OUR COMMITMENT TO SUSTAINABILITY | ESA helps a variety of public and private sector clients plan and prepare for climate change and emerging regulations that limit GHG emissions. ESA is a registered assessor with the California Climate Action Registry, a Climate Leader, and founding reporter for the Climate Registry. ESA is also a corporate member of the U.S. Green Building Council and the Business Council on Climate Change (BC3). Internally, ESA has adopted a Sustainability Vision and Policy Statement and a plan to reduce waste and energy within our operations. This document was produced using recycled paper.

ENVIRONMENTAL CHECKLIST

Initial Study

1. Project Information

1. Project Title:	Lockwood III Apartments
2. Lead Agency Name and Address:	City of Oxnard Community Development Department Planning Division 214 South C Street Oxnard, California 93030
3. Contact Person and Phone Number:	Joe Pearson II, Community Development Department, 805.385.8272, Joe.Pearson@Oxnard.org
4. Project Location:	The Project site is located at 2151 Lockwood Street on a 225,348-square-foot (5.17-acre) undeveloped, vacant parcel within the City of Oxnard (City) (**Figure 1**). Specifically, the Project site is located at the northwest corner of Outlet Center Drive and Lockwood Street in the City of Oxnard within Ventura County (**Figure 2**). The Project site parcel (APN 213-0-090-275) is south of and immediately adjacent to the U.S. 101 Freeway. The site is within the proximate service of major retail, business, medical, and other services.
5. Project Sponsor's Name and Address:	SVM Development, LLC 1534 Moorpark Road, #337 Thousand Oaks, California 91360
6. General Plan Designation(s):	The Project site is designated under the City of Oxnard 2030 General Plan as Business Research Park (BRP), according to the General Plan Land Use Map.
7. Zoning:	The zoning designation for the Project site is Business Research Park (BRP). The zoning for the Project is BRP with an additive zone designation of Affordable Housing Discretionary (-AHD) which would permit 30 units/acre.

8. Description of Project:

The Project consists of the construction of a five-story, 373,069-square-foot (SF) mixed-income, multi-family residential development located within one building (**Figure 3**). The total residential space would be 201,115 SF; covered balconies, patios, parking and walkways would comprise 75,250 SF; corridors would comprise 40,497 SF; balconies 22,610 SF; utility space 16,710 SF; and community space 13,609 SF. The remaining SF would be comprised of corridor and vertical circulation (2,668 SF) and non-conditioned building (592 SF). The Project would contain a total of 234 residential units, including 30 low-income level units and 8 very low-income level units, representing 12.9 percent and 3.4 percent of the total units, respectively. The residential unit types consist of Studio (16 units), 1-bedroom, 1-bath (86 units); 2-bedroom, 2-bath (108 units); and 3-bedroom, 2-bath (24 units) residential spaces. The Project proposes parking on the first floor, and residential units would be split between the upper four stories, with 59 units on Level 2, 59 units on Level 3, 60 units on Level 4 and 56 units on Level 5 (**Figures 4–8**). The 5th Floor will include an approximate 100 feet by 30 feet terrace/deck (2,988 SF) on the southern end of the building (**Figure 8**). The roof will have solar panels installed (**Figure 9**).

The proposed residential building would be 67'-6" at its highest point (at the top of the stairs and elevator tower), 63'-2" at the top of the parapet, and 61'-2" at the lowest of the parapet with an average height of approximately 57'-8" for all building elements (**Figure 10**).

The total building area proposed would be 373,069 SF, which when divided by the total site area (225,348 SF) results in a Floor Area Ratio (F.A.R) of 1:1.65. The maximum building coverage of the net Project site area would be 42 percent.

Additionally, the Project would provide various amenities, including a courtyard, park areas, decks, bicycle storage, extra storage, a setback open area (which would include two bocce ball courts, a pet park, and a putting green), a fitness area, a multi-purpose room, a community room, pet care, and a fifth-floor deck and lounge. The total interior yard and amenity space proposed onsite is 67,267 SF, with the total interior yard space totaling 34,304 SF and the additional amenity space encompassing 32,963 SF. Key amenities, split between interior yard space and building amenity space, are specified in **Table 1**.

TABLE 1
LOCKWOOD 3 AMENITIES

Amenity	Size (SF)
Interior Yard Space	
2 x Park Areas (by southeast driveway)	1,814
Interior Courtyard	14,248
Grass Area (northeast)	350
Dog Run	1,247
Grass Area (north)	864
Scenic Road Setback Open Area (inc. bocce ball courts, dog run and putting green)	15,781
Total Interior Amenity Space	***34,304***

Amenity	Size (SF)
Additional Amenity Space	
Multi-Purpose Room	1,897
Main Floor Community Room	2,444
Fitness Area	2,980
Extra Storage	1,773
Bicycle Storage	374
Pet Care	209
Second Floor Interior Amenity Space	18,148
Second Floor Observation Deck	2,150
Fifth Floor Deck & Lounge	2,988
Total Additional Amenity Space	***32,963***
Total	***67,267***

SOURCE: Lauterbach & Associates, 2023.

Parking and Circulation

The Project would provide 351 on-site parking spaces, dispersed throughout the site as surface, tuck-under, and podium parking (see **Table 2**). Based on the California Government Code Section 65915 requirements, 300 parking spaces are required for the Project. The Project requests City administrative relief to allow for up to 25 percent of the required full-size parking spaces to be replaced by compact parking spaces, with a minimum of 225 full-size spaces and 75 compact spaces. The Project meets the required number of spaces by including 250 full size spaces and 101 compact spaces, with a surplus of 51 extra spaces.

Additionally, per California Green Building Standards Code 2022, the Project is required to provide 36 EV-Capable (EV-F) stalls, 88 EV-Ready (EV-R) and 18 EV Charging Spaces (EVCS) as a minimum. The Project meets the electric vehicle space requirement by providing a total of 175 EV stalls, including 69 EV-F, 88 EV-R, and 18 EVCS spaces.

Access to the Project would be provided by two driveway connections to Lockwood Street, allowing full access to the Project site. The Project driveways would be designed and constructed to the standards provided by the City of Oxnard. In addition, necessary roadway improvements (curb, gutter, sidewalks, etc.) would be required along the frontage adjacent to Lockwood Street, as well as pedestrian facilities to connect the Project to regional and neighborhood services (such as commercial and medical services).

TABLE 2
PROPOSED PROJECT PARKING

Parking Type Provided	Size	Number
Podium Parking		
Accessible	9'x19' MIN.	4
Compact	8'x19' MIN.	30
EV-F	9'x19' MIN.	46
EV-R	9'x19' MIN.	67

EVCS	9'x19' MIN.	9
EVCS Accessible	9'x19' MIN.	3
Standard	9'x19' MIN.	36
TOTAL		***351***

SOURCE: Lauterbach & Associates, Lockwood III Apartments – Plan Set, 2023.

Exterior Design

The Project building would be primarily comprised of various forms of cement, both composite board and plaster, with different sections of the building being painted primarily Warm White, Hamilton Blue (a light grey/blue), California Sagebush (a sage green), Long Lake (a dark grey/blue), Black, and Khaki Brown for the fiber cement lap sidings. See **Figures 10–12** for elevations and renderings. The elevator tower would be faced with perforated aluminum panels. Potential heat and glare would be reduced by altering the hole size and spacing of the perforated panels. Railings and gates would be comprised of metal, and window panes would be tinted.

The other exterior elements of the Project allow for a community-oriented lifestyle. In addition to common areas, such as a pool, a lawn of artificial turf, and outdoor fireplaces with seating, the Project site would include a dog park, putting green, and bocce ball courts. Planted vegetation would be incorporated via floor-mounted and hanging planters. The Project also includes a new 8-

foot-high concrete masonry unit (CMU) wall located at the north property line, adjacent to the U.S. 101 Freeway, to reduce roadway noise associated with the Freeway.

On-site solar photovoltaic panels would be installed on the roof, with a back-up battery storage system to reduce dependence on fossil fuels. Additionally, the roof surface would include reflective white material, which would reduce the albedo effect/urban heat while not creating glare.

Landscaping

The Project would feature various plantings throughout the boundaries of the Project, primarily at the ground level, in the 2nd story courtyards, and on the 5th floor deck. The Project proposes 26 different tree species and 31 different species of shrubs and grasses to be incorporated throughout the site, including citrus, queen palm, sycamore, deer grass, fortnight lily, and sweet pea shrub. Non-inground plants, especially those in the courtyards and deck, would be planted in five different types of self-watering planters. See **Figures 13–15** for landscape plans.

Landscaping would be native and/or drought tolerant (xeriscape landscaping) and would feature high-efficiency drip irrigation systems.

Utilities and Off-Site Improvements

Water service for the Project site would be provided by connecting the proposed 2-inch water lines to existing water lines along Lockwood Street. The Project would discharge to the City-maintained sewer by connecting the proposed 8-inch sewer lines to existing private sewer lines along Lockwood Street. Additionally, a sewer flow study was undertaken to determine if any additional sewer upgrades/replacements were necessary (see Appendix K). The study identified a 900-linear feet segment of 18-inch vitrified clay pipe (VCP), adjacent to Rose Avenue Elementary School, which would need to be upgraded to a 21-inch PVC sewer. Due to the additional sewer discharge that will be generated by the proposed development, the project shall also upgrade 2,250-linear feet of the existing 8-inch sewer main immediately downstream of the project from manhole MH-1 to manhole MH-118. The additional sewer discharge is the result of the proposed development, and the project would be required to carry out the sewer upgrades necessary to support the project. The project shall collaborate with Lockwood 1 and 2 to upgrade the 18-inch VCP and solely be responsible for upgrading the 8-inch VCP. This will be included as a Condition of Approval.

Runoff that occurs on-site would be collected and treated in conformance with MS4 permit requirements set by Ventura County. Peak runoff that occurs due to storm events would be detained on-site, with reduced flows conveyed to public storm drains in Lockwood Street and Outlet Center Drive.

There would be three separate refuse staging areas for trash, recycling, and organics pickup around the proposed building.

Construction Schedule

Project construction would proceed upon approval and issuance of building and grading permits from the City of Oxnard and is estimated to take approximately 27 months to complete, beginning

in spring 2025 and continuing until the end of summer 2027. The Project would be constructed in five main phases: site preparation, grading, building construction, paving, and architectural coating.

Site preparation would involve the placement of construction equipment, initial grading, removal of debris and vegetation, importing of fill dirt, and re-grading to establish the building pad for the building and the interior driveway. An estimated 6,366 cubic yards of cut and 7,762 cubic yards of fill would be needed, resulting in a net import of 1,396 cubic yards of soil. Following site grading, all site utility conduits, vaults, and piping would be installed. Once utilities are in place, curbs, gutters, and the first lift of asphalt would be installed. The site preparation and grading phase is estimated to take approximately 2 to 3 months.

Building construction is estimated to occur between June 2025 and August 2027, with paving and architectural coating overlapping between April and August 2027.

9. Surrounding Land Uses and Setting:

The Project site is located to the north of Gonzales Road and to the west of Rice Avenue, and the U.S. 101 Freeway is directly adjacent to the north. The area surrounding the Project site includes commercial centers, an outlet center, and the Cal Lutheran University extension to the east; medical and general office buildings to the south; and an auto dealership to the west. An easement with an approximately 10-foot-wide concrete drainage culvert is located immediately west of the Project site. Storm water from the adjacent property drains to the culvert while storm water from the Project site does not currently drain to the existing culvert. To the south on the other side of Lockwood Street is the site of the proposed Lockwood 1 and 2 developments, which would be senior apartments.

Regional access to the Project site is provided by Ventura Freeway (U.S. 101 Freeway) and Rice Avenue from the northeast. Local access to the Project site is provided from Gonzales Road and Outlet Center Drive.

The Project site (within 0.5 miles) is served by Gold Coast Transit with several bus routes, including on both sides of Gonzales Road and Rice Avenue. The #4A and #4B routes (both to North Oxnard) operate daily and provide fixed bus route service on Gonzales Road. The #15 route (Esplanade – El Rio – St. Johns Medical Center) provides daily service on Gonzales Road, as does the #17 Route (Esplanade – St. Johns Medical Center – Oxnard College), and #19 route (OTC – 5th – Gonzales Road).

There are existing pedestrian facilities including sidewalks and crosswalks adjacent to the Project site along Lockwood Street and Outlet Center Drive. The pedestrian facilities connect the Project site to the commercial and medical facilities to the east, west, and south. The nearest pedestrian crosswalks across Gonzales Road are provided at the Outlet Center Drive signalized intersection. The nearest pedestrian crosswalks across Rose Avenue are provided at the Lockwood Street signalized intersection. Striped pedestrian crosswalks, sidewalk curb ramps, and pedestrian call buttons are provided at the Gonzales Road/Outlet Center Drive and Rose Avenue/Lockwood Street intersections.

The Project site is served by the City of Oxnard Bikeway System. The existing bicycle facilities located near the Project site consist of Class II bike lanes along Gonzales Road, Rose Avenue, Solar

Avenue, and a portion of Lockwood Street east of Outlet Center Drive. These Class II bike lanes would connect the Project to commercial and employment areas east and west of the Project site. The portion of Lockwood Street adjacent to the Project site is identified as a future Class II bike lane facility in the City of Oxnard Bicycle and Pedestrian Facilities Master Plan.

10. Other public agencies whose approval is required:

No other discretionary permits, financing approval, or participation agreements are anticipated to be required from public agencies other than the City of Oxnard. The City of Oxnard actions that are required to implement this Project include:

- Zone Map Amendment: An approval of a Zone Map Amendment will be necessary to add the -AHD zone overlay to the property to allow residential use.
- Special Use Permit: A Special Use Permit for new building construction is required before building permits may be issued.
- Density Bonus Permit: Per Senate Bill 2345, which permits a density bonus corresponding to specified percentages of units set aside for very low income, low-income, or moderate-income households, the Project is required to obtain a Density Bonus Permit to allow for the proposed 50 percent density bonus.
- Adoption of an Initial Study/Mitigated Negative Declaration (IS/MND) in accordance with the California Environmental Quality Act (CEQA). The City is required to consider the IS/MND and adopt it prior to approving the Project.

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

On behalf of the City of Oxnard, Rincon Consultants, Inc. (Rincon) contacted the Native American Heritage Commission (NAHC) on September 30, 2019, to request a search of the Sacred Lands File and receive a contact list of Native American tribes culturally affiliated with the Project area. Pending results from the NAHC, Rincon sent anticipatory letters on September 30, 2019, to six Native American contacts in the area to request information on potential cultural resources in the Project vicinity that may be impacted by the Project development. On October 3, 2019, Patrick Tumamait of the Barbareño/Ventureño Band of Mission Indians responded via phone. Mr. Tumamait inquired about the results of the field survey and the South Central Coastal Information Center (SCCIC) California Historical Resources Information System (CHRIS) search and stated that he had no concerns regarding the Project after Rincon responded that both efforts were negative for prehistoric cultural resources within the Project site and immediate vicinity. Additionally, formal notification letters were sent on August 21, 2023, to three contacts at the Barbareño/Ventureño Band of Mission Indians, none of whom requested formal consultation. Details of the tribal consultation letters are available in **Appendix A**.

2. Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this Project, involving at least one impact that is a "Potentially Significant Impact" or "Less than Significant with Mitigation Incorporated" as indicated by the checklist on the following pages.

☐ Aesthetics and Urban Design	☒ Cultural Resources and Tribal Cultural Resources	☐ Mineral Resources	☐ Utilities and Energy
☐ Agricultural Resources	☐ Geology and Soils	☐ Noise	☐ Wildfire
☐ Air Quality	☐ Hazards and Hazardous Materials	☐ Population, Education, and Housing	☒ Mandatory Findings of Significance
☒ Biological Resources	☐ Hydrology and Water Quality	☐ Public Services and Recreation	
☐ Climate Change and Greenhouse Gas Emissions	☐ Land Use and Planning	☐ Transportation and Circulation	

Determination:

On the basis of this initial study:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

3. Environmental Checklist

3.1 Aesthetics and Urban Design

Issues	*Potentially Significant Impact*	*Less than Significant with Mitigation Incorporated*	*Less than Significant Impact*	*No Impact*
a) Would the project have a substantial adverse effect on a scenic vista such as an ocean or mountain view from an important view corridor or location as identified in the 2030 General Plan or other city planning documents?	☐	☐	☒	☐
b) Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway, or route identified as scenic by the County of Ventura or City of Oxnard?	☐	☐	☐	☒
c) Would the project substantially degrade the existing visual character or quality of the site or its surroundings such as by creating new development or other physical changes that are visually incompatible with surrounding areas or that conflict with visual resource policies contained in the 2030 General Plan or other city planning documents?	☐	☐	☒	☐
d) Would the project add to or compound an existing negative visual character associated with the project site?	☐	☐	☐	☒
e) Would the project create a new source of substantial light or glare which would adversely affect daytime or nighttime views in the area?	☐	☐	☒	☐

The project site is surrounded by commercial centers, an outlet center, and the Cal Lutheran University extension to the east; medical and general office buildings to the south; and an auto dealership to the west. This section has used the City of Oxnard 2030 General Plan, Goals and Policies and their General Plan Background Report to determine existing scenic resources in the Project vicinity along with 2023 ground-level survey (see Appendix C-1, *Representative Photographs*). Additionally, aerial views of the project site and surrounding area were reviewed from Google Earth. The potential effects on existing resources were based on the Plan set provided by the Project applicant.

Discussion

a) **Less-than-Significant Impact.** A scenic vista is generally defined as a public viewpoint that provides expansive views of a highly valued landscape for the benefit of the public. Based on a review of the Oxnard General Plan Background Report,[1] the highly valued landscape areas are scenic areas and view corridors within the city of Oxnard. The 2030 General Plan Goals and Policies outline three broad categories of aesthetic resources, including Local Waterways, Agricultural Greenbelts, and Beaches and Coastlines.[2] Other scenic areas and

[1] City of Oxnard. 2006. City of Oxnard General Plan Background Report. https://www.oxnard.org/wp-content/uploads/2016/08/OxnardDraftBackgroundReport2006_04.21.06.pdf. Accessed September 20, 2023.

[2] City of Oxnard. 2022. City of Oxnard, California, 2030 General Plan, Goals and Policies. Adopted October 2011 with Amendments through December 2022. Oxnard, California: City of Oxnard, Development Services Department, Planning Division. https://www.oxnard.org/wp-content/uploads/2017/06/Oxnard-2030-General-Plan-Amend-12.2022-SMc.pdf. Accessed September 20, 2023.

view corridors include scenic highways/roadways, hills and mountains, and urban landscapes that maintain original historic architectural features and contain park/plaza features. Beyond the city limits, scenic resources include the Coastal Mountain Range west of the city and the hills of Point Mugu State Park that bound the southeastern portion of the city.

Scenic highways such as the U.S. 101 Freeway, which is located immediately adjacent and north of the Project site, are considered an aesthetic resource per the City's definition in the 2030 General Plan. The Project would include a 30-foot landscape buffer between the U.S. 101 Freeway and the site development, which would include a putting course, pet park, and landscaping comprised of trees, shrubs, and grasses, as shown in Figure 13. The Project also includes a new 8-foot-high concrete masonry unit block wall along the Project's northern boundary adjacent to the Freeway. The block wall will include an evergreen hedge for internal screening and an evergreen vine for screening Freeway motorists' views of the wall.

Although the proposed multi-family development would be different in height and character from the adjacent land uses, the Project would adhere to the requirements of General Plan Policy CD-9.4 and ensure that the Project positively contributes to the overall character of the city. This would be achieved by minimizing impacts on important view corridors such as the U.S. 101 Freeway by providing an evergreen vine to screen Freeway motorists' view of the proposed CMU block wall. The Project also includes a landscaped buffer corridor south of the proposed wall of at least 30 feet.

It is noted that at the point that the Project site becomes visible from U.S 101 Freeway, the area is built out on both sides of the freeway, with outlet malls, self-storage facilities, parking lots, and a car dealership. As such, views from the U.S. 101 Freeway would not be deemed particularly scenic due to these developed areas. Construction of the Project on the existing vacant parcel would not alter the overall views from the scenic highway as it would generally blend into the existing surrounding development. Also, due to the relatively flat terrain to the south of the U.S. 101 Freeway, no long-range views would be impacted. Views to the north, which include the distant Sulphur Mountain, would not be significantly impacted. No other scenic areas or view corridors are visible from the Project site due to distance and intervening structures. Therefore, the Project would not obstruct scenic views, and impacts would be less than significant.

b) **No Impact.** The Project site is not located along a state-designated scenic highway, according to the 2030 General Plan and the California State Scenic Highway System Map. The nearest eligible state scenic highway is the U.S. 101 Freeway (also known as the Ventura Freeway), located immediately to the north of the Project site; the nearest officially state-designated highway is State Route 33, located approximately 30 miles northwest of the Project site.[3] The Project site is also approximately 1.5 miles east of Oxnard Boulevard, which is also an eligible state scenic highway, as well as a City-designated scenic highway (designated from U.S. 101 to Point Mugu). Due to the Project's location and distance from

[3] California Department of Transportation (Caltrans). 2018. California State Scenic Highways. https://caltrans.maps.arcgis.com/apps/webappviewer/index.html?id=465dfd3d807c46cc8e8057116f1aacaa. Accessed September 20, 2023.

these scenic resources, implementation of the Project would not result in impacts on existing scenic resources to a state or local scenic highway.

c) **Less-than-Significant Impact.** The Project includes the development of a mixed-income multi-family residential development. The Project site is designated as Business Research Park (BRP) according to the 2030 General Plan, but in conjunction with City of Oxnard Ordinance No. 2999,[4] the site also has an Affordable Housing Discretionary (AHD) additive zone. The intent of the BRP zone is to provide areas for a limited group of professional, administrative, and research and limited manufacturing uses along with limited commercial activities intended to support such uses. Residential development in the AHD and Affordable Housing Permitted (AHP) zones are subject to the R-4 High-Rise Residential development standards. The intent of the AHD/AHP zones is to provide opportunities for the development of affordable residential housing to assist the city in reaching its Regional Housing Needs Allocation.

Multi-family residential uses are permitted uses in the AHD/AHP zones with an allowable residential density of 30 dwelling units per acre. The R-4 zones are intended to provide high density, high rise multi-family dwellings, emergency shelters for families, transition housing and supportive housing pursuant to statutory requirements, and other uses suitable for location within the city core.

Multi-family residential uses are also a permitted use in the R-4 zones, along with uses permitted in the R-3 garden apartment zone; high rise or high-density apartments; accessory buildings including other uses customarily incidental to a permitted use; off-street parking; grounds, landscaping, flower and vegetable gardens, and fruit trees. Upon approval of the Zone Map Amendment, the Project would not conflict with the Project site's zoning designation.

The height of the Project would be 67'-6" at its highest point (at the top of the stairs and elevator tower), 63'-2" at the top of the parapet, and 57'-8" at the top of the roof, with an average height of approximately 58'-0" for all building elements, which exceeds the maximum building height of 35 feet for the BRP zones, 45 feet for the R-4 zones, and 56 feet for the AHD zones. With approval of the requested permits, Zone Map Amendment and Special Use Permit, and approval of the requested concessions, waivers and incentives, the Project would be consistent with zoning district development standards for the BRP, AHD, and R-4 zones. The Project would also provide a 20-foot front yard setback and a 30-foot rear yard setback, which complies with the requirement of a maximum 30-foot front yard setback and exceeds the required 20-foot rear setback. Compliance with the Oxnard City Code[5] and General Plan would ensure consistency with applicable land use plans, policies, and regulations adopted to avoid environmental effects.

[4] City of Oxnard. 2021. City Council of the City of Oxnard, Ordinance No. 2999. https://www.oxnard.org/wp-content/uploads/2021/10/Ordinance-No.-2999.pdf. Accessed October 17, 2023.

[5] Oxnard, California Code of Ordinances. 2005. Ordinance No. 2694. https://codelibrary.amlegal.com/codes/oxnard/latest/oxnard_ca/0-0-0-30115. Accessed December 5, 2023.

Regarding architectural design, as mentioned in the Project Description, the Project building would be primarily comprised of various forms of cement, both composite board and plaster, with different sections of the building being painted the primary colors of Warm White, Hamilton Blue (a light grey/blue), California Sagebush (a sage green), Long Lake (a dark grey/blue), Black, and Khaki Brown for the fiber cement lap sidings (see Figures 10–12 for elevations and renderings). The elevator tower would be cladded with perforated aluminum panels. Heat and glare would be reduced by altering the hole size and spacing of the perforated panels. Railings and gates would be comprised of metal, and the windowpanes would be tinted. Architecturally, the Project would be distinct from the adjoining uses to the east and west but would form a cohesive development when viewed in combination with the Lockwood I and Lockwood II senior affordable apartment communities located to the south of Lockwood Street. The other exterior elements of the Project such as the pool, dog runs and fifth floor deck would allow for a community-oriented lifestyle and therefore, implementation of the Project would not substantially degrade the existing visual character or quality of the site or its surroundings. Impacts would be less than significant.

d) **No Impact.** The site is currently undeveloped and is largely devoid of features except for the presence of ruderal vegetation. The existing visual character of the site is not considered to be negative but equally the Project site has no qualities that add to the visual character either. As mentioned in the Project Description, the Project is currently zoned as BRP with an AHD additive zone. As such, the Project site has been planned for development and the proposed mixed-income multi-family residential development realizes that intention. While the Project site is neither visually appealing nor visually disagreeable, the presence of a coherently designed residential building would enhance the visual character of the site. Therefore, as the Project site has been intended for development and not to remain vacant, implementation of the Project would have no impacts related to adding to or compounding an existing negative visual character associated with the Project site.

e) **Less-than-Significant Impact.** The Project site is in an urban area with streetlights and parking lots that create nighttime light pollution. The Project would not contribute a substantial amount of additional light during nighttime hours outside of the Project site. The Project would result in a maximum of 0.2 foot-candle (fc) within the U.S. 101 Freeway right-of-way, a maximum of 0.7 fc east of the Project site, 0.9 fc along Lockwood Street to the south, and a maximum of 0.8 fc within the drainage easement west of the site, Additionally, the Project would not create substantial glare, as reflective surfaces used on the Project exterior would include tinted glazing with vinyl frame on all the windows. Furthermore, metal paneling used for the main portion of the development would be painted and thus not highly reflective. Roof surfaces would include solar photovoltaic panels and reflective white material to reduce albedo effect/urban heat but would be installed in a way to avoid the potential to cause glare. Therefore, the Project would not create a new substantial source of light or glare that would adversely affect views in the Project area. Impacts would be less than significant.

3.2 Agricultural Resources

Issues	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural use?	☐	☐	☐	☒
b) Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Would the project involve other changes in the existing environment that, due to their location or nature, could result in conversion of off-site farmland to non-agricultural use?	☐	☐	☐	☒

Historical aerial imagery shows that the Project site was used for agricultural purposes before 1970. Between 1945 and 1959, a citrus grove was planted. Farming operations ceased sometime between 1970 and 1994, and the lot remained undeveloped. This section has used the California Department of Conservation's California Important Farmland Finder to determine whether Prime Farmland, Unique Farmland, Farmland of Statewide Importance, or Williamson Act contracts currently exist within the Project site.

Discussion

a) **No Impact.** The Project site is currently classified as Urban and Built-Up Land according to the California Department of Conservation's California Important Farmland Finder.[6] This area is not designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. There would be no impacts associated with conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural use. Therefore, implementation of the Project would not convert farmland to urban use, and no impact to farmland would occur.

b) **No Impact.** Williamson Act contracts are formed between a county or city and a landowner for the purposes of restricting specific parcels of land to agricultural preserve areas. According to the 2023 General Plan, the Project site is not under any agricultural use and is currently zoned as BRP with an AHD additive zone land use designation. Because there are no active Williamson Act contracts associated with the Project site, and the site is not designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, the Project would not conflict with existing agricultural zoning or a Williamson Act contract. Therefore, no impacts related to agricultural zoning or a Williamson Act contract would occur due to implementation of the Project.

c) **No Impact.** The nearest lands designated as Prime Farmland or Farmland of Statewide Importance are located approximately 0.6 miles south of the Project site along Cesar Chavez Drive, approximately 0.4 miles east of the Project site along North Rice Avenue, and approximately 0.4 miles north of the Project site along Auto Center Drive. Due to the

[6] California Department of Conservation (DOC). 2022. California Important Farmland Finder. https://maps.conservation.ca.gov/DLRP/CIFF/. Accessed September 29, 2023.

distance to the nearest land designated as Prime Farmland or Farmland of Statewide Importance, the construction and operation of the Project would not involve other changes in the existing environment that would result in the conversion of off-site farmland to non-agricultural use.

3.3 Air Quality

Issues	*Potentially Significant Impact*	*Less than Significant with Mitigation Incorporated*	*Less than Significant Impact*	*No Impact*
a) Would the project conflict with population or other growth forecasts contained in the Ventura County AQMP or otherwise obstruct implementation of the Ventura County AQMP?	☐	☐	☒	☐
b) Would the project violate any federal or state air quality standard or contribute substantially to an existing or projected air quality standard violation?	☐	☐	☒	☐
c) Would the project result in a net increase of any criteria pollutant in excess of quantitative thresholds recommended by the VCAPCD?	☐	☐	☒	☐
d) Would the project expose sensitive receptors to substantial pollutant concentrations exceeding state or federal standards or in excess of applicable health risk criteria for toxic air contaminants?	☐	☐	☒	☐
e) Would the project create objectionable odors affecting a substantial number of people?	☐	☐	☒	☐

The project site is located in the South Central Coast Air Basin (SCCAB), which covers Ventura, Santa Barbara, and San Luis Obispo Counties. The Ventura County Air Pollution Control District (VCAPCD) is responsible for attaining and maintaining air quality standards in the Ventura County portion of the SCCAB through a comprehensive portfolio of planning, regulation, enforcement, technical innovation, and education around air quality issues. The clean air strategy of VCAPCD includes preparation of plans for attainment of ambient air quality standards, adoption and enforcement of rules and regulations concerning sources of air pollution, and issuance of permits for stationary sources of air pollution.[7]

An Air Quality/Health Risk Assessment/Greenhouse Gas/Energy Impact Analysis was prepared for the Project by Meridian Consultants,[8] which informs the analysis of potential impacts to air quality. See **Appendix B** of this IS/MND.

Discussion

a) **Less-than-Significant Impact.** The Ventura County portion of the SCCAB is in nonattainment for ozone for the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) and for respirable particulate matter 10 micrometers in diameter and smaller (PM10) for the CAAQS. VCAPCD and the Ventura Council Association of Governments (VCOG) are responsible for preparing the air quality management plan (AQMP), which addresses federal and state Clean Air Act (CAA) requirements. The VCAPCD has adopted AQMPs to meet the CAAQS and

[7] VCAPCD. 2003. *Ventura County Air Quality Assessment Guidelines.* October. http://www.vcapcd.org/pubs/Planning/VCAQGuidelines.pdf. Accessed October 26, 2023.

[8] Meridian Consultants. 2023. Air Quality/Health Risk Assessment/Greenhouse Gas/Energy Impact Analysis.

NAAQS. The VCAPCD board approved the 2022 AQMP on December 13, 2022.[9] The California Air Resources Board (CARB) approved the 2022 AQMP on January 26, 2023. The goals of the 2022 AQMP are to ensure that city and county population growth does not interfere with emission reductions and progress in meeting the state and national ambient air quality standards.

Because the Project is under the jurisdiction of the VCAPCD for air quality planning and control, VCAPCD's 2022 AQMP is the applicable air quality plan for the Project. Projects that are consistent with the regional population, housing, and employment forecasts identified by the VCOG are deemed consistent with the AQMP growth projections, since the forecast assumptions by VCOG form the basis of the land use and transportation control portions of the AQMP. Additionally, because VCOG's regional growth forecasts are based upon, among other things, land uses designated in general plans, a project that is consistent with the land use designated in a general plan would also be consistent with the VCOG's regional forecast projections, and thus also with the AQMP growth projections.

The Project includes the construction of a 5-story, approximately 234-unit, multi-family residential building. This residential building would not increase population beyond that projected in the 2030 General Plan.[10] The Southern California Association of Governments (SCAG) estimates that the population of Oxnard will increase by 32,100 residents and generate 15,000 new jobs between 2016 and 2045.[11] Even in the unlikely event that all new jobs created by the Project were to result in new residents to Oxnard, the Project would result in less than 1 percent of expected city population and employment growth. Therefore, the Project would not result in population growth that would exceed the regional forecast and would not conflict with the VCAPCD's AQMP, so impacts would be less than significant.

The Environmental Resources Chapter of the 2030 General Plan contains goals and policies related to air quality resources. The goals and policies related to air quality resources that are applicable to the Project include the following:

> **Goal ER-14:** Improved air quality and minimized adverse effects of air pollution on human health and the economy.
>
> > **Policy ER-14.4:** Require all construction equipment to be maintained and tuned to meet appropriate U.S. Environmental Protection Agency (EPA), CARB, and VCAPCD emissions requirements and when new emission control devices or operational modifications are found to be effective, such devices or operational modifications are required on construction equipment.

[9] VCAPCD. 2022. *Final 2022 Ventura County Air Quality Management Plan*. December 2022. http://www.vcapcd.org/pubs/Planning/AQMP/2022/Final-2022-AQMP-with-appendices-20221130.pdf. Accessed October 26, 2023.

[10] City of Oxnard. 2011. 2030 General Plan – Goals and Policies Goals and Policies. https://www.oxnard.org/wp-content/uploads/2017/06/Oxnard-2030-General-Plan-Amend-12.2022-SMc.pdf. Accessed October 27, 2023.

[11] Southern California Association of Governments 2020. https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal-plansummary_0.pdf?1606000989. Accessed October 27, 2023.

Policy ER-14.5: Require that the construction period be lengthened to minimize the number of vehicles and equipment operating at the same time during smog season (May through October).

Policy ER-14.6: Continue to require mitigation measures as a condition of obtaining building or use permits to minimize dust and air emissions impacts from construction.

Policy ER-14.8: Cooperate with other local, county, regional, and state agencies in implementing air quality plans to achieve state and federal Ambient Air Quality Standards and in preparing, adopting, and implementing the SCAG Sustainable Communities Strategy (SB 375).

Policy ER-14.12: Consult with the VCAPCD during CEQA review for projects that require air quality impact analysis and ensure that the VCAPCD is on the distribution list for all CEQA documents.

Compliance with the above General Plan goals and policies would reduce potential emissions of criteria pollutants. Therefore, construction of the Project would not generate any significant environmental impacts associated with air quality compliance. Therefore, because implementation of the Project would not exceed applicable growth projections and would not conflict with any applicable General Plan air quality resource goals and policies, the Project would not conflict with the VCAPCD's AQMP, and impacts would be less than significant.

b, c) **Less-than-Significant Impact.** The City of Oxnard has not developed specific air quality thresholds for air quality impacts. However, as stated in Appendix G of the CEQA Guidelines, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the above determinations. As such, the significance thresholds and analysis methodologies in VCAPCD's CEQA Air Quality Handbook are used in evaluating air quality emissions impacts within the city of Oxnard. The VCAPCD's CEQA Air Quality Handbook focuses on reducing ozone precursor emissions, which includes reactive organic gases (ROGs) (also referred to as volatile organic compounds [VOCs]) and nitrogen oxides (NO_X) because emissions of these pollutants could jeopardize attainment of the NAAQS and CAAQS for ozone in Ventura County. The VCAPCD thresholds of significance include a maximum daily ROG or NO_X emissions above 25 pounds per day (lbs/day). The other criteria pollutants of concern include carbon monoxide (CO), which is a colorless and odorless gas and can cause dizziness, confusion, unconsciousness or even death at high levels; sulfur dioxide (SO_2), which is also colorless and can cause asthma exacerbation, including bronchoconstriction accompanied by symptoms of respiratory irritation, such as wheezing, shortness of breath and chest tightness; and PM10 and fine particulate matter 2.5 micrometers or less in diameter (PM2.5), which can worsen respiratory diseases, including asthma and chronic obstructive pulmonary disease, leading to hospitalization and emergency department visits and respiratory mortality. The VCAPCD has not established mass emission significance thresholds for CO, SO_2, PM10 or PM2.5.

Maximum daily emissions of air pollutants during construction of the Project were calculated using CalEEMod (Appendix B). Mobile sources (such as diesel-fueled equipment on-site and vehicles traveling to and from the Project site) would primarily

generate NOx emissions. The application of architectural coatings would primarily result in the release of VOC emissions. **Table 3** identifies daily emissions that are estimated for peak construction days for each construction year. Including regulatory compliance measures for all phases would further reduce emissions provided in the table below. As shown in Table 3, construction-related emissions would not exceed 25 pounds per day for VOC and NOx. Therefore, the Project's construction emission impacts would be less than significant, and no mitigation would be required.

TABLE 3
MAXIMUM CONSTRUCTION EMISSIONS

	VOC	NOx	CO	SO_X	PM10	PM2.5
Source			**lbs/day**			
2025	1.9	24.1	29.3	<0.1	2.9	1.6
2026	1.8	11.6	23.1	<0.1	2.8	0.9
2027	24.2	18.9	36.2	<0.1	3.7	1.3

Threshold exceeded?	No	No	No	No	No	No

SOURCE: Meridian Consultants, *Air Quality/Health Risk Assessment/Greenhouse Gas/Energy Impact Analysis*, 2023.

Operational emissions would result primarily from vehicles traveling to and from the Project site. The Project Traffic Study determined that the Project would generate a net total of 1,175 daily trips. The results presented in **Table 4** are compared to the VCAPCD-established operational significance thresholds. As shown in Table 4, the operational emissions would not exceed the regional VOC and NOx concentration thresholds. Therefore, the Project's operational emission impacts would be less than significant, and no mitigation would be required.

TABLE 4
MAXIMUM OPERATIONAL EMISSIONS

	VOC	NO_x	CO	SO_x	PM10	PM2.5

SOURCE: Meridian Consultants, *Air Quality/Health Risk Assessment/Greenhouse Gas/Energy Impact Analysis*, 2023.

the geographic scope for regional cumulative air quality impacts consists of the air basin(s) in which the Project will be built. The VCAPCD's approach for assessing cumulative

impacts is based on attainment of ambient air quality standards in accordance with the requirements of the CAA and California Clean Air Act. As discussed earlier, the VCAPCD has developed a comprehensive plan, the 2022 AQMP, which addresses the region's cumulative air quality condition. CEQA Guidelines Section 15064(h)(3) also provides guidance in determining the significance of cumulative impacts.

Development of the Project in conjunction with any related projects near the Project site would result in an increase in construction and operational emissions in an already urbanized area of the city. However, cumulative air quality impacts from construction, based on VCAPCD guidelines, are not analyzed in a manner similar to project-specific air quality impacts. Instead, VCAPCD recommends that a project's potential contribution to cumulative impacts should be assessed using the same significance criteria as those for project-specific impacts. According to VCAPCD, individual development projects that generate construction or operational emissions that exceed VCAPCD recommended daily regional or localized thresholds for project-specific impacts would also cause a cumulatively considerable increase in emissions for those pollutants for which the basin is in nonattainment. With the implementation of regulatory compliance measures such as Rule 55 (Fugitive Dust) and Rule 74.2 (Architectural Coating), the Project's construction and operational emissions are not expected to significantly contribute to cumulative emissions. As such, the Project's contribution to cumulative air quality emissions in combination with any related projects would not be cumulatively considerable, and impacts would be less than significant.

d) **Less-than-Significant Impact.** Sensitive receptors are individuals who are considered more sensitive to air pollutants than others. The reasons for greater than average sensitivity may include pre-existing health problems, proximity to emissions sources, or duration of exposure to air pollutants. Schools, hospitals, and convalescent homes are considered as relatively sensitive to poor air quality because children, elderly people, and the infirm are more susceptible to respiratory distress and other air quality-related health problems than the general public. Residential areas are considered sensitive to poor air quality because people usually stay home for extended periods of time, with associated greater exposure to ambient air quality.

The Pacific Senior Living facility is located approximately 830 feet southeast of the Project site. To be conservative, the nearest sensitive receptors were assumed to be as close as 25 feet from the Project site. However, since air emissions disperse rapidly in the environment and decrease with distance from the source, exposure associated with emissions from construction activities would be limited.

CO Hotspots

Emissions of CO are generated in greatest quantities from motor vehicle combustion of fossil fuels and are usually concentrated at or near ground level because they do not readily disperse into the atmosphere, particularly under cool, stable (i.e., low or no wind) atmospheric conditions. Localized areas where ambient concentrations exceed state and/or federal standards are termed CO hotspots. The VCAPCD uses a screening analysis to

determine the potential for CO hotspots for any project with indirect emissions greater than the applicable ozone project significance levels as analyzed under III. Air Quality b) above where roadway intersections are currently operating at or are expected to operate at a level of service (LOS) of E or F. As indicated in Table 4 above, the Project would not exceed regulatory thresholds for VOC or NO_X. Additionally, as analyzed under Section 3.15, *Transportation and Circulation*, Item a), the Project would operate at LOS B or better during the AM peak hour and PM peak hour periods, which meets the city's LOS C standard. In addition, all intersections are expected to operate at LOS ratings of C or better with Project buildout, which would comply with the city's intersection LOS standard of LOS C or better.[12] Therefore, because the Project does not exceed regulatory thresholds and the Project would not result in a LOS of E or F, a refined CO hotspot analysis is not warranted, and the Project would be less than significant with respect to CO impacts.

Localized Air Quality Impacts – Toxic Air Contaminants

Toxic air contaminants (TACs) are generally defined as those contaminants that are known or suspected to cause serious health problems, but which do not have a corresponding ambient air quality standard. TACs are also defined as air pollutants that may increase a person's risk of developing cancer and/or serious health effects; however, the emission of a toxic chemical does not automatically create a health hazard. Project construction would result in short-term emissions of diesel particulate matter, a TAC. Diesel particulate matter poses a carcinogenic health risk that is measured using an exposure period of 70 years for a lifetime exposure or 30 years for a residential exposure. The exhaust of off-road heavy-duty diesel equipment would emit diesel particulate matter. The dose to which receptors are exposed is the primary factor used to determine health risk (i.e., the potential exposure to TACs to be compared to applicable standards). Dose is a function of the concentration of a substance or substances in the environment and the duration of exposure to the substance. Dose is positively correlated with time, meaning that a longer exposure period would result in a higher exposure level for the maximally exposed individual. Thus, the risks estimated for a maximally exposed individual are higher if a fixed exposure occurs over a longer time period. According to the Office of Environmental Health Hazard Assessment, carcinogenic health risk assessments, which determine the exposure of sensitive receptors to TAC emissions, should be based on a 70-year exposure period for a lifetime exposure or 30 years for a residential exposure; however, such assessments should be limited to the period or duration of activities.

Health effects from carcinogenic air toxics are identified and considered in terms of individual cancer risk. Specifically, "Individual Cancer Risk" is the likelihood that a person continuously exposed to concentrations of TAC over a 70-year lifetime will contract cancer based on the use of standard risk assessment methodology. The greatest potential for diesel particulate emissions would only occur during excavation/grading activities, which are scheduled for approximately 46 days. Other construction activities which are estimated to take approximately 2 years, would result in a reduced use of heavy-duty diesel construction equipment in comparison to excavation/grading activities. The Project would therefore not

[12] Meridian Consultants. 2023. *Air Quality/Health Risk Assessment/Greenhouse Gas/Energy Impact Analysis*.

result in a long-term (i.e., 70 year) source of TAC emissions. No residual TAC emissions and corresponding individual cancer risks are anticipated after construction. Because there is such a short-term exposure period (25 out of 840 months of a 70-year lifetime), further evaluation of construction TAC emissions is not warranted. Additionally, the Project would be required to comply with the applicable 2030 General Plan goal and policies, such as Policy ER-14.4 which requires all construction equipment to be properly maintained to meet EPA, CARB, and VCAPCD emissions requirements.

Freeways and high-traffic roads are significant sources of TAC emissions. CARB recommends siting sensitive land uses at least 500 feet away from such sources. As the Project would develop residential areas near the U.S. 101 Freeway, a health risk assessment was conducted to disclose the potential risk to future occupants of the Project. The closest lane of traffic on the U.S. 101 Freeway would be approximately 25 feet from the Project site property line where development would occur. The residential units along the Project site's northern boundary would have an additional buffer distance of approximately 84 feet from the property line. As described in the *Air Quality/Health Risk Assessment/Greenhouse Gas/Energy Analysis* (Appendix B), the building would have an adequate heating, air conditioning, and ventilation (HVAC) system along with a project design features that includes the installation of high efficiency minimum efficiency reporting value (MERV) filters of MERV 14 or better in the intake of residential ventilation systems. The HVAC systems are proposed to be installed with a fan unit power designed to force air through the MERV 14 filter which would result in a cancer risk at the maximum exposed receptor of 5.18 in one million. This cancer risk is less than the VCAPCD cancer risk threshold of 10 in one million. Pursuant to Oxnard Code of Ordinances, Section 16-420J, *Special Development Requirements*, to ensure long-term maintenance and replacement of the MERV 14 filters in the individual units, the following shall occur:

(1) The developer, sale, and/or rental representative shall provide notification to all affected tenants/residents of the potential health risk from the U.S. 101 Freeway and industrial zones for all affected units, per Item (3) below of this section.

(2) For rental units within 500 feet of the U.S. 101 Freeway or any industrially zoned property, the owner/property manager shall maintain and replace MERV 14 filters in accordance with the manufacturer's recommendations. The property owner shall inform renters of increased risk of exposure to diesel particulates from the U.S. 101 Freeway and industrially zoned properties when windows are open.

(3) For residential owned units within 500 feet of the U.S. 101 Freeway or an industrially zoned property, the homeowners' association shall incorporate requirements for long-term maintenance in the covenant conditions and restrictions and inform homeowners of their responsibility to maintain the MERV 14 filter in accordance with the manufacturer's recommendations. The homeowners' association shall inform homeowners of increased risk of exposure to diesel particulates from the U.S. 101 Freeway when windows are open.

The Project would not expose sensitive receptors to substantial pollutant concentrations exceeding state or federal standards or in excess of applicable health risk criteria for toxic

air contaminants (i.e., 10 in one million). Health risk impacts would be less than significant, and no mitigation would be required.

e) **Less-than-Significant Impact.** During the construction of the Project, diesel trucks and off-road construction equipment may emit odors such as that of diesel exhaust. Such odors would be a temporary source of nuisance to adjacent uses but would not affect a substantial number of people. As odors associated with construction would be temporary and intermittent in nature, the odors would be considered a less-than-significant impact.

Mandatory compliance with VCAPCD Rule 74.2 would limit the number of VOCs in architectural coatings and solvents. According to VCAPCD, while almost any source may emit objectionable odors, some land uses are more likely to produce odors because of their operation. Land uses more likely to produce odors include agriculture, chemical plants, composting operations, dairies, fiberglass molding manufacturing, landfills, refineries, rendering plants, rail yards, and wastewater treatment plants.

The Project would not contain any active manufacturing activities and would not convert current agricultural land to residential land uses. Therefore, objectionable odors would not be emitted by the proposed uses. Any unforeseen odors generated by the Project will be controlled in accordance with VCAPCD Rule 51 and Rule 55. As previously noted, Rule 51 prohibits the discharge of air contaminants that harm, endanger, or annoy individuals or the public; endanger the comfort, health or safety of individuals or the public; or cause injury or damage to business or property. Failure to comply with Rule 51 could subject the offending facility to possible fines and/or operational limitations in an approved odor control or odor abatement plan. Also as previously noted, Rule 55 limits the generation of fugitive dust (particulate matter).

3.4 Biological Resources

Issues	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Would the project have a substantial adverse effect on federally protected waters of the U.S. as defined by Section 404 of the federal Clean Water Act or protected waters of the state as defined by Section 1600 et seq. of the California Fish and Game Code (including, but not limited to, marshes, vernal pools, coastal wetlands) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e) Would the project conflict with any local policies or ordinances protecting biological resources?	☐	☐	☐	☒
f) Would the project conflict with an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

To identify the potential biological resource constraints associated with the Project, ESA conducted a literature review and follow-on site survey to characterize existing conditions and determine the potential for sensitive biological resources to occur within the Project site or in a 200-foot buffer area. The Project site and the buffer together comprise the biological survey area. The following resource inventory databases and various publications were referenced:

- California Natural Diversity Data Base (CNDDB).[13] The database was queried for special-status species records in the Oxnard U.S. Geological Survey 7.5-minute quadrangle and five surrounding quadrangles including Ventura, Saticoy, Santa Paula, Camarillo, and Point Mugu.
- Natural Community List.[14]

[13] CDFW. 2023a. California Natural Diversity Data Base (CNDDB). Database was queried for special status species records in the Oxnard USGS 7.5-minute quadrangle and five surrounding quadrangles including Ventura, Saticoy, Santa Paula, Camarillo, and Point Mugu. Accessed August 10, 2023.

[14] CDFW. 2023b. California Natural Community List. Sacramento, CA: CDFW, Natural Heritage Division. August 10, 2023. https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=153398&inline.

- Inventory of Rare and Endangered Vascular Plants of California.[15] The inventory was queried for special-status species records in the Oxnard U.S. Geological Survey 7.5-minute quadrangle and five surrounding quadrangles including Ventura, Saticoy, Santa Paula, Camarillo, and Point Mugu.
- Critical Coastal Areas Map Viewer.[16]
- Critical Habitat Portal.[17]
- Information for Planning and Consultation.[18] Database was queried for federally listed species records within and immediately surrounding the Project site.

A site survey was conducted by ESA Biologist Sonya Vargas on August 8, 2023. The survey consisted of walking throughout the accessible portions of the survey area to characterize existing conditions, and to determine the potential for special-status plants and wildlife to occur (see **Appendix C-1**). All incidental and visual observations of flora and fauna, including signs (i.e., presence of scat) as well as any audible detections, were noted during the assessment. All native and non-native natural communities and land cover types were characterized and delineated on aerial photographs during the field survey, and then digitized on aerial maps using geographic information system software (ArcGIS). Each natural community was characterized using *A Manual of California Vegetation, Second Edition*[19] as a reference; however, where a particular community was not clearly defined in the publication, it was instead characterized using species dominance or another physical descriptor.

Discussion

a) **Less than Significant with Mitigation Incorporated.** The Project site is heavily disturbed, is surrounded by a chain-link fence, and is bound in all directions by commercial development, with the exception of the U.S. 101 Freeway, which is situated along the northern Project site boundary. The Project site has been regularly disturbed (see **Figure 16**), which was apparent during the site visit and further supported through a review of aerial imagery.[20]

Lockwood III Apartments

Figure 16

Natural Communities and Landcover Types

ESA

This page intentionally left blank

Vegetation within the Project site primarily consists of non-native grasses and forbs, including wild oat (*Avena* sp.), red brome (*Bromus rubens*), ripgut brome (*Bromus diandrus*), soft brome (*Bromus hordeaceus*), short-podded mustard (*Hirschfeldia incana*), crown daisy (*Glebionis coronaria*), tocalote (*Centaurea melitensis*), golden crownbeard (*Verbesina encelioides*), tumbleweed (*Salsola* sp.), wild radish (*Raphanus* sp.), iceplant (*Carpobrotus* sp.), devil's thorn (*Emex spinosa*), and flax-leaved horseweed (*Erigeron bonariensis*). Few native plants were observed but included telegraph weed (*Heterotheca grandiflora*), jimsonweed (*Datura wrightii*), and miniature lupine (*Lupinus bicolor*).

Ornamental trees were observed within the survey area, primarily along the eastern and southern Project site boundary. Species included Mexican fan palm (*Washingtonia robusta*), queen palm (*Syagrus romanzoffian*), Peruvian pepper tree (*Schinus molle*), and magnolia (*Magnolia* sp.). A small cluster of citrus trees (*Citrus* sp.) were observed just outside of the Project site, within the northeast corner of the survey area, as well.

Bird species observed within the study area were American crow (*Corvus brachyrhynchos*), black phoebe (*Sayornis nigricans*), and California gull (*Larus californicus*). One inactive nest was detected at the northeast corner of the study area, outside the Project site boundaries, at the top of a tower. No other wildlife species were detected; however, small burrows (approximately 2-3 inches) were detected within the site. These small mammal burrows were not the appropriate size or morphology for burrowing owl (*Athene cunicularia*); in addition, no pellets, white-wash, or feathers were detected.

Critical Habitat

Under the Federal Endangered Species Act, to the extent feasible, the USFWS and National Marine Fisheries Service are required to designate critical habitat for endangered and threatened species. Critical habitat is defined as areas of land, water, and air space containing the physical and biological features essential for the survival and recovery of endangered and threatened species. Designated critical habitat includes sites for breeding and rearing, movement or migration, feeding, roosting, cover, and shelter. Designated critical habitats require special management and protection of existing resources, including water quality and quantity, host animals and plants, food availability, pollinators, sunlight, and specific soil types. Critical habitat delineates all suitable habitat, occupied or not, essential to the survival and recovery of the species.

The USFWS Critical Habitat Portal indicates that critical habitat does not occur within the study area. Critical habitat for the southwestern willow flycatcher (*Empidonax traillii extimus*) occurs approximately 2.5 miles northwest of the Project site, but no habitat for this species occurs within the study area. Therefore, the Project would not result in an impact to critical habitat.

Special-Status Species

Special-status species are defined as those that, because of their recognized rarity or vulnerability to various forms of habitat loss or population decline, are recognized by federal, state, or other agencies as under threat from human-associated developments. Some

of these species receive specific protection that is defined by federal or state endangered species legislation. Others have been designated as special status on the basis of adopted policies and the expertise of state resource agencies or other respected organizations, or policies adopted by local governmental agencies such as counties, cities, and special districts to meet local conservation objectives. Special-status species are defined as follows:

- Species listed or proposed for listing as threatened or endangered under the Federal Endangered Species Act (50 CFR 17.11 for listed animals and 50 CFR 17.12 for listed plants and various notices in the Federal Register for proposed species).
- Species that are candidates for possible future listing as threatened or endangered under the Federal Endangered Species Act (Federal Register, December 2, 2016).
- Species that meet the definitions of rare or endangered species under CEQA (State CEQA Guidelines, Section 15380).
- Species listed, proposed for listing, or identified as candidate species for listing by the State of California as threatened or endangered under the California Endangered Species Act (14 CCR 670.5 animals; 14 CCR 670.2 plants).
- Animal species of special concern to the CDFW.[21,22,23,24]
- Animal species that are fully protected in California (California Fish and Game Code [FGC], Sections 3511 [birds], 4700 [mammals], 5050 [reptiles and amphibians], and 5515 [fish]).
- Bat species considered priority by the Western Bat Working Group.[25]
- Bird species protected by the Migratory Bird Treaty Act.
- Plants considered by the CNPS to be rare, threatened, or endangered (Rank 1A, 1B, 2A, and 2B plants) in California.
- Plants listed as rare under the California Native Plant Protection Act (FGC 1900 et seq.).
- 2022 Ventura County Planning Division Locally Important Animal List and Ventura County Planning Division 2022 Locally Important Plant List.[26]

A search of the most current CNDDB, CNPS and Information for Planning and Consultation databases revealed that 46 special-status plant and 53 special-status wildlife species have been previously recorded within the Oxnard and surrounding five U.S. Geological Survey 7.5-minute quadrangle maps (see **Appendix C-2**). Based on the

disturbed nature of the study area and the absence of suitable habitat, it was determined that all plant species and 45 of the wildlife species do not have a potential to occur within the study area and are omitted from further discussion.

A total of 8 wildlife species, Crotch bumble bee (*Bombus crotchii*), monarch butterfly – California overwintering population (*Danaus plexippus plexippus* pop. 1), coastal whiptail (*Aspidoscelis tigris stejnegeri*), coast horned lizard (*Phrynosoma blainvillii*), burrowing owl (*Athene cunicularia*), ferruginous hawk (*Buteo regalis*), California horned lark (*Eremophila alpestris actia*), and American peregrine falcon (*Falco peregrinus anatum*), were determined to have a low to moderate potential to occur within the study area, based on the following criteria (see **Appendix C-3**):

- **Low Potential:** Limited habitat exists for a particular species within the study area. For example, the appropriate vegetation assemblage may be present while the substrate preferred by the species may be absent, or the preferred habitat may be present, but has undergone substantial disturbance, such that the species is not expected to occur.
- **Moderate Potential:** Marginal habitat for a particular species is present within the survey area. For example, the available habitat may be somewhat disturbed and/or may not support all stages of a species' life cycle, or it may not fit all preferred habitat characteristics, however, still supports important components, such as a particular soil or community type.

One species, the California horned lark (*Eremophila alpestris actia*) was determined to have a moderate potential to occur within the study area. This species, as well as other migratory bird species protected in accordance with the Migratory Bird Treaty Act and Sections 3505, 3503.5, and 3511 of the California Fish and Game Code may nest within or directly adjacent to the study area and may be affected by Project construction. Impacts associated with Project construction may include the removal of an active nest or the disruption of breeding behavior. To avoid impacts to nesting birds, construction activities should be scheduled outside of the avian nesting season (February 15 to September 15). If this is not feasible, implementation of **Mitigation Measure BIO-1** would ensure that impacts to nesting birds would be considered less than significant.

Mitigation Measure BIO-1: If construction activities occur within the bird nesting season (generally defined as February 15 through September 15), a qualified biologist shall conduct a nesting bird survey within 7 days prior to the start of construction. If an active nest is observed within 500 feet of the proposed construction, the nest shall be avoided, and a suitable buffer zone shall be delineated in the field such that no impacts shall occur until the nest has been determined to be inactive by a qualified biologist. Construction buffers are generally 300 feet for passerines and up to 500 feet for raptor species; however, avoidance buffers may be reduced at the discretion of the biologist, depending on the location of the nest and species tolerance to human presence and construction-related noise.

If activities must take place within an established buffer, steps shall be taken to reduce indirect effects to nesting activity by actively reducing construction noise within proximity to a presumed nest location and/or installing temporary construction noise barriers. If the

reduction of noise is not feasible, construction activities shall be postponed until the nest is deemed inactive and/or the breeding season has concluded.

b) **No Impact.** "Sensitive" natural communities and habitats are defined by the CDFW as those natural communities that have a reduced range and/or are imperiled as a result of residential and commercial development, agriculture, energy production and mining, or an influx of invasive and other problematic species. Vegetation communities are evaluated using the CDFW's Vegetation Classification and Mapping Program (VegCAMP) Heritage Methodology, which is based on the knowledge of range and distribution of a specific vegetation type and the proportion of occurrences that are of good ecological integrity. Evaluation is done at both Global (natural range within and outside of California [G]) and Subnational (state level for California [S]) levels, each ranked from 1 (critically imperiled or very rare and threatened) to 5 (demonstrably secure). Natural communities and habitats with state ranks of S1-S3 are considered Sensitive Natural Communities and require review when evaluating environmental impact.[27] Sensitive natural communities are not present within the study area.

As the Project site does not support riparian vegetation or any other sensitive natural communities identified in regional plans, policies, or regulations, or by the California Department of Fish and Game or USFWS, impacts to riparian vegetation or other sensitive natural communities are not expected. No impact to riparian vegetation or other sensitive natural communities and habitat would occur.

c) **No Impact.** Wetlands (including swamps, bogs, seasonal wetlands, seeps, marshes, and similar areas) are considered waters of the U.S., and are defined by U.S. Army Corps of Engineers as "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" (33 CFR 328.3[b]; 40 CFR 230.3[t]). No wetland features are identified by the National Wetlands Inventory as occurring within the Project area[28] and during the site survey, no wetland features were observed. Additionally, other aquatic resources regulated by the CDFW or Regional Water Quality Control Board do not occur onsite. Since Project construction would not extend into wetlands as there is none present, no impact to wetlands or protected waters would occur.

d) **No Impact.** Wildlife corridors are features that exist as topographical or structural pinch points that, among other purposes, are used by wildlife for travel from one geographical area to the next. Features such as a dry culvert under a roadway may support limited biological function and may be used strictly for travel purposes. More often, wildlife corridors contain natural vegetation and habitats that support foraging, roosting, and

[27] CDFW. 2023c. Natural Communities. https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=153609&inline. Accessed August 10, 2023.

[28] USFWS. 2023c. National Wetland Inventory (NWI) Data Mapper. https://www.fws.gov/wetlands/Data/Mapper.html. Accessed August 10, 2023.

breeding activities as well. Very often, particularly in the case of riparian corridors, aquatic species depend entirely on these features to persist.

Wildlife corridors are not present within the Project site, which is surrounded by fencing and urban development. Thus, the Project would not result in impacts to existing wildlife corridors or affect wildlife movement.

e) **No Impact.** The Project would not result in the removal, impact, and/or replacement of ornamental trees observed along the Project site boundary; therefore, the Project will not conflict with local policies or ordinances protecting biological resources such as the City of Oxnard Landscape Standards.[29] No impact to protected trees would occur.

f) **No Impact.** The Project site is not located within any habitat conservation plan or natural community conservation plan areas or other approved local, regional, or state habitat conservation plan area. Therefore, the Project would not conflict with provisions of an adopted natural community conservation plan or other approved local, regional, or state habitat conservation plan, and no impact would occur.

3.5 Climate Change and Greenhouse Gas Emissions

Issues	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b) Would the project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases or otherwise conflict with the state goal for reducing greenhouse gas emissions in California?	☐	☐	☒	☐
c) Would the project contribute or be subject to potential secondary effects of climate change (e.g., sea level rise, increase fire hazard)?	☐	☐	☒	☐

State-regulated greenhouse gases (GHGs) include carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), nitrogen trifluoride (NF_3), and sulfur hexafluoride (SF_6). CO_2 is the most abundant GHG in the atmosphere. Not all GHGs exhibit the same ability to induce climate change; as a result, GHG contributions are commonly quantified in equivalent mass of CO_2, denoted as CO_2e. Mass emissions are calculated by converting pollutant specific emissions to CO_2e emissions by applying the proper global warming potential (GWP) value. These GWP ratios are available from the U.S. Environmental Protection Agency and are published in the California Climate Action Registry General Reporting Protocol. By applying the GWP ratios, Project-related CO_2e emissions can be tabulated in metric tons per year.

Discussion

a, b) **Less-than-Significant Impact.** Neither the City nor the VCAPCD have adopted a numerical significance threshold for assessing impacts related to GHG emissions from a project, and the City has not formally adopted a local plan for reducing GHG emission. When no guidance exists under CEQA, the lead agency may look to and assess general compliance with comparable regulatory schemes.[30] In its January 2008 CEQA and Climate Change white paper, the California Air Pollution Control Officer's Association (CAPCOA) identified a number of potential approaches for determining the significance of GHG emissions in CEQA documents. In its white paper, CAPCOA suggests making significance determinations on a case-by-case basis when no significance thresholds have been formally adopted by a lead agency.[31]

[30] See *Protect Historic Amador Waterways v. Amador Water Agency* (2004) 116 Cal. App. 4th 1099, 1107 ["'[A] lead agency's use of existing environmental standards in determining the significance of a project's environmental impacts is an effective means of promoting consistency in significance determinations and integrating CEQA environmental review activities with other environmental program planning and resolution.'"]. Lead agencies can, and often do, use regulatory agencies' performance standards. A project's compliance with these standards usually is presumed to provide an adequate level of protection for environmental resources. See, e.g., *Cadiz Land Co. v. Rail Cycle* (2000) 83 Cal.App.4th 74, 99 (upholding use of regulatory agency performance standard).

[31] California Air Pollution Control Officers Association (CAPCOA), 2008. CEQA & Climate Change Evaluating and Addressing Greenhouse Gas Emissions from Projects Subject to the California Environmental Quality Act. http://www.capcoa.org/wp-content/uploads/2012/03/CAPCOA-White-Paper.pdf. Accessed October 25, 2023.

Amendments to Section 15064.4 of the CEQA Guidelines were adopted to assist lead agencies in determining the significance of the impacts of GHG emissions. Consistent with existing CEQA practice, Section 15064.4 gives lead agencies the discretion to determine whether to assess those emissions quantitatively or qualitatively. If a qualitative analysis is used, in addition to quantification, this section recommends certain qualitative factors that may be used in the determination of significance (i.e., the extent to which the Project may increase or reduce GHG emissions compared to the existing environment; whether the Project exceeds an applicable significance threshold; and the extent to which the Project complies with regulations or requirements adopted to implement a reduction or mitigation of GHGs). The amendments do not establish a threshold of significance; rather, lead agencies are granted discretion to establish significance thresholds for their respective jurisdictions, including looking at thresholds developed by other public agencies, or suggested by other experts, such as CAPCOA, so long as any threshold chosen is supported by substantial evidence (see Section 15064.7). The California Natural Resources Agency has also clarified that the CEQA Guidelines amendments focus on the effects of GHG emissions as cumulative impacts, and that they should be analyzed in the context of CEQA's requirements for cumulative impact analysis (see Section 15064(h)(3)).[32]

Although GHG emissions can be quantified, CARB, VCAPCD and the City of Oxnard have not adopted project-level significance thresholds for GHG emissions that would be applicable to the Project. The Governor's Office of Planning and Research released a technical advisory on CEQA and climate change that provided some guidance on assessing the significance of GHG emissions, and states that "lead agencies may undertake a project-by-project analysis, consistent with available guidance and current CEQA practice," and that while "climate change is ultimately a cumulative impact, not every individual project that emits GHGs must necessarily be found to contribute to a significant cumulative impact on the environment."[33] Furthermore, the technical advisory states that "CEQA authorizes reliance on previously approved plans and mitigation programs that have adequately analyzed and mitigated GHG emissions to less than significant as a means to avoid or substantially reduce the cumulative impact of a project."[34]

Per CEQA Guidelines Section 15064(h)(3), a project's incremental contribution to a cumulative impact can be found not cumulatively considerable if the project would comply with an approved plan or mitigation program that provides specific requirements that will

[32] See generally California Natural Resources Agency, Final Statement of Reasons for Regulatory Action (December 2009), pp. 11–13, 14, 16. http://resources.ca.gov/ceqa/docs/Final_Statement_of_Reasons.pdf, accessed November 2019; see also Letter from Cynthia Bryant, Director of the Office of Planning and Research to Mike Chrisman, Secretary for Natural Resources, April 13, 2009. http://www.valleyair.org/Programs/CCAP/documents/Transmittal_LetterOPRApril2009.pdf and http://opr.ca.gov/docs/Transmittal_Letter.pdf. Accessed October 2023.

[33] Governor's Office of Planning and Research, Technical Advisory – CEQA and Climate Change: Addressing Climate Change through California Environmental Quality Act (CEQA) Review, (2008).

[34] See generally California Natural Resources Agency, Final Statement of Reasons for Regulatory Action (December 2009), pp. 11–13, 14, 16. http://resources.ca.gov/ceqa/docs/Final_Statement_of_Reasons.pdf, accessed November 2019; see also Letter from Cynthia Bryant, Director of the Office of Planning and Research to Mike Chrisman, Secretary for Natural Resources, April 13, 2009. http://www.valleyair.org/Programs/CCAP/documents/Transmittal_LetterOPRApril2009.pdf and http://opr.ca.gov/docs/Transmittal_Letter.pdf. Accessed October 2023.

avoid or substantially lessen the cumulative problem within the geographic area of the project. To qualify, such a plan or program must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency. Examples of such programs include a "water quality control plan, air quality attainment or maintenance plan, integrated waste management plan, habitat conservation plan, natural community conservation plan, [and] plans or regulations for the reduction of greenhouse gas emissions." Thus, CEQA Guidelines Section 15064(h)(3) allows a lead agency to make a finding of non-significance for GHG emissions if a project complies with a program and/or other regulatory schemes to reduce GHG emissions.[35]

In the absence of any adopted, quantitative threshold, the Project would not have a significant effect on the environment if the Project is found to be consistent with the applicable regulatory plans and policies to reduce GHG emissions, including CALGreen Standards, 2022 Scoping Plan Update, City of Oxnard Climate Action and Adaptation Plan, and SCAGs' Sustainable Communities Strategy (SCS).

Construction and Operational Greenhouse Gas Emissions

As analyzed in the *Air Quality/Health Risk Assessment/Greenhouse Gas/Energy Impact Analysis* in Appendix B, the forecasting of construction-related GHG emissions requires assumptions regarding the timing of construction as the emission factors for some of the Project's construction-related GHG emission sources decline over time. As shown in **Table 5**, total construction emissions would be 1,761 metric tons of CO_2e ($MTCO_2e$). One-time, short-term emissions are converted to average annual emissions by amortizing them over the service life of a building. For buildings in general, it is reasonable to look at a 30-year time frame because this is a typical interval before a new building requires its first major renovation. As shown in Table 5, when amortized over an average 30-year Project lifetime, average annual construction emissions from the Project would be 59 $MTCO_2e$ per year.

[35] See, for example, San Joaquin Valley Air Pollution Control District (SJVAPCD), CEQA Determinations of Significance for Projects Subject to ARB's GHG Cap-and-Trade Regulation, APR-2025 (June 25, 2014), in which the SJVAPCD "determined that GHG emissions increases that are covered under ABR's Cap-and-Trade regulation cannot constitute significant increases under CEQA …" Furthermore, the SCAQMD has taken this position in CEQA documents it has produced as a lead agency. The SCAQMD has prepared three Negative Declarations and one Draft Environmental Impact Report that demonstrate the SCAQMD has applied its 10,000 $MTCO_2e$/yr significance threshold in such a way that GHG emissions covered by the Cap-and-Trade Program do not constitute emissions that must be measured against the threshold. See SCAQMD, Final Negative Declaration for Ultramar Inc. Wilmington Refinery Cogeneration Project, SCH No. 2012041014 (October 2014); SCAQMD Final Negative Declaration for Phillips 99 Los Angeles Refinery Carson Plant—Crude Oil Storage Capacity Project, SCH No. 2013091029 (December 2014); SCAQMD Final Mitigated Negative Declaration for Toxic Air Contaminant Reduction for Compliance with SCAQMD Rules 1420.1 and 1402 at the Exide Technologies Facility in Vernon, CA, SCH No. 2014101040 (December 2014); and SCAQMD Final Environmental Impact Report for the Breitburn Santa Fe Springs Blocks 400/700 Upgrade Project, SCH No. 2014121014 (August 2015).

Operation of the Project has the potential to generate GHG emissions through vehicle trips traveling to and from the Project site. In addition, emissions would result from area sources on site, such as natural gas combustion, landscaping equipment, and use of consumer products. Emissions from mobile and area sources and indirect emissions from energy and water use, wastewater, and waste management would occur every year after full Project development. Operational Project emissions from area sources, energy sources, mobile sources, solid waste, and water and wastewater conveyance are shown in **Table 6**. As shown in Table 6, annual operational emissions from the Project would be 1,794 $MTCO_2e$ per year.

Assembly Bill 32/Senate Bill 32 and Executive Order B-30-15

In support of Assembly Bill 32 and Senate Bill 32, the state has promulgated specific laws aimed at GHG reductions.

- Established a new interim statewide reduction target to reduce GHG emissions to 40 percent below 1990 levels by 2030.
- Ordered all state agencies with jurisdiction over sources of GHG emissions to implement measures to achieve reductions of GHG emissions to meet the 2030 and 2050 reduction targets.
- Directed CARB to update the Climate Change Scoping Plan to express the 2030 target in terms of million metric tons of CO_2e.

Executive Order B-55-18

Executive Order B-55-18, issued by Governor Edmund G. Brown, Jr. in September 2018, establishes a new statewide goal to achieve carbon neutrality as soon as possible, but no later than 2045, and achieve and maintain net negative emissions thereafter. Based on this executive order, CARB would work with relevant state agencies to develop a framework for implementation and accounting that tracks progress towards this goal, as well as ensuring future scoping plans identify and recommend measures to achieve the carbon neutrality goal.[36]

CALGreen Standards

The Project is committed to meeting the requirements of the CALGreen Code by incorporating strategies such as low-flow toilets, low-flow faucets, and other energy and resource conservation measures. The Project would comply with applicable energy, water, and waste efficiency measures specified in the Title 24 Building Energy Efficiency Standards and CALGreen standards.

2022 Scoping Plan Update

The 2022 Scoping Plan Update includes "recommendations intended to build momentum for local government actions that align with the state's climate goals, with a focus on local GHG reduction strategies (commonly referred to as climate action planning) and approval of new land use development projects, including through environmental review under the CEQA." The State encourages local governments to adopt a CEQA-qualified comprehensive area plan addressing the three priority areas (transportation electrification, VMT reduction, and building decarbonization). Comprehensive area plans need to be monitored and updated as state targets change, and new data is available. A detailed assessment of the applicable goals, plans, policies implemented by the City, which would support the GHG reduction strategies in the three priority areas is provided below.

Transportation Electrification

- **Convert local government fleets to zero emission vehicles (ZEV).**

The City's goals of converting the municipal fleet to zero emissions and installation of EV chargers throughout the city would be consistent with the Scoping Plan goals of the transitioning to EVs. Although this measure mainly applies to the city fleet, the Project would be designed to provide approximately 175 EV stalls, over 50 percent of the total parking space provided by the proposed development.

[36] California Air Resources Control Board (CARB). 2017. California's 2017 Climate Change Scoping Plan. https://ww2.arb.ca.gov/sites/default/files/classic/cc/scopingplan/scoping_plan_2017.pdf. Accessed October 25, 2023.

- **Create a jurisdiction-specific ZEV ecosystem to support deployment of ZEVs statewide (such as building standards that exceed state building codes, permit streamlining, infrastructure siting, consumer education, preferential parking policies, and ZEV readiness plans).**

The State has adopted AB 1236 and AB 970, which require cities to adopt streamline permitting procedures for EV charging stations. This requires most new construction to designate 30 percent of new parking spaces as capable of supporting future electric vehicle supply equipment (EVSE). This would exceed the CALGreen 2022 requirements of 20 percent of new parking spaces as EV capable. The ordinance also requires new construction to install EVSE at 10 percent of total parking spaces. This requirement also exceeds the CALGreen 2022 requirements of installing EVSE for 25 percent of EV capable parking spaces which is approximately five percent of total parking spaces. Although this measure mainly applies to city fleet, the Project would be designed to provide approximately 175 EV stalls, over 50 percent of the total parking space provided by the proposed development.

- **Increase access to public transit by increasing density of development near transit, improving transit service by increasing service frequency, creating bus priority lanes, reducing or eliminating fares, microtransit, etc.**
- **Increase public access to clean mobility options by planning for and investing in electric shuttles, bike share, car share, and walking.**
- **Amend zoning or development codes to enable mixed-use, walkable, transit-oriented, and compact infill development (such as increasing the allowable density of a neighborhood).**
- **Preserve natural and working lands by implementing land use policies that guide development toward infill areas and do not convert "greenfield" land to urban uses (e.g., green belts, strategic conservation easements).**

The Project's convenient access to public transit and opportunities for walking and biking would result in a reduction of vehicle trips, vehicle miles traveled, and GHG emissions. Specifically, the Project site is located within walking distance of existing residential and commercial uses and meets the SCAGs' (SCS) by integrating land use and transportation strategies. The Project site is served by the City of Oxnard Bikeway system, with Class II bike lanes located along Gonzales Road, Rose Avenue, Solar Drive, and a portion of Lockwood Street east of Outlet Center Drive. These Class II bike lanes connect the Project to commercial and employment areas east and west of the Project. The City of Oxnard is also served by the Gold Coast Transit. Within the Project vicinity, #4A Route (North Oxnard), #4B Route (North Oxnard), #15 Route (Esplanade − El Rio − St. Johns Medical Center), #17 Route (Esplanade – St. Johns Medical Center – Oxnard College), and #19 Route (OTC – 5th – Gonzales Road) provides fixed route bus service on Gonzales Road. Existing bus stops with benches are located on both sides of Gonzales Road and Rose Avenue, less than 0.5 miles from the Project site. Therefore, the Project would be consistent with these reduction strategies.

Southern California Association of Governments' 2045 Regional Transportation Plan/Sustainable Communities Strategy

SCAG has prepared and adopted the 2020-2045 regional transportation plan/sustainable communities strategy (RTP/SCS), which includes an SCS that addresses regional development and growth forecasts. The SCAG 2020-2045 RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals, with a specific goal of achieving an 8 percent reduction in passenger vehicle GHG emissions on a per capita basis by 2020, 19 percent reduction by 2035, and 21 percent reduction by 2040 compared to the 2005 level.[37]

The SCAG's 2020-2045 RTP/SCS is forecast to help California reach its GHG reduction goals. According to the 2020-2045 RTP/SCS, the updated target for the SCAG region is 19 percent below 2005 per capita emissions levels by 2035. The revised 2035 target is higher than the previous CARB target of 13 percent for the SCAG region. **Table 7** summarizes the Project's consistency with applicable strategies and actions. As shown therein, the Project would be consistent with the GHG emission reduction strategies contained in the 2020-2045 RTP/SCS.

TABLE 7
PROJECT CONSISTENCY WITH APPLICABLE SCAG RTP/SCS GHG EMISSION REDUCTION STRATEGIES

Action	Project Consistency
Focus Growth Near Destinations & Mobility Options • Emphasize land use patterns that facilitate multimodal access to work, educational and other destinations • Focus on a regional jobs/housing balance to reduce commute times and distances and expand job opportunities near transit and along center-focused main street • Plan for growth near transit investments and support implementation of first/last mile strategies Promote the redevelopment of underperforming retail developments and other outmoded nonresidential uses • Prioritize infill and redevelopment of underutilized land to accommodate new growth, increase amenities and connectivity in existing neighborhoods • Encourage design and transportation options that reduce the reliance on and number of solo car trips (this could include mixed uses or locating and orienting close to existing destinations) • Identify ways to "right size" parking requirements and promote alternative parking strategies (e.g., shared parking or smart parking)	**Consistent.** The Project would involve construction of a multi-family residential building. The Project site is located within walking distance of existing residential and commercial uses. Additionally, the Project site is served by the City of Oxnard Bikeway system, with Class II bike lanes located along Gonzales Road, Rose Avenue, Solar Drive, and a portion of Lockwood Street east of the Outlet Center Drive. These Class II bike lanes connect the Project to commercial and employment areas east and west of the Project. The City of Oxnard is also served by the Gold Coast Transit. Within the Project vicinity, #4A Route (North Oxnard), #4B Route (North Oxnard), #15 Route (Esplanade − El Rio – St. Johns Medical Center), #17 Route Esplanade – St. Johns Medical Center – Oxnard College), and #19 Route (OTC – 5th – Gonzales Road) provides fixed route bus service on Gonzales Road. Existing bus stops with benches are located on both sides of Gonzales Road and Rose Avenue, less than 0.5 miles from the Project site. The Project would develop residential uses on previously graded land. Due to the amount of development in the area and the location of the Project, this would be an infill project. Therefore, the Project would be consistent with the strategy to focus growth near destinations and mobility options.

[37] Southern California Association of Governments. 2020. https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal-plansummary_0.pdf?1606000989. Accessed October 27, 2023.

Action	Project Consistency
Leverage Technology Innovations • Promote low emission technologies such as neighborhood electric vehicles, shared rides hailing, car sharing, bike sharing and scooters by providing supporting and safe infrastructure such as dedicated lanes, charging and parking/drop-off space • Improve access to services through technology – such as telework and telemedicine as well as other incentives such as a "mobility wallet," an app-based system for storing transit and other multi-modal payments • Identify ways to incorporate "micro-power grids" in communities, for example solar energy, hydrogen fuel cell power storage and power generation	**Consistent.** The Project would be designed and operated to meet the applicable requirements of CALGreen and the city's Green Building Code. The Project would be designed to provide approximately 175 EV stalls.
Support Implementation of Sustainability Policies • Pursue funding opportunities to support local sustainable development implementation projects that reduce GHG emissions • Support statewide legislation that reduces barriers to new construction and that incentivizes development near transit corridors and stations	**Consistent.** The Project would be designed and operated to meet the applicable requirements of CALGreen and the city's Green Building Code. The Project's indoor water use would be minimized by 20 percent. Furthermore, energy use would be reduced by implementing the requirements of current Title 24 standards, including energy efficient lighting and appliances. Therefore, the Project would support implementation of sustainability policies.
Promote a Green Region • Support development of local climate adaptation and hazard mitigation plans, as well as project implementation that improves community resiliency to climate change and natural hazards • Support local policies for renewable energy production, reduction of urban heat islands and carbon sequestration • Integrate local food production into the regional landscape • Promote more resource efficient development focused on conservation, recycling and reclamation • Preserve, enhance and restore regional wildlife connectivity • Reduce consumption of resource areas, including agricultural land • Identify ways to improve access to public park space	**Consistent.** The Project would involve construction of a multi-family residential building. The Project is located near existing residential and commercial use and would not interfere with regional wildlife connectivity or convert agricultural land. The proposed vegetation and roof color (white) would reduce any contribution to urban heat island effects. The Project would comply with Title 24, and CALGreen. Therefore, the Project would support development of a green region.

SOURCE: Meridian Consultants, *Air Quality/Health Risk Assessment/Greenhouse Gas/Energy Impact Analysis*, 2023.

City of Oxnard Climate Action and Adaptation Plan

The City of Oxnard Climate Action and Adaptation Plan (CAAP) identifies seven areas under which the city can reduce GHG emissions: clean energy, water conservation and reuse, green buildings, waste reduction and recycling, transportation, nature-based solutions, and land use. The CAAP establishes the target of reducing GHG emissions 40 percent below 1990 levels by 2030, consistent with state law. The CAAP presents an

inventory of GHG emissions originating from the city and sets forth strategies and actions to reduce emissions and help the community adapt to a changing climate.

The Project's consistency with applicable GHG reductions from strategies listed in the CAAP are summarized in **Table 8**. As shown therein, the Project would be consistent with the GHG emission reduction strategies contained in the city's CAAP.

There are no federal, state, or local quantitative adopted thresholds of significance for addressing a project's GHG emissions. In the absence of any adopted numeric threshold, this analysis evaluates the significance of a project by considering whether the project conflicts with applicable regulations or requirements adopted to implement a statewide, regional, or local plan.

Compliance with the above applicable regulatory plans as well as the standards identified in the Project would reduce potential climate change impacts from the generation of greenhouse gas emissions.

TABLE 8
PROJECT CONSISTENCY WITH APPLICABLE CAAP STRATEGIES

Action	Project Consistency
Green Buildings (B): B2: Electrify Buildings	**Consistent.** The Project would be designed and operated to meet the applicable requirements of CALGreen (Title 24, Part 6) requirements for electrification of new buildings.
Transportation (T): T1: Expand Zero Emission Vehicle (ZEV) Charging and Fueling Infrastructure	**Consistent.** The Project would be designed to provide approximately 175 EV stalls, over 50 percent of the total parking space provided by the proposed development.
Water Conservation and Reuse (W): W1: Increase Water Conservation and Reuse	**Consistent.** The Project would incorporate water conservation features such as low-flow fixtures, as are required pursuant to the current California Plumbing Code and CALGreen. Furthermore, current CALGreen requirements require a 20 percent increase in indoor water use efficiency relative to previous building requirements.
Water Reduction and Recycling (R): R1: Recycling and Organic Waste Diversion	**Consistent.** The Project would be subject to the requirements of the statewide SB 1383 and city ordinance 3007, which requires the provision of organic waste collection services to multi-family generators. Compliance with existing city and state programs would achieve consistency with this measure.

SOURCE: Meridian Consultants, *Air Quality/Health Risk Assessment/Greenhouse Gas/Energy Impact Analysis*, 2023.

c) **Less-than-Significant Impact.** The Project would be designed and operated to meet the applicable requirements of CALGreen (Title 24, Part 6) requirements for electrification of new buildings consistent with CAAP requirements to reduce GHG emissions: clean energy, water conservation and reuse, green buildings, waste reduction and recycling, transportation, nature-based solutions, and land use. The CAAP establishes a target—to reduce GHG emissions 40 percent below 1990 levels by 2030, consistent with state law. Therefore, the Project is consistent with CAAP requirements and would not contribute to potential secondary effects of global climate change.

3.6 Cultural Resources and Tribal Cultural Resources

Issues	*Potentially Significant Impact*	*Less than Significant with Mitigation Incorporated*	*Less than Significant Impact*	*No Impact*
a) Would the project cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines Section 15064.5?	☐	☐	☐	☒
b) Would the project cause a substantial adverse change in the significance of a unique archaeological resource pursuant to State CEQA Guidelines Section15064.5?	☐	☒	☐	☐
c) Would the project directly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐
d) Would the project disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☒	☐	☐
e) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is listed or eligible in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k).	☐	☒	☐	☐
f) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is a resources determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☒	☐	☐

The analysis in this section is based on the information provided in the California Assembly Bill 52 Consultation undertaken by the City (see Appendix A of this IS/MND), Updated Phase I Cultural Resources Study (**Appendix D**; Cultural Resources Report) for the Lockwood III Project[38] prepared by Rincon Consultants, Inc. on September 25, 2023, and the Paleontological Resources Memo (**Appendix E**; Paleontological Report) prepared for the Project by Rincon Consultants, Inc. on September 28, 2023.[39]

[38] Rincon Consultants, Inc. 2023. Updated Phase I Cultural Resources Study for the Lockwood 3 Project, City of Oxnard, Ventura County, California. September 25, 2023.

[39] Rincon Consultants, Inc., Lockwood 3 Project, Paleontological Resources Memo, 2151 Lockwood St., Oxnard, California 93036. September 28, 2023

Discussion

a) **No Impact.** As defined by the CEQA Guidelines (14 CCR 15000 et seq.), a "historical resource" is considered to be a resource that is listed in or eligible for listing in the National Register of Historic Places or California Register of Historical Resources (CRHR), has been identified as significant in a historical resource survey, or is listed on a local register of historical resources. Under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (Public Resources Code Section 21084.1; 14 CCR 15064.5(b)). If a site is listed or eligible for listing in the CRHR, or included in a local register of historic resources, or identified as significant in a historical resources survey (meeting the requirements of Public Resources Code Section 5024.1(q)), it is a historical resource and is presumed to be historically or culturally significant for the purposes of CEQA (Public Resources Code Section 21084.1; 14 CCR 15064.5(a)).

The Project's Cultural Resources Report included a search of the South Central Coastal Information Center (SCCIC) California Historical Resources Information System (CHRIS); a review of the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), the California State Historic Resources Inventory (HRI) list, and the California Historical Landmarks list, historic maps, and aerial investigations; and a pedestrian survey.

Based on the result of the records searches and field survey, no historic resources were found to occur on the Project site. Because there are no documented structures or other historical resources identified within the Project site, no impact to historical resources would occur.

b) **Less than Significant Impact with Mitigation Incorporated.** As indicated above, the Project's Cultural Resources Report included a search of the CHRIS, NRHP, CRHR, HRI and the California Historical Landmarks list. In addition, specifically with regard to archeological resources, a search of the Archaeological Determination of Eligibility (ADOE) list was conducted. The Native American Heritage Commission (NAHC) was contacted to request a search of the Sacred Lands File (SLF). Also, an archeological pedestrian field survey was conducted on the Project site.

A review of the CHRIS records search identified 17 cultural resources studies that have been conducted within a 0.5-mile radius of the Project site. Of these, two cultural resource studies have included the Project site. A brief summary of previous cultural studies is provided below:

- VN-01042: J. Boyer and S. Craig prepared *UCLA Archeological Survey Record* in 1967. This study included an archeological pedestrian survey of a linear area that intersects the current Project site from north to south. The study did not identify cultural resources within the Project site.
- VN-02449: John F. Romani and George A. Toren prepared *Phase I Archeological Investigation: 1901 Outlet Center Dr., Ventura County, California, APN 213-0-090-015* in 2014. The study included a record search and archeological pedestrian survey within the southeastern corner of the Project site. The study did not identify any cultural resources within the Project site.

A review various aerial photos and topographic maps was conducted as part of the Cultural Resources Report. A United States Geological Survey (USGS) topographic map from 1904 shows the Project site as undeveloped land. Between 1942 and 1943, one building was mapped in the western portion of the site, and agricultural fields surrounded the site on all sides. Between 1949 and 1985, five buildings were in the western portion of the site. From 1994 to 2023, USGS maps and aerials show the Project site as undeveloped land.

The archaeological pedestrian field survey consisted of transect intervals spaced at 15 meters apart examining for artifacts (such as flaked stone tools, tool-making debris, stone milling tools, ceramics, or fire-affected rock); ecofacts (such as marine shell or bone); soil discoloration that might indicate the presence of a cultural midden; soil depressions; features indicative of the former presence of structures or buildings (such as standing exterior walls, postholes, or foundations); or historic debris (such as metal, glass, or ceramics). The pedestrian survey did not identify any cultural resources within the Project site. Additionally, according to the Geoarchaeological Analysis undertaken within the Cultural Resources Report and the Preliminary Geotechnical Investigation,[40] the upper "couple of feet" of sediments within the project site has previously been disturbed for agricultural uses. The Project site is also underlain by Holocene alluvial deposits which have a low geoarchaeological sensitivity and is unlikely that cultural resources exist within the Project site.

As discussed above, no archeological resources have been identified within the Project site. However, the lack of surface evidence of archeological resources does not preclude their subsurface existence. Thus, mitigation is required to address potentially significant impacts related to the inadvertent discovery of archeological resources during construction. The City of Oxnard General Plan includes a policy (ER-11.6) that states "In the event that archaeological/paleontological resources are discovered during site excavation, continue to require that grading and construction work on the project site is suspended until the significance of the features can be determined by a qualified archaeologist/paleontologist." To meet this policy, Mitigation Measure CUL-1 through Mitigation Measure CUL-3 are provided below. With implementation of Mitigation Measure CUL-1 through Mitigation Measure CUL-3, potentially significant impacts to unknown archeological resources would be reduced to a less-than-significant level.

Mitigation Measure CUL-1: Workers Environmental Awareness Program. Prior to the start of construction activities, all construction personnel shall be trained regarding identification and treatment protocol for inadvertent discoveries of resources (archaeological and tribal) and human remains. A basic presentation and handout or pamphlet shall be prepared to ensure proper identification and treatment of inadvertent discoveries of cultural resources and human remains. The purpose of the training is to provide specific details on the kinds of materials that may be identified during ground disturbing activities and explain the importance of and legal basis for the protection of human remains and significant cultural resources. Each worker shall also be trained in the proper procedures to follow in the event that cultural resources or human remains are

[40] Geolabs-Westlake Village, Preliminary Geotechnical Investigation, Proposed Multi-Family Residential Development, Lockwood St., Parcel 1, APN 213-0-090-27, City of Oxnard, California. September 20, 2022.

uncovered during ground disturbing activities. These procedures include but are not limited to work curtailment or redirection, and the immediate contact of the site supervisor and a Qualified Archeologist per Mitigation Measure CUL-2.

Mitigation Measure CUL-2: Inadvertent Discovery Clause. In the event that potential archaeological resources are unearthed, ground-disturbing activities shall be halted or diverted away from the vicinity of the find (at least 100 feet) and a Qualified Archaeologist shall be notified immediately to assess the significance of the find and determine whether or not additional study is warranted. An appropriate buffer area shall be established by the Qualified Archaeologist. Reasonable assumptions regarding the potential for additional discoveries in the vicinity, and safety considerations for those making an evaluation and potential recovery of the discovery shall be provided by the Qualified Archaeologist. This buffer area shall be established around the find where construction activities shall not be allowed to continue until the evaluation is completed. Grading activities shall be allowed to continue outside of the buffer area, and an archaeological monitor shall be provided during these grading activities outside the buffer area, if determined necessary by the Qualified Archaeologist.

All resources unearthed by Project construction activities shall be evaluated by the Qualified Archaeologist. If a resource is determined by the Qualified Archaeologist to constitute an archeological resource pursuant to the CEQA Guidelines Section 15064.5, the Qualified Archaeologist shall coordinate with the Applicant and the City to develop a formal treatment plan that would serve to reduce impacts to the resource. Preservation in place (i.e., avoidance) is the preferred manner of treatment. If in coordination with the City, it is determined that preservation in place is not feasible, appropriate treatment of the resource shall be developed by the Qualified Archaeologist in coordination with the City and may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any archaeological material collected shall be curated at a public, non-profit institution with a research interest in the materials, if such an institution agrees to accept the material. If no institution accepts the archaeological material, they shall be donated to a local school, Tribe, or historical society in the area for educational purposes.

c) **Less than Significant with Mitigation Incorporated.** Paleontological resources are the remains or traces of plants and animals that are preserved in the earth's crust, and per Society of Vertebrate Paleontology guidelines,[41] are older than written history or older than approximately 5,000 years. There are limited, nonrenewable resources of scientific and educational value and are afforded protection under state laws and regulations.

According to the Project's Paleontological Report, the Project site is located within the Transverse Ranges geomorphic province of Southern California, which includes west-east trending elongated mountain ranges and valleys that are geologically complex. The Geotechnical Investigation (**Appendix F**) conducted for the Project site encountered several feet of agricultural fill/disturbed sediments overlying alluvium consisting of sand, silt, clay, and sandy clay within the Project site down to depths of up to 50 feet below

[41] Society of Vertebrate Paleontology. 2010. Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources. https://vertpaleo.org/wp-content/uploads/2021/01/SVP_Impact_Mitigation_Guidelines.pdf. Accessed December 7, 2023.

ground surface, the maximum depth explored. The region was mapped by Clahan[42] as having Holocene alluvial deposits consisting of poorly sorted clayey sand with occasional gravel (Paleontological Report). Holocene-aged sediments are generally considered too young (i.e., less than 5,000 years old) to preserve paleontological resources. Therefore, Holocene alluvial deposits have low paleontological sensitivity.

Holocene-aged sediments may be underlain in the subsurface by older sediments (i.e., Pleistocene) with higher paleontological sensitivity. However, there are few known fossil localities from areas mapped as Holocene sediments within the Oxnard Plain, despite extensive urban and agricultural development of the region. The nearest fossil localities occur in the city of Ventura, several miles northwest of the Project site, and in the Camarillo and Las Posas Hills, several miles northeast of the Project site. The lack of fossil localities in this region of the Oxnard Plain suggests that the depth at which the transition to older, paleontologically sensitive sediments occurs is not frequently encountered during typical urban development activities such as those proposed for this Project.

As part of Project construction, grading for building pads is anticipated to reach less than 5 feet below the surface. Trenching for underground utilities is expected to reach up to 8 feet below the surface. The Project site has been previously disturbed down to "couple of feet" per the Geotechnical Report. Therefore, grading and trenching are anticipated to impact previously undisturbed sediments. The geologic map and relative lack of fossil localities in the Oxnard Plain suggests that the excavations anticipated for the Project would impact small amounts of paleontologically sensitive sediments, if any. Ground-disturbing activities within previously undisturbed sediments with high paleontological sensitivity may result in significant impacts to paleontological resources. Given the small volume of potentially paleontologically sensitive sediments that the Project would affect, significant impacts to paleontological resources are unlikely, but possible. As stated above, the City of Oxnard General Plan includes a policy (ER-11.6) to reduce potential unanticipated discovery of paleontological resources. To meet this policy, Mitigation Measures CUL-1 above and CUL-3 below are provided to ensure that potential impacts to paleontological resources would be less than significant in the event of an unanticipated discovery through the recovery, identification, and curation of previously unrecovered fossils.

Mitigation Measure CUL-3: Paleontological Resources. In the event that potential paleontological resources are unearthed, ground-disturbing activities shall be halted or diverted away from the vicinity of the find (at least 50 feet) and a Qualified Paleontologist shall be notified immediately to assess the significance of the find and determine whether or not additional study is warranted. All paleontological resources shall be identified, handled, and treated in accordance with the applicable provisions of the Society of Vertebrate Paleontology (SVP) standards.

An appropriate buffer area shall be established by the Qualified Paleontologist around the find where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. Grading activities shall be allowed to continue

[42] Clahan, K.B. 2003. Geologic map of the Oxnard 7.5-minute quadrangle, Ventura County, California: a digital database. [map.] California Geological Survey, Preliminary Geologic maps PGM-03-04, scale 1:24,000.

outside of the buffer area, and a paleontological monitor shall be provided during these grading activities outside the buffer area, if determined necessary by the Qualified Paleontologist. At the Qualified Paleontologist's discretion, and to reduce any construction delay, the grading and excavation contractor shall assist in removing rock/sediment samples for initial processing and evaluation. If preservation in place is not feasible, the Qualified Paleontologist shall implement a paleontological salvage program to remove the resources from their location. Any fossils encountered and recovered shall be prepared to the point of identification and catalogued before they are submitted to their final repository. Any fossils collected shall be curated at a public, non-profit institution with a research interest in the materials, such as the Museum of Ventura County, if such an institution agrees to accept the fossils. If no institution accepts the fossil collection, they shall be donated to a local school or historical society in the area for educational purposes.

d) **Less than Significant with Mitigation Incorporated.** As discussed above, the Project site is located within an urbanized area and has been subject to previous grading and development. Also, the SCCIC records search results and SLF search through the NAHC did not identify recorded human remains sites within the Project site, and no surface human remains were noted on the pedestrian survey. Therefore, the potential for uncovering human remains on the Project site is low. Nevertheless, the Project would require grading, excavation, and other construction activities that could have the potential to disturb existing but undiscovered human remains. Should ground disturbance encounter human remains, disturbance of those remains could result in a potentially significant impact. Implementation of Mitigation Measure CUL-4 would reduce potential impacts to human remains to less than significant.

Mitigation Measure CUL-4: If human remains are encountered, the Applicant or its contractor shall halt work in the vicinity (within 100 feet) of the discovery and contact the Ventura County Coroner in accordance with Public Resources Code Section 5097.98 and Health and Safety Code Section 7050.5, which requires that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to Public Resources Code Section 5097.98. If the remains are determined to be of Native American descent, the coroner has 24 hours to notify the NAHC. The NAHC shall then identify the person(s) thought to be the Most Likely Descendent (MLD). The MLD may, with the permission of the landowner, or his or her authorized representative, inspect the site of the discovery of the Native American remains and may recommend to the owner or the person responsible for the excavation work means for treating or disposing of, with appropriate dignity, the human remains and any associated grave goods. The MLD shall complete his or her inspection and make his or her recommendation within 48 hours of being granted access by the landowner to inspect the discovery. The recommendation may include the scientific removal and nondestructive analysis of human remains and items associated with Native American burials. Upon the discovery of the Native American remains, the landowner shall ensure that the immediate vicinity, according to generally accepted cultural or archaeological standards or practices, where the Native American human remains are located, is not damaged or disturbed by further development activity until the landowner has discussed and conferred, as prescribed in this mitigation measure, with the MLD regarding their recommendations, if applicable, taking into account the possibility of multiple human remains. The landowner shall discuss and confer with the MLD on all reasonable options regarding their preferences for treatment.

If the NAHC is unable to identify an MLD, or the MLD identified fails to make a recommendation, or the landowner rejects the recommendation of the MLD and the mediation provided for in Subdivision (k) of Section 5097.94, if invoked, fails to provide measures acceptable to the landowner, the landowner or his or her authorized representative shall inter the human remains and items associated with Native American human remains with appropriate dignity on the Project site in a location not subject to further and future subsurface disturbance.

e, f) **Less than Significant with Mitigation Incorporated.** The Project is subject to compliance with Assembly Bill (AB) 52 (PRC Section 21074), which requires consideration of impacts to tribal cultural resources as part of the CEQA process and requires that lead agencies notify California Native American tribal representatives who are traditionally or culturally affiliated with the geographic area of the Project.

The SCCIC records search and a pedestrian survey did not identify potential tribal cultural resources within the Project site. The SLF search through the NAHC yielded negative results. The city conducted consultation with California Native American tribes pursuant to AB 52 to identify tribal cultural resources in or near the Project site (see Appendix A of this IS/MND).

The City of Oxnard sent a notification letter on August 21, 2023, to the Native American tribe that is on the City's AB 52 list (Appendix A). This list includes only one tribe, the Barbareño/Ventureño Band of Mission Indians, that has requested notification of projects within the city in accordance with AB 52. The letters (3 letters sent to 3 different contacts with the Tribe) provide brief descriptions of the Project and its location, with maps, the lead agency's contact information, and a notification that the tribe has 30 days to request consultation pursuant to Public Resources Code section 21080.3.1.

The Barbareño/Ventureño Band of Mission Indians was notified of the Project but did not request consultation with the City of Oxnard (see Appendix A). There are no known tribal cultural resources located within the Project area, and therefore, no impacts to known tribal cultural resources would occur.

Although the current AB 52 process for the Project failed to identify any known tribal cultural resources, new resources may be identified or established over the course of the implementation of the Project and could be impacted. To reduce potential impacts on tribal cultural resources to less than significant, implementation of **Mitigation Measures CUL-2 and CUL-4** is required.

3.7 Geology and Soils

Issues	*Potentially Significant Impact*	*Less than Significant with Mitigation Incorporated*	*Less than Significant Impact*	*No Impact*
a) Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist or based on other substantial evidence of a known fault?	☐	☐	☐	☒
ii) Strong seismic ground shaking that cannot be addressed through compliance with standard Code requirements?	☐	☐	☒	☐
b) Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project and potentially result in on-site or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse that cannot be addressed through compliance with standard Code requirements?	☐	☐	☒	☐
c) Would the project be located on expansive soil, creating substantial risk to life or property that cannot be addressed through compliance with standard Code requirements?	☐	☐	☒	☐
d) Would the project expose people or structures to inundation by seiche or tsunami?	☐	☐	☐	☒
e) Would the project rely on dredging or other maintenance activity by another agency that is not guaranteed to continue?	☐	☐	☐	☒

The analysis in this section is based on the information provided in the Geotechnical Engineering Investigation Report (Geotechnical Report)[43] prepared by Geolabs-Westlake Village (GWV) on September 20, 2022 (Appendix F), and the Hydrologic and Hydraulic Report/Stormwater Quality Report (Hydrology Report)[44] prepared by CCE Design Associates, Inc. (CCE) on July 10, 2023 (**Appendix G** of this IS/MND).

Discussion

a.i) **No Impact.** A fault is a plane or surface in the earth where failure has occurred and materials on opposite sides have moved relative to one another in response to the accumulation and release of stress. The U.S. Geological Survey defines active faults as those that have had surface displacements within Holocene time (about the last 11,000 years). Potentially active faults are those that have had surface displacement during Quaternary time, within the last 1.6 million years. Based on the City of Oxnard General Plan Background Report, the most regionally active faults in the vicinity of the city of Oxnard are the Oak Ridge, Pitas Point-Ventura, Red Mountain, Anacapa, and Malibu Coast

[43] Geolabs-Westlake Village (GWV), Preliminary Geotechnical Investigation: Proposed Multi-Family Residential Development, Lockwood St., Parcel 1, APN 213-0-090-27, City of Oxnard, California. September 20, 2022.

[44] CCE Design Associates, Inc. (CCE), Hydrologic and Hydraulic Report/ Stormwater Quality Report, Lockwood 3 Outlet Center Dr. and Lockwood St., Oxnard, California 93030. July 10, 2023.

faults.[45] According to the Geotechnical Report, the Project site does not contain any known active or potentially active faults, nor is it within an Alquist-Priolo Earthquake Fault Rupture zone. Therefore, no impacts would result from fault rupture of a known earthquake fault on the Project site.

a.ii) **Less-than-Significant Impact.** The Project is located in Southern California, an area that is subject to strong seismic ground shaking. Seismically induced ground acceleration is the shaking motion that is produced by an earthquake. As noted in Response 3.7.a.i above, there are no known active faults within the city. There are a number of potentially active/active faults in the region including the Oak Ridge, Pitas Point-Ventura, Anacapa, and Malibu Coast faults; however, these faults are located approximately 1.5 to 10 miles from the city of Oxnard. The Project includes construction of a mixed-income, multi-family residential development which could experience moderate to high ground shaking from these fault zones, as well as shaking from other seismically active areas of the Southern California region. Although some structural damage is typically not avoidable during a large earthquake, the Project would be constructed to meet existing construction ordinances and the most recent California Building Code (CBC) which provides earthquake design requirements, including earthquake loading specifications for design and construction to resist effects of earthquake motions in accordance with the American Society of Civil Engineers standards. The CBC includes specific design measures, which are based on the determination of Site Classification and Seismic Design Categories specific to the Project site. These design measures are intended to maximize structural stability in the event of an earthquake. Therefore, adherence to the CBC requirements would reduce impacts related to strong seismic shaking to a less than significant level.

b) **Less-than-Significant Impact.** Unstable geologic units or soils are typically classed as those prone to landslides, lateral spreading, subsidence/collapse, or liquefaction.[46] Each of these key consideration are outlined below.

Landslides

The geologic and topographic characteristics of an area often determine the potential for landslides. Landslides (or slope failures) are the dislodging and falling of a mass of soil or rocks along a sloped surface. Although the potential for small-scale slope failure may exist in the city, particularly along stream banks, margins of drainage channels, and similar settings where steep banks or slopes occur, the flat terrain of the Project site minimizes this potential geologic hazard. Given the Project site's topography, seismically induced landslides would not pose a danger to the people or structures on site. Therefore, no impact would result from landslides due to implementation of the Project.

[45] City of Oxnard. 2006. City of Oxnard General Plan Background Report. https://www.oxnard.org/wp-content/uploads/2016/08/OxnardDraftBackgroundReport2006_04.21.06.pdf. Accessed September 19, 2023.

[46] American Geological Institute. 2009. Living with Unstable Ground. https://biotech.law.lsu.edu/climate/docs/ci2011Aug0119050042954Unstable%20Ground%20Book%20final%20090407.pdf. Accessed December 7, 2023.

Lateral Spreading

Lateral spreading movement occurs when a soil mass slides laterally on liquefied soil layers, moving downslope or towards a free face. The Project site is located within a potential liquefaction hazard zone,[47] and therefore, there is a potential for lateral spreading to occur at the Project site. However, based on the findings of the quantitative analyses undertaken for the Preliminary Geotechnical Investigation, the results indicate that the potential for liquefaction on the Project site is considered unlikely.[48] The Project would be subject to the seismic design criteria of the most recent CBC which has been adopted within the Oxnard City Code. The CBC includes provisions that would reduce lateral spreading impacts on site. Therefore, lateral spreading impacts would be less than significant.

Subsidence/Collapse

Subsidence or collapse is the sinking of the ground surface caused by the compression of earth materials resulting from manmade activities such as groundwater or oil and gas withdrawal. The resulting compression typically occurs only once within affected soils and cannot be reversed or repeated. Thus, once land has subsided, it will not return to its original elevation even if pressure in the underground reservoir is restored.[49]

The Project site is underlain by artificial/agricultural fill over alluvium. The near surface alluvial soils on site are homogenous silty sand and in medium dense condition. Alluvial material on this site consists of various admixtures of sand, silt, clay, and sandy clay in a moist, medium dense/stiff condition.[50] The near surface soils on site could be moderately compressible under saturated conditions, The Project would be designed and constructed on conventional spread footings or mat foundations to withstand seismic hazards. Additionally, the Project applicant would be required to construct the Project in conformance with applicable recommendations made in the Geotechnical Report prepared for the Project as well as with the most recently adopted CBC, which includes provisions to reduce the threats of subsidence and collapse. Therefore, subsidence and collapse impacts would be less than significant.

Liquefaction

Liquefaction is a phenomenon that occurs when soil undergoes transformation from a solid state to a liquefied condition due to the effects of increased pore-water pressure.

47 Geolabs-Westlake Village (GWV). 2022. *Preliminary Geotechnical Investigation: Proposed Multi-Family Residential Development, Lockwood St., Parcel 1, APN 213-0-090-27, City of Oxnard, California*. September 20, 2022

48 Geolabs-Westlake Village (GWV). 2022. *Preliminary Geotechnical Investigation: Proposed Multi-Family Residential Development, Lockwood St., Parcel 1, APN 213-0-090-27, City of Oxnard, California*. September 20, 2022

49 American Geological Institute. 2009. Living with Unstable Ground. https://biotech.law.lsu.edu/climate/docs/ci2011Aug0119050042954Unstable%20Ground%20Book%20final%20090407.pdf. Accessed December 7, 2023.

50 Geolabs-Westlake Village (GWV). 2022. *Preliminary Geotechnical Investigation: Proposed Multi-Family Residential Development, Lockwood St., Parcel 1, APN 213-0-090-27, City of Oxnard, California*. September 20, 2022

This typically occurs where susceptible soils (particularly soils in the medium sand to silt range) are located over a high groundwater table. A high groundwater table is described as one within 50 feet of the surface. A majority of the city of Oxnard is susceptible to liquefaction as a result of underlying thick alluvial deposits and high groundwater levels. In addition, the city of Oxnard is located in a Seismic Hazard area for liquefaction according to the California Geologic Survey's Earthquake Zones of Required Investigation online mapping tool.[51]

As stated in the Geotechnical Report, the Project site is located within a liquefaction zone.[52] To ensure that the proposed mixed-income multi-family residential development would not experience structural damage due to liquefaction, the Project applicant would be required to design and construct the Project in conformance with the most recently adopted CBC, which would ensure that potential liquefaction impacts are less than significant.

c) **Less-than-Significant Impact.** Expansive soil is characterized by a clay composition whereby clay particles expand dramatically upon wetting. Structures constructed on expansive soils require special design considerations that are identified within the CBC. The near-surface fill and alluvial materials encountered on the Project site have been identified as having a low expansion potential.[53] Nonetheless, to ensure that the proposed development would not experience structural damage due to expansive soil, the Project applicant would be required to design and construct the Project in conformance with the most recently adopted CBC, which would ensure that impacts are less than significant.

d) **No Impact.** Seiches and tsunamis are caused by earthquakes. Seiches are waves caused by large-scale, short-duration oscillation of confined bodies of water (such as reservoirs and lakes) during earthquakes that may damage low-lying adjacent areas, although not as severely as a tsunami. The Project site is located on elevated terrain and is not within an enclosed body of water.[54] The closest enclosed body of water that could result in earthquake-induced seiche is Lake Piru, which is approximately 28 miles northeast of the Project site. Due to the distance of Lake Piru, potential seiches in the lake would not impact the Project site.

Tsunamis are earthquake-induced surge waves that can cause severe coastal flooding. The Project site is located approximately 6 miles inland (east) from the Pacific Ocean and is

not located within a tsunami hazard area as mapped by the California Department of Conservation.[55] Therefore, the Project would not be impacted by seiches or tsunamis.

e) **No Impact.** The Project is located on land that is owned by the Project Applicant who will be responsible for maintenance activities. The Project will not require any dredging or other maintenance activities by an agency. Therefore, no impact would occur.

3.8 Hazards and Hazardous Materials

Issues	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials that cannot be addressed through compliance with standard regulatory requirements?	☐	☐	☒	☐
b) Would the project create a substantial hazard to the public or the environment through reasonably foreseeable upset or accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Would the project emit hazardous substances or involve handling hazardous or acutely hazardous substances, or waste within one-quarter mile of an existing or proposed school in quantities or a manner that would create a substantial hazard?	☐	☐	☒	☐
d) Would the project be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
e) Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐

The analysis in this section is based on the information provided in the Phase I Environmental Site Assessment Report (Phase I ESA)[56] prepared by Rincon Consultants, Inc., dated November 16, 2022, and included in **Appendix H**.

Discussion

a) **Less-than-Significant Impact.** Exposure to hazardous materials could occur through improper handling or use of hazardous materials or hazardous wastes, particularly by untrained personnel, a transportation accident, environmentally unsound disposal methods, or fire, explosion, or other emergencies. The severity of potential effects varies with the activity conducted, the concentration and type of hazardous material or wastes present, and the proximity of sensitive receptors.

Construction

A Phase I ESA was prepared for the Project to assess potential impacts related to hazards and hazardous materials. To determine if any RECs exist at the Project site, the Phase I ESA analysis included:

- A review of the physical setting to obtain information concerning the topographic, geologic, and hydrogeologic characteristics of the Project site and vicinity. Such information may be indicative of the direction and/or extent that a contaminant could migrate in the event of a spill or release.

[56] Rincon Consultants, Inc. (Rincon), Phase I Environmental Site Assessment, 2151 Lockwood St., Oxnard, California. November 16, 2022.

- A review of publicly available federal, state, and local regulatory agency records to obtain information that could potentially help identify RECs at, or potentially affecting, the Project site.
- A review of historical references to assess the history of previous uses of the Project site and surrounding area to identify those that could have led to RECs on or near the Project site. Historical sources reviewed included Sanborn Fire Insurance Maps, aerial photographs, topographic maps, and city directories. In addition, interviews were conducted with people who were expected to be reasonably knowledgeable about historical and/or current conditions at, and uses of, the Project site.
- A site reconnaissance was performed to observe site conditions and activities for indications of evidence of RECs.

As discussed in the Phase I ESA, the Project site appears to have been used for agricultural purposes from as early as 1927 through approximately 1985. Agricultural land use is frequently associated with the use of pesticides and arsenic. However, previous soil assessments completed for the Project site identified organochlorine pesticides, arsenic and lead at levels below the applicable residential environmental screening levels. Therefore, no significant hazards have been identified with the former on-site agricultural uses. Additionally, according to the Phase I ESA, historical information identified multiple potentially contaminative historical land uses north of the Project site (and north of U.S. 101) including 2101 Ventura Boulevard, a former automotive repair facility from 1980 to 1996. Additionally, a gasoline station, as part of the Costco development, was located at 2101 Ventura Boulevard from 2005 to 2019 and an additional gasoline station was located at 2099 Ventura Boulevard, in 1961. Based on the distance from the subject property (200 feet), the lack of reported release, and the depth and direction of groundwater flow, the offsite gasoline station and former automotive repair facility were not expected to impact the Project site.

The Phase I ESA also evaluated other off-site properties within one-quarter mile of the Project site that are listed on one or more release-related databases, the status of their listings, and their potential, if any, to cause (or have caused) a REC at the Project site. Based on their clean-up status, proximity to the Project site, and/or down gradient relationship to the Project site, no off-site properties were determined to present a REC.

As discussed in the Phase I ESA, the Project site is identified on various environmental databases (National Pollutant Discharge Elimination System [NPDES], California Integrated Water Quality System [CIWQS], and California Environmental Reporting System [CERS]) as a facility that has an active construction permit. However, the inclusion of the property on these database sites provided no evidence of RECs.

Finally, the site reconnaissance performed as part of the Phase I ESA analysis did not reveal any evidence of RECs on the Project site or on adjacent properties. Based on the analysis summarized above, the Phase I ESA revealed no evidence of RECs in connection with the Project site.

Project construction could however expose construction workers and the public to temporary hazards related to the transport, use, and maintenance of construction materials (such as oil, diesel fuel, and transmission fluid related to construction equipment), and/or handling and transport of demolition debris and import/export of soils. However, these activities would be short term, and the materials used would not be in such quantities or stored in such a manner as to pose a significant safety hazard. Project construction activities would demonstrate compliance with the applicable laws and regulations governing the use, storage, and transportation of hazardous materials/waste, ensuring that all potentially hazardous materials are used and handled in an appropriate manner.

Based on the above, adherence to standard construction practices and compliance with existing regulations related to hazardous materials would ensure the Project construction activities would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials that cannot be addressed through compliance with standard regulatory requirements.

Operation

Operation of the Project would involve the routine use of small quantities of potentially hazardous materials typical of those used in residential buildings, including cleaning products, paints, chemicals for use in the pool and those used for maintenance of landscaping. Such use would be consistent with that currently occurring in nearby commercial and residential developments. As a residential development, the Project would not involve the routine transport, use, and disposal of large quantities of hazardous materials. The Project's limited use of common hazardous materials can typically be disposed of at Class II or III landfills, which accept most common waste materials. In addition, all hazardous materials used on the Project site during operation would be used, stored, and disposed of in accordance with all applicable federal, state, and local requirements. Compliance with applicable regulations would ensure that operational impacts would be less than significant.

b) **Less-than-Significant Impact.** As part of the Phase I ESA prepared for the Project site, regulatory databases were reviewed for the Project site and properties within the standard search radii pursuant to California Government Code Section 65962.5. The databases searched are known as the "Cortese List" and include EnviroStor, GeoTracker, and other lists compiled by the California Environmental Protection Agency (CalEPA). As discussed under Response a), the Phase I ESA revealed no evidence of RECs in connection with the Project Site.

During construction, hazardous materials such as fuels, oils, and lubricants would be transported to and used on site in construction vehicles and equipment, as well as use of coatings, paints, adhesives, and caustic or acidic cleaners. If not managed appropriately, these hazardous materials could be unintentionally released resulting in adverse effects to workers, the public and/or the environment. However, as previously discussed, all potentially hazardous materials used during construction of the Project would be used and disposed of in accordance with manufacturers' specifications and instructions, thereby

reducing the risk of hazardous materials use. In addition, the Project would comply with all applicable federal, state, and local requirements concerning the use, storage, and management of hazardous materials as well as with the requirements of the NPDES Municipal Separate Storm Sewer System (MS4) Permit. Under the NPDES MS4 Permit, the Project must comply with the state NPDES General Construction Permit. Implementation of this Permit would help control the use of hazardous substances during construction and would minimize the potential for such substances to leave the site. Based on the above, compliance with existing regulations would ensure the Project construction activities would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.

As above, the routine use of small quantities of potentially hazardous materials, typical of those used in residential developments, would occur during operation. As stated previously, activities involving the handling and disposal of hazardous wastes would occur in compliance with all applicable federal, state, and local requirements concerning the handling and disposal of hazardous waste. With applicable regulations and requirements compliance, operational activities would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Impacts would be less than significant.

c) **Less-than-Significant Impact.** There are no existing or proposed elementary or secondary schools within 0.25 miles of the Project site. The nearest existing school to the Project site is the Cal Lutheran University – Satellite campus located directly east of the Project site. Charter College, which is a vocational school that offers health care training, is located approximately 0.11 miles southeast of the Project site. Both of these schools are located within a mixed-use center with retail, medical and office uses. The Oxnard Adult School is located approximately 0.4 miles southeast of the Project Site, while Rio Rosales Elementary School is located approximately 0.7 miles south of the Project Site. The use of hazardous materials at the Project site would be restricted to cleaning solvents, paints nd pool chemicals used by maintenance staff and cleaning solvents used by residents of the proposed units. The materials used by maintenance staff would be in small quantities and stored in compliance with state and federal requirements. Because no substantial amount of hazardous materials would be used or stored onsite, potential hazardous impacts to occupants at the nearest schools (Cal Lutheran University – Satellite campus and Charter College) would not occur. Therefore, impacts would be less than significant.

d) **Less-than-Significant Impact.** Section 65962.5 of the California Government Code requires the California Environmental Protection Agency to develop and update annually the Cortese List, which is a list of hazardous waste sites and other contaminated sites. While Section 65962.5 makes reference to the preparation of a list, many changes have occurred related to web-based information access since 1992 and information regarding the Cortese List is now compiled on the websites of multiple agencies. The Phase I ESA for the Project site obtained a database search report, which is included in Appendix B of the Phase I ESA. The report documents findings of various federal, state, and local regulatory database

searches regarding properties with known or suspected releases of hazardous materials or petroleum hydrocarbons. However, the Project Site was not on the Cortese database. Furthermore, none of the database listings for the Project site are indicative of releases of hazardous substances. Therefore, impacts would be less than significant.

e) **Less-than-Significant Impact.** The Project includes a multi-family residential development on vacant land, northwest of the intersection of Lockwood Street and Outlet Center Drive, and south of U.S. 101 Freeway. Slow-moving construction-related traffic along local roadways could reduce optimal traffic flows and could delay emergency vehicles traveling through the Project area. To prevent potentially significant construction-related traffic impacts, if road/lane closures are required, the Project's contractor would implement standard construction traffic management measures or undertake preparation of a construction traffic control plan prior to the initiation of any construction activities to ensure that access for all road users is maintained near the Project. Per standard California Department of Transportation requirements (Caltrans), construction vehicles/equipment would use alternative routes to avoid congested state facilities, especially during peak hours and any transportation of heavy construction equipment and/or materials that requires the use of oversized transport vehicles on State Highways will need a Caltrans transportation permit and potential escort. Furthermore, the Project would be subject to review and approval by all applicable city departments to ensure that the Project complies with city requirements related to emergency response. As such, construction impacts would be less than significant.

The City's Emergency Operations efforts anticipate that all major streets and highways within the city would serve as evacuation routes. The major streets and highways within the city maintain minimum right of way widths and would continue to ensure that various evacuation routes are accessible to residents and businesses. As such, operation of the Project would not interfere with an adopted emergency response plan and/or the emergency evacuation plan. Operational impacts would be less than significant.

3.9 Hydrology and Water Quality

Issues	*Potentially Significant Impact*	*Less than Significant with Mitigation Incorporated*	*Less than Significant Impact*	*No Impact*
a) Would the project cause a violation of any adopted water quality standards or waste discharge or treatment requirements?	☐	☐	☒	☐
b) Would the project substantially deplete groundwater supplies or interfere with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level that would not support existing land uses or planned uses for which permits have been granted)?	☐	☐	☒	☐
c) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in on- or off-site flooding or exceed the capacity of existing or planned stormwater drainage systems?	☐	☐	☒	☐
d) Would the project place new structures within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	☐	☐	☒	☐
e) Would the project impede or redirect flood flows such that it would increase on- or off-site flood potential?	☐	☐	☒	☐
f) Would the project expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	☐	☐	☒	☐
g) Would the project be exposed to a substantial risk related to inundation by seiche, tsunami, or mudflow?	☐	☐	☐	☒
h) Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

This section is based on the information provided in the Hydrologic and Hydraulic Report / Stormwater Quality Report (Hydrology Report) prepared by CCE Design Associates, Inc. (CCE), dated September 22, 2023 (Appendix G of this IS/MND);[57] and the Preliminary Geotechnical Investigation (Geotechnical Investigation) prepared by Geolabs-Westlake Village, dated September 20, 2022 (Appendix F of this IS/MND).

Discussion

a) **Less-than-Significant Impact.** The Project site is currently undeveloped, relatively flat, and covered by sparse grass and low-lying vegetation. Project construction activities would include earthwork/earth moving, maintenance/operation of construction equipment, and handling/storage/disposal of materials, which could contribute to pollutant loading in stormwater runoff. In addition, exposed and stockpiled soils could be subject to wind and

[57] CCE Design Associates, Inc., Hydrologic and Hydraulic Report / Stormwater Quality Report, Lockwood 3, Outlet Center and Lockwood Street, Oxnard, Ca 93030. September 22, 2023.

water conveyance into nearby storm drains during storm events, and on-site water activities for dust suppression purposes could contribute to pollutant loading.

The Project Applicant would be required to comply with the NPDES General Construction Permit, including the preparation of a Storm Water Pollution Prevention Plan (SWPPP) and implementation of best management practices (BMPs) to minimize soil erosion/sedimentation and other runoff from the Project site from entering the storm drains during construction. BMPs would include erosion and sediment control BMPs.[58] Compliance with all applicable federal, state, and local requirements would reduce the potential for construction operations to result in the release of contaminants into the storm drain system or groundwater.

Upon buildout of the Project, the impervious area of the site would increase approximately 73 percent. During operation, the Project would generate stormwater runoff into the municipal storm drain system which may contain nutrients, pesticides, organic compounds, sediments, oil and grease, suspended solids, metals, gasoline, pathogens, and trash and debris. These pollutants most often originate from motor vehicle use and the associated deposition of fuel, oil, and rubber on the ground surface, trash collection areas, landscape maintenance activities, pesticide and herbicide use, and general human activity.

Stormwater quality management for the Project would occur in accordance with the 2011 Ventura County Technical Guidance Manual. Based on the existing onsite soil conditions and recommendations from the Project geotechnical engineer, the use of infiltration or other retention BMPs is feasible. The proposed retention BMP is underground infiltration through the use of a Proprietary Infiltration system. Pre-treatment would be provided upstream of the proposed infiltration system and would include a centralized sediment and trash basin/manhole (hydrodynamic separator). The pre-treatment device would separate and capture trash, debris, sediment and oil and grease from stormwater runoff. The Contech continuous deflective separation (CDS) Model 2025-5 is likely to be the model used on the Project site and has been designed and sized to remove 80 percent of 50-micron particles in accordance with City of Oxnard standards and is a full-capture system listed on the state's Certified Devices list (DS-88).

Furthermore, source control measures, which are operational practices that reduce potential pollutants at the source, would be implemented by the Project. Applicable source control measures for this Project are storm drainage signage (which is to be added to all storm drain inlets), proper design of outdoor trash storage and waste handling areas, and proof of control measure maintenance through a Maintenance Agreement containing a site specific Maintenance Plan for all proposed BMPs to be maintained by the owner/operator of the site.

With adherence to regulations and the proposed stormwater management system in place, construction and operation of the Project would not violate water quality standard and

[58] FEMA. 2021. FEMA Flood Map Service Center: Search by Address, 2151 Lockwood Avenue, Oxnard, CA, 93036 – Flood Map 06111C0910E. https://hazards-fema.maps.arcgis.com/apps/webappviewer/index.html?id =8b0adb51996444d4879338b5529aa9cd. Accessed September 26, 2023.

discharge requirements or otherwise substantially degrade water quality. Impacts would be less than significant.

b) **Less-than-Significant Impact.** The Project site is currently a 5.17-acre vacant lot, and the ground surface consists of mostly dirt with sparse shrubs and grasses. As such, the Project Site does allow some rainwater to permeate the surface into the groundwater, with rainwater also being directed to off-site storm drains which flow into the city's municipal system. Based on the Geotechnical Investigation, five borings were explored within the Project site, of which groundwater was encountered at approximately 41 feet below ground surface. The highest groundwater level is mapped as being approximately 10 feet below ground surface at the Project site.[59] Based on the subsurface information, groundwater is present on the Project site within the upper 50 feet; therefore, there is a potential of groundwater rising to within 10 feet below ground surface.

If groundwater is encountered during Project construction, temporary dewatering would be required and the water would be disposed of in accordance with the NPDES permit and other regulatory requirements and would cease when construction is complete. Thus, dewatering during construction would not meaningfully affect groundwater recharge such that there would be a discernable net deficit in aquifer volume or a lowering of the local groundwater table level. Construction impacts would be less than significant.

During Project operation, water demand outside of residential use would be limited to irrigation for the proposed landscaping and cleaning communal areas. Water supplied to the Project site would be from the water main connection and as such would not substantially decrease groundwater supplies as the city's Urban Water Management Plan anticipates the City will be able to manage its water supply portfolio to provide adequate water to meet demand through the year 2045.[60] Construction and operation of the Project would not meaningfully affect groundwater recharge such that there would be a discernable net deficit in aquifer volume or a lowering of the local groundwater table level. Impacts would be less than significant.

c) **Less-than-Significant Impact.** The Project does not propose any alteration to a stream or river course as there are none present. As specified in the Hydrology Report, the Project's stormwater capture and treatment system would be designed to include an underground detention and retention system. The infiltration device will be set vertically lower and separated from the detention chambers. Stormwater flow would route to the infiltration system which will prevent flow from draining to the detention system until flow builds to a certain level, at which point runoff will begin filling the detention chambers. Additionally, routing to the underground infiltration system will take place utilizing a series of ribbon gutters, catch basins, and underground piping around the building. The drainage design will

[59] FEMA. 2021. FEMA Flood Map Service Center: Search by Address, 2151 Lockwood Avenue, Oxnard, CA, 93036 – Flood Map 06111C0910E. https://hazards-fema.maps.arcgis.com/apps/webappviewer/index.html?id =8b0adb51996444d4879338b5529aa9cd. Accessed September 26, 2023.

[60] City of Oxnard. 2021. 2020 Urban Water Management Plan. https://www.oxnard.org/wp-content/uploads/2021/11/Oxnard-2020-Urban-Water-Management-Plan_20211110_w-Appendices.pdf. Accessed December 8, 2023.

meet city of Oxnard and Ventura County criteria for stormwater quality. The onsite runoff would be collected and treated pursuant to MS4 standards. As discussed in detail within the Hydrology Report, under existing conditions, the peak flow runoff during a 100-year flood event is 6.03 cubic feet per second (cfs). With the Project, the undetained developed 100-year conditions would be 16.9 cfs. However, with the Project's proposed stormwater system in place, the 100-year peak flow would be reduced to 5.17 cfs, which is lower than existing conditions. As specified in the Hydrology Report, there are no anticipated substantial changes to drainage patterns in the area from future development but as sites develop and fall under MS4 requirements, drainage patterns in the area would likely improve, as is the case with the Project. Thus, the Project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in on- or off-site flooding or would exceed the capacity of existing or planned stormwater drainage systems. Impacts related to stormwater drainage systems and drainage patterns would be less than significant.

d) **Less-than-Significant Impact.** Based on a review of the Federal Emergency Management Agency's (FEMA) Flood Insurance Rate Map, the Project site is located within a shaded Zone X, meaning it is outside of the 100-year (1%) annual chance floodplain.[61] Nonetheless, the Project's grading design and proposed drainage system are designed in a manner to convey stormwater flows away from structures in a manner to provide protection from flooding pursuant to City of Oxnard, County of Ventura, and FEMA requirements. All buildings will be constructed outside of 100-year storm event flood limits. Therefore, impacts related to flood hazards would be less than significant.

e) **Less-than-Significant Impact.** The Project Site is not located within a Special Flood Hazard Area (100-year floodplain) identified by FEMA. The Project Site is located in an urbanized area and there are no rivers, streams, or other water bodies (natural or urban) that could flood on or through the Project Site. Therefore, the Project would not impede or redirect flood flows. Impacts would be less than significant in this regard.

f) **Less-than-Significant Impact.** Based on a review of the Ventura County Multi-Jurisdictional Hazard Mitigation Plan, Figure 8-2, *Dam Failure Inundation Area Used for Risk Assessment*, the majority of the city of Oxnard, including the Project site, is within a dam inundation area.[62] Although the Project site may be subject to inundation due to a failure of a dam upstream along the Santa Clara River, the probability of dam failure inundation is not known, but such an event would likely be the result of an extreme storm.

The California Division of Safety of Dams periodically checks the conditions of dams so the likelihood of a dam failure is further reduced as remedial action is likely to be

[61] FEMA. 2021. FEMA Flood Map Service Center: Search by Address, 2151 Lockwood Avenue, Oxnard, CA, 93036 – Flood Map 06111C0910E. https://hazards-fema.maps.arcgis.com/apps/webappviewer/index.html?id =8b0adb51996444d4879338b5529aa9cd. Accessed September 26, 2023.

[62] Tetra Tech. 2022. Ventura County Multi-Jurisdictional Hazard Mitigation Plan. https://www.readyventuracounty.org/county-plans/. Accessed September 29, 2023.

undertaken prior to dam failure. Given the low likelihood of dam failure, the potential impact due to flooding from dam or levee failure is considered to be less than significant.

g) **No Impact.** As stated in Response 3.7.d, the closest enclosed body of water that could result in earthquake-induced seiche is Lake Piru, which is approximately 28 miles northeast of the Project site. Due to the distance of Lake Piru, potential seiches in the lake would not impact the Project site. Also, the Project site is located approximately 6 miles inland (east) from the Pacific Ocean and is not located within a tsunami hazard area as mapped by the California Department of Conservation (California DOC 2023b). Furthermore, the Project site and surrounding area contain relatively flat terrain and are not subject to mudflows. Therefore, the Project would not be exposed to substantial risk related to inundation by a seiche, tsunami, or mudflow at the Project site.

h) **Less-than-Significant Impact.** Apart from residential use, the Project would require water for on-site landscaping and cleaning and would connect to the existing city potable water main and is not anticipated to deplete groundwater supplies within the city of Oxnard, as additional residential growth was accounted for in the city's 2030 General Plan and 2020 Urban Water Management Plan. Additionally, the Project will be designed in accordance with City of Oxnard and Ventura County criteria for water quality control and sustainable groundwater management such as meeting full MS4 compliance standards for the site. As such, the Project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. Therefore, implementation of the Project would result in less-than-significant impacts.

3.10 Land Use and Planning

Issues	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Would the project conflict with an applicable land use plan, policy or regulation of the City or other agency with jurisdiction over the project adopted for the purpose of avoiding or mitigating a significant environmental effect?	☐	☐	☒	☐
b) Would the project involve land uses that are not allowed under any applicable airport land use compatibility plan?	☐	☐	☒	☐
c) Would the project conflict with an applicable habitat conservation plan or natural community conservation plan?	☐	☐	☐	☒
d) Would the project physically divide an established community?	☐	☐	☐	☒

This section has primarily used the City of Oxnard 2030 General Plan Land Use Element and the Airport Comprehensive Land Use Plan Update for Ventura County to determine impacts to Land Use.

Discussion

a) **Less-than-Significant Impact.** The Project consists of the construction of a five-story, 373,069 sf, mixed-income, multi-family residential development, within one building. As mentioned above, the Project site is zoned as BRP, with an additive AHD zoning designation according to the 2030 General Plan Land Use Element. The intent of the BRP zones is to provide areas for a limited group of professional, administrative, and research and limited manufacturing uses along with limited commercial activities intended to support such uses. Residential uses up to 30 units per acre are permitted in both AHD and AHP zones. Additionally, the intent of AHD zones is to provide opportunities for the development of affordable residential housing to help the city reach its Regional Housing Needs Allocation (RHNA). Upon approval of the zone map amendment, the Project would not conflict with the Project site's zoning designation.

The 2030 General Plan land use goals and policies which are applicable to the Project include:

Goal CD-1: A balanced community consisting of residential, commercial, and employment uses consistent with the character, capacity, and vision of the City.

Policy CD-1.2: Promote the efficient use of larger vacant parcels and vacant areas of the city by encouraging infill development, with a priority to mixed uses that reduce vehicle trips and GHG emissions and promote sustainable development goals and objectives.

Policy CD-1.5: Promote the development of a variety of housing types throughout the city including apartments, condominiums, lofts, townhomes, and attached and detached single family units.

The Project would be consistent with Goal CD-1 and Policy CD-1.5 as 234 residential units would be introduced, consisting of Studio (18 units), 1-bedroom, 1-bath (86 units); 2-bedroom, 2-bath (106 units), and 3-bedroom, 2-bath (24 units) residential spaces. With regard to Policy CD-1.2, the Project would be considered infill development. While the Project would not include a mix of uses, the proposed residential uses would be located in an area surrounded by commercial and office, thereby providing housing near jobs and promoting walkability to the nearby non-residential uses. As such, no substantial conflict would occur with this policy such that an adverse physical impact to the environment would occur.

The city's Housing Element includes various goals and policies to promote needed housing within the city, including affordable housing. As of February 2022, the city's total remaining RHNA need is 8,442 units in the four income categories; Extremely Low/Very Low (1,833 units), Low (1,058 units), Moderate (1,521 units) and Above Moderate (4,030 units).[63] The RHNA allocation was determined by the city's General Plan with regional oversight by SCAG.

Development of the Project would provide needed infill housing, including affordable housing, as desired by the Housing Element. The Project would conform to the applicable zoning ordinances outlined in the Oxnard City Code for the BRP and AHD zoning districts. The Project would also provide a 20-foot front yard setback and a 30-foot rear yard setback, which would comply with the requirement of a maximum 30-foot front yard setback and exceed the required 20-foot rear setback. Compliance with the Oxnard City Code and General Plan would ensure consistency with applicable land use plans, policies and regulations adopted to avoid environmental effects. Therefore, the Project impacts would be less than significant.

b) **Less-than-Significant Impact.** The Project site is located approximately 2.4 miles west of the Camarillo Airport, 2.9 miles northeast of the Oxnard Airport, 6.7 miles northwest of the Naval Base Ventura County Point Mugu Airport, and 9.6 miles southwest of the Santa Paula Airport. As outlined in the Airport Comprehensive Land Use Plan (ACLUP) for Ventura County,[64] the Project site is located outside of the adopted ACLUPs for all four aforementioned airports.

According to the Ventura County ACLUP, a portion of the Project site is within the Federal Aviation Regulation (FAR) Part 77 Airspace for Camarillo Airport. This is an imaginary surface extending from the airport's runway. An object constitutes an obstruction to navigation if it is 200 feet above ground level or 200 feet above the airport's elevation (whichever is greater) up to 3 miles for runway lengths greater than 3,200 feet from the airport, which is the case with Camarillo Airport. The Project is an acceptable use within

63 City of Oxnard, Housing Element, October 2022, p. D-3, https://www.oxnard.org/wp-content/uploads/2022/10/Oxnard-Housing-Element_October-2022_Clean_Reduced.pdf. Accessed October 29, 2023.

64 Ventura County Airport Land Use Commission. 2000. Airport Comprehensive Land Use Plan Update for Ventura County. https://vcportal.ventura.org/AIRPORTS/docs/document_library/Doc_Airport_LandUse_Plan.pdf. Accessed February 2, 2023.

the FAR Part 77 Airspace and is not located within a Height Restriction Zone. Therefore, the Project is not subject to Section 77.9(a), which requires that construction or alteration of development below 200 feet in height must file notice with the FAA. The Project development would be 67'-6" at its highest point (at the top of the stairs and elevator tower), with an average height of approximately 58'-0" for all building elements, which would not be a hazard to air navigation or require Federal Aviation Administration notification. Therefore, the Project would not involve land uses that are not allowed under any applicable airport land use compatibility plan. Impacts would be less than significant.

c) **No Impact.** According to the City of Oxnard 2030 General Plan EIR, no established or planned Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan exists within the city of Oxnard. Therefore, no impact would occur.

d) **No Impact.** The Project site is currently comprised of a vacant lot and surrounding land uses consists of commercial centers with an outlet center containing various uses, including Cal Lutheran University east of the Project site, medical and general office buildings to the south, and an auto dealership to the west. Per the site's zoning and land use designations, the Project would be consistent with the land uses and zoning designations adjacent to the Project site boundaries. Vehicle access to the site would be provided via two driveway connections to Lockwood Street, allowing full access to the Project site. In addition, necessary roadway improvements (curb, gutter, sidewalks, etc.) would be required along the frontage adjacent to Lockwood Street, as well as pedestrian facilities to connect the Project to regional and neighborhood services (such as commercial and medical services). The Project would not require the construction of any new infrastructure, such as an interstate highway or railroad tracks, and would not divide an established community nor remove any means of access. Therefore, the Project would not result in a physical division of an established community or adversely affect the continuity of land uses in the Project vicinity, and no impact would occur.

3.11 Mineral Resources

Issues	*Potentially Significant Impact*	*Less than Significant with Mitigation Incorporated*	*Less than Significant Impact*	*No Impact*
a) Would the project result in the loss of availability of a known mineral resource of value to the region or state?	☐	☐	☒	☐
b) Would the project result in the loss of availability of a locally-important mineral resource recovery site delineated in the 2030 General Plan or other adopted land use plan?	☐	☐	☒	☐

This section has used the City of Oxnard General Plan Background Report and the City of Oxnard 2030 General Plan to determine impacts to Mineral Resources.

Discussion

a) **Less-than-Significant Impact.** Based on a review of the City of Oxnard General Plan Background Report, the Project site is designated as Mineral Resource Zone (MRZ) MRZ-3.[65] The MRZ-3 Zone includes areas containing mineral deposits, the significance of which cannot be evaluated from available data. Although the Project site could include significant mineral deposits, there are no mining activities within the Project site, and the existing urban development within the Project area impedes the potential to economically mine in this area. Therefore, the Project would not result in the loss of availability of important mineral resources. Impacts to mineral resources would be less than significant.

b) **Less-than-Significant Impact.** The Project site is not designated as a locally important mineral resource or a mineral resource recovery area.[66] Therefore, the implementation of the Project would not impact a locally important mineral resource recovery site. Impacts to mineral resources would be less than significant.

3.12 Noise

Issues	*Potentially Significant Impact*	*Less than Significant with Mitigation Incorporated*	*Less than Significant Impact*	*No Impact*
a) Would the project generate or expose persons to noise levels exceeding standards established in the Oxnard 2030 General Plan or Noise Ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Would the project generate or expose persons to excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c) Would the project generate a substantial temporary or periodic increase in ambient noise in the project vicinity above levels existing without the project?	☐	☐	☒	☐
d) Would the project generate a substantial permanent increase in ambient noise in the project vicinity above levels existing without the project?	☐	☐	☒	☐
e) For a project located within the airport land use plan for Oxnard Airport or within two miles of Naval Base, Ventura County at Point Mugu, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐
f) Would the project expose non-human species to excessive noise?	☐	☒	☐	☐

The main noise generators within the city consist of vehicular traffic along the US-101 Ventura Freeway, other major roadways, the Oxnard Airport, the Union Pacific Railroad line, and a variety of stationary noise sources. The highest noise levels are adjacent to the US-101 Ventura Freeway. The City of Oxnard 2030 General Plan defines sensitive receptors as residential areas, hospitals, child and daycare facilities, convalescent homes and facilities, schools, and other similar land uses. These uses are considered sensitive because the presence of excessive noise may interrupt normal activities typically associated with their use. Additionally, increased noise levels occur along major arterials including Victoria Avenue, Channel Islands Boulevard, Ventura Road, and Oxnard Boulevard. A Noise Study was prepared for the Project by Meridian Consultants which formed the basis for the analysis within this section, see **Appendix I** of this IS/MND.[67] This section also includes additional typical noise information provided below by ESA so that the definition and metrics of noise can be understood by the reader.

Discussion

a) **Less-than-Significant Impact.** Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a liquid or gaseous medium (e.g., air). Noise is generally defined as unwanted sound (i.e., loud, unexpected, or annoying sound). Acoustics is defined as the physics of sound. In acoustics, the fundamental scientific model consists of a sound (or noise) source, a receiver, and the propagation path between the two. The loudness of the noise source and obstructions, or atmospheric factors affecting the

[67] Meridian Consultants. 2023. Noise Study - Lockwood Development 3 Project. October 2023.

propagation path to the receiver determines the sound level and characteristics of the noise perceived by the receiver. Acoustics addresses primarily the propagation and control of sound.

Sound, traveling in the form of waves from a source, exerts a sound pressure level (referred to as sound level) that is measured in decibels (dB), which is the standard unit of sound amplitude measurement. The dB scale is a logarithmic scale that describes the physical intensity of the pressure vibrations that make up any sound, with 0 dB corresponding roughly to the threshold of human hearing and 120 to 140 dB corresponding to the threshold of pain. Pressure waves traveling through air exert a force registered by the human ear as sound.

Sound pressure fluctuations can be measured in units of hertz (Hz), which correspond to the frequency of a particular sound. Typically, sound does not consist of a single frequency, but rather a broad band of frequencies varying in levels of magnitude, with audible frequencies of the sound spectrum ranging from 20 to 20,000 Hz. The sound pressure level, therefore, constitutes the additive force exerted by a sound corresponding to the sound frequency/sound power level spectrum. The typical human ear is not equally sensitive to this frequency range. As a consequence, when assessing potential noise impacts, sound is measured using an electronic filter that deemphasizes the frequencies below 1,000 Hz and above 5,000 Hz in a manner corresponding to the human ear's decreased sensitivity to these extremely low and extremely high frequencies. This method of frequency filtering, or weighting, is referred to as A-weighting, expressed in units of A-weighted decibels (dBA), which is typically applied to community noise measurements.

An individual's noise exposure is a measure of noise over a period of time; a noise level is a measure of noise at a given instant in time. However, noise levels rarely persist at one level over a long period of time. Rather, community noise varies continuously over a period of time with respect to the sound sources contributing to the community noise environment. Community noise is primarily the product of many distant noise sources, which constitute a relatively stable background noise exposure, with many of the individual contributors unidentifiable. The background noise level changes throughout a typical day, but does so gradually, corresponding with the addition and subtraction of distant noise sources, such as changes in traffic volume. What makes community noise variable throughout a day, besides the slowly changing background noise, is the addition of short-duration, single-event noise sources (e.g., aircraft flyovers, motor vehicles, sirens), which are readily identifiable to the individual.

These successive additions of sound to the community noise environment change the community noise level from instant to instant, requiring the noise exposure to be measured over periods of time to legitimately characterize a community noise environment and evaluate cumulative noise impacts. The following noise descriptors are used to characterize environmental noise levels over time, which are applicable to the Project.

L_{eq}: The equivalent sound level, is used to describe noise over a specified period of time in terms of a single numerical value; the L_{eq} of a time-varying signal and that

of a steady signal are the same if they deliver the same acoustic energy over a given time. The L_{eq} may also be referred to as the average sound level.

L_{max}: The maximum, instantaneous noise level experienced during a given period of time.

L_{min}: The minimum, instantaneous noise level experienced during a given period of time.

L_x: The noise level exceeded a percentage of a specified time period. For instance, L_{50} and L_{90} represent the noise levels that are exceeded 50 percent and 90 percent of the time, respectively.

L_{dn}: The average A-weighted noise level during a 24-hour day, obtained after an addition of 10 dBA to measured noise levels between the hours of 10 p.m. and 7 a.m. to account nighttime noise sensitivity. The L_{dn} is also termed the day-night average noise level (DNL).

CNEL: The Community Noise Equivalent Level (CNEL) is the average A-weighted noise level during a 24-hour day that is obtained after an addition of 5 dBA to measured noise levels between the hours of 7 p.m. and 10 p.m. and after an addition of 10 dBA to noise levels between the hours of 10 p.m. and 7 a.m. to account for noise sensitivity in the evening and nighttime, respectively. CNEL and L_{dn} are close to each other, with CNEL being more stringent and generally 1 dBA higher than L_{dn}.

Noise is generally loud, unpleasant, unexpected, or undesired sound that is typically associated with human activity that is a nuisance or disruptive. Although exposure to high noise levels has been demonstrated to cause physical and physiological effects, the principal human responses to typical environmental noise exposure are related to subjective effects and interference with activities.

With regard to the subjective effects, the responses of individuals to similar noise events are diverse and influenced by many factors, including the type of noise, the perceived importance of the noise, the appropriateness of the noise to the setting, the duration of the noise, the time of day and the type of activity during which the noise occurs, and individual noise sensitivity. Overall, there is no completely satisfactory way to measure the subjective effects of noise, or the corresponding reactions of annoyance and dissatisfaction on people. A wide variation in individual thresholds of annoyance exists, and different tolerances to noise tend to develop based on an individual's past experiences with noise. Thus, an important way of predicting a human reaction to a new noise environment is the way it compares to the existing environment to which one has adapted (i.e., comparison to the ambient noise environment). In general, the more a new noise level exceeds the previously existing ambient noise level, the less acceptable the new noise level will be judged by those

hearing it. With regard to increases in A-weighted noise level, the following relationships generally occur:[68]

- Except in carefully controlled laboratory experiments, a change of 1 dBA in ambient noise levels cannot be perceived.
- Outside of the laboratory, a 3 dBA change in ambient noise levels is considered to be a barely perceivable difference.
- A change in ambient noise levels of 5 dBA is considered to be a readily perceivable difference.
- A change in ambient noise levels of 10 dBA is subjectively heard as doubling of the perceived loudness.

These relationships occur in part because of the logarithmic nature of sound and the dB scale. The human ear perceives sound in a non-linear fashion; therefore, the dBA scale was developed. Because the dBA scale is based on logarithms, two noise sources do not combine in a simple additive fashion, but rather logarithmically. Under the dBA scale, a doubling of sound energy corresponds to a 3 dBA increase. In other words, when two sources are each producing sound of the same loudness, the resulting sound level at a given distance would be approximately 3 dBA higher than one of the sources under the same conditions.

When noise propagates over a distance, the noise level decreases with distance depending on the type of noise source and the propagation path. Noise from a localized source (i.e., point source) propagates uniformly outward in a spherical pattern, referred to as "spherical spreading." Stationary point sources of noise, including stationary mobile sources such as idling vehicles, attenuate (i.e., reduce) at a rate between 6 dBA, for acoustically "hard" sites, and 7.5 dBA for "soft" sites for each doubling of distance from the reference measurement, as the noise energy is continuously spread out over a spherical surface (e.g., for hard surfaces, 80 dBA at 50 feet attenuates to 74 at 100 feet, 68 dBA at 200 feet). Hard sites are those with a reflective surface between the source and the receiver, such as asphalt or concrete surfaces, or smooth bodies of water. No excess ground attenuation is assumed for hard sites and the reduction in noise levels with distance (drop-off rate) is simply the geometric spreading of the noise from the source. Soft sites have an absorptive ground surface, such as soft dirt, grass, or scattered bushes and trees, provides an additional ground attenuation value of 1.5 dBA (per doubling distance), a geometric spreading.[69]

The City of Oxnard has promulgated noise ordinances, but it currently does not have adopted standards, guidelines, or thresholds relative to construction noise.[70] As such, available guidelines from the Federal Transit Authority (FTA) were considered to assess noise impacts

[68] California Department of Transportation (Caltrans). 2013. Technical Noise Supplement (TeNS). September 2013. https://dot.ca.gov/-/media/dot-media/programs/environmental-analysis/documents/env/tens-sep2013-a11y.pdf. Accessed October 25, 2023.

[69] California Department of Transportation (Caltrans). 2013. Technical Noise Supplement (TeNS). September 2013. https://dot.ca.gov/-/media/dot-media/programs/environmental-analysis/documents/env/tens-sep2013-a11y.pdf. Accessed October 25, 2023.

[70] City of Oxnard City Code Chapter 7, Article XI Sound Regulation. https://codelibrary.amlegal.com/codes/oxnard/latest/oxnard_ca/0-0-0-33083. Accessed December 9. 2023.

due to construction. According to the FTA's General Construction Noise Criteria, daytime and nighttime thresholds for residential, commercial, and industrial land uses are considered reasonable criteria for use in accessing the potential for adverse community reaction to noise generated by construction activities. The FTA's construction noise criteria for residential uses are 90 dBA (Leq-1 hour) during the daytime and 80 dBA (Leq-1 hour) during the nighttime period. Additionally, construction noise thresholds for commercial and industrial uses are 100 dBA (Leq-1 hour) during both the daytime and nighttime periods.

Construction activities typically generate noise from the operation of equipment within the Project Site that is required for the construction of various facilities. Noise impacts from on-site construction equipment as well as the on-site staging of construction trucks were evaluated by determining the noise levels generated by different types of construction activity and calculating the construction-related noise level at nearby noise-sensitive receptor locations. Actual construction noise levels would vary, depending upon the equipment type, model, the type of work activity being performed, and the condition of the equipment. The Noise Study, Appendix I, analyzes an inventory of construction equipment, including the number and types of equipment, which would be operating simultaneously within the Project site. Construction equipment was identified for each phase/component of construction and shown in **Table 9**. It is highly unlikely that all pieces of construction equipment identified in Table 9 would operate simultaneously in any specific location during construction because equipment is generally operated only when needed and space constraints limit the equipment that can be used at any one time in a specific location. Therefore, this modeling is considered a conservative approach to calculate the maximum noise levels that would be generated with all pieces of equipment for each phase occurring simultaneously.

TABLE 9
SUMMARY OF CONSTRUCTION PHASES AND EQUIPMENT

Construction Phase	Equipment (number of equipment units)
Site Preparation	Rubber Tired Dozer (3), Tractors/Loaders/Backhoes (4)
Grading	Excavators (1), Graders (1), Rubber Tired Dozers (1), Tractors/Loaders/Backhoes (3)
Building Construction	Cranes (1), Forklifts (3), Generator Sets (1), Tractors/Loaders/Backhoes (3)
Paving	Pavers (2). Paving Equipment (2), Rollers (1)
Architectural Coating	Air Compressors (1)

SOURCE: Meridian Consultants, *Noise Study - Lockwood Development 3 Project*, October 2023.

Table 10 provides estimated construction noise levels for each construction phase at each of the receptors in the vicinity of the Project Site. Construction equipment operates at its noisiest levels for certain percentages of time during operation. During a construction day, the highest noise levels would be generated when multiple pieces of construction equipment are operated concurrently. To characterize construction-period noise levels, the average noise level (hourly Leq) associated with each construction stage was calculated based on the quantity, type, and usage factors for each type of equipment that would be used during each construction stage. These noise levels are typically associated with

multiple pieces of equipment operating simultaneously. Due to the size of the site (5.17 acres) and the number of pieces of equipment assumed for each construction phase, the combined noise levels for each construction phase are anticipated to occur at the center of the Project site. Therefore, the distance between each receptor and the construction site is measured from the center of the Project site.

TABLE 10
ESTIMATED CONSTRUCTION NOISE LEVELS AT EXISTING OFF-SITE SENSITIVE RECEPTORS

Noise-Sensitive Receptor	Construction Phases	Distance between Nearest Receptor and Construction Site	Estimated Construction Noise Levels at Noise Sensitive Receptor by Construction Phase,[a,b] Leq-1 Hour (dBA)

a. Estimated construction noise levels represent the worst-case condition when noise generators are located closest to the receptors.
b. Estimated construction noise levels represent the worst-case condition when all pieces of equipment are operating simultaneously.

Table 10 presents the maximum noise impacts that are forecasted to occur at the nearest receptor site (Receptor 5). As shown, the estimated construction noise levels would not exceed 100 dBA (Leq-1hour) for the existing surrounding commercial uses and 90 dBA (Leq-1hour) for existing residential uses. As such, construction noise impacts would not be considered significant.

City of Oxnard Noise Ordinance

In accordance with Section 7-188 of the city's Municipal Code, sound sources associated with or created by construction, repair, remodeling or grading of any real property are exempt, provided the activities occur between the hours of 7 a.m. and 6 p.m. on weekdays and Saturday. Because the Project would include construction activities between the hours of 7 a.m. and 4:30 p.m. on weekdays and Saturday, the construction noise levels are considered less than significant.

City of Oxnard Safety & Hazards Element

The Safety & Hazards Element includes noise policies. The applicable policies are related to construction and operational noise.[71] The following noise policies are applicable to the Project:

> **SH-6.1: Construction Noise Control** – Provide best practices guidelines to developers for reducing potential noise impacts on surrounding land uses.

As described above, noise levels associated with construction activities at the nearest residences would be below the normally acceptable Community Noise Exposure standards for single- and multi-family residences. Therefore, construction activities would not require best practices to reduce anticipated construction noise.

[71] City of Oxnard. 2022. 2030 General Plan. Adopted October 2011. Amended December 2022. https://www.oxnard.org/city-department/community-development/planning/2030-general-plan/. Accessed October 25, 2023.

> **SH-6.2: Limiting Construction Activities** – Continue to limit construction activities to the hours of 7 a.m. to 7 p.m., Monday through Saturday. No construction shall occur after hours, on Sundays, or on national holidays without permission from the city.

As described above, construction activities would be limited to the hours between 7 a.m. and 4:30 p.m. on weekdays, including Saturday. Therefore, the Project would be consistent with this policy.

> **SH-6.4: New Development Noise Compatibility** – Require that proposed development projects not generate more noise than that classified as "satisfactory" based on CEQA Thresholds of Significance on nearby property.

As described below in Response 3.12 d) below, the Project includes features such as a masonry wall along the northern boundary and attenuation features for the proposed patios and balconies to ensure that outdoor living areas do not exceed the city's 65 dBA exterior noise level standard. Therefore, the Project would be consistent with this policy.

> **SH-6.9: Minimize Noise Exposure to Sensitive Receptors** – Prohibit the development of new commercial, industrial, or other noise generating land uses adjacent to existing residential uses, and other sensitive noise receptors such as schools, child and daycare facilities, health care facilities, libraries, and churches if noise levels are expected to exceed 70 dBA.

As described above, the Project includes construction of residential development and not development of commercial or industrial uses. Therefore, the Project would be consistent with this policy.

b) **Less-than-Significant Impact.** Vibration refers to groundborne noise and perceptible motion. Groundborne vibration is almost exclusively a concern inside buildings and is rarely perceived as a problem outdoors. The motion may be discernible outdoors, but without the effects associated with the shaking of a building, there is less adverse reaction. Vibration energy propagates from a source through intervening soil and rock layers to the foundations of nearby buildings. The vibration then propagates from the foundation throughout the remainder of the structure. Building vibration may be perceived by the occupants as the motion of building surfaces, the rattling of items moving on shelves or hanging on walls, or as a low-frequency rumbling noise. The rumbling noise is caused by the vibrating walls, floors, and ceilings that are radiating sound waves.

Typical sources of groundborne vibration are construction activities (e.g., blasting, pile driving, and operating heavy-duty earth-moving equipment), steel-wheeled trains, and occasional traffic on rough roads.[72] Problems with groundborne vibration and noise from these sources are usually localized.

[72] California Department of Transportation (Caltrans). 2020. Transportation and Construction Vibration Guidance Manual. https://dot.ca.gov/-/media/dot-media/programs/environmental-analysis/documents/env/tcvgm-apr2020-a11y.pdf. Accessed October 25, 2023.

Impacts due to construction activities are evaluated by identifying the vibration sources (i.e., construction equipment), measuring the distance between vibration sources and surrounding structure locations, and providing a significance determination based on established criteria. The city currently does not have adopted standards, guidelines, or thresholds relative to ground-borne vibration. As such, available guidelines from the FTA were considered to assess impacts due to ground-borne vibration during construction. The FTA criteria for human annoyance is 78 Vdb during the daytime (7:00 am to 10:00 pm) for residential uses, 84 Vdb for offices or similar uses not sensitive to vibration, and 90 Vdb for uses characterized as workshops and similar areas not sensitive to vibration. As shown below, construction activities on the Project site will not result in human annoyance impacts. Because the construction activities would not cause substantial human annoyance, a structural vibration impact analysis was not warranted.

Project construction equipment would generate ground vibration. Based on typical construction equipment vibration levels provided by the FTA, the forecasted vibration levels (seen in **Table 11**) of on-site construction activities would range from 15 Vdb to 87 Vdb. As shown in Table 11, project construction equipment would not exceed the residential significance threshold of 78 VdB at the nearest residential use, the office significance threshold of 84 VdB would not be exceeded at the nearby office uses, and the workshop significance threshold of 90 VdB would not be exceeded for the adjacent Cal Lutheran University satellite campus. Impacts related to human annoyance from on-site construction vibration would not be considered significant.

TABLE 11
TYPICAL VIBRATION VELOCITIES FOR PROJECT CONSTRUCTION EQUIPMENT

	Approximate VdB							
Nearest Off-Site Building Structures	**Vibratory Roller**	**Large Bulldozer**	**Caisson Drilling**	**Loaded Trucks**	**Jackhammer**	**Small Bulldozer**	**Significance Threshold (Vdb)**	**Exceeds Threshold?**
1902 Outlet Center Drive Medical Office Building 1	87	79	79	78	71	50	84	No
2024 Outlet Center Drive Medical Office Building 2	53	46	46	44	37	16	84	No
1900 Outlet Center Drive Medical Office Building 3	57	49	49	48	41	20	84	No
2211 E. Gonzales Road, Pacific Senior Living	53	44	45	44	37	16	78	No
2201 Outlet Center Drive, Cal Lutheran University	52	44	44	43	36	15	90	No

Additionally, Project operations would not include use of heavy machinery or equipment that would generate significant vibration. During Project operations, resident vehicles accessing the Project site would result in nominal increases in the typical vibration levels that are experienced from daily vehicles traveling along adjacent roadways. Therefore, the Project would not generate excessive groundborne noise or vibration that would affect sensitive receivers and would have a less-than-significant impact.

c) **Less-than-Significant Impact.** The implementation of the Project would result in temporary and periodic increases in noise levels. As discussed above, temporary noise levels would occur during construction activities associated with the Project. As a worst-case assumption, noise levels at the nearest residential use would not exceed the 90 dBA construction noise criteria for residences during the daytime. In addition, as discussed above, the City considers construction activities significant if construction noise occurs outside the Noise Ordinance timing restriction. Because the Project would include construction activities within the allowed times of day, the Project would result in a less-than-significant temporary noise impact.

d) **Less-than-Significant Impact.** The implementation of the Project would result in the placement of residences adjacent to U.S. 101 and its traffic noise levels. In addition, the Project would increase traffic noise levels on the surrounding roadway network. For the placement of the proposed residences adjacent to U.S. 101, specific numerical noise criteria are not included in the 2030 General Plan but are referenced in the General Plan Background Report.[73] The California Code of Regulations sets forth requirements for the insulation of multiple-family residential dwelling units from excessive and potentially harmful noise. The State indicates that locating units in areas where exterior ambient noise levels exceed 65 dBA is undesirable. As shown in Table 4 of the Noise Study in Appendix I, normally acceptable noise levels for residential multi-family uses are 65 dBA CNEL or less.

U.S. 101 Vehicular Noise Level Impacts on Proposed Resident

The primary off-site noise source in the Project area is vehicular traffic along U.S. 101 Freeway. Motor vehicle noise is a concern because it is characterized by a high number of individual events that often create sustained noise levels. Ambient noise levels are expected to be highest during the morning and afternoon rush hours unless congestion slows speeds substantially. To determine ambient noise levels in the Project area, noise-level monitoring was conducted by Meridian Consultants between August 1 and August 2, 2022, at the northeast corner of the Project site, as shown in Figure 3 of the Noise Study in Appendix I.

The ambient noise level during the 24-hour noise monitoring period at the Project site was 77.4 dBA CNEL. The noise level from vehicular traffic on U.S. 101 would decrease as the receptor is located further away from the traffic. The Project includes a multiple-family residential structure with outdoor living areas (patios and/or balconies). The city's standard for outdoor living areas is 65 dBA CNEL or less as stated above. To reduce noise levels on the Project site, the Project includes an 8-foot high masonry wall with evergreen vine along the northern property line adjacent to U.S. 101. Additionally, the outdoor living areas (patios and/or balconies) on the 2nd through 5th floors of the multiple family residential structure that are positioned facing towards the U.S. 101 Freeway between 160 feet and 180 feet to the freeway centerline would include a 42-

[73] City of Oxnard. 2006. Draft Background Report. April 2006. https://www.oxnard.org/wp-content/uploads/2016/08/OxnardDraftBackgroundReport2006_04.21.06.pdf. Accessed October 25, 2023.

inch solid wall railing. Each of the patios and/or balconies on the 2nd floor would include an 8-inch glazing on top of the solid wall railing and the outdoor living areas positioned facing towards the U.S.-101 Freeway would be attenuated to be below the maximum exterior standard of 65 dBA CNEL. As such, the Project would adhere to the city's exterior standard for outdoor living areas such as the patios and/or balconies. No mitigation is required.

Project Traffic Noise Impacts

To determine the traffic noise impacts on uses in the vicinity of the Project site, existing traffic noise levels need to be identified. If a project results in a traffic noise increase of 3 dBA above ambient noise levels along existing roadways, a project would result in a significant noise increase. Existing roadway noise levels were calculated along various roadway segments near to the Project site based on the existing traffic volumes identified in the Traffic Study in **Appendix J**. In addition, to determine the existing plus Project traffic noise levels, the Traffic Study distributed Project traffic to the surrounding roadway network and calculated the total traffic volumes associated with existing plus Project conditions. Roadway noise attributable to the Project development was calculated based on the traffic volumes in the Traffic Study. **Table 12** shows the existing and existing plus Project traffic noise levels along the surrounding roadways.

As shown in Table 12, the maximum noise level increase along the analyzed roadways is calculated as 0.1 dBA CNEL along Rice Avenue north of U.S. 101 Southbound Ramp and North of Gonzales Road, along Gonzales Road east of Solar Avenue, East of Lombard Street, and East of Rose Avenue. Consequently, Project-related traffic would not cause noise levels along the analyzed roadways to increase by more than the significance threshold of 3.0 dBA. Thus, the Project would not result in a permanent increase in noise levels above ambient levels in the vicinity of the Project site in excess of the city's Noise Element and Noise Ordinance Vehicular related noise impacts associated with the Project would be less than significant.

TABLE 12

NOTES: s/o = south of; e/o = east of; n/o = north of; w/o = west of

e) **Less-than-Significant Impact.** There are no public airports or private airstrips within 2 miles of the Project site. The Project site is located approximately 2.4 miles west of Camarillo Airport and 2.9 miles northeast of Oxnard Airport. As the Project site is over 2 miles from the nearest airport, the Project would not expose people to excessive airport noise levels. Therefore, less than significant aircraft noise impacts would occur.

f) **Less than Significant with Mitigation Incorporated.** The Project could increase noise levels for nesting bird species in the Project vicinity during construction. This increase in noise could result in a significant noise impact to nesting birds. As specified within the

Biological Resources section of this IS/MND, if construction activities take place within an established biological buffer, steps shall be taken to reduce indirect effects to nesting activity by actively reducing construction noise within proximity to a presumed nest location and/or installing temporary construction noise barriers. If the reduction of noise is not feasible, construction activities shall be postponed until the nest is deemed inactive and/or the breeding season has concluded. With the implementation of **Mitigation Measure BIO-1** for nesting birds, potential impacts to nesting birds would be reduced to less than significant.

3.13 Population, Education, and Housing

Issues	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Would the project involve a General Plan amendment that could result in an increase in population beyond that projected in the 2030 General Plan that may result in one or more significant physical environmental effects?	☐	☐	☒	☐
b) Would the project induce substantial growth on the project site or surrounding area, resulting in one or more significant physical environmental effects?	☐	☐	☒	☐
c) Would the project result in a substantial (15 single-family or 25 multi-family dwelling units – about one-half block) net loss of housing units through demolition, conversion, or other means that may necessitate the development of replacement housing?	☐	☐	☐	☒
d) Would the project result in a net loss of existing housing units affordable to very low- or low-income households (as defined by federal and/or city standards), through demolition, conversion, or other means that may necessitate the development of replacement housing?	☐	☐	☐	☒
e) Would the project cause an increase in enrollment at local public schools that would exceed capacity and necessitate the construction of new or expanded facilities?	☐	☐	☒	☐
f) Would the project directly or indirect interfere with the operation of an existing or planned school?	☐	☐	☐	☒

This section has used City of Oxnard 2030 General Plan and SCAG projections for population growth to determine whether the increase in population would be beyond that envisioned in the projections for population, housing and school district attendance.

Discussion

a) **Less than Significant Impact.** The Project consists of the construction of a five-story, mixed-income multi-family residential development within one building. The construction of the Project does not require a general plan amendment and would not increase population beyond that projected in the 2030 General Plan. However, the Project would increase the residential population within the city of Oxnard and the Project vicinity. Based on the city average of 3.9 persons per household, the proposed addition of 234 units would generate an increase of approximately 912 residents, but this would be a nominal increase (2.8 percent) when compared to the SCAG estimates that the population of Oxnard will increase by 32,100 residents between 2016 and 2045.[74] Therefore, the Project would result in less than significant impacts.

[74] Southern California Association of Governments. 2020. Connect SoCal: Demographics and Growth Forecast. https://scag.ca.gov/read-plan-adopted-final-connect-socal-2020. Accessed September 15, 2023. Also see: Southern California Association of Governments, 2021. Pre-Certified Local Housing Data for the City of Oxnard, updated April 2021. https://scag.ca.gov/sites/main/files/file-attachments/oxnard-he-0421.pdf?1620772960#:~:text=This%20chart%20illustrates%20the%20range%20of%20household%20sizes,commonly%20occuring%20household%20is%20of%20four%20people%20%2818.9%25%29. Accessed September 19, 2023.

b) **Less than Significant Impact.** The Project consists of the construction of a mixed-income multi-family residential development consisting of 234 residential units, including 30 low-income level units and 8 very low-income level units. Based on the city average of 3.9 persons per household, the proposed addition of 234 units would generate an increase of approximately 912 residents. Based on the estimated 2020 citywide population of 206,352 residents, the addition of 912 residents would increase Oxnard's population by approximately 0.4 percent. The addition of 234 residential units would also increase the number of households in the city by approximately 0.4 percent.

With regard to future growth, according to the SCAG 2020–2045 RTP/SCS, the forecasted population of the city of Oxnard will increase by 32,100 residents and generate 15,000 new jobs between 2016 and 2045.[75] Based on the 2020 estimates of population and housing for the city of Oxnard and Ventura County as a whole, Oxnard accounts for approximately 25 percent of the countywide 2020 population of 842,886 persons and approximately 291,210 households. The Project would result in 2.8 percent of the expected city population growth.

The Project's increase in population is not expected to induce substantial growth (i.e., additional population or housing growth) within the city. Therefore, the Project's potential for growth-inducing impacts would be less than significant.

c) **No Impact.** As mentioned above, the Project Site is currently vacant, and construction of the Project would not occur on a site that currently contains housing. Therefore, the implementation of the Project would result in no impact on existing housing.

d) **No Impact.** As stated above, construction of the Project would occur on a site that does not contain any existing housing. Therefore, implementation of the Project would result in no impact on existing housing, including existing affordable housing units.

e) **Less than Significant Impact.** As stated above, construction of the Project is estimated to result in a total of 912 new residents. The City of Oxnard 2030 General Plan introduces potential locations of public primary and secondary schools for the Rio, Oxnard, Ocean View, Hueneme, and Oxnard High School Districts.[76] However, the proposed locations do not commit the districts to develop schools at these sites nor limit their options at other sites throughout the city (2030 General Plan). The Project site is located within the Rio

[75] Southern California Association of Governments. 2020. Connect SoCal: Demographics and Growth Forecast. https://scag.ca.gov/read-plan-adopted-final-connect-socal-2020. Accessed September 15, 2023. Also see: Southern California Association of Governments, 2021. Pre-Certified Local Housing Data for the City of Oxnard, updated April 2021. https://scag.ca.gov/sites/main/files/file-attachments/oxnard-he-0421.pdf?1620772960#:~:text=This%20chart%20illustrates%20the%20range%20of%20household%20sizes,commonly%20occuring%20household%20is%20of%20four%20people%20%2818.9%25%29. Accessed September 19, 2023.

[76] City of Oxnard. 2014. City of Oxnard 2030 General Plan Map. https://www.oxnard.org/city-department/community-development/planning/2030-general-plan/. Accessed September 15, 2023.

School District (K–8)[77] and the Oxnard Union High School District (9–12).[78] The nearest existing primary school to the Project site is the Rio Rosales Elementary School, located approximately 0.9 miles south. The closest secondary school to the Project site is the Rio Del Valle Middle School, located approximately 2 miles northwest.[79] The nearest high school is Pacific High School located approximately 1.1 miles southwest. Based on a review of the student generation rates for the Rio School District[80] and Oxnard Union High School District, the proposed 234 multiple family residential units would generate approximately 41 K–5 students (234 x 0.174), 14 6–8 students (234 x 0.061), and 14 9–12 students (234 x 0.06).

As required by Senate Bill (SB) 50, payment of SB 50 fees in accordance with the school districts' established fees by the applicant is required and is considered by the State, City, and districts to represent full mitigation to all potential impacts to school services and facilities. With the payment of these fees, the Project's demand for new or altered school facilities and services would be fully mitigated. As such, development of the Project would result in less-than-significant school facility impacts.

f) **No Impact.** In the project area, public primary and secondary education is provided by the Rio School District and Oxnard Union High School District. The nearest existing schools to the Project site are Rio Rosales Elementary School, located approximately 0.9 miles south, and Rio Del Valle Middle School, located approximately 2 miles northwest. The nearest high school is Pacific High School located approximately 1.1 miles southwest. Due to the distance of the schools from the Project site, implementation of the Project would not directly or indirectly interfere with the operation of any of the existing schools and would not interfere with planned schools within both school districts.

3.14 Public Services and Recreation

Issues	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Would the project increase demand for fire protection service such that new or expanded facilities would be needed to maintain acceptable service levels, the construction of which may have significant environmental effects?	☐	☐	☒	☐
b) Would the project increase demand for law enforcement service such that new or expanded facilities would be needed to maintain acceptable service levels, the construction of which may have significant environmental effects?	☐	☐	☒	☐
c) Would the project increase the use of existing park facilities such that substantial physical deterioration of the facilities would occur or be accelerated or that new or expanded park facilities would be needed to maintain acceptable service levels?	☐	☐	☒	☐
d) Would the project increase the need for or use of existing library or other community facilities such that substantial physical deterioration of the facilities would occur or be accelerated?	☐	☐	☐	☒

This section has reviewed the location of fire departments, police departments, parks and libraries and has used estimated population projections to determine impacts on public services and recreation facilities.

Discussion

a) **Less-than-Significant Impact.** The proposed mixed-income multi-family residential development would be served by City of Oxnard Fire Department Station 5. This fire station is at 1450 East Colonia Road, which is located approximately 1.9 miles southwest of the Project site; this station is equipped with an Engine 65 and Light and Air 65 (coming soon).[81,82] As discussed in Section 3.13, *Population, Education, and Housing*, the Project would generate a total of 912 new residents, which would result in less than 3 percent of expected city population growth.

The Project would be required to comply with the 2019 California Fire Code, Titles 19 and 24 of the California Code of Regulations, the 2022 California Building Code, Chapter 14-sections 14-21 through 14-26 of the Oxnard City Code, and the National Fire Protection Associated (NFPA) Standards, including 2016-NFPA 13 for Fire Sprinklers and 2016-NFPA 72 for Alarm Systems, which would enhance fire safety and support fire protection services. The Project would not require the addition of a new fire station or modifications to an existing fire station to serve the Project site. Therefore, the Project impact on fire protection services would be less than significant.

[81] City of Oxnard. 2023a. City of Oxnard Fire Department, Fire Station Locations. Fire Station Locations | Fire Department – City of Oxnard. Accessed October 4, 2023.

[82] City of Oxnard, 2023b. City of Oxnard, Fire Station 5 Information, https://www.oxnard.org/fire-station-5/. Accessed October 4, 2023.

b) **Less-than-Significant Impact.** The Project site is located approximately 3.3 miles northeast of the City of Oxnard Police Department, which is located at 251 S. C Street. The Project is within Neighborhood Policing Beat 12.[83] As stated above, the Project would generate a total of 912 new residents, which would result in less than 3 percent of the expected city population growth. The proposed Project would not require the addition of a new police station or modifications to an existing police station to serve the Project site. Additionally, the Project would incorporate alarm and video surveillance systems, which would ensure the safety of its residents and visitors. Therefore, the Project would have less-than-significant impacts on police protection services.

c) **Less-than-Significant Impact.** As stated above, the Project would generate a total of 912 new residents, which would result in less than 3 percent of the expected city population growth. The closest city park is East Village Park, located at 2051 Jacinto Drive, approximately 1.1 miles south of the Project site. The second closest city park is West Village Park, located at Cesar Chavez Drive and Teresa Street, approximately 1.3 miles southwest of the Project site. Additionally, the Project would provide approximately 34,304 SF of interior yard space, 32,963 SF of additional amenity space, and 57,033 SF of landscaping, as discussed in Table 1. Therefore, the Project would not create a significant influx of new residents requiring public services such as parks or create a substantial increase in the demand for park facilities. As such, the Project would not result in the physical deterioration of existing park facilities or require new or expanded park facilities. Less-than-significant impacts would occur.

d) **No Impact.** As stated above, the Project would generate a total of 912 new residents, which would result in less than 3 percent of expected city population growth. The Project would be served by the Colonia Public Library, located at 1500 Camino del Sol, approximately 1.8 miles south of the Project site, and the Oxnard Public Library-Main, located at 251 S. A St, approximately 3.2 miles southwest of the site. The Colonial and the Oxnard Public libraries both provide internet access, borrower services, meeting and study rooms, resource and database browsing, job and career information, kids zone, and educational programs.[84] The Project would also provide a multi-purpose room and a community room with internet access for residents to enjoy. Therefore, the Project would not create a substantial increase in the demand for libraries or other community facilities. As such, the Project would not result in a substantial physical deterioration of existing libraries or other community facilities. No impact would occur.

---

3.15 Transportation and Circulation

Issues	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Would the project conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☐	☒
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Would the project result in inadequate emergency access?	☐	☐	☒	☐

The analysis in this section is based on the information provided in the Revised Traffic and Circulation Study (TS)[85] prepared for the Project by Associated Transportation Engineers (ATE) on September 19, 2023, and contained in Appendix J of this IS/MND.

Discussion

a) **No Impact.** The TS prepared for the Project estimated that the Project would generate 1,175 average daily vehicle trips, consisting of 913 trips for the multi-family units and 262 trips for the affordable housing, on the roadways surrounding the Project site.[86] This increase in the number of trips associated with the Project would not conflict with the existing General Plan Circulation Element[87] because the roadways planned within the Circulation Element assumed a greater number of trips generated from the Project site than from this particular Project. The assumed General Plan land use for the site was a factory outlet center, as discussed in the TS, and the center would generate approximately 2,000 more daily trips than the Project. Therefore, the implementation of the Project would not impact the city's planned roadways in a way contrary to the Circulation Element.

The City of Oxnard is served by Gold Coast Transit. The Project site is served by several bus routes located in the project vicinity. The #4A Route (North Oxnard) and the #4B Route (North Oxnard) operate daily providing fixed bus service on Gonzales Road in the vicinity of the site. During the peak commute hours, the #4A Route and #4B Route operate with 45-minute and 25-minute headways, respectively. The #15 Route (Esplanade − El Rio − St. Johns Medical Center), the #17 Route (Esplanade – St. Johns Medical Center – Oxnard College), and #19 Route (OTC – 5th – Gonzales Road) also operate daily providing fixed bus service on Gonzales Road in the vicinity of the site. During the peak commute hours, the #15 Route, #17 Route, and #19 Route operate with 50-minute, 30- to 45-minute, and 60-minute headways, respectively. Existing bus stops with benches are located on both

[85] Associated Transportation Engineers (ATE). 2023. Revised Traffic Study. September 19, 2023.

[86] Associated Transportation Engineers (ATE). 2023. Revised Traffic Study. September 19, 2023.

[87] City of Oxnard. 2011. City of Oxnard 2030 General Plan Goals & Policies. https://www.oxnard.org/city-department/community-development/planning/2030-general-plan/. Accessed October 9, 2023.

sides of Gonzales Road and Rose Avenue, less than 0.5 miles from the Project site. Future Project residents could access these bus routes. The Project would not affect the operation of these transit routes.

Currently, there are pedestrian facilities (crosswalks and sidewalks) located along Lockwood Street and Outlet Center Drive in the project area. The pedestrian facilities connect the Project to commercial and medical facilities east, west, and south of the Project site. The nearest pedestrian crosswalks across Gonzales Road are provided at the Outlet Center Drive signalized intersection. The nearest pedestrian crosswalks across Rose Avenue are provided at the Lockwood Street signalized intersection. Striped pedestrian crosswalks, sidewalk access ramps, and pedestrian call buttons are provided at the Gonzales/Outlet Center Drive and Rose Avenue/Lockwood Street intersections. The Project would not have an adverse effect on the existing pedestrian facilities.

The Project site is served by the City of Oxnard Bikeway System.[88] The existing bicycle facilities located in the Project vicinity consist of Class II bike lanes along Gonzales Road, Rose Avenue, Solar Drive, and a portion of Lockwood Street east of Outlet Center Drive. These Class II bike lanes connect the Project to commercial and employment areas east and west of the Project site. The portion of Lockwood Street adjacent to the Project site is identified as a future Class II bike lane facility in the City of Oxnard Bicycle & Pedestrian Facilities Master Plan.[89] In addition to the on-street facilities, the Project would include the provision of onsite bicycle storage and bike racks. The Project would not have an adverse effect on the existing bicycle facilities.

b) **Less-than-Significant Impact.** Section 15064.3, which describes specific considerations for evaluating a project's transportation impacts under CEQA, was recently added to the State CEQA Guidelines. Section 15064.3(b) establishes vehicle miles traveled (VMT) as the most appropriate measure of transportation impacts, shifting away from the use of Level of Service (LOS) analysis that evaluates a project's impacts on traffic conditions at nearby roadways and intersections. Section 15064.3(c) states that a lead agency shall be governed by the provisions of Section 15064.3 by July 1, 2020. Since the City of Oxnard has not yet established VMT-based criteria for measuring transportation impacts, the VMT analyses presented for the Project was developed using VMT data presented in the recently updated Ventura County Transportation Commission (VCTC) traffic model for Ventura County and the following VMT thresholds published by the State.

Based on OPR guidance, projects that generate or attract fewer than 110 daily trips can use the Screening Threshold for Small Projects and generally may be assumed to cause a less-

[88] COH & Associates, Inc. 2009. 2009 Ventura County Congestion Management Program. https://www.goventura.org/work-with-vctc/publications/. Accessed October 9, 2023.

[89] Alta Planning and Design. 2011. City of Oxnard Bicycle and Pedestrian Facilities Master Plan. https://www.oxnard.org/wp-content/uploads/2016/03/Oxnard-BPMP-Feb12-1.pdf. Accessed October 9, 2023

than-significant transportation impact. Because the Project would generate more than 110 daily trips, the OPR-recommended VMT impact threshold for residential projects is:

> "A proposed project exceeding a level of 15 percent below existing VMT per capita may indicate a significant transportation impact."

The VCTC traffic model provides home-based VMT per capita data for the city of Oxnard as well as the various Traffic Analysis Zones (TAZs) within the city, including the TAZ that encompasses the Project site. Traffic model data was used to establish the home-based VMT per capita thresholds for the city of Oxnard and to estimate the home-based VMT per capita for the Project. Based on the analysis, the existing city-wide home-based VMT in the city of Oxnard is 14.80 VMT per capita and VMT Threshold is a 15 percent reduction from city VMT (12.58 per capita). The Project's home-based VMT is estimated as 9.7 VMT per capita, which is below the 12.58 VMT per capita impact threshold. Therefore, given that the Project would generate a VMT which is significantly lower than the impact threshold, the Project would not create a substantial increase in VMT or conflict or be inconsistent with CEQA Guidelines section 15064.3(b). Impacts would be less than significant.

c) **Less-than-Significant Impact.** The Project does not include design features, such as sharp curves or dangerous intersections, or incompatible uses that would result in traffic safety hazards. Ingress and egress movements for the Project would be facilitated via two driveway connections to Lockwood Street. The driveway connections would allow full access to the Project site. The Project driveways include a design to be consistent with city of Oxnard design standards and have adequate sight distance along Lockwood Street. Because Lockwood Street is on relatively level terrain and the Project driveways include adequate sight distance, the implementation of the Project would result in less-than-significant safety hazards.

d) **Less-than-Significant Impact.** Construction activities on the Project site would include construction worker vehicles as well as delivery and haul trucks. These slow-moving construction trucks traveling along Lockwood Street and Outlet Center Drive could reduce optimal traffic flows and could delay emergency vehicles traveling through the Project area. In addition, certain construction activities, such as roadway, utility, or drainage improvements could require temporary lane closures. However, such impacts would be short-term in duration. Potential sidewalk and lane closures could affect pedestrian and bicycle users and therefore should be managed to minimize potential impacts. This would not result in a significant impact on traffic flows because construction-related traffic would only occur during short periods of time during the day and would cease upon Project completion. As required for the issuance of grading permits within the city, a construction traffic control plan would be prepared for the Project to ensure that adequate emergency access exists during construction. As such, construction impacts would be less than significant.

3.16 Utilities and Energy

j) Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

This section has reviewed the Project's proposed utilities developments and uses and compared this against relevant city of Oxnard utility capacities and thresholds.

Discussion

a) **Less-than-Significant Impact.** The Project would increase water demand compared to the Project site's existing conditions; however, water use would be characteristic of a residential development with surface parking and landscaping. According to the city's 2020 Urban Water Management Plan[90], the city's water demand is expected to increase from 28,819 acre-feet per year (AFY) in 2025 to 33,349 AFY in 2045 which is an approximate increase of 4,530 AFY. This increase in demand is projected to be accommodated by various supply sources.

[90] City of Oxnard. 2021. 2020 Urban Water Management Plan. https://www.oxnard.org/city-department/public-works/water/uwmp/. Accessed October 6, 2023.

Groundwater and imported water supplies are projected to decrease between 2025 and 2045 while the City will increase supplies from recycled water and an aquifer storage recovery project. The City projects the water supplies that they have will be adequate to accommodate the projected water demand within the city. The Project's water demand was projected through the use of the CalEEMod modeling that was performed as part of the *Air Quality/Health Risk Assessment/Greenhouse Gas/Energy Impact Analysis* analyses. The water demand for the Project is expected to have an annual water demand of approximately 9.7 million gallons per year, or 30 AFY, at Project buildout. The Project's water demand would represent 0.1 percent of the city's projected demand in 2025 and 0.08 of the city's projected demand in 2045. Because the city's water demand is projected to be met with the city's projected water supplies and the Project would represent a minimal amount of the City's projected demand, the implementation of the Project would have a less-than-significant impact on available water supplies.

b) **Less-than-Significant Impact.** A significant impact may occur if the amount of wastewater that the Project would generate would exceed the capacity of the existing wastewater treatment provider. The Project site would be served by the City of Oxnard, which directs wastewater to the Oxnard Wastewater Treatment Plant. The rated capacity for this plant is 31.7 million gallons per day (MGD) and the average daily flow is 16 MGD for a population of approximately 206,352, which is well within its capacity for treating 31.7 MGD.[91,92] Water service for the Project site would be provided by connecting the proposed 2-inch water lines to existing water lines along Lockwood Street. The Project would discharge to the City-maintained sewer by connecting the proposed 8-inch sewer lines to existing private sewer lines along Lockwood Street. Additionally, a sewer flow study was undertaken to determine if any additional sewer upgrades/replacements were necessary (see **Appendix K**). The study identified a 900-linear feet segment of 18-inch vitrified clay pipe (VCP), adjacent to Rose Avenue Elementary School, which would need to be upgraded to a 21-inch PVC sewer. Due to the additional sewer discharge that will be generated by the proposed development, the project shall also upgrade 2,250-linear feet of the existing 8-inch sewer main immediately downstream of the project from manhole MH-1 to manhole MH-118. The additional sewer discharge is the result of the proposed development, and the project would be required to carry out the sewer upgrades necessary to support the project. The project shall collaborate with Lockwood 1 and 2 to upgrade the 18-inch VCP and solely be responsible for upgrading the 8-inch VCP. This will be included as a Condition of Approval.

Although the Project would result in increased wastewater production, it is unlikely to generate such a substantial increase in demand that it would exceed the capacity of the existing wastewater treatment system. The Project's water demand is calculated to be 30 AFY (approximately 26,500 gallons per day), and the maximum percentage of this water

[91] City of Oxnard. 2023a. 2020 Wastewater Division. https://www.oxnard.org/city-department/publicworks/wastewater/. Accessed October 6, 2023.

[92] California Department of Finance. 2022. E-5 Population and Housing Estimates for Cities, Counties and the State – January 1, 2021-2022. https://dof.ca.gov/forecasting/demographics/estimates/e-5-population-and-housing-estimates-for-cities-counties-and-the-state-2020-2022/. Accessed October 6, 2023.

that is generated as wastewater is assumed to be approximately 90 percent. Therefore, the maximum wastewater generation of the Project would be approximately 24,000 gallons per day, which is a nominal increase in wastewater compared to the 15.7 MGD capacity of the Oxnard Wastewater Treatment Plant. Therefore, the Project would not require additional wastewater conveyance or treatment capacity to serve Project demands. Impacts would be less than significant.

c) **Less-than-Significant Impact.** A significant impact may occur if a project were to increase solid waste generated to a degree that existing and projected landfill capacity would be insufficient to accommodate the additional solid waste. The City of Oxnard Environmental Resources Division provides waste pick-up and hauling services for residents and businesses. Waste is delivered to the Del Norte Regional Recycling and Transfer Station, which is permitted to process 2,779 tons of waste per day, with a current average intake of approximately 970 tons of waste per day,[93,94] which leaves an estimated remaining daily capacity of 1,809 tons of waste per day.

CalEEMod modeling for Project operation was performed as part of the *Air Quality/Health Risk Assessment/Greenhouse Gas/Energy Impact Analysis* analyses and provides waste generation estimates for each use included in Project buildout (Appendix B). The Project would generate an estimated 173 tons of waste per year, which appears to be slightly lower than anticipated for the level of development proposed. Based on a city of Oxnard average waste generation of 8.3 pounds per person per day[95] (1.5 tons per person per year) and a projected residential population of 912 residents, this would equate to approximately 1,381 tons per year, or 3.78 tons per day. This would not exceed the current estimated remaining daily capacity at Del Norte Regional Recycling and Transfer Station. In addition, the Project's estimated generation of 3.78 tons per day would constitute less than 0.2 percent decrease in the estimated remaining daily capacity of 1,809 tons of total waste processed per day at Del Norte Regional Recycling and Transfer Station. As mentioned, the Project site is currently undeveloped, and the Project would not generate significant quantities of construction waste. Additionally, the Project would be subject to the requirements of the state (SB 1383) and city (Ordinance 3007), which requires the provision of organic waste collection services to multi-family generators. Therefore, the Project would not generate waste in excess of local capacity and impacts to the capacity of local infrastructure would be less than significant.

d) **Less-than-Significant Impact.** During construction and operation, the Project would be required to comply with all federal, state, and local solid waste requirements, including AB 939 and the CALGreen Building Code. CALGreen stipulates that 65 percent of construction waste shall be diverted, while AB 939 specifies 50 percent. Compliance with

[93] City of Oxnard. 2013. Staff Report: Del Norte Regional Recycling and Transfer Station Transition Plan. https://www.oxnard.org/wp-content/uploads/2016/03/CC-Staff-Report-Del-Norte-Regional-Recycling-and-Transfer-Station-Transition-Plan-2.pdf. Accessed October 6, 2023.

[94] California Department of Resources Recycling and Recovery (CalRecycle). 2023. https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/622?siteID=3967. Accessed October 6, 2023.

[95] California Department of Resources Recycling and Recovery (CalRecycle). 2023. Jurisdiction Review Reports. https://www2.calrecycle.ca.gov/LGCentral/AnnualReporting/ReviewReports. Accessed December 13, 2023.

all applicable statutes and regulations would ensure that Project impacts are less than significant.

e) **Less-than-Significant Impact.** The Project would introduce a 234-unit residential development, which would require the expansion of utilities or services. Specifically, the Project would require new service laterals connecting to the new development, and connections to the existing water main in Lockwood Street.[96] The Project site would be served by the Calleguas Municipal Water District.[97] Impacts associated with the installation of water distribution lines would primarily involve trenching to place the water distribution lines below surface and would be limited to on-site water supply. Ground-disturbing activities would comply with applicable local, state, and federal requirements.

The Project would require new sewer connections to the city's sewer system. Sewage for the Project Site would be conveyed via Lockwood Street. During construction, portable restrooms would be available and would not contribute to wastewater flows to the city's wastewater system. During operation, Project wastewater would be treated by the Oxnard Wastewater Treatment Plan, which has adequate capacity to serve the Project, as discussed in Response 13.16 b) above.

As stated in the Hydrologic and Hydraulic Report/Stormwater Quality Report (Appendix G), the Project's design would include an underground detention system, ribbon gutters, catch basins, underground piping around the building, and landscape areas, which would reduce the increase of stormwater runoff while maintaining the existing drainage pattern. Therefore, the construction of new stormwater drainage facilities would provide adequate capacity for the Project. The Project would have a less-than-significant impact associated with stormwater drainage facilities.

The Project site would be served by Southern California Edison (SCE), and electrical demand would vary during the construction period based on construction activities. The Project would result in a demand for electricity totaling 1,207,193 kWh (1.2 GWh) per year. SCE estimates that electricity consumption within its planning area will be approximately 125,000 GWh annually by 2028, when the Project would be fully built out. The Project would account for less than 0.01 percent of the 2028 annual consumption in SCE's planning area. As such, the Project would account for a negligible portion of the projected annual consumption in SCE's planning area. During construction, the Project would consume electricity associated with the conveyance of water used for dust control, and on a limited basis, powering lights, electronic equipment, or other construction activities necessitating electrical power. Additionally, the Project would coordinate with telecommunication facilities prior to construction to reduce any temporary pedestrian and traffic impacts. The Project would require new or updates to the existing telecommunication facilities to meet the demand by the Project's residents. Therefore,

[96] FEMA. 2021. FEMA Flood Map Service Center: Search by Address, 2151 Lockwood Avenue, Oxnard, CA, 93036 – Flood Map 06111C0910E. https://hazards-fema.maps.arcgis.com/apps/webappviewer/index.html?id =8b0adb51996444d4879338b5529aa9cd. Accessed September 26, 2023.

[97] City of Oxnard. 2023b. Water Sources. https://www.oxnard.org/city-department/public-works/water/water-sources/. Accessed October 6, 2023.

based on the above, the Project impacts resulting in the relocation, expansion, or construction of new utility serves would be less than significant.

f) **Less-than-Significant Impact.** The residential development would consume energy during construction activities, primarily from on- and off-road vehicle fuel consumption in the form of diesel and gasoline necessary to install the building foundations.

During operation, the Project would consume energy in the form of purchased electricity to provide power to the building. Electricity in the region area (Ventura County) is provided by SCE. SCE is required to commit to the use of renewable energy sources for compliance with the Renewable Portfolio Standards (RPS). SCE has already met its requirement to procure at least 33 percent of its energy portfolio from renewable sources by 2020 with approximately 35 percent of its 2022 electric supply power mix from renewable power.[98] With the passage of SB 100 in September 2018, SCE will be required to update its long-term plans to demonstrate compliance, including providing 60 percent of its energy portfolio from renewable sources by December 31, 2030, and ultimately planning for 100 percent eligible renewable energy resources and zero-carbon resources by December 31, 2045. Furthermore, on-site solar photovoltaic panels would be installed on the roof, with a back-up battery storage system to reduce dependence on fossil fuels.

The Project would be required to comply with state law and the applicable 2030 General Plan goal and policies. The applicable 2030 General Plan goal and policies include:[99]

> **Goal ICS-17:** Adequate and efficient public utilities that meet the needs of residents of the city.
>
> > **Policy ICS-17.1:** Ensure that electric facilities (such as the Southern California Edison generating facilities located within the city) services and facilities are built in accordance with the California Public Utilities Commission and meet demonstrated need and incorporate feasible solar, wind, and other renewable sources of energy.
> >
> > **Policy ICS-17.4:** Coordinate with gas and electricity providers for the extension of gas and electrical facilities.
> >
> > **Policy ICS-17.5:** Require undergrounding of utility lines in new development, except where it is not feasible due to electrical transmission load or other operational issues.

Therefore, compliance with state law and the General Plan goal and policies identified above would reduce the Project's potential energy impact so that it would not involve wasteful, inefficient, or unnecessary consumption of energy and result in a less-than-significant energy impact.

[98] Southern California Edison (SCE). 2022. 2022 Annual Report, https://www.edison.com/investors/financial-reports-information/annual-reports. Accessed December 11, 2023

[99] City of Oxnard. 2011. 2030 General Plan Goals and Policies. https://www.oxnard.org/wp-content/uploads/2017/06/Oxnard-2030-General-Plan-Amend-12.2022-SMc.pdf. Accessed October 25, 2023.

g) **No Impact.** Implementation of the residential development would not require additional energy facilities beyond a new distribution line connection to serve the Project. Additionally, the Project's energy demand would be minimal compared to available and projected supplies and within the available supply capabilities of the electricity and natural gas utilities and transportation fuel providers. Therefore, the Project would result in no impact.

h) **Less-than-Significant Impact.** Construction and operational activities associated with the implementation of the residential development would utilize energy in the forms of electricity for lighting and fuel for construction and long-term maintenance vehicles.

Future implementation of the Project would be required to comply with state law and the applicable 2030 General Plan goals and policies. The applicable 2030 General Plan goals and policies include:

Goal SC-3: Energy efficiency performance standards and generation from renewable sources.

Policy SC-3.6: As part of the city EAP, meet or exceed state targets for zero-emission fuel vehicle miles traveled within the city by supporting the use of zero-emission vehicles (low speed "neighborhood electric vehicles", utility low-range battery electric vehicles, mid-range "city electric vehicles", full function battery electric vehicles, and fuel cell vehicles) within city departments and divisions.

Policy SC-3.8: As part of the city and community EAP's, require the use of passive energy conservation by building material massing, orientation, landscape shading, materials, and other techniques as part of the design of local buildings, where feasible.

Policy SC-3.9: Promote voluntary participation in incentive programs to increase the use of solar photovoltaic systems in new and existing residential, commercial, institutional and public buildings, including continued participation in the Ventura County Regional Energy Alliance (VCREA).

Goal SC-4: Implementation of the California Green Building Code.

Policy SC-4.1: Implement the 2010 California Green Building Code (CALGREEN) and consider recommending and/or requiring certain developments to incorporate Tier I and Tier II voluntary standards under certain conditions to be developed by the Development Services Director.

Therefore, compliance with state law and the General Plan goals and policies identified above would reduce the Project's potential energy impact and would result in consistency with existing energy standards. Less-than-significant impacts related to energy standards would result from implementation of the Project.

i) **No Impact.** The implementation of the residential development would not preempt energy development or future energy conservation or inhibit the future use of renewable energy or energy storage. Electricity in the region area (Ventura County) is provided by SCE. SCE is required to commit to the use of renewable energy sources for compliance with the RPS. SCE met its requirement to procure at least 33 percent of its energy portfolio from renewable sources by 2020 with approximately 35 percent of its 2020 electric supply power

mix from renewable power.[100] With the passage of SB 100 in September 2018, SCE will be required to update its long-term plans to demonstrate compliance including providing 44 percent renewable energy by December 2024, 52 percent by December 2027, and 60 percent by December 31, 2030, and ultimately planning for 100 percent eligible renewable energy resources and zero-carbon resources by December 31, 2045. In 2022, approximately 39 percent of SCE's supply portfolio came from renewable sources eligible under California's RPS.[101]

The Project would also incorporate sustainability features that would reduce operational energy demand and incorporate sustainable site development practices that would result in water savings and energy efficiency. The Project would provide electric vehicle parking spaces, which would also reduce transportation fuel demand. The Project would provide bicycle parking spaces, which would encourage non-automotive transportation alternatives. The Project would include building energy efficient systems, which may include high efficiency heating and air conditioning systems, high efficiency lighting, natural ventilation and daylighting, and/or other energy efficient systems. This would reduce building energy demand. Thus, the Project would not preempt future energy development or future energy conservation or inhibit the future use of renewable energy or energy storage.

j) **Less-than-Significant Impact.** The Project is committed to meeting the requirements of the CALGreen Code by incorporating strategies such as low-flow toilets, low-flow faucets, and other energy and resource conservation measures. The Project would comply with applicable energy, water, and waste efficiency measures specified in the Title 24 Building Energy Efficiency Standards and CALGreen standards. As such, the Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency, and impacts would be less than significant.

3.17 Wildfire

Issues	*Potentially Significant Impact*	*Less than Significant with Mitigation Incorporated*	*Less than Significant Impact*	*No Impact*
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

This section has reviewed CAL FIRE's Fire and Resource Assessment Program and the Fire Hazard Safety Zones to determine impacts from wildfire.

Discussion

a–d) **Less-than-Significant Impact.** The Project would be located in an urban area of the city of Oxnard. Based on a review of the Fire Hazard Safety Zones (FHSZs) prepared as part of the The Department of Forestry and Fire Protection's (CAL FIRE) Fire and Resource Assessment Program, the Project site is not located within or near an area that is designated as a Very High Fire Hazard Safety Zone (VHFHSZ).[102] The nearest VHFHSZ designated in a Local Responsibility Area is located approximately 6.8 miles northeast of the Project site, and the nearest VHFHSZ designated in a State Responsibility Area is located approximately 4.6 miles northeast of the Project site. Due to the distance from a VHFHSZ, the Project would result in less-than-significant impacts related to wildfires.

[102] California Department of Forestry and Fire Protection (CAL FIRE). 2023. FHSZ Viewer. egis.fire.ca.gov/FHSZ/. Accessed September 15, 2023.

3.18 Mandatory Findings of Significance

Issues	*Potentially Significant Impact*	*Less than Significant with Mitigation Incorporated*	*Less than Significant Impact*	*No Impact*
a) Would the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b) Would the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☒	☐	☐
c) Would the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

Discussion

a) **Less than Significant with Mitigation Incorporated.** The implementation of the Project could cause impacts to nesting birds. The implementation of Mitigation Measure BIO-1 would reduce these potential impacts to biological resources to less than significant. In addition, the Project could result in significant impacts to archaeological, paleontological, human remains, and tribal cultural resources. The implementation of Mitigation Measures CUL-1 through CUL-4 would reduce these potential resource impact to less than significant.

Compliance with state law and the General Plan goals and policies identified within Sections 3.4 (Biological Resources) and 3.6 (Cultural Resources and Tribal Cultural Resources), and the implementation of the above mitigation measures would reduce the Project's potential impact on wildlife species and cultural and tribal cultural resources to less than significant.

Mitigation Measures

Implementation of Mitigation Measures BIO-1, CUL-1, CUL-2, CUL-3, and CUL-4 is required.

b) **Less than Significant with Mitigation Incorporated.** The potential for cumulative impacts occur when the impacts of a project are combined with impacts from related development projects and result in impacts that are greater than the impacts of a project alone. As identified in Appendix J, Traffic Study, of this Initial Study, there are 39 related projects within the Project study area that have been approved or are pending decision. There is a potential for cumulative projects to result in significant environmental impacts. However, as discussed in Chapter 3 above, Project impacts associated with aesthetics and urban design, agricultural resources, air quality, climate change and greenhouse gas

emissions, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, population/education/housing, public services and recreation, transportation and circulation, utilities and energy, and wildfire would result in less-than-significant or no impacts. As a result, the Project contribution to these potential cumulative impacts would be less-than-cumulatively considerable and thus less than significant.

The 39 related projects in the vicinity of the Project site could also result in significant impacts related to biological resources (nesting birds), cultural and tribal cultural resources, and noise (nesting birds). Because the Project could result in significant impacts related to biological resources and cultural and tribal cultural resources, the Project could contribute to cumulative impacts to these resources. This contribution could be cumulatively considerable and thus significant. With the implementation of the mitigation measures identified below, the Project's impact related to biological resources and cultural and tribal cultural resources would be reduced to less than cumulatively considerable and thus less than significant.

Mitigation Measures

Implementation of Mitigation Measures BIO-1, CUL-1, CUL-2, CUL-3, and CUL-4 is required.

c) **Less-than-Significant Impact.** The Project would not cause substantial adverse effects on human beings, either directly or indirectly, according to the analysis contained within this Initial Study. Therefore, the Project would result in less-than-significant impacts related to adverse effects on human beings.

RE: Formal Notification, Pursuant to California Assembly Bill 52, for the 2151 Lockwood Street Project

Dear Chair Ayala:

Pursuant to California Assembly Bill (AB) 52, the City of Oxnard (City) is providing you with formal notification of the 2151 Lockwood Street Project (proposed Project). The City, as California Environmental Quality Act (CEQA) lead agency, is contacting all California Native American entities, as recognized by the Native American Heritage Commission (NAHC), that have formally requested, in writing, AB 52 notification from the City for eligible projects under the City's jurisdiction. The City received your request for formal notification of proposed projects subject to AB 52 and under the City's jurisdiction. This correspondence is intended as formal notification of the proposed Project pursuant to AB 52. Below please find a brief description of the proposed project, project location, and the City's contact information and point of contact. Please also see the attached location map and project plan sheets.

Proposed Project: 2151 Lockwood Street Project.

Project Location: The proposed Project is located at 2151 Lockwood Street in the City of Oxnard, Ventura County, California within public land survey system (PLSS) Section 00, Township 1 North, Range 21 West on the Oxnard, California 7.5-minute USGS Quadrangle. The approximately 5.17-acre, irregularly shaped proposed Project site, located north of Lockwood Street and west of the intersection with Outlet Center Drive, is composed of a single parcel (APN 213-0-090-275). The site is bound by the Ventura Freeway to the north, Lockwood Street to the south, and commercial properties to the east and west.

Project Description: The Project would involve the construction of a 234-unit mixed income

residential community on 5.17 acres in Oxnard, California (Project site). The Project would include 34 units (21%) set aside for very low- and lower-income residents. The Project site was previously used for agriculture and vehicle parking, and occupied by residential and agricultural structures that have since been demolished. The Project site is currently vacant. Project site improvements would include a new five-story building containing a total of 373,069 square feet of floor area; 57,015 square feet of landscape; 59,738 square feet of pavement; 351 parking spaces; and various indoor and outdoor resident amenities.

Native American Heritage Commission Sacred Land Files Search Result: Negative.

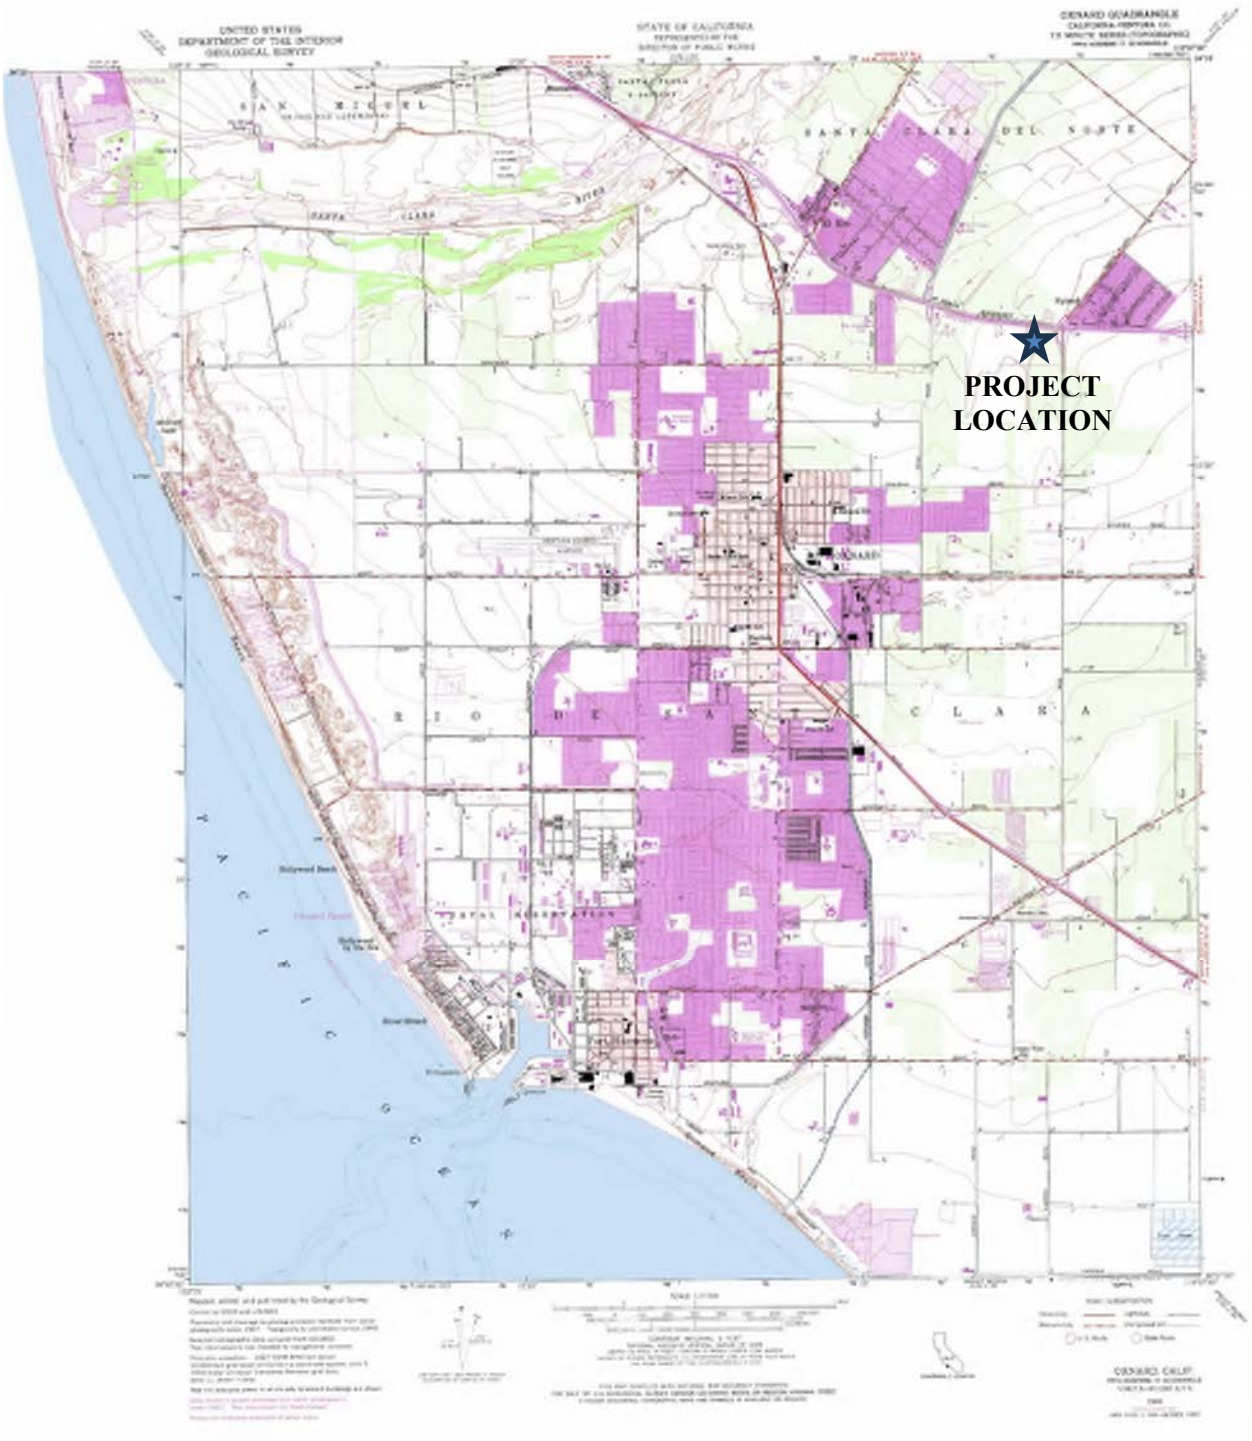
The City welcomes any comments regarding potential impacts to tribal cultural resources (as defined in Public Resources Code § 21074) in relation to the proposed Project as well as requests for proposed Project related information. All formal requests for consultation will only be accepted within 30 days of receipt of this notice. Please include the name of a designated lead contact person in all correspondence to ensure an expedient response. The City carefully adheres to provisions of Public Resources Code section 21082.3, subd. (c)(2)(A) to maintain the confidentiality of the information provided by Tribes.



Your comments and concerns are important to the City, and we welcome the opportunity to consult with the Barbareño/Ventureño Band of Mission Indians, if it is so desired. If you have any questions regarding the proposed Project, please do not hesitate to contact Joe Pearson II at the contact information provided above.

Very Respectfully,

Joe Pearson II, AICP | Planning and Environmental Services Manager

RE: Formal Notification, Pursuant to California Assembly Bill 52, for the 2151 Lockwood Street Project

Dear Chair Barrios:

Pursuant to California Assembly Bill (AB) 52, the City of Oxnard (City) is providing you with formal notification of the 2151 Lockwood Street Project (proposed Project). The City, as California Environmental Quality Act (CEQA) lead agency, is contacting all California Native American entities, as recognized by the Native American Heritage Commission (NAHC), that have formally requested, in writing, AB 52 notification from the City for eligible projects under the City's jurisdiction. The City received your request for formal notification of proposed projects subject to AB 52 and under the City's jurisdiction. This correspondence is intended as formal notification of the proposed Project pursuant to AB 52. Below please find a brief description of the proposed project, project location, and the City's contact information and point of contact. Please also see the attached location map and project plan sheets.

Proposed Project: 2151 Lockwood Street Project.

Project Location: The proposed Project is located at 2151 Lockwood Street in the City of Oxnard, Ventura County, California within public land survey system (PLSS) Section 00, Township 1 North, Range 21 West on the Oxnard, California 7.5-minute USGS Quadrangle. The approximately 5.17-acre, irregularly shaped proposed Project site, located north of Lockwood Street and west of the intersection with Outlet Center Drive, is composed of a single parcel (APN 213-0-090-275). The site is bound by the Ventura Freeway to the north, Lockwood Street to the south, and commercial properties to the east and west.

Project Description: The Project would involve the construction of a 234-unit mixed income

residential community on 5.17 acres in Oxnard, California (Project site). The Project would include 34 units (21%) set aside for very low- and lower-income residents. The Project site was previously used for agriculture and vehicle parking, and occupied by residential and agricultural structures that have since been demolished. The Project site is currently vacant. Project site improvements would include a new five-story building containing a total of 373,069 square feet of floor area; 57,015 square feet of landscape; 59,738 square feet of pavement; 351 parking spaces; and various indoor and outdoor resident amenities.

EXECUTIVE SUMMARY

The purpose of this air quality, health risk assessment, greenhouse gas and energy impact analysis is to provide an assessment of the impacts resulting from the proposed Lockwood 3 Development Project (Project) and to identify any measures that may be necessary to reduce potentially significant impacts.

Standard Air Quality, Energy and GHG Regulatory Conditions

The proposed project would be required to comply with the following regulatory conditions from the Ventura County Air Pollution Control District (VCAPCD) and State of California (State):

Ventura County Air Pollution Control District Rules

The following lists the VCAPCD rules that are applicable, but not limited to, the proposed project:

- Rule 50 (Opacity): Controls opacity standards;
- Rule 51 (Nuisance): Controls the emissions of odors and other air contaminants;
- Rule 55 (Fugitive Dust): Controls the emissions of fugitive dust;
- Rule 55.1 (Paved Road and Public Unpaved Roads): Controls the emissions of fugitive dust generators;
- Rule 55.2 (Street Sweeping Equipment): Controls the emissions of PM10-efficient street sweepers; and
- Rule 74.2 (Architectural Coating): Establishes VOC content limits

State of California Rules

The following lists the State of California Code of Regulations (CCR) air quality emission rules that are applicable, but not limited to, the proposed project.

- CCR Title 13, Article 4.8, Chapter 9, Section 2449: In use Off-Road Diesel Vehicles
- CCR Title 13, Section 2025: On-Road Diesel Truck Fleets;
- CCR Title 24 Part 6: California Building Energy Standards; and
- CCR Title 24 Part 11: California Green Building Standards

Construction Source Emissions

The VCAPCD has not recommended a specific numerical criterion for construction, as emissions are considered to be temporary. Additionally, the Project would be required to comply with the applicable 2030 General Plan goal and policies. Compliance with the above General Plan goals and policies would reduce potential emission of criteria pollutants. Established requirements addressing construction equipment operations, and construction material use, storage, and disposal requirements act to minimize odor impacts that may result from construction activities. Moreover, construction-source odor emissions would be temporary, short-term, and intermittent in nature and would not result in persistent impacts that would affect substantial numbers of people. Potential construction-source odor impacts are therefore considered less than significant.

Operational Source Emissions

Project operational-sourced emissions would not exceed applicable screening thresholds of significance established by the VCAPCD. The project's emissions meet VCAPCD screening thresholds and will not result in a significant cumulative impact. The project does not propose any such uses or activities that would result in potentially significant operational-source odor impacts. Potential operational-source odor impacts would not be considered significant.

Health Risk Assessment

To reduce the exposure of the Project's on-site residents to Diesel Particulate Matter (DPM) emissions, it is recommended that the Project incorporate high-efficiency (MERV 14–16 or higher) pleated particle filters for residential uses located near busy roadways would generally be considered the most effective approach to filtration because these filters can remove the very small particles emitted by motor vehicles without emitting ozone, formaldehyde, or other harmful byproducts. MERV 14 or better air filtration systems are capable of removing 75 percent or more of particles between 0.3 and 1.0 microns, and 90 percent or more of particles between 1.0 and 10.0 microns. Installation of MERV filters with a minimum rating of 14 would reduce cancer risk impacts to levels below the significance threshold. Thus, the cancer and chronic risk for residential receptors due would not be considered significant for all residential receptors at the Project site with installation of MERV filters with a minimum rating of 14.

Greenhouse Gases

There are no federal, State, or local quantitative adopted thresholds of significance for addressing a project's GHG emissions. In the absence of any adopted numeric threshold, this analysis evaluates the significance of a project by considering whether the project conflicts with applicable regulations or requirements adopted to implement a Statewide, regional, or local plan. The Project is committed to meeting the requirements of the CALGreen Code by incorporating strategies such as low-flow toilets, low-flow faucets and other energy and resource conservation measures. The Project would comply with applicable energy, water, and waste efficiency measures specified in the Title 24 Building Energy Efficiency Standards and CALGreen standards.

Energy

For new development such as the proposed project, compliance with California Building Standards Code Title 24 energy efficiency requirements (CALGreen), are considered demonstrable evidence of efficient use of energy. As discussed below, the project would provide for, and promote, energy efficiencies required under other applicable federal and State of California standards and regulations, and in so doing would meet or exceed all California Building Standards Code Title 24 standards. Moreover, energy consumed by the project's operation is calculated to be comparable to, or less than, energy consumed by other commercial uses of similar scale and intensity that are constructed and operating in California. On this basis, the project would not result in the inefficient, wasteful, or unnecessary consumption of energy.

PROJECT DESCRIPTION

The Project site is located in the northeast portion of the City on a vacant 225,359 square foot (5.17-acre) lot just north of the newly constructed Lockwood Street, as shown in **Figure 1: Project Site Location**. The Proposed Project includes construction of a 5-story approximately 234-unit multi-family residential building, consisting of 24 studios units, 82 1-bedroom units, 103 2-bedroom units and 24 3-bedroom units, as shown in **Figure 2: Site Plan**. The proposed development includes open space including a dog park on the northwestern portion of the new building facing the US-101 Ventura Freeway. The Project site is located on a vacant Business Research Park (BRP) zoned parcel adjacent to retail and medical facilities such as Kaiser, St. Johns, and the senior/elderly Health Care Center Oxnard ADHC. The property to the south is undeveloped. Additionally, the developed site to the west is a car dealership and a Medical Office Building further down to the south at Outlet Center Drive.

ENVIRONMENTAL SETTING

AIR QUALITY

Ambient air quality emissions present complex environmental issues that require regulatory attention on both large and small scales. The cumulative nature of project-level and localized emissions contributing to greater regional conditions warrants that regulatory policies be instituted on national, State, and regional levels to address air quality concerns. The following sections outline the applicable regulatory framework that exists at the national, State, and regional levels for air quality.

Background

The United States Environmental Protection Agency (USEPA) is responsible for federal oversight and enforcement of air quality management policies under the 1970 Clean Air Act (CAA). Each individual state is tasked with preparing and adhering to State Implementation Plans[1] (SIPs) for achieving the goals set forth within the CAA. California has some of the most stringent air quality policies in the country and, through the California Air Resources Board (CARB) branch of the California Environmental Protection Agency (CalEPA), has developed its own ambient air quality standards (AAQS). The State is divided into air quality jurisdictions; each jurisdiction is governed by a regional air district that oversees policy implementation, permitting of air pollution emission sources, and enforcement of regulatory requirements. Six criteria air pollutants (CAPs) are monitored at the federal, State, and regional levels. These six CAPs—ozone, particulate matter PM10 and PM2.5, nitrogen dioxide, carbon monoxide, lead, and sulfur dioxide—were identified based on a consensus of decades of research that concluded inhalation of each of the chemicals results in adverse health effects in humans. The six pollutants are identified below in **Table 1: Sources and Health Effects of Criteria Air Pollutants**, along with their common sources and primary health effects from inhalation exposure.

1 A State Implementation Plan is a document prepared by each state describing existing air quality conditions and measures that will be followed to attain and maintain National Ambient Air Quality Standards.

TABLE 1
SOURCES AND HEALTH EFFECTS OF CRITERIA AIR POLLUTANTS

Pollutants	Sources	Primary Effects
Ozone (O3)	Formed through chemical reactions between pollutants emitted from vehicles, factories and other industrial sources, fossil fuels, combustion, consumer products, evaporation of paints, and many other sources; VOCs and NOx react in the presence of sunlight	Respiratory symptoms; worsening of lung disease; lung tissue damage; ecosystem damage; damage to rubber and some plastics
Respirable particulate matter (PM10)	Emissions from combustion of gasoline, oil, diesel fuel or wood; dust from construction sites, landfills and agriculture, wildfires and brush/waste burning, industrial sources, wind-blown dust from open lands, pollen, and fragments of bacteria; chemical reactions of gases and certain organic compounds	Premature death and hospitalization; worsening of respiratory disease; reduced visibility; surface soiling
Fine particulate matter (PM2.5)	Emissions from combustion of gasoline, oil, diesel fuel or wood; chemical reactions of gases and certain organic compounds	Premature death; hospitalization; asthma-related emergencies; increased asthma symptoms and inhaler use
Carbon monoxide (CO)	Incomplete combustion of CO-containing fuels such as natural gas, gasoline, or wood; emitted by a wide variety of combustion sources, including motor vehicles, power plants, wildfires, and incinerators	Chest pain in heart disease patients; headaches; light-headedness; reduced mental alertness
Nitrogen dioxide (NO2)	Emitted from combustion sources similar to CO; formed in the atmosphere through reactions between NO and other air pollutants that require the presence of sunlight (photochemical reactions).	Lung irritation; enhanced allergic responses
Lead (Pb)	Present in soils; ore and metals processing; waste incinerators, utilities, and lead-acid battery manufacturers	Impaired mental function; learning disabilities; brain and kidney damage
Sulfur dioxide (SO2)	Emitted when sulfur-containing fuel is burned; industrial processes, such as natural gas and petroleum extraction, oil refining, and metal processing; volcanic activity and from geothermal fields	Worsening of asthma: increased symptoms, increased medication usage, and emergency room visits; acid rain

USEPA is the federal agency responsible for overseeing the country's air quality and setting the NAAQS for the CAPs. The NAAQS were devised based on extensive modeling and monitoring of air pollution across the country; they are designed to protect public health and prevent the formation of atmospheric ozone. Air quality of a region is considered to be in attainment of the NAAQS if the measured ambient air pollutant levels do not exceed the applicable concentration threshold.

As noted previously, CARB is the State agency responsible for setting the CAAQS. Air quality of a region is considered to be in attainment of the CAAQS if the measured ambient air pollutant levels for O3, CO, NO2, SO2, PM10, PM2.5, and Pb are not exceeded, and all other standards are not equaled or exceeded at any time in any consecutive 3-year period. The CAAQS are also presented in **Table 2**.

The nearest air monitoring station VCAPCD operates is located El Rio-Rio Mesa School #2 located at 545 Central Avenue. This station monitors O3, NO2, PM10 and PM2.5. **Table 2: Air Quality Monitoring Summary** summarizes published monitoring data from 2019 through 2021, the most recent 3-year period available. The data shows that during the past few years, the region has exceeded the O3, and PM10, PM2.5 standards.

USEPA and the CARB designate air basins where AAQS are exceeded as "nonattainment" areas. If standards are met, the area is designated as an "attainment" area. If there is inadequate or inconclusive data to make a definitive attainment designation, they are considered "unclassified." Federal nonattainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from standards.

TABLE 2
AIR QUALITY MONITORING SUMMARY

Air Pollutant	Average Time (Units)	2019	2020	2021
Ozone (O3)	State Max 1 hour (ppm)	0.078	0.104	0.073
	Days > CAAQS threshold (0.09 ppm)	0	2	0

VCAPCD considers a sensitive receptor to be a person in the population who is particularly susceptible to health effects due to exposure to an air contaminant. Sensitive receptors are identified near sources of air pollution to determine the potential for health hazards. Locations evaluated for exposure to air pollution include but are not limited to residences, schools, hospitals, and convalescent facilities.

As mentioned previously, the Project site is located on vacant land surrounded by properties in the BRP zone and is adjacent to retail and medical facilities such as Kaiser, St. Johns, and the senior/elderly Health Care Center Oxnard ADHC.

Figure 3: Sensitive Receptor Map provides a detailed image of the proximal land uses and identifies the sensitive receptors closest to the Project site. These uses represent the nearest sensitive receptors who may be impacted by emissions of air pollutants due to the Project.

GREENHOUSE GAS

In 2020, the City completed an inventory of emissions for the year 2010, representing the earlier year for which the necessary data was available, and for the year 2018, representing the most recent year for which data was available. **Table 4: City of Oxnard Community GHG Emissions**, summarizes the results of the 2010 and 2018 community inventory broken down by major sector (i.e., category of emissions that is defined by the end use that causes them, such as transportation), and showing the change from 2010 to 2018.

TABLE 4
CITY OF OXNARD COMMUNITY GHG EMISSIONS

Sector	2010	2018	Absolute Change	Percent Change
On-Road Transportation	428,030	389,079	-38,951	-9%
Electricity	252,511	207,472	-45,039	-18%
Natural Gas	215,922	165,692	-50,230	-23%
Solid Waste	64,564	68,411	3,848	6%
Off-Road Equipment	28,394	37,310	8,916	31%
Wastewater	6,432	4,769	-1,663	-26%
Passenger Rail	2,353	2,137	-217	-9%
Water	1,583	1,271	-312	-10%
Total	**999,788**	**876,140**	**-123,648**	**-12%**

Source: City of Oxnard Climate Action and Adaptation Plan, Table 2-1.

Table 5: City of Oxnard, GHG Emissions from Municipal Operations summarizes the results for the 2010 and 2018 municipal operations inventories, listed by sector and showing the change from 2010 to 2018. Note that municipal operations represent a subset of community emissions, and they are included in the total emissions shown in **Table 4** above. The municipal operations inventory provides a detailed look at the emission sources over which the City has the most control or influence. Overall, annual emissions have dropped by more than 21 percent from 2010 to 2018. The biggest reductions are from electricity use, wastewater treatment, and water treatment and delivery. Emissions from natural gas and solid waste actually increased, though their contributions to overall emissions remained very small.

TABLE 5
CITY OF OXNARD, GHG EMISSIONS FROM MUNICIPAL OPERATIONS

Sector	2010	2018	Absolute Change	Percent Change
On-Road Fleet	6,338	5,491	-847	-13.4%
Electricity	11,409	7,586	-3,824	-33.5%
Natural Gas	901	1,224	323	35.9%
Solid Waste	1,937	2,052	115	6.0%
Off-Road Fleet	999	897	-101	-10.1%
Wastewater Treatment	6,363	4,734	-1,626	-25.6%

The Business as Usual (BAU) forecast for Oxnard, as shown in **Table 6: City of Oxnard Community GHG Emissions BAU Forecast**, shows that by 2030, annual community GHG emissions would be approximately 948,847 MTCO2e, an increase from the City's 2018 emissions, but representing a 5 percent reduction from 2010. By 2050, annual community GHG emissions are expected to increase to approximately 1,086,277 MTCO2e under BAU conditions, representing a 9 percent increase from 2010.

TABLE 6 CITY OF OXNARD COMMUNITY GHG EMISSIONS BAU FORECASTS				
Sector	**2010**	**2018**	**2030**	**2050**
On-Road Transportation	428,030	389,079	421,902	476,608

AIR QUALITY

Federal

The USEPA sets national vehicle and stationary source emission standards; oversees approval of all SIPs; provides research and guidance for air pollution programs; and sets National Ambient Air Quality Standards (NAAQS). The NAAQS for the six CAPs are shown in **Table 7: Ambient Air Quality Standards** and were identified from provisions of the 1970 CAA. The sections of the CAA that are most applicable to the Project include Title I: Nonattainment Provisions and Title II: Mobile Source Provisions.

TABLE 7
AMBIENT AIR QUALITY STANDARDS

Pollutant	Averaging Time	California Standards		Federal Standards		
		Concentration	Method	Primary	Secondary	Method
Ozone (O3)	1 hour	0.09 ppm (180 µg/m^3)	Ultraviolet photometry	—	Same as primary standard	Ultraviolet photometry
	8 hours	0.07 ppm (137 µg/m^3)		0.075 ppm (147 µg/m^3)		
Respirable particulate matter (PM10)	24 hours	50 µg/m^3	Gravimetric or beta attenuation	150 µg/m^3	Same as primary standard	Inertial separation and gravimetric analysis
	Annual arithmetic mean	20 µg/m^3		—		
Fine particulate matter (PM2.5)	24 hours	No separate State standard		35 µg/m^3	Same as primary standard	Inertial separation and gravimetric analysis
	Annual arithmetic mean	12 µg/m^3	Gravimetric or beta attenuation	15 µg/m^3		
Carbon monoxide (CO)	8 hours	9.0 ppm (10 mg/m^3)	Nondispersive infrared photometry (NDIR)	9 ppm (10 mg/m^3)	None	NDIR
	1 hour	20 ppm (23 mg/m^3)		35 ppm (40 mg/m^3)		
Nitrogen dioxide (NO2)	Annual arithmetic mean	0.03 ppm (57 µg/m^3)	Gas phase chemilumi-nescence	0.053 ppm (100 µg/m^3)	Same as primary standard	Gas phase chemilumi-nescence
	1 hour	0.18 ppm (339 µg/m^3)		0.100 ppm (188 µg/m^3)

Note: ppm = parts per million.

The CAA and the promulgated standards have evolved as a living document over time as research into the effects of air pollution has enhanced regulatory understanding of the associated issues. The 1990 amendments to the CAA identify specific emission reduction goals for areas not meeting the NAAQS. These amendments require both a demonstration of reasonable further progress toward attainment and incorporation of additional sanctions for failure to attain or to meet interim milestones. On the national

level, the USEPA designates regions as achieving "attainment" or suffering from "nonattainment" of the NAAQS based on air quality monitoring data. Regions that are designated as being in nonattainment are responsible for devising localized strategies for reducing emissions of CAPs and achieving regional attainment within a predetermined timeframe set by the USEPA.

The NAAQS were further amended in July 1997 to include an 8-hour standard for ozone and to adopt an NAAQS for PM2.5. The NAAQS were amended again in September 2006 to include an established methodology for calculating PM2.5, as well as to revoke the annual PM10 threshold. Additional revisions to the AAQS may be implemented in the future as the science of air quality progresses.

State

The California Clean Air Act, signed into law in 1988, requires all areas of the State to achieve and maintain the California Ambient Air Quality Standards (CAAQS) by the earliest practicable date. CARB is responsible for the coordination and administration of both State and federal air pollution control programs within California. In this capacity, CARB conducts research, sets CAAQS, compiles emission inventories, develops suggested control measures, and provides oversight of local programs.

CARB establishes emissions standards for motor vehicles sold in California, consumer products, and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions and the CAAQS currently in effect for each of the criteria pollutants, as well as other pollutants recognized by the State. The CAAQS are provided in **Table 2**. It should be noted that the CAAQS are generally more stringent than the NAAQS, reflecting California's diligent efforts toward reducing air pollution and improving air quality.

Regional

In California, jurisdiction over air quality management, enforcement, and planning divided into 35 geographic regions. Within each region, a local air district is responsible for oversight of air quality monitoring, modeling, permitting, and enforcement to ensure that regulatory violations are avoided wherever possible.

The Project site is located within the 6,700-square-mile Basin and is under the SCAQMD's jurisdiction. The Basin includes the southern two-thirds of Los Angeles County, all of Orange County, and the western urbanized portions of Riverside and San Bernardino Counties.

Ventura County Air Pollution Control District

The Ventura County Air Pollution Control District (VCAPCD) implements rules and regulations for emissions that may be generated by various uses and activities. The rules and regulations detail pollution-reduction measures that must be implemented during construction and operation of projects. Relevant rules and regulations to the project include those listed below.

Rule 50 (Opacity). This rule sets opacity standards on the discharge from sources of air contaminants. This rule would apply during construction of the project.

Rule 51 (Nuisance). This rule prohibits any person from discharging air contaminants or any other material from a source that would cause injury, detriment, nuisance, or annoyance to any considerable number of persons or the public or which endangers the comfort, health, safety, or repose to any considerable number of persons or the public. The rule would apply during construction and operational activities.

Rule 55 (Fugitive Dust). This rule requires fugitive dust generators, including construction and demolition projects, to implement control measures limiting the amount of dust from vehicle track-out, earth moving, bulk material handling, and truck hauling activities. The rule would apply during construction and operational activities.

Rule 55.1 (Paved Roads and Public Unpaved Roads). This rule requires fugitive dust generators to begin the removal of visible roadway accumulation within 72 hours of any written notification from the VCAPCD. The use of blowers is expressly prohibited under any circumstances. This rule also requires controls to limit the amount of dust from any construction activity or any earthmoving activity on a public unpaved road. This rule would apply during all construction activities.

Rule 55.2 (Street Sweeping Equipment). This rule requires the use of PM10-efficient street sweepers for routine street sweeping and for removing vehicle track-out pursuant to Rule 55. This rule would apply during construction activities.

Rule 74.2 (Architectural Coatings). This rule sets limits on the volatile organic compound (VOC) content of architectural coatings. Nonflat coatings are limited to 50 grams per liter of VOC content, flat coatings are limited to 50 grams per liter of VOC content and traffic marking coatings are limited to 100 grams per liter of VOC content. The project would be required to comply with this rule during both construction and operation.

GREENHOUSE GAS

Greenhouse Gas Reduction Targets

Executive Order S-3-05, signed by Governor Arnold Schwarzenegger and issued in June 2005, proclaimed that California is vulnerable to the impacts of climate change.[2] It declared that increased temperatures could reduce the Sierra snowpack, further exacerbate California's air quality problems, and potentially cause a rise in sea levels. To combat those concerns, the Executive Order established the following total GHG emission targets:

2 Executive Department State of California, https://www.library.ca.gov/wp-content/uploads/GovernmentPublications/executive-order-proclamation/5129-5130.pdf. Accessed June 2023.

- By 2010, reduce GHG emissions to 2000 levels;
- By 2020, reduce GHG emissions to 1990 levels; and
- By 2050, reduce GHG emissions to 80 percent below 1990 levels.

Executive Order B-30-15, signed by Governor Edmund Gerald "Jerry" Brown and issued on April 29, 2015, established a new Statewide policy goal to reduce GHG emissions to 40 percent below their 1990 levels by 2030. Reducing GHG emissions by 40 percent below 1990 levels in 2030, and by 80 percent below 1990 levels by 2050 (consistent with Executive Order S-3-05), aligns with scientifically established levels needed to limit global warming to less than 2 degrees Celsius.[3]

AB 32, the Global Warming Solutions Act of 2006, requires a sharp reduction of GHG emissions to 1990 levels by 2020. To achieve these goals, which are consistent with the California Climate Action Team, which works to coordinate statewide efforts to implement global warming emission reduction programs and the state's Climate Adaptation Strategy after the passing of AB 32, AB 32 mandates that CARB establish a quantified emissions cap and institute a schedule to meet the cap; implement regulations to reduce Statewide GHG emissions from stationary sources consistent with the California Climate Action Team strategies; and develop tracking, reporting, and enforcement mechanisms to ensure that reductions are achieved. To reach the reduction targets, AB 32 requires CARB to adopt—in an open, public process—rules and regulations that achieve the maximum technologically feasible and cost-effective GHG reductions.

Climate Change Scoping Plan

CARB approved a Climate Change Scoping Plan (Scoping Plan) on December 11, 2008, as required by AB 32. The Scoping Plan proposed a "comprehensive set of actions designed to reduce overall carbon GHG emissions in California, improve our environment, reduce our dependence on oil, diversify our energy sources, save energy, create new jobs, and enhance public health."[4] The Scoping Plan had a range of GHG reduction actions, including direct regulations; alternative compliance mechanisms; monetary and nonmonetary incentives; voluntary actions; market-based mechanisms, such as a cap-and-trade system; and an AB 32 implementation regulation to fund the program.

The Scoping Plan called for a "coordinated set of strategies" to address all major categories of GHG emissions.[5] Transportation emissions were to be addressed through a combination of higher standards for vehicle fuel economy, implementation of the Low Carbon Fuel Standard,[6] and greater consideration to reducing trip length and generation through land use planning and transit-oriented development. Buildings, land use, and industrial operations were encouraged and, sometimes, required to implement

3 Office of the Governor, Governor Brown Established Most Ambitious Greenhouse Gas Reduction Target in North America (April 29, 2015), https://www.ca.gov/archive/gov39/2015/04/29/news18938/index.html. Accessed June 2023.

5 CARB, Climate Change Scoping Plan, p. ES-7.
6 Office of the Governor, Executive Order S-01-07, (January 18, 2007), https://climateactionnetwork.ca/wp-content/uploads/2011/06/eos0107.pdf. Accessed June 2023.

energy efficiency practices. Utility energy supplies will change to include more renewable energy sources through implementation of the Renewables Portfolio Standard. This will be complemented with emphasis on local generation, including rooftop photovoltaics and solar hot water installations. Additionally, the Scoping Plan emphasized opportunities for households and businesses to save energy and money through increasing energy efficiency. It indicated that substantial savings of electricity and natural gas would be accomplished through improving energy efficiency.

CARB updated the Scoping Plan in May 2014 (2014 Scoping Plan). The 2014 Scoping Plan[7] adjusted the 1990 GHG emissions levels to 431 million metric tons of carbon dioxide equivalents ($MMTCO_2e$); the updated 2020 GHG emissions forecast is 509 $MMTCO_2e$, which credited for certain GHG emission reduction measures already in place (e.g., the RPS). The 2014 Scoping Plan also recommended a 40 percent reduction in GHG emissions from 1990 levels by 2030, and a 60 percent reduction in GHG emissions from 1990 levels by 2040.

The 2017 Scoping Plan,[8] approved on December 14, 2017, builds on previous programs, and takes aim at the 2030 target established by the SB 32 (Pavley), which is further discussed below. The 2017 Scoping Plan outlines options to meet California's aggressive goals to reduce GHGs by 40 percent below 1990 levels by 2030. In addition, the plan incorporates the State's updated RPS requiring utilities to procure 50 percent of their electricity from renewable energy sources by 2030. It also raises the State's Low Carbon Fuel Standard[9] and aims to reduce emissions of methane and hydrofluorocarbons by 40 percent from 2013 levels by 2030 and emissions of black carbon by 50 percent from 2013 levels.

The 2017 Scoping Plan[10] advises that absent conformity with a qualified GHG reduction plan, projects should incorporate all feasible GHG reduction measures and that achieving "no net additional increase in GHG emissions, resulting in no contribution to GHG impacts, is an appropriate overall objective for new development."

Transportation

Executive Order S-1-07, the Low Carbon Fuel Standard (issued on January 18, 2007), requires a reduction of at least 10 percent in the carbon intensity of California's transportation fuels by 2020.[11] Regulatory proceedings and implementation of the Low Carbon Fuel Standard have been directed to CARB. CARB has identified the Low Carbon Fuel Standard as a discrete early action item in the adopted Scoping Plan. CARB expects the Low Carbon Fuel Standard to achieve the minimum 10 percent reduction goal; however,

7 CARB, First Update to the Climate Change Scoping Plan: Building on the Framework (May 2014).

many of the early action items outlined in the Scoping Plan work in tandem with one another. Other specific emission reduction measures included are the Million Solar Roofs Program[12] and Assembly Bill (AB) 1493 (Pavley I), Vehicle Emissions: Greenhouse Gases, which establishes motor vehicle GHG emissions standards.[13] To avoid the potential for double-counting emission reductions associated with AB 1493, the Scoping Plan has modified the aggregate reduction expected from the Low Carbon Fuel Standard to 9.1 percent. CARB released a draft version of the Low Carbon Fuel Standard in October 2008. The final regulation was approved by the Office of Administrative Law and filed with the Secretary of State on January 12, 2010; the Low Carbon Fuel Standard became effective on the same day.

Additionally, SCAG has prepared and adopted the 2020–2045 RTP/SCS,[14] which includes a Sustainable Communities Strategy that addresses regional development and growth forecasts. The SCAG 2020–2045 RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals, with a specific goal of achieving an 8 percent reduction in passenger vehicle GHG emissions on a per capita basis by 2020, 19 percent reduction by 2035, and 21 percent reduction by 2040 compared to the 2005 level.

City of Oxnard Climate Action and Adaptation Plan

The City of Oxnard Climate Action and Adaptation Plan (CAAP)[15] identifies seven areas under which the City can reduce GHG emissions: clean energy, water conservation and reuse, green buildings, waste reduction and recycling, transportation, nature-based solutions, and land use. The CAAP establishes a target—to reduce greenhouse gas (GHG) emissions 40 percent below 1990 levels by 2030, consistent with state law. The CAAP presents an inventory of GHG emissions originating from the City, and sets forth strategies and actions to reduce emissions and help the community adapt to a changing climate.

ENERGY

State Standards

The California Energy Commission (CEC) first adopted the Energy Efficiency Standards for Residential and Nonresidential Buildings (California Code of Regulations, Title 24, Part 6) in 1978 in response to a legislative mandate to reduce energy consumption in the State. Although not originally intended to reduce GHG emissions, increased energy efficiency, and reduced consumption of electricity, natural gas, and other fuels would result in fewer GHG emissions from residential and nonresidential buildings subject

12 US Department of Energy, Laying the Foundation for Solar America: The Million Solar Roofs Initiative, https://www.nrel.gov/docs/fy07osti/40483.pdf. Accessed June 2023.

13 The standards enacted in Pavley I are the first GHG standards in the nation for passenger vehicles and took effect for model years starting in 2009 and going through 2016. Pavley I could potentially result in 27.7 million metric tons CO2e reduction in 2020. Pavley II will cover model years 2017 to 2025 and potentially result in an additional reduction of 4.1 million metric tons CO2e.

14 Southern California Association of Governments (SCAG), Connect SoCal: 2020-2045 Regional Transportation Plan/Sustainable Communities Strategies Draft, Chapter 1, https://www.connectsocal.org/Pages/Connect-SoCal-Draft-Plan.aspx. Accessed June 2023.

15 City of Oxnard Climate Action and Adaptation Plan, accessed June 2023, https://www.oxnard.org/wp-content/uploads/2023/01/Oxnard-CAAP_2022-12-07_Adopted.pdf.

to the standard. The standards are updated periodically to allow for the consideration and inclusion of new energy efficiency technologies and methods.

Part 11 of the Title 24 Building Energy Efficiency Standards is referred to as the California Green Building Standards (CALGreen) Code. The purpose of the CALGreen Code is to "improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a positive environmental impact and encouraging sustainable construction practices in the following categories: (1) Planning and design; (2) Energy efficiency; (3) Water efficiency and conservation; (4) Material conservation and resource efficiency; and (5) Environmental air quality." The CALGreen Code is mandatory for all new buildings constructed in the State and establishes mandatory measures for new residential and non-residential buildings. Such mandatory measures include energy efficiency, water conservation, material conservation, planning and design and overall environmental quality. The CALGreen Code was most recently updated in 2019 to include new mandatory measures for residential as well as nonresidential uses; the new measures took effect on January 1, 2020.

SB 1078 (Chapter 516, Statutes of 2002) requires retail sellers of electricity, including investor-owned utilities and community choice aggregators, to provide at least 20 percent of their supply from renewable sources by 2017. SB 107 (Chapter 464, Statutes of 2006) changed the target date to 2010. In November 2008, Governor Schwarzenegger signed Executive Order S-14-08, which expands the State's Renewables Portfolio Standard to 33 percent renewable power by 2020. Pursuant to Executive Order S-21-09, CARB was also preparing regulations to supplement the Renewables Portfolio Standard with a Renewable Energy Standard that will result in a total renewable energy requirement for utilities of 33 percent by 2020. But on April 12, 2011, Governor Jerry Brown signed SB X1-2 to increase California's Renewables Portfolio Standard to 33 percent by 2020. SB 350 (Chapter 547, Statues of 2015), signed into law on October 7, 2015, further increased the Renewables Portfolio Standard to 50 percent by 2030. The legislation also included interim targets of 40 percent by 2024 and 45 percent by 2027.

Energy Action Plan

The City of Oxnard has not adopted a Climate Action Plan, but has adopted an Energy Action Plan (EAP) in April 2013, as required by the 2030 General Plan. The EAP builds upon existing energy conservation efforts and identifies energy conservation and production programs consistent with 2030 General Plan goals and policies, utility company programs, and state and federal legislation and initiatives. The EAP focuses primarily on electricity efficiency and conservation, but also includes natural gas and renewable energy production strategies. The City proposes a reduction target of 10 percent below the 2005 baseline for electricity and natural gas consumption provided by Southern California Edison and SoCal Gas Company.

METHODOLOGY

AIR QUALITY

Construction

Construction of the Project's new building has the potential to generate temporary criteria pollutant emissions through the use of heavy-duty construction equipment and through vehicle trips generated from workers traveling to and from the Project site. Mobile-source emissions, primarily NOx, would result from the use of construction equipment, such as dozers and loaders. Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of construction activity, and prevailing weather conditions. The assessment of construction air quality impacts considers each of these potential sources.

Daily regional emissions during construction are forecasted by assuming a conservative estimate of construction activities (i.e., assuming all construction occurs at the earliest feasible date) and applying the mobile source and fugitive dust emissions factors. The Project would be required comply with VCAPCD Rule 55, which identifies measures to reduce fugitive dust and is required to be implemented at all construction sites located with the Basin.

The emissions are estimated using the latest version of the CalEEMod software, an emissions inventory software program recommended by VCAPCD, which takes into account the latest Title 24 building and energy standards. CalEEMod is based on outputs from the CARB off-road emissions model (OFFROAD) and the CARB on-road vehicle emissions model (EMFAC), which are emissions estimation models developed by CARB and used to calculate emissions from construction activities, including on- and off-road vehicles.

The input values used in this analysis are based on conservative assumptions in CalEEMod, with appropriate, Project-specific adjustments based on equipment types and expected construction activities. These values were then applied to the construction phasing assumptions used in the criteria pollutant analysis to generate criteria pollutant emissions values for each construction activity. Detailed construction equipment lists, construction scheduling, and emissions calculations are provided in **Appendix A**.

Operation

Operation of the Project has the potential to generate criteria pollutant emissions through vehicle trips traveling to and from the Project site. In addition, emissions would result from area sources on site, such as natural gas combustion, landscaping equipment, and use of consumer products.

Area-source emissions are based on natural gas (building heating and water heaters), landscaping equipment, and consumer product (including paint) usage rates provided in CalEEMod. Natural gas usage factors in CalEEMod are based on the California Energy Commission's California Commercial End Use Survey data set, which provides energy demand by building type and climate zone.

Operational emissions were estimated using the CalEEMod software, which was used to forecast the daily regional emissions from area sources that would occur during long-term Project operations. In calculating mobile-source emissions, trip-length values were based on the distances provided in CalEEMod. According to the Traffic and Circulation Study (October 11, 2022), the Project is anticipated to generate a net total of approximately 1,175 average daily trips.

HEALTH RISK ASSESSMENT

The methodologies and assumptions used for the HRA analysis are consistent with the guidance recommended by the SCAQMD's *Supplemental Guidelines for Preparing Risk Assessments for Air Toxics "Hot Spots" Information and Assessment Act (ARB2588*)[16] and the California Environmental Protection Agency's Office of Environmental Health Hazard Assessment (OEHHA) Air Toxic Hot Spots Program Risk Assessment Guidelines.[17] The methodology used in this assessment uses a dose-response assessment to characterize risk from cancer due to inhaled toxic air contaminants (TACs) and the assessment of acute and chronic noncancer from diesel particulate matter (DPM). Based on the OEHHA guidance, the evaluation of potential health risks uses the following standard four-step risk assessment process: (1) Hazard Identification; (2) Exposure Assessment; (3) Dose-Response Assessment; and (4) Risk Characterization.

Air dispersion modeling was conducted using the American Meteorological Society/Environmental Protection Agency Regulator Model (AERMOD v. 11.2.0). This model is a steady-state, multiple-source, Gaussian dispersion model designed for use with emission sources situated in terrain where ground elevations can exceed the release heights of the emission sources (i.e., complex terrain). AERMOD is the U.S. EPA's regulatory dispersion model specified in the Guideline for Air Quality Methods.[18] AERMOD is recommended for use by the South Coast Air Quality Management District (SCAQMD), which has established its own modeling guidance for the model.[19]

GREENHOUSE GASES

The analysis of the Project's GHG emissions consists of a quantitative analysis of the GHG emissions generated by the construction and operation activities and a qualitative analysis of the proposed Project's consistency with adopted GHG-related legislation, plans, and policies. This approach is in accordance with CEQA Guidelines Section 15064.4(a), which affirms the discretion of a lead agency to determine, in the context of a particular project, whether to use quantitative and/or qualitative methodologies to determine the significance of a project's impacts.

19 SCAQMD Modeling Guidance for AERMOD, http://www.aqmd.gov/home/air-quality/meteorological-data/modeling-guidance. Accessed June 2023.

Emissions Inventory Modeling

The total GHG emissions from the Project were quantified to determine the level of the Project's estimated annual GHG emissions. As with the Air Quality section calculations, construction emissions were estimated using CalEEMod by assuming a conservative estimate of construction activities (i.e., assuming all construction occurs at the earliest feasible date) and applying the mobile-source emissions factors. The modeling used the same input values as previously discussed under the methodology section for air quality. SCAQMD's *Draft Guidance Document—Interim CEQA Greenhouse Gas (GHG) Significance Threshold*[20] recognizes that construction-related GHG emissions from projects occur over a relatively short-term period of time and contributes a relatively small portion of a project's overall lifetime GHG emissions. The guidance recommends that a project's construction-related GHG emissions be amortized over a 30-year project lifetime so that GHG reduction measures will address construction GHG emissions as part of the operation GHG reduction strategies. Detailed construction equipment lists, construction scheduling, and emissions calculations are provided in **Appendix A**.

CalEEMod was also used to estimate operational GHG emissions from electricity, natural gas, solid waste, water and wastewater, and landscaping equipment. CalEEMod calculates energy use from systems covered by Title 24 (e.g., heating, ventilation, and air conditioning [HVAC] system, water heating system, and lighting system); energy use from lighting; and energy use from office equipment, appliances, plug-ins, and other sources not covered by Title 24 or lighting. Mobile-source emissions were estimated based on the CARB EMFAC model. For mobile sources, CalEEMod was used to generate the vehicle miles traveled from Project operation based on the Project's traffic analysis.

With regard to energy demand, the consumption of fossil fuels to generate electricity and to provide heating and hot water generates GHG emissions. Energy demand rates were estimated based on square footage as well as predicted water supply needs for this use. Energy demand (off-site electricity generation and on-site natural gas consumption) for the Project was calculated within CalEEMod using the CEC's CEUS data set, which provides energy demand by building type and climate zone.

Emissions of GHGs from solid waste disposal were also calculated using CalEEMod software. The emissions are based on the waste disposal rate for the land uses, the waste diversion rate, and the GHG emission factors for solid waste decomposition. The GHG emission factors, particularly for methane, depend on characteristics of the landfill, such as the presence of a landfill gas capture system and subsequent flaring or energy recovery. The default values, as provided in CalEEMod, for landfill gas capture (e.g., no capture, flaring, energy recovery), which are Statewide averages, were used in this assessment.

Emissions of GHGs from water and wastewater result from the required energy to supply and distribute the water and treat the wastewater. Wastewater also results in emissions of GHGs from wastewater treatment systems. Emissions are calculated using CalEEMod and are based on the water usage rate for the proposed use; the electrical intensity factors for water supply, treatment, and distribution and for

20 SCAQMD, Draft Guidance Document—Interim CEQA Greenhouse Gas (GHG) Significance Threshold (October 2008).

wastewater treatment; the GHG emission factors for the electricity utility provider; and the emission factors for the wastewater treatment process.

ENERGY

Information from CalEEMod output (refer to **Appendix C**), utilized for air quality and greenhouse gas analyses of this report, were also utilized for this analysis. The CalEEMod output detail project related construction equipment, transportation energy demands, and facility energy demands.

Construction

Construction energy impacts were assessed based on the incremental change in energy compared to baseline conditions. As discussed previously, the Project site is currently vacant and therefore does not generate any electricity.

Project construction is estimated to start March 2025. If, for various site planning, financial, or other reasons, the onset of construction is delayed to a later date than assumed in the modeling analysis, construction impacts would be similar to or less than those analyzed, because a more energy-efficient and cleaner burning construction equipment and vehicle fleet mix would be expected in the future. This is because State regulations require construction equipment fleet operators to phase-in less polluting heavy-duty equipment and trucks over time. Construction energy consumption would result primarily from transportation fuels (e.g., diesel and gasoline) used for haul trucks, heavy-duty construction equipment, and construction workers traveling to and from the Project Site. Construction activities can vary substantially from day to day, depending on the specific type of construction activity and the number of workers and vendors traveling to the Project Site. This analysis considers these factors and provides the estimated maximum construction energy consumption for the purposes of evaluating the associated impacts on energy resources. This analysis is based on estimated maximum construction activities, meaning that for each phase of construction it was assumed that all of the vehicles and equipment that could be used for that phase are in simultaneous use for all day and every day of the phase.

Electricity

Construction electricity was estimated for construction equipment that would use electricity as an alternative to diesel fuel, and for water usage from dust control. In addition, electricity from water conveyance for dust control was also calculated based on the estimated exposed area and water needs to cover the area during construction activity. Default CalEEMod water electricity intensity factors were used to convert the volume of water needed to electricity demand from water conveyance.

Natural Gas

Construction activities, including the construction of new buildings and facilities, typically do not involve the consumption of natural gas. Accordingly, natural gas is not expected to be consumed in large quantity

during Project construction. Therefore, natural gas associated with construction activities was not calculated.[21]

Transportation Fuels

Fuel consumption from on-site heavy-duty construction equipment was calculated based on the equipment mix and usage factors provided in the CalEEMod construction output files. The total horsepower was then multiplied by fuel usage estimates per horsepower-hour from CARB's off-road vehicle (OFFROAD) model. Fuel consumption from construction on-road worker, vendor, and delivery/haul trucks was calculated using the trip rates and distances provided in the emissions modeling worksheets and CalEEMod construction output files. Total VMT for these onroad vehicles were then calculated for each type of construction-related trip and divided by the corresponding county-specific miles per gallon factor using CARB's EMFAC model. EMFAC provides the total annual VMT and fuel consumed for each vehicle type. CalEEMod assumed trip lengths were used for worker commutes while vendor, management visits, concrete, and haul truck trips were taken from emissions modeling worksheets that used EMFAC emission factors.

Consistent with CalEEMod, construction worker trips were assumed to include a mix of light duty gasoline automobiles and light duty gasoline trucks. Construction vendor trucks were assumed to be a mix of medium-heavy-duty and heavy-duty diesel trucks and concrete and haul trucks were assumed to be heavy-duty diesel trucks.

The energy usage required for Project construction has been estimated based on the number and type of construction equipment that would be used during Project construction by assuming a conservative estimate of construction activities (i.e., maximum daily equipment usage levels). Energy for construction worker commuting trips has been estimated based on the predicted number of workers for the various phases of construction and the estimated VMT based on the conservative values in the CalEEMod and EMFAC models. The assessment also includes a discussion of the Project's compliance with relevant energy-related regulatory requirements that would minimize the amount of energy usage during construction.

The construction equipment and haul trucks would likely be diesel-fueled, while the construction worker commute vehicles would primarily be gasoline-fueled. For the purposes of this assessment, it is conservatively assumed that all heavy-duty construction equipment and haul trucks would be diesel-fueled. The estimated fuel economy for heavy-duty construction equipment is based on fuel consumption factors from the CARB OFFROAD emissions model, which is a State-approved model for estimating emissions from off-road heavy-duty equipment. The estimated fuel economy for haul trucks and worker

[21] In general, natural gas would not be expected to be used and this energy analysis assumes heavy-duty construction equipment is diesel-fueled, as is typically the case. However, natural gas-fueled heavy-duty construction equipment could be used to replace some diesel-fueled heavy-duty construction equipment. If this does occur, diesel fuel demand would be slightly reduced and replaced by a small amount of temporary natural gas demand. This would not substantially affect the energy analysis or conclusions provided herein.

commute vehicles is based on fuel consumption factors from the CARB EMFAC emissions model, which is a State-approved model for estimating emissions on-road vehicles and trucks. Both OFFROAD and EMFAC are incorporated into CalEEMod. However, fuel consumption for worker, vendor, and concrete/haul trucks were calculated outside of CalEEMod using emission factors from EMFAC to provide a more detailed and accurate account of truck fuel consumption.

Operation

Operation of the Project would require energy in the form of electricity and natural gas for building space and water heating, cooling, cooking, lighting, water demand and wastewater treatment, consumer electronics, and other energy needs, and transportation fuels, primarily gasoline, for on-site landscaping equipment and vehicles traveling to and from the Project Site. For consistency with the emissions modeling provided for Air Quality and Greenhouse Gas, the Project's energy use was calculated assuming buildout in 2028.

Electricity

The Project's estimated electricity demand was analyzed relative to Southern California Edison (SCE) existing and planned energy supplies in 2028 (i.e., the Project buildout year) to determine if the utility would be able to meet the Project's energy demands. Annual consumption of electricity (including electricity usage associated with the supply and conveyance of water) from Project operation was calculated using demand factors provided in CalEEMod based on Title 24 standards. Energy usage from water demand (e.g., electricity used to supply, convey, treat, and distribute) was estimated based on new buildings and facilities. The assessment also includes a discussion of the Project's compliance with relevant energy-related regulations and its land use transportation characteristics that would minimize the amount of energy usage during operations.

Natural Gas

The Project's estimated natural gas demand was analyzed relative to SoCalGas' existing and planned energy supplies in 2028 (i.e., the Project buildout year) to determine if the utility would be able to meet the Project's energy demands. to determine if the utility would be able to meet the Project's energy demands.

Transportation Fuels

Energy for transportation from Project patrons traveling to and from the Project Site is estimated based on the predicted number of trips to and from the Project Site. The transportation fuel demand associated with trips from the Project was accounted for in the Project's operational transportation fuel demand for the purposes of this energy analysis.

SIGNIFICANCE THRESHOLDS

AIR QUALITY

The determination of a project's significance on air quality shall be made considering the factors provided in the City of Oxnard CEQA Guidelines.[22] Additional guidance in determining the potential significance of air emissions from a project is provided by the VCAPCD Air Quality Assessment Guidelines. Specific numerical criteria applicable to the City of Oxnard planning area and other guidance in determining significance are summarized below.

Ozone and Ozone Precursors

For both Reactive Organic Compounds (ROC) and Nitrogen Oxides (NOx), the VCAPCD recommends use of an operational threshold of 25 pounds per day. An emissions inventory program (such as the latest version of the California Emissions Estimator Model [CalEEMod]) should be used to estimate the amounts of pollutants that may be associated with a project. As a screening tool, the Air Quality Assessment Guidelines provide a listing of project sizes that are likely to result in emissions above the 25 pounds per day thresholds. The screening limits for land uses and for future years are found in the most recent version of the VCAPCD Air Quality Assessment Guidelines.

Fugitive Dust

The VCAPCD has not recommended a specific numerical criterion for fugitive dust. The qualitative threshold is described in the VCAPCD Air Quality Assessment Guidelines:

A project that may be reasonably expected to generate fugitive dust emissions in such quantities as to cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which may endanger the comfort, repose, health, or safety of any such person or the public, or which may cause, or have a natural tendency to cause, injury or damage to business or property (see California Health and Safety Code, Division 26, §41700) will have a significant adverse air quality impact.

Most of the concern regarding fugitive dust focuses on construction activities, and measures to minimize dust generation from grading and construction.

San Joaquin Valley Fever

From the Air Quality Assessment Guidelines:

VCAPCD has not recommended a quantitative threshold for a significant San Joaquin Valley Fever impact. However, listed below are factors that may indicate a project's potential to create significant Valley Fever impacts:

- Disturbance of the top soil of undeveloped land (to a depth of about 12 inches)

[22] City of Oxnard CEQA Guidelines, May 2017, accessed June 2023, https://www.oxnard.org/wp-content/uploads/2017/06/CEQA-Guidelines-Color.pdf

- Dry, alkaline, sandy soils
- Virgin, undisturbed, non-urban areas
- Windy areas
- Archaeological resources probably or known to exist in the area (Native American midden sites)
- Special events (fairs, concerts) and motorized activities (motorcross track, All Terrain Vehicle activities) on unvegetated soil (non-grass)
- Non-native population (i.e., out-of-area construction workers)

The lead agency should consider the factors above that are applicable to the project or the project site.

Asbestos

The U.S. EPA and the State of California list asbestos as a toxic air contaminant. Potential exposure to asbestos is most likely to occur in conjunction with the demolition of buildings constructed before 1979. Demolition or renovation activities involving asbestos materials are subject to the National Emissions Standards for Hazardous Air Pollutants (NESHAP) regulations. Rule 62.7 in the VCAPCD Rules and Regulations relates to demolition and renovation activities involving asbestos.

Odors

VCAPCD has not recommended a specific numerical criterion or procedure for odors. The qualitative threshold is described in the VCAPCD Air Quality Assessment Guidelines:

A qualitative assessment indicating that a project may reasonably be expected to generate odorous emissions in such quantities as to cause detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which may endanger the comfort, repose, health, or safety of any such person or the public, or which may cause, or have a natural tendency to cause, injury or damage to business or property (see California Health and Safety Code, Division 26, §41700) will have a significant adverse air quality impact.

The Air Quality Assessment Guidelines provide a definition of significant odor impact in terms of the numbers of complaints received – but this is of no predictive value in assessing new projects. There is a tabulation of "screening distances" in the Air Quality Assessment Guidelines (Table 6-3) for various odorous land uses that may cause an odor impact at receptor locations. The distances are all one or two miles, and they are associated with a wide variety of industrial, agricultural, and waste management facilities.

HEALTH RISK ASSESSMENT

Most projects will not involve a substantial source of TACs. Those that would emit TACs are likely subject to the permit authority of the VCAPCD and the analysis of any TACs and their potential impact should be coordinated with the VCAPCD permit requirements. One source of TACs that is not directly regulated by the VCAPCD is diesel exhaust from heavy trucks. If a project would create a major concentration of heavy truck traffic for a long period of time or involves sensitive receptors that may be exposed to substantial

concentrations of truck traffic or other sources of TACs (e.g., within 500 feet of U.S. 101), then the toxic effects of diesel particulate matter may be of concern. If TACs are a concern then a health risk assessment (HRA) may need to be conducted. The HRA involves the use of an air quality dispersion model and procedures and input values approved by the VCAPCD. The following criteria are used to determine the significance of a potential health risk impact:

- For cancer causing contaminants: a lifetime probability of contracting cancer is greater than 10 in one million as identified in the HRA.
- For non-carcinogenic pollutants: a Hazard Index of greater than 1, as identified in the HRA.

GREENHOUSE GASES

According to the City of Oxnard CEQA Guidelines, GHG's should be calculated using CalEEMod or a similar analysis tool. Emissions can be compared to the statewide inventory and/or any of various quantitative thresholds that have been adopted by other air pollution control districts. Another option is to compare "business as usual" (BAU) emissions (emissions that would occur without any GHG reducing measures in place) to emissions that would occur with implementation of state and local measures as well as any project---specific measures to reduce emissions. Using this BAU approach, the project's impact would typically be less than significant if emission reductions were equal to or greater than the emissions reductions mandated in AB 32. However, this method needs to be based on substantial evidence between the project's individual emissions and the statewide Scoping Plan reduction goal.

On April 29, 2015, the governor issued an executive order establishing a statewide mid--term GH reduction target of 40 percent below 1990 levels by 2030. SB 32 codified this interim reduction target on September 8, 2016. According to CARB, reducing GHG emissions by 40 percent below 1990 levels in 2030 ensures that California will continue its efforts to reduce carbon pollution and help to achieve federal health--based air quality standards. Setting clear targets also provides market certainty to foster investment and growth in a wide array of industries throughout the State, including clean technology and clean energy. An updated Scoping Plan is expected to be completed and adopted by CARB in 2017 that would provide State guidance in meeting long-term reduction targets.

Compare project characteristics to applicable state, regional, and local policies aimed at GHG emission reduction. These include, but are not limited to:

- CALGreen Standards
- Senate Bill 32 and 2017 Scoping Plan
- City of Oxnard Climate Action and Adaptation Plan
- Southern California Association of Governments' Sustainable Communities Strategy (SCS)

ENERGY

The City of Oxnard CEQA Guidance does not provide approaches to conduct an energy assessment.

This analysis addresses the Project's potential energy usage, including electricity, natural gas, and transportation fuel. Energy consumption during both construction and operation is assessed. Specific analysis methodologies are discussed below. Energy calculations are provided in **Appendix C**, and are based on the same assumptions as are used in the Air Quality and Greenhouse Gas Emissions analysis.

AIR QUALITY

Emissions of air pollutants were estimated for construction and operation of the Project. In California, the California Air Pollution Control Officer's Association recommends the use of CalEEMod to calculate and organize emissions data for new development projects. CalEEMod is a program that relies on project-specific information pertaining to geographic setting, utility service provision, construction scheduling and equipment inventory, and operational design features to generate estimates of air pollutant and GHG emissions. Information needed to parameterize the Project in CalEEMod was obtained from the construction engineer and the Project architect.

Table 8: Project Construction Schedule provides the dates and durations of each of the activities that will take place during construction of the Project, as well as a brief description of the scope of work. Future dates represent approximations based on the general Project timeline and are subject to change pending unpredictable circumstances that may arise.

TABLE 8
PROJECT CONSTRUCTION SCHEDULE

Construction Activity	Approximate Start Date	Approximate End Date	Duration (Days)	Description
Site Preparation	3/1/2025	3/14/2025	10	Loading equipment
Grading	3/15/2025	5/19/2025	46	Approximately 6,366 cubic yards of cut and 7,762 cubic yards of fill, resulting in a net import of 1,396 cubic yards of soil
Building Construction	5/20/2025	8/2/2027	575	Construction of proposed multi-family residential building
Paving	5/27/2027	8/17/2027	48	Paving of asphalt surfaces
Architectural Coating	5/27/2027	4/17/2027	48	Application of architectural coatings to building materials

*Note: Refer to **Appendix A (Proposed)** for CalEEMod Output Sheet.*

Construction

An assessment of air pollutant emissions was prepared utilizing the construction schedule in **Table 8**. **Table 9: Project Construction Diesel Equipment Inventory** displays the construction equipment required for each activity described in **Table 8**. Under regulatory compliance measures in CalEEMod, construction would be required to adhere to SCAQMD Rule 403 (Fugitive Dust) and Rule 1113 (Architectural Coatings).

TABLE 9 PROJECT CONSTRUCTION DIESEL EQUIPMENT INVENTORY				
Phase	Off-Road Equipment Type	Amount	Daily Hours	Horsepower [HP] (Load Factor)
Site Preparation	Rubber Tired Dozers	3	8	367 (0.40)
	Tractors/Loaders/Backhoes	4	8	84 (0.37)
Grading	Excavators	1	8	36 (0.38)
	Graders	1	8	148 (0.41)
	Rubber Tired Dozers	1	8	367 (0.40)
	Tractors/Loaders/Backhoes	3	8	84.0 (0.29)

Paving	Pavers	2	8	81 (0.36)
	Paving Equipment	2	8	89 (0.38)
	Rollers	2	8	36 (0.48)

*Refer to **Appendix A (Proposed)** for CalEEMod Output Sheets.*

Maximum daily emissions of air pollutants during construction of the Project's were calculated using CalEEMod. Mobile sources (such as diesel-fueled equipment on-site and vehicles traveling to and from the Project site) would primarily generate NOx emissions. The application of architectural coatings would primarily result in the release of VOC emissions. **Table 10: Maximum Construction Emissions** identifies daily emissions that are estimated for peak construction days for each construction year. It is important to note, emissions presented in **Table 10** do not include regulatory compliance measures such as construction equipment controls (Tier 3 emissions standards with Level 3 DPF per CARB requirements)[23] or control efficiency of PM10 (dust control measures per VCAPCD Rule 55) to provide a worst-case scenario analysis.

As mentioned previously, the VCAPCD has not recommended a specific numerical criterion for construction, as emissions are considered to be temporary. Additionally, the Project would be required to comply with the applicable 2030 General Plan goal and policies which include the following:

- Goal ER-14: Improved air quality and minimized adverse effects of air pollution on human health and the economy.
    - Policy ER-14.4: Require all construction equipment to be maintained and tuned to meet appropriate EPA, CARB, and VCAPCD emissions requirements and when new emission

23 California Air Resources Board, Guide to Off-Road Vehicle & Equipment Regulations, website: https://ww3.arb.ca.gov/msprog/offroadzone/pdfs/offroad_booklet.pdf. Accessed June 2023.

control devices or operational modifications are found to be effective, such devices or operational modifications are required on construction equipment.

- Policy ER-14.5: Require that the construction period be lengthened to minimize the number of vehicles and equipment operating at the same time during smog season (May through October).
- Policy ER-14.6: Continue to require mitigation measures as a condition of obtaining building or use permits to minimize dust and air emissions impacts from construction.
- Policy ER-14.8: Cooperate with other local, county, regional, and State agencies in implementing air quality plans to achieve State and Federal Ambient Air Quality Standards and in preparing, adopting, and implementing the SCAG Sustainable Communities Strategy (SB 375).
- Policy ER-14.12: Consult with the VCAPCD during CEQA review for projects that require air quality impact analysis and ensure that the VCAPCD is on the distribution list for all CEQA documents.

Compliance with the above General Plan goals and policies would reduce potential emission of criteria pollutants. Therefore, construction of the Project would not generate any significant environmental impacts associated with air quality compliance.

TABLE 10
MAXIMUM CONSTRUCTION EMISSIONS

Source	VOC	NOx	CO	SOx	PM10	PM2.5
	pounds/day					
2025	3.4	31.7	31.2	<0.1	3.4	1.6
2026	1.9	12.3	25.2	<0.1	3.4	1.1
2027	32.2	19.5	38.5	<0.1	4.3	1.5
Maximum	**32.2**	**31.7**	**38.5**	**<0.1**	**4.3**	**1.5**

Source: CalEEMod.

Notes: CO = carbon monoxide; NOx = nitrogen oxides; PM10 = particulate matter less than 10 microns; PM2.5 = particulate matter less than 2.5 microns; SOx = sulfur oxides; VOC = volatile organic compounds.

*Refer to **Appendix A (Proposed)**, for maximum on-site plus off-site emissions during both the summer and winter seasons.*

Operation

As mentioned previously, the proposed multi-family residential building includes approximately 234-units with related on-site amenities. Operational emissions would result primarily from vehicles traveling to and from the Project site. The Project would generate a net total of 1,175 daily trips. The results presented in **Table 11: Maximum Operational Emissions** are compared to the SCAQMD-established operational significance thresholds. As shown in **Table 11**, the operational emissions would not exceed the regional VOC and NOx concentration thresholds. Operation of the Project would not generate any significant environmental impacts associated with air quality compliance.

Notes: Totals in table may not appear to add exactly due to rounding in the computer model calculations.

CO = carbon monoxide; NOx = nitrogen oxides; PM10 = particulate matter less than 10 microns; PM2.5 = particulate matter less than 2.5 microns; SOx = sulfur oxides; VOC = volatile organic compounds.

*Refer to **Appendix A (Proposed)** for maximum operational emissions during both the summer and winter seasons.*

Odors

Mandatory compliance with VCAPCD Rule 74.2 would limit the number of VOCs in architectural coatings and solvents. According to SCAQMD, while almost any source may emit objectionable odors, some land uses are more likely to produce odors because of their operation. Land uses more likely to produce odors include agriculture, chemical plants, composting operations, dairies, fiberglass molding manufacturing, landfills, refineries, rendering plants, rail yards, and wastewater treatment plants. The Project does not contain any active manufacturing activities and would not convert current agricultural land to residential land uses. Therefore, objectionable odors would not be emitted by the proposed uses. Any unforeseen odors generated by the Project will be controlled in accordance with VCAPCD Rule 51 and Rule 55. As previously noted, Rule 51 prohibits the discharge of air contaminants that harm, endanger, or annoy individuals or the public; endanger the comfort, health or safety of individuals or the public; or cause injury or damage to business or property. Failure to comply with Rule 51 could subject the offending facility to possible fines and/or operational limitations in an approved odor control or odor abatement plan.

Cumulative

Development of the Project in conjunction with any related projects near the Project would result in an increase in construction and operational emissions in an already urbanized area of the City. However, cumulative air quality impacts from construction, based on VCAPCD guidelines, are not analyzed in a manner similar to project-specific air quality impacts. Instead, VCAPCD recommends that a project's potential contribution to cumulative impacts should be assessed utilizing the same significance criteria as those for project-specific impacts. According to VCAPCD, individual development projects that generate construction or operational emissions that exceed VCAPCD recommended daily regional or localized thresholds for project-specific impacts would also cause a cumulatively considerable increase in emissions for those pollutants for which the Basin is in nonattainment. With the implementation of

regulatory compliance measures such as Rule 55 (Fugitive Dust) and Rule 74.2 (Architectural Coating), the Project's construction and operational emissions are not expected to significantly contribute to cumulative emissions. As such, the Project's contribution to cumulative air quality emissions in combination with any related projects would not be cumulatively considerable.

HEALTH RISK ASSESSMENT

Construction

The City of Oxnard relies on methodology established by VCAPCD for preparation of CEQA air quality analyses. VCAPCD shares responsibility with the California Air Resources Board (CARB) for ensuring that all state and federal ambient air quality standards are achieved and maintained throughout all of Ventura County. Although VCAPCD is responsible for regional air quality planning efforts, it does not have the authority to directly regulate air quality issues associated with new development projects within the Air Basin, such as the Project.

The rational for not requiring a health risk assessment for construction activities is the limited duration of exposure to any short term emissions generated during construction. Health effects from carcinogenic air toxics are identified and considered in terms of individual cancer risk. Specifically, "Individual Cancer Risk" is the likelihood that a person continuously exposed to concentrations of toxic air contaminants (TACs) over a 70-year lifetime will contract cancer based on the use of standard risk assessment methodology. Given that the greatest potential for diesel particulate emissions would only occur during excavation/grading activities (approximately 46 days) and other construction activities (approximately 2 years) would result in reduced use of heavy-duty diesel construction equipment in comparison to excavation/grading activities, the Project would not result in a long-term (i.e., 70 year) source of toxic air contaminant (TAC) emissions. No residual TAC emissions and corresponding individual cancer risk are anticipated after construction. Because there is such a short-term exposure period (25 out of 840 months of a 70-year lifetime), further evaluation of construction TAC emissions is not warranted. Additionally, the Project would be required to comply with the applicable 2030 General Plan goal and policies, such as Policy ER-14.4 which requires proper maintenance of all construction equipment to be tuned to meet EPA, CARB, and VCAPCD emissions requirements.

Operation

According to CARB's Air Quality and Land Use Handbook, sources that may cause health risks to nearby sensitive receptors include freeways, distribution centers, rail yards, ports, refineries, chrome platers, dry cleaners, and gasoline disposing facilities. The Project would construct a multi-family residential building adjacent to the US-101 freeway. Therefore, a quantitative operational HRA was conducted to assess diesel particulate matter (DPM) from the freeway to the proposed residences.

As shown in **Table 12: Estimated Inhalation Cancer Risk and Chronic Hazards**, for the maximum exposed residential units (MEIR), results of the analysis predicted freeway emissions would result in cancer risks above the significance criterion of 10 per 1 million. The chronic health impact would be less than 1 (0.00315) and would be below the Project-level threshold of 1.

TABLE 12 ESTIMATED INHALATION CANCER RISK AND CHRONIC HAZARDS							
Receptor	DPM Concentration at Maximum Exposed Receptor ($\mu g/m^3$)	Cancer Risk at Maximum Exposed Receptor (risk/million)	VCAPCD Cancer Risk Significance Threshold (risk/million)	Exceeds Threshold?	Chronic Non-Cancer Hazard Index	VCAPCD Non-Cancer Hazard Index Significance Threshold?	Exceeds Threshold?
Resident MEIR	1.5E-02	1.36E-05	10	**Yes**	3.15E-03	1.0	No

*Note: See **Appendix B** for AERMOD Output Sheets.*

To reduce the exposure of the Project's on-site residents to DPM emissions, it is recommended that the Project incorporate the following design features to reduce potential cancer risk:

- Locate outdoor areas, such as balconies and courtyards, as far from the US-101 freeway as possible;
- Plant vegetation between residential receptors and the freeway;
- Install, operate, and maintain an HVAC system that uses high-efficiency filters of Minimum Efficiency Reporting Value (MERV) 14 or higher for the residential units (suggested use of MERV 16);
- Locate the air intakes for the residential units as far from the freeway as possible; and
- Provide a disclosure letter to all new residents that discusses the potential risk from living within close proximity of the US-101 freeway, and points out that opening windows reduces the effectiveness of implemented reduction measures and increases individuals' exposure and hence risk.

High-efficiency (MERV 14–16 or higher) pleated particle filters for residential uses located near busy roadways would generally be considered the most effective approach to filtration because these filters can remove the very small particles emitted by motor vehicles without emitting ozone, formaldehyde, or other harmful byproducts. Such high-efficiency filtration can reduce indoor PM2.5 and ultrafine particle levels by up to 90 percent (MERV 16) relative to incoming outdoor levels when doors and windows are kept mostly closed. However, only those particles in the airstream actually passing through the filter are removed. Consequently, because most residential occupants of the proposed Project are anticipated to open their windows or doors at least part of the day, any pollutant reduction attained through the use of high-efficiency filters would be compromised based on the amount of time doors and windows are left open. **Table 13: Reduced Estimated Inhalation Cancer Risk**, identified the reduction in risk associated with incorporation of MERV 14 through MERV 16 filters. Limiting particulate infiltration will be accomplished by installing and maintain air filtration systems with efficiencies of MERV 14 or better as defined by the American Society of Heating, Refrigerating and Air-Conditioning Engineers Standard 52.2. These filters are rated to remove a portion of the ultrafine and submicron particles, such as diesel particulate matter emitted from mobile sources. MERV 14 or better air filtration systems are capable of removing 75 percent or more of particles between 0.3 and 1.0 microns, and 90 percent or more of

particles between 1.0 and 10.0 microns. As shown in **Table 13,** installation of MERV filters with a minimum rating of 14 would reduce cancer risk impacts to levels below the significance threshold. Thus, the cancer and chronic risk for residential receptors due would not be considered significant for all residential receptors at the Project site with installation of MERV filters with a minimum rating of 14.

TABLE 13
REDUCED ESTIMATED INHALATION CANCER RISK

Receptor	MERV 14	MERV 15	MERV 16
Resident MEIR	5.18E-06	4.65E-06	4.12E-06
Exceeds VCAPCD Cancer Risk Threshold (10 in 1 million)?	**No**	**No**	**No**

*Note: See **Appendix B** for calculations.*

GREENHOUSE GAS EMISSIONS

In light of the lack of a specific GHG threshold or qualified GHG reduction plan recommended or adopted by the City or VCAPCD, it is appropriate to refer to guidance from other agencies when discussing GHG emissions. The City generally refers to the SCAQMD methodology for GHG significance analysis. It is important to note, the City understands that the 3,000 MTCO2e per year threshold was proposed a decade ago and was never adopted. As such, comparison the 3,000 MTCO2e threshold is provided for information purposes only and GHG impacts would be considered significant if project characteristics are not consistent with applicable state, regional and local policies.

The forecasting of construction-related GHG emissions requires assumptions regarding the timing of construction as the emission factors for some of the Project's construction-related GHG emission sources decline over time. As shown in **Table 14: Construction GHG Emissions**, total construction emissions would be 1,761 metric tons of CO2e (MTCO2e). One-time, short-term emissions are converted to average annual emissions by amortizing them over the service life of a building. For buildings in general, it is reasonable to look at a 30-year time frame because this is a typical interval before a new building requires its first major renovation.[24] As shown in **Table 14**, when amortized over an average 30-year Project lifetime, average annual construction emissions from the Project would be 59 MTCO2e per year.

TABLE 14
CONSTRUCTION GHG EMISSIONS

Construction Phase	MTCO2e/Year
2025	555
2026	731
2027	475
Total Construction Emissions	**1,761**
30-Year Annual Amortized Rate	**59**

*Refer to **Appendix A**, for overall construction emissions.*
Notes: GHG = greenhouse gas; MTCO2e = metric tons of carbon dioxide equivalent.

Operation of the Project has the potential to generate GHG emissions through vehicle trips traveling to and from the Project site. In addition, emissions would result from area sources on site, such as natural gas combustion, landscaping equipment, and use of consumer products. Emissions from mobile and area sources and indirect emissions from energy and water use, wastewater, as well as waste management would occur every year after full development of the uses allowed by the Project. Operational Project emissions from area sources, energy sources, mobile sources, solid waste, and water and wastewater conveyance are shown in **Table 15: Operational GHG Emissions** below. As shown in **Table 15**, annual

24 International Energy Agency (IEA), Energy Efficiency Requirements in Building Codes, Energy Efficiency Policies for New Buildings, IEA Information Paper (2008).

operational emissions from the Project would be 1,794 MTCO2e per year, below the SCAQMD screening threshold of 3,000 MTCO2e per year.

TABLE 15

Conflict with Applicable Greenhouse Gas Reduction Plans, Policies, or Regulations

There are no federal, State, or local quantitative adopted thresholds of significance for addressing a project's GHG emissions. In the absence of any adopted, numeric threshold, this analysis evaluates the significance of a project by considering whether the project conflicts with applicable regulations or requirements adopted to implement a Statewide, regional, or local plan. The following analysis describes the extent the Project complies with the regulations and policies outlined in the City's CAP.

Consistency with Applicable Plans and Policies

The proposed Project is required to comply with Title 13-Section 2449 of the CCR and the CalRecycle Sustainable (Green) Building Program regulations, which include implementation of standard control measures for equipment emissions. Adherence to these regulations, including the implementation of Best Available Control Measures (BACMs) is a standard requirement for any construction or ground-disturbance activity occurring within the Basin.

BACMs include, but are not limited to, requirements that the project proponent utilize only low sulfur fuel (i.e., having a sulfur content of 15 ppm by weight or less); ensure off-road vehicles (i.e., self-propelled diesel fueled vehicles 25 horsepower and up that were not designed to be driven on road) limit vehicle idling to five minutes or less; register and label vehicles in accordance with the ARB Diesel Off-Road Online Reporting System; restrict the inclusion of older vehicles into fleets; and retire, replace, or repower older engines or install Verified Diesel Emission Control Strategies (i.e. exhaust retrofits). Additionally, the construction contractor will recycle/reuse at least 50 percent of the construction material (including, but not limited to, proposed aggregate base, soil, mulch, vegetation, concrete, lumber, metal, and cardboard) and use "Green Building Materials," such as those materials that are

rapidly renewable or resource efficient, and recycled and manufactured in an environmentally friendly way, for at least 10 percent of the project, in accordance with CalRecycle regulations.

Long-term operational emissions typically include emissions from use of consumer products, energy and water usage, vehicles and land use emissions.

The Project is committed to meeting the requirements of the CALGreen Code by incorporating strategies such as low-flow toilets, low-flow faucets and other energy and resource conservation measures. The Project would comply with applicable energy, water, and waste efficiency measures specified in the Title 24 Building Energy Efficiency Standards and CALGreen standards.

Consistency with Senate Bill 32 and Scoping Plan

There are numerous State plans, policies, and regulations adopted for the purpose of reducing GHG emissions. The principal overall State plan is SB 32, the follow up to AB 32, the California Global Warming Solutions Act of 2006. The goal of SB 32 is to reduce GHG emissions to 40 percent below 1990 levels by 2030. CARB's 2017 Scoping Plan, which outlines a framework to achieve SB 32's 2030 target, emphasizes innovation, adoption of existing technology, and strategic investment to support its strategies for GHG emissions reductions. Statewide plans and regulations in support of these strategies, such as GHG emissions standards for vehicles (AB 1493), the LCFS, and regulations requiring an increasing fraction of electricity to be generated from renewable sources, are being implemented at the statewide level. Many of the measures and programs included in the Scoping Plan would result in the reduction of project-related GHG emissions with no action at the project-level, including GHG emission reductions through increased energy efficiency and renewable energy production (SB 350), reduction in carbon intensity of transportation fuels (LCFS), and the accelerated efficiency and electrification of the statewide vehicle fleet.

The 2045 carbon neutrality goal required CARB to expand proposed actions in the Third Update to include those that capture and store carbon in addition to those that reduce only anthropogenic sources of GHG emissions. The proposed project would support the state's carbon neutrality goals, as implementation includes addition of landscaping throughout the project site, which represent opportunities for potential carbon removal and sequestration over the project lifetime. However, the Third Update emphasizes that reliance on carbon sequestration in the state's natural and working lands will not be sufficient to address residual GHG emissions, and achieving carbon neutrality will require research, development, and deployment of additional methods to capture atmospheric GHG emissions (e.g., mechanical direct air capture). Given that the specific path to neutrality will require development of technologies and programs that are not currently known or available, the project's role in supporting the statewide goal would be speculative and cannot be wholly identified at this time.

Overall, the proposed project would comply with all regulations adopted in furtherance of the Scoping Plan to the extent applicable and required by law. As mentioned above, several Scoping Plan measures would result in reductions of project-related GHG emissions with no action required at the project-level,

including those related to energy efficiency, reduced fossil fuel use, and renewable energy production. As demonstrated above, the proposed project would not conflict with CARB's 2017 or 2022 Scoping Plan updates and with the state's ability to achieve the 2030 and 2045 GHG reduction and carbon neutrality goals. Further, the proposed project's consistency with the applicable measures and programs would assist in meeting the City's contribution to GHG emission reduction targets in the state.

City of Oxnard Climate Action and Adaptation Plan

Table 18: Project Consistency with Applicable CAAP Strategies summarize the Project's consistency with applicable GHG reductions from local strategies listed in the CAAP. As shown therein, the Proposed Project would be consistent with the GHG emission reduction strategies contained in the City's CAAP.

TABLE 16
PROJECT CONSISTENCY WITH APPLICABLE CAAP STRATEGIES

Action	Project Consistency
Green Building (B)	
• B2: Electrify Buildings	**Consistent.** The Project would be designed and operated to meet the applicable requirements of CALGreen for electrification of new buildings.
Transportation (T)	
• T1: Expand Zero Emission Vehicle (ZEV) Charging and Fueling Infrastructure	**Consistent**. The Project would be designed to provide approximately 165 EV charging stations, 50 percent of the total parking space provided by the proposed development.
Water Conservation and Reuse (W)	
• W1: Increase Water Conservation and Reuse	**Consistent**. The Project would incorporate water conservation features, such as low-flow fixtures, required pursuant to the current California Plumbing Code and CALGreen. Furthermore, current CAlGreen requirements require a 20 percent increase in indoor water use efficiency relative to previous building requirements.
Waste Reduction and Recycling (R)	
• R1: Recycling and Organic Waste Diversion	**Consistent**. The Project would be subject to the requirements of the statewide commercial recycling program, which established a statewide goal of diverting at least 75 percent of solid waste from landfills by 2020. Compliance with existing City and State programs would achieve consistency with this measure.

2020 – 2045 Regional Transportation Plan/Sustainable Communities Strategy

The SCAG's 2020-2045 RTP/SCS is forecast to help California reach its GHG reduction goals. According to the 2020-2045 RTP/SCS, the updated target for the SCAG region is 19 percent below 2005 per capita emissions levels by 2035. The revised 2035 target is higher than the previous CARB target of 13 percent for the SCAG region. The 2020-2045 RTP/SCS includes implementation strategies for focusing growth near destinations and mobility options, promoting diverse housing choices, leveraging technology innovations, supporting implementation of sustainability policies, and promoting a green region. **Table 17: Project Consistency with Applicable SCAG RTP/SCS GHG Emission Reduction Strategies** summarize the Project's consistency with applicable strategies and actions. As shown therein, the Proposed Project would be consistent with the GHG emission reduction strategies contained in the 2020-2045 RTP/SCS.

TABLE 17
PROJECT CONSISTENCY WITH APPLICABLE SCAG RTP/SCS GHG EMISSION REDUCTION STRATEGIES

Action	Project Consistency
Focus Growth Near Destinations & Mobility Options	
• Emphasize land use patterns that facilitate multimodal access to work, educational and other destinations • Focus on a regional jobs/housing balance to reduce commute times and distances and expand job opportunities near transit and along center-focused main street • Plan for growth near transit investments and support implementation of first/last mile strategies • Promote the redevelopment of underperforming retail developments and other outmoded nonresidential uses • Prioritize infill and redevelopment of underutilized land to accommodate new growth, increase amenities and connectivity in existing neighborhoods • Encourage design and transportation options that reduce the reliance on and number of solo car trips (this could include mixed uses or locating and orienting close to existing destinations) • Identify ways to "right size" parking requirements and promote alternative parking strategies (e.g., shared parking or smart parking)	**Consistent.** The Proposed Project is an infill development that would involve construction of a multi-family residential building. The Project site is located within walking distance of existing residential and commercial uses. Additionally, the Project site is served by the City of Oxnard Bikeway system, with Class II bike lanes located along Gonzales Road, Rose Avenue, Solar Drive, and a portion of Lockwood Street east of the Outlet Center Drive. These Class II bike lanes connect the Project to commercial and employment areas east and west of the Project. The City of Oxnard is also served by the Gold Coast Transit. Within the project vicinity, #4A Route (North Oxnard), #4B Route (North Oxnard), #15 Route (Esplanade-El Rio-St. Johns Medical Center), #17 Route (Esplanade – St. Johns Medical Center – Oxnard College), and #19 Route (OTC – 5th – Gonzales Road) provides fixed route bus service on Gonzales Road. Existing bus stops with benches are located on both sides of Gonzales Road and Rose Avenue, less than 0.5 miles from the Project site. Therefore, the Project would focus growth near destinations and mobility options.
Leverage Technology Innovations	
• Promote low emission technologies such as neighborhood electric vehicles, shared rides hailing, car sharing, bike sharing and scooters by providing supporting and safe infrastructure sch as dedicated lanes, charging and parking/drop-off space • Improve access to services through technology – such as telework and telemedicine as well as other incentives such as a "mobility wallet," an app-based system for storing transit and other multi-modal payments • Identify ways to incorporate "micro-power grids" in communities, for example solar energy, hydrogen fuel cell power storage and power generation	**Consistent**. The Project would be designed and operated to meet the applicable requirements of CALGreen and the City's Green Building Code.
Support Implementation of Sustainability Policies	
• Pursue funding opportunities to support local sustainable development implementation projects that reduce GHG emissions • Support statewide legislation that reduces barriers to new construction and that incentivizes	**Consistent**. The Project would be designed and operated to meet the applicable requirements of CALGreen and the City's Green Building Code. The Project's indoor water use would be minimized by 20 percent. Furthermore, energy use would be reduced by implementing the requirements of current Title 24 standards, including energy-efficient lighting and appliances. Therefore, the Project would support implementation of sustainability policies.
Promote a Green Region	

TABLE 17
PROJECT CONSISTENCY WITH APPLICABLE SCAG RTP/SCS GHG EMISSION REDUCTION STRATEGIES

Action	Project Consistency
• Support development of local climate adaptation and hazard mitigation plans, as well as project implementation that improves community resiliency to climate change and natural hazards • Support local policies for renewable energy production, reduction of urban heat islands and carbon sequestration • Integrate local food production into the regional landscape • Promote more resource efficient development focused on conservation, recycling and reclamation • Preserve, enhance and restore regional wildlife connectivity • Reduce consumption of resource areas, including agricultural land • Identify ways to improve access to public park space	**Consistent**. The Project is an infill development that would involve construction of a multi-family residential building. Because the project is an infill development, it would not interfere with regional wildlife connectivity or convert agricultural land. The Project would comply with Title 24, and CALGreen. Therefore, the Project would support development of a green region.

Cumulative Impacts

To achieve Statewide goals, CARB is in the process of establishing and implementing regulations to reduce Statewide GHG emissions. Currently, there is no generally accepted methodology that exists to determine whether GHG emissions associated with a specific project represent new emissions or existing and/or displaced emissions. Therefore, consistent with CEQA Guidelines Section 15064h(3), this analysis has determined that the Project's contribution to cumulative GHG emission and global climate change would be less than significant if the Project is consistent with the applicable regulatory plans and polices to reduce GHG emissions. Accordingly, the analysis above considered the potential for the Project to contribute to the cumulative impact of global climate change. As stated above, with compliance of regulatory measures and implementation of CALGreen Building Standards, the Project would not conflict with applicable plans including the City's General Plan and CAP. As such, cumulative impacts would not be considered significant during construction and operation.

ENERGY

Construction

During construction, energy would be consumed in the form of electricity associated with the conveyance of water used for dust control, and on a limited basis, powering lights, electronic equipment, or other construction activities necessitating electrical power. Construction activities typically do not involve the consumption of natural gas. Construction would also consume energy in the form of petroleum-based fuels associated with the use of off-road construction vehicles and equipment within the Project site, construction worker travel, haul trips, and delivery trips.

As shown in **Table 18: Summary of Energy Use During Construction** and additionally discussed below, a total of approximately 152 kilowatt-hours (kWh) of electricity, 143,973 gallons of diesel fuel, and 62,423 gallons of gasoline is estimated to be consumed during construction.

TABLE 18
SUMMARY OF ENERGY USE DURING CONSTRUCTION

Fuel Type	Quantity
Electricity	
Water Conveyance	152 kWh
Diesel	
Off-Road Construction Equipment	70,005 gallons
On-Road Motor Vehicles	73,968 gallons
Total	**143,973 gallons**
Gasoline	
Off-Road Construction Equipment	0 gallons
On-Road Motor Vehicles	62,423 gallons
Total	**62,423 gallons**

*Refer to **Appendix C** for Energy Calculation Sheets.*

Electricity

Southern California Edison (SCE) provides electricity to the Project area, including residential, commercial, and industrial uses. As shown in **Table 16**, a total of approximately 152 kWh of electricity is anticipated to be consumed during construction. The electricity demand at any given time would vary throughout the construction period based on the construction activities being performed and would cease upon completion of construction. In 2021, the County consumed 5,242 GWh and SCE consumed 81,129 Gigawatt hours (GWh).[25] The Project's increased demand will be adequately served by the existing SCE electrical facilities. Total electricity consumption in SCE's service areas is forecast to increase by approximately 20,000 GWh between 2018 and 2030.[26] The increase in electricity demand from the Project would represent an insignificant percent increase (i.e., less than a fraction of one percent) compared to overall demand in SCE's service area. Additionally, Title 24 requirements would apply to construction lighting if duration were to exceed 120 days, which includes limits on the wattage allowed per specified area for energy conservation. As such, the demand for electricity during construction would not cause wasteful, inefficient, or unnecessary use of electricity. As a result, the Project would not result in inefficient, or unnecessary consumption of electricity during construction. Accordingly, electricity demand during construction would be less than significant.

25 California Energy Commission, *California Energy Consumption Database*, accessed June 2023, https://ecdms.energy.ca.gov/

26 California Energy Commission, *California Energy Demand 2018 – 2030 Revised Forecast – Figure 49: Historical and Projected Baseline Consumption,* SCE Planning Area, accessed June 2023, https://ecdms.energy.ca.gov/

Transportation Energy

Project construction would consume energy in the form of petroleum-based fuels associated with use of off-road construction vehicles and equipment on the Project site, construction worker travel to and from the Project site, and delivery and haul truck trips (e.g., for deliveries of construction supplies and materials).

The petroleum-based fuel use summary provided in **Table 16** represents the amount of transportation energy that could potentially be consumed during construction based on a conservative set of assumptions. As shown, on- and off-road vehicles would consume an estimated 48,681 gallons of petroleum (143,973 gallons of diesel and 62,423 gallons of gasoline fuel) throughout the Project's construction period For purposes of comparison, the Energy Information Administration (EIA) forecasts a national oil supply of 17.8 million barrels (mb) per day in 2025, which is the first year of construction for the Project.[27] This equates to approximately 272,874 million gallons (mg) per year. Construction of the Project would account for less than 0.01 percent of the projected annual oil supply in 2025.

Due to the relatively short duration of the construction process, and the fact that the extent of fuel consumption is inherent to construction projects of this size and nature, fuel consumption impacts would not be considered excessive or substantial with respect to regional fuel supplies. The energy demands during construction would be typical of construction projects of this size and would not necessitate additional energy facilities or distribution infrastructure. The Project will also comply with Sections 2485 in Title 13 of the California Code of Regulations, which requires the idling of all diesel fueled commercial vehicles be limited to five minutes at any location. As a result, the Project would not result in inefficient, or unnecessary consumption of transportation resources during construction. Accordingly, transportation resource demands during construction would be less than significant.

Operation

During operation of the Project, energy would be consumed for multiple purposes associated with the proposed uses, including, but not limited to, heating/ventilating/air conditioning (HVAC); refrigeration; lighting; and the use of electronics, equipment, and machinery. Energy would also be consumed during operation of the Project in the form of water usage, solid waste disposal, and vehicle trips, among others. As shown in **Table 19: Summary of Annual Energy Use During Operation**, the Project's energy demand would be approximately 1,207,193 kWh of electricity per year, 3,204,669 kBTU of natural gas per year, and 120,485 gallons of transportation fuel per year.

27 U.S. Energy Information Administration, Annual Energy Outlook 2020: Table 11. Petroleum and Other Liquids Supply and Disposition, https://www.eia.gov/outlooks/aeo/data/browser/#/?id=11-AEO2020&cases=ref2020&sourcekey=0, accessed June 2023.

TABLE 19 SUMMARY OF ANNUAL ENERGY USE DURING OPERATION		
Source	**Units**	**Quantity**
Electricity		
Apartments Mid Rise	kWh/yr	795,984
Parking Lot	kWh/yr	0
Enclosed Parking with Elevator	kWh/yr	289,408
Water Conveyance	kWh/yr	121,801
Total Electricity	**kWh/yr**	**1,207,193**
Natural Gas		
Apartments Mid Rise	kBTU/yr	3,204,669
Total Natural gas	**kBTU/yr**	**3,204,669**
Transportation Energy		
Diesel	Gallons/yr	16,715
Gasoline	Gallons/yr	103,770
Total Fuel	**Gallons/yr**	**120,485**

Notes: kWh/yr = kilowatt-hours per year; kBtu/yr = thousand British Thermal Units per year.
Electricity and Natural Gas for the Project is total yearly operational usage. Mobile gasoline and diesel usage were calculated using CalEEMod output data
*Refer to **Appendix C** for Energy Calculation Sheets.*

Electricity

As shown in **Table 19**, the Project would result in a demand for electricity totaling 1,207,193 kWh (1.2 GWh) per year. SCE estimates that electricity consumption within its planning area will be approximately 125,000 GWh annually by 2028, when the Project would be fully built out.[28] The Project would account for less than 0.01 percent of the 2028 annual consumption in SCE's planning area. As such, the Project would account for a negligible portion of the projected annual consumption in SCE's planning area.

Natural Gas

Natural gas service would be provided to the Project site by Southern California Gas Company (SoCalGas). As shown in **Table 19** above, buildout of the Project is projected to generate an on-site demand for natural gas totaling 3,204,669 kBTU or 3.2 million cubic feet (MMcf) per year. Based on the 2020 California Gas Report, the California Energy and Electric Utilities estimates natural gas supply within SoCalGas' planning area will be approximately 1,253,775 million cubic feet (MMcf) per year in 2028.[29] The proposed Project would account for less than 0.01 percent of the 2028 annual forecasted supply in SoCalGas' planning area. Accordingly, natural gas demand during operation would be less than significant.

28 CEC, Demand Analysis Office, California Energy Demand 2018-2030 Revised Forecast, https://efiling.energy.ca.gov/getdocument.aspx?tn=223244. Accessed June 2023.

Transportation Energy

As shown in **Table 17** above, buildout of the Project is projected to generate a demand of 206,396 gallons of transportation fuel. Based on fuel consumption obtained from CARB's California Emissions Factor Mode, Version 2021 (EMFAC2021), approximately 40.5 million gallons of diesel and approximately 239.1 million gallons of gasoline will be consumed from vehicle trips in Ventura County in 2028.[30] Operation of the Project would account for less than 0.01 percent of the projected annual oil supply in 2028. The Project would not result in inefficient, or unnecessary consumption of energy resources for transportation during operation and the impact of the Project would be less than significant.

Based on the analysis presented above and the calculations provided in this report, the Project would not result in the wasteful, inefficient, or unnecessary consumption of energy and thus would not generate significant impacts with regard to energy use and consumption.

30 California Air Resources Board, Emissions Inventory, https://arb.ca.gov/emfac/emissions-inventory/1c38c7a983b2a1fbc3c255ac07f12367b8554cc9. Accessed June 2023.

CERTIFICATION

The contents of this Air Quality, Health Risk Assessment, Greenhouse Gas, and Energy analysis represent an accurate depiction of the environment and impacts associated with the proposed Lockwood Development 3 Project. The information contained in this noise study is based on the best available information at the time of preparation. If you have any questions, please contact me directly at (818) 415-7274.

Sincerely,

Christ Kirikian, INCE
Principal | Director of Air Quality & Acoustics

Lockwood Development III Project v2 Custom Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

3. Construction Emissions Details

3.1. Site Preparation (2025) - Unmitigated

3.3. Grading (2025) - Unmitigated

3.5. Building Construction (2025) - Unmitigated

3.7. Building Construction (2026) - Unmitigated

3.9. Building Construction (2027) - Unmitigated

3.11. Paving (2027) - Unmitigated

3.13. Architectural Coating (2027) - Unmitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.2. Unmitigated

4.4. Water Emissions by Land Use

4.4.2. Unmitigated

4.5. Waste Emissions by Land Use

4.5.2. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

Building Construction	Tractors/Loaders/Backhoes	Diesel	Average	3.00	7.00	84.0	0.37
Building Construction	Welders	Diesel	Average	1.00	8.00	46.0	0.45
Paving	Pavers	Diesel	Average	2.00	8.00	81.0	0.42
Paving	Paving Equipment	Diesel	Average	2.00	8.00	89.0	0.36
Paving	Rollers	Diesel	Average	2.00	8.00	36.0	0.38
Architectural Coating	Air Compressors	Diesel	Average	1.00	6.00	37.0	0.48

5.3. Construction Vehicles

5.3.1. Unmitigated

Phase Name	Trip Type	One-Way Trips per Day	Miles per Trip	Vehicle Mix
Site Preparation	—	—	—	—
Site Preparation	Worker	17.5	18.5	LDA,LDT1,LDT2
Site Preparation	Vendor	—	10.2	HHDT,MHDT
Site Preparation	Hauling	0.00	20.0	HHDT
Site Preparation	Onsite truck	—	—	HHDT
Grading	—	—	—	—
Grading	Worker	15.0	18.5	LDA,LDT1,LDT2
Grading	Vendor	—	10.2	HHDT,MHDT
Grading	Hauling	3.80	20.0	HHDT
Grading	Onsite truck	—	—	HHDT
Building Construction	—	—	—	—
Building Construction	Worker	201	18.5	LDA,LDT1,LDT2
Building Construction	Vendor	37.9	10.2	HHDT,MHDT
Building Construction	Hauling	0.00	20.0	HHDT

Building Construction	Onsite truck	—	—	HHDT
Paving	—	—	—	—
Paving	Worker	15.0	18.5	LDA,LDT1,LDT2
Paving	Vendor	—	10.2	HHDT,MHDT
Paving	Hauling	0.00	20.0	HHDT
Paving	Onsite truck	—	—	HHDT
Architectural Coating	—	—	—	—
Architectural Coating	Worker	40.3	18.5	LDA,LDT1,LDT2
Architectural Coating	Vendor	—	10.2	HHDT,MHDT
Architectural Coating	Hauling	0.00	20.0	HHDT
Architectural Coating	Onsite truck	—	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%
Sweep paved roads once per month	9%	9%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	454,896	151,632	0.00	0.00	—

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Grading	—	1,396	46.0	0.00	—
Paving	0.00	0.00	0.00	0.00	0.00

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
Parking Lot	0.00	100%
Enclosed Parking with Elevator	0.00	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	0.00	532	0.03	< 0.005
2026	0.00	532	0.03	< 0.005
2027	0.00	532	0.03	< 0.005

5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Apartments Mid Rise	1,175	1,061	883	407,702	10,560	9,532	7,940	3,664,270
Parking Lot	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Enclosed Parking with Elevator	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

Hearth Type	Unmitigated (number)
Apartments Mid Rise	—
Wood Fireplaces	0
Gas Fireplaces	0
Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	234
Conventional Wood Stoves	0
Catalytic Wood Stoves	0
Non-Catalytic Wood Stoves	0
Pellet Wood Stoves	0

5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
454896	151,632	0.00	0.00	—

5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

5.11. Operational Energy Consumption

5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Apartments Mid Rise	795,984	532	0.0330	0.0040	3,204,669
Parking Lot	0.00	532	0.0330	0.0040	0.00
Enclosed Parking with Elevator	289,408	532	0.0330	0.0040	0.00

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Apartments Mid Rise	8,869,401	568,196
Parking Lot	0.00	0.00
Enclosed Parking with Elevator	0.00	0.00

5.13. Operational Waste Generation

5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Apartments Mid Rise	173	—

Parking Lot	0.00	—
Enclosed Parking with Elevator	0.00	—

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Apartments Mid Rise	Average room A/C & Other residential A/C and heat pumps	R-410A	2,088	< 0.005	2.50	2.50	10.0
Apartments Mid Rise	Household refrigerators and/or freezers	R-134a	1,430	0.12	0.60	0.00	1.00

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor

5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual Heat Input (MMBtu/yr)

5.17. User Defined

Equipment Type	Fuel Type
—	—

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

8. User Changes to Default Data

Screen	Justification
Land Use	Project would include podium, tuck under and uncovered parking.
Construction: Construction Phases	Based on estimated construction schedule between March 2025 through August 2027. Project site is currently vacant.
Construction: Dust From Material Movement	Approximately 6,366 cubic yards of cut and 7,762 cubic yards of fill. This results in a net import of 1,396 cubic yards of soil.
Operations: Vehicle Data	Trip rates calculated based on Traffic and Circulation Study.

OPTIONS SUMMARY       ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration
Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for    74
Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =    201879.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: DPM

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:     74 Source(s);       1 Source Group(s); and
131 Receptor(s)

                 with:      0 POINT(s), including
                            0 POINTCAP(s) and      0 POINTHOR(s)
                  and:     74 VOLUME source(s)
                  and:      0 AREA type source(s)
                  and:      0 LINE source(s)
                  and:      0 RLINE/RLINEXT source(s)
                  and:      0 OPENPIT source(s)
                  and:      0 BUOYANT LINE source(s) with a total of
0 line(s)
```

and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 21112

**Output Options Selected:
Model Outputs Tables of PERIOD Averages by Receptor
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 36.58 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC
; Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.5 MB of RAM.

**Input Runstream File: aermod.inp
**Output Print File: aermod.out

**Detailed Error/Message File: Lockwood3.err
**File for Summary of Results: Lockwood3.sum

Buildout	Mgal	0	0	0	8.869401 / 0.568196	8.869401	0.568196

Water and Wastewater Electricity Intensity (kWh/gallon)

Supply Water	0.009727
Treat Water	0.000111
Distribute Water	0.001272
Wastewater Treatment	0.001911

Source: CalEEMod User's Guide, Appendix D, Table 9.2

Indoor Water Factor	0.013021	kWh/gallon (supply, treat, distribute, wastewater treatment)
Outdoor Water Factor	0.01111	kWh/gallon (supply, treat, and distribute)

Notes:

Electricity and Natural Gas for the Proposed Project is total operational usage. Electricity, natural gas, and mobile usage was calculated from CalEEMod. Indoor water factor used for entire Project Site for conservative analysis.

Table 4. Off-Road Equipment Fuel Usage During Construction

C-2 Database Results

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

NOT FOR CONSULTATION

Location

Ventura County, California

Local office

Ventura Fish And Wildlife Office

(805) 644-1766
(805) 644-3958
FW8VenturaSection7@FWS.Gov

2493 Portola Road, Suite B

2493 Portola Road, Suite B
Ventura, CA 93003-7726

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

---

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information. IPaC only shows species that are regulated by USFWS (see FAQ).

NOT FOR CONSULTATION

2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Birds

NAME	STATUS
California Condor *Gymnogyps californianus* There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/8193	Endangered
California Least Tern *Sterna antillarum browni* Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/8104	Endangered
Least Bell's Vireo *Vireo bellii pusillus* Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/5945	Endangered
Light-footed Clapper Rail *Rallus longirostris levipes* Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/6035	Endangered
Marbled Murrelet *Brachyramphus marmoratus* There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/4467	Threatened
Southwestern Willow Flycatcher *Empidonax traillii extimus* Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/6749	Endangered

NOT FOR CONSULTATION

Western Snowy Plover Charadrius nivosus nivosus — Threatened

There is **final** critical habitat for this species. Your location does not overlap the critical habitat.

NOT FOR CONSULTATION

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

There are no critical habitats at this location.

You are still required to determine if your project(s) may have effects on all above listed species.

Bald & Golden Eagles

Bald and golden eagles are protected under the Bald and Golden Eagle Protection Act and the Migratory Bird Treaty Act.

Any person or organization who plans or conducts activities that may result in impacts to bald or golden eagles, or their habitats, should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

Additional information can be found using the following links:

- Eagle Managment https://www.fws.gov/program/eagle-management
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide conservation measures for birds https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf

There are bald and/or golden eagles in your project area.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list,click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON

NOT FOR CONSULTATION

Bald Eagle Haliaeetus leucocephalus — Breeds Jan 1 to Aug 31

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

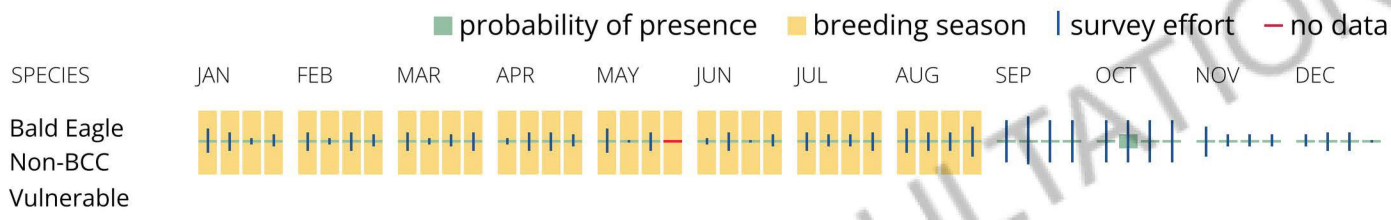
How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.



NOT FOR CONSULTATION

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

What does IPaC use to generate the potential presence of bald and golden eagles in my specified location?

The potential for eagle presence is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply). To see a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What does IPaC use to generate the probability of presence graphs of bald and golden eagles in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What if I have eagles on my list?

NOT FOR CONSULTATION

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur. Please contact your local Fish and Wildlife Service Field Office if you have questions.

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern https://www.fws.gov/program/migratory-birds/species
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide conservation measures for birds https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
Allen's Hummingbird *Selasphorus sasin* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9637	Breeds Feb 1 to Jul 15
Bald Eagle *Haliaeetus leucocephalus* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.	Breeds Jan 1 to Aug 31
Belding's Savannah Sparrow *Passerculus sandwichensis beldingi* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/8	Breeds Apr 1 to Aug 15
Bullock's Oriole *Icterus bullockii* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA	Breeds Mar 21 to Jul 25
California Gull *Larus californicus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Mar 1 to Jul 31
California Thrasher *Toxostoma redivivum* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Jan 1 to Jul 31
Common Yellowthroat *Geothlypis trichas sinuosa* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/2084	Breeds May 20 to Jul 31
Lawrence's Goldfinch *Carduelis lawrencei* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9464	Breeds Mar 20 to Sep 20

NOT FOR CONSULTATION

Marbled Godwit Limosa fedoa — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9481

Nuttall's Woodpecker Picoides nuttallii — Breeds Apr 1 to Jul 20

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9410

Oak Titmouse Baeolophus inornatus — Breeds Mar 15 to Jul 15

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9656

Olive-sided Flycatcher Contopus cooperi — Breeds May 20 to Aug 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/3914

Short-billed Dowitcher Limnodromus griseus — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9480

Tricolored Blackbird Agelaius tricolor — Breeds Mar 15 to Aug 10

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/3910

Western Grebe aechmophorus occidentalis — Breeds Jun 1 to Aug 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/6743

Willet Tringa semipalmata — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Wrentit Chamaea fasciata — Breeds Mar 15 to Aug 10

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

NOT FOR CONSULTATION

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

NOT FOR CONSULTATION

NOT FOR CONSULTATION

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets.

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may query your location using the RAIL Tool and look at the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

NOT FOR CONSULTATION

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

NOT FOR CONSULTATION

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

There are no refuge lands at this location.

Fish hatcheries

There are no fish hatcheries at this location.

Wetlands in the National Wetlands Inventory (NWI)

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

This location did not intersect any wetlands mapped by NWI.

NOTE: This initial screening does **not** replace an on-site delineation to determine whether wetlands occur. Additional information on the NWI data is provided below.

NOT FOR CONSULTATION

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

C-3 Special-Status Species

SPECIAL-STATUS SPECIES EVALUATED FOR POTENTIAL TO OCCUR WITHIN STUDY AREA

Scientific Name	Common Name	Sensitivity Status[1]	Flowering Period/Preferred Habitat/Known Elevation and Distribution[2]	Presence/Potential to Occur Within Biological Study Area
Invertebrates				
Bombus crotchii	Crotch bumble bee	Federal: None (candidate) State: SCE Local: None	Open grassland and scrub habitats that support potential nectar sources such as plants within the Fabaceae, Apocynaceae, Asteraceae, Lamiaceae, and Boraginaceae families.	**Low Potential** The site contains primarily non-native grasses and forbs that may be potential nectar sources; however, the site frequently disturbed and lacks connectivity to high quality habitat.
Danaus plexippus plexippus pop. 1	monarch - California overwintering population	Federal: None (candidate) State: None Local: None	Winter roost sites extend along the coast from northern Mendocino to Baja California, Mexico. Roosts located in wind-protected tree groves (eucalyptus, Monterey pine, cypress), with nectar and water sources nearby.	**Low Potential** Suitable roosting habitat for this species does not occur within the site and host plant species were not detected.
Reptiles				
Aspidoscelis tigris stejnegeri	coastal whiptail	Federal: None State: SSC Local: None	Found in deserts and semi-arid areas with sparse vegetation and open areas. Also found in woodland and riparian areas. Ground may be firm soil, sandy, or rocky.	**Low Potential** Suitable habitat for this species does not occur within the site due to the existing level of disturbance from operating activities.
Phrynosoma blainvillii	coast horned lizard	Federal: None State: SSC Local: BLM Sensitive, LC	Prefers sandy riparian and sage scrub habitats but also occurs in valley-foothill hardwood, conifer, pine-cypress, juniper and annual grassland habitats below 6,000 feet, open country, especially sandy areas, washes, flood plains, and windblown deposits. Requires open areas for sunning, bushes and loose soil for cover and abundant supply of harvester ants.	**Low Potential** Suitable habitat for this species does not occur within the site due to the existing level of disturbance.
Birds				
Athene cunicularia	burrowing owl	Federal: BCC State: SSC Local: BLM Sensitive	Inhabits coastal prairie, coastal scrub, Great Basin scrub, Mojavean desert scrub, Sonoran desert scrub, annual and perennial grasslands, bare ground, and disturbed habitats characterized by low-growing vegetation. A subterranean nester dependent upon burrowing mammals, particularly the California ground squirrel.	**Low Potential** Suitable habitat for this species was not detected. The vegetation was dense and tall and the small mammal burrows detected were not the appropriate size or morphology for this species.
Buteo regalis	ferruginous hawk	Federal: None State: WL Local: LC	Inhabits open grasslands, sagebrush flats, desert scrub, low foothills and fringes of pinyon and juniper habitats. Eats mostly lagomorphs, ground squirrels, and mice. Population trends may follow lagomorph population cycles.	**Low Potential** Suitable nesting habitat does not occur within the project site, however, there is low potential for foraging.

Scientific Name	Common Name	Sensitivity Status[1]	Flowering Period/Preferred Habitat/Known Elevation and Distribution[2]	Presence/Potential to Occur Within Biological Study Area
Eremophila alpestris actia	California horned lark	Federal: None State: WL Local: LC	Found from grasslands along the coast and deserts near sea level to alpine dwarf-shrub habitat above the treeline. During the winter, this species typically flocks in desert lowlands.	**Moderate Potential** Potentially suitable nesting habitat occurs within the project site.
Falco peregrinus anatum	American peregrine falcon	Federal: Delisted State: Delisted Local: LC	General habitat near wetlands, lakes, rivers, or other water; on cliffs, banks, dunes, mounds; also, human-made structures. Nest consists of a scrape or a depression or ledge in an open site.	**Low Potential** Potentially suitable nesting habitat occurs adjacent to the project site within a tower structure located northeast of the project site; however, the closest foraging habitat is located over 2 miles northwest.

Subject: Phase I Cultural Resources Study for the Lockwood 3 Project, City of Oxnard, Ventura County, California

Dear Mr. Ross:

Rincon Consultants, Inc. (Rincon) was retained by SVM-Lockwood, LLC to complete a Phase I cultural resources study in support of the Lockwood Street Subdivision Project (project) located in the city of Oxnard, Ventura County, California. The purpose of this study is to document the results of the tasks performed by Rincon, specifically: a cultural resources records search, Native American outreach, and a field survey of the project site. This cultural resource study was completed in accordance with the requirements of the California Environmental Quality Act (CEQA) and the City of Oxnard is the lead agency.

Project Location and Description

The project site comprises a currently vacant lot in the city of Oxnard, Ventura County, California, bounded by U.S. Highway 101 to the north and commercial buildings to the east, south, and west (Figure 1). The property is identified as Assessor's Parcel Number 213-0-090-10 and is depicted on Township 02N, Range 22W, Sections 26 and 35 of the United States Geological Survey (USGS) *Oxnard* CA 7.5-minute quadrangle (Figure 2). The project involves the construction of a multi-family housing development on a 5.17-acre parcel. The anticipated depth of disturbance is approximately 6 feet below the surface to accommodate needed infrastructure support such as belowground utilities and footings.

Environmental Setting

The project site is situated approximately 76 feet (23 meters) above mean sea level. The nearest water source is the Santa Clara River, approximately 2.7 miles (4.3 kilometers) to the northwest. The soils within the project site include a Hueneme-Camarillo complex that consists of very deep, somewhat poorly drained loamy sand and sandy loam soils that formed in alluvium derived from sedimentary rock sources (California Soil Resource Lab 2019). Vegetation within the project site consists primarily of seasonal grasses.

Cultural Resources Records Search

On October 1, 2019, Rincon conducted a records search of the California Historical Resources Information System (CHRIS) at the South Central Coastal Information Center (SCCIC) located at California State University, Fullerton. The purpose of the records search was to identify previously recorded cultural resources, as well as previously conducted cultural resources studies of the project

site and a 0.5-mile radius surrounding it. The search also included a review of the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), the California Historical Landmarks list, the Archaeological Determination of Eligibility (ADOE) list, and the California State Historic Resources Inventory (HRI) list. Results from the records search can be found in Appendix A of this cultural resources study.

Previously Conducted Studies

The SCCIC records search identified 17 previously conducted cultural resources studies within a 0.5-mile radius of the project site (Table 1). Two cultural resource studies were identified within the project site and brief discussions are provided below.

Table 1 Previous Cultural Resource Studies within 0.5-mile of the Project Site

Source: South Central Coastal Information Center 2019

VN-01042

J. Boyer and S. Craig prepared VN-01042, *UCLA Archaeological Survey Record*, in 1967. This cultural resource study included an archaeological pedestrian survey of a linear area that intersects the current project site from north to south. No cultural resources were identified during the survey effort.

VN-02449

John F. Romani and George A. Toren prepared VN-02449, *Phase I Archaeological Investigation: 1901 Outlet Center Drive, Oxnard, Ventura County, California, APN 213-0-090-015,* in 2004. This cultural resource study included a record search and archaeological pedestrian survey within the southeastern corner of the current project site. No cultural resources were located during the field survey.

The California HRI list indicates the presence of four historic properties within the 0.5-mile search radius. None of the properties are located on the project site. California Historical Resource Status Codes indicate that these properties have been determined ineligible for the National Register by

consensus through Section 106 properties but have not been evaluated for the California Register or Local Listing (6Y).

Client Communications

SVM-Lockwood, LLC confirms that no resources were discovered during the construction of Lockwood Street, which post-dates the SLF and SCCIC records searches in this report.

Previously Recorded Resources

The CCIC records search identified four previously recorded prehistoric cultural resource within a 0.5-mile radius of the project site. No cultural resources were identified within the project site. Table 2 lists the resource within the record search radius.

Table 2 Previously Recorded Cultural Resources within 0.5-mile of the Project Site

Primary Number	Trinomial	Resource Type	Description	Recorder(s) and Year(s)	NRHP/CRHR Eligibility Status	Relationship to Project Site
P-56-001806	-	Historic	Complex of eight structures associated with Rose Ranch/McGrath Ranch. The structures date from the the 1890s to the 1900s and consist of "The Rose House", work shop, garage, modern trailer, green house, workers' residence, early residence and modern office building.	Jeanette A. McKenna (2000)	Appears eligible for the NRHP and CRHR through survey evaluation	Outside
P-56-150007	-	Historic	The Doud house, also known as the McGrath house, has architectural elements of Neo-Colonial and Vernacular Victorian. This residence was constructed between 1919 and 1920.	Bissell, R. (1981)	Appears eligible for the NRHP and CRHR through survey evaluation	Outside

Review of Historical Topographic Maps, Aerial Imagery and Land Patents

Rincon also reviewed available historical topographic maps, aerial imagery, and land patents of the project site to determine past land use. A 1904 historical topographic map shows the project site as undeveloped land (USGS 2019a). One building is depicted in the northwest corner of the project site in maps from 1942 and 1943, with agricultural fields surrounding the parcel on all sides (USGS 2019b-c). Topographic maps from 1949 to 1951 show five buildings erected within the northern half of the project site (USGS 2019d-e). Maps spanning from 1966 to 2018 show the project site as undeveloped (USGS 2019f-i).

Aerial imagery from 1947 shows buildings erected within the northwest portion of the project site. The northeastern portion is undeveloped at this time and the southern portion is shown as agricultural land. The project site is surrounded by graded vacant land to the west and agricultural land to the north, west and east. Historical aerials spanning from 1967 to 1980 show utilization of the project site for agricultural purposes, with continued building development within the northwestern corner. Imagery from 1994 shows that the buildings present from 1947 to 1980 are no longer extant, with new development seen along the eastern boundary. From 2005 to 2016 the project site is shown as a vacant undeveloped lot with dirt roads present in the southern half (NETRonline 2019). The General Land Office (GLO) records show one land patent within Section 26 of Township 02N, Range 22W and it encompasses the project site. This patent was issued to Juan Sanchez on November 5, 1869, under the authority of the California Land Act of 1851 (GLO 2019).

Geoarchaeological Analysis

The project site is located on the Oxnard Plain, which consists primarily of alluvial sediments deposited by the Santa Clara River and Arroyo Conejo. The project site is located on a distal portion of the Oxnard Plain where fluvial (i.e., river) deposition is dominant. The geology of the region surrounding the project site was mapped by Clahan (2003), who identified a single geologic unit, Holocene alluvial deposits, underlying the project site. Holocene alluvial deposits consist of sediment deposited as overbank material (i.e., during flooding). This area of the Oxnard Plain is mapped as a series of now-abandoned, north-south-oriented streams and their associated overbank deposits. The nearest of these stream channels that are mapped at the surface lie approximately 1,000 feet east and west of the project site. Neither of these streams appear on the 1904 historical topographic map of the region (USGS 2019a), suggesting that they are likely prehistoric.

The project's geotechnical report conducted several test borings within the project site down to a maximum of 50 feet below the surface (Geolabs-Westlake Village 2022). These test borings encountered exclusively fine- to medium-grained sediments (clay to silty sand) at depths that will be encountered during excavations for this project (i.e., less than 8 feet below the surface), suggesting that no buried channels exist beneath the surface in the project site at depths that ground disturbance for this project will reach. Based on these borings, the geotechnical report also concluded that the upper "couple of feet" of sediments within the project site had been disturbed for agricultural uses.

The project site lies approximately 1,000 feet from known stream channels, and the geotechnical report suggests that no stream channels lie beneath the project site at shallow depths below the surface. Therefore, the project site has low geoarchaeological sensitivity.

Native American Outreach

Rincon contacted the Native American Heritage Commission (NAHC) on September 30, 2019, to request a search of the Sacred Lands File (SLF) and a contact list of Native Americans culturally affiliated with the project area. Pending results from the NAHC, Rincon sent anticipatory letters on September 30, 2019, to six known Native American contacts in the area to request information on potential cultural resources in the project vicinity that may be impacted by project development.

On October 3, 2019, Patrick Tumamait of the Barbareño/Ventureño Band of Mission Indians responded via phone. Mr. Tumamait inquired about the results of the field survey and CHRIS search. Ms. Pfeiffer responded that both efforts were negative for prehistoric cultural resources within the project site and immediate vicinity. Mr. Tumamait stated that he had no concerns regarding the project.

This outreach does not constitute formal Assembly Bill (AB) 52 consultation as required by CEQA. AB 52 consultation is performed between the lead government agency and California Native American tribes who have requested notification of projects in their traditional area. Appendix B provides the results of the outreach effort.

Field Survey

On October 2, 2019, Rincon conducted an archaeological pedestrian field survey of the project site. Transect intervals were spaced 15 meters apart and oriented east to west. All exposed ground surfaces were examined for artifacts (e.g., flaked stone tools, tool-making debris, stone milling tools, ceramics, fire-affected rock [FAR]), ecofacts (marine shell and bone), soil discoloration that might indicate the presence of a cultural midden, soil depressions, and features indicative of the former presence of structures or buildings (e.g., standing exterior walls, postholes, foundations) or historic debris (e.g., metal, glass, ceramics). Ground disturbances such as burrows and drainages were also visually inspected. Survey accuracy was maintained using a handheld Global Positioning Satellite unit and a georeferenced map of the project site. Site characteristics and survey conditions were documented using field records and a digital camera. Copies of the survey notes and digital photographs are maintained at the Rincon Ventura office.

Results

The project site is situated within a currently vacant dirt lot with four north-south and east-west trending dirt roads intersecting the southern half of the parcel (Figure 3, Figure 4). Ground visibility was approximately 75 percent with 100 percent exposure (Figure 5). The soil was a light brown fine-grained silty sand populated by seasonal grasses with ornamentals and pepper trees lining the outside

perimeter. Fencing was observed along the perimeter while also intersecting the center of the property from east to west (Figure 6). The project site has been subject to past and recent ground disturbing activities, including grading and tilling for agricultural purposes (Figure 7). Twelve concrete, brick, and asphalt piles were concentrated within the southern half of the project site (Figure 8). Modern refuse, including paper, plastic, wood, cardboard, pipes, and paint cans, were also observed (Figure 9). No historic or prehistoric cultural resources were identified during the field survey.

Findings and Recommendations

The pedestrian survey and record search did not identify any cultural resources on the project site. The pedestrian survey identified the project site as a vacant lot, recently disturbed from agricultural activities, with the surrounding area characterized by commercial use. Review of historical aerial photographs and topographic maps identified no previously recorded or unrecorded built environment resources on the project site. Four previously recorded historic-era building complexes/residences are located outside of the project site (P-56-001806, P-56-150007, P-56-150011 and P-56-150012). Additionally, the project applicant indicated that monitoring occurred during the construction of Lockwood Street adjacent to the current project site and that no resources were identified during the monitoring of that construction. Given the distance, ground-disturbing activities associated with the construction and operation of the project will not directly or indirectly impact these historic period resources or their respective settings. Therefore, Rincon recommends a finding of ***no impact to historical resources*** under CEQA.

The lack of surface evidence of archaeological resources does not preclude their subsurface existence. However, the absence of recorded archaeological resources in the immediate vicinity, along with the existing level of disturbance in the project site, suggest there is a low potential for encountering subsurface archaeological deposits. However, ground disturbing activities have the potential to result in unanticipated discoveries. The City of Oxnard General Plan includes a policy to address unanticipated resources during construction (Policy ER-11.6). With adherence to this policy, Rincon recommends a finding of ***less than significant impact to archaeological resources*** under CEQA. The project is also required to adhere to state health and safety codes regarding the unanticipated discovery of human remains, detailed below.

City of Oxnard General Plan Policy ER-11.6: Identification of Archaeological Resources

In the event that archaeological/paleontological resources are discovered during site excavation, continue to require that grading and construction work on the project site is suspended until the significance of the features can be determined by a qualified archaeologist/paleontologist. Human Remains

The discovery of human remains is always a possibility during ground disturbing activities. If human remains are found, the State of California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. In the event of an unanticipated discovery of human remains, the County Coroner must be notified immediately. If the human remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission, which will determine and notify a most likely descendant (MLD). The MLD has 48 hours from being granted site access to make recommendations for the disposition of the remains. If the MLD does not make recommendations within 48 hours, the land owner shall reinter the remains in an area of the property secure from subsequent disturbance.

Please do not hesitate to contact Rincon Consultants with any questions regarding this cultural resources study Sincerely,

Rincon Consultants, Inc.

Kenneth Kahn, Chairperson
Santa Ynez Band of Chumash Indians
P.O. Box 517
Santa Ynez, CA 93460

RE: Cultural Resources Study for the Lockwood Street Subdivision Project, City of Oxnard, Ventura County, California

Dear Chairperson Kahn:

Rincon Consultants, Inc. (Rincon) was retained by Sun Village, LLC to prepare a Phase I Cultural Resources Study for the Lockwood Street Subdivision Project (project) located in the city of Oxnard, Ventura County, California. The project would subdivide an 11.85-acre parcel into separate parcels (6.13-acre and 4.86-acre) with construction activities to follow. The project is subject to the California Environmental Quality Act (CEQA). This letter does not constitute notification under Assembly Bill 52 of 2014. Any AB 52 consultation will be carried out separately by the lead agency.

As part of the process of identifying cultural resources issues for this project, Rincon has contacted the Native American Heritage Commission (NAHC) and requested a Sacred Lands File (SLF) search and a list of Native American tribal organizations and individuals who may have knowledge of sensitive cultural resources in or near the project area. Rincon has not yet received the results of the SLF search from the NAHC. In anticipation of the SLF results we are contacting groups and individuals known to Rincon to have ties to the region.

If you have knowledge of cultural resources that may exist within or near the project site, please do not hesitate to contact me at mpfeiffer@rinconconsultants.com, or by telephone at (805) 644-4455 ext. 2052. Thank you for your assistance.

Sincerely,
Rincon Consultants, Inc.

The project is subject to the California Environmental Quality Act (CEQA). This letter does not constitute notification under Assembly Bill 52 of 2014. Any AB 52 consultation will be carried out separately by the lead agency.

As part of the process of identifying cultural resources issues for this project, Rincon has contacted the Native American Heritage Commission (NAHC) and requested a Sacred Lands File (SLF) search and a list of Native American tribal organizations and individuals who may have knowledge of sensitive cultural resources in or near the project area. Rincon has not yet received the results of the SLF search from the NAHC. In anticipation of the SLF results we are contacting groups and individuals known to Rincon to have ties to the region.

If you have knowledge of cultural resources that may exist within or near the project site, please do not hesitate to contact me at mpfeiffer@rinconconsultants.com, or by telephone at (805) 644-4455 ext. 2052. Thank you for your assistance.

Sincerely,
Rincon Consultants, Inc.

RE: Cultural Resources Study for the Lockwood Street Subdivision Project, City of Oxnard, Ventura County, California

Dear Ms. Arrellanes:

Rincon Consultants, Inc. (Rincon) was retained by Sun Village, LLC to prepare a Phase I Cultural Resources Study for the Lockwood Street Subdivision Project (project) located in the city of Oxnard, Ventura County, California. The project would subdivide an 11.85-acre parcel into separate parcels (6.13-acre and 4.86-acre) with construction activities to follow. The project is subject to the California Environmental Quality Act (CEQA). This letter does not constitute notification under Assembly Bill 52 of 2014. Any AB 52 consultation will be carried out separately by the lead agency.

As part of the process of identifying cultural resources issues for this project, Rincon has contacted the Native American Heritage Commission (NAHC) and requested a Sacred Lands File (SLF) search and a list of Native American tribal organizations and individuals who may have knowledge of sensitive cultural resources in or near the project area. Rincon has not yet received the results of the SLF search from the NAHC. In anticipation of the SLF results we are contacting groups and individuals known to Rincon to have ties to the region.

If you have knowledge of cultural resources that may exist within or near the project site, please do not hesitate to contact me at mpfeiffer@rinconconsultants.com, or by telephone at (805) 644-4455 ext. 2052. Thank you for your assistance.

Subject: Lockwood 3 Project, Paleontological Resources Memo
2151 Lockwood Street, Oxnard, California 93036

Dear Mr. Ross:

Rincon Consultants, Inc. (Rincon) was retained by SVM-Lockwood, LLC to conduct a paleontological resource assessment for the Lockwood 3 Project (project) in Oxnard, California. The goals of this assessment are to identify the geologic units that may be impacted by development of the project, determine the paleontological sensitivity of geologic units in the project site, assess potential for impacts to paleontological resources from development of the project, and recommend mitigation measures to reduce impacts to scientifically significant paleontological resources, as necessary.

Paleontological resources, or fossils, are the evidence of once-living organisms preserved in the rock record. They include both the fossilized remains of ancient plants and animals and the traces thereof (e.g., trackways, imprints, burrows, etc.). Paleontological resources are not found in "soil" but are contained within the geologic deposits or bedrock that underlies the soil layer. Typically, fossils are greater than 5,000 years old (i.e., older than middle Holocene in age) and are typically preserved in sedimentary rocks. Although rare, fossils can also be preserved in volcanic rocks and low-grade metamorphic rocks under certain conditions (Society of Vertebrate Paleontology [SVP] 2010). Fossils occur in a non-continuous and often unpredictable distribution within some sedimentary units, and the potential for fossils to occur within sedimentary units depends on several factors. It is possible to evaluate the potential for geologic units to contain scientifically important paleontological resources, and therefore evaluate the potential for impacts to those resources and provide mitigation for paleontological resources if they are discovered during construction of a development project.

Project Site and Description

The project is located at 2151 Lockwood Street in the City of Oxnard, California, a currently undeveloped 5.17-acre parcel identified by assessor parcel number (APN) 213-0-090-275. The site is bordered by US 101 on the north, an active construction site to the south, and commercial development to the east and west. The project involves the construction of multiple apartment buildings and associated underground utilities (e.g., water, sewer).

Regulatory Setting

State Regulations

California Environmental Quality Act (CEQA)

Paleontological resources are protected under CEQA, which states in part a project will "normally" have a significant effect on the environment if it, among other things, will disrupt or adversely affect a paleontological site except as part of a scientific study. Specifically, in Section VII(f) of Appendix G of the State CEQA Guidelines, the Environmental Checklist Form, the question is posed thus: "Will the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature." To determine the uniqueness of a given paleontological resource, it must first be identified or recovered (i.e., salvaged). Therefore, CEQA mandates mitigation of adverse impacts, to the extent practicable, to paleontological resources.

CEQA does not define "a unique paleontological resource or site." However, the Society of Vertebrate Paleontology (SVP) has defined a "significant paleontological resource" in the context of environmental review as follows:

> Fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are typically to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years) (SVP 2010).
>
> The loss of paleontological resources meeting the criteria outlined above (i.e., a significant paleontological resource) would be a significant impact under CEQA, and the CEQA lead agency is responsible for ensuring that impacts to paleontological resources are mitigated, where practicable, in compliance with CEQA and other applicable statutes.

California Public Resources Code

Section 5097.5 of the Public Resources Code states:

> No person shall knowingly and willfully excavate upon, or remove, destroy, injure or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over such lands. Violation of this section is a misdemeanor.
>
> Here "public lands" means those owned by, or under the jurisdiction of, the state or any city, county, district, authority, or public corporation, or any agency thereof. Consequently, public agencies are required to comply with Public Resources Code Section 5097.5 for their own activities, including construction and maintenance, and for permit actions (e.g., encroachment permits) undertaken by others.

Local Regulations

City of Oxnard

The City of Oxnard created a series of guidelines to "identify the specific procedures and provisions adopted by the City of Oxnard to implement and comply with the requirements of CEQA and consistent with the State CEQA Guidelines" (City of Oxnard 2017). The guidelines addressing paleontological resources are as follows:

> Evaluate the degree of disturbance to the project site. Consider whether the site has been vacant or covered by surfaces that required little or no excavation or grading, such that there has been little surface or subsurface disturbance. Sites, from which the native topsoil has been removed, such as landfills, are unlikely to retain paleontological resource potential.
>
> Review the description of the project and the construction/operation activities. Assess the amount of grading, excavation, erosion, and increased human activity (e.g., opening of previously closed lands, new access routes through sensitive areas, or removal of vegetation that could disturb surface and subsurface fossils).

Methods

Rincon evaluated the paleontological sensitivity of the geologic units that underlie the project site to assess the project's potential for significant impacts to scientifically important paleontological resources. The analysis was based on the results of a paleontological locality search, a review of existing information in the scientific literature regarding known fossils within geologic units mapped at the project site, and previous records searches of known fossil localities in the region. According to the SVP (2010) classification system, geologic units can be assigned a high, low, undetermined, or no potential for containing scientifically significant nonrenewable paleontological resources. Following the literature review, a paleontological sensitivity classification was assigned to each geologic unit mapped within the project site. This criterion is based on rock units within which vertebrate or significant invertebrate fossils have been determined by previous studies to be present or likely to be present. The potential for impacts to significant paleontological resources is based on the potential for ground disturbance to directly impact paleontologically sensitive geologic units.

Geologic Setting

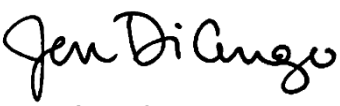
The project site is situated in the Transverse Ranges geomorphic province, one of the eleven geomorphic provinces in California (California Geological Survey 2002). The Transverse Ranges extend approximately 275 miles west-east from Point Arguello in Santa Barbara County, east to the San Bernardino Mountains, and south to the Anacapa-Santa Monica-Hollywood-Raymond-Cucamonga fault zone (Yerkes and Campbell 2005). Locally, the project site is located on the Oxnard Plain, a broad coastal plain formed from sediments primarily deposited by the Santa Clara River.

The region was mapped by Clahan (2003), who recognized one geologic unit underlying the project site, Holocene alluvial deposits. Holocene alluvial deposits consist of poorly sorted clayey sand with occasional gravel. A geotechnical investigation conducted for this project encountered several feet of agricultural fill/disturbed sediments overlying alluvium consisting of sand, silt, clay, and sandy clay within the project site down to depths of up to 50 feet below the surface (Geolabs-Westlake Village 2022), in broad agreement with the map of Clahan (2003).

Paleontological Setting

Holocene-aged sediments are generally considered too young (i.e., less than 5,000 years old) to preserve paleontological resources (SVP 2010). Therefore, Holocene alluvial deposits have low paleontological sensitivity.

Holocene-aged sediments may be underlain in the subsurface by older sediments (i.e., Pleistocene) with higher paleontological sensitivity. However, there are few known fossil localities from areas mapped as Holocene sediments within the Oxnard Plain (Jefferson 2010; Paleobiology Database 2023), despite extensive urban and agricultural development of the region. The nearest fossil localities occur in the City of Ventura, several miles northwest of the project site and in the Camarillo and Las Posas Hills, several miles northeast of the project site. The lack of fossil localities in this region of the Oxnard Plain suggests that the depth at which the transition to older, paleontologically sensitive sediments occurs is not frequently encountered during typical urban development activities, such as those proposed for this project.



Impacts and Recommendations

Ground-disturbing activities for this project are anticipated to include grading for building pads and trenching for underground utilities (e.g., water, sewer). Grading for building pads is anticipated to reach less than 5 feet below the surface. Trenching for underground utilities is expected to reach up to 8 feet below the surface. The project site has been previously disturbed down to "couple of feet" per the geotechnical report (Geolabs-Westlake Village 2022). Therefore, grading and trenching are anticipated to impact previously undisturbed sediments. The geologic map (Clahan 2003) and relative lack of fossil localities in the Oxnard Plain (Jefferson 2010) suggests that the excavations anticipated for this project will impact small amounts of paleontologically sensitive sediments, if any. Ground-disturbing activities within previously undisturbed sediments with high paleontological sensitivity may result in significant impacts to paleontological resources. Given the small volume of potentially paleontologically sensitive sediments that this project will affect, significant impacts to paleontological resources are unlikely, but possible. Mitigation Measure PAL-1 is recommended to ensure that potential impacts to paleontological resources remain less than significant in the event of an unanticipated discovery through the recovery, identification, and curation of previously unrecovered fossils.

PAL-1 Unanticipated Fossil Discovery

SVM-Lockwood, LLC shall include a standard inadvertent discovery clause in every construction contract to inform contractors of this requirement. If a potential fossil is discovered during project construction, construction activity within 50 feet of the find shall cease until the discovery is examined by a Qualified Professional Paleontologist. If the find is determined to be significant, the Qualified Professional Paleontologist shall direct all mitigation measures related to paleontological resources consistent with the SVP (2010) standards.

Sincerely,
Rincon Consultants, Inc.

Attention: Mr. Mark Ross

SUBJECT: Preliminary Geotechnical Investigation,
Proposed Multi-Family Residential Development,
Lockwood Street, Parcel 1, APN 213-0-090-27,
City of Oxnard, California

Mr. Ross:

In accordance with your request, Geolabs – Westlake Village (GWV) has undertaken a study of the geotechnical conditions at the subject site (Plate 1.1). Our purpose was to evaluate the distribution and engineering characteristics of the earth materials that occur at the subject site, so that we might assess their impact upon the proposed new development.

Our scope of work for this study included the following tasks:

- review of previous work which is judged both pertinent to our purpose and readily available to our office
- logging and sampling of five exploratory borings excavated with a truck-mounted hollow-stem auger drill rig
- select laboratory testing of the retrieved samples
- soil engineering analysis of the assembled data
- and preparation of this report.

Field data and the approximate locations of exploratory excavations are shown on the enclosed Plot Map (Plate 1.2). Descriptions of the materials encountered in the exploratory excavations are provided on the enclosed logs (Appendix A). Pertinent laboratory test results are also provided herein (Appendix B). Our findings are presented in the following sections, followed by a discussion of these findings and geotechnical design criteria.

PROPOSED PROJECT

Based on the architectural site plans by Lauterbach & Associates, print date 4 May 2022, the proposed project is to construct apartments for multi-family residential housing that includes a single-story café/lounge and multi-story residential quarters on top of parking podium and tuck-under parking. The 234 residential apartments extend to as tall as five stories overall. It is anticipated that the structure will be constructed with conventional light-weight wood or steel construction with conventional shallow foundations and a slab-on-grade. We anticipate that the development of the site will include grading to prepare building pads, parking areas, and provide adequate site drainage.

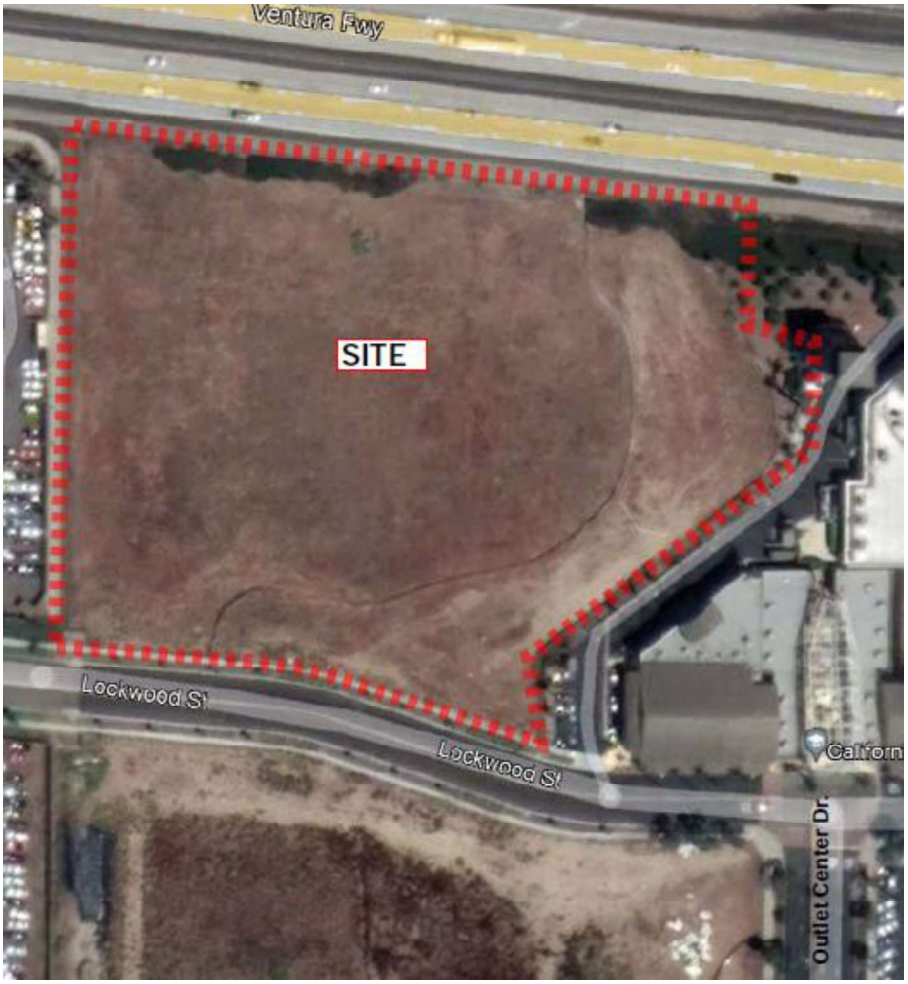

Figure 1 Approximate location of subject site. (Google Earth).

SITE DESCRIPTION & HISTORY

The site is an irregular rectangular shape, consisting of approximately 5.17 acres, located northwest of the intersection of Outlet Center Drive and the Lockwood Street extension in the City of Oxnard (Figure 1). The property is bordered on the north by the southbound 101 Freeway, south by the Lockwood Street extension, east by a concrete drainage ditch, paved parking and existing buildings, and west by a paved parking lot. (see plate 1.1). The subject site is undeveloped, relatively flat, covered by sparse grass and low-lying vegetation. The site is situated in an alluvial plain.

Historical aerial imagery shows that the subject site was used for agricultural purposes before 1970. Between 1945 and 1959 a citrus grove was planted. Farming operations ceased sometime between 1970 and 1994 and the lot remained undeveloped. Farm structures were in the west portion of the site as early as 1938.

PREVIOUS STUDIES

Geotechnical investigations have been performed adjacent/south of the subject site.

Geolabs-Westlake Village (GWV) conducted a preliminary geotechnical investigation for the extension of Lockwood Street along the south side of the subject site. The investigation included subsurface exploration with a backhoe, laboratory testing, engineering analysis, and preparation of a report to provide geotechnical design criteria for the construction of Lockwood Street. The grading for the extension has been completed. During grading, infiltration testing was performed for stormwater improvements.

South of Lockwood Street preliminary geotechnical investigations were performed by GWV in 2021 and MTC Engineering, Inc. (MTC) in 2019. The referenced preliminary geotechnical reports included an evaluation of the liquefaction potential for the site.

FIELD INVESTIGATION

For this study, five exploratory locations were selected to characterize the nature of the earth materials throughout the site. Exploratory borings were excavated with a truck-mounted hollow-stem auger drill rig. Samples were driven with a 140 lb. automatic safety hammer lifted 30 inches. The estimated efficiency of the auto hammer is approximately 81.5 percent. Drill rod was used to allow the hammer to remain above the auger. The boring diameter was

approximately eight inches (outer diameter). The samplers consisted of both SPT split spoon sampler and a lined California split spoon sampler (2.375-inch I.D.). All borings were backfilled upon the completion of our exploration with cuttings from the boring.

Both disturbed (bulk) and relatively undisturbed samples were obtained from the borings. These samples were secured and transported to our laboratory for testing. From these samples, select materials were sent to an independent laboratory for corrosivity testing.

GEOLOGIC SETTING

The site is located in the Transverse Ranges geomorphic province of Southern California. The Transverse Ranges are essentially east-west trending elongate mountain ranges and valleys that are geologically complex. Also included in the province are the Channel Islands.

Structurally, the province reflects the north-south compressional forces that are the result of a bend in the San Andreas Fault. As the Pacific Plate (westerly side of the fault) and the North American Plate (easterly side) move laterally past one another along the fault, the bend creates a deflection which allows for large accumulations of compressional energy. Some of these forces are spent in deforming the crust into roughly east-west trending folds and secondary faults. The most significant of these faults are typically reverse or thrust faults, which allow for the crustal shortening taking place regionally. Great thicknesses of folded and faulted Tertiary-age sediments are characteristic of the Transverse Ranges.

The subject property is situated in the western portion of the province, within the city of Oxnard. The city is situated on a broad and flat alluvial plain of the Santa Clara River. Based on our exploration of the parcel and our review of regional geologic maps, the subject site is underlain in the near surface by alluvium (Plate 1.3).

EARTH MATERIALS

The subject property is underlain by artificial/agricultural fill over alluvium to the maximum depth explored (see Plate 1.3 and Appendix A). A brief description of the materials is provided in the following.

ARTIFICIAL/AGRICULTURAL FILL (af)

Historically, the site was used for farming and the top couple feet of soil have obviously been disturbed. However, in the borings there was no clear delineation between the artificial/agricultural fill and alluvium. These surficial soils were homogenous silty sand in a medium dense condition.

ALLUVIUM (Qal)

Alluvial material consists of various admixtures of sand, silt, clay, and sandy clay in a moist, medium dense/stiff condition.

GROUNDWATER

At the time of our field exploration, groundwater was encountered in Boring B1 at approximately 41 feet below the existing ground surface. Historical high groundwater level is mapped as being approximately ten feet below the ground surface at the subject site (CGS, 2002).

Adjacent to the site/south of Lockwood Street, exploratory borings performed by our office in 2021 did not encounter ground water to the maximum depth of 30 feet. In 2019, Yeh and Associates, Inc. exploratory borings encountered no groundwater to the maximum depth of 31.5 feet. MTC reported groundwater in Boring B-1 at 36.25 feet below existing ground surface.

Nearby investigation at St. John's Oxnard facility encountered groundwater at 35 feet below the ground surface in 2016 (Independent Solutions, 2016).

Seasonal variations in groundwater conditions are expected and are influenced by storm runoff, irrigation, and local groundwater pumping.

SEISMIC HAZARDS

The subject site contains no known active or potentially active faults, nor is it within an Alquist-Priolo Fault Rupture Hazard Zone. Therefore, the potential for ground rupture is considered to be very low. However, the subject site is situated within the seismically active Southern California region and ground shaking is likely to occur due to earthquakes caused by movement along nearby faults.

The subject site is not within a seismic landslide hazard zone but is located within a liquefaction hazard zone (Plate 1.5).

SEISMIC GROUND MOTION VALUES (MAPPED)

This report includes preliminary seismic ground motion values in accordance with the methodology of ASCE Standard 7-16. Seismic ground motion values were determined using the ASCE 7 Hazard Tool (https://asce7hazardtool.online). This website presents data from seismic design maps for a maximum considered earthquake ground motion, defined by an earthquake with a 2 percent probability of exceedance within a 50-year return period (recurrence interval of 2475 years). Output from these analyses is provided in Appendix C and summarized herein.

Latitude: 34.2224º Longitude: -119.1497º	**Factor/Coefficient**	**Value**
Site Profile Type	Site Class	D
Short-Period MCE at 0.2s	S_s	1.801
1.0s Period MCE	S_1	0.669
Site Coefficient	F_a	1.0
Site Coefficient	F_v	---
Adjusted MCE Spectral Response Parameters	S_{ms} S_{m1}	1.801 ---
Design Spectral Acceleration Parameters	S_{DS} S_{D1}	1.201 ---
Long-Period Transition Period	T_L	8.0 sec
Peak Ground Acceleration	PGA_M	0.87

Structures on soil profiles designated as Site Class D with S_1 values greater than or equal to 0.2, need not use site-specific ground motion values provided the value of the seismic response coefficient C_S is determined in accordance with the procedures in ASCE 7-16 §12.8.1.1 (per exception 2 of §11.4.8). The following parameters are considered appropriate for use in determining C_S per exception 2. If the project engineer does not make use of the exception, GWV should be notified and a site-specific seismic analyses can be performed upon request.

Factor/Coefficient		**Value**	**ASCE 7-16 Equation**
Site amplification factor at 0.2 second	F_a=	1.00	
Site amplification factor at 1.0 second	F_v=	1.70	
Site-modified spectral acceleration value	S_{MS}=	1.801	(11.4-1)
Site-modified spectral acceleration value	S_{M1}=	1.137	(11.4-2)
Numeric seismic design value at 0.2 second SA	S_{DS}=	1.201	(11.4-3)
Numeric seismic design value at 1.0 second SA	S_{D1}=	0.758	(11.4-4)
$T_s=S_{D1}/S_{DS}$	T_s=	0.63	(§ 11.3)

If the designer uses the simplified lateral force analysis procedure, §12.14.8 allows F_a to be taken as 1.0 for rock sites, or 1.4 for soil sites, for development of S_{DS}. Also, the value of S_S can be capped at 1.5 for development of parameters in accordance with §11.4.4. Sites are permitted to be considered rock if the soil thickness is no greater than 10 feet below the footing.

The mean earthquake magnitude was approximated using the USGS Unified Hazard Tool website (https://earthquake.usgs.gov/hazards/interactive/index.php). For ground motions with a 2475-year return period, the deaggregated mean earthquake magnitude is estimated at M=7.05 with a mean source distance of 9 km. For ground motions with a 475-year return period, the mean earthquake magnitude is estimated at M=6.89 with a mean source distance of 13.8 km.

LIQUEFACTION POTENTIAL

Liquefaction is a condition where the soil undergoes continued deformation at a constant low residual stress due to the build-up of high porewater pressures. The possibility of liquefaction occurring at a given site is dependent upon the occurrence of a significant earthquake in the vicinity; sufficient groundwater to cause high pore pressures; and on the grain size, relative density, and confining pressures of the soil at the site.

As part of our analyses of the liquefaction potential on the site, we have performed boring B1 on site to obtain subsurface data. Based upon the subsurface information and review of published data, groundwater is present on the site within the upper fifty feet of the soil profile. Considering the historic groundwater information, there is a likelihood of groundwater rising to within 10 feet of the ground surface. This, coupled with the likelihood of significant ground shaking, was cause to perform a quantitative evaluation of the liquefaction potential at the site.

GENERAL DISCUSSION

In the liquefied condition, soil may deform with little shear resistance. The amount of soil deformation following liquefaction depends on the looseness of the material, the depth, thickness, and areal extent of the liquefied layers, the ground slope, and the distribution of loads applied by structures. When liquefaction is accompanied by ground displacement or ground failure, it can be destructive. Adverse effects of liquefaction can include ground oscillation, lateral spreads, flow failures, loss of bearing strength, settlement, and increased pressures on retaining walls.

Discussion of Liquefaction Hazard Assessment

To address the possible impacts of liquefaction, the practice of geotechnical engineering currently has methods of approximating the potential for liquefaction, the potential liquefaction-induced settlement, lateral spreading, and the possibility of surface manifestations. For this project we performed a quantitative analyses of the potential for liquefaction based on our

findings in boring B1. The results indicate that liquefaction on this site is not likely. The results are summarized in appendix C of this report.

Seismic Settlement Potential

The potential for seismic settlement of unsaturated soil has been evaluated using the procedures proposed by Tokimatsu and Seed (1987). Our analysis indicates there is not likely to be significant seismic settlement due to an earthquake with ground motions based on a 2475 year return period (2% chance of exceedance in 50 years.

Tsunamis and Seiches

The site is located in elevated terrain. Review of hazard zones as depicted in the Ventura County View website indicates the site is not within a Tsunamis inundation hazard zone. The potential for tsunamis to impact the site is considered negligible. The site is also not near an enclosed body of water; therefore, the potential for seiches impacting the site is considered negligible.

DISCUSSION AND DESIGN CRITERIA

Data from field exploration on this and adjacent properties performed by this office and MTC, laboratory testing performed by this office and MTC, and engineering analyses, coupled with inferred conditions about exploratory excavations, are the basis for the following discussion. Geotechnical design criteria, based upon the presently available data, are presented for your consideration.

Based on the findings developed during the investigation, the site is feasible for the intended project from a geotechnical perspective. The subject site is underlain by some artificial fill associated with past agricultural use. We anticipate the thickness will vary across the site. Grading of the site will be necessary to prepare the soil for support of the proposed project elements. Considering the type of structures and typical loads associated with those building types, it is our opinion the structures can be supported on conventional spread footings or mat foundations. The geohazards related with the potential for liquefaction at the site is primarily the potential for liquefaction induced total and differential settlement.

GRADING REMOVAL FOR STRUCTURAL AREAS

Disturbed material after demolition of existing structures, pavement, and utilities, stockpile removal, including agricultural fill, are not considered suitable to support structures. We recommend that disturbed material and areas to support structures be improved by

removing the unsuitable material and replacing these materials with engineered fill. At least three feet of engineered fill should be placed below the bottom of the future foundations. Removals for the building area should extend at least five feet horizontally beyond the proposed exterior foundations.

COMPACTION STANDARD

On-site materials are suitable for use as engineered fill. These materials should be moistened and/or air-dried to near optimum moisture content and compacted to at least 90% of their maximum density as determined using the Modified Proctor Test (ASTM D1557). The density of earth materials is to be measured using the nuclear gauge (ASTM D6938) or sand cone (ASTM D1556) test methods. The frequency of field density tests should be at least one density test for every 500 cubic yards of fill or each two vertical feet of fill.

GRADING – ENGINEERED FILL

The following criteria pertain to preparation for, and placement of engineered fill:

1. The on-site soils are suitable for use as engineered fill. Any import materials that are to be used as structural fill should be approved by this office prior to placement.
2. Shrinkage refers to the lesser volume of fill that results from a given volume of excavation. The shrinkage of the alluvial materials is anticipated to be between 7% and 12%.
3. Subsidence includes the general lowering of the ground due to in-place compaction by construction equipment. Subsidence is anticipated to range from 1.0 to 3.0 tenths of a foot in the alluvial areas.
4. All vegetation, trash, construction debris, asphalt, or other deleterious material should be stripped from the area to be filled or to receive the proposed improvements.
5. Compressible soils and any disturbed soil that lie within the areas to receive engineered fill should be removed to relatively incompressible material, moisture conditioned, and replaced as properly compacted fill. Portions of the compressible materials that are sufficiently thin may be scarified, watered or air dried to approximately the material's optimum moisture content, and compacted in-place.
6. Exposed surfaces should be scarified, moistened or air dried as appropriate, and compacted to the appropriate percentage of the material's maximum dry density prior to placement of fill (see COMPACTION STANDARD section).

7. We recommend a uniform blanket of compacted fill be created for support of structural footings. The fill cap should extend to at least three feet below the base of proposed footings and five feet beyond their perimeter. Special consideration should be paid to locations where property lines or existing improvements (buildings, retaining walls, fences, power poles, etc.) interfere with the creation of the desired fill cap. Such conditions should be brought to the attention of this office so that the specific site conditions may be evaluated and recommendations provided. Depending upon the circumstances, special excavating techniques may be employed (i.e. slot cutting), alternative foundation designs may be used (i.e. grade beams supported by pad footings or piles), or the compaction standard may be increased.
8. Areas that are to be paved should be scarified to at least 12 inches below the existing or rough grade (whichever is deeper), brought to near the material's optimum moisture content, and compacted to the appropriate relative compaction (see COMPACTION STANDARD section).
9. Fill materials should be placed in thin lifts, watered to near the material's optimum moisture content (or to near 2% over optimum moisture content, and compacted to the applicable level of relative compaction prior to placing the next lift).
10. All grading should comply with the grading specifications and requirements of the local governing agency.

FOUNDATION SYSTEMS

Grading will be performed so foundations are supported by at least three feet of engineered fill. For the conditions at the site, conventional shallow spread footings or mat foundations are considered appropriate.

Conventional Spread Footings

Continuous or pad footings may be used to support the proposed structures. In order to achieve the capacities specified below, they should be founded a minimum of 24 inches into engineered fill, with the concrete placed against in-place, undisturbed material. Foundation design criteria are based, in part, upon the expansive properties of the materials anticipated to be present near the finished pad grade. The subject site contains soil considered to have very low expansion potential (EI of 0 – 20).

The parameters provided in the following table are minimum design values for the pertinent expansion range. Some of these values are empirical in nature. The foundation and slab

designer should evaluate and design the foundations for the effects of expansive soils (CBC § 1805.8). The final foundation and slab-on-grade configuration should contain details that are not less than the values provided. Laboratory testing to verify the expansive properties of the near-pad-grade materials should be performed at the completion of rough grading.

FOUNDATION DESIGN PARAMETER	DESIGN CRITERIA EI = 0 - 20	UNITS	NOTES
Pre-saturation depth	moisten	in	
Allowable Bearing Capacity (net) (FS>3)	2000	psf	1,2
Allowable Lateral Resistance (FS=1.5)	225	psf/ft	2,3
Maximum Allowable Lateral Resitance	1500	psf	2,3
Coefficient of Friction (FS=1.0)	0.35		
Minimum Embedment Below Adjacent Grade			
One-Story	12	in	4
Multi-Story	24	in	4
Minimum Embedment Into Supporting Material	12	in	
Minimum Reinforcement	2 - #5, 1 near top and 1 near bottom		
SLAB-ON-GRADE DESIGN PARAMETER			
Minimum Concrete Thickness	6	in	
Minimum Reinforcement (On-Center-Each-Way)	#4 @ 16”		5
NOTES			
1) Bearing portions of all footings should be at least five feet (measured horizontally) from the face of adjacent descending slopes. All footings should bear at least three feet below an imaginary plane projected upward at 1.5:1 from the toe of locally over-steepened slopes. Pad footings should be at least 24 inches square. Continuous footings should be at least 12 inches wide for one-story and 15 inches wide for two-story construction.			
2) May be increased by 1/3 for short duration loading such as by wind or seismic forces.			
3) Decrease by 1/3 when combined with friction.			
4) Applies to exterior footings.			
5) Dowel slab to exterior footing using #3 bars @ 24” on-center, bent 36” into slab.			

Slab-On-Grade Subgrade

Concrete slabs-on-grade may be used in this project. The design criteria for these slabs consider the subgrade soils to be engineered fill placed in accordance with the jurisdictional standards and the design criteria in this report. The material on-site is considered low expansive. Concrete slabs-on-grade should be a minimum four inches thick and reinforced with #4 rebar at 16 inches on center, each way, placed in the middle of the slab section.

Approximately four inches of sand should be placed across the slab subgrade. A vapor retarder should be placed on top of the sand in all areas where moisture penetration of the slab

is undesirable. The vapor retarder should consist of a Class A (ASTM E1745), minimum 10 mil thick, polyolefin plastic or better. Concrete for the floor slab should be placed directly upon the vapor retarder. The vapor retarder should be placed in general conformance with ASTM E1643. The permeance (propensity to transmit water) and strength of vapor retarder, as well as the water/cement ratio, mix design and strength of the concrete, will influence a variety of things, including slab finishing, construction schedules, moisture released from the slab, and floor coverings. Project design and construction professionals should consider these factors when developing specifications for, and/or selecting materials for, the vapor retarder, concrete, and floor covering.

MAT FOUNDATION

A mat foundation is considered appropriate to support the proposed buildings. Mat foundations may be designed to impose an allowable net bearing pressure of 2000 psf for dead loads plus live loads at an embedment of at least one foot below the adjacent ground level. These values may be increased by ⅓ for short duration loading such as by wind or seismic forces.

For design of the mat foundation, a modulus-of-subgrade reaction of 120 psi/in may be used. This value is a unit value for use with a 1-foot-square mat. The modulus should be reduced in accordance with the following equation when used with a larger mat:

$$K_v = K_{v1}\left[\frac{B+1}{2B}\right]^2$$

Where: K_v =Vertical subgrade modulus
K_{v1} =Subgrade modulus for 1'x1' plate
B =Foundation width in feet

During design, we recommend the foundation designer collaborate with the geotechnical consultant to refine the K_v value for this specific foundation design.

RETAINING WALL RECOMMENDATIONS

Development plans may include retaining walls. Foundation design criteria are provided in the preceding section. Lateral loading criteria for cantilevered wall designs with level backfills are presented in the table below. The loading criteria are in part a function of the type of backfill material. Criteria for various Unified Soil Classification designations are provided. Earth materials

supported by the retaining wall and bearing support may be assumed to have a total soil unit weight of 125 pcf.

Lateral Design (1)

	Equivalent Fluid Density (pcf)
USCS Class:	SM-SC, ML
Active Pressure	45
At-rest Pressure	100

(1) Considering Table 1610A.1 of the 2019 CBC and laboratory strength results

Retaining walls that are free to deflect at the top may be designed for active pressure. Retaining walls that are restrained at the top should be designed for at-rest pressure. The 2019 CBC §1610A.1 allows basement walls which extend not more than six feet below grade with supporting flexible floor systems to be designed for active pressure.

The equivalent fluid densities in the table should be increased for walls supporting slopes steeper than 5:1 (H:V). The values should be increased one pcf for each two degrees of backfill gradient. For example, ascending backfill with a gradient of 2:1 may use an equivalent fluid density that is increased by 13 pcf. Recommendations for other backfill conditions may be provided upon request.

All retaining walls should be provided with adequate backdrainage systems. Pipe outlets are generally preferred over weep holes. Free draining material should be used behind weep holes or about pipe drains. Care should be exercised to see that weep holes are installed and maintained above finish grade adjacent to the face of the wall. Waterproofing should be included in the design where moisture penetration of the wall and mineral deposits/staining on the wall face are undesirable.

Backfill for retaining walls should be properly compacted. Use of expansive soil as backfill for retaining walls will result in a surcharge to the wall, the magnitude of which is dependent upon the expansion index of the backfill. An impervious cap should be provided at the top of the backfill to retard infiltration of water. A typical backfill detail is provided in the Typical Details appendix of this report.

Seismic Increment of Earth Pressure

As required by California Building Code §1803A.5.12 geotechnical reports for structures

assigned to Seismic Design Category D, E or F must include information regarding lateral pressures on foundation walls and retaining walls due to earthquake motions. Recent writings such as Lew et al. (2010), Al Atik et al. (2010), and Sitar and Wagner (2015) attempt to address the appropriate means to implement this code requirement. These works conclude in part that seismic earth pressures can be neglected when the peak ground acceleration is below 0.3g. For this site, the peak ground acceleration is considered to be above this threshold.

For retaining walls, the following design criteria are provided considering the general provisional recommendations proposed by Sitar and Wagner (2015) for walls founded on non-saturated, level ground conditions. Per CBC §1803A.5.12 item 1, the seismic earth pressure increment need only be included in design when walls support more than six feet of backfill. When this criterion is met, cantilever walls free to move and rotate can be designed for a seismic earth pressure increment considering an equivalent fluid pressure of 23 pcf (triangular pressure distribution). Walls restricted from moving or rotating, such as basement walls, can be designed for a seismic earth pressure increment considering an equivalent fluid pressure of 44 pcf (triangular pressure distribution). The resultant of this seismic earth pressure increment is considered to act at one-third H above the base of the wall, where H is the wall height. The seismic earth pressure increment should be applied to the active earth pressure for both the free-to-rotate and restrained cases. Often, for the case of walls restricted from moving or rotating, this combination of active earth pressure and seismic earth pressure increment will not exceed the at-rest earth pressure for the static case when considering factored loads used for the basic load combinations prescribed in the California Building Code.

ELEVATOR PITS AND RETAINING WALL BACKDRAINS

Subsurface elevator pits and retaining walls should be provided with waterproofing, and backdrains for the alleviation of porewater pressure as illustrated in the Retaining Wall Detail provided in the Typical Details appendix of this report. Such drains should be connected to a nearby storm drain or be provided gravity-flow outletting to a sump. In lieu of installing such backdrainage measures, retaining walls would need to be designed considering hydrostatic pressure.

SETTLEMENT

Considering the preliminary nature of the building design, general static settlement of shallow spread foundations is anticipated to be minor, on the order of one inch. Differential settlement between footings is anticipated to be less than 1/2 inch. We anticipate the majority of settlement to occur during construction. When foundation designs are available, they should be provided to our office for review. Additional geotechnical design criteria may be provided at that time.

CORROSIVITY

For structural elements, a site is considered to be corrosive if one or more of the following conditions exist for the representative soil samples taken at the site: Chloride concentration is 500 ppm or greater, sulfate concentration is 2000 ppm or greater, or the pH is 5.5 or less (Caltrans, 2015; GMED, 2013). For structural elements, the minimum resistivity of soil and/or water indicates the relative quantity of soluble salts present in the soil or water. In general, a minimum resistivity value for soil and/or water less than 1000 ohm-cm indicates the presence of high quantities of soluble salts and a higher propensity for corrosion.

Samples of soil from the subject site were forwarded to consulting corrosion engineers Project X Corrosion Engineering. Resistivity results indicate resistivity of saturated samples of 9,380 ohm-cm. Soluble sulfate test results yielded concentrations of less than 0.10 percent by mass. This level of soluble sulfate is in the S0 exposure class per Table 19.3.1.1 of ACI 318-19. Chlorides were 22.0 ppm. The pH was determined to be approximately 8.1. A copy of the test results is provided in Appendix B.

Based on these results, the on-site soil does not meet any of the corrosion criteria. Samples of the on-site soils are not considered corrosive to structural elements based on the aforementioned definition.

TEMPORARY EXCAVATIONS

All temporary excavations (including utility trenches, grading removals, and backcuts for retaining wall construction) should comply with CAL/OSHA requirements. The safety and stability of excavations for the planned improvements are the responsibility of the contractor. The

materials encountered in the exploratory excavations are classified as Type "C" soils. Temporary excavations (such as backcuts for stability fills, removals, and retaining wall excavations) may be considered stable if cut vertical, providing they are restricted to a maximum of 5 feet in height, are provided with permanent support as soon as possible, and they are protected from erosion and saturation. Portions of temporary excavations in excess of 5 feet high should be laid back to 1.5:1 unless specific alternative treatments are evaluated and found acceptable.

UTILITY TRENCH BACKFILL

Backfill for utility trench excavations should be compacted to the appropriate relative compaction (see COMPACTION STANDARD section). Where installed in sloping areas, the backfill should be properly keyed and benched.

PRELIMINARY PAVEMENT STRUCTURAL SECTIONS

For preliminary planning purposes, we provide the following pavement structural sections. These results are based upon testing of the subgrade materials in the area of the recently constructed section of Lockwood Street that produced a preliminary R-value of 63.

ASPHALT SECTIONS

TRAFFIC INDEX	ASPHALT THICKNESS	BASE THICKNESS
5.0	3.0 in.	4.0 in.
6.0	3.0 in.	4.0 in.

Based on Plate 100 of the City of Oxnard Standard Plan, the upper 12 inches of the subgrade soil should be compacted to at least 95% relative compaction. Base materials should be compacted to at least 95% relative compaction. Near the completion of grading, subgrade materials should be sampled and tested to confirm the R-value of the subgrade materials. Final pavement structural sections will be prepared at that time.

DRAINAGE

Preserving proper surface drainage is important. Planters, decorative walls, plants, trees or accumulations of organic matter should not be allowed to retard surface drainage. Area drains should be kept free of obstruction. Swales and/or area drains should outlet to the street or acceptable non-erodible device. Positive drainage along the backs of retaining walls should be

maintained. Any other measures that will facilitate positive surface drainage should be employed.

CONSTRUCTION MONITORING

Grading plans and foundation plans should be submitted to this office. The project Civil Engineer should incorporate the removal recommendations into the grading plans. Additional recommendations may be provided at that time for our review, if such are considered warranted.

Placement of all fill and backfill should be monitored by representatives of this office. This includes our observation of prepared bottoms prior to filling. Supplemental recommendations may prove warranted based upon the materials exposed in the actual excavations.

Foundation excavations should be observed by representatives of this office to see if the recommended penetration of proper supporting strata has been achieved. Such observations should be made prior to placing concrete, steel or forms. This office should be notified at least 24 hours prior to placing concrete.

CLOSURE

This geotechnical report has been prepared in accordance with generally accepted engineering practices at this time and location. No other warranties, either express or implied, are made as to the professional advice provided under the terms of our agreement and included in this report.

Thank you for this opportunity to be of service. Please do not hesitate to call if you have any questions regarding this report.

Respectfully submitted,
GEOLABS-WESTLAKE VILLAGE

Joanna Nygren

APPENDIX B
Laboratory Results

September 20, 2022
W.O. 9511

LABORATORY TESTING

Undisturbed and bulk samples of soil and rock materials encountered at the site were collected during the course of our fieldwork. Selected laboratory tests completed on the retrieved samples are described below. A comprehensive summary of laboratory test results is provided in Plate LS.

MOISTURE-DENSITY

The field moisture content and dry unit weight were determined for each undisturbed sample. Dry unit weight is expressed in pounds per cubic foot and the moisture content represents a percentage of the dry unit weight. This test data is presented in the Laboratory Test Summary table in this appendix.

COMPACTION TESTS

To determine the compaction characteristics of the onsite materials, compaction tests are performed in accordance with ASTM D1557. The maximum dry density is reported in pounds per cubic foot and the optimum moisture content as a percentage of the maximum dry density. The results of these tests are provided in the Laboratory Test Summary table in this appendix.

SHEAR TEST

Drained Direct shear tests were performed in a Direct Shear Machine of the strain control type. The rate of deformation is approximately 0.01 inches per minute. Shearing occurred under a variety of confining loads to determine the Coulomb shear strength parameters. The test was performed on undisturbed and remolded (@ 90% relative compaction) samples in an artificially saturated condition. The test results are presented graphically in this appendix.

CONSOLIDATION TEST

Settlement predictions of the soil's behavior under load are made on the basis of consolidation tests. A one-inch high sample is loaded in a geometric progression and the resulting deformation is recorded at selected time intervals. Porous stones are placed in contact with the sample (top and bottom) to permit addition and release of pore fluid. The sample is inundated at a selected load during the progression. Results are plotted on the enclosed Consolidation-Pressure Curves in this appendix.

PARTICLE SIZE ANALYSIS

The distribution of various particle sizes in selected representative samples was determined using mechanical sieves in general accordance with ASTM D6913. The particle distribution is presented as the relative percentages of sand, silt and clay particles in each sample tested. The results are presented on the Laboratory Summary in this appendix.

LIQUID LIMIT, PLASTIC LIMIT, AND PLASTICITY INDEX

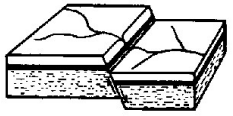
The Liquid Limit, Plasticity Limit, and Plasticity Index for selected cohesive soil samples were determined in the laboratory. The Standard Test Method (ASTM D4318) was utilized. These parameters are used in the classification of cohesive soils.

A cohesive plastic soil may go through four consistency states as the moisture content of the soil is increased. These states are the solid state, the semisolid state, the plastic state, and the liquid state. The limits between these consistency states are the Shrinkage limit, Plastic limit, and the Liquid Limit (respectively). These limits are often referred to as the Atterberg limits. The Plasticity Index is defined as the numeric value of the Liquid limit minus the numeric value of the Plastic limit. The results are presented graphically in this appendix.

CORROSIVITY

The laboratory test for resistivity is performed in order to determine the relative quantity of soluble salts present in a specific soil. It is most often used as a method to determine the likelihood of corrosion potential for steel pipe, pile, or reinforced concrete structures. The resistivity test is also a means for determining the necessity of further chemical analysis of the soil or water for pH, sulfate and chloride-ion content.

A representative sample of the earth materials encountered at the site was delivered to Project X Corrosion Engineering where it was tested for resistivity. The test method utilized is in conformity with the procedures outlined in ASTM G187. Resistivity of soils is inversely proportional to corrosiveness. Thus, the analysis helps in determining whether the soils may have a deleterious affect on underground metallic structures. A generally accepted correlation between resistivity and soil corrosiveness toward metals is provided discussed in the Corrosivity section of this report.



Selected samples were submitted to Project X Corrosion Engineering for soluble sulfate and Chloride analysis in accordance with ASTM D4327. Please refer to the table below for results. When soluble sulfate test results exceed 0.10 percent by weight, special considerations for concrete design are appropriate per ACI 318. The results are discussed in the body of this report.

The pH of selected samples was tested in accordance with ASTM G51. The results indicate the samples ranged from slightly basic.

U.S. Geological Survey - Earthquake Hazards Program

Unified Hazard Tool

Please do not use this tool to obtain ground motion parameter values for the design code reference documents covered by the U.S. Seismic Design Maps web tools (e.g., the International Building Code and the ASCE 7 or 41 Standard). The values returned by the two applications are not identical.

Where:

N1(60): Normalized SPT blow count
Cn: Overburden Correction Factor
Cf: Fines Correction Factor
Ce: Energy Ratio Correction Factor
Cb: Borehole Diameter Correction Factor
Cr: Rod Length Correction Factor
Cs: Sampler Liner Correction Factor
MSF: Magnitude Scaling Factor
Csamp: California Sampler Correction

$$N1(60) = \frac{N*Cn*Ce*Cb*Cr*Cs}{Csamp}$$

N1(60)cs = N1(60)+Cf (equivalent "Clean Sand" N value)

(For 81 % Hammer Efficiency)

(For 6.89 Mag. Earthquake using Revised Idriss Scaling Factor)

(To create equivalent SPT N value)

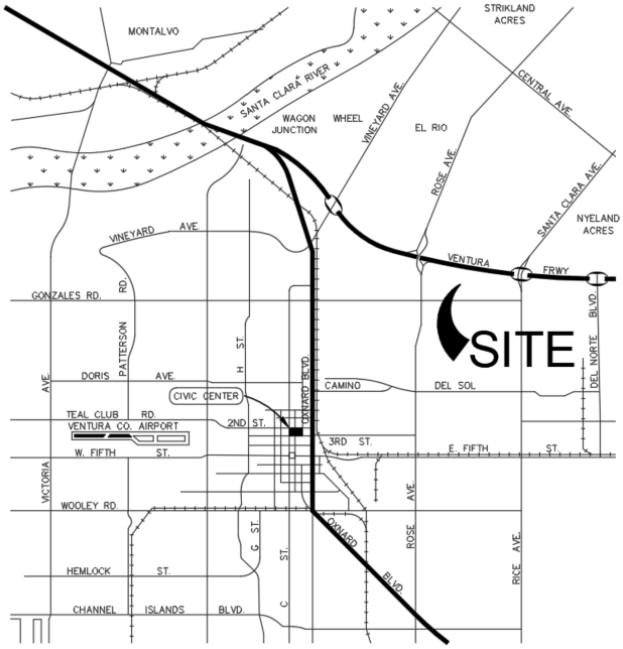
2. Introduction

PURPOSE

The purpose of this report is to validate the grading and drainage design for the proposed Lockwood Street Apartments project, as well as to implement stormwater treatment in accordance with local requirements. The project will involve the construction of a 234-unit residential apartment complex with associated parking.



SITE LOCATION

The project is located on the Northwest corner of Outlet Center Drive and Lockwood Street in Oxnard, California. The APN is 213-0-090-275.

The site is a vacant lot, bounded by a vacant lot to the south, car dealership to the west, the 101 Ventura Freeway to the north and commercial buildings to the east.

LOCATION PLAN

The location within the City of Oxnard is provided on the below map:

DESCRIPTION

The site is located on Lockwood Street between Rose Avenue and Rice Avenue, and adjacent to the 101 Freeway. The lot exists near the northwest corner of the intersection of Outlet Center Drive and Lockwood Street. The surrounding lots fronting Lockwood Street are largely developed as commercial use with varying ages of construction. The total onsite area will be 5.17 acres once complete.

DRAINAGE

Drainage in the area trends from north to south, gently sloping along the Oxnard plain towards the ocean. There is also a slight drainage trend from west to east; however, this is subtle.

The site may receive a small portion of run-on from the freeway property to the north. This would be limited in nature as the freeway and drainage appurtenances intercept runoff from the north and direct it into Caltrans drainage systems. We have estimated that portion of run-on as part of our calculations (noting that the freeway is crowned in this area with a defined width)

The site is located within a shaded Zone X, (outside of the 100-year (1%) annual chance floodplain).

As the neighborhood and watershed is largely built out, there are no anticipated substantial changes to drainage patterns in the area from future development. Rather, as sites develop and fall under MS4 requirements, drainage patterns in the area would likely improve.

EMERGENCY OVERFLOW

The design includes an emergency overflow from the CDS Unit to Lockwood Street via overland flow. The building foundation is set higher than all surrounding grades at finished floor elevation of 81.00. Catch basins are located throughout the drive aisles which collect into the CDS Unit for pretreatment on the South of the property, then into the CMP Infiltration System.

In the event the underground storm drain system should be inundated or clogged; runoff within both the west side and east side of the site will collect in ribbon gutters and be conveyed to the south. The ribbon gutter undulates as it meanders through the site; however, the highest spillover points at each individual sump are at elevation 80.46, allowing for discharge prior to flow reaching the building. In addition, the building is designed as a podium structure, with all units located above the ground floor.

In the event of overland overflow, the driveways will allow flow so that the overflow can sheet flow to Lockwood Street.

4. Objectives

The objective of this report is to determine proposed stormwater flow rates for this project based on existing topography and infrastructure, and then changes resulting from the development of this project. This report will address the following items:

- **Drainage Concept** – This report will discuss the proposed drainage concept for the site in further detail and will demonstrate compliance with criteria pursuant to the City of Oxnard (and

County of Ventura requirements for stormwater quality as outlined in the Technical Guidance Manual).

- **Low Impact Development (LID) –** This project will be designed pursuant to the Ventura County Technical Guidance Manual which provides for LID.
- **Flood Control –** This project will be designed in a manner to meet flood control protection from the FEMA 100-year storm event.

5. Procedure

This hydrology study was prepared using the design criteria and methodology developed by the City of Oxnard. Calculations presented within this study were determined using the Modified Cook's Method for Stormwater Runoff Calculations.

The overall lot is 5.17 acres in size (225,206 square feet) and the adjacent roadway improvements area is 0.31 acres, making for a total usable lot size of 4.86 acres. The freeway will be picked up and conveyed offsite as originally envisioned during the Tract 4317 design and will not contribute to site flow.

The associated construction documents and attached hydrology map provide details on the storm drain collection and conveyance facilities as well as the storm water treatment devices selected. The routing to the underground infiltration system will take place utilizing a series of ribbon gutters, catch basins and underground piping around the building, draining into the underground system.

6. Hydrology

The hydrology was calculated as a single tributary for processing with VCRAT, and will be proportioned accordingly for pipe hydraulic calculations during the construction document phase. The Hydrology Map is included as Attachment F of this report, as is the calculation sheets performed using the Cook's Method (Attachment B).

7. Detention / Retention

The expectation due to the location and nature of this development is that detention will be required for this site. As a result, detention calculations are included as an attachment to this report.

To generate an input hydrograph for routing purposes, hydrology was run using Cook's Method, and the site was then iteratively processed through VCRAT to generate an output hydrograph. It should be noted that the hydrograph generated through VCRAT is based on the underlying software and then "fattened" based on the overall 100-year storm depth to provide a conservative design. As a result, the best approach to generating a reasonably accurate hydrograph is to iteratively modify percent impervious values and time of concentration values in VCRAT until the peak flow matches the Cook's Method output. As the output was not dependent on a time of concentration and was only based on city methodology, the time of concentration calculation was not performed, and the hydrograph was generated through VCRAT to match the Cook's Method peak flow output. As a result, it should be noted that the time of concentration and percent impervious values in the VCRAT output are meaningless and should not be compared with the Cook's Method calculations.

The hydrograph generated includes the project site area, and does not include the portion of Lockwood Street that is not collected. As a result, the site is required to "overdetain" to account for the portion of Lockwood Street that is not picked up. Therefore, the allowable discharge from the detention system is 4.15 cfs (4.15 cfs plus 1.02 cfs of street flow = 5.17 cfs of total site flow).

The 100-year design flow was calculated to be 16.9 cfs using the Cooks' Method calculation for the site area that drain to the detention and infiltration systems. We are assuming the same unit flow of 3.1 cfs/acre will apply to the street areas (which generates the 1.02 cfs undetained). It should be noted that the Tract 4317 storm drain system assumed outflow of 4.66 cfs plus approximately 0.67 cfs of street flow for a total of 5.33 cfs. The 5.17 cfs that drains into this system is therefore in compliance with both the 1.0 cfs per acre requirement as well as the storm drain capacity calculation.

The detention and retention requirements will be fulfilled by separate underground systems. The infiltration device will be set vertically lower and separated from the detention chambers. Invert elevations in the CDS device will route flow to the infiltration system and will prevent flow from draining to the detention system until head builds to a certain level, at which point runoff will begin filling the detention chambers.

Per the calculations contained herein, the outflow from the system is approximately 6.91 cfs, satisfying the detention requirement.

8. Stormwater Quality

Stormwater quality for this project is in accordance with the 2011 Ventura County Technical Guidance Manual (TGM).

PROJECT APPLICABILITY

Per Section 1.5 of the TGM, this project is applicable as a new development project equal to 1 acre or greater of disturbed area that adds more than 10,000 square feet of impervious surface area. Therefore, the project shall mitigate the entire development project area.

SITE CONDITIONS

As previously stated in this report, the site is relatively flat, and slopes are generally 5% or less, making infiltration or other retention BMPs an effective option. Based on the soils report dated April 30, 2020 by MTC Engineering the onsite soils are predominately Group B soils and are consistent with typical infiltration rates for granular soils. The corresponding Ventura County Soil Number is 5. Groundwater was not encountered in Boring 6 and Boring 7 on the east side of the property.

Research conducted as part of a soils report by Yeh and Associates found groundwater elevation data from the Department of Water Resources for a well (No. 02N22W35C001S) located 2,795 feet south west of the project at the St. Johns Medical Center Property. This data showed that from 1972 to 2002, a high groundwater elevation of 12.6 feet below the surface was detected in March 1996. The same research showed a well (02N22W25N002S) located 2,300 feet east of the site with a high groundwater elevation of 17.3 feet below the surface. The average of these two provides approximately 15.5 feet of depth. The existing natural grade at the infiltration basin location is at elevation 78; therefore, with the system invert being at elevation 70, this provides 7.5' of separation to the highest recorded groundwater. As the TGM allows for the use of highest seasonal groundwater,

it is anticipated that this will be significantly deeper, allowing for an adequate safety margin for infiltrating.

Based on the existing onsite soil conditions and recommendation from the project geotechnical engineer, the use of infiltration or other retention BMPs is feasible. Percolation testing was performed at the site on August 28, 2020, by Geolabs and the measured subsurface percolation rate was found to be 24 in/hr. From this measured percolation rate, the adjusted measured percolation rate or converted field infiltration rate was determined to be 12.4 in/hr. This value was then reduced further by applying factors of safety described in the Technical Guidance Manual; the final design percolation rate for this project site is 2.2 in/hr. The results of the percolation test are included in this report as Attachment G. Even with these reductions, the infiltration system will drain within the required 72 hours.

SITE DESIGN PRINCIPLES AND TECHNIQUES

Site design principles and techniques have been applied to this proposed development to reduce the hydrologic and water quality impacts typically associated with redevelopment. The following is a list of site design features incorporated in this project and a brief explanation of how they were implemented:

- Site planning – Adequate space has been allocated for deployment of Retention BMPs to fully treat the SQDV. The site has been laid out in a manner to effectively disconnect impervious surface so that 5% EIA is achieved.
- Protect and restore natural areas – Existing natural areas will be preserved to the maximum extent possible.
- Minimize impervious cover – Landscape areas were included throughout the site where practical.
- Apply LID BMPs – Implemented throughout the site at varying degrees.
- Implement Integrated Water Resource Management Practices – Project has been designed to meet the 2011 VC TGM as part of Order R4-2010-0108 which complements the goals of the IWRMP.

SOURCE CONTROL MEASURES

Source Control Measures are operational practices that reduce potential pollutants at the source. Applicable Source Control Measures for this project are storm drainage signage (S-1) which are to be added to all storm drain inlets, proper design of outdoor trash storage and waste handling areas (S-3), and proof of control measure maintenance (S-8) through a Maintenance Agreement containing a site specific Maintenance Plan for all proposed BMPs to be maintained by the owner / operator of the site.

RETENTION AND TREATMENT CONTROL BMPS

Retention BMPs are proposed to be the primary Treatment Control to mitigate stormwater runoff from the site. The primary pollutants of concern for the post-developed condition of this project are sediment, nutrients, metals, oil and grease, and trash and debris, all of which are effectively treated using retention BMPs.

Calculations for the Stormwater Quality Design Volume (SQDV) required to be mitigated for the project area along with the maximum infiltration depth (dmax) as outlined in the TGM are shown in Attachment

D of this report. The proposed retention BMP to be utilized is underground infiltration through the use of a Proprietary Infiltration (INF-6) system. Per the calculations, the required SQDV for the site is 9,952 cubic feet, the maximum depth of infiltration is 13.53 feet, and the required SQDF (Stormwater Quality Design Flowrate used for design of pre-treatment devices) is 0.90 cfs.

Important to note, this project intends to treat the entire site, including the EIA and all developed pervious surfaces, using the proposed retention BMP.

Specifically, the Contech 60" CMP Infiltration System has been selected as the project retention BMP. As stated, the required SQDV is calculated to be 9,952 cf which is provided in the 60" CMP section with surrounding rock. See the detention calculations in Attached C. Calculations supporting the 60" CMP system sizing are contained within Attachment D of this report.

Additionally, pre-treatment will be provided upstream of the proposed infiltration system. Pre-treatment will be met through the inclusion of a centralized sediment and trash basin/manhole (hydrodynamic separator). More specifically, the Contech CDS Model 2025-5, or approved equal, has been selected as the pre-treatment device. This CDS unit will function as both a treatment and a diversion structure and will provide full trash capture for the site as all site flow will be drained to this CDS unit. The CDS Model 2025-5 has been designed and sized to remove 80-percent of 50-micron particles in accordance with City of Oxnard standards and is a full-capture system listed on the State's Certified Devices list (DS-88).

9. Summary and Conclusions

The following summarizes the hydrology results contained within this report and the appendices of this report:

Development Condition	Peak Flow
Existing (pre-developed) 100-year Condition	6.03 cfs
Undetained Developed 100-year Condition	16.9 cfs
Detained Developed 100-year Condition	5.17 cfs

The total detention volume that will be **retained onsite for stormwater purposes is 9,951 cubic feet**, and additional **detention storage required (in addition to retention storage) is 24,837 cubic feet**. It should be noted that the 9,951 cubic feet of volume for stormwater treatment will infiltrate and will not leave the site. The assumed **infiltration rate is 2.25 inches per hour**.

The infiltration gallery is a 72-inch pipe with 12 inches of rock below the pipe for a **total system depth of 84 inches**. The total **depth of the detention system is 84 inches**, containing a 60 inch pipe with 12 inches of rock above and below the pipe.

The development of this site is in accordance with City of Oxnard and Ventura County criteria for stormwater quality and quantity. The onsite runoff is collected and treated pursuant to Ventura County MS4 standards.

The development of this site will not have adverse impact to downstream storm drain facilities. While the analysis of offsite systems is beyond the scope of this report, the project improves upon the original design, meeting full MS4 compliance standards for the site, including the EIA and developed pervious surfaces.

Additionally, the grading design and proposed drainage system are designed in a manner to convey stormwater flows away from structures in a manner to provide protection from flooding pursuant to City of Oxnard, County of Ventura, and FEMA requirements. All buildings will be constructed outside of 100-year storm event flood limits which are shown on the Hydrology Map.

Stormwater Quality Treatment Calculations

Step 5: Apply BMPs to Reduce EIA to ≤ 5%

Step 1: Determine water quality design volume			
1-1. Enter Project area (acres), *Aproject*	Aproject =	5.17	acres
1-2. Enter the maximum allowable percent of the Project area that may be effective impervious area (%) (refer to permit), ranges from 5-30%, *%allowable*	%allowable =	5	%
1-3. **(5-a)** Determine the maximum allowable effective impervious area (acres), *EIAallowable = (Aproject)*(%allowable)*	EIAallowable =	**0.26**	acres
1-4. Enter Project impervious fraction, *Imp* (e.g. 60% = 0.60)	Imp =	0.73	
1-5. Determine the Project Total Impervious area (acres), *TIA*	TIA =	**3.77**	acres
1-6. **(5-b)** Determine the total area from which runoff must be retained (acres), *Aretain=TIA-EIAallowable*	Aretain =	**3.52**	acres
1-7. Determine pervious runoff coefficient using Table E-1, *Cp*	Cp =	0.05	
1-8. Runoff coefficient, *C = 0.95*	C =	0.95	
1-9. Enter design rainfall depth of the storm (in), *Pi*	Pi =	0.75	in
1-10. Calculate rainfall depth (ft), *P = Pi/12*	P =	**0.06**	ft
1-11. **(5-c)** Calculate Volume to be Retained (ft^3), *SQDV=43560*C*P*Aretain*	SQDV =	**9093**	ft^3

*Taken from the Technical Guidance Manual for Stormwater Quality Control Measures 2011
TGM Errata Update June 29, 2018
**Entire site including EIA and developed pervious areas are being treated by proposed Retention BMP

Step 7: Apply Treatment Control Measures
(INF-6)

Step 1: Determine water quality design volume			
1-1. Enter Project area from EIA and developed pervious surfaces (acres), $A_{EIA} = A_{project} - A_{retain}$	A_{EIA} =	1.65	acres
1-2. Enter Project impervious fraction, *Imp* (e.g. 60% = 0.60), *Imp = ((Apervious * 0.0) + (EIA * 1.0)) / A_{EIA}*	Imp =	0.16	
1-3. Determine pervious runoff coefficient using Table E-1, *Cp*	Cp =	0.05	
1-4. Calculate runoff coefficient, *C = 0.95*imp + Cp(1-imp)*	C =	0.19	
1-5. Enter design rainfall depth of the storm (in), *Pi*	Pi =	0.75	in
1-6. Calculate rainfall depth (ft), *P = Pi/12*	P =	0.06	ft
1-7. Calculate water quality design volume (ft3), *SQDV=43560×C*P*Aretain*	SQDV =	859	ft^3

*Taken from the Technical Guidance Manual for Stormwater Quality Control Measures 2011
TGM Errata Update June 29, 2018
**Entire site including EIA and developed pervious areas are being treated by proposed Retention BMP

Total SQDV
(INF-6)

Step 1: Determine total water quality design volume			
1-1. Enter SQDV from Step 5	SQDV1 =	9092.66	ft^3
1-2. Enter SQDV from Step 7	SQDV2 =	858.59	ft^3
1-3. Determine total SQDV, *SQDV = SQDV (step 5) + SQDV (step 7)*	SQDV =	9951.25	ft^3
Step 2: Determine the design percolation rate			
2-1. Enter measured soil percolation rate (in/hr, 0.5 in/hr min.), *Pmeasured*	Pmeasured =	12.40	in/hr
2-2. Determine percolation rate correction factor, *SA* based on suitability assessment (see Section 6 INF1)	SA =	2	
2-3. Determine percolation rate correction factor, *SB* based on design (see Section 6 INF-1)	Sb =	2.75	
2-4. Calculate combined safety factor, *S = SA* x *Sb*	S =	5.50	
2-5. Calculate the design percolation rate (in/hr), *Pdesign = Pmeasured/S*	Pdesign =	2.25	in/hr
Step 3: Calculate maximum infiltration depth			
3-1. Enter required drain time(hours,72 hrs max.), *t*	t =	72	hrs
3-2. Calculate max. depth of runoff that can be infiltrated within the *t* (ft), *dmax = Pdesign t/12*	dmax =	13.53	ft
Infiltration will be met through a proprietary device, therefore, neither the infiltration basin design or the infiltration trench design apply to this application. Specific volume calculations are provided on Sheet 4.			

*Taken from the Technical Guidance Manual for Stormwater Quality Control Measures 2011
TGM Errata Update June 29, 2018
**Entire site including EIA and developed pervious areas are being treated by proposed Retention BMP

Infiltration Basin Sizing

Factor Category		0.26	Weight	Value	Product	Comment
A	Suitability Assessment	Soil Assessment Methods	0.25	2	0.5	Percolation tests per "Stormwater Detention Infiltration Test Report' performed by Workman Geotechnical Engineering
		Predominant Soil Texture	0.25	2	0.5	Group B soils (Ventura soil number 5), f = 6.20 in/hr
		Site Soil Variability	0.25	1	0.25	Assumed relatively homogeneous soils
		Depth to Groundwater	0.25	3	0.75	Historical mapping indicates the depth to the highest historical groundwater is approximately 20 feet below grade
	Suitability Assessment Safety Factor $S_A=\Sigma p$				2	
B	Design	Tributary Area Size	0.25	3	0.75	Tributary area is less than 2 acres (0.79 ac)
		Level of Pretreatment	0.25	3	0.75	Site incorporates a hydrodynamic separator capacble of capturing 80% of TSS with d50 = 50 microns
		Redundancy	0.25	3	0.75	Medium redundancy, pre-treatment BMP's are capable of treating gross solids and TSS in the event of a system failure. In addition, each system treats individual tributary area, so if one system fails, the other systems will continue to treat the other tributaries.
		Compaction during Const.	0.25	2	0.5	There is a medium probability of unintended/indirect compaction.
	Design Safety Factor $SB=\Sigma p$				2.75	
Combined Safety Factor = S_A x S_B					**5.5**	

Water Quality Design Flow
(SQDF)

Step 1: Determine water quality design flow			
1-1. Enter Project area (acres), *Aproject*	Aproject =	5.17	acres
1-2. Enter Project impervious fraction, *Imp* (e.g. 60% = 0.60)	Imp =	0.85	
1-3. Determine pervious runoff coefficient using Table E-1, *Cp*	Cp =	0.05	
1-4. Calculate runoff coefficient, *C = 0.95*imp + Cp(1-imp)*	C =	0.87	
1-5. Enter design rainfall intensity (in/hr), *i*	i =	0.2	in/hr
1-6. Calculate water quality design flow (cfs), *SQDF=CiA*	SQDF =	**0.90**	cfs

*Taken from the Technical Guidance Manual for Stormwater Quality Control Measures 2011

ATTENTION: Mr. Mark Ross

SUBJECT: Soil Assessment Report for Onsite Stormwater Infiltration,
Lockwood Street, Parcel 1 (APN 213-0-090-27) & Parcel 2 (APN 213-0-090-105),
City of Oxnard, California

Mr. Ross:

In accordance with your request, Geolabs – Westlake Village (GWV) has prepared this report to present the results of stormwater infiltration testing performed at the subject site. The purpose of our work was to evaluate the suitability of the site for onsite infiltration of stormwater, recommend a design infiltration rate, and provide an estimate of the depth to the seasonal high groundwater table.

The subject site is identified on the enclosed Site Location Map (Plate 1.1). Field data and the approximate locations of infiltration tests are shown on the enclosed Plot Map (Plate 1.2). Descriptions of the soils observed in our exploratory excavations are provided on the enclosed Boring Logs in Appendix A. A record of infiltration testing is provided on the enclosed Infiltration Test Logs in Appendix B. Details of our findings are presented in the following sections.

SITE DESCRIPTION

The subject site consists of two vacant parcels in the City of Oxnard located both north and south of Lockwood Street, west of its intersection with Outlet Center Drive. Parcel 1 (APN 213-0-090-27) is 5.17 acres on the north side of Lockwood Street. Parcel 2 (APN 213-0-090-105) is divided into two pieces on the south side of Lockwood Street: 3.08 acres on the west and 3.60 acres on the east. The site is bounded to the north by the Ventura Freeway (U.S. Highway 101), and to the east, south, and west by commercial development.

Site topography is flat lying with elevations ranging from approximately 77 to 81 feet. Historical aerial imagery shows that these lots were used for agricultural purposes before 1970. Between 1945 and 1959 a citrus grove was planted. Farming operations ceased sometime between 1970 and 1994 and the lot remained undeveloped. Farm structures were within the western portion as early as 1938. At the time of this writing, the ground surface is mostly dirt with sparse shrubs and grasses.

Figure 1. Subject site

PROPOSED PROJECT

A five-story apartment building with tuck-under parking and appurtenant on-grade parking areas is proposed on Parcel 1. A group of four-story apartment buildings with two courtyards and appurtenant parking areas are proposed on Parcel 2 West. A four-story senior apartment facility with seven individual buildings and appurtenant on-grade parking areas is proposed on Parcel 2 East. All three development areas are planned to be

provided with subterranean stormwater infiltration galleries. The approximate locations of the galleries are shown on the enclosed Plot Map (Plate 1.2).

FIELD INVESTIGATION

For this study, eight exploratory locations were selected to characterize the infiltration properties of the materials in the vicinity of the proposed stormwater infiltration galleries. Exploratory borings were excavated with a truck-mounted hollow-stem auger drill rig. Samples were driven with a 140 lb. automatic safety hammer lifted 30 inches. Drill rod was used to allow the hammer to remain above the auger. The boring diameter was approximately eight inches (outer diameter). The samplers consisted of both SPT split spoon sampler and a lined California split spoon sampler (2.375-inch I.D.). Borings were converted to infiltration test wells as described below in the INFILTRATION TESTING section. Both disturbed (bulk) and relatively undisturbed samples were obtained from the borings. These samples were secured and transported to our laboratory for testing. At the completion of infiltration testing, the borings were backfilled with drill spoils.

EARTH MATERIALS

Detailed logs of earth materials encountered during the field investigation are presented in Appendix A. Earth materials generally consisted of two layers of alluvium. The upper layer is a brown clayey to sandy silt that extends to depths of approximately 8 to 11 feet below the ground surface. The lower layer is a light brown fine to coarse-grained sand with local clayey interlayers that are less than one foot thick. These materials are consistent with those observed in previous excavations at the site (see references).

GROUNDWATER

Groundwater was not observed in any of the excavations performed for this study to the total depth explored of 17 feet. Our work for Parcel 2 West in 2021 did not encounter groundwater to the total depth explored of 30 feet (GWV 11 August 2022). Our work for Parcel 1 in 2022 encountered groundwater at a depth of 41 feet (GWV 20 September 2022).

Borings performed by Yeh and Associates in 2019 for Lockwood Street did not encounter groundwater to the total depth explored of 31.5 feet. Borings performed by MTC in 2020 for Parcel 2 East encountered groundwater at a depth of 36 feet. Borings performed by Independent Solutions in 2015 for the St. John's Regional Medical Center located approximately one-half mile to the southwest encountered groundwater at a depth of 35 feet.

The historical high groundwater level is mapped as being approximately ten feet below the ground surface at the subject site (CGS, 2002).

SEASONAL HIGH GROUNDWATER LEVEL

Seasonal variations in groundwater conditions are expected and are influenced by numerous factors including storm runoff, irrigation, and local groundwater pumping. To estimate a depth to the seasonal high

groundwater level, we followed the procedure in the Ventura County Technical Guidance Manual for Stormwater Quality Control Measures (hereafter referred to as the TGM). We averaged the annual minima for each water year on record from two nearby sites available through the Geotracker website and the California Water Data Library. A plot of this data is provided on the enclosed Plate GW which shows the seasonal high groundwater level for each water year, and the average seasonal high for each of the two sites.

The first is from the Oxnard Truck Center located at 2101 Ventura Boulevard, which is approximately 800 feet northeast of the subject site. Several groundwater monitoring wells were installed and monitored by Groundwater Solutions between 1992 and 2010 (Groundwater Solutions, 2010). We use the data from well MW-9 which has the longest history of monitoring. The depth to groundwater over this time period varied between 13.2 feet and 20.2 feet, with an average seasonal high of 16.2 feet.

The second is from the St. John's Regional Medical Center in Oxnard located at 1600 North Rose Avenue, which is approximately 2,300 feet southwest of the subject site. State well 02N22W35C001S is located in the northwest quadrant and has monitoring data from 1972 to 2002. We excluded data prior to water year 1993 because the groundwater level was very low, upwards of 80 feet below the ground surface, which appears to have been artificially lowered through activities like groundwater extraction. The depth to groundwater between water years 1993 and 2002 varied between 12.6 feet and 47.0 feet, with an average seasonal high of 20.6 feet.

A straight line drawn between the Oxnard Truck Center and St John's Regional Medical Center passes through the subject site. Interpolating between the two average seasonal highs we estimate the depth to the seasonal high groundwater level at the subject site to be 17.1 feet below the ground surface.

INFILTRATION TESTING

Eight infiltration tests were performed at the subject site, two at the location of each proposed infiltration gallery, to characterize the infiltration properties of the earth materials. Target test locations were provided to our office by the stormwater infiltration system engineer. Tests were conducted at depths of 7 and 17 feet below the ground surface. The tests were performed in wells constructed in exploratory borings I1 through I8 (see Plate 1.2). Test results are presented in Appendix B, Plates IT1 through IT8. Our testing was conducted in accordance with the "Small Diameter Boring Infiltration Test" method presented in the Administrative Manual Los Angeles County Public Works Geotechnical and Materials Engineering Division Document GS200.1 dated June 30, 2021. Test hole construction, infiltration test procedure, infiltration test results, and our recommendations are discussed in greater detail in the following sections.

TEST HOLE CONSTRUCTION

An eight-inch diameter hollow stem auger was used to excavate the infiltration test borings to their respective target depths. A two-inch diameter PVC pipe (solid with the lower one foot slotted) was placed in the

boring through the augers. The annulus was filled with clean (#3) sand to a height of approximately three to four feet above the bottom of the boring. Care was taken during installation of the pipe and sand pack to prevent slough from accumulating in the bottom of the borehole. At the completion of testing, the pipe was removed and the boring backfilled with drilling spoils.

INFILTRATION TEST PROCEDURE

Each test hole was presoaked in accordance with GS200.1. Testing proceeded immediately after the presoak period. Measurement intervals ranging from 1 to 60 minutes were selected depending on the rate that water drained during presoaking. Following each measurement interval, the boring was refilled to the start depth (between one to two feet of water in the bottom of the boring), except for the test in I6 which drained so slowly it was never refilled. This process was repeated until a stabilized rate of drop was obtained, which is when the highest and lowest readings are within ten percent of each other for three consecutive readings.

INFILTRATION TEST RESULTS

Testing was performed on January 25 and 26, 2023. Infiltration rates were determined by the following formula:

$$i = \frac{V}{A \times \Delta t \times RF_t}$$

i = infiltration rate [in/hr]
V = volume of water infiltrated during measurement interval [in^3]
A = average wetted surface area during measurement interval [in^2]
Δt = duration of measurement interval [hr]
RF_t = reduction factor for non-vertical flow

The final three measurements during each test were averaged to produce the "Measured Short-Term Infiltration Rate" presented in Table 1 below.

Table 1. Summary of field measured infiltration rates

Boring	Infiltration Test Log	Depth (feet)	Material Description	Measured Short-Term Infiltration Rate (in/hr)
I1	IT1	7	Silty very fine sand	0.19
I2	IT2	17	Fine to medium sand	6.5
I3	IT3	7	Silty very fine sand	0.43
I4	IT4	17	Fine to coarse sand	28.9
I5	IT5	7	Silty very fine sand	0.10
I6	IT6	17	Sandy clay	0.05
I7	IT7	17	Fine sand	44.2
I8	IT8	7	Clayey sand	0.22

RECOMMENDATIONS

To determine the design percolation rate, the measured short-term infiltration rate should be divided by the Combined Safety Factor presented in Table 6-4 of the TGM. Table 6-4 is reproduced below. Values of cells marked with an asterisk (*) should be selected by the stormwater infiltration system engineer.

Table 6-4. Infiltration Facility Safety Factor Determination Worksheet

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	2	0.5
		Predominant soil texture	0.25	1	0.25
		Site soil variability	0.25	2	0.5
		Depth to groundwater / impervious layer	0.25	3	0.75
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			2.0
B	Design	Tributary area size	0.25	*	*
		Level of pre-treatment / expected sediment loads	0.25	*	*
		Redundancy	0.25	*	*
		Compaction during construction	0.25	*	*
		Design Safety Factor, $S_B = \Sigma p$			*
Combined Safety Factor = S_A x S_B					*

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.

Limitations on the proposed stormwater infiltration galleries are provided in the TGM under the heading INF-6: PROPRIETARY INFILTRATION. These types of systems require a native soil infiltration rate of 0.5 inches per hour. Based on the infiltration testing performed for this study, the upper silty layer of alluvium, represented by the infiltration tests conducted at a depth of 7 feet, is anticipated to have infiltration rates that are slower than the required value. We recommend the invert of the stormwater infiltration galleries be located within the lower sandy layer that begins at a depth of 8 to 11 feet below the ground surface, typically at a depth of 10 feet. Considering the depth to seasonal high groundwater is estimated to be 17 feet, this would provide at least 6 feet of separation from the invert of the galleries. We recommend a measured short-term infiltration rate of 6.5 inches per hour be applied to the lower sandy layer materials. That rate should be reduced by the safety factors in Table 6-4 above to determine the design percolation rate.

If designed and constructed in accordance with the recommendations contained within this report and the requirements of the City of Oxnard, we consider the site to be suitable for the proposed stormwater infiltration galleries.

CONSTRUCTION MONITORING

Site conditions may vary from those observed in our exploratory excavations. A representative of this office should observe excavations for the proposed stormwater infiltration galleries to evaluate whether the conditions encountered are consistent with those used for design. Supplemental recommendations may prove warranted based upon the materials exposed in the actual excavations.

CLOSURE

This geotechnical report has been prepared in accordance with generally accepted engineering practices at this time and location. No other warranties, either express or implied, are made as to the professional advice provided under the terms of our agreement and included in this report.

Thank you for this opportunity to be of service. Please do not hesitate to call if you have any questions.

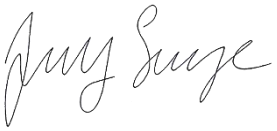
Subject: Phase I Environmental Site Assessment, 2151 Lockwood Street, Oxnard, California

Dear Mr. Ross:

This report presents the findings of a Phase I Environmental Site Assessment (ESA) completed by Rincon Consultants, Inc. (Rincon) for the property located at 2151 Lockwood Street in Oxnard, California. The Phase I ESA was performed in accordance with our proposal dated October 10, 2022, and contract dated October 10, 2022.



The accompanying report presents our findings and provides an opinion regarding the presence of recognized environmental conditions in connection with the subject property. Our work program for this project, as referenced in our contract, is intended to meet the guidelines outlined in the American Society for Testing and Materials (ASTM), Standard Practice for Environmental Site Assessments: *Phase I Environmental Site Assessment Process* (ASTM Standard E1527-13 and E1527-21). Our scope of services, pursuant to ASTM practice, did not include any inquiries with respect to asbestos-containing building materials unrelated to releases into the environment; biological agents; cultural and historic resources; ecological resources; endangered species; health and safety; indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment; industrial hygiene; lead-based paint unrelated to releases into the environment; lead in drinking water; mold or microbial growth conditions; polychlorinated biphenyl-containing building materials (e.g., interior fluorescent light ballasts, paint, and caulk); naturally-occurring radon; regulatory compliance; substances not defined as hazardous substances (including some substances sometimes generally referred to as emerging contaminants) unless or until such substances are classified as a Comprehensive Environmental Response, Compensation, and Liability Act hazardous substance; and wetlands.

Thank you for selecting Rincon for this project. If you have any questions, or if we can be of any future assistance, please contact us.

Sincerely,
Rincon Consultants, Inc.

Lisa Bestard
Senior Environmental Scientist

Ryan Thacher, PhD, PE
Director of Site Assessment and Remediation

Executive Summary

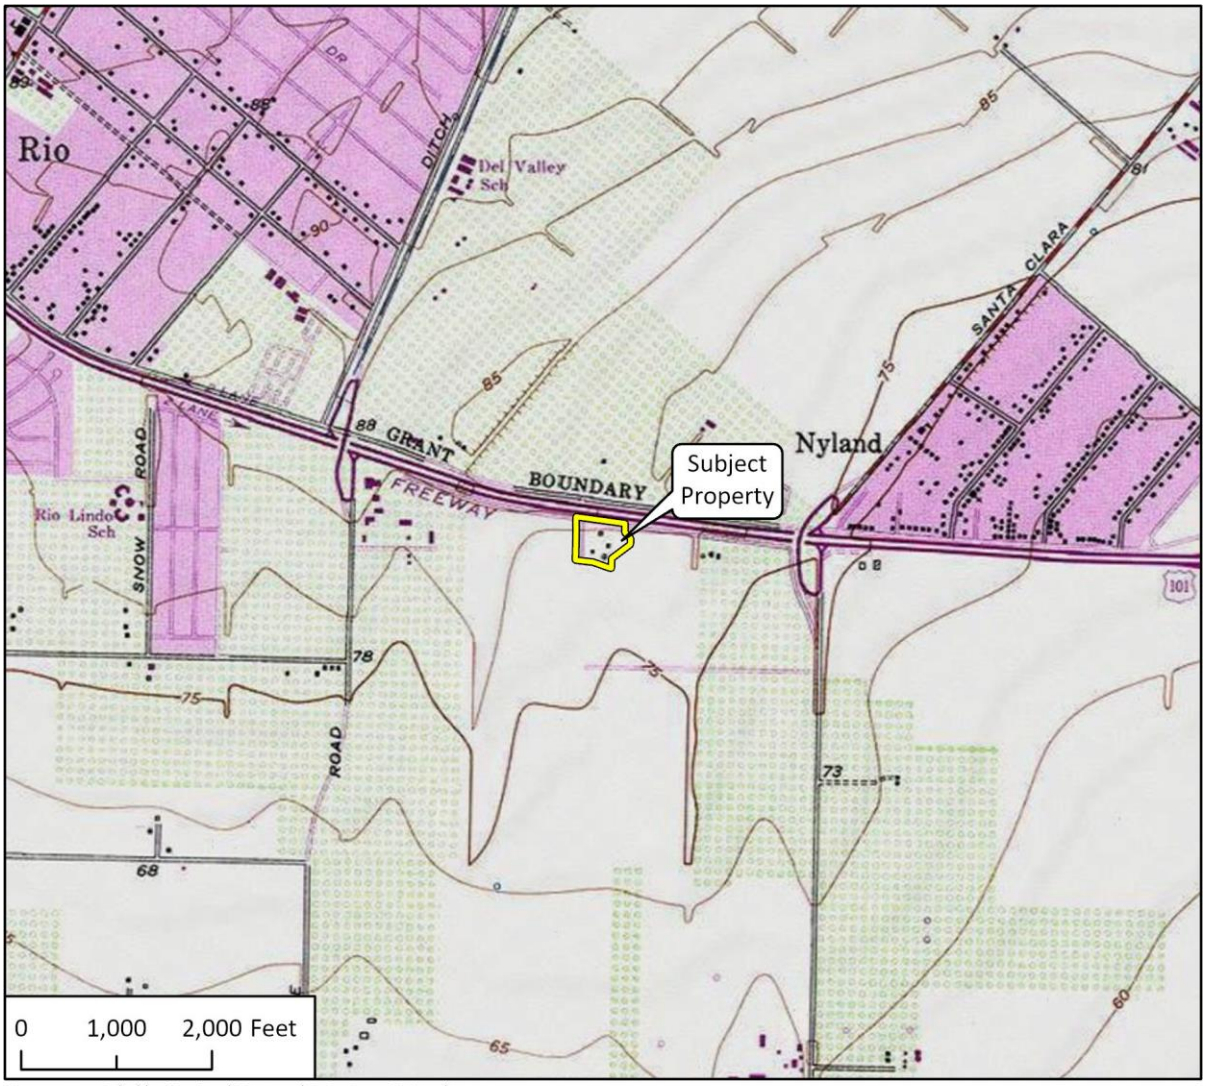
This report presents the findings of a Phase I Environmental Site Assessment (ESA) for the property located at 2151 Lockwood Street in Oxnard, California (subject property). The Phase I ESA was performed for SVM-Lockwood, LLC (SVM) by Rincon Consultants, Inc. (Rincon). SVM has requested this assessment and will use the information for the purpose of the sale and redevelopment of the subject property for commercial use. The subject property is currently vacant land. It is our understanding that the proposed future use of the property includes the development a commercial retail center.

The subject property is located in an area that is primarily composed of commercial and light industrial land uses. Properties in the vicinity of the subject property include retail stores, restaurants, offices, and a flooring warehouse.

During the completion of this Phase I ESA, Rincon performed a site reconnaissance and interviews with the User of the report (SVM), and the owner of the subject property (SVM). In addition, Rincon reviewed potential vapor migration sources, online agency records, and historical records, including aerial photographs, topographic maps, city directories, fire insurance maps, and building permits. Also, SVM provided four documents for our review: a previous Phase I ESA from Rincon, a Phase I and II ESA from Stantec, a Soil Assessment Report from Rincon, and a title report for the subject property.

Based on the findings of this Phase I ESA, it is our opinion that no recognized environmental conditions were identified for the subject property. However, notable Findings in connection with the subject property are as follows:

Notable Findings



1. Northern adjacent gasoline station (2005-2019) and former automotive repair (1980-1996) – 2001 Ventura Boulevard
2. Northern adjacent gasoline station (1961) – 2099 Ventura Boulevard

Because we have no evidence indicating that the subject property has been impacted by hazardous materials or petroleum products, no additional assessment is recommended.

1 Introduction

This report presents the findings of a Phase I Environmental Site Assessment (ESA) conducted for the property located at 2151 Lockwood Street in Oxnard, California (subject property; Figure 1). The Phase I ESA was performed by Rincon Consultants, Inc. (Rincon) for SVM-Lockwood, LLC (SVM) in general conformance with American Society for Testing and Materials (ASTM) E1527-13 and E1527-21, our proposal dated October 10, and our contract dated October 10, 2022. The following sections present our findings and provide our opinion as to the presence of recognized environmental conditions (RECs) on the subject property.

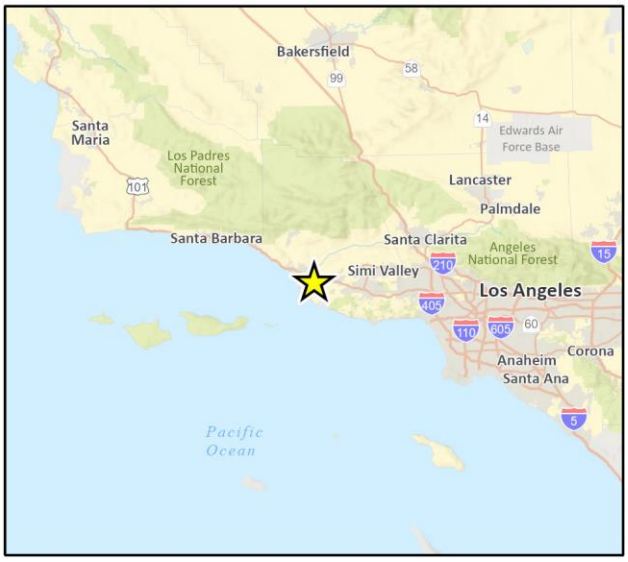


Figure 1 Vicinity

The topographic representation depicted in this map may not portray all of the features currently found in the vicinity today and/or features depicted in this map may have changed since the original topographic map was assembled.

Subject Property

N

1.1 Purpose and Definitions

SVM has requested this assessment and will use the information for the purpose of the sale and redevelopment of the subject property for commercial use. The purpose of this Phase I ESA was to determine if there are RECs on the subject property, taking into account commonly and reasonably ascertainable information, and to qualify for Landowner Liability Protections under the Brownfields Amendments to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

Recognized Environmental Condition (REC)

A REC is defined pursuant to ASTM E1527-21 as,

> "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment;
>
> (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or
>
> (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment".

As stated in ASTM E1527-21,

> "likely is that which is neither certain nor proved, but can be expected or believed by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinions given therein".

Controlled REC

A Controlled REC is defined pursuant to ASTM E1527-21 as,

> "recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)".

Historical REC

A Historical REC is defined pursuant to ASTM E1527-21 as,

> "a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition".

De minimis

A *de minimis* condition is defined pursuant to ASTM E1527-21 as,

> "a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition".

Property Use Limitation

A Property Use Limitation (PUL) is defined pursuant to ASTM E1527-21 as,

> "a limitation or restriction on current or future use of a property in connection with a response to a release, in accordance with the applicable regulatory authority or authorities that allows hazardous substances or petroleum products to remain in place at concentrations exceeding unrestricted use criteria".

Significant Data Gap

A Significant Data Gap is defined pursuant to ASTM E1527-21 as,

> "a data gap that affects the ability of the environmental professional to identify a recognized environmental condition".

Notable Finding

Although not defined by ASTM E1527-13 or E1527-21, Rincon utilizes the term *Notable Finding* for potential environmental concerns present at or possibly present at a property that do not specifically fit one of the above ASTM-defined situations, yet may impact current or future use of the subject property.

1.2 Scope of Services

The scope of services conducted during this study is outlined below:

- Performed a reconnaissance of the subject property to identify obvious indicators of the existence of hazardous materials.
- Observed adjacent or nearby properties from public thoroughfares in an attempt to see if such properties are likely to use, store, generate, or dispose of hazardous materials.
- Obtained and reviewed an environmental records database search to obtain information about the potential for hazardous materials to exist at the subject property or at properties located in the vicinity of the subject property.
- Reviewed files for the subject property and immediately adjacent properties as identified in the database report, as applicable.
- Reviewed the current United States Geological Survey (USGS) topographic map to obtain information about the subject property and regional topography and uses of the subject property and surrounding sites.
- Reviewed additional pertinent record sources (e.g., California Geologic Energy Management Division [CalGEM] records, online databases of hazardous substance release sites), as necessary, to identify the presence of RECs at the subject property.

- Reviewed the California State Water Resources Control Board (SWRCB) Statewide Per- and Polyfluoroalkyl Substances (PFAS) Investigation online Public Map Viewer regarding current PFAS orders issued to facilities located in the vicinity of the subject property.
- Reviewed reasonably ascertainable historical resources (e.g., aerial photographs, topographic maps, fire insurance maps, city directories) to assess the historical land use of the subject property and adjacent properties.
- Provided a user interview questionnaire to a representative of SVM, the user of the Phase I ESA.
- Provided a property owner interview questionnaire to the property owner or a designated subject property representative identified to Rincon by SVM
- Conducted interviews with other property representatives (e.g., key site manager, occupants), as applicable.
- Reviewed available SVM-provided information (e.g., previous environmental reports, title documentation).
- Requested Title Search Information Reports from the User of the report.

1.3 Significant Assumptions, Limitations, Deviations, Exceptions, Special Terms, and Conditions

This work is intended to adhere to good commercial, customary, and generally accepted environmental investigation practices for similar investigations conducted at this time and in this geographic area. No guarantee or warranties, expressed or implied, are provided. The findings and opinions conveyed in this report are based on findings derived from a site reconnaissance, review of an environmental database report, specified regulatory records and historical sources, and comments made by interviewees. This report is not intended as a comprehensive site characterization and should not be construed as such. Standard data sources relied upon during the completion of Phase I ESAs may vary with regard to accuracy and completeness. Although Rincon believes the data sources are reasonably reliable, Rincon cannot and does not guarantee the authenticity or reliability of the data sources it has used. Additionally, pursuant to our contract, the data sources reviewed included only those that are practically reviewable without the need for extraordinary research.

Rincon has not found evidence that hazardous materials or petroleum products exist at the subject property at levels likely to warrant mitigation. Rincon does not under any circumstances warrant or guarantee that not finding evidence of hazardous materials or petroleum products means that hazardous materials or petroleum products do not exist on the subject property. Additional research, including surface or subsurface sampling and analysis, can reduce SVM's risks, but no techniques commonly employed can eliminate these risks altogether.

In addition, pursuant to ASTM E1527-13 and E1527-21 practice, our scope of services did not include any inquiries with respect to asbestos-containing building materials unrelated to releases into the environment; biological agents; cultural and historic resources; ecological resources; endangered species; health and safety; indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment; industrial hygiene; lead-based paint unrelated to releases into the environment; lead in drinking water; mold or microbial growth conditions; polychlorinated biphenyl (PCB)-containing building materials (e.g., interior fluorescent light ballasts, paint, and caulk); naturally-occurring radon; regulatory compliance; substances not defined as hazardous substances (including some substances sometimes generally referred to as emerging

contaminants) unless or until such substances are classified as a CERCLA hazardous substance; and wetlands.

1.4 ASTM Deviations

Deviations from ASTM E1527-13 and E1527-21 practice were not encountered during the completion of this Phase I ESA.

1.5 User Reliance

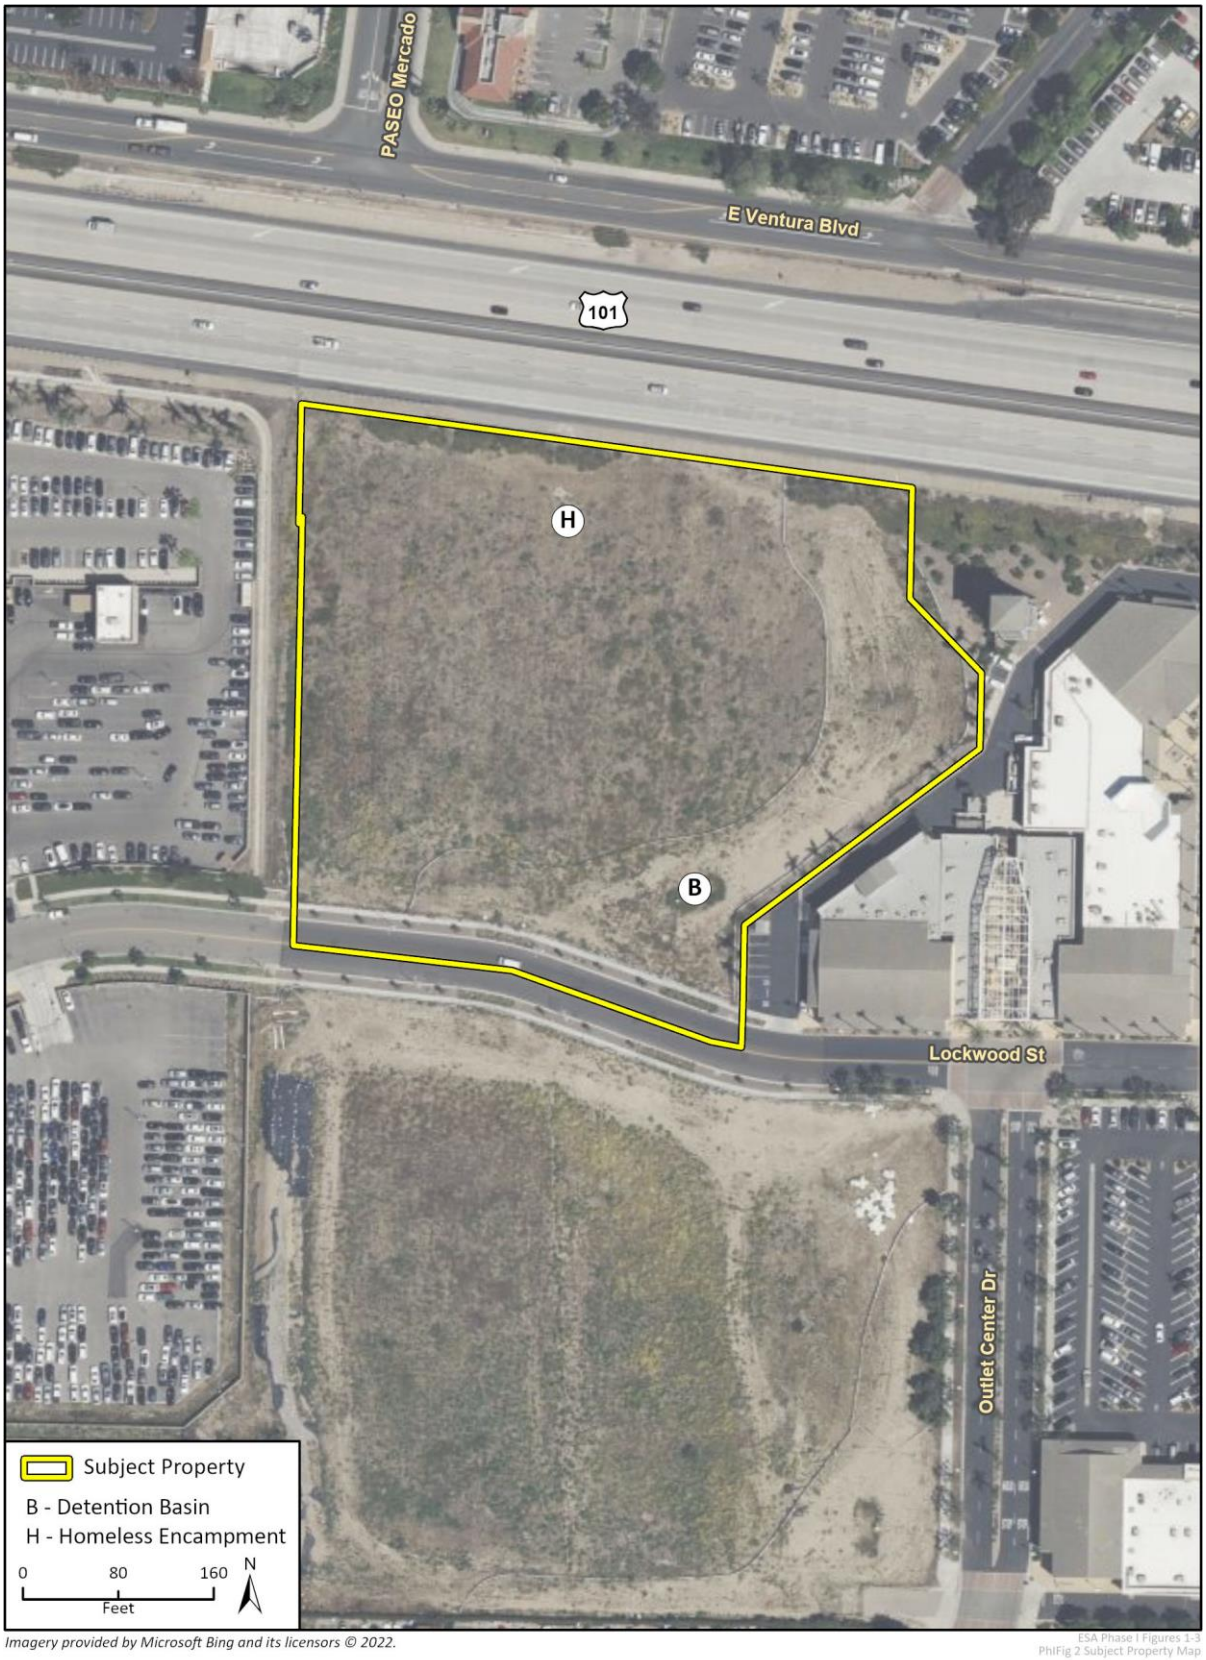
SVM has requested this assessment and will use the information for the purpose of sale and redevelopment of the subject property for commercial use. This Phase I ESA was prepared for use solely and exclusively by SVM, Canfield Development, and Sunbelt Enterprises, LLC. No other use or disclosure is intended or authorized by Rincon. Also, this report is issued with the understanding that it is to be used only in its entirety. It is intended for use only by SVM, Canfield Development, and Sunbelt Enterprises, LLC, and no other person or entity may rely upon the report without the express written consent of Rincon.

1.6 Site Description

Location

The subject property is a 4.7-acre parcel located north of Lockwood Street, west of Outlet Center Drive, and south of Ventura Freeway and Ventura Boulevard in Oxnard, California (Figure 2). The property is identified as 2151 Lockwood Street and APN 213-0-090-275.

Subject Property and Vicinity General Characteristics



Lockwood Street is located along the southern end of the subject property, which is currently vacant land.

The subject property is located in an area that is primarily composed of commercial and light industrial land uses. Properties in the vicinity of the subject property include retail stores, restaurants, offices, and a flooring warehouse. The current adjacent land uses are described in Table 1 and depicted on Figure 3.

Table 1 Current Uses of Adjacent Properties

Area	Use
Northern Properties	Ventura Freeway followed by Ventura Boulevard and Burger King (2800 Paseo Mercado), a commercial property and parking lot (2801 Paseo Mercado) and a Costco/Costco Gasoline (2001 Ventura Boulevard), and an additional commercial property (2101 Ventura Boulevard)
Eastern Properties	Outlet Center Drive followed by California Lutheran University (2201 Outlet Center Drive) and several commercial stores, restaurants, and offices (2200 Outlet Center Drive, Units 390-450) and an associated parking lot
Southern Properties	Southern portion of Lockwood Street followed by vacant land
Western Properties	CarMax used car dealership and associated parking lots (2000-2001 Lockwood St.).

Figure 3 Adjacent Land Use

Imagery provided by Microsoft Bing and its licensors © 2022.

ESA Phase I Figures 1-3
PhIFig 3 Adj Land Use Map

Descriptions of Structures, Roads, and Other Improvements on the Subject Property

The southern portion of Lockwood Street is located to the south of the subject property. Additionally, a chain-link fence was noted around the perimeter of the subject property. During the site reconnaissance, no structures, or other improvements were observed on the subject property. Access to the subject property is available from Lockwood Street.

The following utility providers service the subject property area:

- Electrical Service – Southern California Edison
- Natural Gas Service – Southern California Gas Company
- Water Service – City of Oxnard
- Sewer Service – City of Oxnard
- Solid Waste Service – City of Oxnard

2 User-Provided Information and Responsibilities

2.1 Review Land Title Records and Judicial Records for Environmental Liens and Activity and Use Limitations

Rincon requested title search information reports from the User of the report. Pursuant to ASTM E1527-21,

> "the title search information reports shall identify environmental covenants, environmental easements, land use covenant and agreements, declaration of environmental land use restrictions, environmental land use controls, environmental use controls, environmental liens, or any other recorded instrument that restricts, affects, or encumbers the title to the subject property due to restrictions or encumbrances associated with the presence of hazardous substances or petroleum products. Title search information reports shall review land title records for documents recorded between 1980 and the present. If judicial records are not reviewed, the title search information report shall include a statement providing that the law or custom in the jurisdiction at issue does not require a search for judicial records in order to identify environmental liens".
>
> As stated in ASTM E1527-21 it is the "user's responsibility to search for environmental liens and activity and land use limitations (AULs)". This is in "addition to the environmental professional's search of institutional control and engineering control registries described in" ASTM E1527-21 Section 8.2.

A copy of the title search information records provided by the User is included in Appendix A. Based on our review of the title search information records:

- The title to the subject property is vested in Sunbelt Enterprises, LLC.
- A May 24, 1991 Restrictive Covenant that declares every lot within the subject property must retain a quantity of storm water runoff.
- A January 1, 2022 Restrictive Covenant Modification for the subject property declares homeowners can request to modify property documents that contain unlawful discriminatory covenants.
- A May 19, 2020 Covenant and Deed Restriction declares the property owner is required to minimize pollutants in urban runoff and maintain storm water quality control measures exhibited.
- Eight easements are listed as located on the subject property for ingress, egress, and public utilities. A map of the easements are included in appendix D

2.2 User Questionnaire

As described in ASTM E1527-13 Section 6 and E1527-21 Section 6, a User Questionnaire as provided by ASTM E1527-13 Appendix X3 and E1527-21 Appendix X3 was provided to SVM Development, LLC.

The purpose of the User Questionnaire is for the User of the Phase I ESA to provide actual knowledge pertaining to the subject property to help identify RECs. Mark Ross, Manager with SVM, completed the User Questionnaire on October 24, 2022. A copy of the completed questionnaire is included as Appendix A.

Based on our review of the completed questionnaire, the user indicated the following:

- The Phase I ESA is required/being performed for the sale and development of the subject property.
- A sale transaction is planned for the subject property.
- Specialized knowledge from the sale of and work performed on adjacent parcels site.
- A prior environmental report prepared by Rincon is available for the subject property.

Based on our review of the completed questionnaire, the user *did not review* the following sources of information and is unaware of information regarding the following:

- Recorded land title records (or judicial records, where appropriate) that identify any environmental liens filed or recorded against the subject property
- Recorded land title records (or judicial records, where appropriate) that identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the subject property under federal, tribal, state, or local law
- Title Report that identifies information pertaining to environmental cleanup liens or AULs for the subject property

Based on our review of the completed questionnaire, the user is unaware of information regarding the following:

- Reduction in value for the subject property relative to any known environmental issues
- Commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases
- Obvious indicators that point to the presence or likely presence of releases at the subject property
- Pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the subject property
- Pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property
- Notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products

Based on our review of the completed questionnaire, the user identified information pertaining to the subject property that may help identify RECs in connection with the subject property. This information is summarized below:

- A previous environmental report prepared by Rincon is available for the subject property

The following documents regarding the subject property were provided by SVM:

- *Phase I ESA, Rincon Consultants Inc., July 2014.* Based on our review of this report, one REC was identified in connection with the subject property relating to the historical agricultural use of the subject property.
- *Phase I and Phase II ESA, Stantec, December 2020.* Based on our review of this report, no RECs were identified in connection with the subject property. Additionally, Stantec advanced a total of six shallow borings at the subject property and southern adjacent property and tested soil for organochlorides pesticides (OCPs) by United States Environmental Protection Agency (EPA) test method 8081A and heavy metals arsenic and lead by US EPA test method 6010B. OCPs were detected in four of the six samples analyzed, however all detectable concentrations were below EPA and Department of Toxic Substances Control (DTSC) residential screening levels. Lead was detected in all six soil samples at concentration below the most conservative DTSC screening levels. Additionally, arsenic was detected in all soil samples above EPA Regional Screening Levels (RSLs) for residential use, which Stantec noted falls within typical southern California naturally-occurring regional background levels. Based on these results Stantec determined that the historical agricultural use of the subject property is not a REC.
- *Soil Assessment Report, Rincon Consultants Inc., 2021.* On December 29, 2020 Rincon advanced a total of eight soil borings to a depth of 3 feet at the subject property and southern adjacent property. Rincon found that concentrations of OCPs in shallow soil were below both the residential, commercial, and construction worker exposure Environmental Screening Levels (ESLs) established by the San Francisco Bay Regional Water Quality Control Board. Additionally, Rincon found that although arsenic was detected in the shallow soil at concentrations which exceeded ESLs, the concentrations reported were within the accepted California background concentration range published by the Kearney Foundation. Based on these results no further assessment is warranted.
- *Preliminary Title Report, Fidelity National Title Company, 2022.* Based on our review of this report, several land use covenants were identified. Further information on the land use covenants is provided in Section 2.2.

2.3 User-Provided Information of Concern

Based on the information obtained during our review of user-provided documents, no hazardous material conditions with the potential to impact the subject property were identified.

3 Records Review

3.1 Physical Setting Sources

Topography

The current USGS topographic map (Oxnard and Camarillo Quadrangle) indicates that the subject property is situated at an elevation of approximately 82 feet above mean sea level with topography sloping down to the southwest. The adjacent topography consists of relatively flat land. A copy of the current USGS topographic map is included in Appendix B (Environmental Data Resources [EDR] 2022).

Geology and Hydrogeology

Based on information provided by SVM and the property owners, there are no site-specific geotechnical or geologic reports available for the subject property.

According to the current USGS Geologic Map (Clahan, 2003), the subject property is underlain by Holocene alluvial deposits, which are described as deposited as overbank material and composed of "unconsolidated, poorly sorted, clayey sand with some gravel."

During the preparation of this Phase I ESA, we reviewed the California SWRCB's online GeoTracker database to determine groundwater flow direction in the vicinity of the subject property. Groundwater is reported to be between 11 and 20 feet below ground surface and flows toward the northwest at a site located approximately 350 feet to the northeast of the subject property (Resource Management Agency County of Ventura, 2010).

3.2 Government Record Sources

Rincon outsourced with a regulatory database search contractor to obtain records of sites that generate, store, treat, or dispose of hazardous materials and sites for which a hazardous material release incident has occurred. The regulatory database search was conducted for the subject property and included data from surrounding sites within specified radii of the subject property. A copy of the database report, which specifies the ASTM E1527-13 and ASTM E1527-21 search distance for each public list, is included as Appendix B. As shown on the database report, federal, state, and county lists were reviewed as part of the research effort. Please refer to Appendix B for a complete listing of sites reported by EDR and a description of the databases reviewed.

The Map Findings Summary, included in the database report, provides a summary of the databases searched, the number of reported facilities within the search radii, and whether the facility is located on-site or adjacent to the subject property. The following information is based on our review of the Map Findings Summary and the information contained in the database report.

Subject Property

The subject property was listed on the following databases:

- NPDES, CIWQS, and CERS databases as Outlet Center at Lockwood Street

Regulatory agency files reviewed for the subject property are discussed in the Review of Agency Files section of this report.

Offsite Properties

Offsite properties listed in the database report fall under two general categories of databases: those reporting unauthorized releases of hazardous substances (e.g., Leaking Underground Storage Tank [LUST], National Priority List [a.k.a. Superfund sites], and corrective action facilities), and those reported as businesses permitted to use hazardous materials or generate hazardous wastes, for which an unauthorized release has not been reported to a regulatory agency.

Rincon reviewed the database maps and select detailed listings to evaluate their potential to impact the subject property, based on the following factors:

- Reported distance of the facility from the subject property;
- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes;
- Reported case type (e.g., soil only, failed underground storage tank [UST] test only);
- Reported substance released (e.g., chlorinated solvents, gasoline, metals);
- Reported regulatory agency status (e.g., case closed, “no further action”); and,
- Location of the facility with respect to the reported groundwater flow direction (discussed in the Geology and Hydrogeology section of this report)

Facilities/properties that were interpreted by Rincon to be of potential environmental concern to the subject property, based on one or more of the factors listed above, are summarized in Table 2. In accordance with ASTM E1527-13 and E1527-21, contamination migration pathways in soil, groundwater, and soil vapor were considered in our analysis of offsite properties of potential environmental concern.

Orphan Listings

The database report identified three orphan or unmapped site listings, which were unable to be plotted due to insufficient address information. Based on Rincon’s review of the limited address information or site descriptions for the orphan listings, none of the listings have the potential to impact the subject property.

Table 2 Database Listing Summary of the Subject Property and Select Sites Within One-Eighth Mile of the Subject Property

Site Name	Database Site ID	Site Address	Distance from Subject Property	Database Reference	Comments
Subject Property					
Outlet Center	1	Lockwood Street	Subject Property	NPDES, CIWQS	The facility has an active stormwater construction permit status as of 2019.
				CERS	The facility is listed on the CalEPA Regulated Site Portal and is classified as construction storm water. No violations were found during the most recent compliance evaluation inspection in 2020.
Adjacent Properties					
Charter College	B3, B4	2000 Outlet Center Drive Suite 150	Adjacent Property – East (350 Feet)	RCRA NON GEN/NLR	The facility did not generate hazardous waste in 2019.
				CERS HAZ WASTE	The facility is classified as hazardous waste generator.
				HAZNET	The facility generated onsite and disposed offsite of various quantities of hazardous waste, including photochemical/photo processing waste and aged or surplus organics/inorganics in 2019 and 2021.
				MED WASTE VENTURA	The facility is classified as a small quantity medical waste generator.
				CERS	The facility is classified as a chemical storage facility and did not receive any violations during the most recent compliance evaluation inspection in 2022.
				HWTS	The facility is listed in the hazardous waste tracking system as a college, university, or professional school and is active as of 2019.
Costco Wholesale, Inc., Costco Wholesale #420	C6, C7, C8, C9	2001 East Ventura Boulevard	Adjacent Property – North	UST	The facility has at least one active UST.
				RCRA-SQG	The facility was classified as a small quantify generator of hazardous waste in 2021
				ENVIROSTOR	The facility is listed is having a Tiered Permit. No other pertinent information was provided.
				FINDS	The facility is enrolled in a state mandated program for hazardous waste.
				ECHO	The facility is listed as active with no compliance or enforcement violations identified.
				HAZNET	The facility generated onsite and disposed of offsite various quantities of hazardous waste, including organic solids, and pharmaceutical waste in

Site Name	Database Site ID	Site Address	Distance from Subject Property	Database Reference	Comments
					from 2005 to 2021
				MED WASTE VENTURA	The facility is classified as a small quantity generator of medical waste.
				CERS	The facility is listed in the United States (US) Environmental Protection Agency (EPA) Air Emission Inventory System (EIS) and has various environmental contracts. Additionally, the facility is classified as a chemical storage facility with no violations incurred during the most recent compliance evaluation inspection in 2020.
				HWTS	The facility is listed in the hazardous waste tracking system as a general merchandise store as of 2003.
				CERS HAZ WASTE	The facility is classified as a hazardous waste generator.
Former AutoNation USA, CARMAX #6014, Dent Wizard International	A11, A12, A13, A14, A15, A16	2001 Lockwood Street	Adjacent Property – West	AST	The facility has one 1,500-gallon AST and one 2,500-gallon AST.
				UST	The facility has at least on UST.
				CERS HAZ WASTE	The facility is classified as a hazardous waste generator.
				CERS TANKS	The facility is classified as having an AST and a UST.
				HAZNET	The facility generated onsite and disposed of offsite various quantities of hazardous waste, including organic solids, and oil/water separation sludge, and unspecified oil containing waste in 2001-2005, 2007, and 2009.
				CERS	The facility is classified as a chemical storage facility with no violations incurred during the most recent compliance evaluation inspection in 2021.
				HWTS	The facility is listed in the hazardous waste tracking system as a new car dealer from 2000 to 2009.
				RCRA NON GEN	The facility did not generate hazardous waste in 2018.
				RCRA SQG	The facility was classified as a small quantify generator of hazardous waste in 2012.

Site Name	Database Site ID	Site Address	Distance from Subject Property	Database Reference	Comments
Power Equipment Services, Oxnard Truck Center	D17, D18	2101 Ventura Boulevard	Adjacent Property -- Northeast	**LUST, VENTURA CO. LUST, VENTURA CO BWT, CORTESE, HIST CORTESE**	The facility formerly operated as a heavy equipment rental and service facility. USTs including a total of 6 waste oil storage, new oil storage, gasoline, and diesel tanks were present at two locations onsite and have since been removed from the site. A product piping failure in the diesel UST resulted in an undocumented release in 1987. Remediation at the site included excavation of impacted soils and treatment of groundwater. According to the Case Closure Summary prepared by the Ventura County Environmental Health Department "contaminated soil and groundwater are localized, not mobile, not volatile, and concentrations have been stable since at least 2006." Due to the shrinking of the overall plume size and stable concentrations of contaminants (total petroleum hydrocarbons) the case received case closure in in December 2009.
				CERS HAZ WASTE	The facility is classified as a hazardous waste generator.
				CERS	The facility is classified as a LUST Cleanup Site and a chemical storage facility with one violation incurred during the most recent compliance evaluation inspection in 2022 relating to administrative procedures to which the facility promptly returned to compliance.
				RCRA SQG	The facility was classified as a small quantity generator of hazardous waste in 1991.
				SWEEPS UST, HIST UST, CA FID UST	The facility had three 8,000-gallon motor vehicle fuel/waste oil and three 12,000-gallon diesel USTs.
				FINDS	The facility is enrolled in a state mandated program for hazardous waste.
				ECHO	The facility is listed as active with no compliance or enforcement violations identified.
Oxnard Berry Farms	D19	2105 Ventura Boulevard	Adjacent Property -- Northeast	HIST UST	The facility has one 500-gallon regular gasoline and two 280-gallon unleaded gasoline USTs.
Ben Franklin Superstore	H30	1889 East Ventura Boulevard	Adjacent Property – Northwest	**EDR HIST AUTO**	The facility is listed as a historical gasoline station from 2001 to 2002.

Site Name	Database Site ID	Site Address	Distance from Subject Property	Database Reference	Comments
Crossgradient Release Sites (within 150 feet)					
SCE CORIX CROSSDOCK	A2	2000 Lockwood Avenue	Approximately 250 Feet – West	RCRA NON GEN/NLR	The facility did not generate hazardous waste in 2012.
Chevron #9-7423	C5	1860 Ventura	Address appears to be misplotted[1]	**HIST CORTESE**	The facility is listed on the historical Cortese list as 1860 Ventura
Vista Paint Cooperation	G24, G25	2100 Outlet Center Drive	Adjacent Property – Approximately 500 Feet East	RCRA NON GEN/NLR	The facility did not generate hazardous waste in 2009.
				CERS HAZ WASTE	The facility is classified as a hazardous waste generator.
				HAZNET	The facility generated onsite and disposed of offsite various quantities of hazardous waste, including organic solids, and fuel in 2011, 2012, and 2016.
				HWTS	The facility is listed in the hazardous waste tracking system as a building material dealer and is active as of 2009.
Teleflex Control Systems, Becton Dickson Lab	N64, N65	1950 Williams Drive	Approximately 350 Feet– Southwest	**ENVIROSTOR**	The facility is listed in DTSC's Site Cleanup Program. From 1968 to 1986 the site operated as a manufacturing facility for medical products. In 1991 a yellow mustard like substance appeared on the basement walls and floors of the site. The substance was identified to be a chromate compound. Surfaces were scraped and seal with an epoxy resin. The blooms reappeared in 1998. A Site Reassessment was performed in 2010/2011 and in 2013 the DTSC changed the site status to "No Action Required" as per US EPA decision rationale.
				UST	The facility has at least one inactive UST.

*__Bold__ listings indicate a release database

Regulatory agency information reviewed for the listings in the table above are summarized in the Review of Agency Files section of this report.

[1] This property appears to be six miles to the east of the subject property.

3.3 Review of Agency Files

As a follow-up to the database search, Rincon reviewed regulatory information for the subject property and facilities within the specified search radii that were interpreted to have the potential to impact the subject property, based on one or more factors previously discussed (e.g., distance, open case status, upgradient location, soil vapor migration).

The following is a summary of our review of regulatory information obtained from online sources (e.g., SWRCB GeoTracker database, Department of Toxic Substances Control [DTSC] EnviroStor database, local fire department) and/or files requested from the applicable regulatory agency, as described below.

Subject Property

The subject property was listed in three non-release databases: NPDES, CIWQS, and CERS. These listings indicate that hazardous materials are handled and stored on-site; however, no releases have been reported. Therefore, there were no regulatory agency records available for the subject property from the databases searched.

Adjacent Properties

Seven adjacent properties were listed in databases searched. Three of these properties have the potential to impact the subject property:

Power Equipment Services/Oxnard Truck Center 2001 Ventura Boulevard

This property is located adjacent to the northeast of the subject property.

Databases:	LUST, VENTURA CO BWT, CORTESE, HIST CORTESE
Agency Lead:	Ventura County
Listing/Case Status:	Closed as of April 1, 2010
Soil Impacts/COCs:	Yes/TPH
Soil Vapor Impacts/COCs:	Unknown
Groundwater Impacts/COCs:	Yes/TPH
Groundwater Depth/Flow Direction	Between 11 and 20 feet below grade/northwest
Site Distance from Subject property:	280 feet northwest, across Ventura Freeway and Ventura Boulevard
Release Distance from Subject Property:	Approx. 600 feet northeast
Potential Impacts to Soil, Soil Vapor, or Groundwater at Subject Property:	**Yes – See Table 5**

Ben Franklin Superstore 1889 East Ventura Boulevard

This property is located 450 feet to the northwest of the subject property.

Databases:	Hist Auto Station
Agency Lead:	None

Listing/Case Status:	none
Soil Impacts/COCs:	Unknown
Soil Vapor Impacts/COCs:	Unknown
Groundwater Impacts/COCs:	Unknown
Groundwater Depth/Flow Direction	Unknown
Site Distance from Subject property:	450 feet northeast, across Ventura Freeway and Ventura Boulevard
Release Distance from Subject Property:	Unknown
Potential Impacts to Soil, Soil Vapor, or Groundwater at Subject Property:	**Unknown – See Table 5**

Nearby Release Sites

One nearby release site was listed in the databases searched. This property is located approximately 350 feet to the southwest of the subject property.

Teleflex Control Systems/Becton Dickson Lab 1950 Williams Drive

This property is located adjacent to the southwest of the subject property.

Databases:	ENVIROSTOR
Agency Lead:	DTSC
Listing/Case Status:	No action required as of 2013
Soil Impacts/COCs:	Unknown
Soil Vapor Impacts/COCs:	Unknown
Groundwater Impacts/COCs:	Unknown
Groundwater Depth/Flow Direction	Unknown
Site Distance from Subject property:	Approximately 350 feet southwest
Release Distance from Subject Property:	Approx. 600 feet southwest
Potential Impacts to Soil, Soil Vapor, or Groundwater at Subject Property:	**Unknown – See Table 5**

3.4 Review of State of California Geologic Energy Management Division (CalGEM) Records

A review of the CalGEM Online Mapping System indicates that no oil wells are located on the subject property or within 0.25 mile of the subject property (CalGEM 2022). However, there is one oil and gas well located adjacent to the north across Ventura Freeway and Ventura Boulevard to the subject property:

- API 0411105772, a plugged dry hole well operated by Shell Western E&P Inc.

3.5 Review of National Pipeline Mapping System Records

A review of the National Pipeline Mapping System (NPMS) online Public Map Viewer indicates that no natural gas transmission pipelines or hazardous liquid pipelines are located on the subject property or adjacent properties. Additionally, no pipeline-related accidents or incidents are mapped within 0.25 mile of the subject property (United States Department of Transportation 2022).

3.6 Review of California Statewide PFAS Investigation

Beginning in 2019, the SWRCB sent assessment requirements to property owners of sites that may be potential sources of PFAS. These sites currently include select airports, chrome plating facilities, Department of Defense (DoD) sites, landfills, publicly owned treatment works facilities, and bulk fuel storage terminals and refineries. According to the SWRCB, "PFAS are a large group of human-made substances that do not occur naturally in the environment and are resistant to heat, water, and oil" (SWRCB 2022).

Our Month October 19, 2022 review of the California Statewide PFAS Investigation online Public Map Viewer indicates that there are no current airport, chrome plating, DoD, landfill, or publicly owned treatment works facilities with PFAS orders listed as located within 0.5 mile of the subject property (SWRCB 2022). Based on our review of the SWRCB's March 12, 2021 Bulk Fuel Terminal/Refinery Investigative Order, the subject property is not listed on the Bulk Fuel Storage Terminals and Refineries List (Attachment 1 of the Order). In addition, none of the Bulk Fuel Storage Terminals or Refineries on the list are located within 0.5 mile of the subject property (SWRCB 2021).

Our October 19, 2022 review of the California Statewide Drinking Water System Quarterly Testing Results online Public Map Viewer indicates that perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were not detected in Vineyard Ave Estates MWC (Oxnard) drinking water wells located approximately 0.7 miles to the southeast of the subject property and tested quarterly as part of a PFAS investigative order (SWRCB 2022).

3.7 Records Review Information of Concern

Based on the information obtained during our records review documented above, the following conditions have the potential to impact the subject property:

Adjacent Properties

- 2001 Ventura Boulevard – LUST release site, soil and groundwater impacts
- 1889 East Ventura Boulevard – former gasoline station (2001-2002), unknown soil and groundwater impacts

4 Historical Records

The historical records review completed for this Phase I ESA includes aerial photographs, topographic maps, fire insurance maps, city directories, and building permits as detailed in the following sections. Copies of the historical resources reviewed are included in Appendix C. Table 3 provides a summary of the historical use information available for the subject property and adjacent properties.

4.1 Methodology

Review of Aerial Photographs

Aerial photographs from EDR's aerial photograph collection were obtained. In addition, a current aerial photograph from Google Earth was reviewed. The aerial photographs were reviewed on October 25, 2022.

Review of Historical Topographic Maps

Historical topographic maps from EDR's. The historical topographic maps were reviewed on January October 25, 2022.

Review of City Directory Listings

EDR was contracted to provide copies of city directory listings for the subject property. The city directory listings were reviewed on October 28, 2022.

Review of Fire Insurance Maps

As indicated in the attached report, fire insurance maps were not available for the subject property or adjacent properties.

Review of City of Oxnard Building Permit Records

Based on the sufficient amount of information obtained from the above sources, building permit records were not reviewed.

Other Historical Sources

A recent aerial photograph was taken from Google Earth.

4.2 Summary of Subject Property and Adjacent Historical Uses

Table 3 Historical Use of the Subject Property and Adjoining Properties

Year	Source	Subject Property Use	Adjoining Property Use
1904	Topographic Map (TM)	Undeveloped land	North (N): A primary highway trending east-west (Ventura Freeway) followed by undeveloped land East (E): Undeveloped land South (S): Undeveloped land and one structure West (W): A road followed by undeveloped land
1927	Aerial Photograph (AP)	Agricultural land (dry farming/ row crops) and several residential and farming structures and an unpaved access road. *__Bold__ listings indicate land uses with the potential to impact the subject property

4.3 Gaps in Historical Sources

Several gaps of greater than five years were identified in the historical records reviewed, from 1904 to 1927, 1927 to 1938, 1953 to 1959, 1961 to 1967, and from 1986 to 1993. These gaps are considered insignificant because the subject property use appears to be similar prior to and following the gaps.

4.4 Historical Use Information of Concern

Based on Table 3 above, the following historical uses of the subject property have the potential to impact the subject property:

- Agricultural land (dry farming/grazing/row crops/orchard): 1927-1985

Based on Table 3 above, the following historical uses of the (northern) adjacent property has the potential to impact the subject property:

- Gasoline Station: 2005-2019 (2001 Ventura Blvd.)
- Automotive repair: 1980-1996 (2001 East Ventura Blvd.)
- Gasoline Station: 1961 (2099 East Ventura Blvd.)

5 Interviews

Rincon performed interviews regarding the subject property and surrounding areas. The purpose of the interviews was to discuss current and historical conditions and to obtain information indicating the presence of RECs in connection with the subject property.

5.1 Interview Summary

Interview with Owner

An interview questionnaire was provided to the key site manager, Mark Ross, prior to the site reconnaissance. Mark Ross of SVM completed the Owner Questionnaire on October 24, 2022. A copy of the completed questionnaire is included in Appendix A. The following information is based on our review of the completed questionnaire with the property owner.

The property owner indicated the following:

- The subject property is currently in use as unimproved land.
- The subject property was formerly used for agricultural purposes.
- Northern adjoining properties include a freeway.
- Eastern adjoining properties include a retail center.
- Southern adjoining properties include an office.
- Western adjoining properties include Carmax.
- Sunbelt Enterprises, LLC obtained ownership of the subject property in 2004.
- The former owner of the subject property is unknown.
- A previous environmental assessment has been completed for the subject property by Rincon.
- A soil report from Geolabs is available for the subject property.
- A title report (PTR 10-2022) is available for the subject property.
- Pesticides or herbicides may be present at the subject property.
- There are no hazardous materials or petroleum products stored or used on the subject property.
- No hazardous wastes are generated at the subject property.

The property owner indicated that he is unaware of the presence of industrial drums, storage tanks (above or below ground), fill dirt, pits, ponds, lagoons, sumps, clarifiers, solvent degreasers, stained soil, vent pipes, fill pipes, or access ways, stained surfaces, private wells, non-public water systems, transformers, capacitors, or hydraulic equipment, records indicating the presence of polychlorinated biphenyls at the subject property. However the property owner indicated that he is aware of the presence of pesticides or herbicides from a previous report prepared by Rincon.

The property owner indicated that he is not aware of any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property. In addition, he is not aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products at the subject property.

Interview with Site Manager

An interview questionnaire was provided to the site contact and key site manager, Mark Ross. Who completed the questionnaire on October 24, 2022.

Interviews with Occupants

Because the subject property is currently vacant, no occupants were interviewed as part of this research effort.

Interviews with Local Government Officials

Based on the sufficient information obtained from various sources, no local government officials were interviewed as part of this Phase I ESA.

Interviews with Others

Rincon did not attempt to interview neighboring property owners or others as part of this Phase I ESA.

5.2 Interview Information of Concern

Based on the information obtained during interviews, the following concerns have the potential to impact the subject property:

- Potential presence of pesticides or herbicides at the subject property

6 Site Reconnaissance

Rincon performed a reconnaissance of the subject property on November 1, 2022.The purpose of the reconnaissance was to observe existing subject property conditions and to obtain information indicating the presence of RECs in connection with the subject property.

6.1 Methodology and Limiting Conditions

The site reconnaissance was conducted by:

1. Observing the subject property from public thoroughfares,
2. Observing the adjacent properties from public thoroughfares,
3. Observing the subject property from driveways, ((*dirt/paved*)) roads, and walking paths/sidewalks.

6.2 General Subject Property Information

Current Use of Property and Adjacent Properties

The subject property is currently vacant land bisected by Lockwood Road. Adjacent businesses/properties include a commercial mall, , commercial building with medical offices, Carmax auto dealer and service center, and a warehouse structure.

Past Use of Property and Adjacent Properties

Based on our site reconnaissance, past uses at the subject property and adjacent properties are not readily apparent.

Current or Past Uses in the Surrounding Areas

The subject property is surrounded by commercial and light industrial land uses as detailed in the Site Description section of this report. Past uses of the surrounding area are not readily apparent based on the site reconnaissance.

Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions

Geologic, hydrogeologic, hydrologic, and topographic information are as previously stated in the Physical Setting Sources section of this report.

General Description of Structures

The subject property is currently vacant land.

Roads

The United States 101 Freeway and Ventura Boulevard are located adjacent to the north of the subject property. Outlet Center Drive is adjacent to the east of the subject property. Lockwood Street traverses the subject property through the center.

Potable Water Supply

The City of Oxnard currently supplies potable water to the subject property.

Sewage Disposal System

The subject property is connected to the City of Oxnard sewer system.

Stormwater Runoff

Surface water runoff at the subject property appears to move towards two detention basins located at the northern and southern ends of the subject property. A large plastic pipe appears to mark the drainage point of the basin. Additionally, it appears that water drains to the sewer after sediment settles out of the stormwater. Silt fences and gravel bags are setup across the subject property and along the perimeter of the subject property.

6.3 Exterior Observations

Table 4 provides details regarding the exterior observations noted during the site reconnaissance. Photographs 1 through 10 are shown below.

Table 4 Exterior Observations

Item	Observed	Photograph Number	Description
Hazardous Substances and Petroleum Products in Connection with Identified Uses	No	Not Applicable (N/A)	*None observed*
Aboveground or Underground Storage Tanks	No	N/A	*None observed*
Odors	No	N/A	*None noted*
Pools of Liquid	No	N/A	*None observed*
Drums	No	N/A	*None observed*
Hazardous Substances and Petroleum Products Containers Not in Connection with Identified Uses	No	N/A	*None observed*
Unidentified Substance Containers	No	N/A	*None observed*
Indications of Polychlorinated Biphenyls (PCBs)	No	N/A	*None observed*
Heating/Cooling Systems	No	N/A	*None observed*
Stains or Corrosion	No	N/A	*None observed*
Drains, Clarifiers, and Sumps	Yes	6	One detention basin was observed in the northeastern center portion of the subject property. There appears to be

Item	Observed	Photograph Number	Description
			a drain in the detention basin and a PVC pipe with an unknown origin located in the vicinity of the detention basin.
Degreasers/Parts Washers		N/A	*None observed*
Pits, Ponds, and Lagoons	Yes	6	One detention basin was observed in the northeastern center portion of the subject property. There appears to be a drain in the detention basins.
Stained Soil or Stained Pavement		N/A	*None observed*
Stressed Vegetation		N/A	*None observed*
Solid Waste/Debris	No	N/A	*None observed*
Wastewater	No	N/A	*None observed*
Wells	No	N/A	*None observed*
Septic Systems/Effluent Disposal Systems	No	N/A	*None observed*
Soil Piles	No	N/A	*None observed*
Fill Material	No	N/A	*None observed*

Photographs 1-4

Photograph 2. Eastern adjacent commercial shopping mall

Photograph 3. Southern adjacent vacant land with soil piles

Photograph 4. Western adjacent Carmax

Photographs 5-8

Photograph 5. General view of subject property with homeless encampment in the northern portion

Photograph 6. Subject property detention basin with drain pipe

Photograph 7. Silt fence located on subject property

Photograph 8. PVC pipe with unknown origin

6.4 Site Reconnaissance Information of Concern

Based on the information obtained during the site reconnaissance, no hazardous material conditions with the potential to impact the subject property were identified.

7 Potential Vapor Migration

The database report and other resources were reviewed to identify nearby known or suspect contaminated sites that have the potential for contaminated vapor originating from the nearby sites to migrate beneath the subject property. Based on the ASTM E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, the following minimum search distances were initially used to determine if contaminated soil vapors from a nearby known or suspect contaminated site have the potential to be migrating beneath the subject property:

- 1/10 mile (528 feet) for petroleum hydrocarbons
- 1/3 mile (1,760 feet) for other contaminants of concern (COCs)

Groundwater depth and flow direction is also utilized to determine risk of vapor migration. Groundwater in the vicinity of the subject property is reportedly present between 11 and 20 feet and flows to the northwest (Section 3.1).

If known or suspect contaminated sites are located:

- On-site or adjacent to the subject property,
- Within 100 feet, or
- Within the above referenced distances from the subject property and upgradient or crossgradient to the subject property,

Then online resources are reviewed to determine the extent of the contaminated plume at those sites.

The following describes search distances for contaminated plumes of petroleum hydrocarbons (30 feet from the subject property) and other COCs (100 feet from the subject property). Per ASTM E2600-15, vapors associated with impacted soil or groundwater present within these distances have the potential to migrate beneath the subject property.

7.1 Petroleum Hydrocarbons

Known Petroleum Hydrocarbon Release Sites

Based on our review of the information gathered as part of this report, known on-site, adjacent, upgradient, and/or crossgradient release sites identified within 1/10 mile of the subject property are as follows:

Adjacent or Within 100 Feet

- 2101 Ventura Boulevard– Former heavy equipment rental and service facility, known LUST release site, soil and groundwater impacts, closed Ventura County Environmental Health case; soil, soil vapor, or groundwater plume or soil contamination identified 600 feet from subject property (northeast)

Suspect Petroleum Hydrocarbon Release Sites

Based on our review of the information gathered as part of this report, on-site, adjacent, upgradient, and/or crossgradient suspect release sites identified within 1/10 mile of the subject property are as follows:

Adjacent/Within 30 Feet

- 2001 East Ventura Boulevard – Former automotive repair (1980-1996) identified adjacent to the north of the subject property (200 feet), no known releases
- 2001 Ventura Boulevard – Current gas station (2005-present) identified adjacent to the north of the subject property (200 feet), no known releases
- 2099 East Ventura Boulevard – Former gas station (1961) identified adjacent to the north of the subject property, no known releases

Crossgradient

- 1889 Ventura Boulevard – Former gas station (unknown) identified 450 feet from subject property (northwest), no known releases

7.2 Other COCs

Known COC Release Sites

Based on our review of the information gathered as part of this report, known on-site, adjacent, upgradient, and/or crossgradient release sites identified within 1/3 mile of the subject property are as follows:

Crossgradient

- 2000 East Gonzales Road– Known Cleanup Program Site, pesticide soil impacts, closed Ventura County case; soil contamination identified 1,000 feet from subject property (southwest)
- 1950 Williams Drive – Former medical product manufacturing (1968-1986), known release site, DTSC no action required as of 2013, interior structure contamination by chromate compound identified 350 feet from subject property (northeast)

7.3 Vapor Intrusion Information of Concern

Based on the information above, there are no vapor intrusion threats from petroleum hydrocarbons within 30 feet or other COCs within 100 feet of the subject property.

8 Evaluation

Rincon has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 and E1527-21 for the subject property, located in Oxnard, California. Any exceptions to, or deletions from, this practice are described in the Deviations section of this report. This assessment has not revealed evidence of RECs in connection with the subject property, as detailed below in Table 5.

8.1 Significant Data Gaps

No significant data gaps were identified during the preparation of this report.

Table 5 Findings, Opinions, Conclusions, and Recommendations

No.	Finding	Opinion	Conclusion	Recommendations
1	Adjacent gasoline stations and automotive repair (2101 Ventura Boulevard and 2099 East Ventura Blvd.)	According to the historical resources reviewed, the northern adjacent property (2101 Ventura Boulevard) was formerly occupied by an automotive repair from 1980 to 1996. Additionally, a gasoline station has been present at the northern adjacent property from 2005 to 2019 and an additional gasoline station at 2099 East Ventura Boulevard in 1961. However, based on the distance from the subject property (200 feet), the lack of reported release, and the depth and direction of groundwater flow the adjacent gasoline station and former automotive repair are not expected to impact the subject property.	Notable finding	None
3	Former agricultural use of the subject property	According to the historical resources reviewed, the subject property appears to have been used for agricultural purposes as early as 1927. In general, it appears that the subject property remained used for agricultural purposes from approximately 1927 through approximately 1985. Agricultural land use is typically associated with the use of pesticides and arsenic. However, previous soil assessments completed for the subject property identified OCPs and arsenic and lead at levels below the residential ESLs. Therefore, no additional assessment is warranted.	De minimis	None

10 Signatures of Environmental Professionals

The qualified environmental professionals that are responsible for preparing the report include Ryan Thacher and Lisa Bestard. Their qualifications are summarized in the following section.

"We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Signature	November 16, 2022 Date
Ryan Thacher, PhD, PE Name	Director of Site Assessment and Remediation Title

Signature	November 16, 2022 Date
Lisa Bestard Name	Senior Environmental Scientist Title

11 Qualifications of Environmental Consultants

The environmental consultants responsible for conducting this Phase I ESA and preparing the report include Ryan Thacher, Julie Lynne Welch, and Janey Lange. Their qualifications are summarized below.

Environmental Professional Qualifications	X2.1.1 (2) (i) - Professional Engineer or Professional Geologist License or Registration, and 3 years of full-time relevant experience	X2.1.1 (2) (ii) - Licensed or certified by the Federal Government, State, Tribe, or U.S. Territory to perform environmental inquiries	X2.1.1 (2) (iii) – Baccalaureate or Higher Degree from and accredited institution of higher education in a discipline of engineering or science and the equivalent of 5 years of full-time relevant experience	X2.1.1 (2) (iii) – Equivalent of 10 years of full-time relevant experience
Ryan Thacher	PE		PhD Environmental Engineering	12 years
Lisa Bestard			BA Biology	9 years
Jon Bridgeman			BA Earth and Environmental Science	3 years
Janey Lange			BA Environmental Studies	< 1 year

Dr. Ryan Thacher, PE, is a Director of Site Assessment and Remediation with Rincon Consultants. He holds a Bachelor of Science degree in Chemical Engineering from the University of California, Santa Barbara and a Doctorate degree in Environmental Engineering from the University of Southern California. He has 12 years of experience conducting research related to chemical contaminant fate and transport in soil and groundwater and developing and implementing site assessments and remediation for contaminated sites in California, including the preparation of Phase I and Phase II Environmental Site Assessments. Dr. Thacher is a Professional Engineer (#87757) with the State of California.

Lisa Bestard is a Senior Environmental Scientist with Rincon Consultants. She holds a Bachelor of Arts degree in Biology from University of San Diego, San Diego, California. Ms. Bestard has extensive experience performing Due Diligence Phase I and Phase II ESAs and various remediation projects and providing soil and waste management services. She has 21 years of experience conducting research, assessment, and remediation projects in California. Ms. Bestard's responsibilities at Rincon include implementation of site assessments and development of site remediation programs within the Environmental and Earth Systems Group.

Jon Bridgeman is an Environmental Scientist with Rincon Consultants. He holds a Bachelor of Arts degree in Earth and Environmental Science from the University of California Los Angeles, and a Master of Science degree in Earth and Environmental Science from Tulane University. Mr. Bridgeman has over three years of consulting experience including site visits/inspections, soil and groundwater assessments, and surficial sampling in sensitive wetlands and rivers, as well as groundwater monitoring. His experience includes Phase I ESA site visits, soil remediation projects, and wetland, coastal, and riverine sampling projects. Jon has assisted in the implementation of

Phase I ESAs, and development of watershed monitoring surveys, beneficial use analysis reports, and stormwater technical reports.

Janey Lange is an Environmental Scientist with Rincon Consultants. She holds a Bachelor of Arts degree in Environmental Studies from the University of San Diego. Ms. Lange's responsibilities at Rincon include implementation of Phase I ESAs and preparation of other environmental reports for a variety of commercial, rural, and industrial properties.

User Questionnaire

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

To qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

We respectfully request that you fill out this form and email it to Janey Lange at jlange@Rinconconsultants.com within one week from the date of this transmittal.

Project Description

1. **Why is the Phase I ESA required or being performed?**

   SALE AND DEVELOPMENT OF THE SITE

2. **What type of property transaction is planned? (i.e. sale, purchase, exchange)**

   SALE

3. **What is the entire site address?**

   2151 LOCKWOOD STREET, OXNARD CA 93036

4. **What is the Assessor's Parcel Number(s)?**

   APN: 213-0-090-275

5. **Are any considerations beyond the requirements of Practice E1527 to be considered? (i.e. lien search, asbestos & lead based paint, radon)**

   NO

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

6. **Identify all parties who will rely on the Phase I report.**

SVM-LOCKWOOD, LLC
CANFIELD DEVELOPMENT
SUNBELT ENTERPRISES, LLC

7. **Identify the Site Manager/Contact and how the contact can be reached.**

Mark Ross (818) 667-7512

8. **Identify the Site Owner and how the owner can be reached.**

SAME AS ABOVE

9. **Do you have copies of any available prior environmental site assessment reports, documents, correspondence, etc., concerning any other knowledge or experience with the property that may be pertinent to the environmental professional (i.e. lien search, title report, chain of title, previous Ph Iand II ESAs, Environmental Impact Studies)?**

RINCON

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

Subject Property Information

1. **Did a search of recorded land title records (or judicial records, where appropriate) identify any environmental liens filed or recorded against the property?**

Please mark the box with the most appropriate response:

- [■] I **have not** reviewed the records and **do not know** if there are any filed or recorded environmental liens.
- [ ] I **have** reviewed the records, and **No, there aren't any** filed or recorded environmental liens.
- [ ] I **have** reviewed the records, and **Yes, there are** environmental liens. Explain:

2. **Did a search of recorded land title records (or judicial records, where appropriate) identify any activity and land use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?**

Please mark the box with the most appropriate response:

- [■] I **have not** reviewed the records and **do not know** if there are any filed/recorded AULs or any AULs in place at the site.
- [ ] I **have** reviewed the records, and **No, there aren't any** filed/recorded AULs or any AULs in place at the site.
- [ ] I **have** reviewed the records, and **Yes, there are** AULs filed, recorded, and/or in place at the site. Explain:

3. **Does the Title Report provide any information pertaining to environmental cleanup liens or activity and use limitations (AULs) for the subject property?**

Please mark the box with the most appropriate response:

- [■] I **have not** reviewed the Title Report and **do not know** if it provides environmental cleanup liens or AULs information.
- [ ] I **have** reviewed the Title Report, and **No, it does not provide** environmental cleanup liens or AULs information..
- [ ] I **have** reviewed the Title Report, and **Yes, it does provide** environmental cleanup liens or AULs information. Explain:

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

4. **Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?**

Please mark the box with the most appropriate response:

☐ **No,** I **do not** have any specialized knowledge and/or experience related to the property or nearby properties.

☒ Yes, I **do** have specialized knowledge and/or experience related to the property or nearby properties. Explain:

ADJACENT PARCELS SITE WORK AND SALE.

5. **As the user of this ESA, based on your knowledge and experience related to the property, are you aware of any information pertaining to a reduction in value for the subject property relative to any known environmental issues?**

Please mark the box with the most appropriate response:

☒ **No,** I **do not** have any information about a reduction in property value relative to environmental issues.

☐ **Yes**, I **do** have information about a reduction in property value relative to environmental issues. Explain:

6. **Does the purchase price being paid for this property reasonably reflect the fair market value of the property?**

Please mark the box with the most appropriate response:

☐ **Yes**, I **do** believe the purchase price being paid for this property reasonably reflects the fair market value of the property. Skip to question #7.

☐ **No**, I **do not** believe the purchase price being paid for this property reasonably reflects the fair market value of the property. Proceed to question #6a.

   a. **If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? (40 CFR 312.29)**

      Please mark the box with the most appropriate response

      ☐ **No**, I **have not** considered the idea that known or believed contamination at the site has caused the lower purchase price.

      ☐ **Yes**, I **have** considered the idea that known or believed contamination at the site has caused the lower purchase price. Explain:

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

7. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:

Please mark the box with the most appropriate response:

a. Do you know the past uses of the property?

- [■] I **do not** know.
- [ ] I **do** know. Explain:

b. Do you know of specific chemicals are present or once were present at the property?

- [■] I **do not** know.
- [ ] I **do** know. Explain:

c. Do you know of any spills or other chemical releases that have taken place at the property?

- [■] I **do not** know.
- [ ] I **do** know. Explain:

d. Do you know of any environmental cleanups have taken place at the property?

- [■] I **do not** know.
- [ ] I **do** know. Explain:

8. Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

Please mark the box with the most appropriate response:

- [■] **No**, I do not know and/or do not have any experience with any obvious indicators that point to the presence or likely presence of contamination at the property.
- [ ] **Yes**, I do know of and/or do have experience with obvious indicators that point to the presence or likely presence of contamination at the property. Explain:

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

9. Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the site?

Please mark the box with the most appropriate response:

- [■] **No**, I am not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the site.
- [ ] **Yes**, I am aware of pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site. Explain:

10. Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site?

Please mark the box with the most appropriate response:

- [■] **No**, I am not aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site.
- [ ] **Yes**, I am aware of pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site. Explain:

11. Are you aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?

Please mark the box with the most appropriate response:

- [■] **No**, I am not aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products..
- [ ] **Yes**, I am aware of a notice, or notices, from a government entity (or multiple government entities) regarding a possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products. Explain:

Property Owner Interview Questionnaire

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

This questionnaire should be completed by the current property owner or a designated representative of the current property owner. We respectfully request that you fill out and return this form via fax at (760) 918-9444 or email to us at jlange@rinconconsultants.com within one week from the date of this transmittal.

---

1. Was the subject property or any adjoining property ever used as:

- ☐ an airport
- ☐ a fire training area
- ☐ a gasoline or other fueling station
- ☐ a motor vehicle repair facility
- ☐ a commercial printing facility
- ☐ a dry cleaners
- ☐ a photo developing laboratory
- ☐ a metal plating facility
- ☐ a farm
- ☐ a Department of Defense facility or training area
- ☐ a junkyard or landfill
- ☐ a waste treatment, storage, disposal, processing or recycling facility
- ☐ a machine shop
- ☐ a manufacturing facility
- ☐ an oil production facility (including oil wells)
- ☐ any other industrial use

Please check all that apply above and describe:

NO

2. Please describe the current land uses of the subject property and those surrounding your property. Please indicate all businesses/companies located on property.

2a. Current Use of Subject Property:

Please check all that apply:	Please include a brief description of current operation:
☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ■ Other- Please Describe	UNIMPROVED LAND

2b. Current Use of Northern Adjoining Properties:

Please check all that apply:	Please include a brief description of current operation:
☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ■ Other- Please Describe	FREEWAY

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

2c. Current Use of Eastern Adjoining Properties:

Please check all that apply:	Please include a brief description of current operation:
■ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ☐ Other- Please Describe	RETAIL CENTER

2d. Current Use of Southern Adjoining Properties:

Please check all that apply:	Please include a brief description of current operation:
■ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ☐ Other- Please Describe	OFFICE

2e. Current Use of Western Adjoining Properties:

Please check all that apply:	Please include a brief description of current operation:
■ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ☐ Other- Please Describe	CAR MAX

3. Please describe the previous land uses of your property and those surrounding your property. Include property ownership and dates of operation if known.

3a. Previous Use of Subject Property:

Please check all that apply:	Please include a brief description of current operation:
☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ■ Other- Please Describe	RAW LAND - FARMING

3b. Previous Use of Northern Adjoining Properties:

Please check all that apply:	Please include a brief description of current operation:
☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ■ Other- Please Describe	DON'T KNOW

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

3c. Previous Use of Eastern Adjoining Properties:

Please check all that apply:	Please include a brief description of current operation:
☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ■ Other- Please Describe	DON'T KNOW

3d. Previous Use of Southern Adjoining Properties:

Please check all that apply:	Please include a brief description of current operation:
☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ■ Other- Please Describe	DON'T KNOW

3e. Previous Use of Western Adjoining Properties:

Please check all that apply:	Please include a brief description of current operation:
☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ■ Other- Please Describe	DON'T KNOW

4. Who is the current owner of the property?

SUNBELT ENTERPRISES, LLC

5. When did current ownership begin?

2004

6. What is the age of the on-site facility?

N/A

7. Who is the previous owner of the property?

DON'T KNOW

8. Please indicate the property's current:

Electrical service provider	SCE
Natural Gas service provider	SO CAL GAS
Water service provider	CITY OF OXNARD
Sewer service provider	CITY OF OXNARD
Solid waste hauler	CITY OF OXNARD

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

9. **To the best of your knowledge, has your facility previously or does your facility currently store or use any of the following in individual containers larger than 5 gallons in volume or 50 gallons in the aggregate? (if Yes or Unknown, include how many, type, and size)**

☐ Damaged or discarded automotive or industrial batteries	DON'T KNOW
☐ Paints	
☐ Oils or solvents	
☐ Motor vehicle fleet	
☐ Pesticides or herbicides	
☐ Other chemicals or hazardous substances	

10. **Please indicate any wastes generated at the facility:**

Hazardous Waste	Quantity	Disposal Method
N/A		

11. **Are there currently or to the best of your knowledge have there been previously, any industrial drums (typically 55 gallon) or sacks of chemicals located on the property or at the facility?**

☐ Yes ■ No ☐ Unknown	If Yes or Unknown, please describe:

12. **Are there currently or to the best of your knowledge have there been previously, any evidence of fill dirt having been brought onto the property that originated from a contaminated site or that is of an unknown origin?**

☐ Yes ■ No ☐ Unknown	If Yes or Unknown, please describe:

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

13. Are there currently or to the best of your knowledge have there been previously, any pits, ponds or lagoons located on the property in connection with waste treatment or waste disposal?

☐ Yes ☒ No ☐ Unknown	If Yes or Unknown, please describe:

14. Are there currently or to the best of your knowledge have there been previously, any sumps, clarifiers, or solvent degreasers on the property?

☐ Yes ☒ No ☐ Unknown	If Yes or Unknown, please describe:

15. Are there currently or to the best of your knowledge have there been previously, any stained soil on the property?

☐ Yes ☒ No ☐ Unknown	If Yes or Unknown, please describe:

16. Are there currently or to the best of your knowledge have there been previously, any storage tanks (above or below ground) located on the property?

☐ Yes ☒ No ☐ Unknown	If Yes or Unknown, please describe:

17. Are there currently or to the best of your knowledge have there been previously, any vent pipes, fill pipes, or access ways (etc.) indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?

☐ Yes ☒ No ☐ Unknown	If Yes or Unknown, please describe:

18. If the property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system or has the well been designated as contaminated by any government agency?

☐ Yes ☒ No ☐ Unknown	If Yes or Unknown, please describe:

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

19. Are there currently or to the best of your knowledge have there been previously, any flooring, drains, or walls located within the facility that are stained by substances other than water, or are emitting foul odors?

☐ Yes ■ No ☐ Unknown	If Yes or Unknown, please describe:

20. To the best of your knowledge has your facility previously or does your facility currently, discharge wastewater on or adjacent to the property other than storm water into a sanitary sewer system?

☐ Yes ■ No ☐ Unknown	If Yes or Unknown, please describe:

21. Have any of the following ever been dumped above grade, buried and/or burned on the property? (please check all that apply and describe if possible)

☐ Hazardous substances	NO KNOWLEDGE
☐ Petroleum products	
☐ Unidentified waste materials	
☐ Tires	
☐ Automotive or industrial batteries	
☐ Other waste materials (please describe)	

22. Are there currently or to the best of your knowledge have there been previously, a transformer, capacitor or any hydraulic equipment on the property?

☐ Yes ■ No ☐ Unknown	If Yes or Unknown, please describe:

23. Are there currently or to the best of your knowledge have there been previously any records indicating the presence of PCBs?

☐ Yes ■ No ☐ Unknown	If Yes or Unknown, please describe:

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

24. Are there currently or to the best of your knowledge have there been previously any records indicating the presence of pesticides or herbicides?

■ Yes ☐ No ☐ Unknown	If Yes or Unknown, please describe: PREVIOUS REINCON REPORT

25. Do you have any knowledge of environmental liens that may have been recorded against the property or governmental notification relating to past or recurrent violations of environmental laws with respect to the property or any facility located on the property?

☐ Yes ■ No ☐ Unknown	If Yes or Unknown, please describe:

26. Do you have any knowledge of activity and use limitations (AULs) such as engineering controls, deed restrictions, land use restrictions, or institutional controls that may have been recorded against the property?

☐ Yes ■ No ☐ Unknown	If Yes or Unknown, please describe:

27. Have you been informed of the past or current existence of hazardous substances, petroleum products, or environmental violations with respect to the property or any facility located on the property?

☐ Yes ■ No ☐ Unknown	If Yes or Unknown, please describe:

28. Do you have any knowledge of any environmental site assessments of the property or facility?

■ Yes ☐ No ☐ Unknown	If Yes or Unknown, please describe: RINCON

29. Do you know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release of any hazardous substances or petroleum products involving the property by any owner or occupant of the property?

☐ Yes ■ No ☐ Unknown	If Yes or Unknown, please describe:

Rincon Project Number: 22-13677

Site Name and Full Address: APN 213-009-101-5, Oxnard, California

30. Are there any site-specific geotechnical or geologic reports available for the subject property?

☒ Yes ☐ No ☐ Unknown	If Yes or Unknown, please describe: SOIL REPORT - GEOLABS

31. Is there a Title Report available for the subject property?

☒ Yes ☐ No ☐ Unknown	If Yes or Unknown, please describe: PTR 10-2022

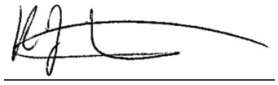
UPDATED **PRELIMINARY REPORT**

In response to the application for a policy of title insurance referenced herein, ***Fidelity National Title Company*** *hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.



This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Fidelity National Title Insurance Company, a Florida Corporation.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

EXCEPTIONS
(Continued)

18. Please be advised that our search did not disclose any open Deeds of Trust of record. If you should have knowledge of any outstanding obligation, please contact the Title Department immediately for further review prior to closing.

19. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

20. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

    The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

    The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

PLEASE REFER TO THE "INFORMATIONAL NOTES" AND "REQUIREMENTS" SECTIONS WHICH FOLLOW FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION.

END OF EXCEPTIONS

REQUIREMENTS SECTION

1. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below:

   Limited Liability Company: Sunbelt Enterprises, LLC

   a) A copy of its operating agreement, if any, and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.

   b) If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendments thereto with the appropriate filing stamps.

   c) If the Limited Liability Company is member-managed, a full and complete current list of members certified by the appropriate manager or member.

   d) A current dated certificate of good standing from the proper governmental authority of the state in which the entity is currently domiciled.

   e) If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

   f) If Limited Liability Company is a Single Member Entity, a Statement of Information for the Single Member will be required.

   g) Each member and manager of the LLC without an Operating Agreement must execute in the presence of a notary public the Certificate of California LLC (Without an Operating Agreement) Status and Authority form.

2. Unrecorded matters which may be disclosed by an Owner's Affidavit or Declaration. A form of the Owner's Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

   The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

END OF REQUIREMENTS

INFORMATIONAL NOTES SECTION

1. None of the items shown in this report will cause the Company to decline to attach CLTA Endorsement Form 100 to an Extended Coverage Loan Policy, when issued.

2. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

3. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

4. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

5. The Company and its policy issuing agents are required by Federal law to collect additional information about certain transactions in specified geographic areas in accordance with the Bank Secrecy Act. If this transaction is required to be reported under a Geographic Targeting Order issued by FinCEN, the Company or its policy issuing agent must be supplied with a completed ALTA Information Collection Form ("ICF") prior to closing the transaction contemplated herein.

   To protect the private information contained in the attached form and photo ID, please return via a secured method.

6. Due to the special requirements of SB 50 (California Public Resources Code Section 8560 et seq.), any transaction that includes the conveyance of title by an agency of the United States must be approved in advance by the Company’s State Counsel, Regional Counsel, or one of their designees.

7. Note: There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

END OF INFORMATIONAL NOTES

Alex Lee/ng1

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the filed rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for such discount. These discounts only apply to transactions involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

Not all discounts are offered by every FNF Company. The discount will only be applicable to the FNF Company as indicated by the named discount.

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Effective August 1, 2021

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.* loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;

Copyright © 2021. Fidelity National Financial, Inc. All Rights Reserved

- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We may share your Personal Information with affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information
If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you without your consent.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 714-2710 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.
For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Copyright © 2021. Fidelity National Financial, Inc. All Rights Reserved

Your Consent To This Privacy Notice; Notice Changes

By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The Privacy Notice's effective date will show the last date changes were made. If you provide information to us following any change of the Privacy Notice, that signifies your assent to and acceptance of the changes to the Privacy Notice.

Accessing and Correcting Information; Contact Us

If you have questions, would like to correct your Personal Information, or want to opt-out of information sharing for affiliate marketing, visit FNF's Opt Out Page or contact us by phone at (888) 714-2710 or by mail to:

ATTACHMENT ONE (Revised 05-06-16)

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

{Except as provided in Schedule B - Part II,{ t{or T}his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

{PART I

{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.}

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:}

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY – ASSESSMENTS PRIORITY (04-02-15)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

OWNER'S DECLARATION

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)

   a. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at _____, further described as follows: See Preliminary Report/Commitment No. 00049386-017-TEW-AL for full legal description (the "Land").

   b. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at _____, further described as follows: See Preliminary Report/Commitment No. 00049386-017-TEW-AL for full legal description (the "Land").

2. (Fill in the applicable paragraph and strike the other)

   a. During the period of six months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.

   b. During the period of six months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Fidelity National Title Company against any and all claims arising therefrom.

3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.

4. Except as shown in the above-referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, regular assessments, special assessments, periodic assessments or any assessment from any source, claims of lien, special assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records. There are no violations of the covenants, conditions and restrictions as shown in the above-referenced Preliminary Report/Commitment.

5. The Land is currently in use as _____; _____occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____

6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.

7. There are no outstanding options to purchase or rights of first refusal affecting the Land.

This declaration is made with the intention that Fidelity National Title Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on ____ at _____.

Subject: **Phase I Environmental Site Assessment**
APN 213-009-010-5, Oxnard, California

Dear Mr. Brock:

This report presents the findings of a Phase I Environmental Site Assessment (ESA) completed by Rincon Consultants, Inc. for the property located on Lockwood Street, assigned Assessor's Parcel Number (APN) 213-009-010-5, Oxnard, California. The Phase I ESA was performed in accordance with our proposal and contract dated June 25, 2014.

The accompanying report presents our findings and provides an opinion regarding the presence of recognized environmental conditions. Our work program for this project is intended to meet the guidelines outlined in the American Society for Testing and Materials (ASTM), Standard Practice for Environmental Site Assessments: *Phase I Environmental Site Assessment Process* (ASTM Standard E-1527-13). Our scope of services, pursuant to ASTM practice, did not include any inquiries with respect to asbestos containing building materials, biological agents, cultural and historic resources, ecological resources, endangered species, health and safety, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, industrial hygiene, lead-based paint, lead in drinking water, mold, radon, regulatory compliance, wetlands, or high voltage power lines.

Thank you for selecting Rincon for this project. If you have any questions, or if we can be of any future assistance, please contact us.

Sincerely,
RINCON CONSULTANTS, INC.

EXECUTIVE SUMMARY

This report presents the findings of a Phase I Environmental Site Assessment (ESA) for the property located on Lockwood Street and identified as Assessor's Parcel Number (APN) 213-009-010-5, in Oxnard, California (Figure 1, Vicinity Map). The subject property is currently vacant land.

Rincon Consultants performed a reconnaissance of the subject property on July 10, 2014. The purpose of the reconnaissance was to observe existing subject property conditions and to obtain information indicating the presence of recognized environmental conditions in connection with the subject property. The subject property was observed to be vacant, unpaved land. Rincon observed what appeared as an approximately 4-inch diameter, vertical PVC pipe filled with concrete within an 8-inch PVC pipe, located on the central-western portion of the subject property. The property owner was not aware of the purpose of the PVC pipe. Rincon observed scattered plastic and paper litter, concrete material, asphalt, glass, household furniture, and clothing and wood debris located throughout the subject property. No obvious evidence of hazardous waste disposal at the subject property was observed. Therefore, the solid waste and debris is considered *de minimis*.

The subject property is located in an area that is primarily developed with educational and commercial land uses. Properties in the vicinity of the subject property include Cal Lutheran University, a commercial shopping center, and medical offices to the east, a medical plaza to the south, commercial businesses to the west, and US Highway 101 to the north.

EDR was contracted to provide a database search of public lists of sites that generate, store, treat or dispose of hazardous materials or sites for which a release or incident has occurred. The EDR search was conducted for the subject property and included data from surrounding sites within a specified radius of the property. The subject property was not listed on the databases reviewed. Two properties adjacent to the west of the subject property were listed on regulatory databases. Teleflex Control Systems/Becton Dickinson & Co at 1950 Williams Drive was listed on the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS), Resource Conservation and Recovery Act (RCRA) Small Quantity Generator (SQG), and underground storage tank (UST) databases. Chromate blooms were reported on basement walls and floors of the facility in the 1990s, with the last known appearance of the blooms in 1998. As of 2013, the USEPA and DTSC categorized the site status as "No Further Remedial Action Planned (NFRAP)" and "No Action Required." Based on the nature of the issues reported at this property (interior chromate blooms) and the status (no further action required), this facility is not expected to impact the subject property. Carmax No. 6014/Cars 101 at 2001 Lockwood Street was listed on the RCRA SQG and aboveground storage tank (AST) databases. Based on the fact this facility is not listed on databases reporting unauthorized releases of hazardous materials and wastes, this facility is not expected to impact the subject property. No unauthorized release sites reported to be located within one-eighth mile of the subject property and interpreted to be upgradient were listed in the databases searched by EDR.

Historical sources reviewed as part of the Phase I ESA included aerial photographs, topographic maps, and city directories. The records reviewed indicate that the subject property

was developed with a ranch and used for agricultural purposes from 1904 to 1989. The subject property has been vacant land from 1994 to the present.

Based on the findings of this Phase I ESA, it is our opinion that there is one potential Recognized Environmental Condition (REC) in connection with the property as follows:

Potential Recognized Environmental Condition

1. Historical agricultural land use at the subject property

Due to the historic use of the subject property for agricultural purposes, there is a potential that the subject property could be affected with pesticides, or other chemicals used routinely in agricultural production. To determine if pesticides are present in the soil beneath the site we recommend collecting shallow soil samples from the subject property and analyzing these samples for pesticides and arsenic.

While the presence of the PVC pipe observed on the subject property is likely considered *de minimis*, the purpose of the pipe should be determined.

INTRODUCTION

This report presents the findings of a Phase I ESA conducted for the property located on Lockwood Street and identified as APN 213-009-010-5 in Oxnard, California. The Phase I ESA was performed by Rincon Consultants, Inc. for Sunbelt Enterprises in general conformance with ASTM E 1527-13 and our proposal dated June 25, 2014. The following sections present our findings and provide our opinion as to the potential presence and impact of environmental site conditions.

PURPOSE

The purpose of this Phase I ESA was to assess the environmental conditions of a property, taking into account commonly and reasonably ascertainable information and to qualify for Landowner Liability Protections under the Brownfields Amendments to CERCLA Liability.

A recognized environmental condition (REC) is defined pursuant to ASTM E 1527-13 as,

> *"the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; 3) under conditions that pose a material threat of a future release to the environment".*

A Controlled REC is defined pursuant to ASTM E 1527-13 as,

> *"a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a*

controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report".

A Historical REC is defined pursuant to ASTM E 1527-13 as,

"a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by regulatory authority, without subjecting the property to any required controls (for example, use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition".

A de minimis condition is defined pursuant to ASTM E 1527-13 as,

"*a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions*".

DETAILED SCOPE OF SERVICES

The scope of services conducted for this study is outlined below:

- Perform a reconnaissance of the site to identify obvious indicators of the existence of hazardous materials.
- Observe adjacent or nearby properties from public thoroughfares in an attempt to see if such properties are likely to use, store, generate, or dispose of hazardous materials.
- Obtain and review an environmental records database search from Environmental Data Resources (EDR), Inc. to obtain information about the potential for hazardous materials to exist at the subject property or at properties located in the vicinity of the subject property.
- Review files for the subject property and immediately adjacent properties as identified in the EDR report, as applicable.
- Review the current U.S. Geological Survey (USGS) topographic map to obtain information about the subject property's topography and uses of the subject property and properties in the vicinity of the subject property.
- Review additional pertinent record sources (e.g., California Division of Oil and Gas records, online databases of hazardous substance release sites), as necessary, to identify the presence of RECs at the subject property.
- Review reasonably ascertainable historical resources (e.g., aerial photographs, topographic maps, fire insurance maps, city directories) to assess the historical land use of the subject property and adjacent properties.

- Provide a property owner interview questionnaire to the property owner or a designated subject property representative identified to Rincon by Sunbelt Enterprises, LLC.
- Provide a user interview questionnaire to a representative of Sunbelt Enterprises, LLC, the user of the Phase I ESA.
- Conduct interviews with other property representatives (e.g., key site manager, occupants), as applicable.
- Review Client-provided information (e.g., previous environmental reports, title documentation), as applicable.

Consistent with ASTM E 1527-13 practice, our work scope did not include any inquiries with respect to asbestos containing building materials, biological agents, cultural and historic resources, ecological resources, endangered species, health and safety, indoor air quality unrelated to release of hazardous substances or petroleum products into the environment, industrial hygiene, lead-based paint, lead in drinking water, mold, radon, regulatory compliance, wetlands, or high voltage power lines.

SIGNIFICANT ASSUMPTIONS, LIMITATIONS, DEVIATIONS, EXCEPTIONS, SPECIAL TERMS AND CONDITIONS

We understand that Sunbelt Enterprises, LLC has requested this assessment and will use the assessment to provide information for insurance purposes. No other use or disclosure is intended or authorized by Rincon. Also, this report is issued with the understanding that it is to be used only in its entirety. It is intended for use only by Sunbelt Enterprises, LLC, and no other person or entity may rely upon the report without the express written consent of Rincon.

This work is intended to adhere to good commercial, customary, and generally accepted environmental investigation practices for similar investigations conducted at this time and in this geographic area. No guarantee or warranties, expressed or implied are provided. The findings and opinions conveyed in this report are based on findings derived from a site reconnaissance, review of an environmental database report, specified regulatory records and historical sources, and comments made by interviewees. This report is not intended as a comprehensive site characterization and should not be construed as such. Standard data sources relied upon during the completion of Phase I ESAs may vary with regard to accuracy and completeness. Although Rincon believes the data sources are reasonably reliable, Rincon cannot and does not guarantee the authenticity or reliability of the data sources it has used. Additionally, pursuant to our contract, the data sources reviewed included only those that are practically reviewable without the need for extraordinary analysis.

Rincon has not found evidence that hazardous materials or petroleum products exist at the subject property at levels likely to warrant mitigation. Rincon does not under any circumstances warrant or guarantee that not finding evidence of hazardous materials or petroleum products means that hazardous materials or petroleum products do not exist on the subject property. Additional research, including surface or subsurface sampling and analysis, can reduce the Sunbelt Enterprises, LLC 's risks, but no techniques commonly employed can eliminate these risks altogether. In addition, in accordance with our authorized work scope and contract, no attempt was made to check for the presence of asbestos containing building

materials, biological agents, cultural and historic resources, ecological resources, endangered species, health and safety, indoor air quality unrelated to release of hazardous substances or petroleum products into the environment, industrial hygiene, lead-based paint, lead in drinking water, mold, radon, regulatory compliance, wetlands, or high voltage power lines.

USER RELIANCE

This Phase I ESA was prepared for use solely and exclusively by Sunbelt Enterprises, LLC. This report shall not be relied upon by or transferred to any other party without the express written authorization of Rincon Consultants.

SITE DESCRIPTION

Location

The subject property is an approximately 11-acre property located north and south of Lockwood Street, west of Outlet Center Drive, in Oxnard, California (Figure 2, Site Map). The subject property has been assigned APN 213-009-010-5.

Subject Property and Vicinity General Characteristics

The subject property is currently vacant, unpaved land. The subject property is located in an area that is primarily developed with educational and commercial land uses. Properties in the vicinity of the subject property include Cal Lutheran University, a commercial shopping center, and medical offices to the east, a medical plaza to the south, commercial businesses to the west, and Highway 101 to the north. The current adjacent land uses are described in Table 1 and depicted on Figure 3, Adjacent Land Use Map.

Table 1 - Current Uses of Adjacent Properties

Area	Use
Northern Properties	Highway 101
Eastern Properties	Cal Lutheran University (2201 Outlet Center Drive), commercial shopping center (The Palms), and Women and Children Medical Group (2000 Outlet Center Drive)
Western Properties	CarMax – used car sales (2000 & 2001 Lockwood Street); Lockwood Street and dirt alley
Southern Properties	Palms Medical Plaza (1901 Outlet Center Drive)

Descriptions of Structures, Roads, Other Improvements on the Site

The subject property is currently vacant land, and no structures were observed onsite during the site reconnaissance. Access to the subject property is available from a driveway located on Lockwood Street.

Water and sewer service is provided by the City of Oxnard. Southern California Edison (SCE) provides electrical service, and the Southern California Gas Company provides natural gas service. Solid waste collection and disposal services are provided by the City of Oxnard.

USER PROVIDED INFORMATION

As described in ASTM E 1527-13 Section 6, the user of this Phase I ESA was interviewed for actual knowledge pertaining to the subject property to help identify recognized environmental conditions in connection with the property. Ms. Tanya Reichenbach, Property Manager for Sunbelt Enterprises LLC, completed the User Questionnaire as provided by ASTM Appendix X3, on July 1, 2014. A copy of the completed questionnaire is included as Appendix 1. The following information is based on our review of the completed questionnaire.

Based on our review of the completed questionnaire, the user did not review the following sources of information and is unaware of information regarding the following:

- recorded land title records (or judicial records, where appropriate) that identify any environmental liens filed or recorded against the property
- recorded land title records (or judicial records, where appropriate) that identify any activity and land use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law
- Title Report that identifies information pertaining to environmental cleanup liens or AULs for the subject property
- specialized knowledge or experience related to the property or nearby properties
- reduction in value for the subject property relative to any known environmental issues
- commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases
- obvious indicators that point to the presence or likely presence of releases at the property
- pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the site
- pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site
- notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

RECORDS REVIEW

PHYSICAL SETTING SOURCES

Topography

The current USGS topographic map (Oxnard Quadrangle, 1949, photorevised 1967) indicates that the subject property is situated at an elevation of approximately 80 feet above mean sea level with generally flat topography. The site vicinity generally slopes downward toward the south.

Geology and Hydrogeology

The project site is located within the Transverse Ranges Geomorphic Province, which is characterized by east-west trending structural features in contrast to the dominant northwest-southeast structural trend of California. The site is situated in the Oxnard Plain Basin, a large structural basin within the Province.

Site Geology

According to the Geologic Map of the Oxnard 7.5 Minute Quadrangle (Clahan, 2003), the subject property is underlain by Holocene alluvial deposits, which are described as deposited as overbank material and composed of "unconsolidated, poorly sorted, clayey sand with some gravel."

Regional Groundwater Occurrence and Quality

The project site is located within the Oxnard Plain Pressure Basin, part of the Oxnard Plain Ground Water Basin. The Oxnard Plain Pressure Basin consists of three distinct hydrogeologic units (from top to bottom) - the semi-perched aquifer and clay cap, the Upper Aquifer System, and the Lower Aquifer System. The semi-perched aquifer extends from the base of developed soil horizons to an average depth of approximately 75 feet over most of the Oxnard Plain. This aquifer consists primarily of geologically recent stream-deposited sands and gravels, with minor silt and clay interbeds. The semi-perched zone is generally of poor water quality and limited quantity. The clay cap underlies the semiperched aquifer zone and acts as an aquitard for the underlying Upper Aquifer System. The Upper and Lower Aquifer Systems have historically been used for water supply although water quality varies throughout the Basin as a result of sea water intrusion. Regionally groundwater flow is toward the south-southwest.

The State Water Resources Control Board (SWRCB) GeoTracker database was reviewed for information regarding depth to groundwater and groundwater flow direction at nearby unauthorized release facilities. According to a December 2009 case closure summary prepared by the Ventura County Department of Environmental Health for an unauthorized release located at 2101 Ventura Boulevard (approximately 365 feet northeast of the subject property), depth to groundwater was approximately 11 to 20 feet below grade, with a direction of groundwater flow to the northwest.

STANDARD ENVIRONMENTAL RECORD SOURCES

Environmental Data Resources, Inc. (EDR) was contracted to provide a database search of public lists of sites that generate, store, treat or dispose of hazardous materials or sites for which a release or incident has occurred. The EDR search was conducted for the subject property and included data from surrounding sites within specified radii of the property. A copy of the EDR report, which specifies the ASTM search distance for each public list, is included as Appendix 2. As shown on the attached EDR report, federal, state and county lists were reviewed as part of the research effort. Please refer to Appendix 2 for a complete listing of sites reported by EDR and a description of the databases reviewed.

The Map Findings Summary, included in the EDR report, provides a summary of the databases searched, the number of reported facilities within the search radii, and whether the facility is located onsite or adjacent to the subject property. The following information is based on our review of the Map Findings Summary and the information contained in the EDR report.

Subject Property

The subject property was not listed on the databases reviewed.

Offsite Properties

Offsite properties listed by EDR fall under two general categories of databases: those reporting unauthorized releases of hazardous substances (e.g., LUST, National Priority List [a.k.a. Superfund sites], and corrective action facilities), and databases of businesses permitted to use hazardous materials or generate hazardous wastes, for which an unauthorized release has not been reported to a regulatory agency.

Rincon reviewed the EDR Radius Map and select detailed listings to evaluate their potential to impact the subject property, based on the following factors:

- Reported distance of the facility from the subject property
- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes
- Reported case type (e.g., soil only, failed UST test only)
- Reported substance released (e.g., chlorinated solvents, gasoline, metals)
- Reported regulatory agency status (e.g., case closed, "no further action")
- Location of the facility with respect to the reported groundwater flow direction (discussed in the Geology and Hydrogeology section of this report)

Facilities/properties that were interpreted by Rincon to be of potential environmental concern to the subject property, based on one or more of the factors listed above, are summarized in Table 2. In accordance with ASTM, contamination migration pathways in soil, groundwater, and soil vapor were considered in our analysis of offsite properties of potential environmental concern.

Table 2 - EDR Listing Summary of Select Sites within One-Eighth Mile of the Subject Site

Site Name	EDR Site ID	Site Address	Distance from Subject Property (miles)	Database Reference
Adjacent Properties				
Teleflex Control Systems/Becton Dickinson & Co	C6/C7/C8	1950 Williams Drive	Adjacent to the west	CERCLIS, RCRA SQG, UST
Carmax No. 6014/Cars 101	E15/E16	2001 Lockwood Street	Adjacent to the west	RCRA SQG, AST

Regulatory agency information reviewed for the listings in the table above is summarized in the Additional Environmental Record Sources section of this report. No unauthorized release sites

reported to be located within one-eighth mile of the subject property and interpreted to be upgradient were listed in the databases searched by EDR.

Orphan Listings

EDR reported orphan or unmapped site listings, which EDR is unable to plot due to insufficient address information. Based on Rincon's review of the limited address information or site descriptions for the orphan listings, none of the listings are expected to impact the subject property.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

Review of Agency Files

As a follow-up to the database search, Rincon reviewed regulatory information for facilities within the specified search radii that were interpreted to have the potential to impact the subject property, based on one or more factors previously discussed (e.g., distance, open case status, up-gradient location, soil vapor migration).

The following is a summary of our review of regulatory information obtained from review of online sources (e.g., SWRCB GeoTracker database, DTSC Envirostor database) and/or files requested from the applicable regulatory agency, as described below. Copies of selected documents reviewed are included in Appendix 2.

Subject Property

The subject property was not listed in the databases reviewed by EDR.

Adjacent Properties

Two adjacent properties were reported by EDR, as discussed below.

- *Teleflex Control Systems/Becton Dickinson & Co, 1950 Williams Drive*: This property located adjacent to the west of the subject property was listed on the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS), Resource Conservation and Recovery Act (RCRA) Small Quantity Generator (SQG), and underground storage tank (UST) databases. According to EDR, the CERCLIS database "contains sites which are either proposed to or on the National Priorities List (NPL) [Superfund list] and sites which are in the screening and assessment phase for possible inclusion on the NPL."

  The DTSC Envirostor database was reviewed for information in connection with this facility. According to the DTSC Envirostor database summary, Becton Dickinson manufactured medical products at this property from 1968 to 1986, and chromate materials were used in a water cooling tower. Teleflex Control Systems/Telair International operated at the property from 1990 to approximately 2004. Chromate

blooms were reported on basement walls and floors of the facility in the 1990s, with the last known appearance of the blooms in 1998.

As of January 2013, this facility was categorized by the USEPA as "No Further Remedial Action Planned (NFRAP)" and did not qualify for the NPL. The DTSC categorized the site status as "No Action Required" in June 2013. The UST associated with this facility was reported to be inactive. Based on the nature of the issues reported at this property (interior chromate blooms) and the status (no further action required), this facility is not expected to impact the subject property.

- *Carmax No. 6014/Cars 101, 2001 Lockwood Street*: This property located adjacent to the west of the subject property was listed on the RCRA SQG and aboveground storage tank (AST) databases. According to EDR, this facility is a small quantity generator of ignitable hazardous wastes and non-halogenated solvents, with no reported violations. Based on the fact this facility is not listed on databases reporting unauthorized releases of hazardous materials and wastes, this facility is not expected to impact the subject property.

Up-gradient Release Sites

No unauthorized release sites reported to be located within one-eighth mile of the subject property and interpreted to be upgradient were listed in the databases searched by EDR.

Known or Suspect Contaminated Release Sites with Potential Vapor Migration

The EDR report was reviewed to identify nearby known or suspect contaminated sites that have the potential for contaminated vapor originating from the nearby site to be migrating beneath the subject property. Based on the ASTM E 2600-10, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, the following minimum search distances were initially used to determine if contaminated soil vapors from a nearby known or suspect contaminated site have the potential to be migrating beneath the subject property:

- 1/10 mile (528 feet) for petroleum hydrocarbons
- 1/3 mile (1,760 feet) for other contaminants of concern (COCs)

If up-gradient known or suspect contaminated sites are located within the above referenced distances from the subject property, online resources are reviewed to determine the extent of the contaminated plume at those sites. The following describes search distances for contaminated plumes of petroleum hydrocarbons and other COCs.

Petroleum Hydrocarbons

Based on our review of the EDR report information as indicated above, there are no adjacent or up-gradient known or suspect petroleum hydrocarbon impacted soil or groundwater plumes located within 30 feet of the subject property.

Other COCs

Based on our review of the EDR report, there are no adjacent or up-gradient known or suspect contaminated soil or groundwater plumes located within 100 feet of the subject property.

Review of State of California Division of Oil and Gas Records

A review of the Department of Conservation, Division of Oil, Gas & Geothermal Resources Online Mapping System indicates that no oil wells are located onsite or adjacent to the subject property. One oil and gas well, "Diedrich 1," was depicted as being located within approximately 300 feet to the north of the subject property and was reported to be plugged and abandoned in 1928. Based on its distance from the subject property and plugged/abandoned status, the well is not expected to impact the subject property.

HISTORICAL USE INFORMATION ON THE PROPERTY AND THE ADJOINING PROPERTIES

The historic records review completed for this Phase I ESA includes aerial photographs, topographic maps, fire insurance maps, and city directories as detailed in the following sections. Table 3 provides a summary of the historical use information available for the subject property.

Review of Historic Aerial Photographs

Aerial photographs from EDR's aerial photograph collection were obtained and reviewed. Copies of the aerial photographs are included in Appendix 3 (Historical Documents).

Review of City Directory Listings

EDR was contracted to provide copies of city directory listings for the subject property. A copy of the EDR city directory report is included in Appendix 3. The subject property did not appear to be listed in the city directories reviewed.

Review of Fire Insurance Maps

EDR was contracted to provide copies of fire insurance maps for the subject property. As indicated in the attached report, no maps were available for the subject property or adjacent properties.

Review of Historic Topographic Maps

Historic topographic maps from EDR's map collection were reviewed. Copies of the historic topographic maps are included in Appendix 3.

Review of City of Oxnard Building Permit Records

Based on the fact that the subject property is currently vacant land, building permit records were not reviewed.

Summary of Historic Uses

Subject Property

Based on our review of the documents listed above and summarized in Table 3 below, it appears that the subject property was developed with a ranch and used for agricultural purposes from 1904 to 1989. The subject property has been vacant land from 1994 to the present.

Table 3 - Historical Use of the Subject Property

Year	Use	Source
1904	The subject property is depicted as being developed with a structure.	Topographic Map
1910	The subject property appears to be vacant land; however, the site land use is not discernible due to the small scale of the map.	Topographic Map
1938	The subject property is developed with a ranch, including possibly a residence and several outbuildings (e.g., sheds, garages, or barns). The remainder of the subject property is agricultural (field crops).	Aerial Photograph
1947	Similar to the 1938 aerial photograph.	Aerial Photograph
1947	The subject property is depicted as being developed with two structures.	Topographic Map
1951	The subject property is depicted as being developed with five structures.	Topographic Map
1959	Similar to the 1947 photograph, except that the majority of the subject property around the ranch buildings is used as orchards.	Aerial Photograph
1964	Similar to the 1959 aerial photograph.	Aerial Photograph
1967	Similar to the 1951 topographic map.	Topographic Map
1970	Similar to the 1964 aerial photograph.	Aerial Photograph
1977	Similar to the 1970 aerial photograph.	Aerial Photograph
1989	Similar to the 1977 aerial photograph, except that fewer of the ranch buildings are present at the subject property. The remainder of the subject property is agricultural (fallow or field crops).	Aerial Photograph
1994	The subject property is vacant land with the eastern portions used for parking.	Aerial Photograph
2005	The subject property is vacant land.	Aerial Photograph
2009	Similar to the 2005 aerial photograph.	Aerial Photograph
2010	Similar to the 2009 aerial photograph.	Aerial Photograph
2012	Similar to the 2010 aerial photograph.	Aerial Photograph

Northern Adjacent Property - Highway 101

Based on our review of the historical documents, it appears that the northern adjacent property was developed with Ventura Boulevard, followed by a ranch and agricultural land from 1904 to 1977. From 1989 to the present, this property has been developed with Highway 101, followed by commercial and industrial properties.

Eastern Adjacent Property – 2000 and 2201 Outlet Center Drive

Based on our review of the historical documents, it appears that the eastern adjacent property was vacant or agricultural land in 1904 and 1910, used for agriculture (field crops or orchards) from 1938 to 1989, and developed with a commercial shopping plaza with offices, restaurants, retail stores, medical clinics, and a church from 1994 to the present.

Southern Adjacent Property – 1901 Outlet Center Drive

Based on our review of the historical documents, it appears that the southern adjacent property was vacant or agricultural land in 1904 and 1910, used for agriculture (field crops or orchards) from 1938 to 1989, was vacant land in 1994, and was developed with a commercial structure with medical offices from 2005 to the present.

Western Adjacent Property – 2000 and 2001 Lockwood Street and 1950 Williams Drive

Based on our review of the historical documents, it appears that the western adjacent property (2000 and 2001 Lockwood Street) was vacant or agricultural land in 1904 and 1910, used for agriculture from 1938 to 1994, was developed with a commercial structure in 2005, and was redeveloped with a different commercial structure in 2012. Based on review of city directories, these properties have been occupied by car dealerships since 2003.

The western adjacent property at 1950 Williams Drive was vacant or agricultural land in 1904 and 1910, used for agriculture from 1938 to 1964, and has been developed with a large industrial facility from 1968 to the present. Based on review of city directories, this property has been occupied by industrial facilities since 1970, including Automatic Retailers of America, Becton Dickinson & Co, Falcon Plastics, Teleflex Control Systems, Inc., Telair International, and Ventura Heat Treating.

Gaps in Historical Sources

Several gaps of greater than 5 years were identified in the historical records reviewed, from 1904 to 1910, 1910 to 1938, 1938 to 1947, 1951 to 1959, 1970 to 1977, 1977 to 1989, and 1994 to 2005. These gaps are considered insignificant because the subject property use appears to be similar from 1904 to 1989 (ranch/agricultural) and from 1994 to the present (vacant land).

INTERVIEWS

Rincon Consultants performed interviews regarding the subject property and surrounding areas. The purpose of the interviews was to discuss current and historical subject property conditions and to obtain information indicating the presence of recognized environmental conditions in connection with the property.

Interview with Owner/Site Manager

An interview questionnaire was completed by the property owner representative, Ms. Tanya Reichenbach, Property Manager for Sunbelt Enterprises, LLC, on July 1, 2014. A copy of the completed questionnaire is included in Appendix 1. The following information is based on information obtained during our review of the completed questionnaire.

Ms. Reichenbach indicated the following:

- The subject property is currently, and was previously, vacant land.
- Sunbelt Enterprises LLC is the current owner of the subject property and obtained ownership in approximately 2011.
- The previous owner of the subject property was Fred Kavli dba Sunbelt Properties.

Ms. Reichenbach also provided the following information regarding hazardous material and petroleum hydrocarbon storage and waste generation at the subject property.

- She was not aware of the use or storage of pesticides, oils, solvents, or fuels at the subject property. She indicated that no hazardous wastes are generated at the subject property.
- She was not aware of aboveground or underground storage tanks at the subject property.
- She indicated that a white PVC pipe was present at the subject property but was not aware of the purpose (e.g., trash or a vent).

Ms. Reichenbach also provided the following information regarding hazardous material and petroleum hydrocarbon storage and waste generation at nearby properties.

- The subject property is bordered to the north by Highway 101, to the east by an outlet center, to the south by medical offices and a credit union, and to the west by an auto center.

Ms. Reichenbach indicated that she is not aware of environmental liens or AULs recorded for the subject property, nor of any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property. In addition, she is not aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

Interview with Site Representative

The following information is based on information obtained during the July 10, 2014 site reconnaissance. John Brock of Sunbelt Enterprises, LLC indicated that the subject property is

disked/plowed every year for weed control and fire prevention. He also indicated that he is not aware of any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property. In addition, he is not aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

Interviews with Occupants

The subject property is vacant, undeveloped land, there are no occupants at the site.

Interviews with Local Government Officials

The Ventura County Environmental Health Division (VCEHD) online database[1] was searched for hazardous materials and underground tank listings. The subject property was not listed on databases maintained by the VCEHD.

During the preparation of this Phase I ESA, we reviewed SWRCB online GeoTracker database to determine if the subject property is listed in the database as an unauthorized release site. In addition, we reviewed the DTSC online Envirostor database to determine if the subject property is listed as a hazardous waste permitted facility or cleanup site. Neither the subject property nor adjacent properties were listed on the GeoTracker database. The adjacent property to the west at 1950 Williams Drive was listed in the Envirostor database as Teleflex Control Systems. This property is discussed in the Additional Environmental Records Sources section of this report.

Interviews with Others

Rincon did not attempt to interview neighboring property owners or others as part of this research effort.

SITE RECONNAISSANCE

Rincon Consultants performed a reconnaissance of the subject property on July 10, 2014 accompanied by John Brock with Sunbelt Enterprises, LLC. The purpose of the reconnaissance was to observe existing subject property conditions and to obtain information indicating the presence of recognized environmental conditions in connection with the property.

METHODOLOGY AND LIMITING CONDITIONS

The site reconnaissance was conducted by 1) observing the subject property from public thoroughfares, 2) observing the adjacent properties from public thoroughfares, and 3) observing the subject property from roads and walking paths.

Because of the large size of the subject property, several east-west or north-south walking transects were completed across the subject property.

[1] http://www.vcenvhealth.org/

CURRENT USE OF THE PROPERTY AND ADJACENT PROPERTIES

The subject property is currently vacant, unpaved land. Two advertisement billboards were observed on the northern portion of the subject property adjacent to Highway 101. Adjacent businesses include mixed commercial and light industrial uses to the east, south, and west, and US Highway 101 to the north.

PAST USE OF THE PROPERTY AND ADJACENT PROPERTIES

Based on our site reconnaissance, past uses at the subject property and adjacent properties are not readily apparent.

CURRENT OR PAST USES IN THE SURROUNDING AREAS

The subject property is surrounded by commercial land uses as detailed in the Site Description section of this report. Past uses of the surrounding area are not readily apparent based on the site reconnaissance.

GEOLOGIC, HYDROGEOLOGIC, HYDROLOGIC AND TOPOGRAPHIC CONDITIONS

Geologic, hydrogeologic, hydrologic, and topographic information are as previously stated in the Physical Setting Section of this report.

GENERAL DESCRIPTION OF STRUCTURES

The subject property is currently vacant land. No structures were observed during the site reconnaissance.

EXTERIOR OBSERVATIONS

Storage Tanks

Rincon did not observe storage tanks during the site reconnaissance of the subject property.

Drums

No drums were observed during the site reconnaissance of the subject property.

Hazardous Substances and Petroleum Products

No obvious hazardous substances or petroleum products were identified at the subject property.

Unidentified Substance Containers

No unidentified substance containers or unidentified containers that might contain hazardous substances were observed during the site reconnaissance.

Odors

During the site reconnaissance, Rincon did not identify any strong, pungent, or noxious odors.

Pools of Liquid

During the site reconnaissance, Rincon did not identify any pools of liquid including standing surface water. In addition, sumps containing liquids likely to be hazardous substances or petroleum products were not observed.

Indications of Polychlorinated Biphenyls (PCBs)

During the site reconnaissance, no transformers were observed on the subject property.

Other Conditions of Concern

During the site reconnaissance Rincon did not note any of the following interior or exterior observations:

- clarifiers and sumps
- pits, ponds, and lagoons
- stained soil
- stressed vegetation
- waste water
- wells
- septic systems/effluent disposal system

PVC Pipe – Rincon observed what appeared as an approximately 4-inch diameter, vertical PVC pipe filled with concrete within an 8-inch PVC pipe, located on the central-western portion of the subject property. The property owner was not aware of the purpose of the PVC pipe.

Solid Waste/Debris– Rincon observed scattered plastic and paper litter, concrete material, asphalt, glass, household furniture, and clothing and wood debris located throughout the subject property. No obvious evidence of hazardous waste disposal at the subject property was observed. Therefore, the solid waste and debris is considered *de minimis*.

EVALUATION

FINDINGS

Known or suspect environmental conditions associated with the property include the following:

- Historical agricultural land use at the subject property
- PVC pipe on the subject property

OPINIONS

A. ***Historical agricultural land use at the subject property–*** Due to the historic use of the subject property for agricultural purposes from approximately 1904 to 1989, there is a potential that soil at the subject property could be impacted with pesticides (e.g., arsenical pesticides, organochlorine pesticides), or other chemicals used routinely in agricultural production. The subject property is currently vacant, unpaved land. Therefore, the historical agricultural land use is considered a potential recognized environmental condition.

B. ***PVC pipe on the subject property*** - Rincon observed what appeared as an approximately 4-inch diameter, vertical PVC pipe filled with concrete within an 8-inch PVC pipe, located on the central-western portion of the subject property. The property owner was not aware of the purpose of the PVC pipe. However, no evidence of wells or other subsurface features (e.g., USTs, wastewater disposal) at the subject property was noted during review of other sources consulted for this assessment. Therefore, while the presence of the pipe is likely considered *de minimis,* the purpose of the pipe should be determined.

CONCLUSIONS

Rincon has intended to perform this Phase I ESA in general conformance with the scope and limitations of ASTM E 1527-13 for the property assigned APN 231-009-010-5 in Oxnard, California. This assessment has revealed evidence of one potential recognized environmental condition in connection with the property:

Potential Recognized Environmental Condition:

1. Historical agricultural land use at the subject property

RECOMMENDATIONS

Due to the historic use of the subject property for agricultural purposes, there is a potential that the subject property could be affected with pesticides, or other chemicals used routinely in agricultural production. To determine if pesticides are present in the soil beneath the site we recommend collecting shallow soil samples from the subject property and analyzing these samples for pesticides and arsenic.

The purpose of the PVC pipe at the subject property should be determined.

DEVIATIONS

A lien search was not completed as part of this assessment. No other deviations from ASTM E 1527-13 Practice were encountered during the completion of this Phase I ESA.

SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

The qualified environmental professionals that are responsible for preparing the report include Shannon Phelan, Sarah Larese, and Michael Gialketsis. Their qualifications are summarized in the following section.

"We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 312.10 of 40 CFR 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

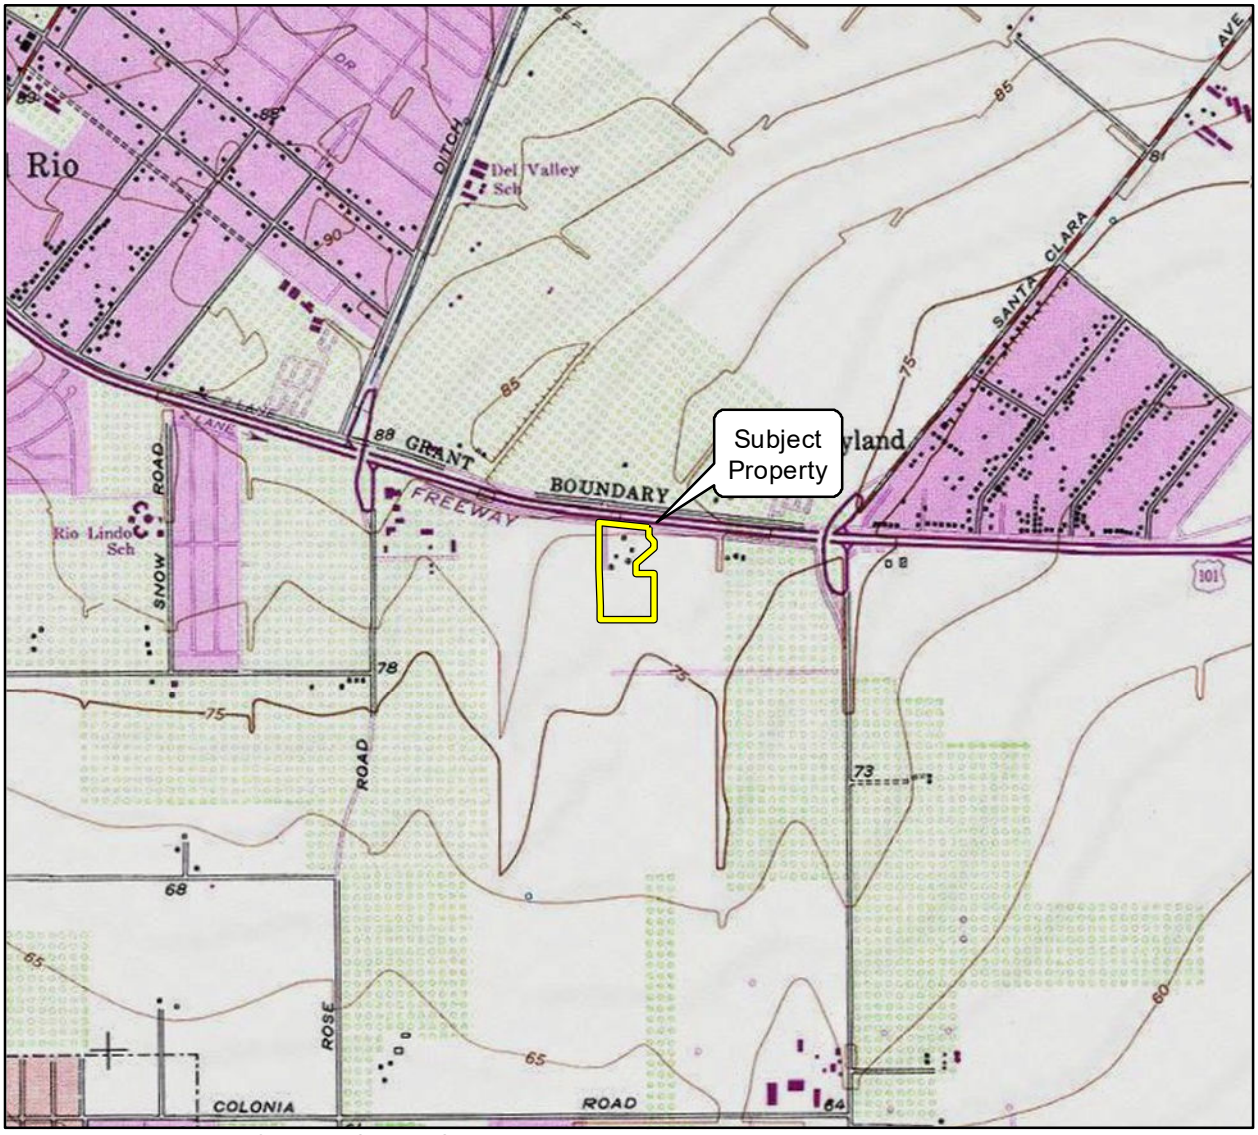
Signature	July 24, 20014 Date
Michael P. Gialketsis Name	President Title
Signature	July 24, 2014 Date
Sarah A. Larese Name	Senior Environmental Scientist Title
Signature	July 24, 2014 Date
Shannon Phelan Name	Environmental Scientist Title

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

The environmental professionals responsible for conducting this Phase I ESA and preparing the report include Shannon Phelan, Sarah Larese, and Michael Gialketsis. Their qualifications are summarized below.

Environmental Professional Qualifications	X2.1.1 (2) (i) - Professional Engineer or Professional Geologist License or Registration, and 3 years of full-time relevant experience	X2.1.1 (2) (ii) - Licensed or certified by the Federal Government, State, Tribe, or U.S. Territory to perform environmental inquiries	X2.1.1 (2) (iii) – Baccalaureate or Higher Degree from and accredited institution of higher education in a discipline of engineering or science and the equivalent of 5 years of full-time relevant experience	X2.1.1 (2) (iii) – Equivalent of 10 years of full-time relevant experience
Michael Gialketsis			BA Environmental Studies	25 years
Sarah Larese			BA Environmental Studies	15 years
Shannon Phelan			BA Environmental Studies	11 years

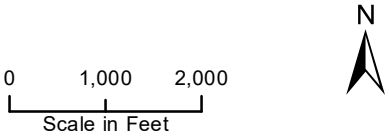
Michael P. Gialketsis is a Principal and Senior Environmental Planner with Rincon Consultants, Inc. He holds a Bachelor of Arts degree in Environmental Studies from the University of California, Santa Barbara. He has over 20 years of experience as a project manager for environmental assessment projects including Phase I Environmental Site Assessments, permitting and environmental compliance monitoring programs. Mr. Gialketsis has a strong multi-disciplinary background and has been responsible for preparation of several hundred environmental studies within southern California.



Sarah A. Larese is an Associate Environmental Scientist with Rincon Consultants. She holds a Bachelors degree in environmental studies from the University of California, Santa Barbara, California. Ms. Larese has experience in development, implementation and project management of environmental assessment and remediation projects, especially relating to underground storage tanks. Ms. Larese's responsibilities at Rincon include implementation of Phase I and II Environmental Site Assessments as well as conducting site remediation field activities and preparation of environmental reports. She has 15 years of experience conducting research, assessment and remediation projects.

Shannon Phelan is an Environmental Scientist with Rincon Consultants. She holds a Bachelor of Arts degree in environmental studies from University of San Diego, California. Ms. Phelan has 11 years of experience conducting environmental site assessments and related due diligence studies to support real estate transactions, as well as environmental history investigations and corridor and area-wide studies to be included in planning documents for large-scale infrastructural improvements. Ms. Phelan has prepared hundreds of Phase I and Phase II Environmental Site Assessments of a variety of properties on behalf of financial institutions, developers, real estate investors, and local, state, and federal governmental agencies. Ms.

Phelan's experience also includes detailed historical and regulatory research for litigation support.



In addition, the following individuals assisted with the report preparation under the supervision of the environmental professionals responsible for conducting this Phase I ESA:

Kristin Roberts is an Environmental Scientist with Rincon Consultants. She holds a Bachelor of Science degree in Soil Science with a concentration in Land Resources from California Polytechnic State University of San Luis Obispo. Ms. Roberts supports and manages SWPPP compliance services and conducts environmental Phase I and Phase II assessments for various project assignments within the Environmental Site Assessment and Remediation Group. Ms. Roberts is a Certified Professional in Erosion and Sediment Control (CPESC #7494) and Qualified SWPPP Practitioner and Developer (QSP/D #24530).

Interview Documentation

Property Owner Interview Questionnaire

Lockwood Street – APN 213-009-010-5 Oxnard, California

This questionnaire should be completed by the current property owner or a designated representative of the current property owner. We respectfully request that you fill out and return this form (via fax **805-644-4240** or email **Sarah Larese** at slarese@rinconconsultants.com to us within one week from the date of this transmittal.

1)	**Was the subject property or any adjoining property ever used as:** ☐ a gasoline or other fueling station ☐ a motor vehicle repair facility ☐ a commercial printing facility ☐ a dry cleaners ☐ a photo developing laboratory ☐ a metal plating facility ☐ a farm (please check all that apply and describe)	☐ a junkyard or landfill ☐ a waste treatment, storage, disposal, processing or recycling facility ☐ a machine shop ☐ a manufacturing facility ☐ an oil production facility (including oil wells) ☐ any other industrial use

2)	**Please describe the current land uses of the subject property and those surrounding your property. Please indicate all businesses/companies located on property.**	
2a	**Current use of Subject Property** (please check all that apply) ☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ☐ Other-Please Describe	(please include a brief description of current operation) Vacant land
2b	**Current use of Northern Adjoining Properties** (please check all that apply) ☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ☐ Other-Please Describe	(please include a brief description of current operation) US 101
2c	**Current use of Southern Adjoining Properties** (please check all that apply) ☑ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ☐ Other-Please Describe	(please include a brief description of current operation) Medical offices - Credit union
2d	**Current use of Western Adjoining Properties** (please check all that apply) ☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ☑ Other-Please Describe	(please include a brief description of current operation) Auto Center
2e	**Current use of Eastern Adjoining Properties** (please check all that apply) ☑ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ☐ Other-Please Describe	(please include a brief description of current operation) Outlet Center

3)	**Please describe the previous land uses of your property and those surrounding your property. Include property ownership and dates of operation if known.**	
3a	**Previous use of Subject Property** (please check all that apply) ❑ Commercial (retail, offices, etc.) ❑ Residential (single family or apartments) ❑ Industrial (manufacturing, warehousing, processing) ❑ Other-Please Describe	(please include a brief description of previous operations, former property owners, and dates of operation) Vacant
3b	**Previous use of Northern Adjoining Properties** (please check all that apply) ❑ Commercial (retail, offices, etc.) ❑ Residential (single family or apartments) ❑ Industrial (manufacturing, warehousing, processing) ❑ Other-Please Describe	(please include a brief description of previous operations) SAME US 101
3c	**Previous use of Southern Adjoining Properties** (please check all that apply) ❑ Commercial (retail, offices, etc.) ❑ Residential (single family or apartments) ❑ Industrial (manufacturing, warehousing, processing) ❑ Other-Please Describe	(please include a brief description of previous operations) SAME Vacant land
3d	**Previous use of Western Adjoining Properties** (please check all that apply) ❑ Commercial (retail, offices, etc.) ❑ Residential (single family or apartments) ❑ Industrial (manufacturing, warehousing, processing) ❑ Other-Please Describe	(please include a brief description of previous operations) SAME
3e	**Previous use of Eastern Adjoining Properties** (please check all that apply) ❑ Commercial (retail, offices, etc.) ❑ Residential (single family or apartments) ❑ Industrial (manufacturing, warehousing, processing) ❑ Other-Please Describe	(please include a brief description of previous operations) SAME

4)	**Who is the current owner of the property?**	Sunbelt Enterprises, LLC
5)	**When did current ownership begin?**	2011 ?
6)	**What is the age of the on-site facility?**	N/A
7)	**Who is the previous owner of the property?**	FRED KAVLI dba Sunbelt Properties

8)	**Please indicate the property's current**	
	electrical service provider -	SCE
	water service provider -	City of Oxnard -
	natural gas service provider -	Southern Ca. Gas -
	sewer service provider -	City of Oxnard
	solid waste hauler -	City of Oxnard

9)	**To the best of your knowledge, has your facility previously or does your facility currently store or use any of the following in individual containers larger than 5 gallons in volume or 50 gallons in the aggregate?** (if yes or unknown, include how many, type, and size)	
	❑ ***Damaged or discarded automotive or industrial batteries***	NO
	❑ ***Pesticides***	NO
	❑ ***Paints***	NO
	❑ ***Oils or solvents***	NO
	❑ ***Motor vehicle fuel***	NO
	❑ ***Pesticides or Herbicides***	NO
	❑ ***Other Chemicals or hazardous substances***	NO

10)	**Please indicate any wastes generated at the facility.**		
	Hazardous waste:	**Quantity:**	**Disposal Method:**
		N/A	

11)	**Are there currently or to the best of your knowledge have there been previously, any industrial drums (typically 55 gallon) or sacks of chemicals located on the property or at the facility?**	
	❑ Yes ☑ No ❑ Unknown	if Yes or Unknown, please describe

12)	**Are there currently or to the best of your knowledge have there been previously, any evidence of fill dirt having been brought onto the property that originated from a contaminated site or that is of an unknown origin?**	
	☐ Yes ☑ No ☐ Unknown	if Yes or Unknown, please describe

13)	**Are there currently or to the best of your knowledge have there been previously, any pits, ponds or lagoons located on the property in connection with waste treatment or waste disposal?**	
	☐ Yes ☑ No ☐ Unknown	if Yes or Unknown, please describe

14)	**Are there currently or to the best of your knowledge have there been previously, any sumps, clarifiers, or solvent degreasers on the property?**	
	☐ Yes ☑ No ☐ Unknown	if Yes or Unknown, please describe

15)	**Are there currently or to the best of your knowledge have there been previously, any stained soil on the property?**	
	☐ Yes ☑ No ☐ Unknown	if Yes or Unknown, please describe

16)	**Are there currently or to the best of your knowledge have there been previously, any storage tanks (above or below ground) located on the property?**	
	☐ Yes ☑ No ☐ Unknown	if Yes or Unknown, please describe

17)	**Are there currently or to the best of your knowledge have there been previously, any vent pipes, fill pipes, or access ways (etc.) indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?**	
	☐ Yes ☐ No ☑ Unknown	if Yes or Unknown, please describe there is a white PVC pipe NOT sure if it is trash or a vent?

18)	**If the property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system or has the well been designated as contaminated by any government agency?**	
	❑ Yes ☑ No ❑ Unknown	if Yes or Unknown, please describe

19)	**Are there currently or to the best of your knowledge have there been previously, any flooring, drains, or walls located within the facility that are stained by substances other than water, or are emitting foul odors?**	
	❑ Yes ☑ No ❑ Unknown	if Yes or Unknown, please describe

20)	**To the best of your knowledge has your facility previously or does your facility currently, discharge wastewater on or adjacent to the property other than storm water into a sanitary sewer system?**	
	❑ Yes ☑ No ❑ Unknown	if Yes or Unknown, please describe

21)	**Have any of the following ever been dumped above grade, buried and/or burned on the property?** (please check all that apply and describe if possible)	
	❑ hazardous substances	
	❑ petroleum products	
	❑ unidentified waste materials	
	❑ tires	
	❑ automotive or industrial batteries	
	❑ other waste materials (please describe)	

22)	**Are there currently or to the best of your knowledge have there been previously, a transformer, capacitor or any hydraulic equipment on the property?**	
	❑ Yes ☑ No ❑ Unknown	if Yes or Unknown, please describe

23)	**Are there currently or to the best of your knowledge have there been previously any records indicating the presence of PCBs?**	
	❑ Yes ☑ No ❑ Unknown	if Yes or Unknown, please describe

24)	**Are there currently or to the best of your knowledge have there been previously any records indicating the presence of pesticides or herbicides?**	
	❑ Yes ☑ No ❑ Unknown	if Yes or Unknown, please describe

25)	**Do you have any knowledge of environmental liens that may have been recorded against the property or governmental notification relating to past or recurrent violations of environmental laws with respect to the property or any facility located on the property?**	
	❑ Yes ☑ No ❑ Unknown	if Yes or Unknown, please describe

26)	**Do you have any knowledge of activity and use limitations (AULs) such as engineering controls, deed restrictions, land use restrictions, or institutional controls that may have been recorded against the property?**	
	❑ Yes ☑ No ❑ Unknown	if Yes or Unknown, please describe

27)	**Have you been informed of the past or current existence of hazardous substances, petroleum products, or environmental violations with respect to the property or any facility located on the property?**	
	❑ Yes ☑ No ❑ Unknown	if Yes or Unknown, please describe

28)	**Do you have any knowledge of any environmental site assessments of the property or facility?**	
	❑ Yes ☑ No ❑ Unknown	if Yes or Unknown, please describe

29)	**Do you know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release of any hazardous substances or petroleum products involving the property by any owner or occupant of the property?**	
	☐ Yes	if Yes or Unknown, please describe
	☑ No	
	☐ Unknown	

30)	**Are there any site-specific geotechnical or geologic reports available for the subject property?**	
	☐ Yes	if Yes or Unknown, please describe
	☐ No	
	☑ Unknown	

31)	**Is there a Title Report available for the subject property?**	
	☐ Yes	if Yes or Unknown, please describe
	☑ No	
	☐ Unknown

To qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

We respectfully request that you fill out this form and e-mail it to Sarah Larese at Slarese@RinconConsultants.com within one week from the date of this transmittal.

1. Why is the Phase I ESA required or being performed?	
2. What type of property transaction is planned? (i.e. sale, purchase, exchange, etc.)	
3. What is the entire site address?	Vacant land -
4. What is the Assessor's Parcel Number (s)?	213-0-090-105
5. Are any considerations beyond the requirements of Practice E1527 to be considered? (i.e. lien search, asbestos & lead based paint, radon, etc.)	NO -
6. Identify all parties who will rely on the Phase I report.	
7. Identify the Site Manager/Contact and how the contact can be reached.	Tanya Reichenbach 805-604-0700
8. Identify the Site Owner and how the owner can be reached.	Sunbelt Enterprises LLC 805-604-0700

9. Do you have copies of any available prior environmental site assessment reports, documents, correspondence, etc., concerning the any other knowledge or experience with the property that may be pertinent to the environmental professional (i.e. title report, previous Ph I and II ESAs, Environmental Impact Studies, etc.).	NO

1. **Did a search of *recorded land title records* (or judicial records, where appropriate) identify any environmental liens filed or recorded against the *property?***

   Please checkmark the most appropriate response:

   ☑ I *have not* reviewed the records and ***do not know*** if there are any filed or recorded environmental liens.

   ☐ I *have* reviewed the records, and ***No, there aren't any*** filed or recorded environmental liens.

   ☐ I *have* reviewed the records, and ***Yes, there are*** environmental liens. Explain:

2. **Did a search of recorded land title records (or judicial records, where appropriate) identify any activity and land use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?**

   Please checkmark the most appropriate response:

   ☑ I *have not* reviewed the records and ***do not know*** if there are any filed/recorded AULs or any AULs in place at the site.

   ☐ I *have* reviewed the records, and ***No, there aren't any*** filed/recorded AULs or any AULs in place at the site.

   ☐ I *have* reviewed the records, and ***Yes, there are*** AULs filed, recorded, and/or in place at the site. Explain:

3. **Does the Title Report provide any information pertaining to environmental cleanup liens or activity and use limitations (AULs) for the subject property?**

   Please checkmark the most appropriate response:

   ☑ I *have not* reviewed the Title Report and ***do not know*** if it provides environmental cleanup liens or AULs information.

   ☐ I *have* reviewed the Title Report, and ***No, it does not*** provide environmental cleanup liens or AULs information.

   ☐ I *have* reviewed the Title Report, and ***Yes, it does provide*** environmental cleanup liens or AULs information. Explain:

4. **Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?**

   Please checkmark the most appropriate response:

   ☑ *No,* I *do not* have any specialized knowledge and/or experience related to the property or nearby properties.

   ☐ *Yes,* I *do* have specialized knowledge and/or experience related to the property or nearby properties. Explain:

5. **As the user of this ESA, based on your knowledge and experience related to the property, are you aware of any information pertaining to a reduction in value for the subject property relative to any known environmental issues?**

   Please checkmark the most appropriate response:

   ☑ *No,* I *do not* have any information about a reduction in property value relative to environmental issues.

   ☐ *Yes,* I *do* have information about a reduction in property value relative to environmental issues. Explain:

6. **Does the purchase price being paid for this property reasonably reflect the fair market value of the property?**

   Please checkmark the most appropriate response:

   ☐ ***Yes,*** I *do* believe the purchase price being paid for this property reasonably reflects the fair market value of the property. Skip to question #7.

   ☐ ***No,*** I *do not* believe the purchase price being paid for this property reasonably reflects the fair market value of the property. Proceed to question #6a.

   a. **If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? (40 CFR 312.29)**

      Please checkmark the most appropriate response:

      ☐ ***No,*** I *have not* considered the idea that known or believed contamination at the site has caused the lower purchase price.

      ☐ ***Yes,*** I *have* considered the idea that known or believed contamination at the site has caused the lower purchase price. Explain.

7. **Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,**

   a. **Do you know the past uses of the property?**

      ☑ I *do not* know.

      ☐ I *do* know. Explain:

   b. Do you know of specific chemicals are present or once were present at the property?

      ☑ I *do not* know.

      ☐ I *do* know. Explain:

   c. Do you know of any spills or other chemical releases that have taken place at the property?

      ☑ I *do not* know.

      ☐ I *do* know. Explain:

d. Do you know of any environmental cleanups have taken place at the property?

☑ I *do not* know.

☐ I *do* know. Explain:

8. **Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?**

Please checkmark the most appropriate response:

☑ No, I do not know and/or do not have any experience with any obvious indicators that point to the presence or likely presence of contamination at the property.

☐ Yes, I do know of and/*or do have experience with* obvious indicators that point to the presence or likely presence of contamination at the property. Explain:

9. **Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the site?**

☐ ***No,*** *I am not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the site.*

☐ ***Yes,*** *I am aware of pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the site.* Explain:

10. **Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site?**

☑ ***No,*** *I am not aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site.*

☐ ***Yes,*** *I am aware of pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site.* Explain:

11. **Are you aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?**

☑ *No,* I *am not aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.*

☐ *Yes,* I *am aware of a notice, or notices, from a government entity (or multiple government entities) regarding a possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.* Explain:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 05/05/2014 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/11/2014 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there is 1 EDR US Hist Auto Stat site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

EXECUTIVE SUMMARY

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there is 1 EDR US Hist Cleaners site within approximately 0.25 miles of the target property.

Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

COSTCO WHOLESALE NO 420 (Continued) **1004677950**

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D011
Waste name: SILVER

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

FINDS:

Registry ID: 110012221513

Environmental Interest/Information System
The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: 221
Waste name: 221

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

CARMAX NO 6014 (Continued) **1014950727**

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

UNIVAR U S A INC (Continued) **1006804881**

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D027
Waste name: 1,4-DICHLOROBENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: D040
Waste name: TRICHLOROETHYLENE

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Facility Has Received Notices of Violations:
Regulation violated: FR - 262.10-12.A

OGDEN POWER PACIFIC OXNARD (Continued) **1000250669**

Area of violation: Generators - General
Date violation determined: 05/05/1994
Date achieved compliance: 05/05/1999
Violation lead agency: State
Enforcement action: Not reported
Enforcement action date: Not reported
Enf. disposition status: Not reported
Enf. disp. status date: Not reported
Enforcement lead agency: Not reported
Proposed penalty amount: Not reported
Final penalty amount: Not reported
Paid penalty amount: Not reported

Evaluation Action Summary:
Evaluation date: 05/05/1994
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Generators - General
Date achieved compliance: 05/05/1999
Evaluation lead agency: State Contractor/Grantee

Evaluation date: 03/17/1993
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

Registry ID: 110012543649

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE

SOUTHERN CALIFORNIA EDISON PROCGEN SUBSTATION (Continued) **1000181055**

FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D005
Waste name: BARIUM

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013
Date Made Active in Reports: 01/28/2014
Number of Days to Update: 78

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013
Date Made Active in Reports: 01/28/2014

Next Scheduled EDR Contact: 07/21/2014
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

Data Release Frequency: No Update Planned

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013

Last EDR Contact: 06/10/2014
Next Scheduled EDR Contact: 07/21/2014
Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013
Date Made Active in Reports: 02/13/2014

Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/31/2013
Date Data Arrived at EDR: 07/08/2013

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/11/2014

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 03/04/2014

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Data Release Frequency: No Update Planned

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

LOCKWOOD
LOCKWOOD STREET
OXNARD, CA 93036

TARGET PROPERTY COORDINATES

Latitude (North):	34.2219 - 34° 13’ 18.84’’
Longitude (West):	119.1495 - 119° 8’ 58.20’’
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	301994.3
UTM Y (Meters):	3788654.5
Elevation:	81 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	34119-B2 OXNARD, CA
Most Recent Revision:	1967

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

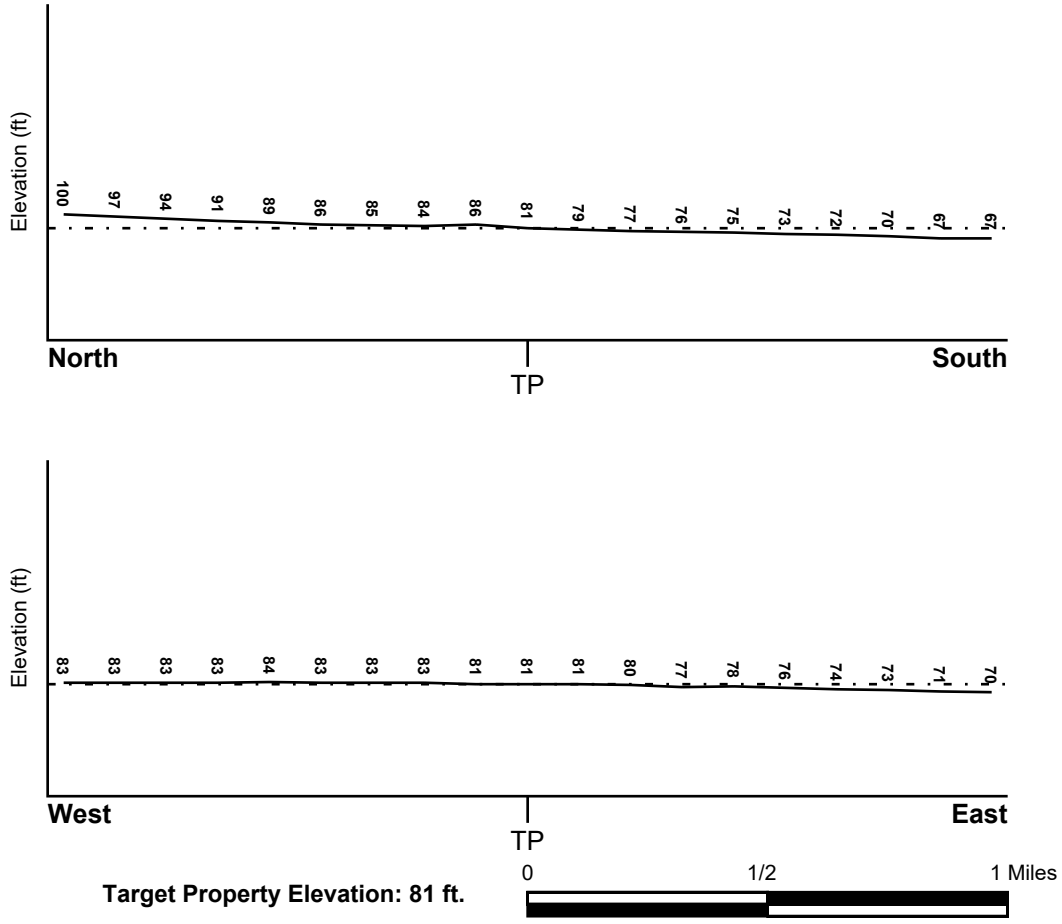
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
VENTURA, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06111C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
OXNARD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HUENEME

Soil Surface Texture: loamy sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 107 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4
2	16 inches	59 inches	stratified sandy loam to silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4

Soil Map ID: 2

Soil Component Name: CAMARILLO

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 107 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	24 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	24 inches	50 inches	stratified sandy loam to sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 8.4 Min: 7.9
3	50 inches	79 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9

Soil Map ID: 3

Soil Component Name: PICO

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	14 inches	53 inches	stratified sandy loam to loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
3	53 inches	59 inches	stratified gravelly sand to gravelly loamy coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9

Soil Map ID: 4

Soil Component Name: METZ

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4
2	7 inches	59 inches	stratified sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1926 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Rincon were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sign-off Sheet and Signatures of Environmental Professionals

This Phase I & II Environmental Site Assessment was prepared by Stantec Consulting Services Inc. ("Stantec") for City Ventures Homebuilding LLC (the "Client"). Any reliance on this document by any third party is strictly prohibited. The material in it reflects Stantec's professional judgment in light of the scope, schedule and other limitations stated in the document and in the Master Services Agreement ("MSA") between Stantec and the Client. The opinions in the document are based on conditions and information existing at the time the document was published and do not take into account any subsequent changes.

All information, conclusions, and recommendations provided by Stantec in this document regarding the Phase I ESA have been prepared under the supervision of and reviewed by the professionals whose signatures appear below.

Thomas Stanley,
Geologic Staff

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1.0 SUMMARY

Stantec Consulting Services Inc. (Stantec) has completed a Phase I & II Environmental Site Assessment (ESA) of the property located south of Lockwood Street and west of Outlet Center Drive, City of Oxnard, County of Ventura, California (the "Property"), on behalf of City Ventures Homebuilding LLC (the "Client").

The Phase I ESA was conducted in conformance with the requirements of American Society for Testing and Materials (ASTM) Designation E 1527-13, and All Appropriate Inquiry (AAI) as defined by the US-EPA in Title 40 of the Code of Federal Regulations, Part 312, except as may have been modified by the scope of work, and the Master Services Agreement between Stantec and Client (the "MSA"). Any exceptions to, or deletions from, the ASTM or AAI practice are described in Section 2.3.

The Property consists of approximately 3.08 acres of undeveloped land. Surrounding properties are a mix of commercial, retail, medical and college properties. A Property location map is illustrated on Figure 1. A Property map illustrating the main features of the Property is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

Based on historical documents including aerial photographs, the Property was formerly used for agricultural purposes (*i.e.*, orchards and cultivating crops) until the early late 1980s or early 1990s. Due to the possible historical use of pesticides and herbicides containing heavy metals (used to prohibit the growth of weeds), Stantec performed a Phase II subsurface investigation to sample and analyze soil for chemical analysis to determine if agricultural chemicals were present at levels that represent a REC or that are of concern to future development.

Stantec advanced six shallow borings to three (3) feet below ground surface (ft bgs) on October 19, 2020 across the Property. Soil samples were collected at the 0.5-1.0-foot interval, 1.5-2.0-feet interval, and the 2.5-3.0-feet interval. The shallow soil sample (0.5-1.0-foot) from the borings were analyzed for organochlorines pesticides (OCPs) by United States Environmental Protection Agency (EPA) test method 8081A and the heavy metals arsenic and lead by US EPA test method 6010B. Stantec believes the scope of work was sufficient for purposes of evaluating the potential impact of historical agricultural use of the Property.

Organochlorine pesticides were detected in four of the six samples analyzed. All detectable concentrations of OCPs were below the respective EPA and Department of Toxic Substances Control (DTSC) residential screening levels. Lead was detected in all six soil samples, but none of the detections exceeded the most-conservative DTSC residential screening levels. Arsenic was detected in all six soil samples at concentrations above the EPA Regional Screening Level (RSL) for residential use (which is typical of soil throughout California, due to naturally-occurring arsenic); however, these concentrations fall within the typical southern California naturally-occurring regional background levels. Based on these results, historical agricultural use does not represent a recognized environmental condition in connection with the Property or a human health risk in contemplation of the proposed residential development of the Property and Stantec recommends no further investigation regarding this issue.

PHASE I & II ENVIRONMENTAL SITE ASSESSMENT

Summary
December 9, 2020

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 of the Property. Any exceptions to, or deletions from, this practice are described in the Data Gaps section of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Property, and Stantec recommends no further investigation regarding the environmental condition of the Property. However, Stantec notes the following *de minimis* condition:

- **Illegally Dumped Waste, Improperly Stored Chemicals and Vehicle.** Stantec identified minor amounts of illegally dumped waste on the Property, particularly along the southern and western Property boundaries. Although there do not appear to be any indications of significant releases of hazardous substances, there is the potential for some amount of hazardous materials to be present amongst the waste. Therefore, the waste should be removed from the Property and disposed of at an appropriately licensed waste receiving facility.

The preceding summary is intended for informational purposes only. Reading of the full body of this report is recommended.

2.0 INTRODUCTION

The objective of this Phase I ESA was to perform All Appropriate Inquiry (AAI) into the past ownership and uses of the Property consistent with good commercial or customary practice as outlined by the ASTM in "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", Designation E1527-13. "All Appropriate Inquiry" (AAI) is the process for evaluating a property's environmental conditions for the purpose of qualifying for landowner liability protections under CERCLA, following final rule of Part 312 of Title 40, Code of Federal Regulations (40 CFR Part 312). The purpose of this Phase I ESA was to identify adverse environmental conditions including recognized environmental conditions ("RECs") associated with the Property.

The ASTM E1527-13 standard indicates that the purpose of the Phase I ESA is to identify RECs, including historical recognized environmental conditions ("HRECs"), and controlled recognized environmental conditions ("CRECs") that may exist at a property. The term "recognized environmental conditions" means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property:

1. Due to any release to the environment.
2. Under conditions indicative of a release to the environment; or
3. Under conditions that pose a material threat of a future release to the environment.

ASTM defines a "HREC" as a REC that has occurred in connection with a property but has been addressed to the satisfaction of the applicable regulatory authority and meets current unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (*e.g.*, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a HREC, the environmental professional (EP) must determine whether the past release is a REC when the current Phase I ESA is conducted (e.g., if there has been a change in the regulations). If the EP considers the past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a REC.

ASTM defines a "CREC" as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), but with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, activity and use limitations, institutional controls, or engineering controls).

As defined by ASTM, RECs can include hazardous substances or petroleum products present under conditions in compliance with laws if that presence represents a material threat of future release. The presence of hazardous substances or petroleum products is, however, not a REC if that presence is a *de minimis* condition. *De minimis* conditions are minor occurrences of contamination that generally do not present a material risk to human health and would not likely be subject to enforcement action if brought to the attention of governmental agencies.

The scope of work conducted during this Phase I ESA consisted of a visual reconnaissance of the Property, interviews with key individuals, and review of reasonably ascertainable documents. The scope of work did not include an assessment for environmental regulatory compliance of any facility ever operated at the Property (past or present), or sampling and analyzing of environmental media. Stantec was not contracted to perform an independent evaluation of the purchase or lease price of the Property and its relationship to current fair market value. The conclusions presented in this Phase I ESA report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 2.3.

ASTM E1527-13 notes that the availability of record information varies from source to source. The User or Environmental Professional is not obligated to identify, obtain, or review every possible source that might exist with respect to a property. Instead, ASTM identifies record information that is reasonably ascertainable from standard sources. “Reasonably ascertainable” means:

1. Information that is publicly available.
2. Information that is obtainable from its source within reasonable time and cost constraints; and
3. Information that is practicably reviewable.

2.1 PROPERTY DESCRIPTION

The Property consists of approximately 3.08 acres of undeveloped land in the southwest portion of APN 213-0-090-105. There are currently no structures present at the Property or the wider APN parcel to the east and north, although a road is under construction adjacent to the north of the Property. Surrounding properties are a mix of commercial, medical, and educational properties. A Property location map is illustrated on Figure 1. A Property map illustrating the main features of the Property is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

2.2 SPECIAL TERMS, CONDITIONS, AND SIGNIFICANT ASSUMPTIONS

There were no special terms, conditions, or significant assumptions associated with this Phase I ESA.

2.3 EXCEPTIONS AND LIMITING CONDITIONS

This report documents work that was performed in accordance with the MSA. No other representations, warranties or guarantees are made concerning the accuracy or completeness of the data or conclusions contained within this report. This report provides an evaluation of specified environmental conditions associated with the identified property that was assessed at the time the work was conducted and is based on information obtained by and/or provided to Stantec at that time. 40 CFR 312.20(f)(2) requires that the Environmental Professional evaluate the thoroughness and reliability of provided information. Stantec can neither warrant nor guarantee such thoroughness or reliability, however.

Conclusions made within this report consist of Stantec’s professional opinion as of the time of the preparation of this report and are based solely on the scope of work described in the report, the limited data available and the results of the work. They are not a certification of the property’s environmental condition. Project Specific limiting conditions are provided in Section 2.2.

The conclusions are based on the site conditions encountered by Stantec at the time of the work. Accordingly, additional studies and actions may be required. The identification of non-environmental risks to structures or people on the Property is beyond the scope of this assessment.

Stantec specifically disclaims any responsibility to update the conclusions in this report if new or different information later becomes available or if the conditions or activities on the property subsequently change.

In the event of any conflict between the terms and conditions of this report and the terms and conditions of the MSA, the MSA shall control.

2.4 PERSONNEL QUALIFICATIONS

This Phase I ESA was conducted by, or under the supervision of, an individual that meets the ASTM definition of an Environmental Professional (EP). The credentials of the EP and other key Stantec personnel involved in conducting this Phase I ESA are provided in Appendix B.

3.0 USER-PROVIDED INFORMATION

ASTM E1527-13 describes responsibilities of the User to complete certain tasks in connection with the performance of "All Appropriate Inquiries" into the Property. The ASTM standard requires that the Environmental Professional request information from the User on the results of those tasks because that information can assist in the identification of RECs, CRECs, HRECs, or de minimis conditions in connection with the Property. Towards that end, Stantec requested that the User provide the following documents and information:

Description of Information	Provided (Yes / No)	Description and/or Key Findings
User Questionnaire and/or Interview	Yes	The user is not aware of any environmental issues associated with the Property. The owner of the Property is identified as Sunbelt Enterprises, LLC.
Environmental Liens or Activity Use Limitations	N/A	No environmental liens or activity and use limitations were identified in the Preliminary Report dated October 23, 2020. A copy of the Preliminary Title Report is provided in **Appendix C.**
Previous Environmental Permits or Reports Provided by User	Yes	The user provided a previous Phase I Environmental Site Assessment for APN 213-009-010-5, Oxnard, California prepared by Rincon Consultants, Inc dated July 24, 2014.
Purpose of the Phase I ESA	Yes	Due diligence.

Stantec requested information relevant to performance of this Phase I ESA with a written questionnaire submitted to the user of this report. A copy of the User Questionnaire completed by Mr. Lenny Dunn, Consultant for City Ventures, and is provided in **Appendix C**. The significant information provided by Mr. Dunn is summarized below.

1. Information on Environmental Cleanup Liens on the Property? – The Client is not aware of any environmental cleanup liens on the Property.
2. Information on Property Activity or Use Limitations (including Institutional and Engineering Controls)? – The Client is not aware of any activity and land use limitations on the Property.
3. Specialized knowledge or experience of the User - The Client is not aware of historical use of the Property.
4. Commonly known or reasonably ascertainable information about the Property? – None.

5. The degree of obviousness or the presence or likely presence of contamination at the Property, and the ability to detect the contamination by appropriate investigation? – None.

A. SPECIALIZED KNOWLEDGE OR EXPERIENCE

The Federal AAI rule (40 CFR §312.28) and ASTM E1527-13 require that all appropriate inquiry must take into account relevant and applicable specialized knowledge and experience on the part of the User regarding the Property, the area surrounding the Property, the conditions of adjoining properties, and any other experience relevant to identifying RECs on the Property.

Mr. Dunn has no knowledge or experience related to the Property or nearby properties.

B. PURCHASE PRICE VS. PROPERTY VALUE

The Federal AAI rule (40 CFR §312.29) and ASTM E1527-13 require that persons seeking a defense to or protection from liability under CERCLA must take into account the relationship of the purchase price to the fair market value of the Property if it were not contaminated to assess whether or not the differential is due to the presence of releases or threatened releases of hazardous substances. This portion of the inquiry is the responsibility of the User, and the User has the option of sharing or not sharing this information with the Environmental Professional performing the Phase I ESA.

Stantec has not performed an independent evaluation of the purchase price of the Property and its relationship to fair market value. Stantec submitted a written questionnaire to the User inquiring about the User's knowledge regarding the relationship of the purchase price to the fair market value of the property if it were not contaminated.

Mr. Dunn believes the purchase price being paid for the Property reasonably reflects the fair market value.

4.0 RECORDS REVIEW

The objective of consulting historical sources of information is to develop the history of the Property and surrounding area and evaluate if past uses may have resulted in RECs. Physical setting records are evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Property. During the review of historical records, Stantec attempted to identify uses of the Property from the present to the first developed use of the Property. Stantec's research included the reasonably ascertainable and useful records described in this section.

4.1 PHYSICAL SETTING

A summary of the physical setting of the Property is provided in the table below with additional details in the following subsections

Topography:	The Property is located at approximately 75 feet above mean sea level (amsl). The Property topography is relatively flat, and regional topography is to the south-southwest (EDR, 2020).
Soil/Bedrock Data:	Based on observations during shallow soil sampling conducted by Stantec on October 19, 2020, soil beneath the Property was observed to be light brown silty sand to the maximum depth explored of 3 feet below ground surface (ft bgs).
Estimated Depth to Groundwater/ Estimated Direction of Gradient:	According to *Monitoring Well Installation & Limited Geoprobe Assessment Report* dated November 2008, prepared for the Former Oxnard Truck Center located approximately 1,000 feet northeast of the Property, depth to groundwater is estimated to be approximately 16 ft bgs.
NOTE: Site-specific groundwater flow direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.	

4.1.1 Property Topography and Surface Water Flow

The regional topography in the vicinity of the Property is predominantly flat with a gentle slope to the south-southwest. The Property is located at approximately 75 feet amsl, and is relatively flat (EDR, 2020). Surface water runoff is expected to infiltrate through the unpaved surface of the Property, with excess expected to follow south toward adjacent properties.

4.1.2 Regional and Property Geology

The Property is located within the Santa Clara River Valley Groundwater Basin (Basin Number 4-004) which underlies a coastal alluvial plain in the southwestern portion of Ventura County. The vicinity of the Property is underlain with Quaternary-aged alluvium deposited by the Santa Ana River.

Based on observations during shallow soil sampling conducted by Stantec on October 19, 2020, soil beneath the Property was observed to be light brown silty sand to approximately 3 ft bgs; the maximum depth explored. According to the *Monitoring Well Installation & Limited Geoprobe Assessment Report*, the subsurface in the vicinity of the Property is described as silty clayey sand with gravel and cobbles from ground surface to 16 feet bgs, underlain by poorly-graded coarse sand to at least 23 ft bgs, in turn locally underlain by silty clay to at least 25 ft bgs.

According to the topographic map, there are no bodies of water within a one-mile radius of the Property.

4.1.3 Regional and Property Hydrogeology

The Property is located within the Santa Clara River Valley Groundwater Basin which is bounded by consolidated rocks exposed on the north in the Ventura Hills; on the east in the Camarillo Hills and Santa Monica Mountains; and on the southwest by the Pacific Ocean. The basin underlies the lower Santa Clara River watershed (DWR, Bulletin 118, February 27, 2004).

According to the *Monitoring Well Installation & Limited Geoprobe Assessment Report* for the Former Oxnard Truck Center located approximately 1,000 feet to the north, depth to groundwater is estimated to be 16 ft bgs, with a likely flow direction toward the Pacific Ocean to the south-southwest.

4.2 FEDERAL, STATE AND TRIBAL ENVIRONMENTAL RECORDS

A regulatory agency database search report was obtained from Environmental Data Resources, Inc. (EDR), a third-party environmental database search firm. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in Appendix D.

Stantec evaluated the information listed within the database relative to potential impact to the Property, assessing the potential for impacts based in part on the physical setting. As part of this process, inferences have been made regarding the likely groundwater flow direction at or near the Property. As described in 4.1.3, the inferred shallow groundwater flow direction is likely to be to the south-southwest. Observations about the Property and surrounding properties made during the Property reconnaissance are provided in more detail in Section 5.

4.2.1 Listings for Property

The Property was not identified in the environmental database report

4.2.2 Listings for Nearby Sites with Potential to Impact Property

Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions on adjacent and nearby sites to pose a REC, CREC, or HREC for the Property. The evaluation included an opinion of the potential for contamination by hazardous substances or petroleum products to migrate to the Property from a nearby property, including by vapor migration or encroachment (i.e., potential for a vapor encroachment condition [VEC].

Based on this evaluation, the following individual facilities were identified as the most likely potential sources of impact to the Property. The basis for why each of the following listed databases creates a REC for the property is also provided.

Listed Facility Name/Address	Database Listing	Distance/Direction from Property	REC? (YES / NO)
CARMAX #6014 2001 Lockwood Street Oxnard, CA 93036	RCRA-SQG, HWTS, CERS HAZ WASTE, CERS TANKS, HAZNET, CERS, AST, UST	350 feet / northwest	No
Despite the facility being listed as a waste producer and maintaining above ground and underground storage tanks (ASTs/USTs), the absence of recorded releases or violations mean that the facility is not considered an environmental concern to the Property.			
7-Eleven Inc. #33399 2201 East Gonzales Road Oxnard, CA 93036	UST, CERS HAZ WASTE, CERS TANKS, CIWQS, CERS, RCRA NONGEN/NLR	350 feet / southeast	No
The gas station facility received multiple CERS notices of violation including failure to maintain secondary containment testing and failure to maintain a current UST Response Plan. The facility returned to compliance on these issues and as of the most recent CERS inspection in September 2019, there are no outstanding violations. Based upon the absence of recorded releases or outstanding violations, the distance and downgradient position of the site, the facility is not considered an environmental concern to the Property.			
Costco Wholesale No 420 2001 East Ventura Boulevard Oxnard, CA 93036	HWTS, RCRA-LQG, ENVIROSTOR, FINDS, ECHO, HAZNET, MED WASTE, VENTURA CERS	750 feet / north	No
The facility is listed as a producer of large quantities of waste including medical waste and hazardous materials including solvents and hydrocarbons. Based upon the absence of recorded releases or outstanding violations, the facility is not considered an environmental concern to the Property.			

Oxnard Truck Center / Power Equipment Services 2101 East Ventura Boulevard Oxnard, CA 93036	RCRA-SQG, LUST, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, VENTURA CO. BWT, CORTESE, HIST CORTESE	750 feet / north	No
A former leaking underground storage tank (UST) case is located at the facility. Information on the State Water Resources Control Board (SWRCB) GeoTracker database indicates that the facility formerly possessed two 12,000-gallon diesel USTs, one 12,000-gallon unleaded gasoline UST, two 8,000-gallon oil USTs and one 2,000-gallon waste oil UST. A diesel release was discovered in 1987 and a waste oil release was identified in 1998. All underground tanks were removed between 2000 and 2003 and replaced by two 500-gallon diesel and two 500-gallon waste oil above-ground storage tanks (ASTs). It is understood that the release of waste oil was assessed and remediated between 1999 and 2002, although evidence of case closure has not been identified by Stantec amongst the records included in the EDR report or available on the GeoTracker database. Assessment and remediation of the diesel release was initially discontinued under the approval of Ventura County Environmental Health Department (VCEHD) in 1999, with associated monitoring wells subsequently abandoned in 2000. Following the removal of the USTs in 2003, additional assessment around the former USTs was undertaken comprising the installation of six additional wells to monitor the extent of the diesel plume around the former UST cavity and as perimeter monitoring wells. All wells were abandoned in 2009, with a Remedial Action Completion Certification letter issued by the Resource Management Agency of the County of Ventura. Due to the closure of the former LUST cases at the facility, time since closure, and distance from the Property, the facility is not considered an environmental concern to the Property.			
Teleflex Control Systems 1950 Williams Drive Oxnard, CA 93036	ENVIROSTOR	1,000 feet / west-southwest	No
The facility is reported to have supported ASTs containing chromate-containing materials between 1968 and 1986 used in the manufacture of medical products. ‘Blooms’ of a mustard yellow substance began appearing on basement walls and floors at the facility in 1991. The last known occurrence of the blooms was 1998, although site assessment was undertaken in 2006, 2010 and 2011. The facility was designated as No Further Remedial Action Required by the US Environmental Protection Agency (EPA) in January 2013, followed by Department of Toxic Substances Control (DTSC) in June 2013. Based on the position of the facility downgradient of the Property, the fact that the site received No Further Remedial Action Required status, the facility is not considered an environmental concern to the Property.			

The remaining listings in the database search report provided in Appendix D do not constitute a potential REC for the Property, based on a combination of factors such as distance from the Property, position with relation to likely hydraulic and topographic gradients, and significance of release(s).

4.3 LOCAL/REGIONAL ENVIRONMENTAL RECORDS

Stantec checked the following sources to obtain information pertaining to Property use and/or indications of RECs in connection with the Property:

4.3.1 Local Building and/or Planning Department Records

Agency Name, Contact Information	Findings
City of Oxnard Clerk300 West Third Street, Fourth Flood Oxnard, CA 93030 Phone: (805) 385-7803 Date of contact: 11/24/2020	Stantec submitted a request to the City of Oxnard Clerk to research whether any documents were on file for the Property. As of the writing of this report, a response had not yet been received. Should records become available that affect the conclusions and recommendations in this report, Stantec will issue an addendum to the report. However, based on its review of other sources, Stantec considers it unlikely that any records from this agency would alter the conclusions or recommendations of this report. The lack of this information does not represent a significant data gap.

4.3.2 Local Health Department

Agency Name Contact Information	Finding
County of Ventura Resource Management Agency (VCRMA) 800 South Victoria Avenue Ventura, CA 93009 Phone: (805) 654-2494 Accessed: 11/24/2020	Stantec reviewed the online records databases maintained by VCRMA and did not identify records pertaining to the subject Property. The databases reviewed include: • Leaking Underground Fuel Tanks (LUFT) and Voluntary Cleanup Program (VCP) • Hazardous Materials Program and Underground Tanks (CUPA) • Underground Tanks – Inactive The absence of records is reflective of the limited development history of the Property.

4.3.3 California Geologic Energy Management Division (CalGEM)

Agency Name Contact Information	Finding
California Geologic Energy Management Division (CalGEM)	Stantec reviewed information on the CalGEM Well Finder database to determine the proximity of oil and gas wells in

Agency Name Contact Information	Finding
Online: https://maps.conservation.ca.gov/doggr/wellfinder/ Accessed: 11/24/2020	the vicinity of the Property. There are no oil wells within the Property boundaries. According to the database, the closest oil well is located approximately 725 feet to the north of the Property. This well is a plugged dry hole identified with American Petroleum Institute (API) number 0411105772, operated by Shell Western E&P Inc.

4.3.4 Department of Toxic Substances Control

Agency Name Contact Information	Finding
Department of Toxic Substances Control 5796 Corporate Avenue Cypress, CA 90630-4732 Phone: 714-484-5300 Online database: http://www.envirostor.dtsc.ca.gov/public/ Accessed: 11/24/2020	No records for the Property address, or the adjoining properties were listed on the DTSC's online database Envirostor.

4.3.5 Fire Department

Agency Name Contact Information	Finding
Ventura County Fire Department 165 Durley Avenue Camarillo Phone: (805) 383-4718 Date of contact: 11/24/2020	A request for public records was submitted to the Ventura County Fire Department on November 24, 2020. A response received on November 30, 2020 indicates that the Fire Department did not identify records for the Property, including no plans or drawings and no exempt records.

4.3.6 Regional Water Quality Control Board

Agency Name Contact Information	Finding
Regional Water Quality Control Board, Santa Ana Region, Region 8 3737 Main Street, Suite 500 Riverside, CA 92501 Phone: 951-782-4130 Online database: http://geotracker.waterboards.ca.gov/ Accessed: 11/24/2020	Stantec searched the RWQCB's online database Geotracker, and no files exist for the Property addresses.

4.4 HISTORICAL RECORDS REVIEW

4.4.1 Land Title Records/Deeds

No environmental liens or activity and use limitations were identified in the Preliminary Report dated June 24, 2020. A copy of the Preliminary Title Report is provided in Appendix C. No additional land title records, deeds, environmental liens, and activity and use limitation documentation were provided by the User, and public records were not searched by Stantec.

4.4.2 Aerial Photographs

Stantec reviewed historical aerial photographs provided by EDR. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The following table summarizes Stantec's observations of the reviewed historical aerial photographs.

Year	Scale	Observations, Property and Adjoining Properties
1927, 1938	1" =500'	The Property predominantly comprises undeveloped land, with a small building present encroaching upon the northern portion of the Property, associated with a development extending off-site to the north. The surrounding land to the east, south and west comprises undeveloped land. Orchards bound the parcel which encompasses the Property to the east and west and beyond a road (future Highway 101) to the north.
1947	1" =500'	The building in the northern portion of the Property is no longer present. The Property and adjacent land to the east and south has been plowed and is in use for cultivation.

Records Review
December 9, 2020

Year	Scale	Observations, Property and Adjoining Properties
1953, 1959, 1967	1" =500'	Up to three small buildings have been constructed encroaching upon the northwestern portion of the Property, extending off-site to the north. The central and southern portions of the Property remain in agricultural use, becoming planted as an orchard by 1959. There are no significant changes to the immediately surrounding land use, although parcels located approximately 1,000 feet northeast and west of the Property have been developed into potential residential and industrial land uses by 1967.
1978, 1985	1" =500'	The Property is no longer in use as an orchard but appears to remain in agricultural use. The parcel adjacent to the southwest has been developed into a large, presumed industrial building with associated paved parking lots. By 1985, the several of the buildings adjacent to the north of Property have been demolished. Additional development is evident in the wider surrounding area.
1994	1" =500'	All buildings encroaching upon the northern Property boundary and extending off-site to the north have been demolished. The Property appears to comprise unused, undeveloped land. Two heavy goods vehicles (HGVs) appear to be parked in the eastern portion of the Property. The parcel approximately 400 feet to the east of the Property has been developed into a commercial complex with associated parking lots. The parcel adjacent to the east of the Property is unpaved but is used for vehicle parking.
2005, 2009, 2012, 2016	1" =500'	Color photography from 2005 indicates the Property comprises undeveloped rough ground populated by grasses and small shrubs. Paths are worn in trackways cutting across the northern, eastern and southern portions of the Property. The parcel adjacent to the south has been developed into commercial use. Lockwood Street has been laid adjacent to the northwest, with commercial properties constructed on the parcels to the north and south. Significant development has occurred in the wider area, comprising predominantly commercial development to the north of Highway 101 and predominantly residential housing in the area to the south of the Property. There are no significant changes to the Property over subsequent photographs. Development continues in the surrounding area, but he parcels immediately adjacent to the east and north remain undeveloped to the present.

Name of aerial photograph source: EDR, 2020

Based on review of aerial photographs, the Property was formerly used for agricultural purposes (i.e. orchards and crop cultivation) until the late 1980s or early 1990s. The Property appears to have remained vacant since at least 1994. Accordingly, collected soil samples for chemical analysis to determine if pesticides and heavy metals associated with herbicides were present at levels that represent a Recognized Environmental Condition (REC) or that are of concern to residential development. Results of this investigation are provided in Section 6.0. Stantec concluded based on the completed soil sampling that

the historical agricultural use of the Property does not represent a REC and recommends no further investigation regarding this issue.

4.4.3 City Directories

Stantec retained a third party to research available reverse city directories for the Property, in approximately five-year intervals.

The following is a summary of pertinent entries identified during Stantec's review of the city directory listings:

Subject/Adjoining Property	Year	Listed Occupants
Adjacent northwest: 2001 Lockwood Street	2009 - 2017	Motorcycles 101 Inc. Cars 101 Carmax
Adjacent south: 1901 Outlet Center Drive	1999 - 2017	Various Medical Offices
Adjacent east: 2000 Outlet Center Drive	1996 - 2017	Various commercial properties including clothing and footwear shops, furniture shops and homeware shops California Lutheran University
Adjacent northeast: 2100 Outlet Center Drive	1996 - 2017	Various commercial properties including clothing and footwear shops, furniture shops and homeware shops
Adjacent northeast: 2201 Outlet Center Drive	1996 - 2017	Bugle Boy Factory Stores California Lutheran University

Name of city directories and source: EDR, 2020

4.4.4 Historical Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide information on the history of prior land use and are useful in assessing whether there may be potential environmental contamination on or near the Property. These maps, which have been periodically updated since the late 19th century, often provide valuable insight into historical Property uses.

Stantec requested fire insurance maps from EDR; however, no coverage exists for the Property. The Sanborn® Map Search Report indicating "no coverage" is presented in Appendix E.

4.4.5 Historical Topographic Maps

Stantec reviewed historical USGS 7.5-minute Topographic Maps of the Oxnard, Camarillo, and Hueneme, California Quadrangles (scales of 1:24,000, 1:50,000 and 1:62,500) to help identify past Property usage and areas of potential environmental concern. Copies of the historical maps are provided in Appendix E. The following table summarizes the maps reviewed and our observations.

Year	Scale	Observations, Property and Adjoining Properties
1904	1:62,500	The Property comprises undeveloped land. A highway is present to the north (Highway 101) and a track is present to the west with a small development adjacent to the southeast of the Property.
1943, 1947, 1949, 1950, 1951, 1967	1:62,500 1:50,000 1:24,000	The Property remains undeveloped, although a building is present adjacent to the northeastern Property boundary. The track to the west is no longer present, but instead a track to the north serves the building adjacent to the north of the Property. Additional buildings are constructed to the north by 1950.
2012	1:24,000	The Property remains undeveloped. The former buildings to the north of the Property are no longer present. The surrounding area has undergone significant development. Lockwood Street is annotated adjacent to the northwest of the Property.

Name of maps and source: EDR, 2020

4.4.6 Other Historical Sources

No other historical sources were researched.

5.0 SITE RECONNAISSANCE

A visit to the Property and its vicinity was conducted by Mr. Thomas Stanley, Geologic Staff with Stantec, on October 19, 2020. Access to the Property was provided by Mr. Lenny Dunn of Point View Land Consulting, a representative of the Property Owner. Stantec was unaccompanied during the Property visit. Figure 2 provides information about the Property and adjoining properties and the location of potential areas of environmental concern. Photographs collected during the Property visit are included in Appendix A.

5.1 SITE RECONNAISSANCE METHODOLOGY

The site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions of the Property that may indicate the presence of RECs. The reconnaissance of the Property was conducted on foot and Stantec utilized the following methodology to observe the Property:

- Traverse the outer Property boundary.
- Traverse transects across the Property.

Weather conditions during the visit to the Property were clear and sunny. There were no weather-related Property access restrictions encountered during the reconnaissance visit.

5.2 GENERAL DESCRIPTION

Property and Area Description:	The Property is located southeast of Lockwood Street and west of Outlet Center Drive, in the City of Oxnard, County of Ventura, California. The surrounding area consists of a mixture of commercial, retail, and education properties, with vacant land adjacent to the east and north.
Property Operations.	The Property is unoccupied and undeveloped.
Structures, Roads, Other Improvements:	None, although a road and utilities were being constructed parallel to the northern Property boundary at the time of the visit.
Property Size (acres):	3.08 acres.
Estimated % of Property Covered by Buildings and/or Pavement:	0%
Observed Current Property Use/Operations:	None observed.
Observed Evidence of Past Property Use(s):	None observed.
Sewage Disposal Method (and age):	None observed.
Potable Water Source:	None observed.
Electric Utility:	None observed.

5.3 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

The following table summarizes Stantec's observations during the Property reconnaissance.

Observations	Description/Location
Hazardous Substances and Petroleum Products as Defined by CERCLA 42 U.S.C. § 9601(14):	None observed.
Drums (≥ 5 gallons):	None observed.
Strong, Pungent, or Noxious Odors:	None observed.
Pools of Liquid:	None observed.
Unidentified Substance Containers:	None observed.
PCB-Containing Equipment:	None observed.
Other Observed Evidence of Hazardous Substances or Petroleum Products:	PVC piping and a carboard box containing full and partially empty slightly rusted metal cans of solvent cement were identified in the northern portion of the Property. No evidence of spills or leakage was noted. A tractor was present in the southern portion of the Property. Whilst no evidence of fuel or oil leaks was noted, the vehicle has the potential to develop leaks when left exposed to wind and rain.

5.4 INTERIOR OBSERVATIONS

As there were no structures present at the time of the reconnaissance visit, no interior observations were made by Stantec.

5.5 EXTERIOR OBSERVATIONS

Stantec made the following observations during the site reconnaissance of exterior areas of the Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
On-site Pits, Ponds, or Lagoons:	None observed.
Stained Soil or Pavement:	None observed.
Stressed Vegetation:	None observed.
Waste Streams and Waste Collection Areas:	Minor amounts of discarded and dumped waste were noted adjacent to the southern and western Property boundaries. Waste predominantly comprised inert materials such as plastic packaging, concrete, and shopping carts.
Solid Waste Disposal:	None observed.

Observations	Description
Potential Areas of Fill Placement:	A stockpile of soil covered with black plastic sheeting was observed along the length of the western Property boundary. Soil was noted to comprise orangish brown poorly graded fine to medium sand and appeared to be used during the ongoing road construction works. No visual or olfactory evidence of contamination was noted, nor was evidence of deleterious materials encountered.
Wastewater:	No exterior wastewater discharge was observed.
Stormwater:	No stormwater discharge was observed.
Wells:	No wells were observed.
Septic Systems:	No visible evidence of the existence of a septic system was observed.
Other Exterior Observations:	None.

5.6 UNDERGROUND STORAGE TANKS/STRUCTURES

Existing USTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), which would indicate the presence of USTs, was discovered during the site reconnaissance.
Former USTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), reports, or other evidence of the former presence of USTs was discovered during this Phase I ESA for the Property.
Other Underground Structures:	None observed.

5.7 ABOVEGROUND STORAGE TANKS

Existing ASTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface stains), which would indicate the presence of ASTs, was discovered during the site reconnaissance.
Former ASTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface stains), reports, or other evidence of the former presence of ASTs was discovered during this Phase I ESA.

5.8 ADJOINING PROPERTIES

5.8.1 Current Uses of Adjoining Properties

As viewed from the Property and/or from public rights-of-way, Stantec made the following observations about use and activities on adjoining properties:

NORTH	A recently laid road with ongoing utility placement works noted during the visit, with undeveloped land beyond.
EAST	Vacant land with Outlet Center Drive and commercial retail units beyond.

SOUTH	A medical center with associated paved parking lot.
WEST	Vehicle storage lot associated with a nearby car sales facility.

5.8.2 Observed Evidence of Past Uses of Adjoining Properties

Observations of adjoining properties providing indications of past use and activities, if any, are described below.

NORTH	None observed.
EAST	None observed.
SOUTH	None observed.
WEST	None observed.

5.8.3 Pits, Ponds or Lagoons on Adjoining Properties

As viewed from the Property and/or from public rights-of-way, Stantec made the following observations about the presence of pits, ponds, and lagoons on adjoining properties:

NORTH	None observed.
EAST	None observed.
SOUTH	None observed.
WEST	None observed.

5.9 OBSERVED PHYSICAL SETTING

Topography of the Property and Surrounding Area:	The Property is relatively flat.

6.0 SHALLOW SOIL SAMPLING

Based on historical documents including aerial photographs, the Property was formerly used for agricultural purposes (i.e. orchards and crop cultivation) until the late 1980s or early 1990s. The historical use of the Property for agricultural purposes can be a potential concern due to the possible use of pesticides and herbicides containing heavy metals used to prohibit the growth of weeds. Based on this history, Stantec performed a Phase II ESA to evaluate if there was a concern to the Site.

Stantec advanced six shallow borings to 3 ft bgs on October 19, 2020. Soil samples were collected at the 0.5-1.0-foot interval, 1.5-2.0-feet interval, and the 2.5-3.0-feet interval. The shallow soil sample (0.5-1.0-foot) from the borings were analyzed for organochlorines pesticides (OCPs) by United States Environmental Protection Agency (EPA) test method 8081A and the metals arsenic and lead by EPA test method 6010B.

The analytical results are compared against EPA Regional Screening Levels and Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Residential Screening Levels in Table 1. Residential rather than commercia screening levels have been selected as a most-sensitive end use for comparison purposes only. The certified laboratory analytical report is provided in Appendix F.

Organochlorine Pesticides

At least two OCP chemicals (of 4,4'-DDE, 4,4'-DDT, alpha chlordane, gamma chlordane, and dieldrin) was detected in soil samples from locations SB-1 to SB-3 and SB-6. The highest concentrations of 4,4'-DDE, 4,4'-DDT, alpha chlordane, gamma chlordane was reported in the sample from SB-1. Dieldrin was detected in the sample from SB-6 only. No concentrations of OCPs were reported above the respective laboratory method detection limit in samples from SB-4 and SB-5.

No concentrations of OCPs were reported exceeding the respective screening level for residential use maintained by the EPA or DTSC.

Heavy Metals

Concentrations of arsenic and lead were reported above the laboratory method detection limit in all six samples. The concentrations of lead reported range from 3.4 milligrams per kilogram (mg/kg) to 11 mg/kg, but none exceed the EPA screening level (400 mg/kg) or DTSC screening level (80 mg/kg) for residential use.

Concentrations of arsenic ranged from 2.2 mg/kg to 3.3 mg/kg, which exceeds both of the screening levels for arsenic maintained by the EPA (0.68 mg/kg) and DTSC (0.11 mg/kg). However, all concentrations were within typical and naturally-occurring southern California background concentrations of arsenic (defined as concentrations of up to 15.2 mg/kg; EPA 1992).

Stantec concludes that the historical agricultural use of the Property represents neither a Recognized Environmental Condition nor a human health risk in contemplation of the proposed residential development of the Property and recommends no further investigation regarding this issue.

7.0 EVALUATION

This section provides a summary overview of or Findings, Opinions, and Conclusions.

7.1 FINDINGS AND OPINIONS

Information gathered from interviews, reviews of existing data, and a property inspection was evaluated to determine if RECs are present in connection with the Property. Based on this information, Stantec made the following findings and developed the following opinions.

- Based on historical documents including aerial photographs, the Property was formerly used for agricultural purposes (i.e. orchards and cultivating crops) until the early late 1980s or early 1990s. Accordingly, Stantec collected soil samples for chemical analysis to determine if pesticides and heavy metals associated with herbicides were present at levels that represent a concern to residential development of the Site.

  Stantec advanced six shallow borings to 3 ft bgs on October 19, 2020. Organochlorine pesticides were detected in four of the six samples analyzed and comprised 4,4'-DDE, 4,4'-DDT, alpha- and gamma-Chlordane, and Dieldrin. All detectable concentrations of OCPs were below the respective EPA and DTSC HERO residential screening levels. Lead was detected in all six soil samples with concentrations ranging from 3.4 to 11 mg/kg. All of the detections are below the DTSC HERO residential screening level of 80 mg/kg for lead. Arsenic was detected in all six soil samples with concentrations ranging from 2.2 to 3.3 mg/kg, which are above the EPA RSL for residential use of 0.68 mg/kg; however, these concentrations fall within the typical southern California regional background levels of up to 15.2 mg/kg.

  Based on these results, historical agricultural use does not represent a recognized environmental condition or a human health risk in context of the proposed development of the Property, and Stantec recommends no further investigation regarding this issue.

- An environmental records search was performed and identified sites within their respective ASTM E 1527-13 search radii of the Property that may represent RECs, HRECs, or *de minimis* conditions.

  Based on one or more of the following reasons: distance from the Property, position of sites with respect to assumed groundwater flow direction, the native soils, and regulatory status, none of the sites identified in the in the environmental records search report are expected to affect soil or groundwater quality at the Property. The environmental records search identified no RECs, HRECs or *de minimis* conditions at or near the Property.

- During a site reconnaissance visit, potential sources of contamination such as dumped waste, improperly stored cans of solvent cement and a tractor parked on bare soil with no drip tray were noted.

  The waste, cans of solvent cement and tractor stored over bare soil are not considered a REC to the Property. They do, however, represent a *de minimis condition* and action should be taken to remove the waste, remove the cans of solvent cement or store in a lidded, impermeable container, and remove

the tractor or place a drip tray beneath the engine and any other parts with the potential to leak fuel, oil or fluids. Otherwise, Stantec recommends no further investigation regarding this issue.

7.2 DATA GAPS

The federal AAI final rule [40 CFR 312.10(a)] and ASTM E1527-13 identify a "data gap" as the lack or inability to obtain information required by the standards and practices of the rule despite good faith efforts by the Environmental Professional or the User.

Any data gaps resulting from the Phase I ESA described in this report are listed and discussed below.

Gap	Discussion
Deletions or Exceptions from Scope of Work Referenced in Section 1.4:	None.
Weather-Related Restrictions to Site Reconnaissance:	None.
Facility Access Restrictions to Site Reconnaissance:	None.
Other Site Reconnaissance Restrictions:	None.
Data Gaps from Environmental Records Review:	None.
Data Gaps from Historical Records Review:	None.
Data Gaps from Interviews:	No interviews were conducted as part of this Phase I ESA. The lack of interview is not considered a significant data gap.
Other Data Gaps:	None.

7.3 CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 of the Property. Any exceptions to, or deletions from, this practice are described in the Data Gaps section of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Property, and Stantec recommends no further investigation regarding the environmental condition of the Property. However, Stantec notes the following *de minimis* condition:

- **Illegally Dumped Waste, Improperly Stored Chemicals and Vehicle.** Stantec identified minor amounts of illegally dumped waste on the Property, particularly along the southern and western Property boundaries. Although there do not appear to be any indications of significant releases of hazardous substances, there is the potential for some amount of hazardous materials to be present amongst the waste. Therefore, the waste

should be removed from the Property and disposed of at an appropriately licensed waste receiving facility.

The preceding summary is intended for informational purposes only. Reading of the full body of this report is recommended.

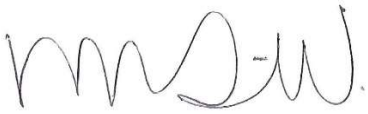
Subject: Dear **Soil Assessment Report for the Outlet Center, Oxnard, California**



Mr. Comanor:

We are pleased to submit this Soil Assessment Report for the property located on Lockwood Street identified by Assessor Parcel Number (APN) 213-009-010-5 in Oxnard, California (site). The soil assessment was performed in accordance with our proposal dated February 27, 2020. The objective of the assessment was to evaluate potential contamination of the onsite soil.

Thank you for selecting Rincon for this project. If you have any questions, or if we can be of any future assistance, please contact us.

Sincerely,

Rincon Consultants, Inc.

Meghan Hearne-Williams
Sr. Environmental Scientist

Walt Hamann, PG, CEG, CHG
Vice President, Environmental Services

Appendix A Analytical Laboratory Report

Executive Summary

This report presents the results of a soil assessment conducted at the property located on Lockwood Street identified by Assessor Parcel Number (APN) 213-009-010-5 in Oxnard, California (site). The soil assessment was performed in accordance with our proposal dated February 27, 2020. The objective of the assessment was to evaluate potential contamination of the onsite soil associated with historical agricultural land use.

On December 29, 2020, Rincon advanced eight hand auger soil borings at the site to a total depth of approximately 3.0 feet below ground surface (bgs). Soil matrix samples were collected at 0.0-0.5 feet bgs (surface) and from 2.5-3.0 feet bgs. A total of 16 soil samples were collected. Initially, only the eight shallow soil samples (0.0-0.5 feet bgs) were analyzed for organochlorine pesticides (OCPs) by EPA Method 8081A and arsenic by EPA Method 6010B/7471A. The deeper samples were kept on hold at the analytical laboratory, pending the results of the shallow samples.

It is Rincon's understanding that the development of the property will be for commercial land use. However, to be protective of human health, the soil matrix analytical results were compared to the San Francisco Bay Regional Water Quality Control Board (SFB RWQCB) Environmental Screening Levels (ESLs) for residential, commercial, and construction worker soil exposure scenarios, (SFB RWQCB 2019) (hereinafter referred to as ESLs). In addition, metals were compared to the California Background Concentrations published by the Kearney Foundation (March 1996), which establishes typical background concentration ranges for metals in California soil.

The following pesticides were detected above laboratory reporting limits in the shallow (0.0-0.5 foot bgs) soil matrix samples: 4,4-Dichlorodiphenyldichloroethane (4,4-DDD), 4,4-Dichlorodiphenyldichloroethylene (4,4-DDE), and 4,4-Dichlorodiphenyltrichloroethane (4,4-DDT). However, none of the concentrations detected were above the SFB RWQCB residential, commercial, and construction worker ESLs. No other pesticides were detected above the laboratory detection limits. Since the results of the shallow soil samples were below ESLs, the soil matrix samples collected from 2.5-3.0 feet bgs were not analyzed.

Concentrations of arsenic ranged from 2.9 milligrams per kilograms (mg/kg) in the soil sample collected from RB3 at 0.0-0.5 feet bgs to 4.8 mg/kg in the soil sample collected from RB1 at 0.0-0.5 feet bgs. Although the levels of arsenic exceeded the residential, commercial, and construction worker exposure ESLs established for arsenic, the concentrations reported are within the accepted California background concentration range published by the Kearney Foundation (0.6 mg/kg to 11 mg/kg). Based on the results of this Soil Assessment:

- Concentrations of OCPs in shallow soil were below both the residential, commercial, and construction worker exposure ESLs. Therefore, no further assessment of OCPs in onsite soil is recommended.
- The concentrations of arsenic reported in the soil samples were within the within the accepted California background concentration range published by the Kearney Foundation. Based on the concentrations reported for arsenic in the shallow soil samples, no further assessment is recommended.

Introduction

On behalf of Sunbelt Enterprises, Rincon Consultants, Inc. (Rincon) has prepared this Soil Assessment Report for the property located on Lockwood Street and identified by Assessor Parcel Number (APN) 213-009-010-5 in Oxnard, California (site). Rincon performed a soil assessment at the site to evaluate if the site has been impacted with organochlorine pesticides (OCPs) and arsenic as a result of historical agricultural land use.

Purpose and Scope

The purpose of the Soil Assessment was to determine the absence or presence of agricultural chemicals and arsenic that could affect site occupants or construction/utility worker safety. Our scope of work included the following:

- Preparation of a site health and safety plan in accordance with Occupational Safety and Health Administration (OSHA) requirements.
- Notification of Underground Service Alert (USA) utility marking service, as required by California law. The utility markings identified known utility locations in the public right of way.
- Advancement of eight soil borings to a depth of 3.0 feet below ground surface (bgs) for the purpose of collecting soil samples.
- Collection of soil matrix samples from each of the eight borings at depth intervals of 0.0-0.5 feet bgs (surface) and 2.5-3.0 feet bgs.
- Analysis of eight soil samples for OCPs by EPA Method 8081A and arsenic by EPA Method 6010B/7471A (initially, only the samples collected from 0.0 to 0.5 feet bgs were analyzed; the deeper samples were placed on hold with the laboratory, pending results of the shallow sample).
- Preparation of this report documenting our findings.

Screening Levels

It is Rincon's understanding that the redevelopment of the property will be for commercial land use. To be protective of human health, soil analytical results were compared to screening levels established for both residential and commercial land use. The following sources were reviewed to select appropriate screening levels for constituents of concern detected in soil samples during this site assessment (Table 1):

- San Francisco Bay Regional Water Quality Control Board (SFB RWQCB) Environmental Screening Levels (ESLs) for residential, commercial, and construction worker soil exposure scenarios, (SFB RWQCB 2019) (hereinafter referred to as ESLs).
- In addition, metals were compared to the California Background Concentrations published by the Kearney Foundation (March 1996), which establishes typical background concentration ranges for metals in California soil.

Methodology

Soil Sampling Methodology

On December 29, 2020, Rincon advanced eight soil borings at the site. The boring locations are depicted on Figure 2. Soil encountered during sampling generally consisted of a dark brown sand from surface to approximately 2.5 feet bgs, which became lighter brown in color with depth. No odors or discoloration were noted.

A total of eight soil borings (RB1 through RB8) were advanced throughout the site to a depth of 3.0 feet bgs. Discrete soil matrix samples were collected at 0.0-0.5 feet bgs (surface) and 2.5-3.0 feet bgs. Initially, only the surface samples were analyzed for OCPs (EPA Method 8081A) and arsenic (EPA Method 6010B). The 2.5-3.0-foot-deep soil matrix samples were held at the laboratory, pending the results of the shallower samples. These samples would only be analyzed if the shallower samples had detected concentrations of contaminants above the ESLs. However, since the results of the shallow soil samples were below ESLs for OCPs and within the acceptable range of arsenic concentrations in California soil, the deeper samples were not analyzed.

Soil sampling was conducted using a stainless-steel hand auger. When the target sampling depth was reached, soil matrix samples were collected in 8-ounce glass jars with Teflon-lined lids, provided by the analytical laboratory. The samples were sealed, the label was applied, and the samples were stored on ice and in a cooler chilled to 4 degrees Celsius. The soil samples were couriered BC Laboratories, Inc. under chain of custody protocol.

Decontamination of reusable sampling equipment was completed between each soil boring and each specific depth interval. Equipment decontaminated included the hand auger, hand tools, and all other equipment that contacted the soil during sampling activities. The sampling equipment was washed in clean 5-gallon buckets using a phosphate-free detergent with a final rinse using distilled water. Soil cuttings were used as backfill in the soil borings.

All sampling and reporting were completed under the direct supervision of a California Professional Geologist.

Laboratory Analytical QA/QC

BC Laboratories, Inc. performed Tier II data validation documenting the quality assurance/quality control (QA/QC) measures employed during laboratory analysis of groundwater and soil vapor samples. The data quality review ensured that data quality objectives were met for each of the following quality control measures:

- Data completeness
- Holding times and preservation
- Laboratory blanks
- Laboratory control standards
- Sample duplicate
- Matrix spike/matrix spike duplicates
- Compound identification and quantitation

Overall, the QA/QC measures met BC Laboratories' data quality objectives, as described in the analytical reports provided in Appendix A.

Analytical Results

The laboratory analytical results are summarized in Table 1. The laboratory analytical report is included in Appendix A.

OCPs and Arsenic

The following pesticides were detected above laboratory reporting limits in the shallow (0.0-0.5 foot) soil matrix samples: 4,4-Dichlorodiphenyldichloroethane (4,4-DDD), 4,4-Dichlorodiphenyldichloroethylene (4,4-DDE), and 4,4-Dichlorodiphenyltrichloroethane (4,4-DDT).

4,4-DDD - Concentrations ranged from below laboratory detection limits (non-detect) to 0.0013 milligrams per kilogram (mg/kg) in the sample collected from RB2 at 0.0-0.5 feet bgs.

4,4-DDE – Concentrations ranged from non-detect to 0.023 mg/kg in the sample collected from RB1 at 0.0-0.5 feet bgs.

4,4-DDT – Concentrations ranged from 0.00093 mg/kg to 0.014 mg/kg in the sample collected from RB1 at 0.0-0.5 feet bgs.

However, none of the concentrations detected were above the SFB RWQCB residential, commercial, and construction worker ESLs. No other pesticides were detected above the laboratory detection limits. Since the results of the shallow soil samples were below ESLs, the soil matrix samples collected from 2.5-3.0 feet bgs were not analyzed.

Arsenic – Concentrations of arsenic ranged from 2.9 mg/kg in the soil sample collected from RB3 at 0.0-0.5 feet bgs to 4.8 mg/kg in the soil sample collected from RB1 at 0.0-0.5 feet bgs. Although the levels of arsenic exceeded the residential, commercial, and construction worker exposure ESLs established for arsenic, the concentrations reported are within the accepted California background concentration range published by the Kearney Foundation (0.6 mg/kg to 11 mg/kg). It is typical for concentrations of arsenic to be above screening levels such as the ESLs. Therefore, based on the concentrations reported for arsenic in the shallow soil samples, no further assessment is recommended.

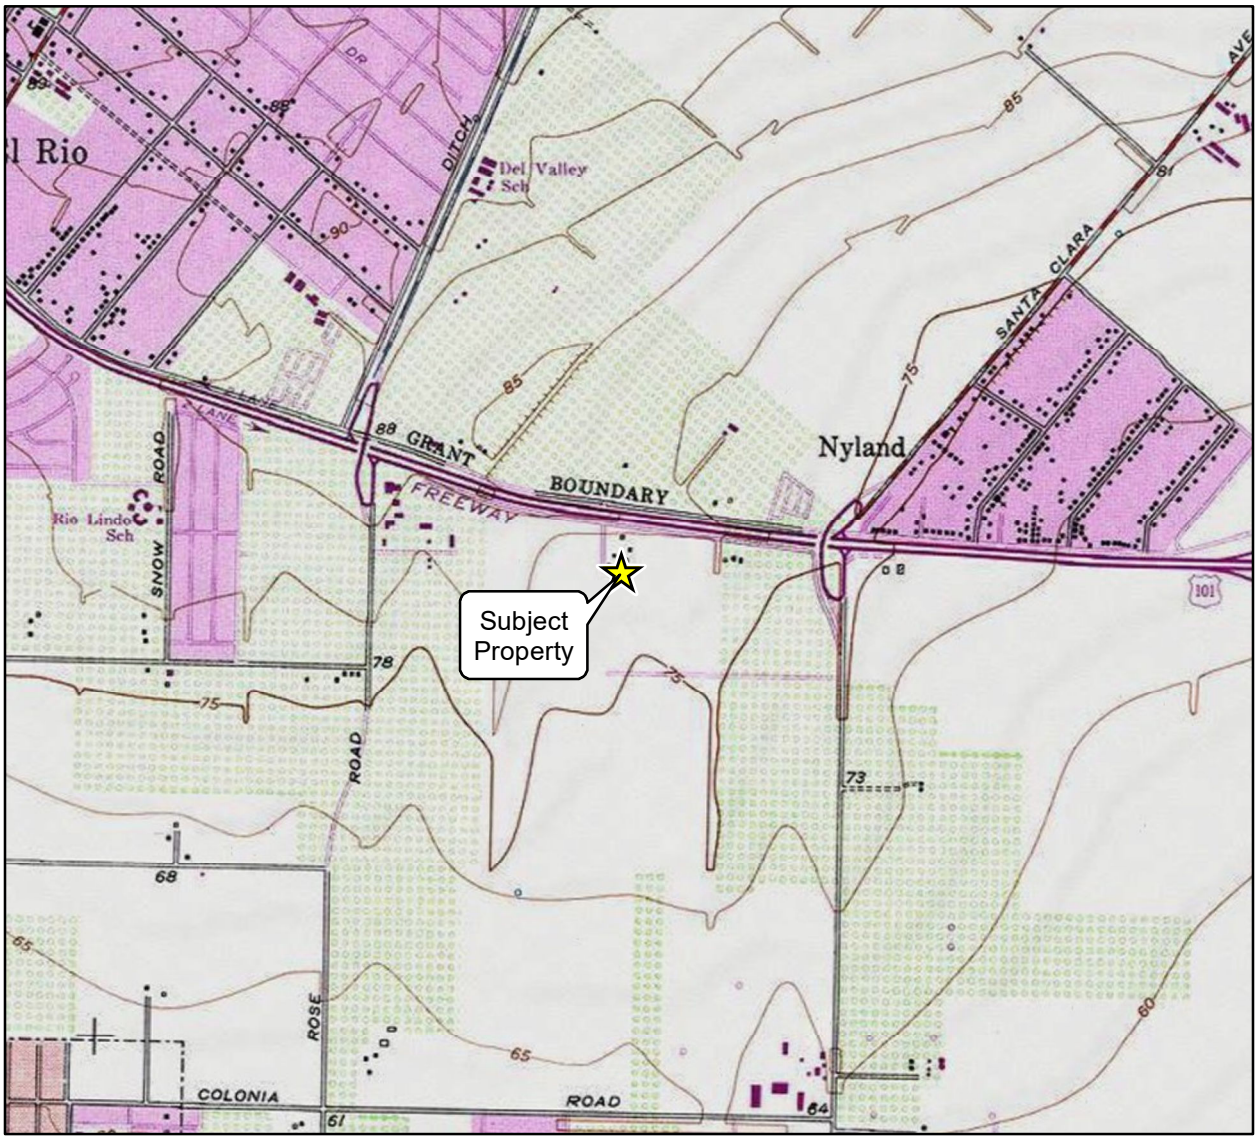
Conclusions and Recommendations

Based on the results of this Soil Assessment:

- Concentrations of OCPs in shallow soil were below both the residential, commercial, and construction worker exposure ESLs. Therefore, no further assessment of OCPs in onsite soil is recommended.
- Although arsenic was detected in the shallow soil at concentrations which exceeded ESLs, the concentrations reported were within the within the accepted California background concentration range published by the Kearney Foundation. Based on the concentrations reported for arsenic in the shallow soil samples, no further assessment is recommended.

Limitations

This Site Assessment Report has been prepared for and is intended for the exclusive use of Daylight Community Deveopment, LLC and Sunbelt Enterprises. The contents of this report should not be relied upon by any other party without thewritten consent of Rincon Consultants, Inc.



Our conclusions regarding the site are based on the results of the limited subsurface sampling and analysis. It should be noted that the concentrations of contaminants measured at any given location may not be representative of conditions at other locations. Further, conditions may change at any particular location as a function of time in response to natural conditions, chemical reactions and other events. Conclusions regarding the condition of the site do not represent a warranty that all areas within the site are similar to those sampled.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/26/2022 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
KAISER PERNANANTE OX EPA ID:: CAL000383641	2200 E GONZALES RD	S 1/8 - 1/4 (0.162 mi.)	J45	411

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/25/2022 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 5 CPS-SLIC sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 10 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 2 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that there are 29 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EPA ID:: CAL000411022

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 06/21/2022 has revealed that there are 18 Cortese sites within approximately 0.5 miles of the target property.

OUTLET CENTER	***LOCKWOOD STREET***	***0 - 1/8 (0.000 mi.)***	***1***	***9***

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 07/18/2022 has revealed that there is 1 CERS site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Waste Description:	BARIUM
Waste Code:	D006
Waste Description:	CADMIUM
Waste Code:	D007
Waste Description:	CHROMIUM
Waste Code:	D008
Waste Description:	LEAD
Waste Code:	D009
Waste Description:	MERCURY
Waste Code:	D010
Waste Description:	SELENIUM
Waste Code:	D011
Waste Description:	SILVER

COSTCO WHOLESALE NO 420 (Continued) **1004677950**

Waste Code: D013
Waste Description: LINDANE (1,2,3,4,5,6-HEXA-CHLOROCYCLOHEXANE, GAMMA ISOMER)

Waste Code: D016
Waste Description: 2,4-D (2,4-DICHLOROPHENOXYACETIC ACID)

Waste Code: D018
Waste Description: BENZENE

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D024
Waste Description: M-CRESOL

Waste Code: D026
Waste Description: CRESOL

Waste Code: D028
Waste Description: 1,2-DICHLOROETHANE

Waste Code: D029
Waste Description: 1,1-DICHLOROETHYLENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: D043
Waste Description: VINYL CHLORIDE

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

COSTCO WHOLESALE NO 420 (Continued) **1004677950**

MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: P001
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste Code: P046
Waste Description: ALPHA,ALPHA-DIMETHYLPHENETHYLAMINE (OR) BENZENEETHANAMINE, ALPHA, ALPHA-DIMETHYL-

Waste Code: P075
Waste Description: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

Waste Code: P188
Waste Description: BENZOIC ACID, 2-HYDROXY-, COMPD. WITH (3AS-CIS)-1,2,3,3A,8,8A-HEXAHYDRO-1,3A,8-TRIMETHYLPYRROLO[2,3-B]INDOL-5-YL METHYLCARBAMATE ESTER (1:1) (OR) PHYSOSTIGMINE SALICYLATE

Waste Code: P204
Waste Description: PHYSOSTIGMINE (OR) PYRROLO[2,3-B]INDOL-5-OL, 1,2,3,3A,8,8A-HEXAHYDRO-1,3A,8-TRIMETHYL-METHYLCARBAMATE (ESTER), (3AS-CIS)-

Waste Code: U010
Waste Description: AZIRINO [2',3':3,4]PYRROLO[1,2-A]INDOLE-4,7-DIONE, 6-AMINO-8-[[(AMINOCARBONYL)OXY]METHYL]-1,1A,2,8,8A,8B-HEXAHYDRO-8A-METHOXY-5-METHYL-, [1AS-(1AALPHA, 8BETA, 8AALPHA, 8BALPHA)]- (OR) MITOMYCIN C

Waste Code: U015
Waste Description: AZASERINE (OR) L-SERINE, DIAZOACETATE (ESTER)

Waste Code: U019
Waste Description: BENZENE (I,T)

Waste Code: U034
Waste Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Waste Code: U035
Waste Description: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

Waste Code: U037
Waste Description: BENZENE, CHLORO- (OR) CHLOROBENZENE

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

COSTCO WHOLESALE NO 420 (Continued) **1004677950**

Waste Code: U057
Waste Description: CYCLOHEXANONE (I)

Waste Code: U058
Waste Description: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

Waste Code: U059
Waste Description: 5,12-NAPHTHACENEDIONE, 8-ACETYL-10-[(3-AMINO-2,3,6-TRIDEOXY)-ALPHA-L-LYXO-HEXOPYRANOSYL)OXY]-7,8,9,10-TETRAHYDRO-6,8,11-TRIHYDROXY-1-METHOXY-, (8S-CIS)- (OR) DAUNOMYCIN

Waste Code: U075
Waste Description: DICHLORODIFLUOROMETHANE (OR) METHANE, DICHLORODIFLUORO-

Waste Code: U089
Waste Description: DIETHYLSTILBESTEROL (OR) PHENOL, 4,4'-(1,2-DIETHYL-1,2-ETHENEDIYL)BIS, (E)-

Waste Code: U121
Waste Description: METHANE, TRICHLOROFLUORO- (OR) TRICHLOROMONOFLUOROMETHANE

Waste Code: U122
Waste Description: FORMALDEHYDE

Waste Code: U129
Waste Description: CYCLOHEXANE, 1,2,3,4,5,6-HEXACHLORO-, (1ALPHA, 2ALPHA, 3BETA, 4ALPHA, 5ALPHA, 6BETA)- (OR) LINDANE

Waste Code: U132
Waste Description: HEXACHLOROPHENE (OR) PHENOL, 2,2'-METHYLENEBIS[3,4,6-TRICHLORO-

Waste Code: U150
Waste Description: L-PHENYLALANINE, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) MELPHALAN

Waste Code: U151
Waste Description: MERCURY

Waste Code: U182
Waste Description: 1,3,5-TRIOXANE, 2,4,6-TRIMETHYL- (OR) PARALDEHYDE

Waste Code: U187
Waste Description: ACETAMIDE, N-(4-ETHOXYPHENYL)- (OR) PHENACETIN

Waste Code: U188
Waste Description: PHENOL

Waste Code: U200
Waste Description: RESERPINE (OR) YOHIMBAN-16-CARBOXYLIC ACID, 11,17-DIMETHOXY-18-[(3,4,5-TRIMETHOXYBENZOYL)OXY]-, METHYL ESTER, (3BETA, 16BETA, 17ALPHA, 18BETA, 20ALPHA)-

Waste Code: U201
Waste Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Waste Code: U205

COSTCO WHOLESALE NO 420 (Continued) **1004677950**

Waste Description: SELENIUM SULFIDE (OR) SELENIUM SULFIDE SES2 (R,T)

Waste Code: U206
Waste Description: D-GLUCOSE, 2-DEOXY-2-[[(METHYLNITROSOAMINO)-CARBONYL]AMINO]- (OR) GLUCOPYRANOSE, 2-DEOXY-2-(3-METHYL-3-NITROSOUREIDO)-,D- (OR) STREPTOZOTOCIN

Waste Code: U228
Waste Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Waste Code: U237
Waste Description: 2,4-(1H,3H)-PYRIMIDINEDIONE, 5-[BIS(2-CHLOROETHYL)AMINO]- (OR) URACIL MUSTARD

Waste Code: U279
Waste Description: U279

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
STATE MASTER
HAZARDOUS WASTE BIENNIAL REPORTER

TSD EPA ID: CAD008364432
CA Waste Code: 141 - Off-specification, aged or surplus inorganics
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.022

Year: 2016
Gepaid: CAR000103333
TSD EPA ID: CAD008364432
CA Waste Code: 214 - Unspecified solvent mixture
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.0935

Year: 2016
Gepaid: CAR000103333
TSD EPA ID: CAD008364432
CA Waste Code: 311 - Pharmaceutical waste
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No

COSTCO WHOLESALE NO 420 (Continued) **1004677950**

	Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	0.0015
Year:	2016
Gepaid:	CAR000103333
TSD EPA ID:	CAT080013352
CA Waste Code:	134 - Aqueous solution with total organic residues less than 10 percent
Disposal Method:	H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons:	0.42
