Completed Date: 02/11/2020
Comments: WDR Semi-Annual October 2019 DTSC is copied on this report but it is meant for the RWQCB. Information in this report is also presented in the Semi-Annual GW Monitoring reports for the site and the EISB Progress Reports. To avoid duplication of review, GSB usually does not receive this report, and focuses review on the Semi-Annual GW Monitoring Reports. The next GW Monitoring Report is the 2nd Semi 2019 which Brian indicated we will receive later this month.

Comments: WDR Semi-Annual October 2019 DTSC is copied on this report but it is meant for the RWQCB. Information in this report is also presented in the Semi-Annual GW Monitoring reports for the site and the EISB Progress Reports. To avoid duplication of review, GSB usually does not receive this report, and focuses review on the Semi-Annual GW Monitoring Reports. The next GW Monitoring Report is the 2nd Semi 2019 which Brian indicated we will receive later this month.

Background Info: Monsanto Chemical Company has manufactured bio and nonbio-degradable detergents for over three decades. The site is located in a heavily industrialized area. Raw materials used in the process include benzene, paraffin, olefin, chlorine, anhydrous ammonia, and aluminum chloride. Volatile organic solvents, chlorinated as well as non-chlorinated, have been found in the groundwater. A layer of benzene is floating on top the groundwater table. Contaminants identified in the soil include benzene and assorted petroleum hydrocarbons.
Soil vapor tests have detected the presence of chlorinated solvents. Direct contact with contaminated soil, inhalation of volatile organics, surface runoff, and groundwater contamination are a threat to public health and the environment. Contaminated water is used for industrial and agricultural purposes. A Consent Order with Monsanto, to investigate the extent of contamination and cleanup the site, was signed in December 1990.
Not reported
Sampling analyses indicate high levels of benzene in shallow aquifer. A seven-inch non-aqueous benzen layer has been identified. 1,2-dichloroethane exists in shallow and deep aquifer.
Not reported
A revised amendment to the Consent Order was finalized and signed on November 15, 1993 to include Remediation Capital Corporation of Reno, Nevada, as a party to the Agreement.
RCC purchased the property from Monsanto in September 1993.
Not reported
RCC subsequently filed for bankruptcy and the site reverted back to Monsanto (now Solutia).

Completed Document Type: Consent Order
Completed Date: 03/07/1996
Comments: DTSC signed a Consent Order with the RPs.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Initial Study/ Neg. Declaration
Completed Date: 04/14/1995
Comments: The CEQA documents (Negative Declaration) and the Remedial Action Plan are approved following a 30-day public comment period. The recommended alternative includes the following elements: institutional controls; monitoring; excavation, in-situ and ex-situ bio-treatment, soil vapor extraction and bioventing of deep soils and shallow soils; thermal/catalytic oxidation of soil vapor; vacuum enhanced LNAPL recovery with total fluids pumps; recovered LNAPL disposal by a certified waste recycler or a permitted hazardous waste TSDF; groundwater remediation by air sparging within the SVE capture radius and plume of groundwater contamination; if necessary groundwater extraction and treatment with air stripping followed by GAC; and treated groundwater discharge to the sanitary sewer. Sparging would not be implemented until the LNAPL had been removed.

Completed Document Type: CEQA - Initial Study/ Neg. Declaration
Completed Date: 04/14/1995
Comments: The CEQA documents (Negative Declaration) and the Remedial Action Plan are approved following a 30-day public comment period. The recommended alternative includes the following elements: institutional controls; monitoring; excavation, in-situ and ex-situ bio-treatment, soil vapor extraction and bioventing of deep soils and

MONSANTO CHEMICAL COMPANY (Continued) **S104404731**

shallow soils; thermal/catalytic oxidation of soil vapor; vacuum enhanced LNAPL recovery with total fluids pumps; recovered LNAPL disposal by a certified waste recycler or a permitted hazardous waste TSDF; groundwater remediation by air sparging within the SVE capture radius and plume of groundwater contamination; if necessary groundwater extraction and treatment with air stripping followed by GAC; and treated groundwater discharge to the sanitary sewer. Sparging would not be implemented until the LNAPL had been removed.

Hazardous Waste Summary:
Waste Code: D001

PHILLIPS 66 CO LOS ANGELES REFINERY CARSON PLANT (Continued) **1000904828**

Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D004
Waste Description: ARSENIC

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D018
Waste Description: BENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F037
Waste Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY

PHILLIPS 66 CO LOS ANGELES REFINERY CARSON PLANT (Continued) **1000904828**

COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Waste Code: F038
Waste Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Waste Code: K048
Waste Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K049
Waste Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K050
Waste Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K051
Waste Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K169
Waste Description: K169

Waste Code: K170
Waste Description: K170

Waste Code: K171
Waste Description: K171

Offsite City,State,Zip:	LAFAYETTE, LA 70508
Offsite county:	LAFAYETTE PARISH
Offsite province:	Not reported
Offsite country id:	Not reported
Offsite control:	NO
Unit of measure:	Pounds
Total amount transferred offsite for disposal:	0
Offsite other reuse or recovery m26 BOE:	Periodic/Random Monotoning Data
Total amount transferred offsite for recycling:	0
Total amount transferred offsite for energy recovery:	0
Total amount transferred offsite for treatment:	0
FRS ID - Transfer Location:	110000613783

Details of Transfers to Publicly Owned Treatment Works:

Cas number:	N458
Document control number:	1321220212082
Chemical name:	Mercury compounds
Classification:	PBT
Unit of measure:	Pounds
POTW name:	JOINT WATER POLLUTION CONTROL PLANT
POTW address:	24501 SOUTH FIGUEROA STREET
POTW City,State,Zip:	CARSON, CA 90745
POTW county:	LOS ANGELES
Quantity transferred:	3.8
Basis of estimate:	Not reported
Discharges to water streams:	0
Discharges to water streams - basis of estimate:	Not reported
Discharges to other activities:	0
Discharges to other activities - basis of estimate:	Not reported
Released to air:	0

PHILLIPS 66 CO LOS ANGELES REFINERY CARSON PLANT (Continued) **1000904828**

Released to air - basis of estimate:	Not reported
Sludge to disposal:	2.622
Sludge to disposal - basis of estimate:	Published Emission Factors
Sludge to incineration - metals:	0
Sludge to incineration - metals - basis of estimate:	Not reported
Sludge to agricultural applications:	0
Sludge to agricultural applications - basis of estimate:	Not reported
Other or unknown disposal:	1.178
Other or unknown disposal - basis of estimate:	Published Emission Factors
Other or unknown treatment:	0
Other or unknown treatment - basis of estimate:	Not reported
Sludge to incineration - nonmetals:	0
Sludge to incineration - nonmetals - basis of estimate:	Not reported
Total treated:	0
POTW Registry ID:	110000526468
Off Site - POTW Releases 81C:	2.622
Off Site - POTW Releases 81D:	1.178
Off Site - POTW Releases:	3.8
Experimental and Est. Treatment:	0
Experimental and Est. Treatment - Basis of Est.:	Not reported

Additional Information Miscellaneous and Optional:

Cas number:	N458
Document control number:	1321220212082
Chemical name:	Mercury compounds
Classification:	PBT
Comment sequence:	650371
Comment type description:	You have entered a value for a metal and/or a metal compound for Transfers to Publicly Owned Treatment Works (POTWs)
Comment text:	Error Reviewed / No Comment.

Case Worker:	JYL
Local Agency:	Not reported
RB Case Number:	0232
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Benzene, Crude Oil, Diesel, Ethylbenzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Naphthalene, Other Petroleum, Toluene, Total Petroleum Hydrocarbons (TPH), Xylene
Site History:	ConocoPhillips Company operates the ConocoPhillips Los Angeles Refinery (LAR) which consists of two plants located in Carson and Wilmington, California. The Carson Plant is a 245-acre site located at 1520 E. Sepulveda Boulevard, Carson, California. These two plants have been connected by pipelines since December 1991 and together provide complete refinery facilities. The Carson Plant is a crude-oil refining, processing, and storage facility. The Carson Plant was constructed in 1923 by Shell Oil Company. It was modernized and expanded in 1980s. Currently the Plant has a processing capacity of 132,000 barrels of crude oil per day. The facility performs crude oil fractionation and heavy-end refining. The unfinished intermediate petroleum products are then piped to the Wilmington Plant for conversion to finished products. The Discharger has released wastes, among which petroleum hydrocarbons are the principal contaminants of concern, to underlying soil and groundwater. On-site evidence of these wastes includes vapor phase contaminants in soil, solid phase contaminants in soil, non-aqueous phase liquids (NAPL) above and below the water table, and dissolved phase contaminants in groundwater. Since 1985, the refinery has been under numerous directives, issued by the Water Board under authority in sections 13304 and 13267 of the California Water Code, to investigate and cleanup releases of wastes. On September 3, 2003, representatives of refineries in Carson area met with USEPA staff to dicuss the presence of chemicals of concern (di-isopropyl ether [DIPE], methyl tert-butyl ether [MTBE] and tert-butyl alcohol [TBA] in groundwater underlying these facilities. Since 2003, COP has been working with RWQCB on phased program for oxygenates assessment. COP completed LNAPL Investigation in 2008, installed cluster Gage Aquifer groundwater

PACIFIC PIPELINE SYS WILMINGTON STA (Continued) **S103963019**

monitoring wells in 2009. Phase 3 data package was submitted in March 2009. COP is in progress to finalize a site conceptual model for LARC in the first quarter of 2011. The 245-acre Phillips 66 Los Angeles Refinery (LAR) has been in operation since 1923. The LAR is a crude oil refining, processing, and storage facility. There are other facilities with similar operations located in Carson, California. The LAR is bordered by Tesoro Los Angeles Refinery, Carson (Tesoro Carson), Tesoro Los Angeles Refinery, Wilmington (Tesoro Wilmington), and Kinder Morgan Carson Terminal (Kinder Morgan). The LAR is located in the West Coast Basin of the Los Angeles County Coastal Plain. The uppermost groundwater occurs in the Water Table Aquifer of the Bellflower Aquiclude at depths ranging from 35 feet to 59 feet below ground surface (bgs). Other aquifers beneath the Bellflower Aquiclude in descending order are the Gage Aquifer, Lynwood Aquifer and Silverado Aquifer. The LAR is located near the Dominguez Gap Barrier Project (DGBP) and the groundwater flow direction in the Water Table Aquifer, Gage Aquifer, and Lynwood Aquifer beneath the LAR is influenced by the operation of the DGBP. The groundwater flow is towards the west away from the DGBP. In the Silverado Aquifer groundwater flow is towards the east. There is light non-aqueous phase liquid (LNAPL) present in the Water Table Aquifer beneath most of the LAR. The groundwater beneath the LAR is also impacted with contaminants of concern (COCs) in the dissolved phase, primarily total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs) particularly benzene and oxygenates such as methyl tert-butyl ether (MTBE), tert-butyl alcohol (TBA), and disipropyl ether (DIPE). The highest concentrations of COCs are detected in the Water Table Aquifer. Benzene and oxygenates are also detected in the Gage Aquifer, Lynwood Aquifer, and Silverado Aquifer. Phillips 66 has been operating extraction wells in the Water Table Aquifer for hydraulic control and LNAPL removal at the LAR.

Citation:	19 CCR 4.5 2745.1(a) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2745.1(a)
Violation Description:	Failure to submit an RMP which includes all requirements described in section 2745.3 through 2745.9.
Violation Notes:	Returned to compliance on 10/22/2020. OBSERVATION: The owner or

PACIFIC PIPELINE SYS WILMINGTON STA (Continued) **S103963019**

operator failed to submit a risk management plan (RMP) which includes the Program 4 requirements as provided in Section 2745.7.5. The five year RMP update submitted to the United States Environmental Protection Agency (US EPA) on June 17, 2019 included data on prevention program elements for Program 3. A copy of this RMP was submitted with a cover letter from the Senior Process Safety Consultant to the Unified Program Agency (UPA). The cover letter specified that the UPA would receive the Program 4 update before October 2019; however, the Program 4 data elements were not submitted. CORRECTIVE ACTION: Submit the Program 4 prevention program elements and information as required by Section 2745.7.5 to the UPA.

Violation Description: Failure to perform and document an effective PHA appropriate to the complexity of each process in order to identify, evaluate, and control hazards associated with each process. Failed to cover all modes of operation, as set forth in subsection 2762.3 (a)(1), in the PHA. Failed to determine and document the priority order for conducting PHAs based on the extent of process hazards, the number of potentially affected people, the age of the process and the process operating history.
Violation Notes: Returned to compliance on 10/22/2020. OBSERVATION: The owner or operator failed to determine and document the priority order for conducting PHAs based on the extent of process hazards, the number of potentially affected people, the age of the process and the process operating history. The Los Angeles Refinery Policy and Procedure (LAR P & P) 4-1-37 Process Hazard Analyses (PHA) and Layer of Protection Analysis (LOPA) states the following: The priority order for conducting PHAs can be based on the extent of process hazards, the number of potentially affected people, the age of the process and the process operating history. Los Angeles Refinery deems all processes to be equal in terms of potential for a process safety event and shall adhere to the previously established PHA scheduling. CORRECTIVE ACTION: Determine and document the priority order for conducting PHAs based on the extent of process hazards, the number of potentially affected people, the age of the process and the process operating history. Citation: 19 CCR 4.5 2762.4(a) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2762.4(a)
Violation Description: (1) Failure to train each employee involved in operating a process, and each operating employee prior to working in a newly assigned process, in an overview of the process and in the operating procedures as specified in section 2762.3. Failure to include material on the specific safety and health hazards applicable to the employee's job tasks, procedures, including emergency operations and shutdown, and safe work practices applicable to the employee's job tasks. (2) Failure to train each employee involved in maintaining the on-going integrity of process equipment in an overview of that process and its hazards and in the procedures applicable to the employee's job tasks to assure that the employee can perform the job tasks in a safe manner.
Violation Notes: Returned to compliance on 10/22/2020. OBSERVATION: the owner or operator failed to train each operator of the Coker unit involved in maintaining the on-going integrity of LCGO pumps after a process change was made to the seal flush cooler to assure the operator can perform the job tasks in a safe manner. During an interview on July 16, 2019 at 1:45 p.m., Prieto stated that on May 2, 2019, the operators and the Reliability Group mechanics started up PCK-10 and there had been a change to the seal flush cooling system. Prieto explained there had been a problem with the seal flush cooler and the impeller was not spinning which indicated there was no water flow through the seal flush cooler. Richard Barton (Barton), Mechanical Supervisor, opened a valve at the bottom of the seal flush cooler and water drained on the ground. The impeller began moving which indicated water flow had resumed. During an interview on November 13, 2019, at 11:45 a.m., Barton described the purpose of the seal flush cooler: it receives [Truncated]

Violation Description: Failure to correct equipment deficiencies to ensure safe operation of process equipment. Failure to ensure repair methodologies are consistent with RAGAGEP or more protective internal practices.
Violation Notes: Returned to compliance on 07/21/2020. OBSERVATION: The owner or operator failed to correct deficiencies of the DU-22 pump and suction valve and the DU-23 seal flush cooler to ensure safe operation of the pumps. A review of the refinery s maintenance and mechanical integrity database, SAP, revealed the following: Leah Moore, Rotating Equipment and Reliability Engineer created SAP Notification, 16042281, on 12/29/2017 and stated DU-22 pump has very high vibration. Seems like unbalance in the horizontal axis. On 12/29/2017, she stated DU-22 coupling shims are cracked. Please replace and re-align. DU-22 pump was repaired on 01/22/2018; however, no post repair test was conducted to confirm the observed and documented mechanical integrity issues had been properly addressed and resolved. On 01/05/2019, SAP notification 16228225 was created for DU-23, for no cooling water through seal cooler. The corresponding order number 61797696 was never started or completed to repair the DU-23 seal cooler issue. A [Truncated]

Chapter 4.5, Section(s) 2762.7(b)

Violation Description: Failure to confirm, as a verification check, independent of the management of change process, that prior to the introduction of highly hazardous materials to a process: (1) Construction, maintenance, and repair work has been performed in accordance with design specifications; (2) Process equipment has been maintained and is operable in accordance with design specifications; (3) Effective safety, operating, maintenance, and emergency procedures are in place; (4) For new process units, a PHA, HCA, DMR, and SPA have each been performed as applicable pursuant to Article 6.5, and recommendations have been implemented or resolved before start-up. For new or modified processes, all changes have been implemented in accordance with the requirements contained in the MOC, section 2762.6; and, (5) Training of each operating employee and maintenance employee affected by the change has been completed.

Violation Notes: Returned to compliance on 10/22/2020. OBSERVATION: The owner or operator failed to ensure that prior to the introduction of highly hazardous materials to the Coker process, the PSSR confirms the following: construction, maintenance, and repair work for the newly installed PCK-10 pump was performed in accordance with design specifications; the PCK-10 pump Ladish valve was maintained and operable in accordance with design specifications; and changes to the modified PCK-14 and PCK-10 pumps were implemented in accordance with the MOC requirements in section 2762.6. A review of the Incident Investigation Report, IMPACT #327900 revealed -inch block valve was missing 2 bonnet bolts, the bonnet gasket was missing, the bonnet bolts were cap screws rather than a stud with 2 nuts. The -inch block valve did not meet the Ladish valve design specifications as it was missing the required body bolts/studs, body nuts, and body gasket at the time of the PCK-10 startup. One of the incident corrective actions was to [Truncated]

Violation Description: Failure to correct equipment deficiencies to ensure safe operation of process equipment. Failure to ensure repair methodologies are consistent with RAGAGEP or more protective internal practices.

Violation Notes: Returned to compliance on 10/15/2020. OBSERVATION: The owner/operator failed to repair or replace a blocked seal flush cooler at the PCK-10 pump and a non-functional check valve at the PCK-14 pump discharge pipe before further use and ensure safe operation of the pumps until the seal flush cooler and check valve could be corrected. A review of the May 2, 2019 shift relief report by Lopez revealed the operational condition of PCK-10: Ran PCK-10, all looks good but need to fix seal water cooler. Water cooler outlet open to grade, ok to run overnight Per Liah and Richard. The shift notes did not reference a work order for repairing or replacing the seal flush cooler and the check valve, or specify any means to assure safe operation of the PCK-10 and PCK-14 pumps. A review of SAP work order request, #61884480, for the leaking seal flush cooler at the PCK-10 pump revealed PCK-10 seal oil water cooler is in bad shape and leaking. On April 2, 2019, a machinist

Citation: 19 CCR 4.5 2765.2(a) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2765.2(a)
Violation Description: Failure to develop, implement, and maintain at the stationary source an emergency response program that includes the following elements: 1. Procedures for informing and interfacing with the public and local emergency response agencies about accidental releases, emergency planning, and emergency response. 2. Documentation of proper first-aid and emergency medical treatment necessary to treat accidental human exposures. 3. Procedures and measures for emergency response after an accidental release of a regulated substance. 4. Procedures for the use of emergency response equipment and for its inspection, testing, and maintenance are developed by the stationary source. 5. Training for all employees in relevant procedures and relevant aspects of the Incident Command System. 6. Procedures to review and update the emergency response plan to reflect changes at the stationary source are developed and employees are informed of these changes.
Violation Notes: Returned to compliance on 07/21/2020. OBSERVATION: The owner or operator failed to train employees in relevant procedures and relevant aspects of the Incident Command System (ICS) for the emergency response program. On March 15, 2019, Leo Thompson, Utility Operator at the Crude Unit, operated a fire hose during the DU-22 Pump Fire Incident without having the required ICS training. On March 26, 2019, during an interview, Leo Thompson said that the fire at the DU-22 pump started at approximately 7:15 pm on March 15, 2019. Mr. Thompson described the sound of the fireball as a loud huff. As he walked around accumulator, Victor 3430, he felt the blast wave and heat of the fire ball and explosion and saw the smoke. After he used his radio to inform the control room of the fire, he activated the air power to the deluge system and turned on a fire monitor. Then he proceeded to use a fire hose next to pump 8098. He said that while he was using the fire hose, he was standing in oily water above his mid-calf. [Truncated]

Violation Description: Failure to ensure employees involved in the process as well as maintenance workers whose job tasks will be affected by a change, are informed of, and effectively trained in the change in a timely manner, prior to implementation of the change. Failure to make the MOC documentation available to and require effective training in the change prior to implementation of the change, pursuant to section 2762.12, for contractors and employees of contractors who are operating the process and whose job tasks are affected by a change.

PACIFIC PIPELINE SYS WILMINGTON STA (Continued) **S103963019**

Violation Notes:	Returned to compliance on 10/22/2020. OBSERVATION: The owner or operator failed to ensure that operators whose job tasks would be affected by a change, were informed of, and effectively trained in the change in a timely manner, prior to implementation of the change. Prieto and Fears were not trained on permanent MOCs, M20192273 and M20135455. M20192273 was regarding the following changes: removal of corrosion probes, flanges, and reducing tees from the discharge pipe downstream of the LCGO pumps, PCK-10 and PCK-14; provision of a straight pipe connected by a different welding material; removal of an alarm/instrumentation device, and an update to the PSI. M20135455 was in regard to a major capital project involving the following changes: replacement of the multistage pumps with single stage overhung pumps; process modification of piping, valves, and flanges to fit the single stage overhung pumps; changes in seal plans; and changes to standard operating procedures (SOP). The change involved the need for [Truncated]

Violation Description:	Failure to report a release or threatened release of a hazardous material to the unified program agency and to OES.

PACIFIC PIPELINE SYS WILMINGTON STA (Continued) **S103963019**

Violation Notes:	Returned to compliance on 10/22/2020. OBSERVATION: Upon discovery of the Coker fire on May 2, 2019, the owner or operator failed to immediately report a release or threatened release of a hazardous material, or an actual release of a hazardous substance to the UPA, and to the California Office of Emergency Services (CalOES). The owner or operator failed to provide a CalOES Spill report to demonstrate the incident was reported. A review of Impact Report #327900 revealed that a process safety and environmental incident occurred at 4:45 p.m., on May 2, 2019, when a fire was reported at the Coker unit in the area of the LCGO pumps. According to the Phillips 66 submitted letter dated July 15, 2019, approximately 85 barrels (3,570 lbs.) of LCGO was released. During an interview on June 27, 2019, Ed Becker, Health and Safety Manager, stated there had been a miscommunication when Shelly Micuzzi had called CalOES, the representative told her she did not need to make the notification to the UPA and CalOES [Truncated]

Violation Description:	Failure to develop and implement effective written operating procedures with clear instructions for safely conducting activities involved in each process with the process safety information.
Violation Notes:	Returned to compliance on 07/21/2020. OBSERVATION: The owner or operator failed to develop and implement specific operating procedures for centrifugal reflux pumps, DU-21, DU-22, and DU-23, such as for removing pumps from service, returning pumps to service, and switching to a spare (standby) pump. Furthermore, operators stated they did not have or use any written operating procedures for returning DU-22 to service during or prior to the DU-22 Pump Fire Incident on March 15, 2019. On March 15, 2019, the crude unit operating employees removed DU-23 from service due to a mechanical issue and placed the spare pump, DU-22, into service without implementing any specific operating procedures or steps to ensure a safe operation. DU-22 had been removed from service for repairs and had not been in operation since January 18, 2018. During interview on April 2, 2019, Daniel Viveros, Operator, provided the following statements: On March 15, 2019, DU-22 was placed back into service because DU-23 had a leak of [Truncated]

Violation Description:	(1) Failure to ensure that all process equipment at a minimum complies with the criteria established in subsection 2762.1(d). Failure to ensure that all process equipment is: (1) suitable for the process application for which it is or will be used; (2) fabricated from the proper materials of construction; (3) designed, constructed, installed, maintained, inspected, tested, operated and replaced in

PACIFIC PIPELINE SYS WILMINGTON STA (Continued) **S103963019**

compliance with the manufacturer's and any other design specifications and all applicable codes and standards. (2) Failure to ensure and document newly installed process equipment or existing process equipment for which no RAGAGEP exists, are designed, built, installed, maintained, inspected, tested and operated in a safe manner. (3) Failure to conduct regularly scheduled checks and inspections as necessary to ensure that the requirements of paragraph (1) are met. (4) Failure to ensure that maintenance materials, spare parts and equipment meet design specifications and applicable codes. (5)Failure to establish a process for evaluating new or updated equipment codes and standards and implementing changes as appropriate to ensure safe operation.

Violation Notes: Returned to compliance on 10/22/2020. OBSERVATION: The owner or operator failed to ensure that the PCK-10 Ladish valve and the CK-4 chain operated valve were designed, constructed, installed, maintained, inspected, tested, operated and replaced in compliance with the manufacturer s specifications and applicable codes and standards. A review of the Los Angeles Refinery Coker Fire, Incident Investigation Report IMPACT #327900 revealed the -inch block valve was missing 2 bonnet bolts, the bonnet gasket was missing, the bonnet bolts were cap screws rather than a stud with 2 nuts The Incident Corrective Actions addressed the need to improve valve rebuild quality with checklists, bolt torqueing requirements, and gasket verification. During an interview on June 27, 2019, at 10:40 a.m., Barton stated Emergency Response Team (ERT) members had to climb a ladder to the CK-4 Stripper and manually close a vent line from CK-4 to CK-1 Fractionator and a suction line of PCK-10 from CK-4. who performed the inspection or test; a description of the inspection or test performed; the results of the inspection or test; and the serial number or other identifier of the equipment on which the inspection or test was performed.

Violation Notes: Returned to compliance on 07/21/2020. OBSERVATION: The owner or operator failed to perform inspection and tests on the DU-21, DU-22, and DU-23 centrifugal reflux pumps using procedures that meet or exceed RAGAGEP. The inspection and testing frequencies were inconsistent with RAGAGEP, such as API 610, API 682 or the Phillips 66 Refining Recommended Best Practice (BP), Rotating Equipment Routine Pump Care, M-45 BP-4. The owner or operator failed to document that the required inspection and test was performed. During interview on April 2, 2019, Leah Moore, Rotating Equipment and Reliability Engineer, provided the following statements: on or about December 2017, she created the Reliability Rounds Routine Pump Care form for recording and documenting the inspection results. She stated reliability rounds are made every three months, and vibration analysis is currently conducted monthly. Prior to that time, maintenance for pumps or reliability rounds had only been visual inspections, and there had been no [Truncated]

Violation Date: 09-17-2019
Citation: 19 CCR 4.5 2762.5(a) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2762.5(a)

Violation Description: Failure to develop, implement, and maintain effective written procedures to ensure the ongoing integrity of process equipment. (1) Failure to ensure the procedures provide clear instructions for safely conducting maintenance activities on process equipment, consistent with the Process Safety Information. (2) Failure to ensure the procedures and inspection documents developed under subsection 2762.5 are readily accessible to employees and employee representatives pursuant to section 2762.10.

Violation Notes: Returned to compliance on 07/21/2020. OBSERVATION: The owner or operator failed to develop and implement written procedures for maintenance of the DU-21, DU-22, and DU-23 centrifugal reflux pumps. The Phillips 66 Refining Recommended Best Practice (BP), Rotating Equipment Routine Pump Care, M-45 BP-4, is a corporate guide for maintaining the ongoing integrity of the rotary equipment; however, there was no evidence to demonstrate any site specific written maintenance procedures were developed or implemented for the Los Angeles Refinery. During interview on April 2, 2019, Leah Moore, Rotating Equipment and Reliability Engineer, provided the following statements: Pumps like DU-22 require the following maintenance: motor gets greased, oil mist is inspected, and vibration values are recorded as a part of the reliability rounds if the pump is in operation. Written notification is created in SAP when there is an equipment issue which would require maintenance and the shop supervisor is notified. The shop [Truncated]

Citation: 19 CCR 4.5 2762.8(c) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2762.8(c)
Violation Description: Failure to prepare a written report of the compliance audit that includes the scope, methods used, questions asked to assess each program element along with findings and recommendations of the compliance audit. Failure to ensure the written report also documents the qualifications of those persons performing the compliance audit. Failure to make the report available to employees and employee representatives, in accordance with section 2762.10. Failure to respond in writing within 60 calendar days to any written employee or employee representative comments on the written audit report.
Violation Notes: Returned to compliance on 10/15/2020. OBSERVATION: The owner or operator failed to include questions asked to assess each program element along with findings and recommendations in the compliance audit report. Review of the compliance audit report, dated October 9, 2018, revealed questions asked to assess each program element or questionnaire checklist were not included in the report. CORRECTIVE ACTION: Provide a written compliance audit report that includes questions asked to assess each program element.

Quarterly Update: QUARTERLY UPDATE Quarterly Update Period: October - December 2021 Current Activity: Permit Maintenance On October 28, 2021, DTSC received the "Third Quarter 2021 Progress Report" for the Phillips 66 Carson Plan for review. The document is currently under review by DTSC. Operations at the facility continue in accordance with the Department of Toxic Substances Control (DTSC)-issued Hazardous Waste Facility Permit. The existing post-closure plan and other documents related to the facility s hazardous waste management activities can be viewed on the Public EnviroStor by clicking the Activities tab above. ---------- Quarterly Update Period: April - June 2021 Current Activity: Permit Maintenance On April 30, 2021 the facility submitted the 1st Quarter 2021 Progress Report. DTSC is currently reviewing the report for technical completeness and compliance. Operations at the facility continue in accordance with the Department of Toxic Substances Control (DTSC)-issued Hazardous Waste Facility Permit. The existing post-closure plan and other documents related to the facility s hazardous waste management activities can be viewed on the Public EnviroStor by clicking the Activities tab above.

SGS INDUSTRIAL (Continued) **S113094054**

---------- Quarterly Update Period:
January - March 2021 Current Activity: Permit Maintenance On January 27, 2021 the facility submitted the 4th Quarter Progress Report, and the Fall 2020 Semiannual Groundwater Monitoring Report and on February 26, 2021, the facility submitted the 2020 Annual Permit Compliance Report. DTSC is currently reviewing the reports for technical completeness and compliance.
---------- Quarterly Update Period:
July - September 2019 Current Activity: Permit Maintenance The new permit was signed and made effective on August 15, 2019 after the response to comments and the appeals period.
---------- Quarterly Update Period:
April - June 2019 Current Activity: Permit Renewal Application

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/25/2023

Next Scheduled EDR Contact: 04/10/2023
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/20/2022

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/06/2023

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 02/23/2022

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS TSCA: PFAS Manufacture and Imports Information

EPA issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. EPA publishes non-confidential business information (non-CBI) and includes descriptive information about each site, corporate parent, production volume, other manufacturing information, and processing and use information.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills
This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/16/2022
Date Data Arrived at EDR: 11/16/2022

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

West Map:	11997978 TORRANCE, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

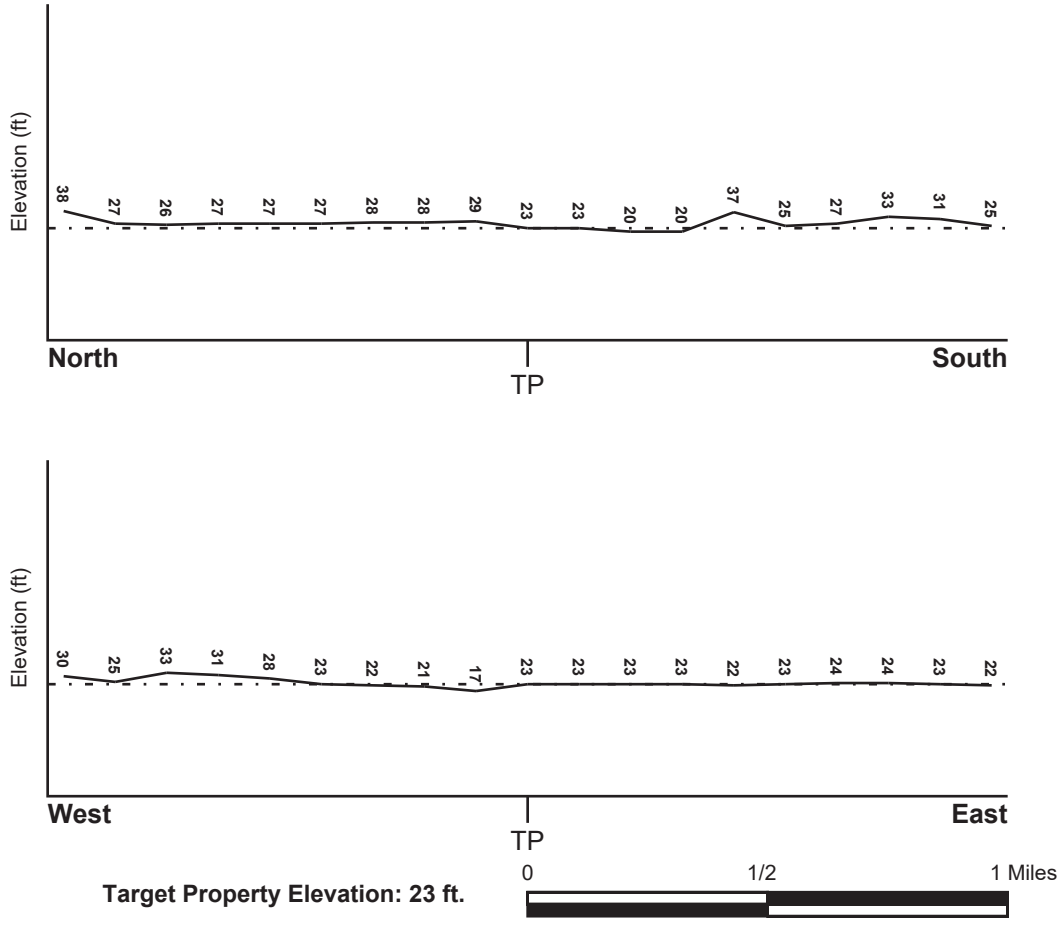
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1965F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1955F	FEMA FIRM Flood data
06037C1962F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NORTH LONG BEACH (OE)	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile WNW
Site Name:	TEXACO USA DIV TEXACO INC
Site EPA ID Number:	CAT000646331
Groundwater Flow Direction:	W IN THE GASPUR/GAGE AND LYNWOOD AQUIFERS AND E IN THE SILVERADO AQUIFER.
Measured Depth to Water:	30 feet to 40 feet in the semi-perched Gaspur aquifer.
Hydraulic Connection:	The uppermost Gaspur/Gage and Lynwood aquifers are hydraulically connected. The underlying Silverado aquifer is confined.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

DEFENSE ENVIRONMENTAL RESTORATION PROGRAM
FORMERLY USED DEFENSE SITES
FINDINGS AND DETERMINATION OF ELIGIBILITY

WILMINGTON CLASS AND HOLD YARD
WILMINGTON, CALIFORNIA
SITE NO. J09CA073000

FINDINGS OF FACT

1. The property comprising the Wilmington Class and Hold Yard was acquired by the U.S. Army during the years 1943 and 1944. Records indicate that 272.23 acres were leased from the City of Los Angeles (W2972-eng-755 and W04-193-eng-4356). Approximately 1.55 acres were leased from the Watson Land Company (W04-193-eng-2652). Approximately 0.65 acres were acquired by permit and 0.142 acres were acquired by license from various private and public parties. Thus, a total of 274.57 acres were acquired by the Army for the Wilmington Class and Hold Yard.

2. The site was used by the U.S. Army as a loading and storage area for military equipment awaiting shipment. Improvements to the site, all constructed in 1943 and 1944, included three warehouses, a railroad spur, sewer and water lines. No visible indications of unsafe debris, contamination, or ordnance were observed at the site resulting from DOD use or ownership. **However, DOD may have installed two underground storage tanks on the north side of existing warehouse No. 17, which was used as an ordnance filler depot to the Port of Los Angeles.**

3. In the months of May and June 1946, 201.57 and 73 acres, respectively, of the Classification and Hold Yard were declared surplus. On 1 July 1946 the 274.57 acre site was formally transferred to the Veterans Administration. Following this, no transfer records were found that describe the termination of numerous leases, permits, and licenses that were acquired for this site. However, through conversations with the Real Property Division of the City of Los Angeles it has been determined the City of Los Angeles currently owns 274.57 acres previously leased to the Army for the former Wilmington Classification and Hold Yard. This property is associated with the Port of Los Angeles and is used to support loading and storage activities, import and export operations, and oil refining.

SITE No. J09CA073000

DETERMINATION

Based on the foregoing Findings of Fact, this site has been determined to be formerly used by the Department of Defense (DoD). It is therefore eligible for the Defense Environmental Restoration Program, Formerly Used Defense Sites, established under 10 USC 2701, et seq.

SITE SURVEY SUMMARY SHEET
FOR
DERP-FUDS SITE NO. J09CA073000
WILMINGTON CLASS AND HOLD YARD
Original 30 June 1993
Supplemental 29 July 1999

SITE NAME: Wilmington Class and Hold Yard, **also known as Wilmington Classification and Hold Yard.**

LOCATION: City of Los Angeles, California.

SITE HISTORY: The property was acquired in 1943 and 1944 as a place to store equipment awaiting shipment. Improvements to the site, all constructed in 1943 and 1944, included three warehouses, a railroad spur, sewer and water lines. No visible indications of unsafe debris, contamination, or ordnance were observed at the site resulting from DOD use or ownership. **However, a recent investigation indicated that there may be two DOD-installed underground storage tanks (USTs), located on the north side of the existing warehouse No. 17 (formerly Manuel Warehouse No. 3), which was utilized as an ordnance filler depot to the Port of Los Angeles during World War II.**

In the months of May and June 1946, 201.57 and 73 acres, respectively, of the Class and Hold Yard were declared surplus. On 1 July 1946 the land was transferred to the Veterans Administration. The City of Los Angeles currently owns 272.23 acres of the former Wilmington Class and Hold Yard.

The property is currently being beneficially used for many purposes. Business located on the property include shipping container platforms for loading and unloading container on to railroad cars (Intermodal Container and Transportation Facility), sulfur storage (California Sulfur Company), import and export operations (Import Dealers Service Corporation), warehouses (Port of Los Angeles, California Cartage Company, Inc.) and a refinery (Texaco). **The USTs located north of Warehouse No. 17 may not have been beneficially used since DOD use of the property. The DOD also constructed and utilized a railyard during World War II. Various types and sources of subsurface soil contamination have been identified in the railyard portion of the site. Subsequent tenants have beneficially used this railyard; therefore, the subsurface contamination does not appear to be exclusively attributable to DOD use.**

SITE VISIT: A site visit was conducted on 6 April 1993 by Frank Scognamillo and David Eckstein of Ebasco Environmental, Santa Ana, California. No apparent DOD related contamination was visible. **The current tenant, Cal Cartage, Inc. denied access to Perry Russell and Karin Anderson of Science Applications International Corporation (SAIC), Santa Barbara, California, on 15 July 1999, for a site visit. Cal Cartage requested that Mr. Russell and Ms. Anderson acquire access through the Port of Los Angeles, the owners of the property. A lack of time precluded access to the property through the Port of Los Angeles.**

CATEGORY OF HAZARD: CON/HTRW, OE

PROJECT DESCRIPTION:

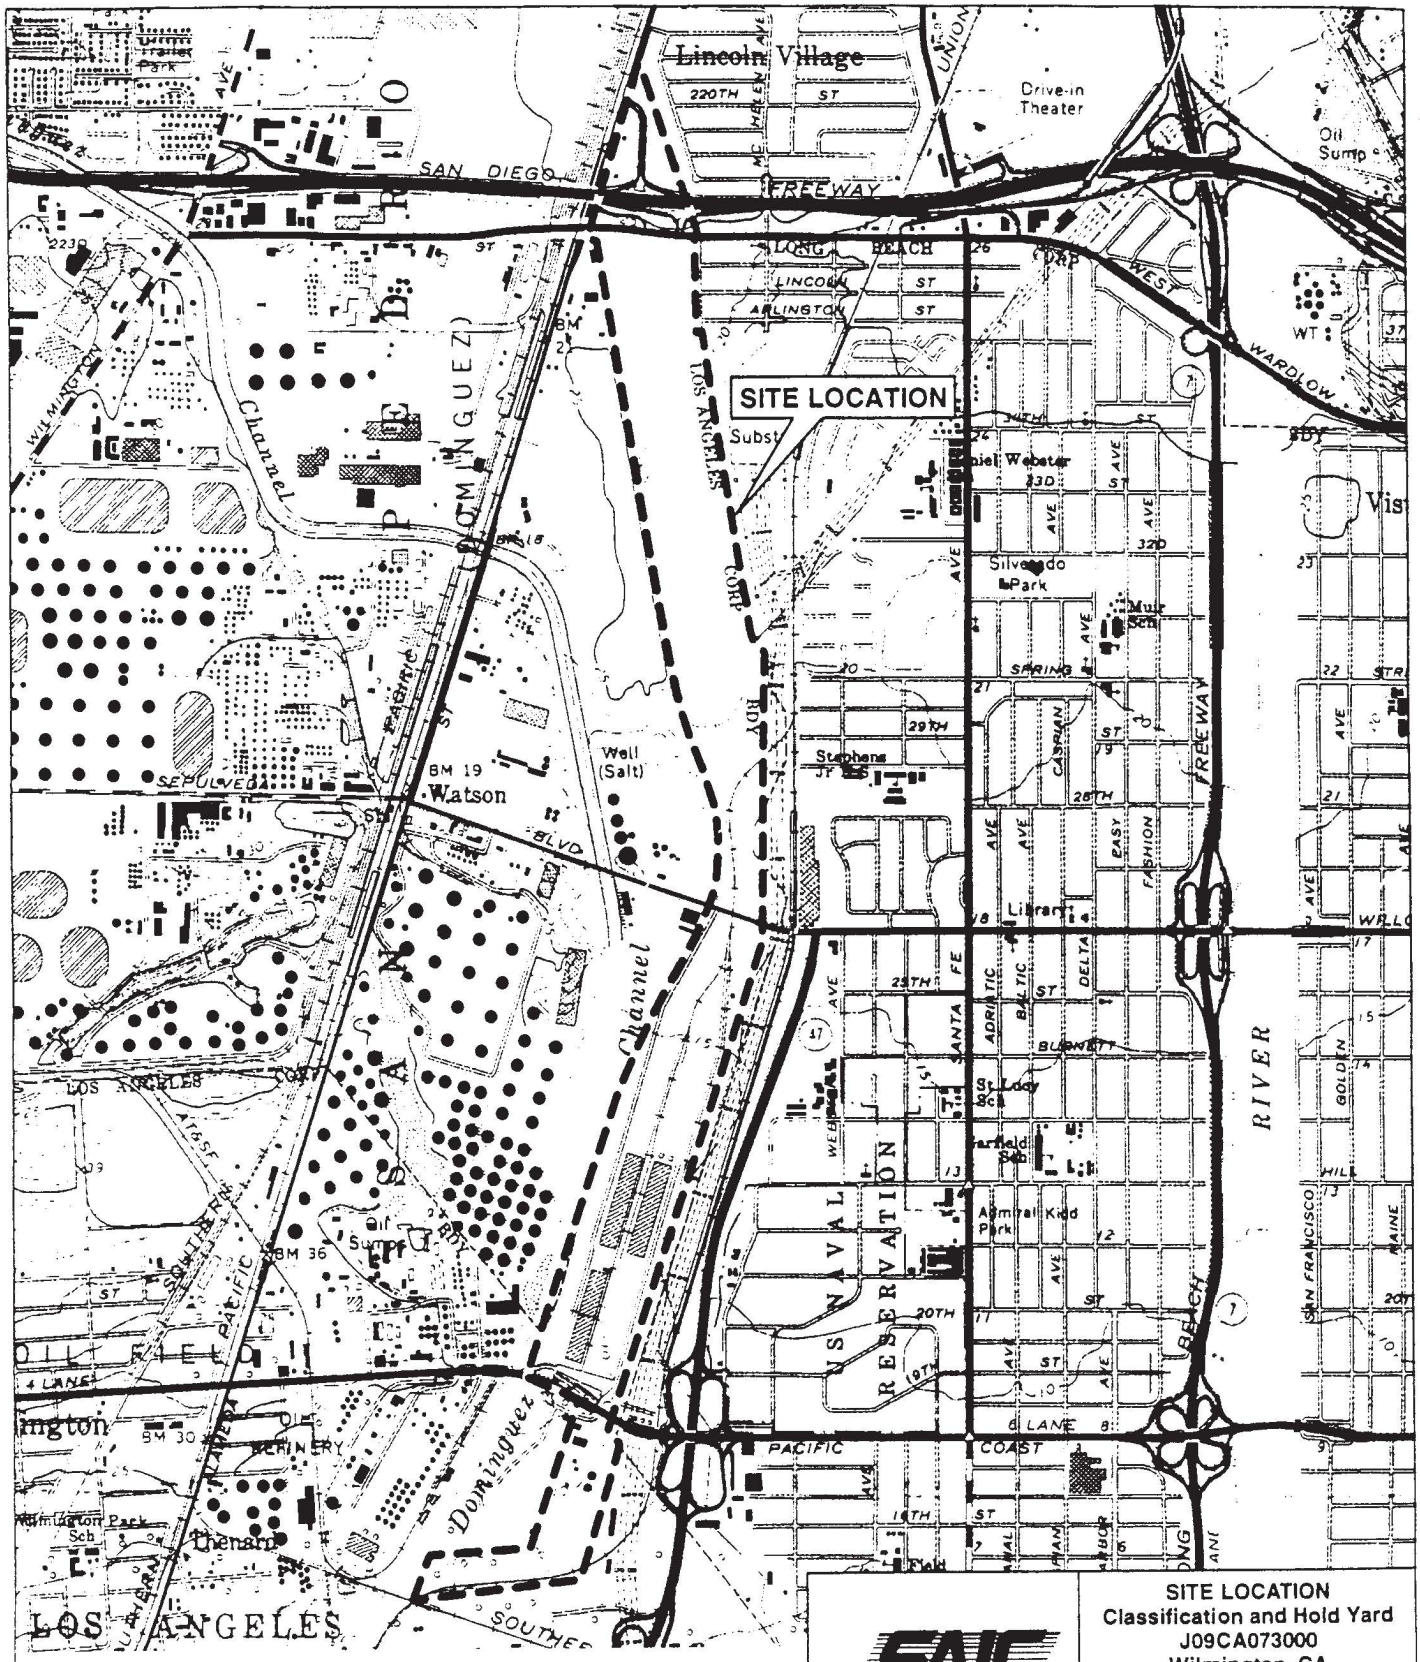
CON/HTRW: Two USTs of unknown size may be located on the north side of existing Warehouse No. 17. Recommend pursue further investigation regarding existence of tanks and potential beneficial use by subsequent site tenants.

OE: Recommend the Huntsville Engineering and Support Center make a determination regarding further investigation at this site.

AVAILABLE STUDIES AND REPORTS: A real estate file is maintained by the Real Estate Division, Los Angeles District, U.S. Army Corps of Engineers.

A report entitled "Basic Historical Report of Los Angeles Ordnance Depot, Wilmington, California", prepared and edited by Harris W. Swan Jr. Capt. Ord., Dept. Assistant, is available in Record Group 156, Box #1, 314.7, at the National Archives, Laguna Niguel, California.

The following reports are available at the Port of Los Angeles, Environmental Management Department:



Preliminary Site Assessment Report for the Port of Los Angeles Manual Yard Rail Facility, Wilmington, California, prepared for Worldport LA by Woodward-Clyde Consultants, May 1997.

Manuel Yard Intermodal Terminal Conceptual Design Report, prepared for Worldport LA by Holmes & Narver, March 1997.

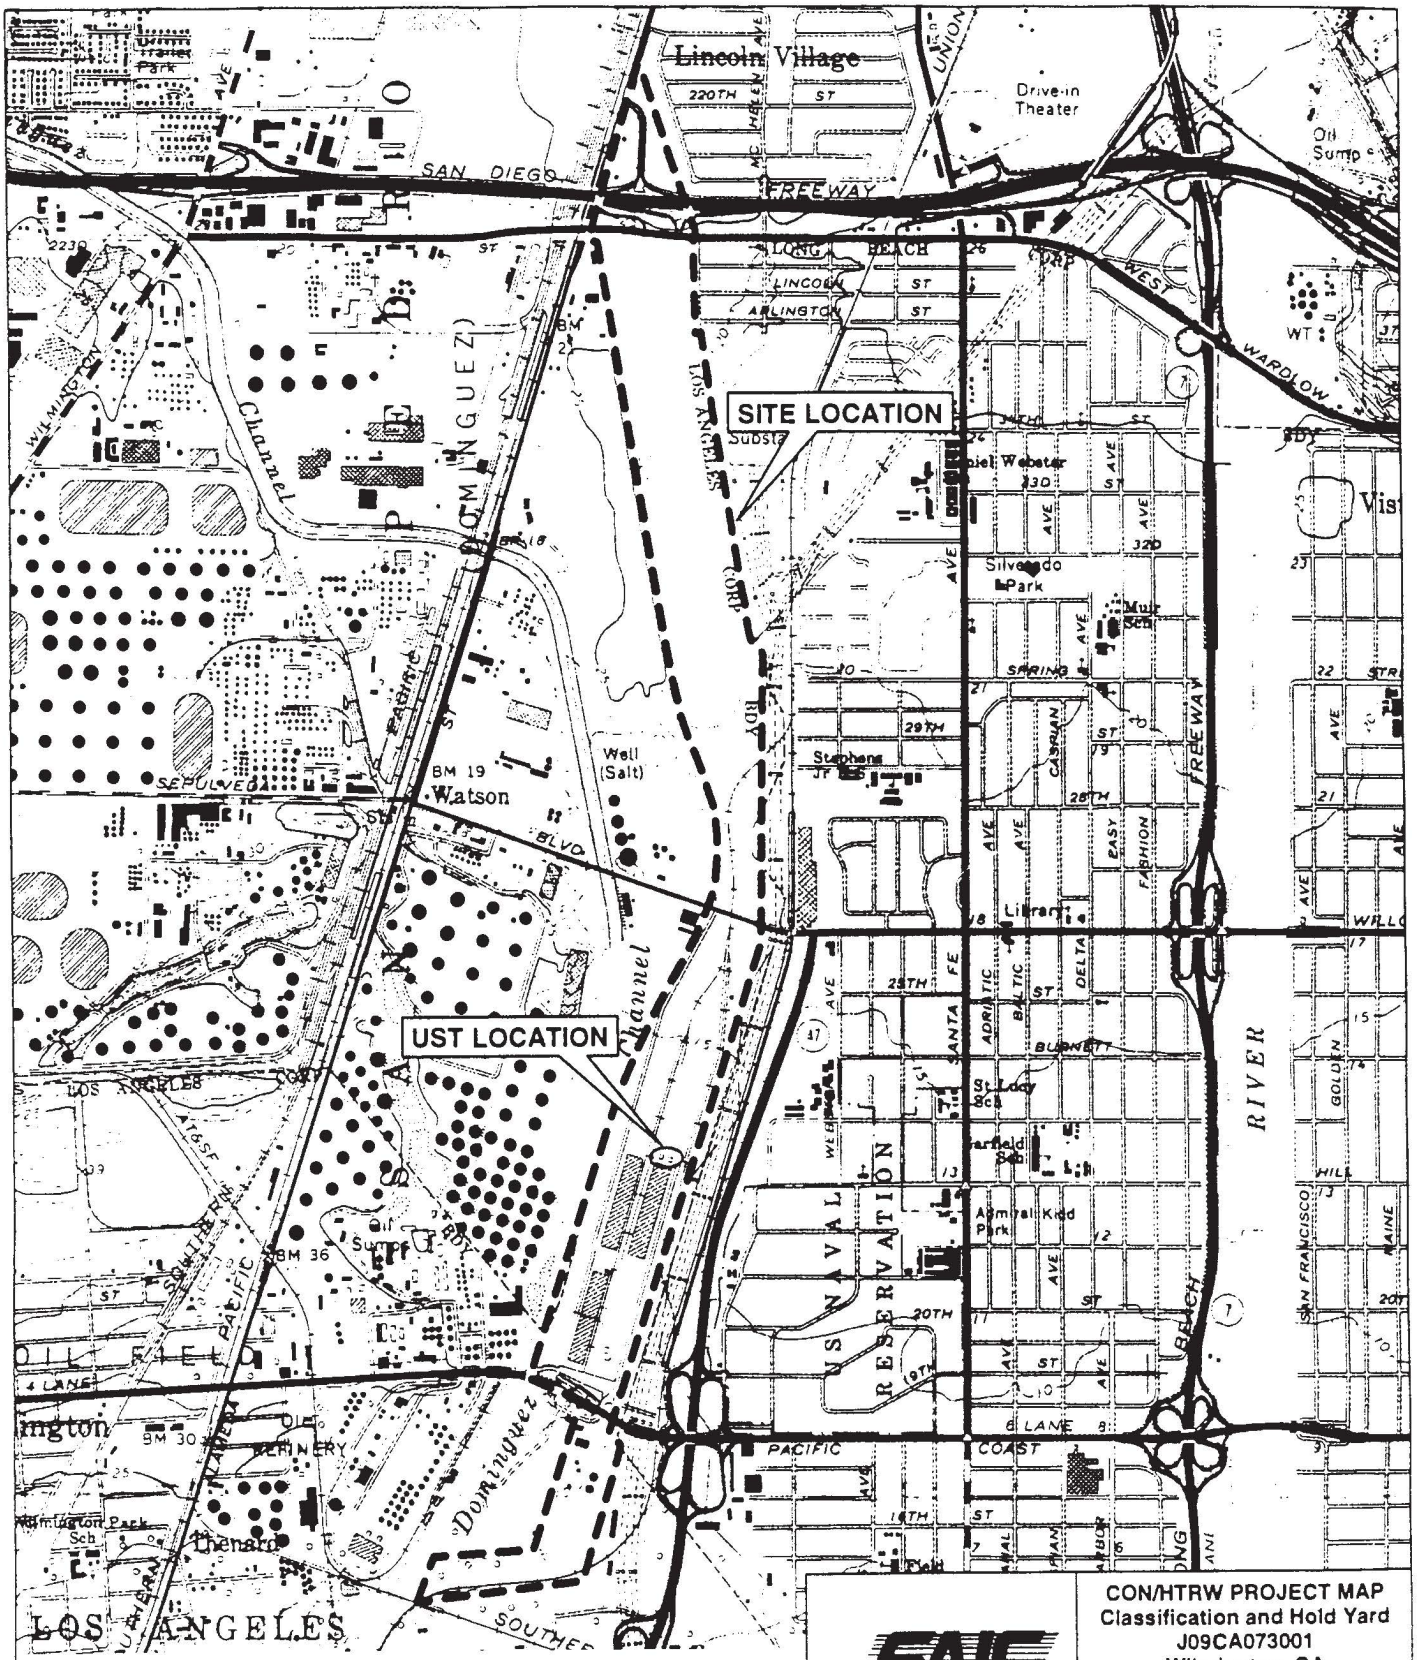
PROJECT SUMMARY SHEET
FOR DERP-FUDS CON/HTRW PROJECT NO. J09CA073001
Wilmington Class and Hold Yard
Wilmington, California
Site No. J09CA073000
27 July 1999



PROJECT DESCRIPTION: Based on information provided by Mr. Christopher Foley, Marine Environmental Supervisor, Environmental Management Division for the Port of Los Angeles, two underground fuel storage tanks (USTs) of unknown size may be present at the site. The depth of the tanks is also unknown. The tanks are potentially located on the north side of the existing Warehouse No. 17 (formerly Los Angeles Ordnance Depot, Manuel Warehouse No. 3).

PROJECT ELIGIBILITY: DOD controlled the subject property from 1944 until 1946 and evidence suggests that the DOD used the USTs during this time period.

POLICY CONSIDERATIONS: Based on available records it appears that the DOD relinquished control of the property in 1946. It is unclear if the Port of Los Angeles or any current or previous occupant of the property beneficially used the USTs subsequent to DOD use. No releases have been documented from these USTs. No other policy considerations are known to affect proposal of this project.

PROPOSED PROJECT: Pursue further investigation regarding existence of the tanks.

DISTRICT POC: Jeffrey B. Armentrout, Los Angeles District (213) 452-3720.

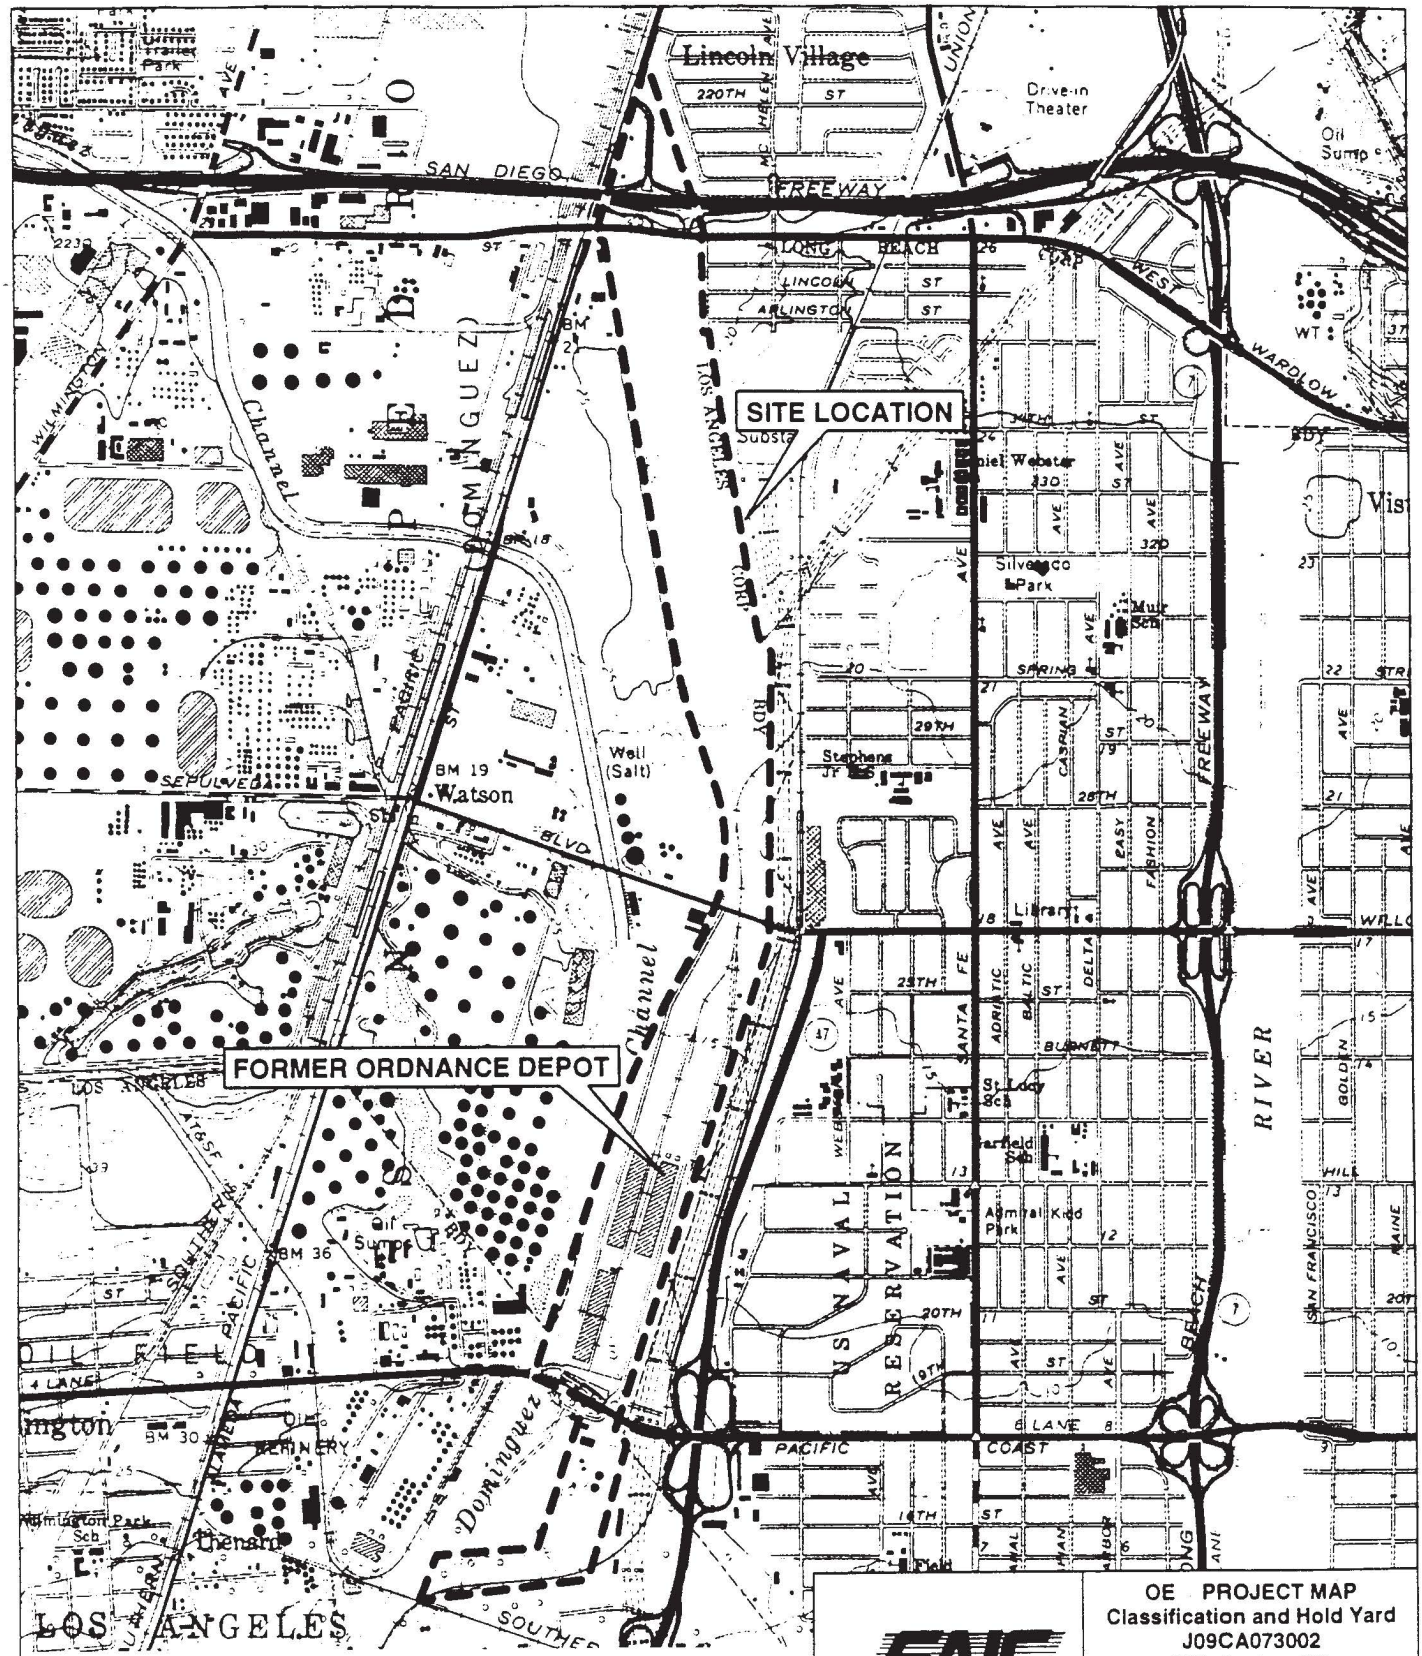
PROJECT SUMMARY SHEET
FOR DERP-FUDS OE PROJECT NO. J09CA073002
Wilmington Class and Hold Yard, Wilmington, California
Site No. J09CA073000
27 July 1999

PROJECT DESCRIPTION: This site was used as a DOD ordnance depot from 1944 to 1946. Because the former ordnance depot is currently used as a freight distribution center, it is unlikely that ordnance remains from DOD occupation of the property. However, a detailed site walk and personal interviews were not completed as part of this investigation due to denial of site access by the current tenant.



PROJECT ELIGIBILITY: DOD controlled the subject property from 1944 until 1946 and evidence suggests that the DOD used existing warehouse No. 17 as an ordnance filler depot to the Port of Los Angeles. Ordnance found on the property may be the result of DOD activity.

POLICY CONSIDERATIONS: There are no policy considerations that prevent proposal of this project.

PROPOSED PROJECT: Recommend the Huntsville Engineering and Support Center make a determination regarding further investigation at this site.

RAC FORM: Attached.

DISTRICT POC: Jeffrey B. Armentrout, Los Angeles District (213) 452-3720.

RISK ASSESSMENT PROCEDURES FOR ORDNANCE AND EXPLOSIVES (OE) SITES

Site Name Wilmington Class and Hold Yard
Site Location Wilmington, CA
DERP Project # J09CA073001
Date Completed July 15, 1999

Rater's Name Perry Russel - SAIC
Phone Number (805) 966 - 0811
Organization L.A. Dist.
Score 4 Recommended 5

OE RISK ASSESSMENT:

This risk assessment procedure was developed in accordance with MIL-STD 882C and AR 385-10. The Risk Assessment Code (RAC) score will be used by the U.S. Army Engineering and Support Center, Huntsville (USAESCH), Ordnance and Explosives Team (USAESCH-OE) to prioritize the remedial action(s) at Formerly Used Defense Sites (FUDS). The risk assessment should be based on the best available information resulting from records searches, reports of Explosive Ordnance Disposal (EOD) Detachments actions, field observations, interviews, and measurements. This information is used to assess the risk involved based on the potential OE hazards identified at the site. The risk assessment is composed of two factors, hazard severity and hazard probability. Personnel involved in visits to potential OE sites should view the USAESCH-OE videotape entitled "A Life Threatening Encounter: OEW".

Part 1. Hazard Severity. Hazard severity categories are defined to provide a qualitative measure of the worst credible event resulting from personnel exposure to various types and quantities of unexploded ordnance.

TYPE OF ORDNANCE: (Circle all that apply)	VALUE
A. Conventional ordnance and ammunition:	
Medium/large caliber (20mm and larger)	10
Bombs, explosive	10
Grenades, hand or rifle, explosive	10
Landmine, explosive	10
Rockets, guided missile, explosive	10
Detonators, blasting caps, fuzes, boosters, bursters	6
Bombs, practice (w/spotting charges)	6

Grenades, practice (w/spotting charges)	4
Landmine, practice (w/spotting charges)	4
Small arms, complete round (.22 cal -.50 cal)	(1)
Small arms, expended	0
Practice ordnance (wo/spotting charges)	0

Conventional ordnance and ammunition (largest single value) 1

What evidence do you have regarding conventional unexploded ordnance? An ordnance inventory dated 23 February, 1944

B. Pyrotechnics (for munitions not described above):	VALUE
Munition (containers) containing White Phosphorus (WP) or other pyrophoric material (i.e., spontaneously flammable)	10
Munition containing a flame or incendiary material (i.e., Napalm, Triethylaluminum metal incendiaries)	6
Flares, signals, simulators, screening smokes (other than WP)	4

Pyrotechnics (select the single largest value) 0

What evidence do you have regarding pyrotechnics?

C. Bulk High Explosives (HE) (not an integral part of conventional ordnance; uncontainerized):	VALUE
Primary or initiating explosives (Lead Styphnate, Lead Azide, Nitroglycerin, Mercury Azide, Mercury Fulminate, Tetracene, etc.)	10
Demolition charges	10
Secondary explosives (PETN, Compositions A, B, C, Tetryl, TNT, RDX, HMX, HBX, Black Powder, etc.)	8

Military dynamite	6
Less sensitive explosives (Ammonium Nitrate, Explosive D, etc.)	3
High explosives (select the largest single value)	0

What evidence do you have regarding bulk explosives?_____

D. Bulk propellants (not an integral part of rockets, guided missiles, or other conventional ordnance; uncontainerized):

	VALUE
Solid or liquid propellants	6
Propellants	0

What evidence do you have regarding bulk propellants?_____

E. Chemical Warfare Materiel (CWM) and Radiological Weapons:

	VALUE
Toxic chemical agents (choking, nerve, blood, blister)	25
War Gas Identification Sets	20
Radiological	15
Riot Control Agents (vomiting, tear)	5
Chemical and Radiological (select the largest single value	0

What evidence do you have regarding chemical or radiological?_____

TOTAL HAZARD SEVERITY VALUE (Sum of value A through E (maximum of 61) 1

Apply this value to Table 1 to determine Hazard Severity Category

TABLE 1
HAZARD SEVERITY*

DESCRIPTION	CATEGORY	HAZARD SEVERITY VALUE
CATASTROPHIC	I	21 and/or greater
CRITICAL	II	10 to 20
MARGINAL	III	5 to 9
NEGLIGIBLE	(IV)	(1 to 4)
**NONE	V	0

*Apply Hazard Severity Category to Table 3

**If hazard severity value is 0, you do not need to complete Part II of this form. Proceed to Part III and use a RAC score of 5 to determine your appropriate action.

PART II. Hazard Probability. The probability that a hazard has been, or will be, created due to the presence and other rated factors of unexploded ordnance or explosive materials on a formerly used Department of Defense (DoD) site.

AREA, EXTENT, ACCESSIBILITY OF OE HAZARD (Circle all that apply)

A. Locations of OE hazards:	VALUE
On the surface	5
Within tanks, pipes, vessels, or other confined areas	4
Inside walls, ceilings, or other building/structure	3
Subsurface	(2)

Location (select the single largest value) 2

What evidence do you have regarding location of OE? No specific information regarding location except entire warehouse No. 17 was used as an ordnance depot.

B. Distance to nearest inhabited location/structure likely to be at risk from OE hazard (road, park, playground, building, etc.) — VALUE

Less than 1,250 feet	(5)
1,250 feet to 0.5 mile	4
0.5 mile to 1.0 mile	3
1.0 mile to 2.0 Miles	2
Over 2 miles	1

Distance (select the single largest value) 5

What are the nearest inhabited structures/buildings? Former Ordnance depot is active freight distribution warehouse.

C. Number(s) of building(s) within a 2-mile radius measured from the OE hazard area, not the installation boundary. — VALUE

26 and over	(5)
16 to 25	4
11 to 15	3
6 to 10	2
1 to 5	1
0	0

Number of buildings (select the single largest value) 5

Narrative: Surrounded by other warehouse, industrial buildings, a petroleum tank farm, and a refinery

D. Types of Buildings (within a 2 mile radius) — VALUE

Educational, child care, residential, hospitals hotels, commercial, shopping centers	5
Industrial, warehouse, etc.	(4)

Agricultural, forestry, etc.	3
Detention, correctional	2
No buildings	0
Types of buildings (select the single largest value	4

Describe the types of buildings: Same as C.

E. Accessibility to site refers to access by humans to ordnance and explosives. Use the following guidance:	VALUE
No barrier nor security system	(5)
Barrier is incomplete (e.g., in disrepair or does not completely surround the site). Barrier is intended to deny egress from the site, as for a barbed wire fence for grazing.	4
A barrier (any kind of fence in good repair) but no separate means to control entry. Barrier is intended to deny access to the site.	3
Security Guard, but no barrier	2
Isolated site	1
A 24-hour surveillance system (e.g., television monitoring or surveillance by guards or facility personnel continuously monitors and controls entry; or, an artificial or natural barrier (e.g., fence combined with a cliff) which completely surrounds the area; and, a means to control entry at all times through the gates or other entrances (e.g., an attendant, television monitors, locked entrances, or controlled roadway access to the area).	0
Accessibility (select the single largest value)	5

Describe the site accessibility: Former ordnance depot is active warhouse with many employees.

F. Site Dynamics. This deals with site conditions are subject to change in the future, but may be stable at the present. Examples would be excessive soil erosion on beaches or streams, increasing land development that could reduce distances from the site to inhabited areas or otherwise increase accessibility. VALUE

Expected 5
None anticipated (0)

Site dynamics (select value) 0

Describe the site dynamics;

TOTAL HAZARD PROBABILITY VALUE (sum of largest values for A through F (maximum of 30) 21

Apply this value to Hazard Probability Table 2 to determine the Hazard Probability Level.

TABLE 2
HAZARD PROBABILITY

DESCRIPTION	LEVEL	HAZARD PROBABILITY VALUE
FREQUENT	A	27 or greater
PROBABLE	(B)	(21 to 26)
OCCASIONAL	C	15 to 20
REMOTE	D	8 to 14
IMPROBABLE	E	less than 8

*Apply Hazard Probability Level to Table 3.

Part III. Risk Assessment. The risk assessment value for this site is determined using the following Table. Enter the results of the Hazard Probability and Hazard Severity values.

TABLE 3

PROBABILITY LEVEL	FREQUENT A	PROBABLE B	OCCASIONAL C	REMOTE D	IMPROBABLE E
SEVERITY CATEGORY:					
CATASTROPHIC I	1	1	2	3	4
CRITICAL II	1	2	3	4	5
MARGINABLE III	2	3	4	4	5
NEGLIGIBLE IV	3	(4)	4	5	5

RISK ASSESSMENT CODE (RAC)

RAC 1 Expedite INPR, recommending further action by USAESCH-Immediately call USAESCH-OE-S (comm 256-895-1582/1598).

RAC 2 High priority on completion of INPR-Recommend further action by USAESCH.

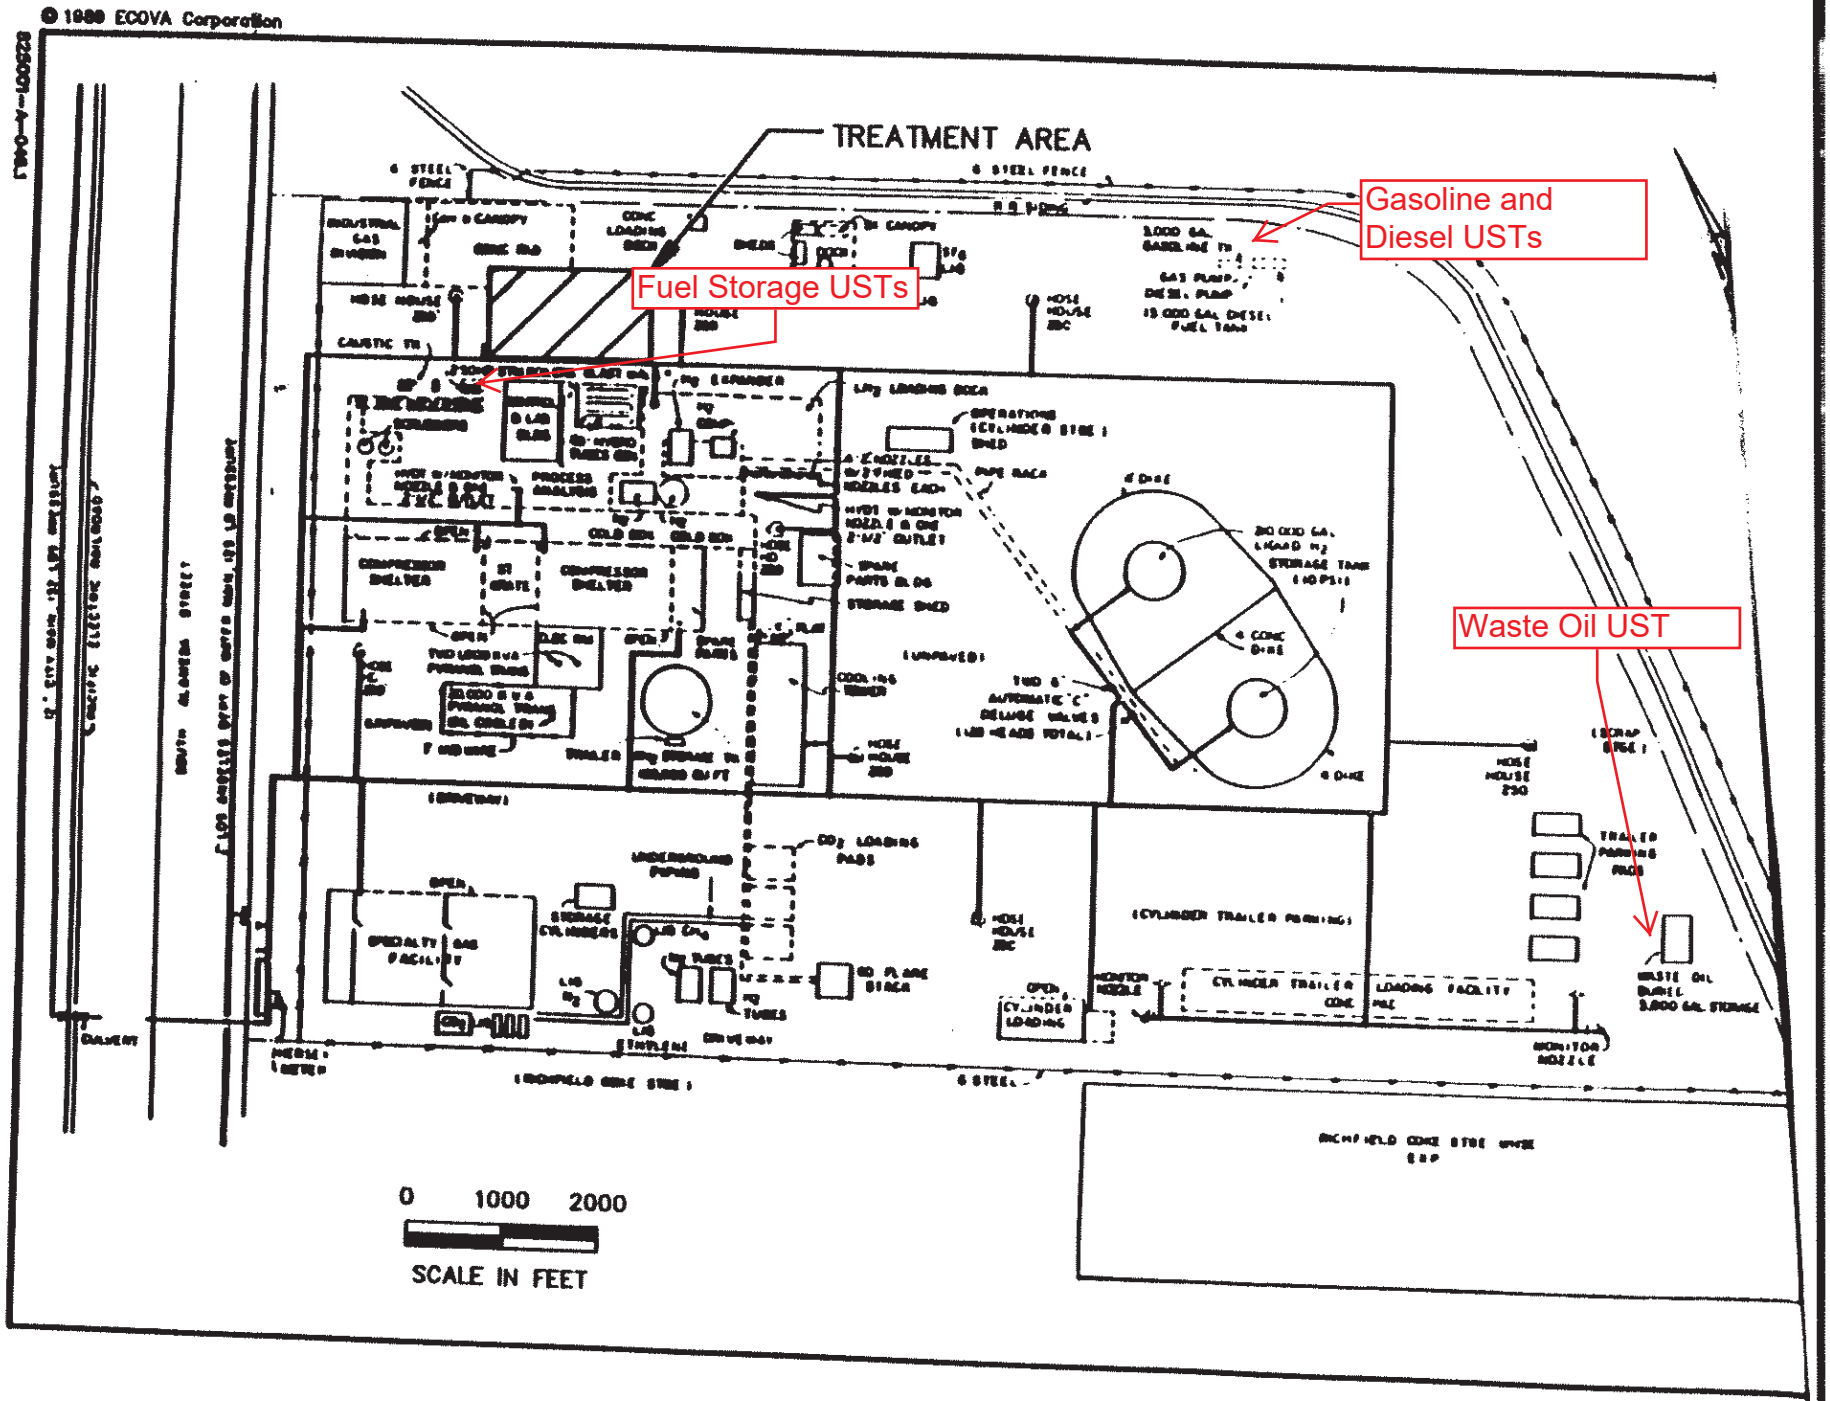
RAC 3 Complete INPR-Recommend further action by USAESCH.

(RAC 4) Complete INPR-Recommend further action by USAESCH.

RAC 5 Usually indicates that No DOD Action Indicated (NDAI) is necessary, Submit NDAI and RAC to USAESCH.

PART IV. Narrative. Summarize the documented evidence that supports this risk assessment. If no documented evidence was available, explain all the assumptions that you made.

See attached justification.



RISK ASSESSMENT PROCEDURES FOR
ORDNANCE AND EXPLOSIVES (OE) SITES
FOR
DERP-FUDS SITE NO. J09CA073000
WILMINGTON CLASS AND HOLD YARD
WILMINGTON, CALIFORNIA

Numerous historical documents indicate that 200,000-square foot Manuel Warehouse No. 3 (currently warehouse No. 17) and surrounding buildings were used as an ordnance depot at the site from 1944 to 1946. An ordnance inventory, dated 23 February 1944, indicates that small arms, automatic weapons, grenade launchers, anti-aircraft artillery, as well as various non-ordnance supplies, were stored and transferred from this warehouse to the Port of Embarkation at the Port of Los Angeles.

The site is currently owned by the Port of Los Angeles (part of the City of Los Angeles) and leased to California Cartage, Inc. (Cal Cartage), a company which receives, redistributes, and then exports freight through the Port of Los Angeles. Existing warehouse No. 17 (former Manuel Warehouse No. 3) is currently used as part of the Cal Cartage freight business, therefore, it is unlikely that ordnance remains at the site. However, this supposition was indeterminate since a detailed site visit was denied by Cal Cartage. They requested that permission for a site visit be acquired from the Port of Los Angeles, the site owner. Time limitations precluded gaining access to the site for completion of a visual inspection and personal interviews.

A risk assessment code score of four has been calculated, based on a severity category IV (negligible) and a probability level B (probable). However, due to the transient nature of DOD activity at this site, as well as the current use of the former depot as a freight warehouse, a RAC 5 is recommended.

INSTRUCTIONS

HAZARDOUS MATERIALS UNDERGROUND STORAGE PERMIT (HMUSP)
PERMIT APPLICATION SUPPLEMENT

DO NOT USE THIS FORM FOR CLOSURE, TRANSFER OR RENEWAL OF AN EXISTING HMUSP

(A) Facility name, mailing address and facility address on new permit applications must correspond with information on Part II of the State Permit Application (SPA) form. Please correct mailing label information if affixed for an existing facility.

(B) Use a separate application supplement for each permit activity. Check the new construction box only if there are no existing tanks and no previous HMUSP has been issued for this facility. Additional approval applications must be accompanied by a description of work and four (4) sets of plans and specifications as appropriate. Additional approval requests that change data previously supplied on Parts IV through VIII of the Hazardous Substance Storage Statement (HSSS) as filed with the California Water Resources Control Board or the SPA as filed with a County of Los Angeles HMUSP application shall include an updated SPA. The container number on the updated SPA must correspond with the previous number submitted.

(C) Assessor parcel identification is required for new permit applications at existing facilities and new construction (no existing HMUSP) applications only.

(D) The information required in Part D is the minimum necessary to allow issuance of a Provisional HMUSP. When a Provisional HMUSP has been issued for a facility, the owner will be required to submit for review and approval a facility plot plan, Leak Detection Program (LDP) and a Tank Monitoring Program (TMP) to be implemented in accordance with a timetable to be included within the Provisional HMUSP as conditions and limitations. New construction plans and specifications must show the location of and include details of all containers and monitoring devices proposed. A TMP must be approved and implemented prior to the issuance of a full term HMUSP.

(E) A HMUSP application fee must accompany all applications. The state surcharge is required for first time HMUSP applications (not required for additional approvals). Specify the number of tanks at the facility.

(F) Persons that have been notified to file for a HMUSP and do not store any hazardous materials underground should check the appropriate box and return this form to avoid any unnecessary follow-up mailings.

The storage of hazardous waste in an underground tank where the specific tank is named in a hazardous waste facility permit issued by the California Department of Health Services is not subject to the HMUSP requirements. Owners of such facilities must furnish the permit number for facilities where this exclusion is requested.

Final interceptors in industrial waste pretreatment systems, catch basins, refinery pipelines, lagoons, stormdrains, oil field gathering lines, well cellars, above ground storage tank spill containment, unlined pits or sumps, and piping not directly associated with a permitted facility are not subject to a HMUSP.

(G) Existing facility and new construction HMUSP application supplements and SPA's must be signed by:

1) A principal executive officer at the level of vice-president or by an authorized representitive. The representitive must be responsible for the overall operation of the facility where the tank(s) are located.
2) A general partner proprietor.
3) A principal executive officer, ranking elected official or authorized representitive of a public agency.

Additional approval application supplements may be signed by a person under contract to and authorized by the owner/operator of a facility.

Official Registration Form

California Water Resources Control Board

Hazardous Substance Storage Statement

Who Must File: Each person storing hazardous substances in any underground container must file this form no later than July 1, 1984 (After October 1, 1984 and no later than January 1, 1985 for tanks used on farms).

Definition of Underground Containers: The law applies to "concrete sumps, nonvaulted buried tanks or other underground containers." (Water Code section 13173) All containers, including earthen walled pits, ponds, lagoons and sumps, that are below the normal ground surface level must register. A tank sitting on the ground is not included. Containers partially beneath the surface are included. Lined or unlined pits, ponds and lagoons are covered if earth has been removed from the storage area to construct the facility. Normal grading is not considered construction below ground level.

Definition of Hazardous Substance: Any substance listed in Section 6382 of the Labor Code or in Section 25316 of the Health and Safety Code. This includes: gasoline, diesel fuel, all industrial solvents, pesticides, herbicides and fumigants. If the material must be carried by a registered hauler, disposed of at a hazardous waste site, is explosive, generates pressure due to heat or decomposition or would harm humans or wildlife you must register the tank. Wastes are included.

Fee: For each tank registered a $10 fee must be paid, except that retail gasoline stations pay $5 per tank.

Penalties: For failure to file, the penalty is $500-$5,000 per day. If you falsify information, you can be fined up to $20,000 for each day the information is incorrect and has not been corrected.

Confidentiality: If you have information protected by trade secret laws, please attach a list of the information on this form that is confidential and the justification for confidentiality, including specific citations of relevant statutory and case law.

Multiple Containers: Fill I and II on one form and leave it blank on all the remaining forms. Attach all forms together securely. If you own more than 50 tanks you can file information on computer tape. Call 916/324-1262 for information.

This is not a Permit Application. All Underground Tanks will be subject to local regulation. Some jurisdictions have already begun programs. Check with your local county government for further information.

NOTE: ALL UNDERGROUND CONTAINERS MUST REGISTER EVEN IF STATE AND/OR LOCAL PERMITS ARE IN FORCE.

Hazardous Substance Storage Statement

Who Must File: Each person storing hazardous substances in any underground container must file this form no later than July 1, 1984 (After October 1, 1984 and no later than January 1, 1985 for tanks used on farms).

Definition of Underground Containers: The law applies to "concrete sumps, nonvaulted buried tanks or other underground containers." (Water Code section 13173) All containers, including earthen walled pits, ponds, lagoons and sumps, that are below the normal ground surface level must register. A tank sitting on the ground is not included. Containers partially beneath the surface are included. Lined or unlined pits, ponds and lagoons are covered if earth has been removed from the storage area to construct the facility. Normal grading is not considered construction below ground level.

Definition of Hazardous Substance: Any substance listed in Section 6382 of the Labor Code or in Section 25316 of the Health and Safety Code. This includes: gasoline, diesel fuel, all industrial solvents, pesticides, herbicides and fumigants. If the material must be carried by a registered hauler, disposed of at a hazardous waste site, is explosive, generates pressure due to heat or decomposition or would harm humans or wildlife you must register the tank. Wastes are included.

Fee: For each tank registered a $10 fee must be paid, except that retail gasoline stations pay $5 per tank.

Penalties: For failure to file, the penalty is $500-$5,000 per day. If you falsify information, you can be fined up to $20,000 for each day the information is incorrect and has not been corrected.

Confidentiality: If you have information protected by trade secret laws, please attach a list of the information on this form that is confidential and the justification for confidentiality, including specific citations of relevant statutory and case law.

Multiple Containers: Fill I and II on one form and leave it blank on all the remaining forms. Attach all forms together securely. If you own more than 50 tanks you can file information on computer tape. Call 916/324-1262 for information.

This is not a Permit Application. All Underground Tanks will be subject to local regulation. Some jurisdictions have already begun programs. Check with your local county government for further information.

NOTE: ALL UNDERGROUND CONTAINERS MUST REGISTER EVEN IF STATE AND/OR LOCAL PERMITS ARE IN FORCE.

Official Registration Form

California Water Resources Control Board

Hazardous Substance Storage Statement

Who Must File: Each person storing hazardous substances in any underground container must file this form no later than July 1, 1984 (After October 1, 1984 and no later than January 1, 1985 for tanks used on farms).

Definition of Underground Containers: The law applies to "concrete sumps, nonvaulted buried tanks or other underground containers." (Water Code section 13173) All containers, including earthen walled pits, ponds, lagoons and sumps, that are below the normal ground surface level must register. A tank sitting on the ground is not included. Containers partially beneath the surface are included. Lined or unlined pits, ponds and lagoons are covered if earth has been removed from the storage area to construct the facility. Normal grading is not considered construction below ground level.

Definition of Hazardous Substance: Any substance listed in Section 6382 of the Labor Code or in Section 25316 of the Health and Safety Code. This includes: gasoline, diesel fuel, all industrial solvents, pesticides, herbicides and fumigants. If the material must be carried by a registered hauler, disposed of at a hazardous waste site, is explosive, generates pressure due to heat or decomposition or would harm humans or wildlife you must register the tank. Wastes are included.

Fee: For each tank registered a $10 fee must be paid, except that retail gasoline stations pay $5 per tank.

Penalties: For failure to file, the penalty is $500-$5,000 per day. If you falsify information, you can be fined up to $20,000 for each day the information is incorrect and has not been corrected.

Confidentiality: If you have information protected by trade secret laws, please attach a list of the information on this form that is confidential and the justification for confidentiality, including specific citations of relevant statutory and case law.

Multiple Containers: Fill I and II on one form and leave it blank on all the remaining forms. Attach all forms together securely. If you own more than 50 tanks you can file information on computer tape. Call 916/324-1262 for information.

This is not a Permit Application. All Underground Tanks will be subject to local regulation. Some jurisdictions have already begun programs. Check with your local county government for further information.

NOTE: ALL UNDERGROUND CONTAINERS MUST REGISTER EVEN IF STATE AND/OR LOCAL PERMITS ARE IN FORCE.

RE: Air Products and Chemicals, Inc.
Long Beach, CA 90810

Dear Sir/Madam:

Enclosed are the registrations of underground storage tanks for the above referenced facility. We had anticipated removal of these tanks by now, since the plant operation have ceased, but tank removal has been delayed until this fall.

For this reason, we are registering these tanks for the iterim period until they are removed.

Please call Robert Swigart at (215) 481-8867 if you have any questions. Thank you for your cooperation with this matter.

Sincerely,

Air Products and Chemicals, Inc.

LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the Los Angeles County Department of Public Works, Waste Management Division, P.O. Box 4089, Los Angeles, CA 90051 containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets and north arrow.
3. Description of methods for obtaining, handling and transporting samples.
4. Time and date samples were obtained.
5. If borings were established, boring logs certified by a CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.
6. Chain-of-custody documentation initiated by person obtaining sample through person at State Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to document hazardous waste disposal of any removed soil.
11. Any observations of site contamination.
12. Remedial action plan to mitigate contamination.
13. Report to be signed by CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.

Signature Ronald S. [illegible] Date 7/28/87

CLOSURE PERMIT SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
2250 ALCAZAR STREET
LOS ANGELES, CALIFORNIA 90033

Closure Permit No. 3436 B
File No. I-5335-22

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application fo Closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1,2	2' TO 4' BELOW TANK INVERT	T.P.H	EPA 8015 OR 418.1
3,4	" "	"	" "
5,6	" "	"	EPA 8015
7,8	" "	"	EPA 418.1

3. All soil samples obtained shall be undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report.

4. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

5. The analysis results for all soil samples shall be expressed in milligrams per kilogram (mg/kg). Analysis results for groundwater samples shall be expressed in parts per billion (ppb).

6. Analysis results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) The method of analysis.

7. All soil/groundwater samples obtained shall be handled and transported to a laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever earlier.

Complies ✓

Not comply _____

Most western diesel tank (listed as 500 gallon, but 2000 gallon) excavation highly contaminated. Clean up may be difficult due to the tank being adjacent to permanently tacked down machinery & above ground tanks. Rumored that plant will be demolished soon. Other excavations look fairly clean. Sampling techniques good.

005385-22 <<<<<<<< FILE NUMBER

AIR PRODUCTS MFG CORP <<<<<<<< PERMITTEE
23320 S ALAMEDA ST
CARSON CA 90810

RE: 23320 S ALAMEDA ST <<<<<<<< FACILITY ADDRESS

TO STORE HAZARDOUS MATERIALS IN UNDERGROUND TANK(S) LOCATED AT THE FACILITY ABOVE.

NUMBER OF PERMITTED TANKS: 5

THIS PROVISIONAL PERMIT IS SUBJECT TO THE FOLLOWING REQUIREMENTS:

PART A — GENERAL CONDITIONS AND LIMITATIONS (ATTACHED).

PART B — AUTHORIZED HAZARDOUS MATERIAL STORAGE TANKS (ATTACHED).

PART C — SPECIFIC CONDITIONS AND LIMITATIONS:

1. THE PERMITTEE SHALL SUBMIT FOR APPROVAL AND IMPLEMENT A LEAK DETECTION PROGRAM (LDP) AND A TANK MONITORING PROGRAM (TMP) PREPARED IN ACCORDANCE WITH "UNDERGROUND STORAGE OF HAZARDOUS MATERIALS - GUIDELINES FOR EXISTING FACILITIES, OCTOBER 1986."

2. THE FOLLOWING TIME SCHEDULE SHALL APPLY TO SUBMITTALS REQUIRED BY THIS PROVISIONAL PERMIT:

   a. PERMIT FEE DUE BY (SEE INVOICE) To Be Billed

   b. TANK INTEGRITY TEST RESULTS DUE BY AUG 27 1987

   c. PROPOSALS FOR LDP AND TMP DUE BY AUG 27 1987

3. PERMIT EFFECTIVE DATE 5-5-86
   NOTE: THE EFFECTIVE DATE IS DETERMINED BY ORIGINAL DATE OF PERMIT APPLICATION.

PART D — SPECIAL CONDITIONS AND LIMITATIONS ATTACHED. YES [ ] NO [XX]

This Provisional Permit is valid only for the continued operation of tanks providing suitable storage and expires six (6) months from the date of issue. Permittee has until the expiration date to complete an approved LDP and to install and be in compliance with an approved TMP. Upon full compliance with the approved LDP and TMP and all other conditions and limitations, this Provisional Permit will be replaced by a full term Operational Permit for the remainder of the unexpired five (5) year term from the effective date unless otherwise noted in Part D above.

PP801 10/86

UNAUTHORIZED DISCHARGES

20. As soon as any person in charge of a facility or responsible for emergency response for a facility has knowledge of any confirmed or unconfirmed unauthorized discharge of a hazardous material, such person shall take all necessary steps to ensure the discovery, containment, and cleanup of such discharge and shall notify the DPW of the occurrence as required.

21. Any owner or operator who has knowledge of a confirmed unauthorized discharge shall immediately notify the DPW.

22. Within the jurisdiction of the Los Angeles County Fire Department, an unauthorized discharge shall also be reported to the Los Angeles County Forester and Fire Warden, Fire Prevention and Conservation Bureau.

23. The permittee shall institute and complete all actions necessary to remedy the effects of any unauthorized discharge, whether sudden or gradual, and supply information on such actions to the DPW.

24. The continued use of, and permit approval for, existing facilities is subject to review and modification or termination by the DPW whenever there has been any unauthorized discharge. In determining whether continued underground storage in such facility is suitable, the DPW shall consider the age of the facility, the methods of containment, the methods of monitoring, the feasibility of the required retrofit, the concentration of the hazardous materials contained, the severity of potential unauthorized discharge and the suitability of other long term preventive measures.

EVALUATIONS AND INSPECTIONS

25. Whenever the approval or satisfaction of the DPW may be required for a design, monitoring, testing or other technical submittal by a permittee, the DPW may require such permittee, at the permittee's sole cost and expense, to retain a suitable qualified independent engineer, chemist or other appropriate professional consultant acceptable to the DPW, for the purpose of evaluating and rendering a professional opinion respecting the adequacy of such submittal.

26. The DPW conduct inspections for the purpose of ascertaining compliance by the permittee and effecting corrections of any conditions which would constitute any violation of any statute, code, rule or regulation affecting the underground storage of hazardous materials.

27. Whenever necessary for the purpose of investigation or enforcement, or whenever a representative of the DPW, County Health Officer, or Forester and Fire Warden has reasonable cause to believe that there exists in any structure or upon any premises any condition which constitutes a violation, said representative may enter such structure or premises at all reasonable times to inspect the same, or to perform any duty imposed by law.

28. The permittee shall conduct regular inspections of the facility to assure compliance with this permit and shall maintain logs or file reports in accordance with this permit.

29. The DPW may require the periodic employment of special inspectors to conduct an audit or assessment of permittee's facility to make a hazardous material safety evaluation and to determine compliance.

30. Permittee shall, within 30 days of said evaluation, file with the DPW a plan to implement all recommendations, or shall demonstrate to the satisfaction of the DPW why such recommendations shall not be implemented.

31. The DPW may require that any regular or special inspection by the permittee be made in the presence of a representative of the DPW. The DPW may further require advance notice of not less than 72 hours as to the availability of equipment, material and personnel required to conduct such inspections.

SUSPENSIONS AND REVOCATIONS

32. This permit is subject to suspension or revocation if conditions exist which would justify denial of a permit or if permittee fails to correct unsatisfactory conditions.

33. Failure to adhere to all applicable conditions and limitations of this permit shall constitute a willful violation of Title 11, Division 4 of the Los Angeles County Code and may result in civil or criminal penalties, revocation of this permit, or both.

Dear Mr. Shadman:

HAZARDOUS MATERIALS UNDERGROUND STORAGE
SITE INVESTIGATION PROPOSAL AND/OR REMEDIAL ACTION PLAN
FACILITY AT: 23320 South Alameda Street

The site investigation proposal and/or remedial action plan submitted on September 3, 1987 for the above facility has been reviewed by this office and found adequate. You may proceed with the plan as proposed unless otherwise indicated below.

You are cautioned that any contaminated soils or hazardous materials generated during the approved operation must be manifested and transported to a hazardous waste disposal facility as required by California Health and Safety Code, Division 20, Chapter 6.5, unless evidence is presented indicating that the material may be disposed of at a less restricted facility. Copies of all completed manifests shall be submitted to this office as part of the final report.

[ ] A Hazardous Waste Facility Permit or a Variance from permit requirements must be obtained from the State Department of Health Services and copies submitted to this office before commencing the proposed remedial action.

[X] NOTE Requirements pertaining to closure permit 3036B have been satisfied. Upon completing the site assessment and any required remedial action, the closure will be final
A written report containing the required information must be submitted to this office by November 6, 1987.

If you have any questions concerning this matter, please contact Mr. Blair Burgess at (213) 226-4437.

Very truly yours,

Re: I-5385
Air Products Manufacturing Corporation
Carson, California Facility

Dear Mr. Burgess:

Per our earlier telephone conversation and my subsequent conversations with Mr. Ronald Illium, of International Technologies Corporation, we request approval to temporarily postpone the investigation and remedial action planned for tank number 28.91 at our South Alameda Street facility.

The hydrogen plant served by tank 28.91 is no longer in operation. Current plans call for the dismantlement of the facility. Because the area, in which tank 28.91 was located, is overlain by process equipment and structural concrete, it would be necessary to let a separate contract for partial demolition to properly complete the action plan. In addition an inactive, and previously emptied and cleaned, tank lies to the south of 28.91. It too is overlain extensively by equipment and concrete.

It is our hope to dismantle the entire facility, thereby allowing ready access to both tank areas. In this fashion we could then remove the inactive tank and perform a complete remediation to the 28.91 tank area. Accordingly, we are proceeding with the treatment of the previously excavated soils, and request approval to delay further investigation of the 28.91 area until 1 April 1989.

If you should have any questions or require additional information please contact me at (215) 481-5154.

Sincerely,

G P Thompson

Dear Mr. Thompson:

HAZARDOUS MATERIAL UNDERGROUND STORAGE PERMIT
REQUEST FOR TIME EXTENSION
PERMIT NO. 3293
FACILITY LOCATION: 23320 South Alameda Street

Your request for time extension to complete requirements under the subject Provisional Hazardous Materials Underground Storage Permit (HMUSP) is hereby granted as follows:

[ ] Provisional HMUSP expiration date is extended to _____.

[ ] Tank integrity test results due by _____.

[ ] LDP/TMP proposals due by _____.

[X] Other: Site investigation proposal due date extended to January 15, 1988. Immediate action is required due to reported depth to groundwater.

The time extension(s) above apply only to obligations due under your Provisional HMUSP and do not extend the HMUSP effective date or full term operational permit expiration date.

If you have any questions, please contact Mr. Blair Burgess at (213) 226-4437.

RE: Permit No. 3293
Air Products and Chemicals, Inc.
23320 South Alameda Street

Dear Mr. Burgess:

Per your 14 December 1987 letter and our 13 January 1987 telephone conversation, we are planning a two phased approach to the delineation and remediation of the soil contaimination, identified during the 4 August 1987 removal of the 2500 gallon diesel fuel tank.

Attached please find the Scope of Work, prepared by IT Corporation, to determine the depth of the existing contamination. Once we have determined if groundwater has been affected, we will prepare a proposal for determining the lateral extent of contamination along with remediation.

We plan to complete this first phase of work during the week of February 1, 1988.

If you should have any questions or require additional information, please contact me at (215) 481-5154.

Very truly yours,

Air Products and Chemicals, Inc.

GP Thompson

Gerard P. Thompson
Manager, Operations Environmental Engineering

GPT/tms

SCOPE OF WORK

Geophysical Underground Locator

Geophysical utility locating services will be used to delineate any utility conduits, subsurface piping, or other obstructions beneath proposed drilling locations.

Backfill Tank Excavation

Stockpiled soil from the tank excavation will be used as backfill. Prior to backfilling, any standing water will be pumped from the excavation. A sheet of Visqueen® plastic will be placed at the base. The fill material will be compacted in 1 to 2 foot lifts to provide a stable drilling platform.

Standing water will be sampled and analyzed for fuel hydrocarbons to determine appropriate disposition. The water will be removed with a vacuum truck and transported to an oil recycler, if necessary.

Drilling and Sample Collection

IT proposes to drill, log, and sample one soil boring (Boring B-1) within and three more (Borings B-2, B-3, and B-4) circumscribing the backfilled tank excavation of former Tank 28.91 (Refer to Figure 2 - Proposed Soil Boring Locations). The borings will be drilled using 10-inch outside diameter (O.D.), continuous-flight, hollow-stem augers. These borings will be advanced to the base of the soil contaminant plume or to first encounter of ground water, whichever is shallower. These borings will be used to determine the lateral and vertical extent of soil contamination and the presence or absence of near-surface ground water. Soil samples will be collected at 5 foot intervals during drilling for field observation and possible laboratory analysis. Headspace monitoring of soil cuttings using an HNu-model photoionization detector will corroborate further which samples will be submitted for chemical analysis.

Soil cuttings will be drummed on-site pending receipt of analytical results to determine appropriate disposal.

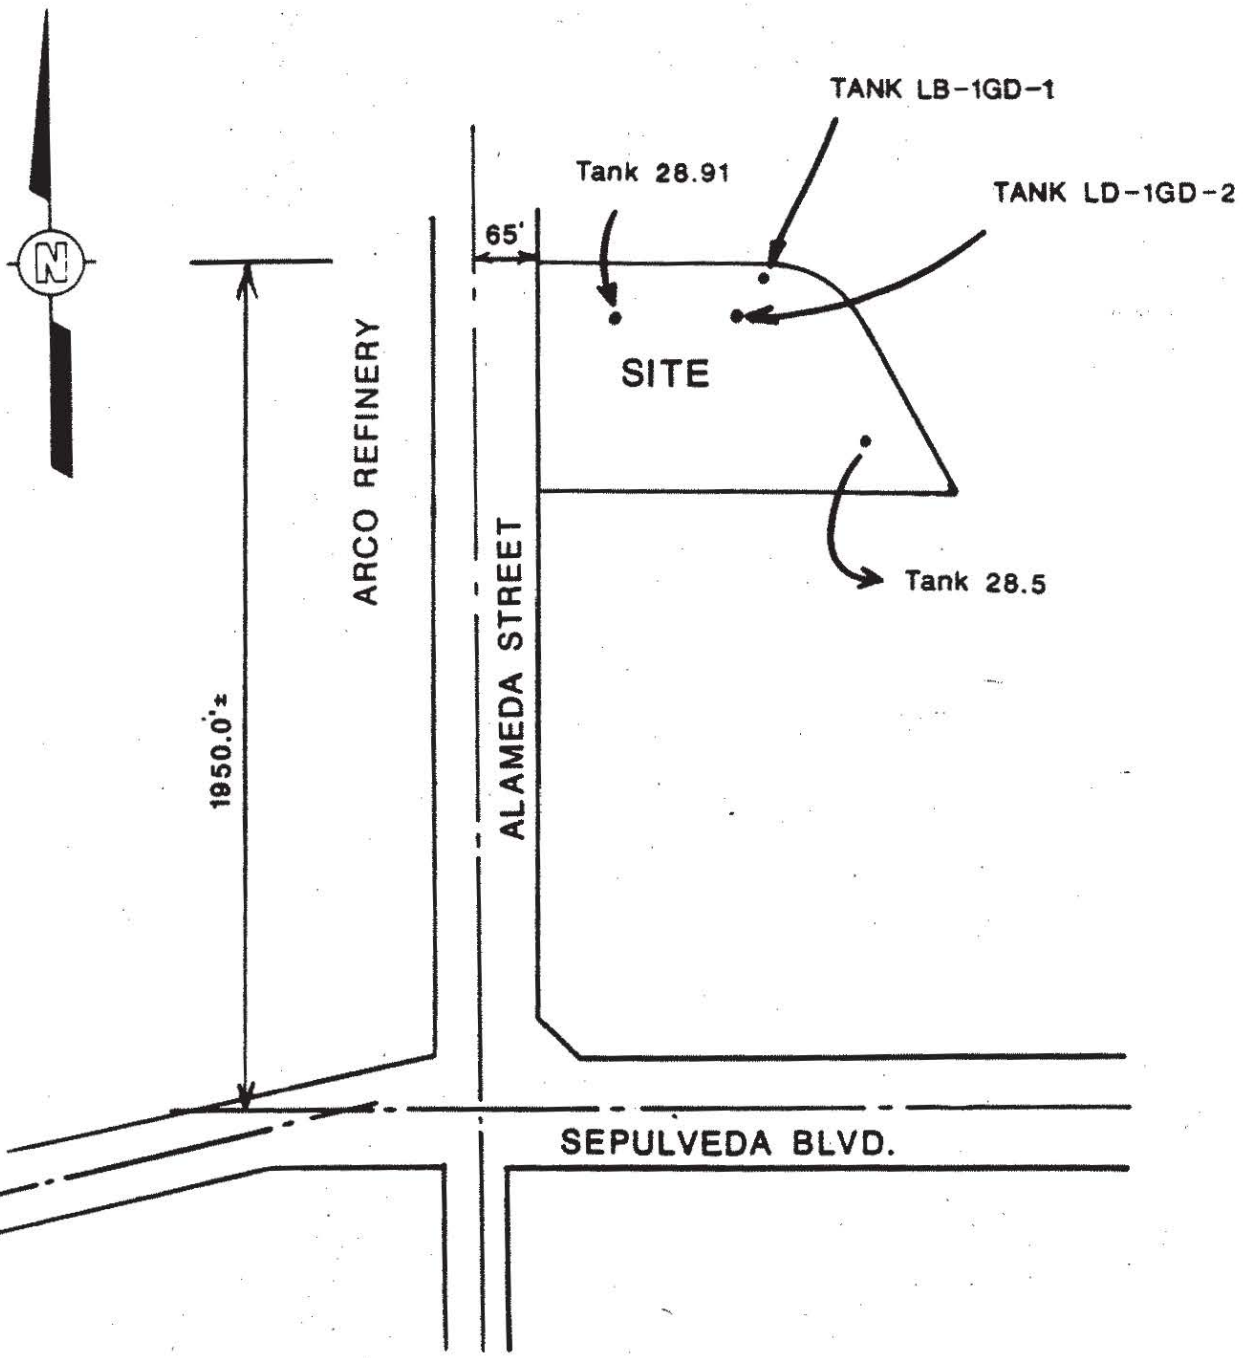
Drilling Without Sample Collection

One soil boring (Boring B-5) will be drilled to ground water in an area near but outside the soil contaminant plume. This boring will be drilled without sampling to a depth of 100 feet or to first encounter of ground water, whichever is shallower.

If ground water is encountered, a sample of aquifer material will be collected for grain size analysis to facilitate proper well installation. The boring will be terminated if a competent clay layer is encountered below the water table that is more than 5 feet thick. Care will be taken to preclude cross contamination of the uppermost aquifer. A sample of aquifer material will be collected for grain size analysis to facilitate proper well installation.

Laboratory Analyses

All analyses will be conducted by IT Analytical Services laboratory (ITAS) in Cerritos, California. Soil samples will be analyzed in accordance with the following U. S. EPA or U. S. EPA modified methods:



Total petroleum hydrocarbons modified (TPH) - EPA 418.1.
Flashpoint by Pensky-Martens closed cup tester - EPA 1010.
Total lead by direct aspiration, modified by California Department of Health Services (DOHS) - EPA 7420.
Benzene, toluene, xylene, and ethylbenzene (BTXE) - EPA 8020

We estimate that eight samples will be analyzed from the soil borings to determine analytically the degree of contamination and the depth at which diesel fuel contamination is no longer present. One surface water sample will be analyzed from the standing water in the tank excavation.

Report

Upon completion of the preliminary ground water site assessment and after receipt of analytical data, IT will prepare a detailed report documenting our field procedures, sample collection and preservation techniques, boring logs, analytical results, conclusions, and pertinent recommendations.

Dear Mr. Thompson

HAZARDOUS MATERIALS UNDERGROUND STORAGE
SITE INVESTIGATION PROPOSAL AND/OR REMEDIAL ACTION PLAN
FACILITY AT: 23320 S. ALAMEDA ST., CARSON

The site investigation proposal and/or remedial action plan submitted on January 20, 1988 for the above facility has been reviewed by this office and found adequate. You may proceed with the plan as proposed unless otherwise indicated below.

You are cautioned that any contaminated soils or hazardous materials generated during the approved operation must be manifested and transported to a hazardous waste disposal facility as required by California Health and Safety Code, Division 20, Chapter 6.5, unless evidence is presented indicating that the material may be disposed of at a less restricted facility. Copies of all completed manifests shall be submitted to this office as part of the final report.

[ ] A Hazardous Waste Facility Permit or a Variance from permit requirements must be obtained from the State Department of Health Services and copies submitted to this office before commencing the proposed remedial action.

[x] NOTE The water well must be constructed down gradient of the former tank location. Water samples must be analyzed for T.P.H. (EPA 8015) and BTX ,(EPA 602).
A written report containing the required information must be submitted to this office by May 20, 1988 .

If you have any questions concerning this matter, please contact Mr. Blair Burgess at (818) 458-3507 .

Very truly yours,

T. A. TIDEMANSON
Director of Public Works

Dear Mr. Swigart

HAZARDOUS MATERIALS UNDERGROUND STORAGE
SITE INVESTIGATION REPORT
FACILITY AT: *23320 S. ALAMEDA STREET, CARSON*

This office reviewed the site investigation report submitted for the above facility. The report is not approved because of the reasons checked below:

[ ] The exact extent of contamination has not been defined. _____

[X] The proposed remedial action is inadequate. *The recommendations as stated in the report from International Technology Corp. should be better adhered.*

[ ] There is significant contamination at this site. Pursuant to Section 25297(b) of the California Health and Safety Code, we are referring the matter to the State Regional Water Quality Control Board. For further information regarding the Board's requirements, please contact Mr. Joshua Workman at 107 S. Broadway, Room 4027, Los Angeles, CA 90012, (213) 620-5662. All future correspondence shall be directed to the Board with a copy sent to this office.

[X] Other *A groundwater sample must be obtained and analyzed for TPH (EPA 8015) and B.T.X.E. (EPA 602).*

Make the required corrections as indicated above and submit a revised report to this office by August 26,1988.

If you have any questions concerning this matter, please contact *Mr. Blair Burgess* at (818) 458-*3507*.

Very truly yours,

RE: File I-5385-22
Revised Report/Remedial Action Plan
Air Products and Chemicals, Inc.
23320 S. Alameda Street
Carson, California

Dear Blair:

As mentioned in my 19 April 1988 correspondence, Air Products will employ an environmental consulting firm for the diesel contaminated soil remediation at our above referenced facility. Our selection will be made from one of the three firms I mentioned in our 19 July phone conversation.

As you requested, we will excavate to the extent that Benzene levels approach zero and total petroleum hydrocarbon (TPH) levels reach 100 - 300 ppm. Direct observation through excavating and sampling will best allow us to determine the extent of the clean-up required and whether additional analyses are warranted. We will then bio-treat the contaminated soil on-site to achieve less than 100 ppm TPH. More detailed information concerning the plan for bio-treatment will be provided to you when our contractor formulates a treatment program. Prior to excavation a health and safety plan will be submitted to you for approval before work begins.

We will forward our selected contractor's remedial plan as soon as possible. We would like to begin excavating by 6 September 1988. If you have any questions, please contact me at (215) 481-8867 or Gerard P. Thompson at (215) 481-5154.

Sincerely,

Air Products and Chemicals, Inc.

WASTE MANAGEMENT DIVISION

Dear Mr. Ortega:

Reference is made to your letter dated February 1, 1989, and work plan regarding the applicability of District Rule 1166 to your proposed "Solid-Phase Bioremediation of Contaminated Soil" at the Air Products Chemicals site located at 233020 S. Alameda Street in Carson, California.

Based on the information provided in your letter, only diesel fuel has contaminated the soil. According to District Rule 1166 (copy attached), if the initial boiling point of the organics in the soil is greater than 302 degrees Fahrenheit and the VOC readings above the soil are expected to be below 50 ppm, then the project is exempt from the Rule requirements under section (d)(1)(B). However, if VOC readings are detected above the soil during soil handling at 50 ppm or above, you should have verification from a laboratory that the organics in the soil have a boiling point above 302 degrees Fahrenheit in order to qualify for the exemption under section (d)(1)(B).

Furthermore, for your information, a permit is required by District Rule 201 (copy attached) for treatment of soil with any type of equipment which enhances volatilization (such as a vapor extraction system) and/or emits/controls emissions. The proposed bioremediation treatment method for treatment of soil contaminated with high boiling point organics which meets the exemption described above does not require a Permit to Construct and Operate. Please be advised however, that appropriate mitigation measures should be implemented during soil handling and bioremediation to prevent violations of District Rules 402 (Nuisance) and 403 (Fugitive Dust) (copies attached).

If you have any questions, please call Mrs. Stacey Ebiner at (818) 572-6318.

Very truly yours,

William J. Dennison

Dear Mr. Huff:

On Friday, February 24, 1989, I received notice from Ms. Stacy Ebiner of the South Coast Air Quality Management District (SCAQMD) informing me that the soil bioremediation project we proposed to execute at the Air Products Chemicals, Inc. plant, located at 233020 South Alameda Street, Carson, California, is exempt from the provisions of the SCAQMD Rule 1166.

We will mobilize equipment on March 8, 1989 and begin excavation operations on March 9, 1989. We will send your office a copy of the Baseline and Process Monitoring Report during the latter part of June, 1989 with the Clearance Data Report (Final Report) to follow in September, 1989.

Thank you,

Miguel A. Ortega

Re: Underground Storage Tank Update
Permit #3293
Air Products Manufacturing Corp.
23320 S. Alameda Street
Carson, CA

Dear Sir/Madam:

Enclosed please find the completed underground storage tank (UST) update forms for our above referenced facility. This plant was shutdown in March of 1986. Tank #28.70 was emptied and washed in July-August 1986 and has not been in use since. This tank had been used to store a 10% sodium hydroxide/90% water solution.

In August 1987 four other UST's were removed at this facility. The fifth tank #28.70 could not be removed because it is covered by a concrete equipment pad in a section of the plant where there are overhead pipe rack supports. This section would have to be demolished before tank #28.70 could be removed. We, therefore, would like to complete the requirements for permanent closure of this tank in place.

During investigations related to the removal of the other UST's, we were able to cut through the concrete pad near tank #28.70 and take a soil boring. This soil boring was analyzed for pH at 5 foot intervals down to 30 feet. The pH ranged from 7.6 to 8.3 standard units and would indicate that this caustic tank (10% NaOH/90% water) had never leaked. In addition an impervious concrete pad covers the tank, and the surrounding area, thus preventing any infiltration of surface water. The depth to groundwater at this site is 65 feet.

Given the above, please verify that this tank has met the requirements of permanent closure in place, or that it must still be filled with an inert material. If you have any questions, please call me at (215) 481-8867.

Sincerely,

Air Products and Chemicals, Inc.

Dear Underground Tank Owner/Operator:

FACILITY LOCATION: 23320 S ALAMEDA ST
PERMIT NUMBER: 00003293 NUMBER OF TANKS: 1

The recent enactment of Federal regulations for the control and monitoring of underground storage tanks (USTs) has made it necessary for local agencies and the State Water Resources Control Board to update information on file about the USTs at your facility and the ownership of these tanks. The State has developed the enclosed Form "A" (Site) and Form "B" (Tank) to record the required information.

The enclosed forms have been preprinted with information presently on file for the subject location. Please correct any erroneous data and complete the remaining information as described on the enclosed instructions. One Form "A" is required for each location where USTs exist and one Form "B" is required for EACH TANK at that location.

The completed forms must be submitted 30 days from date of this letter to:

DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
P.O. BOX 1460
ALHAMBRA, CA 91802-1460

This submittal is mandatory to maintain your UST permit

There is no fee required for this submittal. However, if there are USTs at this location that were not previously registered, you will be liable for additional permit and State surcharge fees. If some or all of the USTs shown for this location have been closed, so indicate on Form "B" and include the Closure Permit number on your submittal. Please note that USTs permitted for closure will remain on the record until ALL required post-closure information has been submitted and approved.

Your cooperation will greatly assist State and local compliance with UST regulations. Please contact the Waste Management Division, UST Unit, at (818) 458-3517 if you have any questions or need additional forms.

Very truly yours:

T. A. TIDEMANSON
Director of Public Works

INSTRUCTIONS:

HAZARDOUS MATERIALS UNDERGROUND STORAGE PERMIT (***HMUSP***)
APPLICATION SUPPLEMENT

DO NOT USE THIS FORM FOR CLOSURE OR TRANSFER OF AN EXISTING *HMUSP*, A NEW CONSTRUCTION PLAN CHECK, OR AN ADDITIONAL APPROVAL.

(A) Facility name, mailing address and facility address on new permit applications must correspond with information on Part I of the State Form **"A"**, Facility/Site Information. Please correct mailing label information if affixed.

(B) This application supplement is to be used for application to operate and maintain existing tanks located within the jurisdiction of the Department of Public Works. Facilities located within the corporate limits of the cities of Burbank, Glendale, Long Beach, Los Angeles, Pasadena, San Fernando, Santa Monica, Torrance and Vernon should contact the respective local agencies directly for permit information. Permit renewal is authorized only if no ownership change has occurred. Specify the number of tanks at the facility.

(C) Assessor parcel identification is required for new permit applications only.

(D) The applicant is responsible for completing ***all*** information requested on State Forms **"A"** and **"B"**. The Department of Public Works Underground Tank Inspector will not fill out these forms for you. This application is due by the date indicated. If you are unable to submit your ***LDP/TMP*** by the due date, a Provisional ***HMUSP*** will be issued granting up to 90 days to complete your submittal. Evidence of safe storage must be submitted with this application to qualify for a provisional ***HMUSP***.

(E) The total fees to accompany this application represent the ***HMUSP*** application fee, the first annual ***HMUSP*** maintenance fee plus the State surcharge. Future annual ***HMUSP maintenance fees*** will be payable upon billing by the Department of Public Works.

(F) Persons that have been notified to file for a ***HMUSP*** and do not store any hazardous materials underground should check the appropriate box and return this form to avoid any unnecessary follow-up mailings.

The storage of hazardous waste in an underground tank where the specific tank is named in hazardous waste facility permit issued by the California Department of Health Services is not subject to the ***HMUSP*** requirements. Owners of such facilities must furnish a copy of the State permit for facilities where this exclusion is requested.

<u>Final</u> interceptors in industrial waste pretreatment systems, catch basins, refinery pipelines, lagoons, storm drains, oil field gathering lines, well cellars, above ground storage tank spill containment, unlined pits or sumps, and piping not directly associated with a permitted facility are not subject to a ***HMUSP***. *Claims for exemption are subject to verification.*

(G) This ***HMUSP*** application supplement and each State **"A"** or **"B"** must be signed by:

1) A principal executive officer at the level of vice-president or by an authorized representative. The representative must be responsible for the overall operation of the facility where the tank(s) are located.
2) A general partner proprietor.
3) A principal executive officer, ranking elected official or authorized representative of a public agency.

FORM 'A':
SITE

UNDERGROUND STORAGE TANK PROGRAM
FACILITY/SITE, INFORMATION

INSTRUCTIONS FOR COMPLETING THIS FORM

GENERAL INSTRUCTIONS:

1. One FORM "A" shall be completed for all **NEW PERMITS, PERMIT CHANGES** or any **FACILITY/SITE INFORMATION CHANGES.**
2. **SUBMIT ONLY ONE (1) FORM "A"** for a Facility/Site, regardless of the number of tanks located at the site.
3. This form should be completed by either the **PERMIT APPLICANT.**
4. Please type or print clearly all requested information.
5. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.

I. FACILITY/SITE INFORMATION & ADDRESS - (MUST BE COMPLETED)

1. Record name and address (physical location) of the underground tank(s).
   NOTE: Address MUST have a valid physical location including city, state, and zip code.
   P.O. BOX NUMBERS ARE NOT ACCEPTABLE.
   Include nearest cross street and care of address information if appropriate.
2. Check the appropriate box for TYPE OF BUSINESS.
3. Check the appropriate box for TYPE OF BUSINESS OWNERSHIP.(ex. CORPORATION, INDIVIDUAL, etc.)
4. If Facitity/Site is located on land within an indian reservation or other indian trust lands, check the box marked "YES".
5. Phone number must have an area code. If the night number is the same, write "SAME" in proper location.
6. Record the E.P.A. ID # or write "NONE" in the space provided.
7. Indicate the NUMBER of TANKS at this SITE.

II. PROPERTY OWNER INFORMATION & ADDRESS - (MUST BE COMPLETED)

1. Complete all items in this section, unless all items are the same as SECTION 1; If the same, write **"SAME AS SITE"** across this section. Be sure to check PROPERTY OWNERSHIP TYPE box.

III. TANK OWNER INFORMATION & ADDRESS - (MUST BE COMPLETED)

1. Complete all items in this section, unless all items are the same as SECTION I; If the same, write **"SAME AS SITE"** across this section. Be sure to check TANK OWNERSHIP TYPE box.

IV. LEGAL NOTIFICATION AND BILLING ADDRESS

1. Check **ONE BOX** for the address that will be used for **BOTH LEGAL and BILLING NOTIFICATIONS.**

Applicant must sign and date form as indicated.

IT IS THE RESPONSIBLITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY/SITE TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS:

FORM 'B':
TANK

UNDERGROUND STORAGE TANK PROGRAM
TANK INFORMATION

INSTRUCTIONS FOR COMPLETING THIS FORM

GENERAL INSTRUCTIONS:

1. One FORM "B" shall be completed for each tank for all **NEW PERMITS, PERMIT CHANGES, TANK CLOSURES, TANK REMOVALS,** and/or any other **TANK INFORMATION CHANGE.**
2. This form should be completed by either the **PERMIT APPLICANT**
3. Please type or print clearly all requested information.
4. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.
2. Indicate the Facility/Site name where the tank is installed.
3. Is this tank a farm tank? Check 'YES' or 'NO'. A farm tank is a tank located on an agricultural farm which stores motor vehicle fuel used to propel farm vehicles.

I. TANK DESCRIPTION — COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

A. Indicate owners tank ID # - If there is a tank number that is used by the owner to identify the tank.(ex. AB70789)
B. Indicate the name of the company that manufactured the tank. (ex. ACME TANK MFG.)
C. Indicate the year tank was installed. (ex. 1987)
D. Indicate the tank capacity in gallons. (ex. 25,000 or 10,000, etc.)

II TANK CONTENTS

A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
   2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
B. Check the appropriate box.
C. Check the type of MOTOR VEHICLE FUEL. (if box 1 is checked in A)
D. Print the chemical name of the hazardous substance stored in the tank and the C.A.S. #. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION — MARK ONE ITEM ONLY IN BOX A, B, C & D

1. Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
2. If OTHER, print in the space provided.

IV. PIPING INFORMATION

1. Circle **A** if above ground, or **U** if underground; circle both if applicable.
2. If UNKNOWN, circle or if OTHER, print in space provided.

V. LEAK DETECTION SYSTEM

1. Circle **P** for PRIMARY, or **S** for SECONDARY. A primary and/or secondary leak detection system **MUST** be circled.
2. If UNKNOWN, specify or if OTHER, print in space provided.
3. If there is no SECONDARY LEAK DETECTION SYSTEM, circle NONE.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

1. ESTIMATED DATE LAST USED - MONTH/YEAR (January, 1988 or 01/88).
2. ESTIMATED QUANTITY of SUBSTANCE remaining in tank. (in Gallons)
3. WAS TANK FILLED WITH INERT MATERIAL? Check 'YES' or 'NO'.

Applicant must sign and date form as indicated.

IT IS THE RESPONSIBLITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY/SITE TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS:

CLOSURE PERMIT SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

Closure Permit
No.: 41613B
File No.
I- 5385-22

PART 1 OF 2

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2-4FT BELOW	TPH, BTXE	418.1, 8020
	TANK INVERT	PH, Na	Appropriate EPA Meth
20FT INTERVAL	"	"	"
ALONG PRODUCT PIPING	"	"	418.1, 8020

dn4/FPERMIT Rev. 3/90

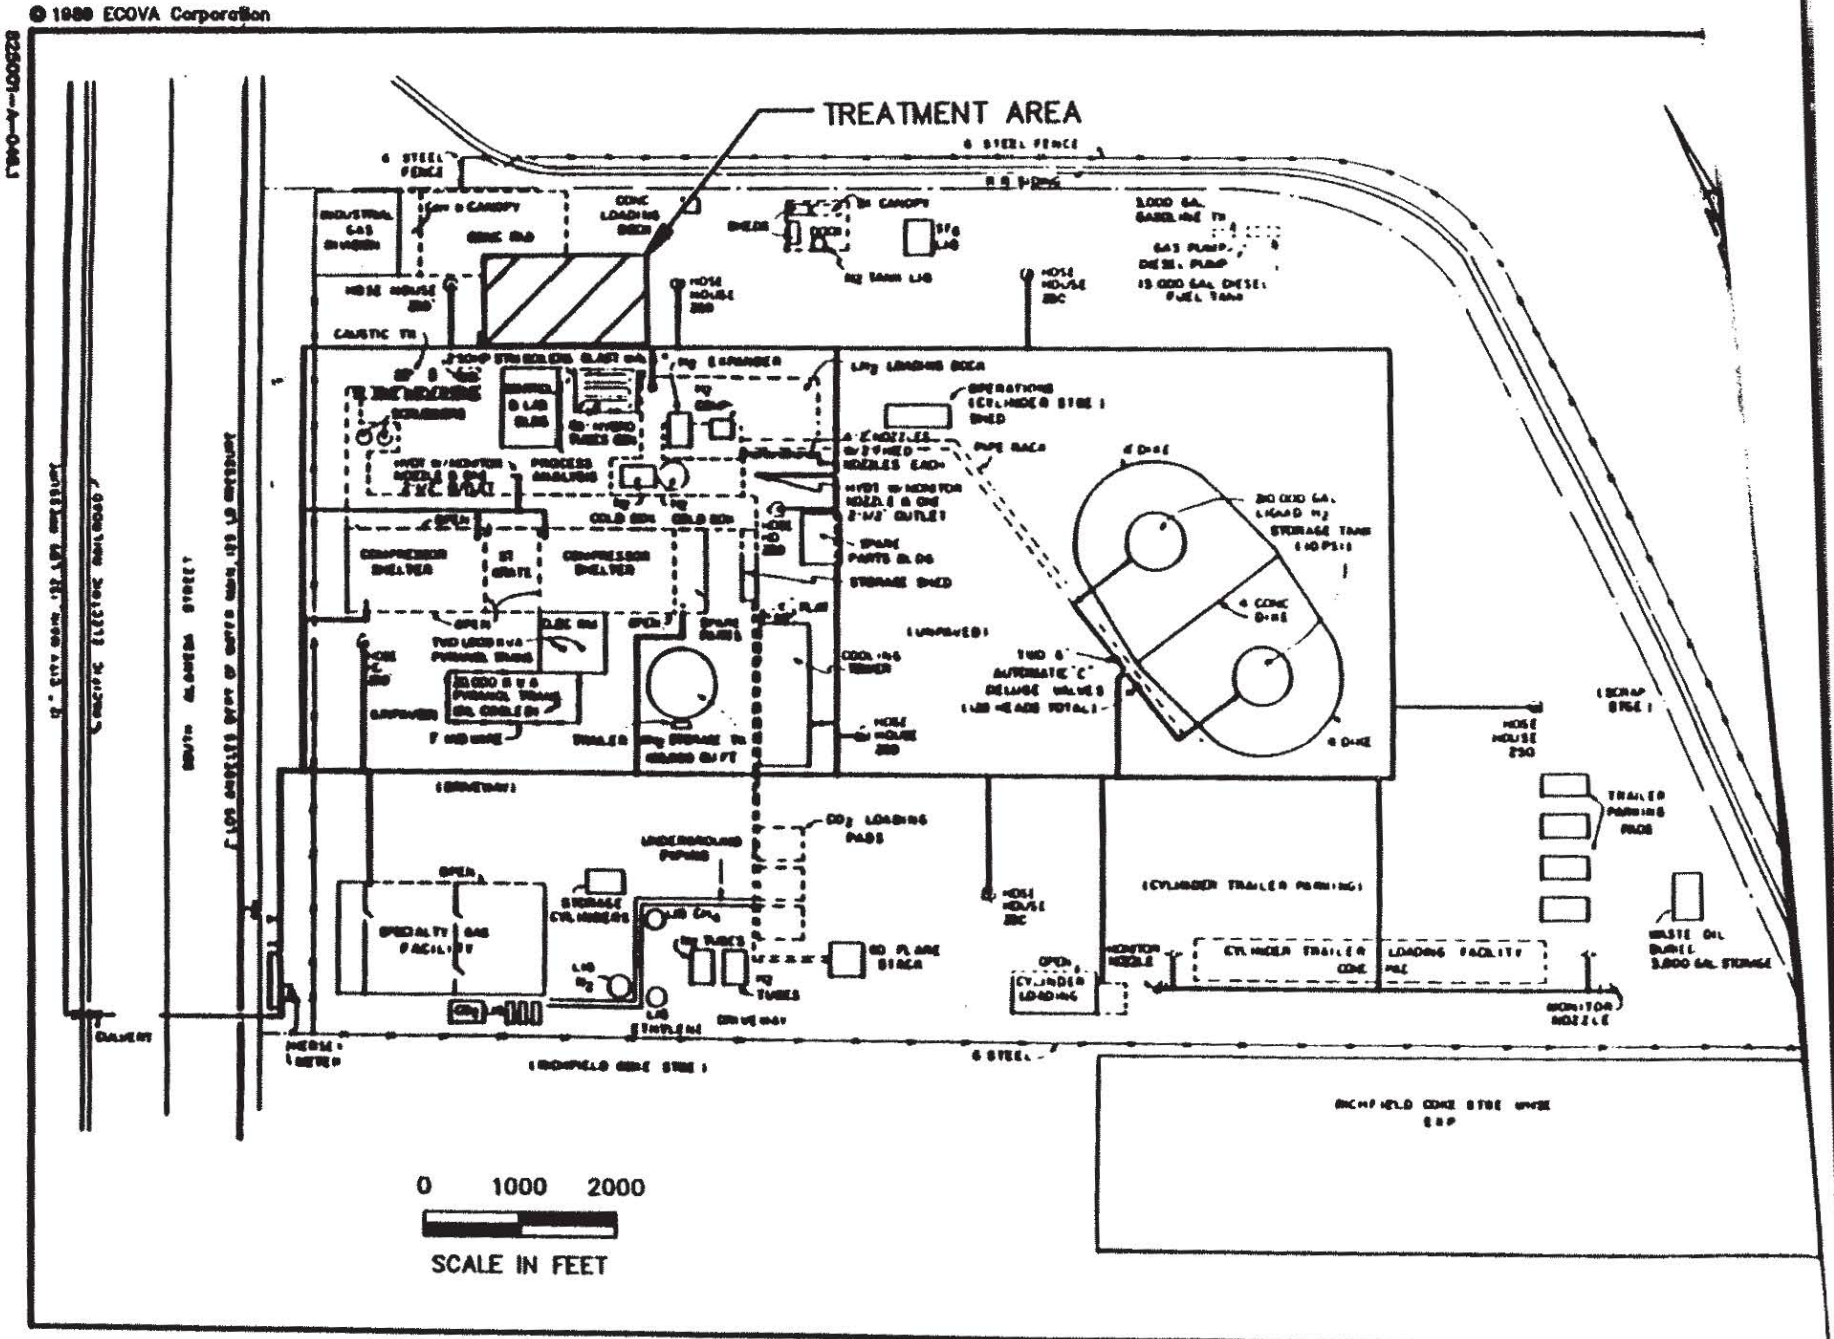
Cont'd on Page 2

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report.

4. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

5. The analytical results for all soil samples shall be expressed milligrams per kilogram (mg/kg), or micrograms per kilogram (ug/kg) as appropriate. Practical quantitation limits of 5-10 ug/kg (ppb) for volatile organics and 1 mg/kg (ppm) for the petroleum hydrocarbons must be achieved by the laboratory. Analytical results for groundwater samples shall be expressed in ug/l (ppb) and practical quantitation limits of .5-5 ug/l (ppb) for volatile organics, and 1 mg/l (ppm) for petroleum hydrocarbons must be achieved by the laboratory.

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determiantion; d) The method of analysis; e) Signature of chemist certifying results.



7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever is earlier.

4907 ;

© 1988 ECOVA Corporation

CLOSURE -- UNDERGROUND STORAGE TANKS

CONDITIONS A -- GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer - Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3) business day advance notification.

   b. Permanent closure of a tank in place or a temporary closure shall require a 30 day written notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74-81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies include the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.

   b. The personnel shall be sufficiently skilled to safely carry out such operation.

   c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.

   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B -- TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, "Abandonment or Removal of Underground Tanks," Part A and any other applicable Parts.

2. A temporary closure shall not exceed 90 days.

CONDITIONS C -- PERMANENT TANK(S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Part D and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tanks shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be backfilled and recompacted to a relative compaction of 90%.

CONDITIONS D -- PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Parts B or C, and any other applicable Parts.

2. Owners/operators shall demonstrate part site integrity as follows:

   a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test borings may be drilled vertically and the reason stated in the report in 2.h. below.

   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.

   c. For multiple tanks, as a minimum, borings shall be placed at 20 foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.

   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.

   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.

   f. Soil samples shall be capped immediately with teflon or aluminum.

   g. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.

   h. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials -- Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

NOTICE TO CLOSURE PERMIT APPLICANTS

The South Coast Air Quality Management District (SCAQMD) has adopted Rule 1166 regulating emissions of Volatile Organic Compounds (VOC) from decontamination of soil effective **August 6, 1988.**

In addition to the requirements of your Closure Permit, persons excavating any underground storage tank that previously contained VOC's must:

- Notify the SCAQMD Executive Officer by telephone at (714) 396-2000 24 hours prior to tank excavation. 1166(c)(1)(A)
- Monitor the excavated material during the excavation for VOC contamination. 1166(c)(1)(B)
- When VOC contamination is detected:
  * Cease excavation
  * Cover the contaminated soil until implementation of approved mitigation measures. 1166(c)(1)(C)
  * Notify the SCAQMD Executive Officer at (714) 396-2000 within 24 hours of detection of VOC contaminated soil. 1166(c)(2)(A)
- A person shall not engage in or allow any on-site or off-site spreading of VOC contaminated soil which results in uncontrolled evaporation of VOC to the atmosphere. 1166(c)(3)

Exemptions

- Treatment of less than one (1) cubic yard of contaminated soil. 1166(d)(1)(A)
- Decontamination of soil containing organic compounds that have initial boiling point of 302°F or greater, Reid Vapor Pressure less than 80mm Hg or Absolute Vapor Pressure less than 36mm Hg at 20°C. 1166(d)(1)(B),(F)
- Removal of soil for sampling purposes pursuant to EPA methods. 1166(d)(1)(C)
- Accidental spillage of five (5) gallons or less of VOC. 1166(d)(1)(D)
- Documentation of soil which is contaminated through natural seepage of VOC from oil and gas wells or other natural sources. 1166(d)(1)(E)

SPECIFIC QUESTIONS ON RULE 1166 SHOULD BE REFERRED TO THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (714) 396-2000

UST1/NOTCLOSE

LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the Los Angeles County Department of Public Works, Waste Management Division, P.O. Box 1460, Alhambra, CA 91802-1460, containing:

1. File number of facility and closure permit number.

2 Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets and north arrow.

3. Description of methods for obtaining, handling, and transporting samples.

4. Time and date samples were obtained.

5. If borings were established, boring logs certified by a CA Registered Geologist, CA Certified Engineering Geologist, or CA Registered Civil Engineer with sufficient experience in soils.

6. Chain-of-custody documentation initiated by person obtaining sample through person at State Department of Health Services certified laboratory.

7. Disposal destination of tanks and evidence of legal disposal.

8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction and methods of analysis.

9. Documentation as to depth of groundwater at facility.

10. Manifests to document hazardous waste disposal of any removed soil and tank rinsate.

11. Any observations of site contamination.

12. Remedial action plan to mitigate contamination.

13. Report to be signed by CA Registered Geologist, CA Certified Engineering Geologist, or CA Registered Civil Engineer with sufficient experience in soils.

Signature T. Monie Date 10/19/92

Re: Written Report Follow-up to 30 October 1992 Verbal Spill Notification
Air Products Manufacturing Corp., 23320 S. Alameda St, Long Beach, CA 90810

Dear Sir:

This letter serves to document the verbal spill notification made in regards to our above referenced facility. As you may recall, Air Products was conducting some demolition activities when we encountered some soil contaminated with fuel. We assumed the source was related to an underground diesel tank that we removed and remediated about four years ago. In addition to yourself, I notified the California Office of Emergency Services (Report # 30300) and the Regional Water Quality Control Board (RWQCB).

On 29 October 1992, at 1:00 P.M., during the demolition of a truck-weighing scale pit at our 23320 S. Alameda Street facility, some fuel contaminated soil was encountered. The following day I reported the contaminated soil. An analysis of the soil shows 3516 ppm gasoline and 779 ppm diesel. The quantity of the contamination is unknown. The source of the contamination may have been from the underground diesel tank that was removed adjacent to the scale or due to a possible past surface spill. We are currently making arrangements with an environmental contractor to investigate and remediate or remove and dispose the contaminated soil.

Investigation and remediation reports will be forwarded to you and to the RWQCB unless you would prefer otherwise. If you have any questions, please call me at (215) 481-8867.

Sincerely,

Air Products and Chemicals, Inc

Re: Gasoline/Diesel Contaminated Soil Update
Air Products Manufact. Corp., 23320 S. Alameda St, Long Beach, Ca 90810

Dear Sir:

As you may recall, Air Products was conducting some demolition activities when we encountered some soil contaminated with gasoline and diesel. We assumed the source was related to an underground diesel tank that we removed and remediated about four years ago. As we investigate, we are beginning to put some pieces of the puzzle together that lead us to believe the contamination may be located over a larger area than we suspected and from a different source.

The above referenced facility is an industrial gas manufacturing plant where Air Products received a pipeline gas, from the petroleum cracking operation at the ARCO refinery across the street, and manufactured pure hydrogen. We have leased this property from ARCO since building our plant in 1962. We decommissioned the plant in 1986 and are currently demolishing sections of the facility so that we may return the land to ARCO.

The truck weighing scale, where the contamination was discovered, is adjacent to a section of our plant that we refer to as the purification or pretreatment area. This is were our demolition activities are currently being directed. Within this area is an underground spent caustic solution tank that we are going to remove. In preparation for this tank removal, we broke through the concrete pad, that covers most of this area, and discovered some similar gasoline/diesel contaminated soil. This would indicate that the contamination covers a larger area than just around the truck scale.

Within our purification/pretreatment area there are two aboveground storage tanks that contained hydrocarbon liquids. One tank is a 6000 gallon diesel tank and the other is a 6000 gallon hydrocarbon condensate tank. This hydrocarbon condensate was very similar to gasoline and contained benzene, toluene, ethylbenzene, and xylene. Given the location of the contaminated soil in relation to these aboveground storage tanks, the similarity of the contamination to the substances stored in these tanks, and the fact that the contamination is located near the ground surface, we now believe that possible surface spills related to

11. 12. 92 03:33 PM *PSG MATL. S. MGMT. P02

these tanks may be the source of this soil contamination. We are now directing our attention to the area beneath these tanks.

We are currently using Cleveland Environmental Services, Inc. to conduct our investigation. We continue to demolish aboveground structures in this area as it will facilitate further investigation and remediation.

If you have any questions regarding our activities, please call me at (215) 431-8867.

Sincerely,

Air Products and Chemicals, Inc

CLOSURE -- UNDERGROUND STORAGE TANKS

CONDITIONS A -- GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer - Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3) business day advance notification.

   b. Permanent closure of a tank in place or a temporary closure shall require a 30 day written notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74-81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies include the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.

   b. The personnel shall be sufficiently skilled to safely carry out such operation.

   c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.

   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B -- TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, "Abandonment or Removal of Underground Tanks," Part A and any other applicable Parts.

2. A temporary closure shall not exceed 90 days.

CONDITIONS C -- PERMANENT TANK(S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Part D and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tanks shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be backfilled and recompacted to a relative compaction of 90%.

CONDITIONS D -- PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Parts B or C, and any other applicable Parts.

2. Owners/operators shall demonstrate part site integrity as follows:

   a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test borings may be drilled vertically and the reason stated in the report in 2.h. below.

   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.

   c. For multiple tanks, as a minimum, borings shall be placed at 20 foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.

   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.

   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.

   f. Soil samples shall be capped immediately with teflon or aluminum.

   g. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.

   h. A report containing the results of the above analysis shall be submitted to the County Engineer.

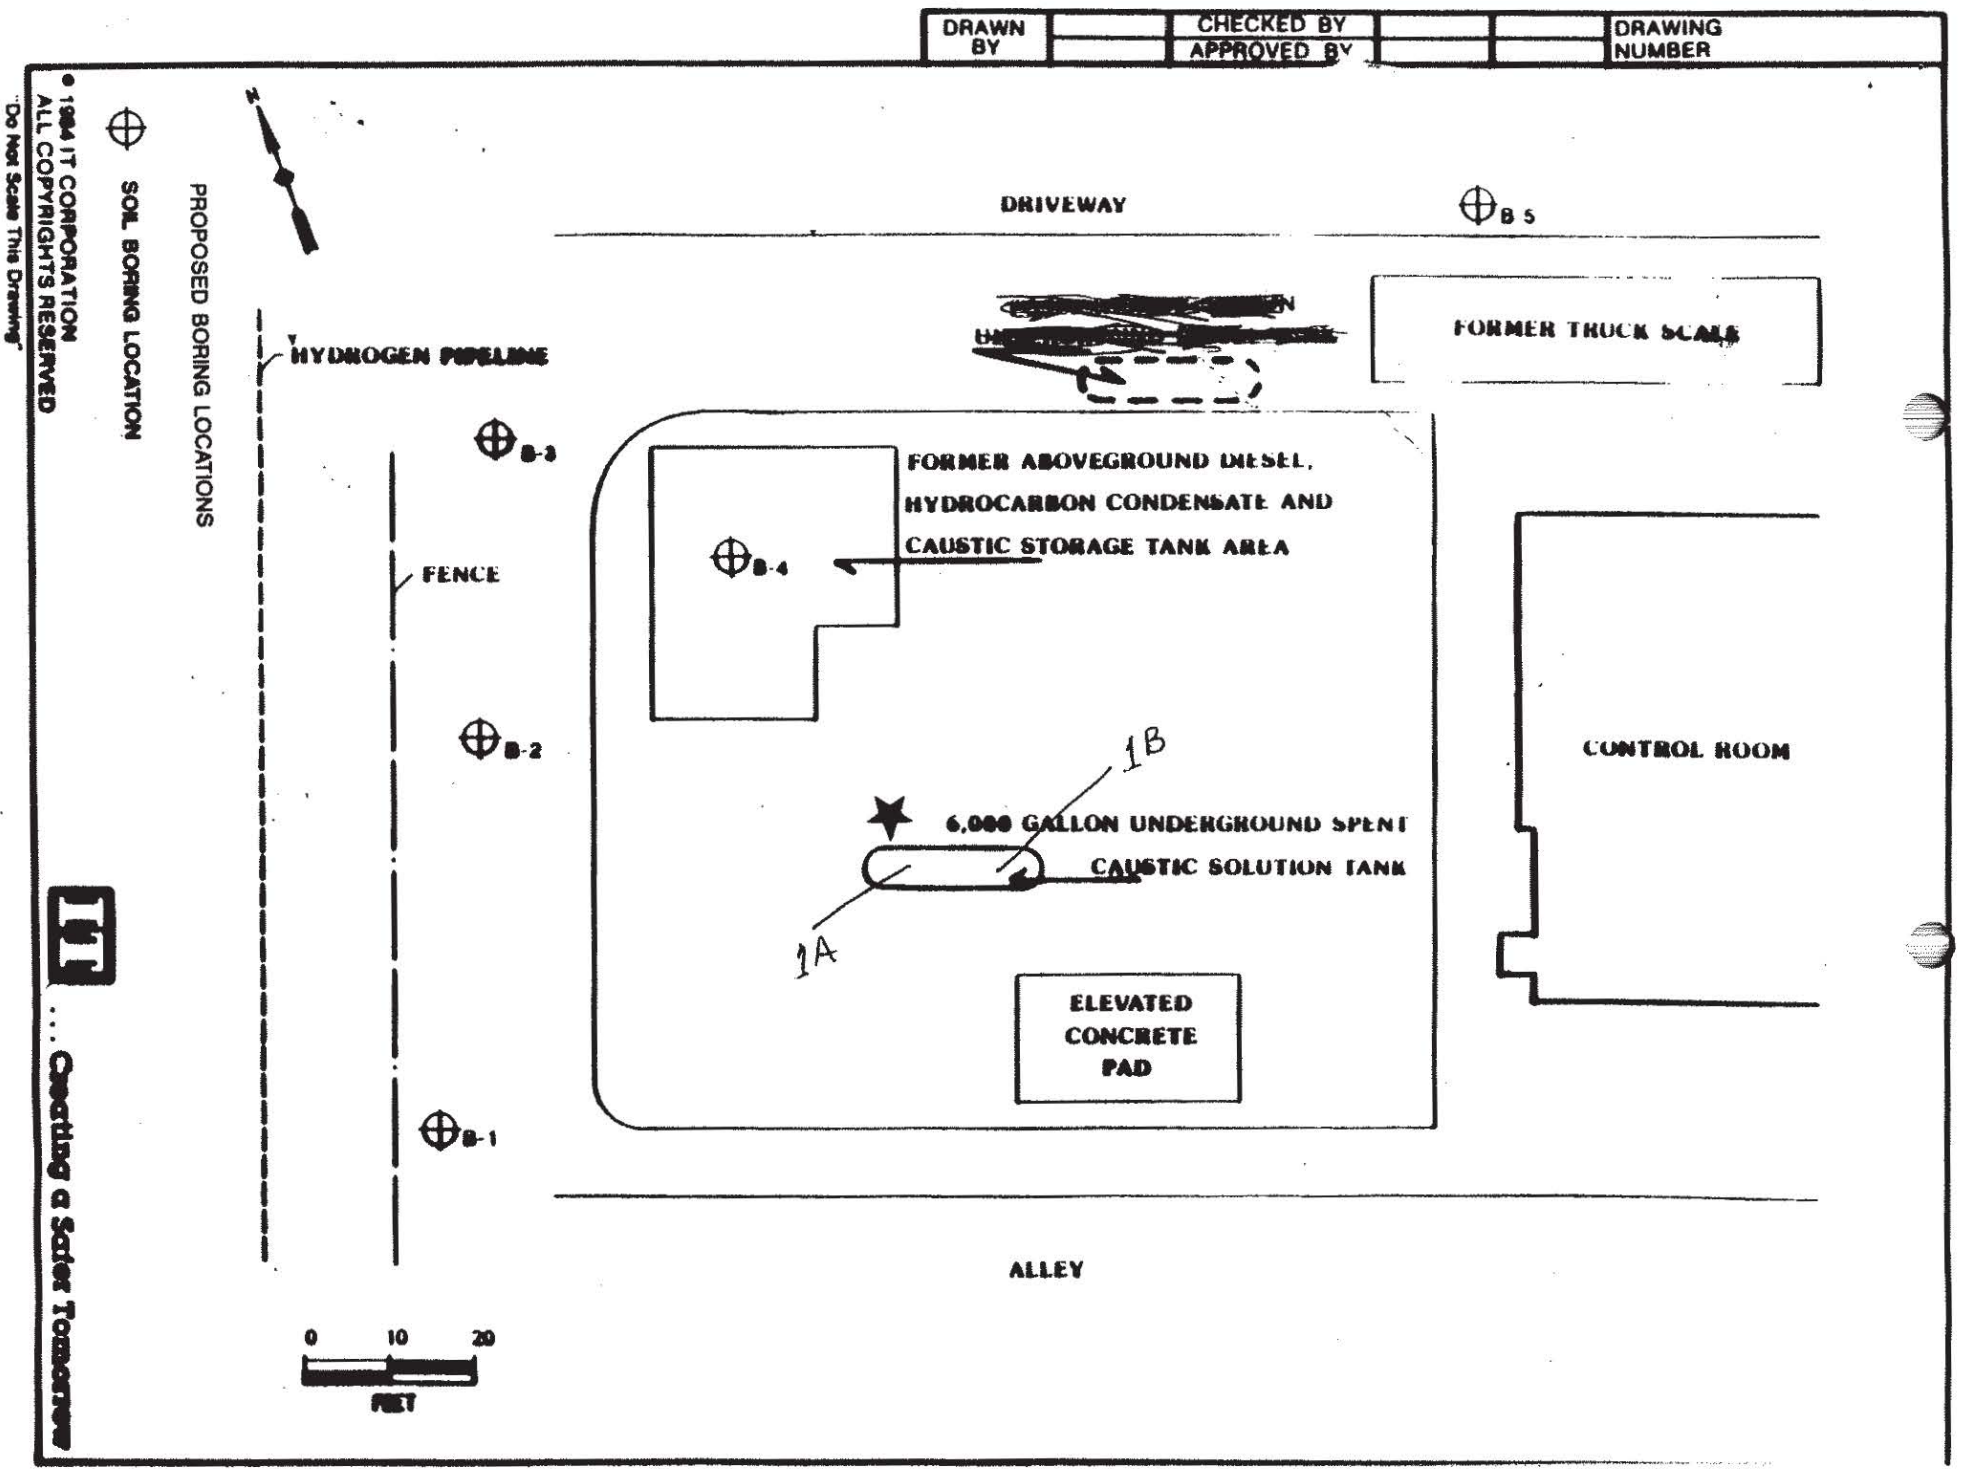
3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials -- Guidelines."

4. A report shall be submitted to the County Engineer containing

NOTICE TO CLOSURE PERMIT APPLICANTS

The South Coast Air Quality Management District (SCAQMD) has adopted Rule 1166 regulating emissions of Volatile Organic Compounds (VOC) from decontamination of soil effective August 6, 1988.

In addition to the requirements of your Closure Permit, persons excavating any underground storage tank that previously contained VOC's must:



- Notify the SCAQMD Executive Officer by telephone at (714) 396-2000 24 hours prior to tank excavation. 1166(c)(1)(A)
- Monitor the excavated material during the excavation for VOC contamination. 1166(c)(1)(B)
- When VOC contamination is detected:
  * Cease excavation
  * Cover the contaminated soil until implementation of approved mitigation measures. 1166(c)(1)(C)
  * Notify the SCAQMD Executive Officer at (714) 396-2000 within 24 hours of detection of VOC contaminated soil. 1166(c)(2)(A)
- A person shall not engage in or allow any on-site or off-site spreading of VOC contaminated soil which results in uncontrolled evaporation of VOC to the atmosphere. 1166(c)(3)

Exemptions

- Treatment of less than one (1) cubic yard of contaminated soil. 1166(d)(1)(A)
- Decontamination of soil containing organic compounds that have initial boiling point of 302°F or greater, Reid Vapor Pressure less than 80mm Hg or Absolute Vapor Pressure less than 36mm Hg at 20°C. 1166(d)(1)(B),(F)
- Removal of soil for sampling purposes pursuant to EPA methods. 1166(d)(1)(C)
- Accidental spillage of five (5) gallons or less of VOC. 1166(d)(1)(D)
- Documentation of soil which is contaminated through natural seepage of VOC from oil and gas wells or other natural sources. 1166(d)(1)(E)

SPECIFIC QUESTIONS ON RULE 1166 SHOULD BE REFERRED TO THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (714) 396-2000

CLOSURE PERMIT SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

Closure Permit
No.: 61306
File No.
I- 5385

PART 1 OF 2

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2-4 feet below tank invert	TPH, BTEX pH, Na	418.1, 8020 Appropriate EPA method
20 feet interval along product pipe	"	"	"

dn4/FPERMIT Rev. 3/90

Cont'd on Page 2

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report.

4. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

5. The analytical results for all soil samples shall be expressed milligrams per kilogram (mg/kg), or micrograms per kilogram (ug/kg) as appropriate. Practical quantitation limits of 5-10 ug/kg (ppb) for volatile organics and 1 mg/kg (ppm) for the petroleum hydrocarbons must be achieved by the laboratory. Analytical results for groundwater samples shall be expressed in ug/l (ppb) and practical quantitation limits of .5-5 ug/l (ppb) for volatile organics, and 1 mg/l (ppm) for petroleum hydrocarbons must be achieved by the laboratory.

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determiantion; d) The method of analysis; e) Signature of chemist certifying results.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever is earlier.

ATTENTION CONTRACTOR

NOTIFICATION REQUIREMENTS

Pursuant to Los Angeles County Code, Section 11.78.045, and the Conditions and Limitations of the attached Hazardous Materials Underground Storage Closure Permit, you are required to complete **ALL** of the agency notifications indicated below within the time period specified prior to commencement of work on this closure.

[X] 72 HOURS - DEPARTMENT OF PUBLIC WORKS INDUSTRIAL WASTE ENGINEERING INSPECTOR:

>>Unless otherwise noted DPW inspectors are available at the following offices between 8:00 a.m. and 9:30 a.m. **ONLY**.<<

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION

CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the County of Los Angeles Department of Public Works, Waste Management Division, P.O. Box 1460, Alhambra, California 91802-1460, containing:

1. File number of facility and closure permit number.

2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.

3. Description of methods for obtaining, handling, and transporting samples.

4. Time and date samples were obtained.

5. Soil sampling certification (including but not limited to soils classification, boring logs, sample procedures, sample locations, initiating chain-of-custody, and groundwater location) for UST closure shall be certified by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils. The certification must clearly state that all work was performed under the supervision of the person signing.

6. Chain-of-custody documentation initiated by person obtaining sample through person at CAL/EPA Department of Toxic Substance Control certified laboratory.

7. Disposal destination of tanks and evidence of legal disposal.

8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction, and methods of analysis.

9. Documentation as to deptn of groundwater at facility.

10. Manifests to document hazardous waste disposal of any removed soil and tank rinseate.

11. Any observations of site contamination.

12. Remedial action plan to mitigate contamination.

13. Report to be signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.

Re: Request For Regional Water Quality Control Board (RWQCB) Written Determination Of Underground Storage Tank Closure Status.
Air Products And Chemicals, Inc., 23320 S. Alameda St., Carson, CA 90810

Dear Sir:

As mentioned in my 18 November 1994 letter, Air Products and Chemicals, Inc. (Air Products) would like to return a portion of the above referenced leased property to ARCO Products Company (ARCO). In order to do so, Air Products must address ARCO's environmental concerns related to Air Products past use of the property. One of ARCO's concerns is that Air Products lacks documentation of final approval from the Los Angeles Department Of Public Works (LADPW) for proper underground storage tank removal/closure for three tanks. Since LADPW is only willing to grant closure for the entire site and is unwilling to do so at this time due to an ongoing remediation project, Air Products is unable to provide ARCO with the requested LADPW final closure approval. In light of this, ARCO would like a written determination from the Regional Water Control Board regarding the status of the three underground tanks that were removed.

ARCO's Dean Kirk informed me that you would like a copy of the report I sent to John Lewis of your office before making your determination. This report describes the soil contamination discovered in our hydrogen purification area. This contamination is not related to the three tanks that were removed from the portion of property that we now wish to return. Given the character of the contamination and the surface spill extent, it also does not appear to be related to two additional underground tanks that were removed from our purification area. All indications lead us to a contamination source of a past, aboveground, hydrocarbon condensate tank. We are about to commission a soil vapor extraction system to remove these hydrocarbons from the purification area.

Please review the enclosed report and issue me a letter regarding the RWQCB determination of the closure status of tanks # LD-IGD-1, LD-IGD-2, and 28.5. Keep in mind that this report and the hydrogen purification area is unrelated to the subject area to be returned and its three removed underground tanks. If you would like to discuss this with me, please call me at (610) 481-8867. My contact at ARCO has been Dean Kirk (310) 816-8421 and my contact at the LADPW has been Mohammed Farzan (818) 458-3980.

I would greatly appreciate your speedy response to this request to:

Robert Swigart
Air Products And Chemicals, Inc.

7201 Hamilton Boulevard
Allentown, PA 18195-1501

AIR PRODUCTS MANUFACTURING CORP. - 23320 SOUTH ALAMEDA STREET, CARSON (FILE NO. 95-089)

We reference your letter of April 27, 1995, and supporting documents requesting closure of underground tank locations LD-IGD-1, LD-IGD-2, and 28.5 at the subject site. The depth to first ground water at the subject site is about 30 feet below ground surface (bgs) and the depth of the underlying Gage aquifer is about 75 feet bgs.

Following are our determinations from reviewing your submittal:

1. Petroleum hydrocarbon soil contamination was identified:

   a. In the underground tank locations LD-IGD-1 and LD-IGD-2. The soil contamination was below the screening levels established in the Interim Site Assessment and Cleanup Guidebook, February 1995;

   b. In the southeastern half of the site, near the former underground tank 28.5. After removal and remediation of the underground tank No. 28.91, about 410 cubic yards of soil with up to 9,590 mg/kg TPH contamination were disposed where the former underground tank 28.5 was located;

   c. In the northern half of the site at the southeastern edge of the former vessel repair shop (up to 11,900 mg/kg TRPH, 167 mg/kg TPH gasoline, 9,880 mg/kg TRPH diesel, and 5 µg/kg benzene);

   d. In the former specialty gas plant area (up to 71,500 mg/kg TRPH, 19 mg/kg benzene, and 450 mg/kg toluene); and

   e. Along the western property line (up to 35,400 mg/kg TRPH, 7,170 mg/kg TPH gasoline, 50,400 mg/kg TPH diesel, 17.4 mg/kg benzene, 10.9 mg/kg toluene, 9.68 mg/kg ethylbenzene, 24.1 mg/kg xylene).

2. Also, a report by IT Corporation, dated August 12, 1993, indicated that the CAM-WET analytical results for arsenic in

L 71969

sample C-6 was 22 mg/ℓ. This exceeds the STLC for arsenic of 5 mg/ℓ. The report indicates that the portion of the berm near sample C-6 was removed but did not report any confirmation samples.

Based upon the information submitted we have determined that no further action is required for the underground tank locations LD-IGD-1 and LDIGD-2. However, before sign-off of underground tank location 28.5, we require that confirmation samples be collected in the area where the 410 cubic yards of soil containing up to 9,590 mg/kg TRPH was disposed.

In addition, the following is required:

1. Remediate the petroleum-hydrocarbon soil contamination in the northern half of the site - specifically at the southeastern edge of the repair shop, in the Specialty Gas Plant area, and along the western property line.

2. Collect confirmation samples from the cinder block berm noted in determination 2, above, and analyze for arsenic.

Submit a work plan to this Regional Board by October 31, 1995, addressing the two requirements, above. Please call Keith Elliott at (213) 266-7614 if you have any questions.

J.E. ROSS, Unit Chief

7201 Hamilton Boulevard
Allentown, PA 18195-1501

AIR PRODUCTS MANUFACTURING CORP. - 23320 SOUTH ALAMEDA STREET, CARSON (FILE NO. 100.315)

We reference your letter of October 26, 1995, responding to our letter dated September 21, 1995, and requesting closure of the underground tank No. 28.5. Based upon the information provided, the following are our determinations:

1. Your letter indicates that soil sample S5 (ND for STLC arsenic), located underneath concrete sample C6, was collected and analyzed to confirm that the contamination identified in sample C6 (22 mg/kg for STLC arsenic) was removed. The confirmation sample requested in our September 21, 1995, letter is no longer required.

2. Total petroleum hydrocarbon (TPH) up to 210 mg/kg was identified in soil samples collected from underground tank No. 28.5. This contamination is below our screening levels for site remediation, therefore, no further action is required regarding this underground tank.

3. After removal and remediation of the underground tank No. 28.91, about 410 cubic yards of soil with up to 7,400 mg/kg TPH, possibly weathered crude oil, was disposed towards the eastern border of the property at an unknown location. The disposal location of this contaminated soil must be located before closure of underground tank No, 28.1, and final site closure may be granted.

4. We will place in abeyance the requirement for additional investigation and remediation of the facility pending completion of the current soil vapor extraction system remediation activities. However, prior to site closure, ARCO and Air Products must provide sufficient evidence showing that site activities have not contributed to the petroleum-hydrocarbon contaminants identified in site soils out-side the influence of the vapor extraction system.

In addition, your letter requested citing information regarding benzene and toluene soil contamination in the former specialty gas plant area. The report of the closure of the spent caustic tank, dated September 1, 1993, identified up to 91 mg/kg benzene, 450 mg/kg toluene, 320 mg/kg xylene, 57 mg/kg ethylbenzene, and 3,540 mg/kg TPH in site soils. However, we acknowledge that a soil vapor extraction system is present at the site to remediate these contaminants.

L77969

Submit a work plan to collect confirmation samples and perform the above required investigation 30 days prior to completion of the vapor extraction activities at the site. Please call Keith Elliott at (213) 266-7614 if you have any questions.

- LEONARD PROPERTY BOUNDARY

NOTES

1. LNAPL thickness measurements shown in feet.
2. Values shown represent the average LNAPL transmissivity acquired from pumping data .
3. LNAPL baildown test recovery in progress
4. Evaluation of alternative LNAPL remediation options currently underway.
5. LNAPL extent is based on current gauging data and supported with historic gauging data and LIF boring C urrent g ug ng data were collected during spring 2
6. Baildown tests can run for extended periods of time (e.g., days to years). This applies to transmissivity values obtained from recovery well data, baildown test data and vacuum truck data. Date ranges for transmissivity values represent the baildown start date to the latest data point for a given test.
7. LNAPL transmissivity values were calculated using the following methods: Bouwer and Rice (1976), Cooper-Jacob (1946), and Cooper, Bredehoeft and Papadopulos (1967). Transm w s y val es from confi ed aq fers were cal ul ted usi g a mod fi d Bouwer and Rice method. Transmissivity values shown represent an average of valid test results.
8. Oil water interface unable to be determined with multiple probes; bailer confirmed LNAPL presence.
9. Wellhead of ANP/501-D was modified with a solid PVC access port extending below potentiometric surface for the 2017 Biosparge Pilot Study. Measured LNAPL thickness is not representative.
10. Grayed wells are active recovery wells; included for reference only.
11. Water was not detected in AMR/304R-S, ASW/055-S, ASW/094-S and ASW/125-S, LNAPL thickness is relative to air/oil interface and measured well bottom.
12. Gauging data for wells AOS/218-D, AOS/219-D, AOS/220-D, AOS/221-D, AOS/222-D, AOS/2 -D, AOS/2 D, AOS/2 6 AOS/2 6, AOS/2 6 AOS/2 6 AOS/2 6 AOS/2 6 AOS/2 6 -6, AOS/2 6 AOS/2 9 6 AOS/2 D, AOS/5 D, AOS/5 D, AOS/5 2 D, AOS/544-D, AOS/545-D, AOS/556-D, AOS/557-D, AOS/559-D, AOS/565-D, AOS/566-D, AOS/573-D, MW-01, MW-02, MW-03, MW-04, WCS/A-MW01-D, WCS/A-MW01, WCS/A-MW02, WCS/A-MW03, WCS/A-MW04-D, WCS/B-MW01-D, WCS/B-MW02-D, LFMW-1R, LFMW-2, LFMW-3 and LFMW-4 were collected by Geosyntec for Watson Industrial Center Site, Carson, CA between April 5 and 10, 2021.
13. Gauging data for wells LPW/C-08R, LPW/C-11R, LPW/C-12, LPW/C-13, LPW/C-14, LPW/C-15, LPW/C-16, LPW/C-17R, LPW/C-18 and LPW/C-19R were collected by Arcadis for Chevron Site No 2 2 2 Carson, CA on June 2 2

Montrose & Del Amo Superfund Sites Site Update Fact Sheet

U.S. Environmental Protection Agency • Region 9 • San Francisco, CA • Fall 2019

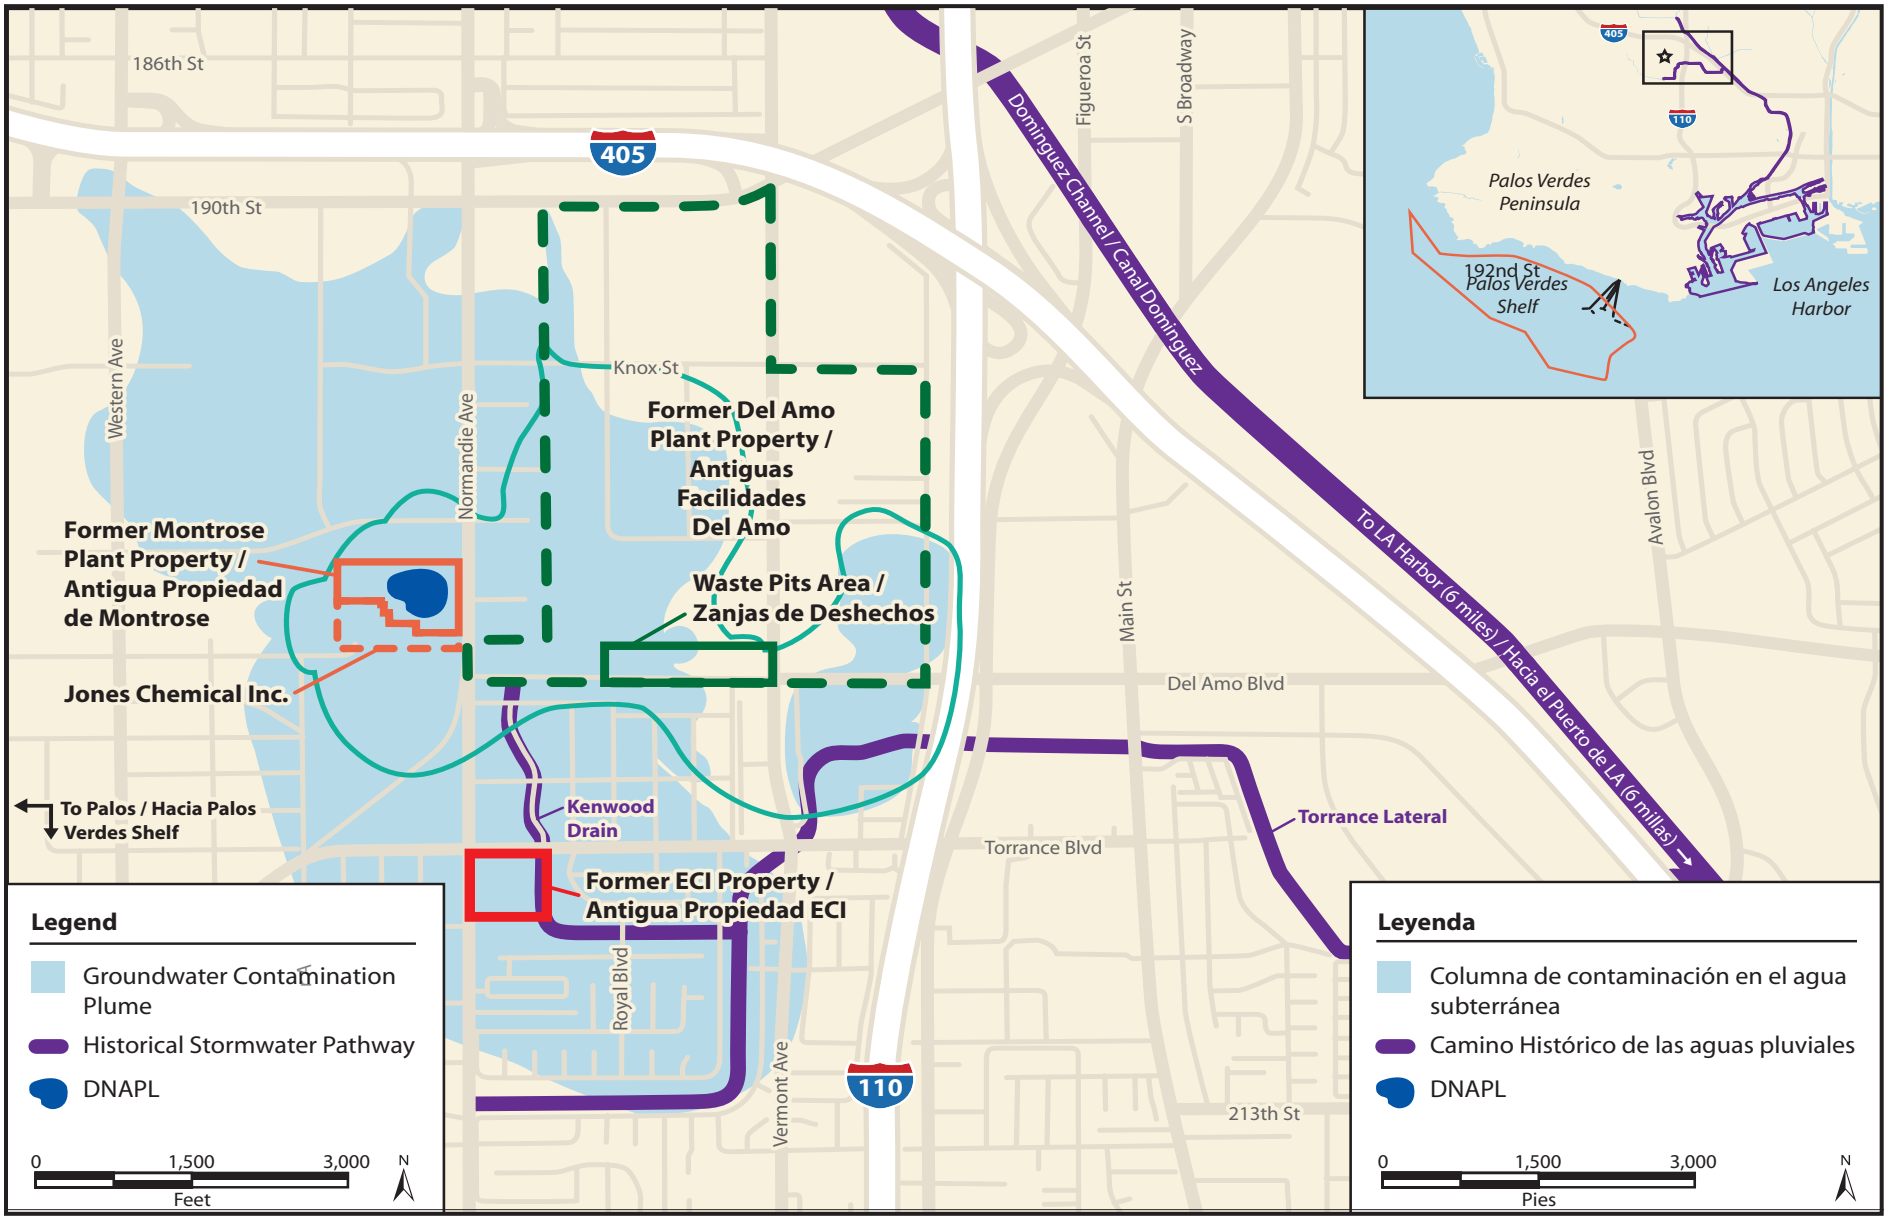
In This Issue

Montrose and Del Amo Superfund Site History 1
Del Amo Commercial Building Indoor Air Investigation 3
Soil Cleanup Work at the Del Amo Site 4
Five Year Review 4
Using Electrical Resistance Heating (ERH) Cleanup Study to Clean Up Dense Non-Aqueous Phase Liquid (DNAPL) at the Montrose Site 5
Cleaning Up Groundwater at the Montrose and Del Amo Sites 5
Soil Gas Investigation at the JCI Jones Portion of the Montrose Site 6
Community Involvement Plan Update 7

Montrose and Del Amo Superfund Site History

The Montrose Chemical Corporation Superfund site ("Montrose site") includes the location of a former dichloro-diphenyltrichloroethane (DDT) manufacturing plant. The plant made the chemical from 1947 to 1982. In 1989, EPA included the Montrose site as part of its Superfund cleanup program. DDT manufacturing work had severely contaminated (polluted) the soil and groundwater beneath and nearby the former plant property.

The Del Amo Superfund site ("Del Amo site") is made up of three former manufacturing plants built to support World War II efforts. The former Del Amo facility is east of the former Montrose plant property. In 2002, EPA included the Del Amo site as part of its Superfund cleanup program. The Del Amo site, like the Montrose site, also had contaminated soil and groundwater beneath and nearby the former facility. Groundwater contamination from both sites has mixed. As such, EPA is managing the cleanup of the groundwater contamination at both sites as one project.



What is a Superfund Site?

In 1980, Congress passed the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), commonly called the "Superfund law." This law was passed in response to public concern about health and environmental risks from hazardous waste sites. This law allows EPA to clean up certain hazardous waste sites and requires companies responsible for the contamination to pay for or do the cleanup. Other types of pollution are handled by other environmental laws.

This fact sheet gives the latest information on EPA's work to clean up both Superfund sites and opportunities for you to learn more about the cleanup and engage with EPA.

Site Map: Montrose and Del Amo Superfund Sites

Harbor Gateway, Los Angeles County, CA / Harbor Gateway, condado de Los Angeles, CA

Commercial Building Indoor Air Investigation at the Del Amo Site

Background

Vapor intrusion is the process where certain chemicals underground volatilize (evaporate) and move into the indoor air of overlying buildings. The chemicals can enter a building by moving through cracks and/or other openings in the building's foundation. (See Figure 1 for more information on vapor intrusion.) As a follow-up to the Del Amo site's 2015 Five-Year Review—a report done every five years to ensure EPA's cleanup plan continues to protect public health—EPA evaluated historic soil vapor data to see if vapor intrusion should be investigated. EPA found vapor intrusion investigations were needed at nine commercial buildings.

In September 2017 and March 2018, Shell Oil Company (Shell), under EPA oversight, sampled soil-gas, indoor and/or outdoor air at two buildings on the Del Amo site—the Coca-Cola building and the LSC Communications (formerly, RR Donnelly) building. (Sampling is done over multiple seasons to ensure results are accurate under all indoor conditions.)

The sampling showed there were no health risks from vapor intrusion at the Coca-Cola or LSC buildings.

The other responsible companies for cleaning up contamination at Del Amo site developed a sampling plan for nine additional buildings. Following EPA's approval, the companies sampled air beneath the buildings in October 2019. EPA is currently evaluating the results and a second sampling event is being scheduled.

Sampling will be scheduled for the additional buildings.

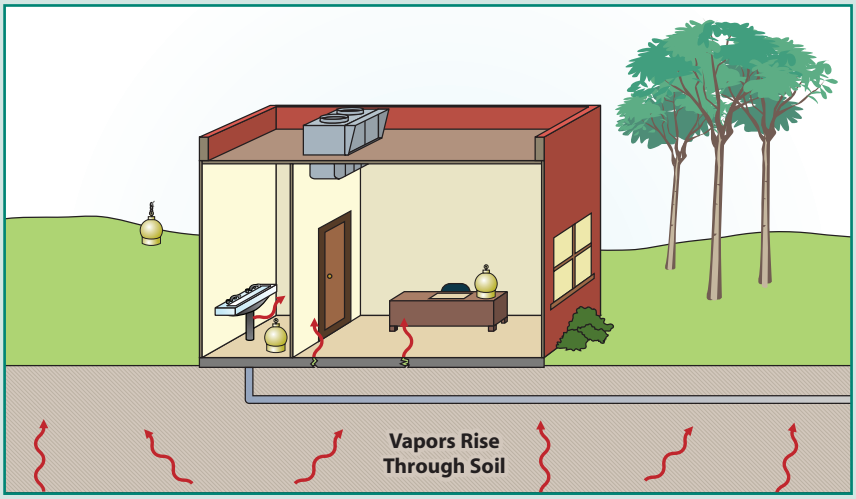


Figure 1: This figure shows how certain chemicals can volatilize (evaporate) and move into indoor air of overlying buildings through cracks and other openings in the building's foundation. The arrows show how these chemicals move into buildings above ground.

Figure 2: The location of the Coca-Cola and LSC Communications buildings.

Soil Cleanup Work at the Del Amo Site

In late 2018, Shell completed a soil cleanup pilot study at the Coca-Cola property, under EPA oversight. The goal of the pilot study was to see if a soil vapor extraction (SVE) system would effectively clean up the soil. This pilot study was important because its results would help EPA create a final cleanup plan for this portion of the site.

SVE works by heating up the chemicals underground. This heating causes the chemicals to volatilize (evaporate). The SVE system then captures all chemical vapors and treats them. Results from the pilot study showed an SVE system would effectively remove contaminants while protecting property workers and nearby residents.

EPA hosted the SVE pilot study community open house in September 2019.

EPA Remedial Project Manager, Tu Nguyen, speaking with community members at the September 2019 SVE meeting.

Five-Year Review

EPA is doing a Five-Year Review for cleanup work at the Montrose and Del Amo sites, respectively. According to the Superfund law, EPA is required to review its cleanup plan, or "remedy," every five years if either the cleanup takes more than five years to complete or if hazardous waste remains on site.

The last Five-Year Review for the Del Amo site, done in 2015, found there was insufficient information to say the soil and NAPL cleanup plans (or "remedies") were protective of human health and the environment. EPA could not say they were protective due to the potential for vapor intrusion at the Del Amo site. As described above, EPA has since done studies on vapor intrusion, which showed there are no health risks from vapor intrusion at the Coca-Cola or LSC buildings, and it has plans to study the remaining buildings. The last Five-Year Review also found the remedy at the "Waste Pits" portion of the Del Amo site was protective of human health and the environment.

The first Five-Year Review for the Montrose and Del Amo groundwater remedy, also done in 2015, found the remedy protected human health and the environment in the short-term. However, to ensure the remedy is protective for the long-term, the Five-Year Review identified numerous issues for EPA to evaluate.

What Is Included in a Five-Year Review?

Five-Year Reviews include:

- an inspection of the site and cleanup technologies;
- review of monitoring data, operating data, and maintenance records; and
- a check for any new relevant regulatory requirements (such as new state or local laws) that have been established since EPA made its original cleanup decision.

EPA Wants to Hear from You!

EPA is doing interviews with community members as part of the Five-Year Review. We want to hear your thoughts on the site cleanup and better understand your concerns and needs. All responses are confidential to EPA, and if you would like to be interviewed, please contact Yarissa Martinez, Remedial Project Manager, to share your thoughts on the groundwater remedy, or Tu Nguyen, Remedial Project Manager, to share your thoughts on the Del Amo remedy. (*Contact information at the end of this fact sheet.*)

A report on Five-Year Review will be completed no later than September 30, 2021. EPA will post a copy of the report on the sites' webpages.

Using Electrical Resistance Heating (ERH) to Clean Up Dense Non-Aqueous Phase Liquid (DNAPL) at the Montrose Site

Electric Resistance Heating pilot study system on the Former Montrose property.

The DNAPL Electrical Resistance Heating (ERH) pilot study—done by Montrose under EPA oversight—ran from January to April 2019. EPA reviewed and provided comments on the final report on the results of this study. Once final, the report will be posted to the sites' webpages in the next few months.

As mentioned, EPA will be working on a final cleanup plan (called a "Record of Decision" [ROD]) for the DNAPL, which is expected to be complete in Fall 2020.

Cleaning Up Groundwater at the Montrose and Del Amo Sites

Site-Wide Groundwater Sampling Event

On September 4, 2019, the sixth-annual dual-site groundwater sampling event was held at more than 500 wells in the area. On this day, the companies responsible for cleaning up groundwater contaminated by the Montrose and Del Amo Superfund sites measured groundwater levels and analyzed groundwater. Results from this sampling event are being analyzed. Once the analysis is complete, results will be included in a report that will be posted on the sites' webpages.

How does the ERH technology work?

The technology uses electricity through long metallic rods, called "electrodes," installed underground throughout the property. The rods heat the underground soil and vaporize the contaminants. The system collects the vapor through an underground network of vacuum wells and moves it to an above-ground treatment system. Air sampling instruments monitored air quality during the pilot study near the former Montrose property to ensure the system was working properly. No air quality issues were found during the pilot study.

What is Non-Aqueous Phase Liquid (NAPL) and Dense Non-Aqueous Phase Liquid (DNAPL)?

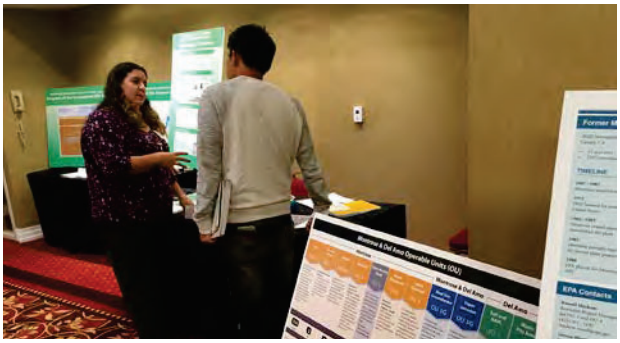
A mixture of concentrated chemicals that does not easily dissolve in water is called NAPL by scientists. In general, NAPL and water do not mix (i.e., like oil and water), making it difficult to remove NAPL. Sometimes, NAPL is made of chemicals heavier than water (and, therefore, would sink in water). This variety of NAPL is referred to as Dense Non-Aqueous Phase Liquid (DNAPL).

Ground Water Fact Sheet Update

The latest groundwater cleanup factsheet is posted on the homepage for both websites This factsheet includes a complete description of the treatment system, information on how we will continue treating groundwater.

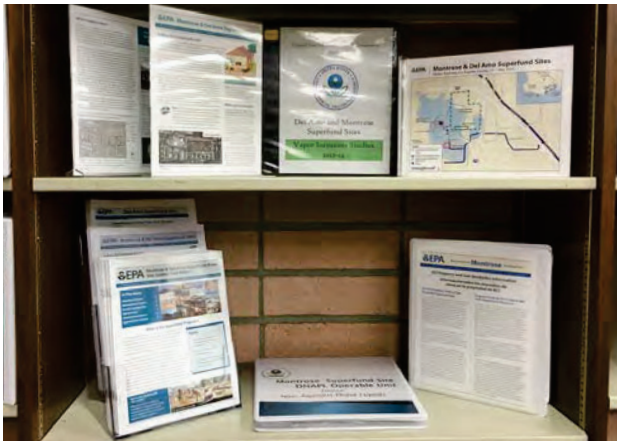
Soil Gas Investigation at the JCI Jones Portion of the Montrose Site

Under EPA oversight, Jones Chemical Company (Jones) developed a soil-gas monitoring plan to: (1) understand how VOCs are behaving underground; and (2) to see where the chemicals are traveling and at what concentrations. Work under the plan started in December 2018 and should be completed by Summer 2020, with a final report by Fall 2020. Preliminary data shows concentrations are not above EPA's screening levels and is moving to the west.



Onsite crew doing soil gas sampling.

Get Involved!



EPA commits to sending email updates on cleanup work every quarter to interested stakeholders. You can sign-up for the Del Amo & Montrose Superfund sites email distribution by clicking on the link in the *bottom-right corner of both websites.*

Community Involvement Plan

EPA representative speaks with community members at a public meeting.

Informational material on Sites at the Carson Public Library in Carson.

EPA is close to finishing its revision of the Montrose and Del Amo Community Involvement Plan (CIP). Because the Montrose and Del Amo Superfund sites impact the same community, EPA is preparing one CIP for community involvement and outreach. The CIP is a strategy unique to the sites and is intended to allow for meaningful community involvement throughout the Superfund cleanup process.

EPA plans to issue the final CIP online and in the local information repositories in early 2020.

INSTRUCTIONS

HAZARDOUS MATERIALS UNDERGROUND STORAGE PERMIT (HMUSP)
PERMIT APPLICATION SUPPLEMENT

DO NOT USE THIS FORM FOR CLOSURE, TRANSFER OR RENEWAL OF AN EXISTING HMUSP

(A) Facility name, mailing address and facility address on new permit applications must correspond with information on Part II of the State Permit Application (SPA) form. Please correct mailing label information if affixed for an existing facility.

(B) Use a separate application supplement for each permit activity. Check the new construction box only if there are no existing tanks and no previous HMUSP has been issued for this facility. Additional approval applications must be accompanied by a description of work and four (4) sets of plans and specifications as appropriate. Additional approval requests that change data previously supplied on Parts IV through VIII of the Hazardous Substance Storage Statement (HSSS) as filed with the California Water Resources Control Board or the SPA as filed with a County of Los Angeles HMUSP application shall include an updated SPA. The container number on the updated SPA must correspond with the previous number submitted.

(C) Assessor parcel identification is required for new permit applications at existing facilities and new construction (no existing HMUSP) applications only.

(D) The information required in Part D is the minimum necessary to allow issuance of a Provisional HMUSP. When a Provisional HMUSP has been issued for a facility, the owner will be required to submit for review and approval a facility plot plan, Leak Detection Program (LDP) and a Tank Monitoring Program (TMP) to be implemented in accordance with a timetable to be included within the Provisional HMUSP as conditions and limitations. New construction plans and specifications must show the location of and include details of all containers and monitoring devices proposed. A TMP must be approved and implemented prior to the issuance of a full term HMUSP.

(E) A HMUSP application fee must accompany all applications. The state surcharge is required for first time HMUSP applications (not required for additional approvals). Specify the number of tanks at the facility.

(F) Persons that have been notified to file for a HMUSP and do not store any hazardous materials underground should check the appropriate box and return this form to avoid any unnecessary follow-up mailings.

The storage of hazardous waste in an underground tank where the specific tank is named in a hazardous waste facility permit issued by the California Department of Health Services is not subject to the HMUSP requirements. Owners of such facilities must furnish the permit number for facilities where this exclusion is requested.

Final interceptors in industrial waste pretreatment systems, catch basins, refinery pipelines, lagoons, stormdrains, oil field gathering lines, well cellars, above ground storage tank spill containment, unlined pits or sumps, and piping not directly associated with a permitted facility are not subject to a HMUSP.

(G) Existing facility and new construction HMUSP application supplements and SPA's must be signed by:

1) A principal executive officer at the level of vice-president or by an authorized representitive. The representitive must be responsible for the overall operation of the facility where the tank(s) are located.
2) A general partner proprietor.
3) A principal executive officer, ranking elected official or authorized representitive of a public agency.

Additional approval application supplements may be signed by a person under contract to and authorized by the owner/operator of a facility.

Official Registration Form

California Water Resources Control Board

Hazardous Substance Storage Statement

Who Must File: Each person storing hazardous substances in any underground container must file this form no later than July 1, 1984 (After October 1, 1984 and no later than January 1, 1985 for tanks used on farms).

Definition of Underground Containers: The law applies to "concrete sumps, nonvaulted buried tanks or other underground containers." (Water Code section 13173) All containers, including earthen walled pits, ponds, lagoons and sumps, that are below the normal ground surface level must register. A tank sitting on the ground is not included. Containers partially beneath the surface are included. Lined or unlined pits, ponds and lagoons are covered if earth has been removed from the storage area to construct the facility. Normal grading is not considered construction below ground level.

Definition of Hazardous Substance: Any substance listed in Section 6382 of the Labor Code or in Section 25316 of the Health and Safety Code. This includes: gasoline, diesel fuel, all industrial solvents, pesticides, herbicides and fumigants. If the material must be carried by a registered hauler, disposed of at a hazardous waste site, is explosive, generates pressure due to heat or decomposition or would harm humans or wildlife you must register the tank. Wastes are included.

Fee: For each tank registered a $10 fee must be paid, except that retail gasoline stations pay $5 per tank.

Penalties: For failure to file, the penalty is $500-$5,000 per day. If you falsify information, you can be fined up to $20,000 for each day the information is incorrect and has not been corrected.

Confidentiality: If you have information protected by trade secret laws, please attach a list of the information on this form that is confidential and the justification for confidentiality, including specific citations of relevant statutory and case law.

Multiple Containers: Fill I and II on one form and leave it blank on all the remaining forms. Attach all forms together securely. If you own more than 50 tanks you can file information on computer tape. Call 916/324-1262 for information.

This is not a Permit Application. All Underground Tanks will be subject to local regulation. Some jurisdictions have already begun programs. Check with your local county government for further information.

NOTE: ALL UNDERGROUND CONTAINERS MUST REGISTER EVEN IF STATE AND/OR LOCAL PERMITS ARE IN FORCE.

Hazardous Substance Storage Statement

Who Must File: Each person storing hazardous substances in any underground container must file this form no later than July 1, 1984 (After October 1, 1984 and no later than January 1, 1985 for tanks used on farms).

Definition of Underground Containers: The law applies to "concrete sumps, nonvaulted buried tanks or other underground containers." (Water Code section 13173) All containers, including earthen walled pits, ponds, lagoons and sumps, that are below the normal ground surface level must register. A tank sitting on the ground is not included. Containers partially beneath the surface are included. Lined or unlined pits, ponds and lagoons are covered if earth has been removed from the storage area to construct the facility. Normal grading is not considered construction below ground level.

Definition of Hazardous Substance: Any substance listed in Section 6382 of the Labor Code or in Section 25316 of the Health and Safety Code. This includes: gasoline, diesel fuel, all industrial solvents, pesticides, herbicides and fumigants. If the material must be carried by a registered hauler, disposed of at a hazardous waste site, is explosive, generates pressure due to heat or decomposition or would harm humans or wildlife you must register the tank. Wastes are included.

Fee: For each tank registered a $10 fee must be paid, except that retail gasoline stations pay $5 per tank.

Penalties: For failure to file, the penalty is $500 - $5,000 per day. If you falsify information, you can be fined up to $20,000 for each day the information is incorrect and has not been corrected.

Confidentiality: If you have information protected by trade secret laws, please attach a list of the information on this form that is confidential and the justification for confidentiality, including specific citations of relevant statutory and case law.

Multiple Containers: Fill I and II on one form and leave it blank on all the remaining forms. Attach all forms together securely. If you own more than 50 tanks you can file information on computer tape. Call 916/324-1262 for information.

This is not a Permit Application. All Underground Tanks will be subject to local regulation. Some jurisdictions have already begun programs. Check with your local county government for further information.

NOTE: ALL UNDERGROUND CONTAINERS MUST REGISTER EVEN IF STATE AND/OR LOCAL PERMITS ARE IN FORCE.

Official Registration Form

California Water Resources Control Board

Hazardous Substance Storage Statement

Who Must File: Each person storing hazardous substances in any underground container must file this form no later than July 1, 1984 (After October 1, 1984 and no later than January 1, 1985 for tanks used on farms).

Definition of Underground Containers: The law applies to "concrete sumps, nonvaulted buried tanks or other underground containers." (Water Code section 13173) All containers, including earthen walled pits, ponds, lagoons and sumps, that are below the normal ground surface level must register. A tank sitting on the ground is not included. Containers partially beneath the surface are included. Lined or unlined pits, ponds and lagoons are covered if earth has been removed from the storage area to construct the facility. Normal grading is not considered construction below ground level.

Definition of Hazardous Substance: Any substance listed in Section 6382 of the Labor Code or in Section 25316 of the Health and Safety Code. This includes: gasoline, diesel fuel, all industrial solvents, pesticides, herbicides and fumigants. If the material must be carried by a registered hauler, disposed of at a hazardous waste site, is explosive, generates pressure due to heat or decomposition or would harm humans or wildlife you must register the tank. Wastes are included.

Fee: For each tank registered a $10 fee must be paid, except that retail gasoline stations pay $5 per tank.

Penalties: For failure to file, the penalty is $500-$5,000 per day. If you falsify information, you can be fined up to $20,000 for each day the information is incorrect and has not been corrected.

Confidentiality: If you have information protected by trade secret laws, please attach a list of the information on this form that is confidential and the justification for confidentiality, including specific citations of relevant statutory and case law.

Multiple Containers: Fill I and II on one form and leave it blank on all the remaining forms. Attach all forms together securely. If you own more than 50 tanks you can file information on computer tape. Call 916/324-1262 for information.

This is not a Permit Application. All Underground Tanks will be subject to local regulation. Some jurisdictions have already begun programs. Check with your local county government for further information.

NOTE: ALL UNDERGROUND CONTAINERS MUST REGISTER EVEN IF STATE AND/OR LOCAL PERMITS ARE IN FORCE.

RE: Air Products and Chemicals, Inc.
Long Beach, CA 90810

Dear Sir/Madam:

Enclosed are the registrations of underground storage tanks for the above referenced facility. We had anticipated removal of these tanks by now, since the plant operation have ceased, but tank removal has been delayed until this fall.

For this reason, we are registering these tanks for the iterim period until they are removed.

Please call Robert Swigart at (215) 481-8867 if you have any questions. Thank you for your cooperation with this matter.

Sincerely,

Air Products and Chemicals, Inc.

L. E. Whited
Production Manager

LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the Los Angeles County Department of Public Works, Waste Management Division, P.O. Box 4089, Los Angeles, CA 90051 containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets and north arrow.
3. Description of methods for obtaining, handling and transporting samples.
4. Time and date samples were obtained.
5. If borings were established, boring logs certified by a CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.
6. Chain-of-custody documentation initiated by person obtaining sample through person at State Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to document hazardous waste disposal of any removed soil.
11. Any observations of site contamination.
12. Remedial action plan to mitigate contamination.
13. Report to be signed by CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.

Signature Ronald S. [illegible] Date 7/28/87

CLOSURE PERMIT SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
2250 ALCAZAR STREET
LOS ANGELES, CALIFORNIA 90033

Closure Permit No. -3436 B
File No. I-5335-22

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application fo Closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1,2	2' TO 4' BELOW TANK INVERT	T.P.H	EPA 8015 OR 418.1
3,4	" "	"	" "
5,6	" "	"	EPA 8015
7,8	" "	"	EPA 418.1

3. All soil samples obtained shall be undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report.

4. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

5. The analysis results for all soil samples shall be expressed in milligrams per kilogram (mg/kg). Analysis results for groundwater samples shall be expressed in parts per billion (ppb).

6. Analysis results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) The method of analysis.

7. All soil/groundwater samples obtained shall be handled and transported to a laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever earlier.

Complies ✓

Not comply _____

Most western diesel tank (listed as 500 gallon, but 2000 gallon) excavation highly contaminated. Clean up may be difficult due to the tank being adjacent to permanently tacked down machinery & above ground tanks. Rumored that plant will be demolished soon. Other excavations look fairly clean. Sampling techniques good.

RE: 23320 S ALAMEDA ST <<<<<<<< FACILITY ADDRESS

TO STORE HAZARDOUS MATERIALS IN UNDERGROUND TANK(S) LOCATED AT THE FACILITY ABOVE.

NUMBER OF PERMITTED TANKS: 5

THIS PROVISIONAL PERMIT IS SUBJECT TO THE FOLLOWING REQUIREMENTS:

PART A — GENERAL CONDITIONS AND LIMITATIONS (ATTACHED).

PART B — AUTHORIZED HAZARDOUS MATERIAL STORAGE TANKS (ATTACHED).

PART C — SPECIFIC CONDITIONS AND LIMITATIONS:

1. THE PERMITTEE SHALL SUBMIT FOR APPROVAL AND IMPLEMENT A LEAK DETECTION PROGRAM (LDP) AND A TANK MONITORING PROGRAM (TMP) PREPARED IN ACCORDANCE WITH "UNDERGROUND STORAGE OF HAZARDOUS MATERIALS - GUIDELINES FOR EXISTING FACILITIES, OCTOBER 1986."

2. THE FOLLOWING TIME SCHEDULE SHALL APPLY TO SUBMITTALS REQUIRED BY THIS PROVISIONAL PERMIT:

   a. PERMIT FEE DUE BY (SEE INVOICE) To Be Billed

   b. TANK INTEGRITY TEST RESULTS DUE BY AUG 27 1987

   c. PROPOSALS FOR LDP AND TMP DUE BY AUG 27 1987

3. PERMIT EFFECTIVE DATE 5-5-86
   NOTE: THE EFFECTIVE DATE IS DETERMINED BY ORIGINAL DATE OF PERMIT APPLICATION.

PART D — SPECIAL CONDITIONS AND LIMITATIONS ATTACHED. YES [ ] NO [XX]

This Provisional Permit is valid only for the continued operation of tanks providing suitable storage and expires six (6) months from the date of issue. Permittee has until the expiration date to complete an approved LDP and to install and be in compliance with an approved TMP. Upon full compliance with the approved LDP and TMP and all other conditions and limitations, this Provisional Permit will be replaced by a full term Operational Permit for the remainder of the unexpired five (5) year term from the effective date unless otherwise noted in Part D above.

UNAUTHORIZED DISCHARGES

20. As soon as any person in charge of a facility or responsible for emergency response for a facility has knowledge of any confirmed or unconfirmed unauthorized discharge of a hazardous material, such person shall take all necessary steps to ensure the discovery, containment, and cleanup of such discharge and shall notify the DPW of the occurrence as required.

21. Any owner or operator who has knowledge of a confirmed unauthorized discharge shall immediately notify the DPW.

22. Within the jurisdiction of the Los Angeles County Fire Department, an unauthorized discharge shall also be reported to the Los Angeles County Forester and Fire Warden, Fire Prevention and Conservation Bureau.

23. The permittee shall institute and complete all actions necessary to remedy the effects of any unauthorized discharge, whether sudden or gradual, and supply information on such actions to the DPW.

24. The continued use of, and permit approval for, existing facilities is subject to review and modification or termination by the DPW whenever there has been any unauthorized discharge. In determining whether continued underground storage in such facility is suitable, the DPW shall consider the age of the facility, the methods of containment, the methods of monitoring, the feasibility of the required retrofit, the concentration of the hazardous materials contained, the severity of potential unauthorized discharge and the suitability of other long term preventive measures.

EVALUATIONS AND INSPECTIONS

25. Whenever the approval or satisfaction of the DPW may be required for a design, monitoring, testing or other technical submittal by a permittee, the DPW may require such permittee, at the permittee's sole cost and expense, to retain a suitable qualified independent engineer, chemist or other appropriate professional consultant acceptable to the DPW, for the purpose of evaluating and rendering a professional opinion respecting the adequacy of such submittal.

26. The DPW conduct inspections for the purpose of ascertaining compliance by the permittee and effecting corrections of any conditions which would constitute any violation of any statute, code, rule or regulation affecting the underground storage of hazardous materials.

27. Whenever necessary for the purpose of investigation or enforcement, or whenever a representative of the DPW, County Health Officer, or Forester and Fire Warden has reasonable cause to believe that there exists in any structure or upon any premises any condition which constitutes a violation, said representative may enter such structure or premises at all reasonable times to inspect the same, or to perform any duty imposed by law.

28. The permittee shall conduct regular inspections of the facility to assure compliance with this permit and shall maintain logs or file reports in accordance with this permit.

29. The DPW may require the periodic employment of special inspectors to conduct an audit or assessment of permittee's facility to make a hazardous material safety evaluation and to determine compliance.

30. Permittee shall, within 30 days of said evaluation, file with the DPW a plan to implement all recommendations, or shall demonstrate to the satisfaction of the DPW why such recommendations shall not be implemented.

31. The DPW may require that any regular or special inspection by the permittee be made in the presence of a representative of the DPW. The DPW may further require advance notice of not less than 72 hours as to the availability of equipment, material and personnel required to conduct such inspections.

SUSPENSIONS AND REVOCATIONS

32. This permit is subject to suspension or revocation if conditions exist which would justify denial of a permit or if permittee fails to correct unsatisfactory conditions.

33. Failure to adhere to all applicable conditions and limitations of this permit shall constitute a willful violation of Title 11, Division 4 of the Los Angeles County Code and may result in civil or criminal penalties, revocation of this permit, or both.

Dear Mr. Shadman:

HAZARDOUS MATERIALS UNDERGROUND STORAGE
SITE INVESTIGATION PROPOSAL AND/OR REMEDIAL ACTION PLAN
FACILITY AT: 23320 South Alameda Street

The site investigation proposal and/or remedial action plan submitted on September 3, 1987 for the above facility has been reviewed by this office and found adequate. You may proceed with the plan as proposed unless otherwise indicated below.

You are cautioned that any contaminated soils or hazardous materials generated during the approved operation must be manifested and transported to a hazardous waste disposal facility as required by California Health and Safety Code, Division 20, Chapter 6.5, unless evidence is presented indicating that the material may be disposed of at a less restricted facility. Copies of all completed manifests shall be submitted to this office as part of the final report.

[ ] A Hazardous Waste Facility Permit or a Variance from permit requirements must be obtained from the State Department of Health Services and copies submitted to this office before commencing the proposed remedial action.

[X] NOTE Requirements pertaining to closure permit 3036B have been satisfied. Upon completing the site assessment and any required remedial action, the closure will be final
A written report containing the required information must be submitted to this office by November 6, 1987.

If you have any questions concerning this matter, please contact Mr. Blair Burgess at (213) 226-4437.

Very truly yours,

Re: I-5385
Air Products Manufacturing Corporation
Carson, California Facility

Dear Mr. Burgess:

Per our earlier telephone conversation and my subsequent conversations with Mr. Ronald Illium, of International Technologies Corporation, we request approval to temporarily postpone the investigation and remedial action planned for tank number 28.91 at our South Alameda Street facility.

The hydrogen plant served by tank 28.91 is no longer in operation. Current plans call for the dismantlement of the facility. Because the area, in which tank 28.91 was located, is overlain by process equipment and structural concrete, it would be necessary to let a separate contract for partial demolition to properly complete the action plan. In addition an inactive, and previously emptied and cleaned, tank lies to the south of 28.91. It too is overlain extensively by equipment and concrete.

It is our hope to dismantle the entire facility, thereby allowing ready access to both tank areas. In this fashion we could then remove the inactive tank and perform a complete remediation to the 28.91 tank area. Accordingly, we are proceeding with the treatment of the previously excavated soils, and request approval to delay further investigation of the 28.91 area until 1 April 1989.

If you should have any questions or require additional information please contact me at (215) 481-5154.

Sincerely,

G P Thompson

Dear Mr. Thompson:

HAZARDOUS MATERIAL UNDERGROUND STORAGE PERMIT
REQUEST FOR TIME EXTENSION
PERMIT NO. 3293
FACILITY LOCATION: 23320 South Alameda Street

Your request for time extension to complete requirements under the subject Provisional Hazardous Materials Underground Storage Permit (HMUSP) is hereby granted as follows:

[ ] Provisional HMUSP expiration date is extended to _____.

[ ] Tank integrity test results due by _____.

[ ] LDP/TMP proposals due by _____.

[X] Other: Site investigation proposal due date extended to January 15, 1988. Immediate action is required due to reported depth to groundwater.

The time extension(s) above apply only to obligations due under your Provisional HMUSP and do not extend the HMUSP effective date or full term operational permit expiration date.

If you have any questions, please contact Mr. Blair Burgess at (213) 226-4437.

RE: Permit No. 3293
Air Products and Chemicals, Inc.
23320 South Alameda Street

Dear Mr. Burgess:

Per your 14 December 1987 letter and our 13 January 1987 telephone conversation, we are planning a two phased approach to the delineation and remediation of the soil contaimination, identified during the 4 August 1987 removal of the 2500 gallon diesel fuel tank.

Attached please find the Scope of Work, prepared by IT Corporation, to determine the depth of the existing contamination. Once we have determined if groundwater has been affected, we will prepare a proposal for determining the lateral extent of contamination along with remediation.

We plan to complete this first phase of work during the week of February 1, 1988.

If you should have any questions or require additional information, please contact me at (215) 481-5154.

Very truly yours,

Air Products and Chemicals, Inc.

GP Thompson

Gerard P. Thompson
Manager, Operations Environmental Engineering

GPT/tms

SCOPE OF WORK

Geophysical Underground Locator

Geophysical utility locating services will be used to delineate any utility conduits, subsurface piping, or other obstructions beneath proposed drilling locations.

Backfill Tank Excavation

Stockpiled soil from the tank excavation will be used as backfill. Prior to backfilling, any standing water will be pumped from the excavation. A sheet of Visqueen® plastic will be placed at the base. The fill material will be compacted in 1 to 2 foot lifts to provide a stable drilling platform.

Standing water will be sampled and analyzed for fuel hydrocarbons to determine appropriate disposition. The water will be removed with a vacuum truck and transported to an oil recycler, if necessary.

Drilling and Sample Collection

IT proposes to drill, log, and sample one soil boring (Boring B-1) within and three more (Borings B-2, B-3, and B-4) circumscribing the backfilled tank excavation of former Tank 28.91 (Refer to Figure 2 - Proposed Soil Boring Locations). The borings will be drilled using 10-inch outside diameter (O.D.), continuous-flight, hollow-stem augers. These borings will be advanced to the base of the soil contaminant plume or to first encounter of ground water, whichever is shallower. These borings will be used to determine the lateral and vertical extent of soil contamination and the presence or absence of near-surface ground water. Soil samples will be collected at 5 foot intervals during drilling for field observation and possible laboratory analysis. Headspace monitoring of soil cuttings using an HNu-model photoionization detector will corroborate further which samples will be submitted for chemical analysis.

Soil cuttings will be drummed on-site pending receipt of analytical results to determine appropriate disposal.

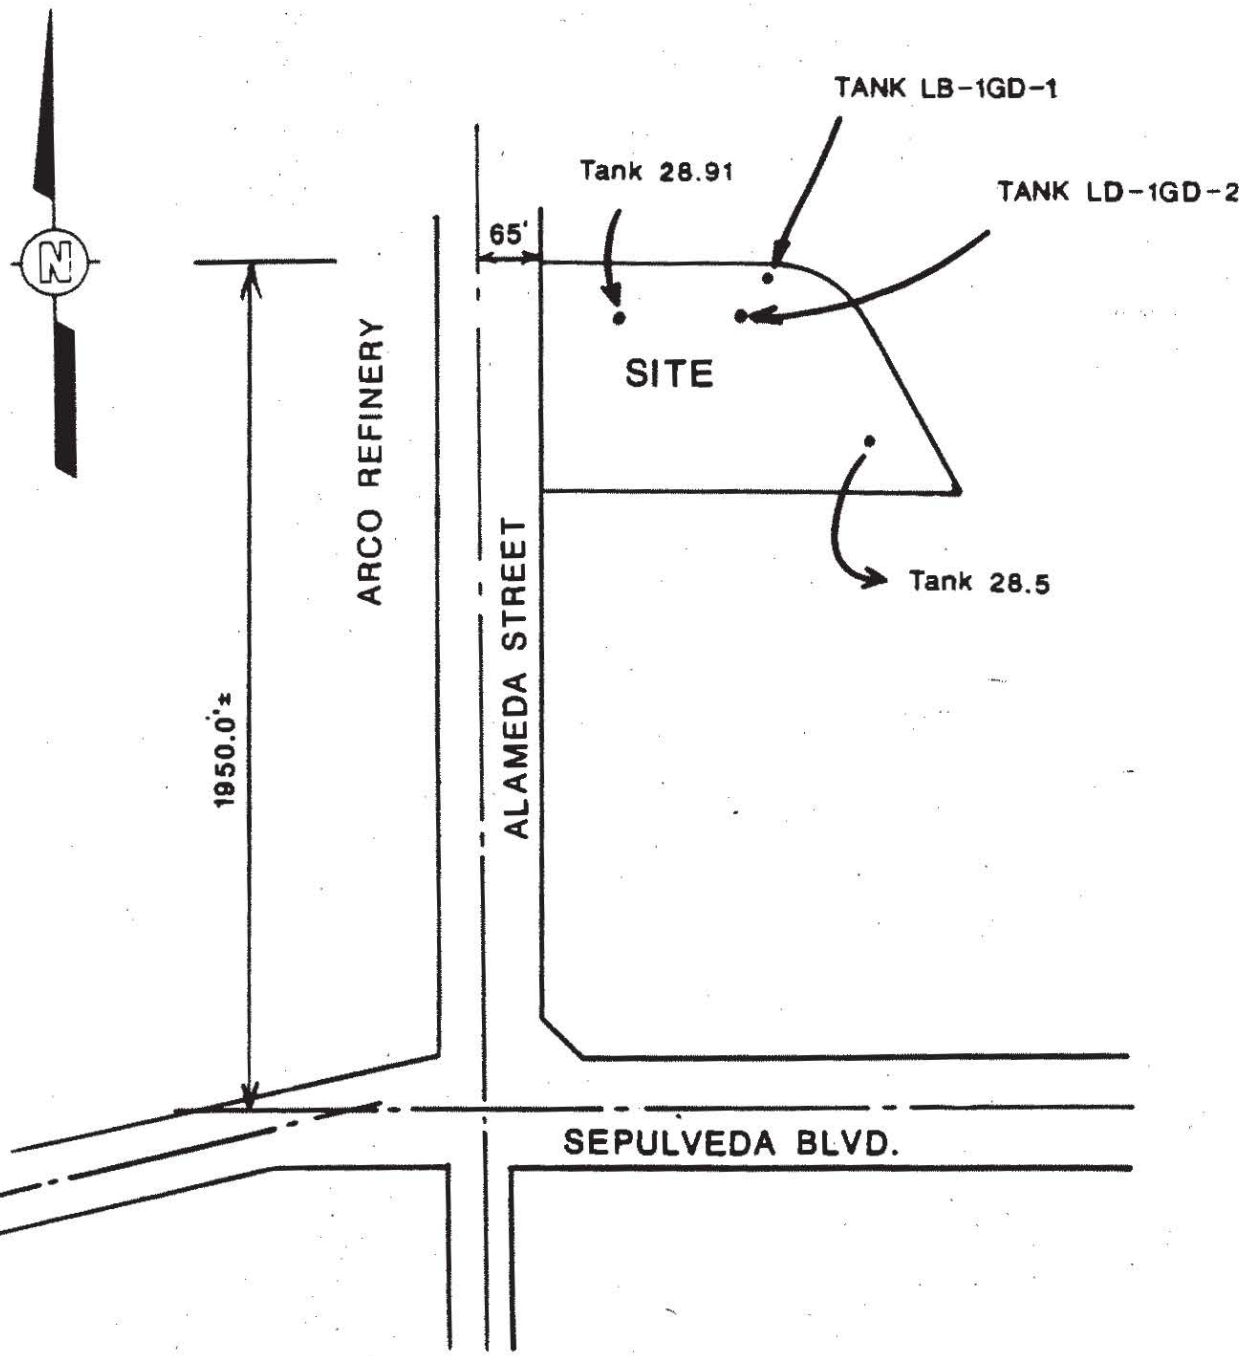
Drilling Without Sample Collection

One soil boring (Boring B-5) will be drilled to ground water in an area near but outside the soil contaminant plume. This boring will be drilled without sampling to a depth of 100 feet or to first encounter of ground water, whichever is shallower.

If ground water is encountered, a sample of aquifer material will be collected for grain size analysis to facilitate proper well installation. The boring will be terminated if a competent clay layer is encountered below the water table that is more than 5 feet thick. Care will be taken to preclude cross contamination of the uppermost aquifer. A sample of aquifer material will be collected for grain size analysis to facilitate proper well installation.

Laboratory Analyses

All analyses will be conducted by IT Analytical Services laboratory (ITAS) in Cerritos, California. Soil samples will be analyzed in accordance with the following U. S. EPA or U. S. EPA modified methods:



Total petroleum hydrocarbons modified (TPH) - EPA 418.1.
Flashpoint by Pensky-Martens closed cup tester - EPA 1010.
Total lead by direct aspiration, modified by California Department of Health Services (DOHS) - EPA 7420.
Benzene, toluene, xylene, and ethylbenzene (BTXE) - EPA 8020

We estimate that eight samples will be analyzed from the soil borings to determine analytically the degree of contamination and the depth at which diesel fuel contamination is no longer present. One surface water sample will be analyzed from the standing water in the tank excavation.

Report

Upon completion of the preliminary ground water site assessment and after receipt of analytical data, IT will prepare a detailed report documenting our field procedures, sample collection and preservation techniques, boring logs, analytical results, conclusions, and pertinent recommendations.

Dear Mr. Thompson

HAZARDOUS MATERIALS UNDERGROUND STORAGE
SITE INVESTIGATION PROPOSAL AND/OR REMEDIAL ACTION PLAN
FACILITY AT: 23320 S. ALAMEDA ST., CARSON

The site investigation proposal and/or remedial action plan submitted on January 20, 1988 for the above facility has been reviewed by this office and found adequate. You may proceed with the plan as proposed unless otherwise indicated below.

You are cautioned that any contaminated soils or hazardous materials generated during the approved operation must be manifested and transported to a hazardous waste disposal facility as required by California Health and Safety Code, Division 20, Chapter 6.5, unless evidence is presented indicating that the material may be disposed of at a less restricted facility. Copies of all completed manifests shall be submitted to this office as part of the final report.

[ ] A Hazardous Waste Facility Permit or a Variance from permit requirements must be obtained from the State Department of Health Services and copies submitted to this office before commencing the proposed remedial action.

[x] NOTE The water well must be constructed down gradient of the former tank location. Water samples must be analyzed for T.P.H. (EPA 8015) and BTX ,(EPA 602).
A written report containing the required information must be submitted to this office by May 20, 1988 .

If you have any questions concerning this matter, please contact Mr. Blair Burgess at (818) 458-3507 .

Very truly yours,

T. A. TIDEMANSON

Dear Mr. Swigart

HAZARDOUS MATERIALS UNDERGROUND STORAGE
SITE INVESTIGATION REPORT
FACILITY AT: *23320 S. ALAMEDA STREET, CARSON*

This office reviewed the site investigation report submitted for the above facility. The report is not approved because of the reasons checked below:

[ ] The exact extent of contamination has not been defined. _____

[x] The proposed remedial action is inadequate. *The recommendations as stated in the report from International Technology Corp. should be better adhered.*

[ ] There is significant contamination at this site. Pursuant to Section 25297(b) of the California Health and Safety Code, we are referring the matter to the State Regional Water Quality Control Board. For further information regarding the Board's requirements, please contact Mr. Joshua Workman at 107 S. Broadway, Room 4027, Los Angeles, CA 90012, (213) 620-5662. All future correspondence shall be directed to the Board with a copy sent to this office.

[x] Other *A groundwater sample must be obtained and analyzed for TPH (EPA 8015) and B.T.X.E. (EPA 602).*

Make the required corrections as indicated above and submit a revised report to this office by August 26,1988.

If you have any questions concerning this matter, please contact *Mr. Blair Burgess* at (818) 458-*3507*.

Very truly yours,

RECEIVED
JUL 2 0 1988
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION

Dear Blair:

As mentioned in my 19 April 1988 correspondence, Air Products will employ an environmental consulting firm for the diesel contaminated soil remediation at our above referenced facility. Our selection will be made from one of the three firms I mentioned in our 19 July phone conversation.

As you requested, we will excavate to the extent that Benzene levels approach zero and total petroleum hydrocarbon (TPH) levels reach 100 - 300 ppm. Direct observation through excavating and sampling will best allow us to determine the extent of the clean-up required and whether additional analyses are warranted. We will then bio-treat the contaminated soil on-site to achieve less than 100 ppm TPH. More detailed information concerning the plan for bio-treatment will be provided to you when our contractor formulates a treatment program. Prior to excavation a health and safety plan will be submitted to you for approval before work begins.

We will forward our selected contractor's remedial plan as soon as possible. We would like to begin excavating by 6 September 19BB. If you have any questions, please contact me at (215) 481-8867 or Gerard P. Thompson at (215) 481-5154.

Sincerely,

Air Products and Chemicals, Inc.

DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION

Dear Mr. Ortega:

Reference is made to your letter dated February 1, 1989, and work plan regarding the applicability of District Rule 1166 to your proposed "Solid-Phase Bioremediation of Contaminated Soil" at the Air Products Chemicals site located at 233020 S. Alameda Street in Carson, California.

Based on the information provided in your letter, only diesel fuel has contaminated the soil. According to District Rule 1166 (copy attached), if the initial boiling point of the organics in the soil is greater than 302 degrees Fahrenheit and the VOC readings above the soil are expected to be below 50 ppm, then the project is exempt from the Rule requirements under section (d)(1)(B). However, if VOC readings are detected above the soil during soil handling at 50 ppm or above, you should have verification from a laboratory that the organics in the soil have a boiling point above 302 degrees Fahrenheit in order to qualify for the exemption under section (d)(1)(B).

Furthermore, for your information, a permit is required by District Rule 201 (copy attached) for treatment of soil with any type of equipment which enhances volatilization (such as a vapor extraction system) and/or emits/controls emissions. The proposed bioremediation treatment method for treatment of soil contaminated with high boiling point organics which meets the exemption described above does not require a Permit to Construct and Operate. Please be advised however, that appropriate mitigation measures should be implemented during soil handling and bioremediation to prevent violations of District Rules 402 (Nuisance) and 403 (Fugitive Dust) (copies attached).

If you have any questions, please call Mrs. Stacey Ebiner at (818) 572-6318.

Very truly yours,

William J. Dennison

Dear Mr. Huff:

On Friday, February 24, 1989, I received notice from Ms. Stacy Ebiner of the South Coast Air Quality Management District (SCAQMD) informing me that the soil bioremediation project we proposed to execute at the Air Products Chemicals, Inc. plant, located at 233020 South Alameda Street, Carson, California, is exempt from the provisions of the SCAQMD Rule 1166.

We will mobilize equipment on March 8, 1989 and begin excavation operations on March 9, 1989. We will send your office a copy of the Baseline and Process Monitoring Report during the latter part of June, 1989 with the Clearance Data Report (Final Report) to follow in September, 1989.

Thank you,

Miguel A. Ortega

Re: Underground Storage Tank Update
Permit #3293
Air Products Manufacturing Corp.
23320 S. Alameda Street
Carson, CA

Dear Sir/Madam:

Enclosed please find the completed underground storage tank (UST) update forms for our above referenced facility. This plant was shutdown in March of 1986. Tank #28.70 was emptied and washed in July-August 1986 and has not been in use since. This tank had been used to store a 10% sodium hydroxide/90% water solution.

In August 1987 four other UST's were removed at this facility. The fifth tank #28.70 could not be removed because it is covered by a concrete equipment pad in a section of the plant where there are overhead pipe rack supports. This section would have to be demolished before tank #28.70 could be removed. We, therefore, would like to complete the requirements for permanent closure of this tank in place.

During investigations related to the removal of the other UST's, we were able to cut through the concrete pad near tank #28.70 and take a soil boring. This soil boring was analyzed for pH at 5 foot intervals down to 30 feet. The pH ranged from 7.6 to 8.3 standard units and would indicate that this caustic tank (10% NaOH/90% water) had never leaked. In addition an impervious concrete pad covers the tank, and the surrounding area, thus preventing any infiltration of surface water. The depth to groundwater at this site is 65 feet.

Given the above, please verify that this tank has met the requirements of permanent closure in place, or that it must still be filled with an inert material. If you have any questions, please call me at (215) 481-8867.

Sincerely,

Air Products and Chemicals, Inc.

Dear Underground Tank Owner/Operator:

FACILITY LOCATION: 23320 S ALAMEDA ST
PERMIT NUMBER: 00003293 NUMBER OF TANKS: 1

The recent enactment of Federal regulations for the control and monitoring of underground storage tanks (USTs) has made it necessary for local agencies and the State Water Resources Control Board to update information on file about the USTs at your facility and the ownership of these tanks. The State has developed the enclosed Form "A" (Site) and Form "B" (Tank) to record the required information.

The enclosed forms have been preprinted with information presently on file for the subject location. Please correct any erroneous data and complete the remaining information as described on the enclosed instructions. One Form "A" is required for each location where USTs exist and one Form "B" is required for EACH TANK at that location.

The completed forms must be submitted 30 days from date of this letter to:

DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
P.O. BOX 1460
ALHAMBRA, CA 91802-1460

This submittal is mandatory to maintain your UST permit

There is no fee required for this submittal. However, if there are USTs at this location that were not previously registered, you will be liable for additional permit and State surcharge fees. If some or all of the USTs shown for this location have been closed, so indicate on Form "B" and include the Closure Permit number on your submittal. Please note that USTs permitted for closure will remain on the record until ALL required post-closure information has been submitted and approved.

Your cooperation will greatly assist State and local compliance with UST regulations. Please contact the Waste Management Division, UST Unit, at (818) 458-3517 if you have any questions or need additional forms.

Very truly yours:

T. A. TIDEMANSON
Director of Public Works

INSTRUCTIONS:

HAZARDOUS MATERIALS UNDERGROUND STORAGE PERMIT (***HMUSP***)
APPLICATION SUPPLEMENT

DO NOT USE THIS FORM FOR CLOSURE OR TRANSFER OF AN EXISTING *HMUSP*, A NEW CONSTRUCTION PLAN CHECK, OR AN ADDITIONAL APPROVAL.

(A) Facility name, mailing address and facility address on new permit applications must correspond with information on Part I of the State Form **"A"**, Facility/Site Information. Please correct mailing label information if affixed.

(B) This application supplement is to be used for application to operate and maintain existing tanks located within the jurisdiction of the Department of Public Works. Facilities located within the corporate limits of the cities of Burbank, Glendale, Long Beach, Los Angeles, Pasadena, San Fernando, Santa Monica, Torrance and Vernon should contact the respective local agencies directly for permit information. Permit renewal is authorized only if no ownership change has occurred. Specify the number of tanks at the facility.

(C) Assessor parcel identification is required for new permit applications only.

(D) The applicant is responsible for completing ***all*** information requested on State Forms **"A"** and **"B"**. The Department of Public Works Underground Tank Inspector will not fill out these forms for you. This application is due by the date indicated. If you are unable to submit your ***LDP/TMP*** by the due date, a Provisional ***HMUSP*** will be issued granting up to 90 days to complete your submittal. Evidence of safe storage must be submitted with this application to qualify for a provisional ***HMUSP***.

(E) The total fees to accompany this application represent the ***HMUSP*** application fee, the first annual ***HMUSP*** maintenance fee plus the State surcharge. Future annual ***HMUSP maintenance fees*** will be payable upon billing by the Department of Public Works.

(F) Persons that have been notified to file for a ***HMUSP*** and do not store any hazardous materials underground should check the appropriate box and return this form to avoid any unnecessary follow-up mailings.

The storage of hazardous waste in an underground tank where the specific tank is named in hazardous waste facility permit issued by the California Department of Health Services is not subject to the ***HMUSP*** requirements. Owners of such facilities must furnish a copy of the State permit for facilities where this exclusion is requested.

<u>Final</u> interceptors in industrial waste pretreatment systems, catch basins, refinery pipelines, lagoons, storm drains, oil field gathering lines, well cellars, above ground storage tank spill containment, unlined pits or sumps, and piping not directly associated with a permitted facility are not subject to a ***HMUSP***. *Claims for exemption are subject to verification.*

(G) This ***HMUSP*** application supplement and each State **"A"** or **"B"** must be signed by:

1) A principal executive officer at the level of vice-president or by an authorized representative. The representative must be responsible for the overall operation of the facility where the tank(s) are located.
2) A general partner proprietor.
3) A principal executive officer, ranking elected official or authorized representative of a public agency.

FORM 'A':
SITE

UNDERGROUND STORAGE TANK PROGRAM
FACILITY/SITE, INFORMATION

INSTRUCTIONS FOR COMPLETING THIS FORM

GENERAL INSTRUCTIONS:

1. One FORM "A" shall be completed for all **NEW PERMITS, PERMIT CHANGES** or any **FACILITY/SITE INFORMATION CHANGES.**
2. **SUBMIT ONLY ONE (1) FORM "A"** for a Facility/Site, regardless of the number of tanks located at the site.
3. This form should be completed by either the **PERMIT APPLICANT.**
4. Please type or print clearly all requested information.
5. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.

I. FACILITY/SITE INFORMATION & ADDRESS - (MUST BE COMPLETED)

1. Record name and address (physical location) of the underground tank(s).
   NOTE: Address MUST have a valid physical location including city, state, and zip code.
   P.O. BOX NUMBERS ARE NOT ACCEPTABLE.
   Include nearest cross street and care of address information if appropriate.
2. Check the appropriate box for TYPE OF BUSINESS.
3. Check the appropriate box for TYPE OF BUSINESS OWNERSHIP.(ex. CORPORATION, INDIVIDUAL, etc.)
4. If Facility/Site is located on land within an indian reservation or other indian trust lands, check the box marked "YES".
5. Phone number must have an area code. If the night number is the same, write "SAME" in proper location.
6. Record the E.P.A. ID # or write "NONE" in the space provided.
7. Indicate the NUMBER of TANKS at this SITE.

II. PROPERTY OWNER INFORMATION & ADDRESS - (MUST BE COMPLETED)

1. Complete all items in this section, unless all items are the same as SECTION 1; If the same, write **"SAME AS SITE"** across this section. Be sure to check PROPERTY OWNERSHIP TYPE box.

III. TANK OWNER INFORMATION & ADDRESS - (MUST BE COMPLETED)

1. Complete all items in this section, unless all items are the same as SECTION I; If the same, write **"SAME AS SITE"** across this section. Be sure to check TANK OWNERSHIP TYPE box.

IV. LEGAL NOTIFICATION AND BILLING ADDRESS

1. Check **ONE BOX** for the address that will be used for **BOTH LEGAL and BILLING NOTIFICATIONS.**

Applicant must sign and date form as indicated.

IT IS THE RESPONSIBLITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY/SITE TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS:

FORM 'B':
TANK

UNDERGROUND STORAGE TANK PROGRAM
TANK INFORMATION

INSTRUCTIONS FOR COMPLETING THIS FORM

GENERAL INSTRUCTIONS:

1. One FORM "B" shall be completed for each tank for all **NEW PERMITS, PERMIT CHANGES, TANK CLOSURES, TANK REMOVALS,** and/or any other **TANK INFORMATION CHANGE.**
2. This form should be completed by either the **PERMIT APPLICANT**
3. Please type or print clearly all requested information.
4. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.
2. Indicate the Facility/Site name where the tank is installed.
3. Is this tank a farm tank? Check 'YES' or 'NO'. A farm tank is a tank located on an agricultural farm which stores motor vehicle fuel used to propel farm vehicles.

I. TANK DESCRIPTION — COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

A. Indicate owners tank ID # - If there is a tank number that is used by the owner to identify the tank.(ex. AB70789)
B. Indicate the name of the company that manufactured the tank. (ex. ACME TANK MFG.)
C. Indicate the year tank was installed. (ex. 1987)
D. Indicate the tank capacity in gallons. (ex. 25,000 or 10,000, etc.)

II TANK CONTENTS

A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
   2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
B. Check the appropriate box.
C. Check the type of MOTOR VEHICLE FUEL. (if box 1 is checked in A)
D. Print the chemical name of the hazardous substance stored in the tank and the C.A.S. #. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION — MARK ONE ITEM ONLY IN BOX A, B, C & D

1. Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
2. If OTHER, print in the space provided.

IV. PIPING INFORMATION

1. Circle **A** if above ground, or **U** if underground; circle both if applicable.
2. If UNKNOWN, circle or if OTHER, print in space provided.

V. LEAK DETECTION SYSTEM

1. Circle **P** for PRIMARY, or **S** for SECONDARY. A primary and/or secondary leak detection system **MUST** be circled.
2. If UNKNOWN, specify or if OTHER, print in space provided.
3. If there is no SECONDARY LEAK DETECTION SYSTEM, circle NONE.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

1. ESTIMATED DATE LAST USED - MONTH/YEAR (January, 1988 or 01/88).
2. ESTIMATED QUANTITY of SUBSTANCE remaining in tank. (in Gallons)
3. WAS TANK FILLED WITH INERT MATERIAL? Check 'YES' or 'NO'.

Applicant must sign and date form as indicated.

IT IS THE RESPONSIBLITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY/SITE TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS:

CLOSURE PERMIT SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

Closure Permit No.: 41613B
File No. I- 5385-22

PART 1 OF 2

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2-4FT BELOW	TPH, BTXE	418.1, 8020
	TANK INVERT	PH, Na	Appropriate EPA Meth
20FT INTERVAL ALONG PRODUCT PIPING	"	"	418.1, 8020

dn4/FPERMIT Rev. 3/90

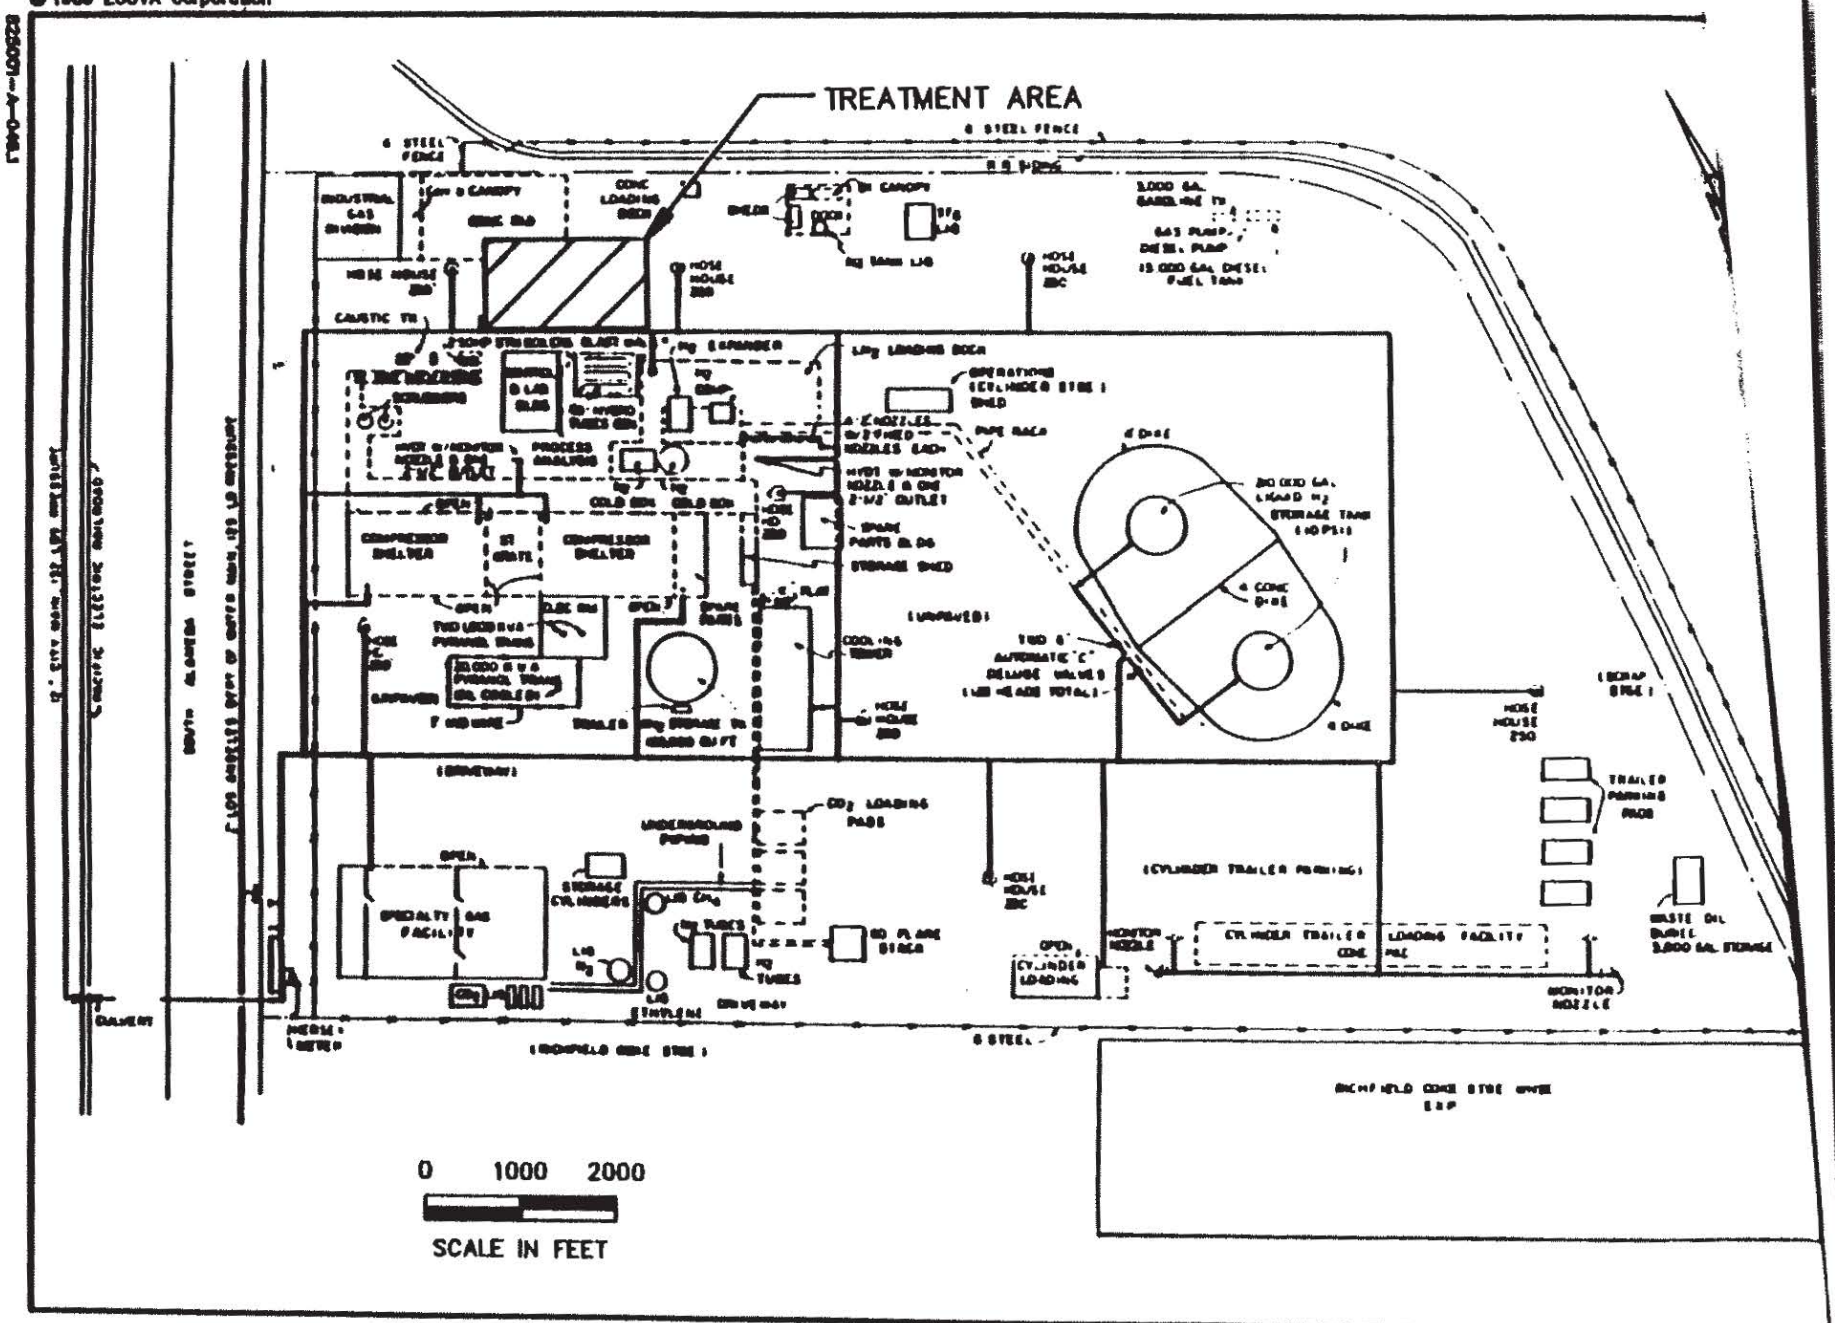
Cont'd on Page 2

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report.

4. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

5. The analytical results for all soil samples shall be expressed milligrams per kilogram (mg/kg), or micrograms per kilogram (ug/kg) as appropriate. Practical quantitation limits of 5-10 ug/kg (ppb) for volatile organics and 1 mg/kg (ppm) for the petroleum hydrocarbons must be achieved by the laboratory. Analytical results for groundwater samples shall be expressed in ug/l (ppb) and practical quantitation limits of .5-5 ug/l (ppb) for volatile organics, and 1 mg/l (ppm) for petroleum hydrocarbons must be achieved by the laboratory.

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determiantion; d) The method of analysis; e) Signature of chemist certifying results.



7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever is earlier.

4907 ;

© 1989 ECOVA Corporation

CLOSURE -- UNDERGROUND STORAGE TANKS

CONDITIONS A -- GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer - Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3) business day advance notification.

   b. Permanent closure of a tank in place or a temporary closure shall require a 30 day written notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74-81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies include the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.

   b. The personnel shall be sufficiently skilled to safely carry out such operation.

   c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.

   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B -- TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, "Abandonment or Removal of Underground Tanks," Part A and any other applicable Parts.

2. A temporary closure shall not exceed 90 days.

CONDITIONS C -- PERMANENT TANK(S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Part D and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tanks shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be backfilled and recompacted to a relative compaction of 90%.

CONDITIONS D -- PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Parts B or C, and any other applicable Parts.

2. Owners/operators shall demonstrate part site integrity as follows:

   a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test borings may be drilled vertically and the reason stated in the report in 2.h. below.

   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.

   c. For multiple tanks, as a minimum, borings shall be placed at 20 foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks seperated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.

   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.

   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.

   f. Soil samples shall be capped immediately with teflon or aluminum.

   g. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.

   h. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials -- Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

NOTICE TO CLOSURE PERMIT APPLICANTS

The South Coast Air Quality Management District (SCAQMD) has adopted Rule 1166 regulating emissions of Volatile Organic Compounds (VOC) from decontamination of soil effective August 6, 1988.

In addition to the requirements of your Closure Permit, persons excavating any underground storage tank that previously contained VOC's must:

- Notify the SCAQMD Executive Officer by telephone at (714) 396-2000 24 hours prior to tank excavation. 1166(c)(1)(A)
- Monitor the excavated material during the excavation for VOC contamination. 1166(c)(1)(B)
- When VOC contamination is detected:
  * Cease excavation
  * Cover the contaminated soil until implementation of approved mitigation measures. 1166(c)(1)(C)
  * Notify the SCAQMD Executive Officer at (714) 396-2000 within 24 hours of detection of VOC contaminated soil. 1166(c)(2)(A)
- A person shall not engage in or allow any on-site or off-site spreading of VOC contaminated soil which results in uncontrolled evaporation of VOC to the atmosphere. 1166(c)(3)

Exemptions

- Treatment of less than one (1) cubic yard of contaminated soil. 1166(d)(1)(A)
- Decontamination of soil containing organic compounds that have initial boiling point of 302°F or greater, Reid Vapor Pressure less than 80mm Hg or Absolute Vapor Pressure less than 36mm Hg at 20°C. 1166(d)(1)(B),(F)
- Removal of soil for sampling purposes pursuant to EPA methods. 1166(d)(1)(C)
- Accidental spillage of five (5) gallons or less of VOC. 1166(d)(1)(D)
- Documentation of soil which is contaminated through natural seepage of VOC from oil and gas wells or other natural sources. 1166(d)(1)(E)

SPECIFIC QUESTIONS ON RULE 1166 SHOULD BE REFERRED TO THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (714) 396-2000

UST1/NOTCLOSE

LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the Los Angeles County Department of Public Works, Waste Management Division, P.O. Box 1460, Alhambra, CA 91802-1460, containing:

1. File number of facility and closure permit number.

2 Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets and north arrow.

3. Description of methods for obtaining, handling, and transporting samples.

4. Time and date samples were obtained.

5. If borings were established, boring logs certified by a CA Registered Geologist, CA Certified Engineering Geologist, or CA Registered Civil Engineer with sufficient experience in soils.

6. Chain-of-custody documentation initiated by person obtaining sample through person at State Department of Health Services certified laboratory.

7. Disposal destination of tanks and evidence of legal disposal.

8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction and methods of analysis.

9. Documentation as to depth of groundwater at facility.

10. Manifests to document hazardous waste disposal of any removed soil and tank rinsate.

11. Any observations of site contamination.

12. Remedial action plan to mitigate contamination.

13. Report to be signed by CA Registered Geologist, CA Certified Engineering Geologist, or CA Registered Civil Engineer with sufficient experience in soils.

Signature T. Monie Date 10/19/92

Re: Written Report Follow-up to 30 October 1992 Verbal Spill Notification
Air Products Manufacturing Corp., 23320 S. Alameda St, Long Beach, CA 90810

Dear Sir:

This letter serves to document the verbal spill notification made in regards to our above referenced facility. As you may recall, Air Products was conducting some demolition activities when we encountered some soil contaminated with fuel. We assumed the source was related to an underground diesel tank that we removed and remediated about four years ago. In addition to yourself, I notified the California Office of Emergency Services (Report # 30300) and the Regional Water Quality Control Board (RWQCB).

On 29 October 1992, at 1:00 P.M., during the demolition of a truck-weighing scale pit at our 23320 S. Alameda Street facility, some fuel contaminated soil was encountered. The following day I reported the contaminated soil. An analysis of the soil shows 3516 ppm gasoline and 779 ppm diesel. The quantity of the contamination is unknown. The source of the contamination may have been from the underground diesel tank that was removed adjacent to the scale or due to a possible past surface spill. We are currently making arrangements with an environmental contractor to investigate and remediate or remove and dispose the contaminated soil.

Investigation and remediation reports will be forwarded to you and to the RWQCB unless you would prefer otherwise. If you have any questions, please call me at (215) 481-8867.

Sincerely,

Air Products and Chemicals, Inc

Re: Gasoline/Diesel Contaminated Soil Update
Air Products Manufact. Corp., 23320 S. Alameda St, Long Beach, Ca 90810

Dear Sir:

As you may recall, Air Products was conducting some demolition activities when we encountered some soil contaminated with gasoline and diesel. We assumed the source was related to an underground diesel tank that we removed and remediated about four years ago. As we investigate, we are beginning to put some pieces of the puzzle together that lead us to believe the contamination may be located over a larger area than we suspected and from a different source.

The above referenced facility is an industrial gas manufacturing plant where Air Products received a pipeline gas, from the petroleum cracking operation at the ARCO refinery across the street, and manufactured pure hydrogen. We have leased this property from ARCO since building our plant in 1962. We decommissioned the plant in 1986 and are currently demolishing sections of the facility so that we may return the land to ARCO.

The truck weighing scale, where the contamination was discovered, is adjacent to a section of our plant that we refer to as the purification or pretreatment area. This is were our demolition activities are currently being directed. Within this area is an underground spent caustic solution tank that we are going to remove. In preparation for this tank removal, we broke through the concrete pad, that covers most of this area, and discovered some similar gasoline/diesel contaminated soil. This would indicate that the contamination covers a larger area than just around the truck scale.

Within our purification/pretreatment area there are two aboveground storage tanks that contained hydrocarbon liquids. One tank is a 6000 gallon diesel tank and the other is a 6000 gallon hydrocarbon condensate tank. This hydrocarbon condensate was very similar to gasoline and contained benzene, toluene, ethylbenzene, and xylene. Given the location of the contaminated soil in relation to these aboveground storage tanks, the similarity of the contamination to the substances stored in these tanks, and the fact that the contamination is located near the ground surface, we now believe that possible surface spills related to

11. 12. 92 03:33 PM *PSG MATL. S. MGMT. P02

these tanks may be the source of this soil contamination. We are now directing our attention to the area beneath these tanks.

We are currently using Cleveland Environmental Services, Inc. to conduct our investigation. We continue to demolish aboveground structures in this area as it will facilitate further investigation and remediation.

If you have any questions regarding our activities, please call me at (215) 481-8867.

Sincerely,

Air Products and Chemicals, Inc

CLOSURE -- UNDERGROUND STORAGE TANKS

CONDITIONS A -- GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer - Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3) business day advance notification.

   b. Permanent closure of a tank in place or a temporary closure shall require a 30 day written notification.

3. Consult current fee schedule for costs.

4. All abandonad wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74-81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies include the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.

   b. The personnal shall be sufficiently skilled to safely carry out such operation.

   c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.

   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B -- TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, "Abandonment or Removal of Underground Tanks," Part A and any other applicable Parts.

2. A temporary closure shall not exceed 90 days.

CONDITIONS C -- PERMANENT TANK(S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Part D and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removad tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tanks shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be backfilled and recompacted to a relative compaction of 90%.

CONDITIONS D -- PERMANENT

1. All parmanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Parts B or C, and any other applicable Parts.

2. Owners/operators shall demonstrate part site integrity as follows:

   a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test borings may be drilled vertically and the reason stated in the report in 2.h. below.

   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.

   c. For multiple tanks, as a minimum, borings shall be placed at 20 foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.

   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.

   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.

   f. Soil samples shall be capped immediately with teflon or aluminum.

   g. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.

   h. A report containing the results of the above analysis shall be submittad to the County Engineer.

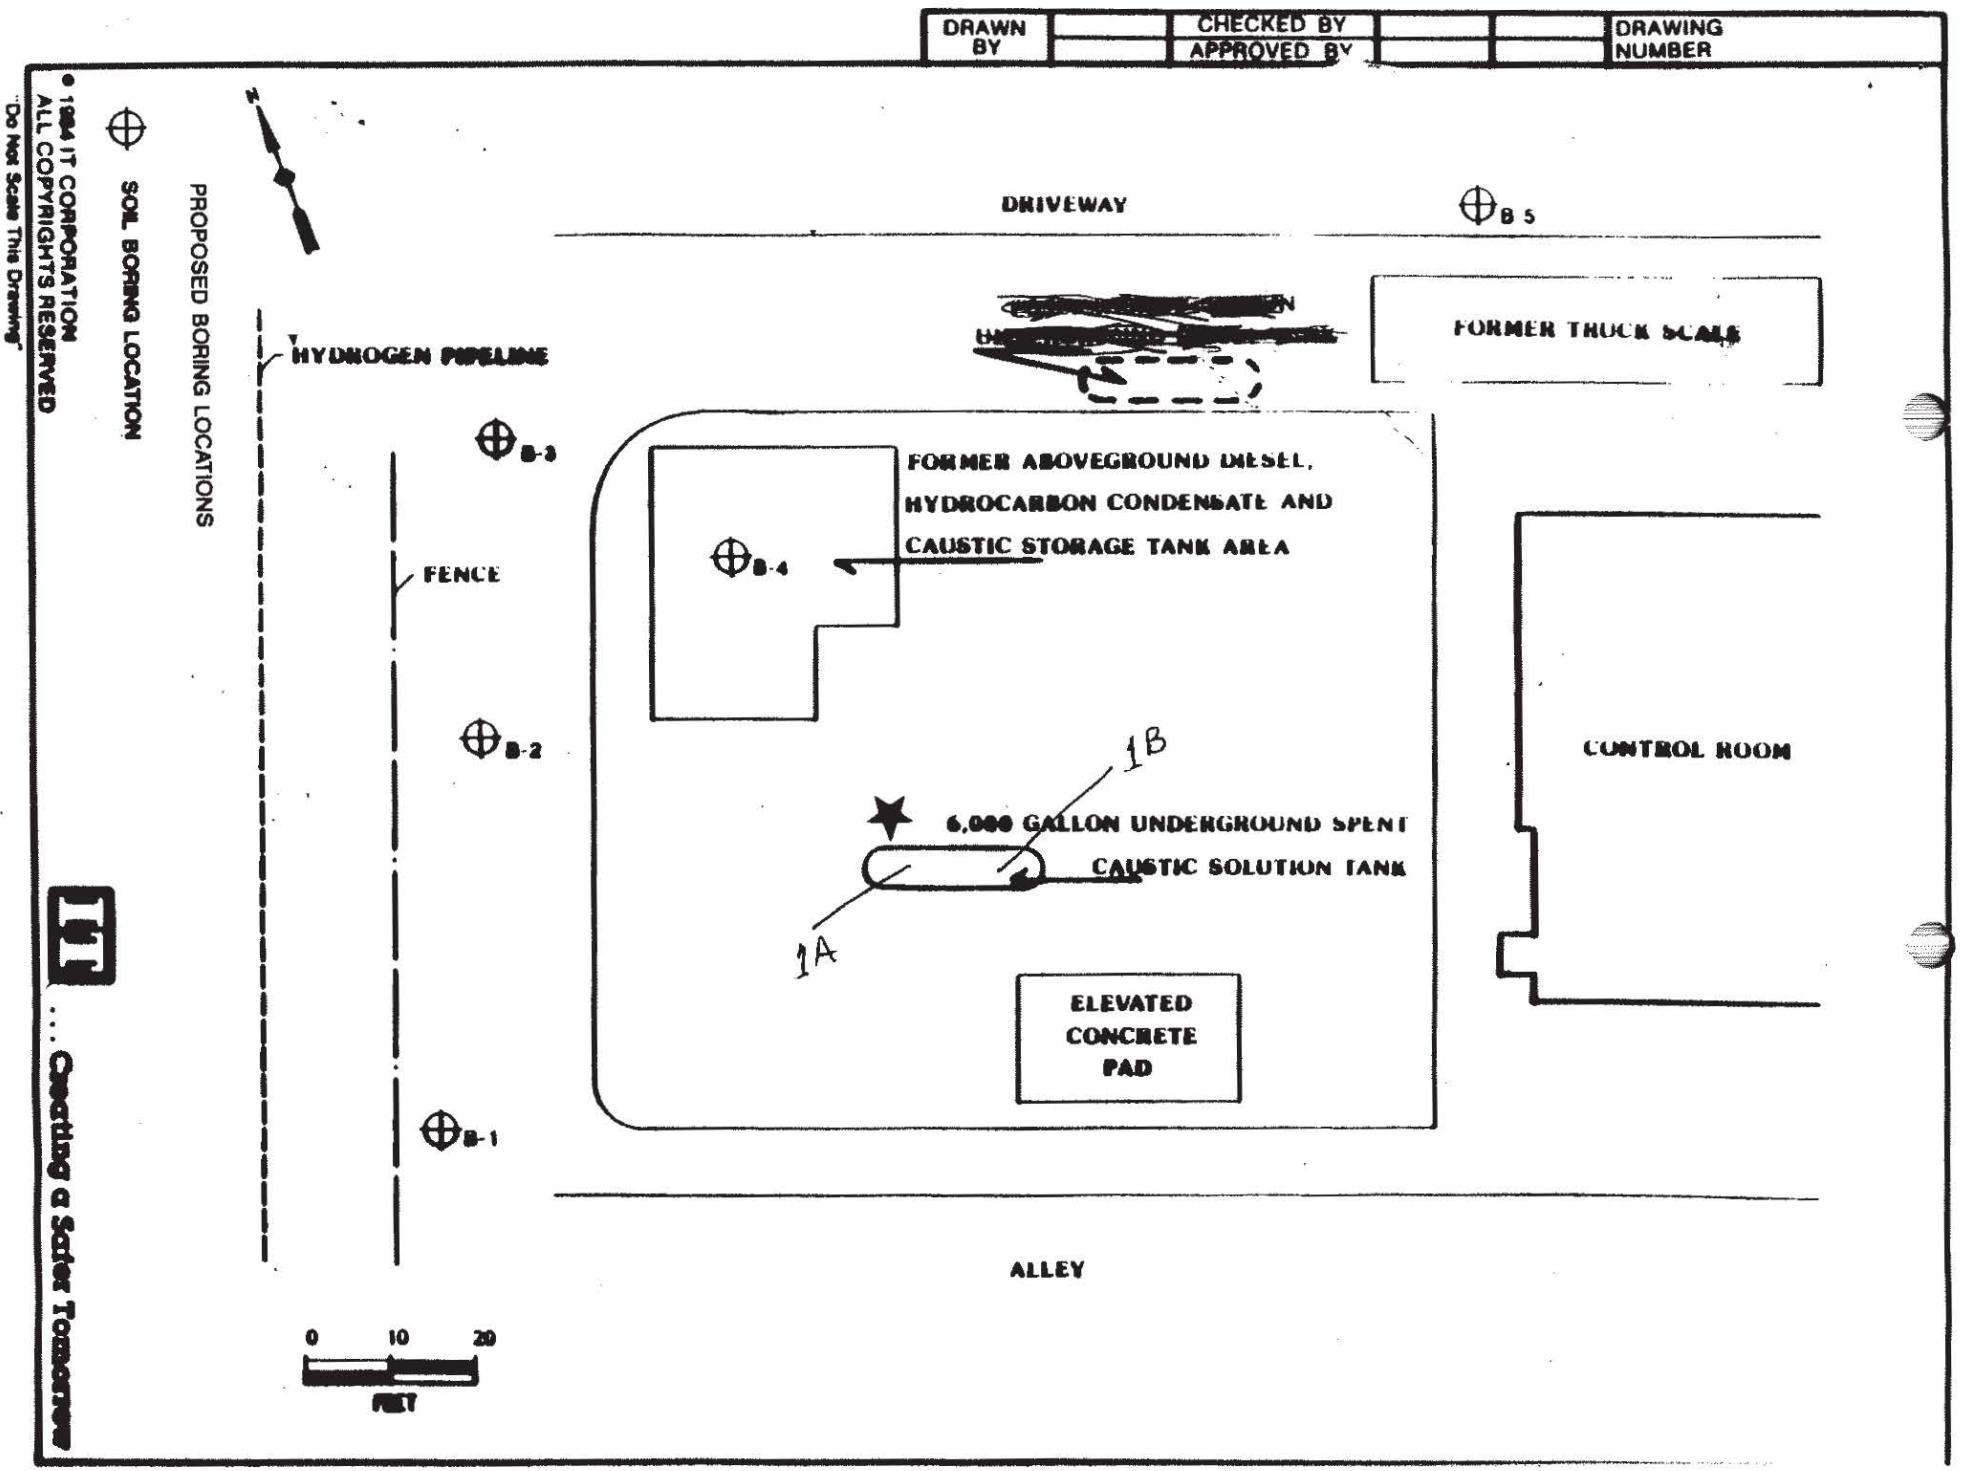
3. If the soil analysis in 2. above indicates the presence of contaminents, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials -- Guidelines."

4. A report shall be submitted to the County Engineer containing

NOTICE TO CLOSURE PERMIT APPLICANTS

The South Coast Air Quality Management District (SCAQMD) has adopted Rule 1166 regulating emissions of Volatile Organic Compounds (VOC) from decontamination of soil effective August 6, 1988.

In addition to the requirements of your Closure Permit, persons excavating any underground storage tank that previously contained VOC's must:



- Notify the SCAQMD Executive Officer by telephone at (714) 396-2000 24 hours prior to tank excavation. 1166(c)(1)(A)
- Monitor the excavated material during the excavation for VOC contamination. 1166(c)(1)(B)
- When VOC contamination is detected:
  * Cease excavation
  * Cover the contaminated soil until implementation of approved mitigation measures. 1166(c)(1)(C)
  * Notify the SCAQMD Executive Officer at (714) 396-2000 within 24 hours of detection of VOC contaminated soil. 1166(c)(2)(A)
- A person shall not engage in or allow any on-site or off-site spreading of VOC contaminated soil which results in uncontrolled evaporation of VOC to the atmosphere. 1166(c)(3)

Exemptions

- Treatment of less than one (1) cubic yard of contaminated soil. 1166(d)(1)(A)
- Decontamination of soil containing organic compounds that have initial boiling point of 302°F or greater, Reid Vapor Pressure less than 80mm Hg or Absolute Vapor Pressure less than 36mm Hg at 20°C. 1166(d)(1)(B),(F)
- Removal of soil for sampling purposes pursuant to EPA methods. 1166(d)(1)(C)
- Accidental spillage of five (5) gallons or less of VOC. 1166(d)(1)(D)
- Documentation of soil which is contaminated through natural seepage of VOC from oil and gas wells or other natural sources. 1166(d)(1)(E)

SPECIFIC QUESTIONS ON RULE 1166 SHOULD BE REFERRED TO THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (714) 396-2000

CLOSURE PERMIT SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

Closure Permit
No.: 61306
File No.
I- 5385

PART 1 OF 2

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2-4 feet below tank invert	TPH, BTEX pH, Na	418.1, 8020 Appropriate EPA method
20 feet interval along product pipe	"	"	"

dn4/FPERMIT Rev. 3/90

Cont'd on Page 2

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report.

4. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

5. The analytical results for all soil samples shall be expressed milligrams per kilogram (mg/kg), or micrograms per kilogram (ug/kg) as appropriate. Practical quantitation limits of 5-10 ug/kg (ppb) for volatile organics and 1 mg/kg (ppm) for the petroleum hydrocarbons must be achieved by the laboratory. Analytical results for groundwater samples shall be expressed in ug/l (ppb) and practical quantitation limits of .5-5 ug/l (ppb) for volatile organics, and 1 mg/l (ppm) for petroleum hydrocarbons must be achieved by the laboratory.

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determiantion; d) The method of analysis; e) Signature of chemist certifying results.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever is earlier.

ATTENTION CONTRACTOR

NOTIFICATION REQUIREMENTS

Pursuant to Los Angeles County Code, Section 11.78.045, and the Conditions and Limitations of the attached Hazardous Materials Underground Storage Closure Permit, you are required to complete **ALL** of the agency notifications indicated below within the time period specified prior to commencement of work on this closure.

[X] 72 HOURS - DEPARTMENT OF PUBLIC WORKS INDUSTRIAL WASTE ENGINEERING INSPECTOR:

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION

CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the County of Los Angeles Department of Public Works, Waste Management Division, P.O. Box 1460, Alhambra, California 91802-1460, containing:

1. File number of facility and closure permit number.

2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.

3. Description of methods for obtaining, handling, and transporting samples.

4. Time and date samples were obtained.

5. Soil sampling certification (including but not limited to soils classification, boring logs, sample procedures, sample locations, initiating chain-of-custody, and groundwater location) for UST closure shall be certified by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils. The certification must clearly state that all work was performed under the supervision of the person signing.

6. Chain-of-custody documentation initiated by person obtaining sample through person at CAL/EPA Department of Toxic Substance Control certified laboratory.

7. Disposal destination of tanks and evidence of legal disposal.

8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction, and methods of analysis.

9. Documentation as to deptn of groundwater at facility.

10. Manifests to document hazardous waste disposal of any removed soil and tank rinseate.

11. Any observations of site contamination.

12. Remedial action plan to mitigate contamination.

13. Report to be signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.

Re: Request For Regional Water Quality Control Board (RWQCB) Written Determination Of Underground Storage Tank Closure Status.
Air Products And Chemicals, Inc., 23320 S. Alameda St., Carson, CA 90810

Dear Sir:

As mentioned in my 18 November 1994 letter, Air Products and Chemicals, Inc. (Air Products) would like to return a portion of the above referenced leased property to ARCO Products Company (ARCO). In order to do so, Air Products must address ARCO's environmental concerns related to Air Products past use of the property. One of ARCO's concerns is that Air Products lacks documentation of final approval from the Los Angeles Department Of Public Works (LADPW) for proper underground storage tank removal/closure for three tanks. Since LADPW is only willing to grant closure for the entire site and is unwilling to do so at this time due to an ongoing remediation project, Air Products is unable to provide ARCO with the requested LADPW final closure approval. In light of this, ARCO would like a written determination from the Regional Water Control Board regarding the status of the three underground tanks that were removed.

ARCO's Dean Kirk informed me that you would like a copy of the report I sent to John Lewis of your office before making your determination. This report describes the soil contamination discovered in our hydrogen purification area. This contamination is not related to the three tanks that were removed from the portion of property that we now wish to return. Given the character of the contamination and the surface spill extent, it also does not appear to be related to two additional underground tanks that were removed from our purification area. All indications lead us to a contamination source of a past, aboveground, hydrocarbon condensate tank. We are about to commission a soil vapor extraction system to remove these hydrocarbons from the purification area.

Please review the enclosed report and issue me a letter regarding the RWQCB determination of the closure status of tanks # LD-IGD-1, LD-IGD-2, and 28.5. Keep in mind that this report and the hydrogen purification area is unrelated to the subject area to be returned and its three removed underground tanks. If you would like to discuss this with me, please call me at (610) 481-8867. My contact at ARCO has been Dean Kirk (310) 816-8421 and my contact at the LADPW has been Mohammed Farzan (818) 458-3980.

I would greatly appreciate your speedy response to this request to:

Robert Swigart

7201 Hamilton Boulevard
Allentown, PA 18195-1501

AIR PRODUCTS MANUFACTURING CORP. - 23320 SOUTH ALAMEDA STREET, CARSON (FILE NO. 95-089)

We reference your letter of April 27, 1995, and supporting documents requesting closure of underground tank locations LD-IGD-1, LD-IGD-2, and 28.5 at the subject site. The depth to first ground water at the subject site is about 30 feet below ground surface (bgs) and the depth of the underlying Gage aquifer is about 75 feet bgs.

Following are our determinations from reviewing your submittal:

1. Petroleum hydrocarbon soil contamination was identified:

   a. In the underground tank locations LD-IGD-1 and LD-IGD-2. The soil contamination was below the screening levels established in the Interim Site Assessment and Cleanup Guidebook, February 1995;

   b. In the southeastern half of the site, near the former underground tank 28.5. After removal and remediation of the underground tank No. 28.91, about 410 cubic yards of soil with up to 9,590 mg/kg TPH contamination were disposed where the former underground tank 28.5 was located;

   c. In the northern half of the site at the southeastern edge of the former vessel repair shop (up to 11,900 mg/kg TRPH, 167 mg/kg TPH gasoline, 9,880 mg/kg TRPH diesel, and 5 µg/kg benzene);

   d. In the former specialty gas plant area (up to 71,500 mg/kg TRPH, 19 mg/kg benzene, and 450 mg/kg toluene); and

   e. Along the western property line (up to 35,400 mg/kg TRPH, 7,170 mg/kg TPH gasoline, 50,400 mg/kg TPH diesel, 17.4 mg/kg benzene, 10.9 mg/kg toluene, 9.68 mg/kg ethylbenzene, 24.1 mg/kg xylene).

2. Also, a report by IT Corporation, dated August 12, 1993, indicated that the CAM-WET analytical results for arsenic in

L 71969

sample C-6 was 22 mg/ℓ. This exceeds the STLC for arsenic of 5 mg/ℓ. The report indicates that the portion of the berm near sample C-6 was removed but did not report any confirmation samples.

Based upon the information submitted we have determined that no further action is required for the underground tank locations LD-IGD-1 and LDIGD-2. However, before sign-off of underground tank location 28.5, we require that confirmation samples be collected in the area where the 410 cubic yards of soil containing up to 9,590 mg/kg TRPH was disposed.

In addition, the following is required:

1. Remediate the petroleum-hydrocarbon soil contamination in the northern half of the site - specifically at the southeastern edge of the repair shop, in the Specialty Gas Plant area, and along the western property line.

2. Collect confirmation samples from the cinder block berm noted in determination 2, above, and analyze for arsenic.

Submit a work plan to this Regional Board by October 31, 1995, addressing the two requirements, above. Please call Keith Elliott at (213) 266-7614 if you have any questions.

7201 Hamilton Boulevard
Allentown, PA 18195-1501

AIR PRODUCTS MANUFACTURING CORP. - 23320 SOUTH ALAMEDA STREET, CARSON (FILE NO. 100.315)

We reference your letter of October 26, 1995, responding to our letter dated September 21, 1995, and requesting closure of the underground tank No. 28.5. Based upon the information provided, the following are our determinations:

1. Your letter indicates that soil sample S5 (ND for STLC arsenic), located underneath concrete sample C6, was collected and analyzed to confirm that the contamination identified in sample C6 (22 mg/kg for STLC arsenic) was removed. The confirmation sample requested in our September 21, 1995, letter is no longer required.

2. Total petroleum hydrocarbon (TPH) up to 210 mg/kg was identified in soil samples collected from underground tank No. 28.5. This contamination is below our screening levels for site remediation, therefore, no further action is required regarding this underground tank.

3. After removal and remediation of the underground tank No. 28.91, about 410 cubic yards of soil with up to 7,400 mg/kg TPH, possibly weathered crude oil, was disposed towards the eastern border of the property at an unknown location. The disposal location of this contaminated soil must be located before closure of underground tank No, 28.1, and final site closure may be granted.

4. We will place in abeyance the requirement for additional investigation and remediation of the facility pending completion of the current soil vapor extraction system remediation activities. However, prior to site closure, ARCO and Air Products must provide sufficient evidence showing that site activities have not contributed to the petroleum-hydrocarbon contaminants identified in site soils out-side the influence of the vapor extraction system.

In addition, your letter requested citing information regarding benzene and toluene soil contamination in the former specialty gas plant area. The report of the closure of the spent caustic tank, dated September 1, 1993, identified up to 91 mg/kg benzene, 450 mg/kg toluene, 320 mg/kg xylene, 57 mg/kg ethylbenzene, and 3,540 mg/kg TPH in site soils. However, we acknowledge that a soil vapor extraction system is present at the site to remediate these contaminants.

L77969

Submit a work plan to collect confirmation samples and perform the above required investigation 30 days prior to completion of the vapor extraction activities at the site. Please call Keith Elliott at (213) 266-7614 if you have any questions.

Department of the County Engineer
County of Los Angeles
Industrial Waste Division
108 W. Second Street
Los Angeles, California

Attention: J. L. Parton
Division Engineer

Dear Mr. Parton:

I would like to express my personal appreciation of the assistance and guidance given to our representatives last week at your office. The expeditious design and construction of our liquid hydrogen plant has been measurably expedited by the assistance that we received.

A matter of concept regarding the disposition of industrial wastes must be resolved prior to continuing with our program. Your approval is solicited for the wasting of spent caustic from our system to the Dominguez Channel near the corner of Sepulveda Boulevard and Alameda Streets. The caustic quantities and amounts to be wasted are as follows:

Quantities - 6 Gallons per hour

H_2O - 88%
NaOH - 2%
Na_2CO_3 - 10%

These concentrations may be further reduced by dilution with cooling tower blowdowns which will amount to 75 gallons per minute.

These data are supplied in confirmation of a discussion between your Mr. Lorenzo Quintana and the writer. If there is any further information required, please let me know.

Very truly yours,

F. B. Eastman
Chief Project Manager

Plan Check No. 3836

Gentlemen:

This letter will confirm conversation between Mr. Lorenzo Quintiana of the Building and Safety Division and Mr. James A. Goring of Daniel, Mann, Johnson and Mendenhall, wherein it was stated that industrial wastes emanating from the Control Building Laboratory would be limited to 1000 cc per week of 10% caustic and 500 cc per week of 5% acid. These wastes will be disposed of in the facility sanitary system.

Yours very truly,

AIR PRODUCTS and CHEMICALS, INC.

March 27, ~~1962~~

Mr. John A. Lambie, County Engineer
County of Los Angeles
Dept. of County Engineer, Bldg. & Safety Depts.
108 W. Second Street
Los Angeles, California

Dear Sir:

This is to certify that the Richfield Oil Corporation has reviewed drawing number 1-6100-57-252, dated March 17, 1962, prepared by the Air Products and Chemicals, Incorporated, for drainage for the property having an address of 23320 South Alameda Street which is adjacent on the north, east, and south to property owned by the Richfield Oil Corporation.

There is and will be no objections on the part of the Richfield Oil Corporation for work performed by Air Products and Chemicals, Incorporated in connection with the traverse of the drain line, marked 21" V.C., through 50 feet of Richfield Oil Corporation property en route to the Flood Control Channel.

Richfield Oil Corporation holds the county free of liability and responsibility for the work on this property.

Yours truly,

RICHFIELD OIL CORPORATION

Gentlemen:

At the request of Mr. L. Quintiana, we are transmitting herewith one copy of Air Products and Chemicals, Inc.'s brochure for their Hydrogen Facility at 23320 South Alameda Street.

We trust the information contained in the brochure will be of help in explaining the functions of the different structures which you have had under review.

In answer to the question raised by Mr. Quintiana as to the function of the Perlite Silo, it is our understanding that this structure houses "Perlite" insulation which is used to insulate certain equipment, such as the cold boxes, etc. At the time of equipment servicing it may be necessary to temporarily return the insulation to the silo.

I-5385-20

MEMORANDUM

TO: Tom Otteson
FROM: Bernard Valasky
DATE: July 13, 1962
FILE: AIR PRODUCTS AND CHEMICALS INC. I-5385-20
23320 S. Alameda Street

Attached are approved plans showing facilities to be constructed at the hydrogen liquefying plant to be located at the above address.

The process includes using waste gas from the reforming process at the Richfield Refinery. This waste gas contains about 80 to 90 percent of elemental hydrogen together with other gases. Previously, the Richfield Company had been using this product for firing their boilers. These gases will now be pumped to the proposed new Air Products plant and the end product at this new plant will be pure hydrogen.

The gases pumped from the Richfield Refinery are passed through a light oil, stripping benzene and other aromatics. There will be no waste from this stripper. Carbon dioxide is removed in a caustic stripper and the spent solution from this stripping operation, sodium carbonate, will be discharged to Dominguez Channel. Other discharges to Dominguez Channel include 75 gallons per minute of cooling tower bleedoff and storm runoff. Included also is a small control laboratory which discharges into the domestic sanitary system. The discharge of these small amounts of laboratory wastes has been discussed and approved by the Health Department. Other facilities include floor drains in a Maintenance Building for washdown which will discharge also to the sanitary system. Included also are plans showing details of the connection to Dominguez Channel. A Permit for this connection has been issued by the Los Angeles County Flood Control District.

If the above facilities are installed, an Industrial Waste Permit will be required.

Gentlemen:

AIR PRODUCTS & CHEMICAL INC. (I-5385-20)

Enclosed is Industrial Waste Disposal Permit No. 3113 which sets requirements on the disposal of your industrial wastes to the Dominguez Channel, and to the sanitary sewer available to the site.

Improvements to Dominguez Channel are now under construction. The California State Regional Water Pollution Control Board No. 4 has adopted long range waste disposal and water quality objectives for the Dominguez Flood Control Channel. While the objectives do not specifically so state, we believe that it was the intent of the Regional Board that they be effective for the waters in the improved Channel rather than the present Channel. The principal difference between their objective from the conditions and limitations in outstanding waste disposal permits for discharge to Dominguez Channel is the requirement that at least 0.5 parts per million of dissolved oxygen be maintained in channel waters at all times.

It is probable that the conditions and limitations of outstanding waste disposal permits, issued by the County Engineer for discharges into Dominguez Channel, will have to be modified to insure conformance with these objectives. The principal

change would be a limitation on the amount of dissolved organic materials that may be discharged into the Channel. In this event, all permittees will be so notified and will be given the opportunity to review specific proposed revisions before such revisions are made effective.

Yours very truly,

John A. Lambie
COUNTY ENGINEER

1-17-63

SPECIAL CONDITIONS AND LIMITATIONS
INDUSTRIAL WASTE DISPOSAL PERMIT NO. 3113
AIR PRODUCTS & CHEMICALS INC. (I-5385-20)

1. This permit is issued to Air Products & Chemicals Inc., for the disposal of wastes from the gas processing facilities located at 23320 South Alameda Street, Long Beach.

2. The cooling tower bleedoff shall be discharged into the Dominguez Channel.

3. The laboratory wastes shall be discharged into the sanitary sewer available to this site.

4. Waste water discharged into the Dominguez Channel shall not cause formation of objectionable deposits of sludge. In general, settleable solids shall not exceed 1.0 cubic centimeters per liter.

5. Waste water discharged into the Dominguez Channel shall not contain oil in excess of 75 ppm.

6. Waste water discharged into the Dominguez Channel shall not cause damage to private or public structures or property.

7. The pH of waste water discharged to the Dominguez Channel shall be maintained at not less than 6.5.

8. Waste water discharged into the Dominguez Channel shall not contain toxic wastes in concentration sufficient to endanger public health. The dissolved sulfides in the discharge shall not exceed 1.0 ppm.

9. Waste water discharged into the Dominguez Channel shall not cause or create odors to the extent that they are a public nuisance.

10. All liquid industrial waste and water soluble solid wastes produced at the above location and not acceptable for disposal to the Dominguez Channel or to the sanitary sewer as provided above, shall be stored in impervious containers pending transportation to a legal point of disposal. The permittee shall certify by signing waste hauler's reports the source, quantity and point of disposal for all such wastes removed from the premises for disposal at any other location. The signed original of this report shall be forwarded to the County Engineer as indicated thereon. A copy of the waste hauler's report form is attached.

11. Representatives of interested governmental agencies concerned with the disposal of industrial wastes shall be permitted access at any reasonable time to take samples and to inspect operations.

12. The County Engineer shall be notified and his written approval secured before making any additions or modifications which may affect the quantity, quality, or method of disposal of waste materials.

13. The County Engineer may modify this permit by addition, revision, or elimination of conditions and limitations as may be necessary to accomplish the purposes of ordinances covering the disposal of waste materials.

14. Violation of any of the conditions of this permit shall be cause for suspension or revocation.

LOS ANGELES REGIONAL WATER QUALITY CONTROL BOARD I-5385

RESOLUTION NO. 68-4

PRESCRIBING REQUIREMENTS FOR DISPOSAL OF INDUSTRIAL WASTES
AIR PRODUCTS AND CHEMICALS INC.
23320 South Alameda Street, vicinity of Dominguez,
Los Angeles County, California
(File 63-63)

WHEREAS, AIR PRODUCTS AND CHEMICALS INC. is discharging industrial wastes to Dominguez Channel under terms of an industrial waste permit issued by the County of Los Angeles; and

WHEREAS, such permit therefor has been submitted to this Board in accordance with established administrative procedures; and

WHEREAS, this material is accepted as a report on waste discharge; and

WHEREAS, this Board has caused the following investigations to be made:

1. Field investigations were conducted by the staff of this Board.

2. Review was made of this Regional Board's Water Quality Control Policy for Harbors, Marinas, and Tidal Prisms in Los Angeles and Ventura Counties, adopted on April 10, 1967.

3. Review was made of this Regional Board's Water Quality Control Policy for Pacific Ocean Coastal Waters, Rincon Point to San Gabriel River, adopted on April 10, 1967.

4. Review was made of the following publications dealing with Dominguez Channel:

   a. "Report on Biochemical Study of Dominguez Channel", A Report to the Los Angeles County Flood Control District by Kennedy Engineers, January 1960.

   b. "Report on Waste Assimilation Study of Dominguez Channel", A Report for the State Water Pollution Control Board, State of California, by James M. Montgomery, Consulting Engineers, Inc., December 1962.

   c. "Report on Hydrogen Sulfide Study of Dominguez Channel", A Report to Dominguez Channel Users' Group, by Montgomery Research Inc., December, 1965.

   d. "Dominguez Channel Study--A Chemical, Physical, and Biochemical Evaluation of the Wastes in a Man-Made Tidal Channel Used for Flood Control and Industrial Waste Disposal, June-December 1965", by Sanitation Districts of Los Angeles County, May 1966.

5. Meetings were held with governmental agencies and those industries discharging wastes into the channel; and

1. This existing waste discharge is from a cryogenic gas processing plant located at 23320 South Alameda Street in the Dominguez area of unincorporated Los Angeles County. Wastes consist of about 40,000 gallons per day of cooling tower bleedoff. The point of discharge to Dominguez Channel is about 2,200 feet easterly of Alameda Street in Section 22, T4S, R13W, S.B.B.&M.

2. Dominguez Channel, in the reach between 116th Street (in Hawthorne) and its end at Henry Ford Avenue (in Los Angeles), is an open, lined channel which was improved by the Los Angeles County Flood Control District for the purpose of flood control.

3. This improvement, which was completed in November 1966, created a tidal prism which extends from the Los Angeles Inner Harbor to Vermont Avenue--a distance of some eight miles.

4. Dry weather flow in the channel above Vermont Avenue amounts to about 1.6 million gallons per day (mgd); this dry weather flow is constituted of street drainage and industrial wastes (principally cooling waters). This flow does not have a significant effect upon the waters of the tidal prism.

5. Below Vermont Avenue, Dominguez Channel traverses a heavily industrialized area; in this reach, there are numerous discharges of treated industrial wastes to the channel.

6. Dominguez Channel empties into Consolidated Slip at Henry Ford Avenue; Consolidated Slip is the extreme upper end of the East Basin of Los Angeles Inner Harbor.

7. Dry weather flow in Dominguez Channel at Henry Ford Avenue is on the order of 13 mgd (excluding tidal flow).

8. In its Resolution No. 67-4 entitled: "Adopting Water Quality Control Policy for Harbors, Marinas, and Tidal Prisms of Los Angeles and Ventura Counties," adopted April 10, 1967, this Board states in part that the quality of the waters of Dominguez Channel must be such that a nuisance will not be caused and that the quality of the waters of the Los Angeles-Long Beach Inner Harbor will not be made lower than as set forth in the policy statement.

9. The Board enunciated no beneficial uses of the waters of Dominguez Channel; however the following beneficial uses of the Inner Harbor waters were enunciated for protection: a) Harborage purposes; b) Shipping, navigation, and anchoring; c) Small boat mooring;

d) Industrial water for cooling and fish handling; and e) Aesthetic enjoyment.

Waters of the Outer Harbor of Los Angeles-Long Beach Harbor are included in the Nearshore Zone of Pacific Ocean coastal waters which are protected for: a) Aesthetic enjoyment; b) Ocean water contact sport (swimming, surfing, skindiving); c) Propagation and sustenance of marine life, including kelp and shorebirds; d) Shellfish harvesting; e) Scientific research and training; f) Sport fishing; g) Bait fishing; h) Commercial fishing; i) Pleasure boating; j) Shipping and navigation; and k) Industrial water supply.

10. Outflow from Dominguez Channel has an effect upon the quality of water in the Inner Harbor which in turn has an effect upon the quality of water in the Outer Harbor.

11. Waste discharges into Dominguez Channel must be strictly controlled so that this Board's Water Quality Control Policy for the Dominguez Channel and for the Inner and Outer Harbors is maintained in order that the quality of water in those harbors is suitable for the beneficial uses enunciated above and so that creation of a nuisance is prevented within Dominguez Channel itself.

12. The discharge of wastes to Dominguez Channel is an economic use of the Channel and, insofar as it does not conflict with the beneficial uses enunciated above for protection, or create a nuisance, is in harmony with the Legislature's declared policy to achieve highest water quality consistent with maximum benefit to the people of the state.

13. Based on the December 1962 Montgomery report (referenced above), Dominguez Channel can assimilate a maximum loading of about 10,000 pounds per day, measured as chemical oxygen demand (COD), under conditions of complete dissolved oxygen depletion, based on the location-pattern of waste discharges existing in 1962. Changes which have taken place since that time have not altered this pattern significantly. The loading calculated for a minimum dissolved oxygen of 0.5 mg/l in the Channel is about 8,700 pounds per day, measured as COD.

14. Section 13054.2 of the California Water Code provides that a regional board need not authorize the utilization of the full waste assimilation capacity of a receiving water.

15. In order to ensure that this Board's objective of 0.5 mg/l of dissolved oxygen in the waters of Dominguez Channel will be met at all times, it is necessary to reserve a portion of this capacity to allow for peak discharge flows and loadings, to allow for additional future discharges to Dominguez Channel, and to compensate for other intermittent factors which result in depression of dissolved oxygen, but which cannot be defined precisely. It is deemed necessary to reserve about 20 percent

of the waste assimilation capacity of Dominguez Channel for this purpose.

16. Section 2163 of the California Administrative Code provides that, in formulating requirements for discharges to surface waters, a regional board may delimit a waste dispersion area in the immediate vicinity of a discharge to an extent which, in the board's judgment, will not compromise the beneficial uses and water quality objectives adopted by the board for the general area.

17. Maintenance of this Board's Water Quality Control Policy through strict control of waste discharges present will result in enhancement of water quality in Dominguez Channel and in the harbor.

18. Increased dissolved oxygen content in the waters of Dominguez Channel will result in the development of an indigenous flora and fauna. Control of nutrient content in discharges to the Channel is necessary to prevent proliferation of growth of these biota to the extent that algal blooms, floating mats, or "red tide" conditions occur.

19. This industrial plant lies within the West Coast Hydrologic Subarea, ground waters from which are extensively utilized for municipal, domestic, industrial, and irrigation purposes. The surface of the ground is in hydraulic continuity with water-bearing zones, and wastes discharged to the ground or to unlined ditches, or which are held in storage facilities which permit percolation, could affect these ground waters deleteriously.

20. All existing discharges to the Tidal Prism are located so that the waste waters enter the waters of the Channel at or near the top of the water surface. This and the relatively low density and warmer temperature of the wastes result in a stratification effect in which the wastes tend to override the more saline and cooler tidal flow in the Channel in a "sheet" varying in thickness up to about 5 feet; and

WHEREAS, on February 7, 1968, a letter transmitting a tentative draft of this Resolution was forwarded to the discharger and copies thereof submitted to interested persons and governmental agencies with advice that objections thereto would be considered by this Board if submitted in writing on or before February 20, 1968; and

WHEREAS, objections and recommendations received have been reviewed and considered by the Board;

NOW, THEREFORE, BE IT RESOLVED, that in order to prevent a condition of pollution of the waters of the State, and to prevent creation of a nuisance, this Regional Water Quality Control Board, in accordance with authority granted by Division 7 of the Water Code of the State of California, prescribes the following requirements with respect to this waste discharge, subject to

the provisions of Section 13054 of the Water Code, which reads in part that requirements may be revised from time to time:

1. Waste discharge operations shall be conducted in such a manner that conditions in the receiving waters of Dominguez Channel Tidal Prism, insofar as they are affected by other than natural forces, shall at all times be consistent with the objectives for these waters contained in "Water Quality Control Policy for Harbors, Marinas and Tidal Prisms in Los Angeles and Ventura Counties," adopted by this Regional Water Quality Control Board on April 10, 1967. This includes, but is not limited to, the following specific requirements:

   a. Wastes discharged shall at no time have a pH of less than 6.5 and shall not cause the pH of waters in the Channel to vary from the range 7.0 to 9.5, except in the immediate vicinity of the waste discharge.*

   b. The discharge of wastes shall not cause the average temperature of waters in the Channel to exceed 20 Fahrenheit degrees over the average ambient temperature of the Inner Harbor except within the immediate vicinity of the waste discharge. Average ambient temperature in the Inner Harbor for the purposes of this requirement shall be defined by the measurements at Los Angeles Harbor Monitoring Station No. 44 in Slip No. 5 in front of City of Los Angeles, Department of Water and Power Harbor Steam Station intake.

   c. Visible solids or other materials of waste origin shall not be present in waters in the Channel as a result of this waste discharge except in the immediate vicinity of the waste discharge.

   d. The discharge of wastes shall not cause the color of the waters of the Channel to be altered except in the immediate vicinity of the discharge.

   e. The discharge of wastes shall not cause visible oil, grease, fats, waxes, oily slicks, or foam in the waters of the Channel or on rocks, channel banks, or structures except in the immediate vicinity of the waste discharge.

   f. The discharge of wastes shall not cause the presence of nutrients in concentrations which will result in proliferation of plankton or other undesirable biotic growth.

   g. Wastes discharged shall not contain phenols, mercaptans or other substances in concentrations which will result in objectionable odors emanating from the waters of the Channel.

*For the purpose of these requirements, "immediate vicinity of the waste discharge" is defined as within a distance of 50 feet, both to left and right, from the point of discharge as measured along the longitudinal axis of the Channel.

h. Wastes discharged shall not contain settleable matter in excess of 1.0 ml per liter, and they shall not contain any other substance in concentrations which would cause the formation of sludge deposits in the Channel.

2. Wastes discharged during any calendar day shall not contain more than 30 pounds of chemical oxygen demand (COD).

3. The discharge of wastes to Dominguez Channel shall not cause conditions in the waters of the Los Angeles-Long Beach Inner Harbors and Outer Harbors, insofar as they may be affected by other than natural forces, to be contrary to the objectives for those waters as contained in the Water Quality Control Policy referenced above and in "Water Quality Control Policy for Pacific Ocean Coastal Waters, Rincon Point to San Gabriel River," adopted by this Regional Water Quality Control Board on April 10, 1967.

4. Wastes discharged to the ground, including unlined ditches and ponds, shall be of such quality that:

a. Concentrations of the following mineral constituents do not exceed the maximum limits specified:

Total dissolved solids	1,500 mg/l
Total hardness (as $CaCO_3$)	500 mg/l
Chloride	300 mg/l
Chloride plus sulfate	750 mg/l
Nitrate	50 mg/l

b. The pH of these wastes shall not be less than 6.0.

c. The wastes discharged shall contain no material capable of imparting tastes, odors, color, foaming, or other objectionable characteristics to underground waters.

d. The wastes discharged shall not contain substances in concentrations toxic to human, animal or plant life.

5. These requirements are for the disposal of industrial wastes only. Sanitary sewage, garbage, refuse, and similar materials shall be excluded from this waste discharge.

6. Any wastes which do not meet all of the foregoing requirements shall be stored in impervious containers, and if transferred elsewhere the final discharge shall be at a legal point of disposal; and

BE IT FURTHER RESOLVED, that the discharger is hereby notified that these requirements apply not only to waste material discharged on a routine basis through plant treatment and disposal facilities, but apply as well to material which may be carried to Dominguez Channel from this facility by storm runoff, plant washdown or other circumstances; and

BE IT FURTHER RESOLVED, that in accordance with Section 13055 of the Water Code, technical reports on the quality and quantity of wastes discharged shall be submitted to this Board in accordance with the specifications contained in Exhibit "A" of this Resolution, which specifications the Executive Officer of this Board is authorized to revise from time to time as may be warranted, such revisions being subject to review by this Board at its discretion or at the request of the discharger or any interested person or governmental agency; and

BE IT FURTHER RESOLVED, that the discharger be informed that it is the policy of this Board that waste disposal operations shall be such that flood control structures and appurtenances shall not be damaged; and

BE IT FURTHER RESOLVED, that in prescribing these requirements it is the intent of this Board to:

1. Preserve the quality of the receiving waters of Los Angeles-Long Beach Inner Harbor and Outer Harbor and the West Coast Hydrologic Subarea, insofar as they may be affected by this waste discharge, and protect them for all beneficial uses hereinbefore listed.

2. Prevent the creation of a nuisance as a result of this existing waste discharge; and

BE IT FURTHER RESOLVED, that the attention of the discharger be hereby directed to Section 13054.1 of the Water Code of the State of California which reads in part "Any person discharging sewage or industrial waste within any region, other than into a community sewer system, shall file with the regional board of that region a report of any material change or proposed change in the character, location, or volume of the discharge;" and

BE IT FURTHER RESOLVED, that the discharger be hereby directed to inform this Board of any change in ownership of the waste disposal facility; and

BE IT FURTHER RESOLVED, that the foregoing requirements do not authorize the commission of any act resulting in injury to the property of another; and

BE IT FURTHER RESOLVED, that the discharger be further advised that these requirements do not exempt the operator of this waste disposal facility from compliance with any other law which may be applicable. The requirements are not a permit; they do not legalize this waste disposal facility, and they leave unaffected any further restraints on the disposal of wastes at this site which may be contained in other statutes; and

BE IT FURTHER RESOLVED, that the Executive Officer of this Board be authorized, and he is hereby directed, to certify and submit copies of this resolution to the discharger, and to such individuals and governmental agencies as may have need therefor, or as may request same.

I, Raymond M. Hertel, Executive Officer of the Los Angeles Regional Water Quality Control Board, State of California, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the Los Angeles Regional Water Quality Control Board at its meeting held on February 21, 1968, the original of which is retained in the files of the Board.

Raymond M. Hertel

RAYMOND M. HERTEL, Executive Officer

EXHIBIT "A"

Specifications for Technical Reports to be Submitted by

Air Products and Chemicals Inc.
(File 63-63)

A. Location of Sampling Stations

1. At each point where plant process effluent (including cooling water) is discharged to Dominguez Channel, an effluent sampling station shall be established so that representative samples of effluent can be obtained prior to discharge to the Channel.

2. Sampling stations for receiving water samples shall be located on cross-sections of the Channel at points 50 feet--as measured along the longitudinal axis of the Channel--from the centerline of the effluent stream for each point of discharge; these cross-sections shall be situated both to the left and right of the discharge.

   On these cross-sections, the sampling stations shall be located at ten feet from the edge of the channel. At each of these points on each cross-section, a sampling station shall be established at two feet below the water surface.

B. Type, Frequency and Techniques of Sampling and Analyzing

1. On at least one day each month, beginning in April, 1968, each of the effluent sampling stations above shall be occupied and the following determinations made:

   Ether solubles
   Settleable solids
   pH
   Phenolic compounds (as phenol)
   Suspended solids
   Chemical oxygen demand

   These determinations shall be made on a composite sample, according to flow, of hourly samples obtained during the period that the receiving water samples below are being obtained.

   The temperature of each hourly sample shall also be determined.

   In addition, for wastes which are discharged to the ground, conveyed to Dominguez Channel in unlined ditches, or held in storage facilities which permit percolation, the following determinations shall be made on a grab sample of those portions which could thus affect underlying ground water:

   Total dissolved solids
   Total hardness (as $CaCO_3$)
   Chloride
   Sulfate
   Nitrate
   pH

2. Once each calendar quarter, beginning in the second quarter of 1968, each of the receiving water stations above shall be occupied and the following determinations made:

   pH
   Dissolved oxygen
   Temperature

   The receiving water stations shall be occupied four times within one tidal cycle each sampling day during periods of waste discharge--once at high water slack, once at low water slack, once on the flood tide midway between low water slack and high water slack, and once on the ebb tide midway between high water slack and low water slack.

3. In addition to the above determinations the following shall be noted at the time of the monthly effluent sampling and at the time of the quarterly receiving water sampling:

   Tide stage
   Direction and estimated force of current
   General weather conditions during monitoring
   For the area outside the immediate vicinity of the discharge point:

   Color of water in Channel and appearance and extent of any visual turbidity or color patches.
   Appearance and extent of any visible solids or other materials of waste origin.
   Appearance and extent of any visible oil and grease, fats or waxes, or foam in the water or at the water's edge.
   Description of odor of Channel water.
   Appearance and extent of any deposits of sludge or other detritus in the water or on Channel banks.
   Appearance and amount of any observed plant or animal growth on banks or substrate or in the water.

4. All samples shall be taken and all analyses shall be performed in accordance with the latest edition of "Standard Methods for the Examination of Water and Wastewater", published by the American Public Health Association, Inc., except that for specific analyses newer techniques may be used if in the judgment of the Executive Officer the results obtained are consistent with the objectives of these waste discharge requirements.

5. Receiving water monitoring shall not be accomplished during or immediately subsequent to periods of storms. Receiving water monitoring shall be done preferably at times other than those when storm runoff is in the Channel.

C. Filing of Reports

1. Three copies of written report of the results of the monitoring program shall be furnished to the Board within 30 days following the sampling.

2. The written report shall contain the following information:

   a. Dates and times of sampling;

   b. Approximate volume of wastes discharged on the date of sampling in gallons per day;

   c. Tabulated results of specified analyses and physical observations;

   d. Record of all wastes hauled during the reporting period, including types of wastes, volumes, dates of hauling, and ultimate point of disposal.

   Format for these reports and sampling station identification will be provided by the Board.

3. These records and reports are public documents and shall be made available for inspection during business hours at the office of the Los Angeles Regional Water Quality Control Board.

I.N.P. 3113

DATE: 12-12-63

REPORT: I CONTACTED MR. DON REAMER PROCESS SUPT. - HE STATES THEY ARE ENGAGED IN MFG. LIQUID HYDROGEN - FEEDSTOCK, FORMERLY A WASTE GAS FROM RICHFIELD REFINERY, CONTAINS 80 TO 90% HYDROGEN WITH OTHER GASES. THIS IS FIRST PASSED THROUGH A LIGHT OIL, STRIPPING BENZINE & AROMATICS (NO WASTE). HYDROGEN GAS IS PRESSURIZED TO 1500 PSI LIQUIFIED & THEN HAULED TO GOVT MISSILE PROGAMS. BENZINES & AROMATICS PASS THROUGH A CAUSTIC STRIPPER, CREATING A SODIUM CARBONATE WASTE TO CHANNEL WHICH IS VERY LITTLE & THE COOLING TOWER BLEED OFF, APPROX 206 P.M. GOES TO CHANNEL. DOMESTIC WASTE GOES TO SEPTIC TANK & THEN TO SEEPAGE PITS. A PH TAKEN OF DISC. TO CHANNEL WAS PH 6.5 AT THIS TIME.

Note - Item 3 of I.W.P. Must be changed to fit the fact. It says 1.6. WASTE shall go to Sanitary Sewer which usually means L.A. County Sewer. This goes to Septic tank & leach system instead. As outlined in letter of intent from Company.

This can be changed when Channel improvement has been completed & All permits covering such discharge are changed. I have discussed this with Jack Edwards.

REPORT:

INSPECTION MADE AT ABOVE COMPANY. PERSON CONTACTED WAS MR. STANG, ACTING IN PLACE OF MR. REAMER.

A SAMPLE WAS TAKEN OF THE DISCHARGE TO DOMINGUEZ CHANNEL. MR. STANG SAID THAT APPROX. 99% OF THIS WATER COMES FROM THEIR COOLING TOWER. THE OTHER 1% IS YARD WASHDOWN. THIS SAMPLE WILL BE CHECKED FOR SETTLEABLE SOLIDS.

THERE WAS NO EVIDENCE OF CHEMICAL SPILLAGE AT TIME OF INSPECTION.

I TOLD MR STANG THAT SOMETIMES THE DISCHARGE IS A MILKEY WHITE. HE SAID THAT IT WAS NECESSARY TO ADD A COMPOUND TO THE TOWER TO CLEAN IT, AND THE ~~DISCHARGE~~ COMPOUND CHANGED THE COLOR TO WHITE.

P-3113

DATE: 1-21-66

REPORT: INSPECTION WAS MADE AT ABOVE COMPANY, PERSON CONTACTED WAS MR. ANDERSON & MR STANG.

THE FOLLOWING ITEMS OF THE INDUSTRIAL WASTE PERMIT WERE INSPECTED.

ITEM #2, 4, 5, 7 ~ COOLING TOWER BLEEDOFF IS DISCHARGED TO DOMINGUEZ CHANNEL. THIS DISCHARGE CONSTITUTES APPROX. 99% OF THE WASTE CONGING FROM THE PLANT. THE OTHER 1% IS FROM YARD WASHDOWN. A SAMPLE OF THIS WASTE WAS TAKEN AND A STANDARD ANALYSIS WILL BE MADE. AT TIMES THIS WATER HAS A MILKY COLOR TO IT. THIS WAS EXPLAINED TO ME THAT THIS IS DUE TO A COMPOUND THAT IS ADDED TO THE COOLING TOWER WATER TO CLEAN IT. THE PH OF THIS WATER WAS 7

ITEM #3 ~ LABORATORY WASTE GOES TO A CEPTIC TANK. THIS WASTE IS FROM TOOL AND LABORATORY UTINSIL WASHING. THIS WASHING IN DONE IN A KITCHEN TYPE SINK.

ITEM #8 ~ SULFIDE READING WAS 0.0

ITEM #9 ~ NO OBJECTIONAL ODERS COULD BE DETECTED.

ITEM #10 ~ NO INDUSTRIAL WASTE IS HAULED FRIM THE PLANT.

FROM: LeRoy Davis

FILE: Air Prod. & Chems. Inc.
23320 S. Alameda St

DATE: 10-7-66

REPORT: On 10-6-66 at 1:30 P.M. checked sulfides at above industries outfall into Dominguez Channel

Found undissolved sulfides of 3 P.P.M. and dissolved sulfides of 0.1 P.P.M. There was a steady streak of iridescence on top of effluent to channel.

On 10-7-66 contacted Dudley Anderson - in charge of lab. (Mr. Stange was absent)

Mr. Anderson stated that the effluent to Dominguez Channel had not been monitored for a very long time, but would be checked at least once a day, in the future. JRK

I stated that any rise in sulfides to channel would necessitate the aeriating of effluent, or other treatment to remove sulfides.

Mr. Anderson further stated that iridescence of effluent would be eliminated in the future.

ATTN: Mr. Raymond Hertel

Gentlemen :

This letter is submitted in response to your notice of February 7, 1968 concerning tentative requirements for the discharge of industrial wastes to Dominguez Channel.

The Air Products & Chemicals liquid hydrogen plant, 23320 So. Alameda, was shut down December, 1967 and no longer will discharge wastes to the Dominguez Channel except for normal wash down of slab areas and run off during rains.

In the future, if this facility should resume normal operations, we will notify immediately.

Very truly yours,

Assistant Plant Manager

RE: Requirements for Disposal of Industrial Wastes (File 63-63)

Gentlemen:

Thank you for your letter dated March 6, 1968, which notified us that your plant at the above address has been shut down and that there is no longer any discharge of industrial wastes to Dominguez Channel from this facility.

We are closing our file on this case and it will not be necessary for you to conduct the monitoring program called for in Resolution No. 68-4, adopted by this Regional Board on February 21, 1968.

If at some time in the future you resume operations at this facility, it will be necessary for you to comply with the requirements of Resolution No. 68-4. Please notify this Board if you do reopen the plant and before you again start discharging industrial wastes to Dominguez Channel. Your continued cooperation is greatly appreciated.

Very truly yours,

Raymond M. Hertel

NOTICE

TO John Sammartino DATE 7/15/71

FIRM NAME Air Products & Chemicals, Inc I.W.PERMIT NO. 3113
I-5385-22

LOCATION 23320 S. Alameda, Carson.

REMARKS: Your use of once pass cooling water (those running to #11) is in violation of Ord 6130 & your permit. This water which is now being discharged to Dominguez Channel must be recirculated and discharged legally & in conformity with your permit. Plans for such discharges must be submitted by 8/15/71.

Please telephone this office for return inspection.

Installation of proper equipment to be made within 30 days after this department's acceptance of the plans.

Continuing discharges after that date which do not conform to legal & permit requirements are subject to penalty.

Re: Proposed Operation of Facility at 23320 South Alameda Street, Long Beach
(File 63-63)

Gentlemen:

Thank you for your letter of December 7, 1971, notifying us of your intent to resume operations at the subject facility and to conform to this Board's Resolution No. 68-4, prescribing waste discharge requirements.

Those requirements, adopted in 1968, were for the disposal of about 40,000 gallons per day of cooling tower bleedoff. Please inform us whether this fairly describes the proposed operation. If there will be any material change in the character, location, or volume of the discharge, it will be necessary for you to file a new report of waste discharge with the Board.

The discharge of sewage to the channel is explicitly prohibited by Requirement 5 on page 7 of Resolution No. 68-4. Please inform us of the method proposed for disposal of sewage and of industrial wastes other than cooling tower bleedoff, if any, from your facility. Also indicate the approximate date of plant startup.

Your reply is requested by February 2, 1972. Meanwhile if there are any questions, feel free to contact us.

Very truly yours,

RAYMOND M. HERTEL
Executive Officer

ATTENTION: Mr. Norwin Schoenerr, Plant Manager

RE: Disposal of Industrial Wastes (CI 5422)

Gentlemen:

Reference is made to Resolution No. 68-4, adopted by this Board on February 21, 1968, which prescribes requirements for the disposal of wastes by your company to Dominguez Channel.

Requirement 1h provides in part that wastes discharged shall not contain any substance in concentrations which would cause the formation of sludge deposits in the Channel.

An inspection of your facilities by this Board's staff with your Mr. Schoenherr on May 11, 1972, disclosed sludge deposits in the Channel at your waste discharge point.

It is requested that you take immediate action to clean up these deposits, to bring the disposal of wastes into compliance with this Board's requirement, to prevent similar occurrences in the future, and to assure that all requirements are complied with at all times.

It is further requested that you provide a written report to this Board by June 8, 1972, of the corrective and preventive measures taken, together with a time schedule of their implementation, and the date the cleanup was completed.

If you have any questions about this matter please contact Mr. Miller Chambers at (213) 620-4460. Your cooperation in water pollution control is appreciated.

Very truly yours,

Raymond M. Hertel

INSPECTOR'S REPORT

TO: Ed Thompson DATE: 6/7/72

FROM: Don H Tallmon FILE: Air Products & Chem. I-5385-22

REPORT:

A follow Up Inspection Was made Today at the above Location. This Was in regard To a Connection from one of the State Boards Field Inspection. This information Was given To me by Mr Tom Otteson.

At todays Inspection I Contacted Mr. Norwin Schoenherr, Plant Manager. He Said that the State Board Inspectors requested that the Company Clean & remove a Coloration on the Rocks of the Bank of Dominguez Channel. This is a Discharge point for their Cooling Tower bleed off, about 10 to 20 gallon per min. It Covers about a 10 Sq ft. area. This Material of the Discoloration is Calcium Carbonate from the Cooling Water. This has occurred over the past 10 yrs once is the first Cleaning.

Mr. Schoenherr has made application

LABORATORY NO. 113163

INVESTIGATION Monitoring of Receiving Water in Dominguez Channel in accordance with requirements of the State of California Los Angeles Regional Water Quality Control Board Number 4, according to Exhibit "A", Resolution No. 68-4, Third Quarter 1972

RESULTS

On August 8, 1972 the receiving water of the one outlet to the Dominguez Channel was monitored at two locations four times during a complete tidal cycle. The sampling locations were two feet below the surface at points fifty feet south and fifty feet north of the discharge, 15 feet out from the West bank. The monitoring was conducted at high tide, mid ebb tide, low tide and mid flood tide to determine pH, temperature and dissolved oxygen.

In addition to the measurements, visual observations were recorded as to conditions outside the immediate vicinity of the discharge point.

The monitoring data and other information are tabulated on the following page.

This report applies only to the sample, or samples, investigated and is not necessarily indicative of the quality or condition of apparently identical or similar products. As a mutual protection to clients, the public and these Laboratories, this report is submitted and accepted for the exclusive use of the client to whom it is addressed and upon the condition that it is not to be used, in whole or in part, in any advertising or publicity matter without prior written authorization from these Laboratories.

Gentlemen:

AIR PRODUCTS AND CHEMICALS, INC. (I-5385)

Our records indicate that your facility is currently discharging to Dominguez Channel under Industrial Waste Disposal Permit No. 3113. To complete our files, please provide us with a current set of site and waste piping plans for all your channel discharges. Please indicate on these plans any flow measuring or recording devices installed.

Your plans should be forwarded to:

Mr. C. G. Brisley, Jr., Division Engineer
Project Planning and Pollution Control Division
Department of County Engineer
9150 East Imperial Highway
Downey, California 90242

Attention Mr. Gordon Marion

Thank you for your cooperation.

Very truly yours,

Harvey T. Brandt
CITY ENGINEER

INVESTIGATION

Monitoring of Receiving Water in Domingues Channel in accordance with requirements of the State of California Los Angeles Regional Water Quality Control Board, Number 4, according to Exhibit "A" Resolution No. 68-4, First Quarter 1973.

RESULTS

On February 13, 1973, the receiving water of the one outlet to the Domingues Channel was monitored at two locations four times during the complete tidal cycle. The sampling locations were two feet below the surface at points fifty feet south and fifty feet north of the discharge, fifteen (15) feet out from the west bank. The monitoring was conducted at high tide, mid ebb tide, low tide and mid flood to determine pH, temperature and dissolved oxygen.

In addition to the measurements, visual observations were recorded as to conditions outside the immediate vicinity of the discharge point.

The monitoring data and other information are tabulated on the following page.

RE: Waste Discharge Requirements (NPDES Permit No. CA0003085)

Gentlemen:

Reference is made to our letter dated October 3, 1974, which transmitted a draft of tentative requirements for your disposal of wastes into Dominguez Channel.

Pursuant to Division 7 of the Water Code of the State of California, this California Regional Water Quality Control Board, at a public hearing held on November 18, 1974, reviewed these tentative requirements, considered all factors in the case, and adopted Order No. 74-344 (copy attached) relative to this waste discharge.

Please note the revision of the effluent limitation for phenols on page 2 of the Order, as adopted. The concentration limits for settleable solids as presented in the tentative requirements were not changed, as these are consistent with those adopted for other similar discharges. Any request for changing these limits must be substantiated by data supporting the request.

This Order serves as a permit under the National Pollutant Discharge Elimination System, and expires July 31, 1978. Please note that you must file an application for a new permit at least 180 days in advance of that date.

Your attention is directed to the provision in the Monitoring and Reporting Program (copy attached) which requires you to submit a technical report to this Board no later than 30 days after receipt of this permit relative to the operation and maintenance of of the waste disposal facility. You are also required to implement the monitoring program as stated in the Monitoring and Reporting Program within 60 days of the effective date of this Order. Your first monitoring report is due by April 15, 1975. Please reference all technical and monitoring reports to our Compliance File No. 5422.

Very truly yours,

ORDER NO. 74-344

NPDES NO. CA0003085

WASTE DISCHARGE REQUIREMENTS FOR AIR PRODUCTS AND CHEMICALS, INC.

The California Regional Water Quality Control Board, Los Angeles Region, finds:

1. Air Products and Chemicals, Inc., has filed a report of waste discharge and has applied for a permit to discharge wastes under the National Pollutant Discharge Elimination System.

2. Air Products and Chemicals, Inc., operates a liquid hydrogen production plant at 23320 South Alameda Street, Carson, California, and discharges up to 56,000 gallons per day of wastes consisting of cooling tower bleed-off, boiler blowdown, and wash water from concrete-paved operating areas directly into Dominguez Channel, a water of the United States, near Sepulveda Boulevard, within the tidal prism.

3. Air Products and Chemicals, Inc., is operating under requirements adopted by this Board on February 21, 1968, (Resolution No. 68-4)

4. The Board adopted an Interim Water Quality Control Plan for Santa Clara and Los Angeles River Basins on June 10, 1971, and updated that Plan on December 13, 1972. The Interim Plan contains water quality objectives for Dominguez Channel tidal prism.

5. The beneficial uses of the receiving waters are: non-water-contact recreation and marine habitat.

6. Effluent limitation standards established pursuant to Section 301 of the Federal Water Pollution Control Act and amendments thereto are applicable to the discharge.

The Board has notified the discharger and interested agencies and persons of its intent to prescribe waste discharge requirements for this discharge and has provided them with an opportunity to submit their written views and recommendations.

The Board in a public hearing heard and considered all comments pertaining to the discharge and to the tentative requirements.

This Order shall serve as a National Pollutant Discharge Elimination System permit pursuant to Section 402 of the Federal Water Pollution Control Act, or amendments thereto, and shall take effect at the end of ten days from the date of its adoption, provided the Regional Administrator, EPA, has no objections.

IT IS HEREBY ORDERED, that Air Products and Chemicals, Inc.,

in order to meet the provisions contained in Division 7 of the California Water Code and regulations adopted thereunder, and the provisions of the Federal Water Pollution Control Act and regulations and guidelines adopted thereunder, shall comply with the following:

A. Effluent Limitations

1. Wastes discharged shall be limited to cooling tower bleed-off, boiler blowdown, and floor wash water, as proposed.

2. The discharge of an effluent in excess of the following limits is prohibited:

	Discharge Rate (lbs/day)		Concentration Limit (mg/l)	
Constituent	Maximum Daily	30-Day Average	Average	Maximum
Suspended solids	35	23.4	50	75
Settleable solids	--	----	0.1*	0.2*
COD	30	30	---	---
Oil and grease	7.0	4.67	10	15
Total chromium	4.67×10^{-3}	2.34×10^{-3}	0.005	0.01
Phenols	0.093	0.047	0.1	0.2

* In ml/l

3. The daily discharge rate shall be obtained from the following calculation for any calendar day:

$$\text{Daily discharge rate} = \frac{8.34}{N} \sum_{1}^{N} Q_i \, C_i$$

in which N is the number of samples analyzed in any calendar day. Q_i and C_i are the flow rate (MGD) and the constituent concentration (mg/l) respectively, which are associated with each of the N grab samples which may be taken in any calendar day. If a composite sample is taken, C_i is the concentration measured in the composite sample and Q_i is the average flow rate occurring during the period over which samples are composited.

4. The 30-day average discharge rate shall be the arithmetic average of all the values of daily discharge rate calculated using the results of analyses of all samples collected during any 30 consecutive calendar day period. If fewer than four samples are collected and analyzed during any 30 consecutive calendar day period, compliance with the 30-day average rate limitation shall not be determined.

5. The pH of wastes discharged shall at all times be within the range 6.5 to 9.0.

6. The temperature of wastes discharged shall not exceed 100°F.

7. Wastes discharged shall not contain visible oil or grease, and shall not cause the appearance of grease, oil or oily slick, or foam in the receiving waters or on channel banks, walls, inverts or other structures.

8. Wastes discharged shall not cause the formation of sludge deposits.

9. Neither the disposal nor any handling of waste shall cause pollution or nuisance.

10. Wastes discharged shall not damage flood control structures or facilities.

11. This discharge shall not cause a violation of any applicable water quality standard for receiving waters adopted by the Regional Board or the State Water Resources Control Board as required by the Federal Water Pollution Control Act and regulations adopted thereunder. If more stringent applicable water quality standards are promulgated or approved pursuant to Section 303 of the Federal Water Pollution Control Act, or amendments thereto, the Board will revise and modify this Order in accordance with such more stringent standards.

12. The discharge of wastes shall not cause the presence of nutrients in concentrations which would result in undue proliferation of plankton or other undesirable biotic growth.

B. Provisions

1. This Order includes the following items of the attached "Standard Provisions": 1, 2, 4, 5, 6, 7, 8, 9, 10 and 11.

2. This Order includes the following items of the attached "Reporting Requirements": 1, 5, and 8.

3. This Order includes the attached "General Monitoring and Reporting Provisions."

4. This Order expires on July 31, 1978, and the discharger must file a Report of Waste Discharge in accordance with Title 23, California Administrative Code, not later than 180 days in advance of such date as application for issuance of new waste discharge requirements.

5. A copy of these waste discharge specifications shall be maintained at the discharge facility so as to be available at all times to operating personnel.

6. In the event of any change in name, ownership, or control of these waste disposal facilities, the discharger shall notify this Board of such change and shall notify the succeeding owner or operator of the existence of this Order by letter, copy of which shall be forwarded to the Board.

7. Any discharge of wastes at any point(s) other than specifically described in this permit is prohibited, and constitutes a violation of the permit.

8. Resolution No. 68-4, adopted by this Board on February 21, 1968, is hereby rescinded.

I, Raymond M. Hertel, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, Los Angeles Region, on November 18, 1974.

Raymond M. Hertel

RAYMOND M. HERTEL, Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD

LOS ANGELES REGION

STANDARD PROVISIONS

1. The requirements prescribed herein do not authorize the commission of any act causing injury to the property of another, nor protect the discharger from his liabilities under federal, state, or local laws, nor guarantee the discharger a capacity right in the receiving waters.

2. The discharge of any radiological, chemical, or biological warfare agent or high level radiological waste is prohibited.

3. The discharger shall require any industrial user of the treatment works to comply with applicable service charges and toxic and pretreatment standards promulgated in accordance with Sections 204(b), 307, and 308 of the Federal Water Pollution Control Act or amendments thereto. The discharger shall require each individual user to submit periodic notice (over intervals not to exceed nine months) of progress toward compliance with applicable toxic and pretreatment standards developed pursuant to the Federal Water Pollution Control Act or amendments thereto. The discharger shall forward a copy of such notice to the Board and the Regional Administrator.

4. The discharger shall permit the Regional Board:

   (a) Entry upon premises in which an effluent source is located or in which any required records are kept;

   (b) Access to copy any records required to be kept under terms and conditions of this Order;

   (c) Inspection of monitoring equipment or records, and

   (d) Sampling of any discharge.

5. All discharges authorized by this Order shall be consistent with the terms and conditions of this Order. The discharge of any pollutant more frequently than or at a level in excess of that identified and authorized by this Order shall constitute a violation of the terms and conditions of this Order.

6. The discharger shall maintain in good working order and operate as efficiently as possible any facility or control system installed by the discharger to achieve compliance with the waste discharge requirements.

7. Collected screenings, sludges, and other solids removed from liquid wastes shall be disposed of at a legal point of disposal, and in accordance with the provisions of Division 7.5 of the California Water Code. For the purpose of this requirement, a legal point of disposal is defined as one for which waste discharge requirements have been prescribed by a regional water quality control board and which is in full compliance therewith.

8. After notice and opportunity for a hearing, this Order may be terminated or modified for cause, including, but not limited to:

   (a) Violation of any term or condition contained in this Order;

   (b) Obtaining this Order by misrepresentation, or failure to disclose all relevant facts;

   (c) A change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge.

9. If a toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is established under Section 307(a) of the Federal Water Pollution Control Act, or amendments thereto, for a toxic pollutant which is present in the discharge authorized herein and such standard or prohibition is more stringent than any limitation upon such pollutant in this Order, the Board will revise or modify this Order in accordance with such toxic effluent standard or prohibition and so notify the discharger.

10. There shall be no discharge of harmful quantities of oil or hazardous substances, as specified by regulation adopted pursuant to Section 311 of the Federal Water Pollution Control Act, or amendments thereto.

11. In the event the discharger is unable to comply with any of the conditions of this Order due to:

   (a) breakdown of waste treatment equipment;

   (b) accidents caused by human error or negligence; or

   (c) other causes such as acts of nature,

   the discharger shall notify the Executive Officer by telephone as soon as he or his agents have knowledge of the incident and confirm this notification in writing within two weeks of the telephone notification. The written notification shall include pertinent information explaining reasons for the non-compliance and shall indicate what steps were taken to correct the problem and the dates thereof, and what steps are being taken to prevent the problem from recurring.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD

LOS ANGELES REGION

REPORTING REQUIREMENTS

1. The discharger shall file with the Board technical reports on self-monitoring work performed according to the detailed specifications contained in any Monitoring and Reporting Programs as directed by the Executive Officer.

2. The discharger shall file a written report with the Board within 90 days after the average dry-weather waste flow for any month equals or exceeds 75 percent of the design capacity of his waste treatment and/or disposal facilities. The discharger's senior administrative officer shall sign a letter which transmits that report and certifies that the policy-making body is adequately informed about it. The report shall include:

   Average daily flow for the month, the date on which the instantaneous peak flow occurred, the rate of that peak flow, and the total flow for that day.

   The discharger's best estimate of when the average daily dry-weather flow rate will equal or exceed the design capacity of his facilities.

   The discharger's intended schedule for studies, design, and other steps needed to provide additional capacity for his waste treatment and/or disposal facilities before the waste flow rate equals the capacity of present units. (Reference: Sections 13260, 13267(b), and 13268, California Water Code.)

3. The discharger shall notify the Board not later than 120 days in advance of implementation of any plans to alter production capacity of the product line of the manufacturing, producing or processing facility by more than ten percent. Such notification shall include estimates of proposed production rate, the type of process, and projected effects on effluent quality. Notification shall include submittal of a new report of waste discharge and appropriate filing fee.

4. The discharger shall notify the Board of (a) new introduction into such works of pollutants from a source which would be a new source as defined in Section 306 of the Federal Water Pollution Control Act, or amendments thereto, if such source were discharging pollutants to the waters of the United States, (b) new introductions of pollutants into such works from a source which would be subject to Section 301 of the Federal Water Pollution Control Act, or amendments thereto, if it were discharging such pollutants to the waters of the United States, (c) a substantial change in the volume or character of pollutants being introduced into such works by a source introducing pollutants into such works at the time the waste discharge requirements were adopted. Notice shall include a description of the quantity and quality of pollutants and the impact of such change on the quantity and quality of effluent from such publicly owned treatment works. A substantial change in volume is considered an increase of ten percent in the mean dry-weather flow rate. The discharger shall forward a copy of such notice directly to the Regional Administrator.

5. The discharger shall file with the Board a report on waste discharge at least 120 days before making any material change or proposed change in the character, location or volume of the discharge.

6. This Board requires the discharger to file with the Board, within 90 days after the effective date of this Order, a technical report on his preventive (fail-safe) and contingency (cleanup) plans for controlling accidental discharges, and for minimizing the effect of such events. The technical report should:

   Identify the possible sources of accidental loss, untreated waste bypass, and contaminated drainage. Loading and storage areas, power outage, waste treatment unit outage, and failure of process equipment, tanks and pipes should be considered.

   Evaluate the effectiveness of present facilities and procedures and state when they became operational.

   Describe facilities and procedures needed for effective preventive and contingency plans.

   Predict the effectiveness of the proposed facilities and procedures and provide an implementation schedule containing interim and final dates when they will be constructed, implemented, or operational. (Reference: Sections 13267(b) and 13268, California Water Code.

   This Board, after review of the technical report, may establish conditions which it deems necessary to control accidental discharges and to minimize the effects of such events. Such conditions may be incorporated as part of this Order, upon notice to the discharger.

7. The discharger shall submit to the Board, by January 30 of each year, an annual summary of the quantities of all chemicals, listed by both trade and chemical names, which are used for cooling and/or boiler water treatment and which are discharged.

8. The discharger shall submit to the Board, together with the first monitoring report required by this permit, a list of all chemicals and proprietary additives which could affect this waste discharge, including quantities of each. Any subsequent changes in types and/or quantities shall be reported promptly.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD

LOS ANGELES REGION

GENERAL MONITORING AND REPORTING PROVISIONS

GENERAL PROVISIONS FOR SAMPLING AND ANALYSIS

Unless otherwise noted, all sampling, sample preservation, and analyses shall be conducted in accordance with the current edition of "Standard Methods for the Examination of Water and Wastewater" or as approved by the Executive Officer.

All analyses shall be performed in a laboratory approved by the Executive Officer.

Effluent samples shall be taken downstream of any addition to the treatment works and prior to mixing with the receiving waters.

The discharger shall calibrate and perform maintenance procedures on all monitoring instruments and equipment to insure accuracy of measurements, or shall insure that both activities will be conducted.

A grab sample is defined as an individual sample collected in fewer than 15 minutes.

A composite sample is defined as a combination of no fewer than eight individual samples obtained over the specified sampling period. The volume of each individual sample is proportional to the discharge flow rate at the time of sampling. The sampling period shall equal the discharge period, or 24 hours, whichever period is shorter.

GENERAL PROVISIONS FOR REPORTING

For every item where the requirements are not met, the discharger shall submit a statement of the actions undertaken or proposed which will bring the discharge into full compliance with requirements at the earliest time and submit a timetable for correction.

By January 30 of each year, the discharger shall submit an annual report to the Board. The report shall contain both tabular and graphical summaries of the monitoring data obtained during the previous year. In addition, the discharger shall discuss the compliance record and the corrective actions taken or planned which may be needed to bring the discharge into full compliance with the waste discharge requirements.

The discharger shall maintain all sampling and analytical results, including strip charts; date, exact place, and time of sampling; date analyses were performed; analyst's name; analytical techniques used; and results of all analyses. Such records shall be retained for a minimum of three years. This period of retention shall be extended during the course of any unresolved litigation regarding this discharge or when requested by the Board.

Monitoring reports shall be signed by:

a. In the case of corporations, by a principal executive officer at least of the level of vice-president or his duly authorized representative, if such representative is responsible for the overall operation of the facility from which discharge originates;

b. In the case of a partnership, by a general partner;

c. In the case of a sole proprietorship, by the proprietor;

d. In the case of municipal, state or other public facility, by either a principal executive officer, ranking elected official, or other duly authorized employee.

The discharger shall mail a copy of each monitoring report to:

Regional Administrator
Environmental Protection Agency
Region IX
100 California Street
San Francisco, CA 94111

Each report shall contain the following completed declaration:

"I declare under penalty of perjury that the foregoing is true and correct.

Executed on the _____day of _____ at _____.

_____(Signature)

_____(Title)"

In reporting the monitoring data, the discharger shall arrange the data in tabular form so that the date, the constituents, and the concentrations are readily discernible. The data shall be summarized to demonstrate compliance with waste discharge requirements, and, where applicable, shall include results of receiving water observations.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION
MONITORING AND REPORTING PROGRAM NO. 5422
FOR
AIR PRODUCTS AND CHEMICALS, INC.
(CA0003085)

The discharger shall implement this monitoring program within 60 days of the effective date of this Order. The first monitoring report under this program is due by April 15, 1975.

Monitoring reports shall be submitted by the dates in the following schedule:

Reporting Period	Report Due
January - March	April 15
April - June	July 15
July - September	October 15
October - December	January 15

If no flow occurred during the quarter the report shall so state.

Effluent Monitoring

A sampling station shall be established for each point of discharge and shall be located where representative samples of that effluent can be obtained. The following shall constitute the effluent monitoring program:

Constituent	Units	Type of Sample	Minimum Frequency of Analysis
pH	pH units	grab	quarterly
Temperature	^{o}F	grab	monthly
Total waste flow	gal/day	----	monthly
Suspended solids	mg/l	grab	quarterly
Settleable solids	ml/l	grab	quarterly
COD	lbs/day	grab	quarterly
Oil and grease*	mg/l	grab	quarterly
Total chromium**	mg/l	grab	quarterly
Phenols	mg/l	grab	quarterly
Sulfide	mg/l	grab	quarterly

* By the trichlorotrifluoroethane extraction method.

** A statement certifying that no chromium compounds were used during the reporting period may be submitted in lieu of this analysis.

Operation and Maintenance Report

The discharger shall file a technical report with this Board not later than 30 days after receipt of this permit, relative to the operation and maintenance program for this waste disposal facility. The information to be contained in that report shall include, as a minimum, the following:

a. The name and address of the person or company responsible for operation and maintenance of the facility.

b. Type of maintenance (preventive or corrective).

c. Frequency of maintenance, if preventive.

RE: Tentative Waste Discharge Requirements (NPDES Permit No. CA0003085)

Gentlemen:

Reference is made to your completed application to this Board for a permit to discharge wastes under the National Pollutant Discharge Elimination System (NPDES).

Pursuant to the Federal Water Pollution Control Act, as amended in 1977, and in accordance with the California Administrative Code, tentative waste discharge requirements have been prepared.

Enclosed are copies of the tentative requirements, consisting of:

a. Board Order
b. Standard Provisions
c. Reporting Requirements
d. General Monitoring and Reporting Provisions
e. Monitoring and Reporting Program

In accordance with administrative procedures, this Board at a public hearing to be held on July 25, 1983, at 10:00 a.m., 107 South Broadway, Room 1138, Los Angeles, California, will consider the enclosed tentative requirements and comments submitted in writing regarding any or all portions thereof. The Board will hear any testimony pertinent to this discharge and the tentative requirements. It is expected that the Board will take action at the hearing; however, as testimony indicates, the Board at its discretion may order further investigation.

Any comments that any person has with respect to this tentative Order must be received by July 11, 1983, in order to be included in the Board's agenda folder. However, comments received after that date will still be considered by this Board.

If you have any questions, please call us.

Very truly yours,

Lawrence A. Thyerson
for RAYMOND M. HERTEL
Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION

ORDER NO. _____

NPDES NO. CA0003085

WASTE DISCHARGE REQUIREMENTS
FOR
AIR PRODUCTS AND CHEMICALS, INC.

The California Regional Water Quality Control Board, Los Angeles Region, finds:

1. Air Products and Chemicals, Inc. discharges wastes under waste discharge requirements contained in Order 78-53 (NPDES No. CA0003085) adopted by this Board on May 22, 1978.

2. Air Products and Chemicals, Inc. has filed a report of waste discharge and has applied for renewal of its waste discharge requirements and National Pollutant Discharge Elimination System permit.

3. Air Products and Chemicals, Inc. operates a liquid hydrogen production plant at 23320 South Alameda Street, Carson, California, and discharges up to 50,000 gallons per day of cooling tower bleed-off, boiler blowdown, and wash water from concrete-paved operating areas directly into Dominguez Channel, a water of the United States, at a point about 1,500 feet downstream from Alameda Street, within the Fidal prism.

4. The Board adopted a revised Water Quality Control Plan for Los Angeles River Basin on March 27, 1978. The Plan contains water quality objectives for Dominguez Channel. The requirements contained in this Order as they are met will be in conformance with the goals of Water Quality Control Plan.

5. The beneficial uses of the receiving waters are non-contact recreation, preservation of rare and endangered species, marine habitat and saline water habitat.

6. Effluent limitation standards established pursuant to Section 301 of the Federal Water Pollution Control Act and amendments thereto are applicable to the discharge.

7. The issuance of waste discharge requirements for this discharge is exempt from the provisions of Chapter 3 (commencing with Section 21100) of the Division 13, of the Public Resources Code in accordance with Water Code Section 13389.

TENTATIVE

The Board has notified the discharger and interested agencies and persons of its intent to prescribe waste discharge requirements for this discharge and has provided them with an opportunity to submit their written views and recommendations.

The Board in a public hearing heard and considered all comments pertaining to the discharge and to the tentative requirements.

This Order shall serve as a National Pollutant Discharge Elimination System permit pursuant to Section 402 of the Federal Water Pollution Control Act, or amendments thereto, and shall take effect at the end of ten days from the date of its adoption, provided the Regional Administrator, EPA, has no objections.

IT IS HEREBY ORDERED, that Air Products and Chemicals, Inc.,

in order to meet the provisions contained in Division 7 of the California Water Code and regulations adopted thereunder, and the provisions of the Federal Water Pollution Control Act and regulations and guidelines adopted thereunder, shall comply with the following:

A. Effluent Limitations

1. The discharge of an effluent in excess of the following limits is prohibited:

		Discharge Limitations	
Constituent	Unit	30-Day Average	Maximum
Suspended solids	mg/l	50	150
	lbs/day*	20.85	62.6
Settleable solids	ml/l	0.1	0.3
COD			
	lbs/day*	30.0	30.0
Oil and grease	mg/l	10	15
	lbs/day*	4.17	6.26
Residual chlorine	mg/l	-	0.1

*Based on discharge flow of 50,000 gallons per day.

TENTATIVE

3. The daily discharge rate shall be obtained from the following calculation for any calendar day:

$$\text{Daily discharge rate} = \frac{8.34}{N} \sum_{1}^{N} Q_i C_i$$

in which N is the number of samples analyzed in any calendar day. Q_i and C_i are the flow rate (MGD) and the constituent concentration (mg/l) respectively, which are associated with each of the N grab samples which may be taken in any calendar day. If a composite sample is taken, C_i is the concentration measured in the composite sample and Q_i is the average flow rate occurring during the period over which samples are composited.

4. The 30-day average shall be the arithmetic average of all the daily values calculated using the results of analyses of all samples collected during any 30 consecutive calendar day period. If fewer than four samples are collected and analyzed during any 30 consecutive calendar day period, compliance with the 30-day average limitation shall not be determined.

5. The pH of wastes discharged shall at all times be within the range 6.0 to 9.0.

6. The temperature of wastes discharged shall not exceed 100°F.

7. Wastes discharged shall not contain visible oil or grease, and shall not cause the appearance of grease, oil or oily slick, or persistent foam in the receiving waters or on channel banks, walls, inverts or other structures.

8. Wastes discharged shall not cause the formation of sludge deposits.

9. Neither the disposal nor any handling of waste shall cause pollution or nuisance.

10. Wastes discharged shall not damage flood control structures or facilities.

11. This discharge shall not cause a violation of any applicable water quality standard for receiving waters adopted by the Regional Board or the State Water Resources Control Board as required by the Federal Water Pollution Control Act and regulations adopted thereunder. If more stringent applicable water quality standards are promulgated or approved pursuant to Section 303 of the Federal Water Pollution Control Act, or amendments thereto, the Board will revise and modify this Order in accordance with such more stringent standards.

12. Wastes discharged shall not contain any substances in concentrations toxic to human, animal, plant, or aquatic life.

13. Petroleum products, chemicals, and refuse and other wastes shall not be stored or placed where they will be picked up by rainfall and discharged to surface waters.

TENTATIVE

B. Provisions

1. This Order includes the following items of the attached "Standard Provisions": 1,2,4,5,6,7,8,9, and 11.

2. This Order includes the following items of the attached "Reporting Requirements": 1,5 and 8.

3. This Order includes the attached "General Monitoring and Reporting Provisions."

4. This Order expires on July 10, 1988, and the discharger must file a Report of Waste Discharge in accordance with Title 23, California Administrative Code, not later than 180 days in advance of such date as application for issuance of new waste discharge requirements.

5. A copy of these waste discharge specifications shall be maintained at the discharge facility so as to be available at all times to operating personnel.

6. In the event of any change in name, ownership, or control of these waste disposal facilities, the discharger shall notify this Board of such change and shall notify the succeeding owner or operator of the existence of this Order by letter, copy of which shall be forwarded to the Board.

7. Any discharge of wastes at any point(s) other than specifically described in this permit is prohibited, and constitutes a violation of the permit.

8. This order may be modified, or, alternatively, revoked and reissued, to comply with any applicable effluent limitation issued pursuant to the order the United States District Court for the District of Columbia issued on June 8, 1976, in Natural Resources Defense Council, Inc. et al. v. Russell E. Train, 8 ERC 2120 (D.D.C. 1976), if the effluent limitation so issued:

   (1) is different in conditions or more stringent than any effluent limitation in this order; or

   (2) controls any pollutant not limited in this order.

9. These requirements do not exempt the operator of this waste disposal facility from compliance with any other laws, regulations, or ordinances which may be applicable; they do not legalize this waste disposal facility, and they leave unaffected any further restraint on the disposal of wastes at this site which may be contained in other statutes or required by other agencies.

10. Order No. 78-53 adopted by this Board on May 22, 1978, is hereby rescinded.

TENTATIVE

TENTATIVE

I, Raymond M. Hertel, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, Los Angeles Region, on July 25, 1983.

RAYMOND M. HERTEL, Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD

LOS ANGELES REGION

STANDARD PROVISIONS

CA 0003085

TENTATIVE

1. The requirements prescribed herein do not authorize the commission of any act causing injury to the property of another, nor protect the discharger from his liabilities under federal, state, or local laws, nor guarantee the discharger a capacity right in the receiving waters.

2. The discharge of any radiological, chemical, or biological warfare agent or high level radiological waste is prohibited.

3. The discharger shall require any industrial user of the treatment works to comply with applicable service charges and toxic and pretreatment standards promulgated in accordance with Sections 204(b), 307, and 308 of the Federal Water Pollution Control Act or amendments thereto. The discharger shall require each individual user to submit periodic notice (over intervals not to exceed nine months) of progress toward compliance with applicable toxic and pretreatment standards developed pursuant to the Federal Water Pollution Control Act or amendments thereto. The discharger shall forward a copy of such notice to the Board and the Regional Administrator.

4. The discharger shall permit the Regional Board:

   (a) Entry upon premises in which an effluent source is located or in which any required records are kept;

   (b) Access to copy any records required to be kept under terms and conditions of this Order;

   (c) Inspection of monitoring equipment or records, and

   (d) Sampling of any discharge.

5. All discharges authorized by this Order shall be consistent with the terms and conditions of this Order. The discharge of any pollutant more frequently than or at a level in excess of that identified and authorized by this Order shall constitute a violation of the terms and conditions of this Order.

6. The discharger shall maintain in good working order and operate as efficiently as possible any facility or control system installed by the discharger to achieve compliance with the waste discharge requirements.

7. Collected screening, sludges, and other solids removed from liquid wastes shall be disposed of at a legal point of disposal, and in accordance with the provisions of Division 7.5 of the California Water Code. For the purpose of this requirement, a legal point of disposal is defined as one for which waste discharge requirements have been prescribed by a regional water quality control board and which is in full compliance therewith.

8. After notice and opportunity for a hearing, this Order may be terminated or modified for cause, including, but not limited to:

   (a) Violation of any term or condition contained in this Order;

   (b) Obtaining this Order by misrepresentation, or failure to disclose all relevant facts;

   (c) A change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge.

9. If a toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standards or prohibition) is established under Section 307(a) of the Federal Water Pollution Control Act, or amendments thereto, for a toxic pollutant which is present in the discharge authorized herein and such standard or prohibition is more stringent than any limitation upon such pollutant in this Order, the Board will revise or modify this Order in accordance with such toxic effluent standard or prohibition and so notify the discharger.

10. There shall be no discharge of harmful quantities of oil or hazardous substances, as specified by regulation adopted pursuant to Section 311 of the Federal Water Pollution Control Act, or amendments thereto.

11. In the event the discharger is unable to comply with any of the conditions of this Order due to:

   (a) breakdown of waste treatment equipment;

   (b) accidents caused by human error or negligence; or

   (c) other causes such as acts of nature,

   the discharger shall notify the Executive Officer by telephone as soon as he or his agents have knowledge of the incident and confirm this notification in writing within two weeks of the telephone notification. The written notification shall include pertinent information explaining reasons for the non-compliance and shall indicate what steps were taken to correct the problem and the dates thereof, and what steps are being taken to prevent the problem from recurring.

12. Supervisors and operators of publicly owned wastewater treatment plants shall possess a certificate of appropriate grade in accordance with regulations adopted by the State Water Resources Control Board.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD

LOS ANGELES REGION

CA 0003085

REPORTING REQUIREMENTS

1. The discharger shall file with the Board technical reports on self-monitoring work performed according to the detailed specifications contained in any Monitoring and Reporting Programs as directed by the Executive Officer.

2. The discharger shall file a written report with the Board within 90 days after the average dry-weather waste flow for any month equals or exceeds 75 percent of the design capacity of his waste treatment and/or disposal facilities. The discharger's senior administrative officer shall sign a letter which transmits that report and certifies that the policy-making body is adequately informed about it. The report shall include:

   Average daily flow for the month, the date on which the instantantaneous peak flow occurred, the rate of that peak flow, and the total flow for that day.

   The discharger's best estimate of when the average daily dry-weather flow rate will equal or exceed the design capacity of his facilities.

   The discharger's intended schedule for studies, design, and other steps needed to provide additional capacity for his waste treatment and/or disposal facilities before the waste flow rate equals the capacity of present units. (Reference: Sections 13260, 13267(b), and 13268, California Water Code).

3. The discharger shall notify the Board not later than 120 days in advance of implementation of any plans to alter production capacity of the product line of the manufacturing, producing or processing facility by more than ten percent. Such notification shall include estimates of proposed production rate, the type of process, and projected effects on effluent quality. Notification shall include submittal of a new report of waste discharge and appropriate filing fee.

4. The discharger shall notify the Board of (a) new introduction into such works of pollutants from a source which would be a new source as defined in Section 306 of the Federal Water Pollution Control Act, or amendments thereto, if such source were discharging pollutants to the waters of the United States, (b) new introductions of pollutantsinto such works from a source which would be subject to Section 301 of the Federal Water Pollution Control Act, or amendments thereto, if substantial change in the volume or character of pollutants being introduced into such works by a source introducing pollutants into such works at the time the waste discharge requirements were adopted. Notice shall include a description of the quantity and quality of pollutants and the impact of such change on the substantial change in volume is considered an increase of ten percent in the mean dry-weather flow rate. The discharger shall forward a copy of such notice directly to the Regional Administrator.

5. The discharger shall file with the Board a report on waste discharge at least 120 days before making any material change or proposed change in the character, location or volume of the discharge.

6. This Board requires the discharger to file with the Board, within 90 days after the effective date of this Order, a technical report on his preventive (failsafe) and contingency (cleanup) plans for controlling accidental discharges, and for minimizing the effect of such events. The technical report should:

   Identify the possible sources of accidental loss, untreated waste bypass, and contaminated drainage. Loading and storage areas, power outage, waste treatment unit outage, and failure of process equipment, tanks and pipes should be considered.

   Evalulate the effectiveness of present facilities and procedures and state when they became operational.

   Describe facilities and procedures needed for effective preventive and contingency plans.

   Predict the effectiveness of the proposed facilities and procedures and provide an implementation schedule containing interim and final dates when they will be constructed, implemented, or operational. (Reference: Sections 13267(b) and 13268, California Water Code.

   This Board, after review of the technical report, may establish conditions which it deems necessary to control accidental discharges and to minimize the effects of such events. Such conditions may be incorporated as part of this Order, upon notice to the discharger.

7. The discharger shall submit to the Board, by January 30 of each year, an annual summary of the quantities of all chemicals, listed by both trade and chemical names, which are used for cooling and/or boiler water treatment and which are discharged.

8. The discharger shall submit to the Board, together with the first monitoring report required by this permit, a list of all chemicals and proprietary additives which could affect this waste discharge, including quantities of each. Any subsequent changes in types and/or quantities shall be reported promptly.

CA 0003085

TENTATIVE

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION

GENERAL MONITORING AND REPORTING PROVISIONS

GENERAL PROVISIONS FOR SAMPLING AND ANALYSIS

All sampling, sample preservation, and analyses shall be performed in accordance with the latest edition of "Guidelines Establishing Test Procedures for Analysis of Pollutants", promulgated by the United States Environmental Protection Agency.

All chemical, bacteriological, and bioassay analyses shall be conducted at a laboratory certified for such analyses by the State Department of Health.

Effluent samples shall be taken downstream of any addition to the treatment works and prior to mixing with the receiving waters.

The discharger shall calibrate and perform maintenance procedures on all monitoring instruments and equipment to insure accuracy of measurements, or shall insure that both activities will be conducted.

A grab sample is defined as an individual sample collected in fewer than 15 minutes.

A composite sample is defined as a combination of no fewer than eight individual samples obtained over the specified sampling period. The volume of each individual sample is proportional to the discharge flow rate at the time of sampling. The sampling period shall equal the discharge period, or 24 hours, whichever period is shorter.

GENERAL PROVISIONS FOR REPORTING

For every item where the requirements are not met, the discharger shall submit a statement of the actions undertaken or proposed which will bring the discharge into full compliance with requirements at the earliest time and submit a timetable for correction.

By January 30 of each year, the discharger shall submit an annual report to the Board. The report shall contain both tabular and graphical summaries of the monitoring data obtained during the previous year. In addition, the discharger shall discuss the compliance record and the corrective actions taken or planned which may be needed to bring the discharge into full compliance with the waste discharge requirements.

The discharger shall maintain all sampling and analytical results, including strip charts; date, exact place, and time of sampling; date analyses were performed; analyst's name; analytical techniques used; and results of all analyses. Such records shall be retained for a minimum of three years. This period of retention shall be extended during the course of any unresolved litigation regarding this discharge or when requested by the Board.

(Revised 8/1/75)

TENTATIVE

In reporting the monitoring data, the discharger shall arrange the data in tabular form so that the date, the constituents, and the concentrations are readily discernible. The data shall be summarized to demonstrate compliance with waste discharge requirements and, where applicable, shall include results of receiving water observations.

Monitoring reports shall be signed by:

a. In the case of corporations, by a principal executive officer at least of the level of vice-president or his duly authorized representative, if such representative is responsible for the overall operation of the facility from which discharge originates;

b. In the case of a partnership, by a general partner;

c. In the case of a sole proprietorship, by the proprietor;

d. In the case of municipal, state or other public facility, by either a principal executive officer, ranking elected official, or other duly authorized employee.

Each report shall contain the following completed declaration:

"I declare under penalty of perjury that the foregoing is true and correct.

Executed on the _____ day of _____ at _____

_____(Signature)

_____(Title)"

The discharger shall mail a copy of each monitoring report to the following:

California Regional Water Quality
Control Board - Los Angeles Region
107 South Broadway, Room 4027
Los Angeles, CA 90012

ATTN: Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION
MONITORING AND REPORTING PROGRAM NO. 5422

FOR

AIR PRODUCTS AND CHEMICALS, INC.
(CA0003085)

The discharger shall implement this monitoring program on the effective date of this Order. The first monitoring report under this program is due by July 15, 1983.

Monitoring reports shall be submitted by the dates in the following schedule:

Reporting Period	Report Due
January - March	April 15
April - June	July 15
July - September	October 15
October - December	January 15

If no flow occurred during the quarter the report shall so state.

Each monitoring report must affirm in writing that:

> All analyses were conducted at a laboratory certified for such analyses by the State Department of Health and in accordance with current EPA guideline procedures or as specified in the Monitoring Program.

For any analysis performed for which no procedure is specified in the EPA guidelines or in this Monitoring Program, the constituent or parameter analyzed and the method or procedure used must be specified in the report.

TENTATIVE

Effluent Monitoring

A sampling station shall be established for each point of discharge and shall be located where representative samples of that effluent can be obtained. The following shall constitute the effluent monitoring program:

Constituent	Units	Type of Sample	Minimum Frequency of Analysis
pH	pH units	grab	quarterly
Temperature	°F or °C	grab	monthly
Total waste flow	gal/day	----	monthly
Suspended solids	mg/l	grab	quarterly
Settleable solids	ml/l	grab	quarterly
COD	lbs/day	grab	quarterly
Oil and grease	mg/l	grab	quarterly
Residual Chlorine*	mg/l	grab	quarterly
Zinc	mg/l	grab	quarterly

* A statement that this constituent has not been added to the system may be submitted in lieu of analysis.

Demonstration of Compliance with 30-day Average Limitations

For parameters where both 30-day average and maximum limits are specified but where the monitoring frequency is less than four times a month, the following procedure shall apply. Future analyses of two successive samples yield results greater than 90% of the maximum limit for a parameter, the sampling frequency for that parameter shall be increased (within one week of receiving the laboratory result on the second sample) to a minimum of once weekly until at least four consecutive weekly samples have been obtained and compliance with the 30-day average limit has been demonstrated again and the discharger has set forth for the approval of the Executive Officer a program which ensures future compliance with the 30-day average limit.

TENTATIVE

Hauling Reports

In the event wastes are transported to a different disposal site during the reporting period, the following shall be reported.

a. Types of wastes and quantity of each type;

b. Name and either the address or the state registration number for each hauler of wastes (or the methods of transport if other than by hauling); and

c. Location of the final points of disposal for each type of waste.

If no wastes are hauled offsite during the reporting period, a statement to that effect shall be submitted.

RE: Tentative Waste Discharge Requirements
(NPDES Permit No. CA0003085)

Gentlemen:

Reference is made to our letter dated June 24, 1983, which transmitted a draft of tentative requirements for your disposal of wastes to Dominguez Channel and informed you that the Board would consider the requirements at its July 25, 1983, public hearing.

At that hearing, the Board continued the consideration of your tentative requirements to a future Board hearing. You will be sent a copy of the agenda notice prior to that hearing.

If you have any questions, please call us.

Very truly yours,

Raymond M. Hertel

RE: Waste Discharge Requirements - (NPDES No. CA0003085)

Gentlemen:

Reference is made to our letter dated June 24, 1983, which transmitted a draft of tentative requirements for your disposal of wastes to Dominguez Channel. Our letter dated August 1, 1983, informed you that the Board would consider your tentative requirements in a future Board hearing.

Revisions have been made to the tentative requirements. Enclosed is a copy of the revised tentative waste discharge requirements.

In accordance with administrative procedures, this Board at a public hearing to be held on November 28, 1983, at 10:00 a.m., 107 South Broadway, Room 1138, Los Angeles, California, will consider the revised tentative requirements and comments submitted in writing regarding any or all portions thereof. The Board will hear any testimony pertinent to this discharge and the tentative requirements. It is expected that the Board will take action at the hearing; however, as testimony indicates, the Board at its discretion may order further investigation.

Any comments that any person has with respect to this tentative Order must be received by November 14, 1983, in order to be included in the Board's agenda folder. However, comments received after that date will still be considered by this Board.

If you have any questions, please call us.

Very truly yours,

Dennis Dasker

ORDER NO. _____

NPDES NO. CA0003085

WASTE DISCHARGE REQUIREMENTS
FOR
AIR PRODUCTS AND CHEMICALS, INC.

The California Regional Water Quality Control Board, Los Angeles Region, finds:

1. Air Products and Chemicals, Inc. discharges wastes under waste discharge requirements contained in Order 78-53 (NPDES No. CA0003085) adopted by this Board on May 22, 1978.

2. Air Products and Chemicals, Inc. has filed a report of waste discharge and has applied for renewal of its waste discharge requirements and National Pollutant Discharge Elimination System permit.

3. Air Products and Chemicals, Inc. operates a liquid hydrogen production plant at 23320 South Alameda Street, Carson, California, and discharges up to 50,000 gallons per day of cooling tower bleed-off, boiler blowdown, and wash water from concrete-paved operating areas directly into Dominguez Channel, a water of the United States, at a point about 1,500 feet downstream from Alameda Street, within the tidal prism.

4. The Board adopted a revised Water Quality Control Plan for Los Angeles River Basin on March 27, 1978. The Plan contains water quality objectives for Dominguez Channel. The requirements contained in this Order as they are met will be in conformance with the goals of Water Quality Control Plan.

5. The beneficial uses of the receiving waters are non-contact recreation, preservation of rare and endangered species, marine habitat and saline water habitat.

6. Effluent limitation standards established pursuant to Section 301 of the Federal Water Pollution Control Act and amendments thereto are applicable to the discharge.

7. The issuance of waste discharge requirements for this discharge is exempt from the provisions of Chapter 3 (commencing with Section 21100) of the Division 13, of the Public Resources Code in accordance with Water Code Section 13389.

TENTATIVE

Revised 10/17/83
6/23/83

The Board has notified the discharger and interested agencies and persons of its intent to prescribe waste discharge requirements for this discharge and has provided them with an opportunity to submit their written views and recommendations.

The Board in a public hearing heard and considered all comments pertaining to the discharge and to the tentative requirements.

This Order shall serve as a National Pollutant Discharge Elimination System permit pursuant to Section 402 of the Federal Water Pollution Control Act, or amendments thereto, and shall take effect at the end of ten days from the date of its adoption, provided the Regional Administrator, EPA, has no objections.

IT IS HEREBY ORDERED, that Air Products and Chemicals, Inc.,

in order to meet the provisions contained in Division 7 of the California Water Code and regulations adopted thereunder, and the provisions of the Federal Water Pollution Control Act and regulations and guidelines adopted thereunder, shall comply with the following:

A. Effluent Limitations

1. The discharge of an effluent in excess of the following limits is prohibited:

		Discharge Limitations	
Constituent	Unit	30-Day Average	Maximum
Suspended solids	mg/l	50	150
	lbs/day*	20.85	62.6
Settleable solids	ml/l	0.1	0.3
COD	lbs/day*	30.0	30.0
Oil and grease	mg/l	10	15
	lbs/day*	4.17	6.26

*Based on discharge flow of 50,000 gallons per day.

TENTATIVE

3. The daily discharge rate shall be obtained from the following calculation for any calendar day:

$$\text{Daily discharge rate} = \frac{8.34}{N} \sum_{1}^{N} Q_i C_i$$

in which N is the number of samples analyzed in any calendar day. Q_i and C_i are the flow rate (MGD) and the constituent concentration (mg/l) respectively, which are associated with each of the N grab samples which may be taken in any calendar day. If a composite sample is taken, C_i is the concentration measured in the composite sample and Q_i is the average flow rate occurring during the period over which samples are composited.

4. The 30-day average shall be the arithmetic average of all the daily values calculated using the results of analyses of all samples collected during any 30 consecutive calendar day period. If fewer than four samples are collected and analyzed during any 30 consecutive calendar day period, compliance with the 30-day average limitation shall not be determined.

5. The pH of wastes discharged shall at all times be within the range 6.0 to 9.0.

6. The temperature of wastes discharged shall not exceed 100°F.

7. Wastes discharged shall not contain visible oil or grease, and shall not cause the appearance of grease, oil or oily slick, or persistent foam in the receiving waters or on channel banks, walls, inverts or other structures.

8. Wastes discharged shall not cause the formation of sludge deposits.

9. Neither the disposal nor any handling of waste shall cause pollution or nuisance.

10. Wastes discharged shall not damage flood control structures or facilities.

11. This discharge shall not cause a violation of any applicable water quality standard for receiving waters adopted by the Regional Board or the State Water Resources Control Board as required by the Federal Water Pollution Control Act and regulations adopted thereunder. If more stringent applicable water quality standards are promulgated or approved pursuant to Section 303 of the Federal Water Pollution Control Act, or amendments thereto, the Board will revise and modify this Order in accordance with such more stringent standards.

12. Wastes discharged shall not contain any substances in concentrations toxic to human, animal, plant, or aquatic life.

13. Petroleum products, chemicals, and refuse and other wastes shall not be stored or placed where they will be picked up by rainfall and discharged to surface waters.

14. The waste discharge to watercourses or flood control channels shall not result in residual chlorine concentrations greater than 0.1 mg/l in the receiving waters at the point of discharge.

TENTATIVE

B. Provisions

1. This Order includes the following items of the attached "Standard Provisions": 1,2,4,5,6,7,8,9, and 11.

2. This Order includes the following items of the attached "Reporting Requirements": 1,5 and 8.

3. This Order includes the attached "General Monitoring and Reporting Provisions."

4. This Order expires on November 10, 1988, and the discharger must file a Report of Waste Discharge in accordance with Title 23, California Administrative Code, not later than 180 days in advance of such date as application for issuance of new waste discharge requirements.

5. A copy of these waste discharge specifications shall be maintained at the discharge facility so as to be available at all times to operating personnel.

6. In the event of any change in name, ownership, or control of these waste disposal facilities, the discharger shall notify this Board of such change and shall notify the succeeding owner or operator of the existence of this Order by letter, copy of which shall be forwarded to the Board.

7. Any discharge of wastes at any point(s) other than specifically described in this permit is prohibited, and constitutes a violation of the permit.

8. This order may be modified, or, alternatively, revoked and reissued, to comply with any applicable effluent limitation issued pursuant to the order the United States District Court for the District of Columbia issued on June 8, 1976, in Natural Resources Defense Council, Inc. et al. v. Russell E. Train, 8 ERC 2120 (D.D.C. 1976), if the effluent limitation so issued:

   (1) is different in conditions or more stringent than any effluent limitation in this order; or

   (2) controls any pollutant not limited in this order.

9. These requirements do not exempt the operator of this waste disposal facility from compliance with any other laws, regulations, or ordinances which may be applicable; they do not legalize this waste disposal facility, and they leave unaffected any further restraint on the disposal of wastes at this site which may be contained in other statutes or required by other agencies.

10. Order No. 78-53 adopted by this Board on May 22, 1978, is hereby rescinded.

TENTATIVE

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD CA 0003085

LOS ANGELES REGION

STANDARD PROVISIONS

TENTATIVE

1. The requirements prescribed herein do not authorize the commission of any act causing injury to the property of another, nor protect the discharger from his liabilities under federal, state, or local laws, nor guarantee the discharger a capacity right in the receiving waters.

2. The discharge of any radiological, chemical, or biological warfare agent or high level radiological waste is prohibited.

3. The discharger shall require any industrial user of the treatment works to comply with applicable service charges and toxic and pretreatment standards promulgated in accordance with Sections 204(b), 307, and 308 of the Federal Water Pollution Control Act or amendments thereto. The discharger shall require each individual user to submit periodic notice (over intervals not to exceed nine months) of progress toward compliance with applicable toxic and pretreatment standards developed pursuant to the Federal Water Pollution Control Act or amendments thereto. The discharger shall forward a copy of such notice to the Board and the Regional Administrator.

4. The discharger shall permit the Regional Board:

   (a) Entry upon premises in which an effluent source is located or in which any required records are kept;

   (b) Access to copy any records required to be kept under terms and conditions of this Order;

   (c) Inspection of monitoring equipment or records, and

   (d) Sampling of any discharge.

5. All discharges authorized by this Order shall be consistent with the terms and conditions of this Order. The discharge of any pollutant more frequently than or at a level in excess of that identified and authorized by this Order shall constitute a violation of the terms and conditions of this Order.

6. The discharger shall maintain in good working order and operate as efficiently as possible any facility or control system installed by the discharger to achieve compliance with the waste discharge requirements.

7. Collected screening, sludges, and other solids removed from liquid wastes shall be disposed of at a legal point of disposal, and in accordance with the provisions of Division 7.5 of the California Water Code. For the purpose of this requirement, a legal point of disposal is defined as one for which waste discharge requirements have been prescribed by a regional water quality control board and which is in full compliance therewith.

8. After notice and opportunity for a hearing, this Order may be terminated or modified for cause, including, but not limited to:

   (a) Violation of any term or condition contained in this Order;

   (b) Obtaining this Order by misrepresentation, or failure to disclose all relevant facts;

   (c) A change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge.

9. If a toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standards or prohibition) is established under Section 307(a) of the Federal Water Pollution Control Act, or amendments thereto, for a toxic pollutant which is present in the discharge authorized herein and such standard or prohibition is more stringent than any limitation upon such pollutant in this Order, the Board will revise or modify this Order in accordance with such toxic effluent standard or prohibition and so notify the discharger.

10. There shall be no discharge of harmful quantities of oil or hazardous substances, as specified by regulation adopted pursuant to Section 311 of the Federal Water Pollution Control Act, or amendments thereto.

11. In the event the discharger is unable to comply with any of the conditions of this Order due to:

   (a) breakdown of waste treatment equipment;

   (b) accidents caused by human error or negligence; or

   (c) other causes such as acts of nature,

   the discharger shall notify the Executive Officer by telephone as soon as he or his agents have knowledge of the incident and confirm this notification in writing within two weeks of the telephone notification. The written notification shall include pertinent information explaining reasons for the non-compliance and shall indicate what steps were taken to correct the problem and the dates thereof, and what steps are being taken to prevent the problem from recurring.

12. Supervisors and operators of publicly owned wastewater treatment plants shall possess a certificate of appropriate grade in accordance with regulations adopted by the State Water Resources Control Board.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD CA 0003085

LOS ANGELES REGION

TENTATIVE

REPORTING REQUIREMENTS

1. The discharger shall file with the Board technical reports on self-monitoring work performed according to the detailed specifications contained in any Monitoring and Reporting Programs as directed by the Executive Officer.

2. The discharger shall file a written report with the Board within 90 days after the average dry-weather waste flow for any month equals or exceeds 75 percent of the design capacity of his waste treatment and/or disposal facilities. The discharger's senior administrative officer shall sign a letter which transmits that report and certifies that the policy-making body is adequately informed about it. The report shall include:

   Average daily flow for the month, the date on which the instantantaneous peak flow occurred, the rate of that peak flow, and the total flow for that day.

   The discharger's best estimate of when the average daily dry-weather flow rate will equal or exceed the design capacity of his facilities.

   The discharger's intended schedule for studies, design, and other steps needed to provide additional capacity for his waste treatment and/or disposal facilities before the waste flow rate equals the capacity of present units. (Reference: Sections 13260, 13267(b), and 13268, California Water Code).

3. The discharger shall notify the Board not later than 120 days in advance of implementation of any plans to alter production capacity of the product line of the manufacturing, producing or processing facility by more than ten percent. Such notification shall include estimates of proposed production rate, the type of process, and projected effects on effluent quality. Notification shall include submittal of a new report of waste discharge and appropriate filing fee.

4. The discharger shall notify the Board of (a) new introduction into such works of pollutants from a source which would be a new source as defined in Section 306 of the Federal Water Pollution Control Act, or amendments thereto, if such source were discharging pollutants to the waters of the United States, (b) new introductions of pollutantsinto such works from a source which would be subject to Section 301 of the Federal Water Pollution Control Act, or amendments thereto, if substantial change in the volume or character of pollutants being introduced into such works by a source introducing pollutants into such works at the time the waste discharge requirements were adopted. Notice shall include a description of the quantity and quality of pollutants and the impact of such change on the substantial change in volume is considered an increase of ten percent in the mean dry-weather flow rate. The discharger shall forward a copy of such notice directly to the Regional Administrator.

5. The discharger shall file with the Board a report on waste discharge at least 120 days before making any material change or proposed change in the character, location or volume of the discharge.

6. This Board requires the discharger to file with the Board, within 90 days after the effective date of this Order, a technical report on his preventive (failsafe) and contingency (cleanup) plans for controlling accidental discharges, and for minimizing the effect of such events. The technical report should:

   Identify the possible sources of accidental loss, untreated waste bypass, and contaminated drainage. Loading and storage areas, power outage, waste treatment unit outage, and failure of process equipment, tanks and pipes should be considered.

   Evalulate the effectiveness of present facilities and procedures and state when they became operational.

   Describe facilities and procedures needed for effective preventive and contingency plans.

   Predict the effectiveness of the proposed facilities and procedures and provide an implementation schedule containing interim and final dates when they will be constructed, implemented, or operational. (Reference: Sections 13267(b) and 13268, California Water Code.

   This Board, after review of the technical report, may establish conditions which it deems necessary to control accidental discharges and to minimize the effects of such events. Such conditions may be incorporated as part of this Order, upon notice to the discharger.

7. The discharger shall submit to the Board, by January 30 of each year, an annual summary of the quantities of all chemicals, listed by both trade and chemical names, which are used for cooling and/or boiler water treatment and which are discharged.

8. The discharger shall submit to the Board, together with the first monitoring report required by this permit, a list of all chemicals and proprietary additives which could affect this waste discharge, including quantities of each. Any subsequent changes in types and/or quantities shall be reported promptly.

CA 0003085

TENTATIVE

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION

GENERAL MONITORING AND REPORTING PROVISIONS

GENERAL PROVISIONS FOR SAMPLING AND ANALYSIS

All sampling, sample preservation, and analyses shall be performed in accordance with the latest edition of "Guidelines Establishing Test Procedures for Analysis of Pollutants", promulgated by the United States Environmental Protection Agency.

All chemical, bacteriological, and bioassay analyses shall be conducted at a laboratory certified for such analyses by the State Department of Health.

Effluent samples shall be taken downstream of any addition to the treatment works and prior to mixing with the receiving waters.

The discharger shall calibrate and perform maintenance procedures on all monitoring instruments and equipment to insure accuracy of measurements, or shall insure that both activities will be conducted.

A grab sample is defined as an individual sample collected in fewer than 15 minutes.

A composite sample is defined as a combination of no fewer than eight individual samples obtained over the specified sampling period. The volume of each individual sample is proportional to the discharge flow rate at the time of sampling. The sampling period shall equal the discharge period, or 24 hours, whichever period is shorter.

GENERAL PROVISIONS FOR REPORTING

For every item where the requirements are not met, the discharger shall submit a statement of the actions undertaken or proposed which will bring the discharge into full compliance with requirements at the earliest time and submit a timetable for correction.

By January 30 of each year, the discharger shall submit an annual report to the Board. The report shall contain both tabular and graphical summaries of the monitoring data obtained during the previous year. In addition, the discharger shall discuss the compliance record and the corrective actions taken or planned which may be needed to bring the discharge into full compliance with the waste discharge requirements.

The discharger shall maintain all sampling and analytical results, including strip charts; date, exact place, and time of sampling; date analyses were performed; analyst's name; analytical techniques used; and results of all analyses. Such records shall be retained for a minimum of three years. This period of retention shall be extended during the course of any unresolved litigation regarding this discharge or when requested by the Board.

(Revised 8/1/75)

TENTATIVE

In reporting the monitoring data, the discharger shall arrange the data in tabular form so that the date, the constituents, and the concentrations are readily discernible. The data shall be summarized to demonstrate compliance with waste discharge requirements and, where applicable, shall include results of receiving water observations.

Monitoring reports shall be signed by:

a. In the case of corporations, by a principal executive officer at least of the level of vice-president or his duly authorized representative, if such representative is responsible for the overall operation of the facility from which discharge originates;

b. In the case of a partnership, by a general partner;

c. In the case of a sole proprietorship, by the proprietor;

d. In the case of municipal, state or other public facility, by either a principal executive officer, ranking elected official, or other duly authorized employee.

Each report shall contain the following completed declaration:

"I declare under penalty of perjury that the foregoing is true and correct.

Executed on the _____ day of _____ at _____.

_____(Signature)

_____(Title)"

The discharger shall mail a copy of each monitoring report to the following:

California Regional Water Quality
Control Board - Los Angeles Region
107 South Broadway, Room 4027
Los Angeles, CA 90012

ATTN: Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION
MONITORING AND REPORTING PROGRAM NO. 5422

FOR

AIR PRODUCTS AND CHEMICALS, INC.
(CA0003085)

The discharger shall implement this monitoring program on the effective date of this Order. The first monitoring report under this program is due by January 15, 1984.

Monitoring reports shall be submitted by the dates in the following schedule:

Reporting Period	Report Due
January - March	April 15
April - June	July 15
July - September	October 15
October - December	January 15

If no flow occurred during the quarter the report shall so state.

Each monitoring report must affirm in writing that:

> All analyses were conducted at a laboratory certified for such analyses by the State Department of Health and in accordance with current EPA guideline procedures or as specified in the Monitoring Program.

For any analysis performed for which no procedure is specified in the EPA guidelines or in this Monitoring Program, the constituent or parameter analyzed and the method or procedure used must be specified in the report.

Effluent Monitoring

A sampling station shall be established for each point of discharge and shall be located where representative samples of that effluent cab be obtained. The following shall constitute the effluent monitoring program:

Constituent	Units	Type of Sample	Minimum Frequency of Analysis
pH	pH units	grab	quarterly
Temperature	^{o}F or ^{o}C	grab	monthly
Total waste flow	gal/day	-----	monthly
Suspended solids	mg/l	grab	quarterly
Settleable solids	ml/l	grab	quarterly

TENTATIVE

Constituent	Units	Type of Sample	Minimum Frequency of Analysis
COD	lbs/day	grab	quarterly
Oil and grease	mg/l	grab	quarterly
Zinc*	mg/l	grab	quarterly

Receiving Water Monitoring

Receiving water sampling stations shall be established as following

RW 1 - 50 feet from the center of the outfall line in the direction of tidal flow at the time of sampling. If sampled at slack tide, this station shall be in the direction where the channel waters have been influenced by the discharge. Samples may be taken from the shore if representative.

RW 2- 250 feet from the center of the outfall line in the direction of tidal flow at the time of sampling. If sampled at slack tide, this station shall be in the direction where the channel waters have been influenced by the discharge. Samples may be taken from the shore if representative.

RW 3 - 250 feet from the center of the outfall line in the opposite direction of tidal flow at the time of sampling. If sampled at slack tide, this station shall be in the opposite direction where the channel waters have been influenced by the discharge. Samples may be taken from the shore if representative.

Receiving water samples shall be obtained during periods of discharge of cooling tower bleed-off. Samples shall be obtained within one foot of the surface.

The following shall constitute the receiving water monitoring program :

Constituent	Station	Units	Type of Sample	Minumum Frequency of Analysis
Residual chlorine	RW1,RW2,RW3	mg/l	grab	quarterly

TENTATIVE

* A statement that this constituent has not been added to the system may be submitted in lieu of analysis.

Demonstration of Compliance with 30-day Average Limitations

For parameters where both 30-day average and maximum limits are specified but where the monitoring frequency is less than four times a month, the following procedure shall apply. Future analyses of two successive samples yield results greater than 90 of the maximum limit for a parameter, the sampling frequency for that parameter shall be increased (within one week of receiving the laboratory result on the second sample) to a minimum of once weekly until at least four consecutive weekly samples have been obtained and compliance with the 30-day average limit has been demonstrated again and the discharger has set forth for the approval of the Executive Officer a program which ensures future compliance with the 30-day average limit.

Hauling Reports

In the event wastes are transported to a different disposal site during the reporting period, the following shall be reported.

a. Types of wastes and quantity of each type;

b. Name and either the address or the state registration number for each hauler of wastes (or the methods of transport of other than by hauling); and

c. Location of the final points of disposal for each type of waste.

If no wastes are hauled offsite during the reporting period, a statement to that effect shall be submitted.

RE: Waste Discharge Requirements (NPDES Permit No. CA0003085)

Gentlemen:

Reference is made to our letter dated October 18, 1983, which transmitted a draft of tentative requirements for your disposal of wastes to Dominguez Channel.

Pursuant to Division 7 of the California Water Code, this California Regional Water Quality Control Board, at a public hearing held on November 28, 1983, reviewed these tentative requirements, considered all factors in the case, and adopted Order No. 83-66 (copy attached) relative to this waste discharge. This Order serves as a permit under the National Pollutant Discharge Elimination System, and expires November 10, 1988. Please note that you must file an application for a new permit at least 180 days in advance of that date.

You are required to implement the new monitoring program as stated in the Monitoring and Reporting Program on the effective date of this Order. Please note that ny monitoring report due under your previous Monitoring and Reporting Program is still required and must be submitted by the due date. Please reference all technical and monitoring reports to our Compliance File No. 5422. We would appreciate it if you would not combine other reports, such as progress or technical reports, with your monitoring reports but would submit each type of report as a separate document.

Very truly yours,

JESSE M. DIAZ
Acting Executive Officer

ORDER NO. 83-66

NPDES NO. CA0003085

WASTE DISCHARGE REQUIREMENTS FOR AIR PRODUCTS AND CHEMICALS, INC.

The California Regional Water Quality Control Board, Los Angeles Region, finds:

1. Air Products and Chemicals, Inc. discharges wastes under waste discharge requirements contained in Order 78-53 (NPDES No. CA0003085) adopted by this Board on May 22, 1978.

2. Air Products and Chemicals, Inc. has filed a report of waste discharge and has applied for renewal of its waste discharge requirements and National Pollutant Discharge Elimination System permit.

3. Air Products and Chemicals, Inc. operates a liquid hydrogen production plant at 23320 South Alameda Street, Carson, California, and discharges up to 50,000 gallons per day of cooling tower bleed-off, boiler blowdown, and wash water from concrete-paved operating areas directly into Dominguez Channel, a water of the United States, at a point about 1,500 feet downstream from Alameda Street, within the tidal prism.

4. The Board adopted a revised Water Quality Control Plan for Los Angeles River Basin on March 27, 1978. The Plan contains water quality objectives for Dominguez Channel. The requirements contained in this Order as they are met will be in conformance with the goals of Water Quality Control Plan.

5. The beneficial uses of the receiving waters are non-contact recreation, preservation of rare and endangered species, marine habitat and saline water habitat.

6. Effluent limitation standards established pursuant to Section 301 of the Federal Water Pollution Control Act and amendments thereto are applicable to the discharge.

7. The issuance of waste discharge requirements for this discharge is exempt from the provisions of Chapter 3 (commencing with Section 21100) of the Division 13, of the Public Resources Code in accordance with Water Code Section 13389.

Revised 10/17/83
6/23/83

The Board has notified the discharger and interested agencies and persons of its intent to prescribe waste discharge requirements for this discharge and has provided them with an opportunity to submit their written views and recommendations.

The Board in a public hearing heard and considered all comments pertaining to the discharge and to the tentative requirements.

This Order shall serve as a National Pollutant Discharge Elimination System permit pursuant to Section 402 of the Federal Water Pollution Control Act, or amendments thereto, and shall take effect at the end of ten days from the date of its adoption, provided the Regional Administrator, EPA, has no objections.

IT IS HEREBY ORDERED, that Air Products and Chemicals, Inc.,

in order to meet the provisions contained in Division 7 of the California Water Code and regulations adopted thereunder, and the provisions of the Federal Water Pollution Control Act and regulations and guidelines adopted thereunder, shall comply with the following:

A. Effluent Limitations

1. The discharge of an effluent in excess of the following limits is prohibited:

		Discharge Limitations	
Constituent	Unit	30-Day Average	Maximum
Suspended solids	mg/l	50	150
	lbs/day*	20.85	62.6
Settleable solids	ml/l	0.1	0.3
COD			
	lbs/day*	30.0	30.0
Oil and grease	mg/l	10	15
	lbs/day*	4.17	6.26

*Based on discharge flow of 50,000 gallons per day.

3. The daily discharge rate shall be obtained from the following calculation for any calendar day:

$$\text{Daily discharge rate} = \frac{8.34}{N} \sum_{1}^{N} Q_i C_i$$

in which N is the number of samples analyzed in any calendar day. Q_i and C_i are the flow rate (MGD) and the constituent concentration (mg/l) respectively, which are associated with each of the N grab samples which may be taken in any calendar day. If a composite sample is taken, C_i is the concentration measured in the composite sample and Q_i is the average flow rate occurring during the period over which samples are composited.

4. The 30-day average shall be the arithmetic average of all the daily values calculated using the results of analyses of all samples collected during any 30 consecutive calendar day period. If fewer than four samples are collected and analyzed during any 30 consecutive calendar day period, compliance with the 30-day average limitation shall not be determined.

5. The pH of wastes discharged shall at all times be within the range 6.0 to 9.0.

6. The temperature of wastes discharged shall not exceed 100°F.

7. Wastes discharged shall not contain visible oil or grease, and shall not cause the appearance of grease, oil or oily slick, or persistent foam in the receiving waters or on channel banks, walls, inverts or other structures.

8. Wastes discharged shall not cause the formation of sludge deposits.

9. Neither the disposal nor any handling of waste shall cause pollution or nuisance.

10. Wastes discharged shall not damage flood control structures or facilities.

11. This discharge shall not cause a violation of any applicable water quality standard for receiving waters adopted by the Regional Board or the State Water Resources Control Board as required by the Federal Water Pollution Control Act and regulations adopted thereunder. If more stringent applicable water quality standards are promulgated or approved pursuant to Section 303 of the Federal Water Pollution Control Act, or amendments thereto, the Board will revise and modify this Order in accordance with such more stringent standards.

12. Wastes discharged shall not contain any substances in concentrations toxic to human, animal, plant, or aquatic life.

13. Petroleum products, chemicals, and refuse and other wastes shall not be stored or placed where they will be picked up by rainfall and discharged to surface waters.

14. The waste discharge to watercourses or flood control channels shall not result in residual chlorine concentrations greater than 0.1 mg/l in the receiving waters at the point of discharge.

B. Provisions

1. This Order includes the following items of the attached "Standard Provisions": 1,2,4,5,6,7,8,9, and 11.

2. This Order includes the following items of the attached "Reporting Requirements": 1,5 and 8.

3. This Order includes the attached "General Monitoring and Reporting Provisions."

4. This Order expires on November 10, 1988, and the discharger must file a Report of Waste Discharge in accordance with Title 23, California Administrative Code, not later than 180 days in advance of such date as application for issuance of new waste discharge requirements.

5. A copy of these waste discharge specifications shall be maintained at the discharge facility so as to be available at all times to operating personnel.

6. In the event of any change in name, ownership, or control of these waste disposal facilities, the discharger shall notify this Board of such change and shall notify the succeeding owner or operator of the existence of this Order by letter, copy of which shall be forwarded to the Board.

7. Any discharge of wastes at any point(s) other than specifically described in this permit is prohibited, and constitutes a violation of the permit.

8. This order may be modified, or, alternatively, revoked and reissued, to comply with any applicable effluent limitation issued pursuant to the order the United States District Court for the District of Columbia issued on June 8, 1976, in Natural Resources Defense Council, Inc. et al. v. Russell E. Train, 8 ERC 2120 (D.D.C. 1976), if the effluent limitation so issued:

   (1) is different in conditions or more stringent than any effluent limitation in this order; or

   (2) controls any pollutant not limited in this order.

9. These requirements do not exempt the operator of this waste disposal facility from compliance with any other laws, regulations, or ordinances which may be applicable; they do not legalize this waste disposal facility, and they leave unaffected any further restraint on the disposal of wastes at this site which may be contained in other statutes or required by other agencies.

10. Order No. 78-53 adopted by this Board on May 22, 1978, is hereby rescinded.

I, Jesse M. Diaz, Acting Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, Los Angeles, on November 28, 1983.

JESSE M. DIAZ, Acting Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD

LOS ANGELES REGION

STANDARD PROVISIONS CA 0003085

1. The requirements prescribed herein do not authorize the commission of any act causing injury to the property of another, nor protect the discharger from his liabilities under federal, state, or local laws, nor guarantee the discharger a capacity right in the receiving waters.

2. The discharge of any radiological, chemical, or biological warfare agent or high level radiological waste is prohibited.

3. The discharger shall require any industrial user of the treatment works to comply with applicable service charges and toxic and pretreatment standards promulgated in accordance with Sections 204(b), 307, and 308 of the Federal Water Pollution Control Act or amendments thereto. The discharger shall require each individual user to submit periodic notice (over intervals not to exceed nine months) of progress toward compliance with applicable toxic and pretreatment standards developed pursuant to the Federal Water Pollution Control Act or amendments thereto. The discharger shall forward a copy of such notice to the Board and the Regional Administrator.

4. The discharger shall permit the Regional Board:

   (a) Entry upon premises in which an effluent source is located or in which any required records are kept;

   (b) Access to copy any records required to be kept under terms and conditions of this Order;

   (c) Inspection of monitoring equipment or records, and

   (d) Sampling of any discharge.

5. All discharges authorized by this Order shall be consistent with the terms and conditions of this Order. The discharge of any pollutant more frequently than or at a level in excess of that identified and authorized by this Order shall constitute a violation of the terms and conditions of this Order.

6. The discharger shall maintain in good working order and operate as efficiently as possible any facility or control system installed by the discharger to achieve compliance with the waste discharge requirements.

7. Collected screening, sludges, and other solids removed from liquid wastes shall be disposed of at a legal point of disposal, and in accordance with the provisions of Division 7.5 of the California Water Code. For the purpose of this requirement, a legal point of disposal is defined as one for which waste discharge requirements have been prescribed by a regional water quality control board and which is in full compliance therewith.

8. After notice and opportunity for a hearing, this Order may be terminated or modified for cause, including, but not limited to:

   (a) Violation of any term or condition contained in this Order;

   (b) Obtaining this Order by misrepresentation, or failure to disclose all relevant facts;

   (c) A change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge.

9. If a toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standards or prohibition) is established under Section 307(a) of the Federal Water Pollution Control Act, or amendments thereto, for a toxic pollutant which is present in the discharge authorized herein and such standard or prohibition is more stringent than any limitation upon such pollutant in this Order, the Board will revise or modify this Order in accordance with such toxic effluent standard or prohibition and so notify the discharger.

10. There shall be no discharge of harmful quantities of oil or hazardous substances, as specified by regulation adopted pursuant to Section 311 of the Federal Water Pollution Control Act, or amendments thereto.

11. In the event the discharger is unable to comply with any of the conditions of this Order due to:

   (a) breakdown of waste treatment equipment;

   (b) accidents caused by human error or negligence; or

   (c) other causes such as acts of nature,

   the discharger shall notify the Executive Officer by telephone as soon as he or his agents have knowledge of the incident and confirm this notification in writing within two weeks of the telephone notification. The written notification shall include pertinent information explaining reasons for the non-compliance and shall indicate what steps were taken to correct the problem and the dates thereof, and what steps are being taken to prevent the problem from recurring.

12. Supervisors and operators of publicly owned wastewater treatment plants shall possess a certificate of appropriate grade in accordance with regulations adopted by the State Water Resources Control Board.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD

LOS ANGELES REGION

CA 0003085

REPORTING REQUIREMENTS

1. The discharger shall file with the Board technical reports on self-monitoring work performed according to the detailed specifications contained in any Monitoring and Reporting Programs as directed by the Executive Officer.

2. The discharger shall file a written report with the Board within 90 days after the average dry-weather waste flow for any month equals or exceeds 75 percent of the design capacity of his waste treatment and/or disposal facilities. The discharger's senior administrative officer shall sign a letter which transmits that report and certifies that the policy-making body is adequately informed about it. The report shall include:

   Average daily flow for the month, the date on which the instantantaneous peak flow occurred, the rate of that peak flow, and the total flow for that day.

   The discharger's best estimate of when the average daily dry-weather flow rate will equal or exceed the design capacity of his facilities.

   The discharger's intended schedule for studies, design, and other steps needed to provide additional capacity for his waste treatment and/or disposal facilities before the waste flow rate equals the capacity of present units. (Reference: Sections 13260, 13267(b), and 13268, California Water Code).

3. The discharger shall notify the Board not later than 120 days in advance of implementation of any plans to alter production capacity of the product line of the manufacturing, producing or processing facility by more than ten percent. Such notification shall include estimates of proposed production rate, the type of process, and projected effects on effluent quality. Notification shall include submittal of a new report of waste discharge and appropriate filing fee.

4. The discharger shall notify the Board of (a) new introduction into such works of pollutants from a source which would be a new source as defined in Section 306 of the Federal Water Pollution Control Act, or amendments thereto, if such source were discharging pollutants to the waters of the United States, (b) new introductions of pollutantsinto such works from a source which would be subject to Section 301 of the Federal Water Pollution Control Act, or amendments thereto, if substantial change in the volume or character of pollutants being introduced into such works by a source introducing pollutants into such works at the time the waste discharge requirements were adopted. Notice shall include a description of the quantity and quality of pollutants and the impact of such change on the substantial change in volume is considered an increase of ten percent in the mean dry-weather flow rate. The discharger shall forward a copy of such notice directly to the Regional Administrator.

5. The discharger shall file with the Board a report on waste discharge at least 120 days before making any material change or proposed change in the character, location or volume of the discharge.

6. This Board requires the discharger to file with the Board, within 90 days after the effective date of this Order, a technical report on his preventive (failsafe) and contingency (cleanup) plans for controlling accidental discharges, and for minimizing the effect of such events. The technical report should:

   Identify the possible sources of accidental loss, untreated waste bypass, and contaminated drainage. Loading and storage areas, power outage, waste treatment unit outage, and failure of process equipment, tanks and pipes should be considered.

   Evalulate the effectiveness of present facilities and procedures and state when they became operational.

   Describe facilities and procedures needed for effective preventive and contingency plans.

   Predict the effectiveness of the proposed facilities and procedures and provide an implementation schedule containing interim and final dates when they will be constructed, implemented, or operational. (Reference: Sections 13267(b) and 13268, California Water Code.

   This Board, after review of the technical report, may establish conditions which it deems necessary to control accidental discharges and to minimize the effects of such events. Such conditions may be incorporated as part of this Order, upon notice to the discharger.

7. The discharger shall submit to the Board, by January 30 of each year, an annual summary of the quantities of all chemicals, listed by both trade and chemical names, which are used for cooling and/or boiler water treatment and which are discharged.

8. The discharger shall submit to the Board, together with the first monitoring report required by this permit, a list of all chemicals and proprietary additives which could affect this waste discharge, including quantities of each. Any subsequent changes in types and/or quantities shall be reported promptly.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION

GENERAL MONITORING AND REPORTING PROVISIONS CA 0003085

GENERAL PROVISIONS FOR SAMPLING AND ANALYSIS

All sampling, sample preservation, and analyses shall be performed in accordance with the latest edition of "Guidelines Establishing Test Procedures for Analysis of Pollutants", promulgated by the United States Environmental Protection Agency.

All chemical, bacteriological, and bioassay analyses shall be conducted at a laboratory certified for such analyses by the State Department of Health.

Effluent samples shall be taken downstream of any addition to the treatment works and prior to mixing with the receiving waters.

The discharger shall calibrate and perform maintenance procedures on all monitoring instruments and equipment to insure accuracy of measurements, or shall insure that both activities will be conducted.

A grab sample is defined as an individual sample collected in fewer than 15 minutes.

A composite sample is defined as a combination of no fewer than eight individual samples obtained over the specified sampling period. The volume of each individual sample is proportional to the discharge flow rate at the time of sampling. The sampling period shall equal the discharge period, or 24 hours, whichever period is shorter.

GENERAL PROVISIONS FOR REPORTING

For every item where the requirements are not met, the discharger shall submit a statement of the actions undertaken or proposed which will bring the discharge into full compliance with requirements at the earliest time and submit a timetable for correction.

By January 30 of each year, the discharger shall submit an annual report to the Board. The report shall contain both tabular and graphical summaries of the monitoring data obtained during the previous year. In addition, the discharger shall discuss the compliance record and the corrective actions taken or planned which may be needed to bring the discharge into full compliance with the waste discharge requirements.

The discharger shall maintain all sampling and analytical results, including strip charts; date, exact place, and time of sampling; date analyses were performed; analyst's name, analytical techniques used; and results of all analyses. Such records shall be retained for a minimum of three years. This period of retention shall be extended during the course of any unresolved litigation regarding this discharge or when requested by the Board.

(Revised 9/19/77)

In reporting the monitoring data, the discharger shall arrange the data in tabular form so that the date, the constituents, and the concentrations are readily discernible. The data shall be summarized to demonstrate compliance with waste discharge requirements and, where applicable, shall include results of receiving water observations.

Monitoring reports shall be signed by:

a. In the case of corporations, by a principal executive officer at least of the level of vice-president or his duly authorized representative, if such representative is responsible for the overall operation of the facility from which discharge originates;

b. In the case of a partnership, by a general partner;

c. In the case of a sole proprietorship, by the proprietor;

d. In the case of municipal, state or other public facility, by either a principal executive officer, ranking elected official, or other duly authorized employee.

Each report shall contain the following completed declaration:

"I declare under penalty of perjury that the foregoing is true and correct.

Executed on the _____ day of _____ at _____.

_____(Signature)

_____(Title)"

The discharger shall mail a copy of each monitoring report to the following:

California Regional Water Quality
Control Board - Los Angeles Region
107 South Broadway, Room 4027
Los Angeles, CA 90012

ATTN: Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION
MONITORING AND REPORTING PROGRAM NO. 5422

FOR

AIR PRODUCTS AND CHEMICALS, INC.
(CA0003085)

The discharger shall implement this monitoring program on the effective date of this Order. The first monitoring report under this program is due by January 15, 1984.

Monitoring reports shall be submitted by the dates in the following schedule:

Reporting Period	Report Due
January - March	April 15
April - June	July 15
July - September	October 15
October - December	January 15

If no flow occurred during the quarter the report shall so state.

Each monitoring report must affirm in writing that:

> All analyses were conducted at a laboratory certified for such analyses by the State Department of Health and in accordance with current EPA guideline procedures or as specified in the Monitoring Program.

For any analysis performed for which no procedure is specified in the EPA guidelines or in this Monitoring Program, the constituent or parameter analyzed and the method or procedure used must be specified in the report.

Effluent Monitoring

A sampling station shall be established for each point of discharge and shall be located where representative samples of that effluent cab be obtained. The following shall constitute the effluent monitoring program:

Constituent	Units	Type of Sample	Minimum Frequency of Analysis
pH	pH units	grab	quarterly
Temperature	^{o}F or ^{o}C	grab	monthly
Total waste flow	gal/day	-----	monthly
Suspended solids	mg/l	grab	quarterly
Settleable solids	ml/l	grab	quarterly

Constituent	Units	Type of Sample	Minimum Frequency of Analysis
COD	lbs/day	grab	quarterly
Oil and grease	mg/l	grab	quarterly
Zinc*	mg/l	grab	quarterly

Receiving Water Monitoring

Receiving water sampling stations shall be established as following

RW 1 - 50 feet from the center of the outfall line in the direction of tidal flow at the time of sampling. If sampled at slack tide, this station shall be in the direction where the channel waters have been influenced by the discharge. Samples may be taken from the shore if representative.

RW 2- 250 feet from the center of the outfall line in the direction of tidal flow at the time of sampling. If sampled at slack tide, this station shall be in the direction where the channel waters have been influenced by the discharge. Samples may be taken from the shore if representative.

RW 3 - 250 feet from the center of the outfall line in the opposite direction of tidal flow at the time of sampling. If sampled at slack tide, this station shall be in the opposite direction where the channel waters have been influenced by the discharge. Samples may be taken from the shore if representative.

Receiving water samples shall be obtained during periods of discharge of cooling tower bleed-off. Samples shall be obtained within one foot of the surface.

The following shall constitute the receiving water monitoring program :

Constituent	Station	Units	Type of Sample	Minumum Frequency of Analysis
Residual chlorine	RW1,RW2,RW3	mg/l	grab	quarterly

* A statement that this constituent has not been added to the system may be submitted in lieu of analysis.

Demonstration of Compliance with 30-day Average Limitations

For parameters where both 30-day average and maximum limits are specified but where the monitoring frequency is less than four times a month, the following procedure shall apply. Future analyses of two successive samples yield results greater than 90% of the maximum limit for a parameter, the sampling frequency for that parameter shall be increased (within one week of receiving the laboratory result on the second sample) to a minimum of once weekly until at least four consecutive weekly samples have been obtained and compliance with the 30-day average limit has been demonstrated again and the discharger has set forth for the approval of the Executive Officer a program which ensures future compliance with the 30-day average limit.

Hauling Reports

In the event wastes are transported to a different disposal site during the reporting period, the following shall be reported.

a. Types of wastes and quantity of each type;

b. Name and either the address or the state registration number for each hauler of wastes (or the methods of transport of other than by hauling); and

c. Location of the final points of disposal for each type of waste.

If no wastes are hauled offsite during the reporting period, a statement to that effect shall be submitted.

Carson, CA 90810

Dear Mr. Buelow:

GROUNDWATER PROTECTION PROGRAM
AIR PRODUCTS MFG. CORP.
23320 S. ALAMEDA ST., CARSON

In order to increase awareness of groundwater pollution problems in Los Angeles County, the Los Angeles County Department of Public Works (LACDPW) is working in conjunction with the United States Environmental Protection Agency (USEPA), to develop a site specific groundwater protection program. The program will apply to all commercial and industrial facilities which discharge, deposit, or dispose of industrial wastewater into the ground or private disposal systems, such as a leach field.

The role of LACDPW will be the investigation of such facilities and may result in required permitting, monitoring and/or closure of certain facilities. The objective of this program is the elimination of facilities which may be a source of pollutants in groundwater supplies. In addition, the LACDPW is implementing an educational program for operators to become familiar with Best Management Practices (BMP), aimed at protecting groundwater.

Enclosed is a series of informational brochures regarding proper handling of waste material at your facility. As part of this program, LACDPW is forwarding these brochures to you in order to increase environmental awareness and provide information which may be useful in your everyday activities.

We appreciate the opportunity to provide you with the enclosed information.

Should you have any questions regarding this matter please contact Ms. Nardy Drew of this office at (626) 458-3511, Monday through Thursday, from 7:00 a.m. to 5:30 p.m.

Very truly your,

HARRY W. STONE

EXECUTIVE SUMMARY

The Air Products and Chemicals, Inc. (APCI) site is located at 23320 South Alameda Street in Carson, California, which is bordered by an Atlantic Richfield Company (ARCO) coke facility to the south, Alameda Street and ARCO refinery to the west, a Texaco sulfur recovery plant to the north and Dominguez Channel to the east.

APCI leased the property from ARCO in 1962 to build a cryogenic hydrogen plant. APCI began manufacturing liquid hydrogen at the site in January 1963 and continued this operation until December 1967. APCI re-initiated the production of liquid hydrogen at the plant in January 1972 and continued to operate until March 1986. The plant had been closed for more than 6 years when the demolition of the H_2 plant began in May 1992.

The objective of this H_2 Plant Demolition Project was to consolidate APCI leased land to the minimum space required by the Specialty Gas Division operations at the Alameda Street location in order to reduce the lease costs. The Specialty Gas Division Facility occupies about 5 acres, which are bordering along the Southwestern portion of the property. The remaining 13.5 acres in the northern and eastern portions of the existing leased area accommodated the PSG H_2 Plant and a Cryogenic Vessel Repair Shop. The dismantlement and consolidation work was accomplished in two phases. Phase 1 involved the removal of two large hydrogen storage spheres and the disposal of hazardous materials and wastes throughout the H_2 plant. Completion of Phase 1 enabled APCI to vacate approximately 8 acres of land where the two H_2 spheres and rear truck parking area were located. Phase 2 involved equipment and building demolition in the hydrogen process area. The demolition project was completed in May 1993.

Two preliminary site assessments and a field investigation were conducted, under CERCLA authority, by the EPA. On March 26, 1991, the site screening inspection report discounted two small accidental discharges of hydrocarbons to the Dominguez Channel and instead emphasized potential landfill activities reported to have occurred on-site prior to 1962. On April 11, 1991, EPA recommended that no further remedial action needed to be taken, and has since terminated its interest in the APCI site.

During plant demolition, care was exercised by APCI regarding the resolution of environmental matters. This included such issues as hazardous material and wastes handling/disposal, underground storage tank removal, potassium permanganate scrubber area cleanup, septic tank and leachfield area investigation, and oil/water separator cleanout.

There remains, however, a hydrocarbon soil contamination problem which was discovered in the hydrogen purification area during demolition in November, 1992. The source of this gasoline/diesel like hydrocarbon release is now believed to be the former aboveground diesel and hydrocarbon condensate storage tanks previously located in the Purification Process Area.

In February 1993, a soil gas survey was conducted by Target Environmental in order to determine the extent of the soil contamination. Based on this survey, 19 soil borings were performed by APCI's contractor, IT Corp., in March and May 1993 (See Figures 7 & 8). Using the results from field OVA tests, the soil gas survey, and the borehole sample results, IT Corp. determined the lateral and vertical extent of the contamination at the APCI site (See Figures 9 and 10). The extent of the contamination is approximately 200 feet in the east-west direction, and is approximately 300 feet in the north-south direction. The contamination is approximately 5 feet deep on the extreme boundary and progressively deeper toward the center of the purification area to a maximum of 30 feet deep.

IT Corp. has recommended the use of in-situ soil vapor extraction technology to remediate the volatile fraction of this hydrocarbon condensate contamination, followed by excavation and transport to an off-site asphalt manufacturing plant for the remaining non-volatile fraction. Probable cost and duration of the cleanup is estimated to be approximately 1.8 million dollars over a duration of 1-2 years.

3.0 REVIEW OF ENVIRONMENTAL ISSUES

3.1 Valid Permits for Plant Operations

The APCI H_2 Plant (SIC 2813) is located in the heavy manufacturing zone in the City of Carson. While operating in the periods from 1/63 to 12/67 and from 1/72 to 3/86, the H_2 plant possessed valid operating permits from appropriate agencies for its air emissions and wastewater discharges as follows:

Air Pollution

Air Permits/Registration

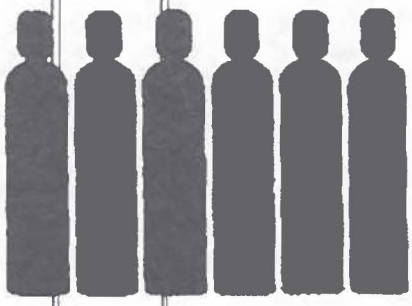
3.2 Accidental Spills and Releases

3.2.1 Small Spills to Dominguez Channel

There were three incidents involving small discharges to the Dominguez Channel as follows:

* On 24 May 1972, - RWQCB noted calcium carbonate deposits at 001 outfall but incorrectly referred to it as sludge deposits/disposal of waste



** CONFIRMATION REPORT **

EXECUTIVE SUMMARY

The Air Products and Chemicals, Inc. (APCI) site is located at 23320 South Alameda Street in Carson, California, which is bordered by an Atlantic Richfield Company (ARCO) coke facility to the south, Alameda Street and ARCO refinery to the west, a Texaco sulfur recovery plant to the north and Dominguez Channel to the east.

APCI leased the property from ARCO in 1962 to build a cryogenic hydrogen plant. APCI began manufacturing liquid hydrogen at the site in January 1963 and continued this operation until December 1967. APCI re-initiated the production of liquid hydrogen at the plant in January 1972 and continued to operate until March 1986. The plant had been closed for more than 6 years when the demolition of the H_2 plant began in May 1992.

The objective of this H_2 Plant Demolition Project was to consolidate APCI leased land to the minimum space required by the Specialty Gas Division operations at the Alameda Street location in order to reduce the lease costs. The Specialty Gas Division Facility occupies about 5 acres, which are bordering along the Southwestern portion of the property. The remaining 13.5 acres in the northern and eastern portions of the existing leased area accommodated the PSG H_2 Plant and a Cryogenic Vessel Repair Shop. The dismantlement and consolidation work was accomplished in two phases. Phase 1 involved the removal of two large hydrogen storage spheres and the disposal of hazardous materials and wastes throughout the H_2 plant. Completion of Phase 1 enabled APCI to vacate approximately 8 acres of land where the two H_2 spheres and rear truck parking area were located. Phase 2 involved equipment and building demolition in the hydrogen process area. The demolition project was completed in May 1993.

Two preliminary site assessments and a field investigation were conducted, under CERCLA authority, by the EPA. On March 26, 1991, the site screening inspection report discounted two small accidental discharges of hydrocarbons to the Dominguez Channel and instead emphasized potential landfill activities reported to have occurred on-site prior to 1962. On April 11, 1991, EPA recommended that no further remedial action needed to be taken, and has since terminated its interest in the APCI site.

During plant demolition, care was exercised by APCI regarding the resolution of environmental matters. This included such issues as hazardous material and wastes handling/disposal, underground storage tank removal, potassium permanganate scrubber area cleanup, septic tank and leachfield area investigation, and oil/water separator cleanout.

There remains, however, a hydrocarbon soil contamination problem which was discovered in the hydrogen purification area during demolition in November, 1992. The source of this gasoline/diesel like hydrocarbon release is now believed to be the former aboveground diesel and hydrocarbon condensate storage tanks previously located in the Purification Process Area.

In February 1993, a soil gas survey was conducted by Target Environmental in order to determine the extent of the soil contamination. Based on this survey, 19 soil borings were performed by APCI's contractor, IT Corp., in March and May 1993 (See Figures 7 & 8). Using the results from field OVA tests, the soil gas survey, and the borehole sample results, IT Corp. determined the lateral and vertical extent of the contamination at the APCI site (See Figures 9 and 10). The extent of the contamination is approximately 200 feet in the east-west direction, and is approximately 300 feet in the north-south direction. The contamination is approximately 5 feet deep on the extreme boundary and progressively deeper toward the center of the purification area to a maximum of 30 feet deep.

IT Corp. has recommended the use of in-situ soil vapor extraction technology to remediate the volatile fraction of this hydrocarbon condensate contamination, followed by excavation and transport to an off-site asphalt manufacturing plant for the remaining non-volatile fraction. Probable cost and duration of the cleanup is estimated to be approximately 1.8 million dollars over a duration of 1-2 years.

3.0 REVIEW OF ENVIRONMENTAL ISSUES

3.1 Valid Permits for Plant Operations

The APCI H_2 Plant (SIC 2813) is located in the heavy manufacturing zone in the City of Carson. While operating in the periods from 1/63 to 12/67 and from 1/72 to 3/86, the H_2 plant possessed valid operating permits from appropriate agencies for its air emissions and wastewater discharges as follows:

Air Pollution

Air Permits/Registration
SCAQMD Facility ID #003417
Permit #D01586 Hydrogen Manufacturing

P-00784	Boiler #1
P-00785	Boiler #2
P-01714	Flare
P-01837	Hydrogen Storage Tank
P-01838	H2S04 Adsorption System

Water Pollution

15 Apr63	LA County Permit #3113
Feb68	State Permit Resolution #68-4
28Nov74	CA RWQCB NPDES #CA0003085
22May78	Renewed CA0003085
28Nov83	Renewed CA0003085
28Nov88	Rescinded CA0003085

3.2 Accidental Spills and Releases

3.2.1 Small Spills to Dominguez Channel

There were three incidents involving small discharges to the Dominguez Channel as follows:

* On 24 May 1972, - RWQCB noted calcium carbonate deposits at 001 outfall but incorrectly referred to it as sludge deposits/disposal of waste

AIR PRODUCTS AND CHEMICALS, INC. LEASE
CHRONOLOGY OF SITE CLOSURE AND SUBSURFACE INVESTIGATION EVENTS

1962	APCI leases property from ARCO, builds cryogenic hydrogen plant and begins manufacturing liquid hydrogen in January 1963
March, 1986	APCI ceases manufacturing liquid hydrogen
August, 1987	Removal of 4 USTs (3 tested clean and 1 dirty), UST removal report submitted to LACDPW
October 1, 1987	LACDPW letter to APCI stating requirements for final closure of USTs
March, 1988	Preliminary investigation of "dirty" UST No. 28.91
March-May, 1989	Bioremediation of diesel contaminated soil from UST No.
May, 1992	APCI begins demolition of hydrogen plant
November, 1992	Hydrocarbon soil contamination discovered in hydrogen purification area
February, 1993	Subsurface investigation (soil gas survey, followed by soil sampling) conducted in hydrogen purification area
February, 1993	Potassium permanganate scrubber removed, soil and concrete sampled
April, 1993	Contaminated portion of potassium permanganate scrubber cinder block berm removed
April, 1993	Removal of 5th (caustic) UST
May, 1993	Field investigation of septic tank system and leachfield area
May 1993	Completion of plant demolition
December 21, 1993	IT letter to John Lewis of LARWQCB with site investigation report attached
January 4, 1994	APCI letter to LACDPW requesting final closure approval for USTs
May 18, 1994	LACDPW letter to APCI stating that assessment and remediation of the site must be addressed through the LARWQCB
July, 1994	Investigation of former cooling tower area

July 18, 1994	APCI fax to LACDPW resubmitting UST removal report and requesting closure certification
November, 1994	Supplemental investigation of former cooling tower area
November 18, 1994	APCI letter to Water Board requesting determination of UST closure status (UST closure report and correspondence attached)

RWQCB Determination 1 (b):

Petroleum hydrocarbon soil contamination was identified in the southeastern half of the site, near the former underground tank 28.5. About 410 cubic yards of soil from the excavation and clean-up of underground tank 28.91 had been remediated, but still contained up to 9,590 mg/kg TPH. This was subsequently placed near where former underground tank 28.5 had been located.

Action Required By RWQCB:

Air Products must collect confirmation samples in the area where the 410 cubic yards of soil containing up to 9,590 mg/kg TRPH was disposed before RWQCB sign-off on underground tank 28.5.

Air Products Response:

The determination that petroleum hydrocarbon soil contamination was identified in the southeastern half of the site, near the former underground tank 28.5, is misleading. No significant contamination has been identified. When removed, this tank was intact, there was no soil staining, and two soil samples showed only minor amounts of hydrocarbons (58 and 210 ppm TPH) which were attributed to surface spillage.

The information that I submitted to you depicting the placement of the bioremediated soil near the south eastern corner of the property was an approximation. I know that the soil was placed towards the eastern border of the property but I'm not sure of the northern or southern extent, or, whether its placement was near where the former tank 28.5 was located.

Your reference to the soil containing up to 9,590 mg/kg TRPH is incorrect. I believe that number came from a tank 28.91 bioremediation process monitoring sample collected on 15 May 1989. Active bioremediation was conducted until December 1989 and the unit was decommissioned in February 1990. The final sample results, collected on 18 December 1989, were less than 100 mg/kg TPH-as diesel with a maximum of 7400 mg/kg TPH-as weathered crude oil. As discussed below, this weathered crude oil was not attributable to Air Products activities and is considered background.

Air Products believes that the location of this treated soil is not an issue and has no bearing on the proper closure of tank 28.5. This soil placement should be treated as an issue separate from the closure of tank 28.5.

RWQCB Determination 1 (c):

Petroleum hydrocarbon soil contamination (up to 11,900 mg/kg TRPH, 167 mg/kg TPH gasoline, 9,880 mg/kg TPH diesel, and 5 ug/kg benzene) was identified at the southeastern edge of the former vessel repair shop.

Action Required By RWQCB:

Remediate the petroleum hydrocarbon contaminated soil.

Air Products Response:

Your reference for this contamination was likely our December 1993 IT Corp. Soil Investigation Report. Specifically, you referenced the boring # 5 sample results at both the five foot and ten foot depth sample intervals. The contamination at this location is within the area influenced by our ongoing soil vapor extraction system. This system is designed to remove volatile organic compounds, gasoline, and diesel

from our former hydrogen feedgas purification area and the adjacent area. This includes the area surrounding where boring # 5 was made.

Given our ongoing soil vapor extraction activity, Air Products is already addressing the remediation of volatiles, gasoline, and diesel from this soil. If weathered crude oils are found to contribute to the TRPH contamination, this would not be attributable to past Air Products activities and as such should not be required as part of our ongoing remediation.

RWQCB Determination 1 (d):

Petroleum hydrocarbon soil contamination (up to 71,500 mg/kg TRPH, 19 mg/kg benzene, and 450 mg/kg toluene) was identified in the former specialty gas plant area.

Action Required By RWQCB:

Remediate the petroleum hydrocarbon contaminated soil.

Air Products Response:

Your reference of up to 71,500 mg/kg TRPH was again the December 1993 IT report. This level was detected at the 10 foot depth of boring # 11. I could not determine your reference for the 19 mg/kg benzene or 450 mg/kg toluene. Please let me know where you found these numbers. The contamination at boring # 11 is within the former hydrogen feedgas purification area rather than the specialty gas plant area. The purification area is under the influence of our ongoing soil vapor extraction system. This system is designed to remove volatile organic compounds, gasoline, and diesel from the hydrogen feedgas purification area and the adjacent area. This includes where boring # 11 is located.

Given our ongoing soil vapor extraction activity, Air Products is already addressing the remediation of volatiles, gasoline, and diesel from this soil. If weathered crude oils are found to contribute to the TRPH contamination, this would not be attributable to past Air Products activities and as such should not be required as part of our ongoing remediation.

RWQCB Determination 1 (e):

Petroleum hydrocarbon soil contamination (up to 35,400 mg/kg TRPH, 7,170 mg/kg TPH gasoline, 50,400 mg/kg TPH diesel, 17.4 mg/kg benzene, 10.9 mg/kg toluene, 9.68 mg/kg ethylbenzene, 24.1 mg/kg xylene) was identified along the western property line.

Action Required By RWQCB:

Remediate the petroleum hydrocarbon contaminated soil.

Air Products Response:

Your reference to the IT Corp. December 1993 report includes various samples collected from borings #1, #2, and #3 at a depth of five feet. The benzene result was from a 10 foot depth sample. The area where borings 1, 2, and 3 are located is between our former hydrogen purification area and the western border of our site; it falls within the area influenced by our soil vapor extraction system. Although we are actively removing volatiles, gasoline, and diesel from this area, they may not all be attributable to past Air Products activities as discussed more fully below.

The entire western border of the property that we lease from ARCO is a pipeline right-of-way that contains multiple pipelines including refinery and utility pipelines of unknown number, contents, and origin. Our hydrogen feedgas pipeline runs from the adjacent ARCO Los Angeles Refinery (west to east) and crosses under Alameda Street at our southwestern gate. It then runs in a northerly direction, about 200 feet, where it then takes a turn to the east and runs a short distance to our former hydrogen purification area. The north-south component of our pipeline traverses a section of the pipeline right-of-way which runs the entire length of our western border.

In February 1993 Air Products conducted a soil gas survey in order to delineate its zone of clean-up responsibility. This included the area traversed by our feedgas pipeline and the area between our former purification area and the pipeline right-of-way just west of the purification area. This survey showed that the hydrocarbons present in the soil along the pipeline right-of-way had a different chromatogram signature than the hydrocarbons that we had handled in our hydrogen purification process. The hydrocarbons near the pipeline right-of-way were a "complex petroleum hydrocarbon mixture" not typical of gasoline or diesel. This is noted in the enclosed sections 3.2 and 5.0 excerpts from the December 1993 IT Corporation Site Investigation Study Report and the enclosed excerpts from the February 1993 Target Environmental Services Soil Gas Survey.

Air Products' hydrocarbon related activities were limited to those involving diesel or a light gasoline-like material. Air Products received a hydrogen gas from ARCO that included minor BTEX components. To make pure hydrogen, the feedgas was first scrubbed with diesel to remove the BTEX. The diesel was then stripped of volatiles which condensed and were collected in a 10,000 gallon aboveground condensate storage tank. This condensate was much like light gasoline in character (benzene was a significant component) and was stored along side of a 10,000 gallon aboveground diesel tank. Nearby these two aboveground tanks was a 2,000 gallon underground diesel tank (28.91) that fueled a process boiler. Air Products also used small volumes of lubricating oil in our compressors and other machinery. To summarize, Air Products stored, used, and handled diesel fuel, a gasoline-like condensate, and small amounts of lubricating oil. Given our use of only gasoline-like and diesel type hydrocarbons in significant quantities, and given the location of the "complex petroleum hydrocarbon mixture" along the pipeline right-of-way, Air Products activities are not the source of the western contamination along Alameda Street.

This argument is bolstered by evidence collected by Air Products during a water supply line break that occurred in September 1993. Our active specialty gas operations are located at the extreme south western portion of the site. This area was not influenced by our former hydrogen plant operations. During the repair of a broken water supply line that cross cuts the Alameda Street pipeline right-of-way, hydrocarbon contaminated soil was encountered. I had IT Corp. collect a sample for analysis. Their 30 September report regarding this is enclosed. It should be noted that benzene was not detected, however, other gasoline and diesel constituents were present. The results (lack of benzene, distance from the former hydrogen purification area) strongly suggest that the contamination along the western Alameda Street border came from the pipeline right-of-way.

Air Products should not be held responsible for the remediation of hydrocarbons along the Alameda Street pipeline right-of-way.

RWQCB Determination 2:

Confirmation samples were not reported in the 12 August 1993
IT Corporation report which indicated that the CAM-WET analytical results for arsenic in sample C-6 was 22 mg/l (this exceeds the STLC for arsenic of 5 mg/l).

Action Required By RWQCB:

Collect confirmation samples from the cinder block berm and analyze for arsenic.

Air Products Response:

Sample C6 was collected from a concrete pad. This portion of the concrete pad was removed and properly disposed of. Sample S5 was collected, as a confirmation sample, from the soil directly beneath where sample C6 was located. Sample S5 was ND for STLC arsenic. This is described in the enclosed 31 January 1995 IT Corporation letter.

Conclusion

In conclusion, Air Products would still like to receive a favorable RWQCB closure approval for underground tank 28.5. We feel that the location of the bioremediated soil is not an issue and has no bearing on tank 28.5 closure.

The petroleum hydrocarbon contamination discovered in or near our former hydrogen purification area consists of: (1) volatiles, gasoline, and diesel components which may be attributable to past Air Products activities, and (2) weathered crude oil or complex hydrocarbon mixtures unlike gasoline or diesel that are not attributable to past Air Products activities. Air Products is currently operating a soil vapor extraction system to remove the hydrocarbons that may be attributable to our past activities. This system also has the incidental beneficial effect of remediating hydrocarbons within the systems zone of influence which are not attributable to Air Products activities. Air Products should not, however, be responsible for investigating and remediating hydrocarbons not linked to its activities.

Regarding the arsenic contaminated concrete, IT Corp. did collect a confirmation sample which showed that the contaminated area had been fully removed.

I hope this letter addresses your concerns. If you have any questions or comments, please give me a call at (610) 481-8867.

Sincerely,

Robert J. Swigart

Monterey Park, CA 91754-2156

Re: Air Products Manufacturing Corp., 23320 South Alameda Street, Carson, CA (File No. 95-089)

Dear Keith:

This letter is submitted in response to your 21 September 1995 correspondence which was relative to Air Products request for RWQCB closure approval for three underground storage tanks at our above referenced site. This property is leased by Air Products from ARCO and is located adjacent to the ARCO Los Angeles Refinery. These three tanks were removed, under the direction of the Los Angeles Department of Public Works (LADPW), at our above referenced site in August 1987. These tanks were identified as tank numbers LD-IGD-1, LD-IGD-2, and 28.5. LADPW never granted Air Products closure for these three tanks because a fourth tank (28.91) was removed from another area of the property and was believed to have leaked. Since this fourth tank was included in the same closure permit as the other three tanks, closure was never granted. In lieu of LADPW closure approval, Air Products has requested RWQCB closure approval in order to satisfy landowner (ARCO) concerns regarding proper tank closure.

Based on determinations that you have made from the review of documents forwarded to you, your letter requests that Air Products submit a work plan to the RWQCB by 31 October 1995. This responds to your work plan request. RWQCB determinations 1(a) and 1(b) are relevant to Air Products request for RWQCB closure approval for the three underground tanks. Determinations 1(c), 1(d), 1(e), and 2 are not relevant to closure approval for these tanks but rather to closure approval for the entire site. The various determinations and required actions set forth in your letter are listed below. I will discuss each of these separately.

RWQCB Determination 1 (a):

Petroleum hydrocarbon soil contamination was identified in underground tank locations LD-IGD-1 and LD-IGD-2. Contamination found was below screening levels.

Action Required By RWQCB:

No further action is required.

Air Products Response:

Air Products agrees with the RWQCB.

ECOVA

1. INTRODUCTION

This report summarizes the final phase of work completed by ECOVA Corporation (ECOVA) on behalf of Air Products and Chemicals, Inc. (APCI), at the APCI facility located at 23320 South Alemeda Street in Carson, California. ECOVA designed and operated a solid-phase biological treatment system at the site to remediate diesel contaminated soil. (Figure 1-1).

In this report we present:

- project background information
- project objectives
- excavation activities
- design and construction of the treatment bed
- baseline, process and final sampling methodologies
- results of analyses
- changes to the work plan resulting from discoveries in the field during the initial field work
- a review of the bioremediation methods
- treatment unit decommissioning

1.1 BACKGROUND

In January, 1989 ECOVA Corporation (ECOVA) of Redmond, Washington was retained by APCI to degrade the diesel contamination in the soil surrounding former UST 28.91. Development of a work plan and attainment of authorization to proceed from the South Coast Air Management District (SCAQMD) and the Los Angeles County Department of Public Works (LACDPW) resulted in a May 1989 startup of the project.

In August, 1987 in response to the State of California underground Fuel Storage Tank Law, APCI retained a contractor to remove four underground storage tanks (USTs) from their Carson, California facility. Upon excavation and removal of a 2,500-gallon diesel underground storage tank (UST 28.91), stained soil was observed in the tank pit (IT Corporation, 1988). At the time of removal, UST 28.91 had been empty and out of service for a period of 10 years. A subsequent environmental investigation was designed and implemented to determine the severity and extent of diesel contamination beneath and near the former UST 28.91. The results of the environmental investigation results showed that:

© 1989 ECOVA Corporation

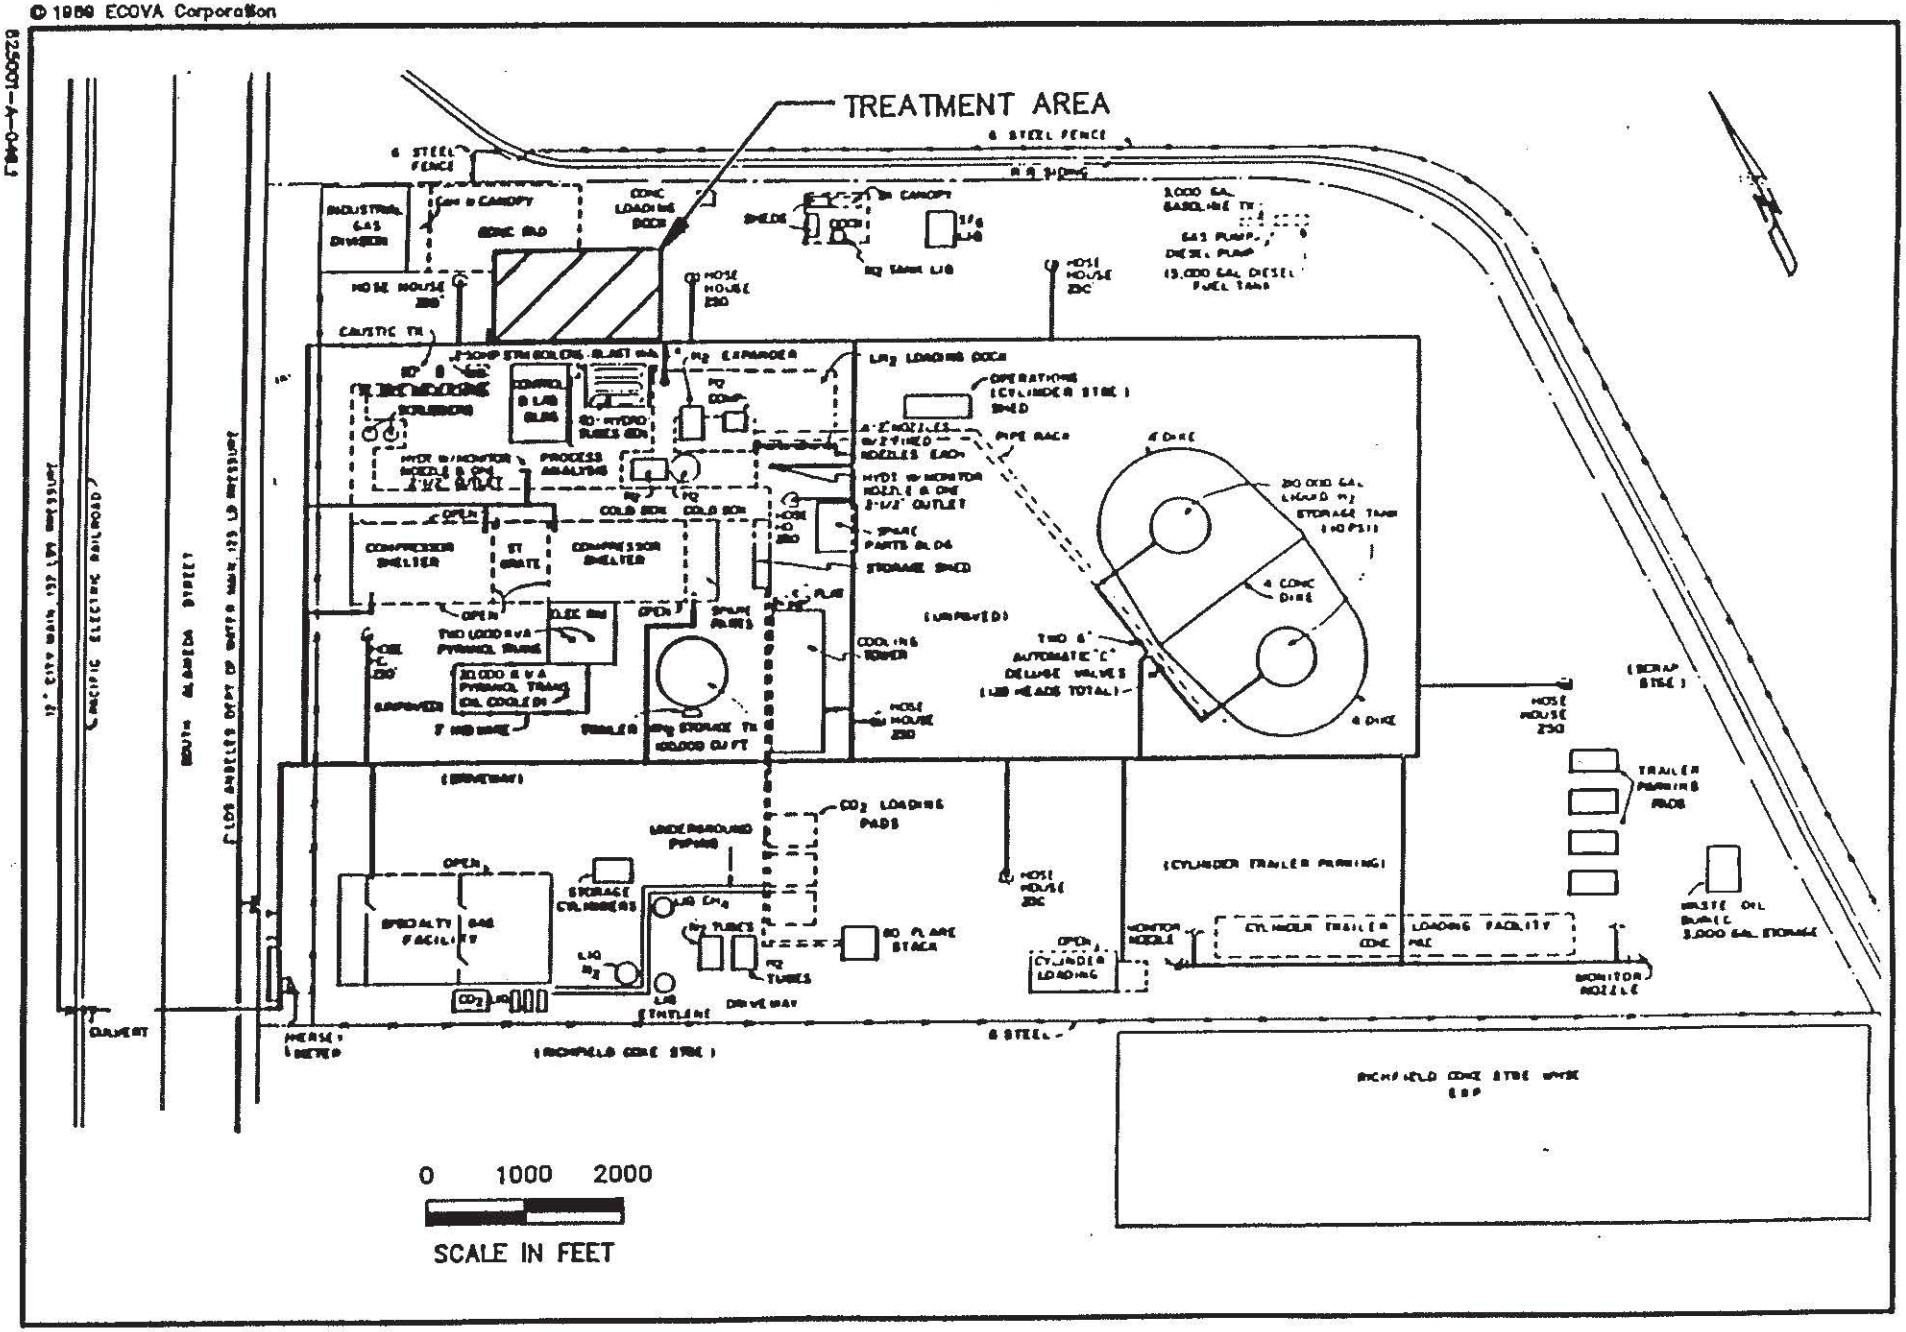

FIGURE 1-1. Site Map

- Leakage associated with the former UST 28.91 had contaminated a localized area beneath and around the tank
- The depth of contamination reached to 15 feet below surface
- Soil contaminants include petroleum hydrocarbons and the volatile diesel fuel constituents of benzene, toluene, ethylbenzene, and xylene isomers
- The horizontal limits of contamination was an area 50-feet on the North-South to 35-feet on the East-West around former UST 28.91
- Based on groundwater data from a boring, approximately 43-feet of unsaturated soil separate the plume from possible ground water contamination (IT Corporation, 1988)

1.2 PROJECT OBJECTIVES

The primary project objective is to achieve biodegradation of the diesel contaminated soil to a concentration allowing off-site disposal to a Class III landfill. The Total Petroleum Hydrocarbon (TPH) concentrations as measured by EPA method 418.1, must be reduced to concentrations below 100 mg/kg (ppm) and any remaining volatile organic compounds must be reduced to below the target cleanup levels accepted by the LACDPW and the California Regional Water Quality Control Board, Los Angeles Region (CRWQCB). Table 1-1 lists specific contaminant cleanup concentrations.

2. SUMMARY OF WORK

2.1 SOIL EXCAVATION

On March 8, 9, and 10, 1989, volume 410 cubic yards (yd^3) of petroleum hydrocarbon contaminated soil was excavated from the area immediately below and adjacent to the former diesel UST 28.91. Two backhoes and a trackhoe were utilized to excavate the contaminated soil. The ECOVA field geologist utilized the cross sections and boring logs provided in the site environmental investigation (IT Corporation, 1988) to confirm geologic indicators, such as a distinctive gray sand layer, which previous investigators noted as the bottom boundary of the contamination. The documented field data was used to supplement on-site air monitoring and visual inspection, as the soil removal process progressed, to determine the extent of contamination. The excavation resulting from the removal of contaminated soil measured 24 by 23 feet by 20 feet deep. Following excavation, the pit was backfilled with clean imported sand fill and compacted to 90 percent compaction.

To confirm that all the contaminated soil was removed from the excavation, ECOVA sampled the bottom and side walls of the excavation (Figure 2-1). A total of six samples were analyzed: one sample each from the north and south ends of the excavation bottom and two samples from each sidewall, composited into one sample. These samples were analyzed for Total Petroleum Hydrocarbons using EPA Method 418.1. The analytical results for the samples collected from the excavation bottom and walls are provided in Table 2-1. Analytical confirmation and visual inspection of the walls of the excavation indicated these areas are not contaminated.

2.1.1. TREATMENT AREA

The treatment bed was constructed on March 8, 1989, prior to the initiation of excavation activities. By building the treatment bed prior to excavating the soil, the field crew was able to place and spread the contaminated soil within the treatment bed as the excavation activities progressed. The contaminated soil was transported to the treatment area, located adjacent to the former truck scales area (Figure 2-2). The treatment area consists of a 1,020 square yard bermed treatment bed measuring 17 yards by 60 yards. The soil in the treatment bed was divided into a grid pattern of 11 individual cells measuring approximately 10 by 10 yards each. Since the area underlying the designated treatment area was covered with asphalt cement, the treatment bed was constructed by bringing in fill material to construct earth berms on top of the asphalt cement. The existing sewer drains were covered with visqueen as was a truck scale pad which made up a portion of the treatment bed floor (Figure 2-2).

2. SUMMARY OF WORK

2.1 SOIL EXCAVATION

On March 8, 9, and 10, 1989, volume 410 cubic yards (yd^3) of petroleum hydrocarbon contaminated soil was excavated from the area immediately below and adjacent to the former diesel UST 28.91. Two backhoes and a trackhoe were utilized to excavate the contaminated soil. The ECOVA field geologist utilized the cross sections and boring logs provided in the site environmental investigation (IT Corporation, 1988) to confirm geologic indicators, such as a distinctive gray sand layer, which previous investigators noted as the bottom boundary of the contamination. The documented field data was used to supplement on-site air monitoring and visual inspection, as the soil removal process progressed, to determine the extent of contamination. The excavation resulting from the removal of contaminated soil measured 24 by 23 feet by 20 feet deep. Following excavation, the pit was backfilled with clean imported sand fill and compacted to 90 percent compaction.

To confirm that all the contaminated soil was removed from the excavation, ECOVA sampled the bottom and side walls of the excavation (Figure 2-1). A total of six samples were analyzed: one sample each from the north and south ends of the excavation bottom and two samples from each sidewall, composited into one sample. These samples were analyzed for Total Petroleum Hydrocarbons using EPA Method 418.1. The analytical results for the samples collected from the excavation bottom and walls are provided in Table 2-1. Analytical confirmation and visual inspection of the walls of the excavation indicated these areas are not contaminated.

2.1.1. TREATMENT AREA

The treatment bed was constructed on March 8, 1989, prior to the initiation of excavation activities. By building the treatment bed prior to excavating the soil, the field crew was able to place and spread the contaminated soil within the treatment bed as the excavation activities progressed. The contaminated soil was transported to the treatment area, located adjacent to the former truck scales area (Figure 2-2). The treatment area consists of a 1,020 square yard bermed treatment bed measuring 17 yards by 60 yards. The soil in the treatment bed was divided into a grid pattern of 11 individual cells measuring approximately 10 by 10 yards each. Since the area underlying the designated treatment area was covered with asphalt cement, the treatment bed was constructed by bringing in fill material to construct earth berms on top of the asphalt cement. The existing sewer drains were covered with visqueen as was a truck scale pad which made up a portion of the treatment bed floor (Figure 2-2).

2.2 AIR MONITORING

In order to meet the SCAQMD emission monitoring requirements, ambient air volatiles were measured throughout the excavation and soil spreading operations. Volatile air emissions were measured using a photoionization detection meter (HNU MODEL ISPI 101) with a 11.7 eV probe. The HNU was calibrated on a daily basis using an Isobuthylene gas standard. Table 2-2 presents air emissions data for March 9, 1989 as an example of the measured emissions from the excavation operations. At no time during excavation or soil treatment operations did the measured emissions exceed 7.5 ppm based on a 99.6 ppm (span 3.30) Isobutylene gas standard.

2.3 TREATMENT OPERATIONS

Treatment operations began on March 10, 1989 and consisted of removing and stockpiling construction rubble from the treatment bed, watering, and cultivating the contaminated soil. A backhoe was used to remove and stockpile blocks of asphalt and concrete from the soil in the treatment bed. The clearing of the treatment bed was necessary to prevent damaging the disk that was used to cultivate the soil. Following the removal of rubble, a 150-horsepower tractor was mobilized to the site to pull a disk (12-inch diameter disks) over the contaminated soil in the treatment bed. The soil was disked for a period of four hours in order to maximize the circulation of air and water within the soil. The soil was initially disked two times per week for the first two weeks of treatment. Subsequently the soil was disked on a weekly basis until the monitoring sampling during the 9th week of treatment. Based on our experience with the solid phase biodegredation of diesel fuel in soil we did not feel that fertilizer or microbial inoculum needed to be added to the soil in the treatment bed.

2.4 SAMPLING

2.4.1 BASELINE SAMPLING

The treatment bed has been sampled two times during the project. The initial sampling (March 11, 1989) was conducted one day after the initial tilling of the soil to gather soil baseline chemical data. The second sampling (May 15, 1989) was conducted to determine the extent of TPH degradationn and to define the nature of the TPH found in the soil being treated (process monitoring).

To define the baseline chemistry of the contaminated soil composite soil samples were collected and analyzed from each of the 11 treatment bed cells. Each cell sample was a composite made up of five individual soil samples: a sample from the center of the cell, and four samples on the cell boundaries, north, south, east, and west of the midpoint of the cell (See Figure 2-2). These five samples were composited into one sample in the

field. At each sample location, a 12-inch long stainless steel core with two 6-inch inserts were was advanced into the soil. The inserts were then emptied into a stainless steel bowl and composited. The composite was then added to composites from the other sampling points within the cell and placed in individual airtight glass jars, and the caps wrapped in parafilm. The cell composites samples were placed in a cooler with ice, then cooled to 4 °C and shipped on the same day under full chain-of-custody procedures to ECOVA Analytical Services in Redmond, Washington.

The samples collected during the March 11, 1989 sampling were analyzed for TPH by EPA Method 418.1 Infrared Spectrophotometry (IR). In addition, the sample with the highest measured concentration of TPH was also analyzed using Gas Chromatograph (GC) methods, EPA modified 8020 (GC-FID), to determine the benzene, ethylbenzene, toluene, and xylenes content and EPA method 8015 to define the types of petroleum hydrocarbons that were being detected by the IR analyses.

2.4.2 PROCESS MONITORING

Following a nine week treatment period the soil in the APCI treatment bed was sampled for a second time on May 15, 1989. For reasons explained in Section 2.7.2 of this report, during this sampling (Process Monitoring) discrete samples were collected from each cell in the treatment bed, from a depth of 6 inches below surface to the base of the treatment bed (18 inches below surface). During the second soil sampling a total of 43 soil samples were collected from the treatment bed. Cell #1 was not completely filled with soil, therefore only three samples were collected from that particular cell.

Following labeling and preparation for shipping, the individual soil samples were placed in a cooler, iced down to 4 °C and shipped via overnight carrier to ECOVA for analysis on May 16, 1989.

2.5 DECONTAMINATION OF SAMPLING EQUIPMENT

To prevent cross-contamination of samples, all equipment used in the collection of samples was decontaminated at specific points designated in the sampling routine. Soil sampling equipment was decontaminated in accordance with the following procedures:

1. Brush or wipe any soil off the sampler, being sure that the inner surface is free of soil.
2. Scrub the sampler in TSP solution with a wire brush.
3. Rinse with potable water and then distilled water.
4. Repeat above procedure for stainless steel bowl used to composite samples and all sampling apparatus.

2.6 HEALTH AND SAFETY

A comprehensive Health and Safety Plan for the APCI site was developed for the protection of all onsite employees and subcontractors. Training on the specific hazards of this site was conducted prior to work, and monitoring of employee exposure is being conducted to ensure reduced risk as a cleanup operations continue. ECOVA has maintained adherence to the OSHA requirements for hazard waste site works and EPA study guidelines as appropriate.

2.7 ANALYTICAL RESULTS

2.7.1 BASELINE ANALYTICAL RESULTS

The results of the baseline sampling are summarized in Table 2-3. The measured TPH ranged from 399 to 866 mg/kg (parts per million-ppm) with an average concentration of 610 ppm. The cell with the highest measured TPH was Cell 1 and the measured TPH concentration of 2148 ppm was anomalously high. The results of EPA method 8015 analysis (GC-FID) on the composite sample from Cell 1 (APCI-C1) indicated that heavy end (long chain hydrocarbons) made up a considerable portion of the sample, with light end petroleum hydrocarbons and diesel making up the minor constituents of the petroleum hydrocarbons in sample APCI-C1 (see Table 2-4). The EPA method modified 8020 analysis indicated low concentrations of BTXs (see Table 2-5), thus confirming that the lighter petroleum hydrocarbons make up the minor fraction of the measured petroleum hydrocarbons in Cell 1.

2.7.2 CHANGES IN SAMPLING AND ANALYTICAL PROTOCOL

Based on the analytical results from the Baseline Analytical showing that the contaminant in the APCI soil consisted of a heterogenous mixture of several types of petroleum hydrocarbons (see Table 2-3 and Table 2-4). ECOVA elected to revamp the sampling/analytical protocol for the Process Monitoring. As was presented in Section 2.3.2 of this report the new sampling protocol for the Process Monitoring called for a greater number of samples to be collected. By collecting four discrete samples from each cell and sampling the lower 12-inches of the treatment bed, ECOVA could get a better understanding of the distribution of the different kinds of petroleum hydrocarbons within the treatment bed. By having better sample control, the soil within the cells could be better characterized.

An extra analytical procedure was also added to the TPH by IR analyses of the Process Monitoring suite of samples (May 15, 1989). The IR method is a straightforward and inexpensive way to measure the TPH content in the soil and it is routinely used to monitor petroleum hydrocarbon degradation when the contaminant is a

known petroleum distallate such as diesel. After analyzing Cell 1 in the baseline sampling it became apparent that the petroleum hydrocarbons in the APCI contaminated soil was not solely diesel but a heterogenous mix of petroleum hydrocarbons with some prominent long chain (greater than carbon -30) petroleum hydrocarbons. For the Baseline Analytical work, the soil samples were analyzed for TPH by the IR method which included the Oil and Grease fraction. During the Process Monitoring ECOVA modified the analytical procedures to eliminate the Oil and Grease fraction by treating the analytical extract with silica gel. The silica gel filtering screens any non-petroleum hydrocarbons, such as Oil and Grease, which the IR analysis picks up as petroleum hydrocarbons.

2.7.3 PROCESS MONITORING RESULTS

As can be observed in the analytical results from the Process Monitoring (Table 2-6) the TPH by IR (Oil & Grease) figures are approximately 1500 ppm higher in concentration than the silica gel filtered TPH by IR analyses. The difference can be attributed to bio residue and humic acids that are not petroleum hydrocarbons but are picked up by the IR analysis (EPA method 418.1) as petroleum hydrocarbons.

Following review of the Process Monitoring analytical data, ECOVA selected and analyzed composite soil samples from the cells which contained the highest concentrations of TPH (Cells 4, 6 and 9,see Table 2-7). The composite samples were then analyzed for TPH utilizing EPA Method modified 8015 (GC-FID) to characterize the petroleum hydrocarbons. Based on interpretation of the gas chromatographs by ECOVA analytical personnel it was determined that the majority of the TPH measured by IR is made up of an atmospheric residual of crude oil or a heavy bunker oil (see Figures 2-3, 2-4, 2-5, and 2-6).

3. BIOREMEDIATION CONSIDERATIONS

This section of the interim report summarizes the assumptions that were used to design the soil biological treatment program for the APCI site. The effectiveness of biological treatment processes at the facility will ultimately be limited by the nature of petroleum biodegradation and the specific petroleum hydrocarbons encountered. An analysis of these two factors suggests that the biodegradability of the APCI material is limited and that concentrations could "plateau" at approximately 30-40 percent of starting concentrations.

3.1 OVERVIEW OF PETROLEUM BIODEGRADATION

The biological degradation of petroleum hydrocarbons is a naturally occurring reaction. Complete biodegradation of petroleum ultimately results in carbon dioxide, water, and microbial biomass. The rate of this reaction, however, is highly dependent on a variety of factors including the specific structure of the compound; the availability of nutrients, oxygen and water for the microorganisms; and the nature of soil or other matrix in which the compound resides. Certain compounds can be biologically degraded over a very short time (hours), while other compounds such as asphaltics, are virtually totally non-degradable.

The susceptibility of petroleum to biodegradation varies with the types and sizes of its component molecules. There are several hundred individual component molecules in any given crude oil, and the overall degradability of a specific petroleum product will depend on the proportion of degradable compounds of which it is composed. For example, alkanes of intermediate chain length (C_{10}-C_{24}) are degraded most rapidly. However, very long chain alkanes become increasingly resistant to biodegradation, and after exceeding a molecular weight of 500-600 they cease to serve as carbon sources to microorganisms. Branching structures typical of asphaltics also reduce the rate of biodegradation, and aromatic compounds are degraded more slowly than alkanes. Condensed polycyclic aromatics and cycloparaffins, as well as high-molecular-weight alkanes, are degraded only very slowly.

The availability of nutrients and oxygen also has significant effects on petroleum degradation. In particular, nitrogen and phosphorus fertilizers, as well as oxygen, accelerate biodegradation. Additionally, proper pH and temperature help to produce favorable effects.

Solid-phase biological treatment processes are designed to remove constraints which slow degradation rates, such as limited nutrients and oxygen, and bring about rapid rates of degradation. Because of the variability in the source of petroleum hydrocarbon contamination, the chemical nature of contaminated soil, and other site-specific concerns, treatability studies are the most appropriate way of establishing proper treatment conditions. However,

in cases were the petroleum hydrocarbon is a known, such as diesel fuel, we can carry out the bioremediation utilizing parameters established during previous projects.

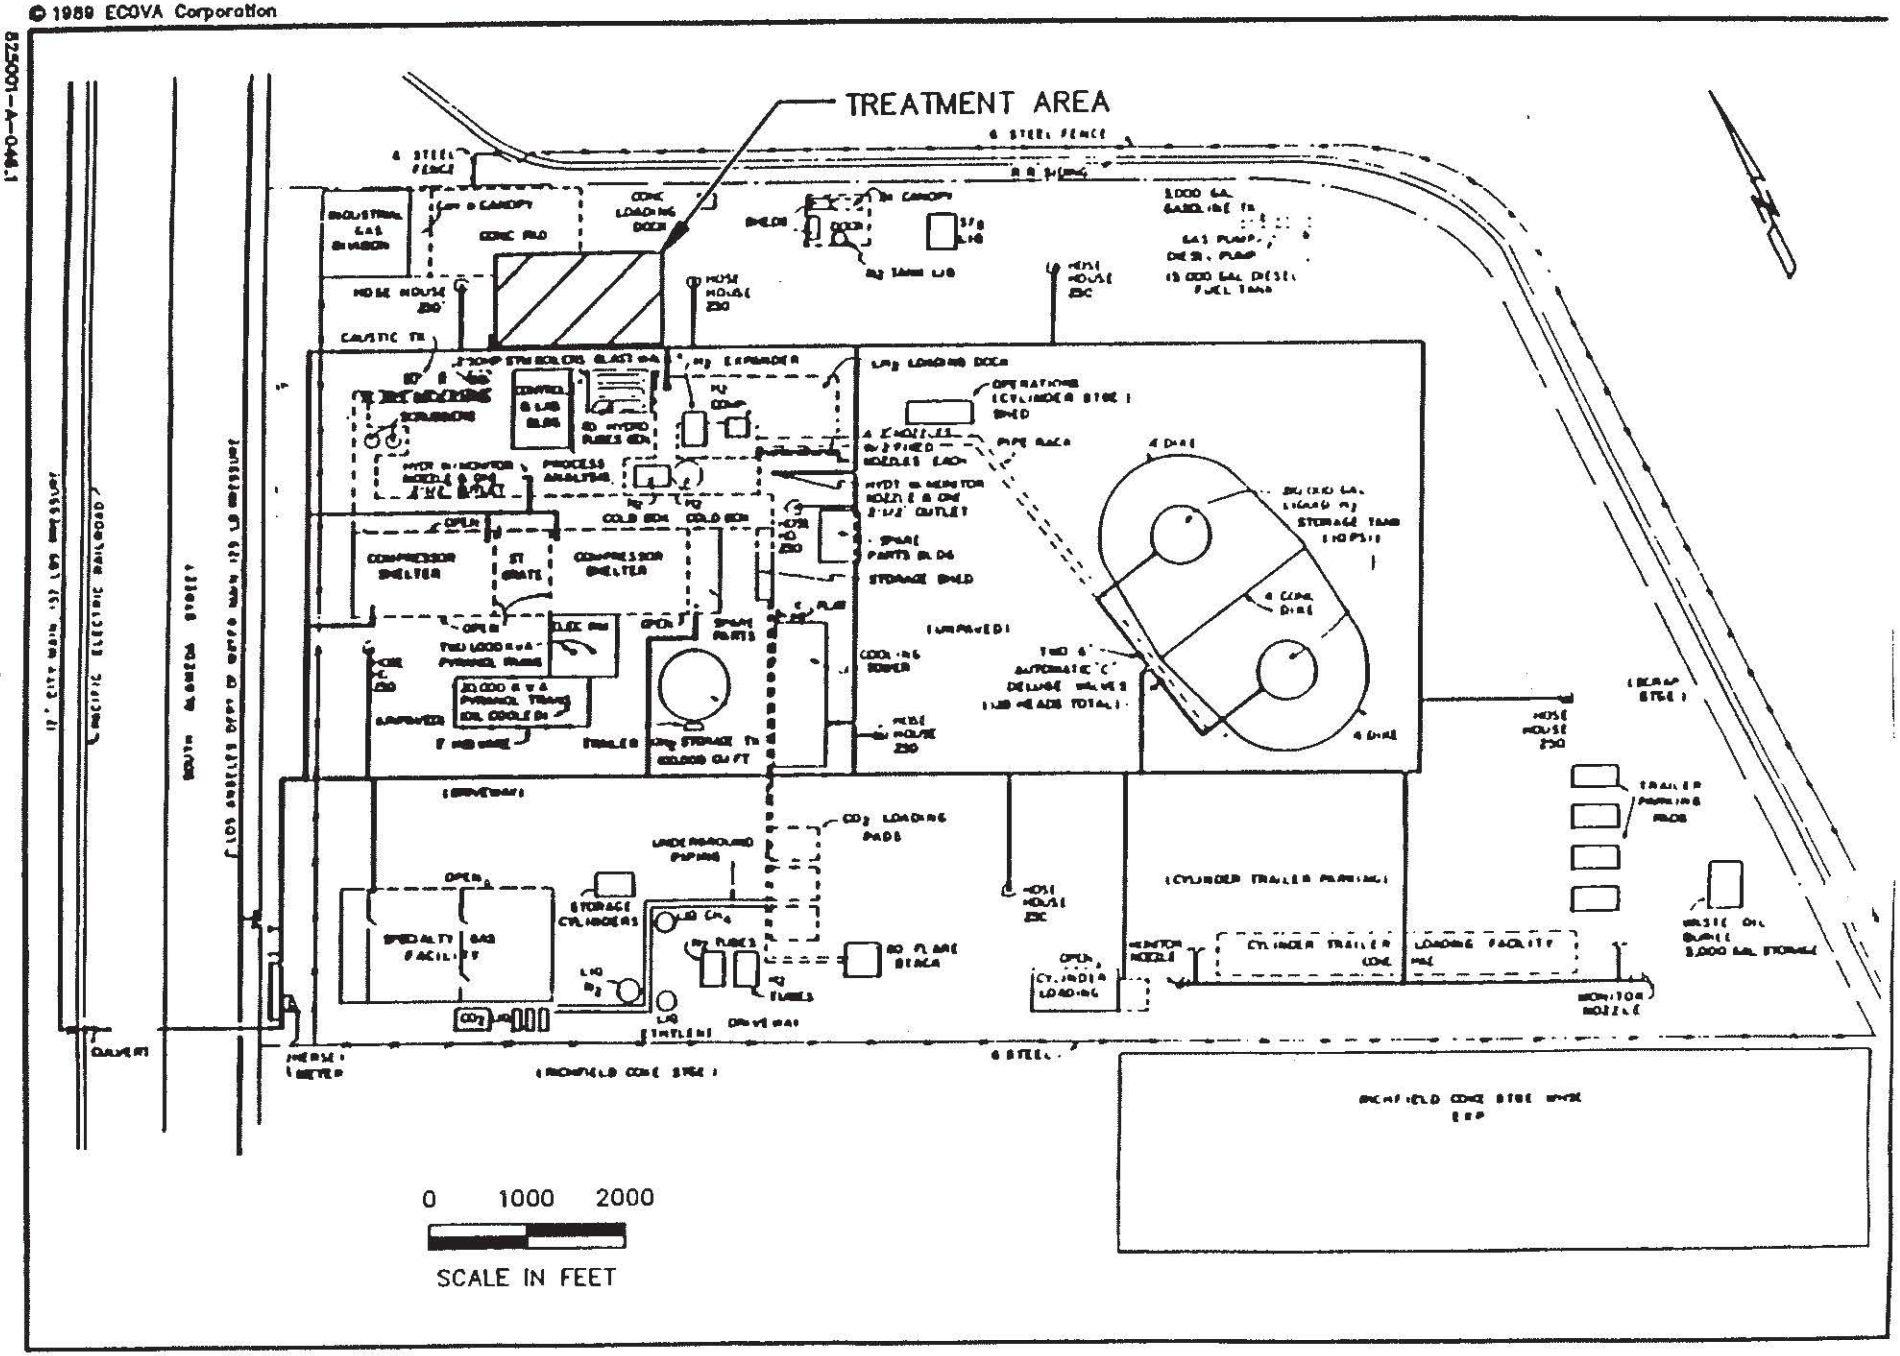
Based on review of the IT environmental study chemical data, it appeared that rapid and complete biodegradation of contaminants at the APCI facility was possible. As a result, it was assumed by ECOVA and APCI that the source contaminant was diesel and therefore the biodegradation would continue at this rate until degradation of the petroleum hydrocarbons reached the target concentration levels.

A subsequent evaluation of the Baseline and Process Monitoring analytical data by ECOVA, however, indicates that this assumption may not be valid, since a portion of the contaminant material is recalcitrant and a linear rate of degradation may not be possible. Specifically, there appears to be little further reduction in TPH concentration after the initial rapid drop. This suggests that in addition to the relatively easily degraded lower molecular fraction, the site material contains a larger molecular weight fraction that degrades at a much slower rate.

The analytical results clearly showed that although there remains a fraction of hydrocarbons (C-25 to C-30) amenable to biodegradation, a second tier of recalcitrant hydrocarbons exists that may not be amenable to biodegradation. Gas chromatographic evidence supports the probability that this recalcitrant fraction is composed of C-40 and longer-chain hydrocarbons. This fraction may average from about 30 to 40 per cent of the amount of TPH present in the contaminated soil.

3.2. SUMMARY

There is a major fraction of the hydrocarbons at the APCI site that are amenable to biodegradation. However, data also indicate a second group of recalcitrant hydrocarbons exist that will probably not biodegrade to any great extent. The overall degradability of the TPH at the APCI site may be 60-70 percent, leaving approximately 30-40 percent of the material as non-degradable to target TPH levels as measured by EPA method 418.1.



4. RECOMMENDATIONS

Analytical results from treatment bed samples collected on May 16, 1989 indicate: (a) that diesel fuel components have been eliminated or reduced to low (less than 280 ppm) concentrations from the treated soil and (b) that a significant portion of the hydrocarbons present in the treatment bed are heavy bunker oil or an atmospheric residual of a crude oil. The latter two substances are not amenable to rapid biodegradation.

Because crude oil is naturally present in background soil, ECOVA proposes that it is not necessary to dispose of the treated soil in a Class III landfill. Instead, soil in the treatment bed should be treated until all diesel fuel has been degraded and then kept on site and used as fill material as needed.

1.0 Introduction

The Air Products and Chemicals, Incorporated (APCI) Carson Hydrogen Facility (site), is located in Carson, Los Angeles County, California, at 23300 South Alameda Street (Figure 1). The site is fenced and occupied by one temporary building on an unpaved lot. The surrounding area consists of industrial properties with the Texaco Sulfur Recovery Facility to the north, and the APCI Specialty Gas Facility and the ARCO Coke Storage Facility to the south.

The site is owned by ARCO, and has been leased by APCI since 1962. In 1962, APCI built a hydrogen purification and liquefaction facility which manufactured liquid and gaseous hydrogen. This manufacturing facility was in operation from 1962 until 1986. The facility was decommissioned and was demolished in 1992 and 1993. All underground storage tanks (USTs) and aboveground storage tanks (ASTs) were removed between the years of 1987 and 1993. Under the direction of the Los Angeles Regional Water Quality Control Board (RWQCB), an in-situ soil vapor extraction system was in operation at the west end of the site between May of 1995 and November of 1996 to remediate past hydrocarbons releases. The RWQCB granted closure of the site in 1997.

The site is located in the Dominguez Gap within the southern portion of the Central Section of the Los Angeles Basin. Shallow soils in this portion of the Basin are mainly recent clays, silts and sands that extend to the Gage Aquifer at approximately 60 feet below surface.

APCI intends to construct a new hydrogen facility on the site. In preparation for this construction, APCI has conducted demolition of some remaining foundations and associated footers from the previous hydrogen facility, as well as other pre-construction activities. These activities included the excavation of soil in several areas of the site.

1.1 Objectives

IT Corporation (IT) was contracted by APCI to perform air monitoring, environmental engineering oversight, soil sampling, and South Coast Air Quality Management District (SCAQMD) Rule 1166 report preparation for activities conducted during the demolition of

certain concrete foundations and associated footers near the west end of the site, and subsequent excavation in preparation for new foundations and footers to be located in this area. Because of the location of the site in the refinery area of Carson and its history of hydrocarbon contamination, APCI anticipated that soils affected by hydrocarbons might be encountered during the demolition and excavation. This report summarizes the field operations, soil excavation and stockpiling activities, field and laboratory analyses, soil removal from the site for disposal, and backfilling operations. All operations were completed in accordance with the conditions stipulated by the SCAQMD Rule 1166 Contaminated Soil Mitigation Plan No. 342375 (Appendix A).

2.0 Field Activities

This section summarizes field activities, including air monitoring, excavation, soil sampling, soil analysis, and backfilling.

2.1 Air Monitoring

On August 25, 1998, air monitoring began, in accordance with SCAQMD Rule 1166 Mitigation Plan No. 342375. Both soils and airspace were monitored using an Hnu® P1-101 Model photo-ionization detector (PID) calibrated to hexane gas (Photo 1). The calibration of the PID was confirmed using manufacturer's recommended procedures and hexane gas standardized to 100 parts per million (ppm) at the beginning and end of each day in which excavation activities were conducted.

PID measurements were taken throughout the excavation activities at time intervals not exceeding 15 minutes. All measurements were entered into SCAQMD Rule 1166 Soil Monitoring Records. Whenever applicable, notations as to sample location, depth, and details of excavation activities were also noted on the Monitoring Records. Monitoring Records are presented in Appendix B.

In accordance with Section III, Condition 14 of the Mitigation Plan, SCAQMD was notified of PID measurements exceeding 50 ppm. On August 27, 1998, reference number EH-98-0336 was provided by the SCAQMD. On August 31, 1998, the SCAQMD provided reference number EH-98-0338 for all remaining soils removed from August 27, 1998 to the end of the excavation activities.

2.2 Vapor Suppression Activities

Throughout the excavation activities, particular care was taken to maintain proper vapor suppression (Photo 2). The excavation area was frequently sprayed with water and all areas of the excavation not within the immediate work area were covered with plastic sheeting (Photo 3). Excavated soils were stockpiled on the site according to the conditions of the Mitigation Plan. All stockpiles of potentially contaminated soil were placed on plastic sheeting, sprayed with water and covered with plastic sheeting (Photo 4). All sheeting was secured and anchored to prevent exposure of potentially contaminated soils to the atmosphere.

2.3 Excavation

Demolition and excavation activities began August 25, 1998 and were completed September 1, 1998. Excavation was conducted by Howard Contracting Incorporated (HCI) of Los Alamitos, California. An estimated total of 1200 cubic yards of soil was removed and placed into one of two stockpile areas, one containing soils with PID measurements less than 50 ppm ("< 50 ppm stockpile") and the other with PID measurements equal to or higher than 50 ppm ("> 50 ppm stockpile"). The excavation was approximately 93 feet long north to south and 75 feet wide east to west, with depths varying from 3 feet to 7 feet below ground surface (bgs) (Figure 2).

2.4 Soil Sampling

Ten soil samples were taken of stockpiled soils on September 2, 1998, entered into chain of custody records, and delivered in ice-chilled coolers to Enviro-Chem, Inc. (Enviro-Chem) in Pomona, California. Nine samples were taken from the > 50 ppm stockpiles and one from the < 50 ppm stockpile. The nine samples from the > 50 ppm stockpiles were composited into three composite samples by the laboratory. All four samples were analyzed for total petroleum hydrocarbons (TPH) by United States Environmental Protection Agency (EPA) Method 8015M, volatile organic compounds (VOCs) by EPA Method 8260A, and Title 22 metals by EPA Methods 6010A, 7196A, and 7471A. Based upon elevated lead and mercury concentrations, the samples were further analyzed for soluble lead and mercury using the California Waste Extraction Test (WET) and by EPA Method 1311 Toxicity Characteristic Leaching Procedure (TCLP). Laboratory Reports are presented in Appendix C.

No VOCs were detected in the samples. All samples contained elevated levels of hydrocarbons in the diesel (C10-C22) and oil (C22-C35) ranges, but no gasoline or kerosene range hydrocarbons were detected in any of the samples. Barium, chromium, cobalt, copper, nickel, selenium, vanadium, and zinc were detected in one or more of the samples at relatively low concentrations. Analytical results are presented in Table 1. Soluble lead concentrations in all samples exceeded the California soluble threshold limit concentration (STLC) of 5 milligrams per liter (mg/L), which resulted in the soil being classified as a California hazardous waste. Lead TCLPs for all four samples were less than the 5.0 mg/L threshold limit. Mercury TCLP for one sample measures less than the 0.2 mg/L threshold limit. Thus, soil was not a RCRA hazardous waste.

Because APCI anticipated transporting the contaminated soil to a disposal facility in Arizona, the nine samples from the >50 ppm stockpiles were transferred to Del Mar Analytical Services (Del Mar), an Arizona certified laboratory, for analysis of BTEX and polynuclear aromatic hydrocarbons (PAHs). Some PAHs were detected in all three composite samples at relatively low concentrations. Benzene and toluene were detected in low concentrations in the composite sample STK1-7,8,9. Analytical results are presented in Table 2.

2.5 Removal of Contaminated Soil

A total of approximately 1782 tons or 1200 cubic yards of stockpiled, contaminated soil was removed from the site (US EPA ID No. CAC002102136). All soils were loaded and hauled by Ecology Control Industries (ECI) to Browning-Ferris Industries, Inc.'s (BFI) La Paz County Landfill in Parker, Arizona (US EPA ID No. AZC950823111). Removal operations took place between September 17, 1998 and September 22, 1998. Copies of hazardous waste manifests are included in Appendix D.

2.6 Backfilling and Compaction

Backfilling and compaction operations were conducted between September 10, 1998 and September 13, 1998 by HCI. Backfilling oversight and compaction testing was conducted by Globus Engineering Incorporated (Globus) of San Pedro, California. The excavation was backfilled with soils from the <50 ppm stockpile and other uncontaminated soils stockpiled on the site.

3.0 Certifications and Limitations

The statements, opinions and conclusions contained in this report are based solely upon the services performed by IT Corporation as described in this document and the contracted scope of work established by APCI and the terms and conditions of the contract agreement with APCI. In performing these services and completing this document, IT Corporation utilized and relied upon the work and information provided by others, including public agencies, whose information cannot be guaranteed by IT Corporation.

This document is intended for the sole and exclusive use of APCI. The findings of this document are limited to those specifically expressed in the document and no other representations or warranties are given by IT Corporation and no additional conclusions should be reached or representations relied on other than those expressly stated in the report and as limited by contracted IT Corporation Terms and Conditions.

IT Corporation performed the field operations, investigations and analyses described in this document in accordance with currently accepted professional standards of environmental investigation, analysis and engineering. The results presented in this document are considered representative of conditions at the time the work was performed. If there are any questions about the information presented in this report, please call the undersigned at (714) 261-6441.

UNDERGROUND STORAGE TANK CASE REVIEW FORM

Los Angeles Regional
Water Quality Control Board

Date: September 23, 1997	LUSTIS file no.: # I-05385	Case reviewer: KEITH ELLIOTT	
Site Name/Address: **Air Products & Chemicals Inc.** **23320 Alameda Street, South** **Carson, CA**	Responsible parties: Robert J. Swigart	Address: Air Products & Chemicals Inc. 7201 Hamilton Boulevard Allentown, PA 18195-1501	Phone no.: (610) 481-8867

I. CASE INFORMATION (N/A = Not Applicable)

Tank No.	Size in Gallons	Contents	Closed in-place/Removed?	Date
LD-IGD-1	3,000	Gasoline	Removed	08/04/87
LD-IGD-2	12,000	Diesel Fuel	Removed	08/04/87
3 (28.5)	2,000	Waste Oil	Removed	08/04/87
4(28.91)	2,500	Diesel Fuel	Removed	08/04/87
5	6,000	Caustic	Removed	05/18/93

II. SITE CHARACTERIZATION INFORMATION (GW=groundwater, -- =Not Reported)

GW Basin: West Coast HSA - Coastal Plain	Beneficial uses: MUN	Depth to drinking water aquifer: About 400 feet bgs	
Distance to nearest municipal supply well: 0.85 miles		Distance between known shallow GW contamination and aquifer: 350 feet	
GW highest depth:5 ft bgs	GW lowest depth:65 ft bgs	Well screen interval: No GW monitoring wells installed on-site	Flow direction: West/Southwest
Soil types: Silty sand, sand, and gravel.		Maximum soil depth sampled: 58 feet	

III. MAXIMUM DOCUMENTED CONTAMINANT CONCENTRATIONS -- Initial and Latest (ND=Non-detect; NRQ=Not required)

Contaminant	Soil (mg/kg)		Water (µg/L)		Contaminant	Soil (mg/kg)		Water (µg/L)	
	Initial (1993)	Latest (1996)	Initial (Year)	Latest (Year)		Initial (1993)	Latest (1996)	Initial (Year)	Latest (Year)
TPH (Gas)	7,170	8,600			Ethylbenzene	57	63		
TPH (Diesel)	50,400	2,300			Xylenes	320	280		
Benzene	91	180			MTBE	NA	ND(5/1/97)		
Toluene	450	350			Other				

IV. SOIL REMEDIATION

Method:Excavation with on-site bioremediation of about 410 cubic yards of soil from Tank 28.91 In addition, SVE for the process area.	Duration of remediation: 1 year SVE.

V. GROUNDWATER REMEDIATION

Method: N/A	Duration of remediation: N/A

VI. FREE PRODUCT:

Was free product encountered? The report indicates Yes, in excavation for caustic tank (BH-9) also in BH-16 however, this is believed to be an elevated perched ground water with petroleum hydrocarbon upon this water.	Has free product been totally recovered? yes
When was free product recovery project completed? 8/96 when SVE system shut down.	

VII. RECOMMENDED ACTION:

Soil Closure only: Yes	Case Closure: Yes	Solvent Case? NO
Additional Action Required (i.e.: additional site assessment, remediation, monitoring): NONE		

VIII. COMMENTS AND JUSTIFICATION FOR RECOMMENDED ACTION:

This site is adjacent to the Carson Reg l Ground Water Group which has extensive phase hydrocarbons upon the ground water. In addition, there are numerous pipelines along the adjacent Alameda Street. Also, there were releases from above ground storage tanks at the subject site.

A crossgradient gauge aquifer monitoring well M-2 identified 0.9 mg/kg TPH & ND for BTEX and crossgradient monitoring well 33-D was ND for TPH & BTEX in 4/97. There were no downgradient monitoring wells analyzed before reaching the downgradient free-phase hydrocarbon "Pool 1" plume at the Arco refinery which had 14.84 feet of free product in the closest well AMR/554-D.

The SVE system operated for one year and developed asymptotic conditions. Tested for rebound conditions which were minimal.

Elevated contaminant concentrations noted above are in area of caustic tank where a plastic liner was placed into excavation prior to backfilling. This liner inhibited SVE treatment of soils. The remaining site appears to have been remediated to more acceptable levels.

Close site based upon Level 2 MTBE and "Common Sense" closure criteria with limitation for industrial use at site.

Re: File No. 100.315
Air Products Manufacturing Corp., 23320 South Alameda St., Carson, CA

Dear Keith:

As requested in your 20 November 1996 letter, Air Products hereby provides the Regional Water Quality Control Board (the Board) with our closure investigation report for the above referenced former hydrogen manufacturing site. As you recall, Air Products operated a soil vapor extraction system (SVE) at this site from May 1995 to November 1996. Following a series of rebound tests, which showed no significant benefit to the continued operation of the SVE system, the Board granted Air Products permission to shut down the SVE system. Subsequently, Air Products' contractor, Terra Vac Inc., prepared a site closure investigation workplan which was approved by the RWQCB. According to the workplan, Air Products drilled five closure borings (CB-1 through CB-5) to an approximate depth of 30 feet below grade and conducted field organic vapor analyses (OVA) during each boring in order to identify any soils with remaining hydrocarbons. Described below is a summary of the five boring locations. Three soil samples from each boring were selected for laboratory analysis, based on the OVA screening, and each sample was analyzed for TPH Diesel, TPH Gasoline, and BTEX.

Closure boring CB-1 was situated where the former 10,000 gallon aboveground diesel and 10,000 gallon aboveground hydrocarbon condensate tanks were located. Closure boring CB-2 and closure boring CB-3 were situated in order to assess the effectiveness of the SVE system in a northerly and southerly direction respectively. Closure boring CB-4 was situated where the former 2,500 gallon underground diesel tank #28.91 was located and closure boring CB-5 was situated where the former 6,000 gallon underground spent caustic solution tank #28.70 was located.

To summarize the results of our closure boring investigation, two borings (CB-2 and CB-4) showed total elimination of hydrocarbons, two other borings (CB-1 and CB-3) showed a nearly total elimination of hydrocarbons, and one boring (CB-5) showed some hydrocarbons remaining. It appears that the overall effectiveness of the SVE system in removing hydrocarbons was good; however, this effectiveness varied somewhat within a closure boring and among closure boring areas. Air Products believes that the site conditions explained below are responsible for these variations in hydrocarbon removal effectiveness.

Based on the "none detected" readings at all levels in CB-2 and CB-4, it appears that the SVE system was completely effective in the northern area of the site where these borings were located. CB-4 was situated where the former underground tank #28.91 was located. The soil in the area surrounding these two closure boring locations appears to be uniformly sandy and porous to the extent that it was well suited to influence from the nearby vapor extraction wells. The SVE system was also very effective in the area where CB-1 and CB-3 were located; however, it was not quite as effective as the CB-2/CB-4 northern area. Air Products attributes this difference in effectiveness to clay layers present at two depths. Clay is less porous than other soil components and serves as a barrier for the downward movement of water from surface infiltration. The clay layers and perched water discovered in CB-1, CB-3, and CB-5 at approximately 5-10 feet and 25-35 feet below grade apparently prevented the SVE system from achieving a "none detected" level of hydrocarbon removal. The existence of the two clay/perched water layers also explains the clean, "none detected" layer of soil found between the two clay layers in CB-1, CB-3, and CB-5.

At 15 and 35 feet below grade, the CB-5 (former underground tank #28.70) location appears to have been less affected by the SVE system. This was quite puzzling at first, given that three vapor extraction wells had operated in close proximity of the CB-5 area. This may be related to two conditions. One is that our past consultant, IT Corp., upon removing underground tank #28.70, had placed a plastic liner in the excavation pit prior to placing the contaminated soil back in the hole. This plastic liner probably acted as a vapor barrier and isolated the 0-10 or 0-15 foot below grade section of the CB-5 area from the beneficial effects of the SVE system. The second condition, and probably the major cause for the reduced treatment efficiency at CB-5, must be the existence of the clay/perched water condition. For some reason, though, the lower treatment efficiency was more dramatic than at CB-1 or CB-3. This may have been due to more clay and/or perched water at CB-5, or SVE well construction.

Given the recent regulatory changes in site clean-up criteria, where the old system of assigning a single numerical target for all sites has shifted to a risk based system where closure targets are more site specific, Air Products is not sure what the Board's position would be regarding the CB-5 area. This is an industrial site that is leased from a refinery and which is bordered by a refinery, a sulfur recovery plant, and a coke storage operation. Although some hydrocarbons remain at the CB-5 area, Air Products believes they present a very low risk. The site is flat and the clay layers and concrete/asphalt covering serve to prevent the downward migration of contamination. The hydrocarbons at the 35 foot depth are 25 to 30 feet above the permanent groundwater level. This permanent groundwater, the Gage Aquifer trends in a westerly direction. No known municipal use exists for the groundwater beneath the site and the nearest known down gradient well is approximately 2.5 miles to the west. Given these facts, Air Products proposes no further action and requests Board closure for the site.

Air Products hereby requests that the Board provide comments to Air Products regarding this closure investigation and our interpretations of the results. Air Products also asks that the Board now grant closure for former underground diesel tank # 28.91 based on the CB-4 analytical results of "none detected" for TPH diesel, TPH gasoline, and BTEX; and for former underground caustic solution tank # 28.70. In addition, given the low risk associated with the hydrocarbons remaining in the CB-5 area, Air Products proposes no further action be required and that the Board grant closure approval for the SVE system area. We would appreciate your prompt response in this regard. If you have any questions please call me at (610) 481-8867.

Sincerely,

Robert J. Swigart

Tank Closure Report
Air Products and Chemicals, Inc.
Carson, California

Dear Mr. Burgess:

The following letter report describes activities conducted by IT Corporation (IT) during the removal of four underground storage tanks. The tanks formerly were located at the Air Products and Chemicals, Inc. (APCI) facility located at 23320 South Alameda Street in Carson, Los Angeles County, California.

BACKGROUND

The APCI Carson facility had four underground storage tanks to be removed. They are as follows:

Tank #	Identification	Volume (Gal.)	Contents
LD-IGD-2	8807	12,000	Diesel Fuel
LB-IGD-1	E-67364	3,000	Gasoline
28.5	E-36350	2,000	Waste Oil
28.91	26076	2,500	Diesel Fuel

The tanks' former locations are illustrated in Figure 1.

FIELD INVESTIGATION

Tank Cleaning

On August 4, 1987, IT triple-rinsed the interior of the four tanks with a pressure washer to remove any hydrocarbon residues. Using a vacuum truck, approximately 1300 gallons of wash water were removed from the tanks and transported under hazardous waste manifest #87086134 to Petroleum Recycling, Inc. located in Signal Hill, California. Mr. Daniel F. O'Connell of APCI signed the manifest and retained the generator's copies.

Inspector Ray Williams of the Los Angeles County Fire Prevention Division supervised the testing of all the tanks with a GX-3 meter prior to the removal operation. All tanks were properly inerted with 15 pounds of dry ice per 1000 gallons.

Tank Removal

IT excavated and removed the four underground storage tanks on August 4, 1987. No visible indication of leakage nor obvious holes in the steel tanks were noted with tanks LD-IGD-1, LB-IGD-2, and 28.5. What appeared to be petroleum contamination was observed below and on all four sides of the excavation for Tank 28.91. The tanks were transported as a non hazardous waste to American Metal Recycling, Inc. in Ontario, California. The certificate of destruction is attached.

Soil Sampling

Under the direction of Ms. Bonnie M. Keolian, Industrial Waste Engineering Inspector for Los Angeles County Department of Public Works, and per Closure Permit No. 3036 B File No. I-5385-22, a total of eight soil samples were obtained from a depth of two feet below the invert of the tanks. The samples were designated #1 through #8. The locations of the samples are detailed in Figures 2 and 3.

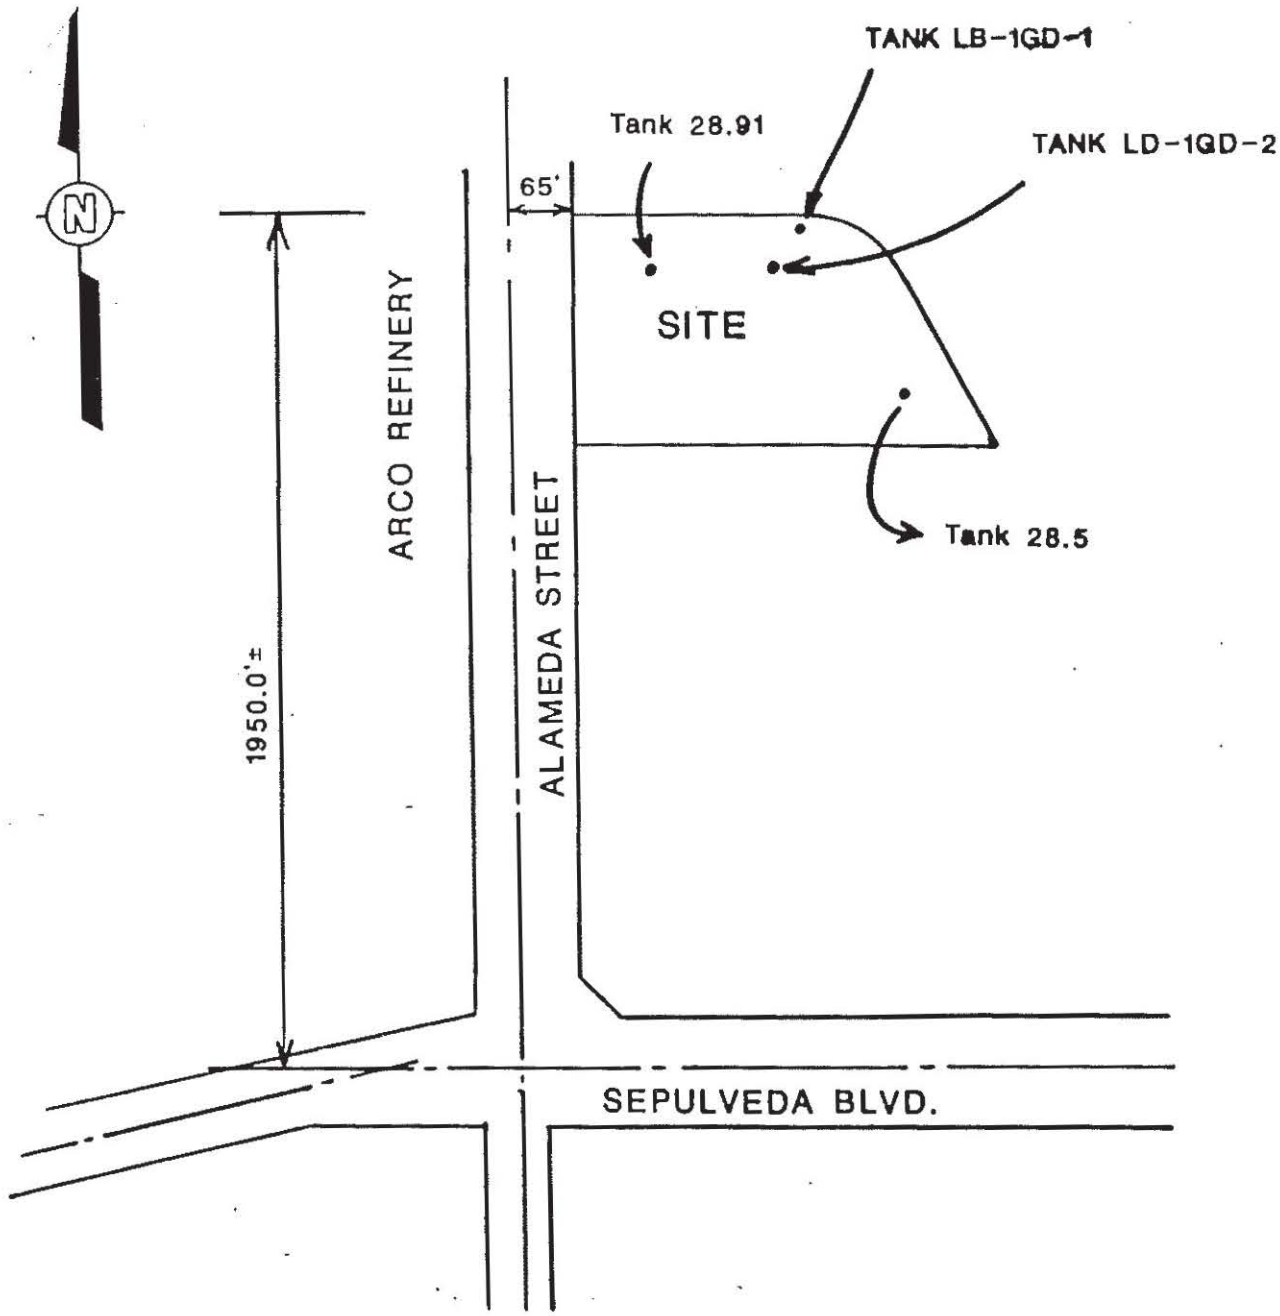
Soil from the designated areas was removed using a backhoe bucket. Grab samples were collected from the backhoe bucket using a hand trowel and placed in 16 ounce jars with Teflon septums. The jars were sealed, labeled, entered into the IT Chain-of-Custody, and immediately placed on ice to prevent volatilization until delivery to the laboratory.

LABORATORY TESTING

Soil samples were analyzed by IT Analytical Services Laboratory of Cerritos, California, for total petroleum hydrocarbons (TPH) according to U.S. EPA Test Method 418.1 and 8015. The results of the sampling are summarized in Table 1. Copies of the Certificate of Analysis and the Chain-of-Custody records are enclosed.

CONCLUSIONS AND RECOMMENDATIONS

Summary



Based on the analytical results, IT concludes that TPH concentrations in soil samples collected from beneath gasoline tank LB-IGD-1 are below 100 ppm. Soil samples obtained from below tanks 28.5 and LD-IGD-2 contain concentrations of between 58 and 270 ppm. Although soil samples taken below the latter two tanks indicate minor soil contamination, no visible signs of contamination were noted in the field and the two tanks were intact. We believe the elevated TPH concentrations were due to over-spillage.

We acknowledge the fact that fairly high levels of petroleum contamination were found below Tank 28.91 and further investigation needs to be done to establish the limits of the plume.

Recommendations

It is our professional opinion that the following steps should be taken at the APCI facility:

- Backfill and compact the excavation for Tank LB-IGD-1
- Spread out and aerate the soil removed from the excavations of Tanks 28.5 and LD-IGD-2. In approximately two weeks, obtain composite samples of the previously contaminated material. If levels are below 100 ppm TPH, use the excavated material as backfill and compact. If analysis shows that levels are above 100 ppm, repeat the aeration process.
- Focus attention on the area surrounding the former location of Tank 28.91. (From a conversation with the Los Angeles Flood Control District, it is our understanding that the static water level in the vicinity of the site is approximately 45 feet). With a drill rig obtain soil samples at five foot intervals to establish the vertical extent of the contamination. The borings should be drilled to a depth of 40 feet or first encountered ground water.
- Using a series of borings, field instrumentation, and observation, establish the extent of the contaminated soil both horizontally and vertically.
- Although the area is congested with machinery and adjacent a working driveway, a few selected test pits may be dug to supplement the drilling operation.
- Evaluate and recommend the most prudent means of site remediation.

INTRODUCTION

Air Products Manufacturing Corporation formerly operated a hydrogen manufacturing facility located at 23320 South Alameda Street, in the City of Carson, California. An in-situ soil vapor extraction system has been in operation at this site for approximately 18 months. A site location map is included as Figure 1.

On December 9 and 10, 1996, Terra Vac drilled five closure soil borings (CB-1, CB-2, CB-3, CB-4, and CB-5), in locations as shown on Figure 2, according to the Regional Water Quality Control Board (RWQCB) approved Work Plan (Terra Vac, October, 1996). The soil borings were initiated with a hand auger and widened with a post hole digger for the first five feet to avoid hitting underground utilities with the hollow stem auger. Soil samples were obtained with a split spoon sampler every five feet to a maximum depth of 35.5 feet; a total of six samples were collected from each soil boring. A total of 15 representative samples (three from each boring) were analyzed.

Samples were analyzed to determine concentrations of diesel, gasoline, and benzene, toluene, ethylbenzene, and xylenes (BTEX). Modified EPA Method 8015 (total petroleum hydrocarbons [TPH] diesel) detects long chain hydrocarbons between C8 and C30 and EPA Method 8015 (TPH gasoline) detects shorter chain hydrocarbons between C6 and C12. Samples were analyzed by EPA Method 8020 for benzene, toluene, ethylbenzene and xylenes (BTEX).

SITE GEOLOGY

The site is located in the Dominguez Gap within the southern portion of the Central Section of the Los Angeles Basin. Soils in this portion of the Basin are mainly comprised of recent soil formations made up of clays, silts and sands that extend to the groundwater formation (IT Corporation, 1988). The site currently has a relatively flat grade covered with asphalt and concrete.

SITE HYDROGEOLOGY

Perched groundwater zones were encountered at approximately 5 to 10 feet and at 25 to 30 feet below grade at borings located within the areas of former tank excavations (CB-1, CB-3, CB-4, and CB-5). These borings revealed backfill consisting of clayey material in the upper zones, which thereby retained groundwater due to surface infiltration from recent rains. Perched groundwater was encountered at the transition from sand to clay at 15 to 16 feet below grade in CB-2. The permanent groundwater table is estimated to be 60 to 65 feet below the surface and would correspond to the Gage Aquifer, a major hydro-stratigraphic unit in the basin. Groundwater flow in the Gage Aquifer in the vicinity of the site flows generally in a westerly direction. No known municipal use exists for the groundwater below this site (IT Corporation, 1988).

SOIL BORING LOCATIONS

The closure soil boring locations were chosen to be representative of the remediated area and the locations of former aboveground and underground hydrocarbon storage tanks. As requested by the Regional Water Quality Control Board (RWQCB), soil borings were placed near the location of the former underground diesel tank (CB-4) and former underground spent caustic solution tank (CB-5). The locations of the five closure borings are shown on Figure 2.

DRILLING ACTIVITES

The drilling and sampling procedures used at this site followed Terra Vac Standard Operating Procedures and current industry practices to ensure quality control and quality assurance. The five soil borings were drilled using a drill hollow stem auger drill rig equipped with 4 inch outside diameter, continuous flight hollow stem augers. Decontamination buckets and brushes were used for decontamination of the split spoon sampler and sampling sleeves in between sampling depths.

The soil and decontamination water generated during the sampling have been containerized in 55 gallon drums and will be properly disposed.

Upon completion of drilling and sampling, the soil borings were backfilled to grade surface with bentonite/cement grout and capped with asphalt. A copy of the soil boring logs has been included in Appendix A.

Sample Collection

Soil samples were collected with a California modified split spoon sampler at five foot intervals beginning at the five (5) foot depth in each boring. The drilling subcontractor provided brass sample liners for collection of soil samples from the split spoon sampler. Each split spoon sample was lined with three (3) sample liners which were used as follows:

- The bottom most soil sample sleeve from each split spoon sampler was collected for chemical analysis. The ends of each sleeve was covered with a plastic end cap and placed in a cooler with blue ice for transportation the laboratory.
- The middle soil sample sleeve was intended to be used for field screening with the OVM by Terra Vac. However, heavy rains during closure boring drilling prevented OVM readings to be taken from most of the borings. Sample screening for subsequent lab analysis was based on soil appearance (i.e. discoloration, apparent hydrocarbon odor).
- The top sample sleeve was used for characterization and logged on a boring log form by Terra Vac's Geologist.

Chemical Analysis

A total of 15 soil samples were submitted to a California certified laboratory. The samples were selected for analyses based on the OVM readings, visual appearance and location. Samples were selected to asses the vertical and lateral distribution of hydrocarbon contamination across the project area.

The soil samples were analyzed by Modified EPA Method 8015 for TPH diesel and TPH gasoline, and by EPA Method 8020 for BTEX. A copy of the analytical reports have been included in Appendix B.

EPA Method 8015 TPH Diesel Fuel Results

In closure boring CB-1, the TPH diesel fuel concentrations were 1,000 mg/Kg at 11 feet below grade, not detected at 21 feet below grade, and 53 mg/Kg at 30 feet below grade.

TPH diesel was not detected in CB-2 at all depths (5.5, 15.5, and 25.5 feet below grade).

The soil sample from CB-3 had TPH diesel concentrations of 2,300 mg/Kg at 6 feet below grade, not detected at 16 feet below grade, and 110 mg/Kg at 20.5 below grade.

TPH diesel was not detected in CB-4 at all depths (10.5, 20.5, and 30.5 feet below grade).

The soil samples from CB-5 had TPH-diesel fuel concentrations of 490 mg/Kg at 15.5 feet below grade, 110 mg/Kg at 20.5 feet below grade, and 2,100 mg/Kg at 35.5 feet below grade.

EPA Method 8015 TPH Gasoline Results

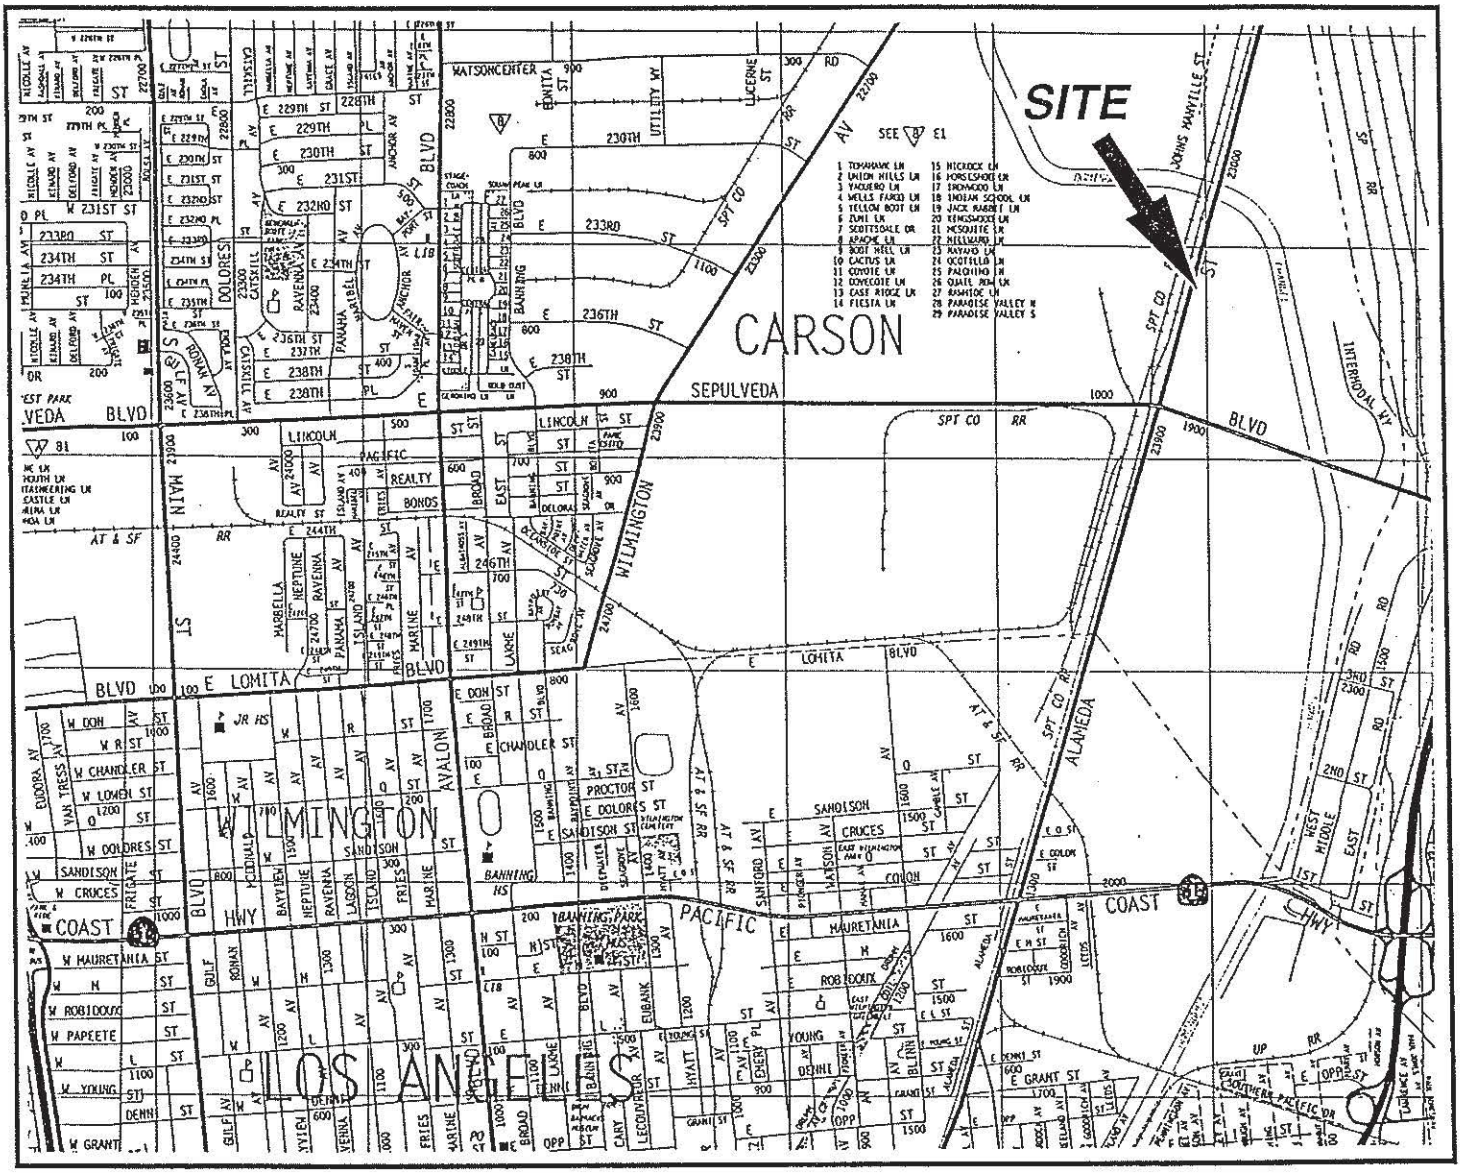
In closure boring CB-1, the TPH gasoline concentrations were 2.5 mg/Kg at 11 feet below grade, not detected at 21 feet below grade, and 0.79 mg/Kg at 30 feet below grade.

TPH gasoline was not detected in CB-2 at all depths (5.5, 15.5, and 25.5 feet below grade).

Soil samples from CB-3 had a TPH gasoline concentration of 1.7 mg/Kg at 6 feet below grade, and not detected at 16 and 20.5 feet below grade.

TPH gasoline was not detected in CB-4 at all depths (5.5, 15.5, and 25.5 feet below grade).

Soil samples from CB-5 had a TPH gasoline concentration of 1,700 mg/Kg at 15.5 feet below grade, not detected at 20.5 feet below grade, and 8,600 mg/Kg at 35.5 feet below grade



EPA Method 8020 (BTEX) Results

The soil samples from CB-1 had concentrations of 43 µg/Kg benzene, 120 µg/Kg toluene, 29 µg/Kg ethylbenzene, and 130 µg/Kg total xylenes at 11 feet below grade; not detected at 21

RECOMENDATIONS

The site should be considered for closure. All of the soil samples analyzed had non detect or low concentrations of contamination. In the area of CB-5 at 15.5 and 35.5 feet below grade, the dense clay zones less affected by the soil vapor extraction system as the rest on the site. This is caused by the characteristic low permeability of clay materials and a plastic liner installed in the excavation after the former caustic tank was removed.

The tightness of the clay and this plastic liner will reduce or eliminate the migration of the remaining BTEX and TPH compounds. The remaining contamination will also continue to degrade through natural biodegradation.

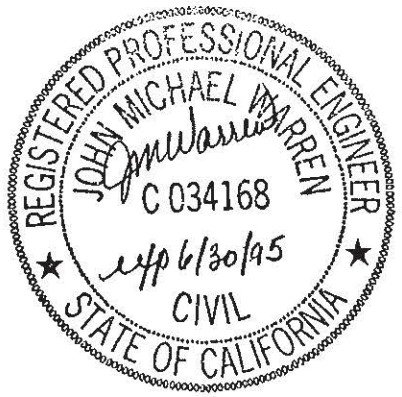
CERTIFICATION PAGE



The attached site investigation report has been prepared under my direction and with my knowledge. I am aware of the contents of the site investigation report and am familiar with the site in question. I believe all data presented to be true and accurate and the approach to be technically sound.

Geology, groundwater hydrology, and geochemistry are inexact sciences, and investigative data commonly contain large uncertainties. The behavior of petroleum products and other contaminants in soil and groundwater are complex phenomena. Our judgements and conclusions are based on the analytical data presented herein and our experiences on other similar projects. The available data do not preclude the presence of materials at other locations on the subject site which presently, or in the future, may be considered hazardous.

Opinion and judgements expressed herein, which are based on our understanding and interpretation of current regulatory standards, should not be construed as legal opinions. This document and the information contained in it have been prepared solely for the use of Air Products and Chemicals, Inc. Any reliance on this information by third parties shall be at such party's sole risk.

1.0 INTRODUCTION

This Remedial Investigation/Feasibility Study Report (report) is prepared on behalf of Air Products and Chemicals, Inc., (APCI), for APCI's plant (site) located at 23320 South Alameda in Carson, California (Figure 1, Site Location Map). This report is compiled using information obtained by IT through site investigations and review of existing site data.

1.1 Site Description

The site is located at 23320 South Alameda in Carson, California, in an industrial area mainly composed of oil refineries and chemical manufacturers. The property is bordered by a railway spur and a Texaco Sulfur Recovery Plant to the north, the Dominguez Water Channel to the east, an ARCO Coke Product Plant to the south, and Alameda Street and the ARCO refinery to the west.

The site was a hydrogen manufacturing plant, consisting of three main areas:

1. The hydrogen production plant, which has been demolished.
2. The specialty gases operation in the southwest part of the site, which is currently in operation.
3. A vessel repair shop which temporarily operated for the past three years in the northwest part of the site and has been demolished.

The specialty gases operation fills cylinders with various gases, which are received in containers or tube trailers. The building which houses the specialty gases operation, consists of a warehouse and a distribution office. The vessel repair shop in the northwest part of the plant, repaired and reconditioned APCI oxygen, nitrogen, and argon vessels and equipment. This operation was housed in a single story structure, approximately 12,000 square feet in area. The hydrogen production plant which has not been operational since 1986, occupied approximately two-thirds of the facility. It was demolished in 1993.

The surface area of the site still has the concrete slabs remaining from the hydrogen plant, the control room building and the vessel repair shop. The rest of the area is paved or has a road base gravel spread over the surface.

1.2 Site Contamination

The portion of the facility included in this study is the former hydrogen plant purification area. This area is bordered on the east by the control building slab, on the west by Alameda Street, on the south by the former compressor building slab, and on the north by the fence and railroad spur (Figure 2, Site Map).

The site previously contained a 2,500 gallon underground diesel storage tank, which was removed in 1987. Upon removal of the tank, soil contamination and suspected free product were encountered in the excavation. The contaminated soil was removed from the excavation and bio-remediated. A 6,000 gallon spent caustic solution underground tank was also located in the hydrogen plant purification area. This tank was removed on May 18, 1993, by IT. The caustic tank did not appear to have released any contaminants on site. IT has prepared and submitted a closure report to the County of Los Angeles Department of Public Works.

A truck scale located north of the control building was removed in late 1992. Visible soil contamination was observed to the north and west portions of the excavation during the removal operations. Soil contaminated with Total Petroleum Hydrocarbon (TPH) measured as Gasoline (3,516 ppm) and Diesel (780 ppm) was discovered during the removal and excavation operations. The soil beneath the adjacent hydrogen plant purification area was found to contain 180-785 ppm TPH as gasoline.

The site previously contained two aboveground hydrocarbon tanks, located in the hydrogen plant purification area. One tank was used to collect a hydrocarbon condensate, similar to gasoline, from the hydrogen feed stream. The other tank contained diesel fuel, which was used to scrub the hydrocarbon condensate from the feed gas. There was a gravel area below the tanks.

1.3 Remedial Investigation Limitations

This report was prepared by compiling information and data from an Underground Diesel Storage Tank Removal and Site Assessment Report (IT Corporation, 1988), from the recent Soil Gas Survey (Target Environmental Services, Inc, 1993), and Site Assessment (IT Corporation, 1993). IT used the following approach to evaluate the presence of contaminants and the horizontal and vertical extent of contamination.

- review available soil and groundwater analytical data
- determine the types of soil
- evaluate the soil physical properties (size, permeability, etc.)
- determine the former locations of the aboveground and underground storage tanks
- evaluate constituents fate and transport in the environment

The results of the Soil Gas Survey completed in February 1993, provided the guidance for the location of five boreholes in the areas of highest detected contamination. Soil samples collected from these boreholes were to be used to evaluate the approximate vertical extent of contamination.

Based on the analytical results of the assessment performed in March 1993 by IT, eight boreholes were proposed to evaluate the horizontal extent of contamination. Once the drilling and sampling process commenced, IT determined that more boreholes were needed to adequately define the horizontal extent of contamination. A total of 14 more boreholes were drilled in the purification area.

Given the many local sources of hydrocarbon contamination of soil and groundwater from other industries, IT's goal was to differentiate the Air Products hydrocarbon condensate contamination from other outside sources of contamination.

2.0 STUDY OBJECTIVES

The main objective of this study is to evaluate the vertical and lateral extent of hydrocarbon contamination emanating from past APCI activities at the site, and to develop remedial alternatives for contamination present. This report is based on the information from the following:

- Underground Diesel Tank Removal and Site Investigation, IT Corporation, March 1988.
- Soil Gas Survey of the Hydrogen Plant Purification Area, Target Environmental Services, Inc., prepared for IT, February 1993.
- Site Investigation Study of the Hydrogen Plant Purification Area, IT Corporation, March 1993.
- Additional Soil Sampling of the Hydrogen Plant Purification Area, IT Corporation, May 1993.

3.0 *PREVIOUS INVESTIGATIONS*

3.1 March 1988, Underground Diesel Tank Removal and Site Investigation

A Site Investigation was completed by IT in March 1988, after the removal of a 2,500 gallon underground diesel storage tank. Hydrocarbon soil contamination and free floating hydrocarbon product were observed in the tank excavation.

This Site Investigation involved the drilling of four boreholes (B-1 to B-4) and collecting soil samples to determine the vertical and horizontal extent of the hydrocarbon contamination. Selected soil samples from the boreholes were collected for laboratory analysis. Four samples, each, were analyzed for Organic Lead by gas chromatograph/PID and for Benzene, Toluene, Ethylbenzene and Xylenes (BTEX) by EPA Method 8020. Ten samples were analyzed for Total Recoverable Petroleum Hydrocarbons (TRPH) by EPA Method 418.1, one sample for flash-point by EPA Method 1010, and six samples for pH by EPA Method 9040.

Analytical results for TRPH, BTEX and Organic Lead are detailed in the report. Sample B-1-2 was selected for the flash-point which was 65 degrees Fahrenheit. The samples collected from Borehole B-4 were used for the pH analyses. The pH ranged from 7.6 to 8.3 in the six samples.

In order to determine the depth to groundwater, one borehole (B-5) was drilled into the groundwater table in an area near, but outside of, the soil contamination area. Groundwater was encountered at a depth of 58 feet, with the total depth of the borehole at 60.5 feet below surface grade. No soil sampling was performed in this borehole. A sample was collected of the aquifer material (brown silty fine sand) for grain size analysis to aid in proper well design for groundwater monitoring wells, if necessary. No groundwater monitor wells were necessary, since the contamination was at a maximum of 25 feet below the surface and groundwater was at a depth of 58 feet below the surface.

3.2 February 1993, Soil Gas Survey of the Hydrogen Plant Purification Area

Under contract to IT, a Soil Gas Survey of the Hydrogen Plant Purification Area was performed by Target Environmental Services, Inc., (Target) in February 1993. The report prepared by Target is included in its entirety in IT's Site Assessment Report, dated March 1993. This survey revealed three areas where elevated levels of volatile hydrocarbons were detected. These are the northeast area near the former truck scale, the northwest area near the former aboveground

storage tanks and the southwest area where the hydrogen feed gas pipeline entered the facility.

The soil gas survey indicated that different types of hydrocarbon contamination were present at the site. The chromatogram signatures of the samples collected in the central portion of the site are suggestive of the gasoline like condensate which was handled in this area. The signatures of the samples collected west of the aboveground tank storage area and at the southwestern corner of the site reveal a complex petroleum hydrocarbon mixture which is not typical of gasoline or diesel fuel, or any other known hydrocarbons handled by Air Products in this area.

The different chromatogram signatures suggest of different sources of contamination. The samples collected from the central part of the site indicate that the hydrocarbon contamination may have come from the aboveground storage tanks. The complex hydrocarbon contamination along the west and southwestern portion of the site may be the result of contamination from the nearby pipe lines owned by others which run along Alameda Street.

3.3 March 1993 Borehole Sampling of the Hydrogen Plant Purification Area

Based on the results of the soil gas survey performed (Target Environmental Services, Inc., 1993) five borehole locations (1-5) were selected based on the highest concentrations of volatile organics observed. The boreholes were drilled to help establish the vertical limits of the hydrocarbon contamination in these areas and to determine the types and concentrations of contaminants. Samples were collected every five feet down to a depth of 40 feet. See Figure 3, Borehole Locations, and Appendix A for Borehole Logs.

All samples collected from the boreholes were analyzed by EPA Method 418.1 for TRPH, by EPA Method 8015 (modified) for Total Petroleum Hydrocarbons (TPH) as Diesel and Gasoline, and by EPA Method 8020 for BTEX. The Analytical Results are summarized in Table 3.1.

Analytical Results for Borehole 1 indicated concentrations of TRPH, TPH and BTEX contamination in the samples collected from depths of 5 and 10 feet. All of the other samples were non-detect (ND) at the indicated detection limits.

Analytical Results for the samples collected in Borehole 2 indicated concentrations of TRPH, TPH and BTEX contamination at depths of 5, 10 and 15 feet. Samples collected at 20 and 25 feet depth were ND except for 17 mg/kg TPH as diesel at a depth of 20 feet. BTEX contamination was again encountered at depth of 30, 35 and 40 feet.

TABLE 3.1

5G	35	ND	ND	ND	ND	ND	ND	ND

ND = Non Detect
mg/kg = Milligrams per Kilogram
µg/kg = Micrograms per Kilogram

(A) - The chromatographic pattern of the sample resembles that of low boiling fuel hydrocarbon, but does not match the pattern of the gasoline calibration standard. The result reported is quantitated as gasoline.

(J) - Value reported below the detection limit.

(Z) - The chromatographic pattern of the sample resembles that of high boiling fuel hydrocarbon but does not match the pattern of the diesel calibration standard. The result reported is quantitated as diesel.

Analytical Results for Borehole 3 indicated concentrations of TRPH, TPH and BTEX contamination at depths of 5 and 10 feet. TPH as diesel of 18 mg/kg was detected at a depth of 15 feet. All of the other samples were ND at the indicated detection limits.

Analytical Results for Borehole 4 indicated concentrations of TRPH, TPH and BTX contamination at depths of 5, 10 and 15 feet. Concentrations of 75 mg/kg TRPH and 33 mg/kg TPH as diesel were detected at a depth of 20 feet. A concentration of 33 mg/kg TRPH was detected at a depth of 35 feet. All samples collected at the depths of 25 and 30 feet were ND at the indicated detection limits.

Analytical Results for Borehole 5 indicated concentrations of TRPH and TPH contamination at depths of 5 and 10 feet. Benzene of 5 μg/kg was also detected at a depth of 10 feet. All of the other samples were ND at the indicated detection limits.

The chromatographic patterns for the TPH contamination reported as gasoline and diesel at depths of 5, 10 and 15 feet did not match those of the gasoline or diesel calibration standards. This contamination is believed indicative of the hydrocarbon condensate which is similar to gasoline from the aboveground storage tank .

The conclusion of this report (IT, Corporation, 1993) indicated that the vertical and lateral extent needed to be further defined in the hydrogen plant purification area.

3.4 May 1993, Investigation of the Hydrogen Plant Purification Area

The focus of the May 1993 investigation was to further define the horizontal and vertical limits of contamination around the hydrogen plant purification area (See Figure 2, Site Map).

Based on the results of the previous sampling performed in March 1993, IT proposed to drill additional boreholes to further define the horizontal and vertical limits of contamination. A total of 14 more boreholes were drilled in the hydrogen plant purification area (Figure 3 - Borehole Locations).

On May 5, 1993, IT proceeded to drill six boreholes, numbered 6, 7, 8, 9, 10 and 11, each to a depth of 30 feet. On May 6, 1993, boreholes, numbered 12, 13, 14, 15 and 16 were drilled. These boreholes were also drilled to a depth of 30 feet except Borehole 16 which reached only 25 feet because of equipment failure. Boreholes 17, 18 and 19 were drilled on May 7, 1993,

to a depth of 30 feet or first encountered groundwater. This groundwater zone is believed to be perched.

3.4.1 Sampling Procedures

The boreholes were drilled using a B-53 mobile drill rig, equipped with 3.75 inch hollow stem augers. The soil samples were collected using a California Modified Split Spoon Sampler containing three brass rings. Soil samples were collected at the 5, 10, 15, 20, 25 and 30 foot depths (see Borehole Logs in Appendix A).

The Split Spoon Sampler was deployed down the hollow stem augers and driven 18 inches into the soil using a 140 pound drive hammer. Upon sample retrieval, the soil samples were screened in the field by an Organic Vapor Analyzer (OVA) to determine the presence of any possible vapors. From this field test any soil samples that had a recorded reading were sent to the analytical laboratory for analysis. One brass ring was then selected, capped, sealed with duct tape, labeled and entered into IT Chain-of-Custody documentation. All of the soil samples were preserved on ice for delivery to the analytical laboratory. The samples were transported to IT Analytical Services in Cerritos, California, a State of California certified analytical laboratory (see Chain-of-Custody documentation in Appendix B).

Between sampling events, the Split Spoon Sampler and brass rings were steam cleaned or were cleaned by washing in Tri-sodium Phosphate and triple-rinsed, using de-ionized water to prevent cross-contamination. The augers were also steam cleaned between the drilling of each borehole to prevent the possibility of any cross-contamination. The soil cuttings from the boreholes and the decontamination water from the steam cleaning, were placed in 55 gallon drums for later disposal.

The soils in each of the boreholes was characterized according to the United States Soil Classification System and logged on Borehole logs located in Appendix A. All of the boreholes were backfilled with a concrete/bentonite mix.

3.4.2 Analytical Procedures

All soil samples sent to the analytical laboratory, were analyzed by EPA Method 418.1 for TRPH. The samples collected from the 15 foot depth (with the exception of the samples 12B and 17D) were analyzed by EPA Method 8240 for Volatile Organic Compounds and by EPA Method 9045 for pH. Several Analytical Results for Acetone and Methylene Chloride have the

letter "B" after the numeric value. The B indicates that the analyte was found in the associated blank as well as the sample, but the value was not blank corrected. Analytical Results are summarized in Table 3.2 and located in Appendix B.

3.4.3 Discussion of Analytical Results

Borehole 6

Three soil samples (6A, 6B and 6C) were collected from Borehole 6, which is located northeast of the truck scale area (Figure 3 - Borehole Locations). The Analytical Results indicated 41 mg/kg TRPH in sample 6A and ND at the indicated detection limits for samples 6B and 6C. The pH analysis for 6C was 8.1. Methylene Chloride was detected in 6C at 6(B) μg/kg. The B indicates that the analyte was found in the associated blank as well as the sample, but the value was not blank corrected. The other constituents that were analyzed under EPA Method 8240 were ND at the indicated detection limits in sample 6C.

The soil in Borehole 6 ranged from a fine-grained, grey, silty sand at 5 feet, to a brown, silty sand at the 30 foot depth. A coarse grained, gravelly sand was encountered at the 25 foot depth. The soil was damp to wet. A perched groundwater zone was encountered at a depth of 30 feet. OVA readings were 0 ppm for all three samples, but the samples were analyzed to evaluate the horizontal limits of contamination.

Borehole 7

Four soil samples (7A, 7B, 7C and 7D) were collected from Borehole 7, which is located north of the truck scale area (Figure 3 - Borehole Locations). These samples registered field OVA readings ranging from 0 to 18 ppm.

Analytical Results indicated TRPH concentrations of 3,520 mg/kg in sample 7A and 2,610 mg/kg in sample 7B. Samples 7C and 7D were ND for TRPH. The pH analysis for sample 7C was 8.0. Analytical Results for EPA Method 8240 in sample 7C, indicated 27 μg/kg Acetone and 5(B) μg/kg Methylene Chloride. The B indicates that the analyte was found in the associated blank as well as the sample, but the value was not blank corrected. The other constituents that were analyzed under EPA Method 8240 were ND at the indicated detection limits for sample 7C.

TABLE 3.2
SUMMARY OF ANALYTICAL RESULTS

SAMPLE	pH	TRPH mg/kg	ACETONE µg/kg	METHYLENE CHLORIDE µg/kg	BENZENE µg/kg	TOLUENE µg/kg	ETHYL BENZENE µg/kg	XYLENE µg/kg	OVA ppm

NA = Not Analyzed
ND = Non Detect
mg/kg = milligrams per kilogram
µg/kg = micrograms per kilogram
ppm = parts per million
TRPH = Total Recoverable Petroleum Hydrocarbons
B = indicates analyte found in the associated blank as well as in the sample, value reported is not blank corrected

The soil in Borehole 7 ranged from a brown, silty sand to a grey-black, silty sand. A gravelly sand was encountered at a depth of 20 feet. The soil was damp to wet at a depth of 5 feet. The perched groundwater zone was not encountered in this borehole.

Borehole 8

Six soil samples (8A, 8B, 8C, 8D, 8E and 8F) were collected from Borehole 8, which is located near the southeast corner of the hydrogen plant purification area (Figure 3 - Borehole Locations). These samples registered field OVA readings ranging from 0 to 101 ppm.

Analytical Results indicated TRPH concentrations of 7,660 mg/kg in sample 8A and 7,890 mg/kg in sample 8B. Samples 8C, 8D, 8E and 8F were ND for TRPH at the indicated detection limits. The pH analysis for sample 8C was 7.2. Analytical Results for EPA Method 8240 in sample 8C indicated 15 μg/kg Acetone and 6(B) μg/kg Methylene Chloride. The B indicates that the analyte was found in the associated blank as well as the sample, but the value was not blank corrected. The other constituents that were analyzed under EPA Method 8240 were ND at the indicated detection limits for sample 8C.

The soil in Borehole 8 ranged from a black, oily, silty sand at the 5 foot depth to a tan gravelly sand at the 30 foot depth. The soil was damp to wet with a perched groundwater zone encountered at 30 feet.

Borehole 9

Borehole 9 was drilled within 1 foot of the underground caustic tank prior to its removal (Figure 3 - Borehole Locations). Six soil samples (9A, 9B, 9C, 9D, 9E and 9F) were collected. These samples registered field OVA readings ranging from 297 to 588 ppm.

Analytical Results indicated TRPH concentrations of 6,510 mg/kg in sample 9A, 1,780 mg/kg in sample 9B, 180 mg/kg in sample 9C, 2,640 mg/kg in sample 9D, 1,340 mg/kg in sample 9E and 1,290 mg/kg in sample 9F. The pH analysis for sample 9C was 9.0. Analytical Results for EPA Method 8240 in sample 9C indicated 8,300 μg/kg Benzene, 20,000 μg/kg Toluene, 1,600 μg/kg Ethylbenzene and 9,300 μg/kg Xylenes. The other constituents that were analyzed under EPA Method 8240 were ND at the indicated detection limits for sample 9C.

The soil in Borehole 9 ranged from a black, wet, "gooey", silty sand near the surface to a wet, silty clayey sand at the 30 foot depth. A watery liquid containing petroleum product was encountered from the 5 to 10 foot depth. A perched groundwater zone was encountered at the 30 foot depth.

Borehole 10

Five soil samples (10A, 10B, 10C, 10D and 10E) were collected from Borehole 10, which is located in the roadway south of the hydrogen plant purification area (Figure 3 - Borehole Locations). These samples registered field OVA readings ranging from 2 to 109 ppm.

Analytical Results indicated TRPH concentrations of 6,180 mg/kg in sample 10A, 4,760 mg/kg in sample 10B and ND at the indicated detection limits in the rest of the samples (10C, 10D and 10E). The pH analysis for sample 10C was 8.4. Analytical Results for EPA Method 8240 on sample 10C indicated 50 μg/kg Acetone, 5(B) μg/kg Methylene Chloride, 5 μg/kg Benzene, and ND at the indicated detection limits for the other constituents analyzed. The B indicates that the analyte was found in the associated blank as well as the sample, but the value was not blank corrected.

The soil in Borehole 10 was mostly a fine-grained, silty sand with a gravelly sand at the 15 foot depth. The soil was damp and the perched groundwater zone was not encountered in the borehole.

Borehole 11

Borehole 11 was drilled in the roadway, southwest of the hydrogen plant purification area (Figure 3 - Borehole Locations). Six soil samples (11A, 11B, 11C, 11D, 11E and 11F) were collected. These samples registered field OVA readings ranging from 2 to 214 ppm.

Analytical Results indicated TRPH concentrations of 5,970 mg/kg in sample 11A, 71,500 mg/kg in sample 11B and ND at the indicated detection limits in the rest of the samples. The pH analysis for sample 11C was 8.7. Analytical Results for EPA Method 8240 in sample 11C indicated 100 μg/kg Acetone, 5(B) μg/kg Methylene Chloride, 5 μg/kg Benzene, and ND at the indicated detection limits for the other constituents analyzed. The B indicates that the analyte was found in the associated blank as well as the sample, but the value was not blank corrected.

The soil in Borehole 11 was a fine-grained, silty sand with a gravelly sand at the 20 to 30 foot depths. A wet zone was encountered between the 5 and 10 foot depth. A perched groundwater zone was encountered at 30 feet.

Borehole 12

Borehole 12 was drilled in the northern part of the connected parking area outside of the fence. Prior to drilling the borehole, a geophysical survey was conducted to prevent the possibility of drilling into buried underground utilities or pipes (Figure 3 - Borehole Locations). Three soil samples (12A, 12B and 12C) were collected. These samples registered field OVA readings ranging from 0 to 15 ppm.

Analytical Results indicated TRPH concentrations of 59,500 mg/kg in sample 12A, 36 mg/kg in sample 12B, and ND at the indicated detection limits in sample 12C. The pH analysis for sample 12B was 9.1. Analytical Results for EPA Method 8240 in sample 12B indicated 22(B) μg/kg Acetone, and ND at the indicated detection limits for the other constituents analyzed. The B indicates that the analyte was found in the associated blank as well as the sample, but the value was not blank corrected.

The soil in Borehole 12 was a fine-grained, silty sand with a gravelly sand at the 20 foot depth. The soil was damp and the perched groundwater zone was not encountered.

Borehole 13

Borehole 13 was drilled in the parking area outside of the fence and west of the hydrogen plant purification area (Figure 3 - Borehole Locations). Prior to drilling the borehole, a geophysical survey was conducted to prevent the possibility of drilling into buried underground utilities or pipes. Five soil samples (13A, 13B, 13C, 13D and 13E) were collected. These samples registered field OVA readings ranging from 0 to 80 ppm.

Analytical Results indicated TRPH concentrations of 9,460 mg/kg in sample 13A, 30 mg/kg in sample 13E, and ND at the indicated detection limits in samples 13B, 13C and 13D. The pH analysis for sample 13C was 8.6. Analytical Results for EPA Method 8240 in sample 13C indicated 39(B) μg/kg Acetone and ND at the indicated detection limits for the other constituents analyzed. The B indicates that the analyte was found in the associated blank as well as the sample, but the value was not blank corrected.

The soil in Borehole 13 ranged from a fine-grained sand to a gravelly sand. The soil was damp and a perched groundwater zone was encountered at the 30 foot depth. An oily layer was encountered at the 5 foot depth.

Borehole 14

Borehole 14 was drilled in the parking area outside of the fence, and near where the ARCO pipeline entered the facility (Figure 3 - Borehole Locations). Prior to drilling the borehole, a geophysical survey was conducted to prevent the possibility of drilling into buried underground utilities or pipes. Five soil samples (14A, 14B, 14C, 14D and 14E) were collected. These samples registered field OVA readings ranging from 0 to 48 ppm.

Analytical Results indicated TRPH concentrations of 8,070 mg/kg in sample 14A and ND at the indicated detection limits in the rest of the samples. The pH analysis for sample 14C was 7.5. Analytical Results for EPA Method 8240 in sample 14C indicated 28(B) μg/kg Acetone, and ND at the indicated detection limits for the other constituents analyzed. The B indicates that the analyte was found in the associated blank as well as the sample, but the value was not blank corrected.

The soil in Borehole 14 ranged from a silty sand, to a gravelly sand at the 20 foot depth. A wet "gooey", oily layer was encountered at the 5 foot depth. The soil was damp and a perched groundwater zone was encountered at the 30 foot depth.

Borehole 15

Borehole 15 was also drilled in the parking area outside of the fence and west of the compressor shelter (Figure 3 - Borehole Locations). Prior to drilling the borehole, a geophysical survey was run to prevent the possibility of drilling into buried underground utilities or pipes. Five soil samples (15A, 15B, 15C, 15D and 15E) were collected. These samples registered field OVA readings ranging from 0 to 215 ppm.

Analytical Results indicated TRPH concentrations of 2,790 mg/kg in sample 15A, 11,400 mg/kg in sample 15B, 580 mg/kg in sample 15D, and ND at the indicated detection limits for samples 15C and 15E. The pH analysis for sample 15C was 6.2. Analytical Results for EPA Method 8240 in sample 15C indicated 19(B) μg/kg Acetone, and ND at the indicated detection limits for the rest of the constituents analyzed. The B indicates that the analyte was found in the

associated blank as well as the sample, but the value was not blank corrected.

The soil in Borehole 15 ranged from a silty sand to a gravelly sand at the 20 foot depth. The soil was damp with a perched groundwater zone encountered at the 30 foot depth.

A borehole was drilled south of Borehole 15. A concrete obstruction was encountered at the 4 foot depth and drilling was halted. No further drilling was performed in the parking area due to the underground utilities and pipes.

The soil that was encountered in the abandoned borehole was a black, silty sand with a strong hydrocarbon odor. No borehole log was recorded for this hole.

Borehole 16

Borehole 16 was drilled just south of the concrete slab of the former maintenance building (Figure 3 -Borehole Locations). Due to an equipment failure, the borehole was only drilled to a depth of 25 feet. Five soil samples (16A, 16B, 16C, 16D and 16E) were collected. These samples registered field OVA readings ranging from 0 to 165 ppm.

Analytical Results indicated TRPH concentrations of 310 mg/kg in sample 16A, 5,590 mg/kg in sample 16B, 1,150 mg/kg in sample 16C, and ND at the indicated detection limits in samples 16D and 16E. The pH analysis for 16C was 8.2. Analytical Results for EPA Method 8240 in sample 16C indicated 64 μg/kg Acetone, 18(B) μg/kg Methylene Chloride, 5 μg/kg Benzene, 9 μg/kg Ethylbenzene, 19 μg/kg Xylenes, and ND at the indicated detection limits for the other constituents analyzed. The B indicates that the analyte was found in the associated blank as well as the sample, but the value was not blank corrected.

The soil in Borehole 16 ranged from a fine-grained, silty sand to gravelly sand at the 20 foot depth. A wet black "gooey" layer was encountered at the 10 foot depth. The soil was damp to wet. The perched groundwater zone was not encountered in this borehole.

Borehole 17

Borehole 17 was drilled just north of the concrete slab of the former maintenance building (Figure 3 -Borehole Locations). Four soil samples (17B, 17C, 17D and 17E) were collected. These samples registered field OVA readings ranging from 0 to 46 ppm.

Analytical Results indicated TRPH concentrations of 1,970 mg/kg in sample 17B and ND at the indicated detection limits in samples 17C, 17D and 17E. The pH analysis for sample 17D was 7.2. Analytical Results for EPA Method 8240 in sample 17D indicated 14 μg/kg Acetone, 5(B) μg/kg Methylene Chloride, and ND at the indicated detection limits for the other constituents analyzed. The B indicates that the analyte was found in the associated blank as well as the sample, but the value was not blank corrected.

The soil in Borehole 17 ranged from a fine-grained, silty sand to a gravelly sand at the 20 foot depth. The soil was damp to moist. The perched groundwater zone was not encountered in the borehole.

Borehole 18

Borehole 18 was drilled just north of the compressor shelter concrete slab (Figure 3 - Borehole Locations). Four soil samples (18C, 18D, 18E and 18F) were collected. These samples registered field OVA readings ranging from 0 to 82 ppm.

Analytical Results indicated TRPH concentrations of 48 mg/kg in sample 18D, 74 mg/kg in sample 18E and ND at the indicated detection limits in samples 18C and 18F. The pH analysis for sample 18C was 7.3. Analytical Results for EPA Method 8240 in sample 18C indicated 13 μg/kg Acetone, 7(B) μg/kg Methylene Chloride, and ND at the indicated detection limits for the other constituents analyzed. The B indicates that the analyte was found in the associated blank as well as the sample, but the value was not blank corrected.

The soil in Borehole 18 ranged from a fine-grained silty sand to a gravelly sand at the 25 foot depth. The soil was damp and a perched groundwater zone was encountered at the 30 foot depth.

Borehole 19

Borehole 19 was drilled in the southeast corner of the former control building concrete slab (Figure 3 - Borehole Locations). Five soil samples (19A, 19B, 19C, 19D and 19E) were collected. These samples registered field OVA readings ranging from 0 to 161 ppm.

Analytical Results indicated TRPH concentrations were ND at the indicated detection limits for all of the samples. The pH analysis for sample 19C was 8.3. Analytical Results for EPA

Method 8240 in sample 19C indicated 12 μg/kg Acetone, 6(B) μg/kg Methylene Chloride, and ND at the indicated detection limits for the other constituents analyzed. The B indicates that the analyte was found in the associated blank as well as the sample, but the value was not blank corrected.

The soil in Borehole 19 ranged from a fine-grained, silty sand to a gravelly sand at the 25 foot depth. The soil was damp and a perched groundwater zone was encountered at the 30 foot depth.

4.0 ENVIRONMENTAL CONDITIONS

This section will describe the environmental conditions at the APCI site. Environmental conditions include site geology, hydrology, hydrogeology and meteorology.

4.1 Site Geology

The site is located in the southern portion of the Central Section of the Los Angeles Basin. Soils in this portion of the Basin are mainly comprised of recent soil formations made up of clays, silts and sands that extend into the groundwater formation. The State of California, Department of Water Resources classifies these formations as "Younger Alluvium".

The site consists of a relatively flat grade, covered with concrete and asphalt in the contaminated area. The site is approximately 18 to 25 feet above mean sea level. According to the information collected during the present and past subsurface investigations, the following is a summary of the site subsurface soil conditions:

- 0 to 5 feet — Damp brown to grey, silty sand
- 5 to 10 feet — Damp to wet fine-grained, grey, silty sand
- 10 to 15 feet — Damp grey to black, fine-grained, silty sand
- 15 to 20 feet — Damp brown or grey, silty sand, maybe some gravel
- 20 to 25 feet — Damp grey or brown sand, maybe some gravel
- 25 to 30 feet — Damp to wet, gravelly sand
- over 30 feet — Moist to wet, brown, silty sand

Borehole logs from the February and May investigations are included in Appendix A. Soil conditions at the site were observed to a depth of 40 feet.

4.2 Site Surface Hydrology

The site is topographically even with the properties located to the north and south. The site is approximately 2 to 3 feet above Alameda Street on the west and approximately 20 feet above the Dominguez Channel water level. During periods of heavy rains, runoff water is channeled to area storm drains located throughout the site. The surface around the hydrogen plant purification area is mainly covered by asphalt and concrete. Some road base gravel has been spread on the roadway between the purification area and the former compressor shed.

The northeast and east portions of the site are bare soil. Any runoff would pond and eventually evaporate and/or percolate into the subsurface. The potential of water runoff from the site is minimal. The site did not experience any uncontrolled rain water runoff release during the uncharacteristically heavy rain period of 1993.

4.3 Site Hydrogeology

A perched groundwater zone was encountered at approximately 30 feet below the surface. This perched groundwater may be caused by the result of heavy rains during the 1992\1993 rain season in the Los Angeles area. The next groundwater formation is estimated to be 60 to 100 feet below the surface. This deeper groundwater formation would correspond to the Gage Aquifer, a major hydro-stratigraphic unit in the basin. Groundwater flow in the Gage Aquifer in the vicinity of the site, trends generally in a westerly direction. No known municipal use exists for the groundwater beneath the APCI site.

4.4 Site Meteorology

The climate of the Carson area, like most of Southern California, is controlled by the strength and position of a semi-permanent high pressure center over the Pacific Ocean. The high pressure ridge over the west coast of Southern California creates a repetitive pattern of frequent early morning cloudiness, hazy afternoon sunshine, daytime on-shore breezes and little temperature changes throughout the year. Limited rainfall occurs in the winter when the fringes of mid-latitude storms move through the area and the high pressure center is weakest and furthest south. On the average 12 to 15 inches of rain fall annually from November through early April. Summers are often completely dry.

Local meteorological conditions conform to the pattern of strong on-shore winds by day, especially in the summer, and weak off-shore winds by night, especially in the winter. Winds blow on-shore from the west/southwest by day and off-shore from the east/northeast by night, with the on-shore component much stronger and more persistent than the weak off-shore component.

5.0 CONCLUSION

Based on the information obtained from the March 1988 Underground Diesel Tank Removal, the March 1993 Site Investigation Report, the February 1993 Soil Gas Survey and the site investigation performed in May 1993, IT has completed the evaluation of the types, the sources and the extent of contamination at the APCI hydrogen production plant purification area.

5.1 Types and Source of Contamination

There are several local industrial sources of hydrocarbons at this site that may have contributed to the contamination of the soil. The task at hand was to differentiate the Air Products soil contamination, related to past surface spills of hydrocarbon condensate, from any other outside sources of contamination that were not attributable to past Air Products activities. Existing underground pipelines, which run along Alameda Street adjacent to the site, appear to be another source of hydrocarbon contamination. In addition, there is known hydrocarbon contamination of regional groundwater in the area.

The information obtained from the diesel tank removal and (IT Corporation, 1988) site assessment indicated that petroleum hydrocarbons and Benzene, Toluene, Ethylbenzene and Xylenes were present in the soil. At the time of the removal of the diesel tank, it was thought that the tank was the source of contamination. We know now that this tank was not the source of contamination, since the petroleum hydrocarbons and BTEX were not characteristic of diesel fuel; the flash point was well below that expected for diesel; the integrity of the tank and piping appeared to be intact; and the contamination extended, in a wide fashion, from the surface down to a depth of 20 feet, which would indicate a surface spill rather than an underground storage tank release.

The Soil Gas Survey (Target Environmental Services, Inc., 1993) indicated that the chromatogram signatures of the samples collected in the central portion of the purification area were indicative of the gasoline-like hydrocarbon condensate handled by Air Products in this area. The signatures of the samples collected in the western and southwestern portions of the purification area revealed a complex petroleum hydrocarbon mixture which was not typical of gasoline or diesel fuel. The highest concentrations of TPH and BTEX were west of the aboveground storage tank area and in the southwestern portion of the hydrogen plant purification area. The Air Products tanks, given their location and contents, do not appear to be the source

of this contamination. Investigation of other potential sources of the petroleum hydrocarbon mixture, such as the underground pipelines which run along Alameda Street, would be prudent; however, such an investigation is beyond the scope of this work plan.

The five boreholes drilled in March 1993 were positioned, using the soil gas survey results as a guide. The Analytical Results indicated that high concentrations of TRPH and BTEX were detected in the samples collected from the 5 and 10 foot depths in all of the five boreholes. TPH and BTEX were also detected in Boreholes 2 and 4. The surface to the 15 foot depth extent, and the nature of the contamination suggests that surface spills from the aboveground tanks were the source of this contamination. The reappearance of BTEX in Borehole 2 at the 30, 35 and 40 foot depths, and in Borehole 4 at the 35 foot depth, however, cloud this issue. Given that the 15 foot to the 35 foot depth appears to be clean, this reappearance of BTEX suggests that another source may be present for the contamination. See Table 3.1 for a Summary of the Analytical Results.

The latest borehole sampling performed in May 1993, further defined the lateral and vertical extent of contamination. It also quantified the hydrocarbon concentrations. In addition, select soil samples were analyzed by EPA Method 8240 for Halogenated Volatile Organic Compounds (HVOC). While very low levels of Methylene Chloride and Acetone were detected in some of the samples, Methylene Chloride, when detected, was also detected in the method blanks and these values were not blank corrected. Acetone was also detected in several of the method blanks and these values were also not blank corrected. Given the low levels of these substances and their presence in the laboratory blanks, Methylene Chloride and Acetone are not considered to be contaminants of concern.

IT believes that the gasoline-like contamination found in the hydrogen purification area at the depths of 5, 10 and 15 feet are the result of surface spills from the aboveground storage tanks. In the central portion of the site this contamination extends to a depth of approximately 30 feet. The complex hydrocarbon substance discovered on the western and southwest area of the site appears to emanate from other sources. The contamination discovered in some of the deepest soil samples also appears to emanate from a source other than Air Products since the Air Products surface spill evidence is not continuous from the surface to that depth. Since the 15 foot to the 35 foot depth at these locations is essentially clean, the source may have been past activities at the site prior to APCI presence or the effects of the known regional groundwater contamination from below.

5.2 Areal Extent of Contamination

The areal extent of contamination in an east-west direction is approximately 200 feet. This is measured from Borehole 13 to Borehole 19. In a north-south direction the extent is approximately 300 feet measured from Borehole 17 to Borehole 15. The depth of contamination was approximately 5 feet deep on the extremes and progressively deeper toward the center of the purification area. Borehole 9 showed the deepest extent of contamination with concentrations of TRPH at the 30 foot depth. Figure 4 shows cross sections of the TRPH contamination across the site in a north-south, and west-east direction. Figure 5 indicates the boreholes that were used for the cross sections.

It is known that the regional groundwater is contaminated with hydrocarbons from other sources. IT is aware of a regional groundwater study presently underway. This study is jointly sponsored by ARCO, Shell, Texaco, and GATX Terminals Corp. The results of the study may provide information regarding groundwater conditions at the Air Products site. Since the contamination attributable to Air Products appears to occur in the top 30 feet of soil, and that the groundwater is 60 feet down, we are not recommending the installation of groundwater wells at this time.

5.3 Cleanup Guidelines

The following section discusses soil and groundwater cleanup requirements by various regulatory agencies as understood by IT. Action levels for soil and groundwater have been based on the strictest interpretation of agency guidelines concerning action levels.

5.3.1 Soil

The California Regional Water Quality Control Board "Water Quality Objectives of 1985" established soil and groundwater action levels in their guidelines. The action levels for the contaminants detected on-site based on these guidelines, are: TPH at 2,000 mg/kg, Benzene at 700 μg/kg, Toluene at 100 mg/kg, Ethylbenzene at 1.4 mg/kg, Xylene at 620 mg/kg and Methylene Chloride (Dichloromethane) at 190 μg/kg. The action levels for the TPH and BTEX are developed for soil, in order to protect groundwater. Acetone is not a regulated substance and does not have an action level. The Methylene Chloride and Acetone detected at the site are not considered to be a hazardous waste problem since they were detected at low levels and were present in the method blanks, will not be further discussed.

In addition, the Leaking Underground Fuel Tank (LUFT) Manual suggests action levels for petroleum hydrocarbon contaminated soil resulting from underground fuel storage tanks.

According to the LUFT Manual, Table 2-1, page 29 Leaching Potential Analysis for Gasoline, using TPH; the leaching potential score for Gasoline contamination at the site is calculated as follows:

CONDITION	SCORE
Depth to groundwater less than 100 feet	9 points
No fractures in subsurface	10 points
Average rainfall is 14 to 17 inches/year	9 points
No man made conduits	10 points
Site-coarse soil	5 points
Total Site Score	43 points

The scores above are assigned to the listed scenarios in order to achieve a score to be used in selecting maximum allowable levels of contaminants that can be present at the site. If existing contaminants exceed the prescribed levels, remediation activities will be required. Based on the 43 score obtained, maximum allowable levels of TPH as Gasoline and BTEX contamination are 100, 1.0, 1.0, 1.0 and 1.0 mg/kg, respectively. These levels are strictly developed based on the presence of gasoline fuel in the soil as a result of a release from an underground tank leak. Remediation of the overlying soils should lessen the degree of contamination and restore normal site conditions to prevent any degradation of the groundwater.

5.3.2 Groundwater

Given that the APCI contamination does not extend deeper than 30 feet, contaminants from the site are not believed to have impacted regional groundwater. The shallow, perched groundwater encountered at the site appears to be transitory. Contamination of this perched groundwater zone will be, in effect, remediated after completion of the soil remedial efforts.

6.0 RECOMMENDATIONS

IT recommends implementation of the remedial alternatives for soil contamination discussed in sections 7.0 and 8.0 of this report, which evaluate site contaminant behavior as well as remedial alternatives of the soil.

Based on the discussion in section 8.0, the recommended remedial alternatives are Soil Vapor Extraction (SVE) followed by Recycling.

7.0 CONTAMINANT FATE AND TRANSPORT, HYDROGEN PLANT PURIFICATION AREA

7.1 Contaminants Description

The purpose of this section is to identify the contaminants of concern, and to discuss the physical and chemical properties of these contaminants in relation to their ultimate fate and transport in the environment. These contaminants of concern were selected based on results obtained from the field investigations.

The guidance by the USEPA (United States Environmental Protection Agency, Risk Assessment for Superfund, Volume I, Human Health Evaluation Manual EPA 540-1-89/002) for the selection of contaminants of concern was followed. This guidance document suggests that in selecting contaminants of concern, the focus should be on those contaminants that constitute the bulk of the potential risk. There are two major classes into which contaminants of concern fall; organics and metals. Metal constituents were not analyzed for in the soil samples. Table 7.1 summarizes the Constituents of Concern at the APCI site.

TABLE 7.1
Contaminants of Concern

Petroleum Hydrocarbons
Volatile Organics
Benzene
Toluene
Ethylbenzene
Xylenes

7.1.1 Volatile Organics

In general, the fate of organics in the environment is determined, to a large degree, by the contaminants' water solubility and high propensity for binding to particulate or other organic matter. Organics will strongly sorb to surface material. Organics in the atmosphere are associated almost exclusively with particulate matter. Although organics are very persistent, bio-degradation by bacteria and photo oxidation of particle bound compounds do occur. Also, the rate of decay may be influenced by the chemical properties of the binding substrate.

The majority of the organic compounds in the soil are slightly soluble, to nearly insoluble in water. Of the detected compounds, Benzene, Toluene, Ethylbenzene and Xylenes are the most soluble. The general rule of solubility is that it decreases with an increasing number of aromatic rings. Therefore, the most likely organic compounds to be leached from the soil by water would be the low molecular weight aliphatic hydrocarbons (C5 through C8).

Benzene, Toluene, Ethylbenzene and Xylenes are constituents with volatility properties that at sufficient concentrations, could be expected to volatilize and be detected through the soil.

7.2 Potential Routes of Migration

The environmental factors that influence the mobility of a contaminant include climatology, surface hydrology, geology, and hydrogeology.

7.2.1 Climatology

The APCI site is located in Southern California where the climate is classified as Coastal Mediterranean type, with a rainy winter season and dry summers. Precipitation in the area averages 12 to 15 inches each year. With the exception of the 1992/1993 season, the region had experienced a drought over the last six years. In winter the average daily temperatures range from the low 40 degrees to the high 70 degrees Fahrenheit. In summer, average daily temperatures range from the low 60 degrees to the high 80 degrees Fahrenheit.

7.2.2 Surface Hydrology

The site is in an area surrounded by oil refineries and chemical manufacturers. The surface area of the site is mostly covered by asphalt or concrete slabs.

7.2.3 Geology

The soil at the site, based on the borehole logs, is a grey to dark brown, silty sand with interbedded gravel zones. The soil is fairly porous and was damp to wet.

7.2.4 Hydrogeology

The site has at least two known groundwater zones. A perched groundwater zone is located at approximately 30 feet below the surface. This zone may be the result of the recent rainfall in the Los Angeles area. The other groundwater zone is located at an approximate depth of 60 to 100 feet. This zone would be equivalent to the Gage aquifer.

7.3 Factors Affecting Waste Migration

The transport of contaminants of concern is largely a function of their physical properties, the physical properties of their surrounding matrix, the physical conditions to which they are subjected, and to the chemical factors. Highly volatile wastes are more prone to be transported through the atmosphere and the more soluble ones to be carried by water.

Wastes will move farther and faster in porous sandy formations than in denser soil. Volatile wastes are mobile under hot windy conditions, and soluble during periods of heavy rainfall. The transport and fate of each contaminant is highly dependent upon its characteristic physio-chemical properties. The properties of greatest importance in this regard are:

- Molecular Weight
- Vapor Pressure
- Water Solubility
- Volatility (Henry's Law Constant K_h or H_c)
- Octanol Partition Coefficient (Kow)
- Organic Carbon Water Coefficient (Koc)
- Bio-concentration Factor

All of these influence a contaminant's environmental persistence. The physical and chemical properties of the contaminants of concern are presented in Table 7.2.

Water solubility is the maximum concentration of a chemical that dissolves in pure water at a specific temperature and pH. It is a critical property affecting environmental fate and transport.

Vapor pressure is a relative measure of the volatility of a chemical in its pure state and is a important determinant of the rate of vaporization from soil and surface waters.

Henry's Law Constant is another parameter, important in evaluating volatilization from waste exposed to air.

The Organic Carbon Water Coefficient (Koc) is a measure of the tendency for organics to be absorbed by the soil and sediments. The Koc is chemical specific and is largely independent of soil properties, and is a prime determinant of phase transport in moist soil.

The Octanol Partition Coefficient (Kow) is a measure of how a chemical is distributed at equilibrium between Octanol and water. It is an important parameter and is often used in the assessment of environmental fate and transport for organic compounds.

The bio-concentration factor provides a measure of the extent of chemical partitioning at equilibrium between a biological medium, such as a fish tissue and/or plant tissue and an external medium, such as water. The larger the factor becomes, the greater the likelihood of accumulation in living tissue.

TABLE 7.2
PHYSICAL AND CHEMICAL PROPERTIES FOR POTENTIAL CONTAMINANTS OF CONCERN AT THE APCI SITE

CONSTITUENT	BENZENE	TOLUENE	ETHYL-BENZENE	XYLENES
Molecular Weight (amu)	58	92	106	106
Vapor Pressure (mmHg)	95.2	28.1	7	10

mmHg - millimeters of Mercury
mg/l - milligrams per Liter
mg/g - milligrams per Gram

8.0 SITE REMEDIATION FEASIBILITY STUDY

This section summarizes the site remediation alternatives that may be used to remediate the contamination that is present at the APCI site.

8.1 Site Remediation Objectives

Soil contamination at the site appears to originate from the former aboveground hydrocarbon condensate and diesel storage tanks.

Based on this, IT will evaluate remedial alternatives that will achieve compliance with remediation guidelines that have been established by the State of California LUFT Manual, the Regional Water Quality Control Board and the County of Los Angeles Department of Public Works Guidance. Based on interaction with the appropriate regulatory agency, and considering the area background, the cleanup objective may be re-established at higher levels. The following is a tabular form of applicable remediation goals.

TABLE 8.1
ESTABLISHED CLEANUP GOALS
NON-SITE SPECIFIC

CONTAMINANT	LUFT GOAL*	COUNTY GUIDANCE *	RWQCB ACTION LEVELS
TRPH	1000 ppm	Background	NA
EPA 8015 TPH Gasoline Diesel	 100 ppm 1000 ppm	"	NA
BENZENE	1.0 ppm	"	700 μg/kg
TOLUENE	1.0 ppm	"	100 mg/kg
ETHYLBENZENE	1.0 ppm	"	1.4 g/kg
XYLENES	1.0 ppm	"	620 mg/kg

* Based on total contaminants present **Based on soil levels to protect groundwater

NA - Not Applicable

In addition, any systems, equipment, and/or construction to be conducted on-site to achieve these goals will be in compliance with all federal, state and local laws and regulations.

8.2 Feasibility Study Objectives

Remediation alternatives selected were evaluated, based on the following criteria which are, listed in terms of importance in the decision making process.

- Effectiveness and protection of public health and the environment
- Cost of alternative
- Technology availability and ease of application
- Ease of permitting and agency acceptance
- Time to apply
- Potential future liabilities associated with executing the alternative

APCI requested that in addition to this criteria, special consideration be given on a remedial technology's cost, time frame to implement, regulatory acceptance, technical feasibility, and future potential liability. Table 8.2, below, summarizes these criteria for each remedial alternative.

TABLE 8.2
REMEDIAL ALTERNATIVE CRITERIA

REMEDIAL ALTERNATIVE	COST 1,000,000's	TIME* FRAME	REGULATORY ACCEPTANCE	FEASIBILITY	LIABILITY POTENTIAL
No Action	.05	NA	Not Accepted	Not Feasible	Deed Restriction
Land Disposal	21.5	3-4 Month(s)	Acceptable	Feasible	Future Liability
Thermal Destruction	27.3	10-12 Month(s)	Not Likely	Not Feasible	Air Discharge
Soil Washing	9.0	10-12 Month(s)	Acceptable	Acceptable	Water Treatment
Bio-remediation	3.7	2-3 Year(s)	Acceptable	Not Feasible	Air Discharge
In-Situ Vapor Extraction	1.8	1-2 Year(s)	Acceptable	Feasible	NA
Recycling	5.4	3-4 Month(s)	Acceptable	Feasible	NA

* - Time frame approximated for implementation including permitting

NA - Not Applicable

8.3 Remedial Alternatives

The following is a list of remedial alternatives and associated approximate costs as evaluated for the APCI site. These remedial alternatives are based on the worst case scenario for the site. They may be substantially lessened after regulatory review. Prices listed in each of the options are estimated and/or average prices per ton, assuming 35,000 cubic yards (52,500 tons) of contaminated soil are present at the site. Total prices quoted include over-run contingencies and administrative costs. Some of the prices listed are based on current disposal and/or recycling facility fees. Other prices are based on the Hazardous Materials Treatment Technologies Manual (HMTT) prepared by the Federal EPA and dated February 9, 1989.

8.3.1 No Action

No Action involves leaving contaminated soil in place and is the least costly. No Action can achieve compliance with the guidelines listed, if a risk assessment is performed and shows that by leaving the material in place there is no endangerment to public health and the environment. The associated costs are administrative costs estimated at $50,000. This option will involve future deed restrictions for the property, if accepted by the appropriate regulatory agency.

8.3.2 Land Disposal

This alternative was widely used in the past to remediate contaminated soil similar to those present at the APCI site. However, lack of suitable, properly designed landfill space for this waste makes this alternative less attractive. In addition, this alternative is merely a storage alternative and not a final destruction of the waste. The alternative will involve excavating and off-site disposal of all contaminated soil. Cost for land disposal of the contaminated soil, including all site activities, excavation and disposal taxes will be approximately $21.5 million.

This cost includes segregating the contaminated soil, backfilling and restoration. This cost is based on tons of actual contaminated soil above goal levels listed in Table 9-1. Cost is based on approximately $100 per ton for disposal at the Chem Waste Class I facility, plus a $10 per ton Kings County Tax, and approximately $33 per ton for transportation, excavation and restoration is based on $20 per ton. In addition, a state tax, currently $102 per ton, is included in the estimate. Permitting for this alternative is relatively easier than other alternatives.

8.3.3 Thermal Destruction

This is a very effective solution that completely destroys contaminants by burning them.

Incineration can either be high temperature, which completely burns the media, including the contamination present, or low temperature that burns waste contaminants with low burning temperature and preserves the media.

The permitting requirements for this alternative are very extensive and include conducting burn tests to determine the applicability and effectiveness of the alternative for the site specific waste. The solution is time extensive, mainly due to the permitting process. The incineration is also equipment intensive. In addition, fly ash as well as off-gas emissions, will require further treatment prior to final disposal. This alternative involves excavation of the contaminated soil for either on-site or off-site incineration.

Costs including excavation, segregation of contaminated soil and backfilling, and site restoration will be in the excess of $27.3 million. This estimate is based on $20 per ton to excavate and restore the site, plus an estimated cost of $500 per ton to permit and thermally destruct of waste. These costs are based on USEPA Hazardous Material Treatment Technologies, issued February 9, 1989 (HMTT).

8.3.4 Soil Washing

Soil washing is also a very effective alternative. However, soil washing transmits contaminants from soil to water and chemical solution mix. This mix requires further treatment prior to final disposal. Soil washing is both time and equipment intensive, requires extensive testing to produce optimum water-chemical mix, and requires extensive permitting. The alternative involves excavation and removal of contaminated soil for on-site washing.

The cost of soil washing, including excavation segregation, washing, backfilling and site restoration is approximately $9.0 million. This is based on a cost estimate of $150 per ton and $20 per ton to excavate and restore. In addition, soil washing costs $.50 per gallon to treat generated waste water.

8.3.5 Bio-remediation

Bio-remediation is a very effective alternative when dealing with petroleum hydrocarbon related contaminants. The alternative is effective, environmentally safe, readily available and easily applied. However, bio-remediation is a time extensive solution and may take weeks, and sometimes months to apply. In addition, bio-remediation requires optimum environmental conditions to be highly effective.

This alternative will involve the excavation of the contaminated soil for on-site treatment.

Bio-remediation involves excavating and spreading the contaminated soil in lifts up to 18 inches deep. Because of the presence of highly volatile organic compounds, this alternative will require extensive permitting from the South Coast Air Quality Management District (SCAQMD) and will require extensive monitoring and sampling program implementation.

Costs for this alternative are approximately $3.7 million. This is based on $50 per ton, plus $20 per ton for excavation and restoration.

8.3.6 Soil Vapor Extraction

The application of Soil Vapor Extraction (SVE) technology to the remediation of soils contaminated with petroleum hydrocarbons and volatile organic compounds is gaining wide acceptance. The alternative involves installing a series of vapor extraction wells, and applying vacuum pressure to them. The contaminant vapor is drawn off and either burned in a portable incinerator (oxidizer) or passed through a carbon absorption system.

This alternative is effective, environmentally safe, readily available, and easily applied. However, SVE is a time extensive solution and may take weeks, and sometimes months to be effective.

The incineration will be high temperature, which completely burns the vapors. Carbon absorption causes the vapors to be passed through a filter media. However, incineration is the preferred alternative over carbon absorption because of the replacement costs of the filter media. The incinerator may be used at another site after all of the contaminants have been removed from the soil. The permitting requirements for this alternative are easily obtainable. The incineration is also equipment intensive and requires weekly maintenance and monthly air sampling.

Soil Vapor Extraction is the least costly of the remedial alternative. No excavation of the soil is required. The cost for Soil Vapor Extraction and site restoration is approximately $1.8 million. This cost is based on purchasing a system for approximately $200,000 (including oxidizer). System installation, vapor extraction well installation, monthly sampling, operation and maintenance, and utilities is approximated at $30 per ton.

8.3.7 Recycling

This alternative is a very effective solution that reuses the contaminated soil by making the soil into asphalt. There are no permitting requirements for this alternative. Acceptance by the recycling facility is a prerequisite. There is no long term liability with recycling. This alternative involves excavation of the contaminated soil, and transportation to the recycling facility.

Costs including excavation, transportation, recycling costs, backfilling, and site restoration are estimated to be $5.4 million. This alternative can be used only after the highly volatile organic vapors have been removed from the soil.

8.4 Recommended Remedial Methods

IT recommends that in-situ soil vapor extraction and recycling be the remedial method utilized at the site. The following are reasons for selecting these remedial methods:

8.4.1 Soil Vapor Extraction

- As a result of the highly volatile components at the site, SCAQMD will not allow removal of the soil without removing or preventing the escape of the volatiles to the atmosphere, soil vapor extraction (SVE) can remove the most volatile contaminants.
- SVE is a proven technology in remediation of Petroleum Hydrocarbon contamination.
- SVE is very effective on the type of waste present, can be applied safely, and will provide maximum protection to public health and environment.
- SVE is the least costly alternative for the removal of the volatile organic compounds.
- The technology is simple, and the equipment is readily available.

Soil Vapor Extraction is the least costly of the remedial alternative. No excavation of the soil is required. The cost for Soil Vapor Extraction and site restoration is approximately $1.8 million. This cost is based on purchasing a system for approximately $200,000 (including oxidizer). System installation, vapor extraction well installation, monthly sampling, operation and maintenance, and utilities is approximated at $30 per ton.

8.3.7 Recycling

This alternative is a very effective solution that reuses the contaminated soil by making the soil into asphalt. There are no permitting requirements for this alternative. Acceptance by the recycling facility is a prerequisite. There is no long term liability with recycling. This alternative involves excavation of the contaminated soil, and transportation to the recycling facility.

Costs including excavation, transportation, recycling costs, backfilling, and site restoration are estimated to be $5.4 million. This alternative can be used only after the highly volatile organic vapors have been removed from the soil.

8.4 Recommended Remedial Methods

IT recommends that in-situ soil vapor extraction and recycling be the remedial method utilized at the site. The following are reasons for selecting these remedial methods:

8.4.1 Soil Vapor Extraction

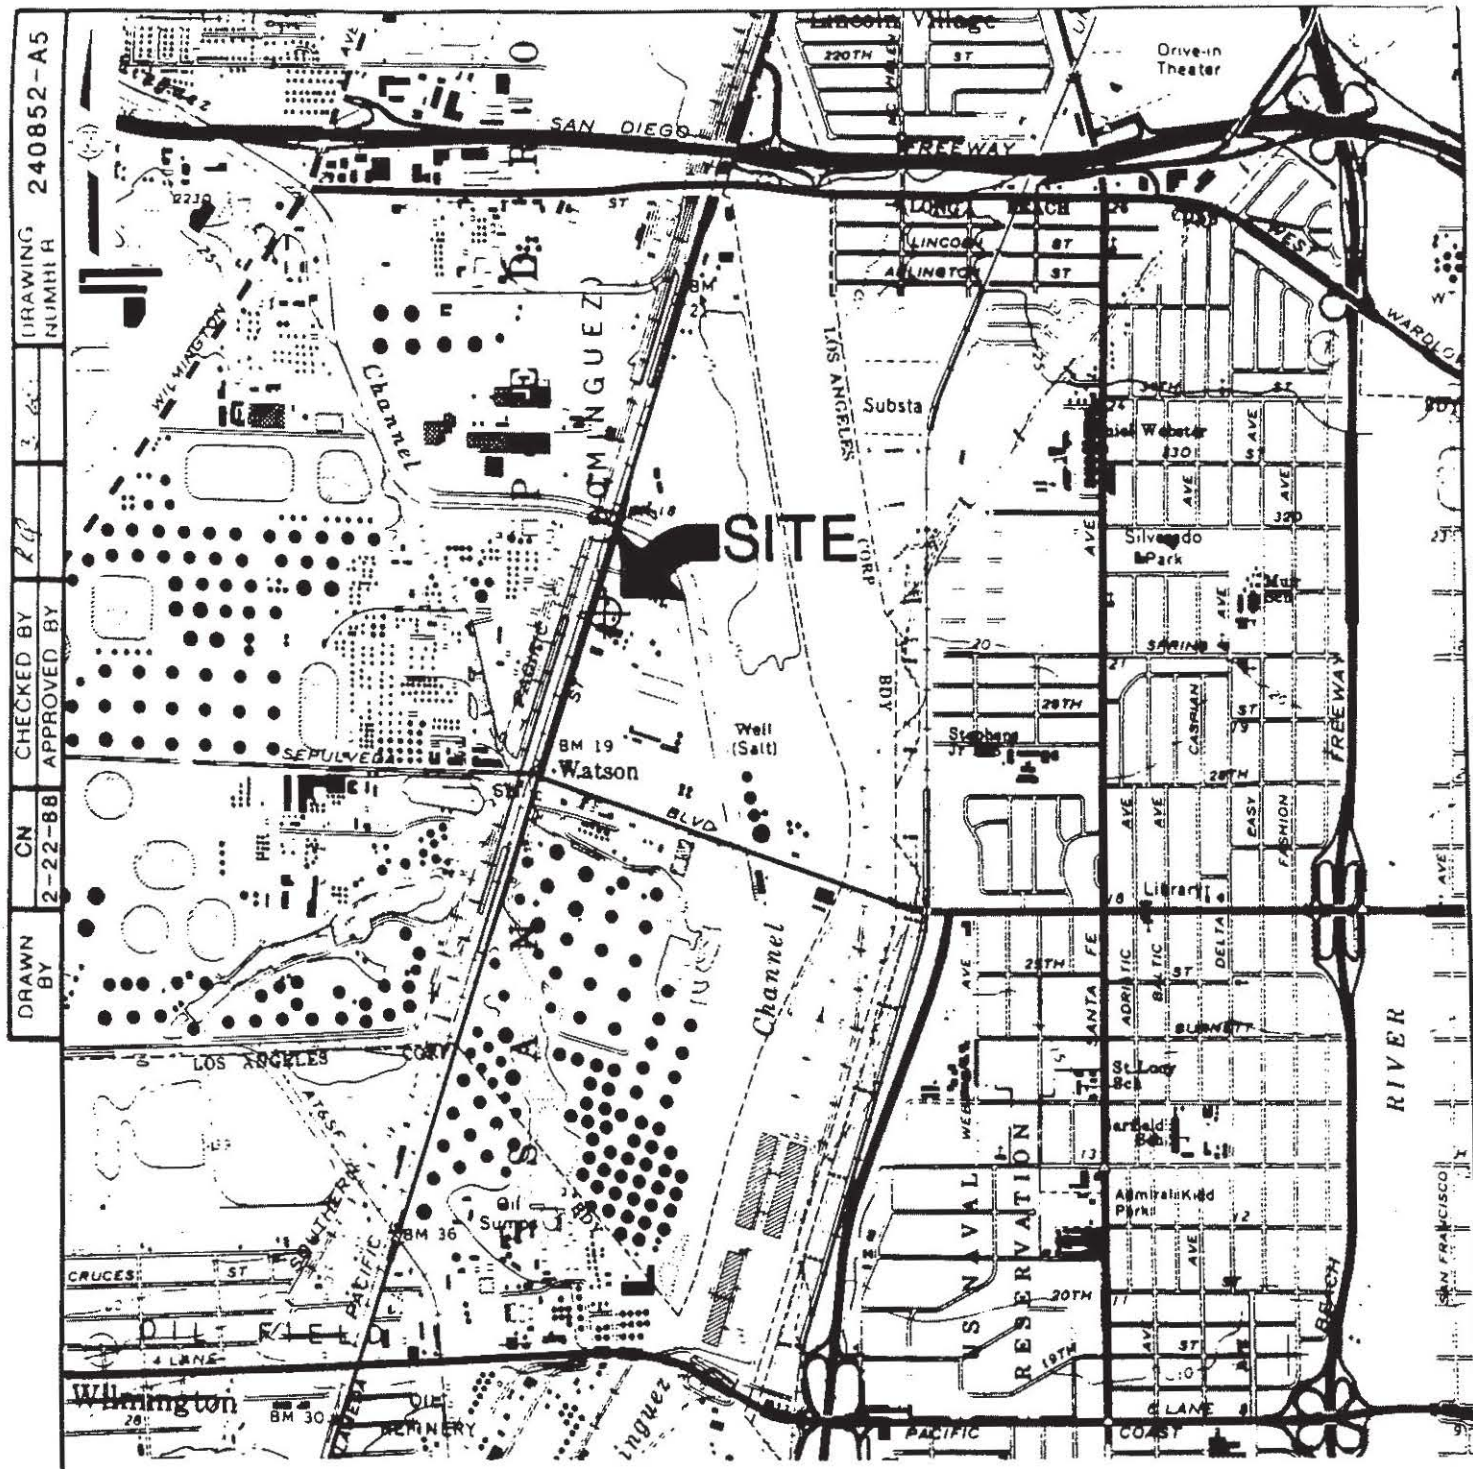
- As a result of the highly volatile components at the site, SCAQMD will not allow removal of the soil without removing or preventing the escape of the volatiles to the atmosphere, soil vapor extraction (SVE) can remove the most volatile contaminants.
- SVE is a proven technology in remediation of Petroleum Hydrocarbon contamination.
- SVE is very effective on the type of waste present, can be applied safely, and will provide maximum protection to public health and environment.
- SVE is the least costly alternative for the removal of the volatile organic compounds.
- The technology is simple, and the equipment is readily available.

- SVE is widely used and easily permitted.
- Minimum potential for future liability.
- Site lithology (i.e., soil permeability) will facilitate the use of SVE.
- Regulatory cleanup guidelines for the volatile organics can be achieved through SVE.
- The extent of contamination can be feasibly remediated by SVE.
- Time of cleanup remediation can be accomplished between 6 to 18 months.

8.4.2 Recycling

- This alternative is very effective on the type of waste present, can be applied safely, and will provide maximum protection to public health and environment.
- There is no long term liability associated with recycling.
- Time of removal can be accomplished in approximately two months after removal of volatile organics.
- Vertical and horizontal extent of contamination can be feasibly remediated.
- Permitting is minimal, versus the other alternatives.

8.5 Applicable Requirements



This section identifies applicable regulatory requirements as they relate to the selected alternatives. The final chosen contractor will contact the listed appropriate agencies to obtain any necessary permits and/or variances to implement this alternative.

TABLE 8.3
AGENCIES AND REQUIREMENTS

AGENCY	POSSIBLE REQUIREMENT
County of Los Angeles Department of Public Works	Overall Necessary Project Approval
Los Angeles Regional Water Quality Control Board	Waste Discharge Requirement Cleanup Goal Acceptance
South Coast Air Quality Management District	Air Emissions Permit/Equipment Permits
California Department of Toxic Substance Control	Compliance with Permit by Rule Requirements
City of Carson	Local and Building Permits

8.6 Application of Alternative/Site Control

A Remedial Action Work Plan will have to be submitted prior to remediation, describing the application of the selected alternatives to the Air Products site.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by NV5 were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Subject: Gabrieleno Band of Mission Indians - Kizh Nation; Notification of the Proposed Avocet BESS 23320 Alameda St., Pursuant to Assembly Bill (AB) 52
Attachments: Avocet Project Description_6.9.23.pdf

Dear Chairperson Andrew Salas/Gabrieleno Band of Mission Indians - Kizh Nation:

Pursuant to California Assembly Bill (AB) 52, the City of Carson (City) is providing you with notification of the proposed Avocet Battery Energy Storage System (BESS) project located in the City of Carson, Los Angeles County, California. An IS/MND will be prepared for this project. Attached is the project description which also contains a vicinity map and project site location.

Project Location and Description
The project site is at 23320 Alameda St., APN Assessor's Parcel Number (APN) 7315-020-022 which consists of approximately 6.96 acres in the City of Carson, California (see Figure 1, Project Vicinity). The project site is in the eastern portion of the City, east of South Alameda Street and north of East Sepulveda Boulevard (see Figure 1 and Figure 2, Project Site). The project is located approximately 0.95 miles south of Interstate 405.

The project site is currently developed as an aggregate recycling center and is surrounded by other mixed industrial uses. The SCE Hinson Substation or point of interconnection is located approximately 0.62 miles to the northeast in the City of Long Beach. Two gen-tie route options are being considered and are further described in section 1.6 of the attached project description. Each of the two gen-tie route options will cross three jurisdictions including: the City of Carson, the City of Los Angeles, and the City of Long Beach. The project will provide a service to the regional electric grid by receiving energy (charging) from the SCE electric transmission system, storing energy on site, and then later delivering energy (discharging) back to the point of interconnection.

Zone/General Plan Designation and Entitlement Applications
The General Plan land use designation for the Project site is Heavy Industrial, and the current zoning is Manufacturing, Heavy – Design Overlay. Entitlement applications for Design Overlay Review and Conditional Use Permit are being processed for this project.

If you have any comments or concerns regarding potential impacts to tribal cultural resources in relation to the project, please provide a written request for consultation to the address below or via email to malexander@carsonca.gov within 30 days of receipt of this notice and include the name of a designated lead contact person.

Subject: Notification of the Proposed Avocet BESS 23320 Alameda St., Pursuant to Assembly Bill (AB) 52
Attachments: Avocet Project Description_6.9.23.pdf

Dear Christina Swindall Martinez:

Pursuant to California Assembly Bill (AB) 52, the City of Carson (City) is providing you with notification of the proposed Avocet Battery Energy Storage System (BESS) project located in the City of Carson, Los Angeles County, California. An IS/MND will be prepared for this project. Attached is the project description which also contains a vicinity map and project site location.

Project Location and Description
The project site is at 23320 Alameda St., APN Assessor's Parcel Number (APN) 7315-020-022 which consists of approximately 6.96 acres in the City of Carson, California (see Figure 1, Project Vicinity). The project site is in the eastern portion of the City, east of South Alameda Street and north of East Sepulveda Boulevard (see Figure 1 and Figure 2, Project Site). The project is located approximately 0.95 miles south of Interstate 405.

The project site is currently developed as an aggregate recycling center and is surrounded by other mixed industrial uses. The SCE Hinson Substation or point of interconnection is located approximately 0.62 miles to the northeast in the City of Long Beach. Two gen-tie route options are being considered and are further described in section 1.6 of the attached project description. Each of the two gen-tie route options will cross three jurisdictions including: the City of Carson, the City of Los Angeles, and the City of Long Beach. The project will provide a service to the regional electric grid by receiving energy (charging) from the SCE electric transmission system, storing energy on site, and then later delivering energy (discharging) back to the point of interconnection.

Zone/General Plan Designation and Entitlement Applications
The General Plan land use designation for the Project site is Heavy Industrial, and the current zoning is Manufacturing, Heavy – Design Overlay. Entitlement applications for Design Overlay Review and Conditional Use Permit are being processed for this project.

If you have any comments or concerns regarding potential impacts to tribal cultural resources in relation to the project, please provide a written request for consultation to the address below or via email to malexander@carsonca.gov within 30 days of receipt of this notice and include the name of a designated lead contact person.

Subject: Soboba Band of Luiseno Indians; Notification of the Proposed Avocet BESS 23320 Alameda St., Pursuant to Assembly Bill (AB) 52

Dear Joseph Ontiveros, Tribal Historic Preservation Officer/ Soboba Band of Luiseno Indians:

Pursuant to California Assembly Bill (AB) 52, the City of Carson (City) is providing you with notification of the proposed Avocet Battery Energy Storage System (BESS) project located in the City of Carson, Los Angeles County, California. An IS/MND will be prepared for this project. Attached is the project description which also contains a vicinity map and project site location.

Project Location and Description
The project site is at 23320 Alameda St., APN Assessor's Parcel Number (APN) 7315-020-022 which consists of approximately 6.96 acres in the City of Carson, California (see Figure 1, Project Vicinity). The project site is in the eastern portion of the City, east of South Alameda Street and north of East Sepulveda Boulevard (see Figure 1 and Figure 2, Project Site). The project is located approximately 0.95 miles south of Interstate 405.

The project site is currently developed as an aggregate recycling center and is surrounded by other mixed industrial uses. The SCE Hinson Substation or point of interconnection is located approximately 0.62 miles to the northeast in the City of Long Beach. Two gen-tie route options are being considered and are further described in section 1.6 of the attached project description. Each of the two gen-tie route options will cross three jurisdictions including: the City of Carson, the City of Los Angeles, and the City of Long Beach. The project will provide a service to the regional electric grid by receiving energy (charging) from the SCE electric transmission system, storing energy on site, and then later delivering energy (discharging) back to the point of interconnection.

Zone/General Plan Designation and Entitlement Applications
The General Plan land use designation for the Project site is Heavy Industrial, and the current zoning is Manufacturing, Heavy – Design Overlay. Entitlement applications for Design Overlay Review and Conditional Use Permit are being processed for this project.

If you have any comments or concerns regarding potential impacts to tribal cultural resources in relation to the project, please provide a written request for consultation to the address below or via email to malexander@carsonca.gov within 30 days of receipt of this notice and include the name of a designated lead contact person.

Kind Regards, M

McKina Alexander

Hello Brandy Salas,

Your consultation request was received and note that this project's consultation is subject to AB 52 not SB 18. I return to the office on September 11th and please be so kind as to send a few dates that Chair Salas is available for consultation.

Contact me if you have any questions.

Kind Regards, M

The region where Gabrieleño culture thrived for more than eight centuries encompassed most of Los Angeles County, more than half of Orange County and portions of Riverside and San Bernardino counties. It was the labor of the Gabrieleño who built the missions, ranchos and the pueblos of Los Angeles. They were trained in the trades, and they did the construction and maintenance, as well as the farming and managing of herds of livestock. "The Gabrieleño are the ones who did all this work, and they really are the foundation of the early economy of the Los Angeles area " . "That's a contribution that Los Angeles has not recognized--the fact that in its early decades, without the Gabrieleño, the community simply would not have survived."

Pursuant to California Assembly Bill (AB) 52, the City of Carson (City) is providing you with notification of the proposed Avocet Battery Energy Storage System (BESS) project located in the City of Carson, Los Angeles County, California. An IS/MND will be prepared for this project. Attached is the project description which also contains a vicinity map and project site location.

Project Location and Description
The project site is at 23320 Alameda St., APN Assessor's Parcel Number (APN) 7315-020-022 which consists of approximately 6.96 acres in the City of Carson, California (see Figure 1, Project Vicinity). The project site is in the eastern portion of the City, east of South Alameda Street and north of East Sepulveda Boulevard (see Figure 1 and Figure 2, Project Site). The project is located approximately 0.95 miles south of Interstate 405.

The project site is currently developed as an aggregate recycling center and is surrounded by other mixed industrial uses. The SCE Hinson Substation or point of interconnection is located approximately 0.62 miles to the northeast in the City of Long Beach. Two gen-tie route options are being considered and are further described in section 1.6 of the attached project description. Each of the two gen-tie route options will cross three jurisdictions including: the City of Carson, the City of Los Angeles, and the City of Long Beach. The project will provide a service to the regional electric grid by receiving energy (charging) from the SCE electric transmission system, storing energy on site, and then later delivering energy (discharging) back to the point of interconnection.

Zone/General Plan Designation and Entitlement Applications
The General Plan land use designation for the Project site is Heavy Industrial, and the current zoning is Manufacturing, Heavy – Design Overlay. Entitlement applications for Design Overlay Review and Conditional Use Permit are being processed for this project.

If you have any comments or concerns regarding potential impacts to tribal cultural resources in relation to the project, please provide a written request for consultation to the address below or via email to malexander@carsonca.gov within 30 days of receipt of this notice and include the name of a designated lead contact person.
