Corporation Class 2 Modification request was approved effective 2/28/2022 with a permit expiration date of 6/25/2025. The modification request included the installation of a EV (electrovoltaic) Solar Farm on top of the closed landfill and modifications to the previous closure cost estimates. DTSC received a response to comments for the 2021 1st Semi-Annual Water Quality Monitoring Report on 3/25/2022. DTSC received the 2021 2nd Semi-Annual and Annual Water Quality Monitoring Report on 3/28/2022. FACILITY DESCRIPTION/ HISTORY Acme Fill Corporation (aka Acme Landfill or Acme) is located east of Martinez, California, near marsh bordering Suisun Bay. The landfill consists of 3 waste disposal areas identified as: the North Parcel, covering about 135 acres; the East parcel, covering about 87 acres; and the South Parcel, covering about 22 acres. The total area of the site, including the combined area of the parcels and additional land used as buffer zones, is about 516 acres. The Post-Closure permit application pertains to only the North Parcel of the landfill. Operation began in the early 1950s where solid and industrial waste were collected and disposed of in the North Parcel area. Initially, waste were placed on ground surface, burned, and then covered with additional wastes that were also burned. In the late 1950s, the waste were compacted and occasionally covered with soil. By 1981 a mandatory soil cover of a minimum of 6 inches was placed over the waste, or working surface. The North Parcel had been used to dispose non-hazardous solid waste and some hazardous and designated waste. Acme stopped accepting RCRA hazardous wastes in 1984, California hazardous wastes in 1987 and California designated waste in 1989. The Acme Landfill North Parcel was closed in 1999. PERMITTING REGULATORY DESCRIPTION/ HISTORY Acme stopped accepting RCRA hazardous wastes in 1984, California hazardous wastes in 1987 and California designated waste in 1989. A Closure Plan fo

Title Description:	1.) Variance Request from 5-foot groundwater separation.
Due Date:	07/16/2018
Comments:	Permittee has applied for variance from 66264.113(d)(1)(E) as it applies to Water Board regulation 27 CCR 20240(c) for unlined surface impoundment Pond 7. Regulation 66264.113(d)(1)(E) requires surface impoundments operating under delay of hazardous waste closure comply with Water Board regulations. Variance from 66264.113(d)(1)(E) as it applies to 20240(c) would allow Pond 7 to continue operation being non-compliant with 20240(c), which requires 5-feet of groundwater separation from unit bottom

Title:	Oral Com 10/05/2017 for Tesoro Refining & Marketing Company LLC Martinez
Description:	Phone call on October 5, 2017, between Patrick Karinja (SFB RWQCB) and Peter Carroll (Tesoro Refining & Marketing Company LLC). Discussed causes and corrective actions associated with three non-serious total coliform effluent violations that occurred from April 2013 through May 2016. The causes were related to a manually controlled hypochlorite feed system. A newly designed hypochlorite system, which uses an automatic hypochlorite feed system, was installed in Summer 2016 and has resulted in consistent effective disinfection (as of October 2017).

Title:	Oral Com 10/05/2017 for Tesoro Refining & Marketing Company LLC Martinez
Description:	Phone call on October 5, 2017, between Patrick Karinja (SFB RWQCB) and Peter Carroll (Tesoro Refining & Marketing Company LLC). Discussed causes and corrective actions associated with three non-serious total coliform effluent violations that occurred from April 2013 through May 2016. The causes were related to a manually controlled hypochlorite feed system. A newly designed hypochlorite system, which uses an automatic hypochlorite feed system, was installed in Summer 2016 and has resulted in consistent effective disinfection (as of October 2017).

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

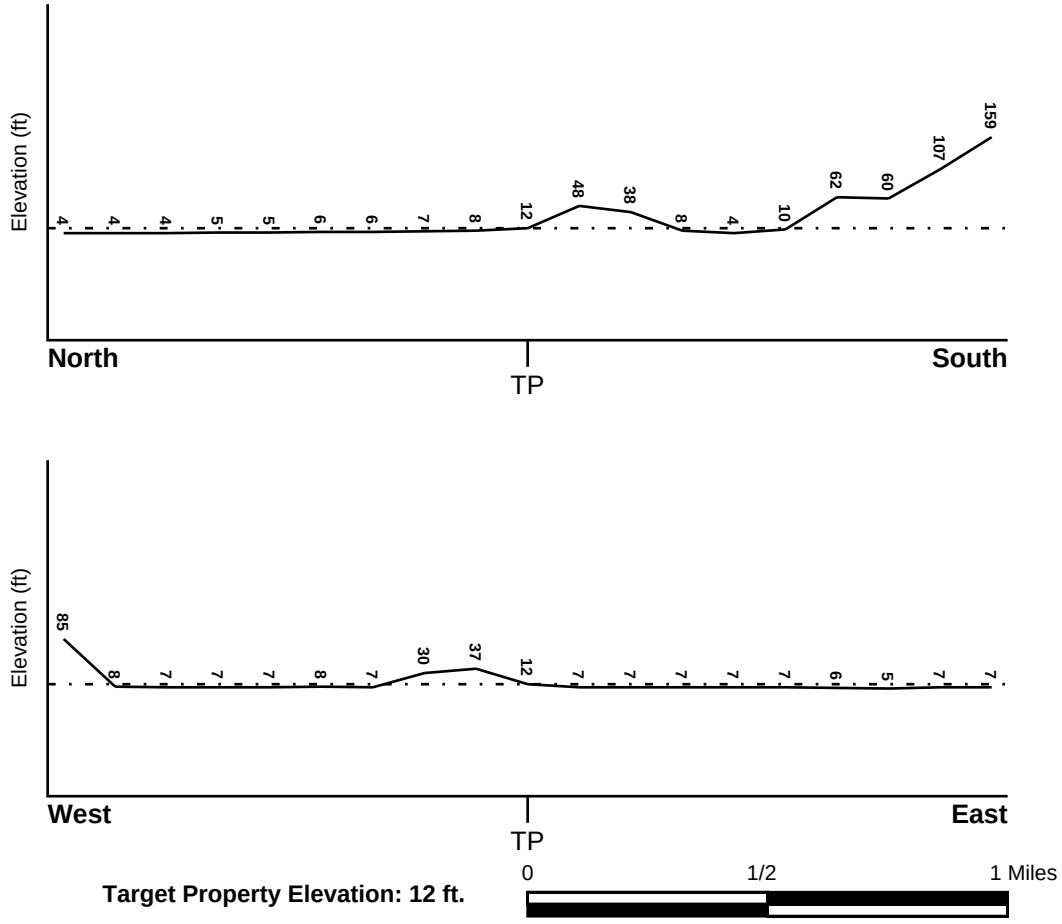
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 12 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

SELECT PROJECT EXPERIENCE

Howard Terminal—Oakland, CA
Lead Environmental Principal. Jeff has provided ongoing technical leadership during several environmental studies for the redevelopment of the Howard Terminal site. The approximately 62.1-acre Property is a former container terminal along the Port of Oakland's Inner Harbor. The Property was originally a bulk-break terminal dating back to the early 1900s, with a manufactured gas plant located in the eastern portion of the Property. The terminal was expanded and converted to a container terminal in the 1980s. Improvements will include a Major League Baseball stadium as well as mid-rise and high-rise buildings to provide a mix of residential, retail, and other commercial uses. ENGEO performed a Phase I Environmental Site Assessment (ESA), Phase II ESAs consisting of soil, soil gas, and groundwater sampling across the property, EIR preparation support, the preparation of a human health and ecological risk assessment (HHERA), and is developing a removal action work plan (RAW).

Google San Jose Downtown West—San Jose, CA
Project Manager. Jeff provided technical leadership and review for a comprehensive ESA for various industrial and commercial properties over approximately 50 acres in downtown San Jose considered for acquisition by Google. The purpose of the assessment was to identify known and unknown environmental concerns and recommended appropriate actions to quantify potential risks to inform due diligence efforts. The risk assessment utilized an innovative

Geographic Information System (GIS) digital interactive platform that provides additional data beyond typical environmental information and is scalable for future project plans.

The South Lathrop Commerce Center—Tracy, CA
Lead Environmental Principal. Jeff provided technical leadership and review for a Phase I ESA for the approximately 245-acre master-planned industrial development. The 4.2-million-square-foot development includes nine tilt-up concrete buildings, ranging in size from 282,000 square feet to over 1,000,000 square feet. Additional improvements for the logistics center include detention and retention basins, paved streets, parking, and drive lanes, a stormwater pump station and outfall, and a sewer lift station. Site development activities include grading operations, primarily consisting of minor cuts and fills, for individual pads and roadways, underground utility installation, pump station and outfall structure construction, flexible and rigid pavement construction, and vertical construction.

Crown Chevrolet Property—Dublin, CA
Project Manager. Jeff provided comprehensive environmental consultation services for the project. Working on behalf of the purchaser, Jeff collaborated with a multi-firm consulting team to characterize and mitigate environmental impacts resulting from previous on-site automotive maintenance activities and off-site businesses. Jeff designed and managed a site characterization program that definitively demonstrated that groundwater and soil gas impacts at the site were the result of off-site releases. He peer reviewed the design and implementation of a permeable reactive barrier (PRB), which serves to remediate an encroaching groundwater plume, as well as vapor intrusion mitigation systems for the site. He also completed a Phase I ESA for a remnant parcel subsequently developed for housing for veterans. The site consists of a multi-story commercial and residential apartment/condominium "transit village" complex.

3512 Clayton Road—Concord, CA
Lead Environmental Principal. Jeff provided technical leadership and review for a Brownfields redevelopment project in Concord. Following the Phase I and Phase II ESAs that identified soil and soil gas impacts, he assisted in the development of a remediation program that included a comprehensive pre-characterization program, accurately delineating soil impacts from past light-industrial uses and soil gas impacts from off-site businesses, allowing for accelerated field implementation. Following active soil remediation and post-remediation soil gas sampling, Jeff and the ENGEO team performed a vapor intrusion risk assessment that confirmed the site did not require long-term vapor mitigation systems. The site was granted case closure from the oversight regulatory agency within an accelerated review and approval timeframe. The project consists of a high-density residential development.

Blacow Road Project—Fremont, CA
Environmental Principal. Jeff has provided technical assistance for project remediation activities and prepared a Phase I ESA for site. The site is an active, open remediation site under the regulatory oversight of the San Francisco Bay Regional Water Quality Control Board (RWQCB). Impacts resulted from a variety of on-site and off-site commercial and industrial land uses dating back over 50 years. ENGEO has performed numerous characterization, remediation design, and monitoring services for the Site. Remediation activities are underway at the site to address groundwater and soil gas impacts from volatile organic compounds (VOCs) and petroleum hydrocarbons. The remediation approach consists of several remedial and mitigative technologies, including soil vapor extraction (SVE), in-situ enhanced bioremediation, and post-remediation vapor intrusion mitigation systems to be installed in future residential structures. The project consists of a residential development.

Eastvale 79—Eastvale, CA
*Environmental Principal***.** Jeff served in an Environmental Principal role for environmental studies at the site. ENGEO performed a Phase I ESA and a subsequent ESA update that included regulatory file reviews, interviews with property owners and regulatory agencies, a site reconnaissance, and preparation of a report documenting our findings. The approximately 16-acre site was historically associated with a portion of a dairy dating to at least 1967. During grading activities, a localized area of stained and odoriferous soil was observed in the southeast corner of the site. ENGEO coordinated and managed remediation efforts, confirmation sampling, and coordination with Riverside County DEH. Approximately 4,115 tons petroleum-impacted soil were removed and disposed. The DEH issued "No Further Action" status for the site.

Alameda Landing—Alameda, CA
Project Manager. Project Manager, Lead Environmental Principal. Jeff has provided comprehensive environmental consultation services for the Alameda Landing project. He has prepared and managed the completion of Phase I ESA and ESA Update studies for subunits of the greater project area. He directed environmental characterization operations for the site, which was suspected of having been affected by naturally occurring methane deposits within the subsurface. Working closely with innovative protocols, Jeff was able to demonstrate to regulatory oversight officials that expensive vapor intrusion mitigation systems were not necessary for proposed residential structures, potentially saving millions of dollars to the site developer. Additionally, he has prepared several Remedial Action Completion Reports (RACRs) of development phases to achieve regulatory case closure. The project consists of a multi-phased residential housing community built as part of a master-planned redevelopment of a former United States Navy facility.

VTA BART Silicon Valley Berryessa Extension Design-Build Project—San Jose, CA
Project Manager. As the lead project team member with respect to hazardous materials, Jeff provided a range of value engineering consulting services relating to existing soils, groundwater, and building materials. ENGEO provided a range of value engineering consulting services to address existing soils, hydrology resources, SWPPP, and building materials.

Following a complex right-of-way that extended through numerous developed areas and paralleled an existing rail line, the project generated hundreds of thousands of cubic yards of excavated soil with potential toxic and hazard concerns. The right-of-way intersected several groundwater plumes emanating from former industrial and commercial sources. Further, a number of structures in the project footprint harbored lead-based paint and asbestos-containing building materials. ENGEO led the effort to accurately quantify these materials and devise strategies to effectively manage and mitigate these materials to drive overall project cost savings.

Foster City Civic Center Lots—Foster City, CA
Assistant Project Manager. Jeff provided technical oversight for a Phase I ESA for the Foster City Civic Center site and environmental characterization operations for the site, which was suspected of having been affected by unauthorized petroleum hydrocarbon releases within the subsurface. Following the completion of a soil gas survey, Jeff and team demonstrated that vapor intrusion mitigation systems were not necessary for proposed development, providing a significant cost savings to the project. The project consists of a multi-use urban infill development.

Macedo Property Environmental Consultation—Livermore, CA
Project Manager. Jeff provided comprehensive environmental consultation services for a Brownfields redevelopment project in Livermore. The project included several challenges, including ongoing business activities at the site and complex contaminant conditions resulting

from a long history of site operation of an automotive service station. Following a comprehensive site characterization plan that he developed, Jeff developed a cost-effective remedial plan to address hydrocarbon-contaminated soil. Jeff worked closely with the design team to rapidly remediate the site contamination using a soil excavation program that minimized disturbance to the active businesses at the site. Through Jeff's project oversight, the characterization and remediation activities were completed on time and under budget. Because of his effective work with various project stakeholders, the site was granted case closure from the oversight regulatory agency within an accelerated timeframe, allowing redevelopment to occur on schedule. The project consists of a residential subdivision. The project consists of a residential subdivision.

1511 Jefferson—Oakland, CA
Project Manager. Jeff provided environmental and geotechnical consultation services for a Brownfields redevelopment project in downtown Oakland. The project included several challenges, including limited site access due to on-site business activities, environmental impact related to previous site use, and the presence of several adjacent mid-rise structures. Jeff developed efficient remedial value engineering solutions to mitigate the presence of geotechnical and environmental development constraints. Jeff worked with the design team to establish cost-effective retaining wall and foundation systems, designed and observed a subsurface environmental mitigation program, and assisted in the design of a structure-wide vapor barrier. The project, serving as a cornerstone of the revitalization of downtown Oakland, consists of a multi-story residential condominium structure.

Alamo Creek—Danville, CA
Project Manager. Jeff prepared guidance documents and helped to form a transit-focused County Service Area (CSA). The transit-focused CSA, believed to be the first in Contra Costa County, helped to establish commuter transit service for a recently constructed residential development. Utilizing market analysis research provided by other consultants, he prepared an Engineer's Report that outlined a three-part phased implementation of transit, beginning with vanpools and ultimately resulting in an airporter-style fleet of bus service to and from an existing Bay Area Rapid Transit station. Jeff also prepared a long-range budget and confirmed a yearly assessment to ensure financial solvency of the CSA over the lifetime of the development. The CSA serves the Alamo Creek development and vicinity in Contra Costa County, California.

Alcosta Boulevard/Interstate 680 Interchange Project—San Ramon, CA
Project Engineer. Jeff performed an Aerially Deposited Lead (ADL) assessment program for the Alcosta Boulevard/Interstate 680 Interchange Improvement. The purpose of the investigation was to determine existing lead levels in surface soils. The scope of services included the recovery of soil samples from the surface to a depth of 3 feet below the ground surface, analytical testing of the samples to determine hydrogen ion content (pH testing), total lead, STLC WET soluble lead, and STLC TCLP soluble lead analyses, and a statistical analysis to determine Confidence Intervals (CI) of soil lead concentrations. An innovative, risk-based statistical analysis was performed to assure site soils were suitable for on-site reuse in accordance with Caltrans/State of California regulations. The project consists of a rehabilitation and realignment of the interstate highway interchange.

Arroyo Crossing—Livermore, CA
Project Engineer. Jeff contributed to the award-winning project, which included an extensive scope of work, including supplemental geotechnical exploration, Phase I and II ESAs, underground storage tank removal and groundwater monitoring. Jeff provided environmental analysis of existing subsurface conditions, helping the design team to implement a comprehensive yet innovative geotechnical and environmental mitigation program. Following

completion of environmental remediation activities, Jeff was able to secure a substantial federal corporate income tax rebate on behalf of the client through the EPA's Brownfields Tax Incentive program. The project consists of a residential subdivision re-use of a former quarry.

Brookside - Guadalupe Mines Road—San Jose, CA
Senior Engineer. Jeff performed a review of existing environmental documents by others, consultation with the client, and peer review document preparation. This 16-acre commercial property is planned for redevelopment into a roughly 95-lot single-family residential development. Site challenges include pre-existing environmental impacts, existing fills, creek bank stability/meander, and faulting.

East Garrison Development - Operations and Maintenance Plan—Carmel, CA
Project Engineer. Jeff prepared an Operations and Maintenance Plan (OMP) that included an assemblage of projected capital and maintenance costs from a range of consultants into working 50-year budgets for both a County Service District (CSD) and a homeowner's association (HOA). He worked to reach agreement with a number of project stakeholders, including the developer, other consultants, and local government agencies. In addition to assisting in the preparation of capital expenditure projections, Jeff developed the two operating and maintenance budgets, maintenance activity schedules and checklists, and the governing document for the two maintenance entities. The project consists of a redevelopment from a former military facility to a residential subdivision.

Highlands Ranch, Unit 3 - Environmental T&O—Pittsburg, CA
Project Engineer. Jeff managed the remediation of a former petroleum tank farm located in a rural/exurban setting. The extensive remediation program was in support of a conversion of industrial site usage into residential site usage. At this prototypical Brownfield site, Jeff personally oversaw all field operations involving a series of subcontractors, including an innovative ex-situ enhanced bioremediation program of impacted soils. Following excavation, Jeff worked closely with California Department of Toxic Substances Control (DTSC) personnel to determine the suitability of the intended site reuse. Jeff implemented an innovative statistical procedure in accordance with State and Federal Environmental Agency Best Practices to assure the site was safe for residential use. The project consists of a large-scale residential subdivision.

Highway 4 Bypass - Lime Treatment Consultation—Brentwood, CA
Project Manager. Jeff served as Project Manager. He provided consultation services that consisted of a variety of forensic analyses pertaining to the lime treatment of sub-base soils. Jeff worked closely with the project contractor as well as a diverse range of stakeholders to determine if lime treatment materials used in construction had met project specification. Following several protocols, including ASTM methods, Jeff demonstrated the absence of a statistical correlation that would confirm the use of substandard materials. Jeff's work was used to produce an opinion on behalf of the project team that the treated materials would be expected to adequately perform over the design life of the project, saving significant cost overruns. The project consists of a multi-lane highway constructed within a rapidly growing region of Eastern Contra Costa County. The project consists of a multi-lane highway constructed within a rapidly growing region of Eastern Contra Costa County.

Lockheed Martin Storm Water Pond No 4—Sunnyvale, CA
Project Manager. Jeff provided permitting consultation services, including the federal and state permitting required for the maintenance of a stormwater detention system. Jeff has also provided geotechnical and environmental support to evaluate the geotechnical conditions of the site. He also determined the absence of environmentally impacted materials within the site area. The site

consists of a stormwater detention basin measuring approximately 4.5 acres in area and located adjacent to sensitive habitat.

New Farm Agricultural and Meteorological Assessment—Contra Costa County, CA
Project Manager. Jeff managed an agricultural suitability evaluation. As part of the project, a portion of hillside open space is to be devoted to cultivation as olive groves. Jeff led the effort to review USDA soil maps and to test onsite soils for the ability to support olive cultivation. The soils were compared to active olive orchards in other locations of Contra Costa County. The project consists of a residential development with agricultural-intensive open space. Jeff led the effort to review USDA soil maps and to test on-site soils for the ability to support olive cultivation. The soils were compared to active olive orchards in other locations of Contra Costa County. The project consists of a residential development with agricultural-intensive open space.

San Ramon Village Plaza - Environmental Consultation—Dublin, CA
Project Manager. Jeff contributed to an environmental peer review of previous land uses, which included a former dry cleaner. Further investigation identified impact due to former site operations. Jeff assisted in a remediation program, closely collaborating with other consultants representing different parties of the property transaction. The site was efficiently remediated, allowing for redevelopment. The project consists of a high-density residential development within the 4.68-acre mixed-use San Ramon Village Plaza site.

Schaefer Ranch - GHAD Consultation—Dublin, CA
Project Engineer. Jeff assisted with the scoping, Plan of Control preparation, budget, and formation processes of a Geologic Hazard Abatement District (GHAD). The scope of the GHAD includes maintenance of slopes, water conveyance features, habitat, and other features. Proactive maintenance, assessment, repair and replacement are also the responsibility of the GHAD subject to the limitations of the Plan of Control. The project consists of a large-scale residential subdivision in the East Bay hills west of Dublin.

Sparklizing Cleaners and Laundry—Fremont, CA
Project Engineer. Jeff provided review and data analysis for this former dry cleaning facility that had released tetrachloroethylene (PCE) to site soil and groundwater. Work included site characterizations using direct push borings, soil gas surveys, well installations, and a remedial alternatives evaluation. He has also assisted in the development of a remedial program for the site. The project site consists of a dry-cleaning facility located within a commercial/retail center. Dry-cleaning operations occurred at the facility since 1974 and resulted in chlorinated solvent impacts to soil and groundwater beneath the site. As a result, the RWQCB opened a Spills, Leaks, Investigations, and Cleanups (SLIC) case and the site was referred to the Alameda County Water District (ACWD) for lead agency oversight. A series of soil and groundwater investigations identified a source area beneath the drycleaner suite and an adjoining retail suite. ENGEO prepared a Corrective Action Plan (CAP) and coordinated the in-situ chemical oxidation program that consisted of injecting 35,000 gallons of potassium permanganate to the subsurface to oxidize chlorinated solvents. The project is currently in the post-remediation monitoring phase.

Stone Lock District Development - Consulting Services—West Sacramento, CA
Project Engineer. Jeff prepared a pro forma analysis of infrastructure-related costs for a preliminary development concept of the property. The analysis included a cost estimate for all site improvements, grading, utilities, and non-structural facilities. Included in the analysis was an evaluation of the existing adjacent levee system. Jeff worked with other team members to provide

a preliminary assessment of the existing levee condition and prepared a cost estimate for levee rehabilitation and reconstruction. The project consists of a proposed mixed-use redevelopment as part of a city revitalization plan.

Torian Parcels - Additional Phase II Environmental Site Assessment—Newark, CA
Project Manager. Jeff served as Project Manager and Project Engineer. He provided comprehensive geotechnical and environmental evaluation. Several significant geotechnical and environmental conditions existed at the property, including compressible soils, liquefiable soils, and significant deposits of non-engineered fill and debris. Several areas of soil and groundwater environmental impact were present due to historic industrial use at and in the vicinity of the site. Jeff performed a financial analysis of several mitigation alternatives to identify the most cost effective remedial solution, one in which a single remedial program in several locations addressed both environmental and geotechnical impact. Additionally, Jeff worked closely with the environmental oversight agency to develop a work plan to assess potential environmental impact. In developing and implementing the work plan, Jeff was able to demonstrate that environmental impact at the property was not as extensive as previously believed. This allowed for an alteration of the proposed site plan to avoid areas of potential impact, saving significant projected redevelopment costs. The project consists of a residential redevelopment of a 40-acre property formerly used for industrial purposes. The project consists of a residential redevelopment of a 40-acre property formerly used for industrial purposes.

Los Banos Airport - Phase I ESA—Los Banos, CA
Project Engineer. Jeff provided a Phase I ESA, prepared a soil and groundwater characterization program, and developed a conceptual soil remediation work plan as part of a multi-phase development. The Los Banos Airport project measures approximately 112 acres in area.

Navlet's Garden Center Concord - Phase I ESA—Concord, CA
Project Manager. Jeff prepared a Phase I ESA for the site. Jeff was able to effectively navigate through the complex historic records and ownership legacy associated with the property. He prepared a report that satisfied the demands and deadline of both the ownership entity and the financial institutions associated with the property. The project consists of a Navlet's Garden Center.

Mare Island, 3rd and Connelly Utility Corridor Environmental Services—Vallejo, CA
Project Engineer. Jeff provided environmental consultation support. During excavation of the utility corridor, zones of impacted soil were identified and removed from an approximate 9,300-square-foot footprint area and depths from 5 to 10½ feet below existing grade. The project consisted of utility demolition and soil excavation activities required to prepare for construction of a 300-foot water and sewer utility corridor along Connelly Street between 3rd Street and Azuar Drive.

Maggiore Property - Soil Remediation—Brentwood, CA
Project Engineer. Jeff directed field remediation operations for the site, which had been affected by an unauthorized subsurface petroleum product release. He managed a site plume delineation and groundwater-monitoring program. Additionally, Jeff performed RBCA Tier I and Tier II assessments to determine feasibility of residential development of property. The project consists of a small residential subdivision.

Cree Court Slide Repair—San Ramon, CA
Project Engineer. Jeff assisted in the development and implementation of a custom-tailored "top-down" construction procedure, allowing the project to be constructed on time and under

budget. Additionally, Jeff helped develop an innovative non-structural grouting procedure to verify proper structural tieback performance. The project consisted of an integrated structural and grading-related repair for the mitigation of a large active landslide in proximity to existing homes. A 70-foot-high retaining wall is now in place to stabilize a major, active landslide.

Sequoia/Conifer Terrace - Structural Repair Design—Danville, CA
Project Engineer. Jeff assisted in the design of a structural repair system for a landslide remediation project within a residential setting. He provided recommendations to help optimize construction of system and lessen financial burden of project. The project consisted of a unique structural repair for the mitigation of a large active landslide in close proximity to existing homes.

Dear Mr. Bobde:

We are pleased to submit the findings of environmental sampling undertaken at the subject property (Property) in Martinez, California (Figure 1).

SITE LOCATION AND BACKGROUND

The Property consists of a railroad corridor located partially along the Union Pacific Railroad (UPRR) tracks south of Waterfront Road and partially within the TransMontaigne Martinez Terminal. The Property comprises a portion of Assessor's Parcel Numbers (APNs) 159-310-036 and 159-310-038.

The Martinez Terminal Rail Restoration Project involves reestablishing a former rail line on the southern side of the existing Martinez Terminal connecting to the existing UPRR railroad tracks south of Waterfront Road. The rail spur would be located within the existing Martinez Terminal property and within UPRR right-of-way (ROW). The project would include construction of approximately 3,500 linear feet of new track, with a lead track of approximately 2,050 feet, and three operating industry tracks of approximately 475 feet each. These tracks would hold train cars for the transport of a range of petroleum-based and renewable products, feed stocks, and blend stocks commodities (Reference 1).

ENGEO prepared a phase I ESA for the Property in 2023 (Reference 2) which identified the following Recognized Environmental Conditions (RECs) in connection with the Property.

- **REC: Residual Chemicals Associated with Railroad Tracks**
  - Residual chemicals, including heavy metals, pesticides, petroleum hydrocarbons, and polycyclic aromatic hydrocarbons (PAHs), are commonly found in surface and near-surface soil in the alignment of railroad tracks and spurs. The presence of railroad tracks is classified as a REC.
- **REC: Tosco Pipeline – Wickland Releases**
  - At least seven historical releases of total petroleum hydrocarbons (TPH) occurred in the pipeline alignment within the railroad corridor. These releases are documented under Tosco Pipeline – Wickland case (GeoTracker ID SL18360780). Residual TPH constituents may be found in soil. Contaminant maps provided in the most recent cleanup order (Order R2-2008-0019) show that the contaminant plume was located within the wetland adjacent to the Property. These releases are classified as a REC.
- **REC: Nearby Refinery Releases Affecting the Railroad Corridor**
  - TransMontaigne Martinez (GeoTracker ID SL373211178): Numerous releases have occurred in connection with refinery operations at the TransMontaigne Martinez Terminal. Extensive remedial actions have been implemented to achieve cleanup objectives. Most notably, in the southwestern area of the terminal (in the western portion of the Property), a phytoremediation system was installed in 2007 to contain dissolved-phase hydrocarbons and methyl tert-butyl ether (MTBE) and limit potential discharges to the marsh. A groundwater extraction pump was also installed in a monitoring well in this region to contain groundwater while the roots of the phytoremediation system deepened. Residual contamination is managed through a land use covenant (LUC) and Soil Management Plan (SMP) (Reference 3). The SMP, dated June 17, 2019, provides procedures and protocols for managing residual hydrocarbons in soil throughout the facility. The facility is eligible for closure related to petroleum contamination as of July 19, 2021.
  - TransMontaigne Martinez Terminal (PFAS) (GeoTracker ID L10005962342): While the TransMontaigne facility is eligible for closure pertaining to TPH contamination, recent investigations have been conducted to evaluate the presence of per- and polyfluoroalkyl substances (PFAS) under open cleanup case L10005962342. The case is listed as having long-term management (as of July 19, 2021). A PFAS investigation is outside the scope of this assessment.
- **Controlled REC: Covenant and Environmental Restriction on Property**
  - A Covenant and Environmental Restriction on the Property was recorded on March 12, 2020, (dated August 16, 2023, on GeoTracker) and affects the entire TransMontaigne parcel (APN 159-310-038). The covenant indicates that soil and groundwater underlying the Property contains hazardous materials (TPH) due to historical releases from refinery operations. The LUC references the 2019 SMP, which summarizes procedures for the appropriate management of separate-phase hydrocarbons (SPH) and associated petroleum-impacted soil and groundwater during future redevelopment or other on-site maintenance activities at the site.

The purpose of this assessment was to characterize soil within the planned railroad spur alignment to address potential construction worker exposure human health risks.

SCOPE OF SERVICES

Pre-Field Activities

The exploration occurred partially within the UPRR ROW south of Waterfront Road. Prior to commencement of field activities, we obtained a Right of Entry (ROE) Agreement with UPRR. An ENGEO representative marked the proposed boring locations and contacted Underground Service Alert (USA) North to facilitate notification of operators of utilities at or near the Property. We also retained the services of a private utility locator to clear readily identifiable utilities at the boring locations.

Soil Sampling

A railroad representative from National Railroad Safety Services (NRSS) supervised the sampling activities within the active railroad corridor to ensure safety. A total of 41 soil samples were collected on May 7 and May 8, 2024, from 24 locations (S-1 through S-24) spaced every 150 feet of the planned railroad spur alignment (Figure 2). Samples S-1 through S-11 were collected at lateral distances of approximately 10 to 15 feet north of the existing railroad track. Samples S-12 through S-24 were located within the alignment of an existing abandoned railroad spur which diverges northwest from the main track and terminates south of the facility. Samples were generally collected at depths of 6 to 12 inches and 18 to 24 inches below the ground surface (bgs) at each location. However, refusal occurred at several locations due to the presence of ballast rock and/or aggregate base within the soil, preventing samples from being collected at the target depths and/or preventing deeper samples from being collected. These modifications are listed as follows.

- The deep samples from locations S-5, S-14, S-15, S-17, S-18, S-21, and S-23 were unable to be collected.
- The shallow samples from locations S-17 and S-23 were collected at a depth of 3 to 9 inches instead of 6 to 12 inches.
- The deep samples from locations S-8 and S-24 were collected at a depth of 12 to 18 inches instead of 18 to 24 inches.

The samples were collected in stainless steel liners and sealed using Teflon® sheets secured by tight-fitting plastic end caps and tape. The samples were labeled, placed into an ice-cooled chest, and submitted under documented chain-of-custody to Torrent Laboratory, Inc., a state-certified laboratory located in Milpitas, California. The samples were composited based on depth and analyzed as 12 composite samples for the following.

- CAM-17 metals by EPA Method 6020/7471
- PAHs by EPA Method 8270C SIM

Additionally, two samples from each composite sample (24 total) were analyzed for the following.

- TPH as gasoline (TPH-g) and VOCs by EPA Method 8260B
- TPH as diesel and motor oil (TPH-d and TPH-mo) by EPA Method 8015M

Where exceedances were reported in the composite samples, the individual samples were analyzed on a discrete basis.

RESULTS

The soil sample results were compared to the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) environmental screening levels (ESLs) for construction worker exposure[1]. Arsenic results were compared to the naturally occurring background concentration of 11 milligrams per kilogram (mg/kg) for the San Francisco Bay Area[2]. The following exceedances were reported. Where exceedances were reported in the composite samples, the discrete samples were analyzed.

- Arsenic was reported above 11 mg/kg in 13 of the 21 shallow samples analyzed, at concentrations ranging between 11.3 mg/kg to 202 mg/kg, and in 8 of the 16 deep samples analyzed, at concentrations ranging between 11.8 mg/kg and 193 mg/kg.
- Lead was reported above the ESL of 160 mg/kg in 6 of the 12 samples analyzed, at concentrations ranging between 162 mg/kg and 745 mg/kg, and in 3 of the 6 deep samples analyzed, at concentrations ranging between 175 mg/kg and 690 mg/kg.
- Cobalt was reported above the ESL of 28 mg/kg in the composite sample collected from the shallow samples at locations S-21 through S-24 (30.8 mg/kg). Each sample was analyzed discretely for cobalt and none of the samples exceeded 28 mg/kg.

TPH-d and TPH-mo were reported in all 24 samples analyzed, at concentrations below the ESLs of 1,100 mg/kg and 54,000 mg/kg, respectively. Low-level detections of PAHs below the corresponding ESLs were reported in 10 of the 12 composite samples. TPH-g and VOCs were not detected above laboratory reporting limits in any of the samples.

A summary of the analytical results is provided in Figure 3 and Table A. The complete laboratory report is presented in Appendix A.

DISCUSSION AND RECOMMENDATIONS

The results indicate that arsenic and lead impacts are found at elevated levels in shallow soil along the entire planned railroad alignment. The highest concentrations reported were in Samples S-13 through S-24, which are located along the abandoned spur. The concentrations are likely associated with chemicals used to treat the railroad ties. A a site-specific health and safety plan (HASP) should be implemented. Construction workers should utilize appropriate levels of personal protective equipment (PPE) to minimize contact with impacted soil.

We understand that no soil export is planned for the proposed railroad development. However, in the future, if soil is to be removed from the project site, the following additional lab testing may be required by the receiving party to profile the soil.

- Organochlorine pesticides (OCPs) by EPA Method 8081A
- Polychlorinated biphenyls (PCBs) by EPA Method 8082
- Semivolatile organic compounds (SVOCs) by EPA Method 8270C SIM
- Asbestos by CARB Method 435, 400-point count

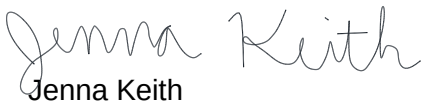
Additionally, the following hazardous waste criteria will apply if soil is exported from the Property.

- Soil with constituent concentrations exceeding 10 times the soluble threshold limit concentration (STLC) value is potentially characterized as California Class I hazardous waste[3]. The Waste Extraction Test (WET) will be required to determine if the soluble concentration exceeds the STLC limit.
- Soil with constituent concentrations exceeding 20 times the toxicity characteristic leaching procedure (TCLP) value is potentially characterized as Federal (Resource Conservation and Recovery Act [RCRA]) hazardous waste[4]. The TCLP test will be required to determine if the soluble concentration exceeds the TCLP limit.
- Soil with constituent concentrations exceeding the total threshold limit concentration (TTLC) value is by default characterized as California Class I hazardous waste[5].
- Soil with constituents exceeding construction worker exposure screening levels but below applicable hazardous waste thresholds is characterized as California Class II non-hazardous waste for disposal/export purposes.



Additionally, if soil import is planned for the Property in the future, fill material should be tested and evaluated in compliance with the receiving facility requirements.

Finally, many high priority utilities are located within the planned spur alignment. Care should be taken to properly located utilities so that they are not damaged during construction activities.

Sincerely,

ENGEO Incorporated

Notes:

Results are shown in milligrams per kilogram (mg/kg).

<0.040 indicates analyte was not detected above the laboratory reporting limit of 0.040 mg/kg.

-- indicates analyte was not analyzed or screening level not established.

BOLD indicates the concentration was detected above laboratory reporting limits.

Highlighted values exceed construction worker exposure screening criteria.

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - **mg/L** and ***mg/Kg*** (equivalent to PPM - parts per million in **liquid** and ***solid***), **ug/L** and ***ug/Kg*** (equivalent to PPB - parts per billion in **liquid** and ***solid***), **ug/m3**, ***mg/m3***, **ppbv** and ***ppmv*** (all units of measure for reporting concentrations in air), **%** (equivalent to 10000 ppm or 1,000,000 ppb), **ug/Wipe** (concentration found on the surface of a single Wipe usually taken over a 100cm2 surface)

LABORATORY QUALIFIERS:

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H- Indicates that the recommended holding time for the analyte or compound has been exceeded
J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.
