Eval Notes: On site to witness annual monitor certification and to conduct a routine UST inspection. Met with Rouba Khadra and Victor Hassan of Hassan and Sons and David Lopez of Clean Air Testing. David Lopez conducted the tank testing, monitor system certification, and spill bucket testing. Mr. Lopez ICC, VPM, and Veeder-Root certifications were observed and verified. The facility contains: - (1) 20,000 gallon double walled UST containing gasoline (regular grade). - (1) 15,000 gallon double walled UST containing gasoline (premium grade). - (1) 10,000 gallon double walled UST containing diesel. All USTs are continuously monitored by a Veeder-Root TLS-350R system. The diesel sumps are double walled and contain brine in the interstitial space. The secondary containment is monitored under constant vacuum. Alarm history and set-up tape was reviewed during this inspection. The monitoring panel read "All Functions Normal". Facility contains: -Uses a flapper valve for [Truncated]

Eval Notes:	On site to witness monitoring system certification testing activities and to conduct routine UST inspection. Permission to enter, inspect, and take photographs granted by Sam Ansari. The facility has three USTs. Two are double walled USTs with double walled piping. The diesel tank at the facility is a VPH system. The fill sumps , Turbine sumps , vent transition box, and UDC sumps were observed to be dry. The leak sensors in the 87 and 91 fill and turbine sumps were not held in place by a sleeve that kept the sensors completely upright. I discussed setting the sensors in a way that the sensors were completely upright and at the low point with Sam Ansari this date. The hooks on some of the sensors were adjusted sot that the sensors set properly . By the time I had finished my inspection all components except the line leak detectors had been tested and passed per the tester. Site has flappers for overfill prevention. Spill buckets were visibly water tested and passed [Truncated]

Met with Brandon Lester. Inspected used oil, drained used oil/fuel filters, absorbents, aqueous parts cleaner and waste antifreeze. Drums were provided with a lid, stored in a secure manner and appear to be in good condition. The operator completes a maintenance inspection on the drums on a weekly basis. A Hazardous Waste label was noted on all drums with the required identification. Municipal dumpster area does not appear to contain any hazardous waste. Perimeter of facility inspected - did not observe any water runoff or staining at this time. Hazardous Waste Emergency Response plan was available for review. Manifests and bills of [Truncated]

Address: 10874 HOPE ST
City,State,Zip: CYPRESS, CA 90630
Site ID: 363815
CERS ID: 856611
CERS Description: Industrial Facility Storm Water

Violations:
Site ID: 363815
Site Name: TAYCO ENGINEERING INC
Violation Date: 08-22-2019
Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)
Violation Description: Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, and tank systems authorized under Permit-by-Rule, Conditional Authorization, and Conditional Exemption or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.
Violation Notes: Returned to compliance on 09/30/2019. OBSERVATION: PE certification dated 4/19/19 does not include 'corrosive' for the hazardous characteristics of handled waste. CORRECTIVE ACTION: Submit updated PE certification to this Agency within 60 days.
Violation Division: Orange County Environmental Health
Violation Program: PBR
Violation Source: CERS

Site ID: 363815
Site Name: TAYCO ENGINEERING INC
Violation Date: 08-31-2017
Citation: 22 CCR 15 66265.177 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.177
Violation Description: Failure to separate incompatible wastes from the same container, nearby containers, or unwashed containers which previously contained incompatible waste or materials.
Violation Notes: Returned to compliance on 10/19/2017. The facility stored waste Hydrochloric Acid mixed with Hydrofluoric acid next to a container of waste Potassium Hydroxide and above a shared secondary containment pallet. These chemicals are incompatible and must not be stored next to each other nor sharing secondary containment. Immediately move the two waste streams away from each other and store them above separate secondary containment.

TAYCO ENGINEERING INC (Continued) **S113012004**

Violation Description:	Failure of the generator to prepare, maintain, and submit to CUPA an annual report containing the following information: (A) The serial number(s) of the FTU(s) involved in treatment; (B) The physical and mailing address of the business entity which owns or operates the FTU(s); (C) The name, title and telephone number of each FTU contact person; (D) The name and address or legal description of the facility; (E) The facility identification number; (F) The number of days each FTU was operated; (G) The quantity of hazardous waste(s) treated by each FTU; (H) The composition and hazardous characteristics of the influent hazardous waste(s); (I) The treatment method(s) used for each hazardous waste treated by each FTU; (J) The quantity, composition and hazardous characteristic(s) of any treatment effluent or residual discharged from each FTU to a POTW, if applicable; and (K) The quantity, composition, hazardous characteristic(s) and disposition of any FTU treatment effluent or residual that was not discharged to a POTW, if applicable.
Violation Notes:	Due to the absence of a waste evaluation, the facility has not been regulated in the correct Tier. Based on analytical results from grab samples collected from the pretreament holding tanks, the facility should be regulated as a Permit By Rule facility. Please re-submit notification forms electronically via the E-submit Portal indicating the proper tier to this agency immediately.
Violation Division:	Orange County Environmental Health
Violation Program:	CA

Eval Notes: Inspector Comments: Please be advised that this Agency has reviewed 2015 Tiered Permitting Financial Assurance Self Certification for this facility. The 2015 Adjusted Closure Cost Estimate (CCE) was not properly calculated due errors in multiplication of 2014 costs with the 2015 inflation factor (1.016). In addition, CCE for 2015 cannot be approved until revised 2014 CCE have been submitted and approved by this agency. Costs for obtaining a PE certification for PBR unit closure as required (22CCR sec.66264.115) were not included in 2014 CCE and requested revised documents were not received by this agency. Also, the 2015 CCE breakdown lists two different amounts ($2,228.56 and $11,472.70) for equipment salvage value. Revised/corrected 2014 and 2015 Certification Of Financial Assurance Form and Estimate Closure Cost must be submitted to this Agency by 5/19/15.

Eval Notes:	Reviewed the Written Engineers Tank Assessment Report for the Permit By Rule (PBR) Tank Systems at Tayco Engineering. The tank assessment was conducted by Alta Environmental. Based on my review of this assessment, the document is determined to be incomplete due to the following: - The Tank Assessment must be certified by a Civil, Structural, or Geotechnical Engineer. - Per Title 22, 66265.192 (a)(5), if the facility is located in a seismic fault zone, a seismic assessment shall also be conducted on the tank system. Please include as an addendum to this report a seismic assessment of the tank system that includes the seismic calculations. The seismic assessment must be certified by a qualified engineer as previously mentioned. Based on the above, violation Y016 will remain open and outstanding. In order to abate this violation, complete the above immediately. Based on the findings of the tank assessment report, the secondary containment, wood support [Truncated]

Eval Notes:	On site to conduct a routine Tiered Permitting inspection, accompanied by Dean Freed, Supervising Hazardous Materials Specialist. Consent to inspect was given by Lance Luu, Project Engineer. The facility is operating one Permit By Rule treatment unit. Wastewater being treated is generated from etching using strong acid and is hazardous for pH, chrome, and copper. Wastewater is pumped from the etching process to a lift station, where it is then pumped to two holding tanks. From holding tanks the waste is pumped to a batch treatment tank where caustic soda and flocculent is added to adjust pH and precipitate out heavy metals. The sludge is then put through a filter press and residual liquids are pumped back into the batch treatment tank. The facility has submitted Tiered Permitting Unit Notification forms to CERS. CERS ID 10537606 last submittal dated 3/26/18 was verified during this inspection. The following documents were available for review: - Inspection and [Truncated]

Eval Notes:	On site for routine hazardous waste inspection. Also present was Susan Berg of OCHCA. Consent to enter, inspect, and take photographs was given by Mr. Luu and he provided a tour of the facility. The facility generates sufficient quantities of federally-regulated hazardous waste and is regulated as a RCRA large quantity generator (LQG). The facility reportedly conducts treatment of rinse liquids containing chromium, nickel and copper under a Permit by Rule tier. Observed the facility and inspected the process areas, treatment areas, and storage areas. The following conditions were observed: Labeling and Container Storage Accumulation -A 10 gallon container of waste petroleum distillates container had an accumulation start date of 6-2-16. -A 20 gallon container of acid waste had an accumulation start date of 10-15-15 and had conflicting content description as acid waste and waste mineral spirits with the hazardous property of Toxic, Flammable and 5 gallon [Truncated]

Eval Notes:	On site to conduct a routine Permit By Rule Tiered Permitting inspection. Supervising Hazardous Materials Specialist Susan Berg accompanied me on the inspection. We met with Mr. Lance Luu and he provided consent to inspect and take photos of the facility. The facility uses a wastewater treatment unit to treat wastewater generated from the process consisting of developer liquids and etchants used on printed circuit boards. The wastewater is reportedly hazardous for pH, Chrome, and Copper. The wastewater is treated with acid/base ph adjustment and a flocculent to precipitate out the metals. The sludge is then put through a filter press to remove any liquids. The facility is regulated under Permit By Rule program for 1 Treatment Unit. The HW Treatment Notification Information submitted in CERS has incorrect information regarding treatment in containers (see violation). Mr. Luu, stated there has been no changes to the process and no releases of hazardous materials [Truncated]

Eval Notes:	CERS 10537606 for the Tiered Permitting section was reviewed and not accepted today. The following comment was made: The TP PBR Treatment Unit forms have been reviewed and are not accepted today. The Tiered Permitting Unit PBR page was reviewed and the following corrections need to be made: - In section Treatment Unit Identification and Details, the number of Containers / Treatment Areas indicates 4 containers are being used in the treatment of HW. There is no treatment being conducted in containers. Please change this item on the page. - In section Permit by Rule (PBR)- Waste and Treatment Process Combinations, item #8 is marked Yes for a technology that is not being utilized (pH adjustment or neutralization). Please change this item on the page as the facility used item 1 for the pH Adjustment / Neutralization. Please update the submittal and re-submit

Eval Notes:	INSPECTOR COMMENTS: On-site for a follow up inspection. Met with Lance Luu and discussed the open violations from the inspection report dated 05/05/16. Violation I325 has been corrected. A copy of the analytical results for the metal sanding dust was reviewed this date. This material appears to be non-hazardous. Violation I328 has not been corrected. Manifest 009433773 dated 06/02/16 was produced during the inspection as evidence that the Oakite waste observed during the last inspection with an accumulation date of 2011 was disposed of properly. The oakite waste does not appear to be in any of the three descriptions, but is listed in block 14 (special handling instructions). Please contact the hauler and determine if the waste oakite was hauled on this manifest, and if so, why wasn't the waste listed.

Eval Notes:	Please be advised that this Agency has reviewed Tiered Permitting Financial Assurance Self Certification for this facility. The 2014 Adjusted Closure Cost Estimate (CCE) was not properly calculated due to errors in the Estimated Closure Costs. According to new costs provided, the total 2014 CCE is $8519.02 and the 2014 Adjusted CCE after applying the salvage value ($2476.17), is $6042.85. Revised Certification Of Financial Assurance Form and Estimate Closure Cost (enclosed) must be submitted to this Agency by 3/17/14. Also, the salvage value of the assets has not been changed from the value listed in 2012. The salvage value of your assets must be reviewed on an annual basis to be sure that depreciation and changes made to your inventory of equipment are reflected in the salvage value estimate. If you believe that your salvage value has remained the same since 2012, be sure to maintain documentation reflecting your estimated salvage value.

Violations:
Site ID: 363815
Site Name: TAYCO ENGINEERING INC
Violation Date: 08-22-2019
Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)

TAYCO ENGINEERING INC (Continued) **S113012004**

Violation Description:	Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, and tank systems authorized under Permit-by-Rule, Conditional Authorization, and Conditional Exemption or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.
Violation Notes:	Returned to compliance on 09/30/2019. OBSERVATION: PE certification dated 4/19/19 does not include 'corrosive' for the hazardous characteristics of handled waste. CORRECTIVE ACTION: Submit updated PE certification to this Agency within 60 days.

Citation:	22 CCR 15 66265.177 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.177
Violation Description:	Failure to separate incompatible wastes from the same container, nearby containers, or unwashed containers which previously contained incompatible waste or materials.
Violation Notes:	Returned to compliance on 10/19/2017. The facility stored waste Hydrochloric Acid mixed with Hydrofluoric acid next to a container of waste Potassium Hydroxide and above a shared secondary containment pallet. These chemicals are incompatible and must not be stored next to each other nor sharing secondary containment. Immediately move the two waste streams away from each other and store them above separate secondary containment.

Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Inspector Comments: Please be advised that this Agency has reviewed 2015 Tiered Permitting Financial Assurance Self Certification for this facility. The 2015 Adjusted Closure Cost Estimate (CCE) was not properly calculated due errors in multiplication of 2014 costs with the 2015 inflation factor (1.016). In addition, CCE for 2015 cannot be approved until revised 2014 CCE have been submitted and approved by this agency. Costs for obtaining a PE certification for PBR unit closure as required (22CCR sec.66264.115) were not included in 2014 CCE and requested revised documents were not received by this agency. Also, the 2015 CCE breakdown lists two different amounts ($2,228.56 and $11,472.70) for equipment salvage value. Revised/corrected 2014 and 2015 Certification Of Financial Assurance Form and Estimate

TAYCO ENGINEERING INC (Continued) **S113012004**

Eval Notes:	On site for a routine Tiered Permitting inspection. Met with Environmental Manager Lance Luu of Tayco Engineering Inc. Also present was Terry Carrier of OCHCA. The facility is regulated under Permit By Rule program for (1) FTU. The facility conducts acid etching. Waste water is treated with acid/base ph adjustment and a flocculent to precipitate out the metals. The sludge is then put through a filter press to remove any liquids. Documents observed during this inspection include: - Tiered Permitting (PBR) notification - on CERS database - Inspection schedule and logs - POTW permit Documents that were not provided included the following: - Waste Analysis Plan (See violation I675 above) - Phase 1 Environmental Checklist/Assessment (See violation I087 above) - Closure Plan (See violation I675 above)

Eval Notes: Please be advised that this Agency has reviewed the revised Tiered Permitting Financial Assurance Self Certification dated 7/22/14, for this facility. The Closure Cost Estimate (CCE) breakdown you provided does not include the cost for obtaining a Professional EngineerG s (PE) certification for PBR unit closure as required (22CCR sec.66264.115). Revised Certification Of Financial Assurance form and CCE breakdown (enclosed) which includes costs for obtaining a PE certification must be submitted by 8/28/14.

Eval Notes: Reviewed the Written Engineers Tank Assessment Report for the Permit By Rule (PBR) Tank Systems at Tayco Engineering. The tank assessment was conducted by Alta Environmental. Based on my review of this assessment, the document is determined to be incomplete due to the following: - The Tank Assessment must be certified by a Civil, Structural, or Geotechnical Engineer. - Per Title 22, 66265.192 (a)(5), if the facility is located in a seismic fault zone, a seismic assessment shall also be conducted on the tank system. Please include as an addendum to this report a seismic assessment of the tank system that includes the seismic calculations. The seismic assessment must be certified by a qualified engineer as previously mentioned. Based on the above, violation Y016 will remain open and outstanding. In order to abate this violation, complete the above immediately. Based on the findings of the tank assessment report, the secondary containment,

Eval Notes: On site to conduct a routine Tiered Permitting inspection, accompanied by Dean Freed, Supervising Hazardous Materials Specialist. Consent to inspect was given by Lance Luu, Project Engineer. The facility is operating one Permit By Rule treatment unit. Wastewater being treated is generated from etching using strong acid and is hazardous for pH, chrome, and copper. Wastewater is pumped from the etching process to a lift station, where it is then pumped to two holding tanks. From holding tanks the waste is pumped to a batch treatment tank where caustic soda and flocculent is added to adjust pH and precipitate out heavy metals. The sludge is then put through a filter press and residual liquids are pumped back into the batch treatment tank. The facility has submitted Tiered Permitting Unit Notification forms to CERS. CERS ID 10537606 last submittal dated 3/26/18 was verified during this inspection. The following documents were available for review: - Inspection and [Truncated]

Eval Notes: On site to conduct a routine Hazardous Waste inspection, accompanied by Dean Freed, Supervising Hazardous Materials Specialist. Consent to inspect was given by Lance Luu, Project Engineer. The facility is a Large Quantity Generator of RCRA hazardous waste. Walked throughout the facility and observed hazardous waste generation points and storage areas. The following was observed: - 55 gallon drum of filter press water filters was dated 3/12/18 and has gone past its 90 day accumulation time limit - 55 gallon drum of waste IPA wipes was observed with a label, but missing the start date of accumulation - One container for waste IPA wipes in the quality control room was observed without a Hazardous Waste label The municipal trash was observed and there appears to be no signs of illegal disposal. The following documents were available for review: - Hazardous waste manifests - Business contingency plan - Annual employee training records - Inspection logs for [Truncated]

Eval Notes:	On site for routine hazardous waste inspection. Also present was Susan Berg of OCHCA. Consent to enter, inspect, and take photographs was given by Mr. Luu and he provided a tour of the facility. The facility generates sufficient quantities of federally-regulated hazardous waste and is regulated as a RCRA large quantity generator (LQG). The facility reportedly conducts treatment of rinse liquids containing chromium, nickel and copper under a Permit by Rule tier. Observed the facility and inspected the process areas, treatment areas, and storage areas. The following conditions were observed: Labeling and Container Storage Accumulation -A 10 gallon container of waste petroleum distillates container had an accumulation start date of 6-2-16. -A 20 gallon container of acid waste had an accumulation start date of 10-15-15 and had conflicting content description as acid waste and waste mineral spirits with the hazardous property of Toxic, Flammable

Eval Notes:	On site to conduct a routine Permit By Rule Tiered Permitting inspection. Supervising Hazardous Materials Specialist Susan Berg accompanied me on the inspection. We met with Mr. Lance Luu and he provided consent to inspect and take photos of the facility. The facility uses a wastewater treatment unit to treat wastewater generated from the process consisting of developer liquids and etchants used on printed circuit boards. The wastewater is reportedly hazardous for pH, Chrome, and Copper. The wastewater is treated with acid/base ph adjustment and a flocculent to precipitate out the metals. The sludge is then put through a filter press to remove any liquids. The facility is regulated under Permit By Rule program for 1 Treatment Unit. The HW Treatment Notification Information submitted in CERS has incorrect information regarding treatment in containers (see violation). Mr. Luu, stated there has been no changes to the process and no releases of hazardous materials [Truncated]

Observed hazardous waste storage areas and review documentation. Treatment Area: - Observed one 5-gal container of waste filter and pads and one 2.5-gal of waste pads in TP unit area. Containers were open and did not have labels. Operator labeled and placed lids on both containers. Per Mr. Luu, containers are emptied and waste is put into a 55-gal drum of waste filters. - Filter cake container label in treatment area has been corrected of labeling issues noted on the previous inspection. - Damaged bung cap noted on previous inspection has been replaced for 55-gal waste filter drum. Hazardous Waste Storage Area by Lab: - 5-gal container of Oakite 31 dated 4/29/19 and 2-gal container of used alcohol have been hauled. Manifests were available for review. Document Review: - Training [Truncated]

Eval Notes:	Please be advised that this Agency has reviewed Tiered Permitting Financial Assurance Self Certification for this facility. The 2014 Adjusted Closure Cost Estimate (CCE) was not properly calculated due to errors in the Estimated Closure Costs. According to new costs provided, the total 2014 CCE is $8519.02 and the 2014 Adjusted CCE after applying the salvage value ($2476.17), is $6042.85. Revised Certification Of Financial Assurance Form and Estimate Closure Cost (enclosed) must be submitted to this Agency by 3/17/14. Also, the salvage value of the assets has not been changed from the value listed in 2012. The salvage value of your assets must be reviewed on an annual basis to be sure that depreciation and changes made to your inventory of equipment are reflected in the salvage value estimate. If you believe that your salvage value has remained the same since 2012, be sure to maintain documentation reflecting your estimated salvage

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2021

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2019

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

GOODMAN
5757 PLAZA DRIVE
CYPRESS, CA 90630

TARGET PROPERTY COORDINATES

Latitude (North):	33.805668 - 33° 48' 20.40''
Longitude (West):	118.033132 - 118° 1' 59.28''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	404371.7
UTM Y (Meters):	3740895.0
Elevation:	38 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5633745 LOS ALAMITOS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

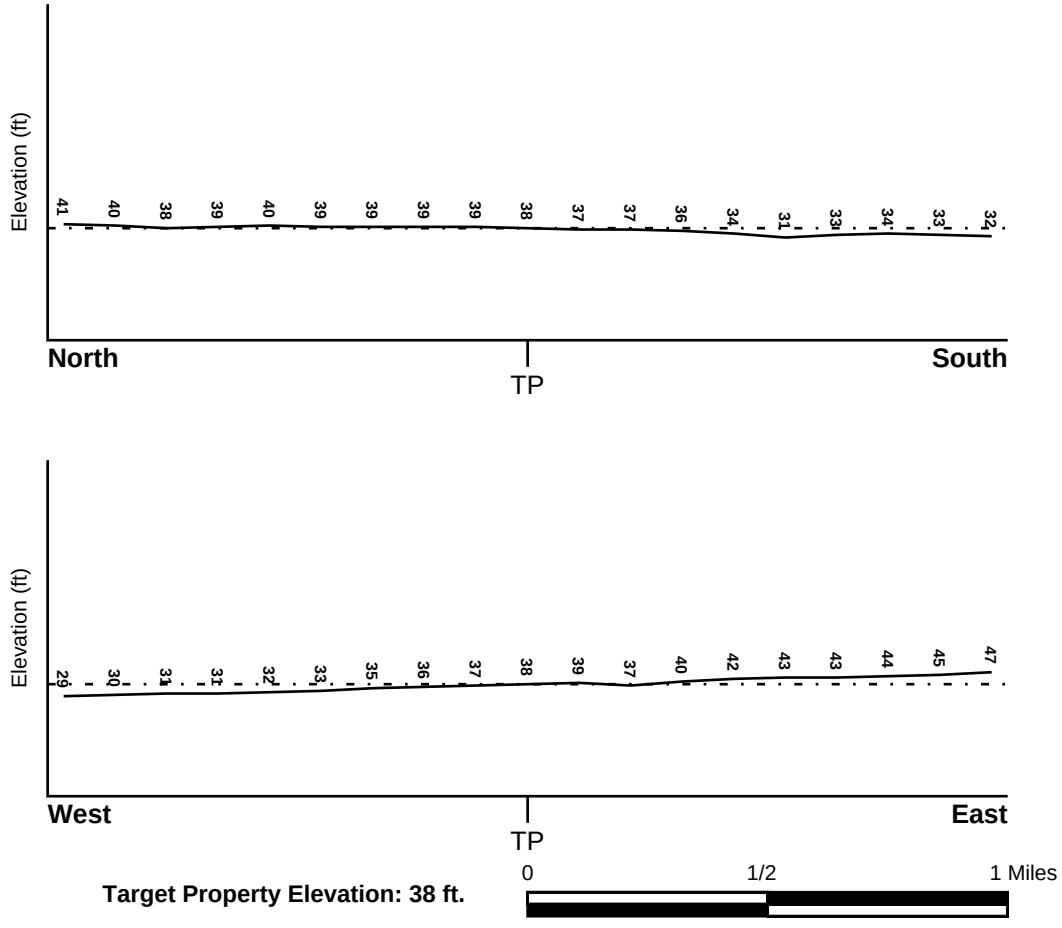
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 38 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C2000F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LOS ALAMITOS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

6G	1/2 - 1 Mile ESE	Varies
7G	1/4 - 1/2 Mile WSW	Varies

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: SAN EMIGDIO

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	7 inches	61 inches	stratified gravelly loamy coarse sand to very fine sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: SAN EMIGDIO

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	7 inches	40 inches	stratified gravelly loamy coarse sand to very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 42 Min: 14	Max: 8.4 Min: 7.9
3	40 inches	44 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 42 Min: 14	Max: 8.4 Min: 7.9
4	44 inches	61 inches	stratified gravelly loamy coarse sand to very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 42 Min: 14	Max: 8.4 Min: 7.9

Soil Map ID: 3

Soil Component Name: METZ

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6
2	16 inches	62 inches	stratified sand to fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6

Soil Map ID: 4

Soil Component Name: HUENEME

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	27 inches	fine sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.4
2	27 inches	59 inches	stratified sand to silt loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.4

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Stantec were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

LICENSED DECLARATION: I hereby affirm that I am licensed under provisions of Charter 9 (commencing with section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Class: C-10 License No. 466915 Exp. Date: 10-31-04

Signature Robert Gordon

TO ALL PERMITTEES: In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☒ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier STATE FUND

Policy Number 1718477-2003

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: 9-30-04 Applicant: Robert Gordon

Signature: Robert Gordon

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

Date: 9-30-04 Signature Robert Gordon

***TO ALL PERMITTEES:** In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.*

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: 5665 PLAZA DR, 2ND FLR

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☑ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier GRANITE STATE

Policy Number WC 300-98-04

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: 9-24-04 Applicant: F.R. CRANE, CWC

Signature: F R Crane

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

TO ALL PERMITTEES: *In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.*

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier State Fund

Policy Number 465-0000140-2002

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (*Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair* any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

***TO ALL PERMITTEES:** In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation Insurance policy.*

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT *RECORD:*

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☒ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier STATE AND FUND

Policy Number 1718477-2004

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: 12/14/05 Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

LICENSED DECLARATION: I hereby affirm that I am licensed under provisions of Charter 9 (commencing with section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Class: C10/16 License No. 703099 Exp. Date: 10/31/06

Signature _____

TO ALL PERMITTEES: *In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation Insurance policy.*

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier SEABRIGHT INS. CO.

Policy Number BB1050611

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law *does not apply to an owner of a property who builds or improves thereon,* and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ *I am exempt under Section* _____ *B. & P. C. for this reason*

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

LICENSED DECLARATION: I hereby affirm that I am licensed under provisions of Charter 9 (commencing with section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Class: C10 License No: 385577 Exp. Date: 11/30/07

Signature Dave R Juergens

TO ALL PERMITTEES: *In accordance with AB 443, the Workers' Compensation Insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.*

WORKERS' COMPENSATION INSURANCE DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☒ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier _____

Policy Number On file

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

THIS RECEIPT IS VALID ONLY WHEN TRANSACTION NUMBER, DATE AND RECEIPT ARE IMPRINTED BELOW.

B-1 Building Permit Application rev. 03-06 Disbursement: White - Inspector's Copy / Canary - Applicant / Pink - Cashier / Goldenrod - Cashier

LICENSED DECLARATION: I hereby affirm that I am licensed under provisions of Charter 9 (commencing with section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Class: C7 License No. 766852 Exp. Date: 9/07

Signature _____

TO ALL PERMITTEES: *In accordance with AB 443, the Workers' Compensation Insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation Insurance policy.*

WORKERS' COMPENSATION INSURANCE DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☑ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ *I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code,* for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier _____

Policy Number _____

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: 8/15/06 Applicant: Ron Anderson

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: *I hereby affirm that I am exempt from the Contractor's License Law for the* following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ *I, as owner of the property or my employees with wages as their sole compensation, will do the work, and* the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project *(Section 7044, Business and Professions Code:* The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

TO ALL PERMITTEES: In accordance with AB 443, the Workers' Compensation Insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.

WORKERS' COMPENSATION INSURANCE DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier Wasserman and Associates

Policy Number 713 8693-05

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason [Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) or Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).]

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

LICENSED DECLARATION: I hereby affirm that I am licensed under provisions of Charter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code and my license is in full force and effect.

License Class: C10 License No. 838904 Exp. Date: 09/30/07

Signature: M. Mg

TO ALL PERMITTEES: *In accordance with AB 443, the Workers' Compensation Insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation Insurance policy.*

WORKERS' COMPENSATION INSURANCE DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier State Fund Comp.

Policy Number 1724573

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

I have read the front and back of this application and state that the information is correct and agree to comply with all City ordinances and State Laws regulating the work for which this permit is intended.

I certify that I am properly registered and/or licensed as required by City of Cypress and State of California or that I am the legal owner of the above described property

PERMIT NUMBER 80572

Signature of Permittee X [signature] Building Dept. J Watson 3/11/03

THIS RECEIPT IS VALID ONLY WHEN TRANSACTION NUMBER, DATE AND RECEIPT ARE IMPRINTED BELOW.

B-1 rev. 5-96 Disbursement: White - Inspector's Copy / Canary - Applicant / Pink - Cashier / Goldenrod - Cashier

LICENSED DECLARATION: I hereby affirm that I am licensed under provisions of Charter 9 (commencing with section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Class: C8 License No. 682062 Exp. Date: 8/31/04

Signature: _____

TO ALL PERMITTEES: In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation Insurance policy.

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☒ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier State Fund

Policy Number 1625328 exp 5/1/03

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: 2/4 Applicant: John Anderson

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason: (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ *I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project* (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

B-1 rev. 5-96 Disbursement: White - Inspector's Copy / Canary - Applicant / Pink - Cashier / Goldenrod - Cashier

LICENSED DECLARATION: I hereby affirm that I am licensed under provisions of Charter 9 (commencing with section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Class: B License No. 594228 Exp. Date: 7-31-04

Signature [signature]

TO ALL PERMITTEES: In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: 5665 PLAZA DRIVE

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☑ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier STATE FUND

Policy Number 046

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: 2-28 Applicant: MIKE BAUERLEIN

Signature: [signature]

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

TO ALL PERMITTEES: In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: 3665 Plaza DR

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier Zurich American Insurance Co

Policy Number WC 367 6619-02

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

***TO ALL PERMITTEES:** In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.*

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier _____

Policy Number _____

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

PLAN REVIEW SUBMITTAL CRITERIA

Complete the following questions as they relate to the project you are proposing.

PROJECT ADDRESS: 5665 PLAZA DR. # 200

CONTACT NAME: BRUCE MORIMOTO PHONE NUMBER: 949 729 8958

YES	NO	
		ONE AND TWO FAMILY RESIDENTIAL PROJECTS (R3 occupancies)
☐	☐	1. Does the total square footage (existing and new), including garage, exceed 3,600 square feet? Submit residential site plan.
☐	☐	2. Is the house or new structure located in excess of 50 feet from the street? Submit residential site plan.
☐	☐	3. Is the house within a Special Fire Protection Area or Very High Fire Hazard Severity Zone? Submit residential site plan and fire sprinkler plan.
☐	☐	4. Is your lot adjacent to non-irrigated native vegetation or a slope?
☐	☐	5. Are you installing a gate that restricts access to a house where the house is located in excess of 50 feet from the street? Submit residential gate plan. (An approved residential site plan may be required prior to approving the gate.)
☐	☐	6. **Yorba Linda ONLY**: Is this a new residence or an addition greater than 1000 square feet and is the residence located within the Division of Oil, Gas and Geothermal Resources administrated boundary? Submit methane investigation plan.
		COMMERCIAL PROJECTS
☐	☒	7. Does this project include changes to the site, location of fire hydrants, or parking striping? Submit fire master plan.
☐	☒	8. Does this project include construction of a new structure or increase the footprint of an existing building? Submit fire master plan.
☐	☒	9. Is the project within a Special Fire Protection Area or Very High Fire Hazard Severity Zone? Submit fire master plan and fire sprinkler plan.
☐	☒	10. Will the new building, addition, or tenant improvement contain one of the following occupancies: Assembly, Educational, Factory, Hazardous materials, Institutional, or Multi-family Residential (3 or more units)? Submit architectural plans.
☐	☒	11. Will the new building, addition, or tenant improvement contain storage or merchandizing areas that are greater than 500 sq. ft. and/or storage greater than 12 feet high? Submit high-piled storage plans.
☐	☒	12. Does the project involve the installation of industrial piping? Submit floor plan, Chemical Classification Package and piping plans.
☐	☒	13. Does the project involve the installation or modification of an industrial refrigeration system? Submit OCFA Refrigerant Disclosure form.
☐	☒	14. Does the project involve the installation or modification of a commercial hood system? Submit Hood and Duct System plans.
☐	☒	15. Does this plan involve the construction of a high-rise building (height of building is equal to or more than 55 feet from the lowest point of fire access to highest occupied floor)? Submit architectural plans.
☐	☒	16. Did you answer "yes" to any of the questions contained on page 2 of the Orange County Fire Authority Permit Screening Form (PSF)? Submit plans for the specific operation you have indicated "yes" to. *Note: The PSF is available through all building departments and the OCFA.*
☐	☒	17. Does this plan involve the installation of gates that restrict access to any structures? Submit a gate plan.

NOTE:

- An existing building under going a tenant improvement that contains a fire sprinkler, fire alarm and/or special fire extinguishing system must have the fire system evaluated by a licensed contractor to determine if the system must be modified. If the system is found to require modification, the licensed contractor shall submit plans for approval prior to any change taking place.
- If you answered "YES" to any of the questions, you must submit your project through the building department or directly to the OCFA for review (see the Plan Routing Form). Submit *this* completed form with your plan.
- If you have answered "NO" to all the questions, the Building Department may accept this checklist as the written release.
- If you have answered "NO" to all the questions and the Building Department requires that your plan be stamped by OCFA, the plans must be submitted with a copy of the correction letter from the Building Department and the appropriate fees.

I certify under penalty of perjury under the laws of the State of California that the above is true.

***TO ALL PERMITTEES:** In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.*

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier STATE fund.

Policy Number 1589741-02

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.]

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

Your application for a permit, together with plans and specifications, has been examined. The following corrections are necessary and new plans must be submitted along with this original set for rechecking. To facilitate ease of rechecking, please enter on each correction item listed below the location of the corrected information. **Return these sheets along with all plans and specifications after corrections have been made to the Building and Safety Department.**

Reference

GENERAL CORRECTIONS: 2001 CBC (Tenant Improvement)

1. Refer to check-set of plans and calcs marked in red for corrections/comments and return with two corrected sets for recheck.
2. Submit plans to the Fire Department for approval prior to issuance of building permit.
3. Show detail of 1-hour new corridors with 20 min. doors with coordinated astragal. See check-set.

MECHANICAL & T-24: 2001 CMC

Checker: Ray Go, ME

1. Refer to check-set for corrections noted in red. Respond to comments and return check-set to facilitate recheck.
2. Affix MECH-1 forms on plans, properly filled out with signature of preparer.
3. Provide a note on the plans that states "An air balance test will be required to verify the proper amount of outside air to comply with T-24 calculations, before final approval of this project".
4. Provide required supply and return for the corridor and shall not be ducted from. other areas/rooms.
5. Make-up air for restroom shall not be drawn from corridor due to fire resistive construction.
6. Air handling duct systems shall be constructed, installed and insulated as provided in Chapter 6 of CMC, 2001. (Note on plan).
7. Comply with Section 602.2 for combustibles within the return air plenum for restrictions.
8. Specify outside air CFM to each AC unit per T-24 calculations.

***TO ALL PERMITTEES:** In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.*

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier STATE fund.

Policy Number 1589741-07

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

***TO ALL PERMITTEES:** In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.*

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier _____

Policy Number _____

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

THIS RECEIPT IS VALID ONLY WHEN TRANSACTION NUMBER, DATE AND RECEIPT ARE IMPRINTED BELOW.

B-1 rev. 5-98 Disbursement: White - Inspector's Copy / Canary - Applicant / Pink - Cashier / Goldenrod - Cashier

LICENSED DECLARATION: I hereby affirm that I am licensed under provisions of Charter 9 (commencing with section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Class: C-16 License No. 802591 Exp. Date: 12-31-05

Signature: _____

TO ALL PERMITTEES: *In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.*

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier AMERICAN HOME ASSURANCE

Policy Number RMWC 5898786

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

THIS RECEIPT IS VALID ONLY WHEN TRANSACTION NUMBER, DATE AND RECEIPT ARE IMPRINTED BELOW.

B-1 rev. 5-96 Disbursement: White - Inspector's Copy / Canary - Applicant / Pink - Cashier / Goldenrod - Cashier

LICENSED DECLARATION: I hereby affirm that I am licensed under provisions of Charter 9 (commencing with section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Class: B License No. 184531 Exp. Date: 7-31-05

Signature _____

TO ALL PERMITTEES: In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: 5665 PLAZA DR 2nd Floor

Permit No. 83332 Issuance Date 9-14-04

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☑ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier BARNEY & BARNEY LLC

Policy Number 98950

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

OWNER BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason Section 7031.5 Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit subject to the applicant to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvement are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Section B.&P.C. for this reason

Date Owner

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

☐ Certified copy is filed with the city building division.

EXEMPTION FROM WORKERS' COMPENSATION DECLARATION
(This section need not be completed if the permit is for one hundred dollars ($100) or less.)
I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers Compensation Laws of California.

Date _____ Signature _____

NOTICE: If after making this declaration, you should become subject to the Workers Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY
I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Section 3097 Civ.C).

Lender's Name _____

Lender's Address _____

OWNER BUILDER DECLARATION
I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit subject to the applicant to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvement are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.).

☐ I, *as owner of the property, am exclusively contracting* with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Section _____ B.&P.C. for this reason

Date _____ Owner _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

5665 PLAZA

LICENSED DECLARATION

I hereby affirm that I am licensed under provisions of Charter 9 (commencing with section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Class B-C-10 License No. 469185

Exp. Date 2-28-91 Signature

WORKERS' COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure or a certificate of Workers Compensation Insurance, or a certified copy thereof (Section 3800, Lab.C.)

Policy No. 02-WCP-01312-B Company Pacific Rim

☐ Certified Copy is hereby furnished Exp. Date 3-12-91

☐ Certified copy is filed with the city building division.

EXEMPTION FROM WORKERS' COMPENSATION DECLARATION

(This section need not be completed if the permit is for one hundred dollars ($100) or less.) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers Compensation Laws of California.

Date Signature

NOTICE: If after making this declaration, you should become subject to the Workers Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Section 3097 Civ.C).

Lender's Name

Lender's Address

OWNER BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit subject to the applicant to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvement are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Section B.&P.C. for this reason

Date Owner

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

Cypress, CA 90630

Re: Mitsubishi Building
LA Cellular/2nd Floor Remodel
5665 Plaza Drive, Suite 200

Dear Mr. Watson:

Daryl Maimberg Associates is space planner of record for the above project. We prepared sheets AO thru A11 of the construction documents which were permitted by the Cypress Building Department and plan checked by Melad & Associates.

DMA
Daryl Malmberg Associates
Interior Planning & Design
2600 Michelson Drive, Suite 1550
Irvine, California 92715
Telephone: (714) 752-1150
Telefax: (714) 851-5135

The general contractor for the project has brought to our attention that a clarification in construction detailing has been discussed relevant to conduit penetrations at rated walls. In effect, the general contractor will be using "Fire-safing" and "Fire Caulk" to pack all existing and new electrical and cable conduits/trays that will penetrate rated walls.

While the direction of our documents does not indicate the specific method of rating we have no problem with this method. This method is commonly used throughout many local municipalities to continue the required rating.

We trust that this will suffice as adequate authorization for the method of construction addressed above. Should any questions arise please feel free to contact our office.

Very truly yours,

DARYL MALMBERG ASSOCIATES

Daryl Malmberg

TO ALL PERMITTEES: In accordance with AB 443, the workers' compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.

WORKERS' COMPENSATION DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: 5665 Plaza DR.

Permit No. 84933 Issuance Date 09-13-05

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☒ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier Zurich - American

Policy Number WC 367 6619-02

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

TO ALL PERMITTEES: *In accordance with AB 443, the Workers' Compensation insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.*

WORKERS' COMPENSATION INSURANCE DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier State Fund

Policy Number 0009683

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

***TO ALL PERMITTEES:** In accordance with AB 443, the Workers' Compensation Insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.*

WORKERS' COMPENSATION INSURANCE DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier Majestic Insurance

Policy Number 0200804666702

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section _____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

***TO ALL PERMITTEES:** In accordance with AB 443, the Workers' Compensation Insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.*

WORKERS' COMPENSATION INSURANCE DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☒ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier Southern Ins Co.

Policy Number WISO024242-01

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section_____ B. & P. C. for this reason

***TO ALL PERMITTEES:** In accordance with AB 443, the Workers' Compensation Insurance declaration required by Health and Safety Code, Section 19825, has been amended to include the statements following this explanation. The law now places responsibility with the contractor to provide insurance as a condition of the license. By completing this declaration, the contractor permittee takes full responsibility to provide the insurance and the contractor no longer needs to provide the issuing jurisdiction a copy of the Workers' Compensation insurance policy.*

WORKERS' COMPENSATION INSURANCE DECLARATION
THIS DECLARATION BECOMES A PART OF THE PERMANENT PERMIT RECORD:

Job Address: _____

Permit No. _____ Issuance Date _____

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation , as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier Everest National Insurance Company

Policy Number 7600001379111

This section need not be completed if the permit is for one hundred dollars ($100) or less

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____

Signature: _____

WARNING: FAILURE TO SECURE WORKER'S COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000) IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit shall be subject to a civil penalty of not more than five hundred dollars ($500).)

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of a property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner will have the burden of proving he did not build or improve for the purpose of sale.)

☐ I, as sole owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's License law does not apply to an owner of a property who builds or improves thereon, and who contracts from such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Section_____ B. & P. C. for this reason

Date: _____ Owner: _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

Date: 7/21/11 Signature _____

Carrier _____ Policy Number _____

Name of Agent _____ Phone # _____

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers compensation provision of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date: _____ Applicant: _____ Signature: _____

OWNER BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the reasons listed belowby the checkmark(s) I have placed next to the applicable item(s). (Section 7031.5, Business and Professions Code: Any city which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provision of the Contractor's License law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property or my employees with wages as their sole compensation, will do (___) all of or (___) portions of the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractor's State License Law does not apply to an owner of a property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built or improved for the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code: The Contractor's State License law does not apply to an owner of a property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractor's State License Law.)

☐ I am exempt from licensure under the Contractor's State License Law for the following reason:

_____

Date: _____ Name of Owner: _____

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site:

http://www.legalinfo.ca.gov/calaw.html

DECLARATION REGARDING CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Section 3097, Civil Code).

THE ITEMS NOTED BELOW WERE OBSERVED DURING COURSE OF THE SITE VISIT. ANY VIOLATIONS OBSERVED MUST BE CORRECTED

OPENING COMMENTS

On site to conduct a change of ownership inspection.

Reef Transwwestern in no longer the owner if the facility.

CBRE is the operator of the building.

On site to conduct a routine Hazardous Materials Business Emergency Plan inspection. Consent to inspect was provided by Craig Wright of CBRE.
A walk through of the facility was conducted.
The following Hazardous Substances were observed being stored at above the reporting threshold:
-Diesel Fuel (160 gallons)

This facility is responsible for identifying all hazardous materials and hazardous wastes, which are above the following disclosure thresholds:
Solids > 500 pounds.
Liquids > or = 55 gallons
Gas > or = 200 cubic feet

The facility has not completed or submitted the Hazardous Materials Business Emergency Plan in CERS.

The HMBEP documents must be electronically submitted by going to the CERS website at http://cers.calepa.ca.gov/ and creating an account.

The following HMBEP documents that must be electronically submitted:
- Business Activities form
- Owner/Operator Identification form
- Hazardous Material Chemical Inventory forms
- Facility Site Map
- Business Emergency Plan

A site map used in the HMBEP must be available for review.
The employee training in regards the HMBEP is conducted annually.

PROGRAM DESCRIPTION 5801 - HAZ MAT DISCLOSURE 1-4 CHEMICALS			REINSPECTION DATE: NEXT ROUTINE

Consent to enter, inspect, and take photos of the facility was given by: Craig Wright, Building Engineer

The following items have been inspected. If there were violations, this document constitutes a Summary of Violations and Notice to Comply and the Violation Degree column is marked Minor, Class I, or Class II. A violation that is corrected at the time of inspection is marked COS. Failure to correct the listed violation(s) prior to the designated compliance date may necessitate a reinspection at an additional fee.

Overall Inspection Comments:

A remote hazardous materials inspection was conducted with Craig Wright, Building Engineer.

Observed diesel generator present on site. Facility only stores up to 50 gallons of Diesel at any given time. Business will be removed from the hazardous materials program as of this date.

The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds of 55 gallons for liquids, 500 pounds for solids, & 200 cubic feet for gases. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Hazardous Materials documents can be submitted via the California Environmental Reporting System (CERS) located at http://cers.calepa.ca.gov/.

No violations were noted. Orange County Environmental Health greatly appreciates your efforts to comply with all health, safety, and environmental laws and regulations applicable to your facility.

SIGNATURE(S) OF ACKNOWLEDGEMENT

NAME:
TITLE:

Signing for the receipt of the above report is not an admission of the facts of the violations set forth herein.

ADDITIONAL FEES:
Uncorrected violations may lead to follow-up actions, which may incur additional fees. The purpose of these fees is to shift costs away from compliant operators and impose fees on those facilities that fail to readily comply with the applicable laws and regulations. The amount of the fee is to cover all of the cost associated with the service. For the most current fees, please refer to http://ochealthinfo.com/eh/home/fees or call (714) 433-6000.

Asbestos Inspection Report

5665 Plaza Drive
Cypress, California 90630

Introduction

This report presents the results of our inspection services to identify asbestos-containing materials in the approximately 150,626 square foot five-story office building located at 5665 Plaza Drive in Cypress, California.

All work was conducted by State of California certified personnel. Field services for the inspection were conducted from July 27 through August 4, 2021. The project team included Thomas Gannon, a Cal/OSHA Certified Site Surveillance Technician (CSST 00-2726) and Michael Lyssy, a Cal/OSHA California Certified Asbestos Consultant (CAC 94-1311, expires 3/4/2022, mike@pacificenvironmental.com, (800)303-6484).

Scope of Work

ASBESTOS: The asbestos survey was performed by identifying suspect ACMs (defined by U.S. EPA and Occupational Safety and Health Administration (OSHA) as any material containing more than 1% asbestos) and performing sampling in compliance with the regulations that specify the identification of ACM. The suspect ACMs were grouped into Homogeneous Sampling Areas (HSAs). An HSA is a material that exhibits similar physical characteristics and that was installed at the same time as observed by the licensed inspector. Enclosed and/or encased materials were deemed inaccessible and as such, this investigation and all sampling was conducted only in generally accessible areas. Walls, ceiling, floors or soffits were not demolished to gain access.

Upon identifying the suspect ACMs, representative bulk samples were collected following OSHA and National Emission Standards for Hazardous Air Pollutants (NESHAP) regulations. Bulk samples were collected using a variety of cutting and/or coring tools, each cleaned prior to and following the collection of each sample. Samples were generally collected through the entire strata of each material sampled, unless otherwise noted. To minimize the generation of dust, a liberal amount of water was applied during the collection of each sample, particularly during the collection of friable materials. Samples were placed inside a clean (new) plastic container and labeled with a unique sampling number corresponding to a material description on bulk sample collection logs.

The bulk samples collected were logged onto chain of custody sheets and forwarded to AmeriSci Los Angeles (24416 S. Main Street, Suite 308, Carson, CA 90745, (310)834-4868) for analysis by Polarized Light Microscopy (PLM). AmeriSci Los Angeles participates in the National Voluntary Laboratory Accreditation Program (NVLAP 200346-0). The bulk samples were analyzed in accordance with the U.S. EPA "Method for Determination of Asbestos in Bulk Building Materials" 600/R-93/116.

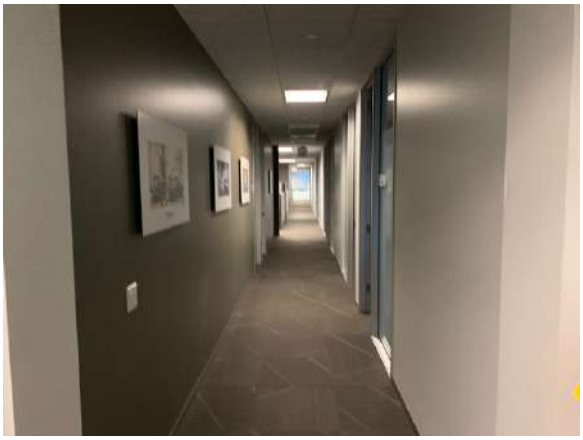
The National Emission Standard for Hazardous Air Pollutants (NESHAPS), EPA, OSHA and South Coast Air Quality Management District define an ACM as any material containing a concentration of asbestos greater than 1.0% by weight as determined by Polarized Light Microscopy. The National Emission Standard for Hazardous Air Pollutants (NESHAPS), EPA, OSHA and SCAQMD define an ACM as any material containing a concentration of asbestos greater than 1.0% by weight as determined by Polarized Light Microscopy. The SCAQMD further separates ACM into the following:

- **FRIABLE ASBESTOS-CONTAINING MATERIAL** is material containing more than one percent (1%) asbestos, that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure
- **CLASS I NONFRIABLE ASBESTOS-CONTAINING MATERIAL** is material containing more than one percent (1%) asbestos, and that, when dry, can be broken, crumbled, pulverized, or reduced to powder in the course of demolition or renovation activities. Actions which may cause material to be broken, crumbled, pulverized, or reduced to powder include physical wear and disturbance by mechanical force, such as, but not limited to, sanding, sandblasting, cutting or abrading, improper handling or removal or leaching of matrix binders. Class I non-friable asbestos-containing material includes, but is not limited to, fractured or crushed asbestos cement products, transite materials, mastic, roofing felts, roofing tiles, cement water pipes and resilient floor covering.
- **CLASS II NONFRIABLE ASBESTOS-CONTAINING MATERIAL** is all other material containing more than one percent (1%), that is neither friable nor Class I non-friable.

The California Department of Occupational Safety and Health (Cal/OSHA) defines an asbestos-containing construction material (ACCM) as a material that contains greater than one-tenth of one percent (>0.10%) asbestos.

Site Description

The subject property is a five-story steel-framed office building that comprises approximately 150,626 square feet. It was reportedly built in 1991 and is partially occupied. Toyo Tires and their subsidiaries occupy half of the third floor and the entire second floor. Murphy, Murphy & Murphy, Inc., certified public accountants, occupy the other half of the third floor. Beacon CBHM, LLC, a management company in the health services industries, occupies portions of the first and fourth floors in a very limited capacity, and the fifth floor is vacant. Due to the global pandemic, the building is practically vacant.



Interior finishes include drywall walls and hard lid ceilings with suspended ceiling systems in the office areas. Floors are concrete finished with carpet, vinyl and stone floorings. Mechanical systems are insulated with fiberglass and foam and the structural steel is protected with fireproofing. The roof is a single-ply TPO roofing system that was installed by Best Contracting in 2017/2018. We subcontracted Best Contracting to perform the roof cores for sample collection and to provide patching services in order to preserve the warranty of the roofing system.

The following photographs illustrate the typical site conditions.

Asbestos Inspection Results

A total of one hundred and seventy-two bulk samples of suspect materials were collected and submitted to independent laboratories for analysis. The laboratories analyzed each layer (one hundred and ninety-six layers) by Polarized Light Microscopy with dispersion staining per EPA protocols.

The EPA considers a homogeneous material to be an Asbestos Containing Building Material (ACBM) if one or more samples are found to contain greater than 1% by weight or area estimation. Materials that contain *trace* amounts of asbestos (<1% asbestos by weight) are considered Asbestos Containing Construction Materials (ACCM) per CalOSHA and are subject to worker protection rules.

Based on the results of our inspection services, no asbestos-containing materials or ACCMs were used in the construction of the improvements at the site. The following materials were determined to not be classified as asbestos-containing through laboratory analysis:

Material	**Location**
Drywall	Interior Walls and Ceilings, Suite 350
Drywall Joint Compound	Interior Walls and Ceilings, Suite 350
2' x 4' Ceiling Tile	Suite 350 Ceilings
Gray 12" x 12" Vinyl Floor Tile	Suite 350 Break Room

Drywall	Interior Walls and Ceilings, First Floor
Drywall Joint Compound	Interior Walls and Ceilings, First Floor
White 12" x 12" Vinyl Floor Tile	First Floor Storage, Lunch Room
Vinyl Floor Tile Adhesive	First Floor Storage, Lunch Room
Gray 12" x 12" Vinyl Floor Tile	First Floor Server Room
White Vinyl Covebase	First Floor Baseboards
Covebase Adhesive	First Floor Baseboards
Black Vinyl Covebase	First Floor Baseboards
Fireproofing	Structural Steel and Overspray
Roof Core – Vinyl Layer	Roof
Roof Core – Roofing Layer	Roof
Roof Core – Lightweight Concrete Layer	Roof

A summary table with all of the sample results in included after the text of the report. Sample location plans are included as Appendix A and the laboratory reports are located in Appendix B.

Summary and Recommendations

No asbestos-containing materials were identified at the five-story office building located at 5665 Plaza Drive in Cypress, California

An investigation below soil grade was outside the scope of this project and additional material, such as suspect cementitious asbestos pipes, electrical wiring insulation, or other materials may subsequently be discovered. These materials should be considered positive and treated according. Be advised that subsequent testing and laboratory analysis is recommended should any such sub-surface material be discovered. Furthermore, be advised that specific work plans may need to be prepared and approved by South Coast Air Quality Management District should cementitious suspect asbestos piping be discovered during the course of this project.

Every effort was made to sample all of the suspect building materials, however some materials may have been concealed and could not be exposed without demolition. If any additional suspect building materials are encountered during future renovation or demolition activities, we will arrange to sample and analyze them accordingly

This report should be given to trade contractors who are involved in performing demolition or renovations to the property.

Limitations

The conclusions and recommendations presented herein are based upon the agreed scope of work outlined in this report and were necessarily limited to our observations and experience. Pacific Environmental Company makes no warranties or guarantees as to the accuracy or completeness of information provided or compiled by others. This report is not a legal opinion. The services performed by Pacific Environmental Company have been conducted in a manner consistent with the level of care ordinarily exercised by members of our profession currently practicing under similar conditions. No other warranty, expressed or implied, is made.

The results reported and any opinions reached by Pacific Environmental Company are for the benefit of the client. The results and opinions set forth by Pacific Environmental Company in this report will be valid as of the date of the report. Pacific Environmental Company assumes no obligation to advise you of any changes that may later be brought to our attention.

PLM Bulk Asbestos Report

5665 Plaza Drive

Reporting Notes:

Analyzed By: Johana Perez _____; Date Analyzed: 8/3/2021 8.5.21

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

PLM Bulk Asbestos Report

Goodman; 5665 & 5757 Plaza Dr.

Reporting Notes:

Analyzed By: Thu M. Nguyen Thumnguyen; Date Analyzed: 8/7/2021 8.7.21

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

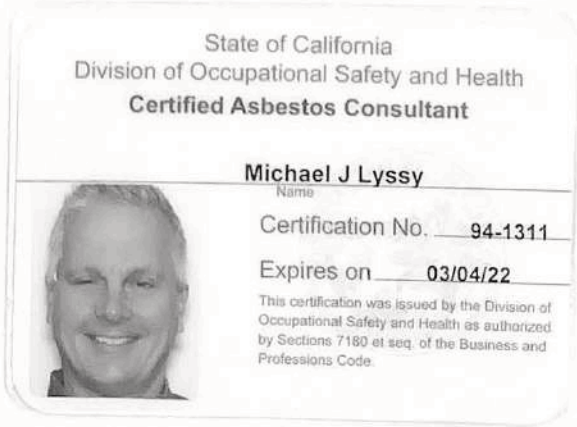
Dear Certified Asbestos Consultant or Technician:

Enclosed is your certification card. **To maintain your certification, you must abide by the rules printed on the back of the certification card.**

Your certification is valid for a period of one year. If you wish to renew your certification, you must apply for renewal at least 60 days before the expiration date shown on your card. [8 CCR 341.15(h)(1)].

Please hold and do not send copies of your required AHERA refresher renewal certificates to our office until you apply for renewal of your certification.

Certificates must be kept current if you are actively working as a CAC or CSST. The grace period is only for those who are not actively working as an asbestos consultant or site surveillance technician.



Please notify our office via U.S. Postal Service or other carrier of any changes in your mailing or work address within 15 days of the change.

Sincerely,

Jeff Ferrell
Senior Safety Engineer

MEMORANDUM

GLC Cypress LLC
3333 Michelson Drive, Suite 1050
Irvine, California 92612

August 25, 2023
Project No. 1-1209

Attention: Mr. Blair Dahl

Subject: Updated Earthwork Considerations
Goodman Commerce Center Cypress
Building 3, 5665 Plaza Drive
Cypress, California

Reference: G3SoilWorks, Inc., Geotechnical Investigation and Report Update, Proposed Goodman Commerce Center, 5665 and 5757 Plaza Drive, Cypress, California, dated May 4, 2022, Project No. 1-1209.

Dear Mr. Dahl,

This memorandum provides updated earthwork recommendations for planned Building 3 at the 5665 Plaza Drive site for the subject project. This update has been prepared based on modifications / additional recommendations provided as part of project evolution during the design phase for Buildings 1 and 2 at the 5757 Plaza Drive location addressed in the referenced geotechnical report.

Deep Dynamic Compaction

Deep Dynamic Compaction (DDC) is currently being considered to provide in-situ ground stabilization as an option to mitigate potential site soil liquefaction and provide acceptable support for the planned Building No. 3. It is anticipated that this DDC program would occur over an approximately one-month period during which time site vibration monitoring would be performed by G3SoilWorks.

Revised Site Remedial Grading Recommendations

The referenced geotechnical report provides general site remedial grading recommendations associated with the pavement / ancillary construction and completion of structure pads following in-situ ground improvement, with actual magnitude of remedial grading to be refined based on ground improvement considerations. Presented below are revised preliminary remedial grading

recommendations within the limits of proposed DDC and beyond the limits of planned DDC, respectively.

Areas Within the Limits of DDC

In-situ ground improvement utilizing deep dynamic compaction methods is currently planned to provide support for the planned structure for the proposed development. Within these areas, remedial grading is anticipated to be limited to the extent necessary to achieve finish pad grade elevations, including scarification / recompaction of the exposed subgrade to provide minimum 90 relative compaction in areas to receive additional fill and 95 percent relative compaction at finish pad subgrade elevations.

Areas Beyond the Limits of DDC

Recommendations were provided in the referenced geotechnical report for the over-excavation / recompaction of existing site soils to 5 feet (minimum) depth below existing or planned site grades, whichever depth is lower, for the support of planned exterior hardscape / pavement construction. In view of the shallow existing groundwater levels underlying the project site, the remedial grading recommendations for these areas were revised to a 2-foot (minimum) depth below existing or planned grades, whichever depth is lower. Exposed bottoms would be evaluated for acceptability by a representative of our office and additional over-excavation performed, where necessary. Acceptable over-excavation bottoms would then be scarified and recompacted to at least 90 percent relative compaction prior to the backfilling / placement of approved engineered compacted fill.

Underground Stormwater Storage Chambers

An underground stormwater chamber is planned below the truck court area along the west side of this building. This chamber tentatively will measure approximately 26 feet by 175 feet in plan area and extend approximately 12 feet in depth. Excavation for and installation of this stormwater storage chamber as currently planned would therefore necessitate the need for localized site dewatering operations.

Limitations

The recommendations presented herein were developed in accordance with generally accepted professional engineering principles and local practice in the field of geologic and geotechnical engineering and reflect our best professional judgment. We make no other warranty, either express or implied.

Closure

We trust this addendum report is adequate for your needs at this time. Should you have any questions or need additional information, please do not hesitate to contact the undersigned.

All other recommendations presented in the referenced report, except as superseded by the recommendations presented herein, remain valid and in effect for the subject project.

Sincerely,

G3SoilWorks, Inc.

Irvine, California 92612

May 4, 2022
Project No. 1-1209

Attention: Mr. Blair Dahl

Subject: Geotechnical Investigation and Report Update
Proposed Goodman Commerce Center
5665 and 5757 Plaza Drive
Cypress, California

References: See attached List of Selected References

Dear Mr. Dahl,

Pursuant to your request and authorization, G3SoilWorks, Inc. (G3), has prepared this geotechnical investigation report update for the proposed commercial / industrial development to be located at 5665 and 5757 Plaza Drive, in the city of Cypress, California. This report update was prepared based on our review of available documents and plans provided by your office, preliminary assessment and independent analysis of the data presented in the referenced reports by others, desktop site research and onsite reconnaissance, supplemental field subsurface exploration, laboratory testing, and engineering geologic evaluation / geotechnical engineering analysis of our field findings. A summary of our evaluation / findings and geotechnical recommendations for site development are included and presented herein.

SITE LOCATION / DESCRIPTION

The project site is located at the subject address (5665 and 5757 Plaza Drive) in the City of Cypress, California. As shown on Figure 1 (attached), Plaza Drive partially bounds the site to the south / southeast and is accessed via intersections with Katella Avenue and Valley View Street, south and east of the site, respectively. Currently, the site is understood to be occupied by the Cypress Technology Center which includes an existing approximately 5-story office building associated with the 5665 property address, a large commercial / industrial building and office complex associated with the 5757 property address, and associated parking areas concentrated near the northwest corner of the site and around the perimeters of the existing buildings.

The 5665 property is approximately 450 feet by 800 feet in area and occupies the westerly 8.3± acres of the site with the existing office complex occupying an “L”-shaped footprint of approximately 0.82 acres. The 5757 property is larger (approximately 750 feet by 950 feet) and comprises the easterly 16.4± acres of the site with the existing commercial / industrial building

complex occupying a rectangular area of about 7.2 acres. The topography of the site is relatively flat to very gently sloping. Site elevations in feet above the North American Vertical Datum of 1988 (NAVD88) are estimated to range from approximately Elevation (El.) 38± feet near the northeast and southeast corners of the site, El. 39± feet near the center of the site, and El. 35-36± feet near the northwest and southwest corners of the site, respectively.

PROJECT UNDERSTANDING

Three (3) commercial / industrial buildings are currently proposed across this project site, with each building including 1st and 2nd floor office areas and a warehouse with attendant loading docks and associated paved parking and driveway areas. A Concept Grading Plan (Reference No. 1) for the easterly 5757 property shows Building 1 (199,909 square feet) and Building 2 (180,359 square feet) occupying the easterly and westerly portions of the property. Conceptual plans for the 5665 property were not available at the time of this report, but we understand that Building 3 (185,412 square feet) will be of a similar type of construction (i.e., concrete tilt-up frame construction) with similar appurtenances relative to Buildings 1 / 2.

Structural details were not available at the time of this report update. For the purposes of this report, it is assumed that the planned structures will consist of concrete tilt-up frame construction with associated truck docks. Maximum column and wall loadings not exceeding about 200 kips and 5 kips per lineal foot, respectively, have been assumed for preliminary design purposes. Should the planned design / construction loadings vary from those indicated herein, this office should be notified in order to provide comment and/or updated geotechnical recommendations for design, as appropriate.

PROJECT BACKGROUND AND PREVIOUS STUDIES

Previous studies for the project were performed by Southern California Geotechnical (SCG), the findings of which were presented in SCG's Geotechnical Feasibility Study dated June 7, 2021 (Reference No. 2) and subsequent Geotechnical Investigation Report dated September 29, 2021 (Reference No. 3). Field subsurface investigation for both properties was performed by SCG as part of their Geotechnical Feasibility Study and included the drilling of four (4) soil borings (B-1 through B-4) and four (4) Cone Penetration Tests (CPT-1 through CPT-4) to depths of 50 feet below existing ground surface. SCG's subsequent study / Geotechnical Investigation Report included nine (9) additional borings (B-5 through B-14) and four (4) additional CPTs (CPT-4 through CPT-8) with recommendations provided for buildings located on the 5757 property (now referred to as Buildings 1 and 2, respectively, per Concept Grading Plan; Reference No. 1). Actual logs of borings B-5 through B-7 and CPT-5/-6, including associated laboratory test results, were not available for our review. The CPT data files were also not available for our review and re-evaluation.

SCG identified shallow groundwater levels at 5 to 9.5 feet below existing ground surface and potentially liquefiable soil conditions at depths between 5 and 50 feet below existing ground surface. Recommendations for remedial grading combined with or without specialized ground improvement techniques to depths of 15 feet were provided with the intent of supporting the

planned structures on shallow conventional foundations. Conventional foundation criteria were provided when considering remedial grading to 15 feet depth, with reported post-construction settlements expected to be within tolerable limits for conventional foundations. However, based on our review of the previous studies by SCG, estimated total and differential settlement potentials were not provided for design, and settlements due to potential soil liquefaction below the proposed 15-feet-depth of remedial grading did not appear to have been addressed. Additionally, the proposed remedial grading would intercept shallow groundwater, requiring extensive dewatering.

In view of the above, G3 was retained to review and evaluate the findings / recommendations of the previous geotechnical consultant (SCG), perform supplemental subsurface exploration, and develop alternative recommendations for the proposed development. G3 has completed this additional phase of study and summarized our findings / recommendations herein as the new / current Geotechnical Consultant of Record (see below).

CHANGE OF GEOTECHNICAL CONSULTANT OF RECORD

G3SoilWorks, Inc. (G3), has been retained and should be considered as the current Geologic / Geotechnical Consultant of Record for the subject project. As the Consultant of Record, G3 has reviewed the referenced reports prepared by Southern California Geotechnical (SCG; Reference Nos. 2-3), accepts the data, and generally concurs with their conclusions and recommendations, with the exception of those superseded herein.

PURPOSE AND SCOPE

The purpose of our geotechnical investigation was to re-assess and evaluate the findings / evaluation / recommendations for the deep removal / recompaction remedial grading scheme presented by the previous geotechnical consultant and provide alternative in-situ ground improvement considerations for structure support.

Our scope of work included the following tasks:

- Review of available pertinent geologic and geotechnical reports and maps specific to the project site and vicinity
- Preliminary site reconnaissance and boring layout;
- The drilling of 5 borings to depths of 25 to 51.5 feet below existing grade utilizing a truck-mounted drilling rig equipped with an eight-inch diameter hollow-stem auger, and associated soil sampling and logging by our geologist / engineer to substantiate the subsurface findings reported by the previous consultant and obtain additional subsurface information.
- A total of five (5) monitoring wells were installed to determine static water levels and provide a means of groundwater monitoring in advance of and during construction.
- Review of the liquefaction analyses performed by the previous consultant and perform two (2) additional Cone Penetrometer Tests to depths of 50 feet below grade for liquefaction evaluation;

- Laboratory testing, including moisture content and dry density of relatively undisturbed samples obtained in the field, maximum density / optimum moisture relationship, expansion index, hydrometer, classification, consolidation, direct shear, and Atterberg limits;
- Engineering geologic / geotechnical evaluation and analysis of the findings by our office and those presented in the referenced reports relative to the existing site conditions / proposed development, including geologic hazards and re-evaluation of potential site liquefaction;
- Consultation with our ground improvement design / build specialist to develop criteria for use in ground stabilization and preliminary recommendations for remedial grading / ground improvement, and foundation design criteria;
- Preparation of this written report presenting a summary of our field findings, laboratory test results, and updated recommendations for grading, preliminary criteria for ground improvement, foundation design and construction, and utility trench excavation considerations.

GEOLOGY

Regional Geologic Setting

The Los Angeles and Orange County coastal areas are adjacent to what is referred to as California's "Continental Borderland" geomorphic province – representing an area of transition between continental and marine environments associated with the geologic development of the Los Angeles Basin (LA Basin, Figure A). Over the past 20 million years of geologic time, tectonic reorganization of the southern California landscape along the "Big Bend" of the San Andreas Fault Zone (SAFZ) caused areas associated with the LA Basin to subside / down-drop, forming a major structural depression / sedimentary basin during early to middle Miocene time (15-20 million years ago). This depression initially formed an offshore marine environment that persisted for millions of years and filled with marine sediments sourced from the rapidly evolving highlands. Within the last 2-3 million years, tectonic uplifts that developed along the Newport-Inglewood / Rose Canyon Fault Zone (NIRCFZ) to the west and Whittier Fault Zone (WFZ) to the north caused the basin to uplift and fill with terrestrial and marine sediments, eventually becoming an evolving emergent plain. The source of the infill sediments was a combination of both marine and terrestrial sediments deposited by the ancestral Santa Ana, Los Angeles, and San Gabriel River systems. Over the last approximate 120-thousand years of geologic time, alluvial sedimentary fans have built-out / prograded southwestward toward the Pacific Ocean from the mouth of Santa Ana Canyon, forming the upland areas of the Orange County coastal plain. The Orange County coastal plain, City of Cypress, and project site are located within the southeasterly margins of the LA Basin, west of the historic Santa Ana River Channel, and are underlain by thousands of feet of Tertiary sediments and crystalline basement rocks of the Peninsular Ranges Geomorphic Province of southern California.

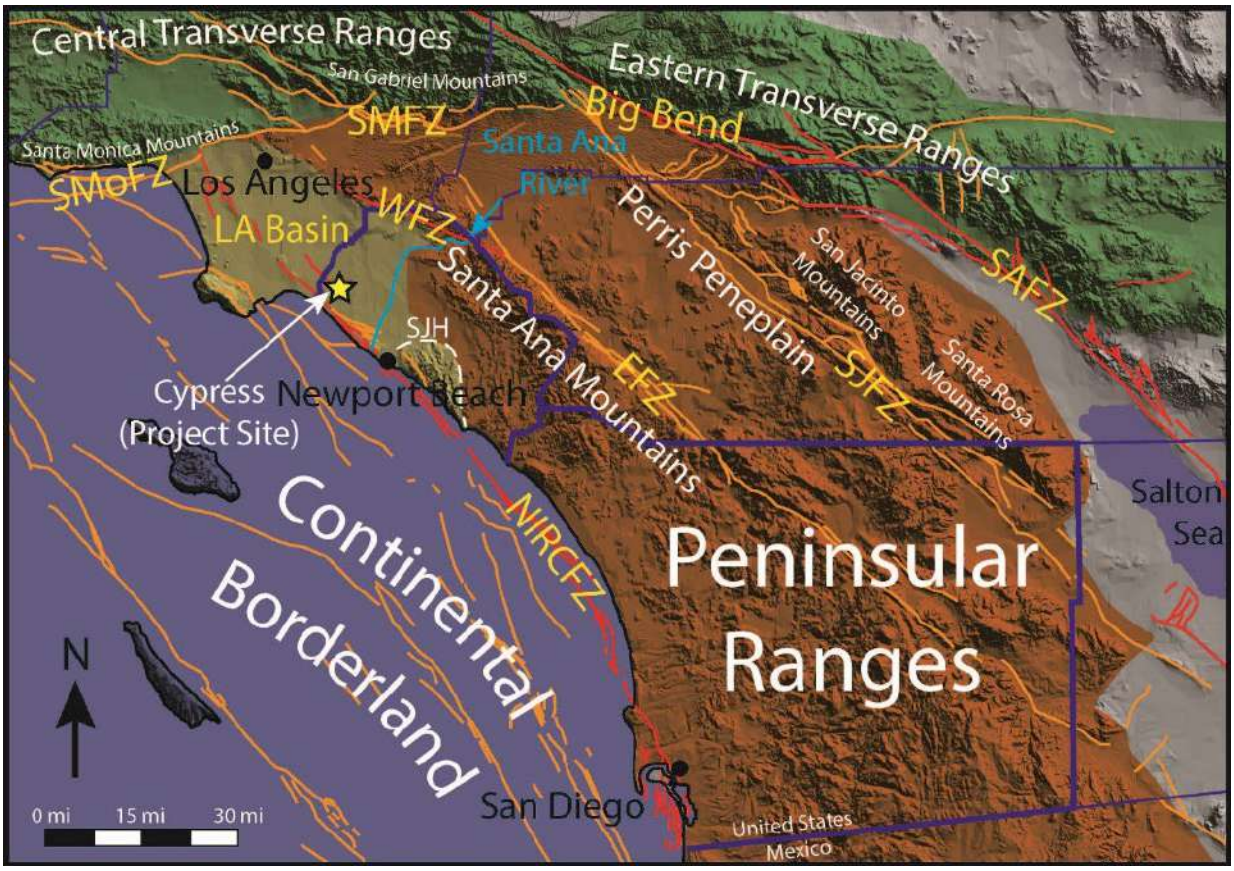

Figure A. Map of Local Geomorphic Provinces, Regional Fault Lines, and Related Landforms including: the Peninsular Ranges (orange), Continental Borderland (blue), and Transverse Ranges (green); the San Andreas, Newport-Inglewood / Rose Canyon, and Whittier fault zones (SAFZ, NIRCFZ, and WFZ, respectively; red lines); the San Jacinto (SJFZ), Elsinore (EFZ), Santa Monica (SMoFZ), and Sierra Madre (SMFZ) fault zones (orange lines). The project site (yellow star) is located along within the southeasterly interior margins of the Los Angeles Basin (LA Basin; yellow), a geomorphic sub-province forming the "join" between the three surrounding provinces. The San Joaquin Hills (dashed, white outline) represent the uplifted southeastern extension of the LA Basin to the southeast. County lines shown in dark blue with the project site located in Orange County. Approximate alignment of Santa Ana River is shown in light blue.

Local Geology / Geomorphology

Review of historic topographic maps dating back to the early 1900's (Figure B, below) indicates that the site is located near the terminus of the abandoned northern branch of the ancestral Santa Ana River and the headwaters of Anaheim Creek, which historically drained into the wetlands of Seal Beach (now known as the Seal Beach National Wildlife Refuge). Regional geologic mapping (Figure 3, attached) indicates that the site is underlain by Quaternary young alluvial deposits – Unit 2 (Qya_2) of late Pleistocene to Holocene age. The local alluvial deposits are described as, "*Poorly consolidated, poorly sorted, permeable flood-plain deposits consisting of soft clay, silt and loose to moderately dense sand and silty sand*". Sediments underlying the site / vicinity are understood to be fluvial in origin, having been transported by floodwaters of the

ancestral San Gabriel and Santa Ana River drainages, deposited as broad sheets and anastomosing lobes of sediment across an ancient flood plain. These relatively ancient flood-plain deposits, now at elevations of 35-40 feet above sea level, likely began accumulating in a low-lying wetland, similar to the historic wetlands of Seal Beach to the southwest. During the late Pleistocene / early Holocene climatic transition (10- to 20-thousand years ago), local relative sea level was more than 300 feet below its modern level, but rapidly rose in response to climate change and influx of glacial meltwater into Earth's oceans. This rapid sea level rise essentially drowned the coastal zone and flooded former wetland areas that would subsequently infill and be buried by terrestrial alluvium transported and deposited by the Santa Ana and San Gabriel Rivers. As these sediments continued to accumulate, they developed into broad alluvial fans that prograded / built-out from ancient stream channels, displacing and/or maintaining the Pacific Coastline to the southwest. The result of this apparently rapid depositional history is an elevated, alluvial flood-plain that buried / infilled an ancient wetland, creating the relatively flat / low-lying terrain and alluvial deposits present under the site.

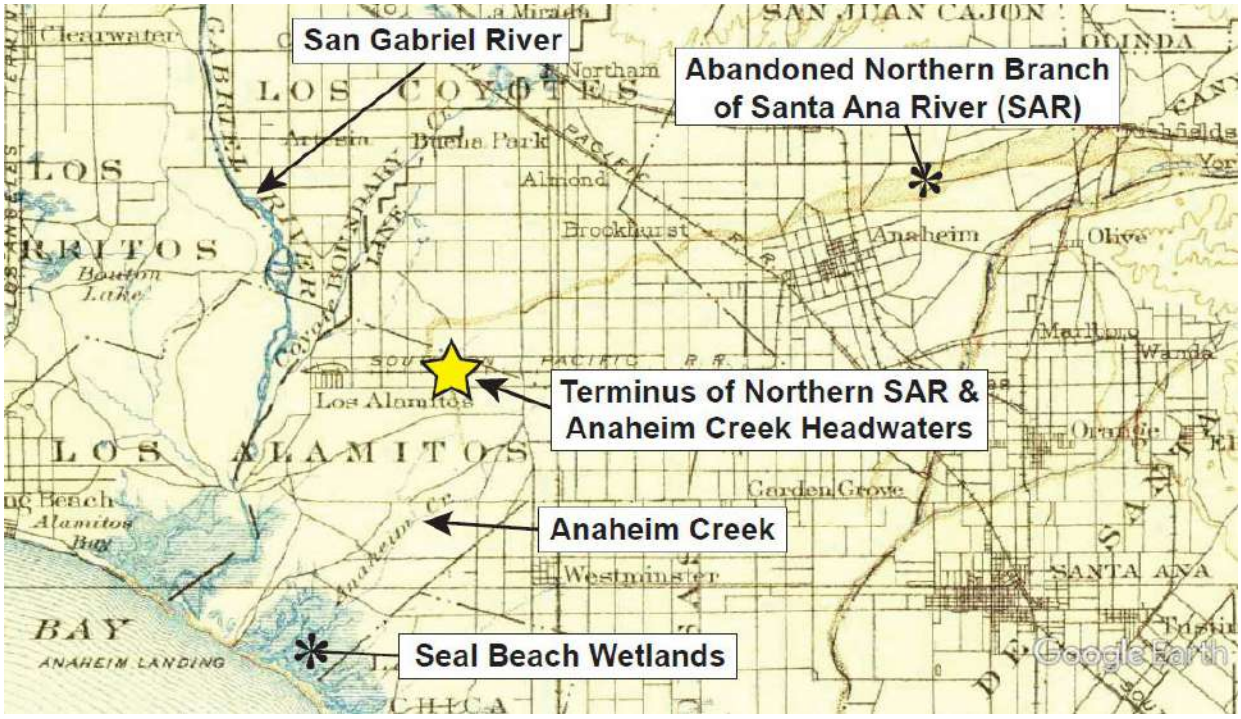

Figure B. Historic Topographic Map of Southern California from U.S. Geological Survey – Southern California Sheet No. 1, 1:250,000 Scale, 250-feet Contour Interval, May 15, 1910 Edition. Note that the site (yellow star) is located near the terminus of the ancestral Santa Ana River's abandoned north branch, and the headwaters of historic Anaheim Creek, which ultimately drains into wetlands of Seal Beach (Note: Not to Scale; For Illustrative Purposes Only).

Site History

According to PropertyShark and LoopNet commercial real estate website, the existing structures that currently occupy the 5665 and 5757 properties were reportedly constructed in 1988 and 1991,

respectively. Review of vintage topographic maps and historic aerial photos dating back to the early 1900s indicates that the site originated as part of a largely undeveloped, rectangular parcel, with the majority of the local area either similarly undeveloped or agricultural. By the early 1930s, some housing and limited urbanization, including a petroleum tank farm to the northwest, is scattered throughout the greater vicinity. As of 1950 (Figure C, below), the site was part of a group of agricultural parcels proximal to the Southern Pacific Rail Line, the Los Alamitos Race Track and Army Airfield Complex, and other developments can be seen in the area. By 1960, the airfield had expanded to near its modern configuration and much of the surrounding vicinity had become urbanized. The site area remained agricultural through 1970, but much of the surrounding area was urbanized and developed by 1980. The site and immediate vicinity however remained agricultural until about 1985. In 1990, the site's configuration was apparently established similar to today.

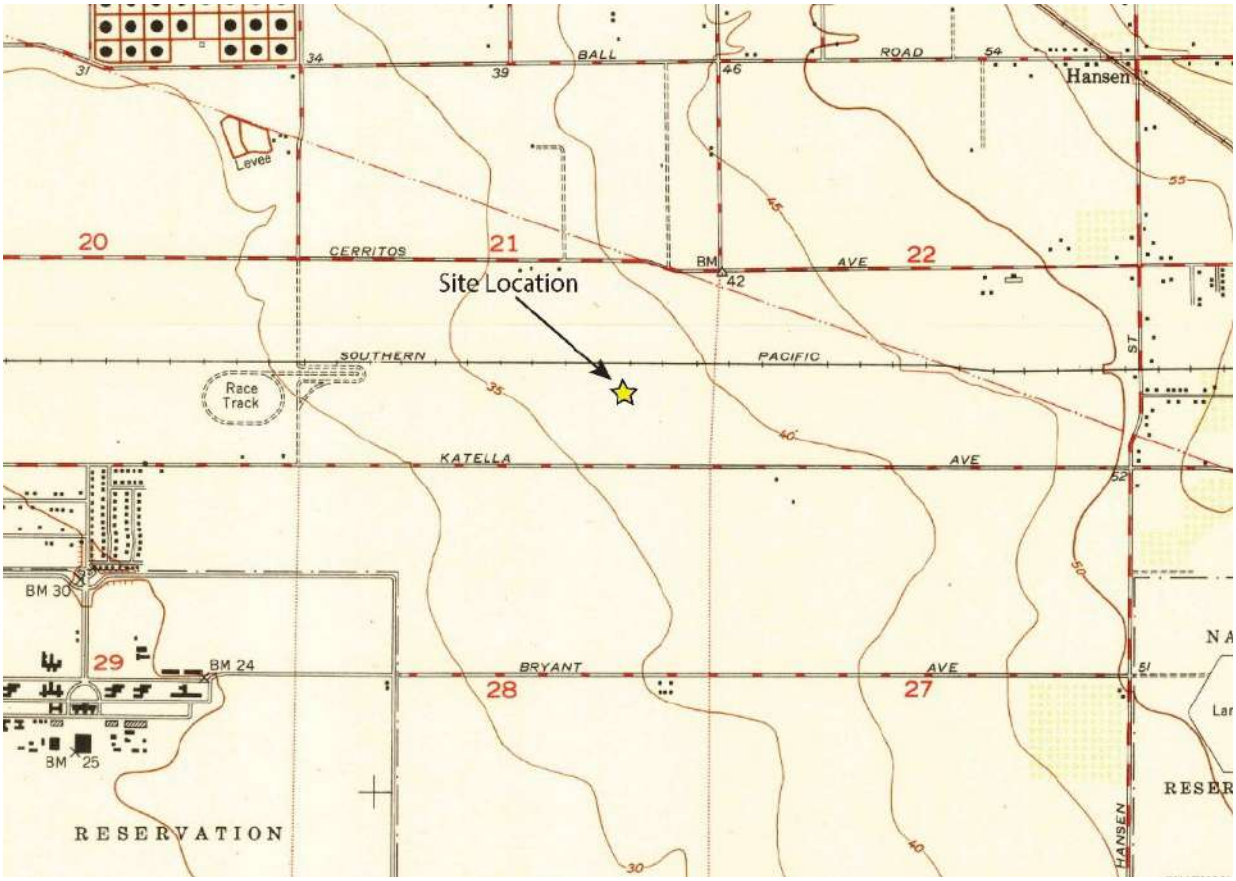

Figure C. Excerpt from U.S. Geological Survey 1950 topographic map of the Los Alamitos Quadrangle (1:24,000 scale; 5-foot contour interval) showing approximate location of project site at Elevation 37± feet above mean sea level (not to scale; site location is approximate; for illustrative purposes only).

With regards to the above, no buildings or other meaningful development were noted on or very near the site until the current development. The agricultural uses, based on historical review, indicate only "open ranch" replaced later by basic row crops. With respect to anthropological

development, the general area was open space that served as a mix of rural and agricultural development. This continued through the early to mid-20th century. During that time, agricultural processing and use may have influenced the upper few to possibly locally several feet of onsite soils. Since that time, the area has been subject to heavy urbanization. This has likely created minor fills and modifications to the topography. The modifications include roadways, building pads and similar in support of development. This results in local fills and cuts of a few to locally several feet. The area has been heavily urbanized. Locally, the majority of the area is built out. The existing conditions onsite are part of a larger commercial development ("Cypress Technology Center") that includes commercial buildings and associated paved parking areas.

Flood Hazards

The major drainages – namely the San Gabriel and Santa Ana Rivers – have been largely channelized, along with storm water controls effectively "stabilizing" the area from further fluvial activity. Review of FEMA Flood Hazard Mapping (06059C0116J) indicates that the site is outside the 100-year flood plain but within the 500-year flood plain (i.e., in a zone assigned a 0.2-percent chance of being flooded in any given year or once every 500 years on average).

Local Faulting / Seismicity

Our desktop research indicates that the site is not underlain by any known active faults (i.e., Holocene faults that have ruptured in last 11,700 years and are likely to rupture in the future per the Alquist-Priolo Earthquake Fault Zoning Act). According to the Cypress General Plan, the nearest zoned "active" fault includes the Newport-Inglewood Fault Zone (5.1 miles southwest of the project site). Other nearby "active" faults include the Whittier-Elsinore Fault Zone (11.6 miles northeast of the project site). Nearby Quaternary faults includes an inferred portion of the Los Alamitos fault, located 2.2 miles southwest of the site, the faults in West Coyotes Hills, 8.2 miles northeast of the site, and the El Modena fault and Peralta Hills fault, located 10.2 and 11.3 miles easterly of the site, respectively. A nearby pre-Quaternary fault is the Norwalk fault, located 5.2 miles northeast of the site. Another concealed fault line (presumed inactive) is located approximately 0.85 miles southwest of the site, parallel to trend of the Los Alamitos Fault.

The local area is seismically active and subject to being impacted by large / damaging earthquakes. Recent historic damaging earthquakes affecting the local area include the 1987 magnitude (Mw) 5.9 Whittier Narrows earthquake and 1994 Mw 6.7 Northridge earthquake, caused by blind thrust faults located in the northern Puente Hills and San Fernando Valley, respectively. These earthquakes generated moderate to strong ground shaking in the local area and slight damage to local structures (Modified Mercalli Intensity V-VI at the subject site). The 1933 magnitude (M_w) 6.4 Long Beach Earthquake reportedly caused severe ground shaking (Modified Mercalli Intensity VIII) and moderate to heavy damage to structures in the local area according to the California Department of Conservation, based on the work of Barrows (1970, Reference No. 4), Trifunac (2003, Reference No. 5), and others. Larger / more damaging earthquakes have the potential to affect the local area in association with seismic events on the San Andreas, San Jacinto, Elsinore, Newport-Inglewood, and other regional fault lines affecting southern California.

The Los Alamitos Quadrangle is a Seismic Hazards Zone and is discussed in SHZR 019. The SHZR notes that the vicinity of the site is susceptible to liquefaction. This is described in more detail in the Seismic Hazards section of this report.

GEOTECHNICAL INVESTIGATION

Field and Laboratory Investigation

On December 13th, 2021, two CPT borings (CPT-1 and CPT-2) were advanced to depths of approximately 50 feet below existing site grade. Between January 3, 2022, and January 4, 2022, five hollow-stem augured borings (B-1 through B-5) were advanced to depths of approximately 31.5 feet and 51.5 feet below existing site grades, respectively. The approximate location of these borings and CPTs by G3 are shown on the attached Boring / CPT Location and Groundwater Map (Figure 2), along with the locations of previous borings / CPTs by SCG. Soil samples were obtained at selected depths and transported to the laboratory for testing.

Geotechnical boring logs for the hollow-stem auger borings and CPT results are included in Appendix A and Appendix B, respectively. Laboratory testing was performed on representative soil samples obtained during the field exploration to determine geotechnical properties of the site's subsurface materials, and the results of this testing are included in Appendix C. Boring logs, CPT results, and related information excerpted from SCG's previous reports (Reference Nos. 2 and 3) are included in Appendix D and Appendix E, respectively.

Subsurface Conditions

Based on the findings of our subsurface exploration, the project site is underlain, in general, by shallow fills and Quaternary alluvial deposits (Qal; synonymous with Unit Qya_2 of Figure 3, described in Local Geology / Geomorphology section). Artificial fill was noted within the upper 5± feet and generally consisted of dark grayish brown, moist to very moist, medium-dense, silty sands. Below about 5 feet depth, the native alluvial materials consisted primarily of very moist to wet silty sands / sandy silts with interbeds / discontinuous lenses of clayey silt / silty clay and poorly-graded sands noted between 35 and 40 feet. A distinct / apparently widespread layer of clayey silt / silty clay was noted at about 15± feet and 32.5 feet in Borings B-1 through B-5, consistent with previous borings by SCG. In general, the relative density and consistency of the alluvial materials, based on SPT / Cal-Mod blow counts, was noted to be predominantly loose to medium-dense and soft to firm. The fine-grained soils were generally low to very low / non-plastic in terms of apparent plasticity. It is likely that some of the fill materials, particularly the lower portions, are of an agricultural nature. Although we did not have opportunity to review any engineering information about the grading of the original development, based on available subsurface information, this agricultural fill may have been processed to varying degrees to accommodate the current development. No adverse organics were noted, however scattered roots and similar were reported in both our and the prior consultant SCG's work. Shallow groundwater conditions are present at the site, with first water occurring at depths of about 6-9 feet below existing surface elevations. Additional information regarding groundwater conditions is provided below.

Groundwater

Monitoring Well Installation / Recent Water Levels

Groundwater was initially encountered / noted in borings B-1 through B-5 between 7 feet and 8 feet below ground surface, which is generally consistent with groundwater levels of between 5 feet and 9.5 feet reported by the previous consultant (SCG; Reference Nos. 1 and 2). As part of our work, a total of five (5) monitoring wells permitted through Orange County Environmental Health Care Agency – Environmental Health Division were installed in borings B-1 through B-5 for the purposes of determining static water levels and as a means of ongoing monitoring for the project. The completed / approved well permit application and supporting documents are included in Appendix F. As-built well diagrams are referenced in the attached Geotechnical Boring Logs (Appendix A) and included as attachments in Appendix G. Estimated groundwater elevations as of January 7th and April 4th (2022) are summarized below and on the attached Figure 2.

Table 1. Estimated Groundwater Elevations / Depths – Wells B-1 through B-5

Well #	Est. Surface Elev. (feet above NAVD88)	Est. GW Elev. (1/7/22) (feet above NAVD 88)	Est. GW Elev. (4/4/22) (feet above NAVD 88)	Change (feet)	Depth to Water (4/4/22) (feet below ground surface)
B-1	38	31.4	31.6	0.2	6.4
B-2	38	31.4	31.5	0.1	6.5
B-3	36	28.9	28.8	-0.1	7.2
B-4	35	28.4	28.6	0.2	6.4
B-5	39	30.3	30.2	-0.1	8.8

Notes: Surface Elevations estimated from Google Earth to nearest 1-foot. Groundwater Depths / Elevations rounded to nearest 0.1 feet. See Figure 2 (attached) additional notes / information.

Hydrogeology / Structure

Groundwater associated with the site / local vicinity is not a singular body but likely comprised of multiple anastomosed zones that are inferred to be locally / partially interconnected and fed by regional and local sources of recharge, including surface infiltration, storm drain leakage, and other shallow / surficial sources. An Upper Zone of “first water” occurs in predominantly silty sands of moderate permeability, and inferred to be largely unconfined / perched on top of a relatively low permeability clay / silt layer noted at 15± feet in Borings B-1 through B-5. An Intermediate Zone, centered at approximately 20-30 feet, generally occurs in silty sands and is inferred to be semi-confined / leaky. Below about 35 feet, a Lower Zone occurring in poorly-graded sands centered at approximately 35-40 feet is inferred to be confined / semi-confined (i.e., “pressurized") based on the presence of confining layers (clayey silts / silty clays) above and below. In general, the sediments controlling groundwater flow occur as sub-horizontal, semi-continuous layers / lenses that generally conduct water horizontally and/or through vertically leakage between zones.

Groundwater Considerations

In general, groundwater associated with the site is shallow and understood to be of incidental / non-beneficial use. The ongoing regional series of droughts may influence the groundwater by tending to depress it. During periods of heavy rains and particularly “wet” rainy seasons,

groundwater may be expected to rise and may mound in areas of concentrated influx. This condition may influence the use of infiltration and other stormwater controls.

The influence of the groundwater on overlying soils is likely to complicate earthwork / excavations, as the groundwater may rise into the work zone by “pumping” effects of heavy equipment, and by capillarity. Where semi-confined groundwater bodies exist, their phreatic head may be higher than their physical occurrence. This condition can exert a pressure on excavation bottoms, creating a “quick” condition, and other adverse effects. This typically requires a zone of isolation of up to several feet between the groundwater surface and the excavation to mitigate.

Shallow groundwater conditions and dewatering should be factored accordingly as part of the design and construction of the proposed development, including its effect on utility installations and general earthwork / construction. Shallow groundwater may be expected to influence utilities and related where they are close to or intersect the water table. The potential effects include flooding / groundwater intrusion, possible bottom heave, and decreased sidewall stability should be accounted for accordingly. Spoils near or below the water table are expected to be relatively wet and may require additional processing (aeration / drying) for use as engineered fill.

Specific details regarding groundwater / dewatering approaches, if needed, are beyond the scope of this report. Once the development plans are firmed up, this office should be consulted on how to proceed with formulating dewatering plans and/or other forms of ground stabilization that may be required to accommodate the proposed development and related appurtenances.

The groundwater at the site may present another hazard that could affect the property long-term in the form of wicking and capillarity, particularly during heavy seasonal rain or transient rise in groundwater. This condition may be expected to cause potential for elevated moisture / vapor intrusion risks to interior structures. Mitigations for such hazards include a robust capillary break and high-quality engineered vapor retarder system underlying a relatively thick slab assembly made of high-strength, low water cement ratio concrete, preferably with a hydrophobic additive (i.e., Xypex / Hycrete). Providing interior ventilation, appropriate exterior drainage, eliminating planters next to / proximal to buildings, and similar can also help mitigate risks associated with moisture / vapor intrusion. This is discussed in more detail in the Recommendations section of this report.

SEISMIC HAZARDS

General

Seismic hazards are typically categorized into two classes: primary and secondary. Primary seismic hazards are those directly related to a seismic event and include strong ground motion and surface rupture due to regional earthquakes and related surface displacements along fault lines. Secondary seismic hazards occur as a result of the primary hazards and include responses of the local ground to seismic shaking like liquefaction, lateral spreading, earthquake-induced landslides, etc. Additional hazards associated with coastal settings and open water bodies include tsunamis and seiche. These hazards and associated risk potentials are described below.

Surface Rupture and Strong Ground Motion

As previously described, active faults do not appear to be present across or very near the subject property. According to the California Geological Survey's web-based application (EQ Zapp), the nearest zoned active faults include the Newport-Inglewood and Whittier fault zones located approximately 5.1 miles southwest and 11.6 miles northeast of the site, respectively. The Fault Activity Map of California (CDMG Map No. 6, 2010) also indicates that the site is not located in an Earthquake Fault Zone of Required Investigations. A small area of recent activity in the Coyote Hills (Fault 433) is present in between the Norwalk Fault and Whittier Fault about 8.25 miles northeast of the site. The local area does include the Los Alamitos Fault Zone (Fault 442) about 2.2 miles southwesterly that is of Late Quaternary age, and not considered active. The Norwalk Fault (Fault 443) is located about 5.3 miles north easterly of the site, along with splay segments of unnamed faults situated about 4.25 miles south-southeast and 3.8 miles easterly of the site. Risk of onsite fault-related ground rupture associated with activity of a known active fault is considered unlikely. However, it should be noted that incidental ground cracking and other phenomena can occur due to high seismic accelerations and regional seismic activity, including effects associated with liquefaction and lateral spread– which should be expected throughout project's design life. Risks associated with seismic shaking and strong ground motion are considered moderate but can be mitigated through appropriate geotechnical / structural design and construction practices. Seismic design parameters based on ASCE 7-16 are included in Appendix H.

Liquefaction / Seismic Settlement

Liquefaction is a phenomenon in which saturated, cohesionless soils lose strength during relatively severe earthquake ground motions, with potential for adversely affecting buildings and road structures. In general, during ground motion, saturated fine sands and silty sands tend to compact and decrease in volume, resulting in an increase in pore water pressure if drainage is impeded. If the pore water pressure becomes equivalent to the overburden pressure, the effective stress becomes zero and, consequently, the cohesionless soil loses its strength and is considered to be in a liquefied state. Factors known to influence the potential for liquefaction include soil type and depth, grain-size, relative density, groundwater level, degree of saturation, and both the intensity and duration of ground shaking.

According to California Geological Survey's web-based application (EQ Zapp), the site is located in Liquefaction Hazards Zone of required investigations and our subsurface exploration, as well as that of the previous consultant (SCG; Reference Nos. 2 and 3), has verified the presence of potentially liquefiable soils to depths of 50 feet. Liquefaction analyses performed by the previous consultant based on the results of their CPT test data (in their Feasibility Study; Reference No. 2) indicated potential dynamic settlements ranging from 5.08 inches to 7.62 inches under a major seismic event. In their Preliminary Geotechnical Investigation Report (Reference No. 3), repeat liquefaction analyses were performed using different analysis methods resulting in dynamic settlements ranging from 2.80 inches to 3.29 inches, including an additional liquefaction analysis of secondary CPT test data resulting in 4.56 inches of settlement.

Site liquefaction potential was evaluated utilizing the computer program LiquefyPro developed by CivilTech Software, based on the subsurface conditions encountered in our CPT-1 and CPT-2 (Appendix B). The results of this analysis indicate potential dynamic settlements on the order of 2.90 inches to 5.27 inches during a severe seismic event. This dynamic settlement is expected to occur over a large area and would result in areal subsidence, and the potential differential settlement is expected to be significantly less over any relatively small segment. However, given the nature of the proposed development, being comprised large-scale industrial warehouse facilities, differential settlements under current conditions could be significant. Remedial grading / foundation considerations and/or in-situ ground improvement measures are recommended hereinafter to help mitigate potential adverse effects due to soil liquefaction. The results of our liquefaction analysis are included in Appendix I.

Lateral Spread

Liquefaction induced lateral spreading is defined as the finite lateral displacement of gently sloping ground as a result of pore pressure build-up or liquefaction in a shallow underlying deposit during an earthquake. Factors known to contribute to lateral spreading include gentle surface slope, free-face conditions, shallow water table, and liquefiable cohesionless soils under a major seismic event. Lateral spreading is typically confined to the displacement of large, surficial blocks of soil in the downslope direction as a result of liquefaction in a subsurface layer.

Commonly associated with lateral spreading are slumping of embankments overlying liquefiable soils, resulting in settlements, lateral displacements, and surface cracks or scarps oriented near parallel to the top of slope. Although these slumps are the result of soil liquefaction, the slope failure can better be characterized as a rotational slide or slump. On flat terrain, lateral spread is limited by lack of topographic differential. During very high ground motion events, lateral spread may occur locally and in conjunction with other more widespread liquefaction mechanisms, and is likely to focus on weak susceptible ground adjacent to channels, excavations, and other locations with topographic discontinuities.

Given the character of the area surrounding the site, and considering the ground improvements afforded by remedial grading that will be associated with the proposed development, and based on performance in prior significant earthquakes, heavy lateral spread is considered a low risk, ground cracking and displacements and localized spread, particularly adjacent to channels, etc. is considered a moderate risk. This risk is improved by ground treatment and dewatering, as well as providing a capping of engineered fill.

Tsunami

Tsunamis are long-period ocean waves generated by the displacement of ocean water resulting from submarine landslides and/or fault rupture during large earthquakes. Coastal inundation / flooding as a result of tsunami can be caused by local and/or distant sources distributed throughout the Pacific Ocean. Tsunamigenic sources include local seismic sources like the Catalina Fault, Newport-Inglewood Fault and submarine landslides associated with the Palos

Verdes Peninsula. More distant sources include subduction-related faulting around the Pacific Rim near Alaska and Chile.

Topographic and regional maps indicate that the subject site is more than 6 miles inland from the coast / Pacific Ocean. The site sits at an elevation of approximately 37± feet above sea level and is not located in an area of known tsunami hazards according to Reference No. 8. Based on the above, risk of tsunami from the known sources described above is considered low.

Seiche

Seiche is defined as a standing wave oscillation effect generated in a closed or semi-closed body of water caused by wind, tidal current, and earthquake. Seiche potential is highest in large, deep, steep-sided reservoirs or water bodies (OFR 79-8). The nearest such bodies are the ponds located at the Los Alamitos racetrack, located 0.6 miles from the site, the El Dorado Park lakes, which are located approximately 3 miles from the site, and Carbon Creek, Coyote Creek, and San Gabriel River located as near as 0.7 miles from the site. Considering the relative distances and the various topographic obstructions, the potential for Seiche effects to the project site due to off-site reservoirs, etc., is considered nil.

It is important to note that in our experience, moderate to high ground motion occurrences can cause seiche effects in pools, spas, and ponds. If pools or other water features are planned near the residence or on the property, consideration for Seiche effects should be accounted for – as nuisance sloshing as a result of earthquake forces may cause localized flooding and related damage in their immediate vicinity.

CONCLUSIONS AND RECOMMENDATIONS

From an engineering geologic standpoint, it is our opinion that the proposed development is feasible, provided that the recommendations provided herein and the City of Cypress grading requirements are incorporated in the design and implemented during construction.

Presented below are general guidelines and preliminary recommendations for incorporation into the project design and construction based on our findings, analyses, reviews and overall experience with similar conditions. These include grading / in-situ ground improvement, structure foundations, seismic design, structure setbacks, exterior flatwork, moisture / vapor retarder system for structures, soil expansion, corrosion considerations, retaining walls, asphaltic concrete pavements, storm water infiltration, utility trench backfills, site drainage, landscape irrigation and maintenance, and plan reviews, observations and testing.

Geotechnical Considerations

The major geotechnical factors that should be considered during project design include the following:

- Soil disturbance resulting from the demolition and removal of existing structures, ancillary elements, and underground utilities;
- Presence of existing fill soils to general depths of about 5 feet, locally more;

- Shallow groundwater levels at depths ranging from approximately 6 to 9 feet below existing site grades, with zones of overlying wetness that may be present;
- Static settlement due to foundation / improvement loading and dynamic settlement resulting from earthquake-induced liquefaction and shallow dry sand settlement;
- Constraints to remedial grading due to shallow groundwater levels;
- High ground accelerations / seismic shaking may be experienced at the site during its design life – therefore, the proposed structures should be designed and constructed to the prevailing standards and seismic design requirements;
- Soil exposure issues related to control of external influences on the structure – including water / moisture / vapor, vegetation (landscaping), soil chemistry (i.e. sulfate / pH issues), exposure to rain and weather.
- Typical measures to mitigate the potential adverse effects due to site liquefaction include the following, in order of decreasing effectiveness:
    - Improvement of liquefiable soils (e.g. dynamic compaction, compaction grouting, removal and replacement with approved compacted fill) would minimize the potential for dynamic settlement of the underlying soils and associated adverse effects to structures.
    - Structures supported on deep foundations (e.g. pile/grade beam system with structurally supported floor slab) would help mitigate temporary loss of foundation support due to liquefaction of the underlying site soils, although there may be some temporary loss of lateral support.
    - Structures supported on mat foundations may suffer distress in the form of differential movement due to temporary loss of foundation support during a major seismic event. However, it may be feasible to re-level mat supported structures utilizing compaction grouting / mud jacking procedures. Mat foundations typically outperform conventional footings in reducing the adverse effects associated with dynamic differential settlement.
    - Structures supported on strengthened conventional foundations (i.e., continuous and spread footings) incorporating some foundation redundancy would provide some measure of mitigation against the adverse effects due to site liquefaction. However, the structure may experience extensive distress.

Considering the type of development (i.e., warehouse / distribution center comprised of concrete tilt-up construction), shallow groundwater levels and associated constraints to remedial grading to mitigate static / dynamic structure settlements, structure sensitivity to differential settlements, and overall site area, recommendations for ground improvement to mitigate potential adverse effects due to soil liquefaction are provided herein. The in-situ ground improvement considerations recommended herein will provide some measure of mitigation and should provide

suitable levels of protection with regard to bearing failure, settlements, and limit lateral displacements, but will not eliminate the potential adverse effects to structures associated with soil liquefaction / dynamic settlement.

The following recommendations are specific to the currently proposed construction. Any deviation from the assumed loads and proposed construction is subject to review by the Project Geotechnical Engineer.

Ground Improvement Considerations

General Discussion

Considerations were given to in-situ ground improvement to mitigate potential site soil liquefaction to provide acceptable support of the planned structures, with limited remedial grading operations considered to provide support for planned pavement construction.

Preliminary assessment for in-situ ground improvement options were performed by Advanced Geosolutions, Inc. – design-build geotechnical contractor, utilizing the field findings available in the referenced Southern California Geotechnical reports and those findings obtained during our geotechnical exploration phase. Based on their assessment, viable ground improvement systems for the subject building include vibro-stone columns or deep soil mixing.

Ground improvement systems are installed under design-build contracts by specialty contractors. The required size, spacing, length, and strength of the ground improvement elements should be determined by the specialty contractor based on the proposed structural loads and desired level of improvement. Prior to submittal, our office will review the geotechnical aspects of the ground improvement program for concurrence with our findings and recommendations and provide comments / revisions as appropriate. The capacities of the ground improvement elements should be determined by the design-build contractor that installs the system; however, for planning purpose, it may be assumed that both ground improvement alternatives will extend to a depth ranging from 20 to 30 feet contingent upon desired structural performance. Based on the chosen ground improvement technique, the upper 12 to 18 inches or more of the working pad may need to be re-compacted after ground improvement installation, due to surface disturbance and potential ground heave. For this reason, we do not recommend preparation of the final pad or the construction of utilities prior to ground improvement.

Preliminary discussions of the two alternate approaches are presented in the following sections.

Stone Column

Stone columns would provide reinforcement within and to the surrounding soil via densification thereby increasing soil shear strengths and associated increased bearing capacities, decrease seismic deformations and associated structure settlements, resulting in reduced foundation costs. The construction process consists of utilizing pre-augered methods. The augered cavities are backfilled with aggregate that is compacted in place using static crowd pressure augmented with a high frequency, low amplitude, vibratory hammer. The impact hammer densifies aggregate vertically while the tamper foot forces aggregate laterally into cavity sidewalls resulting in stiff

stone column elements and stiffened matrix soil.

Stone columns can be installed at generally uniform spacings across the building footprint and to a lateral distance on the order of 15 feet beyond the structure footprints with a total coverage area of approximately 10 to 12 percent. Following installation, the planned structures may be supported by shallow conventional foundations with concrete floor slab.

Alternately, stone columns can be strategically placed at concentrated foundation load conditions, footing locations with input from the project Structural Engineer. For this alternative, conventional footings with structural floor slab would be used.

When considering stone columns, crushed/ processed concrete from demolition operations can be incorporated into the stone mix if the material meets certain criteria, and soil spoil materials generated from the drilling operations can be reused on-site to achieve planned grades and/ or dock height fill placements.

Deep Soil Mixing

Deep soil mixing (DSM) is a ground improvement technique through blending of hardening agent (usually cement grout) with the native soils. The process improves the strength and stiffness of the soil to increase bearing capacity, decrease settlement, and mitigate seismic issues. A revolving hollow shaft with mixing paddles and/or a section of auger (mixing tool) is advanced into the soil. As the mixing tool is advanced into the soil by a combination of rotation and crowd force, a grout slurry (comprised of cement and water) is injected through the hollow-stem and blended with the soil mix, creating a series of soilcrete columns. DSMs can also be amended to provide uplift capacity by introduction of tie-down rebar.

The DSM columns are typically separated from the bottom of the foundation using a minimum 6-inch layer of crushed rock or other similar “cushion material”. No direct structural connection between the DSM columns and the overlying structural element is allowed. Lateral resistance is provided by footing bottom friction at the “cushion” layer interface or passive resistance of the side walls. The target strengths of the DSM soils are usually between 100 to 300 psi at 28 days, depending on load demands. The strength is tested using ASTM D2166 “Standard Test Method for Unconfined Compressive Strength of Cohesive Soils”.

When considering deep soil mixing ground improvement, conventional footings with structural floor slab would be used. Excess soil spoil materials generated can be reused on-site to achieve planned grades and/ or dock height fill placements.

Grading / In-situ Ground Improvements

General

Presented below are recommendations to address site clearing/ preparation and remedial grading associated with the pavement/ ancillary construction and completion of structure pads. The actual design and magnitude of remedial grading and ground improvement will be refined and presented under separate reporting.

Site Clearing and Preparation

- Site preparation and grading should be made under the observation of the Project Geotechnical Engineer or Geologist, Project Engineering Geologist, and/or their field representative.
- Proper measures should be implemented during the performance of grading work to protect the work site, particularly excavated areas, from flooding, ponding and inundation due to poor or improper temporary surface drainage. During periods of impending inclement weather, temporary provisions should be made to adequately direct surface drainage, from all sources, away from and off the work site and to provide adequate pumps and sumps to handle any flow into the excavations.
- Prior to the start of the required earthwork and grading, all vegetation, surface trash, debris, and other deleterious materials should be removed from areas of planned grading and wasted away from the site. Vegetation removal should include root-balls and attendant root systems.
- Removal of existing structures should include foundations, concrete flatwork, and any remaining buried obstructions. Concrete fragments and construction debris from site demolition operations should be disposed of off-site.
- Any pipelines or conduits encountered within the zone of planned grading that are designated for abandonment should be removed from the construction area and ends cut and plugged according to the applicable Code requirements but not less than 10 feet outside the perimeter of the proposed construction area, or as property line considerations dictate. Non-reinforced concrete or clay pipes may be crushed in-place and incorporated in the fill.

Local ordinances relative to abandonment of underground utilities, if more restrictive, will supersede the above minimum requirements.

Remedial Earthwork

The following remedial grading recommendations were developed with consideration for ground improvement (Stone column or Deep Soil Improvement) to provide acceptable processing of the interface between the treatment zone and the overlying building envelop and support for the proposed structures within the development.

1. For planned building pad areas receiving new fill soils to achieve planned grades where the underlying soils were treated as described herein, remedial grading should consist, as a minimum, of an 8-inch scarification of the exposed soils and recompaction to at least 90 percent relative compaction at 2 to 3 percentage points wet of optimum moisture conditions (ASTM: D1557). Should unstable bottom conditions be experienced, additional site overexcavation and recompaction and/or bottom stabilization methods may be warranted and should be performed in accordance with our field recommendations based on the actual conditions encountered at the time of grading.

2. For planned building pad locations in areas of planned grade cuts, remedial grading should be performed, as necessary, to provide a working platform for stone column installation and deep soil mixing. During aggregate pier installation, it is anticipated that the upper approximately 12 to 18 inches of pad grade soils will become disturbed. Disturbed materials extending below proposed subgrade elevations will need to be reworked as engineered compacted fill. Additional remedial grading efforts should be performed, as necessary, based on the actual conditions exposed at the time of remedial grading efforts and to the satisfaction of the ground improvement specialist.
3. In areas extending beyond the zone of in-situ ground improvement, the existing site soils should be over-excavated to a 5 feet (minimum) depth below planned finish or existing site grades, whichever depth is greater. For ancillary foundation support, additional over-excavation should be performed, as necessary, to provide minimum of 3 feet of engineered compacted fill beneath footings, and to a lateral distance of 3 feet beyond footing edges.
4. Should undocumented fill soils outside the limits of the recommended ground improvement be exposed at depths greater than 5 feet the condition of the fills exposed should be evaluated in order to enable our office to provide additional recommendations, as appropriate.
5. As discussed in the Groundwater section of this report, the site is underlain by relatively shallow groundwater. A dewatering plan should be considered to mitigate this in construction. Even with an appropriate dewatering program, some excavation areas may experience wetness and or soft ground that may require supplemental means and methods to address, including local sumping and pumping, rock / lime / cent treatment, and top-loading.
6. Note that the groundwater at the site has likely been influenced by long-term regional drought and may be affected as a result. The effect would be expected as a sympathetic lowering. Therefore the water level may be higher in response to wet weather periods.
7. Dewatering, as may be required, should be performed in advance of the planned work, it may take considerable time to lower groundwater significantly. Note that once the ground in an excavation bottom is damaged by pumping and or turning quick, it can be difficult to regain control.
8. Dewatering may assist in ground improvement. It may be possible to integrate the dewatering with other ground improvement work planned for the site.
9. A study based dewatering program is recommended. Dewatering and disposal of developed water will likely require a permit from the State Regional Water Quality Control Board, and possibly other jurisdictions.
10. The shallow groundwater may adversely influence infiltration and other stormwater management options. An evaluation of storm drainage management and infiltration should be considered.

Excavation Procedures

Temporary excavations performed 4 feet or deeper in vertical should be shored or sloped in accordance with Cal OSHA requirements. Special construction techniques, such as slot cutting, may be utilized if excavations are greater than 4 feet vertical and site constraints preclude use of temporary slope cuts.

Excavations located along property lines and adjacent to existing structures (i.e. buildings, walls, fences, etc.) should not be permitted within two (2) feet from the existing foundations. Temporary slopes, if utilized, should be no steeper than 1.5:1 (horizontal: vertical) gradient with maximum height of slope not exceeding 20 feet. A representative of this firm should be present on-site during excavations to verify acceptability of temporary slopes. Acceptability will be dependent upon the soil conditions encountered, construction procedures and schedule.

Excavation slopes and cuts daylighting seepage, or seepage occurring at or near the base of these excavations may develop instability, raveling and piping. These should be addressed in the field by the geotechnical consultant on an actual conditions case-by-case basis.

It is imperative that grading schedules be coordinated to minimize the exposure time of these unsupported excavations. Once started, these excavations and subsequent fill operations should be maintained to completion without intervening delays imposed by avoidable circumstances. In cases where five-day workweeks comprise a normal schedule, grading should be planned to avoid exposing a grade or near-grade excavation through a non-work weekend. Where improvements may be affected by temporary instability, either on / or offsite, further restrictions such as slot cutting, extending workday-weekend schedules, and/or other requirements considered critical to serving specific circumstances may be imposed. Removal of unsuitable materials also may be affected by the above requirements.

Excavation Bottom Preparation

The acceptability of excavation bottoms should be evaluated by the Project Geotechnical Consultant prior to placing approved fill soils. Excavation bottoms should be thoroughly moisture conditioned, as necessary, to 2-3 percentage points above optimum moisture content depending on the soil type exposed, scarified to a depth of about 8 inches and compacted to minimum 90 percent of the laboratory maximum dry density (ASTM: D 1557). Should severe pumping and heaving conditions be experienced during excavation bottom preparation, it may be necessary to stabilize the bottom with a one to two feet layer of aggregate base material placed in a single lift rolled lightly with static equipment to achieve a firm and unyielding condition. The method of stabilization would be determined by a representative of our office at the time of grading and would be dependent upon the actual conditions encountered, equipment used, etc.

Fill Placement and Compaction

Fill materials should be placed in loose lifts not exceeding thickness that can be adequately and thoroughly processed and compacted by the equipment and methods utilized. These materials should be processed by blending and moisture conditioning to 2-3 percentage points above optimum moisture content, depending on the soil type, and compacted to at least 90 percent

relative compaction based on the laboratory maximum dry density assigned – to the satisfaction of the Project Geotechnical Consultant. All grading should be performed under the observation and testing of the Project Geotechnical Consultant or his representative.

Fill Materials

Fill materials should consist of clean onsite soil and imported soils and should be free of vegetation, reinforcing steel, hazardous materials, rocks greater than 6 inches in maximum dimension, and any other organic or deleterious materials.

It may be feasible to incorporate inert construction debris (concrete, brick, and asphalt) in the fill materials. The acceptability of this material for incorporation into the fill, and in particular when placed beneath the structure footprints, will be subject to the review and approval by the project environmental consultant. In general, said construction debris should be processed to 1.5" maximum sizes, and be blended with sufficient granular soils to infill void space, with resulting soil blend exhibiting less than 30 percent retained on the 3/4" sieve size. Crushed material blends should be reviewed by our office for acceptability prior to use as engineered fill.

Import soils, if required, should exhibit engineering properties similar to or better than the on-site material. The import soils should be approved by a representative of this firm, at the borrow site, at least 48 hours prior to importing.

Shrinkage and Subsidence

Based on the available field and laboratory test data obtained by the previous consultants and during the course of this geotechnical investigation, soil shrinkage factors within the upper 5 to 6 feet of existing grade are anticipated to generally vary from about 5 to 20 percent, when recompacted as structural fill. This range in soil shrinkage values most likely reflects variation in soil types relative to available maximum density test results, non-uniform fill soil conditions, and other factors. A shrinkage factor range of between 10 to 15 percent, with consideration for the upper bound limits of this range may be assumed for preliminary design purposes. Losses due to stripping of vegetation, demolition, unsuitable soil disposals, subsidence, etc. should also be accounted for in volume estimates.

Ground subsidence due to the removal / replacement of the site soils as recommended above is expected to be variable and would occur as a result of soil consolidation of the underlying natural soils due to increased loading from additional fill placements to achieve planned finish grades, as well as increased loading from excavated / recompacted soil materials. Some ground subsidence should be anticipated in areas to receive additional fills, and settlement monuments may be considered in those areas receiving new fills greater than about 4 feet above current site grades outside the limits of in-situ ground improvement.

Testing and Observations

Site preparation, grading, compaction, and backfill operations should be performed under the observation and testing of the Project Geotechnical Consultant or his representative. An adequate number of field tests should be performed to verify compliance with recommendations presented

in this report and local ordinances.

If it is determined during grading that site soils require over-excavation to greater depths for proper structural support, this additional work should be performed in accordance with the recommendations of the Project Geotechnical Consultant.

Fill materials should be compacted to the minimum 90 percent relative compaction based on the assigned laboratory maximum density determined in accordance with ASTM: D 1557. Road subbase and basecourse may require 95% relative compaction.

Foundations

Presented in the following are geotechnical criteria for design and construction of shallow conventional footings as well as concrete slab criteria for the proposed structures. Foundation design should consider anticipated post-construction settlements under both static loads and short-term seismic conditions, as appropriate.

Structure Foundations

Presented in the following are preliminary geotechnical criteria for design and construction of shallow continuous and spread footings for the support of structures with consideration for in-situ ground improvement support.

Allowable Bearing Pressure (1)	=	2,500 psf
Minimum Footing Depth (2)	=	24 inches
Minimum Footing Width	=	Per 2019 CBC
Passive Soil Pressure (3)	=	250 psf/ft., subject to 2,500 psf maximum
Friction Coefficient	=	0.4 (ultimate)
Minimum Footing reinforcement	=	For continuous footing, min. four No. 4 bars, two at top and two at bottom.

(1) The above value may be increased 250 lbs./sq.ft. for each additional foot exceeding the minimum embedment depth, subject to a maximum of 3,500 psf. Allowable bearing pressures may be increased one-third for short term loading due to wind of seismic forces.

(2) Footing depth is below lowest adjacent soil grade. Footings should be deepened, as necessary, to depths equivalent to existing adjacent foundations, where applicable.

(3) Passive soil pressure value is for level soil conditions adjacent to footings.

Ancillary Construction

For ancillary construction located outside the limits of proposed in-situ ground improvement, the following design criteria may be used:

Allowable Bearing Pressure (1)	=	1,500 psf

Minimum Footing Depth (2)	=	18 inches
Minimum Footing Width	=	Per 2019 CBC
Passive Soil Pressure (3)	=	200 psf/ft., subject to a maximum of 2,000 psf
Friction Coefficient	=	0.40 (ultimate)
Minimum Footing Reinforcement	=	For continuous footings, min. four No. 4 bars, two at top and two at bottom.

(1) Allowable bearing pressures may be increased by one-third for short term loading due to wind or seismic forces.

(2) Footing depth is below lowest adjacent soil grade and founded on engineered compacted fill.

(3) Passive soil pressure value is for level soil conditions adjacent to footings.

General Foundation Construction Comments / Guidelines

General remarks regarding the construction of conventional footings are presented below:

Footing embedment depths should be maintained throughout the life of the structure, and not compromised via erosion softening, digging, landscaping, etc.

Where foundations encroach closer than five (5) feet horizontally from the flow line of drainage swales, the footings edges should be deepened sufficiently to maintain the required embedment depth below the adjacent flow line.

Foundation details such as concrete strength, reinforcements, thickness, etc. should be established by the Project Structural Engineer, considering the loading conditions. The recommended foundation embedment, thickness and reinforcements are minimum requirements and should be established by the Project Structural Engineer. More restrictive criteria based on structural design considerations or Code requirements shall govern.

Foundation excavations should be observed and approved by the Project Geotechnical Engineer prior to the placement of reinforcement or concrete. Forming of footing excavations may be required. Excavations should be free of slough and debris and thoroughly moisture conditioned prior to placing concrete.

Excavated material from footing and utility trenches should not be placed in slab-on-grade areas unless properly compacted and tested.

Footings should be doweled to the floor slab with No. 4 bars at 18 inches on center.

Floor slabs should be underlain by a moisture vapor retarder, as recommended hereinafter, to mitigate moisture / water vapor intrusion into the structure.

Foundation details such as concrete strength, reinforcements, etc. should be established by the Project Structural Engineer. More restrictive criteria based on structural design considerations or

Code requirements shall govern.

Concrete Floor Slab-on-Grade

Presented below are preliminary geotechnical criteria which may be used for concrete floor slabs on grade.

Concrete Slab Thickness = 7 inches or per structural design

Minimum Reinforcement = Per Structural Engineer

In order to minimize migration of moisture through the concrete slab from soil sub-grade and damage to floor coverings, a moisture / water vapor retarder system should be placed beneath floor slabs in areas to be tiled, carpeted, or otherwise considered moisture sensitive. Recommendations relating to the placement and location of this moisture vapor / retarder are provided in the “Moisture / Water Vapor Retarder for Concrete Slab-on-Grade” section. The use of a hydrophobic additive, such as Xypex or Hycrete, in the concrete should be considered, given the shallow groundwater conditions.

The prepared soil sub-grade should be moisture conditioned to and maintained at about 1 to 3 percentage points wet of optimum moisture contents to a depth of 12 inches and exhibit at least 95 percent relative compaction as determined by ASTM: D1557.

Interior floor slabs should be properly designed for the construction and service loading conditions, and potential differential movements. The structural details, such as slab thickness, concrete strength, reinforcing criteria, joint spacing, etc. should be established by the Project Civil / Structural Engineer.

To minimize slab curling, a low shrinkage / low slump concrete (concrete mix with a minimum 4,500 psi compressive strength and maximum water cement ratio of 0.45) should be used for the slab construction, as determined by the Project Structural Engineer. The mix design should be verified by the Project Civil / Structural Engineer, and placement of concrete should be observed and certified by the Concrete Deputy Inspector, as required.

Settlements

Some structure movement should be expected both during and following construction, even when supported on a zone of in-situ ground improvement, due to various factors including, but not limited to:

- Surcharge loading due to dock height fill construction;
- Sequence of foundation and slab loading during construction;
- Variation in structural loads along foundation elements;
- Variation in underlying soil types with different compressibility indices and subsurface soil profile and associated primary and long-term secondary consolidation settlements; and
- Potential dynamic settlement under a major seismic event

Total static settlements for foundations would be dependent upon the actual structural loading conditions and configuration, remedial grading performed, final grades, and final design / specifications and installation of the ground improvement program. For appropriately designed and constructed structure foundations and supporting loads typical for the concrete tilt-up construction (column and wall loads on the order of 125 kips and 5 kips/lineal foot, respectively), static settlement estimates following in-situ ground improvement are estimated to be on the order of 1-inch total. Differential settlements under static conditions are not expected to exceed ½-inch over a distance of approximately 50 feet and between similarly loaded adjacent foundations.

Under exposure to short term seismic loading during a major seismic event, the site is prone to additional settlements due to soil liquefaction. Liquefaction settlements under seismic conditions are anticipated to vary with the variance in the underlying site soil conditions. For preliminary design purposes and when considering in-situ ground improvement, average dynamic settlements on the order of 1-inch total may be considered and are expected to occur over a large area. Generally, the differential settlements at level sites are expected to be small even if the total settlements are large, and for preliminary design purposes are estimated to be on the order of ½ inch over a distance of approximately 50 feet. Potential dynamic settlements under a major seismic event should be further evaluated/ substantiated by our office and the ground improvement specialist based on review of the ground improvement program selected.

Total and differential settlement potentials for ancillary construction outside the limits of in-situ ground improvement would be dependent upon foundation loads, location relative to planned grade cuts and fill placements, etc. For preliminary design purposes, total and differential static settlements on the order of 1 inch and ¾ inch over a distance of approximately 30 feet may be considered for lightly loaded ancillary footings supported on engineered compacted fill as recommended in the Grading section. Under seismic load conditions, additional potential total and differential settlements could be on the order 2-1/2-inches and 1-1/2 inches over a distance of 50 feet respectively

The above estimated potential settlements should be substantiated by our office and the ground improvement specialist based on review of final foundation plans and proposed ground improvement measures and limits.

Additional Considerations Regarding Settlement and Improvements:

1. General fill equilibrium will develop with time but is most affected by changes in soil moisture;
2. Sequence of foundation and slab loading and variation in structural loads along foundation elements during construction can impact differential movements;
3. Variation in underlying soil types with different compressibility indices, subsurface soil profiles, and subsurface drainage systems and conditions will affect primary and long-term secondary consolidation settlements;
4. Moisture changes due to climatic and non-climatic influences following construction, and associated shrink / swell of expansive soils;

5. Soil shrinkage and expansive behavior will be separate and is considered independent of settlement as a result of fill placement and associated loading from water and structures;
6. Soil shrinkage and expansion effects that are not reconciled in the design and construction will have a direct impact to top of slope improvements and associated lateral deformation;
7. Adequate and properly designed and functioning area drainage systems combined with the proper landscape design and watering programs would significantly help reduce the potential for expansion and shrinkage and long-term slope deformation; and

It should be noted that moderate slab on grade cracking may be observed within the first week after construction that are not related to soil movement. These are related to water cement ratios exceeding specifications and inappropriate finishing techniques.

Seismic Design Considerations

The site is in a zone of high seismic activity / exposure. Strong ground motion from an earthquake generated along active faults should therefore be anticipated at this site. Based on the presence of liquefiable soils to depths down of 50 feet below the site, the site qualifies as Site Class F and the proposed development should be designed and constructed to the prevailing standards regarding seismic design. Seismic design parameters based on standard procedures for Default Site Class D (ASCE 7-16) are included in Appendix H and should be reviewed for acceptability by the Project Structural Engineer based on current and applicable CBC requirements, as appropriate.

Moisture / Water Vapor Retarder for Concrete Slab-on-Grade

It should be recognized that, even with site surface and sub-drainage measures, there is potential for saturation of ground beneath concrete floor slabs due to water infiltration from irrigation, rain, and run-off or flow through the soil subgrade. The upward migration of moisture in vapor phase from soil subgrade through the slab-on-grade is inevitable. It is imperative that the Contractor properly install the recommended site drainage measures, utility trench backfill, and the moisture / water vapor retarder system in accordance with the project design requirements and specifications to mitigate potential moisture / water vapor transmission into the structures.

On this project, the presence of relatively shallow groundwater is expected to exacerbate moisture-vapor intrusion issues.

In order to reduce the potential for moisture / water vapor migration up through the slab in moisture sensitive areas, and possibly affecting floor covering, wood cabinets and other objects, a moisture / vapor retarder is recommended under concrete slab-on-grade in these areas. The recommendations provided below are based on the guidelines of the American Concrete Institute:

The moisture / water vapor retarder should consist of high strength membrane and should meet or exceed the ASTM: E-1745-97 Class A material requirements for water vapor permeance, tensile strength, and puncture resistance. The vapor retarder should consist of “Stego Wrap” (Stego Industries, LLC) or “Vapor Block” VB 15 (Americover, Inc.), or approved equal.

The installation of the moisture / water vapor retarder system requires specialized knowledge and experience and should be accomplished with the technical assistance and supervision of retarder system manufacturer and/or supplier. The membrane should be properly lapped and sealed. Membranes intersecting utility pipes, sewer lines, ducts or drains must be properly wrapped around the penetrations and sealed. All punctures and rips in the membrane should be repaired prior to placement of concrete, following manufacturer's recommendations.

The vapor retarder should be installed in general accordance with the procedures outlined in ASTM: E-1643, and in conformance with the installation procedures recommended by the manufacturer.

In addition, floor coverings (e.g., wood, tile, etc.) and other built-in features should be carefully selected with vapor transmission in mind and include proper preparation and installation in accordance with the manufacturer's recommendations.

Moisture-vapor intrusion may be further reduced at the slab level by use of consistent and low water cement ratios (ie. do not allow addition of water to concrete during the pour operations), proper finishing and curing (moist or wet cure for the first several days will reduce permittivity) and consider use of a hydrophobic additive such as Xypex or Hycrete that heal microcracks and seams and improve overall water resistance.

It should be emphasized that, even with proper moisture / water vapor installation, proper control of irrigation and landscape water adjacent to the structure is very important to minimize problems caused by moisture and water vapor intrusion and is the responsibility of the Property Manager / Owner, including the maintaining of proper site drainage as recommended hereinafter.

Planters and similar open to the ground adjacent to building areas is an invitation to moisture and other problems. These should be avoided. Concrete / paved surfaces should have clear positive drainage away from the building to an approved disposal / drain. Roof drains should include hard conveyance away from the proximity of the building.

Soil Expansion

The near surface site soils consist predominantly of sandy soils, and these soils are expected to exhibit very low soil to low expansion. During site grading, the soil expansion potential of the exposed soil blend should be verified by additional laboratory testing.

Soil Corrosion and Concrete Design

Based on the laboratory test results presented in Appendix C, sulfate exposure for concrete ranges from S0 to S1. It has been our experience that post-construction factors such as near surface soil wetting and drying cycles, and other changes with time can increase the concentrations of soluble sulfate and other derogatory salts and these conditions predispose them to being highly corrosive to both concrete and buried metals. Higher strength concrete with lower water / cement ratio will improve overall slab performance, durability, and water and corrosivity resistance.

In an abundance of caution and to account for potential future conditions, we recommend

concrete in contact with soils be designed for a minimum compressive strength of 4,500 psi and maximum w:c = 0.45.

Laboratory tests to evaluate the potential soil corrosivity to metallic installations were performed as part of the Feasibility Study by SCG (Reference No. 2). Based on these preliminary results, the soils along with any transient waters flowing through them should be considered to be highly corrosive to metals in contact with them. Attention to minimizing galvanic / chemical corrosivity (i.e., protective coatings, dielectric couplings, eliminating mixing metal types in contact or in near vicinity to each other) where in contact with soil and soil moisture can minimize these effects. An experienced corrosion consultant should be retained and their recommendations incorporated into the design if special / critical corrosive issues exist or further corrosion potential study is warranted.

Retaining Walls

Lateral Earth Pressures

The earth pressure acting on retaining walls depends primarily on the allowable wall movement, type of backfill materials, backfill slopes, wall inclination, surcharges, and hydrostatic pressure.

The following lateral earth pressures are recommended for the design of vertical cantilevered retaining walls (active case) and restrained walls (at-rest case) with no hydrostatic pressure, level backfill conditions, and no surcharge loading.

Wall Condition	Backfill Type	Equivalent Fluid Pressure
Active (Cantilever)	Sandy soils	40 pcf
At Rest (Restrained)	Sandy soils	60 pcf-

These values are applicable for compacted sand backfill placed between the wall stem and an imaginary plane at 45 degrees from the edge of wall footing.

For design purposes, walls supporting dock height fill construction should be based on at-rest earth pressures. The surcharge effect of anticipated loads on the wall backfill (e.g. traffic, construction equipment, footings, etc.) should be included in the wall design. For walls free to deflect or restrained, 33 or 50 percent, respectively, of the maximum surcharge load located within a distance equal to the height of the wall

Backfill

Retaining wall backfill should consist of select backfill comprised of free-draining granular soils exhibiting an expansion index (EI) of 30 or less. The backfill should extend within a 45-degree plane from the wall footing.

Retaining wall backfill should be mechanically compacted to minimum 90 percent of the applicable laboratory maximum density (ASTM: D1557) and performed under the observation and testing of the Project Geotechnical Consultant.

No jetting, ponding, or flooding should be permitted. No backfill should be placed against concrete

until minimum design strengths as determined by compression tests of cylinders are attained.

Retaining Wall Backdrainage

As a minimum, subdrainage system for retaining walls (excluding walls supporting dock height fill construction) should be included as part of retaining wall construction. Sub-drains should consist of 4-inch diameter, perforated Schedule 40, PVC pipe or equivalent, embedded in approximately 3 cubic feet per lineal foot of clean, ¾-inch crushed aggregate, or approved alternate. This permeable material should be enveloped in geofabric consisting of Mirafi 140 or equivalent. The pipe and trench bottom should be sloped at a gradient of 2± percent to a suitable discharge outlet. Sub drains placed behind retaining walls should be approved by the Project Geotechnical Consultant prior to backfill placement.

Should seepage be experienced through retaining walls from nuisance water (e.g., irrigation, precipitation), staining and mineral development may result and necessitate periodic maintenance / cleaning. Note that efflorescence should not be confused with permeating water effects; some efflorescence is to be expected and is considered normal.

Concrete Flatwork

Exterior Flatwork

The concrete slab design and construction details should be established by the Project Design Engineer. From a geotechnical standpoint, the minimum criteria for exterior flatwork should consider low soil expansion potential and should be in accordance with the requirements of the project structural engineer and specialty contractor / consultant. Exterior hardscape / pavement construction in areas to receive substantial new fills to achieve planned grade elevations are expected to exhibit post construction total and differential movement due to surcharge fill loading on the underlying native soils and this may occur over several months or more. Depending on the magnitude / severity of post construction movement, it may be necessary to perform periodic repairs and/or relevelling / replacement of affected hardscape. Sidewalks and walkways should be 4 inches thick (minimum) and may be placed directly on the approved compacted subgrade. To control cracking, the slab should include joints at approximately 10 feet spacing (maximum). The slab design and construction details should be established by the Project Design Engineer.

Slab Sub-Grade Pre-Saturation

Prior to concrete placement, the prepared soil sub-grade should be moisture conditioned to and maintained at about 1 to 3 percentage points wet of optimum moisture contents to a depth of 12 inches and exhibit at least 90 percent relative compaction as determined by ASTM: D1557.

Asphalt Concrete Pavement Design

For preliminary design purposes, the following asphalt concrete pavement sections are recommended for the automobile parking lot and access drive areas. These sections were computed using Caltrans Highway Design Manual method, based on the assumed Traffic Indices shown below and an assumed R-Value of 20 for the resulting blend of site soils compacted as sub-grade.

Pavement Utilization	Traffic Index	Asphaltic Concrete (in.)	Aggregate Base (in.)
Parking Areas	5.0	4”	6”
Access Drives	8.0	6”	12”

The applicability of assumed traffic indices should be verified by the Project Civil Engineer. Aggregate base should consist of crushed base (CAB or CMB) as specified in the Standard Specifications for Public Works Construction (Green Book) and be compacted to 95 percent of the maximum laboratory density determined in accordance with ASTM: D1557.

The soil sub-grade to a depth of 5 feet should be compacted to minimum 90 percent relative compaction in accordance with the recommendations under “Site Grading”. The surface of the subgrade soil supporting basecourse should be compacted to at least 95% relative compaction and exhibit a firm and unyielding surface immediately prior to placement of base material, in addition to the recommended minimum compaction. Final compaction and testing of pavement sub-grade should be performed just prior to placement of aggregate base, so that the subgrade does not deteriorate for whatever reason in the interim..

The pavement sections shown above should be considered tentative and should be verified by R-value testing of sub-grade soils at the completion of grading. Further analysis and evaluation are necessary, if the design traffic index and the sub-grade R-value are different from those used in our analyses.

Should pavement construction be performed in stages, with the initial course section to be followed by asphalt cap layer after completion of on-site construction, it should be noted that some repairs / replacement of pavement should be anticipated, particularly in areas of concentrated construction traffic and along junctions prone to water seepage to the underlying pavement subgrade soils (e.g., pavement edges adjacent to curb / gutter construction).

Concrete Pavement Design

Concrete pavement design was based on review / comparison of the following methodologies with consideration for assumed truck frequencies at the subject property.

For the PCA Simplified Design Procedure, the following parameters were considered: Axle Load Category of 2 assigned to collector streets, rural and secondary roads (relatively high axle loads for this category) and arterial streets and primary roads (relatively low axle loads for this category), respective maximum single and tandem axle load distributions of 26 kips and 44 kips, low subgrade soil support, pavements with doweled joints for load transfer, supported edges (curbs, gutters or widened lane), and a concrete Modulus of Rupture (MR) of 650 psi.

For the ACI Guideline Document - “Guide for the Design and Construction of Concrete Site Paving for Industrial and Trucking Facilities” (ACI330.2R-17), considerations were given to a Modulus of Subgrade Reaction of 150 pci, a concrete Modulus of Rupture (MR) of 650 psi, supported pavement edges, dowels in construction joints, and axle load distributions representative for major arterial over-the-road truck category.

For both methods, two-axle four tire trucks are excluded, and concrete pavement section considerations assume appropriate construction/ contraction joint spacings and joint sealing, and minimum design service period of 20 years.

Concrete Pavement Section

Based on the above considerations, the following concrete pavement sections are recommended:

Trucks Per Day (*)	Concrete Pavement Thickness (**)
50	6 inches
100	7 inches

(*) For axle load distributions representative for over-the-road truck category major arterial per day design lane.

(**) Minimum concrete compressive strength of 4,500 psi with maximum water cement ratio of 0.45 and Concrete Modulus of rupture of 650 psi.

The Project Civil / Structural Engineer should establish structural details of the pavement, such as concrete mix design, reinforcing, longitudinal and contraction joints, load transfer devices, etc. As a minimum the longitudinal and contraction joints should be based on PCA and ACI guidelines.

The above Portland Cement Concrete pavement sections are a minimum. More restrictive criteria based on civil / structural design and jurisdictional requirements shall govern.

Pavement Subgrade

The subgrade soils beyond the limits of in-situ ground improvment should be over-excavated to a depth of at least 5 feet and recompacted to minimum 90 percent relative compaction at approximately 1-3 percentage points above optimum moisture content (ASTM: D1557). The uppermost one foot of the pavement subgrade should be compacted to at least 95 percent relative compaction and exhibit firm and unyielding condition prior to placement of base material.

Subbase Considerations

The pavement subgrade soils are expected to be comprised of a blend of the near surface soils at the completion of remedial grading operations. The use of a subbase directly beneath concrete pavement construction can improve load transfer across the joints and mitigate potential for soil erosion and pumping along the joints where the soil subgrade blend may include more than 15 percent fines passing the No. 200 sieve size. Upon request, recommendations for incorporating a subbase layer beneath concrete pavement construction can be provided.

Joint Spacings and Dowels

Longitudinal and contraction joints should be based on ACI / PCA guidelines. Concrete pavement crack control joints should be spaced at a minimum of 10 feet (5 feet preferred, and not exceeding 14 feet) on center with dowels incorporated along contraction joints or other load transfer mechanisms, or as specified by the Project Civil / Structural Engineer and should include additional joints to facilitate irregular pavement boundary conditions. From a performance

standpoint, closer spacing and strategic location of control joints at returns, corners, and other areas that focus stress should be considered.

Where movement is expected in a construction or control joint, and both sides are restrained, a combination of waterstop (where transmission of water through the joint is to be avoided) and doweling may be used. Dowels installed across construction joints may consist of 1.5-inches diameter, epoxy-coated smooth dowels, 18 inches in length, placed mid-height of slab and so the dowel is centered across the joint, and spaced at 12 inches on center where joint is new to new.The dowel should be greased to limit bonding so slip may occur. In the case where movement is expected, but joining existing to new, the dowels should be placed similarly, but embedded and epoxied accordingly into the existing work, and the unbonded end that will extend into the new work greased with commercial waterproof grease.

Waterstops for control joints accommodating movement should preferably consist of the “hard” plastic type that have a crude dumbbell or similar shape and a center bulb that can accommodate the anticipated range of motion. The details of installation are highly dependent on the nature and expectations of the joint. We would be happy to provide additional input and recommendations to address particular conditions.

Where the control joint is to be restrained, such as in concrete pavement, doweling may consist of #5 or larger bar placed at slab mid height following the above criteria (18” overall dowel length, centered over joint, spaced 12” on center. Where joining new to new, the deformations of the rebar should provide adequate “bite;” where joining existing to new, the new rebar should be placed into an appropriately sized and cleaned out hole drilled into the existing work, and the dowel half embedded in the hole by epoxy.

Where control joints in concrete pavement occur where standing water or flowlines are associated (such as where pavement section joins a gutter, intake basin or similar), a waterstop incorporated into the joint should be considered to limit influx of waters into the subgrade. Consideration to thicken the edges of the slab on either side of the joint should be given where a higher degree of performance is expected.

Alternatively, the design may be per Civil / Structural Engineer design.

Factoring Site-Specific Considerations

Site specific factors such as expansive soils, variability, mediocre drainage, and related factors need to be considered. Should anticipated truck frequency and / or maximum truck axle loading conditions be different from the above assumed considerations, our office should be contacted for further evaluation and recommendations, as appropriate.

Curb / gutters should be monolithic to the extent feasible. Pavement edges in the proximity of open ground or similar may benefit from a thickened edge.

Special Note - Finishing and Curing of Concrete

Of critical importance to the long-term / lifelong behavior and performance of concrete is how it is place, finished, and preliminarily cured. Detailed studies by the Bureau of Reclamation have

shown that low water-to-cement ratio, high strength concrete – such as is recommended herein – has inherently much lower shrinkage and much higher water tightness than the mediocre concrete originally specified when properly placed and finished. For this reason, water should not be added to the mix for any reason. If a stiff mix is an issue – fluidizer and similar admixtures should be considered – to be based on join recommendations of the Project Geotechnical and Structural engineering consultants.

The Bureau's studies also showed that both early and overall strength is greatly improved and issues with cracking, crazing, and surface abrasion resistance are also improved where properly placed and finished concrete is allowed to wet or moist cure for at least 5 to 7 days. Crack control joints should be performed at the proper time and using proper methods / materials. These recommendations are considered paramount to long-term performance. Structural Review

The above recommended concrete pavement recommendations are a minimum. The structural design (e.g., concrete mix design, reinforcing, longitudinal and contraction joints, load transfer devices, etc.) by the project Civil / Structural Engineer, where more restrictive, shall govern.

Utility Trench Backfill

- Bedding material should consist of sandy material exhibiting a Sand Equivalent (S.E.) value of 30 or greater and should comply with the requirements of the controlling governing jurisdiction.
- The site soils are considered suitable for trench backfill, provided they are free of organic material and rocks over 4 inches in maximum dimension.
- To reduce potential water migration into building sub-grade through the granular bedding / shading layer and trench backfill, utility trenches should be backfilled with the onsite finer grained materials or sand-cement slurry for minimum 3 feet length at their entry points.
- Backfill of all exterior and interior trenches should be placed in thin lifts not exceeding 4 inches and mechanically compacted to achieve a relative compaction of not less than 90% based on ASTM: D1557. Care should be taken not to damage utility lines.
- Utility trenches should not be located within the influence of footings. This is defined as a zone located below the footing and a line sloping at an inclination of 1:1 (horizontal to vertical) outward from the outside edge of footings. If utility lines are located within the zone of footings, the backfill should be compacted to a minimum 95 percent relative compaction or slurry backfilled (minimum 1-1/2 sack cement - sand mix).
- Trenches greater than 4 feet in depth should be shored or sloped back as required by the local regulatory agency, the State of California Division of Industrial Safety Construction Safety Orders, and Federal OSHA requirements.

As described in the Groundwater section of this report, the site includes shallow groundwater conditions. Where trench excavations come close to or intersect the water table, the groundwater may react adversely. These effects may include bottom quickening / heaving, sidewall raveling, sloughing and calving, and decrease in sidewall stability. Where trenching will be below 5-feet,

special means and methods may be required to address and stabilize the situation. This office should be consulted for specific recommendations and support where this may occur.

Site Drainage

Of all the post-construction maintenance items – attention to site drainage is the most important. Nuisance water is the cause of most potential problems.

The Client, Landscape Architect, and Property Manager should be aware of the potential problems that may develop when drainage is altered through construction of retaining walls, paved walkways, and patios. Conditions which will lead to ground saturation must be avoided.

- All roof and surface drainage should be directed away from structures and their appurtenances and slopes to approved drainage facilities. Ponding of water should be avoided. Per the 2019 CBC, a minimum gradient of 5 percent away from structures should be maintained for graded soil areas to a distance of 10 feet or to approved drainage swales.
- The recommended drainage patterns should be established at the time of fine grading and maintained throughout the life of the structure or, if altered, should be replaced with properly designed area drain system.
- Irrigation activities at the site should be monitored and controlled to prevent over watering. Planter and lawn areas adjacent to structures should be avoided. If utilized, these should include measures to contain irrigation water and prevent moisture migration into the walls and under foundations and slabs-on-grade.
- Plants with aggressive roots should be avoided. Trees should be planted in designated tree wells that limit lateral and promote deeper root movement.
- Planters should be well drained. Root barriers should be considered to limit invasive roots from getting out and under the surrounding pavement. The incorporation of “Bio Barrier” fabric in root barriers is specifically recommended. Bio Barrier includes a hormone chemical that keeps roots away without harming the plants.
- The selection of plant palettes should be based on that which is suitable for the area and be drought tolerant. For any planned bio-swales or bio-basins, specific plant palettes may be required to address particular conditions. Our office should be consulted to provide such guidance as may be required.
- It is imperative that all new construction maintain positive drainage to suitable discharge facilities. Adequate area drainage systems should be installed in planter areas and within flatwork areas, as required.

Landscape, Irrigation, and Maintenance

General guidelines for landscape, irrigation and maintenance are shown below:

- Landscape planting should consist of appropriate drought resistant vegetation as

recommended by the Landscape Architect. Landscaping of slopes should be completed as soon as possible and properly maintained;

- The property owner is responsible for proper irrigation and for maintenance and repair of installed irrigation systems. Leaks should be repaired immediately. Sprinklers should be adjusted to provide maximum coverage with a minimum of water usage and overlap. Over-watering with consequent excessive runoff and ground saturation must be avoided;
- If automatic sprinkler systems are installed, their use should be adjusted to account for natural rainfall conditions;
- All interceptor ditches, drainage terraces, down-drains, and any other drainage devices that have been installed must be maintained and cleaned;
- If rodent activity is present, the property owner should undertake a program for the elimination of burrowing animals. This should be an ongoing program in order to promote stability; and
- Water should be directed away from constructed slopes faces. This may require the construction of berms or ditches along the top of slopes, if such devices are not in place.

Plan Review, Observations and Testing

During the design and precise grading phases, the final Precise Grading and Foundation Plans, including the design details of planned structures (e.g., location, configuration, design loads, etc.) should be provided to the Project Geotechnical Engineer to verify the applicability of the recommendations provided above and to develop additional and/or revised recommendations, as appropriate.

Precise grading, including foundation and on-site construction should be performed under the observation, documentation, and testing by the Project Geotechnical Consultant. To document actual conditions encountered, work performed, and any in-field modifications / adjustments, an As-Graded report should be prepared upon the completion of work.

CLOSURE

Our evaluation and preparation of this report are based on our experience and our knowledge of the site and were obtained in accordance with currently accepted professional engineering principles and practice in the field of geologic and geotechnical engineering and reflect our best professional judgment. We make no other warranty, either express or implied. This report is subject to supplementation and revision as new information becomes available and the designs are refined. This report is also subject to the review of the controlling jurisdiction and any comments / responses become a part hereto and the project specifications.

The recommendations provided by this firm are made on the assumption that we will be retained to perform the geotechnical onsite observation, testing and support associated with the proposed work. If another geotechnical firm is used, these and any other applicable recommendations developed by this firm are considered void. G3SoilWorks is not responsible for any implementation of recommendations or grading / construction that it did not have an adequate opportunity to observe, test, comment on, and document. Similarly, should unanticipated conditions be encountered or alterations to the current design be made, this office should be given the opportunity and retainage to evaluate and provide revisions / updates as warranted.

We appreciate the opportunity of being of service to you on this project. Should you have any questions or need additional information, please contact the undersigned.

Sincerely,

G3SoilWorks, Inc.

SUMMARY
OF
CONE PENETRATION TEST DATA

1. INTRODUCTION

This report presents the results of a Cone Penetration Test (CPT) program carried out for the project located at 5665 & 5757 Plaza Drive in Cypress, California. The work was performed by Kehoe Testing & Engineering (KTE) on December 13, 2021. The scope of work was performed as directed by G3SoilWorks, Inc. personnel.

2. SUMMARY OF FIELD WORK

The fieldwork consisted of performing CPT soundings at two locations to determine the soil lithology. A summary is provided in **TABLE 2.1**.

LOCATION	DEPTH OF CPT (ft)	COMMENTS/NOTES:
CPT-1	50	
CPT-2	50	

TABLE 2.1 - Summary of CPT Soundings

3. FIELD EQUIPMENT & PROCEDURES

The CPT soundings were carried out by **KTE** using an integrated electronic cone system manufactured by Vertek. The CPT soundings were performed in accordance with ASTM standards (D5778). The cone penetrometers were pushed using a 30-ton CPT rig. The cone used during the program was a 15 cm^2 cone with a cone net area ratio of 0.83. The following parameters were recorded at approximately 2.5 cm depth intervals:

- Cone Resistance (qc)
- Sleeve Friction (fs)
- Dynamic Pore Pressure (u)
- Inclination
- Penetration Speed

The above parameters were recorded and viewed in real time using a laptop computer. Data is stored at the KTE office for up to 2 years for future analysis and reference. A complete set of baseline readings was taken prior to each sounding to determine temperature shifts and any zero load offsets. Monitoring base line readings ensures that the cone electronics are operating properly.

4. CONE PENETRATION TEST DATA & INTERPRETATION

The Cone Penetration Test data is presented in graphical form in the attached Appendix. These plots were generated using the CPeT-IT program. Penetration depths are referenced to ground surface. The soil behavior type on the CPT plots is derived from the attached CPT SBT plot (Robertson, "Interpretation of Cone Penetration Test…", 2009) and presents major soil lithologic changes. The stratigraphic interpretation is based on relationships between cone resistance (qc), sleeve friction (fs), and penetration pore pressure (u). The friction ratio (Rf), which is sleeve friction divided by cone resistance, is a calculated parameter that is used along with cone resistance to infer soil behavior type. Generally, cohesive soils (clays) have high friction ratios, low cone resistance and generate excess pore water pressures. Cohesionless soils (sands) have lower friction ratios, high cone bearing and generate little (or negative) excess pore water pressures.

The CPT data files have also been provided. These files can be imported in CPeT-IT (software by GeoLogismiki) and other programs to calculate various geotechnical parameters.

It should be noted that it is not always possible to clearly identify a soil type based on qc, fs and u. In these situations, experience, judgement and an assessment of the pore pressure data should be used to infer the soil behavior type.

If you have any questions regarding this information, please do not hesitate to call our office at (714) 901-7270.

Sincerely,

KEHOE TESTING & ENGINEERING

Steven P. Kehoe
President

APPENDIX C

LABORATORY TEST PROCEDURES AND RESULTS

LABORATORY TEST PROCEDURES AND RESULTS

The samples obtained during the field investigation were transported to the laboratory for testing and analysis. The results of tests performed on selected samples and the test procedures are summarized below.

Dry Density and Moisture Content

Field dry density and moisture contents of undisturbed soils samples retained in 2 3/8–inch inside diameter by one-inch height rings were determined, and moisture test results were obtained for the small bulk samples. Dry density and moisture content testing were performed in accordance with ASTM D2937 and ASTM D2216, respectively. The test results are posted on the Geotechnical Boring Logs in Appendix A.

Maximum Dry Density and Optimum Moisture Content

Maximum dry density and optimum moisture content test was performed on the submitted bulk soil samples in accordance with ASTM: D 1557. The results are shown below:

Sample Identification	Maximum Dry Density (pcf)	Optimum Moisture Content (%)
B-2 @ 0-5’	107.0	11.5
B-5 @ 0-5’	118.0	13.0

Expansion Index

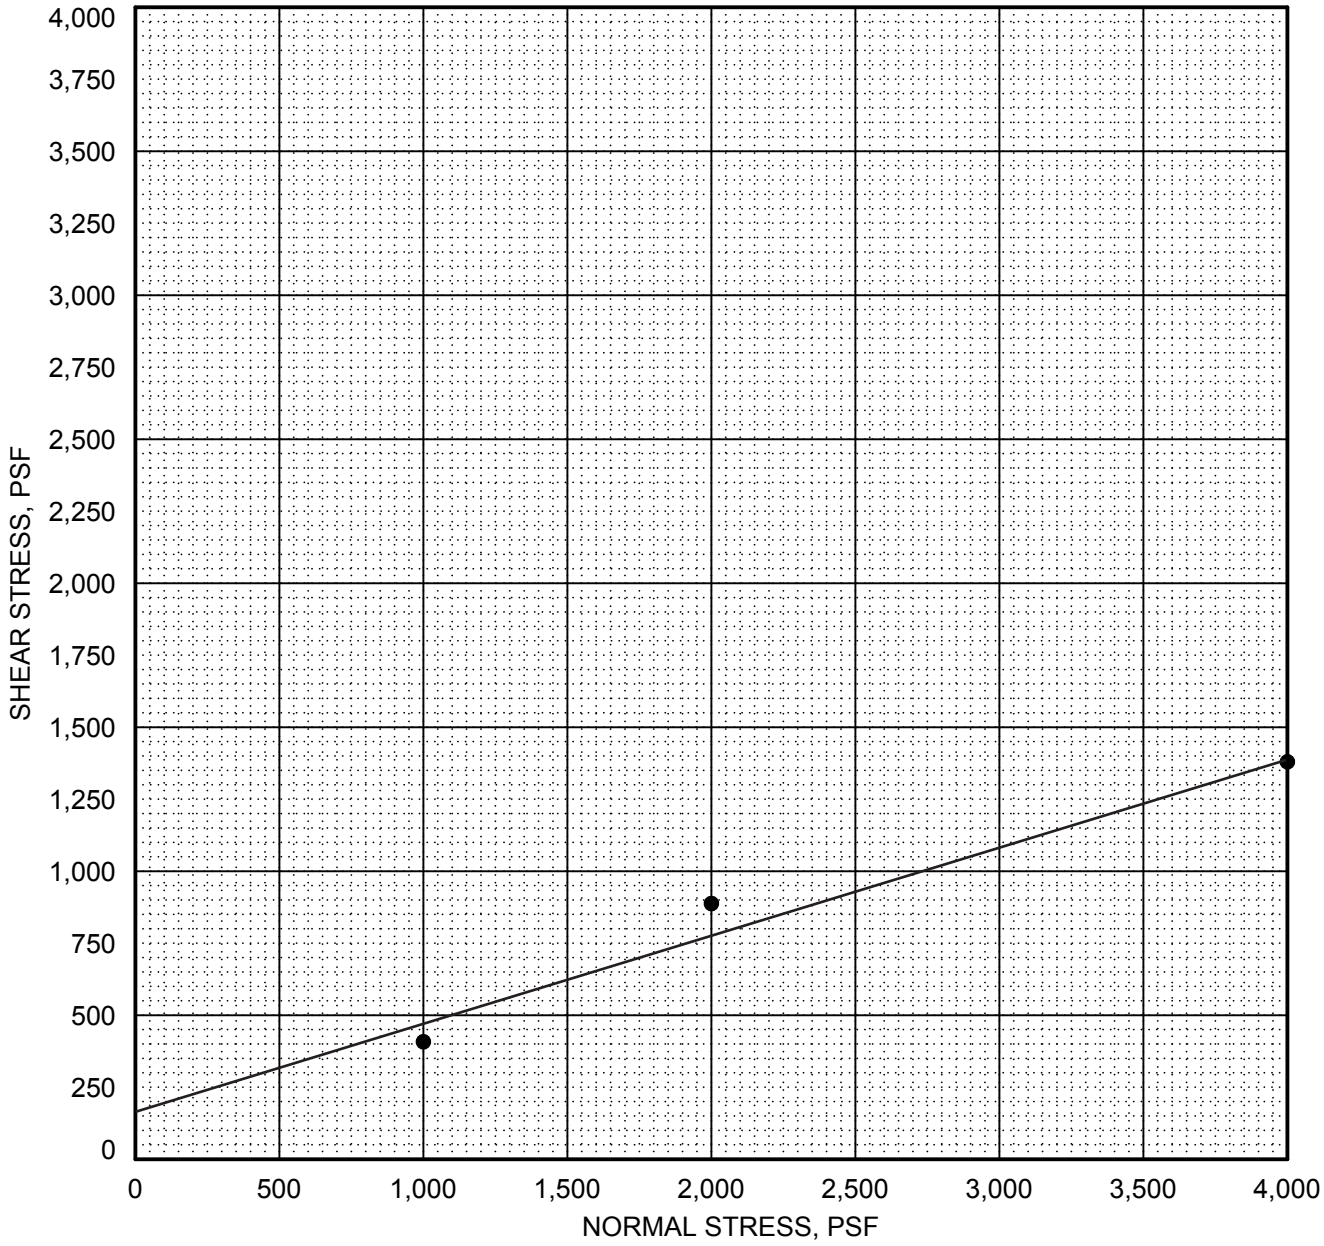
Representative soil samples were tested for expansion potential following the ASTM D4829 Test Procedure. Test results are presented below.

Sample Identification	Expansion Index	Expansion Potential (UBC 18-1-B)
B-2 @ 0-5’	0	Very Low
B-5 @ 0-5’	14	Very Low

Sulfate Content

Selected soil samples were tested for soluble sulfate content in accordance with the Hach method. The test results are shown below.

Sample Identification	Water Soluble Sulfate in Soil (ppm)	Sulfate Exposure (ACI 318-08, Table 4.2.1)
B-2 @ 0-5’	120	S0
B-5 @ 0-5’	300	S1



Direct Shear

Direct shear tests were performed on representative, relatively undisturbed soil samples with a direct shear machine of the strain-controlled type in which the rate of strain is 0.01 inches per minute. The soil specimens were soaked in a confined state prior to shearing and was sheared under varied normal loads ranging from 1.0 ksf to 4.0 ksf. The test results are plotted on Figures S-1 through S-7.

Consolidation

Consolidation tests was performed on sample identified as B-1 @ 15 feet, B-3 @ 15 feet, B-3 @ 30 feet, B-4 @ 10 feet, and B-4 @ 20 feet. The test specimen was initially loaded to 0.2 tons per square foot and soaked during the test. Progressive loading was then applied to a maximum of 3.2 tons per square foot. Loading was then reduced to determine rebound characteristics. The consolidation test is presented on Figure C-1 through C-5.

APPENDIX D

REFERENCE NO. 2 EXCERPTS

SOUTHERN CALIFORNIA GEOTECHNICAL
A California Corporation

BORING NO. B-1

JOB NO.: 21G150-1
PROJECT: Proposed C/I Development
LOCATION: Cypress, California

DRILLING DATE: 4/2/21
DRILLING METHOD: Hollow Stem Auger
LOGGED BY: Jamie Hayward

WATER DEPTH: 9.5 feet
CAVE DEPTH: 11 feet
READING TAKEN: At Completion

FIELD RESULTS						LABORATORY RESULTS						
DEPTH (FEET)	SAMPLE	BLOW COUNT	POCKET PEN. (TSF)	GRAPHIC LOG	DESCRIPTION SURFACE ELEVATION: --- MSL	DRY DENSITY (PCF)	MOISTURE CONTENT (%)	LIQUID LIMIT	PLASTIC LIMIT	PASSING #200 SIEVE (%)	ORGANIC CONTENT (%)	COMMENTS
					3± inches Asphaltic Concrete; 8± inches Aggregate Base							
		10			FILL: Gray Brown Silty fine Sand, mottled, loose to medium dense-moist to very moist		15					
		6					18					
5			2.0		ALLUVIUM: Gray Brown Silty Clay, trace Calcareous nodules, little Iron oxide staining, medium stiff-very moist		36	46	23			
		10			Dark Gray fine Sandy Silt, loose to medium dense-very moist to wet		24			56		
		7					29			62		
10												
15		13			@ 14 feet, trace Iron oxide staining		23			50		
					Gray Brown Silty fine Sand, loose to medium dense-wet							
		7					25			23		
20												
25		25			@ 24 feet, little Iron oxide staining		20			37		
					Gray Brown fine Sand, trace Silt, very loose-wet							
		2					25			4		
30			1.0		Gray Brown Silty Clay, little Iron oxide staining, very soft-wet		37	50	28	93		
					Gray Brown fine Sand, medium dense-wet							
		19			Gray Brown Silty fine Sand, trace Iron oxide staining, medium		22			5

Total estimated settlement: 7.62

Abbreviations

$Q_{tn,cs}$:	Equivalent clean sand normalized cone resistance
FS:	Factor of safety against liquefaction
e_v (%):	Post-liquefaction volumentric strain
DF:	e_v depth weighting factor
Settlement:	Calculated settlement

Total estimated settlement: 6.53

Abbreviations

$Q_{tn,cs}$: Equivalent clean sand normalized cone resistance
FS: Factor of safety against liquefaction
e_v (%): Post-liquefaction volumentric strain
DF: e_v depth weighting factor
Settlement: Calculated settlement

Total estimated settlement: 5.13

Abbreviations

$Q_{tn,cs}$:	Equivalent clean sand normalized cone resistance
FS:	Factor of safety against liquefaction
e_v (%):	Post-liquefaction volumentric strain
DF:	e_v depth weighting factor
Settlement:	Calculated settlement

:: Post-earthquake settlement due to soil liquefaction ::

:: Post-earthquake settlement due to soil liquefaction :: (continued)

Depth (ft)	$Q_{tn,cs}$	FS	e_v (%)	DF	Settlement (in)	Depth (ft)	$Q_{tn,cs}$	FS	e_v (%)	DF	Settlement (in)

Total estimated settlement: 5.08

Abbreviations

$Q_{tn,cs}$:	Equivalent clean sand normalized cone resistance
FS:	Factor of safety against liquefaction
e_v (%):	Post-liquefaction volumentric strain
DF:	e_v depth weighting factor
Settlement:	Calculated settlement

Total estimated settlement: 2.80

Abbreviations

$Q_{tn,cs}$:	Equivalent dean sand normalized cone resistance
FS:	Factor of safety against liquefaction
e_v (%):	Post-liquefaction volumentric strain
DF:	e_v depth weighting factor
Settlement:	Calculated settlement

:: Post-earthquake settlement due to soil liquefaction :: (continued)

Depth (ft)	$q_{c1N,cs}$	FS	e_v (%)	DF	Settlement (in)	Depth (ft)	$q_{c1N,cs}$	FS	e_v (%)	DF	Settlement (in)

Total estimated settlement: 3.29

Abbreviations

$Q_{tn,cs}$:	Equivalent clean sand normalized cone resistance
FS:	Factor of safety against liquefaction
e_v (%):	Post-liquefaction volumentric strain
DF:	e_v depth weighting factor
Settlement:	Calculated settlement

REQUIRED DOCUMENTS

WATER & STORMWATER DRY INJECTION WELL CONSTRUCTION

☐ An approval from the Division of Drinking Water (DDW) for public or municipal water wells.

☐ A cross-section well diagram detailing total depth, borehole diameter, depth and thickness of the sanitary seal(s), type(s) of casing(s), and length(s) of screen(s) / slotting. A top view is required for nested wells that demonstrate the radial thickness separation.

☐ Indicate the number of water aquifers the well will be screened through.

☐ A site map using a 250-foot radius from the proposed water well location that includes locations and distances to:

- All existing, active, inactive, and/or abandoned water wells.
- All existing, abandoned, and/or proposed sewer lines, recycled water lines, and storm drain lines.
- All active and/or abandoned leach fields, cesspits, and septic tanks.
- All animal enclosures (e.g., stables, coops, kennels, etc.).
- All water courses and/or bodies of water, including, but not limited to: rivers, creeks, ponds, retention ponds, and/or swimming pools.
- All other underground storage tanks and open (regulated) remediation sites.
- All nearby structures (e.g., commercial and residential buildings, houses, storage sheds) sanitary hazards and their locations.

NON-PRODUCTION WELL CONSTRUCTION

■ Written work plan. For regulated sites, an approved work plan by the overseeing regulatory agency must be included for the installation of any type of nested well.

■ Site map(s) showing the locations of the proposed wells (no topographical maps).

■ A cross-section well diagram detailing total depth, borehole diameter, depth and thickness of the sanitary seal(s), type(s) of casing(s), and length(s) of screen(s) / slotting. A top view is required for nested wells that demonstrates a 2-inch radial thickness separation between casings and casing and wall of the borehole.

WELL & EXPLORATORY BORING DESTRUCTION

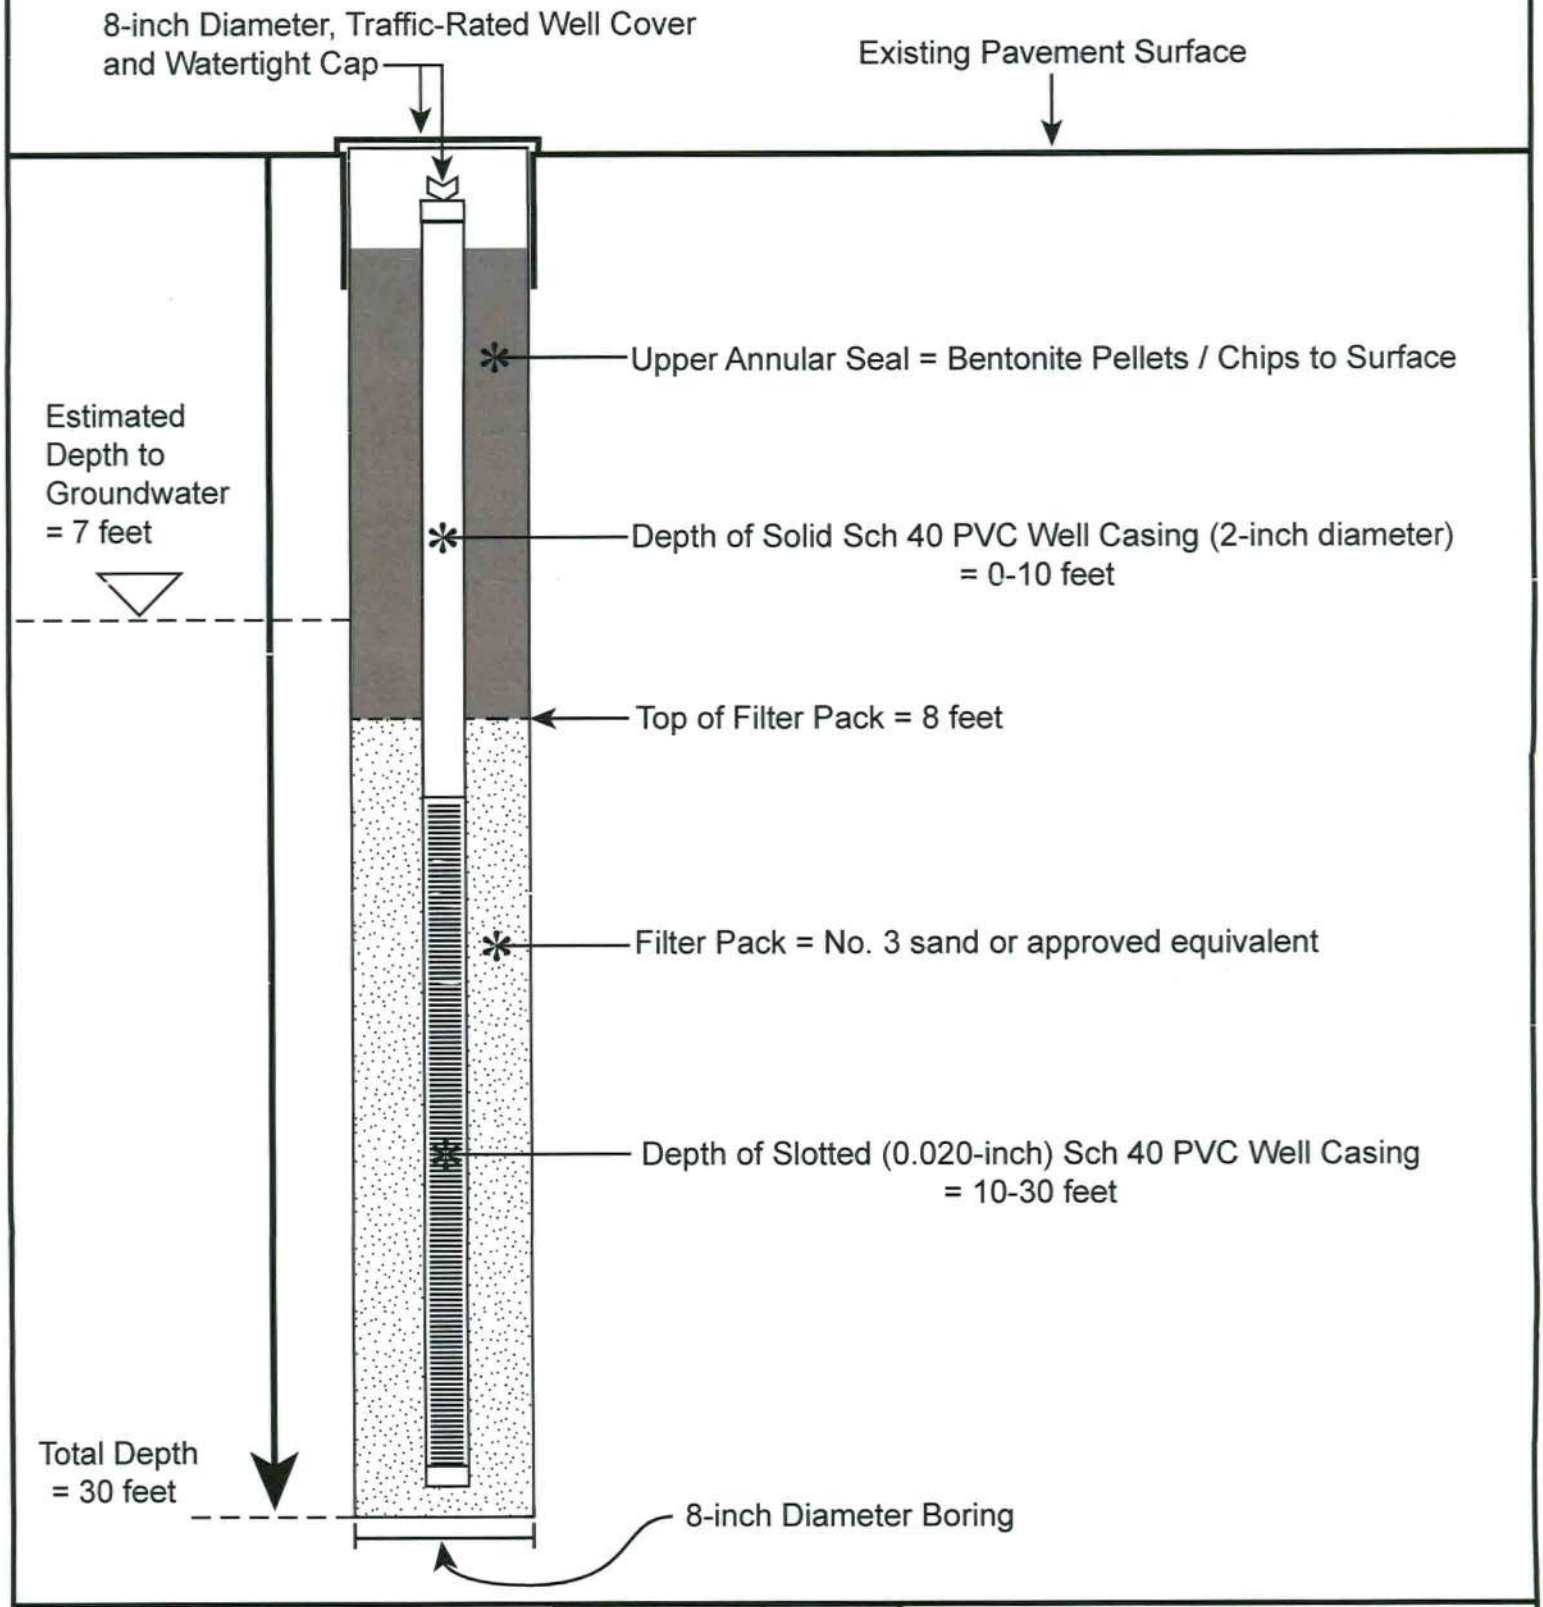
☐ Written work plan. For regulated sites, an approval of the work plan by the overseeing regulatory agency must be included.

☐ Site map(s) showing the locations of the wells to be destroyed (no topographical maps).

☐ Type and amount of sealant (show calculations for water wells):

Total depth _____feet Borehole diameter _____inches Sealing material Select One of the Approved Materials

☐ Method of destruction:



☐ Pressure grout / removal of top 5 feet casing / removal of well boxes ☐ Overdrill ☐ Excavation

☐ Other

December 27, 2021
Project No. 1-1209

Attention: Mr. Juan Anzora

Subject: **Work Plan for Well Construction Permit Application**
Geotechnical Investigation for
Proposed Commercial / Industrial Development
5665 and 5757 Plaza Drive
Cypress, California

References: Orange County Health Care Agency – Environmental Health Division
Application for Well Destruction Permit. dated December 23, 2021.

Dear Mr. Anzora,

G3SoilWorks, Inc. (G3), is providing this Work Plan for the construction of five (5) temporary monitoring wells to be located at the subject address. The proposed Work Plan and supporting information presented herein are provided as an attachment to the referenced Orange County Health Care Agency – Environmental Health Division (OCHCA-EHD) Application for Well Construction Permit dated December 23, 2021.

PURPOSE / INTENT

The purpose of our work, in accordance with this Work Plan, will be to construct five (5) temporary monitoring wells at the subject property for the purposes of monitoring groundwater elevations as part of our geotechnical investigation for the proposed commercial / industrial development. The wells will be constructed in accordance with County requirements (i.e., Bulletin for Annular Sealing Material, Bulletin for Destruction of Monitoring Wells and Soil Borings, California Well Standards, etc.) and California Well Standards.

PROJECT DESCRIPTION / BACKGROUND

As shown on Figure 1 (attached), the subject site is located northerly adjacent to Katella Avenue and Plaza Drive, between Walker Street and Valley View Street, in the City of Cypress. The property is generally flat-lying to very gently sloping and is occupied by paved parking areas at the proposed well locations. A total of five (5) temporary monitoring wells are to be constructed as part of G3's geotechnical investigation for the subject proposed commercial / industrial development. These wells are to be constructed in accordance with the attached well construction diagrams (Figures 2-4) and will range in depth from 25 to 30 feet below existing ground surface. One of the wells (B-3) will be drilled to 50 feet for the purposes of geotechnical sampling and testing, then sealed and set to a depth of 25 feet as shown on Figure 4.

RECEIVED HCA

JAN 12 2022

ENVIRONMENTAL HLTH

SOILS AND GROUNDWATER

Based on review of available geologic mapping and subsurface information, the site is underlain by Quaternary alluvium associated with the ancestral Santa Ana River. Soils include anastomosed / interfingered and interbedded sequences of poorly-graded sand, silty sand, sandy silt, and silty clay. Shallow groundwater is anticipated at depths of approximately 7 feet below ground surface and is understood to be "first water" of non-beneficial use.

METHODOLOGY / WORK PLAN

The proposed temporary monitoring wells will be located within the limits of the property as shown Figure 1 (attached). The wells will be constructed by a C-57 licensed drilling contractor according to the attached well construction diagrams (Figures 2-4), with oversight and documentation by G3. The wells will remain in place for monitoring purposes until construction of the proposed commercial / industrial development begins. At some point during the construction phase, a well destruction permit application will be submitted for County review and approval, and the wells will be destroyed by a licensed C-57 drilling contractor in accordance with the approved well destruction permit.

DISCUSSION / CONCLUSION

It is our opinion that the above work plan meets the intent of California Well Standards and conforms with applicable County requirements for well construction. Our work will be performed in accordance with the approved well construction permit and work plan proposed herein.

CLOSURE

We thank you for your assistance and look forward to working with you in the future. If you have any questions or require additional information, please do not hesitate to contact the undersigned.

Respectfully submitted,

G3SoilWorks, Inc.

Basic Parameters

Name	Value	Description
S_S	1.451	MCE_R ground motion (period=0.2s)
S_1	0.515	MCE_R ground motion (period=1.0s)
S_{MS}	1.742	Site-modified spectral acceleration value
S_{M1}	* null	Site-modified spectral acceleration value
S_{DS}	1.161	Numeric seismic design value at 0.2s SA
S_{D1}	* null	Numeric seismic design value at 1.0s SA

* See Section 11.4.8

Additional Information

Name	Value	Description
SDC	* null	Seismic design category
F_a	1.2	Site amplification factor at 0.2s
F_v	* null	Site amplification factor at 1.0s
CR_S	0.911	Coefficient of risk (0.2s)
CR_1	0.914	Coefficient of risk (1.0s)
PGA	0.622	MCE_G peak ground acceleration
F_{PGA}	1.2	Site amplification factor at PGA
PGA_M	0.746	Site modified peak ground acceleration

T_L	8	Long-period transition period (s)
SsRT	1.451	Probabilistic risk-targeted ground motion (0.2s)
SsUH	1.593	Factored uniform-hazard spectral acceleration (2% probability of exceedance in 50 years)
SsD	2.465	Factored deterministic acceleration value (0.2s)
S1RT	0.515	Probabilistic risk-targeted ground motion (1.0s)
S1UH	0.563	Factored uniform-hazard spectral acceleration (2% probability of exceedance in 50 years)
S1D	0.836	Factored deterministic acceleration value (1.0s)
PGAd	0.999	Factored deterministic acceleration value (PGA)

* See Section 11.4.8

The results indicated here DO NOT reflect any state or local amendments to the values or any delineation lines made during the building code adoption process. Users should confirm any output obtained from this tool with the local Authority Having Jurisdiction before proceeding with design.

Disclaimer

Hazard loads are provided by the U.S. Geological Survey Seismic Design Web Services.

While the information presented on this website is believed to be correct, ATC and its sponsors and contributors assume no responsibility or liability for its accuracy. The material presented in the report should not be used or relied upon for any specific application without competent examination and verification of its accuracy, suitability and applicability by engineers or other licensed professionals. ATC does not intend that the use of this information replace the sound judgment of such competent professionals, having experience and knowledge in the field of practice, nor to substitute for the standard of care required of such professionals in interpreting and applying the results of the report provided by this website. Users of the information from this website assume all liability arising from such use. Use of the output of this website does not imply approval by the governing building code bodies responsible for building code approval and interpretation for the building site described by latitude/longitude location in the report.

Per ASCE 7-16 section 11.4.8, a site response analysis is required for structures on Site Class F unless any of the exceptions listed in section 20.3.1 are applicable. Provided that the proposed structure has a fundamental period of vibration of equal to or less than 0.5s, the site class and corresponding values can be determined by the procedures outlined in section 11 in lieu of performing a site response analysis. The values for S_{M1}, S_{D1}, F_v, and SDC have been tabulated in accordance with ASCE 7-16 procedures and are included in the table below. The applicability of the exemption and the parameters provided below should be verified by the Structural Engineer for conformance to local laws and ordinances.

Parameter	Value	Description
S_{M1}	0.919	Site-modified spectral acceleration value
S_{D1}	0.613	Numeric seismic design value at 1.0s SA
F_v	1.785	Site amplification factor at 1.0s
SDC	D	Seismic design category

Modify Robertson method generates Fines from qc/fs. Inputted Fines are not relevant.

Output Results:

Settlement of Saturated Sands=2.47 in.
Settlement of Unsaturated Sands=0.43 in.
Total Settlement of Saturated and Unsaturated Sands=2.90 in.
Differential Settlement=1.450 to 1.914 in.

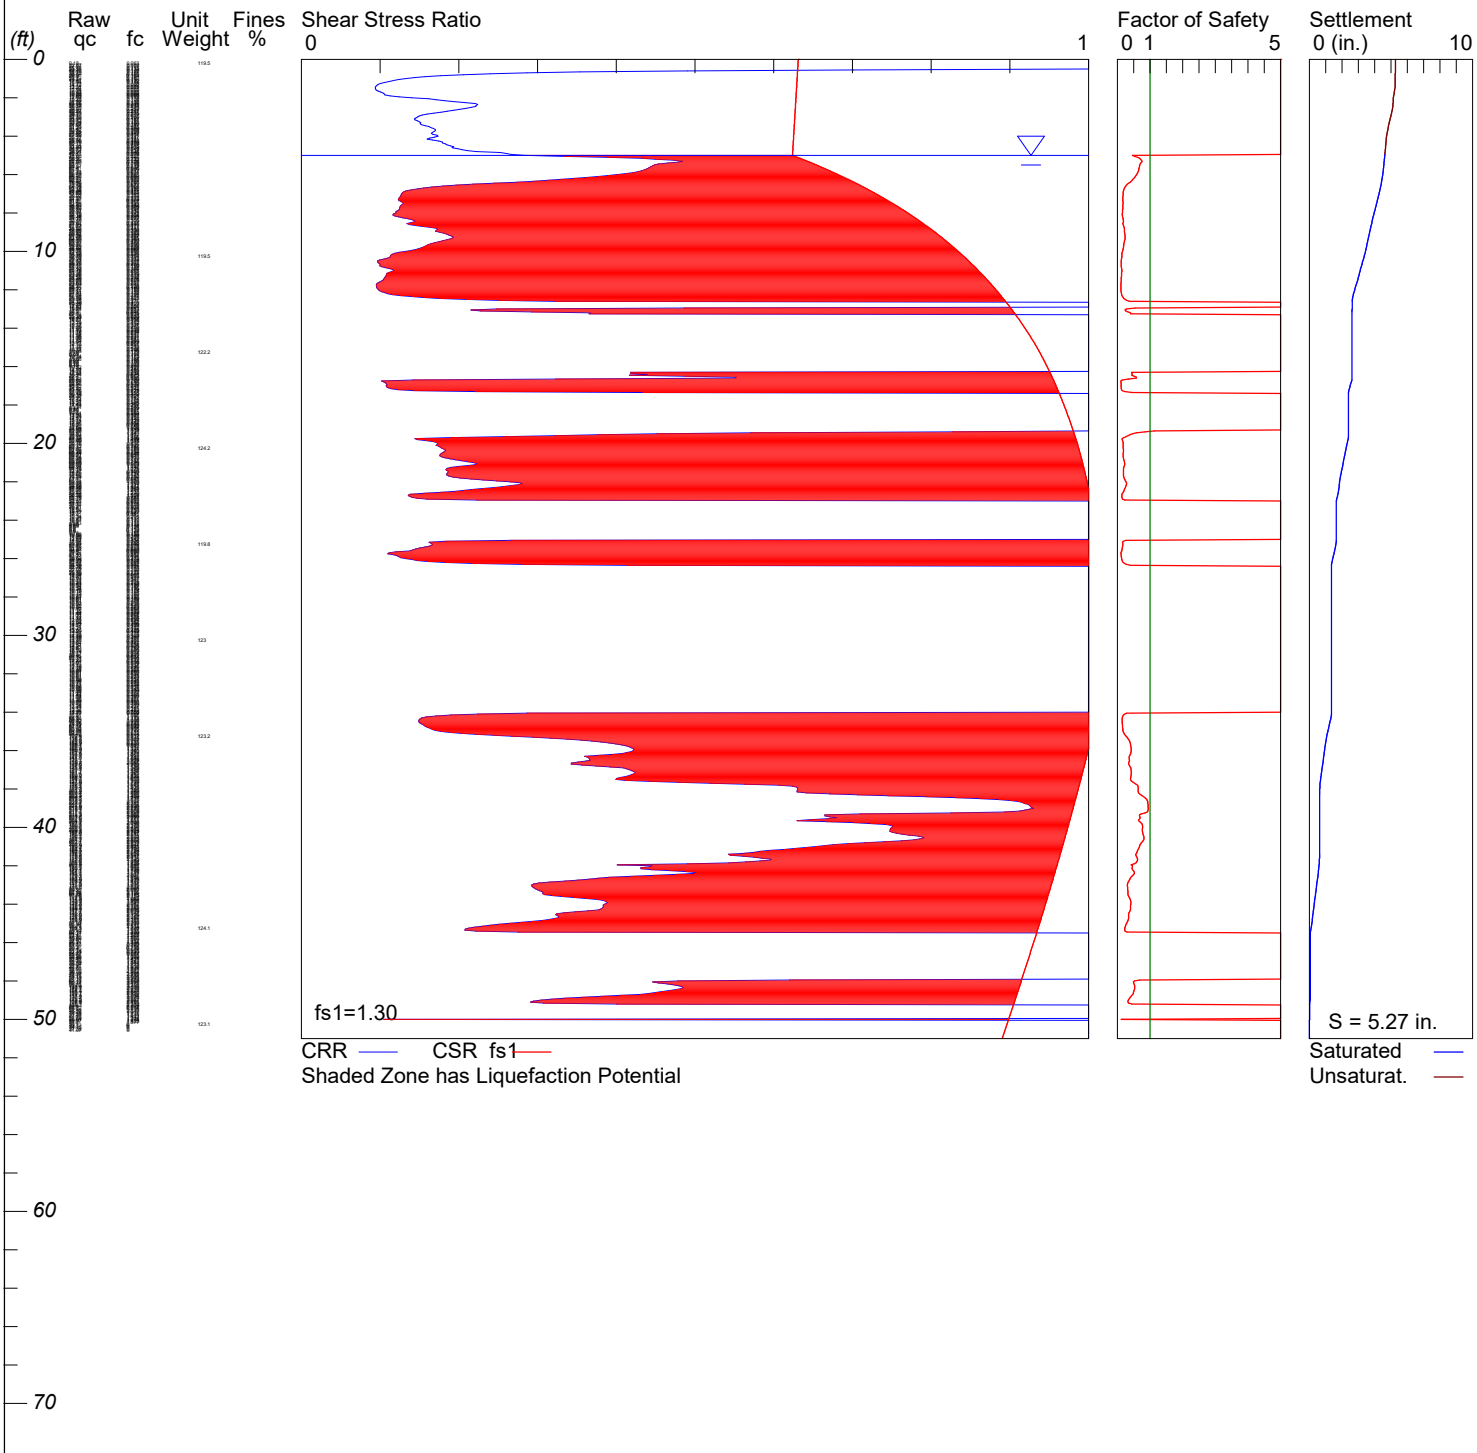
* F.S.<1, Liquefaction Potential Zone
(F.S. is limited to 5, CRR is limited to 2, CSR is limited to 2)

Units: Unit: qc, fs, Stress or Pressure = atm (1.0581tsf); Unit Weight = pcf; Depth = ft; Settlement = in.

---



1 atm (atmosphere) = 1 tsf (ton/ft2)
CRRm Cyclic resistance ratio from soils
CSRsf Cyclic stress ratio induced by a given earthquake (with user request factor of safety)
F.S. Factor of Safety against liquefaction, F.S.=CRRm/CSRsf
S_sat Settlement from saturated sands
S_dry Settlement from Unsaturated Sands
S_all Total Settlement from Saturated and Unsaturated Sands
NoLiq No-Liquefy Soils

LIQUEFACTION ANALYSIS

Cypress

Hole No.=CPT-2 Water Depth=5 ft

Magnitude=7.5
Acceleration=.747g

Input File Name: S:\PROJECTS\1000s GEOTECH PROJECTS\1-1209 Goodman Cypress\Calcs\Liquefaction\KYCPT2.liq
Title: Cypress
Subtitle: CPT-2

Surface Elev.=
Hole No.=CPT-2
Depth of Hole= 51.00 ft
Water Table during Earthquake= 5.00 ft
Water Table during In-Situ Testing= 7.00 ft
Max. Acceleration= 0.75 g
Earthquake Magnitude= 7.50

Input Data:
Surface Elev.=
Hole No.=CPT-2
Depth of Hole=51.00 ft
Water Table during Earthquake= 5.00 ft
Water Table during In-Situ Testing= 7.00 ft
Max. Acceleration=0.75 g
Earthquake Magnitude=7.50
No-Liquefiable Soils: CL, OL are Non-Liq. Soil

1. CPT Calculation Method: Modify Robertson*
2. Settlement Analysis Method: Ishihara / Yoshimine
3. Fines Correction for Liquefaction: Stark/Olson et al.*
4. Fine Correction for Settlement: During Liquefaction*
5. Settlement Calculation in: All zones*
9. User request factor of safety (apply to CSR) , User= 1.3
Plot one CSR curve (fs1=User)
10. Use Curve Smoothing: Yes*
* Recommended Options

In-Situ Test Data:
