Completed Date: 01/06/2022
Comments: Recent replacement of extraction well fans to stronger fans indicates improved indoor air quality. Laboratory results of indoor air samples collected August 22, 2021 were at least one order of magnitude less than DTSC indoor air screening levels, including the tetrachloroethene (PCE) screening level of 2.0 μg/m3 and the vinyl chloride screening level of 0.16 μg/m3. Indoor air analytical results were significantly lower than historical indoor sample results, including samples collected at the same locations. Carbon (filter) replacement was not necessary this quarter. The sub-slab vapor probe monitoring network is functional with only minor maintenance conducted during the monitoring period (i.e. labeling and replacement of probe tip covers).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 04/02/2018
Comments: DTSC has approved the Work Plan for Additional Indoor Air Sampling at the Morena Trust Site. Indoor air sampling is being done in two units to reevaluate indoor air conditions following modifications to the building foundation. Sampling will take place in two seasons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 03/07/2019
Comments: DTSC has reviewed and approved the Work Plan to implement a Pilot Test of a Sub-Slab Depressurization System (SSDS) at the Starlite/Canal Building at 111 Starlite Street in South, SF. The Subslab Depressurization System mitigates the intrusion of subsurface tetrachloroethylene (PCE or perc) vapors by passively depressurizing the subsurface relative to the occupied building and creating a preferential pathway for those vapors to escape. Field implementation is scheduled to begin in second quarter 2019 and the pilot test period will continue for an additional 6-12 months after. If the pilot test demonstrates that an SSDS is successful in mitigating the subsurface intrusion of PCE vapors, the remedy will be recommended and proposed in a Removal Action Workplan which the neighboring community will have the opportunity to comment on.

Comments: The sub-slab depressurization system report documents the operation of the system. The system fans were replaced with stronger fans (PT-25) to increase the vacuum and effectiveness of the system. The system removes PCE and other halogenated VOCs and maintains an effective negative pressure in the sub-slab area within the area of vacuum influence. The flow rates and effective radius of influence of the system increased since installation of the PT-25 fans. Indoor air monitoring will occur for a second season to ensure that the system improvements are effective at reducing PCE vapor intrusion into the building.

Completed Document Type: Technical Report
Completed Date: 01/06/2022
Comments: Recent replacement of extraction well fans to stronger fans indicates improved indoor air quality. Laboratory results of indoor air samples collected August 22, 2021 were at least one order of magnitude less than DTSC indoor air screening levels, including the tetrachloroethene (PCE) screening level of 2.0 μg/m3 and the vinyl chloride screening level of 0.16 μg/m3. Indoor air analytical results were significantly lower than historical indoor sample results, including samples collected at the same locations. Carbon (filter) replacement was not necessary this quarter. The sub-slab vapor probe monitoring network is functional with only minor maintenance conducted during the monitoring period (i.e. labeling and replacement of probe tip covers).

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	04/02/2018
Comments:	DTSC has approved the Work Plan for Additional Indoor Air Sampling at the Morena Trust Site. Indoor air sampling is being done in two units to reevaluate indoor air conditions following modifications to the building foundation. Sampling will take place in two seasons.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Pilot Study/Treatability Workplan
Completed Date:	03/07/2019
Comments:	DTSC has reviewed and approved the Work Plan to implement a Pilot Test of a Sub-Slab Depressurization System (SSDS) at the Starlite/Canal Building at 111 Starlite Street in South, SF. The Subslab Depressurization System mitigates the intrusion of subsurface tetrachloroethylene (PCE or perc) vapors by passively depressurizing the subsurface relative to the occupied building and creating a preferential pathway for those vapors to escape. Field implementation is scheduled to begin in second quarter 2019 and the pilot test period will continue for an additional 6-12 months after. If the pilot test demonstrates that an SSDS is successful in mitigating the subsurface intrusion of PCE vapors, the remedy will be recommended and proposed in a Removal Action Workplan which the neighboring community will have the opportunity to comment on.

Completed Date: 05/25/2016
Comments: Document was not prepared with DTSC oversight. In response to a May 22, 2015 letter from San Mateo County Groundwater Protection Program (GPP), Trinity Source Group (Trinity) conducted a cool-weather assessment of indoor air. Sub-slab vapor probes were also sampled. Maximum reported concentrations were 2.1ug/m3 for tetrachloroethene (PCE) and 0.086 ug/m3 for trichloroethene (TCE) for the indoor air sampling. PCE was detected from in 14 of the 16 subslab probes samples from 48.8 to 25,600 ug.m3. TCE was detected in 8 of the 16 subslab probes at concentrations ranging from 94.0 to 1540ug/m3.

Comments: The sub-slab depressurization system report documents the operation of the system. The system fans were replaced with stronger fans (PT-25) to increase the vacuum and effectiveness of the system. The system removes PCE and other halogenated VOCs and maintains an effective negative pressure in the sub-slab area within the area of vacuum influence. The flow rates and effective radius of influence of the system increased since installation of the PT-25 fans. Indoor air monitoring will occur for a second season to ensure that the system improvements are effective at reducing PCE vapor intrusion into the building.

completed. Lead contaminated soil was excavated and disposed of offsite, however soil lead that exceeds unrestricted use levels remains at the Site at depths of 1 foot beneath the surface, and below. A land use covenant was recorded on January 31, 2014 in order to prohibit the use of the site as a residence, hospital, school, or day care. The land use covenant also prohibits soil disturbance at or below 1 foot below grond surface without a DTSC approved Soil Management Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 12/10/2009
Comments: RP signed VCA received and processed. UPRR will be submitting the advance payment within 10 days.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 02/03/2014
Comments: DTSC has determined that all appropriate response actions have been completed. Lead contaminated soil was excavated and disposed of offsite, however soil lead that exceeds unrestricted use levels remains at the Site at depths of 1 foot beneath the surface, and below. A land use covenant was recorded on January 31, 2014 in order to prohibit the use of the site as a residence, hospital, school, or day care. The land use covenant also prohibits soil disturbance at or below 1 foot below grond surface without a DTSC approved Soil Management Plan.

CA BOND EXP. PLAN:

Reponsible Party:	COST RECOVERY/OPERATION AND MAINTENANCE SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Sun Chemical and U.A. Local 38 Pension Trust Funds are the responsible parties. The RPs funded the characterization and remedial action at this site. State Bond funds were used for oversight of the RP's activities. DHS will seek cost recovery for its direct costs including staff costs and overhead related to the project.
Site Description:	This site is a former print ink manufacturing facility. Soil contamination has been identified onsite. Tanks and sumps containing oily and ink wastes are also onsite.
Hazardous Waste Desc:	Heavy metals including lead, zinc and barium, as well as cyanide comple1xes are present in sumps and soils. The hazards associated with these wastes and contaminants have been eliminated by removal of the liquids and sludges; removal of tanks, sumpsand piping; cleanup of residues on floors and other surfaces of the building; and excavation and redisposal of contaminated soils from the site.
Threat To Public Health & Env:	Peak concentrations of contaminants in the ground water are below applicable drinking water requirements. Ground water monitoring sampling continued until September, 1987. The monitoring wells were destroyed in December, 1987,

SUN CHEMICAL CORPORATION (Continued) **S100833558**

following limited pumping of one well to remove the remaining ink.

Site Activity Status: The responsible parties conducted removal of the liquids and sludges and sumps and piping in the early part of 1986. The site was fully characterized in mid 1987. DHS certified that the site was remediated in November, 1987.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 09/30/2010
Comments: The Site has been subdivided into 12 separate parcels and houses 12 industrial/warehouse condominiums and a concrete surface parking lot. It was observed that the surface of the concrete was in very good condition with only minor of cracking. There was no evidence of any activities prohibited by the Deed Restriction.

Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 05/16/2011
Comments: The surface of the concrete was in very good condition with only minor of cracking. There was no evidence of any activities prohibited by the Deed Restriction.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 05/07/2009
Comments: During the inspection of the parking lot some cracking of the concrete surface was observed. There was no evidence of any activities prohibited by the Deed Restriction. It is recommended that the cracks observed during the inspection will only become worse and should be repaired.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 02/23/2012
Comments: DTSC conducted its annual site visit to check the condition of the pavement over contaminated soil and to verify compliance with the restrictions and requirements of the Land Use Covenant. The surface of the pavement was in very good condition with only minor of cracking. There was no evidence of any activities prohibited by the Land Use Covenant.

Completed Sub Area Name:	Not reported
Completed Document Type:	Land Use Restriction - Site Inspection/Visit
Completed Date:	03/10/2016
Comments:	DTSC staff performed annual inspection on February 11, 2016. Lead remains in soil at the site at concentrations that do not allow for unrestricted use. The lead-impacted soil is contained under the concrete pavement and buildings on the site. An area of the concrete pavement was observed during the inspection that requires repair. Also, vegetation and sediment were observed in a storm drain should be removed. Based on the inspection, DTSC concluded the selected remedial action remains protective of human health and the environment.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Land Use Restriction - Site Inspection/Visit
Completed Date:	01/31/2017
Comments:	DTSC's personnel performed an annual cap inspection on January 17, 2017. During the inspection, areas of cracking and deterioration were observed on the surface of the concrete. However, no soil underneath was exposed and no evidence of any activities prohibited by the Land Use Covenant was observed.

Waste Description: Physostigmine (Or) Pyrrolo[2,3-B]Indol-5-Ol, 1,2,3,3a,8,8a-Hexahydro-1,3a,8-Trimethyl-Methylcarbamate (Ester), (3as-Cis)-

Waste Code: U010
Waste Description: Azirino [2',3':3,4]Pyrrolo[1,2-A]Indole-4,7-Dione, 6-Amino-8-[[(Aminocarbonyl)Oxy]Methyl]-1,1a,2,8,8a,8b-Hexahydro-8a-Methoxy-5-Methyl-, [1as-(1aalpha, 8beta, 8aalpha, 8balpha)]- (Or) Mitomycin C

Waste Code: U015
Waste Description: Azaserine (Or) L-Serine, Diazoacetate (Ester)

Waste Code: U034
Waste Description: Acetaldehyde, Trichloro- (Or) Chloral

Waste Code: U035
Waste Description: Benzenebutanoic Acid, 4-[Bis(2-Chloroethyl)Amino]- (Or) Chlorambucil

Waste Code: U044
Waste Description: Chloroform (Or) Methane, Trichloro-

Waste Code: U057
Waste Description: Cyclohexanone (I)

Waste Code: U058
Waste Description: 2h-1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide

Waste Code: U059
Waste Description: 5,12-Naphthacenedione, 8-Acetyl-10-[(3-Amino-2,3,6-Trideoxy)-Alpha-L-Lyxo-Hexopyranosyl)Oxy]-7,8,9,10-Tetrahydro-6,8,11-Trihydroxy-1-Methoxy-, (8s-Cis)- (Or) Daunomycin

Waste Code: U075
Waste Description: Dichlorodifluoromethane (Or) Methane, Dichlorodifluoro-

Waste Code: U089
Waste Description: Diethylstilbesterol (Or) Phenol, 4,4'-(1,2-Diethyl-1,2-Ethenediyl)Bis, (E)-

COSTCO (Continued) **1004677951**

Waste Code: U121
Waste Description: Methane, Trichlorofluoro- (Or) Trichloromonofluoromethane

Waste Code: U122
Waste Description: Formaldehyde

Waste Code: U129
Waste Description: Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane

Waste Code: U132
Waste Description: Hexachlorophene (Or) Phenol, 2,2'-Methylenebis[3,4,6-Trichloro-

Waste Code: U150
Waste Description: L-Phenylalanine, 4-[Bis(2-Chloroethyl)Amino]- (Or) Melphalan

Waste Code: U151
Waste Description: Mercury

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U182
Waste Description: 1,3,5-Trioxane, 2,4,6-Trimethyl- (Or) Paraldehyde

Waste Code: U187
Waste Description: Acetamide, N-(4-Ethoxyphenyl)- (Or) Phenacetin

Waste Code: U188
Waste Description: Phenol

Waste Code: U200
Waste Description: Reserpine (Or) Yohimban-16-Carboxylic Acid, 11,17-Dimethoxy-18-[(3,4,5-Trimethoxybenzoyl)Oxy]-, Methyl Ester, (3beta, 16beta, 17alpha, 18beta, 20alpha)-

Waste Code: U201
Waste Description: 1,3-Benzenediol (Or) Resorcinol

Waste Code: U205
Waste Description: Selenium Sulfide (Or) Selenium Sulfide Ses2 (R,T)

Waste Code: U206
Waste Description: D-Glucose, 2-Deoxy-2-[[(Methylnitrosoamino)-Carbonyl]Amino]- (Or) Glucopyranose, 2-Deoxy-2-(3-Methyl-3-Nitrosoureido)-,D- (Or) Streptozotocin

Waste Code: U220
Waste Description: Benzene, Methyl- (Or) Toluene

Waste Code: U237
Waste Description: 2,4-(1h,3h)-Pyrimidinedione, 5-[Bis(2-Chloroethyl)Amino]- (Or) Uracil Mustard

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

COSTCO (Continued) **1004677951**

Waste Code: U240
Waste Description: 2,4-D, Salts & Esters (Or) Acetic Acid, (2,4-Dichlorophenoxy)-, Salts & Esters (Or) Dichlorophenoxyacetic Acid 2,4-D

Waste Code: U279
Waste Description: U279

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/25/2024

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/25/2024

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 09/25/2024

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/20/2024

Next Scheduled EDR Contact: 04/07/2025
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/16/2024

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

Next Scheduled EDR Contact: 04/14/2025
Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/05/2024
Date Data Arrived at EDR: 08/06/2024
Date Made Active in Reports: 10/25/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

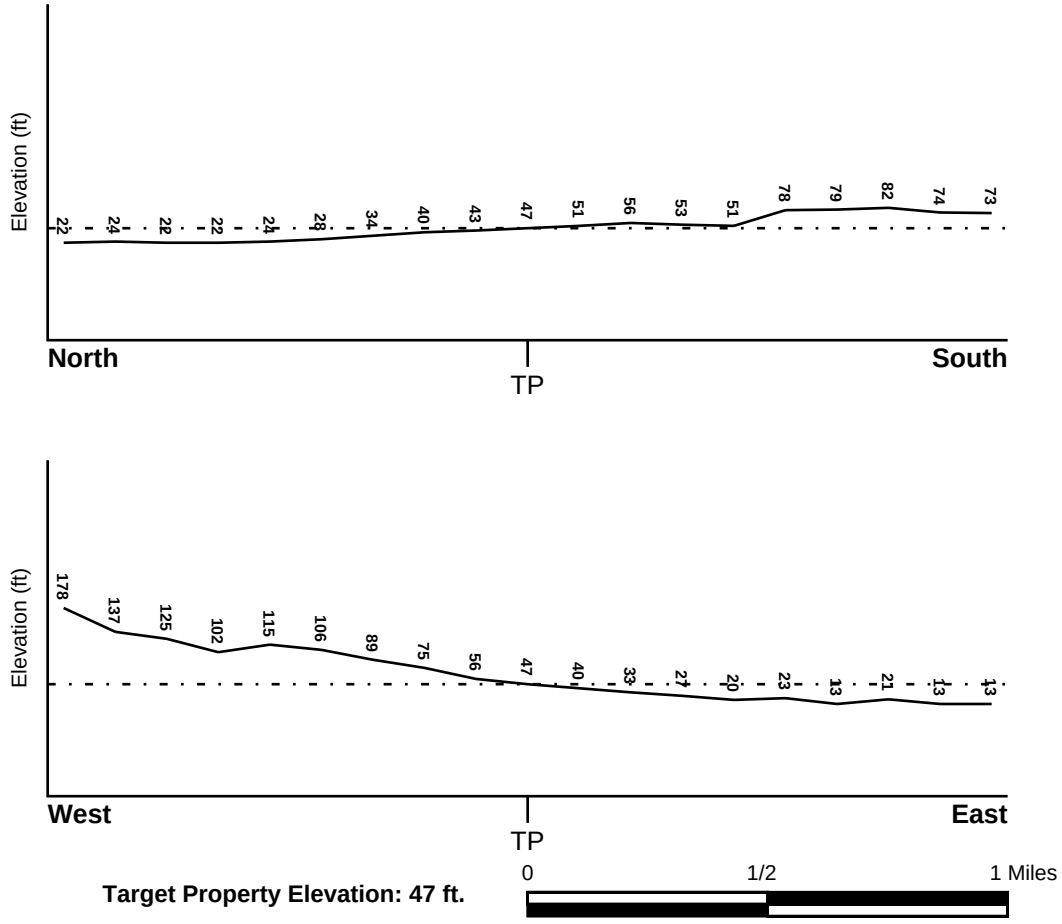
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 47 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06081C0043E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

SAN FRANCISCO SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

60G	1/2 - 1 Mile SSE	NNW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: Orthents

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	59 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 3

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

WELL SEARCH DISTANCE INFORMATION

DATABASE	SEARCH DISTANCE (miles)
Federal USGS	1.000
Federal FRDS PWS	Nearest PWS within 1.000 miles
State Database	1.000

FEDERAL USGS WELL INFORMATION

MAP ID	WELL ID	LOCATION FROM TP
No Wells Found		

FEDERAL FRDS PUBLIC WATER SUPPLY SYSTEM INFORMATION

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ramboll Americas Engineering Solutions, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Oakland, CA 94607
Contact: Jodi Vanneman

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll Americas Engineering Solutions, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll Americas Engineering Solutions, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll Americas Engineering Solutions, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll Americas Engineering Solutions, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

DISCLAIMER

This report has been prepared for the Sears Holdings Management Corporation with specific application to a Site Conceptual Model (SCM) for the Sears Automotive Service Center (Unit No. 1478) located at 1178 El Camino Real, San Bruno, California. This report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, either expressed or implied, is made as to the professional advice presented herein.

Changes in Site use and conditions may occur due to variations in rainfall, temperature, water usage, or other factors. Additional information, which was not available to the consultant at the time of this investigation, or changes, which may occur on the Site or in the surrounding area, may result in modification to the Site that would impact the summary presented herein. This report is not a legal opinion.

1 INTRODUCTION

SCS Engineers (SCS) was retained by the Sears Holdings Management Corporation (Sears) to complete a Site Conceptual Model (SCM) for the Sears Automotive Service Center (Unit No. 1478) (Sears Auto Center) located at 1178 El Camino Real, San Bruno, California (the "Site"). The SCM is a decision making tool where existing Site data and information are integrated and interpreted to increase our understanding of the nature and extent of contamination and its potential to impact public health and the environment.

The San Mateo County Health System, Ground Water Protection Program (San Mateo County GPP), is currently responsible for regulatory oversight of the Site (Case #880008). The Site is also located within the jurisdiction of the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) (Case #41-0476). This SCM was prepared in accordance with GPP guidelines.

2 SITE LOCATION AND DESCRIPTION

A Site Vicinity Map is provided as ***Figure 1*** and a Site Plan showing previous sampling locations and other Site features is provided as ***Figure 2***. The Site is located on the San Francisco Peninsula at an elevation of approximately 40 feet above mean sea level (MSL). Local topography slopes gently northeast toward the San Francisco Bay (***Figure 1***). The nearest surface water body is an unnamed tidal slough located approximately 250 feet north of Shaw Road, approximately 0.5 miles northeast from the Site, that drains to Colma Creek and the San Francisco Bay.

The Site consists of the Sears Auto Center and the associated parking lot and occupies San Mateo County Assessor's Parcel Number (APN) 014-316-330. The Site is surrounded by Sneath Lane and a shopping center to the North, residential and commercial properties to the East, the Shops at Tanforan to the south, and El Camino Real and commercial stores to the west. The Sears Auto Center is located in the northeast corner of the Tanforan Mall complex, situated between Sneath Lane to the north, Century Theaters to the south, and the San Bruno BART train station, entrance plaza, BART parking structure, and San Bruno Police Station to the east (***Figure 2***).

3 SITE HISTORY AND BACKGROUND

Records show that as early as 1925 the Site was the location of the Tanforan Horse Racing Track, which, in 1942, was used as a Relocation Center for Bay Area persons of Japanese ancestry. During the 1950s, the Site returned to use as a race track, which, maintained an "oil/gas corporation yard" near what is now the Sears Auto Center. Aerial photos show that in 1965 the Site was used as a golf course, which was located in the center of the track. The Tanforan shopping mall was constructed in 1969. The San Bruno BART station, BART parking structure, and San Bruno Police Station were constructed between 2000 and 2003 and the Century Theater/parking structure was built in 2006 and 2007.

4 SUMMARY OF PREVIOUS WORK

KNOWN SOURCE AREAS

Seven underground storage tanks (USTs) operated by Sears were formerly located at the Site: two 12,000-gallon gasoline USTs, two 6,000-gallon gasoline USTs, two 530-gallon bulk motor-oil USTs, and one 500-gallon used-oil UST (HLA, 1992). The four gasoline and two motor-oil USTs were reportedly removed in 1985 (Blaine Tech Services (BTS), 1985). The 500-gallon used-oil UST was reportedly removed in January 1987 (Combustion Engineering, 1987), however, its location was not reported.

Geophysical surveys have identified five subsurface anomalies (designated Anomalies A through E) within the boundaries of the Site, although distant to the location of the former USTs operated by Sears. Elevated levels of petroleum hydrocarbons have been detected near Anomalies D and E.

In February 2001, Sears received notification from a BART subcontractor, that a 100-gallon UST was uncovered at a depth of approximately 16 feet, near the southwest corner of the BART construction zone during excavation for the police station. According to this individual, the UST was old, had numerous rusted holes in the bottom, and the soil adjacent to it was "dark", with a "strong odor like gasoline or diesel". The UST was removed by a BART subcontractor. Field notes completed by BART's environmental consultant indicate that a sheen was present in groundwater in the vicinity of the UST (BART, 2010). The tank appeared to be located downgradient of MW-11 and cross-gradient of MW-4, in the vicinity of Anomaly E.

One additional potential off-Site source is the Shell service station (San Mateo County GPP Case # 880057) located on the southwest corner of Sneath Lane and El Camino Real, just over 1,000 feet west, southwest of the Sears Auto Center. The most recent *Groundwater Monitoring and Remediation Report-Third Quarter 2011* (Conestoga-Rovers & Associates 10/27/2011) was reviewed to evaluate the environmental significance of this site to the Sears Site. Significant fuel related hydrocarbon impacts to underlying soil and groundwater exist due to previous leaking USTs under the Shell station. A groundwater extraction and treatment system was reportedly operating from November 2005 to July 27, 2010. It is currently shut down pending the results of a rebound evaluation. Fourteen groundwater monitoring wells and two groundwater extraction wells are currently active. Six of the 14 monitoring wells are on the Shops at Tanforan property, but outside the Sear Auto Center Project boundary and lie between approximately 638 to 772 feet west, southwest of Sears monitoring well MW-10 (***Figures 3 and 9)***. The data from the Shell groundwater monitoring wells closest to MW-10 was reviewed and suggest the potential for groundwater impacts to the Sears Site from the Shell station appear unlikely. However, it should not be completely ruled out because according to Geotracker, *"The extent of MTBE in groundwater is slowly increasing in the most downgradient well. Therefore downgradient extent is not defined".*

PREVIOUS ENVIRONMENTAL INVESTIGATIONS

The nature and extent of petroleum constituents in soil and groundwater at the Site and its vicinity have been evaluated through a series of investigations dating to the UST removals in 1985. Initial investigative activities focused on potential subsurface impacts from the USTs operated by Sears. Later investigations were performed to evaluate the potential for environmental impacts in the BART construction area and in the vicinity of the San Bruno Police Station and Anomaly E. A summary of past Site sampling locations is provided below:

- Twenty-one groundwater monitoring wells (MW-1 through MW-21) installed on- and off-Site between 1992 and 2010;
- Three soil borings (B-1 through B-2) drilled in 1992 near the former gasoline and bulk motor-oil USTs;
- Seven cone penetration tests (CPTs) (ASC-2 through ASC-6; ASC-9; and ASC-10) advanced on-Site in 1996;
- Eight soil borings (SB-1 through SB-8) drilled on the BART property between 1997 and 1998;
- Fifty-eight direct-push sampling locations (GP-1 through GP-42; GP-44; GP-45; GP-47 through GP-51(2000); GP-51(2010) through GP-58; and GP-60) were advanced on- and off-Site between 1998 and 2010;
- Thirty-four utility trench locations (SS-01 through SS-03; SD-01 through SD-06; UT-01-01 through UT-01-04; UT-02-01 through UT-02-13; UT-03-01 through UT-03-06; UT-04-01; and UT-04-02) sampled in 1998 and 1999;
- Five soil vapor probes (SVP-13 through SVP-17) advanced near the San Bruno Police Station between 2004 and 2006;
- Fifteen indoor air samples collected from five locations in and around the San Bruno Police Station (IA-BNSW, IA-BSSW, IA-B109, IA-2ELEV, and IA-R1) between 2006 and 2009.

Tables 1 through 5 provide the following summaries of Site data:

- Table 1 - Summary of Soil Sample Analytical Results
- Table 2 - Summary of Groundwater Sample Analytical Results
- Table 3 - Summary of Groundwater Well Elevation Data
- Table 4 - Summary of Soil Vapor Sample Analytical Results
- Table 5 - Summary of Indoor Air Sample Analytical Results

A narrative of past Site investigations is provided below:

- Harding Lawson Associates (HLA) prepared an *Evaluation of Petroleum Hydrocarbons in Soil and Groundwater for Sears* (HLA 1992). The evaluation included review of information regarding the former USTs operated by Sears that were removed between 1985 and 1987. According to the HLA report, no reports describing soil conditions or soil sample analytical data associated with these UST removals or associated excavations were available. In March 1985 soil samples were reportedly collected by BTS during "soil aeration" activities on site, but no analytical data was identified;

  The HLA report also states that during the removal of this UST, two soil samples were collected at a depth of ten feet under the direction of the County, and low levels of petroleum hydrocarbons were detected in the samples, but no additional information was available. The location of the USTs described above as well as the associated excavation limits, dispenser islands, and HLA borings (B-1 through B-3) described below are shown on ***Figure 2***;

- In March 1992, HLA drilled three borings, B-1 through B-3, and installed three groundwater monitoring wells, MW-1 through MW-3, to evaluate subsurface conditions in the vicinity of the former gasoline and bulk motor oil UST areas. This was the first documented subsurface investigation for this project;

- Select soil and groundwater samples were collected and analyzed for total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and xylenes (BTEX), oil and grease, volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), total metals, and organic lead. TPH in the gasoline range (TPH-g) concentration in soil and groundwater were detected at maximum concentrations of 2,900 milligrams per kilograms (mg/kg) and 2,400 micrograms per liter (µg/L), respectively (Harding Lawson Associates, 1992). It should also be noted that groundwater monitoring wells MW-1 through MW-3, when first sampled, were evaluated for floating free product and no free product was observed (Harding Lawson Associates, 1992);

- In November through December 1994 the dispenser island canopy, dispenser islands, product lines, and vent lines were reportedly removed from the Site. The work was conducted by Fluor Daniel GTI and during these activities 27 confirmation soil samples were collected from 3 to 10 feet below the dispenser islands and product lines. Soil samples were analyzed for TPH was detected at a maximum concentration of 1,900 mg/kg (Fluor Daniel GTI, 1996);

- In November 1996, Fluor Daniel GTI performed seven CPTs, ASC-2 through ASC-6, ASC-9, and ASC-10 on-Site and installed three groundwater monitoring wells (MW-4, MW-5, and MW-6) near the former Sears UST area. Elevated hydrocarbon concentrations were detected indicating that the down-gradient extent of impacts to groundwater had not been defined (Fluor Daniel GTI, 1997);

- In August 1997 and February 1998, CH2M Hill/DMJM collected eight grab groundwater samples and one soil sample from eight soil borings (SB-1 through SB-8) drilled as part

of the BART/San Francisco International Airport (BART/SFO) expansion project. Petroleum related constituents were detected in seven of the grab groundwater samples (CH2M Hill/DMJM, 1998);

- In August and September 1998, Fluor Daniel GTI collected samples from nine direct-push locations (GP-1 through GP-9) completed primarily in the BART construction area; soil and grab groundwater samples were analyzed for TPHg and BTEX. Monitoring wells MW-7 and MW-8 were also installed north of the Sears Auto Center during this investigation. Petroleum related constituents were detected in four soil samples and seven grab groundwater samples collected during the investigation (Fluor Daniel GTI, 1998);

- In December 1998 and January 1999, IT Corporation (IT) collected 37 soil samples at various depths from utility trenches including the sanitary sewer, storm drain, telephone, water, electric, and gas tranches (SS-01 through SS-03, SD-01 through SD-06, and UT-01 through UT-04). The sampling occurred during BART construction activities. Six of the 37 samples collected contained petroleum related constituents (IT, 1999);

- In January 1999, IT collected soil and grab groundwater samples from 33 direct-push locations (GP-10 through GP-42). Petroleum related constituents were detected in soil samples collected from 23 of the locations and in 16 of the grab groundwater samples. Three additional monitoring wells, MW-9 through MW-11, were also installed (IT, 1999);

- In December 1999, IT performed CPTs at four locations, CPT-1 through CPT-4, and collected a groundwater sample from one Hydropunch® boring, HP-1. CPT was conducted to evaluate Site stratigraphy and potential vertical gradients. Three groundwater samples were collected at varying depths from the HP-1. Petroleum related constituents were detected in one of the groundwater samples collected from HP-1 at a depth of 30 feet below ground surface (bgs), (IT, 1999b);

- In April 2000, IT advanced seven direct-push sampling locations, GP-44, GP-45, and GP-47 through GP-51. Petroleum related constituents were detected in soil and groundwater at all seven locations (Burns & McDonnell, 2005);

- In September 2000, Gregg Drilling and Testing, Inc., under contract to IT, destroyed monitoring well MW-5 by pressure grouting. The well was destroyed due to its location within the BART construction zone. Field personnel have been unable to locate MW-8 since February 2000. In October 2002, Burns & McDonnell personnel used a global positioning system (GPS) unit to estimate the location of MW-8, and observed the area to be covered by a cinder-block wall constructed by BART (Burns & McDonnell, 2005);

- In May 2004, Burns & McDonnell conducted a Site investigation. Burns & McDonnell oversaw the installation of four one-inch diameter groundwater monitoring wells, MW-12 through MW-15, and two soil vapor points, SVP-13 and SVP-14. Monitoring well MW-13 and soil vapor point SVP-13 were installed in the vicinity of Anomaly E. Light non-aqueous phase liquid (LNAPL) and elevated concentrations of petroleum related

constituents were previously detected in the vicinity of Anomaly E (Burns & McDonnell, 2006). One groundwater monitoring well, MW-12, is in the general area of Anomaly D. One groundwater monitoring well, MW-15, located on East Huntington Avenue was installed to act as a piezometric point for evaluation of groundwater elevation (Burns & McDonnell, 2005);

- In May 2004, two groundwater monitoring wells, MW-3 and MW-4, were properly destroyed. Both wells were pressure grouted up to grade with cement. These wells were destroyed to accommodate the construction of a multi-story parking garage, planned for construction in that area (Burns & McDonnell, 2005);

- In November 2005, well MW-11 was properly destroyed after being damaged and covered up during the Tanforan Mall expansion. The well was grouted in place from the bottom of the casing to within 6 inches of the ground surface (Burns & McDonnell, 2006a);

- In January 2006, Burns & McDonnell directed the installation of three new soil vapor probes, SVP-15 through SVP-17, in the vicinity of the San Bruno Police Station, to evaluate potential concentrations in soil vapor adjacent to the building (Burns & McDonnell, 2006b);

- In October 2006, Burns & McDonnell directed excavation activities in the area designated as Anomaly E, in an attempt to locate and remove a suspected source of elevated concentrations of petroleum hydrocarbon constituents detected in nearby monitoring wells. The area was excavated to approximately 15 ft bgs, when possible, until groundwater was encountered. Soil samples were taken from the sidewalls and the stockpiles of excavated soil. Petroleum related constituents were not detected in soil samples collected from the excavation sidewalls. Analysis of the composite samples of the stockpiled soil indicated TPH-mo concentrations between 12 and 36 milligrams per

  kilogram (mg/kg). A total of 1,100 lbs of Calcium Peroxide was placed at the bottom of the excavation for in-situ treatment of hydrocarbon impacted soil and groundwater (Burns & McDonnell, 2006c).

  In response to the San Mateo County Health Services Agency (SMCHSA) letter, issued June 26, 2007, soil vapor sampling was discontinued, adjustments were made to the groundwater sampling schedule, and groundwater monitoring was changed from quarterly to semi-annual sampling (Burns & McDonnell, 2008);

- In January 2010, Burns & McDonnell directed the installation of six additional groundwater monitoring wells (MW-16 through MW-21). Three of the monitoring wells, MW-16, MW-18, and MW-20, were installed in the deeper groundwater zone. Nine direct push soil borings, GP-51(2010) through GP-58, and GP-60 were advanced and sampled in the vicinity of monitoring well MW-2 north of the former Sears USTs. Please note that two of the borings completed at the Site have been named GP-51. The boring GP-51(2010) completed during this investigation (the second boring named GP-51) is shown on the Site Plan with an asterisk and footnote explaining the nomenclature.

Petroleum related constituents were detected in all soil samples collected from the borings completed during this investigation. Additionally, the five soil vapor probes, SVP-13 through SVP-17, and groundwater monitoring wells MW-7 and MW-15 were properly destroyed during this phase of work (Burns & McDonnell, 2010).

5 GEOLOGY AND HYDROGEOLOGY

Burns & McDonald (2005) provided the following description of Site geology:

> "The Site is located on the eastern flatlands of San Francisco Peninsula bordering San Francisco Bay. The near-surface geology in the area of the Site has largely been controlled by the changing morphology of the Bay Area over recent geologic time. Bedrock in the area is comprised of Jurassic-Age Franciscan Assemblage, which may be observed in outcrops in the hills surrounding the area to the north, south, and west. Typically, the top of bedrock occurs at depths from about 500 feet to 600 feet bgs in this general area. Overlying the bedrock are the Merced and Colma formations, a series of Quaternary-Age alluvial and marine deposits (USGS, 1983).
>
> The Site is immediately underlain by both fine- and coarse-grained sediments. Gravelly and sandy fill is locally present just below asphalt to approximately three to five feet bgs. The fill is underlain by clay/silt to a depth of approximately 12 to 15 feet bgs. The clay/silt unit is underlain by a laterally continuous silty sand to sand, with local gravel lenses, from approximately 15 to at least 50 feet bgs".

Based on drilling observations, the first encountered water bearing zone beneath the Site occurs in this sand and appears to under confined to semi-confined conditions. For example, during the drilling of wells MW-19 and MW-21 first groundwater was logged at depths of 18 to 20 feet bgs, however, water levels have been measured in these wells at depths ranging from approximately 6 to 12 feet bgs. The Shallow Zone groundwater flow has historically been toward the northeast. Shallow groundwater gradients at the Site have varied between less than 0.01 feet/foot, often described as relatively flat, to 0.05 feet/foot. The Deep Zone groundwater generally flows in a north to north-northeasterly direction. Groundwater gradients in the Deep Zone at the Site have varied between 0.03 feet/foot to 0.04 feet/foot. A summary of groundwater elevation data for the Site is provided in ***Table 3***.

6 REGULATORY SCREENING LEVELS

Based on the Site location and setting, Environmental Screening Levels (ESLs) established by the SFBRWQCB for residential properties located above groundwater that is a potential source of drinking water are appropriate screening levels for soil, groundwater, and soil vapor at the Site. San Mateo County GPP requires use of residential use risk levels, even in commercial areas, because changes in land use may occur over time and without a deed restriction commercial properties can be redeveloped for residential use. Commercial ESLs are appropriate for indoor air at the San Bruno Police Station since existing use is essentially commercial and

indoor air detections are only appropriate for an existing building. Chemicals detected at concentrations below ESLs are generally assumed to not pose a significant threat to human health or the environment.

ESLs as are used as decision making guidance and do not have the effect of law or regulations. Appropriate ESLs for the Site are summarized below:

Shallow Soil (less than 10 feet bgs; Residential ESLs):

TPH-g = 83 mg/kg
Benzene = 0.044 mg/kg
Ethylbenzene = 2.3 mg/kg
Toluene = 2.9 mg/kg
Xylenes = 2.3 mg/kg

Deep Soil (greater than 10 feet bgs; Residential ESLs):

TPH-g = 83 mg/kg
Benzene = 0.044 mg/kg
Ethylbenzene = 3.3 mg/kg
Toluene = 2.9 mg/kg
Xylenes = 2.3 mg/kg

Groundwater:

TPH-g = 100 µg/L
Benzene = 1.0 µg/L
Ethylbenzene = 30 µg/L
Toluene = 40 µg/L
Xylenes = 20 µg/L

Soil Vapor (Residential ESLs):

TPH-g = 10,000 $\mu g/m^3$
Benzene = 84 $\mu g/m^3$
Ethylbenzene = 980 $\mu g/m^3$
Toluene = 63,000 $\mu g/m^3$
Xylenes = 21,000 $\mu g/m^3$

Indoor Air (Commercial ESLs):

TPH-g = 14 $\mu g/m^3$
Benzene = 0.14 $\mu g/m^3$
Ethylbenzene = 1.6 $\mu g/m^3$
Toluene = 88 $\mu g/m^3$
Xylenes = 29 $\mu g/m^3$

Analytical results from past Site investigations are summarized in ***Tables 1 through 5***.

7 EXTENT OF CONTAMINATION

Light Non-Aqueous Liquid (LNAPL)

Light non-aqueous phase liquid (LNAPL) was detected in grab groundwater samples collected from borings GP-20 and GP-49, in the vicinity of Anomaly E (Burns & McDonnell, 2006c). LNAPL has not been observed in any other grab groundwater samples collected, or in any samples collected from Site monitoring wells; however, concentrations of TPH-g in select grab groundwater samples, and in samples collected from monitoring wells MW-13 and MW-19, suggest that LNAPL may be present in some areas of the Site.

Unsaturated Zone

Depth to groundwater measurements collected from Site monitoring wells dating to 1992 indicate that groundwater is present at the Site in the Shallow Zone at depths ranging from approximately 13 to 30 feet bgs. The unsaturated zone is therefore assumed to range from 0 (ground surface) to 13 feet bgs. The lateral extent of contamination in the unsaturated zone is shown on ***Figures 5a and 6a***. A summary of soil sample analytical results for the Site is provided in ***Table 1***.

Saturated Zone

The saturated zone, or smear zone, at the Site is defined above as ranging between 13 to 30 feet bgs. The lateral extent of contamination in the saturated zone is shown on Figures 5b and 6b. As shown on these figures, the lateral extent of contamination has been generally defined (San Mateo County GPP, 2010). Only one soil sample collected at 30 feet bgs contained petroleum related constituents. The highest concentrations of petroleum related constituents have typically been observed at depths of 10 feet to 20 feet bgs. Only two soil samples have been collected at the Site at depths greater than 30 feet bgs, boring GP-45 at 35 feet and 40 feet bgs. Petroleum related constituents were not detected in either of these samples. A summary of soil sample analytical results for the Site is provided in ***Table 1***.

Groundwater

The lateral extent of TPH-g and benzene in groundwater are shown on ***Figures 8a and 8b***, respectively, for the Shallow Zone. As shown on these figures, the lateral extent of groundwater impacts in the Shallow Zone has been generally defined (San Mateo County GPP, 2010).

TPH-g and benzene have not been detected in Deep Zone wells MW-16, MW-18, and MW-20 during monitoring conducted in March and September 2011. Benzene was detected in well MW-18 in February 2010 at a concentration of 1.4 µg/L and TPH-g was detected in wells MW-18 and MW-20 at concentrations up to 959 µg/L. Additionally, TPH-d toluene, xylenes, and MTBE were variously detected in the Deep Zone wells prior during 2010. A summary of groundwater sample analytical results for the Site is provided in ***Table 2***.

Subsurface Vapor

Five soil vapor probes, SVP-13 through SVP-17, were installed at the Site and monitored between 2004 and 2007 before being decommissioned. The soil vapor probe locations are shown on Figure 2 and are all located within the vicinity of the San Bruno Police Station. The soil vapor probes were screened between 4.5 feet and 14 feet bgs. Petroleum related constituents were detected in soil vapor in all soil vapor probes at the Site. A summary of soil vapor analytical results for the Site is provided in ***Table 4***

Indoor Air

Three rounds of in indoor air sampling have been performed at the San Bruno Police Station since 2006. During each event samples were collected from the basement, second floor, and roof of the building. As shown on ***Table 5***, TPH-g and BTEX were variously detected in indoor and outdoor (roof) air during these sampling events. However, when outdoor background concentrations are subtracted from indoor concentrations only TPH-g, benzene, and ethylbenzene have been detected at concentrations exceeding commercial ESLs. Elevated detection limits for the background sample collected from the roof during the 2007 sampling event limit the usefulness of data from this sampling event.

8 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of past Site Investigations, SCS provides the following conclusions:

- There appear to be at least two separate source areas on-Site: 1) the former gasoline and bulk motor-oil USTs operated by Sears and 2) the Anomaly E/San Bruno Police Station Area, which is likely related to activities at the former Tanforan Race Track.

- The lateral and vertical extent of soil and groundwater impacts are generally well defined as shown on ***Figures 5 through 8***.

- Significant concentrations of TPH-g and BTEX are present in groundwater near Anomaly E and the San Bruno Police Station. In accordance with San Mateo Count GPP requests, SCS recommends completion of a feasibility study/pilot test work plan to remediate this area. This document is currently being prepared by SCS on behalf of Sears.

- Based on drilling observations, the first encountered water bearing zone beneath the Site occurs at a depth of approximately 18 to 20 feet bgs within a sandy zone and appears to be under confined to semi-confined conditions. As such, wells MW-19 and MW-21 appear to be screened adequately to collect representative Shallow Zone water samples. San Mateo County GPP had previously requested reinstallation of these wells, however reinstallation is not recommended by SCS.

- Current data suggests indoor air within the San Bruno Police Station may be impacted by vapor intrusion associated with the Anomaly E source area. However, as indicated above, there is a relatively limited indoor air data set and past indoor air analysis have not been definitive. Due to the importance of this issue, SCS recommends additional indoor air quality sampling/analysis within the San Bruno Police Station in accordance with the Workplan provided as ***Appendix B***. Concurrently, Sears has recently obtained as-built plans of the San Bruno Police Station from BART and is in the process of selecting an HVAC Contractor/Mechanical Engineer to design and implement HVAC upgrades to the police station to mitigate indoor air impacts, if warranted based on the proposed additional indoor air sampling/analysis.

Notes:

bgs = Below ground surface

J = Estimated concentration

MTBE = Methyl tert butyl ether

TPH-d = Total petroleum hydrocarbons as diesel fuel

TPH-g = Total petroleum hydrocarbons as gasoline

TPH-mo = Total petroleum hydrocarbons as motor oil

mg/kg = milligrams per kilogram

-- = Not Analyzed

U = Analyte not detected at specified laboratory reporting limit

Two on site soil sample locations named GP-51 exist on site. "*" or GP-51* designates the most recent GP-51 collected on 1/26/2010.

ESL = Environmental Screening Level - San Francisco Bay Regional Water Quality Control Board, Interim Final - November 2007, Revised May 2008 (Tables A-1 and C-1: Applies to residential property above groundwater that is a current or potential drinking water resource).

Notes:
D=Deep
S= Shallow
V=Vadose
ug/L= micrograms per liter
J = Estimated concentration
MTBE= Methyl tert butyl ether
TDS= Total dissolved solids
TPH-g = Total petroleum hydrocarbons as gasoline
TPH-d = Total petroleum hydrocarbons as diesel fuel
TPH-mo = Total petroleum hydrocarbons as motor oil
U= Analyte not detected above listed laboratory reporting limit
-- = Not Analyzed
NE = Not established
ESL = Environmental Screening Level - San Francisco Bay Regional Water Quality Control Board, Interim Final - November 2007, Revised May 2008 (Table F-1a: Applies to property above groundwater that is a current or potential drinking water resource).

Notes:

Corrected Value = Adjusted concentration of analyte at each sample location calculated by subtracting the corresponding background concentration from the indoor air sample result.

MTBE = Methyl tert-butyl ether by EPA Method TO-15

TPH-g = Total petroleum hydrocarbons as gasoline, analyzed by EPA Method TO-3 and/or Massachusetts APH Method (results presented are the adjusted Aphztics in the C5 to C12 range

U= Analyte not detected at specified laboratory reporting limit

ug/m^3 = micrograms per cubic meter

--- = Not Analyzed

NE = Not established

NC = Not calculated

ESL = Environmental Screening Level - San Francisco Bay Regional Water Quality Control Board, Interim Final - November 2007, Revised May 2008 (Table E - applies to indoor air on commercial property).

ATTN: Ms. Anne Jurek

RE: **2018 First Semi-Annual Groundwater Monitoring Report**
Sears Automotive Service Center (No. 1478)
1178 El Camino Real
San Bruno, California

Dear Ms. Jurek:

On behalf Sears Holdings Management Corporation (Sears), AECOM (formerly URS Corporation) has prepared this *2018 First Semi-Annual Groundwater Monitoring Report* for the Sears Automotive Service Center (No. 1478) located at 1178 El Camino Real in San Bruno, California. The activities presented in this report were conducted around Anomaly E located at the Bay Area Rapid Transit (BART) system/Police Station and next to the Sears Auto Center.

If you have any questions regarding this report, or need additional information concerning the subject site, please call us at (714) 567-2400.

Sincerely,
AECOM

Joseph R. Liles, PG, CHG
Principal Geologist

2018 First Semi-ANNUAL GROUNDWATER MONITORING REPORT

Sears Automotive Service Center (No. 1478)
1178 El Camino Real
San Bruno, California

May 21, 2018

This 2018 First Semi-Annual Groundwater Monitoring Report for the Sears Automotive Service Center (No. 1478) in San Bruno, California was prepared by AECOM (formerly URS Corporation) on behalf of the Sears Holdings Management Corporation in a manner consistent with the level of care and skill ordinarily exercised by professional engineers, geologists, and environmental scientists. This report was prepared under the technical direction of the undersigned.

AECOM

Joseph R. Liles, PG, CHG
Principal Geologist
California Professional Geologist No. 8297

1.0 INTRODUCTION

AECOM (formerly URS Corporation [URS]) was retained by the Sears Holdings Management Corporation, to conduct the 2018 First Semi-annual groundwater monitoring event at the Sears Automotive Service Center (No. 1478) located at 1178 El Camino Real in San Bruno, California (Site). A vicinity map showing the Site location is provided as **Figure 1**, and a detailed Site plan showing the site and well locations is provided as **Figure 2**.

The San Mateo County Health System, Ground Water Protection Program (San Mateo County GPP), is currently responsible for regulatory oversight of the environmental work conducted at this Site. The groundwater sampling was conducted to evaluate current groundwater conditions at the Site and in the vicinity of the Site. Specifically, the sampling assessed the groundwater condition which was historically impacted with total petroleum hydrocarbons (TPH) as gasoline (TPHg) and gasoline constituents' benzene, toluene, ethylbenzene, and xylenes (BTEX).

Groundwater monitoring has been conducted at the Site since April 1992 to assess the nature and extent of groundwater impacts. A dual-phase extraction pilot test was conducted in April 2015. Results of the dual-phase extraction (DPE) pilot study for the treatment of TPHg- and BTEX-impacted soil and groundwater were presented in the *2015 First Semi-Annual Groundwater Monitoring and Dual-Phase Extraction Pilot Test Report* dated June 19, 2015 (AECOM, 2015). Groundwater data from this September 2017 sampling event were compared to the appropriate State Water Resources Control Board's Low-Threat Underground Storage Tank Case Closure Policy (LTCP) screening results to evaluate the effectiveness of the DPE mass removal and determine the readiness of the Site for closure. Field activities for the 2018 First Semi-annual groundwater monitoring event included the following:

- Gauging of 12 monitoring wells on March 15, 2018,
- Sampling and analysis of 11 monitoring wells (MW-1, MW-2, MW-6, MW-9, MW-10, MW-12, MW-14, MW-19R, MW-21R, MW-22, and MW-23) on March 15, 2018.

2.0 SITE BACKGROUND

The Site is bounded by Sneath Lane and a shopping center to the north, residential and commercial properties to the east, the Shops at Tanforan to the south, and El Camino Real and commercial stores to the west. As shown on **Figure 2**, the Sears Auto Center is located in the northeast corner of the Tanforan Mall complex, situated between Sneath Lane to the north, Century Theaters to the south, and the San Bruno Bay Area Rapid Transit (BART) train station, entrance plaza, BART parking structure, and San Bruno Police Station to the east (SCS Engineers, 2013).

2.1 SITE HISTORY

Records show that as early as 1925, the Site was the location of the Tanforan Horse Racing Track which, in 1942, was used as a Relocation Center for Bay Area persons of Japanese ancestry. During the 1950s, the Site returned to use as a race track which maintained an "oil/gas corporation yard" near what is now the San Bruno Police Station. Aerial photos show that in 1965, the Site was the location of a golf course which occupied the central area of the track oval. The Tanforan shopping mall was constructed in 1969. The San Bruno BART station, BART parking structure, and San Bruno Police Station were constructed between 2000 and 2003, and the Century Theater/parking structure was built in 2006 and 2007 (SCS Engineers, 2013).

In February 2001, a BART subcontractor uncovered a 100-gallon underground storage tank (UST) at a depth of approximately 16 feet below ground surface (bgs) during excavation for the police station, near the southwest corner of the BART construction zone, over 300 feet from the former gasoline and oil UST areas associated with the Sears Auto Center. According to this subcontractor, the UST was old, had numerous rusted holes in the bottom, and the soil adjacent to it was "dark", with a "strong odor like gasoline or diesel." The UST was removed by a BART subcontractor. Field notes completed by BART's environmental consultant indicate that a sheen was present on the groundwater in the vicinity of the UST (BART, 2010). The tank appeared to be located near the southern corner of the San Bruno Police Station, which is the general area where the petroleum hydrocarbon mass associated with Anomaly E is located (**Figure 2**). The old 100-gallon UST was most likely associated with the former racetrack oil/gas yard.

2.2 GEOLOGY AND HYDROGEOLOGY

2.2.1 Regional Geology and Hydrogeology

The Site is located on the eastern flatlands of San Francisco Peninsula bordering San Francisco Bay at an elevation of approximately 40 feet above mean sea level (MSL). Local topography slopes gently northeast toward San Francisco Bay. The near-surface geology in the area of the Site has largely been controlled by the changing morphology of the Bay Area over recent geologic time. Bedrock in the area is comprised of Jurassic-Age Franciscan Assemblage, which may be observed in outcrops in the hills surrounding the area to the north, south, and west. Typically, the top of bedrock occurs at depths from about 500 feet to 600 feet bgs in this general area. Overlying the bedrock are the Merced and Colma Formations, a series of Quaternary-Age alluvial and marine deposits (U.S. Geological Survey [USGS], 1983 and Burns & McDonnell, 2005).

The nearest surface water body is an unnamed tidal slough located approximately 0.5 mile northeast of the Site, that drains to Colma Creek and then to the San Francisco Bay.

2.2.2 Site Geology and Hydrogeology

The Site is immediately underlain by both fine- and coarse-grained sediments. Gravelly and sandy fill is locally present just below asphalt to approximately 3 to 5 feet bgs. The fill is underlain by clay/silt to a depth of approximately 12 to 15 feet bgs. The clay/silt unit is underlain by a laterally continuous silty sand to sand, with local gravel lenses, from approximately 15 to at least 50 feet bgs (Burns & McDonnell, 2005).

Based on drilling observations, the first encountered water-bearing zone beneath the Site (Shallow Zone) occurs in the sand described above and appears to be under confined to semi-confined conditions. For example, during the drilling of Wells MW-19 and MW-21, first groundwater was logged at depths of 18 to 20 feet bgs, but rose to depths ranging from approximately 6 to 12 feet bgs in subsequent measurements after the wells were installed. The Shallow Zone groundwater flow direction has historically been toward the northeast. Shallow groundwater gradients at the Site have been relatively flat varying between less than 0.01 and 0.05 foot/foot (SCS Engineers, 2013). The Deep Zone groundwater generally flows in a north to north-northeasterly direction. Groundwater gradients in the Deep Zone at the Site have varied between 0.03 and 0.04 foot/foot (SCS Engineers, 2013).

2.3 PREVIOUS SITE ASSESSMENT INVESTIGATIONS

The nature and extent of petroleum constituents in soil and groundwater at the Site have been evaluated through a series of investigations starting with the UST removals at the nearby Sears Auto Center in 1985. Initial investigative activities focused on potential subsurface impacts from the USTs operated by Sears. Later investigations were performed to evaluate the potential for environmental impacts in the BART construction area and in the vicinity of the San Bruno Police Station around the general area where the 100-gallon UST was discovered at and near Anomaly E. Previous investigation activities included the following:

- Twenty-one groundwater monitoring wells (MW-1 through MW-21) installed on- and off-Site between 1992 and 2010;
- Three soil borings (B-1 through B-3) drilled in 1992 near the former gasoline and bulk motor-oil USTs;
- Six cone penetration tests (CPTs; ASC-2 through ASC-5, ASC-9, and ASC-10) advanced on-Site in 1996;
- Eight soil borings (SB-1 through SB-8) drilled on the BART property between 1997 and 1998;
- Fifty-eight direct-push sampling locations (GP-1 through GP-42, GP-44, GP-45, GP-47 through GP-58, and GP-60) were advanced on- and off-Site between 1998 and 2010;
- Thirty-four utility trench locations (SS-01 through SS-03; SD-01 through SD-06; UT-01-01 through UT-01-04; UT-02-01 through UT-02-13; UT-03-01 through UT-03-06; UT-04-01; and UT-04-02) were sampled in 1998 and 1999;
- Five soil vapor probes (SVP-13 through SVP-17) installed near the San Bruno Police Station between 2004 and 2006; and
- Forty-two indoor air samples collected from six locations in and around the San Bruno Police Station between 2006 and 2014.

- Four groundwater monitoring wells (MW-19R, MW-21R, MW-22, and MW-23) were installed in the vicinity of the San Bruno Police Station in 2015;
- Four soil vapor probes (SV-1 through SV-4) installed near the San Bruno Police in 2016; and
- Three dual-phase extraction wells (DPE-1, DPE-2, DPE-3) were installed within the Anomaly E area, in the vicinity of the San Bruno Police Station in 2017.

A detailed summary of past soil, soil vapor, and groundwater investigations is provided in the *Site Conceptual Model and Additional Screening Indoor Air Quality Monitoring Workplan* (SCS Engineers, 2011). The indoor air sampling is summarized in the *Additional Screening Indoor Air Quality Monitoring Summary Report* (URS, 2015).

2.4 NATURE AND EXTENT OF IMPACTED SOIL AND GROUNDWATER

Brief discussions of the nature and extent of impacts to soil and groundwater are provided below based on the summaries presented in the *Feasibility Study and Corrective Action Plan* (SCS Engineers, 2013). These summaries are based on historical data, which shows that natural attenuation of the petroleum hydrocarbons is most likely occurring.

2.4.1 Unsaturated Zone Soils

Depth to groundwater measurements collected from Site monitoring wells dating to 1992, indicate that groundwater is present at the Site in the Shallow Zone at depths ranging from approximately 6 to 30 feet bgs. The unsaturated or vadose zone is therefore assumed to extend from ground surface to 6 feet bgs.

2.4.2 Saturated Zone Soils

Based on the groundwater measurements indicated above, the saturated zone or smear zone at the Site might range between 6 to 30 feet bgs. However, the practical extent of the smear zone would actually occur between 10 and 20 feet bgs where the highest concentrations of petroleum-related constituents have typically been observed. Only one soil sample collected at 30 feet bgs contained detectable petroleum-related constituents, and the only two deeper soil samples collected at the Site (boring GP-45 at 35 and 40 feet bgs) contained no detectable petroleum hydrocarbons. The lateral extent of saturated zone impacts has been generally defined for the Site (San Mateo County GPP, 2010).

2.4.3 Light Non-Aqueous Phase Liquid (LNAPL)

Light non-aqueous phase liquid (LNAPL) was detected in groundwater grab samples collected from borings GP-20 and GP-49, in the vicinity of Anomaly E (Burns & McDonnell, 2006). Measurable LNAPL has not been observed in any other groundwater grab samples or in any samples collected from Site monitoring wells. However, the relatively high concentrations of TPHg in certain groundwater grab samples and in samples collected from monitoring Wells MW-13 (which had sheen in March 2018) suggest that sorbed petroleum hydrocarbon mass with the potential to form LNAPL may be present in Site soil in some areas around Anomaly E.

2.4.4 Groundwater

The lateral extent of groundwater impacts in the Shallow Zone has been generally defined for the Site (San Mateo County GPP, 2010).

TPHg, benzene, and other petroleum hydrocarbon related compounds were not detected in Deep Zone Wells MW-16, MW-18, and MW-20 during monitoring conducted in March and September 2011. Benzene was detected in Well MW-18 in February 2010 at a concentration of 1.4 micrograms

per liter (µg/L), and TPHg was detected in Wells MW-18 and MW-20 at concentrations up to 959 µg/L. Additionally, TPH as diesel (TPHd), toluene, xylenes, and methyl tert-butyl ether (MTBE) were variously detected in the Deep Zone wells during 2010. Based on the lack of detected concentrations and historically sporadic/limited detections, the lateral extent of groundwater impacts in the Deep Zone has also been generally defined for the Site. These three wells were destroyed as part of the DPE pilot test activities in April 2015.

2.4.5 Subsurface Vapor

Five soil vapor probes, SVP-13 through SVP-17, were installed at the Site and monitored between 2004 and 2007 before being decommissioned. The former soil vapor probe locations are shown on **Figure 2** and were all located within the vicinity of the San Bruno Police Station. Petroleum-related constituents were detected in soil vapor in all soil vapor probes at the Site.

2.4.6 Indoor Air

During the most recent round of sampling in October 2014, indoor air concentrations of petroleum-related constituents were generally low and below commercial/industrial screening levels, with the exception of benzene (URS, 2015). Estimated cancer risks associated with the detected benzene concentrations (including background) ranged from 1.1×10^{-6} to 2.3×10^{-6}. These estimated cancer risks are within the risk management range for commercial/industrial exposures. The highest concentration (just over twice the screening level) was detected in a sample from the south basement stair well, which is isolated and minimally occupied and appears to be somewhat atmospherically isolated from the rest of the Police Station by spring-actuated heavy metal doors. This slightly higher benzene result is consistent with the previous air sampling data for the south basement stair well.

3.0 HEALTH AND SAFETY

AECOM updated the Site-specific Health & Safety Plan (HSP) to address the following:

- Identify and describe potentially hazardous substances, which may be encountered during field operations;
- Specify protective equipment and clothing for onsite activities; and
- Outline measures to be implemented in the event of an emergency.

AECOM field personnel and AECOM subcontractors reviewed the HSP prior to commencing the field procedures. Field monitoring activities were recorded in the HSP, which is maintained in the project files at AECOM' Orange office. A copy of the HSP remained onsite during field operations.

4.0 SEMI-ANNUAL GROUNDWATER MONITORING

Field activities for the 2018 First Semi-annual groundwater monitoring were completed on March 15, 2018, and consisted of gauging of 12 groundwater monitoring wells and post-purge sample collection and analysis of 11 groundwater monitoring wells. A description of the monitoring methods is presented below.

4.1.1 Groundwater Gauging

Prior to purging and sampling, water levels were gauged to the nearest 0.01 foot using a Solinst electronic interface probe. The depth to water was measured relative to the surveyed top of well casing. Water level measurements for the 2018 First Semi-annual groundwater monitoring event were recorded on a gauging log and are provided in **Table 1**. One groundwater monitoring well (MW-13) had a detectable separate-phase product (sheen).

4.1.2 Purging and Sampling Methods

After gauging, the wells were purged and sampled using low-flow/low-stress procedures (U.S. Environmental Protection Agency [USEPA]/540/S-95/504, April 1996) with verbal approval from Jacob Madden of the San Mateo County Health System (SMCHS) on April 14, 2015. Low-flow purging was conducted to minimize the impact of the purging process on groundwater chemistry during sample collection, and to minimize the volume of water purged and disposed. Except for Wells MW-12 and MW-14, a Grundfos® submersible well pump was used to purge the remaining wells at rates of approximately 300 to 400 milliliters per minute (ml/min). Wells MW-12 and MW-14 were purged with a peristaltic pump (due to the wells being 1 inch in diameter).

Water quality indicator parameters were used to determine purging needs prior to sample collection in each well. The goal was to minimize drawdown where possible, with frequent monitoring of water quality parameters. Particular care was taken to insert the pump at the desired interval in the well screen with minimal disturbance to the water in the well casing. Water purged from each well was monitored for various field parameters including temperature, pH, turbidity, electrical conductivity, dissolved oxygen (DO), and oxidation reduction potential (ORP) using a YSI™ multi-parameter meter equipped with a flow-through cell. Purging continued until temperature, pH, and conductivity had stabilized. Measured field parameters are listed in **Table 1**. Copies of the groundwater purge logs are provided in **Appendix A**.

Groundwater samples were collected from 11 of the 12 monitoring wells for laboratory analysis. Groundwater samples from Wells MW-12 and MW-14 were collected with a disposable bailer following well purging. Groundwater samples from Wells MW-1, MW-2, MW-6, MW-9, MW-10, MW-19R, MW-21R, MW-22 and MW-23 were collected from the discharge tubing of the well pump following well purging. The submersible well pump was cleaned prior to use and between wells by washing in a solution of Liquinox, rinsing with tap water, final rinsing with deionized water, and air drying. New disposable, polyethylene discharge tubing was attached to the pump following each decontamination procedure and was changed between each well. Duplicate samples were collected from Wells MW-2 and MW-9, and labeled DUP-2 and DUP-1, respectively. One equipment blank, labeled EB-180315, was collected by pumping deionized water through the utilized pump and clean, disposable, polyethylene tubing into sample containers following decontamination procedures. A trip blank sample, labeled TB-180315, was prepared by the analytical laboratory and remained in the cooler during sample collection and transport. The trip blank was placed on hold pending the results of the field samples.

Sample containers and handling procedures conformed to the established protocols for each specific parameter as described in USEPA SW-846. The sample bottles, once filled and preserved as required, were labeled with the following: well identification number, sample number, date and time sampled, job number, Site/client name and location, and sampling personnel's initials. The sealed and labeled samples were placed in a cooler containing ice, and transported to Eurofins (Calscience) for analysis. The temperature of the cooler was recorded by the laboratory upon sample receipt and was within acceptable range. The chain-of-custody (COC) was maintained throughout the sampling program. A copy of the COC record is included in **Appendix B** with the groundwater sampling laboratory report.

4.1.3 Well Head Maintenance

As part of the semi-annual monitoring program, each well head is inspected to ensure that wells are properly sealed and secured. The routine well maintenance associated with the semi-annual groundwater sampling consists of the following: inspection of water-tight well caps and locks on all monitoring wells and replacement as necessary; replacement of missing or damaged bolts on well box covers; and removal and replacement of damaged well boxes and associated concrete aprons. Several tabs on the vault boxes for Wells (MW-6, and MW-12) were re-tapped and one bolt was replaced for Well MW-22. The remaining monitoring wells were observed to be in good condition during this event.

4.1.4 Laboratory Analysis Program

A total of 11 primary groundwater samples and two field duplicate groundwater samples were analyzed for the following:

- TPHg and TPH as motor oil (TPHmo) by USEPA Method 8015M
- BTEX and fuel oxygenates MTBE, di-isopropyl ether (DIPE), ethanol, ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), and tertiary butyl alcohol (TBA) by USEPA Method 8260B, and full list volatile organic compounds (VOCs).

The laboratory report is presented in **Appendix B** and the groundwater analytical results are summarized in **Table 2**.

4.2 LIMITED DATA VALIDATION

AECOM conducted a check of data completeness for the analytical laboratory results for the groundwater samples collected. Results of the data completeness check indicate that the data as qualified are considered to be useable for meeting project objectives. One sample (MW-19R) required dilution for the EPA 8260B analysis in order to quantitate detected target analytes. For these samples, there are also non-detect results with elevated reporting limits. The data user must evaluate the utility of non-detect results with elevated reporting limits.

Copies of AECOM's data validation memoranda are included as **Appendix C**.

5.0 GROUNDWATER SAMPLING RESULTS

5.1 GROUNDWATER MONITORING RESULTS

5.1.1 Groundwater Elevation and Contours

Groundwater gauging data for the current semi-annual event are summarized in Table 1, and historical groundwater gauging data are included in **Appendix D, Table D-1**.

Measured depths to water in the 12 wells gauged (screened between approximately 5 and 30 feet bgs in the Shallow Zone) ranged from 6.05 (MW-21R) to 15.93 (MW-10) feet below top of casing (btoc). Groundwater elevations in this shallow zone ranged from 29.18 (MW-19R) to 30.89 (MW-10) feet above mean sea level (msl). Groundwater elevations increased an average of 0.34 feet between the 2017 second semi-annual groundwater monitoring event and the 2018 First Semi-annual groundwater monitoring event.

The groundwater elevations for each well are presented on **Figure 3**. As noted on the figure, the groundwater table for the Shallow Zone is very flat; thus, groundwater elevation contours were not generated, and a gradient was not calculated.

5.1.2 Groundwater Analytical Results

Chemical analytical results for this reporting period are presented in **Table 2**. Historical analytical results are included in **Appendix D, Table D-2**. A copy of the laboratory report is provided as **Appendix B**.

In summary, TPHg and/or BTEX were detected above laboratory reporting limits in 7 of the 12 groundwater monitoring wells sampled. Wells MW-1, MW-9, MW-10, MW-21R located south, north, and south respectively, of the Sears Auto Center, and Well MW-21R located north of the Police Station were non-detect for all constituents. TPHmo, Ethanol, MTBE, ETBE, DIPE, and TAME were not detected in any of the wells. TBA was detected in well MW-2. Additional VOCs detected this event include: n- butylbenzene, sec-butylbenzene, tert-butylbenzene, isopropylbenzene, n-propylbenzene, naphthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene.

The following is a summary of the detected compounds:

Detected Compound	Number of Detections	Minimum Detection (µg/L)	Maximum Detection (µg/L)	Well with Maximum Concentration
TPHg	7	170	13,000	MW-19R
Benzene	4	2.1	1,700	MW-22
Toluene	3	47	1,600	MW-19R
Ethylbenzene	4	1.4	3,900	MW-19R
Xylenes	4	1.5	12,600	MW-19R
TBA	1	18	18	MW-2
n-butylbenzene	4	11	30	MW-19R
Sec-butylbenzene	3	2.2	8.1	MW-2
Tert-butylbenzene	5	4.0	26	MW-2
Isopropylbenzene	5	4.9	120	MW-19R
n-propylbenzene	5	2.9	280	MW-19R
Naphthalene	3	56	390	MW-19R
1,2,4-trimethylbenzene	3	24	1,900	MW-19R

Detected Compound	Number of Detections	Minimum Detection (µg/L)	Maximum Detection (µg/L)	Well with Maximum Concentration
1,3,5-trimethylbenzene	2	260	460	MW-19R

µg/L – micrograms per liter

Based on results of the analyses, isoconcentration contour maps for dissolved-phase TPHg and benzene in groundwater are provided as **Figures 4** and **5**, respectively. As indicated on the figures, the highest concentrations are centered around Wells MW-13, MW-19R, MW-22, and MW-23, the area of the DPE pilot test (AECOM, 2015). This is near Anomaly E and the Police Station in the general location of the former UST that appeared to be associated with the former racetrack. The benzene plume (greater than 10 µg/L) appears to be limited to an area roughly 250 feet in length (**Figure 5**). The smaller area of impact (maximum benzene concentration of 17 µg/L) detected during the second semi-annual 2017 event is no longer present at Well MW-2 in the vicinity of the former oil tanks for the Sears Auto Center.

A dual-phase extraction pilot test was conducted in the area of Anomaly E in April 2015. The results from this test show a relatively low benzene mass removal rate (i.e., one pound removed at a rate of 0.2 lb/day), a declining removal rate from the peak at the start of the test to the end (i.e., 37% lower), up to 50% reduction in benzene concentrations in soil vapor, and up to 75% reduction in benzene concentrations in the area with the highest benzene concentrations in groundwater. These reductions indicate that additional direct benzene mass removal would likely have limited effect on Site conditions. To assess whether conditions would change (i.e. rebound) after the DPE event, AECOM recommended one additional round of groundwater monitoring be conducted in September 2015 to evaluate the potential post-DPE rebound in current Site conditions and to determine the need for future remediation (i.e., another round of DPE), if any. In their letter dated August 20, 2015, GPP concurred with the recommendation to collect post-DPE groundwater samples to evaluate dissolved-phase concentrations in the suspected source area.

Groundwater data from the April and September 2015 through March 2018 sampling events in the plume area around MW-19R are summarized below.

Groundwater Monitoring Well ID	April 2015 Benzene (µg/L)	Sept. 2015 Benzene (µg/L)	March 2016 Benzene (µg/L)	Sept. 2016 Benzene (µg/L)	March 2017 Benzene (µg/L)	Sept. 2017 Benzene (µg/L)	March 2018 Benzene (µg/L)	Reduction/Increase in Benzene Concentration since April 2015
MW-13[(1)]	9,000	--	--	--	--	4,300	--	
MW-19R	4,050	3,740	5,520	2,760	1,900	1,900	1,600	**Decrease** 60.5%
MW-22	1,790	975	758	2,160	820	1,900	1,700	**Decrease** 5.0%
MW-23	616	157	484	756	1,100	960	520	**Decrease** 15.6%
LTCP Scenario 2								3000 ug/L

(1) Well not sampled due to the presents of a sheen

Groundwater data from the March 2018 sampling event were compared to the appropriate State Water Resources Control Board's Low-Threat Underground Storage Tank Case Closure Policy (LTCP) screening results to evaluate the effectiveness of the DPE mass removal and determine the readiness of the Site for closure. The benzene concentrations in Well MW-23 have decreased from the previous sampling event from 960 µg/L to 520 µg/L; Well MW-22 decreased from 1,900 to 1,700 µg/L which is below the 3,000 µg/L criteria for benzene; Well MW-19R demonstrated a decrease in benzene and continues to be below the LTCP criteria (Groundwater-Specific Criteria

Scenario 2) at 1,600 µg/L. LNAPL sheen was detected in Well MW-13, therefore benzene concentration likely exceed the LTCP criteria (Groundwater-Specific Criteria Scenario 2). Therefore, the Site does not currently meet the characteristics of LTCP groundwater-specific criteria Scenarios. Based on the results from Well MW-19R, MW-22, and MW-23, it appears that benzene concentrations may be stabilizing. Therefore, AECOM is currently working with Sears for additional remedial activities to obtain Low-Treat Closure.

6.0 WASTE MANAGEMENT

Liquid wastes (decontamination water and well purge water) were collected and stored in 55-gallon U.S. Department of Transportation (DOT)-approved drums. AECOM generated one drum during the 2018 First Semi-annual groundwater monitoring event. The drum was labeled to identify the source of the waste. The drum was picked up from the site and properly disposed of by a licensed waste transporter.

7.0 DISCUSSION

Based on the results of the groundwater monitoring event conducted in March 2018, AECOM concludes the following for the Sears Automotive Service Center (No. 1478) located at 1178 El Camino Real in San Bruno, California:

- Groundwater elevations in the Shallow Zone ranged from 29.18 (MW-19R) to 30.83 (MW-10) feet msl in March 2018. The groundwater elevations increased by an average of 0.34 feet from the last monitoring event in September 2017. The Shallow Zone groundwater table across the Site is very flat; thus, groundwater elevation contours were not generated and a gradient was not calculated.
- During the March 2018 monitoring event, the highest concentrations of TPHg (maximum of 13,000 µg/L in Well MW-19R) and benzene (maximum of 1,700 µg/L in Well MW-22) in the Shallow Zone are centered around Wells MW-13, MW-19R, MW-22, and MW-23, near Anomaly E and the Police Station. The historically highest TPHg concentration in Well MW-19R (70,000 µg/L) during the September 2016 monitoring event was higher than that detected during the previous sampling events and greater than five times the current sampling event. The TPHg concentrations for Wells MW-22 and MW-23 during this event were less than the September 2017 event. These subsurface impacts do not originate from the former USTs associated with the Sears Auto Center, but with a former UST associated with the former racetrack.
- MTBE was not detected above the laboratory reporting limits in the 11 groundwater monitoring wells sampled.
- The benzene plume near the Police Station is roughly 250 feet in length, with a maximum concentration of 1,700 µg/L in Well MW-22 and trace LNAPL in Well MW-13.

A dual-phase extraction pilot test was conducted in April 2015. AECOM recommended one additional round of groundwater monitoring to evaluate the potential post-DPE rebound in current Site conditions. In addition, AECOM recommended another round of DPE to further remediate the area around Anomaly E, but are currently waiting for financial commitment from BART prior to conducting the DPE activities. Groundwater data from this March 2018 sampling event were compared to the appropriate State Water Resources Control Board's LTCP screening results to evaluate the effectiveness of the DPE mass removal and determine the readiness of the Site for closure. The Site does not currently meet the characteristics of the LTCP groundwater-specific criteria scenarios, due to LNAPL in Well MW-13 in which benzene results likely exceed 3,000 µg/L in Wells MW-13 (4,300 µg/L). AECOM recommended another round of DPE to further remediate the area around Anomaly E to meet or exceed the LTCP groundwater-specific criteria Scenario number 2, but are currently waiting for financial commitment from BART prior to conducting the DPE activities.

8.0 SCHEDULE

The anticipated schedule for work to be conducted during the second quarter of 2018 is as follows:

- Implement the Corrective Action Plan during the Fall of 2018 (Pending financial commitment from BART)
- Conduct the second semi-annual groundwater monitoring of 12 groundwater wells in September 2018.

The RWQCB will be notified of upcoming field activities.

-o0o-

Notes/Explanations:
1. "Post-purge" sample
2. Purged and sampled with disposable bailer
3. Well not sampled due to presence of sheen or free product

Groundwater Elevation = Top of casing elevation - (Depth to Water - (0.8 * Standing Product Thickness))
ft - feet
btoc - below top of casing
MSL - mean sea level
bgs - below ground surface

^{o}F - degrees Fahrenheit
^{o}C - degrees Celsius
µS/cm - microSiemens per centimeter
DO - dissolved oxygen
mg/L - milligrams per liter
ORP - oxidation reduction potential
mV - millivolts
NTU - nephelometric turbidity unit

Re: Corrective Plan Implementation Report
Sears Automotive Service Center (No. 1478)
Separate Source of Hydrocarbons in the Vicinity of the San Bruno Police Station
1178 El Camino Real, San Bruno, California
SMCo Site #880008

Dear Mr. Gwinn:

AECOM is submitting the enclosed Corrective Action Plan Implementation Report for the Sears Automotive Service Center (No. 1478) located at 1178 El Camino Real, San Bruno, California. This report summarizes remediation activities for a separate source of hydrocarbons in the vicinity of the San Bruno Police Station and includes the results of groundwater sampling post remediation activities.

If you have any questions or comments, please feel free to contact Dennis Callahan at (714) 567-2724.

Sincerely,
AECOM

Dennis Callahan, PE
Project Engineer

Corrective Action Plan Implementation Report

Sears Automotive Service Center (No. 1478)
1178 El Camino Real
San Bruno, California

This Corrective Action Plan (CAP) Implementation Report for the Sears Automotive Service Center (No. 1478) in San Bruno, California was prepared by AECOM (formerly URS Corporation) on behalf of the Bay Area Rapid Transit (BART) in a manner consistent with the level of care and skill ordinarily exercised by professional engineers, geologists, and environmental scientists. This report was prepared under the technical direction of the undersigned.

1.0 INTRODUCTION

On behalf of the Bay Area Rapid Transit (BART), AECOM prepared this *Corrective Action Plan (CAP) Implementation Report* for the Sears Automotive Service Center (No. 1478) located at 1178 El Camino Real in San Bruno, California (Site, **Figure 1**). This report summarizes the dual-phase extraction (DPE) activities conducted at the Sears Automotive Service Center (No. 1478), adjacent to the San Bruno Police Station and Bay Area Rapid Transit (BART) Station (San Mateo County Assessor's Parcel Number [APN] 014-316-330). The remediation activities were conducted in the general area around Anomaly E, where elevated concentrations of petroleum hydrocarbon mass have been detected. A Site plan showing the area is provided as **Figure 2**.

Work activities were completed per AECOM's *Corrective Action Plan* (CAP) dated June 22, 2017 (AECOM, 2017a) and Memorandum to Jacob Madden, San Mateo County Groundwater Protection Program (GPP) dated August 17, 2017 (AECOM, 2017b, **Appendix A**). As proposed in the CAP, a 30-day DPE event was selected as the remedial approach to best achieve the remedial action objectives (ROA) and cleanup criteria per California State Water Resources Control Board (SWRCB) Low-Threat Underground Storage Tank Case Closure Policy (LTCP).

The remediation objectives outlined in the CAP for the Anomaly E area are as follows:

- Remove residual petroleum hydrocarbons in the subsurface soil to the maximum extent practical;
- Remove residual LNAPL in the subsurface soil to the maximum extent practical and
- Reduce dissolved benzene concentrations in onsite source area monitoring wells to achieve low-threat closure criteria (< 1,000 ug/L).

In addition to DPE activities summarized herein, this report also summarizes the results of post remediation groundwater sampling conducted from groundwater monitoring wells within the area. The results of the groundwater sampling showed the remediation of the area was successful in achieving remediation objectives.

2.0 SITE BACKGROUND

A comprehensive summary of the site history, previous investigations and the nature and extent of petroleum hydrocarbons was presented in the CAP (AECOM, 2017a). The Site is bounded by Sneath Lane and a shopping center to the north, residential and commercial properties to the east, the Shops at Tanforan to the south, and El Camino Real and commercial stores to the west. As shown on Figure 2, the Sears Auto Center is located in the northeast corner of the Tanforan Mall complex, situated between Sneath Lane to the north, Century Theaters to the south, and the San Bruno BART train station, entrance plaza, BART parking structure, and San Bruno Police Station to the east.

2.1 SITE HISTORY

Records show that as early as 1925, the Site was the location of the Tanforan Horse Racing Track which, in 1942, was used as a Relocation Center for Bay Area persons of Japanese ancestry. During the 1950s, the Site returned to use as a race track which maintained an "oil/gas corporation yard" near what is now the San Bruno Police Station. Aerial photos show that in 1965, the Site was the location of a golf course which occupied the central area of the track oval. The Tanforan shopping mall was constructed in 1969. The San Bruno BART station, BART parking structure, and San Bruno Police Station were constructed between 2000 and 2003, and the Century Theater/parking structure was built in 2006 and 2007 (SCS Engineers, 2013).

In February 2001, a BART subcontractor uncovered a 100-gallon underground storage tank (UST) at a depth of approximately 16 feet below ground surface (bgs) during excavation for the police station, near the southwest corner of the BART construction zone, over 300 feet from the former gasoline and oil UST areas associated with the Sears Auto Center. According to this subcontractor, the UST was old, had numerous rusted holes in the bottom, and the soil adjacent to it was "dark", with a "strong odor like gasoline or diesel." The UST was removed by a BART subcontractor. Field notes completed by BART's environmental consultant indicate that a sheen was present on the groundwater in the vicinity of the UST (BART, 2010). The tank appeared to be located near the southern corner of the San Bruno Police Station, which is the general area where the petroleum hydrocarbon mass associated with Anomaly E is located. The old 100-gallon UST was most likely associated with the former racetrack oil/gas yard.

2.2 GEOLOGY AND HYDROGEOLOGY

2.2.1 Regional Geology and Hydrogeology

The Site is located on the eastern flatlands of San Francisco Peninsula bordering San Francisco Bay at an elevation of approximately 40 feet above mean sea level (MSL). Local topography slopes gently northeast toward San Francisco Bay. The near-surface geology in the area of the Site has largely been controlled by the changing morphology of the Bay Area over recent geologic time. Bedrock in the area is comprised of Jurassic-Age Franciscan Assemblage, which may be observed in outcrops in the hills surrounding the area to the north, south, and west. Typically, the top of bedrock occurs at depths from about 500 feet to 600 feet bgs in this general area. Overlying the bedrock are the Merced and Colma Formations, a series of Quaternary-Age alluvial and marine deposits (U.S. Geological Survey [USGS], 1983 and Burns & McDonnell, 2005).

The nearest surface water body is an unnamed tidal slough located approximately 0.5 miles northeast of the Site, that drains to Colma Creek and then to the San Francisco Bay.

2.2.2 Site Geology and Hydrogeology

The Site is immediately underlain by both fine- and coarse-grained sediments. Gravelly and sandy fill is locally present just below asphalt to approximately 3 to 5 feet bgs. The fill is underlain by clay/silt to a depth of approximately 12 to 15 feet bgs. The clay/silt unit is underlain by a laterally continuous silty sand to sand, with local gravel lenses, from approximately 15 to at least 50 feet bgs (Burns & McDonnell, 2005).

Based on drilling observations, the first encountered water-bearing zone beneath the Site (Shallow Zone) occurs in the sand described above and appears to be under confined to semi-confined conditions. For example, during the drilling of Wells MW-19 and MW-21, first groundwater was logged at depths of 18 to 20 feet bgs but rose to depths ranging from approximately 6 to 12 feet bgs in subsequent measurements after the wells were installed. The Shallow Zone groundwater flow direction has historically been toward the northeast. Shallow groundwater gradients at the Site have been relatively flat varying between less than 0.01 and 0.05 foot/foot (SCS Engineers, 2013). The Deep Zone groundwater generally flows in a north to north-northeasterly direction. Groundwater gradients in the Deep Zone at the Site have varied between 0.03 and 0.04 foot/foot (SCS Engineers, 2013).

2.2.3 Groundwater Supply Wells

Per the California Regional Water Quality Control Board, San Francisco Bay Region's (SFBRWQCB) *Water Quality Control Plan* (SFBRWQCB, 2015), existing and potential beneficial uses for groundwater in the Site vicinity include municipal, industrial, and agricultural. As discussed in AECOM's CAP (AECOM, 2017a), no water supply wells are located within 1,000 feet of the Site. The nearest well is located roughly 1,800 south of the Site and is reported to be a monitoring well for the City of San Bruno.

2.3 PREVIOUS INVESTIGATIONS

The nature and extent of petroleum constituents in soil and groundwater at the Site have been evaluated through a series of investigations starting with the UST removals at the nearby Sears Auto Center in 1985. Initial investigative activities focused on potential subsurface impacts from the USTs operated by Sears. Later investigations and a DPE pilot test were performed in the vicinity of the San Bruno Police Station around the general area where the 100-gallon UST was discovered at the location of Anomaly E (Figure 2). A detailed summary of previous investigations and AECOM's 2015 DPE pilot study are detailed in the CAP (AECOM, 2017a).

In preparation of this DPE event, extraction wells DPE-1, DPE-2, and DPE-3 were installed during October 2017 to provide additional wells to remove the hydrocarbon source within the Anomaly E area (AECOM, 2017c).

3.0 DUEL PHASE EXTRACTION

3.1 DPE ACTIVITIES

DPE activities were planned based on the results of the 2015 DPE Pilot Test described in the CAP (AECOM, 2017a). DPE operation at the Site were conducted from August 22, 2019 to September 24, 2019 using wells MW-19R, MW-22, MW-23, DPE-1, DPE-2, and DPE-3 for extraction (**Figure 2**).

Equipment for the DPE event consisted of a truck-mounted, low-noise, high-vacuum liquid ring pump system supplied by CalClean, Inc. based in Tustin, California. This technology allows for the simultaneous extraction of volatile organic compounds (VOCs) from the vadose zone, capillary fringe, and saturated soil zone. During operation, extracted vapor and groundwater are separated in a high-vacuum-rated knockout tank. Extracted soil vapor was treated using a thermal oxidizer and discharged to the atmosphere in accordance with the Bay Area Air Quality Management District (BAAQMD) Permit to Operate (Plant No. 12568). Extracted groundwater was treated by a series of two 500-pound (lb) liquid-phase granular activated carbon (GAC) adsorbers and discharged to the sanitary sewer system per the Cities of South San Francisco-San Bruno General/Groundwater Discharge Permit Number GW-19-P-09. Copies of the air and wastewater permits are included in **Appendix B**.

Other equipment included a handheld manometer or magnehelic gauges for measuring residual vacuum at various observation wells, a water level meter (or interface probe) for measuring groundwater drawdown at the extraction and observation wells, and an organic vapor analyzer (OVA) for measuring hydrocarbon concentrations in extracted vapor.

During DPE operation, daily site visits were conducted to monitor and record system data and to collect vapor samples for laboratory analyses. Data recorded include:

- Hours system operated;
- System flow rate;
- Temperature;
- Volatile organic compounds (VOCs) vapor concentrations measured with a photoionization detector (PID) for total system influent and individual extraction wells;
- Vacuum readings (system, DPE, well casing, and extraction hose); and
- Total volume of extracted groundwater.

The vapor samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) by EPA Method TO-3(M), VOCs by EPA Method TO-15(M) and fixed gases including oxygen, carbon dioxide, and methane by ASTM D1946.

Prior to initiating the discharge to the sewer system, one water sample, Discharge-1, was collected from the groundwater treatment system after the GAC adsorbers and analyzed for constituents listed on the General/Groundwater Discharge Permit Number GW-19-P-09.

Laboratory and DPE data for the event are summarized in **Table 1** and **Table 2**, respectively. Petroleum hydrocarbon and benzene mass removal calculations are summarized in **Table 3**. DPE field data sheets are included as **Appendix C**. Copies of the laboratory reports and chain-of-custody records are included as **Appendix D**. The results of the DPE event are summarized below:

- Vapor concentrations ranged from 220 to 1,300 parts per million (ppmv) TPHg and 1.3 to 5.3 ppmv benzene in total system influent samples.
- The average system influent vapor TPHg concentration was 742 ppmv.
- The average system influent vapor benzene concentration was 3.2 ppmv.
- Approximately 140,570 gallons of water were removed during the event (approximately 3.6 gallons per minute [gpm]). The water was temporarily stored in a poly tank before onsite treatment and discharge per the treated water discharge permit.
- The average system flow rate averaged 105 standard cubic feet per minute (scfm).
- The applied system vacuum averaged approximately 13.5 inches of mercury (inHg).
- The average inlet VOC concentration measured in the field was 962 ppmv.
- VOC mass removal rates measured in the field averaged 1.4 lbs/hr or 33 lbs/day.
- Field data calculations estimated a total VOC mass removal of 878.5 lbs.
- Laboratory results indicate that 950.3 lbs of TPHg and 3.3 lbs of benzene were removed via vapor extraction during the event.

Figure 3 shows concentrations and cumulative VOC mass removed, **Figure 4** shows individual well VOC concentrations, and **Figure 5** shows depth to water measurements for the duration of the DPE event.

4.0 POST REMEDIATION GROUNDWATER SAMPLING

Following the DPE activities, groundwater samples were collected from wells MW-19R, MW-22, and MW-23 on December 6, 2019. These groundwater monitoring wells are located within the targeted remediation area. A description of the monitoring methods is presented below.

4.1.1 Groundwater Gauging

Prior to purging and sampling, water levels were gauged to the nearest 0.01 foot using a Solinst electronic interface probe. The depth to water was measured relative to the surveyed top of well casing. Water level measurements were recorded on a gauging log.

4.1.2 Purging and Sampling Methods

After gauging, the wells were purged and sampled using low-flow/low-stress procedures (U.S. Environmental Protection Agency [USEPA]/540/S-95/504, April 1996). Low-flow purging was conducted to minimize the impact of the purging process on groundwater chemistry during sample collection, and to minimize the volume of water purged and disposed.

Water quality indicator parameters were used to determine purging needs prior to sample collection in each well. The goal was to minimize drawdown where possible, with frequent monitoring of water quality parameters. Water purged from each well was monitored for various field parameters including temperature, pH, turbidity, electrical conductivity, dissolved oxygen (DO), and oxidation reduction potential (ORP) using a YSI™ multi-parameter meter equipped with a flow-through cell. Purging continued until temperature, pH, and conductivity had stabilized. Copies of the groundwater sample logs are provided in **Appendix E**.

Groundwater samples were collected from the discharge tubing of the well pump following well purging. The submersible well pump was cleaned prior to use and between wells by washing in a solution of Liquinox, rinsing with tap water, final rinsing with deionized water, and air drying. New disposable, polyethylene discharge tubing was attached to the pump following each decontamination procedure and was changed between each well. A duplicate sample was collected labeled DUP-1. One equipment blank, labeled EB-191206, was collected by pumping deionized water through the utilized pump and clean, disposable, polyethylene tubing into sample containers following decontamination procedures. A trip blank sample, labeled TB-191206, was prepared by the analytical laboratory and remained in the cooler during sample collection and transport. The trip blank was placed on hold pending the results of the field samples.

Sample containers and handling procedures conformed to the established protocols for each specific parameter as described in USEPA SW-846. The sample bottles, once filled and preserved as required, were labeled with the following: well identification number, sample number, date and time sampled, job number, Site/client name and location, and sampling personnel's initials. The sealed and labeled samples were placed in a cooler containing ice and transported to Eurofins (Calscience) for analysis. The temperature of the cooler was recorded by the laboratory upon sample receipt and was within acceptable range. The chain-of-custody (COC) was maintained throughout the sampling program. A copy of the COC record is included in **Appendix F** with the groundwater sampling laboratory report.

Groundwater samples were analyzed for the following:

- TPHg and TPH as motor oil (TPHmo) by USEPA Method 8015M
- BTEX and fuel oxygenates MTBE, di-isopropyl ether (DIPE), ethanol, ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), and tertiary butyl alcohol (TBA) by USEPA Method 8260B, and full list volatile organic compounds (VOCs).

5.0 POST REMEDIATION GROUNDWATER SAMPLING RESULTS

5.1 GROUNDWATER MONITORING RESULTS

5.1.1 Groundwater Analytical Results

Laboratory results of groundwater samples are summarized in **Table 4** and per the following:

Groundwater Monitoring Well ID	TPHg (µg/L)	Benzene (µg/L)	Ethylbenzene (µg/L)	Toluene (µg/L)	Xylenes (µg/L)	MTBE (µg/L)
MW-19R	1,300	40	250	3.5	105	Non-detect
MW-22	2,400	46	140	3.2	410	Non-detect
MW-23	3,800	170	850	21	312	Non-detect

LTCP Scenario 2: Benzene less than 1,000 µg/L.

Groundwater data were compared to the appropriate State Water Resources Control Board's Low-Threat Underground Storage Tank Case Closure Policy (LTCP) screening results to evaluate the effectiveness of the DPE mass removal and determine the readiness of the Site for closure. Significant reductions in dissolved-phase petroleum hydrocarbon concentrations from previous/pre-remediation values, specifically benzene, were observed in all three wells. The benzene concentrations are all well below the LTCP criteria (Groundwater-Specific Criteria Scenario 2). In addition, no LNAPL sheen was detected in Well MW-13.

6.0 CONCLUSIONS AND RECOMMENDATIONS

AECOM concludes that the remedial objectives for low-threat closure have been achieved for the Sears Automotive Service Center (No. 1478) located at 1178 El Camino Real in San Bruno, California, based on the results of DPE event conducted in August and September 2019 and confirmed by the groundwater sampling event completed in December 2019.

The post-treatment groundwater monitoring event conducted in December 2019 confirmed that the remedial objects outlined in the CAP have been met. No LNAPL or sheen was observed in any of the monitoring wells sampled. Benzene concentrations in the source area groundwater have reduced to less than 200 µg/L, well below the target low-threat closure criteria of 1,000 µg/L. AECOM recommends the Site be evaluated for LTCP closure.

7.0 LIMITATIONS

The conclusions presented in this report are professional opinions based solely upon the data described in this report. They are intended exclusively for the purpose outlined herein and the site location and project indicated. This report is for the sole use and benefit of Sears Holding Management Corporation. The scope of services performed in execution of this investigation may not be appropriate to satisfy the needs of other users, and any use or reuse of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of said user.

Given that the scope of services for this investigation was limited, and that conditions may vary between the points explored, it is possible that currently unrecognized conditions may be present at the Site. Should Site use or conditions change, the information and conclusions in this report may no longer apply. Opinions relating to environmental, geologic, and geotechnical conditions are limited to data obtained from these investigations and actual conditions might vary from those encountered at the times and locations where data were obtained. No express or implied representation or warranty is included or intended in this report except that the work was performed within the limits prescribed by Sears with the customary thoroughness and competence of professionals working in the same area on similar projects.

Notes:
in. Hg = inches of mecury
scfm = standard cubic feet per minute
ppmv = parts million by volume
lb/hr = pounds per hour
lb/day = pounds per day
lbs = pounds
gal = gallons
gpm = gallons per minute

Hydrocarbon removal rate and cumulative hydrocarbon removal were calculated using the following formula:

$$\frac{\text{(average ppmv)(60 min/hr) (24 hr/day) (average scfm) (86.2 lb/lb-mole)}}{\text{(1,000,000) (379 ft}^3\text{/lb-mole)}}$$

ppmv - average hydrocarbon concentration in parts per million by volume
min/hr - minutes per hour
scfm - average vapor flow rate in standard cubic feet per minute
86.2 lb/lb-mole - pound/pound-mole: molecular weight of hexane
379 ft^3/lb-mole - cubic feet per pound-mole: ideal gas constant

SUBJECT: SEPARATE SOURCE OF HYDROCARBONS IN THE VICINTIY OF THE SAN BRUNO POLICE STATION, SEARS AUTOMOTIVE CENTER #1478, 1178 EL CAMINO REAL, SAN BRUNO, CALIFORNIA

Dear Responsible Parties:

Thank you for the *Corrective Action Implementation Report* dated April 28, 2020 (uploaded to GeoTracker on June 9, 2021), which was submitted by AECOM for the subject site. San Mateo County Groundwater Protection Program (GPP) staff have the following comments based on review of the report and project file.

- The mobile dual-phase extraction (DPE) test operated nearly 30 days through August and September 2019. The total gasoline mass removed during the event was calculated as approximately 950 lbs. However, the mass removal rate at the end of the event remained above 10 lbs/day, and cumulative mass removed plot did not display a flattening trend. These conditions indicate that the system may have been shut-down prematurely before the secondary source was removed to the extent practicable.

- Post-DPE groundwater samples collected from wells MW-19R, MW-22, and MW-23 in December 2019 indicate that dissolved-phase benzene concentrations were reduced one to two orders of magnitude from pre-DPE levels.

- Please complete an additional post-DPE groundwater monitoring event to evaluate current plume conditions. A comprehensive groundwater monitoring event has not been performed at the site since 2018. Wells MW-2, MW-6, MW-12, MW-13, MW-14, MW-19R, MW-21R, MW-22, and MW-23 should be sampled for TPHg and BTEX. Please submit the groundwater monitoring **no later than February 15, 2022**.

If future monitoring indicates a sustained reduction in groundwater contaminant concentrations, additional secondary source reduction may not be required.

I appreciate your cooperation. This office requires a two business-day notification, preferably by email, for all fieldwork. Feel free to contact me at (650) 272-4590 or bgwinn@smcgov.org if you have any questions.

Sincerely,

Brian Gwinn, PG
Hazardous Materials Specialist
Groundwater Protection Program

1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting, Inc. (Ramboll) was retained by Milbank LLP (Milbank) on behalf of CTL PropCo I LLC, a Delaware limited liability company, to perform a Phase I Environmental Site Assessment (ESA) of the J.C. Penney Company, Inc. (J.C. Penney or the "Company") property at 1122 El Camino Real in San Bruno, California (herein referred to as the "facility" or the "site"). Ramboll's assessment was conducted in connection with a potential purchase of the site.

The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 7). The scope of work for the Phase I ESA was expanded to include a qualitative evaluation of the potential for the on-site existence of asbestos-containing materials (ACM).

1.1 Site Summary

JC Penney owns and operates a retail department store and associated parking garages and parking lots at the site in San Bruno, California. The approximately 15-acre site is improved with an approximately 223,232-square-foot building, which is connected to the rest of The Shops at Tanforan (the "shopping mall building") to the north but is situated on its own parcel of land. The building is currently used as a retail department store and included sales areas, a salon, a digital portrait studio, optical office, product storage, offices, employee areas, and restrooms. Other areas associated with the site consist of parking garages to the east and south and parking lots to the west and southeast of the site building.

The site was developed with the southern portion of the Tanforan Race Track ("Race Track") in 1899. The Race Track, was temporarily converted into a Unites States military training center from 1914 to 1918 and from 1941 to 1950, including an internment camp in 1942. The Race Track burned down in 1964, and the current site building and former automotive operations building was constructed in 1972. JC Penney has continued to operate the facility as a retail department store since that time, demolishing the automotive shop operations building in 2005.

1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site at 1122 El Camino Real in San Bruno, California in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no RECs in connection with the site.

1.3 Other Findings

Although not considered RECs, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Former USTs without Closure Documentation.** A total of five USTs were formerly located at the site in association with the former automotive shop operations and facility. Three 10,000-gallon gasoline (one premium, one unleaded, and one regular) USTs were installed in 1972 and listed as being last used in 1983. One 500-gallon waste oil tank was installed in 1972 and listed as

being active. Additionally, one 550-gallon waste oil UST with unknown installation date is also listed as being active. Facility personnel indicate there are no active USTs on site but were unaware of the closure process prior or during the demolition of the automotive operations building in 2005. It is unclear whether the tanks were removed from the ground and if leaks were discovered upon closure of the tanks, as Ramboll has not been provided with reports documenting nature of UST closure activities performed. It does not appear that any confirmatory soil or groundwater samples were collected, and no records indicate that leak detection equipment or overfill alarms were installed at the time of installation. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, absent further closure or removal documentation, Ramboll cannot confirm that the subsurface was not adversely impacted from the operation of this UST. However, regulatory database search results do not identify any continuing obligations related to the closure of the USTs.

- **Past Operations at the Site.** The site has been used for various purposes since the late 1890s, including as a horse, dog, motorcycle and automotive race track (1899-1964), military training and operations (1914-1918, 1941-1950), internment camp operations (1942), automotive shop operations (1972–2005), and retail operations (1972–present). These former industrial operations may have included the use of petroleum products, solvents, adhesives, paint, metals, acids, caustics, corrosives, explosives, propellants, lead and other chemicals and a fire is known to have occurred in 1964. Additionally, historical operations conducted between site development and the early 1980s predate the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. No subsurface characterization activities are known to have been conducted at the site. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, absent further information regarding the specific nature of historical chemical use, chemical handling practices, and associated wastes, Ramboll cannot rule out the possibility that inadvertent spills or releases of chemicals or petroleum products may have occurred in the past. Facility personnel are not aware of any major spills or releases at the site and there is no current regulatory scrutiny related to contamination matters at the site. As such, Ramboll does not consider this finding a REC.
- **Potential for Migration of Contamination from Off-Site Properties.** The site is located adjacent to (500 feet south) an off-site property within the shopping mall that is listed with open status on a database indicative of potential soil or groundwater contamination. The database listing indicates petroleum hydrocarbons contamination of soil and groundwater originating from former UST operations from the Tanforan Race Track and Sears automotive shop operations. The contamination that is currently being remediated under regulatory oversight. The groundwater contamination has been delineated and based on the available information, there is no indication that contamination from the off-site property is migrating to the subject site; however, consistent with ASTM requirements, Ramboll has attempted to undertake a further review through submission of a Freedom of Information Act (FOIA) request to the state environmental agency regarding the database listings. Additionally, the site is located adjacent to (350 feet southeast) an off-site property within the shopping mall that formerly conducted dry-cleaning operations, which potentially included the use of chlorinated solvents. No spills were identified in the database reports, however Ramboll cannot rule out the potential for vapors migrating to the subject site due to an unreported spill. If contamination associated with off-site properties is found to have migrated onto the subject site, it is expected that any remedial activities would be the

responsibility of the entities named in the listing or other designated responsible party and not JC Penney. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product to the subject site related to this matter, it is not considered a REC.

1.4 Non-Scope Considerations

Ramboll identified the following finding that relates to non-scope considerations:

- **Asbestos-Containing Materials (ACMs).** Given the date of construction of the buildings at the site, it is possible that ACM are present in building materials. A formal asbestos survey has not been conducted at the facility. Ramboll conducted visual observations of limited areas of the buildings at the site and noted presumed asbestos-containing material (PACM) (e.g., vinyl floor tile, thermal system insulation associated with piping,) and other materials that may contain asbestos (e.g., ceiling tiles). Ramboll observed certain building materials that were damaged or deteriorating, specifically approximately 6-square-feet of abraded floor tiles were observed on the stairs leading to the mechanical penthouse.

2. INTRODUCTION

2.1 Scope of Work

Ramboll conducted a Phase I ESA of the JC Penney site in San Bruno, California. The Phase I ESA relied upon the references noted below and included the following tasks

- A visit to the site by Joel Krech of Ramboll on January 13, 2021 to observe the exterior and interior features of the site and to identify the uses and conditions specified in Sections 9.4.1 through 9.4.4.7 of the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during or prior to the site visit with the following individuals (year associated with the site indicated in parentheses): Kerri Manino, General Manager (1987 - 2009), Yolanda Rodriguez, Assistant General Manager (1998) and Craig Gomez, Asset Protection Manager (2016). The aforementioned individuals are referred to herein as "facility personnel". The facility personnel interviewed by Ramboll were identified by the Company as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - A radius report prepared by Environmental Data Resources, LLC (EDR, see Appendix B), which presents the results of searches of federal and state databases for the subject site, as well as properties near the subject site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
  - The United States Environmental Protection Agency's (USEPA's) Envirofacts database, which provides site information contained in multiple USEPA regulatory databases.
  - The California GeoTracker and EnviroStor databases, which contain contamination-related information from the State Water Resources Control Board (SWRCB) and State Department of Toxic Substances Control (DTSC), respectively.
  - The California Hazardous Waste Tracking System (HWTS), which provides information from waste manifests submitted to the DTSC.
- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources (as identified in Section 4.2 of this report and included as Appendix C) to develop a history of the previous uses of the site and surrounding area.
  - Local building permit information, as obtained via EDR's Lightbox application.
  - Historical and site-specific information obtained from the San Mateo County Assessor's Office (Assessor).
  - An information request, regarding septic systems and wells, to the San Mateo County Environmental Health Services. A response had not been received at the time this report was completed.

  - An information request, regarding underground storage tanks (USTs), fires, spills, and emergency responses to the site, to the City of San Bruno Fire Department. A response had not been received at the time this report was completed.
  - An information request to the California State Water Resources Control Board – Division of Water Quality, Underground Storage Tank Program (CA UST Program) for information related to USTs at the site.
- A review of environmental documents provided to Ramboll, including hazardous waste manifests. Facility personnel reported that, to their knowledge, no Phase I ESAs or Phase II site investigations, or similar investigations have previously been conducted for the site.
- A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report.
- A review of any information provided by the user of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report.

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and Milbank in October 2020.

2.2 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the subject site are not considered to represent a significant concern to the subject site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation.

2.3 Reliance and General Limitations

This report has been prepared for the exclusive use of CTL PropCo I LLC, a Delaware limited liability company, and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's best professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to

the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment did not include an asbestos survey or inspection. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect asbestos-containing materials must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including presumed or suspect ACM, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Other issues considered outside the scope of the ASTM Standard and this review include radon, lead-based paint, lead in drinking water, flooding, wetlands, PCBs in building materials, cultural and historic resources, ecological resources, endangered species, fire safety, and high voltage power lines.

3. SITE DESCRIPTION

3.1 Site Setting

JC Penney owns and operates a retail department store and associated parking garages and parking lots located at 1122 El Camino Real in San Bruno, California (the "site" or the "facility"). The site is located approximately ten miles south of San Francisco, California (Figure 1).

According to the Assessor's Office, the assessor's parcel number (APN) for the site is 014-316-300.

The approximately 15-acre site is developed with an approximately 223,232-square-foot two-story building, which is located in the northern portion of the site. The JC Penney store is connected to the rest of The Shops at Tanforan (the "shopping mall building") to the north but is situated on its own parcel of land (the "property"). The remaining areas of The Shops at Tanforan (the "shopping mall building") are operated by various entities as restaurants and retailers (i.e., apparel, homeware, jewelry, electronics, beauty, children's toys), beauty salons. A review of the operations of the other tenants of the shopping mall building was not included in Ramboll's scope of work. The building is currently used as a retail department store and included sales areas, a salon, a digital portrait studio, optical office, product storage, offices, employee areas, and restrooms. Other areas associated with the site consist of parking garages to the east and south and parking lots to the west and southeast of the site building.

The site is accessed primarily from El Camino Real at the western site boundary and Huntington Avenue at the eastern site boundary. Customer and employee parking areas are present to the east, south, and west of the building, and delivery truck access to a loading dock is provided to the south of the building. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 42 feet near the northeastern corner to 68 feet along the northwestern corner of the site.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on-site, with a gentle downward slope to the east/northeast. Regional topography slopes gently downward to the east.

Table 1: Physical Setting and Utility Information		
Conditions	**Source**	**Description**
Local Land Use	Visual observations	The facility is located in a mixed residential/commercial land use area. North: The Shops at Tanforan, of which the site is a part, followed by Sneath Lane. East: Huntington Avenue, followed by a residential area. South: Highway 380, followed by a residential area. West: El Camino Real. A mixed residential and commercial area is located across El Camino Real. Ramboll did not observe any conditions on adjacent properties that represent a potential contamination concern to the subject site.
Nearest Residence	Visual observations	Approximately 600 feet east of the site.
Hydrology		
Storm Water Runoff	Visual observations	Enters catch basins that discharge to the municipal storm sewer system.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	San Bruno Canal, located approximately 3,300 feet to the northeast at its nearest point. The Canal ultimately discharges to the San Francisco Bay, located approximately 1.5 miles to the east of the site.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map	Based on the topographic gradient, shallow groundwater likely flows to the east/northeast.
Depth to Groundwater	Not readily available	Information not readily available.
On-site Wells	Facility personnel; Visual observations	No production or monitoring wells.
Nearest Groundwater Supply Wells	Database report	One federally registered well, which is registered as a public supply well, is present 2,500 feet southeast of the site. Approximately four private or municipal wells that may be used for water supply are located within one mile south and west of the site.
Geologic Conditions	NCSS*	Regional soils are urban land with very slow infiltration rates.

Table 1: Physical Setting and Utility Information		
Conditions	**Source**	**Description**
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	Natural-gas fired heating units supply building heat. The building is cooled with air conditioning units.
Natural Gas Service	Facility personnel	The site is provided with natural gas service.
Use of Fuel Oil for Building Heat	Facility personnel	No known current or former use of fuel oil for building heat.
Foam-based Fire Suppression System	Facility personnel	According to facility personnel, the site is not equipped with a built-in foam-based fire suppression system.
Water Supply	Facility personnel; City Website	The facility receives drinking water from the City of San Bruno water system.
Sanitary Sewer	Facility personnel	The facility discharges wastewater to the municipal sanitary sewer system.
Septic Systems	Facility personnel	No identified current or former septic systems.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory

* - Source was provided in the environmental database report.

During the site visit, Ramboll walked or drove by the borders of the properties that are adjacent to the subject site. Ramboll did not enter the neighboring properties.

3.2 Current Use of Property

3.2.1 Current Operations

JC Penney currently operates a retail department store at the site, which includes the storage and sale of primarily clothing and housewares. Ancillary operations at the facility include administrative activities, shipping, receiving, and building maintenance. With the exception of small quantities of maintenance-related chemicals, janitorial supplies, and haircare products used in the salon, the facility does not maintain any chemicals or petroleum products.

3.2.2 Waste Management

Hazardous wastes generated at the site include characteristically hazardous wastes such as flammable liquids (e.g., fragrances, non-aerosol hair spray), corrosive/acidic materials (e.g., Lysol, Windex), oxidizing materials (e.g., bleach, hydrogen peroxide), and other chemicals (e.g., paints, adhesives). Universal wastes generated on-site include light bulbs/fluorescent light tubes, aerosols, and electronic

wastes. On-site hazardous and universal wastes are hauled off-site by Heritage Environmental Services.

Nonhazardous waste generated at the site consists of general trash and recyclable wastes from general employee operations which are accumulated in a trash compactor positioned outdoors in the loading/unloading area near the southern portion of the building; the trash compactor wastes are hauled off-site by Hazi Waste Services. The recyclable wastes are collected in a cardboard baler, before they are hauled off-site to a central JC Penney warehouse for recycling.

3.2.3 Wastewater and Storm Water

Sanitary wastewater from bathroom areas (including floor drains) and the hair salon is discharged to the municipal sanitary sewer system. The facility does not generate process wastewater. Storm water at the site enters storm drains in paved areas of the site. These storm drains discharge the storm water to the municipal storm sewer system located on unnamed mall access road.

3.2.4 Air Emissions

Air emissions from the facility are limited to combustion products resulting from the operation of the site's natural-gas-fired comfort heating system and occasional use of one diesel powered emergency backup generator, which provides power for emergency exit lighting.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in October 2020 to prepare of summary of listings in federal and state agency databases for the site and facilities within applicable radii of the property, as specified by the ASTM standard.[1] A copy of the environmental database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by a third-party database provider (see Appendix B) and also searched the California Geotracker, Envirostor, and HWTS databases. The site is listed on several environmental databases, as discussed in Table 2.

Table 2: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
JC Penney Store #1959 is listed in the Resource Conservation and Recovery Act (RCRA) database as a non-generator of hazardous waste. The site is also listed on the San Mateo County Business Inventory (San Mateo Co. BI), California Environmental Reporting System (CERS), CERS Hazardous Waste (CERS HAZ WASTE), Hazardous Waste Tracking System (HWTS), and Facility and Manifest Data (HAZNET) databases as a generator of asbestos-containing waste, aged or surplus organics, unspecified solvent mixtures, other inorganic solid waste, and laboratory waste chemicals. No current violations or issues of noncompliance are identified. The CERS database lists numerous historical violations, which appear to have been resolved.	The listings do not suggest a contamination concern to the site. Wastes generated at the site are further discussed in Section 3.2.2.
Firestone 36F3 is listed at the site address as a gas station in the Historical UST (HIST UST) database for four USTs installed in 1972, including three 10,000-gallon tanks (one premium, one unleaded, and one regular, all of which were last used in 1983) and one 500-gallon waste oil tank. JC Penney is also listed in the HIST UST database for the same 500-gallon waste oil tank.	Ramboll submitted an information request to the CA UST Program regarding these tanks. According to documents received from the Program, the 500-gallon UST is currently in use and the Program had no records of UST removal information or aware of any cleanup activities at the site. According to facility personnel, there are no active USTs on site but are unaware of the closure process during the demolition of the Firestone in 2005. This matter is further discussed in Section 6.

[1] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 2: Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	**Ramboll's Comments**
Firestone listed at 1110 El Camino Real is listed in the HIST UST, Statewide Environmental Evaluation and Planning System UST (SWEEPS UST), California Facility Inventory Database UST (CA FID UST), and San Mateo Co. Business Inventory (San Mateo Co. BI) databases for one active 550-gallon waste oil UST.	The listing indicates a different address than the Firestone 36F3 above, however facility personnel indicate there was only one firestone in the area, which was located on the site property. According to facility personnel, there are no active USTs on site but are unaware of the closure process during the demolition of the Firestone in 2005. Ramboll submitted an information request to the CA UST Program regarding this tank and is awaiting a reply. This matter is further discussed in Section 6.
Notes: * The site is also listed on the following databases related to regulatory compliance: Enforcement and Compliance History Online (ECHO), California Emission Inventory Database (EMI), and Facility Index System/Facility Registration System (FINDS). Listings on these databases, by themselves, are not necessarily indicative of contamination. The database search report includes listings for past site occupants that may indicate past use or storage of chemicals or petroleum products.	

4.1.2 Database Review for Adjoining Properties

Based on a review of the environmental database search report, Ramboll identified the adjoining sites listed in Table 3 on databases indicative of a potential contamination concern.

Table 3: Contamination-Related Database Listings for Adjoining Properties [1]		
Listing Name or Address and Location Relative to the Subject Site	**Summary of Information Contained in Database**	**Ramboll's Comments**
Multiple Sites (within the interconnected Shops at Tanforan to the north and other adjoining properties to the north)	Dozens of entities operating within the north-adjoining Shops at Tanforan and other adjoining properties are listed on databases (i.e., CERS HAZ WASTE, San Mateo Co. BI, RCRA NonGen/NLR, HWTS, HAZNET, and CERS) related to the generation of hazardous waste. No releases are noted in the listings, and prior waste-related violations issued to certain of these facilities are listed as having been resolved.	Listings on databases related to the generation, by themselves and without indication of a release, are not indicative of a contamination concern and are not further discussed herein.

Table 3: Contamination-Related Database Listings for Adjoining Properties [1]		
Listing Name or Address and Location Relative to the Subject Site	**Summary of Information Contained in Database**	**Ramboll's Comments**
Tanforan Cleaners & Shoe 302 and 402 Tanforan Park (within the interconnected Shops at Tanforan to the north and other adjoining properties to the north)	Tanforan Cleaners & Shoe is listed in the EDR Exclusive Historical Cleaners (EDR Hist. Cleaner) database, which is an EDR proprietary database that indicates that dry cleaning operations may have been performed. The property is listed as a dry cleaning plant, except rugs, from 1991 to 1998. There is no indication of a release in the listing.	Based on Ramboll's observations and information provided by facility personnel, the former dry cleaner is now Tanforan Dental. The site is located within the Shops at Tanforan, approximately 350 ft northwest of JC Penney. According to facility personnel dry cleaning operations did occur at the property. Generally, drycleaners within 500 feet of a site building are considered a potential vapor intrusion concern, however there are no documented releases. This listing is further discussed in Section 6.
Sears #1478 (within the interconnected Shops at Tanforan to the north and other adjoining properties to the north)	Sears #1478 is listed on the San Mateo Co. BI and HIST UST for five USTs installed in 1970; one 500-gallon waste oil, one 12,000-gallon unleaded gasoline, one 12,000-gallon regular gasoline, and two 5,000-gallon premium gasoline. The site is also listed on the CORTESE Hazardous Waste & Substances Sites List (CORTESE) and CERS site for a Leaking Underground Storage Tank (LUST) with open status. Additionally, Sears #1478 is listed on the Emissions Inventory Data (EMI) database for pollutant emissions data collected by the Air Resources Board and local air pollution agencies.	According to documents on GeoTracker, there were seven USTs associated with the Sears Automotive Service Center: two 12,000-gallon gasoline USTs, two 6,000-gallon gasoline USTs, two 530-gallon motor-oil USTs, and one 500-gallon used-oil UST. The four gasoline and two motor-oil USTs were removed from the ground in 1985. The analytical results for soil samples collected during the 1985 removals are not available. In January 1987, the used-oil UST was removed and detectable levels of petroleum hydrocarbons were in the confirmation samples, requiring further investigation. In December 1994, all remaining dispenser islands, product lines, and vent lines were removed from the site. Soil samples collected beneath the former dispenser island and product lines also contained detectable petroleum hydrocarbons, requiring further investigation. Soil and groundwater remediation is ongoing. The contamination is being addressed with regulatory oversight. This matter is further discussed in Section 6.

Table 3: Contamination-Related Database Listings for Adjoining Properties [1]		
Listing Name or Address and Location Relative to the Subject Site	**Summary of Information Contained in Database**	**Ramboll's Comments**
Notes: [1] Ramboll's analysis of adjoining sites was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the subject site.		

4.1.3 Database Review for Other Surrounding Properties

There are several listings in the environmental database report for non-adjoining off-site facilities within applicable ASTM search radii; however, Ramboll has not identified any properties that are likely to represent a potential contamination concern to the site.[2]

The database report indicates that poor or inadequate address information was available for several sites located in the vicinity of the subject site; therefore, these sites could not be readily mapped by the third-party provider. Because the location of these sites with respect to the subject site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the subject site from these sites. It was beyond the scope of this review to accurately locate each of the unmapped sites identified by the third-party provider; however, Ramboll reviewed the list of unmapped sites and verified that none appeared to be adjacent to the subject site.

4.2 Historical Uses of the Site and Adjacent Sites

4.2.1 Past Uses of the Site

The site was developed with the southern portion of the Tanforan Race Track in 1899. The Race Tack hosted horse and dog racing, and also had motorcycle and automobile racing tracks. The Race Track, was temporarily converted into a Unites States military training center during World War I (1914 – 1918). The 1925 Sanborn map depicts the site as having been developed with a portion of the dirt track, numerous stalls, a club house, and the southern portion of the Grand Stand. In 1941, during World War II, the United States military again utilized the Race Track as a training center and from April to October 1942, the Tanforan Race Track became known as the Tanforan Assembly Center – an internment camp for Japanese Americans. By 1950, the military training center was removed. The 1949 and 1953 Sanborn maps depict two artificial lakes in the middle of the site and the northern portion of a small warehouse in the southeastern portion of the site; the stalls are no longer depicted. The Race Track and associated structures burned down in 1964, and the current site building and former automotive shop operations building was constructed in 1972. The former automotive operations building, located in the southeastern portion of the site, was demolished in 2005. According

[2] In its evaluation, Ramboll considered only non-adjoining sites listed on databases indicative of contamination, with open status, located potentially upgradient of the site to represent a potential risk for contamination to the site (as the issuance of regulatory closure suggests that impacts to the subject site from the noted off-site property are unlikely).

to information provided by facility personnel and in the database report, former automotive shop operations were conducted at the site from 1972 to 2005, however the operations were leased to Firestone from 1983 to 2005.

4.2.2 Past Uses of Adjacent Sites

The properties in the vicinity of the site were used as the Tanforan Race Track (north and south) from 1899 to 1964 including temporary military operations, as discussed in Section 4.2.1. The properties to the east have been single-family residential since at least 1943. In addition, the properties to the west of the site were used by the United States military for apparent residential and/or storage purposes from the 1940s until as recently as the 1990s; these properties were redeveloped in the early 2000s for residential and commercial uses. The 1949 Sanborn depicts a gas station to the northwest , which is the current location of Shell Gas Station. Highway 280 (adjoining to the south) and The Shops at Tanforan (adjoining to the north) were constructed in the early 1970s and the The Shops at Tanforan have been operated by various entities as restaurants and retailers (i.e., apparel, homeware, jewelry, electronics, beauty, children's toys), beauty salons since that time. Furthermore, the properties further south of the site have been used for residential purposes since at least the 1940s. Ramboll did not observe obvious indications of concern on the historical sources reviewed.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in the table below.

Table 4: Local Agency Information for the Site

Agency Contacted / Document Reviewed	Information Obtained
San Mateo County Tax Assessor	Tax assessor records indicate that the site is 15.329 acres. No information was provided regarding construction details of the current site building. The site is described on the San Mateo County tax map as 014-316-300.
San Mateo County Environmental Health Services	Ramboll requested information from the San Mateo County Environmental Health Services for information related to septic systems and wells at the site. A response had not been received at the time this report was completed.
City of San Bruno Fire Department	Ramboll requested information from the City of San Bruno Fire Department for information related to USTs, fires, spills, and emergency responses to the site. A response had not been received at the time this report was completed.
CA UST Program	Ramboll requested information from the CA UST Program for information related to USTs at the site. A response had not been received at the time this report was completed.

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with facility personnel, no prior Phase I environmental assessments, UST closures, environmental sampling, or remediation activities are known to have been conducted at the site.

- Based on a review of historical database documents and interviews with facility personnel, prior tank closure reports may exist but have not been provided to Ramboll.

4.5 User-Provided Information

Ramboll provided Milbank with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, activity use limitations (AULs), specialized knowledge of the property, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The user did not provide any information that was not otherwise obtained and reviewed by Ramboll.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

During the site visit, observations of both the interior and exterior portions of the site were made to evaluate if any RECs, as defined in Chapter 7, are present. Ramboll did not observe the roof of the building and a review of the operations of the other tenants of the shopping mall building was not included in Ramboll's scope of work.

5.2 General Site Setting and Observations

Ramboll made observations concerning all of the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in the table below. Additional information regarding observed and historical items is provided in the sections following the table.

Table 5: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the property	See Section 3.2
9.4.2.2	Past use(s) of the property	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses	**Present** (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	(see Sections 5.2.2 and 5.2.3) Formerly Present Absent
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	Absent
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	**Present** (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	**Present** (see Section 5.2.1)
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	**Present** (see Section 5.2.1)

Table 5: Summary of Site Reconnaissance Observations		
ASTM Section	**Issue**	**Observation**
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment on-site (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment on-site (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	(see Section 5.2.4) **Present** Unlikely **Present** Unlikely
Interior Issues		
9.4.3.1	Heating/cooling systems	**Present** (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	**Present** (see Section 5.2.5)
9.4.3.3	Floor drains and interior sumps	**Present** (see Section 3.2.3)
Exterior Issues		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	Absent
9.4.4.2	Stained soil or pavement	**Present** (see Section 5.2.6)
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the property	**Present** (see Section 3.2.3)
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	Absent
9.4.4.7	Septic systems or cesspools	Absent
Non-Scope Considerations		
N/A	Asbestos Containing Materials	**Present** (see Section 5.2.7)

Table 5: Summary of Site Reconnaissance Observations		
ASTM Section	**Issue**	**Observation**
Notes: Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4. See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section. Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered. N/A – Not applicable.		

5.2.1 Hazardous Substances and Petroleum Products

The primary chemicals used at the site include sanitizers and detergents in retail sales areas and beauty products (including bleaches, color developer, etc.) in the beauty salon and department. Chemical storage at the site is limited to refrigerants and other retail-sized (less than five gallons) janitorial and maintenance-related products, such as hydraulic oil, paints, and sanitizers. Three unlabeled approximately 5-gallon containers were located in near the emergency generator in the mechanical penthouse. Facility personnel had no knowledge of the contents or purpose of the containers, but assumed they were diesel fuel for the emergency generator. No evidence of significant release was observed in these areas. Chemicals are not stored in exterior areas of the site.

Facility personnel knew of no significant spills or releases of materials in chemical storage areas. While dedicated secondary containment was not provided for all of the drums and containers, Ramboll did not observe evidence of spills or uncontrolled releases from these storage areas, other than minor staining in some interior (i.e., maintenance area) and paved (i.e., loading dock and parking lot) areas. Staining did not appear to extend to floor drains, storm water drains or unpaved surfaces.

5.2.2 Aboveground Storage Tanks (AST)

No current or former ASTs were identified associated with the site. Although not considered an AST, the site operates a diesel generator that is equipped with a 24-gallon diesel fuel reservoir. Facility personnel did not identify any release associated with the diesel reservoir and no visual evidence of spills or uncontrolled releases was observed during Ramboll's site inspection.

5.2.3 Underground Storage Tanks

A total of five USTs were formerly located at the site in association with the former automotive shop operations and facility. Three 10,000-gallon gasoline (one premium, one unleaded, and one regular) USTs were installed in 1972 and listed as being last used in 1983. One 500-gallon waste oil tank was installed in 1972 and listed on GeoTracker as being active. One 550-gallon waste oil UST with unknown installation date is also listed as being active on GeoTracker. Facility personnel indicate there are no active USTs on site but are unaware of the closure process during the demolition of the Firestone in 2005. The site is not listed on the LUST database. Further information regarding these closure activities is included in Section 6.

5.2.4 Polychlorinated Biphenyls (PCBs)

Facility personnel knew of no on-site equipment that is known to contain polychlorinated biphenyls (PCBs). No transformers are present on the property. The two-story building is equipped with two hydraulic elevators. Facility personnel had no information regarding the hydraulic fluid contained in the elevator reservoir. Because the building was constructed in 1972, before the 1979 federal ban on the manufacture of PCBs, it is possible that the hydraulic fluid contained in the elevator reservoir contain PCBs. Facility personnel indicated that the elevators are serviced annually and within the past year. As such, it is likely that hydraulic fluid used in the building elevators in the early 1970s (and potentially containing PCBs) has been replaced and removed from the site.

Ramboll observed no indication of leaks or releases from electrical equipment during the site visit.

5.2.5 Stains or Corrosion on Interior Floors, Walls, or Ceilings

Ramboll observed minor floor staining in the mechanical penthouse, fire pump room, loading dock area, and maintenance areas. This staining did not appear to be indicative of widespread releases or losses. Concrete floors in the vicinity of the staining appeared to be in good condition, with no evidence of cracking.

5.2.6 Stained Soil or Pavement

Ramboll observed evidence of minor pavement staining in the paved parking areas located north, east and south of the building. This staining is consistent with from minor drips from customer vehicles parked in this area. In addition, Ramboll observed minor pavement staining in the loading dock area. Pavement in the vicinity of the observed staining appeared to be in good condition, with no evidence of cracking.

5.2.7 Asbestos Containing Materials (ACMs)

Although an asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work, Ramboll made limited visual observations[3] of representative building materials in those areas accessed during the site tour to identify readily apparent PACM and suspect ACM. OSHA's definition of PACM is limited to thermal system insulation (TSI) and surfacing materials present in buildings constructed before 1981. Vinyl floor tiles are not considered PACM, but OSHA nonetheless requires that asphalt and vinyl floor tiles present in buildings constructed before 1981 be treated similarly to PACM. The term suspect ACM is not defined by OSHA but can include numerous building materials manufactured using asbestos currently or in the past (e.g., ceiling tiles, roofing materials, joint compound), as well as TSI, surfacing materials, and flooring materials installed after 1981.

Because the building at the site was constructed prior to 1981 and a comprehensive asbestos survey has not been conducted, TSI, surfacing materials and vinyl/asphalt flooring must be treated as PACM. During the site visit, PACM observed by Ramboll vinyl floor tile, TSI associated with piping, and wall texture. In addition, Ramboll observed other materials potentially considered suspect ACM (e.g., ceiling tile). Also, based on the building age, the roofing materials may be considered suspect ACM.

[3] Ramboll did not observe all building materials or formally survey the facility to determine the presence and condition of PACM and suspect ACM.

There are no regulatory requirements to remove PACM, suspect ACM and known ACM or to confirm whether building materials contain asbestos, unless the materials are damaged and have the potential to release fibers or the materials have the potential to be disturbed during renovation or demolition activities. Ramboll observed certain building materials that were damaged or deteriorating, specifically approximately 6-square-feet of abraded floor tiles were observed on the stairs leading to the mechanical penthouse. OSHA requires building owners and employers to identify locations of PACM and confirmed ACM at the facility and comply with certain employee notification, training, labeling and recordkeeping requirements (29 CFR §1910.1001(j)) and housekeeping programs (1910.1001(k)). The Company does not appear to have developed asbestos training programs, labeled ACM or PACM, or maintained appropriate records, as required.

6. FINDINGS, OPINION, AND CONCLUSIONS

6.1 Findings, Opinions, and Conclusions

6.1.1 Recognized Environmental Conditions

Ramboll has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the JC Penney property located at 1122 El Camino Real in San Bruno, California. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

6.1.2 Other Findings

In addition to RECs discussed above, the following additional findings related to potential contamination concerns were identified:

- **Former USTs without Closure Documentation.** A total of five USTs were formerly located at the site in association with the former automotive shop operations and facility. Three 10,000-gallon gasoline (one premium, one unleaded, and one regular) USTs were installed in 1972 and listed as being last used in 1983. One 500-gallon waste oil tank was installed in 1972 and listed as being active. Additionally, one 550-gallon waste oil UST with unknown installation date is also listed as being active. Facility personnel indicate there are no active USTs on site but were unaware of the closure process prior or during the demolition of the automotive operations building in 2005. It is unclear whether the tanks were removed from the ground and if leaks were discovered upon closure of the tanks, as Ramboll has not been provided with reports documenting nature of UST closure activities performed. It does not appear that any confirmatory soil or groundwater samples were collected, and no records indicate that leak detection equipment or overfill alarms were installed at the time of installation. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, absent further closure or removal documentation, Ramboll cannot confirm that the subsurface was not adversely impacted from the operation of this UST. However, regulatory database search results do not identify any continuing obligations related to the closure of the USTs.
- **Past Operations at the Site.** The site has been used for various purposes since the late 1890s, including as a horse, dog, motorcycle and automotive race track (1899-1964), military training and operations (1914-1918, 1941-1950), internment camp operations (1942), automotive shop operations (1972–2005), and retail operations (1972–present). These former industrial operations may have included the use of petroleum products, solvents, adhesives, paint, metals, acids, caustics, corrosives, explosives, propellants, lead and other chemicals and a fire is known to have occurred in 1964. Additionally, historical operations conducted between site development and the early 1980s predate the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. No subsurface characterization activities are known to have been conducted at the site. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, absent further information regarding the specific nature of historical chemical use, chemical handling practices, and associated wastes, Ramboll cannot rule out the possibility that inadvertent spills or releases of chemicals or petroleum products may have occurred in the past. Facility personnel are not aware

of any major spills or releases at the site and there is no current regulatory scrutiny related to contamination matters at the site. As such, Ramboll does not consider this finding a REC.

- **Potential for Migration of Contamination from Off-Site Properties.** The site is located adjacent to (500 feet south) an off-site property within the shopping mall that is listed with open status on a database indicative of potential soil or groundwater contamination. The database listing indicates petroleum hydrocarbons contamination of soil and groundwater originating from former UST operations from the Tanforan Race Track and Sears automotive shop operations. The contamination that is currently being remediated under regulatory oversight. The groundwater contamination has been delineated and based on the available information, there is no indication that contamination from the off-site property is migrating to the subject site; however, consistent with ASTM requirements, Ramboll has attempted to undertake a further review through submission of a Freedom of Information Act (FOIA) request to the state environmental agency regarding the database listings. Additionally, the site is located adjacent to (350 feet southeast) an off-site property within the shopping mall that formerly conducted dry-cleaning operations, which potentially included the use of chlorinated solvents. No spills were identified in the database reports, however Ramboll cannot rule out the potential for vapors migrating to the subject site due to an unreported spill. If contamination associated with off-site properties is found to have migrated onto the subject site, it is expected that any remedial activities would be the responsibility of the entities named in the listing or other designated responsible party and not JC Penney. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product to the subject site related to this matter, it is not considered a REC.

6.1.3 *De Minimis* Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll identified the following *de minimis* conditions related to the site:

- **Pavement and Floor Staining.** Ramboll observed multiple areas of exterior pavement and interior flooring where oil stains were apparent. The stains were limited in areal extent, the underlying pavement/flooring appeared to be intact, and no stains appeared to reach floor drains or storm water drains. As such, Ramboll considers this matter to represent a *de minimis* condition.

6.1.4 Non-Scope Considerations

Ramboll identified the following finding that relates to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials.** The building was constructed before asbestos was generally phased out of use in most building material applications in the 1980s. A formal asbestos survey has not been conducted at the facility. Ramboll conducted limited visual observations of limited areas of the buildings at the site and noted PACM (e.g., vinyl floor tile, TSI associated with piping, wall texture) and other materials that may contain asbestos (e.g. ceiling tiles).

6.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience,

raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions.
- During the site visit, Ramboll did not observe the roof of the building due to access and safety constraints.
- Historical information, such as aerial photographs, was not readily available to characterize the property from the present back to the property's obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is a Sanborn Map dated 1925, which shows that at least a portion of the property was already developed as the Tanforan Race Track.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

7. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap / Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

We declare that, to the best of my professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Appendix E: Environmental Lien Search
Appendix F: Qualifications of Environmental Professionals

1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting, Inc. (Ramboll) was retained by Alexandria Real Estate Equities, Inc. (ARE or "the Client") to perform a Phase I Environmental Site Assessment (ESA) of the site located at 1122 El Camino Real in San Bruno, California (herein referred to as the "facility" or the "site"). Ramboll's assessment was conducted in connection with a potential purchase of the site. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 7).

1.1 Site Summary

CTL PropCo I LLC owns the JC Penney retail department store, associated parking garages, and parking lots at the site. The approximately 15-acre site is improved with an approximately 223,232-square-foot building, which is connected to the rest of The Shops at Tanforan (the "shopping mall building") to the north but is situated on its own parcel of land. The building is currently used as a retail department store and includes sales areas, a salon, a digital portrait studio, optical office, product storage, offices, employee areas, and restrooms. Other areas of the site consist of parking garages to the east and south, and surface parking lots to the west and southeast of the site building.

The site was developed with the southern portion of the Tanforan Race Track ("Race Track") in 1899. The Race Track, was temporarily converted into a United States military training center from 1914 to 1918 and from 1941 to 1950, including an internment camp in 1942. Structures associated with the Race Track were destroyed in a fire in 1964, and the current site building and former automotive operations building were constructed in 1972. The existing parking structures were built in the 2000s. JC Penney has operated the facility as a retail department store since 1972. The automotive shop operations building, associated with the addresses 1110 and 1112 El Camino Real and formerly located in the southeast corner of the site, was demolished in 2005.

1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site at 1122 El Camino Real in San Bruno, California in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no RECs in connection with the site.

1.3 Other Findings

Although not considered RECs, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Former USTs without Closure Documentation.** A total of five USTs were formerly located at the site in association with the former automotive shop operations. Three 10,000-gallon gasoline (one premium unleaded, one unleaded, and one regular) USTs were installed in 1972 and listed as being last used in 1983. One 500-gallon waste oil tank was installed in 1972 and listed as being active. Additionally, one 550-gallon waste oil UST with an unknown installation date is also listed as being active. Facility personnel indicate there are no active USTs on site but had no knowledge regarding the historical UST closure process(es) prior or during the demolition of the automotive operations building in 2005, and closure documentation is not available from other resources reviewed for this assignment. Regulatory database search results do not identify any continuing obligations related to the closure of the USTs. Because Ramboll's review did not identify

documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, additional information (e.g., confirmatory sample data) would be required to evaluate the potential for subsurface impacts, if any, related to the operation of USTs at the site.

- **Past Operations at the Site.** The site has been used for various purposes since the late 1890s, including as a horse, dog, motorcycle and automotive race track (1899-1964), military training and operations (1914-1918, 1941-1950), internment camp operations (1942), automotive shop operations (1972–2005), and retail operations (1972–present). Several of these former operations may have included the use of petroleum products, solvents, adhesives, paint, metals, acids, caustics, corrosives, explosives, propellants, lead, and other chemicals. Additionally, historical operations conducted between site development and the early 1980s predate the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. No subsurface characterization activities are known to have been conducted at the site. Ramboll's review did not identify documentation of a release. Facility personnel are not aware of any major spills or releases at the site and there is no current regulatory scrutiny related to contamination matters at the site.

1.4 Non-Scope Considerations

Ramboll identified the following finding that relates to non-scope considerations:

- **Asbestos-Containing Materials (ACMs).** The building (1972) and parking structures (2000s) at the site were constructed prior to and after the time that asbestos was generally phased out of use in many building material applications during the mid-1980s. According to facility personnel, multiple asbestos abatements have been conducted in the past during renovation of the men's and junior's departments of the store. Exact dates and building materials removed during abatements are unknown. Additionally, given the date of construction of the building (1972) at the site, it is possible that other ACMs are present in building materials. In the event that renovation or demolition of structures is to occur in the future, a comprehensive (demolition-level) asbestos survey is required.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building in 1972, it is likely that lead-based paint was used on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility, and Ramboll observed the paint to be in good condition.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site. Facility personnel reported that there had not been any past water intrusion events.
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, out of 45 sites surveyed in San Mateo County, three sites were over 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first floor room at two sites was 0.100 pCi/L.

2. INTRODUCTION

2.1 Purpose

Ramboll was retained by ARE to conduct a Phase I ESA of the site in connection with a potential financial transaction. The purpose of the assessment was to identify RECs, which are defined in the ASTM Standard as:

> "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions."

2.2 Scope of the Assessment

Ramboll completed the following tasks, consistent with the ASTM Standard, during its Phase I ESA of the site:

- A visit to the site by Katie Zheng of Ramboll on June 28, 2021 to observe the exterior and interior features of the site and to identify the uses and conditions specified in Sections 9.4.1 through 9.4.4.7 of the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during or prior to the site visit with the following individuals (year associated with the site indicated in parentheses): Melinda Kaufman, General Manager (2021) and Craig Gomez, Asset Protection Manager (2016). The aforementioned individuals are referred to herein as "facility personnel". The facility personnel interviewed by Ramboll were identified by the Company as having good knowledge of the uses and physical characteristics of the site.
- A review of a radius report prepared by Environmental Data Resources, Inc. (EDR, see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site. The radius searched for each database, as well as the databases themselves, were selected in accordance with the ASTM Standard.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - The United States Environmental Protection Agency's (USEPA's) EnviroFacts database, which provides site information contained in multiple USEPA regulatory databases.
  - The Department of Toxic Substances Control (DTSC) EnviroStor database, which contains information about certain regulated facilities in California.
  - The State Water Resources Control Board (SWRCB) GeoTracker database, which contains information about groundwater contamination and clean-up sites in California
  - The California Geologic Energy Management Division (CalGEM), which contains information regarding oil and gas wells on and in the site vicinity
  - The DTSC Hazardous Waste Tracking System (HWTS), which contains hazardous waste manifest information reported to CalEPA.
  - The Enforcement and Compliance History Online (ECHO) database, which aggregates USEPA compliance information.

- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources, including (where available) historical topographic maps and aerial photographs, city directories, and Sanborn Maps, to develop a history of the previous uses of the site and surrounding area.
  - Historical and site-specific information obtained from the following local agencies: the San Mateo County Assessor's Office (Assessor), San Mateo County Department of Environmental Health (SMCDEH), and the San Bruno Building Department (Building Department). Ramboll also requested information from the Department of Toxic Substances Control (DTSC), Regional Water Quality Control Board (RWQCB), San Bruno Fire Department (Fire Department), and the San Bruno Public Works Department (Public Works Department), and was informed that the agencies did not have any records pertaining to the site.
- A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report.
- Ramboll was provided with the following previous environmental assessment report, which is included as Appendix D:
  - *Phase I Environmental Site Assessment for 1122 El Camino Real*, San Bruno, California, prepared by Ramboll US Consulting, Inc., dated December 2020 (the "2020 Phase I ESA report").
- A search for environmental liens or other activity and use limitations (AULs) for the site, provided by the third-party database provider (as shown in Appendix E). Ramboll ordered the lien search using the parcel number believed to be associated with the site, as obtained from the local tax assessor's office and other online resources.
- A review of any information provided by the user of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report.

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and the Client in June 2021. The standard ASTM scope was expanded to include a limited review of asbestos-containing materials, lead-based paint, water intrusion, and radon.

2.3 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the subject site are not considered to represent a significant concern to the site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate

laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation.

2.4 Reliance and General Limitations

This report has been prepared for the exclusive use of ARE and its affiliated entities and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment did not include an asbestos survey or inspection. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect asbestos-containing materials must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including materials typically considered suspect ACM, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Other issues considered outside the scope of the ASTM Standard and this review include lead in drinking water, polychlorinated biphenyls (PCBs) in building materials, cultural and historic resources, ecological resources, endangered species, and high voltage power lines.

However, Ramboll evaluated: the potential for asbestos and lead-based paint to be present in building materials based solely on the age of the buildings, the potential for radon and wetlands to be present in the vicinity of the site based on information provided by EDR, and the potential for water intrusion to have taken place at the building based on limited visual observations and information provided by facility personnel.

3. SITE DESCRIPTION

3.1 Site Setting

The site is owned by CTL PropCo I, LLC. The approximately 15-acre site is located approximately 10 miles south of San Francisco, California (Figure 1). According to the Assessor's Office, the assessor's parcel number (APN) for the site is 014-316-300.

The approximately 15-acre site is developed with an approximately 223,232-square-foot two-story building, which is located in the northern portion of the site. The building is connected to the rest of The Shops at Tanforan (the "shopping mall building") to the north but is situated on its own parcel of land. The remaining areas of The Shops at Tanforan (the "shopping mall building") are operated by various entities as restaurants, retailers (i.e., apparel, homeware, jewelry, electronics, beauty, children's toys), and beauty salons. A review of the operations of the other tenants of the shopping mall building was not included in Ramboll's scope of work. The building is currently used as a retail department store and included sales areas, a salon, a digital portrait studio, optical office, product storage, offices, employee areas, and restrooms. Other areas associated with the site consist of parking garages to the east and south and parking lots to the west and southeast of the site building.

The site is accessed primarily from El Camino Real at the western site boundary and Huntington Avenue at the eastern site boundary. Customer and employee parking areas are present to the east, south, and west of the building, and delivery truck access to a loading dock is provided to the south of the building. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 42 feet near the northeastern corner to 68 feet along the northwestern corner of the site.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on site, with a gentle downward slope to the east/northeast. Regional topography slopes gently downward to the east.
Hydrology		
Storm Water Runoff	Visual observations	Enters catch basins that discharge to the municipal storm sewer system.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	San Bruno Canal, located approximately 3,300 feet to the northeast at its nearest point. The Canal ultimately discharges to the San Francisco Bay, located approximately 1.5 miles to the east of the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Flood Plain	FEMA*; Facility personnel;	Facility personnel reported no known occurrences of flooding at the site. The site is not located within a 500-year flood zone.
Wetlands	NWI*	There are no federally designated wetlands on site. Federally designated wetlands are located approximately one-half mile east and northeast of the site.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map; 2018 First Semi-Annual Groundwater Monitoring Report, Sears Automotive Center, 1178 El Camino Real, San Bruno, California	Based on the topographic gradient, shallow groundwater likely flows to the northeast toward the San Francisco Bay. A 2018 groundwater monitoring report from 1178 El Camino Real, a property to the north, indicated that groundwater flows north to north-northeast.
Depth to Groundwater	2018 First Semi-Annual Groundwater Monitoring Report, Sears Automotive Center, 1178 El Camino Real, San Bruno, California	Based on groundwater monitoring conducted in 2014 at 1178 El Camino Real, groundwater was encountered at approximately 18 to 20 feet bgs.
On-site Wells	Facility personnel; Visual observations	There are no production or monitoring wells on site. There are also no injection, oil, or natural gas wells on site.
Nearest Groundwater Supply Wells	Database report	One federally registered well, which is registered as a public supply well, is present 2,500 feet southeast of the site. Approximately four private or municipal wells that may be used for water supply are located within one mile south and west of the site.
Geologic Conditions	NCSS*	Regional soils are urban land with very slow infiltration rates.
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	Natural-gas fired heating units supply building heat. The building is cooled with air conditioning units.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Electricity Supplier	Facility personnel	Pacific Gas and Electric (PG&E)
Natural Gas Service	Facility personnel	PG&E
Use of Fuel Oil for Building Heat	Facility personnel	No known current or former use of fuel oil for building heat.
Water Supply	Facility personnel; City Website	City of San Bruno
Sanitary Sewer	Facility personnel	The site is connected to the municipal sanitary sewer system maintained by the City of San Bruno
Septic Systems	Facility personnel	No identified current or former septic systems.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory

* - Source was provided in the environmental database report.

3.2 Current Use of Site

3.2.1 Current Operations

JC Penney currently operates a retail department store at the site, which includes the storage and sale of primarily clothing, shoes, accessories, housewares, and beauty supplies (Sephora). The Company also operates a salon, a digital portrait studio, and optical office. Ancillary operations at the facility include administrative activities, shipping, receiving, and building maintenance. Small quantities of maintenance-related chemicals, janitorial supplies, and haircare products are used. One 55-gallon drum of hydraulic oil is stored in the freight elevator control room.

According to DTSC's Hazardous Waste Tracking System (HWTS), the site is registered as a small quantity generator (SQG) of hazardous wastes that include but are not limited to the following: Non-RCRA hazardous waste (makeup, lotions, hair products, lubricants, glues, and paints), flammable liquids (paints, fragrances, nail polish, and rubbing alcohol), aerosols (hairspray, WD-40, pesticides, insecticides), oxidizing materials (hydrogen peroxide and bleach), universal waste (batteries, ballasts, and fluorescent light bulbs). Non-hazardous wastes generated at the site include general trash and recycling (carboard, plastic bags, paper, bottles, and cans). Trash is stored in a compactor located in the loading dock area south of the building. Recyclables are loaded onto a truck at the loading dock and transported to a store support center in Reno.

3.3 Current Uses of Adjoining Properties

The site is located in a mixed residential/commercial land use area. The nearest residential area is located approximately 200 feet east (downgradient) of the site. Based on discussions with facility

personnel, Ramboll's visual observations from the site boundary and public rights-of-way, and a limited review of publicly available information, a general evaluation of the current use of adjacent properties was developed, as described Table 2.

Table 2: Current Use of Adjacent Properties

Direction	Property/Land Use	Ramboll's Observations
North	The Shops at Tanforan, of which the site is a part, followed by Sneath Lane.	No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted.
East	Huntington Avenue, followed by a residential area.	No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted.
South	Highway 380, followed by a residential area.	No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted.
West	El Camino Real. A mixed residential and commercial area is located across El Camino Real.	No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted.

Notes:

During the site visit, Ramboll walked or drove by the borders of these properties that are adjacent to the subject site. Ramboll did not enter the neighboring properties.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in June 2021 to prepare of summary of listings in federal and state agency databases for the site and facilities within applicable radii of the property, as specified by the ASTM standard.[1] A copy of the environmental database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by a third-party database provider (see Appendix B) and also searched the GeoTracker, EnviroStor, and HWTS databases. The site is listed on several environmental databases, as discussed in Table 3.

Table 3: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
JC Penney Store #1959 is listed in the Resource Conservation and Recovery Act (RCRA) database as a non-generator of hazardous waste. The site is also listed on the San Mateo County Business Inventory (San Mateo Co. BI), California Environmental Reporting System (CERS), CERS Hazardous Waste (CERS HAZ WASTE), HWTS, and Facility and Manifest Data (HAZNET) databases as a generator of asbestos-containing waste, aged or surplus organics, unspecified solvent mixtures, other inorganic solid waste, and laboratory waste chemicals. No current violations or issues of noncompliance are identified. The CERS database lists numerous historical violations, which appear to have been resolved.	The listings do not suggest a contamination concern to the site. Additionally, all violations appear to have been resolved. Wastes generated at the site are further discussed in Section 3.2.2.
Firestone 36F3 is listed at the site address as a gas station in the Historical UST (HIST UST) database for four USTs installed in 1972, including three 10,000-gallon tanks (one premium, one unleaded, and one regular, all of which were last used in 1983) and one 500-gallon waste oil tank. JC Penney is also listed in the HIST UST database for the same 500-gallon waste oil tank.	A total of five USTs were listed as formerly located at the site in association with the former automotive shop operations. Three 10,000-gallon gasoline USTs were installed in 1972 and listed as being last used in 1983. One 500-gallon waste oil tank was installed in 1972 and listed as being active. Additionally, one 550-gallon waste oil UST with an unknown installation date is also listed as being active. Facility personnel indicate there are no active USTs on site but were unaware of the closure process prior or during the demolition of the automotive operations building in 2005. It is unclear whether the tanks were removed from the ground and if leaks were discovered upon closure of the tanks. This matter is further discussed in Section 6.

[1] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 3: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
Firestone listed at 1110 El Camino Real is listed in the HIST UST, Statewide Environmental Evaluation and Planning System UST (SWEEPS UST), California Facility Inventory Database UST (CA FID UST), and San Mateo Co. Business Inventory (San Mateo Co. BI) databases for one active 550-gallon waste oil UST.	The listing indicates a different address than the Firestone 36F3 above, however facility personnel indicate there was only one Firestone in the area, which was located on the site. According to facility personnel, there are no active USTs on site, and no information is available regarding the closure process during the demolition of the Firestone in 2005. This matter is further discussed in Section 6.

Notes:

* The site is also listed on the following databases related to regulatory compliance: Enforcement and Compliance History Online (ECHO), California Emission Inventory Database (EMI), San Mateo County Business Inventory (San Mateo CO. BI), and Facility Index System/Facility Registration System (FINDS). Listings on these databases, by themselves, are not necessarily indicative of contamination.

The database search report includes listings for past site occupants that may indicate past use or storage of chemicals or petroleum products.

4.1.2 Database Review for Adjoining Properties

Based on a review of the environmental database search report, Ramboll identified the adjoining properties listed in Table 4 on databases indicative of a potential contamination concern.

Table 4: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
Tanforan Cleaners & Shoe 302 and 402 Tanforan Park (within the interconnected Shops at Tanforan to the north)	Tanforan Cleaners & Shoe is listed in the EDR Exclusive Historical Cleaners (EDR Hist. Cleaner) database, which is an EDR proprietary database that indicates that dry cleaning operations may have been performed. The property is listed as a dry cleaning location from 1991 to 1998. There is no indication of a release in the listing.	The former dry cleaner is now Tanforan Dental and located approximately 350 ft northwest and cross gradient of the site. The EDR proprietary database from which this listing is derived is based on business names as opposed to records or permits indicating dry cleaning was actually performed at the location. Based on the absence of indications of a release and/or subsurface impacts, this matter is unlikely to present a major concern to the site.

Table 4: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
Sears #1478 (within the interconnected Shops at Tanforan to the north)	Sears #1478 is listed on the CORTESE Hazardous Waste & Substances Sites List (CORTESE) and CERS site for a Leaking Underground Storage Tank (LUST) with open status.	Seven USTs associated with the Sears Automotive Service were removed in the 1980s. Soil samples collected during tank removal activities contained detectable concentrations of petroleum hydrocarbons, requiring further investigation. Subsurface impacts appear to have been delineated, and soil and groundwater remediation is ongoing. Given that the property is currently under active regulatory oversight, responsible parties have already been identified for contamination, and groundwater flow to the northeast (away from the site), this listing does not appear to represent a significant contamination concern for the site.

Notes:

[1] Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the subject site.

4.1.3 Database Review for Other Surrounding Properties

There are several listings in the environmental database report for non-adjoining off-site facilities within applicable ASTM search radii; however, Ramboll has not identified any properties that are likely to represent a potential contamination concern to the site.[2]

The database report indicates that poor or inadequate address information was available for several properties located in the vicinity of the subject site; therefore, these properties could not be readily mapped by the third-party provider. Because the location of these properties with respect to the subject site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the subject site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped properties identified by the third-party provider; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the subject site.

[2] In its evaluation, Ramboll considered only non-adjoining sites listed on databases indicative of contamination, with open status, located potentially upgradient of the site to represent a potential risk for contamination to the site (as the issuance of regulatory closure suggests that impacts to the subject site from the noted off-site property are unlikely).

4.2 Historical Uses of the Site and Adjacent Properties

4.2.1 Past Uses of the Site

The site was developed with the southern portion of the Tanforan Race Track in 1899. The Race Tack hosted horse and dog racing, and also had motorcycle and automobile racing tracks. The Race Track, was temporarily converted into a United States military training center during World War I (1914 – 1918). The 1925 Sanborn map depicts the site as having been developed with a portion of the dirt track, numerous stalls, a club house, and the southern portion of the Grand Stand. In 1941, during World War II, the United States military again utilized the Race Track as a training center and from April to October 1942, the Tanforan Race Track became known as the Tanforan Assembly Center – an internment camp for Japanese Americans. By 1950, the military training center was removed. The 1949 and 1953 Sanborn maps depict two artificial lakes in the middle of the site and the northern portion of a small warehouse in the southeastern portion of the site; the stalls are no longer depicted. The Race Track and associated structures burned down in 1964, and the current site building and former automotive shop operations building was constructed in 1972. The former automotive operations building, located in the southeastern portion of the site, was demolished in 2005. According to information from facility personnel, the 2020 Phase I ESA report, and the database report, former automotive shop operations were conducted at the site from 1972 to 2005, and operated by Firestone from under a lease from 1983 to 2005.

Table 5: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
Sanborn Maps (1925, 1949, and 1953)	The 1925 Sanborn map depicts the site developed with the southern portion of the Tanforan Race Track. Along the outer edges of the track are stables to the east and stands to the west. The 1949 and 1953 Sanborn maps depicts two lakes in the northern-central portion of the site and a warehouse in the southeastern portion of the site.
Aerial Photographs and Satellite Imagery[1] (1946 to 2016)	In the 1943 and 1946 photographs, the site appears developed with the southern portion of the Tanforan Race Track and buildings on the outer western and eastern edges of the track. The 1956 photograph depicts an artificial lake in the middle of the site. In the 1963 photograph, the artificial lake is no longer depicted. In the 1968 photograph, the site appears graded and buildings are no longer present. The 1974 photograph shows to existing building (part of the greater shopping mall building) and a building in the southeastern corner of the site, and parking lots in the remaining areas. In the 2006 photograph, the southeastern building is no longer present at the site. The 2009 photograph shows an additional parking level structure at the southern central portion of the site. The 2009 and subsequent photographs show the site in its present configuration, with one building present. No concerns are noted.
Topographic Maps (1896 to 2012)	The maps from 1896 to 1915 show a railway running through the northern and southern boundaries of the site. In the 1939 map, the site is developed with the southern portion of the Tanforan Race Track and buildings on the outer western and eastern edges of the track. In the 1947 through 1956 maps, two artificial lakes are present in the center of the site. In the 1968 map, no structures or features are located on the site. In the 1980 map, two buildings are present in the northern-central and southeastern portions of the site. No structures are visible on the subsequent maps. Roadways are depicted on the site in the 2012 map. No concerns are noted.

Table 5: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
City Directory Abstracts (1953 to 2017)	The occupants of three site buildings as of 2017 are listed as: Penney JC Casualty (1986) JF Ardly OD (1995) JC Penney Company Incorporated Tanforan Shopping Center (2000-2017) San Bruno Police Association (2005) Sephora Inside JC Penney (2014)
Property Tax Map Report	The EDR Property Tax Map Report shows the site is located on Parcel C of tax code area 14-31
Lien and AUL Search Report	As of January 30, 2021, the title for parcel number 014-316-300 was transferred from J.C Penney Properties, LLC to CTL PropCo I LLC. No liens or AULs are associated with the site.

Notes:

[1] In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.

4.2.2 Past Uses of Adjacent Properties

The properties in the vicinity of the site were used as the Tanforan Race Track (north and south) from 1899 to 1964 including temporary military operations, as discussed in Section 4.2.1. The properties to the east have been single-family residential since at least 1943. In addition, the properties to the west of the site were used by the United States military for apparent residential and/or storage purposes from the 1940s until as recently as the 1990s; these properties were redeveloped in the early 2000s for residential and commercial uses. The 1949 Sanborn depicts a gas station to the northwest, which is the current location of a Shell gas station. Highway 280 (adjoining to the south) and The Shops at Tanforan (adjoining to the north) were constructed in the early 1970s and The Shops at Tanforan have been operated by various entities as restaurants, retailers (i.e., apparel, homeware, jewelry, electronics, beauty, children's toys), and beauty salons since that time. The properties further south of the site have been used for residential purposes since at least the 1940s. Ramboll did not observe obvious indications of concern on the historical sources reviewed.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in the table below.

Table 6: Local Agency Information for the Site

Agency Contacted/ Document Reviewed	Information Obtained
San Mateo County Tax Assessor	The site is described on the San Mateo County tax map as 014-316-300.

Table 6: Local Agency Information for the Site

Agency Contacted/ Document Reviewed	Information Obtained
San Mateo County Environmental Health Services	Ramboll requested information from the San Mateo County Environmental Health Services. Records provided include Hazardous Materials Business Plans (HMBPs), Certified Unified Program Agency (CUPA) small quantity generator and storage of hazardous waste permits, HMBP inspection reports, stormwater inspection reports, emergency response/contingency plans, training plans, CERS submittals, and an environmental health application. Minor violations related to record keeping/documentation, training, manifests, and outdoor waste disposal/storage were reported. Major violations were not reported. A 2012 HMBP report details the storage of perfumes, rubbing alcohols, foaming acid restroom cleaners, tile and grout rejuvenator, aerosols, paints and primers, diesel fuel for an emergency backup generator, and universal wastes. A permit of one monitoring well installation/destruction was provided as part of an investigation for a nearby property in 2015.
City of San Bruno Building Department	Ramboll requested information from the City of San Bruno Building Department for information related to building permits, correspondence, plot plans and address activity report to the site. Records provided include building permits (for walls, fixtures, flooring, tenant improvements, fire alarm system, a curb ramp, firework stands), floor plans, and inspection records.

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with facility personnel, a prior environmental assessment has been conducted at the site, as summarized below. Pertinent historical and site-related information contained in the prior reports has been incorporated into other sections of this report.

- **2020 Phase I Environmental Site Assessment.** In 2020, Ramboll conducted a Phase I ESA at the site and found no RECs in connection with the site. Notable other findings were identified, including the following: (1) former USTs at the site without closure documentation and soil and groundwater confirmation sample results; (2) past site operations that may have included the use of petroleum products, solvents, and other chemicals; and (3) potential migration of contamination from off-site properties (Sears and a former dry-cleaner) located within the shopping mall building. Based on supplemental information reviewed for this assignment regarding contamination at off-site properties, it appears contamination at the downgradient Sears property has been delineated and migrates to the northeast, away from the site, and there is no evidence to suggest that the former dry cleaner (located cross gradient of the site) released chemicals to the subsurface.

4.5 User-Provided Information

Ramboll provided the client with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, AULs, specialized knowledge of the site, site value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The user provided the information requested in the User Questionnaire; however, the client is unaware of any information beyond that obtained by Ramboll as part of the current assessment.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

During the site visit, observations of both the interior and exterior portions of the site were made to evaluate if any RECs, as defined in Section 7, are present. Ramboll did not observe the roof of the building.

5.2 General Site Setting and Observations

Ramboll made observations concerning all of the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in the table below. Additional information regarding observed and historical items is provided in the sections following the table.

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the property	See Section 3.2
9.4.2.2	Past use(s) of the property	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses	**Present** (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	(see Sections 5.2.2 and 5.2.3) Formerly Present Absent
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	Absent
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	**Present** (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	**Present** (see Section 5.2.1)
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	**Present** (see Section 5.2.1)

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
9.4.2.10	Polychlorinated biphenyls (PCBs)	(see Section 5.2.4)
	Electrical equipment on-site (e.g., transformers, capacitors)	**Present**
	Electrical equipment known or likely to contain PCBs	Unlikely
	Hydraulic equipment on-site (e.g., elevators, truck dock lifts)	**Present**
	Hydraulic equipment known or likely to contain PCBs	Unlikely
Interior Issues		
9.4.3.1	Heating/cooling systems	**Present** (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	**Present** (see Section 5.2.5)
9.4.3.3	Floor drains and interior sumps	**Present** (see Section 3.2.3)
Exterior Issues		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	Absent
9.4.4.2	Stained soil or pavement	**Present** (see Section 5.2.6)
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the property	**Present** (see Section 3.2.3)
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	Absent
9.4.4.7	Septic systems or cesspools	Absent
Non-Scope Considerations		
N/A	Asbestos Containing Materials	**Present** (see Section 5.2.7)
N/A	Lead-Based Paint	**Present** (see Section 5.2.8)

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
N/A	Water Intrusion	**Present** (see Section 5.2.9)
N/A	Radon	**Present** (see Section 5.2.10)

Notes:

Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.

See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.

Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.

N/A – Not applicable.

5.2.1 Hazardous Substances and Petroleum Products

The primary chemicals used at the site include sanitizers and detergents in retail sales areas and beauty products (including bleaches, color developer, etc.) in the beauty salon and department. Except for one 55-gallon drum of hydraulic oil located in the freight elevator control room, chemical storage at the site is limited to retail-sized (less than five gallons) janitorial and maintenance-related products, such as hydraulic oil, paints, and sanitizers. Three unlabeled approximately 5-gallon containers were located near the emergency generator (currently broken) in the mechanical penthouse. Facility personnel had no knowledge of the contents or purpose of the containers, but assumed they were diesel fuel for the emergency generator. No evidence of significant release was observed in these areas. Chemicals are not stored in exterior areas of the site.

Facility personnel knew of no significant spills or releases of materials in chemical storage areas. While dedicated secondary containment was not provided for all of the drums and containers, Ramboll did not observe evidence of spills or uncontrolled releases from these storage areas, other than minor staining in some interior (i.e., chemical storage and maintenance area) and paved (i.e., loading dock and parking lot) areas. Staining did not appear to extend to floor drains, storm water drains or unpaved surfaces.

5.2.2 Aboveground Storage Tanks

No current or former ASTs were identified associated with the site. Although not considered an AST, the site operates a diesel generator that is equipped with a 24-gallon diesel fuel reservoir. Facility personnel did not identify any release associated with the diesel reservoir and no visual evidence of spills or uncontrolled releases was observed during Ramboll's site visit.

5.2.3 Underground Storage Tanks

No USTs are known to be present at the site, however, a total of five USTs were formerly located at the site in association with the former automotive shop operations and facility. Information regarding the removal of the USTs was not identified during this assessment.

5.2.4 Polychlorinated Biphenyls

Facility personnel knew of no on-site equipment that is known to contain polychlorinated biphenyls (PCBs). Three pad-mounted transformers are present on the property. The units are not labeled as to their PCB content. The two-story building is equipped with three hydraulic elevators. Facility personnel had no information regarding the hydraulic fluid contained in the elevator reservoir. Because the building was constructed in 1972, before the 1979 federal ban on the manufacture of PCBs, it is possible that the hydraulic fluid contained in the elevator reservoir contain PCBs. Facility personnel indicated that the elevators are serviced annually and within the past year. As such, it is likely that hydraulic fluid used in the building elevators in the early 1970s (and potentially containing PCBs) has been replaced and removed from the site.

Ramboll observed no indication of major leaks or releases from electrical equipment during the site visit.

5.2.5 Stains or Corrosion on Interior Floors, Walls, or Ceilings

Ramboll observed minor floor staining in the mechanical penthouse, fire pump room, loading dock area, and maintenance areas. This staining did not appear to be indicative of widespread releases or losses. Additionally, minor staining was observed in the vicinity of a floor drain located in the mechanical penthouse and appeared to be related the water treatment system for the chillers, but the exact source is unknown. Concrete floors in the vicinity of the staining appeared to be in good condition, with no evidence of cracking.

5.2.6 Stained Soil or Pavement

Ramboll observed evidence of minor pavement staining in the paved parking areas located north, east and south of the building. This staining is consistent with from minor drips from customer vehicles parked in this area. In addition, Ramboll observed minor pavement staining in the loading dock area. Pavement in the vicinity of the observed staining appeared to be in good condition, with no evidence of major cracking.

5.2.7 Asbestos Containing Materials

The building (1972) and parking structures (2000s) at the site were constructed prior to and after the time that asbestos was generally phased out of use in many building material applications during the mid-1980s. According to facility personnel, multiple asbestos abatements have been conducted in the past during renovation of the men's and junior's departments of the store. Exact dates and building materials removed during abatements are unknown. Additionally, given the date of construction of the building (1972) at the site, it is possible that other ACMs are present in building materials. In the event that renovation or demolition of structures is to occur in the future, a comprehensive (demolition-level) asbestos survey is required.

5.2.8 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building in 1972, it is likely that lead-based paint was used on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility, and Ramboll observed the paint to be in good condition.

5.2.9 Water Intrusion

Ramboll did not perform a mold survey at the site. Facility personnel reported that there had not been any past water intrusion events.

5.2.10 Radon

Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, out of 45 sites surveyed in San Mateo County, three sites were over 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first floor room at two sites was 0.100 pCi/L.

6. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the site located at 1122 El Camino Real in San Bruno, California in June 2021. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Section 7 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

6.1 Findings, Opinions, and Conclusions

6.1.1 Recognized Environmental Conditions

This assessment has revealed no evidence of recognized environmental conditions in connection with the site.

6.1.2 Other Findings

In addition to RECs discussed above, the following additional findings related to potential contamination concerns were identified:

- **Former USTs without Closure Documentation.** A total of five USTs were formerly located at the site in association with the former automotive shop operations. Three 10,000-gallon gasoline (one premium unleaded, one unleaded, and one regular) USTs were installed in 1972 and listed as being last used in 1983. One 500-gallon waste oil tank was installed in 1972 and listed as being active. Additionally, one 550-gallon waste oil UST with an unknown installation date is also listed as being active. Facility personnel indicate there are no active USTs on site but had no knowledge regarding the historical UST closure process(es) prior or during the demolition of the automotive operations building in 2005, and closure documentation is not available from other resources reviewed for this assignment. Regulatory database search results do not identify any continuing obligations related to the closure of the USTs. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, additional information (e.g., confirmatory sample data) would be required to evaluate the potential for subsurface impacts, if any, related to the operation of USTs at the site.
- **Past Operations at the Site.** The site has been used for various purposes since the late 1890s, including as a horse, dog, motorcycle and automotive race track (1899-1964), military training and operations (1914-1918, 1941-1950), internment camp operations (1942), automotive shop operations (1972–2005), and retail operations (1972–present). Several of these former operations may have included the use of petroleum products, solvents, adhesives, paint, metals, acids, caustics, corrosives, explosives, propellants, lead, and other chemicals. Additionally, historical operations conducted between site development and the early 1980s predate the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. No subsurface characterization activities are known to have been conducted at the site. Ramboll's review did not identify documentation of a release. Facility personnel are not aware of any major spills or releases at the site and there is no current regulatory scrutiny related to contamination matters at the site.

6.1.3 De Minimis Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the

attention of appropriate governmental agencies. Ramboll identified the following *de minimis* conditions related to the site:

- **Pavement and Floor Staining.** Ramboll observed multiple areas of exterior pavement and interior flooring where oil stains were apparent. The stains were limited in areal extent, the underlying pavement/flooring appeared to be intact, and no stains appeared to reach floor drains or storm water drains. As such, Ramboll considers this matter to represent a *de minimis* condition.

6.1.4 Non-Scope Considerations

Ramboll identified the following finding that relates to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials (ACMs).** The building (1972) and parking structures (2000s) at the site were constructed prior to and after the time that asbestos was generally phased out of use in many building material applications during the mid-1980s. According to facility personnel, multiple asbestos abatements have been conducted in the past during renovation of the men's and junior's departments of the store. Exact dates and building materials removed during abatements are unknown. Additionally, given the date of construction of the building (1972) at the site, it is possible that other ACMs are present in building materials. In the event that renovation or demolition of structures is to occur in the future, a comprehensive (demolition-level) asbestos survey is required.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building in 1972, it is likely that lead-based paint was used on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility, and Ramboll observed the paint to be in good condition.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site. Facility personnel reported that there had not been any past water intrusion events.
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, out of 45 sites surveyed in San Mateo County, three sites were over 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first floor room at two sites was 0.100 pCi/L.

6.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions.
- During the site visit, Ramboll did not observe the roof of the building due to access and safety constraints.
- Historical information, such as aerial photographs, was not readily available to characterize the property from the present back to the property's obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is a Sanborn Map dated 1925, which shows the site was already developed as the Tanforan Race Track.
- Lack of information (e.g., confirmatory sample data) necessary to evaluate the potential for subsurface impacts, if any, related to operation of the former USTs.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

7. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap/Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting, Inc. (Ramboll) was retained by Alexandria Real Estate Equities, Inc. (ARE or "the Client") to perform a Phase I Environmental Site Assessment (ESA) of the site located at 1150 and 1178 El Camino Real in San Bruno, California (herein referred to as the "facility" or the "site"). Ramboll's assessment was conducted in connection with a potential purchase of the site. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 7).

1.1 Site Summary

The northeastern section of The Shops at Tanforan, specifically the Sears building and former Sears Automotive Center are owned by Seritage Growth Properties. This approximately 11-acre site is improved with an approximately 84,800 square-foot department store, which is connected to the rest of The Shops at Tanforan (the "shopping mall building") to the southwest and the approximately 20,350 square-feet auto center, a standalone building. The Sears department store and Sears Automotive Center are located at 1150 and 1178 El Camino Real, respectively. The Sears building is a three-story retail building, located on the northeast section of the shopping mall on its own parcel of land. There are two incorporated parking lots surrounding that section of the shopping mall, located north and west of the Sears building. Separate from the Sears building is the former Sears Automotive Center, which has a main floor and a basement floor, and it is located in the northeast section of the same parcel. Both buildings are largely vacant; Seritage leases the front of the first story section of the Sears building to Spirit Halloween, LLC, for seasonal retail.

The site was developed with the southern portion of the Tanforan Race Track ("Race Track") in 1899. The Race Track was temporarily converted into a United States military training center from 1914 to 1918 and again from 1941 to 1950, a use that included an internment camp in 1942. Structures associated with the Race Track were destroyed in a fire in 1964. The Sears building was constructed in 1969, and automotive center building was constructed in 1972. Sears operated the facility as a retail department store and automotive center until vacating the site in 2020.

1.2 Recognized Environmental Conditions

This assessment has revealed the following REC related to potential contamination concerns:

- **On-Site Groundwater and Soil Contamination Related to Historical Operations at Site.** The Sears Automotive Center formerly operated seven underground storage tanks (USTs) for the storage of gasoline (two 12,000-gallon and two 6,000-gallon), motor oil (two 530-gallon), and used oil (500-gallon). Following removal of the USTs between 1985 and 1987, investigations commenced to evaluate and delineate the extent of petroleum hydrocarbons in soil and groundwater beneath the site. Under the oversight of the San Mateo County Department of Environmental Health (SMCDEH), investigations continued into the 2000s and have included soil, groundwater, and soil vapor sampling, and the installation and periodic sampling of groundwater monitoring wells. In a letter dated March 15, 2013, SCMDEH stated that active remediation was not warranted for the former gasoline and oil USTs and the agency has not requested additional investigation of this area of the site since approximately that time. This was verified in an October 21, 2021 phone call with SMCDEH case worker, Brian Gwinn.

  In addition to the Sears Automotive operation, an eighth UST was discovered in 2001 during construction of the San Bruno Police Station located at a property adjacent to the southeast side

of the site (the adjacent property is owned by Bay Area Rapid Transit [BART]). BART contractors discovered a 100-gallon UST of unknown type and at a depth of approximately 16 feet in or adjacent to the excavation for the police station. This area is referred to as Anomaly E in correspondence and reports and appears to be a source area for petroleum and benzene impacts in the subsurface.

Agency correspondence states the tank was found in the basement area of the current police station. SMCDEH named BART as an additional responsible party in 2013, and BART has performed investigation and remediation of the area since that time. Investigation activities have included sampling and analysis of soil, soil vapor, indoor air, and groundwater, and periodic groundwater monitoring. Following a 2015 pilot test and preparation of a 2017 work plan, BART implemented a dual phase extraction (DPE) remedial program from August 22, 2019 through September 24, 2019 to remediate the source area at Anomaly E. Post remedial groundwater sample results indicate that benzene concentrations in groundwater monitoring wells were reduced by one to two orders of magnitude but remain above commercial/industrial screening criteria, and the trend of cumulative contaminant mass removal did not reach asymptotic conditions, signifying that the system may have been shut down prematurely.

Based on a September 22, 2021 letter and October 21, 2021 phone call with Mr. Gwinn, the SMCDEH requested an additional post-remedial groundwater monitoring event (inclusive of all wells on the site and in the vicinity of Anomaly E), and indicated that if results demonstrate a sustained reduction in groundwater contaminants, further remedial effort may not be necessary. In that scenario, the agency suggested that the case, which includes Sears Automotive (a portion of the site) and Anomaly E (located on BART property), may qualify for closure under the State Water Resources Control Board (SWRCB) Low-Threat Underground Storage Tank Case Closure Policy.

The presence of petroleum hydrocarbons and benzene in groundwater beneath the site at concentrations above current regulatory screening criteria constitutes a REC. It is not expected that site redevelopment would be inhibited in a significant manner by the identified issues. Irrespective of case status with the oversight agency, residual impacts present at this site are likely to be managed as part of redevelopment and construction, continued coordination with the agency, and the implementation of a soil management plan.

1.3 Notable Other Findings

Although not considered a REC, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM standard.

- **Past Operations at the Site.** The site has been used for various purposes since the late 1890s, including as a horse, dog, motorcycle and automotive racetrack (1899-1964), military training and operations (1914-1918, 1941-1950), internment camp operations (1942), automotive shop operations (1972–2020), and retail operations (1972–present). Several of these former operations may have included the use of petroleum products, solvents, adhesives, paint, metals, acids, caustics, corrosives, explosives, propellants, lead, and other chemicals. Additionally, historical operations conducted between site development and the early 1980s predate the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. With the exception of the current remedial activity occurring at the Sears Automotive Center, facility personnel are not aware of any major spills or releases at the site.

1.4 Non-Scope Considerations

Ramboll identified the following finding that relates to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials (ACMs).** The buildings (1969 and 1972) at the site were constructed prior to the time that asbestos was generally phased out of use in many building material applications during the mid-1980s. According to facility personnel, multiple mobilizations for asbestos abatement have been conducted in the past, including during renovation of the site in 2005. Exact dates and building materials removed during abatement are unknown, and ACM-related documentation was not available for review during this assessment. Additionally, given the date of construction of the buildings at the site, it is possible that other ACMs are present in building materials. In the event that renovation or demolition of structures is to occur in the future, a comprehensive (demolition-level) asbestos survey is required. This section will be updated with the results of a forthcoming visual and limited survey regarding the presence of ACM at the site.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the buildings in 1969 and 1972, it is likely that lead-based paint was used on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility, and Ramboll observed the paint to be in good condition.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site. Facility personnel reported that there had not been any past water intrusion events with the exception of roof leaks at the Sears department store that were immediately repaired, same day. No other information was available.
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, out of 45 sites surveyed in San Mateo County, three sites were over 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first-floor room at two sites was 0.100 pCi/L.

2. INTRODUCTION

2.1 Purpose

Ramboll was retained by ARE to conduct a Phase I ESA of the site in connection with a potential financial transaction. The purpose of the assessment was to identify RECs, which are defined in the ASTM Standard as:

> "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions."

2.2 Scope of the Assessment

Ramboll completed the following tasks, consistent with the ASTM Standard, during its Phase I ESA of the site:

- A visit to the site by Katie Zheng and Timothy Grant of Ramboll on October 5, 2021, to observe the exterior and interior features of the site and to identify the uses and conditions specified in Sections 9.4.1 through 9.4.4.7 of the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during or prior to the site visit with John Puamau, Operations Manager with CBRE Property Management and affiliated with the site since 2012. The aforementioned individual is referred to herein as "facility personnel". The facility personnel interviewed by Ramboll were identified by the Company as having good knowledge of the uses and physical characteristics of the site.
- A review of a radius report prepared by Environmental Data Resources, Inc. (EDR, see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site. The radius searched for each database, as well as the databases themselves, were selected in accordance with the ASTM Standard.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - The United States Environmental Protection Agency's (USEPA's) EnviroFacts database, which provides site information contained in multiple USEPA regulatory databases.
  - The Department of Toxic Substances Control (DTSC) EnviroStor database, which contains information about certain regulated facilities in California.
  - The State Water Resources Control Board (SWRCB) GeoTracker database, which contains information about groundwater contamination and clean-up sites in California
  - The California Geologic Energy Management Division (CalGEM), which contains information regarding oil and gas wells on and in the site vicinity
  - The DTSC Hazardous Waste Tracking System (HWTS), which contains hazardous waste manifest information reported to CalEPA.

- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources, including (where available) historical topographic maps and aerial photographs, city directories, and Sanborn Maps, to develop a history of the previous uses of the site and surrounding area.
  - Historical and site-specific information obtained from the following local agencies: the San Mateo County Assessor's Office (Assessor). Ramboll also requested information from the Department of Toxic Substances Control (DTSC), Regional Water Quality Control Board (RWQCB), San Bruno Fire Department (Fire Department), the City of San Bruno Building Division (Building Department), and the San Bruno Public Services Administration's Public Works Department (Public Works Department) but the agencies did not have any records pertaining to the site. Additionally, Ramboll contacted the SMCDEH; however, a response had not been received at the time this report was completed (some of the records on file with SMCDEH are expected to be duplicative of those reviewed on Geotracker [description below]).
  - A telephone interview on October 21, 2021 with SMCDEH personnel regarding an active environmental oversight case for the site.

  A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report.
- Ramboll reviewed prior environmental documentation obtained from the State Water Resources Control Board's GeoTracker website. All prior reports reviewed by Ramboll are attached as Appendix D. A complete list of documents Ramboll reviewed includes the following reports:
  - *Site Conceptual Model and Additional Screening Indoor Air Quality Monitoring Workplan, 1178 El Camino Real, San Bruno, California,* prepared by SCS Engineers, dated December 7, 2011;
  - *2018 First Semi-Annual Groundwater Monitoring Report, Sears Automotive Service Center (No. 1478), 1178 El Camino Real, San Bruno, California,* prepared by AECOM, dated May 21, 2018;
  - *Corrective Plan Implementation Report, Sears Automotive Service Center (No. 1478). Separate Source of Hydrocarbons in the Vicinity of the San Bruno Police Station, 1178 El Camino Real, San Bruno California,* repared by AECOM, dated April 28, 2020; and
  - *Separate Source of Hydrocarbons in the Vicinity of the San Bruno Police Station, Sears Automotive Center #1478, 1178 El Camino Real, San Bruno, California,* prepared by SMCDEH, dated September 22, 2021.
- A search for environmental liens or other activity and use limitations (AULs) for the site, provided by the third-party database provider (as shown in Appendix E). Ramboll ordered the lien search using the parcel number believed to be associated with the site, as obtained from the local tax assessor's office and other online resources.
- A review of any information provided by the user of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report.

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and the Client in June 2021. The standard ASTM scope was expanded to include a limited review of asbestos-containing materials, lead-based paint, water intrusion, and radon.

2.3 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the subject site are not considered to represent a significant concern to the site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation.

2.4 Reliance and General Limitations

This report has been prepared for the exclusive use of ARE and its affiliated entities and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment did not include an asbestos survey or inspection. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect asbestos-containing materials must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including materials typically considered suspect ACM, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Other issues considered outside the scope of the ASTM Standard and this review include lead in drinking water, polychlorinated biphenyls (PCBs) in building materials, cultural and historic resources, ecological resources, endangered species, and high voltage power lines.

However, Ramboll evaluated: the potential for asbestos and lead-based paint to be present in building materials based solely on the age of the buildings, the potential for radon and wetlands to be present in the vicinity of the site based on information provided by EDR, and the potential for water intrusion to have taken place at the building based on limited visual observations and information provided by facility personnel.

3. SITE DESCRIPTION

3.1 Site Setting

The site is owned by Seritage Growth Properties. This site is located approximately 10 miles south of San Francisco, California (Figure 1). The Sears department store building and Sears Automotive Center are identified as addresses 1150 and 1178 El Camino Real in San Bruno, California, respectively. According to the Assessor's Office, assessor's parcel number (APN) for the site is 014-316-330.

The Sears building is a three-story, approximately 84,800 square-foot-in-area retail building, located on the northeast section of the shopping mall. There are two incorporated parking lots surrounding that section of the shopping mall to the north and west. The former Sears Automotive Center, a standalone building, is located in the northeast section of the parcel. It is approximately 20,350 square feet with a main floor and basement floor, and it is surrounded by parking lots to the south and north. Both buildings are largely vacant; Seritage leases the front, first story section of the Sears building to Spirit Halloween, LLC, for seasonal retail. The eastern section of the parcel includes an area that is not part of the site for this assessment: 1188 El Camino Real (occupied by the Century movie theater) is a separate parcel and property that is surrounded on all sides by the site.

The site is accessed primarily from El Camino Real at the western site boundary, Huntington Avenue at the eastern site boundary, and Sneath Lane to the north. Customer and employee parking areas are present to the east, south, and west of the building, and delivery truck access to the bottom floor loadings docks were provided to the north of the building. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 51 feet near the northwestern corner to 31 feet along the northeastern corner of the site.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on site, with a slight downward slope to the east/northeast. Regional topography slopes gently downward to the east.
Hydrology		
Storm Water Runoff	Visual observations	Enters street drains and catch basins that discharge to the municipal storm sewer system.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	San Bruno Canal, located approximately 2,800 feet to the east at its nearest point. The Canal ultimately discharges to the San Francisco Bay, located approximately 1.6 miles to the east of the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Flood Plain	FEMA*; Facility personnel;	Facility personnel reported no known occurrences of flooding at the site. The site is not located within a 500-year flood zone.
Wetlands	NWI*	There are no federally designated wetlands on site. Federally designated wetlands are located approximately one-half mile east of the site.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map; 2018 First Semi-Annual Groundwater Monitoring Report, Sears Automotive Center, 1178 El Camino Real, San Bruno, California	Based on the topographic gradient, shallow groundwater likely flows east to northeast, toward the San Francisco Bay. A 2018 groundwater monitoring report for the site indicates that groundwater flows north to north-northeast.
Depth to Groundwater	2018 First Semi-Annual Groundwater Monitoring Report, Sears Automotive Center, 1178 El Camino Real, San Bruno, California	Based on groundwater monitoring conducted at the site in 2018, groundwater was encountered at approximately 18 to 20 feet bgs.
On-site Wells	Facility personnel; Visual observations	There are nine groundwater monitoring wells on site.
Nearest Groundwater Supply Wells	Database report	One federally registered well, which is registered as a public supply well, is present more than a half a mile southeast of the site. Approximately four private or municipal wells that may be used for water supply are located within approximately one mile south and west of the site.
Geologic Conditions	NCSS*	Regional soils are urban land with very slow infiltration rates.
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	Natural-gas fired heating units supply building heat. The building is cooled with air conditioning units.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Electricity Supplier	Facility personnel	Pacific Gas and Electric (PG&E)
Natural Gas Service	Facility personnel	PG&E
Use of Fuel Oil for Building Heat	Facility personnel	No known current or former use of fuel oil for building heat.
Water Supply	Facility personnel; City Website	City of San Bruno
Sanitary Sewer	Facility personnel	The site is connected to the municipal sanitary sewer system maintained by the City of San Bruno
Septic Systems	Facility personnel	No identified current or former septic systems.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory

* - Source was provided in the environmental database report.

3.2 Current Use of Site

3.2.1 Current Operations

Sears vacated the Sears building in 2020; it is currently predominantly vacant and no longer in use, with the exception of a temporary Spirit Halloween shop that occupies a quarter of the main floor space. Janitorial supplies are limited, as the seasonal shop maintains only spray bottles for surface cleaning. A mechanical room, boiler, and chiller system is located on the eastern and southeast section of the Sears building. In addition to these systems, a water purification system is located to the left of the chillers, and it utilizes a 55-gallon drum of water treatment chemical to minimize corrosion in the system's coils.

The Sears Automotive Center is no longer in operation and closed in February 2020. The building has a main floor and basement floor and was primarily used as a car servicing center. Within the Sears Automotive Center, there are two freight elevators and an ADA accessibility lift In the basement, the building houses two unlabeled above-ground tanks that appear to have been used for new motor oil and waste oil.

3.3 Current Uses of Adjoining Properties

The site is located in a mixed residential/commercial land use area. The nearest residential area is located approximately 360 feet east (downgradient) of the site. Based on discussions with facility personnel, Ramboll's visual observations from the site boundary and nearby roads, and a limited review of publicly available information, a general evaluation of the current use of adjacent properties was developed, as described Table 2.

Table 2: Current Use of Adjacent Properties

Direction	Property/Land Use	Ramboll's Observations
North	Sneath Lane, followed by a mixed residential commercial area.	In addition to adjacent properties moving away from the site, the site completely surrounds a separate land parcel that is currently used as a movie theater. No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted.
East	The San Bruno Police Station and Bart terminal, followed by Huntington Avenue, followed by a residential area.	
South	Highway 380, followed by a residential area.	
West	El Camino Real. A mixed residential and commercial area is located across El Camino Real.	

Notes:

During the site visit, Ramboll walked or drove by the borders of these properties that are adjacent to the subject site. Ramboll did not enter the neighboring properties.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in October 2021 to prepare a summary of listings in federal and state agency databases for the site and facilities within applicable radii of the property, as specified by the ASTM standard.[1] A copy of the environmental database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by a third-party database provider (see Appendix B) and also searched the GeoTracker, EnviroStor, and HWTS databases. The site is listed on several environmental databases, as discussed in Table 3.

Table 3: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
Sears #1478 is listed in on the Historical Underground Storage Tank (Hist UST), Leaking Underground Storage Tank (LUST), Hazardous Waste and Substances List (Cortese) and Historical Cortese databases for several fuel USTs that leaked impacting soil and groundwater.	The Sears Automotive Center formerly operated seven USTs for the storage of gasoline (two 12,000-gallon and two 6,000-gallon), motor oil (two 530-gallon), and used oil (500-gallon). Following removal of the USTs between 1985 and 1987, investigations commenced to evaluate and delineate the extent of petroleum hydrocarbons in soil and groundwater beneath the site. Under the oversight of the SMCDEH, investigations continued into the 2000s and have included soil, groundwater, and soil vapor sampling, and the installation and periodic sampling of groundwater monitoring wells. In a letter dated March 15, 2013, SCMDEH stated that active remediation was not warranted for the former gasoline and oil USTs and the agency has not requested additional investigation of this area of the site since approximately that time. This was verified in an October 21, 2021 phone call with SMCDEH case worker, Brian Gwinn. In addition to the Sears Automotive operation, an eighth UST was discovered in 2001 during construction of the San Bruno Police Station located adjacent to the southeast side of the site (the adjacent property is owned by BART). BART contractors discovered a 100-gallon UST of unknown type and at a depth of 16 feet in or adjacent to the excavation for the police station. This area is referred to as Anomaly E in correspondence and reports and appears to be a source area for petroleum and benzene impacts in the subsurface. Agency correspondence states the tank was found in the basement area of the current police station. SMCDEH named BART as an additional responsible party in 2013, and BART has performed investigation and remediation of the area since that time. Investigation activities have included sampling and analysis of soil, soil vapor, indoor air, and groundwater, and periodic groundwater monitoring. Following a 2015 pilot test and

[1] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 3: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
Sears #1478 is listed in on the Historical Underground Storage Tank (Hist UST), Leaking Underground Storage Tank (LUST), Hazardous Waste and Substances List (Cortese) and Historical Cortese databases for several fuel USTs that leaked impacting soil and groundwater. *(Continued)*	preparation of a 2017 work plan, BART implemented a DPE remedial program from August 22, 2019 through September 24, 2019 to remediate the source area at Anomaly E. Post remedial groundwater sample results indicate that benzene concentrations in groundwater monitoring wells were reduced by one to two orders of magnitude but remain above commercial/industrial screening criteria, and the trend of cumulative contaminant mass removal did not reach asymptotic conditions, signifying that the system may have been shut down prematurely. Based on a September 22, 2021 letter and October 21, 2021 phone call with Mr. Gwinn, the SMCDEH requested an additional post-remedial groundwater monitoring event (inclusive of all wells on the site and in the vicinity of Anomaly E), and indicated that if results demonstrate a sustained reduction in groundwater contaminants, further remedial effort may not be necessary. In that scenario, the agency suggested that the case, which includes Sears Automotive (a portion of the site) and Anomaly E (located on BART property), may qualify for closure under the SWRCB Low-Threat Underground Storage Tank Case Closure Policy. This matter is further discussed in Sections 4.4 and 6.
Sears numbers 6909, 1478, and 7098 are listed on the Resource Conservation and Recovery Act Small Quantity Generator (RCRA-SQG), RCRA-Large Quantity Generator (RCRA-LQG), San Mateo County Business Inventory (San Mateo Co. BI), California Environmental Reporting System (CERS), Facility Index System/Facility Registration System (FINDS), Enforcement and Compliance History Online (ECHO), RCRA Non-Generators of Hazardous Waste (NonGEN/NLR), and Emissions Inventory Data (EMI) databases for storage and generation of hazardous waste circa 1993 to 2020. Wastes included waste oil and mixed oil, other organic solids, unspecified organic liquid mixture, alkaline solution, unspecified solvent mixture, and off-spec, aged or surplus organics.	The listings do not suggest a contamination concern to the site, and no violations or issues or noncompliance are identified.

Notes:

The database search report includes listings for past site occupants that may indicate past use or storage of chemicals or petroleum products.

4.1.2 Database Review for Adjoining Properties

Based on a review of the environmental database search report, Ramboll identified the adjoining properties listed in Table 4 on databases indicative of a potential contamination concern.

Table 4: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
Tanforan Cleaners & Shoea 302 and 402 Tanforan Park (within the interconnected Shops at Tanforan to the south; located cross to upgradient from the site)	Tanforan Cleaners & Shoe is listed in the EDR Exclusive Historical Cleaners (EDR Hist. Cleaner) database, which is an EDR proprietary database that indicates that dry cleaning operations may have been performed. The property is listed as a dry-cleaning location from 1991 to 1998. There is no indication of a release in the listing.	The former dry cleaner is now Tanforan Dental and located approximately 150 ft southwest and upgradient of the site. The EDR proprietary database from which this listing is derived is based on business names as opposed to records or permits indicating dry cleaning was actually performed at the location. Based on the absence of indications of a release and/or subsurface impacts, this matter is unlikely to present a major concern to the site.
Firestone Tire 1110 El Camino Real (former tire center associated with the JC Penney building within the Tanforan shopping mall; located cross gradient from the site)	Firestone 36F3 is listed the Historical UST (HIST UST), Statewide Environmental Evaluation and Planning System UST (SWEEPS UST), California Facility Inventory Database UST (CA FID UST), and San Mateo Co. Business Inventory (San Mateo Co. BI) databases related to four USTs installed in 1972, including three 10,000-gallon tanks (one premium, one unleaded, and one regular, all of which were last used in 1983) and one 500-gallon waste oil tank. JC Penney is also listed in the HIST UST database for the same 500-gallon waste oil tank.	A total of five USTs were listed as formerly located on the JC Penney parcel, south of the department store in what is now a paved parking lot, in association with the former automotive shop operations. Three 10,000-gallon gasoline USTs were installed in 1972 and listed as being last used in 1983. One 500-gallon waste oil tank was installed in 1972 and listed as being active. Additionally, one 550-gallon waste oil UST with an unknown installation date is also listed as being active. During Ramboll's recent assessment performed for ARE on the adjacent JC Penney property in June 2021, facility personnel indicated there are no active USTs on the property but were unaware of the closure process prior or during the demolition of the automotive operations building in 2005. It is unclear whether the tanks were removed from the ground and if leaks were discovered upon closure of the tanks.

Notes:

[1] Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the subject site.

4.1.3 Database Review for Other Surrounding Properties

There are several listings in the environmental database report for non-adjoining off-site facilities within applicable ASTM search radii; however, Ramboll has not identified any properties that are likely to represent a potential contamination concern to the site.[2]

The database report indicates that poor or inadequate address information was available for several properties located in the vicinity of the subject site; therefore, these properties could not be readily mapped by the third-party provider. Because the location of these properties with respect to the subject site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the subject site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped properties identified by the third-party provider; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the subject site.

4.2 Historical Uses of the Site and Adjacent Properties

4.2.1 Past Uses of the Site

The site was developed as the Tanforan Race Track in 1899. The Race Tack hosted horse and dog racing, and also had motorcycle and automobile racing tracks. The Race Track was temporarily converted into a United States military training center during World War I (1914 – 1918). The 1925 Sanborn map depicts the site as having been developed with a portion of the dirt track, numerous stalls, a club house, and the southern portion of the Grandstand. In 1941, during World War II, the United States military again utilized the Race Track as a training center and from April to October 1942, the Tanforan Race Track became known as the Tanforan Assembly Center – an internment camp for Japanese Americans. An aerial photograph from 1946 depicts two artificial lakes with one located in the middle of the site and the other on the southern portion of the site. By the 1950s, the military training center was removed, and the site returned to use as a racetrack. A 1956 aerial photograph depicts a third artificial lake in the middle of the racetrack. The racetrack and associated structures burned down in 1964, and the current department store building and automotive center building were constructed in 1969 and 1972, respectively.

Table 5: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
Sanborn Maps (1943, 1946, 1956, and 1974)	The 1943 Sanborn map depicts the military base and multiple barrack-like structures existing at the site with a small, manmade pond in the middle of the site. By 1946, those structures have been removed, and the pond is no longer visible. By 1956, the racetrack has been revitalized. The first depiction of the shopping mall complex and current site layout occurs in 1974.

[2] In its evaluation, Ramboll considered only non-adjoining sites listed on databases indicative of contamination, with open status, located potentially upgradient of the site to represent a potential risk for contamination to the site (as the issuance of regulatory closure suggests that impacts to the subject site from the noted off-site property are unlikely).

Table 5: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
Aerial Photographs and Satellite Imagery[1] (1943 to 2016)	In the 1943 photograph, the site appears developed with the central portion of the Tanforan Race Track and buildings on the outer western and eastern edges of the track as well as inside the track. By 1946 the buildings are no longer present, and the racetrack remains. The 1946 photograph depicts two artificial lakes. A third artificial lake appears in the 1956 photograph. In the 1963 photograph, the artificial lakes appear smaller in size. In the 1968 photograph, the site appears graded. The 1974 and subsequent photographs show the site in its present configuration, with the department store building (part of the greater shopping mall building) and automotive center building, and parking lots in the remaining areas. No concerns are noted.
Topographic Maps (1896 to 2012)	The maps from 1896 to 1980 show a railway running alongside the eastern boundary of the site. The first depiction of the Tanforan Race Track occurs in the 1939 map. Two artificial lakes appear in the maps from 1947 to 1956 with a third lake appearing in the 1956 map. In the 1968 map, no structures or features are located on the site. The site appears in its current configuration on the 1973 and 1980 maps. No structures are visible on the subsequent maps. No concerns are noted.
City Directory Abstracts (1953 to 2017)	Sears is listed on the city directory consecutively from 1976-2017. Other occupants of the site buildings include Budget (2017), Lenscrafters (2010-2017), Maz Watch & Jewelry Repair (2010-2017), San Bruno Superior Mold (2014, 2017), Dental Health Care (1995-2014), San Bruno Miracle Ear (1995-2014), H&R Block (2005, 2010), Cole Vision Corp (2005), Premier Salons International (2005), Sierra Sounds (2005), Tranzact (2005), Capitol Prestige Travel (2000), Carlson Travel Network (2000), Coldwell Banker (1986), Allstate Insurance (1976, 1981), and USA Petroleum (1981).
Property Tax Map Report	The EDR Property Tax Map Report has no coverage of the target addresses.
Lien and AUL Search Report	On July 7, 2015, the title for parcel number 014-316-330 was transferred from Sears Roebuck and CO to Seritage SRC Financial, LLC. No liens or AULs are associated with the site.

Notes:

[1] In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.

4.2.2 Past Uses of Adjacent Properties

The properties in the vicinity of the site were used as part of the Tanforan Race Track from 1899 to 1964 including temporary military operations, as discussed in Section 4.2.1. The properties to the east have been single-family residential since at least 1943. In addition, the properties to the west of the site were used by the United States military for apparent residential and/or storage purposes from the 1940s until as recently as the 1990s; these properties were redeveloped in the early 2000s for residential and commercial uses. The 1949 Sanborn depicts a gas station to the west, which is the current location of a Shell gas station. The Shops at Tanforan (adjoining to the south) were constructed in the early 1970s and have been operated by various entities as restaurants, retailers

(i.e., apparel, homeware, jewelry, electronics, beauty, children's toys), and beauty salons since that time. The properties to the north were part of the Tanforan Race Track, and were vacant circa 1968 until the 1990s when they were developed for commercial purposes. Ramboll did not observe obvious indications of concern on the historical sources reviewed.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in the table below.

Table 6: Local Agency Information for the Site[1]

Agency Contacted/ Document Reviewed	Information Obtained
Hazardous Waste Tracking System Database	According to the HWTS database Sears generated and disposed of the following wastes circa 1993 to 2020, waste oil and mixed oil, other organic solids, unspecified organic liquid mixture, alkaline solution, unspecified solvent mixture, and off-spec, aged or surplus organics.
San Mateo County Tax Assessor	The site is described on the San Mateo County tax map as 014-316-330.

Notes:

[1] Ramboll also contacted the Department of Toxic Substances Control (DTSC), Regional Water Quality Control Board (RWQCB), San Bruno Fire Department (Fire Department), the City of San Bruno Building Division (Building Department), and the San Bruno Public Services Administration's Public Works Department (Public Works Department) but the agencies did not have any records pertaining to the site. Ramboll contacted the SMCDEH; however, a response had not been received at the time this report was completed.

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with facility personnel, a prior environmental assessment has been conducted at the site, as summarized below. Pertinent historical and site-related information contained in the prior report has been incorporated into other sections of this report.

- **2011 Site Conceptual Model (former UST information).** This report (obtained on Geotracker and prepared by SCS Engineers for Sears) indicates that seven USTs operated by Sears were formerly located at the site: two 12,000-gallon gasoline USTs, two 6,000-gallon gasoline USTs, two 530-gallon bulk motor-oil USTs, and one 500-gallon used-oil UST. The four gasoline and two motor-oil USTs were reportedly removed in 1985, and the 500-gallon used-oil UST was reportedly removed in January 1987 (the former location of the used oil UST is unknown). In addition, geophysical surveys performed at the site identified five subsurface anomalies (designated Anomalies A through E) not in proximity to the former USTs but on site. Elevated concentrations of petroleum hydrocarbons were detected near Anomalies D and E.

In February 2001, a BART subcontractor discovered a 100-gallon UST at a depth of approximately 16 feet bgs in a construction zone that is now believed to be in the basement area of the adjacent San Bruno Police Station to the southeast of the site, near the southwest corner of the BART construction zone during excavation for the police station. According to this individual, the UST was old, had

numerous rusted holes in the bottom, and the soil adjacent to it was "dark", with a "strong odor like gasoline or diesel". The UST was removed by a BART subcontractor. Field notes completed by BART's environmental consultant indicate that a sheen was present in groundwater in the vicinity of the UST (BART, 2010). The tank appeared to be located downgradient of MW-11 and cross-gradient of MW-4, in the vicinity of Anomaly E.

- **2013 SMCDEH Letter.** In response to a Feasibility Study and Corrective Action Plan submitted by SCS Engineers on behalf of Sears, the SMCDEH concurred with the proposed approach of DPE remedial program to address impacts in the vicinity of Anomaly E, stating that area is the only area where free product had been observed, and where the document exposure pathway warranted active remediation. The letter stated that no active remediation was necessary for other areas of the site. It appears that the pilot test for the selected remedial approach at Anomaly E was implemented in 2015.
- **2018 First Semi-Annual Groundwater Monitoring Report.** In March 2018, AECOM conducted a semi-annual groundwater monitoring event (the most recent monitoring event for which a report is available). Depth to groundwater ranged from approximately 6 to 16 feet below the top of casing (i.e., top of the well near the ground surface). The hydraulic gradient or groundwater flow direction was not calculated since the shallow water bearing zone is very flat. Groundwater sample results indicated elevated concentrations of total petroleum hydrocarbons as gasoline (TPHg) and benzene, toluene, ethylbenzene and xylene (BTEX) and appear to be localized around the southern portion of the police station (Anomaly E) with one elevated TPHg concentration 50 feet south of the Sears Automotive Center building.
- **2020 Corrective Action Implementation Report.** BART implemented a DPE remedial program from August 22, 2019 through September 24, 2019 to remediate the source area at Anomaly E. Post remedial groundwater sample results indicate that benzene concentrations in groundwater monitoring wells were reduced by one to two orders of magnitude but remain above commercial/industrial screening criteria, and the trend of cumulative contaminant mass removal did not reach asymptotic conditions, signifying that the system may have been shut down prematurely.
- **2021 SMCDEH Letter.** In response to AECOM's Corrective Action Implementation Report, the SMCDEH requested an additional post-remedial groundwater monitoring event and indicated that if results demonstrate sustained reduction in groundwater contaminants, further remedial effort may not be necessary. In that scenario, the agency suggested that the site may qualify for closure under the SWRCB Low-Treat Underground Storage Tank Case Closure Policy. Via a conversation with SMCDEH staff on October 21, 2021, the agency confirmed that the comment regarding the path forward to closure is applicable to the entire case (not just Anomaly E).

4.5 User-Provided Information

Ramboll provided the client with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, AULs, specialized knowledge of the site, site value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The user provided the information requested in the User Questionnaire; however, the client is unaware of any information beyond that obtained by Ramboll as part of the current assessment.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

During the site visit, observations of both the interior and exterior portions of the site were made to evaluate if any RECs, as defined in Section 7, are present. Ramboll did not observe the roof of the building.

5.2 General Site Setting and Observations

Ramboll made observations concerning all of the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in the table below. Additional information regarding observed and historical items is provided in the sections following the table.

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the property	See Section 3.2
9.4.2.2	Past use(s) of the property	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses	**Present** (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	(see Section 5.2.2) **Formerly Present** Absent
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	Absent
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	**Present** (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	**Present** (see Section 5.2.1)
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	Absent
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment on-site (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment on-site (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	(see Section 5.2.3) **Present** Unlikely **Present** Unlikely

Table 7: Summary of Site Reconnaissance Observations		
ASTM Section	**Issue**	**Observation**
Interior Issues		
9.4.3.1	Heating/cooling systems	**Present** (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	**Present** (see Section 5.2.4)
9.4.3.3	Floor drains and interior sumps	Absent
Exterior Issues		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	Absent
9.4.4.2	Stained soil or pavement	**Present** (see Section 5.2.5)
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the property	Absent
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	**Present** (see Table 1)
9.4.4.7	Septic systems or cesspools	Absent
Non-Scope Considerations		
N/A	Asbestos Containing Materials	see Section 5.2.6
N/A	Lead-Based Paint	see Section 5.2.7
N/A	Water Intrusion	see Section 5.2.8

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
N/A	Radon	see Section 5.2.9

Notes:

Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.

See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.

Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.

N/A – Not applicable.

5.2.1 Hazardous Substances and Petroleum Products

The primary chemicals used at the Sears department store building include corrosive agents used to clean the building's chiller system coils, identified as Cascade Water Service's agent C876L and Coilox Concentrate. Chemicals and hazardous substances formerly used and currently stored at the Sears Automotive Center includes fresh motor oil and waste oil. Oil is stored in approximately 43 gallon drums.

5.2.2 Underground Storage Tanks

No known USTs are currently present on site. Seven former USTs for the storage of gasoline (two 12,000-gallon and two 6,000-gallon), motor oil (two 530-gallon), and used oil (500-gallon) were removed between 1985 and 1987. There is currently an open SMCDEH related to the former USTs discussed further in Sections 4.4 and 6.

5.2.3 Polychlorinated Biphenyls

Multiple elevators and transformers are located at the site. In the Sears department store building, there are two elevators and in the automotive center there are two freight elevators and an ADA accessibility lift for basement wheelchair access. Facility personnel had no information regarding the hydraulic fluid contained in these elevator reservoirs. Because the buildings were constructed in 1969 and 1972, before the 1979 federal ban on the manufacture of PCBs, it is possible that PCBs could be present in the oil associated with the equipment. However, facility personnel indicated that the elevators were serviced monthly by OTIS, and as such, it is likely that hydraulic fluid used in the building elevators in prior to 1979 (potentially containing PCBs) has been replaced and removed from the site.

Ramboll observed no indication of major leaks or releases from electrical equipment during the site visit.

5.2.4 Stains or Corrosion on Interior Floors, Walls, or Ceilings

Ramboll observed minor oil staining located next to the oil drums in the Automotive Center basement and staining in the boiler room due to the discharge of condensate. The concrete floors in the vicinity of the staining near the drums appeared to be in good condition with no evidence of cracking.

5.2.5 Stained Soil or Pavement

Ramboll observed evidence of minor pavement staining in the paved parking areas. Pavement staining was noted in several locations within the Automotive Center likely due to the routine vehicle maintenance. Ramboll also observed minor pavement staining in the loading dock areas of both buildings. Pavement in the vicinity of the observed staining areas appeared to be in good to fair condition, with no evidence of major cracking

5.2.6 Asbestos Containing Materials

The buildings (1969 and 1972) at the site were constructed prior to the time that asbestos was generally phased out of use in many building material applications during the mid-1980s. According to facility personnel, multiple mobilizations for asbestos abatement have been conducted in the past, including during renovation of the site in 2005. Exact dates and building materials removed during abatement are unknown, and ACM-related documentation was not available for review during this assessment. Additionally, given the date of construction of the buildings at the site, it is possible that other ACMs are present in building materials. In the event that renovation or demolition of structures is to occur in the future, a comprehensive (demolition-level) asbestos survey is required. This section will be updated with the results of a forthcoming visual and limited survey regarding the presence of ACM at the site.

5.2.7 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the buildings in 1969 and 1972, it is likely that lead-based paint was used on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility, and Ramboll observed the paint to be in good condition.

5.2.8 Water Intrusion

Ramboll did not perform a mold survey at the site. Facility personnel reported that there had not been any past water intrusion events with the exception of roof leaks at the Sears department store that were immediately repaired, same day. No other information was available.

5.2.9 Radon

Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, out of 45 sites surveyed in San Mateo County, three sites were over 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first-floor room at two sites was 0.100 pCi/L.

6. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the site located at 1150 El Camino Real in San Bruno, California in October 2021. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Section 7 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

6.1 Findings, Opinions, and Conclusions

6.1.1 Recognized Environmental Conditions (RECs)

This assessment has revealed the following REC related to potential contamination concerns:

- **On-Site Groundwater and Soil Contamination Related to Historical Operations at Site.** The Sears Automotive Center formerly operated seven underground storage tanks (USTs) for the storage of gasoline (two 12,000-gallon and two 6,000-gallon), motor oil (two 530-gallon), and used oil (500-gallon). Following removal of the USTs between 1985 and 1987, investigations commenced to evaluate and delineate the extent of petroleum hydrocarbons in soil and groundwater beneath the site. Under the oversight of the San Mateo County Department of Environmental Health (SMCDEH), investigations continued into the 2000s and have included soil, groundwater, and soil vapor sampling, and the installation and periodic sampling of groundwater monitoring wells. In a letter dated March 15, 2013, SCMDEH stated that active remediation was not warranted for the former gasoline and oil USTs and the agency has not requested additional investigation of this area of the site since approximately that time. This was verified in an October 21, 2021 phone call with SMCDEH case worker, Brian Gwinn.

  In addition to the Sears Automotive operation, an eighth UST was discovered in 2001 during construction of the San Bruno Police Station located at a property adjacent to the southeast side of the site (the adjacent property is owned by Bay Area Rapid Transit [BART]). BART contractors discovered a 100-gallon UST of unknown type and at a depth of approximately 16 feet in or adjacent to the excavation for the police station. This area is referred to as Anomaly E in correspondence and reports and appears to be a source area for petroleum and benzene impacts in the subsurface.

  Agency correspondence states the tank was found in the basement area of the current police station. SMCDEH named BART as an additional responsible party in 2013, and BART has performed investigation and remediation of the area since that time. Investigation activities have included sampling and analysis of soil, soil vapor, indoor air, and groundwater, and periodic groundwater monitoring. Following a 2015 pilot test and preparation of a 2017 work plan, BART implemented a dual phase extraction (DPE) remedial program from August 22, 2019 through September 24, 2019 to remediate the source area at Anomaly E. Post remedial groundwater sample results indicate that benzene concentrations in groundwater monitoring wells were reduced by one to two orders of magnitude but remain above commercial/industrial screening criteria, and the trend of cumulative contaminant mass removal did not reach asymptotic conditions, signifying that the system may have been shut down prematurely.

  Based on a September 22, 2021 letter and October 21, 2021 phone call with Mr. Gwinn, the SMCDEH requested an additional post-remedial groundwater monitoring event (inclusive of all wells on the site and in the vicinity of Anomaly E), and indicated that if results demonstrate a sustained reduction in groundwater contaminants, further remedial effort may not be necessary. In that scenario, the agency suggested that the case, which includes Sears Automotive (a portion of the

site) and Anomaly E (located on BART property), may qualify for closure under the State Water Resources Control Board (SWRCB) Low-Threat Underground Storage Tank Case Closure Policy.

The presence of petroleum hydrocarbons and benzene in groundwater beneath the site at concentrations above current regulatory screening criteria constitutes a REC. It is not expected that site redevelopment would be inhibited in a significant manner by the identified issues. Irrespective of case status with the oversight agency, residual impacts present at this site are likely to be managed as part of redevelopment and construction, continued coordination with the agency, and the implementation of a soil management plan.

6.1.2 Notable Other Findings

In addition to the REC discussed above, the following additional finding related to potential contamination concerns was identified:

- **Past Operations at the Site.** The site has been used for various purposes since the late 1890s, including as a horse, dog, motorcycle and automotive racetrack (1899-1964), military training and operations (1914-1918, 1941-1950), internment camp operations (1942), automotive shop operations (1972–2020), and retail operations (1972–present). Several of these former operations may have included the use of petroleum products, solvents, adhesives, paint, metals, acids, caustics, corrosives, explosives, propellants, lead, and other chemicals. Additionally, historical operations conducted between site development and the early 1980s predate the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. With the exception of the current remedial activity occurring at the Sears Automotive Center, facility personnel are not aware of any major spills or releases at the site.

6.1.3 De Minimis Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll identified the following *de minimis* conditions related to the site:

- **Pavement and Floor Staining.** Ramboll observed multiple areas of exterior pavement and interior flooring where oil and rust stains were apparent. The stains were limited in areal extent, the underlying pavement/flooring appeared to be intact.

6.1.4 Non-Scope Considerations

Ramboll identified the following finding that relates to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials (ACMs).** The buildings (1969 and 1972) at the site were constructed prior to the time that asbestos was generally phased out of use in many building material applications during the mid-1980s. According to facility personnel, multiple mobilizations for asbestos abatement have been conducted in the past, including during renovation of the site in 2005. Exact dates and building materials removed during abatement are unknown, and ACM-related documentation was not available for review during this assessment. Additionally, given the date of construction of the buildings at the site, it is possible that other ACMs are present in building materials. In the event that renovation or demolition of structures is to occur in the future, a comprehensive (demolition-level) asbestos survey is required. This section will be updated with the results of a forthcoming visual and limited survey regarding the presence of ACM at the site.

- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the buildings in 1969 and 1972, it is likely that lead-based paint was used on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility, and Ramboll observed the paint to be in good condition.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site. Facility personnel reported that there had not been any past water intrusion events with the exception of roof leaks at the Sears department store that were immediately repaired, same day. No other information was available.
- **Radon**. Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, out of 45 sites surveyed in San Mateo County, three sites were over 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first-floor room at two sites was 0.100 pCi/L.

6.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions.
- During the site visit, Ramboll did not observe the roof of the building due to access and safety constraints.
- Historical information, such as aerial photographs, was not readily available to characterize the property from the present back to the property's obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is a Sanborn Map dated 1943, which shows the site was already developed as the Tanforan Race Track.
- Ramboll contacted the SMCDEH; however, a response had not been received at the time this report was completed. Some of the records on file with SMCDEH are expected to be duplicative of those reviewed on GeoTracker.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

7. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap/Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

Appendix A: Limited Asbestos Survey Report by Terracon Consultants, Inc.
Appendix B: Links to Regulations

1. SCOPE AND APPLICATION

ARE-San Francisco No. 94 Holding, LLC (ARE) has retained Ramboll US Consulting, Inc. (Ramboll) to prepare this Asbestos Operations and Maintenance Program (O&M) for The Shops at Tanforan located at 300 Tanforan Way and 1122, 1150, and 1178 El Camino Real in San Bruno, California (the "site"). In October 2021, Ramboll prepared Phase I Environmental Site Assessment (ESA) reports for three different portions of the site. Additionally, a Limited Asbestos Survey Report for the site was prepared by Terracon Consultants, Inc. (Terracon) in November 2021.

The ESAs noted the site has a combined footprint of approximately 40 acres. The site can roughly be split into three areas:

1. The central portion of the site referred to as The Shops at Tanforan ("main mall building") associated with the addresses 1150 El Camino Real and 300 Tanforan Way[1];
2. The southern portion of the site where the former JC Penney retail department store is located at 1122 El Camino Real; and
3. The northern portion of the site where the former Sears retail department store at 1150 El Camino Real and former Sears automotive center at 1178 El Camino Real are located.

The Century movie theater is located east of the Sears retail building and is surrounded on all sides by the site. The movie theater is not included in this O&M plan.

The ESAs noted the site was developed with the southern portion of the Tanforan Race Track ("Race Track") in 1899. The Race Track, was temporarily converted into a United States military training center from 1914 to 1918 and from 1941 to 1950, including an internment camp in 1942. Structures associated with the Race Track were destroyed in a fire in 1964. The ESA reported that site personnel indicated multiple mobilizations for asbestos abatement were conducted in the past including during renovation of the site in 2005, but no documentation was available for review.

This O&M Program was developed to assist ARE with safely managing asbestos containing materials (ACMs) that might be present in the Buildings. The objective is to protect employees, tenants, contractors, visitors, and the environment from potential hazards that could be associated with asbestos exposure, and to assist ARE in complying with applicable asbestos federal, state, or local regulations.

1.1 Asbestos Background

Asbestos is the name of a class of minerals that occur in a fibrous form. Asbestos has been used in many different materials over the years including pipe insulation, floor tile, mastics, spray-on fireproofing, acoustic ceiling plaster, roofing products, and many other applications.

The health effects that can be associated with asbestos exposure are caused by the inhalation of asbestos fibers. The potential for an asbestos containing product to release respirable fibers depends largely on its degree of "friability". Materials that can be crumbled with hand pressure are considered "friable" and are considered to be more risky, especially if disturbed or in a damaged condition. Some examples of friable

[1] The ESA notes the address as 300 Tanforan Park; however, a Google search for 300 Tanforan Park yields results for 300 Tanforan Way.

materials include spray-on fireproofing and thermal systems insulation (TSI) (such as pipe insulation).

Conversely, non-friable materials do not readily release asbestos fibers unless aggressively disturbed. Examples of non-friable materials include floor tile, mastics, roofing materials, Transite panels (similar to a cement board), and laboratory countertops.

As a general rule, ACMs that are in good condition and left undisturbed do not present a health risk. Asbestos exposures can occur when ACMs are damaged or impacted during the course of construction or other work. ACMs that are maintained in good condition and left undisturbed can be safely managed in-place.

1.2 Regulatory Summary

California Health and Safety Code section 39658(b)(1) establishes the Asbestos National Emissions Standards for Hazardous Air Pollutants (NESHAP) as an airborne toxic control measure. The California Occupational Safety and Health Administration (Cal/OSHA) enforces the State of California and federal asbestos regulations related to the disturbance of ACM and occupational exposure to asbestos.

The United States Environmental Protection Agency (USEPA) issued rules for the application, removal, and disposal of Presumed or Suspect ACMs under the asbestos NESHAP. The USEPA delegated responsibility for administering relevant provisions of the asbestos NESHAP to the California Air Resources Board (CARB). CARB enforces compliance with the Asbestos NESHAP in California's sixteen 'non-delegated' air districts. Projects in San Bruno, California fall under the delegated authority of the Bay Area Air Quality Management District (BAAQMD).

2. OVERVIEW OF THE O&M PROGRAM

2.1 Objectives of the Program

The primary objectives of this O&M Program include:

1. Minimizing the potential for future release of asbestos fibers;
2. Maintaining confirmed, suspected, or presumed ACMs in sound condition;
3. Monitoring the condition of confirmed, suspected, or presumed ACMs on a regular basis; and
4. Providing for the prompt identification and immediate remediation of asbestos hazardous conditions that might be created.

2.2 Definitions

The following definitions are applicable to this O&M Program:

- *Asbestos Containing Material (ACM)* is a building material that is found to contain greater than 1 percent asbestos by laboratory analysis.
- *Asbestos Program Manager (APM)* is the person that will be responsible for implementation of this Program on behalf of ARE.
- *Assumed Asbestos Containing Material (assumed ACM)* is a building material that could potentially contain asbestos, but was not readily accessible for sampling or difficult to sample (such as roofing materials) to determine asbestos content.
- F*riable Asbestos Containing Material (Friable ACM)* is a material that contains greater than 1 percent asbestos and when dry, can be crumbled, pulverized, or reduced to a powder by hand pressure. Spray-on fireproofing is an example of a friable material.
- *Non-Friable Asbestos Containing Material (Non-Friable ACM)* is a material that contains greater than 1 percent asbestos and cannot be crumbled, pulverized, or reduced to a powder by hand pressure. Includes two categories:
  - Category I: packing, gaskets, resilient floor covering, and asphalt roofing products; and
  - Category II: any material that is not considered Category I, including, asbestos cement siding and shingles, Transite panel boards, and asbestos cement pipe.
- *Presumed Asbestos Containing Material (PACM)* is defined by the Occupational Safety and Health Administration (OSHA) as TSI and surfacing material found in buildings constructed no later than 1980. Resilient floor coverings and adhesives are also treated as PACM.
- *Suspect Asbestos Containing Material (suspect ACM)* is a material that could potentially contain asbestos, is accessible for sampling, but has not been sampled to determine asbestos content. For the purpose of this O&M Program, suspect ACMs should be treated as assumed ACMs until bulk sampling and laboratory analysis proves otherwise.

2.3 Key Elements

The O&M Program for the site will be managed and implemented by ARE to safely maintain ACMs in-place. Some of the key elements of the O&M Program are summarized below:

1. ARE will designate an APM to implement and oversee the elements of the O&M Program for the site.

2. In the event a suspect ACM is encountered that has not been previously identified and it is not known if the material contains asbestos, the material will be treated as a suspect ACM until sampling and analysis demonstrate otherwise.
3. Confirmed, suspect, or presumed ACMs that have been identified at the site will be maintained in good condition.
4. Surveillance of the confirmed, suspect, or presumed ACMs, or PACMs or suspect ACMs will be conducted periodically to observe for evidence of damage or changing conditions that could lead to damage. Findings of the periodic surveillance shall be documented and kept on file.
5. ARE employees, tenants and their employees, or other parties are expressly prohibited from sampling, disturbing, cleaning up, or removing confirmed, suspect, or presumed ACMs. All ACM related work will be performed by California Certified Asbestos Consultants and/or California Certified Asbestos Abatement Contractors.
6. No new ACMs shall be installed at the site. Contract documents for construction or renovation work shall specify this requirement.
7. The APM will be notified of all pending construction, renovation, or demolition work that has the potential to disturb in-place confirmed, suspect, or presumed ACMs. An asbestos hazard assessment must then be performed to determine if confirmed or suspect ACMs will be impacted.
8. If confirmed, suspect, or presumed ACMs will be impacted by the work, the materials must be removed by a California Certified Asbestos Abatement Contractor before the construction, renovation, or demolition work begins.
9. Building maintenance and cleaning staff that have the potential to impact confirmed, suspect, or presumed ACMs during the course of their work will be notified of the types and locations of confirmed, suspect, or presumed ACMs at the site and advised to avoid disturbance.
10. Outside contractors that may be at the site and have the potential to impact confirmed, suspect, or presumed ACMs during the course of their work will be notified of the type and locations of confirmed, suspect, or presumed ACMs in their work areas before the start of work and advised to avoid disturbance.
11. Contractors, custodial and maintenance employees, site tenants, and ARE employees will be advised to notify the APM in the event of unintended disturbance of confirmed, suspect, or presumed ACMs.

This O&M Program assigns and outlines the responsibilities of the APM and other ARE staff that will be involved to successfully implement the Program.

2.4 Summary of Past Asbestos Work at the Site

The following reports were identified and used to summarize past work at the site relating to asbestos:

- *Phase I Environmental Site Assessment:* 1122 El Camino Real, San Bruno California, prepared by Ramboll, dated July 2021
- *Phase I Environmental Site Assessment:* 1150 and 1178 El Camino Real, prepared by Ramboll, dated October 2021
- *Limited Asbestos Screening Level Survey:* The Shops at Tanforan, 1150 El Camino Real, San Bruno, California, prepared by Terracon, dated November 11, 2021

Ramboll's Phase I ESAs noted that buildings on the site (built from approximately 1969 to 1972) were constructed before asbestos was generally phased out of use in most building material applications in the 1980s. According to facility personnel, multiple asbestos abatements have been conducted in the past, including during a renovation of the JC Penney's men's and junior's departments, and a larger renovation of the site in 2005. According to results from federal and state environmental database searches, various amounts of asbestos-containing waste was removed from the site in 1992, 1996, 1999, 2003, 2004, 2015, and 2019. Exact dates and building materials removed during abatement are unknown, and ACM-related documentation was not available for review during this assessment.

Terracon conducted a limited asbestos survey to identify predominant suspect ACMs at the site. Terracon noted the sampling was performed of a generally limited nature, and additional survey efforts will be necessary prior to any construction-related activities at the site. Terracon was not provided access to any areas outside of the general public spaces and all sampling was limited to non-destructive methodologies. Results of this survey are discussed in Section 2.5.

2.5 Known, Suspect, or Presumed ACMs at the Site

Terracon reported that they identified a total of fifteen[2] predominant suspect ACMs at the site. Bulk analysis was performed on seven of these materials, none of which were reported positive for asbestos.

Terracon reported that eight additional predominant suspect ACM were observed at the site, but were not sampled due to the destructive means necessary and the current site ownership provisions. As such, Terracon identified the following materials as materials that are assumed to contain asbestos:

- **All interior walls:**
  - Drywall and joint compound
- **All main mall areas:**
  - Ceramic floor tile (12" glossy white/grey tile with grout and mortar)
- **Target retail store:**
  - Floor tile (12" white and grey flecks and adhesive)
  - Ceiling tile (2'x4' white lay-in system, pinhole fissure pattern)
- **JC Penney retail store:**
  - Ceramic floor tile (12" beige mottled tile with grout and mortar)
  - Ceiling tile (2'x4' white lay-in system, pinhole fissure pattern)
- **Entire mall building:**
  - Roofing
- **Throughout mall interior and in various tenant and incident spaces:**
  - Carpet/flooring adhesives

Buildings must be thoroughly inspected by a California Certified Asbestos Consultant prior to beginning any demolition or renovation activity. The inspection is used to

[2] Terracon initially reported there were thirteen (13) identified predominant suspect ACMs throughout the site on page 1 of their report; however, they identified fifteen in the report and noted there was fifteen noted in the conclusions.

determine the presence, type, location and amount of asbestos present and what state or federal asbestos rules and regulations apply to the project.

2.6 Asbestos Program Manager

An APM will be designated to oversee and implement this program.

The APM shall be contacted for all issues relating to ACMs at the site. The APM will retain certified asbestos consultants and contractors as required by the state of California to conduct asbestos assessments to facilitate planned repair or renovation work, or in the event of the disturbance of suspect ACMs/PACMs may have occurred.

This O&M Program must remain current and properly implemented over the years. In the event the current APM changes, a new APM shall be designated, and this section of the O&M Program will be updated.

3. RESPONSIBILITIES

In order to properly implement this O&M Program, the APM, property maintenance staff, and outside asbestos professionals have specific responsibilities to ensure proper compliance with regulations. The following sections describe the roles and responsibilities for the personnel involved in implementing the O&M Program.

It is the intent of ARE to have all asbestos-related work (inspections, repairs, clean-up, removal, etc.) conducted by outside asbestos professionals that are certified in the state or local jurisdiction. Building maintenance and custodial staff are specifically prohibited from handling or disturbing suspect ACMs/PACMs.

3.1 Asbestos Program Manager

The APM is responsible for implementing the O&M Program and for the review of all work performed under the O&M Program. The APM has specific responsibilities to ensure compliance with applicable regulations. Key responsibilities of the APM include:

1. Serving as the primary point of contact for any asbestos issues at the site.
2. Staying informed regarding all site maintenance work or renovation/demolition activities that could potentially disturb suspect ACMs/PACMs.
3. Retaining a California Certified Asbestos Consultant to conduct Asbestos Assessments of planned work areas where suspect ACMs/PACMs could be disturbed.
4. Ensuring that applicable ARE maintenance/cleaning staff and outside contractors are notified of the presence of suspect ACMs/PACMs that may be impacted by their work. Documentation of the notifications must be maintained on file.
5. Notifying existing tenants, new tenants, or architects/engineers that may design work at the site about the O&M Program elements as well as the requirements for safely identifying and handling suspect ACMs/PACMs that may be disturbed prior to any renovation or construction work that may impact suspect ACMs/PACMs.
6. Ensuring maintenance and custodial staff who may disturb or work near suspect ACMs/PACMs receive asbestos awareness training in accordance with the requirements of the federal OSHA 29 CFR 1929.1101 and California OSHA (Cal/OSHA) Title 8 CCR 1529 are aware of the requirements of this O&M Program.
7. Ensuring that a California Certified Asbestos Abatement contractor is retained to perform any asbestos abatement or cleanup work that may be required to facilitate repairs, renovation, or demolition.
8. Conducting surveillance of the suspect ACMs/PACMs periodically to document its condition.
9. Initiating corrective measures using certified asbestos professionals in the event damaged suspect ACMs/PACMs are identified.
10. For all projects involving new construction, the APM shall require (or specify that ARE tenants require) in writing that all newly installed materials at ARE shall be asbestos free.
11. Maintaining records of all asbestos related notifications, training, sampling, abatement projects, waste disposal, and emergency response. Documents that must be maintained include:
    a. Reports documenting any/all asbestos inspection or asbestos assessment work.
    b. Training records.

c. Written notifications to tenants, contractors, and site employees about the presence of suspect ACMs/PACMs at the site.

d. Bulk sampling reports.

e. Reports documenting asbestos abatement work, including project notifications, project location, contractor name, abatement work methods, air sampling data (when applicable), removal permits, and waste manifests.

12. Ensuring that the past and current asbestos related reports are kept on file and readily accessible for review.

3.2 Maintenance and Custodial Staff

Maintenance and custodial employees are prohibited from handling or disturbing suspect ACM/PACM. However, it is important that maintenance personnel are informed of the types and locations of suspect ACMs/PACMs at the site. The custodial and maintenance personnel should act "as the eyes and ears" of the APM and report any damage or changes in ACMs condition to the APM as soon as discovered.

Note that while maintenance and custodial personnel will receive asbestos awareness training, this training does not allow them to disturb or impact suspect ACMs/PACMs.

Responsibilities of maintenance personnel include:

1. Attending an asbestos awareness training class and maintaining records of attendance.
2. As required by regulations, participating in periodic refresher trainings.
3. Observing damaged suspect ACMs/PACMs during the course of daily work and notifying the APM of those damaged materials when discovered.
4. Performing their work without disturbing or impacting suspect ACMs/PACMs.
5. Notifying the APM of any project or repair work that may impact suspect ACMs/PACMs. This must be done before the start of work.
6. Ensuring that no work is performed until the APM has completed an asbestos assessment of the planned work area and authorized the work to proceed.

3.3 California Certified Asbestos Abatement Contractors

Responsibilities of certified asbestos abatement contractors that perform work at the Building shall include:

1. Providing all required asbestos removal project notifications to regulatory agencies in accordance with the timeframes established in the regulations and not begin work until the specified time and/or when approved by the agency.
2. Ensuring that all asbestos abatement workers are certified as such and have received the appropriate level of training, including maintaining all training records for each abatement worker.
3. Conducting all work in strict accordance with applicable regulations and the requirements of this O&M Program.
4. Properly containing and disposing all suspect ACMs/PACMs that are generated on-site in accordance with the established regulatory requirements. The contractor shall maintain copies of all waste disposal manifests as required by the regulations.
5. Providing documentation to the APM for all asbestos related work performed on site. Documentation shall include project notifications, dates and locations of work

performed, daily logs, worker licenses, waste manifests, and other pertinent information.

3.4 California Certified Asbestos Consultants

Responsibilities of certified asbestos consultants that perform inspection and oversight work on-site include:

1. Providing only trained and certified asbestos professionals to conduct asbestos related work on site.
2. Performing all asbestos assessments, testing, monitoring, and asbestos management work in strict accordance with applicable regulations and this O&M Program.
3. Providing documentation of all asbestos related work and reports to the APM.

4. O&M PROGRAM ELEMENTS

ARE has established the following policies with respect to suspect ACM/PACM at this site. All affected ARE personnel, tenants, ARE retained architects and engineers, and outside contractors shall be informed of and comply with the policies in this section.

4.1 Prohibition of New Asbestos Uses

The installation of any new asbestos containing material at any ARE building is prohibited. Construction documents prepared for renovation work and specifications for new building materials or equipment must specifically state that ACM are prohibited.

4.2 Asbestos Assessments

An asbestos assessment must be conducted prior to all repair, renovation, or construction related work that has the potential to disturb suspect ACM/PACM. Close coordination with existing and new tenants and maintenance personnel is required to ensure the APM is notified of all construction activities.

Any asbestos assessment must be completed by a California Certified Asbestos Consultant and include the following:

1. Review of project drawings and/or discussions with knowledgeable staff to obtain a clear understanding of the location and scope of planned construction.
2. A thorough review of existing asbestos inspection reports, if any, to determine if suspect ACMs/PACMs were previously identified in that space.
3. A review of previous asbestos abatement reports, if any, to determine if adequate documentation exists concerning removal of suspect ACMs/PACMs from that space. If the answer to this step is "Yes," the consultant shall provide a written report documenting their findings and referencing the sources of information along with a conclusion that renovation work may proceed without further need for asbestos testing.
4. If the answer to the question in Step 3 is "No", then an inspection and bulk sampling at the Building is required as summarized below:
    a. A walk-through of the planned work area must be performed by a California Certified Asbestos Consultant to observe existing conditions and suspect ACMs/PACMs.
    b. Bulk sampling of suspect ACMs/PACMs to confirm or refute the presence of asbestos of previously "assumed" or "presumed" materials or other materials not previously sampled.
    c. Making a written determination as to what (if any) suspect ACMs/PACMs will be impacted in the space.
    d. Providing a written report of findings along with recommendations for asbestos abatement and/or other special precautions as warranted to ensure suspect ACMs/PACMs are safely managed.

4.3 Asbestos Abatement Work

All asbestos abatement work must be performed by trained and accredited asbestos professionals in strict accordance with current regulations. Asbestos removal work should only be implemented where bulk sampling and laboratory analysis has confirmed the presence of ACMs. Removal of suspect ACMs/PACMs should not be performed until bulk sampling confirms asbestos.

Asbestos abatement work methods will vary depending on the type and quantity of ACMs being removed. Typically, one of the following three methods will be employed for asbestos abatement:

1. Gross removal methods are typically employed for projects involving the removal of friable suspect ACMs/PACMs, or larger projects involving non-friable ACMs. Suspect ACMs/PACMs are removed inside of a fully contained, negative pressure enclosure as required under applicable regulations. Final air clearance testing is always required following gross removal work, again in accordance with applicable regulations.
2. Non-friable removal methods can be used when the materials being removed are non-friable suspect ACMs/PACMs and they can be removed intact. ACM floor tile or floor tile mastic, roofing materials, and exterior sealants, can in many cases be carefully removed using non-friable removal methods.
3. Glove-bag removal methods are typically used to remove ACM pipe insulation on smaller sized projects.

The APM must be notified of all pending asbestos abatement work and the removal methods that will be employed.

The APM shall maintain records of all asbestos related work that occurs at the site. Written reports shall be developed that document the location of the work, the type(s) of ACMs removed, air sampling data, waste manifests, and other project records.

4.4 Prohibited Practices

The following work practices shall not be used for any work that may disturb ACM:

- Dry sanding;
- High-speed abrasive disc saws that are not equipped with a source ventilator or enclosure with high-efficiency particulate air (HEPA) filtered exhaust air;
- Compressed air used to remove or clean dust and debris that may be associated with ACM; and
- Dry sweeping, shoveling, or other dry clean-up of dust and debris containing ACM.

4.5 Posting of Signs

Warning signs should also be posted in areas where construction, maintenance, or renovation work creates the potential for employees to come into contact with, release, or disturb ACMs. The signs will be posted by ARE in common areas, mechanical rooms, utility closets, roof access points and other areas that are under the control of ARE. The tenant will be responsible for providing signage in any area where they are responsible for the performance of, or contracting for, such work.

Warning signs must include the following information as described in Title 8 CCR 1529(k)(7):

DANGER

ASBESTOS

MAY CAUSE CANCER

CAUSES DAMAGE TO LUNGS

AUTHORIZED PERSONNEL ONLY

Additionally, where the use of respirators and protective clothing is required in the regulated area under this section, the warning signs must include the following:

WEAR RESPIRATORY PROTECTION AND CLOTHING IN THIS AREA

4.6 Notifications to Employees and Contractors

ARE maintenance/custodial employees and outside contractors must be notified of the presence of suspect ACMs/PACMs that they may come in contact with during the course of their work activities at the Building. Since employees work in different areas of the site depending on their job description, different notification letters can be issued to employees depending on their specific work activities. The APM shall maintain a file documenting such employee notifications.

Contractors that work at the site are specifically prohibited from handling or disturbing suspect ACMs/PACMs. Before contractors begin work, the APM must notify the contractor in writing of the type of suspect ACMs/PACMs that may be present and that these materials cannot be disturbed by their work. If disturbance is required, an Asbestos Assessment as described above must be completed before the start of work.

The APM shall maintain a file documenting such contractor notifications.

4.7 Federal, State, and Local Agency Notifications to Regulatory Agencies

The APM shall ensure compliance with any state or local notification requirements. California Health and Safety Code section 39658(b)(1) establishes the Asbestos NESHAP as an airborne toxic control measure enforceable by CARB. The Asbestos NESHAP protects the public and environment by minimizing the release of asbestos fibers during renovation and demolition activities. CARB enforces compliance with the Asbestos NESHAP in California's sixteen 'non-delegated' air districts. In these non-delegated districts, an Asbestos Notification Form is to be submitted to the USEPA (Region 9) with a copy of the notification submitted to CARB. In delegated air districts, each air district runs its own Asbestos NESHAP. Therefore, notifications for any demolition or renovation projects must be submitted to the air district with jurisdiction (refer to https://ww2.arb.ca.gov/our-work/programs/asbestos-neshap-program/renovation-or-demolition-locations for information on responsible air districts). Projects in San Bruno, California fall under the delegated authority of the Bay Area Air Quality Management District (BAAQMD).

Notification in California is required for removal of 100 ft^2 or more of surface area. The Notification will typically be issued by the Certified Asbestos Abatement Contractor and must be submitted a minimum of 10 working days before the start of abatement. The APM shall maintain copies of all notifications.

Cal/OSHA enforces the State of California and federal asbestos regulations related to the disturbance of ACM. Cal/OSHA requires a Certified Asbestos Consultant prepare an abatement design for projects involving the disturbance or removal of greater than 100 ft^2 of confirmed or suspected ACMs. The Certified Asbestos Consultant must also review the work area prior to the start of work and is responsible for the performance of clearance air monitoring. All asbestos abatement workers, supervisors, contractors, consultants, and training providers must be certified by the State of California.

Additional information regarding state and local regulatory requirements can be obtained at http://www.dir.ca.gov/dosh/Asbestos.html and in Appendix B regarding the following regulations:

- Cal/OSHA, California Code of Regulations Title 8, Article 4, Sect. 1529 Construction Safety Orders, Asbestos
- Cal/OSHA, California Code of Regulations Title 8, Article 110, Sect. 5208 General Industry Safety Orders, Asbestos
- California Health & Safety Code, Section 25915, et seq. Asbestos Notification

4.8 Periodic Surveillance

Periodic surveillance of suspect ACMs/PACMs throughout the site should be performed to ensure these materials are maintained in good condition and areas of damage (if any) are identified. The current condition of suspect ACMs/PACMs will be assessed and compared to its condition in previous surveys. Any deterioration or changes in condition will be recorded. Damaged materials will be repaired or removed to maintain the materials in good condition.

The surveillance can be performed by the APM, trained and knowledgeable maintenance staff, or a Certified Asbestos Consultant. Documentation of the annual surveillance must be maintained along with this O&M Program.

4.9 Training

The APM, maintenance staff, and custodial staff shall receive initial "asbestos awareness" orientation training in accordance with OSHA requirements (29 CFR 1926.1101) and/or Cal/OSHA requirements (Title 8 CCR 1529). The training shall provide guidance on the scope and contents of this O&M Program.

The "awareness" training program shall cover the following topics:

- Methods of recognizing asbestos, including how to presume that certain building materials contain asbestos.
- The health effects associated with asbestos exposure. The relationship between smoking and asbestos in producing lung cancer.
- The nature of operations that could result in exposure to asbestos.
- The importance of necessary protective controls to minimize exposure including, as applicable, work practices, respirators, housekeeping procedures, protective clothing, emergency procedures, waste disposal procedures, and any necessary instruction in the use of these controls and procedures.
- The type and location of suspect ACMs/PACMs at the site.
- The content of federal and state asbestos regulations.
- Clear direction that no work shall be performed that will impact suspect ACMs/PACMs.

The APM shall maintain records that document which employees have received the awareness training.

Any maintenance or custodial staff, tenant employees, or contractors that may perform general O&M tasks that involve the repair or maintenance of building components that contain minor amounts of damaged ACMs (less than 25 linear feet or 10 square feet) must have completed an initial and refresher OSHA Asbestos Class III (Operations and Maintenance) training course, and must provide evidence to the APM of completion, including completion of annual refresher training, in accordance with the OSHA requirements of 29 CFR 1926.1101(k)(9) and Cal/OSHA requirements of Title 8 CCR 1529(k)(9). The APM will not permit any person to undertake O&M work unless they can provide the required training documentation.

4.10 Emergency Response

Emergency response actions shall be carried out in as safe a manner as possible. Generally, these activities involve situations where suspect ACM are disturbed or damaged through the unplanned disruption of building finishes that affect the condition of suspect ACM/PACM, or situations where suspect ACMs/PACMs are present on or near these systems.

Basic steps that shall be taken in the event of unplanned asbestos disturbance include:

- The APM shall coordinate the response and ensure the area is isolated and access is restricted to the space.
- The APM shall direct site operations to shut down and isolate the heating, ventilating and air-conditioning systems to the space where feasible.
- The APM shall visually assess the disturbance and develop a corrective action plan to repair or remove the damaged materials. Obtain guidance and direction from a California Certified Asbestos Consultant as necessary.
- Retain a California Certified Asbestos Abatement contractor to perform any repair or removal work. All workers that perform removal or repair work shall be trained and certified and must show evidence of same prior to performing removal or repair work.[3]
- Conduct a fine cleaning of the space using wet towels and a HEPA filtered vacuum, if warranted, based on the type of disturbance. All visible debris shall be cleaned from the area.
- Conduct air monitoring in the space prior to re-occupancy.
- Document all work that was performed including the original cause of the disturbance.
- Initiate corrective measures to ensure a similar disturbance does not occur in the future.

In the event of a fire or explosion, the immediate response shall be to evacuate the area and protect human health. The APM will attempt to notify emergency responders of the locations and possible hazards associated with asbestos in the affected area(s).

4.11 Record Keeping

The APM shall maintain all appropriate records as required by OSHA, Cal/OSHA, other applicable regulatory standards, and the requirements of this O&M program. These records shall be maintained in a central location of the site and are to be updated as the information changes or new documents/information are generated or discovered.

The following records (as applicable) of O&M work should be retained in permanent files:

- A copy of this O&M Plan (initial program and all updated versions)
- Initial asbestos inspection and assessment reports
- Reinspection/periodic surveillance reports
- Notification forms and letters
- Data to rebut any presumption that materials are asbestos-containing
- Qualifications and performance records for outside contractors performing O&M work
- Waste shipment records

[3] Dust and debris in an area containing visibly deteriorated ACMs may not be blown out with compressed air, swept dry with a broom, or vacuumed without using a HEPA filtered vacuum. This cleaning must be carried out by workers who have, at a minimum, Asbestos Operations and Maintenance training.

5. LIMITATIONS

This O&M plan was developed from available information related to presence of known ACM and/or suspect ACM/PACM in accordance with generally accepted professional practice standards. Ramboll has not independently verified the information contained in the cited documents and has not performed an asbestos building inspection to determine whether any of the Building materials referred to in this O&M plan are or are not ACM. Ramboll does not make any warranties or representations, whether expressed or implied, regarding the accuracy of any of the information that we relied on and cannot be held accountable or responsible for any inaccuracies that may be present. Our judgements and conclusions as expressed in the O&M plan are based on conditions that existed at the time of the preparation of this document. It is likely that conditions will change over time and this document may not be used for future evaluations of the site, unless updates are conducted by a consultant familiar with asbestos uses in site.

This O&M plan has been prepared for the exclusive use of ARE-San Francisco No. 94 Holding, LLC, its agents, and its legal counsel as it pertains to this Building. Any reliance on this document by third parties shall be at such party's sole risk.

RE: Limited Asbestos Screening Level Survey
The Shops at Tanforan
1150 El Camino Real
San Bruno, California
Terracon Project No: R1217775

Dear Ms. Benitez:

Terracon Consultants, Inc. (Terracon) hereby submits the attached report for the referenced site to Ramboll US Consulting, Inc. (Ramboll). The purpose of this report is to present the data gathered during the limited asbestos screening survey that was performed at the referenced site on October 15, 2021. This survey was conducted in general accordance with Terracon's proposal PR121775, dated September 28, 2021. We understand that this survey was requested due to the eventual acquisition of the affected site, which encompasses an entire shopping center in San Bruno, California.

Terracon appreciates the opportunity to provide this service to Ramboll. If you have any questions regarding this report, please contact our office at your convenience.

Sincerely,
Terracon Consultants, Inc.

William Frieszell, CAC, CIH
Senior Industrial Hygienist

Steff Steiner, CAC
Office Manager

LIMITED ASBESTOS SCREENING LEVEL SURVEY
The Shops at Tanforan
1150 El Camino Real
San Bruno, California

Terracon Project No. R1217775
November 11, 2021

1.0 INTRODUCTION

Terracon Consultants, Inc. (Terracon) conducted a limited asbestos screening survey of the referenced site located 1150 El Camino Real in San Bruno, California. The survey was conducted on October 15, 2021 in general accordance with Terracon's proposal PR1217775, which was issued on September 28, 2021.

It should be noted that the purpose of this survey was to identify predominant suspect building materials within affected areas as part of ongoing due diligence efforts pending the acquisition of the site. Sampling was performed of a generally limited nature, and additional survey efforts will be necessary prior to any construction related activities at the site. Terracon was not granted entry to any areas outside of general public access at any point during the survey. Furthermore, sampling was limited to entirely non-destructive methodologies.

A total of thirteen (13) predominant suspect asbestos containing materials (ACMs) were identified throughout the affected structures, of which seven (7) could be sampled on a limited basis during the survey. Of the materials sampled, none were reported positive for asbestos. All other material identified were excluded from sampling at the time of the survey as destructive sampling methods would have been required to collect the samples. These materials have been assumed to contain asbestos in accordance with current regulatory framework.

Due to the constraints placed on the survey by building ownership and occupancy, samples could not be collected in full accordance with randomized sampling schemes promulgated by the US Environmental Protection Agency under the Asbestos Hazard Emergency Response Act (AHERA). Therefore, while certain materials have been listed as negative for detectable concentrations of asbestos, additional sampling will be required to fully characterize these materials prior to building demolition.

The referenced survey, as performed by Terracon is not, nor is it intended to be, sufficient for the performance or bidding of construction or abatement related activities. Additional survey activities and destructive sampling of materials will be required prior to renovation activities, depending on the nature, extent, and location of those renovation activities, an additional destructive sampling of materials will be required prior to final demolition, if conducted.

1.1 Project Scope

The scope of the survey was as follows:

- Inspect the interior and exterior of the subject site for the presence of suspect ACMs.
- Collect samples of suspect predominant ACMs to the extent feasible.
- Asbestos bulk samples will be analyzed using polarized light microscopy (PLM) in accordance with the EPA's July 1993 method for the determination of asbestos in bulk building materials - EPA 600/R-93/116.
- Submit a written report including analytical results, regulatory requirements and conclusions as well as an estimated cost for the abatement of identified ACMs.

1.2 Reliance

This report is for the exclusive use of Ramboll and their client for use as due-diligence information prior to the acquisition of the subject site and surrounding hardscape on the referenced property. Reliance by any other party on this report is prohibited without written authorization of Terracon and their client. Reliance on this report by Ramboll and all authorized parties will be subject to the terms, conditions, and limitations stated in the proposal, this report and the project contract.

2.0 METHODS AND ASSESSMENT STRATEGY

2.1 Suspect Asbestos

The survey was conducted by William Frieszell, Certified Asbestos Consultant (CAC). During the survey, additional assistance was provided by Wyatt Renner, Certified Site Surveillance Technician (CSST). Copies of pertinent training certifications are included in Appendix B.

A summary of survey activities is provided below. EPA regulation 40 CFR 61, Subpart M, the National Emission Standards for Hazardous Air Pollutants (NESHAP) prohibits the release of asbestos fibers to the atmosphere during renovation or demolition activities. The asbestos NESHAP requires that regulated ACM be identified, classified, and quantified prior to planned disturbances, renovations, or demolition activities.

2.2 Visual Assessment - Asbestos

Survey activities were initiated with visual observation of accessible or visible areas of the subject structures to identify homogeneous areas of suspect ACMs. A homogeneous area (HA) consists of a building material that appears similar in terms of color, size and texture with consideration given to the date of installation. Visual assessment was limited to accessible areas in interior and exterior areas of the buildings.

2.3 Physical Assessment - Asbestos

A physical assessment of each HA of suspect ACM was conducted to assess the current friability and condition of the materials. A friable material is defined by the EPA as a material which can be crumbled, pulverized or reduced to powder by hand pressure when dry. Friability was assessed by physically touching suspect materials.

Bulk samples were collected only from accessible predominant building materials. Samples were placed in sealable containers and labeled with unique sample numbers using an indelible marker. The selection of sample locations and frequency of sampling were based on Terracon's observations and the assumption that like materials in the same area are homogeneous in content.

Terracon collected a total of twenty-five (25) bulk samples from seven (7) homogeneous areas of suspect ACM. Asbestos was not reported to be present in detectable concentrations in any of the materials sampled upon analysis. Eight (8) additional predominant suspect ACMs were not sampled during the survey and have been assumed to contain asbestos. A summary of the materials assumed as containing asbestos is included in Table I below. The non-ACMs and general sampling locations are listed in Table II below. It should be noted that the non-ACMs reported below have not been sampled in accordance to strategies outlined by the Asbestos Hazard Emergency Response Act (AHERA) as promulgated by the United States Environmental Protection Agency (US EPA). Therefore, additional sampling will be necessary to fully characterize these materials during a subsequent survey event.

2.4 Sample Analysis - Asbestos

Asbestos bulk samples were submitted under chain of custody to Aerobiology Laboratory Associates, Inc. (Aerobiology) in Phoenix, Arizona for analysis by polarized light microscopy with dispersion staining techniques per EPA methodology 600/R-93/116. The percentage of asbestos, where applicable, was determined by microscopic visual estimation. Aerobiology is accredited under the National Voluntary Laboratory Accreditation Program (NVLAP). The laboratory reports for the asbestos bulk samples are included as Appendix A.

3.0 SURVEY FINDINGS

3.1 Asbestos

Asbestos not detected in any of the seven (7) materials sampled during the course of the screening level survey event. Eight (8) additional predominant suspect homogeneous ACMs were observed but not sampled due to the level of destructive means necessary to access them as well as current site ownership provisions. These materials have been assumed to contain asbestos in accordance with existing regulatory framework. The confirmed and assumed ACMs are listed in Table I below. Any assumed material should be treated as asbestos-containing until

actual concentrations can be determined through acceptable sampling and analytical practices. Laboratory analytical reports are included as Appendix A.

Table I – Assumed Asbestos Containing Materials

Material Description	Material Locations	Asbestos Result	Estimated Quantity*	Waste Category
Drywall and Joint Compound	Material is Present throughout All Interior Wall Systems	ASSUMED	2,700,000	RACM
Ceramic Floor Tile System - 12" Glossy White/Grey Tile with Grout and Mortar	Material Appears Present Throughout Main Mall Area Flooring Systems	ASSUMED	850,000	Cat. II
Floor Tile - 12" White with Grey Flecks and Adhesive	Material is Present throughout Flooring Systems in Target Retail Store	ASSUMED	200,000	Cat. I
Ceiling Tile System - 2'x4' White Lay-in System, Pinhole Fissure Pattern	Material is Present throughout Drop Ceiling Systems in Target Retail Store	ASSUMED	200,000	RACM
Ceramic Floor Tile - 12" Beige Mottled Tile with Grout and Mortar	Material is Present throughout Flooring Systems in JC Penney Retail Store	ASSUMED	120,000	Cat. II
Ceiling Tile System - 2'x4' White Lay-in System, Pinhole Fissure Pattern	Material is Present throughout Drop Ceiling Systems in JC Penney Retail Store	ASSUMED	120,000	RACM
Building Roofing Systems	Materials are Located throughout Roofing Field Areas over Entire Mall Area	ASSUMED	1,000,000	Cat. I (Generally)
Carpet/Flooring Adhesives	Material is Present throughout Mall Area in Various Tenant and Incidental Spaces	ASSUMED	150,000	Cat. I

Cat. I = Category I Non-friable (note ACM must be reclassified as a RACM if rendered friable during removal); Cat. II = Category II Non-friable (note ACM must be reclassified as a RACM if rendered friable during removal); RACM = Regulated Asbestos Containing Material

*Estimated quantity should be field verified prior to abatement or abatement design

Non-ACMs and general sampling locations are listed in Table II below. It should be noted that these materials have not been sampled in accordance with protocols established under AHERA

in terms of numbers of samples to be collected or sample distribution. Therefore, additional sampling will be necessary to fully characterize these materials.

Table II - Non-Asbestos Containing Materials

Material Description	Material Locations
Concrete Skim Coating Material/Textured Paint	Building Exterior Wall Systems at Naan and Curry, JC Penney and Southeastern Parking Structure Areas
Exterior Wall Systems - Stucco with Scratch Coat	Building Exterior Wall Systems at Tanforan Dental, Eastern Main Mall Entry Way and Petco Entry Way
Exterior Wall Systems - 4”x16” Brick with Mortar	Building Exterior Wall Systems at Eastern and Western Former Sears Retail Space
Asphalt Paving Materials - Black	Seven Samples Collected from Exterior Parking Areas throughout the Tanforan Property
Building Concrete Materials	Samples Collected from Southwestern and Western Side Sidewalk Areas and Southern Mall Exterior Support Column
Asphaltic Coating on Concrete	Material Collected from Upper Level at Southeastern Main Parking Structure
Exterior Walkway Concrete Systems	Main Exterior Planet Fitness Walkway Area

Terracon has been asked to provide a budgetary estimate for the abatement of identified ACMs. While an estimate has been provided below in Table III, actual abatement bids may exhibit substantial variation based on the firm selected, timing of the project and numerous other factors. The numbers provided should be considered informational in nature and may significantly differ from actual bids submitted by contracting entities. Furthermore, the budgetary numbers in no way constitute an actual bid for abatement services by Terracon.

Table III - Asbestos Abatement Budgetary Estimates

Zone	Abatement Budget
Interior Materials	$21,250,000
Building Roof Level	$4,000,000

Zone	Abatement Budget
Total Site	$25,250,000

It should be reemphasized that although reasonable efforts were made to survey accessible suspect materials, additional suspect but un-sampled materials could be located under existing building materials, inside walls, above ceilings, in isolated areas or in other concealed areas. Any assumed material should be treated as asbestos or sampled to determine asbestos content before disturbing the material.

Negative materials have been reported in this document due to available data, however, due to constraints placed on the survey scope due to transitional ownership, not all of the materials could be sampled in accordance with present guidelines promulgated by AHERA. Additional sampling will be required prior to any sort of construction activities to be performed at the referenced site. This document is not intended to serve as a pre-renovation or demolition survey report.

4.0 CONCLUSIONS

Based upon the survey results, Terracon concludes the following:

- Asbestos was assumed to be present in eight (8) of the fifteen (15) identified predominant suspect ACMs throughout the referenced site.
- Terracon was only granted entry to publicly accessible areas of the site on the date of the survey.
- The referenced survey, as performed by Terracon is not, nor is it intended to be, sufficient for the performance or bidding of construction or abatement related activities. Additional survey activities and destructive sampling of materials will be required prior to renovation activities, depending on the nature, extent, and location of those renovation activities, and additional destructive sampling of materials will be required prior to final demolition, if conducted.
- Quantities provided are for information purposes only and are not intended to serve as the basis for any sort of contractor abatement bid. All quantities must be verified in the field by selected contractors during the bidding process.
- Abatement bids may exhibit substantial variation based on the firm selected, timing of the project and numerous other factors. The numbers provided should be considered informational in nature and may significantly differ from actual bids submitted by contracting entities. Furthermore, the budgetary numbers in no way constitute an actual bid for abatement services by Terracon.

5.0 REGULATORY OVERVIEW

5.1 Asbestos

The Asbestos NESHAP program in California is enforced by federal, state, and county Asbestos NESHAP Coordinators. For projects occurring in San Bruno, California, the Bay Area Air Quality Management District has been delegated authority from the EPA to enforce the Asbestos NESHAP within its respective jurisdictional boundaries, excluding tribal lands.

The asbestos NESHAP (40 CFR Part 61, Subpart M) regulates asbestos fiber emissions and asbestos waste disposal practices. The asbestos NESHAP regulation also requires the identification and classification of existing ACM according to friability prior to demolition or renovation activity. Friable ACM is a material containing more than 1% asbestos that, when dry, can be crumbled, pulverized or reduced to powder by hand pressure. All friable ACM is considered regulated asbestos-containing material (RACM).

The asbestos NESHAP regulation classifies ACM as either RACM, Category I non-friable ACM or Category II non-friable ACM. RACM includes all friable ACM, along with Category I and Category II non-friable ACM that has become friable, will be or has been subjected to sanding, grinding, cutting or abrading, or ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder in the course of renovation or demolition activity. Category I non-friable ACM are exclusively asbestos-containing packings, gaskets, resilient floor coverings, and asphalt roofing products that contain more than 1% asbestos. Category II non-friable ACM are all other non-friable materials other than Category I non-friable ACM that contain more than 1% asbestos.

The California Department of Occupational Safety and Health (DOSH) asbestos standard for construction (Title 8 CCR 1529) regulates workplace exposure to asbestos. The DOSH standard requires that employee exposure to airborne asbestos must not exceed 0.1 fibers per cubic centimeter of air (0.1 f/cc) as an eight-hour time weighted average (TWA) and not exceed 1.0 fibers per cubic centimeter of air (1.0 f/cc) over a 30-minute time period known as an excursion limit (EL). The TWA and EL are known as DOSH's asbestos permissible exposure limits (PELs). The DOSH standard classifies construction and maintenance activities which could disturb ACM and specifies work practices and precautions which employers must follow when engaging in each class of regulated work.

6.0 LIMITATIONS / GENERAL COMMENTS

This survey was performed as a portion of ongoing due diligence phase activities associated with the pending acquisition of the affected property. Due to building ownership and occupancy issues, Terracon was not authorized to perform fully destructive testing such as selective demolition of walls, dismantling of equipment or removal of protective coverings during the survey. Furthermore, multiple areas of each structure could not be viewed at the time of the survey due

to occupancy and tenant-notification restraints. Uncharacterized hidden materials may exist under existing finishes, equipment or structural materials.

This limited asbestos screening level survey was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing under similar conditions in the same locale. The results, findings, conclusions and recommendations expressed in this report are based on conditions observed during our survey at the subject site. The information contained in this report is relevant to the date on which this survey was performed and should not be relied upon to represent conditions at a later date. This report has been prepared on behalf of and exclusively for use by Ramboll for specific application to their project as discussed.

This document is provided solely for informational purposes related to the asbestos survey as performed by Terracon and is not intended to serve as an abatement specification. Furthermore, the level of survey provided would not be considered sufficient to serve as a renovation or demolition level event. No professional opinions have been expressed with regards to the means and/or methods to be utilized during the abatement and demolition process. All material quantities provided herein are estimates and should be verified by the owner's selected contractor(s) prior to the finalization of any bid for abatement services. Contractors or consultants reviewing this report must draw their own conclusions regarding further investigation or remediation deemed necessary. Terracon does not warrant the work of regulatory agencies, laboratories or other third parties supplying information which may have been used in the preparation of this report. No warranty, express or implied is made.

General Notes

- **ND** indicates no asbestos was detected; the method detection limit is 1 %.
- **Trace** or "<1" indicates asbestos was identified in the sample, but the concentration is less than 1%.
- All regulated asbestos minerals (i.e. chrysotile, amosite, crocidolite, anthophyllite, tremolite, and actinolite) were sought in every layer of each sample, but only those asbestos minerals detected are listed. Amosite is the common name for the asbestiform variety of the minerals cummingtonite and grunerite. Crocidolite is the common name used for the asbestiform variety of the mineral riebeckite.
- Tile, vinyl, foam, plastic, and fine powder samples may contain asbestos fibers of such small diameter (< 0.25 microns in diameter) that these fibers cannot be detected by PLM. For such samples, more sensitive analytical methods (e.g. TEM, SEM, and XRD) are recommended if greater certainty about asbestos content is required. Semi-quantitative bulk TEM floor tile analysis is accepted under NESHAP regulations.
- These results are submitted pursuant to Aerobiology Laboratory Associates, Inc.'s current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which the results are used or interpreted.
- Unless notified in writing to return the samples covered by this report, Aerobiology Laboratory Associates, Inc. will store the samples for a minimum period of thirty (30) days before discarding. A shipping and handling charge will be assessed for the return of any samples.
- Aerobiology does not guarantee the results of tape lifts, microvacs, wipe, and/or debris samples. Accurate analysis cannot be performed due to particle size, media used, and/or amount of material given. Analysis of these materials should be preformed by a TEM. ***A result of ND does not indicate that the sample area does not contain asbestos. It means the analyst could not identify asbestos in the specific sample for the reasons listed above.***

Notes Required by NVLAP

- This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government.
- This test report relates only to the items tested or calibrated.
- This report is not valid unless it bears the name of a NVLAP-approved signatory.
- Any reproduction of this document must include the entire document in order for the report to be valid.

SUBJECT: SEPARATE SOURCE OF HYDROCARBONS IN THE VICINTIY OF THE SAN BRUNO POLICE STATION, SEARS AUTOMOTIVE CENTER #1478, 1178 EL CAMINO REAL, SAN BRUNO, CALIFORNIA

Dear Mr. Moore and Mr. Olsen:

The California Regional Water Quality Control Board has approved our case closure recommendation and no comments were received during the public comment period. Therefore, case closure will be granted when all of the wells installed for the subject site are destroyed in accordance with California Well Standards and the San Mateo County Well Ordinance, all remedial equipment and appurtenant facilities are removed, and a report documenting these activities and the disposal of generated wastes is uploaded to the State GeoTracker database.

Please upload a well destruction work plan to GeoTracker by **November 15, 2023**. The work plan must detail and justify the well destruction process, method of destruction proposed for each well, proposed grout mix, and the estimated grout volumes for each well. In addition, the work plan must include the actual well construction details and current tagged well depths for each well proposed for pressure grouting. Moreover, the work plan should state: 1) Portland cement will be pumped down the tremie pipe until all water is displaced out of the well casing before a well is pressure grouted (or displaced out the borehole for over-drilled wells); 2) drilling rod will be lowered the full length of the well casing before a well is over-drilled; and 3) the report will specify the grout volume and size and number of cement bags used to destroy each well and include driller daily forms. Please note, the registered professional should be prepared in the field to immediately over-drill any pressure grouted well taking significantly less or more grout than calculated to avoid being potentially directed by GPP staff at a later date to over-drill the cement cured well with larger-diameter auger.

Our drilling permit application, which indicates the minimum conditions under which pressure-grouting may be proposed, is available at www.smchealth.org/GPP. This office also requires a two business-day notification, preferably by email, for all fieldwork.

I appreciate your cooperation. Please contact me at (650) 272-4590 or bgwinn@smcgov.org if you have any questions.

Sincerely,

Brian Gwinn, PG

SAN MATEO COUNTY GROUNDWATER PROTECTION PROGRAM
CASE CLOSURE MEMORANDUM

TO: File

FROM: Groundwater Protection Program (GPP) Staff

DATE: April 18, 2023

SUBJECT: SMCo. LUFT Case #880008 / RO0000361
APN: 014-316-330, 014-316-180, 014-316-310
SEARS AUTOMOTIVE CENTER #1478 AND SEPARATE SOURCE IN VICINITY OF SAN BRUNO POLICE STATION
1178 EL CAMINO REAL
SAN BRUNO, CALIFORNIA

SITE DESCRIPTION AND HISTORY

The project area is located in the northeast corner of the Tanforan Mall complex in San Bruno, California (Figure 1). The site consists of the Sears Automotive Center, associated parking lot, and the area proximal to the San Bruno Police Station. This area consists of San Mateo County Assessor's Parcel Numbers (APNs) 014-316-330 (Sears Auto Center), 014-316-310 (parking area south of Sears), and 014-316-180 (the Bay Area Rapid Transit [BART] parcel where the San Bruno Police Station is located). The site is bounded by Sneath Lane and a shopping center to the north, residential and commercial properties to the east, the Tanforan Mall to the south, and El Camino Real and commercial stores to the west (Figure 2A).

The site operated as the Tanforan Horse Racing Track from 1899 to 1964. During 1942, the site was used as the Tanforan Assembly Center for detention of persons of Japanese ancestry (the majority of whom were U.S. citizens) before being transported to internment camps located further inland for the remainder of World War II. After the war, site use returned to horse racing. Historical records indicate that an "oil/gas corporation yard" was operated near what is now the San Bruno Police Station during the 1950s. The racetrack was destroyed by fire in 1964 and the shopping mall was constructed in 1969. The Sears Automotive Center was ostensibly built around that time or shortly thereafter. The San Bruno BART station, BART parking structure, and San Bruno Police Station were constructed between 2000 and 2003 and the Century Theater/parking structure was built in 2006 and 2007.

FUEL RELEASE IDENTIFICATION

A total of seven underground storage tanks (USTs) were reportedly operated by Sears at the site. In 1985, four gasoline USTs (two 12,000-gallon capacity and two 6,000-gallon capacity) and two bulk motor oil USTs (both 530-gallon capacity) were removed from the site. One waste-oil UST (500-gallon capacity) was later removed in 1987. Petroleum contaminated soil was discovered during UST removal. In 1991, San Mateo County Environmental Health identified the tank operator, Sears, Roebuck & Company, as the responsible party because it owned the subject property and USTs at the time the contamination was discovered.

During the course of investigation in the late 1990s, geophysical surveys identified five subsurface anomalies (designated Anomalies A through E) in the area of the site. Petroleum hydrocarbon contamination was eventually detected in the vicinity of Anomaly E, proximal to the location of the future San Bruno Police Station.

In 2000, BART acquired a portion of the San Bruno station property from Sears through condemnation. The remainder of the BART property resulted from the relocation of Huntington Avenue. In February 2001, Sears received notification from a BART subcontractor that a small UST (approximate 100-gallon capacity) was discovered at a depth of approximately 16 feet below grade (fbg) near the southwest corner of the BART construction zone during excavation for the police station. The UST was reported to have numerous rusted holes in the bottom, and the soil adjacent to it was "dark", with a "strong odor like gasoline or diesel". The UST was removed by a BART subcontractor. It was later concluded that this UST was removed from BART property during excavation for the San Bruno Police Station basement. In 2013, BART was additionally identified as a responsible party because it owned the subject property at the time the contamination was discovered.

Corrective activities have been ongoing for the past 30 years. Historical sample locations are shown on Figures 2A and 2B, utilities are shown on Figure 2C, geologic cross-sections are shown on Figures 3A and 3B, historical soil contamination is shown on Figures 4A and 4B, and remaining groundwater contamination is shown on Figures 5A and 5B. Cumulative soil, soil vapor, indoor air, and groundwater analytical and elevation data are summarized in Tables 1, 2, 3, 4, 5, and 6.

LOCAL AND REGIONAL HYDROGEOLOGY

The site is located on the low lying area along the western San Francisco Bay margin. The area is mapped as the Pleistocene Colma Formation (Qc) described as friable to loose, fine- to medium-grained sand with subordinate amounts of gravel, silt, and clay (Geology of the Onshore Part of San Mateo County, California: A Digital Database, 1998). The site is set at an elevation of approximately 40 feet above sea level, and local topography dips gently to the east-northeast towards the bay.

The site is underlain by both fine- and coarse-grained sediments. Gravelly and sandy fill is locally present just below the surface to approximately 3 to 5 fbg. The fill is underlain by clay/silt to a depth of approximately 12 to 15 fbg. The clay/silt unit is underlain by a laterally continuous silty sand to sand, with local gravel lenses, to a depth of least 50 fbg. Stabilized depth to shallow groundwater fluctuates from approximately 8 to 16 fbg and flow is toward the northeast.

The nearest surface water body, San Bruno Canal, is located approximately ½-mile northeast of the site, and no water supply wells are located within 1,000 feet. The area is served by the San Bruno Municipal Water District.

JUSTIFICATION FOR CASE CLOSURE

The subject site appears to satisfy the California State Water Resource Control Board (SWRCB) Low-Threat UST Case Closure Policy (LTCP) which became effective on August 17, 2012. The following justifies our conclusion.

LTCP General Criteria

a) The unauthorized release is located within the service area of a public water system.

Yes. Public water is supplied by San Bruno Municipal Water District.

b) The unauthorized release consists only of petroleum.

Yes. The release consists of gasoline range petroleum hydrocarbons.

c) The unauthorized release has been stopped.

Yes. A total of seven USTs were removed from the Sears Auto Service area between 1985-1987. Additionally, one UST was discovered and removed during construction of the San Bruno Police Station in 2001. No new USTs were installed.

d) Free product has been removed to the maximum extent practicable.

Yes. Free-product has not been observed throughout the course of corrective action.

e) A conceptual site model that assesses the nature, extent, and mobility of the release has been developed.

Yes. A sufficient number of samples have been collected to assess the lateral and vertical extent of gasoline hydrocarbons in soil and groundwater and demonstrate LTCP criteria have been adequately satisfied.

f) Secondary source been removed to the extent practicable.

Yes. Two phases of secondary source removal have been completed in the area of Anomaly E and the Police Station.

- October 2006 – The area of Anomaly E was excavated to a depth of approximately 15 fbg; however, no USTs were discovered and no elevated petroleum hydrocarbon concentrations were encountered in the excavated material. An oxygenating agent (1,100 lbs of calcium peroxide) was placed in excavation to support aerobic biodegradation of remaining petroleum contamination although no additional information was provided to support its effectiveness.

- August-September 2019 – Approximately 950 lbs of gasoline range hydrocarbons were removed during a 30-day dual-phase extraction event in the area of Anomaly E and the Police Station. Removal rates peaked at approximately 60 lbs/day midway through the event and diminished to 11 lbs/day at the end.

g) Soil or groundwater been tested for MTBE and results reported in accordance with Health and Safety Code Section 25296.15.

Yes.

h) A nuisance as defined by Water Code section 13050 does not exist.

A nuisance condition does not currently exist.

LTCP Groundwater-Specific Criteria

GPP staff consider the remaining plume characteristics to satisfy Class 4.

a. *The contaminant plume that exceeds water quality objectives is less than 1,000 feet in length.*
b. *There is no free product.*
c. *The nearest existing water supply well or surface water body is greater than 1,000 feet from the defined plume boundary.*
d. *The dissolved concentration of benzene is less than 1,000 µg/L, and the dissolved concentration of MTBE is less than 1,000 µg/L.*

The remaining plume exceeding WQOs is approximately 600 feet long; there is no free-product, the maximum remaining benzene concentrations is 189 µg/L, and MTBE is not detectable (<1.0 µg/L). No water supply wells or surface water bodies are located within 1,000 feet of the defined plume boundary.

LTCP Vapor-Specific Criteria (Petroleum Vapor Intrusion)

GPP staff consider site conditions to satisfy Option 2: *A site-specific risk assessment for the vapor intrusion pathway is conducted and demonstrates that human health is protected to the satisfaction of the regulatory agency*.

Potential vapor intrusion issues associated with the source proximal to the San Bruno Police Station have been evaluated by multiple rounds of soil gas and indoor sampling. During the most recent indoor air sampling event (2014), benzene concentrations were found to slightly exceed the Commercial ESL of 0.42 µg/m^3 (i.e. maximum of 0.63 µg/m^3). However, GPP staff do not consider these conditions to represent an unacceptable human health risk due to vapor intrusion based the following rationale:

- Benzene in indoor air appears to be primarily from outdoor sources. Benzene concentrations in indoor and outdoor air have historically been very similar, and the BTEX ratios for indoor air were like those for outdoor air (but dissimilar to those for soil gas). These observations suggest a significant portion of benzene detected in indoor air originates from outdoor air and not from vapor intrusion.

- A significant secondary source mass was removed from the area during a DPE event in 2019. It is anticipated that benzene soil gas concentrations will continue to decline as result of natural attenuation processes.

LTCP Direct Contact and Outdoor Air Exposure

Site conditions satisfy the LTCP exception from this media-specific criterion because the upper 10 feet of soil is free of petroleum contamination.

RECOMMENDATIONS

Based on the investigative findings and other information known to GPP staff, it appears the criteria of the LTCP have been satisfied, that residual dissolved-phase hydrocarbons will naturally degrade to RWQCB Water Quality Objectives within a reasonable time and that the waters of the State have not been significantly impacted. Therefore, all appropriate response actions appear complete and further investigation, remedial/removal actions, or monitoring of the release does not appear warranted.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations (AULs), such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel number and/or legal description
- search for ownership information
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.
- search for publicly available environmental encumbering instrument(s) filed on or after the recording of the current deed; between the recording of the current deed and the most current publicly available date
- provide a copy of any environmental encumbrance(s)
- provide a copy of the current deed when available

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Legal Description

PARCEL ONE-A:

BEING A PORTION OF PARCELS A AND B, AS SHOWN ON THAT CERTAIN MAP ENTITLED, "PARCEL MAP, BEING A RESUBDIVISION OF LOTS 1, 2 & 3, BLOCK 6, TANFORAN PARK UNIT NO. 1, RECORDED IN VOLUME 66 OF MAPS AT PAGES 1, 2, 3 & 4, RECORDS OF SAN MATEO COUNTY", FILED IN THE OFFICE OF THE RECORDER OF THE COUNTY OF SAN MATEO, STATE OF CALIFORNIA ON JULY 27, 1970 IN BOOK 10 OF PARCEL MAPS AT PAGE 46, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING AT THE MOST NORTHERLY CORNER OF SAID PARCEL B; THENCE ALONG THE BOUNDARY OF SAID PARCEL B, SOUTH 25° 05' 23" EAST, A DISTANCE OF 289.02 FEET TO A POINT ON A TANGENT CURVE; THENCE SOUTHERLY ALONG SAID TANGENT CURVE TO THE RIGHT HAVING A RADIUS OF 1159.92 FEET AND A CENTRAL ANGLE OF 01° 38' 30", A DISTANCE OF 33.23 FEET TO A POINT OF TANGENCY; THENCE SOUTH 23° 26' 53" EAST A DISTANCE OF 129.82 FEET; THENCE SOUTH 66° 09' 33" WEST, A DISTANCE OF 867.04 FEET; THENCE NORTH 23° 50' 27" WEST 52.83 FEET; THENCE SOUTH 66° 09' 33" WEST A DISTANCE OF 506.00 FEET; THENCE NORTH 23° 50' 27" WEST, A DISTANCE OF 409.34 FEET; THENCE LEAVING THE BOUNDARY OF SAID PARCEL B, NORTH 66° 09' 33" EAST, A DISTANCE OF 474.00 FEET TO THE NORTHERLY BOUNDARY OF SAID PARCEL B; THENCE ALONG THE NORTHERLY BOUNDARY OF SAID PARCEL B, SOUTH 23° 50' 27" EAST, A DISTANCE OF 10.17 FEET; THENCE NORTH 66° 09' 33" EAST, A DISTANCE OF 380.01 FEET; THENCE LEAVING SAID NORTHERLY BOUNDARY, NORTH 23° 50' 27" WEST, A DISTANCE OF 25.17 FEET; THENCE NORTH 66° 09' 33" EAST, A DISTANCE OF 193.00 FEET; THENCE SOUTH 56° 17' 57" EAST, A DISTANCE OF 2.30 FEET TO A POINT ON A NON-TANGENT CURVE, THE CENTER OF WHICH BEARS SOUTH 44° 51' 31" EAST; THENCE EASTERLY ALONG SAID NON-TANGENT CURVE TO THE RIGHT HAVING A RADIUS OF 228.52 FEET AND A CENTRAL ANGLE OF 25° 48' 12", A DISTANCE OF 102.91 FEET TO A NON-TANGENT CURVE, THE CENTER OF WHICH BEARS SOUTH 86° 20' 27" WEST; THENCE SOUTHERLY ALONG SAID NON-TANGENT CURVE TO THE RIGHT HAVING A RADIUS OF 228.52 FEET AND A CENTRAL ANGLE OF 10° 27' 37", A DISTANCE OF 41.72 FEET TO A POINT ON THE NORTHERLY LINE OF SAID PARCEL B; THENCE ALONG THE NORTHERLY BOUNDARY OF SAID PARCEL B, NORTH 66° 09' 33" EAST, A DISTANCE OF 235.98 FEET TO THE POINT OF BEGINNING.

EXCEPTING THEREFROM, THOSE CERTAIN PORTIONS THEREOF DESCRIBED IN THAT CERTAIN CONDEMNATION ACTION PENDING IN THE SUPERIOR COURT OF THE STATE OF CALIFORNIA, COUNTY OF SAN MATEO, CASE NO. 407836, ENTITLED SAN MATEO COUNTY TRANSIT DISTRICT, PLAINTIFF, VS. TANFORAN PARK SHOPPING CENTER, LLC, A DELAWARE LIMITED LIABILITY COMPANY, ET AL. DEFENDANTS, DISCLOSED BY THE DOCUMENT ENTITLED, "LETTER AGREEMENT OF CONVEYANCE SAN MATEO COUNTY TRANSIT DISTRICT TO SAN FRANCISCO BAY AREA RAPID TRANSIT DISTRICT", WHICH RECORDED SEPTEMBER 14, 2000 AS INSTRUMENT NO. 2000-114339, OFFICIAL RECORDS, AS PARCELS D-3518-1A AND D-3518-1C.

FURTHER EXCEPTING THEREFROM, THAT CERTAIN PORTION THEREOF AS DEDICATED TO THE CITY OF SAN BRUNO AND BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

A PORTION OF "PARCEL B", AS SHOWN ON THE MAP ENTITLED, "PARCEL MAP, BEING A RESUBDIVISION OF LOTS 1, 2 & 3, BLOCK 6, TANFORAN PARK, UNIT NO. 1 ETC. RECORDED JULY 27, 1970 IN VOLUME 10 OF PARCEL MAPS AT PAGE 46, AND BEING ALSO A PORTION OF THAT CERTAIN PARCEL OF LAND DESCRIBED IN THE GRANT DEED TO TANFORAN PARK SHOPPING CENTER LLC, RECORDED SEPTEMBER 15, 1998 UNDER

SERIES NUMBER 98-148600, OFFICIAL RECORDS OF SAN MATEO COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT THE NORTHWESTERN CORNER OF SAID "PARCEL B" (10 PM 46), RUNNING THENCE ALONG THE WESTERN LINE OF SAID "PARCEL B", SOUTH 23° 50' 13" EAST 129.941 METERS (426.33642 FEET) TO AN INTERSECTION WITH THE GENERAL SOUTHERN LINE OF SAID "PARCEL B"; THENCE ALONG LAST SAID LINE, NORTH 66° 09' 47" EAST, 11.889 METERS (39.00781 FEET); THENCE NORTH 9° 57' 40" WEST, 1.832 METERS (6.01079 FEET); THENCE FROM A TANGENT WHICH BEARS NORTH 3° 45' 16" EAST, NORTHERLY AND NORTHEASTERLY ALONG THE ARC OF A CURVE TO THE RIGHT HAVING A RADIUS OF 16.980 METERS (55.711381), THROUGH A CENTRAL ANGLE OF 62° 24' 20", A DISTANCE OF 18.494 METERS (60.67881 FEET); THENCE TANGENT TO LAST SAID CURVE, NORTH 66° 09' 36" EAST 4.860 METERS (15.94566 FEET); THENCE AT RIGHT ANGLES NORTH 23° 50' 24" WEST 23.600 METERS (77.43160 FEET); THENCE AT RIGHT ANGLES, SOUTH 66° 09' 36" WEST 16.375 METERS (53.72637 FEET); THENCE TANGENT TO LAST SAID COURSE, SOUTHWESTERLY AND WESTERLY ALONG THE ARC OF A CURVE TO THE RIGHT HAVING A RADIUS OF 9.330 METERS (30.6173 FEET), THROUGH A CENTRAL ANGLE OF 31° 52' 28", A DISTANCE OF 5.190 METERS (17.02839 FEET); THENCE NORTH 52° 17' 40" WEST 8.80 METERS (28.87280 FEET); THENCE NORTH 24° 07' 40" WEST, 86.306 METERS (283.16998 FEET) TO AN INTERSECTION WITH THE GENERAL NORTHERN LINE OF SAID "PARCEL B"; THENCE ALONG LAST SAID LINE SOUTH 66° 09' 47" WEST, 6.302 METERS (20.67686 FEET) TO THE POINT OF BEGINNING.

EXCEPTING FROM SAID AFOREMENTIONED DESCRIPTION, ANY PORTION THEREOF LYING WITHIN THAT PORTION OF LAND CONVEYED TO SEARS ROEBUCK & CO., A NEW YORK CORPORATION, IN THAT CERTAIN GRANT DEED RECORDED OCTOBER 19, 2004 AS INSTRUMENT NO. 2004-207421, OFFICIAL RECORDS OF SAN MATEO COUNTY, CALIFORNIA.

PARCEL ONE-B:

BEING A PORTION OF PARCEL "C", AS SHOWN ON THAT CERTAIN MAP ENTITLED, "PARCEL MAP, BEING A RESUBDIVISION OF LOTS 1, 2 & 3, BLOCK 6, TANFORAN PARK UNIT NO. 1, RECORDED IN VOLUME 66 OF MAPS AT PAGES 1, 2, 3 & 4, RECORDS OF SAN MATEO COUNTY", FILED IN THE OFFICE OF THE RECORDER OF THE COUNTY OF SAN MATEO, STATE OF CALIFORNIA ON JULY 27, 1970 IN BOOK 10 OF PARCEL MAPS AT PAGE 46, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING AT THE MOST WESTERLY CORNER OF SAID PARCEL "C"; THENCE NORTH 66° 09' 33" EAST, A DISTANCE OF 390.45 FEET ALONG THE NORTHWESTERLY BOUNDARY OF SAID PARCEL "C" TO THE TRUE POINT OF BEGINNING; THENCE CONTINUING ALONG SAID NORTHWESTERLY BOUNDARY NORTH 66° 09' 33" EAST, A DISTANCE OF 115.55 FEET; THENCE SOUTH 23° 50' 27" EAST, A DISTANCE OF 52.83 FEET; THENCE NORTH 66° 09' 33" EAST, A DISTANCE OF 3.09 FEET; THENCE LEAVING SAID NORTHWESTERLY BOUNDARY SOUTH 23° 50' 27" EAST 8.23 FEET; THENCE SOUTH 66° 09' 33" WEST, A DISTANCE OF 137.64 FEET TO A POINT ON A NON-TANGENT CURVE, WHICH CENTER BEARS SOUTH 86° 32' 37" EAST; THENCE NORTHERLY ALONG SAID NON-TANGENT CURVE TO THE LEFT HAVING A RADIUS OF 183.95 FEET AND A CENTRAL ANGLE OF 20° 01' 16", A DISTANCE OF 64.28 FEET TO THE TRUE POINT OF BEGINNING.

PARCEL TWO:

LOT 3, BLOCK 1, AS SHOWN ON THAT CERTAIN MAP ENTITLED, "TANFORAN PARK UNIT NO. 1, SAN BRUNO, SAN MATEO COUNTY, CALIFORNIA", FILED IN THE OFFICE OF THE RECORDER OF THE COUNTY OF SAN MATEO, STATE OF CALIFORNIA, ON JANUARY 5, 1967 IN BOOK 66 OF MAPS AT PAGE(S) 1, 2, 3 & 4.

EXCEPTING THEREFROM, THOSE CERTAIN PORTIONS THEREOF AS DESCRIBED IN THAT CERTAIN CONDEMNATION ACTION IN THE SUPERIOR COURT OF THE STATE OF CALIFORNIA, COUNTY OF SAN MATEO, CASE NO. 407836, ENTITLED SAN MATEO COUNTY TRANSIT DISTRICT, PLAINTIFF, VS. TANFORAN PARK SHOPPING CENTER, LLC, A DELAWARE LIMITED LIABILITY COMPANY, ET AL. DEFENDANTS, AS DISCLOSED BY THE DOCUMENT ENTITLED, "FINAL ORDER OF CONDEMNATION", WHICH RECORDED APRIL 6, 2010 AS INSTRUMENT NO. 2010-037143 OF OFFICIAL RECORDS, AS PARCELS D-3496-1A, D-3496-1B AND D-3496-1C.

PARCEL THREE:

NON-EXCLUSIVE EASEMENTS APPURTENANT TO PARCEL ONE ABOVE, FOR THE PURPOSE OF PARKING AREA, COMMON AREA, ACCESS, COMMON BUILDING COMPONENTS, UTILITIES AND ENCROACHMENTS, AS DEFINED IN SECTION 3, PARAGRAPHS A, B, C, D, E & F, OF THAT CERTAIN DOCUMENT ENTITLED, "TANFORAN PARK SHOPPING CENTER SAN BRUNO, CALIFORNIA DECLARATION OF ESTABLISHMENT OF RESTRICTIONS AND COVENANTS AFFECTING LAND", WHICH RECORDED MAY 23, 1969 AS DOCUMENT NO. 38239-AC IN BOOK 5642 OF OFFICIAL RECORDS, SAN MATEO COUNTY, CALIFORNIA AT PAGE 610, AND AS SUPPLEMENTED AND AMENDED BY THAT CERTAIN DOCUMENT ENTITLED, "FIRST AGREEMENT SUPPLEMENTING DECLARATION OF ESTABLISHMENT OF RESTRICTIONS AND COVENANTS AFFECTING LAND", WHICH RECORDED JULY 1, 1970 AS DOCUMENT NO. 28872-AD IN BOOK 5801 OF OFFICIAL RECORDS, SAN MATEO COUNTY, CALIFORNIA AT PAGE 250, AND BY THAT CERTAIN DOCUMENT ENTITLED, "SECOND AGREEMENT SUPPLEMENTING AND AMENDING DECLARATION OF ESTABLISHMENT OF RESTRICTIONS AND COVENANTS AFFECTING LAND", WHICH RECORDED OCTOBER 26, 1971 AS DOCUMENT NO. 57257-AE IN BOOK 6035 OF OFFICIAL RECORDS, SAN MATEO COUNTY, CALIFORNIA AT PAGE 55, AND AS FURTHER AMENDED BY THAT CERTAIN DOCUMENT ENTITLED, "FIRST AMENDMENT TO SECOND AGREEMENT SUPPLEMENTING AND AMENDING DECLARATION OF ESTABLISHMENT OF RESTRICTIONS AND COVENANTS AFFECTING LAND", WHICH RECORDED MARCH 10, 2005 AS INSTRUMENT NO. 2005-037895, OFFICIAL RECORDS.

PARCEL FOUR:

ALL BUILDINGS AND OTHER IMPROVEMENTS LOCATED ON THE FOLLOWING PARCEL OF LAND (BUT NOT FEE SIMPLE TITLE TO SUCH LAND PARCEL ITSELF, WHICH IS EXPRESSLY NOT CONVEYED IN THIS INSTRUMENT):

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

FARSHAD RAZMDJOO

Managing Principal

Farshad Razmdjoo is the Managing Principal of Ramboll's Southwest operations. He has over 30 years of experience in environmental consulting and engineering. Farshad currently manages a vast variety of consulting projects, including real estate and merger and acquisition due diligence, tenant environmental audits, environmental, health and safety audits, property decommissioning and redevelopment, remedial investigations, remedial action design and implementation, regulatory agency interaction, asbestos management programs, radon surveys, mold investigation and remediation programs and evaluations of lead in drinking water. In addition, he has developed and managed an environmental risk-management program for a major real estate investment trust. Farshad is highly experienced in working with federal and California environmental regulations and has a working knowledge of many other state and local regulatory requirements and agencies throughout the United States. Much of Farshad's past and current projects involve assessing environmental issues at commercial and industrial facilities throughout the North America, Europe, China, and India. For the past 24 years at Ramboll, Farshad has managed projects for representatives in real estate development companies, insurance companies, financial institutions, pension funds, institutional investors, private equities, real estate investment trusts, aerospace companies, industrial and manufacturing companies, and law firms.

PROJECTS

Site Investigation and Remediation

- Negotiated with the Santa Ana Regional Water Quality Control Board (SARWQCB) a reasonable path forward for a former manufacturing facility located in Irvine, California where soil and groundwater is impacted with volatile organic compounds (VOCs). Historically, considerable remediation had been performed on site by other consultants, which included excavation, and above ground soil treatment, soil vapor extraction, and groundwater pump and treat technologies. The site has been in a post remediation monitoring phase under the oversight of the SARWQCB. Post remediation monitoring indicated that overall, natural attenuation processes were reducing VOC concentrations over time. However, in 2013, the SARWQCB requested the responsible parties to consider evaluating additional remedial options to reduce concentrations of VOCs in one area of the site. Also a Membrane Interface Probe (MIP) investigation was performed in that area of the site.

- Using the data collected during the MIP investigation, Farshad directed the development of a limited and focused remedial program utilizing state of the art technology appropriate for the restrictive conditions which are present in the area of the site investigated (challenging geologic materials, limited access due to occupied buildings, roadways, neighboring properties, etc.). The SARWQCB approved the remedial plan that included injection of zero-valent iron into the shallow saturated zone to reduce VOCs in the area of concern. The remediation was completed during October and November 2014. A post monitoring program started in December 2014 is on-going.

- Directed the evaluation of potential off-site sources, and development of a site conceptual model for a facility in Vernon, California where chlorinated VOCs (CVOCs) were discovered in groundwater. Designed and managed investigation of soil, soil gas, and groundwater to evaluate potential sources, including use of compound-specific isotope analysis to help demonstrate that the CVOCs detected in soil gas are distinct from those detected in groundwater, and unrelated. Managed additional soil, soil gas, and groundwater investigation to delineate the CVOC impacts onsite. Based on the onsite investigation, a pilot study was designed to assess the efficacy of soil vapor extraction (SVE) to reduce CVOCs in the vadose zone (ground surface to approximately 180 feet below ground surface). The pilot study showed that SVE operations effectively reduced CVOC soil gas concentrations at all depths. The SVE pilot system was expanded and operated under a final Remedial Action Plan. The SVE system appeared to have reached asymptotic conditions and the SVE operation has been stopped and post remedial rebound testing is ongoing. The rebound testing results will be used to assess and negotiate site closure. All work is being implemented under the oversight of Los Angeles Regional Water Quality Control Board (LARWQCB).

- Assisted an owner of a former industrial facility in southern California that was significantly impacted by CVOCs in soil, soil gas, and groundwater. The scope of work included oversight of the remediation of the vadose zone with in situ thermal treatment and evaluation of human health risk assessments to assess various future redevelopment scenarios. The work was conducted under the oversight of the LARWQCB.

- Designed and managed the implementation of site characterizations, remediation, and human health risk assessments for an existing 75-acre commercial and light industrial center in Irvine, California under the oversight of the Orange County Health Care Agency (OCHCA) and the SARWQCB. The work was conducted for the property owner and involved performing appropriate site characterization to define the extent of CVOC releases in soil, soil gas, and groundwater from prior and existing tenants; one of which included a dry cleaning facility. The human health risk assessment considered site specific conditions and data to define risk based threshold concentrations deemed as acceptable concentrations in soil, soil gas, and groundwater for indoor worker receptors.

- Remediation involved injection of approximately 100,000 pounds of zero-valent iron in sixty direct push borings to create three separate permeable reactive barriers or treatment zones. The purpose of work was that each zone would chemically reduce chlorinated solvents in the “shallow zone” groundwater as it migrates through the permeable reactive barrier(s). Due to the low groundwater concentrations, Farshad was able to negotiate the elimination of post remediation groundwater monitoring. The project also involved collection of sub-slab and indoor air samples followed by installation and operation of a sub-slab vapor depressurization system and epoxy coating the interior floors to mitigate vapor intrusion. Post mitigation indoor air samples reported a reduction of indoor air concentrations by 100 times. Farshad successfully negotiated and obtained a “No Further Action” for the site with the concurrence from the SARWQCB.
- Managed a remedial investigation at a California Superfund site in Los Angeles County. The site was under a consent order from Cal-EPA Department of Toxic Substances Control at the time. The project involved performing RI/FS, conducting human health and ecological risk assessments, and preparing a remedial action plan.
- Managed, reviewed, and evaluated numerous Phase I and II reports associated with the acquisition of a 500-acre industrial park in Spokane, Washington. Prepared a report of findings including conclusions and recommendations for review by the client.
- Managed Phase I and II site assessments and estimation of remediation costs of six manufacturing plants in Costa Mesa (Orange County), Perris (Riverside County), Ontario (San Bernardino County), Somerton (Arizona), Alliance (Ohio), and Winter Heaven (Florida).
- Designed and managed a site investigation program to evaluate the nature and the extent of soil contaminated with PCE at a dry cleaning facility in Aliso Viejo, California. Based on the results, several remedial alternatives were evaluated and a risk assessment was performed. Based on the results of the risk assessment, site closure was obtained from OCHCA.
- Managed a remedial investigation/feasibility study (RI/FS) using CPT/HydroPunch and Geoprobe techniques, with installation of multi-level groundwater monitoring wells, evaluation and selection of a remedial alternative, and design and preparation of an interim remedial action plan for remediation of soil and groundwater contaminated with dense non-aquas phase liquid (DNAPL) at a former manufacturing facility in Oxnard, California. The first phase of remediation included the excavation and placement of approximately 11,000 cubic yards of impacted soil into vapor extraction cells for on-site treatment. Soil vapor and vertical and horizontal groundwater extraction wells were installed. The vapor and groundwater treatment systems included air stripping, ultra violet oxidation, and vapor and liquid granulated activated carbon. All work was conducted under oversight of LARWQCB and Ventura County Air Pollution Control District.
- Managed a groundwater investigation program at a former electronics manufacturing plant in Santa Ana, California. This included installation, development, and sampling of shallow groundwater monitoring wells and evaluation and interpretation of hydrogeological and analytical data. The investigation was performed under the regulatory oversight of the SARWQCB.
- For a multinational corporation at an orphan site in the San Francisco Bay Area, provided investigative and consulting services in support of regulatory case closure under the San Francisco Regional Water Quality Control Board’s (RWQCB) Low-Threat Chlorinated Solvent Site guidance. The site was in long-term post-remedial monitoring status when the client took active responsibility for the site. Following development and implementation of soil gas and indoor air quality investigations and an evaluation of potential human health risks, the RWQCB rescinded the cleanup order for the site and issued case closure.
- Provided consulting services to evaluate soil, soil vapor, and groundwater impacts at the Site located at14657 Industry Circle, La Mirada, California. Ramboll was successful in demonstrating that the majority of groundwater impacts on the Site originated from an upgradient source. Through monitoring (4 years of groundwater monitoring and reporting) and evaluation of the remaining chemical of concern, Tetrahydrofuran, Ramboll was successful in attaining site closure using a detailed Conceptual Site Model and Health Risk Assessment to show that the groundwater at the site related to tetrahydrofuran posed no significant risk. The Regional Water Quality Control Board concurred with our assessment and issued a closure letter for the Site in September 2014.

Environmental Risk Management

- Farshad has developed and managed an environmental risk management program for a major real estate investment trust (REIT). This REIT contained over 200 properties with 400 tenants with pharmaceutical and life science operations throughout the western and eastern United States, China, and India. As part of the environmental risk management program, an acquisition due diligence, an asbestos management program, a moisture intrusion and mold prevention response (MIMPR) program, and a tenant environmental audit (TEA) program were developed and implemented. A mold prevention and response plan, as outlined in the MIMPR, was prepared and implemented. More than 500 tenant exit audits for tenants vacating the properties were conducted in accordance with the TEA. An overall tenant environmental audit program has been developed.

Decontamination / Decommissioning

- Managed the decontamination and decommissioning of a former biopharmaceutical research facility. A detailed survey of over 250 rooms was conducted, and radiological materials, hazardous chemicals, and potentially biologically hazardous substances were identified. Upon completion of the decontamination/decommissioning, the entire facility was cleaned and prepared for re-occupancy. Throughout the decommissioning process, Ramboll worked closely with State regulatory officials to demonstrate that all cleanup activities were in compliance with applicable regulations.

- Managed the acquisition due diligence and subsequent redevelopment of a former metal stamping facility in Santa Fe Springs, California. Under Farshad's direction, a Phase I ESA was completed and, based on the findings of the Phase I ESA, a targeted Phase II subsurface investigation was performed to evaluate areas of potential environmental concern that included soil gas, soil, and groundwater sampling. Farshad also assisted the client with closure activities for the site that included performing an assessment of building materials for polychlorinated biphenyls contamination, coordination and oversight of asbestos and lead-based paint surveys, groundwater monitoring well abandonment, post excavation soil sampling on removal of various subsurface features, and preparation of a soil management plan (SMP), to be implemented during redevelopment activities. Subsequently, a no further action letter was obtained from the Santa Fe Springs Fire Department.

Site Closure

- Managed the preparation of a sampling and analysis plan evaluating the nature and extent of soil and groundwater contaminated with tetrachloroethene (PCE) at a dry cleaning facility in Santa Ana, California. Ramboll obtained closure for the site from the SARWQCB.

Litigation Support

- Managed litigation support services related to the fate and transport of organic compounds in soil and groundwater, appropriate remedial alternatives, and cost associated for two facilities in southern California. The results of the evaluations were successfully used as part of the settlement negotiations with the opposing parties.

Due Diligence

- Directed the due diligence process and estimating environmental liabilities for acquisition of a former aerospace manufacturing facility in Los Angeles, California under extremely tight deadline. The site has been impacted with various VOCs, total petroleum hydrocarbons, metals, emerging chemicals, and radioactive wastes. The assignment also included evaluation of methane, asbestos, lead-based paint, and indoor air quality. The work was conducted on behalf of the site's buyer, which planned to develop it into a commercial business park.

- Acted as point of contact and responsible Principal for several national real estate and development clients with properties throughout the United States. Farshad has completed over 1000 assignments supporting the clients in acquiring, managing, and disposing properties. Many of these assignments were undertaken and successfully completed under extreme time constraints.

- Farshad has managed over 30 international multi-site environmental assessments at over 200 industrial, manufacturing, and commercial facilities as a part of merger and acquisition environmental due diligence. These included evaluation of aerospace component manufacturing facilities, automotive manufacturing and distribution facilities, medical device manufacturing facilities, telecommunication facilities, and hardware store facilities. Work plans and subsequent Phase II soil and groundwater investigations were also completed for many of those assignments.

NICK WALCHUK

Principal

Nick Walchuk has more than 28 years of due diligence, site assessment, and remediation experience in support of a diverse array of clients, including attorneys and financial institutions, small businesses and multinational corporations, developers and private property owners. His broad range of experience includes the design and implementation of site characterization and remedial activities, development and evaluation of remedial cost estimates, performance of facility closure and similar evaluations, and strategic client support during negotiation with regulators, buyers/sellers, and/or third parties. He collaborates with Ramboll colleagues to evaluate and mitigate vapor intrusion concerns, address waste management issues, and perform human health risk assessments. Nick is registered as a professional geologist in California, and serves multiple internal roles at Ramboll as the chair of Ramboll's Leadership Development Committee and the Site Solutions Service Line Leader for Ramboll Americas Southwest Region.

YEARS IN RAMBOLL

20

EDUCATION

BA, Geology
University of California, Berkeley, California

COURSES/CERTIFICATIONS

Professional Geologist – California (No. 8040)
OSHA 40-hour Hazardous Waste Operations and Emergency Response Standard (HAZWOPER)

PROJECTS

- Serves as a regional manager of an environmental risk management program developed by Ramboll for a major real estate investment trust (REIT) containing more than 100 properties with 200 tenants throughout the western and eastern United States. Various services are provided under the umbrella of the program, including: 1) environmental site assessments; 2) soil, soil gas, and groundwater investigations conducted pursuant to property acquisition, financing, development, or divestiture; negotiations and correspondence regarding environmental matters with regulatory agencies on behalf of the client; 3) tenant environmental audits to evaluate biotechnology tenant operations and facility closure/decommissioning procedures; and 4) providing general consulting services to assist the client's risk management and construction groups regarding environmental, waste management, and site development matters. [2005-current]

- Provides technical and project management direction for a multidisciplinary team supporting the assessment, characterization, and remediation at multiple Southern California beverage production/distribution facilities where significant chlorinated solvent concentrations are present in soil vapor. Work is ongoing under the oversight of the California Department of Toxic Substances Control (DTSC). [2018-current]
- Directs Ramboll and teaming partner staff in support of Ramboll's long-term involvement in the Charnock Sub-Basin near Los Angeles, California, where MtBE and other gasoline constituents were discovered in the City of Santa Monica's Charnock well field, leading to the shutdown of the municipal supply wells. This project was conducted under the oversight of both USEPA Region 9 and the California Regional Water Quality Control Board – Los Angeles and is nearing completion.
- For dozens of projects in California, Mr. Walchuk performs, manages, and coordinates support for developer clients at all stages of site redevelopment:
  - Pre-acquisition: preliminary information review, environmental due diligence including Phase I and Phase II assessments, strategic planning support in relation to potential future environmental costs relative to potential or proposed future site use (e.g., entitlement or environmental review concerns, regulatory oversight and/or environmental matters for construction);
  - Entitlement, redevelopment, and construction planning: evaluating mitigation requirements or conditions of approval placed on the project by local authorities, subsurface sampling in support of budget development for costs related to soil excavation/disposal and dewatering, asbestos and lead paint surveys, air quality investigations and other risk evaluations, development of soil management and dust control plans, vapor intrusion and related remediation/mitigation requirements;
  - During construction: assistance with soil sampling and/or data evaluation for soil disposal profiling, working with the client and/or owner's representative as liaison with the excavation and grading contractor, noise evaluation, construction emissions tracking, support for meeting other mitigation requirements;
  - Post-construction: development of project completion summaries related to environmental matters – these can be completed to fulfil requirements under environmental regulatory oversight, and/or for client recordkeeping purposes to provide comprehensive documentation in the event of a future sale of the property.
- Conducted or directed hundreds of environmental site assessments, numerous site investigations, and provided strategic support for implementation of remediation (where warranted) in combination with proposed redevelopment plans. Such projects often include considerable interaction and negotiation with local and/or state environmental regulatory agencies, and required the navigation of local regulatory programs such as the Maher Ordinance (San Francisco), voluntary cleanup programs (Santa Clara and San Mateo counties), the San Francisco Regional Water Quality Control Board's (RWQCB) Low-Threat Chlorinated Solvent Site guidance, and the state California Land Re-use and Revitalization Act (CLRRA). As a result of work on such projects, Mr. Walchuk has established strong relationships with local city, county, and state regulators. [1997-current]
- Assisted a major real estate investment trust with unique issues arising during site redevelopment at a San Francisco Bay Area site. An abandoned oil pipeline was discovered during site construction, and the resulting project required researching the history and ownership of the pipeline, as well as its removal from the property and associated soil sampling. Subsequent tasks included additional site characterization to delineate potential soil and groundwater impacts to support negotiations with the local oversight agency regarding a low-risk approach to site closure. [2009-2011]
- Assisted several confidential clients in the telecommunications and retail industries with waste characterization and survey of waste streams generated at facilities throughout California. Sometimes conducted in response to consent decree/judgments, these audits typically have included review of client and facility documentation, development of standardized audit protocols, coordination and implementation of solid waste audits and production of deliverables used by clients

and counsel to demonstrate compliance and progress toward required and/or regulatory targets, improvements in relation to a Consent Judgment, and also to guide client planning, development, and refinement of client-internal training programs. [2014-current]

- Assisted with the "Mission Rock" development in San Francisco, located along the shoreline of San Francisco Bay and under the oversight of the Department of Toxic Substances Control (DTSC) and the San Francisco Department of Public Health. Historical operations resulted in the presence of metals, chlorinated solvents, polyaromatic hydrocarbons, and petroleum hydrocarbons in subsurface media, which required management to allow for construction to take place. Work involved preparation of an Updated Human Health Risk Assessment (HHRA) to modify an existing land use covenant (LUC) for select portions of the site, preparation implementation of a Soil Management Plan (SMP) and a Dust Control Plan (DCP) to satisfy requirements of the San Francisco Department of Public Health (SFDPH) and DTSC as well as an Asbestos Dust Mitigation Plan (ADMP) to satisfy requirements of the Bay Area Air Quality Management District (BAAQMD), as well as evaluation of potential impacts of certain aspects of the project to ecological receptors. Support during redevelopment on our client's behalf included interaction and coordination with multiple general contractors tasked with construction on different areas of the site. [2017-current]
- Mr. Walchuk served in a director capacity in North America for Ramboll's programmatic support of a major confidential client in the datacenter industry. Ramboll's support for this client includes includes the performance of multidisciplinary due diligence screening evaluations as part of the site selection process, and includes topic areas such as permitting, entitlement and development, typical environmental due diligence, air quality, geotechnical, traffic, noise, water infrastructure, flood risk, and other elements. These fast-paced projects are typically delivered in accelerated timeframes and on budget in support of client decision-making strategies. [2019-2021]
- Provided advisory and environmental due diligence services for a confidential academic institution. Environmental consulting and technical services were in support of potential acquisition of a property with known contamination that was undergoing redevelopment. Environmental risks were evaluated with respect to potential future uses. Specific tasks involved a third party review of site investigation and remediation reports as well as vapor mitigation system designs. [2020]
- Following management and completion of several ESAs for a prospective purchaser of properties within an area of commingled ground water contamination (chlorinated solvents) emanating from the subject site and two NPL (Superfund) sites, conducted soil, ground water, and soil gas data collection and associated evaluation and report preparation. Nick coordinated a subsequent human health risk assessment, and participated in calls and meetings between regulators, and sellers' and buyers' counsel to facilitate the implementation of land use restrictions at the sites, allowing Ramboll's client to proceed with the purchase of the site. Several years later, Mr. Walchuk assisted the same client with the sale of the property, a process which encompassed two years of strategic negotiation support involving the buyer, a third party responsible party, and state and federal environmental regulators regarding an appropriate investigative and remedial approach that could be implemented in conjunction with planned redevelopment of the site. [2006-2015]
- Mr. Walchuk directed facility closure activities related to the closure of a former recycled paperboard mill and an adjacent paper packaging manufacturing facility. The client terminated operations at each site separately, followed by separate real estate transactions. Ramboll performed facility closure activities at each, including closure work plan preparation, environmental sampling in compliance with agency requirements and as part of seller due diligence, oversight of contractors during implementation of closure activities, interacted with regulatory agencies on the client's behalf, and prepared final completion reports for agency approval. Ramboll's work facilitated an efficient completion of the client's sale of each site soon after completion of facility closure. [2011 and 2017]
- For a site impacted with chlorinated solvents that were discovered during acquisition due diligence, Mr. Walchuk directed the investigation, delineation, risk evaluation, and long term groundwater monitoring of the plume underlying the site. Following the sale of the property to a new owner that opted for a more active approach to resolving the matter, Nick directed the design and implementation of further delineation and remediation that included confirmation of plume definition

to the satisfaction of the local oversight agency. Investigation methodologies included the use of membrane interface probe (MIP) technology and groundwater sampling from multiple groundwater bearing zones, and remediation included the installation of horizontal wells beneath an existing building and active soil vapor extraction to reduce contamination concentrations and risks related to vapor intrusion. [2008-2018]

- For a multinational corporation at an orphan site in the San Francisco Bay Area, provided investigative and consulting services in support of regulatory case closure under the San Francisco Regional Water Quality Control Board's (RWQCB) Low-Threat Chlorinated Solvent Site guidance. The site was in long-term post-remedial monitoring status when the client took active responsibility for the site. Following development and implementation of soil gas and indoor air quality investigations and an evaluation of potential human health risks, the RWQCB rescinded the cleanup order for the site and issued case closure. [2005-2009]
- Provided due diligence and related support to a San Francisco Bay Area auto maker with respect to local facilities as well elements of site selection for major new facilities. Local projects have included review of remedial activities to address legacy contamination issues under a Corrective Action Consent Agreement with the California Department of Toxic Substances Control (DTSC). [2012-2015]
- Provided assistance to Habitat for Humanity and other non-profit organizations in support of site redevelopment for affordable housing and schools, including engagements on a pro bono basis. These projects have included environmental site assessment and reviews of historical information, evaluation of known and potential contamination concerns, site characterization and investigation including soil, soil gas, and groundwater sampling, design and implementation of remedial activities, and strategic support for state and local agency interaction prior to and during redevelopment. [2009-2019]
- Developed a scope of work and directed site characterization activities at a former pesticide mixing facility in Pearl Harbor, Hawaii, pursuant to a Unilateral Administrative Order issued by USEPA to conduct site cleanup as a Non-Time-Critical Removal Action under CERCLA. Subsequent work included the preparation of an Engineering Evaluation and Cost Analysis (EE/CA) Work Plan, including evaluation of human health and ecological risks, and planning for remedy implementation. This project involved significant negotiation and interaction with three regulatory entities, including USEPA, the US Navy, and the state of Hawaii. [2009-2022]
- For a large developer and landowner, provided oversight of a major remediation project in the Mission Bay Redevelopment Area along the southern waterfront of San Francisco, California. Project oversight included the active supervision of contaminated soil and ground water removal operations performed by the responsible party, participation in weekly stakeholder meetings, and interacting with local regulatory agencies and the responsible party on behalf of the property owner. [2005-2007]

LORENA BENITEZ

Senior Managing Consultant

Lorena Benitez has 18 years of due diligence and site assessment experience across a diverse array of clients, including attorneys and financial institutions, small businesses, multinational corporations, as well as developers and private property owners. Her broad range of experience includes the design and implementation of site characterization and remedial activities, development and evaluation of remedial cost estimates, and strategic client support during negotiation with regulators, buyers/sellers, and/or third parties. Ms. Benitez has significant specialized project experience related to insurance claims, including claim evaluation, past and future cost auditing, third party review, and litigation support.

COURSES/CERTIFICATIONS

OSHA 40-hour Hazardous Waste Operations and Emergency Response Standard (HAZWOPER)

PROJECTS

- Serve as project manager of an environmental risk management program developed by Ramboll for a major real estate investment trust (REIT) containing more than 30 properties with approximately 100 tenants throughout California. Various services are provided under the umbrella of the program, including: 1) environmental site assessments; 2) soil, soil gas, and groundwater investigations conducted pursuant to property acquisition, financing, development, or divestiture; negotiations and correspondence regarding environmental matters with regulatory agencies on behalf of the client; 3) tenant environmental audits to evaluate biotechnology tenant operations and facility closure/decommissioning procedures; and 4) providing general consulting services to assist the client's risk management and construction groups regarding environmental, waste management, and site development matters. [2019-current]
- For dozens of projects in California, Ms. Benitez performs, manages, and coordinates support for developer clients at all stages of site redevelopment:
  - Pre-acquisition: preliminary information review, environmental due diligence including Phase I and Phase II assessments, strategic planning support in relation to potential future environmental costs relative to potential or

proposed future site use (e.g., entitlement or environmental review concerns, regulatory oversight and/or environmental matters for construction);

- Entitlement, redevelopment, and construction planning: evaluating mitigation requirements or conditions of approval placed on the project by local authorities, subsurface sampling in support of budget development for costs related to soil excavation/disposal and dewatering, asbestos and lead paint surveys, air quality investigations and other risk evaluations, development of soil management and dust control plans, vapor intrusion and related remediation/mitigation requirements;
- During construction: assistance with soil sampling and/or data evaluation for soil disposal profiling, working with the client and/or owner's representative as liaison with the excavation and grading contractor, noise evaluation, construction emissions tracking, support for meeting other mitigation requirements;
- Post-construction: development of project completion summaries related to environmental matters – these can be completed to fulfil requirements under environmental regulatory oversight, and/or for client recordkeeping purposes to provide comprehensive documentation in the event of a future sale of the property.

- Conducted or directed several of environmental site assessments, numerous site investigations, and provided strategic support for implementation of remediation (where warranted) in combination with proposed redevelopment plans. Such projects often include considerable interaction and negotiation with local and/or state environmental regulatory agencies, and required the navigation of local regulatory programs such as voluntary cleanup programs (Santa Clara and San Mateo counties), the San Francisco Regional Water Quality Control Board's (RWQCB) Low-Threat Chlorinated Solvent Site guidance, and the State's California Water Boards Underground Storage Tank (UST) Program under the Low-Threat UST Case Closure Policy. [2006-current]
- Perform due diligence for property and financial transactions including industrial, commercial, and residential properties. Specific due diligence aids clients in understanding the environmental risks and liabilities associated with the target property. Responsibilities include oversight of agency research, file, aerial photo, historical map review; site visits and interviews; asbestos, lead-based paint, and drinking water sampling; detailed site plan preparation; and reporting. [2006-current]
- Provide advisory and environmental due diligence services for a confidential academic institution. Environmental consulting and technical services were in support of potential acquisition of a property with known contamination that was undergoing redevelopment. Environmental risks were evaluated with respect to potential future uses. Specific tasks involved a third party review of site investigation and remediation reports as well as vapor mitigation system designs. [2020-2022]
- Provide expert technical services in the classification of environmental cost recovery disputes for cases related to industrial facilities, manufactured gas plants and sediment remediation sites. Reviewed investigation and remediation activities and the associated costs related to sites contaminated with petroleum products, chlorinated solvents, polychlorinated bi-phenyls (PCBs), and heavy metals. Technical work supported clients in cost allocation and recovery cases. Provided analysis of both incurred and future costs. Other tasks include evaluating the nature and extent, and timing of releases. [2016-2019]
- Managing a 20-acre development site, which was formerly a portion of a US Steel factory. Site structures were previously removed, and lead, hydrocarbon, and PCB impacted material had been placed and covered with an engineered cap over a majority of the site. Specific tasks included: conducting regulatory agency required cap inspections; consulting with management, design, and construction team members to help minimize the hazardous materials exposure and costs; overseeing mitigation measures during redevelopment; and ensuring project compliance with applicable permits and regulations. [2016-2019]
- Managed industrial site, which was formerly a portion of the Benicia Arsenal, with both hydrocarbon and VOC impacts to environmental media. Specific tasks included: leading the remediation effort for

TPH impacted soil and groundwater from a former diesel UST through excavation and addition of chemical oxidants; investing soil gas and indoor air VOC impacts; preparing a request for closure for both TPH and VOC impacted media; and corresponding with stakeholders. [2016-2019]

- Managed a large-scale (5.5 million dollar) remediation project with volatile organic compound (VOC) impacts to soil and multiple aquifers. Responsibilities included ensuring all regulatory and client specific requirements were met. Specific tasks at the former chemical manufacturing facility included a residential soil vapor intrusion investigation, operation of a groundwater extraction treatment system, phytoremediation pilot study, soil excavation and associated well abandonment and replacement activities, and semiannual groundwater and soil vapor monitoring. Responsibilities also included implementation of an enhanced in-situ bioremediation (EISB) pilot test for the shallow water bearing zone and subsequent full-scale implementation that involved installation of two transects of 30 injection wells each and injection of emulsified vegetable oil (EVO) into each transect of wells. Subsequent evaluation of EISB activities through periodic performance monitoring indicated biodegradation of tetrachloroethylene (PCE) and trichloroethylene (TCE). [2013-2016]
- Field task lead for a site with metals contamination to soil, several creeks, and multiple aquifers. Tasks included leading field teams; preparation of field paperwork and guidance documents; geomorphologic and soil mapping floodplains along four tributaries; and sediment and soil sampling within and along creeks. Determined soil classification groups based on geomorphic surface, pedological properties, mineralogical properties, and particle size. [2013-2016]
- Managed and performed routine groundwater monitoring and other site investigations at an active lead smelting facility with 28 operable units, 2 post-closure units, 25 solid waste management units and 4 areas of concern as required under a RCRA Equivalent Waste Facility Operations and Post-Closure Permit (Part B Permit). Additional responsibilities including leading inspection efforts for facility underground piping, sumps, and tanks, and subsequent sampling beneath these components for collection of soil, soil vapor, and soil-pore-liquid. [2007-2012]

JODI VANNEMAN

Managing Consultant

Jodi Vanneman has over 30 years of environmental consulting experience, primarily in the due diligence and environmental compliance arena. With thousands of due diligence and third-party desktop reviews completed, Jodi has worked on both single and large-portfolio projects throughout the United States. Familiar with agency funding and regulatory framework, Jodi has assisted industrial clients achieve their compliance objectives and investors make informed acquisition decisions.

EXPERIENCE HIGHLIGHTS

Completed assessment of properties with existing contamination subject to regulatory Cleanup Orders. Prevented prospective buyers from acquiring contaminated property due to exposure of deficient and grossly misleading prior reports and/or findings assisted with property value negotiations.

Managed the assessment and completion of Preliminary Endangerment Assessment (PEA) and remedial action at a former plating facility transferred through inheritance. Completed a risk assessment/PEA for the DTSC to achieve case closure.

Conducted environmental assessment of 1000s of residential and commercial structures to assist military privatization objectives defined for the Housing Requirements and Marketing Analyses of military installations.

Provided desktop review and recommendations for a 100+ year old lumbermill and pulp plant with history of tanks, treatment ponds, and open water discharges subject to lawsuits and public exposure.

Conducted assessment and compliance audits of vineyards and wineries addressing agriculturally-related maintenance, water management, natural resource management, pesticide applications, and wastewater treatment.

Conducted environmental, health & safety compliance audits that included employee interviews, record audits and agency interviews to identify deficiencies. Selected management tools to improve compliance.

Completed various Phase I and II site assessments to document environmental disposition of regional malls commonly addressing dry-cleaning, gas stations and automotive repair activities. Developed and prioritized remedial action.

Lead environmental auditor on EH&S compliance audits interviewing employees, auditing records and inspecting facilities to identify deficiencies and prioritize negative findings. Recommended corrective actions and best management practices.

Conducted third-party/desktop reviews and conducted site assessments for large, multi-site portfolios providing environmental and business risk summaries to develop strategies for managing properties with environmental concerns.
