## SIGNATURE AND ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

# 1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting, Inc. (Ramboll) was retained by Wactor Environmental Law Group, P.C. (Counsel) and its client Blake/Griggs Properties (collectively, the "Client") to perform a Phase I Environmental Site Assessment (ESA) of the site located at 701 South Myrtle Avenue, Monrovia, in California (herein referred to as the "Subject Property"; see Figures 1 and 2). Ramboll's assessment was conducted in connection with a potential purchase of the Subject Property.

The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-21[1] (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 8).

The scope of work for the Phase I ESA was expanded to include an evaluation of certain additional considerations that are not included within the ASTM Standard,[2] as noted in Section 2.1 of this report.

## 1.1 Site Summary

The Subject Property is rectangular, flanked by three city streets and a commercial property, approximately 1.6 acres in size, fully paved, developed with an approximately 25,000-square-foot single story multi-tenant commercial building constructed in 1979, and is located in the southwest corner of West Olive Avenue and South Myrtle Avenue in Monrovia, California, approximately 20 miles northeast of the city of Los Angeles. The single-story building includes fifteen commercial tenant suites currently occupied by eleven tenants (two tenant spaces are vacant, two tenants occupy two spaces). The primary site access is from West Olive Avenue to the north of the Subject Property and leads to asphalt-paved areas in the northern and southern portions of the Subject Property. Additional access is from the alley located south of the Subject Property. Other areas of the Subject Property include landscaping along the western, northern and eastern perimeter.

The Subject Property was residential along the western portion and commercial along the eastern portion from the late 1800s until the 1970s. An automotive repair shop and gasoline service station (R&B Service) were located along the southeastern edge of the Subject Property from the 1920s until the 1960s. Nearby land uses are commercial and multi-family residential.

## 1.2 Phase I ESA Conclusions

### 1.2.1 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the Subject Property in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 7.2 of this report. This assessment has identified no RECs in connection with the Subject Property.

Additional findings of Ramboll's Phase I ESA that are not considered RECs are discussed in Sections 5.3 and 7 of this report.

[1] While this report was prepared to meet the 2021 ASTM Standard, it also meets the requirements of the 2013 ASTM Standard.

[2] The ASTM Standard refers to these areas as "non-scope considerations."

# 2. INTRODUCTION

## 2.1 Scope of Work

Ramboll conducted a Phase I ESA of the Subject Property, which relied upon the sources of information noted below. The date on which the information was obtained/reviewed is also indicated in the table below.

**Table 1: Sources of Information Relied on for the Phase I ESA**

| Resource | Description | Date |
|---|---|---|
| **Site Reconnaissance** | | |
| Site visit | Ramboll representative: Stephanie Eckelman (photographs from the site visit are provided in Appendix A) | October 25, 2022 |
| **Interviews** | | |
| Site Representatives[1] (year first associated with the Subject Property) | James Mendenhall, Property Manager with Samuelson and Fetter (2012) | October 25, 2022 |
| Subject Property Owner Representative | The current property owner was not interviewed during this assessment. | N/A |
| **Records Review** | | |
| Environmental Database Search2 | Environmental Data Resources, Inc (EDR) database report (Appendix B) | October 18, 2022 |
| Federal and State Governmental Online Resources | USEPA EnviroFacts and Enforcement and Compliance History Online (ECHO) databases<br>California Department of Toxic Substances Control's EnviroStor (EnviroStor)<br>California Water Resources Control Board's GeoTracker website (GeoTracker)<br>South Coast Air Quality Management District (SCAQMD) Facility Information Detail (FIND)<br>California Geologic Energy Management Division (CalGEM) website<br>National Pipeline Mapping System (NPMS) Public Viewer website | October 18, 2022 |

**Table 1: Sources of Information Relied on for the Phase I ESA**

| Resource | Description | Date |
|---|---|---|
| Local Agency Records | County of Los Angeles Fire Department-Health Hazardous Materials Division (HHMD), City of Monrovia Fire Department, Los Angeles County Public Works-Waste Management Division, and the City of Monrovia Building Department.<br>Ramboll requested information from Los Angeles County Public Health Investigator (PHI); however, the agency referred Ramboll to the Fire Department – HHMD for records pertaining to the Subject Property. | October 18, 2022 |
| Historical Sources | Aerial photographs, topographic maps, city directory listings, Sanborn maps (as available), obtained from EDR (Appendix C). | October 18, 2022 |
| Physical Setting Sources | Current USGS 7.5-minute topographic map for the Subject Property and surrounding area<br>Geologic, hydrogeologic, and hydrologic information provided in the EDR report | October 18, 2022 |
| Prior Environmental Reports and Information | Prior environmental reports reviewed by Ramboll (Appendix D) included:<br>• *Soils Engineering Report for Proposed Light Industrial Development at 120 W. Olive Avenue, Monrovia California,* prepared by Foundation Engineering Co., Inc., and dated July 27, 1978.<br>• *Geotechnical Design-Level Investigation for Mixed-Use Apartment Development, 701 S. Myrtle Avenue, Monrovia, California* prepared by Geotechnical Professionals, Inc., and dated November 3, 2022 | October 19, 2022<br>December 6, 2022 |
| Title Report | A review of a preliminary title report prepared by First American dated September 23, 2022, provided by the Client. | October 19, 2022 |
| Environmental Lien (EL)/Activity and Use Limitations (AUL) | EL/AUL search report obtained from EDR (Appendix E) | October 19, 2022 |
| **User-provided Information** | | |
| User-provided Information | Information provided by the user of this assessment consistent with Appendix X3 of the ASTM Standard and other information identified in Section 10.8 and 10.9 of the ASTM Standard. | October 19, 2022 |

Notes:

[1] The Subject Property representatives interviewed by Ramboll were identified by the Company as having good knowledge of the uses, physical characteristics, and operations of the Subject Property (i.e., "key site manager" as defined by the ASTM Standard).

[2] The radius searched for each database, as well as the databases themselves, were selected in accordance with the ASTM Standard.

This Phase I ESA was conducted in accordance with the methodology specified in the ASTM Standard, as agreed upon by Ramboll and its client in the proposal for this assignment.

The scope of work for this assignment was expanded to include an evaluation of certain additional considerations that are not included in the ASTM Standard, which included a screening-level review of wetlands, flood plains, PFAS, ACMs[3], radon, water intrusion/mold, and lead-based paint in Subject Property buildings. The review of additional considerations was conducted based on available information and documentation; no samples of any media were collected as part of this assignment unless explicitly stated otherwise. Any other areas referred to as non-scope considerations by the ASTM Standard not listed above were outside the scope of this assessment.[4]

## 2.2 Significant Assumptions

In conducting this review, Ramboll made no significant assumptions, except for the following:

- Site-specific field measurements or other detailed hydrogeological information for the Subject Property were not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the Subject Property and in the local vicinity generally mimics surface topography and is affected by nearby surface water bodies. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or upgradient of the Subject Property are not considered to represent a significant contamination concern to the Subject Property. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction.
- Based on a review of current tenants at the facility and the general similarity in use and construction of the individual tenant spaces, Ramboll determined that it was not necessary to inspect each individual space. Based on a list of tenants provided by facility personnel Ramboll selected tenant spaces for visual review based on the potential for that tenant to manage or use hazardous materials above "*de minimis*" amounts (e.g., laboratories, dental restoration fabrication). Ramboll has assumed that operations at other current tenant spaces are unlikely to result in the identification of RECs in connection with this review of the Subject Property.

## 2.3 Reliance and General Limitations

This report has been prepared for the exclusive use of Wactor Environmental Law Group P. C. and its client Blake/Griggs Properties, and their corporations, subsidiaries, and direct affiliates (collectively, "the User"), and may not be relied upon by any other person or entity without Ramboll's prior express written permission. Reliance on Ramboll's report by any third-party may be granted through the issuance of a separate reliance letter. If granted, and unless otherwise specified in writing, Ramboll's total aggregate exposure and liability in connection with the Report to Wactor Environmental Law

[3] Ramboll's review of ACMs in building materials did not include a formal asbestos survey in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, and any comments in this report regarding the condition of building materials represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

[4] The ASTM Standard considers per-/polyfluoroalkyl substances (PFAS) and other emerging contaminants as non-scope considerations; however, for the purposes of this assessment, Ramboll considered PFAS within the context of the Phase I ESA.

Group P.C. and any third party to which reliance has been issued shall not exceed the limits of liability established in the contract between Ramboll and its client for this assignment.

This report is considered current only for a period of 180 days from the Subject Property inspection (or the earliest date identified in the table above). The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of Subject Property conditions. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the Subject Property.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

# 3. SUBJECT PROPERTY DESCRIPTION

## 3.1 Subject Property Setting

The Subject Property is located in the southwest corner of West Olive Avenue and South Myrtle Avenue in Monrovia, California and is located approximately 20 miles northeast of the City of Los Angeles (Figure 1).

The Subject Property is developed with an approximately 25,000-square-foot commercial building, which encompasses the majority of the Subject Property. The single-story at-grade building includes fifteen tenant spaces currently occupied by eleven tenants (two tenant spaces are vacant, two tenants occupy two spaces; Figure 2).

The primary site access is from West Olive Avenue to the north of the Subject Property and leads to asphalt-paved areas in the northern and southern portions of the Subject Property. Additional access is from the alley located south of the Subject Property. Other areas of the Subject Property include landscaping along the western, northern, and eastern perimeter.

The following table provides an overview of physical setting and utility information for the Subject Property.

**Table 2: Physical Setting Information**

| Conditions | Description |
|---|---|
| **Subject Property Information** | |
| Ownership | Myrtle and Olive Associates LLC |
| Size | 1.62 acres |
| Property Tax ID | AINs: 8516-033-031 and 8516-033-030 |
| **Topography and Hydrology** | |
| Topography | Subject Property: Generally flat with a slight downward slope to the south.<br>Region: Regionally, the ground slopes downward to the southwest. |
| Nearest Surface Water Body to the Subject Property | On-site: There are no on-site surface water bodies.<br>Off-site: Sawpit Wash is located approximately 0.83 miles east of the Subject Property. |
| **Geology and Hydrogeology** | |
| Presumed Direction of Shallow Groundwater Flow[1] | Information not readily available for the Subject Property, however a property located approximately 400 feet east of the Subject Property notes that although the first water table groundwater flow direction is to the northeast, the middle and bottom zones range from the southeast to the south.[5] Regional groundwater flow appears to be to the south. |

[5] Third Five-Year Review Report for San Gabriel Valley (Area 1) Superfund Site, LA County, September 2021.

**Table 2: Physical Setting Information**

| Conditions | Description |
|---|---|
| Depth to Groundwater | Information not readily available for the Subject Property, however a vicinity property[6] located approximately 400 feet east of the Subject Property notes that groundwater appears to be located between 200 and 300 feet below ground surface (bgs). |
| Nearby Groundwater Supply Wells | According to well database information provided in the EDR report, one federal public water supply well owned by the City of Monrovia Water Department is present between one quarter and one mile north-northeast of the Subject Property. In addition, 27 private or municipal wells identified in the state database, which may be used for water supply, are located within one mile of the Subject Property; however, it appears the majority of the wells are groundwater monitoring wells. |
| Geologic Conditions | According to soil sampling conducted at the Subject Property by Foundation Engineering Co., Inc. in 1978, Subject Property soils were largely sand/gravelly sand with fine to coarse grains, medium dense with a light gray color. |

Notes:

Information in this table was obtained through visual observations during the site visit; a review of USGS topographic maps, Google Earth imagery, information contained in the database search report, prior environmental assessment reports (if available), and local agency sources (noted in Section 2), and information provided by Subject Property representatives.

[1] In the absence of on-site measurements of groundwater flow direction, presumed direction of groundwater flow is based on local/regional topography and the location and direction of flow of nearby surface water bodies.

## 3.2 Current Use of the Subject Property

The Subject Property is currently used by several commercial tenants including Toffer Mann Investments, Pacific MultiTech, Inc., Amy Yang Balance Chiropractic, Curative, Inc., A+ Academics, Behavior Frontiers, MS Diagnostic Lab, Precision Dental Ceramics, Inc., RAC Development and Big Wave Window. Two tenants (MS Diagnostic Lab and Curative, Inc.[7]) are small testing laboratories that conduct analysis of biological blood samples. MS Diagnostic Labs primarily tests for complete and metabolic chemical blood panels while Curative, Inc. primarily conducted analysis for Covid-19. The labs received blood samples submitted from local doctor's offices. The two laboratories utilize small quantities of benchtop laboratory chemicals including anticoagulants, sanitizers and detergents. Equipment utilized at the laboratories included small bench-top sized autoclaves and fume hoods.

Another tenant, Precision Dental Ceramics, Inc. collects digital images from dental offices and fabricates dental restorations (e.g., dental crowns, dentures, and partials). Equipment observed in the tenant space included a dental kiln used for enameling, small ovens, two air compressors, a bench-top milling machine, cure lights, dental dust collector, small sand blasting machine, measurement scanners, a porcelain furnace, and a small bench-top high temperature in-lab furnace. Raw materials at the Subject Property appear to be limited to the storage of small amounts of gypsum, ceramics,

[6] Third Quarter 2022 Report Groundwater Monitoring and Soil Vapor Extraction Program 801 Royal Oaks Drive, Monrovia, CA prepared by PES Environmental Inc, dated October 2022.

[7] Site personnel indicated Curative, Inc. has not conducted operations at site since April 2022.

and porcelain coatings used for the dental products. Fabrication and manufacturing activities are limited to the generation of dental restorations.

Maintenance-related chemicals and janitorial supplies, including latex paint and cleaning supplies are used in small quantities (containers of one gallon and smaller) within tenant spaces. Subject Property representatives knew of no use of chlorinated solvents or polyfluoroalkyl substances (PFAS) at the Subject Property, and the use of such chemicals is considered unlikely based on the nature of Subject Property uses.

# 4. RECORDS REVIEW

## 4.1 Historical Subject Property Use and Local Agency Information

The Subject Property was residential along the western portion and commercial along the eastern portion from the late 1800s until the 1970s. An automotive repair shop and gasoline service station (R&B Service) were located along the southeastern edge of the Subject Property from the 1920s until the 1960s. The current commercial building was constructed in 1979 by George Boone and Associates (later purchased by Samuelson & Fetter).

Based on Ramboll's review of the past uses of the Subject Property, it is unlikely that chlorinated solvents and PFAS were previously used, stored, or handled. Although solvent use associated with the former repair and service station in the southeast corner of the Subject Property is unknown, Ramboll found no evidence of any documented releases or spills related to Subject Property operations.

The following table provides a summary of key information obtained by Ramboll from a review of available historical resources and information obtained from local governmental agencies and regulatory bodies.

**Table 3: Summary of Historical Resources and Local Agency Information for the Subject Property**

| Historical Resource | Key Observations Regarding Subject Property History |
|---|---|
| **Historical Resources** | |
| Sanborn Maps<br>(1888, 1892, 1897, 1907, 1913, 1927, 1932, 1942, and 1960) | 1888 - 1960: Between two and four separate residences are located within the western portion of the Subject Property. No structures are shown on the eastern portion.<br>1927 - 1960 – An automotive repair shop and gasoline station (R&B Service) are located on the eastern part of the Subject Property at the corner of Myrtle and the unnamed alley (713 South Myrtle Avenue). |
| Aerial Photographs<br>(1928, 1938, 1949, 1952, 1964, 1972, 1977, 1979, 1981, 1989, 1990, 1994, 2002, 2005, 2009, 2012 and 2016)<br>Satellite Imagery [1]<br>(1994 to 2022) | 1928 - 1972: The Subject Property appears a mix of residential (western portion) and commercial buildings (eastern portion). A gasoline dispenser island canopy first appears in the 1938 photograph at the southeast corner of the Subject Property until at least 1977.<br>1979 – 2016: The residential and commercial buildings have been replaced by a long rectangular one-story commercial building in present day configuration. The remaining portions of the Subject Property appear as either parking or small landscaped areas. |
| Topographic Maps<br>(1894 to 2018) | 1894 – 1928: Residential sized structures are present along the perimeter of the Subject Property.<br>1928 – 1941: Structures are present along the eastern edge of the Subject Property.<br>1966 – present: The Subject Property and vicinity appear to be within a developed area. |

**Table 3: Summary of Historical Resources and Local Agency Information for the Subject Property**

| Historical Resource | Key Observations Regarding Subject Property History |
|---|---|
| City Directory Abstracts<br>(1950, 1957, 1960, 1966, 1975, 1980, 1985, 1994, 2004, and 2006) | Prior uses and occupants of the Subject Property are listed at:<br>701 South Myrtle Avenue<br>Western Tree and Truck Service (1950-1960), BH Greve (1950-1960), LA Times Circulation (1950-1975), GEM City Transfer and Storage (1950-1960), Brown Reuel (1950), Kasimoff WM Piano Tuning (1957), Huntington Construction Inc. (1980), Bedney Reginald C Inc. DDS (1985), Pacific Multitech Inc. (1994), Heil Construction Inc (2004-2006).<br>703 South Myrtle Avenue<br>Monrovia Café (1950)<br>707 South Myrtle Avenue<br>Hall Furniture Company (1950-1960)<br>713 South Myrtle Avenue<br>Hanes Brake Service/Pittman S. Mobile Service (1950), R & B Automotive (1960-1975). |
| Subject Property Representative | Mr. Mendenhall reported that the Subject Property was developed in the 1970s as a multi-tenant commercial building and has been used for the same purpose since that time. |
| **Local Agency Information** | |
| Tax assessor website | The Los Angeles County Tax Assessors Office indicated there are two assessor identification numbers (AIN) for the Subject Property; 8516033031 and 8516033030. The ownership is listed as Myrtle and Olive Associates LLC. The land use is a one-story commercial building/store. The property was last sold in 1978. |
| Environmental Lien (EL) and Activity and Use Limitation (AUL) Search Report | There are no liens or AULs associated with the Subject Property. |
| Preliminary Title report | According to the Preliminary Title Report prepared by First American dated September 23, 2022, no environmental liens or activity and use limitations (AULs) were identified. |
| County of Los Angeles Fire Department-Health Hazardous Materials Division | The County of Los Angeles Fire Department indicated it did not have records for 701-713 (odd addresses) South Myrtle Avenue or 110-136 (even addresses) West Olive Avenue, Monrovia CA. |
| City of Monrovia Fire Department | The City of Monrovia Fire Department indicated that it did not have records for 701-713 South Myrtle Avenue or 110 – 136 (even addresses) West Olive Avenue, Monrovia, CA. |

**Table 3: Summary of Historical Resources and Local Agency Information for the Subject Property**

| Historical Resource | Key Observations Regarding Subject Property History |
|---|---|
| Los Angeles County Public Works-Waste Management Division | Ramboll reviewed the Los Angeles County Public Works-Waste Management Division database to determine if there were any records of underground storage tanks, industrial waste discharge permits or violations that may have been issued to the following: 701-713 South Myrtle Avenue and 110 – 136 West Olive Avenue, Monrovia, CA. There were no records in the system. |
| City of Monrovia Building Department | Pertinent Building Department records included the following:<br>1979-building permit for wood frame and stucco building, as well as an application to construct a new 25,000-square foot building. The commercial building was slated to be constructed on a parcel which formerly contained "an old commercial warehouse, auto repair garage, sheet metal shop, two nonconforming residential parcels and several vacant lots".<br>1980-electrical permit (George Boone & Associates), a permit to install a halon 1301 fire suppression system, and plumbing permits for a 15 HP boiler (STD Research; fuel type not identified).<br>1997-Certificate of Occupancy for Wells Fargo Bank<br>1998-new sign permit<br>2011-special event canopy |

Notes:

[1] In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery available on Google Earth and at www.historicaerials.com. Printed copies were not obtained, and imagery dates were not independently verified.

## 4.2 Environmental Regulatory Database Review for the Subject Property

Ramboll reviewed the results of the state and federal environmental database searches performed by EDR (see Appendix B) and reviewed information available in the DTSC HWTS, EnviroStor and the California GeoTracker databases. The Subject Property is listed on two environmental databases. Curative Labs, located at 122 West Olive Avenue, is listed on the Resource Conservation and Recovery Act (RCRA) Small Quantity Generator (SQG) database (identification number CAR000335612) in May 2022 for potentially generating spent non-halogenated solvents; however no manifests were listed for the tenant.

A former tenant, HB Laboratories (Preskai) located at 122 Olive Avenue is listed on the RCRA NonGenerator -no longer reporting (NonGen/NLR) database. The HWTS indicated HB Laboratories (Preskai), a veterinary service provider, was issued a permanent state hazardous waste generator ID number (CAL000454244) in April 2020; however no manifests were listed for the Subject Property. These listings do not suggest a known release at the Subject Property. Wastes generated at the Subject Property are further discussed in Section 5.3.

A historical tenant, R & B Service located at 713 South Myrtle Avenue was listed on the EDR Historical Automotive database from 1959 through 1975. This former tenant is further discussed in Section 7.0.

## 4.3 Previous Environmental Assessments and Activities

Based on a review of historical Subject Property documents and interviews with Subject Property representatives, no prior Phase I environmental assessments, UST closures, environmental sampling, or remediation activities are known to have been conducted at the Subject Property. However, Ramboll did review a soils engineering report prepared for the Subject Property in July 1978 as well as a geotechnical feasibility investigation for the Subject Property in November 2022.

Foundation Engineering Co., Inc. (Foundation) conducted soil exploration at the Subject Property in July 1978. The purpose of the investigation was to classify the soil at the Subject Property, determine if filled ground exists, and conduct physical soil tests. The Subject Property reportedly was relatively level with some residential and some commercial structures at the Subject Property in addition to planted citrus trees. Soils were listed as loose, sand/gravelly sand with some silty sands. Several partial basements were noted in the abandoned houses on the Subject Property. Eight soil samples were collected using a backhoe to a maximum depth of 12 feet below ground surface. According to a site map, soil samples were not collected in the former gasoline station area. Groundwater was not encountered. Soils were largely sand/gravelly sand with fine to coarse grains, medium dense with a light gray color. Fill soil was not identified in the report.

Geotechnical Professionals Inc. (GPI) conducted limited subsurface exploration and review of prior nearby geotechnical data, and engineering evaluations in November 2022 to determine whether significant geotechnical conditions are present at the Subject Property that may impact the development of a mixed-use building. GPI performed three cone penetration test (CPT) borings to evaluate subsurface conditions to depths of 40, 50, and 71 feet bgs. Subsurface conditions consisted of predominantly medium dense sands and silty sands in the upper on-site soils. Refusal was encountered at two locations (at depths of 40 and 71 feet bgs) in very dense sandy soils. Fill soil was not encountered or identified in the report as part of the geotechnical investigation.

## 4.4 User-Provided Information

Ramboll provided Blake/Griggs Properties with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, activity use limitations (AULs), specialized knowledge of the Subject Property, property value diminution, chain-of-title, and any other commonly known or obvious indications of site contamination, as well as information on any proceedings involving the Subject Property (as noted in Section 10.9 of the ASTM Standard) that was not otherwise provided to Ramboll (see Appendix F).

The User did not provide any information that was inconsistent with Ramboll's findings and was not otherwise obtained and reviewed by Ramboll.

# 5. SUBJECT PROPERTY OBSERVATIONS

## 5.1 Chemical and Petroleum Storage

### 5.1.1 Underground Storage Tanks

According to Subject Property representatives, there are no current or former USTs at the Subject Property and no actual knowledge of an on-site, historical service station. Ramboll identified no visual evidence of such (e.g., vent pipes, fill ports, or dispensing equipment) during the site visit.

### 5.1.2 Aboveground Storage Tanks

Subject Property representatives reported that there are currently no ASTs at the Subject Property, and Ramboll did not observe any during the site visit. Ramboll did not identify visual evidence of former aboveground storage tanks during the site visit (e.g., concrete pads or tank cradles) or during the review of historical records.

### 5.1.3 Other Chemical and Petroleum Containers

Chemical storage at the Subject Property is limited to small quantities used in the laboratories (one gallon or less) of isopropyl alcohol, sanitizers, and detergents as well as janitorial and household-type maintenance chemicals (stored in individual tenant spaces). One approximately 10-liter container of nitrous oxide was observed in the Curative, Inc. tenant space. One small, compressed gas cylinder of argon was observed in the Precision Dental suite. No evidence of releases was observed in these areas. Chemicals are not stored in exterior areas of the Subject Property. Subject Property representatives knew of no significant spills or releases of materials in storage areas.

## 5.2 Other Subject Property Reconnaissance Observations

During the site visit, Ramboll made observations of interior and exterior portions of the Subject Property to look for and identify the features, activities, uses, and conditions specified in 9.4 of the ASTM Standard, as discussed in the table below.

**Table 4: Subject Property Reconnaissance Observations**

| Conditions | Description |
|---|---|
| **Subject Property Utilities and Equipment** | |
| Heating and Cooling Equipment | Approximately 19 packaged heating and air conditioning units are located on the rooftop. |
| Natural Gas Service | The Subject Property is provided with natural gas service. |
| Use of Fuel Oil for Building Heat | No current or former use of fuel oil for building heat. |
| Foam-based Fire Suppression System | According to Subject Property representatives, the Subject Property is not equipped with a built-in foam-based fire suppression system. |

**Table 4: Subject Property Reconnaissance Observations**

| Conditions | Description | |
|---|---|---|
| Water Supply and On-site Water Wells | The Subject Property receives drinking water from the City of Monrovia Utilities, which obtains its water from the Main San Gabriel Basin beneath the San Gabriel Valley. | |
| PCB-containing Equipment | Subject Property representatives were not aware of any on-site equipment that is known to contain PCBs. There is currently one pad-mounted transformer on the Subject Property; the unit is owned by Southern California Edison. The unit is not labeled as to its PCB content. Because the unit may have been installed before the 1979 federal ban on the manufacture of PCBs, it is possible that transformer oils contain PCBs. Because the building was constructed around the time of the 1979 federal ban on the manufacture of PCBs, it is possible that hydraulic or other types of electrical equipment, such as capacitors, contain PCBs. Ramboll observed no evidence of leaks or releases from the transformer or other hydraulic/electrical equipment during the site visit. | |
| **Waste, Wastewater and Stormwater** | | |
| Waste | Hazardous and Universal | Hazardous wastes are not generated at the Subject Property (other than limited quantities of latex paint). Universal wastes, which includes batteries and aerosol cans are stored within the tenant spaces. Each tenant is responsible for universal waste disposal. Biological waste generated at the laboratories is removed from the Subject Property by Stericycle. |
| | Nonhazardous | Nonhazardous waste generated at the Subject Property includes office trash and dental fabrication waste and is stored within a locked enclosure along the southern edge of the Subject Property for removal by Athens Services. |
| | Observations | Ramboll observed no evidence of a contamination concern associated with waste storage and management at the Subject Property. |
| Wastewater | Sanitary | Sanitary wastewater from the Subject Property is discharged to the municipal sanitary sewer system. |
| | Process | Operations at the Subject Property do not generate process wastewater other than floor mop water. |
| | Septic Systems | No identified current or former septic systems. |
| | Observations | Ramboll observed no evidence of a contamination concern associated with wastewater management at the Subject Property. |
| Stormwater | Management | Percolates into the ground surface at landscaped areas or sheet flows to a concrete drainage channel located along the unnamed alley. The drainage channel discharges the stormwater onto Primrose Street where it enters catch basins that discharge to the municipal storm sewer system. |

| Table 4: Subject Property Reconnaissance Observations | | |
|---|---|---|
| **Conditions** | **Description** | |
| | Observations | Ramboll observed no evidence of a contamination concern associated with stormwater management at the Subject Property. |
| **Other Interior and Exterior Observations** | | |
| Exterior Ponds, Pits, Lagoons and Standing Surface Water | Ramboll observed no exterior ponds, pits, or lagoons. | |
| On-site Disposal or Fill Material | Ramboll did not observe any areas of the Subject Property indicative of on-site waste disposal or placement of fill material. | |
| Staining and Stressed Vegetation | Ramboll did not observed staining at the Subject Property. | |
| Interior Drains, Sumps, Pits, and Trenches | According to Subject Property representatives and Ramboll's observations, there are no sub-grade structures at the Subject Property. | |
| Odors | At the time of the site visit, Ramboll did not note strong odors in interior or exterior areas at the Subject Property. | |

## 5.3 Additional Considerations

Ramboll's scope of work also included a review of certain additional considerations that are not included within the scope of the ASTM Standard (i.e., "ASTM non-scope considerations"). A summary of Ramboll's findings for these additional considerations is provided in the table below.

| Table 5: Review of Additional Considerations | | |
|---|---|---|
| **Consideration** | **Subject Property Visit Information and Observations** | **Comments/Findings** |
| Flood Plains | Subject Property representatives reported no known occurrences of flooding at the Subject Property. The Subject Property is not located within a 500-year flood zone. | No issues identified |
| Wetlands | According to the wetlands information provided by the National Wetland Inventory (NWI) (as obtained from the EDR database report), there are no on-site federally designated wetlands. | No issues identified |

**Table 5: Review of Additional Considerations**

| Consideration | Subject Property Visit Information and Observations | Comments/Findings |
|---|---|---|
| ACM | Asbestos was phased out of use in some of building materials in 1980s. The building at the Subject Property was constructed in 1979 and a comprehensive asbestos survey has not been conducted. | Given that the Subject Property building was constructed in 1979 and a comprehensive asbestos survey has not been conducted, the possibility that some asbestos is present in the building materials cannot be ruled out. During the site visit, Ramboll observed building materials that may be considered suspect ACMs [i.e., floor tile, ceiling tile]. There are no regulatory requirements to remove ACM or evaluate whether building materials contain asbestos, unless the materials are damaged and have the potential to release fibers or the materials have the potential to be disturbed during renovation or demolition activities. Ramboll did not observe any obviously damaged building materials. Ramboll understands that a hazardous materials survey to assess ACMs is concurrently being conducted by others along with the Phase I. |
| Radon | According to Subject Property representatives, no radon surveys have been completed at the Subject Property. According to the USEPA's radon zone information for the Subject Property (as obtained from the EDR database report), the Subject Property is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per Liter (pCi/L). The average indoor basement radon concentration for 63 properties surveyed in the zip code in which the Subject Property is located (i.e., 91016) is 0.933 pCi/L. | The USEPA's continuous exposure limit for radon, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. Irrespective of the fact that USEPA continuous exposure limit applies to residential, not commercial, properties, given the USEPA's radon zone designation for the Subject Property and radon survey results for the Subject Property vicinity, radon does not appear to be a significant environmental concern. |
| Historical/Current Oil and Gas Wells | Based on a review of the resources identified in Section 2, Ramboll did not identify any such wells on the Subject Property. Ramboll did not observe any current or former oil and gas wells, and Subject Property representatives were not aware of any such wells on the Subject Property. | No issues identified. |

**Table 5: Review of Additional Considerations**

| Consideration | Subject Property Visit Information and Observations | Comments/Findings |
|---|---|---|
| Water Intrusion/Mold | Ramboll's scope of work included a qualitative observation with respect to water intrusion and the presence of mold within the Subject Property building during the site visit. No visual evidence of water intrusion or apparent mold was observed at the Subject Property at the time of the site visit in the areas accessed. Subject Property representatives were not aware of water intrusion or apparent mold growth at the Subject Property. | No issues identified. |
| Lead-Based Paint | Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the Subject Property building, it is possible that lead-based paint was used historically on the building.<br>Ramboll made limited, non-exhaustive observations of painted surfaces at the Subject Property. Subject Property representatives indicated that no LBP surveys have been performed at the Subject Property. Painted surfaces at the Subject Property, both interior and exterior, were generally observed to be in good condition. | Based on the age of the Subject Property building, it is possible building surfaces contain LBP. Ramboll understand that a hazardous materials survey to assess LBPs is concurrently being conducted along with the Phase I by others. |
| Vapor Encroachment | Ramboll conducted an initial vapor encroachment screen to evaluate if a vapor encroachment condition (VEC) exists in the subsurface below the existing structure at the Subject Property from hazardous substances, petroleum, and petroleum products that include VOCs, semi-VOCs (SVOCs), and/or inorganic volatile compounds. A Tier 1 non-invasive vapor encroachment screen was performed using the information provided in the EDR database report prepared by EDR for Ramboll for the chemicals of concern and the approximate recommended minimum search distances | Based on available information, a VEC related to existing conditions at the Subject Property is unlikely due to the nature of current operations. Available information is limited; however no confirmation of contamination as a result of historical on-site operations has been identified during this investigation (See Section 7). Based on available information, a confirmed VEC in relation to the historical automotive service and gasoline station has not been identified.<br>Ramboll evaluated the following potential VECs related to off-site properties: |

**Table 5: Review of Additional Considerations**

| Consideration | Subject Property Visit Information and Observations | Comments/Findings |
|---|---|---|
| | included in ASTM E 2600-15, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. | Historical dry cleaners (across the unnamed alley to the south of the Subject Property) with the address of 727 S Myrtle Avenue. Based on a review of historical fire insurance maps, regulatory databases, and city directory listings, this building operated as a laundry/dry cleaner from the 1920s to the late 1960s. Available information is limited; however no confirmation of contamination as a result of historical off-site operations has been identified during this investigation (See Section 7). Based on available information, a confirmed VEC in relation to the former adjacent dry cleaning operation has not been identified. In addition, multiple properties located north of the Subject Property are listed on the EDR Historical Cleaners database, however none of the properties are listed on databases indicative of a release. These properties are not considered to represent a REC or a VEC in relation of the Subject Property.<br><br>Historical auto shops (various addresses) within a radius of 1/3-mile of the Subject Property. VEC appears unlikely due to the lack of known or documented releases associated with these properties. These properties are not considered to represent a REC in relation of the Subject Property.<br><br>Closed LUST Sites (various addresses) within a radius of 1/3-mile of the Subject Property. VEC appears unlikely based on case closure status of the LUST cleanup sites. These properties are not considered to represent a REC in relation of the Subject Property. One property owned by the City of Monrovia (135 Colorado Boulevard) is listed as an Active LUST case. The property is located 500 feet northeast and cross-gradient of the Subject Property. The property experienced a petroleum release that impacted soil only. The property is under the active oversight of the Regional Water Quality Control Board. Based on the soil only impacts and the active agency oversight, it is unlikely that this cross-gradient property has created a VEC for the Subject Property.<br><br>A second property, Pamco Machine Works is located approximately 900 feet south and downgradient of the Subject Property. The property is listed as Open-inactive on the Spills, Leaks, Investigations and Cleanups |

**Table 5: Review of Additional Considerations**

| Consideration | Subject Property Visit Information and Observations | Comments/Findings |
|---|---|---|
| | | database. There are no additional documents available on the GeoTracker database. Based on the downgradient location and distance from the Subject Property, it is unlikely that this property has created a VEC for the Subject Property. |

Notes:

Ramboll did not conduct a comprehensive survey for any of the issues noted above. Furthermore, Ramboll's observations were inherently limited and included only non-exhaustive visual observations.

# 6. SURROUNDING PROPERTIES

The ASTM Phase I Standard requires an evaluation of the potential for migration of contamination onto the Subject Property from adjoining and other off-site properties. Ramboll's review of potential contamination risks posed by properties surrounding the Subject Property is presented below. Per ASTM E1527-21, Section 3.2.4, "adjoining" properties include those that would be contiguous but for a public thoroughfare separating them and Ramboll designates them as such below.

## 6.1 Current and Past Uses of Adjoining Properties and Surrounding Area

The Subject Property is located in a mixed commercial and residential land use area, as summarized below. The nearest residence (Oak Park Apartments; senior care apartments) to the Subject Property is located to the north across Olive Avenue. Single family residences are located in the northwest corner of Olive Avenue and South Primrose Avenue.

The properties in the vicinity of the Subject Property have primarily been used for residential purposes (north, west) and light commercial (south, and east) since as early as the 1900s. Monrovia Laundry appears south of the Subject Property from 1913 until the late 1970s. The laundry included dry cleaning operations from 1927 through at least 1960. Ramboll did not observe obvious indications of environmental concern on the historical sources reviewed.

**Table 6: Current and Past Uses of Adjoining Properties**

| Current Uses of Adjoining and Nearby Properties | Notable Past Uses and Approximate Time Period | Observations and Notes |
|---|---|---|
| **North** | | |
| Olive Avenue, beyond which are commercial and residential properties including JB Burgers, Jacen Crehan Realtor at DPP, Ace Mattress, and Oak Park Apartments. | Residential and Commercial (1928-present day); including California Furniture Company (1950-1966), Monarch Roofing and Insulating Company (1950-1960), Realtor (1950-present), JB Burgers (1975-present), Player Shop (1975-2009), and Vitaganza Health Foods (2004-2009). | Ramboll did not observe conditions on or identify past uses of adjacent properties that represent a potential contamination concern to the Subject Property. |

**Table 6: Current and Past Uses of Adjoining Properties**

| Current Uses of Adjoining and Nearby Properties | Notable Past Uses and Approximate Time Period | Observations and Notes |
|---|---|---|
| **East** | | |
| South Myrtle Avenue followed by Paragon at Old Town apartment complex with commercial businesses on the first floor (The UPS Store, Monrovia Street Fair & Market, A Snail's Pace Running Shop and Insulation Contractor Monrovia Redzone) and residents on the second through fourth floors. | Cleaning and Dye Works, Pacific Electric Rail Yard Depot, Monrovia Taxi Service (1913-1960)<br>Auto Repair/Monrovia Tire Shop (1930-1940s)<br>Jimmy's Barber Shop, Scotty's Electric Shaver Shop, Kelder Construction Co, Pacific Specialty Manufacturing Company, Shannon-Ohnson Television Engineering, Ower Custom Cabinets, Neff Instrument Corp. (1940s-1960s)<br>Residences and The UPS Store, Fast Fire Damage/Gold Water Damage Restoration and Chandra Sam Law Offices (1980s-present). | The Cleaning and Dye Works property is not listed on any databases indicative of former dry-cleaning operations or a release.<br>Ramboll did not observe conditions on or identify past uses of adjacent properties that represent a potential contamination concern to the Subject Property. |
| **South** | | |
| An unnamed alley followed by commercial properties including Lab Corp, Converse Consultants, an auto body shop and a warehouse facility. | Monrovia Steam Laundry (1913-1960s), Dry Cleaners (1927-1960s), Auto Sales (1927-1932). | The laundry facility included an in-ground crude oil tank and expanded from a one building business to encompassing the majority of the southern block by the 1940s including a dedicated dry-cleaning building adjacent to the site beyond the alleyway. Neither the laundry or the dry cleaners are listed on any databases indicative of former dry-cleaning operations or a release. This property is further discussed in Section 7. |

**Table 6: Current and Past Uses of Adjoining Properties**

| Current Uses of Adjoining and Nearby Properties | Notable Past Uses and Approximate Time Period | Observations and Notes |
|---|---|---|
| **West** | | |
| Commercial building: tenants include Brown United Inc. and J.A. Urban Inc. | Residential (1888-1970s)<br>Commercial (1980s-present) | Ramboll did not observe conditions on or identify past uses of adjacent properties that represent a potential contamination concern to the Subject Property. |

Notes:

During the site visit, Ramboll walked or drove by the borders of the properties that are adjacent to the Subject Property. Ramboll did not enter the neighboring properties.

## 6.2 Database Review for Off-site Properties

### 6.2.1 Adjoining Properties

Based on a review of the environmental database search report, Ramboll identified the adjoining properties listed below on databases relating to known or potential past releases.

**Table 7: Database Listings Relating to Known/Potential Releases at Adjoining Properties[1]**

| Listing Name or Address and Location Relative to the Subject Property | Summary of Information Contained in Database | Ramboll's Comments |
|---|---|---|
| Goldrich Kest Management Co., Inc.<br>125 West Olive Avenue<br>(Adjoining to the northwest) | Goldrich Kest Management Co., Inc. is listed on the RCRA NonGen/NLR database in 2019. No wastes were generated at the property nor where violations listed in the database. | Listings related to the generation of hazardous materials, without indication of significant spills or releases, do not suggest a contamination concern to the Subject Property. |

**Table 7: Database Listings Relating to Known/Potential Releases at Adjoining Properties[1]**

| Listing Name or Address and Location Relative to the Subject Property | Summary of Information Contained in Database | Ramboll's Comments |
|---|---|---|
| Angelica Health Care/Blue Seal Laundry & Dry Cleaning<br>727 Myrtle Avenue<br>(Adjoining to the south of the Subject Property beyond the alley) | The property is listed on the CA Leaking Underground Storage Tank (LUST), CA Cortese, Historical Cortese, Historical UST, and the EDR Historical Dry Cleaners databases. The property received closure from the Los Angeles County Department of Public Works (DPW) and the Los Angeles Regional Water Quality Control Board (RWQCB) for a diesel release to soil only that was discovered in 1989. The release was observed during UST closure activities. The release received closure on September 11, 1989 from the Los Angeles County DPW.<br>The property is listed as a historical dry cleaner from 1959 to 1961. City directories list Blue Seal Linen Supply and Blue Seal Launderers & Dry Cleaning at 717 S Myrtle Avenue in 1975 and at 727 S Myrtle Ave in 1960. This property is the same as the south-adjacent property and historical dry cleaners listed in Table 6 above. | Because the LUST release has been granted regulatory closure by the state agency, it is reasonable to assume that the matter was appropriately evaluated in accordance with regulations in place at the time, and that remaining contamination, if any, is localized and unlikely to migrate at significant concentrations onto the Subject Property. Thus, this closed off-site LUST listing does not appear to represent a significant contamination concern to the Subject Property.<br>Based on Ramboll's review, there is no indication of a dry cleaning release in the listings nor does the database report or GeoTracker suggest a contamination concern associated with historical dry-cleaning operations. This property is further discussed Section 7. |
| NEFF Instrument Corporation<br>700 South Myrtle Avenue<br>(Adjoining to the east across South Myrtle Avenue) | This property is listed on the historical underground storage tank (UST), Los Angeles County Hazardous Materials System (HMS), and State Wide Environmental Evaluation and Planning System (SWEEPS) databases. The property maintained one 5,000-gallon unleaded gasoline fuel UST installed in 1979. The UST appears to have been removed in 2005 by Nieto and Sons Trucking Inc. | The property is not listed on a database indicative of a release and thus is not considered likely to have adversely impacted the Subject Property. |

Notes:

[1] Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the Subject Property.

### 6.2.2 Other Surrounding Properties

Ramboll has identified non-adjoining properties that are listed on databases indicative of possible contamination as detailed in the table below.

**Table 8: Database Listings for Surrounding Properties Indicative of Potential Contamination[1]**

| Listing Name or Address and Location Relative to the Subject Property | Summary of Information Contained in Database | Ramboll's Comments |
|---|---|---|
| Vehicle Donation Processing Center, Inc.<br>626 South Primrose Avenue<br>(Approximately 179 feet northwest) | The property is listed on the Solid Waste Information System for Active, Closed and Inactive Landfills. The permit status is Recycling Survey. | This property is not listed on a database indicative of a release. Ramboll does not consider this listing to represent a contamination concern to the Subject Property. |
| Multiple Drycleaners | The EDR database lists three historical drycleaners approximately375 feet north and upgradient of the Subject Property. None of the former dry cleaners are listed on databases indicative of a release. | The former dry cleaners are not listed databases indicative of a release and thus are not considered likely to have adversely impacted the Subject Property. |

Note:

[1] Ramboll considered non-adjoining properties to represent a potential risk of contamination to the Subject Property only if they are listed on databases indicative of contamination, with open status, and located potentially upgradient of the Subject Property (as the issuance of regulatory closure suggests that impacts to the Subject Property from the noted off-site property are unlikely).

In addition to the aforementioned properties, Ramboll notes that the Subject Property is located approximately 0.47 miles northwest from the San Gabriel Valley Area 1 Superfund Site. The Potentially Responsible Parties (PRPs) for that Superfund Site have been named and do not include current or prior owners or occupants of the Subject Property. The main contaminants of concern are chlorinated volatile organic compounds (VOCs) namely tetrachloroethene (PCE), trichloroethene (TCE), carbon tetrachloride, and chloroform. The Subject Property is at least 0.4 miles upgradient of the contaminant plume. The Superfund Site is currently under active groundwater remediation operations including pump and treat. The Superfund Site is currently on the Final National Priorities List (NPL). Based on the available information from the Third Five-Year Review report prepared in September 2021, there is no indication that contamination from the Superfund Site is migrating to the Subject Property. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product to the Subject Property related to this matter, it is not considered a REC. If contamination associated with the Superfund Site is found to have migrated onto the Subject Property, it is expected that any remedial activities would be the responsibility of the entity(ies) named in the listing or other designated responsible party and not the Company.

The database report indicates that poor or inadequate address information was available for one property (Alexan Monrovia located at the SW Corner of South Magnolia and West Evergreen Avenues) located in the vicinity of the Subject Property; therefore, this property could not be readily mapped by the third-party provider. Because the location of this property with respect to the Subject Property could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the Subject Property from this property. It was beyond the scope of this review to accurately locate the unmapped property identified in the database report; however, Ramboll reviewed the list of unmapped properties and verified that the one listed property did not appear to be adjacent to the Subject Property.

# 7. FINDINGS, OPINION, AND CONCLUSIONS

## 7.1 Discussion of Findings

Ramboll's findings, opinions, and conclusions regarding conditions at the site are presented below. The findings of this assessment are classified based on the definitions in the ASTM Standard provided in Section 8 of this report. No RECs were identified as part of this assessment.

Facility personnel knew of no soil or groundwater contamination at the site, and Ramboll did not observe evidence of significant contamination (e.g., extensive staining on unpaved areas, spills or releases, or stressed vegetation). According to the database report and as detailed in Section 4.2, the site is not listed with active status on environmental databases that are indicative of a contamination concern. The site is currently not the subject of regulatory scrutiny or enforcement actions related to soil or groundwater conditions. The user of this report has provided no information indicating adverse conditions, and Ramboll's interviews with local regulatory personnel did not indicate any adverse conditions associated with the site. The third-party environmental lien search did not identify any environmental liens or AULs associated with the site. Ramboll observed the facility to have adequate housekeeping and chemical storage practices, and Ramboll did not observe any current or former features or structures of potential environmental concern at the site (e.g., evidence of current or former USTs, dry wells, septic systems). Facility personnel knew of no current or former use of chlorinated solvents, and the facility's operations are not chemically intensive.

Ramboll identified the following findings relating to known and potential site conditions:

- **Historical On-Site Automotive Repair and Gasoline Service Station without Closure Documentation.** Based on a review of historical resources, an automotive repair shop and gasoline service station (R&B Service) were located at the southeastern portion of the Subject Property from approximately the 1920s through the 1970s, prior to the enactment of specific tank closure requirements. Based on a review of aerial photographs, the associated structures were removed between before 1979, when the current structure is present. Service stations typically maintained one or more USTs for the storage of fuels. Information and records identified during the performance of this assessment did not provide additional detail regarding the gasoline service station closure, including responses to requests submitted to the City of Monrovia Fire and Building Departments, the Los Angeles County Fire Department, and the Subject Property owner. More than 45 years have passed since the gasoline service station ceased operations, and there has been no regulatory scrutiny of this matter since that time. Further, the site was subsequently redeveloped (the eastern end of the current building is in the location of the former gas station), and it is likely that grading and excavation activities during construction would have encountered and removed the former fueling system and USTs if they were not already removed. Because Ramboll's review did not identify documentation of a release or a potentially material threat of contamination in relation to a hazardous substance or petroleum product, this finding is not considered a REC. Ramboll will issue an addendum to the Phase I ESA Report if any additional records or information are obtained regarding the station closure that will change its findings or conclusions.
- **Historical Off-Site, Adjacent Dry Cleaner.** Based on a review of historical resources, the property adjacent to the south of the site located at 727 Myrtle Avenue (beyond the alley) is listed as a historical laundry facility and dry cleaner under various names from the 1920s to the late 1960s. Former dry-cleaning operations may have included the use of chlorinated solvents. Chemical use prior to the 1980s predates the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. There is no public record of

current regulatory scrutiny or investigation related to potential contamination matters in relation to the dry cleaning operation (a soil-only matter related to a former diesel UST at the adjacent site received regulatory case closure in 1989), and the associated database listings do not indicate the confirmed or suspected presence of contamination as a result of dry cleaning operations. Because Ramboll's review did not identify documentation of a release or a potentially material threat of contamination in relation to a hazardous substance or petroleum product, this finding is not considered a REC. Ramboll will issue an addendum to the Phase I ESA Report if any additional records or information are obtained regarding the dry cleaner that will change its findings or conclusions.

## 7.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Subject Property representatives did not have current contact information for representatives of former Subject Property owners/occupants. Ramboll made reasonable attempts to obtain such information, but it was not otherwise readily available. Thus, Ramboll was unable to interview former owners/occupants about historical operations and Subject Property conditions. However, Ramboll conducted interviews with representatives of Samuelson and Fetter LLC, with tenure at the Subject Property dating back to 2012 and reviewed other historical sources regarding former uses of the Subject Property.
- Due to confidential personal data, Ramboll was not allowed to take photographs within the MS Diagnostics Lab tenant space.

The data gaps listed above are not considered to be significant, and are not expected to alter the findings and conclusions of this assessment.

# 8. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

**REC - Recognized Environmental Condition:**

(1) The presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

**CREC - Controlled Recognized Environmental Condition:**

A REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

**HREC - Historical Recognized Environmental Condition:**

A previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

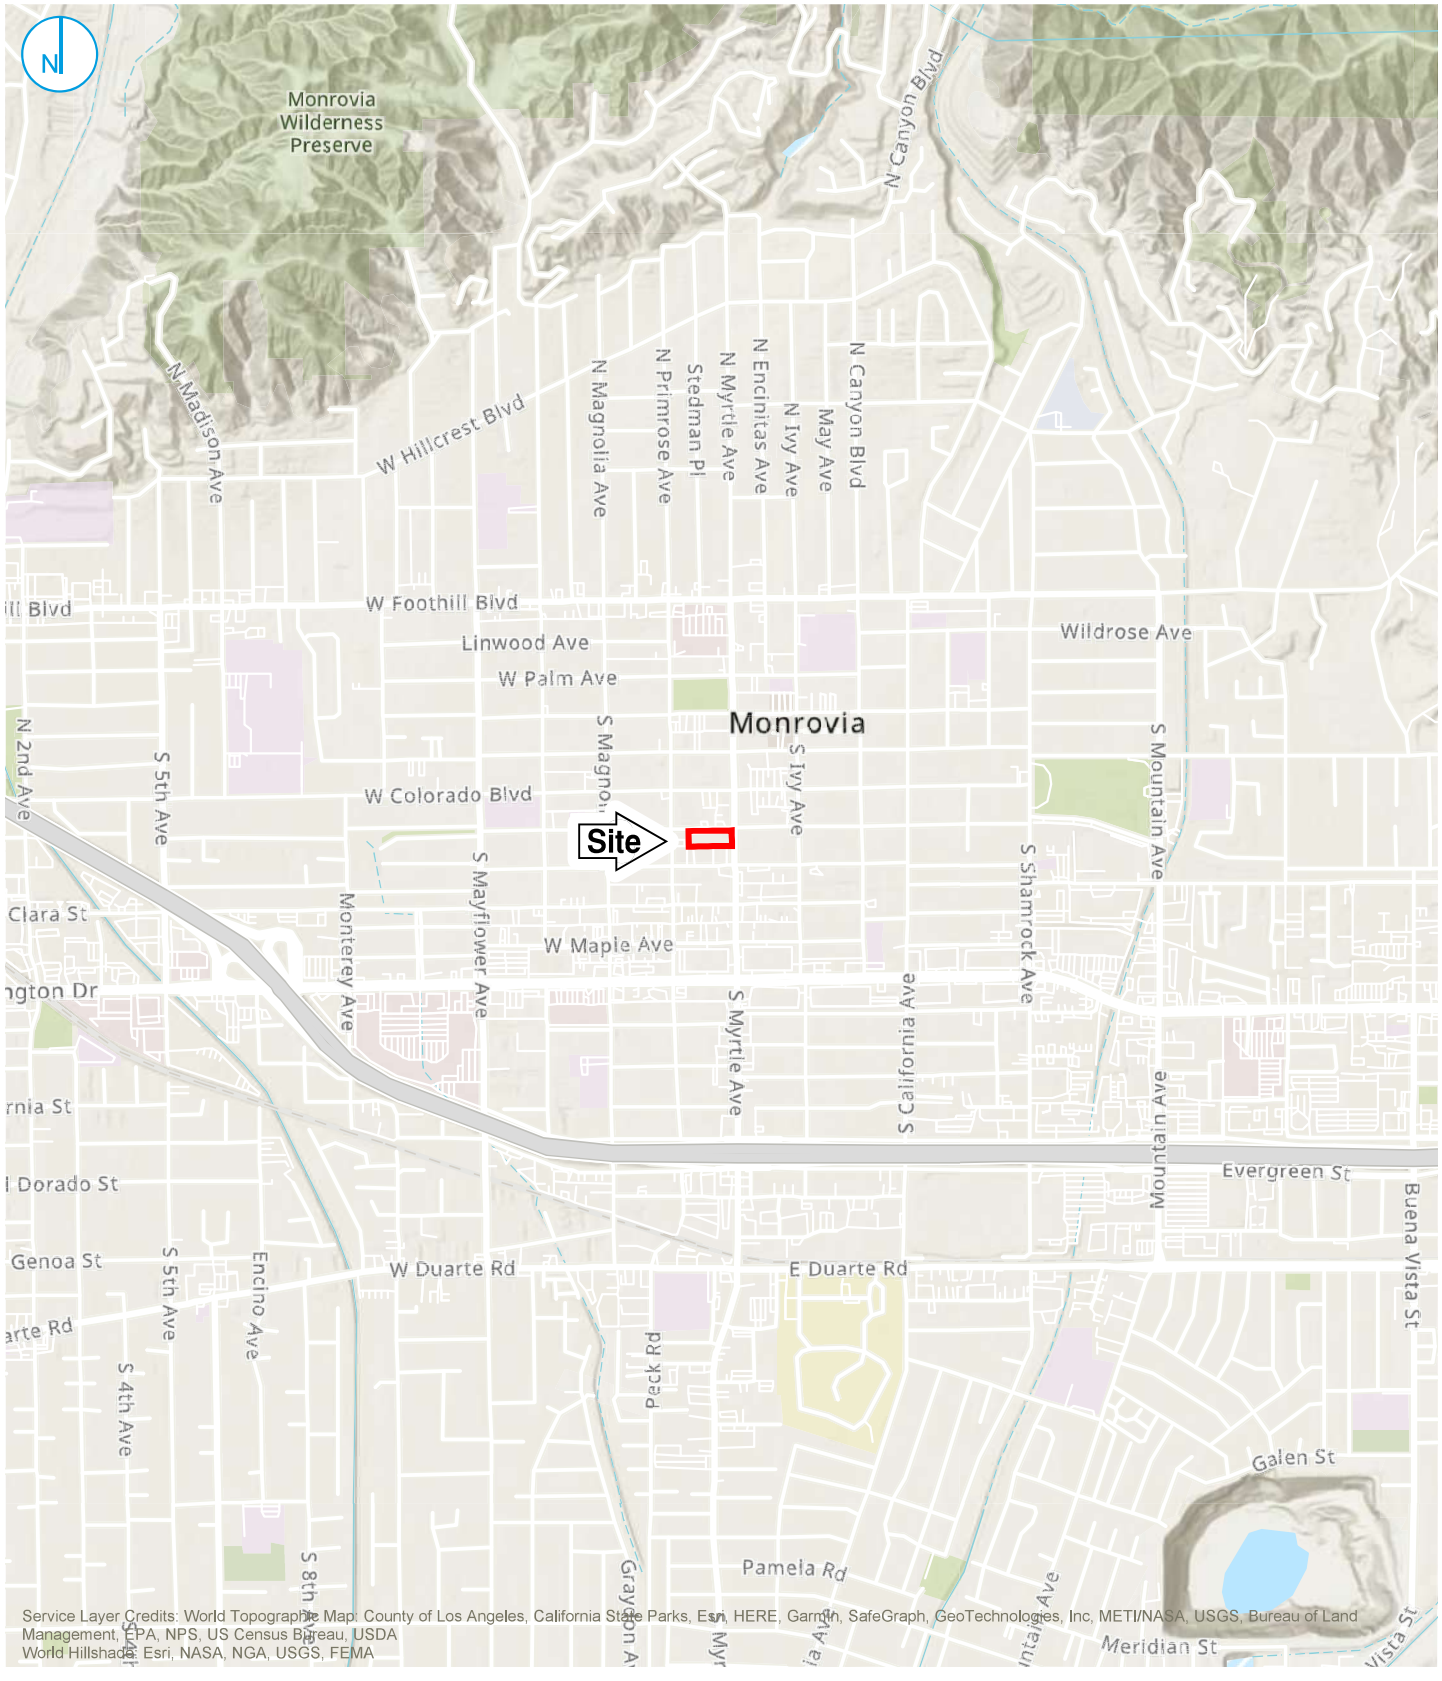

***De minimis* Condition:**

A condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

**Data Gap/Significant Data Gap:**

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap that affects the ability of the environmental professional to identify a REC is considered a significant data gap.

Photo 13: View of apartment complex north of the site.

Photo 14: View of auto body shop adjacent to the south of the site.

# APPENDIX B
# ENVIRONMENTAL DATABASE REPORT

## NOTES ON ENVIRONMENTAL DATABASE REPORT

The third-party provider conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology "approximate minimum search distance" to refer to the radii searched in the environmental database report.

Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

# EXECUTIVE SUMMARY

## TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

## DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

## STANDARD ENVIRONMENTAL RECORDS

### *Lists of Federal NPL (Superfund) sites*

Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

### *Lists of Federal Delisted NPL sites*

Delisted NPL ---------- National Priority List Deletions

### *Lists of Federal sites subject to CERCLA removals and CERCLA orders*

FEDERAL FACILITY ---------- Federal Facility Site Information listing

### *Lists of Federal RCRA facilities undergoing Corrective Action*

CORRACTS ---------- Corrective Action Report

### *Lists of Federal RCRA TSD facilities*

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

### *Lists of Federal RCRA generators*

RCRA-LQG ---------- RCRA - Large Quantity Generators
RCRA-VSQG ---------- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

### *Federal institutional controls / engineering controls registries*

LUCIS ---------- Land Use Control Information System
US INST CONTROLS ---------- Institutional Controls Sites List

### *Federal ERNS list*

ERNS ---------- Emergency Response Notification System

### *Lists of state and tribal leaking storage tanks*

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land

***Lists of state and tribal registered storage tanks***

FEMA UST ---- Underground Storage Tank Listing
CA AST ---- Aboveground Petroleum Storage Tank Facilities
INDIAN UST ---- Underground Storage Tanks on Indian Land

***Lists of state and tribal voluntary cleanup sites***

INDIAN VCP ---- Voluntary Cleanup Priority Listing

***Lists of state and tribal brownfield sites***

CA BROWNFIELDS ---- Considered Brownfieds Sites Listing

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Brownfield lists***

US BROWNFIELDS ---- A Listing of Brownfields Sites

***Local Lists of Landfill / Solid Waste Disposal Sites***

CA WMUDS/SWAT ---- Waste Management Unit Database
CA SWRCY ---- Recycler Database
CA HAULERS ---- Registered Waste Tire Haulers Listing
INDIAN ODI ---- Report on the Status of Open Dumps on Indian Lands
ODI ---- Open Dump Inventory
DEBRIS REGION 9 ---- Torres Martinez Reservation Illegal Dump Site Locations
IHS OPEN DUMPS ---- Open Dumps on Indian Land

***Local Lists of Hazardous waste / Contaminated Sites***

US HIST CDL ---- Delisted National Clandestine Laboratory Register
CA CDL ---- Clandestine Drug Labs
CA Toxic Pits ---- Toxic Pits Cleanup Act Sites
US CDL ---- National Clandestine Laboratory Register
CA PFAS ---- PFAS Contamination Site Location Listing
CA AQUEOUS FOAM ---- Former Fire Training Facility Assessments Listing

***Local Lists of Registered Storage Tanks***

CA CERS TANKS ---- California Environmental Reporting System (CERS) Tanks

***Local Land Records***

CA LIENS ---- Environmental Liens Listing
LIENS 2 ---- CERCLA Lien Information
CA DEED ---- Deed Restriction Listing

***Records of Emergency Release Reports***

HMIRS ---- Hazardous Materials Information Reporting System
CA LDS ---- Land Disposal Sites Listing

**EDR RECOVERED GOVERNMENT ARCHIVES**

***Exclusive Recovered Govt. Archives***

CA RGA LF Recovered Government Archive Solid Waste Facilities List
CA RGA LUST Recovered Government Archive Leaking Underground Storage Tank

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal NPL (Superfund) sites***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/26/2022 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

| Equal/Higher Elevation | Address | Direction / Distance | Map ID | Page |

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly

known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/26/2022 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

***Lists of Federal RCRA generators***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 13 RCRA-SQG sites within approximately 0.25 miles of the target property.

***Lists of state- and tribal (Superfund) equivalent sites***

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, has revealed that there is 1 CA RESPONSE site within approximately 1 mile of the target property.

***Lists of state- and tribal hazardous waste facilities***

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/25/2022 has revealed that there are 10 CA ENVIROSTOR sites within approximately 1 mile of the target property.

***Lists of state and tribal landfills and solid waste disposal facilities***

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there is 1 CA SWF/LF site within approximately 0.5 miles of the target property.

***Lists of state and tribal leaking storage tanks***

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 11 CA LUST sites within approximately 0.5 miles of the target property.

# EXECUTIVE SUMMARY

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 2 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

***Lists of state and tribal registered storage tanks***

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 4 CA UST sites within approximately 0.25 miles of the target property.

***Lists of state and tribal voluntary cleanup sites***

CA VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the CA VCP list, as provided by EDR, and dated 07/25/2022 has revealed that there is 1 CA

VCP site within approximately 0.5 miles of the target property.

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Lists of Hazardous waste / Contaminated Sites***

CA AOCONCERN: San Gabriel Valley areas where VOC contamination is at or above the MCL as designated by region 9 EPA office. Date of Government Version: 3/30/2009 Exide Site area is a cleanup plan of lead-impacted soil surrounding the former Exide Facility as designated by the DTSC. Date of Government Version: 7/17/2017

A review of the CA AOCONCERN list, as provided by EDR, has revealed that there is 1 CA AOCONCERN site within approximately 1 mile of the target property.

***Local Lists of Registered Storage Tanks***

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 14 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

***Other Ascertainable Records***

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that there are 38 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 05/13/2022 has revealed that there are 2 FINDS sites within approximately 0.001 miles of the target property.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

| Lower Elevation | Address | Direction / Distance | Map ID | Page |

| SO CAL GAS/MONROVIA | 1622 S MAGNOLIA AVE | SSW 1/2 - 1 (0.712 mi.) | Y136 | 562 |

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 8 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 12 EDR Hist Cleaner sites within approximately 0.25 miles of the target property.

Pathway: GROUND WATER PATHWAY
Scoring: 2

Summary Details:

Conditions at listing September 1983): San Gabriel Valley Area 1) is a ground water plume that runs along the axis of the Rio Hondo Wash and the Salt Pit Wash in the San Gabriel ground water basin in El Monte, Los Angeles County, California. The plume also parallels the San Gabriel River to the east. It is approximately 4 miles long and 1.5 miles wide. Ground water is contaminated with trichloroethylene TCE), perchloroethylene PCE), and carbon tetrachloride CTC) according to analyses by State agencies and local water companies. Many public wells in this area exceed the EPA Suggested No Adverse Response Levels SNARL) for TCE and PCE. Approximately 200,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies contain less than 5 parts per billion ppb) of TCE and 4 ppb PCE, levels considered safe for human consumption. When alternative methods of reducing the TCE and PCE levels below such levels are not effective, wells are removed from service. Currently, three small mutual water companies have no alternate water supply and have advised their customers to use bottled water. Status June 1984): As a result of EPA s analysis of initial remedial measures, completed in December l983, EPA will install water treatment systems to provide clean water to two of the three companies that have no alternate supply. The third company has already purchased a treatment system and will begin operation of the system soon. A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA arepreparing to initiate a remedial investigation/feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to identify sources of contamination. This site, along with the three other San Gabriel Valley sites, was added to the NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

Environmental Interest/Information System:
SUPERFUND NPL
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date: 11-19-2019
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: Returned to compliance on 12/28/2020. OBSERVATION: The generator has not obtained an active EPA ID number to manage hazardous waste. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without an active EPA ID number. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that you have obtained an EPA ID number.

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 12/28/2020. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. CORRECTIVE ACTION: Dispose of hazardous waste (3 drums of used oil and 2 drums of spent filters) that have been stored over the applicable time limit and provide documentation that the violation has

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations:
Site ID: 132626
Site Name: MANNY'S QUALITY AUTO REPAIR
Violation Date: 08-10-2020
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 08/10/2020. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation that the violation has been corrected.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 132626

**MANNY'S QUALITY AUTO REPAIR (Continued)** **S123500764**

Site Name: MANNY'S QUALITY AUTO REPAIR
Violation Date: 05-17-2017
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 12/04/2017. OBSERVATION: Used oil in three 55-gal drums were found stored >180 days. Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA 30 days from now.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 132626
Site Name: MANNY'S QUALITY AUTO REPAIR
Violation Date: 05-17-2017
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 12/04/2017. OBSERVATION: Owner/Operator failed to submit the hazardous waste notification electronically to CERS. CORRECTIVE ACTION: Owner/Operator shall submit a notification of hazardous waste generated by the facility in accordance with HSC 25158 electronically to CERS. HSC 25404(e)(4) No later than three years after the statewide information management system is established, each CUPA, PA, and regulated business shall report program data electronically. The secretary shall work with the CUPAs to develop a phased in schedule for the electronic collection and submittal of information to be included in the statewide information management system, giving first priority to information relating to those chemicals determined by the secretary to be of greatest concern. The secretary, in making this determination shall consult with the CUPAs, the California Emergency Management Agency, the State Fire Marshal, and the boards, departments, and offices within the California [Truncated]

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

listed above has been properly labeled.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 45535
Site Name: LUXURY MOTORWORKS
Violation Date: 09-18-2020
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 03/30/2021. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. CORRECTIVE ACTION: Dispose of hazardous waste (waste coolant) that has been stored over the applicable time limit and provide documentation that the violation has been corrected.

Violation Date: 06-25-2018
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 06/25/2018. OBSERVATION: Owner/Operator failed to submit the hazardous waste notification electronically to CERS. CORRECTIVE ACTION: Owner/Operator shall submit a notification of hazardous waste generated by the facility in accordance with HSC 25158 electronically to CERS. NOTE: Submitted at the time of inspection for 2018. Corrected on site. HSC 25404(e)(4) No later than three years after the statewide information management system is established, each CUPA, PA, and regulated business shall report program data electronically. The secretary shall work with the CUPAs to develop a phased in schedule for the electronic collection and submittal of information to be included in the statewide information management system, giving first priority to information relating to those chemicals determined by the secretary to be of greatest concern. The secretary, in making this determination shall consult with the CUPAs, the California Emergency Management Agency, the State Fire Marshal, [Truncated]

| Violation Date: | 09-18-2020 |
| Citation: | 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a) |
| Violation Description: | Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste. |
| Violation Notes: | Returned to compliance on 03/30/2021. OBSERVATION: Uniform Hazardous Waste Manifests for waste coolant were not available at the time of inspection. CORRECTIVE ACTION: Locate a copy of all manifests for waste coolant and submit copies to the CUPA. |

| Violation Date: | 09-18-2020 |
| Citation: | 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c) |
| Violation Description: | Failure to keep records of any test results, waste analyses, or other determinations made in accordance with section 66262.11 for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal. |
| Violation Notes: | Returned to compliance on 03/30/2021. OBSERVATION: Operator stated that paper filters (filters without metal casing) were routinely drained and thrown in the trash and a proper waste determination has not been made. CORRECTIVE ACTION: Immediately cease such practice of filter disposal. Manage the filters as hazardous waste or submit documentation to the CUPA demonstrating that they have been properly characterized as non-hazardous. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future. Keep the test results, waste analyses, or other determinations at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal. |

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Year: 2012
Gepaid: CAL000152839
TSD EPA ID: CAT080013352
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons: 1.93905

Violation Program: HW
Violation Source: CERS,

Site ID: 441061
Site Name: Harbor Seal Inc
Violation Date: 03-29-2018
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 10/25/2018. OBSERVATION: Finely divided metal generated from saw cutting and sandblasting area are being recycled as scrap metal. Finely divided metal less than 100 microns in size does not meet the definition of scrap metal. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the finely divided metal has been properly characterized to determine if it is a hazardous waste for Heavy Metals via TTLC/STLC (if necessary). If determined to be hazardous submit manifests/receipts documenting proper disposal and a statement demonstrating how you will manage it in the future.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| Citation: | HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1) |
| Violation Description: | Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days. |
| Violation Notes: | Returned to compliance on 01/27/2021. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. CORRECTIVE ACTION: Dispose of hazardous waste (paint-contaminated solids) that has been stored over the applicable time limit and provide documentation that the violation has been corrected. |

General
Violation Notes: Returned to compliance on 06/18/2018. OBSERVATION: Owner/Operator failed to submit the hazardous waste notification electronically to CERS. CORRECTIVE ACTION: Owner/Operator shall submit a notification of hazardous waste generated by the facility in accordance with HSC 25158 electronically to CERS. HSC 25404(e)(4) No later than three years after the statewide information management system is established, each CUPA, PA, and regulated business shall report program data electronically. The secretary shall work with the CUPAs to develop a phased in schedule for the electronic collection and submittal of information to be included in the statewide information management system, giving first priority to information relating to those chemicals determined by the secretary to be of greatest concern. The secretary, in making this determination shall consult with the CUPAs, the California Emergency Management Agency, the State Fire Marshal, and the boards, departments, and offices within the California [Truncated]

Environmental Interest/Information System:

**TELEDYNE CAMERA SYSTEMS (Continued)** **1000201850**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

| Site ID: | 86714 |
| Site Name: | XENCOR, INC |
| Violation Date: | 08-31-2017 |
| Citation: | 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d) |
| Violation Description: | Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days. |
| Violation Notes: | Returned to compliance on 01/31/2018. OBSERVATION: One jug of waste Trypan blue stain-ethanol-detergent mixture, located in Lab 275 storage, was observed WITHOUT AN ACCUMULATION START DATE / and another jug of same waste WITH AN ACCUMULATED START DATE OF 3/10/2016 and a manifest/receipt demonstrating disposal within the past 180 days was not available. CORRECTIVE ACTION: Dispose of the waste Trypan Blue stain-ethanol-detergent mixture and submit a copy of the manifest/receipt to the CUPA. |

| Violation Description: | Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method. |
| Violation Notes: | Returned to compliance on 01/08/2021. OBSERVATION: Per lab scientist in charge, the waste IPA and TRIS solution from HPLC machines is routinely being poured down the drain and a proper waste determination has not been made. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the HPLC waste has been properly characterized to determine if it is a hazardous waste. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future. |

| Violation Notes: | Returned to compliance on 01/31/2018. OBSERVATION: Owner/Operator failed to submit the hazardous waste notification electronically to CERS. CORRECTIVE ACTION: Owner/Operator shall submit a notification of hazardous waste generated by the facility in accordance with HSC 25158 electronically to CERS. HSC 25404(e)(4) No later than three years after the statewide information management system is established, each CUPA, PA, and regulated business shall report program data electronically. The secretary shall work with the CUPAs to develop a phased in schedule for the electronic collection and submittal of information to be included in the statewide information management system, giving first priority to information relating to those chemicals determined by the secretary to be of greatest concern. The secretary, in making this determination shall consult with the CUPAs, the California Emergency Management Agency, the State Fire Marshal, and the boards, departments, and offices within the California [Truncated] |

greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 11/12/2020. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. CORRECTIVE ACTION: Dispose of hazardous waste (waste formalin and waste Trypan) that has been stored over the applicable time limit and provide documentation that the violation has been corrected.

Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 06/12/2020. OBSERVATION: Owner/Operator failed to submit a valid EPA ID along with the hazardous waste notification electronically to CERS. CORRECTIVE ACTION: Owner/Operator shall submit a notification of hazardous waste generated by the facility in accordance with HSC 25158 electronically to CERS. HSC 25404(e)(4) No later than three years after the statewide information management system is established, each CUPA, PA, and regulated business shall report program data electronically. The secretary shall work with the CUPAs to develop a phased in schedule for the electronic collection and submittal of information to be included in the statewide information management system, giving first priority to information relating to those chemicals determined by the secretary to be of greatest concern. The secretary, in making this determination shall consult with the CUPAs, the California Emergency Management Agency, the State Fire Marshal, and the boards, departments, and offices within [Truncated]

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
UORS (California - Used Oil Recycling System). California Integrated Waste Management Board (CIWMB) helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Name: HOMERS TRUCK & AUTO SERV., INC.
Address: 148 E LEMON AVE
City,State,Zip: MONROVIA, CA 91016
Site ID: 123082
CERS ID: 10306060
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 123082
Site Name: HOMERS TRUCK & AUTO SERV., INC.
Violation Date: 01-23-2020
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 02/21/2020. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. CORRECTIVE ACTION: Dispose of hazardous waste (5 drums of waste coolant) that has been stored over the applicable time limit and provide documentation that the violation has been corrected.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date: 02-21-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Returned to compliance on 02/22/2017. Update HMBP. HMBP Updated and submitted.
Violation Division: Monrovia Fire Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 6942
Site Name: ARROWHEAD PRESS
Violation Date: 04-30-2018
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 01/08/2019. OBSERVATION: One 55-gal drum of waste ink/solvent mixture located in the waste storage area was observed without an accumulation start date and a manifest/receipt demonstrating disposal within the past 180 days was not available. CORRECTIVE ACTION: Dispose of waste ink/solvent mixture and submit a copy of the manifest/receipt to the CUPA.
Violation Division: Los Angeles County Fire Department

Site ID: 6942
Site Name: ARROWHEAD PRESS
Violation Date: 01-14-2021
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 04/30/2021. OBSERVATION: Uniform Hazardous Waste Manifests for 2019/2020 waste ink-solvent were not available at the time of inspection. CORRECTIVE ACTION: Locate a copy of all manifests for 2019/2020 waste ink-solvent and submit copies to the CUPA.

Violations:

| | |
|---|---|
| Site ID: | 30032 |
| Site Name: | FERRARI BROS BODY SHOP |
| Violation Date: | 05-31-2016 |
| Citation: | 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d) |
| Violation Description: | Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month. |
| Violation Notes: | Returned to compliance on 06/24/2016. Properly dispose of accumulation of hazardous wastes that have been stored beyond the allowable storage time limit. Observed one 55 gal drum of waste paint and one 30 gal drum of waste cleaning solution being stored beyond the allowable storage time limit. Provide a copy of the manifest to show proper disposal. |

| Citation: | 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11 |
| Violation Description: | Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method. |
| Violation Notes: | Returned to compliance on 01/30/2020. OBSERVATION: The spent spray booth filters located in the body shop were being claimed to be non-hazardous and a proper waste determination has not been made in the past 3 years. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the spent spray booth filters have been properly characterized to determine if they are hazardous wastes. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage them in the future. |

Violations:

| | |
|---|---|
| Site ID: | 418361 |
| Site Name: | pH Solutions, LLC |
| Violation Date: | 03-24-2022 |
| Citation: | HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1) |
| Violation Description: | Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days. |
| Violation Notes: | Returned to compliance on 03/30/2022. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days. Multiple containers of contaminated solids and waste flammable liquid were observed on site. Most recent hazardous waste manifest in the DTSC database (022874632JJK) has a date of 8/18/21, which qualifies the current waste on site as over 180 days old. CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide hazardous waste manifest when the violation has been corrected. |

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS AIR POLLUTANT MAJOR

|---|---|
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Site Characterization Report |
| Completed Date: | 12/31/2002 |
| Comments: | DTSC approved Site Characterization activities in December 2002. Contaminants of concern included PAHs & BTEX. |

| | |
|---|---|
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Preliminary Endangerment Assessment Report |
| Completed Date: | 02/05/1993 |
| Comments: | The Department completed review of the PEA on January 4, 1993. The levels of the contaminants at the site were above the regulatory limit. Therefore, the Department recommended further investigation or assessment of the site. |

| | |
|---|---|
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Site Screening |
| Completed Date: | 07/14/1992 |
| Comments: | The Dept received a notice of intent to initiate a PEA for the site. The reports indicate that the site appears to be used as part of an industrial operation. The gas production at the site began in 1905 and ended in 1910. The site approximately .06 acres in size. |

| | |
|---|---|
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Technical Report |
| Completed Date: | 03/15/2007 |
| Comments: | Supplemental Site Investigation Report was reviewed by DTSC. Based on the results of Additional off-site step out sampling additional removal action is necessary in the areas as described in DTSCs comments.A Supplemental Removal Action Workplan should be submitted to DTSC for review & comment prior to any removal activities. |

| | |
|---|---|
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Removal Action Workplan |
| Completed Date: | 03/04/2003 |
| Comments: | DTSC approved RAW on 3/4/03. Proposed remedial activities include the removal of approximately 3,864 cubic yards of soil. Previously identified chemicals of potential concern include PAHs and BTX. Removal activities are anticipated to last approximately 40 days. DTSC placed the special Initial Study, Negaive Declaration, and De Minimis Impact for public review. There were two written comments |

**SO CAL GAS/MONROVIA MGP (Continued)** **S106836061**

received. DTSC provided a response to the two comments. The comments were not substantial and did not result in any changes to the CEQA documents. DTSC approved the CEQA on 3/4/03.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 05/15/2009
Comments: The results of the post remediation soil gas sampling did not indicate the presence of either naphthalene or benzene. Any potential MGP-related compounds (i.e., xylenes and toluene) were detected in soil gas at levels well below residential screening concentrations.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 09/27/2005
Comments: The Department of Toxic Substances Control (DTSC) has reviewed the PROPOSED SUPPLEMENTAL SITE INVESTIGATION, FORMER MONROVIA MANUFACTURED GAS PLANT SITE, 1622 SOUTH MAGNOLIA STREET, MONROVIA, CALIFORNIA, SEPTEMBER 6, 2005. DTSC approves the proposed Supplemental Sampling. However; DTSC may require additional sampling based on visual observations in the field.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 06/30/2014
Comments: Site certification letter was sent.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 12/31/2002
Comments: DTSC approved Site Characterization activities in December 2002. Contaminants of concern included PAHs & BTEX.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 02/05/1993
Comments: The Department completed review of the PEA on January 4, 1993. The levels of the contaminants at the site were above the regulatory limit. Therefore, the Department recommended further investigation or assessment of the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 07/14/1992
Comments: The Dept received a notice of intent to initiate a PEA for the site. The reports indicate that the site appears to be used as part of an industrial operation. The gas production at the site began in 1905 and ended in 1910. The site approximately .06 acres in size.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 03/15/2007
Comments: Supplemental Site Investigation Report was reviewed by DTSC. Based on the results of Additional off-site step out sampling additional

Completed Document Type: CEQA - Initial Study/ Neg. Declaration
Completed Date: 03/04/2003
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 03/04/2003
Comments: DTSC approved RAW on 3/4/03. Proposed remedial activities include the removal of approximately 3,864 cubic yards of soil. Previously identified chemicals of potential concern include PAHs and BTX. Removal activities are anticipated to last approximately 40 days. DTSC placed the special Initial Study, Negaive Declaration, and De Minimis Impact for public review. There were two written comments received. DTSC provided a response to the two comments. The comments were not substantial and did not result in any changes to the CEQA documents. DTSC approved the CEQA on 3/4/03.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 05/15/2009
Comments: The results of the post remediation soil gas sampling did not indicate the presence of either naphthalene or benzene. Any potential MGP-related compounds (i.e., xylenes and toluene) were detected in soil gas at levels well below residential screening concentrations.

Manufactured Gas Plants:

Site located at 1622 South Magnolia Street in Monrovia, California. The former MGP site occupies approximately 0.6 acres within the property. An oil gas plant operates at the site from 1905 until 1917. Sometime in 1917, the MGP was converted to a reggulating station and storage site. It is believed that between 1917 to 1921, the gas generating and processing equipment was dismantled. Various businesses have occupied the site since 1965.

|---|---|
| RB Case Number: | 106.2010 |
| File Location: | Regional Board |
| Potential Media Affected: | Aquifer used for drinking water supply, Soil, Soil Vapor |
| Potential Contaminants of Concern: | 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Chromium, Gasoline |
| Site History: | The site has been an active industrial facility since approximately 1942. United Technologies Corporations (UTCs) subsidiary, Carrier Corporation, and Carriers related entities, operated the facility from approximately 1942 to 1959 for the production of heaters and air conditioners and later for the manufacture of aerospace components including helicopter blades, jet spoilers and aircraft winglets. The facility were also operated by such companies as Whittaker Corporation and Alcoa, Inc., between 1959 and 2001 for the manufacture of aerospace components. Ducommun, Inc. has been operating the facility since approximately 2001. Site investigations have been conducted at the site since 1985 to assess and delineate the soil and groundwater contamination. Volatile organic compounds (VOCs), such as trichloroethene (TCE), and perchloroethyele (PCE), heavy metals such as hexavalent chromium, and emergent chemicals such as 1,4-dioxane have been detected in the soil and groundwater beneath the site. A soil vapor extraction (SVE) system has been operating at the site since August 2003 to remove VOCs from the vadose zone. Groundwater monitoring has also been conducted at the site since 1997. Site assessment and remediation are still being conducted under Regional Board's oversight. |

| Background Info: | This lead contaminated Site has been a joint project between LA County, US-EPA, and DTSC, with DTSC now as the Lead Agency. The Site originally consisted of five properties; 827, 829, 831 Olive Avenue and 824, 832 Colorado Blvd; but now two properties, 831 Olive and the 824 Colorado are determined clean. Lead contamination exists in sols from 0-2 and the contamination was probably from Barth's Battery Shop which was located on 832 Colorado Blvd. in the 1930s. In the 1930s the Olive Avenue properties were a vacant lot. The battery shop probably disposed their battery waste beind the business as pieces of battery casings have been found in Site soils. In the 1960s the Olive Avenue vacant lot was developed with the current residential buildings which were built on top of the battery waste. Grading of the lot prior to construction probably spread the lead waste throughout the properties.<br>Not reported<br>DTSC sampled in May and October 2001 to define the vertical and lateral extent of the lead contamination. DTSC then conducted an Emergency Removal Action in January 2002 to remove surface soils contaminated with lead that may pose a health risk to residents. After this action the 824 Colorado Blvd address was determined cleaned as only a small area in the southwest corner of the property needed excavation. In May 2003 DTSC conducted a Removal Action to remove the remaining lead contaminated soil that was not covered by structures or paving. After this action the 831 Olive Avenue was determined cleaned as only a small area on the south western lot was excavated.<br>Not reported<br>DTSC believes that the health risk has been removed at the Site. Lead contaminated soil still exists there, but the areas where lead contaminated soil exists are either covered by concrete, asphalt, or building structures, and therefore do not pose a risk to human health or the environment. |
| Comments Date: | 01072004 |
| Comments: | Lead contaminated soils still exist at the site, but are not |
| Comments Date: | 01072004 |
| Comments: | considered a threat to human health nor the environment |
| Comments Date: | 01072004 |
| Comments: | because those areas are either covered by building structures, |

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal NPL (Superfund) sites***

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/20/2022

***Lists of Federal RCRA generators***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/20/2022

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

***Lists of state- and tribal hazardous waste facilities***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Brownfield lists***

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

| Version Date: | 2018 |
| Northeast Map: | 12015949 AZUSA, CA |
| Version Date: | 2018 |

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

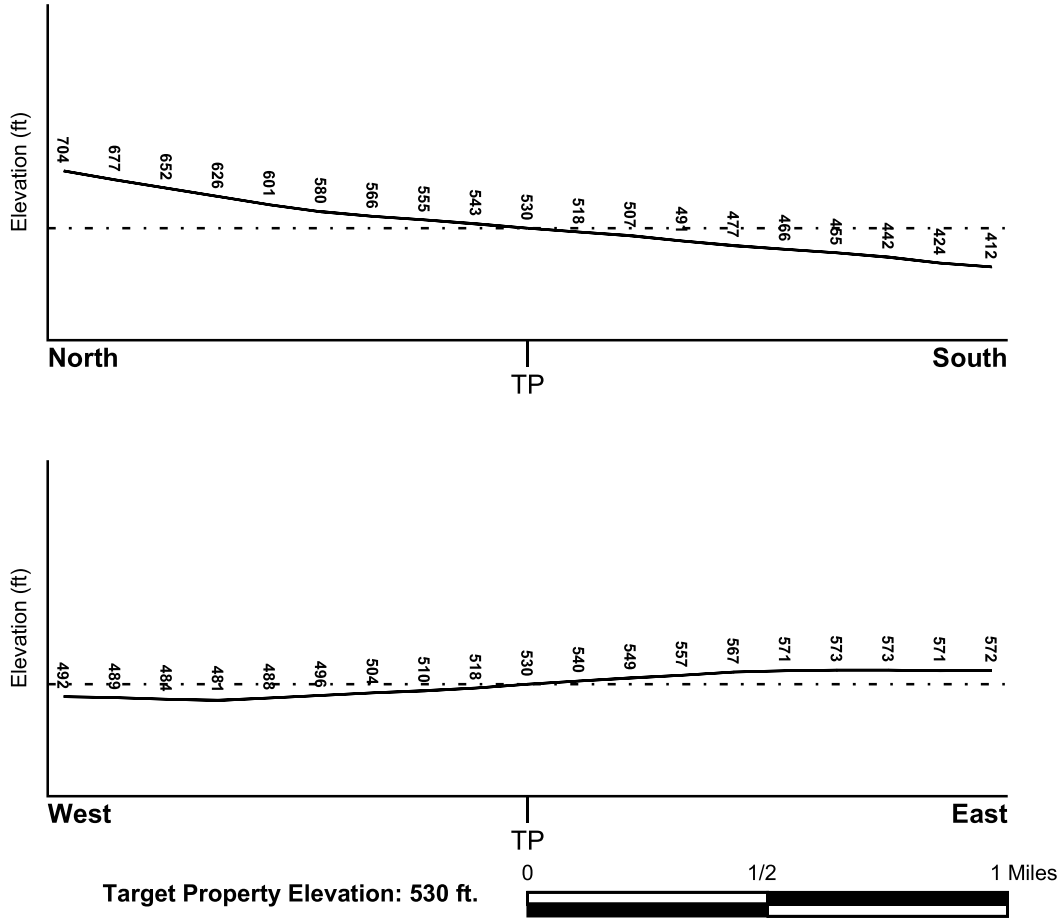

**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General SW

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## FEMA FLOOD ZONE

| Flood Plain Panel at Target Property | FEMA Source Type |
|---|---|
| 06037C1400F | FEMA FIRM Flood data |

| Additional Panels in search area: | FEMA Source Type |
|---|---|
| 06037C1415F | FEMA FIRM Flood data |

## NATIONAL WETLAND INVENTORY

| NWI Quad at Target Property | NWI Electronic Data Coverage |
|---|---|
| MOUNT WILSON | YES - refer to the Overview Map and Detail Map |

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

***Site-Specific Hydrogeological Data*:***

| | |
|---|---|
| Search Radius: | 1.25 miles |
| Status: | Not found |

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| MAP ID | LOCATION FROM TP | GENERAL DIRECTION GROUNDWATER FLOW |
|---|---|---|
| Not Reported | | |

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

**ROCK STRATIGRAPHIC UNIT**

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

**DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information | | | | | | | |
|---|---|---|---|---|---|---|---|
| | Boundary | | | Classification | | | |
| Layer | Upper | Lower | Soil Texture Class | AASHTO Group | Unified Soil | Permeability Rate (in/hr) | Soil Reaction (pH) |

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

AQUIFLOW$^{R}$ Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

# EXECUTIVE SUMMARY

## DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2015. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

## RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

# APPENDIX D
# KEY ENVIRONMENTAL DOCUMENTATION

GEOTECHNICAL PROFESSIONALS INC.

November 3, 2022

Blake/Griggs Properties, LLC
550 Hartz Avenue, Suite 200
Danville, CA 94526

Attention: Mr. Scott Griggs

Subject: Geotechnical Design-Level Investigation
Mixed-Use Apartment Development
701 S. Myrtle Avenue
Monrovia, California
GPI Project No. 3160.I

Dear Mr. Griggs:

In accordance with your request, this letter presents the results of our geotechnical feasibility investigation for the subject project. The site location is shown on the Site Location Map, Figure 1.

We understand that our evaluation of the site is desired prior to the purchase of the property by Blake/Griggs Properties, LLC. The primary purpose of our investigation is to determine whether significant geotechnical conditions ("fatal flaws") are present at the site that may impact the development of a mixed-use building. This letter is not intended to be a design level document and should not be submitted to the regulatory agency.

We provided geotechnical services for the projects at 700 and 825 S. Myrtle Avenue. The conditions at the subject site are similar to these nearby sites.

## PROJECT DESCRIPTION

Based on information you provided, we understand that a podium-style apartment/retail complex is proposed that will contain approximately 200 residential units with 350 parking stalls. The structure will be 4 stories of wood framed apartments over 2 levels of above grade concrete podium. Below grade, the structure includes an additional 1 to 2 levels of the concrete podium with the lowest level being a half level. The proposed site plan and sections of the proposed development are provided in Figure 2.

Based on our experience with similar projects, we have assumed maximum wall loads for the building will be on the order of 8 to 12 kips per lineal foot and maximum column loads of approximately 500 to 750 kips. Finish grades at the street level are expected to correspond approximately to existing grades. The finished floor of the subterranean parking is expected to be approximately 10 to 20 feet below existing site grades.

5736 Corporate Avenue • Cypress, CA 90630 • (714) 220-2211 , FAX (714) 220-2122

The entire site covers a footprint of 1.61 acres. The site is bounded by W. Olive Avenue to the north, S. Myrtle Avenue to the east, an alley and single-story warehouse building to the south, and a single-story office building and parking to the west.

## SCOPE OF WORK

Our scope of work included limited subsurface exploration, review of prior nearby geotechnical data, engineering evaluations, and preparation of this feasibility-level geotechnical report.

We performed three cone penetration tests (CPT's) to evaluate subsurface conditions at the site. The CPTs were extended to depths of 40, 50, and 71 feet below existing grades. Two CPT's refused at depths of 40 and 71 feet below existing grade in very dense sandy soils. Logs of the CPT's are presented in the Appendix. At one CPT (C-3), we performed seismic shear wave measurements at depth intervals of 10 feet. The approximate locations of the CPT's are shown on the Site Plans, Figures 2 and 3.

## SUBSURFACE CONDITIONS

The subsurface conditions encountered in our CPT's were interpreted to consist of predominately interbedded layers of sands, silty sands, and sandy silts. In CPT C-1, we encountered a layer of clayey silt extending from about 30 to 35 feet below existing grades. While difficult to distinguish in CPT's, man-made fills appear to extend approximately 2 to 4 feet below existing grades. The interpreted sandy soils range from medium dense to dense within the upper 25 to 40 feet, with the soils becoming dense to very dense with depth. The limited fine-grained soils are typically stiff to hard.

We observed variability between the CPT's performed in the northern portion of the site (CPT C-1 and C-2) and the southern portion of the site (CPT C-3). In general, the depth of medium dense sands at CPT C-3 extended to depths of approximately 25 feet. In general, the depth of medium dense sands was on the order of 5 to 7 feet below existing grade at the other CPT's.

Detailed descriptions of the materials as interpreted from the CPT's are shown on the Logs of CPT's in the Appendix.

Seismic shear wave velocity measurements performed within CPT C-3 indicate an average shear wave velocity of 1256 ft/sec within the upper 100 feet of the soil profile.

Groundwater was not encountered during our investigation. Based on the Seismic Hazard Zone Report (Reference 1), groundwater is anticipated to be deeper than 100 feet.

## OBSERVATIONS AND FINDINGS

Based on available documents and our field investigation, we offer the following:

General

- The site currently contains a single-story office building, asphalt pavements, a concrete drive entry, flatwork, and landscape areas. The pavements are in poor to fair condition with significant cracking.

- Based on a review of historical aerial photos (Reference 2), the site has been occupied by the single-story office since 1979. Based on historic aerials from 1952 to 1977, the site appears to have been occupied by a single-family home, garage, and large yard.

- The single-story building to the west of the site extends to the property line of the site. The single-story warehouse building to the south of the site is approximately 20 feet from the property line.

Seismic

- The site is not located in a Special Studies Fault Zone. There are no known active faults crossing or trending towards the site. The site is located approximately one mile from a Special Studies Fault Zone (Reference 3). The Special Studies Fault Zone includes the Sierra Madre Fault Zone.

- The site is not located in a Seismic Hazard Zone for liquefaction according to the Seismic Hazard Zone Map (Reference 3).

Subsurface Conditions

- Based on the existing and former structures at the site, foundation elements and undocumented fills associated with the buildings may exist below the footprint of the structures.

- The upper on-site soils are predominantly medium dense sands and silty sands. As such, the soils are susceptible to caving in open cuts and excavations.

- Corrosivity testing at nearby sites (Reference 4) indicated negligible levels of sulfate exposure and mild corrosivity to buried metals.

## CONCLUSIONS AND PRELIMINARY RECOMMENDATIONS

Based on our observations and findings, subsurface investigation, and experience in the area, we conclude the following:

Earthwork

- Undocumented fills or debris buried from the current commercial structure that is present and encountered during demolition will need to be removed within the building footprint. However, these undocumented fills and debris will likely be removed with excavations to the subterranean parking levels.

- Based on the variability of the depth to dense soils in the CPT's, our preliminary recommendation is that removals within the building footprint should extend to the bottom of the footings. Our preliminary recommendation is to compact the bottom of the excavation with heavy vibratory equipment in order to densify soils directly beneath the footing bottoms.

- Our preliminary recommendations for removals may be modified when more field and laboratory data is obtained at the site or in the field based on conditions observed in the bottom of the excavations.

- Based on the preliminary explorations, the on-site soils in the upper 25 feet of the soil profile are suitable for use as compacted fill including as fill below footings and as non-expansive fill directly beneath slab-on-grade floors/hardscape or behind retaining walls.

- Granular soils under the building footprint should be compacted to at least 95 percent of maximum dry density in accordance with ASTM D-1557.

Seismic

- We assume seismic design of the proposed development will be in accordance with the 2022 California Building Code (CBC). Based on the results of the shear wave measurements performed during our subsurface explorations, a Site Class C should be used for seismic design.

- There is a potential that the proposed site development will be subjected to strong ground shaking due to earthquakes on nearby faults. Based on published information (References 5 and 6) and the Site Class provided above, the site could be subjected to a peak horizontal ground acceleration of (PGAM) 0.98g and a mean magnitude 7.1 earthquake. This acceleration has a 2 percent chance of being exceeded in 50 years.

- Based on the results of our CPT's and deep groundwater, we do not anticipate liquefaction induced settlement to negatively impact the site. However, based on our analyses, we estimate a potential for dry seismic settlement of about 1-inch or less assuming removals of the existing soils will extend to at least 10 to 15 feet below existing grades.

Foundations and Slab-On-Grade Floors

- Spread footings and a slab-on-grade floor can be used to support the proposed apartment building (4 stories of wood framed apartments over 2 levels of above-grade concrete podium over 1 to 2 subterranean concrete levels).

- The footings can likely be supported on natural soils or a layer of engineered fill derived from natural soils. We anticipate the footings can be designed for an allowable net bearing capacity on the order of 4,000 to 5,000 pounds per square foot (psf). These preliminary recommendations will limit the total settlement (static and seismic) to approximately 1½ inches.

- Soil resistance to lateral loads can be provided by a combination of frictional resistance between the bottom of footings and underlying soils and by passive soil pressures acting against the embedded sides of the footings. For preliminary design of footings, a coefficient of friction of 0.35 may be used for frictional resistance. In addition, an allowable lateral bearing pressure equal to an equivalent fluid weight of 300 pounds per cubic foot may be used for the preliminary design of footings.

- The slab-on-grade floors can be supported on engineered fill derived from natural soils. For concrete floors for the subterranean parking level, a vapor retarder is not necessary from a geotechnical standpoint except where moisture sensitive flooring such as at lobby areas near the elevators.

Shoring

- Since there is not sufficient space for sloped embankments along the property limits, shoring will be required. One method of shoring would consist of steel soldier piles placed in drilled holes, backfilled with concrete. Driven or vibrated soldier piles may be a feasible and more economical alternative to drilled holes, however vibrating piles adjacent to the existing building at the property line to the west should not be permitted.

- The shoring contractor should evaluate the potential drilling conditions when planning the installation methods and should note that caving of drilled holes is likely due to the presence of medium dense clean sands.

- Due to the proximity to the adjacent streets, and buildings, an additional surcharge load will likely need to be added to the recommended earth pressure to account for structure and traffic surcharge loading.

- Excavations deeper than approximately 15 to 17 feet will likely require tied-back earth anchors or rakers to support the temporary shoring.

- Due to anticipated caving soil conditions, the voids between the lagging and retained earth should be backfilled with lean-mix sand-cement slurry prior to continuing the excavation deeper.

Stormwater Infiltration

- Our interpretation of the CPT data suggests that the site consists of predominately sandy soils. These soil types suggest that stormwater infiltration on-site is feasible.

- Current plans show the proposed building to extend to the property limits on all sides making conventional stormwater detention systems not feasible. As such, drywells would likely need to extend to depths of at least 25 to 30 feet below the proposed foundations (approximately 40 to 55 feet below existing grades) to provide stormwater infiltration at the site.

- The drywells should be grouted to depths of at least 25 to 30 feet below the proposed foundations to mitigate impact of water infiltrating within the influence zone of the footings.

## FURTHER STUDIES

A design-level geotechnical investigation will be required to provide specific design and construction recommendations for the proposed residential development. The design-level investigation will need to be reviewed and approved by the appropriate regulatory agency.

As part of a design-level geotechnical investigation, we recommend at least 3 exploratory borings be performed with the footprint of the apartment building. The exploratory borings will allow us to obtain soil samples to perform consolidation (collapse) testing, index testing, and corrosivity testing. These tests will allow us to determine the collapse potential of medium dense sands under foundation level of the structures and to refine our seismic settlement analysis with correlation of the fines in the soil layers.

Infiltration testing will need to be performed prior to the design of a system to determine specific infiltration rates.

## LIMITATIONS

The geotechnical investigation reported herein was performed for the exclusive use by Blake/Griggs Properties, LLC and their consultants, in evaluating the feasibility of constructing the proposed improvements. This report should not be used for evaluating the feasibility of developing the site for other uses or for the detailed design of the proposed project, because this report does not contain sufficient or appropriate information for such use.

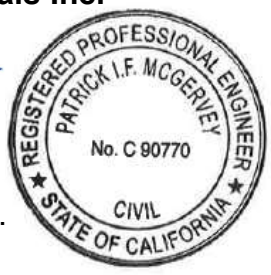

Soil deposits may vary in type, strength, and many other important properties between points of exploration due to non-uniformity of the geologic formations or to man-made cut and fill operations. While we cannot evaluate the consistency of the properties of materials in areas not explored, the conclusions drawn in this report are based on the assumption that the data obtained in the field is reasonably representative of field conditions and are conducive to interpolation and extrapolation.

As noted previously, additional geotechnical investigations will be needed for design and construction. Furthermore, our recommendations were developed with the assumption that a proper level of field observation and construction review will be provided by a qualified geotechnical consulting firm during grading, excavation, and foundation construction. If design- and construction-phase geotechnical services are performed by others they must accept full responsibility for all geotechnical aspects of the project.

Our investigation and evaluations were performed using generally accepted engineering approaches and principles available at this time and the degree of care and skill ordinarily exercised under similar circumstances by reputable Geotechnical Engineers practicing in this area. No other representation, either express or implied, is included or intended in our report.

Respectfully submitted,
**Geotechnical Professionals Inc.**

# APPENDIX A

## CONE PENETRATION TESTS

The subsurface conditions were investigated by performing three Cone Penetration Tests (CPT's) at the site. The soundings were advanced to a ranging from approximately 40 feet to 71 feet below existing grade. The locations of the CPTs are shown on the Site Plans, Figures 2 and 3.

The Cone Penetration Test consists of pushing a cone-tipped probe into the soil deposit while simultaneously recording the cone tip resistance and side friction resistance of the soil to penetration (refer to Figure A-1). The CPT described in this report was conducted in general accordance with ASTM specifications (ASTM D 5778) using an electric cone penetrometer.

The CPT equipment consists of a cone assembly mounted at the end of a series of hollow sounding rods. A set of hydraulic rams is used to push the cone and rods into the soil while a continuous record of cone and friction resistance versus depth is obtained in both analog and digital form at the ground surface.

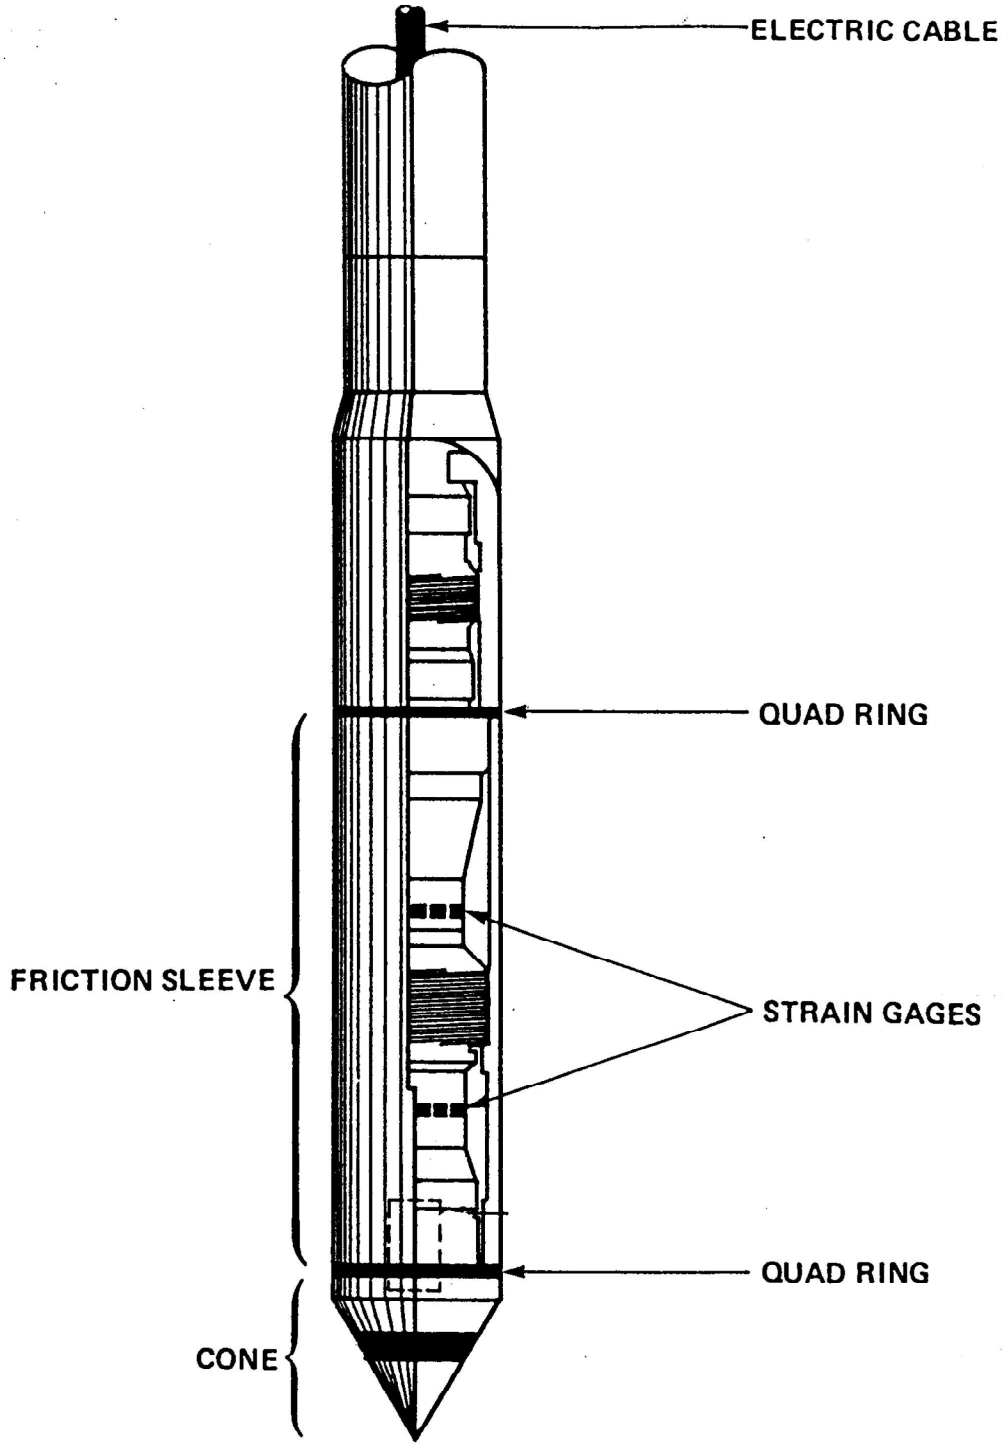

Data obtained during a CPT consists of continuous stratigraphic information with close vertical resolution. Stratigraphic interpretation is based on relationships between cone tip resistance and friction resistance. The calculated friction ratio (CPT friction sleeve resistance divided by cone tip resistance) is used as an indicator of soil type. Granular soils typically have low friction ratios and high cone resistance, while cohesive or organic soils have high friction ratios and low cone resistance. These stratigraphic material categories form the basis for all subsequent calculations, which utilize the CPT data.

A computer plot of the reduced CPT data acquired for this investigation is presented in Figures A-2 through A-4 of this appendix. The field testing and computer processing for the current investigation was performed by Kehoe Testing under subcontract to Geotechnical Professionals Inc. (GPI). The interpreted soil descriptions were prepared by GPI.

A seismic cone penetration test provided shear wave velocity measurements of the soil profile. A standard cone penetrometer is equipped with two sets of geophones located approximately 3 feet apart on the cone penetrometer. At 10-foot intervals, a shear wave source is activated at the ground surface using an air-actuated hammer. A seismograph measures the travel time of the shear wave detected at each set of geophones. The time difference provides the velocity of the shear wave in the layer between the two geophone sets.

Seismic cone penetration tests were performed at CPT C-3. The cone penetration test at location C-3 was performed to refusal at 71 feet below existing grade and the subsequent data was used in order to estimate the average shear wave velocity for the upper 100 feet of soil profile. Table A-1 provides the shear wave velocity from the surface and the interval of soil between the geophones.

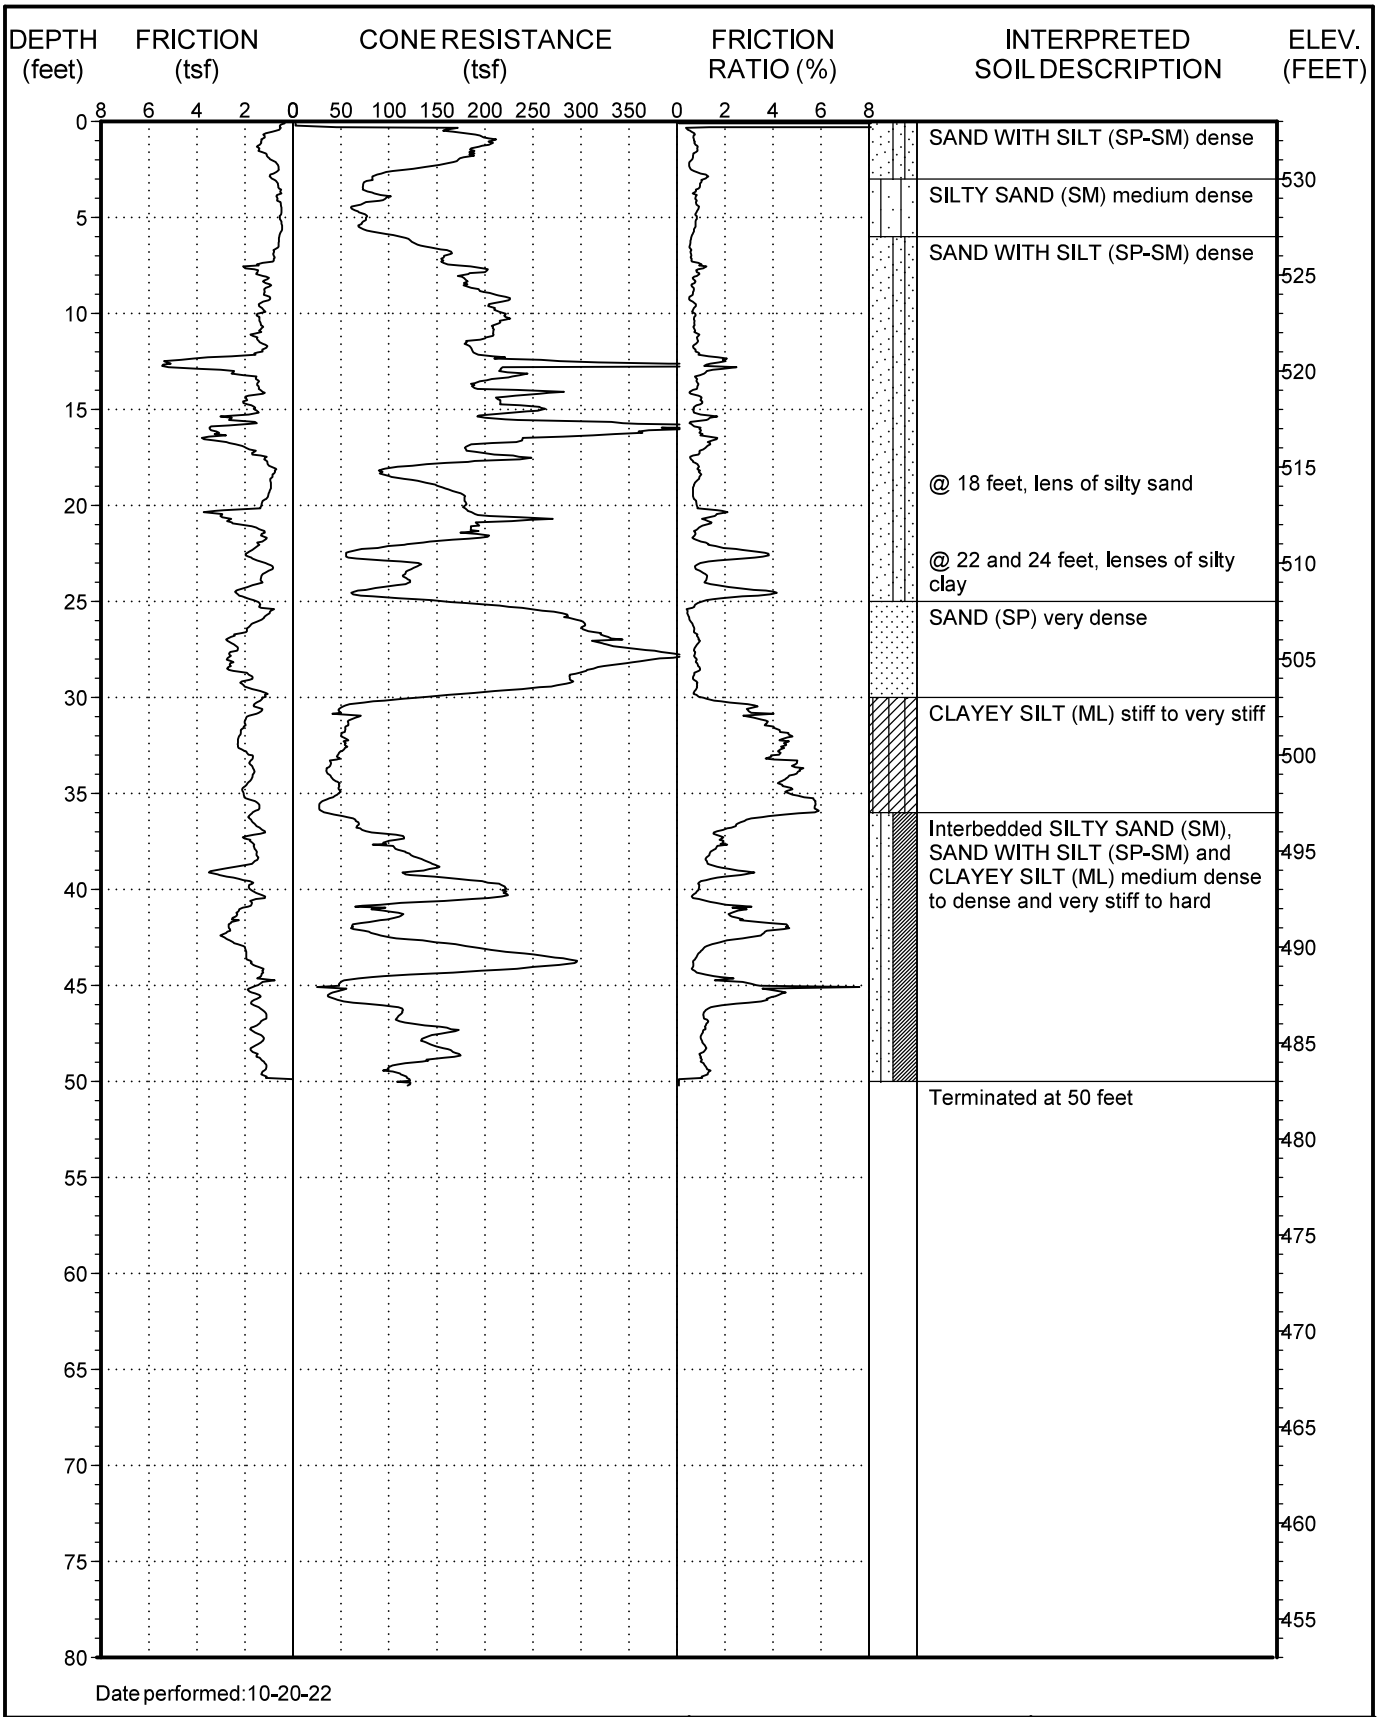

The CPT locations were laid out in the field by measuring from existing features at the site. The ground surface elevation at the CPT locations was estimated from Google Earth and should be considered very approximate.

# SOILS REPORT

## General

A soils exploration has been conducted for a light industrial development to be located at 120 W. Olive Avenue, Monrovia, California.

The site is somewhat irregular in shape with dimensions along Myrtle Avenue and Olive Avenue of 160 feet and 450 feet respectively. The additional portion of the property fronts on Walnut Avenue (almost in the middle of the block) and has a frontage of 125 feet and a depth of 160 feet.

This exploration was authorized to classify the soil at the site, determine if filled ground exists, measure the expansive potential of the soil and correlate the soil conditions with the applicable provisions of the Building Code for the designer's use. The Building Code permits a developer, architect, or engineer to select design information from the Building Code for small structures. It is with this intent that the soil report was prepared. This report is only intended to describe the soil conditions at random locations.

## Surface Conditions

The site is nearly level and is presently occupied by various structures, all single story, some residential, some commercial. There were vacant areas of the site and areas planted with citrus trees. Because of the various buildings on the property, certain locations were inaccessible for our investigation. However, the soils at the site reveal a general uniform consistency and the inaccessible areas probably consist of similar material.

Soil exposed on the ground surface is silty sand and is in a somewhat loose condition. The absence of shrinkage cracks indicates nonexpansive surface soils.

Streets, existing, and adjoining buildings were inspected for possible signs of settlement or effects of expansive or unstable soils. No distress from these causes was observed.

No surficial indications of filled ground were noted. However, as the site is occupied by buildings, debris and concrete from foundations and basements could be present. Utility lines and private sewerage disposal systems may exist on

the property. Several partial basements were noted in the abandoned houses on the site.

Foundation Conditions

The natural soils consist of silty sand to varying depths, underlain and interspersed with gravelly sand layers. The silty sand is generally dark brown near the surface becoming more brown with depth, fine to medium grain, loose to medium dense, dry, non-plastic with the test pits exhibiting some caving with depth. The sand/gravelly sand is fine to coarse grain, dry, medium dense and light grey in color.

Up to five feet of fill was encountered in the test pits. Also, concrete, and debris was encountered in some of the test pits. Since fill was encountered on a portion of the site, it may exist at other locations in variable quantity and quality.

No groundwater was encountered in the test holes.

Testing

Testing consisted of field exploration and laboratory tests at random locations throughout the site. Test holes were excavated by a backhoe to a maximum depth of 12 feet. The approximate location of the test holes are shown on the attached plan.

Logs of the test holes are attached, which tabulate data based on laboratory classification tests and visual inspection by the engineer in the field. A legend precedes the logs describing the various tests made. The test holes represent the condition at the particular location, changes in soils type and variations in the thickness of various layers of soil can be expected between the test holes.

Classification tests consisting of grading analysis and moisture content indicate that the soils on which the buildings will be supported are mostly silty sands. Density tests show the undisturbed soils to have uniform densities; thus settlement of similar footings will be uniform.

The maximum density and optimum moisture content of the silty sand were determined in the laboratory in accordance with the American Society for Testing Materials (ASTM) Test Method D 1557. The compaction test was made in a four inch diameter mold having a 1/30 cubic foot volume, with 25 blows of a ten pound hammer falling 18 inches on each of five layers. A new batch of soil was used for each point on the compaction curve. The maximum density of the silty sand is 120 pounds per cubic foot. Comparing the in-place densities with the maximum density, the soils are considered to be in a loose to medium state.

To classify the expansion characteristics of the silty sand soil an expansion index test was conducted in accordance with the Uniform Building Code Standard

No. 29-2. A moistened sample of the silty sand was compacted in a four inch diameter ring with 15 blows of a 5.5 pound hammer having a fall of 12 inches per inch of compacted sample. If the degree of saturation ranged between 49 and 51 percent for an assumed specific gravity of 2.7, the specimen was loaded with 144 pounds per square foot and flooded. After 24 hours the expansion was noted and the expansion index calculated. The expansion index was found to be 15. This soil is considered to have a very low potential for expansion. Experience with footings on similar soils indicate that the measured expansion will not require special foundation treatment.

## Proposed Construction and Grading

It is intended to construct wood frame and stucco structures not greater than two stories in height, and one story masonry structures.

Grading will be required to provide for access, to construct suitable building pads and to provide for proper drainage.

## Discussion

The recommendations in this report are based on random exploration and testing as described in the previous paragraphs. Soil deposits may vary in type, consistency and many other important properties between the borings. Therefore, this report should be considered only preliminary in nature; its purpose is to determine the soil parameters to be used in designing the foundation system for structures.

Foundation Engineering Company should continue to be retained for the project in order that continued observation of the subsurface conditions can be made and such that additional recommendations can be made for changes in design, if needed. Provision should be made for possible changes in quantities during construction. To minimize the possiblity of such changes, a more detailed exploration and soil testing program could be considered. Higher design values may be justified by additional testing. Also, the settlement characteristics of the footings can be analyzed.

The Building Code permits design information to be selected from the Code for small buildings. These values are based on the soil classification and do not take into account the amount of settlement that could occur under the various loads particularly in the case of changed moisture conditions. Because soils consolidate upon saturation, it is important that the ground slopes away from the buildings and water not be allowed to pond adjacent to the foundations.

The lowest quality soil which will affect foundations classifies as a silty sand. The Building Code provides minimum requirements for design of structures and foundations on various soil types. The applicable values relating to foundation design for this type of soil are given in the following table. The table, "Building Code Requirements" is presented for the convenience of the designer.

120 W. Olive Avenue
Monrovia, Calif.

## BUILDING CODE REQUIREMENTS

### DESIGN VALUES

| | | |
|---|---|---|
| Allowable foundation pressure on 12" X 12" footing | p/sf | 1500 |
| Increase per foot for depth deeper than 12" | p/sf | 300 |
| Increase per foot for width greater than 12" | p/sf | 300 |
| Maximum Allowable Foundation Pressure | p/sf | 3000 |
| Lateral Bearing (equivalent fluid pressure) | p/sf/ft | 150 |
| Sliding Coefficient | | 0.4 |
| Maximum Load on Continuous Footing | p/ft | 2000 |
| Maximum Load on Isolated Footing | kips | 50 |

### FOOTING

| | | 1 Story Exterior | 1 Story Interior | 2 Story |
|---|---|---|---|---|
| Depth | Inches | 12 | 12 | 18 |
| Width | Inches | 12 | 12 | 16 |
| Reinforcement | | One Number 4 Bar | | |

### Recommendations

All existing deposits of fill should be removed from the proposed building areas. These soils may be replaced in layers, moistened and compacted. The removal should extend beyond the building site for a distance equal to the depth of the fill or for at least four feet.

The natural soil is loose and in order to utilize the higher bearing values allowed in the Code, should be removed to a depth of three feet below the existing grade or two feet below the finished grade, whichever is lower. The removal should extend at least four feet beyond the proposed buildings. The intent of this procedure is to provide at least one foot of compacted fill below all structural footings.

120 W. Olive Avenue
Monrovia, Calif.

All grading should be done in accordance with the plans and specifications approved by Los Angeles County and Chapter 70 of the Uniform Building Code.

The following recommendations are made relative to the grading to emphasize their importance and they do not represent the grading specifications for a project. It is suggested that applicable portions be included in the project grading specifications.

All vegetation and debris on the surface shall be removed from the site prior to commencing excavation and grading.

The governmental agencies having jurisdiction over the project shall be notified by the contractor or the owner that grading is to commence and make all necessary arrangements for their inspection.

On completion of the prepared subgrades for the fill the subgrades shall be examined by the soil engineer before any fill is placed to determine if conditions are consistent with the soil report. The subgrade shall be scarified, moistened to near optimum moisture, and compacted. The existing fill is suitable to be reused after removal of all combustible debris.

Fill shall be placed in level layers not exceeding six inches in thickness and be compacted to a density of at least 90 percent of maximum density as determined by ASTM Test Method D 1557.

The soil engineer should be notified sufficiently in advance to permit testing of each fill at each two feet of elevation that the fill surface is raised.

If a seepage pit or cesspool is encountered, do not fill it until approval is obtained from the grading inspector and Foundation Engineering Co., Inc.

Import fill shall be silty sand, clayey sand or sand and shall have an expansion index of 20 or less.

On completion of the work, the site should be graded to slope away from the building. Areas where water could pond adjacent to the building in planter areas or where walks and drives would create depressed areas should be eliminated.

Representatives of Foundation Engineering Co., Inc., will observe the work in progress, make tests of the soil, and examine the excavations and trenches. It should be understood that the contractor or others shall supervise and direct the work and they shall be solely responsible for all construction means, methods, techniques, sequences and procedures, and shall be solely and completely responsible for conditions of the job site, including safety of all persons and property during the performance of the work. Periodic or continuous inspection by Foundation Engineering Co., Inc., is not intended to include verification of

120 W. Olive Avenue
Monrovia, Calif.

dimensions or review of the adequacy of the contractor's safety measures in, on, or near the construction site.

# LOG OF TEST HOLES

Continuous disturbed samples were taken for classification tests to identify the various soils, and 2 1/2 inch diameter undisturbed samples were taken at frequent intervals for detailed laboratory tests.

An explanation of the symbols and values shown on the logs is as follows:

M.C. Moisture content in percent of dry weight.

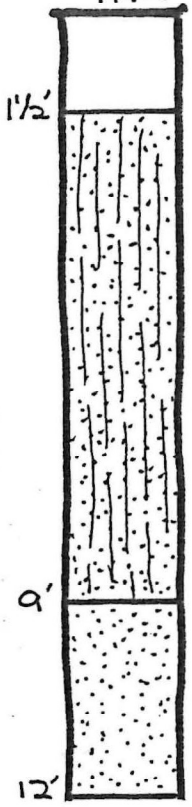

D.D. Dry Density in pounds per cubic foot

4 The percent of material that will pass a No. 4 (3/16") sieve. The materials larger than the No. 4 sieve and smaller than 3 inches would be designated as a gravel, and the material smaller than the No. 4 and larger than the No. 200 would be termed a sand.

200 The percent of the material that will pass a No. 200 sieve (the largest particle that will pass a No. 200 sieve is about the smallest that can be seen with the unaided eye). If more than half of the sample passes this sieve, it would be classed as a silt or clay.

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

***Thank you for your business.***

FOR A VALUABLE CONSIDERATION, receipt of which is hereby acknowledged, **Myrtle and Olive Associates, a General Partnership**

hereby GRANTS to **Myrtle and Olive Associates, LLC, a California limited liability company**

the following described property in the City of **Monrovia**, County of **Los Angeles**, State of **California**:

**PARCEL 1:**

**LOTS 1 AND 2, IN BLOCK "T", TOWN OF MONROVIA, IN THE CITY OF MONROVIA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 9 PAGES 69 AND 70 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.**

**EXCEPT THEREFROM THAT PORTION OF SAID LOT 1, DESCRIBED AS FOLLOWS:**

**BEGINNING AT THE NORTHEAST CORNER OF SAID LOT 1; THENCE WESTERLY ALONG THE NORTHERLY LINE OF SAID LOT 1, TO A POINT DISTANT 11.50 FEET (MEASURED AT RIGHT ANGLES) FROM THE EASTERLY LINE OF SAID LOT 1, TO THE TRUE POINT OF BEGINNING; THENCE SOUTHERLY ALONG A LINE THAT IS PARALLEL WITH THE EASTERLY LINE OF SAID LOT 1, A DISTANCE OF 15 FEET; THENCE NORTHWESTERLY IN A DIRECT LINE TO A POINT ON THE SAID NORTHERLY LINE OF SAID LOT 1, A DISTANCE OF 26.50 FEET WESTERLY OF SAID NORTHEAST CORNER OF SAID LOT 1; THENCE EASTERLY ALONG THE NORTHERLY LINE OF SAID LOT 1, A DISTANCE OF 15 FEET TO THE TRUE POINT OF BEGINNING.**

**ALSO EXCEPT THEREFROM THE EASTERLY 11.50 FEET, MEASURED AT RIGHT ANGLES FROM THE EASTERLY LINE OF SAID LOTS 1 AND 2.**

**PARCEL 2:**

**LOT 3, IN BLOCK "T" OF THE TOWN OF MONROVIA, IN THE CITY OF MONROVIA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 9 PAGES 69 AND 70 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.**

07 2457078

Mail Tax Statements To: **SAME AS ABOVE**

**EXCEPT THEREFROM THE EASTERLY 11.50 FEET, MEASURED AT RIGHT ANGLES FROM THE EASTERLY LINE OF SAID LOT 3.**

**PARCEL 3:**

**LOTS 4 THROUGH 9 INCLUSIVE, IN BLOCK "T", TOWN OF MONROVIA, IN THE CITY OF MONROVIA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 9 PAGES 69 AND 70 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.**

**"This conveyance confirms a change of name, and the grantor and grantee are the same party."**

Dated: **10/25/2007**

Myrtle and Olive Associates, a General Partnership

Lynda Boone Fetter

By: Lynda Boone Fetter, Partner

STATE OF California )SS
COUNTY OF Los Angeles )

On October 26, 2007, before me, Monica Masucci,
Notary Public, personally appeared
Lynda Boone Fetter, personally known to me
~~(or proved to me on the basis of satisfactory evidence)~~ to be the person(s) whose name(s) is/are subscribed to the within instrument and acknowledged to me that ~~he~~/she/~~they~~ executed the same in ~~his~~/her/~~their~~ authorized capacity(~~ies~~) and that by ~~his~~/her/~~their~~ signature(~~s~~) on the instrument the person(~~s~~) or the entity upon behalf of which the person(~~s~~) acted, executed the instrument.

WITNESS my hand and official seal.

Signature
Monica Masucci

# NICK WALCHUK

**Principal**

Nick Walchuk has 24 years of due diligence and site assessment experience in support of a diverse array of clients, including attorneys and financial institutions, small businesses and multinational corporations, as well as developers and private property owners. His broad range of experience includes the design and implementation of site characterization and remedial activities, development and evaluation of remedial cost estimates, performance of facility closure and similar evaluations, and strategic client support during negotiation with regulators, buyers/sellers, and/or third parties. He collaborates with Ramboll colleagues to evaluate vapor intrusion concerns, indoor and ambient air quality issues, address waste management issues, and perform human health risk assessments. Nick is registered as a professional geologist in California.

## YEARS IN RAMBOLL

15

## EDUCATION

1996
**BA, Geology**
University of California, Berkeley, California

## COURSES/CERTIFICATIONS

Professional Geologist – California (No. 8040)
Legacy ENVIRON Global Leadership Development Program
OSHA 40-hour Hazardous Waste Operations and Emergency Response Standard (HAZWOPER)

## PROJECTS

- Serves as a regional manager of an environmental risk management program developed by Ramboll for a major real estate investment trust (REIT) containing more than 100 properties with 200 tenants throughout the western and eastern United States. Various services are provided under the umbrella of the program, including: 1) environmental site assessments; 2) soil, soil gas, and groundwater investigations conducted pursuant to property acquisition, financing, development, or divestiture; negotiations and correspondence regarding environmental matters with regulatory agencies on behalf of the client; 3) tenant environmental audits to evaluate biotechnology tenant operations and facility closure/decommissioning procedures; and 4) providing general consulting services to assist the client's risk management and construction groups regarding environmental, waste management, and site development matters. [2005-current]

## CONTACT INFORMATION

**Nick Walchuk**

nwalchuk@ramboll.com
+1 (510) 420 2559

Ramboll
2200 Powell Street
Suite 700
Emeryville, CA 94608
United States of America

- Assisted several confidential clients in the telecommunications and retail industries with waste characterization and survey of waste streams generated at facilities throughout California. Sometimes conducted in response to consent decree/judgments, these audits typically have included review of client and facility documentation, development of standardized audit protocols, coordination and implementation of solid waste audits and production of deliverables used by clients and counsel to demonstrate compliance and progress toward required and/or regulatory targets, improvements in relation to the Consent Judgment, and also to guide client planning, development, and refinement of client-internal training programs. [2014-current]
- Provided advisory and environmental due diligence services for a confidential academic institution. Environmental consulting and technical services were in support of potential acquisition of a property with known contamination that was undergoing redevelopment. Environmental risks were evaluated with respect to potential future uses. Specific tasks involved a third party review of site investigation and remediation reports as well as vapor mitigation system designs. [2020]
- Mr. Walchuk serves in a director role in North America for Ramboll's programmatic support of a major confidential client in the datacenter industry. Ramboll's support for this client includes includes the performance of multidisciplinary due diligence screening evaluations as part of the site selection process, and includes topic areas such as permitting, entitlement and development, typical environmental due diligence, air quality, geotechnical, traffic, noise, water infrastructure, flood risk, and other elements. These fast-paced projects are typically delivered in accelerated timeframes and on budget in support of client decision-making strategies. [2019-current]
- For numerous projects in California, Mr. Walchuk performs, manages, and coordinates support for developer clients at all stages of site redevelopment:
  - Pre-acquisition: preliminary information review, environmental due diligence including Phase I and Phase II assessments, strategic planning support in relation to potential future environmental costs relative to potential or proposed future site use (e.g., entitlement or environmental review concerns, regulatory oversight and/or environmental matters for construction);
  - Entitlement, redevelopment, and construction planning: evaluating mitigation requirements or conditions of approval placed on the project by local authorities, subsurface sampling in support of budget development for costs related to soil excavation/disposal and dewatering, asbestos and lead paint surveys, air quality investigations and other risk evaluations, development of soil management and dust control plans;
  - During construction: assistance with soil sampling and/or data evaluation for soil disposal profiling, working with the client and/or owner's representative as liaison with the excavation and grading contractor, noise evaluation, construction emissions tracking, support for meeting other mitigation requirements;
  - Post-construction: development of project completion summaries related to environmental matters – these can be completed to fulfil requirements under environmental regulatory oversight, and/or for client recordkeeping purposes to provide comprehensive documentation in the event of a future sale of the property.
- Conducted or directed hundreds of environmental site assessments, numerous site investigations, and provided strategic support for implementation of remediation (where warranted) in combination with proposed redevelopment plans. Such projects often include considerable interaction and negotiation with local and/or state environmental regulatory agencies, and required the navigation of local regulatory programs such as the Maher Ordinance (San Francisco), voluntary cleanup programs (Santa Clara and San Mateo counties), the San Francisco Regional Water Quality Control Board's (RWQCB) Low-Threat Chlorinated Solvent Site guidance, and the state California Land Re-use and Revitalization Act (CLRRA). As a result of work on such projects, Mr. Walchuk has established strong relationships with local city, county, and state regulators. [1997-current]

- Following management and completion of several ESAs for a prospective purchaser of properties within an area of commingled ground water contamination (chlorinated solvents) emanating from the subject site and two NPL (Superfund) sites, conducted soil, ground water, and soil gas data collection and associated evaluation and report preparation. Nick coordinated a subsequent human health risk assessment, and participated in calls and meetings between regulators, and sellers' and buyers' counsel to facilitate the implementation of land use restrictions at the sites, allowing Ramboll's client to proceed with the purchase of the site. Several years later, Mr. Walchuk assisted the same client with the sale of the property, a process which encompassed two years of strategic negotiation support involving the buyer, a third party responsible party, and state and federal environmental regulators regarding an appropriate investigative and remedial approach that could be implemented in conjunction with planned redevelopment of the site. [2006-2015]
- Mr. Walchuk directed facility closure activities related to the closure of a former recycled paperboard mill and an adjacent paper packaging manufacturing facility. The client terminated operations at each site separately, followed by separate real estate transactions. Ramboll performed facility closure activities at each, including closure work plan preparation, environmental sampling in compliance with agency requirements and as part of seller due diligence, oversight of contractors during implementation of closure activities, interacted with regulatory agencies on the client's behalf, and prepared final completion reports for agency approval. Ramboll's work facilitated an efficient completion of the client's sale of each site soon after completion of facility closure. [2011 and 2017]
- For a site impacted with chlorinated solvents that were discovered during acquisition due diligence, Mr. Walchuk directed the investigation, delineation, risk evaluation, and long term groundwater monitoring of the plume underlying the site. Following the sale of the property to a new owner that opted for a more active approach to resolving the matter, Nick directed the design and implementation of further delineation and remediation that included confirmation of plume definition to the satisfaction of the local oversight agency. Investigation methodologies included the use of membrane interface probe (MIP) technology and groundwater sampling from multiple groundwater bearing zones, and remediation included the installation of horizontal wells beneath an existing building and active soil vapor extraction to reduce contamination concentrations and risks related to vapor intrusion. [2008-2018]
- For a multinational corporation at an orphan site in the San Francisco Bay Area, provided investigative and consulting services in support of regulatory case closure under the San Francisco Regional Water Quality Control Board's (RWQCB) Low-Threat Chlorinated Solvent Site guidance. The site was in long-term post-remedial monitoring status when the client took active responsibility for the site. Following development and implementation of soil gas and indoor air quality investigations and an evaluation of potential human health risks, the RWQCB rescinded the cleanup order for the site and issued case closure. [2005-2009]
- Provided due diligence and related support to a San Francisco Bay Area auto maker with respect to local facilities as well elements of site selection for major new facilities. Local projects have included review of remedial activities to address legacy contamination issues under a Corrective Action Consent Agreement with the California Department of Toxic Substances Control (DTSC). [2012-2015]
- Provides assistance to Habitat for Humanity and other non-profit organizations in support of site redevelopment for affordable housing and schools, including engagements on a pro bono basis. These projects have included environmental site assessment and reviews of historical information, evaluation of known and potential contamination concerns, site characterization and investigation including soil, soil gas, and groundwater sampling, design and implementation of remedial activities, and strategic support for state and local agency interaction prior to and during redevelopment. [2009-current]
- Developed a scope of work and directed site characterization activities at a former pesticide mixing facility in Pearl Harbor, Hawaii, pursuant to a Unilateral Administrative Order issued by USEPA to conduct site cleanup as a Non-Time-Critical Removal Action under CERCLA. Subsequent work has included the preparation of an Engineering Evaluation and Cost Analysis (EE/CA) Work Plan, including

evaluation of human health and ecological risks, and implementation preparations are underway. This project has involved significant negotiation and interaction with three regulatory entities, including USEPA, the US Navy, and the state of Hawaii. [2009-current]

- For a large developer and landowner, provided oversight of a major remediation project in the Mission Bay Redevelopment Area along the southern waterfront of San Francisco, California. Project oversight included the active supervision of contaminated soil and ground water removal operations performed by the responsible party, participation in weekly stakeholder meetings, and interacting with local regulatory agencies and the responsible party on behalf of the property owner. [2005-2007]
- Assisted a major real estate investment trust with unique issues arising during site redevelopment at a San Francisco Bay Area site. An abandoned oil pipeline was discovered during site construction, and the resulting project required researching the history and ownership of the pipeline, as well as its removal from the property and associated soil sampling. Subsequent tasks included additional site characterization to delineate potential soil and groundwater impacts to support negotiations with the local oversight agency regarding a low-risk approach to site closure. [2009-2011]

# ALEXIS HILLMAN

**Senior Managing Consultant**

Alexis Hillman is a Senior Managing Consultant at Ramboll's Los Angeles office. She has 19 years of experience in environmental investigations and due diligence projects and is a California Professional Geologist and Certified Hydrogeologist. Ms. Hillman has conducted and managed soil, groundwater, soil vapor, and indoor air quality sampling projects as well as aquifer testing for Phase II site investigations and groundwater monitoring programs, and has contributed to the development of feasibility studies, treatability studies, remedial investigation reports, and remedial action plans. She manages due diligence projects and has contributed to litigation support projects. Ms. Hillman works extensively on redevelopment projects from the due diligence phase, to site investigation, data evaluation, risk assessment, and remediation, as well as construction oversight and soil management.

## CAREER

1996-2000
**Assistant Geoscientist to Senior Associate Geoscientist, McLaren/Hart, Inc.**
Staff Geoscientist responsible for site investigations, due diligence, preparation of work plans, groundwater monitoring reports, Phase I and Phase II reports.

## EDUCATION

1990-1994
**BS Geology**
University of California, Los Angeles

## COURSES/CERTIFICATIONS

OSHA 40-hour Hazardous Waste Operations and Emergency Response Standard - HAZWOPER, 2019
Certified Hydrogeologist - California, 2003-2019
Professional Geologist - California, 2001-2019

## PROJECTS

2016-present

**Former Metals Facility Soil Vapor Extraction**

Project manager for Phase I and site characterization activities at former metal preparation facility being considered for multi-use redevelopment. Identified a vapor intrusion concern from chlorinated volatile organic compounds for future tenants and a potential off-site building. Ramboll installed and operates a soil vapor extraction system to proactively reduce concentrations in shallow subsurface soil and soil vapor while waiting for County oversight to begin the closure process.

2014-present

**Redevelopment of Former Manufacturing Facility**

Conducted and managed due diligence for prospective buyer and developer on property with lengthy site investigation and remediation history. Worked with agency on a separate redevelopment track to conduct earthwork activities under a soil management plan. Conducted pre-construction soil characterization to minimize disposal fees. Oversaw earthwork activities, which included export of 47,900 cubic yards of soil, monitoring soil for impacts and separation of soil for different disposal facilities. In addition, the project includes the design, installation, and ongoing performance monitoring of a sub-slab depressurization system (SSDS) to mitigate residual shallow soil impacts, which Ramboll continues to operate and maintain.

2016-2018

**Source Area Excavation & Site Closure Activities**

Managed a Phase I environmental site assessment and based on the significant former manufacturing activities, a Phase II investigation was recommended. An area of elevated tetrachloroethene and petroleum hydrocarbons was identified in soil and soil gas. After engaging local agency oversight, Ramboll implemented a source area removal work plan involving the excavation of approximately 207.83 tons of TPH- and VOC-impacted soil from the area with the highest concentrations of those constituents, the "source area", by large diameter auger drilling. Based on its site investigation and removal action activities, Ramboll requested no further action on behalf of its client, which was granted in December 2018 in concert with a land use restriction for commercial uses only.

2014-2016

**Aerospace Manufacturing Facility**

Managed a Phase I environmental site assessment to evaluate environmental liabilities for an aerospace manufacturing facility in southern California with a 25-year history of extensive site investigations and ongoing remedial actions. The site soil, soil gas and groundwater has been impacted primarily with chlorinated solvents and cleanup is being performed under the oversight of the Los Angeles Regional Water Quality Control Board. Further, conducted a Phase II subsurface investigation to document the current conditions of soil and soil gas to assist the client in marketing the property to potential buyers. The work was conducted on behalf of the parent company, which was considering sale of the property.

2013-2016

**Commercial/Residential Redevelopment**

Managed site investigation activities and risk assessment following identification of a recognized environmental condition during due diligence of a site being redeveloped into a high rise commercial and residential building in Los Angeles. Implemented soil management plan during grading to address previously unknown areas of impacted soil. Worked with Los Angeles County Fire Department, Health Hazardous Materials Division (LAFD) to satisfy requirements for no further action for soil while meeting aggressive project redevelopment schedules. LAFD provided a letter requiring no further action acknowledging that the contamination had been satisfactorily mitigated with a vapor barrier and passive venting system. Following one year of groundwater monitoring, LAFD also agreed to no further action for groundwater.

2012-2015

**Due Diligence**

Manager for property transaction environmental assessments, including industrial, commercial and residential property. Responsibilities include agency research, file, aerial photo, and historical map review; site visits and interviews; asbestos, lead-based paint, and drinking water sampling; detailed site plan preparation; and reporting.

2010-2014

**Former Dry Cleaning Facility**

**Confidential Real Estate Investor**

Evaluated historical releases from a former dry cleaning facility located in a shopping center. Conducted subsurface evaluations in an existing grocery store to evaluate VOCs in soil, soil gas, and groundwater. Conducted a screening human health risk assessment followed by indoor air sampling. Evaluated VOCs in groundwater over several monitoring events. Negotiated with the local agency to demonstrate groundwater plume stability and acceptable vapor intrusion risk to achieve regulatory closure.

2010-2013

**Redevelopment of Industrial Property**

Managed environmental issues during redevelopment of a former manufacturing facility in South Gate, California. A soil management plan was prepared to guide earthwork. The site had received a no further action letter for soil with unrestricted use from the DTSC; however, several areas of soil impacted with TPH, VOCs, and SVOCs were encountered during grading operations. To maintain the project schedule and avoid costly penalties for missed deadlines, aggressive excavations were conducted in five areas and in total 24,749 tons of impacted soil were removed and disposed off-site. In areas where building pads were proposed, soil gas surveys were completed to demonstrate to future tenants that the risk to site workers was well below commonly accepted standards. In addition, three previously unknown USTs were found during the grading process and removed and closed under the oversight of the local agency. A supplemental no further action letter was subsequently granted by the DTSC.

2013

**Facility Decommissioning and Closure**

Obtained closure of an ink manufacturing facility in Santa Fe Springs, California. Prepared the facility decommissioning and closure plan for submittal to the Santa Fe Springs Fire Department following site inspection. Following decommissioning, implemented a post-decommissioning sampling and analysis program to satisfy requirements of the Fire Department. Assistance was provided to the client in closing out stormwater and air permits for the facility. Prepared a closure report following sampling and decommissioning activities.

2002

**Due Diligence**

Conducted environmental due diligence of aerospace, chemical, manufacturing, multi-tenant and light industrial business parks as part of corporate mergers and acquisitions and commercial real estate transactions in California, Wyoming, and Montana. As part of the due diligence process, prepared cost scenarios for compliance issues regarding air, wastewater, and OSHA issues.

2001-2003

**Former Manufacturing Facility**

Task manager implementing remedial action plan (RAP) involving the installation of a dual-phase and soil vapor extraction system to clean up chlorinated-solvent impacted soil and groundwater. Implementation of the RAP required management of permitting process through numerous agencies in Southern California.

2001-2002

**MTBE Field Investigation**

Field geologist for agency driven, regional methyl tertiary-butyl ether (MTBE) study. Conducted discrete-depth groundwater sampling using a combination of air rotary casing hammer and mud rotary drilling techniques and using the Simulprobe sampling tool. The project included continuous core sampling, geophysical logging, and monitoring well installation in the shallow and regional aquifers. The project was completed under the supervision of RWQCB and USEPA representatives. Results of the investigations were used to determine cost allocations for regional remedial efforts.

2001

**Due Diligence**

Geologist for Phase I Environmental Assessment at former crude oil impoundment site. The Site is currently developed with a shopping center, however due to former operations at the site methane monitoring is conducted on a continuing basis. Other issues identified during the assessment included potential migration of impacted groundwater from an offsite source, and dry cleaning operations at the Site that have impacted a shallow perched groundwater zone. Responsible for reviewing all environmental documents related to the various identified issues and summarizing the work completed to the satisfaction of the Site owner.

1999-2000

**Development of Feasibility Studies**

Geologist for development of Feasibility Study and Treatability Studies for chlorinated solvent-impacted manufacturing facility in Southern California. The project included document review, compilation and presentation of soil and groundwater data, and comparison to potentially applicable agency clean-up criteria, for the purpose of selecting remedial action alternatives and appropriate treatability studies. Also responsible for implementing certain tasks for treatability studies, installing multiple offsite monitoring wells including several in public right-of-ways and in residential areas and implementing the community relations program in place to address the potential concerns of community members.

1999

**Site Investigation**

Field geologist for subsurface soil and groundwater investigation at a proposed 2-mile railroad construction site with underground petroleum pipelines in the Port of Los Angeles. This expedited site characterization included sampling at nearly 200 points, management of field database and mobile laboratory, plume definition and GPS surveying.

1999

**Site Investigation**

Geologist for extensive Cone Penetrometer Testing (CPT) study. Implemented CPT logging and multiple-depth groundwater sampling investigation along downgradient property boundary and prepared detailed cross-section of stratigraphy and distribution of contaminants for presentation to the Regional Water Quality Control Board.

1998

**Former Landfill**

Geologist for development of Brownfields Redevelopment Workplan. The site was a former landfill that was underdeveloped. Responsibilities include preliminary historical research regarding the extent and nature of the landfill, and development of a work plan to investigate the potential impact to soil and/or groundwater by the former landfill as well as current site operators.

1998

**Site Investigation**

Field geologist conducting slug tests at former underground storage tank site involved in litigation. The project included slug tests on multiple monitoring wells at the site and data analysis using AQTESOLV. The results were used along with physical soil analysis results to determine if a release date could be estimated.

1996-1997

**Site Investigation**

Field geologist for the installation of groundwater monitoring wells for a medical equipment manufacturing facility in Irvine, California. Groundwater at the facility is impacted with chlorinated solvents. Responsible for obtaining permits, including right-of-way; setting up subcontractors for well installation and lab analyses; and supervising installation of the monitoring wells. These wells were installed to aid in characterizing the extent of impact to groundwater. Also responsible for preparing groundwater monitoring reports, including groundwater contour maps, chemical impact figures, and hydrographs, under supervision of the RWQCB - Santa Ana Region.

1996

**Pesticide Manufacturing Plant**

Field geologist for several phases of site characterization for a pesticide manufacturing plant in the Los Angeles area where soil is impacted by chlorinated pesticides, and dioxins and furans. Responsible for implementing sampling plan, which involved precise measurement of sampling depths with the Geoprobe®. Also responsible for performing modified decontamination procedures to ensure representative integrity of samples. All work was performed under supervision of the Department of Toxic Substances Control.

# STEPHANIE T ECKELMAN

**Senior Consultant 1**

## KEY COMPETENCIES

Stephanie Eckelman has been an environmental consultant since 2000. Stephanie has conducted numerous ASTM Phase I Environmental Site Assessments of commercial, industrial and residential properties. She has assisted with multiple soil, groundwater, and soil vapor investigations for subsurface investigations and groundwater monitoring programs. Stephanie has conducted multiple waste audits for clients and has helped prepare waste audit documentation forms.

## PROJECTS

### Phase I Environmental Site Assessment

**Black Equities Warner Ctr Phase I, Woodland Hills, California, United States, Black Equities Group Ltd., 2018-2019**

Ramboll conducted a Phase I ESA for the northwestern portion of a property (former Northrop Grumman facility "Parcel A") located at 5500 Canoga Ave and 21240 Burbank Blvd, Woodland Hills, CA, referred to by the client, Black Equities Group, as the Warner Center Project.

**Site environmental auditor**

Conduct the site visit, interview on-site personnel, contact agencies, update staff on site status and prepare closing report.

**Manufacturing Facility Potential Relocation, Bakersfield, California, United States, 2008**

Water supply availability research and compilation

**Research and report preparation**

Researched and prepared report detailing various Urban Water Management Plans in the Central Basin for client to make informed decision on future land use purchase.

**Multiple Phase I ESA projects, California, United States, 2005-2020**

Prepared ASTM Phase I reports, including site visits, agency records reviews, and aerial photograph reviews on numerous properties including manufacturing, commercial retail properties, defense-related facilities;

**Consultant**

conducted multiple Phase I ESA site audits, client communication, subcontractor communication, report preparation and staff scheduling as needed.

**Phase I Environmental Site Assessments, California, United States, 2005-2020**

Ramboll conducted Phase I Environmental Site Assessments on multiple private, public and municipal properties.

## SPECIAL COMPETENCIES

Due Diligence Phase I ESA
Waste Audits
gINT boring log template creation

## TOTAL YEARS OF EXPERIENCE

17

## EDUCATION

1998 BS, Environmental Studies

## COURSES/CERTIFICATIONS

2020 OSHA 40-hour Hazardous Waste Operations and Emergency Response Standard - HAZWOPER

**Consultant**
Conduct site visits, prepare written reports, interact with clients and agencies, contract with subcontractors and update additional staff if the project required additional Ramboll services.

**Site Solutions**

**Investec: 2019 DryCleaner Comp Rev, Santa Barbara, Camarillo, Chula Vista, California, United States, Investec Real Estate, 2019**
Ramboll conducted reviews of three drycleaners located at the Central Plaza Shopping Center, 708 Arneill Road, Camarillo, California; the Mesa Shopping Center, 1998 Cliff Drive at Meigs Road, Santa Barbara, California; and the Plaza at Sunbow, 601 East Palomar Street Chula Vista, California.
**Site personnel**
Conduct site inspection, conduct personnel interviews, prepare report and share findings with client.

**Underground Storage Tank Removal Oversight, Alhambra, California, United States, 2018-2019**
Multiple abandoned UST's located and removed from the site.
**Field Supervisor**
Tasks included scheduling subcontractors, overseeing UST removals, collection of confirmation sampling, agency oversight communication, and report preparation.

**KS: Home Depot - LBP - California, California, United States, The Home Depot, 2017-2019**
Ramboll Environ assisted in connection with an investigation involving Home Depot’s renovation projects in homes that may have contained lead based paint.
**Site auditor**
Conducted lead based paint sampling oversight, coordinate subcontractors and residents, prepare written documentation.

**Former Oil Field Pre- and Post- Stormwater Site Inspection, Santa Clarita, California, United States, 2007-2008**
Conducted Storm Water Pollution Prevention Plan monitoring including pre- and post-storm surface inspection on a form large oil field
**Inspector**
Conduct pre- and post-storm water site investigation for damaged BMP's on a large vacant former oil field.

**Lage Redevelopment Project, Santa Clarita, California, United States, 2006-2011**
Conducted soil sampling, surface water runoff sampling, groundwater sampling, soil vapor sampling and groundwater pump tests at a 1000-acre property;
**Site staff**
Collect soil samples, storm water samples, groundwater sampling and soil vapor samples.

**Pool Product Manufacturer, California, United States, 2002-2009**
Prepared and submitted Wastewater Treatment Surcharge Statements and tracked Wastewater Treatment Surcharge Quartely Reports for a facility in South Los Angeles;
**Site staff**
Prepared wastewater treatment surcharge statements, updated staff and client on changes and maintained submission requirements.

**Entertainment Industry, Glendale, California, United States, 2001**
Managed well decommissioning, including permitting, for deep wells for various municipalities;
**Onsite personnel**
Managed well decommissioning, including permitting, for deep well located in Glendale.

Generate various boring log templates.

**Baker: SSF Add. Site Investigation, Not specified, California, United States, Baker Properties, Inc., 2017-2018**
Ramboll Environ conducted a soil, soil vapor, groundwater, and indoor air investigation at 160-180 Sylvester Road, South San Francisco, CA.
**Boring log**
Prepare MIP boring logs for the site.

**Boring Log template generation, California, United States, Multiple client projects., 2015-2020**
Prepared multiple subsurface boring log templates for multi-office use with gINT boring log software.
**Boring Log Generator**
Created and implemented new boring log templates and reports for numerous large scale projects.

**Large Shipping Company: 2019 California Waste Audit, California, United States, Amazon.com Services Inc., 2019-2020**
Ramboll performed an evaluation of the contents of municipal solid waste containers at three locations in California.
**Waste Auditor**
Conducted waste audit of compacted 40 cubic yard bin with agency oversight.

**Telecommunication: CA CJ Audits, Not specified, California, United States, 2015-2020**
Ramboll Environ conducted hazardous waste audits and trash sorts at multiple California locations of a telecommunications company in order to fulfill the requirements of a Consent Judgment against the company.
**Auditor**
Conducted multiple waste audits through multiple years at facilities throughout Southern and Central California.

**NE Corner Victoria St/Central, Carson RAP, Corner of South Central Avenue and Victoria Street, Carson, CA, United States, The Carson Project Owner, LLC, 2017-2018**
Ramboll prepared a Human Health Risk Assessment, conducted a statistical evaluation on distribution of chemicals, prepared a Remedial Action Plan and provided project management, attended meetings, and provided estimated costs for site remediation
