May 28, 2014

Case Narrative

Project Name: 1805 Sacramento, Los Angeles
Report No. : 1405132

Twenty-eight soil samples were received by a Positive Lab Service representative on May 15, 2014. The samples were collected on May 15, 2014 and were analyzed for VOCs (EPA 8260B) and TPH Extractable Ranges + Stodard Solvent (EPA 8015B) per Chain of Custody Nos. 83491, 83492 and 83493. The temperature of the cooler was 1.5 degrees Celsius upon receipt.

The holding time and analytical acceptance criteria were met for the above mentioned sample(s) with the following exception(s).

VOCs

Initial Calibration (05/14/14) - The %RSD for 2-chloroethyl vinyl ether (23%) in the ICAL was above the acceptance level of 15% with an average %RSD of 6.4% for the method target analytes. The linearity conditions for multi-analyte methods were met as specified in EPA Method 8000.

Continuing Calibration (05/16/14) – The %D for all analytes were within the acceptance range of 20%.

Continuing Calibration Verification (05/17/14 am)–The %D for acetone (-34%), was below the ±20% acceptance limit. The average %D for target analytes in EPA 8260B for soil samples was 10.7%. The linearity conditions for multi-analyte methods were met as specified in EPA Method 8000.

Acetone is a common laboratory contaminant. Presence of this compound at a background level can affect the %RSD and/or %D in the initial calibration and/or continuing calibration verification.

WAYNE PERRY, INC.
Environmental Remediation, Construction and Consulting

January 7, 2015

City of Los Angeles Fire Department
Underground Storage Tanks - Plan Check Unit
200 North Main Street, Suite 1700
Los Angeles, California 90012

Attention Eloy Luna

SUBJECT: SUBMITTAL OF REVISED ENVIRONMENTAL OVERSIGHT FOR UST REMOVAL AND SOIL SAMPLING ACTIVITIES REPORT
MARSH AND HERB IMPORTER INC.
1811 SACRAMENTO STREET
LOS ANGELES, CALIFORNIA
WPI PROJECT NO. 14.477

Dear Eloy:

As indicated in my December 31, 2014 voicemail and our discussion on January 5, 2015, enclosed is a revised Environmental Oversight for UST Removal and Soil Sampling Activities Report for the above referenced facility. Changes made to the previous submittal are summarized below:

- Address correction within report text and laboratory reports from 1805 to 1811 Sacramento Street, thereby matching the LAFD permit application;
- Property owner name correction from Albert and Elaine Borchard to The Albert and Elaine Borchard Foundation, Inc.
- Typographical error of g/kg on page 3 to ug/kg;
- Facility name correction from Marsh and Herb Warehouse/Marsh and Herb Produce Company to Marsh and Herb Importer, Inc. (where applicable);
- Bolded appendix, table and figure references within text;
- Reversed parenthesis on page 3 for VOCs, corrected;

- Property Information Contact corrected on page 5;
- Figure 2 updated to include stockpile samples and PCE results
- Added the word "procedures" following LAFD on page 1; and
- Owner address reference on Page 1 footer.

If you have any questions regarding this submittal, please contact the undersigned at (714) 826-0352.

Sincerely,
WAYNE PERRY INC.

James Carrino
Project Geologist

Los Angeles, California 90012

Attention: Eloy Luna

SUBJECT: ENVIRONMENTAL OVERSIGHT FOR UST REMOVAL AND SOIL SAMPLING ACTIVITIES REPORT (REVISED)
MARSH AND HERB IMPORTER INC.
1811 SACRAMENTO STREET
LOS ANGELES, CALIFORNIA
WPI PROJECT NO. 14.477

Dear Mr. Luna;

Wayne Perry, Inc. (WPI) is submitting this report documenting environmental oversight for the underground storage tank (UST) removal and soil sampling activities performed at the Marsh and Herb Importer, Inc. facility located at 1811/1825 Sacramento Street[1] in Los Angeles, California (herein referred to as the "Site"). The Site location is shown on **Figure 1**. All work was conducted under authorization from the Albert and Elaine Borchard Foundation, Inc., the property owner.

The soil sampling and analyses were conducted to determine the presence or absence of petroleum fuel hydrocarbons in soil beneath the former UST and product piping locations. All field activities were conducted in compliance with the City of Los Angeles Fire Department (LAFD) procedures.

[1] The owner references the addresses collectively as 1811. Therefore, this is the reference used by the laboratory and Wayne Perry, Inc.

SITE DESCRIPTION

The Site is currently occupied by Marsh and Herb Importer Inc., and is surrounded by commercial properties. Schratter Foods is located north of the Site, DHL delivery services is located east of the Site, TAC Produce is located south of the Site, and United Melon is located west of the Site.

GEOLOGIC AND HYDROGEOLOGIC SETTINGS

The Site is situated at an elevation of approximately 260 feet above mean sea level (USGS, 1966) in the Los Angeles Plains Region of Los Angeles County (CDWR, 1961). Underlying soils are primarily comprised of alluvium sediments. Soils encountered during excavation activities included sandy silt, silt and fine to medium grained sand and gravel to a depth of 14 feet.

Hydrogeologically, the Site lies within the Sawtelle Plain area of the Santa Monica Groundwater Basin, near the northern edge of the Ballona aquifer. Groundwater was not encountered during excavation activities.

UST REMOVAL ACTIVITIES

WPI provided environmental oversight and performed excavation and UST removal activities at the Site from October 15 to November 12, 2014. Construction activities included the excavation and removal of three 500-gallon waste-oil USTs and one 10,000-gallon diesel fuel UST. Underground product piping was not encountered and appeared to have been removed at an earlier date.

Excavated soil was monitored for volatile organic compounds (VOCs) using a photo-ionization detector (PID) in accordance with WPI's South Coast Air Quality Management District (SCAQMD) Rule 1166 Mitigation Plan No. 558840, Reference Number 377606. PID readings did not exceed 50 ppm during excavation activities. Copies of the SCAQMD Rule 1166 notification forms and rule 1166 monitoring records are provided in **Appendix A**.

On October 17, 2014, the three waste-oil USTs were cleaned, triple rinsed, and certified inert by an industrial hygienist. The USTs were removed under permit number SR0030158 and under the direction of Inspector Pleasant of the LAFD. A copy of the permit for the waste oil UST removals is provided in **Appendix B**.

On November 12, 2014, the diesel UST was cleaned, triple rinsed, and certified inert by an industrial hygienist. The UST was removed under permit number SR0030158 and under the direction of Inspector Morel of the LAFD. A copy of the diesel UST removal permit is included in **Appendix B**.

Upon removal, each UST was visually inspected and all appeared to be in good condition. Adams Services Inc. transported the USTs as a non-RCRA hazardous waste to American Metals Recycling in Fontana, California. Copies of the rinseate manifest, tank certificates, and destruction documents are provided in **Appendix C**.

SOIL SAMPLING ACTIVITIES

On October 17, 2014, WPI personnel collected soil samples from beneath each former waste-oil UST location (samples T1-10, T2-10 and T3-10), from beneath the remote fill (sample FP-3) and waste oil UST ventilation lines (sample VP-2). The waste oil UST pit samples were obtained from a depth of approximately 2 feet beneath the excavation floor. Soil samples from the remote fill and UST ventilation line pipe trenches were obtained from depths of approximately 3 and 10 feet, respectively. In addition, one sample was collected from the excavated soils (SP1, dated 10/17/2014), which were stockpiled on-site. Soil sample locations are shown on **Figure 2**.

The waste oil UST pit soil samples were collected from the bucket of a backhoe using EPA 5035 Protocol. The remote fill and ventilation piping samples were collected from the bucket of a hand auger. A back up sample from each location was packed into a brass tube and sealed at each end with Teflon sheets and capped with plastic end caps. All samples were labeled, stored on ice, and delivered under chain-of-custody to an on-site mobile laboratory operated by Jones Environmental, Inc. of Fullerton, California. Soil sampling activities were performed under the supervision of a California Professional Geologist.

On November 12, 2014 WPI personnel collected soil samples from each end of the former diesel fuel UST pit (samples T4Ad14 and T4Bd14) and one sample was collected from the diesel pit excavated soils (SP1, dated 11/12/14). Soil samples from the UST pit were obtained from a depth of approximately 14 feet beneath ground surface. Soil sample locations are shown on **Figure 2**.

All samples collected from the former diesel fuel UST and waste oil UST pits were analyzed for the following constituents using the indicated laboratory methods:

- Total petroleum hydrocarbons as gasoline (TPH-G), diesel (TPH-D) and oil (TPH-O) using EPA Method 8015;
- Volatile organic compounds (VOCs) and fuel oxygenating compounds using EPA Method 8260B Full Scan; and
- CAM 17 metals using EPA Methods 6010B and EPA 7471.

Soil analytical results are summarized in Table 1 and on **Figure 2**. Copies of the laboratory reports and chain-of-custody documents are provided in **Appendix D**.

SOIL SAMPLING ANALYTICAL RESULTS

Waste Oil USTs

Tetrachloroethylene (PCE) was detected at a concentration of 1.2 µg/kg in sample T2-10, obtained from the waste oil UST excavation floor. No other VOCs were detected in samples T1-10, T2-10 and T3-10, or the remote fill and ventilation samples FP-3 and VP-2.

TPH-G, TPH-D, and TPH-O, were not detected in the waste oil excavation floor samples T1-10, T2-10 and T3-10, or the remote fill and ventilation samples FP-3 and VP-2.
None of the CAM metals were detected in the waste oil excavation floor samples T1-10, T2-10 and T3-10, or the remote fill and ventilation samples FP-3 and VP-2 at concentrations exceeding background (i.e., naturally occurring) levels.

Diesel UST
Tetrachloroethylene was detected at a concentration of 5.7 µg/kg in sample T4Bd14, obtained from the diesel UST excavation floor. No other VOCs were detected in samples T4Ad14 or T4Bd14.

TPH-G, TPH-D and TPH-O were not detected in diesel UST samples T4Ad14 or T4Bd14.

None of the CAM metals were detected in diesel UST samples T4Ad14 or T4Bd14 at concentrations exceeding background (i.e., naturally occurring) levels.

Soil Stockpile
VOCs were not detected in soil stockpile samples SP1 (10-17-14) or SP1 (11-12-14).

TPH-G, TPH-D and TPH-O were not detected in soil stockpile samples SP1 (10-17-14) or SP1 (11-12-14).

None of the CAM metals were detected in soil stockpile samples SP1 (10-17-14) or SP1 (11-12-14) at concentrations exceeding background (i.e., naturally occurring) levels.

SOIL STOCKPILE DISPOSITION
Based on these analytical results, stockpiled soils generated during excavation activities were used as backfill for the UST and piping trench excavations.

o o O o o

This report has been prepared by Wayne Perry, Inc. for the exclusive use of The Albert and Elaine Borchard Foundation, Inc. as it pertains to the Site located at 1811 Sacramento Street, Los Angeles, California. Our professional services have been performed using the degree of care and skill ordinarily exercised under similar circumstances by other geologists and engineers practicing in this field. No other warranty, express or implied, is made as to professional advice in this report.

Should you have questions or comments regarding this report, please contact Mr. James Carrino of WPI at (714) 826-0352. If you have any questions regarding property information at this Site, please contact The Albert and Elaine Borchard Foundation, Inc.

Sincerely,
WAYNE PERRY, INC.

James Carrino
Project Geologist

SECTION VII – VERIFICATION AND SIGNATURE

29. THIS PLAN IS NOT VALID UNTIL ALL PARTIES HAVE REVIEWED AND SIGNED THE VERIFICATION STATEMENT BELOW.

I CERTIFY THAT I HAVE REVIEWED AND UNDERSTAND THE CONDITIONS CONTAINED WITHIN THIS PLAN. IN SIGNING BELOW, I ACKNOWLEDGE THAT UNDER THE PROVISIONS OF RULE 1166, I CAN BE HELD RESPONSIBILE FOR THE REQUIREMENTS SET FORTH IN THIS PLAN.

DEFINITIONS

Excavation	**Is the process of digging out and removing materials including any material necessary to that process such as the digging out and removal of asphalt or concrete necessary to expose, dig out and remove known VOC contaminated soil.**
Organic Vapor Analyzer (OVA)	**For the purposes of this plan, an OVA is an hydrocarbon monitor utilizing flame ionization, photo ionization or other analytical methods complying with 40 CFR PART 60 APPENDIX A, EPA METHOD 21 SECTION 3, "DETERMINATION OF VOLATILE ORGANIC COMPOUND LEAKS, MONITORING INSTRUMENT SPECIFICATIONS. The monitor shall be capable of being calibrated using hexane at a range of 0 parts per million by volume (PPMV) to 50 PPMV, and at a detection range of at least 30 PPMV to 1100 PPMV**
Responsible Party	**For the purposes of this plan, Responsible Party is the party financially responsible for initiating the excavation. This may include the property owner or the tank operator. This excludes contractors working for the property owner or operator, and any other party that lacks the direct authority to immediately treat all VOC contaminated soils generated at the excavation site.**
VOC Contaminated Soil	**Is soil that registers a concentration of 50 PPM or greater of volatile organic compounds as measured before suppression materials have been applied and at a distance of no more than three inches from the surface of the excavated soil with an organic vapor analyzer calibrated with hexane.**
Volatile Organic Compound (VOC)	**Is any volatile compound of carbon, excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, ammonium carbonate, and exempt compounds. Exempt compounds areas defined in Rule 102 – Definitions of Terms.**

MAIL COMPLETED SOIL REPORT TO:

LOS ANGELES FIRE DEPARTMENT
UNDERGROUND STORAGE TANK - ENFORCEMENT UNIT
200 NORTH MAIN STREET, SUITE 1700
LOS ANGELES, CALIFORNIA 90012

UST SOIL REPORT REQUIREMENTS

A complete soil report is due 30 days from the date of soil sampling

FACILITY ADDRESS: **1811 E. Sacramento St. Los Angeles Ca. 90021**

PERMIT NO: **SR0030158** DATE: **10-17-2014**

The soil report should follow the Los Angeles Fire Department's General Report submittal guidelines. To assist you, the guidelines are available at http://www.lafd.org/prevention/pdfforms/report_guidelines.pdf.

The following documentation shall be included as part of your report:

- A copy of the Los Angeles Fire Department Division 5-Permit
- Marine Chemist Certificate
- Copy of the Hazardous Waste Manifest for Disposal of Tank's Rinsate
- Certificate of Tank Disposal/Destruction and associated piping
- Soil manifest for soil removed from the site
- Scaled plot plan, clearly illustrating the location and depth of all the samples collected
- All analytical results should be presented in milligram per kilogram (mg/kg)
- All names in the chain of custody must be legible
- A copy of this page
- *If soil analysis results exceed the LAFD Minimum Action Levels, include an Unauthorized Release Report (URR) with your soils report*

ANALYTICAL REQUIREMENTS				
Group A Gasoline Analyte	Group-B Diesel Analyte	Analytical Method	Required MDL's (ug/kg)	LAFD Minimum Action Levels mg/kg

30'

79'

51'

BUILDING

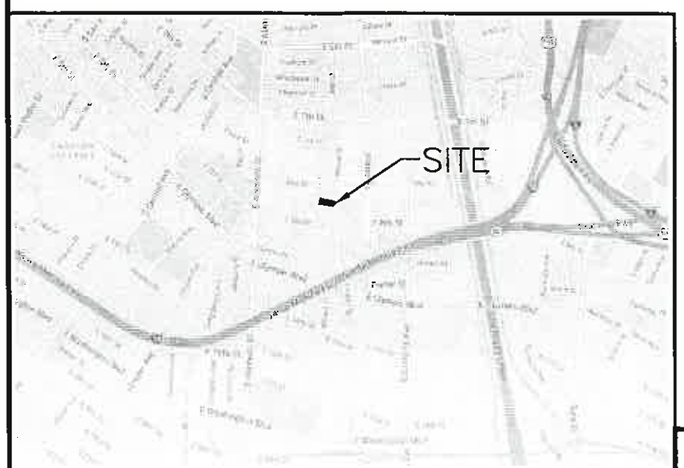
A C R A M E N T O S T.

Scope of Work 1–10,000 & 3–1,000 gallon tanks

NOTE: Tanks have been empty for years, no pumps attached

- Verify LEL of tanks, remove any residual fluids, wash tanks & insert dry ice 20 pounds per 1000 gallon capacity
- Remove the concrete/asphalt covering the below ground tanks, load and transport offsite for recycling
- Excavate the underground tanks stockpiling the material a minimum of 5' from the edge of the open excavation. During the excavation we will be monitoring for VOC's in accordance with SCAQMD Rule 1166
- When the tanks have been excavated, we will triple rinse the tanks & have a Marine Chemist or CIH certify the tanks clean & ready for removal.
- Remove the tanks from the ground, place onto flatbed trucks for proper disposal offsite.
- Obtain all soil samples as directed by the onsite LAFD inspector
- Leave site secure with temporary fencing until lab results from the soil samples are received.
- When approval has been received, we will backfill & compact the two tank holes & resurface to match the existing.
- A UST closure report will be prepared & provided to all involved parties.

SUBJECT TO FIELD INSPECTION



The approval of these plans and/or specifications does not exempt them from strict compliance with all other pertinent Sections of the Municipal Code and other laws and regulations.

LABORATORY RESULTS

Client:	Wayne Perry	**Report date:**	10/21/2014
Client Address:	8281 Commonwealth Ave Buena Park, CA 90621	**JEL Ref. No.:** **Client Ref. No:**	C-2280 14477
Attn:	Scott Hultner	**Date Sampled:** **Date Received:** **Date Analyzed:**	10/17/2014 10/17/2014 10/17&20-21/2014
Project Address:	1811 Sacramento Street Los Angeles, CA	**Physical State:**	Soil

ANALYSES REQUESTED

1. EPA 8015 - Extended Range Hydrocarbons (ASTM 2887)
2. EPA 8260B by 5035- Volatile Organics by GC/MS + Oxygenates
3. EPA 6010B by 3050 and EPA 7471A for CAM 17 Metals

Approval:

Steve Jones, Ph.D.
Laboratory Manager

1.0 SUMMARY

Bolour Associates, Inc. (Client) retained Environmental Solutions (ES) to perform a Phase I Environmental Site Assessment (ESA) of the approximately 1.77-acres site located at 1811 and 1825 Sacramento Street, in the City of Los Angeles, in the County of Los Angeles, California, 90021 referred to herein as the "subject property."

ES has conducted this Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the subject property. Any exceptions to or deletions from this practice are described in Section 2.2 of this report. This report also meets the requirements of All Appropriate Inquiries as defined in CERCLA 42, U.S.C. 9601(35) (B). The enclosed report and opinion are based on the intent to finance the subject property. We understand that you will rely on our opinion for such purposes.

This assessment has revealed no evidence of controlled recognized environmental conditions connected with the subject property. ES have identified one recognized environmental condition, one historical recognized environmental condition, one de minimis condition, and one offsite vapor intrusion threat.

Recognized Environmental Condition

According to fire department records, in 1949, a 2,000 gallon UST was installed on the east side of the subject property. This UST was located between 14 and 15 feet north of the south subject property border and 35 to 48 feet west of the east subject property border. In 1954 this 2,000 gallon UST was replaced with a 10,000 gallon gasoline UST. This tank was reported to have been located 15 feet north of the south subject property border and 40 feet west of the east subject property border. "Service station" was referenced in several documents pertaining to these USTs. The last reference to the service station was in 1963. There were no reports indicating that the 10,000 gallon gasoline UST had been removed. The possible presence, or past presence, of a gasoline UST in the east parking lot of the subject property represents a recognized environmental condition.

It is advised that subsurface investigations be performed in the east parking lot. Soil vapor testing for petroleum compounds is recommended in the two areas where the tanks were reported to have existed. Soil vapor probes set to depths of five feet bgs can also be considered as confirmation regarding the presence, or absence, of tanks in this area.

Historical Recognized Environmental Condition

In approximately 1971, one 10,000 gallon diesel UST and three 1,000 gallon waste oil USTs were installed on the subject property west of the east subject property building. The Los Angeles Fire Department referencing the January 7, 2015 WI report issued a No Further Action (NFA) letter dated February 11, 2015. A copy of this letter is presented in Appendix G. The removal of the diesel 10,000 gallon diesel UST and three 1,000 gallon waste oil USTs under the oversight and approval of a regulatory agency with contamination levels below cleanup standards represents a historical recognized environmental condition.

Offsite Vapor Intrusion Threat

Geltman Industry and *Wave Enterprises* at 1901 Sacramento Street was located adjacent to the northeast, across Sacramento Street, and upgradient of the subject property. This site was listed in the HAZNET, DRYCLEANERS, EMI, and HAZNET databases. This site generated small quantities of chlorinated solvents and inorganic solid waste for off-site disposal or recycling. This site had an air pollution permit for drycleaning from 1987 through 2004.

There had been a release of chlorinated solvents from the site located immediately north of this site at 1910 Bay Street (the 1910-1914 Bay Street Property) which has resulted in subsurface investigations having been performed on this adjacent site. ES reviewed the most recent subsurface testing report from this site (Remdox, Inc., July 15, 2019). According to this report, both soil and groundwater have been impacted by PCE. This site has only recently installed groundwater monitoring wells and plume diagrams have not yet been developed; therefore, the impact to groundwater below the subject property from this site is unknown. However, soil vapor surveys performed on this site indicated that elevated levels of PCE at 1,000 ug/L are located on the east side of Wilson Street, approximately 115 feet north, northeast of the northeast subject property corner. Copies of the soil vapor plume diagrams from this site are presented in Appendix G. Although soil vapor sampling on the northwest corner of the subject property did not indicate elevated levels of VOCs in soil vapor exits in this location, the condition of soil vapor on the east end of the subject property is unknown. Elevated concentrations of PCE identified on the northeast adjacent site represents a suspect vapor intrusion issue. Screening of soil vapor on the east side of the subject property is recommended to determine if this represents a recognized environmental condition to the subject property.

De Minimis Condition

Surface staining had previously been observed in the central parking lot. Also, dumping of used mineral spirits was observed directly onto the unpaved ground of the former railroad spur in the northwest subject property corner. Subsurface testing was then performed on the subject property (Andersen Environmental, 2014) in these two areas. The results of their assessment indicated that a significant release to the subsurface in the areas of dumping of used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest corner of the site, and limited surface staining in the central portion of the site, have not occurred. The soil and soil vapor testing indicated that petroleum hydrocarbons and VOCs detected in the subsurface of these areas represented de minimis concentrations of contamination. ES agrees with AE and have also designated this as a de minimis condition.

Findings, opinions, and recommendations for the following conditions are discussed in this report: possible asbestos containing materials are discussed in Section 6.1 and the possible presence of lead based paint is discussed in Section 6.2. Based on our findings, no immediate assessment of these conditions currently appears warranted.

2.0 INTRODUCTION

2.1 Definitions

To assist the reader with the interpretation of this report, ES would like to provide the following definitions of significant ESA terminology as defined by ASTM E1527-13.

Recognized environmental condition

A recognized environmental condition is defined as*, "*the presence or likely presence of any hazardous substances or petroleum products in, on, or at a Property: (*1*) due to any release to the environment; (*2*) under conditions indicative of a release to the environment; or (*3*) under conditions that pose a material threat of a future release to the environment."

Historical recognized environmental condition

A *historical recognized environmental condition* is defined as, *"*a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, Property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

Controlled recognized environmental condition

A controlled recognized environmental condition is defined as*, "*a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*)."

De minimis condition

A de minimis condition is defined as*, "*a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not *recognized environmental conditions* nor *controlled recognized environmental conditions*."

Business Environmental Risk

Business Environmental Risk is defined by ASTM as "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice (ESA, ASTM E1527-13). Consideration of *business environmental risk* issues may involve addressing one or more non-scope considerations such as asbestos, lead based paint, mold, endangered species, and other issues.

2.2 Purpose and Scope

A Phase I ESA is intended to provide a brief description of the subject property, its location and surroundings and to identify, to the extent feasible, associated r*ecognized environmental conditions, controlled recognized environmental conditions, historical recognized environmental condition,* and *de minimis conditions* associated with the subject property or surrounding land use and to create a list of the potential human and environmental receptors. The protocol followed for this assessment is in conformance with the requirements of All Appropriate Inquiries as defined in CERCLA 42, U.S.C. 9601(35) (B) and the American Society for Testing and Materials Standard Practice for Environmental Site Assessment for Commercial Real Estate Transactions, ASTM Standard E1527-13. Any exceptions are noted in Section 2.2 – Limiting Conditions and Methodology Used. ES understands that this ESA will be used by Bolour Associates, Inc. to perform due diligence with respect to environmental conditions at the subject property.

2.3 Limitations, Exceptions and Methodology of Assessment

Due care was taken during the investigation process, but a Phase I ESA cannot eliminate uncertainty about a subject property's potential for Environmental Conditions. It should be noted that all Phase I ESAs are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and site evaluation. ES accepts no liability for hidden conditions, variations in composition of materials and identification of materials not normally found in construction use. Subsurface conditions were not field investigated as part of this study and may differ from the conditions implied by the surface observations.

ES has relied on one or more documents developed by other parties and is not liable for any conclusions drawn using these sources if their findings or procedures were erroneous. ES makes no warranty, guaranty, or certification regarding the quality, accuracy, or reliability of any prior reports reviewed and discussed in this report. ES expressly disclaims all liability for any errors or omissions contained in any prior reports provided to ES and discussed in this report. Additionally, the passage of time may result in a change in the environmental characteristics at this subject property and surrounding sites. ES did not identify significant elements of these reports indicating they were erroneous. However, ES and the Client were not the intended recipients of these reports and cannot legally rely on their findings. It is recommended that the Client consult legal counsel concerning their reliance on these reports and the feasibility/necessity of performing independent testing.

The scope of work for this report did not include testing of electrical equipment for the potential presence of polychlorinated biphenyls or the collection of other environmental samples. The scope of work did not include a detailed assessment of natural hazards such as naturally occurring asbestos, arsenic, radon gas or methane gas, an assessment of the potential presence of radionuclides, an assessment of nonchemical hazards such as the potential for damage from earthquakes or floods, or the presence of endangered species or wildlife habitats. The scope of work for this report did not include an assessment of the environmental compliance status of the subject property, the businesses operating at the subject property, or a health-based risk assessment. The scope of work for this report did not include any wetland studies, indoor air quality assessment, or vapor intrusion assessment beyond that required under ASTM 1527-13.

Our professional services have been performed, our findings obtained, and our recommendations have been prepared in accordance with customary principles and practices in the field of environmental science and engineering. The subject property boundaries and other drawings have been compiled from the best available recorded information and have not been verified by a field survey and may vary from actual conditions. All areas of the subject property were inspected as part of this investigation.

2.4 Data Gaps

In accordance with the ASTM standard, an attempt to confirm the history and use of the subject property was performed from the present back to when the subject property was first developed with any structures or was used for residential, agricultural, commercial, industrial or governmental purposes. Multiple historical sources were consulted to fill in any data gaps dating back to 1894, the first reasonably available information. Information from the subject property owner representative, Mr. James Zadaris, dated back approximately 20-years to 1999. Sanborn Fire Insurance Maps were researched with coverage of the subject property reviewed from the years 1906, 1950, 1953, 1954, 1959, 1960, 1967, and 1970. Aerial photographs with coverage of the subject property were reviewed from the years 1923, 1928, 1938, 1948, 1952, 1964, 1972, 1977, 1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016, and 2018. City Directories were reviewed in intervals of approximately five-years beginning in 1920. Historical USGS topographic maps of the subject property were reviewed from the years 1894, 1896, 1900, 1928, 1953, 1966, 1972, 1981, 1991/1994, and 2012.

ASTM E1527-13 does not require the environmental professional to undertake a review of recorded land title records or search for environmental liens. This responsibility is placed upon the user. It is ES's understanding that a lender will engage a title company or title professional to undertake a review of reasonably ascertainable recoded land title records and lien records relating to the subject property. Per the scope of work, ES did not obtain recorded land title records or conduct an environmental lien search.

ES requested records for the subject property from the Los Angeles Regional Water Quality Control Board. As of the publication of this report, this agency has not responded to our request. Using various resources referenced in this report, ES formed an opinion on the subject property. ES does not anticipate that there are any significant records to be reviewed for the subject property at this agency. If records are received that will alter the conclusions or recommendations of this report, ES will notify the client.

The subject property was already developed with single-family residences, detached garages, and sheds in the first reasonably available historical information from 1894. The inability to identify the first development date on the subject property represents a data gap. Using various resources referenced in this report, ES formed an opinion on the subject property. ES considers the probability that a recognized environmental condition exists on the subject property due to uses prior to 1894 to be very low.

There were gaps in the identification of the historical uses of the subject property and some of the adjacent sites. However, based upon the historical and regulatory data reviewed and the visual inspection during the subject property reconnaissance, it is the professional opinion of ES that this lack of data did not affect our ability to identify conditions indicative of releases and threatened releases.

It is the professional opinion of ES that there were no significant data gaps with regards to the ability of ES to identify conditions indicative of releases and threatened releases.

2.5 Reliance

This report was prepared for the sole use and benefit of Bolour Associates, Inc. The information and opinions rendered in this report are for the exclusive use and reliance by Bolour Associates, Inc. ES will not distribute or publish this report without the consent of Bolour Associates, Inc. except as required by law and court order. The information and opinions expressed in this report are given in response to a limited assignment by Bolour Associates, Inc. and should be considered and implemented only in respects to that assignment. The services provided by ES in completing this project have been provided in a manner consistent with normal standards of the profession. This report is not a legal opinion and does not offer warranties or guarantees expressed or implied.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property is approximately 1.77-acres and the street addresses are 1811 and 1825 Sacramento Street, in the City of Los Angeles, in the County of Los Angeles, California, 90021. Other subject property addresses identified in historical document research may have included 1805 and 1899 Sacramento Street and 1104 Lawrence Street. The subject property is located on the southwest corner of the intersection of Sacramento Street and Wilson Street. Sacramento Street delimits the subject property to the south and east and adjacent sites delimit the subject property to the southwest and north.

The approximate latitude and longitude near the center of the subject property are 34°1’50.74” north and 118°14’6.93” west, respectively. The subject property is composed of two parcels. The APN numbers for the subject property are 5166-030-008 and 5166-030-008.

The subject property was occupied by one warehouse building, one warehouse and cold storage building, paved parking lots, and an unpaved abandoned rail spur. The owners of the subject property were reported to be 1899 Sacto, LLC. ES was not provided with a legal description of the subject property.

3.2 Site and Vicinity Characteristics

3.2.1 Surface Characteristics

The general topography of the subject property sloped to the south. According to the U.S. Geological Survey (USGS) topographic map, Los Angeles California Quadrangle, the finished elevation near the center of the subject property was approximately 242 feet above Mean Sea Level (MSL). Unpaved areas included small isolated planters in the east parking lot and the land along the abandoned railroad spur at the southwest subject property border.

3.2.2 Drainage Patterns/Basins

The subject property is in an area designated as "Zone X" on the FEMA Q3 Flood Insurance Rate Map, Los Angeles County, map number 06037C1638G, panel number 1638, dated December 21, 2018. These areas have been determined to be outside the 0.2% annual chance floodplain.

On October 31, 2019 ES researched the California Environmental Protection Agency, State Water Resources Control Board, Water Boards Storm Water Multiple Application & Report Tracking System for storm water permits related to construction, industrial, and municipal activities. There were no storm water/NPDES permits identified for the subject property.

There were floor drains in various areas of the subject property buildings including the bathrooms and food storage areas. These drains were not deemed to be conduits to subsurface contamination because ES noted no evidence of spills or releases into these drains and there were no hazardous materials or petroleum products stored near the drains.

There was no industrial water discharge from the subject property into a sanitary sewer system. There were two sources of wastewater at the subject property including sanitary sewage and stormwater runoff. The sanitary sewage discharged into the municipal system. The stormwater runoff is estimated to move via sheet flow to the Sacramento Street on the center area and to a storm drain in the east parking lot on the east side. Stormwater from adjacent sites was not expected to enter the subject property under normal conditions. There were no drinking water wells, groundwater monitoring wells, clarifiers, sumps, septic system, or french drains noted on the subject property. The removal and testing of a former clarifier outside the northwest corner of the east subject property building is discussed in Section 3.6.6.

3.2.3 Geology

The subject property is located in the Coastal Plain region of Los Angeles County (CDWR, 1961). This Coastal Plain region is composed of a basement complex of Cretaceous metamorphic and igneous rocks overlain by Tertiary rocks of primary marine origin. These consist of sandstone, siltstone, diatomite, shales, and conglomeratic sands. These Tertiary rocks are, in turn, overlain by poorly consolidated gravels, sands, and silts, dune sand, and alluvium, all of which ranges in age from Plio-Pleistocene to Recent (Poland and others, 1959). Soils encountered during subsurface testing on the subject property indicated that sandy silt, silt and fine to medium grained sand and gravel to a depth of 14 feet bgs (Wayne Perry, Inc., January 7, 2015).

According to the *Web Soil Survey* by the National Resources Conservation Service dated September 16, 2019, the primary soil type at the subject property is Urban land, commercial. The landform setting for this soil is described as alluvial plains with a slope of 0 to 5 percent.

3.2.4 Hydrogeology

Hydrogeologically, the subject property lies within the Sawtelle Plain area of the Santa Monica Groundwater Basin, near the northern edge of the Ballona aquifer and may also overlie the northern limit of the Silverado aquiver. The Ballona aquifer is part of the Recent alluvial sequence and is composed of sand and gravel (State of California Department of Water Resources Bulletin 104, 1990).

ES reviewed subsurface data from the northeast adjacent site, across Sacramento Street. Groundwater conditions were detailed in a report dated July 15, 2019 by Remdox, Inc. entitled "*2nd Quarter 2019 Quarterly Monitoring Report, Light Industrial Property, 1910-1914 Bay Street & 1901 Sacramento Street, Los Angeles, California*." The data indicated that there is a thin perched groundwater zone located above an apparently competent silty clay layer located at about 140 feet below grade. The depth to groundwater varied considerably based on location and ranged from 117 to 134 feet bgs. The groundwater gradient measurement indicated southwesterly flow under a gradient of 0.08 ft/ft, consistent with previous measurements of groundwater flow at this site.

Shallow groundwater generally flows in directions subparallel to the ground surface slopes and under the influence of gravity toward points of discharge such as creeks, swamps, drainage swales, or pumped groundwater wells. Based upon review of the topographic map and the well data discussed above, the presumed groundwater flow direction in the uppermost water-bearing unit across the subject property would be to the southwest, partially following the surface topography. Southwest is only the presumed groundwater flow direction and only physical testing can accurately state the true groundwater flow direction.

3.2.5 Wetlands

ES screened the subject property for the presence of suspect wetlands during the site reconnaissance and by reviewing the U.S. Department of the Interior, Fish and Wildlife Service, *National Wetlands Inventory* online map researched on November 2, 2019 and the most recently available topographic map dated 2012. These sources indicated that the subject property is not in an area mapped as a potential wetlands area and there were no mapped bodies of water indicative of possible wetlands on the subject property. During ES's site reconnaissance, no suspect wetlands areas were observed on the subject property. The nearest significant surface water is the Los Angeles River located approximately 0.45-miles east of the subject property. The Environmental Professional who performed the subject property reconnaissance is not a specialist trained in wetlands delineation. A wetland delineation was beyond the scope of this assessment. ES notes that the Wetlands Inventory Map is prepared through the analysis of aerial photography and not by actual ground reconnaissance. It is normally used as a screening method to assess if potential wetland areas exist. No further assessment is recommended.

3.2.6 Earthquake Induced Landslides, Liquefaction, and Fault Lines

The Department of Conservation, California Geological Survey developed the Seismic Hazard Zone Report 029 for the Los Angeles California 7.5 Minute Quadrangle map dated March 25, 1999. According to this map, the subject property is not located in a designated Liquefaction Area or in an Earthquake Induced Landslide Area.

The Department of Conservation, California Geological Survey also published a fault zone map for the Los Angeles California 7.5 Minute Quadrangle map dated June 15, 2017. According to this map, the subject property is not located in a fault zone and there were no faults located within one-quarter of a mile of the subject property.

3.2.7 Methane Zone

The City of Los Angeles, Department of Public Works, Engineering Department (LADPW) published a map dated March 31, 2004 showing areas where design standards related to construction in methane zones are required. The Los Angeles Fire Department have defined a Methane Zone as an area that has the potential to contain methane in the shallow subsurface. According to this map, the subject property is not located in a Methane Zone or in a Methane Buffer Zone. Additional oil field information and oil well data are described below in Section 5.8.

3.3 Structures, Roads and Other Improvements

The subject property was developed with a one warehouse building and one warehouse and cold storage building. The west subject property building was the warehouse without cold storage areas that the Los Angeles County Office of the Assessor indicated was constructed in 1972 and was approximately 13,753-square feet. The east subject property building was the warehouse with cold storage areas that the Los Angeles County Office of the Assessor indicated was constructed in 1971 and was approximately 26,800-square feet. Asphalt paving covers much the area between the two buildings and a concrete parking lot exists east of the east subject property building. There appears to be an alley along the north subject property border that has been abandoned and is being used by the subject property tenants. The subject property can be accessed from driveways on Sacramento Street.

The interior of the one-story west subject property building was subdivided into offices, bathrooms, and warehouse space. Finishing materials included: drywall, finished concrete slab, and floor tile. The northwest area was brick construction and the remainder of the building was tilt-up concrete construction with a slab above grade concrete foundation. The roof was composed of rolled asphalt composite roof sheeting. The building exterior walls were brick or painted concrete.

The interior of the one-story east subject property building was subdivided into offices, bathrooms, warehouse space, and five cold storage areas. Finishing materials included: drywall, finished concrete slab, floor tile, and ceramic tile. The west end of this building was set up as a separate tenant space. The building was tilt-up concrete construction with a slab above grade concrete foundation. The roof was composed of rolled asphalt composite roof sheeting. The building exterior walls were brick or painted concrete. Electrical rooftop HVAC units provided conditioned air to the building.

Electricity and potable water were supplied by the Department of Water and Power (DWP) and natural gas was supplied by Southern California Gas Company. Electricity and potable water were supplied by the Department of Water and Power (DWP) and natural gas was supplied by Southern California Gas Company. In a report entitled, "*2018 Drinking Water Quality Report for the Period of January 1 through December 31, 2018*," dated 2019, it was stated, "You will see that most constituents have not been detected in our water sources and those that are, are safely within the regulatory limits for drinking water." Sewer service was provided by the Sanitation Districts of Los Angeles County. Solid waste disposal services were performed by Nasa Services.

3.4 Current Uses of the Subject Property

At the time of the subject property reconnaissance on November 4, 2019, the west subject property was being used as warehouse space for packaging materials and produce by United Melon Distributors Inc. The west end of the east subject property building was occupied by Golden Medal Mushroom Inc. who used it for cold storage, storage, and offices. The east side of the east subject property building was occupied by United Melon Distributors Inc. who used it for cold storage, storage, and offices. There were no significant hazardous materials or petroleum products identified with these uses.

3.5 Tenant, User, and Owner Information

Tenant

Mr. Alex Castro, Warehouse Manager for United Melon Distributors Inc., escorted ES through the subject property. Mr. Castro had been working on the subject property for the past 14 years. He indicated that he knew of no significant amounts of hazardous or petroleum products used on the subject property. He indicated that he had no knowledge of any Underground Storage Tanks (USTs), Above Ground Storage Tanks (ASTs) or the storage of any hazardous materials or petroleum products on the subject property other than some maintenance paint. Mr. Castro stated that to the best of his knowledge, there had never been any spills or violations on the subject property in association with hazardous materials or petroleum products. Mr. Castro was aware of no soil or groundwater contamination on the subject property or on adjacent sites. Mr. Castro wrote that to the best of his knowledge, which dates back over 14 years, the prior uses were also produce storage.

Owner

Mr. James Saderis with 1899 Sacto, LLC, one of the subject property owners, filled out an environmental questionnaire dated November 1, 2019. A copy of this form is provided in Appendix I. Mr. Saderis indicated that he had firsthand knowledge of the subject property since approximately 1999. He indicated that he knew of no significant amounts of hazardous or petroleum products used on the subject property. Mr. Saderis marked that he knew of no current or past environmental liens in association with the subject property. He was not aware of any Activity or Use Limitations (ALUs) such as engineering controls, land use restrictions or institutional controls in place or on file under federal, tribal, state or local law. He indicated that he had no knowledge of any Underground Storage Tanks (USTs), Above Ground Storage Tanks (ASTs) or the storage of any hazardous materials or petroleum products on the subject property other than the former tanks and clarifier removed from the subject property as detailed in the reports provided to ES. Mr. Saderis stated that to the best of his knowledge, there had never been any spills or violations on the subject property in association with hazardous materials or petroleum products.

Mr. Saderis was aware of no soil or groundwater contamination on the subject property or on adjacent sites. He wrote that he was not aware of a reduction in the subject property value due to environmental issues. He was not aware of any issues or reports regarding asbestos, lead based paint, or mold on the subject property. Mr. Saderis wrote that to the best of his knowledge, which dates back over 20 years, the subject property use has been as a produce warehouse.

User

Mr. Hiren Naik with Bolour Associates, Inc., the users of this report, filled out an environmental questionnaire dated November 4, 2019. A copy of this form is provided in Appendix H. Mr. Naik indicated that he knew of no significant amounts of hazardous or petroleum products used on the subject property. Mr. Naik marked that he knew of no current or past environmental liens in association with the subject property. He was not aware of any Activity or Use Limitations (ALUs) such as engineering controls, land use restrictions or institutional controls in place or on file under federal, tribal, state or local law. He indicated that he had no knowledge of any Underground Storage Tanks (USTs), Above Ground Storage Tanks (ASTs) or the storage of any hazardous materials or petroleum products on the subject property. Mr. Naik wrote that to the best of his knowledge, there have never been any spills or violations on the subject property in association with hazardous materials or petroleum products. Mr. Naik was aware of no soil or groundwater contamination on the subject property or on adjacent sites. He wrote that he was not aware of a reduction in the subject property value due to environmental issues. He was not aware of any issues or reports regarding asbestos, lead based paint, or mold on the subject property. Mr. Naik wrote that he had no historical knowledge regarding the subject property uses other than its current use for fruit and vegetable distribution.

3.6 Historical Uses of the Subject Property

Historical information was obtained from Sanborn Fire Insurance Maps (1906, 1950, 1953, 1954, 1959, 1960, 1967, and 1970) presented in Appendix D, aerial photographs (1923, 1928, 1938, 1948, 1952, 1964, 1972, 1977, 1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016, and 2018) presented in Appendix C, USGS Topographic maps (1894, 1896, 1900, 1928, 1953, 1966, 1972, 1981, 1991/1994, and 2012) presented in Appendix E, and City Directories (intervals of five years or less, where available, beginning in 1920) presented in Appendix F. Information from the subject property owner representative, Mr. James Zadaris, dated back approximately 20-years to 1999.

Based on referenced historical documents, single-family residences, detached garages, and sheds occupied portions of the subject property from prior to 1894 through at least 1906. Between 1906 and 1923, all the prior residential structures had been demolished from the subject property and a warehouse was developed in the northwest corner and an industrial building was developed on the east half. The center of the subject property was vacant. Between 1928 and 1938, the northwest corner warehouse had been demolished, a railroad spur had been constructed along the southwest subject property border, and the east half industrial building remained.

Sanborn fire insurance maps indicated that between at least 1950 and 1967, the northwest corner of the subject property was a magazine and paper warehouse. The center of the subject property was a parking lot and truck repair shop. The east half was occupied by Blue Diamond Bag Company who manufactured burlap bags.

Los Angeles Fire Department records indicated that a "Service Station" existed on the east side of the subject property from at least 1949 through 1963.

Based on the presence of a truck repair shop, hazardous materials usage was presumed to have been used on the subject property. However, subsurface testing previously performed on the subject property (Anderson Environmental, 2014) did not indicate any impacts from petroleum products, VOCs, or heavy metals in this area.

In 1971, the east half of the subject property was redeveloped with the existing warehouse. In 1972, the west half was redeveloped with the existing warehouse building.

According to historical city directories, the subject property occupants in the 1920s through the 1940s were canning and food processing businesses. In the 1950s and 1960s, the subject property uses included burlap bag manufacturing, truck servicing, and freight services. Since 1971 and 1972 when the subject property had been redeveloped as it currently exists, uses on the subject property have included textile businesses, distribution services, packing and produce storage, and general warehouse use. Other than the truck servicing business and service station discussed above, there were no tenants identified that are suspected of using significant quantities of hazardous materials or petroleum products.

3.6.1 Sanborn Fire Insurance Maps

The following is a summary of the findings of the Sanborn Fire Insurance maps reviewed by ES. The descriptions below are limited to the subject property, however, these maps were used for descriptions in other sections of this report relating to adjacent and surrounding sites. These maps can be found in Appendix D of this report.

1906

In the 1906 Sanborn map, the very west end of the subject property was developed with a warehouse building used as a magazine and paper warehouse. The east side of the west half of the subject property was occupied by a parking lot and building used for truck storage and service. Based on this use, hazardous materials usage was presumed to have been used on the subject property. However, subsurface testing previously performed on the subject property (Anderson Environmental, 2014) did not indicate any impacts from petroleum products, VOCs, or heavy metals in this area. A railroad spur ran along the southwest subject property border. The east half of the subject property was occupied by Pacific Diamond Bag Company which manufactured burlap bags. A parking lot was on the east end of the subject property.

1950, 1953, 1954, 1959, 1960, 1967, and 1970

There were no significant differences on the subject property or surrounding sites in the 1950, 1953, 1954, 1959, 1960, 1967, and 1970 maps from the 1906 map. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in these maps, other than as discussed in the 1906 map.

3.6.2 Historical Aerial Photographs

The following are descriptions of the historical aerial photographs taken at the subject property and reviewed by ES. This review has been supplemented by geographic place names and other data obtained in other assessment activities of this ESA. These photographs can be found in Appendix C. These photographs were used for descriptions in other sections of this report. Although it may be stated below that there were no obvious signs of the storage or disposal of hazardous materials or petroleum products in these photographs, specific uses or the presence of materials, may not have been identifiable from the information contained in the photographs. The following discussion is limited to the subject property.

1923

In the 1923 aerial photograph, the subject property appeared to have been developed with a warehouse in the northwest corner and an industrial building on the east half. The center of the subject property was vacant. The surrounding area was already fully developed with railroad spurs and industrial buildings.

1928

There were no significant differences on the subject property or adjacent sites in the 1928 aerial photograph from the 1923 aerial photograph. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in this photograph.

1938

In the 1938 aerial photograph, the warehouse in the northwest corner had been demolished and this area was vacant. The center of the subject property was also vacant and the industrial building was still located on the east half. A railroad spur was installed along the southwest subject property border.

1948

There were no significant differences on the subject property or adjacent sites in the 1948 aerial photograph from the 1938 aerial photograph. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in this photograph.

1952

In the 1952 aerial photograph, a warehouse was constructed in the northwest corner which was listed as a magazine and paper warehouse in Sanborn fire insurance maps. There was a parking lot and industrial building in the center of the subject property which was depicted as a truck yard and service building. The east half of the subject property was occupied by an industrial that was depicted as a burlap bag manufacturing business.

1964

There were no significant differences on the subject property or adjacent sites in the 1964 aerial photograph from the 1952 aerial photograph. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in this photograph.

1972

The subject property had been redeveloped with the existing two warehouse buildings and central parking lot as it was observed during the subject property reconnaissance. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in this photograph.

1977, 1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016, and 2018

There were no significant differences on the subject property or adjacent sites in the 1977, 1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016, and 2018 aerial photographs from the 1972 aerial photograph. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in these photographs.

3.6.3 Topographic Maps

Topographic maps from 1894, 1896, 1900, 1928, 1953, 1966, 1972, 1981, 1991/1994, and 2012 are presented in Appendix E. These maps depicted the subject property, adjacent sites, and surrounding areas as vacant, occupied by non-descript structures, or shaded as developed using house omission tint indicating dense urban development. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in any of the topographic maps.

3.6.4 Environmental Liens

No environmental liens were found during this investigation. The subject property was not listed in the search of the Federal NPL Liens database. The subject property owner stated that there were no environmental liens on the subject property. For there to be an environmental lien against the subject property, it must be a suspected, or confirmed, contributor to subsurface contamination. Research conducted for this report did not identify any subsurface testing, spills, or releases on the subject property.

3.6.5 Title Report

It was not in the scope of work for ES to obtain a Title report for the subject property. The Client did not provide ES with a Title report for review.

3.6.6 Previous Subject Property Inspection Reports

2014 Limited Environmental Assessment

ES reviewed a previous Phase I ESA performed on the subject property and provided by the subject property owner entitled, "*Limited Environmental Assessment, Borchard Foundation Property*" by Iris Environmental (IE) dated January 29, 2014. Based on drawings and information provided in this report, ES concluded that the boundaries of the subject property assessed by this consultant were the same as that performed by ES. This report was not a Phase I ESA and its scope of work only included portions of an ASTM compliant ESA. The subject property was occupied by fresh produce storage, cold storage, and wood furniture manufacturing at the time of their site reconnaissance. Chemical storage observed during their site reconnaissance included cans of mineral spirits. Stains were observed on the ground in the furniture manufacturing area, both inside and outside on the loading dock.

What appeared to be a 16-ounce water bottle of mineral spirits had been observed being dumped out onto the ground of the rail spur in the northwest subject property corner by an employee of the furniture business. The observed dumping of waste solvent onto the unpaved ground surface was identified by IS as an environmental concern and it was noted that it would cause environmental impairment, the extent of which was dependent on the duration, volume, and locations of past dumping. Further inquiry with this tenant was recommended by IS to better understand their operations and waste solvent disposal procedures and to ensure no further dumping would occur. IS stated that depending on additional information obtained, further investigation into this matter would be prudent.

IS also identified evidence of a UST and a waste fluid collection tank/sump/clarifier with associated piping that were reported to have been installed in the 1970s during the use of the east building as a truck maintenance facility. The remaining presence and unknown conditions and contents in the UST and waste fluid collection tank/sump/clarifier, if any, were identified as environmental concerns. IE recommended that these features be brought in compliance with current regulations or removed from the subject property under permit from the City of Los Angeles Fire Department (LAFD) and subsurface testing be performed.

2014 Phase II Environmental Site Assessment

ES reviewed a previous Phase II ESA performed on the subject property and provided by the subject property owner entitled, "*Phase II Environmental Site Assessment Report*" by Andersen Environmental (AE) dated July 24, 2014. Based on drawings and information provided in this report, ES concluded that the boundaries of the subject property assessed by this consultant were the same as that performed by ES. AE did not identify occupancy uses or chemical storage. AE was retained to perform subsurface testing in the northwest subject property corner where dumping of used mineral spirits was observed directly onto the unpaved ground of the former railroad spur in the northwest subject property corner. AE was also retained to perform subsurface testing in the central parking lot where surface staining had been noted. AE also performed a geophysical survey of the areas where a possible UST and a tank/sump/clarifier were suspected. They used Ground Penetrating Radar (GPR) and other subsurface measuring instruments.

Results from AE's geophysical survey included two large Electro Magnetic (EM) anomalies and GPR anomaly that were interpreted as two suspected USTs of approximately 6,000 to 10,000 gallon capacities. In addition, an inlet, an outlet, and a vent line were detected in the area of the clarifier at the north side of the east subject property building.

AE advanced 10 direct-push soil borings (B1 through B10) and conducted soil sampling to evaluate the subsurface for the presence of petroleum hydrocarbons, stoddard solvent, and VOCs. Soil borings B1through B8 were advanced in the northwest subject property corner to a maximum depth of 10 feet bgs and samples were collected at 2, 5, and 10 feet bgs. Soil borings B9 and B10 were advanced in areas of surface staining near the center of the north border of the center paved parking lot to a maximum depth of 5 feet bgs and samples were collected at 2 and 5 feet bgs. Soil samples from 2 feet bgs from soil borings B1 through B8 were submitted for analysis of Extractable Range Petroleum Hydrocarbons (ERPH) and VOCs. Soil samples from 2 feet bgs from soil borings B9 and B10 were submitted for analysis of ERPH. Analytical results indicate TPH-d was detected in each of the ten soil samples at a maximum concentration of 18.6 milligrams per kilogram (mg/kg), below the Maximum Soil Screening Level[1] (MSSL) of 100 mg/kg. TPH-o was detected in six of ten soil samples at a maximum concentration of 216 mg/kg, below the MSSL of 1,000 mg/kg. Stoddard solvent was not detected above analytical laboratory Reporting Limit (RL) in any of the soil samples analyzed.

Tetrachloroethene (PCE) was detected in soil samples B1-2'and B3-2' at a maximum concentration of 5.45 micrograms per kilogram (µg/kg), below the Regional Soil Screening Level[2] (RSL) of 2,800 µg/kg for soils at industrial properties.

Ethylbenzene was detected in soil sample B1-2' at a concentration of 2.61 µg/kg. Xylenes were detected in soil samples B1-2' and B7-2' at a maximum concentration of 11.96 µg/kg. The ethylbenzene and xylene concentrations detected were found to be well below their respective RSLs for soils at industrial properties of 27,000 µg/kg and 2,700,000 µg/kg, respectively. No other VOCs were present at concentrations the RL in any of the other soil samples selected for VOC analysis. Further assessment of subsurface VOCs was then performed in the west portion of the property via soil gas probe installation and sampling.

AE converted soil borings B1, B4, and B8 to vapor probes VP1, VP4, and VP8 at 5 feet bgs in an attempt to assess the presence of VOCs in the gas phase of the shallow subsurface. VOCs were not detected above RL in any of the soil gas samples analyzed.

[1] Los Angeles Regional Water Quality Control Board for the protection of groundwater resources (May 1996 Guidebook).
[2] EPA Region 9.

AE's conclusions:

1) TPH-d and TPH-o detected at the subject property were not indicative of a significant release and are not likely to threaten groundwater.
2) Because PCE was only detected at very low concentrations in two shallow soil samples, it was not considered to be a chemical of concern (COC) in the areas assessed.
3) VOCs in the shallow subsurface were not considered to be COC in the areas explored.
4) AE stated that the results of their assessment indicated that a significant release to the subsurface in the areas of dumping of used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest corner of the site, and limited surface staining in the central portion of the site, have not occurred. They indicated that petroleum hydrocarbons and VOCs detected in the subsurface of these areas represented de minimis concentrations of contamination.

AS's recommendations:

1) ES recommended that further subsurface investigation in the areas investigated was not warranted at this time.
2) Further assessment was recommended to be performed to assess the potential for subsurface releases in the vicinity of the suspected USTs and clarifier.

Summary

Surface staining had previously been observed in the central parking lot. Dumping of used mineral spirits was observed directly onto the unpaved ground of the former railroad spur in the northwest subject property corner. Subsurface testing was performed on the subject property (Andersen Environmental, 2014) in these two areas. The results of their assessment indicated that a significant release to the subsurface in the areas of dumping of used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest corner of the site, and limited surface staining in the central portion of the site, have not occurred. The soil and soil vapor testing indicated that petroleum hydrocarbons and VOCs detected in the subsurface of these areas represented de minimis concentrations of contamination. ES agrees with AE and have also designated this as a de minimis condition.

2015 UST Oversight Removal and Soil Sampling Report

ES reviewed a prior environmental report provided by the subject property owner entitled, "*Submittal of Revised Environmental Oversight for UST Removal and Soil Sampling Activities Report*" by Wayne Perry, Inc. (WP) dated January 7, 2015. WP provided oversight and excavation of three 500-gallon waste oil USTs on October 17, 2014 and one 10,000 gallon diesel UST on November 12, 2014. WI indicated that the associated piping [and dispensers] appeared to have been removed at a prior time. WI stated that all field activities were conducted in compliance with the City of Los Angeles Fire Department (LAFD) procedures.

Soil samples were collected from 2 feet beneath the excavation of each of the former waste-oil UST locations, from 3 feet below the remote fill location, and 10 feet below the ventilation lines. One sample was collected from the excavated soil. Soil samples were collected from 14 feet bgs from each end of the former diesel UST exaction and one sample was taken of the stockpiled soils from this excavation. All soil samples were analyzed for: TPH-g, TPH-d, TPH-o by EPA Method 8015; VOCs by EPA Method 8260B; and CAM 17 Metals by EPA Methods 6010B and EPA 7471.

PCE was detected at a concentration of 1.2 ug/kg in one sample from below one of the former waste oil USTs and at a concentration of 5.7 ug/kg in one sample from below the former diesel UST. No other VOCs were above the RL. TPH-g, TPH-d, TPH-o results were all below the RLs. WI stated that CAM metals were all detected at levels below background (naturally occurring) levels. Based on the analytical results, the stockpiled soils were used as backfill. WP did not offer any conclusions or recommendations.

In approximately 1971, one 10,000 gallon diesel UST and three 1,000 gallon waste oil USTs were installed on the subject property west of the east subject property building. The Los Angeles Fire Department referencing the January 7, 2015 WI report issued a No Further Action (NFA) letter dated February 11, 2015. A copy of this letter is presented in Appendix G. The removal of the diesel 10,000 gallon diesel UST and three 1,000 gallon waste oil USTs under the oversight and approval of a regulatory agency with contamination levels below cleanup standards represents a historical recognized environmental condition.

2015 Clarifier Oversight Removal and Soil Sampling Report

ES reviewed a prior environmental report provided by the subject property owner entitled, "*Submittal of Oversight for Clarifier Removal and Soil Sampling Activities Report*" by Wayne Perry, Inc. (WP) dated January 7, 2015. WP provided oversight and excavation of a three chamber 500-gallon clarifier outside the northwest corner of the east subject property building on October 15 through October 17, 2014. Associate piping was encountered but was reported to have been sealed off from the sewer system at an earlier date. The clarifier was removed and broken into pieces for offsite disposal. One soil sample was taken from 2 feet below the excavation of the former clarifier at 8 feet bgs and one from the stockpiled soils from the excavation.

The soil samples were analyzed for: TPH-g, TPH-d, TPH-o by EPA Method 8015; VOCs and fuel oxygenating compounds by EPA Method 8260B; and CAM 17 Metals by EPA Methods 6010B and EPA 7471. TPH-g, TPH-d, TPH-o, VOCs, and fuel oxygenating compounds were all below the RL. WI stated that CAM metals were all detected at levels below background levels. Based on the analytical results, the stockpiled soils were used as backfill. WP did not offer any conclusions or recommendations.

3.6.7 City Directories

ES retained Environmental Data Resources, Inc. (EDR) to perform historical city directory research of the subject property. ES reviewed the report, "*The EDR-City Directory Abstract*" by EDR dated November 1, 2019. The complete city directory search is presented in Appendix F. The table below summarizes the findings for the subject property and details years where listings were found for the subject property. According to these directories, the subject property occupants in the 1920s through the 1940s were canning and food processing businesses. In the 1950s and 1960s, the subject property uses included burlap bag manufacturing, truck servicing, and freight services. Since 1971 and 1972 when the subject property had been redeveloped as it currently exists, uses on the subject property have included textile businesses, distribution services, packing and produce storage, and general warehouse use. Other than the truck servicing business, there were no tenants identified that are suspected of using significant quantities of hazardous materials or petroleum products.

3.7 Current Uses of Adjoining Sites

Current uses of the immediately adjacent sites and their addresses as noted on the buildings or researched on-line are as follows:

- North – Warehouse space for Prologics; 1700 and 1800 Bay Street;
- Northeast – Sacramento Street followed by a vacant industrial facility; 1901 Sacramento Street;
- Southeast – Sacramento Street followed by a logistics facility occupied by DHL; 1900 Sacramento Street;
- South – Sacramento Street followed by a logistics facility occupied by Golden Kingdom Produce and Villareal Trucking Inc. with a restaurant on the west end occupied by Market Place Restaurant Deli; 1800 Sacramento Street and 1102 Lawrence Street.
- West – D. De Franco & Sons produce storage and distribution; 1000 Lawrence Street.

Based on observations and research, there is a low likelihood that a recognized environmental condition exists at the subject property because of the current adjacent land use to the north, west, or south. ES did not detect obvious indications that these adjacent sites store large quantities of hazardous materials, hazardous waste, have USTs, or are involved in a cleanup operation.

The northeast and southeast adjacent sites utilized hazardous materials and/or petroleum products and are discussed in more detail below in Section 4.1.2.

3.8 Past Uses of Adjoining Sites

3.8.1 North

Historical sources indicated that the site adjacent to and north of the subject property was undeveloped in 1894. Between 1906 and 1923, this site was developed with multiple railroad spurs and several warehouses. Between 1983 and 1989, this site was redeveloped with the existing two warehouse/logistics buildings.

The following table contains past tenants identified on this site from historical city directory research. There were no past tenants identified that would have been expected to have used significant quantities of hazardous materials or petroleum products. There were no indications from any historical sources that the subject property has been impacted from this adjacent site.

North Adjacent Site Historical Tenants	
Year	**Tenant**
1990	The Produce Place
2000	Tanimura Distributing Inc
2006	Tanimura Distributing Inc
2010	Schratter Foods Incorporated
2010	Kelsi Farms Inc
2010	Kelsi Farms Inc
2010	Schratter Foods Incorporated
2014	Schratter Foods Incorporated
2014	Schratter Foods Incorporated

3.8.2 Northeast

Historical sources indicated that the site adjacent to and northeast of the subject property, across Sacramento Street, was undeveloped in 1894. By 1906, this site was being used as a truck loading yard. Between 1928 and 1938, this site was redeveloped with a warehouse. Between 1948 and 1950, this site was redeveloped with the existing industrial building.

The following table contains past tenants identified on this site from historical city directory research. This site was listed in one or more environmental databases. Specific information regarding hazardous materials or petroleum products on this site is discussed below in Section 4.1.2.

Northeast Adjacent Site Historical Tenants	
Year	**Tenant**
1942	Savage Transportation Co R W Pierce Manager Truck Trans
1951	Sacramento Citizens Truck Co
1951	Sacramento Marr Freight Transit Inc.
1957	Clipper Carloading Co
1958	Clipper Carloading Co
1958	Clipper Carloading Co
1958	Fredrickson A W Clipper Carloading Co
1958	Marr Freight Transit Inc.
1962	Marr Freight Transit Inc.
1962	Operations & Sales
1962	Western Piggyback Inc. Western Shippers Div.
1962	Western Shippers Assn Div. Of Western Piggyback Inc.
1962	Operations & Sales
1990	Geltman Industries

Northeast Adjacent Site Historical Tenants	
Year	**Tenant**
1990	Shamad Collection
2000	Geltman Industries
2006	Geltman
2006	Industries

3.8.3 Southeast

Historical sources indicated that the site adjacent to and southeast of the subject property, across Sacramento Street, was undeveloped in 1894. By 1906, this site was occupied by single-family residences and Washington Iron Works. Between 1928 and 1938, the single-family residences had been demolished and this site's usage has been industrial since. By 1950, this site use was a freight line service. Between 1967 and 1970, this site had been redeveloped with the existing industrial building and parking lots.

The following table contains past tenants identified on this site from historical city directory research and Sanborn fire insurance maps. This site was listed in one or more environmental databases. Specific information regarding hazardous materials or petroleum products on this site is discussed below in Section 4.1.2.

Southeast Adjacent Site Historical Tenants	
Year	**Tenant**
1906	Washington Iron Works and single-family residences
1950	Freight Lines
1976	Dial Delacorte Press
1976	Dial Delacorte Press
1976	So. Cal Distributing Co.
1990	Price Stern Sloan Publishers
1990	Price Stern Sloan Publishers Warehouse
2000	Just For Wraps Inc.
2000	Just For Wraps Inc.
2000	Wrappers USA
2006	Wrappers USA

3.8.4 South

Historical sources indicated that the site adjacent to and south of the subject property, across Sacramento Street, was undeveloped in 1894. By 1906, several single-family residences occupied this site. Between 1928 and 1938, all of the residential structures had been removed from this site and it was occupied by multiple railroad spurs. Between 1960 and 1964, this site was redeveloped with the existing commercial and industrial building and parking lot.

The following table contains past tenants identified on this site from historical city directory research. There were no past tenants identified that would have been expected to have used significant quantities of hazardous materials or petroleum products. There were no indications from any historical sources that the subject property has been impacted from this adjacent site.

South Adjacent Site Historical Tenants	
Year	**Tenant**
1906	Single-family residences
1923	Single-family residences
1967	General Trucking and Warehouse
1976	Franks Coffee Shop
1976	Franks Coffee Shop
1990	Market Place Restaurant
1990	Market Place Restaurant
2010	Make Miracles Come True
2010	Market Place Inc.

3.8.5 West

Historical sources indicated that the site adjacent to and west of the subject property was undeveloped in 1894. Between 1950 and 1952, this site was developed with the existing commercial and industrial building.

The following table contains past tenants identified on this site from historical city directory research. There were no past tenants identified that would have been expected to have used significant quantities of hazardous materials or petroleum products. There were no indications from any historical sources that the subject property has been impacted from this adjacent site.

West Adjacent Site Historical Tenants	
Year	**Tenant**
1953	Produce Packing Plant
1970	Produce Packing Plant
1990	Sunripe Growers Of California
1990	Sunripe Growers Of California
2000	Sunripe Growers
2000	New England Tomato
2000	DiFranco D & Sons

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources, Federal and State

A Federal, State and Local Radius Profile Report from Environmental Data Resources, Inc. dated November 1, 2019 was reviewed by ES. The radius report, found in Appendix H, contains records of registered sites surrounding the subject property for the classifications and distances as required by ASTM Practice E1527-13. Descriptions of each database, their source, and publication dates are detailed in this appendix section.

4.1.1 Subject Property Environmental Database Summary

The subject property was listed in the HIST UST database under "Same As Above." This database indicated that one 10,000 gallon diesel UST and one 10,000 gallon gasoline UST had been installed on the subject property at the 1811 Sacramento Street address.

The subject property was listed in the SWEEPS UST, HIST UST, CA FID UST, HAZMAT, and UST databases under United Melon Distributors Inc. The information contained in these databases supported the above HIST UST listing of two 10,000 gallon USTs containing diesel and unleaded gasoline. Copies of the registration for the tanks are included in Appendix G.

The subject property was listed in the HAZNET database under Albert and Elaine Borchard Foundation, Inc. for the offsite disposal of approximately 21.58 tons of tank bottom waste in 2014. This is consistent with the known removal of three waste oil USTs and one 10,000 gallon diesel UST in 2014. There were no records indicating that the 10,000 gallon gasoline UST had been removed from the subject property which is discussed in more detail below in Section 4.1.8.

4.1.2 Adjacent Sites Environmental Database Summary

The adjacent sites to the north, south, or west were not listed in any of the databases searched. The adjacent sites to the northeast and southeast were listed in one or more databases.

Northeast Adjacent Site

Geltman Industry and Wave Enterprises at 1901 Sacramento Street was located adjacent to the northeast, across Sacramento Street, and upgradient of the subject property. This site was listed in the HAZNET, DRYCLEANERS, EMI, and HAZNET databases. This site generated small quantities of chlorinated solvents and inorganic solid waste for off-site disposal or recycling. This site had an air pollution permit for drycleaning from 1987 through 2004.

There had been a release of chlorinated solvents from the site located immediately north of this site at 1910 Bay Street (the 1910-1914 Bay Street Property) which has resulted in subsurface investigations having been performed on this adjacent site. ES reviewed the most recent subsurface testing report from this site (Remdox, Inc., July 15, 2019). According to this report, both soil and groundwater have been impacted by PCE. This site has only recently installed groundwater monitoring wells and plume diagrams have not yet been developed; therefore, the impact to groundwater below the subject property from this site is unknown. However, soil vapor surveys performed on this site indicated that elevated levels of PCE at 1,000 ug/L are located on the east side of Wilson Street, approximately 115 feet north, northeast of the northeast subject property corner. Copies of the soil vapor plume diagrams from this site are presented in Appendix G. Although soil vapor sampling on the northwest corner of the subject property did not indicate elevated levels of VOCs in soil vapor exits in this location, the condition of soil vapor on the east end of the subject property is unknown. Elevated concentrations of PCE identified on the northeast adjacent site represents a suspect vapor intrusion issue. Screening of soil vapor on the east side of the subject property is recommended to determine if this represents a recognized environmental condition to the subject property.

Southeast Adjacent Site

First Vehicle Service/Wrapper at 1900 Sacramento Street was located adjacent to the southeast, across Sacramento Street, and downgradient of the subject property. This site was listed in the CERS HAZ WASTE, ENF, NPDES, HAZMAT, CIWQS, and CERS databases. This site generated small quantities of hazardous waste and/or petroleum products for off-site disposal or recycling. This site was listed as a chemical storage facility. This site had an industrial stormwater permit.

This site has been issued multiple violations during routine inspections during fire department inspections. Fire Department records indicated that violations were issued for paperwork errors, increasing chemical storage without reporting the increase, training violations, and failure to submit paperwork. None of these violations were of a nature that would indicate that a release, or potential release had occurred that may impact the subject property, could, or had occurred. In addition, the status of these violations have been returned to compliance.

There is a low likelihood that a recognized environmental condition exists at the subject property due to this site for the following reasons: because of its distance from the subject property; its location downgradient from the subject property; only small quantities of wastes have been generated; and there were no records of spills, USTs, or releases on this site. No further action is recommended regarding this site.

4.1.3 Sites Within 0.125 Miles of the Subject Property

1910-1914 Bay Street Property at 1910 Bay Street was located approximately 222-feet east, northeast and crossgradient of the subject property. Releases of PCE from this site have impacted soil and possibly groundwater. Impacts to the subject property from this site are discussed above in Section 4.1.2.

There are other sites on multiple databases that are located within 0.125 miles (660-feet) of the subject property. There is a low likelihood that a recognized environmental condition exists at the subject property as a result of these sites because none of them were: adjacent, drycleaners, historical drycleaners, gasoline stations, or had reported spills or releases. No further action is recommended regarding these sites.

4.1.4 Sites Between 0.125 Miles and 0.25 Miles of the Subject Property

Golden Plating, Inc. at 930 So Mateo was located approximately 738-feet east, northeast and upgradient of the subject property. This site was listed in the ENVIROSTOR, RCRA-SQG, FINDS, ECHO, EMI, HAZMAT, and LA County Site Mitigation databases. This site generated small quantities of hazardous waste and/or petroleum products for off-site disposal or recycling. This site had an air pollution permit. This site had a release of a regulated material that has impacted soil and possibly groundwater. This site is located on the other side of the northeast adjacent site discussed above in Section 4.1.1. Therefore, any impact from this site would be included in the subsurface investigations performed on the northeast adjacent site. No further action is recommended regarding this site.

Western Electrochemical Company at 2348 East 8th Street was located approximately 1,173-feet east, southeast and downgradient of the subject property. This site was listed in the RESPONSE, ENVIROSTOR, and CERS databases. This site had a release of a regulated chemical that impacted soil and possibly groundwater. Remediation of the release had been performed under the supervision of the DTSC. Its status as of 2013 has been closed. There is a low likelihood that a recognized environmental condition exists at the subject property due to this site for the following reasons: because of its distance from the subject property; its location downgradient from the subject property; and the site status has been closed with remedial action completed or deemed unnecessary. No further action is recommended regarding this site.

Greyhound Lines Inc. at 1614 East 7th Street was located approximately 1,312-feet north, northwest and crossgradient of the subject property. This site was listed in the RCRA-SQG, AST, HIST UST, FINDS, EMI, LUST, CERS HAZ WASTE, SWEEPS UST, CERS TANKS, and CA FID UST databases. This site generated small quantities of hazardous waste and/or petroleum products for off-site disposal or recycling. This site has active petroleum product ASTs and USTs. This site had an air pollution permit. This site had a release of diesel fuel that impacted soil discovered in 1990. Testing and/or remediation have been performed on this site and its status as of 2016 has been closed. There is a low likelihood that a recognized environmental condition exists at the subject property due to this site for the following reasons: because of its distance from the subject property; its location crossgradient from the subject property; only small quantities of wastes have been generated; the release had been limited to the soil and is therefore not anticipated to migrate to the subject property; and the site status has been closed with remedial action completed or deemed unnecessary. No further action is recommended regarding this site.

There were other sites on multiple databases that were located between 0.125 and 0.25 miles from the subject property that have a low likelihood of creating a recognized environmental condition at the subject property and no further action is recommended regarding any of these sites because of their distances from the subject property and there were no reports of spills or releases on any of these sites.

4.1.5 Sites Located More than 0.25 miles from the Subject Property

There were several sites on multiple databases that were located more than 0.25-miles from the subject property that have a low likelihood of creating a recognized environmental condition at the subject property and no further action is recommended regarding any of these for the following reasons:

- Their distances from the subject property;
- There were no reports of spills or releases, and/or;
- The releases were not of a magnitude that would be expected to impact the subject property and/or;
- The site statuses had been closed with remedial action completed or deemed unnecessary.

4.1.6 Orphan (Unmapped) Sites

Orphan (unmapped) sites indicated in the radius report were reviewed to determine their locations relative to the subject property. These sites were not found to be near the subject property or their location could not be determined. Based upon ES's area reconnaissance, types of regulatory listings identified for the orphan facilities, and conditions typical of the identified facilities activities, the orphan facilities were not considered suspect *recognized environmental conditions* to the subject property.

4.1.7 Los Angeles County Department of Public Works, Agency Records

The Los Angeles County Department of Public Works (LACDPW) maintains records of industrial waste and underground storage tank sites. These sites are not necessarily those that have had releases or spills. The search of their online database records was limited to the subject property. The subject property was not listed in the search of these records.

The Solid Waste Information Management System (SWIMS) is another online list of permitted solid waste facilities, closed landfills, and historical dumpsites published by the LACDPW. The subject property and adjacent sties were not listed in the search of these records.

4.1.8 Los Angeles Fire Department

Los Angeles Fire Department, Certified Unified Program Agency (CUPA) records were researched for the subject property. The Los Angeles Fire Department (LAFD) published six tables dated June 1, 2019 that included all known active hazardous materials sites, inactive hazardous materials sites, active AST sites, inactive AST sites, active UST sites, and inactive UST sites. United Melon Distributors, Inc. was listed at the 1811 Sacramento Street address in both the inactive hazardous materials sites and inactive UST sites lists. ES have requested records regarding these two listings from the Los Angeles Fire Department.

In an email dated October 31, 2019 from the HazMat Program Unit it was stated that they did not have any information on file for the subject property addresses

On November 4, 2019, the LAFD provided records for the 1811 Sacramento Street address. The following table is a summary of the contents of this file.

Summary of Los Angeles Fire Department Files			
Year	**Tenant or Owner**	**Item**	**Description**
1949	General Trucking Service	Permit Renewal	One 2,000 gallon UST located 14-feet north of curb line and 48-feet west of east property line
1949	General Trucking Service	Certificate of Occupancy	Repair garage
1951	General Trucking Service	Permit Renewal	Public garage, repairs on trucks
1951	General Trucking Service	Permit Renewal	One 2,000 gallon UST located 20-feet north of south property line and 35-feet west of east property line
1951	General Trucking Service	Inspection by LAFD	Fire code violations (no hazardous materials involved)
1954	General Trucking Service	Transfer of Permit	One 10,000 gallon gasoline UST installed, one 2,000 gallon tank to be removed
1954	Not Stated	Tank Abandonment Form	2,000 gallon UST removed from ground

Summary of Los Angeles Fire Department Files			
Year	**Tenant or Owner**	**Item**	**Description**
1954	General Trucking Service	Fire permit index	One 10,000 gallon UST installed and one 2,000 gallon UST removed
1955	Albert Borchard	Permit	10,000 gallon gas UST 15-feet north of south property line and 40-feet west of east property line
1957	General Trucking Service	Inspection by LAFD	Fire code violations (no hazardous materials involved)
1958	General Trucking Service	Transfer of Permit	Public garage
1960	General Trucking Service	Inspection by LAFD	Fire code violations (no hazardous materials involved)
1960	Albert Borchard	Note from building and safety	Garage building approved
1962	General Trucking Service	Permit	No details
1963	Albert Borchard	Fire permit index	Auto Fueling Station
1965	General Trucking Service	Inspection by LAFD	Fire code violations (no hazardous materials involved)
1966	General Trucking Service	Inspection by LAFD	Fire code violations (no hazardous materials involved)
1967	Southern California Magazine Distributing Company	Inspection by LAFD	Fire code violations (no hazardous materials involved)
1968	General Trucking Service	Inspection by LAFD	Fire code violations (no hazardous materials involved)
1971	General Trucking Service	Permit	Install 4 USTs
1978	General Trucking Service	Permit	Install pipe for diesel pump and set pump on island
1978	General Trucking Service	Permit	Install one 9,940 gallon UST and three 550 gallon USTs
1978	General Trucking Service	Permit	Install, add, or alter piping
1980	Not Stated	Memo	Small fire
2014	United Melon Distributors	Soil Report Log Sheet	Verification of soil samples taken
2014	Albert & Elaine Borchard	Hazardous waste tank closure	Certification from CIH that tanks were clean
2014	United Melon Distributors	Permit	Permit to remove 4 USTs
2014	Albert & Elaine Borchard	Various permits, correspondents,	Various items related to permitting and removal of one 10,000 diesel UST and three 1,000 gallon waste oil USTs
2014	United Melon Distributors	Soil Report Log Sheet	Verification of soil samples taken
2014 (10/17/14)	Albert & Elaine Borchard	Manifest	325 gallons waste liquid from tanks
2014 (11/12/14)	United Melon Distributors	Tank Certification Report	CIH verification of LEL for one 10,000 gallon gasoline UST
2014 (11/12/14)	Albert & Elaine Borchard	Manifest	250 gallons waste liquid from tanks

Summary of Los Angeles Fire Department Files			
Year	**Tenant or Owner**	**Item**	**Description**
2015 (2/11/2015)	Marsh and Herb Importer, Inc.	NFA Letter	NFA from LAFD
2015	Marsh and Herb Importer, Inc.	UST Oversight Report	Same report by Wayne Perry reviewed in Section 3.6.6

Discussion

The NFA letter in these files for the removal of the one 10,000 gallon diesel UST and three 1,000 gallon waste oil USTs represents a historical recognized environmental condition.

In 1949, a 2,000 gallon UST was installed on the east side of the subject property. This UST was located between 14 and 15 feet north of the south subject property border and 35 to 48 feet west of the east subject property border. In 1954 this 2,000 gallon UST was replaced with a 10,000 gallon gasoline UST. This tank was reported to have been located 15 feet north of the south subject property border and 40 feet west of the east subject property border. "Service station" was referenced in several documents pertaining to these USTs. The last reference to the service station was in 1963. There were no reports indicating that the 10,000 gallon gasoline UST had been removed. The possible presence, or past presence, of a gasoline UST in the east parking lot of the subject property represents a recognized environmental condition.

It is advised that subsurface investigations be performed in the east parking lot. Soil vapor testing for petroleum compounds is recommended in the two areas where the tanks were reported to have existed. Soil vapor probes set to depths of five feet bgs can also be considered as confirmation regarding the presence, or absence, of tanks in this area.

4.1.9 Los Angeles County Fire Department

ES requested to review records for the subject property from the Los Angeles County Fire Department, Health Hazardous Materials Division from the following addresses: 1805, 1811, 1825, and 1899 Sacramento Street. This agency also keeps records formerly held by the Los Angeles County Department of Public Health / Public Health Investigation unit. In e-mails October 30, 2019 from the Site Administrator of the Health Hazardous Materials Division, it was stated that there no records for these addresses.

4.1.10 Los Angeles Regional Water Quality Control Board

ES requested to review records for the subject property from the Los Angeles Regional Water Quality Control Board. As of the publication of this report, this agency had not responded to our request. Using other resources referenced in this report, ES formulated an opinion on the subject property. ES does not anticipate that there are any significant records to be reviewed for the subject property at this agency that would change our opinion. If records are received that will alter the conclusions or recommendations of this report, ES will notify the client.

4.1.11 Department of Toxic Substances Control (DTSC)

DTSC Files

ES requested to review records for the subject property from the Department of Toxic Substances Control (DTSC). Ms. Choua Her with Regional Central Files wrote in a letter dated October 31, 2019 that after a thorough review of their files, they have found no records that exist pertaining to the subject property.

Generator Information Services Section

The letter from Ms. Her did not indicate that their Generator Information Services Section had any manifests that were generated from the subject property. To confirm, ES searched the DTSC Hazardous Waste Tracking System (HWTS) and found no records for the subject property.

EnviroStor

ES searched for the subject property and adjacent sites on the EnviroStor website published by the DTSC. This website contains listings of Federal Superfund sites, State Response sites, Voluntary Cleanup sites, School Cleanup sites, Evaluation sites, School Evaluation sites, Military Evaluation sites, Tiered Permit sites, Corrective Action sites, Operating Permit sites, Post Closure Permit sites, and Non-Operating Permit sites. The subject property and adjacent sites were not listed on the EnviroStor website.

4.1.12 State Water Resources Control Board (GeoTracker)

ES searched for the subject property and adjacent sites on the GeoTracker website published by the State Water Resources Control Board. GeoTracker contains lists of DTSC cleanup sites, other cleanup sites, LUST sites, UST sites, land disposal sites, military sites, and DTSC Disposal Permit sites. The subject property and adjacent sites were not listed on the GeoTracker website.

4.1.13 CalEPA Regulated Sites

ES searched for the subject property and adjacent sites on the CalEPA Regulated Site Portal. This site combines data about environmentally regulated sites and facilities in California. These activities include hazardous materials and wastes, state and federal cleanups, impacted ground and surface waters, and toxic materials. The subject property and adjacent sites to the north, south, and west were not listed in the CalEPA Regulated Site Portal. Reports published on this web site for the northeast and southeast adjacent sites are discussed above in Section 4.1.2.

4.1.14 South Coast Air Quality Management District (SCAQMD)

ES performed a search of the SCAQMD Facility Information Detail database for records pertaining to the subject property. These records include air pollution permits, applications, and violations. Regularly scheduled updates are made to this database by the SCAQMD at least once per week. Permits appeared to have been issued to one of the past subject property tenants. ES requested records for the subject property addresses. The only item found was an equipment list for General Trucking Services dated 1984. There was no equipment listed and it appears that this tenant was not working under any permit. The SCAQMD data did not identify any systems that used liquid petroleum compounds, were related to solvents, or would be possible contributors to contamination on the subject property.

5.0 INFORMATION FROM SITE RECONNAISSANCE

5.1 Hazardous Substances Connected with Identified Uses

The site reconnaissance was performed on November 4, 2019 by Mr. Doug Kochanowski, Biologist and Project Manager that included a walk of the subject property to determine the presence of hazardous materials and environmental conditions. Mr. Kochanowski is an Environmental Professionals as defined by ASTM E1527-13 and 40 CFR §312.10(b). All areas of the subject property were inspected as part of this investigation. A subject property tenant representative, Mr. Alex Castro with United Melon Distributors Inc., escorted ES during the site reconnaissance.

ES observed standard maintenance and janitorial chemicals and multiple containers of 5-gallon or less of paint being stored in the west subject property building. There was a cage of propane canisters for the forklifts near the southeast corner doorway of the west subject property building. In the northeast corner of the east subject property building was a battery charging station for the forklifts. There was no evidence noted of spills or releases of these materials during the site reconnaissance.

5.2 Unidentified Substance Containers

There were no unidentified substance containers observed on the subject property.

5.3 Storage Tanks

In 1949, a 2,000 gallon UST was installed on the east end of the subject property. In 1954 this 2,000 gallon UST was replaced with a 10,000 gallon gasoline UST. As discussed above in Section 4.1.8, there were no records regarding the removal of this UST or subsurface testing in this area which represents a recognized environmental condition.

The removal of one 10,000 gallon diesel UST and three 1,000 gallon waste oil USTs from the subject property in 2014, as discussed above in Section 3.6.6, represents a historical recognized environmental condition.

Currently, no USTs, ASTs, or clarifiers were noted on the subject property at the time of the subject property reconnaissance. There were no common indicators of USTs such as vent pipes, fill ports, manways, fuel gauges, or dispensers observed. Visual indicators of former site ASTs such as tank cradles, secondary containment structures, and tank pedestals were not observed.

5.4 Hydraulic Equipment

There were no above or below-grade hydraulic lift systems observed on the subject property.

5.5 Indications of PCBs

There were no pad-mounted transformers, pole-mounted transformers, or hydraulic lift systems located on the subject property.

The subject property buildings were constructed in approximately 1971 and 1972, therefore, the florescent light ballasts may contain PCBs. However, due to renovations many, if not all, the ballasts may have been replaced. There was no evidence of leaks from the ballasts and they are not an obvious threat to the environmental integrity of the subject property. No further action regarding the ballasts is recommended.

5.6 Indications of Solid Waste Disposal

There was no evidence observed of buried drums, buried containers, free liquids, odors, unusual depressions, or excavations that would indicate solid waste disposal activity on the subject property. There was no evidence of fill material from an unknown source on the subject property. Several solid waste dumpsters were observed in the central parking lot. There was no surface evidence of spills, releases, or illegal disposal noted in this area during the subject property reconnaissance.

Based on surface observations, other than typical engineered fill used in foundation construction, it did not appear that a significant amount of fill had been imported onto the subject property.

5.7 Surface Staining

There was no evidence noted of discolored soils, odors or surface staining on the subject property during the site reconnaissance. There was no evidence of sparse, stressed, or dead vegetation (from other than insufficient water). There was no visual evidence of improper handling or disposal of hazardous chemicals or materials on the grounds or in the subject property buildings.

5.8 Physical Setting Analysis

The subject property is in an area surrounded by commercial and industrial developments. The area around the subject property began to significantly develop in the 1920s.

There were no indications that the subject property or any of the adjacent sites have been affected by the presence of oil or natural gas deposits. According to the California Department of Conservation Field and Wells Map from 2001, the subject property is not located in the proximity of an oil or gas field.

State of California, Department of Conservation, Division of Oil, Gas and Geothermal Resources (DOGGR) on-line, digital database, *Oil Well Finder* map was reviewed which contains the most current information on oil well locations. According to this map there were no oil wells located on the subject property or adjacent sites.

5.9 Pipelines

ES reviewed the online National Pipeline Mapping System published by the Pipeline and Hazardous Materials Safety Administration, a division of the Department of Transportation. According to this agency, there were no pipelines mapped on the subject property.

6.0 NON-SCOPE ASTM CONSIDERATIONS

6.1 Asbestos

Physical sampling of suspect Asbestos Containing Materials (ACMs) was not part of the scope of this project and only a very limited and cursory visual inspection was performed. Materials suspected of containing asbestos are presumed to have been used in the construction of the subject property buildings. These materials included, but may not be limited to, the following: drywall, drywall joint compound, floor tile and mastic, drop ceiling tile, plaster, fire doors, covebase mastic, window putty, and roofing materials. These materials were found to be in good condition with limited or no damage. When in good condition and if they are not disturbed, the suspect ACMs are not a concern to the health of the building occupants or workers and do not represent a recognized environmental condition for the subject property.

The California Health and Safety Code requires owners of structures with ACM to notify tenants and employees that buildings have ACMs. ES recommends that if not already issued, this notice be sent to tenants and employees at the subject property.

Cal OSHA regulations require employees who may potentially disturb ACM (typically janitorial staff and building engineers) complete an annual two-hour awareness-training course. If the janitorial staff and building engineers are employed by the subject property owner, ES recommends they be required to take this two-hour awareness-training course. If the janitorial staff and building engineers are employed by a third party, ES recommends they be notified to comply with this requirement.

ES recommends that all defined and suspect ACMs in the subject property buildings be included in an Operations and Maintenance (O&M) Plan.

The South Coast Air Quality Management District (SCAQMD) maintains specific regulations concerning demolition and renovation activities involving ACMs. If renovation or demolition will disturb any suspect ACMs, a licensed California Certified Asbestos Consultant must first survey the materials for asbestos. If asbestos is found, an asbestos abatement contractor must remove these items prior to the renovation or demolition.

6.2 Lead Based Paint

Surveying and inspecting for lead based paint were not included in the scope of this project and only a very limited and cursory visual inspection was performed by a non-licensed professional. Any building constructed prior to 1978, such as the subject property buildings, should be suspected of containing lead based paint. ES did not note the presence of any significant quantities of delaminating, chipping, peeling or chalking coatings at the subject property. The possible presence of lead based paint on the subject property is not considered a recognized environmental condition. It should be noted that this assessment is provided to the Client from a professional who is not a licensed lead based paint inspector/risk assessor.

6.3 Lead Contamination of Drinking Water

The condition of the drinking water at the subject property is unknown. There were no lead welds or lead pipes noted on the potable water piping system. Physical sampling of drinking water for lead was not part of the scope of this project.

6.4 Radon

Based on the results of the State of California Department of Health Services' 1990 California Statewide Radon Survey, the U.S. Environmental Protection Agency (U.S. EPA) lists Los Angeles County as being in Radon Zone 2. Zone 2 areas have a predicated average indoor radon screening potential of between 2.0 picocuries per liter (pCi/L) and 4.0 pCi/L. The level at which the U.S. EPA considers radon levels to be unhealthful is 4.0 pCi/L in residential structures.

There can be extreme variations of indoor radon levels within a local area based upon geologic, soil structure and building characteristics. The EPA recommends testing as the definitive method in determining the radon level within a specific structure. Radon testing was not part of this project's scope of work.

6.5 Urea-Formaldehyde

The sale and installation of Urea Formaldehyde Foam Insulation (UFFI) as thermal insulation began in approximately 1970. In December of 1980, its installation was banned under the federal *Hazardous Products Act*. UFFI was installed in new buildings during this period and may also have been added to existing buildings. UFFI was not commonly used in industrial or commercial buildings. Although a UFFI survey was not included in the scope of services for this project, there was no evidence noted of UFFI in the subject property buildings during the subject property reconnaissance.

6.6 Mold

Surveying or physical sampling for mold was not part of the scope of this project. Only a limited and cursory visual inspection for signs of water intrusion or visible mold growth was performed by ES. There were no obvious signs of water intrusion or mold growth noted in the subject property buildings during the site reconnaissance on November 4, 2019.

6.7 Fluorescent Light Tubes

The presence of fluorescent light tubes in the subject property is not a threat to the health of the tenants or the environmental integrity of the subject property. Their disposal, however, is regulated.

In California, the California Environmental Protection Agency Department of Toxic Substances Control (DTSC) regulates the management of spent fluorescent light tubes and spent mercury vapor lamps. These are hazardous wastes because mercury is listed as a hazardous waste under Title 22, California Code of Regulations, Section 66261.126. The spent tubes and lamps typically contain enough mercury to qualify as toxic hazardous wastes under Title 22, CCR, Section 66699 when disposed of in quantity. Questions regarding this policy should be direct to the DTSC, Hazardous Waste Management Program. Although their disposal is regulated, this is not a Recognized Environmental Condition.

6.8 Mercury

The subject property was inspected for the presence of mercury containing building components. Some of the high voltage lighting systems, such as the exterior lighting, may contain mercury vapor but these are not a threat to the environmental integrity of the subject property.

6.9 Vapor Intrusion

Based on a review of agency records and historical documents, possible vapor intrusion issues exist on the subject property both from onsite and offsite conditions. The past, and possible current, presence of a 10,000 gallon gasoline UST in the east subject property parking lot represents a possible vapor intrusion issue. The release of solvents that have impacted the northeast adjacent site, located across Sacramento Street, represents another possible vapor intrusion issue. ES has recommended soil vapor testing in the east subject property parking lot to determine if these conditions represent a vapor intrusion issue for the subject property.

7.0 FINDINGS, OPINIONS, AND RECOMMENDATIONS

ES has conducted this Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the subject property. Any exceptions to or deletions from this practice are described in Section 2.2 of this report. This report also meets the requirements of All Appropriate Inquiries as defined in CERCLA 42, U.S.C. 9601(35) (B). The enclosed report and opinion are based on the intent to finance the subject property. We understand that you will rely on our opinion for such purposes.

This assessment has revealed no evidence of controlled recognized environmental conditions connected with the subject property. ES have identified one recognized environmental condition, one historical recognized environmental condition, one de minimis condition, and one offsite vapor intrusion threat.

Recognized Environmental Condition

In 1949, a 2,000 gallon UST was installed on the east side of the subject property. This UST was located between 14 and 15 feet north of the south subject property border and 35 to 48 feet west of the east subject property border. In 1954 this 2,000 gallon UST was replaced with a 10,000 gallon gasoline UST. This tank was reported to have been located 15 feet north of the south subject property border and 40 feet west of the east subject property border. “Service station” was referenced in several documents pertaining to these USTs. The last reference to the service station was in 1963. There were no reports indicating that the 10,000 gallon gasoline UST had been removed. The possible presence, or past presence, of a gasoline UST in the east parking lot of the subject property represents a recognized environmental condition.

It is advised that subsurface investigations be performed in the east parking lot. Soil vapor testing for petroleum compounds is recommended in the two areas where the tanks were reported to have existed. Soil vapor probes set to depths of five feet bgs can also be considered as confirmation regarding the presence, or absence, of tanks in this area.

Historical Recognized Environmental Condition

In approximately 1971, one 10,000 gallon diesel UST and three 1,000 gallon waste oil USTs were installed on the subject property west of the east subject property building. The Los Angeles Fire Department referencing the January 7, 2015 WI report issued a No Further Action (NFA) letter dated February 11, 2015. A copy of this letter is presented in Appendix G. The removal of the diesel 10,000 gallon diesel UST and three 1,000 gallon waste oil USTs under the oversight and approval of a regulatory agency with contamination levels below cleanup standards represents a historical recognized environmental condition.

Offsite Vapor Intrusion Threat

Geltman Industry and *Wave Enterprises* at 1901 Sacramento Street was located adjacent to the northeast, across Sacramento Street, and upgradient of the subject property. This site was listed in the HAZNET, DRYCLEANERS, EMI, and HAZNET databases. This site generated small quantities of chlorinated solvents and inorganic solid waste for off-site disposal or recycling. This site had an air pollution permit for drycleaning from 1987 through 2004.

There had been a release of chlorinated solvents from the site located immediately north of this site at 1910 Bay Street (the 1910-1914 Bay Street Property) which has resulted in subsurface investigations having been performed on this adjacent site. ES reviewed the most recent subsurface testing report from this site (Remdox, Inc., July 15, 2019). According to this report, both soil and groundwater have been impacted by PCE. This site has only recently installed groundwater monitoring wells and plume diagrams have not yet been developed; therefore, the impact to groundwater below the subject property from this site is unknown. However, soil vapor surveys performed on this site indicated that elevated levels of PCE at 1,000 ug/L are located on the east side of Wilson Street, approximately 115 feet north, northeast of the northeast subject property corner. Copies of the soil vapor plume diagrams from this site are presented in Appendix G. Although soil vapor sampling on the northwest corner of the subject property did not indicate elevated levels of VOCs in soil vapor exits in this location, the condition of soil vapor on the east end of the subject property is unknown. Elevated concentrations of PCE identified on the northeast adjacent site represents a suspect vapor intrusion issue. Screening of soil vapor on the east side of the subject property is recommended to determine if this represents a recognized environmental condition to the subject property.

De Minimis Condition

Surface staining had previously been observed in the central parking lot. Also, dumping of used mineral spirits was observed directly onto the unpaved ground of the former railroad spur in the northwest subject property corner. Subsurface testing was then performed on the subject property (Andersen Environmental, 2014) in these two areas. The results of their assessment indicated that a significant release to the subsurface in the areas of dumping of used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest corner of the site, and limited surface staining in the central portion of the site, have not occurred. The soil and soil vapor testing indicated that petroleum hydrocarbons and VOCs detected in the subsurface of these areas represented de minimis concentrations of contamination. ES agrees with AE and have also designated this as a de minimis condition.

Findings, opinions, and recommendations for the following conditions are discussed in this report: possible asbestos containing materials are discussed in Section 6.1 and the possible presence of lead based paint is discussed in Section 6.2. Based on our findings, no immediate assessment of these conditions currently appears warranted.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

The undersigned certifies that the professional services have been performed, our findings obtained, and our recommendations have been prepared in accordance with customary principles and practices in the field of environmental science and engineering. ES has acted in good faith and has no relationship with sellers, buyers or agents of the subject property. There have been no conflicts of interest involved in the drawing of conclusions, which have been based solely on materials reviewed and visual inspections performed by ES. The undersigned declares that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR 312 Section 312.10. We have the specific qualifications based on education, training, and experience to assess a subject property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312 with any exceptions noted in Section 2.2 - Limitations, Exceptions and Methodology of Assessment.

Senior Environmental Consultant

10.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS PARTICIPATING IN THE PHASE I ESA

Michael Rezvani
PE, REPA, CAC (Senior Environmental Consultant)

Professional Experience:
Michael Rezvani has been directly involved with various aspects of the environmental engineering and consulting industry for over 37 years (since 1982). As the principal officer of The Environmental Solutions, he actively continues to develop and execute new environmental projects and sustains his lasting relationships with his older clients. He is knowledgeable in understanding the intent and the importance of environmental site assessments (phase I and phase II), subsurface soils-testing and soil-gas surveys, asbestos consulting services, physical risk assessments, indoor air quality testing, emission testing, lead surveys and hazard mitigation monitoring. He involves himself personally in the daily activities and correspondences of his projects. He is uniquely qualified when it comes to making sense out of an overwhelming amount of technical data and simplifying the results into an understandable form for his clients. He has performed hundreds of "phase I and phase II" environmental site assessments since 1988 and specifically prior to the issuance of the current ASTM standards.

He has uniquely designed and personally managed major construction and/or demolition projects involving asbestos and lead abatement. He has been conducting asbestos and lead awareness classes since 1990. He is unique in his ability to educate his clients about a given environmental or geotechnical problem and involving them in the step by step process of mitigation. He creates a sense of personal trust and transparency in his execution of a given environmental project. His litigation experience as an expert witness which stems from many years in the consulting industry is further exemplified by his personal participation as a key part of several defense teams for his clients in environmental related lawsuits. He has testified as an expert witness at the Superior Court of Los Angeles and in out-of-court settlements for environmental mitigation cases. His knowledge, common sense and uniquely simple approach to interpret the intent of the environmental regulations have assisted legal teams to succeed in several significant cases.

In the late 1980′s he performed over 10 million square feet of EPA/AHERA asbestos surveys and provided the documentation for the associated EPA management plans for the schools (K-12) throughout the central and western parts of the United States. In the mid 1980′s, he performed the original volumetric testing and damage assessment of the underground storage tanks (USTs) in Southern and Central California following the US EPA issuance of the Subtitle I & II of RCRA. He later managed the subsequent phase II assessment and the removal of the USTs.

In the early 1980′s, and on behalf of Halliburton's subsidiary, Analytical Inspection Inc., he utilized his radiography and radiation training to coordinate and performed the radiographic inspections of the Louisiana and Texas off-shore production platforms for determination of internal erosion throughout the Gulf of Mexico. He worked under direct supervision of the Louisiana Chief Radiation Safety Officer (RSO), Lloyd Anderson.

Education:
Bachelor of Science Industrial Technology, University of Louisiana, 1982
Bachelor of Science Civil Engineering, University of Louisiana, 1982
EPA-NIOSH Microscopy, University of Southern California, 1989

Registrations and Certifications:
Registered Environmental Property Assessor
Certified Asbestos Consultant
Certified UST Assessor
Certified EPA/NIOSH 582
Certified EPA Hazardous Waste Operations
Certified Level II Radiographer

Doug Kochanowski
CHMM, CAC (Biologist and Project Manager)

Professional Experience:
Mr. Kochanowski has been performing Phase I Environmental Site Assessments (ESAs) for over 31 years (since 1988) and is considered an industry expert. The environmental consulting profession was in its infancy when he performed his first ESA. Over the past two decades, Mr. Kochanowski has performed ESAs on almost every type of real property in over ten different states and in Europe. This includes military bases, medical facilitate, high-rise office buildings, learning institutions, factories, shopping malls and plazas, gasoline stations, industrial parks, vacant land, agricultural land, housing tracks, multifamily developments, and government facilities. His wide array of experience has made him a key component of complex ESAs and his expertise is sought after by a wide variety of clients and other consulting firms. His practical approach and comprehensive knowledge of the ASTM standards result in ESAs that are accurate, comprehensive, and address environmental issues with a common-sense approach.

Some ESAs must make recommendations for subsurface testing, also referred to as Phase II's. Mr. Kochanowski's extensive ESA portfolio has led him to a perform Phase II's at a variety of locations and property types for as long has he has been in the industry. His Phase II experience includes soil testing, groundwater testing and modeling, landfill leachate testing, and soil vapor studies. Where contamination has been identified in a Phase II, Mr. Kochanowski has worked with clients to remedy the situation. He has implemented remedial systems for contaminated soil and groundwater. He has also assisted clients in obtaining regulatory closures of releases without the need for remediation.

For as long as Mr. Kochanowski has been writing ESAs and performing Phase II's, he has been performing asbestos testing and consulting. Mr. Kochanowski performs asbestos surveys, develops removal specifications and drawings, writes Operations and Management (O&M) Plans, and performs contractor observation and air monitoring during abatement projects. His asbestos experience includes schools, nuclear facilities, universities, airports, hospitals, military bases, shopping malls, high-rise office buildings, industrial complexes, port facilities, apartments and single-family homes. Mr. Kochanowski was the Manager and Facility Security Officer (FSO) for a high-profile asbestos survey, air monitoring and abatement project of the White House, Washington D.C. His AHERA survey experience includes inspecting over eight million square feet of building space for school districts in California, Kansas, New Mexico and Tennessee.

Mr. Kochanowski has teaching experience including OSHA 1910.120 HAZWOPR, Confined Space Entry, and asbestos awareness classes. He has served as Secretary on the Board of Directors and is a founding father for the SoCal ACHMM chapter. In the past, he has served on the technical committee for a Local Emergency Planning Commission (LEPC) and was elected Secretary on the Board of Directors for the Rhine-Main Post of the Society of American Military Engineers (SAME). He has managed several large IDT contracts for the European District Corps of Engineers, working at over twenty bases in Germany and Spain. Projects included remediation design, soil and groundwater sampling, landfill leachate testing, asbestos surveys, air monitoring, and radon testing.

Education:
Bachelor of Science, Biology, San Diego State University, 1987.
Continuing Education; Strategies for Conducting Meaningful Microbial IAQ Investigations/American Indoor Air Quality Council
Registrations and Certifications:

CHMM, Master Level; Secretary of the SoCal ACHMM Chapter
California Certified Asbestos Consultant (#09-2699)
Registered Environmental Assessor-I (#07411)
NIOSH 582 Accredited Sampling and Evaluation Airborne Asbestos
Certified, OSHA 40Hr Trained 1910.120/Site Supervisor
Certified TRGS 519 Under German Hazardous Materials Regulations
AHERA Certified Asbestos Inspector, Management Planner, Designer, and Abatement Supervisor
Certified Radiation Worker
Confined Space Entry Certified

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Sanborn® Library search results

Certification #: CC2F-4EC7-88BB

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Environmental Solutions (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Environmental Solutions were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA

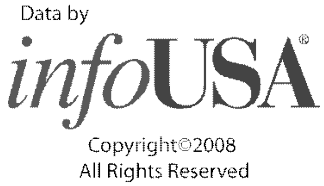
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

BUILDING

BUILDING

A C R A M E N T O S T.

Scope of Work 1–10,000 & 3–1,000 gallon tanks

NOTE: Tanks have been empty for years, no pumps attached

- Verify LEL of tanks, remove any residual fluids, wash tanks & insert dry ice 20 pounds per 1000 gallon capacity
- Remove the concrete/asphalt covering the below ground tanks, load and transport offsite for recycling
- Excavate the underground tanks stockpiling the material a minimum of 5' from the edge of the open excavation. During the excavation we will be monitoring for VOC's in accordance with SCAQMD Rule 1166
- When the tanks have been excavated, we will triple rinse the tanks & have a Marine Chemist or CIH certify the tanks clean & ready for removal.
- Remove the tanks from the ground, place onto flatbed trucks for proper disposal offsite.
- Obtain all soil samples as directed by the onsite LAFD inspector
- Leave site secure with temporary fencing until lab results from the soil samples are received.
- When approval has been received, we will backfill & compact the two tank holes & resurface to match the existing.
- A UST closure report will be prepared & provided to all involved parties.

SUBJECT TO FIELD INSPECTION

The approval of these plans and/or specifications does not exempt them from strict compliance with all other pertinent Sections of the Municipal Code and other laws and regulations.

MARSH AND HERB IMPORTER INC.
1811 SACRAMENTO STREET
LOS ANGELES, CALIFORNIA
WPI PROJECT NO. 14.477

Dear Mr. Luna:

As indicated in our discussion earlier today this site is pending escrow based on the review of the submitted report referenced above. Wayne Perry Inc. on behalf of The Albert and Elaine Borchard Foundation Inc. respectfully requests an expedited review of the report to facilitate the progression of the pending sale.

Ms. Summer Nastich of Morris Pilch & Purdy LLP who represents the Foundation is located at One Embarcadero Center, suite 400 in San Francisco, California. Ms. Nastich can be reached at 415-984-8506 with any questions.

If you have any questions regarding this submittal, please contact the undersigned at (714) 826-0352.

Sincerely,
WAYNE PERRY INC.

Dear Mr. & Mrs. Borchard:

The Fire Department has reviewed the "Submittal of Revised Environmental Oversight for UST Removal and Soil Sampling Activities Report" dated January 7, 2015, submitted by Wayne Perry, Incorporated. Based on the information provided, this Department has determined that no further action is required at the site, for the work performed under Division-5 permit, number 30158.

Please note, this correspondence does not exempt you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at this site. Additionally, you maintain responsibility to correct additional or previously unidentified conditions at the site, which cause, or may thereafter cause, pollution or nuisance, or otherwise pose a threat to water quality or public health.

If you require additional information regarding this matter, please contact Eloy Luna of the Underground Storage Tanks – Plan Check Unit, at (213) 978-3708.

Very truly yours,

RALPH M. TERRAZAS

SUBJECT: SUBMITTAL OF REVISED ENVIRONMENTAL OVERSIGHT FOR UST REMOVAL AND SOIL SAMPLING ACTIVITIES REPORT
MARSH AND HERB IMPORTER INC.
1811 SACRAMENTO STREET
LOS ANGELES, CALIFORNIA
WPI PROJECT NO. 14.477

Dear Eloy:

As indicated in my December 31, 2014 voicemail and our discussion on January 5, 2015, enclosed is a revised Environmental Oversight for UST Removal and Soil Sampling Activities Report for the above referenced facility. Changes made to the previous submittal are summarized below:

- Address correction within report text and laboratory reports from 1805 to 1811 Sacramento Street, thereby matching the LAFD permit application;
- Property owner name correction from Albert and Elaine Borchard to The Albert and Elaine Borchard Foundation, Inc.
- Typographical error of g/kg on page 3 to ug/kg;
- Facility name correction from Marsh and Herb Warehouse/Marsh and Herb Produce Company to Marsh and Herb Importer, Inc. (where applicable);
- Bolded appendix, table and figure references within text;
- Reversed parenthesis on page 3 for VOCs, corrected;

- Property Information Contact corrected on page 5;
- Figure 2 updated to include stockpile samples and PCE results
- Added the word "procedures" following LAFD on page 1; and
- Owner address reference on Page 1 footer.

If you have any questions regarding this submittal, please contact the undersigned at (714) 826-0352.

Sincerely,
WAYNE PERRY INC.

BUILDING

A C R A M E N T O S T.

Scope of Work 1-10,000 & 3-1,000 gallon tanks

NOTE: Tanks have been empty for years, no pumps attached

- Verify LEL of tanks, remove any residual fluids, wash tanks & insert dry ice 20 pounds per 1000 gallon capacity
- Remove the concrete/asphalt covering the below ground tanks, load and transport offsite for recycling
- Excavate the underground tanks stockpiling the material a minimum of 5' from the edge of the open excavation. During the excavation we will be monitoring for VOC's in accordance with SCAQMD Rule 1166
- When the tanks have been excavated, we will triple rinse the tanks & have a Marine Chemist or CIH certify the tanks clean & ready for removal.
- Remove the tanks from the ground, place onto flatbed trucks for proper disposal offsite.
- Obtain all soil samples as directed by the onsite LAFD inspector
- Leave site secure with temporary fencing until lab results from the soil samples are received.
- When approval has been received, we will backfill & compact the two tank holes & resurface to match the existing.
- A UST closure report will be prepared & provided to all involved parties.

SUBJECT TO FIELD INSPECTION

The approval of these plans and/or specifications does not exempt them from strict compliance with all other pertinent Sections of the Municipal Code and other laws and regulations.

Mr. Albert Borchard	Owner	627-1481

TO	STREET	ZONE	CITY	STATE
Southern California Magazine Distributing Company	1104 S. Lawrence	90021	L.A.,	Cal.
ATTENTION	LOCATION OF SURVEY 1811 Sacramento			

A fire safety survey was made of your plant facilities, and the following conditions must be corrected in order to meet minimum fire and life safety requirements.

OK 1. 57.01.35 Remove all storage and other obstructions from around sprinkler control valves. Maintain at least 3 feet clearance around control valve with an unobstructed aisleway to the valve.

OK 2. 57.140.01 Properly recharge all fire extinguishers. Such work shall be done by a person having a valid Certificate of Fitness.

OK 3. 57.01.35 Repair fire door in southwest portion of building.

OK 4. 57.57.10 Remove storage from main aisle, northeast portion of building. This aisle must be open at all times.

OK 5. 57.57.25 Storage shall be maintained to prevent materials from accidentally falling into aisles or clearance areas.

ON May ~~25~~ 23 19 67 AN INSPECTION WILL BE MADE, AT WHICH TIME WE EXPECT COMPLIANCE.

Donald F. Ortmann, Incorporated
16213 Illinois
Paramount, California 90723

REGARDING: Installation of 4 Atmospheric Tanks - for General Trucking Service, 1811 Sacramento.

Permit No. 19528 authorizes you to make the above installation, subject to the following conditions:

1. Field inspection by a member of this Department prior to covering of tanks and piping.

2. Pressure test of piping prior to covering. This must be done in the presence of the field inspector.

3. Final approval in writing shall be obtained from the field inspector before the installation may be placed in operation.

Section 57.04.03 requires that all auto fueling stations have a permit, which shall be secured from the City Clerk's Office, Room 1, City Hall.

Please contact Captain Harring of our South Unit, telephone 485-5995, to make necessary arrangements for inspection.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/19/2019 has revealed that there are 3 SEMS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/19/2019 has revealed that there

are 5 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/24/2019 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/24/2019 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/24/2019 has revealed that there are 15 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/29/2019 has revealed that there are 42 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 4 SWF/LF sites within approximately 0.5 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 15 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/24/2019 has revealed that there are 8 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 01/07/2019. Newer inspection has been completed for this facility. Closed as requested, JIRA CUPA_183
Violation Division: Los Angeles City Fire Department
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-28-2015
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Referral from Joy "WE REC'D EMAIL FRM THE CONSULTANT STRATA ENVIRONMENTAL THAT THIS BUSINESS HAD VACATED THE SITE" Inspection conducted with Gabriel Jespersen, Field Service Supervisor, DHL. Per Gabriel Jespersen "Business changed hands--we sub-contract a fleet mechanic for DHL Express--but the new guy still works for us." New business owner: Jess Eddards (562) 755-9758 [cdbsvcs@verizon.net] CDB Services, contacted via telephone and confirmed new business information. Instructed to pay CUPA permit fees and establish HMBP via CERS.
Eval Division: Los Angeles City Fire Department
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection

SIC Code:	2711
SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	STORMS
Waste Type2:	Not reported
Waste2:	Stormwater Runoff
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

TIMES MIRROR CO OF DELAWARE (Continued) **S101584521**

dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date: 03-22-2017
Citation: HSC 6.5 25143.9 - California Health and Safety Code, Chapter 6.5, Section(s) 25143.9
Violation Description: Failure to manage a recyclable material pursuant to HSC 6.5 25143.2(b), (c), or (d).
Violation Notes: Returned to compliance on 09/08/2017. OBSERVATION: Generator failed to meet one of the following requirements of excluded recyclable materials: 1) Used or reused as an ingredient in an industrial process to make a product if the material is not being reclaimed, 2) Used or reused as a safe and effective substitute for commercial products if the material is not being reclaimed, 3) Returned to the original process from which the material was generated, without first being reclaimed, if the material is returned as a substitute for raw material feedstock, and the process uses raw materials as principal feedstocks, 4) The material is recycled and used at the same facility at which the material was generated, or by the same corporate entity, 5) The material is recycled within the applicable generator accumulation time, 6) The material is managed in accordance with all

TIMES MIRROR CO, LOS ANGELES T (Continued) **S103639737**

applicable requirements for generators of hazardous wastes, 7) If the material is held in a container or tank, the container or tank is labeled, [Truncated]

Violation Date: 12-14-2018
Citation: HSC 6.7 25299(a)(9) - California Health and Safety Code, Chapter 6.7, Section(s) 25299(a)(9)
Violation Description: Leak detection equipment disabled or tampered with in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak.
Violation Notes: Returned to compliance on 12/14/2018. OBSERVATION: Owner/Operator tampered with and/or disabled leak detection equipment in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak. The Owner/Operator shall not disable or tamper with monitoring equipment. Repair/replace equipment so that it functions per manufacturer's specifications The VR 420 sensor in the trench sump (Sensor L7) had the float on the sensor flipped so that the sensor would not go into alarm. Water was noted in the same sump as L7 VR 420 sensor in an amount enough to cause an alarm CORRECTED ON SITE: Tester Ron Franklin switched the float back to normal position and tested sensor which functioned properly during testing. Water was removed onsite and was properly disposed of.

Violation Date:	11-22-2013
Citation:	HSC 6.5 25143.10 - California Health and Safety Code, Chapter 6.5, Section(s) 25143.10
Violation Description:	Failure of any person who recycles more than 100 kilograms per month of recyclable material under a claim that the material qualifies for exclusion or exemption, to provide the following information every two years: 1) The name, site address, mailing address, and telephone number of the owner or operator of any facility that recycles the material. 2) The name and address of the generator of the recyclable material. 3) Documentation that the requirements of any exemptions or exclusions pursuant to HSC 25143.2 are met, including the following: A) Where a person who recycles the material is not the same person who generated the recyclable material, documentation that there is a known market for disposition of the recyclable material and any products manufactured from the recyclable material. B) Where the basis for the exclusion is that the recyclable material is used or reused to make a product or as a safe and effective substitute for a commercial product, a general description of the material and products, identification of the constituents or group of constituents, and their approximate concentrations, that would render the material or product hazardous under the regulations adopted pursuant to HSC 25140 and 25141, if it were a waste, and the means by which the material is beneficially used.
Violation Notes:	Returned to compliance on 12/22/2013. Facility failed to provide recyclable materials report.

Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,?2018. For USTs installed before October 1, 2018, perform an

TIMES MIRROR CO, LOS ANGELES T (Continued) **S103639737**

	inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October?1,?2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 12/14/2018. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Facility did not test overfill protection before the October 13th 2018 deadline. CORRECTED ON SITE: Overfill protection was tested on site today 12/14/2018 during monitor cert by Ron Franklin with George Bryant Construction.

FINDS:

Registry ID: 110002828272

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

THE ROW (Continued) **S118925915**

Site Name:	The ROW
Violation Date:	04-25-2019
Citation:	23 CCR 16 2716(a) through (e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(a) through (e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 06/14/2019. OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: 10/2018 - 2/2019 & 4/2019 Section VI not signed by Tank owner/operator. Tank owner/operator and not the DO fills out Section V with responses to compliance issues in Section III. Missing work orders for work completed on 10/2018-3/2019 DO inspection reports. CORRECTIVE ACTION: Ensure that DO is complying with all the requirements noted above. Submit copy of compliant DO inspection record. Have tank owner/operator sign DO reports from 10/2018 - 2/2019 & 4/2019 in Section VI. Ensure the tank owner/operator is filling out Section V with response to Section III compliance issues. Locate missing work orders for work completed on 10/2018-3/2019 DO inspection reports and attach them to respective DO reports.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,?2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October?1,?2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 04/25/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Facility did not test overfill protection before the October 13th 2018 deadline. CORRECTED ON SITE: Overfill protection was tested on 4/24/2019 during monitor cert by Djerl Shultz with JDS Tank Testing.

Monitoring certification and overfill protection were performed on 4/24/2019 by Djerl Shultz WITH JDS Tank Testing. Monitoring System components were observed and verified on this date. Tester provided the following certifications: Djerl Shultz ICC: 8020127 Exp: 6/13/2019 VR: #B36436 Exp: 4/6/2020 VMI: 3041 EXP: 8/5/2020 The UST monitoring panel all functions normal. Current monitoring setup and alarm history WERE available for review. The sumps WERE available for inspection and the sensors WERE observed positioned to detect a leak at the earliest opportunity. The spill buckets WERE also visually inspected. [Truncated]

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

GOLDEN PLATING INC (Continued) **1000186917**

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 50742
Site Name: MV TRANSPORTATION
Violation Date: 05-03-2016
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 03/18/2019.
Violation Division: Los Angeles City Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 50742
Site Name: MV TRANSPORTATION
Violation Date: 10-01-2018
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 01/07/2019. Observation: Owner/operator failed to maintain the facility to prevent release of hazardous wastes. Observed accumulation of waste liquids in the secondary containment under the waste antifreeze tank and under the drums of motor oil. Corrective Action: Remove accumulation of waste liquids in the secondary containment under the waste antifreeze tank and under the drums of motor oil.

CERS HAZ WASTE:

Name:	MORTON SCRAP METAL
Address:	2020 E SACRAMENTO ST
City,State,Zip:	LOS ANGELES, CA 90021
Site ID:	136420
CERS ID:	10259494
CERS Description:	Hazardous Waste Generator

Violations:

Site ID:	136420
Site Name:	MORTON SCRAP METAL
Violation Date:	08-08-2018
Citation:	40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Description:	Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.
Violation Notes:	OBSERVATION: Employees are not thoroughly familiar with proper waste handling and emergency procedures as demonstrated by the number and/or type of hazardous waste violations observed at the time of inspection. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that employees have been properly trained.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS

Site ID:	136420

MORTON SCRAP METAL (Continued) **S123536938**

Site Name:	MORTON SCRAP METAL
Violation Date:	08-08-2018
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	OBSERVATION: 5 x 55-gallon drums of used oil located in the hazardous waste storage area were observed without accumulation start dates and manifests/receipts demonstrating disposal within the past 180 days were not available. CORRECTIVE ACTION: Dispose of the used oil and submit a copy of the manifest/receipt to the CUPA.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS

Site ID:	136420
Site Name:	MORTON SCRAP METAL
Violation Date:	08-08-2018
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	OBSERVATION: Uniform Hazardous Waste Manifests/Invoices for hazardous waste disposed of in the last three years were not available at the time of inspection. CORRECTIVE ACTION: Locate a copy of all manifests/invoices for hazardous waste from the last three years and submit copies to the CUPA.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS

Site ID:	136420

Violation Source: CERS

Site ID: 120374
Site Name: GRAND PRIX AUTO BODY, INC
Violation Date: 08-08-2016
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 08/26/2016. OBSERVATION: Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. Observed 1 x 30 gallon drum containing waste waterborne cleaning solution accumulating on-site in excess of 180 days. CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the department by 9-7-16.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation:	23 CCR 16 2715(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(f)(2)
Violation Description:	Failure to have at least one facility employee present during operating hours that has been trained in the proper operation and maintenance of the UST system by a designated operator (DO).
Violation Notes:	Returned to compliance on 06/04/2018. OBSERVATION: Owner/Operator failed to have at least one employee present during operating hours that has been trained in the proper operation and maintenance of the UST system by a designated operator (DO). CORRECTIVE ACTION: Ensure that at least one employee is present during operating hours that has been trained in the proper operation and maintenance of the UST system by a designated operator (DO).
Violation Division:	Los Angeles City Fire Department
Violation Program:	UST
Violation Source:	CERS

Site ID:	12031
Site Name:	Better Life Organics
Violation Date:	06-21-2019
Citation:	23 CCR 16 2716(a) through (e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(a) through (e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: Signature by tank owner/operator in Section VI is missing on 5/2019-3/2019, 1/2019-12/2018 & 10/2018 DO inspection reports. Section VII was incorrectly marked YES by DO on 5/2019, 4/2019, 2/2019, & 11/2018 DO Inspection reports. Late Overfill was noted in Section X on 2/2019 & 11/2018 DO report but not noted in Section III by DO and was not able to followed up on in Section V by tank owner/operator. 2/2019 DO report Section VII and VIII are not filled out. DO failed to sign Section IV on 10/2018 DO report. CORRECTIVE ACTION: Tank owner/operator signed in Section VI on DO reports where there was no signature on site. Section VII for previously mentioned DO reports from 5/2019, 4/2019, 2/2019, & 11/2018 should be marked as NO since overfill was not completed and was noted in Section III on previous DO inspection report. Have DO note late overfill in Section III on & [Truncated]

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-29-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by Tim Hall (Owner). Contact Information: laimprintstees@aol.com Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date: 02-13-2019
Citation: HSC 6.7 25290.1(c)(3),25290.2(c)(3) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(c)(3),25290.2(c)(3)
Violation Description: Failure to keep water out of the secondary containment of UST systems installed on or after July 1, 2003.
Violation Notes: Returned to compliance on 02/13/2019. OBSERVATION: Liquid was observed in Tanks 1-4 fill sumps. Approximately 2 gallons in each sump. If water could enter into the secondary containment by precipitation or infiltration, it must be removed and disposed of properly. CORRECTIVE ACTION: Immediately remove this liquid, make a hazardous waste determination per Title 22 hazardous waste regulations, and manage it accordingly. Ensure that the fill sumps for tanks 1-4 are maintained free of liquid. ** CORRECTED ON SITE BY LUIS NAVARRO OF TANKNOLOGY **

Citation: 22 CCR 15 66265.192(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(a)
Violation Description: Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service. The written assessment shall state that, the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation.
Violation Notes: Returned to compliance on 08/23/2017. OBSERVATION: Owner/Operator does not have a tank assessment for the 550 gallon used oil aboveground storage tank. The owner or operator of a hazardous waste tank shall obtain a written assessment reviewed and certified by an independent, qualified, professional engineer, registered in California attesting that the system has sufficient structural integrity, is acceptable for the transferring, storing, and treating of hazardous waste, and that the tanks and containment system are suitably designed. CORRECTIVE ACTION: Immediately have an assessment prepared for the 550 gallon used oil aboveground storage tank. Submit a schedule showing when this will be accomplished to the department by 3-1-17.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,?2018. For USTs installed before October 1, 2018, perform an

GREYHOUND LINES INC. LOS ANGELES MAINTENENCE (Continued) **S101617241**

inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October?1,?2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 02/13/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. CORRECTIVE ACTION: Maintain overfill prevention system to comply with the deficiencies noted above. Submit verfiication. ** Mr. Acosta, please have your overfill prevention equipment tested by October 13-2018 and every 3 years thereafter. Manufactured Gas Plants:

Site located at 725 Chemming Street, Los Angeles, California, approximately 2.5 acres. From 1887 util 1906 an oil gas plant was operated at site. MGP may have been converted to a natural gas storage site in approximately 1906. Records indicate that MMGP equipment may have been removed by 1930. Site is currently used as a Greyhound Bus parking lot.

Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/20/1993
Comments: The Department completed review of the PEA. A Manufactured Gas Plant (MGP) was operated at the site in the late 1800s and early 1900s. Gas was produced from crude oil for distribution in the site area.
Several companies operated at the site. In 1909, the site was owned by the Los Angeles Gas and Electric Corp., which merged with the Southern Calfornia Gas Company in 1937. SoCalGas owned the property until 1976, and sold to the current owners. The MGP was dismantled sometime before 1906. The byproducts from the manufactured gas operation were tars, oils, sludges, and lampblack. Elevated levels of polycyclic aromatic hydro- carbons (PAH), heavy metals such as lead and arsenic and cyanides were found at the site. The PEA concluded that there was contamination at the site above screening values. Therefore, the Department recommended that further investigation or assessment at the site was necessary.

CA BOND EXP. PLAN:

Reponsible Party:	COST RECOVERY/OPERATION AND MAINTENANCE SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	DHS has utilized Bond funds to complete the remedial action. DHS is currently undertaking appropriate cost recovery actions.
Site Description:	This site was previously used to scrap electrical transformers.
Hazardous Waste Desc:	Polychlorinated biphenyls (PCBs) were detected in the soil.
Threat To Public Health & Env:	The remedial action has been completed. Soil contaminated with PCBs was excavated and redisposed of in a licensed landfill. There is no threat to public health and the environment.
Site Activity Status:	In August, 1985, the RP, Mr. Rodney Dean, pled no contest to three felony counts of illegal storage, transportation and disposal of hazardous wastes. Mr. Dean's probation required that the cleanup of the site be completed and reported to the court. The RP retained a contractor for the cleanup and began the remedial actions. The contractors removed much of the contaminated soil. DHS completed the cleanup after the RP exhausted his financial resources. DHS is currently in the cost recovery stage.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 07/10/2008
Comments: Asphalt cover is in good condition. Pallet company occupies site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 06/27/2011
Comments: Site visit completed. Asphalt cap intact.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation & Maintenance Order/Agreement
Completed Date: 08/01/2007
Comments: The Agreement describes maintenance of the asphalt cover in the former Western Lead and Metal property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/10/2006
Comments: Removal Action included placement of an asphalt cover in the property area and removal of 97 tons of soil contaminated with lead and arsenic.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 10/21/2004
Comments: The RAW proposes to address the lead & arsenic contaminated soil by placing a four-inch asphalt cap on the property area (15,000 sq.ft.) and removing soil from nine impacted areas at the Site boundary. Implementation is scheduled for end of January 2005.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/15/2003
Comments: The Remedial Investigation is approved. The RI involved sampling of lead and other metals, and volatile organic compounds, particularly tetrachlorethene and 1,1,1-trichloroethane.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 06/30/1998
Comments: Completed a Preliminary Assessment (PA) with sampling of the site under contract with U.S. EPA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/18/1997
Comments: Soil removal (excavation) of lead-contaminated soils. The Implementation Report for completion of the Emergency Removal Action

INTERNATIONAL LEAD CO. (A.K.A. WESTERN LEAD AND METAL CO.) (Continued) **S112842372**

by Quemetco at Area 3 (Coast Produce Warehouse) and Area 4 (Residential property at 2151 E. 14th Street) was approved. An estimated 120 tons of contaminated lead was excavated and disposed of off-site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 07/18/1997
Comments: UPRR: A removal action workplan (RAW-UPRR) was approved for Union Pacific Railroad track areas along Lemon Street (between 10th & 14th Streets). These areas are designated as Areas 1 & 2. A Notice of Exemption was also filed with the OPR as required by the CEQA laws and guidelines. The RAW-UPRR included excavation, treatment and disposal of contaminated soils in the neighboring railroad right-of-way (track) areas of the International Lead Company site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/25/1998
Comments: Excavation, treatment and disposal of 2,500 tons of metal contaminated soil from the UPRR rail track areas. The Implementation Report of Emergency Removal Action by Dames & Moore for Areas 1 and 2 was approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 07/18/1997
Comments: A removal action workplan (RAW-QUEMETCO) which proposed excavation and disposal of contaminated soils, was approved for Areas 3 and 4 (perimeter of Property and residential property). A Notice of exemption was also filed with the OPR as required by the CEQA laws and guidelines.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 11/07/1994
Comments: DTSC received an information letter for 3 possible hazardous substance release sites allegedly associated with Quemetco/ RSR Corporation, a lead smelting company.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 02/10/2006
Comments: Workplan for additional removal of soil is approved.

Alternate Address:	2182 EAST 11TH STREET
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The Site is also known as the Western Lead and Metal Company Site. The Site is located in an industrial area near downtown Los Angeles and is surrounded by warehouses, food distributors, light manufacturing, and scrap metal recyclers. The Site is roughly bounded by 11th Street (Property), to the north, the Union Pacific Railroad right-of-way to the east, 14th Street, to the south, and Wilson Street to the west. The Site includes the property at 2182 East 11th Street, which was occupied by several different companies as a lead smelter from 1946 to 1965. The Western Lead Products Company operated a lead smelter on the Property from 1954 to 1960 under the name of Western Lead and Metal Company. After 1965, the Property was used for die-cast manufacturing operations. The Property is approximately 110 feet by 140 feet and is currently devoid of any buildings, and is secured by fencing. The other areas of the Site include: portions of the Union Pacific Railroad right-of-way, between 14th and 10th Streets; a narrow strip of the property occupied by Coast Produce; and a residencial property at the corner of Wilson and 14th Streets. Since 1991, several site assessments have been conducted. These assessments involved mostly surface soil sampling and analyses for metals including lead, antimony, and arsenic. In 1996, the Property was paved with three inches of asphalt to prevent exposure of the public to contaminated soil. In addition, DTSC collected several surface soil samples in the areas surrounding the Property. Extremely high levels of lead (up to 574,000 ppm), antimony (up to 14,000 ppm), and arsenic (up to 920 ppm) were detected in the narrow strip along the southern and western boundaries of the Property; high levels of lead, copper, and zinc were detected along the railroad right-of-way; and elevated levels of lead (up to 1,450 ppm) were detected on the residential property. A Consent Order (Imminent and Substantial Endangerment) was entered into with Quemetco

WESTERN LEAD AND METAL CO (INTERNATIONAL LEAD CO.) (Continued) **1001115052**

Inc., (an RSR Subsidiary) and Union Pacific Railroad Company.
As required by the Order, in 1977, Quemetco completed an
Emergency Removal Action at Areas 3 and 4 which are located at
the perimeter of the Property and the residential property.
Union Pacific has also conducted an Emergency Removal Action at
Areas 1 and 2 (railroad right-of-wau). The Remedial
Investigation found the extent of metal contamination.
Currently, the Draft RAW, which proposes to place a 4-inch
asphalt cover on the Property area and excavate soil, from the
Site boundary, has been approved. The 30 day Public Comment
Period starts on August 23 and ends September 22, 2004.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS Description: Chemical Storage Facilities

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-30-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Erica E. Jacalone
Eval Division: Los Angeles County Fire Department
Eval Program: HW
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 07-16-2019
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: This a unman facility. Tried again to reach SCGC to speak with a representative. I was able to get to the call center and transferred me to Mr. Greg Gianelli, which I have left several message aout this site. The site is going through a clean up process and based on CERS part of the contaminants are petroleum base. el

CA BOND EXP. PLAN:

Reponsible Party:	RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Southern California Gas has entered into a consent order with DHS for oversight/monitoring of its cleanup efforts. DHS has budgeted $50,000 for direct costs related to the project. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with site cleanup.
Site Description:	The Olympic Base facility, currently owned by Southern California Gas Company, is the site of a former oil gasification "towne gas" plant.
Hazardous Waste Desc:	The wastes are generally characterized as polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). Other constituents of concern are cyanide, lead, and semivolatile organics. Soil contamination is present at the site from the surface to a depth of 10 to 15 feet in both the northern and southern portions of the site.
Threat To Public Health & Env:	The primary concern is potential contamination of ground water. Usable ground water lies approximately 200 feet below the ground surface and the water table may rise to only 100 feet below the site. Ground water contamination has not been verified. Surface soil contamination may migrate offsite due to airborne particulates.
Site Activity Status:	The Southern California Gas Company has completed a remedial investigation/feasibility study.

SOUTHERN CALIFORNIA GAS CO (Continued) **1000166039**

Annual Waste Handled:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Hazardous Waste Summary:

. Waste code: 133
. Waste name: Aqueous solution with 10% or more total organic residues

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 151
. Waste name: Asbestos-containing waste

SOUTHERN CALIFORNIA GAS CO (Continued) **1000166039**

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 261
. Waste name: Polychlorinated biphenyls and material containing PCB's

. Waste code: 281
. Waste name: Adhesives

. Waste code: 291
. Waste name: Latex waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 611
. Waste name: Contaminated soil from site clean-ups

. Waste code: 731
. Waste name: Liquids with polychlorinated biphenyls > 50 mg/l

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D004
. Waste name: ARSENIC

. Waste code: D005
. Waste name: BARIUM

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: D018
. Waste name: BENZENE

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET,

SOUTHERN CALIFORNIA GAS CO (Continued) **1000166039**

WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 39178.2

Waste code: D004
Waste name: ARSENIC

Manufactured Gas Plants:

The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were weere discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domesttic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a stanndby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility

Background Info:	The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were were discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domestic Gas Company purchased and took

OLYMPIC BASE (Continued) **S105689611**

over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a standby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility.
A Consent Order was signed in December 1986, which addressed the work needed to complete the Remedial Investigation/-Feasibility Study (RI/FS) process. The RI report was approved by the Department on September 17, 1987. The RI found that soil from about 2 to 12 feet below ground surface is contaminated. The contaminants are not readily vaporized, nor do they enter aqueous phase solution. Groundwater aquifers beneath the site are unsaturated to a depth of 90 feet. Air monitoring at the site does not indicate that the contaminants are emitting vapors to the air. SCG then submitted a FS report in May 1988. DHS has reviewed the FS report and requested a full Health Risk Assessment (HRA) based on appropriate biological receptors and exposure pathways on October 20, 1988. The HRA was approved by the Department on June 4, 1990. The FS was revised by SCG and the report approved on July 19, 1990.
The RP submitted a draft RAP on August 20, 1990, as requested by the Department. The Department has published a fact sheet on the findings of the RI/FS. The RAP meeting with the community was held on November 17, 1990 and the RAP was subsequently approved in January of 1991.
The RAP proposed an asphalt cap on the site, groundwater monitoring, and a deed restriction. Groundwater monitoring is necessary as the region the site is located in is currently experiencing a drought; however, if this should change the groundwater table will rise, possibly impacting the conclusions of the RI. The deed restriction, protected the integrity of the cap by limiting land use and excavation of the waste.
The Department directed the RP to prepare a Remedial Design and Implementation (RD&I) plan. The plan included engineering specifications for the asphalt cap, permits, and a schedule for completion of the cap. The cap will be repaired as necessary; necessary; it is expected to require replacement every ten years. This operation and maintenance program will last for 20 years.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

OLYMPIC BASE (Continued) **S105689611**

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and

ANGELUS WESTERN PAPER FIBERS (Continued) **S101704329**

disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 09/19/2000
Comments: DTSC entered into a Voluntary Cleanup Agreement (Agreement) (Docket Number HSA-A 99/00-171) with Whittaker Corporation (Proponent) to conduct a Preliminary Endangerment Assessment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/13/2003
Comments: DTSC approves PEA Report. The PEA investigative activities conducted at the former smelting site identified arsenic (3410 mg/kg), and lead (25,700 mg/kg). DTSC concluded that the current conditions (building and pavement intact, no exposed soil) at the Site does not pose a potential threat to industrial workers. Due to elevated levels of the

EASTERN SMELTING AND REFINING SITE (Continued) **S106568216**

above-mentioned metals in the soil, if there is any demolition of the buidling or parking lot, or development at the Site, the responsible party(s) will be required to submit a Removal Action Workplan or Remedial Action Plan to DTSC for approval.

Completed Area Name: PROJECT WIDE

Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 05/31/1996
Comments: DTSC signed a Voluntary Cleanup Agreement with Santa Fe for the completion and review of a Preliminary Endangerment Assessment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/04/1996
Comments: DTSC reviewed a Preliminary Endangerment Assessment for the site under a Voluntary Cleanup Agreement. Based on the information and data presented, DTSC determined that the hazardous constituents remaining at the site do not constitute a threat to human health or the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 09/13/1995
Comments: The Department received a Non-Emergency Hazardous Substance Release Report dated January 31, 1995. Review of the document indicates that the site is contaminated with elevated levels of heavy metals such as lead, copper and zinc. Foundry operations existed at the site from at least 1906 until 1990, operated by W.G. Grant & Co. Santa Fe Railway is the current owner of the site. RP removed USTs from the site without any regulatory agency oversight. Due to evidence of a release, DTSC is recommending that a PEA be conducted to evaluate the site. On September 13, 1995, DTSC notified the RP thereof.

Waste2: Not reported
Primary Waste Type: Not reported
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

MID CITY IRON/METAL CORP (Continued) **S101584674**

Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by Eric Delgado (Manager). Contact Information: edelgado@sarecycling.com Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Background Info: The site is located at 590 South Santa Fe Avenue, Los Angeles, California. The site consists of two land parcels totaling approximately 2.68 actes of land and is located witin an indus-industrial portion of the City of Los Angeles. Historically the site has been used for chemeical or paint manufacturing.

BUTTERFIELD (SUN CHEMICAL CORPORATION) (Continued) **S105481902**

Not reported
The site was formerly under the oversight of the California Regional Water Quality Control Board (CRWQCB). (CRWQCB) has overseen the site investiation and remediation since approximately 1986.
Not reported
Previous sampling activities have confirmed both soil and groundwater contamination. Contaminants of concern identified in the groundwater and soil include benzene, ethyl benzene, 1,1-dichlorethane, 1,1-dichloroethene, 4-methyl-2-pentanone (MIBK), toluene, and total xylene. The toluene, and xylene appear to be primarily located within the groundwater beneath the northern portion of the site whereas MIBK has been identified in the groundwater along the southwest corner of the site and may extend beyond the site boundary.

Completed Date: 07/12/2017
Comments: DTSC site visit. Meeting with MTA and Arcadis regarding current and upcoming activities.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 01/25/2017
Comments: Investigation Report describes additional delineation of the Site's contamination. DTSC approved the Report.

Completed Area Name: Groundwater
Completed Sub Area Name: Not reported
Completed Document Type: Well Decommissioning Report
Completed Date: 01/25/2017
Comments: The Report documents destruction of three groundwater monitoring wells and two vapor extraction wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 12/24/2004
Comments: Plan proposed data gap investigation, air sparging and soil vapor extraction.

UNITED TECHNOLOGIES INMONT COR (Continued) **S101617157**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 12/24/2004
Comments: Addendum includes response to DTSC comments and additional data from pilot study.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Treatability Study Report
Completed Date: 06/27/2018
Comments: DTSC provided comments to Metro and will meet in August to discuss changes to ISCO use.

Comments: OK

Completed Area Name: PROJECT WIDE

UNITED TECHNOLOGIES INMONT COR (Continued) **S101617157**

Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 12/02/2013
Comments: Workplan approved to conduct sampling for data gaps.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 06/30/2014
Comments: Based on the elevated concentrations in the groundwater, DTSC requires submittal of a pilot study workplan that would evaluate potential remedies.

Completed Area Name: Shallow Soil
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 03/22/2016
Comments: The Completion Report summarizes the removal of underground storage tanks and shallow soil excavation. DTSC approved Report. Soil contamination at greater depth and groundwater contamination needs to be completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 11/17/2013
Comments: Sampling activities have begun to delineate contamination.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Community Profile
Completed Date: 03/30/2016
Comments: Profile details Site information and community involvement activities. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 09/02/2015
Comments: The Factsheet will be distributed to the community informing them of the public comment period for the Draft Removal Action Workplan (RAW). Public comment period will occur from September 7 to October 7, 2015. The RAW describes cleanup options for the Site soil and a pilot study to test options for the deeper soil and groundwater.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 09/01/2015
Comments: The Public Notice will be published in the local newspapers.

Completed Area Name: Groundwater
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 08/28/2014
Comments: Not reported

UNITED TECHNOLOGIES INMONT COR (Continued) **S101617157**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 04/08/2013
Comments: VCA signed by Butterfield owner and DTSC to conduct additional investigation and remediation, if necessary.

Completed Area Name: Soil
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Initial Study/ Environmental Impact Report
Completed Date: 08/12/2015
Comments: In accordance with CEQA, DTSC has reviewed the Environmental Impact Report (EIR) prepared by MTA for the MTA Westside Subway Extension Project (WSE) to ensure that CEQA requirements have been satisfied. The Butterfield/MTA Site will be developed as a maintenance yard for the WSE. The EIR included activities associated with the RAW and thereby evaluated environmental impact(s) from the Site. The EIR can be found on MTA s website: http://www.metro.net/projects/westside/final-eis-eir/

Completed Area Name: PROJECT WIDE

Comments: A PEA was performed. Soil sampling and analysis was conducted for PCBs, metals, VOCs, and TPH. The results showed that concentrations of PCBs and VOCs were found at the site. Soil contaminated with PCBs was removed from the site, and additional sampling was conducted. The additional sampling performed at the site confirmed that the low levels of PCBs and VOCs remaining on the site do not pose a human health risk as specified in DTSC's PEA manual.

Address: 719 TOWNE AVENUE
City,State,Zip: LOS ANGELES, CA 90021
Region: STATE
Facility Status: Open - Site Assessment
Status Date: 06/06/2013
Global Id: T10000004814
Lead Agency: LOS ANGELES RWQCB (REGION 4)
Lead Agency Case Number: Not reported
Latitude: 34.0392409
Longitude: -118.245909
Case Type: Cleanup Program Site
Case Worker: RV
Local Agency: Not reported
RB Case Number: 1290
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply, Contaminated Surface / Structure, Soil, Soil Vapor
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE), Chromium, Chromium VI
Site History: Plating operations started in the mid-1910s in the southwestern portion of the Site until 2005. Ace Plating owned and conducted plating related operations on the 11 contiguous parcels, specifically electrochemical coating of metal parts. Numerous assessments conducted at the site indicate that the soil is impacted with VOCs

ACE PLATING CO., INC. (Continued) **S105632824**

and metals. The soil vapor has been sampled throughout the Site with tetrachloroethene (PCE) concentrations at 5 feet below ground surface (bgs) ranging from 7.9 micrograms per liter (a%g/L) to 87 a%g/L. The soil vapor data is limited at depths greater than 30 feet bgs. At 60 feet bgs and below, PCE concentrations range from 39 a%g/L below the Assembly Room to 127 a%g/L offsite on Crocker Street. The lateral extent of shallow PCE greater than 12 a%g/L is only defined on the east side. The source of the PCE is unknown but slightly higher concentrations exist in the central portions of the Plating Rooms. Chromium concentrations ranged from 1.5 mg/kg to 4,300 mg/kg for total chromium and from 0.92 to 840 mg/kg for hexavalent chromium. The maximum concentrations were both collected from SSVW-2 at 1 foot bgs located in the alley between the Crocker Street and Towne Avenue buildings and is adjacent to the location of the former chromium tanks. Outside of the area impacted by the former chromium tanks, the maximum chromium concentration is 4200 mg/kg for total chromium and 94 mg/kg for hexavalent chromium at MW-1. Degreasers that contained PCE were utilized in Plating Rooms 1 and 2 from 1993 to 2001. The maximum PCE concentration is 0.150 mg/kg and was sampled 4 feet deep in the vicinity of the former nickel dip tank in Plating Room 2. Two groundwater monitoring wells have been installed. Hexavalent chromium was not detected above the laboratory detection limits in any of the groundwater samples collected. Tetrachloroethylene (PCE) and 1,1-dichloroethene are the only VOC detected in groundwater, with the maximum concentration detected in MW-3 at a concentration of 33 ug/L and 2.7 ug/L, respectively.

Completed Date: 06/25/1999

ALAMEDA CORRIDOR-SALE PARCEL 497B (Continued) **S106568223**

Comments: Remedial Action Plan and Remedial Design completed for Operable Unit No. 1. Remedial Action commenced on 06/26/99 to remove surface soils contaminated with lead, arsenic, and PCBs.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 04/23/1999
Comments: Remedial Investigation for Operable Unit 1 and Operable Unit 2 completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 02/05/1998
Comments: DTSC and the Alameda Corridor Transportation Authority executed a Voluntary Cleanup Agreement (VCA) for the site, which is a 4.4-acre parcel of the former California Reception Center site (aka State Surplus Sale Parcel 497). DTSC will oversee completion of a Remedial Investigation/Feasibility Study (RI/FS), remediation of the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Prospective Purchaser Agreement
Completed Date: 12/22/1998
Comments: Alameda Corridor Transportation Authority signed a Prospective Purchaser Agreement for the acquisition of State Sale Parcel 497-B.

Comments: Former name of this site was "California Reception Center - LAC". This 20+ acre site is being broken into two irregularly-shaped parcels, with no identifiable addresses. The establishment of 2 parcels will facilitate addressing future activities. This site will now be known as Los Angeles CRA - Sale Parcel "497A" and represents one of the parcels. The other Parcel is Alameda Corridor-Sale Parcel "497B". CalSites # 19400011. Parcel "497A" will be the project of the Los Angeles Community Redevelopment Agency (CRA). CRA, in their "Brownfields Program" will complete an RI/FS on the 497A Parcel, obtain a purchase option from the State of California, and solicit foster redevelopment of the site. Parcel "497B" will be the project of the Alameda Corridor Transportation Authority (ACTA). Please see CalSites #19400011 for further information on Parcel "497B".

Alternate Address:	2435 E. WASHINGTON BLVD.
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The historic usage of the site is a railroad maintenance yard. Chlorinated solvents TCE and PCE have been identified in the soil along the border of the site with 2425 E. Washington Blvd. Possible pathways for contamination migration are soil and groundwater. Possible receptors are on-site workers and the population which may drink contaminated drinking water extracted from nearby drinking wells. Some shallow soil gas sampling has been performed on-site in 1995. This survey was concentrated along the border of 2455 E. Washington Blvd. Results showed decreasing contaminant concentrations with increasing distance from 2425 E. Washington Blvd. property boundry. No source was identified at the Amtrak property. Not reported An approximately 50-acres site located in an industrial/ commerical area of Los Angeles, one-half mile south of the Santa Monica freeway. The site is also known as the Redondo Junction Facility. Various buildings are located on the property for support and maintenance of trains. Rail Spurs run throughout the property in a general north-south direction. The Los Angeles river is located directly to the east. Previous owner of the property from 1885 to 1976 was Atchison, Topeka, and Sante Fe Railroad Corporation.

AMTRAK (Continued) **S101586462**

Not reported
Investigation of this site is key to determining the extent of soil gas and groundwater contamination found on the adjacent property 2425 E. Washington Boulevard, known as State Surplus Parcel (SSL-497). A draft VCA was prepared by DTSC for recovery of oversight costs. A limited subsurface soil gas survey is proposed as a first step to determine extent of chlorinated solvent contamination and also to identify any contributing sources.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Fiscal Year:	2013
Federal Facility ID:	CA9799F5509
RAB:	Not reported
NPL Status:	Not Listed
Description:	This 3.61-acre site is located in downtown Los Angeles, California, on the south side of 20th Street between Long Beach Boulevard and Alameda Street, and at the northeast corner of the intersection of 20th and McGarry Street, in the County of Los Angeles. The property is owned by several private entities.
History:	In April 1942, the Army acquired 3.45 acres in downtown Los Angeles by lease from the Mack International Motor Truck Company for use as a medical depot. An additional 0.16 acres located across the street at the northeast corner of 20th and McGarry was obtained by lease from the City of Los Angeles.

FINDS:

Registry ID: 110002138696

Environmental Interest/Information System
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

SHELMAC CORP (Continued) **1000289756**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/10/1993
Comments: On September 1, 1993, the Department completed review of the PEA. Based on the information provided in the PEA report, the site does not appear to constitute a threat to human health/or the environment. Therefore, the Department concurred with the recommendation that "No Further Action" is warranted at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 04/19/1993
Comments: On March 29, 1993, the Department received the Notice of Intent to Initiate a PEA. Historical activities include machine shops, tool & die making, agricultural products and clothing manufacturing. 1910-20, the site was occupied by Kellifer Manufacturing Company. 1921-59, Tlomb Tool Co. (machine shop) was at the site. From 1960-1980 Troto Tool & Machine Shop was at the site. In 1980 the new building constructed and Liquette Clothing Company currently using for clothes manufacturing. Currently, the preperty is on sale. The preliminary soil screening investigation at the site revealed that the fill dirt used in construction of foundation found to carry chemical residues. The fill dirt was contaminated with TRPH, halogenated organic compounds such as TCE & PCE. The site is completely covered with asphalt. A PEA is recommended due to the presence of contaminants at the site.

ROYAL PLATING CO (Continued) **1000148255**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 07/03/2012
Comments: Inspection completed for the 2011/2012 fiscal year. No violation of LUC was observed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 10/18/2012
Comments: Inspection Checklist sent to DTSC by owner. No violations of the LUR exist. Follow up inspection to be completed next fiscal year (2013-2014) along with 5 year Review.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 05/04/2016
Comments: Annual inspection was conducted.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 12/26/2017
Comments: Annual Inspection Report submitted by RP.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 03/20/2001
Comments: Deed Restriction entered.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 01/02/1997
Comments: DTSC and Alan Bailey, the property owner executed a Voluntary Cleanup Agreement for a Preliminary Endangerment Assessment for the site property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 07/18/2006
Comments: Not reported

Completed Area Name: PROJECT WIDE

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FIRST NATIONWIDE BANK (Continued) **S100714946**

Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	04/26/1994
Comments:	PEA reviewed by DTSC staff. Levels of contaminants observed are protective of human health and the environment DTSC recommends No Further Action.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	11/30/1993
Comments:	The site is identified from RP, who likes to submit a PEA. The site consists of 1.53 acres of land and includes a 75,000 sq.ft. two storey building. Phase I investigation revealed no information regarding hazardous waste activities conducted at the site. Further sampling reveals that concentration of oil & grease ranged from 590 to 9900 mg/kg and perchloroethylene (PCE) ranged from 0.89 to 17.0 mg/kg. Due to the evidence of on-site contamination, Department recommends a PEA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/19/2019

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 06/03/2019

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

Northwest Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

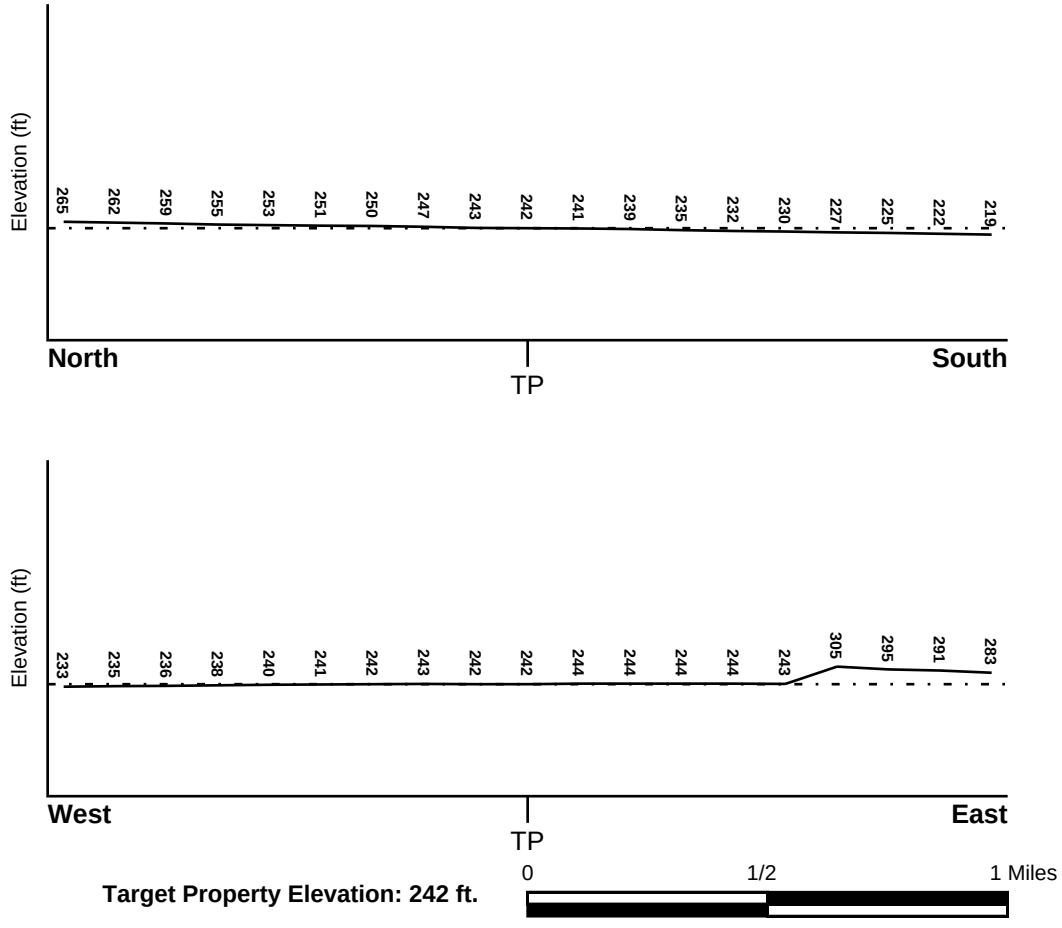
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 242 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1638F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1620F	FEMA FIRM Flood data
06037C1636F	FEMA FIRM Flood data
06037C1637F	FEMA FIRM Flood data
06037C1639F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LOS ANGELES	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles WSW
Site Name:	SUNGRO CHEMICALS
Site EPA ID Number:	CAD009689696
Surficial Aquifer Flow Dir.:	Southeast
Inferred Depth to Water:	approximately 221 feet.
Hydraulic Connection:	A clay layer exists between the ground surface and the water table in the site vicinity.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/4 - 1/2 Mile SE	Not Reported
A2	1/2 - 1 Mile WSW	Not Reported
A3	1/2 - 1 Mile WSW	Not Reported
1G	1/2 - 1 Mile WSW	Not Reported
2G	1/2 - 1 Mile WSW	Not Reported
3G	1/4 - 1/2 Mile SE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

APPENDIX I

Questionnaires

Environmental Solutions

Assessment – Engineering - Management

Environmental Solutions is conducting a Phase I ESA of the site located at Sacramento and Lawrence Streets, Los Angeles, California, hereinafter referred to as the, "Property." Please answer the following questions to the best of your knowledge, scan and e-mail to: ***es65@pacbell.net*** *or FAX to:* ***(714) 593-0012.***

1) Is the property, past or present, been occupied by a tenant using significant amounts of hazardous materials or petroleum products?

YES ☐ NO/DON'T KNOW ☒ IF YES, EXPLAIN:

2) Are there any adjoining sites, past or present, occupied by a tenant using significant amounts of hazardous materials or petroleum products?

YES ☐ NO/DON'T KNOW ☒ IF YES, EXPLAIN:

3) Are you aware of spills or releases on the Property or adjacent sites?

YES ☐ NO/DON'T KNOW ☒ IF YES, EXPLAIN:

4) In regards to the Property, are there any environmental liens or Activity or Use Limitations (ALUs) such as engineering controls, land use restrictions or institutional controls in place or on file under federal, tribal, state or local law?

YES ☐ NO/DON'T KNOW ☒ IF YES, EXPLAIN:

5) Are there clarifiers or oil water separators on the Property? If yes, please provide the name of the firm that cleans them and how often.

YES ☐ NO/DON'T KNOW ☒ IF YES, PROVIDE NAME OF COMPANY AND HOW OFTEN CLEANED :

6) Have there been any pits, ponds, or lagoons located on the Property?

YES ☐ NO/DON'T KNOW ☒ IF YES, EXPLAIN: Phase II report

7) Have there been any Underground Storage Tanks (USTs) or Aboveground Storage Tanks (ASTs) located on the Property?

YES ☒ NO/DON'T KNOW ☐ IF YES, EXPLAIN: Phase I perchlorate tanks identified, then Phase II, removed.

8) Has the sale price of the Property been discounted for any environmental reason?

YES ☐ NO/DON'T KNOW ☒ IF YES, EXPLAIN:

9) Have you been informed of any environmental violations with respect to the Property?

YES ☐ NO/DON'T KNOW ☒ IF YES, EXPLAIN:

2601 E. Chevy Chase Drive., Suite A, Glendale, CA 91206
T: 818-243-2656 – E: es65@pacbell.net

10) Do you have knowledge of any past environmental reports performed on the Property such as: an environmental site assessment, asbestos survey, lead based paint survey, mold testing, soil and/or groundwater testing?

YES ☒ NO/DON'T KNOW ☐ IF YES, DESCRIBE THE REPORT(S) AND SEND ELECTRONIC COPY(S):

See Question 7

11) Do you know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of a hazardous substance or petroleum product involving the Property?

YES ☐ NO/DON'T KNOW ☒ IF YES, EXPLAIN:

12) Does the Property discharge any industrial wastewater, other than stormwater, into a sanitary sewer system?

YES ☐ NO/DON'T KNOW ☒ IF YES, EXPLAIN:

13) What is the reason for having the Phase I Environmental Site Assessment performed?

☐ Purchase ☐ Lease ☒ Other (please attach explanation) Refinance of Loan

☐ Sale ☐ Loan

14) Are there hydraulic lifts and or elevators on the subject property? If so, please provide the number of lifts and the name of the company that has been hired to maintain the hydraulic lifts or elevators.

YES ☐ NO/DON'T KNOW ☒ IF YES, NUMBER OF LIFTS AND NAME OF MAINTENANCE COMPANY:

15) Has the hydraulic lift/elevator maintenance company ever indicated that there had been significant releases of hydraulic fluid from the system(s)?

YES ☐ NO/DON'T KNOW ☐ IF YES, EXPLAIN:

16) How many years of firsthand knowledge do you possess regarding the Property: 20 + Years

17) Please explain your relationship to the Property (owner, tenant, purchaser, real estate agent), the company you represent, and your title: Owner

18) Please provide, to the best of your knowledge, a description of the present and historical uses and/or tenants on the Property: Produce warehouse

19) Please list the Property owner's name on record along with a representative's name and phone number:
James Zaferis and Evangelos Ambatielos / 1899 Sacto, LLC

Environmental Solutions
Assessment – Engineering - Management

Environmental Solutions is conducting a Phase I ESA of the site located at Sacramento and Lawrence Streets, Los Angeles, California, hereinafter referred to as the, "Property." Please answer the following questions to the best of your knowledge, scan and e-mail to: ***es65@pacbell.net*** *or FAX to:* ***(714) 593-0012.***

1) Is the property, past or present, been occupied by a tenant using significant amounts of hazardous materials or petroleum products?

YES ☐ NO/DON'T KNOW ☑ IF YES, EXPLAIN:

2) Are there any adjoining sites, past or present, occupied by a tenant using significant amounts of hazardous materials or petroleum products?

YES ☐ NO/DON'T KNOW ☑ IF YES, EXPLAIN:

3) Are you aware of spills or releases on the Property or adjacent sites?

YES ☐ NO/DON'T KNOW ☑ IF YES, EXPLAIN:

4) In regards to the Property, are there any environmental liens or Activity or Use Limitations (ALUs) such as engineering controls, land use restrictions or institutional controls in place or on file under federal, tribal, state or local law?

YES ☐ NO/DON'T KNOW ☑ IF YES, EXPLAIN:

5) Are there clarifiers or oil water separators on the Property? If yes, please provide the name of the firm that cleans them and how often.

YES ☐ NO/DON'T KNOW ☑ IF YES, PROVIDE NAME OF COMPANY AND HOW OFTEN CLEANED :

6) Have there been any pits, ponds, or lagoons located on the Property?

YES ☐ NO/DON'T KNOW ☑ IF YES, EXPLAIN:

7) Have there been any Underground Storage Tanks (USTs) or Aboveground Storage Tanks (ASTs) located on the Property?

YES ☐ NO/DON'T KNOW ☑ IF YES, EXPLAIN:

8) Has the sale price of the Property been discounted for any environmental reason?

YES ☐ NO/DON'T KNOW ☑ IF YES, EXPLAIN:

9) Have you been informed of any environmental violations with respect to the Property?

YES ☐ NO/DON'T KNOW ☑ IF YES, EXPLAIN:

2601 E. Chevy Chase Drive., Suite A, Glendale, CA 91206
T: 818-243-2656 – E: es65@pacbell.net

10) Do you have knowledge of any past environmental reports performed on the Property such as: an environmental site assessment, asbestos survey, lead based paint survey, mold testing, soil and/or groundwater testing?

YES ☐ NO/DON'T KNOW ☑ IF YES, DESCRIBE THE REPORT(S) AND SEND ELECTRONIC COPY(S):

11) Do you know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of a hazardous substance or petroleum product involving the Property?

YES ☐ NO/DON'T KNOW ☑ IF YES, EXPLAIN:

12) Does the Property discharge any industrial wastewater, other than stormwater, into a sanitary sewer system?

YES ☐ NO/DON'T KNOW ☑ IF YES, EXPLAIN:

13) What is the reason for having the Phase I Environmental Site Assessment performed?

☐ Purchase ☐ Lease ☐ Other (please attach explanation)

☐ Sale ☑ Loan

14) Are there hydraulic lifts and or elevators on the subject property? If so, please provide the number of lifts and the name of the company that has been hired to maintain the hydraulic lifts or elevators.

YES ☐ NO/DON'T KNOW ☑ IF YES, NUMBER OF LIFTS AND NAME OF MAINTENANCE COMPANY:

15) Has the hydraulic lift/elevator maintenance company ever indicated that there had been significant releases of hydraulic fluid from the system(s)?

YES ☐ NO/DON'T KNOW ☑ IF YES, EXPLAIN:

16) How many years of firsthand knowledge do you possess regarding the Property:

0

17) Please explain your relationship to the Property (owner, tenant, purchaser, real estate agent), the company you represent, and your title:

Lender

18) Please provide, to the best of your knowledge, a description of the present and historical uses and/or tenants on the Property:

Fruit or Vegetable Distributors

19) Please list the Property owner's name on record along with a representative's name and phone number:

I R I S E N V I R O N M E N T A L

MEMORANDUM

To: Summer Nastich, Esq., Smith Trager, LLP
Ned Spurgeon, Borchard Foundation

From: Timothy F. Wood, P.G., C.HG., Iris Environmental

Date: January 29, 2014

Subject: Limited Environmental Assessment
Borchard Foundation Property
1805, 1811, 1825, and 1899 Sacramento Street
Los Angeles, California

Iris Environmental has prepared this memorandum at the request of Summer Nastich of Smith Trager, LLP (Smith Trager) to summarize our findings from a limited environmental assessment of the Borchard Foundation property located at 1805, 1811, 1825, and 1899 Sacramento Street in Los Angeles, California (the Site). The limited environmental assessment was conducted in accordance with our January 2, 2013 Proposal for Limited Environmental Assessment for the Site, which was executed by Smith Trager the same day and included the following tasks:

- Historical Information Review;
- Site Visit;
- Interviews with Individuals Knowledgeable About the Site;
- Review of Regulatory Records; and
- Review of City of Los Angeles Building Department Records.

In addition, based on observations made during the Site visit and discussion with Smith Trager, Iris Environmental added to the scope of services to review City of Los Angeles Fire Department records for underground storage tank (UST) records.

The findings from completion of these five tasks, and the key issues identified, are discussed below. An aerial photograph identifying the Site buildings is included as Attachment A and photographs taken during the Site visit are included as Attachment B to this memorandum.

Site Description

The Site is located in a primarily industrial area of Los Angeles approximately ¼-mile north of the 10 Freeway and ¾-mile west of the junction of the 5 and 10 Freeways. The Site consists of 2 buildings, the western of which has the address 1805, and the eastern of which includes 1811 in its western portion and 1825 in its eastern portion. The 1825 portion reportedly also has the address of 1899, which was observed on the exterior of the building during the Site visit. A former railroad spur is present immediately south of the 1825 building, which appears to have connected across Sacramento Street to the South of the Site along a southeast orientation. The tracks within the spur appear to have been removed, though the spur area surface was unpaved and primarily gravel (Attachment A).

Historical Information Review

Historical aerial photographs, topographic maps, and Sanborn Fire Insurance maps were reviewed to evaluate the Site use history.

Aerial Photographs and Topographic Maps:

A 1948 aerial photograph shows that the 1805 building had not yet been constructed; however, the rail spur to the south is evident. A small rectangular building or trailer-sized object may be located in the southeast portion of the land area that currently is developed with the 1805 building. The 1805 building area is darker than surrounding areas and varied in color; though it is difficult to discern the surface due to the relatively poor quality and lack of focus in this photograph. The 1811 and 1825/1899 building property is developed with a structure in approximately the same location and of the same approximate size as the current building. In addition, two or three smaller buildings are located west of the larger building in the area that currently is a driveway between the 1805 and 1811 buildings. The surrounding area has numerous rail spurs going to various properties and the area therefore appears to be primarily used for industrial purposes.

A 1952 aerial photograph shows the Site configuration similar to the 1948 photograph; however, the western triangular portion of the 1805 building has been constructed. Of the two to three smaller buildings west of the larger building at the current location of the 1811 and 1825/1899 in the 1948 aerial photograph, one remains closest to the eastern Site buildings. Numerous railcars are located on the rail spur south of the Site and on surrounding rail spurs. It appears that trucks are pulled up to eastern side of 1805 building in a configuration typical for a loading dock. The area between the Site buildings appears to likely be paved. A building has also been constructed to the South of the 1805 building and rail spur.

A 1956 topographic map depicts the Site and surrounding area with numerous rail lines and spurs into properties, including the spur south of the Site. A 1968 topographic map depicts three buildings on the Site, which appear to be those shown on the 1952 aerial photograph. Additional structures are depicted on surrounding properties. Topographic maps from 1975, 1982, 1987, and 1994 depict the same in the same configuration; however, aerial photographs more recent than 1952 depict changes to the Site as described below.

An aerial photograph from 1972 depicts the Site in the same general configuration as it appeared during the Site visit on January 3, 2014. The eastern portion of the 1805 building has been constructed, and the 1811 and 1825/1899 building has either been reconstructed within a similar footprint or features on the roof have been changed. The smaller building west of the 1811 building is no longer present. Trucks appear to be pulled up to the eastern side of the 1805 building in a manner typical for loading. Rail cars are evident on the spur south of the 1805 building. An additional building has been constructed south of the 1805 building and south of Sacramento Street. A 1980 aerial photograph depicts the Site and vicinity in the same general configuration as in 1972.

Aerial photographs from 2003, 2004, 2005, and 2013 depict the Site similarly to in 1972 and its current configuration. Additional buildings have been constructed since 1972 on surrounding properties.

Sanborn Fire Insurance Maps:

The 1906 map shows the Site vicinity as a sparsely developed residential neighborhood. One or more residential lots and associated dwellings appear to occupy the eastern portion of the Site and undeveloped lots appear to occupy the western portion of the Site.

The 1950 map shows the western portion of the 1805 building in use as a Magazine and Paper Warehouse with the rail spur tracks to the south. The buildings identified on the eastern portion of the Site are identified as Truck Companies Storage and Service, Cleaning, and the Pacific Diamond Burlap Bag Manufacturing and Mending. Sewing and patching areas and a boiler room are identified. A trucking yard is identified between the Site buildings. Map from 1953, 1954, 1959, 1960, 1967, and 1970 show the Site similarly with no significant changes.

Site Visit

On January 3, 2014, Mr. Timothy Wood of Iris Environmental was joined by Mr. Ned Spurgeon, who is the President of the Borchard Foundation, which reportedly owns the Site. The 1825 building was primarily being used for fresh produce storage, including in cold rooms. The western-most portion of the 1825 building and the exterior loading dock adjacent to the former rail spur was separated from the remainder of the 1825 building with a tarp, and wood furniture manufacturing operations were being performed. Cans of mineral spirits and stains were observed on the ground in the furniture manufacturing area, both inside and outside on the loading dock, and what appeared to be a 16-ounce water bottle of mineral spirits was observed being dumped out onto the ground of the rail spur by an employee of the furniture business.

The 1811 portion of the Site was being utilized for fresh mushroom storage. Access was not provided to the 1825/1899 portion of the eastern building, though it was reported by Mr. Spurgeon to also be in use for cold storage of fresh produce.

Two approximately 12-inch diameter flush-mount metal vaults were observed in the asphaltic pavement approximately 5 feet apart in front of one of several rollup doors to the 1811 building, one of which was stamped “Fill Box” in its rim. According to Mr. Spurgeon, the 1811 building was formerly used as a truck repair facility and the vaults are access ports to a UST that

historically was used for fueling trucks that were part of an on-Site trucking business. In addition, Mr. Spurgeon pointed out a similar vault inside the 1811 building adjacent to the rollup door in front of the reported UST, which appeared to be full of debris. Adjacent to the interior vault cover were two approximately 2-inch diameter metals pipes that had been cut off approximately 18 inches above grade. Mr. Spurgeon indicated that the property owner had operated the trucking business and truck repair facility in the 1970s and had installed a waste fluid collection system for the truck repair facility, to which the interior vault and piping were related. The piping reportedly extends to the north side of the 1811 building (though it is not clear whether the piping extended beneath the building or along its exterior) to a waste collection tank or sump installed below grade. At the time of the Site visit, the area north of the building was covered with Styrofoam wall panel partitions for the existing produce cold storage business. A portion of what appeared to be a storm drain grate and subgrade vault or multi-stage clarifier was partially observed under the Styrofoam panels.

Interviews with Individuals Knowledgeable about the Site

Mr. Spurgeon indicated that the Site was acquired by Albert Borchard (doing business as Conejo Company) and that different corporations owned businesses on the Site. Tilt-up buildings reportedly were constructed in the 1950s, 1960s, and into the early 1970s. Albert Borchard died in 1983 and the property was put into the ownership of the Borchard Foundation, for which Mr. Spurgeon serves as president. The property has reportedly been used for produce storage and distribution for several decades, except for the truck repair operations in the 1811 building, which reportedly occurred from about the early to late 1970s. Mr. Spurgeon was not previously aware of the small furniture manufacturing operations in the 1805 building and instructed the employees of the furniture operations to cease business operations and discarding of waste cleaning solvents onto the ground.

No manufacturing has been performed since Mr. Spurgeon because associated with the property in the early 1970s. The 1805 building is used for melon warehousing by United Melon, with the exception of the previously unknown small furniture manufacturing area in the western portion of the building and on the western loading dock to the former rail spur. The former rail spur south of the 1805 building is part of the Site.

The 1825/1899 tenant space along Sacramento Street is a cooler warehouse and is used for mushroom warehousing. The western portion of the building (1811) formerly was used as a truck maintenance facility in the 1970s and the eastern portion (1825/1899) for business offices. The truck maintenance facility performed oil changes, greasing, fueling, and other truck maintenance activities. Mr. Spurgeon is not aware of whether the former UST was removed, but based on the presence of the access vaults, one of which is labeled “Fill Box,” it appears it remains in the ground. The owners of United Melon reportedly informed Mr. Spurgeon that the vault and pipes inside the 1811 building are related to a system that collected used oil and other maintenance fluids and piped them to the north side of the building to a waste collection sump or clarifier. Mr. Borchard reportedly sold the trucking business in the late 1970s and discontinued vehicle maintenance at the Site. During operation, a vacuum extraction truck would reportedly come clean out the waste sump/clarifier periodically.

Review of Regulatory Records

The site was not identified on any of the environmental databases searched for this assessment. Numerous properties in the Site vicinity are listed as using chemicals and generating hazardous waste.

Review of City of Los Angeles Building Department (CLABD) and Fire Department (CLAFD) Records

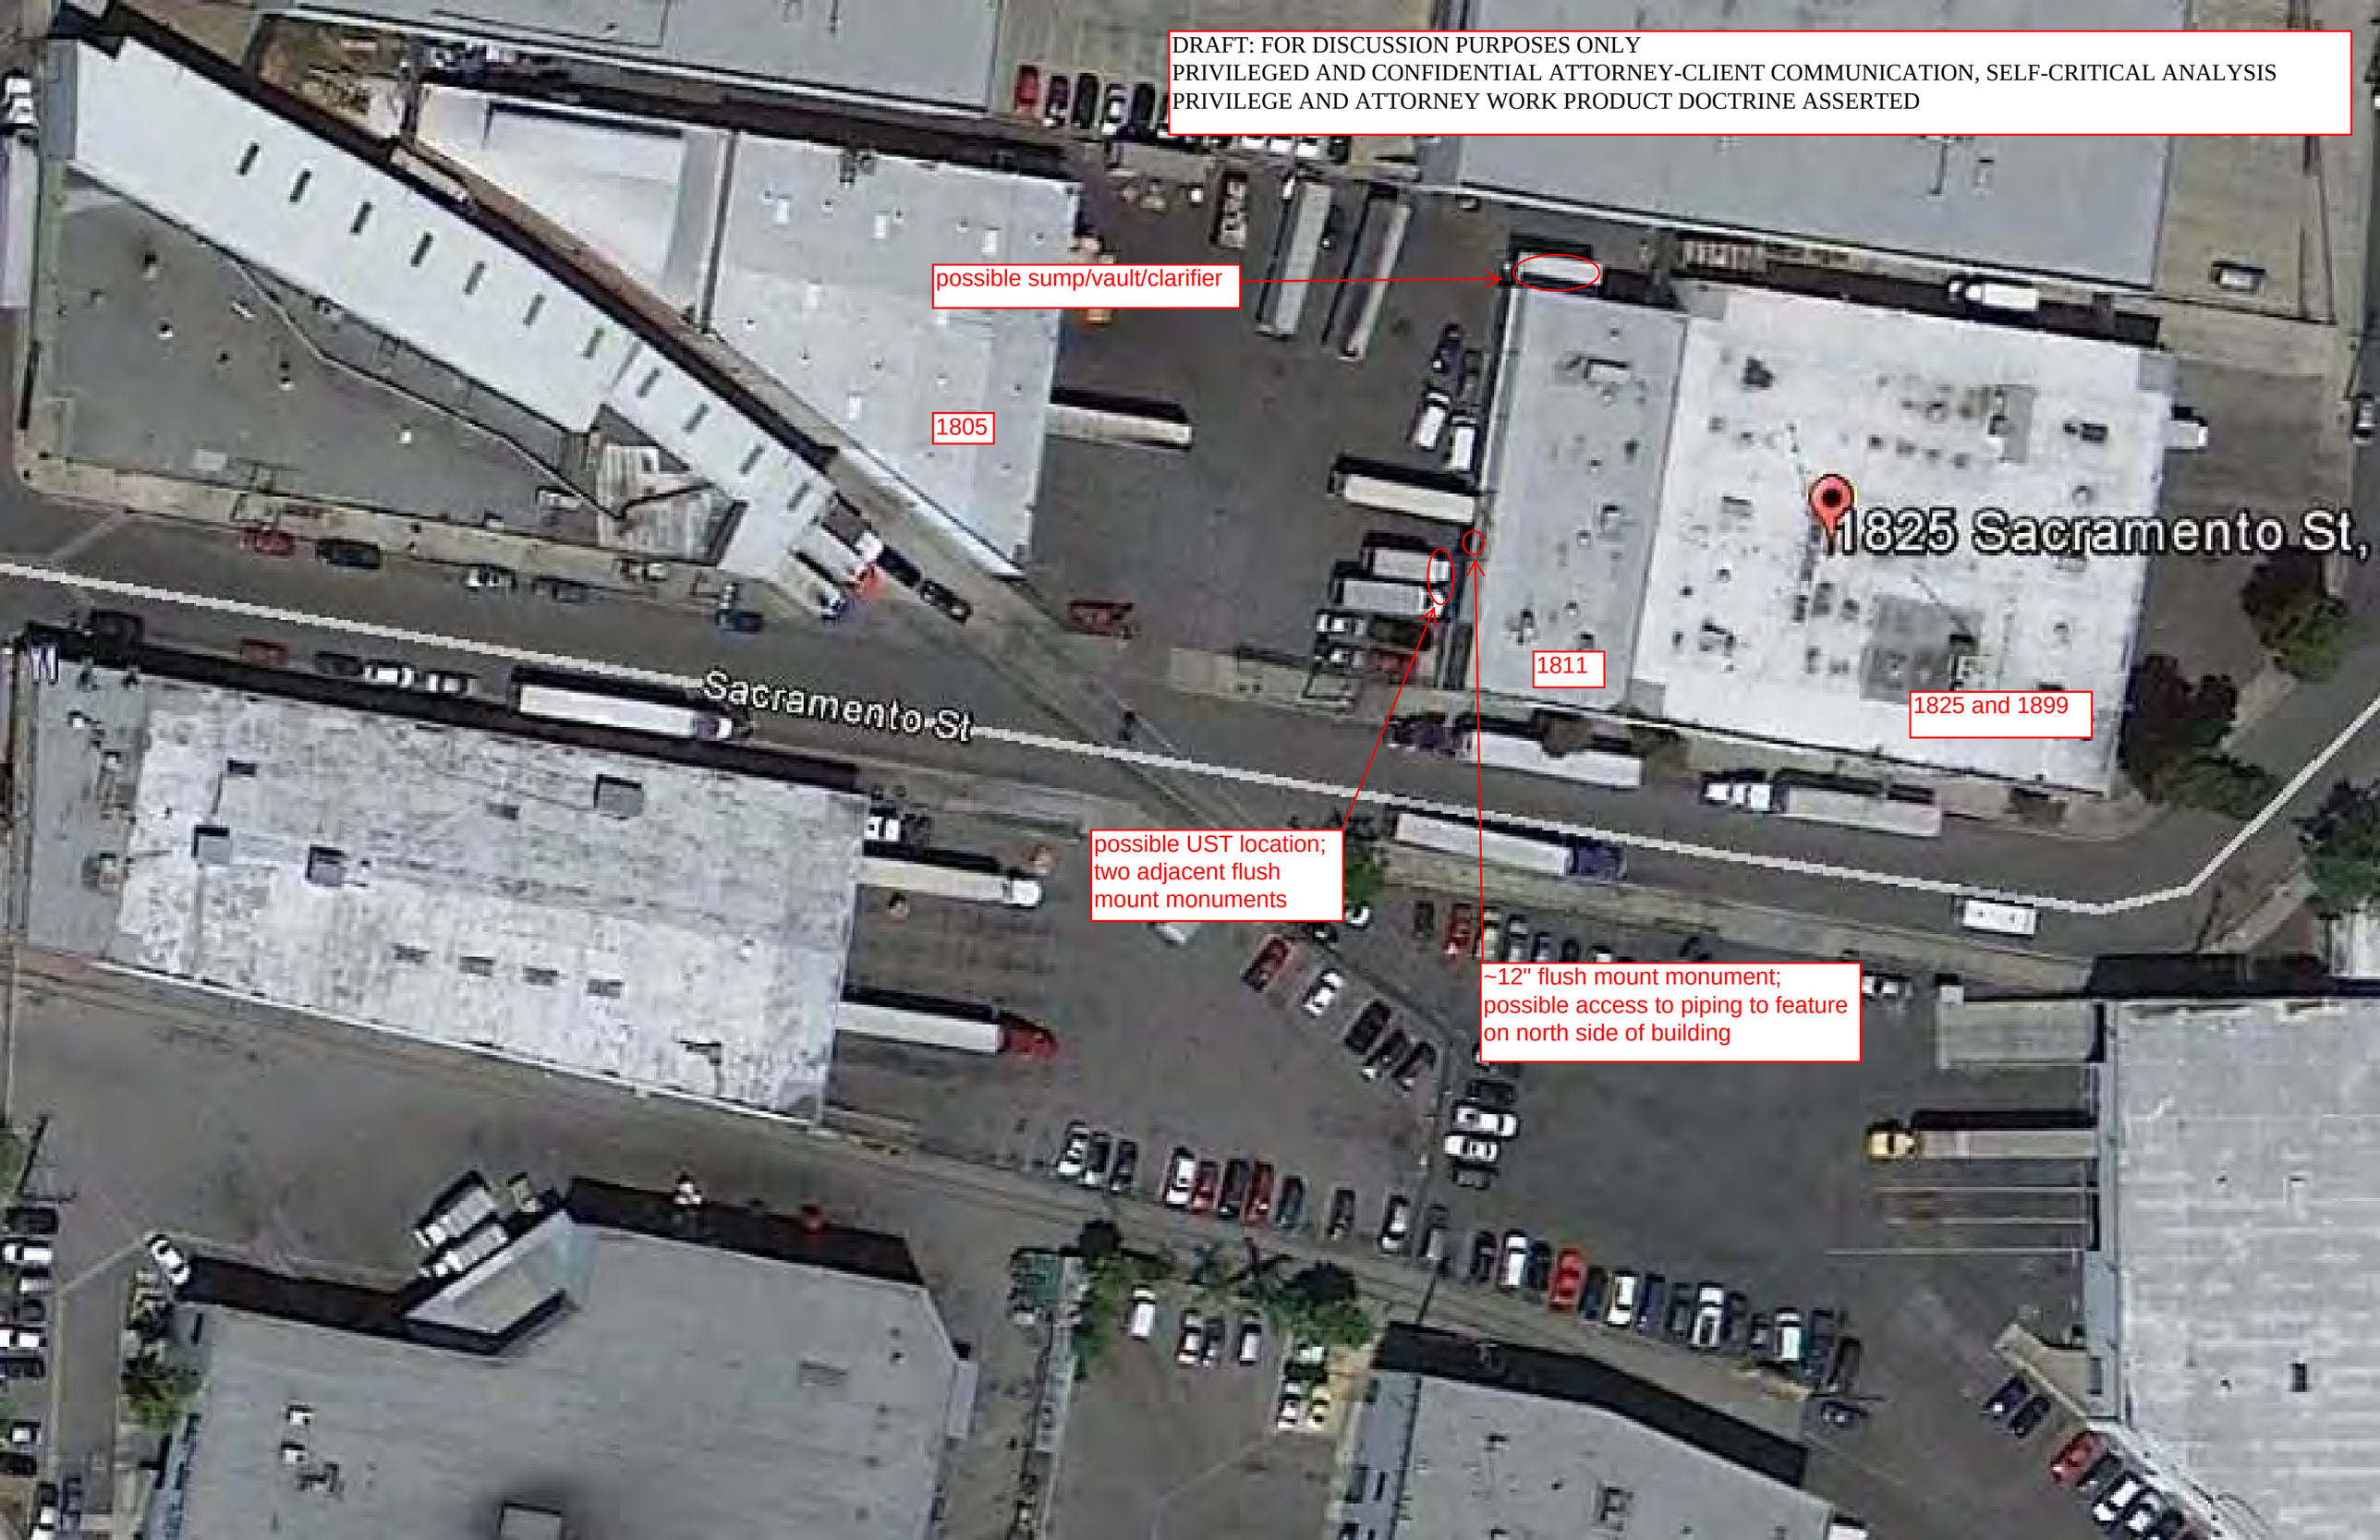
No records regarding the reported fuel UST and subgrade waste liquid collection system (vault/clarifier/UST) were identified with the CLABD, or within the CLAFD hazardous materials division, plan check/underground tank division, or industrial/commercial division.

Permits with the CLABD Hazardous Materials Unit indicate that United Melon Distributors Inc. has a permit for flat water based paint, but that it was inactivated on April 21, 1994 and the last inspection date is listed as May 2, 1994.

Permits from CLABD included the following:

- The 1805 property was listed as a Dwelling in 1914.
- An application to erect a new building in 1949 for the 1811 property lists the owner as General Trucking Service.
- 1805 to 1811 was owned by General Tucking Co. in 1958 and in 1960, which occupied the garage building.
- The 1811 and 1825 property is listed as "office, warehouse, and service garage" in September 1970.
- An application for the 1811 building property to be demolished and cleared was issued in 1971.
- In August 1971, the 1811 to 1825 property is listed as a one story office, warehouse, and service garage and owned by Al Borchard.
- The 1899 property is listed as a produce warehouse owned by Season Produce in July 1984. In September 1993 the 1899 property is listed as being used for retail and owned by Bob Horwath.
- In March 2000, the 1811 building is indicated as having a change in use from service garage to cold storage warehouse with two walk-in coolers.

Key Issues Identified



1. The furniture manufacturing operations in the western portion of the 1805 building were observed to dump used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest portion of the Site. It is not evident how long this operation has been going on at the Site, but it is likely that this inappropriate disposal practice was previously conducted before the Site visit. The observed dumping of waste solvent onto the unpaved ground surface is an environmental concern and will cause environmental impairment, the extent of which is dependent on the duration, volume, and locations of

past dumping. Further inquiry with this tenant is recommend to better understand their operations and disposal of waste solvent and to ensure no further dumping occurs. Depending on additional information obtained, further investigation into this matter may be prudent.

2. The apparent fuel UST, waste fluid disposal collection tank/sump/clarifier, and associated piping appear to have been installed in the 1970s during the use of the 1811 building as a truck maintenance facility. The remaining presence and unknown conditions and contents, if any, represent an environmental concern. Waste fluids commonly contained cleaning solvents and oils from truck repair operations. USTs and other subsurface waste collection systems, including associated piping, commonly leaked from corrosion and faulty joints and welds, and releases also commonly occurred from overfilling and surface spills. Based on observations made during the Site visit, it appears these features are likely not in compliance with laws governing USTs. These features should be brought in compliance with current regulations or removed from the Site under permit from the CLAFD UST Program, which administers and enforces Federal and State laws and regulations and local ordinances for the construction/installation, modification, upgrade, and removal of USTs in the City of Los Angeles. Testing of the soil for environmental impacts beneath the UST(s) will be required by the CLAFD, and depending on the results, additional environmental investigation and potentially mitigation could be required. It is likely that the cost to remove the observed structures will be on the order of $50,000 to $100,000 or potentially higher, without costs associated with environmental impacts. Additional costs for environmental investigation and mitigation will be dependent on conditions encountered during removal of the subsurface features.

INTRODUCTION

Andersen Environmental presents this Phase II Environmental Site Assessment (ESA) Report performed at 1805, 1811, 1825, and 1899 Sacramento Street in Los Angeles, California (Site). Based on our review of available site documents and the performance of limited site reconnaissance, reported dumping of used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest portion of the site, limited surface staining in the central portion of the site, an underground storage tank (UST), and a clarifier have been identified as items of environmental concern at the property. UST and clarifier assessments were not included in this Phase II ESA.

Andersen Environmental has performed soil and soil vapor sampling in the vicinity of the reported dumping and surface staining to evaluate whether mineral spirit dumping has significantly impacted the subsurface of the property. Andersen also directed a geophysical survey in an attempt to determine the approximate size and orientation of the UST and determine if there are any other USTs in the immediate vicinity.

SITE INFORMATION

SITE LOCATION AND DESCRIPTION

The Site is located on the north side of the Sacramento Street, east of the intersection of Sacramento Street and Wilson Street, in the City of Los Angeles. The Site is approximately 77,150 square feet (1.77 acres) (Figure 2). The property is occupied by an 11,000 square foot warehouse structure on the eastern half and a second 26,800 square foot warehouse structure to the west. The remaining portions of the property consist of asphalt-paved, concrete-paved, and unpaved areas. The surrounding area is mostly used for commercial and industrial purposes. According to the Los Angeles County Assessor's Office, the Site is located in the City of Los Angeles and is described by the Assessor's Parcel Numbers: 5166-030-008 and -009.

SITE SETTING

The elevation of the Site is approximately 240 feet above sea level (USGS Los Angeles, CA 7.5 minute topographic quadrangle). Based on our review of groundwater data presented in the State Water Resources Control Board (SWRCB) Geotracker website, groundwater was encountered at a leaking underground storage tank site (180 South Doheny Drive) approximately 2,000 feet northeast of the Site at approximately 25-feet below ground surface (bgs). Based on regional groundwater data, regional groundwater flow direction is estimated to be to the south; however, local groundwater flow direction may vary.

FIELD ACTIVITIES

GEOPHYSICAL SURVEY

On May 15, 2014, Andersen Environmental directed a geophysical survey in the vicinity of the suspected UST fill ports and clarifier observed at the subject property. The survey was performed to assess the presence of buried USTs and/or backfilled excavations associated with UST removal, as well as the presence of detectable underground utilities in the vicinity of suspected fill ports and clarifier features. The survey included the use of a Geonics model EM61 time domain instrument (EM), Fisher M-Scope TW-6 pipe and cable locator, RD4000 line tracer, Schonstedt GA-52C magnetic gradiometer, and GSSI SIR 3000 Ground Penetrating Radar (GPR) unit using a 400 MHz transducer.

Visual evaluation of the possible fill boxes and fill ports revealed three apparent fill ports outside of the building, three apparent vent lines on the side of the building, and a possible remote fill located inside of the

building. The results of the geophysical survey revealed the presence of an additional possible fill port, two large EM anomalies, and a GPR anomaly (Figure 2). Several additional high EM responses were also observed at the site; however these responses are attributed to the presence of reinforced concrete, building elements, various utility lines/risers, and chain link fencing. It should be noted that the presence of existing structures and surface objects (i.e., metal fencing, buildings components, etc.) potentially limited the survey. Where obstructions were present subsurface data could not be collected. Moreover, EM and magnetic responses produced by metal surface objects and buried utility lines/pipes can potentially obscure subsurface features. Radar penetration at the site was typically on the order of 2 to 3 feet below the ground surface; therefore, objects below this depth would not have been imaged with GPR.

GPR traverses conducted in the vicinity of the visible fill ports were inconclusive with respect to the quantity, location, and orientation of the USTs. However, a possible fill port buried below the asphalt was imaged with the GPR near the two existing fill ports located adjacent to the building. In addition, the three vents outside the building appear to extend a short distance west of the building toward these fill ports. GPR also indicated a fourth line extending from the possible remote fill inside of the building west toward the fill ports. A possible concrete apron just below the asphalt was also observed in the GPR images collected from around the fill ports. One of the large EM anomalies was detected in the area of the fill port located closer to Sacramento Street. This feature is likely related to the presence of a large UST. The other large EM response/anomaly is located adjacent to the building and encompasses the previously described vent lines, the two visible fill ports and the possible buried fill port. This anomaly is reportedly likely to represent one or more USTs. Based on the size of this identified anomaly, Andersen Environmental grossly estimates it may represent suspected USTs of 6,000 to 10,000 gallon capacities. In order to more fully assess these anomalous features, Andersen Environmental recommends more direct methods be used. Such methods may include the excavation of exploratory trenches/test pits and/or borings.

Several utilities and unidentified lines were also detected in the survey areas. In addition, an inlet, an outlet, and a vent line were detected in the area of the clarifier at the north side of the building. The attached Figure 2 illustrates the suspected UST and clarifier locations. The Geophysical Survey Report, including photographs of identified subject property features, is included as Appendix A.

SOIL SAMPLING

On May 15, 2014, ten direct-push technology (DPT) soil borings (B1 through B10) were advanced at the Site to evaluate subsurface soils for the presence of petroleum hydrocarbons, stoddard solvent, and volatile organic compounds (VOCs). Soil borings B1through B10 were advanced using a dolly-mounted DPT drill rig. Soil borings B1through B8 were advanced at the west side of the property to a maximum depth of 10 feet bgs and soil samples were collected at 2, 5, and 10 feet bgs. Soil borings B9 and B10 were advanced in areas of surface staining to a maximum depth of 5 feet bgs and soil samples were collected at 2 and 5 feet bgs.

Soil samples were collected by hydraulically pushing an acetate-lined steel sampler to the desired sampling depths. At each sampling location, an approximately 6-inch portion of the soil-filled acetate liner was cut, capped with Teflon® liners and firm-fitting plastic end-caps, labeled, logged according to the Unified Soil Classification System (USCS), recorded in a chain of custody and immediately placed in a chilled ice chest pending analysis. Samples were subsequently transported to a State-Certified laboratory under proper chain of custody documentation for analysis. In addition, a small volume of recovered soil at each sampling location was field screened for volatile organic compounds (VOCs) utilizing a photoionization detector (PID).

Soils encountered in soil borings B1 through B8 generally consisted of silty sand and gravel (SM/GM) suspected to be fill material at 2 feet bgs. In the remaining soil borings where fill was not encountered,

soils consisted of silty fine-grained sands (SM) at 2 and 5 feet bgs, and poorly graded sands (SP) at 10 feet bgs. No distinct visual evidence, elevated PID readings or odors were observed during soil sample collection. Field boring logs are included as Appendix B.

SOIL GAS PROBE INSTALLATION

On May 15, 2014, Andersen Environmental converted soil borings B1, B4, and B8 to vapor probes VP1, VP4, and VP8 (Figure 2) at 5 feet bgs in an attempt to assess the presence of VOCs in the gas phase of the shallow subsurface. In the absence of observable evidence of subsurface impacts during soil sample collection, probe locations were evenly distributed within the area of reported mineral spirit dumping to screen for a surface release from hazardous material.

The temporary soil vapor probes were constructed in the 10 foot soil borings by depositing a lower seal of approximately 4.5 feet of bentonite set and hydrated beneath approximately 6 inches of clean sand. A length of ¼-inch nylon tubing (Nylaflow) fitted with a porous polypropylene tip was set at the top of the sand and approximately 6 additional inches of sand was backfilled to assure the tip and hose were buried in the middle of approximately 1 foot of clean sand at 5 feet bgs. The upper end of the tubing was cut approximately 2 feet above ground surface to facilitate soil vapor sample collection. The remainder of the boring was backfilled using bentonite granules (one foot) followed by hydrated bentonite slurry to grade level.

SOIL GAS SAMPLING

After equilibrating for a period of approximately 24 hours, at each soil gas probe, a pre-evacuated 1-liter stainless steel (SUMMA®) canister was affixed to the nylon tubing with a compression fitting and ferrules to avoid leaks in the sampling train. A vacuum gauge was used to measure the initial vacuum of the canister, the final vacuum upon completion of sampling, and monitor the fill rate of the canister. Each canister was evacuated to approximately 30 inches of mercury vacuum prior to sampling by the analytical laboratory. The compression fitting was secured to the SUMMA tee fitting with a 9/16 wrench, and the valve was opened ½ turn for the collection of a soil gas grab sample for approximately 30 seconds, leaving approximately 5 inches of residual mercury vacuum. Following successful collection of each soil gas grab sample, the valve was closed by hand tightening the valve in the clockwise direction and the soil gas probe was disconnected from the SUMMA. The sample tag for each canister was completed with sample ID, date and time. Proper chain-of-custody documentation and protocol were maintained during sample collection and transport.

SOIL ANALYTICAL SCHEDULE AND RESULTS

Soil samples from 2 feet bgs from soil borings B1 through B8 were submitted for analysis of extractable range petroleum hydrocarbons (ERPH) and stoddard solvent by EPA Method 8015M and VOCs by EPA Method 8260B (Tables 1 and 2, respectively). Soil samples from 2 feet bgs from soil borings B9 and B10 were submitted for analysis of ERPH (Table 1). The laboratory report and chain of custody documentation is provided as Appendix C.

ERPH & STODDARD SOLVENT IN SOIL

The ERPH analyzed can be characterized by the length of their constituent carbon chains. C13-C22 and C23-C32 are commonly interpreted as diesel (TPHd) and oil (TPHo) range hydrocarbons, respectively. Stoddard solvent is an industrial solvent generally interpreted as consisting of diesel and oil range hydrocarbon constituents and can also be analyzed for and detected by EPA Method 8015.

As indicated in Table 1: Extractable Range Petroleum Hydrocarbons and Stoddard Solvent in Soil, analytical results indicate TPH-d was detected in each of the ten soil samples at a maximum concentration of 18.6 milligrams per kilogram (mg/kg) (B6-2'). TPH-o was detected in six of ten soil samples at a

maximum concentration of 216 mg/kg (B2-2'). Stoddard solvent was not detected above analytical detection limits in any of the soil samples analyzed by EPA Method 8015M.

As shown in Table 1, the TPH-d and TPH-o concentrations in the soil samples were found to be well below the Maximum Soil Screening Levels (MSSLs) as prescribed by the Los Angeles Regional Water Quality Control Board (LARWQCB) for the protection of groundwater resources (May 1996 Guidebook). The MSSLs for TPHd and TPHo are 100 mg/kg and 1,000 mg/kg, respectively. As such, the petroleum hydrocarbons detected at the property are not indicative of a significant release and is not likely to threaten groundwater.

VOLATILE ORGANIC COMPOUNDS IN SOIL

As indicated in Table 2: Volatile Organic Compounds in Soil, tetrachloroethene (PCE) was detected in soil samples B1-2'and B3-2' at a maximum concentration of 5.45 micrograms per kilogram (µg/kg) (B3-2'), well below the EPA Region 9 Regional Soil Screening Level (RSL) for soils at industrial properties (established at 2,800 µg/kg). As PCE was only detected at very low concentrations in two shallow soil samples, it is not considered to be a chemical of concern (COC) in the areas assessed.

Ethylbenzene was also detected in soil sample B1-2' at concentrations of 2.61 µg/kg. Xylenes were detected in soil samples B1-2' and B7-2' at a maximum concentration of 11.96 µg/kg. The ethylbenzene and xylene concentrations detected were found to be well below their respective RSLs for soils at industrial properties of 27,000 µg/kg and 2,700,000 µg/kg. Total Xylene concentrations were calculated by summing the results of m-, p- and o-Xylenes in the laboratory reports.

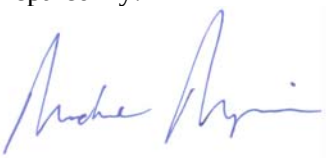
No other VOCs were present at concentrations above laboratory detection limits in any of the other soil samples selected for VOC analysis. Further assessment of subsurface VOCs was performed in the west portion of the property via soil gas probe installation and sampling.

SOIL GAS ANALYTICAL SCHEDULE AND RESULTS

All soil gas samples were analyzed by Sunstar Laboratories, Inc., for a standard list of VOCs including tetrachlorethene (PCE), trichloroethene (TCE), associated PCE breakdown products, benzene, toluene, ethylbenzene, total xylenes (BTEX) and fuel oxygenates using EPA Method 8260B. A copy of the analytical report and chain of custody form is included in the Laboratory Report section (Appendix II) of this report. VOCs were not detected above analytical detection limits in any of the soil gas samples analyzed. As such, VOCs in the shallow subsurface are not considered to be COCs in the areas explored.

CONCLUSIONS AND RECOMMENDATIONS

Andersen Environmental presents this Phase II ESA Report performed at 1805, 1811, 1825, and 1899 Sacramento Street in Los Angeles, California. Based on our review of available site documents and the performance of limited site reconnaissance, reported dumping of used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest portion of the site, limited surface staining in the central portion of the site, a known UST, and a clarifier have been identified as items of environmental concern at the property. UST and clarifier assessments were not included in this Phase II ESA.



Andersen has performed soil and soil vapor sampling in the vicinity of the reported dumping and surface staining to evaluate whether mineral spirit dumping has significantly impacted the subsurface of the property. Andersen also directed a geophysical survey in an attempt to determine the approximate size and orientation of the UST(s) and to determine if there are any other USTs in the immediate vicinity. The following are Andersen's conclusions and recommendations based on the field activities and laboratory analytical results detailed herein:

- Andersen Environmental directed a geophysical survey in the vicinity of the suspected UST fill ports and clarifier at the subject property. Andersen Environmental interprets two large EM anomalies and GPR anomaly as two suspected USTs of approximately 6,000 to 10,000 gallon capacities. Several utilities and unidentified lines were detected in the study areas. In addition, an inlet, an outlet, and a vent line were detected in the area of the clarifier at the north side of the 1825 Sacramento Street building.
- Andersen directed the advancement of 10 direct-push soil borings (B1 through B10) and conducted soil sampling to evaluate the subsurface for the presence of petroleum hydrocarbons, stoddard solvent, and VOCs. Soil borings B1through B8 were advanced at the west side of the property to a maximum depth of 10 feet bgs and samples were collected at 2, 5, and 10 feet bgs. Soil borings B9 and B10 were advanced in areas of surface staining to a maximum depth of 5 feet bgs and samples were collected at 2 and 5 feet bgs.
- Soil samples from 2 feet bgs from soil borings B1 through B8 were submitted for analysis of ERPH and VOCs. Soil samples from 2 feet bgs from soil borings B9 and B10were submitted for analysis of ERPH.
- Analytical results indicate TPH-d was detected in each of the ten soil samples at a maximum concentration of 18.6 milligrams per kilogram (mg/kg) (B6-2'). TPH-o was detected in six of ten soil samples at a maximum concentration of 216 mg/kg (B2-2'). Stoddard solvent was not detected above analytical detection limits in any of the soil samples analyzed.
- The TPH-d and TPH-o concentrations in the soil samples were found to be well below MSSLs. The MSSLs for TPHd and TPHo are 100 mg/kg and 1,000 mg/kg, respectively. As such, the TPHd and TPHo detected at the property are not indicative of a significant release and are not likely to threaten groundwater.
- PCE was detected in soil samples B1-2'and B3-2' at a maximum concentration of 5.45 micrograms per kilogram (µg/kg) (B3-2'), well below RSL for soils at industrial properties (established at 2,800 µg/kg). As PCE was only detected at very low concentrations in two shallow soil samples, it is not considered to be a chemical of concern (COC) in the areas assessed.
- Ethylbenzene was also detected in soil sample B1-2' at concentrations of 2.61 µg/kg. Xylenes were detected in soil samples B1-2' and B7-2' at a maximum concentration of 11.96 µg/kg. The ethylbenzene and xylene concentrations detected were found to be well below their respective RSLs for soils at industrial properties of 27,000 µg/kg and 2,700,000 µg/kg, respectively. No other VOCs were present at concentrations above laboratory detection limits in any of the other soil samples selected for VOC analysis. Further assessment of subsurface VOCs was performed in the west portion of the property via soil gas probe installation and sampling.
- Andersen Environmental converted soil borings B1, B4, and B8 to vapor probes VP1, VP4, and VP8 at 5 feet bgs in an attempt to assess the presence of VOCs in the gas phase of the shallow subsurface. VOCs were not detected above analytical detection limits in any of the soil gas samples analyzed. As such, VOCs in the shallow subsurface are not considered to be COC in the areas explored.
- The results of this assessment indicate that a significant release to the subsurface in the areas of dumping of used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest portion of the site and limited surface staining in the central portion of the site has not occurred. This conclusion is based on the *de minimis* concentrations of petroleum hydrocarbons and VOCs detected in the subsurface of these areas. Based on the findings of this assessment, it is Andersen Environmental's opinion that further subsurface investigation of these areas is not warranted at this time. However, further assessment should be performed to assess the potential for subsurface releases in the vicinity of the suspected USTs and clarifier at the site. In order to further assess the

USTs and clarifier, we recommend that more direct methods be used. Such methods may include the excavation of exploratory trenches/test pits and/or borings accompanied by an assessment of soils in those areas.

Subject: Geophysical Evaluation
1811 Sacramento Street
Los Angeles, California

Dear Mr. Maglione:

In accordance with your authorization, we are pleased to submit this report pertaining to our geophysical evaluation for the property located at 1811 Sacramento Street in Los Angeles, California. The purpose of our evaluation was to assess the presence of buried underground storage tanks (USTs) and/or backfilled excavations associated with UST removal, as well as the presence of detectable underground utilities in the vicinity of three fill ports and a clarifier. Our services were conducted on May 15, 2014. This data report presents the survey methodology, equipment used, analysis, and results from our study.

We appreciate the opportunity to be of service on this project. Should you have any questions please contact the undersigned at your convenience.

Sincerely,
SOUTHWEST GEOPHYSICS, INC.

1. INTRODUCTION

In accordance with your authorization, we are pleased to submit this report pertaining to our geophysical evaluation for the property located at 1811 Sacramento Street in Los Angeles, California (Figure 1). The purpose of our evaluation was to assess the presence of buried underground storage tanks (USTs) and/or backfilled excavations associated with UST removal at the site, as well as the presence of detectable underground utilities in the vicinity of three fill ports and a clarifier. Our services were conducted on May 15, 2014. This report presents the survey methodology, equipment used, analysis, and results from our study.

2. SCOPE OF SERVICES

Our scope of services included:

- Performance of a geophysical survey at the project site. Our survey included the use of a Geonics model EM61 time domain instrument, Fisher M-Scope TW-6 pipe and cable locator, RD4000 line tracer, Schonstedt GA-52C magnetic gradiometer and GSSI SIR 3000 Ground Penetrating Radar (GPR) unit using a 400 MHz transducer.
- Site reconnaissance including field mapping of surface structures at and near the survey area.
- Compilation and analysis of the data collected.
- Preparation of this report presenting our findings and conclusions.

3. SITE DESCRIPTION AND BACKGROUND

The project site is located near the northeast corner of the intersection of Lawrence Street and Sacramento Street in Los Angeles, California (Figure 1). The property is an asphalt lot, bounded by commercial properties to the north, east and west, and Sacramento Street to the south. Figures 2 and 3 depict the general site conditions.

Based on our discussions with you, it is our understanding that three fill ports, three vents, a possible remote fill, and a clarifier are present at the site. However, details regarding the quantity, orientation, and size of the USTs and the location of utilities were reportedly not available.

4. GEOPHYSICAL INSTRUMENTATION AND APPLICATIONS

Our evaluation included the use of a Geonics model EM61, GSSI SIR 3000 GPR, Schonstedt model GA-52C magnetic gradiometer, Fisher M-Scope TW-6 pipe and cable locator, and RD4000 line tracer. These instruments provide real-time results and facilitate the delineation of subsurface features.

The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets. Conductive objects to a depth of approximately 11 feet generally can be detected.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at boundaries in the subsurface across which there are an electrical contrast. The recorder continuously makes a record of the reflected energy as the antenna is moved across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The EM wave travels at a velocity unique to the material properties of the ground being studied, and when these velocities are known, or closely estimated from ground conductivity values and other information, two-way travel times can be converted to depth. Penetration into the ground and resolution of the GPR images produced are a function of ground electrical conductivity and dielectric constant. Images tend to be graphic, even at considerable depth, in sandy soils, but penetration and resolution may be limited in more conductive clayey moist ground.

The magnetic gradiometer has two fluxgate magnetic fixed sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits an audible signal at a low frequency. When the instrument passes over buried iron or steel objects, so that the field is significantly different at the two sensors, the frequency of the emitted sound increases. Frequency is a function of the gradient between the two sensors.

The M-Scope TW-6 device energizes the ground by producing an alternating primary magnetic field with alternating current (AC) in the transmitting coil. If conducting materials (including soils) are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs an audio response. The strength of the secondary field is a function of the conductivity of the object, its size, and its depth and position relative to the instrument's two coils. Conductive objects to a depth of approximately 10 feet can be sensed. Also the device is somewhat focused, that is, it is more sensitive to conductors below (and above) the instrument, than to conductors off to the side.

Where risers are present, the RD4000 utility locator transmitter can be connected to the object, and a current is impressed on the conductor pipe or cable. The receiver unit is tuned to this same frequency, and it is used to trace the pipe's surface projection away from the riser. In addition, the instrument may be used in the passive mode, whereby radio and 60 Hz electromagnetic signals produced by communication and live electric lines are detected.

5. SURVEY METHODOLOGY

Traverses with the EM61 were conducted along roughly east to west and north to south profile lines spaced 5 feet apart across accessible portions of the survey area. GPR traverses were conducted along roughly east to west and south to north profiles spaced approximately 5 feet apart. GPR traverses were also performed along random profiles across and near detected features. Traverses with the M-Scope and gradiometer were conducted along traverses spaced approximately 5 feet apart. The line tracer was used in both passive and inductive modes to delineate the

presence of underground utilities in the study area. Significant anomalies as well as detectable underground utilities were marked on the ground surface with paint and reported to you.

6. RESULTS, CONCLUSIONS, AND RECOMENDATIONS

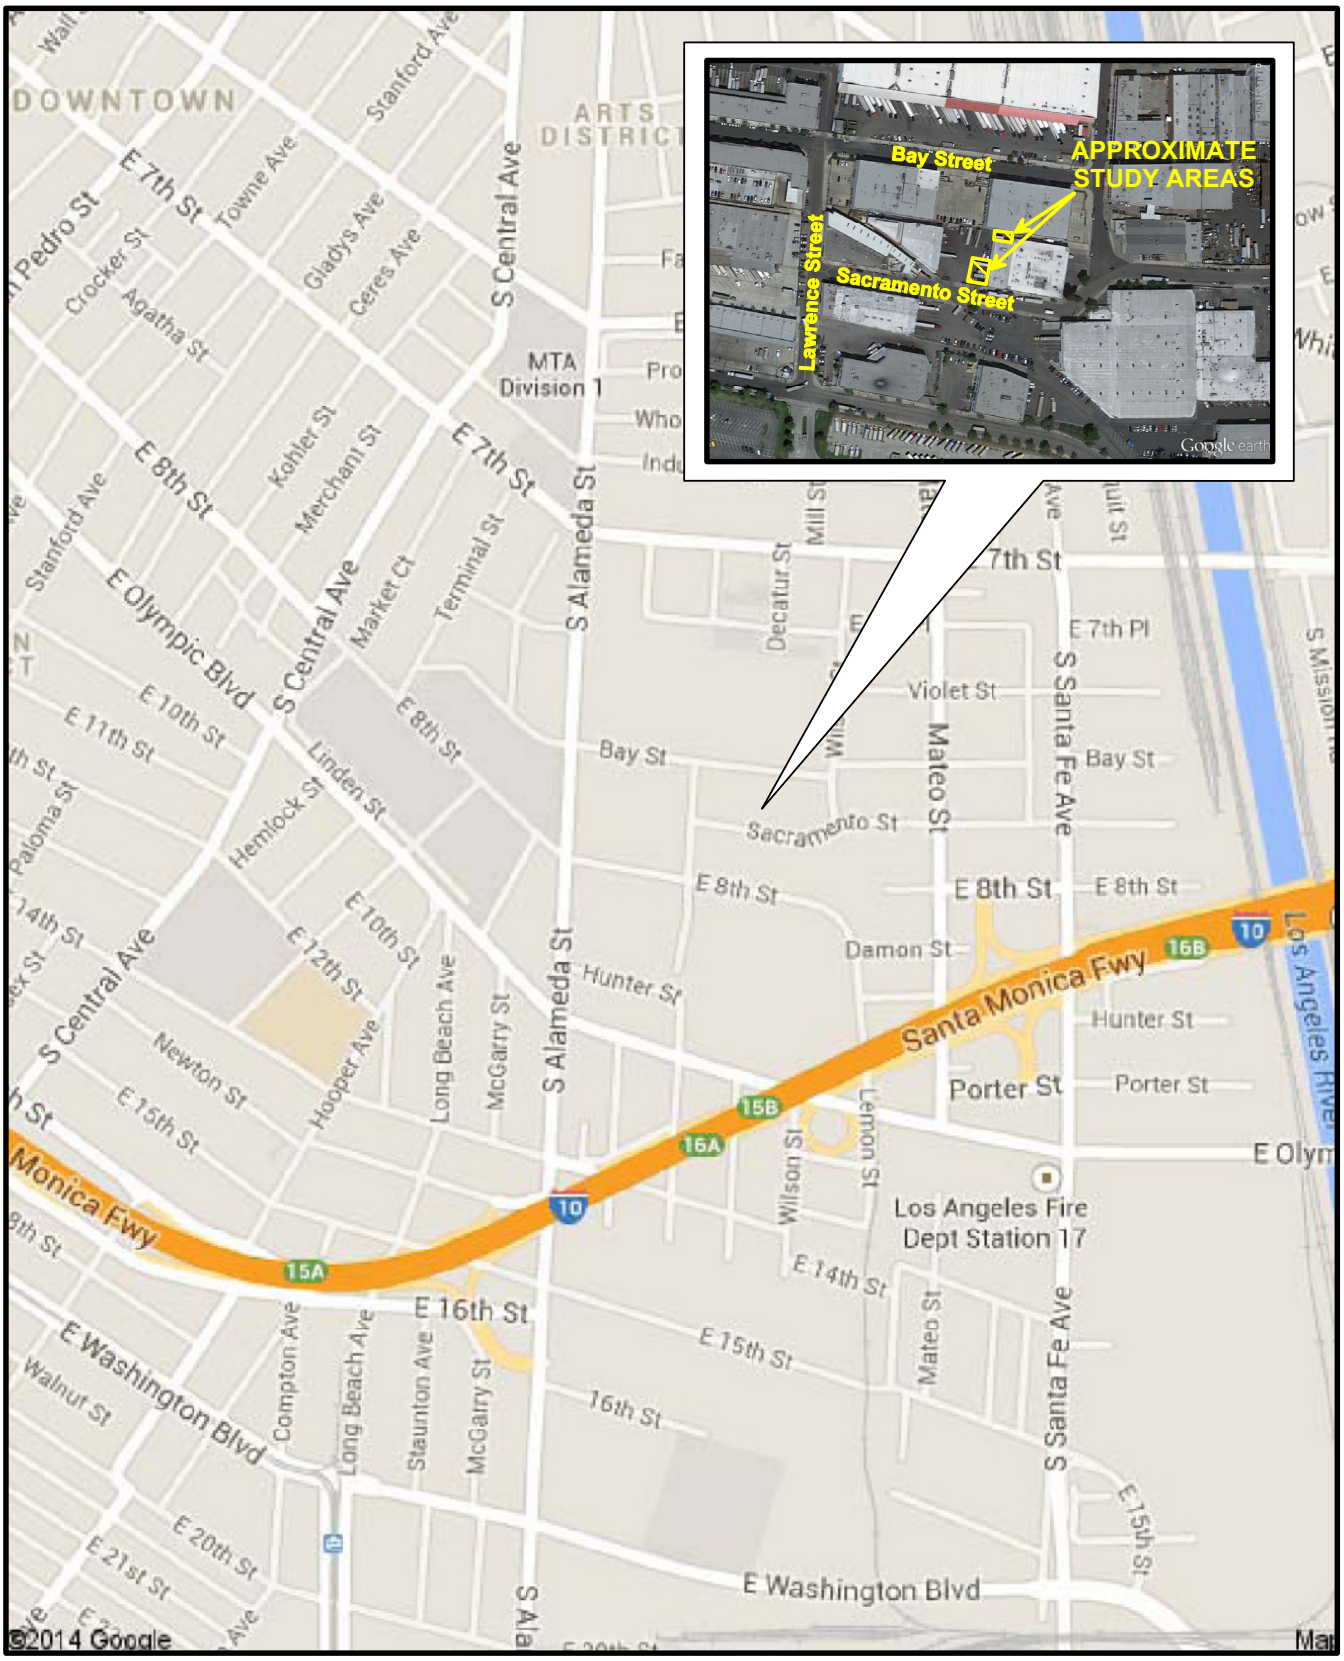
As previously discussed, the primary purpose of our evaluation was to assess the presence of buried underground storage tanks (USTs) and/or backfilled excavations associated with UST removal at the site. In addition to the visible indications of USTs (e.g., three fill ports outside of the building, three vent lines on the side of the building, and a possible remote fill located inside of the building), the results of our survey revealed the presence of an additional possible fill port, two large EM anomalies, and a GPR anomaly (Figures 2 and 3).

GPR traverses conducted in the vicinity of the visible fill ports were inconclusive to the quantity, location, and orientation of the USTs. However, a possible fill port buried below the asphalt was imaged with the GPR near the two existing fill ports located adjacent to the building (see Figure 2). In addition, the three vents outside the building appear to extend a short distance west of the building toward these fill ports. GPR also indicated a fourth line extending from the possible remote fill inside of the building west toward the fill ports. A possible concrete apron just below the asphalt was also observed in the GPR images collected from around the fill ports.

One of the large EM anomalies was detected in the area of the fill port located closer to Sacramento Street. This feature is likely related to the presence of a large UST. The other large EM response/anomaly is located adjacent to the building and encompasses the previously described vent lines, the two visible fill ports and the possible buried fill port. This anomaly likely represents one or more USTs.

Several utilities and unidentified lines were detected in the study areas. In addition, an inlet, an outlet, and a vent line were detected in the area of the clarifier at the north side of the building (see Figures 2 and 3).

Several additional high EM responses were observed at the site; however these responses are attributed to the presence of reinforced concrete, building elements, various utility lines/risers, and chain link fencing. It should be noted that the presence of existing structures and surface objects (i.e., metal fencing, buildings components, etc.) potentially limited the survey. Where obstructions were present subsurface data could not be collected. Moreover, EM and magnetic responses produced by metal surface objects and buried utility lines/pipes can potentially obscure subsurface features. Radar penetration at the site was typically on the order of 2 to 3 feet below the ground surface; therefore, objects below this depth would not have been imaged with GPR. Figures 2 and 3 illustrate the general site conditions.



In order to further assess the features described above, we recommend that more direct methods be used. Such methods may include the excavation of exploratory trenches/test pits and/or borings.

7. LIMITATIONS

The field evaluation and geophysical analyses presented in this report have been conducted in general accordance with current practice and the standard of care exercised by consultants performing similar tasks in the project area. No warranty, express or implied, is made regarding the conclusions and opinions presented in this report. There is no evaluation detailed enough to reveal every subsurface condition. Variations may exist and conditions not observed or described in this report may be present. Uncertainties relative to subsurface conditions can be reduced through additional subsurface surveying and/or exploration. Additional subsurface surveying can be performed upon request.

Please also note that our evaluation was limited to the detection of USTs and/or backfilled tank excavations, as well as the presence of detectable underground lines in the study areas. “USA” or “Dig Alert” should also be contacted prior to conducting subsurface exploration activities. In addition, we recommend that available utility plans/drawings of the project site be reviewed as appropriate.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Southwest Geophysics, Inc. should be contacted if the reader requires additional information or has questions regarding the content, interpretations presented, or completeness of this document. This report is intended exclusively for use by the client. Any use or reuse of this report by parties other than the client is undertaken at said parties' sole risk.

SUBJECT: SUBMITTAL OF REVISED ENVIRONMENTAL OVERSIGHT FOR UST REMOVAL AND SOIL SAMPLING ACTIVITIES REPORT
MARSH AND HERB IMPORTER INC.
1811 SACRAMENTO STREET
LOS ANGELES, CALIFORNIA
WPI PROJECT NO. 14.477

Dear Eloy:

As indicated in my December 31, 2014 voicemail and our discussion on January 5, 2015, enclosed is a revised Environmental Oversight for UST Removal and Soil Sampling Activities Report for the above referenced facility. Changes made to the previous submittal are summarized below:

- Address correction within report text and laboratory reports from 1805 to 1811 Sacramento Street, thereby matching the LAFD permit application;
- Property owner name correction from Albert and Elaine Borchard to The Albert and Elaine Borchard Foundation, Inc.
- Typographical error of g/kg on page 3 to ug/kg;
- Facility name correction from Marsh and Herb Warehouse/Marsh and Herb Produce Company to Marsh and Herb Importer, Inc. (where applicable);
- Bolded appendix, table and figure references within text;
- Reversed parenthesis on page 3 for VOCs, corrected;

- Property Information Contact corrected on page 5;
- Figure 2 updated to include stockpile samples and PCE results
- Added the word "procedures" following LAFD on page 1; and
- Owner address reference on Page 1 footer.

If you have any questions regarding this submittal, please contact the undersigned at (714) 826-0352.

Sincerely,
WAYNE PERRY INC.

James Carrino
Project Geologist

Attention: Eloy Luna

SUBJECT: ENVIRONMENTAL OVERSIGHT FOR UST REMOVAL AND SOIL SAMPLING ACTIVITIES REPORT (REVISED)
MARSH AND HERB IMPORTER INC.
1811 SACRAMENTO STREET
LOS ANGELES, CALIFORNIA
WPI PROJECT NO. 14.477

Dear Mr. Luna;

Wayne Perry, Inc. (WPI) is submitting this report documenting environmental oversight for the underground storage tank (UST) removal and soil sampling activities performed at the Marsh and Herb Importer, Inc. facility located at 1811/1825 Sacramento Street[1] in Los Angeles, California (herein referred to as the "Site"). The Site location is shown on **Figure 1**. All work was conducted under authorization from the Albert and Elaine Borchard Foundation, Inc., the property owner.

The soil sampling and analyses were conducted to determine the presence or absence of petroleum fuel hydrocarbons in soil beneath the former UST and product piping locations. All field activities were conducted in compliance with the City of Los Angeles Fire Department (LAFD) procedures.

[1] The owner references the addresses collectively as 1811. Therefore, this is the reference used by the laboratory and Wayne Perry, Inc.

SITE DESCRIPTION

The Site is currently occupied by Marsh and Herb Importer Inc., and is surrounded by commercial properties. Schratter Foods is located north of the Site, DHL delivery services is located east of the Site, TAC Produce is located south of the Site, and United Melon is located west of the Site.

GEOLOGIC AND HYDROGEOLOGIC SETTINGS

The Site is situated at an elevation of approximately 260 feet above mean sea level (USGS, 1966) in the Los Angeles Plains Region of Los Angeles County (CDWR, 1961). Underlying soils are primarily comprised of alluvium sediments. Soils encountered during excavation activities included sandy silt, silt and fine to medium grained sand and gravel to a depth of 14 feet.

Hydrogeologically, the Site lies within the Sawtelle Plain area of the Santa Monica Groundwater Basin, near the northern edge of the Ballona aquifer. Groundwater was not encountered during excavation activities.

UST REMOVAL ACTIVITIES

WPI provided environmental oversight and performed excavation and UST removal activities at the Site from October 15 to November 12, 2014. Construction activities included the excavation and removal of three 500-gallon waste-oil USTs and one 10,000-gallon diesel fuel UST. Underground product piping was not encountered and appeared to have been removed at an earlier date.

Excavated soil was monitored for volatile organic compounds (VOCs) using a photo-ionization detector (PID) in accordance with WPI's South Coast Air Quality Management District (SCAQMD) Rule 1166 Mitigation Plan No. 558840, Reference Number 377606. PID readings did not exceed 50 ppm during excavation activities. Copies of the SCAQMD Rule 1166 notification forms and rule 1166 monitoring records are provided in **Appendix A**.

On October 17, 2014, the three waste-oil USTs were cleaned, triple rinsed, and certified inert by an industrial hygienist. The USTs were removed under permit number SR0030158 and under the direction of Inspector Pleasant of the LAFD. A copy of the permit for the waste oil UST removals is provided in **Appendix B**.

On November 12, 2014, the diesel UST was cleaned, triple rinsed, and certified inert by an industrial hygienist. The UST was removed under permit number SR0030158 and under the direction of Inspector Morel of the LAFD. A copy of the diesel UST removal permit is included in **Appendix B**.

Upon removal, each UST was visually inspected and all appeared to be in good condition. Adams Services Inc. transported the USTs as a non-RCRA hazardous waste to American Metals Recycling in Fontana, California. Copies of the rinseate manifest, tank certificates, and destruction documents are provided in **Appendix C**.

SOIL SAMPLING ACTIVITIES

On October 17, 2014, WPI personnel collected soil samples from beneath each former waste-oil UST location (samples T1-10, T2-10 and T3-10), from beneath the remote fill (sample FP-3) and waste oil UST ventilation lines (sample VP-2). The waste oil UST pit samples were obtained from a depth of approximately 2 feet beneath the excavation floor. Soil samples from the remote fill and UST ventilation line pipe trenches were obtained from depths of approximately 3 and 10 feet, respectively. In addition, one sample was collected from the excavated soils (SP1, dated 10/17/2014), which were stockpiled on-site. Soil sample locations are shown on **Figure 2**.

The waste oil UST pit soil samples were collected from the bucket of a backhoe using EPA 5035 Protocol. The remote fill and ventilation piping samples were collected from the bucket of a hand auger. A back up sample from each location was packed into a brass tube and sealed at each end with Teflon sheets and capped with plastic end caps. All samples were labeled, stored on ice, and delivered under chain-of-custody to an on-site mobile laboratory operated by Jones Environmental, Inc. of Fullerton, California. Soil sampling activities were performed under the supervision of a California Professional Geologist.

On November 12, 2014 WPI personnel collected soil samples from each end of the former diesel fuel UST pit (samples T4Ad14 and T4Bd14) and one sample was collected from the diesel pit excavated soils (SP1, dated 11/12/14). Soil samples from the UST pit were obtained from a depth of approximately 14 feet beneath ground surface. Soil sample locations are shown on **Figure 2**.

All samples collected from the former diesel fuel UST and waste oil UST pits were analyzed for the following constituents using the indicated laboratory methods:

- Total petroleum hydrocarbons as gasoline (TPH-G), diesel (TPH-D) and oil (TPH-O) using EPA Method 8015;
- Volatile organic compounds (VOCs) and fuel oxygenating compounds using EPA Method 8260B Full Scan; and
- CAM 17 metals using EPA Methods 6010B and EPA 7471.

Soil analytical results are summarized in Table 1 and on **Figure 2**. Copies of the laboratory reports and chain-of-custody documents are provided in **Appendix D**.

SOIL SAMPLING ANALYTICAL RESULTS

Waste Oil USTs

Tetrachloroethylene (PCE) was detected at a concentration of 1.2 µg/kg in sample T2-10, obtained from the waste oil UST excavation floor. No other VOCs were detected in samples T1-10, T2-10 and T3-10, or the remote fill and ventilation samples FP-3 and VP-2.

TPH-G, TPH-D, and TPH-O, were not detected in the waste oil excavation floor samples T1-10, T2-10 and T3-10, or the remote fill and ventilation samples FP-3 and VP-2.
None of the CAM metals were detected in the waste oil excavation floor samples T1-10, T2-10 and T3-10, or the remote fill and ventilation samples FP-3 and VP-2 at concentrations exceeding background (i.e., naturally occurring) levels.

Diesel UST
Tetrachloroethylene was detected at a concentration of 5.7 µg/kg in sample T4Bd14, obtained from the diesel UST excavation floor. No other VOCs were detected in samples T4Ad14 or T4Bd14.

TPH-G, TPH-D and TPH-O were not detected in diesel UST samples T4Ad14 or T4Bd14.

None of the CAM metals were detected in diesel UST samples T4Ad14 or T4Bd14 at concentrations exceeding background (i.e., naturally occurring) levels.

Soil Stockpile
VOCs were not detected in soil stockpile samples SP1 (10-17-14) or SP1 (11-12-14).

TPH-G, TPH-D and TPH-O were not detected in soil stockpile samples SP1 (10-17-14) or SP1 (11-12-14).

None of the CAM metals were detected in soil stockpile samples SP1 (10-17-14) or SP1 (11-12-14) at concentrations exceeding background (i.e., naturally occurring) levels.

SOIL STOCKPILE DISPOSITION
Based on these analytical results, stockpiled soils generated during excavation activities were used as backfill for the UST and piping trench excavations.

o o O o o

This report has been prepared by Wayne Perry, Inc. for the exclusive use of The Albert and Elaine Borchard Foundation, Inc. as it pertains to the Site located at 1811 Sacramento Street, Los Angeles, California. Our professional services have been performed using the degree of care and skill ordinarily exercised under similar circumstances by other geologists and engineers practicing in this field. No other warranty, express or implied, is made as to professional advice in this report.

Should you have questions or comments regarding this report, please contact Mr. James Carrino of WPI at (714) 826-0352. If you have any questions regarding property information at this Site, please contact The Albert and Elaine Borchard Foundation, Inc.

Sincerely,
WAYNE PERRY, INC.

SUBJECT: ENVIRONMENTAL OVERSIGHT FOR CLARIFIER REMOVAL AND SOIL SAMPLING ACTIVITIES REPORT
MARSH AND HERB IMPORTER INC.
1811 SACRAMENTO STREET
LOS ANGELES, CALIFORNIA
WPI PROJECT NO. 14.477

Dear Albert and Elaine Borchard Foundation, Inc.;

Wayne Perry, Inc. (WPI) is submitting this report documenting environmental oversight for the clarifier removal and soil sampling activities performed at the Marsh and Herb Importer, Inc. facility located at 1811/1825 Sacramento Street[1] in Los Angeles, California (herein referred to as the "Site"). The Site location is shown on **Figure 1**. All work was conducted under authorization from the Albert and Elaine Borchard Foundation, Inc., the Site owner.

The soil sampling and analyses were conducted to determine the presence or absence of petroleum fuel hydrocarbons in soil beneath the former clarifier.

[1] The owner references the addresses collectively as 1811. Therefore, this is the reference used by the laboratory and Wayne Perry, Inc. herein.

SITE DESCRIPTION

The Site is currently occupied by Marsh and Herb Importer Inc., and is surrounded by commercial properties. Schratter Foods is located north of the Site, DHL delivery services is located east of the Site, TAC Produce is located south of the Site, and United Melon is located west of the Site.

GEOLOGIC AND HYDROGEOLOGIC SETTINGS

The Site is situated at an elevation of approximately 260 feet above mean sea level (USGS, 1966) in the Los Angeles Plains Region of Los Angeles County (CDWR, 1961). Underlying soils are primarily comprised of alluvium sediments. Soils encountered during excavation activities included sandy silt, silt and fine to medium grained sand and gravel to a depth of 14 feet.

Hydrogeologically, the Site lies within the Sawtelle Plain area of the Santa Monica Groundwater Basin, near the northern edge of the Ballona aquifer. Groundwater was not encountered during excavation activities.

CLARIFIER REMOVAL ACTIVITIES

WPI provided environmental oversight and performed excavation and clarifier removal activities at the Site from October 15 to October 17, 2014. Construction activities included the excavation and removal a of three chamber 500-gallon clarifier. Underground piping was encountered but appeared to have been sealed off from the sewer system at an earlier date.

Excavated soil was monitored for volatile organic compounds (VOCs) using a photo-ionization detector (PID) in accordance with WPI's South Coast Air Quality Management District (SCAQMD) Rule 1166 Mitigation Plan No. 558840, Reference Number 377606. PID readings did not exceed 50 ppm during excavation activities. Copies of the SCAQMD Rule 1166 notification forms and rule 1166 monitoring records are provided in **Appendix A**.

On October 16, 2014, the concrete clarifier was removed and broken into pieces for transportation and disposal at a construction materials disposal facility.

SOIL SAMPLING ACTIVITIES

On October 17, 2014, WPI personnel collected one soil sample (CL-8) 8 feet below ground surface (2 feet below excavation floor) from beneath the former clarifier location. Soil sample location is shown on **Figure 2**.

The sample collected from the former clarifier pit was analyzed for the following constituents using the indicated laboratory methods:

- Total petroleum hydrocarbons as gasoline (TPH-G), diesel (TPH-D) and oil (TPH-O) using EPA Method 8015;
- Volatile organic compounds (VOCs) and fuel oxygenating compounds using EPA Method 8260B Full Scan; and

- CAM 17 metals using EPA Methods 6010B and EPA 7471.

Soil analytical results are summarized in Table 1 and on **Figure 2**. Copies of the laboratory reports and chain-of-custody documents are provided in **Appendix B**.

SOIL SAMPLING ANALYTICAL RESULTS

Clarifier

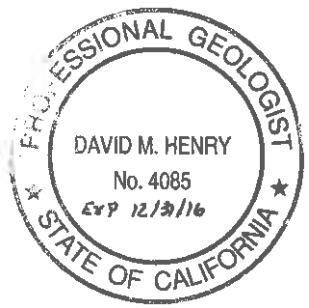
VOCs, TPH-G, TPH-D and TPH-O were not detected in clarifier sample CL-8.

None of the CAM metals were detected in clarifier sample CL-8 at concentrations exceeding background (i.e., naturally occurring) levels.

SOIL STOCKPILE DISPOSITION

Based on these analytical results stockpiled soils generated during excavation activities were used as backfill for the clarifier excavation.

o o O o o



This report has been prepared by Wayne Perry, Inc. for the exclusive use of The Albert and Elaine Borchard Foundation, Inc, as it pertains to the Site located at 1811 Sacramento Street, Los Angeles, California. QUALIFICATIONS

ELLIOT R. HARO
Principal Scientist

Mr. Haro is the founding principal of Haro Environmental, Inc. With over 14 years of experience in the environmental field, Mr. Haro has directed, managed and performed environmental site assessments and remediation activities. Mr. Haro's project management experience includes proposal and cost estimate preparation for site assessments and remediation projects, design of soil and groundwater remediation systems, in-house staff and subcontractor coordination, technical report preparation, and permit acquisition. Mr. Haro has managed and performed numerous Phase I and Phase II Environmental Site Assessments (ESAs) as well as site investigation and remediation field activities including air, soil, groundwater, and surface water sampling, groundwater monitoring well installations, and remediation system operations and maintenance. He has prepared various environmental reports including site assessment reports, feasibility studies, remedial/corrective action plans, remedial work plans and health-based risk evaluations. Mr. Haro is familiar with the regulatory process and has consulted with both local and regional agencies on Client's behalf for work plan approvals and modifications. Mr. Haro's technical expertise includes evaluation, design and implementation of innovative in-situ groundwater treatment technologies including enhanced bioremediation and in-situ chemical oxidation.

- Permitting
- Regulatory Agency Negotiations
- Quarterly Reporting
- Target compounds: Hydrocarbons and MTBE
- Interim Remedial Action Plans
- Remedial and Corrective Action Plans
- Health and Safety
- Remediation System Design
- Multiphase and Dual Phase Extraction Systems

Managed project activities for monitoring and cleanup of multiple gas station facilities throughout Northern, Central and Southern California. Evaluated in-situ and ex-situ treatment options for source zone reduction and off-site containment of contaminants. Performed and managed operations and maintenance activities on remediation systems and prepared quarterly remediation reports. Prepared quarterly groundwater monitoring reports for agency submittal and approval. Prepared corrective actions plans and remedial action plans for implementation of mobile high vacuum dual phase extraction, multi-phase extraction, and dual-phase extraction systems. Designed and permitted innovative groundwater remediation approaches including enhanced aerobic bioremediation using ORC®. Negotiated with overseeing agencies for acceptance of proposed remedial actions.

Phase I Environmental Site Assessment, Remediation Engineering Evaluation, & Indoor Air Quality Assessment, Former Aircraft Manufacturing Facility, Playa Vista, CA

- Phase I ESA
- Remediation System Performance Evaluation
- Historic Chlorinated VOC and Hydrocarbon Use
- 550,000 Square Feet of Building Space

Performed a Phase I ESA for an approximately 38-acre site developed with 8 historic structures totaling approximately 550,000 square feet. Historic aircraft manufacturing resulted in chlorinated VOCs and petroleum hydrocarbon impacts to soil and groundwater. Identified recognized environmental conditions (RECs) at 11 source areas. Consulted client on extent of environmental liabilities and potential

environmental costs. Evaluated the performance of the on-site dual-phase extraction system targeting identified source areas. Developed potential life-cycle costs for the existing remediation system, and costs for remediation of metals contaminated soil. Performed an indoor air survey to assess potential impacts from the historic aircraft manufacturing operations on indoor air quality. Indoor air study results were compared to published regulatory thresholds and calculated site-specific health risks.

Soil and Groundwater Remediation of Chlorinated Solvents using Chemical Oxidation, Former Aerospace Manufacturing Facility, Newbury Park, CA

- Groundwater Monitoring and Sampling Management
- In-Situ Chemical Oxidation using Potassium Permanganate
- Injection and Monitoring Well Installations
- Quarterly WDR Reporting
- Target compounds: Chlorinated VOCs
- Health and Safety Plan Preparation
- Lead Agency Negotiations

Managed in-situ chemical oxidation injections for remediation of soil and groundwater impacted with the chlorinated solvents TCE and PCE. Negotiated with the lead agency (LARWQCB) for revised Waste Discharge Requirements (WDR) and amendments to the original work plan. Developed and implemented a site-specific health and safety plan to protect the health and safety of workers and the environment from accidental exposure to the chemical oxidant. Oversaw the installation of 35 injection wells and 14 dual-nested monitoring wells, and the injection of approximately 12,000 pounds of potassium permanganate. Conducted performance evaluation sampling per WDR requirements, and prepared and submitted quarterly WDR monitoring reports to the regulatory agency.

Soil and Groundwater Remediation of Chlorinated Solvents, Soil Source Zone Removal and In-Situ Bioremediation, Former Industrial Facility, Los Angeles, CA.

- Groundwater Monitoring and Sampling Management
- Large Diameter Auger Excavation
- Enhanced Anaerobic Bioremediation
- Soil Vapor Survey
- Injection and Monitoring Well Installations
- Quarterly WDR Reporting
- Target compounds: Chlorinated VOCs
- Health and Safety Plan Preparation
- Lead Agency Negotiations

Managed soil and groundwater investigation and remediation activities for a site with soil and perched groundwater water zone with chlorinated hydrocarbons present. A Remedial Action Plan (RAP) was developed and approved by the LARWQCB to remediate soil and groundwater at the site. Because site constraints precluded the use of conventional excavation approaches without extensive shoring requirements, soil remediation activities included the design and implementation of source area soil removal using large diameter augers. Groundwater remediation activities included acquisition of a Waste Discharge Requirement (WDR) permit from the LARWQCB for injection of HRC® into the perched zone, injection design, and implementation of an Enhanced Anaerobic Biodegradation approach to stimulate by injecting HRC®.

RCRA Facility Closure, Former Hazardous Waste Handling Facility, Wilmington, CA

- Lead Agency: DTSC
- RCRA Hazardous Waste Permit Closure
- Port of Los Angeles Permitting
- Health and Safety Plan Preparation
- DTSC Approval of Work Plan Updates and Modifications

Managed work plan modification/updating and permitting for a closure of a RCRA hazardous waste permit under DTSC oversight. This former hazardous waste handling facility was the subject of an enforcement action by the lead regulatory agency and resulted in the conviction of the former operator. The chemicals associated with the facility included VOCs and petroleum hydrocarbons. Negotiated with DTSC for work plan modification resulting in a reduction of $70,000 in the sampling costs.

Feasibility Study, Former Aerospace Testing Facility, CA

- Chlorinated VOCs
- Emergent Compounds 1,4-dioxane and NDMA
- In-Situ and Ex-Situ Treatment Options
- Conforming to Lead Agency Requirements

Provided technical assistance for preparation of a feasibility study for remediation of a 2,800-acre former test site facility being closed after 50 years of storied operations. The feasibility study in part addressed the emergent chemicals 1,4-dioxane and N-nitrosodimethylamine (NDMA). These chemicals are somewhat recalcitrant in the environment and are the subject of research at many DOD-sponsored projects. Evaluated innovative remedial alternatives including enhanced aerobic bioremediation and in-situ chemical oxidation. Prepared a bench-scale work plan and reported the findings evaluating sodium persulfate and propane to reduce NDMA concentrations in groundwater.

Former Oil Field Sumps Assessment and Remediation, Santa Maria Valley, CA

- Sump Assessment and Remediation
- Remediation construction
- Target compounds: Metals, volatile and semi-volatile organics, hydrocarbons,
- Soil Excavation
- Health and Safety Plan Preparation

Project manager for sump assessment and remediation activities for multiple land leases within the Santa Maria Valley. Former oil field features were identified by reviewing historic maps and aerial photographs. The lateral and vertical limits of identified features were assessed in the field using direct push technology. Non-hazardous sump material was excavated and transported to a local landfill for reuse. Confirmation samples were collected and based on the results, closure reports were prepared and submitted to the lead oversight agency (County Santa Barbara Fire Prevention Division).

Operations and Maintenance, Ex-situ Bioremediation, San Luis Obispo, CA

- Groundwater monitoring well installation
- Groundwater sampling
- Remediation construction
- Vapor extraction system O&M
- Soil Excavation
- Field safety coordinator

Feasibility Study and Remedial Action Plan, Thousand Oaks, CA

- Project Coordinator
- Oversee field activities
- Permitting
- Conducted dual phase extraction events
- Managed and performed O & M

Site Investigations, Multiple Clients

- Oversee well installation
- Oversee boring installation
- Remediation construction
- Perform Monitoring and Optimization.
- Soil and Soil Vapor Sampling
- Risk Analysis
- Managed Subcontractors
- Construction

1.0 INTRODUCTION

Equipoise Corporation (Equipoise) has prepared this Limited Phase II Soil and Soil Vapor Investigation for the property at 1805/1811/1899 Sacramento Street in Los Angeles, California (the Site) based on recommendations from the Phase I Environmental Site Assessment (Phase I ESA [Haro, 2020]). The Phase I ESA was performed by Equipoise and an Equipoise subcontractor, Haro Environmental, for Skanska USA Commercial Development. The Phase I ESA identified four areas that additional subsurface investigation activities were recommended and the results of the implementation of the investigation is detailed in this report.

The objective of the Limited Phase II Soil and Soil Vapor Investigation activities was to evaluate if there are any subsurface impacts of volatile organic compounds (VOCs) or petroleum hydrocarbons from historic operations. Soil vapor samples were proposed for use as a screening mechanism for VOCs as they are generally representative of larger footprint of the Site than soil samples. Soil samples were proposed from borings at multiple depths (5, 10, and 15 feet below ground surface [bgs]) to provide representative concentrations of subsurface conditions.

An additional objective was to collect soil samples from four borings at a depth of 1-foot bgs to provide representative concentrations of subsurface conditions for future soil disposal.

1.1 PHASE I FINDINGS

Based on the data gathered and reviewed during the Phase I ESA, Haro Environmental identified the following recognized environmental conditions (RECs):

- One 10,000-gallon gasoline underground storage tank (UST) historically located in the eastern parking lot installed in 1954 associated with an auto filling station in that area. No reports exist documenting its removal; however, because the Site property line at the time extended further east of the current eastern property line, this UST is/was likely located beneath the present-day Wilson Street. As such, the potential is low for this historic feature to present a significant environmental concern to soil, soil vapor, and/or groundwater beneath the Site. In addition, soil vapor sampling performed in 2019 did not detect elevated concentrations of petroleum hydrocarbons.

- Soil and or groundwater impacts in the eastern parking lot associated with the adjacent northeastern property historically used for textile processing and the location of a known release of chlorinated solvent tetrachloroethene (PCE). Soil vapor sampling performed in the eastern parking lot at the Site in 2019 indicated elevated concentrations of PCE in soil vapor samples and suggests there is a potential for this offsite release to impact soil, and possibly groundwater, beneath the Site.

- The observed dumping of mineral spirits in the northwestern corner of the property and the limited soil and soil gas sampling conducted in 2014. Because of the observed dumping, there is a potential for elevated concentrations of mineral spirits which could negatively impact soil and soil vapor beneath the Site.

Based on the data gathered and reviewed during this Phase I ESA, Haro Environmental identified the following Historical REC:

- The former presence of one 10,000-gallon UST and three 550 to 1,000-gallon waste oil USTs located in the central parking lot associated with the historic trucking service. UST removal and sampling activities were performed under the supervision of the Los Angeles Fire Department (LAFD), and the LAFD issued a no further action letter for the USTs. Because the former USTs have been closed by the regulatory agency, these for USTs are considered a historical REC.

Based on the findings, Haro Environmental identified the following potential environmental concern:

- The historic presence of railroad tracks to the south of the Site. Railroads can be the source of a release of chemicals including petroleum hydrocarbons, herbicides, and/or heavy metals. As such, there is a potential for elevated concentrations of these chemicals in soil near the former railroad tracks.

1.2 PHASE I RECOMMENDATIONS

The Phase I ESA has identified four areas that additional subsurface investigation activities were recommended:

- Former clarifier at 1811 Sacramento Street: The clarifier was removed in 2014 and one soil sample was collected 2 feet below the excavation floor. The sample was non-detect for the suite of chemical testing performed at the time. Because clarifiers have the capability of causing significant environmental problems if installed and operated improperly, it was recommended that 3 soil boring/soil vapor probes be installed in proximity to the former clarifier. The proposed locations are identified on Plate 1.
- Former UST area at 1811 Sacramento Street: There were three waste oil USTs and one 10,000-gallon diesel UST. The USTs were removed in 2014 and eight soil samples were collected beneath the excavation floors, beneath the remote fill, and near waste oil UST ventilation lines. PCE was detected at a low concentration of 1.2 micrograms per kilogram (ug/kg) below the waste oil UST excavation floor. The remaining samples were non-detect for the suite of chemical testing performed at the time. Because USTs have the capability of causing significant environmental problems if installed and operated improperly, it was recommended that 3 soil boring/soil vapor probes be installed in proximity to the former USTs. The proposed locations are identified on Plate 1.
- Former UST area at 1811 Sacramento Street The location is written on a 1949 permit as 14 feet north of the south curb line and 48 feet west of the east property line. This UST was replaced by the 10,000-gallon diesel UST discussed in the previous bullet and likely removed, but no record was found that indicated that the UST was removed. It was recommended that 2 soil boring/soil vapor probes be installed in proximity to the former UST near the eastern parking lot. The proposed locations are identified on Plate 1.

- The furniture manufacturing operations in the western portion of the 1805 building were observed in 2014, by an environmental consultant performing a site inspection, to be dumping used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest portion of the Site. It is not evident how long this operation has been going on at the Site, but it is likely that this inappropriate disposal practice was previously conducted before the Site visit. The observed dumping of waste mineral spirit onto the unpaved ground surface is an environmental concern and will cause environmental impairment, the extent of which is dependent on the duration, volume, and locations of past dumping. It was recommended that 2 soil boring/soil vapor probes be installed in proximity to the former railroad tracks. The proposed locations are identified on Plate 1.

The Phase I ESA also identified a facility immediately to the east of the Site at 1910-1914 Bay Street & 1901 Sacramento Street that has an active soil vapor remediation system to clean-up historic VOCs contamination (primarily PCE) that is overseen by the California Regional Water Quality Control Board-Los Angeles Region (LARWQCB). More details of this facilities impact to soil vapor are illustrated with soil vapor results from the Site to provide context of the results.

2.0 SITE DESCRIPTION AND PREVIOUS ENVIRONMENTAL INVESTIGATIONS

2.1 SITE DESCRIPTION

Current and historic addresses associated with the Site include 1805, 1811, 1813, 1825, and 1899 Sacramento Street. The Site occupies approximately 1.77 acres at an elevation of 245 feet above mean sea level (MSL). Site topography is generally flat and slopes slightly to the southwest. The nearest surface water body is the Los Angeles River (channelized) located approximately one-half mile east of the Site. The Site is developed with two large warehouse buildings. Most of the Site is paved with portions of bare soil located in planters and near the former railroad tracks south of the Site.

2.2 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

To date, multiple environmental investigations have been conducted at the Site. These investigations have documented three areas of concern: (1) Former clarifier at 1811 Sacramento Street; (2) Former UST area at 1811 Sacramento Street where they were three waste oil USTs and one 10,000-gallon diesel UST; and (3) a furniture manufacturing operations in the western portion of the 1805 building where dumping used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest portion of the Site was observed. Anderson Environmental performed soil and vapor sampling in the vicinity of the reported dumping and surface staining to evaluate whether the mineral spirit dumping has significantly impacted the subsurface of the property. Anderson also directed a geophysical survey to determine the approximate size and orientation of the UST to determine if there are any other USTs in the immediate vicinity.

A summary of the environmental reports for the Site are provided below.

January 29, 2014: Limited Environmental Assessment, 1805, 1811, 1825, 1899 Sacramento Street, Los Angeles, California: This report presented the findings from the limited environmental assessment of the Borchard Foundation property at the Site. The assessment included: historical information review; Site visit; interviews with individuals knowledgeable about the Site; review of regulatory records; and review of LAFD records for UST records. Their findings included the following:

- Observed staining on the ground located at the north end of the parking lot in the center of the property.

- "Operations in the western portion of the 1805 building were observed to dump used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest portion of the Site. The observed dumping of waste solvent onto the unpaved ground surface is an environmental concern and will cause environmental impairment. Depending on additional information obtained, further investigation into this matter may be prudent."

- "The apparent fuel UST, waste fluid disposal collection tank/sump/clarifier, and associated piping appear to have been installed in the 1970s during the use of the 1811 building as a truck maintenance facility. The remaining presence and unknown conditions and contents, if any,

represent an environmental concern. These features should be brought in compliance with current regulations or removed from the Site under permit from the LAFD UST Program."

July 24, 2014: Phase II Environmental Site Assessment, 1805, 1811, 1825, 1899 Sacramento Street, Los Angeles, California: In response to the Phase I conducted at the Site, a Phase II was conducted which included soil and soil vapor sampling and a geophysical survey. Eight (8) soil borings were completed to ten feet bgs in the northeastern area and two (2) soil borings were completed to five feet bgs in the north end of central parking lot to assess possible impacts from the observed dumping of waste solvents onto the unpaved ground surface and areas of surface staining. Soil samples were collected from 2, 5, and 10 feet bgs. Of those, eight (8) samples collected from 2 feet bgs from the borings located in northwestern corner, were tested for extractable range petroleum hydrocarbons (ERPH) and Stoddard solvent using United States Environmental Protection Agency (USEPA) Test Method 8015M, and VOCs using USEPA Test Method 8260B, and two (2) soil samples collected from 2 feet bgs from borings located at the north end of the central parking lot were tested for ERPH using USEPA Test Method 8015M. A photoionization detector (PID) was used to screen a small amount of soils for VOCs from each sampling location. The results from the PID screenings were not provided and could not be located. Total petroleum hydrocarbons as diesel (TPHd) was detected in all 10 samples analyzed at concentrations ranging from 2.7 to 18.6 milligrams per kilogram (mg/kg). Total petroleum hydrocarbons as oil (TPHo) was detected in 6 of the 10 samples analyzed at concentrations ranging from 140 to 216 mg/kg. Stoddard solvent was not detected above analytical detection limits in any of the soil samples. PCE was detected in 2 samples analyzed at concentrations of 4.36 micrograms per kilogram (µg/kg) and 5.45 µg/kg, ethylbenzene was detected in one sample at 2.61 µg/kg, xylenes were detected in two samples at 3.02 µg/kg and 11.96 µg/kg. No other VOCs were detected. Three soil borings were converted to soil vapor probes at five (5) feet bgs. Soil vapor samples were tested for VOCs and fuel oxygenates using USEPA Test Method 8260B. No VOCs were detected in any of the samples. A geophysical survey, including ground penetrating radar, was conducted to evaluate the presence of USTs and/or backfilled excavations associated with UST removal, as well as the presence of detectable underground utilities in the vicinity of suspected fill ports and clarifier features. Results indicate two suspected USTs of approximately 6,000 to 10,000-gallon capacities in the central parking lot area and the detection of an inlet, an outlet, and a vent line in the area of the clarifier at the north side of the 1811 Sacramento Street building.

The report concluded "that a significant release to the subsurface in the areas of dumping of used mineral spirits directly onto the unpaved ground of the former railroad spur in the northwest portion of the site and limited surface staining in the central portion of the site has not occurred, therefore further subsurface investigation is not warranted." However, they did recommend further assessment to determine potential subsurface releases in the vicinity of the suspected USTs and clarifier at the site. Soil testing for laboratory analysis did not appear to be performed at the 5 and 10-foot bgs intervals.

January 7, 2015: Environmental Oversight for Clarifier Removal and Soil Sampling Activities Report, Marsh and Herb Importer, Inc., 1811 Sacramento Street, Los Angeles, California: This report presented the findings from the clarifier removal and associated soil sampling at the Site. One three chamber 500-gallon clarifier was removed, located northwest of the northwest corner of the building at 1811 Sacramento Street. Excavated soil was monitored for VOCs using a PID and readings did not exceed 50 parts per million (ppm) during activities. One soil sample was collected from 2 feet below the excavation

floor (8 feet bgs) to determine subsurface impacts from the clarifier and was tested for petroleum hydrocarbons using USEPA Test Method 8015, VOCs and fuel oxygenates using USEPA Test Method 8260B Full Scan, and CAM 17 metals using USEPA Test Method 6010B and USEPA Test Method 7471. Petroleum hydrocarbons, VOCs, and fuel oxygenates were not detected and CAM 17 metal concentrations did not exceed naturally occurring background levels. Stockpiled soils were used as backfill in the excavated area. The report concluded that petroleum hydrocarbons, VOCs, and fuel oxygenates were not detected above their respective laboratory reporting limits, and metals concentrations were below levels of concern. Soil testing from the side walls of the excavated area for laboratory analysis was not performed. However, there were no VOCs detected with the PID from the east or west side of the clarifier during the removal process.

January 7, 2015: Submittal of Revised Environmental Oversight for UST Removal and Soil Sampling Activities Report, Marsh and Herb Importer, Inc., 1811 Sacramento Street, Los Angeles, California: This report presented the findings from the UST removal and associated soil sampling at the Site. Three 550-gallon (also referred to as 1,000-gallons in other records) waste oil USTs and one 10,000-gallon diesel fuel UST were removed, located west of building 1811 Sacramento Street in the (former) trucking parking lot. Excavated soil was monitored for VOCs using a PID and readings did not exceed 50 ppm during activities. Three (3) soil samples were collected from 2 feet beneath the excavation of each of the waste-oil USTs, one (1) soil sample was collect from 3 feet below the remote fill location, one (1) soil sample was collected from 10 feet below the UST ventilation line, and one sample was collected from the excavation waste oil soil to determine subsurface impacts from the 550-gallon USTs and were tested for petroleum hydrocarbons using USEPA Test Method 8015, VOCs and fuel oxygenates using USEPA Test Method 8260B Full Scan, and CAM 17 metals using USEPA Test Method 6010B and USEPA Test Method 7471. PCE was detected in one sample at a concentration of 1.2 µg/kg. No other VOCs or fuel oxygenates, petroleum hydrocarbons were detected, CAM 17 metal concentrations did not exceed naturally occurring background levels. Two (2) soil samples were collected beneath each end of the UST at a total depth of 14 feet bgs and one (1) soil sample was collected from excavated diesel fuel soil. All soil samples were tested for petroleum hydrocarbons using USEPA Test Method 8015, VOCs and fuel oxygenates using USEPA Test Method 8260B Full Scan, and CAM 17 metals using USEPA Test Method 6010B and EPA Method 7471. PCE was detected in one sample at a concentration of 5.7 ug/kg. No other VOCs or fuel oxygenates, petroleum hydrocarbons were detected, CAM 17 metal concentrations did not exceed naturally occurring background levels. Stockpiled soils were used as backfill in the excavated area.

November 8, 2019: Phase I Environmental Site Assessment, Sacramento Street Industrial Buildings, 1811 and 1825 Sacramento Street, Los Angeles, California: This report presented the findings from the Phase I report. Their findings included: no controlled recognized environmental conditions; one recognized REC; one historical REC, one "de minimis" condition, and one offsite vapor intrusion threat. The one REC included a 10,000-gallon UST that was installed in 1954, in the eastern parking lot, to replace an existing 2,000-gallon UST. No records exist of the 10,000-gallon UST being removed. The historical REC included the 2015 removal of one 10,000-gallon diesel UST and three 1,000-gallon oil waste USTs located west of the 1811 Sacramento building. The "de minimis" condition included the previously observed dumping of used mineral spirits (solvents) onto the unpaved ground of the former railroad spur in the northwest subject property corner and the previously observed surface staining in the central parking lot where both were investigated and no impacts were noted. An off-site vapor intrusion threat

from the 1901 Sacramento Street site from the generation of chlorinated solvents and inorganic solid waste for off-site disposal or recycling and 1910-1914 Bay Street property from release of chlorinated solvents has been identified. The report recommended that subsurface investigations be performed in the east parking lot in the two areas where the tanks were reported to have existed, including soil vapor testing with probes set to 5 feet bgs which could provide info regarding the presence of the USTs and/or impacts from the REC related to the northeastern property located at 1901 Sacramento Street.

November 22, 2019: Limited Phase II Environmental Site Assessment Subsurface Soil-Vapor Screening Test Report, The Sacramento Street Property East Parking Lot Portion, 1811 Sacramento Street, Los Angeles, California: This report presented the findings from the subsurface soil-vapor screening conducted in the eastern parking lot located at the Site. Eight (8) soil-vapor/gas probes were installed to 5 feet bgs in the eastern parking lot to screen for possible chlorinated solvents and aromatic hydrocarbons in soil vapor.

Vapor samples were analyzed onsite for: gasoline vapors and compounds, chlorinated solvents, and aromatic hydrocarbons using USEPA Test Method 8260B on a mobile gas chromatograph. PCE was detected in (8) samples (includes one duplicate sample) at concentrations ranging from 0.21 micrograms per liter (µg/L) to 0.90 µg/L. No other concentrations were detected above their respective laboratory reporting limits. The report concluded "that, presence of a REC as discussed in the Phase I report is not likely to the extent that gasoline vapors were suspected and that the subsurface of this portion of property has not been adversely impacted by its historic use. Further assessment is not recommended at this time." There is not enough evidence to suggest that the reported 10,000-gallon UST in eastern parking lot was ever removed. A geophysical survey using ground penetrating radar was recommended to located the potential UST and associated lines. In addition, we do not know if the Site groundwater has been impacted from the northeast property located at 1901 Sacramento Street. This issue was not addressed or discussed in the 2019 Limited Phase II report.

1910-1914 Bay Street and 1901 Sacramento Street Properties – 73 Feet Northeast

The properties located approximately 73 feet northeast, upgradient, of the Site, was listed as 1910-1914 Bay Street and 1901 Sacramento Street Properties, Geltman Industry, and Wave Enterprises in multiple databases searched by the EDR. The combined facility was primarily listed in the databases for contaminated soil and groundwater related to historic above and below ground USTs used to hold PCE and trichloroethene (TCE) and railroad spurs that were once routed through the Bay Street property.

Information regarding these facilities was found on the Geotracker website (www.geotracker.waterboards.ca.gov). Currently, there is one Open – Assessment & Interim Remedial Action case listed for this property. The case (Region 4 Case #1412) involves subsurface contamination related to the historic release of chlorinated solvents at 1910 Bay Street. The facility was historically used for textile manufacturing and processing by Geltman Industries and Rezex Corporation dating back to at least the 1970s. Records indicate several storage tanks have been used to contain PCE, TCE, and diesel fuel. Soil contamination was discovered during a limited subsurface investigation in December 1993 through January 1994 which included the installation of seven soil borings. Soil samples collected near the former railroad tracks and around the edges of the property indicated elevated concentrations of PCE

and total recoverable petroleum hydrocarbons (TRPH). In 1999, a Phase I Environmental Site Assessment was conducted at the facility which determined historic uses and above ground and below ground tanks historically used at the properties.

In February 2016, a soil gas survey was conducted that included the installation of 25 semi-permanent gas probes to 3 to 5 feet bgs in target areas. Soil gas samples collected indicated elevated concentrations of PCE in all soil gas samples and concentrations of TCE and cis-1,2-dichloroethene) cis-1,2 DCE were detected in most samples. Detected concentrations exceeded the Department of Toxic Substance Control (DTSC) guidelines.

In April 2016, eight single and multiple completion vapor extraction wells (VEWs) were installed from 10 to 110 feet bgs for soil vapor extraction remediation and vapor intrusion mitigation. Most soil samples collected during the well installations detected concentrations of PCE, TCE, cis-1,2 DCE, chloroform, and naphthalene.

In March 2017, an additional VEW was installed to 135 feet bgs. Soil samples collected during installation indicated detectable concentrations of PCE.

In August 2017, one groundwater monitoring well was installed to 140 feet bgs. Soil samples collected during installation indicated detectable concentrations of PCE and TCE. Additional site assessment was required by the LARWQCB to determine groundwater conditions. In 2018, six groundwater monitoring wells were installed to 140 feet bgs including several with multi-level soil gas sampling tips. A silty clay layer located at approximately 140 to 142 feet bgs interval was encountered during well installation. It was suggested that there was a possible perched groundwater zone. Soil samples collected during installation indicated detectable concentrations of PCE and TCE. Soil gas samples indicated low concentrations of PCE and TCE in most samples.

In December 2018, groundwater sampling was conducted. During this sampling event many wells produced low volumes of water and had slow recharge times. Groundwater samples collected indicated concentrations of PCE, 1,1-dichloroethene (1,1-DCE), and cis-1,2-DCE in all samples.

Between April and June 2016, a vapor extraction pilot test was conducted utilizing 14 available well using a mobile extraction devise. In July 2016, the vapor extraction system used in the interim remedial action program was started for continuous operation. As of the fourth quarter of 2019, the system has removed a total of 3,527.5 pounds of PCE in the vapor phase.

The closest groundwater monitoring well to the 1805/1811/1899 Sacramento Street Site is MW2 (approximately 85 feet northeast) located at 1901 Sacramento Street on the southwest corner of the property. The well is installed to 140 feet bgs and includes soil gas sampling tips at 15, 30, 60, and 90 feet bgs. Results from groundwater sampling conducted on December 15, 2019 indicated concentrations of PCE, TCE, and cis-1,2-DCE at 990 ug/L, 210 ug/L, and 28 ug/L. Soil gas samples collected from MW2 on December 3, 2018 indicate PCE concentrations were present in most samples ranging from 4.5 ug/L (15 feet bgs) to 150 ug/L (90 feet bgs) and TCE concentrations were present in one sample at 0.80 ug/L (90 feet bgs). The closest vapor extraction well to the subject Site is (VE6) located at 1901 Sacramento Street, at approximately 134 feet northeast. Recent vapor samples collected on November

14, 2019 indicate PCE and TCE concentrations were present in both the shallow and deep sample locations ranging from 73 ug/L (deep- 100 feet bgs) to 160 ug/L (shallow- 45 feet bgs) and 0.72 (shallow) to 2.5 (deep).

As of January 2020, two work plans for additional work at the 1910-1914 Bay Street and 1901 Sacramento Street Properties have been submitted and conditionally approved by the LARWQCB. One work plan calls for plans to define the extent of groundwater contamination and to define the current soil gas conditions (not currently posted/available on Geotracker). The other, a Soil Gas Sampling Plan, dated February 7, 2020, is to provide a plan for gauging the effectiveness of the ongoing vapor extraction system operation program (Remdox, 2020). Upon approval, the scope of work is to be implemented in Summer 2020.

Based on the soil, soil vapor, and groundwater contamination associated with this site, the upgradient position of this facility from the 1805/1811/1899 Sacramento Street Site, and the (current) lack of off-site data, this facility poses an environmental concern to subsurface soil vapor and/or groundwater at the 1805/1811/1899 Sacramento Street Site.

2.3 GEOLOGY AND HYDROGEOLOGY

Soils encountered during drilling activities for soil borings and soil vapor probes installations were fairly consistent across the Site and generally consist primarily of sand, and gravelly sand, with occasional layers of silty sand and clayey silt/clay to approximately 50 feet bgs. Lithologic boring logs of each drilling location are included in Appendix A. Geologic cross section location is presented on Plate 2 and geologic cross sections A-A' is presented on Plate 3.

Based on the drilling logs from the adjacent site, this sequence extends to about 140 feet below grade. The results from drilling well VE9 indicated the saturated interface was very close to 135 feet below grade based on very moist conditions noted in the drilling log.

Also, information in reports for the 1910-1914 Bay Street and 1901 Sacramento Street Properties, in August 2017, groundwater was encountered at 140 feet bgs in MW1 underlain by an apparent competent silty clay layer extending from 140-142 feet bgs. Static groundwater lies at 125-130 feet bgs in wells VE9d and MW1, a significant range in depth considering the proximity and close surface elevation between the two points (about 1-foot difference). The saturated zone is apparently very thin and is interpreted to be a perched zone situated atop the silty clay layer located at about 140 feet bgs. The wells are poor producers of groundwater and each well bails dry with relative ease. The groundwater flow direction is southwest.

The Site is located within the Central Groundwater Basin of the Downey Plain physiographic province of Los Angeles County. The sediment in this region consists mostly of unconsolidated alluvial sediments of Recent to Pleistocene Age (approximately 2 million years before present). These late Pleistocene sediments are known collectively as the Lakewood Formation. Several aquifers of variable thickness and groundwater quality are present regionally and beneath the site. In descending order of depth, these aquifers include the Gaspur (Recent Age), Exposition, Gardena, Gage, Hollyfield, Jefferson, Lynwood, Silverado, and Sunnyside (all Pleistocene Age).

Based on water-level data collected on October 16, 2014 by the Los Angeles County Department of Public Works (LADWP), Hydrologic Unit, the potentiometric surface in a nearby water supply well, State Well No. 2778, located approximately one mile southeast of the site, was measured at 245.10 feet below grade.

These data are consistent with other LADWP wells in the vicinity, which indicate the depth to significant groundwater resources in the area is approximately 215 to 250 feet bgs, nearly 100 feet deeper than at the subject site.

3.0 FIELD ACTIVITIES

3.1 INITIAL FIELD ACTIVITIES

The initial field activities performed at the Site included the following:

- Installation of 10 semi-permanent soil vapor probes at depths of 5 and 15 feet bgs. The soil vapor probes have a surface well lid of 5-inches in diameter with a concrete collar approximately 8-inches in diameter.
- Collection of soil samples at 1, 5, 10 and 15 feet bgs with details below:
    - Collected 4 soil samples (one sample from each separate area) at 1-foot bgs for analysis for soil profiling. These samples were analyzed for the following:
        - VOCs using USEPA Test Method 8260B,
        - Total petroleum hydrocarbons-carbon chain (TPHcc) using USEPA Test Method 8015M,
        - Semi-volatile organic compounds (SVOCs) using USEPA Test Method 8270C
        - Polychlorinated biphenyls (PCBs) using USEPA Test Method 8082, and
        - CAM Metals using USEPA Test Methods 6010B/7471A. Soluble testing using Soluble Threshold Limit Concentration (STLC) and Toxicity Characteristic Leaching Procedure (TCLP) methods was performed on one sample that lead exceeded 50 milligrams per kilogram (mg/kg).
    - Collected 10 soil samples from 5 feet, 10 feet, and 15 feet bgs and analyzed for VOCs and TPH-cc (a total of 30 samples).
- Collection of 20 soil vapor samples from the soil vapor probes and analyzed samples for VOCs using USEPA Test Method TO-15 (modified).

3.2 FOLLOW-UP FIELD ACTIVITIES

Based on the widespread detections of VOCs (primary PCE) in soil vapor samples and the detection of one location with total lead and soluble lead concentrations that would be considered as hazardous waste for disposal, the following additional field investigation activities were implemented:

- Installation of 6 semi-permanent soil vapor probes at depths of approximately 25 and 40-50 feet bgs.
- Collection of soil samples at 1 and 2 feet bgs at 8 locations to delineate lead impacts. These samples were analyzed for lead using USEPA Test Method 6010B. Four samples were tested using STLC and TCLP methods where the total lead concentration exceeded 50 mg/kg.
- Collection of 12 soil vapor samples from the soil vapor probes and analyzed samples for VOCs using USEPA Test Method TO-15 (modified).
- Collection of soil samples at 1, 2 and 5 feet bgs at 6 locations to delineate lead impacts and collected 5 feet deep samples at the 5 locations where the 2 feet deep sample had a STLC exceedance. A total of 23 samples were collected. These samples were analyzed for lead using USEPA Test Method 6010B. One sample was tested using STLC and TCLP methods where the total lead concentration exceeded 50 mg/kg.

3.3 SOIL BORING ADVANCEMENT

Four shallow soil sample were collected at 1-foot bgs and analyzed for metals using USEPA Test Method 6010 series, VOCs + oxygenates using USEPA Test Method 8260B, polychlorinated biphenyls using USEPA Test Method 8082, and TPH carbon chain C6 to C44 analysis using USEPA Test Method 8015B (modified [M]). The soil samples were collected in laboratory supplied sampling containers and transported on ice and under chain-of-custody documentation to Sunstar Laboratories, Inc (Sunstar). Detected chemical compounds and carbon chain laboratory analytical results in soil are presented in Table 1 through 4, and corresponding laboratory analytical reports and supporting chain-of-custody documentation are included in Appendix B.

Soil borings (SB-1 through SB-10) were hand-augered to approximately 5 feet bgs, and advanced to 15 feet bgs with truck-mounted direct push drill rig operated by a C-57 licensed drilling contractor (J&H Drilling Company, Inc. [J&H]) of Buena Park, California. These locations were selected outside of the existing Site buildings near the former clarifier, former USTs and where mineral spirits were observed to be dumped. Soil samples were collected at 5, 10, and 15 feet bgs for all soil borings, screened with a PID and observed for evidence of visual impacts, and lithologically logged per the Unified Soils Classification System (USCS) under the direction of a California Registered Professional Geologist (PG) or Professional Engineer (PE). Soil boring logs are presented in Appendix A. The soil samples were collected in laboratory supplied sampling containers and transported on ice and under chain-of-custody documentation to Sunstar Laboratories, Inc (Sunstar) and analyzed for VOCs + oxygenates using USEPA Test Method 8260B and TPH carbon chain C6 to C44 analysis using USEPA Test Method 8015B (M). Detected VOCs and TPH carbon chain laboratory analytical results in soil are presented in Tables 2 and 4, respectively, and corresponding laboratory analytical reports and supporting chain-of-custody documentation are included in Appendix B.

3.4 SOIL VAPOR PROBE INSTALLATION

On April 14, April 15 and May 19 through 21, 2020, J&H completed the advancement of sixteen borings (SV-1 through SV-16) and installed multi-depth nested soil vapor probes using a truck-mounted direct push rig. Each soil vapor probe location was hand-augered to approximately 5 feet bgs prior to borehole advancement. Multi-depth nested soil vapor sample points were installed at 5 feet and 15 feet for SV-1 through SV-10, and at 25 feet and between 40 and 50 feet for SV-11 through SV-16.

Soil samples were collected every 5 feet bgs to the total depth for all soil vapor probes, field screened with a PID and visual observed for evidence of potential hazardous constituents, and lithologically logged per the USCS under the direction of the Project PG or PE. Laboratory analytical soil samples were collected at depths of 5, 10, and 15 feet bgs on the initial soil vapor probe installations and analyzed for VOCs + oxygenates using USEPA Test Method 8260B, and TPH carbon chain C6 to C44 analysis using USEPA Test Method 8015B (M). The soil samples were collected in laboratory supplied sampling containers and transported on ice and under chain-of-custody documentation to SunStar. Detected VOCs and TPH-carbon chain laboratory analytical results in soil for soil vapor probes are presented in Tables 2 and 4, and corresponding laboratory analytical reports and supporting chain-of-custody documentation are included in Appendix B.

Soil vapor probes were designed in accordance with the DTSC's July 2015 *Active Soil Gas Investigations Advisory* guidance document (DTSC, 2015). Six-inch long stainless-steel wire mesh soil vapor probe well screens with barbed fittings were connected to 0.25-inch diameter Nylaflow tubing and attached to the outside of a small diameter polyvinyl chloride (PVC) stabilizing pipe using zip ties at the desired soil vapor probe installation depth. Portland cement/bentonite grout, granular or bentonite chips, and sand materials were placed from the bottom of the borehole or particular corresponding depth interval. Each soil vapor probe's installation depth was selected based on location-specific lithology at the direction of the Project PG or PE. Each individual soil vapor probe sampling tube was capped with a two- or three-way valve and labelled with its particular depth at the surface. All soil vapor probe locations were completed at the surface with a minimum 2 feet thick concrete seal, and traffic rated well box and locking manhole lid. Detailed descriptions of emplaced materials and specific installed intervals for each soil vapor probe are presented on boring logs in Appendix A.

3.5 SOIL VAPOR SAMPLING METHODOLOGY

Soil vapor samples were collected in two separate events (April 17 and May 26, 2020) from multi-depth nested soil vapor probes SV-1 through SV-16 in accordance with the July 2015 DTSC *Active Soil Gas Investigations Advisory* guidance document. A minimum of 48 hours equilibration period was observed following soil vapor probe construction prior to collecting vapor samples. One-liter (1-L) Tedlar collection bags were obtained from Sunstar, and prior to sampling a shut-in test was conducted on the above ground portion of the soil vapor probe and sampling train equipment to evaluate for the presence of any pressure leaks within the sampling system. Following successful shut-in testing, each soil vapor probe's purge volume was calculated, and each soil vapor probe was purged (3 purge volumes) using a small voltage air pump, per DTSC guidance flow rates and vacuum thresholds. Once soil vapor probe purging was complete, a rag exposed to the leak check compound 1,1-difluoroethane (1,1-DFA) was placed inside or near the soil vapor well vault and the sample tubing valve was opened allowing soil vapor to enter into the Tedlar bag. Soil vapor samples were submitted to Sunstar under chain-of custody documentation and analyzed for VOCs and 1,1-DFA by USEPA Test Method TO-15 (modified) in air. All soil vapor sampling laboratory analytical results are discussed below and presented in Tables 5. The corresponding laboratory analytical reports and supporting chain-of-custody documentation are included in Appendix B.

4.0 SOIL AND SOIL VAPOR RESULTS

4.1 REGULATORY SCREENING LEVELS

There are several regulatory screening levels that can be used in the State of California to compare the soil and soil vapor sample results. Quite often, multiple regulatory threshold criteria are used to evaluate results because screening methodology does not always have a regulatory threshold for every detected chemical.

In the recent past, soil samples have been compared to DTSC's Human and Ecological Risk Office (HERO) Note 3 for commercial/industrial soil screening levels, the San Francisco Bay RWQCB's Environmental Screening Levels (ESLs) for commercial/industrial shallow soil exposure, and the HERO Note 3 residential screening levels. Recent experience and numerous recent communications with LARWQCB staff and management have indicated that the LARWQCB wants soil data compared to screening values developed following the LARWQCB soil screening 1996 guidance document protocols (LARWQCB, 1996).

Previously, soil vapor results have been compared to HERO Note 3 screening levels for commercial/industrial air and ESLs for sub-slab/soil gas for commercial/industrial vapor assuming continued commercial/industrial land use at the Site. Recent experience with LARWQCB required that the detected chemical concentrations should be multiplied by a default attenuation factor of 0.03 and those values are compared to risk-based screening levels in accordance with DTSC's HERO Note 3. It is currently unclear that once remedial activity based on not passing the screening criteria has been implemented, what the post-remediation target remediation goals will be or what protocols will be used to develop final target remediation goals. It is important to note the previous methodology using the Advanced Version of the Johnson & Ettinger Model that is no longer accepted by the LARWQCB.

4.2 SOIL RESULTS

Lead

Lead results from the initial field activities indicated one sample (SV-9@1') had a total lead concentration that exceeded 50 mg/kg, which triggered the requirement to analyze the sample for potential lead solubility using STLC and TCLP testing to evaluate hazardous waste characterization. The STLC result exceeded 5.0 ug/L which indicates that if this soil is excavated at the Site, it will need to be considered a non-RCRA hazardous waste. The TCLP result was less than 5.0 ug/L which indicates that if the soil is excavated at the Site, it will not be considered as a RCRA hazardous waste.

The follow-up field activities collected samples at 1 and 2 feet bgs approximately 5 and 10 feet to the north, south, east, and west of the original lead sample that exceeded 5.0 ug/L on the STLC. The objective of these samples was to define the lateral and vertical delineation of the impacted lead area. Results of the step-out samples provided some delineation to the north and south, but the STLC-lead impacted area was still not bounded to the east, northeast, southeast, or the northwest. Also, the three STLC-exceedances were all at 2 feet bgs, so there was no vertical delineation. Additional sampling is necessary to provide

lateral and vertical delineation to calculate the soil volume that needs to be removed and managed as non-RCRA hazardous waste.

Based on the above results a total of 23 samples in 6 step-out locations to the north, east, northwest, and southeast was collected to bound the lead-impacted zone laterally. Five (5) soil samples were collected at 5 feet bgs at the locations where the 2 feet bgs sample had STLC exceedances to bound the lead-impacted zone vertically. Samples were collected at 1, 2 and 5 feet bgs. These samples were analyzed for lead using USEPA Test Method 6010B. One sample was tested using STLC and TCLP methods where the total lead concentration exceeded 50 mg/kg. The TCLP result was less than 5.0 ug/L which indicates that if the soil is excavated at the Site, it will not be considered as a RCRA hazardous waste.

Plates 4, 5 and 6 show the total lead and soluble lead results near SV-9.

VOCs

PCE was the only VOC detected in the soil at a maximum concentration of 4.2 ug/kg at a depth of 5 feet bgs. PCE was detected in 8 of 34 soil samples with a range of 1.5 to 4.2 ug/kg with the laboratory detection being 1.5 ug/kg. The sample detections are widespread with no discernable distribution pattern that would suggest an on-site source. These concentrations are slightly above the laboratory detection limits.

4.3 SOIL VAPOR RESULTS

Initial and follow-up PCE soil vapor results are depicted together in a series of graphics on Plates 4 through 12. The PCE soil vapor concentrations are shown in isoconcentration contour maps that begin using the San Francisco Bay RWQCB ESL for commercial sub-slab and soil vapor results of 67 microgram per meter cubed (mg/m^3) and each subsequent contour interval is increased an order of magnitude.

There are two different contour maps at four different depth intervals. The depth intervals are at 5 feet bgs, 15 feet bgs, 25 feet bgs, and between 40 and 50 feet bgs. The last depth interval is a range due to difficult drilling conditions at depth caused probe refusal.

Soil vapor depicted on the contour maps is from the 1805-1899 Sacramento Street site and the 1910-1914 Bay Street & 1901 Sacramento Street east of the Site. Each depth interval has two separate contour maps as discussed below:

- Most Recent Data: Plates 7, 9, 11 and 13 illustrate the most recent PCE soil vapor data collected from 1805-1899 Sacramento Street site and the 1910-1914 Bay Street & 1901 Sacramento Street site.
- Maximum Historic Data: Plates 8, 10, 12 and 14 illustrate the maximum historic PCE soil vapor data collected from 1805-1899 Sacramento Street site and the 1910-1914 Bay Street & 1901 Sacramento Street site. Note that there is only one data set from the 1805-1899 Sacramento Street site, so this does not change between the sets of data. The historic maximum maps are necessary to illustrate conditions at 1910-1914 Bay Street & 1901 Sacramento Street site prior to beginning soil vapor remediation activities using a remediation approach called soil vapor extraction (SVE).

The series of graphics on Plates 7 through 14 illustrate that the adjacent property had PCE soil vapor concentrations at least two orders of magnitude greater than the 1805-1899 Sacramento Street site and strongly suggest that the soil vapor impacts migrated from the adjacent site. Soil vapor migration of VOCs is driven by chemical diffusion (from high concentration areas to lower concentration areas) and pressure differentials in the subsurface. Chemical diffusion migration is dominant process in steady state conditions and is a relatively slow process that would occur over numerous years to decades. Pressure differential migration (such as an active SVE system) is a faster process that would occur over months to years.

Plate 15 illustrates the maximum historic PCE concentrations in soil vapor along cross section A-A'. This graphic clearly illustrates the significant differences in soil vapor PCE concentrations, especially when it is considered that the 1805/1811/1899 Sacramento Street Site results are after the SVE system has operated for several years. The original design radius of influence (ROI) from the SVE pilot test performed at 1910-1914 Bay Street & 1901 Sacramento Street site is shown on Plate 15, through based on the extensive gravel shown at the bottom of the cross section (Plate 3), the ROI is likely greater than the original estimation.

So, the maximum historic PCE plots show the result of chemical diffusion under both sites, while the most recent PCE plots show the result of chemical diffusion under the 1805-1899 Sacramento Street site and the result of pressure differential migration (on-going SVE system) under the 1910-1914 Bay Street & 1901 Sacramento Street site. Note that based on information provided in a technical report on the 1910-1914 Bay Street & 1901 Sacramento Street site, the operation of the SVE system cannot "pull back" the PCE impacts currently under the 1805-1899 Sacramento Street site.

Another potential chemical migration pathway to explain PCE soil vapor beneath the Site is migration of impacted groundwater from an upgradient source, then off-gassing from groundwater into soil vapor beneath the Site and migrating upward through a process known as vapor intrusion.

5.0 CONCLUSIONS AND RECOMMENDATIONS

The impacts of the lead and VOCs in soil vapor are discussed below:

Lead

Lead results from the field activities indicate that several samples exceed the STLC result and will need to be treated as a non-RCRA hazardous waste when excavated and disposed at an appropriately permitted landfill that can accept this waste stream. The TCLP results were less than 5.0 ug/L which indicates that if the soil will not need be considered as a RCRA hazardous waste. While the 2-foot bgs samples exceeded the STLC, it is likely that the lead impacts will not go significantly deeper based on the nature of its environmental fate and transport mechanisms.

Based on the existing lead data, it is estimated that a probable lead impact area of 30 feet long, 10 feet wide and 5 feet deep. Using a 1.4 factor to convert cubic yards to tons, the volume converts to be approximately 77 tons. Estimating the disposal cost at approximately $150 per ton would yield lead disposal costs of approximately $11,500. Based on the existing lead data, it is estimated that a worst-case lead impact area of 40 feet long, 15 feet wide and 5 feet deep. Using a 1.4 factor to convert cubic yards to tons, the volume converts to be approximately 155 tons. Estimating the disposal cost at approximately $150 per ton would yield lead disposal costs of approximately $23,000.

VOCs in Soil Vapor

Based on existing data, a conclusive statement on whether the PCE impacts in soil vapor under the Site is a result of chemical diffusion from the adjacent site, off-gassing from groundwater from upgradient sites, or a combination of both these processes cannot be made. However, multiple lines of evidence indicate PCE soil vapor impacts at 1805-1899 Sacramento Street Site are a result of migration from the 1910-1914 Bay Street & 1901 Sacramento Street site.

Regardless of the source or migration mechanism of the PCE impacts in soil vapor, the path-forward recommendation is the same. An engineered vapor intrusion mitigation system (a sub-slab vapor barrier with vent risers) should be installed as part of any new building constructed at the Site.

Notes:
Detections shown in **BOLD**
µg/kg = micrograms per kilogram
USEPA = United States Environmental Protection Agency
<1.5 = Not detected at or above the indicated reporting limit
bgs = below ground surface
1,1,1-TCA = 1,1,1-Trichloroethane
1,1-DCA = 1,1-Dichloroethane
1,1-DCE = 1,1-Dichloroethene
1,2-DCA = 1,2-Dichloroethane
cis-1,2-DCE = cis-1,2-Dichloroethene
PCE = Tetrachloroethene
TCE = Trichloroethene

Notes and Definitions

QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Notes and Definitions

QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Notes and Definitions

QM-07	The spike recovery and or RPD was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

SunStar Laboratories, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

SAMPLE RECEIVING REVIEW SHEET

Batch/Work Order #: T2020S1

Client Name: EQUIPOISE CORP

Project: 1805/1811/1899 SACRAMENTO ST, LA

Delivered by: ☒ Client ☐ SunStar Courier ☐ GSO ☐ FedEx ☐ Other

If Courier, Received by: _____ Date/Time Courier Received: _____

Lab Received by: BRIAN Date/Time Lab Received: 4/16/20 0950

Total number of coolers received: Thermometer ID: SC-1 Calibration due: 6.27.20

Temperature: Cooler #1	3.6 °C +/- the CF (+ 1.2°C) =	4.8	°C corrected temperature
Temperature: Cooler #2	°C +/- the CF (+ 1.2°C) =		°C corrected temperature
Temperature: Cooler #3	°C +/- the CF (+ 1.2°C) =		°C corrected temperature

Temperature criteria = ≤ 6°C (no frozen containers)	Within criteria?	☒ Yes ☐ No
If NO:		
Samples received on ice?	☐ Yes	☐ No → **Complete Non-Conformance Sheet**
If on ice, samples received same day collected?	☐ Yes → Acceptable	☐ No → **Complete Non-Conformance Sheet**

Custody seals intact on cooler/sample	☐ Yes	☐ No*	☒ N/A
Sample containers intact	☒ Yes	☐ No*	
Sample labels match Chain of Custody IDs	☒ Yes	☐ No*	
Total number of containers received match COC	☒ Yes	☐ No*	
Proper containers received for analyses requested on COC	☒ Yes	☐ No*	
Proper preservative indicated on COC/containers for analyses requested	☐ Yes	☐ No*	☒ N/A
Complete shipment received in good condition with correct temperatures, containers, labels, volumes preservatives and within method specified holding times	☒ Yes	☐ No*	

* Complete Non-Conformance Receiving Sheet if checked
