The City of Menifee (City), in cooperation with the California Department of Transportation (Caltrans), proposes to reconstruct the Interstate 215 (I-215)/McCall Boulevard interchange and widen McCall Boulevard to address traffic congestion and delays associated with new and proposed developments. The limits of work for this project are along I-215 between post mile (PM) R20.1 and PM 21.5 and includes the widening of the existing overcrossing (OC) structure along McCall Boulevard over I-215, adding a bike/Neighborhood Electric Vehicle (NEV) lane on both sides of the road/bridge, adding sidewalk on the north side of the road/bridge, modifications of the associated on- and off-ramps, and improvements at the nearby intersections of McCall Boulevard/Bradley Road and McCall Boulevard/Encanto Drive (see attached pages for the complete Project Description).

Note: The State Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g. Notice of Preparation or previous draft document) please fill in.

## Reviewing Agencies Checklist

Lead Agencies may recommend State Clearinghouse distribution by marking agencies below with an "X".  
If you have already sent your document to the agency please denote that with an "S".

## **Interstate 215/McCall Boulevard Interchange Improvements Project Project Description**

The City of Menifee (City), in cooperation with the California Department of Transportation (Caltrans), proposes to reconstruct the Interstate 215 (I-215)/McCall Boulevard interchange and widen McCall Boulevard to address traffic congestion and delays associated with new and proposed developments. The limits of work for this project are along I-215 between post mile (PM) R20.1 and PM 21.5 and includes the widening of the existing overcrossing (OC) structure along McCall Boulevard over I-215, adding a bike/Neighborhood Electric Vehicle (NEV) lane on both sides of the road/bridge, adding sidewalk on the north side of the road/bridge, modifications of the associated on- and off-ramps, and improvements at the nearby intersections of McCall Boulevard/Bradley Road and McCall Boulevard/Encanto Drive. The McCall Boulevard OC, an east-west roadway, currently provides two traffic lanes in each direction and one left-turn lane at the ramp intersections. The Build Alternative proposes to keep the existing Type L-1 Tight Diamond interchange configuration, and widen McCall Boulevard, the I-215 overcrossing, and the I-215 ramps. The No Build Alternative proposes that no improvements be implemented on the mainline facility and the existing overcrossing would not be widened.

The total estimated capital cost for the project, escalated for the year of construction (year 2026), is \$42,346,000 for the Build Alternative, which includes Right-of-Way and construction costs.

This project is included in the Southern California Association of Governments (SCAG) 2024-2050 Connect SoCal plan, the current Regional Transportation Plan/Sustainable Communities Strategy, and the 2023 Federal Transportation Improvement Program (2023 FTIP).

Caltrans is the lead agency under the National Environmental Policy Act (NEPA) and the California Environmental Quality Act (CEQA). The City of Menifee is the project proponent.

### **Alternative 1: No Build**

The “No Build” Alternative is considered the base case scenario and proposes that no improvements be implemented on the mainline facility and the existing overcrossing would not be widened. Without the project, the existing geometric deficiencies would not be corrected, conditions would continue to worsen with increased traffic volumes, and the queuing onto the mainline would continue to increase collision rates. In the No Build scenario, there would be an increase in congestion, specifically focused on the McCall Boulevard/Bradley Road and McCall Boulevard/Encanto Drive intersections, and level-of-service in the region would continue to deteriorate, which would result in the operational breakdown of both McCall Boulevard and I-215. The gap in pedestrian/bike/NEV connectivity and delays with public transit would continue to hamper the community’s use of alternative modes of transportation.

### **Alternative 2: Build Alternative**

The proposed project improvements include widening McCall Boulevard, the I-215 overcrossing, and the I-215 ramps. The existing Type L-1 Tight Diamond interchange configuration would not be modified. Additional improvements include signal modifications at the proposed northbound

and southbound ramps intersections, the Bradley Road intersection, and the Encanto Drive intersection.

McCall Boulevard would be widened from two to three lanes in each direction from Sun City Boulevard to approximately 700 feet east of the Encanto Drive. The six through lanes would continue east where the ultimate facility is a six-lane Urban Arterial road. In the westbound direction, two lanes would be added/dropped at the Bradley Road intersection to match the four-lane facility west of the interchange in accordance with the City's General Plan designation, which is a 4-lane Major road.

The I-215/McCall Boulevard bridge overcrossing would be widened to include two left turn lanes, with a painted median to provide shared storage for both directions of travel along McCall Boulevard. The widening would also include a bike/Neighborhood Electric Vehicle (NEV) lane and sidewalks on both sides of the road/bridge and sidewalks on the north side of the road/bridge, which would extend along McCall Boulevard to the Encanto Drive and Bradley Road intersections to connect with existing and future planned bike/NEV and pedestrian facilities. These proposed facilities are anticipated to connect to future projects that will provide Class II bicycles lanes along the roadway delineated by pavement striping and signage dedicated for bicycle travel along McCall Boulevard from Valley Boulevard in the west to Briggs Road in the east, consistent with the City General Plan.

A 1,500-foot deceleration lane would be constructed at the I-215 northbound off-ramp to improve operation of the I-215 mainline. The I-215 northbound and southbound on-ramps would be reconstructed and widened from one to two lanes with ramp metering to allow for additional storage and reduce backspill onto McCall Boulevard. The I-215 northbound and southbound off-ramps would be partially reconstructed to provide four turn lanes to allow for additional storage and reduce backspill onto I-215. All existing ramp skew angles and curb returns at McCall Boulevard would be realigned and improved to meet Caltrans' design standards to improve safety and accommodate the turn movements of Surface Transportation Assistance Act (STAA) trucks. The McCall Boulevard intersection improvements at Bradley Road and Encanto Drive include additional turn-lanes and standard pedestrian facilities such as two curb ramps and median pedestrian refuge islands. Landscaping features may be included as part of the project in the interchange.

During construction, temporary closures of the on-ramps and off-ramps may be necessary during construction; however, the improvements are largely located near the intersections and would be staged to minimize disruptions. The bridge overcrossing will be widened to the north to allow for construction to be staged and ensure the existing four lane bridge would continue to be utilized by vehicles during construction. No closures of McCall Boulevard over I-215 are anticipated. Similarly, the local roadway improvements along McCall Boulevard, Encanto Drive, and Bradley Road would be staged to minimize disruptions and require minimal closures during construction.

The Build Alternative would impact areas in all four interchange quadrants and additional right of way may be required to accommodate the proposed improvements. Due to the new widening, the Build Alternative would temporarily impact businesses and commercial developments along both sides of McCall Boulevard from Sun City Boulevard to Encanto Drive during construction and

may require some sliver right-of-way acquisitions; however, no substantial or negative economic impact to businesses is anticipated.

The improvements associated with the widening of McCall Boulevard would also require utility relocations. While the majority of the utilities within the project area are underground, there may be impacts to some utility poles and above ground boxes/vaults due to the widening improvements. Any existing utilities within the project area requiring relocation would be coordinated with the owner and operator of the utility.

Drainage in the project area is collected by various storm drain facilities and conveyed to the Sun City Channel, a regional flood control facility operated and maintained by the Riverside County Flood Control and Water Conservation District. The Sun City Channel, which is located between Encanto Drive and I-215, conveys flows from east to west and traverses under I-215 via a reinforced concrete box culvert, which is currently at capacity and has a history of flooding in the Avila Apartment Homes community. Since the interchange project is anticipated to increase the impervious surfaces in the area, the project may attenuate additional runoff tributary to the Sun City Channel/reinforced concrete box culvert through the use of detention/retention basins within the interchange.

Other project activities needed to support the design of the project include potholing and geotechnical investigations within the existing roadway and proposed improvement locations.

The total estimated capital cost for the project, escalated for the year of construction (year 2026), is \$42,346,000 for the Build Alternative, which includes Right-of-Way and construction costs and will require approximately 540 working days to construct the improvements.

This project contains a number of standardized project measures which are employed on most, if not all, Caltrans projects and were not developed in response to any specific environmental impact resulting from the proposed project.
