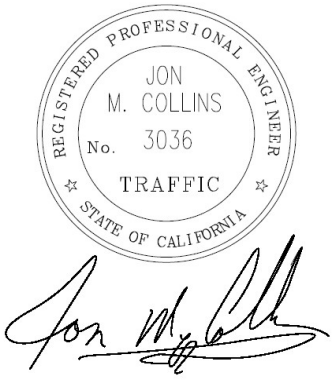
MIDWAY RISING

Local Mobility Analysis



PRJ #: 1106734

AUGUST 2024 | VERSION 5

Prepared By:

Kimley»Horn

EXECUTIVE SUMMARY

This Local Mobility Analysis (LMA) evaluates the potential transportation effects associated with the proposed Midway Rising project. The City of San Diego (City) Transportation Study Manual (TSM) dated September 2022 was used to develop this LMA. A Vehicle Miles Traveled (VMT) analysis was also performed per California Environmental Quality Act (CEQA) and the results are provided in a separate document. A Community Plan Amendment (CPA) was also developed as a separate document to modify circulation element roadways planned in the Midway-Pacific Highway Community Plan (2018). The CPA can be found in **Appendix B**. The proposed Midway Rising development is located at 3220, 3240, 3250, and 3500 Sports Arena Boulevard and 3467, 3487, and 3495 Kurtz Street (privately-owned parcels), in the City of San Diego, CA.

PROJECT OVERVIEW

The Midway Rising project proposes to demolish the existing 16,000-seat San Diego Sports Arena and all commercial buildings on-site and construct a mixed-use development within the Midway Pacific-Highway Community Planning Area including a new Entertainment Center. A Midway Rising Specific Plan will include both the existing Sports Arena site and 3 adjacent privately-owned parcels along Kurtz Street.

The project is located between Kurtz Street to the northeast, Sports Arena Boulevard to the southwest, and Hancock Street to the northeast, and commercial development to the southeast. **Figure ES-1** shows the proposed conceptual site plan for the project. The details of each proposed land use are as follows:

- Entertainment
  - New 16,000-seat Entertainment Center
  - 3,500-seat theater (to be located within the privately-owned parcels area)
- Residential
  - 4,627 multi-family dwelling units, including:
    - 2,627 market-rate units
    - 2,000 affordable units, including
      - 1,538 units (≤ 50% Area Median Income (AMI))
      - 462 units (50-80% AMI).
- Commercial
  - 140,000 square-feet of commercial, including
    - 60,000 square-feet retail
    - 40,000 square-feet quality restaurant
    - 40,000 square-feet high-turnover sit-down restaurant

Construction of the project is proposed to occur in two phases, as illustrated in **Figure ES-2**.

- Phase 1 consists of the project site east of Frontier Drive with the exception of the privately-owned parcels, including construction of the proposed Frontier Drive, to be completed in 2030. During the construction of Phase 1, the Sports Arena and existing commercial uses west of Frontier Drive will remain operational.
- Phase 2 construction includes the remainder of the project site west of Frontier Drive plus the privately-owned parcels, to be completed by 2035.

EXISTING ARENA OPERATIONS

The existing arena is currently accessible via five driveways; four are inbound/outbound and one is outbound-only. Three driveways are located on Sports Arena Boulevard and two are located on Kurtz Street. **Figure ES-3** illustrates the existing driveways and operations for the project site during an event.

The existing arena currently has a 16,000-seat capacity for sporting events and 10,500-seat capacity for concerts due to the u-shaped seating layout. Currently, 3,861 parking spaces are provided via surface lot space for the Sports Arena and surrounding commercial uses. Additionally, surrounding on-street parking and adjacent commercial lots were observed to be used by spectators to avoid parking costs (typically $35 per vehicle, verified through site visits) on-site for events.

TRANSPORTATION ANALYSIS

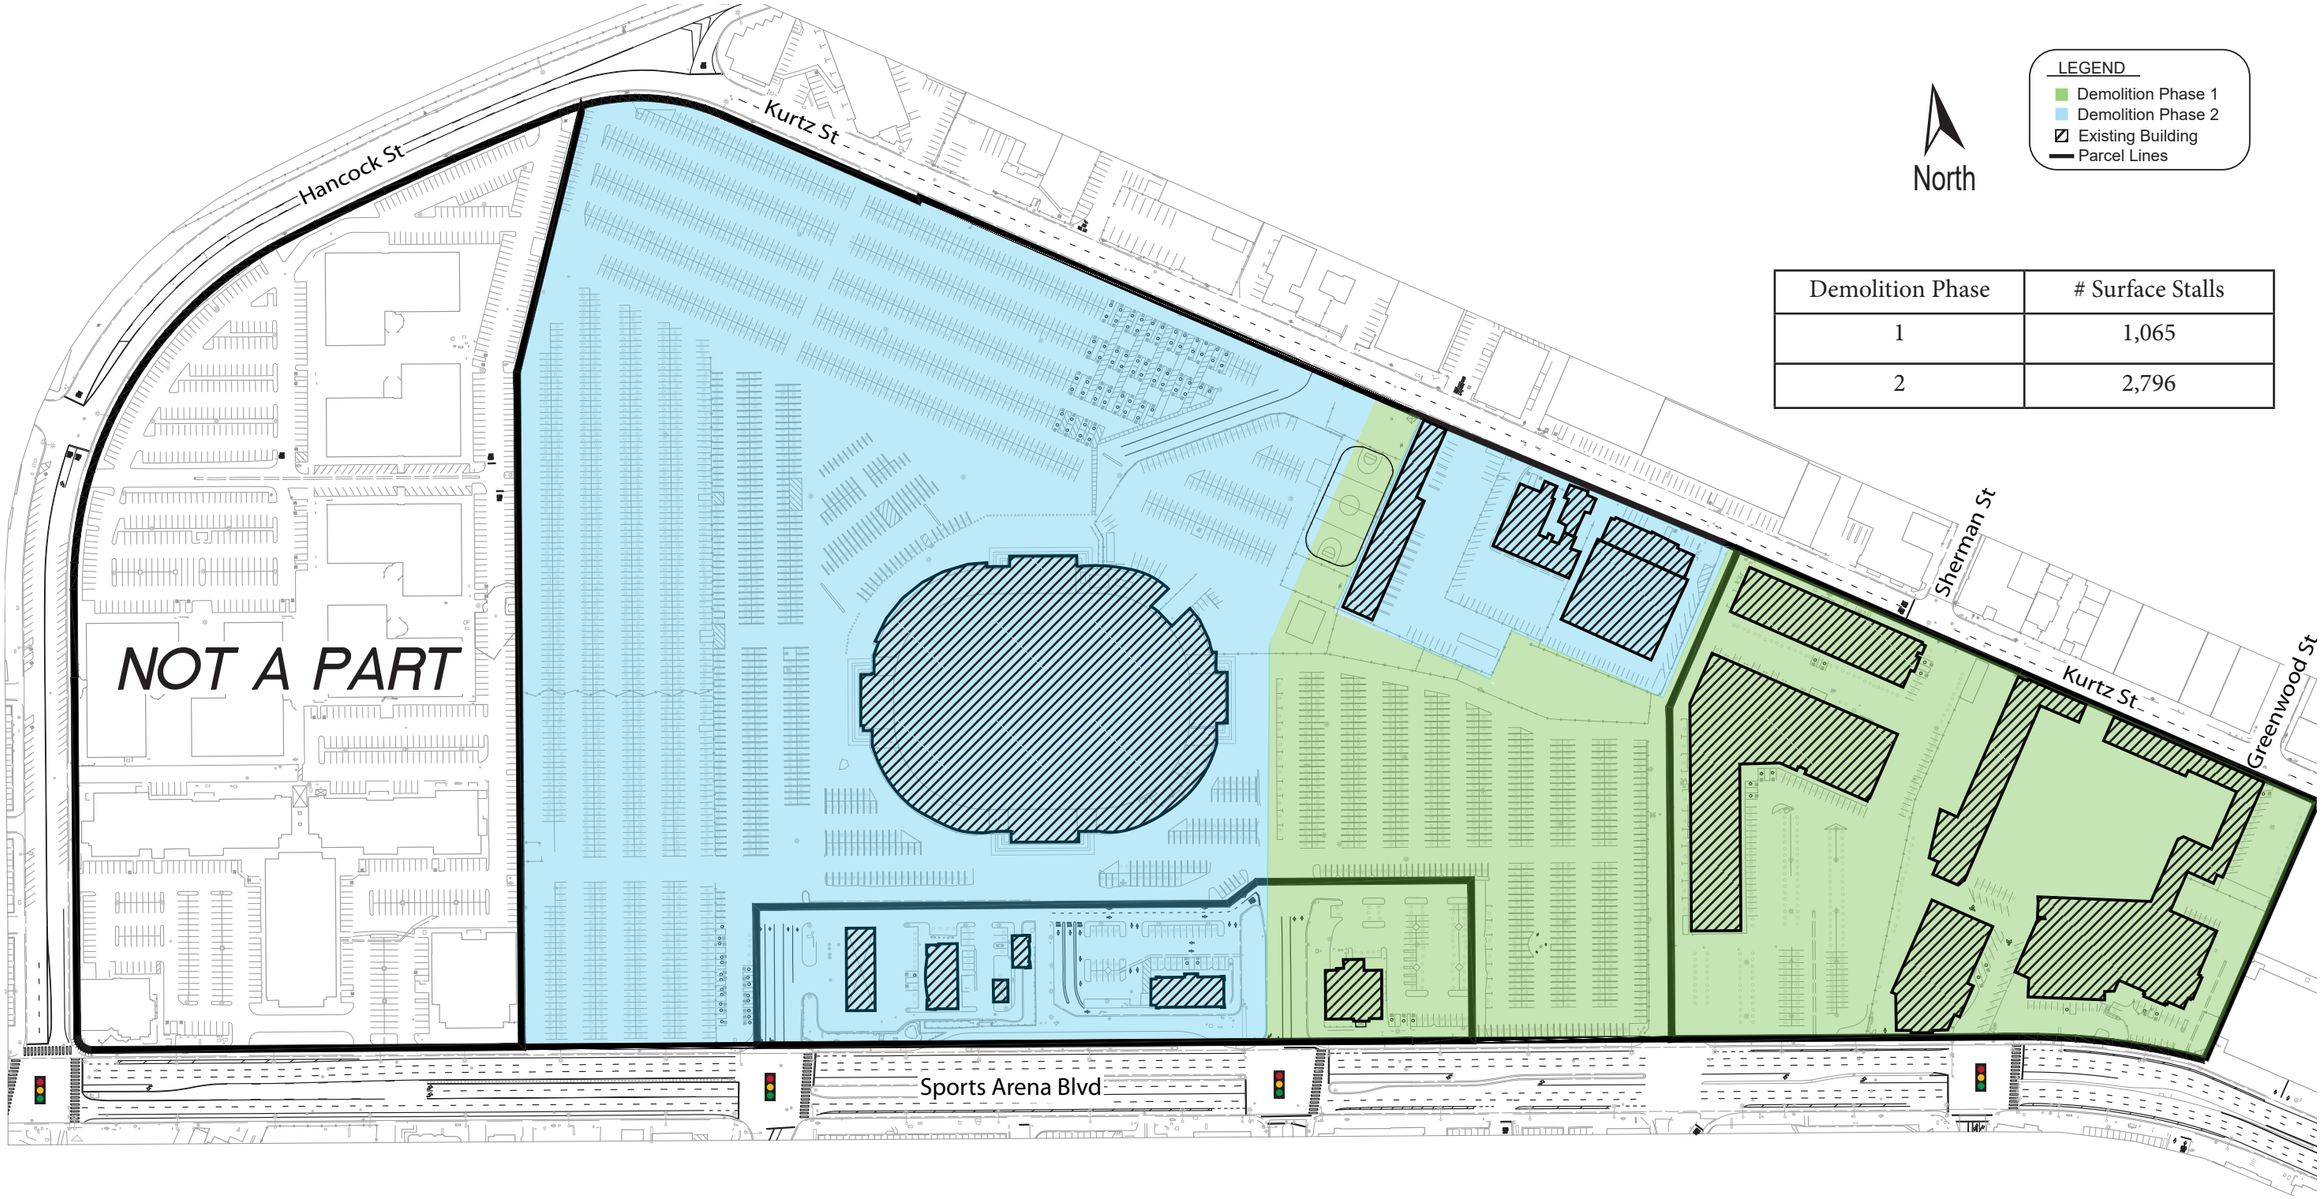
STUDY AREA

The study area was determined per the City of San Diego TSM. The proposed study area consists of 40 study intersections, including 24 signalized intersections, 10 unsignalized intersections, 6 unsignalized project driveways, and 23 roadway segments.

The study area is illustrated in **Figure ES-4**. The study intersections and study segments are listed in Section 2.1 of the LMA.

ANALYSIS SCENARIOS

The following scenarios were analyzed in the LMA report:



- ***Existing (2023):*** Represents the traffic conditions of the existing street network (as of December 2023), lane geometry, signal timing, and traffic volumes observed on a weekday, event day in 2023.
- ***Opening Year (2030) Base:*** Represents the traffic conditions on the existing street network assumed to be in place in year 2030, and a 0.55% annual growth rate in traffic volumes. Includes the NAVWAR redevelopment Near-Term with Year 2030 Alternative 2 project trips.
- ***Opening Year (2030) Plus Project Phase 1:*** Represents the Opening Year (2030) Base scenario with the addition of the proposed project Phase 1 trips and roadway network.
- ***Opening Year (2035) Base:*** Represents the traffic conditions on the existing street network anticipated to be in place in year 2035. The Opening Year (2035) Base traffic volumes were developed by applying a 0.55% annual growth rate to the existing (2023) traffic volumes and adding NAVWAR project trips for the future year 2035. The NAVWAR Near-Term with Year 2030 Alternative 2 project trips were linearly interpolated between NAVWAR Near-Term with Year 2030 Alternative 2 and Year 2050 with Alternative 2 scenario trips to develop cumulative project trips for 2035. Resulting trips were added to the project study intersections contained within the NAVWAR study area.
- ***Opening Year (2035) Plus Project Phase 2 Buildout:*** Represents the Opening Year (2035) Base scenario with the addition of the proposed project Phase 2 trips and roadway network.

Figure ES-4. Study Area Map

PROJECT TRANSPORTATION DEMAND

The following sections describe the project trip generation, trip distribution, and trip assignment through the study area.

Proposed Entertainment Center

The existing arena currently has a 16,000-seat capacity for sporting events and 10,500-seat capacity for concerts. The Entertainment Center will maintain a 16,000-seat capacity for sporting events and increase the concert capacity to 14,500 seats. The Entertainment Center is anticipated to continue to host similar types and sizes of events as the existing Sports Arena. The planned program of events (type, size, and frequency) for the future Entertainment Center is summarized in **Table ES-1**.

Table ES-1. Planned Events for Proposed Entertainment Center

Event	No. of Events/Year	Average Spectators
San Diego Gulls	38	8,500
San Diego Seals	9	6,500
San Diego Strike Force	8	3,000
Concert – Full	25	14,500
Concert – Half	25	7,500
Family Shows	8	3,500
Ice Shows	6	3,000
Motorsports	1	4,000
Boxing	1	8,000
Wrestling	2	4,000
Rodeos	1	3,000
High School Sports	5	1,500
Other Sports	2	4,000
Graduations & Trade Shows	10	300
Private / Catered Events	25	8,500
Total	**166**	

On-site parking for the Entertainment Center will be provided via parking garages on Block E2 and Block B2, west of Frontier Drive, and Block H1, east of Frontier Drive (See **Figure ES-1** for Block locations). **Table ES-2** summarizes the number of parking spaces that will be provided on-site during an event by Block, not including on-street parking on Kemper Street, Frontier Drive, and Kurtz Street.

Table ES-2. Proposed Event Parking Spaces by Block

Block	Available Parking Spaces (Phase 1)	Event Parking Spaces (Phase 2)
Block B2	0	565
Block E2	0	754
Block H1	781	781
Surface Parking	2,683	0
Total	**3,464**	**2,100**

The project will provide 2,100 spaces to accommodate events (along with transit, rideshare, biking, and walking) for up to 10,000 attendees. The 2,100 spaces are considered "right sized" for the site; the parking provided enables for the site to accommodate parking for a typical event on-site and minimize empty parking structures/spaces through the year (200 days of the year with no event). Limiting the amount of available parking has been found to encourage spectators to utilize other modes of transportation and potentially minimize the amount of traffic to be added to the roadway network. For events over 10,000 spectators, Midway Rising Project will maintain contracts with several entities—e.g., adjacent parking structures, business parks, and major landowners—for the use of their parking lots as overflow event parking.

The trips generated by the Entertainment Center were assigned to the roadway network based on available parking in each Block, and additional trips were assigned to overflow parking sites nearby the project site. **Figure ES-5** illustrates the locations of the overflow parking sites for the Entertainment Center.

TRIP GENERATION RATES

The project transportation demand was developed using San Diego Municipal Code Land Development Code Trip Generation Manual (2003). The San Diego Trip Generation Manual, Institute of Transportation Engineers (ITE) Trip Generation Manual, and San Diego Association of Governments (SANDAG) Trip Generation Manual, trip generation rates for entertainment land uses are not reflective of the anticipated operations for the proposed Entertainment Center. Thus, trip rates for the proposed Entertainment Center were manually developed based on previous arena studies, existing driveway counts, anticipated mode shift, and parking availability. The assumptions for the trip generation analysis for each land use are further detailed in Section 4.1 of this LMA.

The trip generation rates used for the proposed land uses are summarized in **Table ES-3**.

TRIP GENERATION RATE ADJUSTMENTS

Commercial trip generation rates included reductions for multimodal trips and internal capture (mixed-use). Additionally, trip generation rates were adjusted for the Commuter PM and Pre-Event Peak periods, based on the assumption that a portion of retail- and restaurant-goers will avoid the project site and surrounding area during these peaks on event days as compared to non-event days.

The residential and retail trip generation rates for the Pre-Event PM peak hour are based on vehicle time of day distributions ("bell curve factor") provided in the ITE Trip Generation Manual, 11th Edition for Multifamily Mid-Rise (ITE Code 221) and Shopping Center (ITE Code 820). Both land uses were observed to generate a lower portion of ADT in the 6-7 PM hour compared to the 5-6 PM hour.

Figure ES-5. Entertainment Center Off SIte Overflow Parking

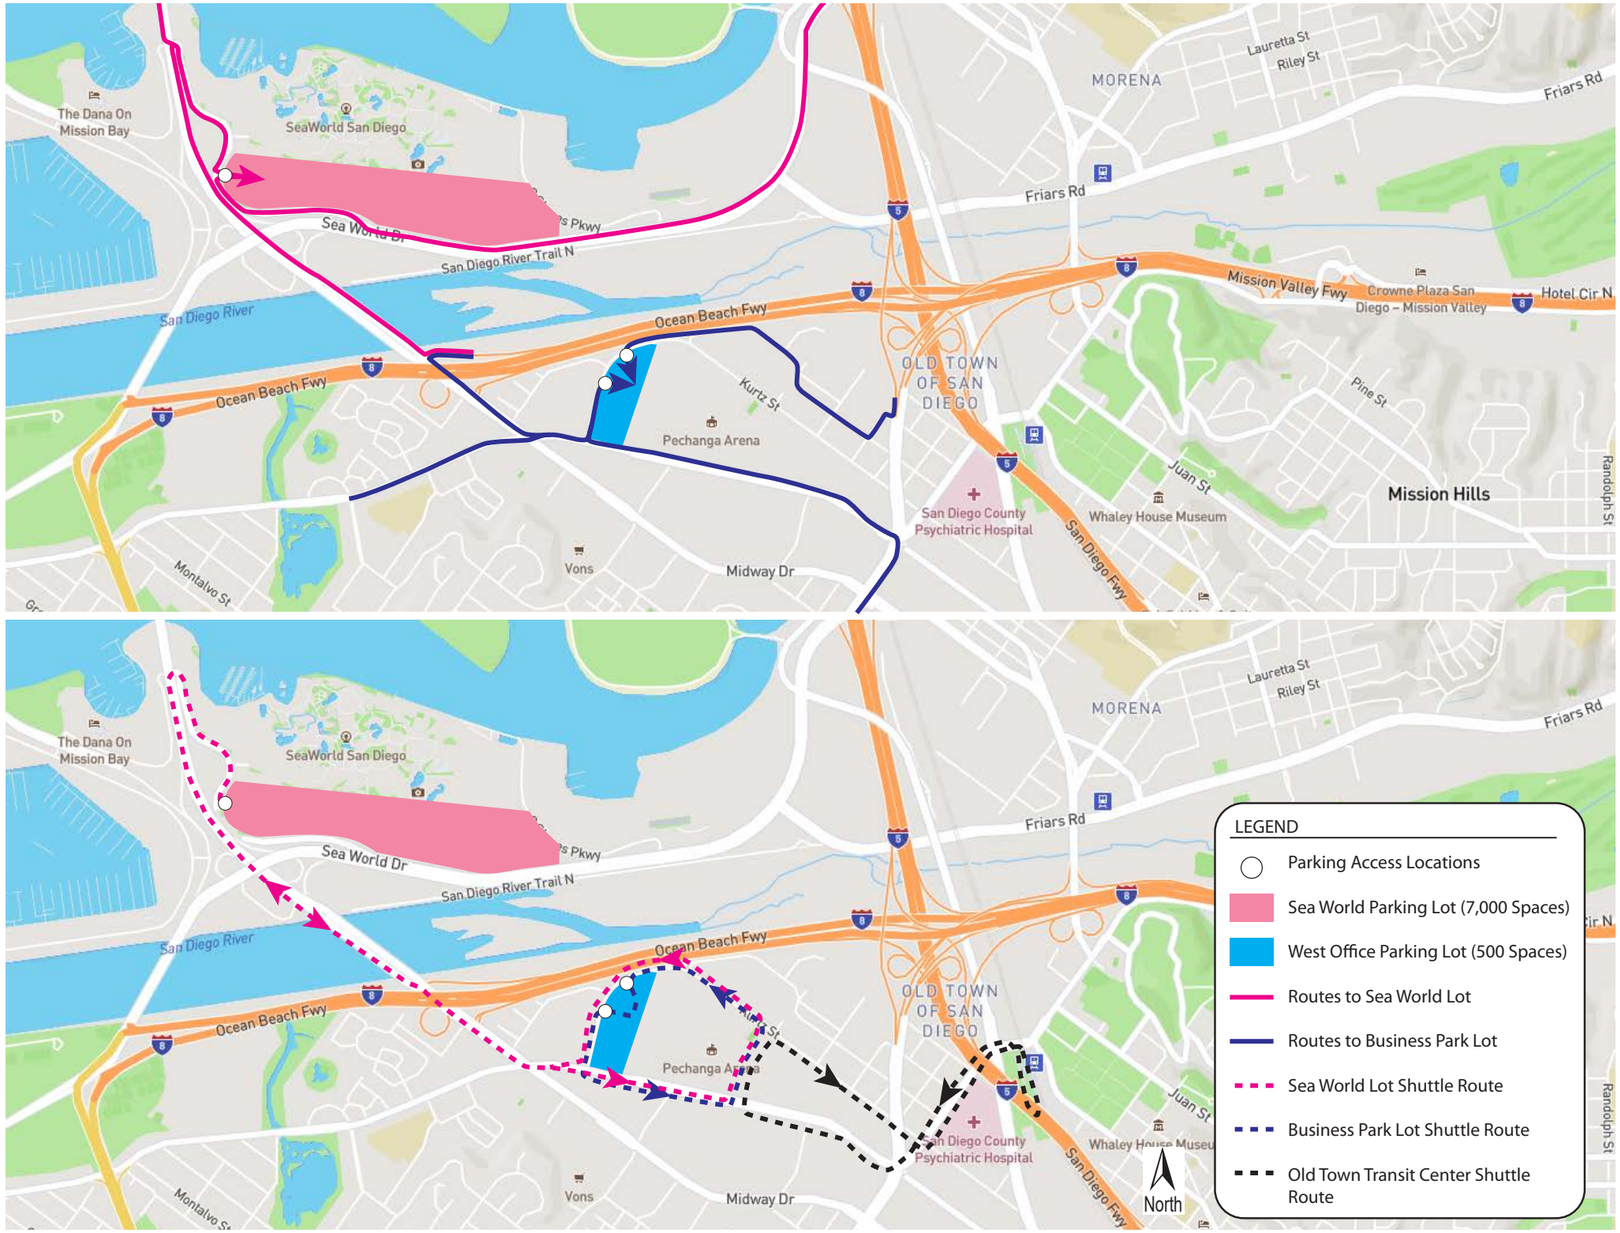

Table ES-3. Trip Generation Rates for Proposed Project (Cumulative Trip Rates)

Land Use[1]		Daily Rates-Cumulative	Weekday Event-Day									Weekend Non-Event Day		
			AM Commuter Peak Hour[2]			PM Commuter Peak Hour[3]			Pre-Event PM Peak Hour[4]			Midday Peak Hour[5]		
			Total	In	Out	Total	In	Out	Total	In	Out	Total	In	Out
Proposed Raw Rates														
*	Entertainment Center Event - Spectators	2.0	0	0	0	0.20	0.20	0	0.40	0.40	0	0	0	0
*	Entertainment Center - Employees	2.0	0	0	0	0.25	0.25	0	0.00	0.00	0	0	0	0
SD	Multiple Dwelling Unit - Over 20 dwelling units/acre	6.0	8%	2	8	9%	7	3	9%	7	3	9%	7	3
SD	Restaurant - Quality	90	1%	6	4	8%	7	3	8%	7	3	8%	7	3
SD	Restaurant - High Turnover (sit-down)	104	8%	5	5	8%	6	4	8%	6	4	8%	6	6
SD	Shopping Center - Community (100,000 sq. ft. or more GLA on 10 or more acres)	49	3%	6	4	10%	5	5	10%	5	5	10%	5	5

Notes:

[1]Land Uses based on: SD – City of San Diego Trip Generation Manual

[2]AM Commuter Peak Hour = Morning Peak Hour (8-9 AM)

[3]PM Commuter Peak Hour = Evening Commute Peak Hour (5-6 PM)

[4]Pre-Event PM Peak Hour = Arrival Peak Hour prior to event (6-7 PM)

[5]Weekend Midday Peak = Midday peak hour (11 AM-12 PM) during a non-event day

*Entertainment Center trip generation is based on number of maximum number of seats and employees expected for that peak period. Proposed Raw Trips is not based on a rate but rather using assumptions listed below:

Spectator Arrival - 20% during Commute PM Peak Hour; 40% during Pre-Event PM Peak Hour

Employee Arrival - 25% during PM Peak Hour; 0% during Pre-Event PM Peak Hour

Table ES-3. Trip Generation Rates for Proposed Project (Driveway Trip Rates)

Land Use[1]		Daily Rates-Driveway	Weekday Event-Day									Weekend Non-Event Day		
			AM Commuter Peak Hour[2]			PM Commuter Peak Hour[3]			Pre-Event PM Peak Hour[4]			Midday Peak Hour[5]		
			Total	In	Out	Total	In	Out	Total	In	Out	Total	In	Out

[2]AM Commuter Peak Hour = Morning Peak Hour (8-9 AM)

[3]PM Commuter Peak Hour = Evening Commute Peak Hour (5-6 PM)

[4]Pre-Event PM Peak Hour = Arrival Peak Hour prior to event (6-7 PM)

[5]Weekend Midday Peak= Midday peak hour (11 AM-12 PM) during a non-event day

RESIDENTIAL AND COMMERCIAL TRIP GENERATION

The proposed commercial land use trip generation calculations are based on rates for Multiple Dwelling Unit (Over 20 dwelling units/acre) for the proposed residential land use, and Restaurant (Quality), Restaurant (High-Turnover/sit-down), and Shopping Center (Community) for the commercial land uses.

Two different trip generation calculations were performed for the commercial land uses:

1. Trip generation based on cumulative trip rates
2. Trip generation based on driveway trip rates

The driveway trip rates were used to calculate commercial trips at all project driveways, while cumulative trip rates were used to calculate commercial trips at the remaining study intersections.

ENTERTAINMENT CENTER TRIP GENERATION CALCULATIONS

Two different sets of trip generation calculations were performed for the entertainment land use on the project site:

1. Typical Event: 14,500 spectators
2. Full Capacity Event: 20,000 spectators (combined maximum capacity of Entertainment Center and theater)

Although the transportation analysis was performed for the two event sizes, project effect determination is based on the 14,500-spectator event for the proposed scenario as the “typical” maximum event. The 20,000-spectator scenario is a maximum capacity event for the Entertainment Center and the theater combined, which is expected to occur up to 2 times per year. Operational results of the maximum capacity event will be used to develop traffic management strategies including temporary traffic control, additional signage, and traffic signal modifications that would be used for these larger spectator events.

TRIP GENERATION RESULTS

Trip generation for the project site was estimated for the event-day weekday Commuter AM (7-10 am), Commuter PM (4-6 pm), Pre-Event PM (6-7 pm), and Weekend Midday (11am-1pm) peak hours. Two trip generation estimates were produced for the Pre-Event PM peak:

- Typical-capacity events – 14,500 spectators
- Full-capacity events – 20,000 spectators

The existing site trip generation was subtracted from the proposed trip generation to calculate the net new trips generated by the proposed project. The net new trips generated by the proposed project are reported below.

Trip Generation Results with Typical Event

Trip generation calculations were prepared for the proposed project and a typical event with 14,500 spectators under Opening Year (2030) Plus Project Phase 1 with both cumulative rates and driveway rates, as described below.

The Opening Year (2030) Plus Project Phase 1 is expected to generate approximately 3,614 net new daily cumulative trips with 14,500 spectators at the Entertainment Center, and the portion of residential and

commercial land uses proposed for east of Frontier Drive. The proposed project net new peak hour trips are presented below:

- 5 AM Commuter Peak Hour Trips (-228 inbound / 234 outbound)
- 841 PM Commuter Peak Hour Trips (873 inbound / -33 outbound)
- 432 Pre-Event PM Peak Hour Trips (523 inbound / -92 outbound)
- -590 Weekend Midday Peak Hour Trips (-309 inbound / -280 outbound)

The Opening Year (2030) Plus Project Phase 1 is expected to generate approximately 5,586 net new daily commercial driveway trips for the portion of commercial land uses proposed east of Frontier Drive. The proposed project net new commercial, peak hour driveway trips are presented below:

- 62 AM Commuter Peak Hour Trips (-16 inbound / 78 outbound)
- 201 PM Commuter Peak Hour Trips (120 inbound / 82 outbound)
- -304 Pre-Event PM Peak Hour Trips (193 inbound / -112 outbound)
- 732 Weekend Midday Peak Hour Trips (426 inbound / 306 outbound)

The Opening Year (2035) Plus Project Phase 2 Buildout scenario is expected to generate approximately 22,514 net new daily cumulative trips with 14,500 spectators at the Entertainment Center, and full buildout of residential and commercial land uses. The proposed project net new peak hour trips are presented below:

- 1,450 AM Commuter Peak Hour Trips (86 inbound / 1,363 outbound)
- 2,055 PM Commuter Peak Hour Trips (1,684 inbound / 371 outbound)
- 1,321 Pre-Event PM Peak Hour Trips (1,106 inbound / 215 outbound)
- 885 Weekend Midday Peak Hour Trips (911 inbound / -27 outbound)

The Opening Year (2035) Plus Project Phase 2 Buildout scenario is expected to generate approximately -915 net new daily commercial driveway trips for full buildout of commercial land uses. The proposed project net new commercial, peak hour driveway trips are presented below:

- -228 AM Commuter Peak Hour Trips (-156 inbound / -72 outbound)
- -329 PM Commuter Peak Hour Trips (-196 inbound / -134 outbound)
- -1,175 Pre-Event PM Peak Hour Trips (-807 inbound / -368 outbound)
- -617 Weekend Midday Peak Hour Trips (-170 inbound / -447 outbound)

Trip Generation Results with Full Capacity Event

Under the full-capacity event scenario, peak hour trips were developed for the Pre-Event PM peak hour only, as it is assumed to be the worst-case scenario. Trip generation results are described below.

Opening Year (2030) Plus Project Phase 1 is expected to generate approximately 7,027 net new daily cumulative trips, with 1,145 (1,143 inbound / 1 outbound) weekday, Pre-Event PM peak hour cumulative trips with 20,000 spectators, and the portion of residential and commercial land uses proposed for east of Frontier Drive.

Opening Year (2030) Plus Project Phase 1 is expected to generate approximately -3,588 net new daily commercial driveway trips, with -1,198 (-820 inbound / -378 outbound) weekday Pre-Event PM peak hour trips for the portion of commercial land uses proposed for east of Frontier Drive.

Opening Year (2035) Plus Project Phase 2 Buildout scenario is expected to generate approximately 32,401 net new daily cumulative trips with 2,586 (2,218 inbound / 369 outbound) weekday Pre-Event PM peak hour trips with 20,000 spectators, and full buildout of residential and commercial land uses.

Opening Year (2035) Plus Project Phase 2 Buildout scenario is expected to generate approximately 5,586 net new daily commercial driveway trips with -304 (-193 inbound / -112 outbound) weekday Pre-Event PM peak hour trips with full buildout of commercial land uses.

TRIP DISTRIBUTION

Trip distribution patterns were created for each land use to and from applicable parking locations within and nearby the project site. Three geographic areas (or zones) were chosen to develop the regional trip distribution for each proposed land use. The zones were selected for each land use to represent comparable travel patterns to the proposed project, based on their location and similarity in characteristics with the proposed land uses. The three sites selected are identified as follows:

- Residential neighborhoods located north and south of Point Loma Boulevard were chosen for the proposed Residential land use to reflect the mid- to high-density nature of the project.
- Liberty Station was chosen for the proposed commercial land uses as it contains boutique-retail and restaurant and beverage uses, similar to the project.
- Sports Arena was chosen for the proposed Entertainment Center as the project proposes to redevelop the existing Sports Arena.

Additional details on trip distribution development are in Section 4.2 of the LMA.

TRANSPORTATION ANALYSIS RESULTS

Table ES-4 provides a summary of the intersection LOS for all intersections and scenarios analyzed as part of this LMA at the end of this section of the Executive Summary. **Table ES-5** provides a summary of the roadway segment LOS analysis for all locations and all scenarios.

EXISTING CONDITIONS ANALYSIS

The existing (2023) scenario was analyzed at the study intersections based on the existing (2023) lane geometry and traffic volumes. Existing (2023) conditions lane geometrics and traffic volumes are provided in Chapter 3 of the LMA. Existing (2023) conditions level of service results for all study intersections are included in Chapter 3 of this LMA.

Under existing (2023) conditions, all intersections operate at LOS D or better in all peak hours except:

- Intersection #2 – Midway Drive & W Point Loma Boulevard & Sports Arena Boulevard (PM: LOS E; Pre-Event: LOS E)
- Intersection #5 – West Drive / Frontier Drive & Sports Arena Boulevard (Pre-Event: LOS F)
- Intersection #6 – Target Driveway & Sports Arena Boulevard (PM: LOS E; WKND: LOS F)
- Intersection #16 – Camino del Rio W & Moore Street (WKND: LOS E)
- Intersection #17 – Camino del Rio W & Hancock Street (AM: LOS F; PM: LOS F; Pre-Event: LOS F)
- Intersection #20 – Rosecrans Street & Midway Drive (AM: LOS E; PM: LOS E; Pre-Event: LOS E; WKND: LOS E)
- Intersection #27 – Pacific Highway & Enterprise Street (PM: LOS F; WKND: LOS F)
- Intersection #29 – Barnett Avenue & Midway Drive (PM: LOF F)

Notes:

[1] Functional Classification based on the Midway Pacific Highway Community Plan.

[2] LOS E Capacity provided by City of San Diego staff. LOS E capacity of Segment 12 under WP Conditions is based on a 2-lane Collector with two-way left-turn lane as the project wouldn't construct the median for a Major Arterial on Rosecrans St because there is not a project effect, and instead proposes a 2-lane Collector with flex lanes.

[3] ADT - Average Daily Traffic.

[4] V/C Ratio - Volume-to-capacity ratio.

[5] LOS - Level of Service.

[6] With Project Classification based on roadway classifications proposed by the Midway Rising Project.

OPENING YEAR (2030) BASE SCENARIO

Opening Year (2030) Base traffic volumes are provided in Chapter 5 of this LMA. The Opening Year (2030) Base lane geometry is the same as shown under the Existing (2023) scenario. Under the Opening Year (2030) Base scenario, all intersections are anticipated to operate at LOS D for all peak hours in all scenarios or better except:

- Intersection #2 – Midway Drive & W Point Loma Boulevard & Sports Arena Boulevard (PM: LOS E; Pre-Event: LOS E; WKND: LOS E)
- Intersection #5 – West Drive / Frontier Drive & Sports Arena Boulevard (Pre-Event: LOS F)
- Intersection #6 – Target Boulevard & Sports Arena Boulevard (PM: LOS E; WKND: LOS F)
- Intersection #16 – Camino del Rio W & Moore Street (WKND: LOS E)
- Intersection #17 – Camino del Rio W & Hancock Street (AM: LOS F)
- Intersection #20 – Rosecrans Street & Midway Drive (AM: LOS E; PM: LOS E; Pre-Event: LOS E; WKND: LOS E)
- Intersection #22 – Rosecrans Street & Lytton Street (AM: LOS E)
- Intersection #26 – Kurtz Street & Pacific Hwy (PM: LOS F; Pre-Event: LOS F)

Under the Opening Year (2030) Base scenario, all roadway segments are expected to operate at LOS D or better on a weekday event day except the following:

- Camino del Rio West north of Greenwood Street (LOS F)
- Camino del Rio West between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)
- Midway Drive between Kemper Street and Rosecrans Street (LOS E)

OPENING YEAR (2030) PLUS PROJECT PHASE 1 (14,500-SPECTATORS)

The Opening Year (2030) Plus Project Phase 1 traffic volumes will consist of the Opening Year (2030) Base scenario, and proposed project traffic for the project under Phase 1. Under Opening Year (2030) Plus Project Phase 1 scenario (14,500-spectator event), the project would be expected to cause a project effect at the following intersections:

- Intersection #2 – Midway Dr / W Point Loma Blvd & Sports Arena Blvd (PM: LOS F; Pre-Event: LOS E; WKND: LOS E)
- Intersection #5 – West Dr / Frontier Dr & Sports Arena Blvd (PM: LOS F; Pre-Event: LOS F; WKND: LOS F)
- Intersection #14 – Sherman Street & Hancock St (Pre-Event: LOS F)
- Intersection #16 – Camino del Rio W & Moore St (PM: LOS E; Pre-Event: LOS E; WKND: LOS F)
- Intersection #17 – Camino del Rio W & Hancock St (AM: LOS F)
- Intersection #20 – Rosecrans Street & Midway Dr (AM: LOS E; PM: LOS E; Pre-Event: LOS E; WKND: LOS F)
- Intersection #26 – Kurtz Street & Pacific Hwy (PM: LOS F; Pre-Event: LOS F)
- Intersection #27 – Pacific Hwy & Enterprise Street (PM: LOS E; Pre-Event: LOS E)

The following intersections operate at LOS E or F under the Opening Year (2030) Plus Project Phase 1 scenario (14,500-spectator event), but are not identified as a project effect:

- Intersection #6 – Target Driveway & Sports Arena Blvd (WKND: LOS F)

- Intersection #19 – Rosecrans Street & Sports Arena Boulevard & Camino Del Rio W (PM: LOS E; WKND: LOS E)
- Intersection #22 – Rosecrans St & Lytton St (AM: LOS E)

Under the Opening Year (2030) Plus Project Phase 1 scenario (14,500-spectator event), the project would be expected to cause a project effect at the following locations:

- Camino Del Rio W between Hancock Street and Kurtz Street (LOS E)
- Kurtz Street between Kemper Street and Frontier Drive (LOS F)
- Kurtz Street between Frontier Drive and Sherman Street (LOS F)

The following roadway segments would be expected to operate at LOS E or F under the Opening Year (2030) Plus Project Phase 1 scenario, but are not identified as a project effect per the criteria in the TSM:

- Camino Del Rio W North of Greenwood Street (LOS F)
- Camino Del Rio W between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)
- Midway Drive between Kemper Street and Rosecrans Street (LOS E)

OPENING YEAR (2030) PLUS PROJECT PHASE 1 (20,000-SPECTATORS)

The Opening Year (2030) Plus Project Phase 1 traffic volumes will consist of the Opening Year (2030) Base scenario, and proposed project traffic for the project under Phase 1. Under Opening Year (2030) Plus Project Phase 1 scenario (20,000-spectator event), all intersections are expected to operate at LOS D or better except:

- Intersection #26 – Kurtz Street & Pacific Hwy (Pre-Event: LOS F)
- Intersection #27 – Pacific Hwy & Enterprise Street (Pre-Event: LOS E)

OPENING YEAR (2035) BASE SCENARIO

Opening Year (2035) Base traffic volumes are provided in Chapter 7 of this LMA. The Opening Year (2035) Base lane geometry is the same as shown under the Existing (2023) scenario. Under the Opening Year (2035) Base scenario, all intersections are expected to operate at LOS D or better except:

- Intersection #2 – Sports Arena Boulevard / Midway Dr & W Point Loma Blvd (PM: LOS E; Pre-Event: LOS E; WKND: LOS E)
- Intersection #5 – West Drive / Frontier Drive & Sports Arena Boulevard (Pre-Event: LOS F)
- Intersection #6 – Sports Arena Boulevard & Target Driveway (PM: LOS F; WKND: LOS F)
- Intersection #16 – Camino del Rio W & Moore Street (WKND: LOS F)
- Intersection #17 – Camino del Rio W & Hancock Street (AM: LOS F)
- Intersection #19 – Rosecrans Street & Sports Arena Boulevard & Camino del Rio W (WKND: LOS E)
- Intersection #20 – Rosecrans Street & Midway Drive (AM: LOS E; PM: LOS E; Pre-Event: LOS E; WKND: LOS F)
- Intersection #22 – Rosecrans Street & Lytton Street (AM: LOS F; PM: LOS E)
- Intersection #26 – Kurtz Street & Pacific Highway (PM: LOS F; Pre-Event; LOS F)
- Intersection #28 – Midway Drive & Enterprise Street (PM: LOS E)
- Intersection #29 – Barnett Avenue & Midway Drive (PM: LOS E)

Under the Opening Year (2035) Base scenario, all roadway segments would be expected to operate at LOS D or better on a weekday event day except the following:

- Camino del Rio West north of Greenwood Street (LOS F)
- Camino del Rio West between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)
- Midway Drive between Kemper Street and Rosecrans Street (LOS E)

OPENING YEAR (2035) PLUS PROJECT PHASE 2 BUILDOUT (14,500-SPECTATORS)

The Opening Year (2035) Plus Project Phase 2 Buildout traffic volumes will consist of the Opening Year (2035) Base scenario, and proposed project traffic for the project under Phase 2. Under Opening Year (2035) Plus Project Phase 2 Buildout scenario (14,500-spectator event), the project would be expected to cause a project effect at the following intersections:

- Intersection #2 – Sports Arena Boulevard / Midway Dr & W Point Loma Blvd (PM: LOS F; Pre-Event: LOS F; WKND: LOS F)
- Intersection #5 – West Drive / Frontier Drive & Sports Arena Blvd (PM: LOS F; Pre-Event: LOS F; WKND: LOS F)
- Intersection #14 – Sherman Street & Hancock Street (Pre-Event: LOS E)
- Intersection #16 – Camino del Rio W & Moore Street (PM: LOS E; Pre-Event: LOS E; WKND: LOS F)
- Intersection #17 – Camino del Rio W & Hancock Street (AM: LOS F)
- Intersection #19 – Rosecrans Street & Sports Arena Boulevard & Camino del Rio W (WKND: LOS F)
- Intersection #20 – Rosecrans Street & Midway Drive (AM: LOS E; PM: LOS E; Pre-Event: LOS E; WKND: LOS F)
- Intersection #22 – Rosecrans Street & Lytton Street (AM: LOS E; PM: LOS E)
- Intersection #27 – Pacific Highway & Enterprise Street (PM: LOS E; Pre-Event: LOS E)
- Intersection #28 – Midway Drive & Enterprise Street (PM: LOS E; Pre-Event: LOS E)
- Intersection #29 – Barnett Avenue & Midway Drive (PM: LOS E)

The following intersections operate at LOS E or F but are not identified as a project effect:

- Intersection #6 – Target Driveway and Sports Arena Boulevard (WKND: LOS E)
- Intersection #26 – Kurtz Street & Pacific Highway (PM: LOS F; Pre-Event: LOS F)

Under Opening Year (2035) Plus Project Phase 2 scenario (14,500-spectator event), the project would be expected to cause a project effect at the following locations:

- Sports Arena Boulevard between I-8 EB On Ramp and W Point Loma Boulevard (LOS E)
- Sports Arena Boulevard between W Point Loma Boulevard and Hancock St (LOS F)
- Camino Del Rio W between Hancock Street and Kurtz Street (LOS E)
- Kurtz Street between Kemper Street and Frontier Drive (LOS F)
- Kurtz Street between Frontier Drive and Sherman Street (LOS F)
- Hancock Street between Sports Arena Boulevard and Channel Way (LOS F)
- Hancock Street between Channel Way and Kurtz Street (LOS F)

The following roadway segments would be expected to operate at LOS E or F under the Opening Year (2035) Plus Project Phase 2 Buildout scenario (14,500-spectator event), but are not identified as a project effect:

- Camino del Rio W North of Greenwood Street (LOS F)
- Camino Del Rio W between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)
- Midway Drive between Kemper Street and Rosecrans Street (LOS E)

OPENING YEAR (2035) PLUS PROJECT PHASE 2 BUILDOUT (20,000-SPECTATORS)

The Opening Year (2035) Plus Project Phase 2 Buildout traffic volumes will consist of the Opening Year (2035) Base scenario, and proposed project traffic for the project under Phase 2. Under Opening Year (2035) Plus Project Phase 2 Buildout scenario (20,000-spectator event), all intersections are expected to operate at LOS D or better except:

- Intersection #2 – Sports Arena Boulevard / Midway Dr & W Point Loma Blvd (Pre-Event: LOS F)
- Intersection #5 – West Drive / Frontier Drive & Sports Arena Blvd (Pre-Event: LOS F)
- Intersection #14 – Sherman Street & Hancock Street (Pre-Event: LOS E)
- Intersection #16 – Camino del Rio W & Moore Street (Pre-Event: LOS E)
- Intersection #20 – Rosecrans Street & Midway Drive (Pre-Event: LOS E)
- Intersection #26 – Kurtz Street & Pacific Highway (Pre-Event: LOS F)
- Intersection #27 – Pacific Highway & Enterprise Street (Pre-Event: LOS E)
- Intersection #28 – Midway Drive & Enterprise Street (Pre-Event: LOS E)

The following roadway segments would be expected to operate at LOS E or F under the Opening Year (2035) Plus Project Phase 2 Buildout scenario (20,000-spectator event), but are not identified as a project effect:

- Camino del Rio W North of Greenwood Street (LOS F)
- Camino Del Rio W between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)
- Midway Drive between Kemper Street and Rosecrans Street (LOS E)

PARKING & LOADING AREAS

The proposed project is located within the CC-3-6 zone and Parking Standards Transit Priority Area (PSTPA). The following sections of the Municipal Code were consulted for parking required for each land use:

- Residential: Market Rate Dwelling Units: §142.0528; Affordable Dwelling Units: §142.0528
- Commercial (Retail and Restaurant): §142.0528
- Entertainment Center: §141.0622

Parking requirements influence Mobility Choices Regulations outlined in Chapter 14, Article 3, Division 11 of the San Diego Municipal Code. Mobility Choices Regulations apply to the Commercial and Entertainment land uses, as discussed below. Additionally, San Diego Municipal Code Section 142.0528(c) requires a

multiple dwelling residential development within a PSTPA to provide transportation amenities per *Appendix Q* of the Land Development Manual. Thus, transportation amenities are required for the residential portion of the project.

Per the City of San Diego Municipal Code (§142.0528), the project site is located within a PSTPA, and thus off-street vehicular parking spaces are not required for residential or commercial uses.

RESIDENTIAL LAND USE

Residential Parking Requirements

Per Section 142.0528 of the SDMC (PSTPA Regulations), the minimum residential off-street vehicle parking space requirement is 0. Motorcycle parking and bicycle storage spaces are required per Section 142.0525(a) and Table 142-05C, regardless of whether vehicle parking is required. These parking spaces will be provided throughout the project site at the time when the residential units are constructed.

Transportation Amenities

Midway Rising is located within a Parking Standards Transit Priority Area (PSTPA) as defined in the California Public Resources Code Section 21099. San Diego Municipal Code (SDMC) section 142.0528(c) requires a multiple dwelling residential development within a PSTPA to provide transportation amenities per *Appendix Q* of the Land Development Manual, and thus, transportation amenities are required for the residential portion of the Midway Rising project. Transportation amenities are intended to encourage alternative modes of transportation and facilitate non-vehicular access to everyday activities.

The project's Transportation Amenity requirements are determined by SDMC section 142.0528(c). The following variables were applied to calculate a "score" for the amenity requirements:

- APN: 7602450900
- Total number of apartment units: 4,627
- Total number of bedrooms: 7,170

The Midway Rising project is required to provide at least 2 points of transportation amenities.

The project plans to provide 17 points of transportation amenities, which exceeds the required points as described in **Table ES-6**.

Table ES-6. Proposed Transportation Amenities

#	Amenity	Amenity Description	Project-Specific Notes	Transportation Amenities Points
1	**Transit and Active Transportation Infrastructure as outlined in Community Plan Mobility Elements**	Design and construct one or more of the following transit improvements on a street adjacent to the development: (a) the addition of pedestrian scale lighting (Section 142.0740), (b) sidewalk widening to 6 feet along property frontage and sidewalk widening to 10 feet near corners of intersection to allow for ADA required widths (this improvement shall be in addition to any improvements or measures otherwise required under other regulations or standards), (c) installation of transit shelters and/or benches. Transit shelters and benches shall be designed to MTS and ADA standards and require an approved agreement with MTS	The project proposes: a. Install a minimum of 6 ft wide sidewalks along the project frontage of Sports Arena Boulevard and Kurtz Street with at least 10 feet of space at the corners of intersections. b. Install transit shelters and benches for the three bus stops along Sports Arena Drive per MTS Design Guide. Transit shelters will be designed to MTS and ADA standards. An approved agreement with MTS will be recorded.	**5**
2	**Transit and Rideshare Information**	Install and maintain an on-site kiosk or information center with multi-modal wayfinding information and transit information. The kiosk information center shall be located in a prominent location that can easily be seen by residents entering and exiting the development. The kiosk or information center shall be shown on the project plans.	The project proposes an on-site multi-modal wayfinding kiosk in a location that meets the requirements of this amenity.	**1**
3	**On-Site Bicycle Repair Station**	Install and properly maintain an on-site public bicycle repair station. The bicycle repair station must be located in a well-lit area, near the street frontage and must include, at a minimum, a bike pump, English and metric Allen wrenches, pedal wrench, headset wrench, tire levers, and screwdrivers. The bicycle repair station shall be shown on the project plans.	The project proposes two on-site public bicycle repair stations which will meet the requirements of this amenity.	**4**
4	**Delivery Support**	Provide a secure area for receipt of deliveries that offers at least one of the following: (1) closed lockers, (2) temporary storage for packages, laundry, and other deliveries, or (3) temporary	The project proposes a secure area for receipt of deliveries which will meet the requirements of this amenity.	**1**

#	Amenity	Amenity Description	Project-Specific Notes	Transportation Amenities Points
		refrigeration for groceries. The secure area shall be shown on the project plans.		
5	**Outdoor Fitness Circuit**	Construct and maintain an outdoor fitness circuit within the development premises. The outdoor fitness circuit shall be available to the public at least 12 hours a day, 7 days a week and shall provide a minimum of 4 workout stations. The outdoor fitness circuit shall be shown on the project plans.	The project proposes an on-site outdoor fitness circuit which will meet the requirements of this amenity.	**2**
6	**Co-Working Space**	Provide and maintain a co-working space within the project premises available for resident use. The co-working space shall be at least 500 square feet and shall provide private or semiprivate office work spaces. The co-working space shall be shown on the project plans.	The project proposes two co-working spaces which will meet the requirements of this amenity.	**4**
Total Transportation Amenities Points				**17**

COMMERCIAL LAND USE

Commercial Parking Requirements

The project is located in a PSTPA and there is no minimum vehicular parking requirement for the commercial component of this development provided the VMT Reduction Measure requirements of Section 142.0530 are met.

Short-term and long-term bicycle parking spaces are required for non-residential land use per Section 142.0530(e)(1) and (2) and motorcycle parking is required per Section 142.0530(g) of the SDMC. These parking spaces will be provided throughout the project site at the time when the retail, restaurants, and Entertainment Center & Theater are constructed.

Complete Communities: Mobility Choices

The purpose of the Complete Communities: Mobility Choices Regulations is to assist in determining the greatest VMT reductions that developments can implement to address a development's VMT impacts. The Mobility Choices Regulations apply to all development projects as described in Municipal Code Section 143.1102. The project is required to provide a minimum of 16 points of VMT Reduction Measures for the commercial land uses to meet the Complete Communities: Mobility Choices requirement from Appendix T of the TSM:

- Commercial land use:
  - Retail – 8 points
  - Restaurant – 8 points

The project plans to provide more than the required points for a total of 16.5 points as shown in **Table ES-7**.

ENTERTAINMENT LAND USE

Entertainment Parking Requirements

Per Section 141.0622 (d) of the SDMC (Sports Arenas and Stadiums), off-street parking shall be provided at a level sufficient to serve the facility without impacting adjacent or nearby property.

Complete Communities: Mobility Choices (VMT Reduction Measures)

The project is required to provide a minimum of 5 points of VMT Reduction Measures for the entertainment land uses to meet the Complete Communities: Mobility Choices requirement from Appendix T of the TSM.

The project plans to provide more than the required points for a total of 7.5 points as shown in **Table ES-8**.

Table ES-7. Commercial Land Use – VMT Reduction Measures

Measure	Project-Specific Notes	Points
Pedestrian 1. Pedestrian scale lighting adjacent to public pedestrian walkways along the entire development frontage.	Pedestrian scale lighting will be provided along the project frontage roadways of Sports Arena Boulevard and Kurtz Street	0.5
Pedestrian 2. Installing pop-outs at adjacent intersections or curb extensions at adjacent mid-block crosswalks. Installation shall comply with the Street Design Manual Traffic Calming Chapter. Coordination with City Fire-Rescue Department staff and/or San Diego Metropolitan Transit System/North County Transit District may be required.	3 locations: • Sports Arena Boulevard & Frontier Drive (half intersection) • Sports Arena Boulevard & Kemper Street (half intersection) • Frontier Drive mid-block crossing (South) (full intersection)	5
Pedestrian 9. Widening sidewalk within the existing public right-of-way to Street Design Manual standards. The reduction of parkway/landscape buffer to less than the width required by the Street Design Manual standards to widen sidewalk width is not permitted. Requires replacement of existing sidewalk.	Multi-use path along Kurtz Street and Rosecrans Street (approximately 2,200 feet)	1.25
Bicycle 12. Providing on-site bicycle repair station.	Located near Class I path along Sherman Street alignment through site.	1.5
Bicycle 13. Installing new bicycle infrastructure (Class I, II, IV) that is part of the City's planned bikeway network that closes or incrementally closes an existing gap between two existing bikeways.	Class I multi-use path proposed for the north side of Sports Arena Boulevard, east side of Frontier Drive, south side of Kurtz Street, and east side of Rosecrans Street that would connect to Class II bike lanes on Pacific Highway and Sports Arena Boulevard (approximately 3,960 feet).	2.25
Transit 19. Providing high cost amenities/upgraded features to an existing transit stop (above existing condition), i.e., addition of shelter, real time bus information monitors.	Provide enhancements to an existing local bus stop (ID 13344) along the project frontage on Sports Arena Boulevard: • Relocate an existing local bus stop approximately 145 feet east of near Hancock Street to just west of the Kemper Street extension. • Provide enhancements to this bus stop. Upgrade and relocate existing bus stop (ID 13345) to a new RAPID bus stop per the MTS Designing for Transit Manual (February 2018) including the following upgrades: • Provide real-time digital display for rapid bus stop (ID 13345) on Sports Arena Boulevard.	2.5

Measure	Project-Specific Notes	Points
Transit 20. Providing low cost amenities/upgraded features to an existing transit stop (above existing condition), i.e., addition of bench, public art, static schedule and route display, trash receptacle.	Provide system map for local bus stop (ID 13344) on Sports Arena Boulevard.	1
Other 25. Installing a traffic calming measure, such as speed feedback signs, median slow points (chokers), and speed table/raised crosswalk. Installation shall comply with the Street Design Manual Traffic Calming Chapter. Coordination with City Fire-Rescue Department staff and/or MTS/NCTD may be required.	Raised crossing / intersection on Frontier Drive.	2.5
Total VMT Reduction Measure Points (Commercial)		**16.5**

Table ES-8. Entertainment Land Use – VMT Reduction Measures

Measure	Project-Specific Notes	Points
Pedestrian 2. Installing pop-outs at adjacent intersections or curb extensions at adjacent mid-block crosswalks. Installation shall comply with the Street Design Manual Traffic Calming Chapter. Coordination with City Fire-Rescue Department staff and/or San Diego Metropolitan Transit System/North County Transit District may be required.	2 locations: • Kemper Street mid-block crossing (North) (full intersection) • Kemper Street mid-block crossing (South) (full intersection)	5
Bicycle 12. Providing on-site bicycle repair station.	Located near Blocks D1 and D2.	1.5
Transit 20. Providing low cost amenities/upgraded features to an existing transit stop (above existing condition), i.e., addition of bench, public art, static schedule and route display, trash receptacle.	Provide system map for local bus stop (new stop) on Sports Arena Boulevard on the west side of Kemper Street.	1
Total VMT Reduction Measure Points (Entertainment)		**7.5**

Parking Summary

Table ES-9 summarizes the required and provided vehicle parking for each proposed land use.

Table ES-9. Parking Summary Table

Land Use	Required Vehicle Parking Spaces	Proposed Vehicle Parking Spaces	Required/ Provided Short-Term Bike Parking Spaces	Required/ Provided Long-Term Bike Parking Spaces	Required/ Provided Motorcycle Parking Spaces	Required/ Provided Zero Emissions Vehicle Parking Spaces
Commercial	0	431	22	22	9	204
Entertainment Center	*	2,100	105	105	42	1,050
Residential	0	5,216	0	2,104	464	2,088
Total	*	**7,747**	**127**	**2,231**	**515**	**3,343**

*City of San Diego Municipal Code Section 141.0622 (d) indicates that off-street parking for sports arenas and stadiums shall be provided at a level sufficient to serve the facility without impacting adjacent or nearby property.

Loading Zones

The project proposed to provide off-street loading spaces for each land use as required by Section 142.1010 and Table 142.10B of the SDMC. Per the SDMC, the Midway Rising project requires a minimum of 17 residential loading zones, 5 commercial loading zones, and 2 entertainment center loading zones. The Midway Rising project proposes to provide 19 residential loading zones, five commercial loading zones, and two entertainment center loading zones for a total of 26 loading zones, which complies with this requirement.

PROJECT IMPROVEMENTS

The project site plan and mobility improvements were guided by multi-modal recommendations in the Midway-Pacific Highway Community Plan (CP) (September 2018) and operational improvement needs that would be triggered by the project. As the project proposed improvements to the transportation network that differed from those planned in the CP, a Community Plan Amendment (CPA) and associated transportation analysis were required.

This analysis was developed as a separate document and identifies the following transportation and mobility modifications to the CP:

- **Kurtz Street** (between Hancock Street and Sherman Street): Convert from a 2-lane one-way (southeast-bound) collector to a 2-lane (two-way) collector with one lane in each direction.
- **Rosecrans Street** (between Midway Drive and Pacific Highway): Dedicate one lane in each direction for Business Access and Transit ("BAT") lane. Proposed BAT lane will be accessible for passenger vehicles making a right turn at an intersection or driveway.
- **Sports Arena Boulevard** (between Midway Drive / W Point Loma Boulevard and Rosecrans St): Dedicate one lane in each direction for BAT lane. Proposed BAT lane will be accessible for passenger vehicles making a right turn at an intersection or driveway.

- **Greenwood Street** (between Kurtz Street and Sports Arena Boulevard): The project does not propose to construct this segment as planned in the Community Plan. Note that bicycles and pedestrians will still be able to connect between Kurtz Street and Sports Arena Boulevard as an "extension" of Sherman Street.
- Intersection modifications at:
  - Intersection #2 – Midway Drive and Sports Arena Boulevard / West Point Loma Boulevard
  - Intersection #4 – Kemper Street and Sports Arena Boulevard
  - Intersection #11 – Hancock Street and Kurtz Street
  - Intersection #18 – Kurtz Street and Camino del Rio West
  - Intersection #19 – Camino del Rio West / Rosecrans Street and Sports Arena Boulevard

The project will construct two new roadways running north-south through the site, as planned in the CP:

- Kemper Street (between Sports Arena Boulevard and Kurtz Street)
- Frontier Drive (between Sports Arena Boulevard and Kurtz Street)

The project will also provide the following pedestrian and bicycle facilities that implement the CP recommendations:

Road Name	Midway-Pacific Highway CP Recommendation	Midway Rising Project Recommendation
Sports Arena Boulevard	Class I Path (Bay-to-Bay Urban Path) Class II Bike Lanes	Class I Path (Bay-to-Bay Urban Path) Class IV One-Way (WB) Cycle track; Class II Bike Lane EB
Rosecrans Street	Class I Path (La Playa Urban Path) Class II Bike Lanes	Class I Path (La Playa Urban Path)*
Midway Drive	Class I Path (Midway Urban Path)	No improvement as part of this project
Hancock Street	Class III Route	No improvement as part of this project
Kurtz Street	Class III Route	Class I Path
Greenwood Street	Class II Bike Lanes	Class I Path**
Kemper Street	Class I Path (Bay-to-Bay Urban Path) Class II Bike Lanes	Class IV One-Way Cycle tracks
Frontier Drive	Class II Bike Lanes	Class I Path (Bay-to-Bay Urban Path)

* The proposed facility on Rosecrans Street provides a raised Class IV two-way cycle track with an adjacent sidewalk which meets the intention of the Class I path but provides separation between pedestrians and bicyclists.

** In lieu of a vehicular roadway, the intention of the north-south connection for pedestrians and bicyclists will be provided as a Class I path aligned with Sherman Street rather than Greenwood Street

INTERSECTION IMPROVEMENTS TRIGGERED BY THE PROJECT

The project causes operational effects in Opening Year (2030) Plus Project Phase 1 at 8 intersections, shown in **Table ES-10**. Operations will be improved to an acceptable level of service at 5 of these intersections. Improvements made at 2 more intersections would improve operations but the intersection would still operate at LOS E for the reasons listed. Lastly, at one intersection (#16 Camino del Rio and Moore Street), there are no reasonable improvements that can be made to enhance operations, as described further in **Table ES-10**.

The project causes operational effects in Opening Year (2035) Plus Project Phase 2 Buildout at 11 intersections. Operations could be improved to an acceptable level of service at 9 of these intersections by implementing the improvements described in **Table ES-10** plus the ones in **Table ES-11**. Similar to the (2030) Plus Project Phase 1 Plus Improvements scenario, improvements made at 2 more of the intersections listed below would improve operations but the intersection would still operate at LOS E for the reasons listed below.

ROADWAY IMPROVEMENTS TRIGGERED BY THE PROJECT

The project causes operational effects in Opening Year (2030) Plus Project Phase 1 at three roadway segments. The project does not propose to provide improvements to roadway segments with project effects because there are no reasonable improvements that can be made to enhance operations, as described in **Table ES-12**.

The project causes operational effects in Opening Year (2035) Plus Project Phase 2 Buildout at seven roadway segments. The project proposes improvements to two segments in 2035, but not at the remaining five segments, as described further in **Table ES-13**.

Table ES-10. Opening Year (2030) Plus Project Phase 1 Intersection Improvements Summary

<table>
<tr><th>#</th><th>Location</th><th>2030 Considered Improvement</th><th>2030 Improvement Decision</th></tr>
<tr><td>2</td><td>Midway Dr / W Point Loma Blvd & Sports Arena Blvd</td><td>Improvements (See Appendix U for a high-level feasibility concept of the physical improvements described below):
- Signal timing optimization
- Reduce roadway width in northeast corner to convert westbound channelized right turn lane to an exclusive right turn lane per CP.
- Provide overlap phase for westbound right turn movement. Requires signal modification.
- Remove small, channelized portions of northbound and southbound right turn movements. Right-most lanes will be shared through-right instead.
- Separate southbound shared through/left turn lane into exclusive left turn and exclusive through lane. Southbound approach to include 2 left turn lanes, 1 through lane, and 1 shared through/right turn lane. Requires signal modification.
- Separate northbound shared through/left turn lane into exclusive left turn and exclusive through lane. Northbound approach to include 2 left turn lanes, 1 through lanes, and 1 shared through/right turn lane.
- Widen by 6 feet to construct additional eastbound through lane. Eastbound approach to include 1 left turn lane, 1 shared left/through lane, 1 through lane, and 1 right turn lane.
- Modify northbound and southbound signal timing to protected left turn phasing instead of split phasing.
Results: Maintain LOS E or better for all peaks.</td><td>Midway Rising will improve this intersection to the extent feasible by incorporating the improvements described. The intersection cannot be improved to LOS D or better without diminishing pedestrian and bicycle safety or conflicting with the CP’s visions for multimodal improvements. Removal of the westbound channelized free right turn lane as proposed in the CP prevents this intersection from being able to improve to LOS D or better. Removal of the free right turn would also decrease pedestrian safety. There is not enough right-of-way to further widen the intersection due to the adjacent residential and commercial land uses, the skew of the intersection, and the proposed multimodal improvements on all approaches to the intersection (including bus only lanes).</td></tr>
<tr><td>5</td><td>West Dr / Frontier Dr & Sports Arena Blvd</td><td>Improvement: Signal timing optimization. Increase in the overall signal cycle length to 100 seconds during the AM peak and 150 seconds during the PM and Pre-Event PM peaks. Increase in cycle length and optimized splits helps accommodate the increase in volumes for the eastbound left turn movement, westbound through movement, and southbound movements from the project.
Results: Improved to LOS D or better for all peaks.</td><td>Midway Rising will improve this intersection to an acceptable LOS by optimizing signal timing.</td></tr>
<tr><td>14</td><td>Sherman Street & Hancock St</td><td>Improvements (See Figure 7-1 for an illustration of temporary improvements described below): Implement temporary traffic control during the PM Pre-Event peak period to modify intersection geometry during the PM Pre-Event peak. Implement traffic control flagger (or appropriate traffic control setup) to allow two westbound lanes to turn left from Hancock Street onto southbound Sherman Street, and convert Sherman Street (temporarily) to a one-way two-lane southbound street. Vehicles wishing to travel northbound on Sherman Street from Kurtz Street will be redirected to Greenwood Street. At Sherman Street & Kurtz Street, two southbound lanes would be directed to turn right or go straight into the H1 driveway for Entertainment Center parking.
A separate analysis was performed at this intersection for the Opening Year (2030) Pre-event PM peak accounting for the traffic pattern modifications from temporary traffic control. The results are summarized in the table below:
<table>
<tr><th>Scenario</th><th></th><th>Delay (sec)</th><th>LOS</th></tr>
<tr><td rowspan="2">Opening Year (2030) Plus Project Phase 1 Plus Improvements – Pre-Event PM Peak</td><td>Normal Operations</td><td>50.1</td><td>F</td></tr>
<tr><td>Temporary Event Operations</td><td>23.5</td><td>C</td></tr>
</table>
Results: Improved to LOS C or better for pre-event peak period.</td><td>Midway Rising will improve this intersection to an acceptable LOS by incorporating temporary traffic control (including a traffic control flagger) during the pre-event peak period.</td></tr>
<tr><td>16</td><td>Camino del Rio W & Moore St</td><td>No reasonable improvement found: No reasonable improvements can be made to increase operations.</td><td>Midway Rising will <u>not</u> make improvements to this intersection. The deficient LOS at this intersection is dictated by the eastbound right turn movement from Moore Street, where 10 or fewer vehicles turn right per hour. The project does not add vehicular traffic to this approach. Synchro assumes these vehicles are unable to find a gap in traffic on southbound Camino del Rio W to make a right turn. In reality, these vehicles will likely find a gap from the queue when vehicles keep the intersection clear, or they can use Hancock Street instead at the signalized intersection. Due to low volumes on the side street, and the close proximity to the nearest signalized intersection, it is not recommended to consider signalizing the intersection to improve side street operations.</td></tr>
</table>

#	Location	2030 Considered Improvement	2030 Improvement Decision
17	Camino del Rio W & Hancock St	**Improvement:** Signal timing optimization. Increase in the overall cycle length to 120 seconds during the AM peak, 145 seconds during the PM peak, and 100 seconds during the Pre-Event PM peak. Increase in cycle length and optimized splits helps accommodate the increase in volumes for the northbound and southbound through movements resulting from the project. **Results:** Improved to LOS D or better for all peaks.	**Midway Rising will improve this intersection to an acceptable LOS by optimizing signal timing.**
19	Rosecrans St/Sports Arena Blvd & Camino Del Rio W	**Improvements:** - Convert channelized right turn lane to exclusive right turn lane per CP. - Remove northbound "channelized" right turn and ancillary intersection per CP. - Allow through movement from eastbound Sports Arena Boulevard to Sports Arena Boulevard per CP. - Modify eastbound approach to include 1 left turn lane, 1 shared left/through lane, 1 right turn lane to Sports Arena Boulevard, and 1 right turn lane to Camino del Rio W. Requires traffic signal modification. **Results**: Project effect at this intersection is not realized until 2035, however, implementation of these improvements would improve **Intersection #26 to LOS C or better for all peaks** by allowing vehicles travelling southeast-bound on Sports Arena Boulevard to continue through the intersection towards Pacific Highway. The improvements reduce the number of vehicles with the following travel pattern: left from Sports Arena Boulevard onto Rosecrans Street, right turn onto Kurtz Street (Intersection #26), and another right turn onto Pacific Highway.	**Midway Rising will improve this intersection to an acceptable LOS in Opening Year (2030) Plus Project to address the project effect the project would cause at Intersection #26.**
20	Rosecrans St & Midway Dr	**Improvement:** Signal timing optimization. Increase the overall signal cycle length to 135 seconds during the AM peak, 150 seconds during the PM peak, and 100 seconds during the Pre-Event PM peak. For the AM peak, increase in cycle length, optimized splits, and lagging left turn phases helps accommodate the increase in volumes for the northbound and southbound through movements. For the commuter PM and pre-event PM peak, the decrease in cycle length decreases unnecessary time for the left turn movements and increases overall operations. For the weekend peak, the increase in overall cycle length decreases unnecessary time for the left turn movements and increases time for through movements. **Results:** Improved to LOS D or better for all peaks.	**Midway Rising will improve this intersection to an acceptable LOS by optimizing signal timing.**
26	Kurtz St & Pacific Hwy	**Improvements: I**mprovements at intersection 19 will reduce the number of vehicles turning right from Pacific Highway onto southbound Kurtz Street. No improvements needed at this intersection after implementation of improvements at Intersection #19. **Results:** Improved to LOS C or better for all peaks by improving intersection #19.	**Midway Rising will improve this intersection to an acceptable LOS by implementing improvements at Intersection #19.**
27	Pacific Hwy & Enterprise St	**Improvements:** Modify southbound approach to add 2nd left turn lane. Requires median modification. Modify northbound approach to add 2nd left turn lane. Requires median modification. **Results:** Improved to LOS D or better for all peaks	**Midway Rising will not make improvements to this intersection.** *A majority of the trips assigned to this intersection are from the redevelopment of the NAVWAR facility and are unrelated to the Midway Rising project. Across all 2030 scenarios, Midway Rising assigns a maximum of 56 trips to this intersection during the weekend peak. NAVWAR assigns 493 trips during the weekday PM peak, and during this same weekday PM peak Midway Rising assigns 29 trips. Additionally, across all 2035 scenarios, Midway Rising assigns a negative number of trips to this intersection meaning the project effect at full project buildout is entirely attributed to the NAVWAR facility.*

Table ES-11. Opening Year (2035) Plus Project Phase 2 Buildout Intersection Improvements Summary

Includes improvements from Opening Year (2030) Plus Project Phase 1 with the consideration of the following:

ID	Location	2035 Considered Improvement	2035 Improvement Decision
5	West Dr / Frontier Dr & Sports Arena Blvd	**Improvements:** Signal timing optimization. Increase in the overall signal cycle length to 105 seconds during the AM peak and 150 seconds during the PM and Pre-Event PM peaks. The increase in overall signal cycle length and optimized splits helps accommodate the increase in volumes for the eastbound left turn movement, westbound through movement, and southbound movements. **Results:** Improved to LOS E or better for all peaks. On event days, traffic control personnel would manage signal timing operations at this intersection during the PM peak, and would be able to manually provide green time to the heaviest movements.	**Midway Rising will improve this intersection to the extent feasible by optimizing signal timing and providing traffic control operators beginning at the start of the PM peak on event days.** *Improvements made in light of the CP where the number of eastbound left turn lanes is reduced from 2 to 1 to maintain three through lanes.*
22	Rosecrans Street & Lytton Street	**Improvements:** Restripe eastbound approach of Lytton Street to include 2nd eastbound left turn lane. No curb modifications would be required. **Results:** Improved to LOS D or better for all peaks	**Midway Rising will improve this intersection to an acceptable LOS by incorporating the improvements described.**
28	Midway Dr & Enterprise St	**Improvements:** No reasonable improvements can be made to increase operations. **Results**: Improved to LOS D or better for all peaks	**Midway Rising will <u>not</u> make improvements to this intersection.** *A majority of the trips assigned to this intersection are from the redevelopment of the NAVWAR facility, and are unrelated to the Midway Rising project. Additionally, this improvement does not make sense from a multimodal perspective, which is prioritized in the Midway-Pacific Highway Community Plan. The CP lists pedestrian-related improvements at this intersection, which include bulb-outs and a pedestrian refuge island. Adding any vehicle lanes to this intersection may preclude the addition of the improvements listed in the CP.*
29	Barnett Ave & Midway Dr	**Improvement:** Signal timing optimization. Decrease in overall cycle length to 110 seconds during the AM peak, 150 seconds during the PM peak, 100 seconds during the Pre-Event PM peak, and 90 seconds during the weekend peak helps decrease the amount of time unnecessarily dedicated to the southbound right turn movement, which helps serve all other movements more frequently. **Results:** Improved to LOS D or better for all peaks.	**Midway Rising will improve this intersection to an acceptable LOS by optimizing signal timing.**

Table ES-12. Opening Year (2030) Plus Project Phase 1 Roadway Segment Improvements Summary

ID	Location	2030 Considered Improvement	2030 Improvement Decision
11	Camino Del Rio between West Hancock Street and Kurtz Street	Widening the roadway to an 8-Lane Prime Arterial would improve roadway segment operations	**Midway Rising will <u>not</u> improve this roadway segment.** Widening the roadway is infeasible due to limited right-of-way caused by surrounding land uses. This segment of roadway is built out to its ultimate classification per the Community Plan, and any increase in vehicular capacity above the ultimate classification does not align with City or state climate action goals. *Midway Rising does not recommend vehicle capacity improvements on this segment.*
15	Kurtz Street between Kemper Street and Frontier Drive	Widening the roadway to a 4-Lane Collector with two-way left-turn lane would improve roadway segment operations, but is infeasible due to fronting land uses on both sides of Kurtz Street.	**Midway Rising will <u>not</u> improve this roadway segment.** Midway Rising proposes multimodal improvements along Kurtz Street, including a Class I multi-use path and improved pedestrian facilities, intended to increase pedestrian and bicycle activity along Kurtz Street by providing safe access between the site and high-frequency transit services at Old Town Transit Center, Rosecrans Street, and Sports Arena Boulevard. Although widening the roadway would improve vehicular LOS, this would reduce the multimodal improvements along this segment that connect to high-frequency transit services. Additionally, the project proposes to move the curbline into the street by 5 feet and remove approximately 36 on-street parking spaces to increase the space dedicated to multimodal users along the project frontage. *Thus, the Midway Rising does not recommend vehicle capacity improvements on this segment.*
16	Kurtz Street between Frontier Drive and Sherman Street	Widening the roadway to a 2-Lane Collector with two-way left-turn lane improves roadway segment operations, but is infeasible due to fronting land uses on both sides of Kurtz Street.	**Midway Rising will <u>not</u> improve this roadway segment.** Midway Rising proposes multimodal improvements along Kurtz Street, including a Class I multi-use path and improved pedestrian facilities, intended to increase pedestrian and bicycle activity along Kurtz Street by providing safe access between the site and high-frequency transit services at Old Town Transit Center, Rosecrans Street, and Sports Arena Boulevard. Although widening the roadway would improve vehicular LOS, this would reduce the multimodal improvements along this segment that connect to high-frequency transit services. Additionally, the project proposes to move the curbline into the street by 5 feet and remove approximately 30 on-street parking spaces to increase the amount of space dedicated to multimodal users along the project frontage. *Thus, the Midway Rising does not recommend vehicle capacity improvements on this segment.*

Table ES-13. Opening Year (2035) Plus Project Phase 2 Buildout Roadway Segment Improvements Summary

Includes improvements from Opening Year (2030) Plus Project Phase 1 with the consideration of the following:

ID	Location	2035 Considered Improvement	2035 Improvement Decision
2	Sports Arena Boulevard between I-8 EB On Ramp and W Point Loma Boulevard	Widening the roadway to a 6-Lane Major Arterial would improve roadway segment operations.	**Midway Rising will <u>not</u> improve this roadway segment.** Widening the roadway is infeasible due to limited right-of-way caused by surrounding land uses. Additionally, class II bike lanes were recently added to this segment which involved a reduction in the number of vehicle lanes. Addition of vehicle lanes to this segment would require removal of these recent multimodal improvements. *Thus, the Midway Rising does not recommend vehicle capacity improvements on this segment.*
3	Sports Arena Boulevard between W Point Loma Boulevard and Hancock Street	Widening the roadway to a 6-Lane Major Arterial would improve roadway segment operations.	**Midway Rising will <u>not</u> improve this roadway segment.** Widening the roadway is infeasible due to limited right-of-way caused by surrounding land uses. Midway Rising proposes bus only lanes in both directions of Sports Arena Boulevard to improve transit connectivity to the Pacific Beach and Ocean Beach communities and increase transit ridership for access to and from the site, supporting City and State VMT reduction goals. Increasing the number of general-purpose travel lanes would negate the ability to implement bus only lanes. *Thus, the Midway Rising does not recommend vehicle capacity improvements on this segment.*
18	Hancock Street between Sports Arena Boulevard and Channel Way	Widening the roadway beyond its ultimate classification of a 4-lane collector per the MPH Community Plan to a 4-lane with a two-way left-turn lane would improve roadway segment operations.	**Midway Rising will <u>not</u> improve this roadway segment <u>beyond</u> the ultimate classification planned for in the Community Plan.** The Midway Rising project will increase the capacity of this segment from a 2-lane collector to a 4-lane collector through restriping and converting angle parking to parallel parking (loss of approximately 20 parking spaces), consistent with the ultimate classification of the Community Plan. Widening the roadway beyond this is infeasible due to limited right-of-way due to surrounding existing land uses. Further increase in vehicular capacity beyond the ultimate roadway classification per the CP would not align with City or State climate action goals. *Thus, Midway Rising does not recommend vehicle capacity improvements on this segment beyond the ultimate classification from the Community Plan.*
19	Hancock Street between Channel Way and Kurtz Street	Widening the roadway beyond its ultimate classification of a 4-lane collector per the MPH Community Plan to a 4-lane with a two-way left-turn lane would improve roadway segment operations.	**Midway Rising will <u>not</u> improve this roadway segment <u>beyond</u> the ultimate classification planned for in the Community Plan.** The Midway Rising project will increase the capacity of this segment from a 2-lane collector to a 4-lane collector through restriping and converting angle parking to parallel parking (loss of approximately 16 parking spaces), consistent with the ultimate classification of the Community Plan. Widening the roadway beyond this is infeasible due to limited right-of-way due to surrounding existing land uses. Further increase in vehicular capacity beyond the ultimate classification per the CP would not align with City or State climate action goals. *Thus, Midway Rising does not recommend vehicle capacity improvements on this segment beyond the ultimate classification from the Community Plan.*

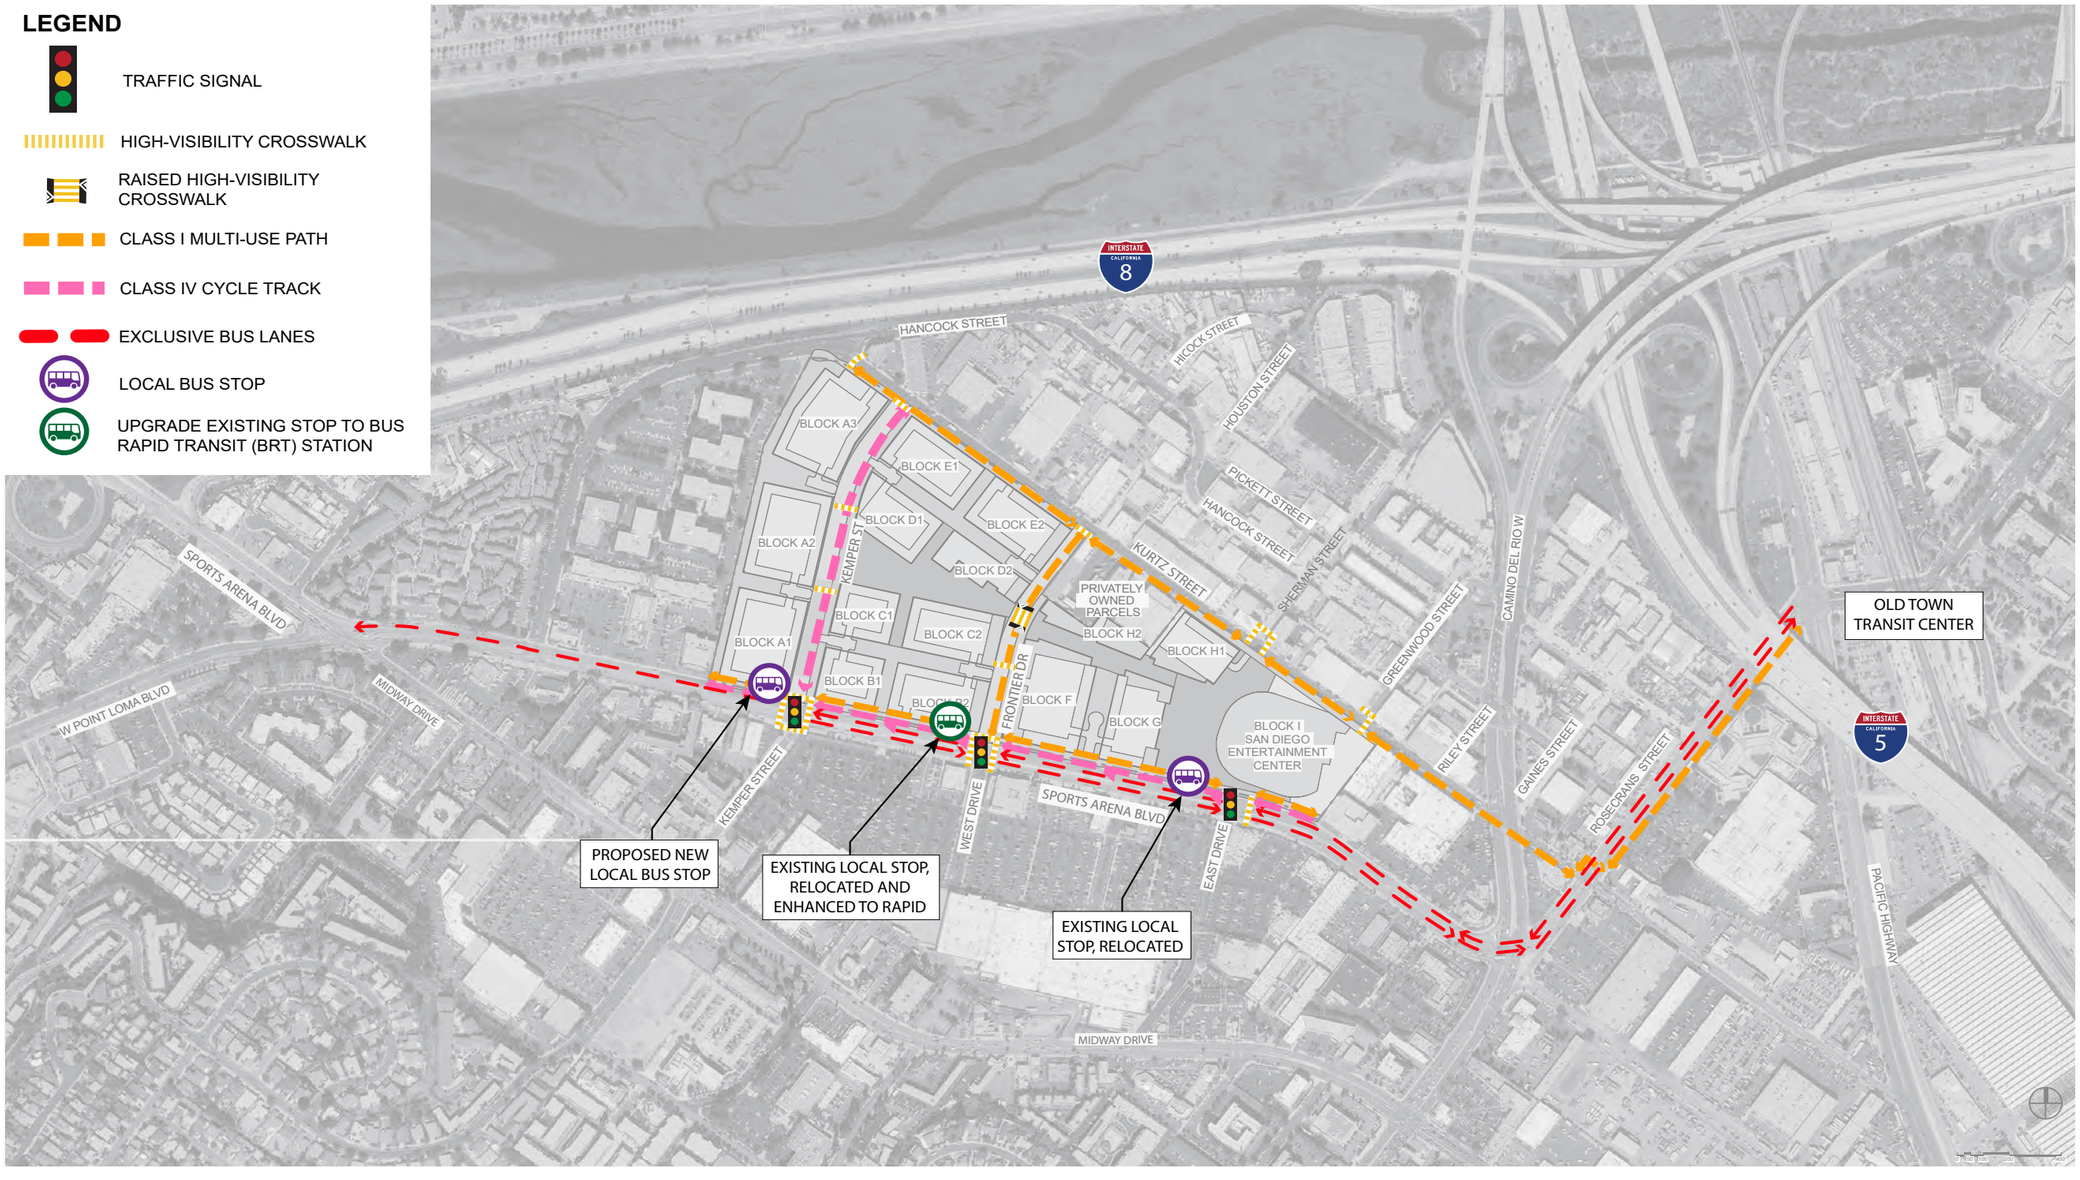
MULTI-MODAL IMPROVEMENTS

The project will provide accessible connections to the trolley station as envisioned in the CP to enable and achieve multi-modal reductions.

The following multi-modal improvements are proposed as part of the Phase 1 of the project, expected to occur in 2030:

- Construct a Class I multi-use path along the project frontage (south side) on Kurtz Street from the west edge of Block H1 to Greenwood Street.
- Construct a Class I multi-use path along the east side of Frontier Drive (south of the privately-owned parcels) when this public street is constructed.
- Construct a Class I multi-use path along the project frontage (north side) on Sports Arena Boulevard and a Class IV one-way cycle-track in the westbound direction along the project frontage from Frontier Drive to the east edge of the site.
- Relocate existing local bus stop (ID 13344) to the west side of the Sports Arena Boulevard / East Drive intersection (approximately 200' to the west of the existing stop). Provide a sign, bench, schedule display, route and system map, trash receptacle, concrete bus pad, and shelter.
- Provide event shuttle service between off-site business park lot and the Entertainment Center from 5pm to 1am. Shuttles will be used for events with greater than 10,000 spectators. Event shuttle will run along Sports Arena Boulevard, Frontier Drive, Kurtz Street, and Hancock Street. For all events with greater than 10,000 spectators, shuttle headway will be 5 minutes for pre-event and post-event service.
- Provide event shuttle service between Old Town Transit Center and the Entertainment Center from 5pm to 1am. Shuttles will be used for events with greater than 7,500 spectators. Event shuttle will run along Rosecrans Street, Sports Arena Boulevard, Frontier Drive, and Kurtz Street. For events with between 7,500 and 14,500 spectators, shuttle headway will be 5 minutes for pre-event and post-event service. For events with 20,000 spectators, shuttle headway will be 2 minutes for pre-event and post-event service.
- Provide a retail daily shuttle service between Old Town Transit Center and Frontier Drive for the first 10 years of the project opening Phase 1, anticipated to occur in 2030. The shuttle would operate between 12:00 PM and 10:00 PM using one vehicle at 20- to 30-minute headways.

The following multi-modal improvements are proposed as part of the Phase 2 of the project, expected to occur in 2035:



- Construct a Class I multi-use path along the project frontage (south side) on Kurtz Street from Hancock Street to the west edge of Block H1.
- Construct a Class I multi-use path along the south side of Kurtz Street (east of Greenwood Street) and along the southeast side of Rosecrans Street to provide a connection to the Old Town Transit Center via walking and biking. The multi-use path will be developed in coordination with the City and adjacent property owners; however, it is intended to be feasible within existing City right-of-way, and not be located within private property. Conceptual plans for this proposed improvement are included in Appendix A.

- Construct a Class I multi-use path along the project frontage (north side) on Sports Arena Boulevard and a Class IV one-way cycle-track in the westbound direction along the project frontage from the west edge of the site to Frontier Drive.
- Construct Class IV one-way cycle-tracks on both sides of the proposed Kemper Street extension within the site.
- Construct a roundabout at the intersection of Hancock Street and Kurtz Street.
- Stripe exclusive bus / right-turn only lanes on:
    - Sports Arena Boulevard between W Point Loma Boulevard and Kemper Street – westbound direction only
    - Sports Arena Boulevard between Kemper Street and Camino Del Rio West – both directions
    - Rosecrans Street between Sports Arena Boulevard and Kemper Street – both directions

  The project team will coordinate with MTS, the San Diego Association of Governments (SANDAG), and the City regarding the timeline and design details of implementation for these improvements. Developer is responsible for striping only.
- Construct a new local bus stop (ID not identified by MTS) on the west side of the Sports Arena Boulevard / Kemper Street intersection. Provide a sign, bench, schedule display, route and system map, trash receptacle, concrete bus pad, and shelter.
- Relocate existing bus stop (ID 13345) to the west side of the Sports Arena Boulevard / Frontier Drive intersection (approximately 150' to the east of existing stop) and designate stop as a future RAPID bus stop per the MTS Designing for Transit Manual (February 2018). The RAPID service is anticipated to be implemented by 2035. Provide a sign, bench, schedule display, trash receptacle, concrete bus pad, rapid shelter, and a real-time digital display. Developer to coordinate with MTS for improvements.
- Provide event shuttle service between offsite parking at SeaWorld and the Entertainment Center from 5pm to 1am. Shuttles will be used for events with greater than 12,000 spectators. Event shuttle will run along W Mission Bay Drive, Sports Arena Boulevard, Frontier Drive, Kurtz Street and Hancock Street. For events with between 12,000 and 14,500 spectators, shuttle headway will be 5 minutes for pre-event and post-event service. For events with 20,000 spectators, shuttle headway will be 2 minutes for pre-event and post-event service.

The proposed project multimodal features are illustrated in **Figure ES-6**.

Figure ES-6. Proposed Multimodal Improvements

BASEMAP SOURCE: SAFDIE RABINES ARCHITECTS

SYSTEMIC SAFETY REVIEW RECOMMENDATIONS

Per the TSM, hotspots for vehicles, pedestrians, and bicycles were identified using the methodologies provided in the City of San Diego *Systemic Safety The Data-Driven Path to Vision Zero,* dated April 2019.

The following countermeasures will be provided by the project at the respective hotspots:

- **Recommended Vehicle Countermeasure**: Retroreflective Signal Head Backplates
    - Intersection #9 - Midway Drive & East Drive
    - Intersection #20 - Rosecrans Street & Midway Drive
    - Intersection #22 - Rosecrans Street & Lytton Street
    - Intersection #25 - Pacific Highway & Rosecrans Street/Taylor Street
    - Intersection #29 - Midway Drive & Barnett Avenue
    - Intersection #30 - Friars Road & Sea World Drive

- **Recommended Pedestrian Countermeasure**: Lead Pedestrian Interval
    - Intersection #9 - Midway Drive & East Drive
    - Intersection #23 - Rosecrans Street & Kurtz Street

- **Recommended Bicycle Countermeasure**: Public Safety Messaging Campaign
    - Intersection #8 - Midway Drive & Kemper Street (no bike lanes on either street, therefore engineering countermeasure of bike detection is not applicable)
    - Intersection #9 - Midway Drive & East Drive (no bike lanes on either street, therefore engineering countermeasure of bike detection is not applicable)
    - Intersection #23 - Rosecrans Street & Kurtz Street (future multi-use path is not conducive for bike loop detection)
    - Intersection #27 - Pacific Highway & Enterprise Street (bike detection already provided on Pacific Highway on the northbound approach, no bike lanes are present on the southbound approach)
    - Intersection #29 - Midway Drive & Barnett Avenue (bike detection already provided on Barnett Avenue; there are no bike lanes on Midway Drive)
    - Intersection #30 - Friars Road & Sea World Drive (only the southbound approach has bike lane with no conflicting vehicle movements)
    - Intersection #31 - Sea World Drive & E Mission Bay Drive/Pacific Highway (Sea World Drive does not have bike lanes; bike detection not applicable)

1 INTRODUCTION

The following Local Mobility Analysis (LMA) has been prepared per the City's Transportation Study Manual (TSM), current version dated September 2022, to identify the project's transportation effects in the project study area and recommend project improvements to the transportation network. The proposed Midway Rising development is located at 3220, 3240, 3250, and 3500 Sports Arena Boulevard and 3467, 3487, and 3495 Kurtz Street (privately-owned parcels), in the City of San Diego, CA.

1.1 PROJECT DESCRIPTION

The approximately 47.8-acre (52.07 total including privately-owned parcels) project site is located within the Midway-Pacific Highway community of the City of San Diego, and is bordered by Kurtz Street to the northeast, Sports Arena Boulevard to the southwest, Hancock Street to the northwest, and commercial development to the southeast, as shown in **Figure 1-1**.

1.1.1 LAND USES

The project proposes to demolish the existing 16,000-seat San Diego Sports Arena and all commercial buildings on site, and construct the following uses as presented in **Figure 1-2**:

- Entertainment
  - New 16,000-seat Entertainment Center
  - 3,500-seat theater (to be located within the privately-owned parcels area)
- Residential
  - 4,627 multi-family dwelling units, including
    - 2,627 market-rate units
  - 2,000 affordable units, including
    - 1,538 units ≤ 50% Area Median Income (AMI)
    - 462 units between 50%-80% AMI
- Commercial
  - 140,000 square-feet of commercial, including
    - 60,000 square-feet retail
    - 40,000 square-feet quality restaurant
    - 40,000 square-feet high-turnover sit-down restaurant

1.1.2 ZONING

The project is located at 3220, 3240, 3250, and 3500 Sports Arena Boulevard (in addition to the privately-owned parcels located at 3467, 3487, and 3495 Kurtz Street) in a Parking Standards Transit Priority Area (TPA), Transit Area Overlay Zone, Coastal Height Limitation Overlay Zone, and Mobility Zone 2 in the CC-3-1, CC-3-6, and CC-3-8 zones within the Midway-Pacific Highway Community Planning Area. The project proposes a Specific Plan as part of the development process, as envisioned in the Community Plan (CP). The project will provide over 90 dwelling units (DUs) per acre, which is greater than the allowable limit for the project's planning zone (44 DUs per acre). Therefore, the project also proposes a Community Plan Amendment (CPA) to rezone the site to RMX-2.

Figure 1-1. Regional Vicinity Map

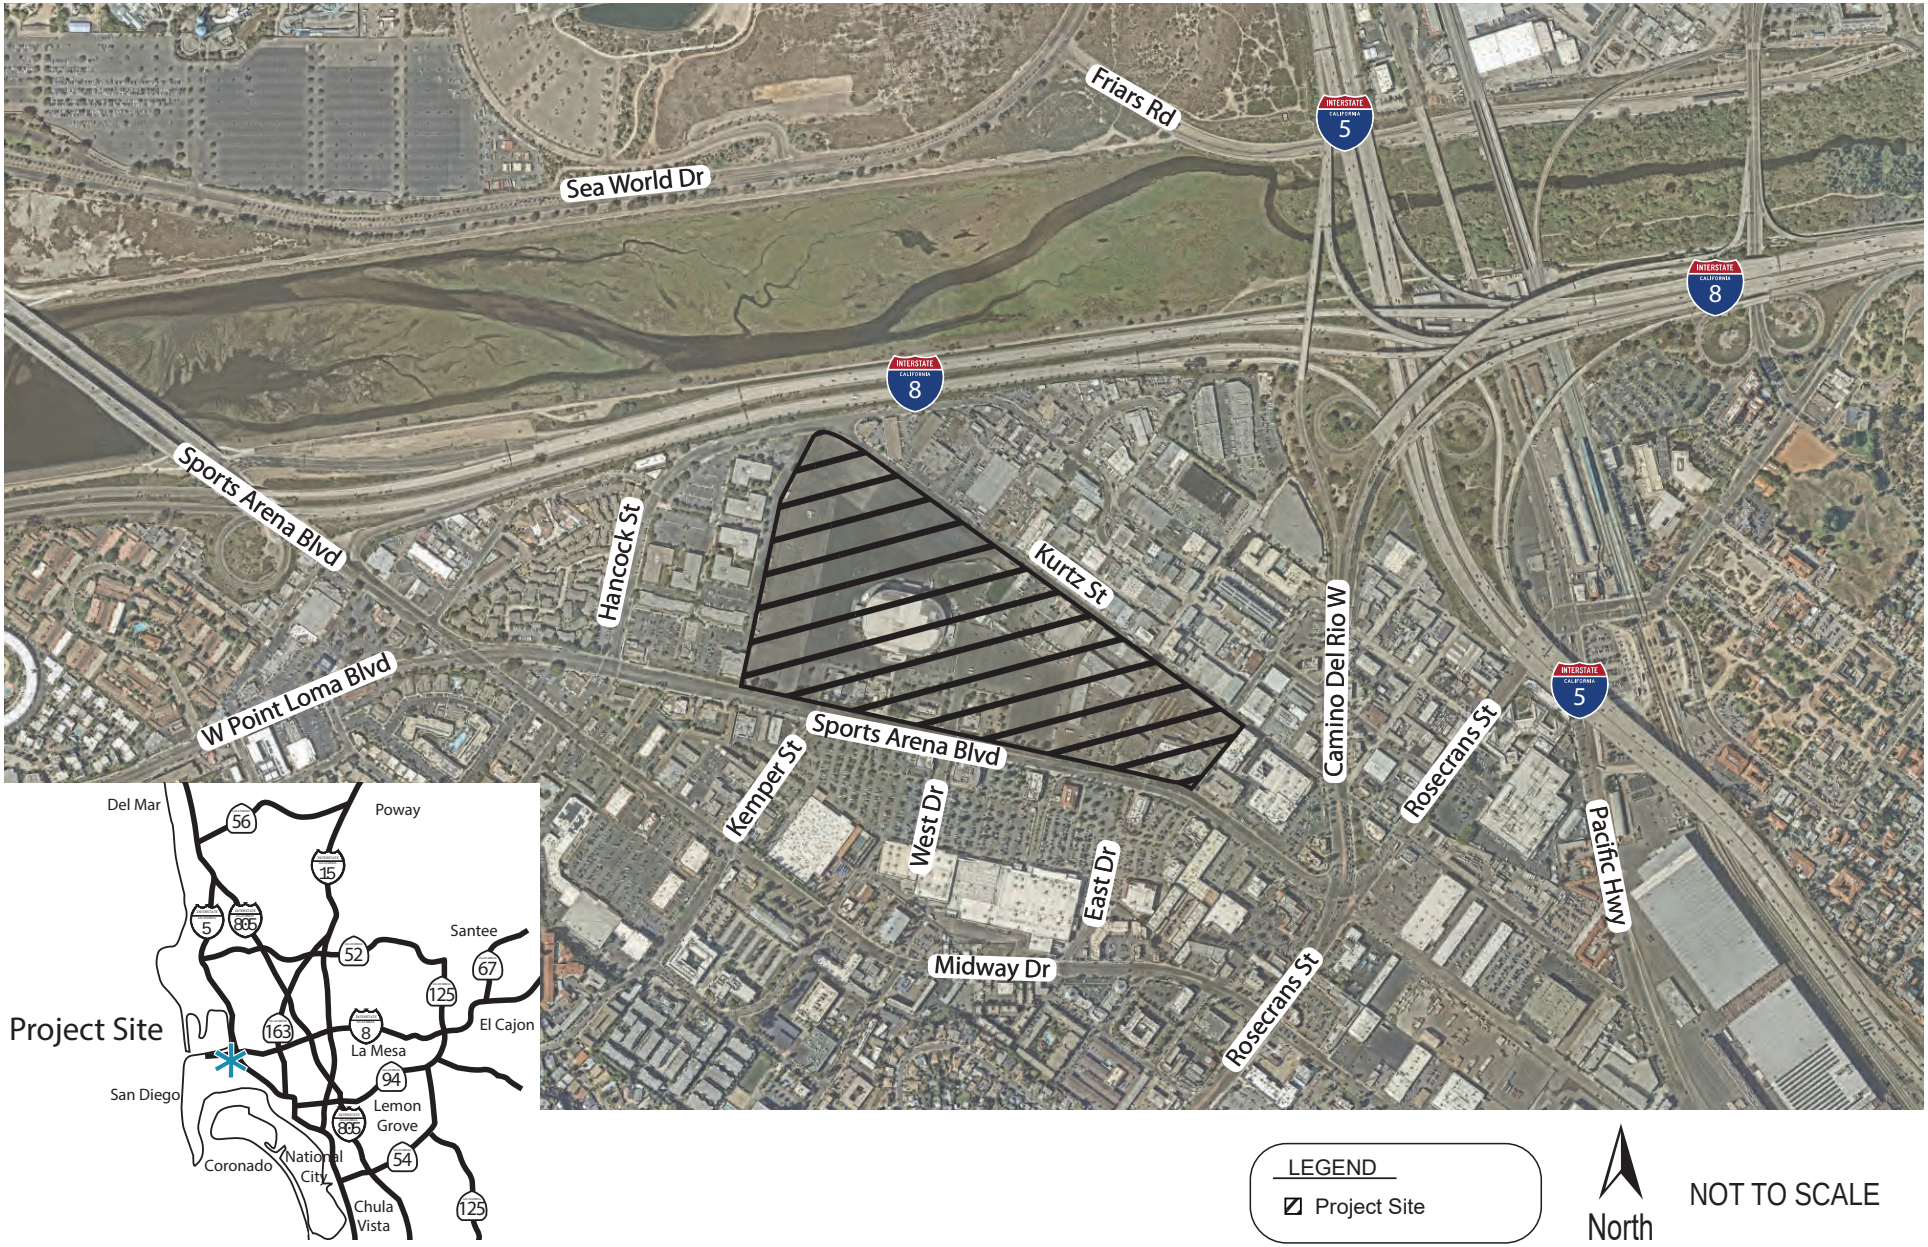

Figure 1-2. Proposed Conceptual Site Plan

BASEMAP SOURCE: SAFDIE RABINES ARCHITECTS

1.1.3 MULTIMODAL PROJECT FEATURES

The proposed project intends to promote and enhance multi-modal travel by utilizing the project's proximity to the Old Town Transit Center, located between 0.7- and 1-mile walking distance from the site, and providing various multi-modal project features on and off-site. Walking routes between the project site and Old Town Transit Center are illustrated in **Figure 1-3.** The project will provide multi-modal urban paths and connections to the Transit Center as envisioned in the CP to enable and achieve vehicle trip reductions through multi-modal services. The development of the project site will include the following multi-modal improvements, shown in **Figure 1-4**:

- Construct a Class I multi-use path along the project frontage (south side) on Kurtz Street (**Appendix A** sheets 12 & 13).
- Construct a Class I multi-use path along the south side of Kurtz Street (east of the project site) and along the southeast side of Rosecrans Street to provide a connection to the Old Town Transit Center via walking and biking. The project proposes to construct this facility within the existing street rights-of-way by narrowing the vehicular travel way, not within private property that is not part of the Midway Rising project. Conceptual plans for this proposed improvement are included in **Appendix A** on Sheet 22.
- Construct a Class I multi-use path (Bay-to-Bay Urban Path) along the east side of planned Frontier Drive (the Midway Rising project proposes to construct the Bay-to-Bay Urban Path along Frontier Drive instead of Kemper Street as planned in the CP, as shown in **Appendix A** Sheets 12 & 13).
- Construct a Class I multi-use path (Bay-to-Bay Urban Path) along the project frontage (north side) on Sports Arena Boulevard and a Class IV one-way cycle-track in the westbound direction along the project frontage (**Appendix A** Sheets 11 & 13).
- Construct Class IV one-way cycle-tracks on both sides of the planned Kemper Street extension within the site (**Appendix A** Sheets 11 & 12).
- Construct a roundabout at the intersection of Hancock Street and Kurtz Street (**Appendix A** Sheets 9 & 12).
- Stripe exclusive bus / right-turn only lanes on:
    - Sports Arena Boulevard between W Point Loma Boulevard and Kemper Street – westbound direction only
    - Sports Arena Boulevard between Kemper Street and Camino Del Rio West – both directions
    - Rosecrans Street between Sports Arena Boulevard and Kemper Street – both directions

  The project team will coordinate with MTS, the San Diego Association of Governments (SANDAG), and the City regarding the timeline and design details of implementation for these improvements. Developer is responsible for striping only (**Appendix A** Sheets 2, 11, 13).
- Implement the following bus stop improvements along the project frontage:
    - Construct a new local bus stop (ID not identified by MTS) on the west side of the Sports Arena Boulevard / Kemper Street intersection. Provide a sign, bench, schedule display, route and system map, trash receptacle, concrete bus pad, and shelter.
    - Relocate existing bus stop (ID 13345) to the west side of the Sports Arena Boulevard / Frontier Drive intersection (approximately 150' to the east of existing stop) and designate stop as a future RAPID bus stop per the MTS Designing for Transit Manual (February 2018). The RAPID service is anticipated to be implemented by 2035. Provide a sign, bench, schedule display, trash receptacle,

concrete bus pad, rapid shelter, and a real-time digital display. Developer to coordinate with MTS for improvements.

  - Relocate existing local bus stop (ID 13344) to the west side of the Sports Arena Boulevard / East Drive intersection (approximately 200' to the west of the existing stop). Provide a sign, bench, schedule display, route and system map, trash receptacle, concrete bus pad, and shelter.

- Provide a shuttle service to and from the site for the following scenarios:
  - Events > 7,500 spectators – provide event shuttle service to and from Old Town Transit Center
  - Events > 10,000 spectators – provide 2 shuttle services to and from both Old Town Transit Center and off-site business park lot to the west of the project site
  - Events > 12,000 spectators – provide 3 shuttle services to and from Old Town Transit Center, the off-site business park lot, and the off-site Sea World lot.
  - Daily – provide daily retail shuttle service between Old Town Transit Center and Frontier Drive for the first 10 years of the project opening (Phase 1). Shuttle included based on anticipated VMT mitigation.

Cross-sections for the internal site roadways and the project adjacent roadways including the proposed multi-modal improvements discussed above are provided in Section 13.5.

Figure 1-4. Midway Rising Project Proposed Multimodal Improvements

BASEMAP SOURCE: SAFDIE RABINES ARCHITECTS

1.1.1 SITE ACCESS

The proposed project site will provide vehicle access (as illustrated in **Figure 1-2**) via 11 access points: four along Sports Arena Boulevard and seven on Kurtz Street. Four access points will be intersections formed with the proposed Kemper Street and Frontier Drive roadways, and the remaining seven access points will be driveways into parking structures.

Pedestrian and bicycle access will be provided via proposed facilities along the project frontages on Sports Arena Boulevard and Kurtz Street, which will also facilitate access from the existing and proposed transit stops on the north side of Sports Arena Boulevard into the project site.

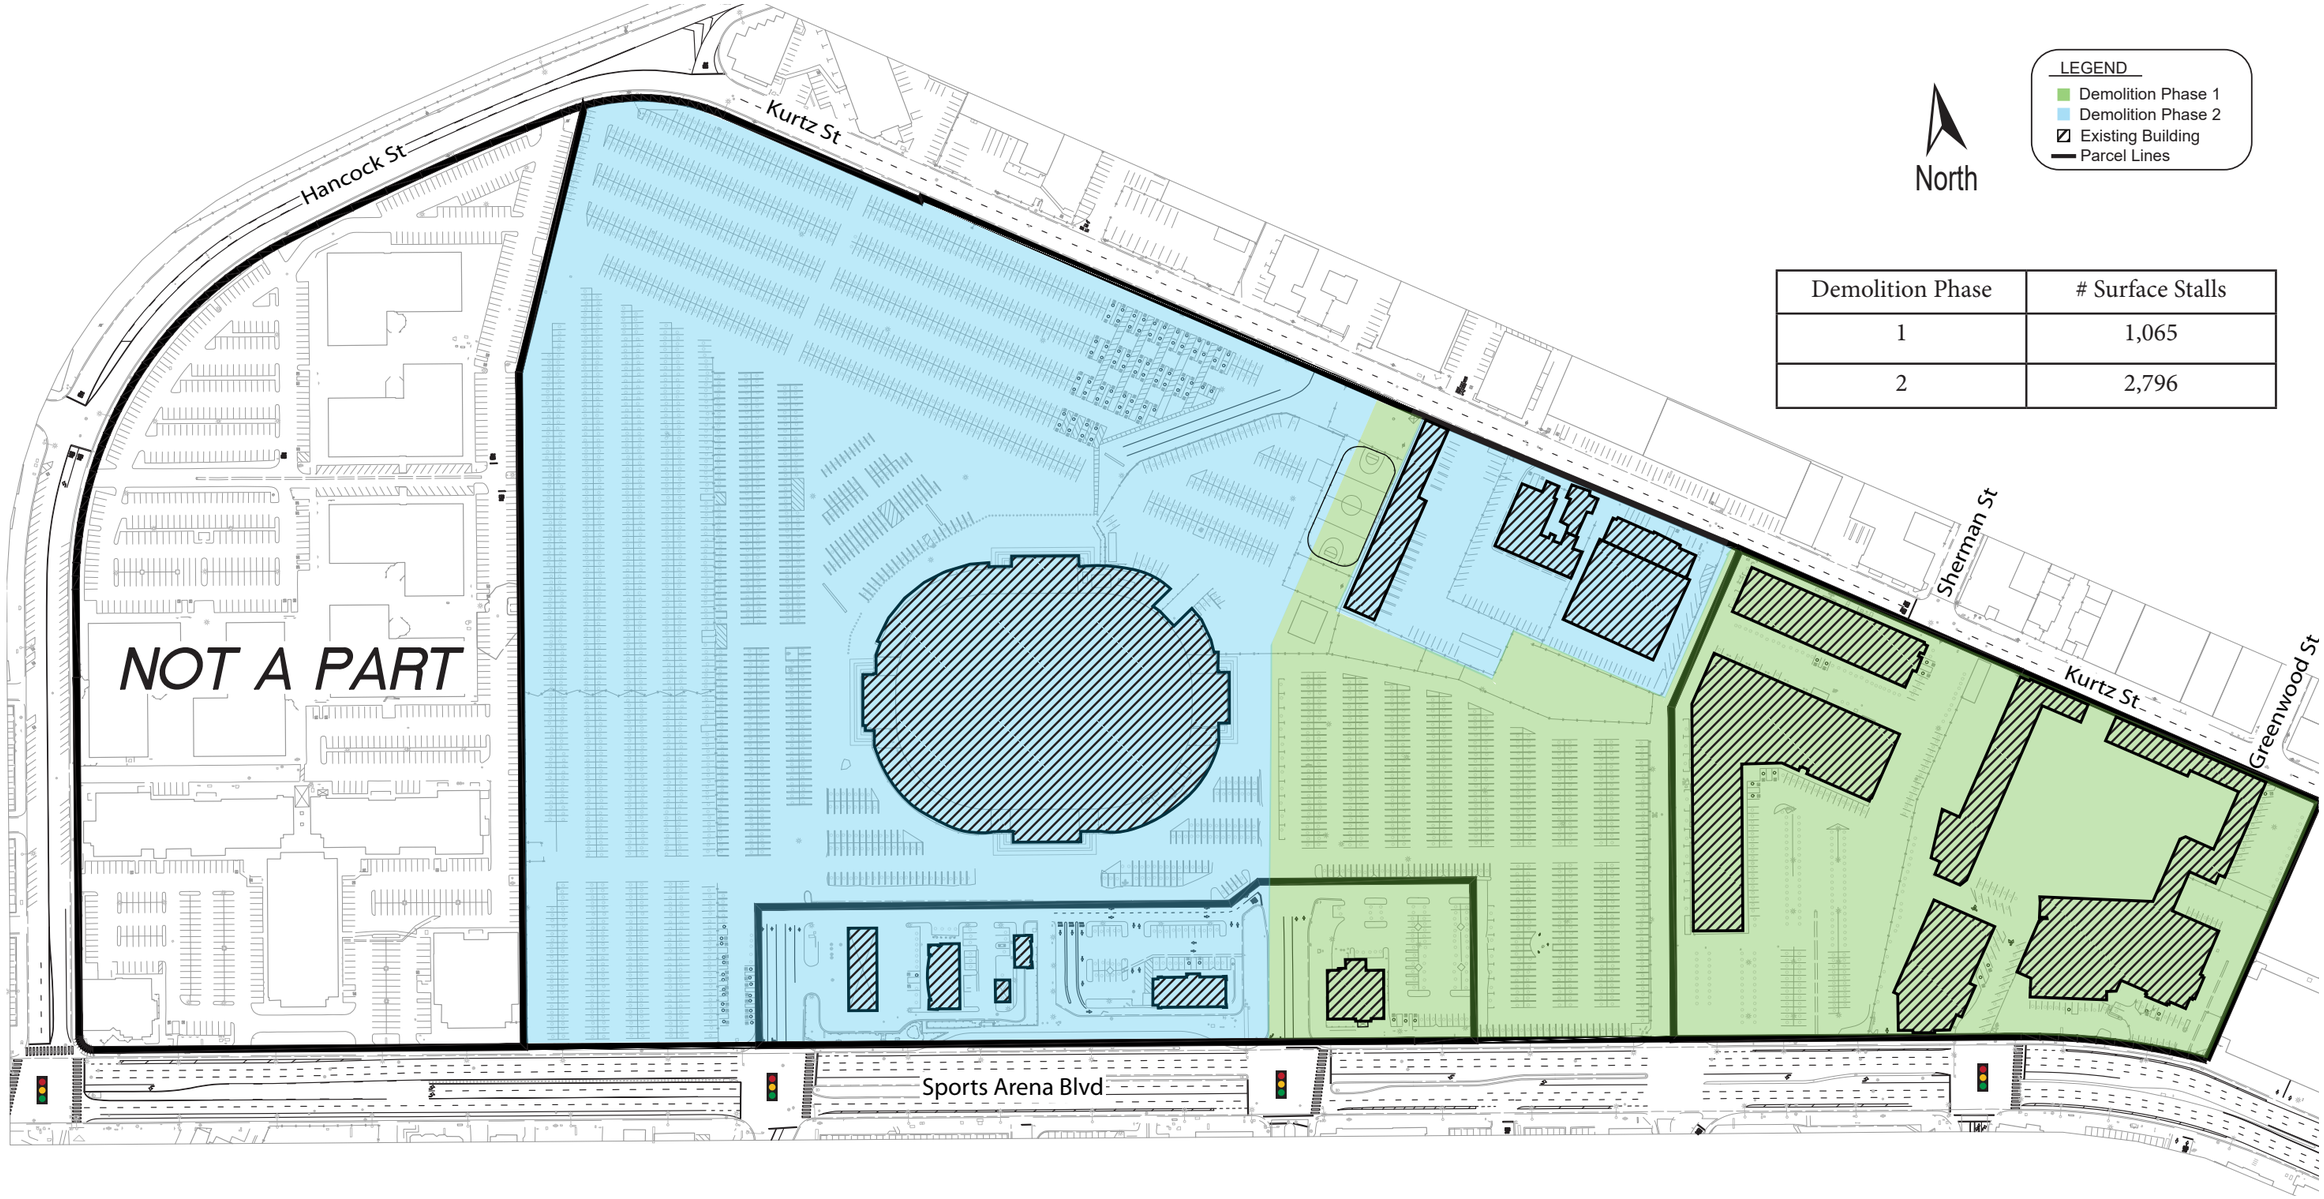
1.1.2 PARKING

The project proposes to provide approximately 7,747 total parking spaces for the site. EV-ready stalls, accessible spaces, short-term and long-term bicycle parking, and motorcycle parking will be provided per the City of San Diego Municipal Code Parking Requirements, as discussed in the Parking chapter of this report. **Table 1-1** shows details parking proposed by the project per land use.

Table 1-1. Total Vehicle Parking for Proposed Land Uses

Land Use	Required Vehicle Parking Spaces	Proposed Vehicle Parking Spaces
Commercial	0	431
Entertainment Center	*	2,100
Residential	0	5,216
Total		***7,747***

[a] City of San Diego Municipal Code Section 141.0622 (d) indicates that off-street parking for sports arenas and stadiums shall be provided at a level sufficient to serve the facility without impacting adjacent or nearby property.



1.1.3 CONSTRUCTION PHASING

The project will be constructed in two phases:

1. Phase 1 (anticipated to be complete in 2030) includes:
    - Demolition of the site east of proposed Frontier Drive
    - Construction of the new Entertainment Center while the existing arena remains operational
    - Construction of the residential and commercial uses east of Frontier Drive
    - Construction of Frontier Drive
2. Phase 2 Buildout (anticipated to be complete in 2035) includes:
    - Demolition of the existing arena (once the new Entertainment Center is operational)
    - Demolition of the existing land uses west of Frontier Drive
    - Construction of commercial and residential uses west of Frontier Drive

Figure 1-5 shows the proposed demolition phasing of the existing site. **Figure 1-6** shows the proposed construction phasing of the project.

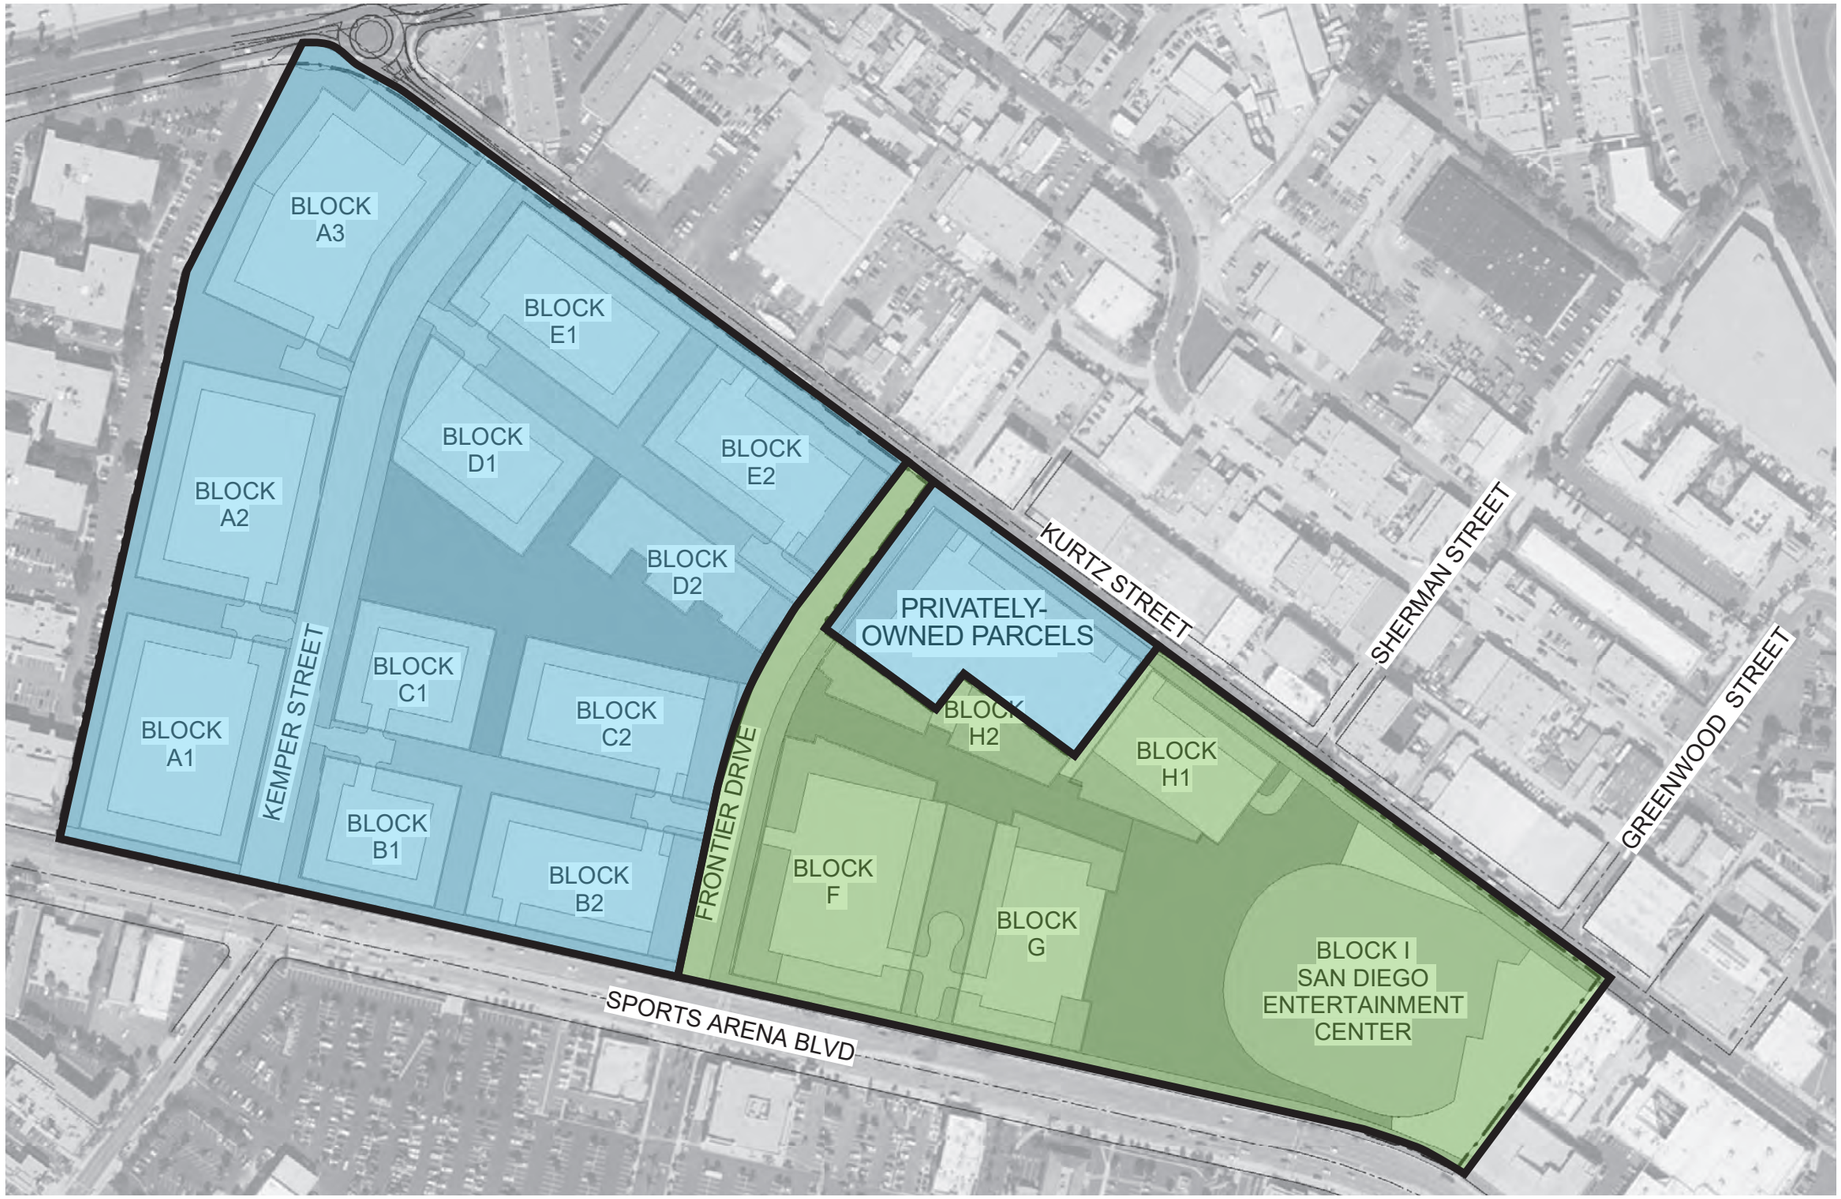


Figure 1-5. Project Demolition Phasing

Demolition Phase	# Surface Stalls
1	1,065
2	2,796

BASEMAP SOURCE: PROJECT DESIGN CONSULTANTS A BOWMAN COMPANY

Figure 1-6. Project Construction Phasing

BASEMAP SOURCE: PROJECT DESIGN CONSULTANTS A BOWMAN COMPANY

Table 1-2 summarizes the intensity/quantity of the different land uses per phase. The Entertainment Center will be completed in Opening Year (2030) Phase 1, thus the number of spectators remains the same in both phases. A site plan change decreased the number of dwelling units and commercial square footage anticipated to be completed in Phase 1. **Table 1-2** reflects the actual anticipated land uses for Phase 1, while the analysis performed in this LMA for Opening Year (2030) Project Phase 1 is based on higher land use values from before the site plan change occurred. The analysis for Opening Year (2030) Project Phase 1 is therefore conservative, as it accounts for more trip generation from a higher number of dwelling units and square footage of retail.

Table 1-2. Proposed Land Uses Per Phase

Land Use		Opening Year (2030) Project Phase 1	Phase 1 to Phase 2 Net Increase	Opening Year (2035) Project Phase 2 Buildout
Entertainment (Spectators)	Entertainment Center	16,000	+0	16,000
	Theater	0	+3,500	3,500
	TOTAL	**16,000**	**+3,500**	**19,500**
Residential (Dwelling Units)	Affordable	479	+1,521	2,000
	Market Rate	386	+2,241	2,627
	TOTAL	**875**	**+3,752**	**4,627**
Commercial (Square Feet)	Retail	38,952	+21,048	60,000
	Restaurant	51,936	+28,064	80,000
	TOTAL	**90,888**	**+49,112**	**140,000**
Parking	Residential	1,535	+3,681	5,216
	Retail	280	+151	431
	Entertainment	781	+1,319	2,100
	TOTAL	**2,596**	**+5,151**	**7,747**

1.2 ANALYSIS SCENARIOS

The LMA analyzes the following scenarios based on scoping with the City and guidance in the TSM:

- ***Existing (2023):*** Represents the traffic conditions of the existing street network, lane geometry, signal timing, and traffic volumes observed on a weekday, event day in 2023. See Chapter 3.
- ***Opening Year (2030) Base:*** Represents the traffic conditions on the existing street network anticipated to be in place in year 2030. The Opening Year (2030) Base traffic conditions were developed by applying a 0.55% annual growth rate to the existing (2023) traffic volumes and adding the NAVWAR Near-Term with Year 2030 Alternative 2 project trips to study intersections contained within the NAVWAR study area. See Chapter 5.
- ***Opening Year (2030) Plus Project Phase 1:*** Represents the Opening Year (2030) Base scenario with the addition of the proposed project Phase 1 trips and roadway network (see Chapter 4). Comparison of this scenario to the Opening Year (2030) Base scenario determines direct effects associated with the project. See Chapter 6.
- ***Opening Year (2035) Base:*** Represents the traffic conditions on the existing street network anticipated to be in place in year 2035. The Opening Year (2035) Base traffic volumes were

developed by applying a 0.55% annual growth rate to the existing (2023) traffic volumes and adding NAVWAR project trips for the future year 2035. The NAVWAR Near-Term with Year 2030 Alternative 2 project trips were linearly interpolated between NAVWAR Near-Term with Year 2030 Alternative 2 and Year 2050 with Alternative 2 scenario trips to develop cumulative project trips for 2035. Resulting trips were added to the project study intersections contained within the NAVWAR study area. See Chapter 8.

- ***Opening Year (2035)*** Plus ***Project Phase 2 Buildout:*** Represents the Opening Year (2035) Base scenario with the addition of the proposed project Phase 2 trips and roadway network (see Chapter 4). Comparison of this scenario to the Opening Year (2035) Base scenario determines direct effects associated with the project, Phase 2. See Chapter 9.

1.3 STUDY PERIODS

The LMA analyzes the following study periods based on coordination with City of San Diego staff and guidance in the TSM:

- Weekday Commuter AM Peak: represents the morning peak commute hours (7:00 AM to 10:00 AM) on a typical weekday in the study area.
- Weekday Commuter PM Peak: represents the evening peak commute hours (4:00 PM to 6:00 PM) on a typical weekday in the study area.
- Weekday Pre-Event Peak: represents the peak arrival hour (6:00 PM to 7:00 PM) on a weekday event day for the Entertainment Center. Within the Weekday Pre-Event Peak analysis, two event size scenarios were analyzed within this study (details on event sizes are provided in Chapter 4):
  - 14,500-spectator scenario
  - 20,000-spectator scenario

1.4 MIDWAY-PACIFIC HIGHWAY COMMUNITY PLAN UPDATE

The project site plan and mobility improvements were guided by the Midway-Pacific Highway Community Plan (CP), September 2018. The proposed project is consistent with the CP vision and the General Plan's City of Villages strategy. Where this plan differs from the CP, a Community Plan Amendment (CPA) transportation analysis was reviewed as a separate document to analyze the effects of the transportation and mobility CP modifications (see Section 1.4.4). **Appendix B** contains the Midway Rising CPA, which is subject to change upon further review by the City.

1.4.1 PROJECT SITE

The Midway-Pacific Highway CP calls for the development of the project site into a "Sports Arena Community Village" with a land use designation of Community Commercial, allowing a maximum of 44 dwelling units per acre and a mix of entertainment, office, retail, residential, public, and park uses. The project is proposing a rezone to residential mixed- use (RMX) to increase the allowable residential density on the site while still allowing the proposed land uses. The CP envisions the Sports Arena Community Village as a vibrant, pedestrian- and transit-oriented entertainment area that is a landmark attraction for Midway-Pacific Highway and surrounding communities.

1.4.2 CP RECOMMENDATIONS

The CP proposes a network of planned pedestrian facilities, urban paths, and bicycle facilities. Included in the proposed CP street network are three new roadways running north-south through the site between Sports Arena Boulevard and Kurtz Street:

- Kemper Street (extended)
- Frontier Drive
- Greenwood Street (extended)

The CP also provides intersection improvement concepts for the following four intersections located within the study area:

- Hancock Street and Sports Arena Boulevard (CP Figure 3-8)
- Kemper Street and Sports Arena Boulevard (CP Figure 3-8)
- Midway Drive and Sports Arena Boulevard / West Point Loma Boulevard (CP Figure 3-14)
- Camino del Rio West / Rosecrans Street and Sports Arena Boulevard (CP Figure 3-15).

Excerpts from the CP referenced above are provided in **Appendix C**.

1.4.3 PROJECT IMPROVEMENTS

Table 1-3 summarizes the CP recommended street classification modifications versus the project proposed modifications.

Table 1-4 summarizes the CP recommended pedestrian and bicycle improvements versus the project's proposed pedestrian and bicycle improvements along the study area roadways.

1.4.4 COMMUNITY PLAN AMENDMENT (CPA)

The following modifications to the CP will be analyzed as part of the Midway Rising project's proposed Community Plan Amendment (CPA):

- **Kurtz Street** (between Hancock Street and Sherman Street): Convert from a 2-lane one-way (southeast-bound) collector to a 2-lane (two-way) collector with one lane in each direction.
- **Rosecrans Street** (between Midway Drive and Pacific Highway): Dedicate one lane in each direction for Business Access and Transit ("BAT") lane. Proposed BAT lane will be accessible for passenger vehicles making a right turn at an intersection or driveway.
- **Sports Arena Boulevard** (between Midway Drive / W Point Loma Boulevard and Rosecrans St): Dedicate one lane in each direction for BAT lane. Proposed BAT lane will be accessible for passenger vehicles making a right turn at an intersection or driveway.
- **Greenwood Street** (between Kurtz Street and Sports Arena Boulevard): The project does not propose to construct this segment as planned in the Community Plan. Note that bicycles and pedestrians will still be able to connect between Kurtz Street and Sports Arena Boulevard as an "extension" of Sherman Street.
- Intersection modifications at:
  - Intersection #2 – Midway Drive and Sports Arena Boulevard / West Point Loma Boulevard
  - Intersection #4 – Kemper Street / Sports Arena Boulevard
  - Intersection #11 – Hancock Street / Kurtz Street
  - Intersection #18 – Kurtz Street / Camino del Rio West
  - Intersection #19 – Camino del Rio West / Rosecrans Street / Sports Arena Boulevard

See **Appendix B** for more information regarding project recommendations for the CPA.

Table 1-3. Existing and Planned Vehicular System

Road Name	Extents	Existing Street Classification[1]	Community Plan Ultimate Street Classification[2]	Community Plan Amendment Ultimate Street Classification	Midway Rising Project Recommendation
Sports Arena Boulevard	I-8 WB Off-Ramp to I-8 EB On Ramp	6-lane prime arterial	6-lane prime arterial	No change from CP	6-lane prime arterial
	I-8 EB On Ramp to Midway Drive	5-lane major arterial	6-lane major arterial	No change from CP	No change from Existing Classification Project does not trigger improvements
	Midway Drive to Hancock Street	5-lane collector with a center left turn lane	6-lane major arterial	4-lane major arterial (with two bus only lanes)	No change from Existing Classification Project does not trigger improvements; project does not intend to implement CPA classification change
	Hancock Street to Kemper Street	5-lane collector with a center left turn lane	6-lane major arterial	4-lane major arterial (with two bus only lanes)	4-lane major arterial (with two bus only lanes)
	Kemper Street to West Drive	5-lane major arterial	6-lane major arterial	4-lane major arterial (with two bus only lanes)	4-lane major arterial (with two bus only lanes)
	West Drive to Rosecrans Street	6-lane major arterial	6-lane major arterial	4-lane major arterial (with two bus only lanes)	4-lane major arterial (with two bus only lanes)
	Rosecrans Street to Pacific Highway	2-lane collector	2-lane collector with a center left turn lane	No change from CP	No change from Existing Classification Project does not trigger improvements
Rosecrans Street	Camino Del Rio/Sports Arena Boulevard to Pacific Highway	4-lane collector with a center left turn lane	4-lane major arterial	2-lane major arterial (with two bus only lanes)	2-lane collector (with two bus only lanes) Project does not trigger improvements; project does not intend to implement CPA classification change
	Sports Arena Boulevard to Midway Drive	6-lane major arterial	6-lane prime arterial	No change from CP recommendation	No change from Existing Classification Project does not trigger improvements
Midway Drive	Kemper Street to Rosecrans Street	4-lane collector with a center left turn lane	4-lane collector with a center left turn lane	No change from CP recommendation	4-lane collector with a center left turn lane
Hancock Street	Sports Arena Boulevard to Channel Way	2-lane collector	4-lane collector	No change from CP recommendation	4-lane collector
	Channel Way to Kurtz Street	2-lane collector with a center left turn lane	4-lane collector	No change from CP recommendation	4-lane collector
	Kurtz Street to Greenwood Street	2-lane collector (one-way north-westbound)	3-lane major arterial (one-way)	No change from CP recommendation	No change from Existing Classification Project does not trigger improvements
	Greenwood Street to Camino del Rio West	2-lane collector (one-way north-westbound)	3-lane major arterial (one-way)	No change from CP recommendation	2-lane collector (one-way north-westbound) Project does not trigger improvements
Kurtz Street	Hancock Street to Frontier Drive	2-lane collector (one-way south-eastbound)	2-lane collector (one-way southeast-bound)	2-lane collector	2-lane collector
	Frontier Drive to Sherman Street	2-lane collector (one-way south-eastbound)	2-lane collector (one-way southeast-bound)	2-lane collector	2-lane collector
	Sherman Street to Camino del Rio West	2-lane collector (one-way south-eastbound)	2-lane collector (one-way south-eastbound)	No change from CP recommendation	2-lane collector (one-way south-eastbound)
Camino Del Rio W	Greenwood Street to Kurtz Street	6-lane prime arterial	6-lane prime arterial	No change from CP recommendation	6-lane prime arterial
Greenwood Street	Kurtz Street to Sports Arena Boulevard	Does not exist	2-lane collector	Segment of Greenwood Street would not be constructed	*(No new roadway)*
Kemper Street	Sports Arena Boulevard to Kurtz Street	Does not exist	2-lane collector with a center left turn lane	No change from CP recommendation	2-lane collector with a center left turn lane
Frontier Drive	Sports Arena Boulevard to Kurtz Street	Does not exist	2-lane collector with a center left turn lane	No change from CP recommendation	2-lane collector with a center left turn lane

Notes:
[1]Based on Figure 3-5 Existing (2017) Street Classifications in the Midway Pacific Highway Community Plan, except at the following location:
- Hancock St b/w Sports Arena Blvd & Channel Wy – Lane geometry changes since adoption of Community Plan

[2]Based on Figure 3-6 Planned Street Classifications in the Midway Pacific Highway Community Plan.

Table 1-4. Existing and Planned Pedestrian and Bicycle System

Road Name	Midway-Pacific Highway CP Recommendation	Midway Rising Project Recommendation
Sports Arena Boulevard	Class I Path (Bay-to-Bay Urban Path) Class II Bike Lanes	Class I Path (Bay-to-Bay Urban Path) Class IV One-Way (WB) Cycle track; Class II Bike Lane EB
Rosecrans Street	Class I Path (La Playa Urban Path) Class II Bike Lanes	Class I Path (La Playa Urban Path)*
Midway Drive	Class I Path (Midway Urban Path)	No improvement as part of this project
Hancock Street	Class III Route	No improvement as part of this project
Kurtz Street	Class III Route	Class I Path
Greenwood Street	Class II Bike Lanes	Class I Path**
Kemper Street	Class I Path (Bay-to-Bay Urban Path) Class II Bike Lanes	Class IV One-Way Cycle tracks
Frontier Drive	Class II Bike Lanes	Class I Path (Bay-to-Bay Urban Path)

* The proposed facility on Rosecrans Street provides a raised Class IV two-way cycle track with an adjacent sidewalk which meets the intention of the Class I path but provides separation between pedestrians and bicyclists.
** In lieu of a vehicular roadway, the intention of the north-south connection for pedestrians and bicyclists will be provided as a Class I path aligned with Sherman Street rather than Greenwood Street

1.5 OTHER REGIONAL PLANNING DOCUMENTS

Appendix C of the SANDAG Central Mobility Hub Comprehensive Multimodal Corridor Plan (CMH CMCP) and the SANDAG Regional Plan identify future Rapid Route 10, planned for implementation in the Year 2035, as an enhancement to the existing MTS Route 10. The route will connect the communities between La Mesa and Ocean Beach utilizing segments of Pacific Highway, Rosecrans Street, and Sports Arena Boulevard within the project study area. To increase travel time reliability for the Rapid Route 10, the CMH CMCP recommends bus-only lanes along Rosecrans Street and Sports Arena Boulevard within the project study area.

2 METHODOLOGY

The following section describes the methodology used to identify the study area, analyze study area conditions, and determine project effects.

2.1 STUDY AREA

The study area is defined by including signalized and unsignalized intersections that meet the following criteria from the TSM for projects that generate more than 2,400 daily final driveway trips:

- All signalized intersections and signalized project driveways where the project will add 50 or more peak hour final primary (cumulative) trips to any turning movement at the intersection.
- All unsignalized intersections (side street stop-controlled, all-way stop-controlled, and roundabout) and unsignalized project driveways where the project will add 50 or more peak hour final primary (cumulative) trips on any approach.
- All freeway ramp terminal intersections where a project adds 50 or more peak hour final primary (cumulative) (AM or PM) net new trips on any approach must be analyzed regardless of their distance from the project site.
- For roadway segments, the study area should include roadway segments where the project would add 1,000 or more daily final primary trips (cumulative trips) if consistent with the Community Plan, or 500 or more daily final primary trips (cumulative trips) if inconsistent with the Community Plan AND:
    - Have improvements identified in the community plan; OR
    - Not built to the community plan ultimate classification (including planned new circulation element roadways).

The study area was determined by distributing the project trips through the surrounding roadway network, based on the distribution patterns outlined in this document. The proposed study area consists of

- 40 intersections
    - 24 signalized
    - 10 unsignalized
    - 6 unsignalized project driveways
- 23 roadway segments.

Of the 24 signalized intersections, three are at freeway ramps at I-8 Westbound Off-Ramp / W. Mission Bay Drive (Intersection #1), Camino del Rio W/I-5 Southbound Off-Ramp/I-8 Westbound Off-Ramp (Intersection #17)/ Hancock Street and I-5 Southbound Ramps /Sea World Drive (Intersection #32).

The intersections identified for evaluation are summarized in **Table 2-1**. The roadway segments identified for evaluation are summarized in **Table 2-2**.

Figure 2-1 shows the project study area intersections and the existing traffic control.

Table 2-1. Study Intersections

#	Location	Existing Control	Jurisdiction
1	West Mission Bay Drive / Sports Arena Blvd & I-8 Westbound Off-Ramp	Signal	Caltrans
2	Sports Arena Boulevard & Midway Drive & West Point Loma Boulevard	Signal	City of San Diego
3	Sports Arena Boulevard & Hancock Street / Commercial Dwy 1	Signal	City of San Diego
4	Sports Arena Boulevard & Kemper Street	Signal	City of San Diego
5	Sports Arena Boulevard & West Drive / Proposed Frontier Drive	Signal	City of San Diego

21		Greenwood Street to Camino Del Rio West
22	*Frontier Drive (Plus Project scenarios Only)	Sports Arena Boulevard to Kurtz Street
23	*Kemper Street (Plus Project scenarios Only)	Sports Arena Boulevard to Kurtz Street

*Project will construct these roadways as shown in the Midway-Pacific Highway Community Plan

Figure 2-1. Study Area Map

2.2 ANALYSIS PROCESS

The TSM provides guidelines for preparing an LMA. The analysis process includes determining the vehicular operations at the study intersections for the peak periods as well as documenting pedestrian, bicycle, and transit facilities within the study area. Intersection operations were evaluated using Synchro 11 software. Analysis results were compared to the City's standards to determine project effects.

The Highway Capacity Manual (HCM), published by the Transportation Research Board, establishes procedures to evaluate facilities and rate their ability to process traffic volumes. The terminology "level of service" is used to provide a qualitative evaluation based on certain quantitative calculations, which are related to average delays.

2.2.1 PEDESTRIANS

The TSM states that pedestrian analysis should focus primarily on pedestrian connectivity, walkshed analysis, and adequacy of facilities, with additional analysis requirements possible in dense, urban environments. Pedestrian facilities evaluated include sidewalks, crosswalks, curb ramps, and pedestrian signal heads.

2.2.2 BICYCLES

Bicycle projects or improvements identified in the City's Bicycle Master Plan or the Midway-Pacific Highway Community Plan (CP) and located within the project study area will be documented. Bicycle facilities within the project study area were evaluated for connectivity gaps and deficiencies, per the TSM. Bicycle facilities include physical roadway features, as well as signing and striping of bicycle travel lanes.

2.2.3 TRANSIT

Planned and/or proposed transit improvements identified in the SANDAG 2021 Regional Plan and in the Central Mobility Hub Comprehensive Multimodal Corridor Plan (CMCP) (June 2023) that are located within the project study area will be documented. The transit system within the study area should be evaluated for the following project effects, per the TSM:

- Anticipated increase in travel time for buses due to intersection or corridor delay
- Conflicts between existing/planned transit facilities and project driveways

2.2.4 VEHICULAR LEVEL OF SERVICE ANALYSIS

Level of Service for Intersections

Level of service (LOS) for intersections is defined in terms of delay, which is a measure of driver discomfort, frustration, fuel consumption, and loss of travel time. The LOS reported for signalized intersections is the average control delay per vehicle for the peak 15-minute period within the hour analyzed. The average control delay includes initial deceleration delay, queue move-up time, and final acceleration time in addition to the stop delay. LOS for unsignalized intersections is determined by the computed or measured control delay and is defined for each movement. At all-way stop-controlled intersections, the delay reported is the average control delay of all movements at the intersection. At one-way or two-way stop-controlled intersections, the delay reported represents the worst movement which is typically the left-turn from the minor street approach. **Table 2-3** describes the criteria for the various levels of service designations for signalized and unsignalized intersections.

Table 2-3. LOS Criteria for Intersections

LOS	Control Delay (sec/veh)		Description
	Signalized Intersections (a)	*Unsignalized Intersections (b)	
A	≤10.0	≤10.0	Operations with very low delay and most vehicles do not stop.
B	>10.0 and ≤20.0	>10.0 and ≤15.0	Operations with good progression but with some restricted movement.
C	>20.0 and ≤35.0	>15.0 and ≤25.0	Operations where a significant number of vehicles are stopping with some backup and light congestion.
D	>35.0 and ≤55.0	>25.0 and ≤35.0	Operations where congestion is noticeable, longer delays occur, and many vehicles stop. The proportion of vehicles not stopping declines
E	>55.0 and ≤80.0	>35.0 and ≤50.0	Operations where there is significant delay, extensive queuing, and poor progression.
F	>80.0	>50.0	Operations that is unacceptable to most drivers, when the arrival rates exceed the capacity of the intersection.

Source:
(a) 6th Edition Highway Capacity Manual, Chapter 19, Page 16, Exhibit 19-8; 2000 Edition Highway Capacity Manual, Chapter 16, Page 2
(b) 6th Edition Highway Capacity Manual, Chapter 20, Page 6, Exhibit 20-2; 2000 Edition Highway Capacity Manual, Chapter 17, Page 2 & 32
*The LOS criteria for roundabouts would be the same as unsignalized intersections.

Synchro 11 software was used to analyze the intersection level of service operations for both signalized and unsignalized intersections. The intersection analysis uses the methodologies outlined in HCM 6th Edition except where limitations to HCM 6th edition methodology was present such as a fifth leg, clustered intersections, custom phasing, or exclusive pedestrian phasing. For these intersections, HCM 2000 methodology was used.

The following list contains the assumptions used for intersection analysis:

- **Peak-hour factor (PHF)** – PHFs collected in field were assigned per approach under existing conditions, and default value of 0.92 PHF assigned at all approaches under future conditions per the TSM.
- **Saturation flow rate** – Typical saturation flow rate of 1,900 vehicles per hour per lane
- **Signal timing** - Existing signal timings were modeled for the signalized intersection under existing and future base scenarios, except the intersections near the NAVWAR site which were optimized under future base scenarios to facilitate the large increase in traffic volumes from the future NAVWAR projects. Signal timings were also optimized under plus project scenarios. Signal timing sheets for the signalized study intersections are provided in **Appendix D**.

Thresholds for Project Effects at Intersections

Intersections were considered to exhibit project effects if the following changes to LOS were calculated in Plus Project scenarios when compared to LOS results in Base scenarios. **Table 2-4** defines transportation effects for City of San Diego intersections for when project improvements should be provided.

Table 2-4. Project Effect Criteria for Intersections

Intersection Control	Within ½ mile path of travel of a Major Transit Stop	Outside ½ mile path of travel of a Major Transit Stop
Signalized/All-Way Stop/Roundabout	Project causes intersection to degrade to LOS F, OR Project adds traffic to intersection already at LOS F	Project causes intersection to degrade to LOS E or F, OR Project adds traffic to intersection already at LOS E or F
Side-Street Stop	Project causes the worst movement to degrade to LOS F, OR Project adds traffic to the worst movement already at LOS F	Project causes the worst movement to degrade to LOS E or F, OR Project adds traffic to the worst movement already at LOS E or F

Source: City of San Diego Transportation Study Manual (2022)

Level of Service for Roundabouts (SIDRA)

Roundabout level of service (LOS) results were determined using methods defined in the *Highway Capacity Manual (HCM), 6th Edition* and SIDRA (Version 9.1) traffic analysis software. SIDRA software combines geometry and gap-acceptance parameters which consider the effect that the traffic volumes would have on driver behavior, through gap-availability and gap-acceptance modeling. This software is compatible with the Highway Capacity Manual for roundabout evaluation. The HCM roundabout intersection procedures define LOS as a function of average control delay for the intersection as a whole.

Level of Service for Roadway Segments

The plus project roadway level of service will determine if the project needs to implement roadway improvements identified in the Community Plan. **Table 2-5** summarizes the TSM's roadway level of service criteria based on classification and average daily traffic (ADT).

Thresholds for Project Effects for Roadway Segments

Roadway segments were considered to exhibit project effects if the following LOS changes were observed in Plus Project scenarios when compared to results in Base scenarios. **Table 2-6** defines the criteria for project effects for roadway segments per the TSM and whether the project should implement the improvement or contribute a fair share towards the improvement.

Table 2-5. Level of Service Thresholds for City of San Diego Roadway Segments

Street Classification	Lanes	Level of Service				
		A	B	C	D	E
Expressway	8 lanes	40,000	56,000	80,000	93,500	107,000

2.2.5 QUEUE ANALYSIS

SimTraffic software included in Synchro 11 was used to analyze the 95th percentile queues at the turn pockets for signalized intersections. The 95th percentile queue is the queue length expected to be exceeded only 5% of the time. The 95th percentile queue lengths reported represent an average of five SimTraffic runs.

2.2.6 FREEWAY OFF-RAMP ANALYSIS

Per the TSM, freeway interchange analysis should show changes in off-ramp maximum queues with the addition of project traffic. This analysis was performed at the three freeway off-ramp intersections within the study area.

2.2.7 SIGNAL WARRANT ANALYSIS

The *2014 California Manual on Uniform Traffic Control Devices (CA MUTCD), Chapter 4, Revision 8* provides nine warrants which provide criteria a project must meet for signal installation. While traffic signals may be justified when one or more signal warrants are satisfied, satisfaction of one or more warrants do not themselves require installation of a traffic signal. The signal warrants used in this analysis are described in detail below.

Warrant 1: Eight Hour Vehicular Volume

The criteria for Warrant 1, Eight-Hour Vehicular Volume, are contained in Table 4C-1 of the CA MUTCD. Warrant 1 is satisfied when one of two conditions is met during any 8 hours of an average day: The Minimum Vehicular Volume, Condition A, and the Interruption of Continuous Traffic, Condition B. Condition A may be satisfied due to a significant volume on the minor street approach, while Condition B may be satisfied due to a significant volume of traffic on the major street. The details of Condition A and Condition B are listed below:

A. The vehicles per hour given in both 100 percent columns of **Table 2-7** exist on the major-street and the higher-volume minor street approaches, respectively, to the intersection; or

B. The vehicles per hour given in both 100 percent columns of Condition B in **Table 2-7** exist on the major-street and the higher-volumes minor-street approaches, respectively, to the intersection.

Table 2-7. CA MUTCD Warrant 1, Eight-Hour Vehicular Volume

Condition A—Minimum Vehicular Volume

Number of lanes for moving traffic on each approach		Vehicles per hour on major street (total of both approaches)				Vehicles per hour on higher-volume minor-street approach (one direction only)			
Major Street	Minor Street	100%[a]	80%[b]	70%[c]	56%[d]	100%[a]	80%[b]	70%[c]	56%[d]
1	1	500	400	350	280	150	120	105	84
2 or more	1	600	480	420	336	150	120	105	84
2 or more	2 or more	600	480	420	336	200	160	140	112
1	2 or more	500	400	350	280	200	160	140	112

Condition B—Interruption of Continuous Traffic

Number of lanes for moving traffic on each approach		Vehicles per hour on major street (total of both approaches)				Vehicles per hour on higher-volume minor-street approach (one direction only)			
Major Street	Minor Street	100%[a]	80%[b]	70%[c]	56%[d]	100%[a]	80%[b]	70%[c]	56%[d]
1	1	750	600	525	420	75	60	53	42
2 or more	1	900	720	630	504	75	60	53	42
2 or more	2 or more	900	720	630	504	100	80	70	56
1	2 or more	750	600	525	420	100	80	70	56

[a] Basic minimum hourly volume

[b] Used for combination of Conditions A and B after adequate trial of other remedial measures

[c] May be used when the major-street speed exceeds 40 mph or in an isolated community with a population of less than 10,000

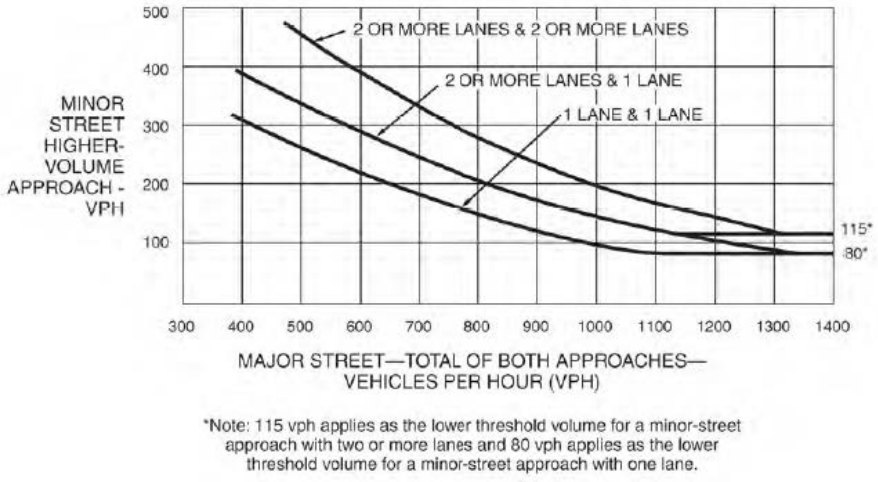
[d] May be used for combination of Conditions A and B after adequate trial of other remedial measures when the major-street speed exceeds 40 mph or in an isolated community with a population of less than 10,000

Warrant 2: Four-Hour Vehicular Volume

The criteria for Warrant 2, Four-Hour Vehicular Volume, are contained in Figure 4C-1 and Figure 4C-2 of the CA MUTCD and are shown on **Figure 2-2** of this report. The Four-Hour Vehicular Volume Warrant is met when, for each of any four hours of an average day, the plotted points representing the vehicles per hour on the major street (total of both approaches) and the corresponding vehicles per hour on the minor-street approach (one direction only) fall above the applicable curve.

If the posted speed limit on the major street exceeds 40 miles per hour, or if the intersection lies within the built-up area of an isolated community having a population of less than 10,000, then **Figure 2-3** may be used instead.

Figure 2-2. CA MUTCD Warrant 2, Four-Hour Vehicular Volume



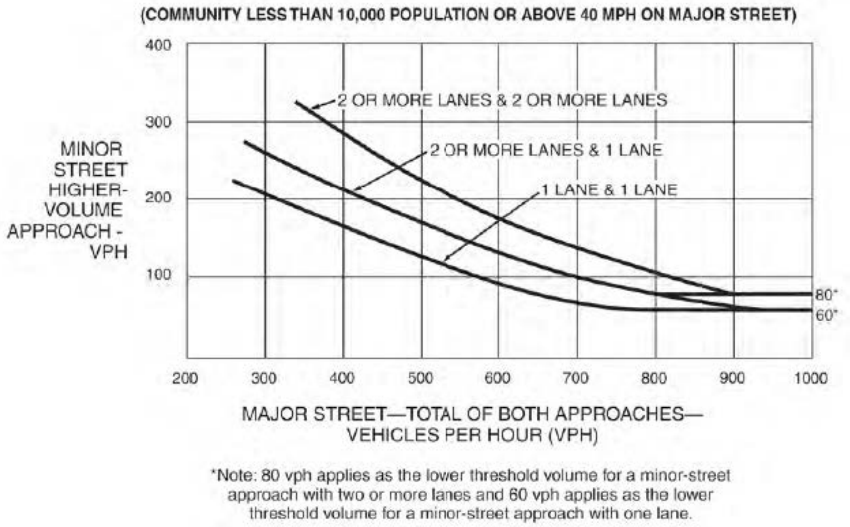


Figure 2-3. CA MUTCD Warrant 2, Four-Hour Vehicular Volume (70% Factor)

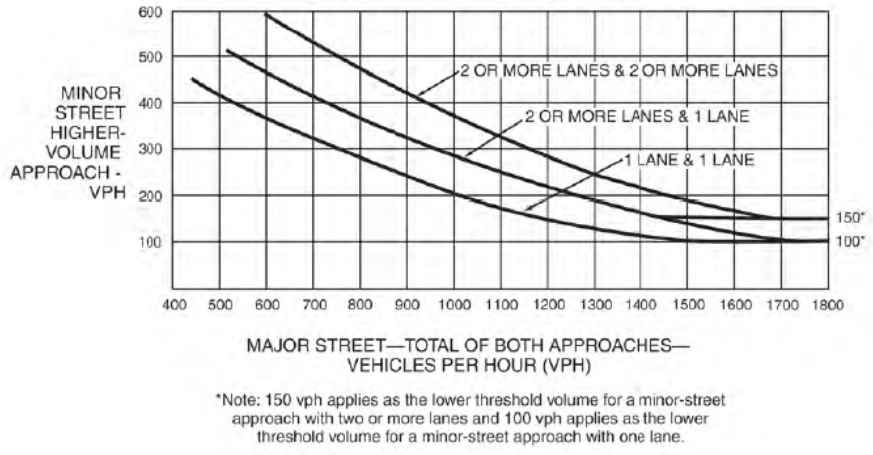
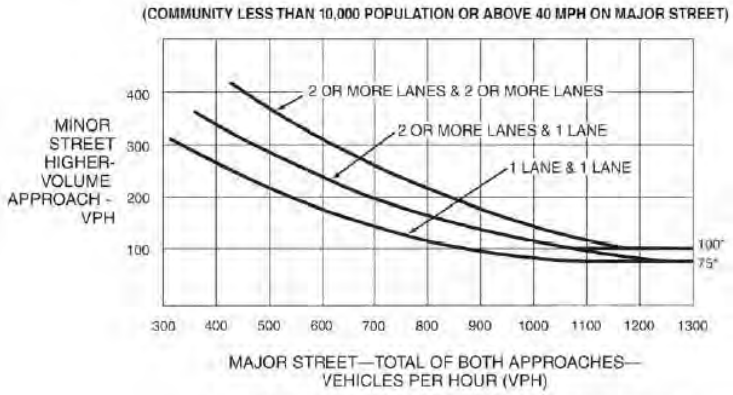
Warrant 3: Peak Hour



The criteria for Warrant 3, Peak Hour Vehicular Volume, are contained in Figure 4C-3 and Figure 4C-4 of the CA MUTCD and are shown in **Figure 2-4** and **Figure 2-5** of this report. The Peak Hour Warrant is met when either of the following two parts is met:

A. If all three of the following conditions exist for the same 1 hour (any four consecutive 15-minute periods) of an average day:
    1. The total stopped time delay experienced by the traffic on one minor-street approach (one direction only) controlled by a STOP sign equals or exceeds: 4 vehicle-hours for a one-lane approach; or 5 vehicle-hours for a two-lane approach, and
    2. The volume on the same minor-street approach (one direction only) equals or exceeds 100 vehicles per hour for one moving lane of traffic or 150 vehicles per hour for two moving lanes, and
    3. The total entering volume serviced during the hour equals or exceeds 800 vehicles per hour for intersections with four or more approaches.

B. The plotted point representing the vehicles per hour on the major street (total of both approaches) and the corresponding vehicles per hour on the higher-volume minor-street approach (one direction only) for 1 hour (any four consecutive 15-minute periods) of an average day falls above the applicable curve in **Figure 2-4** for the applicable combination of approach lanes.
    If the posted speed on the major street exceeds 40 miles per hour, or if the intersection lies within the built-up area of an isolated community having a population less than 10,000, **Figure 2-5** may be used in place of **Figure 2-4**



This warrant applies to unusual cases, such as office complex, manufacturing plants, industrial complexes, or high-occupancy vehicle facilities that attract or discharge large numbers of vehicles over a short time. This warrant applies as the Entertainment Center will attract and discharge large numbers of vehicles over a short time.

Figure 2-4. CA MUTCD Warrant 3, Peak Hour

*Note: 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.

Figure 2-5. CA MUTCD Warrant 2, Peak Hour (70% Factor)

*Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

2.3 PUBLIC IMPROVEMENTS

The TSM provides guidance for improvements for vehicular traffic and alternative transportation (walking, biking, and transit) needs, as summarized in **Table 2-8**.

Table 2-8. Public Improvement Recommendations

Facility	Measurement of Effectiveness (MOE)	Improvement Recommendations
Pedestrian	Connectivity, walkshed, ADA-compliance	• Close sidewalk gaps and/or remove obstructions • Construct curb ramps to meet accessibility standards • Accommodate increased pedestrian demand with traffic calming and/or pedestrian related signal timing changes
Bicycle	Connectivity, bikeshed	• Construct bicycle facilities identified in the Community Plan or City Bicycle Master Plan. • Accommodate increased bicycle demand with upgrades to existing facilities.
Transit	Travel time, on-time performance, conflict identification	• Implement transit priority treatments and/or improvements identified in the Community Plan or at movements that experience LOS E or worse • Accommodate transit demand with additional stops and abiding by the Community Plan, RTIP, SANDAG, MTS, and/or the North County Transit District
Signalized Intersection	Seconds of delay, queue lengths, Project traffic volumes	• Add or lengthen a turn lane • Improve/modify signal timing • Provide Intelligent Transportation System (ITS) improvements • Add right-turn overlap phasing
Unsignalized Intersection	Seconds of delay, queue lengths, Project traffic volumes	• Evaluate alternative traffic control such as a signal or roundabout
Roadway Segment	ADT, v/c ratio	• Improve or upgrade facilities identified in the Community Plan
Freeway	Off-Ramp Queues (ft)	• Coordinate with City/Caltrans to improve off-ramp spillbacks onto freeway mainline.

3 EXISTING (2023) SCENARIO

This section summarizes the existing roadway circulation network, daily and peak-hour traffic volumes, and operations at the study intersections and roadway segments.

3.1 ROADWAY NETWORK

The roadways along the project frontages include Sports Arena Boulevard to the south and Kurtz Street to the north. Surrounding roadways nearby the project site include Sports Arena Boulevard, Kurtz Street, Hancock Street, Kemper Street, Camino Del Rio West, Rosecrans Street, W Point Loma Boulevard, and Midway Drive. The project proposes two new roadways— Kemper Street and Frontier Drive running north-south through the site between Kurtz Street and Sports Arena Boulevard, consistent with the Midway-Pacific Highway Community Plan (2018).

Table 3-1 provides a description of existing roadway network as of December 2023, of the study area. The planned roadway classifications are provided in the Midway-Pacific Highway Community Plan (2018). **Figure 3-1** shows the existing roadway classifications, and **Figure 3-2** shows the planned roadway classifications based on the Midway-Pacific Highway Community Plan (2018).

Figure 3-3 illustrates the existing study intersection geometries under the existing (2023) scenario.

Table 3-1. Existing Roadway Network

Roadway	From	To	No. Lanes	Median Type	Sidewalks	Bike Facilities	Transit Route	Posted Speed Limit	Existing Roadway Class.[1]	Planned Roadway Class.[2]
Sports Arena Blvd	I-8 WB Off-Ramp	Rosecrans St	5-6 Lanes	Painted / Raised	B/S (non-contiguous) 6 ft wide	Class II/ Class II Buffered	8 & 9	35 MPH	5-Lane Major Arterial	6-Lane Major Arterial

Figure 3-3. Existing Intersection Geometries (Page 1 of 2)

Figure 3-3. Existing Intersection Geometries (Page 2 of 2)

3.2 TRAFFIC VOLUMES

Peak-hour intersection turning movement counts and roadway segment average daily traffic counts were collected by National Data and Surveying Services (NDS) at the study intersections and study segments on Thursday, September 21, 2023, and Tuesday, October 24, 2023. Data was collected on two typical, non-holiday, event-day weekdays when schools were in session. Intersection vehicle, pedestrian, and bicycle traffic counts were collected from 7:00 AM to 10:00 AM and from 3:00 PM to 7:00 PM. Bi-directional, 24-hour roadway segment counts were collected from 3:00 AM to 3:00 AM to avoid splitting up event traffic between two separate count days. All existing traffic count data is included in **Appendix E**.

Typical event-day attendance was estimated from the September 21, 2023 counts on the day of a Luis Miguel concert. The following data represents actual event-day attendance at typical and full-capacity events observed at the existing Sports Arena in 2023.

a. Jan 7th: San Diego Seals vs Vancouver Warriors – 4,115
b. Jan 8th: San Diego Sockers vs. Dallas Sidekicks – 1,558
c. Jan 11th: San Diego Gulls vs San Jose Barracuda – 3,085
d. Jan 13th: San Diego Gulls vs. Ontario Reign – 6,285
e. Jan 14th: Subtronics Concert – 4,579
f. Sept 21st: Luis Miguel Concert – 10,450

3.3 EXISTING SPORTS ARENA OPERATIONS

The project team completed multiple field visits on weekday event days to observe traffic operations such as approach queues, lane utilization, and peak hour traffic flow. This information was used to calibrate the existing SimTraffic model by checking that the model results provided queues and traffic congestion that generally aligns with those observed in the field. Information on the existing arena event operations and access were extracted from field visits and through correspondence with Sports Arena and ACE parking staff.

3.3.1 ON-SITE EMPLOYEES

The existing arena is operated and managed by ASM Global and various subcontractors. Event employees consist of venue management, and event staff. During events, it is reported that there are anywhere between 80 and 160 ASM Global employees on-site depending on the size of the event, and 34 ASM Global employees on-site when no event is taking place.

Subcontractors provide event employees for traffic-control, parking, ticketing, security, and other arena operations. These employees arrive to the arena six to eight hours prior to an event start time. ASM Global offers full-time employees the option to sign up for a mass transit account, which they are allowed to pay into with pre-tax dollars to be used for transit passes. However, very few part-time employees and no full-time staff take advantage of this option, most likely due to the lack of convenient transit to and from the site. Otherwise, all full- and part-time ASM Global employees are provided free parking passes for on-site parking.

3.3.2 EXISTING ARENA ACCESS

Arena parking and drop-off/ pick-up are currently accessible via five driveways, of which four are inbound/outbound and one is outbound-only. Three driveways are located on Sports Arena Boulevard and two are located on Kurtz Street. **Figure 3-4** illustrates the existing driveways and operations for the project site. The operations of each driveway are as follows:

- **Driveway 2** (Sports Arena Boulevard/Kemper Street) – Provides inbound/outbound access to Sports Arena parking (Driveway 1). Also provides inbound access to Summit Gasoline and Chick-fil-A. Vehicles traveling outbound from Summit Gasoline and Chick-fil-A during the pre-event period must use Driveway 4 to exit.
- **Driveway 4** (Sports Arena Boulevard/West Drive) – Main driveway providing inbound/outbound access to Sports Arena parking (Driveway 3) and Transportation Network Company (TNC) vehicles. Also provides inbound/outbound access to Summit Gasoline, Chick-fil-A, and Chili's.
- **Driveway 20** (driveway located approximately 290 feet east of the Kurtz Street/Hancock Street intersection) – Operates as an outbound-only driveway for all events.
- **Driveway 19** (driveway located approximately 695 feet east of Driveway 20) – Operates as a right in/right out only, inbound/outbound driveway for all events. All inbound trips on Kurtz Street enter the site via Driveway 19. The number of entrance/exit lanes depends on the event size.
- **Driveway 5** (driveway along Sports Arena Boulevard located approximately 485 feet east of Driveway 2) – Operates as an inbound/outbound access driveway for major events only (sometimes designated for VIP parking).

3.3.3 RIDESHARE ACCESS

As shown in **Figure 3-4**, the Sports Arena directs rideshare vehicles to utilize Driveway 4 for drop-off operations. Rideshare vehicles are directed to enter through Driveway 4 then make a left at Driveway 3 (avoiding the arena parking lot entrance) to drop off patrons. After drop-off, rideshare vehicles must exit back through Driveway 4. Rideshare vehicles may not exit through Driveway 2 during drop-off operations due to a physical blockade.

Pick-up operations follow a similar pattern to drop-off operations; vehicles are directed to enter through Driveway 4 then make a left at Driveway 3 to pick up riders. Once riders are in the vehicles, however, rideshare vehicles are directed to make a left turn through Driveway 1 to exit through Driveway 2.

3.3.4 EXISTING SITE AND ARENA DRIVEWAY VOLUMES

Kimley-Horn collected driveway counts for a full concert event at the existing Sports Arena to develop existing volumes for the project site. Driveway counts were collected at 20 driveways along the existing site border. Counts were collected from 3:00 a.m. prior to the event to 3:00 a.m. after the event on Thursday, September 21, 2023, during the Luis Miguel concert, and were used to directly calculate the Commuter AM peak hour, Commuter PM peak hour, Pre-Event PM peak hour, and ADT volumes for the existing site volumes. **Table 3-2** summarizes the driveway volumes for the arena access driveways.

Table 3-3 summarizes the driveway volumes for the total site. Driveway 1 and Driveway 3 are internal-access driveways for the arena accessible via Driveways 2 and 4, and thus are not included in the Total Site volumes. Volumes at Driveways 1 and 3 represent arena spectator trips only.

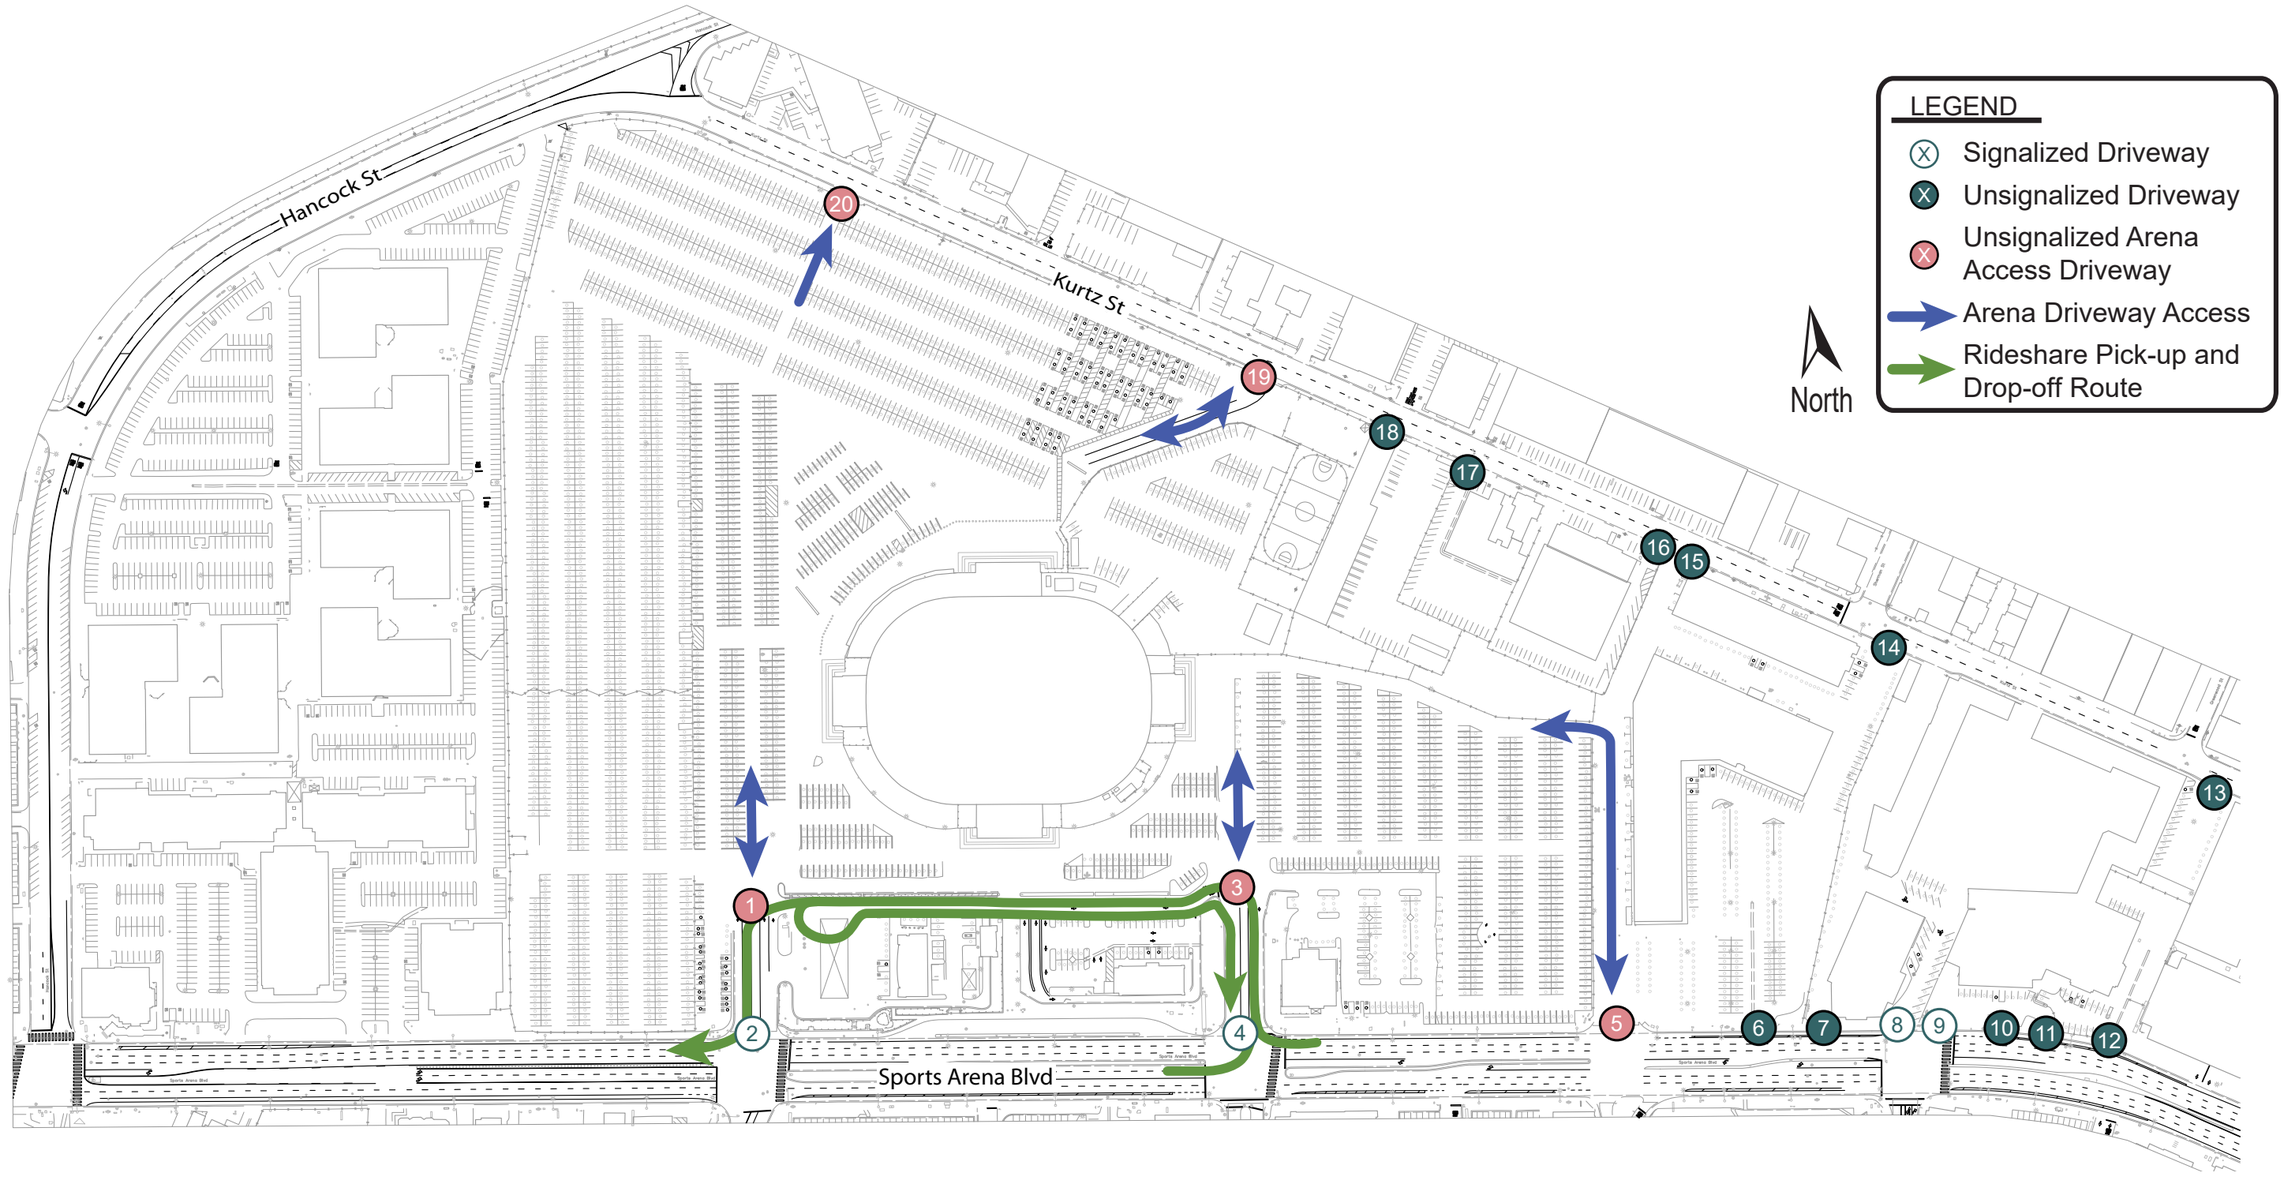

Table 3-2. Existing Driveway Volumes – Arena Only

#	Driveway Name	ADT		Peak hour AM Commuter		Peak hour PM Commuter		PM Pre-Event	
		IN	OUT	IN	OUT	IN	OUT	IN	OUT

3.3.5 EXISTING ARENA EVENTS

The existing arena currently has a 16,000-seat capacity for sporting events and 10,500-seat capacity for concerts due to the u-shaped seating layout. **Table 3-4.** summarizes the events and their typical average attendance for the existing arena.

Table 3-4. Existing Arena Events and Attendance

	Average Events/Year	Event Days *		Average Turnstile Attendance	
		Weekends	Weekdays	Per Event	Annual
San Diego Gulls	35	23	12	4,800	168,275
San Diego Seals	10	10	0	2,930	29,300
San Diego Strike Force	7	6	1	955	6,682
San Diego Sockers	15	14	1	1,760	26,450
Concert - Large	18	10	8	9,026	162,468
Concert - Small	12	9	3	4,770	57,242
Family Shows	13	6	3	3,142	40,850
Ice Shows	14	6	2	3,342	46,792
Motorsports	3	2	0	7,087	21,261
Boxing	1	1	0	5,372	5,372
Other Sports	1	1	0	7,009	7,009
Other	1	1	0	2,618	2,618
Total	**130**	**89**	**30**		

Notes:
*Weekend events are events on Friday, Saturday, or Sunday.

3.4 EXISTING SITE PARKING

Currently 3,861 parking stalls are provided via surface lot space for the Sports Arena and surrounding commercial uses as shown in **Figure 1-5**. Additionally, surrounding on-street parking and adjacent commercial lots were observed to be used by spectators to avoid parking costs (typically $35 per vehicle) on-site for events. Existing parking lots are accessible via three intersections on Sports Arena Boulevard and two driveways on Kurtz Street, listed in Section 3.3.4 of this report.

3.5 INTERSECTION LEVEL OF SERVICE ANALYSIS

The existing (2023) scenario intersection analysis was performed based on existing lane geometries and traffic controls observed, and data collected during the Commuter AM, Commuter PM, and Pre-Event PM peak hours on weekday event-day. **Figure 3-5** illustrates the existing traffic volumes at the study intersections.

Table 3-5. displays the LOS analysis results for the study intersections under the existing scenario.

Under the existing scenario, all intersections currently operate at LOS D or better during all peak hours except:

- Intersection #2 – Midway Drive & W Point Loma Boulevard & Sports Arena Boulevard (PM: LOS

E; Pre-Event: LOS E)

- Intersection #5 – West Drive / Frontier Drive & Sports Arena Boulevard (Pre-Event: LOS F)
- Intersection #6 – Target Driveway & Sports Arena Boulevard (PM: LOS E; WKND: LOS F)
- Intersection #16 – Camino del Rio W & Moore Street (WKND: LOS E)
- Intersection #17 – Camino del Rio W & Hancock Street (AM: LOS F; PM: LOS F; Pre-Event: LOS F)
- Intersection #20 – Rosecrans Street & Midway Drive (AM: LOS E; PM: LOS E; Pre-Event: LOS E; WKND: LOS E)
- Intersection #27 – Pacific Highway & Enterprise Street (PM: LOS F; WKND: LOS F)
- Intersection #29 – Barnett Avenue & Midway Drive (PM: LOF F)

Appendix F contains the intersection LOS calculation worksheets for the existing scenario.

3.6 QUEUEING ANALYSIS

The 95th percentile queue lengths reported represent an average of five SimTraffic runs. **Table 3-6** summarizes the 95th percentile queues under the existing scenario. **Appendix G** contains the 95th percentile queue worksheets for the existing scenario. Under the existing scenario, queues exceed the existing available storage length at:

- 7 intersections in the Commuter AM peak,
- 17 intersections in the Commuter PM peak, and
- 12 intersections in the pre-event PM peak.

3.7 ROADWAY SEGMENT ANALYSIS

The existing (2023) scenario roadway segment analysis was performed based on existing roadway geometries and 24-hour roadway segment counts collected on a weekday event day (Wednesday, January 11th, 2023). **Table 3-7** summarizes the roadway segment LOS analysis at the study segments under the existing scenario.

Under the existing (2023) scenario, all roadway segments operate at LOS D or better on a weekday event day except the following:

- Camino del Rio West north of Greenwood Street (LOS F)
- Camino del Rio West between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)

Notes:
Bold values indicate intersections operating at LOS E or F.
ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds.
(a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a two-way stop-controlled intersection, delay refers to the worst movement.
(b) LOS calculations are based on the methodology outlined in the *Highway Capacity Manual 6th Edition* or the *Highway Capacity Manual 2000* and performed using Synchro 11.0

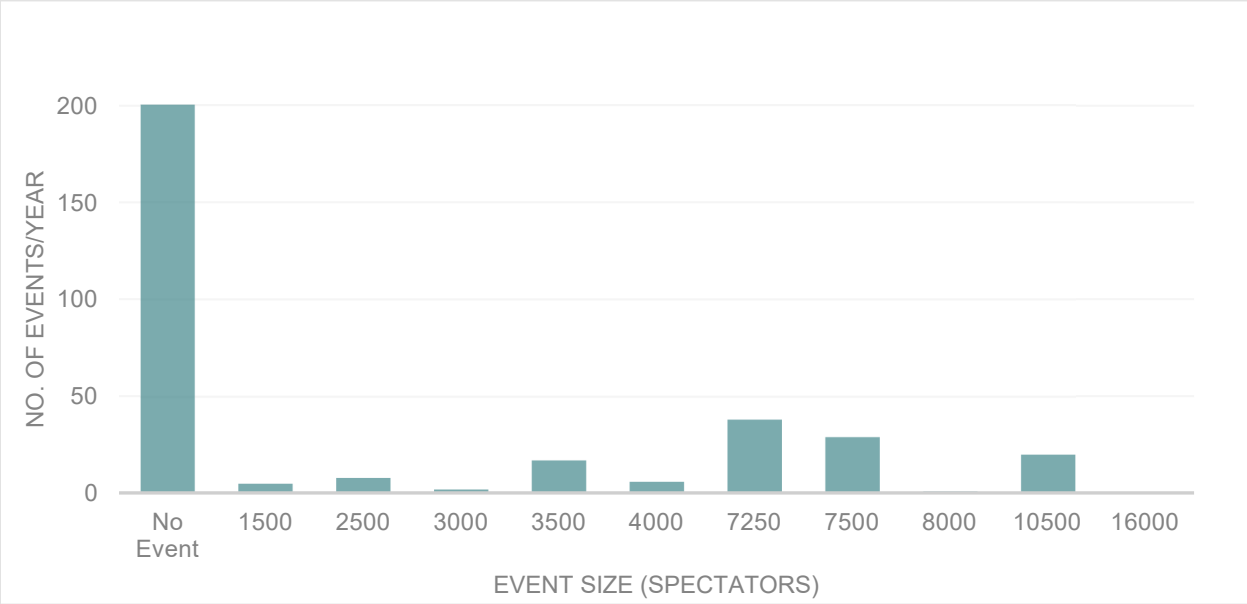
[4]V/C Ratio - Volume-to-capacity ratio.

[5]LOS - Level of Service.

4 PROJECT TRANSPORTATION DEMAND

The following section describes the trip generation, distribution and assignment related to the proposed project.

4.1 ENTERTAINMENT OPERATIONS



4.1.1 ENTERTAINMENT CENTER CAPACITY

The existing arena currently has a 16,000-seat capacity for sporting events and 10,500-seat capacity for concerts. The Entertainment Center will maintain a 16,000-seat capacity for sporting events and increase the concert capacity to 14,500 seats. The Entertainment Center is anticipated to continue to host similar types and sizes of events as the existing arena, but plan to program more events per year. The planned program of events (type, size, and frequency) for the future Entertainment Center is summarized in **Table 4-1** and **Figure 4-1**. While an event is expected to be held at the Entertainment Center for 166 days of the year, almost 200 days of the year are expected to have no event.

Table 4-1. Planned Events for Proposed Entertainment Center

Event	No. of Events/Year	Average Spectators
San Diego Gulls	38	8,500
San Diego Seals	9	6,500
San Diego Strike Force	8	3,000
Concert – Full	25	14,500
Concert – Half	25	7,500
Family Shows	8	3,500
Ice Shows	6	3,000
Motorsports	1	4,000
Boxing	1	8,000
Wrestling	2	4,000
Rodeos	1	3,000
High School Sports	5	1,500
Other Sports	2	4,000
Graduations & Trade Shows	10	2,000
Private/Catered Events	25	300
Total	**166**	

Figure 4-1. Event Size vs. Number of Events Planned per Year

4.1.2 THEATER CAPACITY

A theater will also be located on the project site with a planned capacity of up to 3,500 spectators. The theater will either be located within the privately-owned parcels on Kurtz Street or would be an allowable outdoor space within the open space adjacent to the Entertainment Center.

4.1.3 COMBINED CAPACITY ANALYSIS SCENARIOS

Two sets of trip generation calculations were performed for the entertainment land use on the project site based on event size:

1. Typical Event: 14,500 spectators
2. Full Capacity Event: 20,000 spectators (combined maximum capacity of Entertainment Center and Theater [3,500])

Although the transportation analysis was performed for the two event sizes, project effect determination is based on the 14,500-spectator event for the proposed scenario as the “typical” maximum event. The 20,000-spectator scenario is a maximum capacity event for the Entertainment Center and the theater combined, which is expected to occur up to 2 times per year. Operational results of the maximum capacity event will be used to develop traffic management strategies including temporary traffic control, additional signage, and traffic signal modifications that would be used for these larger spectator events.

4.1.4 ENTERTAINMENT EMPLOYEES

Based on data from similar-sized venues managed by the applicant, 885 employees would be present for a typical event at the Entertainment Center and 1,080 employees would be present for a combined full capacity event at both venues. The increased number of employees compared to existing operations is a result of the modernization of the venue and the increases focus on the customer experience. A large portion of the increased number of employees is due to the food and beverage commissary operations that will be on-site for the future venue which is not provided at the current arena.

4.1.5 PROPOSED EVENT SHUTTLE

It is anticipated that overflow parking may be necessary for large event sizes. Specifically, events under 10,000 spectators will be provided with on-site parking (2,100 spaces), utilizing the trip generation methodology discussed in Section 4.2 of this report. For events with more than 10,000 spectators, two off-site parking facilities will be utilized. One will be just west of the project site in the business park with approximately 500 spaces, and the other will be the Sea World parking lot on Sea World Drive which will provide an additional 7,000 spaces. Shuttle routes to the Sea World parking lot and the business park lot are shown in **Figure 4-2**. Event spectators will be provided an assigned parking area (on-site or in an overflow lot) at the point of ticket sale so they can plan accordingly ahead of the event.

Event shuttles will be provided for access to Old Town Transit Center and the off-site parking lots as follows:

- Provide event shuttle service between offsite parking at SeaWorld and the Entertainment Center from 5pm to 1am. Shuttles will be used for events with greater than 12,000 spectators. Event shuttle will run along W Mission Bay Drive, Sports Arena Boulevard, Frontier Drive, Kurtz Street and Hancock Street. For events with more than 12,000 spectators, shuttle headway would be approximately 5 minutes for pre-event and post-event service.
- Provide event shuttle service between off-site business park lot and the Entertainment Center from 5pm to 1am. Shuttles will be used for events with greater than 10,000 spectators. Event shuttle will run along Sports Arena Boulevard, Frontier Drive, Kurtz Street, and Hancock Street. For all events with greater than 10,000 spectators, shuttle headway would be approximately 5 minutes for pre-event and post-event service.
- Provide event shuttle service between Old Town Transit Center and the Entertainment Center from 5pm to 1am. Shuttles will be used for events with greater than 7,500 spectators. Event shuttle will run along Rosecrans Street, Sports Arena Boulevard, Frontier Drive, and Kurtz Street. For events with more than 7,500 spectators, shuttle headway would be approximately 5 minutes for pre-event and post-event service.

4.1.6 RIDESHARE ACCESS

Rideshare access will be provided along Kemper Street between Sports Arena Blvd and Kurtz St for both pick-up and drop-off operations. Kemper Street provides enough curb space on both the east and west sides of the street (approximately 79 stalls) to process many vehicles at once. Parking would be restricted with signage on both sides of the street during event evenings. Proposed rideshare operations are shown in **Figure 4-3**.

4.1.7 TARGET ROUTES

Entertainment Center spectators that choose to drive and purchase parking passes on an event day will receive location-specific information prior to the event, with specific routing and wayfinding information to an assigned parking garage, including arrival routes per origin and parking structure destination. The recommended arrival routes will inform spectators to avoid the Camino del Rio and Sports Arena Boulevard intersection, where possible, as it is currently heavily congested.

Figure 4-2. Entertainment Center Off SIte Overflow Parking

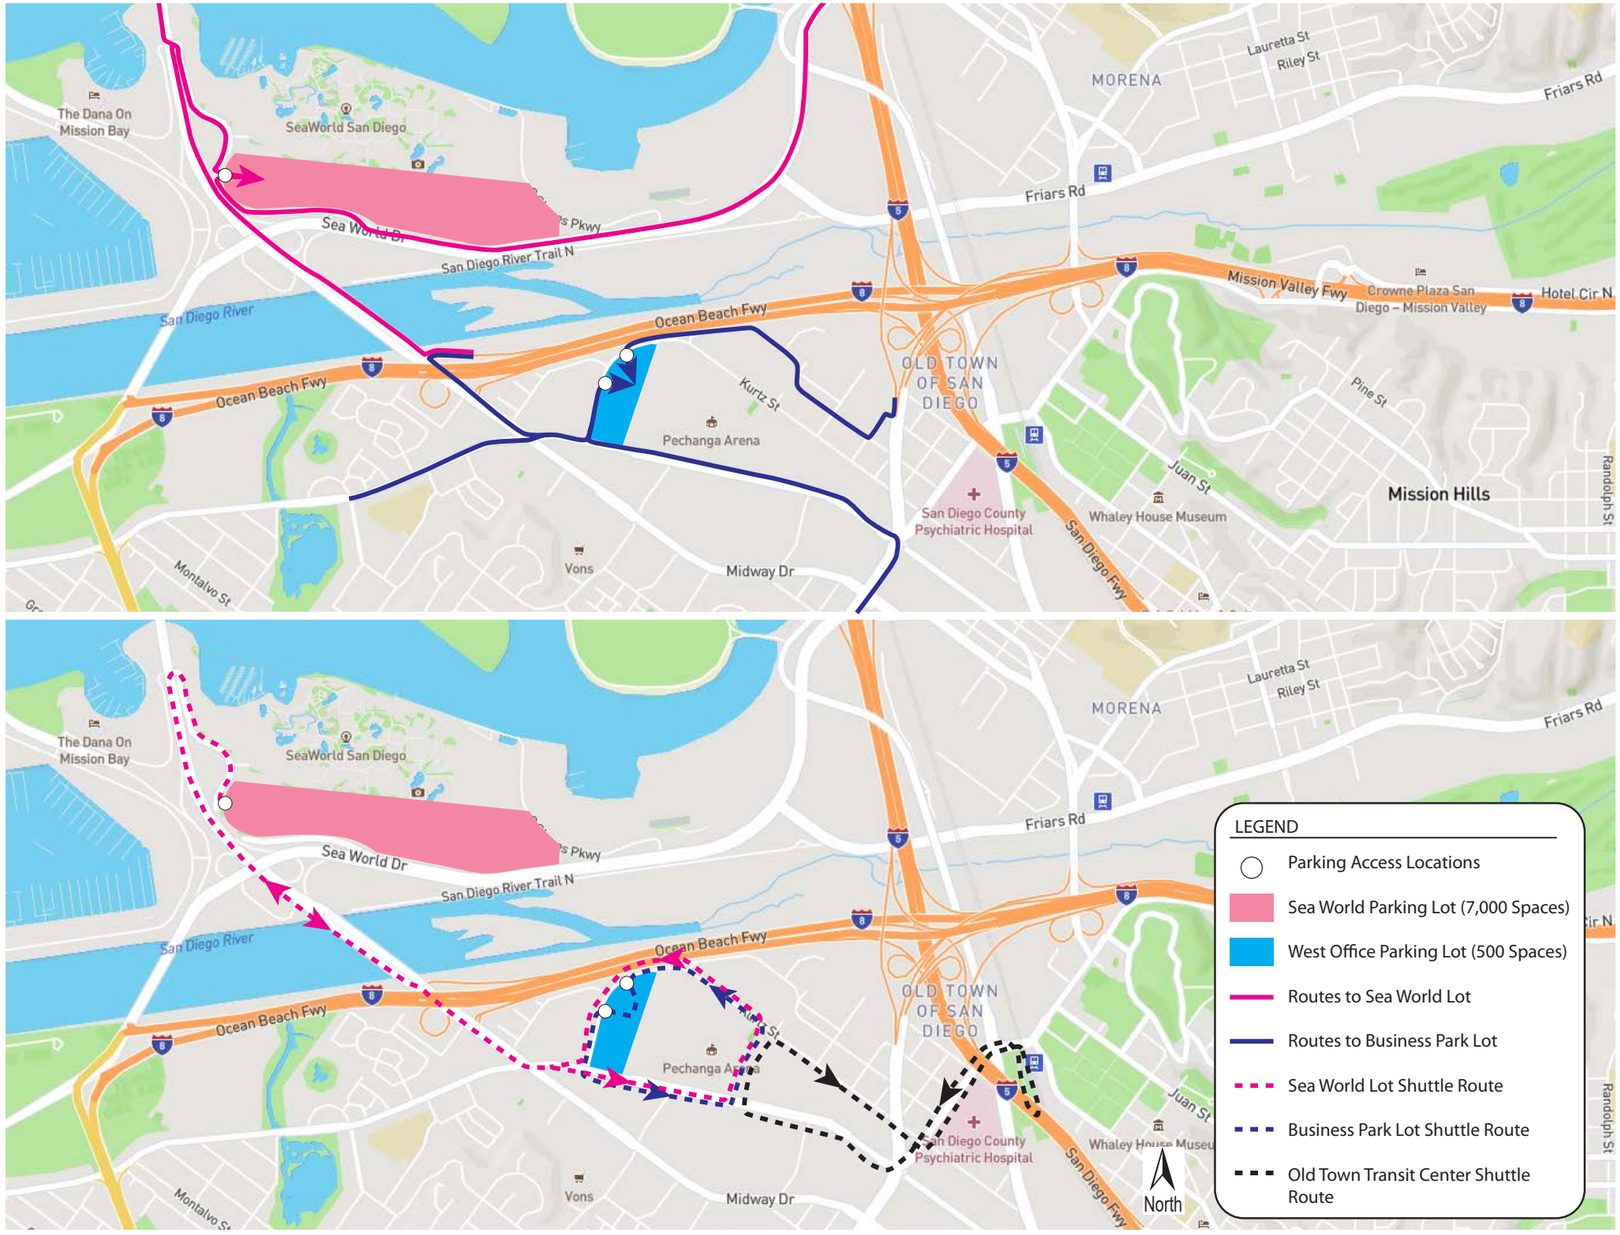


Figure 4-3. Proposed TNC Ingress and Egress

4.2 TRIP GENERATION

Daily and peak hour trip generation rates for the proposed residential and commercial land uses were developed using various sources, including existing driveway counts and the San Diego Municipal Code Land Development Code Trip Generation Manual (May 2003). Kimley-Horn developed trip generation rates for the proposed Entertainment Center utilizing market research on similar event spaces and trends present in the existing driveway counts on an event day. **Table 4-2** outlines the trip generation sources used for each land use.

Table 4-2. Trip Generation Sources

Land Use	Trip Generation Source
Commercial	San Diego Municipal Code Trip Generation Manual
Residential	San Diego Municipal Code Trip Generation Manual
Entertainment Center	Market research*

* Entertainment Center market research assumptions and calculations are discussed later in this report

A detailed discussion of trip generation methodology is provided in the sections below.

4.2.1 RESIDENTIAL AND COMMERCIAL TRIP GENERATION METHODOLOGY

Trip generation rates from the City of San Diego Trip Generation Manual were used to estimate the trip generation for the proposed residential and commercial land uses. Rates for Multiple Dwelling Unit (Over 20 dwelling units/acre) were used to estimate the trip generation for the proposed residential land use, and Restaurant (Quality), Restaurant (High-Turnover/sit-down), and Shopping Center (Community) were used to estimate the trip generation for the commercial land uses.

Two different trip generation calculations were performed for the commercial land uses:

1. Trip generation based on cumulative trip rates
2. Trip generation based on driveway trip rates

The driveway trip rates were used to calculate commercial trips at all project driveways, while cumulative trip rates were used to calculate commercial trips at the remaining study intersections.

Multimodal Reductions

The TSM provides a 10% daily/14% AM peak hour /14% PM peak hour multimodal reduction for residential land uses. The multimodal reduction was applied to the residential trip generation due to the project's proximity to Old Town Transit Center and the proposed improvements to pedestrian, bicycle, and transit facilities, which will promote alternative modes of transportation for internal mobility and travel to and from the project site. These proposed pedestrian, bicycle and transit improvements are illustrated and discussed in Chapter 13 of this report.

Multimodal reductions were not applied to the commercial land uses.

Internal Capture (Mixed-Use Reduction)

The TSM recommends use of the *NCHRP 8-51 Internal Trip Capture Estimation Tool* for determining trip generation reductions allowable for a mixed-use project. Based on the conceptual site plan (see **Figure 1-2**) the commercial (retail and restaurant) land uses are located on the ground floor along Frontier Drive

with residential and parking uses located on the remaining floors, and the furthest residential land uses being located on Kemper Street, which is approximately 635 feet west of the future Frontier Drive. Based on the NCHRP estimation tool, proximities less than 770 feet use unconstrained internal capture values.

Based on *Table 106 from the NCHRP Tool* a 2% Daily/2% AM peak hour /20% PM peak hour mixed-use reduction factor was applied to the residential land use, and a 1% Daily/17% AM/10% PM mixed-use reduction factor was applied to the commercial land uses. It should be noted that although *Table 106 of the NCHRP Tool* recommended a 46% PM reduction factor for retail to residential land uses, a maximum of 20% reduction was anticipated for this analysis.

Excerpts from NCHRP 8-51 are included in **Appendix H**.

Rate Modifications

Trip generation for commercial land uses will be influenced by the proposed Entertainment Center event traffic. On event days, a portion of retail- and restaurant-goers will likely avoid the site during the Entertainment Center peak period and the commuter PM peak period will be reduced compared to a typical non-event day ("avoidance factor").

The residential and retail trip generation rates for the Pre-Event PM peak hour are based on vehicle time of day distributions ("bell curve factor") provided in the ITE Trip Generation Manual, 11th Edition for Multifamily Mid-Rise (ITE Code 221) and Shopping Center (ITE Code 820). Both land uses were observed to generate a lower portion of ADT in the 6-7 PM hour compared to the 5-6 PM hour.

These assumptions for the "avoidance factor" and "bell curve factor" are portrayed in **Table 4-3.**

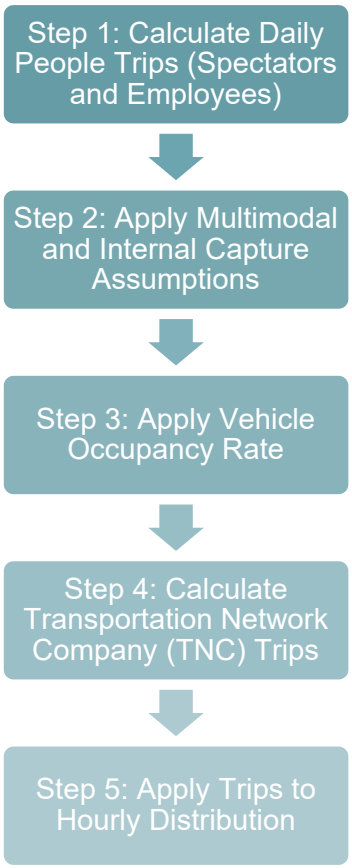

Table 4-3. Peak Hour Trip Generation Rate Percentages

Peak Hour (Bell Curve Factor)	Residential	Commercial	
	Non-Event and Event	Non-Event	Event (Avoidance Factor)
Commuter PM Peak (5-6 PM)	100%	100%	70%
Pre-Event PM Peak (6-7 PM)	87%	88%	10%

4.2.2 ENTERTAINMENT TRIP GENERATION METHODOLOGY

Applicable trip generation rates for the proposed San Diego Entertainment Center are not available in the San Diego, ITE, or SANDAG trip generation manuals. ITE provides trip generation rates for a professional baseball arena, SANDAG provides trip generation rates for outdoor stadium and indoor arena, and the City of San Diego has trip generation rates for auditorium and indoor sport facility. However, the description of the applicable land uses in these manuals are not reflective of the anticipated operations for the proposed Entertainment Center, which will continue to host regularly scheduled minor-league sporting events and live performances. Consequently, trip rates for the proposed Entertainment Center were manually developed based on previous arena studies, existing driveway counts, anticipated mode shift, and parking availability. **Figure 4-4** illustrates the steps taken to develop the Entertainment Center land use trip generation.

Figure 4-4. Site Specific Entertainment Center Trip Generation Calculation Flow Chart

Step 1: Daily People Trips (Spectators and Employees)

Both employee and spectator trips were included in the trip generation calculations for the 14,500- and 20,000-spectator scenario with employees and spectators arriving at and departing from the Entertainment Center within the same day. Therefore, a rate of 2 daily trips per spectator and per employee was used.

Step 1: Calculate a rate of 2 daily trips per spectator and employee. Generate trips for 14,500-spectator and 20,000-spectator events.

Step 2: Multimodal and Internal Capture

Although mixed-use reductions from the City's TSM do not include recreational land uses, some residents, although a minimal amount, are expected to attend the Entertainment Center events. Therefore, an internal capture of 1% was applied to the proposed Entertainment Center trip generation to account for trips between the Entertainment Center and residential uses on the site.

As discussed in *Managing Travel for Planned Special Events* (FHWA, 2003), "travel time, travel convenience, parking accessibility and cost" weigh significantly on an event patron's decision to drive or utilize an alternate mode of travel. Trip reductions for multimodal trips were applied due to the project's proximity to Old Town Transit Center, the number of parking spaces provided, and the proposed

improvements to pedestrian, bicycle, and transit facilities, which will encourage alternative modes of transportation for travel to and from the Entertainment Center. The proposed pedestrian, bicycle and transit improvements are discussed in Chapter 13 of this report. Additionally, the right-sized parking (2,100 spaces) for proposed entertainment land uses along with parking prices will induce a shift in mode choice.

Regarding transit trips, **Table 4-4** displays the vehicle-to-transit conversion potential for the entertainment land use on-site, based on StreetLight data collected for the existing Sports Arena. Based on an average of 10 weekday and weekend event days in 2019, approximately 26% of spectator trips are within a 15-minute trolley or bus ride, and it is expected that a portion of these trips can be converted into transit trips. The planned BRT along Sports Arena Boulevard, in conjunction with the improved transit stations and bus-only lanes would improve travel time and convenience for transit trips to and from the site. The SANDAG 2021 Regional Plan projects that the Rapid Service will be provided by Opening Year (2035).

Table 4-4. Entertainment Center Event Day Vehicle-to-Transit Trip Potential

Transit Route	% of Destination Trips
Green Line	9%
Blue Line	5%
BRT 35: Ocean Beach	4%
BRT 28: Kearny Mesa	2%
BRT 28: Point Loma	4%
MTS 8 and 9	3%
Total Trips in a 15-Minute Access Area	**26%**

A multimodal trip reduction of 25% was applied to the trip generation calculations for the proposed entertainment uses for Opening Year 2035 Phase 2 Buildout. This trip reduction is within the range of transit splits reported in *Table 5-12 in Managing Travel for Planned Special Events* (FHWA, 2003).

Opening Year 2030 Phase 1 will not include the full extent of multimodal improvements proposed for the planned BRT route along Sports Arena Boulevard, which is not anticipated to be completed by 2030. Therefore, a 15% trip reduction was applied for Opening Year 2030.

Step 2: Apply 1% internal capture, 25% multimodal capture for Opening Year 2035 Phase 2 Buildout, 15% multimodal capture for Opening Year 2030 Phase 1.

Step 3: Vehicle Occupancy

Kimley-Horn referenced available arena/stadium traffic studies including the Honda Center in Anaheim, Petco Park, Snapdragon Stadium, Truist Park in Atlanta and the Georgia Dome in Atlanta, as well as informational reports by ITE and the FHWA. The studies reference average vehicle occupancies ranging between 2.5 and 3.5 persons per automobile, consistent with the range recommended in *Managing Travel for Planned Special Events* (FHWA, 2003) and *Traffic Considerations for Special Events* (ITE, 1976). It was noted that larger stadiums and venues with higher-generating events, like weekend sporting events and high-selling concerts, used vehicle occupancy factors closer to 3.0. According to the ITE document, events

appealing to captive riders (i.e., teenagers and seniors), family entertainment events, and venues with limited parking spaces yield higher vehicle occupancy rates. Per the FHWA, average vehicle occupancy observed at San Diego Padres games are 2.5 persons per automobile for weeknight baseball games and 3.0-3.1 persons per automobile for weekend night-time baseball games. The San Diego Padres baseball games take place at Petco Park where spectators can park in multiple dedicated parking lots. There is additionally streetside parking and many small lots near and around Petco Park. Midway Rising provides 2,100 parking spaces for the Entertainment Center and fewer opportunities to park near and around the site. Thus, Midway Rising would be expected to yield slightly higher levels of carpooling.

An average vehicle occupancy rate of 3.0 was utilized for spectators. An average vehicle occupancy rate of 1.0 was utilized for employees.

Step 3: Apply 3.0 average vehicle occupancy rate for spectators, and 1.0 for employees.

Step 4: Transportation Network Company (TNC) Trips

Both spectators and employees are expected to utilize rideshare, or Transportation Network Companies (TNCs), on event days. It is difficult to accurately collect data for the number of TNC trips at the existing arena since the TNC driveway is currently shared with the Chick-fil-A patrons, and because there are inevitably drop offs that occur outside of the assigned TNC drop-off area. For reference, based on existing driveway trips, it is estimated that approximately 10% of total arena trips are made by TNCs. The existing arena provides more parking than will be provided in the future (3,800 existing stalls versus 2,100 future stalls). Therefore, the number of TNC trips is anticipated to increase. A factor of 15% was used to account for rideshare trips. These trips were applied twice to account for an arrival and departure within the same hour.

Step 4: Calculate a second departure trip for 15% of the total trips to account for TNC operations

Step 5: Arrival Hourly Distribution

Step 4 provides the total number of vehicle trips estimated for the Entertainment Center. The last step involved distributing the vehicle trips among the hours leading up to the event.

The start time for events at the existing arena and proposed Entertainment Center depends on the size of the event. Based on data collected at the existing arena, sporting events typically start at 7:00 PM, and full-capacity events at the Entertainment Center start between 7:30 and 8:00 PM.

The existing site driveway counts for the Luis Miguel concert on Thursday, September 21, 2023, were observed for arrival spread patterns. Event day volumes for all existing site driveways are included in **Appendix E**. The event started at 8:00 PM, two hours after the commuter PM peak period. The driveway north of Sports Arena Boulevard and Kemper Street (Driveway 3 in Section 3.3.4) was used to identify arrival patterns since a majority of spectators utilized this driveway. Based on existing Sports Arena data, the spectator arrival period generally occurs between 5:00 and 8:30 PM, with the following distribution:

- 8% of trips arrive during the commuter PM peak hour (5:00-6:00 PM)
- 28% of trips arrive during the Pre-Event PM peak hour (6:00-7:00 PM)
- Remaining trips arrive from 7:00-8:30 PM

To provide a more conservative analysis of the PM peak hour and the Pre-Event PM peak hour, and account for earlier arrivals incentivized by adjacent attractions/land uses on the site, the above arrival patterns were increased from 8% and 28% to 20% and 40%, respectively. The remaining 40% of spectators would arrive after the start of event and are not studied in this analysis.

Employees typically arrive early on event days. Approximately 25% of employees will arrive during the commuter PM peak as a conservative analysis; the remainder will arrive before the PM peak hour (5:00 PM). No employees are expected to arrive during the PM Pre-Event peak hour.

Step 5: Distribute the arrival trips among the commuter peak hour (20%) and the Pre-Event PM peak hour (40%). Assume only 25% of employees arrive to the site during the commuter PM peak hour; the remainder arrive before the PM peak hour (5:00 PM).

4.2.3 PROPOSED TRIP GENERATION RESULTS

Trip generation for the project site was estimated for the event-day weekday Commuter AM (7-10 am), Commuter PM (4-6 pm), Pre-Event PM (6-7 pm), and Weekend Midday (11am-1pm) peak hours. **Table 4-5** summarizes the proposed cumulative trip rates used for the proposed site. **Table 4-6** summarizes the proposed driveway trip rates for the proposed site, which were applied at the proposed project driveways. Two trip generation estimates were produced for the Pre-Event PM peak:

- Typical-capacity events – 14,500 spectators
- Full-capacity events – 20,000 spectators

The existing site trip generation were subtracted from the proposed trip generation to calculate the net new trips generated by the proposed project. The net new trips generated by the proposed project are reported below.

4.2.3.1 Trip Generation Results with Typical Event

Table 4-7 and **Table 4-8** summarize the trip generation for the proposed project and a typical event with 14,500-spectators under Opening Year (2030) Plus Project Phase 1 with cumulative rates and driveway rates, respectively. A site plan change decreased the number of dwelling units and commercial square footage anticipated to be completed in Phase 1. The results from the analysis described in this chapter reflec higher land use values and trip generation values than the actual land uses projected to be constructed in Opening Year (2030) Plus Project Phase 1 as described in **Table 1-2**. The analysis for Opening Year (2030) Project Phase 1 is therefore conservative, as it accounts for more trip generation from a higher number of dwelling units and square footage of retail.

In **Table 4-7** the Opening Year (2030) Plus Project Phase 1 is expected to generate approximately 3,614 net new daily cumulative trips with 14,500 spectators at the Entertainment Center, and the portion of residential and commercial land uses proposed for east of Frontier Drive.

The proposed project net new peak hour trips are presented below:

- 5 AM Commuter Peak Hour Trips (-228 inbound / 234 outbound)
- 841 PM Commuter Peak Hour Trips (873 inbound / -33 outbound)
- 432 Pre-Event PM Peak Hour Trips (523 inbound / -92 outbound)
- -590 Weekend Midday Peak Hour Trips (-309 inbound / -280 outbound)

In **Table 4-8**, the Opening Year (2030) Plus Project Phase 1 is expected to generate approximately 5,586 net new daily commercial driveway trips for the portion of commercial land uses proposed east of Frontier Drive. The proposed project net new commercial, peak hour driveway trips are presented below:

- 62 AM Commuter Peak Hour Trips (-16 inbound / 78 outbound)
- 201 PM Commuter Peak Hour Trips (120 inbound / 82 outbound)
- -304 Pre-Event PM Peak Hour Trips (193 inbound / -112 outbound)
- 732 Weekend Midday Peak Hour Trips (426 inbound / 306 outbound)

As seen in the trip generation results above, the project is expected to result in net new trips. Net new trips represent the trips generated by the proposed project minus the existing site trips. Thus, compared to the existing site, and based on cumulative rates, the project will generate 228 fewer inbound trips during the AM commuter peak hour, 33 fewer outbound trips during the PM commuter peak hour, 92 fewer outbound trips during the Pre-Event PM peak hour, and 309 fewer outbound trips in the Weekend Midday peak hour in Opening Year (2030) Plus Project Phase 1. Additionally, compared to the existing commercial trips, and based on driveway rates, the commercial portion of the project will generate 16 fewer inbound trips during the AM commuter peak hour and 112 fewer outbound trips during the Pre-Even PM peak hour in Opening Year (2030) Plus Project Phase 1.

Table 4-9 and **Table 4-10** summarize trip generation for the proposed project and a typical event with 14,500-spectators under Opening Year (2035) Plus Project Phase 2 Buildout with cumulative and driveway rates, respectively.

In **Table 4-9,** the Opening Year (2035) Plus Project Phase 2 Buildout scenario is expected to generate approximately 22,514 net new daily cumulative trips with 14,500 spectators at the Entertainment Center, and full buildout of residential and commercial land uses. The proposed project net new peak hour trips are presented below:

- 1,450 AM Commuter Peak Hour Trips (86 inbound / 1,363 outbound)
- 2,055 PM Commuter Peak Hour Trips (1,684 inbound / 371 outbound)
- 1,321 Pre-Event PM Peak Hour Trips (1,106 inbound / 215 outbound)
- 885 Weekend Midday Peak Hour Trips (911 inbound / -27 outbound)

In **Table 4-10,** the Opening Year (2035) Plus Project Phase 2 Buildout scenario is expected to generate approximately -915 net new daily commercial driveway trips for full buildout of commercial land uses. The proposed project net new commercial, peak hour driveway trips are presented below:

- -228 AM Commuter Peak Hour Trips (-156 inbound / -72 outbound)
- -329 PM Commuter Peak Hour Trips (-196 inbound / -134 outbound)

- -1,175 Pre-Event PM Peak Hour Trips (-807 inbound / -368 outbound)
- -617 Weekend Midday Peak Hour Trips (-170 inbound / -447 outbound)

1.1.3.1 Trip Generation Results with Full Capacity Event

Table 4-11 and **Table 4-12** summarize the trip generation for the proposed project and a full-capacity event with 20,000-spectators under Opening Year (2030) Project Phase 1 Buildout with cumulative and driveway rates, respectively. **Table 4-13** and **Table 4-14** summarize the trip generation for the proposed project and a full-capacity event with 20,000-spectators under Opening Year (2035) Project Phase 2 Buildout with cumulative and driveway rates, respectively. Under this scenario, peak hour trips were developed for the Pre-Event PM peak hour only, as it is assumed to be the worst-case scenario.

In **Table 4-11**, the Opening Year (2030) Plus Project Phase 1 is expected to generate approximately 7,027 net new daily cumulative trips, with 1,145 (1,143 inbound / 1 outbound) weekday, Pre-Event PM peak hour cumulative trips with 20,000 spectators, and the portion of residential and commercial land uses proposed for east of Frontier Drive.

In **Table 4-12**, the Opening Year (2030) Plus Project Phase 1 is expected to generate approximately -3,588 net new daily commercial driveway trips, with -1,198 (-820 inbound / -378 outbound) weekday Pre-Event PM peak hour trips for the portion of commercial land uses proposed for east of Frontier Drive.

In **Table 4-13**, the Opening Year (2035) Plus Project Phase 2 Buildout scenario is expected to generate approximately 32,401 net new daily cumulative trips with 2,586 (2,218 inbound / 369 outbound) weekday Pre-Event PM peak hour trips with 20,000 spectators, and full buildout of residential and commercial land uses.

In **Table 4-14**, the Opening Year (2035) Plus Project Phase 2 Buildout scenario is expected to generate approximately 5,586 net new daily commercial driveway trips with -304 (-193 inbound / -112 outbound) weekday Pre-Event PM peak hour trips with full buildout of commercial land uses.

Table 4-5. Trip Generation Rates for Proposed Project (Cumulative Trip Rates)

Land Use[1]		Daily Rates-Cumulative	Weekday Event-Day									Weekend Non-Event Day		
			AM Commuter Peak Hour[2]			PM Commuter Peak Hour[3]			Pre-Event PM Peak Hour[4]			Midday Peak Hour[5]		
			Total	In	Out	Total	In	Out	Total	In	Out	Total	In	Out

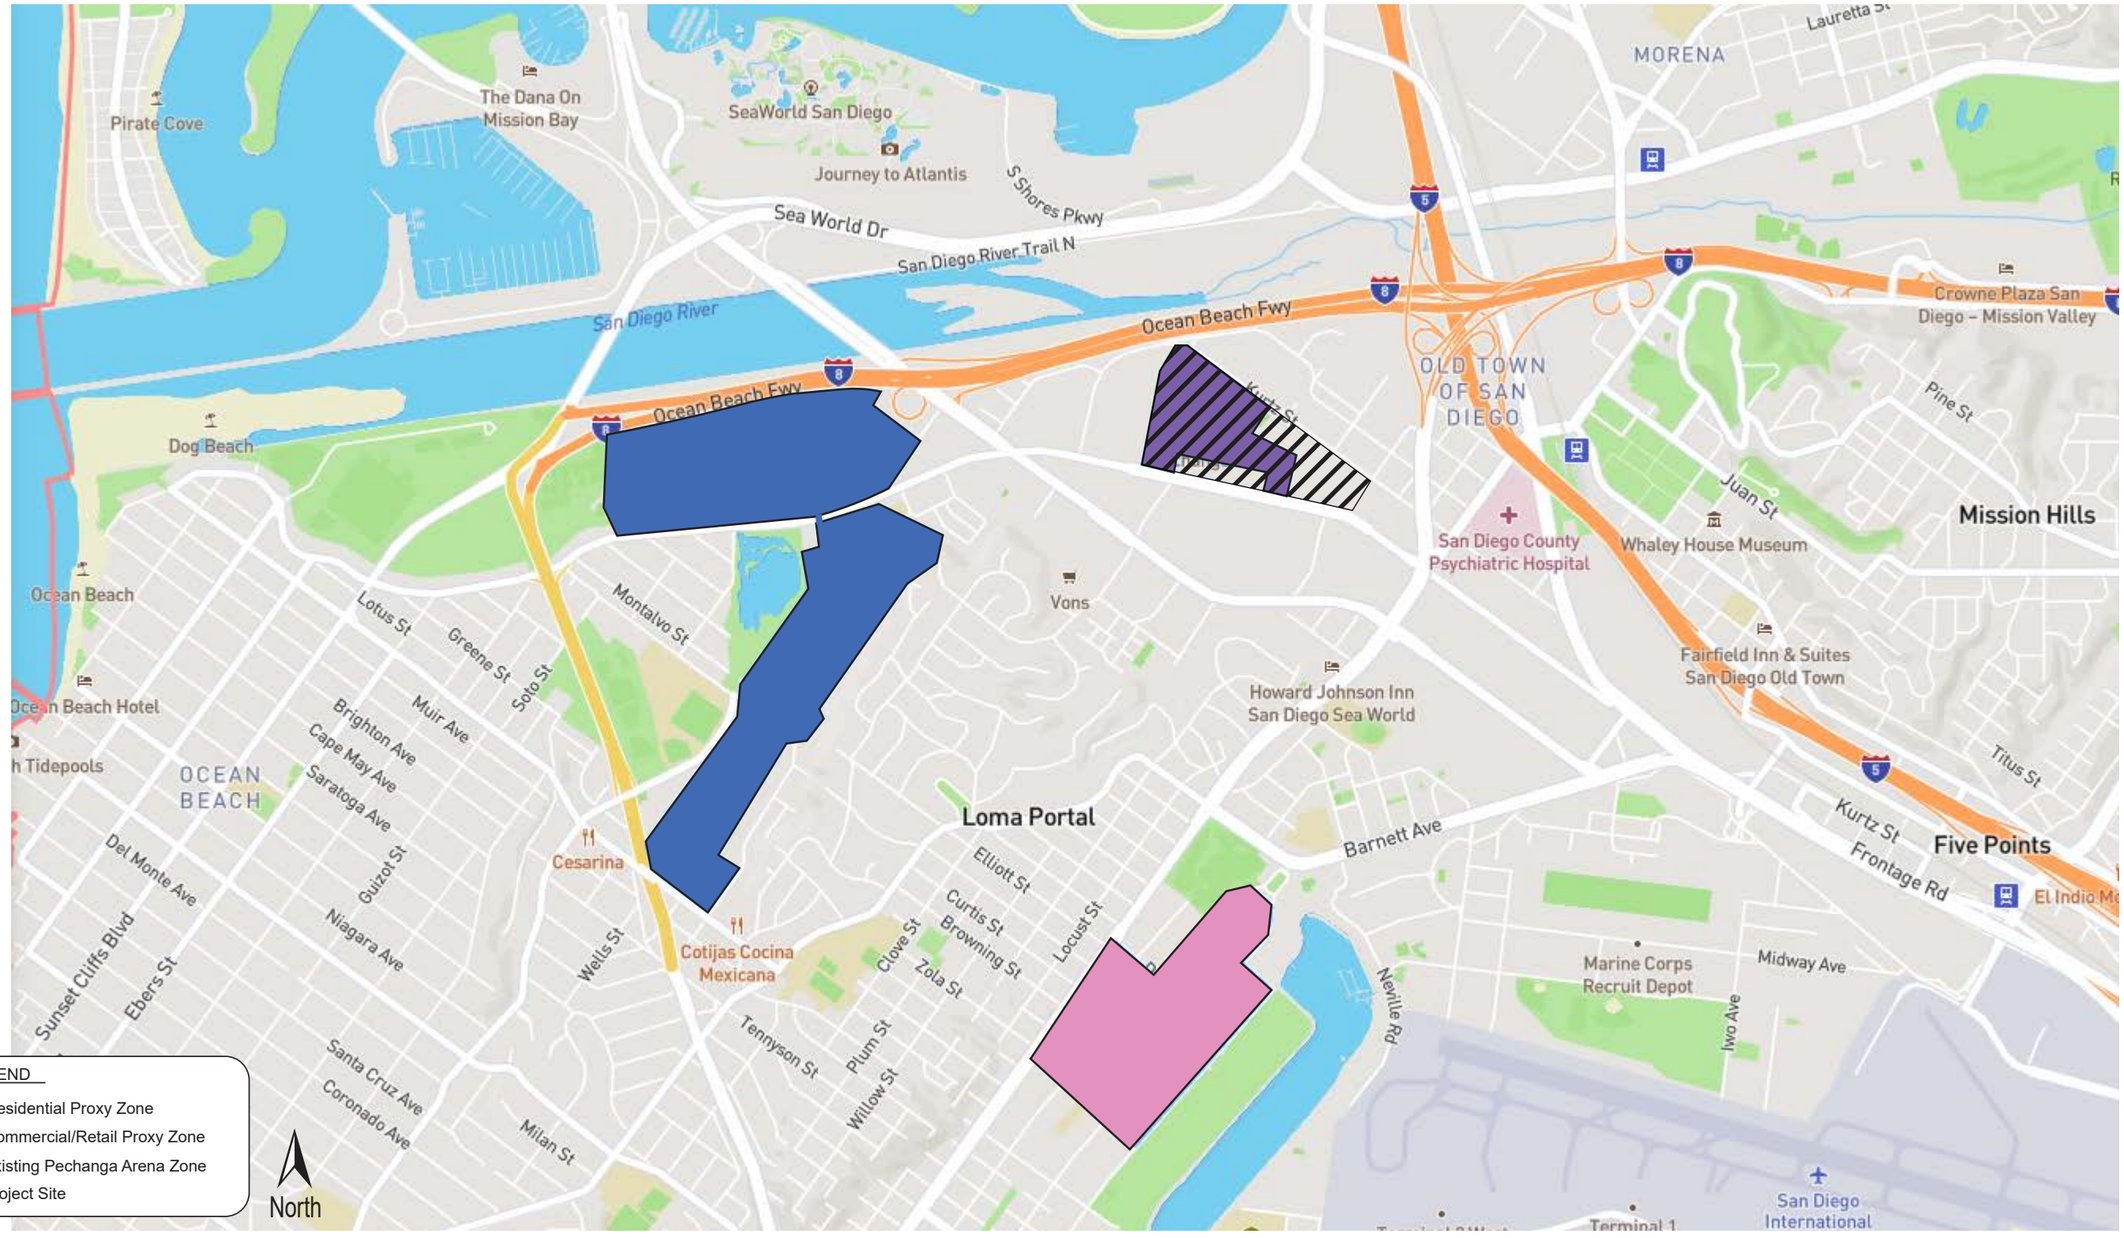
4.3 TRIP DISTRIBUTION

The Streetlight Insight tool, which provides location-based service data, was used to estimate regional trip distribution for the project site and identify community circulation and site access routes. Streetlight allows users to analyze anonymous travel patterns to and from geographic areas (i.e., zones), and view groups of trips that pass-through or have origins and destinations in these zones. For this study, two types of demand analyses were utilized to gain context and draw conclusions regarding the project's expected travel patterns.

- **Origin-destination analysis** analyzes the proportion of trips that move to and from the selected zone and census blocks within the City. This analysis was used to identify trends in regional ingress and egress for the project study area.
- **"Top routes" analysis** details how traffic flows to and from a zone along roadways. This analysis illustrates which roads are taken most frequently to and from a zone and identifies which roadways are heavily used as ingress and egress options.



Three geographic areas (or proxy sites), shown in **Figure 4-5**, were identified to represent comparable travel patterns for each land use in the proposed project, based on their location and similarity in characteristics to the proposed land uses. The project traffic distribution was estimated based on multiple factors including existing count data surrounding the existing arena, travel patterns for proxy sites using Streetlight Insight platform, and local knowledge of the project area and roadway network. The three zones identified are as follows:

- Sports Arena was chosen for the proposed Entertainment Center as the project proposes to redevelop the existing Sports Arena.
- Residential neighborhoods located north and south of West Point Loma Boulevard were chosen for the proposed Residential land use to reflect the mid- to high-density nature of the project.
- Liberty Station was chosen for the proposed commercial land uses as it leases to boutique-retail and restaurant and beverage, similar to the project.

Travel patterns on a typical weekday (Tuesday-Thursday) during typical commuter peaks (7:00 AM to 9:00 AM in the morning and 4:00 PM to 6:00 PM in the evening) were evaluated for these sites. Data was from January 1, 2019 to December 31, 2019, prior to the COVID-19 pandemic, and averaged over the course of that year. Additional years of data were not used due to travel pattern changes as a result of the COVID pandemic and recovery period.

While the distribution to/from the Streetlight zones was directly applied to the project site distribution patterns, trips were routed to the proposed project site and proposed parking structure locations based on the "top routes" analysis. The residential, commercial, and entertainment center distribution maps are included in **Appendix I**. **Appendix J** shows the distributions for each land use by study intersection.

Figure 4-5. Proposed Streetlight Zones

4.3.1 RESIDENTIAL DEMAND ANALYSIS

The proxy zone chosen to represent the proposed residential land use element of the project combines two medium- to high-density residential areas just west of the project site, which are expected to have similar travel patterns as the residential portion of the proposed project.

Table 4-15 summarizes the distribution of destinations from the proxy residential zone during the AM peak period, based on the Streetlight top routes summary, included in **Appendix K**. The study looked at the top routes exiting the residential proxy site during the AM peak to capture AM and PM commuter traffic patterns.

Table 4-15. Residential AM Peak Top Routes Summary

Roadway	% Destination Trips
I-8	23%
I-5 North of Site	7%
I-5 South of Site	12%
Mission Bay Drive	3%
W Point Loma Blvd	6%
Catalina Blvd	15%
Rosecrans Street	13%
Kemper Street	9%
Pacific Highway	6%
Taylor Street / Rosecrans Street	3%
Sea World Drive	3%
Total	**100%**

Appendix J shows the trip distribution for the residential trips generated by the proposed project.

4.3.2 COMMERCIAL DEMAND ANALYSIS

The project intends to primarily lease community-serving retail and food and beverage space, similar to Liberty Station. The commercial space for the project would be distributed among approximately 11 different building blocks along Frontier Drive and the greenway between Frontier Drive and the Entertainment Center. Liberty Station was chosen as the commercial proxy site, as it is located nearby the project site, generates traffic from the nearby community, and is the most similar type of retail and restaurant land uses intended to be leased on the project site. Additionally, Liberty Station has a concert hall and boutique businesses with similar interaction between those uses as expected at the project site. **Table 4-16** summarizes the distribution of origins to the proxy commercial zone using the top routes summary. The Streetlight top routes results for trips to the proxy commercial site indicated most trips to and from Liberty Station use Rosecrans Street, I-8 and I-5, included in **Appendix L**.

Table 4-16. Liberty Station Top Routes Summary

Roadway	% Origin Trips
I-8 East of Site	19%
I-5 North of Site	9%
I-5 South of Site	18%
Pacific Highway South of Site	7%
Rosecrans Street South of Site	31%
Rosecrans Street North of Site (Old Town)	2%
Point Loma Boulevard West of Site	5%
Mission Bay Drive West of Site	3%
Sports Arena Boulevard West of Site	1%
Camino Del Rio North of Site	1%
Midway Drive West of Site	4%
Total	**100%**

Appendix J shows the trip distribution for the commercial trips generated by the proposed project.

4.3.3 ENTERTAINMENT DEMAND ANALYSIS

Information from Streetlight on the existing Sports Arena site was used to assess trips traveling to the proposed Entertainment Center on event days. Data was averaged from 10 event days in 2019 between 6:00 PM and 10:00 PM to understand typical travel patterns to the site. The event days consisted of both weekdays and weekends, with data taken during two San Diego Seals games, four San Diego Gulls games, and four concerts with approximate attendance of 10,450 attendees.

Table 4-17 summarizes the distribution patterns for the Entertainment Zone results based on the top routes summary. **Appendix M** shows the Streetlight top routes results for trips to the existing arena. **Appendix J** shows the trip distribution for the entertainment center trips generated by the proposed project.

Table 4-17. Sports Arena Event Day Origin Summary

Roadway	% Origin Trips
I-8	50%
I-5 North of Site	10%
I-5 South of Site	20%
Mission Bay Dr	5%
Taylor Street	5%
Point Loma Boulevard	5%
Rosecrans Street	5%
Total	**100%**

The existing arena travel patterns were used to distribute proposed arena trips based on the proposed location of the proposed Entertainment Center parking structures and assumptions for rideshare/

transportation network company (TNC) pick-up and drop-off patterns. Parking structures H1, E2, and B2 provide parking for the arena, and are labeled on the site plan previously referenced.

Sports Arena distribution patterns are only provided for the arrival operations since the departure operations occur during off-peak hours and not part of this study. For event days, vehicles arriving to parking structures during the arrival period are not expected to leave the Entertainment Center within the same hour. Therefore, only inbound distributions to the parking structures (Blocks B2, E2, and H) are provided. As previously discussed, overflow parking will be provided for events hosting more than 10,500 spectators. Inbound overflow distributions are also provided for these sites.

Each event trip taken using TNC includes two trips for the TNC vehicle: one to drop off and a second to depart the site. Both trips would occur within the same peak hour. Therefore, inbound and outbound distributions are provided for TNC trips.

Regional origins are anticipated to remain the same between the existing arena demand and the proposed Entertainment Center demand. Arrival routes to the Entertainment Center along local roadways were modified to reflect the targeted routing information to each new parking structure as discussed in Section 4.1.7. The modifications to reflect the targeted routing information include:

- Block E2, B2, and overflow lot vehicles originating from the southeast were routed from I-5 northbound to I-8 westbound where they would exit at Mission Bay Drive and proceed to the site via Sports Arena Boulevard and Hancock Street.
- Block E2, B2, and overflow vehicles traveling to Blocks E and B from I-5 North of Site were routed to Sea World Drive, where they would take Mission Bay Drive and proceed to the site via Sports Arena Boulevard and Hancock Street.
- TNC vehicle distributions utilized regional percentages obtained from Streetlight and were anticipated to drop off along Kemper Street in a designated TNC area.

Table 4-18 summarizes the distribution patterns for the existing arena and proposed Entertainment Center land use.

Table 4-18. Event Day Entertainment Center Top Routes Summary

Origin	Site Access Roadway	Existing Arena	Proposed Entertainment Center (Block H)	Proposed Entertainment Center (Block E2, B2)	Proposed Entertainment Center (TNC)	Proposed Entertainment Center (Overflow)	Proposed Entertainment Center (SeaWorld)

Ocean Beach	Via West Point Loma Blvd	5%	5%	5%	5%	5%	5%
Old Town	Via Taylor Street	5%	5%	5%	5%	5%	5%

4.4 TRIP ASSIGNMENT

To estimate the number of inbound and outbound trips, the site's trip generation was applied to the study intersections and roadway segments using the trip distribution patterns for their respective peaks. The trip generation was applied as follows:

- The driveway trip rates were used to calculate net commercial trips at all project driveways, while cumulative trip rates were used to calculate net commercial trips at the remaining study intersections.
- Total residential project trips were directly applied to the residential trip distribution to attain project volumes.
- Total entertainment center project trips were applied to distributions as follows:
  - **Opening Year (2030) Plus Project Phase 1 (14,500 spectators)**: Block H will be constructed by 2030, while Blocks E2/B2 will not be constructed. On the west side of the site, 2,683 spaces will

remain in place for use during Phase 1 operations (refer to **Table 4-20)**. Block H distribution was applied for the total number of available parking spaces in Block H, and the Block E2/B2 distribution was applied to the remaining trip, reflective of vehicles parking in the remaining surface lot spaces.

- **Opening Year (2030) Plus Project Phase 1 (20,000 spectators)**: For the full capacity event, overflow parking lots will need to be used to accommodate the number of people parking. In addition to the distributions described for the 14,500-spectator event, vehicles were also assigned to the overflow parking lot west of the site, and the Sea World Drive parking lot.
- **Opening Year (2035) Plus Project Phase 2 Buildout (14,500 spectators)**: For the full buildout scenario, 2,100 event spaces will be provided on site. Block B2, E2, and H distributions were applied to these trips. The additional vehicles were assigned to park in the overflow parking lot west of the site, and Sea World Drive. **Table 4-19** summarizes the proposed parking stalls by block for the entertainment center land use.
- **Opening Year (2035) Plus Project Phase 2 Buildout (20,000 spectators)**: The same distribution patterns were applied for the full capacity event as the 14,500-spectator event for the Opening Year (2035) Plus Project Phase 2 Buildout scenario. **Table 4-19** summarizes the proposed parking stalls by block for the entertainment center land use.
- The existing arena trip generation was applied to the Sports Arena distribution to determine Sports Arena trip assignment. These existing trips were subtracted from the network in all plus project scenarios.

Table 4-19. Proposed Event Parking Spaces by Block

Block	Available Event Parking Spaces (Phase 1)	Available Event Parking Spaces (Phase 2)
Block B2	0	565
Block E2	0	754
Block H1	781	781
Surface Parking	2,683	0
Total	**3,464**	**2,100**

Appendix N includes the trip assignment of the proposed development trip generation under each analysis peak hour. for Opening Year (2030) Phase 1 and Opening Year (2035) Plus Project Phase 2 Buildout under each analysis peak hour. **Appendix N** also includes the trip assignment for the proposed project by land use.

5 OPENING YEAR (2030) BASE SCENARIO

This section summarizes the Opening Year (2030) Base Scenario. This scenario establishes a baseline to compare against the Opening Year (2030) Plus Project Phase 1 scenario to determine Phase 1 project effects. Year 2030 was selected as the anticipated opening year of Phase 1 of the project per information provided by the Applicant.

5.1 ROADWAY NETWORK CHANGES

The existing roadway network, reflective of conditions in December 2023 (discussed in Section 3.1), was used for the Opening Year (2030) Base analysis.

5.2 TRAFFIC VOLUMES

Based on coordination with the City during the scoping phase, Opening Year (2030) Base intersection and roadway traffic volumes were forecasted by applying an ambient growth rate of 0.55% per year over 7 years and adding the NAVWAR Near-Term with Year 2030 Alternative 2 project traffic to determine baseline volumes. The growth rate was calculated using the SANDAG ABM2+ 2021 Regional Plan model volumes for 2016 and 2035 at various locations within the study area. The average growth for the study area was 0.55%.

Sports Arena event traffic is not expected to increase in the Opening Year (2030) Base Scenario, so event traffic was subtracted from peak hour traffic before the growth rate was applied and then was added back afterward. The NAVWAR Near-Term with Year 2030 Alternative 2 project traffic (from the draft EIS / EIR dated May 2021) assumes 25% buildout of the NAVWAR project by the year 2030 and was chosen because it represents the worst-case highest intensity development to occur in a 10-year timeframe and the project is accounted for in the SANDAG regional model. The NAVWAR project trips were only included at intersections and roadway segments within the NAVWAR project study area that overlap with this study. **Figure 5-1.** illustrates the NAVWAR Near-Term with Year 2030 Alternative 2 project traffic added to the study intersections and roadway segments.

Figure 5-2 illustrates the resulting Opening Year (2030) Base Scenario traffic volumes.

5.3 INTERSECTION ANALYSIS

Table 5-1 displays the LOS analysis results for the study intersections under Opening Year (2030) Base Scenario.

Due to the large size of the NAVWAR project, it will be responsible for a large portion of the baseline trips in the area, specifically near the main access point on Pacific Highway at Enterprise Street. It is assumed the City would retime the signalized intersections closest to the project access points in order to accommodate the increase in traffic volumes and changes in travel patterns for the NAVWAR project. Therefore, signal timings were optimized at three intersections where the NAVWAR project is responsible for the majority of baseline traffic volumes increase. Without optimizing the following three intersections, the SimTraffic model was unable to properly run without the system clogging. As a result, these intersections show improved LOS and queue values compared to the existing conditions:

- Intersection #17 – Camino del Rio W & Hancock Street
- Intersection #27 – Pacific Highway & Enterprise Street

- Intersection #29 – Barnett Avenue & Midway Drive

Under Opening Year (2030) Base scenario, all intersections expected to operate at LOS D or better during all peak hours except:

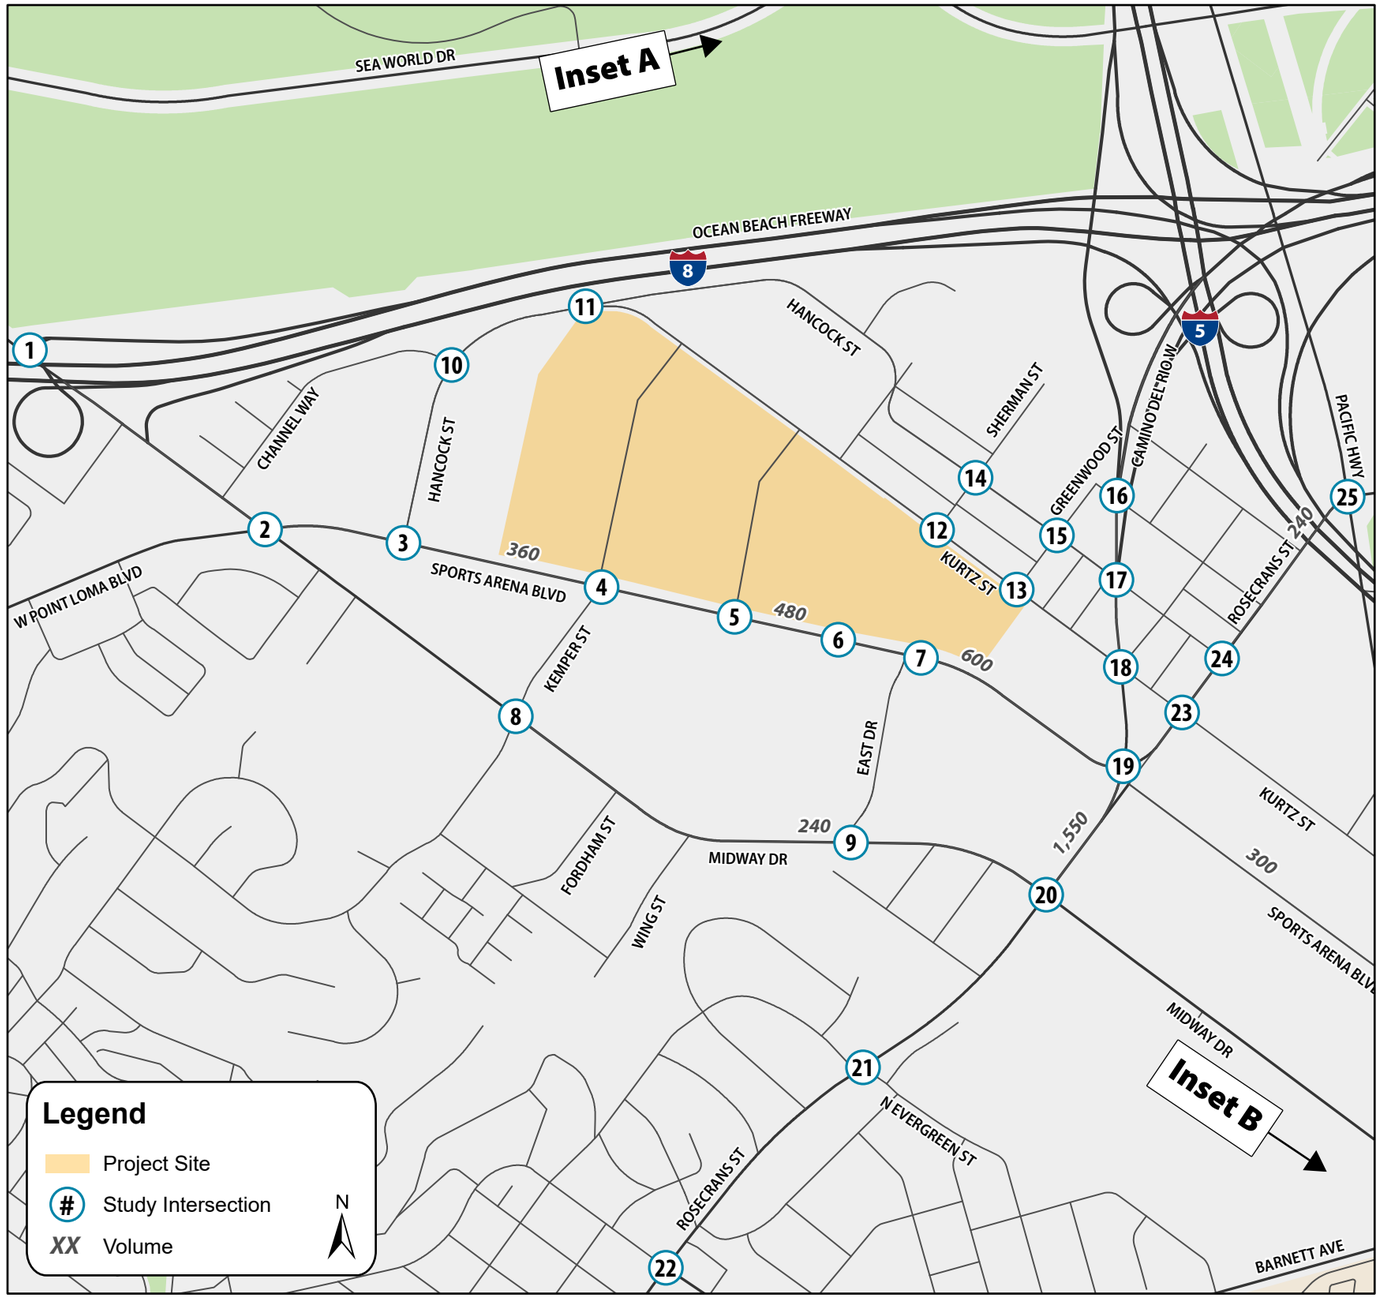
- Intersection #2 – Midway Drive & W Point Loma Boulevard & Sports Arena Boulevard (PM: LOS E; Pre-Event: LOS E; WKND: LOS E)
- Intersection #5 – West Drive / Frontier Drive & Sports Arena Boulevard (Pre-Event: LOS F)
- Intersection #6 – Target Driveway & Sports Arena Boulevard (PM: LOS E; WKND: LOS F)
- Intersection #16 – Camino del Rio W & Moore Street (WKND: LOS E)
- Intersection #17 – Camino del Rio W & Hancock Street (AM: LOS F)
- Intersection #20 – Rosecrans Street & Midway Drive (AM: LOS E; PM: LOS E; Pre-Event: LOS E; WKND: LOS E)
- Intersection #22 – Rosecrans Street & Lytton Street (AM: LOS E)
- Intersection #26 – Kurtz Street & Pacific Hwy (PM: LOS F; Pre-Event: LOS F)

Appendix O contains the intersection LOS calculation worksheets for Opening Year (2030) Base.

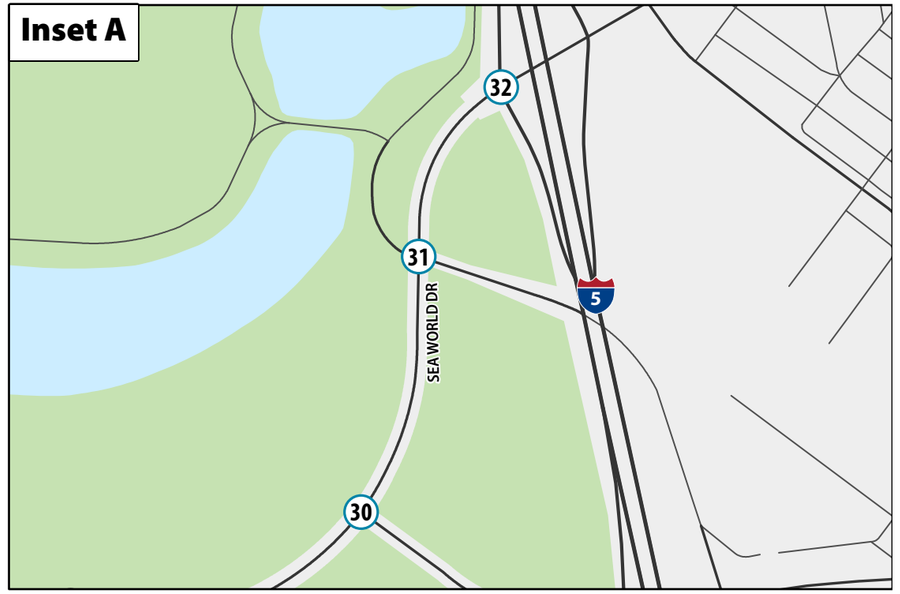
5.4 QUEUEING ANALYSIS

Table 5-2 displays the 95th percentile queues under Opening Year (2030) Base scenario. The 95th percentile queue lengths reported represent an average of five SimTraffic runs. **Appendix P** contains the 95th percentile queue worksheets for Opening Year (2030) Base scenario. Under Opening Year (2030) Base scenario, queues are expected to exceed the existing available storage length at:

- 8 intersections in the Commuter AM peak,
- 14 intersections in the Commuter PM peak,
- 14 intersections in the Pre-Event PM peak,
- 14 intersections in the Weekend Mid-Day peak.



5.5 ROADWAY SEGMENT ANALYSIS



The Opening Year (2030) Base scenario roadway segment analysis was performed based on existing roadway geometries and existing 24-hour roadway segment counts. The existing counts were extrapolated to Year 2030 on a weekday event day and traffic from the NAVWAR Near Term (Year 2030) Alternative 2 scenario was added (See Section 5.2). **Table 5-3** summarizes the roadway segment LOS analysis at the study segments under Opening Year (2030) Base scenario for a weekday event day.

Under Opening Year (2030) Base scenario, all roadway segments are expected to operate at LOS D or better on a weekday event day except the following:

- Camino del Rio West north of Greenwood Street (LOS F)
- Camino del Rio West between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)
- Midway Drive between Kemper Street and Rosecrans Street (LOS E)

Notes:
Bold values indicate intersections operating at LOS E or F.
ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds.
(a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a two-way stop-controlled intersection, delay refers to the worst movement.
(b) LOS calculations are based on the methodology outlined in the *Highway Capacity Manual 6th Edition* or the *Highway Capacity Manual 2000* and performed using Synchro 11.0

Notes:

[1]Functional Classification based on the Midway Pacific Highway Community Plan.

[2]LOS E Capacity provided by City of San Diego staff.

[3]ADT - Average Daily Traffic.

[4]V/C Ratio - Volume-to-capacity ratio.

[5]LOS - Level of Service.

6 OPENING YEAR (2030) PLUS PROJECT PHASE 1

This section summarizes the Opening Year (2030) Project Phase 1 scenario. Phase 1 of the project includes demolition of the site east of Frontier Drive (new roadway) with the exception of the privately-owned parcels, construction of the new Entertainment Center, construction of residential and commercial land uses east of Frontier Drive, and construction of Frontier Drive.

This scenario is analyzed for a typical event (14,500 spectators) and full capacity event (20,000 spectators). It should be noted that the full capacity event will occur approximately 2 times per year, and thus was not analyzed for project effects triggering improvements. The full capacity event is included for informational purposes.

6.1 ROADWAY NETWORK CHANGES

The roadway network under Opening Year (2030) Phase 1 of the project includes the construction by the project of:

- Frontier Drive between Sports Arena Boulevard and Kurtz Street, with the exception of the multi-use path on the east side along the privately-owned parcels frontage. Until the privately-owned parcels are redeveloped to be incorporated into the site, pedestrians and bicyclists will be encouraged to travel through the open space area of the site through posted signage and pathways, as indicated in **Figure 6-1.**
- Intersection #5: Frontier Drive/Sports Arena Boulevard (southbound approach) and Intersection #34: Frontier Drive/Kurtz Street.
- Block F and G driveways on Sports Arena Boulevard.
- Block F driveway on Frontier Drive.
- Block H driveways on Kurtz Street.
- Entertainment Center access driveways on Kurtz Street and Sports Arena Boulevard.

The roadway network will not change between typical-capacity and full-capacity events. **Figure 6-2** illustrates the lane geometries at the study intersections for the Opening Year (2030) Plus Project Phase 1 scenario.

6.2 TYPICAL EVENT ANALYSIS (14,500 SPECTATORS)

A typical event day with 14,500 spectators in Opening Year (2030) Plus Project Phase 1 is expected to generate approximately 12,204 average daily vehicle trips with 380 AM Commuter Peak Hour Trips (96 inbound / 284 outbound), 1,657 PM Commuter Peak Hour Trips (1,316 inbound / 341 outbound), and 1,936 Pre-Event PM Peak Hour Trips (1,583 inbound / 352 outbound). The typical event scenario was analyzed for all peak periods.

6.2.1 TRAFFIC VOLUMES

The Opening Year (2030) Plus Project Phase 1 traffic volumes will consist of the Opening Year (2030) Base scenario, and proposed project traffic for the project under Phase 1 with a 14,500-spectator event. **Figure 6-3** shows the Opening Year (2030) Plus Project Phase 1 traffic volumes during all peak hours for a 14,500-spectator event.

6.2.2 INTERSECTION ANALYSIS

Table 6-1 displays the LOS analysis results for the study intersections under Opening Year (2030) Plus Project Phase 1 scenario with 14,500-spectators.

Under the Opening Year (2030) Plus Project Phase 1 scenario, the project would be expected to cause a project effect at the following intersections:

- Intersection #2 – Midway Dr & W Point Loma Blvd & Sports Arena Blvd (PM: LOS F; Pre-Event: LOS E; WKND: LOS E)
- Intersection #5 – West Dr / Frontier Dr & Sports Arena Blvd (PM: LOS F; Pre-Event: LOS F; WKND: LOS F)
- Intersection #14 – Sherman Street & Hancock St (Pre-Event: LOS F)
- Intersection #16 – Camino del Rio W & Moore St (PM: LOS E; Pre-Event: LOS E; WKND: LOS F)
- Intersection #17 – Camino del Rio W & Hancock St (AM: LOS F)
- Intersection #20 – Rosecrans Street & Midway Dr (AM: LOS E; PM: LOS E; Pre-Event: LOS E; WKND: LOS F)
- Intersection #26 – Kurtz Street & Pacific Hwy (PM: LOS F; Pre-Event: LOS F)
- Intersection #27 – Pacific Hwy & Enterprise Street (PM: LOS E; Pre-Event: LOS E)

The following intersections would be expected to operate at LOS E or F under the Opening Year (2030) Plus Project Phase 1 scenario, but are not identified as a project effect per the criteria in the TSM:

- Intersection #6 – Target Driveway & Sports Arena Blvd (WKND: LOS F)
- Intersection #19 – Rosecrans Street & Sports Arena Boulevard & Camino Del Rio W (PM: LOS E; WKND: LOS E)
- Intersection #22 – Rosecrans St & Lytton St (AM: LOS E)

Appendix Q contains the intersection LOS calculation worksheets for the Opening Year (2030) Plus Project Phase 1.

6.2.3 QUEUEING ANALYSIS

Table 6-2 displays the expected 95th percentile queues under Opening Year (2030) Plus Project Phase 1 scenario with 14,500-spectators. The 95th percentile queue lengths reported represent an average of five SimTraffic runs. **Appendix R** contains the 95th percentile queue worksheets for the Opening Year (2030) Plus Project Phase 1 scenario. Under Opening Year (2030) Plus Project Phase 1 scenario, queues exceed the existing available storage length at:

- 13 intersections in the Commuter AM peak,
- 34 intersections in the Commuter PM peak,
- 28 intersections in the Pre-Event PM peak with 14,500-spectator event, and
- 16 intersections in the Weekend peak.

6.2.4 ROADWAY SEGMENT ANALYSIS

The Opening Year (2030) Plus Project Phase 1 scenario roadway segment analysis was performed based on proposed roadway geometries and 2030 expected daily roadway segment volumes on a weekday, 14,500-spectator event day. **Table 6-3** summarizes the roadway segment LOS analysis at the study segments under Opening Year (2030) Plus Project Phase 1 scenario for a weekday event day.

Under Opening Year (2030) Plus Project Phase 1 scenario (14,500-spectator event), the project would be expected to cause a project effect at the following locations:

- Camino Del Rio W between Hancock Street and Kurtz Street (LOS E)
- Kurtz Street between Kemper Street and Frontier Drive (LOS F)
- Kurtz Street between Frontier Drive and Sherman Street (LOS F)

The following roadway segments would be expected to operate at LOS E or F under the Opening Year (2030) Plus Project Phase 1 scenario, but are not identified as a project effect per the criteria in the TSM:

- Camino Del Rio W North of Greenwood Street (LOS F)
- Camino Del Rio W between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)
- Midway Drive between Kemper Street and Rosecrans Street (LOS E)

Notes:
Bold values indicate intersections operating at LOS E or F. **Bold and shaded** values indicate project significant impact.
ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds.
(a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a two-way stop-controlled intersection, delay refers to the worst movement.
(b) LOS calculations are based on the methodology outlined in the *Highway Capacity Manual 6th Edition and Highway Capacity Manual 2000 Edition* and performed using Synchro 11
*Intersection is analyzed as a roundabout using SIDRA software (HCM 6th Edition) in Opening Year (2030) Plus Project Phase 1

Table 6-1. Opening Year (2030) Plus Project Phase 1 Intersection LOS Summary

Notes:

[1]Functional Classification based on the Midway Pacific Highway Community Plan.

[2]LOS E Capacity provided by City of San Diego staff. LOS E capacity of Segment 12 under WP Conditions is based on a 2-lane Collector with two-way left-turn lane as the project wouldn't construct the median for a Major Arterial on Rosecrans St because there is not a project effect, and instead proposes a 2-lane Collector with flex lanes.

[3]ADT - Average Daily Traffic.

[4]V/C Ratio - Volume-to-capacity ratio.

[5]LOS - Level of Service.

[6]With Project Classification based on roadway classifications proposed by the Midway Rising Project.

6.3 FULL CAPACITY EVENT ANALYSIS (20,000 SPECTATORS)

A full capacity event with 20,000 spectators would be expected to generate approximately 16,412 average daily vehicle trips with 3,629 Pre-Event PM Peak Hour Trips (3,055 inbound / 573 outbound). The full capacity event was analyzed for the Pre-Event PM peak hour only since this is the highest trip generating peak based on all land uses on the site. This analysis is being analyzed to inform the project's development of an event management plan to manage traffic on the full-capacity event days.

6.3.1 TRAFFIC VOLUMES

The Opening Year (2030) Plus Project Phase 1 traffic volumes will consist of the Opening Year (2030) Base scenario, and proposed project traffic for the project under Phase 1 with a 20,000-spectator event. **Figure 6-4** shows the Opening Year (2030) Project Phase 1 traffic volumes during the Pre-Event PM peak for a 20,000-spectator event.

6.3.2 INTERSECTION ANALYSIS

Table 6-1 displays the LOS analysis results for the study intersections under Opening Year (2030) Plus Project Phase 1 scenario with 20,000-spectators. Under Opening Year (2030) Plus Project Phase 1 scenario, 7 intersections are expected to operate at LOS E or F during the Pre-Event PM peak hour with a 20,000-spectator event.

Appendix S contains the intersection LOS calculation worksheets for the Opening Year (2030) Plus Project Phase 1 scenario Pre-Event PM peak for a 20,000 spectator event.

6.3.3 QUEUEING ANALYSIS

Table 6-2 displays the expected 95th percentile queues under Opening Year (2030) Plus Project Phase 1 scenario with 20,000-spectators. The 95th percentile queue lengths reported represent an average of five SimTraffic runs. **Appendix T** contains the 95th percentile queue worksheets for Opening Year (2030) Plus Project Phase 1 scenario Pre-Event PM peak for a 20,000 spectator event. Under Opening Year (2030) Plus Project Phase 1 scenario, queues would be expected to exceed the existing available storage length at 17 intersections in the pre-event PM peak with 20,000-spectator event.

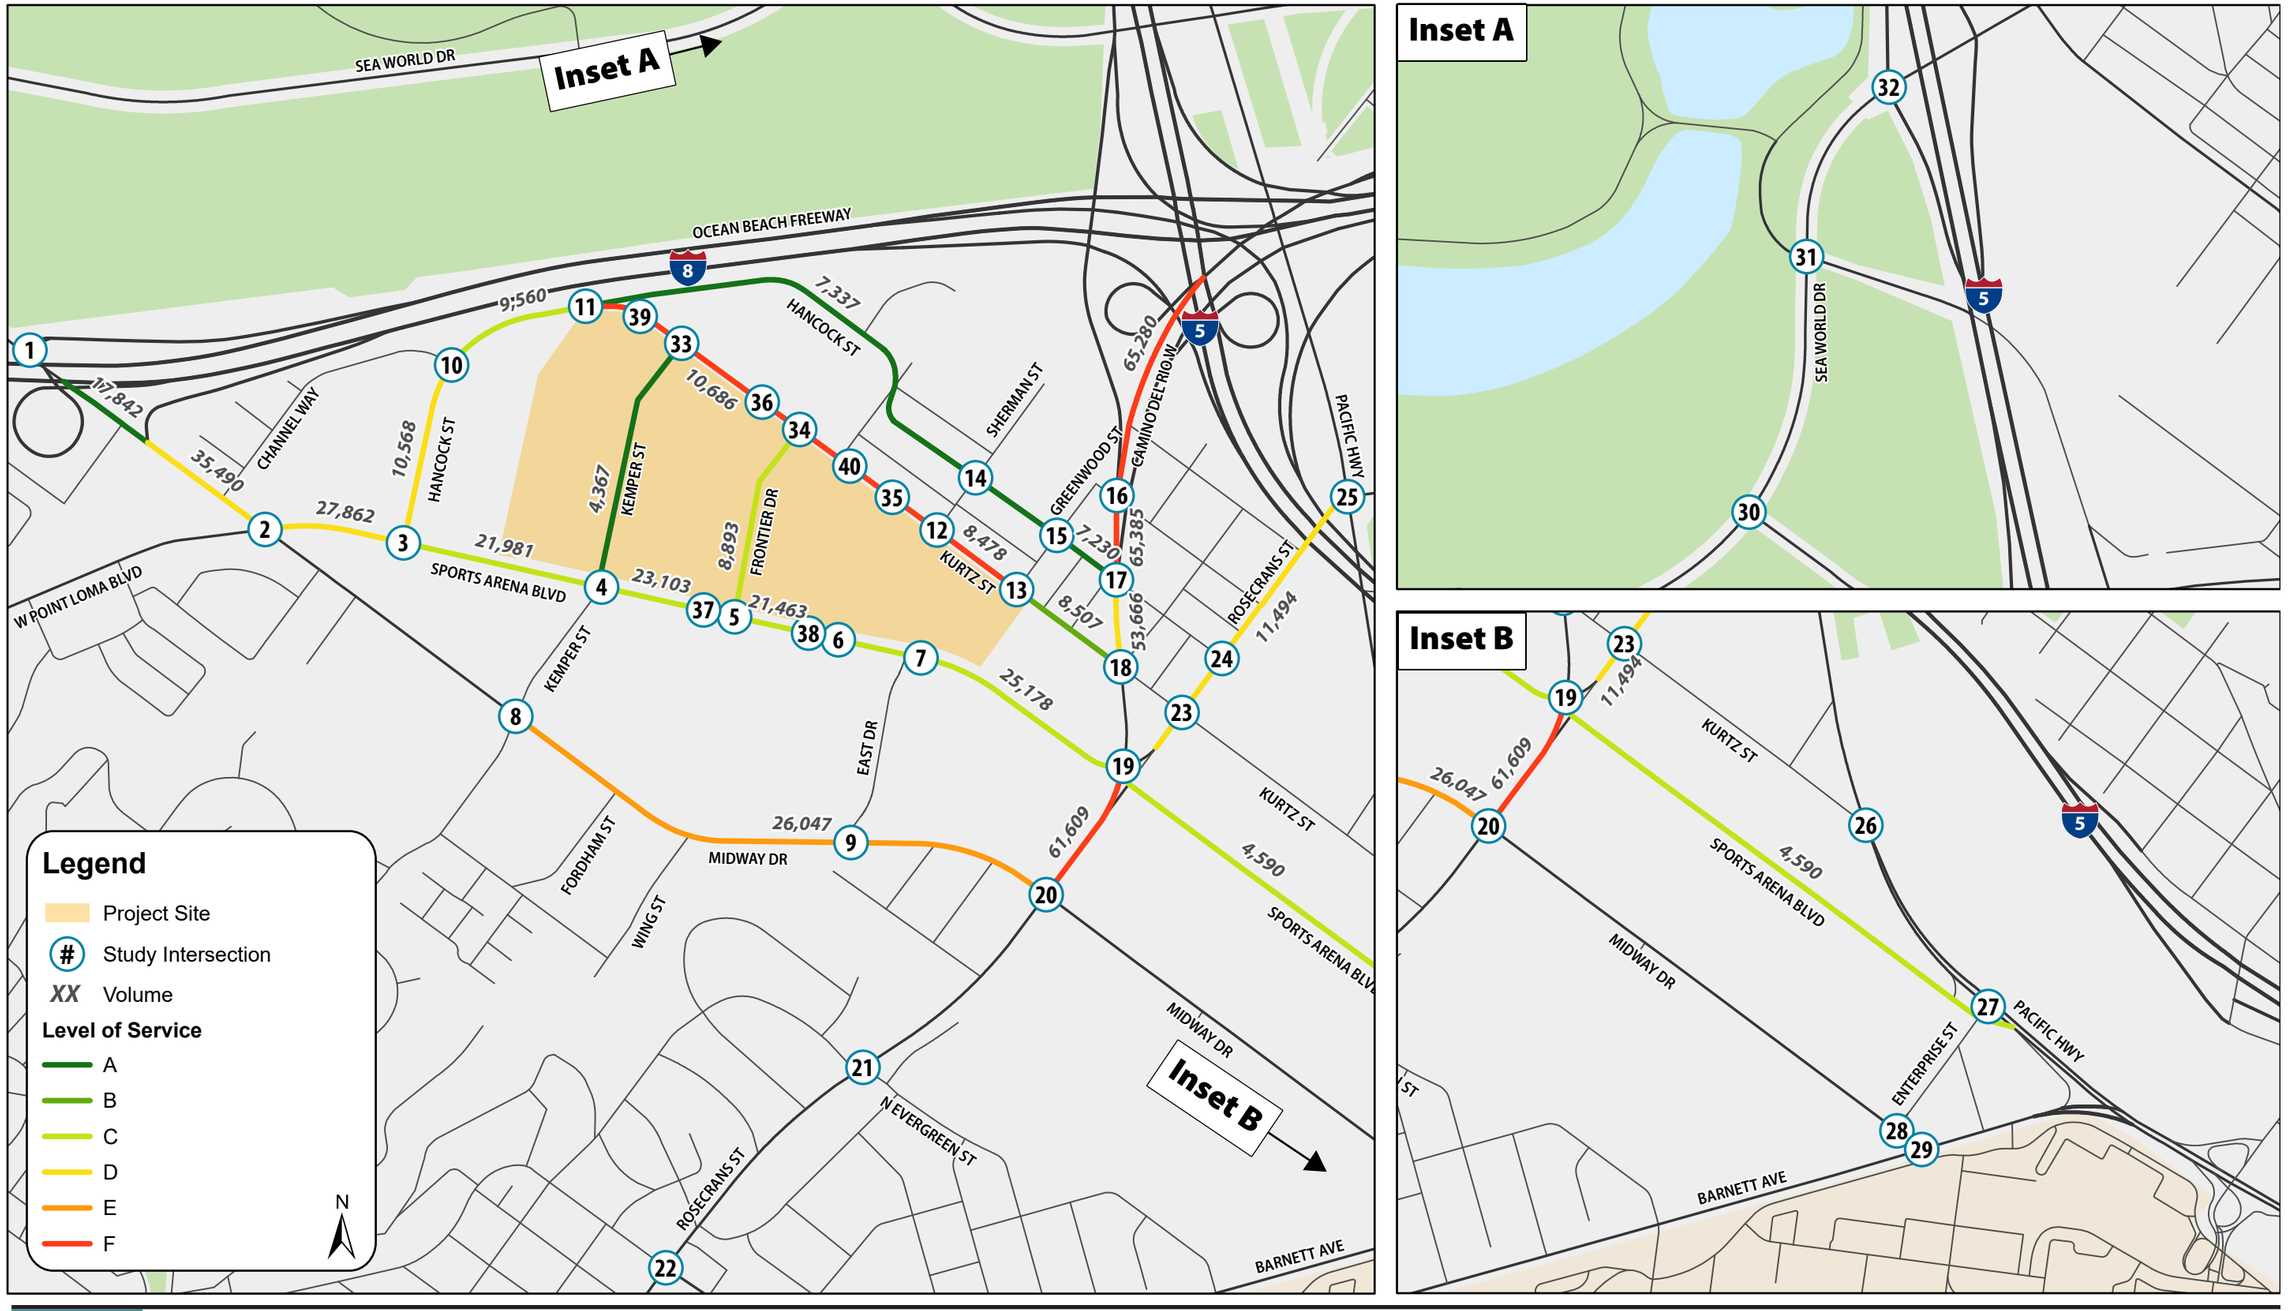
6.3.4 ROADWAY SEGMENT ANALYSIS

The Opening Year (2030) Plus Project Phase 1 scenario roadway segment analysis was performed based on proposed roadway geometries and 2030 expected daily roadway segment volumes on a weekday, 20,000-spectator event day. **Table 6-4** summarizes the roadway segment LOS analysis at the study segments under Opening Year (2030) Plus Project Phase 1 scenario for a 20,000-spectator, weekday event day.

Under Opening Year (2030) Plus Project Phase 1 scenario, all roadway segments would be expected to operate at LOS D or better on a weekday, 20,000-spectator event day except the following:

- Camino del Rio West north of Greenwood Street (LOS F)
- Camino del Rio West between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)
- Midway Drive between Kemper Street and Frontier Drive (LOS E)
- Kurtz Street between Kemper Street and Frontier Drive (LOS F)
- Kurtz Street between Frontier Drive and Sherman Street (LOS F)

Figure 6-4. Opening Year (2030) Plus Project Phase 1 Traffic Volumes (20,000 spectators) (Page 1 of 2)



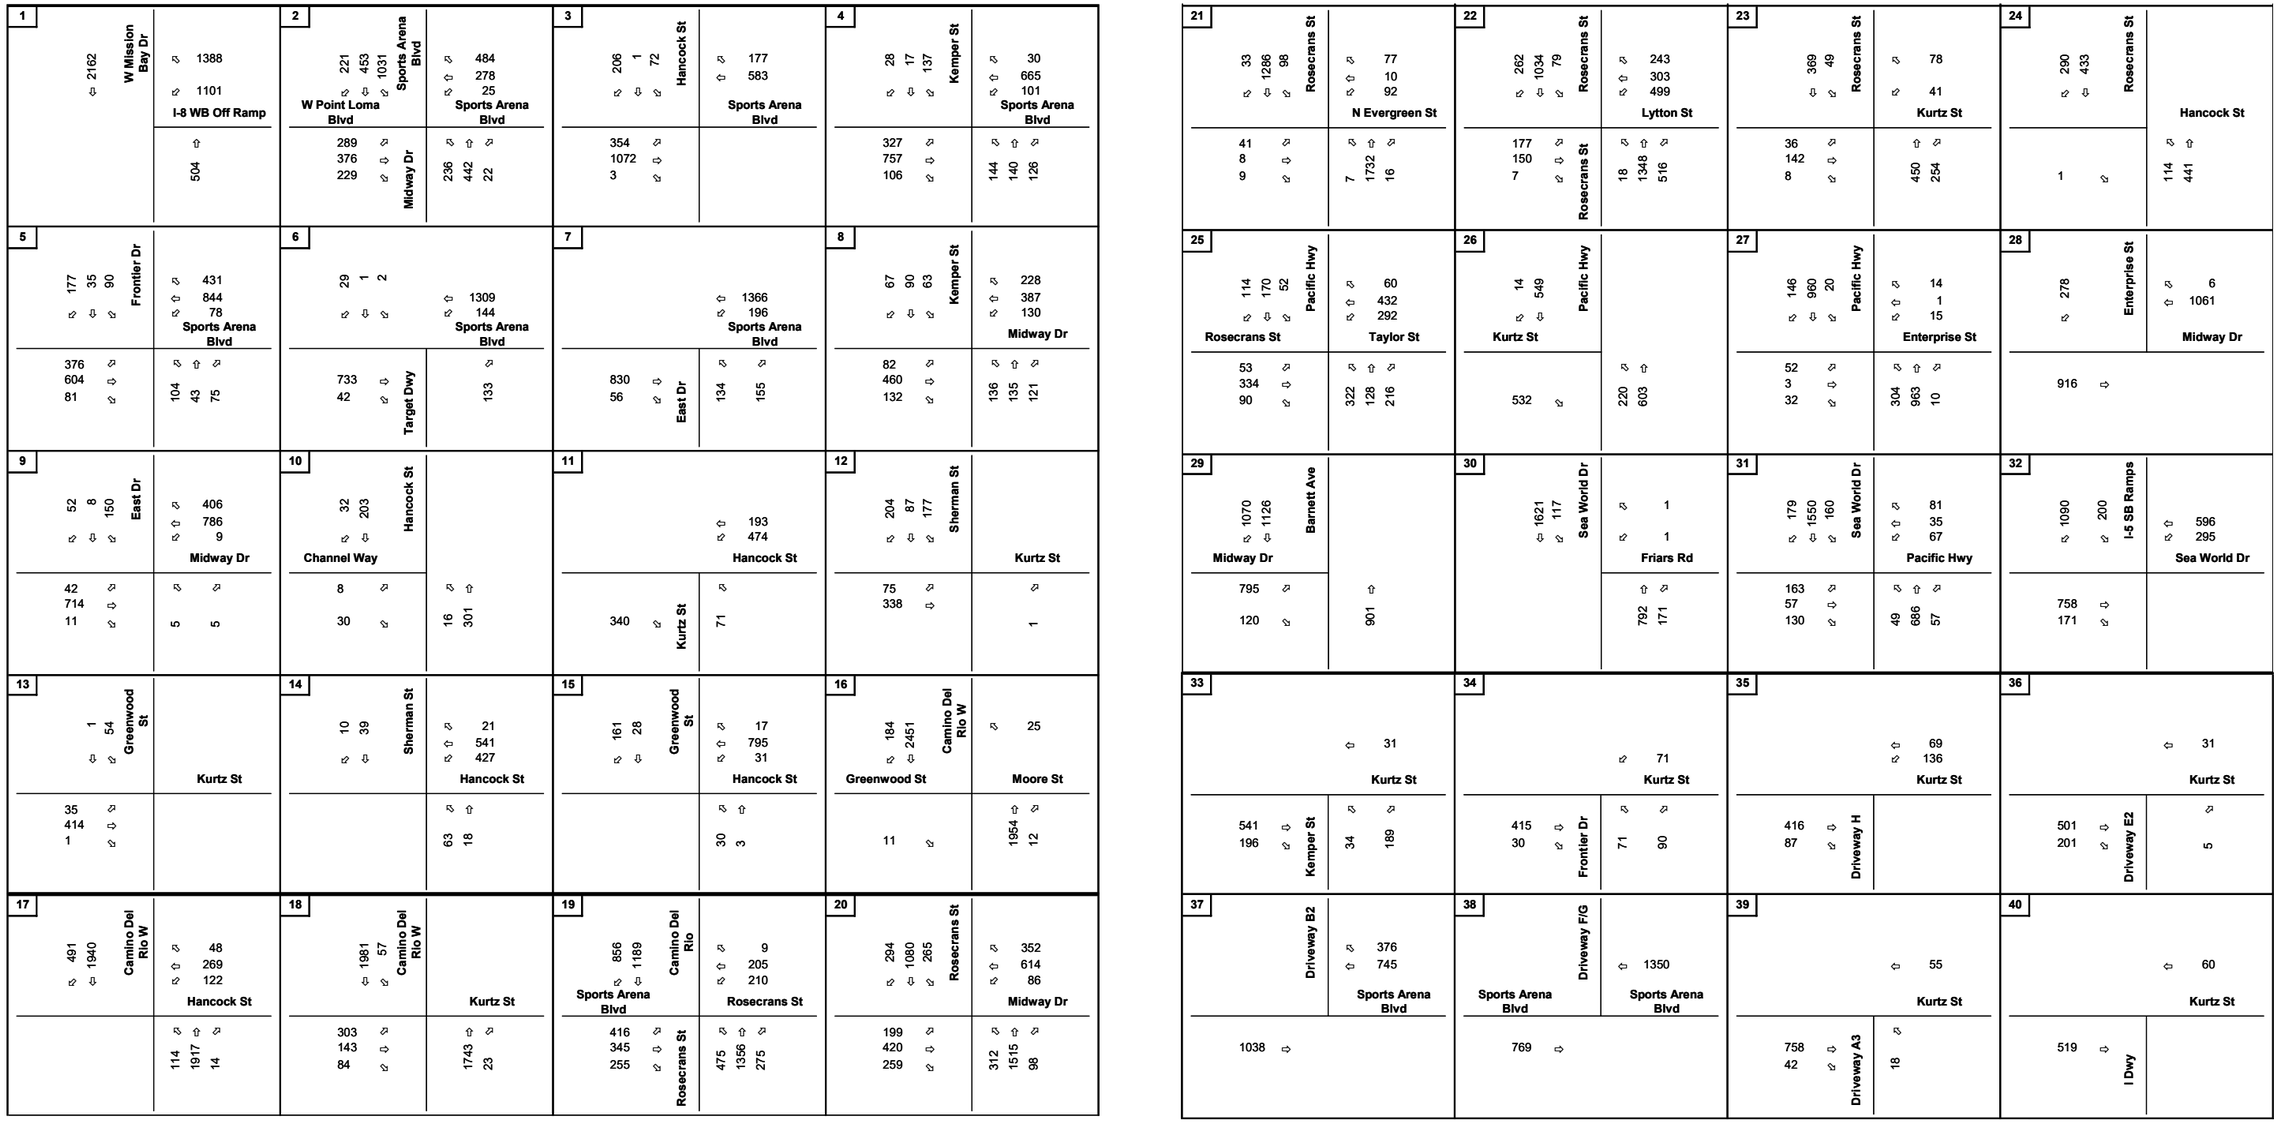


Figure 6-4. Opening Year (2030) Plus Project Phase 1 Traffic Volumes (20,000 spectators) (Page 2 of 2)

23	*Kemper Street (Future Conditions Only)	Sports Arena Boulevard to Kurtz Street	-	-	-	-	-	2 Lane Collector (with two-way left-turn Lane)	15,000	4,367	0.291	A

Notes:

[1]Functional Classification based on the Midway Pacific Highway Community Plan.

[2]LOS E Capacity provided by City of San Diego staff. LOS E capacity of Segment 12 under WP Conditions is based on a 2-lane Collector with two-way left-turn lane as the project wouldn't construct the median for a Major Arterial on Rosecrans St because there is not a project effect, and instead proposes a 2-lane Collector with flex lanes.

[3]ADT - Average Daily Traffic.

[4]V/C Ratio - Volume-to-capacity ratio.

[5]LOS - Level of Service.

[6]With Project Classification based on roadway classifications proposed by the Midway Rising Project.

7 OPENING YEAR (2030) PLUS PROJECT PHASE 1 PLUS IMPROVEMENTS

7.1 SIGNAL OPTIMIZATION

It is assumed that signal optimization will occur at all signalized intersections within the study area due to the increase in vehicle volumes and new travel patterns caused by the project, and the redevelopment of the NAVWAR facility that will require signal optimization to properly serve each approach.

Optimization would include:

- Optimized cycle lengths
- Optimized phase splits
- Optimized corridor offsets for coordinated corridors (Sports Arena Blvd, Rosecrans Street, Camino del Rio)
- Optimized lead/lag left turn phasing

These improvements have been applied to both the Opening Year (2030) Plus Project Phase 1 and the Opening Year (2035) Plus Project Phase 2 Buildout scenarios.

7.2 PROJECT INTERSECTION IMPROVEMENTS

The project causes operational effects in the year 2030 at the 8 intersections listed in Section 6.2. Operations could be improved to an acceptable level of service at 5 of these intersections by implementing the following improvements. Improvements made by the project at 2 more of the intersections listed in **Table 7-1** would improve operations but the intersection would still operate at LOS E for the reasons listed. Lastly, at one intersection (#16 Camino del Rio and Moore Street), there are no reasonable improvements that can be made to enhance operations, as described further below.

Locations of intersection improvements are shown in **Figure 7-2**. **Figure 7-3** illustrates the resulting lane geometries at the study intersections under 2030 Plus Project Plus Improvements.

7.3 PROJECT ROADWAY IMPROVEMENTS

The project causes operational effects in the year 2030 at the three roadway segments listed in Section 6.3.4. The project does not propose to provide improvements to roadway segments with project effects because there are no reasonable improvements that can be made to enhance operations, as described further in **Table 7-2** below.

Table 7-1. Opening Year (2030) Plus Project Phase 1 Intersection Improvements Summary

<table>
<tr><th>#</th><th>Location</th><th>2030 Considered Improvement</th><th>2030 Improvement Decision</th></tr>
<tr><td>2</td><td>Midway Dr / W Point Loma Blvd & Sports Arena Blvd</td><td>Improvements (See Appendix U for a high-level feasibility concept of the physical improvements described below):
- Signal timing optimization
- Reduce roadway width in northeast corner to convert westbound channelized right turn lane to an exclusive right turn lane per CP.
- Provide overlap phase for westbound right turn movement. Requires signal modification.
- Remove small, channelized portions of northbound and southbound right turn movements. Right-most lanes will be shared through-right instead.
- Separate southbound shared through/left turn lane into exclusive left turn and exclusive through lane. Southbound approach to include 2 left turn lanes, 1 through lane, and 1 shared through/right turn lane. Requires signal modification.
- Separate northbound shared through/left turn lane into exclusive left turn and exclusive through lane. Northbound approach to include 2 left turn lanes, 1 through lanes, and 1 shared through/right turn lane.
- Widen by 6 feet to construct additional eastbound through lane. Eastbound approach to include 1 left turn lane, 1 shared left/through lane, 1 through lane, and 1 right turn lane.
- Modify northbound and southbound signal timing to protected left turn phasing instead of split phasing.
Results: Maintain LOS E or better for all peaks.</td><td>Midway Rising will improve this intersection to the extent feasible by incorporating the improvements described. The intersection cannot be improved to LOS D or better without diminishing pedestrian and bicycle safety or conflicting with the CP’s visions for multimodal improvements. Removal of the westbound channelized free right turn lane as proposed in the CP prevents this intersection from being able to improve to LOS D or better. Removal of the free right turn would also decrease pedestrian safety. There is not enough right-of-way to further widen the intersection due to the adjacent residential and commercial land uses, the skew of the intersection, and the proposed multimodal improvements on all approaches to the intersection (including bus only lanes).</td></tr>
<tr><td>5</td><td>West Dr / Frontier Dr & Sports Arena Blvd</td><td>Improvement: Signal timing optimization. Increase in the overall signal cycle length to 100 seconds during the AM peak and 150 seconds during the PM and Pre-Event PM peaks. Increase in cycle length and optimized splits helps accommodate the increase in volumes for the eastbound left turn movement, westbound through movement, and southbound movements from the project.
Results: Improved to LOS D or better for all peaks.</td><td>Midway Rising will improve this intersection to an acceptable LOS by optimizing signal timing.</td></tr>
<tr><td>14</td><td>Sherman Street & Hancock St</td><td>Improvements (See Figure 7-1 for an illustration of temporary improvements described below): Implement temporary traffic control during the PM Pre-Event peak period to modify intersection geometry during the PM Pre-Event peak. Implement traffic control flagger (or appropriate traffic control setup) to allow two westbound lanes to turn left from Hancock Street onto southbound Sherman Street, and convert Sherman Street (temporarily) to a one-way two-lane southbound street. Vehicles wishing to travel northbound on Sherman Street from Kurtz Street will be redirected to Greenwood Street. At Sherman Street & Kurtz Street, two southbound lanes would be directed to turn right or go straight into the H1 driveway for Entertainment Center parking.
A separate analysis was performed at this intersection for the Opening Year (2030) Pre-event PM peak accounting for the traffic pattern modifications from temporary traffic control. The results are summarized in the table below:
<table>
<tr><th>Scenario</th><th></th><th>Delay (sec)</th><th>LOS</th></tr>
<tr><td rowspan="2">Opening Year (2030) Plus Project Phase 1 Plus Improvements – Pre-Event PM Peak</td><td>Normal Operations</td><td>50.1</td><td>F</td></tr>
<tr><td>Temporary Event Operations</td><td>23.5</td><td>C</td></tr>
</table>
Results: Improved to LOS C or better for pre-event peak period.</td><td>Midway Rising will improve this intersection to an acceptable LOS by incorporating temporary traffic control (including a traffic control flagger) during the pre-event peak period.</td></tr>
<tr><td>16</td><td>Camino del Rio W & Moore St</td><td>No reasonable improvement found: No reasonable improvements can be made to increase operations.</td><td>Midway Rising will <u>not</u> make improvements to this intersection. The deficient LOS at this intersection is dictated by the eastbound right turn movement from Moore Street, where 10 or fewer vehicles turn right per hour. The project does not add vehicular traffic to this approach. Synchro assumes these vehicles are unable to find a gap in traffic on southbound Camino del Rio W to make a right turn. In reality, these vehicles will likely find a gap from the queue when vehicles keep the intersection clear, or they can use Hancock Street instead at the signalized intersection. Due to low volumes on the side street,</td></tr>
</table>

#	Location	2030 Considered Improvement	2030 Improvement Decision
			and the close proximity to the nearest signalized intersection, it is not recommended to consider signalizing the intersection to improve side street operations.
17	Camino del Rio W & Hancock St	**Improvement:** Signal timing optimization. Increase in the overall cycle length to 120 seconds during the AM peak, 145 seconds during the PM peak, and 100 seconds during the Pre-Event PM peak. Increase in cycle length and optimized splits helps accommodate the increase in volumes for the northbound and southbound through movements resulting from the project. **Results:** Improved to LOS D or better for all peaks.	**Midway Rising will improve this intersection to an acceptable LOS by optimizing signal timing.**
19	Rosecrans St/Sports Arena Blvd & Camino Del Rio W	**Improvements:** - Convert channelized right turn lane to exclusive right turn lane per CP. - Remove northbound "channelized" right turn and ancillary intersection per CP. - Allow through movement from eastbound Sports Arena Boulevard to Sports Arena Boulevard per CP. - Modify eastbound approach to include 1 left turn lane, 1 shared left/through lane, 1 right turn lane to Sports Arena Boulevard, and 1 right turn lane to Camino del Rio W. Requires traffic signal modification. **Results**: Project effect at this intersection is not realized until 2035, however, implementation of these improvements would improve **Intersection #26 to LOS C or better for all peaks** by allowing vehicles travelling southeast-bound on Sports Arena Boulevard to continue through the intersection towards Pacific Highway. The improvements reduce the number of vehicles with the following travel pattern: left from Sports Arena Boulevard onto Rosecrans Street, right turn onto Kurtz Street (Intersection #26), and another right turn onto Pacific Highway.	**Midway Rising will improve this intersection to an acceptable LOS in Opening Year (2030) Plus Project to address the project effect the project would cause at Intersection #26.**
20	Rosecrans St & Midway Dr	**Improvement:** Signal timing optimization. Increase the overall signal cycle length to 135 seconds during the AM peak, 150 seconds during the PM peak, and 100 seconds during the Pre-Event PM peak. For the AM peak, increase in cycle length, optimized splits, and lagging left turn phases helps accommodate the increase in volumes for the northbound and southbound through movements. For the commuter PM and pre-event PM peak, the decrease in cycle length decreases unnecessary time for the left turn movements and increases overall operations. For the weekend peak, the increase in overall cycle length decreases unnecessary time for the left turn movements and increases time for through movements. **Results:** Improved to LOS D or better for all peaks.	**Midway Rising will improve this intersection to an acceptable LOS by optimizing signal timing.**
26	Kurtz St & Pacific Hwy	**Improvements: I**mprovements at Intersection #19 will reduce the number of vehicles turning right from Pacific Highway onto southbound Kurtz Street. No improvements needed at this intersection after implementation of improvements at Intersection #19. **Results:** Improved to LOS C or better for all peaks by improving Intersection #19.	**Midway Rising will improve this intersection to an acceptable LOS by implementing improvements at Intersection #19.**
27	Pacific Hwy & Enterprise St	**Improvements:** Modify southbound approach to add 2nd left turn lane. Requires median modification. Modify northbound approach to add 2nd left turn lane. Requires median modification. **Results:** Improved to LOS D or better for all peaks	**Midway Rising will not make improvements to this intersection.** *A majority of the trips assigned to this intersection are from the redevelopment of the NAVWAR facility and are unrelated to the Midway Rising project. Across all 2030 scenarios, Midway Rising assigns a maximum of 56 trips to this intersection during the weekend peak. NAVWAR assigns 493 trips during the weekday PM peak, and during this same weekday PM peak Midway Rising assigns 29 trips. Additionally, across all 2035 scenarios, Midway Rising assigns a negative number of trips to this intersection meaning the project effect at full project buildout is entirely attributed to the NAVWAR facility.*

Table 7-2. Opening Year (2030) Plus Project Phase 1 Roadway Segment Improvements Summary

ID	Location	2030 Considered Improvement	2030 Improvement Decision
11	Camino Del Rio between West Hancock Street and Kurtz Street	Widening the roadway to an 8-Lane Prime Arterial would improve roadway segment operations	**Midway Rising will <u>not</u> improve this roadway segment.** Widening the roadway is infeasible due to limited right-of-way caused by surrounding land uses. This segment of roadway is built out to its ultimate classification per the Community Plan, and any increase in vehicular capacity above the ultimate classification does not align with City or state climate action goals. *Midway Rising does not recommend vehicle capacity improvements on this segment.*
15	Kurtz Street between Kemper Street and Frontier Drive	Widening the roadway to a 4-Lane Collector with two-way left-turn lane would improve roadway segment operations, but is infeasible due to fronting land uses on both sides of Kurtz Street.	**Midway Rising will <u>not</u> improve this roadway segment.** Midway Rising proposes multimodal improvements along Kurtz Street, including a Class I multi-use path and improved pedestrian facilities, intended to increase pedestrian and bicycle activity along Kurtz Street by providing safe access between the site and high-frequency transit services at Old Town Transit Center, Rosecrans Street, and Sports Arena Boulevard. Although widening the roadway would improve vehicular LOS, this would reduce the multimodal improvements along this segment that connect to high-frequency transit services. Additionally, the project proposes to move the curbline into the street by 5 feet and remove approximately 36 on-street parking spaces to increase the space dedicated to multimodal users along the project frontage. *Thus, the Midway Rising does not recommend vehicle capacity improvements on this segment.*
16	Kurtz Street between Frontier Drive and Sherman Street	Widening the roadway to a 2-Lane Collector with two-way left-turn lane improves roadway segment operations, but is infeasible due to fronting land uses on both sides of Kurtz Street.	**Midway Rising will <u>not</u> improve this roadway segment.** Midway Rising proposes multimodal improvements along Kurtz Street, including a Class I multi-use path and improved pedestrian facilities, intended to increase pedestrian and bicycle activity along Kurtz Street by providing safe access between the site and high-frequency transit services at Old Town Transit Center, Rosecrans Street, and Sports Arena Boulevard. Although widening the roadway would improve vehicular LOS, this would reduce the multimodal improvements along this segment that connect to high-frequency transit services. Additionally, the project proposes to move the curbline into the street by 5 feet and remove approximately 30 on-street parking spaces to increase the amount of space dedicated to multimodal users along the project frontage. *Thus, the Midway Rising does not recommend vehicle capacity improvements on this segment.*

7.4 OPENING YEAR (2030) PLUS PROJECT PLUS IMPROVEMENT VOLUMES

Under the Opening Year (2030) Plus Project Phase 1 Plus Improvements scenario, volume adjustments were applied at three intersections due to the lane geometry and control changes for the Sports Arena Boulevard/Rosecrans Street & Camino del Rio W intersection (Intersection #19). Specifically, the CP recommends reconstructing existing raised medians to allow the eastbound through movement from Sports Arena Boulevard across the intersection south of Rosecrans Street to Sports Arena Boulevard, a movement that is currently prohibited. It was assumed that approximately 75% of the northbound right turns from Rosecrans Street to Kurtz Street (Intersection #23) would choose to make the new through movement instead. These volumes were rerouted through the system for each scenario.

Figures 7-4 through 7-6 illustrate the traffic volume adjustments under Opening Year (2030) Plus Project Phase 1 Plus Improvements for Intersections #19, #23, and #26.

- **Figure 7-4**. Opening Year (2030) Plus Project Phase 1 Plus Improvements with 14,500-spectators for Commuter AM and Commuter PM Peak Hours

7.5 INTERSECTION ANALYSIS RESULTS

Table 7-3 illustrates the intersection LOS results for the Opening Year (2030) Plus Project Phase 1 Plus Improvements scenario. The LOS worksheets are contained in **Appendix V**.

7.6 QUEUING ANALYSIS

Additionally, based on the SimTraffic analysis, many of the queue lengths exceed the storage pockets. At many of these locations, the baseline traffic volumes already exceed the storage pocket, or there is no additional right-of-way to construct an additional turn pocket or extend the length of the existing turn pocket. Therefore, no improvements to address storage queues, except one as described below, are recommended.

- Intersection #3: Sports Arena Blvd & Hancock St / Commercial Driveway 1
  - *Improvement*: Restripe eastbound approach to extend the left turn storage from 160' to 350'. This will not affect the adjacent westbound left turn pocket for intersection #2 (Sports Arena Boulevard / Midway Drive / West Point Loma Drive). See **Appendix U** for a high-level feasibility concept of the physical improvements.
  - *Results*: Improved queue lengths for all peaks.

Table 7-4 summarizes the queue results under Opening Year (2030) Plus Project Phase 1 Plus Improvements scenario. The 95th percentile queue worksheets are contained in **Appendix W**.

Table 7-3. Opening Year (2030) Plus Project Plus Improvements Phase 1 Intersection LOS Summary

Notes:

Bold values indicate intersections operating at LOS E or F. **Bold and shaded** values indicate project significant impact.

ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds.

(a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a two-way stop-controlled intersection, delay refers to the worst movement.

(b) LOS calculations are based on the methodology outlined in the *Highway Capacity Manual 6th Edition and Highway Capacity Manual 2000 Edition* and performed using Synchro 11

Table 7-4. Opening Year (2030) Plus Project Plus Improvements Phase 1 Queue Summary

8 OPENING YEAR (2035) BASE SCENARIO

This section summarizes the Opening Year (2035) Base scenario. This scenario establishes a baseline to compare against the Opening Year (2035) Plus Project Phase 2 Buildout scenario to determine project effects caused by the project. Year 2035 was selected as the anticipated opening year of Phase 2 Project Buildout per information provided by the applicant.

8.1 ROADWAY NETWORK CHANGES

The existing roadway network, reflective of conditions in December 2023 (as discussed in Section 3.1), was used for the Opening Year (2035) Base analysis.

8.2 TRAFFIC VOLUMES

Based on coordination with the City during the scoping phase, Opening Year (2035) Base intersection and roadway traffic volumes were forecasted by applying an ambient growth rate of 0.55% per year and adding the NAVWAR project traffic to determine baseline volumes. The growth rate was calculated using the SANDAG ABM2+ 2021 Regional Plan model volumes.

The Sports Arena is anticipated to be demolished once the new Entertainment Center construction is complete in 2030. The growth associated with the event space is accounted for in the trip generation calculations, so the growth rate was not applied to the event-related trips. Instead, event traffic was subtracted from peak hour traffic before the growth rate was applied and then was added back afterward. NAVWAR traffic for Opening Year (2035) was calculated using linear interpolation between the NAVWAR Near-Term Year 2030 Alternative 2 and Year 2050 with Alternative 2 project trips, because the NAVWAR study does not include a 2035 scenario. Linear interpolation of the NAVWAR project trips between 2030 and 2050 was applied to develop NAVWAR Year 2035 Alternative 2 project trips. The NAVWAR project trips were only added to the intersections and roadway segments within the NAVWAR project study area that overlap with this study. **Figure 8-1** illustrates the interpolated NAVWAR Near-Term (Year 2035) project traffic added to the study intersections and roadway segments.

Figure 8-2 illustrates the resulting Opening Year (2035) Base traffic volumes.

8.3 INTERSECTION ANALYSIS

Table 8-1 displays the LOS analysis results for the study intersections under Opening Year (2035) Base scenario.

Under Opening Year (2035) Base scenario, all intersections would be expected to operate at LOS D or better during all peak hours except:

- Intersection #2 – Sports Arena Boulevard / Midway Dr & W Point Loma Blvd (PM: LOS E; Pre-Event: LOS E; WKND: LOS E)
- Intersection #5 – West Drive / Frontier Drive & Sports Arena Boulevard (Pre-Event: LOS F)
- Intersection #6 – Target Driveway & Sports Arena Boulevard (PM: LOS F; WKND: LOS F)
- Intersection #16 – Camino del Rio W & Moore Street (WKND: LOS F)
- Intersection #17 – Camino del Rio W & Hancock Street (AM: LOS F)
- Intersection #19 – Rosecrans Street & Sports Arena Boulevard & Camino del Rio W (WKND: LOS E)

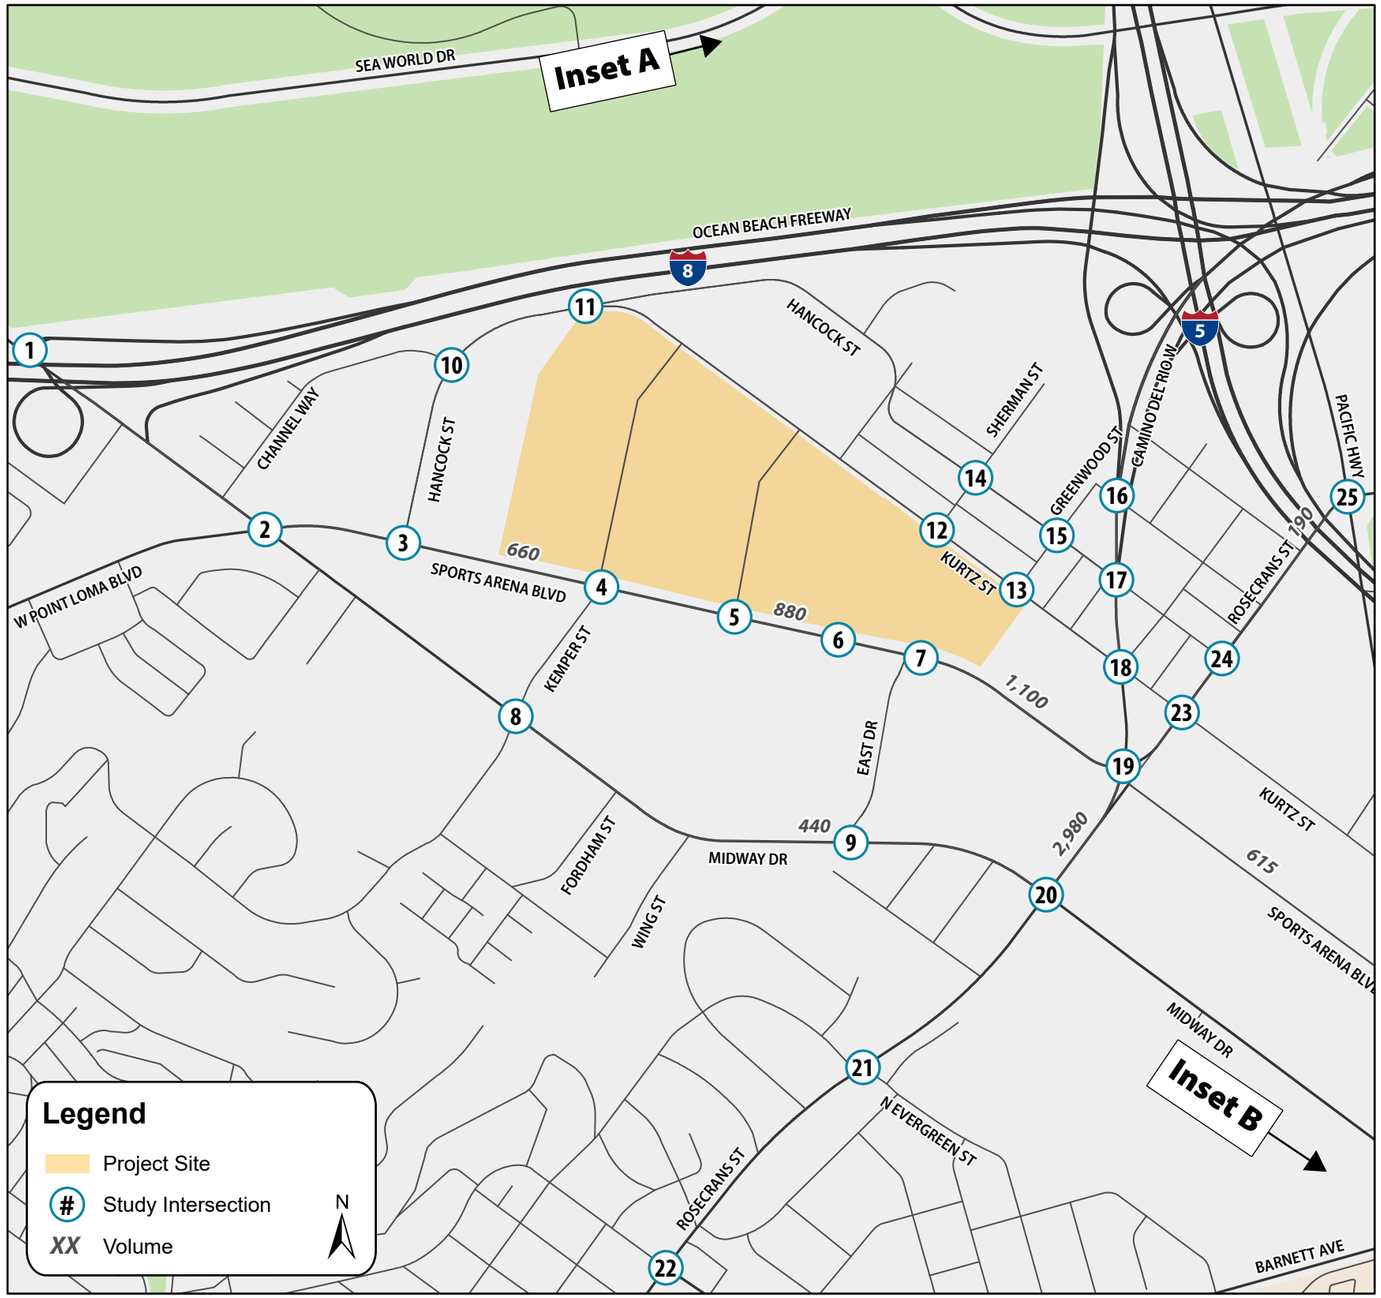
- Intersection #20 – Rosecrans Street & Midway Drive (AM: LOS E; PM: LOS E; Pre-Event: LOS E; WKND: LOS F)
- Intersection #22 – Rosecrans Street & Lytton Street (AM: LOS F; PM: LOS E)
- Intersection #26 – Kurtz Street & Pacific Highway (PM: LOS F; Pre-Event; LOS F)
- Intersection #28 – Midway Drive & Enterprise Street (PM: LOS E)
- Intersection #29 – Barnett Avenue & Midway Drive (PM: LOS E)

Appendix X contains the intersection LOS calculation worksheets for the study intersections under Opening Year (2035) Base scenario.

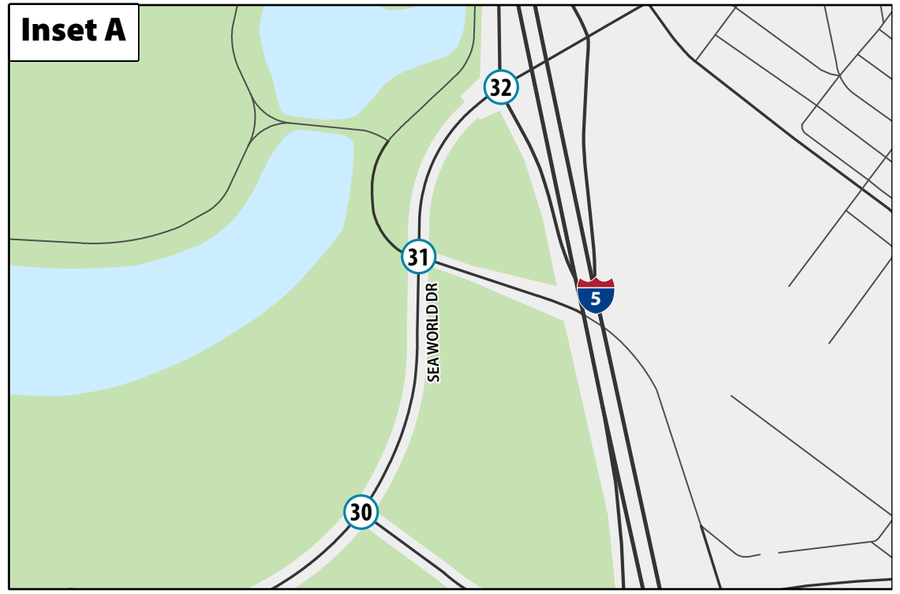
8.4 QUEUEING ANALYSIS

Table 8-2 displays the 95th percentile queues under the Opening Year (2035) Base scenario. The 95th percentile queue lengths reported represent an average of five SimTraffic runs. **Appendix Y** contains the 95th percentile queue worksheets for Opening Year (2035) Base scenario. Under Opening Year (2035) Base scenario, queues are expected to exceed the existing available storage length at:

- 7 intersections in the Commuter AM peak hour,
- 17 intersections in the Commuter PM peak hour,
- 14 intersections in the Pre-Event PM peak hour, and
- 14 intersections during the Weekend Midday peak hour.



8.5 ROADWAY SEGMENT ANALYSIS



The Opening Year (2035) Base roadway segment analysis was performed based on existing roadway geometries and existing 24-hour roadway segment counts grown to year 2035 on a weekday event day (See Section 8.2). **Table 8-3** summarizes the roadway segment LOS analysis at the study segments under the Opening Year (2035) Base scenario for a weekday event day.

Under the Opening Year (2035) Base scenario, all roadway segments would be expected to operate at LOS D or better on a weekday event day except the following:

- Camino del Rio West north of Greenwood Street (LOS F)
- Camino del Rio West between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)
- Midway Drive between Kemper Street and Rosecrans Street (LOS E)

Notes:

Bold values indicate intersections operating at LOS E or F.

ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds.

(a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a two-way stop-controlled intersection, delay refers to the worst movement.

(b) LOS calculations are based on the methodology outlined in the *Highway Capacity Manual 6th Edition* or the *Highway Capacity Manual 2000* and performed using Synchro 11.0

Notes:

[1]Functional Classification based on the Midway Pacific Highway Community Plan.

[2]LOS E Capacity provided by City of San Diego staff.

[3]ADT - Average Daily Traffic.

[4]V/C Ratio - Volume-to-capacity ratio.

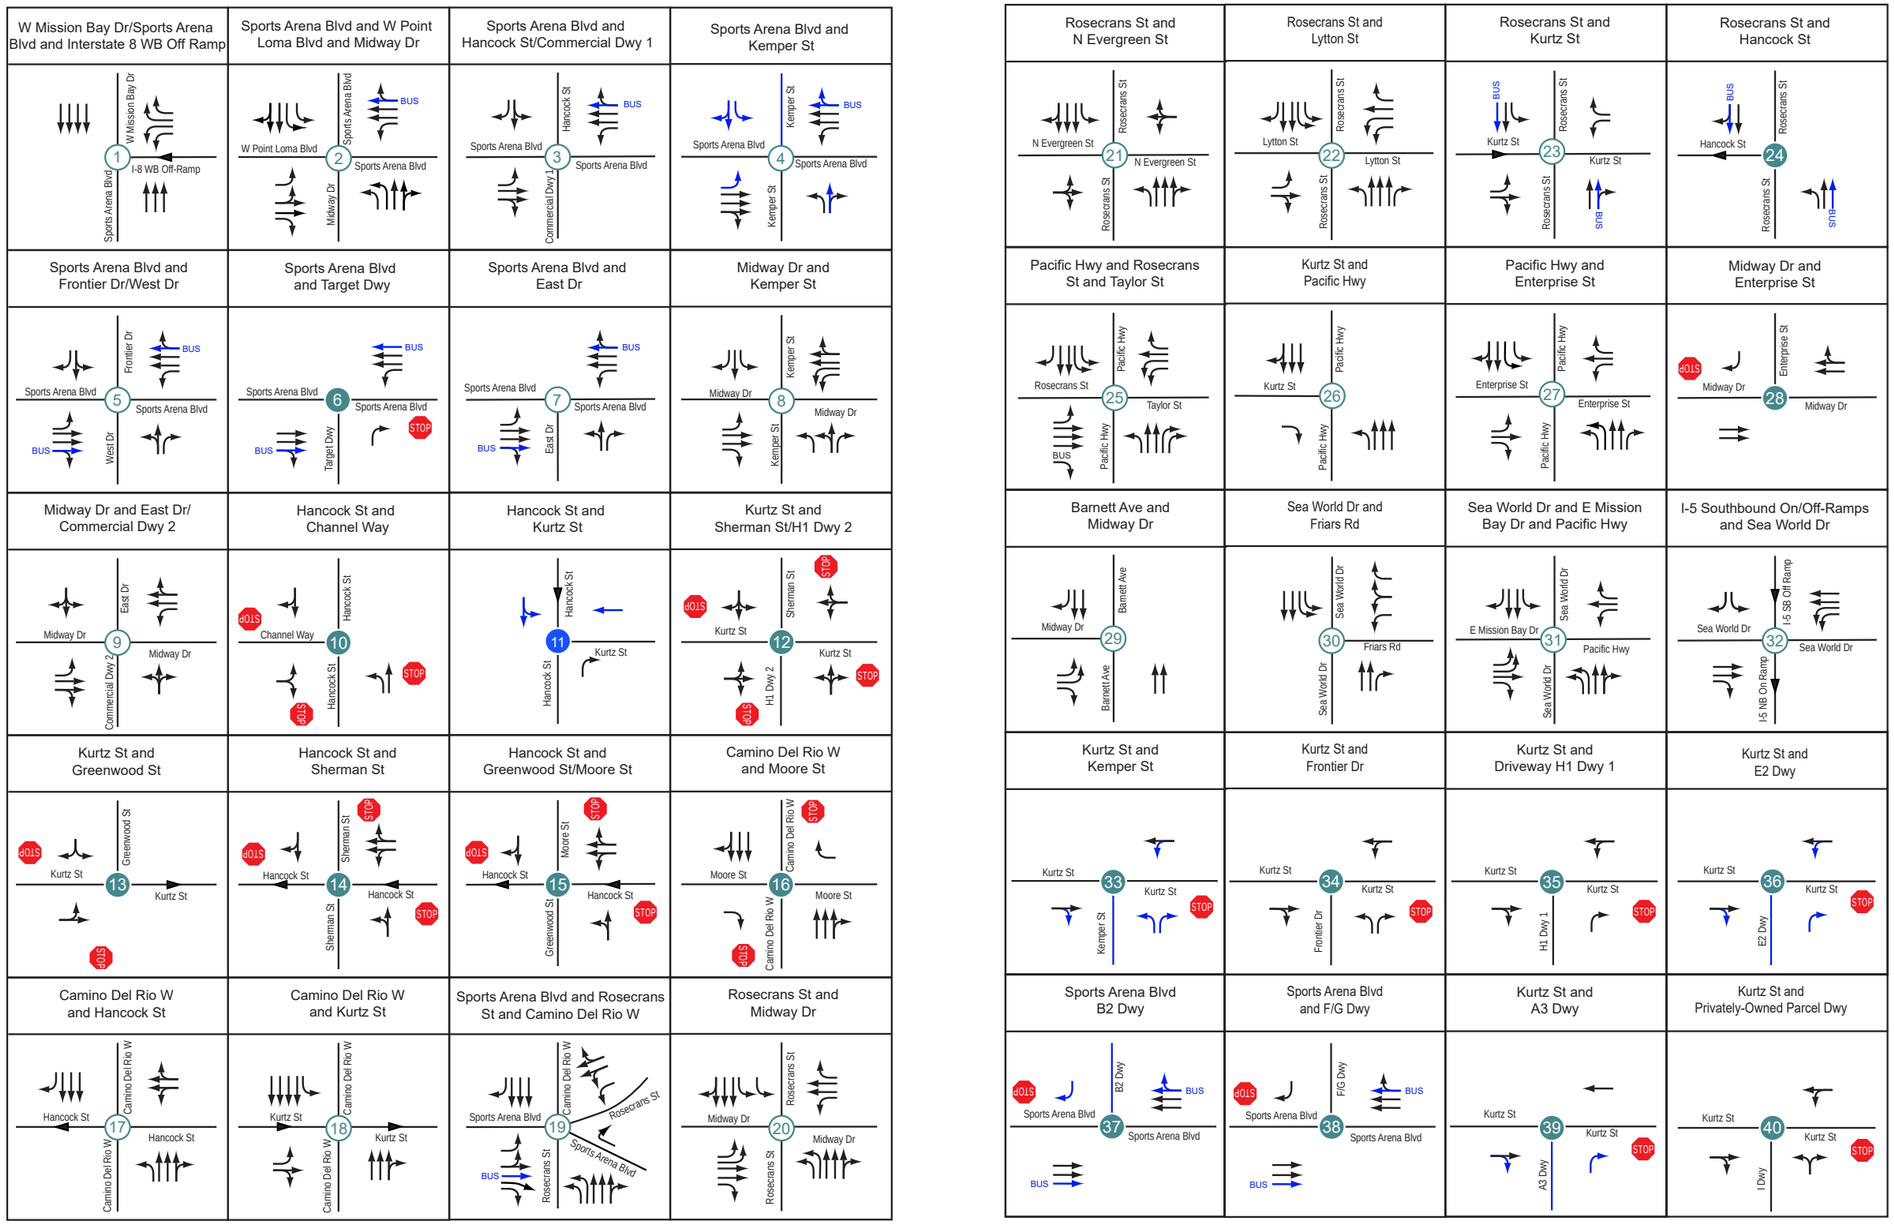
[5]LOS - Level of Service.

9 OPENING YEAR (2035) PLUS PROJECT PHASE 2 BUILDOUT

This section summarizes the Opening Year (2035) Plus Project Phase 2 Buildout Scenario. The project Phase 2 buildout scenario includes demolition of the existing Sports Arena and existing land uses west of Frontier Drive, and construction of residential and commercial land uses west of Frontier Drive, and construction of Kemper Street. This scenario is analyzed for a typical event (14,500 spectators) and full capacity event (20,000 spectators). The full capacity event is expected to occur approximately 2 times per year, and thus was not analyzed for the purpose of identifying project effects and improvements but is included for informational purposes.

9.1 ROADWAY NETWORK CHANGES

The roadway network under Opening Year (2035) Plus Project Phase 2 Buildout includes the roadway network under Plus Project Phase 1 scenario plus the construction of:



- Intersection #4: Kemper Street/Sports Arena Boulevard (southbound approach) and Intersection #33: Kemper Street/Kurtz Street;
- Roundabout at Intersection #11: Hancock Street and Kurtz Street;
- Access points on the west side of Frontier Drive and both sides of Kemper Street;
- Entertainment Center operations access driveways on Kurtz Street and Sports Arena Boulevard.
- Elimination of eastbound exclusive right turn lane at the intersection of Kurtz Street and Camino del Rio West to accommodate proposed multi-use path;
- Conversion of Kurtz Street from one-way (southbound) to two-way between Hancock Street and Sherman Street;
- Bus only lanes on Sports Arena Boulevard between Point Loma Boulevard and Camino Del Rio West/Rosecrans Street – right-most through lane converted to right-turn only pocket and through lane for buses only;
- Bus only lanes on Rosecrans Street between Sports Arena Boulevard and Pacific Highway– right-most through lane converted to right-turn only pocket and through lane for buses only;

The roadway network will not change between typical-capacity and full-capacity events. **Figure 9-1** illustrates the lane geometries at the study intersections for the Opening Year (2035) Plus Project Phase 2 Buildout scenario.

Figure 9-1. Opening Year (2035) Plus Project Phase 2 Buildout Intersection Geometries (Page 1 of 2)

Figure 9-1. Opening Year (2035) Plus Project Phase 2 Buildout Intersection Geometries (Page 2 of 2)

9.2 TYPICAL EVENT ANALYSIS (14,500 SPECTATORS)

A typical event with 14,500 spectators is expected to generate approximately 28,481 average daily vehicle trips with 1,682 AM Commuter Peak Hour Trips (356 inbound / 1,326 outbound), 2,976 PM Commuter Peak Hour Trips (2,239 inbound / 736 outbound), and 2,668 Pre-Event PM Peak Hour Trips (2,096 inbound / 572 outbound). The typical event scenario was analyzed for all peak periods.

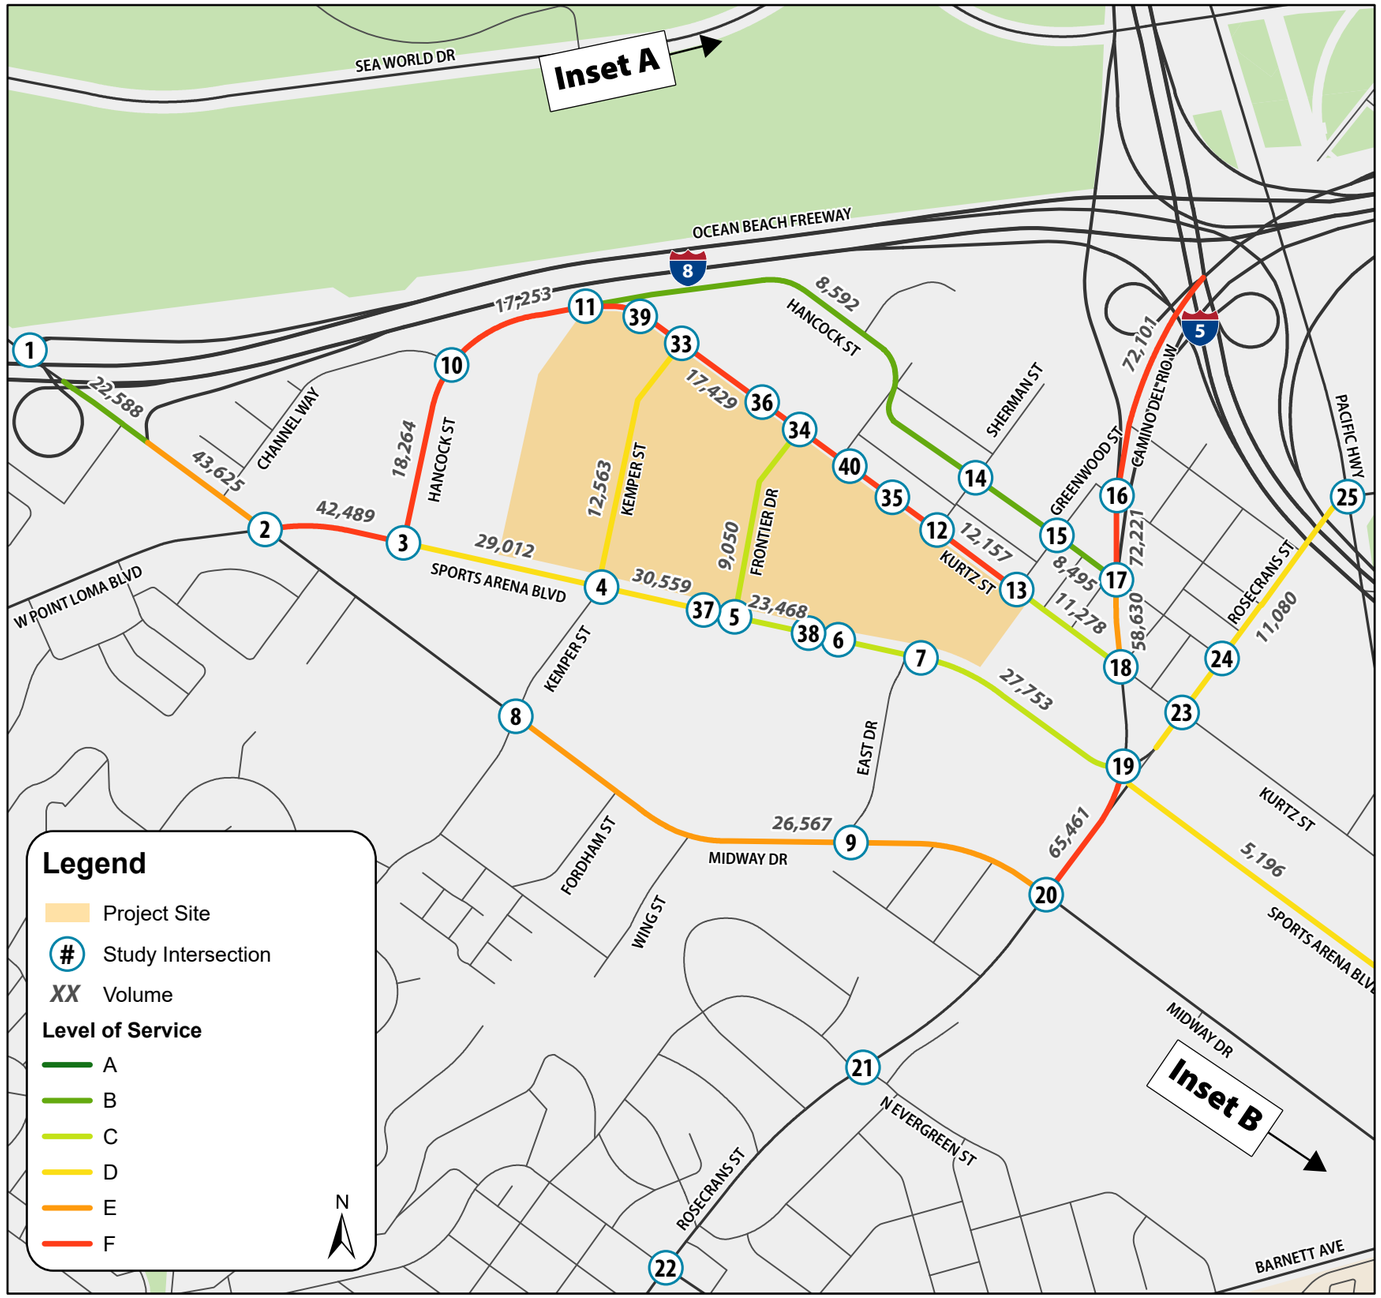
9.2.1 TRAFFIC VOLUMES

The Opening Year (2035) Plus Project Phase 2 Buildout traffic volumes will consist of the Opening Year (2035) Base scenario, and proposed project Phase 2 traffic for full buildout of the project with a 14,500-spectator event. **Figure 9-2** shows the Opening Year (2035) Plus Project Phase 2 Buildout traffic volumes during all peak hours for a 14,500-spectator event.

9.2.2 INTERSECTION ANALYSIS

Table 9-1 displays the LOS analysis results for the study intersections under Opening Year (2035) Plus Project Phase 2 Buildout scenario with 14,500-spectators.

Under the Opening Year (2035) Plus Project Phase 2 Buildout scenario, the project is expected to cause an effect at the following intersections:



- Intersection #2 – Sports Arena Boulevard / Midway Dr & W Point Loma Blvd (PM: LOS F; Pre-Event: LOS F; WKND: LOS F)
- Intersection #5 – West Drive / Frontier Drive & Sports Arena Blvd (PM: LOS F; Pre-Event: LOS F; WKND: LOS F)
- Intersection #14 – Sherman Street & Hancock Street (Pre-Event: LOS E)
- Intersection #16 – Camino del Rio W & Moore Street (PM: LOS E; Pre-Event: LOS E; WKND: LOS F)
- Intersection #17 – Camino del Rio W & Hancock Street (AM: LOS F)
- Intersection #19 – Rosecrans Street & Sports Arena Boulevard & Camino del Rio W (WKND: LOS F)
- Intersection #20 – Rosecrans Street & Midway Drive (AM: LOS E; PM: LOS E; Pre-Event: LOS E; WKND: LOS F)
- Intersection #22 – Rosecrans Street & Lytton Street (AM: LOS E; PM: LOS E)
- Intersection #27 – Pacific Highway & Enterprise Street (PM: LOS E; Pre-Event: LOS E)
- Intersection #28 – Midway Drive & Enterprise Street (PM: LOS E; Pre-Event: LOS E)
- Intersection #29 – Barnett Avenue & Midway Drive (PM: LOS E)

The following intersections operate at LOS E or F under the Opening Year (2035) Plus Project Phase 2 scenario, but are not identified as a project effect:

- Intersection #6 – Target Driveway and Sports Arena Boulevard (WKND: LOS E)
- Intersection #26 – Kurtz Street & Pacific Highway (PM: LOS F; Pre-Event: LOS F)

Appendix Z contains the intersection LOS calculation worksheets for the Opening Year (2035) Plus Project Phase 2 Buildout.

Notes:

Bold values indicate intersections operating at LOS E or F. **Bold and shaded** values indicate project significant impact.

ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds.

(a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a two-way stop-controlled intersection, delay refers to the worst movement.

(b) LOS calculations are based on the methodology outlined in the *Highway Capacity Manual 6th Edition and Highway Capacity Manual 2000 Edition* and performed using Synchro 11

*Intersection is analyzed as a roundabout using SIDRA software (HCM 6th Edition) in Opening Year (2035) Plus Project Phase 2 Buildout

Table 9-1. Opening Year (2035) Plus Project Phase 2 Buildout Intersection LOS Summary

Notes:

Bold values indicate intersections operating at LOS E or F. **Bold and shaded** values indicate project significant impact.

ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds.

(a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a two-way stop-controlled intersection, delay refers to the worst movement.

(b) LOS calculations are based on the methodology outlined in the *Highway Capacity Manual 6th Edition and Highway Capacity Manual 2000 Edition* and performed using Synchro 11

9.2.2.1 Intersection LOS Comparison for Proposed Roundabout

The Midway Rising project proposes to provide a single-lane roundabout at the intersection of Hancock Street/ Kurtz Street rather than a traffic signal, which is proposed in the Midway-Pacific Highway Community Plan. The roundabout is intended to improve operational flow for the project as well as the rest of the community as redevelopment continues to occur on the north side of Hancock Street.

Table 9-2 summarizes a comparison between the roundabout and signalized intersection LOS results under the Opening Year (2035) Plus Project Phase 2 Buildout scenario at the intersection of Hancock Street /Kurtz Street. **Table 9-2** shows that both proposed intersection controls would be expected to operate at an acceptable LOS D or better, but the roundabout control would be expected to operate with a lower average delay than the signal control.

Table 9-2. Intersection LOS Analysis Comparison for Proposed Roundabout at Hancock St / Kurtz Street

Peak Hour	Intersection Control	Analysis Method	Opening Year (2035) Plus Project Phase 2 Buildout	
			Delay (s)	LOS
AM	Roundabout	SIDRA (HCM 6th)	4.8	A
	Signal	Synchro (HCM 6th)	11.1	B
PM	Roundabout	SIDRA (HCM 6th)	7.8	A
	Signal	Synchro (HCM 6th)	11.5	B

Appendix Z shows analysis results for Intersection #11 modeled as a signalized intersection and a roundabout for the 2035 With Project Phase 2 Buildout Scenario AM and PM peak periods.

9.2.3 QUEUEING ANALYSIS

Table 9-3 displays the 95th percentile queues under the Opening Year (2035) Plus Project Phase 2 Buildout scenario with 14,500-spectators. The 95th percentile queue lengths reported represent an average of five SimTraffic runs. **Appendix AA** contains the 95th percentile queue worksheets for Opening Year (2035) Plus Project Phase 2 Buildout scenario with 14,500-spectators. Under Opening Year (2035) Plus Project Phase 2 Buildout scenario, queues exceed the existing available storage length at:

- 10 intersections in the Commuter AM peak hour,
- 16 intersections in the Commuter PM peak hour, and
- 14 intersections in the Pre-Event PM peak hour with 14,500-spectator event.
- 18 intersections in the Weekend Midday peak hour

9.2.4 ROADWAY SEGMENT ANALYSIS

The Opening Year (2035) Plus Project Phase 2 Buildout scenario roadway segment analysis was performed based on proposed roadway geometries and 2035 expected daily roadway segment volumes on a weekday, 14,500-spectator event day. **Table 9-4** summarizes the roadway segment LOS analysis at the study segments under Opening Year (2035) Plus Project Phase 2 Buildout scenario for a weekday event day.

Under Opening Year (2035) Plus Project Phase 2 scenario (14,500-spectator event), the project would be expected to cause a project effect at the following locations:

- Sports Arena Boulevard between I-8 EB On Ramp and W Point Loma Boulevard (LOS E)
- Sports Arena Boulevard between W Point Loma Boulevard and Hancock St (LOS F)
- Camino Del Rio W between Hancock Street and Kurtz Street (LOS E)
- Kurtz Street between Kemper Street and Frontier Drive (LOS F)
- Kurtz Street between Frontier Drive and Sherman Street (LOS F)
- Hancock Street between Sports Arena Boulevard and Channel Way (LOS F)
- Hancock Street between Channel Way and Kurtz Street (LOS F)

The following roadway segments would be expected to operate at LOS E or F under the Opening Year (2035) Plus Project Phase 2 Buildout scenario (14,500-spectator event), but are not identified as a project effect:

- Camino del Rio W North of Greenwood Street (LOS F)
- Camino Del Rio W between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)
- Midway Drive between Kemper Street and Rosecrans Street (LOS E)

Table 9-3. Opening Year (2035) Plus Project Phase 2 Buildout Queue Summary

#	Intersection	Movement	Storage Length/Link Distance (ft)	Peak Hour	2035 Base		2035 With Project		Project Effect?

Notes:

[1]Functional Classification based on the Midway Pacific Highway Community Plan.

[2]LOS E Capacity provided by City of San Diego staff. LOS E capacity of Segment 12 under WP Conditions is based on a 2-lane Collector with two-way left-turn lane as the project wouldn't construct the median for a Major Arterial on Rosecrans St because there is not a project effect, and instead proposes a 2-lane Collector with flex lanes.

[3]ADT - Average Daily Traffic.

[4]V/C Ratio - Volume-to-capacity ratio.

[5]LOS - Level of Service.

[6]With Project Classification based on roadway classifications proposed by the Midway Rising Project.

9.3 FULL CAPACITY EVENT ANALYSIS (20,000 SPECTATORS)

A full capacity event with 20,000 spectators is expected to generate approximately 32,689 average daily vehicle trips with 4,362 Pre-Event PM Peak Hour Trips (3,569 inbound / 793 outbound). The full capacity event was analyzed for the Pre-Event PM peak hour only.

9.3.1 TRAFFIC VOLUMES

The Opening Year (2035) Plus Project Phase 2 Buildout traffic volumes consist of the Opening Year (2035) Base scenario Plus proposed project Phase 2 traffic for full buildout of the project with a 20,000-spectator event. **Figure 9-3** shows the Opening Year (2035) Plus Project Phase 2 Buildout traffic volumes during all peak hours for a 20,000-spectator event.

9.3.2 INTERSECTION ANALYSIS

Table 9-1 displays the LOS analysis results for the study intersections under Opening Year (2035) Plus Project Phase 2 Buildout scenario with 20,000-spectators. Under Opening Year (2035) Plus Project Phase 2 scenario, 8 intersections would be expected to operate at LOS E or F during the Pre-Event PM peak hour with a 20,000-spectator event. **Appendix AB** contains the intersection LOS calculation worksheets for the Opening Year (2035) Plus Project Phase 2 Buildout scenario for the Pre-Event PM peak for a 20,000 spectator event.

9.3.3 QUEUEING ANALYSIS

Table 9-2 displays the 95th percentile queues under the Opening Year (2035) Plus Project Phase 2 Buildout scenario with 20,000-spectators. The 95th percentile queue lengths reported represent an average of five SimTraffic runs. **Appendix AC** contains the 95th percentile queue worksheets for the Opening Year (2035) Plus Project Phase 2 Buildout scenario with 20,000-spectators. Under the Opening Year (2035) Plus Project Phase 2 Buildout scenario, queues exceed the existing available storage length at 29 intersections in the pre-event PM peak with 20,000-spectator event.

9.3.4 ROADWAY SEGMENT ANALYSIS

The Opening Year (2035) Plus Project Phase 2 Buildout scenario roadway segment analysis was performed based on proposed roadway geometries and 2035 daily roadway segment volumes on a weekday, 20,000-spectator event day. **Table 9-5** summarizes the roadway segment LOS analysis at the study segments under the Opening Year (2035) Plus Project Phase 2 Buildout scenario for a 20,000-spectator, weekday event day. Under the Opening Year (2035) Plus Project Phase 2 Buildout scenario, all roadway segments would be expected to operate at LOS D or better on a weekday, 20,000-spectator event day except the following:

Under Opening Year (2035) Plus Project Phase 2 scenario (20,000-spectator event), the project would be expected to cause a project effect at the following locations:

- Sports Arena Boulevard between I-8 EB On Ramp and W Point Loma Boulevard (LOS E)
- Sports Arena Boulevard between W Point Loma Boulevard and Hancock St (LOS F)
- Camino Del Rio W between Hancock Street and Kurtz Street (LOS E)
- Kurtz Street between Kemper Street and Frontier Drive (LOS F)
- Kurtz Street between Frontier Drive and Sherman Street (LOS F)
- Hancock Street between Sports Arena Boulevard and Channel Way (LOS F)
- Hancock Street between Channel Way and Kurtz Street (LOS F)

The following roadway segments would be expected to operate at LOS E or F under the Opening Year (2035) Plus Project Phase 2 Buildout scenario (20,000-spectator event), but are not identified as a project effect:

- Camino del Rio W North of Greenwood Street (LOS F)
- Camino Del Rio W between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)
- Midway Drive between Kemper Street and Rosecrans Street (LOS E)

Figure 9-3. Opening Year (2035) Plus Project Phase 2 Traffic Volumes (20,000 spectators) (Page 1 of 2)

10 OPENING YEAR (2035) PLUS PROJECT PHASE 2 BUILDOUT PLUS IMPROVEMENTS

10.1 SIGNAL OPTIMIZATION

It is assumed that signal optimization will occur at all signalized intersections within the study area due to the increase in vehicle volumes and new travel patterns caused by the project, and the redevelopment of the NAVWAR facility that will require signal optimization to properly serve each approach.

Optimization would include:

- Optimized cycle lengths
- Optimized phase splits
- Optimized corridor offsets for coordinated corridors (Sports Arena Blvd, Rosecrans Street, Camino del Rio)
- Optimized lead/lag left turn phasing

These improvements have been applied to both the Opening Year (2030) Plus Project Phase 1 and the Opening Year (2035) Plus Project Phase 2 Buildout scenarios.

10.2 PROJECT INTERSECTION IMPROVEMENTS

The project would be expected to cause operational effects at the 11 intersections listed in Section 9.2. Operations could be improved to an acceptable level of service at 9 of these intersections by implementing the improvements described in Section 7.2 plus the ones in **Table 10-1** below. Similar to the Opening Year (2030) Plus Project Phase 1 Plus Improvements scenario, improvements made at 2 more of the intersections listed below would improve operations but the intersection would still operate at LOS E for the reasons listed below.

Locations of intersection improvements are shown in **Figure 10-1**. **Figure 10-2** illustrates the resulting lane geometries at the study intersections under Opening Year (2035) Plus Project Plus Improvements.

10.3 PROJECT ROADWAY IMPROVEMENTS

The project would be expected to cause operational effects in Opening Year (2035) Plus Project Phase 2 Buildout at the seven roadway segments listed in Section 9.3.4. The project proposes improvements to two segments. However, the project would still result in a transportation effect on roadway segments, as described further in **Table 10-2** below and **Table 7-2** in Section 7.3.

Table 10-1. Opening Year (2035) Plus Project Phase 2 Buildout Intersection Improvements Summary

Includes improvements from Opening Year (2030) Plus Project Phase 1 with the consideration of the following:

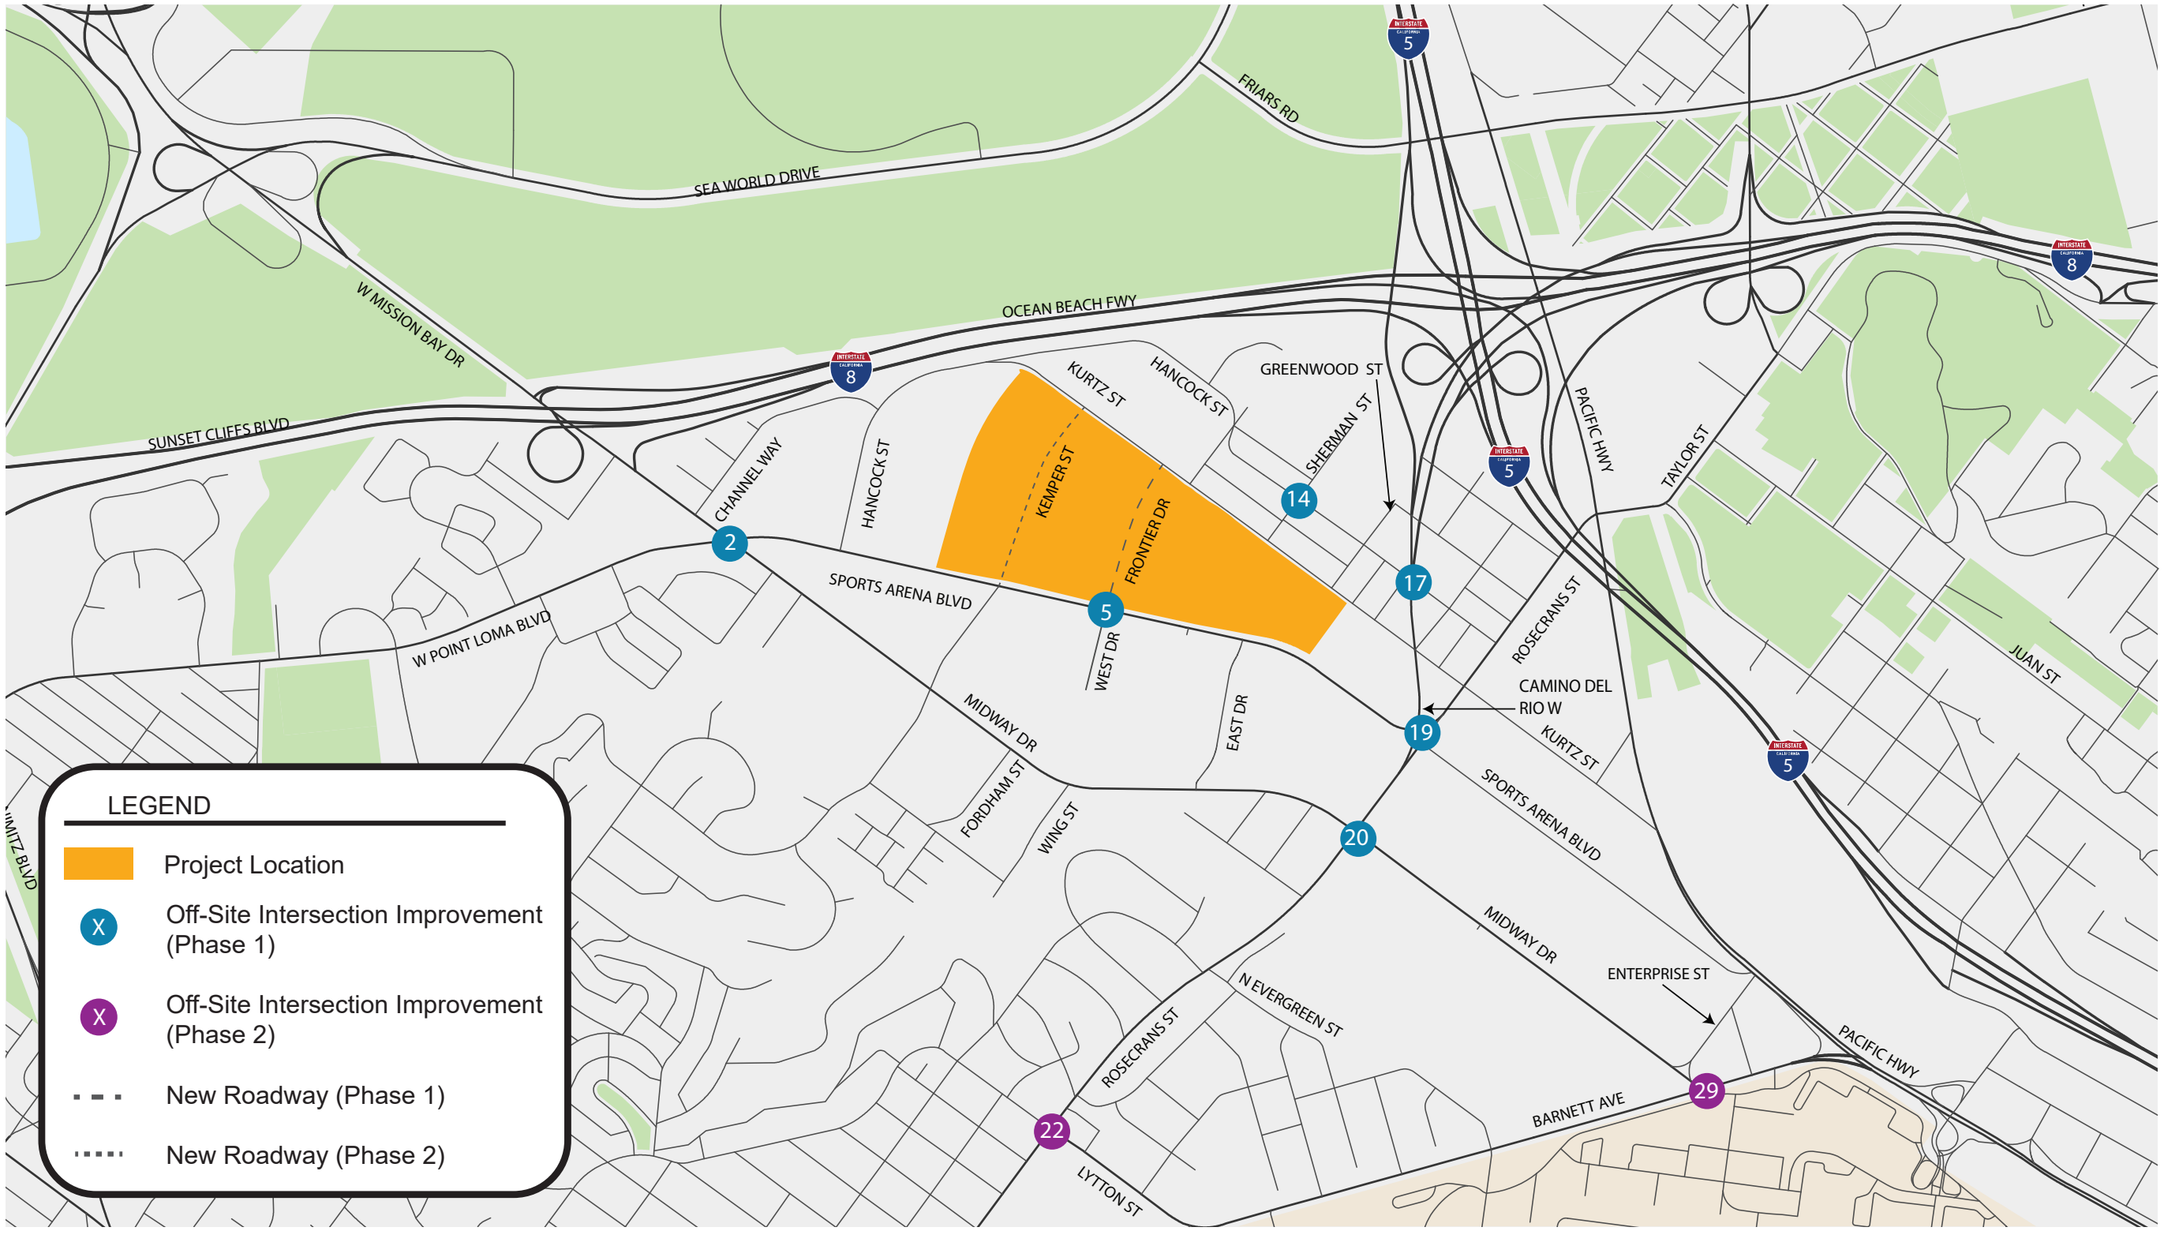
ID	Location	2035 Considered Improvement	2035 Improvement Decision
5	West Dr / Frontier Dr & Sports Arena Blvd	**Improvements:** Signal timing optimization. Increase in the overall signal cycle length to 105 seconds during the AM peak and 150 seconds during the PM and Pre-Event PM peaks. The increase in overall signal cycle length and optimized splits helps accommodate the increase in volumes for the eastbound left turn movement, westbound through movement, and southbound movements. **Results:** Improved to LOS E or better for all peaks. On event days, traffic control personnel would manage signal timing operations at this intersection during the PM peak, and would be able to manually provide green time to the heaviest movements.	**Midway Rising will improve this intersection to the extent feasible by optimizing signal timing and providing traffic control operators beginning at the start of the PM peak on event days.** *Improvements made in light of the CP where the number of eastbound left turn lanes is reduced from 2 to 1 to maintain three through lanes.*
22	Rosecrans Street & Lytton Street	**Improvements:** Restripe eastbound approach of Lytton Street to include 2nd eastbound left turn lane. No curb modifications would be required. **Results:** Improved to LOS D or better for all peaks	**Midway Rising will improve this intersection to an acceptable LOS by incorporating the improvements described.**
28	Midway Dr & Enterprise St	**Improvements:** No reasonable improvements can be made to increase operations. **Results**: Improved to LOS D or better for all peaks	**Midway Rising will <u>not</u> make improvements to this intersection.** *A majority of the trips assigned to this intersection are from the redevelopment of the NAVWAR facility, and are unrelated to the Midway Rising project. Additionally, this improvement does not make sense from a multimodal perspective, which is prioritized in the Midway-Pacific Highway Community Plan. The CP lists pedestrian-related improvements at this intersection, which include bulb-outs and a pedestrian refuge island. Adding any vehicle lanes to this intersection may preclude the addition of the improvements listed in the CP.*
29	Barnett Ave & Midway Dr	**Improvement:** Signal timing optimization. Decrease in overall cycle length to 110 seconds during the AM peak, 150 seconds during the PM peak, 100 seconds during the Pre-Event PM peak, and 90 seconds during the weekend peak helps decrease the amount of time unnecessarily dedicated to the southbound right turn movement, which helps serve all other movements more frequently. **Results:** Improved to LOS D or better for all peaks.	**Midway Rising will improve this intersection to an acceptable LOS by optimizing signal timing.**

Table 10-2. Opening Year (2035) Plus Project Phase 2 Buildout Roadway Segment Improvements Summary

Includes improvements from Opening Year (2030) Plus Project Phase 1 with the consideration of the following improvements:

ID	Location	2035 Considered Improvement	2035 Improvement Decision
2	Sports Arena Boulevard between I-8 EB On Ramp and W Point Loma Boulevard	Widening the roadway to a 6-Lane Major Arterial would improve roadway segment operations.	**Midway Rising will <u>not</u> improve this roadway segment.** Widening the roadway is infeasible due to limited right-of-way due to surrounding existing land uses. Additionally, class II bike lanes were recently added to this segment which involved a reduction in the number of vehicle lanes. Addition of vehicle lanes to this segment would require removal of these recent multimodal improvements. *Thus, Midway Rising does not recommend vehicle capacity improvements on this segment.*
3	Sports Arena Boulevard between W Point Loma Boulevard and Hancock Street	Widening the roadway to a 6-Lane Major Arterial would improve roadway segment operations.	**Midway Rising will <u>not</u> improve this roadway segment.** Widening the roadway is infeasible due to limited right-of-way due to surrounding existing land uses. Midway Rising proposes bus only lanes in both directions of Sports Arena Boulevard to improve transit connectivity to the Pacific Beach and Ocean Beach communities and increase transit ridership for access to and from the site, supporting City and State VMT reduction goals. Increasing the number of general-purpose travel lanes would negate the ability to implement bus only lanes. *Thus, Midway Rising does not recommend vehicle capacity improvements on this segment.*
18	Hancock Street between Sports Arena Boulevard and Channel Way	Widening the roadway beyond its ultimate classification of a 4-lane collector per the MPH Community Plan to a 4-lane with a two-way left-turn lane would improve roadway segment operations.	**Midway Rising will <u>not</u> improve this roadway segment <u>beyond</u> the ultimate classification planned for in the Community Plan.** The Midway Rising project will increase the capacity of this segment from a 2-lane collector to a 4-lane collector through restriping and converting angled parking to parallel parking (loss of approximately 20 parking spaces), consistent with the ultimate classification of the Community Plan. Widening the roadway beyond this is infeasible due to limited right-of-way due to surrounding existing land uses. Further increase in vehicular capacity beyond the ultimate roadway classification per the CP would not align with City or State climate action goals. *Thus, Midway Rising does not recommend vehicle capacity improvements on this segment beyond the ultimate classification from the Community Plan.*
19	Hancock Street between Channel Way and Kurtz Street	Widening the roadway beyond its ultimate classification of a 4-lane collector per the MPH Community Plan to a 4-lane with a two-way left-turn lane would improve roadway segment operations.	**Midway Rising will <u>not</u> improve this roadway segment <u>beyond</u> the ultimate classification planned for in the Community Plan.** The Midway Rising project will increase the capacity of this segment from a 2-lane collector to a 4-lane collector through restriping and converting angled parking to parallel parking (loss of approximately 16 parking spaces), consistent with the ultimate classification of the Community Plan. Widening the roadway beyond this is infeasible due to limited right-of-way due to surrounding existing land uses. Further increase in vehicular capacity beyond the ultimate classification per the CP would not align with City or State climate action goals. *Thus, Midway Rising does not recommend vehicle capacity improvements on this segment beyond the ultimate classification from the Community Plan.*

Figure 10-1. Intersection improvement Locations for Opening Year (2035) Plus Project Phase 2 Buildout



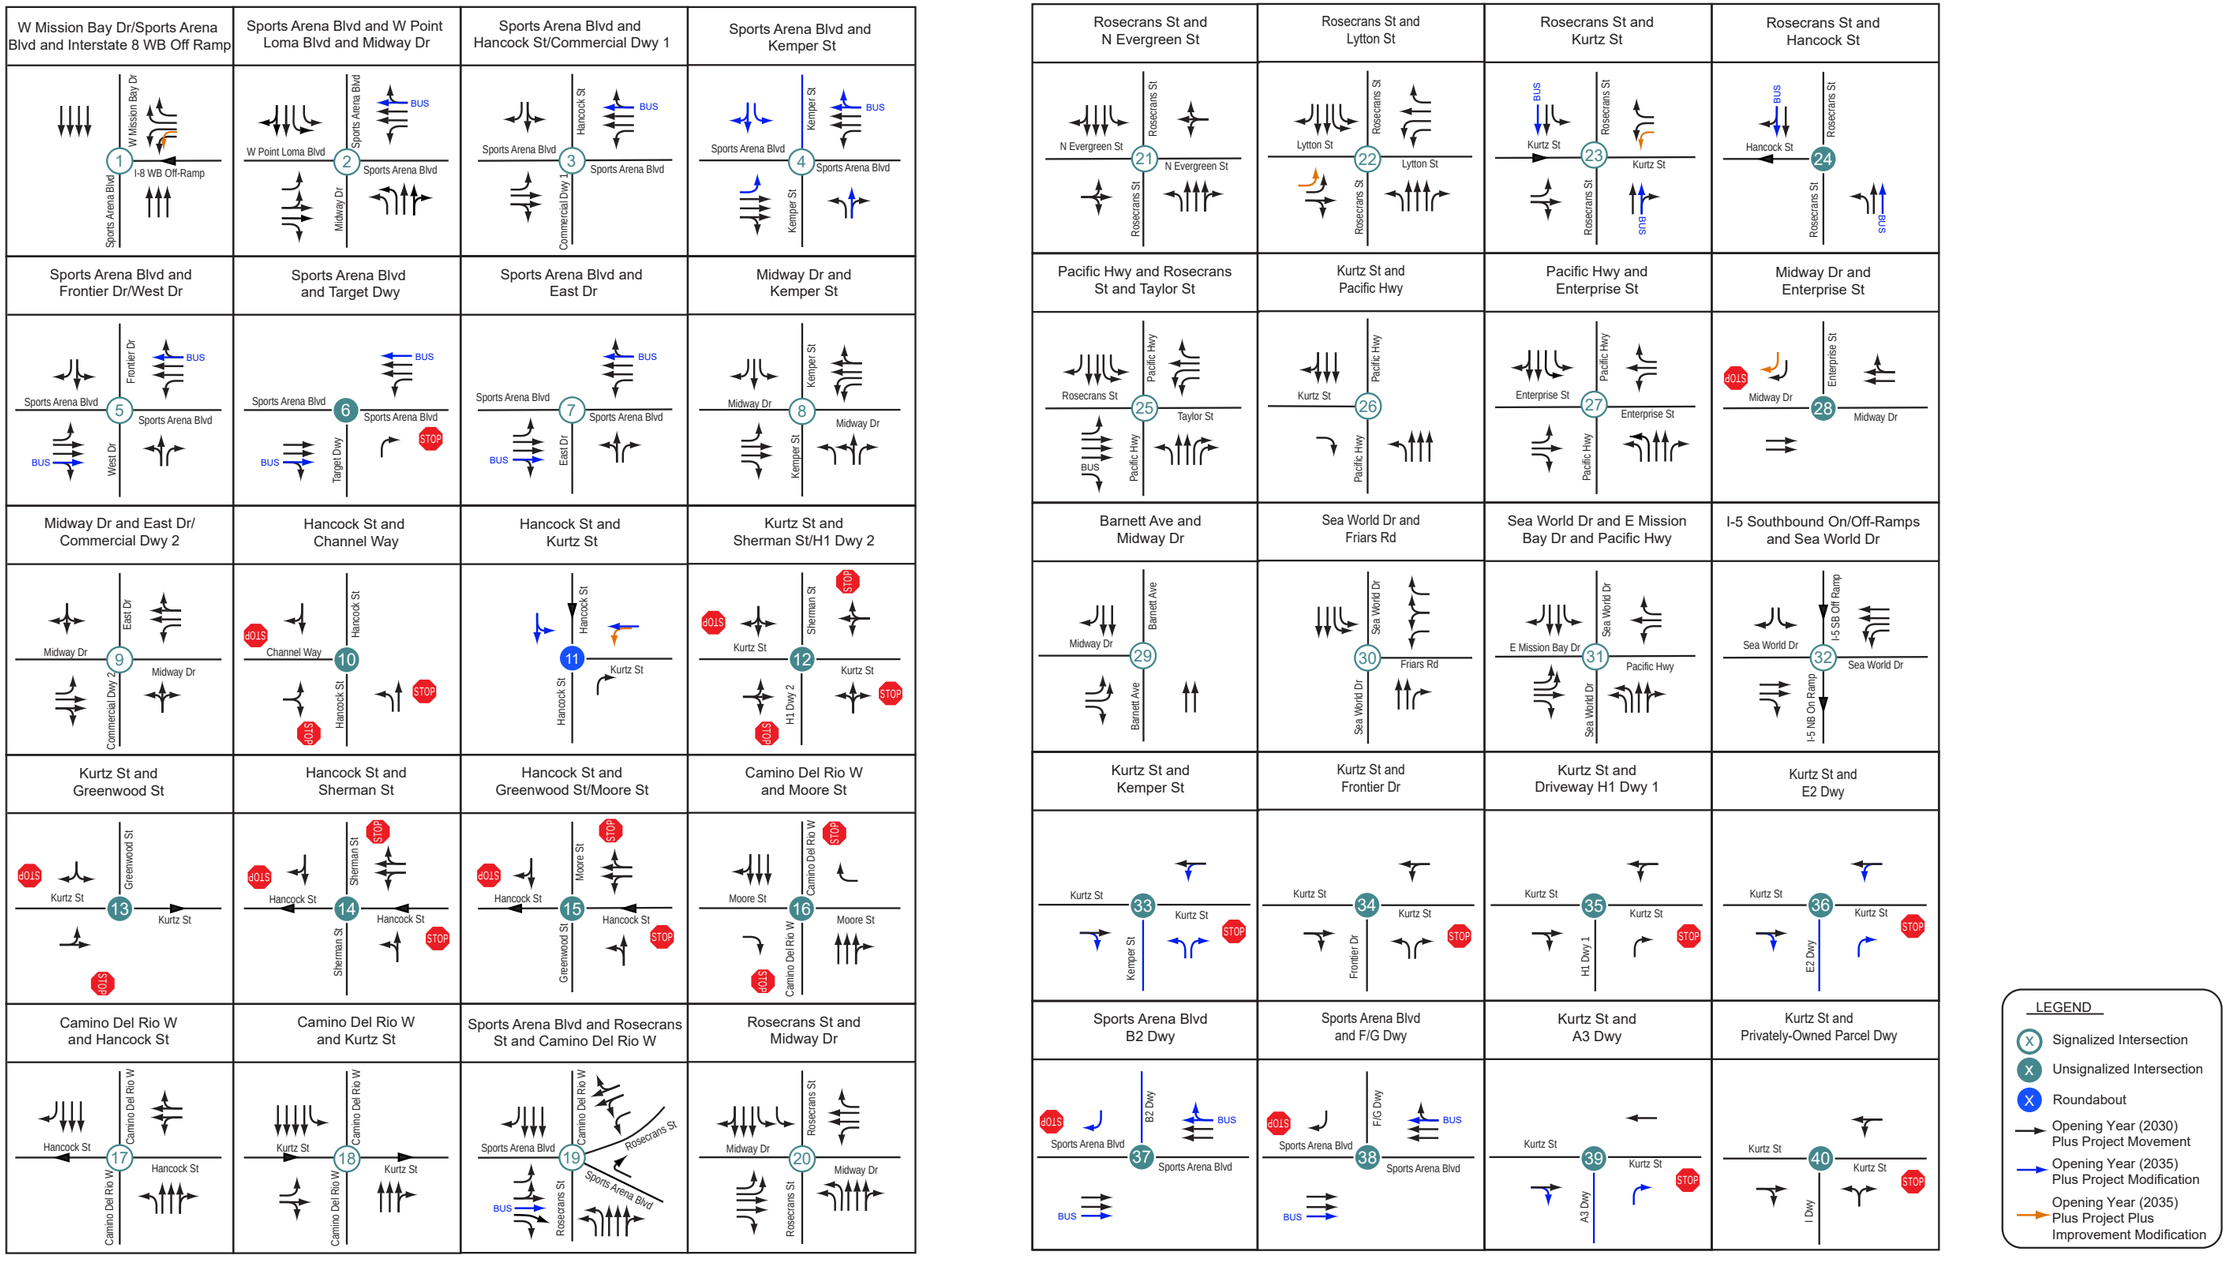


Figure 10-2. Opening Year (2035) Plus Project Phase 2 Buildout Plus Improvements - Intersection Geometries (Page 1 of 2)

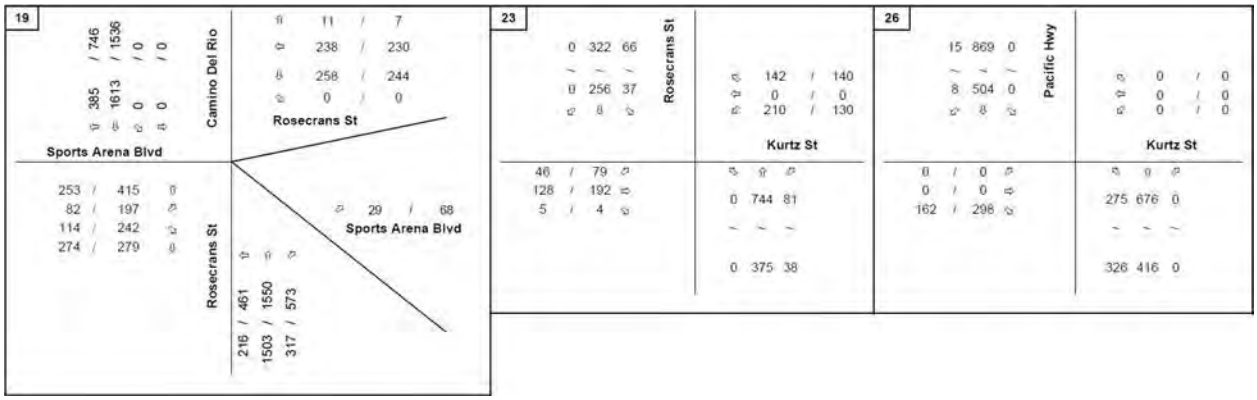
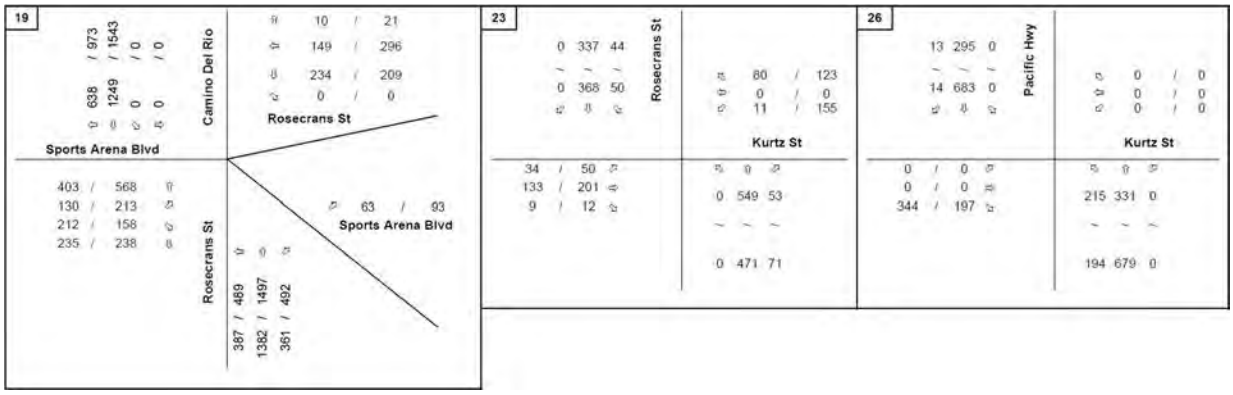
Figure 10-2. Opening Year (2035) Plus Project Phase 2 Buildout Plus Improvements - Intersection Geometries (Page 2 of 2)



10.4 OPENING YEAR (2035) PLUS PROJECT PHASE 2 BUILDOUT PLUS IMPROVEMENT VOLUMES

Under the Opening Year (2035) Plus Project Phase 2 Buildout Plus Improvements scenario, volume adjustments were applied at three intersections due to the lane geometry and control changes for the Sports Arena Boulevard/Rosecrans Street & Camino del Rio W intersection (Intersection #19). Specifically, the CP recommends reconstructing existing raised medians to allow the eastbound through movement from Sports Arena Boulevard across the intersection south of Rosecrans Street to Sports Arena Boulevard, a movement that is currently prohibited. It was assumed that approximately 75% of the northbound right turns from Rosecrans Street to Kurtz Street (Intersection #23) would choose to make the new through movement instead. These volumes were rerouted through the system for each scenario.

Figure 10-3 through **Figure 10-5** illustrate the traffic volume adjustments under Opening Year (2035) Plus Project Phase 2 Plus Improvements for Intersections #19, #23, and #26.



- **Figure 10-3:** Opening Year (2035) Plus Project Phase 2 Plus Improvements with 14,500-spectators for Commuter AM and Commuter PM Peak Hours
- **Figure 10-4:** Opening Year (2035) Plus Project Phase 2 Plus Improvements with 14,500-spectators for Pre-Event PM Peak Hour
- **Figure 10-5:** Opening Year (2035) Plus Project Phase 2 Plus Improvements with 20,000-spectators for Pre-Event PM Peak Hour

10.5 INTERSECTION ANALYSIS RESULTS

Table 10-3 illustrates the intersection LOS results for the Opening Year (2035) Plus Project Phase 2 Plus Improvements scenario. The LOS worksheets are contained in **Appendix AD**.

10.6 QUEUING ANALYSIS

Additionally, based on the SimTraffic analysis, many of the queue lengths exceed the storage pockets. At many of these locations, the baseline traffic volumes already exceed the storage pocket, or there is no room to construct an additional turn pocket or extend the length of the existing turn pocket. Therefore, no additional improvements to address queues are recommended in this phase of this project.

Table 10-4 summarizes the queue results under Opening Year (2035) Plus Project Phase 2 Plus Improvements scenario. The 95th percentile queue worksheets are contained in **Appendix AE**.

Notes:

Bold values indicate intersections operating at LOS E or F. **Bold and shaded** values indicate project significant impact.

ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds.

(a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a two-way stop-controlled intersection, delay refers to the worst movement.

(b) LOS calculations are based on the methodology outlined in the *Highway Capacity Manual 6th Edition and Highway Capacity Manual 2000 Edition* and performed using Synchro 11

11 PARKING & LOADING AREAS

The proposed project is located within the CC-3-6 zone and Parking Standards Transit Priority Area (PSTPA). The following sections of the Municipal Code were consulted in regard to parking required for each type of land use:

- Residential: Market Rate Dwelling Units: §142.0528; Affordable Dwelling Units: §142.0528
- Commercial (Retail and Restaurant): §142.0528
- Entertainment Center: §141.0622

Parking requirements influence which Mobility Choices Regulations outlined in Chapter 14, Article 3, Division 11 of the San Diego Municipal Code apply to the proposed project. Mobility Choices Regulations apply to both Commercial and Entertainment land uses, as discussed below. The purpose of the Mobility Choices Regulations is to assist in the City in determining the greatest VMT reductions that developments can implement to address project VMT impacts.

Additionally, San Diego Municipal Code (SDMC) Section 142.0528(c) requires a multiple dwelling residential development within a PSTPA to provide transportation amenities per *Appendix Q* of the Land Development Manual, and thus, transportation amenities are required for the residential portion of the Midway Rising project. Transportation amenities are intended to encourage alternative modes of transportation and facilitate non-vehicular access to everyday activities.

Per the SDMC (§142.0528), the project site is located within a PSTPA, and thus off-street vehicular parking spaces are not required for residential or commercial uses. If off-street parking is provided, the spaces must be unbundled, and include accessible, electric-vehicle, carpool, in addition to bicycle and motorcycle parking spaces. Detailed parking requirements for each land use are provided in this chapter.

11.1 RESIDENTIAL LAND USE

11.1.1 RESIDENTIAL PARKING REQUIREMENTS

Per Section 142.0528 of the SDMC (PSTPA Regulations), the minimum residential off-street vehicle parking space requirement is zero. Motorcycle parking and bicycle storage spaces are required per Section 142.0525(a) and Table 142-05C, regardless of whether vehicle parking is required. These parking spaces will be provided throughout the project site at the time when the residential units are constructed.

11.1.2 TRANSPORTATION AMENITIES

Mobility Choices Regulations do not apply to multi-family residential development in a Transit Priority Area that provides transportation amenities required by Section 142.0528 per Section 143.1102(g) of the SDMC. Midway Rising is located within a Parking Standards Transit Priority Area (PSTPA) as defined in the California Public Resources Code Section 21099 and City Mapping layers. SDMC Section 142.0528(c) requires a multiple dwelling residential development within a PSTPA to provide transportation amenities per *Appendix Q* of the Land Development Manual, and thus, transportation amenities are required for the residential portion of the Midway Rising project. Transportation amenities are intended to encourage alternative modes of transportation and facilitate non-vehicular access to everyday activities.

The project's Transportation Amenity requirements are determined by SDMC Section 142.0528(c). The following variables were applied to calculate a "score" for the amenity requirements:

- APN: 7602450900
- Total number of apartment units: 4,627
- Total number of bedrooms: 7,170

The Midway Rising project is required to provide at least 2 points of transportation amenities.

The project plans to provide 17 points of transportation amenities, which exceeds the required points as described in **Table 11-1.** The anticipated locations for these amenities are shown in **Figure 11-1.** The transportation amenities are anticipated to reduce vehicle trips by providing amenities that do not require residents to leave the site, or support those trips by other modes of transportation.

The additional points above those required are intended to offset the LOS E and F intersections that are unable to be improved to LOS D or better, as identified in Section 7.2 and Section 10.2 of this document, by encouraging a mode shift in travel patterns through provision of transportation amenities.

Table 11-1. Proposed Transportation Amenities

#	Amenity	Amenity Description	Project-Specific Notes	Transportation Amenities Points
1	**Transit and Active Transportation Infrastructure as outlined in Community Plan Mobility Elements**	Design and construct one or more of the following transit improvements on a street adjacent to the development: (a) the addition of pedestrian scale lighting (Section 142.0740), (b) sidewalk widening to 6 feet along property frontage and sidewalk widening to 10 feet near corners of intersection to allow for ADA required widths (this improvement shall be in addition to any improvements or measures otherwise required under other regulations or standards), (c) installation of transit shelters and/or benches. Transit shelters and benches shall be designed to MTS and ADA standards and require an approved agreement with MTS	The project proposes: a. Install a minimum of 6 ft wide sidewalks along the project frontage of Sports Arena Boulevard and Kurtz Street with at least 10 feet of space at the corners of intersections. b. Install transit shelters and benches for the three bus stops along Sports Arena Drive per MTS Design Guide. Transit shelters will be designed to MTS and ADA standards. An approved agreement with MTS will be recorded.	**5**
2	**Transit and Rideshare Information**	Install and maintain an on-site kiosk or information center with multi-modal wayfinding information and transit information. The kiosk information center shall be located in a prominent location that can easily be seen by residents entering and exiting the development. The kiosk or information center shall be shown on the project plans.	The project proposes an on-site multi-modal wayfinding kiosk in a location that meets the requirements of this amenity.	**1**
3	**On-Site Bicycle Repair Station**	Install and properly maintain an on-site public bicycle repair station. The bicycle repair station must be located in a well-lit area, near the street frontage and must include, at a minimum, a bike pump, English and metric Allen wrenches, pedal wrench, headset wrench, tire levers, and screwdrivers. The bicycle repair station shall be shown on the project plans.	The project proposes **two** on-site public bicycle repair stations which will meet the requirements of this amenity.	**4**
4	**Delivery Support**	Provide a secure area for receipt of deliveries that offers at least one of the following: (1) closed lockers, (2) temporary storage for packages, laundry, and other deliveries, or (3) temporary	The project proposes a secure area for receipt of deliveries which will meet the requirements of this amenity.	**1**

#	Amenity	Amenity Description	Project-Specific Notes	Transportation Amenities Points
		refrigeration for groceries. The secure area shall be shown on the project plans.		
5	**Outdoor Fitness Circuit**	Construct and maintain an outdoor fitness circuit within the development premises. The outdoor fitness circuit shall be available to the public at least 12 hours a day, 7 days a week and shall provide a minimum of 4 workout stations. The outdoor fitness circuit shall be shown on the project plans.	The project proposes an on-site outdoor fitness circuit which will meet the requirements of this amenity.	**2**
6	**Co-Working Space**	Provide and maintain a co-working space within the project premises available for resident use. The co-working space shall be at least 500 square feet and shall provide private or semi-private office work spaces. The co-working space shall be shown on the project plans.	The project proposes two co-working spaces which will meet the requirements of this amenity.	**4**
Total Transportation Amenities Points				**17**

11.2 COMMERCIAL LAND USE

11.2.1 COMMERCIAL PARKING REQUIREMENTS

The project is located in a PSTPA and there is no minimum vehicular parking requirement for the commercial component of this development provided the VMT Reduction Measure requirements of Section 142.0530 are met, as described below in Section 11.2.2.

Short-term and long-term bicycle parking spaces are required for non-residential land use per Section 142.0530(e)(1) and (2) and motorcycle parking is required per Section 142.0530(g) of the SDMC. These parking spaces will be provided throughout the project site at the time when the retail, restaurants, and Entertainment Center & Theater are constructed.

11.2.2 COMPLETE COMMUNITIES: MOBILITY CHOICES

Chapter 14, Article 3, Division 11 of the San Diego Municipal Code describes the Complete Communities: Mobility Choices Regulations. The purpose of the Complete Communities: Mobility Choices Regulations is to assist in determining the greatest VMT reductions that developments can implement to address a development's VMT impact. The regulations apply to all development projects as described in Section 143.1102, including any commercial or office development with greater than 5,000 square feet gross floor area. Thus, as the Midway Rising project proposes approximately 140,000 sf of commercial land use, the project must provide VMT reduction measures.

Section 143.1103 of the SDMC requires that the project provide VMT reduction measures to achieve a minimum of 5 points per land use (or 8 points per land use if the project provides more than the minimum vehicular parking required based on basic parking rates). **Table 11-2** provides the minimum parking requirement calculations for the commercial land uses using the basic parking rates. As a result, the retail and restaurant land uses are required to provide 8 points each, for a total of 16 points of VMT reduction measures to meet the requirements of the Complete Communities: Mobility Choices regulations for the commercial land use portion of the project.

Table 11-2. Commercial Land Use – VMT Reduction Measures Point Requirements (Basic Parking Rates)

Land Use	Required Parking[1]	Parking Provided	VMT Reduction Measure Points Required
Retail	90	185	8
Restaurant	120	246	8
Total (Commercial)		431	
Minimum VMT Reduction Measure Points Required (Commercial):			16

[1] *City of San Diego Municipal Code Table 142-05E and Table 142-05F*

Appendix T of the *Mobility Choices Regulations: Implementation Guidelines* provides a list of VMT reduction measures, and the number of points associated with each measure. **Table 11-3** summarizes the list of VMT reduction measures the project proposes to meet this requirement. These measures will be provided by the project when the first of each type of land use is constructed.

Table 11-3. Commercial Land Use – VMT Reduction Measures

Measure	Project-Specific Notes	Points
Pedestrian 1. Pedestrian scale lighting adjacent to public pedestrian walkways along the entire development frontage.	Pedestrian scale lighting will be provided along the project frontage roadways of Sports Arena Boulevard and Kurtz Street	0.5
Pedestrian 2. Installing pop-outs at adjacent intersections or curb extensions at adjacent mid-block crosswalks. Installation shall comply with the Street Design Manual Traffic Calming Chapter. Coordination with City Fire-Rescue Department staff and/or San Diego Metropolitan Transit System/North County Transit District may be required.	3 locations: • Sports Arena Boulevard & Frontier Drive (half intersection) • Sports Arena Boulevard & Kemper Street (half intersection) • Frontier Drive mid-block crossing (South) (full intersection)	5
Pedestrian 9. Widening sidewalk within the existing public right-of-way to Street Design Manual standards. The reduction of parkway/landscape buffer to less than the width required by the Street Design Manual standards to widen sidewalk width is not permitted. Requires replacement of existing sidewalk.	Multi-use path along Kurtz Street and Rosecrans Street (approximately 2,200 feet)	1.25
Bicycle 12. Providing on-site bicycle repair station.	Located near Class I path along Sherman Street alignment through site.	1.5
Bicycle 13. Installing new bicycle infrastructure (Class I, II, IV) that is part of the City's planned bikeway network that closes or incrementally closes an existing gap between two existing bikeways.	Class I multi-use path proposed for the north side of Sports Arena Boulevard, east side of Frontier Drive, south side of Kurtz Street, and east side of Rosecrans Street that would connect to Class II bike lanes on Pacific Highway and Sports Arena Boulevard (approximately 3,960').	2.25
Transit 19. Providing high cost amenities/upgraded features to an existing transit stop (above existing condition), i.e., addition of shelter, real time bus information monitors.	Provide enhanced amenities at proposed new bus stop on the west side of the Sports Arena Boulevard / Kemper Street intersection, including a shelter. Relocate existing bus stop (ID 13345) and upgrade to a RAPID bus stop per the MTS Designing for Transit Manual (February 2018) including real-time digital display for rapid bus stop and rapid shelter.	2.5
Transit 20. Providing low cost amenities/upgraded features to an existing transit stop (above existing condition), i.e., addition of bench, public art, static schedule and route display, trash receptacle.	Provide system map for local bus stop (ID 13344) on Sports Arena Boulevard.	1
Other 25. Installing a traffic calming measure, such as speed feedback signs, median slow points (chokers), and speed table/raised crosswalk. Installation shall comply with the Street Design Manual Traffic Calming Chapter. Coordination with City Fire-Rescue Department staff and/or MTS/NCTD may be required.	Raised crossing / intersection on Frontier Drive.	2.5
Total VMT Reduction Measure Points (Commercial)		**16.5**

11.3 ENTERTAINMENT LAND USE

11.3.1 ENTERTAINMENT CENTER PARKING REQUIREMENTS

Per Section 141.0622 (d) of the SDMC (Sports Arenas and Stadiums), off-street parking shall be provided at a level sufficient to serve the facility without impacting adjacent or nearby property.

11.3.2 ENTERTAINMENT CENTER PARKING PROVIDED

The project will provide 2,100 spaces to accommodate events (along with transit, rideshare, biking, and walking) for up to 10,000 attendees. The 2,100 spaces are considered "right sized" for the site; the parking provided enables for the site to accommodate parking for a typical event on-site and minimize empty parking structures/spaces through the year (200 days of the year with no event). Limiting the amount of available parking has been found to encourage spectators to utilize other modes of transportation and potentially minimize the amount of traffic to be added to the roadway network. As discussed in Traffic Considerations for Special Events (ITE, 1976), larger stadiums and venues with higher generating-events, like weekend sporting events and high-selling concerts proposed at the proposed Entertainment Center experience higher vehicle occupancy rates. These types of events appeal to captive riders (i.e. teenagers and seniors), who are more likely to use alternative modes of transportation, and venues with limited parking spaces yield higher vehicle occupancy rates.

For events over 10,000 spectators, Midway Rising Project will maintain contracts with several entities—e.g., adjacent parking structures, business parks, and major landowners—for the use of their parking lots as overflow event parking.

11.3.3 COMPLETE COMMUNITIES: MOBILITY CHOICES (VMT REDUCTION MEASURES)

As discussed in the commercial land use section, this project is subject to Complete Communities: Mobility Choices Regulations.

Section 143.1103 of the SDMC requires that the project provide VMT reduction measures to achieve a minimum of 5 points per land use or 8 points per land use if the project provides more than the minimum vehicular parking required based on basic parking rates. **Table 11-4** provides the minimum parking requirement calculations for the entertainment land use using the basic parking rates. As a result, the entertainment land use is required to provide 5 points of VMT reduction measures to meet the requirements of the Complete Communities: Mobility Choices regulations.

Table 11-4. Entertainment Land Use – VMT Reduction Measures Point Requirements (Basic Parking Rates)

Land Use	Required Parking[1]	Parking Provided	VMT Reduction Measure Points Required
Entertainment	5,333	2,100	5
Minimum VMT Reduction Measure Points Required (Entertainment):			5

[1] *City of San Diego Municipal Code Table 142-05G*

Appendix T of the *Mobility Choices Regulations: Implementation Guidelines* provides a list of VMT reduction measures, and the number of points associated with each measure. **Table 11-6** summarizes the list of VMT reduction measures the project proposes to meet this requirement, and **Figure 11-2** shows the anticipated locations for these amenities. These measures will be provided by the project when this land use is constructed.

11.4 PARKING SUMMARY

Table 11-5 summarizes the required and provided vehicle parking for each proposed land use.

Table 11-5. Parking Summary Table

Land Use	Required Vehicle Parking Spaces	Proposed Vehicle Parking Spaces	Required/ Provided Short-Term Bike Parking Spaces	Required/ Provided Long-Term Bike Parking Spaces	Required/ Provided Motorcycle Parking Spaces	Required/ Provided Zero Emissions Vehicle Parking Spaces
Commercial	0	431	22	22	9	204
Entertainment Center	*	2,100	105	105	42	1,050
Residential	0	5,216	0	2,104	464	2,088
Total	*	**7,747**	**127**	**2,231**	**515**	**3,343**

*City of San Diego Municipal Code Section 141.0622 (d) indicates that off-street parking for sports arenas and stadiums shall be provided at a level sufficient to serve the facility without impacting adjacent or nearby property.

11.5 LOADING SPACES

The project proposed to provide off-street loading spaces for each land use as required by Section 142.1010 and Table 142.10B of the SDMC. Per the SDMC, the Midway Rising project requires a minimum of 17 residential loading zones, 5 commercial loading zones, and 2 entertainment center loading zones. The Midway Rising project proposes to provide 19 residential loading zones, five commercial loading zones, and two entertainment center loading zones for a total of 26 loading zones, which complies with this requirement.

Figure 11-3 displays the proposed loading zones to be provided on the site.

Table 11-6. Entertainment Land Use – VMT Reduction Measures

Measure	Project-Specific Notes	Points
Pedestrian 2. Installing pop-outs at adjacent intersections or curb extensions at adjacent mid-block crosswalks. Installation shall comply with the Street Design Manual Traffic Calming Chapter. Coordination with City Fire-Rescue Department staff and/or San Diego Metropolitan Transit System/North County Transit District may be required.	2 locations: • Kemper Street mid-block crossing (North) (full intersection) • Kemper Street mid-block crossing (South) (full intersection)	5
Bicycle 12. Providing on-site bicycle repair station.	Located near Blocks D1 and D2	1.5
Transit 20. Providing low cost amenities/upgraded features to an existing transit stop (above existing condition), i.e., addition of bench, public art, static schedule and route display, trash receptacle.	Provide system map for local bus stop (new stop) on Sports Arena Boulevard on the west side of Kemper Street.	1
Total VMT Reduction Measure Points (Entertainment)		**7.5**

12 SYSTEMIC SAFETY REVIEW

12.1 INTERSECTION SYSTEMIC SAFETY REVIEW

The TSM requires a Systemic Safety Review to determine if study intersections meet the criteria to be identified as a systemic hotspot for vehicles, pedestrians and bicycles. A review of the City of San Diego *Systemic Safety The Data-Driven Path to Vision Zero,* dated April 2019, indicated that an intersection can be considered a hotspot location based on intersection control, roadway cross-section, and primary roadway Average Daily Traffic (ADT). The Systemic Safety Review was completed for opening Year (2030) Plus Project Phase 1 and for Opening Year (2035) Plus Project Phase 2 Buildout scenarios.

12.2 SAFETY ANALYSIS RESULTS

Table 12-1 through **Table 12-5** summarize the systemic hotspots identified for vehicles, pedestrians, and bicycles. The vehicular and pedestrian hotspot analysis both utilize traffic volumes to determine hot spot locations. These two analyses were performed using both Opening Year (2030 and 2035) Plus Project volumes. Because the same hotspots were identified for both scenarios, all countermeasures will be implemented by the project in Opening Year (2030).

Table 12-1. Vehicular Systemic Hotspots Analysis (with Opening Year 2030 Plus Project Traffic Volumes)

32	Sea World Dr & I-5 SB Ramps	Signalized	4-Lane	N/A	No	

12.3 SYSTEMIC SAFETY REVIEW RECOMMENDATIONS

Based on the review, the following hotspots and recommended countermeasures were identified that the project will provide:

- **Recommended Vehicle Countermeasure**: Retroreflective Signal Head Backplates
  - Intersection #9 - Midway Drive & East Drive
  - Intersection #20 - Rosecrans Street & Midway Drive
  - Intersection #22 - Rosecrans Street & Lytton Street
  - Intersection #25 - Pacific Highway & Rosecrans Street/Taylor Street
  - Intersection #29 - Midway Drive & Barnett Avenue
  - Intersection #30 - Friars Road & Sea World Drive
- **Recommended Pedestrian Countermeasure**: Lead Pedestrian Interval (see next section for more detail)
  - Intersection #9 - Midway Drive & East Drive
  - Intersection #23 - Rosecrans Street & Kurtz Street
- **Recommended Bicycle Countermeasure**: Public Safety Messaging Campaign (see next section for more detail)
  - Intersection #8 - Midway Drive & Kemper Street (no bike lanes on either street, therefore engineering countermeasure of bike detection is not applicable)
  - Intersection #9 - Midway Drive & East Drive (no bike lanes on either street, therefore engineering countermeasure of bike detection is not applicable)
  - Intersection #23 - Rosecrans Street & Kurtz Street (future multi-use path would typically not have loop detection)
  - Intersection #27 - Pacific Highway & Enterprise Street (bike detection already provided on Pacific Highway on the northbound approach, no bike pockets are available on the southbound approach, therefore engineering countermeasure of bike detection is not applicable)
  - Intersection #29 - Midway Drive & Barnett Avenue (bike detection already provided on Barnett Avenue; there are no bike lanes on Midway Drive, therefore engineering countermeasure of bike detection is not applicable)
  - Intersection #30 - Friars Road & Sea World Drive (only the eastbound approach has bike lane with no conflicting vehicle movements, therefore engineering countermeasure of bike detection is not applicable)
  - Intersection #31 - Sea World Drive & E Mission Bay Drive/Pacific Highway (Sea World Drive does not have bike lanes; bike detection not applicable)

12.3.1 PEDESTRIAN COUNTERMEASURE: LPI

For the two intersections where LPIs were recommended, an operational analysis was performed to make sure the intersections would still operate acceptably with the additional time provided to pedestrians. The results of these analyses are summarized below in **Table 12-6.**

Table 12-6. LPI Countermeasure Analysis Results

#	Intersection	Peak Hour	2030 Pus Project Plus Improvement		2035 Pus Project Plus Improvement	
			Delay	LOS	Delay	LOS
9	Midway Dr & East Dr/ Commercial Dr	Commuter AM	21.5	C	16.9	B
		Commuter PM	26.5	C	40.8	D
23	Rosecrans St & Kurtz St	Commuter AM	16.6	B	14.1	B
		Commuter PM	41.5	D	52.3	D

Source: HCM 6th Methodology in Synchro 11.0

Since the intersections would still be expected to operate acceptably, the project will implement Lead Pedestrian Interval signal modifications at both intersections at Opening Year (2030).

12.3.2 BICYCLE COUNTERMEASURE: SAFETY CAMPAIGN

The project will institute a Public Safety Messaging Campaign by posting flyers in the informational area of each residential building, as well as attaching the flyers to the digital ticket sales. The flyers would include statistics on bicycle-involved collisions and safe behaviors for bicyclists and drivers to minimize collisions and severity. Specifically, the education should focus on how bicyclists should behave at side-street stop-controlled intersections, and general behaviors for drivers when bicyclists are present.

13 ADDITIONAL TOPICS

This section discusses additional transportation topics including; site access and circulation; and pedestrian, bicycle, and transit access to the project.

13.1 SITE ACCESS AND ON-SITE CIRCULATION

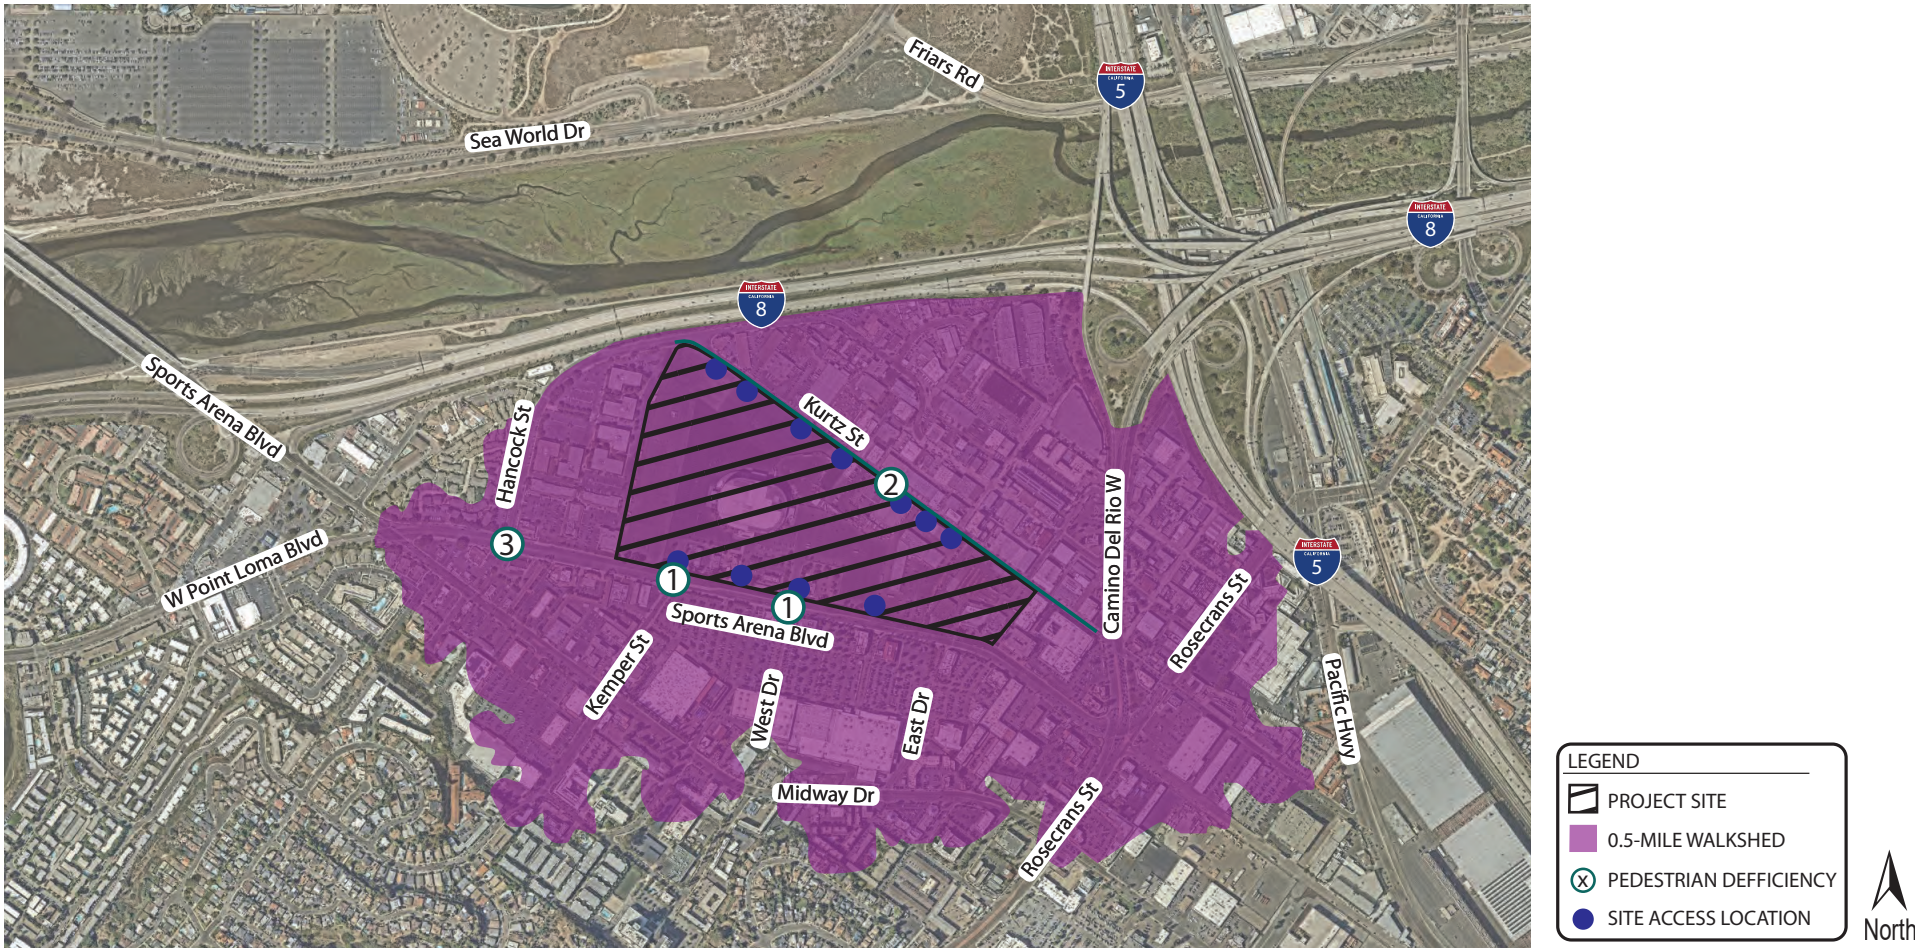
Vehicle access for the project site is proposed via the following four locations:

- Intersection #4: Sports Arena Boulevard/Kemper Street (Signalized)
- Intersection #5: Sports Arena Boulevard/Frontier Drive (Signalized)
- Intersection #33: Kurtz Street/Kemper Street (Stop Controlled)
- Intersection #34: Kurtz Street/Frontier Drive (Stop Controlled)

Additionally, seven driveways would provide direct access to parking garages on the proposed project site:

- Intersection #37: Sports Arena Boulevard/Driveway B2 (Stop-Controlled)
- Intersection #38: Sports Arena Boulevard/ Driveway F/G (Stop-Controlled)
- Intersection #39: Kurtz Street/Driveway A3 (Stop-Controlled)
- Intersection #32: Kurtz Street/Driveway E2 (Stop-Controlled)
- Intersection #35: Kurtz Street/Driveway H1 (Stop-Controlled)
- Intersection #12: Kurtz Street/Sherman Street/Driveway H2 (Stop-Controlled)
- Intersection #40: Kurtz Street/Driveway X (Stop-Controlled)

Internal circulation is facilitated via the proposed new roadways, Kemper Street and Frontier Drive, which run parallel to each other through the project site, and connect Sports Arena Boulevard and Kurtz Street. Kemper Street provides access to residential land uses and parking garages, while Frontier Drive provides access to commercial, residential, and entertainment land uses. Parking is primarily provided via structures in each building; however, on-street parking is also provided on Kemper Street and Frontier Drive.



Pedestrian and bicycle access is also provided along Kemper Street and Frontier Drive, as well as throughout many of the green spaces across the site.

13.2 PEDESTRIAN FACILITIES

This section presents a qualitative evaluation of the existing pedestrian network within the project study area and includes a walkshed analysis that identifies any pedestrian barriers and walkability. The purpose of this evaluation is to provide a complete network of pedestrian-friendly, multi-modal facilities throughout the community and create a comfortable pedestrian experience consistent with the City of San Diego Pedestrian Master Plan (2006) and the Midway-Pacific Highway Community Plan (2018) pedestrian policies.

The walkshed analysis was performed using the TravelTime API Map Demo. This model was built by TravelTime from a range of data sets including OpenStreetMap and country-specific data. Walkshed maps including all locations within ½ mile walking distance measured from each pedestrian access point to the site were generated using the API. The Project's walkshed is shown in **Figure 13-1**.

Figure 13-1. Existing Walkshed

The following pedestrian environment deficiencies were identified within the walkshed:

1. Crossings along Sports Arena Boulevard at Kemper Street and West Drive providing site access lack crosswalk striping across north side of Sports Arena Boulevard.
2. South side of Kurtz Street has narrow and missing sidewalk sections
3. Curb ramp missing at southwest corner of Intersection # 3: Sports Arena Boulevard/Hancock Street

Project improvements for pedestrians include:

- Construct non-contiguous sidewalk facilities along the project frontages on Sports Arena Boulevard and Kurtz Street
- Construct non-contiguous sidewalk facilities along both sides of the proposed new roadways, Kemper Street and Frontier Drive
- Provide ADA-compliant curb ramps across all driveways and intersection crossings
- Add new crosswalks with pedestrian countdown signal heads across the southbound approaches of Intersection #4 Sports Arena Boulevard/Kemper Street and Intersection #5 Sports Arena Boulevard/Frontier Drive
- Add two mid-block crossings across Kemper Street and one mid-block crossing across Frontier Drive (See warrant analysis in the next section)
- Construct raised crosswalk on Frontier Drive between Block D2 and Block H2
- Construct non-contiguous and contiguous, internal sidewalk network connecting residential, commercial and entertainment center land uses

13.2.1 UNCONTROLLED CROSSWALK WARRANTS

The project proposes mid-block crosswalks on Kemper Street and Frontier Drive to facilitate anticipated heavy pedestrian travel flows based on locations of attractors and generators. The following four locations were evaluated against the City of San Diego Pedestrian Crosswalk Guidelines, adopted in 2015 as Council Policy 200-07. Per the guidelines, a location qualifies for a marked crosswalk if it meets each of the basic warrants and scores a minimum of 16 points for the point warrants.

- Kemper Street and mid-block crossing (North) – warrants met, crossing treatment recommended
- Kemper Street and mid-block crossing (South) – warrants met, crossing treatment recommended
- Frontier Drive and mid-block crossing (North) – warrants met, crossing treatment recommended
- Frontier Drive and mid-block crossing (South) – warrants met, crossing treatment recommended

The warrants system and points awarded are heavily geared towards providing crossings on existing roadways. However, these roadways and the land uses that are anticipated to produce the pedestrian demand do not currently exist. The mid-block crossing on Frontier Drive (South) meets the warrant because the crossing provides a direct pedestrian connection between parking at Blocks F and G and retail located on the west side of Frontier Drive, and between event parking in Block B2 and the Entertainment Center in Block I.

Table 13-1 indicates the recommended crossing treatments for locations that meet the warrants. The category thresholds are based on vehicle volumes, vehicle speeds, and pedestrian crossing distance at the proposed location. Location types are divided into categories A, B, C, and D, and are used to determine the appropriate treatment for the proposed marked crosswalk location.

Table 13-1. Crossing Treatment Recommendations from Council Policy 200-07

Crossing Distance[2]	Roadway ADT (vehicles per day)				
	< 1,500	1,501 – 5,000	5,001 – 12,000	12,001 – 15,000	> 15,000
< 40'	A	B	B	C	C / D[1]
40' to 52'	A	B	C	C / D[1]	D
> 52'	A	B / C[1]	C / D[1]	D	D

1. For streets with more than one lane at an approach or posted speed limit 30 mph or greater.
2. Crossing distance can be measured to a pedestrian refuge island if one is present.

Source: City of San Diego (February, 2015)

Based on the table, crossing treatment Category B is recommended for the crossings on Frontier Drive, and crossing treatment Category C is recommended for the crossings on Kemper Street.

Treatments for Category C crosswalks should apply two treatments, including radar speed feedback signs, striping changes, Rectangular Rapid Flashing Beacon (RRFB), staggered crosswalks with pedestrian refuge islands, or horizontal deflection traffic calming treatments. The following Category C treatments are recommended for each location on Kemper Street:

- Kemper Street mid-block crossing (North): RRFB and narrower lanes than typical (narrow lanes are incorporated into the design of the proposed new roadway)
- Kemper Street mid-block crossing (South) – RRFB and narrower lanes (narrow lanes are already incorporated into the design of the roadway)

Treatments for Category B crosswalks should include either "Yield to Pedestrian" signage if a median is present, RRFBs, or raised crosswalk or other traffic calming treatments. The following Category B treatments are recommended for each location on Frontier Drive:

- Frontier Drive mid-block crossing (North) – raised crosswalk and RRFB
- Frontier Drive mid-block crossing (South) – RRFB

The guidelines require additional treatments to be installed prior to the crosswalk. However, due to the mixed-use nature of this site, and the level of pedestrian demand anticipated to occur, crosswalks and treatments are recommended to be installed with construction of the roadways rather than waiting to install the treatments until after the site is constructed.

The crosswalk warrant analyses for each of the four proposed crossings are summarized in **Table 13-2** through **Table 13-5.** The location of each of the proposed crossings in relation to the nearest uncontrolled crossing are shown in **Figure 13-2**.

Table 13-2. Uncontrolled Crosswalk Warrant - Kemper Street and Mid-Block Crossing (North)

Project Name: Midway Rising **Project Location: Kemper Street and Mid-block Crossing (N)**

Warrants		Description	Project Specific Notes	Warrant Met?
Basic Warrants (location must meet all basic warrants)	Pedestrian Volume Warrant	Pedestrian volumes must be equal to or greater than ten (10) pedestrians per hour during the peak pedestrian hour. Children under 13, elderly over 64 years and/or disabled persons count as 1.5 pedestrians. Alternatively, this warrant can be satisfied using Latent Pedestrian Demand if conditions (a), (b), or (c).	Crossing does not exist; Latent Pedestrian Demand conditions used instead. Location meets condition (c)	Yes
	Approach Speed Warrant	The 85th percentile approach speed must be equal to or lower than 40 MPH. This warrant does not apply when a pedestrian hybrid beacon or a pedestrian traffic signal will be installed.	Roadway does not exist, therefore speed cannot be evaluated. Roadway speed limit will be 25 mph, and will includes traffic calming measures such as narrow 10' lanes and curb extensions. Adjacent land uses include residential and retail with a lot of pedestrian and bicycle activity. Speeds are expected to remain below 40 mph.	Yes
	Nearest Controlled Crossing	The proposed location must be further than 250 feet from the nearest controlled crossing location (measured from the nearest edge of the proposed marked crosswalk to the closest edge of the controlled crossing).	Nearest controlled crossing location is 450' to the north.	Yes
	Visibility Warrant	The motorist must have an unrestricted view of all pedestrians at the proposed location for the distance required by the following table (stopping sight distance is to be interpolated when 85th percentile speed is between 5 mph increments): **85th Percentile Speed (MPH)** / **Stopping Sight Distance (feet)** 25 / 150 30 / 200 35 / 250 40 / 300	Roadway does not exist. A 30 mph 85th percentile speed is assumed(conservative approach to 25 mph speed limit). Curb extensions will allow pedestrians to be visible to vehicles for at least 200'.	Yes
	Illumination Warrant	The proposed location must have existing lighting.	Project proposes lighting at the crosswalks and along the project roadways.	Yes
	Accessibility Warrant	The proposed location must have existing accessibility to disabled pedestrians or have accessibility improvements programmed.	The crosswalk and curb ramps are designed to meet ADA requirements.	Yes
			Is the Basic Warrant met?	**Yes**

Warrants		Description	Project Specific Notes	Points
Points Warrant (location must score a minimum of 16 points)	Pedestrian Volume Warrant	**Number of Pedestrians (Peak Hour)** / **Points** 10-25 / 4 points 26-50 / 8 points 51+ / 10 points **Total Avilable Points: 10**	Roadway does not exist, therefore pedestrian volume not available	0
	Latent Pedestrian Demand Warrant	(a) The proposed crosswalk is in a commercial, mixed land use, or high density residential area. **3 points** (b) A pedestrian or shared use path is interrupted by a restricted crossing. **3 points** (c*) A pedestrian attractor/generator is directly adjacent to the proposed crosswalk as defined in the explanatory notes below. **4 points** **Total Available Points: 10**	Location meets condition (c) **Applies for all three proposed crosswalk locations*	4
	General Condition Warrant	(a) The nearest controlled crossing is greater than 300 feet from the proposed crosswalk. **3 points** (b) The proposed crosswalk will position pedestrians to be better seen by motorists. **3 points** (c) The proposed crosswalk will establish a mid-block crossing between adjacent signalized intersections or it will connect an existing pedestrian path. **3 points** (d) The proposed crosswalk is located within 1/4 mile of pedestrian attractors/generators as defined in the explanatory notes below. **3 points** (e) An existing bus stop is located within 100 feet of the proposed crosswalk. **3 points** (f) Other factors. **3 points** **Total Available Points: 18**	Location meets conditions (a), (b), (c), and (d)	12
	Gap Time Warrant	**Average Number of Vehicular Gaps per 5-Minute Period** / **Points** 0 – 0.99 / 0 points 1 – 1.99 / 1 point 2 – 2.99 / 8 points 3 – 3.99 / 10 points 4 – 4.99 / 8 points 5 – 5.99 / 1 point 6 or over / 0 points **Total Avilable Points: 10**	Roadway does not exist, therefore gap study cannot be conducted	0
			Total Points	**16**
			Is the Points Warrant met?	**Yes**

Explanatory Notes:

Pedestrian Volume Warrant

The Pedestrian Volume Warrant assigns point values based on pedestrian crossing volumes at the proposed crosswalk. Children under 13, elderly over 64 years and/or disabled persons count as 1.5 pedestrians.

Latend Pedestrian Demand Warrant

The Latent Pedestrian Demand Warrant may be used in lieu of the Pedestrian Volume Warrant.

General Condition Warrant

The General Condition Warrant presents six (6) unique categories. A location can score either zero (0) or three (3) points for each unique category, making a total 18 possible points available. The general conditions include the following:

(a) *The nearest controlled crossing is greater than 300 feet from the proposed crosswalk.*

The distance should be measured from the proposed location of the crosswalk to the nearest controlled intersection, i.e. stop sign, traffic signal, etc.

(b) *The proposed crosswalk will position pedestrians to be better seen by motorists.*

This condition should be considered at locations where one leg of the intersection provides better sight distance than the other legs.

(c) *The proposed crosswalk will establish a mid-block crossing between adjacent signalized intersections.*

This warrant refers to a condition where there is a high pedestrian attractor/generator nearby, and adequate crossing can be provided that could help channelize a recognized heavy flow of mid-block pedestrians.

(d) *The proposed crosswalk is located within ¼ mile of the following pedestrian attractors/generators as defined below:*

- International Border Crossing
- Major Multi-Modal Transit Centers (>10,000 boardings per day)
- Transit Stops (>1,000boardings per day)
- Elementary/Middle/ High Schools
- Universities and Colleges
- Neighborhood Civic Facilities (Libraries, Post Office & Religious Facilities)
- Neighborhood and Community Retail
- Pedestrian Intensive Beaches
- Parks & Recreation (excludes non-useable open space)
- Mixed Land Uses (housing near employment and/or commercial)

(e) *A bus stop is located within 100 feet of the proposed crosswalk.*

This warrant is applicable if there is a bus stop within 100-feet of the proposed crosswalk.

(f) *Other factors.*

Other factors allow for extenuating circumstances

Gap Time Warrant

Gap time is the time needed for a pedestrian to cross the travelled lanes of a roadway at an average walking speed without the need for a driver to yield. The number of usable gaps (or gaps that exceed the minimum time needed to cross) are counted during the peak vehicular hour and averaged per five-minute period.

Table 13-3. Uncontrolled Crosswalk Warrant - Kemper Street and Mid-Block Crossing (South)

			Is the Points Warrant met?	**Yes**

Explanatory Notes:

Pedestrian Volume Warrant

The Pedestrian Volume Warrant assigns point values based on pedestrian crossing volumes at the proposed crosswalk. Children under 13, elderly over 64 years and/or disabled persons count as 1.5 pedestrians.

Latend Pedestrian Demand Warrant

The Latent Pedestrian Demand Warrant may be used in lieu of the Pedestrian Volume Warrant.

General Condition Warrant

The General Condition Warrant presents six (6) unique categories. A location can score either zero (0) or three (3) points for each unique category, making a total 18 possible points available. The general conditions include the following:

(a) *The nearest controlled crossing is greater than 300 feet from the proposed crosswalk.*

The distance should be measured from the proposed location of the crosswalk to the nearest controlled intersection, i.e. stop sign, traffic signal, etc.

(b) *The proposed crosswalk will position pedestrians to be better seen by motorists.*

This condition should be considered at locations where one leg of the intersection provides better sight distance than the other legs.

(c) *The proposed crosswalk will establish a mid-block crossing between adjacent signalized intersections.*

This warrant refers to a condition where there is a high pedestrian attractor/generator nearby, and adequate crossing can be provided that could help channelize a recognized heavy flow of mid-block pedestrians.

(d) *The proposed crosswalk is located within ¼ mile of the following pedestrian attractors/generators as defined below:*

- International Border Crossing
- Major Multi-Modal Transit Centers (>10,000 boardings per day)
- Transit Stops (>1,000boardings per day)
- Elementary/Middle/ High Schools
- Universities and Colleges
- Neighborhood Civic Facilities (Libraries, Post Office & Religious Facilities)
- Neighborhood and Community Retail
- Pedestrian Intensive Beaches
- Parks & Recreation (excludes non-useable open space)
- Mixed Land Uses (housing near employment and/or commercial)

(e) *A bus stop is located within 100 feet of the proposed crosswalk.*

This warrant is applicable if there is a bus stop within 100-feet of the proposed crosswalk.

(f) *Other factors.*

Other factors allow for extenuating circumstances

Gap Time Warrant

Gap time is the time needed for a pedestrian to cross the travelled lanes of a roadway at an average walking speed without the need for a driver to yield. The number of usable gaps (or gaps that exceed the minimum time needed to cross) are counted during the peak vehicular hour and averaged per five-minute period.

	General Condition Warrant	(a) The nearest controlled crossing is greater than 300 feet from the proposed crosswalk. **3 points** (b) The proposed crosswalk will position pedestrians to be better seen by motorists. **3 points** (c) The proposed crosswalk will establish a mid-block crossing between adjacent signalized intersections or it will connect an existing pedestrian path. **3 points** (d) The proposed crosswalk is located within 1/4 mile of pedestrian attractors/generators as defined in the explanatory notes below. **3 points** (e) An existing bus stop is located within 100 feet of the proposed crosswalk. **3 points** (f) Other factors. **3 points** **Total Available Points: 18**	Location meets conditions (b), (c), (d), and (f) (f) This proposed crosswalk is located where Entertainment Center spectators are anticipated to cross Frontier Drive based on the location of the venue and the nearest parking structure. It is unlikely pedestrians would utilize the nearest crossing in either direction and will instead cross at this proposed location.	12
	Gap Time Warrant	**Average Number of Vehicular Gaps per 5-Minute Period** / **Points** 0 – 0.99 / 0 points 1 – 1.99 / 1 point 2 – 2.99 / 8 points 3 – 3.99 / 10 points 4 – 4.99 / 8 points 5 – 5.99 / 1 point 6 or over / 0 points **Total Avilable Points: 10**	Roadway does not exist, therefore gap study cannot be conducted	0
			Total Points	**16**
			Is the Points Warrant met?	**Yes**

Explanatory Notes:

Pedestrian Volume Warrant

The Pedestrian Volume Warrant assigns point values based on pedestrian crossing volumes at the proposed crosswalk. Children under 13, elderly over 64 years and/or disabled persons count as 1.5 pedestrians.

Latend Pedestrian Demand Warrant

The Latent Pedestrian Demand Warrant may be used in lieu of the Pedestrian Volume Warrant.

General Condition Warrant

The General Condition Warrant presents six (6) unique categories. A location can score either zero (0) or three (3) points for each unique category, making a total 18 possible points available. The general conditions include the following:

(a) *The nearest controlled crossing is greater than 300 feet from the proposed crosswalk.*

The distance should be measured from the proposed location of the crosswalk to the nearest controlled intersection, i.e. stop sign, traffic signal, etc.

(b) *The proposed crosswalk will position pedestrians to be better seen by motorists.*

This condition should be considered at locations where one leg of the intersection provides better sight distance than the other legs.

(c) *The proposed crosswalk will establish a mid-block crossing between adjacent signalized intersections.*

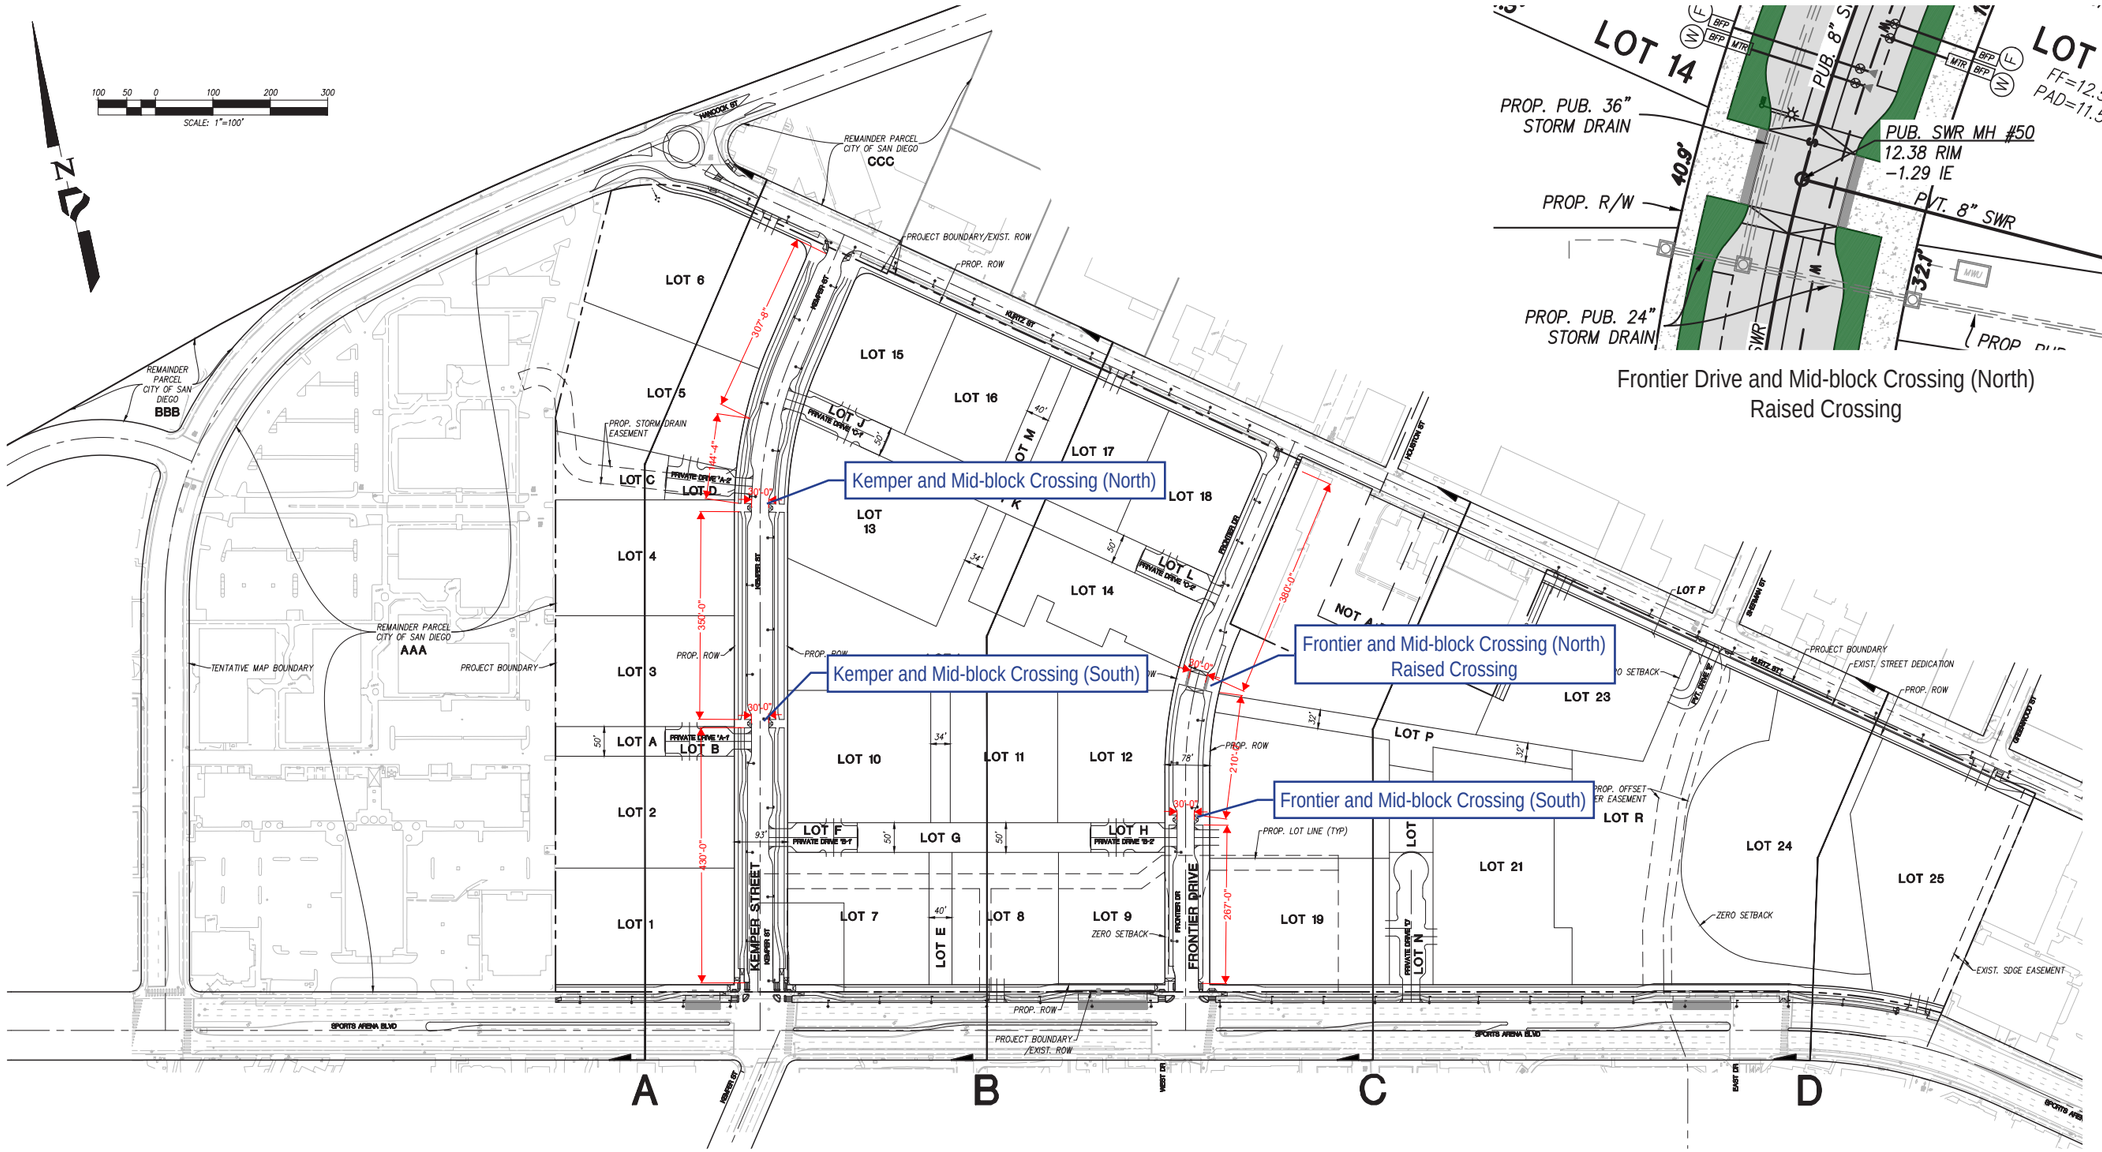
This warrant refers to a condition where there is a high pedestrian attractor/generator nearby, and adequate crossing can be provided that could help channelize a recognized heavy flow of mid-block pedestrians.

(d) *The proposed crosswalk is located within ¼ mile of the following pedestrian attractors/generators as defined below:*

- International Border Crossing
- Major Multi-Modal Transit Centers (>10,000 boardings per day)
- Transit Stops (>1,000boardings per day)
- Elementary/Middle/ High Schools
- Universities and Colleges
- Neighborhood Civic Facilities (Libraries, Post Office & Religious Facilities)
- Neighborhood and Community Retail
- Pedestrian Intensive Beaches
- Parks & Recreation (excludes non-useable open space)
- Mixed Land Uses (housing near employment and/or commercial)

(e) *A bus stop is located within 100 feet of the proposed crosswalk.*

This warrant is applicable if there is a bus stop within 100-feet of the proposed crosswalk.



(f) *Other factors.*

Other factors allow for extenuating circumstances

Gap Time Warrant

Gap time is the time needed for a pedestrian to cross the travelled lanes of a roadway at an average walking speed without the need for a driver to yield. The number of usable gaps (or gaps that exceed the minimum time needed to cross) are counted during the peak vehicular hour and averaged per five-minute period.

Figure 13-2. Proposed Mid-Block Crossing Locations

Frontier Drive and Mid-block Crossing (North)
Raised Crossing

13.3 BICYCLE FACILITIES

This section presents a qualitative evaluation of the existing bicycle network within the project study area and includes a bikeshed analysis that identifies any barriers and overall bike-ability. The purpose of this evaluation is to provide a complete network of multi-modal facilities throughout the community and create a comfortable bicycling experience consistent with the City of San Diego Bicycle Master Plan (2013) and the Midway-Pacific Highway Community Plan (2018) bicycling policies.

The bikeshed analysis was performed using the TravelTime API Map Demo. This model was built by TravelTime from a range of data sets including OpenStreetMap and country-specific data. 15-minute and 30-minute bikeshed maps were generated using the API for the project site address.

The project's bikeshed is shown in **Figure 13-3**.

Within the study area, existing Class II bike lanes are provided on Sports Arena Boulevard (from the I-8 ramps to Camino Del Rio West to), W. Point Loma Boulevard (Class IV between Adrian Street and Groton Street), Rosecrans Street, Barnett Avenue, Pacific Highway, and Sea World Drive. There are also two Class I multi-use paths north of the project site, one located along the north side of Sea World Drive connecting to Ingraham Street, and another located on the north side of I-8 connecting to W. Mission Bay Drive.

The following bicycle environment deficiencies were identified:

1. Class II bike lanes on Sports Arena Boulevard along the project frontage lack enhanced striping such as conflict striping at driveways and buffers.
2. Class II bike lanes along Rosecrans Street lack buffers.
3. Midway Drive lacks bike lanes.

Project improvements for bicyclists include:

- Construct a Class I multi-use path along the project frontage (south side) on Kurtz Street.
- Construct a Class I multi-use path along the south side of Kurtz Street (east of the site) and along the southeast side of Rosecrans Street to provide a connection to the Old Town Transit Center via walking and biking. The project proposes to construct this facility within the existing street rights-of-way by narrowing the vehicular travel way, not within private property that is not part of the Midway Rising project. Conceptual plans for this proposed improvement are included in **Appendix A**.
- Construct a Class I multi-use path along the east side of proposed Frontier Drive.
- Construct a Class I multi-use path along the project frontage (north side) on Sports Arena Boulevard and a Class IV one-way cycle-track in the westbound direction along the project frontage.
- Construct Class IV one-way cycle-tracks on both sides of the proposed Kemper Street extension within the site.

Additionally, a Class IV cycle track is planned along Pacific Highway between Taylor Street and Laurel Street to be implemented by future development per the Midway-Pacific Highway CP.

Figure 13-3. Existing Bikeshed

13.4 TRANSIT FACILITIES

Figure 13-4 illustrates all transit stops within a half of a mile walking distance of each pedestrian point of the project site, and the proposed modifications to the existing transit stops along the project frontage. **Table 13-6** evaluates the provided amenities for each of these stops. There are two bus stops (ID 13344 and ID 13345) located along the Sports Arena Boulevard project frontage which serve MTS Routes 8 and 9. One of the existing bus stops (ID 13345) has a bench, shelter, trash bin, and wayfinding, while the other stop (ID 13344) has only a bench. The project will be responsible for constructing a third bus stop on the project frontage on the west side of the Sports Arena Boulevard / Kemper Street intersection. There is also a bus stop (ID 13346) located less than 100 feet west of the project frontage on Sports Arena Boulevard, which will remain in place.

Additionally, the site is within a half-mile walking distance of bus stops serving Routes 28 and 35 along Sports Arena Boulevard, Rosecrans Street, East Drive, and W. Point Loma Boulevard, and within 0.7 mile to 1 mile of the Old Town Transit Center which serves the MTS Green and Blue line trolleys and various local bus routes.

Appendix AF contains the current schedules for MTS Routes 8, 9, 28, and 35.

SANDAG's 2021 Regional Plan vision identifies two new *Rapid* bus routes in the study area:

- Rapid Route 10 serving La Mesa to Ocean Beach via Mid-City, Hillcrest, Old Town Transit Center, and Central Mobility Hub, running along Sports Arena Boulevard – anticipated to be in service by 2035
- Rapid Route 28 serving Point Loma to Kearny Mesa via Central Mobility Hub and Linda Vista

The Central Mobility Hub CMCP recommends transit only lanes on:

- Sports Arena Boulevard from Point Loma Boulevard to Rosecrans Street
- Rosecrans Street from Pacific Highway to Sports Arena Boulevard

The Midway Rising project proposes the following transit-related improvements:

- Stripe exclusive bus / right-turn only lanes on Sports Arena Boulevard and Rosecrans Street. The project team will coordinate with MTS, SANDAG, and the City regarding the details of implementation for these improvements. This modification to the CP was analyzed as part of the Midway Rising Community Plan Amendment transportation study and is also accounted for in this LMA (by reducing the vehicular capacity of Sports Arena Boulevard and Rosecrans Street).
- Construct new local bus stop (ID not identified by MTS) on the west side of the Sports Arena Boulevard / Kemper Street intersection. Provide a sign, bench, schedule display, route and system map, trash receptacle, concrete bus pad, and shelter.
- Relocate existing bus stop (ID 13345) to the west side of the Sports Arena Boulevard / Frontier Drive intersection (approximately 150' to the east of existing stop) and designate stop as a future RAPID bus stop per the MTS Designing for Transit Manual (February 2018). The RAPID service is anticipated to be implemented by 2035. Provide a sign, bench, schedule display, trash receptacle, concrete bus pad, rapid shelter, and a real-time digital display. Developer to coordinate with MTS for improvements.
- Relocate existing local bus stop (ID 13344) to the west side of the Sports Arena Boulevard / East Drive intersection (approximately 200' to the west of the existing stop). Provide a sign, bench, schedule display, route and system map, trash receptacle, concrete bus pad, and shelter.

13.5 PROPOSED MULTIMODAL FEATURES SUMMARY

The project will provide accessible connections to the trolley station as envisioned in the CP to enable and achieve multi-modal reductions, discussed in Section 4.1 of this report. The proposed multi-modal improvements are illustrated in **Figure 13-5**.

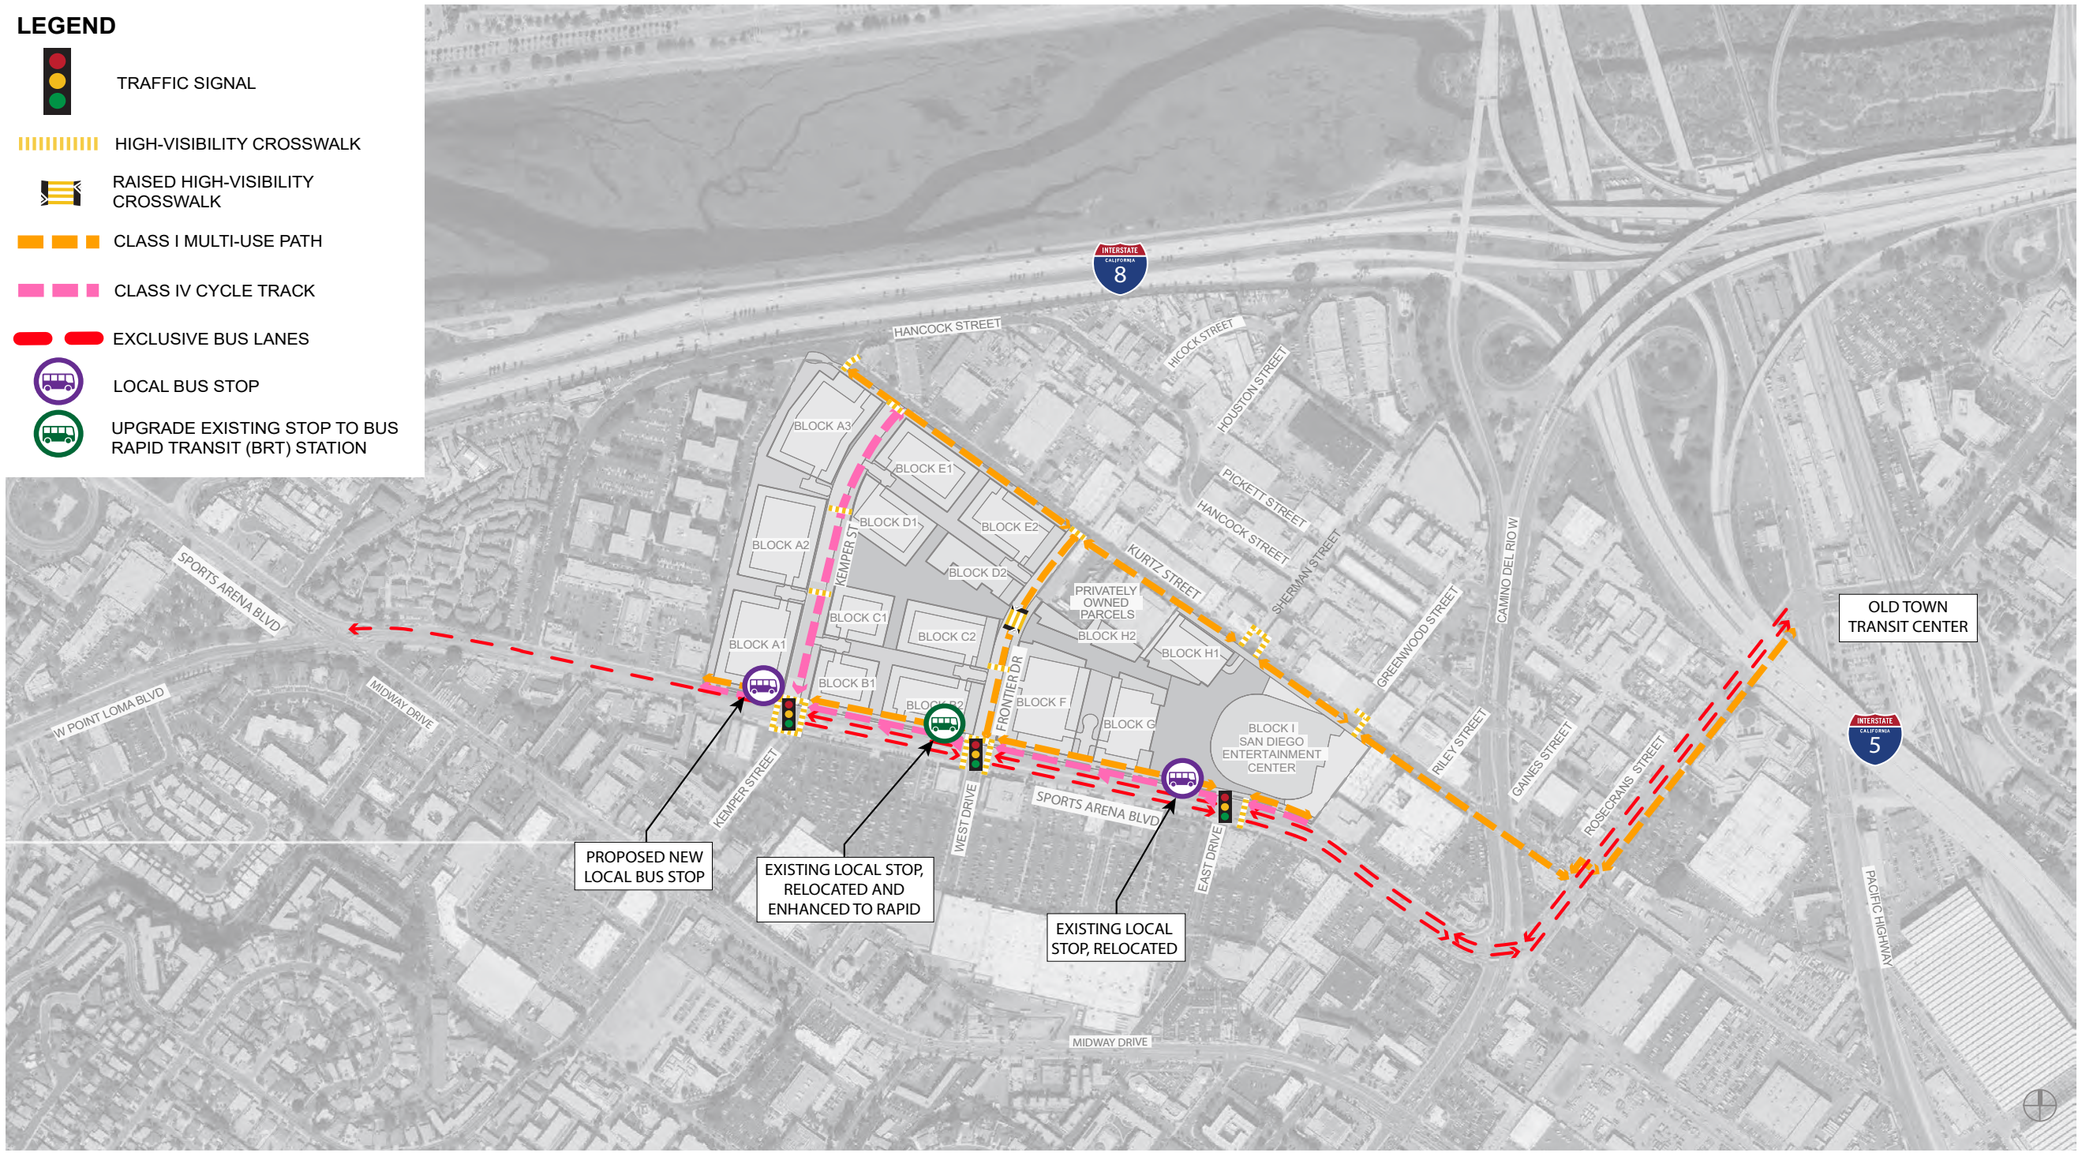
The following multi-modal improvements are proposed as part of the Phase 1 of the project, expected to occur in 2030:

- Construct a Class I multi-use path along the project frontage (south side) on Kurtz Street from the west edge of Block H1 to Greenwood Street.
- Construct a Class I multi-use path along the east side of Frontier Drive (south of the privately-owned parcels) when this public street is constructed.
- Construct a Class I multi-use path along the project frontage (north side) on Sports Arena Boulevard and a Class IV one-way cycle-track in the westbound direction along the project frontage from Frontier Drive to the east edge of the site.
- Relocate existing local bus stop (ID 13344) to the west side of the Sports Arena Boulevard / East Drive intersection (approximately 200' to the west of the existing stop). Provide a sign, bench, schedule display, route and system map, trash receptacle, concrete bus pad, and shelter.
- Provide event shuttle service between off-site business park lot and the Entertainment Center from 5pm to 1am. Shuttles will be used for events with greater than 10,000 spectators. Event shuttle will run along Sports Arena Boulevard, Frontier Drive, Kurtz Street, and Hancock Street. For all events with greater than 10,000 spectators, shuttle headway will be 5 minutes for pre-event and post-event service.
- Provide event shuttle service between Old Town Transit Center and the Entertainment Center from 5pm to 1am. Shuttles will be used for events with greater than 7,500 spectators. Event shuttle will run along Rosecrans Street, Sports Arena Boulevard, Frontier Drive, and Kurtz Street. For events with between 7,500 and 14,500 spectators, shuttle headway will be 5 minutes for pre-event and post-event service. For events with 20,000 spectators, shuttle headway will be 2 minutes for pre-event and post-event service.
- Provide a retail daily shuttle service between Old Town Transit Center and Frontier Drive for the first 10 years of the project opening Phase 1, anticipated to occur in 2030. The shuttle would operate between 12:00 PM and 10:00 PM using one vehicle at 20- to 30-minute headways. Shuttle included based on anticipated VMT mitigation.

The following multi-modal improvements are proposed as part of the Phase 2 of the project, expected to occur in 2035:

- Construct a Class I multi-use path along the project frontage (south side) on Kurtz Street from Hancock Street to the west edge of Block H1.
- Construct a Class I multi-use path along the east side of Frontier Drive (along the privately-owned parcels frontage).
- Construct a Class I multi-use path along the south side of Kurtz Street (east of Greenwood Street) and along the southeast side of Rosecrans Street to provide a connection to the Old Town Transit Center via walking and biking. The multi-use path will be developed in coordination with the City and adjacent property owners; however, it is intended to be feasible within existing City right-of-way, and not be located within private property. Conceptual plans for this proposed improvement

are included in **Appendix A.**



- Construct a Class I multi-use path along the project frontage (north side) on Sports Arena Boulevard and a Class IV one-way cycle-track in the westbound direction along the project frontage from the west edge of the site to Frontier Drive.
- Construct Class IV one-way cycle-tracks on both sides of the proposed Kemper Street extension within the site.
- Construct a roundabout at the intersection of Hancock Street and Kurtz Street.
- Stripe exclusive bus / right-turn only lanes on:
  - Sports Arena Boulevard between W Point Loma Boulevard and Kemper Street – westbound direction only
  - Sports Arena Boulevard between Kemper Street and Camino Del Rio West – both directions
  - Rosecrans Street between Sports Arena Boulevard and Kemper Street – both directions

  The project team will coordinate with MTS, the San Diego Association of Governments (SANDAG), and the City regarding the timeline and design details of implementation for these improvements. Developer is responsible for striping only.
- Construct a new local bus stop (ID not identified by MTS) on the west side of the Sports Arena Boulevard / Kemper Street intersection. Provide a sign, bench, schedule display, route and system map, trash receptacle, concrete bus pad, and shelter.
- Relocate existing bus stop (ID 13345) to the west side of the Sports Arena Boulevard / Frontier Drive intersection (approximately 150' to the east of existing stop) and designate stop as a future RAPID bus stop per the MTS Designing for Transit Manual (February 2018). The RAPID service is anticipated to be implemented by 2035. Provide a sign, bench, schedule display, trash receptacle, concrete bus pad, rapid shelter, and a real-time digital display. Developer to coordinate with MTS for improvements.
- Provide event shuttle service between offsite parking at SeaWorld and the Entertainment Center from 5pm to 1am. Shuttles will be used for events with greater than 12,000 spectators. Event shuttle will run along W Mission Bay Drive, Sports Arena Boulevard, Frontier Drive, Kurtz Street and Hancock Street. For events with between 12,000 and 14,500 spectators, shuttle headway will be 5 minutes for pre-event and post-event service. For events with 20,000 spectators, shuttle headway will be 2 minutes for pre-event and post-event service.

Figure 13-6 through **Figure 13-11** provide cross-sections for the internal site roadways and the project adjacent roadways including the proposed roadway improvements discussed above. The figures are as follows:

- **Figure 13-6:** Sports Arena Boulevard along the project frontage
- **Figure 13-7:** Kurtz Street between Hancock Street and Frontier Drive
- **Figure 13-8:** Kurtz Street between east of Sherman Street and Greenwood Street
- **Figure 13-9:** Kurtz Street between Greenwood Street and Camino Del Rio West

BASIS OF BEARINGS

THE BASIS OF BEARINGS FOR THIS A.L.T.A. IS THE CALIFORNIA COORDINATE SYSTEM OF 1983, ZONE 6, EPOCH 1991.35 GRID BEARING BETWEEN G.P.S. STATION 237 AND G.P.S. STATION 1027 PER ROS 14492.

I.E., SOUTH 34°26'55" EAST

THE COMBINED SCALE FACTOR AT G.P.S. STATION 237 IS 1.0000097. QUOTED BEARINGS FROM REFERENCE DEEDS/MAPS MAY OR MAY NOT BE IN TERMS OF SAID SYSTEM.

TOPOGRAPHY NOTES

1. TOPOGRAPHY SHOWN ON THIS SURVEY IS BASED UPON AN AERIAL SURVEY BY TERRASCRIBE INC., IN JANUARY 2023, AND A FIELD REVIEW IN FEBRUARY 2023.
2. THE LOCATIONS OF UNDERGROUND UTILITIES ON THIS SURVEY HAVE BEEN ESTIMATED BY PHYSICAL SURFACE FEATURES AND BY INFORMATION SUPPLIED BY SAN DIEGO GAS AND ELECTRIC COMPANY; COX CABLE SAN DIEGO, PACIFIC BELL AND THE CITY OF SAN DIEGO ENGINEERING DEPARTMENT. ADDITIONAL UNDERGROUND UTILITIES EXIST OFFSITE AND ONSITE BUT CANNOT BE LOCATED FROM FIELD CONDITIONS.

GRADING TABULATION

TOTAL AMOUNT OF ON-SITE TO BE GRADED AREA 49.231 AC.; OR 100.0% OF TOTAL PROJECT SITE.
AMOUNT OF CUT (GEOMETRIC): 56,500 CY AND MAXIMUM DEPTH OF CUT: 9 FT
AMOUNT OF FILL (GEOMETRIC): 59,600 CY AND MAXIMUM DEPTH OF FILL: 5 FT
AMOUNT OF IMPORT: 3,100 CY

RETAINING WALLS LENGTH: 0 FT MAXIMUM HEIGHT: 0 FT (MAXIMUM EXPOSED HEIGHT).

NOTE:
NO RECORDED MAP EXISTS WITHIN THE PROJECT BOUNDARY.

NOTES:

1. THE PROPOSED PROJECT WILL COMPLY WITH ALL THE REQUIREMENTS OF THE CURRENT CITY OF SAN DIEGO STORM WATER STANDARDS MANUAL BEFORE A GRADING OR BUILDING PERMIT IS ISSUED. IT IS THE RESPONSIBILITY OF THE OWNER/DESIGNER/APPLICANT TO ENSURE THAT THE CURRENT STORM WATER PERMANENT BMP DESIGN STANDARDS ARE INCORPORATED INTO THE PROJECT.
2. THE SUBDIVIDER SHALL RECORD A DECLARATION OF COVENANTS AND RESERVATION OF EASEMENTS FOR THE SHARED ACCESS EASEMENT. THE DECLARATION OF COVENANTS AND RESERVATION OF EASEMENTS SHALL STATE: SINCE THE MUTUAL ACCESS EASEMENT AGREEMENT IS A PRIVATE AND NOT A PUBLIC ISSUE, THE CITY OF SAN DIEGO IS NOT RESPONSIBLE FOR ANY DISPUTE THAT MIGHT ARISE IN THE FUTURE BETWEEN THE PRIVATE PARTIES.
3. WHEREAS THE MAP PROPOSES THE SUBDIVISION OF A 49.23 ACRE SITE INTO 43 LOTS FOR A NEW ENTERTAINMENT, RESIDENTIAL, AND MIXED-USE DEVELOPMENT. 11 RESIDENTIAL LOTS, 12 MIXED-USE LOTS, 8 PUBLIC SPACE LOTS, 2 PUBLIC PARK LOTS, 8 PRIVATE DRIVE LOTS AND 2 LOTS FOR THE NEW ENTERTAINMENT CENTER.
4. THIS VESTING TENTATIVE MAP IS FOR A PHASED PROJECT AND FINAL MAPS MAY BE RECORDED IN PHASES AND ADJUST, AS NECESSARY. APPLICANT WILL WORK WITH CITY ENGINEER DURING FINAL ENGINEERING TO PROVIDE APPROPRIATE INFRASTRUCTURE TO SUPPORT EACH PROJECT PHASE.

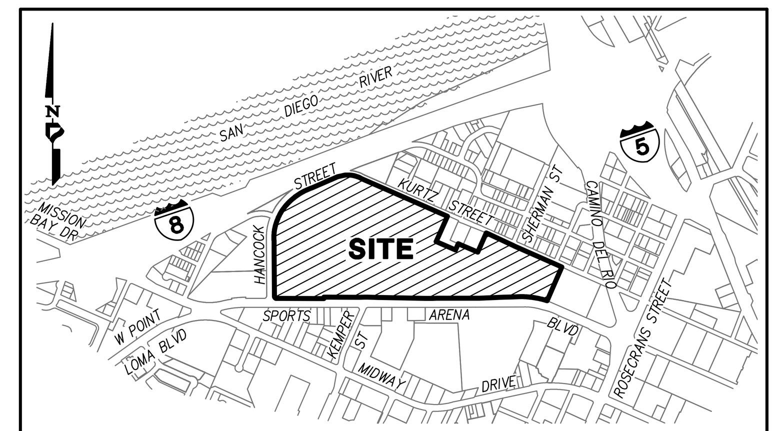
TRANSPORTATION AMENITIES



#	Amenity	Amenity Description	Project-Specific Notes	Transportation Amenities Points
1	**Transit and Active Transportation Infrastructure as outlined in Community Plan Mobility Elements**	Design and construct one or more of the following transit improvements on a street adjacent to the development: (a) the addition of pedestrian scale lighting (Section 142.0740), (b) sidewalk widening to 6 feet along property frontage and sidewalk widening to 10 feet near corners of intersection to allow for ADA required widths (this improvement shall be in addition to any improvements or measures otherwise required under other regulations or standards), (c) installation of transit shelters and/or benches. Transit shelters and benches shall be designed to MTS and ADA standards and require an approved agreement with MTS	The project proposes: a. Install a minimum of 6 ft wide sidewalks along the project frontage of Sports Arena Boulevard and Kurtz Street with at least 10 feet of space at the corners of intersections. b. Install transit shelters and benches for the three bus stops along Sports Arena Drive per MTS Design Guide. Transit shelters will be designed to MTS and ADA standards. An approved agreement with MTS will be recorded.	5
2	**Transit and Rideshare Information**	Install and maintain an on-site kiosk or information center with multi-modal wayfinding information and transit information. The kiosk information center shall be located in a prominent location that can easily be seen by residents entering and exiting the development. The kiosk or information center shall be shown on the project plans.	The project proposes an on-site multi-modal wayfinding kiosk in a location that meets the requirements of this amenity.	1
3	**On-Site Bicycle Repair Station**	Install and properly maintain an on-site public bicycle repair station. The bicycle repair station must be located in a well-lit area, near the street frontage and must include, at a minimum, a bike pump, English and metric Allen wrenches, pedal wrench, headset wrench, tire levers, and screwdrivers. The bicycle repair station shall be shown on the project plans.	The project proposes **two** on-site public bicycle repair stations which will meet the requirements of this amenity.	4
4	**Delivery Support**	Provide a secure area for receipt of deliveries that offers at least one of the following: (1) closed lockers, (2) temporary storage for packages, laundry, and other deliveries, or (3) temporary refrigeration for groceries. The secure area shall be shown on the project plans.	The project proposes a secure area for receipt of deliveries which will meet the requirements of this amenity.	1
5	**Outdoor Fitness Circuit**	Construct and maintain an outdoor fitness circuit within the development premises. The outdoor fitness circuit shall be available to the public at least 12 hours a day, 7 days a week and shall provide a minimum of 4 workout stations. The outdoor fitness circuit shall be shown on the project plans.	The project proposes an on-site outdoor fitness circuit which will meet the requirements of this amenity.	2
6	**Co-Working Space**	Provide and maintain a co-working space within the project premises available for resident use. The co-working space shall be at least 500 square feet and shall provide private or semi-private office work spaces. The co-working space shall be shown on the project plans.	The project proposes two co-working spaces which will meet the requirements of this amenity.	4
Minimum Transportation Amenities Points Required				2
Total Transportation Amenities Points				17

Source: City of San Diego Land Development Manual, Appendix Q

VEHICLE MILES TRAVELED REDUCTION MEASURES PER COMPLETE COMMUNITIES: MOBILITY CHOICES

Measure	Project-Specific Notes	Points
Pedestrian 1. Pedestrian scale lighting adjacent to public pedestrian walkways along the entire development frontage.	Pedestrian scale lighting will be provided along the project frontage roadways of Sports Arena Boulevard and Kurtz Street	0.5
Pedestrian 2. Installing pop-outs at adjacent intersections or curb extensions at adjacent mid-block crosswalks. Installation shall comply with the Street Design Manual Traffic Calming Chapter. Coordination with City Fire-Rescue Department staff and/or San Diego Metropolitan Transit System/North County Transit District may be required.	3 locations: • Sports Arena Boulevard & Frontier Drive (half intersection) • Sports Arena Boulevard & Kemper Street (half intersection) • Frontier Drive mid-block crossing (South) (full intersection)	5
Pedestrian 9. Widening sidewalk within the existing public right-of-way to Street Design Manual standards. The reduction of parkway/landscape buffer to less than the width required by the Street Design Manual standards to widen sidewalk width is not permitted. Requires replacement of existing sidewalk.	Multi-use path along Kurtz Street and Rosecrans Street (approximately 2,200 feet)	1.25
Bicycle 12. Providing on-site bicycle repair station.	Located near Class I path along Sherman Street alignment through site.	1.5
Bicycle 13. Installing new bicycle infrastructure (Class I, II, IV) that is part of the City's planned bikeway network that closes or incrementally closes an existing gap between two existing bikeways.	Class I multi-use paths are proposed for the north side of Sports Arena Boulevard, east side of Frontier Drive, through the project site, and east side of Rosecrans Street that would connect to Class II bike lanes on Pacific Highway and Sports Arena Boulevard (approximately 3,960').	2.25
Transit 19. Providing high cost amenities/upgraded features to an existing transit stop (above existing condition), i.e., addition of shelter, real time bus information monitors.	Provide enhanced amenities at proposed new bus stop on the west side of the Sports Arena Boulevard / Kemper Street intersection, including a shelter. Relocate existing bus stop (ID 13345) and upgrade to a RAPID bus stop per the MTS Designing for Transit Manual (February 2018) including real-time digital display for rapid bus stop and rapid shelter.	2.5
Transit 20. Providing low cost amenities/upgraded features to an existing transit stop (above existing condition), i.e., addition of bench, public art, static schedule and route display, trash receptacle.	Provide system map for local bus stop (ID 13344) on Sports Arena Boulevard.	1
Other 25. Installing a traffic calming measure, such as speed feedback signs, median slow points (chokers), and speed table/raised crosswalk. Installation shall comply with the Street Design Manual Traffic Calming Chapter. Coordination with City Fire-Rescue Department staff and/or MTS/NCTD may be required.	Raised crossing / intersection on Frontier Drive.	2.5
Minimum VMT Reduction Measure Points Required (Commercial)		**16**
Total VMT Reduction Measure Points (Commercial)		16.5

Measure	Project-Specific Notes	Points
Pedestrian 2. Installing pop-outs at adjacent intersections or curb extensions at adjacent mid-block crosswalks. Installation shall comply with the Street Design Manual Traffic Calming Chapter. Coordination with City Fire-Rescue Department staff and/or San Diego Metropolitan Transit System/North County Transit District may be required.	2 locations: • Kemper Street mid-block crossing (North) (full intersection) • Kemper Street mid-block crossing (South) (full intersection)	5
Bicycle 12. Providing on-site bicycle repair station.	Located near Blocks D1 and D2	1.5
Transit 20. Providing low cost amenities/upgraded features to an existing transit stop (above existing condition), i.e., addition of bench, public art, static schedule and route display, trash receptacle.	Provide system map for local bus stop (new stop) on Sports Arena Boulevard on the west side of Kemper Street.	1
Minimum VMT Reduction Measure Points Required (Entertainment)		**5**
Total VMT Reduction Measure Points (Entertainment)		7.5

PROJECT DESCRIPTION

THE MIDWAY RISING PROJECT PROPOSES TO IMPLEMENT THE MIDWAY RISING SPECIFIC PLAN AND REDEVELOP THE EXISTING SPORTS AREA PROPERTY WITH A WALKABLE, TRANSIT-CENTRIC, AND MODERN LIVE-WORK-PLAY MIXED-USE NEIGHBORHOOD THAT PROVIDES A DESTINATION THAT OFFERS A MIX OF USES, ACTIVE RETAIL EXPERIENCES, A RANGE OF HOUSING CHOICES AND A VIBRANT PUBLIC REALM. CONTINUOUS OPEN SPACES DRAW PEOPLE INTO THE SITE AND CONNECT ELEMENTS OF THE SITE, THE ENTERTAINMENT CENTER, PARK, SQUARE, PASEOS, HOUSING AND RETAIL. CONNECTION WITH THE COMMUNITY BY MULTI-USE PATHS, WIDE SIDEWALKS, PASEOS AND GREENWAYS, NEW ROADWAYS, BIKE FACILITIES ON SITE AND ENHANCED TRANSIT STOPS ALONG THE SPORTS ARENA BOULEVARD FRONTAGE. PARKS AND OPEN SPACE, PRIVATE AND COMMON OPEN SPACES INTEGRATED WITH RESIDENTIAL BUILDINGS, AND CONTINUOUS TREE CANOPY ON ALL STREETS MAKE MIDWAY RISING A VIBRANT COMMUNITY WITH PEDESTRIAN-SCALED RETAIL THAT FACES AND ACTIVATES FRONTIER DRIVE AND LINKS TO THE ENTERTAINMENT CENTER THROUGH A LIVELY PEDESTRIAN PROMENADE WITH COMMERCIAL SUPPORTING USES.

LEGAL DESCRIPTION

PARCEL 1 (A PORTION OF APN 441-590-04-00):

THOSE PORTIONS OF PUEBLO LOTS 241, 242, 259, 276, 311, 312, 313, 314, 337 AND 338 OF THE PUEBLO LANDS OF SAN DIEGO, IN THE CITY OF SAN DIEGO, COUNTY OF SAN DIEGO, STATE OF CALIFORNIA, ACCORDING TO MAP THEREOF MADE BY JAMES PASCOE, A COPY OF WHICH SAID MAP WAS FILED IN THE OFFICE OF COUNTY RECORDER OF SAN DIEGO COUNTY, AND KNOWN AS MISCELLANEOUS MAP NO. 36, TOGETHER WITH LOT "A" AND A PORTION OF LOT "B" OF PUEBLO LOT 339, ACCORDING TO PARTITION MAP THEREOF ON FILE IN THE OFFICE OF THE COUNTY CLERK OF SAID COUNTY, IN AN ACTION ENTITLED "STEELE VS. STEELE", SUPERIOR COURT, CASE NO. 5620, TOGETHER WITH MAP OF CASS AND MCELWEE SUBDIVISION, ACCORDING TO MAP THEREOF NO. 1581, FILED IN THE OFFICE OF COUNTY RECORDER OF SAN DIEGO COUNTY, DESCRIBED AS FOLLOWS:

COMMENCING AT A POINT OF INTERSECTION OF THE SOUTHEASTERLY LINE OF PUEBLO LOT 312 WITH THE NORTHERLY LINE OF FRONTIER STREET, (NOW SPORTS ARENA BOULEVARD) AS DESCRIBED IN DEED TO FRONTIER ENTERPRISES, INC., RECORDED MARCH 5, 1941 IN BOOK 1143, PAGE 320 OF OFFICIAL RECORDS OF SAN DIEGO COUNTY; THENCE NORTHEASTERLY ALONG SAID SOUTHEASTERLY LINE TO A POINT OF INTERSECTION WITH A LINE WHICH IS DISTANT 15.00 FEET NORTHERLY, MEASURED AT RIGHT ANGLES TO THE NORTHERLY LINE OF SAID SPORTS ARENA BOULEVARD, BEING THE TRUE POINT OF BEGINNING; THENCE SOUTH 77° 23'46" EAST, 869.92 FEET TO A TANGENT 1,010.93 FOOT RADIUS CURVE, CONCAVE SOUTHWESTERLY; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH AN ANGLE OF 15° 07'07" A DISTANCE OF 269.13 FEET TO THE SOUTHEASTERLY LINE OF SAID PUEBLO LOT 337; THENCE ALONG SAID SOUTHEASTERLY LINE NORTH 36° 29'46" EAST 404.64 FEET TO THE MOST EASTERLY CORNER OF SAID PUEBLO LOT 337; THENCE ALONG THE NORTHEASTERLY LINE OF SAID PUEBLO LOT 337 NORTH 53° 26'44" WEST 464.11 FEET TO THE MOST EASTERLY CORNER OF SAID PUEBLO LOT 338; THENCE ALONG THE NORTHEASTERLY LINE OF SAID PUEBLO LOT 338 NORTH 53° 27'34" WEST 466.64 FEET TO THE MOST NORTHERLY CORNER OF SAID PUEBLO LOT 338; THENCE SOUTH 36° 37'26" WEST ALONG THE NORTHWESTERLY LINE OF PUEBLO LOT 338, A DISTANCE OF 233.40 FEET TO THE MOST EASTERLY CORNER OF SAID LOT "A"; THENCE NORTH 53° 27'44" WEST ALONG THE NORTHEASTERLY LINE OF SAID LOT "A", A DISTANCE OF 233.41 FEET TO THE MOST NORTHERLY CORNER OF SAID LOT "A", THENCE SOUTH 36° 33'41" WEST ALONG THE NORTHWESTERLY LINE OF SAID LOT "A", A DISTANCE OF 74.98 FEET TO A POINT DISTANT NORTH 36° 33'41" EAST, 158.40 FEET FROM THE MOST WESTERLY CORNER OF SAID LOT "A", THENCE NORTH 53° 27'19" WEST, 233.43 FEET TO A POINT IN THE NORTHWESTERLY LINE OF PUEBLO LOT 339 DISTANT SOUTH 36° 36'21" WEST, 308.33 FEET FROM THE MOST NORTHERLY CORNER OF SAID PUEBLO LOT 339; THENCE NORTH 36° 36'21" EAST ALONG THE NORTHEASTERLY LINE OF PUEBLO LOT 339, A DISTANCE OF 301.33 FEET TO A LINE WHICH IS PARALLEL WITH AND 7.00 FEET SOUTHWESTERLY OF AND MEASURED AT RIGHT ANGLES TO THE NORTHERLY PROLONGATION OF THE NORTHEASTERLY LINE OF SAID PUEBLO LOT 339; THENCE ALONG SAID PARALLEL LINE NORTH 53° 26'49" WEST, A DISTANCE OF 786.16 FEET TO A POINT IN THE SOUTHEASTERLY LINE OF KURTZ STREET AS DEDICATED BY RESOLUTION NO. 197563 OF THE COUNCIL OF THE CITY OF SAN DIEGO, A COPY OF WHICH WAS RECORDED JULY 30, 1969 AS INSTRUMENT NO. 137836 OF OFFICIAL RECORDS; THENCE ALONG THE BOUNDARY OF SAID KURTZ STREET AS FOLLOWS:

SOUTH 36° 32'31" WEST, A DISTANCE OF 5.00 FEET, NORTH 53° 26'49" WEST, A DISTANCE OF 307.00 FEET TO THE BEGINNING OF A 300.00 FOOT RADIUS CURVE, CONCAVE SOUTHWESTERLY; AND WESTERLY ALONG THE ARC OF SAID CURVE TO AND ALONG THE SOUTHERLY LINE OF HANCOCK STREET DEDICATED BY SAID RESOLUTION, THROUGH A CENTRAL ANGLE OF 39° 03'30" AN ARC LENGTH OF 204.51 FEET; THENCE SOUTH 26° 51'31" WEST, A DISTANCE OF 393.88 FEET; THENCE SOUTH 12° 35'00" WEST, A DISTANCE OF 968.25 FEET TO SAID LINE WHICH IS PARALLEL WITH AND 15.00 FEET NORTHERLY OF THE NORTHERLY LINE OF FRONTIER STREET; THENCE ALONG SAID PARALLEL LINE SOUTH 77° 23'46" EAST, TO THE TRUE POINT OF BEGINNING.

EXCEPTING THEREFROM A PORTION OF SAID LAND, ALL URANIUM, THORIUM, AND ALL OTHER MATERIALS DETERMINED PURSUANT TO SECTION 5(B) (1) OF THE ATOMIC ENERGY ACT OF 1946 (60 STAT. 761), TO BE PECULIARLY ESSENTIAL TO THE PRODUCTION OF FISSIONABLE MATERIAL, CONTAINED IN WHATEVER CONCENTRATION IN DEPOSITS IN THE LANDS COVERED BY THIS INSTRUMENT, TOGETHER WITH THE RIGHT OF THE UNITED STATES THROUGH ITS AUTHORIZED AGENTS OR REPRESENTATIVES AT ANY TIME TO ENTER UPON THE LAND AND PROSPECT FOR, MINE AND REMOVE THE SAME, AS RESERVED FOR THE USE OF THE UNITED STATES, IN A DEED RECORDED JUNE 23, 1954 IN BOOK 5279, PAGE 259 OF OFFICIAL RECORDS.

ALSO EXCEPTING THEREFROM A PORTION OF SAID LAND, ALL URANIUM, THORIUM, AND ALL OTHER MATERIALS DETERMINED PURSUANT TO SECTION 5(B) (1) OF THE ATOMIC ENERGY ACT OF 1946 (60 STAT. 761), TO BE PECULIARLY ESSENTIAL TO THE PRODUCTION OF FISSIONABLE MATERIAL, CONTAINED IN WHATEVER CONCENTRATION IN DEPOSITS IN THE LANDS COVERED BY THIS INSTRUMENT, TOGETHER WITH THE RIGHT OF THE UNITED STATES THROUGH ITS AUTHORIZED AGENTS OR REPRESENTATIVES AT ANY TIME TO ENTER UPON THE LAND AND PROSPECT FOR, MINE AND REMOVE THE SAME, AS RESERVED FOR THE USE OF THE UNITED STATES, IN A DEED RECORDED JANUARY 31, 1955 IN BOOK 5514, PAGE 182 OF OFFICIAL RECORDS.

PARCEL 2 (A PORTION OF APN 441-590-04-00):

ALL THAT PORTION OF PUEBLO LOTS 242, 243, 259 AND 311 OF THE PUEBLO LANDS OF SAN DIEGO, IN THE CITY OF SAN DIEGO, COUNTY OF SAN DIEGO, STATE OF CALIFORNIA, ACCORDING TO THE MAP THEREOF MADE BY JAMES PASCOE IN 1870; A COPY OF WHICH MAP WAS FILED IN THE OFFICE OF THE COUNTY RECORDER OF SAN DIEGO COUNTY, NOVEMBER 14, 1921, AS MISCELLANEOUS MAP NO. 36, ALL BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

COMMENCING AT THE MOST NORTHERLY CORNER OF PUEBLO LOT 276; THENCE SOUTH 53° 17'00" EAST ALONG THE NORTHEASTERLY BOUNDARY LINE OF PUEBLO LOT 276, A DISTANCE OF 93.78 FEET; THENCE LEAVING SAID BOUNDARY LINE OF PUEBLO LOT 276, NORTH 72° 53'15" EAST, A DISTANCE OF 120.70 FEET TO A POINT IN THE ARC OF A 270.00 FOOT RADIUS CURVE, CONCAVE SOUTHERLY, A RADIAL TO SAID POINT BEARS NORTH 13° 11'45" EAST; THENCE NORTHWESTERLY AND WESTERLY THROUGH THE ARC OF SAID CURVE, THROUGH A CENTRAL ANGLE OF 20° 28'03" A DISTANCE OF 96.45 FEET; THENCE SOUTH 82° 42'42" WEST, A DISTANCE OF 579.30 FEET; THENCE SOUTH 75° 31'30" WEST, 237.21 FEET TO A POINT IN A 300.00 FOOT RADIUS CURVE, CONCAVE SOUTHERLY, A RADIAL TO SAID POINT BEAR NORTH 00° 57'45" EAST; THENCE WESTERLY ALONG THE ARC OF SAID CURVE THROUGH A CENTRAL ANGLE OF 03° 28'04" AN ARC LENGTH OF 18.16 FEET TO THE TRUE OF BEGINNING; THENCE CONTINUING ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 06° 41'21" AN ARC LENGTH OF 35.02 FEET TO THE BEGINNING OF A 4767.00 FOOT RADIUS CURVE, CONCAVE SOUTHERLY; THENCE SOUTHWESTERLY ALONG THE ARC OF SAID CURVE TO THE BEGINNING OF A 558.00 FOOT RADIUS CURVE, CONCAVE SOUTHEASTERLY, A RADIAL TO SAID POINT BEAR NORTH 14° 26'39" WEST; THENCE SOUTHWESTERLY ALONG THE ARC OF SAID CURVE THROUGH A CENTRAL ANGLE OF 63° 00'02" AN ARC LENGTH OF 613.56 FEET; THENCE SOUTH 12° 33'19" WEST, A DISTANCE OF 126.74 FEET TO A POINT IN THE NORTHEASTERLY BOUNDARY LINE OF PUEBLO LOT 243; THENCE CONTINUING SOUTH 12° 33'19" WEST, A DISTANCE OF 514.24 FEET TO THE BEGINNING OF A 20.00 FOOT RADIUS CURVE, CONCAVE NORTHEASTERLY, A RADIAL TO SAID POINT BEARS NORTH 77° 26'41" WEST; THENCE SOUTHEASTERLY ALONG THE ARC OF SAID CURVE THROUGH A CENTRAL ANGLE OF 89° 57'05" AN ARC LENGTH OF 31.40 FEET; THENCE TANGENT TO SAID CURVE SOUTH 77° 23'46" EAST, 617.83 FEET; THENCE NORTH 12° 35'00" EAST, 968.25 FEET; THENCE NORTH 26° 51'31" EAST, 393.88 FEET TO THE TRUE POINT OF BEGINNING.

EXCEPTING THEREFROM A PORTION OF SAID LAND, ALL URANIUM, THORIUM, AND ALL OTHER MATERIALS DETERMINED PURSUANT TO SECTION 5(B) (1) OF THE ATOMIC ENERGY ACT OF 1946 (60 STAT. 761), TO BE PECULIARLY ESSENTIAL TO THE PRODUCTION OF FISSIONABLE MATERIAL, CONTAINED IN WHATEVER CONCENTRATION IN DEPOSITS IN THE LANDS COVERED BY THIS INSTRUMENT, TOGETHER WITH THE RIGHT OF THE UNITED STATES THROUGH ITS AUTHORIZED AGENTS OR REPRESENTATIVES AT ANY TIME TO ENTER UPON THE LAND AND PROSPECT FOR, MINE AND REMOVE THE SAME, AS RESERVED FOR THE USE OF THE UNITED STATES, IN A DEED RECORDED JANUARY 31, 1955 IN BOOK 5514, PAGE 182 OF OFFICIAL RECORDS.

PARCEL 3 (A PORTION OF APN 441-590-04-00):

THAT PORTION OF PUEBLO LOT 259 OF THE PUEBLO LANDS OF SAN DIEGO, IN THE CITY OF SAN DIEGO, COUNTY OF SAN DIEGO, STATE OF CALIFORNIA, ACCORDING TO MAP THEREOF MADE BY JAMES PASCOE, A COPY OF WHICH SAID MAP WAS FILED IN THE OFFICE OF THE COUNTY RECORDER OF SAN DIEGO COUNTY AND KNOWN AS MISCELLANEOUS MAP NO. 36, DESCRIBED AS FOLLOWS:

BEGINNING AT A POINT IN THE SOUTHERLY LINE OF HANCOCK STREET, AS DESCRIBED IN PARCEL 1 OF RESUBDIVISION OF RESOLUTION NO. 197563 OF THE CITY OF SAN DIEGO, A CERTIFIED COPY OF SAID RESOLUTION RECORDED JULY 30, 1969 AS INSTRUMENT NO. 137836 OF OFFICIAL RECORDS, SAID POINT BEING THE INTERSECTION OF SAID SOUTHERLY LINE WITH THE SOUTHEASTERLY LINE OF SAID PUEBLO LOT 259, THENCE ALONG SAID SOUTHERLY LINE, SOUTH 82° 11' 53" WEST 460.92 FEET (RECORD SOUTH 82° 42' 42" WEST 460.91 FEET) TO POINT "A" OF SAID PARCEL NO. 1, SAID POINT BEING ON THE NORTHEASTERLY LINE OF KURTZ STREET, AS DESCRIBED IN PARCEL NO. 2 OF SAID RESOLUTION NO. 197563 OF OFFICIAL RECORDS; THENCE ALONG SAID NORTHEASTERLY LINE ON A TANGENT CURVE TO THE LEFT HAVING A RADIUS OF 40 FEET THROUGH AN ANGLE OF 136° 07' 53" AN ARC DISTANCE OF 95.04 FEET (RECORD 95.06 FEET); THENCE ALONG THE NORTHEASTERLY LINE OF SAID KURTZ STREET, SOUTH 53° 56' 00" EAST 304.02 FEET TO THE SOUTHEASTERLY LINE OF SAID PUEBLO LOT 259; THENCE ALONG SAID SOUTHEASTERLY LINE, NORTH 36° 08' 53" EAST 388.26 FEET TO THE TRUE POINT OF BEGINNING.

PARCEL 4 (A PORTION OF APN 441-590-04-00):

EXCEPTING THEREFROM A PORTION OF SAID LAND, ALL URANIUM, THORIUM, AND ALL OTHER MATERIALS DETERMINED PURSUANT TO SECTION 5(B) (1) OF THE ATOMIC ENERGY ACT OF 1946 (60 STAT. 761), TO BE PECULIARLY ESSENTIAL TO THE PRODUCTION OF FISSIONABLE MATERIAL, CONTAINED IN WHATEVER CONCENTRATION IN DEPOSITS IN THE LANDS COVERED BY THIS INSTRUMENT, TOGETHER WITH THE RIGHT OF THE UNITED STATES THROUGH ITS AUTHORIZED AGENTS OR REPRESENTATIVES AT ANY TIME TO ENTER UPON THE LAND AND PROSPECT FOR, MINE AND REMOVE THE SAME, AS RESERVED FOR THE USE OF THE UNITED STATES, IN A DEED RECORDED JANUARY 31, 1955 IN BOOK 5514, PAGE 182 OF OFFICIAL RECORDS.

THAT PORTION OF PUEBLO LOT 259, AS SAID PUEBLO LOT IS SHOWN ON THE MAP OF THE PUEBLO LANDS OF SAN DIEGO, MADE BY JAMES PASCOE IN 1870, IN THE CITY OF SAN DIEGO, COUNTY OF SAN DIEGO, STATE OF CALIFORNIA, A CERTIFIED COPY OF SAID PASCOE'S MAP IS FILED IN THE OFFICE OF THE COUNTY RECORDER OF SAN DIEGO COUNTY AS MISCELLANEOUS MAP NO. 36, WHICH LIES NORTHWESTERLY OF THE NORTHWESTERLY LINE OF HANCOCK STREET, NORTHERLY OF THE NORTHERLY LINE OF CHANNEL WAY AS DESCRIBED UNDER PARCELS 1 AND 3, RESPECTIVELY, IN RESOLUTION NO. 197563 ON JULY 24, 1969 BY THE COUNCIL OF THE CITY OF SAN DIEGO, RECORDED JULY 30, 1969 AS INSTRUMENT NO. 137836 OF OFFICIAL RECORDS, AND WHICH LIES SOUTHERLY OF THE SOUTHERLY BOUNDARY OF 11-SD-109, HIGHWAY 109 AS DESCRIBED UNDER PARCEL 2 IN DEED TO THE STATE OF CALIFORNIA, RECORDED MARCH 26, 1968 AS INSTRUMENT NO. 49552 OF OFFICIAL RECORDS.

DECLARATION OF RESPONSIBLE CHARGE

I HEREBY DECLARE THAT I AM THE ENGINEER OF WORK FOR THIS PROJECT, THAT I HAVE EXERCISED RESPONSIBLE CHARGE OVER THE DESIGN OF THE PROJECT AS DEFINED IN SECTION 6703 OF THE BUSINESS AND PROFESSIONS CODE, AND THAT IN MY PROFESSIONAL OPINION THE DESIGN IS CONSISTENT WITH CURRENT STANDARDS.

I UNDERSTAND THAT THE CHECK OF PROJECT DRAWINGS AND SPECIFICATIONS BY THE CITY OF SAN DIEGO IS CONFINED TO A REVIEW ONLY AND DOES NOT RELIEVE ME, AS ENGINEER OF WORK, OF MY RESPONSIBILITY FOR PROJECT DESIGN.

MARTIN J. JONES, RCE 78492 DATE

LAND USE PARKING REQUIREMENTS

Land Use	Site Area (SF)	Parking Ratio Code Sections	Required Per Code: Min. Parking Ratio	Required Per Code: Parking	Required Per Code: Clean Air / Zero Emission	Required Per Code: *****Loading Zones	Proposed: Parking	Proposed: Clean Air / Zero Emission	Proposed: Loading Zones	Proposed: Accessible	Proposed: Van Accessible
Residential	1,230,100	SDMC 142-05C	* N/A	* 0	N/A	17	4,550	N/A	19	91	12
Commercial	130,000	SDMC 142-05E SDMC 142 - 05F	* N/A	* 0	32	5	390	32	5	8	2
Entertainment Center	191,870	SDMC 141.0622(d)	** N/A	**0	168	2	2,100	168	2	31	6

* Site is located in a Transit Priority Area (TPA) and therefore the minimum required vehicular parking is zero provided that the requirements of Section 142.0528 and 142.0530 of the SDMC are met.

** City of San Diego Municipal code Section 141.0622(d) indicates that off-street parking for sports arenas and stadiums shall be provided at a level sufficient to serve the facility without impacting adjacent or nearby property

*****The number of required loading areas is based on Section 142.1010, Table 142-10B of the SDMC.

ADDITIONAL PARKING REQUIREMENTS

Land Use	EV Capable	EV Ready	EV Chargers	Short Term Bike Parking	Long Term Bike Parking	Motorcylce
Residential	455	1,138	228	0	1,942	426
Commercial	*** 195	N/A	**** 20	20	20	8
Entertainment Center	** 1,050	N/A	**** 105	105	105	42

*** EV Capable ratios are based on Council Policy 900-03 which adds an additonal 30% to the existing 20% per Calgreen requiremetns for a total of 50% for non-residential

**** EV Charger values are based on the original Calgreen 20% EV Capable value and not Council Policy 900-03

NOTE:
PARKING FOR PARKS WILL BE PROVIDED WITHIN THE SHARED ENTERTAINMENT CENTER PARKING AND ON PUBLIC STREETS PROXIMATE TO THE PARKS PER COUNCIL POLICY 500-08 AND PER THE PARKS & RECREATION CONSULTANT'S GUIDE TO PARK DESIGN AND DEVELOPMENT.

SPORTS ARENA BOULVEARD

Sports Arena Boulevard will undergo improvements to meet the requirements of the Midway Pacific Highway Community Plan (CPU) and city code requirements, with respect to land use, mobility and sustainability. Improvements should include a promenade, which would enhance pedestrian and bicycle experience and connectivity. The promenade may include a 12' wide multi-modal bike and pedestrian path, which would also serve as the Bay-To-Bay Urban Path on Sports Arena Boulevard. The path may meander through the promenade, maintaining a 12' clear path of travel. The path should be composed of standard pedestrian rated concrete, with enhanced paving at plazas and intersections. A double-row of street trees should conform with the CPU street tree requirements for the Bay-to-Bay Urban Path. Planting areas should vary in size and location throughout the Promenade. Additional amenities should be placed within the promenade to activate and enrich the space. Such amenities may include small plazas and seating areas with enhanced paving, stabilized decomposed granite gravel and fixed seating. Pedestrian amenities such as trash and recycling receptacles, etc will be located at a minimum of 1 for every 250 feet of street frontage. Opportunities for public art should be accommodated within the streetscape. For short-term bike parking, bike racks should be provided along Sports Arena Boulevard and dispersed evenly throughout the property. In addition to code required roadway lights (per civil), pedestrian-scaled lighting fixtures should be provided within the promenade to create a safe and walkable environment. Bus stops - local and BRT - would be located on Sports Arena Boulevard, providing essential mobility linkages (per traffic engineers). Shaded and enhanced bus stops are encouraged. To further optimize mobility, an additional 6' wide bike path and a 3' buffer should be provided along the curb.

KURTZ STREET

Kurtz Street should undergo improvements to meet the requirements of the Midway Pacific Highway Community Plan (CPU) and city code requirements, with respect to land use, mobility and sustainability. Improvements should include a promenade on the south side of the street, which would enhance pedestrian and bicycle experience and connectivity. The promenade may include a 12' wide multi-modal bike and pedestrian path. The path may meander through the promenade, maintaining a 12' clear path of travel. The path should be composed of standard pedestrian-rated standard concrete, with enhanced paving at plazas and intersections. Truncated dome pavers will be necessary at all locations where the path meets a driveway or street intersection. Additionally, the promenade would include shade trees in planting areas. Planting areas should vary in size and location. Additional amenities and park features should be placed within the promenade to activate and enrich the space. Such amenities may include small plazas and seating areas with enhanced paving, decomposed granite gravel and fixed seating. Children's play elements, fitness stations, and small lawn areas may be included within the promenade. Opportunities for public art should be accommodated within the streetscape. Bike racks should be provided for short-term bicycle parking in multiple locations. In addition to code required roadway lights (per civil), pedestrian-scaled lighting fixtures should be provided within the promenade to create a safe and walkable environment. Interpretive and wayfinding signage may be provided within the promenade to enhance the walkability and to optimize accessibility through the project site.

FRONTIER DRIVE

Frontier Drive is a new retail-oriented street that would provide connectivity, promote walkability and ease of access for cyclists. Improvements should include a promenade on the east side of the street, which includes a 12' wide multi-modal bike and pedestrian path. All paving along Frontier Drive should consist of enhanced paving with a mix of colored concrete and/or unit pavers. The multi-modal path should be buffered from the street by a generous furnishings zone, which should include a range of park amenities recommended in the CPU, including fixed seating, bike racks and interpretive and wayfinding signage, small decomposed granite plazas, and planting areas. Opportunities for public art should be accommodated within the streetscape. Additionally, the promenade would include shade trees, located in planting areas and in tree grates. A retail frontage zone will be included within the promenade, which should serve as a space for outdoor cafe seating. The streetscape on the west side of Frontier Drive should include a parkway consisting of a 7' clear walkway and a 7' wide furnishing/planting zone. The walkway should be made up of pedestrian-rated enhanced paving, and the furnishings zone should include fixed and movable seating, bike racks, lighting, planting areas and shade trees. For stormwater quality, at-grade water quality treatment features such as modular wetlands should be provided (per civil) within the streetscape. These features may be enhanced with decorative aggregate and boulders to create a visually pleasing streetscape aesthetic. Interpretive and wayfinding signage may be provided within the promenade to optimize accessibility through the project site and create a sense of place.

KEMPER STREET

Kemper Street is a new residential-oriented street that should enhance circulation for pedestrians and cyclists at the community scale. Class IV cycle tracks should be provided on both east and west sides of the street. On the east side of Kemper, this cycle track is buffered from vehicular traffic, within the Promenade. The Promenade should also include a range of park amenities recommended in the CPU, including fixed seating, bike racks and interpretive and wayfinding signage, small decomposed granite plazas, small lawn areas and planting. Opportunities for public art should be accommodated within the streetscape. The pedestrian pathway within the Promenade should be composed of standard pedestrian rated standard concrete, with enhanced paving at plazas and intersections. Additionally, the Promenade should include shade trees in planting areas. Planting areas should vary in size and location. The streetscape on the west side of Frontier Street should include a parkway consisting of a 7' clear walkway and a 7' wide furnishing zone which may include include fixed and movable seating, bike racks, lighting, planting areas and shade trees in planting and in tree grates. The walkway should be made up of pedestrian-rated enhanced paving. For stormwater quality, at-grade water quality treatment features such as modular wetlands should be provided (per civil) within the streetscape.

PASEO GREENS

Paseo Greens are residential-focused park spaces located at the ground level of residential housing blocks. These paseos are planned to accommodate park amenities and enhance connectivity for the residential community. The Paseo Greens should include shade trees, lawn areas, planting, decomposed granite gravel, and pedestrian walkways with enhanced paving. Individually they should vary in character and may have enhancements such as children's play areas, gated dog runs, shade structures and seating areas. Smaller recreational opportunities such as bocce ball, basketball, fitness stations, game tables and movable furnishings should also be considered. Water quality basins will be strategically incorporated within Paseo Green planting areas in an effort to meet stormwater quality regulations. Ground floor units shall have a private patio space surrounded with a low masonry wall or ornamental fencing (not shown) with planting and paving as required. In some instances, fire access lanes are located within the Paseo Greens. The 26' wide fire lanes should be composed of vehicular-rated enhanced paving, Grasspave and/or Gravelpave - drivable surface products that offer a softer alternative to traditional hardscape. These products enable turf grass and stabilized decomposed granite gravel to be placed within the fire lane, creating space for play, seating and activation. Pedestrian walkways of standard concrete allow for walkability through the greens. Ornamental and shade trees should line the walkways to provide visual screening of the residences. Paseo Greens sit adjacent to private drives which contain parallel parking spaces for leasing visitors and for moving truck loading and unloading. Private drives should consist of asphalt paving or concrete (per civil) with standard raised driveway curbs.

PASEO GREENWAYS

Paseo Greenways are usable park spaces that also serve as fire lanes or for emergency access. The 26' wide fire lanes should be composed of vehicular-rated enhanced paving, Grasspave and/or Gravelpave - drivable surface products that offer a softer alternative to traditional hardscape. These products enable turf grass and decomposed granite gravel to be placed within the fire lane, creating flexible spaces for play, seating and activation. Pedestrian walkways of standard concrete allow for walkability through the greenways. Ornamental and shade trees should line the walkways to provide visual screening of the residences. Small seating areas and plazas should be located within the Paseo Greenways. Paved with decomposed granite gravel, they may include amenities such as small play features, fire features, and movable and fixed seating. Ground floor units shall have a private patio space surrounded with a low masonry wall or ornamental fencing (not shown) with planting and paving as required. Residential parking garage access off Frontier and Kemper are located via Private Drives at ends of the Paseo Greenways. Private drives contain parallel parking spaces to accommodate leasing visitors and for moving truck loading and unloading. Private drives should consist of asphalt paving or concrete (per civil) with standard raised driveway curbs. Pedestrian walkways of pedestrian-rated concrete should be implemented on both sides of the private drives.

THE GREEN

The Green is a neighborhood park, composed of park program elements and amenities tailored toward community and residential uses. The park should be welcoming for residents and the public, promoting community cohesion, providing space for children and pets to play, while accommodating events of varying scales. The park may include open multi-use lawns to allow for free-play activities like pick-up soccer and frisbee, movie nights and outdoor yoga classes, or other flexible uses. Children's play areas should be outfitted with play equipment, nature play elements and small water play features. For day-to-day activation, the park may include game tables, swings, and public art to welcome park-goers. Plaza spaces should be provided as central zones to accommodate community events. These plaza spaces may be composed of enhanced paving with public art and/or architectural shade structures. A well-designed public restroom/storage facility with drinking fountains should be provided within the park. A series of wide, generous walkways consisting of pedestrian-rated enhanced paving should be provided along the perimeter of the park, allowing for seamless walkability to residences and park features. A multi-modal path should be provided within the park to allow for bicycles to traverse through The Green. Shade trees should be abundantly located throughout the park to provide shade and an aesthetically pleasing atmosphere. Planting areas should be provided for visual screening where necessary, creating a leisurely park atmosphere. Ground floor units shall have a private patio space surrounded with a masonry wall or ornamental fencing with planted landscape buffers to clearly separate patios from park areas.

THE PLAZA

The Plaza is designed as an experiential restaurant and retail experience, fronted with al fresco dining patios and public plaza amenities. The Plaza acts as a primary pedestrian connector between the Square and the Green - the two largest public parks on site. The Plaza may be made up of pedestrian-rated and vehicular-rated concrete unitized pavers. Small lawn areas and performance spaces may be provided within the Plaza, softened by stabilized decomposed granite seating terraces and cooled by interactive water features. Seating areas for dining and leisure will spill out from beneath architectural canopies, creating a strong indoor-outdoor connection. Retail and lobby entries will be graciously planted to allow for a welcoming entrance. Large shade trees should be liberally placed throughout the Plaza, creating a green and verdant atmosphere. A 26' wide portion of the Plaza that is designated for vehicular fire access will contain only movable furnishings, with no fixed furnishings or trees. Other amenities within the Plaza may include fixed and movable seating, shade structures and bicycle racks, to create a functional, welcoming and vibrant public realm open space.

THE SQUARE

The Square should be a vibrant and highly activated public plaza for outdoor cultural, and community events. The Square is located directly adjacent to the arena, and is scaled to accomodate large quantities of event attendees. Public programming and entertainment opportunities should be accomodated within the Square. The Square should serve as a large, dynamic plaza space composed of pedestrian-rated and vehicle-rated enhanced concrete unit pavers. Lighting, power and event infrastructure should be provided within the Square to power food trucks, outdoor concerts, and other programming activities with electrical needs. Shade structures, performance pavilion and an outdoor performance stage may be provided within the Square. Public art in the form of wall murals, sculptures and interpretive graphics may be included within the Square. An interactive water feature may be provided within the Square to provide interest and foster community. Fixed and moveable seating will be provided in the Square. Planting areas with large shade trees will be strategically located to provide shade, buffer noise, frame and soften views where necessary. A 26' wide fire access lane will be provided through the Square to access the arena and adjacent buildings. The fire access lane may be composed of a combination of vehicular-rated enhanced paving. A gracious bicycle path shall be provided through the Square.

PLANTS LEGEND

Native and adaptive plants with one or more of the following characteristics have been selected for consideration: native, drought-tolerance, low maintenance, visual/seasonal interest, habitat generator, pollinators, and growth habits. Plant species for the Midway Rising project may include, but are not limited to, the following:

SHRUBS FOR SCREENING AND HEDGES	SPACING	CONTAINER	HEIGHT	WIDTH
Arbutus unedo 'Compacta' - Dwarf Strawberry Tree	72" o.c.	15 GAL	7'-10'	7'-10'
Acanthus mollis - Bear's Breech	24" o.c.	1 - 5 GAL	3'-5'	2'-3'
Artemesia x 'Powis Castle' - Powis Castle Artemesia	24" o.c.	1 - 5 GAL	2'-4'	4'-6'
Ceanothus thyrsiflorus - Skylark Ceanothus*	36" o.c.	1 - 5 GAL	4'-6'	5'
Heteromeles arbutifolia - Toyon*	72" o.c.	15 GAL	8'-15'	8'
Mahonia nevinii - Nevin's Barberry*	36" o.c.	1 - 5 GAL	10'-15'	10'-15'
Myrica californica - Pacific Wax Myrtle*	72" o.c.	15 GAL	20'-30'	10'-20'
Olea europaea 'Montra' - Little Ollie Olive	30" o.c.	15 GAL	6'-8'	6'-8'
Podocarpus henkelii - Long-leafed Yellowwood	30" o.c.	15 GAL	15'-20'	12'-20'
Philodendron xanadu - Xanadu Philodendron	30" o.c.	1 - 5 GAL	1'-2'	2'-3'
Rhus integrifolia - Lemonade Berry*	72" o.c.	15 GAL	6'-10'	10'-15'
Rhamnus californica 'Eve Case' - Eve Case Coffeeberry*	72" o.c.	15 GAL	3'-6'	4'-6'
Rosmarinus officinalis - Upright Rosemary	36" o.c.	1 - 5 GAL	4'-6'	4'-6'
Westringia fruticosa 'Mundi' - Low Coast Rosemary	60" o.c.	1 - 5 GAL	1'-2'	4'-6'
Westringia fruticosa 'Wynyabbie Gem' - Coast Rosemary	60" o.c.	1 - 5 GAL	6'	10'-12'

SUB-SHRUBS AND PERENNIALS	SPACING	CONTAINER	HEIGHT	WIDTH
Achillea millefolium - Yarrow*	36" o.c.	1 - 5 GAL	2'-3'	2'-3'
Asclepias fascicularis - Narrowleaf Milkweed*	36" o.c.	1 - 5 GAL	3'	3'
Asclepias speciosa - Showy Milkweed*	36" o.c.	1 - 5 GAL	2'-4'	2'-3'
Dudleya edulis - Lady Fingers*	24" o.c.	1 - 5 GAL	0.5'-0.75'	1'
Encelia californica - Canyon Sunflower*	24" o.c.	1 - 5 GAL	3'-5'	3'-5'
Heuchera maxima - Island Alum Root*	36" o.c.	1 - 5 GAL	3'	2'
Mimulus gutttatus- Monkeyflower*	36" o.c.	1 - 5 GAL	2'	2'
Penstemon margarita 'BOP' - Foothill Penstemon*	36" o.c.	1 - 5 GAL	0.5'-0.8'	1'-1.5'
Salvia apiana - White Sage*	36" o.c.	1 - 5 GAL	6'	6'
Salvia clevelandii - Cleveland Sage*	36" o.c.	1 - 5 GAL	3'-5'	5'-8'
Salvia leucantha 'Santa Barbara' - Santa Barbara Sage	36" o.c.	1 - 5 GAL	3'-4'	3'-4'
Salvia mellifera - Black Sage*	36" o.c.	1 - 5 GAL	5'	2'-3'
Solidago californica - California Goldenrod	24" o.c.	1 - 5 GAL	1.5'	5'
Sphaeralcea ambigua - Desert Mallow*	60" o.c.	1 - 5 GAL	3'-5'	2'-4'
Trichostema lanatum - Woolly Blue Curls*	24" o.c.	1 - 5 GAL	3'-5'	3'-5'
Verbena lilacina 'De La Mina' - Lilac Verbena*	36" o.c.	1 - 5 GAL	1'-2'	3'-4'
Viguiera laciniata - San Diego Sunflower*	36" o.c.	1 - 5 GAL	3'	3'

GROUNDCOVERS:	SPACING	CONTAINER	HEIGHT	WIDTH
Acacia redolens 'Low Boy' - Low Boy Bank Catclaw	48" o.c.	1 - 5 GAL	1'-2'	8'-15'
Arctostaphylos Pacific Mist - Pacific Mist Manzanita*	48" o.c.	1 - 5 GAL	2.5'	4'-10'
Baccharis pilularis 'Pigeon Point' - Pigeon Point Coyote Brush*	72" o.c.	1 - 5 GAL	1'-2'	8'-10'
Ceanothus 'Centennial' - Centennial Ceanothus*	48" o.c.	1 - 5 GAL	0.5'-1'	4'-5'
Erigeron g. x 'Wayne Roderick Daisy' - Wayne Roderick Daisy	48" o.c.	1 - 5 GAL	1'	1.5'
Salvia 'Point Sal' - Low Purple Sage'*	12" o.c.	1 - 5 GAL	0.5'-1'	1'-4'
Salvia spathacea - Hummingbird Sage*	12" o.c.	1 - 5 GAL	1'-2'	4 -5'
Salvia sonomensis - Creeping Sage*	12" o.c.	1 - 5 GAL	0.5'-1'	2'-4'
Rosmarinus officinalis 'Prostratus'	24" o.c.	1 - 5 GAL	2'-3'	8'
Senecio mandraliscae - Blue Chalksticks	24" o.c.	1 - 5 GAL	0.5'-1'	1'-2'

BIORETENTION SPECIES+:	SPACING	CONTAINER	HEIGHT	WIDTH
Anemopsis californica - Yerba mansa*	12" o.c.	1 - 5 GAL	1'	1'
Baccharis pilularis 'Pigeon Point' - Pigeon Point Coyote Brush*	72" o.c.	1 - 5 GAL	1'-2'	8'-10'
Carex praegracilis - Clustered Field Sedge*	12" o.c.	1 - 5 GAL	1'	3'
Chondropetalum tectorum - Small Cape Rush	18" o.c.	1 - 5 GAL	3'	3'
Juncus patens- California Grey Rush*	18" o.c.	1 - 5 GAL	2'-3'	2'-3'
Mimulus cardinalis - Scarlet Monkeyflower*	12" o.c.	1 - 5 GAL	1.5'-3'	3'

VINES:	SPACING	CONTAINER	HEIGHT	WIDTH
Bauhinia corymbosa - Phanera Vine	60" o.c.	1 - 5 GAL	9'	9'
Ficus pumila - Fig Vine	60" o.c.	1 - 5 GAL	3'-25'	3'-25'
Hardenbergia vilacea - Purple Vine Lilac	60" o.c.	1 - 5 GAL	6'-8'	6'-8'
Passiflora vitifolia - Passion Flower Vine	60" o.c.	1 - 5 GAL	6'-20'	3'-5'
Petrea volubilis - Queen's Wreath	60" o.c.	1 - 5 GAL	6'-12'	3'-6'
Stephanotis floribunda - Madagascar Jasmine	60" o.c.	1 - 5 GAL	6'-20'	6'-10'
Trachelospermum jasminiodes - Chinese Star Jasmine	60" o.c.	1 - 5 GAL	2'	10'-20'

CACTUS & SUCCULENTS	SPACING	CONTAINER	HEIGHT	WIDTH
Aeonium urbicum - Dinner Plate Aeonium	36" o.c.	1 - 5 GAL	3'	3'
Agave attenuata - Foxtail Agave	24" o.c.	1 - 5 GAL	4'-5'	6'-8'
Agave americana - Century Plant	60" o.c.	1 - 5 GAL	6'-10'	8'-13'
Agave x 'Blue Flame' - Blue Flame Agave	36" o.c.	1 - 5 GAL	3'-5'	3'-5'
Agave x 'Blue Glow' - Blue Glow Agave	36" o.c.	1 - 5 GAL	1'-2'	1'-2'
Agave vilmoriniana - Octopus Agave	48" o.c.	1 - 5 GAL	3'-4'	3'-4'
Aloe barbadensis - Aloe Vera	24" o.c.	1 - 5 GAL	2'-3'	2'-3'
Aloe striata - Coral Aloe	24" o.c.	1 - 5 GAL	2'-3'	1'-2'
Echinocactus grusonii- Golden Barrell Cactus	36" o.c.	1 - 5 GAL	2'-3'	2'
Hesperaloe 'Brakelights' - Red Yucca	36" o.c.	15 GAL	3'	2'-3'
Opuntia santa rita - Santa Rita Pricklypear	36" o.c.	1 - 5 GAL	4'	6'
Sanseveria zeylanica - Bowstring Sanseveria	24" o.c.	1 - 5 GAL	2'-3'	1'
Yucca elephantipes - Soft Tip Yucca	48" o.c.	15 GAL	3'-6'	3'
Yucca whipplei - Chapparral Yucca	48" o.c.	15 GAL	3'	6'

FERNS	SPACING	CONTAINER	HEIGHT	WIDTH
Dryopteris erythrosora - Autumn Fern	24" o.c.	1 - 5 GAL	1'-2'	1'-2'
Microlepia strigosa - Lace Fern	24" o.c.	1 - 5 GAL	2'-3'	2'-3'
Polystichum munitum - Western Sword Fern*	24" o.c.	1 - 5 GAL	2'-3'	2'-4'
Rumohra adiantiformis - Leatherleaf Fern	24" o.c.	1 - 5 GAL	3'	3'

GRASSES AND GRASS-LIKE SPECIES	SPACING	CONTAINER	HEIGHT	WIDTH
Aristida purpurea - Purple Three-Awn	12" o.c.	1 - 5 GAL	2'	2'
Carex divulsa- Berkeley Sedge	12" o.c.	1 - 5 GAL	1'-1.5'	2'
Chondropetalum tectorum - Small Cape Rush	18" o.c.	1 - 5 GAL	3'	3'
Chondropetalum elephantium - Large Cape Rush	48" o.c.	1 - 5 GAL	5'-6'	4'-6'
Dianella revoluta 'Clarity Blue' - Clarity Blue Dianelle	24" o.c.	1 - 5 GAL	1.5'	2'
Hybrid Bermuda - Turf Sod		Sod		
Leymus condensatus - Giant Wildrye*	48" o.c.	1 - 5 GAL	2'-3'	4'-6'
Lomandra longifolia 'Breeze' - Dwarf Mat Rush	30" o.c.	1 - 5 GAL	3'	3'
Muhlenbergia rigens - Deer Grass*	48" o.c.	1 - 5 GAL	2'-3'	2'-3'
Sesleria autumnalis - Autumn Moor Grass	48" o.c.	1 - 5 GAL	1'	1'
Sisyrinchium bellum - Blue Eyed Grass*	48" o.c.	1 - 5 GAL	1'	1'

**California Native species*
+Per City of San Diego Stormwater Standards plant List for Bioretention / Biofiltration BMPs

IRRIGATION NOTES

1. ALL PLANTING AREAS WILL BE IRRIGATED ACCORDING TO HYDROZONES, PLANT TYPE & ENVIRONMENTAL EXPOSURE AND WILL RECEIVE 100% COVERAGE BY MEANS OF AUTOMATICALLY CONTROLLED, ELECTRONICALLY OR SATELLITE OPERATED, UNDERGROUND PIPED PERMANENT SYSTEM.

2. ALL LANDSCAPE AND IRRIGATION SHALL CONFORM TO THE CITY OF SAN DIEGO LANDSCAPE ORDINANCE AND CITY OF SAN DIEGO LAND DEVELOPMENT MANUAL LANDSCAPE STANDARDS AND ALL REGIONAL STANDARDS FOR LANDSCAPE INSTALLATION AND MAINTENANCE.

3. AN IRRIGATION SYSTEM SHALL BE PROVIDED AS REQUIRED FOR PROPER IRRIGATION DEVELOPMENT AND MAINTENANCE OF THE VEGETATION. THE DESIGN OF THE SYSTEM SHALL PROVIDE ADEQUATE SUPPORT FOR THE VEGETATION SELECTED.

LANDSCAPE NOTES

1. A MINIMUM ROOT ZONE OF 40 SF IN AREA, (TYP. 5X8) SHALL BE PROVIDED FOR ALL TREES. THE MINIMUM DIMENSION FOR THIS AREA SHALL BE 5 FT PER SDMC 142.0403(b)(5).

2. NO TREES OR SHRUBS WHOLE HEIGHT WILL EXCEED 3 FT AT MATURITY SHALL BE INSTALLED OR RETAINED WITHIN 5 FT OF ANY PUBLICLY MAINTAINED WATER FACILITIES OR WITHIN 10 FT OF ANY PUBLICLY MAINTAINED SEWER FACILITIES.

3. MINIMUM TREE SEPARATION DISTANCE

- TRAFFIC SIGNALS/ STOP SIGN	20 FT
- UNDERGROUND UTILITY LINES	5 FT
- SEWER LINES	10 FT
- ABOVE GROUND UTILITY LINES	10 FT
- DRIVEWAY ENTRIES	10 FT
- INTERSECTIONS	25 FT

(INTERSECTING CURB LINES OF TWO STREETS)

4. NO OBSTRUCTION INCLUDING LANDSCAPING OR SOLID WALLS WITHIN THE VISIBILITY TRIANGLE SHALL EXCEED 36' IN HEIGHT.

NOTE:
STREET TREE LOCATION AND QUANTITIES ARE SUBJECT TO CHANGE BASED ON FINAL LOCATIONS OF DRIVEWAYS AND UNDERGROUND UTILITIES. HOWEVER, THE MINIMUM STREET TREE RATE REQUIREMENT ALONG EACH STREET FRONTAGE SHALL BE ACHIEVED.

CLIMATE ACTION PLAN

1.TREES SHALL BE PLACED TO MEET CLIMATE ACTION PLAN REGULATIONS: A MINIMUM 50% OF PEDESTRIAN AREAS IN THE PUBLIC RIGHT-OF-WAY SHALL BE SHADED BY STREET TREES AT 10 YEARS MATURITY.

2. FOR RESILIENT INFRASTRUCTURE AND HEALTHY ECOSYSTEMS - TWO TREES SHALL BE PROVIDED ON THE PREMISES FOR EVERY 5,000 SQ.FT. OF LOT AREA, WITH A MINIMUM OF ONE TREE PER PREMISES

TREES LEGEND

The Tree Species Diagram illustrates varying tree palettes for the Midway Rising community. Native and adaptive trees with the following characteristics have been selected for consideration: abundant shade canopy, drought-tolerance, low maintenance, seasonal interest, and as recommended in the Midway Pacific Highway Community Plan. Tree species for the Midway Rising project may include, but are not limited to, the following:

A — THE GREEN

	QUANTITY	CONTAINER	MATURE HEIGHT	MATURE WIDTH
Chilopsis linearis - Desert Willow*	187 TOTAL	24" Box	10'-30'	6'-25'
Quercus spp. - Oak species*		60" Box	25'-80'	25'-60'
Platanus racemosa - California Sycamore*		60" Box	40'-50'	30'-45'
Pinus torreyana - Torrey Pine*		60" Box	50'	20'-25'

1 INTRODUCTION

The Midway Rising Project proposes to modify the transportation network that was modeled in the 2018 Midway Pacific Highway Community Plan (September 2018). Therefore, a Community Plan Amendment (CPA) and analysis to evaluate any potential operational effects within the study area in the Horizon Year (2050) due to the Project's proposed modifications in addition to those identified in the Community Plan transportation analyses was prepared. This document was prepared as the transportation analysis that evaluates the Midway Rising project's proposed changes to the Community Plan with respect to the roadway network.

1.1 PROJECT DESCRIPTION

The proposed Midway Rising development is located at 3220, 3240, 3250, and 3500 Sports Arena Boulevard and 3467, 3487, and 3495 Kurtz Street (privately-owned parcels), in the City of San Diego, CA. The approximately 47.8-acre (52.07 acres total including privately-owned parcels) Midway Rising project site is located within the Midway-Pacific Highway community of the City of San Diego, and is bordered by Kurtz Street to the northeast, Sports Arena Boulevard to the southwest, Hancock Street to the northwest, and commercial development to the southeast.

LAND USES

The project proposes to demolish the existing 16,000-seat San Diego Sports Arena and all commercial buildings on site, and construct the following uses:

- **Entertainment**
  - New 16,000-seat Entertainment Center
  - 3,500-seat theater (to be located within the privately-owned parcels area)
- **Residential**
  - 4,627 multi-family dwelling units, including:
    - 2,627 market-rate units
    - 2,000 affordable units, including:
      - 1,538 units ≤ 50% Area Median Income (AMI)
      - 462 units between 50%-80% AMI
- **Commercial**
  - 140,000 square-feet of commercial, including
    - 60,000 square-feet retail
    - 40,000 square-feet quality restaurant
    - 40,000 square-feet high-turnover sit-down restaurant

Construction of the project is proposed to occur in two phases:

- Phase 1 consists of the project site east of Frontier Drive with the exception of the privately-owned parcels, including construction of the proposed Frontier Drive, to be completed in 2030. During the construction of Phase 1, the existing San Diego Sports Arena and existing commercial uses west of Frontier Drive will remain operational.
- Phase 2 construction includes the remainder of the project site west of Frontier Drive plus the privately-owned parcels, to be completed by 2035.

SITE ACCESS

The proposed project site will provide vehicle access via 11 access points, including four along Sports Arena Boulevard and seven on Kurtz Street. Four access points will be intersections formed with the proposed Kemper Street and Frontier Drive roadways, and the remaining seven access points will be driveways into parking structures. The project will provide multimodal facilities within the project study area that will improve mobility within the site and to and from the Old Town Transit Center.

1.2 ANALYSIS SCENARIOS

The CPA analyzed the following scenarios:

- ***Existing (2023):*** Represents the traffic conditions of the existing street network, lane geometry, and signal timing, as of December 2023, and traffic volumes observed on a weekday, event day in 2023.
- ***Horizon Year (2050) Baseline (CP Scenario):*** The CP scenario represents the Horizon Year (2050) Baseline scenario per the Midway-Pacific Highway Community Plan. The roadway network is based on the Midway-Pacific Highway Community Plan Baseline scenario land use inputs for 2035, which is not anticipated to change by Year 2050. The traffic volumes were developed using the 2050 SANDAG (ABM2+ version 14.3.0) travel demand model, which includes the buildout scenario based on the Midway-Pacific Highway Community Plan EIR transportation analysis. Note that the Community Plan buildout scenario does not include the continuation of the San Diego Sports Arena and therefore reflects a non-event day scenario.
- ***Horizon Year (2050) Plus Full Project Buildout (CPA Scenario):*** The CPA scenario represents the Horizon Year (2050) Plus Project Buildout scenario. The roadway network includes the roadway changes proposed for the Midway Rising project. Traffic volumes were developed using the 2050 SANDAG (ABM2+ version 14.3.0) travel demand model, including the Midway Rising Project Buildout land use inputs. The CPA scenario includes the Midway Rising Project Buildout land use inputs for the proposed Entertainment Center under an event-day and non-event day.

1.3 STUDY PERIODS

The CPA analyzed the following two study periods, which are consistent with the 2018 Community Plan:

- Commuter AM Peak: 7:00 AM to 10:00 AM (reflective of the existing study area weekday commuter peak period)
- Commuter PM Peak: 4:00 PM to 6:00 PM

The two peak periods above were analyzed for all proposed land uses under the three analysis scenarios defined in the previous section.

The Horizon Year (2050) Baseline (CP Scenario) reflects the Midway Pacific Highway Community Plan buildout, which assumes the highest density land use alternative, and assumes the demolition of the existing San Diego Sports Arena. Therefore, the CP Scenario weekday analysis is reflective of a ‘non-event day’. However, the project will include the Entertainment Center and theater uses; therefore, analysis was run for event day and non-event day under the Horizon Year (2050) Plus Full Project Buildout (CPA Scenario).

2 MIDWAY-PACIFIC HIGHWAY COMMUNITY PLAN

2.1 CP RECOMMENDATIONS

The CP includes a network of planned roadways and associated pedestrian facilities, multi-use paths, and bicycle facilities. Three new north-south running roadways within the site between Sports Arena Boulevard and Kurtz Street were planned in the CP street network:

- Kemper Street (extended north from its current terminus with Sports Arena Boulevard)
- Frontier Drive
- Greenwood Street (extended south from its current terminus with Kurtz Street)

The CP also provides conceptual intersection design for improvements at the following four intersections located within the study area:

- Hancock Street and Sports Arena Boulevard (*CP Figure 3-8*)
- Kemper Street and Sports Arena Boulevard (*CP Figure 3-8*)
- Midway Drive and Sports Arena Boulevard / West Point Loma Boulevard (*CP Figure 3-14*)
- Camino del Rio West / Rosecrans Street and Sports Arena Boulevard (*CP Figure 3-15)*

Excerpts from the Midway Pacific-Highway Community Plan referenced above are provided in **Appendix A**.

2.2 PROJECT RECOMMENDATIONS FOR THE CPA

The following modifications to the Midway-Pacific Highway Community Plan were analyzed for the 2050 Midway Rising Project Buildout (CPA scenario):

Roadway Segments:

- **Kurtz Street** (between Hancock Street and Sherman Street): Convert from a 2-lane one-way (southeast-bound) collector to a 2-lane (two-way) collector with one lane in each direction.
- **Rosecrans Street** (between Midway Drive and Pacific Highway): Dedicate one lane in each direction for Business Access and Transit ("BAT") lane. Proposed BAT lane will be accessible for passenger vehicles making a right turn at an intersection or driveway.
- **Sports Arena Boulevard** (between Midway Drive / W Point Loma Boulevard and Rosecrans St): Dedicate one lane in each direction for BAT lane. Proposed BAT lane will be accessible for passenger vehicles making a right turn at an intersection or driveway.
- **Greenwood Street** (between Kurtz Street and Sports Arena Boulevard): The project does not propose to construct this segment as planned in the Community Plan. Note that bicycles and pedestrians will still be able to connect between Kurtz Street and Sports Arena Boulevard as an "extension" of Sherman Street.

Intersections:

- **Intersection #2 – Midway Drive and Sports Arena Boulevard / West Point Loma Boulevard**: In addition to the improvements identified in *Figure 3-14* of the CP, the Midway Rising project proposes removal of the small channelized portions to accommodate an additional left-turn lane on the southeastbound and northwestbound approaches of Sports Arena Boulevard and Midway Drive, as well as removal of 174 feet of the existing median on W. Point Loma Boulevard to accommodate an additional through lane on the eastbound approach.
- **Intersection #4 – Kemper Street and Sports Arena Boulevard**: *Figure 3-8* of the CP proposes an exclusive left turn and right turn lane on the southbound approach of Kemper Street at Sports Arena Boulevard. The Midway Rising project proposes only a through lane and an exclusive right turn lane.
- **Intersection #11 – Hancock and Kurtz Street**: Construct a single-lane roundabout at this intersection instead of a traffic signal.
- **Intersection #18 – Kurtz Street and Camino del Rio West**: Elimination of eastbound exclusive right turn lane to accommodate a proposed multi-use path along Kurtz Street.
- **Intersection #19 – Camino del Rio West / Rosecrans Street and Sports Arena Boulevard**: In addition to the improvements identified in *Figure 3-15* of the CP, the Midway Rising project proposes the following modifications to the southeastbound approach as compared to the CP design concept:
  - Convert through lane to shared through-left turn lane
  - Replace second through lane to a bus-only through movement lane
  - Separate shared through-right lane to an exclusive through lane and right turn lane

Table 2-1 summarizes the recommended CP street classification modifications versus the project proposed modifications

Figure 2-1 illustrates the proposed CPA modifications for the Midway Rising project and **Figure 2-2** the proposed cross-sections for the roadways adjacent to the project site.

Table 2-1. Existing and Planned (CP and CPA) Vehicular System

Road Name	Extents	Existing Street Classification[1]	Community Plan Ultimate Street Classification[2]	Community Plan Amendment Ultimate Street Classification	Midway Rising Project Recommendation
Sports Arena Boulevard	I-8 WB Off-Ramp to I-8 EB On Ramp	6-lane prime arterial	6-lane prime arterial	No change from CP	6-lane prime arterial
	I-8 EB On Ramp to Midway Drive	5-lane major arterial	6-lane major arterial	No change from CP	No change from Existing Classification Project does not trigger improvements
	Midway Drive to Hancock Street	5-lane collector with a center left turn lane	6-lane major arterial	4-lane major arterial (with two bus only lanes)	No change from Existing Classification Project does not trigger improvements; project does not intend to implement CPA classification change
	Hancock Street to Kemper Street	5-lane collector with a center left turn lane	6-lane major arterial	4-lane major arterial (with two bus only lanes)	4-lane major arterial (with two bus only lanes)
	Kemper Street to West Drive	5-lane major arterial	6-lane major arterial	4-lane major arterial (with two bus only lanes)	4-lane major arterial (with two bus only lanes)
	West Drive to Rosecrans Street	6-lane major arterial	6-lane major arterial	4-lane major arterial (with two bus only lanes)	4-lane major arterial (with two bus only lanes)
	Rosecrans Street to Pacific Highway	2-lane collector	2-lane collector with a center left turn lane	No change from CP	No change from Existing Classification Project does not trigger improvements
Rosecrans Street	Camino Del Rio/Sports Arena Boulevard to Pacific Highway	4-lane collector with a center left turn lane	4-lane major arterial	2-lane major arterial (with two bus only lanes)	2-lane collector (with two bus only lanes) Project does not trigger improvements; project does not intend to implement CPA classification change
	Sports Arena Boulevard to Midway Drive	6-lane major arterial	6-lane prime arterial	No change from CP recommendation	No change from Existing Classification Project does not trigger improvements
Midway Drive	Kemper Street to Rosecrans Street	4-lane collector with a center left turn lane	4-lane collector with a center left turn lane	No change from CP recommendation	4-lane collector with a center left turn lane
Hancock Street	Sports Arena Boulevard to Channel Way	2-lane collector	4-lane collector	No change from CP recommendation	4-lane collector
	Channel Way to Kurtz Street	2-lane collector with a center left turn lane	4-lane collector	No change from CP recommendation	4-lane collector
	Kurtz Street to Greenwood Street	2-lane collector (one-way north-westbound)	3-lane major arterial (one-way)	No change from CP recommendation	No change from Existing Classification Project does not trigger improvements
	Greenwood Street to Camino del Rio West	2-lane collector (one-way north-westbound)	3-lane major arterial (one-way)	No change from CP recommendation	2-lane collector (one-way north-westbound) Project does not trigger improvements
Kurtz Street	Hancock Street to Frontier Drive	2-lane collector (one-way south-eastbound)	2-lane collector (one-way southeast-bound)	2-lane collector	2-lane collector
	Frontier Drive to Sherman Street	2-lane collector (one-way south-eastbound)	2-lane collector (one-way southeast-bound)	2-lane collector	2-lane collector
	Sherman Street to Camino del Rio West	2-lane collector (one-way south-eastbound)	2-lane collector (one-way south-eastbound)	No change from CP recommendation	2-lane collector (one-way south-eastbound)
Camino Del Rio W	Greenwood Street to Kurtz Street	6-lane prime arterial	6-lane prime arterial	No change from CP recommendation	6-lane prime arterial
Greenwood Street	Kurtz Street to Sports Arena Boulevard	Does not exist	2-lane collector	Segment of Greenwood Street would not be constructed	*(No new roadway)*
Kemper Street	Sports Arena Boulevard to Kurtz Street	Does not exist	2-lane collector with a center left turn lane	No change from CP recommendation	2-lane collector with a center left turn lane
Frontier Drive	Sports Arena Boulevard to Kurtz Street	Does not exist	2-lane collector with a center left turn lane	No change from CP recommendation	2-lane collector with a center left turn lane

3 METHODOLOGY

The following section describes the methodology used to identify the study area and analyze study area conditions, and determine any potential project effects.

3.1 STUDY AREA

The study area for the CPA transportation analysis was determined based on the roadway volumes and travel patterns that would be expected to be modified as a result of the proposed roadway changes. The modifications are not anticipated to change the number of vehicles accessing the site from a regional perspective. Instead, the modifications are anticipated to change local travel behavior in how vehicular traffic will access the site. Therefore, intersections were selected along corridors with roadway modifications, except for Midway Drive, where it is anticipated that vehicles may choose to use Midway Drive instead of Sports Arena Boulevard due to the reduction in general purpose travel lanes on Sports Arena Boulevard. Additionally, the West Mission Bay Drive and I-8 Westbound Off-Ramp intersection and the Pacific Highway and Rosecrans Street / Taylor Street intersections were included. All study roadway segments analyzed in the LMA were included for evaluation in the CPA.

The resulting study area includes 21 intersections shown in **Figure 3-1**. The intersections identified for evaluation are summarized in **Table 3-1**. The intersection numbers in **Table 3-1** are consistent with the LMA study area, which contains additional study intersections missing from the list below. The roadway segments identified for evaluation are summarized in **Table 3-2**.

Table 3-1. Study Intersections

#	Location	Existing Control	Jurisdiction
1	West Mission Bay Drive / Sports Arena Boulevard & I-8 Westbound Off-Ramp	Signal	Caltrans
2	Sports Arena Boulevard & Midway Drive & West Point Loma Boulevard	Signal	City of San Diego
3	Sports Arena Boulevard & Hancock Street / Commercial Dwy 1	Signal	City of San Diego
4	Sports Arena Boulevard & Kemper Street	Signal	City of San Diego

Figure 3-1. Community Plan Amendment Study Area

3.2 ANALYSIS PROCESS

Intersection operations were evaluated using Synchro 11 (Trafficware) and SIDRA software (for the proposed roundabout at Hancock Street/Kurtz Street). The Highway Capacity Manual (HCM), published by the Transportation Research Board, establishes procedures to evaluate facilities and rate their ability to process traffic volumes. The terminology "level of service" is used to provide a qualitative evaluation based on certain quantitative calculations, which are related to average delays.

LEVEL OF SERVICE ANALYSIS

3.2.1.1 Level of Service for Intersections

Level of service (LOS) for intersections is defined in terms of delay, which is a measure of driver discomfort, frustration, fuel consumption, and loss of travel time. The LOS reported for signalized intersections is the average control delay per vehicle for the peak 15-minute period within the hour analyzed. The average control delay includes initial deceleration delay, queue move-up time, and final acceleration time in addition to the stop delay. LOS for unsignalized intersections is determined by the computed or measured control delay and is defined for each movement. At all-way stop-controlled intersections, the delay reported is the average control delay of all movements at the intersection. At one-way or two-way stop-controlled intersections, the delay reported represents the worst movement which is typically the left-turn from the minor street approach. **Table 3-3** describes the criteria for the various levels of service designations for signalized and unsignalized intersections.

Table 3-3. LOS Criteria for Intersections

LOS	Control Delay (sec/veh)		Description
	Signalized Intersections (a)	Unsignalized Intersections (b)	
A	≤10.0	≤10.0	Operations with very low delay and most vehicles do not stop.
B	>10.0 and ≤20.0	>10.0 and ≤15.0	Operations with good progression but with some restricted movement.
C	>20.0 and ≤35.0	>15.0 and ≤25.0	Operations where a significant number of vehicles are stopping with some backup and light congestion.
D	>35.0 and ≤55.0	>25.0 and ≤35.0	Operations where congestion is noticeable, longer delays occur, and many vehicles stop. The proportion of vehicles not stopping declines
E	>55.0 and ≤80.0	>35.0 and ≤50.0	Operations where there is significant delay, extensive queuing, and poor progression.
F	>80.0	>50.0	Operations that is unacceptable to most drivers, when the arrival rates exceed the capacity of the intersection.

Source:
(a) 6th Edition Highway Capacity Manual, Chapter 19, Page 16, Exhibit 19-8; 2000 Edition Highway Capacity Manual, Chapter 16, Page 2
(b) 6th Edition Highway Capacity Manual, Chapter 20, Page 6, Exhibit 20-2; 2000 Edition Highway Capacity Manual, Chapter 17, Page 2 and 32

Synchro 11 software was used to analyze the intersection level of service operations for both signalized and unsignalized intersections. The intersection analysis uses the methodologies outlined in HCM 6th Edition except where limitations to HCM 6th edition methodology was present such as a fifth leg, clustered

intersections, custom phasing, or exclusive pedestrian phasing. For these intersections, HCM 2000 methodology was used.

- ***Peak-hour factor (PHF)*** – PHFs collected in field were assigned per approach under existing conditions, and default value of 0.92 PHF assigned at all approaches under future conditions per the City's Transportation Study Manual (TSM).
- ***Saturation flow rate*** – Typical saturation flow rate of 1,900 vehicles per hour per lane.
- ***Signal timing*** - Existing signal timings were modeled for the signalized intersection under the existing scenario. Signal timing was optimized for each future scenario, as is typical when analyzing horizon year conditions and when implementing roadway changes. Signal timing sheets for the signalized study intersections are provided in **Appendix B.**

3.2.1.2 Level of Service for Roundabouts (SIDRA)

Levels-of-service (LOS) for roundabouts in this evaluation were determined using methods defined in the *Highway Capacity Manual (HCM), 6th Edition* and SIDRA (Version 9.1) traffic analysis software. The HCM roundabout intersection procedures define LOS as a function of average control delay for the intersection as a whole. Roundabout control is analyzed using unsignalized criteria.

3.2.1.3 Thresholds for Project Effects at Intersections

Intersections were considered to exhibit project effects if the following changes to LOS were calculated in Plus Project scenarios when compared to LOS results in Base scenarios. **Table 3-4** defines transportation effects for City of San Diego intersections for when project improvements should be provided.

Table 3-4. Project Effect Criteria for Intersections

Intersection Control	Within ½ mile path of travel of a Major Transit Stop	Outside ½ mile path of travel of a Major Transit Stop
Signalized/All-Way Stop/Roundabout	Project causes intersection to degrade to LOS F, OR Project adds traffic to intersection already at LOS F	Project causes intersection to degrade to LOS E or F, OR Project adds traffic to intersection already at LOS E or F
Side-Street Stop	Project causes the worst movement to degrade to LOS F, OR Project adds traffic to the worst movement already at LOS F	Project causes the worst movement to degrade to LOS E or F, OR Project adds traffic to the worst movement already at LOS E or F

Collector ***(one-way)***	2 lanes	7,500	9,500	12,500	15,000	17,500
Collector ***(one-way)***	1 lane	2,500	3,500	5,000	6,500	7,500
Sub-Collector ***(Single-family)***	2 lanes	--	--	2,200	--	--

Source: City of San Diego Transportation Study Manual (September 2022)
***LOS Criteria provided by City of San Diego Sustainability and Mobility Department staff**

3.2.1.5 Thresholds for Project Effects for Roadway Segments

Roadway segments were considered to exhibit project effects if the following LOS changes were observed in Plus Project scenarios when compared to results in Base scenarios. **Table 3-6** defines the criteria for project effects for roadway segments per the TSM and whether the project should implement the improvement or contribute a fair share towards the improvement.

Table 3-6. Project Effect Criteria for Roadway Segments

Roadway Type	Complete implementation of Improvement per the Community Plan	Fair Share of Improvement per the Community Plan
Roadways with improvements identified in the community plan	Project adds >50% of total daily vehicle trips on segment	Project adds ≤50% of total daily vehicle trips on segment
Planned new circulation element roadways	Project adds >50% of total daily vehicle trips on segment	Project adds ≤50% of total daily vehicle trips on segment

Source: City of San Diego Transportation Study Manual (2022)

QUEUE ANALYSIS

SimTraffic software included in Synchro 11 was used to analyze the 95th percentile queues at the turn lanes for signalized intersections. The 95th percentile queue is the maximum queue length under 95th percentile traffic volumes, and thus will rarely be exceeded. The 95th percentile queue lengths reported represent an average of five SimTraffic runs.

3.3 TRAVEL DEMAND MODELING

ROADWAY NETWORK

As part of the 2018 Midway Pacific Highway Community Plan, the roadway network was modeled using a previous version of the SANDAG traffic forecast model (SANDAG Series 12 Future Year Forecast model). This model was based on origin-destination travel forecasting. Since 2018, SANDAG has transitioned to an activity-based model (ABM) and is currently utilizing the Series 14, ABM2+, Base Year 2016, version 14.3.0.

Per the City's TSM, future traffic forecasts must utilize the latest available regional activity-based demand model (SANDAG Series 14 ABM2+ version 14.3.0—updated and released July 12, 2022). The Horizon Year (2050) Base (CP Scenario) and the Horizon Year (2050) Plus Full Project Buildout (CPA Scenario) utilized the SANDAG Series 14 ABM2+ version 14.3.0 and was run in-house by Kimley-Horn.

HORIZON YEAR (2050) TRAFFIC VOLUMES

The land use inputs from the Series 14, 2035 travel demand model, which includes the Midway Pacific Highway Community Plan buildout, were incorporated into the Series 14, 2050 travel demand model to develop Horizon Year (2050) CP scenario volumes. More detail is provided in Section 5.3 of this report.

The land use inputs were updated to reflect the proposed Midway Rising project land uses, and input into the 2050 travel demand model to develop Horizon Year (2050) CPA scenario volumes. More detail is provided in Section 6.2 of this report.

The VMT report for the Midway Rising project is provided in **Appendix C**, which includes more details on the model, and summarizes the land use inputs for each scenario.

The Horizon Year (2050) CP scenario forecasted roadway segment volumes were determined by calculating a growth rate between the 2016 Baseline and the 2050 Baseline SANDAG model volumes and applying that growth rate to the 2023 existing roadway segment counts taken on a non-event day. The Horizon Year (2050) CPA scenario forecasted roadway segment volumes were determined by calculating a growth rate between the 2016 Baseline and the 2050 With Project SANDAG model volumes and applying that growth rate to the 2023 existing roadway segment counts taken on an event day and a non-event day.

The Horizon Year (2050) turning movement counts were calculated using an iterative method (turn32) to measure growth between 2023 roadway segment ADT counts for a non-event day and 2050 roadway segment forecasted ADTs, and applying that growth to the existing 2023 turning movement counts for a non-event day. This methodology was used to develop turning movement volumes for the Horizon Year (2050) CP and CPA scenarios for a non-event day. The same methodology was used to develop turning movement volumes for the Horizon Year (2050) CPA scenario for an event-day but based on a growth rate between 2023 roadway segment ADT counts for an event day and 2050 roadway segment forecasted ADTs, and applying that growth to the existing 2023 turning movement counts for an event day.

4 EXISTING CONDITIONS

This section summarizes the existing roadway circulation network, daily and peak-hour traffic volumes, and operations at the study intersections and roadway segments.

4.1 ROADWAY NETWORK

The roadways along the project frontages include Sports Arena Boulevard to the south and Kurtz Street to the north. Surrounding roadways nearby the project site include Sports Arena Boulevard, Kurtz Street, Hancock Street, Kemper Street, Camino Del Rio West, Rosecrans Street, W Point Loma Boulevard, and Midway Drive.

Table 4-1 provides a description of existing roadway network of the study area, as of December 2023. The planned roadway classifications are provided in the Midway-Pacific Highway Community Plan (2018). **Figure 4-1** illustrates the existing study intersection geometrics under existing (2023) conditions.

4.2 TRAFFIC VOLUMES

Driveway and peak hour intersection counts were collected by National Data and Surveying Services (NDS) during a high-capacity concert at the San Diego Sports Arena to obtain event-day, existing (2023) traffic volumes. These counts were collected on Thursday, September 21, 2023, during the Luis Miguel concert during the commuter AM and PM peak periods. Additionally, 24-hour roadway segment counts were collected for eight days between Saturday, January 7, 2023 and Saturday, January 14, 2023 at the study segments. The weekday event day (San Diego Gulls) occurred on Wednesday, January 11th, 2023. These counts were used to analyze existing (2023) conditions in the study area and develop the existing site trip generation.

Appendix D contains the existing traffic count data.

4.3 INTERSECTION LEVEL OF SERVICE ANALYSIS

The existing (2023) intersection analysis was performed based on existing lane geometries and traffic controls observed, and data collected during the Commuter AM and Commuter PM peak hours on weekday event-day. **Figure 4-2** illustrates the existing traffic volumes at the study intersections.

Table 4-2 displays the LOS analysis results for the study intersections under existing conditions.

Under existing conditions, all study intersections operate at LOS D or better during the commuter AM and PM peak hours, except the following:

- Intersection #2 – Sports Arena Blvd / Midway Dr / W Point Loma Blvd (PM: LOS E)
- Intersection #6 – Sports Arena Blvd / Target Dwy / Existing VIP Access (PM: LOS E)
- Intersection #17 – Camino del Rio W / Hancock St (AM: LOS F; PM: LOS F)
- Intersection #20 – Rosecrans St / Midway Dr (AM: LOS E; PM: LOS E)

Appendix E contains the intersection LOS calculation worksheets for existing conditions.

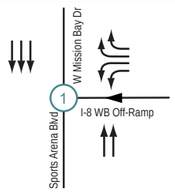

Table 4-1. Existing Roadway Network

Roadway	From	To	No. Lanes	Median Type	Sidewalks	Bike Facilities	Transit Route	Posted Speed Limit	Existing Roadway Class.[1]	Planned Roadway Class.[2]
Sports Arena Boulevard	I-8 WB Off-Ramp	Rosecrans St	5-6 Lanes	Painted/ Raised	B/S (non-contiguous) 6 ft wide	Class II/ Class II Buffered	8 & 9	35 MPH	5-Lane Major Arterial	6-Lane Major Arterial

Notes:

Bold values indicate intersections operating at LOS E or F.

ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds.

(a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a two-way stop-controlled intersection, delay refers to the worst movement.

(b) LOS calculations are based on the methodology outlined in the *Highway Capacity Manual 6th Edition* and *2000 Edition* and performed using Synchro 11.0

4.4 QUEUEING ANALYSIS

Table 4-3 summarizes the 95th percentile queues under existing conditions. The 95th percentile queue lengths reported represent an average of five SimTraffic runs.

Appendix F contains the 95th percentile queue worksheets for existing conditions. Under existing conditions, queues exceed the existing available storage length at:

- 4 intersections in the Commuter AM peak
- 10 intersections in the Commuter PM peak

4.5 ROADWAY SEGMENT ANALYSIS

The existing (2023) conditions roadway segment analysis was performed based on existing roadway geometries and 24-hour roadway segment counts collected on a weekday event day (Wednesday, January 11th, 2023).

Table 4-4Error! Reference source not found. summarizes the roadway segment LOS analysis at the study segments under existing conditions.

Under existing (2023) conditions, all roadway segments operate at LOS D or better on a weekday event day except the following:

- Camino del Rio West north of Greenwood Street (LOS F)
- Camino del Rio West between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)

Table 4-3. Existing Conditions Queue Summary

Notes:

[1]Functional Classification based on the Midway Pacific Highway Community Plan.

[2]LOS E Capacity provided by City of San Diego staff.

[3]ADT - Average Daily Traffic.

[4]V/C Ratio - Volume-to-capacity ratio.

[5]LOS - Level of Service.

5 2050 MIDWAY PACIFIC HIGHWAY COMMUNITY PLAN BASELINE

This section summarizes the Horizon Year (2050) Baseline (CP) scenario per the Midway Pacific Highway Community Plan. This scenario establishes a baseline to compare against the Horizon Year (2050) Plus Full Project Buildout (CPA) scenario. Year 2050 was selected as it is the current horizon year of the SANDAG Series 14 ABM2+ model.

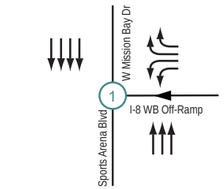
5.1 SIGNAL OPTIMIZATION

It is assumed that signal optimization will occur at all signalized intersections within the study area due to the increase in vehicle volumes and new travel patterns that will require signal optimization to properly serve each approach. Optimization would include:

- Optimized cycle lengths
- Optimized phase splits
- Optimized corridor offsets for coordinated corridors (Sports Arena Blvd, Rosecrans Street, Camino del Rio West)
- Optimized lead/lag left turn phasing

5.2 ROADWAY NETWORK CHANGES

The roadway network in the Horizon Year (2050) Baseline (CP) scenario is based on the planned street classifications in the Midway-Pacific Highway Community Plan (2018), included in **Appendix G**. **Figure 5-1** illustrates the Horizon Year (2050) Baseline (CP) scenario intersection geometries.



5.3 TRAFFIC VOLUMES

Intersection volumes were developed for the Horizon Year (2050) Baseline (CP) using 2023 roadway segment volumes and 2050 forecasted roadway segment volumes as described in Section 3.3 of this report. The SANDAG 2050 Baseline model used for forecasting volumes includes the land uses associated with the CP buildout, which does not include the continuation of the San Diego Sports Arena. It is important to note that the SANDAG model is not able to incorporate a few minor roadway segments (Greenwood Street extension, Kemper Street extension, and Frontier Drive) that are proposed in the CPU or that will be modified by the CPA (Greenwood Street). Thus, ADTs for these roadway segments were supplemented by 2035 daily roadway segment traffic volumes from the CP Preferred Plan scenario (Figure 6-2 of the Midway-Pacific Highway and Old Town Mobility Report).

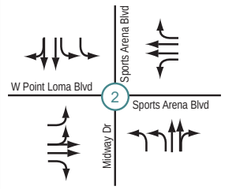


Figure 5-2 illustrates the resulting Horizon Year (2050) Baseline (CP) scenario traffic volumes.

5.4 INTERSECTION ANALYSIS

Table 5-1 displays the LOS analysis results for the study intersections under the Horizon Year (2050) Baseline (CP) scenario.

Under the Horizon Year (2050) Baseline (CP) scenario, all study intersections are anticipated to operate at LOS D or better during the commuter AM and PM peak hours except the following:

- Intersection #2 – Sports Arena Blvd / Midway Dr / W Point Loma Blvd (PM: LOS E)
- Intersection #4 – Sports Arena Blvd / Kemper St (PM: LOS E)
- Intersection #13 – Greenwood St / Kurtz St (PM: LOS F)
- Intersection #19 – Rosecrans St / Sports Arena Blvd / Camino Del Rio W (PM: LOS E)
- Intersection #20 – Rosecrans St / Midway Dr (PM: LOS E)

Appendix H contains the intersection LOS calculation worksheets for the CP scenario.

5.5 QUEUEING ANALYSIS

Table 5-2 displays the 95th percentile queues for the study intersections under the Horizon Year (2050) Baseline (CP) scenario. The 95th percentile queue lengths reported represent an average of five SimTraffic runs. **Appendix I** contains the 95th percentile queue worksheets from SimTraffic for this scenario. Under the CP scenario, queues are anticipated to exceed the existing available storage length at:

- 10 intersections in the Commuter AM peak hour
- 6 intersections in the Commuter PM peak hour

5.6 ROADWAY SEGMENT ANALYSIS

The Horizon Year (2050) Baseline (CP) scenario roadway segment analysis was performed based on planned roadway geometries from the Midway Pacific Highway Community Plan Base for 2035, and expected roadway segment counts for year 2050 on a typical weekday. **Table 5-3** summarizes the roadway volumes LOS analysis at the study segments under Horizon Year (2050) Baseline (CP) scenario.

Under the Horizon Year (2050) Baseline (CP) scenario, all roadway segments are anticipated to operate at LOS D or better on a typical weekday except the following:

- Camino del Rio West north of Greenwood Street (LOS F)
- Camino del Rio West between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)

Notes:

[1]Ultimate Classification based on the Midway Pacific Highway Community Plan - Preferred Plan.

[2]LOS E Capacity provided by City of San Diego staff.

[3]ADT - Average Daily Traffic.

[4]V/C Ratio - Volume-to-capacity ratio.

[5]LOS - Level of Service.

6 HORIZON YEAR (2050) PLUS FULL PROJECT BUILDOUT

This section summarizes the Horizon Year (2050) Plus Full Project Buildout (CPA) scenario (event and non-event day), which is compared against the Horizon Year (2050) Baseline (CP) scenario.

6.1 ROADWAY NETWORK CHANGES

The roadway network in the CPA scenario represents the Horizon Year (2050) Baseline (CP) scenario roadway geometry with the roadway segment and intersection modifications proposed by the Midway Rising project described below:

Roadway Segments:

- **Kurtz Street** (between Hancock Street and Sherman Street): convert from a two-lane one-way (southeast-bound) collector to a two-way collector with one lane in each direction.
- **Rosecrans Street** (between Midway Drive and Pacific Highway): dedicate one lane in each direction for Business Access and Transit ("BAT") lane. The project does not trigger improvements, and thus construction of the median to implement CPA classification change to a major arterial between Camino Del Rio/Sports Arena Boulevard and Pacific Highway is not considered. The segment between Camino Del Rio/Sports Arena Boulevard and Pacific Highway is instead analyzed as a collector with two BAT lanes.
- **Sports Arena Boulevard** (between Midway Drive / W Point Loma Boulevard and Rosecrans St): dedicate one lane in each direction for BAT lane.
- **Greenwood Street** (between Kurtz Street and Sports Arena Boulevard): Not proposed to be constructed as planned in the Community Plan. Note that bicycles and pedestrians will still be able to travel between Kurtz Street and Sports Arena Boulevard on a north-south running Class I path to be constructed in the general location of the planned Sherman Street extension.

Intersections:

- **Intersection #2 – Midway Drive and Sports Arena Boulevard / West Point Loma Boulevard**: In addition to the improvements identified in *Figure 3-14* of the CP, the Midway Rising project proposes removal of the small channelized portions to accommodate an additional left-turn lane on the southeastbound and northwestbound approaches of Sports Arena Boulevard and Midway Drive, as well as removal of 174 feet of the existing median on W. Point Loma Boulevard to accommodate an additional through lane on the eastbound approach.
- **Intersection #4 – Kemper Street and Sports Arena Boulevard**: *Figure 3-8* of the CP proposes an exclusive left turn and right turn lane on the southbound approach of Kemper Street at Sports Arena Boulevard. The Midway Rising project proposes only a through lane and an exclusive right turn lane.
- **Intersection #18 – Kurtz Street and Camino del Rio West intersection**: Elimination of eastbound exclusive right turn lane to accommodate a proposed multi-use path along Kurtz Street.

- **Intersection #11 – Hancock Street and Kurtz Street intersection**: Construct a single-lane roundabout at this intersection instead of a traffic signal.
- **Intersection #19 – Camino del Rio West / Rosecrans Street and Sports Arena Boulevard**: In addition to the improvements identified in the CP, the Midway Rising project proposes the following modifications to the southeastbound approach as compared to the CP design concept:
    - Convert through lane to shared through-left turn lane
    - Replace second through lane to a bus-only through movement pocket
    - Separate shared through-right lane to an exclusive through lane and right turn lane by reconfiguring turn lane

Figure 6-1 illustrates the CPA scenario intersection geometries.

6.2 TRAFFIC VOLUMES

Intersection volumes were developed for the Horizon Year (2050) Plus Full Project Buildout (CPA) using 2023 roadway segment volumes and 2050 forecasted roadway segment volumes as described in Section 3.3 of this report. The SANDAG 2050 With Project model used for forecasting volumes includes the land uses associated with the Midway Rising project. It is important to note that the SANDAG model is not able to incorporate the internal roadway segments (Greenwood Street extension, Kemper Street extension, and Frontier Drive) that are proposed in the CPU and will be modified by the CPA. Thus, ADTs for these roadway segments were supplemented by Opening Year (2035) Plus Project Phase 2 Buildout daily roadway segment traffic volumes. **Figure 6-2 and 6-3** illustrate the resulting Horizon Year (2050) Plus Full Project Buildout (CPA) scenario traffic volumes for an event day and a non-event day, respectively.

6.3 INTERSECTION LEVEL OF SERVICE ANALYSIS

Table 6-1 displays the LOS analysis results for the study intersections under Horizon Year (2050) Plus Full Project Buildout (CPA) scenario, event day and non-event day. The results for the Horizon Year (2050) Baseline (CP) scenario are also included in the table to identify project transportation effects. Under the Horizon Year (2050) Plus Full Project Buildout (CPA) scenario, all study intersections are expected to operate at LOS D or better except the following:

Event day:

- Intersection #2 – Midway Dr / W Point Loma Blvd / Sports Arena Blvd (AM: LOS E; PM: LOS E)
- Intersection #19 – Rosecrans St / Sports Arena Blvd / Camino Del Rio W (PM: LOS E)

Non-event day:

- Intersection #2 – Midway Dr / W Point Loma Blvd / Sports Arena Blvd (AM: LOS E; PM: LOS E)
- Intersection #19 – Rosecrans St / Sports Arena Blvd / Camino Del Rio W (PM: LOS F)

Appendix J contains the intersection LOS calculation worksheets for the Horizon Year (2050) Plus Full Project Buildout (CPA) Event Day scenario. **Appendix K** contains the intersection LOS calculation worksheets for the Horizon Year (2050) Plus Full Project Buildout (CPA) Non-event Day scenario.

The Midway Rising project causes operational effects at both of the intersections listed above (Intersection #2 and #19). Project effects and potential improvements are discussed further in Section 6.6.

Notes:
Bold values indicate intersections operating at LOS E or F.
ECL = Exceeds Calculable Limit. Reported when delay exceeds 180 seconds.
(a) Delay refers to the average control delay for the entire intersection, measured in seconds per vehicle. At a two-way stop-controlled intersection, delay refers to the worst movement.
(b) LOS calculations are based on the methodology outlined in the *Highway Capacity Manual 6th Edition* and 2000 Edition. LOS calculations are performed using Synchro 11.0 and SIDRA 9.1.

INTERSECTION LOS COMPARISON FOR PROPOSED ROUNDABOUT

The Midway Rising project proposes to provide a single-lane roundabout at the intersection of Hancock Street / Kurtz Street rather than a traffic signal, which was modeled in the Midway-Pacific Highway Community Plan. The roundabout is intended to improve operational flow for the project as well as the rest of the community as redevelopment continues to occur to the northeast of Kurtz Street.

Table 6-2 summarizes a comparison between the level of service observed for the roundabout proposed under the Midway Rising project as compared to the signal proposed under the Midway Pacific-Highway Community Plan. **Table 6-2** shows that both proposed controls would be expected to operate at LOS D or better, but the roundabout may operate with a lower average delay than the signal control.

Table 6-2. Intersection LOS Analysis Comparison for Proposed Roundabout at Hancock St / Kurtz Street

Peak Hour	Intersection Control	Analysis Method	Horizon Year (2050) Baseline (CP)		Horizon Year (2050) Plus Full Project Buildout (CPA) – Event Day		Horizon Year (2050) Plus Full Project Buildout (CPA) - Non-Event Day	
			Delay (s)	LOS	Delay (s)	LOS	Delay (s)	LOS

	Signalized	Synchro (HCM 6th)	0.5	A	10.4	**B**	9.8	A

6.4 QUEUEING ANALYSIS

Table 6-3 and **Table 6-4** display the 95th percentile queues under Horizon Year (2050) Plus Full Project Buildout (CPA) scenario for an event day and a non-event day, respectively. The 95th percentile queue lengths reported represent an average of five SimTraffic runs. **Appendix L** and **Appendix M** contain the 95th percentile queue worksheets for the Horizon Year (2050) Plus Full Project Buildout (CPA) Event Day scenario and the Horizon Year (2050) Plus Full Project Buildout (CPA) Non-Event Day scenario, respectively. Under the two Horizon Year (2050) Plus Full Project Buildout (CPA) scenarios, queues are expected to exceed the existing available storage length at:

Event Day:

- 5 intersections in the Commuter AM peak hour
- 12 intersections in the Commuter PM peak hour

Non-event Day:

- 5 intersections in the Commuter AM peak hour
- 11 intersections in the Commuter PM peak hour

QUEUE ANALYSIS COMPARISON FOR PROPOSED ROUNDABOUT

The Midway Rising project proposes to provide a single-lane roundabout at the intersection of Hancock Street and Kurtz Street rather than a traffic signal, as modeled in the Midway-Pacific Highway Community Plan. **Table 6-5** summarizes a comparison between the queue lengths anticipated for the roundabout proposed under the Midway Rising project as compared to the traffic signal planned in the Midway Pacific-Highway Community Plan. The table shows that the Midway Rising project's proposed roundabout control would be expected to have lower queue lengths than the traffic signal control proposed in the Midway Pacific-Highway Community Plan.

Table 6-5. Horizon Year (2050) Baseline (CPA) Scenario Queue Analysis Summary for Proposed Roundabout at Hancock St / Kurtz Street

Peak Hour	Intersection Control	Analysis Method	Horizon Year (2050) Baseline (CP) 95th Percentile Queue (ft)	Horizon Year (2050) Plus Full Project Buildout (CPA) 95th Percentile Queue (ft) – Event Day	Horizon Year (2050) Plus Full Project Buildout (CPA) 95th Percentile Queue (ft) – Non-Event Day

6.5 ROADWAY SEGMENT ANALYSIS

The Horizon Year (2050) Plus Full Project Buildout (CPA) scenario roadway segment analysis was performed based on proposed roadway geometries and 2050 expected roadway segment volumes. **Table 6-6** summarizes the roadway segment LOS analysis at the study segments under CPA scenario for a weekday event day and non-event day.

Under the Horizon Year (2050) Plus Full Project Buildout (CPA) scenario, all roadway segments are expected to operate at LOS D or better except the following:

Weekday Event Day

- Camino del Rio West North of Greenwood Street (LOS F)
- Camino del Rio West between Greenwood Street and Hancock Street (LOS F)
- Camino del Rio West between Hancock Street and Kurtz Street (LOS E)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)
- Kurtz Street between Hancock Street and Frontier Drive (LOS F)
- Kurtz Street between Frontier Drive and Sherman Street (LOS F)

Weekday Non-Event Day

- Camino del Rio West North of Greenwood Street (LOS F)
- Camino del Rio West between Greenwood Street and Hancock Street (LOS F)
- Rosecrans Street between Sports Arena Boulevard and Midway Drive (LOS F)
- Kurtz Street between Hancock Street and Frontier Drive (LOS F)
- Kurtz Street between Frontier Drive and Sherman Street (LOS F)

The Midway Rising project would be expected to cause an operational effect at all roadway segments listed above. Project effects for roadway segments are discussed further in Section 6.6.

6.6 PROJECT EFFECTS

Based on the transportation analysis discussed in the previous sections, the Midway Rising project's proposed changes to the Midway Pacific-Highway Community Plan would result in project transportation effects at intersections along Sports Arena Boulevard and roadway segments along Sports Arena Boulevard, Rosecrans Street, and Kurtz Street.

PROJECT EFFECTS ON INTERSECTION LEVEL OF SERVICE

The project is expected to cause a transportation effect at the following two intersections in the Horizon Year (2050) Plus Full Project Buildout (CPA) scenario:

- **Intersection #2: Midway Drive and Point Loma Boulevard/Sports Arena Boulevard** – Although the intersection would operate at LOS E under the Horizon Year (2050) CP scenario, the Midway Rising project traffic volumes cause the overall intersection delay to increase by more than one second under the Horizon Year (2050) Plus Full Project Buildout (CPA) scenario. The worst observed movement is the westbound right turn in the AM peak hour and the northbound right turn in the PM peak hour; however, all movements would operate at LOS E or F during both peak hours.
- **Intersection #19**: **Rosecrans St / Sports Arena Blvd & Camino Del Rio W** – Although the intersection would operate at LOS E under the Horizon Year (2050) CP scenario, the Midway Rising project traffic volumes cause the overall intersection delay to increase by more than one second under the Horizon Year (2050) Plus Full Project Buildout (CPA) scenario. The worst observed movement is the northbound left turn in the PM peak hour.

PROJECT EFFECTS ON ROADWAY LEVEL OF SERVICE

The project is expected to cause a transportation effect at the following seven roadway segments in the Horizon Year (2050) Plus Full Project Buildout (CPA) scenario:

- **Camino del Rio West, North of Greenwood Street** (LOS F) – The Midway Rising project adds traffic to an LOS F segment, resulting in a project effect.
- **Camino del Rio West, between Greenwood Street and Hancock Street** (LOS F) – The Midway Rising project adds traffic to an LOS F segment, resulting in a project effect.

- **Camino del Rio West, between Hancock Street and Kurtz Street** (LOS F) – The Midway Rising project adds traffic to an LOS F segment, resulting in a project effect.
- **Rosecrans Street, between Sports Arena Boulevard and Midway Drive** (LOS f) – The Midway Rising project adds traffic to an LOS F segment, resulting in a project effect.
- **Kurtz Street, between Frontier Drive and Sherman Street** (LOS F) – The Midway Rising CPA proposes to convert this segment from a 2-lane, one-way collector to a 2-lane, two-way collector, resulting in a change in LOS from D to F, and thus a project effect.
- **Kurtz Street, between Hancock Street and Frontier Drive** (LOS F) – The Midway Rising project adds traffic to an LOS F segment, resulting in a project effect.

Table 6-6. Horizon Year (2050) Plus Full Project Buildout (CPA) Scenario Roadway Segment Analysis Summary

Notes:

[1]Ultimate Classification based on the Midway Pacific Highway Community Plan - Preferred Plan.

[2]LOS E Capacity provided by City of San Diego staff. LOS E capacity of Segment 12 under WP Conditions is based on a 2-lane Collector with two-way left-turn lane as the project wouldn't construct the median for a Major Arterial on Rosecrans St because there is not a project effect, and instead proposes a 2-lane Collector with flex lanes.

[3]ADT - Average Daily Traffic.

[4]V/C Ratio - Volume-to-capacity ratio.

[5]LOS - Level of Service.

[6]With Project Classification based on roadway classifications proposed by the Midway Rising Project.

[7]Due to limitations of the SANDAG ABM 2+ model, manual calculations were used to develop ADTs to reflect geometry modifications at intersection #19

[8]Due to limitations of the SANDAG ABM 2+ model, the 2050 Base and With Project ADTs reflect the 2035 Base and With Project ADTs, respectively, as these roadways were unable to be modeled accurately.

7 CONCLUSIONS AND PROJECT IMPROVEMENTS

7.1 INTERSECTION CONCLUSIONS AND PROJECT IMPROVEMENTS

The project is expected to cause a transportation effect at two study intersections in the Midway-Pacific Highway community under the Horizon Year (2050) Plus Full Project Buildout (CPA) scenario.

Table 7-1 summarizes the Midway Rising CPA transportation network improvements to address project effects on study area intersections.

7.2 ROADWAY SEGMENT CONCLUSIONS

Although the CPA scenario identified the project would be expected to cause transportation effects along six roadway segments, improvements are not recommended due to limited right-of-way and prioritization of safety of all roadway users, not only vehicles. Consistent with the Midway-Pacific Highway Community Plan, the Midway Rising project intends to promote and enhance multi-modal travel by constructing improvements that would leverage the project's proximity to the Old Town Transit Center, located between 0.7- and 1-mile walking distance from the site. The project will provide shuttle services and multi-modal paths and connections to the Transit Center as envisioned in the CP to enable and achieve vehicle trip reductions through multi-modal services.

Table 7-2 describes the project improvements which address the identified project effects on roadway segments.

Table 7-1. Horizon Year (2050) CPA Scenario Intersection Improvements

ID	Location	2050 CPA Considered Improvement	Improved Recommendation
2	Midway Drive and Point Loma Boulevard/Sports Arena Boulevard	**Improvements:** - Signal timing optimization - Reduce roadway width in northeast corner to convert westbound channelized right turn lane to an exclusive right turn lane per CP. - Provide overlap phase for westbound right turn movement. Requires signal modification. - Remove small, channelized portions of northbound and southbound right turn movements. Right-most lanes will be shared through-right instead. - Separate southbound shared through/left turn lane into exclusive left turn and exclusive through lane. Southbound approach to include 2 left turn lanes, 2 through lanes, and 1 right turn lane. Requires signal modification. - Separate northbound shared through/left turn lane into exclusive left turn and exclusive through lane. Northbound approach to include 2 left turn lanes, 1 through lanes, and 1 shared through/right turn lane. - Widen eastbound approach by 6' to construct additional through lane. Eastbound approach to include 1 left turn lane, 1 shared left/through lane, 1 through lane, and 1 right turn lane. - Modify northbound and southbound signal timing to protected left turn phasing instead of split phasing. **Results:** Maintain LOS E during both peaks.	**Midway Rising will improve this intersection to the extent feasible by incorporating the imporvements described.** *The intersection cannot be improved to LOS D or better without diminishing pedestrian and bicycle safety or conflicting with the Community Plan's visions for multimodal improvements. Removal of the westbound channelized free right turn lane as proposed in the CP prevents this intersection from being able to improve to LOS D or better. Removal of the free right turn would also decrease pedestrian safety. There is not enough right-of-way to further widen the intersection due to the adjacent residential and commercial land uses, the skew of the intersection, and the proposed multimodal improvements on all approaches to the intersection (including bus only lanes).*
19	Rosecrans St/Sports Arena Blvd & Camino Del Rio W	**Improvements**: - Convert channelized right turn lane to exclusive right turn lane per CP. - Remove northbound "channelized" right turn and ancillary intersection per CP. - Allow through movement from eastbound Sports Arena Boulevard to Sports Arena Boulevard per CP. - Modify eastbound approach to include 1 left turn lane, 1 shared left/through lane, 1 right turn lane to Sports Arena Boulevard, and 1 right turn lane to Camino del Rio W. Requires traffic signal modification. **Results**: Improves overall delay and queuing at the intersection, but does not improve the intersection operations to LOS D or better	**Midway Rising will improve this intersection to the extent feasible by incorporating the imporvements described.** *The intersection cannot be improved to LOS D or better without widening the approaches to the intersection with additional turn lanes, and potentially diminishing pedestrian and bicycle safety or conflicting with the Community Plan's visions for multimodal improvements.*

Table 7-2. Horizon Year (2050) CPA Scenario Roadway Improvements

ID	Location	Potential Improvement	Improved Recommendation
9	Camino del Rio West, North of Greenwood Street	**Improves roadway segment operations to LOS D or better:** - Widening the roadway to a 8 Lane Prime Arterial improves roadway segment operations	**Midway Rising will <u>not</u> improve this roadway segment <u>beyond</u> the planned classification per the Community Plan.** Widening the roadway past 6 lanes is inconsistent with the Midway-Pacific Highway Preferred Plan and is infeasible due to limited right-of-way and the nearby freeway access points to and from I-8 to the east and 1-5 to the north. This segment of roadway is built to its planned classification per the Community Plan, and any increase in capacity above the ultimate classification could induce VMT which does not align with City or state climate action goals. *Thus, the Midway Rising project does not recommend vehicle capacity improvements on this segment.*
10	Camino del Rio West, between Greenwood Street and Hancock Street	**Improves roadway segment operations to LOS D or better:** - Widening the roadway to an 8 Lane Prime Arterial improves roadway segment operations	**Midway Rising will <u>not</u> improve this roadway segment <u>beyond</u> the planned classification per the Community Plan.** Widening the roadway past 6 lanes is inconsistent with the Midway-Pacific Highway Preferred Plan and infeasible due to limited right-of-way. The Midway Rising project proposes multimodal improvements along Kurtz Street, including a Class I multi-use path and improved pedestrian access between Camino Del Rio West and the proposed project site. This path intends to increase pedestrian and bicycle access to and from the Old Town Transit Center and encourage the use of alternative transportation, as is the vision of the Midway Pacific-Highway Community Plan. This segment of roadway is built to its planned classification per the Community Plan, and any increase in capacity above the ultimate condition could induce VMT which does not align with City or state climate action goals. *Thus, the Midway Rising project does not recommend vehicle capacity improvements on this segment.*
11	Camino del Rio West, between Hancock Street and Kurtz Street	**Improves roadway segment operations to LOS D or better:** - Widening the roadway to an 8 Lane Prime Arterial improves roadway segment operations	**Midway Rising will <u>not</u> improve this roadway segment <u>beyond</u> the planned classification per the Community Plan.** Widening the roadway is infeasible due to limited right-of-way caused by surrounding commercial land uses. This segment of roadway is built out to its ultimate condition per the Community Plan, and any increase in capacity above the ultimate condition could induce VMT which does not align with City or state climate action goals. *Thus, the Midway Rising project does not recommend vehicle capacity improvements on this segment.*
13	Rosecrans Street, between Sports Arena Blvd and Midway Drive	**Improves roadway segment operations to LOS D or better**: - Widening the roadway to an 8 Lane Prime Arterial improves roadway segment operations	**Midway Rising will <u>not</u> improve this roadway segment <u>beyond</u> the planned classification per the Community Plan.** Widening the roadway is infeasible due to limited right-of-way caused by surrounding commercial land uses. This segment of roadway is built out to its ultimate condition per the Community Plan, and any increase in capacity above the ultimate condition could induce VMT which does not align with City or state climate action goals. *Thus, the Midway Rising project does not recommend vehicle capacity improvements on this segment.*
15	Kurtz Street, between Hancock Street and Frontier Drive	**Improves roadway segment operations to LOS D or better**: - Widening the roadway to a 4 Lane Collector with two-way left-turn lane improves roadway segment operations, but is infeasible due to fronting land uses that are not part of the project site on both sides of Kurtz Street	**Midway Rising will <u>not</u> improve this roadway segment**. Midway Rising proposes multimodal improvements along Kurtz Street, including a Class I multi-use path and improved pedestrian facilities, intended to increase pedestrian and bicycle activity along Kurtz Street by providing safe access between the site and high-frequency transit services at Old Town Transit Center, Rosecrans Street, and Sports Arena Boulevard. Although widening the roadway would improve vehicular LOS, this would reduce the multimodal improvements along this segment that connect to high-frequency transit services. *Thus, the Midway Rising project does not recommend vehicle capacity improvements on this segment.*
16	Kurtz Street, between Frontier Drive and Sherman Street	**Improves roadway segment operations to LOS D or better:** - Widening the roadway to a 4 Lane Collector with two-way left-turn lane improves roadway segment operations, but is infeasible due to fronting land uses that are not part of the project site on both sides of Kurtz Street	**Midway Rising will <u>not</u> improve this roadway segment.** Midway Rising proposes multimodal improvements along Kurtz Street, including a Class I multi-use path and improved pedestrian facilities, intended to increase pedestrian and bicycle activity along Kurtz Street by providing safe access between the site and high-frequency transit services at Old Town Transit Center, Rosecrans Street, and Sports Arena Boulevard. Although widening the roadway would improve vehicular LOS, this would reduce the multimodal improvements along this segment that connect to high-frequency transit services. *Thus, the Midway Rising project does not recommend vehicle capacity improvements on this segment.*

LUMINAIRE - 9 400 WATT MERCURY VAPOR WITH INTEGRAL, CONSTANT WATTAGE BALLAST 230/480 VOLT MULTIPLE, INTEGRAL PHOTOELECTRIC CONTROL RECEPTACLE AND RECEPTACLE SHORTING CAP ***

CONTROLLER - MODULAR SOLID STATE CONTROLLER IN AN "8" CABINET WITH THE FOLLOWING ITEMS: 3 TYPE XIII PHASE TIMING MODULES, 7 INDUCTIVE LOOP DETECTOR UNITS AND 2 MAGNETOMETER DETECTORS. REFER TO JOB SPECIFICATIONS FOR CONTROLLER FUNCTIONS

* MODIFY MAST ARM POSITIONS AS SHOWN ON PLANS

** HEAD SHALL BE A 3M BRAND, CAT NO. M 123 C-304 WITH BACKPLATE AND VISORS MOUNTED IN A 2600 SIGNAL MOUNTING (MOUNTING SHALL BE DEEP ENOUGH TO ALLOW THE BACK OF THE SIGNAL HEAD TO OPEN 180°)

*** TRANSFORMER BASES SHALL BE OF THE BREAKAWAY TYPE AS SHOWN ON STD DWGS E-85 & E 86

STANDARDS TYPE XV, XVI, XVII SHALL BE AS SHOWN ON CALIFORNIA STATE DIVISION OF HIGHWAYS STANDARD PLANS.

NOTE 1 LUMINAIRES TO BE INSTALLED ON THIS CONTRACT ON A 480 VOLT MULTIPLE CIRCUIT WITH RECEPTACLE SHORTING CAP INSTALLED CIRCUIT TO BE SWITCHED BY UTILITY COMPANY

2 LUMINAIRES SHALL BE WIRED SO THAT IN THE FUTURE THEY CAN BE CONNECTED FOR A 240 VOLT CIRCUIT AND INDIVIDUALLY SWITCHED BY CHANGING THE INPUT CONNECTIONS TO THE BALLAST AND INSTALLING A PHOTOELECTRIC CELL.

NOTES

1 SEE SHEET #1 FOR WORK TO BE DONE SCHEDULE AND SPECIFICATIONS

2 SAFETY LIGHTING CONDUIT IN PAVED AREAS SHALL BE RIGID STEEL

3 ALL ELBOWS AND RISERS IN THE ABS CONDUIT SYSTEM SHALL BE RIGID STEEL GALV. THIS INCLUDES ELBOWS AND RISERS IN STANDARD FOUNDATIONS, PULL BOXES AND ON SERVICE POLES

NOTE
ALL CONDUIT 24" DEEP IN TRENCH

NOTES

1. ALL PULLBOXES SHALL BE NO 5 UNLESS NOTED OTHERWISE.
2. ALL DETECTOR LOOPS SHALL BE 6'X6' WITH 10' SPACING IN DIRECTION OF TRAVEL UNLESS NOTED OTHERWISE ALL LOOPS CENTERED IN LANE
3. CONTRACTOR SHALL INSTALL "CITY FURNISHED" TYPE 170 CONTROLLER AND MODEL 332 CABINET
4. [4] *INSTALL 2 #2 TW SIGNAL SERVICE & 1-#10 GROUND CONDUCTORS FROM THE SERVICE METER AT FRIARS RD AND SEA WORLD DR (S/W CORNER) TO THE CONTROLLER AT E MISSION BAY DR/SEA WORLD DR USE EXIST CONDUIT PER SECTION 86-2.09B INSTALL 1P-50 AMP CIRCUIT BREAKER ON POLE (A) FOR SIGNAL SYSTEM AT E MISSION BAY DR/SEA WORLD DRIVE (APPROX DISTANCE BETWEEN TWO INTERSECTIONS 1400 ft)*
   S D G & E SERVICE POINT, FOR SIGNALS AND LIGHTING IS AT *FRIARS RD/SEA WORLD DR (S/W)*
5. INSTALL EMERGENCY VEHICLE PREEMPTION *DETECTORS AT LOCS (A), (B), (C) & (E) FOR PHASES 4+7, 1+6, 3+8 AND 2+5 RESPECTIVELY*
6. SIGNING AND STRIPING BY OTHERS, SHOWN FOR REFERENCE ONLY
7. ALL VEHICLE SIGNAL INDICATIONS SHALL BE 12" DIAMETER WITH BACKPLATES. FAR LEFT, LEFT TURN INDICATIONS FOR PHASES 1,3,5 & 7 SHALL HAVE LOUVERED RED AND YELLOW SECTIONS, AND GREEN ARROW.
8. CONSTRUCT PEDESTRIAN RAMPS AND SIDEWALKS AS SHOWN ON THIS PLAN AND PER DETAILS SHOWN ON CITY OF SAN DIEGO STD DWG. NO G-7 AND SDG-101 P.C.C. SHALL BE 3 1/2" THICK SIDEWALKS SHALL BE 10' WIDE.
9. ALL SIGNAL STANDARDS SHALL BE INSTALLED 9'-0" FROM FACE OF CURB TO CENTERLINE OF POLE.
10. LUMINAIRES SHALL HAVE CONSTANT WATTAGE BALLASTS WITH P.E. CONTROLS WITH CUTOFF FIXTURES.
11. DELIVER SALVAGED EQUIPMENT TO COMMUNICATIONS AND ELECTRICAL DIVISION, 20TH & B ST, 236-5505
12. [12] *REMOVE AND SALVAGE EXIST SAFETY LIGHTS AND INSTALL #5 PULL BOX TO COMPLETE EXIST. 240 V ST LT CIRCUIT*

[13] *REMOVE EXIST PULL BOX AND EXTEND EXIST 1 1/2" CONDUITS TO THE NEW PULL BOX*
[14] *PULL OUT EXIST. #6 TW SAFETY LTG CONDUCTORS AND INSTALL NEW CONDUCTORS AS SHOWN*
[15] *CAUTION! REPLACE IRRIGATION SYSTEM IF DISTURBED.*
[16] *AT LOC (J), REMOVE AND SALVAGE EXIST LIGHT*

Free Lag <C/1+F+0> _2_4_6_

Notes: **Adaptive System operartion RULES:**

1- Intersection is running in Adaptive system coordination signal timing.
2- Do not change PIN ASSIGNMENTS on page 3. Pin numbers are changed for Adaptive mode operation.
3- No Recalls/Detector delays to be USED in the controller. Recalls/Delays are to be configured in the InSync Processor, Detector Setup.
4- Controller MUST BE set to FREE operation. C/0-A-1 =14
5- Min G is 10s for sync phases and 5s for all other permitted phases.
6- Veh Ext, Max Gap & Min Gap are set to 1.0s, Reduce Every is set to "zero".
7- "Carry Over" is SET to "zero" for all detectors.

Notes: **Adaptive System operartion RULES:**

1- Intersection is running in Adaptive system coordination signal timing.
2- Do not change PIN ASSIGNMENTS on page 3. Pin numbers are changed for Adaptive mode operation.
3- No Recalls/Detector delays to be USED in the controller. Recalls/Delays are to be configured in the InSync Processor, Detector Setup.
4- Controller MUST BE set to FREE operation. C/0-A-1 =14
5- Min G is 10s for sync phases and 5s for all other permitted phases.
6- Veh Ext, Max Gap & Min Gap are set to 1.0s, Reduce Every is set to "zero".
7- "Carry Over" is SET to "zero" for all detectors.

3 = Offset C

Notes: **Adaptive System operartion RULES:**

1- Intersection is running in Adaptive system coordination signal timing.
2- Do not change PIN ASSIGNMENTS on page 3. Pin numbers are changed for Adaptive mode operation.
3- No Recalls/Detector delays to be USED in the controller. Recalls/Delays are to be configured in the InSync Processor, Detector Setup.
4- Controller MUST BE set to FREE operation. C/0-A-1 =14
5- Min G is 10s for sync phases and 5s for all other permitted phases.
6- Veh Ext, Max Gap & Min Gap are set to 1.0s, Reduce Every is set to "zero".
7- "Carry Over" is SET to "zero" for all detectors.

Notes:

Adaptive System Operation Rules:

1- Intersection is running in Adaptive system coordination signal timing.
2- No Min Recalls/Max Recalls/Detector delays or locks to be used in the controller.
Only soft recall to be used for sync phases.
Recalls/Delays are to be configured in the InSync Processor, Detector Setup.
3- Controller MUST BE set to FREE operation. C/0+A+1 =14
4- Min Green is 10s for sync phases and 5s for all other permitted phases.
5- Veh Ext, Max Gap & Min Gap are set to 1.0s, Reduce Every is set to "zero".
6- "Carry Over" is set to "zero" for all detectors.

E/W Street Name: **LYTTON**
Last Database Change:
Notes: **Drawing Number 32008-8-D**

Adaptive System operartion RULES:

1- Intersection is running in Adaptive system coordination signal timing.
2- Do not change PIN ASSIGNMENTS on page 3. Pin numbers are changed for Adaptive mode operation.
3- No Recalls/Detector delays to be USED in the controller. Recalls/Delays are to be configured in the inSync Processor, Detector Setup.
4- Controller MUST BE set to FREE operation. C/0-A-1 =14
5- Min G is 10s for sync phases and 5s for all other permitted phases.
6- Veh Ext, Max Gap & Min Gap are set to 1.0s, Reduce Every is set to "zero".
7- "Carry Over" is SET to "zero" for all detectors.

Notes:

Adaptive System operartion RULES:

1- Intersection is running in Adaptive system coordination signal timing.
2- Do not change PIN ASSIGNMENTS on page 3. Pin numbers are changed for Adaptive mode operation.
3- No Recalls/Detector delays to be USED in the controller. Recalls/Delays are to be configured in the InSync Processor, Detector Setup.
4- Controller MUST BE set to FREE operation. C/0-A-1 =14
5- Min G is 10s for sync phases and 5s for all other permitted phases.
6- Veh Ext, Max Gap & Min Gap are set to 1.0s, Reduce Every is set to "zero".
7- "Carry Over" is SET to "zero" for all detectors.

2 = Offset B
3 = Offset C

Adaptive System operartion RULES:

1- Intersection is running in Adaptive system coordination signal timing.
2- Do not change PIN ASSIGNMENTS on page 3. Pin numbers are changed for Adaptive mode operation.
3- No Recalls/Detector delays to be USED in the controller. Recalls/Delays are to be configured in the InSync Processor, Detector Setup.
4- Controller MUST BE set to FREE operation. C/0-A-1 =14
5- Min G is 10s for sync phases and 5s for all other permitted phases.
6- Veh Ext, Max Gap & Min Gap are set to 1.0s, Reduce Every is set to "zero".
7- "Carry Over" is SET to "zero" for all detectors.

Notes:
1- Adjust Railroad timing to check bus detection during limited service.
2- Make sure Detector ASSIGN fields are correctly set to remove DET SET2 for all phase 2 detection except within the bus lane and phase 2 ped.
3- RR2 input calls Special Event Sequence 1 and Calls DET SET2.
4- Overlap 3: Bus Indication is phase 2 and EB (ph2) vehicle indications are the overlapping phase.

Notes

User approved pedestrian interval to be less than phase max green.
User approved volume balancing among the lanes for turning movement.
User approved ignoring U-Turning movement.

Unsignalized Delay for [NBR, WBR, SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 6th Ctrl Delay	37.4
HCM 6th LOS	D

Notes

User approved pedestrian interval to be less than phase max green.
User approved volume balancing among the lanes for turning movement.
User approved ignoring U-Turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.
User approved changes to right turn type.
