Violation Date:	09-24-2013
Citation:	23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)
Violation Description:	Failure of sensor to be located in the proper position/location.
Violation Notes:	Returned to compliance on 09/24/2013. 87-B Fill Sump Sensor found on its side at the bottom of the sump. Alarm history and maintenance records show sensor alarmed on May 25, 2013 and replaced on May 26, 2013. Maintain sensor at earliest level of detection.
Violation Division:	Oxnard City CUPA
Violation Program:	UST
Violation Source:	CERS,

Site ID:	108289
Site Name:	Costco Wholesale #420
Violation Date:	08-14-2018
Citation:	23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)
Violation Description:	Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(f)(2).
Violation Notes:	Returned to compliance on 08/14/2018. Tank #3 91 fill sump was accumulating liquid but not enough to trigger alarm.

Violation Date: 05-10-2018
Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)
Violation Description: Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.
Violation Notes: Returned to compliance on 05/10/2018. Observed cord to Veeder Root Sensor 208 tanged up in Dispenser 3/4 making it raised from the bottom of the UDC approximately 1/4 of an inch inside a sleeve. Reviewed maintenance records and Dispenser had ISD work conducted in April and May 2018. Last alarm according to Veeder Root Panel was August 2017 during annual monitor certification test. UDS appeared to be dry and dusty. This is a Class II violation. Ensure all monitoring sensors are positioned at the lowest point of detection.
Violation Division: Oxnard City CUPA
Violation Program: UST
Violation Source: CERS,

Site ID: 108289
Site Name: Costco Wholesale #420
Violation Date: 09-24-2014
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description: Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.
Violation Notes: Returned to compliance on 09/24/2014. Overfill alarm light did not light up when atg was at 90%. Repair/Replace light bulb.

Violations:

Site ID: 103242
Site Name: CarMax #6014
Violation Date: 09-17-2015
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 10/28/2015. Waste paint label was not visible and the other is missing accumulation date. Provide accumulation date to hazardous waste labels and maintain visible.
Violation Division: Oxnard City CUPA
Violation Program: HW
Violation Source: CERS,

Site ID: 103242
Site Name: CarMax #6014
Violation Date: 08-28-2018
Citation: 23 CCR 16 2712(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)
Violation Description: Failure to maintain records of repairs, lining, and upgrades on site, or off site if approved by the UPA, for the life of the UST.
Violation Notes: Returned to compliance on 09/26/2018. Monitor panel shoes alarms at the Annular Sensor on August 10, 2018 and twice on July 21, 2018. 2017 and 2018 maintenance records are not available. Look through records and/or contact maintenance company(s) to obtain 2017 and 2018 maintenance records.

Violation Date: 09-07-2016
Citation: 23 CCR 16 2712(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(i)
Violation Description: Failure to have a UST Monitoring Plan available on site.
Violation Notes: Returned to compliance on 09/07/2016.
Violation Division: Oxnard City CUPA
Violation Program: UST
Violation Source: CERS,

Site ID: 103242
Site Name: CarMax #6014
Violation Date: 08-28-2018
Citation: 23 CCR 16 2712(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(i)
Violation Description: Failure to submit a current UST Response Plan available on site.
Violation Notes: Returned to compliance on 08/28/2018. Plan onsite dated 2014 is outdated. Most current plan dated 9/11/2017 was most recently submitted to CERS 3/2/2018 is not available. Maintain current Response Plan available onsite.
Violation Division: Oxnard City CUPA

CARMAX #6014 (Continued) **S113097128**

Violation Program: UST
Violation Source: CERS,

Site ID: 103242
Site Name: CarMax #6014
Violation Date: 08-22-2019
Citation: HSC 6.7 25290.1(d) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(d)
Violation Description: Failure of a UST system installed on or after July 1, 2004 to be designed and constructed with a monitoring system capable of detecting the entry of the liquid or vapor-phase of the hazardous substance stored in the primary containment into the secondary containment and capable of detecting water intrusion into the secondary containment.
Violation Notes: Returned to compliance on 08/22/2019. Observed liquid in fill sump by not enough to put in alarm condition. Maintain sumps clean and dry.
Violation Division: Oxnard City CUPA
Violation Program: UST
Violation Source: CERS,

Site ID: 103242
Site Name: CarMax #6014
Violation Date: 08-22-2019
Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)
Violation Description: Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.
Violation Notes: Returned to compliance on 08/22/2019. At the beginning of certification test, observed UDC had been opened with sensors at lowest point. When scheduling for monitor certification test, testing company (Tanknology) was directed to maintain sump's and UDC's closed until Oxnard Fire/CUPA was onsite. Unable to verify placement of sensors prior to UDC being opened.

Site ID: 144540
Site Name: Power Equipment Services
Violation Date: 05-26-2020
Citation: 22 CCR 15 66265.194 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.194
Violation Description: Failure to comply with general tank operating requirements: (a) Hazardous wastes or treatment reagents shall not be placed in a tank system if they could cause the tank , its ancillary equipment, or the secondary containment system to rupture, leak, corrode, or otherwise fail;. (b) The owner or operator shall use appropriate controls and practices to prevent spills and overflows from tank or secondary containment systems. These include at a minimum: (1) spill prevention controls (e.g., check valves, dry discount couplings); (2) overfill prevention controls (e.g., level sensing devices, high level alarms, automatic feed cutoff, or bypass to a standby tank); and (3) maintenance of sufficient freeboard in uncovered tanks to prevent overtopping by wave or wind action or by precipitation. Uncovered tanks shall be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure (e.g., standby tank with a capacity that equals or exceeds the volume of the top 60 centimeters (2 feet) of the tank).

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Program:	HW
Eval Source:	CERS,

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	01-30-2020
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Verified violations from report dated 12/5/2019 have been corrected. - Facility has paid for Oxnard Fire/CUPA Permit and submitted to CERS. - Per Annor and Dept Admin Gabriel De-Souza, the P-listed waste is going to be monitored to ensure not to accumulate at or above 2.2 pounds. This will make this facility a CESQG. Pick-ups are being scheduled monthly. - Most recent pick-up from Clean Harbors shows no P-Listed waste onsite during inspection. - Review with employees how to document accumulation log @ the pharmacy.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS AIR POLLUTANT MAJOR

Violations:
Site ID: 437162
Site Name: Career Care Institute
Violation Date: 04-03-2018
Citation: HSC 6.5 25189.5(a),25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a),25201(a)
Violation Description: Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not authorized according to HSC 6.5.

CAREER CARE INSTITUTE (Continued) **S123521197**

Violation Notes: Returned to compliance on 05/02/2018. Failure to generate hazardous waste with a Permit from Oxnard Fire/CUPA. Facility has generated five gallons of x-ray solution waste from older x-ray machine. The x-ray class has gone to digital technology and will no longer generate x-ray solution waste. Disposal records onsite from previous generation. Contact x-ray solution hauler to remove within 30 days or obtain a Hazardous Waste Generator Permit by registering on the Statewide database California Environmental Reporting System (CERS). CERS Brochure provided. Contact Oxnard Fire/CUPA for re-inspection.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SEVEN UP RC OXNARD DISTRIBUTIO (Continued) **S103990443**

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR PROGRAM
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
US Emissions & Generation Resource Database (EGRID) contains data on emissions and resource mix for virtually every power plant and company that generates electricity in the United States.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

PROCTER & GAMBLE PAPER PRODUCTS (Continued) **1000181055**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
OSHA ESTABLISHMENT
HAZARDOUS AIR POLLUTANT MAJOR
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
STATE MASTER
ELECTRIC GENERATOR
AIR MAJOR
HAZARDOUS WASTE BIENNIAL REPORTER
US EPA RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "Best Available" air pollution technologies that have been required to reduce the emission of air pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

SIC Code 2:	Not reported
Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Primary Waste:	STORMS
Waste Type2:	Not reported
Waste2:	Stormwater Runoff
Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS Description: Industrial Facility Storm Water

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-25-2019
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: During the inspection, Staff verified that measures indicated in the Level 1 ERA report were implemented. Staff verified that personnel were trained and that monitoring, and inspections, were conducted for the facility. Staff mentioned the discoloration on the pavement and was informed that since materials are dropped off by individuals, there is often discolored water coming off items or vehicles. Mr. Morales informed Staff that a second filtration unit is planned to be installed for additional treatment of stormwater prior to leaving the premises. Facility was in compliance at the time of the inspection and no issues were identified. Facility is to continue to monitor exceedances and evaluate how to reduce elevated levels identified through sampling data.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/08/2022
Date Data Arrived at EDR: 05/09/2022

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics

22-13677
213009
OXNARD, CA 93036

TARGET PROPERTY COORDINATES

Latitude (North):	34.221668 - 34ˆ 13’ 18.00’’
Longitude (West):	119.149486 - 119ˆ 8’ 58.15’’
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	301995.0
UTM Y (Meters):	3788628.8
Elevation:	81 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	11998320 OXNARD, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

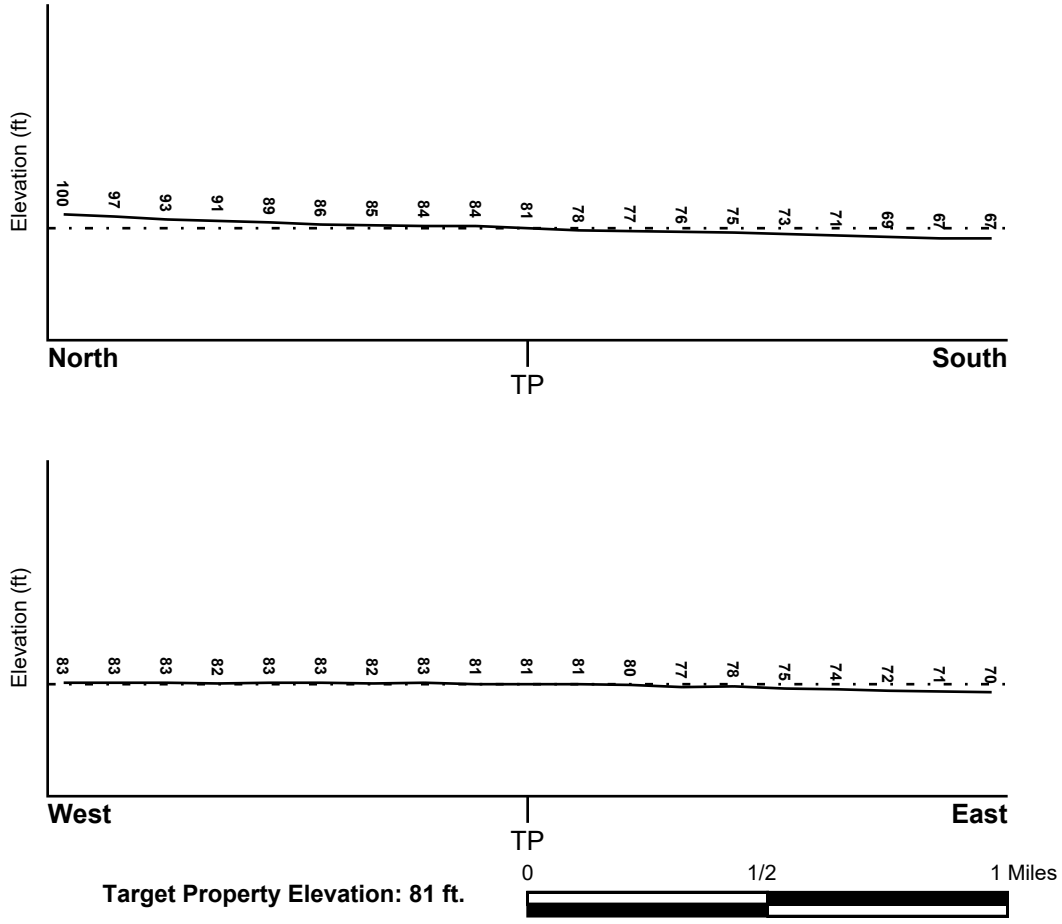
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06111C0910E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
OXNARD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CAMARILLO

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 107 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	24 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	24 inches	50 inches	stratified sandy loam to sandy clay loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
3	50 inches	79 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: HUENEME

Soil Surface Texture: loamy sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 107 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4
2	16 inches	59 inches	stratified sandy loam to silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4

Soil Map ID: 3

Soil Component Name: PICO

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9
2	14 inches	53 inches	stratified sandy loam to loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9
3	53 inches	59 inches	stratified gravelly sand to gravelly loamy coarse sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9

Soil Map ID: 4

Soil Component Name: METZ

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4
2	7 inches	59 inches	stratified sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Rincon were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1926 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1926 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

The purpose of this noise analysis is to provide an assessment of the impacts resulting from the Lockwood 3 Development Project (Project) and to identify any measures that may be necessary to reduce potentially significant impacts.

Construction Noise

The City currently does not have adopted standards, guidelines, or thresholds relative to construction noise. As such, available guidelines from the Federal Transit Authority (FTA) was considered to assess noise impacts due to construction. Average noise levels during construction would not result in noise levels that exceed 100 dBA (Leq-1hour) for commercial and industrial uses and 90 dBA (Leq-1hour) for residential uses.

Construction Vibration

The City currently does not have adopted standards, guidelines, or thresholds relative to ground-borne vibration. As such, available guidelines from the Federal Transit Authority (FTA) was considered to assess impacts due to ground-borne vibration during construction. The Project would result in construction-related vibration that is less than the FTA vibration-annoyance criteria of 78 VdB during the daytime (7:00 AM – 10:00 PM) for residential uses, 84 VdB for office uses and 90 VdB for workshop uses.

Roadway Noise

Project-related traffic would not cause noise levels along the analyzed roadways to increase by more than 3.0 dBA. Thus, the proposed Project would not result in a permanent increase in noise levels above ambient levels in the vicinity of the Project Site in excess of the City's Noise Element and Noise Ordinance. Vehicular related noise impacts would not be considered significant.

Exterior Noise

Specific numerical noise criteria are not included in the 2030 General Plan but are referenced in the General Plan Background Report. For residential and other sensitive uses, the maximum exterior Community Noise Equivalent Level (CNEL) that is considered compatible is 65 a-weight decibels (dBA). As a Project Design Feature, the northern boundary of the Project site adjacent to the US-101 freeway includes an 8-foot masonry wall with evergreen vine. Additionally, the outdoor living areas (patios and/or balconies) on the 2nd through 5th floor that are positioned facing towards the US-101 freeway would include a 42-inch solid wall railing. The 2nd floor would include an 8-inch glazing on top of the solid wall railing. The Project would adhere to the City's exterior standard of 65 dBA CNEL at the outdoor living that include patios and/or balconies.

PROJECT DESCRIPTION

The Project site is located in the northeast portion of the City on a vacant 225,359 square foot (5.17-acre) lot just north of the newly constructed Lockwood Street, as shown in Figure 1: Project Site Location. The Project includes construction of a 5-story 233-unit multi-family residential building, consisting of 24 studios units, 82 one-bedroom units, 103 two-bedroom units and 24 three-bedroom units, as shown in Figure 2: Site Plan. Residential uses would be located within the 2nd and 5th floors of the proposed development. As a Project Design Feature, the northern boundary of the Project site adjacent to the US-101 freeway includes an 8-foot masonry wall with evergreen vine. Additionally, the outdoor living areas (patios and/or balconies) on the 2nd through 5th floor that are positioned facing towards the US-101 freeway would include a 42-inch solid wall railing. The 2nd floor would include an 8-inch glazing on top of the solid wall railing. The Project site is located on a vacant Business Research Park (BRP) adjacent to retail and medical facilities such as Kaiser, St. Johns, and the senior/elderly Health Care Center Oxnard ADHC. The property to the south is undeveloped. Additionally, the developed site to the west is a car dealership and a Medical Office Building further down to the south at Outlet Center Drive.

Ambient Noise Measurements

The main noise generators within the City consist of vehicular traffic along the US-101 Ventura Freeway, other major roadways, the Oxnard Airport, the Union Pacific Railroad line, and a variety of stationary noise sources. The highest noise levels are adjacent to the US-101 Ventura Freeway. The City of Oxnard 2030 General Plan defines sensitive receptors as residential areas, hospitals, child and daycare facilities, convalescent homes and facilities, schools, and other similar land uses. These uses are considered sensitive because the presence of excessive noise may interrupt normal activities typically associated with their use. Additionally, increased noise levels occur along major arterials including Victoria Avenue, Channel Islands Boulevard, Ventura Road, and Oxnard Boulevard.

As mentioned previously, the Project site is located on vacant land surrounded by properties in the BRP zone. The Project site and the surrounding area are primarily subject to traffic noise associated with the US-101 Freeway to the north. Long-term (24-hour) noise measurements were conducted between August 1 – August 2, 2022, to characterize the daily noise levels generated within the Project site and provided in **Table 1: Ambient Noise Measurements**. **Figure 3: Noise Monitoring Location** depicts where the ambient noise measurement was conducted within the Project site. As shown in **Table 1**, ambient noise levels during the 24-hour period at the Project site was 77.4 dBA CNEL.

TABLE 1
AMBIENT NOISE MEASUREMENT

Location Number/Description	Leq-Daytime (7:00 AM - 7:00 PM)	Leq-Evening (7:00 PM - 10:00 PM)	Leq-Nighttime (10:00 PM - 7:00 AM)	24-hour CNEL
1 Between Proposed Lockwood I and approved Lockwood II Development	71.3	71.6	70.5	77.4

*Source: Refer to **Appendix A** for noise monitoring data sheets.*
Notes: dBA = A-weighted decibels; Leq = average equivalent sound level.

Roadway Noise Levels

In addition to the ambient noise measurements near the Project Site, the existing traffic noise on local roadways in the surrounding areas was calculated to quantify the daytime and nighttime noise levels using information provided in the transportation impact analysis.[1] The transportation impact analysis analyzed four segments within the Project vicinity. Traffic noise levels were calculated using the Federal Highway Administration Traffic Noise Model (FHWA TNM).

Table 2: Existing Roadway Noise Levels provides the calculated 24-hour CNEL noise levels for the analyzed local roadway segments based on existing traffic volumes. 24-hour CNEL levels attributed to roadway traffic range from a low of 64.8 dBA CNEL along Gonzales Road east of Lombart Street to a high of 69.6 dBA CNEL along Rice Avenue south of US Highway 101 SB Ramp. In terms of the City's land use compatibility categories based on roadway traffic only, all locations are classified as normally acceptable.

[1] Associated Transportation Engineers, Lockwood III Apartments Projects, dated October 11, 2022.

TABLE 2
EXISTING ROADWAY NOISE LEVELS

Roadway Segment	Adjacent Land Use	Existing Roadway Noise Level dBA CNEL	Existing Noise Exposure Compatibility Category
Rice Avenue			
North of US Highway 101 NB Ramp	Commercial	65.3	Normally Acceptable
South of US Highway 101 NB Ramp	Commercial	67.8	Normally Acceptable

Sensitive Uses

As mentioned previously, properties surrounding the vacant site are in the BRP zone and is adjacent to retail and medical facilities such as Kaiser, St. Johns, and the senior/elderly Health Care Center Oxnard ADHC. An overview of the surrounding sensitive land uses that may be impacted by the Proposed Project is provided below. Additionally, refer to **Figure 4: Sensitive Receptor Map** for location of the sensitive uses described below:

- **2201 Outlet Center Drive**: Located to the southeast of the Project site at the corner of Outlet Center Drive and Lockwood Street and Outlet Center drive, sensitive uses include the California Lutheran University Satellite campus.
- **1901 Outlet Center Drive**: Located to the south of the Project site across Lockwood Street at Outlet Center Drive, sensitive uses include the medical office building.
- **2024 Outlet Center Drive**: Located to the southeast of the Project site south of Lockwood Street along Outlet Center Drive, sensitive uses include the medical office building.
- **1900 Outlet Center Drive**: Located to the southeast of the Project site along Outlet Center Drive, sensitive uses include the medical office building.
- **2211 E. Gonzales Road**: Located to the southeast of the Project site along Gonzales Road, sensitive uses include the Pacific Senior Living assisted living facility.

Construction Noise

The City does not have any adopted standards, guidelines, or thresholds relative to construction noise. To evaluate whether the Project will generate a substantial periodic increase in short-term noise levels at off-site sensitive receiver locations, a construction-related noise level threshold is adopted from the FTA Construction Noise Handbook for General Assessment Construction Noise Criteria. The FTA *Transit Noise and Vibration Impact Assessment Manual*[2] provides a general noise assessment guideline to assess potential noise impacts construction of transit projects. A general noise assessment is suitable and appropriate given the current stage of planning and evaluation for this Project. The FTA's General Assessment Construction Noise Criteria identifies daytime and nighttime thresholds for residential, commercial, and industrial land uses, which are considered reasonable criteria for use in assessing the potential for adverse community reaction to noise generated by construction activities.

The construction noise criteria threshold for residential uses is 90 dBA (Leq-1hour) during the daytime and 80 dBA (Leq-1hour) during the nighttime period. Additionally, construction noise thresholds for commercial and industrial uses are 100 dBA (Leq-1hour) during both the daytime and nighttime periods. Since the construction-related noise level threshold represents the energy average of the noise source over a given time, they are expressed as Leq noise levels.

Construction Vibration

The City currently does not have any adopted standards, guidelines, or thresholds relative to ground-borne vibration. As such, available guidelines from the FTA would be considered to assess impacts due to ground-borne vibration. The Proposed Project is required to implement construction techniques which result in construction-related vibration that is less than the maximum vibration levels for residential uses presented in **Table 3: Interpretation of Vibration Criteria for Detailed Vibration Analysis**. The criteria in this section are used to assess the potential for interference or annoyance from building response and to determine performance of vibration reduction methods. Development would be required to implement construction techniques which result in construction-related vibration that is less than the FTA vibration-annoyance criteria of 78 VdB during the daytime (7:00 AM – 10:00 PM) for residential uses, 84 VdB for office uses, and 90 VdB for workshop uses.

2 Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, September 2018, accessed September 2021, https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf

TABLE 3 INTERPRETATION OF VIBRATION CRITERIA FOR DETAILED VIBRATION ANALYSIS		
Criterion Curve	**Max Lv, VdB[1]**	**Description of Use**
Workshop	90	Vibration that is distinctly felt, Appropriate for workshops and similar areas not as sensitive to vibration.
Office	84	Vibration that can be felt. Appropriate for offices and similar and areas not as sensitive to vibration.
Residential Day	78	Vibration that is barely felt. Adequate for computer equipment and low-power optical microscopes (up to 20x).
Residential Night	72	Vibration is not felt, but ground-borne noise may be audible inside quiet rooms. Suitable for medium-power optical microscopes (100X) and other equipment of low sensitivity.

Note:

[1] As measured in 1/3-octave bands of frequency over the frequency range 8 to 80 Hz.

Lv = vibration level; VdB = RMS velocity in decibels.

Source: FTA Transit Noise and Vibration Handbook, Table 6-6: Interpretation of Vibration Criteria for Detailed Vibration Analysis.

Operation

Specific numerical noise criteria are not included in the 2030 General Plan but are referenced in the General Plan Background Report. The California Code of Regulations sets forth requirements for the insulation of multiple-family residential dwelling units from excessive and potentially harmful noise. The State indicates that locating units in areas where exterior ambient noise levels exceed 65 dBA is undesirable. Whenever such units are to be located in such areas, the developer must incorporate into building design various construction features which reduce interior noise levels to 45 dBA CNEL. **Table 4: Community Noise Exposure Ldn or CNEL, Db** presents criteria used to assess the compatibility of proposed land uses with the noise environment. As shown, normally acceptable noise levels for residential multi-family uses are 65 dBA CNEL or less. Pursuant to the City's Zoning Code Section 16-420J(F)(2), the Applicant shall submit evidence to the satisfaction of the Director that all units with patios and/or balconies meet the 65 dBA CNEL.

TABLE 4 COMMUNITY NOISE EXPOSURE LDN OR CNEL, DB				
Land Use Category	**Normally Acceptable**	**Conditionally Acceptable**	**Normally Unacceptable**	**Clearly Unacceptable**
Residential – Low Density, Single Family, Duplex, Mobile Homes	<60	55-70	70-75	>80
Residential – Multi Family	<65	60-70	70-75	>75
Transient Loding – Motels, Hotels	<65	60-70	70-80	>80
Schools, Libraries, Churches, Hospitals, Nursing Homes	<70	60-70	70-80	>80
Auditoriums, Concert Halls, Amphitheaters	NA	<70	NA	>65
Sports Arena, Outdoor Spectator Sports	NA	<75	NA	>70
Playgrounds, Neighborhood Parks	<70	67.5-75	NA	>72.5
Golf Courses, Riding Stables, Water Recreation, Cemeteries	<75	70-80	70-80	>80
Office Buildings, Business Commercial and Professional	<70	67.5-77.5	>75	NA
Industrial, Manufacturing Utilities, Agriculture	<75	70-80	>75	NA

Note:

Normally Acceptable *– Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal convention construction, without any special noise insulation requirements.*

Conditionally Acceptable *– New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design – Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice*

Normally Unacceptable *– New construction or development should generally be discouraged – If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.*

Clearly Unacceptable *– New construction or development should generally not be undertaken.*

NA *– Not applicable.*

Source: California Office of Planning and Research, General Plan Guidelines, 2003.

The FTA has recommended noise criteria related to traffic-generated noise. These recommendations can be used as guidance to determine whether or not a change in traffic would result in "substantial" permanent increase in noise. The allowable noise exposure increase is reduced with increasing ambient existing noise exposure, such that higher ambient noise levels have a lower allowable noise exposure increase. **Table 5: Significance of Changes in Operational Roadway Noise Exposure** shows the significance thresholds for increases in traffic-related noise levels. These standards are applicable to project-related impacts on existing sensitive receptors. For noise exposures above 75 dBA CNEL, there is no allowable noise exposure increase. As shown in **Table 5**, the ambient noise exposure within the Project site is 77.4 dBA CNEL. As such, there is no allowable noise exposure increase limit for this portion of the site.

TABLE 5
SIGNIFICANCE OF CHANGES IN OPERATIONAL ROADWAY NOISE EXPOSURE

Existing Noise Exposure (dBA Ldn or Leq)	Allowable Noise Exposure Increase (dBA Ldn or Leq)

Ambient Noise Measurements

Noise-level monitoring was conducted by Meridian Consultants between August 1 – August 2, 2022 along Puente Street, as shown in **Figure 3**. Noise-level monitoring was conducted for a 24-hour period using a Larson Davis Model 831 sound-level meter. This meter satisfies the American National Standards Institute (ANSI) standard for general environmental noise measurement instrumentation. The ANSI specifies several types of sound-level meters according to their precision. Types 1, 2, and 3 are referred to as "precision," "general-purpose," and "survey" meters, respectively. Most measurements carefully taken with a Type 1 sound-level meter will have a margin of error not exceeding 1 dB.

The Larson Davis Model 831 is a Type 1 precision sound-level meter. This meter meets all requirements of ANSI S1.4-1983 and ANSI1.43-1997 Type 1 standards, as well as International Electrotechnical Commission (IEC) IEC61672-1 Ed. 1.0, IEC60651 Ed 1.2, and IEC60804 Type 1, Group X standards. The sound-level meter was located approximately 5 feet above ground and was covered with a Larson Davis windscreen. The sound-level meter was field calibrated with an external calibrator prior to operation.

Construction Noise

Future dates represent approximations based on the general Project timeline and are subject to change pending unpredictable circumstances that may arise. Construction would occur over the following phases: (1) Site Preparation; (2) Grading; (3) Building Construction; (4) Paving; and (5) Architectural Coating.

Each phase of construction would result in varying levels of intensity and a number of construction personnel. The construction workforce would consist of approximately 18 worker trips per day during site preparation; approximately 15 worker trips per day and approximately 4 hauling trips per day during grading; approximately 201 worker trips per day and approximately 38 vendor trips per day during building construction; approximately 15 worker trips per day during paving; and approximately 41 worker trips per day during architectural coating.

On-Site Construction Equipment

Construction activities typically generate noise from the operation of equipment within the Project Site that is required for the construction of various facilities. Noise impacts from on-site construction equipment as well as the on-site staging of construction trucks were evaluated by determining the noise levels generated by different types of construction activity and calculating the construction-related noise level at nearby noise-sensitive receptor locations. Actual construction noise levels would vary, depending upon the equipment type, model, the type of work activity being performed, and the condition of the equipment.

In order to calculate construction noise levels, hourly activity or utilization factors (i.e., the percentage of normal construction activity that would occur, or construction equipment that would be active, during

each hour of the day) are estimated based on the temporal characteristics of other previous and current construction projects. The hourly activity factors express the percentage of time that construction activities would emit average noise levels. Typical noise levels for each type of construction equipment were obtained from the FHWA Roadway Construction Noise Model.[3]

An inventory of construction equipment, including the number and types of equipment, which would be operating simultaneously within the Project Site was identified for each phase/component of construction and shown in **Table 6: Construction Equipment by Phase**. It is highly unlikely that all pieces of construction equipment identified in **Table 6** would operate simultaneously in any specific location during construction because equipment is generally operated only when needed and space constraints limit the equipment that can be used at any one time in a specific location. Therefore, this modeling is considered a conservative approach to calculate the maximum noise levels that would be generated.

The calculated average noise levels provided in **Table 6** were inputted into the noise model SoundPLAN,[4] which generates computer simulations of noise propagation from sources such as construction noise. SoundPLAN forecasts noise levels at specific receptors using sound power data and three-dimensional topographical data.

3 U.S. Department of Transportation, FHWA Roadway Construction Noise Model Final Report, January 2006, accessed March 2022, https://www.fhwa.dot.gov/environment/noise/construction_noise/rcnm/rcnm.pdf

4 SoundPLAN model is in compliance with ISO 9613-2 standards for assessing attenuation of sound propagating outdoors and general calculation method.

Construction Equipment Vibration

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods employed. The operation of construction equipment causes ground vibrations that spread through the ground and diminish in strength with distance. While ground vibrations from construction activities do not often reach the levels that can damage structures, fragile buildings must receive special consideration.

Impacts due to construction activities were evaluated by identifying vibration sources (i.e., construction equipment), measuring the distance between vibration sources and surrounding structure locations, and making a significance determination.

For quantitative construction vibration assessments related to building damage and human annoyance, vibration source levels for construction equipment are taken from the FTA *Transit Noise and Vibration Impact Assessment Manual*.[5] Building damage would be assessed for each piece of equipment individually and assessed in terms of peak particle velocity. Ground-borne vibration related to human annoyance is assessed in terms of rms velocity levels.

5 FTA, Transit Noise and Vibration Impact Assessment Manual, September 2018, accessed August 2022, https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf

The vibration source levels for various types of equipment are based on data provided by the FTA.

Operation

Roadway Noise

Traffic noise levels were modeled using the FHWA TNM. The FHWA TNM calculates noise associated with a specific line source and the results characterize noise generated by motor vehicle travel along a specific roadway segment. The traffic noise impact analysis is based on the 24-hour CNEL noise descriptor and incorporates traffic volumes, vehicle mix, posted speed limits, roadway geometry, and site conditions. Noise levels were evaluated with respect to the following traffic scenarios:

- Existing (2022) Conditions;
- Existing (2022) plus Project Conditions;
- Cumulative without Project Conditions; and
- Cumulative with Project Conditions.

Noise impacts due to off-site motor vehicle travel were analyzed by comparing the projected increase in traffic noise levels from without Project conditions to plus proposed Project to the applicable significance criteria. Cumulative plus Project conditions include traffic volumes from future ambient growth, related projects, and the proposed Project.

Exterior Noise

Noise-level calculations at the Project site were assessed using the SoundPLAN noise model. The SoundPLAN model depicts noise contours at varying distances and accounts for various inputs to analyze topography, vegetation, propagation from buildings, and existing- and proposed-noise sources and barriers. The SoundPLAN model takes into account the distances between the noise sources and the receiver to depict noise contours at varying distances. The software utilizes algorithms (based on the inverse square law) to calculate noise level projections. Accuracy has been validated in published studies to be +/- 2.7 dBA with an 85 percent confidence level. The software allows the user to input specific noise sources, spectral content, sound barriers, building placement, topography, and sensitive receptor locations.

The roadway noise environment along US-101 Freeway was modeled based on average annual daily trips (AADTs) from existing volumes (Year 2021) ahead of Rose Avenue obtained from Caltrans.[6]

6 Caltrans 2021 Traffic Volume, https://dot.ca.gov/programs/traffic-operations/census

Construction Noise

Noise from construction activities would be affected by the amount of construction equipment, the location of this equipment, the timing and duration of construction activities, and the relative distance to noise-sensitive receptors. Construction activities that would occur during the construction phases would generate both steady-state and episodic noise that would be heard both on and off the Project site. Each construction phase involves the use of different types of construction equipment and, therefore, has its own distinct noise characteristics. The Project would be constructed using typical construction techniques; no blasting or impact pile driving would be required.

The construction equipment reference noise levels provided in **Table 7** above, are based on measured noise data compiled by the FHWA and would occur when equipment is operating under full power conditions. However, equipment used on construction sites typically operate at less than full power. The acoustical usage factor is the percentage of time that each type of construction equipment is anticipated to be in full power operation during a typical construction day. These values are estimates and will vary based on the actual construction process and schedule.

Construction equipment operates at its noisiest levels for certain percentages of time during operation. As such, equipment would operate at different percentages over the course of an hour.[7] During a construction day, the highest noise levels would be generated when multiple pieces of construction equipment are operated concurrently.

To characterize construction-period noise levels, the average (hourly Leq) noise level associated with each construction stage was calculated based on the quantity, type, and usage factors for each type of equipment that would be used during each construction stage. These noise levels are typically associated with multiple pieces of equipment operating simultaneously.

The estimated construction noise levels were calculated for each of the analyzed receptors (refer to **Figure 4: Noise Sensitive Receptors**) during each of the construction phases. As mentioned previously, given the physical size of the Project site and logistical limitations, and with the noise equipment located at the construction area nearest to the affected receptors to present a conservative impact analysis. This is considered a worst-case evaluation because construction of the Project would typically use fewer pieces of equipment simultaneously at any given time as well as operating throughout the construction site (i.e., most of the time construction equipment would be operating at distances further away from

7 Federal Highway Administration, Traffic Noise Model (2006).

the off-site receptors than that assumed in the forecasting of Project construction noise levels). As such, Project construction would often generate lower noise levels than reported herein.

Table 7: Maximum Noise Impacts Associated with On-Site Construction Activities presents the maximum noise impacts that are forecasted to occur at each of the receptor sites. As shown, average noise levels during construction would not result in noise levels that exceed 100 dBA (Leq-1hour) for commercial and industrial uses and 90 dBA (Leq-1hour) for residential uses. As such, construction noise impacts would not be considered significant.

TABLE 7
MAXIMUM NOISE IMPACTS ASSOCIATED WITH ON-SITE CONSTRUCTION ACTIVITIES

Location	Calculated Noise Level (Leq-1hour) by Construction Phase					Exceeds Significance Threshold?
	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	
1902 Outlet Center Drive Medical Office Building 1	75.5	75.2	72.8	68.9	57.2	**No**
2024 Outlet Center Drive Medical Office Building 2	74.9	74.6	72.7	68.3	57.1	**No**

*Refer to **Appendix** C for Construction Noise Worksheets.*

Construction Vibration

Table 8: On-Site Construction Vibration Impacts-Human Annoyance presents the construction vibration impacts associated with on-site construction in terms of human annoyance. As shown in **Table 8**, the forecasted vibration levels due to on-site construction activities would not exceed the residential significance threshold of 78 VdB, the office significance threshold of 84 VdB and the workshop significance threshold of 90 VdB for human annoyance for all sensitive sites surrounding the Project area during construction. Due to the distance of the Project-identified sensitive receptors, changes in elevations, and intervening structures, such as buildings and walls, on-site construction vibration would not result in a significant vibration impact with regard to human annoyance. Impacts related to human annoyance from on-site construction vibration would not be considered significant.

Operation

Roadway Noise

Existing plus Project

Table 9: Existing plus Project Roadway Noise Levels illustrates the change in noise levels from traffic volumes and from traffic generated by the Project. The difference in traffic noise between existing conditions and existing plus Project conditions represents the increase in noise attributable to Project-related traffic. As shown in **Table 9**, the maximum noise level increase along the analyzed roadways were 0.1 dBA CNEL along Rice Avenue north of US Highway 101 SB Ramp and North of Gonzales Road, along Gonzales Road east of Solar Avenue, East of Lombart Street and East of Rose Avenue. Consequently, Project-related traffic would not cause noise levels along the analyzed roadways to increase by more than 3.0 dBA. Thus, the proposed Project would not result in a permanent increase in noise levels above ambient levels in the vicinity of the Project Site in excess of the City's Noise Element and Noise Ordinance. Vehicular related noise impacts would not be considered significant.

TABLE 9 EXISTING PLUS PROJECT ROADWAY NOISE LEVELS

Exterior Noise

As shown in **Table 3** above, the ambient noise exposure within the Project site is 77.4 dBA CNEL. There is no allowable noise exposure increase limit for ambient noise exposures above 75 dBA CNEL. As a Project Design Feature, the northern boundary of the Project site adjacent to the US-101 freeway includes an 8-foot masonry wall with evergreen vine. Additionally, the outdoor living areas (patios and/or balconies) on the 2nd through 5th floor that are positioned facing towards the US-101 freeway between 160 feet to 180 feet to the freeway centerline would include a 42-inch solid wall railing. The 2nd floor would include an 8-inch glazing on top of the solid wall railing. As shown in **Table 11: Exterior Façade Noise Levels**, the outdoor living areas positioned facing towards the US-101 Ventura Freeway would be attenuated to be below the maximum exterior standard of 65 dBA CNEL. As such, the Proposed Project would adhere to the City's exterior standard for outdoor living areas such as the patios and/or balconies. No further mitigation is required.

TABLE 11
EXTERIOR FAÇADE NOISE LEVELS

Distance from Freeway Centerline	Floor	dBA CNEL
160 feet	2nd	61.6
	3rd	62.4
	4th	61.9
	5th	62.3
180 feet	2nd	61.1
	3rd	63.7
	4th	62.5
	5th	61.8

(1) Alpha Factor: Coefficient of absorption relating to the effects of the ground surface. An alpha factor of 0 indicates that the site is an acoustically "hard" site such as aspalt. An alpha factor of 0.5 indicates that the site is an acoustically "soft" site such as vegetative ground cover.

Assumed 24-Hour Traffic Distribution:	Day	Evening	Night
Total ADT Volumes	77.70%	12.70%	9.60%
Medium-Duty Trucks	87.43%	5.05%	7.52%
Heavy-Duty Trucks	89.10%	2.84%	8.06%

Project Name rev. (Date)

Weekday AM/PM Peak Hour Volumes

Intersection: 2

Rice Avenue and US 101 SB Ramp

If Peak Hour = 6% of ADT, Scaling Factor = 16.667

If Peak Hour = 7% of ADT, Scaling Factor = 14.286

If Peak Hour = 8% of ADT, Scaling Factor = 12.5

If Peak Hour = 9% of ADT, Scaling Factor = 11.111

If Peak Hour = 10% of ADT, Scaling Factor = 10

(1) Alpha Factor: Coefficient of absorption relating to the effects of the ground surface. An alpha factor of 0 indicates that the site is an acoustically "hard" site such as aspalt. An alpha factor of 0.5 indicates that the site is an acoustically "soft" site such as vegetative ground cover.

Assumed 24-Hour Traffic Distribution:	Day	Evening	Night
Total ADT Volumes	77.70%	12.70%	9.60%
Medium-Duty Trucks	87.43%	5.05%	7.52%
Heavy-Duty Trucks	89.10%	2.84%	8.06%

Project Name rev. (Date)

Weekday AM/PM Peak Hour Volumes

Intersection: 3

Rice Avenue and Gonzales Road

If Peak Hour = 6% of ADT, Scaling Factor = 16.667

If Peak Hour = 7% of ADT, Scaling Factor = 14.286

If Peak Hour = 8% of ADT, Scaling Factor = 12.5

If Peak Hour = 9% of ADT, Scaling Factor = 11.111

If Peak Hour = 10% of ADT, Scaling Factor = 10

(1) Alpha Factor: Coefficient of absorption relating to the effects of the ground surface. An alpha factor of 0 indicates that the site is an acoustically "hard" site such as aspalt. An alpha factor of 0.5 indicates that the site is an acoustically "soft" site such as vegetative ground cover.

Assumed 24-Hour Traffic Distribution:	Day	Evening	Night
Total ADT Volumes	77.70%	12.70%	9.60%
Medium-Duty Trucks	87.43%	5.05%	7.52%
Heavy-Duty Trucks	89.10%	2.84%	8.06%

(1) Alpha Factor: Coefficient of absorption relating to the effects of the ground surface. An alpha factor of 0 indicates that the site is an acoustically "hard" site such as aspalt. An alpha factor of 0.5 indicates that the site is an acoustically "soft" site such as vegetative ground cover.

Assumed 24-Hour Traffic Distribution:	Day	Evening	Night
Total ADT Volumes	77.70%	12.70%	9.60%
Medium-Duty Trucks	87.43%	5.05%	7.52%
Heavy-Duty Trucks	89.10%	2.84%	8.06%

Project Name rev. (Date)

Weekday AM/PM Peak Hour Volumes

Intersection: 7

Rose Ave and Gonzales Road

If Peak Hour = 6% of ADT, Scaling Factor = 16.667

If Peak Hour = 7% of ADT, Scaling Factor = 14.286

If Peak Hour = 8% of ADT, Scaling Factor = 12.5

If Peak Hour = 9% of ADT, Scaling Factor = 11.111

If Peak Hour = 10% of ADT, Scaling Factor = 10

(1) Alpha Factor: Coefficient of absorption relating to the effects of the ground surface. An alpha factor of 0 indicates that the site is an acoustically "hard" site such as aspalt. An alpha factor of 0.5 indicates that the site is an acoustically "soft" site such as vegetative ground cover.

Assumed 24-Hour Traffic Distribution:	Day	Evening	Night
Total ADT Volumes	77.70%	12.70%	9.60%
Medium-Duty Trucks	87.43%	5.05%	7.52%
Heavy-Duty Trucks	89.10%	2.84%	8.06%

(1) Alpha Factor: Coefficient of absorption relating to the effects of the ground surface. An alpha factor of 0 indicates that the site is an acoustically "hard" site such as aspalt. An alpha factor of 0.5 indicates that the site is an acoustically "soft" site such as vegetative ground cover.

Assumed 24-Hour Traffic Distribution:	Day	Evening	Night
Total ADT Volumes	77.70%	12.70%	9.60%
Medium-Duty Trucks	87.43%	5.05%	7.52%
Heavy-Duty Trucks	89.10%	2.84%	8.06%

REVISED TRAFFIC AND CIRCULATION STUDY FOR
THE LOCKWOOD III APARTMENT PROJECT - CITY OF OXNARD

Associated Transportation Engineers (ATE) has prepared the following revised traffic and circulation study for the Lockwood III Apartments Project. The revised traffic and circulation study addresses comments provided by ESA on the October 11, 2022 traffic and circulation study prepared by ATE. It our understanding that the City of Oxnard will use the results of the revised traffic and circulation study to process the Project's development application.

We appreciate the opportunity to assist SVM - Lockwood, LLC with this Project.

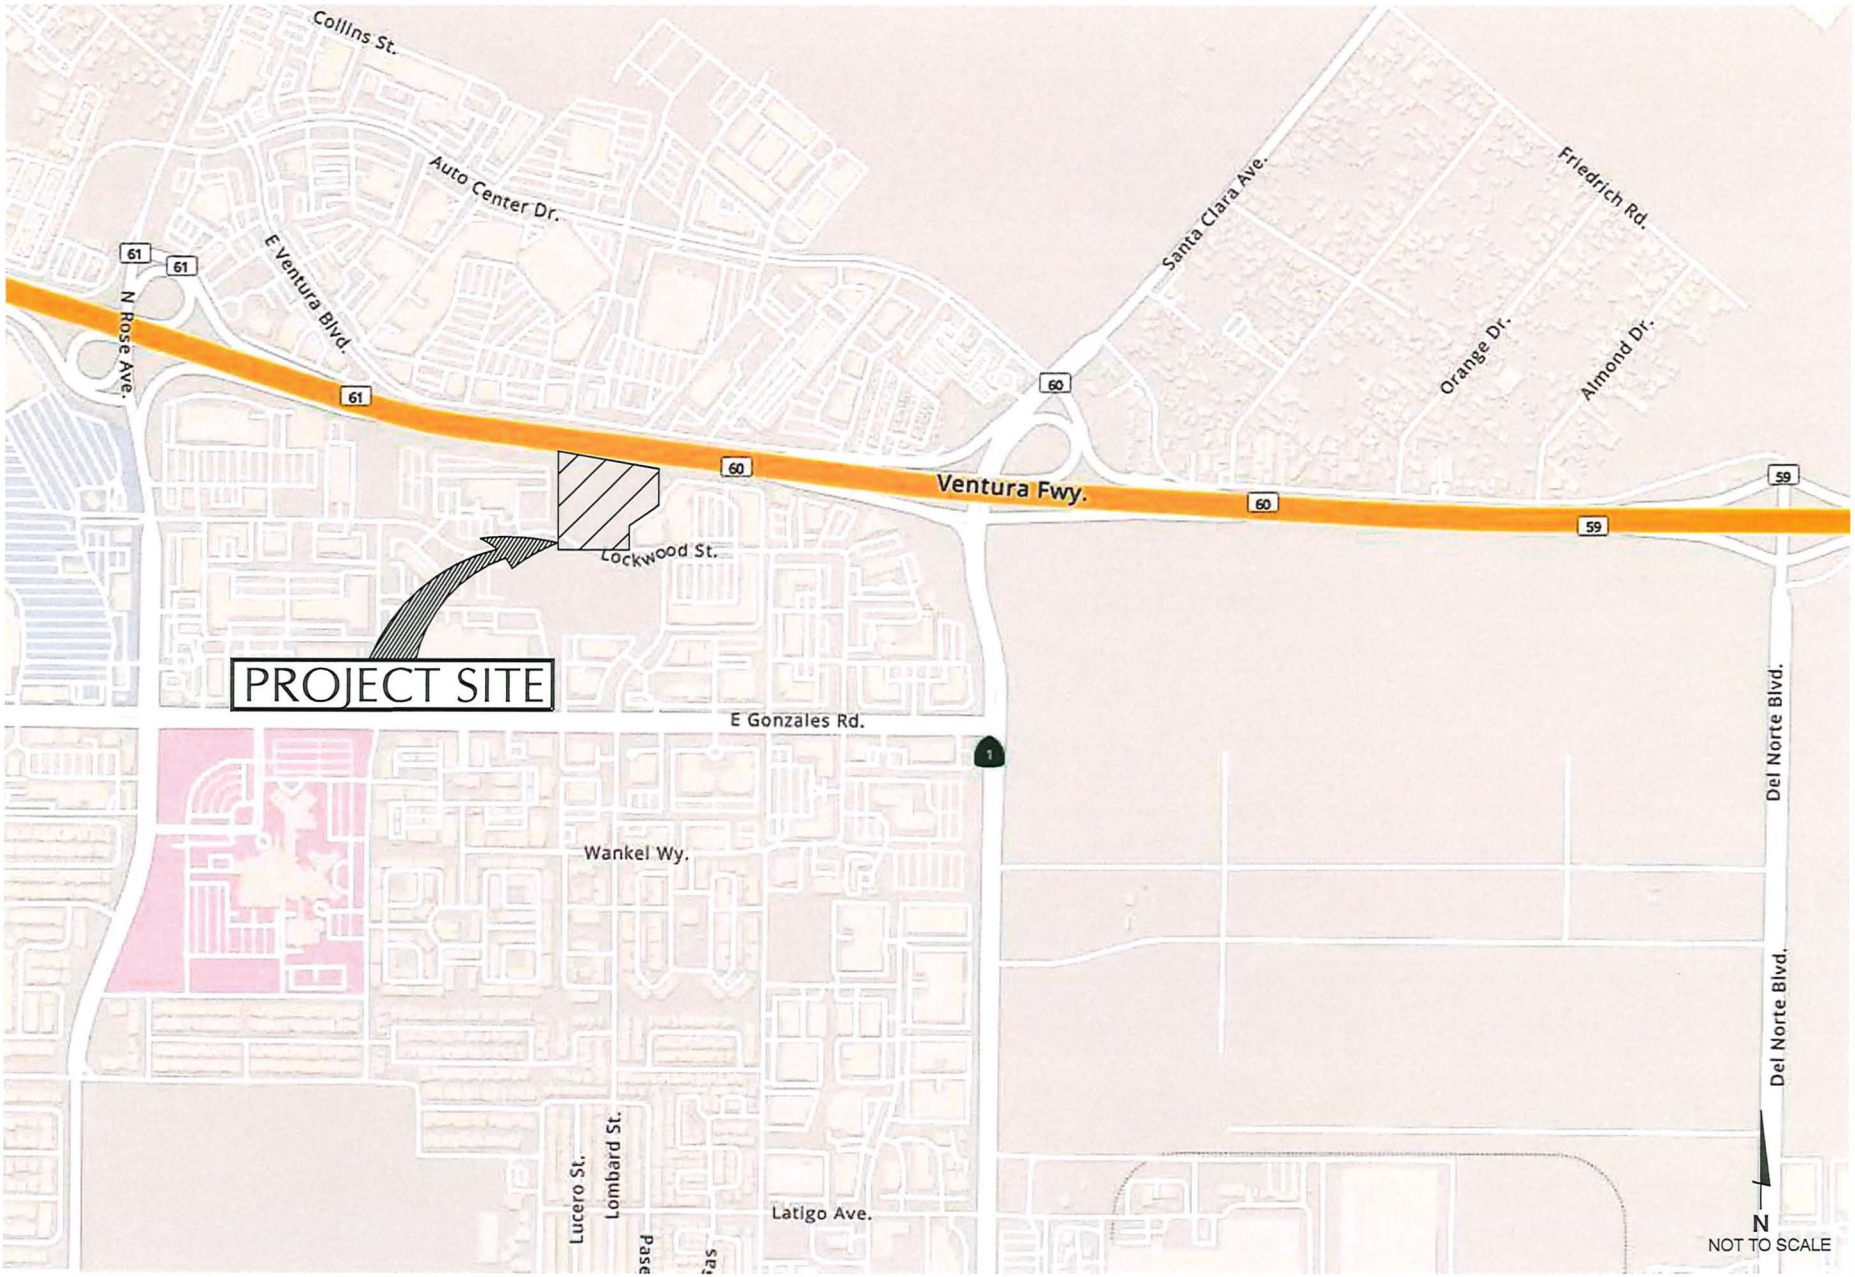
INTRODUCTION

The following report presents the results of the traffic and circulation study completed by Associated Transportation Engineers (ATE) for the Lockwood III Apartments Project, located in the City of Oxnard. The City of Oxnard's traffic study standards were utilized in formatting the various sections of the traffic study. The study provides information relative to Existing, Existing + Project, Cumulative and Cumulative + Project traffic conditions. Site access, on-site parking, constriction traffic and Vehicle Miles Traveled (VMT) are also addressed in the study.

PROJECT DESCRIPTION



The Project site is an undeveloped parcel located at 2001 Lockwood Street east of Rose Avenue in the City of Oxnard, as illustrated on Figure 1. The Project is proposing to construct 234 apartment units including 33 affordable units with related on-site amenities. The Project is applying for Density Bonus and related concessions. The Project would require a General Plan Amendment from Business and Research Park (BRP) to High-Rise Residential (R4). Access to the Project site will be provided via two driveway connections to Lockwood Street. The Lockwood III Apartments Project is proposing to provide 351 on-site parking spaces (including 7 ADA parking spaces, 36 electric vehicle charging stations, 5 ADA electric vehicle charging stations and 1 ADA van electric vehicle charging station). The Project site design will provide on-site bicycle storage and bike racks. The Project site plan is illustrated on Figure 2.

EXISTING CONDITIONS

Existing Street Network

The Project site is served by a circulation system comprised of freeway, arterial and collector streets, which are illustrated on Figure 1 and discussed in the following text.

U.S. Highway 101, located north of the Project site, is a multi-lane interstate highway serving the Pacific Coast between the City of Los Angeles and the State of Washington. U.S. Highway 101 is the principal route between the City of Oxnard and the adjacent cities of Ventura to the north and Camarillo to the south. Regional access to the site is provided via the U.S. Highway 101/Rose Avenue and U.S. Highway 101/Rice Avenue interchanges.

ASSOCIATED
TRANSPORTATION
ENGINEERS

PROJECT SITE PLAN

FIGURE 2

JH - ATE#22068

Rose Avenue is a 2- to 6-lane north-south roadway that extends north from Sanford Street to State Route 118 (Los Angeles Avenue). Rose Avenue provides a major link between the residential areas in Oxnard and the commercial centers along the U.S. Highway 101 corridor.

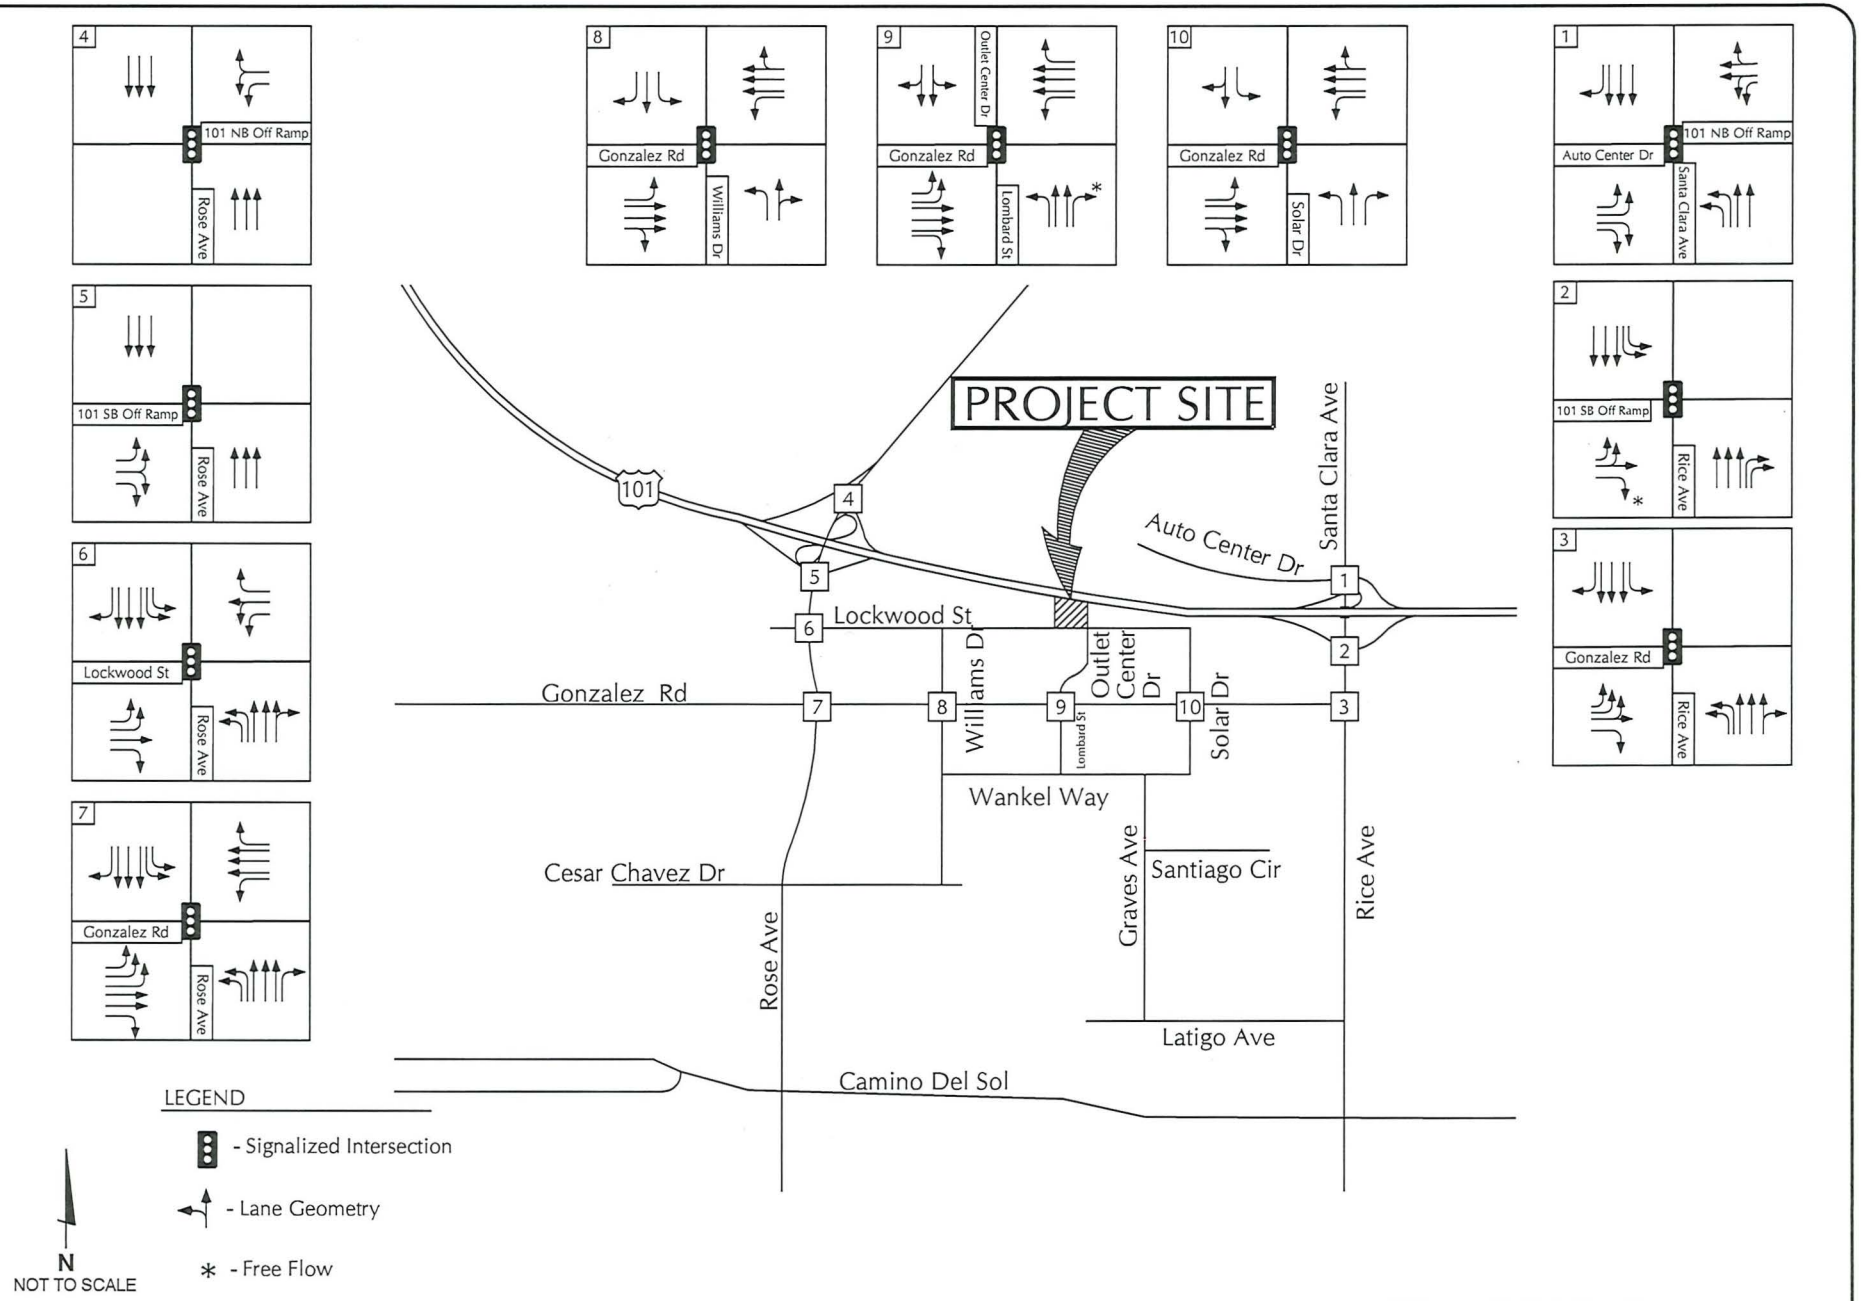
Rice Avenue-Santa Clara Avenue located east of the Project site is a 2- to 6-lane north-south arterial roadway from State Route 1 to State Route 118 (Los Angeles Avenue). Within the study-area, Rice Avenue-Santa Clara Avenue is signalized at the U.S. Highway 101 ramps, and Gonzales Road intersections. Rice Avenue is designated as a truck route.

Gonzales Road is a 4- to 6-lane east-west divided arterial roadway that serves the north central portions of the City of Oxnard. Gonzales Road extends from Harbor Boulevard to Rice Avenue. Gonzales Road serves both residential, commercial, and medical land-uses in the study-area. Gonzales Road is designated as a truck route.

Lockwood Street is a 2-lane roadway that extends easterly from Rose Avenue to Solar Drive south of Gonzales Road. Lockwood Street serves retail commercial and office land uses. Lockwood Street links the Project to Shopping at the Rose and Rose Crossing to the west and the Palms Market Place to the east. Direct access to the Project would be provided via two driveway connections on Lockwood Street. Lockwood Street is signalized at Rose Avenue.

Williams Drive is a 2-lane roadway that extends southerly from Lockwood Street to Cesar Chavez Drive south of Gonzales Road. Williams Drive serves residential, commercial, and medical office land uses. Williams Drive is signalized at Gonzales Road.

Lombard Street-Outlet Center Drive is a 2- to 4-lane divided roadway that extends southerly from Lockwood Street to Jacinto Drive. Lombard Street-Outlet Center Drive serves residential, commercial, and medical office uses. Lombard Street-Outlet Center Drive is signalized at Gonzales Road.



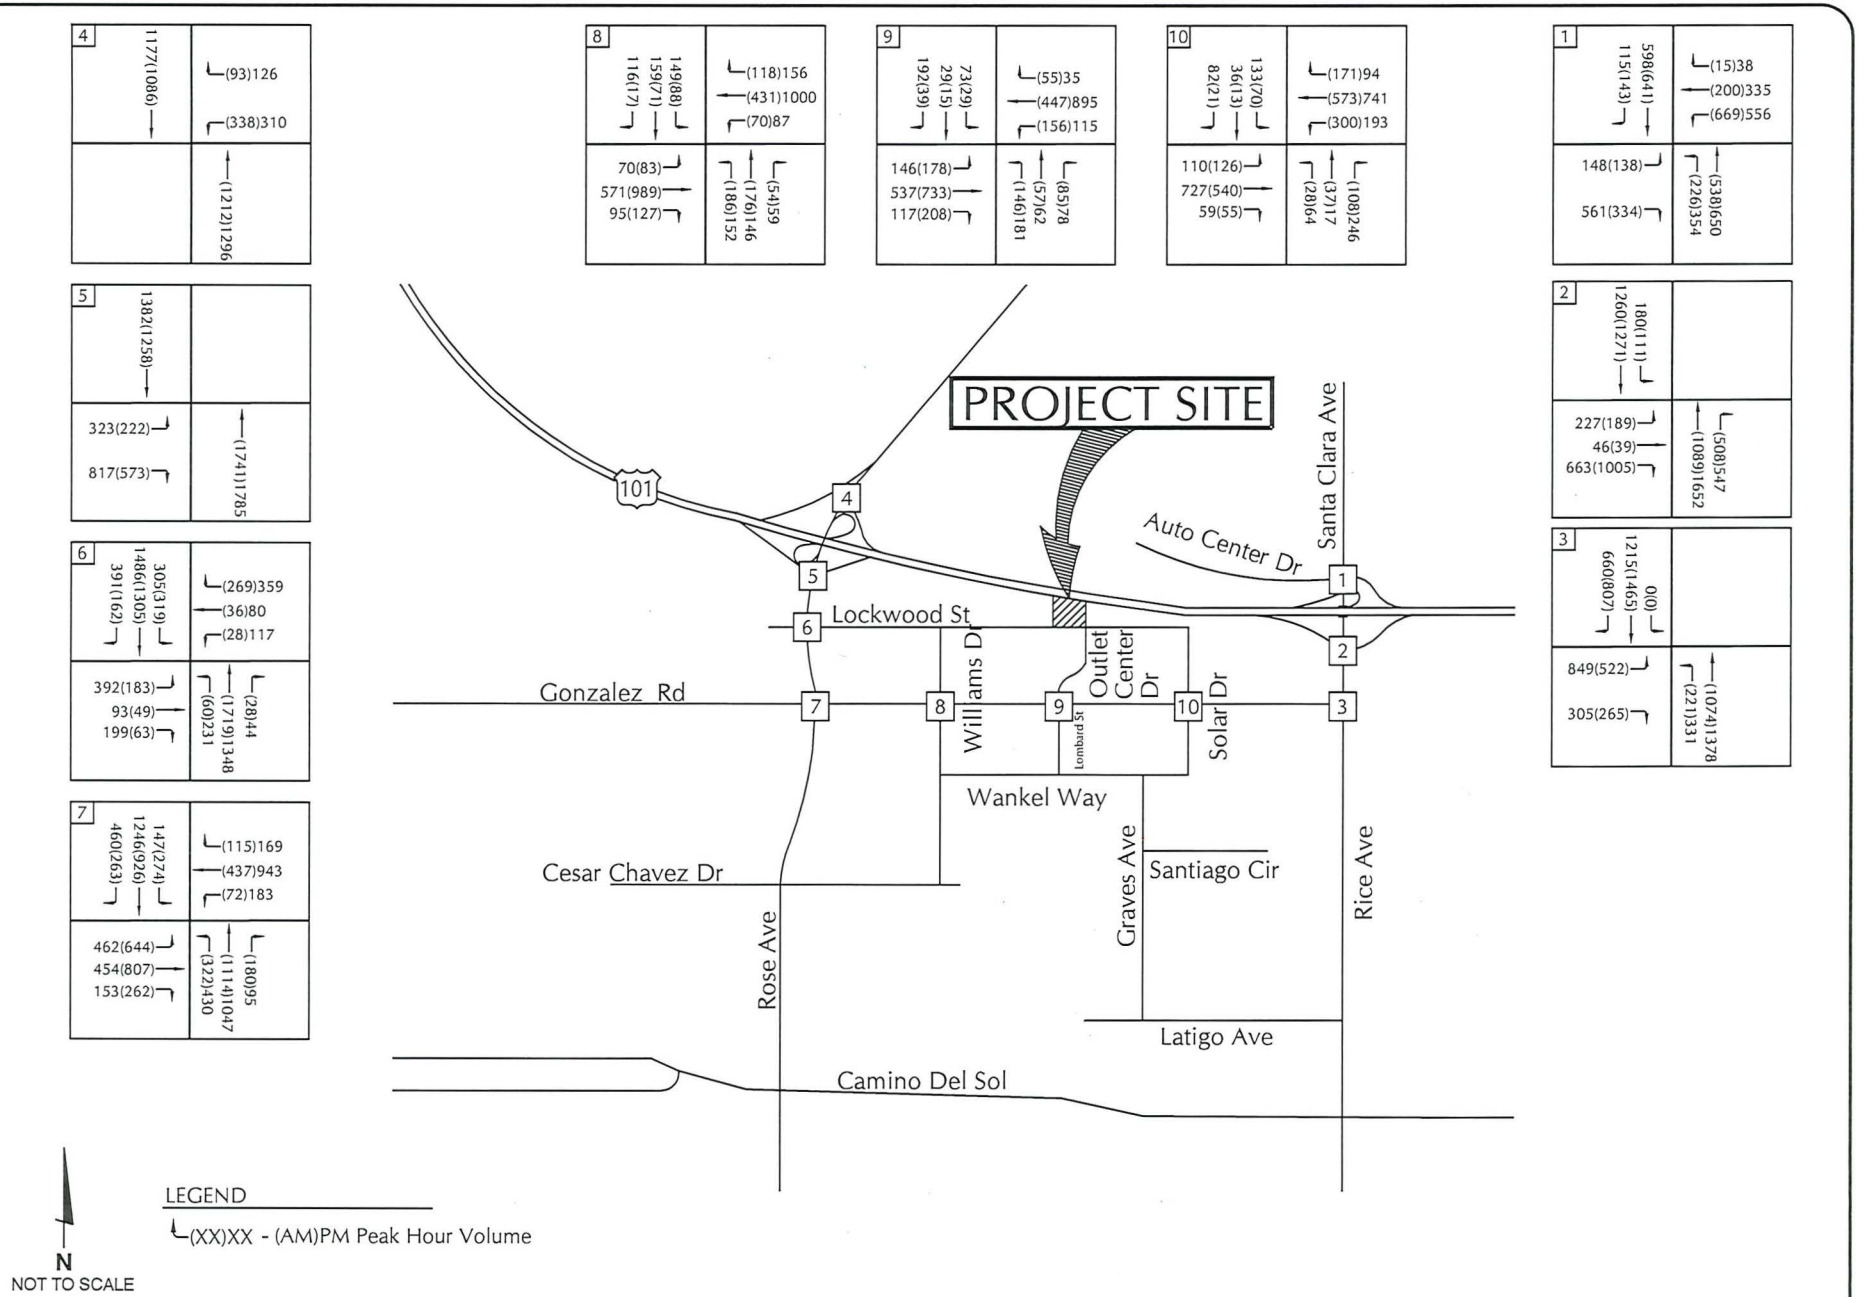
Solar Drive is a 2-lane roadway that extends southerly from Lockwood Street to Wankel Way south of Gonzales Road. Solar Drive serves commercial and medical office land uses. Solar Drive is signalized at Gonzales Road.

Existing Volumes and Levels of Service

Intersection Operations

Traffic flow on urban arterials is most constrained at intersections. Therefore, a detailed analysis of traffic flows must examine the operating conditions of critical intersections during peak travel periods. In rating intersection operations, "Levels of Service" (LOS) "A" through "F" are used, with LOS "A" indicating free flow operations and LOS "F" indicating congested operations (more complete definitions of levels of service are included in the Technical Appendix). In the City of Oxnard LOS "C" is the acceptable operating standard for intersections.

Existing AM and PM peak hour turning movement volumes for the study-area intersections were collected by ATE in September of 2022 (count sheets are contained in Technical Appendix). Figure 3 illustrates the existing traffic controls and geometries for the study-area intersections. The existing Year 2022 AM and PM peak hour traffic volumes at the study-area intersections are illustrated on Figure 4.



ASSOCIATED TRANSPORTATION ENGINEERS

EXISTING LANE GEOMETRIES AND TRAFFIC CONTROLS

FIGURE 3

JH - ATE#22068

ASSOCIATED TRANSPORTATION ENGINEERS

EXISTING TRAFFIC VOLUMES

FIGURE 4

JH - ATE#22068

Existing levels of service for the study-area intersections were calculated using the Intersection Capacity Utilization (ICU) methodology for signalized intersections as required by the City of Oxnard. Worksheets illustrating the level of service calculations are contained in the Technical Appendix for reference. Table 1 lists the existing levels of service for the study-area intersections during the AM and PM peak hour periods.

Table 1
Existing Peak Hour Levels of Service

Intersection		Control Type	AM Peak Hour		PM Peak Hour	
			ICU	LOS	ICU	LOS
1.	U.S. Highway 101 NB Ramps/Rice Ave.	Signal	0.49	LOS A	0.61	LOS B
2.	U.S. Highway 101 SB Ramps/Rice Ave.	Signal	0.52	LOS A	0.55	LOS A
3.	Rice Ave./Gonzales Rd.	Signal	0.50	LOS A	0.54	LOS A
4.	U.S. Highway 101 NB Ramps/Rose Ave.	Signal	0.34	LOS A	0.61	LOS B
5.	U.S. Highway 101 SB Ramps/Rose Ave.	Signal	0.53	LOS A	0.61	LOS B
6.	Rose Ave./Lockwood Street	Signal	0.56	LOS A	0.63	LOS B
7.	Rose Ave./Gonzales Rd.	Signal	0.62	LOS B	0.69	LOS B
9.	Gonzales Rd./Williams Dr.	Signal	0.48	LOS A	0.51	LOS A
9.	Gonzales Rd./Lombard St.	Signal	0.37	LOS A	0.44	LOS A
10.	Gonzales Rd./Solar Dr.	Signal	0.42	LOS A	0.48	LOS A

The data presented in Table 1 indicates that the study-area intersections currently operate at LOS B or better during the AM peak hour and PM peak hour periods, which meets the City's LOS C standard.

CITY GENERAL PLAN POLICY

City of Oxnard. The City of Oxnard has established LOS C as the acceptable standard for intersection operation. If the addition of project traffic increases the ICU by 0.02 or more at an intersection operating at LOS C or worse, it should be mitigated to the ICU level identified without the project traffic. These criteria were used to determine the effects of the traffic generated by the Project added to the study-area intersections.

PROJECT GENERATED TRAFFIC VOLUMES

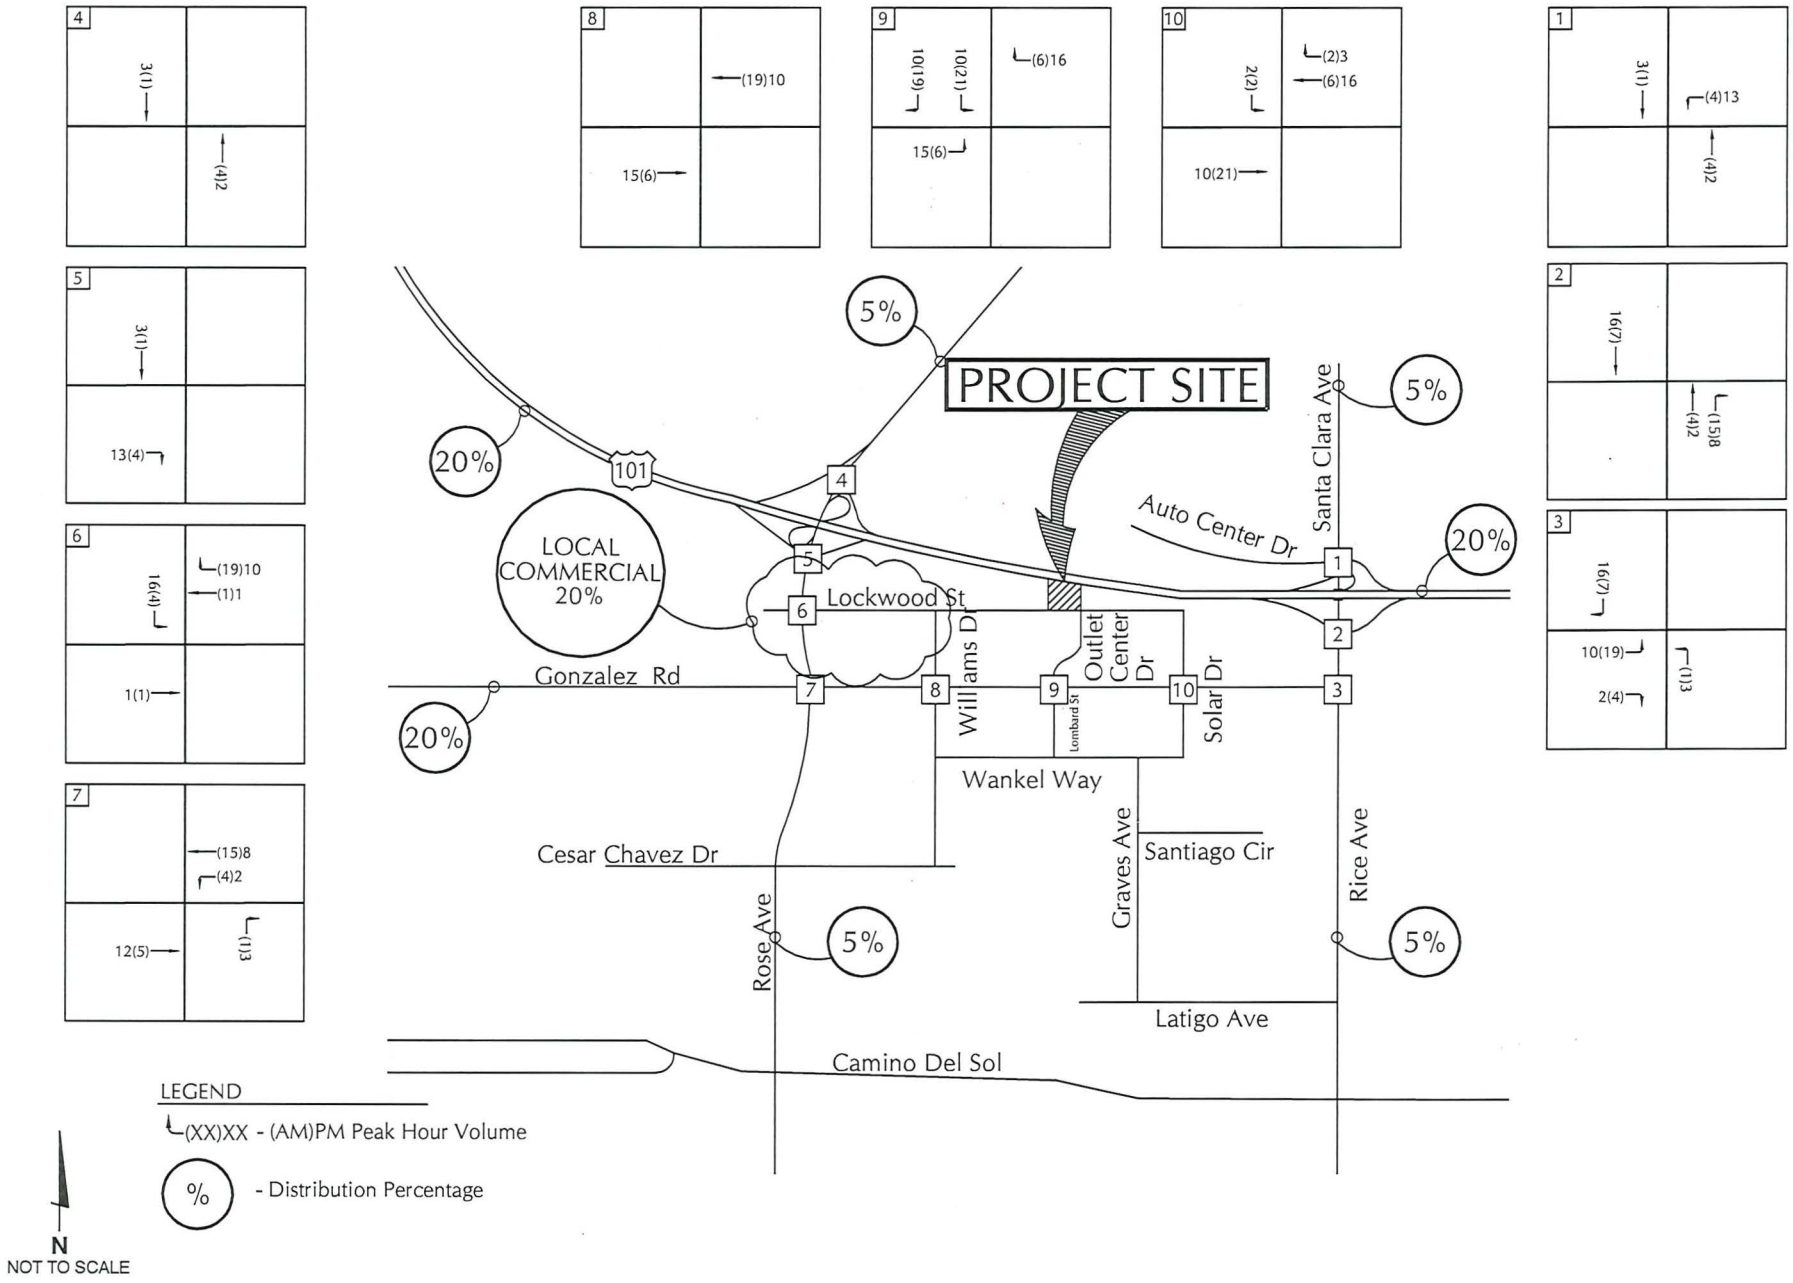
Project Trip Generation

Trip generation estimates were calculated for the proposed Lockwood III Apartments based on the rates presented in the Institute of Transportation Engineers (ITE), Trip Generation, 11th Edition for Multifamily Housing - Midrise (Land-Use Code #221) and Affordable Housing - Income Limits (Land Use Code #223)[1]. Table 2 summarizes the average daily trips (ADT), AM and PM peak hour trip generation estimates for the proposed housing development.

Table 2
Project Trip Generation

		ADT		Peak Hour Trips			
				AM Peak Hour		PM Peak Hour	
Land Use	#Units	Rate	Trips	Rate	Trips	Rate	Trips
Apartments	201 units	4.54	913	0.38	77 (18 In/59 Out)	0.39	79 (48 In/31 Out)
Apartments	33 units	7.94	262	0.73	24 (7 In/17 Out)	0.73	24 (14 In/10 Out)
Total Trip Generation:			1,175		101 (25 In/76 Out)		103 (62 In/41 Out

As shown in Table 2 the Project would generate 1,175 average daily trips, 101 AM peak hour trips and 103 PM peak hour trips.



Project Trip Distribution and Assignment

The project-generated AM and PM peak hour traffic volumes were distributed and assigned to the study-area intersections based on the existing traffic pattern and general knowledge of the residential, employment, commercial and medical health development in the vicinity of the study-area. Figure 5 illustrates the trip distribution and assignment assumed for the Project's trips, and Figure 6 illustrates the Existing + Project traffic volumes.

PROJECT-SPECIFIC ANALYSIS

Levels of service were calculated for the study-area intersections assuming the Existing + Project volumes. Tables 3 and 4 show the results of the calculations and identify the Project's traffic effects based on the City of Oxnard policies.

[1]Trip Generation, Institute of Transportation Engineers, 11th Edition, 2020.

		ICU	LOS	ICU	LOS	
1.	U.S. Highway 101 NB Ramps/Rice Ave,	0.61	LOS A	0.61	LOS C	0.00
2.	U.S. Highway 101 SB Ramps/Rice Ave.	0.55	LOS A	0.56	LOS B	0.01
3.	Rice Ave./Gonzales Rd.	0.54	LOS A	0.54	LOS B	0.00
4.	U.S. Highway 101 NB Ramps/Rose Ave.	0.61	LOS B	0.61	LOS A	0.00
5.	U.S. Highway 101 SB Ramps/Rose Ave.	0.61	LOS B	0.61	LOS C	0.00
6.	Rose Ave./Lockwood St.	0.63	LOS B	0.64	LOS C	0.01
7.	Rose Ave./Gonzales Rd.	0.69	LOS B	0.69	LOS C	0.01
8.	Gonzales Rd./Williams Dr.	0.51	LOS A	0.51	LOS A	0.00
9.	Gonzales Rd./Lombard St.	0.44	LOS A	0.45	LOS A	0.01
10.	Gonzales Rd./Solar Dr.	0.48	LOS A	0.49	LOS A	0.01

The data presented in Tables 3 and 4 indicate that with the addition of project-generated traffic the study-area intersections would continue to operate at LOS C or better. The Project would not have an adverse effect on the study-area intersections based on the City of Oxnard's General Plan policy.

CUMULATIVE (EXISTING + APPROVED/PENDING PROJECTS) CONDITIONS

The City of Oxnard requires that intersection operations be analyzed with the addition of traffic generated by projects which have been approved or are pending within the Project study-area. Trip generation estimates were developed for the cumulative developments using rates published in the ITE, Trip Generation, 11th Edition. Table 5 summarizes the average daily trips, AM and PM peak hour trip generation estimates for the cumulative projects.

Table 5

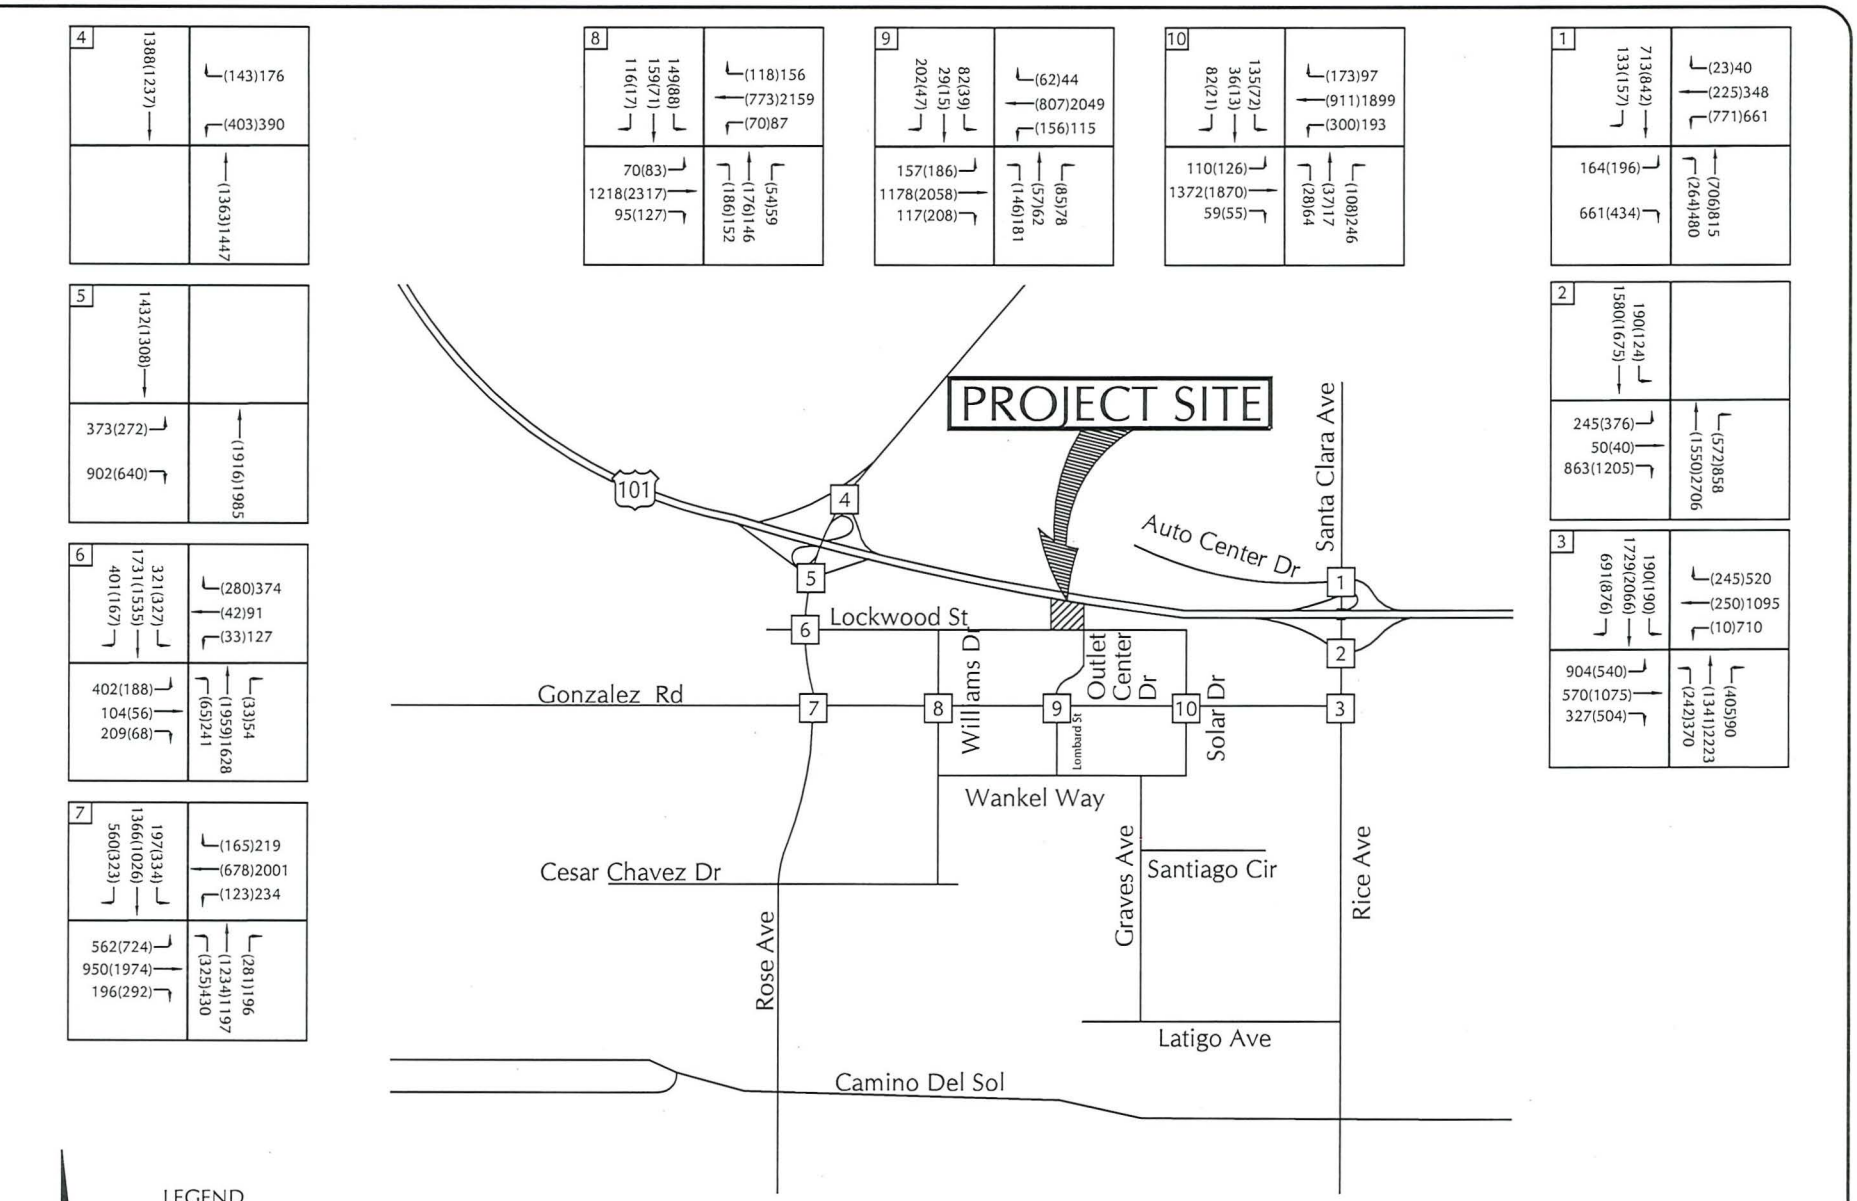
39.	Lockwood I	Trip Generation from ATE TIA		640	35	45
39.	Lockwood III	Apartments	154 Units	1,127	71	87
			Total Trips:	91,658	9,555	9,802

The data presented in Table 5 indicate that the approved/pending projects would generate a total of 91,658 average daily trips, 9,555 AM peak hour trips and 9,802 PM peak hour trips. The traffic generated by the approved/pending projects was distributed and assigned to the study-area intersections. The trip assignment for the cumulative development projects was developed based on the location of each project, data presented in recent traffic studies, as

well as a general knowledge of the population, employment and commercial centers in Oxnard and surrounding Ventura County area.

Cumulative Conditions



Levels of service were calculated for the study-area intersections assuming the Cumulative volumes illustrated on Figure 7. Table 6 lists the Cumulative levels of service for the study-area intersections during the AM and PM peak hour periods. Planned improvements identified in the Sakioka Farms Business Park EIR[1] are assumed to be in place for the Cumulative intersection analysis.

Table 6
Cumulative Peak Hour Levels of Service

Intersection		Control Type	AM Peak Hour		PM Peak Hour	
			ICU	LOS	ICU	LOS
1.	U.S. Highway 101 NB Ramps/Rice Ave.	Signal	0.61	LOS B	0.73	LOS C
2.	U.S. Highway 101 SB Ramps/Rice Ave.	Signal	0.70	LOS B	**0.81**	**LOS D**
3.	Rice Ave./Gonzales Rd.	Signal	0.75	LOS C	0.76	LOS C
4.	U.S. Highway 101 NB Ramps/Rose Ave.	Signal	0.40	LOS A	0.57	LOS A
5.	U.S. Highway 101 SB Ramps/Rose Ave.	Signal	0.59	LOS A	0.68	LOS B
6.	Rose Ave./Lockwood St.	Signal	0.61	LOS B	0.71	LOS C
7.	Rose Ave./Gonzales Rd.	Signal	**0.81**	**LOS D**	0.78	LOS C
8.	Gonzales Rd./Williams Dr.	Signal	0.75	LOS C	0.75	LOS C
9.	Gonzales Rd./Lombard St.	Signal	0.65	LOS B	0.69	LOS B
10.	Gonzales Rd./Solar Dr.	Signal	0.70	LOS B	0.72	LOS C

The data presented in Table 6 indicate that most of the study-area intersections would operate at LOS C or better during the AM peak hour and PM peak hour periods under Cumulative conditions, which meets the City's LOS C standard. However, the U.S. Highway 101 southbound ramps/Rice Avenue and Rose Avenue/Gonzales Road intersections will operate at LOS D.

[1] Sakioka Farms Specific Plan Environmental Impact Report Traffic Study

ASSOCIATED TRANSPORTATION ENGINEERS

CUMULATIVE TRAFFIC VOLUMES

FIGURE 7

JH - ATE#22068

Cumulative + Project Impacts

Levels of service were calculated for the study-area intersections assuming the Cumulative + Project volumes illustrated on Figure 8. Tables 7 and 8 show the results of the calculations and identify the consistency of the Project with the City of Oxnard policies.

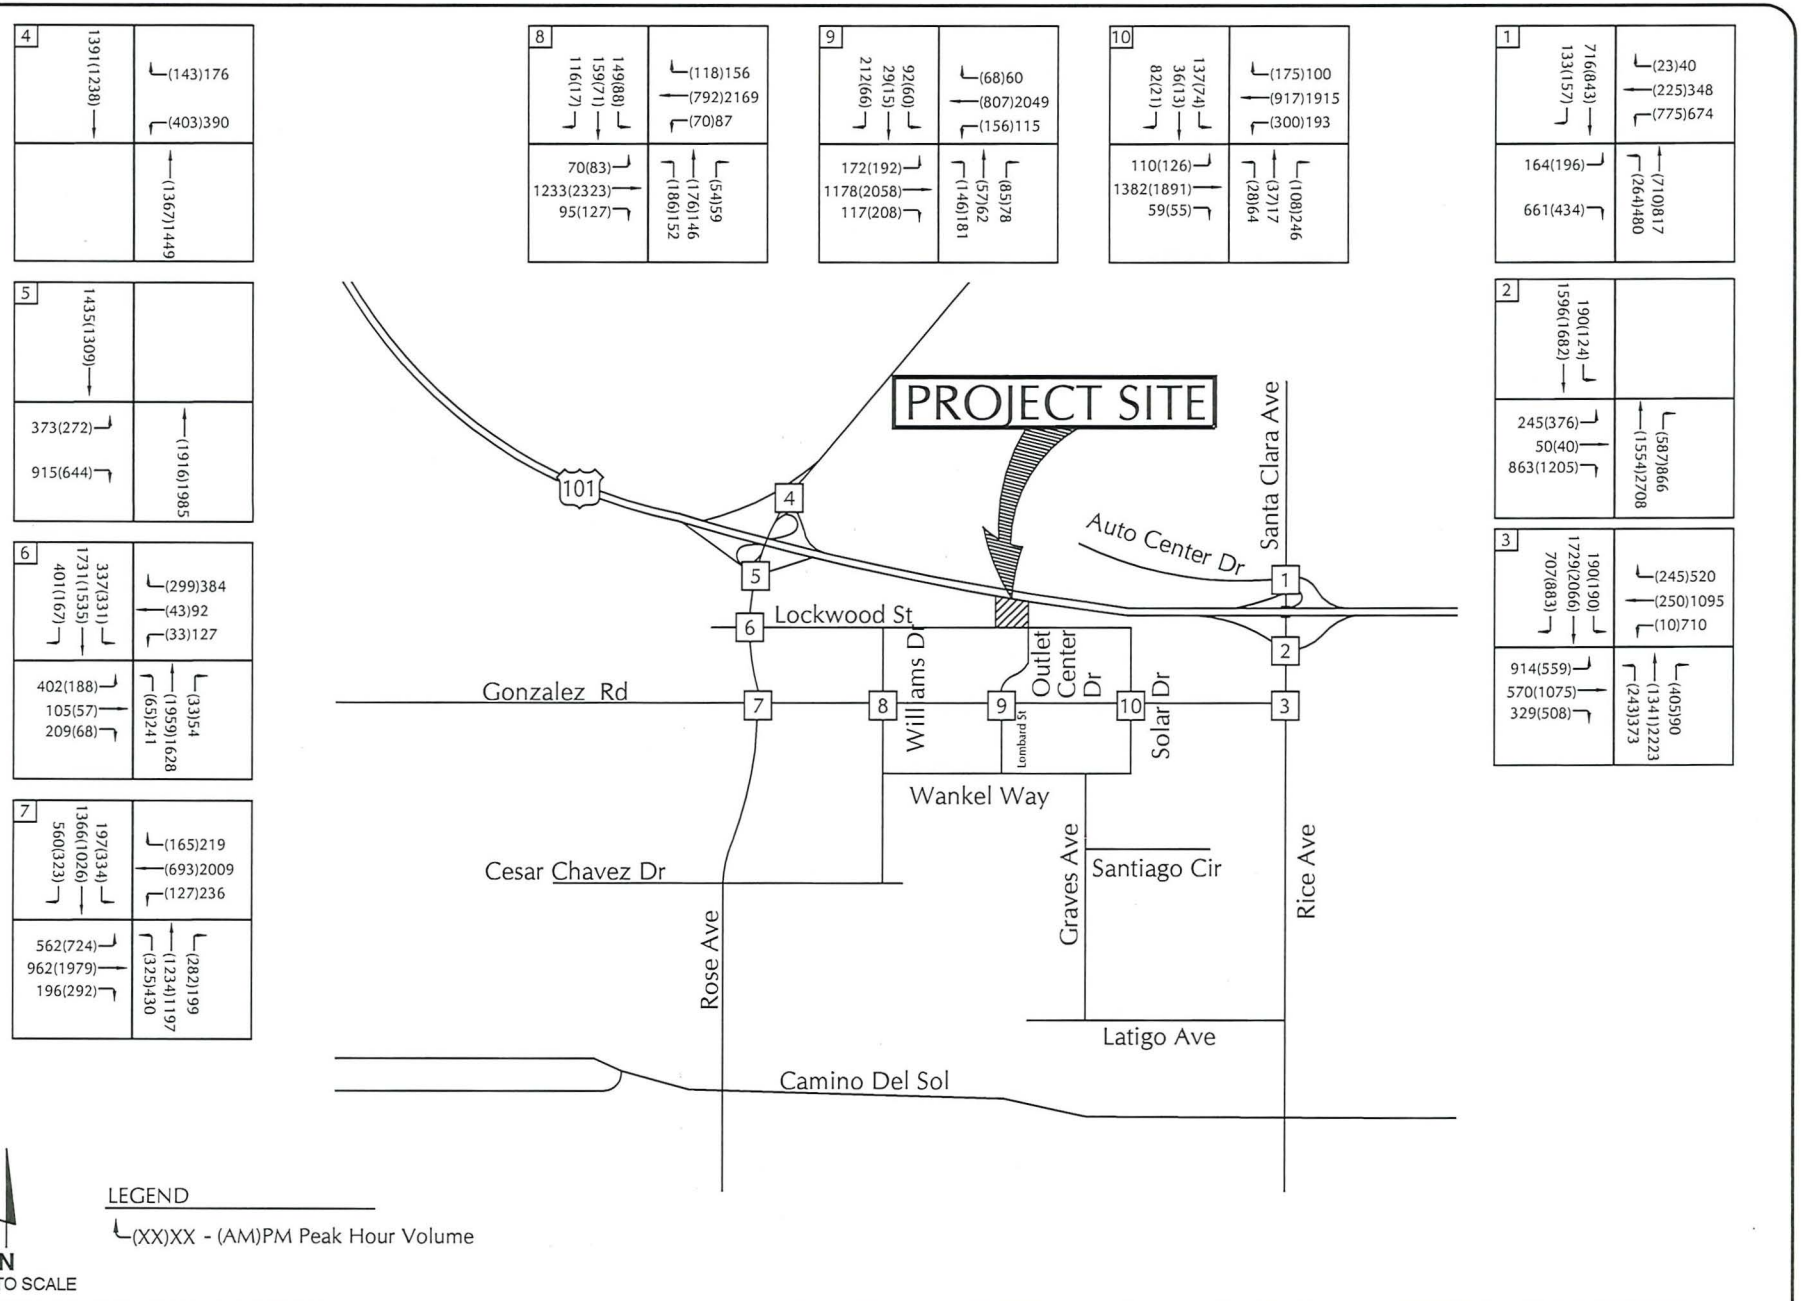


Table 7
Cumulative + Project AM Peak Hour Levels of Service

Intersection		Cumulative		Cumulative + Project		Change
		ICU	LOS	ICU	LOS	
1.	U.S. Highway 101 NB Ramps/Rice Ave,	0.61	LOS B	0.61	LOS B	0.00
2.	U.S. Highway 101 SB Ramps/Rice Ave.	0.70	LOS B	0.70	LOS B	0.00

6.	Rose Ave./Lockwood St.	0.61	LOS B	0.62	LOS B	0.01
7.	Rose Ave./Gonzales Rd.	**0.81**	**LOS D**	**0.81**	**LOS D**	0.00
8.	Gonzales Rd./Williams Dr.	0.75	LOS C	0.75	LOS C	0.00
9.	Gonzales Rd./Lombard St.	0.65	LOS B	0.66	LOS B	0.01
10.	Gonzales Rd./Solar Dr.	0.70	LOS B	0.71	LOS C	0.01

Table 8
Cumulative + Project PM Peak Hour Levels of Service

Intersection		Cumulative		Cumulative + Project		Change
		ICU	LOS	ICU	LOS	
1.	U.S. Highway 101 NB Ramps/Rice Ave,	0.73	LOS C	0.73	LOS C	0.00
2.	U.S. Highway 101 SB Ramps/Rice Ave.	**0.81**	**LOS D**	**0.81**	**LOS D**	0.00
3.	Rice Ave./Gonzales Rd.	0.76	LOS C	0.76	LOS C	0.00
4.	U.S. Highway 101 NB Ramps/Rose Ave.	0.57	LOS A	0.57	LOS A	0.00
5.	U.S. Highway 101 SB Ramps/Rose Ave.	0.68	LOS B	0.68	LOS B	0.00
6.	Rose Ave./Lockwood St.	0.71	LOS C	0.71	LOS C	0.00
7.	Rose Ave./Gonzales Rd.	0.78	LOS C	0.78	LOS C	0.00
8.	Gonzales Rd./Williams Dr.	0.75	LOS C	0.75	LOS C	0.00
9.	Gonzales Rd./Lombard St.	0.69	LOS B	0.70	LOS B	0.01
10.	Gonzales Rd./Solar Dr.	0.72	LOS C	0.73	LOS C	0.01

The data presented in Tables 7 and 8 indicate that the project would be consistent with the City of Oxnard's policies during the AM or the PM peak hour periods. Generally, all of the study-area intersections would continue to operate at LOS C or better with the addition of project traffic. The U.S. Highway 101 southbound ramps/Rice Avenue and Rose Avenue/Gonzales Road intersections will continue to operate at LOS D. The Project would not have an adverse effect on the study-area intersections based on the City of Oxnard's General Plan policy (ICU increase of 0.02 or greater).

CUMULATIVE + PROJECT TRAFFIC VOLUMES

FIGURE 8

JH - ATE#22068

GENERAL PLAN BUILDOUT

The Project requires a General Plan Amendment from Business Research Park (BRP) to High Rise Residential (R4). Trip generation estimates were calculated for the proposed land use and the approved land use based on the rates presented in the Institute of Transportation Engineers (ITE), Trip Generation, 11th Edition for Multifamily Housing – Mid Rise (Land-Use Code #221), Affordable Housing - Income Limits (Land Use Code #223) and Factory Outlet Center (Land-Use Code #823)[2]. Factory Outlet Center is consistent with the initial traffic study prepared for the entitlement of the existing Palms Market Place. Table 9 summarizes the average daily, AM and PM peak hour trip generation estimates for the proposed and approved General Plan land uses.

Table 9
General Plan Land Use Trip Generation Comparison

		ADT		Weekday Peak Hour Trips			
				AM Peak Hour		PM Peak Hour	
Land Use	Size	Rate	Trips	Rate	Trips	Rate	Trips
Apartments	201 units	4.54	913	0.38	77	0.39	79
Apartments	33 units	7.94	262	0.73	24	0.73	24
			1,175		101		103
Factory Outlet Center	120,000 S.F.	26.59	3,191	0.67	80	2.29	275
	Net Change:		-2,016		+21		-172

As shown in Table 9 the Project would generate 1,175 average daily trips, 101 AM peak hour trips and 103 PM peak hour trips. The approved land use would generate 3,191 average daily trips, 80 AM peak hour trips and 275 PM peak hour trips. The proposed Lockwood IIII Apartments Project would generate fewer trips average daily and PM peak hour trips than the approved land use. The General Plan Buildout circulation system would be able to accommodate the traffic generated by the Project.

SITE ACCESS AND CIRCULATION

As illustrated on Figure 2 (Project Site Plan), access to Lockwood III Apartments Project will be provided by two driveway connections to Lockwood Street. The driveway connections will allow full access to the Project site. Given the existing and projected traffic volumes, the Lockwood Street/Project Driveway intersections will operate acceptably with Project traffic.

[2]Trip Generation, Institute of Transportation Engineers, 11th Edition, 2020.

The Project driveways would be designed and constructed to City of Oxnard design standards. Lockwood Street is level and straight, adequate sight distance should be provided at the driveways. The Project will be required to complete any necessary roadway improvements (curb, gutter, and sidewalk, etc.) on Lockwood Street along its frontage. Pedestrian facilities along Lockwood Street will connect the Project to regional and neighborhood commercial and medical services.

Pedestrian and Bicycle Facilities

Currently there are pedestrian facilities (crosswalks/sidewalks etc.) located along Lockwood Street and Outlet Center Drive in the study-area. The pedestrian facilities connect the Project to the commercial and medical facilities east, west, and south of the Project. Curb gutter and sidewalks are provided on Lockwood Street adjacent to the Project site. The nearest pedestrian crosswalks across Gonzales Road are provided at the Outlet Center Drive signalized intersection. The nearest pedestrian crosswalks across Rose Avenue are provided at the Lockwood Street signalized intersection. Striped pedestrian crosswalks, ADA ramps and pedestrian call buttons are provided at the Gonzles Road/Outlet Center Drive and Rose Avenue/Lockwood Street intersections. The proposed Project would not have an adverse effect on the existing pedestrian facilities.

The Project site is served by the City of Oxnard Bikeway System. The existing bicycle facilities located in the study-area consist of Class II bike lanes along Gonzales Road, Rose Avenue, Solar Drive, and a portion of Lockwood Street east of the Outlet Center Drive. These Class II bike lanes connect the Project to commercial and employment areas east and west of the Project. The portion of Lockwood Street adjacent to the Project site is identified as a future Class II bike lane facility in the "City of Oxnard Bicycle & Pedestrian Facilities Master Plan". In addition to the on-street facilities, the Project will provide on-site bicycle storage and bike racks. The proposed Project would not have an adverse effect on the existing bicycle facilities.

Transit Facilities

The City of Oxnard is served by Gold Coast Transit. In the study-area, the Project site is served by several bus routes. The #4A Route (North Oxnard) operates daily providing fixed route bus service on Gonzales Road in the vicinity of the Project site. During the peak commute hours, the #4A Route operates with 45-minute headways. The #4B Route (North Oxnard) operates daily providing fixed route bus service on Gonzles Road in the vicinity of the Project site. During the peak commute hours, the #4B Route operates with 25-minute headways. The #15 Route (Esplanade -El Rio - St. Johns Medical Center) operates daily providing fixed route bus service on Gonzales Road in the vicinity of the Project site. During the peak commute hours, the #15 Route operates with 50-minute headways. The #17 Route (Esplanade - St. Johns Medical Center - Oxnard College) operates daily providing fixed route bus service on Gonzales Road in the vicinity of the Project site. During the peak commute hours, the #17 Route operates with 30- to 45-minute headways. The #19 Route (OTC - 5th - Gonzales Road) operates daily providing fixed route bus service on Gonzales Road in the vicinity of the Project site. During the peak commute hours, the #19 Route operates with 60-minute headways. Existing bus stops with benches are located on both sides of Gonzales Road and Rose Avenue, less than ½ a mile from the Project site. The proposed Project has the potential to increase transit ridership and the demand for bus service in the study-area, however these increases would be accommodated by the existing transit services provided.

PARKING ANALYSIS

The Lockwood III Apartments Project is proposing to provide 351 on-site parking spaces (including 7 ADA parking spaces, 36 electric vehicle charging stations, 5 ADA electric vehicle charging stations and 1 ADA van electric vehicle charging station). Of the total 351 on-site parking spaces, 39 spaces (11% of total parking) would be compact. The City of Oxnard allows up to 25% of the required parking to be compact. The 39 compact spaces are dispersed through-out the Project site as surface, tuck under and podium parking. The locations of the compact parking spaces would not create an inconvenience, impair safety, on-site vehicular or pedestrian circulation.

State Density Bonus Parking Requirement

The Lockwood III Apartments Project is providing a 21% mix of very low- and low-income units, therefore under the State Density Bonus Law (Cal. Gov't Code, Section 65915(p)(3) included in Technical Appendix for reference) and the City of Oxnard Municipal Code, the follow parking ratios apply:

Studio and one bedroom:	1 garage space per unit
Two or more bedrooms:	1.5 garage spaces per unit

Based on these ratios, the parking requirements for the apartment units were calculated as shown in Table 10.

Table 10
Density Bonus Parking Requirements

Dwelling Type	Number of Units	Parking Ratio	Required Parking
1 Bedroom Apartment	24 units	1 space/unit	24 spaces
1 Bedroom Apartment	78 units	1 space/unit	78 spaces
2 Bedroom Apartment	108 units	1.5 spaces/unit	162 spaces
3 Bedroom Apartment	24 units	1.5 spaces/unit	36 spaces
		Total Parking Spaces Required:	300 spaces

Based on the Density Bonus Law, 300 parking spaces are required for the 234 apartment units in the Lockwood III Apartments Project. The 351 on-site parking spaces proposed for the Project would satisfy the parking requirement and provide 51 reserve parking spaces.

Project Peak Parking Demands

Peak parking demand estimates were also developed for the Project. Based on the empirical parking demand rates presented in the ITE, Parking Generation, 5th Edition. ITE parking demand rates (85th Percentile) for Multifamily Housing - Mid Rise (Land Use Code #221) and Affordable Housing - Income Limits (Land Use Code #223) was used to estimate the peak parking demand for the Project based on the number of apartment units. Table 11 summarizes the results of the peak parking demand analysis based on ITE parking demand data.

Table 11
ITE Peak Parking Demand

Land Use	Units	Parking Rate	Parking Demand	Parking Provided
Apartments - Market Rate	201 units	1.47 Vehicles/Unit	295 Spaces	351 Spaces
Apartments - Affordable	33 units	1.33 Vehicles/Unit	44 Spaces	
		Total Parking:	339 Spaces	

Based on ITE rates, the weekday peak parking demand estimates for the Lockwood III Apartments Project is 339 parking spaces. The 351 on-site parking spaces proposed for the Project would satisfy the peak parking demand and provide 12 reserve parking spaces.

Based on State Density Bonus Law and ITE empirical peak parking demand data, the 351 on-site parking spaces proposed by the Project are adequate.

CONSTRUCTION TRAFFIC ANALYSIS

Project grading and building construction is estimated to occur over 22 months. Grading is estimated to occur over a 2-month period. The average number of workers on the site for the grading and construction duration is 10 - 30 workers. The workers make one trip onto the job site at 7:00 AM, and one trip off the job site at 3:00 PM. The vast majority of workers bring their own lunch or eat from a food truck that comes to the site, thus never leaving the site during work hours. Construction workers would travel to the site in private vehicles. If adequate parking areas are not available onsite, off-site parking would need to be obtained.

Grading and building construction of the Project would also require the delivery of construction equipment and materials to the site. Adequate staging and storage areas would need to be provided on-site to accommodate construction equipment and the delivery and storage of materials. The average heavy work trucks on site every day is 2. During the grading portion of the Project (first stage of construction) this number will go up slightly. The Project will have to have dirt hauled offsite, so during this process there will be 3 heavy trucks hauling dirt to an offsite location. Each truck will make an estimated 1 - 2 trips per day.

Construction of project-related improvements along Lockwood Street and Outlet Center Dive would have the potential to disrupt traffic flows within the corridor. Certain construction activities - such as roadway improvements, utility relocation or extensions, and drainage facility construction - could require temporary lane closures, which would in turn temporarily reduce existing street capacity. Such impacts would be short-term in duration. Potential sidewalk and lane closures could affect pedestrian and bicycle flows and therefore should be managed to minimize potential impacts. Traffic control plans would be required to mitigate these potential construction impacts (see Construction Mitigation Measures).

VEHICLE MILES TRAVELED ANALYSIS

The State of California, in compliance with Senate Bill 743, has developed a new set of CEQA guidelines and thresholds for transportation impacts that are based on a Vehicle Miles Traveled (VMT) metric rather than a Level of Service (LOS) metric. The State's Natural Resource Agency Updated Guidelines for the Implementation of the CEQA adopted in 2018, have designated VMT as the most appropriate measure of transportation impacts. "Vehicle miles traveled" refers to the amount and distance of automobile travel attributable to a project. Other relevant considerations may include the effects of the project on transit and non-motorized travel. For land use projects, vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact.

VMT Thresholds

Local agencies have discretion to develop and adopt their own thresholds or rely on thresholds recommended by other agencies. Since the City of Oxnard has not yet adopted VMT impact criteria, the VMT analyses prepared for the Project was developed using VMT data presented in the recently updated Ventura County Transportation Commission (VCTC) traffic model for Ventura County and the following VMT thresholds published by the State.

The California Governor's Office of Planning and Research (OPR) published a technical advisory that includes recommendations regarding assessment of VMT, thresholds of significance, and mitigation measures.[3] The recommended VMT impact threshold for residential projects is as follows:

> "A proposed project exceeding a level of 15 percent below existing VMT per capita may indicate a significant transportation impact. "

VMT Analysis

The VCTC traffic model provides home based VMT per capita data for the City of Oxnard as well as the various Traffic Analysis Zones (TAZs) within the City, including the TAZ that encompasses the Project site (TAZ included in the Technical Appendix). Traffic model data was used to establish the home-based VMT per capita thresholds for the City of Oxnard and to estimate the home-based VMT per capita for the Project. Table 12 shows the existing home-based VMT per capita for the City of Oxnard, the VMT threshold (15% below existing home-based VMT per capita), and the Project's home-based VMT per capita based on the VCTC traffic model data (model data attached).

Table 12
Lockwood III Apartments Per Capita VMT Summary

City of Oxnard VMT[(a)]	VMT Impact Threshold[(b)]	Project VMT Estimate[(c)]	Impact?
14.80 per capita	10.69 per capita	0.97 per capita	**No**

(a) City of Oxnard home-based VMT per capita based on VCTC traffic model.
(b) VMT Threshold is a 15% reduction from City VMT (14.80 x 0.85 = 10.69).
(c) Project home-based VMT per capita estimate based on VCTC model traffic analysis zones.

As shown, the existing city-wide home-based VMT in the City of Oxnard is 14.80 VMT per capita. Thus, the VMT threshold is 10.69 VMT per capita (15% below existing VMT: 14.80 x 0.85 = 10.69). The VCTC model shows that the homes within the Project TAZ generate 0.97 VMT per capita, which is below the 10.69 VMT per capita impact threshold. Thus, the Project would not have a potentially significant VMT impact.

INTERSECTION LEVEL OF SERVICE CRITERIA/DEFINITIONS

DISCUSSION OF INTERSECTION CAPACITY UTILIZATION (ICU)

The ability of a roadway to carry traffic is referred to as capacity. The capacity is usually less at intersections because traffic flows continuously between them and only during the green phase at them. Capacity at intersections is best defined in terms of vehicles per lane per hour of green. The technique used to compare the volumes and capacity of an intersection is known as Intersection Capacity Utilization (ICU). ICU or volume-to-capacity ratio, usually expressed as a percentage, is the proportion of an hour required to provide sufficient capacity to accommodate all intersection traffic if all approaches operate at capacity. If an intersection is operating at 80 percent of capacity, then 20 percent of the signal cycle is not used.

The ICU calculation assumes that an intersection is signalized and that the signal is ideally timed. Although calculating ICU for an unsignalized intersection is invalid, the presumption is that a signal can be installed and the calculation shows whether the geometrics are capable of accommodating the expected volumes. It is possible to have an ICU well below 100 percent, yet have severe traffic congestion. This would occur if one or more movements is not getting sufficient time to satisfy its demand, and excess time exists on other movements. This is an operational problem which should be addressed.

Capacity is often defined in terms of roadway width. However, standard lanes have approximately the same capacity whether they are 11 or 14 feet wide. Data collected by Kunzman Associates indicates a typical lane, whether a through-lane or a left-turn lane, has a capacity of approximately 1,700 vehicles per hour, with nearly all locations showing a capacity greater than 1,600 vehicles per hour per lane. This finding is published in the August, 1978 issue of ITE Journal in the article entitled, "Another Look at Signalized Intersection Capacity" by William Kunzman. For this study, a capacity of 1,600 vehicles per hour per lane will be assumed for left-turn, through, and right-turn lanes as per City policy.

The yellow time can either be assumed to be completely used and no penalty applied, or it can be assumed to be only partially usable. Total yellow time accounts for less than 10 percent of a cycle, and a penalty of up to five percent is reasonable. On the other hand, during peak hour traffic operation, the yellow times are nearly completely used. In this study, no penalty will be applied for the yellow because the capacities have been assumed to be only 1,600 vehicles per hour per lane when in general they are 1,700-1,800 vehicles per hour per lane.

The ICU technique is an ideal tool to quantify existing as well as future intersection operations. The impact of adding a lane can be quickly determined by examining the effect the lane has on the intersection capacity utilization.

Signalized Intersection Level of Service Definitions

LOS	Delay[a]	V/C Ratio	Definition
A	< 10.0	< 0.60	Progression is extremely favorable. Most vehicles arrive during the green phase. Many vehicles do not stop at all.
B	10.1 - 20.0	0.61 - 0.70	Good progression, short cycle lengths, or both. More vehicles stop than with LOS A, causing higher levels of delay.
C	20.1 - 35.0	0.71 - 0.80	Only fair progression, longer cycle lengths, or both, result in higher cycle lengths. Cycle lengths may fail to serve queued vehicles, and overflow occurs. Number of vehicles stopped is significant, though many still pass through intersection without stopping.
D	35.1 - 55.0	0.81 - 0.90	Congestion becomes more noticeable. Unfavorable progression, long cycle lengths and high v/c ratios result in longer delays. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.
E	55.1 - 80.0	0.91 - 1.00	High delay values indicate poor progression, long cycle lengths and high v/c ratios. Individual cycle failures are frequent
F	> 80.0	> 1.00	Considered unacceptable for most drivers, this level occurs when arrival flow rates exceed the capacity of lane groups, resulting in many individual cycle failures. Poor progression and long cycle lengths may also contribute to high delay levels.

[a] Average control delay per vehicle in seconds.

Unsignalized Intersection Level of Service Definitions

The HCM[1] uses *control delay* to determine the level of service at unsignalized intersections. Control delay is the difference between the travel time actually experienced at the control device and the travel time that would occur in the absence of the traffic control device. Control delay includes deceleration from free flow speed, queue move-up time, stopped delay and acceleration back to free flow speed.

LOS	Control Delay Seconds per Vehicle
A	< 10.0
B	10.1 - 15.0
C	15.1 - 25.0
D	25.1 - 35.0
E	35.1 - 50.0
F	> 50.0

CALIFORNIA GOVERNMENT CODE SECTION 65915 (p)(1)

STATE OF CALIFORNIA
LEGISLATIVE COUNSEL BUREAU
AUTHENTICATED
ELECTRONIC LEGAL MATERIAL

State of California

GOVERNMENT CODE

Section 65915

65915. (a) (1) When an applicant seeks a density bonus for a housing development within, or for the donation of land for housing within, the jurisdiction of a city, county, or city and county, that local government shall comply with this section. A city, county, or city and county shall adopt an ordinance that specifies how compliance with this section will be implemented. Except as otherwise provided in subdivision (s), failure to adopt an ordinance shall not relieve a city, county, or city and county from complying with this section.

(2) A local government shall not condition the submission, review, or approval of an application pursuant to this chapter on the preparation of an additional report or study that is not otherwise required by state law, including this section. This subdivision does not prohibit a local government from requiring an applicant to provide reasonable documentation to establish eligibility for a requested density bonus, incentives or concessions, as described in subdivision (d), waivers or reductions of development standards, as described in subdivision (e), and parking ratios, as described in subdivision (p).

(3) In order to provide for the expeditious processing of a density bonus application, the local government shall do all of the following:

(A) Adopt procedures and timelines for processing a density bonus application.

(B) Provide a list of all documents and information required to be submitted with the density bonus application in order for the density bonus application to be deemed complete. This list shall be consistent with this chapter.

(C) Notify the applicant for a density bonus whether the application is complete in a manner consistent with the timelines specified in Section 65943.

(D) (i) If the local government notifies the applicant that the application is deemed complete pursuant to subparagraph (C), provide the applicant with a determination as to the following matters:

(I) The amount of density bonus, calculated pursuant to subdivision (f), for which the applicant is eligible.

(II) If the applicant requests a parking ratio pursuant to subdivision (p), the parking ratio for which the applicant is eligible.

(III) If the applicant requests incentives or concessions pursuant to subdivision (d) or waivers or reductions of development standards pursuant to subdivision (e), whether the applicant has provided adequate information for the local government to make a determination as to those incentives, concessions, or waivers or reductions of development standards.

(6) "Total units" or "total dwelling units" means a calculation of the number of units that:

(A) Excludes a unit added by a density bonus awarded pursuant to this section or any local law granting a greater density bonus.

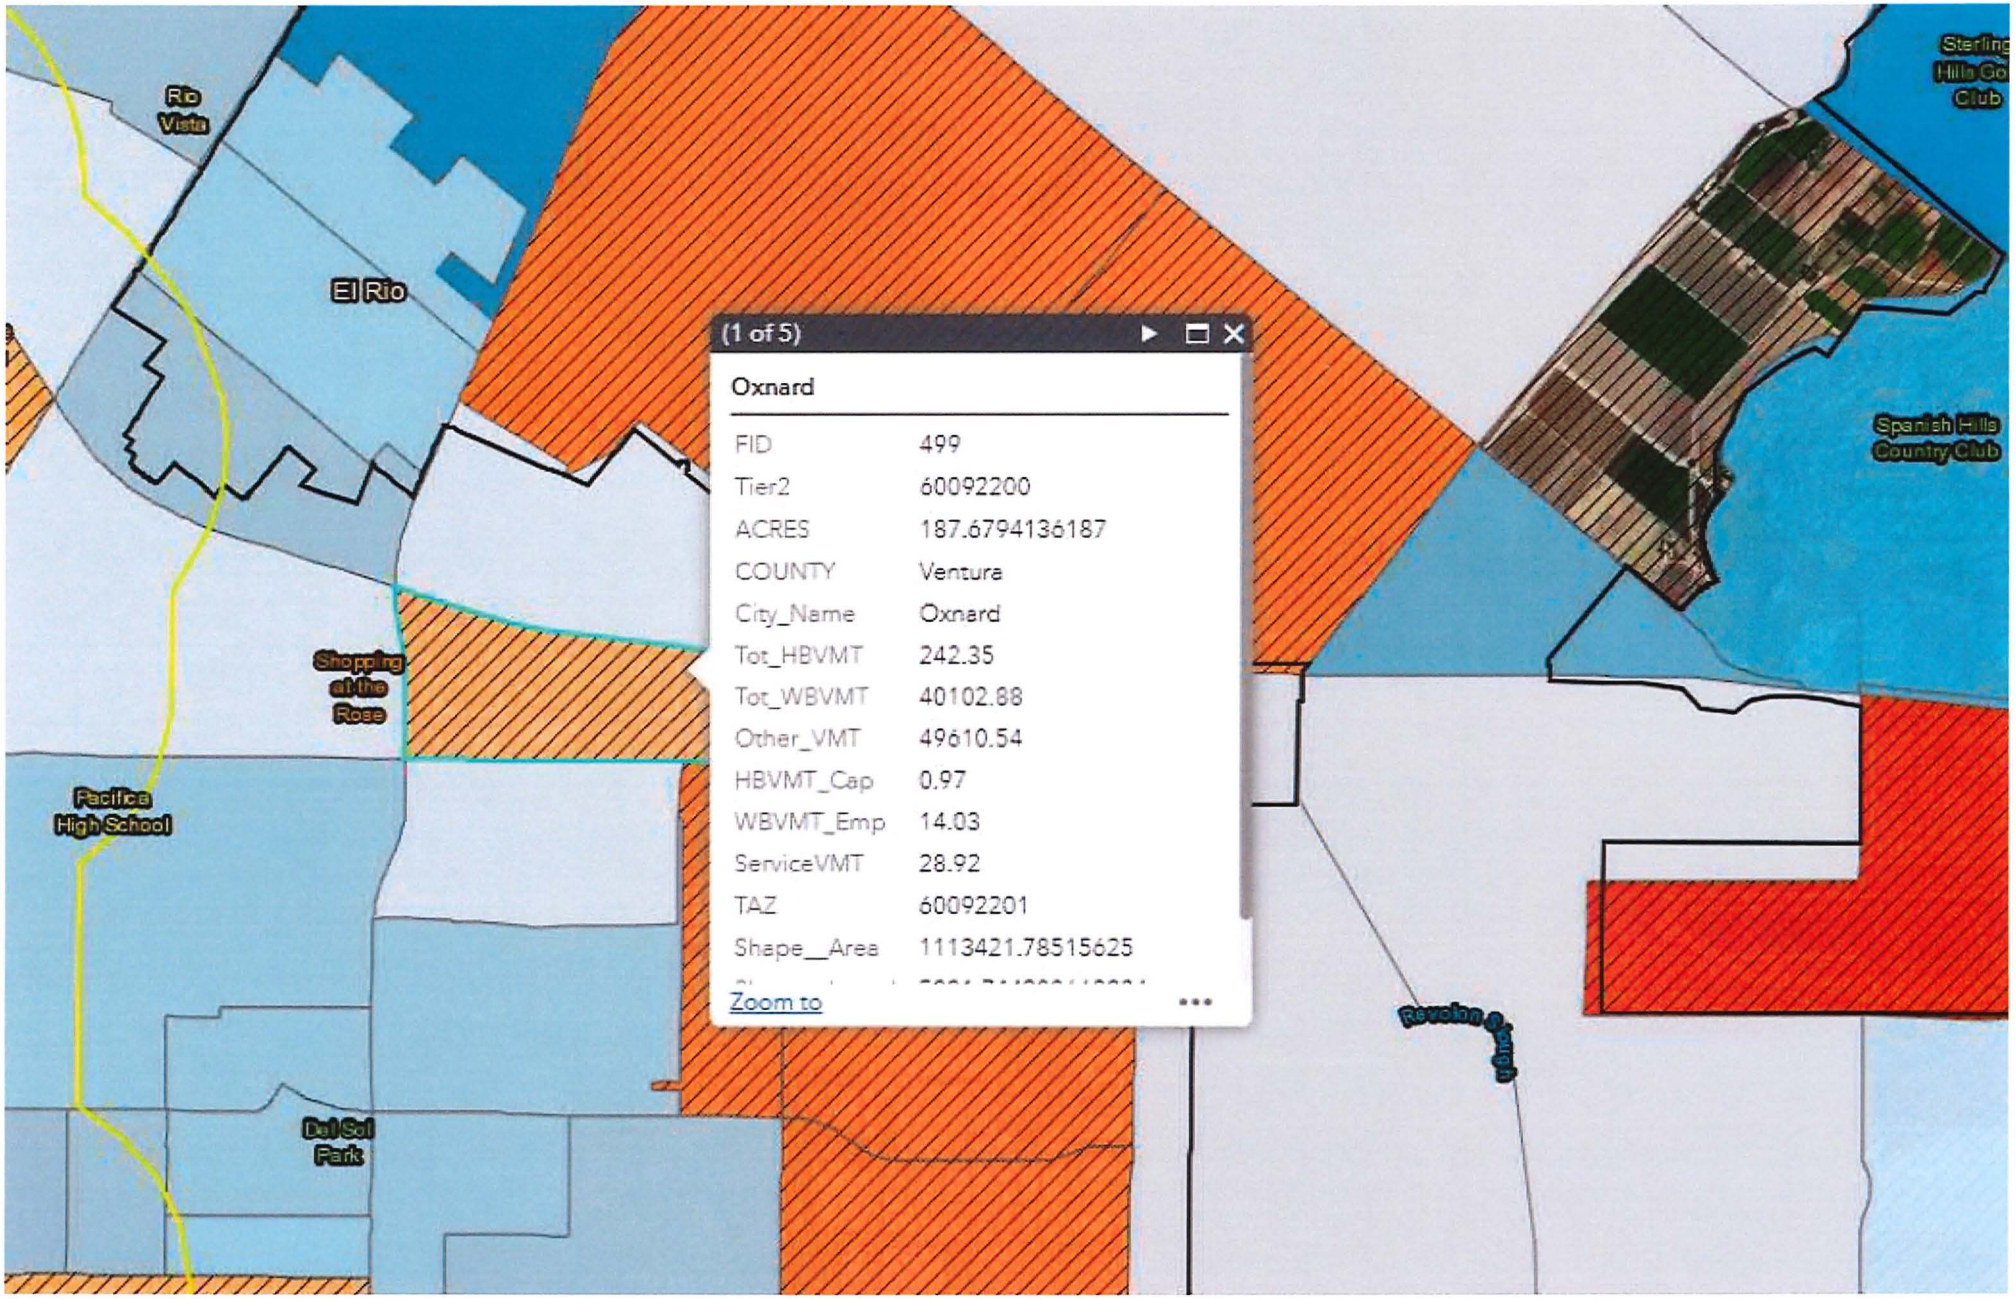
(B) Includes a unit designated to satisfy an inclusionary zoning requirement of a city, county, or city and county.

(p) (1) Except as provided in paragraphs (2), (3), and (4), upon the request of the developer, a city, county, or city and county shall not require a vehicular parking ratio, inclusive of parking for persons with a disability and guests, of a development meeting the criteria of subdivisions (b) and (c), that exceeds the following ratios:

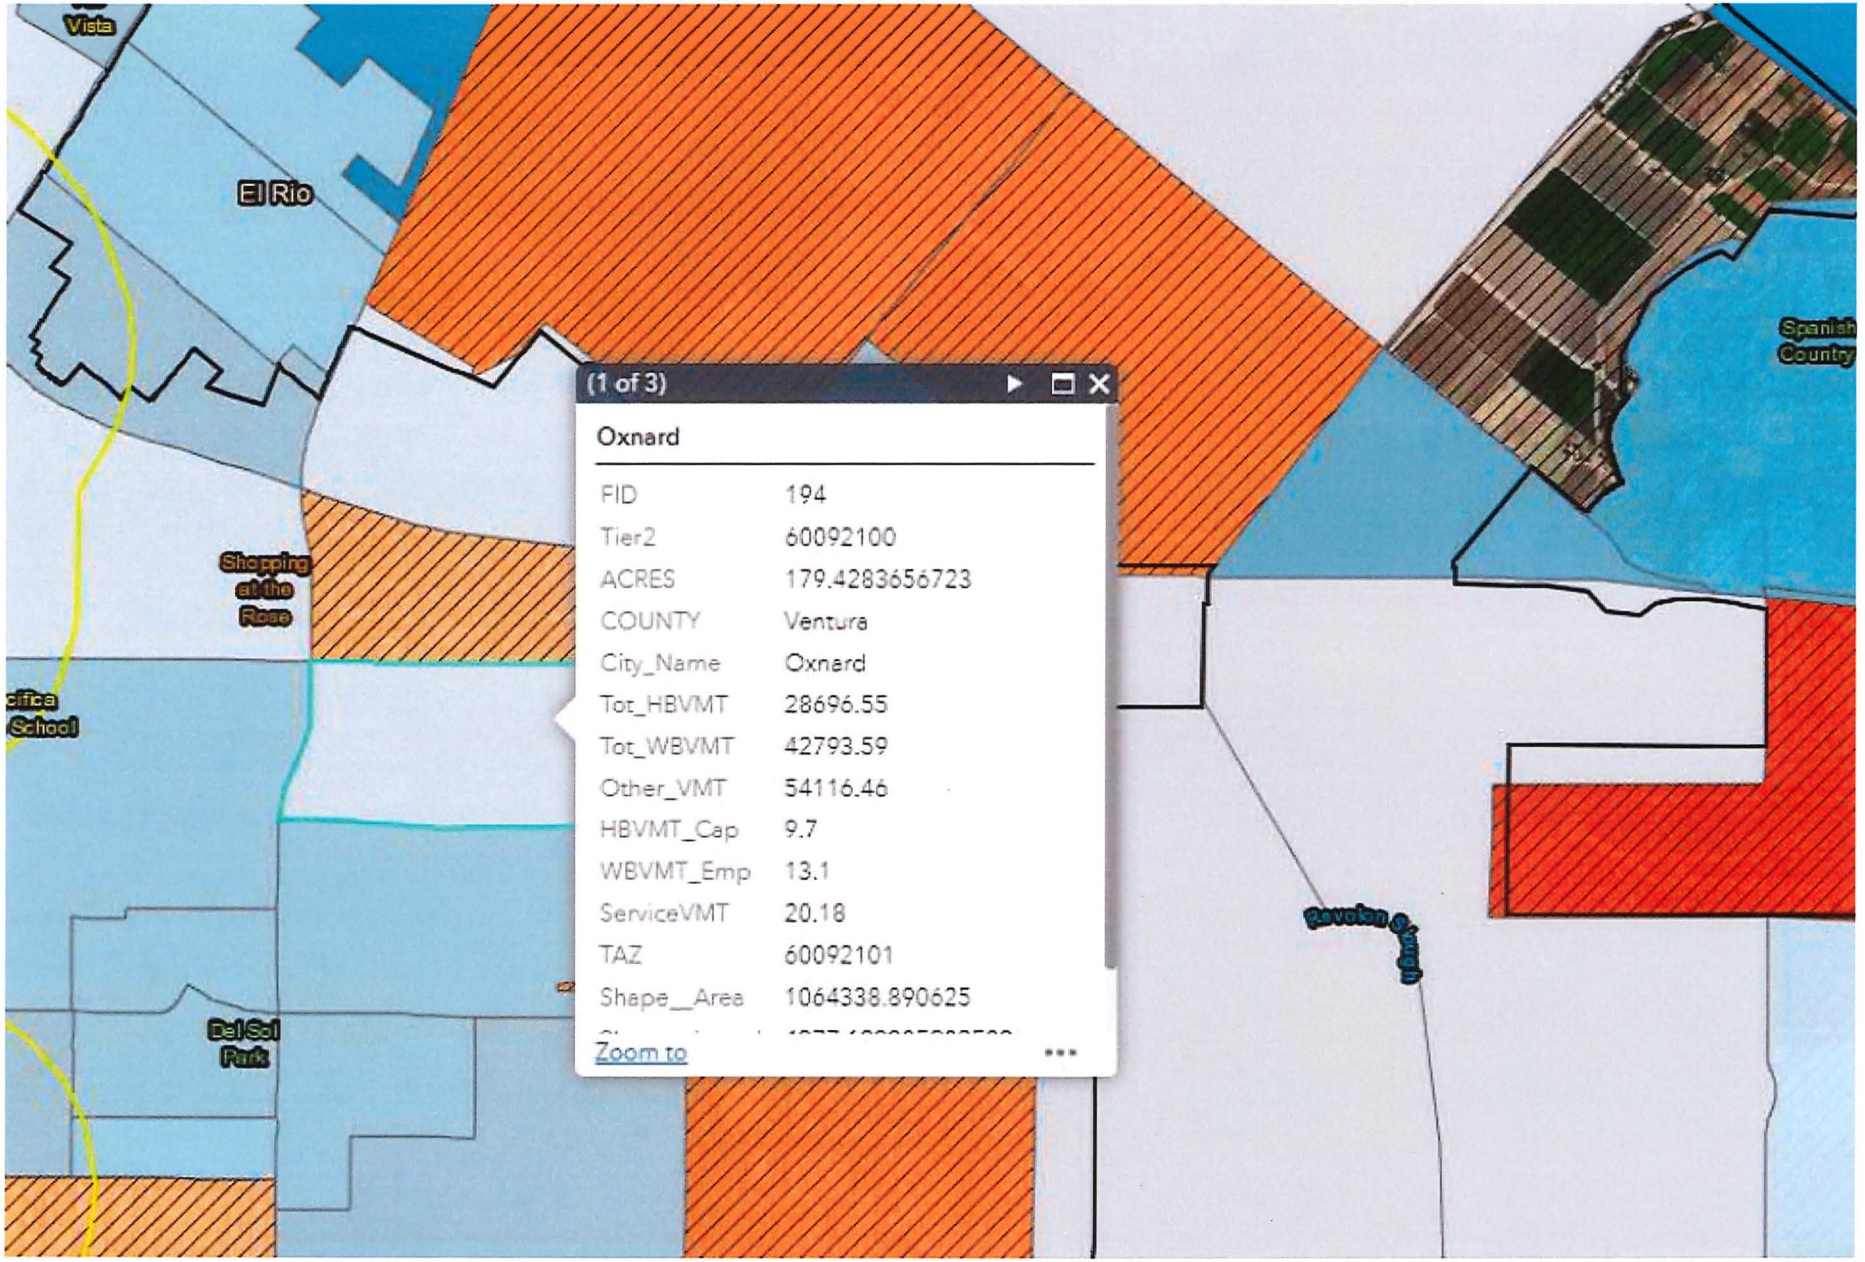
(A) Zero to one bedroom: one onsite parking space.

(B) Two to three bedrooms: one and one-half onsite parking spaces.

(C) Four and more bedrooms: two and one-half parking spaces.



(2) (A) Notwithstanding paragraph (1), if a development includes at least 20 percent low-income units for housing developments meeting the criteria of subparagraph (A) of paragraph (1) of subdivision (b) or at least 11 percent very low income units for housing developments meeting the criteria of subparagraph (B) of paragraph (1) of subdivision (b), is located within one-half mile of a major transit stop, and there is unobstructed access to the major transit stop from the development, then, upon the request of the developer, a city, county, or city and county shall not impose a vehicular parking ratio, inclusive of parking for persons with a disability and guests, that exceeds 0.5 spaces per unit. Notwithstanding paragraph (1), if a development includes at least 40 percent moderate-income units for housing developments meeting the criteria of subparagraph (D) of paragraph (1) of subdivision (b), is located within one-half mile of a major transit stop, as defined in subdivision (b) of Section 21155 of the Public Resources Code, and the residents of the development have unobstructed access to the major transit stop from the development then, upon the request of the developer, a city, county, or city and county shall not impose a vehicular parking ratio, inclusive of parking for persons with a disability and guests, that exceeds 0.5 spaces per bedroom.



(B) For purposes of this subdivision, "unobstructed access to the major transit stop" means a resident is able to access the major transit stop without encountering natural or constructed impediments. For purposes of this subparagraph, "natural or constructed impediments" includes, but is not limited to, freeways, rivers, mountains, and bodies of water, but does not include residential structures, shopping centers, parking lots, or rails used for transit.

(3) Notwithstanding paragraph (1), if a development consists solely of rental units, exclusive of a manager's unit or units, with an affordable housing cost to lower income families, as provided in Section 50052.5 of the Health and Safety Code, then, upon the request of the developer, a city, county, or city and county shall not impose vehicular parking standards if the development meets either of the following criteria:

(A) The development is located within one-half mile of a major transit stop and there is unobstructed access to the major transit stop from the development.

Re: Lockwood 3
CCE Project No. C20.0275D

Dear Mark Ross:

We have reviewed the preliminary flow data provided by ADS in real time during the sewer flow testing which was performed between December 13, 2023 and January 3, 2024. The sewer line that was tested exists between Manhole R-21-102 and Manhole R21-122, within the Rice Road Drain right-of-way owned by the Ventura County Watershed Protection District.

The total monitored section contains 5 manholes (3 of which had monitoring devices installed) and encompasses approximately 578 linear feet of 18" VCP sewer at a slope of 0.18%.

During the flow monitoring period, flow monitoring data showed several consistent intervals where flow peaked at a depth of over 14 inches. This represents approximately 78% full which exceeds the 75% allowable for pipe sizes of this diameter. Also noted is that these flows do not represent peak flows, and with peaking factors applied we anticipate these numbers to be higher.

With this in mind, we are anticipating the upsizing of the lines in question from an 18" VCP sewer to a 24" PVC sewer. This will facilitate the existing surcharged flows, as well as the development of the Lockwood 1 and 2 projects currently under construction. This will also provide adequate capacity for the Lockwood 3 project and will provide additional capacity for future development that may be anticipated in this area.

We have begun design of this sewer line and anticipate submitting these plans to the City of Oxnard by February 2, 2024. Attached to this email are as-built drawings of the existing 18" sewer line as well as the request provided by the city for monitoring of these lines. Final data will be provided once available.

Sincerely,
CCE DESIGN ASSOCIATES INC.

SUBJECT: Sewer Flow Study 2023

Dear Randy Chapman,

ADS is pleased to submit the report for the **Sewer Flow Study 2023** completed on behalf of CCE Design Associates. The metering was conducted at three (3) locations. The study was conducted during the period of Thursday, 14 December 2023 to Tuesday, 02 January 2024.

The report contains depth, velocity, and quantity hydrographs as well as daily long tables for the metering period. An Excel file containing depth, quantity, and velocity entities for the monitoring location in 5-minute format is also provided.

In addition, we would be happy to further explain any details about the report that may seem unclear. Should you have any questions or comments, you may contact the Project Manager, Shay Koerber at 619.520.9168.

It has been our pleasure to be of service to you in the performance of this project. Thank you for choosing ADS products and services to meet your flow monitoring needs.

Sincerely,
ADS ENVIRONMENTAL SERVICES

Tyler Bui
Hydraulic Data Analyst

Scope and Methodology

Introduction

CCE Design Associates. entered into an agreement with ADS Environmental Services to conduct flow monitoring at (3) three locations in the Oxnard Sanitary Collection System. The study was scheduled for a period of (14) fourteen days. Once in place, the flow monitoring equipment was to be used to measure depth, velocity, and to quantify flows. The objective of this study was capacity study- flow vrs office vrs retail.

Project Scope

The scope of this study involved using a flow monitor to quantify wastewater flow at the designated locations for the study period. Specifically, the study included the following key components.

- Investigate the proposed flow-monitoring site for adequate hydraulic conditions
- Flow monitor installation
- Flow monitor confirmations and data collections
- Flow data analysis

Equipment installation was completed on December 13, 2023. The monitoring period began on December 14, 2023, and was completed on January 2, 2024. Upon completion of the study, equipment was removed from the system.

Flow Monitoring Equipment

The ***ADS FlowShark Triton*** monitor was selected for this project. This flow monitor is an area velocity flow monitor that uses both the Continuity and Manning's equations to measure flow.

The ADS FlowShark Triton monitor consists of data acquisition sensors and a battery-powered microcomputer. The microcomputer includes a processor unit, data storage, and an on-board clock to control and synchronize the sensor recordings. The monitor was programmed to acquire and store depth of flow and velocity readings at 5-minute intervals.

The FS Triton monitor features cross-checking using multiple technologies in each sensor for continuous running of comparisons and tolerances. The FS Triton monitor can support two (2) sets of sensors. The sensor option used for this project was:

The Peak Combo Sensor installed at the bottom of the pipe includes three types of data acquisition technologies.

The ***up looking ultrasonic depth*** uses sound waves from two independent transceivers to measure the distance from the sensor upward toward the flow surface; applying the speed of sound in the water and the temperature measured by sensor to calculate depth.

The ***pressure depth*** is calculated by using a piezo-resistive crystal to determine the difference between hydrostatic and atmospheric pressure. The pressure sensor is temperature compensated and vented to the atmosphere through a desiccant filled breather tube.

To obtain ***peak velocity*****,** the sensor sends an ultrasonic signal at an angle upward through the widest cross-section of the oncoming flow. The signal is reflected by suspended particles, air bubbles, or organic matter with a frequency shift proportional to the velocity of the reflecting objects. The reflected signal is received by the sensor and processed using digital spectrum analysis to determine the peak flow velocity.

Installation

Installation of flow monitoring equipment typically proceeds in four steps. First, the site is investigated for safety and to determine physical and hydraulic suitability for the flow monitoring equipment. Second, the equipment is physically installed at the selected location. Third, the monitor is tested to assure proper operation of the velocity and depth of flow sensors and verify that the monitor clock is operational and synchronized to the master computer clock. Fourth, the depth and velocity sensors are confirmed and line confirmations are performed.

In pipes up to 42 inches in diameter, the sensors were mounted on expandable stainless-steel rings, inserted at least a foot upstream into influent pipes and tightened against the inside walls of the pipes. Influent pipe installations reduce the influences of turbulence and backwater often caused by changes in channel geometry in manholes.

Data Collection, Confirmation, and Quality Assurance

Data collects were done remotely via wireless connect on a weekly basis. As needed, during the monitoring period, field crews visit each monitoring location to verify proper monitor operation and document field conditions. The following quality assurance steps are taken to assure the integrity of the collected data:

Measure power supplies: monitors were powered by dry cell battery packs. Voltages were recorded and battery packs replaced, as necessary. Separate batteries provided back-up power to memory allowing primary batteries to be replaced without loss of data.

Clock synchronization: Field crews synchronized monitor clocks to master clocks.

Confirm depth and velocity readings: Field crews descended into meter manholes to manually measure depths and velocities and compare the meter readings to confirm that they agreed. The site met the criteria for confirmation for depth and velocity unless noted otherwise in the site commentary section. They also measured silt levels, if any, in the inverts of the pipes. Silt areas were subtracted from flow areas to compute true areas of flow.

Confirm average velocities through cross-sectional velocity profiles: Since ADS velocity sensors measure peak velocity, field crews collected cross-sectional velocity profiles in order to develop a relationship between peak and average velocity in lines that meet the hydraulic criteria.

Upload and Review Data: Data collected from the monitors were uploaded and reviewed by a Data Analyst for completeness, outliers and deviations in the flow patterns, which indicate system anomalies or equipment failure.

Flow Quantification Methods

There are two main equations used to measure open channel flow: the ***Continuity Equation*** and the ***Manning Equation.*** The Continuity Equation, which is considered the most accurate, can be used if both depth of flow and velocity are available. In cases where velocity measurements are not available or not practical to obtain, the Manning Equation can be used to estimate velocity from the depth data based on certain physical characteristics of the pipe (i.e. the slope and roughness of the pipe being measured). However, the Manning equation assumes uniform, steady flow hydraulic conditions with non-varying roughness, which are typically invalid assumptions in most sanitary sewers. The Continuity Equation was used exclusively for this study.

Continuity Equation

The Continuity Equation states that the flow quantity (Q) is equal to the wetted area (A) multiplied by the average velocity (V) of the flow.

$$Q = A * V$$

This equation is applicable in a variety of conditions including backwater, surcharge, and reverse flow.

Data Analysis and Presentation

Data Analysis

A flow monitor is typically programmed to collect data at 5-minute intervals throughout the monitoring period. The monitor stores raw data consisting of (1) the ultrasonic depth, (2) the peak velocity and (3) the pressure depth. The data is imported into ADS's proprietary software and is examined by a data analyst to verify its integrity. The data analyst also reviews the daily field reports and site visit records to identify conditions that would affect the collected data.

Velocity profiles and the line confirmation data developed by the field personnel are reviewed by the data analyst to identify inconsistencies and verify data integrity. Velocity profiles are reviewed and an average to peak velocity ratio is calculated for the site. This ratio is used in converting the peak velocity measured by the sensor to the average velocity used in the Continuity equation. The data analyst selects which depth sensor entity will be used to calculate the final depth information. Silt levels present at each site visit are reviewed and representative silt levels established.

Occasionally the velocity sensor's performance may be compromised resulting in invalid readings sporadically during the monitoring period. This is generally caused by excessive debris (silt) blocking the sensor's crystals, shallow flows (~< 1") that may drop below the top of the sensor or very clear flows lacking the particles needed to measure rate. In order to use the Continuity equation to quantify the flow during these periods, a Data Analyst and/or Engineer will use the site's historical pipe curve (depth vs. velocity) data along with valid field confirmations to reconstitute and replace the false velocity recordings with expected velocity readings for a given historical depth along the curve.

Selections for the above parameters can be constant or can change during the monitoring period. While the data analysis process is described in a linear manner, it often requires an iterative approach to accurately complete.

Data Presentation

This type of flow monitoring project generates a large volume of data. To facilitate review of the data, results have been provided in graphical and tabular formats. The flow data is presented graphically in the form of scattergraphs and hydrographs. Hydrographs are based on 15-minute averaging. Tables are provided in 5-minute format. These tables show the flow rate for each day, along with the daily minimum and maximums, the times they were observed, the total daily flow, and total flow for the month (or monitoring period). The following explanation of terms may aid in interpretation of the flow data table and hydrograph.

DEPTH - Final calculated depth measurement (in inches)

QUANTITY - Final calculated flow rate (in MGD)

VELOCITY - Final calculated flow velocity (in feet per second)

REPORT TOTAL - Total volume of flow recorded for the indicated time period (in MG)

Lockwood01

Site Commentary

SITE INFORMATION

Pipe	Round (18 in H)
Silt	3.50 (in)

OBSERVATIONS

This site functioned under normal conditions during the study period. No surcharge conditions were experienced at this location.

Field observation noted the presence of a 3.5 inches sediment in the pipe. Therefore, 3.5 inches was removed from the wetted cross section for flow calculations. Due to the presence of sediment, data confidence is lower than typical at this location.

This site was positioned upstream of site Lockwood02. A review of balancing indicates a minor imbalance due to the presence of sediment.

5-min flow depth, velocity, and quantity data observed during **Thursday, 14 December 2023 to Tuesday, 02 January 2024**, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	12.37	0.85	0.594
Minimum	10.02	0.41	0.206
Maximum	15.00	1.18	0.984
Min Time	12/14/2023 4:20:00 AM	12/14/2023 4:15:00 AM	12/14/2023 4:15:00 AM
Max Time	12/21/2023 1:55:00 AM	12/28/2023 1:30:00 PM	12/26/2023 12:45:00 PM

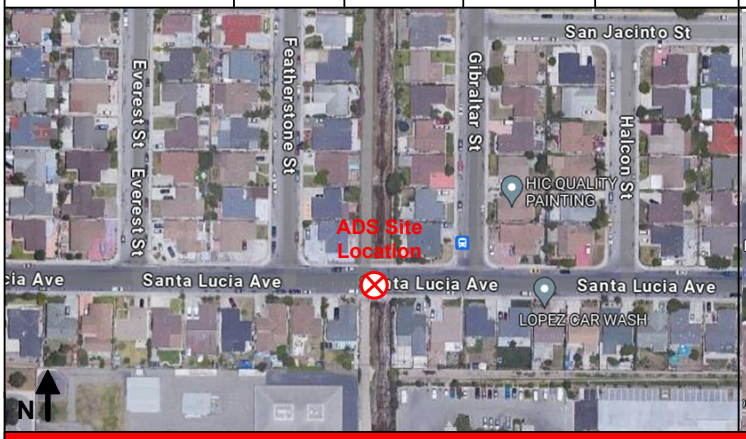
Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions are based on the five minutes intervals.

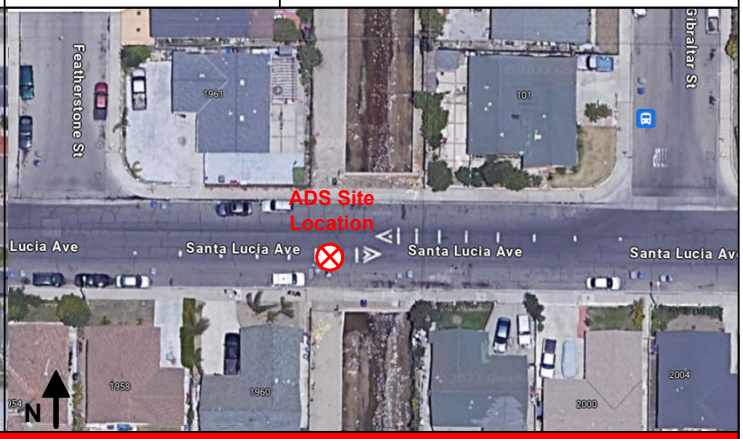
Values in the graphical reports are based on the fifteen minutes average.

Values in the tabular report are based on the five minutes intervals.

DATA UPTIME



Data uptime observed during **Thursday, 14 December 2023 to Tuesday, 02 January 2024** is provided in the following table:



Percent Uptime	
DFINAL (in)	100
VFINAL (ft/s)	100
QFINAL (MGD - Total MG)	100

Site Commentary

SITE INFORMATION

Pipe	Elliptical (17.5 in H x 18 in W)
Silt	0.00 (in)

OBSERVATIONS

This site functioned under normal conditions during the study period. No surcharge conditions were experienced at this location.

This site was positioned downstream of site Lockwood01 and upstream of site Lockwood03. See sites Lockwood01 and Lockwood03 for balancing details.

5-min flow depth, velocity, and quantity data observed during **Thursday, 14 December 2023 to Tuesday, 02 January 2024**, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	10.38	0.81	0.571
Minimum	6.94	0.32	0.131
Maximum	13.25	1.13	1.013
Min Time	12/29/2023 4:50:00 AM	12/29/2023 4:50:00 AM	12/29/2023 4:50:00 AM
Max Time	12/21/2023 2:00:00 AM	12/21/2023 2:05:00 AM	12/21/2023 2:00:00 AM

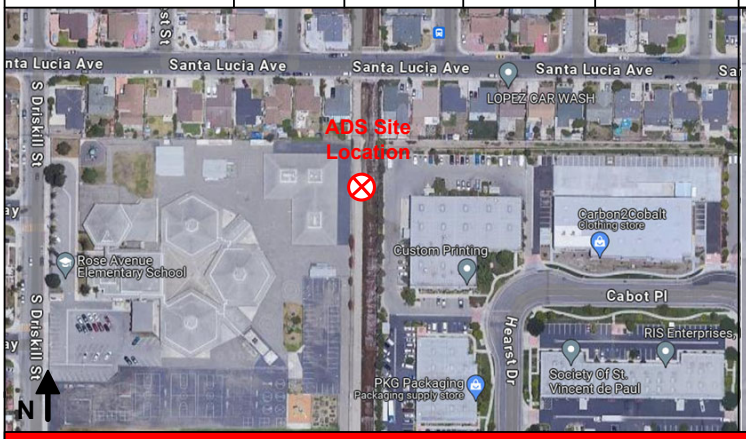
Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions are based on the five minutes intervals.

Values in the graphical reports are based on the fifteen minutes average.

Values in the tabular report are based on the five minutes intervals.

DATA UPTIME



Data uptime observed during **Thursday, 14 December 2023 to Tuesday, 02 January 2024** is provided in the following table:

Percent Uptime	
DFINAL (in)	100
VFINAL (ft/s)	100
QFINAL (MGD - Total MG)	100

Site Commentary

SITE INFORMATION

Pipe	Elliptical (17.75 in H x 18 in W)
Silt	0.00 (in)

OBSERVATIONS

This site functioned under poor hydraulic condition during the study period. Data analysis concluded the presence of a hydraulic jump/wave, causing lower data confidence than typical at this location.

This site was positioned downstream of site Lockwood02. A review of balancing indicates no problem.

5-min flow depth, velocity, and quantity data observed during **Thursday, 14 December 2023 to Tuesday, 02 January 2024**, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	3.93	3.68	0.698
Minimum	3.03	1.59	0.208
Maximum	4.63	4.91	1.116
Min Time	12/15/2023 4:15:00 AM	12/14/2023 4:00:00 AM	12/14/2023 4:00:00 AM
Max Time	12/24/2023 6:40:00 PM	12/26/2023 12:35:00 PM	12/26/2023 12:35:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions are based on the five minutes intervals.

Values in the graphical reports are based on the fifteen minutes average.

Values in the tabular report are based on the five minutes intervals.

MEMO

February 27, 2024

TO: Developer

FROM: Tai P. Chau, PE, Supervising Civil Engineer

SUBJECT: City of Oxnard Sewer Recommendations
Lockwood 1, 2, and 3

Dear Developer,

According to the Conditions of Approval 226 for Lockwood 1 and 230 and 231 for Lockwood 2, as well as the proposed Lockwood 3 project, the sewer calculations provided by your professional engineer have been reviewed by the engineering team members from the Community Development and Public Works Departments. The data from the sewer calculations was used to run the sewer modeling. The necessary improvements have been identified. They are listed below and are required to be constructed to accommodate the following Lockwood projects:

1) Lockwood 1 & 2 only (without the development of Lockwood 3).

    - Upgrade the existing 18-inch VCP sewer main to 21-in PVC from MH-R21-100 to MH-R21-103 with a minimum slope of 0.2%.

2) Lockwood 1, 2, & 3 combined:

    - Upgrade the existing 18-inch VCP sewer main to 21-in PVC from MH-R21-100 to MH-R21-103 with a minimum slope of 0.2%.

    - Upgrade the overcapacity pipes (d/D ratio above 60%) from MH-1 to MH-118 identifiedin Appendix 1.

If you have any questions or concerns, please contact me at (805) 385-7894 or tai.chau@oxnard.org.

Appendices:

1. Sewer calculations for Lockwood 1, 2, and 3
2. Sewer Survey Topographic Plans
3. Email from Public Works

Appendix 1

Chau, Tai <tai.chau@oxnard.org>

Lockwood development sewer analysis.

Withanage, Asitha <asitha.withanage@oxnard.org> Mon, Feb 26, 2024 at 5:28 PM

To: "Chau, Tai" <tai.chau@oxnard.org>
Cc: Morgan Kessler <morgan.kessler@oxnard.org>

Hello Tai,
I included the Lockwood phase 3, see comments below.

I have analyzed the existing sewer model to evaluate the potential impact of the proposed Lockwood development on the City's wastewater system as requested by you. This study aimed to assess the feasibility of incorporating the proposed development into the current wastewater system and to identify any potential issues that could arise as a result.

The proposed peak wastewater discharge is 0.198 cfs for Lockwood Phase 1, 0.189 cfs for Lockwood Phase 2, and 0.241 cfs for Phase 3 as shown in attached Appendix#1.

Due to additional wastewater discharge from the proposed development, downstream 18-inch sewer pipe sections between La Puerta Ave and Santa Lucia Ave (along the storm drain channel) exceed the maximum d/D ratio allowed.

Recommendation:
1. Upgrade the existing 18-inch VCP sewer to 21-inch PVC from MH-R21-100 to MH-R21-103 with a minimum 0.002 slope. See Appendix #2
2. Upgrade the overcapacity pipes (d/D ratio above 60%) identified by the developer in Appendix#1.

Thanks

Asitha Withanage, P.E. - Senior Civil Engineer
Public Works Department, Engineering
