed as part of this Phase I ESA.

6.0 FINDINGS, CONCLUSIONS AND RECOMMENDATIONS

This Phase I ESA of the property located at 1811 & 1825 Sacramento Street in the city of Los Angeles, California (the Site) was performed by Equipoise Corporation (Equipoise) and an Equipoise subcontractor, Haro Environmental, for Skanska USA Commercial Development. Haro Environmental performed this Phase I ESA consistent with ASTM Practice E-1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM Standard). Exceptions to, or deletions from, this practice are described in this report.

Based on the data gathered and reviewed during this Phase I ESA, Haro Environmental identified the following RECs:

- One 10,000-gallon gasoline UST historically located in the eastern parking lot installed in 1954 associated with an auto filling station in that area. No reports exist documenting its removal; however, because the Site property line at the time extended further east of the current eastern property line, this UST is/was likely located beneath the present day Wilson Street. As such, the potential is low for this historic feature to present a significant environmental concern to soil, soil vapor, and/or groundwater beneath the Site. In addition, soil vapor sampling performed in 2019 did not detect elevated concentrations of petroleum hydrocarbons.

- Soil and or groundwater impacts in the eastern parking lot associated with the adjacent northeastern property historically used for textile processing and the location of a known release of PCE. Soil vapor sampling performed in the eastern parking lot at the Site in 2019 indicated elevated concentrations of PCE in soil vapor samples, and suggests there is a potential for this offsite release to impact soil, and possibly groundwater, beneath the Site.

- The historic dumping of solvents in the northwestern corner of the property and the limited soil and soil gas sampling conducted in 2014. Because of the illegal dumping, there is a potential for elevated concentrations of solvents which could negatively impact soil and soil vapor beneath the Site.

Based on the data gathered and reviewed during this Phase I ESA, Haro Environmental identified the following Historical REC:

- The former presence of one 10,000-gallon UST and three 550-1,000-gallon waste oil USTs located in the central parking lot associated with the historic trucking service. UST removal and sampling activities were performed under the supervisions of the LAFD, and the LAFD issued a no further action letter for the USTs. Because the former USTs have been closed by the regulatory agency, these for USTs are considered a historical REC.

Based on the findings, Haro Environmental identified the following potential environmental concern:

- The historic presence of railroad tracks to the south of the Site. Railroads can be the source of a release of chemicals including petroleum hydrocarbons, herbicides, and/or heavy metals. As such, there is a potential for elevated concentrations of these chemicals in soil near the former railroad tracks.

7.0 STANDARD OF CARE

The findings and conclusions contained in this Phase I ESA are based upon professional opinions with regard to the subject matter. These opinions have been arrived at in accordance with currently accepted industry standards and practices applicable to this location and are subject to the following inherent limitations:

Accuracy of Information. Certain information utilized by Haro Environmental in this assessment has been obtained, reviewed, and evaluated from various sources believed to be reliable. Although Haro Environmental's conclusions, opinions, and recommendations are based, in part, on such information, Haro Environmental's services did not include the verification of the information's accuracy or authenticity. Should such information prove to be inaccurate or unreliable, Haro Environmental reserves the right to amend or revise its conclusions, opinions and/or recommendations.

Reconnaissance. Haro Environmental performed a reconnaissance of the Site that is the subject of this assessment to document current conditions. Haro Environmental focused on areas deemed more likely to exhibit hazardous materials conditions while other areas received limited attention. No known areas were inaccessible at the time of our reconnaissance.

Limitations. Haro Environmental does not guarantee that the Site is free of hazardous or potentially hazardous materials or conditions, or that latent or undiscovered conditions will not become evident in the future. This assessment has been prepared in accordance with currently accepted industry standards, and no other warranties, representations, or certifications are made. Unless stated otherwise herein, this report is intended for and restricted to the sole use of Equipoise and Skanska USA Commercial Development. Any other use, interpretation, or reliance upon this assessment is at the sole risk of the user and Haro Environmental shall have no liability for such unauthorized use, interpretation or reliance.

Qualifications of Environmental Professionals. Mr. Elliot Haro representing Haro Environmental performed this ESA. Mr. Haro is an environmental consultant who has performed over 100 ESAs for a variety of clients. Mr. Haro's resume is provided in Appendix D.

Reliance. This ESA report has been prepared for the exclusive use and reliance of Equipoise and Skanska USA Commercial Development. Use or reliance by any other party is prohibited without the written authorization of Equipoise, Skanska USA Commercial Development, and Haro Environmental.

Scope Limitations and ASTM Exceptions. This ESA did not include any inquiries with respect to non-scope ASTM considerations (including but not limited to asbestos containing materials, radon gas, lead-based paint, lead in drinking water, mold, wetlands, regulatory compliance, cultural and historic resources,

industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality or electromagnetic fields), subsurface or other invasive assessments, business environmental risk evaluations or other services not particularly identified and discussed herein.

Reasonable attempts were made to obtain information within the scope and time constraints set forth by the client; however, in some instances, information requested may not be received by the issuance date of the report. In the event information obtained from sources mentioned previously alters the findings stated in this report, an addendum letter will be forwarded to Equipoise and Skanska USA Commercial Development under separate cover providing Haro Environmental's findings and conclusions. Additional Phase I ESA limitations include:

- Several data gaps since 1940 of greater than 5 years were identified in the historical records reviewed and included the years from 1940 to 1948, 1983 to 1989 and from 1994 to 2000. These data gaps are considered insignificant because the Site use appears to be similar during the data gaps.

- A title report was not reviewed as part of this Phase I ESA. This data gap is considered insignificant based on other sources of information reviewed.

- An environmental lien search was not performed by the user or preparer of this Phase I ESA report. This data gap is considered insignificant based on other sources of information reviewed.

- User provided information was not obtained during preparation of this Phase I ESA. The significance of this data gap is undetermined.

- Interviews with current or past owners, operators, or site occupants was performed during preparation of this Phase I ESA. This data gap is considered insignificant based on other sources of information reviewed.

This report represents our service to you as of the report date and constitutes our final document; its text may not be altered after final issuance. Findings in this report are based upon the Site's current utilization, information derived from the most recent reconnaissance and from other activities described herein; such information is subject to change. Certain indicators of the presence of hazardous substances or petroleum products may have been latent, inaccessible, unobservable or not present during the reconnaissance and may subsequently become observable (such as after site renovation or development). Further, these services are not to be construed as legal interpretation or advice.

Certification. I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Haro Environmental, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 01/30/2020 has revealed that there are 3 SEMS sites within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/30/2020 has revealed that there

are 5 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/16/2019 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/16/2019 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 12 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/28/2019 has revealed that there are 42 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 4 SWF/LF sites within approximately 0.5 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 15 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/16/2019 has revealed that there are 16 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	STORMS
Waste Type2:	Not reported
Waste2:	Stormwater Runoff
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Description:	Leak detection equipment disabled or tampered with in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak.
Violation Notes:	Returned to compliance on 12/14/2018. OBSERVATION: Owner/Operator tampered with and/or disabled leak detection equipment in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak. The Owner/Operator shall not disable or tamper with monitoring equipment. Repair/replace equipment so that it functions per manufacturer's specifications The VR 420 sensor in the trench sump (Sensor L7) had the float on the sensor flipped so that the sensor would not go into alarm. Water was noted in the same sump as L7 VR 420 sensor in an amount enough to cause an alarm CORRECTED ON SITE: Tester Ron Franklin switched the float back to normal position and tested sensor which functioned properly during testing. Water was removed onsite and was properly disposed of.

FINDS:
Registry ID: 110002828272
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002828272

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation: 23 CCR 16 2716(a) through (e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(a) through (e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in

ALAMEDA SQUARE OWNER LLC (Continued) **S118925915**

	accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 07/23/2019. OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: 10/2018 - 2/2019 & 4/2019 Section VI not signed by Tank owner/operator. Tank owner/operator and not the DO fills out Section V with responses to compliance issues in Section III. Missing work orders for work completed on 10/2018-3/2019 DO inspection reports. CORRECTIVE ACTION: Ensure that DO is complying with all the requirements noted above. Submit copy of compliant DO inspection record. Have tank owner/operator sign DO reports from 10/2018 - 2/2019 & 4/2019 in Section VI. Ensure the tank owner/operator is filling out Section V with response to Section III compliance issues. Locate missing work orders for work completed on 10/2018-3/2019 DO inspection reports and attach them to respective DO reports. **********SECOND NOTICE**********

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 04/25/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill

Eval Date:	08-12-2019
Violations Found:	Yes
Eval Type:	Other, not routine, done by local agency
Eval Notes:	Facility was given a Notice of violation for late testing that was not determined during monitor certification testing due to no 2017 testing results found on site. Notice of violation was corrected on site due to testing already had been completed. OBSERVATION: Annual monitoring system certification and/or leak detector testing, were last performed on 2/24/2017 by Fuel Pros and was completed on 4/25/2019, 2 months past due. These tests are required once every 12 months. CORRECTED ON SITE: Immediately schedule these tests and provide 48 hours notification to the CUPA. Testing was completed on 4/25/2019 done by JDS Testing. As discussed on site any future late testing will be considered a Class I violation and subject to fine assessment.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Name: MV TRANSPORTATION
Address: 2016 BAY ST
City,State,Zip: LOS ANGELES, CA 90021
Site ID: 50742
CERS ID: 10262566
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 50742
Site Name: MV TRANSPORTATION
Violation Date: 10-01-2018
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 01/07/2019. Observation: Owner/operator failed to maintain the facility to prevent release of hazardous wastes. Observed accumulation of waste liquids in the secondary containment under the waste antifreeze tank and under the drums of motor oil. Corrective Action: Remove accumulation of waste liquids in the secondary containment under the waste antifreeze tank and under the drums of motor oil.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 50742
Site Name: MV TRANSPORTATION
Violation Date: 05-03-2016
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 03/18/2019.
Violation Division: Los Angeles City Fire Department
Violation Program: HMRRP
Violation Source: CERS

Evaluation:

Eval Notes:	On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by DEAN MARIANI - SHOP MANAGER. CONTACT INFORMATION: DEANMARIANI@MVTANSIT.COM Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit

CERS HAZ WASTE:
Name: MORTON SCRAP METAL
Address: 2020 E SACRAMENTO ST
City,State,Zip: LOS ANGELES, CA 90021
Site ID: 136420
CERS ID: 10259494
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 136420
Site Name: MORTON SCRAP METAL
Violation Date: 08-08-2018
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes: Returned to compliance on 09/25/2019. OBSERVATION: 5 x 55-gallon drums of used oil located in the hazardous waste storage area were observed without hazardous waste labels, accumulation start dates and with used oil filters sitting on top of the drums. CORRECTIVE ACTION: Submit a copy of the inspection log to the CUPA demonstrating that the

MORTON SCRAP METAL (Continued) **S123536938**

hazardous waste storage area is being inspected weekly.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 136420
Site Name: MORTON SCRAP METAL
Violation Date: 05-08-2014
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain and/or maintain an Active EPA ID.
Violation Notes: Returned to compliance on 08/28/2014. OBSERVATION: This facilityG s EPA ID number is inactive. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without an EPA ID number. CORRECTIVE ACTION: Immediately contact DTSC and reactivate your EPA ID number and submit evidence to the CUPA by within 30 days.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 136420
Site Name: MORTON SCRAP METAL
Violation Date: 05-08-2014
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to properly close hazardous waste containers when not in active use.
Violation Notes: Returned to compliance on 08/28/2014. OBSERVATION: open top 55 gallon containers with oil water mix and absorbent waste. All hazardous waste containers shall be closed at all times except when adding or removing waste. CORRECTIVE ACTION: Immediately close these containers and ensure all hazardous waste containers are closed when not adding or removing waste.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 136420
Site Name: MORTON SCRAP METAL
Violation Date: 08-08-2018
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 09/25/2019. OBSERVATION: Uniform Hazardous Waste Manifests/Invoices for hazardous waste disposed of in the last three years were not available at the time of inspection. CORRECTIVE ACTION: Locate a copy of all manifests/invoices for hazardous waste from the last three years and submit copies to the CUPA.
Violation Division: Los Angeles County Fire Department
Violation Program: HW

Citation:	40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Description:	Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.
Violation Notes:	Returned to compliance on 09/25/2019. OBSERVATION: Employees are not thoroughly familiar with proper waste handling and emergency procedures as demonstrated by the number and/or type of hazardous waste violations observed at the time of inspection. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that employees have been properly trained.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS

Site ID:	136420
Site Name:	MORTON SCRAP METAL
Violation Date:	08-08-2018
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 09/25/2019. OBSERVATION: 5 x 55-gallon drums of used oil located in the hazardous waste storage area were observed without accumulation start dates and manifests/receipts demonstrating disposal within the past 180 days were not available. CORRECTIVE ACTION: Dispose of the used oil and submit a copy of the manifest/receipt to the CUPA.
Violation Division:	Los Angeles County Fire Department

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 08/28/2014. OBSERVATION: several 55 gallon drums of coolant, oil water, contaminated absorbent waste without HW labels. All hazardous waste containers shall be marked with the following information: 1) the words G Hazardous WasteG ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information.

Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for three years.
Violation Notes: Returned to compliance on 04/29/2015. OBSERVATION: Copies of hazardous waste disposal records for 2013-14 were not available for review, office manager not on site at time of inspection. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. CORRECTIVE ACTION: Immediately locate a copy of all manifests

MORTON SCRAP METAL (Continued) **S123536938**

and receipts for the last three years, maintain them on site, and submit copies to the CUPA within 30 days.

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 120374
Site Name: GRAND PRIX AUTO BODY, INC
Violation Date: 03-04-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.
Violation Notes: CUPA phone number is incorrect. Review, update and resubmit the Emergency Response/Contingency Plan and Employee Training Plan in CERS with all the required information. Ensure the phone numbers for the local CUPA (213) 978-3680, Regional Water Quality Control Board (213) 576-6600, and nearest hospital facility are inputted correctly. You can download the most current CONTINGENCY PLAN form as well as CONTINGENCY PLAN INSTRUCTIONS in the Hazardous Materials Business Plan Section (HMBP) using the following link https://www.lafd.org/fire-prevention/cupa/documents-forms

Citation: 22 CCR 15 66265.35 - California Code of Regulations, Title 22, Chapter

GRAND PRIX AUTO BODY INC (Continued) **S113136036**

15, Section(s) 66265.35
Violation Description: Failure to maintain aisle space to allow the unobstructed movement of personnel, fire protection, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless it can be demonstrated to the Department that aisle space is not needed for any of these purposes.
Violation Notes: Returned to compliance on 09/03/2013. FACILITY FAILED TO PROVIDE AISLE SPACE TO EMPLOYEES REACHING THE HW CONTINERS(OBSERVED AUTOMOTIVE PARTS WERE BLOCKING THE HW CONTINERS)
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 120374
Site Name: GRAND PRIX AUTO BODY, INC
Violation Date: 08-08-2016
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 08/26/2016. OBSERVATION: Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. Observed 1 x 30 gallon drum containing waste waterborne cleaning solution accumulating on-site in excess of 180 days. CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the department by 9-7-16.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002779173

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation: 23 CCR 16 2716(a) through (e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(a) through (e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: Returned to compliance on 09/06/2019. OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: Signature by tank owner/operator in Section VI is missing on 5/2019-3/2019, 1/2019-12/2018 & 10/2018 DO inspection reports. Section VII was incorrectly marked YES by DO on 5/2019, 4/2019, 2/2019, & 11/2018 DO Inspection reports. Late Overfill was noted in Section X on 2/2019 & 11/2018 DO report but not noted in Section III by DO and was not able to followed up on in Section V by tank owner/operator. 2/2019 DO report Section VII and VIII are not filled out. DO failed to sign Section IV on 10/2018 DO report. CORRECTIVE ACTION: Tank owner/operator signed in Section VI on DO reports where there was no signature on site. Section VII for previously mentioned DO reports from 5/2019, 4/2019, 2/2019, & 11/2018 should be marked as NO since overfill was not completed and was noted in Section III on previous DO inspection report. Have DO note late overfill in Section III on & [Truncated]

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes:	On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by Tim Hall (Owner). Contact Information: laimprintstees@aol.com Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Comments: DTSC approved site characterization activities in December 2002. Contaminants of concern included PAH's & BTEX. A RAW involving excavation will be implemented for the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/20/1993
Comments: The Department completed review of the PEA. A Manufactured Gas Plant (MGP) was operated at the site in the late 1800s and early 1900s. Gas was produced from crude oil for distribution in the site area.
Several companies operated at the site. In 1909, the site was owned by the Los Angeles Gas and Electric Corp., which merged with the Southern Calfornia Gas Company in 1937. SoCalGas owned the property until 1976, and sold to the current owners. The MGP was dismantled sometime before 1906. The byproducts from the manufactured gas operation were tars, oils, sludges, and lampblack. Elevated levels of polycyclic aromatic hydro- carbons (PAH), heavy metals such as lead and arsenic and cyanides were found at the site. The PEA concluded that there was contamination at the site above screening values. Therefore, the Department recommended that further investigation or assessment at the site was necessary.

Manufactured Gas Plants:

Site located at 725 Chemming Street, Los Angeles, California, approximately 2.5 acres. From 1887 util 1906 an oil gas plant was operated at site. MGP may have been converted to a natural gas storage site in approximately 1906. Records indicate that MMGP equipment may have been removed by 1930. Site is currently used as a Greyhound Bus parking lot.

CA BOND EXP. PLAN:

Reponsible Party:	COST RECOVERY/OPERATION AND MAINTENANCE SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	DHS has utilized Bond funds to complete the remedial action. DHS is currently undertaking appropriate cost recovery actions.
Site Description:	This site was previously used to scrap electrical transformers.
Hazardous Waste Desc:	Polychlorinated biphenyls (PCBs) were detected in the soil.
Threat To Public Health & Env:	The remedial action has been completed. Soil contaminated with PCBs was excavated and redisposed of in a licensed landfill. There is no threat to public health and the environment.
Site Activity Status:	In August, 1985, the RP, Mr. Rodney Dean, pled no contest to three felony counts of illegal storage, transportation and disposal of hazardous wastes. Mr. Dean's probation required that the cleanup of the site be completed and reported to the court. The RP retained a contractor for the cleanup and began the remedial actions. The contractors removed much of the contaminated soil. DHS completed the cleanup after the RP exhausted his financial resources. DHS is currently in the cost recovery stage.

Alternate Address:	2182 EAST 11TH STREET
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The Site is also known as the Western Lead and Metal Company Site. The Site is located in an industrial area near downtown Los Angeles and is surrounded by warehouses, food distributors, light manufacturing, and scrap metal recyclers. The Site is roughly bounded by 11th Street (Property), to the north, the Union Pacific Railroad right-of-way to the east, 14th Street, to the south, and Wilson Street to the west. The Site includes the property at 2182 East 11th Street, which was occupied by several different companies as a lead smelter from 1946 to 1965. The Western Lead Products Company operated a lead smelter on the Property from 1954 to 1960 under the name of Western Lead and Metal Company. After 1965, the Property was used for die-cast manufacturing operations. The Property is approximately 110 feet by 140 feet and is currently devoid of any buildings, and is secured by fencing. The other areas of the Site include: portions of the Union Pacific Railroad right-of-way, between 14th and 10th Streets; a narrow strip of the property occupied by Coast Produce; and a residencial property at the corner of Wilson and 14th Streets. Since 1991, several site assessments have been conducted. These assessments involved mostly surface soil sampling and analyses for metals including lead, antimony, and arsenic. In 1996, the Property was paved with three inches of asphalt to prevent exposure of the public to contaminated soil. In addition, DTSC collected several surface soil samples in the areas surrounding the Property. Extremely high levels of lead (up to 574,000 ppm), antimony (up to 14,000 ppm), and arsenic (up to 920 ppm) were detected in the narrow strip along the southern and western boundaries of the Property; high levels of lead, copper, and zinc were detected along the railroad right-of-way; and elevated levels of lead (up to 1,450 ppm) were detected on the residential property. A Consent Order (Imminent and Substantial Endangerment) was entered into with Quemetco Inc., (an RSR Subsidiary) and Union Pacific Railroad Company. As required by the Order, in 1977, Quemetco completed an Emergency Removal Action at Areas 3 and 4 which are located at the perimeter of the Property and the residential property. Union Pacific has also conducted an Emergency Removal Action at Areas 1 and 2 (railroad right-of-wau). The Remedial Investigation found the extent of metal contamination. Currently, the Draft RAW, which proposes to place a 4-inch asphalt cover on the Property area and excavate soil, from the Site boundary, has been approved. The 30 day Public Comment Period starts on August 23 and ends September 22, 2004.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	10/10/2006
Comments:	Removal Action included placement of an asphalt cover in the property area and removal of 97 tons of soil contaminated with lead and arsenic.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Workplan
Completed Date:	10/21/2004
Comments:	The RAW proposes to address the lead & arsenic contaminated soil by placing a four-inch asphalt cap on the property area (15,000 sq.ft.) and removing soil from nine impacted areas at the Site boundary.

QUEMETCO CORPORATION (Continued) **S112842372**

Implementation is scheduled for end of January 2005.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/15/2003
Comments: The Remedial Investigation is approved. The RI involved sampling of lead and other metals, and volatile organic compounds, particularly tetrachlorethene and 1,1,1-trichloroethane.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 06/30/1998
Comments: Completed a Preliminary Assessment (PA) with sampling of the site under contract with U.S. EPA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/18/1997
Comments: Soil removal (excavation) of lead-contaminated soils. The Implementation Report for completion of the Emergency Removal Action by Quemetco at Area 3 (Coast Produce Warehouse) and Area 4 (Residential property at 2151 E. 14th Street) was approved. An estimated 120 tons of contaminated lead was excavated and disposed of off-site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 07/18/1997
Comments: UPRR: A removal action workplan (RAW-UPRR) was approved for Union Pacific Railroad track areas along Lemon Street (between 10th & 14th Streets). These areas are designated as Areas 1 & 2. A Notice of Exemption was also filed with the OPR as required by the CEQA laws and guidelines. The RAW-UPRR included excavation, treatment and disposal of contaminated soils in the neighboring railroad right-of-way (track) areas of the International Lead Company site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/25/1998
Comments: Excavation, treatment and disposal of 2,500 tons of metal contaminated soil from the UPRR rail track areas. The Implementation Report of Emergency Removal Action by Dames & Moore for Areas 1 and 2 was approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 07/18/1997
Comments: A removal action workplan (RAW-QUEMETCO) which proposed excavation and disposal of contaminated soils, was approved for Areas 3 and 4 (perimeter of Property and residential property). A Notice of exemption was also filed with the OPR as required by the CEQA laws

QUEMETCO CORPORATION (Continued) **S112842372**

and guidelines.

Completed Document Type:	* Final Remedial Action
Completed Date:	12/16/1991
Comments:	The Final Remedial Action consisted of placing an asphalt cap on the unpaved portions of the Olympic Base Site which would be maintained according to the requirements set forth in the RAP. A deed restriction was recorded on the property. The design of the cap was prepared and included in the RAP workplan.

Completed Document Type: * Final Remedial Action
Completed Date: 12/16/1991
Comments: The Final Remedial Action consisted of placing an asphalt cap on the

OLYMPIC PCB TRANSFER AND STORAGE FACILITY (Continued) **S101585050**

unpaved portions of the Olympic Base Site which would be maintained according to the requirements set forth in the RAP. A deed restriction was recorded on the property. The design of the cap was prepared and included in the RAP workplan.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Background Info:

The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were were discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs).

The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domestic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a standby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility.

A Consent Order was signed in December 1986, which addressed the work needed to complete the Remedial Investigation/-Feasibility Study (RI/FS) process. The RI report was approved by the Department on September 17, 1987. The RI found that soil from about 2 to 12 feet below ground surface is contaminated. The contaminants are not readily vaporized, nor do they enter aqueous phase solution. Groundwater aquifers beneath the site are unsaturated to a depth of 90 feet. Air monitoring at the site does not indicate that the contaminants are emitting vapors to the air. SCG then submitted a FS report in May 1988. DHS has reviewed the FS report and requested a full Health Risk Assessment (HRA) based on appropriate biological receptors and exposure pathways on October 20, 1988. The HRA was approved by the Department on June 4, 1990. The FS was revised by SCG and the report approved on July 19, 1990.

The RP submitted a draft RAP on August 20, 1990, as requested by the Department. The Department has published a fact sheet on the findings of the RI/FS. The RAP meeting with the community was held on November 17, 1990 and the RAP was subsequently approved in January of 1991.

OLYMPIC BASE (Continued) **S105689611**

The RAP proposed an asphalt cap on the site, groundwater monitoring, and a deed restriction. Groundwater monitoring is necessary as the region the site is located in is currently experiencing a drought; however, if this should change the groundwater table will rise, possibly impacting the conclusions of the RI. The deed restriction, protected the integrity of the cap by limiting land use and excavation of the waste. The Department directed the RP to prepare a Remedial Design and Implementation (RD&I) plan. The plan included engineering specifications for the asphalt cap, permits, and a schedule for completion of the cap. The cap will be repaired as necessary; necessary; it is expected to require replacement every ten years. This operation and maintenance program will last for 20 years.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Manufactured Gas Plants:

The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were weere discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic

SO CAL GAS/OLYMPIC BASE MGP (Continued) **1008407709**

aromatic hydrocarbons (PNAs or PAHs). The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domesttic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a stanndby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility

CA BOND EXP. PLAN:

Reponsible Party:	RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Southern California Gas has entered into a consent order with DHS for oversight/monitoring of its cleanup efforts. DHS has budgeted $50,000 for direct costs related to the project. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with site cleanup.
Site Description:	The Olympic Base facility, currently owned by Southern California Gas Company, is the site of a former oil gasification "towne gas" plant.
Hazardous Waste Desc:	The wastes are generally characterized as polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). Other constituents of concern are cyanide, lead, and semivolatile organics. Soil contamination is present at the site from the surface to a depth of 10 to 15 feet in both the northern and southern portions of the site.
Threat To Public Health & Env:	The primary concern is potential contamination of ground water. Usable ground water lies approximately 200 feet below the ground surface and the water table may rise to only 100 feet below the site. Ground water contamination has not been verified. Surface soil contamination may migrate offsite due to airborne particulates.
Site Activity Status:	The Southern California Gas Company has completed a remedial investigation/feasibility study.

ALCO FLATING CORPORATION (Continued) **U001560836**

Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/12/2003
Comments: Potential release as a result of Preliminary Assessment (PA). Further Action recommended.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/06/2000
Comments: 06/06/2000: Based on review of the PEA, DTSC determines that "Further Action is necessary. In addition, DTSC provides comments to be incorporated in subsequent investigation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 04/04/1997
Comments: The site has been occupied by metal plating companies since 1943. Site soil and possibly groundwater is contaminated with heavy metals and cyanides. Also, there are four under- ground abandoned storage tanks at the site. The tanks were closed without proper regulatory involvement. site, staff recommends a PEA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	06/13/2003
Comments:	DTSC approves PEA Report. The PEA investigative activities conducted at the former smelting site identified arsenic (3410 mg/kg), and lead

EASTERN SMELTING AND REFINING SITE (Continued) **S106568216**

(25,700 mg/kg). DTSC concluded that the current conditions (building and pavement intact, no exposed soil) at the Site does not pose a potential threat to industrial workers. Due to elevated levels of the above-mentioned metals in the soil, if there is any demolition of the buidling or parking lot, or development at the Site, the responsible party(s) will be required to submit a Removal Action Workplan or Remedial Action Plan to DTSC for approval.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/04/1996
Comments: DTSC reviewed a Preliminary Endangerment Assessment for the site under a Voluntary Cleanup Agreement. Based on the information and data presented, DTSC determined that the hazardous constituents remaining at the site do not constitute a threat to human health or the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 09/13/1995
Comments: The Department received a Non-Emergency Hazardous Substance Release Report dated January 31, 1995. Review of the document indicates that the site is contaminated with elevated levels of heavy metals such as lead, copper and zinc. Foundry operations existed at the site from at least 1906 until 1990, operated by W.G. Grant & Co. Santa Fe Railway is the current owner of the site. RP removed USTs from the site without any regulatory agency oversight. Due to evidence of a release, DTSC is recommending that a PEA be conducted to evaluate the site. On September 13, 1995, DTSC notified the RP thereof.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 05/31/1996
Comments: DTSC signed a Voluntary Cleanup Agreement with Santa Fe for the completion and review of a Preliminary Endangerment Assessment.

Background Info:	The site is located at 590 South Santa Fe Avenue, Los Angeles, California. The site consists of two land parcels totaling approximately 2.68 actes of land and is located witin an indus- industrial portion of the City of Los Angeles. Historically the site has been used for chemeical or paint manufacturing. Not reported The site was formerly under the oversight of the California Regional Water Quality Control Board (CRWQCB). (CRWQCB) has overseen the site investiation and remediation since approximately 1986. Not reported Previous sampling activities have confirmed both soil and groundwater contamination. Contaminants of concern identified in the groundwater and soil include benzene, ethyl benzene, 1,1-dichlorethane, 1,1-dichloroethene, 4-methyl-2-pentanone (MIBK), toluene, and total xylene. The toluene, and xylene appear to be primarily located within the groundwater beneath the northern portion of the site whereas MIBK has been identified in the groundwater along the southwest corner of the site and may extend beyond the site boundary.

Completed Date: 09/28/2008
Comments: DTSC sent first demand letter to RP to recover the CLEAN Loan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 04/08/2013
Comments: VCA signed by Butterfield owner and DTSC to conduct additional investigation and remediation, if necessary.

Completed Area Name: Soil
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Initial Study/ Environmental Impact Report
Completed Date: 08/12/2015
Comments: In accordance with CEQA, DTSC has reviewed the Environmental Impact Report (EIR) prepared by MTA for the MTA Westside Subway Extension Project (WSE) to ensure that CEQA requirements have been satisfied. The Butterfield/MTA Site will be developed as a maintenance yard for the WSE. The EIR included activities associated with the RAW and thereby evaluated environmental impact(s) from the Site. The EIR can be found on MTA s website: http://www.metro.net/projects/westside/final-eis-eir/

Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/21/1998
Comments: A PEA was performed. Soil sampling and analysis was conducted for PCBs, metals, VOCs, and TPH. The results showed that concentrations of PCBs and VOCs were found at the site. Soil contaminated with PCBs was removed from the site, and additional sampling was conducted. The additional sampling performed at the site confirmed that the low levels of PCBs and VOCs remaining on the site do not pose a human health risk as specified in DTSC's PEA manual.

Lead Agency:	LOS ANGELES RWQCB (REGION 4)
Lead Agency Case Number:	Not reported
Latitude:	34.0392409
Longitude:	-118.245909
Case Type:	Cleanup Program Site
Case Worker:	RV
Local Agency:	Not reported
RB Case Number:	1290
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Contaminated Surface / Structure, Soil, Soil Vapor
Potential Contaminants of Concern:	Tetrachloroethylene (PCE), Trichloroethylene (TCE), Chromium, Chromium VI
Site History:	Plating operations started in the mid-1910s in the southwestern portion of the Site until 2005. Ace Plating owned and conducted plating related operations on the 11 contiguous parcels, specifically electrochemical coating of metal parts. Numerous assessments conducted at the site indicate that the soil is impacted with VOCs and metals. The soil vapor has been sampled throughout the Site with tetrachloroethene (PCE) concentrations at 5 feet below ground surface (bgs) ranging from 7.9 micrograms per liter (a%g/L) to 87 a%g/L. The soil vapor data is limited at depths greater than 30 feet bgs. At 60 feet bgs and below, PCE concentrations range from 39 a%g/L below the Assembly Room to 127 a%g/L offsite on Crocker Street. The lateral extent of shallow PCE greater than 12 a%g/L is only defined on the east side. The source of the PCE is unknown but slightly higher concentrations exist in the central portions of the Plating Rooms. Chromium concentrations ranged from 1.5 mg/kg to 4,300 mg/kg for total chromium and from 0.92 to 840 mg/kg for hexavalent chromium. The maximum concentrations were both collected from SSVW-2 at 1 foot bgs located in the alley between the Crocker Street and Towne Avenue buildings and is adjacent to the location of the former chromium tanks. Outside of the area impacted by the former chromium tanks, the maximum chromium concentration is 4200 mg/kg for total chromium and 94 mg/kg for hexavalent chromium at MW-1. Degreasers that contained PCE were utilized in Plating Rooms 1 and 2 from 1993 to 2001. The maximum PCE concentration is 0.150 mg/kg and was sampled 4 feet deep in the vicinity of the former nickel dip tank in Plating Room 2. Two groundwater monitoring wells have been installed. Hexavalent chromium was not detected above the laboratory detection limits in any of the groundwater samples collected. Tetrachloroethylene (PCE) and 1,1-dichloroethene are the only VOC detected in groundwater, with the maximum concentration detected in MW-3 at a concentration of 33 ug/L and 2.7 ug/L, respectively.

Comments: DTSC completed a PEA and recommended further action at the site. This included further remedial activities, public participation and PRP search.

Completed Area Name: PROJECT WIDE

CROWN COACH (Continued) **S106568222**

Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 10/30/1992
Comments: While excavating the eastern area and demolishing all existing buildings, other areas were discovered to be contaminated with lead and VOCs (April'94). As a result the total volume of material excavated and removed prior to legislative cancellation of the prison project (Sept'92) was about 40,000 tons. Stabilization measures were also taken, including the implementation of dust control, fensing and posting, and site security. Further investigation and remediation was stopped due to lack of funds.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 03/04/1992
Comments: Bid Package 1B-Hazardous Waste Remedial Action (RAP) completed by K/J/C. The RAP was developed for the shallow soil excavation in the eastern area of the site with a cleanup level of 10 ppm.

Completed Area Name: PROJECT WIDE

Comments: Former name of this site was "California Reception Center - LAC". This 20+ acre site is being broken into two irregularly-shaped parcels, with no identifiable addresses. The establishment of 2 parcels will facilitate addressing future activities. This site will now be known as Los Angeles CRA - Sale Parcel "497A" and represents one of the parcels. The other Parcel is Alameda Corridor-Sale Parcel "497B". CalSites # 19400011. Parcel "497A" will be the project of the Los Angeles Community Redevelopment Agency (CRA). CRA, in their "Brownfields Program" will complete an RI/FS on the 497A Parcel, obtain a purchase option from the State of California, and solicit foster redevelopment of the site. Parcel "497B" will be the project of the Alameda Corridor Transportation Authority (ACTA). Please see CalSites #19400011 for further information on Parcel "497B".

Comments:	DTSC prepared a Public Participation Plan.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	10/30/1994
Comments:	DTSC completed a PEA and recommended further action at the site. This included further remedial activities, public participation and PRP search.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Action Completion Report
Completed Date:	10/30/1992
Comments:	While excavating the eastern area and demolishing all existing buildings, other areas were discovered to be contaminated with lead and VOCs (April'94). As a result the total volume of material excavated and removed prior to legislative cancellation of the prison project (Sept'92) was about 40,000 tons. Stabilization measures were also taken, including the implementation of dust control, fensing and posting, and site security. Further investigation and remediation was stopped due to lack of funds.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Action Plan
Completed Date:	03/04/1992
Comments:	Bid Package 1B-Hazardous Waste Remedial Action (RAP) completed by K/J/C. The RAP was developed for the shallow soil excavation in the eastern area of the site with a cleanup level of 10 ppm.
Completed Area Name:	PROJECT WIDE

Alternate Address:	2435 E. WASHINGTON BLVD.
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The historic usage of the site is a railroad maintenance yard. Chlorinated solvents TCE and PCE have been identified in the soil along the border of the site with 2425 E. Washington Blvd. Possible pathways for contamination migration are soil and groundwater. Possible receptors are on-site workers and the population which may drink contaminated drinking water extracted from nearby drinking wells. Some shallow soil gas sampling has been performed on-site in 1995. This survey was concentrated

AMTRAK (Continued) **S101586462**

along the border of 2455 E. Washington Blvd. Results showed decreasing contaminant concentrations with increasing distance from 2425 E. Washington Blvd. property boundry. No source was identified at the Amtrak property.
Not reported
An approximately 50-acres site located in an industrial/ commerical area of Los Angeles, one-half mile south of the Santa Monica freeway. The site is also known as the Redondo Junction Facility. Various buildings are located on the property for support and maintenance of trains. Rail Spurs run throughout the property in a general north-south direction. The Los Angeles river is located directly to the east. Previous owner of the property from 1885 to 1976 was Atchison, Topeka, and Sante Fe Railroad Corporation.
Not reported
Investigation of this site is key to determining the extent of soil gas and groundwater contamination found on the adjacent property 2425 E. Washington Boulevard, known as State Surplus Parcel (SSL-497). A draft VCA was prepared by DTSC for recovery of oversight costs. A limited subsurface soil gas survey is proposed as a first step to determine extent of chlorinated solvent contamination and also to identify any contributing sources.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

Description: This 3.61-acre site is located in downtown Los Angeles, California, on the south side of 20th Street between Long Beach Boulevard and Alameda Street, and at the northeast corner of the intersection of 20th and McGarry Street, in the County of Los Angeles. The property is owned by several private entities.
History: In April 1942, the Army acquired 3.45 acres in downtown Los Angeles by lease from the Mack International Motor Truck Company for use as a medical depot. An additional 0.16 acres located across the street at the northeast corner of 20th and McGarry was obtained by lease from the City of Los Angeles.

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource

SHELMAC CORP (Continued) **1000289756**

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/10/1993
Comments: On September 1, 1993, the Department completed review of the PEA. Based on the information provided in the PEA report, the site does not appear to constitute a threat to human health/or the environment. Therefore, the Department concurred with the recommendation that "No Further Action" is warranted at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 04/19/1993
Comments: On March 29, 1993, the Department received the Notice of Intent to Initiate a PEA. Historical activities include machine shops, tool & die making, agricultural products and clothing manufacturing. 1910-20, the site was occupied by Kellifer Manufacturing Company. 1921-59, Tlomb Tool Co. (machine shop) was at the site. From 1960-1980 Troto Tool & Machine Shop was at the site. In 1980 the new building constructed and Liquette Clothing Company currently using for clothes manufacturing. Currently, the preperty is on sale. The preliminary soil screening investigation at the site revealed that the fill dirt used in construction of foundation found to carry chemical residues. The fill dirt was contaminated with TRPH, halogenated organic compounds such as TCE & PCE. The site is completely covered with asphalt. A PEA is recommended due to the presence of contaminants at the site.

Environmental Interest/Information System:
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 04/26/1994
Comments: PEA reviewed by DTSC staff. Levels of contaminants observed are protective of human health and the environment DTSC recommends No Further Action.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 11/30/1993
Comments: The site is identified from RP, who likes to submit a PEA. The site consists of 1.53 acres of land and includes a 75,000 sq.ft. two storey building. Phase I investigation revealed no information regarding hazardous waste activities conducted at the site. Further sampling reveals that concentration of oil & grease ranged from 590 to 9900 mg/kg and perchloroethylene (PCE) ranged from 0.89 to 17.0 mg/kg. Due to the evidence of on-site contamination, Department recommends a PEA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/30/2020

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/14/2019
Date Data Arrived at EDR: 12/05/2019
Date Made Active in Reports: 02/03/2020

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Northwest Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

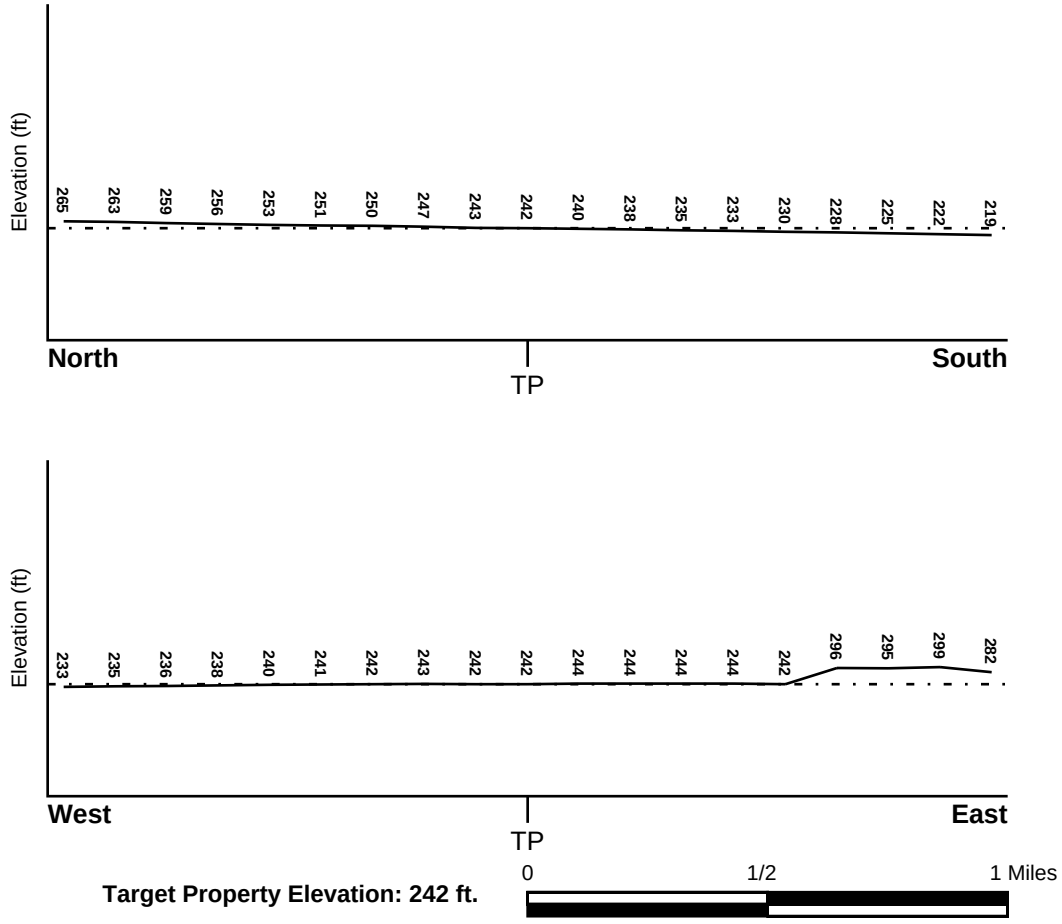
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 242 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1638F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1620F	FEMA FIRM Flood data
06037C1636F	FEMA FIRM Flood data

06037C1639F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LOS ANGELES	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles WSW
Site Name:	SUNGRO CHEMICALS
Site EPA ID Number:	CAD009689696
Surficial Aquifer Flow Dir.:	Southeast
Inferred Depth to Water:	approximately 221 feet.
Hydraulic Connection:	A clay layer exists between the ground surface and the water table in the site vicinity.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/4 - 1/2 Mile SE	Not Reported
A2	1/2 - 1 Mile WSW	Not Reported
A3	1/2 - 1 Mile WSW	Not Reported
1G	1/2 - 1 Mile WSW	Not Reported
2G	1/2 - 1 Mile WSW	Not Reported
3G	1/4 - 1/2 Mile SE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

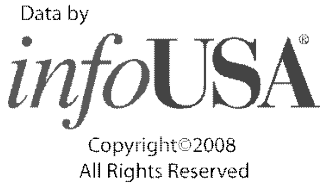
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 369 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

SUBJECT: ENVIRONMENTAL OVERSIGHT FOR CLARIFIER REMOVAL AND SOIL SAMPLING ACTIVITIES REPORT
MARSH AND HERB IMPORTER INC.
1811 SACRAMENTO STREET
LOS ANGELES, CALIFORNIA
WPI PROJECT NO. 14.477

Dear Albert and Elaine Borchard Foundation, Inc.;

Wayne Perry, Inc. (WPI) is submitting this report documenting environmental oversight for the clarifier removal and soil sampling activities performed at the Marsh and Herb Importer, Inc. facility located at 1811/1825 Sacramento Street[1] in Los Angeles, California (herein referred to as the "Site"). The Site location is shown on **Figure 1**. All work was conducted under authorization from the Albert and Elaine Borchard Foundation, Inc., the Site owner.

The soil sampling and analyses were conducted to determine the presence or absence of petroleum fuel hydrocarbons in soil beneath the former clarifier.

[1] The owner references the addresses collectively as 1811. Therefore, this is the reference used by the laboratory and Wayne Perry, Inc. herein.

SITE DESCRIPTION

The Site is currently occupied by Marsh and Herb Importer Inc., and is surrounded by commercial properties. Schratter Foods is located north of the Site, DHL delivery services is located east of the Site, TAC Produce is located south of the Site, and United Melon is located west of the Site.

GEOLOGIC AND HYDROGEOLOGIC SETTINGS

The Site is situated at an elevation of approximately 260 feet above mean sea level (USGS, 1966) in the Los Angeles Plains Region of Los Angeles County (CDWR, 1961). Underlying soils are primarily comprised of alluvium sediments. Soils encountered during excavation activities included sandy silt, silt and fine to medium grained sand and gravel to a depth of 14 feet.

Hydrogeologically, the Site lies within the Sawtelle Plain area of the Santa Monica Groundwater Basin, near the northern edge of the Ballona aquifer. Groundwater was not encountered during excavation activities.

CLARIFIER REMOVAL ACTIVITIES

WPI provided environmental oversight and performed excavation and clarifier removal activities at the Site from October 15 to October 17, 2014. Construction activities included the excavation and removal a of three chamber 500-gallon clarifier. Underground piping was encountered but appeared to have been sealed off from the sewer system at an earlier date.

Excavated soil was monitored for volatile organic compounds (VOCs) using a photo-ionization detector (PID) in accordance with WPI's South Coast Air Quality Management District (SCAQMD) Rule 1166 Mitigation Plan No. 558840, Reference Number 377606. PID readings did not exceed 50 ppm during excavation activities. Copies of the SCAQMD Rule 1166 notification forms and rule 1166 monitoring records are provided in **Appendix A**.

On October 16, 2014, the concrete clarifier was removed and broken into pieces for transportation and disposal at a construction materials disposal facility.

SOIL SAMPLING ACTIVITIES

On October 17, 2014, WPI personnel collected one soil sample (CL-8) 8 feet below ground surface (2 feet below excavation floor) from beneath the former clarifier location. Soil sample location is shown on **Figure 2**.

The sample collected from the former clarifier pit was analyzed for the following constituents using the indicated laboratory methods:

- Total petroleum hydrocarbons as gasoline (TPH-G), diesel (TPH-D) and oil (TPH-O) using EPA Method 8015;
- Volatile organic compounds (VOCs) and fuel oxygenating compounds using EPA Method 8260B Full Scan; and

- CAM 17 metals using EPA Methods 6010B and EPA 7471.

Soil analytical results are summarized in Table 1 and on **Figure 2**. Copies of the laboratory reports and chain-of-custody documents are provided in **Appendix B**.

SOIL SAMPLING ANALYTICAL RESULTS

Clarifier

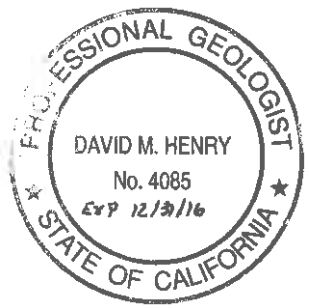
VOCs, TPH-G, TPH-D and TPH-O were not detected in clarifier sample CL-8.

None of the CAM metals were detected in clarifier sample CL-8 at concentrations exceeding background (i.e., naturally occurring) levels.

SOIL STOCKPILE DISPOSITION

Based on these analytical results stockpiled soils generated during excavation activities were used as backfill for the clarifier excavation.

o o O o o



This report has been prepared by Wayne Perry, Inc. for the exclusive use of The Albert and Elaine Borchard Foundation, Inc, as it pertains to the Site located at 1811 Sacramento Street, Los Angeles, California. Our professional services have been performed using the degree of care and skill ordinarily exercised under similar circumstances by other geologists and engineers practicing in this field. No other warranty, express or implied, is made as to professional advice in this report.

Should you have questions or comments regarding this report, please contact Mr. James Carrino of WPI at (714) 826-0352. If you have any questions regarding property information at this Site, please contact The Albert and Elaine Borchard Foundation, Inc.

Sincerely,
WAYNE PERRY, INC.

James Carrino

DEFINITIONS

Excavation	**Is the process of digging out and removing materials including any material necessary to that process such as the digging out and removal of asphalt or concrete necessary to expose, dig out and remove known VOC contaminated soil.**
Organic Vapor Analyzer (OVA)	**For the purposes of this plan, an OVA is an hydrocarbon monitor utilizing flame ionization, photo ionization or other analytical methods complying with 40 CFR PART 60 APPENDIX A, EPA METHOD 21 SECTION 3, "DETERMINATION OF VOLATILE ORGANIC COMPOUND LEAKS, MONITORING INSTRUMENT SPECIFICATIONS. The monitor shall be capable of being calibrated using hexane at a range of 0 parts per million by volume (PPMV) to 50 PPMV, and at a detection range of at least 30 PPMV to 1100 PPMV**
Responsible Party	**For the purposes of this plan, Responsible Party is the party financially responsible for initiating the excavation. This may include the property owner or the tank operator. This excludes contractors working for the property owner or operator, and any other party that lacks the direct authority to immediately treat all VOC contaminated soils generated at the excavation site.**
VOC Contaminated Soil	**Is soil that registers a concentration of 50 PPM or greater of volatile organic compounds as measured before suppression materials have been applied and at a distance of no more than three inches from the surface of the excavated soil with an organic vapor analyzer calibrated with hexane.**
Volatile Organic Compound (VOC)	**Is any volatile compound of carbon, excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, ammonium carbonate, and exempt compounds. Exempt compounds areas defined in Rule 102 – Definitions of Terms.**

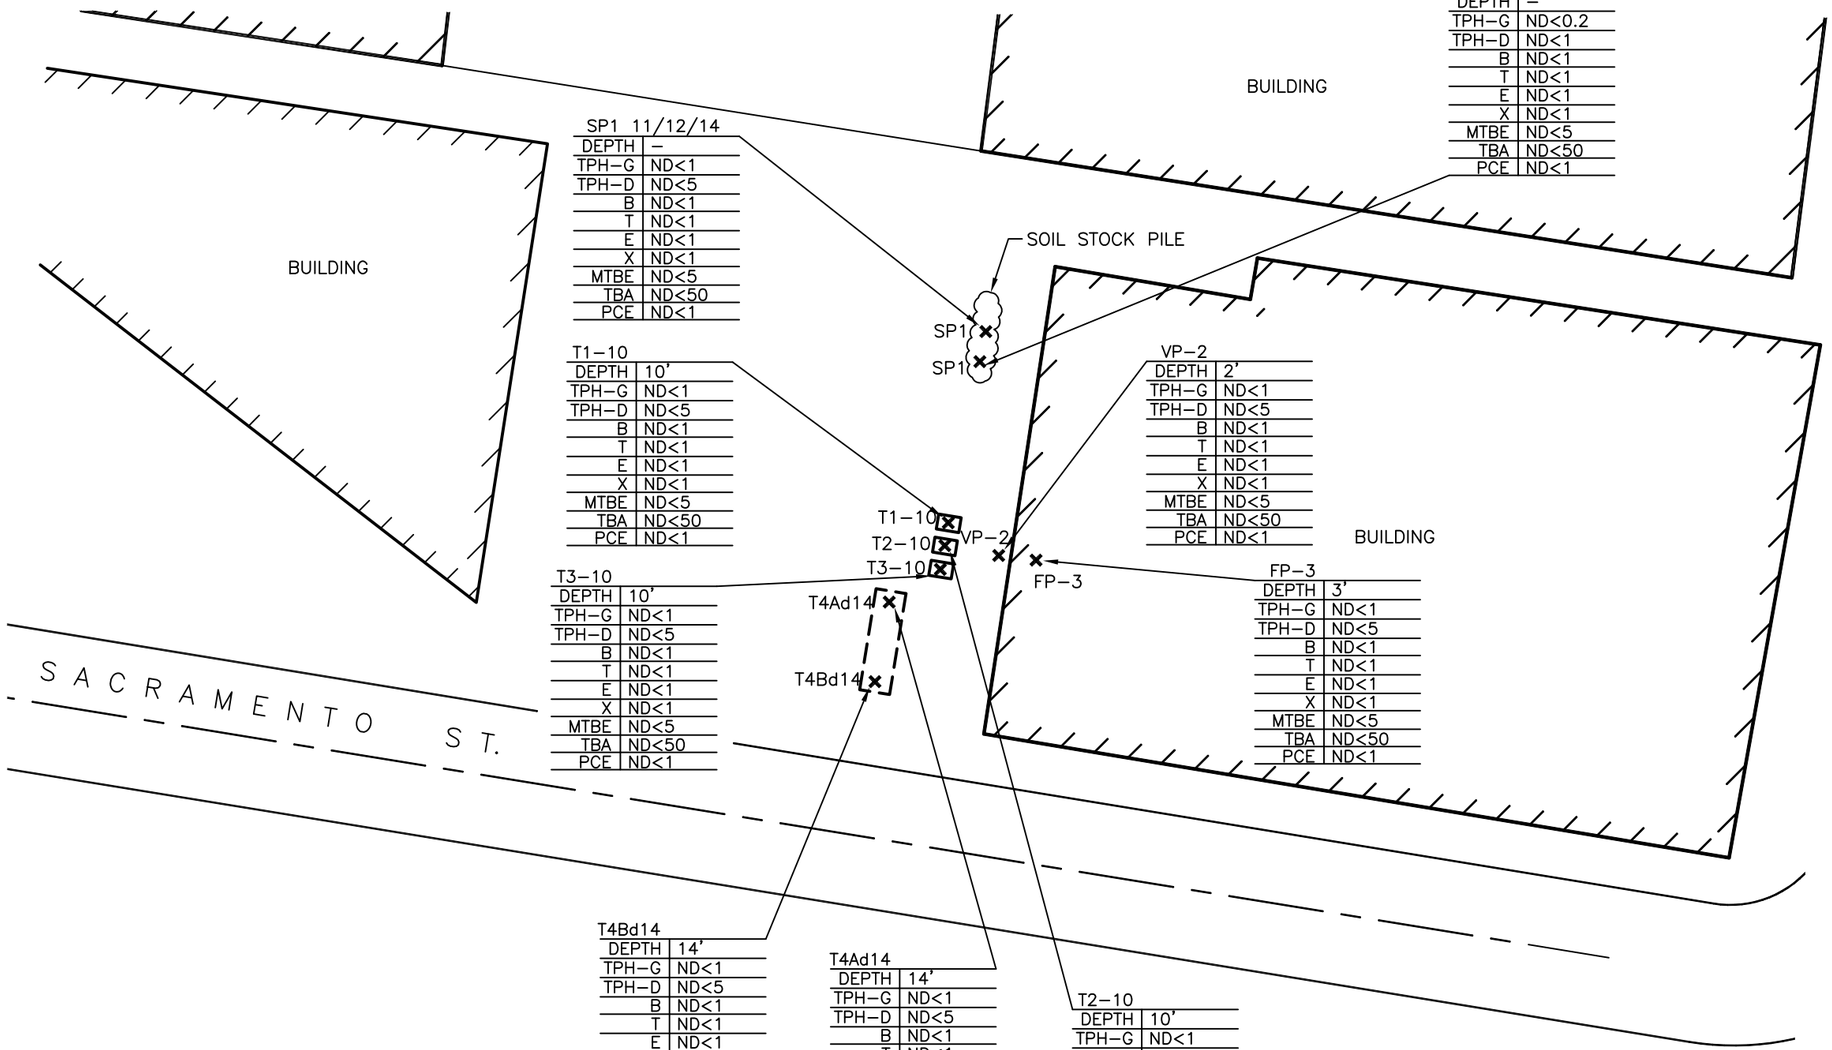
Los Angeles California, California

Dear Mr. & Mrs. Borchard:

The Fire Department has reviewed the "Submittal of Revised Environmental Oversight for UST Removal and Soil Sampling Activities Report" dated January 7, 2015, submitted by Wayne Perry, Incorporated. Based on the information provided, this Department has determined that no further action is required at the site, for the work performed under Division-5 permit, number 30158.

Please note, this correspondence does not exempt you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at this site. Additionally, you maintain responsibility to correct additional or previously unidentified conditions at the site, which cause, or may thereafter cause, pollution or nuisance, or otherwise pose a threat to water quality or public health.

If you require additional information regarding this matter, please contact Eloy Luna of the Underground Storage Tanks – Plan Check Unit, at (213) 978-3708.



Very truly yours,

RALPH M. TERRAZAS
Fire Chief

INTRODUCTION

Andersen Environmental presents this Phase II Environmental Site Assessment (ESA) Report performed at 1805, 1811, 1825, and 1899 Sacramento Street in Los Angeles, California (Site). Based on our review of available site documents and the performance of limited site reconnaissance, reported dumping of used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest portion of the site, limited surface staining in the central portion of the site, an underground storage tank (UST), and a clarifier have been identified as items of environmental concern at the property. UST and clarifier assessments were not included in this Phase II ESA.

Andersen Environmental has performed soil and soil vapor sampling in the vicinity of the reported dumping and surface staining to evaluate whether mineral spirit dumping has significantly impacted the subsurface of the property. Andersen also directed a geophysical survey in an attempt to determine the approximate size and orientation of the UST and determine if there are any other USTs in the immediate vicinity.

SITE INFORMATION

SITE LOCATION AND DESCRIPTION

The Site is located on the north side of the Sacramento Street, east of the intersection of Sacramento Street and Wilson Street, in the City of Los Angeles. The Site is approximately 77,150 square feet (1.77 acres) (Figure 2). The property is occupied by an 11,000 square foot warehouse structure on the eastern half and a second 26,800 square foot warehouse structure to the west. The remaining portions of the property consist of asphalt-paved, concrete-paved, and unpaved areas. The surrounding area is mostly used for commercial and industrial purposes. According to the Los Angeles County Assessor's Office, the Site is located in the City of Los Angeles and is described by the Assessor's Parcel Numbers: 5166-030-008 and -009.

SITE SETTING

The elevation of the Site is approximately 240 feet above sea level (USGS Los Angeles, CA 7.5 minute topographic quadrangle). Based on our review of groundwater data presented in the State Water Resources Control Board (SWRCB) Geotracker website, groundwater was encountered at a leaking underground storage tank site (180 South Doheny Drive) approximately 2,000 feet northeast of the Site at approximately 25-feet below ground surface (bgs). Based on regional groundwater data, regional groundwater flow direction is estimated to be to the south; however, local groundwater flow direction may vary.

FIELD ACTIVITIES

GEOPHYSICAL SURVEY

On May 15, 2014, Andersen Environmental directed a geophysical survey in the vicinity of the suspected UST fill ports and clarifier observed at the subject property. The survey was performed to assess the presence of buried USTs and/or backfilled excavations associated with UST removal, as well as the presence of detectable underground utilities in the vicinity of suspected fill ports and clarifier features. The survey included the use of a Geonics model EM61 time domain instrument (EM), Fisher M-Scope TW-6 pipe and cable locator, RD4000 line tracer, Schonstedt GA-52C magnetic gradiometer, and GSSI SIR 3000 Ground Penetrating Radar (GPR) unit using a 400 MHz transducer.

Visual evaluation of the possible fill boxes and fill ports revealed three apparent fill ports outside of the building, three apparent vent lines on the side of the building, and a possible remote fill located inside of the

building. The results of the geophysical survey revealed the presence of an additional possible fill port, two large EM anomalies, and a GPR anomaly (Figure 2). Several additional high EM responses were also observed at the site; however these responses are attributed to the presence of reinforced concrete, building elements, various utility lines/risers, and chain link fencing. It should be noted that the presence of existing structures and surface objects (i.e., metal fencing, buildings components, etc.) potentially limited the survey. Where obstructions were present subsurface data could not be collected. Moreover, EM and magnetic responses produced by metal surface objects and buried utility lines/pipes can potentially obscure subsurface features. Radar penetration at the site was typically on the order of 2 to 3 feet below the ground surface; therefore, objects below this depth would not have been imaged with GPR.

GPR traverses conducted in the vicinity of the visible fill ports were inconclusive with respect to the quantity, location, and orientation of the USTs. However, a possible fill port buried below the asphalt was imaged with the GPR near the two existing fill ports located adjacent to the building. In addition, the three vents outside the building appear to extend a short distance west of the building toward these fill ports. GPR also indicated a fourth line extending from the possible remote fill inside of the building west toward the fill ports. A possible concrete apron just below the asphalt was also observed in the GPR images collected from around the fill ports. One of the large EM anomalies was detected in the area of the fill port located closer to Sacramento Street. This feature is likely related to the presence of a large UST. The other large EM response/anomaly is located adjacent to the building and encompasses the previously described vent lines, the two visible fill ports and the possible buried fill port. This anomaly is reportedly likely to represent one or more USTs. Based on the size of this identified anomaly, Andersen Environmental grossly estimates it may represent suspected USTs of 6,000 to 10,000 gallon capacities. In order to more fully assess these anomalous features, Andersen Environmental recommends more direct methods be used. Such methods may include the excavation of exploratory trenches/test pits and/or borings.

Several utilities and unidentified lines were also detected in the survey areas. In addition, an inlet, an outlet, and a vent line were detected in the area of the clarifier at the north side of the building. The attached Figure 2 illustrates the suspected UST and clarifier locations. The Geophysical Survey Report, including photographs of identified subject property features, is included as Appendix A.

SOIL SAMPLING

On May 15, 2014, ten direct-push technology (DPT) soil borings (B1 through B10) were advanced at the Site to evaluate subsurface soils for the presence of petroleum hydrocarbons, stoddard solvent, and volatile organic compounds (VOCs). Soil borings B1through B10 were advanced using a dolly-mounted DPT drill rig. Soil borings B1through B8 were advanced at the west side of the property to a maximum depth of 10 feet bgs and soil samples were collected at 2, 5, and 10 feet bgs. Soil borings B9 and B10 were advanced in areas of surface staining to a maximum depth of 5 feet bgs and soil samples were collected at 2 and 5 feet bgs.

Soil samples were collected by hydraulically pushing an acetate-lined steel sampler to the desired sampling depths. At each sampling location, an approximately 6-inch portion of the soil-filled acetate liner was cut, capped with Teflon® liners and firm-fitting plastic end-caps, labeled, logged according to the Unified Soil Classification System (USCS), recorded in a chain of custody and immediately placed in a chilled ice chest pending analysis. Samples were subsequently transported to a State-Certified laboratory under proper chain of custody documentation for analysis. In addition, a small volume of recovered soil at each sampling location was field screened for volatile organic compounds (VOCs) utilizing a photoionization detector (PID).

Soils encountered in soil borings B1 through B8 generally consisted of silty sand and gravel (SM/GM) suspected to be fill material at 2 feet bgs. In the remaining soil borings where fill was not encountered,

soils consisted of silty fine-grained sands (SM) at 2 and 5 feet bgs, and poorly graded sands (SP) at 10 feet bgs. No distinct visual evidence, elevated PID readings or odors were observed during soil sample collection. Field boring logs are included as Appendix B.

SOIL GAS PROBE INSTALLATION

On May 15, 2014, Andersen Environmental converted soil borings B1, B4, and B8 to vapor probes VP1, VP4, and VP8 (Figure 2) at 5 feet bgs in an attempt to assess the presence of VOCs in the gas phase of the shallow subsurface. In the absence of observable evidence of subsurface impacts during soil sample collection, probe locations were evenly distributed within the area of reported mineral spirit dumping to screen for a surface release from hazardous material.

The temporary soil vapor probes were constructed in the 10 foot soil borings by depositing a lower seal of approximately 4.5 feet of bentonite set and hydrated beneath approximately 6 inches of clean sand. A length of ¼-inch nylon tubing (Nylaflow) fitted with a porous polypropylene tip was set at the top of the sand and approximately 6 additional inches of sand was backfilled to assure the tip and hose were buried in the middle of approximately 1 foot of clean sand at 5 feet bgs. The upper end of the tubing was cut approximately 2 feet above ground surface to facilitate soil vapor sample collection. The remainder of the boring was backfilled using bentonite granules (one foot) followed by hydrated bentonite slurry to grade level.

SOIL GAS SAMPLING

After equilibrating for a period of approximately 24 hours, at each soil gas probe, a pre-evacuated 1-liter stainless steel (SUMMA®) canister was affixed to the nylon tubing with a compression fitting and ferrules to avoid leaks in the sampling train. A vacuum gauge was used to measure the initial vacuum of the canister, the final vacuum upon completion of sampling, and monitor the fill rate of the canister. Each canister was evacuated to approximately 30 inches of mercury vacuum prior to sampling by the analytical laboratory. The compression fitting was secured to the SUMMA tee fitting with a 9/16 wrench, and the valve was opened ½ turn for the collection of a soil gas grab sample for approximately 30 seconds, leaving approximately 5 inches of residual mercury vacuum. Following successful collection of each soil gas grab sample, the valve was closed by hand tightening the valve in the clockwise direction and the soil gas probe was disconnected from the SUMMA. The sample tag for each canister was completed with sample ID, date and time. Proper chain-of-custody documentation and protocol were maintained during sample collection and transport.

SOIL ANALYTICAL SCHEDULE AND RESULTS

Soil samples from 2 feet bgs from soil borings B1 through B8 were submitted for analysis of extractable range petroleum hydrocarbons (ERPH) and stoddard solvent by EPA Method 8015M and VOCs by EPA Method 8260B (Tables 1 and 2, respectively). Soil samples from 2 feet bgs from soil borings B9 and B10 were submitted for analysis of ERPH (Table 1). The laboratory report and chain of custody documentation is provided as Appendix C.

ERPH & STODDARD SOLVENT IN SOIL

The ERPH analyzed can be characterized by the length of their constituent carbon chains. C13-C22 and C23-C32 are commonly interpreted as diesel (TPHd) and oil (TPHo) range hydrocarbons, respectively. Stoddard solvent is an industrial solvent generally interpreted as consisting of diesel and oil range hydrocarbon constituents and can also be analyzed for and detected by EPA Method 8015.

As indicated in Table 1: Extractable Range Petroleum Hydrocarbons and Stoddard Solvent in Soil, analytical results indicate TPH-d was detected in each of the ten soil samples at a maximum concentration of 18.6 milligrams per kilogram (mg/kg) (B6-2'). TPH-o was detected in six of ten soil samples at a

maximum concentration of 216 mg/kg (B2-2'). Stoddard solvent was not detected above analytical detection limits in any of the soil samples analyzed by EPA Method 8015M.

As shown in Table 1, the TPH-d and TPH-o concentrations in the soil samples were found to be well below the Maximum Soil Screening Levels (MSSLs) as prescribed by the Los Angeles Regional Water Quality Control Board (LARWQCB) for the protection of groundwater resources (May 1996 Guidebook). The MSSLs for TPHd and TPHo are 100 mg/kg and 1,000 mg/kg, respectively. As such, the petroleum hydrocarbons detected at the property are not indicative of a significant release and is not likely to threaten groundwater.

VOLATILE ORGANIC COMPOUNDS IN SOIL

As indicated in Table 2: Volatile Organic Compounds in Soil, tetrachloroethene (PCE) was detected in soil samples B1-2'and B3-2' at a maximum concentration of 5.45 micrograms per kilogram (µg/kg) (B3-2'), well below the EPA Region 9 Regional Soil Screening Level (RSL) for soils at industrial properties (established at 2,800 µg/kg). As PCE was only detected at very low concentrations in two shallow soil samples, it is not considered to be a chemical of concern (COC) in the areas assessed.

Ethylbenzene was also detected in soil sample B1-2' at concentrations of 2.61 µg/kg. Xylenes were detected in soil samples B1-2' and B7-2' at a maximum concentration of 11.96 µg/kg. The ethylbenzene and xylene concentrations detected were found to be well below their respective RSLs for soils at industrial properties of 27,000 µg/kg and 2,700,000 µg/kg. Total Xylene concentrations were calculated by summing the results of m-, p- and o-Xylenes in the laboratory reports.

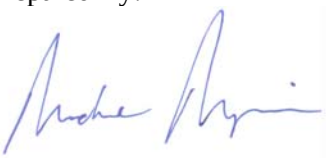
No other VOCs were present at concentrations above laboratory detection limits in any of the other soil samples selected for VOC analysis. Further assessment of subsurface VOCs was performed in the west portion of the property via soil gas probe installation and sampling.

SOIL GAS ANALYTICAL SCHEDULE AND RESULTS

All soil gas samples were analyzed by Sunstar Laboratories, Inc., for a standard list of VOCs including tetrachlorethene (PCE), trichloroethene (TCE), associated PCE breakdown products, benzene, toluene, ethylbenzene, total xylenes (BTEX) and fuel oxygenates using EPA Method 8260B. A copy of the analytical report and chain of custody form is included in the Laboratory Report section (Appendix II) of this report. VOCs were not detected above analytical detection limits in any of the soil gas samples analyzed. As such, VOCs in the shallow subsurface are not considered to be COCs in the areas explored.

CONCLUSIONS AND RECOMMENDATIONS

Andersen Environmental presents this Phase II ESA Report performed at 1805, 1811, 1825, and 1899 Sacramento Street in Los Angeles, California. Based on our review of available site documents and the performance of limited site reconnaissance, reported dumping of used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest portion of the site, limited surface staining in the central portion of the site, a known UST, and a clarifier have been identified as items of environmental concern at the property. UST and clarifier assessments were not included in this Phase II ESA.



Andersen has performed soil and soil vapor sampling in the vicinity of the reported dumping and surface staining to evaluate whether mineral spirit dumping has significantly impacted the subsurface of the property. Andersen also directed a geophysical survey in an attempt to determine the approximate size and orientation of the UST(s) and to determine if there are any other USTs in the immediate vicinity. The following are Andersen's conclusions and recommendations based on the field activities and laboratory analytical results detailed herein:

- Andersen Environmental directed a geophysical survey in the vicinity of the suspected UST fill ports and clarifier at the subject property. Andersen Environmental interprets two large EM anomalies and GPR anomaly as two suspected USTs of approximately 6,000 to 10,000 gallon capacities. Several utilities and unidentified lines were detected in the study areas. In addition, an inlet, an outlet, and a vent line were detected in the area of the clarifier at the north side of the 1825 Sacramento Street building.
- Andersen directed the advancement of 10 direct-push soil borings (B1 through B10) and conducted soil sampling to evaluate the subsurface for the presence of petroleum hydrocarbons, stoddard solvent, and VOCs. Soil borings B1through B8 were advanced at the west side of the property to a maximum depth of 10 feet bgs and samples were collected at 2, 5, and 10 feet bgs. Soil borings B9 and B10 were advanced in areas of surface staining to a maximum depth of 5 feet bgs and samples were collected at 2 and 5 feet bgs.
- Soil samples from 2 feet bgs from soil borings B1 through B8 were submitted for analysis of ERPH and VOCs. Soil samples from 2 feet bgs from soil borings B9 and B10were submitted for analysis of ERPH.
- Analytical results indicate TPH-d was detected in each of the ten soil samples at a maximum concentration of 18.6 milligrams per kilogram (mg/kg) (B6-2'). TPH-o was detected in six of ten soil samples at a maximum concentration of 216 mg/kg (B2-2'). Stoddard solvent was not detected above analytical detection limits in any of the soil samples analyzed.
- The TPH-d and TPH-o concentrations in the soil samples were found to be well below MSSLs. The MSSLs for TPHd and TPHo are 100 mg/kg and 1,000 mg/kg, respectively. As such, the TPHd and TPHo detected at the property are not indicative of a significant release and are not likely to threaten groundwater.
- PCE was detected in soil samples B1-2'and B3-2' at a maximum concentration of 5.45 micrograms per kilogram (µg/kg) (B3-2'), well below RSL for soils at industrial properties (established at 2,800 µg/kg). As PCE was only detected at very low concentrations in two shallow soil samples, it is not considered to be a chemical of concern (COC) in the areas assessed.
- Ethylbenzene was also detected in soil sample B1-2' at concentrations of 2.61 µg/kg. Xylenes were detected in soil samples B1-2' and B7-2' at a maximum concentration of 11.96 µg/kg. The ethylbenzene and xylene concentrations detected were found to be well below their respective RSLs for soils at industrial properties of 27,000 µg/kg and 2,700,000 µg/kg, respectively. No other VOCs were present at concentrations above laboratory detection limits in any of the other soil samples selected for VOC analysis. Further assessment of subsurface VOCs was performed in the west portion of the property via soil gas probe installation and sampling.
- Andersen Environmental converted soil borings B1, B4, and B8 to vapor probes VP1, VP4, and VP8 at 5 feet bgs in an attempt to assess the presence of VOCs in the gas phase of the shallow subsurface. VOCs were not detected above analytical detection limits in any of the soil gas samples analyzed. As such, VOCs in the shallow subsurface are not considered to be COC in the areas explored.
- The results of this assessment indicate that a significant release to the subsurface in the areas of dumping of used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest portion of the site and limited surface staining in the central portion of the site has not occurred. This conclusion is based on the *de minimis* concentrations of petroleum hydrocarbons and VOCs detected in the subsurface of these areas. Based on the findings of this assessment, it is Andersen Environmental's opinion that further subsurface investigation of these areas is not warranted at this time. However, further assessment should be performed to assess the potential for subsurface releases in the vicinity of the suspected USTs and clarifier at the site. In order to further assess the

USTs and clarifier, we recommend that more direct methods be used. Such methods may include the excavation of exploratory trenches/test pits and/or borings accompanied by an assessment of soils in those areas.

Subject: Geophysical Evaluation
1811 Sacramento Street
Los Angeles, California

Dear Mr. Maglione:

In accordance with your authorization, we are pleased to submit this report pertaining to our geophysical evaluation for the property located at 1811 Sacramento Street in Los Angeles, California. The purpose of our evaluation was to assess the presence of buried underground storage tanks (USTs) and/or backfilled excavations associated with UST removal, as well as the presence of detectable underground utilities in the vicinity of three fill ports and a clarifier. Our services were conducted on May 15, 2014. This data report presents the survey methodology, equipment used, analysis, and results from our study.

We appreciate the opportunity to be of service on this project. Should you have any questions please contact the undersigned at your convenience.

Sincerely,
SOUTHWEST GEOPHYSICS, INC.

Edward R. Verdugo, G.I.T.
Senior Staff Geologist/Geophysicist

Patrick F. Lehrmann, P.G., P.Gp.

1. INTRODUCTION

In accordance with your authorization, we are pleased to submit this report pertaining to our geophysical evaluation for the property located at 1811 Sacramento Street in Los Angeles, California (Figure 1). The purpose of our evaluation was to assess the presence of buried underground storage tanks (USTs) and/or backfilled excavations associated with UST removal at the site, as well as the presence of detectable underground utilities in the vicinity of three fill ports and a clarifier. Our services were conducted on May 15, 2014. This report presents the survey methodology, equipment used, analysis, and results from our study.

2. SCOPE OF SERVICES

Our scope of services included:

- Performance of a geophysical survey at the project site. Our survey included the use of a Geonics model EM61 time domain instrument, Fisher M-Scope TW-6 pipe and cable locator, RD4000 line tracer, Schonstedt GA-52C magnetic gradiometer and GSSI SIR 3000 Ground Penetrating Radar (GPR) unit using a 400 MHz transducer.
- Site reconnaissance including field mapping of surface structures at and near the survey area.
- Compilation and analysis of the data collected.
- Preparation of this report presenting our findings and conclusions.

3. SITE DESCRIPTION AND BACKGROUND

The project site is located near the northeast corner of the intersection of Lawrence Street and Sacramento Street in Los Angeles, California (Figure 1). The property is an asphalt lot, bounded by commercial properties to the north, east and west, and Sacramento Street to the south. Figures 2 and 3 depict the general site conditions.

Based on our discussions with you, it is our understanding that three fill ports, three vents, a possible remote fill, and a clarifier are present at the site. However, details regarding the quantity, orientation, and size of the USTs and the location of utilities were reportedly not available.

4. GEOPHYSICAL INSTRUMENTATION AND APPLICATIONS

Our evaluation included the use of a Geonics model EM61, GSSI SIR 3000 GPR, Schonstedt model GA-52C magnetic gradiometer, Fisher M-Scope TW-6 pipe and cable locator, and RD4000 line tracer. These instruments provide real-time results and facilitate the delineation of subsurface features.

The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets. Conductive objects to a depth of approximately 11 feet generally can be detected.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at boundaries in the subsurface across which there are an electrical contrast. The recorder continuously makes a record of the reflected energy as the antenna is moved across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The EM wave travels at a velocity unique to the material properties of the ground being studied, and when these velocities are known, or closely estimated from ground conductivity values and other information, two-way travel times can be converted to depth. Penetration into the ground and resolution of the GPR images produced are a function of ground electrical conductivity and dielectric constant. Images tend to be graphic, even at considerable depth, in sandy soils, but penetration and resolution may be limited in more conductive clayey moist ground.

The magnetic gradiometer has two fluxgate magnetic fixed sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits an audible signal at a low frequency. When the instrument passes over buried iron or steel objects, so that the field is significantly different at the two sensors, the frequency of the emitted sound increases. Frequency is a function of the gradient between the two sensors.

The M-Scope TW-6 device energizes the ground by producing an alternating primary magnetic field with alternating current (AC) in the transmitting coil. If conducting materials (including soils) are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs an audio response. The strength of the secondary field is a function of the conductivity of the object, its size, and its depth and position relative to the instrument's two coils. Conductive objects to a depth of approximately 10 feet can be sensed. Also the device is somewhat focused, that is, it is more sensitive to conductors below (and above) the instrument, than to conductors off to the side.

Where risers are present, the RD4000 utility locator transmitter can be connected to the object, and a current is impressed on the conductor pipe or cable. The receiver unit is tuned to this same frequency, and it is used to trace the pipe's surface projection away from the riser. In addition, the instrument may be used in the passive mode, whereby radio and 60 Hz electromagnetic signals produced by communication and live electric lines are detected.

5. SURVEY METHODOLOGY

Traverses with the EM61 were conducted along roughly east to west and north to south profile lines spaced 5 feet apart across accessible portions of the survey area. GPR traverses were conducted along roughly east to west and south to north profiles spaced approximately 5 feet apart. GPR traverses were also performed along random profiles across and near detected features. Traverses with the M-Scope and gradiometer were conducted along traverses spaced approximately 5 feet apart. The line tracer was used in both passive and inductive modes to delineate the

presence of underground utilities in the study area. Significant anomalies as well as detectable underground utilities were marked on the ground surface with paint and reported to you.

6. RESULTS, CONCLUSIONS, AND RECOMENDATIONS

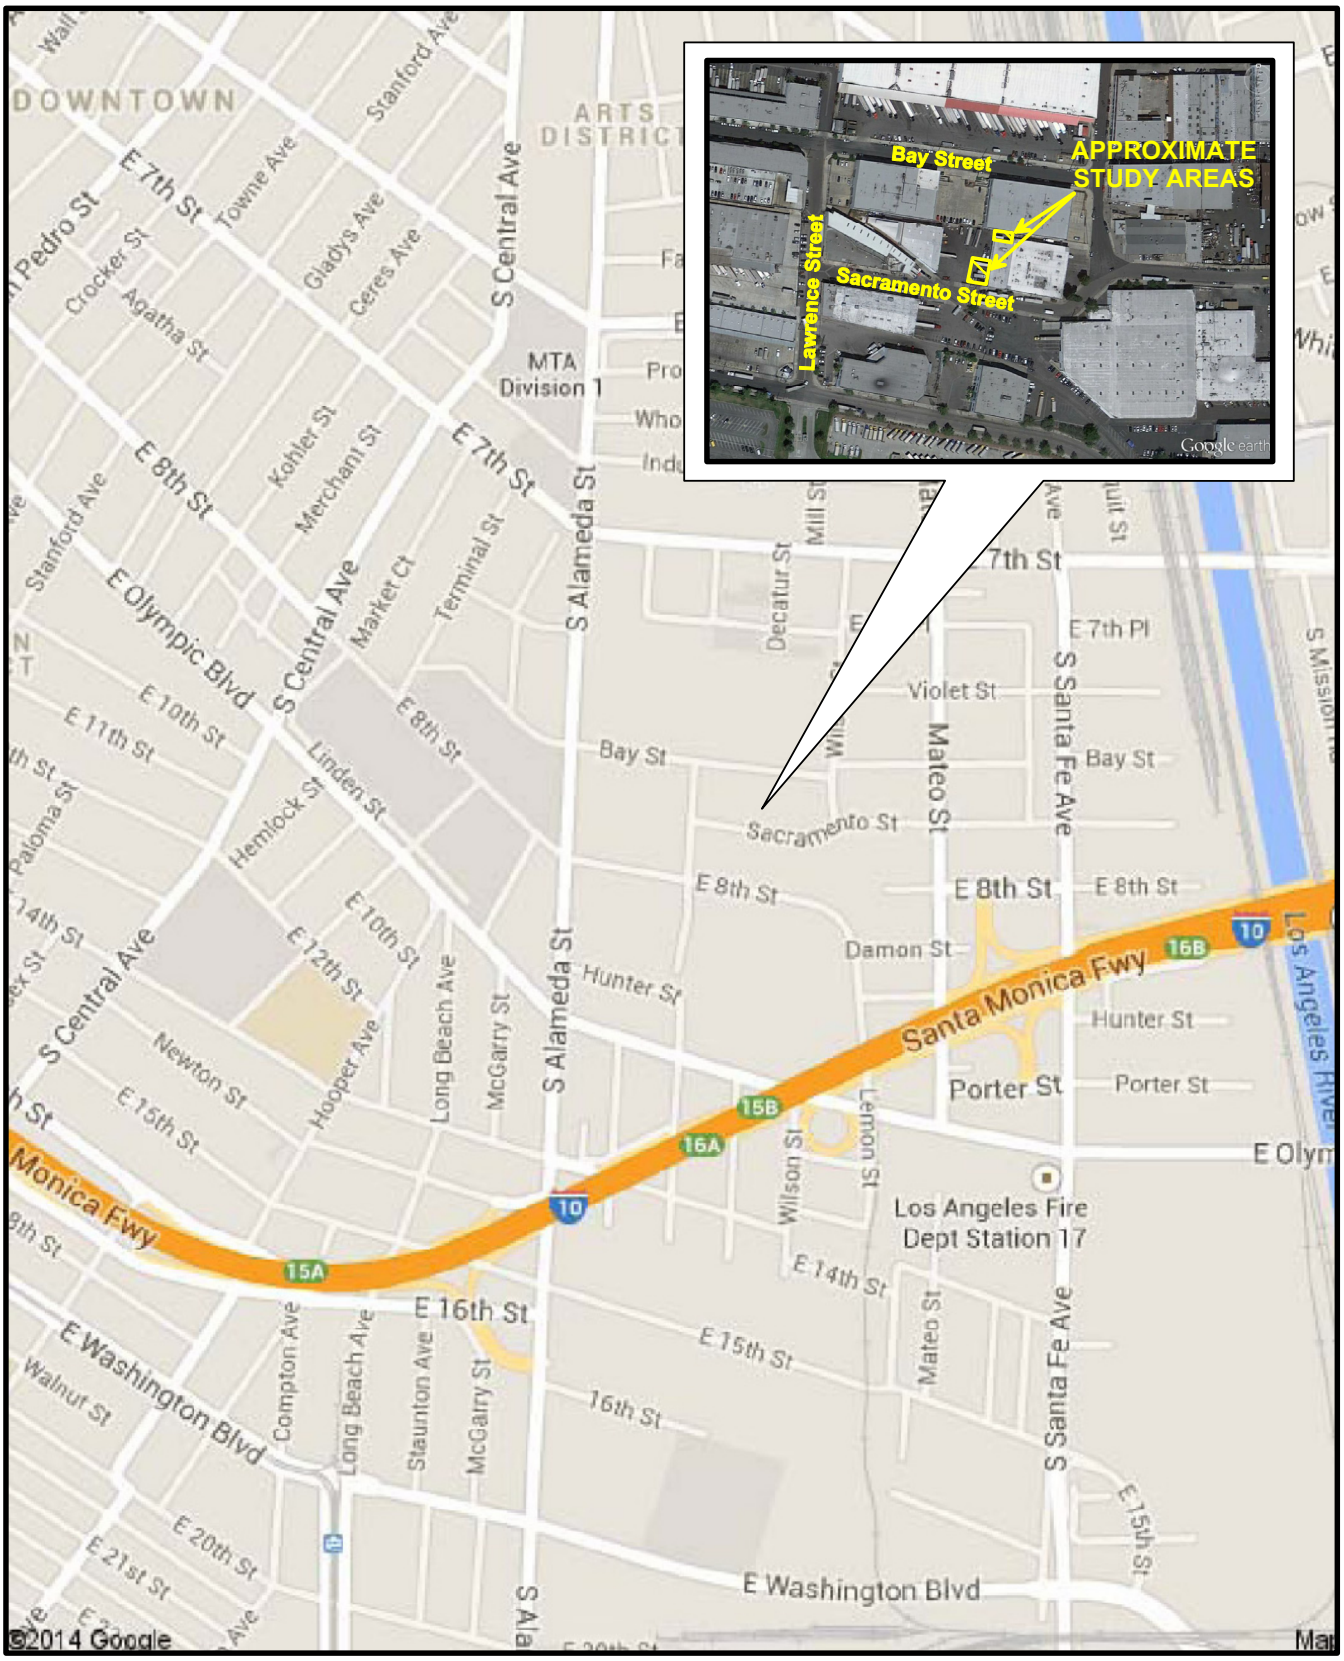
As previously discussed, the primary purpose of our evaluation was to assess the presence of buried underground storage tanks (USTs) and/or backfilled excavations associated with UST removal at the site. In addition to the visible indications of USTs (e.g., three fill ports outside of the building, three vent lines on the side of the building, and a possible remote fill located inside of the building), the results of our survey revealed the presence of an additional possible fill port, two large EM anomalies, and a GPR anomaly (Figures 2 and 3).

GPR traverses conducted in the vicinity of the visible fill ports were inconclusive to the quantity, location, and orientation of the USTs. However, a possible fill port buried below the asphalt was imaged with the GPR near the two existing fill ports located adjacent to the building (see Figure 2). In addition, the three vents outside the building appear to extend a short distance west of the building toward these fill ports. GPR also indicated a fourth line extending from the possible remote fill inside of the building west toward the fill ports. A possible concrete apron just below the asphalt was also observed in the GPR images collected from around the fill ports.

One of the large EM anomalies was detected in the area of the fill port located closer to Sacramento Street. This feature is likely related to the presence of a large UST. The other large EM response/anomaly is located adjacent to the building and encompasses the previously described vent lines, the two visible fill ports and the possible buried fill port. This anomaly likely represents one or more USTs.

Several utilities and unidentified lines were detected in the study areas. In addition, an inlet, an outlet, and a vent line were detected in the area of the clarifier at the north side of the building (see Figures 2 and 3).

Several additional high EM responses were observed at the site; however these responses are attributed to the presence of reinforced concrete, building elements, various utility lines/risers, and chain link fencing. It should be noted that the presence of existing structures and surface objects (i.e., metal fencing, buildings components, etc.) potentially limited the survey. Where obstructions were present subsurface data could not be collected. Moreover, EM and magnetic responses produced by metal surface objects and buried utility lines/pipes can potentially obscure subsurface features. Radar penetration at the site was typically on the order of 2 to 3 feet below the ground surface; therefore, objects below this depth would not have been imaged with GPR. Figures 2 and 3 illustrate the general site conditions.



In order to further assess the features described above, we recommend that more direct methods be used. Such methods may include the excavation of exploratory trenches/test pits and/or borings.

7. LIMITATIONS

The field evaluation and geophysical analyses presented in this report have been conducted in general accordance with current practice and the standard of care exercised by consultants performing similar tasks in the project area. No warranty, express or implied, is made regarding the conclusions and opinions presented in this report. There is no evaluation detailed enough to reveal every subsurface condition. Variations may exist and conditions not observed or described in this report may be present. Uncertainties relative to subsurface conditions can be reduced through additional subsurface surveying and/or exploration. Additional subsurface surveying can be performed upon request.

Please also note that our evaluation was limited to the detection of USTs and/or backfilled tank excavations, as well as the presence of detectable underground lines in the study areas. “USA” or “Dig Alert” should also be contacted prior to conducting subsurface exploration activities. In addition, we recommend that available utility plans/drawings of the project site be reviewed as appropriate.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Southwest Geophysics, Inc. should be contacted if the reader requires additional information or has questions regarding the content, interpretations presented, or completeness of this document. This report is intended exclusively for use by the client. Any use or reuse of this report by parties other than the client is undertaken at said parties' sole risk.

Report No.: 1405132
Project Name: 1805 Sacramento, Los Angeles

Dear Mr. Michael J. Maglione,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on May 15, 2014.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.
