                                                 Good Efficiency

*============================================================*
| Extran Efficiency is an indicator of the efficiency of     |
| the simulation.  Ideal efficiency is one iteration per     |
| time step.  Altering the underrelaxation parameter,        |
| lowering the time step, increasing the flow and head       |
| tolerance are good ways of improving the efficiency,       |
| another is lowering the internal time step. The lower the  |
| efficiency generally the faster your model will run.       |
| If your efficiency is less than 1.5 then you may try       |
| increasing your time step so that your overall simulation  |
| is faster.  Ideal efficiency would be around 2.0           |
|                                                            |
| Good Efficiency      < 1.5           mean iterations       |
| Excellent Efficiency < 2.5 and > 1.5 mean iterations       |
| Good      Efficiency < 4.0 and > 2.5 mean iterations       |
| Fair      Efficiency < 7.5 and > 4.0 mean iterations       |
| Poor Efficiency      > 7.5           mean iterations       |

|        HYDRAULICS TABLES IN THE OUTPUT FILE                |
|  These are the more important tables in the output file.   |
|  You can use your editor to find the table numbers,        |
|  for example: search for Table E20 to check continuity.    |
|  This output file can be imported into a Word Processor    |
|  and printed on US letter or A4 paper using portrait       |
|  mode, courier font, a size of 8 pt. and margins of 0.75   |
|                                                            |
| Table E1   - Basic Conduit Data                            |
| Table E2   - Conduit Factor Data                           |
| Table E3a  - Junction Data                                 |
| Table E3b  - Junction Data                                 |
| Table E4   - Conduit Connectivity Data                     |
| Table E4a  - Dry Weather Flow Data                         |
| Table E4b  - Real Time Control Data                        |
| Table E5   - Junction Time Step Limitation Summary         |
| Table E5a  - Conduit Explicit Condition Summary            |
| Table E6   - Final Model Condition                         |

Time Control from Hydraulics Job Control
Year.........    2024 Month.......       1
Day..........       1 Hour........       0
Minute.......       0 Second......       0

Control information for simulation
----------------------------------

Integration cycles.................     27360
Length of integration step is......     60.00 seconds
Simulation length..................    456.00 hours
Do not create equiv. pipes(NEQUAL).         0
Use U.S. customary units for I/O...         0
Printing starts in cycle...........         1
Intermediate printout intervals of.       500 cycles
Intermediate printout intervals of.    500.00 minutes
Summary printout intervals of......       500 cycles
Summary printout time interval of..    500.00 minutes
Hot start file parameter (REDO)....         0
Initial time.......................      0.00 hours

Iteration variables: Flow Tolerance.   0.00010
                     Head Tolerance.   0.00050
    Minimum depth (m or ft).........   0.00001
    Underrelaxation parameter.......   0.85000
    Time weighting parameter........   0.85000
    Conduit roughness factor........   1.00000
    Flow adjustment factor..........   1.00000
    Initial Condition Smoothing.....         0
    Courant Time Step Factor........   1.00000
    Default Expansion/Contraction K.   0.00000
    Default Entrance/Exit K.........   0.00000
    Routing Method..................   Dynamic Wave
Default surface area of junctions...     12.57 square feet.
Minimum Junction/Conduit Depth......   0.00001 feet.
Ponding Area Coefficient............   5000.00
Ponding Area Exponent...............    1.0000
Minimum Orifice Length..............   1000.00 feet.
NJSW input hydrograph junctions.....     1
     or user defined hydrographs....

260   *=====================================================*
261   | If there are messages about (sqrt(g*d)*dt/dx), or |
262   | the sqrt(wave celerity)*time step/conduit length  |
263   | in the output file all it means is that the       |
264   | program will lower the internal time step to      |
265   | satisfy this condition (explicit condition).      |
266   | You control the actual internal time step by      |
267   | using the minimum courant time step factor in the |
268   | HYDRAULICS job control.  The message put in words |
269   | states that the smallest conduit with the fastest |
270   | velocity will control the time step selection.    |
271   | You have further control by using the modify      |
272   | conduit option in the HYDRAULICS Job Control.     |

                                                 Good Efficiency

*============================================================*
| Extran Efficiency is an indicator of the efficiency of     |
| the simulation.  Ideal efficiency is one iteration per     |
| time step.  Altering the underrelaxation parameter,        |
| lowering the time step, increasing the flow and head       |
| tolerance are good ways of improving the efficiency,       |
| another is lowering the internal time step. The lower the  |
| efficiency generally the faster your model will run.       |
| If your efficiency is less than 1.5 then you may try       |
| increasing your time step so that your overall simulation  |
| is faster.  Ideal efficiency would be around 2.0           |
|                                                            |
| Good Efficiency      < 1.5           mean iterations       |
| Excellent Efficiency < 2.5 and > 1.5 mean iterations       |
| Good      Efficiency < 4.0 and > 2.5 mean iterations       |
| Fair      Efficiency < 7.5 and > 4.0 mean iterations       |
| Poor Efficiency      > 7.5           mean iterations       |

===
| Table E20 - Junction Flooding and Volume Listing. |
| The maximum volume is the total volume |
| in the node including the volume in the |
| flooded storage area. This is the **max** |
| volume at any time. The volume in the |
| flooded storage area is the total volume|
| above the ground elevation, where the |
| flooded pond storage area starts. |
| The fourth column is instantaneous, the fifth is the|
| sum of the flooded volume over the entire simulation|
| Units are either ft^3 or m^3 depending on the units.|
===

Junction Flood Name	Surcharged Time **(min)**	Flooded Time**(min)**	Out of cell 1D-System Stored (Flooded Volume)	Maximum Volume	Passed to 2D OR Volume in allowed Pond of 1D-System
Inflow	656.	0.000	0.000	141.	0.000
Node2	1.512E+03	0.000	0.000	1.759E+06	0.000

|        HYDRAULICS TABLES IN THE OUTPUT FILE                |
|  These are the more important tables in the output file.   |
|  You can use your editor to find the table numbers,        |
|  for example: search for Table E20 to check continuity.    |
|  This output file can be imported into a Word Processor    |
|  and printed on US letter or A4 paper using portrait       |
|  mode, courier font, a size of 8 pt. and margins of 0.75   |
|                                                            |
| Table E1   - Basic Conduit Data                            |
| Table E2   - Conduit Factor Data                           |
| Table E3a  - Junction Data                                 |
| Table E3b  - Junction Data                                 |
| Table E4   - Conduit Connectivity Data                     |
| Table E4a  - Dry Weather Flow Data                         |
| Table E4b  - Real Time Control Data                        |
| Table E5   - Junction Time Step Limitation Summary         |
| Table E5a  - Conduit Explicit Condition Summary            |
| Table E6   - Final Model Condition                         |

Time Control from Hydraulics Job Control
Year.........    2024 Month.......       1
Day..........       1 Hour........       0
Minute.......       0 Second......       0

Control information for simulation
----------------------------------

Integration cycles.................     27360
Length of integration step is......     60.00 seconds
Simulation length..................    456.00 hours
Do not create equiv. pipes(NEQUAL).         0
Use U.S. customary units for I/O...         0
Printing starts in cycle...........         1
Intermediate printout intervals of.       500 cycles
Intermediate printout intervals of.    500.00 minutes
Summary printout intervals of......       500 cycles
Summary printout time interval of..    500.00 minutes
Hot start file parameter (REDO)....         0
Initial time.......................      0.00 hours

Iteration variables: Flow Tolerance.   0.00010
                     Head Tolerance.   0.00050
    Minimum depth (m or ft).........   0.00001
    Underrelaxation parameter.......   0.85000
    Time weighting parameter........   0.85000
    Conduit roughness factor........   1.00000
    Flow adjustment factor..........   1.00000
    Initial Condition Smoothing.....         0
    Courant Time Step Factor........   1.00000
    Default Expansion/Contraction K.   0.00000
    Default Entrance/Exit K.........   0.00000
    Routing Method..................   Dynamic Wave
Default surface area of junctions...     12.57 square feet.
Minimum Junction/Conduit Depth......   0.00001 feet.
Ponding Area Coefficient............   5000.00
Ponding Area Exponent...............    1.0000
Minimum Orifice Length..............   1000.00 feet.
NJSW input hydrograph junctions.....     1
     or user defined hydrographs....

260   *=====================================================*
261   | If there are messages about (sqrt(g*d)*dt/dx), or |
262   | the sqrt(wave celerity)*time step/conduit length  |
263   | in the output file all it means is that the       |
264   | program will lower the internal time step to      |
265   | satisfy this condition (explicit condition).      |
266   | You control the actual internal time step by      |
267   | using the minimum courant time step factor in the |
268   | HYDRAULICS job control.  The message put in words |
269   | states that the smallest conduit with the fastest |
270   | velocity will control the time step selection.    |
271   | You have further control by using the modify      |
272   | conduit option in the HYDRAULICS Job Control.     |
