APPENDIX A

CALEEMOD OUTPUT DATA

This page intentionally left blank

Cypress 5665 Plaza Drive - Existing Uses Custom Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Cypress 5665 Plaza Drive - Existing Uses
Operational Year	2023
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	1.80
Precipitation (days)	6.20
Location	Plaza Dr, Cypress, CA 90630, USA
County	Orange
City	Cypress
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5874
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
General Office Building	37.7	1000sqft	8.53	37,657	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	CO2e

8. User Changes to Default Data

Screen	Justification
Land Use	8.53-acre project site with approximately 222 parking spaces and a 191,394 sf industrial building, including 181,061 sf of warehouse uses and 10,333 sf of office space. Approximately 50% of warehouse space would be refrigerated.
Construction: Construction Phases	Construction would start in April 2024 and end in March 2025, demolition would be approximately 60 days. Assume overlap between architectural coating and building construction phases.
Construction: Off-Road Equipment	Default construction equipment, assuming tier 2 engines
Operations: Vehicle Data	Vehicles and light duty trucks only. Based on the project's trip generation of 328 ADT for passenger and light duty trucks.
Operations: Fleet Mix	Fleet mix adjusted to reflect passenger cars and light duty trucks only. Based on 312 passenger cars and 16 light duty trucks from a total of 328 ADT

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Cypress 5665 Plaza Drive - Heavy Heavy Duty Trucks
Construction Start Date	4/1/2024
Operational Year	2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	1.80
Precipitation (days)	6.20
Location	5665 Plaza Dr, Cypress, CA 90630, USA
County	Orange
City	Cypress
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5874
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

8. User Changes to Default Data

Screen	Justification
Land Use	8.53-acre project site with approximately 222 parking spaces and a 191,394 sf industrial building, including 181,061 sf of warehouse uses and 10,333 sf of office space. Approximately 50% of warehouse space would be refrigerated. In addition, based on the preliminary water quality report, the total pervious area would be 29,718 sf. This analysis assumes all pervious area would be landscaped.
Construction: Construction Phases	Construction would start in April 2024 and end in March 2025, demolition would be approximately 60 days. Assume overlap between architectural coating and building construction phases.
Construction: Off-Road Equipment	Default construction equipment, assuming tier 2 engines
Operations: Vehicle Data	Heavy heavy duty trucks (HHDT) only. Based on the project's trip generation of 78 ADT for HHDT trucks. Trip length adjusted to 40 miles
Operations: Fleet Mix	Fleet mix adjusted to reflect HHDT only

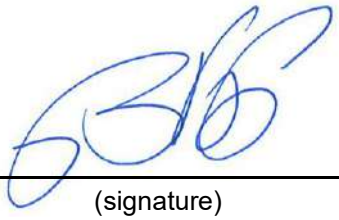
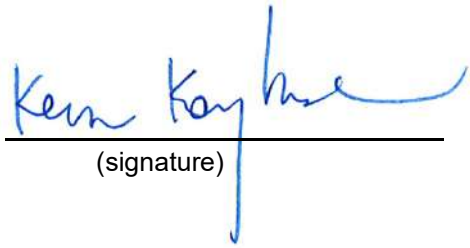
Sign-off Sheet and Signatures of Environmental Professionals



This document entitled Phase I Environmental Site Assessment was prepared by Stantec Consulting Services Inc. (Stantec) for the account of GNAP Development, LLC (collectively the "Client") The material in it reflects Stantec's best judgment in light of the information available to it at the time of preparation. Any use which a third party makes of this report, or any reliance on or decisions made based on it, are the responsibilities of such third parties. Stantec accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

All information, conclusions, and recommendations provided by Stantec in this document regarding the Phase I ESA have been prepared under the supervision of and reviewed by the professionals whose signatures appear below.



I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1.0 SUMMARY

Stantec Consulting Services Inc. (Stantec) has completed a Phase I Environmental Site Assessment (ESA) report of the property located at 5665 Plaza Drive, City of Cypress, County of Orange, California (the "Site" or "Property"), on behalf of GNAP Development, LLC (the "Client"). The work was performed according to Stantec's proposal and terms and conditions dated July 20, 2021. GNAP Development, LLC (the "User") has been designated as the User of this report.

The Phase I ESA was conducted in conformance with the requirements of American Society for Testing and Materials (ASTM) Designation E 1527-13, except as may have been modified by the scope of work, and terms and conditions, requested by the Client. Any exceptions to, or deletions from, the ASTM practice are described in the Data Gaps section of this report.

The Property consists of approximately 8.09 acres of land currently developed with one five-story office building and associated asphalt parking lot. Surrounding properties consists of commercial/office structures. A Property location map is illustrated on Figure 1. A Property map illustrating the main features of the Property is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

According to historical documents including topographic maps, a railroad line was located along the northern property boundary and the Property was also used historically for agricultural purposes until circa 1980. Based on the adjacent railroad line and historical agricultural use, pesticides and or herbicides may have been utilized on the Property and near-surface soils may have at one time contained these compounds. However, the Property has been commercially developed since the 1990s and the soils have been reworked. Given the intended future use of the Property is not residential and there is no intended off-site disposal, no further assessment appears warranted at this time. Should off-site disposal of soil be required, Stantec recommends the soil is sampled for profiling purposes prior to removal.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 5665 Plaza Drive, City of Cypress, County of Orange, California, the Property. Any exceptions to, or deletions from, this practice are described in the Data Gaps section of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Property. No further assessment is warranted at this time.

The preceding summary is intended for informational purposes only. Reading of the full body of this report is recommended.

2.0 INTRODUCTION

The objective of this Phase I ESA was to perform appropriate inquiry into the past ownership and uses of the Property consistent with good commercial or customary practice as outlined by the ASTM in "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", Designation E1527-13. The purpose of this Phase I ESA was to identify, to the extent feasible, adverse environmental conditions including recognized environmental conditions ("RECs") of the Property.

The ASTM E1527-13 standard indicates that the purpose of the Phase I ESA is to identify RECs, including historical recognized environmental conditions ("HRECs"), and controlled recognized environmental conditions ("CRECs") that may exist at a property. The term "recognized environmental conditions" means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property:

(1) Due to any release to the environment;

(2) Under conditions indicative of a release to the environment; or

(3) Under conditions that pose a material threat of a future release to the environment.

ASTM defines a "HREC" as a REC that has occurred in connection with the property but has been addressed to the satisfaction of the applicable regulatory authority and meets unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a HREC, the environmental professional ("EP") must determine whether the past release is a REC when the current Phase I ESA is conducted (for example, if there has been a change in the regulations). If the EP considers the past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a REC.

ASTM defines a "CREC" as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), but with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

De minimis conditions are not RECs. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. As indicated, the term REC does not include de minimis conditions, which generally do not present a material risk to human health and would not likely be subject to enforcement action if brought to the attention of governmental agencies.

This ESA was conducted in accordance with our proposal dated July 20, 2021. The scope of work conducted during this Phase I ESA consisted of a visual reconnaissance of the Property, interviews with key individuals, and review of reasonably ascertainable documents. The scope of work did not include an assessment for environmental regulatory compliance of any facility ever operated at the Property (past or present), or sampling and analyzing of environmental media. Stantec was not contracted to perform any

independent evaluation of the purchase or lease price of the Property and its relationship to current fair market value. The conclusions presented in this ESA report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 2.3.

ASTM E1527-13 notes that the availability of record information varies from source to source. The User or Environmental Professional is not obligated to identify, obtain, or review every possible source that might exist with respect to a property. Instead, ASTM identifies record information that is reasonably ascertainable from standard sources. "Reasonably ascertainable" means:

(1) Information that is publicly available;

(2) Information that is obtainable from its source within reasonable time and cost constraints; and

(3) Information that is practicably reviewable.

2.1 PROPERTY DESCRIPTION

The Property consists of approximately 8.09 acres of land currently developed with one five-story office building and associated asphalt parking lot. Surrounding properties consists of commercial/office structures. A Property location map is illustrated on Figure 1. A Property map illustrating the main features of the Property is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

The Assessor Parcel Number (APN) associated with the Property is 241-101-025. The Property Owner is identified as G&I IX Cypress Campus LP.

2.2 SPECIAL TERMS, CONDITIONS, AND SIGNIFICANT ASSUMPTIONS

There were no special terms, conditions, or significant assumptions associated with this Phase I ESA.

2.3 EXCEPTIONS AND LIMITING CONDITIONS

This report documents work that was performed in accordance with generally accepted professional standards at the time and location in which the services were provided and given the schedule and budget constraints established by the client. No other representations, warranties, or guarantees are made concerning the accuracy or completeness of the data or conclusions contained within this report, including no assurance that this work has uncovered all potential and actual liabilities and conditions associated with the identified property.

This report provides an evaluation of selected environmental conditions associated with the identified portion of the property that was assessed at the time the work was conducted and is based on information obtained by and/or provided to Stantec at that time. There are no assurances regarding the accuracy and completeness of this information. All information received from the client or third parties in the preparation of this report has been assumed by Stantec to be correct. Stantec assumes no responsibility for any deficiency or inaccuracy in information received from others.

If a service is not expressly indicated, do not assume it has been provided. If a matter is not addressed, do not assume that any determination has been made by Stantec in regard to it.

Conclusions made within this report consist of Stantec's professional opinion as of the time of the writing of this report and are based solely on the scope of work described in the report, the limited data available, and the results of the work. They are not a certification of the property's environmental condition.

This report relates solely to the specific project for which Stantec was retained and the stated purpose for which this report was prepared and shall not be used or relied upon by the client identified herein for any variation or extension of this project, any other project, or any other purpose.

This report has been prepared for the exclusive use of the client identified herein and any use of or reliance on this report by any third party is prohibited, except as may be consented to in writing by Stantec or as required by law. The provision of any such consent is at Stantec's sole and unfettered discretion and will only be authorized pursuant to the conditions of Stantec's standard form reliance letter. Stantec assumes no responsibility for losses, damages, liabilities, or claims, howsoever arising, from third party use of this report.

Project Specific limiting conditions are provided in Section 2.2.

The locations of any utilities, buildings and structures, and property boundaries illustrated in or described within this report, if any, including pole lines, conduits, water mains, sewers and other surface or sub-surface utilities and structures are not guaranteed. Before starting work, the exact location of all such utilities and structures must be confirmed by the client and Stantec assumes no liability resulting from damage to such utilities and structures.

The conclusions are based on the conditions encountered at the Property by Stantec at the time the work was conducted. Accordingly, additional studies and actions may be required. As the purpose of this report is to identify selected Property conditions which may pose an environmental risk; the identification of non-environmental risks to structures or people on the Property is beyond the scope of this assessment. The findings, observations, and conclusions expressed by Stantec in this report are not an opinion concerning the compliance of any past or present owner or operator of the Property which is the subject of this report with any Federal, state, provincial or local law or regulation.

This report presents professional opinions and findings of a scientific and technical nature. It does not and shall not be construed to offer a legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations or policies of Federal, state, provincial or local governmental agencies. Issues raised by the report should be reviewed by client legal counsel.

Stantec specifically disclaims any responsibility to update the conclusions in this report if new or different information later becomes available or if the conditions or activities on the property subsequently change.

2.4 PERSONNEL QUALIFICATIONS

This Phase I ESA was conducted by, or under the supervision of, an individual that meets the ASTM definition of an Environmental Professional (EP). The credentials of the EP and other key Stantec personnel involved in conducting this Phase I ESA are provided in Appendix B.

3.0 USER-PROVIDED INFORMATION

ASTM E1527-13 describes responsibilities of the User to complete certain tasks in connection with the performance of "All Appropriate Inquiries" into the Property. The ASTM standard requires that the Environmental Professional request information from the User on the results of those tasks because that information can assist in the identification of RECs, CRECs, HRECs, or de minimis conditions in connection with the Property. Towards that end, Stantec requested that the User provide the following documents and information:

Description of Information	Provided (Yes / No)	Description and/or Key Findings
User Questionnaire	Yes	The User was not aware of any environmental cleanup liens, or activity use limitations associated with the Property. The User is aware that the Property was used for office/industrial and prior to that dairy farming.
Environmental Liens or Activity Use Limitations	No	Land title records, deeds, environmental liens, and activity and use limitation documentation were not provided by the User, and public records were not searched by Stantec.
Previous Environmental Permits or Reports Provided by User	Yes	Stantec was provided with the following environmental reports: • *Final Phase I Environmental Site Assessment of Mitsubishi Electric & Electronics USA, Inc., 5665 Plaza Drive, Cypress, California 90630 prepared by Golder Associates, dated July 2002*. • *2016 Annual Environmental Audit, prepared by ESIS, dated June 22, 2016.* Pertinent information is used and referenced throughout this report.
Purpose of the Phase I ESA	Yes	Due Diligence

The User provided information is included in Appendix C.

Stantec sent the User Questionnaire form to Mr. Matt McGuire, Vice President of Entitlements for the Client. The user questionnaire was forward to the Property Owner Representative, Ms. Lan Lan, Senior Real Estate Manager with CBRE. A completed user questionnaire was provided by Ms. Lan and is included in Appendix C.

4.0 RECORDS REVIEW

The objective of consulting historical sources of information is to develop the history of the Property and surrounding area, in order to evaluate if past uses may have resulted in RECs. Physical setting records are evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Property. During the review of historical records, Stantec attempted to identify uses of the Property from the present to the first developed use of the Property. Stantec's research included the reasonably ascertainable and useful records described in this section.

4.1 PHYSICAL SETTING

A summary of the physical setting of the Property is provided in the table below with additional details in the following subsections

Topography:	The Property is relatively flat with an approximate 36 feet above mean sea level (amsl) elevation with a general topographic gradient to the southwest (EDR, 2021).
Soil/Bedrock Data:	According to previous Phase I ESA prepared by Golder, geotechnical borings advanced on the Property indicated the subsurface consists of sands, silty sands, sandy silts, and silty clays.
Estimated Depth to Groundwater/ Estimated Direction of Gradient:	A perched water-bearing zone was encountered beneath the Property at approximately 6 to 6.5 feet below ground surface (bgs). The groundwater flow direction was not reported; however, groundwater likely follows the topographic gradient to the southwest.
Note: Site-specific groundwater direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.	

4.1.1 Property Topography and Surface Water Flow

The Property is relatively flat with an approximate 36 feet above mean sea level (amsl) elevation with a general topographic gradient to the southwest (EDR, 2021). The Coyote Creek is located approximately 2.8 miles to the west of the Property.

4.1.2 Regional and Property Geology

The Property is located within the Coastal Plain of Orange County, which underlies a coastal alluvial plain in northwestern Orange County and the Santa Ana Watershed. The basin is constrained by non-porous rocks to the north, east, and south, and the Pacific Ocean to the southwest and a low topographic divide to the northwest. The basin consists of upper, middle, and lower aquifers that are contained in marine and non-marine sediments (Department of Water Resources [DWR], 2004).

According to previous Phase I ESA prepared by Golder, geotechnical borings advanced on the Property indicated the subsurface consists of sands, silty sands, sandy silts, and silty clays.

4.1.3 Regional and Property Hydrogeology

The Property is located in the Orange County Basin, which is dominated by a deep structural depression containing a thick accumulation of fresh water-bearing interbedded marine and continental sand, silt, and clay deposits (DWR, 2004). The supper aquifer system included Holocene alluvium, older alluvium, stream terraces, and the upper Pleistocene deposits represented by the La Habra formation. Generally, the upper aquifer system contains a lower percentage of water-bearing strata in the northwest and coastal portions of the area where clays and clayey silts dominate.

According to previous Phase I ESA prepared by Golder, a perched water-bearing zone was encountered beneath the Property at approximately 6 to 6.5 feet below ground surface (bgs). The groundwater flow direction was not reported; however, groundwater likely follows the topographic gradient to the southwest.

4.2 FEDERAL, STATE AND TRIBAL ENVIRONMENTAL RECORDS

A regulatory agency database search report was obtained from Environmental Data Resources (EDR), a third-party environmental database search firm. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in Appendix D.

Stantec evaluated the information listed within the database relative to potential impact to the Property, assessing the potential for impacts based in part on the physical setting. As part of this process, inferences have been made regarding the likely groundwater flow direction at or near the Property. As described in 4.1.3, the inferred shallow groundwater flow direction is to the southwest. Observations about the Property and surrounding properties made during the Property reconnaissance are provided in more detail in Section 5.

4.2.1 Listings for Property

The Property address was identified not identified in the environmental database report.

4.2.2 Listings for Nearby Sites with Potential to Impact Property

Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions on adjacent and nearby sites to pose a REC, CREC, or HREC for the Property. The evaluation included an opinion of the potential for contamination by hazardous substances or petroleum products to migrate to the Property from a nearby property, including by vapor migration or encroachment (i.e., potential for a vapor encroachment condition [VEC].

Based on this evaluation, the following individual facilities were identified as the most likely potential sources of impact to the Property. The basis for why each of the following listed databases creates a REC for the property is also provided.

Listed Facility Name/Address	Database Listing	Distance/Direction from Property	REC? (YES / NO)
Mitsubishi Elevator; Mitsubishi Electric Automotive America; Transwestern; RREEF Management Co. Inc.; and Contract Application 5757 Plaza Drive Cypress, CA 90630	HAZNET, HWTS, FINDS, ECHO, EMI, and RCRA-SQG	Adjacent to the east	No
The facility was considered a small quantity generator of hazardous waste (other organic solids, unspecified aqueous solutions, paint sludge, and waste/mixed oil) with off-site disposal and no reported violations. No additional information or indication of any underground storage tanks were provided by EDR or available online. Therefore, the environmental listings are not considered a REC.			
Precision Ferrites & Ceramics 5576 Corporate Drive Cypress, CA 90630	RCRA-SQG; FINDS; ECHO; HAZNET; HWTS	Approximately 95 feet to the northwest	No
The facility is listed as a small quantity generator of hazardous waste with no reported violations. Given there are no underground features or evidence of a release, this listing is not considered an environmental concern to the Property and no further assessment is warranted.			
Focus Diagnostics 10743 Progress Way Cypress, CA 90630	RCRA-SQG; FINDS; ECHO;	Approximately 179 feet to the west-northwest	No
The facility is listed as a small quantity generator of hazardous waste with no reported violations. Given there are no underground features or evidence of a release, this listing is not considered an environmental concern to the Property and no further assessment is warranted.			
CA-959 Phoneswitch/Headend – Cypress (Time Warner) 5575 Corporate Ave Cypress, CA 90630	AST	Approximately 228 feet to the northwest	No
The facility is listed as having a 1,320-gallon aboveground storage tank (AST) associated with Time Warner Cable. No additional information was provided by EDR or available online. Given there are no underground features or evidence of a release, this listing is not considered an environmental concern to the Property and no further assessment is warranted.			
Yaskawa 5626 Corporate Avenue Cypress, CA 90630	RCRA-SQG	Approximately 287 feet to the north	No
The facility is listed as a small quantity generator of hazardous waste with no reported violations. Given there are no underground features or evidence of a release, this listing is not considered an environmental concern to the Property and no further assessment is warranted.			
Mobil Corporation 5636 Corporate Avenue 4 Cypress, CA 90630	EDR Hist Auto	Approximately 303 feet to the north	No
The facility is listed as a gasoline service station in 1991 and 1992. No additional information was provided by EDR or available online. Given the distance and there is no evidence of a release, this			

Listed Facility Name/Address	Database Listing	Distance/Direction from Property	REC? (YES / NO)
listing is not considered an environmental concern to the Property and no further assessment is warranted.			
Linotype Hell Co 5646 Corporate Avenue Cypress, CA 90630	RCRA-SQG; FINDS; ECHO; HAZNET; HWTS	Approximately 318 feet to the north	No
The facility is listed as a small quantity generator of hazardous waste with no reported violations. Given there are no underground features or evidence of a release, this listing is not considered an environmental concern to the Property and no further assessment is warranted.			
The Boeing Company / OK International / Cook Compression A Dover Company 10800 Valley View Street Cypress, CA 90630	ENVIROSTOR; CERS HAZ WASTE; Orange Co. Industrial Site; EMI; HAZNET; NPDES; CERS; HWTS; RCRA NonGen/NLR	Approximately 321 feet to the east	No
The facility is listed as having undergone an evaluation for oil and water and received closure on January 27, 2005. No additional information was provided by EDR or available online. Minor administration violations were issued. However, all violations were corrected and the facility was returned to compliance. Given there are no underground features or evidence of a release, this listing is not considered an environmental concern to the Property and no further assessment is warranted.			

The remaining listings in the database search report provided in Appendix D do not constitute a potential REC for the Property.

4.3 LOCAL/REGIONAL ENVIRONMENTAL RECORDS

Stantec checked the following sources to obtain information pertaining to Property use and/or indications of RECs in connection with the Property:

4.3.1 Orange County Department of Environmental Health

Agency Name Contact Information	Finding
Orange County Department of Environmental Health (OCHCA) 1241 East Dyer Road, Suite 120 Santa Ana, CA 92705 Phone: (714) 433-6000	The OCHCA provided records for the Property on August 2, 2021. Records available included inspection reports for hazards materials disclosures/inspections for Reef (Transwestern) on July 20, 2016; November 3, 2017; and November 18, 2020. Diesel fuel (160 gallons) was noted associated with the diesel generator. No violations or indication of a release were reported. Copies of the available records are provided in Appendix F.

4.3.2 Orange County Fire Authority

Agency Name Contact Information	Finding
Orange County Fire Authority (OCFA) 1 Fire Authority Road Irvine, CA 92602 Phone: (714) 573-6000	On July 21, 2021, the OCFA provided available records for the Property address. These records included routine inspection notes. No evidence indicating a release were observed in these records. Copies of the available records are provided in Appendix F.

4.3.3 California Regional Water Quality Control Board (CRWQCB)

Agency Name, Contact Information	Findings
Regional Water Quality Control Board (RWQCB), Santa Ana, Region 8 3737 Main Street, Suite 500 Riverside, CA 92501 Phone: 951-7823-4130 Online database: https://geotracker.waterboards.ca.gov	According to an email dated July 23, 2001, there are no records for the Property addresses. Additionally, there are no records for the Property or adjoining facilities listed on the RWQCB's online database Geotracker.

4.3.4 Department of Toxic Substances Control (DTSC)

Agency Name Contact Information	Finding
Department of Toxic Substances Control (DTSC) 5796 Corporate Ave., Cypress, CA 90630 Date Access: August 4, 2021 Online database: https://www.envirostor.dtsc.ca.gov	No records for the Property or adjoining facilities were listed on the DTSC online database Envirostor.

4.3.5 California Geologic Energy Management Division (CalGEM)

Agency Name Contact Information	Finding
California Geologic Energy Management Division (CalGEM) 5816 Corporate Avenue, Suite 200 Cypress, CA 90630 Online database: http://www.conservation.ca.gov/ dog/Pages/WellFinder.aspx Date Access: August 4, 2021	According to the CalGEM wellfinder, there are no oil wells within the Property boundaries. There are no oil wells within a one-mile radius of the Property.

4.3.6 City of Cypress Building Department

Agency Name Contact Information	Finding
City of Cypress Building Department 5275 Orange Avenue Cypress, CA 90630 Phone: 714-229-6680	On July 27, 2021, Ms. Sara Salazar, Executive Assistant to the City Council & City Manager, provided available records for the Property address. Records provided included building permits for tenant improvements. No records of environmental significance were observed. Copies of the available records are provided in Appendix F.

4.4 HISTORICAL RECORDS REVIEW

4.4.1 Land Title Records/Deeds

Land title records, deeds, environmental liens, and activity and use limitation documentation were not provided by the User, and public records were not searched by Stantec.

4.4.2 Aerial Photographs

Stantec reviewed historical aerial photographs provided by EDR. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The following table summarizes Stantec's observations of the reviewed historical aerial photographs.

Year	Scale	Observations, Property and Adjoining Properties
1928	1=500'	The Property and surrounding area appear to be vacant land. The southern portion of the Property is not depicted on the photograph. Railroad tracks appear adjacent to the north.
1938 1947 1952 1954	1=500'	The Property and surrounding area appear to be used for light agricultural purposes. Railroad tracks appear adjacent to the north.
1963	1=500'	The Property and surrounding area remain utilized for light agricultural purposes. Urban development appears to the north.
1977	1=500'	The Property and surrounding area remain utilized for light agricultural purposes. An air station appears to the south beyond a roadway.
1979 1981	1=500'	The Property and surrounding area remain utilized for light agricultural purposes. Commercial development appears to the northwest. A golf course appears to the south.

Year	Scale	Observations, Property and Adjoining Properties
1983	1=500’	The Property and surrounding area to the north, east, and west remain used for light agricultural purposes. A commercial building appears to the south.
1990	1=500’	The Property is developed with the current commercial/office building with an asphalt parking lot to the north. The area south of the Property building is under development for a parking lot. Commercial buildings appear to the north, east, and south. Vacant land appears adjacent to the west. The railroad tracks to the north are no longer present.
1994	1=500’	The Property and surrounding area appear similar to the previous photograph. An asphalt parking lot appears adjacent to the south of the Property building.
2002 2016	1=500’	The Property appears to reflect current conditions. Additional commercial development appears to the west and southwest.

Name of aerial photograph source: EDR, 2021

4.4.3 City Directories

Stantec retained EDR to research available reverse city directories for the Property, in approximately five-year intervals. The following is a summary of Stantec’s review of the city directory listings:

Subject/Adjoining Property	Year	Listed Occupants
Subject Property – 5665 Plaza Drive	2014	CBHM Beacon; Pacific Residential Finance; Toyo Tire; Transfirst Corporate Sales LLC; Transwestern Property Management
Subject Property – 5665 Plaza Drive	2010	Mitsubishi Electric; Mitsubishi Elevators; Montrenes Consulting; Pacific Residential Finance; Telecom RCM; US Merchant SVC
Subject Property – 5665 Plaza Drive	2005	1ST UST Merchant Services; Mitsubishi Electric; Montrenes Financial Services; US Merchant SVC
Subject Property – 5665 Plaza Drive	1995	Mitsubishi Electronics America; Suda Y
Adjoining N 5576 Corporate Avenue	--	Not listed
Adjoining N 5676 Corporate Avenue	--	Not listed
Adjoining E 5757 Plaza Drive	2014	Bybrid Promotions LLC; Hybrid Promotions LLC
Adjoining E 5757 Plaza Drive	2010	Cenic; Various Doctors; Pacific Care of California
Adjoining E 5757 Plaza Drive	2005	Cenic; Corp for Education; Jacobs Engineering Group Inc; Mitsubishi Digital Elec Amr; National Lamdarail Inc; Pacific Health Systems

Subject/Adjoining Property	Year	Listed Occupants
Adjoining E 5757 Plaza Drive	1995	Ericsson Business Comms; Leif Isaksson; Bjorn Lundgren; Lars Rymert; Stig Siogren
Adjoining E 5757 Plaza Drive	1992	Pacificare
Adjoining E 5757 Plaza Drive	1987	Mitsubishi Elec Sls
Adjoining S 5701 Katella Avenue	--	Not listed
Adjoining W 10880 Walker Avenue	--	Not listed

Name of city directories and source: EDR, 2021

4.4.4 Historical Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide information on the history of prior land use and are useful in assessing whether there may be potential environmental contamination on or near the Property. These maps, which have been periodically updated since the late 19th century, often provide valuable insight into historical Property uses.

Stantec requested fire insurance maps from EDR; however, no coverage exists for the Property. The Sanborn® Map Search Report indicating "no coverage" is presented in Appendix E.

4.4.5 Historical Topographic Maps

Stantec reviewed historical USGS 7.5-minute Topographic Maps of the Los Alamitos, Downey, and Artesia, California Quadrangle (scale 1:24,000) to help identify past Property usage and areas of potential environmental concern. Copies of the historical maps are provided in Appendix E. The following table summarizes the maps reviewed and our observations.

Year	Scale	Observations, Property and Adjoining Sites
1896 1899	1=62,500	The Property and surrounding area are depicted as vacant land. No structures or indicators of potential RECs were depicted on the map.
1902	1=62,500	The Property and surrounding area are depicted as vacant land. Railroad tracks appear adjacent to the north. A water feature (i.e. drainage) appears adjacent to the west.
1923 1925 1945	1=24,000	These topographic maps did not have coverage of the Property.
1935 1942 1943 1947	1=31,680 1=62,500 1=24,000	The Property and surrounding area are depicted as vacant land. Railroad tracks appear adjacent to the north. The Texas Oil Tank Farm appears approximately ½ mile to the northwest.
1949 1950	1=24,000	The Property and surrounding area appear similar to the previous maps. A race track appears to the west.

Year	Scale	Observations, Property and Adjoining Sites
1964 1972 1981	1=24,000	No structures or indicators of potential RECs were depicted on the Property. The Los Alamitos Air Station appears to the south beyond Katella Avenue. A golf course and the Los Alamitos Racetrack appear to the west-northwest.
2012	1=24,000	No details are depicted on the map. Roadways appear to reflect the current configuration.

Name of maps and source: EDR, 2021

4.4.6 Other Historical Sources

The following reports were provided by the User for the Property.

- *Final Phase I Environmental Site Assessment of Mitsubishi Electric & Electronics USA, Inc., 5665 Plaza Drive, Cypress, California 90630 prepared by Golder Associates, dated July 2002*.

Golder Associates (Golder) performed a Phase I ESA of the subject Property in 2002 and identified no RECs in connections with the Property. However, the following items of note were observed:

- Mitsubishi Elevator was listed on the HAZNET database for disposing of paint sludge and other organic solids through a transfer station. However, the facility supervisor for Mitsubishi Electric stated no hazardous wastes have been stored at the Property.

- The emergency diesel-powered generator is currently permitted by the AQMD with one violation issued on August 19, 1999 for failure to maintain the generator operating log. However, the engine ran in compliance with the allowable cumulative hours of operation based on the automatic running schedule.

- Golder collected 27 bulk samples of suspect ACMs during their 2002 Phase I ESA. The analytical results indicated the presence of asbestos in the roof penetration mastic on the building. Golder recommended that an Operations and Maintenance Plan be developed for the building.

- Golder collected six carbon dioxide and carbon monoxide samples from each of the five floors. All results were below the ASHRAE maximum ambient indoor air level of 800 ppm for carbon dioxide and 9 ppm for carbon monoxide.

- Water leakage and stained ceiling panels was observed on each of the five floors and suspect fungal growth was observed on the 2nd floor janitors closet drywall and 2nd floor women's restroom floor grout. Golder recommended that all leaks be repaired, and damaged materials removed.

- Significant oil staining was observed surrounding the hydraulic trash compactor located outside the northeast corner of the site building. This area should be steamed cleaned and better housekeeping and maintenance should be implemented.

- *2016 Annual Environmental Audit, prepared by ESIS, Inc. – Health, Safety & Environmental, dated June 22, 2016.*

ESIS, Inc. – Health, Safety & Environmental, (ESIS) performed an annual environmental audit (AEA) for the Property to evaluate the overall environmental status of the Property with emphasis on tenants that are engaged in the storage and use of hazardous materials and generation of hazardous waste. The tenants during this audit included Beacon CBHM, LLC (Healthcare Services Administration Offices) in Suites 100, 400, and 410; Toyo Tires (Administration Offices) in Suites 200 and 300; and Nitto Tires (Administrative Offices) in Suite 250.

No significant environmental concerns were noted in the AEA in 2016 or the previous AEAs conducted by ESIS and other consultants between 2004 and 2015. One double-walled secondarily contained approximately 200-gallon diesel day tank associated with the emergency generator was located on the building roof. ESIS recommended that a Flammable Materials Permit be obtained from the OCFA for storing flammable liquids in the Aboveground Storage Tank (AST) onsite. The South Coast Air Quality Management District (SCAQMD) identified the Property as Facility ID No. 159181 for the operation of the diesel generator.

At the time of the site reconnaissance, no chemicals and hazardous wastes were identified in the tenant suites with the exception of small quantities of commercial cleaners and water treatment chemicals (inhibitors and biocides) associated with a cooling tower that services the onsite building. The cooling tower is maintained by an outside vendor.

5.0 SITE RECONNAISSANCE

A visit to the Property and its vicinity was conducted by Ms. Alicia Jansen, Associate Scientist with Stantec on July 27, 2021. Access to the Property was coordinated by Client representative Mr. Matthew McGuire. Stantec was accompanied by Ms. Lan Lan of CBRE during the Property visit. Figure 2 provides information about the Property and adjoining properties and the location of potential areas of environmental concern. Photographs collected during the Property visit are included in Appendix A.

5.1 SITE RECONNAISSANCE METHODOLOGY

The site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions of the Property that may indicate the presence of RECs. The reconnaissance of the Property was conducted on foot and Stantec utilized the following methodology to observe the Property:

- Traverse the outer Property boundary.
- Traverse transects across the Property.
- Traverse the periphery of all structures on the Property.
- Visually observe accessible interior areas expected to be used by occupants or the public, maintenance and repair areas, utility areas, and a representative sample of occupied spaces.

Weather conditions during the visit to the Property were clear and sunny. There were no weather-related Property access restrictions encountered during the reconnaissance visit.

5.2 GENERAL DESCRIPTION

Property and Area Description:	The Property is located north of Plaza Drive in the City of Cypress, County of Orange, California. Surrounding properties consists of commercial and office buildings.
Property Operations.	The Property is primarily vacant with one administrative tenant remaining.
Structures, Roads, Other Improvements:	The Property is developed with a five-story office building that has a total of 151,589 square feet of tenant space surrounded by asphalt parking and landscaped areas.
Property Size (acres):	Approximately 8.09 acres.
Estimated % of Property Covered by Buildings and/or Pavement:	95%
Observed Current Property Use/Operations:	Office space.
Observed Evidence of Past Property Use(s):	None observed.

Sewage Disposal Method (and age):	City of Cypress.
Potable Water Source:	City of Cypress.
Electric Utility:	Southern California Edison.

5.3 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

The following table summarizes Stantec's observations during the Property reconnaissance.

Observations	Description/Location
Hazardous Substances and Petroleum Products as Defined by CERCLA 42 U.S.C. § 9601(14):	None observed.
Drums (≥ 5 gallons):	None observed.
Strong, Pungent, or Noxious Odors:	None detected.
Pools of Liquid:	None observed.
Unidentified Substance Containers:	None observed.
PCB-Containing Equipment:	One pad-mounted transformer was observed along the southwestern exterior of the building. The transformer appears to be in good condition without any indication of leaking or staining.
Other Observed Evidence of Hazardous Substances or Petroleum Products:	Small quantities of commercial cleaners were observed in the janitors closets. Additionally, water treatment chemicals (inhibitors and biocides) were observed that are associated with the roof-mounted cooling tower that services the onsite building. The cooling tower is maintained by an outside vendor. The containers appeared in good condition with no indication of leaking or staining. An elevator maintenance room was observed on the roof. The elevator hydraulic systems appeared in good condition without any indication of leaking or staining.

5.4 INTERIOR OBSERVATIONS

Stantec made the following observations during the Property reconnaissance of the building interiors at the Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
Heating/Cooling Method:	Roof-mounted HVAC units and a cooling tower are located on the roof.
Surface Stains or Corrosion:	None observed.
Floor Drains and Sumps:	None observed.
Other Interior Observations:	None observed.

5.5 EXTERIOR OBSERVATIONS

Stantec made the following observations during the site reconnaissance of exterior areas of the Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
On-site Pits, Ponds, or Lagoons:	None observed.
Stained Soil or Pavement:	None observed.
Stressed Vegetation:	None observed.
Waste Streams and Waste Collection Areas:	A trash enclosure was observed on the northwestern perimeter of the Property. No evidence of illegal disposal was observed.
Solid Waste Disposal:	No areas indicative of solid waste disposal were observed.
Potential Areas of Fill Placement:	No mounds, piles or depressions suggesting the placement of fill material were observed on the Property.
Wastewater:	No exterior wastewater discharge was observed.
Stormwater:	Concrete drainage swales leading to stormwater drains observed in the asphalt parking lots. No evidence of illegal disposal associated with the stormwater was observed.
Wells:	None observed.
Septic Systems:	No visible evidence of the existence of a septic system was observed.
Other Exterior Observations:	A cooling towner with water treatment chemicals (inhibitors and biocides) was observed on the roof. The cooling tower appeared in good condition without any indication of leaking or staining. The cooling tower is maintained by an outside vendor.

5.6 UNDERGROUND STORAGE TANKS/STRUCTURES

Existing USTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), which would indicate the presence of USTs, was discovered during the site reconnaissance.
Former USTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), reports, or other evidence of the former presence of USTs was discovered during this Phase I ESA.

Other Underground Structures:	None observed.

5.7 ABOVEGROUND STORAGE TANKS

Existing ASTs:	An approximately 2,00-gallon aboveground storage tank (AST) containing diesel fuel associated with the backup generator was observed on the roof of the building. The generator appeared in good condition without any indication of leaking or staining. No visible evidence (fill pipes, vent pipes, dispensers, surface stains), which would indicate the presence of additional ASTs, was discovered during the site reconnaissance.
Former ASTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface stains), reports, or other evidence of the former presence of ASTs was discovered during this Phase I ESA.

5.8 ADJOINING PROPERTIES

5.8.1 Current Uses of Adjoining Properties

As viewed from the Property and/or from public rights-of-way, Stantec made the following observations about use and activities on adjoining properties:

NORTH	Commercial/Office Building.
SOUTH	Commercial/Office Building.
EAST	Commercial/Office Building.
WEST	Commercial/Office Building.

5.8.2 Observed Evidence of Past Uses of Adjoining Properties

Observations of adjoining properties providing indications of past use and activities, if any, are described below.

NORTH	None observed.
SOUTH	None observed.
EAST	None observed.
WEST	None observed.

5.8.3 Pits, Ponds or Lagoons on Adjoining Properties

As viewed from the Property and/or from public rights-of-way, Stantec made the following observations about the presence of pits, ponds and lagoons on adjoining properties:

NORTH	None observed.
SOUTH	None observed.
EAST	None observed.
WEST	None observed.

5.9 OBSERVED PHYSICAL SETTING

Topography of the Property and Surrounding Area:	The Property and surrounding area are relatively flat.

6.0 INTERVIEWS

Stantec conducted interviews with the following individuals:

Name and contact information	Relationship to Property	Key findings:
Ms. Lan Lan CBRE	Property Owner Representative for 6 years	Ms. Lan is not aware of any current or former USTs or environmental issues associated with the Property. Also, Ms. Lan is not aware of any chemical or petroleum storage currently or formerly on the Property.

7.0 EVALUATION

7.1 FINDINGS AND OPINIONS

Information gathered from interviews, reviews of existing data, and a Property inspection was evaluated to determine if RECs are present in connection with the Property. Based on this information, Stantec made the following findings and developed the following opinions.

- The Property consists of approximately 8.09 acres of land developed in circa 1990 with the current five-story office building and associated asphalt parking lot. According to historical documents including topographic maps, a railroad line was located along the northern property boundary and was historically utilized for agricultural purposes until circa 1980. Based on the adjacent railroad line and historical agricultural use, pesticides and or herbicides may have been utilized on the Property and near-surface soils may have at one time contained these compounds. However, the Property has been commercially developed since the 1990s and the soils have been reworked.

  Given the intended future use of the Property is not residential and there is no intended off-site disposal, no further assessment appears warranted at this time. Should off-site disposal of soil be required, Stantec recommends the soil is sampled for profiling purposes prior to removal.

- An environmental records search was performed and identified sites within their respective ASTM E 1527-13 search radii of the Property that may represent RECs, HRECs, or de minimis conditions.

  Based on one or more of the following reasons: distance from the Property, position of sites with respect to assumed groundwater flow direction, the native soils, and regulatory status, none of the sites identified in the in the environmental records search report are expected to affect soil or groundwater quality at the Property. The environmental records search identified no RECs, HRECs or de minimis conditions at or near the Property.

- During the site reconnaissance, Stantec observed a diesel-powered backup generator and cooling tower with water treatment chemicals on the roof. An elevator maintenance room was also observed on the roof in good condition. The generator and cooling tower appeared in good condition without any indication of leaking or staining; therefore, these features are not considered a REC or HREC.

  No other indications of RECs, HRECs or de minimis conditions were observed that are likely to have affected the Property.

7.2 DATA GAPS

The federal AAI rule [40 CFR 312.10(a)] and ASTM E1527-13 identify a “data gap” as the lack or inability to obtain information required by the standards and practices of the rule despite good faith efforts by the Environmental Professional or the User.

Any data gaps resulting from the Phase I ESA described in this report are listed and discussed below.

Gap	Discussion
Deletions or Exceptions from Scope of Work Referenced in Section 1.4:	None
Weather-Related Restrictions to Site Reconnaissance:	None
Facility Access Restrictions to Site Reconnaissance:	None
Other Site Reconnaissance Restrictions:	None
Data Gaps from Environmental Records Review:	None
Data Gaps from Historical Records Review:	None
Data Gaps from Interviews:	None
Other Data Gaps:	None

7.3 CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 5665 Plaza Drive, City of Cypress, County of Orange, California, the Property. Any exceptions to, or deletions from, this practice are described in the Data Gaps section of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Property. No further assessment is warranted at this time.

8.0 NON-SCOPE CONSIDERATIONS

No ASTM E1527-13 non-scope services were performed as part of this Phase I ESA with the following exceptions:

8.1 LEAD-BASED PAINT

Concern for lead-based paint (LBP) is primarily related to residential structures. The EPA's Final Rule on Disclosure of Lead-Based Paint in Housing (40 CFR Part 745) defines LBP as paint or other surface coatings that contain lead equal to or in excess of 1.0 milligram per square centimeter or 0.5 percent by weight.

The risk of lead toxicity in LBP varies based upon the condition of the paint and the year of its application. The U.S. Department of Housing and Urban Development (HUD) has identified the following risk factors:

The risk of lead toxicity in LBP varies based upon the condition of the paint and the year of its application. The U.S. Department of Housing and Urban Development (HUD) has identified the following risk factors:

- The age of the dwelling as follows: maximum risk is from paint applied before 1950.
- There is severe risk from paint applied before 1960.
- There is moderate risk from deteriorated paint applied before 1970.
- There is slight risk from the paint that is intact but applied before 1977.
- The condition of the painted surfaces.
- The presence of children and certain types of households in the building.
- Previously reported cases of lead poisoning in the building or area.

Given the Property was constructed in circa 1990, the presence of LBP is considered unlikely.

8.2 ASBESTOS

Asbestos can be found in many applications, including sprayed-on or blanket-type insulation, pipe wraps, mastics, floor and ceiling tiles, wallboard, mortar, roofing materials, and a variety of other materials commonly used in construction. The greatest asbestos-related human health risks are associated with friable asbestos, which is ACM that can be reduced to powder by hand pressure. Friable asbestos can become airborne and inhaled, and has been associated with specific types of respiratory disease. The manufacturing and use of asbestos in most building products was curtailed during the late 1970s.

Stantec makes no warranty as to the possible existence or absence of inaccessible materials or to their evaluation with respect to asbestos content. Samples of suspect ACM should be collected for laboratory analysis of asbestos prior to any renovation or building demolition, in order to determine the need for compliance with EPA National Emission Standard for Hazardous Air Pollutants (NESHAP) regulations.

Golder collected 27 bulk samples of suspect ACMs during their 2002 Phase I ESA. The analytical results indicated the presence of asbestos in the roof penetration mastic on the building. Golder recommended that an Operations and Maintenance Plan be developed for the building.

Stantec recommends conducting a comprehensive, pre-demolition ACM survey in accordance with the sampling protocol of the Asbestos Hazard Emergency Response Act (AHERA) prior to any activities with the potential to disturb building materials to determine whether ACM are present. Further, in the event ACM is detected, Stantec recommends proper removal and disposal of the materials identified prior to any activities with the potential to disturb them.

8.3 RADON

Radon is a colorless, tasteless radioactive gas with an EPA-specified action level of 4.0 PicoCuries per liter of air (pCi/L) for residential properties. Radon gas has a very short half-life of 3.8 days. The health risk potential of radon is primarily associated with its rate of accumulation within confined areas near or in the ground, such as basements, where vapors can readily transfer to indoor air from the ground through foundation cracks or other pathways. Large, adequately ventilated rooms generally present limited risk for radon exposure. The radon concentrations in buildings and homes depend on many factors, including soil types, temperature, barometric pressure, and building construction (EPA, 1993).

Stantec reviewed regional data published by the EPA on average indoor radon concentrations in the vicinity of the Property (http://www.epa.gov/radon/zonemap.html).

EPA Radon Zones (w/Average Measured Indoor Radon concentrations)		
Zone 1 – High (>4.0 pCi/L)	Zone 2 – Moderate (2 to 4 pCi/L)	Zone 3 – Low (<2 pCi/L)

The Property is located in an area designated as EPA Radon Zone Level 3 with a predicted average indoor screening level less than 2 pCi/L. According to the EDR report, one of the 50 tests performed in zip code 90630 (the zip code of the Property) were above 4 pCi/L and the average first floor radon concentration in Orange County is 0.763 pCi/L. The information regarding this determination is contained in the EDR report attached as Appendix D. Based on this information, the Property lies within an area of low radon risk, radon is unlikely to represent an environmental concern at the Property, and no further assessment is recommended.

8.4 FLOOD ZONES

According to the Physical Setting summary portion of the EDR report, the Property is located within a 0.2% Annual Chance Flood Hazard plain.

Appendix B STANTEC RESUMES

Alicia Jansen CAC, LRCIA

Environmental Scientist
18 years of experience

Alicia is an Associate Scientist with over fifteen years of experience in Phase I and II Environmental Assessments, with strong emphasis in water quality and environmental research. Alicia has managed the preparation of environmental documents, training programs, and environmental compliance during large scale environmental monitoring projects. Alicia's environmental consulting experience includes performing asbestos and lead-based paint surveys, oversight of contractors during asbestos abatement, hazardous materials surveys, and Phase I Environmental Site Assessments (ESAs) in accordance with the practices identified in the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E 1527-13 and the Standard Practice for Environmental Site Assessments for Forestland or Rural Property, ASTM Designation E 2247-16.

PROJECT EXPERIENCE

HEALTH, SAFETY & INDUSTRIAL HYGIENE

Confidential Health Care Company, Asbestos, Lead-Based Paint, and Hazardous Materials Survey | Northern California | Staff

Alicia assisted with site inspections for asbestos, lead-based paint, and hazardous materials at multiple occupied hospitals and office spaces. The scope of work involved sample collection for asbestos and lead-based paint in addition to the quantification of universal wastes (PCBs, mercury containing equipment, refrigerants, etc.) that would require special handling and disposal. She assisted with the preparation of reports summarizing findings.

State of California General Services, Asbestos, Lead-Based Paint, and Hazardous Materials Survey | Northern California | 2009 | Technical Support

Alicia assisted with site inspections for asbestos, lead-based paint, and hazardous materials at multiple communication towers in remote areas. The scope of work involved sample collection for asbestos and lead-based paint in addition to the quantification of universal wastes (PCBs, mercury containing equipment, refrigerants, etc.) that would require special handling and disposal. She assisted with the preparation of reports summarizing findings. Role: Technical Support | Cost: Unknown | Dates involved: 10/2009-10/2009

Indoor Air Quality Assessments* | San Jose, California | 2002-2005 | Staff

Alicia performed site inspections, interviews, and collected air samples to be analyzed for various air pollutants and molds including formaldehyde, penicillium, aspergillus, cladosporium, and stachybotry. She prepared reports summarizing findings and made recommendations.

Veteran's Administration of Puget Sound, Asbestos and Lead-Based Paint Survey | Seattle, Washington | 2009 | Project Scientist

Alicia served as the Project Scientist responsible for hazardous building material assessments, specifically asbestos and lead-based paint. These services were required as part of the pre-design tasks for this project. Over 300 samples were collected over the span of four days culminating in a final hazardous building materials report to be incorporated into the facility design as well as demolition activities once the construction phase of the project commences.

Interim Remedial Action, Indoor Air Sampling, and Sub-Slab Soil Gas Sampling | Sunnyvale, California | 2004–2014 | Task Manager and Field Support

Alicia conducted an indoor air sampling survey using air sampling pumps, dosimeter badges, and flame ionization detector (FID) during a sump excavation. She performs semi-annual sub-slab soil vapor sampling and indoor air quality surveys using summa canisters. She assists with the preparation and submittal of reports summarizing the findings and provides recommendations to the local regulatory agency. Role: Indoor Air Sampling Survey | Cost: Unknown | Dates involved: 09/2004-09/2014

** denotes projects completed with other firms*

Lead Dust Assessment and Abatement Oversight | Fremont, California | 2009 | Technical Support

Alicia assisted with the evaluation of lead dust in an industrial facility. A total of 307 dust wipe samples were collected in order to evaluate the potential presence of lead dust throughout the two-story, 500,000 square foot manufacturing building. Role: Technical Support | Cost: Unknown | Dates involved: 01/2009-03/2009

Former Tesoro Coke Facility, Asbestos, Lead-Based Paint Survey | Pittsburg, California | Technical Support

Alicia assisted with an asbestos and lead paint survey of 20 structures at the facility ultimately scheduled for demolition. More than 200 samples were collected over the span of two days. She prepared a report for demolition while also providing the information needed for worker safety during demolition activities at the facility. Role: Technical Support | Cost: Unknown | Dates involved: 04/2009-04/2009

State of California General Services, Asbestos and Lead-Based Paint Survey | Southern California | 2014-2019 | Certified Asbestos Consultant

Alicia conducted with site inspections for asbestos and lead-based paint at multiple bridges, maintenance stations, and roadways throughout Southern California. The scope of work involved sample collection for asbestos and lead-based paint that would require special handling and disposal. She assisted with the review and approval of reports summarizing findings. Role: Certified Asbestos Consultant | Cost: Unknown | Dates involved: 9/2014-10/2019

PERMITTING, COMPLIANCE, AUDITING

Tesoro Refinery, Initial Study* | Benicia, California | 2005 | Staff

Alicia assisted with the background research and preparation of applicant-prepared initial study for the upgrade of a refinery.

Transmission Line Upgrade* | San Mateo to San Francisco, California | 2005 | Environmental Research and Compliance Staff

Alicia supported the environmental compliance program for the construction of a 27-mile 230 kV underground and overhead transmission line. She assisted with the preparation and submittal of variance requests, extra work space requests, and daily and weekly reports for submittal to the California Public Utilities Commission. She also conducted research and assisted with training and report preparation.

REMEDIAL INVESTIGATIONS & ASSESSMENTS

California Department of Transportation Portfolio | Multiple Sites, Northern California and Southern California, California | 2008-2019 | Task Lead Manager

Alicia prepared quarterly groundwater monitoring reports, subsurface investigation reports, sensitive receptor surveys, and preferential pathway studies for various California Department of Transportation locations throughout Northern California. She assisted with the utility locating, work plan preparation, field coordination, archived data onto the State Water Resource Control Board's (RWQCB) Geotracker electronic filing system. Alicia currently conducts site inspections for asbestos, lead-based paint, and hazardous materials for bridges, salt barns, and maintenance buildings associated with California Department of Transportation locations throughout Southern California. The scope of work involves sample collection for asbestos and lead-based paint that would require special handling and disposal. She assists with the preparation of reports summarizing findings. Role: Task Lead Manager | Cost: Unknown | Dates involved: 06/2008-02/2019

Soil Gas Sampling and Human Health Risk Assessment | San Jose, California | 2014 | Project Lead

Alicia performed a soil vapor survey in conformance with the DTSC Advisory Active Soil Gas Investigations, using soil vapor sampling devices and a mobile laboratory for onsite chemical analysis. She also assisted with the report preparation summarizing the findings and providing recommendations for further assessment.

Confidential Client, Phase I Environmental Site Assessments | Multiple Sites, California, Arizona, New Mexico, Texas, Virginia | Task Manager

Alicia performs Phase I Environmental Site Assessments for multiple confidential clients in accordance with the practices identified in the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E 1527-13 and Standard Practice for Environmental Site Assessments for Forestland or Rural Property, ASTM Designation E 2247-16 to achieve compliance with requirements of the "All Appropriate Inquiries" rule required to obtain protection from liability under the federal Comprehensive Environmental Response, Cleanup and Liability Act (CERCLA). Previous sites include large industrial warehouses, multi-tenant commercial buildings, large lots of vacant land, and residential properties. She reviews topographic maps, Sanborn Fire Insurance Maps, and files at local regulatory agencies. She interviews present and former property owners and performed site and adjacent property reconnaissance. She prepares reports summarizing the findings and provides recommendations for further assessment if applicable. Cost: 3-8000 per report

Goodyear Portfolio | Northern California and Hawaii | 2005–present | Project Lead

Alicia performed Phase I Environmental Site Assessments (ESA) and Phase II Site Assessments for various Goodyear Tire & Rubber Company locations throughout California and Hawaii. She assisted with the installation of monitoring wells and exploratory borings; underground storage tank removals; site restoration; product removal with passive recovery system; archived data onto the State Water Resource Control Board's Geotracker electronic filing system; and assisted with the preparation of quarterly groundwater monitoring reports, sensitive receptor surveys, site conceptual models, and subsurface investigation reports. Approximately 250 Sites • Cost: $8,000 per site.

Kevin Miskin PE

Principal

Kevin is a registered professional engineer with 20 years of experience in the environmental and geotechnical engineering industry. His strong background in environmental engineering, civil engineering, and construction management has provided the expertise and experience to manage all aspects of soil and groundwater assessment and remediation projects in accordance with local, state, and Federal regulations. Kevin has managed complex, large-scale soil and groundwater remediation projects; has maintained major national accounts; has provided technical support to the legal community; environmental due diligence and risk evaluations for corporate mergers, as well as commercial and industrial facilities and portfolios; and has participated in business development activities. He has performed and managed site characterization assessments, site remediation projects, and geotechnical soil investigations and landfill design throughout the US and Mexico.

EDUCATION

BS, Civil Engineering, Brigham Young University, Provo, Utah, 1987

MS, Civil Engineering, Purdue University, Lafayette, Indiana, 1989

REGISTRATIONS

Professional Engineer #48458, State of California

Professional Engineer #12396, State of Nevada

Professional Engineer #28953, State of Arizona

PROFESSIONAL ASSOCIATIONS

8-Hour OSHA Supervisor's Training, Occupational Safety & Health Administration

8-Hour OSHA Health and Safety Annual Refresher Course, Occupational Safety & Health Administration

40-Hour OSHA Health and Safety Training (29 CFR 1910.120), Occupational Safety & Health Administration

PROJECT EXPERIENCE

Crude Oil Pipeline Spill Cleanup

Kevin managed and provided technical guidance on a crude oil pipeline spill in which more than 3,300 barrels of oil discharged through 1.5 miles of remote canyon land and into a drinking water reservoir. Cleanup was conducted under the guidance and direction of the U.S. EPA, U.S. Army Corps of Engineers, California Department of Water Resources, California Department of Fish and Game, USDA Forest Service, etc. The project entailed remote oil recovery in canyons using coffer dams, helicopters and ground crews, recovery of surface oil with skimmers and sorbents, and recovery of oil from the bottom of the lake using an innovative method of sparging bottom sediments to release oil micelles to the surface where they were recovered with booms and sorbents.

Chemicals & Polymers

Two Former Chemical Plants, Environmental Site Assessments and Remediation, Vernon, California (Project Manager)

At the first site, Mr. Miskin managed and provided oversight of the decontamination, demolition, and remediation of a chemical manufacturing facility and adjacent railroad property contaminated with radionuclides (Th-232 and U-238), chlorinated solvents, organo-chlorine pesticides, petroleum hydrocarbons, heavy metals, and acid/caustics. The final site survey for radioactive materials was performed in accordance with NUREG-1575 (MARSSIM). The site was successfully remediated and closed by the City of Vernon and California Environmental Protection Agency. The site was successfully remediated and is currently being redeveloped.

* denotes projects completed with other firms

Kevin Miskin PE

Principal

For the second site, Mr. Miskin managed and designed remedial investigations, feasibility studies, risk assessments, and remedial actions for an old industrial chemical plant including 11 acres of unlined settling ponds and burn dumps containing elevated radionuclide contamination, chlorinated solvents (PCE, TCE and DCE), organo-chlorine pesticides, heavy metals, polynuclear aromatic hydrocarbons, and pH at a chemical plant. His responsibilities included agency negotiations in which risk-based cleanup goals—along with administrative and mechanical (capping) actions—were implemented to reduce potential remedial costs by several million dollars.

Dams & Levees

Dam Erosion Control System, West Lafayette, Indiana

Kevin designed an erosion control system for several gabion check dams to prevent undermining of houses along a 1.5-mile ravine discharging to the Wabash River.

Grantsville Dam Construction, Grantsville, California

Kevin managed quality control testing for the construction of the Grantsville Dam.

Box Lake Dam Construction, Payson, Utah

Kevin managed and inspected the construction of the Box Lake Dam.

Due Diligence Assessments

Due Diligence - Mergers and Acquisitions for Major Oil Companies

Kevin performed environmental due diligence and risk/exposure evaluations for corporate mergers and asset acquisitions for major oil companies, including the development of databases for ranking and evaluating potential environmental risks and liabilities for acquisitions of more than 2,000 facilities.

Environmental Litigation, Arbitration and Mediation support

Litigation Support - Former Bulk Terminal Remediation, Los Angeles, California

Kevin provided technical expertise in settlement negotiations for a major oil company with respect to remediation of an old bulk terminal in the Los Angeles area.

Litigation Support - Major Oil Companies

Kevin provided technical analysis in evaluating environmental damages claims for single and multi-party lawsuits in several lawsuits and participated in settlement negotiations on behalf of major oil companies.

Litigation Support - Refinery Cleanup, Los Angeles, California

Kevin provided technical support representing a group of insurance plaintiffs on a multi-million-dollar soil and groundwater cleanup of a refinery.

Technical Support/Representation - Superfund Contamination

Kevin provided technical support and representation in negotiating allocation of financial responsibility on behalf of client for MTBE contamination in Superfund wells and treatment system.

Litigation Support - Petroleum-Related Contamination

Kevin provided professional consulting for litigation which involved lateral migration of petroleum-related contamination.

Litigation Support - Chlorinated Solvent Release from Dry Cleaner, Ventura County, California

Kevin provided technical support for the plaintiff on a multi-party suit for chlorinated solvent release from a dry cleaner in Ventura County. The process involved contaminant transport mechanisms and plume using a piezocone to locate thin, confined water-bearing units followed by groundwater sampling using a hydropunch sampler advanced with the cone rig.

Remedial Investigation - Air Force Base Landfill

Kevin served as second-party reviewer and technical advisor for the evaluation of a remedial investigation of an old landfill at an Air Force base.

San Gabriel Valley Superfund Site, Remediation & Closure of Multiple Source Areas, Industry, California

Mr. Miskin provided technical support for an aerospace contractor on the allocation of responsibility for the regional chlorinated solvent plumes associated with the San Gabriel Valley Superfund Site mediation process.

* denotes projects completed with other firms

Kevin Miskin PE

Principal

Environmental Site Remediation

Remediation - California Institution for Men, Chino, California

Kevin investigated and provided remedial recommendations for lagoon erosion at the California Institution for Men.

Remediation of Various Petroleum Facilities

Kevin managed national petroleum accounts and directed vadose zone and groundwater assessments and remediation of more than 100 petroleum facilities involving petroleum hydrocarbons ranging from gasoline to crude oil, VOCs (chlorinated and non-chlorinated), fuel oxygenates (MTBE, DIPE, ETBE, TAME), and heavy metals. He designed and implemented various remedial alternatives including excavation (shored and unshored, as well as dewatering systems), above and below grade soil vapor extraction, in-situ bioremediation, landfarming, pump and treat, chemical oxidation, ozone sparging, air sparging, dual phase extraction, and monitored natural attenuation.

Remediation of an Aboveground Tank Farm and Railroad Spur, Industry, California

Kevin managed, designed, and directed installation of an in-situ bioventing system for mitigating elevated levels of styrene, ethylbenzene, and waste oil below an aboveground tank farm and railroad spur at a plastics manufacturer.

Remediation of DNAPL, El Centro, California

Kevin managed remedial investigations, risk assessments, feasibility studies, and remediation of DNAPL in a tight clay formation. Remediation was ultimately performed using electrical resistive heating (ERH) to achieve remediation goals.

Remediation of a Former Landfill/Burn Dump, Riverside, California

Kevin managed and coordinated multi-party CERCLA remedial investigations, feasibility studies, and remedial action of an old landfill/burn dump in an industrial sector of downtown Riverside, including rail yards, foundries, cold storage, and burn dump facilities. He implemented multiple remedial actions to recycle all landfill materials for use in the 50-acre redevelopment project, including landfill gas and material characterization, excavation and segregation of landfill materials, aboveground bioremediation of 10,000 tons of petroleum hydrocarbon-contaminated landfill materials, and chemical stabilization of 13,000 tons of heavy metal (lead and copper) impacted landfill materials.

Remediation of a Former Aerospace Manufacturing Facility

Kevin managed and performed remedial investigations, feasibility studies (ISCO, ERH, MNA), and risk-based remedial actions for a former aerospace manufacturing facility located in the Puente Valley Operable Unit in the San Gabriel Valley Groundwater Superfund Site. Remediation involved natural attenuation of VOCs (primarily PCE) in groundwater, soil vapor extraction, and pattern drilling to mitigate chlorinated and petroleum hydrocarbons. Risk assessments and vapor intrusion studies were performed as part of remedial actions. Remediation was recently completed to the satisfaction of the Los Angeles Regional Water Quality Control Board and is in the process of closure.

Remedial Groundwater Investigations and Feasibility Studies at a Multi-RP Superfund Site, Nebraska

Kevin managed remedial groundwater investigations and feasibility studies at a Nebraska multi-RP superfund site. Activities included groundwater fate and transport modeling, design and implementation of large scale in-situ chemical oxidation (ISCO) pilot study using sodium permanganate to treat TCE groundwater plume, and implementation of monitored natural attenuation as the interim remedy.

* denotes projects completed with other firms

Kevin Miskin PE

Principal

Remediation of a Chemical Plant, Los Angeles, California

Kevin managed and designed remedial investigations, feasibility studies, risk assessments, and remedial actions for an old industrial chemical plant including 11 acres of unlined settling ponds and burn dumps containing elevated radionuclide contamination, chlorinated solvents (PCE, TCE and DCE), organo-chlorine pesticides, heavy metals, polynuclear aromatic hydrocarbons, and pH at a chemical plant. Kevin's responsibilities included agency negotiations in which risk-based cleanup goals—along with administrative and mechanical (capping) actions—were implemented to reduce potential remedial costs by several million dollars.

Remediation of a Chemical Manufacturing Facility, Los Angeles, California

Kevin managed and provided oversight of the decontamination, demolition, and remediation of a chemical manufacturing facility and adjacent railroad property contaminated with radionuclides (Th-232 and U-238), chlorinated solvents, organo-chlorine pesticides, petroleum hydrocarbons, heavy metals, and acid/caustics. The final site survey for radioactive materials was performed in accordance with NUREG-1575 (MARSSIM). The site was successfully remediated and closed by the City of Vernon and California Environmental Protection Agency. The site was successfully remediated and is currently being redeveloped.

Remedial Investigation - Industrial Site and Railway Line, Los Angeles, California

Kevin managed and directed remedial investigation, design, and remedy implementation of a chlorinated volatile organic compound (VOC), petroleum hydrocarbon, PCB-contaminated industrial site (plastics injection molding and aluminum zinc die casting) and railway line in the greater Los Angeles area. Sixty-five thousand tons of PCB-impacted soil were excavated, characterized, and transported off site in accordance with California and TSCA regulations. Chlorinated VOCs in soil and groundwater were mitigated using in-situ soil vapor extraction and natural attenuation. Uniquely designed risk-based remedial actions were implemented on the site, as well as the railroad property, and incorporated both administrative and engineered remedies that resulted in the successful mitigation of health risks. The property has since been redeveloped for commercial use.

CERCLA Remedial Investigations and Feasibility Studies, Northern Arizona

Kevin managed and directed CERCLA remedial investigations and feasibility studies for an old open dump potentially contaminated with uranium mill tailings and heavy metals in northern Arizona under the direction and in association with the US EPA, Department of Interior, Department of Energy, and local Native American tribes.

San Fernando Valley Groundwater Superfund Site, San Fernando Valley, California

Kevin managed remedial investigations, feasibility studies, risk assessment, and implementation of remedial actions at a PRP site in the San Fernando Valley Groundwater Superfund Site involving emerging chemicals, chlorinated solvents, and hexavalent chromium. Chlorinated VOCs and 1.4-dioxane were mitigated by a combination of removal action, vapor extraction, and monitored natural attenuation. Hexavalent chromium in soil and groundwater was treated through a combined program of excavation and in-situ chemical reduction using calcium polysulfide and enhanced biological reduction using emulsified oil and fructose.

Palmdale Plant 57 UST Removal and Investigation, Palmdale, California (Project Manager)

Kevin conducted leak detection investigations (subsurface soil sampling) and provided environmental oversight for removal of large jet fuel underground storage tanks at the Plant 57 tank farm. His duties included drilling, sampling, and reporting.

Naval Weapons Center Whirl Tower PCB and Dioxin Investigation, El Centro, California (Project Manager)

Kevin conducted a site Investigation following the guidelines promulgated in Toxic Substances Control Act to delineate PCB and dioxin contamination on the old Whirl Tower that resulted from a fire in which PCB oils burned in the Whirl Tower motor. The investigation included statistical sampling of various components of the Whirl Tower and included wipe samples, concrete cores and soil samples. The investigation was conducted to support demolition activities.

Geotechnical Analyses

Bridge Geotechnical Investigation, Lake Elsinore, California

Kevin performed a geotechnical investigation and pile foundation analyses for six bridges.

* denotes projects completed with other firms

Principal

Waterline Geotechnical Investigation

Kevin performed a geotechnical investigation for more than 75 miles of waterline for municipal water districts in Riverside and San Bernardino, California.

Civic Center Geotechnical Investigation*, Moreno Valley, California

Kevin performed geotechnical investigation and design for a proposed 64-acre civic center. Services included stabilization of highly collapsible soils for the city hall, a 200-foot-high observation tower, and other structures including office buildings with underground parking.

Methane Collection System, Olinda, California

Kevin provided design recommendations for improvements to a methane collection system at an LFG power plant. Recommendations included modifications to methane extraction system to increase gas flow and power output, optimization of LFG piping network, and methane extraction design improvements for future power plant expansion.

Healthcare

CONFIDENTIAL: Former NASA Industrial Facility, Hospital and MOB Redevelopment, Downey, California

Mr. Miskin participated on the team that conducted a combined environmental and geotechnical evaluation of a former NASA industrial plant that was to be demolished and redeveloped as a hospital and medical office building complex. The NASA facility was utilized for Gemini, Apollo, and Space Shuttle testing, and included an airfield, hazardous material storage, and cryogenic and physical testing areas. The project involved historical research to locate former hazardous material usage and storage areas; drilling and sampling of soil, soil vapor, and groundwater to evaluate impacts; combining the geotechnical and environmental sampling for efficiency and cost savings; assessment and health risk (PEA) reports for evaluation of worker and site user health risk and for submission to the California DTSC; asbestos and hazardous material abatement reports for demolition purposes; geotechnical reports for site grading, foundation, pile, and liner design, and backfill requirements; construction oversight; and participation with client legal counsel in negotiations with state regulatory agencies. Remedial oversight was also conducted, and we coordinated with the client, contractor, adjacent landowners, the City, and regulatory agencies.

Landfill Services

Inert Debris Landfill, Orange County, California

Kevin provided technical support in characterization and closure evaluation for the development of an inert debris landfill.

Central Avenue Landfill, Phoenix, California

Kevin provided design and technical review of landfill cover and closure of the Central Avenue Landfill.

Mohave County Cerbat Landfill, Kingman, Arizona

Kevin provided design and construction oversight of lined septage evaporation ponds at Mohave County Cerbat Landfill.

Carson City Landfill, Carson City, Nevada

Kevin provided technical design and management of expansion, evaluation, and redesign of the Carson City Landfill.

Tuba City Dump Site - Landfill Closure Activities, Tuba City, Arizona

Kevin provided management and oversight of landfill closure activities following the CERCLA RI/FS process at the Tuba City Dump site.

Multiple-Cell Municipal Landfill, Kingman, Arizona

Kevin provided technical oversight of design, construction quality assurance, O&M, and closure of a multiple-cell municipal landfill. Landfill cells were designed and constructed with geosynthetic clay liners, geocomposite drainage system, high density polyethylene liner, sand filter, and leachate collection system.

Longsdon Pit South Landfill, Garden Grove, California

Kevin was involved in the management, construction, and operations and maintenance of a landfill gas collection system and hotel/restaurant gas monitoring systems at the Longsdon Pit South landfill.

Litigation Support and Expert Testimony

Expert Witness - Mold Intrusion*

Kevin provided expert witness testimony on mold intrusion for a large commercial development.

Expert Witness - CERCLA Recovery of Damages, Riverside, California

Kevin served as an expert witness for CERCLA recovery of damages in remediation of an old burn dump in an industrial sector in downtown Riverside.

* denotes projects completed with other firms

Kevin Miskin PE

Principal

Mixed-Use

Port of San Diego Rohr Facility, Chula Vista, California

Mr. Miskin completed a detailed subsurface assessment of the Rohr facility. The intent of the assessment was to evaluate the 40-acre former aircraft part manufacturing facility for acquisition by the Port of San Diego for redevelopment into a business park and entertainment complex. The assessment identified the presence of soil, soil vapor, and groundwater impacts by petroleum hydrocarbons, VOCs, heavy metals, PCBs, and semi-volatile organic compounds. He utilized many sampling techniques to assess the limits and concentrations of contaminants in the subsurface. Ultimately, the team was able to develop a cost estimate for potential remedial action cost associated to corrective action to allow redevelopment.

Seismic Engineering

Lake Gregory Drive Seismic Evaluation, Lake Gregory, California

Kevin performed seismic evaluation, analysis, and design of the 20-foot-high Lake Gregory Drive cribwall and slope.

Transportation Planning

Caltrans ADL Investigation, Hinkley, California (Project Manager)

Kevin managed an ADL investigation for the expansion of 21 kilometers of Route 58. The scope of the investigation included the collection of 1,100 samples from 276 borings and analysis for total lead, soluble lead by Cal WET, TCLP and Cal WET DI, as well as VOCs. The data was statistically analyzed to optimize reuse on site and included designation of areas as Y-1, Y-2, and contractor release materials along the right of way.

Caltrans Bridge Expansion and Retrofits, County of Riverside and San Bernardino, California (Project Manager)

Kevin managed asbestos surveys, lead based paint surveys, and environmental investigations for various chemicals of concern in soil and groundwater for bridge construction, expansion, and retrofitting on freeways and highways throughout San Bernardino and Riverside Counties. Samples of piping materials and bridge shims were collected to determine the existence of asbestos-containing materials and the presence of lead. In addition, soil samples were collected from borings using hand augers, Geoprobe®, hollow stem auger, and rotary wash to evaluate the presence of lead, petroleum hydrocarbons, VOCs, and PCBs.

Caltrans Initial Site Assessment and Naturally Occurring Asbestos Survey, Wrightwood, California (Project Manager)

As Project Manager, Kevin managed and performed an ISA for a 3.2-kilometers-long expansion project of Route 2 through Wrightwood. In addition to evaluating environmental concerns, an NOA survey was performed to assess the asbestos content in schist formations along the right of way.
The NOA survey included drilling and sampling of schist formations along the right of way to map areas where NOA might be encountered or disturbed in the work zone.

Caltrans Initial Site Assessment, Highway 58, Hinkley, California (Project Manager)

Kevin managed and directed the development of an ISA for 34 kilometers of Highway 58. The ISA considered four highway alignment alternatives that included a study width of 3.2 kilometers. The ISA addressed numerous environmental concerns including, USTs, ASTs, water treatment ponds, illegal disposal sites, electrical sub stations, and wetlands.

Caltrans Aerially Deposited Lead Survey, Beaumont, California (Project Manager)

Kevin managed and designed an ADL survey along 28 kilometers the I-10 freeway to support freeway expansion. The work required drilling 336 borings and sampling at multiple depths in the proposed work zone. A total of 660 samples were collected and analyzed for total lead, with additional analysis of select samples for soluble lead by TCLP and Cal WET extractions, as well as Cal WET deioized water. He performed a statistical evaluation and made recommendations in a final report for designated areas of Y-1, Y-2, and contractor release material.

Brian Viggiano PG

Senior Geologist

Brian is a California Professional Geologist with approximately ten years of professional experience in environmental and geotechnical fields. He has performed and managed numerous Environmental Site Assessments (ESAs) for real estate transfers, bank loans, and redevelopment projects. Related sites have included former and active retail petroleum stations, former oil fields, dry cleaners, agricultural sites, plating facilities, landfills, chemical plants and other industrial facilities. He has also performed site assessment, investigation, characterization, and remedy of soil and groundwater contamination utilizing established and innovative technologies including single and multi-phase extraction, in-situ chemical oxidation, pump and treat, electrical resistance heating, and chemical fixation. Brian has also performed geotechnical investigations at proposed school developments and for academic purposes. Projects have included evaluation of active and potentially active faults, seismic evaluations, geophysical surveys, and evaluation of remotely sensed data. His versatility and range of environmental and geotechnical skills have been utilized in all stages of investigation including planning, implementation, site reconnaissance, mapping, surveys, and site inspections during construction, assessment or cleanup to final drafting, illustration, and report preparation.

PROJECT EXPERIENCE

Environmental Site Remediation

Chemical Plant Decommissioning and Remediation, Vernon, California (Field Geologist/ Site Superintendent)

Brian worked as the Field Geologist/ Site Superintendent during assessment, below grade demolition and remediation of an historical Chemical plant located in the City of Vernon, California. Assessment activities consisted of evaluating historical process areas, below grade structures and settling ponds impacted by high levels of pesticides, heavy metals and radionuclides (Thorium-232 and Uranium-238). Remediation activities consisted of excavation and off-site disposal of radiological and chemically impacted waste, corrective grading and capping of residual wastes. The Project value was $8,000,000.00.

Former Open Dump Site, Hopi and Navajo Tribal Lands, Arizona (Field Geologist)

Brian worked as the field geologist at a former open dump site located on Hopi and Navajo Tribal lands. The open dump was reported to have been the source of elevated concentrations of uranium and other radionuclides in groundwater at the site and vicinity. Brian conducted a collaborative multi-week field study with the U.S. Geological Survey (USGS) to assess site geological relationships, potential groundwater flow paths and plume limits, and potential for spring and drinking water resources to be impacted by leachate from the site. Field work included rock coring, installation of groundwater monitor wells, field mapping, and stratigraphic analysis. Subsequent data analysis included review of comprehensive legacy data, evaluation of landfill leachate tracers (e.g., tritium) and whole rock and leachability data. The investigation is ongoing and is being conducted collaboratively with the USGS,

** denotes projects completed with other firms*

Department of Interior, and Environmental Protection Agency.

Garden Grove Redevelopment Project, Garden Grove, California (Project Geologist)
Brian implemented remedial investigation of petroleum-impacted soil and groundwater. His investigation consisted of soil sampling, installation, and subsequent development and sampling of groundwater monitoring wells. He worked with others to design and implement a complex dual-phase extraction system that included the installation of 45 extraction wells and two soil vapor extraction systems. He completed work under the oversight of the State of California.

Chlorinated Solvent Remediation, El Centro, California (Project Geologist)
Brian performed site remedial investigation and clean up of chlorinated solvent-impacted soil and groundwater. He designed and implemented feasibility tests which included in-situ chemical oxidation using potassium permanganate and hi-vacuum dual phase extraction. He also designed and implemented final remediation approach using six-phase electrical resistance heating. The project value was $1,000,000.

Mixed-Use
Compton Redevelopment Project, Compton, California (Project Geologist)
Brian performed site remedial investigation and cleanup of soil chemically impacted with petroleum, PCBs, chlorinated solvents, and heavy metals including hazardous waste concentrations of lead and groundwater impacted with chlorinated solvents. Mitigation of impacted soil included appropriate remedial excavations and corrective grading plans. Groundwater remedy included SVE with air sparging and in-situ chemical oxidation using potassium permanganate. All work was completed under State of California oversight. The project value was $2,800,000.

Multi-Unit / Family Residential
Claremont Residential Development, Claremont, California (Project Geologist)
Brian performed a remedial investigation that identified the presence of approximately 9,000 cubic yards of lead impacted fill materials. He designed and implemented corrective grading plan that included the generation a of numerous small stockpiles of soil that were statistically characterized and either reused on site or disposed of off site. Site mitigation was conducted under the oversight of the Los Angeles County Fire Department. The innovative grading approach resulted in client cost savings of $500,000.

Residential Redevelopment Project, Torrance, California (Project Geologist)
Brian oversaw remediation of petroleum and solvent contamination that resulted from historical oil field activities overprinted by contamination from a more recent release from a dry cleaning facility. The site was mitigated to residential standards under State of California oversight. Remedial actions included re-abandonment of an onsite oil well and removal of the historical pipeline infrastructure, excavation and onsite bioremediation of petroleum impacted soil, and soil vapor extraction to reduce solvent impact in the vicinity of the former dry cleaners. In addition, at all locations where solvent-impacted soil was recalcitrant to vapor extraction, due to the presence of heavy petroleum, a large diameter flight auger was used to drill out residual contamination. The project value was $750,000.

Appendix C USER PROVIDED RECORDS

Stantec

PHASE I ESA USER'S QUESTIONNAIRE

In order to qualify for protection from land owner liability under CERCLA as an *innocent landowner, bona fide prospective purchaser,* or *contiguous property owner*, ASTM standard practice E1527-13 and the federal AAI rule (40 CFR 312) require that the User of the Phase I ESA report provide certain information (if available) to the Environmental Professional completing the assessment. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Information that is not or cannot be provided to the Environmental Professional may be identified as a "data gap" in the Phase I ESA report.

Please answer the following questions as completely as possible. Attach additional pages as needed. Return the completed questionnaire to Stantec along with the executed Authorization For services form.

1. Property Information

Property Name: Cypress Technology Campus

Property Address(es): 5665 & 5757 Plaza Drive

City: Cypress State CA Zip 90630

Property Owner Name: G&I IX CYPRESS CAMPUS LP (DRA Advisors)

Property Owner Phone #: 415-633-0016

2. Contact For Site Access

Name: Craig Wright

Company/Organization/Title: CBRE - Building Engineer

Phone # 714.321.5829 E-Mail Address: Craig.Wright2@cbre.com

3. Environmental Cleanup Liens. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

_____ Yes X _____ No

If yes, describe or attach details of the lien _____

_____

4. Activity and Land Use Limitations. Are you aware of any activity and use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded as applicable to the property as a result of environmental contamination, investigation, cleanup, or related matters?

_____ Yes X _____ No

If yes, describe or attach details of the limitations _____

_____

5. Specialized Knowledge or Experience. As the User of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property, such that you would have specialized knowledge about chemicals and processes used by this type of business?

_____ Yes X_____ No

If yes, describe or attach details of your specialized knowledge or experience _____

_____

6. Relationship of Purchase Price to Fair Market Value of Property. Does the purchase price being paid for the property reasonably reflect the fair market value?

_____Yes _____No

X_____Not applicable. User is not involved in a purchase of the property.

If you conclude that there is a difference, do you have any reason to believe that the reduced purchase price may be related to contamination known or believed to be present at the property?

_____Yes, I have reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property.

_____No, I have no reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property.

7. Commonly Known or Reasonably Ascertainable Information. Are you aware of commonly known or reasonably ascertainable information about the property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases of hazardous substances or petroleum products? For example:

Do you know the past uses of the property?

X_____Yes (describe) Office and Industrial and prior to that, dairy farming.

_____

_____

_____No

Do you know of chemicals, hazardous substances or petroleum products that are present or once were present at the property?

_____Yes (describe) _____

_____

_____

X_____No

Do you know of spills or other releases of chemicals, hazardous substances or petroleum products that have taken place at the property?

_____Yes (describe) _____

_____

_____

X_____No

Do you know of any environmental cleanups that have taken place at the property?

_____Yes (describe) _____

_____

_____

X_____No

8. The Degree of Obviousness of Contamination. E1527-13 and the federal AAI rule (40 CFR 312.31) require that the Phase I ESA consider the degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation. Based on your knowledge and experience related to the property, are there any *obvious* indictors that point to the presence or likely presence of contamination at the property?

_____Yes (describe) _____

_____

_____

X_____No

9. Availability of Previous Environmental Reports. Are you aware of previous environmental site assessment reports, other environmental reports, documents, correspondence, etc. concerning the property and its environmental condition?

_____Yes (describe) _____

_____

_____

X_____No

APPENDIX A: RESUMES
APPENDIX B: EDR RADIUS MAP REPORT

1.0 INTRODUCTION

At the request of Transwestern, ESIS, Inc. – Health Safety & Environmental (ESIS HSE) has performed an Annual Environmental Audit (AEA) for the property (herein referred to as the Site) at 5665 Plaza Drive in Cypress, California. The AEA was conducted on June 15, 2016 in accordance with the RREEF Management Company (RREEF) Scope of Work, Annual Environmental Audit, dated March 4, 2010.

The purpose of the AEA was to evaluate the overall environmental status of the Site with emphasis on tenants that are engaged in the storage and use of hazardous materials and the generation and storage of hazardous waste. This AEA is not intended to be a Phase I Environmental Site Assessment (ESA), Environmental Compliance Audit, or an OSHA Life and Safety Review.

The AEA for the site included a pre-inspection meeting with the property manager, a review of environmental permits, and a site reconnaissance; which focused on chemical and hazardous waste generation and storage practices, building conditions, housekeeping, wastewater discharge, surface staining, and hazardous materials storage. Hazardous materials, substances, or wastes in this report are as defined by CERCLA in the United States Code (42 USC, Section 9601) or as defined by the Resources Conservation and Recovery Act (RCRA) of 1976 as defined by 42 CFR, Section 6931 Subtitle C.

The following tenants were evaluated for the 2016 AEA:

	Tenant Name	Street Address	Facility Description
1	Beacon CBHM, LLC	5665 Plaza Drive, Suites 100, 400 and 410	Healthcare Services Administrative Offices
2	Toyo Tires	5665 Plaza Drive, Suites 200 and 300	Administrative Offices
3	Nitto Tires	5665 Plaza Drive, Suite 250	Administrative Offices

This report is prepared in a format, which includes information and data required by RREEF.

1.1 Site Description

The Site is located at 5665 Plaza Drive in Cypress, Orange County, California (Figure 1). The Site can be found on the U.S. Geological Survey (USGS) Los Alamitos, California, Quadrangle, 7.5 Minute Series Topographic Map at approximately 33°48'20" North latitude and 118°02'03" West longitude.

The Site is developed with one office building that has a total of 151,589 square feet of tenant space. The Site building is situated on an irregular-shaped parcel of land in a commercial portion of Cypress (Figure 1).

The Site building is of steel frame construction with concrete slab-on-grade floors. Interior walls are primarily constructed of wood framing and drywall. The ceilings are composed of 2-foot by 4-foot (2'x4') lay-in acoustical ceiling panels supported by drop-in T-bar grid systems. Floors in the office portions of the tenant spaces are covered with a combination of carpeting and vinyl flooring materials. The perimeter and

parking areas of the subject property are surrounded with landscaped areas consisting of trees and small bushes. Drainage swales leading to storm drains are used to direct onsite surface water runoff. No surface staining or obvious odors, which might indicate disposal of hazardous waste, were noted in the vicinity of the storm drains.

The Site is currently occupied by three tenants. Tenants that utilize chemicals and/or generate hazardous waste in the course of their operations are discussed in Section 8.

1.2 Prior Reports

Hygienetics Environmental Services (a.k.a. ESIS HSE) reviewed a previous environmental report entitled *Final Phase I Environmental Site Assessment of Mitsubishi Electric & Electronics USA, Inc., 5665 Plaza Drive, Cypress, California*, which was submitted by Golder in July 2002. This Phase I ESA did not identify any significant environmental concerns associated with the activities of the on-site tenants or with the surrounding properties. Golder did observe the presence of staining in the vicinity of the trash compactor utilized by Mitsubishi and recommended that this area be cleaned and that improved housekeeping practices be employed in this area. According to the 2002 Phase I ESA issued by Golder, the SCAQMD issued Mitsubishi a paperwork-related violation regarding its on-site use of an emergency power generator. No concerns were identified regarding the facilities on the environmental database report or the historical use of the subject site. Golder also conducted air monitoring for carbon dioxide and carbon monoxide in the site building and found that all of the samples collected were within the recommended maximum ambient air levels for the site building. The 2002 Phase I ESA conducted for the site by Golder did not include any recommendations for further investigation regarding this site building.

The 2004 Annual Environmental Audit for the Site was conducted in 2004 by Hygienetics Environmental. No significant concerns were noted at the Site, and no recommendations for further investigation were included in the AEA report.

LFR conducted an AEA for the Site in 2005. No significant environmental concerns were noted at the Site, and no recommendations for further environmental investigation were included in the AEA report.

Hygienetics conducted AEAs for the Site in 2006, 2007 and 2008. No significant environmental concerns were noted at the Site, and no recommendations for further environmental investigation were included in the 2006, 2007, and 2008 AEAs.

ARCADIS conducted an AEA for the Site in 2009 and 2010. No significant environmental concerns were noted at the Site and no recommendations were made. ARCADIS also conducted an AEA for the Site in 2011. Based upon observations made during the 2011 AEA, ARCADIS recommended the Site obtain a Flammable Materials Permit issued by the Orange County Fire Authority (OCFA) required for storing flammable liquids in an AST on site. At the time of ARCADIS's 2012 AEA inspection, the Site still had not obtained a Flammable Materials Permit.

ESIS HSE conducted the AEAs for the Site in 2013, 2014, and 2015. One double-walled, secondarily contained approximately 200-gallon diesel day tank is used to power an emergency generator and located on the Site building roof. A Flammable Materials Permit issued by the OCFA is required for storing flammable liquids in the AST on site. ESIS HSE recommended that Transwestern obtain the required OCFA

permit. At the time of the 2016 AEA, the required permit was not presented for review during the Site visit.

1.3 Site Reconnaissance

Ms. Ruth Weinberger, Senior HSE Consultant with ESIS HSE, visited the Site escorted by Ms. Lynn Gordon on June 15, 2016. The site reconnaissance focused on general building conditions including on-site chemical and hazardous materials use, storage, and disposal; hazardous waste generation, storage, and disposal; environmental permits; the presence of surface impoundments, USTs and ASTs; and the presence of on-site transformers and overhead power lines.

2.0 REVIEW OF TENANT ENVIRONMENTAL PERMITS

ESIS HSE attempted to review environmental permits for tenants at the Site who possess environmental permits. According to information provided by site tenants and observations in the field, none of the Site tenants (of those inspected at the Site) engages in activities requiring environmental permits.

However, one onsite backup generator and associated tank require an environmental permit. An approximately 200-gallon aboveground storage tank (AST) is located on the Site building roof. The AST is used to power a backup generator. The following permit has been issued for operation of the generator:

- South Coast Air Quality Management District (SCAQMD) Facility ID No. 159181 for the operation of a diesel generator (the current permit was not posted on the generator).

This permit is renewed by the SCAQMD on an annual basis. A permit for storing flammable liquids issued by the OCFA does not appear to be maintained onsite.

3.0 SURFACE WATER CONTAMINATION

Stormwater drains, which lead to and the municipal storm drain system, are used to collect runoff from the roof and surface runoff entering the garage. No surface staining or obvious noxious odors were noted in the vicinity of the storm drains, which might indicate disposal of hazardous waste.

4.0 SOIL CONTAMINATION

ESIS HSE inspected the Site for surface staining. At the time of the 2016 AEA site inspection, ESIS HSE did not observe any visual presence of staining inside the tenant spaces inspected at the site. Small areas of surface staining were noted in parking areas, which are most likely the result of leaking automobile fluids. These stained areas do not represent a significant on-site threat of hydrocarbon contamination to the soil.

5.0 ASBESTOS CONTAINING MATERIALS

In conjunction with the 2002 Phase I ESA, Golder collected a total of twenty-seven (27) bulk samples of suspect ACMs from the 5665 Plaza Drive site building. The analytical results indicated the presence of asbestos in the roof penetration mastic on this building. Golder recommended that a limited Operations and Maintenance (O&M) Plan be developed for this building.

ESIS HSE recommends that the confirmed ACMs be handled as required by current regulations.

6.0 POLYCHLORINATED BIPHENYLS

6.1 Transformers

Two (2) pad-mounted electrical transformers were identified on the Site, which are owned and operated by Southern California Edison (SCE). SCE has issued a statement indicating that it is unlikely that these transformers are PCB-containing. SCE is responsible for ensuring that its transformers comply with all applicable regulations. At the time of the reconnaissance, the transformers did not appear to be leaking.

6.2 Fluorescent Light Fixtures

PCBs may also be found in capacitors and fluorescent lighting unit ballasts. Fluorescent lighting was observed in all the tenant areas that were entered. The ballasts were inaccessible at the time of the site inspection. ESIS HSE recommends that burned out ballasts are disposed of as required by law.

7.0 UNDERGROUND AND ABOVE GROUND STORAGE TANKS

No visual evidence of USTs was identified at the Site. One double-walled, secondarily contained approximately 200-gallon diesel day tank is used to power an emergency generator and located on the Site building roof. No evidence of leaks or stains was observed/reported in the vicinity of the diesel AST.

8.0 TENANT MANAGEMENT OF HAZARDOUS MATERIALS

At the time of the site reconnaissance, no chemicals and hazardous wastes were identified in the tenant suites assessed for the 2016 audit. Small quantities of commercial cleaners were observed in the tenant spaces inspected during the AEA Site walk. The onsite storage and use of these products does not represent an environmental concern to the subject Site.

Additional onsite chemicals include small quantities of water treatment chemicals (inhibitor and biocide) used in association with a cooling tower that services the onsite building. The cooling tower is maintained by an outside vendor.

9.0 REGULATORY RECORDS REVIEW

The RREEF AEA scope of work indicates that “if warranted on the basis of observed Site and/or adjacent Site conditions (or every five years), an updated regulatory records database should be obtained and reviewed to evaluate potential environmental conditions at the Site from either on-Site or off-Site sources.” As part of the 2016 AEA, government records search for performed by Environmental Data Resources, Incorporated (EDR).

On-Site

According to the attached EDR Radius Map Report, the Site address does not appear on any of the government databases searched by EDR indicating a release of hazardous substances has occurred.

The only Site listings included in the EDR database report were related to Mitsubishi Elevator Inc. (Mitsubishi) and Transwestern. Mitsubishi and Transwestern are included on the HAZNET database for the manifesting of hazardous waste for disposal. Based on the information provided, no notices of violation, releases or other outstanding issues were reported in relation to the Site address.

Off-Site

ESIS HSE also searched the EDR report and State of California GEOTRACKER and ENVIROSTOR databases to assess the potential for Site impacts from nearby off-Site sources. According to the information reviewed, the potential for subsurface impacts from off-Site hazardous substances release incidents is low.

There were no additional adjoining or adjacent properties listed on either the GEOTRACKER or ENVIROSTOR database.

10.0 RADON ASSESSMENT

Based on the RREEF scope of work, radon assessments are not included in the scope of work for AEAs. As such, a radon assessment has not been conducted for the Site in conjunction with the 2016 AEA.

11.0 OSHA HAZARD COMMUNICATION STANDARD (HCS)

According to the RREEF scope of work, if conditions exist where RREEF employees may be required to handle hazardous materials, an evaluation is required to be conducted in conjunction with the AEA. RREEF employees do not staff the Site. Transwestern/RREEF employees may use paint and a variety of different building maintenance chemicals for routine maintenance and repair activities. The OSHA Hazard Communication Standard requires employers to notify employees regarding the hazardous related to their jobs. ESIS HSE anticipates Transwestern's compliance with the OSHA Hazard Communication Standard provided that material safety data sheets (MSDS) are made available to their employees for their reference.

12.0 LEAD IN DRINKING WATER OR PAINT

According to the RREEF scope of work, lead "in any form" is not recommended to be evaluated in conjunction with AEAs. As such, such lead assessments have not been conducted for the Site in conjunction with the 2016 AEA.

13.0 PESTICIDES/HERBICIDES

ESIS HSE inspected the Site for evidence of pesticide/herbicide use and/or storage. No pesticides/herbicides were identified during the Site reconnaissance. Transwestern/RREEF contracts all

landscaping at the Site to an outside landscape maintenance contractor. Pesticides and herbicides are reportedly used on-Site on a limited basis according to manufacturer instructions, but are not stored on-Site. Based on the information provided, the use of chemicals, fuels, and/or pesticides does not appear to be an environmental concern in relation to the Site at this time.

14.0 INDOOR AIR QUALITY (IAQ)

According to the RREEF scope of work, IAQ testing is not recommended to be evaluated in conjunction with AEAs. As such, such IAQ testing has not been conducted for the Site in conjunction with the 2016 AEA.

15.0 MICROBIAL CONTAMINATION

During the course of this AEA, ESIS inspected the tenant spaces for visual evidence of moisture intrusion and/or microbial growth. In addition, ESIS HSE conducted an interview with current onsite representatives regarding events leading to moisture intrusion and subsequent microbial growth. Based on information from tenant interviews and observations in the field, there was no evidence of moisture-intrusion/mold growth in tenant spaces visited during the 2016 AEA. Therefore, moisture-intrusion/microbial growth does not appear to represent an environmental concern at the Site at this time.

16.0 DRY CLEANERS

Based on the information provided by Transwestern and RREEF and observations made during the course of ESIS HSE's AEA Site inspection, no dry cleaning facilities (plant on-premises, drop-off locations or any other dry cleaning-type facilities) are present at the Site. As such, ESIS HSE did not perform any additional or specialized evaluation of the Site with respect to dry cleaners.

17.0 MSDS REVIEW

ESIS HSE reviewed MSDS associated with on-Site chemical usage, and observed chemical and hazardous waste storage and handling practices at the Site. The tenants at the Site do not utilize/store significant amounts of chemicals on-Site as part of their operations. Some of these tenants also, store small quantities of household-strength cleaners in break room areas (generally stored under sinks, in cupboards or on shelves). Housekeeping on-Site was noted to be good in all tenant spaces visited during the 2016 AEA.

18.0 FINDINGS, CONCLUSIONS AND RECOMMENDATIONS

ESIS HSE conducted an AEA for 5665 Plaza Drive in Cypress, California. The AEA was conducted in accordance with RREEF Management Company Scope of Work, Annual Environmental Audit, dated March 4, 2010. The AEA consisted of a previous report review and a site reconnaissance. Based on field observations, review of previous environmental reports, and current regulatory guidelines, the following conclusions and recommendations are presented:

Item 1:
A Flammable Materials Permit issued by the OCFA is required for storing flammable liquids in the AST on site.

Recommendations:
ESIS HSE recommends that Transwestern obtain the required OCFA permit.

Item 2:
At the time of the site inspection, the suspected/confirmed ACMs were noted to be in good condition.

Recommendations:
ESIS HSE recommends that ACMs be handled as required by current regulations.

Based upon the 2016 AEA site observations and previous report review, no further environmental investigation is warranted at this time.

Annual follow-up audits should be continued in accordance with the RREEF Management Company Scope of Work, Annual Environmental Audit, dated March 4, 2010.

19.0 LIMITATIONS

This report and the information herein contained have been prepared by ESIS, Inc. Health, Safety & Environmental Services (herein referred to as ESIS HSE) for the sole use of RREEF Management Company/Transwestern (herein referred to as the Client), or their assigned parties. The conclusions presented in the Report were based solely upon the services described therein, and not on scientific tasks or procedure beyond the scope of described services or the time and budgetary constraints imposed by the Client. The work described in this report was carried out in accordance with the attached Standard Conditions outlined in the proposal/contract.

The purpose of this report was to assess the physical characteristics of the Site with respect to the presence in the environment of hazardous material/waste or petroleum products (herein referred to as oil). No specific attempt was made to check on the compliance of present or past owners or operators of the Site with federal, state or local laws and regulations environmental or otherwise.

In preparing this Report, ESIS HSE has relied on certain information provided by observations made by ESIS HSE personnel during an on-Site inspection and evaluation, personal interviews of the client, tenants, other private parties and consultants; research of available public information found in documents, records and maps provided by federal, state and/or local regulatory agencies, document libraries and utility companies. This is subject to the limitations of historical documentation, as well as the availability and accuracy of pertinent records. Although there have been some degree of overlap in the information provided by these various sources, ESIS HSE did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this Site assessment. The accuracy of property boundaries, addresses, and/or assessor parcel numbers for the Site or properties examined for the investigation are the responsibility of the Client.

Observations were made of the Site and of structures on the Site as indicated within the Report. Where access to portions of the Site or to structures on the Site was unavailable or limited, ESIS HSE is unable

to render an opinion as to the presence of hazardous material/waste or oil, or to the presence of indirect evidence relating to hazardous material/waste or oil, in that portion of the Site or structure. In addition, ESIS HSE renders no opinion as to the presence of hazardous material/waste or oil, where direct observation of the interior walls, floor, or ceiling of a structure on a Site was obstructed by objects or coverings on or over these surfaces or when access was denied by the property owner, operator or tenant.

The initial Site investigation took into account the natural and man made features of the Site, including any unusual or suspect phenomenon. These factors, combined with the Site's geology, hydrogeology, hydrology, topography, and past and present land uses served as a basis for choosing a methodology and location for subsurface exploration as well as groundwater and subsurface sampling, if done. The subsurface data, if provided, is meant as a representative overview of the Site. It is possible that despite the use of reasonable care and interpretation, ESIS HSE may not have identified illegally disposed hazardous materials and/or wastes, unreported regulatory violations, the presence of hazardous substances or wastes migrating onto the Site from off-Site sources, and unpermitted, misidentified illegal, or inappropriately abandoned underground tanks, vaults, drums, or other containers or buried impoundments on the Site and its immediate vicinity.

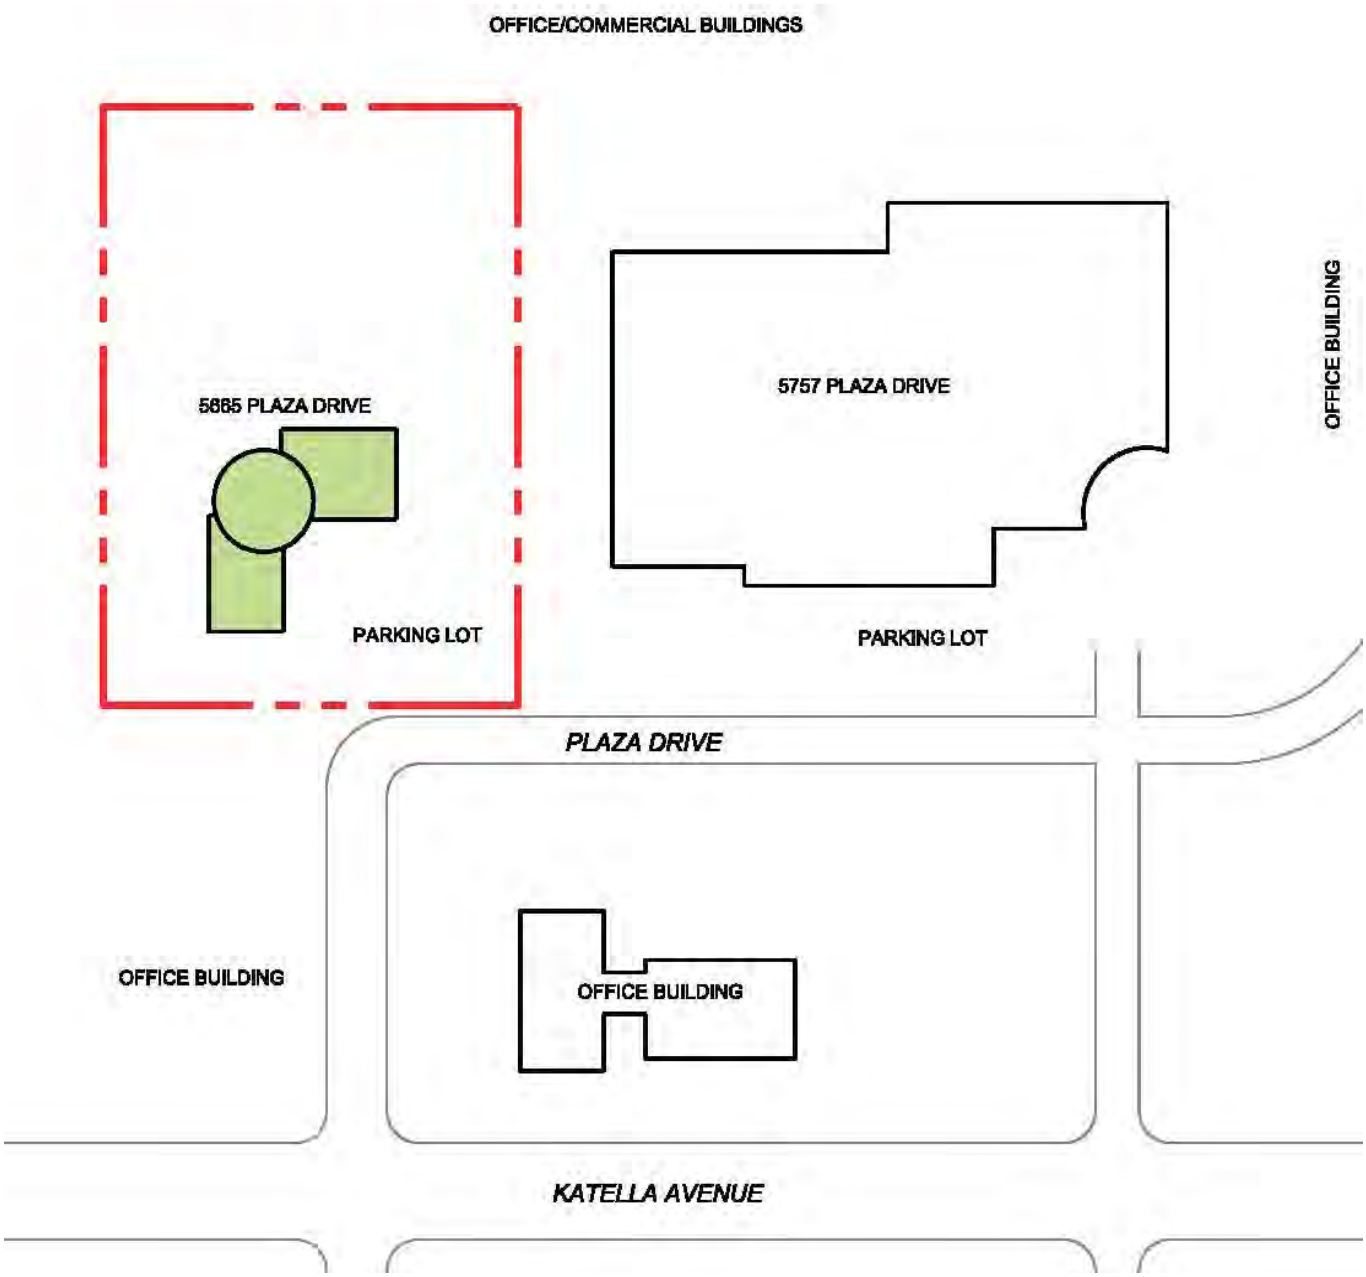
Unless otherwise specified in the Report, ESIS HSE did not conduct surface or subsurface investigation involving the physical collection and analysis of air, soil-vapor, surface- or ground-water, bulk building materials, transformer fluids, and contents of on Site tanks, or other containers; nor have any geophysical investigations been conducted.

If a Phase II investigation was conducted, then the conclusions and recommendations contained in this Report are based in part upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Water level readings have been made in the test pits, borings and/or observation wells at the times and under the conditions stated on the test pit or boring logs. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall, time, and other factors. Should additional chemical data become available in the future, these data should be reviewed by ESIS HSE, and the conclusions and recommendations presented herein modified accordingly.

Except as noted within the text of the report, no quantitative laboratory testing was preformed as part of the Site assessment. Where such analyses have been conducted by an outside laboratory, ESIS HSE has relied upon the data provided, and has not conducted an independent evaluation of the reliability of these tests.

The conclusions and recommendations contained in this report are based in part upon various types of chemical data and are contingent upon their validity. These data have been and are contingent upon their validity. These data have been reviewed and interpretations made in the Report. As indicated within the Report, some of these data are preliminary "screening" level data and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time and other factors.



Should additional chemical data become available in the future, this data should be reviewed by ESIS HSE and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific parameters during the course of this Site assessment, as described in the test. However, it should be noted that additional chemical constituents not searched for during the current study may be present in soil and/or groundwater at the Site.

ESIS HSE assumes no responsibility for the accuracy of information identified or obtained from government records which may be out of date, incomplete, or otherwise inaccurate. ESIS HSE assumes no responsibility for conditions that were not specifically requested and evaluated, events that may have occurred after the Site visit such as illegal disposal or accidental spillage of hazardous materials/wastes, or conditions that were not generally recognized as environmentally unacceptable at the date this report was prepared. ESIS HSE prepared this report for the Client's exclusive use for this particular project. No other warranties, expressed or implied, as to the professional advice provided are made. It is recommended that ESIS HSE be retained to provide further engineering services during construction and/or implementation of any remedial measures recommended in this report. This is to allow ESIS HSE to observe compliance with the concepts and recommendations contained herein, and to allow the development of design changes in the event that subsurface conditions differ from those anticipated.

EPA/AHERA Accredited Asbestos Contractor Supervisor

Ms. Weinberger has over 15 years of experience in the environmental field as a consultant in the private sector. Ms. Weinberger has managed or participated in the performance of more than 600 environmental site assessments, more than 600 environmental audits and more than 150 environmental compliance reviews of industrial, commercial, and residential properties throughout the United States. Ms. Weinberger previously led the National Accounts Program for Hygienetics Environmental Services (Hygienetics, currently known as ESIS, Inc. – Health, Safety and Environmental Services (ESIS HSE)), reviewing Phase I Environmental Site Assessments (ESAs) and various environmental reports company-wide. Ms. Weinberger has also conducted soil and groundwater investigations for a variety of clients in the Western United States. In the past, Ms. Weinberger has acted as a Senior Environmental Consultant for a national consulting firm and was an appointed Technical Leader within the company, reviewing environmental reports company-wide.

Representative Project Experience

Compliance Related Services

Aramark, Various Locations.
Developed Environmental and OSHA Gap Analysis Form related to healthcare industrial laundry facilities based on applicable federal, state and local environmental and OSHA-related regulations.

Confidential Client, Carlsbad, California.
Performed a compliance review and environmental assessment of a large laser manufacturing company with a location in Carlsbad, California. Included reviewing the company's programs and permits, as well as an inspection of the facility to confirm compliance.

Confidential Client, Carson and Fallbrook, California.
Performed a compliance review and environmental assessment for a large nursery company, specifically related to their Carson and Fallbrook, California locations. Researched regulations related to nursery/farm workers (i.e. personal protective equipment, pesticide application regulations); water management (i.e. storm water management and related plans; protection of nearby wetland areas); as well as typical hazardous materials, hazardous waste, air and tank regulations.

Confidential Client, Century City, California.
Managed NPDES permit for a large shopping center de-watering system. Performed quarterly discharge monitoring events. Prepared and submitted Discharge Monitoring Reports.

Certifications/Accreditations (continued)

EPA/AHERA Accredited Building Inspector

40-Hour Lead Inspector/Assessor Training

OSHA 40-Hour Hazardous Waste Operations/24-Hour Health & Safety Training

Confidential Client, Culver City, California.
Managed NPDES permit for a large entertainment-related property de-watering system impacted with perchloroethylene from nearby, off-property facilities. Performed quarterly discharge monitoring events. Maintained an activated carbon groundwater remediation system. Prepared and submitted Discharge Monitoring Reports.

Confidential Client, Irvine, California.
Performed a compliance review and environmental assessment of a large furniture manufacturer located in Irvine, California. During the course of the compliance review, various environmental compliance issues were observed and noted. As a result, Ms. Weinberger provided environmental compliance recommendations and support to this client in order to address these issues. Support included air permit reviews and revisions; material safety data sheet (MSDS) review, collection, organization and training structure; and development of a hazard communication plan.

Confidential Client, Ontario, California.
Performed an insurance risk assessment audit for a large pool and household chemicals manufacturer. Reviewed corporate environmental, chemical, hazardous waste, health, safety, premises, automobile and other risks related to the company and its operation at the Ontario, California headquarters. Also reviewed standard operating procedures and policies; permits; hazardous waste storage and disposal documentation. Conducted a site inspection to observe whether the standard operating procedures and policies prepared by the company and its consults were being implemented in on-site operations.

Confidential Client, Orange, California.
Performed a compliance review and environmental assessment of a large healthcare laundry facility located in Orange, California. Researched regulations related to healthcare laundry industry; water management (i.e. wastewater management, storm water management, outdoor storage); as well as typical hazardous materials, hazardous waste, air and tank regulations.

Confidential Client, South El Monte, California.
Performed a compliance review and environmental assessment of a facility utilized to manufacture large metal bins and containers. Researched regulations related to metal cutting, painting, air emissions; waste storage; water management; as well as typical hazardous materials and hazardous waste regulations

Confidential Client, Southern California.
Performed a compliance review and environmental assessment several nursery, tree and landscape maintenance facilities located throughout. Researched regulations related to healthcare laundry industry; water management (i.e. wastewater management, storm water management, outdoor storage); as well as typical hazardous materials, hazardous waste, air and tank regulations.

Confidential Client, Sparks, Nevada.
Performed Phase I ESA and compliance review for a waste oil and hazardous waste transfer, storage and disposal facility (TSDF). The compliance review included reviewing the following: hazard communication plans; tank compliance; hazardous materials storage, permitting and compliance; hazardous waste storage, permitting and compliance; spill plans; water management (i.e. wastewater, storm water, wells); air permitting; and reviews of records pertaining to this facility.

Confidential Client, Washougal, Washington.
Performed Phase I ESA and compliance review for a large manufacturer of non-woven fabrics. The compliance review included reviewing the following: hazard communication plans; tank compliance; hazardous materials storage, permitting and compliance; hazardous waste storage, permitting and compliance; spill plans; water management (i.e. wastewater, storm water, wetlands and river protection; wells); air permitting; and reviews of records pertaining to this facility.

RREEF Management Company/The RREEF Funds, Various Locations.
Served as inspector, project manager and overall coordinator for Annual Environmental Audits (AEAs) of RREEF's various industrial, commercial, office and retail properties. Conducted the AEAs in accordance with an agreed upon scope of work, which included reviewing the following: permits; chemical and hazardous wastes storage practices; hazardous waste disposal documentation/records; spill plans and other environmentally-related plans; and previous environmental reports related to each property. In addition, performed visual inspections for evidence of moisture intrusion during the course of the site inspections.

Standard Management Company, Property in Chatsworth, California.
Provided hazardous materials testing, tank removal oversight, and waste management in conjunction with decommissioning abandoned pharmaceutical manufacturing equipment. Conducted a compliance audit related to on-site tenants prior to lease renewal. This audit included an interview with the company president, review of permits and records, inspection of the facility, and surrounding property reconnaissance.

Valley Crest Companies, Various Locations.
Performed a compliance review and environmental assessment several nursery, tree and landscape maintenance facilities located throughout. Researched regulations related to nursery/farm workers (i.e. personal protective equipment, pesticide application regulations); water management (i.e. storm water management and related plans; protection of nearby wetland areas); as well as typical hazardous materials, hazardous waste, air and tank regulations.

Underground Storage Tank Compliance and Management Services

Confidential Client, St. George, Utah.
Performed Phase I ESA, general compliance review and an underground storage tank (UST) compliance review for a large gasoline and diesel filling station and travel center in St. George, Utah. The compliance review included reviewing the following: hazard communication plans; tank compliance;

hazardous materials storage, permitting and compliance; hazardous waste storage, permitting and compliance; spill plans; water management (i.e. wastewater, storm water, wells); air permitting; and reviews of records pertaining to this facility. The UST compliance review included reviewing the following: tank permitting and registration records; tank monitoring system; employee training with respect to tanks, monitoring and related plans/procedures; tank filling procedures; tank gauging; and other UST-related items.

Portfolio of Gasoline Stations, Clients and Locations Confidential.
Served as project manager for conducting document review for UST compliance of a portfolio of gasoline station properties related to a real estate transaction. The scope of the review included document/data gathering from the corporate entities involved with the transaction; telephone interviews with site personnel and corporate representatives; telephone interviews with the appropriate regulatory agencies and case workers (regarding both impact and compliance issues); compiling the information gathered; and presentation of the information to the client.

Tank Facilities, Clients and Locations Confidential.
Conducted environmental reviews as they relate to environmental insurance tank policies for various gasoline service stations, hotels, nursing homes, apartments, and other facilities that include tanks for which coverage is sought. Includes telephone surveys and reviews of previous reports, including Phase I ESAs, Phase II subsurface investigations, groundwater monitoring reports, various regulatory agency documents, and related environmental information.

Due Diligence and Mergers & Acquisitions (M&A) Projects

GE Capital Real Estate, Nationwide.
Served as client manager for GE Capital Real Estate projects across the United States. Responsible for staffing projects and serving as liaison between GE Capital Real Estate and project personnel, performing and managing various Phase I/II environmental projects for GE Capital Real Estate. Other duties involved negotiating pricing, preparing proposals and providing technical support to company offices nationwide.

The RREEF Funds, Various Projects.
Served as project manager for Phase I ESAs of various industrial, commercial, office, retail and residential properties scheduled for acquisition. Phase I ESAs have been conducted in accordance with the AAI Standard (or similar industry standards in place at the time). In addition, industrial hygiene related tasks typically performed during such acquisition studies, with tasks including asbestos surveys; lead-in-drinking-water sampling; radon surveys; visual inspections for evidence of moisture intrusion; and indoor air quality (IAQ) assessment. Such IAQ assessments required testing for temperature, relative humidity, carbon dioxide, and carbon monoxide.

Various Food Production Facilities, Clients and Locations Confidential.
Served as project manager for conducting Phase I ESAs and Environmental Compliance Reviews for a series of food production facilities located throughout California. The scope of work included site inspections; interviews; data gathering in order to evaluate potential compliance issues related to these facilities (including, but not limited to, Ozone Depleting Substances (ODSs)); client conference status calls and preparation of final reports.

Historical Hotel in Southern California, Client and Location Confidential.
Served as project manager on a Phase I ESA of a large, historical hotel complex in Southern California. Phase I ESA conducted in accordance with the AAI Standard (or similar industry standard in place at the time). Phase I ESA included an inspection of the entire complex; review of permits and documents; review of historical information dating to the 1880s and reconciling tank removals and related records associated with this hotel property.

Airport in Southern California, Client and Location Confidential.
Served as staff environmental scientist during the removal of 10 USTs from a Southern California airport. Included oversight of excavation, soil sampling, oversight of shoring installation, and final confirmation sampling. Assisted the Professional Geologist with the final report to be submitted to the regulatory agency providing oversight on the project, on behalf of the airport.

GE Capital Real Estate, Property in Lawndale, California.
Served as project manager for a Phase II ESA on a dry cleaning facility to determine extent of tetrachloroethene contamination in soil and groundwater. Soil and groundwater data obtained were used to evaluate remedial options. Worked closely with Regional Water Quality Control Board/Orange County Health Care Agency to seek "case closure" for the site.

Premises Pollution Liability Insurance Policy Review Projects

Large Private Real Estate Owner/Developer, Client and Locations Confidential.
Served as sole reviewer for a large portfolio of properties encompassing tens of thousands of acres in the Western U.S. Responsible for reviewing previous reports, reviewing existing policy and exclusion information, and preparing a risk evaluation matrix based on these reviews.

Large Chemical Manufacturer, Client and Locations Confidential.
Served as project manager for the review of a large chemical manufacturer with locations throughout the world. The insured manufactures chemicals that are used by a variety of end-users, from industry to private consumers. Reviewed the company's oldest and most complex location and managed a team of in-house and out-of-house consultants to perform reviews on additional properties. Also included management of the information provided in the dataroom setup for this insured.

Florida
Licensed Mold Assessor
MRSA184

Green Building Certification Institute
LEED® Accredited Professional Building Design & Construction
#10182303

Mr. Felix has over twenty-five years of experience in the environmental field as a consultant in the private sector. He has been responsible for the direction of Environmental Due Diligence programs at various environmental consulting firms. He has directed or participated in the performance of more than 750 environmental site assessments of industrial, commercial, and residential properties. Prior to joining ESIS, Inc. – Health, Safety & Environmental Services (ESIS; formerly Hygienetics Environmental), Mr. Felix led the corporate environmental site assessment practice for a national consulting firm where he was responsible for developing corporate policy and technical procedures for conducting Phase I ESAs. He also managed and performed CERCLA site investigations for various military installations located in southern California. These projects involved assessing potentially contaminated areas prior to base closure or realignment. In addition of to his environmental due diligence experience, Mr. Felix has a broad-range of environmental consulting experience including projects related to employee exposure and indoor air quality (IAQ) testing, and indoor odor investigations.

Representative Project Experience

RREEF, California.
Client Manager for RREEF projects in California. Mr. Felix manages all projects performed for RREEF including:

- Annual Environmental Audits;
- Mold Surveys and Mold Remediation Oversight;
- IAQ Testing;
- Indoor Odor Investigations;
- Asbestos Surveys and Abatement Monitoring;
- Lead Surveys;
- Phase I ESAs (Acquisition and Divestiture);
- Soil Vapor/Soil Sampling; and
- Monitoring Well Abandonment.

Environmental consulting services are performed for industrial, residential, commercial, and retail properties. Responsible for staffing projects and serves as liaison between RREEF and project personnel.

Wells Fargo Bank, California.
Client manager for Wells Fargo projects in California. Responsible for staffing projects and serves as liaison between Wells Fargo and project personnel, performing and managing various Phase I environmental projects for Wells Fargo. Other duties involve negotiating pricing and providing technical support to other offices, as-needed.

ACE Environmental Risk, Nationwide.
Prepare moisture-intrusion and mold prevention plans for various companies throughout the United States. These plans are required for ACE customers whose insurance policies include mold coverage. The plans generally include basic information about mold, health effects, best practices for preventing moisture-intrusion, and methods and procedures for mold remediation. Mold remediation procedures are developed in accordance with U.S. Environmental Protection Agency and New York City Department of Health and Mental Hygiene guidelines. Guidance regarding respiratory protection, engineering controls, clean-up procedures, and post-remediation clearance criteria are included in moisture-intrusion and mold prevention plans. These plans are used to respond to minor water-intrusion events. Mold awareness training is often performed in conjunction with plan preparation. The training is customized for each customer depending on the service line of the company, and covers the topics included in the moisture-intrusion and mold prevention plan.

Bixby Land Company, Eleven Properties in Southern California.
Served as project manager for Phase I ESA of a small commercial retail portfolio scheduled for divestiture. Staffed, managed, and participated in the environmental assessment of small neighborhood retail malls and an auto dealership. ESIS's (operating as Hygienetics Environmental) primarily goal was to complete each Phase I ESA prior to the scheduled real estate offering of all properties. Three properties required further assessment, and Hygienetics Environmental assisted the client with developing a work plan and cost estimates to perform subsequent Phase II ESAs.

Bixby Land Company, Long Beach, California.
Served as project manager for a site investigation of a former gasoline station to assess the presence of abandoned underground storage tanks and historic release incidents of petroleum hydrocarbons. The investigation was conducted in a phased approach by searching for abandoned underground storage tanks (USTs) and over-compacted soil at the Site using ground penetrating radar (GPR) and electromagnetic equipment. The survey results indicated an area of over-compacted soil, which suggested a backfilled former UST excavation. Soil borings were placed in areas close to over-compacted soil, and soil and groundwater samples were collected for analysis. Field evidence and analytical results showed soil was impacted with gasoline range hydrocarbons from moderate (74 ppm) to very high (22,000 ppm) concentrations. Laboratory data also showed ground water at the Site is impacted with relatively high (4.5 ppm) to very high (1,100 ppm) concentrations of gasoline range hydrocarbons.

The RREEF Funds, Carlsbad, California.
Served as project manager for a Phase I ESA of a property scheduled for acquisition. ESIS (operating as Hygienetics Environmental) conducted the Phase I ESA in accordance with the AAI Standard and performed additional environmental due diligence related tasks including asbestos survey; lead in-drinking water sampling; air sampling for non-viable mold spores; and indoor air quality assessment that required testing for temperature, relative humidity, carbon dioxide, and carbon monoxide. The results of the Phase I discovered a moisture-intrusion issue that appeared to impact wallboard material in the shower area of a ground floor restroom and adjacent janitor closet. Hygienetics Environmental arranged for the moisture-intrusion source to be repaired, the impacted wallboard removed and replaced, and associated mold growth removed.

Caltrans, San Diego, California.
Served as project manager for a site investigation along a segment of the I-5 Freeway between Del Mar Heights Road and the San Dieguito River Bridge. The site investigation focused on evaluating soil along the northbound shoulder of I-5 for aerially deposited lead. The scope of the site investigation included health and safety and work plan preparation, utility clearance, soil sampling and analysis, GPS survey of

boring locations, statistical analysis of collected data, and report preparation. The analytical data was used to evaluate soil disposal and reuse options based on SW-846 and Department of Toxic Substances Control (DTSC) guidelines.

Standard Insurance Company, Former Gasoline Station; San Diego County, California.
Served as project manager for a site investigation of a former gasoline station property to determine the extent of petroleum hydrocarbon contamination. The scope of the investigation was performed in accordance with San Diego County Department of Environmental Health (DEH) Site Assessment Manuel (SAM) guidelines. The DEH provided oversight of the project under the Voluntary Assistance Program (VAP).

Costco, Garden Grove, California.
Served as project manager for a Phase II ESA on vacant property to determine the extent of solvent and petroleum hydrocarbon contamination; assisted Costco with obtaining an indemnity agreement with the City of Garden Grove prior to site development.

COVS Partners, Fullerton, California.
Served as project manager for a Phase II ESA on a dry cleaning facility to determine extent of perchloroethylene (PCE) contamination in soil and groundwater. Soil and groundwater data obtained was used to evaluate remedial options; worked closely with RWQCB/Orange County Health Care Agency to gain "case closure" for the site.

United States Navy, San Diego, California.
Served as contract task order leader for CERCLA Preliminary Assessment/Site Investigation projects conducted at the Naval Training Center (NTC). Managed preliminary assessment activities involving aerial photo, records review, interviews with base personnel, onsite and offsite reconnaissance, and community relations support. Also managed site inspection activities at NTC, which involved work plan preparation, establishing data quality objectives, soil and groundwater sampling, and locating abandoned USTs.

LSG Sky Chefs, Vernon, CA.
Managed and performed a UST removal project at LSG's Vernon, California facility. Coordinated the removal of a 10,000 gallon UST and performed onsite screening of potentially impacted soil, soil sample collection activities, and oversight of excavation backfill and repaving efforts. Other duties involved acquiring UST removal permits, work plan preparation, final report preparation, and negotiations with the City of Vernon to gain "no further action" status.

Jones Lang LaSalle, Walnut Creek, California.
Mold growth was discovered on wallboard inside two elevator shafts during a property condition assessment of the building. Mr. Felix was responsible for confirming the presence of mold on the wallboard by collecting surface samples for direct examination. He also assisted with developing a mold remediation protocol and performed post-remediation verification to demonstrate that the remediation was performed successfully. Post-remediation air samples were compared to pre-remediation air sample results and final testing concluded that spore concentrations in post-remediation air samples were similar to indoor and outdoor pre-remediation samples, Consequently, the remediation effort was successfully completed. Part of the project also included identifying the source of the leak, which was discovered to be from blocked drains at the bottom of each shaft.

Confidential Client, Mexico City D.F.
Performed a microbial survey required for the acquisition of a film studio. Responsible for collecting surface samples and interior and exterior spore trap samples, and assisted with identifying water damaged and moldy areas for subsequent removal. During the survey, large areas of mold-impacted wallboard were present throughout the building. A moisture meter was used to find water-damaged wallboard, which were graphically presented on a floor plan. Assisted with estimating rough order of magnitude cost estimates to remove the wallboard. The source of the moisture-intrusion inside the building appeared to be from unsealed exterior joints in the exterior building façade, which allowed water to flow into the building at several points of entry.

Gap Incorporated, Mission Viejo, California.
Performed a moisture-intrusion assessment of the Old Navy store in the Mission Viejo, Mall. Historical water leaks occurred periodically inside the store. Hygienetics discovered small, isolated areas of mold growth, active leaks from the ceiling above the sales floor, and corroded piping anchored to the ceiling. Some piping showed condensation that was also causing damage to merchandise. A visual survey of fireproofing covering the ceiling deck was not possible as the ceilings were too high for a conventional ladder. Hygienetics used infrared imaging equipment to look for temperature differentials in the ceiling material. The results of the infrared imaging indicated that the fireproofing along the perimeter of the store was at a lower temperature indicating water-damaged fireproofing material. Infrared imaging suggested that the source of the moisture-intrusion was the food court above, specifically the kitchens that are roughly located above the perimeter of the store. The infrared imaging also discovered the reason for the formation of condensation on some pipe surfaces. Hygienetics recommended that piping be insulated to stop the formation of condensation, and to work with mall management to identify and correct the each source of moisture-intrusion in the food court.

Confidential Retail Client, Naples, Florida
Performed a microbial assessment of the heating, venting, and air conditioning (HVAC) system inside a retail store. The results of the assessment indicated that interior levels of mold spores were present at high concentrations inside the store. High concentrations of mold spores were also detected inside ductwork, on diffusers, and in the air handing unit (AHU). The moisture source inside the store was the HVAC system not adequately dehumidifying the air inside the store, and causing elevated relative humidity levels. Consequently, a mold remediation protocol was prepared, which involved remediation of the HVAC system and clean-up of selected store surfaces. Post-remediation sampling was performed after the HVAC system was cleaned, and interior spore concentrations were similar to outdoor spore concentrations indicating that the remediation was successful.

Confidential Client, Springfield, Oregon
Provided technical support for a construction defect claim associated with an office building occupied by a software company. Excessive moisture and mold growth was discovered between the foundation and flooring causing warping of vinyl and bamboo flooring at several locations. The cause of the moisture-intrusion was thought to be from excessive water below the concrete slab-on grade foundation. Tasks performed included reviewing claim-related information, concrete moisture test results, spore trap and surface sampling results, and communicating the technical aspects of the claim to the client, which were used to evaluate the merits of the claim.

1.0 EXECUTIVE SUMMARY

At the request of RREEF, Golder performed an ESA of the Mitsubishi Electric & Electronics USA, Inc. (Mitsubishi Electric) office building located at 5665 Plaza Drive in Cypress, California (herein referred to as the subject property, see Figure 1). The subject property consists of one 5-story office building with associated parking areas developed as a commercial complex encompassing approximately 2.5 acres. The building was constructed in 1991, and since that time, has been used for administrative operations. Past use of the subject property reportedly included agricultural operations.

The objective of the ESA was to provide a preliminary evaluation of the presence, use or release on the subject property of hazardous substances or petroleum products such as is defined in ASTM E 1527-00 as a recognized environmental condition. The ESA included site reconnaissance, interviews, review of government environmental agency databases and records, and historical records review. In addition to the ASTM scope of work, Golder conducted sampling and analysis of suspect asbestos-containing materials (ACMs), a fungal screening, and field screening of carbon monoxide and carbon dioxide gas pursuant to the RREEF protocol. A summary of the conclusions and recommendations are listed below:

- The subject property, under the name Mitsubishi Elevator, was listed on the HAZNET database as disposing of paint sludge and other organic solids through a transfer station. According to Ms. Carol Amour, Facilities Supervisor for Mitsubishi Electric, no hazardous wastes have been stored at the subject property.

- The emergency diesel-powered generator is currently permitted by AQMD. One AQMD violation notice was issued to Mitsubishi on August 19, 1999 for failure to maintain the generator operating log (including date of use, run time, reason for use, and amount of diesel used). The last AQMD inspection date was listed as January 1, 2001. The AQMD inspector indicated that the generator runs automatically for 15 to 20 minutes each week. The engine ran for a total of 4.2 hours from 2000 to 2001 and was in compliance with the allowable cumulative hours of operation.

- Twenty-seven bulk samples were collected from suspect ACM in the subject property building. Laboratory analysis indicated ACM in the gray mastic on the building roof. This material is considered nonfriable and was in good condition at the time of the survey. A limited Operations and Maintenance Plan should be developed for the subject property ACM.

- Golder collected six carbon dioxide (CO_2) and carbon monoxide (CO) samples from representative areas on each of the five floors. All of the results were below the recommended ASHRAE maximum ambient indoor air levels of 800 ppm for CO_2 and 9 ppm for CO.

- All five floors showed some evidence of prior water leakage from air conditioning pipes located above the drop ceilings. Suspect fungal growth was observed on the 2nd Floor janitor closet drywall and the 2nd Floor women's restroom floor grout. Several ceiling panels were stained on each floor. Golder recommends that all leaks be repaired and damaged materials removed.

- Significant oil staining was observed surrounding the hydraulic trash compactor located outside the northeast corner of the site building. This area should be steam cleaned and better housekeeping and maintenance practices should be implemented in this area.

2.0 SITE DESCRIPTION

2.1 Interviews

On June 6, 2002, Golder's field investigators performed the site visit and met with several tenant representatives. Interviews with tenant representatives and other individuals including regulatory agency personnel are presented in the following sections where relevant to the discussion.

2.2 Project Area Location and Description

The subject property consisted of one 5-story multi-tenant building located at 5665 Plaza Drive and associated parking areas (Figure 3). Three tenants occupied the building at the time of the site reconnaissance. The office building was constructed of a steel frame with metal decks and concrete floors (Dames & Moore, 1999). The subject property was located within the City of Cypress, Orange County, California (Figure 1).

The subject property was located in the Cypress Business Park, which is characterized by commercial and light industrial businesses. Interior finishes for the buildings generally included gypsum wallboard interior walls with carpeting, floor tile, and suspended ceiling systems with lay-in panels. The tenant spaces were comprised entirely of office space. No warehouse space was observed in the building. The building roof consisted of a built-up mineralized asphalt sheet at the time of the site reconnaissance. Parking for the building was provided by outdoor, uncovered parking spaces. A total of 649 parking spaces were indicated on a Site Plan provided by Mitsubishi Electric and Electronics USA, Inc. (Mitsubishi Electric).

One solid waste receptacle/compactor was located on the northeast side of the subject property building. Paper and cardboard recycling bins were located on the north and west sides of the property, respectively.

2.3 Tenant Review

Three tenants were operating on the subject property at the time of the site reconnaissance. One vacant tenant space was located on the 1st floor to the southwest of the main lobby. The entire 2nd floor, formerly reported as LA Cellular Telephone tenant space, was vacant at the time of the site reconnaissance. Three traction elevators, maintained by Mitsubishi Automation, Inc., were located in the central circular portion of the building. Common areas are located on the 1st floor including a lobby area, security guard area, lunchroom and former kitchen, two conference rooms, one presentation room, and a fitness center. Janitor closets are located on each floor between the men's and women's restrooms. The following indicates the location and a summary of the current tenant activities.

2.3.1 Mitsubishi Electric & Electronics USA, Inc.

Mitsubishi Electric manages the entire building for maintenance as well as operates the 4th and 5th Floors for administrative activities. Mitsubishi Electric also reportedly manages all janitorial work. One trash receptacle/compactor was observed outside the northeast corner of the building. According to Ms. Carol Amour, Ware Disposal handles compactor maintenance annually. Ms. Amour reported that a hydraulic oil leak was fixed approximately one year ago. However, Golder observed significant oil staining beneath the entire compactor, with new apparent leakage observed.

2.3.2 Mitsubishi Automation Inc.

Mitsubishi Automation Inc. operates one tenant space on the 1st floor to the south of the main lobby as administrative offices for primarily the elevator service division. In addition to offices, one storage room is located on the south side of this tenant space (will be further discussed in Section 2.4.2).

2.3.3 Touro University International

Touro University International (Touro) is an on-line educational institution that operates the entire 3rd floor of the building. Touro has only been a tenant of the building for a couple months. This tenant space is used for administrative activities for the university and is still undergoing tenant improvements.

2.4 Hazardous Substance Storage

The subject property was primarily used for administrative activities. Janitorial cleaning products were stored in two general areas on the first floor of the building. Equipment and associated chemicals were also stored on the building roof. Material safety data sheets (MSDS) were reviewed for the janitorial products stored at Mitsubishi Electric. No current or former underground storage tanks were reported or observed on the site. No spills or stains of environmental significance were observed or reported in the janitorial product storage areas or on the roof.

2.4.1 1st Floor Janitor Closet

The following Easterday Janitorial Supply Company products were observed in 5-gallon containers in the janitor closet:

- One container of glass and mirror cleaner;
- One container of restroom cleaner;
- Two containers of all purpose cleaner;
- One container of neutral cleaner;
- One container of Pro-Guard pre-spray and spotter; and

- One container of stainless steel cleaner.

The remaining janitorial cleaning products included various spray cans and quart containers as well as three 1-gallon containers of all purpose cleaner.

2.4.2 1st Floor Mitsubishi Automation Storage Closet

The following janitorial products were observed in this room:

- Three 5-gallon containers of anti-static neutral cleaner; and
- One 1-gallon container of Soil-Solv cleaner.

2.4.3 Building Roof

One approximately 150-gallon diesel aboveground storage tank (AST) with the diesel generator unit was observed in the central circular portion of the roof. According to Frank Figueroa, Mitsubishi Electric's maintenance engineer, diesel is brought to the roof in 5-gallon containers for AST replenishment. Mr. Figueroa indicated that the generator is serviced monthly with a major maintenance overhaul conducted annually. No secondary containment was observed surrounding the AST and generator. No leaks or stains were observed on the roof surrounding the generator and AST. According to Ms. Carol Amour, Facilities Supervisor for Mitsubishi Electric, the generator is permitted with the South Coast AQMD. See Section 3.2.5 for more information regarding the AQMD permit.

One Evapco Cooling Tower (chiller) was observed in the central circular portion of the roof. One 30-gallon container of Chem Pro 3030C [non-acid, non-chromate corrosion inhibitor (phosphonate)] was located adjacent to the tower and is automatically fed into the chiller. Golder reviewed the MSDS sheet, which was provided by Chem Pro Laboratories, Inc. The hazardous component of this chemical is sodium hydroxide. No leaks or stains were observed surrounding the container storage and no microbial growth was observed surrounding the cooling tower.

2.5 Review of Adjoining Properties and Surrounding Areas

A curbside review and limited walk-through of exterior areas accessible to the public were conducted of the adjoining properties during the site reconnaissance to ascertain whether there were any environmental concerns that could potentially impact the subject property. The subject property was located in an area of primarily commercial and light industrial businesses.

North: The subject property was bordered to the north by a former Southern Pacific Railroad right-of-way followed by businesses along Corporate Avenue. Branch Flowmetrics (5556 Corporate), Moving Air Inc. (5576 Corporate), HLM Printing and Labeling (5596 Corporate), and a business complex (5606-5736

Corporate) were located to the northwest, north-northwest, north, and northeast of the subject property, respectively. The business complex comprised of The Whipple Company (5606 Corporate), Automation Controls (5616 Corporate), Yaskawa Electric America, Inc. (5626 Corporate), Motoman Inc. (5636 Corporate), Vacant tenant space (5646 Corporate), Kitamura Machinery, West Coast Branch (5656 Corporate), Horizon Foods (5666 Corporate), Daiichi Jitsuggo (America) Inc. (5676 Corporate), Quest Diagnostics (5686 Corporate), Managed Care Innovations Inc. (5696 Corporate), Hyundai Electronic America (5716 Corporate), KTS Services Inc. Bus. Com. Serv. (5726 Corporate), Geotechnical Professional Inc. (5736 Corporate). No environmental concerns were noted from the facility drive-by observations.

East: The adjacent eastern property (5757 Plaza Drive) operates under three tenants (Jacobs Engineering, PacifiCare, and Mitsubishi). Jacobs Engineering and PacifiCare Secure Horizons operate the office space. Mitsubishi operates the warehouse space, which stores some hydraulic oils for the Elevator Division's off-site service calls. No environmental concerns were noted from the exterior of the building.

South: PacifiCare Secure Horizons was located adjacent to the southeast of the site, across Plaza Drive. Bandai America, Inc., a toy company, was located adjacent to the southwest of the subject property. No environmental concerns were noted from the facility drive-by observations.

West: Vertex Standard was located at 10900 Walker Street, adjacent to the west of the subject property. A vacant vegetative parcel was observed adjacent to the north of Vertex Standard and adjacent to the west-northwest of the subject property. No environmental concerns were noted from the facility drive-by observations.

2.6 Sewer/Septic System

Based on site observations, there was no evidence of an active septic system on the subject property. Sewer manholes were observed throughout the subject property. According to Marsha at the City of Cypress Building and Safety Department, sanitary sewer service was first provided to the site in June 1990. One floor drain was observed inside the former 1st floor kitchen preparation area. This drain is reportedly connected to the sanitary sewer. No activities are currently conducted in the vicinity of this floor drain.

2.7 Storm Drainage System

During the site reconnaissance, Golder observed curbside storm drains along the eastern, southern, and western perimeters of the subject property. The curbside storm drains are connected to the municipal storm drain system maintained by the City of Cypress.

2.8 Water Supply

Drinking water is supplied to the subject property by the Southern California Water Company, Los Alamitos Service Area (SCWC). The city obtains a small portion of its water from twenty operating wells pumping from the Orange County Groundwater Basin. The remaining portion of the total potable water is purchased from the Metropolitan Water District of Southern California. Golder received a copy of the most recent SCWC water quality report (2001) to determine compliance with the federal and state water quality standards. According to the report, water supplied to the site meets all existing state and federal standards. A copy of the report is included in Appendix E.

2.9 Polychlorinated Biphenyl Electrical Equipment

Southern California Edison (SCE) provides electric power to the subject property. One pad-mounted electrical transformer (P5379876) was observed on the southwest side of the subject property. No leakage or staining was observed surrounding the transformer. Golder contacted Mr. Brian Smith of SCE to determine the PCB content of the transformer insulating fluid. Mr. Smith indicated that transformer P5379876 was installed at the site in September 2000 and the likelihood of the transformer insulating liquid containing polychlorinated biphenyls (PCBs) was low.

Fluorescent light fixtures were observed throughout the subject property. Light ballasts manufactured after 1979 are generally labeled with "No PCB" or similar designation. Any ballast that is not labeled as to PCB-content must be considered as PCB-contaminated electrical equipment. The handling and disposal of PCB-contaminated electrical equipment must be conducted in accordance with applicable federal, state, and local regulations. Golder recommends that all removed fluorescent light ballasts be inspected for labeling, damage, and leaks, and handled accordingly.

2.10 High Voltage Transmission Lines

No high voltage transmission lines were observed on, crossing over, or adjacent to the subject property.

2.11 Pits, Ponds, and Lagoons

No pits, ponds or lagoons were observed or reported on the subject property.

2.12 Wetlands

No wetlands were observed on or near the subject property. The National Wetlands Inventory Map information provided in the Environmental Data Resources, Inc. (EDR) report did not identify any wetlands on or adjacent to the subject property.

2.13 Floodplains

Flood area information provided by EDR indicated that the site is located within the 500-year flood zone of the San Gabriel River. This area is considered flood plain zone X by the City of Cypress. Flood plain zone X does not require flood insurance for property owners.

2.14 Physical Setting Analysis

The subject property is located within the County of Orange, California, at an elevation of approximately 36 feet above mean sea level (MSL) according to the Los Alamitos, California Topographic Quadrangle (1964, Photo-revised 1972). According to the topographic map, the general topographic gradient slopes gently to the southwest towards the San Gabriel River.

The Coyote Creek (northern tributary of the San Gabriel River) is located approximately 2.8 miles to the west of the subject property. Small bodies of water were observed on the topographic map approximately 0.5 miles southwest and 0.6 miles northwest of the subject property.

The subject property lies within the Los Angeles-Orange County Coastal Plain Aquifer System, which is bordered on the north and east by the Santa Monica Mountains and Puente Hills, on the south by the San Joaquin Hills, and on the west by the Pacific Ocean (USGS, *Groundwater Atlas of the United States, California, Nevada)*. The subject property is underlain by unconsolidated alluvial deposits (USGS). Geotechnical borings conducted as part of a former investigation at the site indicated that sands, silty sands, sandy silts, and silty clays were observed beneath the site (Dames & Moore, 1999).

According to the Orange County Water District (OCWD) November 2001 Groundwater Contour Map for North County, regional groundwater has been reported at depths of approximately 45 feet below mean sea level (approximately 80 feet below ground surface-bgs). Data provided in a former site report (*Structural Review for Mitsubishi Warehouse-* John A. Martin & Associates) indicated that a perched water-bearing zone was encountered at approximately 6 to 6.5 feet bgs (Dames & Moore, 1999).

3.0 INVESTIGATIVE FINDINGS

3.1 Environmental Database Review

The following databases were researched by Environmental Data Resources, Inc. (EDR) of Southport Connecticut. The EDR report provides a summary and a location map of all database-listed sites that were within the specified search distances. The EDR report is included in Appendix E. Golder evaluated and synthesized the information from the EDR report and the site reconnaissance in order to provide the information detailed in this section.

Golder requested a file review at the Santa Ana Regional Water Quality Control Board (RWQCB) for those listed facilities identified on the subject property. If off-site facilities with a high potential to adversely affect the subject property, based on close proximity and available information from the EDR report, were identified, Golder requested a file review at the RWQCB. No records were on file for the subject property and none of the surrounding properties was deemed to present a high potential to adversely affect the subject property.

3.1.1 Federal National Priorities Listing (NPL) – Environmental Protection Agency Superfund List

The NPL is a subset of the United States Environmental Protection Agency's (USEPA) Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) and lists over 1,200 sites that are ranked as high priority for cleanup under the Superfund program. Neither the subject property nor other properties within a one-mile search distance of the subject property were listed on the Federal NPL. Source: NPL database updated January 29, 2002.

3.1.2 USEPA - Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List

The CERCLIS list is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites which are, or were, under investigation by the USEPA but have not been elevated to the status of a NPL site. Neither the subject property nor other properties within a one-half mile search distance of the subject property were listed in the CERCLIS database. Source: USEPA CERCLIS database updated February 12,2002.

3.1.3 USEPA - Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS), No Further Remedial Action Planned (NFRAP) List

The CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA. CERCLIS-NFRAP sites may be sites where after an initial investigation, no contamination was found, contamination was removed quickly, or contamination was not serious enough to warrant Federal Superfund or NPL action. Neither the subject property nor surrounding properties within a one-quarter mile search distance were listed in the CERCLIS-NFRAP database. Source: USEPA CERCLIS-NFRAP database updated February 14, 2002.

3.1.4 Resource Conservation and Recovery Information System (RCRIS)

The Resource Conservation and Recovery Act (RCRA) program identifies and tracks hazardous wastes from the point of generation to the point of disposal. The RCRIS database tracks those facilities that treat, store, and/or dispose of hazardous materials as defined by RCRA (referred to as TSD facilities). The RCRIS CORRACTS database identifies TSD facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. The RCRIS Generators database tracks large and small quantity generators of hazardous waste. The RCRA Administrative Action Tracking System (RAATS) database, which maintains records of enforcement actions issued under RCRA for major violators, is included in the regulatory research report.

As summarized in the following table, the subject property was not listed as a hazardous waste generator, but seven surrounding properties within a one-quarter mile radius were listed as hazardous waste generators in the RCRIS database. Neither the subject property nor surrounding properties within a one-mile search distance appeared as either TSD facilities or CORRACTS facilities. Source: RCRIS database, dated March 22, 2002.

Property Name and Address	Proximity	Classification/Status
Precision Ferrites & Ceramics 5576 Corporate Drive	682 feet north	Small-quantity generator with no reported violations.
Linotype Hell Company 5646 Corporate Avenue	803 feet north-northeast	Small-quantity generator with no reported violations.
Mitsubishi Electric Sales America, Inc. 5757 Plaza Avenue	833 feet east-southeast	Small-quantity generator with no reported violations.
McDonnell Douglas (now Boeing) 10473 Progress Way	907 feet north-northwest	Small-quantity generator with no reported violations.
Kayaba Corporation 5790 Katella Avenue	942 feet south-southeast	Small-quantity generator with no reported violations.
Clayton Environmental Consultants (now Geotechnical Professionals, Inc.) 5736 Corporate Avenue	1,132 feet north-northeast	Small-quantity generator with no reported violations.
Smit J.K. Sons Inc. 5554 Market Place	1162 feet north-northwest	Small-quantity generator with no reported violations.

These hazardous waste generators did not have listed violations and were not listed on other databases that denote a release to the environment. Accordingly, they do not appear to present an environmental concern to the subject property.

3.1.5 Emergency Response Notification System (ERNS) Database

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil and hazardous substances. The subject property was not listed on the ERNS database. Source: ERNS database updated December 31, 2000.

3.1.6 AWP Database

California DTSC's Annual Workplan (AWP), formerly BEP, identifies hazardous substance sites targeted for cleanup. Neither the subject property nor other properties within a one-mile search distance of the subject property were listed in the AWP Database. Source: AWP database, updated November 8, 2000.

3.1.7 Cal-Sites Database

The Cal-Sites database, formerly known as ASPIS, contains both known and potential hazardous substance release sites. Neither the subject property nor surrounding properties within a one-mile search distance were listed in the Cal-Sites database. Source: Cal-Sites database, updated October 1, 2000.

3.1.8 California Hazardous Materials Incident Report System (CHMIRS) Database

The California Hazardous Materials Incident Report System (CHMIRS) contains information on reported hazardous material incidents (i.e., accidental releases or spills). The list has not been updated since 1994. Neither the subject property nor surrounding properties within a one-mile search distance were listed in the CHMIRS database. Source: CHMIRS database, updated December 31, 1994.

3.1.9 Notify 65 Database

Notify 65 records contain facility notifications about any release that could impact drinking water and thereby expose the public to a potential health risk. The data comes from the State Water Resources Control Board's Proposition 65 database. Neither the subject property nor properties within a one-mile search distance of the subject property were listed in the Notify 65 database. Source: Notify 65 database, updated October 21, 1993.

3.1.10 Toxic Pits Cleanup Act Sites

The Toxic Pits Database identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. Neither the subject property nor surrounding properties within a one-mile search distance were listed in the Toxic Pits database.

3.1.11 Solid Waste Facilities/Landfills (SWIS) Solid Waste Information System

The Solid Waste Information System (SWIS) contains information on active, closed, and inactive landfills. Such records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. These may be inactive or active facilities or open dumps that failed to meet RCRA Section 2004 criteria for solid waste landfills or disposal sites. The data comes from the Integrated Waste Management Board's Solid Waste Information System database. Neither the subject property nor surrounding properties within a one-half mile search distance were listed in the SWIS database. Source: SWIS database, updated March 15, 2002.

3.1.12 Waste Management Unit Database (WMUDS)/SWAT

The Waste Management Unit Database System is used for program tracking and inventory of waste management units. Neither the subject property nor the surrounding properties within a one-half mile radius

were listed in the WMUDS/SWAT database. One site was listed within a one-half mile search distance of the subject property in the WMUDS/SWAT database. Source: SWAT database, updated April 1, 2000.

3.1.13 Cortese Database

The Cortese database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material, sites with USTs having a reportable release, and all solid waste disposal facilities from which there is a known migration. Source: CAL EPA/Office of Emergency Information, updated April 1, 2001. The subject property was not listed on the Cortese Database. There were eleven sites within one mile of the subject property. Eight of the nine remaining sites are located more than one-half mile from the subject property and have been signed off with remedial action completed or deemed unnecessary. The remaining Cortese facilities are discussed in the following table.

Name/Address	Proximity	Affected Media/Cleanup Status
Innabi Union 76 #1 (aka Union Oil Service Station 5511 and TOSCO-76 Station #5511) 5100 Katella Avenue	1,492 feet southwest	Gasoline-impacted groundwater reported in May 1987. In August 1999, Final Remediation Plan submitted. Proposed to remove contaminated soil and floating free product, and pump and treat groundwater to remove dissolved contaminants. Notice of violation issued to uncooperative responsible parties.
Unocal Service Station #5176 (aka Union Oil Service Station 5176) 5999 Cerritos Avenue	2,479 feet northeast	LUST Incident 86UT35-gasoline-impacted groundwater (release date not reported). Remedial action (cleanup) in progress as of August 1990. LUST Incident 91UT43-gasoline-impacted groundwater (leak discovery in October 1990-*geotracker website*). Signed off, remedial action completed or deemed unnecessary in August 1995.
Cypress Car Wash Company 9971 Valley View Street	4,838 feet north-northeast	LUST entry reported-no details reported in EDR. LUFT geotracker website listed this site (case # 98UT049) as a leaking gasoline UST affecting soil (discovered in July 1998). The last regulatory entry date was September 1998.

Based on the distance from the subject property and/or regulatory status, the Cortese facilities do not appear to present an environmental concern to the subject property.

3.1.14 Leaking Underground Storage Tank (LUST) Information System

Golder reviewed the Leaking Underground Storage Tank (LUST) Sites List for sites with reported leaking underground storage tanks (LUSTs) located within one-half mile of the subject property. Source: Leaking

Underground Storage Tank (LUST) Information System, State Water Resources Control Board, updated January 17, 2002. The subject property was not listed as a LUST facility. Four sites within one-half mile of the subject property were listed as LUST facilities. Of these, two are discussed above as Cortese facilities. The remaining two LUST facilities are discussed below in the following table.

Name/Address	Proximity	Affected Media/Cleanup Status
Equilon Enterprises LLC 6000 Cerritos Avenue	2,471 feet northeast	Waste oil and gasoline-impacted groundwater encountered (release date not reported); Post remedial action monitoring in progress as of September 1992.
Texaco Service Station 6000 Cerritos Avenue	2,479 feet northeast	Waste oil-impacted waste oil reported in September 1987. Signed off, remedial action completed or deemed unnecessary

Due to the regulatory status of these two facilities and their distances to the subject property, these sites do not appear to present an environmental concern to the subject property.

3.1.15 CA Bond Expenditure Plan (BEP)

The Department of Health Services developed a site-specific expenditure plan as the basis for the appropriation of Hazardous Substance Cleanup Bond Act funds. Neither the subject property nor properties within a one-mile search distance of the subject property were listed in the BEP database. Source: BEP database, updated January 1, 1989.

3.1.16 Underground Storage Tank (UST) Sites List, Historical and Active

Golder reviewed the Underground Storage Tank Sites Lists for sites with registered historical and active underground storage tanks (USTs) adjoining the subject property and to verify the subject property status regarding registered USTs. The subject property was not listed has having a registered UST. No sites were listed on the UST database within a one-quarter mile radius of the subject property. Union Oil Service Station 5511 (aka Innabi Union 76 #1) property was listed on both the CA FID and HIST UST databases. This facility is listed as an active UST location and as historically having a waste oil UST. There is no data pertaining to the removal of the waste oil UST. Union Oil Service Station 5511 was also cross-listed as a Cortese/LUST facility and is discussed above. Sources: UST Database, updated January 17, 2002, CA FID Database, updated October 31, 1994, and HIST UST database, updated October 15, 1990.

3.1.17 Hazardous Waste Information System (HAZNET)

The data is compiled from copies of hazardous waste manifests received each year by the Department of Toxic Substances Control (DTSC). Inclusion in this database does not imply any environmental violations. The subject property and nine properties with a one-quarter mile search distance were listed on the HAZNET database. Source: HAZNET Database, updated December 31, 2000. The HAZNET sites are presented in the following table.

Property Name and Address	Proximity	Category/Disposal Method
Mitsubishi Elevator Inc. 5665 Plaza Drive	Subject Property	Paint Sludge/Transfer Station Other Organic Solids/Transfer Station
Precision Ferrites & Ceramics 5576 Corporate Drive	682 feet north-	Unspecified sludge waste/Disposal, landfill Unspecified aqueous solution/Recycler Unspecified aqueous solution/treatment, tank Waste oil and mixed oil/Recycler
HLM Labeling Incorporated 5596 Corporate Avenue	682 feet north	Oxygenated solvents/Recycler Halogenated solvents/Recycler
Linotype Hell Company 5646 Corporate Avenue	803 feet north-northeast	Photochemicals/photoprocessing waste/Recycler
Mitsubishi Electric Sales America, Inc. 5757 Plaza Avenue	833 feet east-southeast	Empty containers/Not reported Other inorganic solid waste/Not reported Aqueous solution with less than 10% total organic residues/Treatment, tank Off-specification, aged, or surplus organics/Recycler
Kitamura Machinery Sales Inc. 5656 Corporate Avenue	838 feet north-northeast	Waste oil and mixed oil/Recycler Unspecified oil-containing waste/Recycler
Focus/MRL 10743 Progress Way	907 feet north-northwest	Oxygenated solvents/Transfer Station Unspecified organic liquid mixture/Not reported Unspecified organic liquid mixture/Transfer Station Unspecified organic liquid mixture/Treatment, incineration
Exhibit Group Giltspur Southern California 5560 Katella Avenue	1,053 feet southwest	Liquids with halogenated organic compounds >1,000 mg/L/Recycler
Magna Tool Inc. 5594 Market Place	1,115 feet north	Oil/water separation sludge/Recycler Unspecified oil-containing waste/Recycler
Kaller Inc. 5573 Market Place	1,137 feet north-northwest	Waste oil and mixed oil/Recycler Oil/water separation sludge/Recycler

The subject property was listed under Mitsubishi Elevator Inc. as disposing of paint sludge and other organic solids through a transfer station. According to Ms. Carol Amour, Facilities Supervisor for Mitsubishi Electric, no hazardous wastes have been stored at the subject property. Given that these facilities did not appear on databases that denoted a release to the environment, they are not considered to pose an environmental concern to the subject property.

3.2 Local Agency and Historical Records Review

3.2.1 City of Cypress Building Department

Golder reviewed records for the subject property at the City of Cypress Building Department. The original address of the site during construction was listed as 5605 Plaza Drive. No previous buildings were reportedly associated with this address. The City of Cypress issued an approval letter to Mitsubishi Electric America on April 17, 1991 to change the site address from 5605 Plaza Drive to 5665 Plaza Drive. The earliest construction permit on file (# 55168) for the subject property was dated June 26, 1990 under the owner Shuwa Investments for the building shell. Underground sprinklers were permitted for installation (# 55651) under Mitsubishi in September 1990. The original certificate of occupancy was issued for the 5-story building in October 17, 1991 under Shuwa Investments. A permit to construct a three-foot high retaining wall (#76842) was issued in December 2000 under the owner LBA. LA Cellular Telephone Company was listed as a tenant on the 2nd floor of the building in 1994. Several tenant improvements permits were also on file. No significant environmental concerns were identified in the course of the permit review. A copy of the certificate of occupancy is included in Appendix D.

3.2.2 Munger Map Book

The Munger Map Book for California-Alaska Oil and Gas Fields (May 1992) provides data on wells from the California Department of Conservation, Division of Oil and Gas, oil operators, Munger oilogram, and other sources. Map number W-65, which includes the subject property area, was reviewed for the presence of oil and/or gas wells on the subject property. No oil/gas wells were observed or reported for the subject property. A copy of the Munger Map is included in Appendix E.

3.2.3 Orange County Fire Authority

The Orange County Fire Authority was contacted for information concerning underground storage tanks (USTs) or hazardous material incidents on the subject property. The OCFA provided Golder with a business report, which indicated that the site only receives routine fire inspections. The last fire inspection of the subject property was conducted in August 1998 with no reported violations. Violations relating to

housekeeping were issued by the OCFA during a September 4, 1997 inspection. These violations were reportedly corrected by September 30, 1997. One OCFA Place of Assembly permit (for 50-299 occupants) was issued for the site in July 1998. This permit expired in July 1999. According to the OCFA report, there were no hazardous materials on record at the site. The OCFA inspection report is included in Appendix E.

3.2.4 Orange County Health Care Agency

The Orange County Health Care Agency (OCHCA) was contacted for information regarding hazardous waste generator files, UST files, site cleanup files, and Proposition 65 reports. OCHCA indicated that no files exist for the subject property address. A copy of the response is included in Appendix E.

3.2.5 Santa Ana Regional Water Quality Control Board

The Santa Ana Regional Water Quality Control Board (RWQCB) was contacted for information about the subject property. Ms. Annette Subriar of the RWQCB informed Golder that no records were on file for the subject property. A telephone contact memorandum is included in Appendix E.

3.2.6 South Coast Air Quality Management District

The South Coast Air Quality Management District (AQMD) was contacted for information regarding air permits, notices of violations, and site inspection reports for the subject property. The AQMD sent Golder a copy of the Permit to Construct/Operate (# D52987) the roof-mounted emergency diesel-fuel generator unit, initially issued in May 1992. The permit limits the operation of the unit to no more than 125 cumulative hours per year. One AQMD violation notice was issued to Mitsubishi on August 19, 1999 for failure to maintain the generator operating log (including date of use, run time, reason for use, and amount of diesel used). The last AQMD inspection date was listed as January 1, 2001. The AQMD inspector indicated that the generator runs automatically for 15 to 20 minutes each week. The engine ran for a total of 4.2 hours from 2000 to 2001 and was in compliance with the allowable cumulative hours of operation. The inspection report also indicated that diesel is bought by Mitsubishi at a local service station in 5-gallon containers, which are carried to the roof when needed to refill the diesel tank. The permit to operate the generator and the AQMD inspection report are included in Appendix E.

3.2.7 California Department of Toxic Substances Control

The California Department of Toxic Substances Control (DTSC) was contacted for information regarding the subject property. DTSC indicated that no files exist for the subject property address. A copy of the response is included in Appendix E.

3.2.8 U.S. Environmental Protection Agency, Region IX

The U.S. Environmental Protection Agency (EPA), Region IX was contacted for information regarding the subject property. EPA indicated that no CERCLIS files exist for the subject property address. A copy of the response is included in Appendix E.

3.3 Historical Records Review and Summary

The following historical sources were reviewed:

- Historical aerial photographs for the years 1947, 1953, 1968, 1977, 1989, and 1994 from EDR. Copies of these photographs are included in Appendix B.
- Current topographic maps (1964, photo-revised 1972 and 1981) reviewed by Golder and historical topographic maps for the years 1935, 1950, and 1964 reviewed by Dames & Moore (1999). The current 1981 topographic map is included as Figure 1.
- Historical Chain of Title Report from Nationwide Environmental Title Research, June 11, 2002. The earliest recorded document is from 1953.
- Previous environmental report as referenced in Section 3.5 of this report.
- Historical City Directory review (provided in Dames & Moore, 1999 report) for the time period 1924-1986.
- Sanborn Maps were not available for the subject property and surrounding areas. A copy of the preliminary no coverage sheet is included in Appendix B.

The historical sources listed above were used to develop a historical summary of the subject property.

1924-1953

The 1935 topographic map reportedly indicated that the site and the surrounding vicinity were undeveloped (Dames & Moore, 1999). The 1947 aerial photograph shows the site as agricultural land. The surrounding adjacent properties also appeared to be in agricultural production. Irrigation piping appeared to be evident on properties to the north, east, and south of the site. According to historical city directory search by Dames & Moore (1999), the site address and surrounding addresses were not listed in the 1924, 1926, 1931, 1936, 1941, 1947, and 1951 City Directories. The 1953 aerial photograph depicted an airstrip approximately 0.5 miles southwest of the site, which was associated with the Naval Reservation.

Buildings, which appear to be associated with agricultural operations, were observed 580 feet to the north and 1,000 feet to the southwest of the subject property.

1954 to 1976

According to historical city directory search by Dames & Moore (1999), the site address and surrounding addresses were not listed in the 1955, 1959, 1964, 1969, and 1974 City Directories. The 1968 aerial photograph shows the subject property and surrounding properties as undeveloped, agricultural lands. A golf course was observed south of Katella Avenue, approximately 1,050 feet southeast of the site. An associated pond for the golf course was observed 0.3 miles southwest of the subject property. The 1972 topographic map shows a pumping station and tank farm with 53 tanks, located approximately 0.85 miles northwest of the subject property. This tank farm was reportedly listed as "Texas Oil Tank Farm" in the 1935 topographic map (Dames & Moore, 1999). No buildings are depicted on the subject property in the 1972 or 1981 topographic maps. The surrounding adjacent areas still appeared undeveloped. The Naval Reservation has been renamed the Los Alamitos Armed Forces Reserve Center. The general vicinity appeared to be primarily residentially and commercially developed by this time.

1977-1988

The subject property and surrounding adjacent properties still appear undeveloped on the 1977 aerial photograph. Walker Street was observed on this photograph to the west of the site. A portion of the Los Alamitos Racetrack was observed approximately 0.3 miles northwest of the subject property. Several industrial-type buildings were observed approximately 1,000 feet southwest of the subject property, to the south of Katella Avenue, on the 1981 topographic map. According to historical city directory search by Dames & Moore (1999), the site address was not listed in the 1980 and 1986 City Directories. The surrounding properties to the east and southeast (Mitsubishi Electric Sales of America-5757 Plaza Drive and PacifiCare-5995 Plaza Drive, respectively) were listed in the 1986 City Directory (Dames & Moore, 1999). Surrounding adjacent properties appear similar to the 1989 photograph.

1989 to the Present

The 1989 aerial photograph shows the subject property already under construction. This is a discrepancy from the building permit records reviewed at the City of Cypress, which indicated that the permit to construct the building shell was issued in June 1990. The Certificate of Occupancy for the 5-story subject property building was issued in October 1991 to Shuwa Investments. This discrepancy does not appear to present an environmental concern for the subject property. The 1989 aerial photograph also shows the adjacent current building footprints to the north, east, and southeast of the site. Plaza Drive was observed adjacent to the southeast of the subject property. A portion of the former golf course to the south has been

graded for agricultural use. The surrounding vicinity to the north and east is primarily commercial and light industrial facilities. The 1994 aerial photograph shows the subject property with its current building footprint. Adjacent properties to the southwest and west appeared to still be undeveloped in the 1989 and 1994 aerial photographs. These properties appear to have been developed with their current building footprints some time after 1996 (Dames & Moore, 1999). Agricultural fields were observed to the south of the site, across Katella Avenue. The Armed Forces Reserve Center airstrip was still visible in this area.

3.4 Chain of Title

The Chain of Title Search (NETR-Real Estate Research & Information, June 11, 2002) indicated the subject property was owned by the following entities:

- Prior to 1940 – 1953: Harry L. Burnham
- 1953-1959: Consolidated Pacific Investment Company (Grant Deed 3-10-1953)
- 1959-1980: The Prudential Insurance Company (Grant Deed 1-29-1959)
- 1980-1985: McDonald Douglas Corporation (Corporation Grant Deed 1-3-1980)
- 1985-1991: Shuwa Douglas Corporation (Grant Deed 11-19-1985)
- 1991-1999: SIC Finance, Inc., a California Company (Grant Deed 12-4-1991)
- 1999-Present: LBA-VF III, a Delaware limited liability company (Grant Deed 7-16-1999)

One of the recorded deeds lists McDonnell Douglas Corporation (incorrectly identified by NETR as McDonald Douglas) as the property owner from 1980 to 1985. McDonnell Douglas Corporation had been a major government aerospace contractor. The potential exists that McDonnell Douglas Corporation used the site for government aerospace contract work. However, based on the review of local agency files and previous environmental assessments, it does not appear that the subject property had been either developed by McDonnell Douglas Corporation or had been used as a storage area. Accordingly, no specific environmental concerns or use of hazardous substances and petroleum products were identified from the review of historical resources. There were no leases or environmental liens indicated for the subject property.

3.5 Previous Environmental Reports

The following previous environmental report was provided by Layton-Belling & Associates:

- *Phase I Environmental Site Assessment – Mitsubishi Office Building, 5665 Plaza Drive, Cypress, California,* prepared for Layton-Belling & Associates by Dames & Moore, July 8, 1999.

Dames & Moore performed the following tasks: document review, map review, interviews with people knowledgeable of site operations, limited adjacent property review, and site reconnaissance as part of their

1999 assessment. Dames & Moore did not sample radon gas, indoor air quality, lead-based paint, lead in drinking water, asbestos, soil, groundwater, or wetlands as part of their investigation. The following is a summary of Dames & Moore's findings:

- The current 5-story building on the subject property was constructed in 1991 as a commercial office building. Prior to 1989, the subject property was reportedly in agricultural production as evidenced on historical aerial photographs. The 1935 topographic map reportedly indicated a Texas Oil Tank Farm located approximately 0.75 miles northwest of the site.

- A *Structural Review Report for Mitsubishi Warehouse* (John A. Martin & Associates), provided by the Shuwa property management office to Dames & Moore, indicated that site groundwater was reportedly encountered during geotechnical boring at 6 to 6.5 feet bgs. Subsurface soils encountered during the geotechnical investigation reportedly included sands, silty sands, sandy silts, and silty clays.

- Dames & Moore noted the following chemicals during their site visit: one 55-gallon drum and five 1-gallon containers of water treatment chemical (Chem Pro 3030C); various small quantities of cleaning supplies, and various small quantities of maintenance supplies. No staining was observed surrounding the trash receptacle/compactor on the east side of the building.

- One 150-gallon diesel AST associated with the emergency generator was observed on the roof. Dames & Moore noted that the AST was in good condition.

- Due to the building age (1991), Dames & Moore indicated that the potential for asbestos-containing materials was too low to warrant sampling.

- Dames & Moore reviewed historical environmental databases through EDR. Their review of the EDR Report indicated that potential for surrounding properties to create a recognized environmental condition (REC) at the subject property was low.

- Dames & Moore contacted the RWQCB, DTSC, State Fire Marshall, Orange County Health Care Agency, Orange County Sanitation Districts, South Coast AQMD, and OCFA. No environmental files were reported for the site at the agencies listed above. The OCFA had an annual fire inspection, but no record of hazardous materials storage.

Dames & Moore identified no recognized environmental conditions in connection with the subject property and did not recommend that further investigations be conducted.

3.6 Environmental Sampling

3.6.1 Asbestos-Containing Materials (ACM)

Golder conducted a limited asbestos survey of the subject property. The asbestos survey portion of the ESA was limited to identifying and locating broad categories of ACM. The survey was performed to provide information used to identify immediate asbestos hazards and to develop recommendations as to the need for a more thorough survey and/or an operations and maintenance program. The survey was not an attempt to sample each homogeneous area or fully characterize each suspect material.

Golder conducted a floor-by-floor inventory of the building materials at the subject property. No previous asbestos surveys were reported for the site according to LBA personnel or the previous Phase I report (Dames & Moore, 1999). Bulk samples were collected from representative areas in the various tenant spaces, roof tops, storage areas, and common areas. Bulk sampling was conducted in accordance with procedures outlined in the Asbestos Hazard Emergency Response Act (40 CFR 763.86, Sampling). The procedure requires the inspector to select random sampling locations from homogeneous materials suspected to contain asbestos.

A homogeneous material is defined as an area of surfacing material, thermal system insulation, or miscellaneous materials that is uniform in color and texture, and appears to be identical in all aspects. The homogeneous materials that were sampled in this survey included roofing components, various resilient flooring, drywall/tape/compound, and lay-in ceiling panels. The materials observed were in good condition. Unsampled suspect asbestos-containing construction materials may be located within walls, ceiling cavities, and other non-accessible areas. Precautions should be used in relation to these unsampled materials until proper sampling and analysis have determined their asbestos content.

ACM bulk samples were analyzed using polarized light microscopy (PLM) in accordance with the EPA Interim Method of Asbestos in Bulk Insulation Samples as defined in 40 CFR 763, Appendix E to Subpart E (EPA Method 600/R-93-116). Environmental Management Consultants, Inc. of Phoenix, Arizona, performed the PLM analysis of the samples.

Sample No.	PLM Analysis Location/Description	Results (% Asbestos)
1-5665	20" by 5' acoustic ceiling panel (ACP) outside 5th floor smoking area	ND
2-5665	12" by 12" acoustic ceiling tile (ACT) in 5th floor hallway	ND
3-5665	12" by 12' beige resilient floor tile (RFT) and yellow mastic in central	ND

Sample No.	PLM Analysis Location/Description	Results (% Asbestos)
	break room (5th Floor)	
4-5665	12" by 12" black specked RFT and yellow mastic, 5th Floor copy room	ND
5-5665	12" by 12" beige RFT in 4th Floor north office area	ND
6-5665	20" by 5' ACP in 4th Floor east office area	ND
7-5665	12" by 12" ACT in 4th Floor Mail Room	ND
8-5665	12" by 12" black RFT and yellow mastic in 4th Floor telecom room	ND
9-5665	12" by 12" ACT in 4th Floor north of elevator	ND
10-5665	12" by 12" black RFT and yellow mastic in 1st Floor east hallway	ND
11-5665	12" by 12" beige RFT in 2nd Floor east office	ND
12-5665	Drywall/joint compound in 2nd Floor east office area	ND
13-5665	Drywall/joint compound in 2nd Floor north office	ND
14-5665	Drywall/joint compound in west lunchroom- 2nd Floor	ND
15-5665	20" by 5' ACP in west office area- 2nd Floor	ND
16-5665	2' by 4' ACP in west lunchroom-2nd Floor	ND
17-5665	12" by 12" gray and tan RFT and yellow mastic in west lunchroom- 2nd Floor	ND
18-5665	12" by 12" gray and tan RFT and yellow mastic in west lunchroom- 2nd Floor	ND
19-5665	12" by 12" gray and tan RFT and yellow mastic in west lunchroom- 2nd Floor	ND
20-5665	2' by 4' ACP in west lunchroom- 2nd Floor	ND
21-5665	2' by 4' ACP in west lunchroom- 2nd Floor	ND
22-5665	Roof field cut 1 (Layers 1 through 3)	ND
23-5665	Roof field cut 2 (Layers 1 through 3)	ND
24-5665	Roof field cut 3 (Layers 1 through 3)	ND
25-5665	Roof mastic 1 (Gray)	8% Chrysotile
26-5665	Roof mastic 2 (Gray)	8% Chrysotile
27-5665	Roof mastic 3 (Gray)	8% Chrysotile

A total of 27 bulk samples were collected from suspect ACM on the subject property. Laboratory analysis only indicated ACM (8% Chrysotile) in the gray mastic on the building roof. This material was in good condition and is considered to be nonfriable. This material is not considered likely to pose a potential health risk. The remaining materials sampled did not contain ACM.

The ACM identified should only be removed by qualified asbestos workers. Maintenance, construction, demolition, and repair personnel should be made aware of the presence of ACM, and instructed not to disturb or damage ACM unless properly qualified. Current federal and state regulations require that repair, renovation, or demolition of asbestos-containing materials must be conducted only by workers and contractors who have been properly trained in the correct handling of asbestos.

Golder's sampling and analysis does not constitute a full characterization of asbestos-containing materials that may be inaccessible in the buildings on the subject property (e.g., interior wall materials). Golder recommends that unsampled suspect material in inaccessible areas be presumed asbestos-containing

material until tested. Laboratory analytical reports and chain-of-custody documentation are contained in Appendix C.

3.6.2 Fungal Screening

In conjunction with the RREEF scope of work, Golder conducted a fungal screening as part of the environmental site assessment on the subject property. The objective of the fungal screening was to report conditions identified through limited interviews, document review, and physical observation of potential fungal growth from water intrusion or water leakage conditions at the subject property. Interior wall inspections and/or air sampling was not included in the scope of work. Golder observed HVAC systems, bathrooms, utility closets, landscaping, and interior ceilings and walls for roof leaks and water penetration. Additionally, tenants were questioned regarding evidence of fungal growth and odors, leaks, floods, or other conditions that could promote fungal growth. Ms. Carol Amour, Facilities Manager for Mitsubishi Electric, has been at the site since 1991 and reported no problems with water intrusion or water leakage within the last one year. Ms. Amour reported on minor window leaks that were reportedly fixed over one year ago. The following results of the Golder fungal screening follow:

Floor	Date	Location	Evidence of Water Staining	Evidence of Suspect Fungal Growth	Comments
1st	6/6/02	Elevator Area	Bulging wallpaper and water leak stains	None observed.	According to Ms. Carol Amour, this area was impacted by a leaking HVAC pipe on the second floor approximately 2 years ago. The bulging wallpaper does not appear to have been fixed since the leak occurred.
2nd	6/6/02	Janitor's Closet	Water stains down walls.	Suspect fungal growth on drywall observed in two areas beside floor drain.	Appears to be water leakage from piping above, however, could also be impacted by improper use of drain (i.e. overflow conditions).
2nd	6/6/02	Women's Restroom	No water stains observed.	Suspect fungal growth on floor grout.	There was a slight musty odor in this vacant restroom.
2nd	6/6/02	Office/ Cubicle Areas	Water stained ceiling panels in various areas.	None Observed.	
3rd	6/6/02	Office/ Cubicle Areas	Water stained ceiling panels on west side of floor.	None Observed.	

Floor	Date	Location	Evidence of Water Staining	Evidence of Suspect Fungal Growth	Comments
4th	6/6/02	Office/Cubicle Areas	Water stained ceiling panels in various areas.	None Observed.	One office had a stained ceiling panel beside window. Possible water intrusion. Remaining stained ceiling panels were on interior portions of building.
4th	6/6/02	Janitor's Closet	Bulging drywall approximately 8 feet above ground.	None Observed.	Water stains were faintly visible on the drywall, which appeared to have been wet sometime in the past.
5th	6/6/02	Office/ Cubicle Areas	Stained ceiling panels in various areas.	None Observed.	

3.6.3 Carbon Monoxide (CO) and Carbon Dioxide (CO_2) Screening Tests

Golder conducted screening tests for carbon dioxide and carbon monoxide in representative building areas. The screening tests were performed using a Dräeger Accuro Multi Gas Detector bellows pump and Dräeger tubes specific for carbon monoxide and carbon dioxide. The measuring range for the carbon monoxide tubes was 2 to 60 parts per million (ppm). The measuring range for the carbon dioxide tubes was 100 to 3,000 ppm. The table below summarizes the results of the tests.

Location	Date Sampled[1]	CO Results (ppm)	CO_2 Results (ppm)
5th Floor outside smoking room; north side	6/6/02	0	300
5th Floor east office area	6/6/02	0	400
4th Floor east office area	6/6/02	0	350
4th Floor north office area	6/6/02	0	375
1st Floor Mitsubishi Automation office	6/6/02	0	450
3rd Floor Touro University; south office area	6/6/02	0	275

1. June 6, 2002 (Los Alamitos, CA): Actual Atmospheric Pressure= 1010 hPA (hectaPascals) as provided by www.wunderground.com.

Carbon dioxide and carbon monoxide levels can be indicators of ventilation problems inside a building. Golder's field screening results were compared to levels set by the American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE; Standard 62–1989). According to ASHRAE, carbon dioxide levels in office buildings should be kept at or below 800 ppm in office spaces. ASHRAE

also recommends that carbon monoxide levels in ventilation air meet the outdoor standard set by EPA of less than 9 ppm carbon monoxide for any 8-hour exposure period. All of the results were below the recommended ASHRAE maximum ambient indoor air levels for CO_2 and CO.

3.6.4 Lead in Drinking Water

Golder did not collect drinking water samples for lead analysis since the site was not used for residential purposes, as specified in the RREEF Scope of Work.

3.6.5 Radon

Golder did not collect radon samples, based on the RREEF Scope of Work for non-residential properties. Based on the designation of the subject site as EPA radon zone 3 (indoor average level of less than 2pCi/L) and the lack of subterranean spaces in the buildings, it appears unlikely that elevated radon levels would be present inside of the subject property buildings. Actual testing would be required to evaluate radon concentrations in the buildings.

3.6.6 Lead-Based Paint

Golder did not collect paint samples, based on the RREEF Scope of Work for non-residential properties. The paint observed in the subject property building appeared to be in good condition.

4.0 CONCLUSIONS AND RECOMMENDATIONS

Golder has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E 1527-00 of the subject property located at 5665 Plaza Drive, Cypress, California. Any exceptions to, or deletions from, the Standard Practice are described in the corresponding sections of this report. This assessment revealed no evidence of Recognized Environmental Conditions in connection with the subject property.

The following potential environmental concerns with associated conclusions and recommendations are presented as a result of the environmental site assessment of the subject property:

- Twenty-seven bulk samples were collected from suspect ACM in the subject property building. Laboratory analysis indicated ACM in the gray mastic on the building roof. This material is considered nonfriable and was in good condition at the time of the survey. A limited Operations and Maintenance Plan should be developed for the subject property ACM.

- All five floors showed some evidence of prior water leakage from air conditioning piping located above the drop ceilings. Suspect fungal growth was observed in the 2nd Floor janitor closet drywall and the 2nd Floor women's restroom floor grout. Several ceiling panels were stained on each floor. Golder recommends the repair of all leaks and removal of all water damaged materials.

- Significant oil staining was observed surrounding the hydraulic trash compactor located outside the northeast corner of the site building. This area should be steam cleaned and better housekeeping and maintenance practices should be implemented in this area.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 18 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/23/2021 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 5 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 2 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 37 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

DOD: Consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

A review of the DOD list, as provided by EDR, and dated 12/31/2005 has revealed that there is 1 DOD site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
LOS ALAMITOS ARMED F		S 1/4 - 1/2 (0.307 mi.)	0	65

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 03/22/2021 has revealed that there are 2 Cortese sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

THE BOEING COMPANY (Continued) **S103622068**

Name:	COOK COMPRESSION
Address:	10800 VALLEY VIEW ST
City,State,Zip:	CYPRESS, CA 90630
Site ID:	409544
CERS ID:	10709341
CERS Description:	Chemical Storage Facilities

Violations:

Site ID:	409544
Site Name:	Cook Compression
Violation Date:	04-10-2020
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes:	Returned to compliance on 04/16/2020. The facility failed to submit the hazardous materials business emergency plan on CERS by the due date of March 1, 2020. Corrective action: Within 30 days, notify this Agency that the hazardous materials inventory has been submitted.
Violation Division:	Orange County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS

Site ID:	409544
Site Name:	Cook Compression
Violation Date:	08-20-2019
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	OBSERVATION: Hazardous waste manifests were not available for review at the time of inspection. Facility should have hazardous waste manifests on site dating back to three years. CORRECTIVE ACTION: Submit copies of the hazardous waste manifests to this Agency within 30 days to abate this violation.
Violation Division:	Orange County Environmental Health
Violation Program:	HW
Violation Source:	CERS

Evaluation:

Eval General Type:	Other/Unknown
Eval Date:	04-10-2020
Violations Found:	Yes
Eval Type:	Other, not routine, done by local agency
Eval Notes:	The facility has failed to submit the Hazardous Materials Business Emergency Plan by the deadline March 1, 2020. To correct the violation log on to CERS and submit the business plan for the year 2020. A copy of this report was sent to mspanial@doverprecision.com.
Eval Division:	Orange County Environmental Health

Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Hazardous waste manifests were received by this Agency. The following violation has been corrected: - I474: Failure to keep a copy of each properly signed manifest for at least three years The facility has no outstanding violations.
Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-16-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Cook Compression 10800 Valley View St Cypress, CA 90630 On site to conduct a routine hazardous waste inspection. Consent to enter and inspect the facility was granted by Mike Perez, Service Center Manager. This facility currently generates hazardous waste on a routine basis from repairing hydraulic cylinders. Walked throughout the facility and observed the hazardous waste storage areas. Containers of hazardous waste were stored closed and properly labeled. Containers appeared to be in good condition. Per Mike Perez, this facility has not yet had a hazardous waste pick-up. Maintain 3 years of hazardous waste manifests when they become available. Please verify your facilityG s EPA ID number or contact DTSC (Department of Toxic Substances Control) to obtain an active EPA ID number if your facility is generating hazardous waste: https://www.dtsc.ca.gov/IDManifest/index.cfm The emergency response contingency plan information sticker was provided. No [Truncated]

CERS HAZ WASTE:
Name: CAVOTEC USA, INC.
Address: 5665 CORPORATE AVE
City,State,Zip: CYPRESS, CA 90630
Site ID: 359247
CERS ID: 10645759
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 359247
Site Name: Cavotec USA, Inc.
Violation Date: 11-07-2019
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 12/03/2019. OBSERVATION: Observed the following drums in the outside yard area - 55-gal drum labeled 'propylene glycol' and 55-gal drum of polyester resin. Both containers contain material and stored open. CORRECTIVE ACTION: Have these drums hauled off under manifest within 30 days.
Violation Division: Orange County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 359247
Site Name: Cavotec USA, Inc.
Violation Date: 01-30-2020
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Returned to compliance on 03/04/2020. This violation is being elevated to a Class II Violation which is a more serious violation. The violation was originally cited on 11/6/2019. Review regulator comments in CERS and make corrections immediately.
Violation Division: Orange County Environmental Health

Violation Date: 11-07-2019
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 12/03/2019. OBSERVATION: Observed one 55-gal drum of waste oil dated 8/25/16 and one 55-gal drum of waste acetone dated 8/16/16 in fire cabinet. CORRECTIVE ACTION: Have these hazardous wastes hauled by a registered hazardous waste hauler and submit a copy of the manifest to this Agency within 30 days.
Violation Division: Orange County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 359247
Site Name: Cavotec USA, Inc.
Violation Date: 11-07-2019
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 12/03/2019. OBSERVATION: Observed the following hazardous waste containers with no hazardous waste label: - one cubic yard box of 'used rags' - one cubic yard box of waste aerosols CORRECTIVE ACTION: Label all containers of hazardous waste with required information and submit documentation to this Agency demonstrating compliance with labeling regulations within 30 days.

FINDS:
Registry ID: 110056511136

Click Here:

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	05-18-2016
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site to conduct a routine Hazardous Materials Disclosure Business Emergency Plan (HMBEP) inspection. Met with Manager Shelley Currier of Consolidated Medical Bio-Analysis. Consent was provided to enter and conduct inspection activities. Consolidated Medical Bioanalysis has submitted the HMBEP into the Esubmit database. The 2016 HMBEP has been accepted. Disclosable chemicals verified include: - diesel - Waste Alcohol - Waste Formalin The contingency plan and training program was verified during this inspection. Please note that if the facility decides to discontinue any of the above chemicals, proper disposal or removal of chemicals is required and maintenance of disposal records will be verified. Within 30 days of removal, contact this agency to verify that the hazardous material is no longer stored on site and remove it from the facility's listed disclosable chemicals.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

CLAYTON ENVIRON CONSULT (Continued) **1000442492**

corrective action activities required under RCRA.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-16-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine Hazardous Materials Business Emergency Plan inspection. Met with Manager John Short of Magna Tool. Consent was provided to enter and conduct inspection activities. Magna Tool has submitted the HMBEP into the CERS database. The Submittal was reviewed and accepted on this date. The following chemicals were observed: -Waste cooling oil - 330 gallons -New Cooling Oil - 355 gallons -Oxygen - 550 cu.ft. Acetylene - 300 cu.ft. Please note that if the facility decides to discontinue any of the above chemicals, proper disposal or removal of chemicals is required and maintenance of disposal records will be verified. Within 30 days of removal, contact this agency to verify that the hazardous material is no longer stored on site and remove it from the facility's listed disclosable chemicals.

Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-16-2016

MAGNA TOOL INC (Continued) **S118599464**

Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site to conduct a routine hazardous waste inspection. Met with Manager John Short of Magna Tool. Consent to enter and inspect the facility was granted. Hazardous waste observed on site included: - (6) 55 gallon drums containing Waste cooling Oil/water mixture. All waste containers were properly stored closed. The containers had labels that were illegible. The labels were re-inked.. Hazardous waste manifests for all hazardous waste streams were available for review. Perimeter of the facility was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility. The Hazardous Waste Emergency Response information was available in the emergency response plan.

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	04-26-2019
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site to conduct routine hazardous waste inspection. Walked the internal and exterior areas of facility. Observed hazardous waste storage area and hazardous waste containers. Contingency plan and manifests for waste pick-up were available for review.
Eval Division:	Orange County Environmental Health
Eval Program:	HW
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	04-26-2019
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	On site for routine Hazardous Materials Business Plan (HMBP) inspection. Observed the following hazardous materials on site in reportable quantities (all sizes are approximate): - 5 x 55 gal drums of waste oil/coolant mix - 550 cubic ft of oxygen - 300 cubic ft of acetylene - 75 gal of new oil Per California Health & Safety Code Ch. 6.95, businesses that store and handle hazardous materials at or over reportable quantities (55 gal of a liquid, 500 lbs of a solid, 200 cubic ft of a compressed gas) must prepare and implement an HMBP. The HMBP must include the following elements: - Business Activities - Owner/Operator Information - Chemical Inventory - Site Map - Emergency Response Plan/Training Plan The HMBP must be submitted online through the California Environmental Reporting System (CERS) by March 1st of every year. The facility is responsible for identifying all hazardous materials, including hazardous wastes, which are at or above disclosure [Truncated]

Eval Type:	Other, not routine, done by local agency
Eval Notes:	The facility has submitted their 2018 Annual HMBP certification to CERS. The submission was declined due to the ER plan not being submitted for 2018. I emailed Linda, whom submitted the HMBEP: "Hello Linda, I reviewed your facilityG s Hazardous Materials Disclosure on CERS. For your annual, 2018 certification, all three sections (Facility Information, Hazardous Materials Inventory, Emergency Response and Employee Training Plan) must be submitted together. Violations I463 and I632 for the site map, and failure to renew the submission annually will remain outstanding until all parts of the submission are submitted. Please contact me if you need assistance, thank you."

Eval Notes:	Reviewed Facility's CERS Hazardous Materials Disclosure and Business Emergency Plan. Facility Information has been accepted. Hazardous Materials Inventory has been DECLINED for Site Map. The Site Map uploaded is not clearly legible and is missing required information. Please upload a clear site map with the following information: north orientation, loading areas and internal roads if applicable, adjacent streets, storm drains and sewers, access and exit points, emergency gas/water/electric shutoffs, evacuation staging areas, hazardous material storage and handling areas, and emergency response equipment (fire extinguishers and hydrants). You have failed to complete your annual Hazardous Materials Disclosure and Business Emergency Plan renewal certification by not submitting your Emergency Response and Employee Training Plan. A violation has been cited and a copy of the report has been sent to linda@magnatoolinc.com and robert@magnatoolinc.com

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes: On 2/18/2014, received SB989 secondary containment test results for the UDCs performed on 2/5/2014 by Leonard Evans, Service Technician, with Wayne Perry, Inc. The tanks, sumps, and piping at this site are monitored by VPH system, and do not require SB989 testing. However the dispenser containment sumps are not monitored by VPH and therefore SB989 testing must be performed every 3 years. Secondary containment testing of the UDCs was recently performed on 2/5/2014 and the results indicate all components passed. No further action required.

I just want to confirm a permit is not required. SCOPE OF WORK: -Last Friday (7-26-13) Western Pump replaced a 2G G X 18G G flex line in the 91 turbine sump. Our techs coned off and shut down (91) STP sump. We evacuated the 91 product line by blowing it down with nitrogen to the 91 UST. Then we switched out the flex line. After installing the new flex line, the line was purged from all air pockets and put back in service. The repairs only consisted of working on the 2G G primary line (flex hose) in the turbine (91) sump. Thank You, Project Coordinator KELLEN HANEMAAYER WESTERN PUMP,INC DIRECT LINE 619-578-2180 CELL LINE 619-446-9818 FAX LINE 619-236-7406

Eval Notes:	SR0129450 Erdman was on site to conduct the final inspection and to witness the post construction Monitoring System Certification test. The post modification monitoring system certification testing was completed by Axel Medina of Tanknology. I met with Don Prescott. The scope of work included the following: - adding a new Veeder Root TLS 350R - replacing all the existing UDCs with new VPH UDCs - adding 4 new VPH UDCs - re-piping the fuel lines and vent and vapor lines from existing piping to all UDCs - Install new 4hp STP on both 87 USTs and added a 4hp STP to 91 UST. The new VR panel is located next to the original panel and is operating properly. All 12 UDCs were filled with brine and the reservoirs are holding brine without leaks and the VR 304 sensors and the VR 323 sensors are operating properly. The vacuum sensors in the 87 and Additive tanks STP sumps were tested and all passed testing. Note the 91 piping vacuum line has a small leak near the A new [Truncated]

Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: The following documents were received by this Agency: - Monitoring system certification test results dated 4/14/20 - Spill bucket test results 4/20/20 - Overfill prevention test results 4/14/20 All components were tested and passed. The facility utilizes ATG as overfill prevention.
Eval Division: Orange County Environmental Health
Eval Program: UST
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-28-2015
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site to witness annual monitor certification and to conduct a routine UST inspection. Met with William Karras of WSK and Sons Inc. William Karras conducted the tank testing, monitor system certification, and spill bucket testing. Mr. Karras ICC, VPM, and Veeder-Root certifications were observed and verified. The facility

COSTCO WHOLESALE #748 (GAS STATION) (Continued) **S123499016**

contains: - (3) 30,000 gallon double walled USTs (87 A, 87 B, and 91) containing gasoline; and - (1) 1,500 gallon double walled UST containing Lubrisol fuel additive. All USTs are continuously monitored by a Veeder-Root TLS-350R system. All USTs and sumps contain brine in the interstitial space. In addition, the vent line box also contains brine. Secondary containment is monitored under constant vacuum. Alarm history and set-up tape was reviewed during this inspection. Facility contains: - Ball float and ATG for overfill protection. The following were tested: - All Sump and UDC sensors initiated positive shutdown to the [Truncated]

Eval Division: Orange County Environmental Health
Eval Program: UST
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 04-28-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Erdman was on site to witness the primary piping soap test. I met with Don Prescott the project manager of the construction. The facility had the concrete removed as well as all the dispensers and had the piping exposed. All of the 12 new VPH dispenser sumps were observed holding vacuum. Glycerin gauges were connected to the primary piping had approximately 50 psi on the line. All of the primary piping connections were saturated with soapy water to verify that there were no leaks. All piping connections passed the inspection as no bubbles were observed. The contractor stated that the vapor and vent lines were not completed. We discussed that a return visit would be conducted early Monday morning to observe the soap test on the vent and vapor connections.

Eval Division: Orange County Environmental Health
Eval Program: UST
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 06-08-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Reviewed facility’s CERS HMBEP Submission. All HMBEP submittal elements have been accepted.

Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 06-20-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: The CERS UST electronic reporting submission is complete and accepted. The 91 grade fuel UST monitoring plan was updated with the Mag 112 as the STP sump sensor. Also submitted was the Certification of Installation / Modification for the recent modification under Permit SR0129450. The results from the Monitoring System Certification were also reviewed and all components tested received a pass.

Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Jimmy Auto Parts 10652 Walker St. Cypress, CA 90630 Attn. Jimmy Minato On site to conduct a routine Hazardous Materials Business Emergency Plan inspection. Met with Jimmy Minato, who provided consent to enter and inspect the facility. A walk through of the facility has verified (2) different chemicals above threshold quantities. Used Oil - max volume= 220 gallons Antifreeze - Max volume = 55 gallons To date, the facility has not prepared or submitted a hazardous materials business emergency plan via the Orange County E-Submit portal (See violations I292 above). A username and password were requested during this inspection. Facility has 30-days to submit a hazardous materials business emergency plan on the Orange County e-submit portal. If additional assistance is needed to complete the HMBEP plan, you can attend the free esubmit portal lab every 2nd and 4th Thursday of every month.

Eval Notes:	On site to conduct a routine hazardous waste inspection. Met with Jimmy Minato, who gave consent to enter and inspect the facility. Ownership Information was verified and is currrent. Hazardous waste observed on site include: - (4) 55-gallon drums containing waste motor oil, (1) 55-gallon drum containing waste antifreeze, and (1) 55-gallon drum for used oil filters. All containers were properly stored closed. Two containers had labels that were missing required information (See violation I400 above). Hazardous waste manifests were available for review. Perimeter of the facility and the municipal dumpster was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility. The Hazardous Waste Emergency Response information was posted in the facility.

Site ID: 418845
Site Name: MITSUBISHI ELECTRIC US INC
Violation Date: 09-19-2017
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 09/19/2017. The accumulation start date was missing from the 4x55 gallon drums of waste oil. Each container and portable tank holding hazardous waste must be marked with the following information: 1. The words G HAZARDOUS WasteG 2. Waste (name) 3. Hazardous property of the waste (e.g. G toxic, flammable, corrosive, etc.) 4. Physical state of the waste (liquid or solid) 5. Name and address of the business. 6. Accumulation date (date the first

SUREFLO COMPLEX (Continued) **S121678074**

drop of waste has been placed in container) The accumulation start date was updated during this inspection. Violation I400 is corrected.

Eval Notes: On site to conduct a routine Hazardous Materials Disclosure and Business Emergency Plan (HMBP) inspection. The facility has the following hazardous materials on site in quantities that meet disclosure thresholds: - Propane, 7 (13) gallon cylinders - Waste hydraulic oil, 55 (2) gallon drums The facility had recently submitted their HMBP on California Environmental Reporting System (CERS) when it was observed that one submittal for 3 buildings on the same campus was being done. Buildings A and B do not store hazardous materials over disclosure thresholds. I worked with Aldo on editing the CERS submittal to change the submittal from Building A, to Building C. Together we completed the Facility Information and Emergency Response and Training Plan and Hazmat Inventory portions of the submittal. The site map was discussed. Violations I169 and I292 for failure to submit an HMBP cited on 8/10/17 have been corrected and violation I208 is being cited. Please finish and [Truncated]

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine Hazardous Materials Disclosure Business Emergency Plan (HMBEP) inspection. Met with Manager TGregg O'Rear of GES. Consent was provided to enter and conduct inspection activities. GES has submitted the HMBEP into the Esubmit database. The 2016 HMBEP has been declined. The following were verified: - Chemical Disclosure was not accurate (see violation I169 above) - Contingency plan/BEP. Facility map was inaccurate (see violation I632 above), and; - Training program. Please note that if the facility decides to discontinue any of the above chemicals, proper disposal or removal of chemicals is required and maintenance of disposal records will be verified. Within 30 days of removal, contact this agency to verify that the hazardous material is no longer stored on site and remove it from the facility's listed disclosable chemicals.

Eval Notes: On site to conduct a routine hazardous waste inspection. Met with facility operator Chip Rennie, who gave consent to enter and inspect the facility. Hazardous waste observed on site include: - Waste paint, waste rags containing solvent, waste solids containing paint, and universal waste including ballasts and fluorescent light tubes. All containers were labeled and properly closed. Hazardous waste manifests for all hazardous waste streams were available for review. Perimeter of the facility and the municipal dumpster was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility. The Hazardous Waste Emergency Response information was posted in the facility.

Citation:	22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)
Violation Description:	Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service. The written assessment shall state that, the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation. The tank assessment shall be valid for five (5) years.
Violation Notes:	OBSERVATION: PE certification is required for the neutralization tank that was installed in late 2018. CORRECTIVE ACTION: Provide a copy of the PE certification for the tank to this Agency within 60 days.

Eval Notes:	On site for routine Permit by Rule inspection. Consent to enter, inspect, and take photographs was given by Robert Hays. Also present was Susan Berg of OCHCA. Facility is also regulated for the treatment of hazardous waste under the CA tier. The facility conducts treatment of acidic waste oil which is generated during routine maintenance of vacuum pumps. The waste oil is transferred to a 55-gallon poly drum. The waste is subject to neutralization and phase separation (gravity settling.) After separation, top layer of oil and remaining sludge are hauled off as non-RCRA hazardous waste. Mr. Hays confirmed that there have been no changes to the system and no releases in the previous three years. The following documents were available for review: inspection log and Phase 1 Environmental checklist. Annual Tiered Permitting notification documents were received for 2019.

Eval Notes:	On site for routine Tiered Permitting-Conditionally Authorized inspection. Consent to enter, inspect, and take photographs was given by Robert Hays. Also present was Susan Berg of OCHCA. The facility is also regulated for treatment of hazardous waste under the PBR tier. There have been no reported releases in the previous three years. Observed the following process: - Acidic reactive waste is generated in plumbing fixtures in the facilityG s process room. The facility has two acid neutralization units, or sinks, that alternate usage. The fixtures are placed into the neutralization sinks creating acid waste. The acid waste is neutralized (before being discharged to the POTW.) Per Mr. Hayes, one of the 100-gal neutralization sinks was switched out in late 2018 due to a crack in the tank. The following documents are available for review: inspection log, operating instructions for the treatment units, closure cost estimate, sewer agency discharge records, and Phase 1 [Truncated]

Eval Notes: INSPECTOR COMMENTS: A routine Tiered Permitting inspection was conducted 4/24/18. The facility generates a reactive acidic waste that undergoes treatment by neutralization. During the treatment process, approximately one to two gallons worth of solid residue settles to the bottom of the treatment tank per batch treatment. Per facility employee, Jason, the residue is disposed of into the municipal trash. The facility has not made a determination on whether or not this residue is hazardous. Discontinue disposing of this residue to the municipal trash until testing has been done to determine if it is hazardous or not. Please obtain a representative sample of this residue and have it tested by a state-certified laboratory for a Fish Bioassay (Acute Aquatic 96-hour LC50 Test) per Title 22 CCR Section 66261.24 (a)(6). Additional testing may be required depending on results. You may use generator knowledge to assume the residue is a hazardous waste and manage it as a hazardous [Truncated]

Eval Notes:	Received and reviewed analytical results from Robert Hays. Testing was conducted by CalScience. Results are for two different waste streams: white solid precipitate which is leftover residue from treatment in neutralization tanks, and silicon carbide slurry rinsate. Both samples were tested for Acute Aquatic 96-hour LC50 Test, pH, and California regulated metals per Title 22 CCR. Results of the sample testing are as follows: White Solid Precipitate - 0% mortality of fish, pH = 10.10, Title 22 CCR California metals either not detected or under TTLC limits Slurry Rinse - 0% mortality of fish, pH = 7.55, Title 22 CCR California metals not detected Based on these analytical results both waste streams are not hazardous. Violation I637 cited on 4/26/18 is corrected. A copy of this report was sent to Robert Hays.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Eval Date:	09-22-2014
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site to conduct a routine Hazardous Materials Business Emergency Plan inspection. Met with health and safety supervisor Barbara Ross, who provided consent to conduct inspection activities. DRS Sensors and Targeting Systems has disclosed their chemicals stored on site into the E-Submit Portal database. The submission was reviewed and accepted on February 13, 2014. An inspection of the facility was conducted in order to verify HMBEP accuracy. The facility map, business emergency plan, and training documents were all verified and reviewed. Please note that if the facility decides to discontinue any of the above chemicals, proper disposal or removal of chemicals is required and maintenance of disposal records will be verified by this agency. In addition, the HMBEP submission will need to be revised within 30 days of the removal date to accurately show the correct list of disclosable chemicals.

Eval Date:	09-22-2014
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site to conduct a routine hazardous waste inspection. Met with health and safety engineer Barbara Ross, who gave consent to enter and inspect the facility. Hazardous waste observed on site include: - 1 gallon bottles of waste sulfuric acid, potassium dichromate, hydrogen fluoride, hydrogen peroxide, nitric acid, and ammonium hydroxide. In addition, waste acetone was contained in a 55-gallon drum. All containers were labeled and properly stored closed. All hazardous waste was stored in storage bins behind the main building. Hazardous waste manifests for all hazardous waste streams were available for review. Perimeter of the facility and the municipal dumpster was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility. The Hazardous Waste Emergency Response information was available in the business emergency plan.

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	09-25-2017
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site to conduct a routine hazardous waste inspection. Consent to inspect and take photos at the facility was provided by Kevin Balsley. The facility has numerous waste acetone wipe storage containers throughout the facility and all are emptied daily to a designated container. Municipal dumpster area does not contain any hazardous waste. The perimeter of the facility was also inspected; no signs of releases were noted. Emergency Response Information was complete. Hazardous waste containers were properly labeled and covered. Reviewed manifests, bills of lading and consolidated manifests for all hazardous waste streams. For further information about Hazardous Waste management, please refer to the Orange County CUPA website at www.occupainfo.com and open the PDF G Hazardous Waste the BasicsG . No

Waste Description:	LEAD
Waste Code:	D009

DRS SENSORS AND TARGETING SYSTEMS INC (Continued) **1008372054**

Waste Description: MERCURY

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Date:	08-24-2017
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 08/24/2017. The hazardous waste labels on the waste oil and the waste antifreeze container was missing the name and address, the hazardous property, physical state, composition and accumulation start date. All hazardous waste containers shall be marked with the following information: 1) the words G Hazardous WasteG ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. The containers were labeled properly during this inspection. Violation I400 is corrected.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
SSTS (Section Seven Tracking System) evolved from the FIFRA and TSCA Enforcement System (FATES). SSTS tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed each year.

Eval General Type: Other/Unknown
Eval Date: 06-20-2017
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: Reviewed the facility's Hazardous Materials Disclosure and Business Emergency Plan to CERS (California Environmental Reporting System). The facility has only submitted their Business Activities and Business Owner/Operator Identification. After reviewing the inspection report from the inspection conducted 7/8/2016, it appears a violation to the facility for not submitting their business emergency plan was never issued. The facility is now being issued a violation for not submitting their Hazardous Materials Disclosure and Business Emergency Plan. Please disclose your Hazardous Materials Inventory. Hazardous materials are materials above the reportable thresholds of 55 gallons liquid, 500 pounds solid, 200 cubic feet compressed gas. Submit a site map consisting of the following information: north orientation, loading areas and internal roads if applicable, adjacent streets, storm drains and sewers, access and exit points, emergency gas/water/electric shutoffs, [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-08-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine Hazardous Materials Disclosure Business Emergency Plan (HMD/BEP) inspection. Met with Plant Manager Victor Bautista from Advanex. Consent was provided to enter and conduct inspection activities. Advanex has not submitted the HMD/BEP into the California Environmental Reporting System (CERS) database (See violation I292 above). Disclosable chemicals verified include: - Lubricating oils G 325 gallons - Lead Acid Batteries/Sulfuric Acid Electrolyte G Unknown Quantity - Argon G 1,680 Cu.Ft. The contingency plan and training program was verified during this inspection. Please note that if the facility decides to discontinue any of the above chemicals, proper disposal or removal of chemicals is required and maintenance of disposal records will be verified. Within 30 days of removal, contact this agency to verify that the hazardous material is no longer stored on site and remove it from the facility's listed disclosable chemicals.

Eval Notes:	On site to conduct an annual routine Hazardous Waste Inspection. Met with Victor and Joe who explained the process and escorted me through the site. Facility contains: 55 gallon drum of used hydraulic oil and universal waste Hazardous waste containers are properly labeled and covered. All containers storing hazardous waste must be labeled with the following information: 1. The words G HAZARDOUS WasteG 2. Waste (name) 3. Hazardous property of the waste (e.g. G toxic, flammable, corrosive, etc.) 4. Physical state of the waste (liquid or solid) 5. Name and address of the business. 6. Accumulation date (date the first drop of waste has been placed in container) Documents Available for review: 1. Hazardous waste Manifest/Receipts (keep a copy on site for three years). - Note: A copy of the federal manifest must be sent to DTSC. (Department of Toxic Substances Control, P.O. Box 400, Sacramento, CA 95812-0400). 2. Hazardous Waste Emergency Response [Truncated]

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste Code: U035
Waste Description: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U057
Waste Description: CYCLOHEXANONE (I)

Waste Code: U058
Waste Description: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

Waste Code: U059
Waste Description: 5,12-NAPHTHACENEDIONE, 8-ACETYL-10-[(3-AMINO-2,3,6-TRIDEOXY)-ALPHA-L-LYXO-HEXOPYRANOSYL)OXY]-7,8,9,10-TETRAHYDRO-6,8,11-TRIHYDROXY-1-METHOXY-, (8S-CIS)- (OR) DAUNOMYCIN

Waste Code: U075
Waste Description: DICHLORODIFLUOROMETHANE (OR) METHANE, DICHLORODIFLUORO-

Waste Code: U089
Waste Description: DIETHYLSTILBESTEROL (OR) PHENOL, 4,4'-(1,2-DIETHYL-1,2-ETHENEDIYL)BIS, (E)-

Waste Code: U150
Waste Description: L-PHENYLALANINE, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) MELPHALAN

COSTCO WHOLESALE NO 748 (Continued) **1007989088**

Waste Code: U200
Waste Description: RESERPINE (OR) YOHIMBAN-16-CARBOXYLIC ACID, 11,17-DIMETHOXY-18-[(3,4,5-TRIMETHOXYBENZOYL)OXY]-, METHYL ESTER, (3BETA, 16BETA, 17ALPHA, 18BETA, 20ALPHA)-

Waste Code: U279
Waste Description: U279

Violation Date:	09-21-2017
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

COSTCO WHOLESALE NO 748 (Continued) **1007989088**

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 12/27/2017. The following hazardous materials and wastes were reported in the Hazardous Materials Inventory and were not observed at a volume above which is required to be reported (see violation). Please remove them from the Hazardous Materials Inventory: - Liquid Petroleum Gas - Waste Absorbent - Waste State Regulated Liquids - Waste State Regulated Solids Resubmit the Hazardous Materials Inventory within 30 days.
Violation Division: Orange County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 09-17-2015
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Accepted: HMBEP Approval. The following documents were received and ACCEPTED on CERS: Business Activities Form Business Owner/Operator Form Chemical Inventory (for 12 chemicals) Facility Site Map Emergency Response/Contingency Plan Employee Training Plan
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-21-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection. Consent to inspect was provided by Brenda Simmons. Hazardous waste disposals are conducted monthly. Municipal dumpster area does not contain any hazardous waste. The perimeter of the facility was also inspected; no signs of releases were noted. Emergency Response Information was complete. Hazardous waste containers were properly labeled and covered. Reviewed manifests, bills of lading and consolidated manifests for all hazardous waste streams. For further information about Hazardous Waste management, please refer to the Orange County CUPA website at www.occupainfo.com and open the PDF G Hazardous Waste the BasicsG . No hazardous waste violations noted today.

Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine Hazardous Materials Disclosure Business Emergency Plan (HMBEP) inspection. Met with Store Manager on duty Sal Reyes of Costco. Consent was provided to enter and conduct inspection activities. Costco has submitted the HMBEP into the California Environmental Reporting System (CERS) database and was accepted. The following were verified: - Chemical Disclosure - Contingency plan/BEP, and; - Training program. Please note that if the facility decides to discontinue any of the above chemicals, proper disposal or removal of

COSTCO WHOLESALE NO 748 (Continued) **1007989088**

chemicals is required and maintenance of disposal records will be verified. Within 30 days of removal, contact this agency to verify that the hazardous material is no longer stored on site and remove it from the facility's listed disclosable chemicals.

Eval Date: 08-21-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection. Met with facility supervisor Donnie Gentry, who gave consent to enter and inspect the facility. Hazardous waste observed on site include: - Waste products that exhibit corrosive, acidic, flammable, and toxic properties. In addition, waste pharmaceuticals and waste silver columns were observed. All containers used to store hazardous waste were labeled and properly closed. Hazardous waste manifests for all hazardous waste streams were available for review. Perimeter of the facility and the municipal dumpster was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility. The Hazardous Waste Emergency Response information was available in the business emergency plan.

Eval Notes: Diana, of San Diego's Western Pump, called for modification "permit" info to install Veeder-Root "BIR" enhancement software; project expected to involve a "cold start" of the UST monitoring system. I reviewed the EHD Modification listing, and confirmed with Supervisor Terry Carrier, that no plan check is required. I contacted Diana with

COSTCO WHOLESALE NO 748 (Continued) **1007989088**

the info; post software monitoring certification report to be sent to EHD. other Costco sites to receive BIR on this project: (La Habra, Cypress, Huntington Beach, Irvine). - - GZ email reply to Diana Hello- I reviewed our listing of UST plan check G permitG items on our (www.occupainfo.com) website. I also confirmed with Terry Carrier, an inspection supervisor. No permit/plan check required for the BIR work and subsequent G cold startG . Please send a copy of the post software install monitoring certification report to this agency. Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

- Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
- Violation Description: Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

PURRFECT AUTO SERVICE #13 (Continued) **S124869367**

Violation Notes:	Returned to compliance on 10/04/2014. The HMBEP must be prepared and submitted within 30 days from receipt of this report. Please go to www.esubmit.ocgov.com and log in using the credentials that were provided to you. Complete and submit all necessary information within 30 days from receipt of this report in order to abate this violation.
Violation Division:	Orange County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS
Site ID:	559416
Site Name:	Citywide Auto Care
Violation Date:	02-06-2017
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 02/06/2017. The waste antifreeze drums and the waste oil tanks were missing the Hazardous waste labeling information. Mr. Dunaway completed the Hazardous waste labels during this inspection. Therefore violation I400 is abated today.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-22-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for routine Hazardous Materials Business Plan (HMBP) inspection. Observed the following hazardous materials on site in reportable quantities (all sizes are approximate): - 200 gal total of new oil - 120 gal tank of waste oil - 55 gal of new antifreeze - 55 gal of waste antifreeze Per California Health & Safety Code Ch. 6.95, businesses that store and handle hazardous materials at or over reportable quantities (55 gal of a liquid, 500 lbs of a solid, 200 cubic ft of a compressed gas) must prepare and implement an HMBP. The HMBP must include the following elements: - Business Activities - Owner/Operator Information - Chemical Inventory - Site Map - Emergency Response Plan/Training Plan The HMBP must be submitted online through the California Environmental Reporting System (CERS) by March 1st of every year. The facility is responsible for identifying all hazardous materials, including hazardous wastes, which are at or above disclosure [Truncated]

Eval Notes:	On site to conduct a routine hazardous waste inspection. Met with lead mechanic Gary McMann, who gave consent to enter and inspect the facility. Hazardous waste observed on site include: - (2) 150-gallon tanks containing waste motor oil, (3) 55-gallon drums containing waste antifreeze, and (1) 55-gallon drum for used oil filters. All containers were labeled and properly closed. Hazardous waste manifests for all hazardous waste streams were available for review. Perimeter of the facility and the municipal dumpster was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility. The Hazardous Waste Emergency Response information was posted in the facility.

CYPRESS AUTO REPAIR & SMOG (Continued) **S113121968**

	Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 08/05/2014. Hazardous waste labels were observed illegible. In order to ensure compliance, please routinely inspect labels to ensure that the information required on the label is legible. This violation was corrected during this inspection.
Violation Division:	Orange County Environmental Health
Violation Program:	HW
Violation Source:	CERS
Site ID:	411088
Site Name:	CYPRESS AUTO REPAIR & SMOG
Violation Date:	08-05-2014
Citation:	22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173
Violation Description:	Failure to properly close hazardous waste containers when not in active use.
Violation Notes:	Returned to compliance on 08/05/2014. All containers storing liquid must be closed properly. All lids or bung caps must be sealed closed. This violation was corrected during this inspection.
Violation Division:	Orange County Environmental Health
Violation Program:	HW

Site ID:	411088
Site Name:	CYPRESS AUTO REPAIR & SMOG
Violation Date:	05-02-2017
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 05/02/2017. The waste oil tote was missing the hazardous waste labeling information on the HW label. The waste antifreeze container was missing the hazardous waste label. All hazardous waste storage containers must be labeled with the following: "Hazardous Waste", name and address of the generator, the physical and chemical characteristics of the hazardous waste, and the starting accumulation date. The Hazardous Waste Labeling information was completed on the waste oil tote and the a hazardous waste label was completed and posted on the waste antifreeze drum during this inspection, therefore this violation was corrected.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 09/12/2017. The hazardous waste disposal records for the last 3 years were not available for review. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site.

MIDAS MUFFLER & BRAKE (Continued) **S123519639**

Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 09/12/2017. The accumulation start date was missing from the waste oil tank label and the waste antifreeze. All hazardous waste tanks shall be marked with the words G Hazardous WasteG and the accumulation start date. Immediately ensure that all hazardous waste tanks are marked with the required information.

Eval Notes:	On site visit. This is on the S/E corner of Cerritos and Valley View. The building in question is on the south side of the property. Midas (6040 Cerritos) is the second from the east end. Directly west (in the same building but separate address/business) is Cypress Auto Repair and Smog (6036 Cerritos) and City Wide Auto Care (6026 Cerritos). There is an alleyway and parking lot directly south of the building. The municipal trash dumpster directly behind Midas was described by the anonymous informant as the dumpster where the oil filters had been disposed. I checked the dumpster and found only municipal trash, along with furniture dumped in the trash enclosure. There was a 5 gallon plastic pail of used motor oil in the planter to the rear of the dumpster. While checking the dumpster, I saw an employee of Cypress Auto Care (next door to Midas) watching me. Thinking that he may be the suspect company, I explained that I was following up on an anonymous complaint of oil [Truncated]

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for

CYPRESS METRIC MOTORS (Continued) **1000596535**

generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
UORS (California - Used Oil Recycling System). California Integrated Waste Management Board (CIWMB) helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Violation Source: CERS

Site ID: 424837
Site Name: METRIC MOTORS OF CYPRESS
Violation Date: 06-29-2020
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: OBSERVATION: The labels on the containers of used oil and waste antifreeze were missing the physical state and accumulation start date. Additionally, one container of waste antifreeze was inaccurately labeled as used oil. CORRECTIVE ACTION: Ensure all hazardous waste containers have been properly labeled and submit photos to this Agency within 30 days.

Eval Notes: On site to conduct a routine hazardous waste inspection. Met with facility mechanic John Herron, who gave consent to enter and inspect the facility. Hazardous waste observed on site include: - (3) 55-gallon drums containing waste motor oil, (2) 55-gallon poly drums containing waste antifreeze, and (1) 55-gallon drum for used oil filters. The oil and antifreeze drums were observed open and the labels were illegible (see violations I617 and I400 above). Labels were provided during this inspection. Hazardous waste manifests for all hazardous waste streams were available for review. Perimeter of the facility and the municipal dumpster was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility. The Hazardous Waste Emergency Response information was posted in the facility.

Violation Date: 08-05-2014
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Description: Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 10/04/2014. The HMBEP (business activities page, chemical disclosure, business emergency plan, and facility map) must be prepared and submitted within 30 days from receipt of this report. Please go to www.esubmit.ocgov.com and log in using the credentials that were provided to you. Complete and submit all necessary information within 30 days from receipt of this report in order to abate this violation. Please contact me if you need further assistance.

Site ID: 425699
Site Name: INTEGRITY TRANSMISSION
Violation Date: 08-21-2017
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 08/21/2017. The waste oil container's hazardous waste labels were illegible. All hazardous waste containers shall be marked with the following information: 1) the words G Hazardous WasteG ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. New Hazardous waste labels were completed and posted on the containers during this inspection and violation I400 was corrected.

Eval Notes: On site to conduct a routine Hazardous Materials inspection. Consent to inspect and take photos was provided by Miles Arnold. A tour of the facility was conducted. The business provides services and fluids for various Cutting Machines. This facility is responsible for identifying all hazardous materials and hazardous wastes, which are above the disclosure thresholds. Reporting thresholds for hazardous substances stored at the facility are 500 pounds of solids or 55 gallons of liquid or 200 cubic feet of gas. Hazardous substances should not include an annual waste amount. Hazardous wastes should have a separate disclosure. Please refer to the Orange County CUPA website at http://occupainfo.com/programs/hm for further assistance. The facility has approximately 5000 gallons of various grades of cutting fluids. Mr. Arnold provided a copy of a few MSDS's for review. The cutting fluid may be combined for the purpose of the HMBEP Chemical Disclose. Please combine the [Truncated]

Eval Notes:	Hi Miles, -Yes go ahead and break down the cutting fluids into 3 categories. -The Chemical name is for pure substances associated with the CAS # -The Common Name is the trade name of the chemical or mixture (Trim Sol ____) - The Ecomate FN CleanerG . I recommend calling the manufacturer and ask them what you should put on the submittal (sorry but usually calling the manufacturer is the fastest and best way to get the info you want) - Yes include the CAS # for water. -A waste cutting fluid doesnG t have a specific CAS # but list the CAS # for the various hazardous components of what the waste is mostly made of. -The Fire Code Hazard Class look at the Machin fluid Soluble or Machining fluid Synthetic as Combustible or OHH G Other Health HazardG or Irritant. ItG s hard to generalize for the specific fluids but do you best. -The fed hazard categories would mostly be Acute or Chronic. I donG t see to many reactive warnings on what you provided me. I hope this [Truncated]

Violation Date:	09-17-2019
Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 10/07/2019. OBSERVATION: Overfill Prevention Equipment Inspection done on 2/11/19 is not documented on DO reports from March 2019 - September 2019 DO reports. CORRECTIVE ACTION: Document overfill inspection report on most recent DO report (October 2019) and submit document to this Agency within 30 days.
