1.0 INTRODUCTION

As the lead agency, the City of Inglewood has conducted this Initial Study and prepared this Mitigated Negative Declaration pursuant to the California Environmental Quality Act (CEQA) Statute and Guidelines[1] to determine and analyze the potential environmental impacts of the proposed 113-133 W. Plymouth Street Residential Project.

1.1 PROJECT OVERVIEW

The proposed project consists of the demolition of eleven existing residences totaling 11,287 square feet (sq. ft.), 1,745 sq. ft. of garages, and one existing 171 sq. ft. laundry room and the construction and operation of twenty townhouses totaling 52,616.2 sq. ft., each with three stories above a basement with semi-subterranean garages, and additional features. The General Plan Land Use designation for the project site is commercial/residential and project site is zoned Residential Multiple Family (R-3) and Parking (P-1). The project site consists of parcels associated with street addresses 113-133 W. Plymouth Street between Eucalyptus Avenue and La Brea Avenue in the northern portion of the City of Inglewood, California. The total area of the project site is 29,593 sq. ft.

1.2 ENVIRONMENTAL COMPLIANCE

This IS/MND has been prepared in accordance with the California Environmental Quality Act (CEQA) of 1970 (Public Resources Code 21000–21189) and relevant provisions of the CEQA Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3, Sections 15000–15387), as amended.

Initial Study. Section 15063(c) of the CEQA Guidelines defines an Initial Study (IS) as the proper preliminary method of analyzing the potential environmental consequences of a project. To paraphrase from this Section, the relevant purposes of an Initial Study are:

(1) To provide the Lead Agency with the necessary information to decide whether to prepare an Environmental Impact Report (EIR) or a Mitigated Negative Declaration (MND);

(2) To enable the Lead Agency to modify a project, mitigating adverse impacts, thus avoiding the need to prepare an EIR; and

(3) To provide sufficient technical analysis of the environmental effects of a project to permit a judgment based on the record as a whole, that the environmental effects of a project have been adequately mitigated.

Negative Declaration or Mitigated Negative Declaration. Section 15070 of the CEQA Guidelines states that a public agency shall prepare a negative declaration or MND for a project subject to CEQA when:

(a) The initial study shows that there is no substantial evidence, in light of the whole record before the agency, that the project may have a significant effect on the environment; or

(b) The Initial Study identifies potentially significant effects, but:

[1] California Public Resources Code, Division 13. Environmental Quality, Section 21000 et seq., California Environmental Quality Act (CEQA); and California Code of Regulations, Title 14, Guidelines for the Implementation of the California Environmental Quality Act, Section 15000 et seq., (State CEQA Guidelines).

1. Revisions in the project plans or proposals made by, or agreed to by the applicant before a proposed mitigated negative declaration and initial study are released for public review would avoid the effects or mitigate the effects to a point where clearly no significant effects would occur, and
2. There is no substantial evidence, in light of the whole record before the agency, that the project as revised may have a significant effect on the environment.

An IS/MND may be used to satisfy the requirements of CEQA when a proposed project would have no significant unmitigable effects on the environment. As discussed in subsequent sections of this document, implementation of the proposed project would not result in any significant effects on the environment that cannot be reduced to below a level of significance with the mitigation measures included herein.

1.3 DISCRETIONARY ACTIONS AND APPROVALS

As the Lead Agency, the City of Inglewood has authority over discretionary actions and approvals for the project. Discretionary actions necessary for the implementation of the project include the following:

- **Special Use Permit**: A discretionary Special Use Permit through the Planned Assembly Development (PAD) procedure described in the Housing Element of the City General Plan.

The project would also require the following non-discretionary entitlements and approvals:

- **Vesting Tentative Tract Map**: Approval of Vesting Tentative Tract Map No. 82105 for a Small Lot Single Family Subdivision.
- **IS/MND**: Adoption of an IS/MND pursuant to CEQA.
- **Site Plan Review**

The project proposes the following code exceptions through the PAD procedure to allow deviations from the Inglewood Municipal Code (Municipal Code):

1. The project proposes a 3 ½ story building in the R-3 zone in lieu of the three-story maximum allowed by Section 12-21.1 of the Municipal Code.
2. The project proposes a three-foot six-inch front yard setback in lieu of the 20-foot front yard setback required by Section 12-21.2 of the Municipal Code.
3. The project proposes a six-foot side yard setback in lieu of the 10-foot side yard setback for three story buildings required by Section 12-21.4 of the Municipal Code.
4. The project proposes a three-foot six-inch rear yard setback in lieu of the 20-foot rear yard setback required by Section 12-21.5 of the Municipal Code.
5. The project proposes five guest parking spaces in lieu of the seven guest parking spaces required for 20 homes by Section 12-43 (H) of the Municipal Code that requires one additional guest parking space on-site for every three units for all multiple-unit residential facilities having six or more units.
6. The project proposes less than a 19-foot separation between the proposed 3 ½ story dwelling structure and another 3 ½ story dwelling structure on the same lot in lieu of the 19-foot separation required from wall to wall including balcony walls by Section 12-10 of the Municipal Code.
7. The project proposes lots that range from 1,048 sq. ft. to 1,801 sq. ft. in lieu of the minimum lot

area of 6,000 sq. ft. required by Section 12-7a and b1 of the Municipal Code.

1.4 PROJECT INFORMATION

Project Title and Address:	113-133 W. Plymouth Street Residential Project 113-133 W. Plymouth Street Inglewood, CA 90303
Lead Agency Name and Address:	City of Inglewood 1 Manchester Boulevard, 4th Floor Inglewood, CA 90301
Contact Person and Phone Number:	Mindy Wilcox, Planning Manager Economic and Community Development Department Planning Division (310) 412-5230
Project Sponsor Name and Address:	James D. Ward Ward Schurr, Inc. 6565 Sunset Blvd. Suite #310 Los Angeles, CA 90028

1.5 ORGANIZATION OF INITIAL STUDY AND MITIGATED NEGATIVE DECLARATION

The organization of this IS/MND is designed to meet the requirements of CEQA. This IS/MND is organized into the following five sections:

1.0 Introduction. This section provides introductory information, including an overview of the project, and the Lead Agency for the project.

2.0 Findings of This Initial Study. This section summarizes the legal findings of this Initial Study pursuant to CEQA.

3.0 Project Description. This section provides a description of the Project, a description of the project site and the surrounding land uses, and the estimated timeline for the construction and implementation of the project.

4.0 Initial Study Checklist and Evaluation. This section contains the complete IS Checklist appended to the CEQA Guidelines. This section identifies the level of impact the project would have under each environmental impact category. This section evaluates the environmental impacts associated with each category.

5.0 Preparers and References. This section provides a list of consultant team members that prepared this IS/MND and lists the sources and references used in the preparation of this IS/MND.

1.6 MITIGATION MONITORING AND REPORTING PROGRAM

The purpose of the Mitigation Monitoring and Reporting Program (MMRP) is to ensure the implementation of the mitigation measures identified in this IS/MND to reduce impacts to less than significant. For ease of use, the MMRP is organized into a tabular format, with columns containing the language of the mitigation measures, timing, parities responsible for implementation, and parities responsible for enforcement. Implementation of this MMRP shall be carried out by the City of Inglewood and other entities (e.g., Applicant and Construction Contractor), as specified in **Table 1-1, Mitigation Monitoring and Reporting Program.**

Table 1-1
Mitigation Monitoring and Reporting Program

CULTURAL RESOURCES			
CUL-1 Archaeological Monitoring To reduce the impact of grading and earth moving on any potentially present archaeological resources beneath the subject property, a Lead Agency-approved archaeologist that meets the Secretary of Interior qualifications shall be on the project site on a spot-check basis during project grading and earth moving within native soils until bedrock is encountered. Spot-check monitoring shall include a kick-off meeting to introduce the archaeologist to the construction leadership team, and three weekly on-site inspections of no greater than 4-hours in duration to assess the subsurface materials being encountered project site during grading and excavating tasks. The archaeological monitor shall collect any prehistoric or older (pre-1940s) cultural material uncovered through excavation and can halt construction within 50-feet of a potentially significant cultural resource if necessary. If potentially significant cultural resources are encountered, the project shall follow the resource "discovery" protocol provided in mitigation measure CUL-3. Native American monitoring is not recommended due to the lack of prehistoric cultural resources being identified by the SCCIC record search within the project properties and the surrounding region. If, however, archaeological monitoring identifies prehistoric cultural resources in the Project properties to the level that "discovery" protocols are triggered, then a Native American monitor may be required to protect Native American cultural interests. Adding a Native American monitor shall only take place after consultation and approval by the Project proponent and the Lead Agency.	Kick-off Meeting at the Start, and Three Weekly On-site Inspections During the Earth-moving Operations of the Construction Phase until bedrock is encountered	City-Approved Archaeologist	Building Safety Division

CUL-2 Paleontological Monitoring To reduce the impact of grading on any potentially present paleontological resources beneath the subject property, a Lead Agency-approved qualified paleontologist shall be on the project site on a spot-check basis during construction grading and earth moving within native soils. Spot-check monitoring will include a kick-off meeting to introduce the paleontologist to the construction leadership team, and three weekly on-site inspections of no greater than 4-hours in duration to assess the subsurface materials encountered during project site excavation grading tasks. The paleontological monitor shall collect any fossil material uncovered through excavation, and can halt construction within 50-feet of a potentially significant fossil resource if necessary. If potentially significant intact paleontological resources are encountered, the project shall follow the resource "discovery" protocol provided in mitigation measure CUL-3.	Kick-off Meeting at the Start, and Three Weekly On-site Inspections During Earth-moving Operations Affecting Native Soils in the Construction Phase	City-Approved Paleontologist	Building Safety Division
CUL-3 Inadvertent Discovery Protocol for Archaeological or Paleontological Resources The inadvertent discovery of archaeological resources is always a possibility during ground disturbances; California Penal Code Section 622.5 addresses these findings. Older alluvial material can also lead to the discovery of paleontological resources during ground disturbance. If buried materials of potential significance are inadvertently discovered within an undisturbed context during any earth-moving operation associated with the proposed project, then all work in that area shall be halted or diverted away from the discovery to a distance of 50-feet until a qualified senior archaeologist/paleontologist can evaluate the nature and/or significance of the find(s). If, upon assessment by a qualified senior archaeologist/paleontologist, the find is not determined to be significant, then construction may resume.	During Earth-moving Operations in the Construction Phase	City-Approved Archaeologist and Paleontologist	Building Safety Division

If the find is determined to be potentially significant, then the Lead Agency shall be immediately notified of the discovery. Construction shall not resume in the locality of the discovery until consultation between the senior archaeologist/paleontologist, the project manager, the Lead Agency, the Applicant's representative, and all other concerned parties, takes place and a reaches a conclusion approved by the Lead Agency. If a significant cultural or paleontological resource is discovered during earth-moving, complete avoidance of the find is preferred. However, further survey work, evaluation tasks, or data recovery of the significant resource may be required by the Lead Agency if the resource cannot be avoided. In response to the discovery of significant cultural or paleontological resources, the Lead Agency may also add additional regulatory compliance for use during further project site development, which may include Native American monitoring (if appropriate). Any additional monitoring required shall be outlined in a Construction Phase Monitoring Plan, which shall also be submitted to the Lead Agency for review prior to the recommencement of ground-disturbance activities. Any Evaluation, Data Recovery, Site Management, or Monitoring Plans or Reports generated in response to the discovery of a significant cultural resource shall be submitted to the Lead Agency for review and final curation as part of the project record. All such documents associated with the discovery of cultural resources shall be transmitted to the appropriate State of California information centers at the end of the Project.			

CUL-4 Human Remains The inadvertent discovery of human remains is always a possibility during ground disturbances; State of California Health and Safety Code Section 7050.5 addresses these findings. This code section states that in the event human remains are uncovered, no further disturbance shall occur until the County Coroner has made a determination as to the origin and disposition of the remains pursuant to California Public Resources Code Section 5097.98. The Coroner must be notified of the find immediately, together with the Lead Agency and the property owner. If the human remains are determined to be prehistoric, the Coroner must notify the NAHC within 24 hours, which shall determine and notify a Most Likely Descendant (MLD). The MLD shall complete the inspection of the project site within 48 hours of being granted access to the project site and may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials and an appropriate re-internment site. The Lead Agency and a qualified archaeologist shall also establish additional appropriate measures for further project site development, which may include archaeological and Native American monitoring or subsurface testing, conducted and paid for by the applicant. All responses to the discovery of human remains shall be outlined in a Recovery and/or Management Plan submitted to the Lead Agency for review. Any required monitoring shall be outlined in a Construction Phase Monitoring Plan, which shall also be submitted to the Lead Agency for review prior to the recommencement of ground-disturbance activities.	During Earth-moving Operations in the Construction Phase	City-Approved Archaeologist	Building Safety Division
GEOLOGY AND SOILS			
GEO-1 Prior to the issuance of grading or building permits, the City Economic and Community Development Department, Building Safety Division, shall review and approve the	Prior to Issuance of Grading/Building Permits	Applicant's Geologist and Building and Safety Division	Building Safety Division

	Preliminary Soils Engineering report (GS18-0203) written by Geosystems, Inc. dated April 4, 2018, for the proposed 20 residential unit project. The City shall incorporate the recommendations provided within the Soils Report as conditions of approval for the proposed 20-unit residential project. If a more recent, soils engineering investigation or geotechnical report is prepared, the recommendations of the most recent soils or geotechnical report shall supersede those of the earlier report to the satisfaction of the City's Building Safety Division.			
GEO-2	To support the proposed building structures, a mat foundation system described within the approved soils or geotechnical report shall be used. The design and foundation shall be approved by a structural engineer. If an updated soils or geotechnical report is approved by the City's Building Safety Division and provides more updated recommendations, those recommendations shall take precedent.	During Construction	Applicant's Structural Engineer	Building Safety Division
NOISE				
NOI-1	On-site noise generating construction and demolition activities shall be restricted to the hours of 7:00 a.m. to 8:00 p.m. Exceptions require that a permit be obtained beforehand from the Permits and Licenses Committee of the City.	During Demolition and Construction	Applicant/Applicant's Construction Contractor	Building Safety Division
NOI-2	The construction contractor shall ensure that all powered construction equipment shall be equipped with appropriate mufflers. The construction contractor shall ensure that all equipment is properly maintained to prevent additional noise due to worn or improperly maintained parts. The construction contractor shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than metal-tracked equipment), wherever possible.	During Construction	Applicant/ Applicant's Construction Contractor	Building Safety Division
NOI-3	The construction contractor shall locate construction staging areas as far as possible from sensitive uses near the project's northern and western boundary.	During Construction	Applicant/ Applicant's Construction Contractor	Building Safety Division

NOI-4	The applicant shall install a temporary noise control barrier, sound curtain, or other noise control method acceptable to the Planning Manager along the northern and western property line. If a barrier is selected, the barrier shall be at least 16 feet high to block the line-of-sight to adjacent noise-sensitive land uses from equipment operating near the property line. The noise control barrier or sound curtain shall be engineered to reduce construction-related noise by at least 10 decibels for ground-level receptors adjacent to construction activity. The noise control barrier or sound curtain shall be engineered according applicable codes and shall remain in place until windows are installed on the proposed building.	Prior to Construction	Applicant/ Applicant's Construction Contractor	Building Safety Division
NOI-5	The construction contractor shall establish a noise disturbance coordinator. The noise disturbance coordinator shall be responsible for responding to any local complaints about construction noise. The noise disturbance coordinator shall determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and shall be required to implement reasonable corrective measures such that the complaint is resolved. Notices sent to residential units within 500 feet of the construction site and all signs posted at the construction site shall list the telephone number for the noise disturbance coordinator.	Prior to Construction	Applicant/ Applicant's Construction Contractor	Building Safety Division
NOI-6	**Groundborne Vibration (Construction)** Prior to issuance of a grading or shoring permit, a qualified structural engineer shall survey the existing foundation and structural integrity of adjacent structures including the adjacent multi-family residences to the north and west, subject to property owner granting access to conduct the survey, and shall submit a pre-construction survey letter establishing baseline conditions at these buildings to the lead agency and to the mitigation monitor. At the conclusion of vibration causing activities, and prior to the issuance of any temporary or permanent certificate of occupancy for the project building, the qualified structural engineer shall issue	Prior to Construction	Applicant/ Applicant's Construction Contractor	Building Safety Division

a subsequent letter describing damage, if any, to the adjacent structures. The letter shall identify recommendations for any repairs and certify the completion of any repairs as necessary to confirm the integrity of the foundation and structure of the adjacent structures.			

2.0 FINDINGS OF THIS INITIAL STUDY

As shown in the following analysis in this Initial Study, with the incorporation of mitigation measures, the proposed project would have a less than significant impact on the environment with regard to all of the eighteen CEQA Checklist topics. For each topic addressed in Section 4.0, the impacts associated with development have been determined to be "Significant Unless Mitigation Incorporated," "Less than Significant," or "No Impact." For issues that were determined to be "Significant Unless Mitigation Incorporated," mitigation measures have been identified that would reduce impacts to below a level of significance.

3.0 PROJECT DESCRIPTION

This section describes the project site, surrounding land uses, and characteristics of the project according to the Architectural Plans prepared by Nassef A. Eskander & Associates dated March 2018 provided in **Appendix A**.

3.1 PROJECT LOCATION AND EXISTING USES

Regionally, the proposed project site (project site) is located east of the Interstate 405 (I-405) freeway within the City of Inglewood (City) as shown on the inset map in **Figure 3-1, Location Map**. Locally, the project site is on the north side of W. Plymouth Ave between N. La Brea Ave and N. Eucalyptus Ave. With approval of Vesting Tentative Tract Map No. 82105 for a Small Lot Single Family Subdivision, provided in **Appendix B**, the project site would encompass 20 lots associated with seven Assessor Parcel Numbers (APNs)[2] located at 113-133 W. Plymouth Street.[3] The proposed lot areas are provided in **Table 3-1, Proposed Lot Area**.

Table 3-1
Proposed Lot Areas

1	1,767	11	1,185
2	1,522	12	1,048
3	1,784	13	1,409
4	1,801	14	1,520
5	1,533	15	1,130
6	3,765	16	1,278
7	1,781	17	1,278
8	1,048	18	1,130
9	1,048	19	1,130
10	1,185	20	1,252
		Total	**29,593**
Source: N.C. Hansen Inc., Vesting Tentative Tract Map No. 82105, 2/19/2018, Appendix B.			

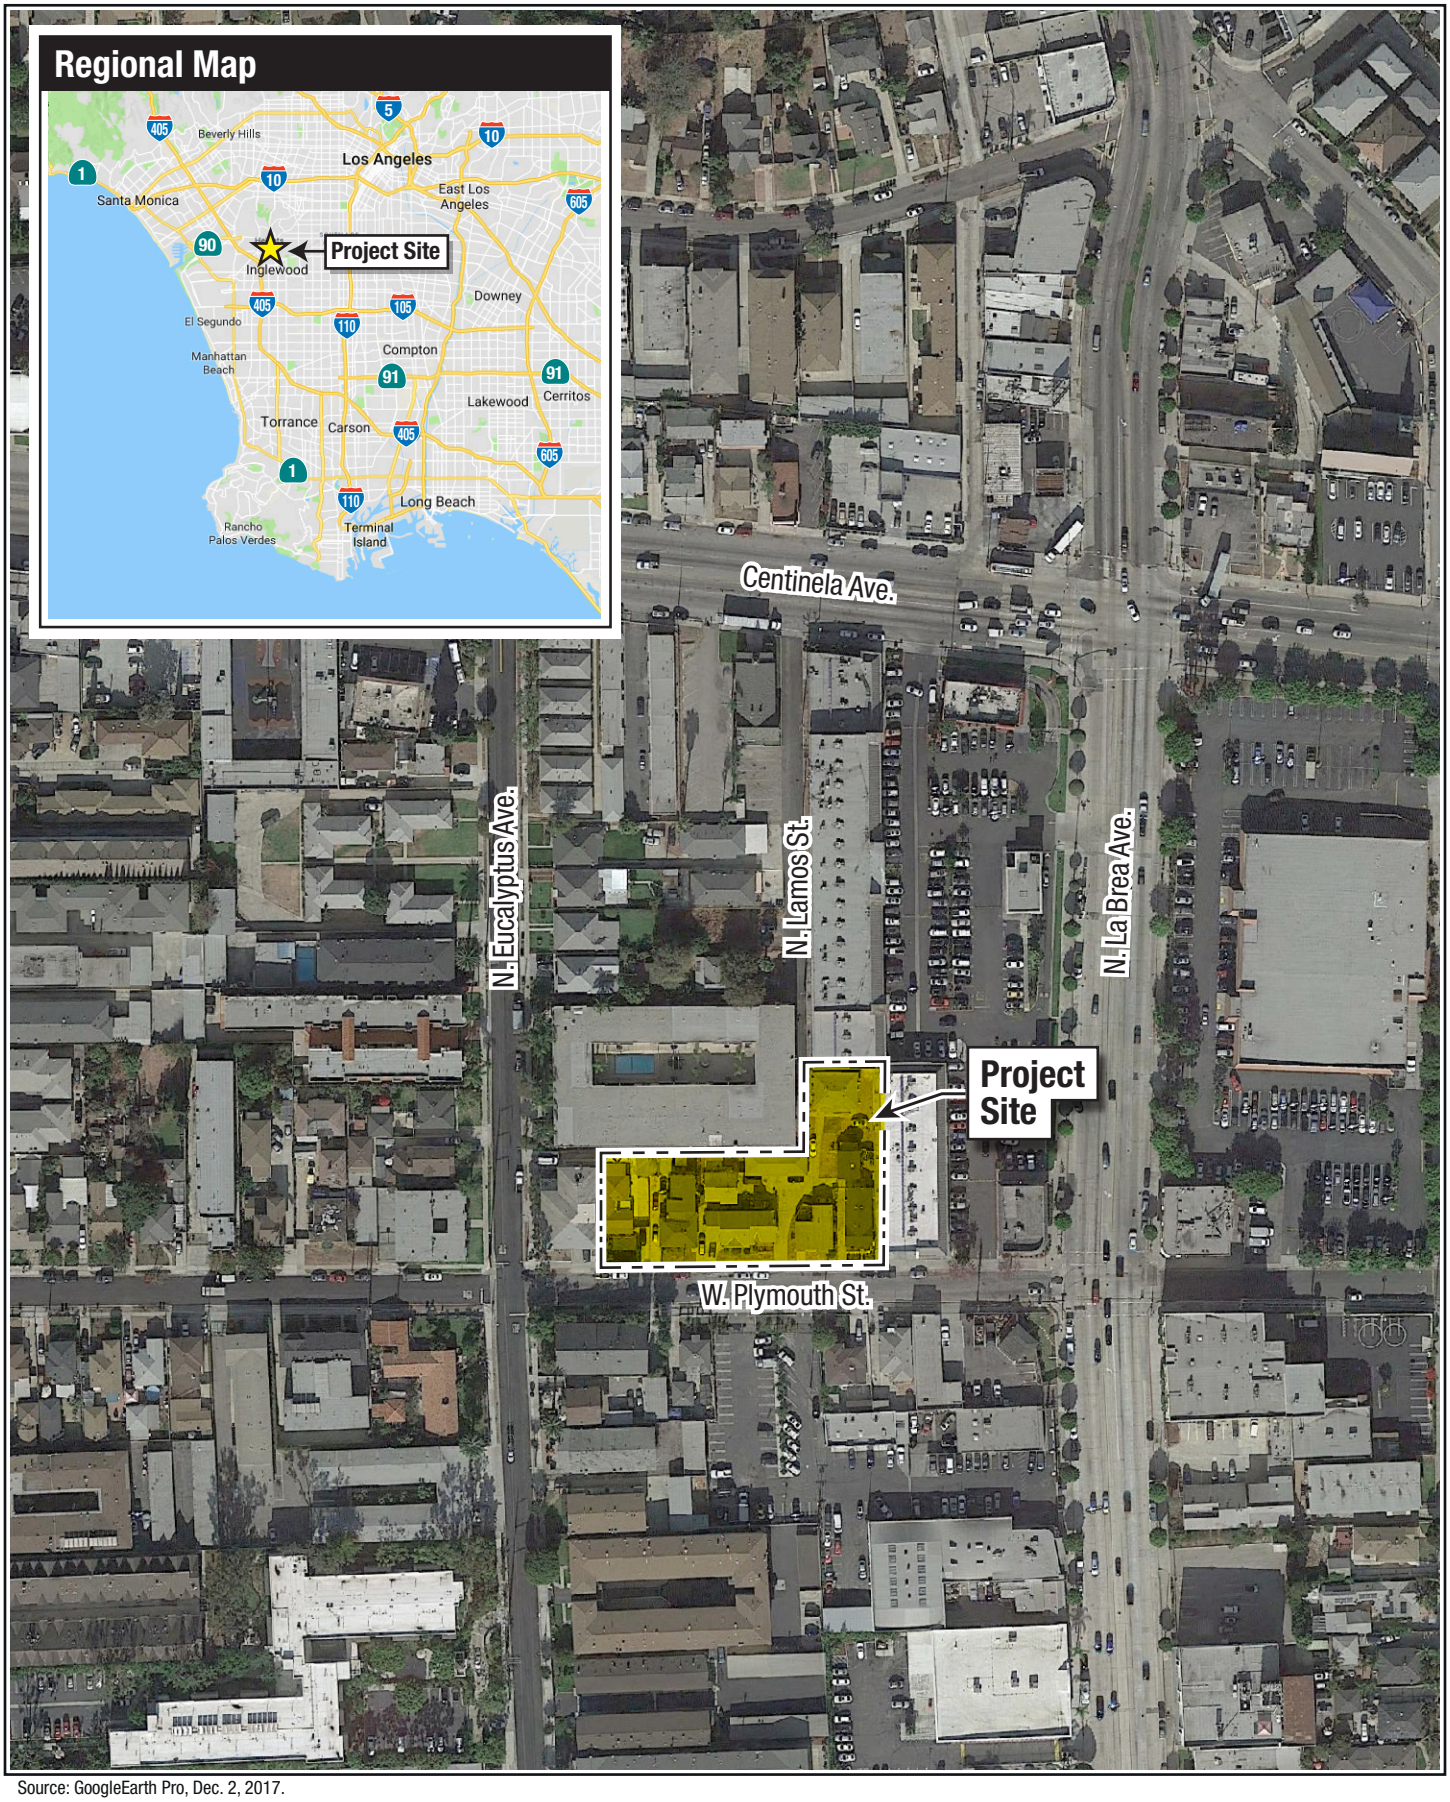

As shown in Table 3-1, the proposed project site totals 29,593 square feet (0.68-acre) of land area (subject property). Given the proposed project would develop the entire subject property, the terms 'project site' and 'subject property' may be used interchangeably throughout this document and impact analysis.

3.2 SURROUNDING AREA

The subject property is adjacent to an existing shopping plaza to the east (901 N. La Brea Ave.), an existing commercial building (919 N. La Brea Ave.) and multi-family residential building to the north (914 N. Eucalyptus Ave.), an existing multi-family residential building to the west (137 W. Plymouth Street), and W. Plymouth Street to the south.

[2] The existing site consists of the following APNs: 4016-004-002, 4016-004-003, 4016-004-020, 4016-004-021, 4016-005-019, 4016-005-020, and 4016-005-021.

[3] The street addresses associated with the existing lots are 113, 115, 123, 125, 129, and 133, W. Plymouth Street, collectively referred to as 113-133 W. Plymouth Street throughout this document.

Location Map

FEET 0 87.5 175

FIGURE 3-1

3.3 LAND USE DESIGNATION AND ZONING

The General Plan Land Use designation for the project site is Commercial/Residential. The project site is zoned Residential Multiple Family (R-3) and Parking (P-1). The Parking (P-1) zone at the eastern portion of the site allows the same R-3 density as the remainder of the site, and thus the project would not require a change of zone. North La Brea Ave. and North Eucalyptus Ave. are north-south streets that run parallel to the east and west of the project site as shown in Figure 3-1, Location Map. The properties along N. La Brea Ave., east of the project site contain existing commercial uses.

The properties to the west of the project site, along N. Eucalyptus Ave, contain existing multi-family and single-family residential uses. The uses across the street from the project site to the south contain a multi-family residence, single-family residences, and a surface parking lot associated with a church. The uses to the north contain multi-family residential buildings, single-family residences, and commercial uses.

The project site is located within walking distance (less than 0.1 mile) of the Los Angeles County Metropolitan Transportation Authority (Metro) La Brea/Plymouth Bus Station (Stop ID: 12143) east of the project site. This bus station serves the Metro Local 212/312 lines. Nearby avenues provide regional access to the project site, including Centinela Ave and N. La Brea Ave, which provide access to the I-405 freeway.

3.4 PROJECT CHARACTERISTICS

The proposed project (project) consists of the demolition of 11 existing residences and the construction and operation of twenty new residences. The 11 existing residences to be demolished total 11,287 sq. ft. with an additional 1,745 sq. ft. of existing garages and a 171 sq.-ft. laundry room. The existing residences to be demolished consist of 3 single-family residences (3), two duplexes (4), and a one quadruplex with 4 units (4) for a total of 11 residences as shown on **Figure 3-2, Existing Residences**. The project proposes twenty new residences of varying size totaling 52,616.2 sq. ft., each with three stories above a basement with semi-subterranean garages and additional features as shown in **Figure 3-3, Proposed Site Plan**. Each residence would contain three bedrooms and 3.5 bathrooms. Detailed floor plan layouts, cross-section elevations, and additional features may be found in the complete architectural plan set in Appendix A. The twenty units would be a combination of Type A, B, C, and D, layouts of varying sizes as provided in **Table 3-2, Gross Building Floor Area**.

Site Plan

FEET 0 30 60

FIGURE 3-3

The proposed residences would share a vertical wall in a townhome fashion with a driveway to the garages in the basement connecting to a corridor to provide vehicular access to a driveway leading to W. Plymouth Street and pedestrian access to the alley connecting to N. Lamos Street across from a pool area, as shown in Figure 3-3, Site Plan. Fourteen of the proposed 20 residences would be arranged in two rows from east to west, seven residences each, with the entrances oriented toward W. Plymouth Street, and six of the twenty residences would be arranged in one row from north to south with the entrances oriented to the eastern edge of the subject property. Additional project features include a pool area in the center of the project site and a play area north of the row of six residences with playground equipment. The basement floor would provide laundry rooms and a two-car garage for each residence, five covered stalls for visitor parking, a trash enclosure, and an on-site security office. The third floor of each residence features an outdoor rooftop garden area with a barbeque. The project would provide landscaped area around the building perimeter with additional landscape areas in the roof garden areas which would be visible from W. Plymouth Street.

Based on the most recently available census data for the City, the citywide average household size for owner-occupied units is 3.22 persons per household.[4] Based on this household size, the project would result in a gross increase of 64 people. Given the project would result in the removal of 11 existing residences with an estimated population of 32 people, the project would reasonably be expected to result in a net increase of 32 people for the purpose of analyzing impacts on the environment.

3.5 CONSTRUCTION ACTIVITES AND SCHEDULE

The project site contains eleven existing residential units, so demolition activities would be required. Construction would proceed in separate phases of varying duration consisting of: demolition, site preparation, grading, building construction, paving, and architectural coating. Excavation during the grading phase of construction would require 7,500 cubic yards (CY) of cut, 6,500 CY of soil export, and 1,000 CY of fill. In accordance with Municipal Code Section 5-41, construction crews would restrict their activities to between 7:00 a.m. and 8:00 p.m. on weekdays.

3.6 SITE ACCESS AND PARKING

Vehicular access to the project site would be provided by an internal driveway leading from basement level garages and visitor parking to a driveway apron connecting to W. Plymouth Street as shown in Figure 3-2, Site Plan. Walkways leading from the front entrances of the residences to W. Plymouth Street would provide pedestrian access to and from each of the residences.

[4] United States Census Bureau, 2012-2016 American Community Survey 5-Year Estimates, Selected Housing Characteristics for Inglewood, CA. https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?src=CF (accessed April 10, 2018).

4.0 INITIAL STUDY / MITIGATED NEGATIVE DECLARATION

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture and Forestry Resources	☐ Air Quality
☐ Biological Resources	☒ Cultural Resources	☒ Geology / Soils
☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials	☐ Hydrology / Water Quality
☐ Land Use / Planning	☐ Mineral Resources	☒ Noise
☐ Population / Housing	☐ Public Services	☐ Recreation
☐ Transportation/Traffic	☒ Tribal Cultural Resources	☐ Utilities / Service Systems
☐ Mandatory Findings of Significance		

DETERMINATION: (To be completed by the Lead Agency)
On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project. Therefore, an EIR Addendum will be prepared.

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
I.	**AESTHETICS.** Would the project:				
a.	Would the project have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b.	Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings, or other locally recognized desirable aesthetic natural feature within a city-designated scenic highway?	☐	☐	☒	☐
c.	Would the project substantially degrade the existing visual character or quality of the site and its surroundings?	☐	☐	☒	☐
d.	Would the project create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

a. Less Than Significant Impact. A significant impact may occur if the proposed project introduces incompatible visual elements within a field of view containing a scenic vista or substantially blocks views of a scenic vista. Scenic vistas can be panoramic views (visual access to a large geographic area, for which the field of view can be wide and extend into the distance) and focal views (visual access to a particular object, scene, or feature of interest). The project site and surrounding vicinity is currently developed and the City General Plan does not designate scenic vistas in the project vicinity. The project site is located in an urbanized area of the City consisting of existing, multi-story residential and commercial land uses. Residential uses adjacent to the project site consist of multi-story, multi-family structures to the north, southwest, and west. Commercial uses adjacent to the project site include a commercial strip mall to the east and associated surface parking lots. Uses across W. Plymouth Street consist of multi-family residential, surface parking, and commercial. Therefore, the project would not have a substantially adverse effect on a scenic vista and impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

b. Less Than Significant Impact. A significant impact would occur only if scenic resources would be damaged or removed by development of the proposed project. There are no features within the project site that are listed, designated or otherwise recognized by the City (e.g., a scenic corridor, historic district, heritage oak trees) as scenic resources. The project site is not adjacent to, or in a designated viewshed of, a scenic highway. Therefore, the project would not result in a significant impact with regard to scenic highways and impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

c. Less Than Significant Impact. A significant impact would occur if the proposed project were to introduce incompatible visual elements that would be incompatible with the character of the area surrounding the project site. The project proposes an in-fill development that would replace existing residential buildings with new residential buildings similar to, and visually compatible with, existing residential uses to the north, west, and southwest of the project site. The existing multi-family residential buildings to the west, north, and southwest of the project site are two-stories above a floor for semi-

subterranean parking. The project site is visible from public roadways in the vicinity, including W. Plymouth Street, Eucalyptus Street, and La Brea Ave. The existing visual character of the vicinity consists of adjacent multi-story residential structures and relatively level topography that gently slopes upward west of the project site at the intersection of Eucalyptus Avenue and Plymouth Street. Although the proposed three-story residences would be one story taller than the existing two-story residences to the north, west, and southwest, these existing residences sit at the top of a gently rising slope to west of the project site with a natural grade (135 feet above sea level) approximately eight feet higher than the proposed project site (127 feet above sea level). Given this difference in elevation, the proposed three-story residences would appear compatible with the existing visual character of the two story-residential buildings to the southwest, west, and north. Therefore, the proposed project would not substantially degrade the existing visual character of the site and surroundings and would have a less than significant impact.

Mitigation Measures: No mitigation measures are required.

d. Less Than Significant Impact. A significant impact may occur if the project introduces new sources of light on, or glare from, the project site that would be incompatible with the surrounding areas, or adversely affect day or nighttime views in the area.

Light

The proposed project is located in an urbanized area with existing nighttime lighting for safety and security emanating from street lights, commercial uses and associated surface parking lots, residential buildings, and street traffic. The proposed project would limit nighttime lighting to the amount necessary to illuminate building entrances, stairs, walkways and landscape areas to provide adequate night visibility and security. The parking areas and associated lighting would be contained within a semi-subterranean basement level and would not be visually prominent from adjacent properties. Outdoor nighttime lighting provided for the project would be directed downward to minimize light spillover pursuant to Municipal Code standards, including the light pollution reduction standards. Compliance with regulatory requirements would reduce light impacts to a less than significant level.

Glare

Nighttime glare can come from various lighting sources such as car lights, street lights and other lights on buildings, walkways and parking garages for visibility and security. Daytime glare can be the result of buildings with glass exteriors or other reflective surfaces. The project would install windows consistent with City Building Code standards and conventional residential construction and would not generate a substantial amount of glare that would affect daytime views in the area. As the proposed building exterior would not produce a new source of substantial glare and the project parking area would conceal vehicle lights, glare impacts would be less than significant.

Shade and Shadow

The proposed structures and structural elements would not exceed 60 feet in height relative to nearby existing residential and commercial uses, a standard conventionally used for the assessment of shade and shadow impacts in an urban setting (e.g., by the neighboring City of Los Angeles). Furthermore, the adjacent existing multi-family and commercial uses adjacent to the project site are not identified as substantially shadow-sensitive uses where sunlight is important to function, physical comfort, or commerce. Therefore, shade and shadow impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
II.	**AGRICULTURE AND FORESTRY RESOURCES**.				
a.	Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b.	Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c.	Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d.	Would the project result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e.	Would the project involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?	☐	☐	☐	☒

Impact Analysis

a-e. No Impact. No farmland, agricultural uses, or forest land are present within the project site or surrounding area. The project site is located within a urbanized area of the City of Inglewood and the project site and surroundings are not included in the Farmland Mapping and Monitoring Program (FMMP) of the California Department of Conservation.[5] The project site is zoned for residential use and is not under a Williamson Act contract or designated as forest land. Therefore, the project would have no impact on agricultural or forestry resources.

Mitigation Measures: No mitigation measures are required.

[5] California Department of Conservation, Division of Land Resource Protection, Los Angeles County Important Farmland 2012, Accessed on April 16, 2018 at ftp://ftp.consrv.ca.gov/pub/dlrp/FMMP/pdf/2012/los12.pdf.

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
III.	**AIR QUALITY.** Would the project result in:				
a.	Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b.	Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	☐	☐	☒	☐
c.	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	☐	☐	☒	☐
d.	Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
e.	Create objectionable odors affecting a substantial number of people?	☐	☐	☒	☐

The proposed project lies within the South Coast Air Basin (Air Basin), a 6,600 square mile coastal plain that is bounded by the Pacific Ocean to the west, and the San Gabriel, San Bernardino, and San Jacinto mountains to the north and east. There are a number of regional factors that collectively hinder the dispersion of air pollutants and contribute towards poor air quality, especially in the Air Basin's inland valleys: low temperature inversion heights, meteorological conditions (e.g. light winds, extensive sunlight, limited turbulent mixing), adjacent mountain ranges and other topographical features.

Project-related air quality emissions analysis was performed using California Emissions Estimator Model (CalEEMod.2016.3.2), a model developed by the California Air Pollution Officers Association (CAPCOA) in collaboration with the California Air Districts, by which to calculate construction and operational emissions. The model calculates both the daily maximum and annual average emissions for criteria pollutants. Project CalEEMod output data is provided in **Appendix C**.

a. Less Than Significant Impact. A significant air quality impact could occur if the proposed project is not consistent with the applicable Air Quality Management Plan (AQMP), or if it would in some way represent a substantial hindrance to implementing the policies or obtaining the goals of that plan.

The most recent SCAQMD AQMP is the 2016 Air Quality Management Plan, adopted on March 3, 2017. The 2016 AQMP is a plan to implement strategies to achieve national ambient air quality standards and California ambient air quality standards. Planning strategies for reducing emissions and achieving ambient air quality standards are developed using demographic growth projections (regional population, housing, and employment) generated by the Southern California Association of Governments (SCAG).

The proposed project would be consistent with currently allowable land uses for the project site, and no General Plan amendment is required. As discussed in Section XIII, Population and Housing, the population that would be housed by the proposed project's net increase of 10 residential units would represent a fraction of one percent (approximately 0.2 and 0.5 percent, respectively) of the projected

citywide population and housing increases for the period from 2012 to 2040. As such, the project would not cause substantial population growth that exceeds projected or planned population levels. As there are no unexpected uses and minimal expected growth, the project is accounted for within the future SCAG growth projections and therefore incorporated within the AQMP.

Primary pollutants are those that are emitted in their already unhealthful form and can generally be evaluated directly in comparison to appropriate clean air standards. Violations of these standards where they are currently met, or a measurable worsening of an existing or future violation, would be considered a significant impact. Secondary pollutants require time to transform from a more benign form to a more unhealthful contaminant, and their impact may occur regionally far from the source. Their incremental regional impact is minute on an individual basis and cannot be quantified except through complex photochemical computer models. Because of the chemical complexity of primary versus secondary pollutants, the SCAQMD has designated significant emissions levels as surrogates for evaluating regional air quality impact significance independent of chemical transformation processes. Projects with daily emissions that exceed significance thresholds shown in **Table III-1** are recommended by the SCAQMD to be considered significant under CEQA guidelines.

Table III-1
Thresholds of Significance for Daily Emissions

ROG	75	55
NO_X	100	55
CO	550	550
PM_{10}	150	150
$PM_{2.5}$	55	55
SO_X	150	150
Source: SCAQMD Air Quality Significance Thresholds, Revised March 2015.		

Because of the non-attainment status of the South Coast Air Basin (SCAB) for PM_{10}, an aggressive dust control program is required by SCAQMD Rule 403 to control fugitive dust during project construction. Compliance with Rule 403 would include spraying water on exposed soils during grading (typically 2-3 times daily). As evaluated below the project emissions would be far below the applicable significance thresholds provided by SCAQMD during construction and operations. Therefore, the project would not substantially affect or obstruct implementation of the AQMP. Impacts to implementation of applicable air quality plans would be less than significant.

Mitigation Measures: No mitigation measures are required.

b. Less Than Significant Impact. A project may have a significant impact if project-related emissions exceed any federal, state, or regional standards or thresholds of significance, or if project-related emissions substantially contribute to an existing or projected air quality violation. Significance thresholds are provided by SCAQMD for daily air quality emissions. Construction phase and operational emissions for criteria pollutants were calculated using CalEEMod.2016.3.2.

Construction Emissions
The project is proposing to demolish ten existing residences and garages and construct 20 3-story residential units over semi-subterranean garages. The project would also construct ancillary features including a pool area and playground area, and five covered guest parking spaces. Based on the

construction assumptions provided in the Project Description, the projected construction activities were modeled, including export from construction grading in the amount of 6,500 cubic yards.

Table III-2, **Construction Activity Maximum Daily Emissions**, provides the calculated peak construction day emissions for the project. As shown, project emissions would be below SCAQMD thresholds and therefore project construction impacts would be less than significant.

Table III-2
Construction Activity Maximum Daily Emissions

Unmitigated	66.2	45.4	16.2	0.1	3.9	1.8
Mitigated[(a)]	47.1	36.1	16.5	0.1	3.4	1.5

During construction, all projects are required to comply with SCAQMD Rule 403 to reduce Fugitive Dust, regardless of whether the project is below the SCAQMD threshold. Requirements under this rule include actions such as wetting the project site to prevent dust plumes, limiting the size of staging areas, and installing fencing or wind barriers. Emissions reductions that would result from the required compliance with SCAQMD Rule 403 to reduce fugitive dust emissions are shown in Table III-2 in the mitigated scenario, although emissions would not exceed significance thresholds without such measures.

Operational Emissions

The project's 20 residential units would generate pollutant emissions during the operations, which as shown in **Table III-3, Daily Operational Emissions**, would not exceed SCAQMD thresholds. Therefore, the project's operational impacts would be less than significant. The emissions shown in Table III-3 are conservative as they do not consider emissions reductions that would occur with removal of 11 existing residential units from the site, which would result in net increases of emissions that would be even lower than shown in the table.

Table III-3
Daily Operational Emissions

Area	1.2	0.3	1.8	< 0.1	< 0.1	< 0.1
Energy	< 0.1	0.1	< 0.1	< 0.1	< 0.1	< 0.1
Mobile	0.3	1.3	3.5	< 0.1	< 0.9	0.2
Total	**1.5**	**1.7**	**5.3**	< 0.1	**0.9**	**0.3**
Exceeds Threshold?	No	No	No	No	No	No

Source: CalEEMod.2016.3.2 Output in Appendix C.
[1] Totals may have minor discrepancies due to rounding.

Mitigation Measures: No mitigation measures would be required.

c. Less Than Significant Impact. A significant impact may occur if a project adds a considerable cumulative contribution to federal or state nonattainment pollutants. According to the 2016 AQMP, the Air Basin is designated non-attainment for ozone and $PM_{2.5}$. To determine the significance of the proposed project's incremental contribution to cumulative air quality emissions, the SCAQMD recommends assessment of a project's potential contribution to cumulative impacts using the same significance criteria used for project-specific impacts. As such, if an individual project's construction or operational emissions would be less than significant, then the project would not generate a cumulatively considerable increase in emissions for those pollutants for which Air Basin is in nonattainment. Based on the project emissions reported in Tables III-1 and III-2, the project's construction and operational emissions would be below SCAQMD thresholds. Therefore, the proposed project's incremental contribution to cumulative air quality emissions would be less than significant.

Mitigation Measures: No mitigation measures are required.

d. Less Than Significant Impact. A significant impact may occur if a project were to generate pollutant concentrations to a degree that would significantly affect sensitive receptors. Sensitive receptors are populations that are generally more susceptible to the effects of air pollution than the population at large. Land uses considered to be sensitive receptors include residences, long-term care facilities, schools, playgrounds, parks, hospitals, and outdoor athletic facilities. The closest sensitive receptors that could potentially be subject to localized air quality impacts associated with construction of the proposed project would be existing residences adjacent to the project site.

Local Significance Thresholds Impacts

Localized Significance Threshold (LST) analysis using SCAQMD methodology was conducted for the proposed project. LSTs are only applicable for certain criteria pollutants: oxides of nitrogen (NO_x), carbon monoxide (CO), and particulate matter (PM_{10} and $PM_{2.5}$). For the proposed project, the most stringent 25-meter source-receptor distance was used to evaluate LST impacts due to the adjacent residences. The maximum on-site emissions generated during any construction phase for LST-related criteria pollutants are listed in **Table III-4, LST – Maximum On-site Construction Emissions**. Onsite emissions from other construction phases would be less than those shown in Table III-4. As shown, the maximum daily on-site emissions generated by any construction phase would not exceed LST thresholds, and impacts would be less than significant.

Table III-4
LST - Maximum On site Construction Emissions

Max. On-Site Emissions[b]	9.7	11.0	1.9	1.0
Exceeds Threshold?	No	No	No	No

Source: CalEEMod.2016.3.2 Output in Appendix C.
[a] Emissions shown are the highest daily estimates for any construction phase. Emissions during any other phase would be less.
[b] Emissions shown do not consider implementation of required fugitive dust suppression measures, which would result in even lower emissions.

As shown in Table III-4, the above LST emissions would not exceed thresholds during construction. Given that daily operational emissions shown in Table III-3, which includes on- and off-site emissions, are lower than daily construction emissions, and are also lower than the LST significance thresholds shown in Table III-4, project operations LST impacts would also be less than significant.

Mitigation Measures: No mitigation measures are required.

e. Less Than Significant Impact. A significant impact may occur if objectionable odors would be emitted from the project site, which could impact sensitive receptors. During construction, objectionable odors may come from construction equipment exhaust, architectural coatings, or other interior and exterior finishes. Odors from these activities would be localized and temporary. During operation, odors are typically associated with industrial projects involving the use of chemicals, solvents, petroleum products, and other strong-smelling materials used in manufacturing processes, as well as some sewage treatment facilities and landfills. As the proposed project involves no components related to these types of activities, no odors from these types of uses are anticipated. Therefore, the project would have less than significant impacts regarding objectionable odors.

Mitigation Measures: No mitigation measures are required.

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
IV.	**BIOLOGICAL RESOURCES.** Would the project:				
a.	Have a substantial adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
b.	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in the City or regional plans, policies, regulations by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c.	Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh vernal pool, coastal, etc.) Through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d.	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐
e.	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☒	☐
f.	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional or state habitat conservation plan?	☐	☐	☐	☒

a. Less Than Significant Impact. A project would normally have a significant impact on biological resources if it could result in (1) the loss of individuals, or the reduction of existing habitat of a State- or federal-listed endangered, threatened, rare, protected, candidate, or sensitive species or a Species of Special Concern; (2) the loss of individuals or the reduction of existing habitat of a locally designated species or a reduction in a locally designated natural habitat or plant community; or (3) interference with habitat such that normal species behaviors are disturbed (e.g., from the introduction of noise or light) to a degree that may diminish the chances for long-term survival of a sensitive species.

The project site is developed and disturbed. The project site is surrounded by development on all sides, including roads, buildings, and landscaping within an urbanized area. Landscaped areas are dominated by non-native ornamental plant species. Although landscaped areas within and surrounding the project site provide habitat for wildlife habituated an urban setting, paved roads and parking areas within the urban setting provide little cover and extremely limited foraging for the few wildlife species present in the

surrounding urban environment. Additionally, traffic and human disturbance adjacent to the project study area generally precludes occupation by wildlife. There are ornamental trees and landscaping on the property, but a majority of the project site is paved and developed. Analysis for potential occurrence of species identified as candidate, sensitive, or special status was conducted through research of the California Natural Diversity Database (CNDDB).[6] A total of 20 species were identified through the CNDDB search. Seven species recorded in the Inglewood quadrangle were identified as either endangered or threatened in the CNDDB search, as shown in **Table IV-1, Sensitive Species Previously Recorded in the Project Vicinity**.

Table IV-1
Sensitive Species Previously Recorded in the Project Vicinity

coastal dunes milk-vetch	Astragalus tener var. titi	Endangered	Endangered
southwestern willow flycatcher	Empidonax traillii extimus	Endangered	Endangered
San Diego button-celery	Eryngium aristulatum var. parishii	Endangered	Endangered
spreading navarretia	Navarretia fossalis	Threatened	None
California Orcutt grass	Orcuttia californica	Endangered	Endangered
coastal California gnatcatcher	Polioptila californica californica	Threatened	None
least Bell's vireo	Vireo bellii pusillus	Endangered	Endangered
Source: California Department of Fish and Wildlife, California Natural Diversity Database, Rarefind 5 Sensitive Element Occurrence Report for Inglewood quadrangle, Accessed April 18, 2018.			

A search of California Native Plant Society's (CNPS) Inventory of Rare and Endangered Plants of California was also conducted for the Inglewood Quadrangle. As the CNPS search was more comprehensive than the CNDDB search, it also included California Rare Plant Ranks (CRPR) 3 and 4, two additional plant species were also listed.[7]

None of these species are currently on the project site and due to the nature of the project site being highly developed residential homes, the chances for these species to occur on the project site is unlikely. Therefore, the impact to these species is less significant.

Mitigation Measures: No mitigation measures are required.

b. No Impact. The project site is located in a highly-developed urban area. There are existing residential units on the project site and residential properties to the north, west, and south. Existing commercial businesses are east of the project site. As the project site is highly developed and disturbed, there are no riparian habitat or natural communities. The project would have no impact to riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service.

Mitigation Measures: No mitigation measures are required.

[6] California Department of Fish and Wildlife, California Natural Diversity Database, Rarefind 5 Sensitive Element Occurrence Report for Inglewood quadrangle, Accessed April 18, 2018.

[7] California Native Plant Society, Rare Plant Program, Inventory of Rare and Endangered Plants of California, Accessed on April 18, 2018 at: http://www.rareplants.cnps.org.

c. No Impact. A project would potentially have a significant impact on biological resources if it could result in the alteration of an existing wetland habitat. There are no federally protected wetlands on the project site. Therefore, no impacts would occur.

Mitigation Measures: No mitigation measures are required.

d. Less than Significant Impact. A project would normally have a significant impact on biological resources if it could interfere with wildlife movement within migration corridors that may diminish the chances for long-term survival of a sensitive species. Due to the highly disturbed setting, there are no native or migratory fish on or adjacent to the project site. Although it is not expected, there is potential for migratory birds to nest on the project site and adjacent areas. This creates the potential to result in take of nesting birds. Under the Federal Migratory Bird Treaty Act (MBTA) of 1918, the take of birds and their active nests is prohibited for raptors and other nongame migratory birds. As the project would remove the existing residences and regrade the project site, the project would require the removal of existing ornamental trees and shrubs. If construction were to occur during the nesting bird season, which generally runs from March 1st through August 31st, the project would be required perform necessary protocols such as bird surveys to ensure avoidance of take of birds and nests in compliance with the MBTA. Compliance with the MBTA would reduce potential impacts to migratory bird species to less than significant.

Mitigation Measures: No mitigation measures are required.

e. Less Than Significant Impact. A significant adverse effect could occur if a project were to cause an impact that is inconsistent with local regulations pertaining to biological resources, such as the City Protected Tree Ordinance.[8] The City of Inglewood Municipal Code protects 13 tree species that have reached a minimum of four inches diameter trunk size. According to the Vesting Tentative Tract Map prepared by N.C. Hansen Inc. on February 9th, 2018, provided in Appendix B, there are no Oak, California Bay, Western Sycamore, or California Black Walnut Trees on the project site.[9] The existing ornamental trees fronting the residences that would be removed by the project are not protected under the Municipal Code. Therefore, the project would have no impact regarding conflicts with local policies or ordinances protecting biological resources such as a tree preservation policy or ordinance.

Mitigation Measures No mitigation measures are required.

f. No Impact. A significant impact would occur if the proposed project would be inconsistent with mapping or policies in any conservation plans of the types cited. The project site is not located within any of these plans. Therefore, there would be no impact.

Mitigation Measures: No mitigation measures are required.

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
V.	**CULTURAL RESOURCES:** Would the project:				
a.	Cause a substantial adverse change in significance of a historical resource as defined in CEQA Section 15064.5?	☐	☐	☐	☒
b.	Cause a substantial adverse change in significance of an archaeological resource pursuant to CEQA Section 15064.5?	☐	☒	☐	☐
c.	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐
d.	Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☒	☐	☐

In April of 2018, Envicom Corporation completed a Phase I Cultural Resource Assessment (Cultural Assessment) of the subject property which included: record searches from the South Central Coastal Information Center (SCCIC) and the Native American Heritage Commission (NAHC); a review of historic maps for the project site; and a physical pedestrian survey of the subject property. The Cultural Assessment is provided in **Appendix D**. Copies of the record search request and the response letter from the NAHC may be found in the appendices to the Cultural Assessment.

a. No Impact. The proposed project would have a significant impact if it would cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines Section 15064.5. The SCCIC and NAHC results were negative for prehistoric or early historic cultural resources within the project site and adjacent area. Due to the early age (1920s) of development in the Inglewood area, the Cultural Assessment considered the region sensitive for older built-environment historic cultural resources; however, the examination of seventeen historic United States Geological Survey maps was negative for older historic cultural resources directly within the project site.[10] The surface survey was also negative for historic cultural resources within the project site and adjacent area. Based on the results of the Cultural Assessment, the project site does not contain historically significant resources and the project would result in no impact.

Mitigation Measures: No mitigation measures are required.

b. Potentially Significant Unless Mitigation Incorporated. A significant impact would occur if a known or unknown archaeological resource would be removed, altered, or destroyed as a result of the proposed development. A significant impact may occur if grading or excavation activities associated with

[10] 1896 Redondo US Geological Survey Map. 1:62,500 ft. scale; 1901 Redondo USGS Map. 1:62,500 ft. scale; 1901 Southern California Sheet No 1. USGS Map. 1:250,000 ft. scale; 1904 Southern California Sheet No 1. USGS Map. 1:250,000 ft. scale; 1924 Inglewood USGS Map. 1:24,000 ft. scale; 1930 Inglewood USGS Map. 1:24,000 ft. scale, 1944 Redondo USGS Map. 1:62,500 ft. scale; 1948 Inglewood USGS Map. 1:24,000 ft. scale; 1949 Long Beach USGS Map. 1:250,000 ft. scale; 1950 Inglewood USGS Map. 1:24,000 ft. scale; 1952 Inglewood USGS Map. 1:24,000 ft. scale; 1957 Long Beach USGS Map. 1:250,000 ft. scale; 1960 Long Beach USGS Map. 1:250,000 ft. scale; 1972 Inglewood USGS Map. 1:24,000 ft. scale; 1979 Long Beach USGS Map. 1:250,000 ft. scale. (update); 1981 Inglewood USGS Map. 1:24,000 ft. scale; 1981 Long Beach USGS Map. 1:100,000 ft. scale.

a project would disturb archaeological resources that presently exist within the project site. Section 15064.5 of the State CEQA Guidelines define criteria for resources that constitute unique archaeological resources. The results of the SCCIC and the NAHC record searches were negative for cultural resources within, adjacent, or near to the subject property, and the surrounding area. The Cultural Assessment concluded the project site is not sensitive for prehistoric or older historic (roughly 1840 to 1940 for the region) cultural resources. Due to the lack of archaeological resources at the project site and adjacent area identified by the record search, the Cultural Assessment did not recommend full-time monitoring unless a discovery is made during construction. However, the unanticipated discovery of previously unidentified archaeological resources during project grading is always a possibility during construction earth-moving activities. Given there is a possibility of encountering unknown archaeological resources during the excavation phase of construction, mitigation measure **CUL-1** requires spot-check monitoring by a qualified archaeologist during grading and earth moving within previously undisturbed native soils on site (i.e., not fill soils). If unknown archaeological resources are inadvertently encountered during the grading and earth moving phase of construction, mitigation measure **CUL-3**, provides a protocol for the potential discovery. Implementation of mitigation measures CUL-1 and CUL-3 would reduce the project impact to previously unidentified archeological resources inadvertently encountered during the grading and earth moving phase of construction to less than significant.

Mitigation Measures:

CUL-1 Archaeological Monitoring

To reduce the impact of grading and earth moving on any potentially present archaeological resources beneath the subject property, a Lead Agency-approved archaeologist that meets the Secretary of Interior qualifications shall be on the project site on a spot-check basis during project grading and earth moving within native soils until bedrock is encountered. Spot-check monitoring shall include a kick-off meeting to introduce the archaeologist to the construction leadership team, and three weekly on-site inspections of no greater than 4-hours in duration to assess the subsurface materials being encountered project site during grading and excavating tasks.

The archaeological monitor shall collect any prehistoric or older (pre-1940s) cultural material uncovered through excavation and can halt construction within 50-feet of a potentially significant cultural resource if necessary. If potentially significant cultural resources are encountered, the project shall follow the resource "discovery" protocol provided in mitigation measure CUL-3.

Native American monitoring is not recommended due to the lack of prehistoric cultural resources being identified by the SCCIC record search within the project properties and the surrounding region. If, however, archaeological monitoring identifies prehistoric cultural resources in the Project properties to the level that "discovery" protocols are triggered, then a Native American monitor may be required to protect Native American cultural interests. Adding a Native American monitor shall only take place after consultation and approval by the Project proponent and the Lead Agency.

c. Potentially Significant Unless Mitigation Incorporated. Paleontological resources are the fossilized remains of organisms that have lived in the region in the geologic past and the accompanying geologic strata. The potential for fossil occurrence depends on the rock type exposed at the surface in a given area. An examination of geological maps indicated that the subject property is located within an area that should be considered sensitive for paleontological resources due to the bedrock consisting of compacted older alluvial material. Furthermore, the unanticipated discovery of previously unidentified paleontological resources is always a possibility during the grading and earth-moving phase of

construction. Therefore, mitigation measure **CUL-2** requires spot-check monitoring by a qualified paleontologist during grading and earth moving within native soils. As noted in mitigation measure CUL-2, if potentially significant intact paleontological resources are encountered, the project must follow the resource discovery protocol provided in mitigation measure CUL-3. Implementation of mitigation measures CUL-2 and CUL-3 would reduce the project impact to previously unidentified paleontological resources inadvertently encountered during the grading and earth moving phase of construction to less than significant.

Mitigation Measures:

CUL-2 Paleontological Monitoring

To reduce the impact of grading on any potentially present paleontological resources beneath the subject property, a Lead Agency-approved qualified paleontologist shall be on the project site on a spot-check basis during construction grading and earth moving within native soils. Spot-check monitoring will include a kick-off meeting to introduce the paleontologist to the construction leadership team, and three weekly on-site inspections of no greater than 4-hours in duration to assess the subsurface materials encountered during project site excavation grading tasks.

The paleontological monitor shall collect any fossil material uncovered through excavation, and can halt construction within 50-feet of a potentially significant fossil resource if necessary. If potentially significant intact paleontological resources are encountered, the project shall follow the resource "discovery" protocol provided in mitigation measure CUL-3.

CUL-3 Inadvertent Discovery Protocol for Archaeological or Paleontological Resources

The inadvertent discovery of archaeological resources is always a possibility during ground disturbances; California Penal Code Section 622.5 addresses these findings. Older alluvial material can also lead to the discovery of paleontological resources during ground disturbance. If buried materials of potential significance are inadvertently discovered within an undisturbed context during any earth-moving operation associated with the proposed project, then all work in that area shall be halted or diverted away from the discovery to a distance of 50-feet until a qualified senior archaeologist/paleontologist can evaluate the nature and/or significance of the find(s). If, upon assessment by a qualified senior archaeologist/paleontologist, the find is not determined to be significant, then construction may resume.

If the find is determined to be potentially significant, then the Lead Agency shall be immediately notified of the discovery. Construction shall not resume in the locality of the discovery until consultation between the senior archaeologist/paleontologist, the project manager, the Lead Agency, the Applicant's representative, and all other concerned parties, takes place and a reaches a conclusion approved by the Lead Agency.

If a significant cultural or paleontological resource is discovered during earth-moving, complete avoidance of the find is preferred. However, further survey work, evaluation tasks, or data recovery of the significant resource may be required by the Lead Agency if the resource cannot be avoided. In response to the discovery of significant cultural or paleontological resources, the Lead Agency may also add additional regulatory compliance for use during further project site development, which may include Native American monitoring (if appropriate).

Any additional monitoring required shall be outlined in a Construction Phase Monitoring Plan, which shall also be submitted to the Lead Agency for review prior to the recommencement of ground-disturbance activities. Any Evaluation, Data Recovery, Site Management, or Monitoring Plans or Reports generated in response to the discovery of a significant cultural resource shall be submitted to the Lead Agency for review and final curation as part of the project record. All such documents associated with the discovery of cultural resources shall be transmitted to the appropriate State of California information centers at the end of the Project.

d. Potentially Significant Unless Mitigation Incorporated. A project may have a significant adverse effect if grading or earth moving activities associated with the project disturb previously interred human remains. No known human burials have been identified within the project site and adjacent area. As discussed, the results of the SCCIC and the NAHC record searches were negative for cultural resources within, adjacent, or near to the project site and surrounding area. The Cultural Assessment concluded the subject property is not-sensitive for prehistoric cultural resources. However, previously unidentified human remains could occur on the project site and if proper care is not taken during construction, damage to, or destruction of, these unknown remains could occur. Therefore, mitigation measure **CUL-4** provides the appropriate protocol to follow if previously unidentified human remains are encountered. Implementation of CUL-4 would reduce the project impact to previously unidentified human remains inadvertently encountered during the grading and earth moving phase of construction to less than significant.

Mitigation Measure:

CUL-4 Human Remains

The inadvertent discovery of human remains is always a possibility during ground disturbances; State of California Health and Safety Code Section 7050.5 addresses these findings. This code section states that in the event human remains are uncovered, no further disturbance shall occur until the County Coroner has made a determination as to the origin and disposition of the remains pursuant to California Public Resources Code Section 5097.98. The Coroner must be notified of the find immediately, together with the Lead Agency and the property owner.

If the human remains are determined to be prehistoric, the Coroner must notify the NAHC within 24 hours, which shall determine and notify a Most Likely Descendant (MLD). The MLD shall complete the inspection of the project site within 48 hours of being granted access to the project site and may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials and an appropriate re-internment site.

The Lead Agency and a qualified archaeologist shall also establish additional appropriate measures for further project site development, which may include archaeological and Native American monitoring or subsurface testing, conducted and paid for by the applicant. All responses to the discovery of human remains shall be outlined in a Recovery and/or Management Plan submitted to the Lead Agency for review. Any required monitoring shall be outlined in a Construction Phase Monitoring Plan, which shall also be submitted to the Lead Agency for review prior to the recommencement of ground-disturbance activities.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
VI. GEOLOGY AND SOILS. Would the project:				
a. Exposure of people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii. Strong seismic ground shaking?	☐	☒	☐	☐
iii. Seismic-related ground failure, including liquefaction?	☐	☒	☐	☐
iv. Landslides?	☐	☐	☐	☒
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☒	☐	☐
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	☐	☐	☒	☐
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒

The following section incorporates information for the project site provided by the project's Preliminary Soils Engineering report (Soils Report), dated April 4, 2018, prepared by Geosystems, Inc. The Preliminary Soils Engineering Investigation (Soils Report) is provided in **Appendix E**. Based on findings from the soils investigation, the Soils Report concluded no soil conditions were encountered that would preclude construction of the proposed project provided the recommendations within the Soils Report are followed and implemented during the final foundation and building phase of project construction.

a. i. Less Than Significant Impact. A significant impact may occur if the project site is located within a state-designated Alquist-Priolo Zone or other designated fault zone.

The project site is not located within an Alquist-Priolo Special Studies Zone and is not above a known fault with the potential to cause surface rupture at the project site. The nearest fault zone is from the Inglewood fault, located approximately 150 meters (i.e., 492 feet) east of the project site, across La Brea Avenue. As the project is not located within a designated earthquake fault zone, the potential impact of surface rupture at the project is considered less than significant.

Mitigation Measures: No mitigation measures are required.

a. ii. Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if a project represents an increased risk to public safety or destruction of property by exposing people, property, or infrastructure to seismically induced ground shaking hazards that are greater than the average risk associated with other locations in Southern California.

As Southern California is a seismically active region, and the Inglewood fault is close to the project site, there is potential for strong seismic ground shaking. Ground shaking from a moderate to major earthquake (considered a magnitude of 6.0 or greater) is expected within the lifespan of the project's structure. As discussed in the project Soils Report, this is not unexpected for the Southern California region, and generally the design of buildings (as limited by state and local building codes) is intended to prevent loss of life rather than prevent all structural damage. For this reason, compliance with building codes, current construction practices, and the recommendations of the Soils Report is required. Mitigation measure **GEO-1** would reduce the impact of strong seismic ground shaking. Therefore, this project's impact is potentially significant unless mitigation is incorporated.

Mitigation Measures:

GEO-1: Prior to the issuance of grading or building permits, the City Economic and Community Development Department, Building Safety Division, shall review and approve the Preliminary Soils Engineering report (GS18-0203) written by Geosystems, Inc. dated April 4, 2018, for the proposed 20 residential unit project. The City shall incorporate the recommendations provided within the Soils Report as conditions of approval for the proposed 20 unit residential project. If a more recent, soils engineering investigation or geotechnical report is prepared, the recommendations of the most recent soils or geotechnical report shall supersede those of the earlier report to the satisfaction of the City's Building Safety Division.

a. iii. Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if a project site is located within a liquefaction zone.

Liquefaction refers to the action that occurs when loose soils are saturated with water and act like a liquid during an earthquake. This can have many affects, such as loss of building support and lateral spreading of soils.[11] The Soils Report used borings on the project site to sample the soil layers at a depth of 10 to 23 feet, in order to perform a liquefaction potential analysis. The liquefaction potential analysis found that during a major earthquake event, liquefaction is likely to occur. In order to reduce the impact and improve support in the event of a major earthquake, recommendations within the Soils Report would need to be followed and mitigation measures GEO-1 and **GEO-2** would need to be implemented. Therefore, the project would have a potentially significant impact unless mitigation is incorporated for liquefaction.

Mitigation Measures:

GEO-1: Mitigation measure GEO-1 shall apply.

[11] United States Geological Survey, About Liquefaction, Accessed on April 13, 2018 at: https://geomaps.wr.usgs.gov/sfgeo/liquefaction/aboutliq.html.

GEO-2: To support the proposed building structures, a mat foundation system described within the approved soils or geotechnical report shall be used. The design and foundation shall be approved by a structural engineer. If an updated soils or geotechnical report is approved by the City's Building Safety Division and provides more updated recommendations, those recommendations shall take precedent.

a. iv. No Impact. A project-related, significant adverse effect may occur if the project is located in a hillside area with soil conditions that would suggest a high potential for sliding.

The topography of the project site and its surroundings is relatively level and is previously developed. The project site is not located within a hillside area, which is defined by the Inglewood Municipal Code as a natural slope of 25% or greater.[12] According to the Hillside Management Areas and Ridgeline Management Map within the Los Angeles County General Plan, the nearest Hillside Management Area is north of, but outside of the City of Inglewood.[13] Therefore, the project would have no impact related to landslides.

Mitigation Measures: No mitigation measures are required.

b. Less Than Significant Impact. A project would normally have significant sedimentation or erosion impacts if it would (1) constitute a geologic hazard to other properties by causing or accelerating instability from erosion; or (2) accelerate natural processes of wind and water erosion and sedimentation, resulting in sediment runoff or deposition which would not be contained or controlled on project site.

Although the project site is relatively flat, grading of the project has potential to cause erosion during construction and project site preparation. Erosion and sedimentation impacts would be reduced by implementation of best management practices (BMPs) as required with approval of grading and building permits. BMPs can include erosion and sediment controls such as the placement of silt fencing, straw wattles, and sand bags around the perimeter of the construction site. Therefore, impacts related to erosion would be less than significant.

Mitigation Measures: No mitigation measures are required.

c. Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the project is built in an unstable area without proper project site preparation or design features to provide adequate foundations for buildings, thus posing a hazard to life and property.

As mentioned above, the project site is in a relatively flat area not susceptible to landslides, but it is susceptible to liquefaction. In order to reduce impacts from potential unstable soils, the project would implement mitigation measures GEO-1 and GEO-2. Recommendations in the approved soils or geotechnical report would account for potential impacts from grading and unstable soils. Building regulations and building permit conditions would also be followed and reduce the impact from unstable soils to less than significant following mitigation.

Mitigation Measures: Implementation of GEO-1 and GEO-2.

d. Less Than Significant Impact. A significant impact may occur if the project is built on expansive soils without proper project site preparation or design features to provide adequate foundations

[12] City of Inglewood, Inglewood Municipal Code, Chapter 10, Article 16, Section 10-203.
[13] Los Angeles County, Department of Regional Planning, General Plan 2035, Figure 9.8, May 2014.

for buildings, thus posing a hazard to life and property. Expansive soils contain significant amounts of clay particles that swell considerably when wetted and shrink when dried. Foundations constructed on these soils are subject to uplifting forces caused by the swelling.

The Soils Report indicates that the on-site soils were classified and tested to be clayey sand/sandy clay. The report finds that this soil composition has a low expansion potential. The project design would also comply with building codes and recommendations for foundations and concrete slabs. Therefore, impacts related to expansive soils would be less than significant.

Mitigation Measures: No mitigation measures are required.

e. No Impact. A significant impact may occur if the has soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water.

The project is located in a developed urban area in City of Inglewood. It would connect to the existing sewer system and would not incorporate nor propose a septic or alternate wastewater disposal system. Therefore, there would be no impacts due to a septic system or alternate wastewater disposal systems.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. GREENHOUSE GAS EMISSIONS. Would the project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

Greenhouse gases (GHG) emitted by human activity are implicated in global climate change, commonly referred to as global warming. GHGs contribute to an increase in the temperature of the earth's atmosphere by transparency to incoming short wavelength visible sunlight, but near opacity to outgoing terrestrial long wavelength heat radiation in some parts of the infrared spectrum. The CEQA Guidelines define the following as GHGs: carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), sulfur hexafluoride (SF_6), perfluorocarbons (PFCs), and hydrofluorocarbons (HFCs).[14]

Because the warming potential of the identified GHGs differ, GHG emissions are typically expressed in terms of carbon dioxide equivalents (CO_2e), providing a common expression for the combined volume and warming potential of the GHGs generated by a particular emitter. The total GHG emissions from individual sources are generally reported in metric tons (MT) and expressed as metric tons of carbon dioxide equivalents ($MTCO_2e$).

Fossil fuel use in the transportation sector (on-road motor vehicles, off-highway mobile sources and aircraft) is the single largest source of GHG emissions, accounting for half of all emissions globally. Energy use associated with industrial and commercial land uses contribute approximately one quarter of global GHG emissions.

Project greenhouse gas emission (GHG) emissions were evaluated using CalEEMod.2016.3.2 emissions estimation model provided by SCAQMD. The CalEEMod output is provided in Appendix C.

a. Less Than Significant Impact. A significant impact would occur if the project would generate GHG emissions, either directly or indirectly, that might have a significant impact on the environment.

There are no locally adopted significance thresholds for GHG emissions. The SCAQMD CEQA Significance Thresholds GHG Working Group recommends a screening level of 3,000 MT CO_2e for residential/commercial projects. Without an adopted numerical threshold of significance, project related GHG emissions in excess of this recommended screening level are presumed to trigger a requirement for enhanced GHG reduction at the project level.

During construction, use of construction equipment, disposal of construction waste, and application of various construction materials (paint, asphalt, etc.) would result in the short-term generation of GHG emissions. The project's construction-related GHG emissions were modeled using CalEEMod. The total construction-related GHG emissions generated over the full duration of the construction period would be

[14] California Code of Regulations, Section 15364.5, Article 20, Definitions.

90.1 $MTCO_2e$. The SCAQMD GHG emissions analysis policy for construction activities recommends amortization of emissions over a 30-year project lifetime to evaluate significance on an annual basis. Based on the total construction period emissions, the project's 30-year annual amortized GHG emissions would be 3.0 $MTCO_2e$.

Operation of the proposed project would result in GHG emissions from mobile sources, on-site use of natural gas and landscaping equipment, and off-site sources such as electricity generation, water distribution and treatment, disposal of solid waste, and treatment of wastewater. The operational generation of GHG emissions were calculated using CalEEMod, as recommended by the SCAQMD. Operational GHG emissions are shown in **Table VII-1**, **Greenhouse Gas Emissions**. As shown in Table VII-1, with the addition of the amortized construction emissions, the project's annual GHG emissions were estimated to be approximately 245.9 $MTCO_2e$ annually.

The emissions shown in Table VII-1 conservatively overstate the potential GHG emissions that would result from this project as it does not consider removal of 11 existing residences, which would result in an even lower project-related net increase. As the project's net increase in number of residences is double the existing number of residences, the number of vehicle trips generated by existing uses would be approximately half of the estimated trips attributed to the proposed project. As mobile source emissions are the primary component of the project's GHG emissions, the net increase in mobile emissions would likely be approximately half of that shown in Table VII-1; therefore, the project's net increase in operational GHG emissions would likely be approximately half the emissions shown in Table VII-1.

Table VII-1
Greenhouse Gas Emissions

Area Sources	0.3
Energy Utiliztion	54.3
Mobile Source	176.5
Solid Waste Generation	4.6
Water Consumption	10.1
Operations Total	**245.9**
Annualized Construction	3.0
Project Total	**248.9**
Significance Threshold	3,000.00
Source: CalEEMod.2016.3.2 output provided in Appendix C.	

As shown in Table VII-1, the proposed project's combined annual operational GHG emissions and annual amortized construction-related GHG emissions would be far below 3,000 MT CO2e per year without considering reduction "credits" from the proposed removal of 11 existing residences, therefore the project's GHG emissions impact would be less than significant.

Mitigation Measures: No mitigation measures are required.

b. Less Than Significant Impact. The goal of AB 32 is to reduce statewide GHG emissions to 1990 levels by 2020. In 2014, the California Air Resources Board (CARB) updated its Scoping Plan, which details strategies to meet that goal. Executive Order S-3-05 aims to reduce statewide GHG emissions to 80 percent below 1990 levels by 2050. To reduce GHG emissions from energy usage, the City of Inglewood prepared the Inglewood Energy and Climate Action Plan (ECAP). The ECAP provides

a roadmap to achieve GHG and energy reductions. The ECAP took an inventory of GHG emissions, then sets a target of GHG emission reductions, sets strategies for reduction, and lays out an implementation program and timeline. Within the ECAP, there is a goal of fifteen percent emission reductions below 2005 levels by 2020 and a thirty-two and a half percent below 2005 levels by 2035. The ECAP is consistent with and assumes buildout of the City General Plan.

The ECAP provides a summary table of Climate-Ready Development Standards with a range of "points" for each standard to use as a guide for evaluating a project's consistency with citywide sustainability efforts. Pursuant to City guidance, the proposed project must achieve 20 points from the ECAP list of development standards to be considered consistent with citywide sustainability efforts. The climate-ready development standards the project would meet are provided in **Table VII-2, Consistency with Inglewood Climate-Ready Development Standards.**

Table VII-2
Consistency with Inglewood Climate-Ready Development Standards

Demonstrate the building will perform at least 15% better than the current Title 24. Three additional points can be achieved if the building will perform at least 30% better than the current Title 24.	3 – 6
Design and orient 75% or more new buildings such that one axis of each building is at least 1.5 times longer than the other, and such that the longer axis is within 15 degrees of the geographical east/west axis. The length to width ratio shall be applied only to the length of walls enclosing conditioned spaces; walls enclosing unconditioned spaces such as garages, arcades, or porches cannot contribute to standard achievement. South-facing vertical surfaces of buildings counting towards standard achievement must not be more than 25% shaded at time of initial occupancy (measured at noon on December 21st).	3
Provide continuous rows of appropriately spaced trees (every 25 feet) along all streets (or an equivalent number of trees placed offsite at the discretion of the Planning Director). Trees shall be of a type and nature that have broad canopies and provide ample shade. Evergreen trees are preferred. Palm trees shall be prohibited from consideration towards achieving this standard.	2
If a façade faces a street or sidewalk, 30% or greater of its continuous length shall not be blank (without windows and doors). Walls with public art installations such as murals may be exempted.	2
It is prohibited for more than 20% of the linear street frontage of new buildings to be garages and service bay openings.	2
Design and install landscaping to minimize summer heat gain through: (1) the placement of evergreen trees along the west façade of buildings, (2) the placement of trees so as to shade 50% of the site's hardscape with 5 years of construction, and (3) a covenant recorded that provides for the ongoing maintenance so as to maintain the trees' shade. Trees shall be of a type and nature that have broad canopies and provide ample shade. Evergreen trees are preferred. Palm trees shall be prohibited from consideration towards achieving this standard.	2
Provide at least one additional tree per unit above what is required by code. Trees shall be of a type and nature that have broad canopies and provide ample shade. Evergreen trees are preferred. Palm trees shall be prohibited from consideration towards achieving this standard.	2

Divert 100% of all non-hazardous inert construction and demolition debris for recycling and salvage and divert 75% of all remaining construction and demolition debris.	1
Use salvaged, refurbished, or recycled materials such that the sum of these materials constitutes at least 5%, based on cost, of the total value of materials on the project. On additional point can be achieved if the use of these materials constitutes at least 10% of the total value of materials.	1 – 2
Provide designated space, facilities, and services for users to recycle and compost waste.	1
Meet at least 5% of a project's indoor water use through a combination of reclaimed water and gray water. Providing plumbing for future reclaimed water availability will meet the requirements of this standard if reclaimed water is not yet available at the site.	1
Design landscaping for very-low water use.	1
Utilize artificial turf in place of grass.	1
Locate all new off-street surface parking lots at the side or rear of buildings, leaving building frontages facing streets free of surface parking lots.	1
Total Points	**23-27**
Source: City of Inglewood, Inglewood Energy and Climate Action Plan, March 2013. [an] Applicant-selected development standards with which the project would be consistent.	

As shown in Table VII-2, Inglewood Climate-ready Development Standards Consistency, the project would qualify for at least 23 points using the lowest range values for meeting climate-ready development standards. The project would replace older buildings and construct a new structure that would comply with the current requirements of the California Green Building Standards and the Inglewood Energy and Climate Action Plan. In particular, the Inglewood Energy and Climate Action Plan allows for several different compliance options to allow for new development and the City to meet GHG reduction targets. These new buildings would be subject to greater energy efficiency and conservation requirements than the existing structures that were built to previous building codes. The project is also within walking distance of several commercial uses, including restaurants and a grocery store. There are also within walking distance of a bus stop along La Brea Avenue. Access to alternative transportation options is consistent with ECAP Strategy 4: Improve Transportation Options and Manage Transportation Demand.

The City is within the SCAG region Metropolitan Planning Organization (MPO) region. SCAG prepares Regional Transportation Plans/Sustainable Communities Strategies to evaluate how projected population growth will affect transportation and associated GHG emissions. As discussed in Section XIII, Population and Housing, the population that would be housed by the proposed project's net increase of 10 residential units would represent a fraction of one percent (approximately 0.2 and 0.5 percent, respectively) of the projected citywide population and housing increases for the period from 2012 to 2040. As such, the project would not cause substantial population growth that exceeds projected or planned population levels. The project is an in-fill development that provides housing within walking distance (0.1 mile) of an existing Metro Bus Stop at W. Plymouth St. and N. La Brea Ave. Therefore, the proposed project would not conflict with the applicable objectives of the 2016 Regional Transportation Plans/Sustainable Communities Strategy.

Based on consistency with the General Plan, Green Building Code and ECAP, the proposed project would be consistent with local and statewide goals and policies aimed at reducing the generation of GHG emissions, would not conflict with GHG reduction plans or policies for achieving GHG reduction targets, and impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d. Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
f. For a project within the vicinity of a private airstrip, would the project result in a safety hazard for the people residing or working in the area?	☐	☐	☐	☒
g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
h. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	☐	☐	☐	☒

A Phase I Environmental Site Assessment (Phase I ESA) of the project site was performed by GeoSystems, Inc. The Phase I Site Assessment Report, dated January 30, 2016, is provided as **Appendix F**.

Impact Analysis

a. Less Than Significant Impact. A significant impact would occur if a project creates a significant hazard to the public or environment through routine transport, use, or disposal of hazardous materials.

The project is proposing the construction of a 20-unit residential structure that would replace 10 existing residential structures. The hazardous materials that are currently used on project site are typical household

cleaning chemicals and substances used for building or automotive maintenance. The Phase I ESA found that the quantities of these substances and uses are not expected to represent a significant threat to soils or groundwater. The land use is not expected to change with the project, and as with existing residences, the new residences are not expected to transport, use, or dispose of hazardous materials in quantities that could represent a significant hazard to the public. Therefore, the project would have a less than significant impact for this issue.

Mitigation Measures: No mitigation measures are required.

b. Less Than Significant Impact. A significant impact would occur if a project creates a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.

The Phase I ESA did not identify recognized environmental conditions (RECs), historical RECs (HRECs), or controlled RECs (CRECs) at the project site. Past uses show only residential uses at the project site, which would only allow for small quantities of hazardous materials for domestic use. Due to the age of the existing buildings, asbestos containing building materials (ACBMs), lead-based paint, and limited amounts of polychlorinated biphenyl (PCB) electrical equipment may exist at the project site. The Phase I ESA did not identify underground storage tanks, aboveground storage tanks, radon, pits, ponds, lagoons, septic tanks, cesspools, wells, or cisterns. There are not and have not been oil or gas wells on site. There are facilities within a 0.25-mile radius that have been identified with environmental conditions, but none of them have been documented as having negatively impacted soil or groundwater conditions beneath the project site.[15] To address the potential for ACBMs, PCB-containing electrical equipment, lead based paint, and larger than usual amounts of household hazardous materials, the project would establish a plan for renovation and demolition. As these plans would be subject to regulatory compliance and approval by the City, the project would have a less than significant impact to create a significant public hazard through foreseeable upset and accident conditions.

Mitigation Measures: No mitigation measures are required.

c. Less Than Significant Impact. A project would normally have a significant impact if it would emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

Although the closest school is located approximately 0.1 miles east of the project site, Wilder's Preparatory Academy Charter at 830 N. La Brea Avenue, which is within a one-quarter mile radius of the project site, the project does not propose to emit or handle hazardous materials, substances, or waste. Potentially hazardous materials on the project site would be limited to fluids, paints, and solvents commonly used in construction and cleaning supplies for household use and routine maintenance in operations. The use of these materials as directed in manufacturer's specifications and in limited quantities of would reduce impacts to less than significant.

Mitigation Measures: No mitigation measures are required.

d. Less Than Significant Impact. A project would normally have a significant impact if it would be located on a project site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment.

[15] GeoSystems, Inc., Phase I Environmental Site Assessment, January 30, 2018.

There are several lists of hazardous materials sites compiled pursuant to Government Code Section 65962.5,[16] none of which include the project site as a hazardous materials site. The Phase I ESA for the project site also performed an environmental database records review for the project site and a one-mile radius. The project site addresses did not appear on the government databases reviewed within the Phase I ESA. There were approximately 98 nearby facilities that appeared on the government database review. None of the facilities within a one-quarter mile radius of the project site have been identified as having negatively impacted the soil or groundwater beneath the project site.[17] Therefore, the project would have a less than significant impact.

Mitigation Measures: No mitigation measures are required.

e-f. No Impact. A project would have a significant impact if it would result in a safety hazard for people residing or working in a project area within two miles of a public airport or public use airport, or within the vicinity of a private airstrip.

The project site is not located within two miles of a public airport or private airstrip. The nearest airport is Los Angeles International Airport located over two miles southwest of the project site. Therefore, the project would not result in a safety hazard to people working or residing within the project area regarding aircraft operations in the vicinity. No impact would occur.

Mitigation Measures: No mitigation measures are required.

g. Less Than Significant Impact. A project would have a significant impact if it would impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.

The project site is located along Plymouth Street, a residential road that intersects N. La Brea Avenue. Plymouth Street is not an evacuation route according to the City General Plan.[18] La Brea Avenue is the closest evacuation route, but the project would not physically interfere with its route nor would it impair implementation of an evacuation plan. Therefore, the project would have a less than significant impact.

Mitigation Measures: No mitigation measures are required.

h. No impact. A project would have a significant impact if it would expose people or structures to a significant risk of loss, injury or death involving wildland fires. The urban setting of the project site is not adjacent to wildlands. According to the City General Plan Land Use Map, the surrounding areas are designated for residential or commercial uses and contain existing residential and commercial uses.[19] As the project site is adjacent to existing urban development, the project would have no impact to exposing people or structures to risk or loss due to a wildland fire.

Mitigation Measures: No mitigation measures are required.

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
IX.	**HYDROLOGY AND WATER QUALITY.** Would the proposal result in:				
a.	Violate any water quality standards or waste discharge requirements?	☐	☐	☒	☐
b.	Substantially deplete groundwater supplies or interfere with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned land uses for which permits have been granted)?	☐	☐	☒	☐
c.	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?	☐	☐	☒	☐
d.	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner, which would result in flooding on- or off site?	☐	☐	☒	☐
e.	Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	☐	☐	☒	☐
f.	Otherwise substantially degrade water quality?	☐	☐	☒	☐
g.	Place housing within a 100-year flood plain as mapped on federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	☐	☐	☐	☒
h.	Place within a 100-year flood plain structures, which would impede or redirect flood flows?	☐	☐	☐	☒
i.	Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	☐	☐	☐	☒
j.	Inundation by seiche, tsunami, or mudflow?	☐	☐	☐	☒

a. Less Than Significant Impact. A significant impact may occur if a project discharges water that does not meet the quality standards of agencies that regulate surface water quality and water discharge into stormwater drainage systems.

Impervious surfaces currently exist within the project site, including rooftops, driveways, and other hardscape associated with the existing structures. The project site is bounded on the south by W.

Plymouth Street, which conveys runoff from the project site to existing storm drain facilities maintained by the City via existing inlets in the curbsides along the roadway surface.

During construction, the project would demolish existing the buildings and regrade the previously-developed project site. Erosion and sedimentation may occur during construction and grading. Due to the small size of the project site, 0.68 acres, impacts to stormwater quality are expected to be minimal. Compliance with construction Best Management Practices (BMPs) stipulated in the Municipal Code would ensure compliance with water quality standards through the control and minimization of erosion and siltation. Appropriate erosion control BMPs during construction may include, but are not limited to, silt fencing, fiber rolls, sand bag barriers, gravel bag berms, stabilized construction site entrances/exits, and other practices laid out in the City's Low-Impact Development (LID) Standards Manual.[20]

During operation, the project would not have any uses atypical of urban housing. Project operations would involve the use household cleaning chemicals and substances used for building and automotive maintenance. However, in the quantities used for residential properties and when stored properly, these substances are not expected to pose a significant threat to subsurface soils or groundwater.[21] Use of these products would be subject to product usage guidelines and the City Municipal Code.

Therefore, project construction and operations would be required to comply with Municipal Code standards and would result in a less than significant impact to water quality standards and waste discharge requirements.

Mitigation Measures: No mitigation measures are required.

b. Less Than Significant Impact. A project would usually have a significant impact on groundwater level if it would change potable water levels sufficiently to: (a) reduce the ability of a water utility to use the groundwater basin for public water supplies, conjunctive use purposes, storage of imported water, summer/winter peaking, or respond to emergencies and drought; (b) reduce yields of adjacent wells or well fields (public or private); (c) adversely change the rate or direction of flow of groundwater; or (d) result in demonstrable and sustained reduction in groundwater recharge capacity. The City owns and operates wells that extract groundwater from the West Coast Groundwater Basin. The Water Replenishment District (WRD) of Southern California is the entity responsible for maintaining and replenishing the West Coast Groundwater Basin. Given that natural groundwater replenishment, through percolation of precipitation and irrigation, is not enough to replenish the groundwater pumping within the West Coast Groundwater Basin, the WRD of Southern California purchases and recharges additional water to make up for the overdraft. Along with the WRD, the City implements artificial recharge programs to recharge the local groundwater basin.

The project does not propose groundwater extraction. As discussed in topic XVIII.d., Utilities and Service Systems, the project would be served with a potable water supply from imported surface water purchased from the Metropolitan Water District through the West Basin Municipal Water District and local groundwater produced from the West Coast Groundwater Basin via City-owned and operated wells. these providers have sufficient supplies available to serve the project from existing entitlements and resources. Therefore, the project would not substantially deplete groundwater supplies.

The project would replace ten existing residences with twenty proposed residences on a previously developed project site, the majority of which is paved and consists of existing impermeable surfaces.

[20] Inglewood Municipal Code Section 10-208.
[21] GeoSystems Inc., Phase I Environmental Site Assessment, January 30, 2018.

Although the proposed project would increase the amount of impermeable surface area on the subject property, the net increase in impermeable area would not substantially interfere with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level. The field investigation conducted for the Preliminary Soils Engineering report prepared by Geosystems, Inc., dated April 4, 2018, did not encounter the groundwater table a depth of 50-feet below existing grade.[22] Therefore, the project would not substantially interfere with groundwater supplies. The project would have a less than significant impact with regard to the depletion of groundwater supplies or interference with groundwater recharge.

Mitigation Measures: No mitigation measures are required.

c-d. Less Than Significant Impact. A project would have a significant impact if the project would substantially alter the drainage pattern of the project site or area such that substantial erosion, siltation, or flooding would result. There are no stream or rivers on the subject property. As an in-fill urban development, alterations to the drainage pattern would be limited to the previously-disturbed project site and would have minimal effects on the overall drainage pattern of the area. Similar to existing conditions, the project would direct drainage to the City's existing Municipal Separate Storm Sewer System (MS4). During construction and operation, the project would be subject to applicable provisions of the City Municipal Code that stipulate Low Impact Development (LID) requirements for new development and redevelopment (Chapter 10, Article 16, Section 10-208). The LID requirements ensure eligible new development is designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use in accordance with the requirements set forth in the MS4 Permit (Order No. R4-2012-0175) and the LID Standards Manual. The project would be required to implement BMPs to meet design specifications within the MS4 Permit to control pollutants and pollutant loads. Compliance with applicable City Municipal Code requirements and implementation of BMPs requiring the minimization of erosion, siltation and flooding from the project site would reduce impacts related to drainage to less than significant.

Mitigation Measures: No mitigation measures are required.

e. Less Than Significant Impact. A significant impact would potentially occur if it would create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff.

The proposed project would replace the existing ten residential structures with 20, three story residential structures. A majority of the existing site consists of impervious surfaces. The project site currently drains runoff water to the stormwater system, which would not change following the project completion. As the land use is the same and the project site is slightly decreasing its pervious surfaces, the project would not create or contribute runoff water that would be substantially different than existing conditions nor would it exceed capacity of the existing stormwater drainage systems. Therefore, the project would have a less than significant impact with regard to exceeding the capacity of stormwater drainage systems.

f. Less Than Significant Impact. A significant impact would potentially if the project would substantially degrade water quality in a way not already analyzed.

[22] The investigation resulted in perched groundwater in one of the four borings at a depth of 30 to 35 feet but no further groundwater was encountered below these levels.

As discussed above, the project would not change the existing land uses and would be subject to applicable ordinances within the City of Inglewood Municipal Code. Therefore, the project would have less than significant impact to water quality.

Mitigation Measures: No mitigation measures are required.

g-h. No Impact. A significant impact would potentially occur if the project proposed housing or structures to be placed within a 100-year flood plain.

The project site is within an urban area in a Federal Emergency Management Agency (FEMA) Flood Hazard of Zone X, area of minimal flood hazard, and not within a 100-year or 500-year flood plain.[23] Therefore, the project has no impact related to location within a 100-year flood plain.

Mitigation Measures: No mitigation measures are required.

i. No Impact. A significant impact would potentially occur if the proposed project would expose people or structures to a significant risk of loss, injury, or death due to flooding as a result of failure of a levee or dam.

The project is located within an urban area of the City of Inglewood. There are no nearby rivers, streams, or places in which dams or levees are located. The project is also not within a floodplain or area in which water would flow should a levee or dam fail. Therefore, there is no impact to people or structures as a result of a failed levee or dam.

Mitigation Measures: No mitigation measures are required.

j. No Impact. A significant impact would potentially occur if the proposed project would expose people or structures to a significant risk of loss, injury, or death due to inundation by seiche, tsunami, or mudflow.

The City of Inglewood is not considered a coastal city as it is over four miles from the Pacific Ocean. Further, the City of Inglewood has an elevation range from 50 to 250 feet above sea level.[24] Accordingly, the United States Geologic Survey (USGS) Tsunami Inundation Map available on the California Department of Conservation website show that the proposed project site is not within an anticipated tsunami inundation area.[25] There are no bodies of water near the project site to create the possibility of a seiche. The project is also within a relatively flat area, not subject to mudflows according to the General Plan Safety Element and the project Soil Report (see Section V, Geology and Soils). Therefore, the project would have no impact to risks of inundation by seiche, tsunami, or mudflow.

Mitigation Measures: No mitigation measures are required.

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
X.	**LAND USE AND PLANNING**. Would the project:				
a.	Physically divide an established community?	☐	☐	☐	☒
b.	Conflict with applicable land use plan, policy or regulation of an agency with jurisdiction over the project (including but not limited to the general plan, specific plan, coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐
c.	Conflict with any applicable habitat conservation plan or natural community conservation plan?	☐	☐	☐	☒

Impact Analysis

a. No Impact. A significant impact may occur if the proposed project would be sufficiently large or otherwise configured in such a way as to create a physical barrier within an established community.

The project site is located in an urbanized setting within the City. The project would remove 10 existing residential units and redevelop the project site with 20 new residential units (the same land use) and is adjacent to existing multi-family residential buildings and commercial buildings. No streets or other project elements would be added that could create physical barriers. Construction activity would take place on site with the exception of such temporary lane closures on Plymouth Street as are determined necessary to allow for construction equipment to maneuver safely for delivery and hauling. The project would therefore not physically divide an established community. No impact would occur.

b. Less Than Significant Impact. A significant impact may occur if a project is inconsistent with the applicable land use plan, policy or regulation, including the zoning designations that currently apply to the project site. The project site is located within City jurisdiction and is subject to the land use designations of local land use plans and regulations of zoning ordinances. The project is consistent with the City General Plan land use designation of Commercial/Residential and the proposed use would be consistent with the project site zoning, which is R3, Residential Multiple Family and P-1, Parking, on the easternmost parcel, through the City's discretionary Planned Assembly Development (PAD) process. The PAD process is summarized in the following analysis and fully described Housing Element of the General Plan.

The project is located in the planning area of the Southern California Air Quality Management District (SCAQMD) Air Quality Management Plan (AQMP). As evaluated in Section III, Air Quality, the proposed project is consistent with the AQMP, no further analysis is required.

City of Inglewood General Plan – Land Use Element

The Land Use Element of the General Plan presents a long-range plan for the distribution and future use of land within the City. This element analyzes population, existing and future land use requirements, and proposes implementation techniques. **Table X-1**, **Project Consistency with Applicable Land Use Element Goals and Objectives** provides an analysis of project consistency with the applicable goals and objectives of the Land Use Element pertaining to residential development.

Table X-1
Project Consistency with Applicable Land Use Element Goals and Objectives

Chapter II: B. Residential	
Promote the maintenance, rehabilitation, and modernization of the City's housing stock.	**Consistent:** The project would modernize a portion of the City's housing stock through the construction of new residences.
Encourage suitable condominium development as a means of diversifying types of housing and increasing the number of residents who own property.	**Consistent:** The proposed residences would be arranged in a townhome style similar to condominium development, diversifying the types of housing available in the area and increasing the number of residents who own property.
Promote residential developments which will attract middle and upper income families who can afford the higher cost of recycled development.	**Consistent:** The project would provide single-family townhome style residences with garages and outdoor patio areas to attract middle and upper income families.
Source: City of Inglewood General Plan Land Use Element, pg. 6-7.	

As shown in Table X-1, the project would be consistent with applicable land use goals and objectives of the General Plan. The General Plan Land Use Element policy regarding residential land use states, "the best locations for residential land are those which can provide convenient living areas to commercial and industrial employment locations as well as any other existing employment centers…higher intensity uses should be located around the civic center and along major arterials thus facilitating mass transit and preventing the large traffic volume associated with multi-family housing from passing through and disrupting less intensely developed residential areas." There are existing commercial and employment locations to the east of the project site and the project would be located adjacent to N. La Brea Ave, a major arterial that facilitates mass transit and prevents large traffic volumes from disrupting less intensely developed residential areas. The Land Use Element also states "Multi-family housing should serve as a transition area between lower density residential areas and commercial or other high intensity land uses. Location of high-density housing adjacent to commercial areas and extending back from them as needed serves as a screen and puts the greatest number of customers adjacent to the commercial area." The project would increase the density of housing on the project site in a location that serves as a transition area between lower density residential areas to the west of Eucalyptus Ave. and the commercial uses on N. La Brea Ave. to the east. Therefore, the project would be consistent with the relevant goals, policies, and objectives, of the City General Plan.

Inglewood Municipal Code

The project site is zoned for residential multiple family use (R3) and parking (P-1) on the easternmost parcel. The project would be consistent with the existing zoning with approval of a Special Use Permit for a PAD and approval of a Vesting Tentative Tract Map No. 82105 for a small lot subdivision. The following except from the Housing Element of the City General Plan summarizes the PAD procedure.

> The Planned Assembly Development (PAD) procedure encourages more creative approaches to the development of land than would be possible through the strict application of zoning regulations. The PAD procedure is to be applied to sites of significant size where the opportunity exists to provide pre-planned and coordinated phases of development that would be mutually complementary when assembled together. A PAD applicant may request a greater density for a planned residential development than the density permitted by the Inglewood General Plan if the

> proposed design would result in substantially more open space, recreation facilities or other residential amenities than the minimum otherwise required for comparable residential projects developed per the zoning standards or provide affordable housing where not less than 30 percent of the additional units exceeding the General Plan density shall be affordable housing units and made affordable for at least 30 years. The PAD provides a maximum density increase of 50 percent. The PAD provisions provide greater opportunities to develop affordable multiple-family housing and increase density that would otherwise be restricted by zoning standards. A PAD project is processed under the Special Use Permit procedure.
>
> The Planning Commission has the discretion to waive or modify development standards during a Special Use Permit hearing on the Planned Assembly Development proposal.

Therefore, through the PAD procedure, the Planning Commission has the discretion to waive or modify development standards, including, but not limited to, height limitations, minimum setbacks, or minimum parking spaces, that apply to the project site under the zoning ordinance. The Setback Matrix on Vesting Tentative Tract Map No. 82105, found in Appendix B, provides the proposed setbacks. As noted in the Housing Element of the General Plan, the density allowed in the R-3 zone is 39 dwelling units per acre.[26] The Parking (P-1) zone at the eastern portion of the site allows the same R-3 density as the remainder of the site and does not impact the overall project. Based on the site of the subject property of 0.68 acres, the allowable density is 26.52 units per acre. Given the project proposes 20 units, the project would not exceed the density allowed under the existing zoning.

The project would not conflict with applicable land use plans, policy or regulations of agencies with jurisdiction over the project adopted for the purpose of avoiding or mitigating an environmental effect and the project would result in a less than significant impact.

c. No Impact. The project site is located within a developed urban setting and is not located within an adopted habitat conservation plan or natural community conservation plan. Therefore, the project would have no impact.

[26] City of Inglewood General Plan, Housing Element, 2013-2021, page 6-7.

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XI.	**MINERAL RESOURCES**. Would the project:				
a.	Would the project result in the loss of availability of a known mineral resource that would be of future value to the region and the residents of the State?	☐	☐	☐	☒
b.	Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

a-b. No Impact. A significant impact may occur if the project site is located in an area used or available for extraction of a regionally important mineral resource, or if the project development would convert an existing or future regionally important mineral extraction use to another use, or if the project development would affect access to a site used or potentially available for regionally important mineral resource extraction.

The project proposes in-fill development within an urban setting on 0.68 acres currently occupied by existing single and multi-family residential units. The project site is not designated as a locally important mineral resource recovery site as delineated on a local general plan, specific plan, or other land use plan. No mineral resources are known to exist within the project site.[27] No impacts associated with the loss of availability of a known mineral resource would occur.

Mitigation Measures: No mitigation measures are required.

[27] California Department of Conservation, CGS Information Warehouse: Mineral Land Classification, Accessed on April 12, 2018 at https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=mlc,%20accessed%20November%207,%202017.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. NOISE. Would the project result in:				
a. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☒	☐	☐
b. Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	☐	☒	☐	☐
c. A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☐	☒	☐
d. A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☒	☐	☐
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
f. For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

The following impact analysis is based on the noise and vibration calculations prepared by Envicom Corporation dated August 30, 2018, provided in **Appendix G**. The summary below describes key terms and concepts used throughout this analysis for a basic understanding of sound, noise, and noise impacts. Additional information and methodology may be found in Appendix G.

Noise is unwanted sound. Sound is mechanical energy transmitted by pressure waves through a compressible medium such as air. Sound pressure level, expressed in decibels (dB), is the most common descriptor used to characterize the loudness of sound. Although technically noise levels are sound pressure levels, these two terms are used interchangeably in the following analysis for ease of reference. A dB is a ratio of the unit of sound pressure to an assumed zero sound level. Sound can vary in intensity by over one million times within the range of human hearing so a logarithmic loudness scale, similar to the Richter Scale, is used to keep sound intensity numbers manageable. The human ear is not equally sensitive to all sound frequencies within the entire spectrum so sound pressure levels at maximum human sensitivity are factored more heavily into sound descriptions in a process called A-weighting written as dB(A). Subsequent references to decibels written as dB should be understood as A weighted dB(A).

Sound intensity decreases in proportion with the square of the distance from the source. Generally, sound pressure levels for a point source, such as construction equipment, will decrease or attenuate by 6 dBA for

each doubling of distance.[28] Because community receptors are more sensitive to unwanted noise intrusion during the evening and at night, state law requires, for planning purposes, an artificial dB increment be added to quiet time noise levels in a 24-hour noise descriptor called the Community Noise Equivalent Level (CNEL), a weighted average of noise levels over time. Similarly, Leq is an average of sound levels that vary over time, resulting in a single decibel value that accounts for the total sound energy over a given time period, such as fifteen minutes or an hour.

a. Potentially Significant Impact Unless Mitigation Incorporated. A project may have a significant impact if project-generated noise would exceed standards set forth in the Noise Element of the City General Plan or Noise Ordinance. The standards in the Noise Element are 24-hour operational noise thresholds used to assess compatibility of land uses from a long-term planning perspective while the standards in the Noise Ordinance regulate point noise sources such as construction equipment. Therefore, the following analysis evaluates whether project-generated noise would exceed Municipal Code standards during construction and whether project-generated noise would exceed land use compatibility standards in the Noise Element during operations.

Construction Noise Impacts

Municipal Code Section 5-41 regulates noise generated by the construction of buildings or projects. To paraphrase, this section prohibits people within a residential zone, or within a 500-ft. radius therefrom, from performing any outside construction work on buildings, structures, or projects or operating any construction equipment between the hours of 8:00 p.m. and 7:00 a.m. the next day in such a manner that a reasonable person residing in the area is caused discomfort or annoyance. Exceptions require a permit to be obtained beforehand from the City Permits and Licenses Committee. Given the language of Section 5-41 prohibits the operation of construction equipment between the hours of 8:00 p.m. and 7:00 a.m., one may reasonably infer Section 5-41 allows for the operation of construction equipment between the hours of 7:00 a.m. and 8:00 p.m. In compliance with this regulatory requirement, project construction would take place within daytime hours of 7:00 a.m. and 8:00 p.m.

As defined in Chapter Five of the Noise Element, noise sensitive receptors include residential development, public and private educational facilities, churches, and hospitals. Based on the 500-ft. radius from residential zones established by Municipal Code Section 5-41, noise sensitive receptors within 500 ft.[29] of the project site include the following:

- Multi-family residences adjacent to the north and west property line of the project site (5 ft.);
- Single and multi-family residences across Plymouth Street south of the project site (50 ft.);
- Single- and multi-family residences to the west along Eucalyptus Ave located (100 ft.); and
- A school (Wilder's preparatory academy) located to the east of the project site across N. La Brea Ave (300 ft).

These noise sensitive receptors represent the nearest locations with the potential to be impacted by project construction. Construction activity would result in the loudest noise at sensitive land uses with a direct line-of-sight to the surface elevation of the project site. The first row of buildings immediately surrounding the project site would act as a noise barrier to other sensitive receptors located beyond these buildings but within a 500-foot radius of the project site. Therefore, the following analysis considers

[28] U.S. Department of Transportation, Federal Highway Administration, Highway Traffic Noise Analysis and Abatement Policy and Guidance, Noise Fundamentals, https://www.fhwa.dot.gov/environMent/noise/regulations_and_guidance/polguide/polguide 02.cfm (accessed August 28, 2018).

[29] Measurements are from the nearest point on the subject property line.

construction noise levels for receptors at the four previously-mentioned noise-sensitive locations closest to the project site with a direct line-of-sight to project site.

Temporary construction noise levels would fluctuate depending on the construction phase, the type of equipment in use, the duration of use, the distance between the source and receptor, and presence or absence of noise attenuation barriers. Typical noise levels from various types of equipment that may be used during construction are listed in **Table XII-1 Construction Equipment Noise Levels**. Because construction equipment does not operate constantly at full power during a typical eight-hour workday, maximum instantaneous noise levels, expressed as Lmax, can be averaged using an acoustical usage factor to determine an hourly average noise level expressed as Leq. Table XII-1 provides these hourly average noise levels (Leq) at distances of 50 ft. from the noise source for the types of equipment anticipated for project construction.

Table XII-1
Construction Equipment Noise Levels

Auger drilling rig	84	20%	77	80
Backhoe	78	40%	74	77
Chain saw	84	20%	77	80

Dozer	82	40%	78	81
Grader	85	40%	81	84
Excavator	81	40%	77	80
Loader	79	40%	75	78
Pump	81	50%	78	81
Water truck	76	40%	72	75

[1] Estimates the portion of time each piece of equipment is operating at full power during construction
[2] Data Source: Federal Highway Administration, Construction Noise Handbook, Chapter 9, Construction Equipment Noise Levels and Ranges, Final Report, August 2006, accessed August 28, 2018.
[3] Calculation by Envicom Corporation based on an eight-hour work day, see Appendix G.
[4] Two pieces of the same type of construction equipment operating simultaneously in the same location.

As shown in Table XII-1, the equipment that could generate the highest noise level is a grader, with an Leq of 81 dB at 50 feet from the source. The column labeled "Combined Leq" provides the Leq resulting from the multiple pieces of equipment operating simultaneously. Given that decibels are in logarithmic units, sound levels cannot be added by ordinary arithmetic means. The sound pressure level from two equal sources is 3 dB greater than the sound pressure level of just one source.[30] Therefore, as shown in the Combined Leq column in Table XII-1, two graders producing 81 dB each would combine to produce 84 dB, not 162 dB. With respect to the small, 0.68-acre project site, the simultaneous use of two graders, is unlikely but presented as a worst-case scenario. **Table XII-2, Outdoor Construction Noise Levels at Nearest Receptors** presents the estimated noise levels at the sensitive receptors nearest the project site with a reduction due to spreading loss, the fall-off or attenuation in sound pressure level due to distance from the source.

[30] U.S. Department of Transportation, Federal Highway Administration, Highway Traffic Noise Analysis and Abatement Policy and Guidance, Noise Fundamentals, https://www.fhwa.dot.gov/environMent/noise/regulations_and_guidance/polguide/polguide 02.cfm (accessed August 28, 2018).

Source: Federal Highway Administration, Construction Noise Handbook, 2006, Chapter 9, Construction Equipment Noise Levels and Ranges. [a] Calculations by Envicom Corporation, April 25, 2018, Appendix G.		

As shown in Table XII-2, in a worst-case scenario with the loudest piece of construction equipment operating at the edge of the project site line in closest proximity to the nearest adjacent residence, the maximum noise level would be 101 dB and would be subject to compliance with the hours allowed by Municipal Code Section 5-41. Two graders producing 101 dB each would combine to produce 104 dB in a worst-case scenario. Due to the types of construction equipment needed, the early phases of construction (demolition, grading, and structural framing) are the most intense in terms of noise generation. During framing and vertical construction, noise sources would be elevated above ground level. However, the majority of the latter phases of construction would be closer to the center of the construction site or within the newly constructed building and would result in less noise than exterior construction.

In addition to on-site construction activities, noise would be generated off site by construction-related trucks and worker vehicles travelling to and from the project site. Trucks associated with construction activity would incrementally increase noise levels along the haul route. Change in sound pressure level of 3 dB may be noticed by individuals extremely sensitive to changes in noise; however, changes are not readily noticeable until 5 dB or more. A doubling of sound wave energy, such as doubling the volume of traffic on a roadway, results in a 3 dB increase in sound, a barely perceptible change in sound pressure level. Given that up to 41 haul truck trips per day are anticipated at the time of peak soil export activity and that existing average daily traffic (ADT) volumes on La Brea Ave., between Centinela Ave. and Hyde Park Blvd., are over 33,198 trips[31], haul truck trips would not double the existing traffic volume and are not anticipated to substantially increase off-site noise. Truck trips would be limited daytime hours when adjacent residences are less likely to be occupied. Therefore, the project would result in a less than significant impact related to noise generated by off-site construction-related truck trips.

Although project construction would result in short-term noise increases, the construction equipment would comply with Municipal Code Section 5-41 by operating between 7:00 a.m. and 8:00 p.m. To reduce the impact of construction noise on nearby sensitive receptors, the project would also implement mitigation measures NOI-1 through NOI-5. Mitigation measure NOI-1 requires compliance with Municipal Code Section 5-41 allowing construction activity between 7:00 a.m. and 8:00 p.m. Mitigation measures NOI-2 and NOI-3 require the use of properly operating mufflers and locating construction

[31] City of Inglewood, Department of Public Works, 2017 ADT provided by Peter Puglese, City Traffic Engineer, to Envicom Corporation August 31, 2018.

staging areas as far as possible from sensitive uses near the project's northern and western boundary. Mitigation measure NOI-4 requires temporary noise control barriers, sound curtains, or noise reduction devices installed along the northern and western property line to reduce construction-related noise by an estimated 10 dB for ground-level receptors with no line-of-site to construction activity. Mitigation measure NOI-5 requires the establishment of a noise disturbance coordinator.

As the source of construction noise becomes elevated during vertical construction of the building, noise becomes more difficult to reduce through the use of barriers or sound curtains installed at ground level around the property line. A noise control barrier or reduction device of 16 feet in height would provide a noise reduction benefit to sensitive receptors for construction occurring on the second level of the building. Although the noise control barrier would not provide significant noise reductions for construction activities associated with the third level of the building, typically construction at these stages would not include the use of heavy pieces of equipment such as graders that generate loud noise levels. Implementation of mitigation measures NOI-1 through NOI-5 would reduce impacts related to on-site construction noise to less than significant.

Operational Noise Impacts

According to the Noise Element, the ambient noise level near the project site is 69.8 Leq dB.[32] The project would introduce stationary and mobile noise sources to the existing noise environment. Stationary operational noise sources would consist of the proposed roof-mounted Heating, Ventilation, and Air Conditioning (HVAC) units, pool equipment, and the children's play area in the northeastern portion of the project site. Mobile noise sources would consist of vehicles entering and exiting the semi-subterranean parking level.

Regarding stationary noise sources, the proposed HVAC units would be required to comply with the City's noise ordinance standards. Municipal Code Section 5-39 regulates machinery, equipment, fans, and air conditioning units. This section states it is unlawful for any person to operate any such machinery or similar mechanical device in any manner that would cause the noise level at the property line of any property to exceed the ambient noise base level by 5 dBA. As depicted on Sheet A-5 of the architectural plans provided in Appendix A, HVAC equipment would be screened, resulting in a reduced operational noise level due to insertion loss. Estimated HVAC equipment noise levels accounting for the insertion loss of the screen and spreading loss over distance are provided in **Table XII-3, Estimated HVAC Operational Noise**.

As shown in Table XII-3, the proposed rooftop HVAC equipment would not exceed the ambient noise level on the premises of other occupied properties by more than 5 dBA in compliance with Municipal Code Section 5-39. As shown on Architectural Plan Sheet A-6, the proposed pool equipment would be located in an enclosed room in the basement level of the building with solid walls that would block the sound of operation, therefore, the operational the pool equipment would not exceed the ambient noise level by 5 dBA in compliance with Municipal Code Section 5-39.

[2] Applies an insertion loss of 5 dB to account for the HVAC screening shown in the project Architectural Plans, Sheet A-5. Attenuation Calculations and reference sound level measurement provided in Appendix G.
[3] City of Inglewood General Plan, Noise Element, Exhibit A10, Site #8, Centinela at Market Street pg. 76
[4] Addition Calculations provided in Appendix G.

In terms of new stationary noise sources, the proposed children's play area in the northeast corner of the project site and the pool in the north-central area of the project site would be new sources of operational noise. The children's play area would be surrounded on three sides by either existing concrete walls on the back of commercial buildings or the proposed project residences. Sensitive receptors in the immediate vicinity of this proposed feature are limited to the multi-family residential building at 914 N. Eucalyptus Ave, with east-facing balconies overhanging N. Lamos Street approximately 13 feet from the western edge of the proposed children's plan area. Section 5-30 of the Municipal Code specifies that no residential property shall produce a noise level that exceeds the base exterior ambient noise level for more than 30 minutes within any one-hour time period. Given that playground noise takes place at irregular intervals of sporadic duration, such as the short sound of a child yelling or laughing, playground noise would not be expected to exceed the base exterior ambient noise level for more than 30 minutes within any one-hour time period once the play area is operational. As a worst-case scenario for purposes of analysis, using a reference noise measurement of 60 dBA at a distance of 40 ft. for 30 children at a playground,[33] more than expected to use the proposed children's play area at one time, the addition of the proposed children's play area noise to the existing ambient noise level of 69.8 dB would result in a noise level of 72.8 dB at the east-facing private balconies on the nearest sensitive receptor as calculated in Appendix G. Federal guidelines define sound level changes of 3 dB as "barely perceptible," changes are not "readily perceptible" until they reach 5 dB or more.[34] Therefore, increases in operational noise resulting from the proposed children's play area would not exceed noise standards or result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project.

[33] Edward L. Pack Associates. Inc., Acoustical Consultants, Noise Assessment Study for Rocketship School, San Jose, July 26, 2013. Study involved noise measurements for 30 children, ages 5-6, at a distance of 40 ft. from the play area.
[34] U.S. Federal Highway Administration, Highway Traffic Noise Analysis and Abatement Policy and Guidance, Table 3: Decibel Changes, Loudness, and Energy Loss, https://www.fhwa.dot.gov/environMent/noise/regulations_and_guidance/polguide/polguide02.cfm (accessed September 13, 2018).

Noises from the proposed pool area, such as splashing, swimming, and conversation, would be comparable to the proposed children's play area and would be surrounded to the west and east by the proposed residential buildings and the south by the proposed semi-subterranean parking driveway. As shown in Figure 3-2, the south-facing exterior of the existing multi-family residential building adjacent to the northern boundary of the project site (914 N. Eucalyptus Avenue) does not feature private balconies that would face the proposed pool area, thereby reducing potential noise exposure.

The Noise Element identifies an exterior noise standard of 65 CNEL for limited outdoor environments therein defined that include multi-family private balconies served by a means of exit from inside.[35] As noted, CNEL is a weighted *average* of noise levels over time, namely, a 24-hour period, with a 5 dB reduction added during the late evening hours of 7:00 p.m. to 10:00 p.m. CNEL also adds a 10 dB reduction for the nighttime hours of 10:00 p.m. to 7:00 a.m., times when the children's play area are not expected to be in operation. By factoring in the base ambient noise levels for residential land uses from Municipal Code Section 5-30, 55 dBA and 45 dBA Leq for daytime and nighttime hours, respectively, and assuming the children's play area is in full operation for five hours a day during the daytime, the resulting noise level would be 63.7 dB CNEL at the east-facing private balconies on the nearest sensitive receptors (i.e., east-facing balconies of multi-family residences at 914 N. Eucalyptus Ave). An operational noise level of 63.7 dB CNEL would be below the Noise Element exterior noise standard of 65 dB CNEL for limited outdoor environments. Therefore, the proposed stationary noise sources would not exceed noise standards established in the local general plan or noise ordinance.

Regarding mobile noise sources, doubling the volume of traffic on a roadway would result in a 3 dB increase.[36] As noted, changes of 3 dB may be noticed by individuals extremely sensitive to changes in noise. For the purpose of this analysis, an increase exceeding 3 dB is considered as a threshold of significance for mobile operational noise sources. Based on the project's traffic analysis provided in response to Checklist Question XVI. Transportation and Circulation, the project would generate a total of 44 net new daily vehicle trips. Given that existing daily ADT on La Brea Ave. is 33,198 trips[37], this project-generated net increase in vehicle trips would not increase noise levels by 3 dB above existing levels, the point at which increases become perceptible. Therefore, the project increase in operational noise from mobile sources would not exceed 3 dB and the impact would be less than significant.

Mitigation Measures

NOI-1 On-site noise generating construction and demolition activities shall be restricted to the hours of 7:00 a.m. to 8:00 p.m. Exceptions require that a permit be obtained beforehand from the Permits and Licenses Committee of the City.

NOI-2 The construction contractor shall ensure that all powered construction equipment shall be equipped with appropriate mufflers. The construction contractor shall ensure that all equipment is properly maintained to prevent additional noise due to worn or improperly maintained parts. The construction contractor shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than metal-tracked equipment), wherever possible.

NOI-3 The construction contractor shall locate construction staging areas as far as possible from

[35] City of Inglewood, Noise Element, Exhibit 7, Interior and Exterior Noise Standards.
[36] California Department of Transportation, Technical Noise Supplement to the Traffic Noise Analysis Protocol, September 2013, pg. 2-15.
[37] City of Inglewood, Department of Public Works, 2017 ADT provided by Peter Puglese, City Traffic Engineer, to Envicom Corporation August 31, 2018.

sensitive uses near the project's northern and western boundary.

NOI-4 The applicant shall install a temporary noise control barrier, sound curtain, or other noise control method acceptable to the Planning Manager along the northern and western property line. If a barrier is selected, the barrier shall be at least 16 feet high to block the line-of-sight to adjacent noise-sensitive land uses from equipment operating near the property line. The noise control barrier or sound curtain shall be engineered to reduce construction-related noise by at least 10 decibels for ground-level receptors adjacent to construction activity. The noise control barrier or sound curtain shall be engineered according applicable codes and shall remain in place until windows are installed on the proposed building.

NOI-5 The construction contractor shall establish a noise disturbance coordinator. The noise disturbance coordinator shall be responsible for responding to any local complaints about construction noise. The noise disturbance coordinator shall determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and shall be required to implement reasonable corrective measures such that the complaint is resolved. Notices sent to residential units within 500 feet of the construction site and all signs posted at the construction site shall list the telephone number for the noise disturbance coordinator.

b. Potentially Significant Impact Unless Mitigation Incorporated. A significant noise impact may occur if the proposed project would expose people to or generate excessive groundborne vibration or groundborne noise levels.

Construction Groundborne Vibration

Construction activities generate groundborne vibration when heavy equipment travels over unpaved surfaces or is engaged in soil movement. The effects of ground-borne vibration may include discernable movement of building floors, rattling of windows, shaking of items on shelves or hanging on walls, and rumbling sounds. Groundborne vibration is quickly damped out within the softer sedimentary surfaces of much of southern California. Because vibration is typically not an issue, few jurisdictions have adopted vibration significance thresholds. Vibration thresholds have been adopted for major public works projects, but these relate more to structural protection (cracking foundations or stucco) rather than to human annoyance. A vibration descriptor commonly used to determine structural damage is the peak particle velocity (PPV), the maximum instantaneous positive or negative peak of the vibration signal, usually measured in inches per second (in/sec). Human responses to groundborne vibration become "strongly perceptible" at or above a PPV of 0.9 in/sec for transient sources and 0.1 in/sec for intermittent sources, such as vibratory compaction equipment.[38] Construction-related vibration is an intermittent annoyance; therefore, the following focuses on the potential for groundborne vibration to result in structural damage.

The City does not have a significance threshold for vibration impacts, therefore this analysis relies on industry-standard federal guidelines. Based on Federal Transit Administration criteria, thresholds for construction vibration damage are 0.3 PPV (in/sec) for engineered concrete and masonry buildings and 0.2 PPV (in/sec) for non-engineered timber and masonry buildings. For a worst-case analysis, the on-site equipment used in construction of the project that could create the maximum potential vibration is a large bulldozer. The closest sensitive land uses adjacent to the project boundary include multi-family residential buildings set back approximately five feet from the northern and western property boundary. The construction ground-borne vibration levels for the impact of a large bulldozer on these receptors is provided in **Table XII-4, Construction Groundborne Vibration Levels**. An existing commercial building is located adjacent to the eastern project boundary as well, although commercial uses are not considered sensitive to noise and groundborne vibration impacts.

[38] Caltrans Transportation and Construction Vibration Guidance Manual, 2013.

Table XII-4
Construction Groundborne Vibration Levels

Multi-family residences adjacent to the western and northern project site boundary	5 ft	0.995
Single and multi-family residences to the south across Plymouth Street	50 ft	0.031
Single- and multi-family residences to the west along Eucalyptus Ave	100 ft	0.011
Wilder's Preparatory Academy	270 ft	0.003
Data Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment, Groundborne vibration calculations provided in Appendix G.		

As shown in Table XII-4, at five feet, groundborne vibration levels would be 0.995 in/sec for a large bulldozer, this would exceed Vibration Damage Potential Threshold Criteria of 0.2 in/sec for non-engineered timber and masonry buildings. At a distance of 50 feet and beyond, the predicted vibration levels generated by this construction equipment would be 0.031 PPV for a large bull dozer, well below levels that could damage in non-engineered timber and masonry buildings (i.e., 0.2 in/sec). To ensure the adjacent structures would not be irreparably damaged by construction-related vibration, mitigation measure **NOI-6** requires a structural engineer to survey adjacent building foundations for structural integrity before, during, and after construction. Implementation of mitigation measure NOI-6 would reduce the project construction vibration impacts to adjacent buildings to less than significant.

Regarding annoyance/disruption, land uses particularly sensitive to vibration annoyance during daytime construction hours include, but are not limited to, hospitals, schools, museums, concert halls, television studios, recording studios, auditoriums, theaters, and research facilities with sensitive equipment (e.g., microscopes). No uses particularly sensitive to vibration annoyance during daytime hours were identified in the immediate vicinity of the project site. As shown in Table XII-4, groundborne vibration levels at Wilder's Preparatory Academy, 0.003 in/sec, were well below the criteria for a strongly perceptible human response of 0.1 in/sec for intermittent sources. Therefore, impacts during daytime construction hours to groundborne vibration sensitive uses would be less than significant.

Operational Groundborne Vibration

The residential project would not propose stationary sources of ground-borne vibration, such as heavy equipment operations. Operational ground-borne vibration in the project vicinity is generated by vehicular travel on the local roadways. The proposed project would add very minimally to traffic on area roadways. The Federal Transit Administration Transit Noise and Vibration Impact Assessment guidance document states that vibration from rubber-tired vehicles is rarely perceptible, except under poor road conditions. Roadways near the project site are well maintained, and vibration generated by project-related traffic would not be perceptible by sensitive receptors. Therefore, the project would result in a less than significant impact related to operational groundborne vibration.

Mitigation Measures:

NOI-6 Groundborne Vibration (Construction)

Prior to issuance of a grading or shoring permit, a qualified structural engineer shall survey the existing foundation and structural integrity of adjacent structures including the adjacent multi-

family residences to the north and west, subject to property owner granting access to conduct the survey, and shall submit a pre-construction survey letter establishing baseline conditions at these buildings to the lead agency and to the mitigation monitor. At the conclusion of vibration causing activities, and prior to the issuance of any temporary or permanent certificate of occupancy for the project building, the qualified structural engineer shall issue a subsequent letter describing damage, if any, to the adjacent structures. The letter shall identify recommendations for any repairs and certify the completion of any repairs as necessary to confirm the integrity of the foundation and structure of the adjacent structures.

c. Less Than Significant Impact. A significant noise impact may occur if the proposed project would result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project. Under ambient conditions, people generally do not perceive that a noise level has clearly changed until there is a 3 dB difference. Because of this, an increase of 3 dB is commonly used to define "substantial increase" for the purpose of determining noise impacts for projects when the existing noise environment already exceeds the City's standards for noise-sensitive land uses. Therefore, an increase of +3 dBA CNEL in traffic noise would be considered a significant impact if the total noise level also exceeds the City's exterior noise threshold of 65 dB CNEL for areas with noise-sensitive land uses. As discussed above in response to checklist question XII.a., the project would not exceed applicable City thresholds for operational noise. Therefore, the project would not result in a substantial permanent increase in ambient noise levels in the project vicinity and the impact would be less than significant.

Mitigation Measures: No mitigation measures are required.

d. Potentially Significant Impact Unless Mitigation Incorporated. A significant noise impact may occur if the proposed project would result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project. As discussed in response to checklist question XIIa, due to construction activity, the project would result in temporary increases in ambient noise levels in the project vicinity above levels existing without the project. Through compliance with the hours of construction identified in Municipal Code Section 5-41 and implementation of mitigation measures NOI-1 through NOI-5, temporary construction noise impacts would be reduced to less than significant.

Mitigation Measures: NOI-1 through NOI-5 shall apply.

e and f. No impact. A significant noise impact may occur if projects located within an airport land use plan or within two miles of a public airport, or within the vicinity of a private airstrip, would expose people residing or working in the project area to excessive noise levels. The project is neither located within an airport land use plan, within the vicinity of a private airstrip, nor within two miles of a public use airport. The airport closest to the project site is the Los Angeles International (LAX) airport located approximately 2.5 miles to the southwest. The project would have no impact on airport noise.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII. POPULATION AND HOUSING. Would the project:				
a. Would the project induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b. Would the project displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☒	☐
c. Would the project displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	☐	☐	☒	☐

a. Less Than Significant Impact. A significant impact may occur if a project would locate new development such as homes, businesses, or infrastructure, with the effect of substantially inducing growth in the proposed area that would otherwise not have occurred as rapidly or in as great a magnitude.

The project would include the demolition of 11 existing residences and construction of 20 townhome style residences of varying sizes totaling 52,616.2 square feet and including 3 bedrooms and 3.5 bathrooms. The proposed project would not require a change in the zoning of Residential Multiple Family (R-3). Based on the most recent census data for the City, the citywide average household size for owner-occupied units is 3.22 persons per household and the construction of the proposed project's 20 residential dwelling units would result in a gross increase of 64 people.[39] As the project would result in the removal of 11 existing residential units with an estimated population of 32 people, the project would reasonably be expected to result in a net increase of 32 people.

According to the census data for the City, the estimated population within Inglewood is 110,654 people as of 2016; therefore, the estimated net increase of 32 people the project would provide housing for would represent approximately 0.02 percent of the estimated population of the City. Additionally, the Southern California Association of Governments forecasts that from 2012 to 2040 population and housing would increase by 18,100 and 6,800, respectively[40] as shown in **Table XIII-1, City of Inglewood Population and Housing Growth Forecast.**

[39] United States Census Bureau, 2012-2016 American Community Survey 5-Year Estimates, Selected Housing Characteristics for Inglewood, CA, Accessed on April 17, 2018 at: https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?src=CF.

[40] Southern California Association of Governments, 2016-2040 RTP/SCS, Appendix Current Context Demographics and Growth Forecast, Adopted April 2016, Accessed on April 17, 2018 at http://scagrtpscs.net/Documents/2016/final/f2016RTPSCS_DemographicsGrowthForecast.pdf.

Table XIII-1
City of Inglewood Population and Housing Growth Forecast

2012	110,900	36,600
2040	129,000	43,400
Net Growth	18,100	6,800
Source: Southern California Association of Governments, 2016-2040 RTP/SCS		

The proposed project would represent a fraction of one percent (approximately 0.2 and 0.5 percent, respectively) of the projected citywide population and housing increases for the period from 2012 to 2040. As such, the project would fall within population projections and would not cause growth that exceeds projected/planned levels for the year of occupancy/buildout resulting in an adverse physical change in the environment. Further, the proposed project would be consistent with the number of units allowed by current City General Plan designation and Zoning, which are aligned with the City's population projections. Additionally, the project would not involve the extension of roads or other infrastructure that would indirectly induce substantial population growth in the region. Therefore, the potential impacts associated with population growth would be less than significant.

Mitigation Measures: No mitigation measures are required.

b-c. Less Than Significant Impact. A significant impact may occur if a project would result in the displacement of existing housing units or people, necessitating the construction of replacement housing elsewhere. The project proposes to demolish ten existing residences and garages, and construct twenty residences of varying sizes, each with three stories above a basement, and ancillary features. Although the project would remove ten existing homes/garages and temporarily displace the estimated 32 residents currently occupying the existing site, the project would create additional housing for a total estimated 64 residents. The project would provide more housing than is currently available at the existing site. It would displace up to approximately 32 people by removing the existing 10 existing residences, which does not constitute the displacement of a substantial number of people or existing housing. Furthermore, the project would add to a net ten dwelling units to the City housing stock. Therefore, the project would have a less than significant impact.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV. PUBLIC SERVICES. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
a. Fire protection?	☐	☐	☒	☐
b. Police protection?	☐	☐	☒	☐
c. Schools?	☐	☐	☒	☐
d. Parks?	☐	☐	☒	☐
e. Other public facilities?	☐	☐	☒	☐

a. Less Than Significant Impact. The proposed project would have a potentially significant impact if it would result in a substantial adverse physical impact associated with the provision of new or physically altered fire facilities or the need for new or physically altered fire facilities, the construction of which could cause significant environmental impacts, to maintain acceptable service ratios, response times, or other performance objectives for fire services. The City contracts fire services with the County of Los Angeles Fire Department, which includes three fire stations that serve the area. Fire Station 171, located at 141 W. Regent Street, is the Bureau and Battalion 20 Headquarters. Station 170, located at 10701 S Crenshaw, and Station 173, located at 9001 S. Crenshaw, also serve the City.[41] The nearest fire station to the proposed project site is Station 171, located approximately 0.9 driving miles to the south.

As the proposed project anticipates a net growth of ten residences and 32 residents, it is not anticipated that there would be a need to expand existing fire services or build a new station to maintain acceptable service ratios, response times, or other performance objectives. As noted in the project architectural plans, dated March 2018, the project design features include a full sprinkler system, a fire alarm system, fire extinguisher, and the project construction shall not restrict a five-foot clear and unobstructed access to any water or power distribution facilities. The project would be required to submit these plans to County of LA Fire Department for review and approval of fire prevention and safety features prior to installation.

Based on the close proximity of fire stations that serve the City and required compliance with County of Los Angeles code regarding site plan review requirements, the project would not require new construction or expansion of existing fire stations, and potential impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

b. Less Than Significant Impact. The proposed project would have a potentially significant impact if it would result in a substantial adverse physical impact associated with the provision of new or physically altered police protection facilities or the need for new or physically altered police protection

[41] City of Inglewood, Fire Services, Accessed on April 17, 2018 at https://www.cityofinglewood.org/508/Fire-Services.

facilities, the construction of which could cause significant environmental impacts, to maintain acceptable service ratios, response times, or other performance objectives for police protection services. The project site is served by the Inglewood Police Department, located at 1 Manchester Boulevard and approximately 1.1 driving miles from the project site. The project site and surrounding area is served by the Inglewood Police Department Beat 1[42], and currently employs 186 sworn personnel and 92 civilian support personnel.[43]

Construction

During construction, the project site could potentially attract trespassers and/or vandals that could result in unsafe conditions for the public. Due to the temporary nature of project construction, such potential impacts would not require the construction or expansion of police facilities to serve the project site or maintain service response times. The project would be required to limit access to the project site during construction to address potential trespass on the project site. Construction impacts associated with police services would be less than significant. Inglewood Municipal Code 12-93 requires temporary fencing to ensure the project site would be secure during construction activities.

Operation

The project would demolish ten existing residential units and construct twenty new residential units, resulting in the net increase of 32 residents. As this is a less than significant addition of people to the City (see Section XIII, Population and Housing), it would not result in a substantial increase in the service area's population such that new of physically altered police facilities would be needed to maintain current response times. Police units are most often in a mobile state and the nearest police unit would respond to service calls made within the area. The project would provide electronically controlled gates, closed circuit cameras with light motion sensors, and card reader access doors for safety and security purposes.[44] Additionally, the applicant would be required to submit site plans to Inglewood Police Department for review and approval prior to project build out. Therefore, potential impacts would be less than significant.

Mitigation Measures: No mitigation measures would be required.

c. Less Than Significant Impact. A significant impact would occur if the Project would create a substantial employment or population growth, which could generate a demand for school facilities that would exceed the capacity of the school district, necessitating a new school or physical alteration of an existing school, the construction of which would cause a significant environmental impact. The project site is located within the Inglewood Unified School District (IUSD) and served by the following schools: Highland Elementary School (K-6), George W. Crozier Middle School (7-8), and Inglewood High School (9-12).[45]

As analyzed above in Section XIII, the project would not result in a significant population increase as a result of the project. The IUSD reports that most of the schools in Inglewood are operating below capacity. During the 2012-2013 school year, there were 14,208 students enrolled with a total available capacity within the district of 19,176 students, meaning the district was operating at approximately 74% capacity.[46] As the proposed project is reasonably anticipated to result in a net increase of 32 new

[46] City of Inglewood General Plan, Housing Element, 4-Potential Housing Constraints, Schools, 2012-2013, Accessed on April 18, 2018 at https://www.cityofinglewood.org/DocumentCenter/View/127.

residents, this would not generate a demand for school facilities that would exceed the capacity of the school district. Additionally, in accordance with Senate Bill 50 (SB 50), the applicant would be required to pay mandatory developer fees to offset the proposed project's demands upon local schools. Pursuant to Government Code Section 65995, the development fees authorized by SB 50 are deemed to be "full and complete school facilities mitigation."[47] Therefore, project impacts would be less than significant.

Mitigation Measures: No mitigation measures would be required.

d. Less Than Significant Impact. A significant impact would occur if the recreation and park services available could not accommodate the projected population increase resulting from implementation of a project or if the proposed project resulted in the construction of new recreation and park facilities that create significant direct or indirect impacts to the environment.

The City of Inglewood Department of Recreation and Parks provides park and recreation facilities at multiple locations nearby the project site, including Rogers Park and Ashwood Park, that provide a variety of recreation opportunities at the various locations. The project would provide on-site recreation amenities for use by future residents, which would reduce the project's demand for off-site recreation services within the local area. The proposed project would include features such as a pool area, play area with proposed playground equipment, and an outdoor rooftop garden area with a barbeque. Additionally, pursuant to the Quimby Act, the project would be required to pay fees, which would be dedicated to acquire new parkland or purchase capital improvements at existing park. The net increase of 32 residents is a less than significant increase in population and within the population projections of the City. Therefore, the project would not create park capacity issues and would not negatively impact park facilities within the City, resulting in a less than significant project impact.

Mitigation Measures: No mitigation measures are required.

e. Less Than Significant Impact. A significant impact would occur if the project would result in substantial employment or population growth that could generate a demand for other public service facilities, such as libraries, which exceed the capacity available to serve the project site, necessitating new or physically altered public facilities, the construction of which would cause significant environmental impacts.

The project is not anticipated to have a significant effect on other public service facilities in the vicinity, such as library services. The Inglewood Public Library main facility is located at 101 W. Manchester Boulevard, approximately 1.0 driving miles from the project site. The Crenshaw Imperial Branch Library is located at 11141 Crenshaw Boulevard, approximately 4.5 driving miles from the project site. The addition of 20 new residential units that would generate a net increase of 32 potential library patrons within the City would not be expected to generate a volume of demand on existing library services that would necessitate construction of new or expanded library facilities to continue to serve the public. As such, potential impacts on other public services would be less than significant.

Mitigation Measures: No mitigation measures are required.

[47] Senate Bill 50, August 27, 1998, p.87.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XV. RECREATION.				
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	☐	☐	☐	☒

a. Less Than Significant Impact. A significant impact may occur if a project includes substantial employment or population growth, which would increase the use of neighborhood and regional parks or other recreational facilities, causing or accelerating substantial physical deterioration of the facility.

The City Parks, Recreation, and Library Services Department provides parks and recreation facilities at multiple locations near the project site, including Rogers Park, 0.5 mile south of the project site, and Ashwood Park, 1.6 miles south of the project site that provide a variety of recreation opportunities at the various locations, including children's play areas, picnic areas, historic areas, walking paths, fields, baseball fields, basketball courts, and a wading pool.[48] As stated in Section 3.0, Project Description, the project would add an estimated net increase of 32 people to the existing City population of 110,654[49], a minimal increase that would not significantly affect the use of existing parks. The project would provide on-site recreation amenities for use by future residents, which would reduce the project's demand for off-site recreation services within the local area. The proposed project would include features such as a pool area, play area with proposed playground equipment, and an outdoor rooftop garden area with a barbeque.

Additionally, pursuant to the Quimby Act, the project would be required to pay applicable impact fees for acquiring new parkland or the purchase of capital improvements at existing parks. The project's net population increase would not result in substantial deterioration of physical facilities of local park and recreation facilities and impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

b. No Impact. A significant impact may occur if a project includes the construction or expansion of park facilities and such construction would have a significant adverse effect on the environment. As discussed in section XV a., above, the project would provide some common area facilities on site. The project does not propose to construct or expand park facilities that would have an adverse effect on the environment. Therefore, the project would have no impact regarding this issue.

Mitigation Measures: No mitigation measures are required.

XVI. TRANSPORTATION/CIRCULATION. Would the project:				
a. Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	☐	☐	☒	☐
b. Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	☐	☐	☒	☐
c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	☐	☐	☐	☒
d. Substantially increase hazards to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
e. Result in inadequate emergency access?	☐	☐	☒	☐
f. Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?	☐	☐	☒	☐

a. Less Than Significant Impact. A significant impact may occur if the project would conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, accounting for all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.

A trip generation forecast was prepared for the proposed project utilizing trip rates provided in the Trip Generation manual published by the Institute of Transportation Engineers (ITE). The forecast was prepared for a typical weekday during the morning (AM) commuter peak hour and afternoon (PM) commuter peak hour. A trip forecast was also prepared to estimate the number of trips generated over a 24-hour period on a weekday. The trip generation forecast for the proposed project is provided in **Table XVI-1, Project Trip Generation**.

Table XVI-1

NET PROJECT TRIPS		**44**	**-1**	**4**	**3**	**3**	**0**	**3**

[1] Source: ITE "Trip Generation", 9th Edition, 2012.
[2] Trips are one-way traffic movements, entering or leaving.
[3] ITE Land Use Code 230 (Residential Condo/Townhouse) trip generation average rates
- Daily Trip Rate: 5.81 trips/dwelling units; 50% inbound/50% outbound
- AM Peak Hour Trip Rate: 0.44 trips/dwelling unit; 10% inbound/90% outbound
- PM Peak Hour Trip Rate: 0.52 trips/dwelling unit; 70% inbound/30% outbound

[4] ITE Land Use Code 210 (Single Family Detached) trip generation average rates
- Daily Trip Rate: 9.52 trips/dwelling units; 50% inbound/50% outbound
- AM Peak Hour Trip Rate: 0.75 trips/dwelling unit; 50% inbound/50% outbound
- PM Peak Hour Trip Rate: 1.00 trips/dwelling unit; 70% inbound/30% outbound

[5] ITE Land Use Code 220 (Apartments) trip generation average rates
- Daily Trip Rate: 6.65 trips/dwelling units; 50% inbound/50% outbound
- AM Peak Hour Trip Rate: 0.55 trips/dwelling unit; 30% inbound/70% outbound
- PM Peak Hour Trip Rate: 0.74 trips/dwelling unit; 60% inbound/40% outbound

There are both single-family residential and multi-family residential units that comprise the existing project site, and ITE Land Use Code 210 (Single Family Detached) and Land Use Code 220 (Apartments) were utilized. For the proposed condominiums, ITE Land Use Code 230 (Residential Condo/Townhouse) was utilized. Both existing and proposed trip rates were based on trips per dwelling unit (DU). The estimated trips for the existing single family/multi-family residential units were subtracted from the forecast trips for the proposed condos to determine the number of new vehicle trips the Project might generate.

As shown in Table XVI-1, the proposed Project is forecast to generate net new vehicle trips during a typical weekday, where the net trips are determined by subtracting the existing trips from those anticipated with the proposed project:

- 3 net new trips during the AM commuter peak hour (-1 in, 4 out)
- 2 net new trips during the PM commuter peak hour (3 in, 0 out)
- 44 trips over the 24-hour period (22 in, 22 out)

The vehicle trips destined to and from the project would most likely utilize La Brea Avenue to the east and Centinela Avenue to the north as the primary access to the local and regional network. Vehicle trips would also utilize the smaller and lesser-used W Plymouth Street to the south and N Eucalyptus Avenue

via main roads, Centinela Avenue and La Brea Avenue. Assuming an equal assignment of project trips in each direction, the project would add approximately one and half net new vehicle trips to Centinela Avenue and La Brea Avenue during the weekday AM commuter peak hour and one net new vehicle trip to Centinela Avenue and La Brea Avenue during the PM commuter peak hour. Therefore, on average, the estimated net new vehicle trips associated with the project would result in less than one vehicle trip added to both Centinela Avenue and La Brea Avenue every 15 minutes during the weekday commuter peak hours. The net new vehicle trips would not be noticeable to nearly all motorists currently utilizing these roadways. Thus, the project would not substantially increase traffic above the existing traffic load of the street system and impacts related to intersection operations would be less than significant.

Mitigation Measures: No mitigation measures are required

b. Less Than Significant Impact. A significant impact may occur if the project would conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways.

Based on the procedures outlined in the 2010 Congestion Management Program (CMP) for Los Angeles County, CMP analysis is required where a project would add 50 or more trips during the peak hours to a local CMP monitoring intersection. It is estimated that the project would generate at most 6 net new trips during the AM peak hour and 7 net new trips during the PM peak hour. As these volumes are below the threshold of 50 trips, no further CMP intersection analysis is warranted.

In addition, any CMP freeway monitoring segment where a project is expected to add 150 or more trips in any direction during the peak hours is to be analyzed. The project's peak hour trip generation of 6 net new trips during the AM peak hour and 7 net new trips during the PM peak hour would be far below the threshold of 150 directional trips for potential CMP freeway impacts. Therefore, CMP impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

c. No impact. A significant impact could potentially occur if the project would result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks.

The project site is located approximately 4.4 driving miles northeast of the Los Angeles International Airport (LAX). The proposed project would provide ten net new residential units in a residentially zoned area, and as such, would not affect air traffic patterns or air travel safety. No impact would occur.

Mitigation Measures: No mitigation measures are required.

d. Less Than Significant Impact. A significant impact may occur as a result of proposed driveway configuration or their placement in areas of inadequate visibility, adjacent to bicycle or pedestrian facilities, or too close to busy or congested intersections.[50]

The project design would provide driveway access to the proposed garages in the basement connecting to a corridor to provide vehicular access to a driveway leading to W. Plymouth Street and pedestrian access to the alley connecting to N. Lamos Street across from a pool area. The project design, including

driveway design, would be subject to City review at the plot plan review stage, prior to construction, to assure City codes and dedication requirements are met. Therefore, potential impacts related to design feature traffic hazards would be less than significant.

By maintaining existing pedestrian facilities and providing pedestrian safety features during construction, the project's impact level would be less than significant.

Mitigation Measures: No mitigation measures are required.

e. Less Than Significant Impact. A significant impact may occur if the project would result in inadequate emergency access. During construction, compliance with City traffic control standards would ensure construction activities would not result in inadequate emergency access. During operations, the proposed project would not physically obstruct an adopted emergency response or evacuation plan, and would not introduce significant traffic impacts at area intersections that may be used for emergency access. By locating the proposed development within the project site boundaries on land designated by the General Plan for commercial and residential use, the project would not obstruct access to Centinela Avenue, the nearest evacuation route shown in the Safety Element.[51] The project would be required to meet the criteria of the City's Fire Code for provision of adequate fire lanes and access for emergency vehicles and personnel and would be consistent with standards requiring adequate ingress and egress. Therefore, this potential impact would be less than significant.

Mitigation Measures: No mitigation measures are required.

f. **Less Than Significant Impact.** A significant impact may occur if the project would conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities. Public transit options in the area include a number of bus lines, many of which transfer to Metro rail lines. Existing sidewalks along Plymouth Street and La Brea Avenue provide pedestrian-friendly walking areas. The La Brea/Plymouth St. bus stop (Stop ID: 12143) serving Metro Bus Line 110 and 212/312 is located 0.1 mile east of the project site. In addition to the closest bus stops within the project vicinity, there are other also located nearby. Metro Bus Line 110 and 212/312 would serve the project site, running approximately 3-10 times (depending on the stop and direction) during peak periods from 6:00 a.m. – 8:00 a.m. in the morning and 4:00 p.m. – 6:00 p.m. in the evening.

The Metro First/Last Mile Strategic Plan (FLM Plan) aims to provide improvements for the "first/last mile" portion of an individual's trip to a particular destination, as many users must first walk, bike, or drive themselves to and from the nearest bus or rail station that comprises the core portion of their trip. The FLM Plan would provide better infrastructure for walking, rolling, or biking, facilities for modal connection, and proper signage and way-finding to provide ease of travel.[52] The project would not conflict with this plan as existing sidewalks would provide pedestrian-friendly walking areas are within walking distance of existing Metro bus stops. As such, the project would not conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities, and the level of impact would be less than significant.

Mitigation Measures: No mitigation measures are required.

[51] City of Inglewood General Plan, Safety Element, Evacuation Routes and Potential Blockages, Figure 6.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less than Significant Impact	No Impact
XVII. TRIBAL CULTURAL RESOURCES.				
a. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?	☐	☒	☐	☐
b. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☒	☐	☐

The following analysis is based on a Phase I Cultural Resource Assessment (Cultural Assessment) of the project site conducted by Envicom Corporation in April of 2018 and provided in Appendix D. On September 12, 2018, the City notified California Native American Tribes that submitted a written request for notification of CEQA projects and are affiliated with the area with the Assembly Bill-52 Notification letter provided in **Appendix H**.

a.-b. Potentially Significant Unless Mitigation Incorporated. A significant impact would occur if a project would cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code section 21074 that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources. As discussed above in Section V, the project is located in an urbanized area of the City. The site and surrounding areas are relatively flat, with no geographically distinct landforms. The project site has been subject to past disturbance, including subdivision and development, which included the construction of residential uses that currently occupy the site. The project Cultural Assessment included a records search at the SCCIC to provide an inventory of all previously recorded archaeological and historic archaeological resources as well as previously conducted archaeological investigations or studies within the project site plus a 0.25-

mile buffer radius. The results did not identify any previously recorded cultural resources, including Native American resources within the Sacred Lands Inventory, within the project study area. The Cultural Assessment also requested NAHC review of the Sacred Lands Inventory to determine if any recorded Tribal Cultural Places or other sites of cultural importance were located within or near the project area plus a 0.25-mile buffer, which returned a negative result. As no evidence of known tribal resources have been identified either in archived records or in response from a Tribal Group, the potential for the site to represent a tribal cultural resource is low. Nevertheless, implementation of mitigation measures CUL-1 through CUL-4 would reduce impacts to potentially present Tribal Cultural Resources to less than significant.

As specified in Assembly Bill (AB) 52, lead agencies must provide notice inviting consultation to California Native American tribes traditionally and culturally affiliated with the geographic area of a proposed project if the California Native American tribe has submitted a request in writing to be notified of proposed projects. A tribe must respond in writing within 30 days of the City's AB 52 notice. The City provided such notice in conformance with the tribal consultation requirements by the letter dated September 12, 2018, provided in Appendix H. Should a request for consultation regarding the project site be received within 30 days of the AB 52 Notification letter, in accordance with AB 52 the City as Lead Agency would facilitate such consultation. As such, the project would have no impact regarding potential substantial adverse changes in the cultural significance of a tribal cultural resource as defined in Public Resources Code section 21074 that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources.

Mitigation Measures: Mitigation Measures CUL 1 through CUL-4 shall apply.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XVIII. UTILITIES AND SERVICE SYSTEMS.				
a. Would the project exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	☐	☐	☒	☐
b. Would the project require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☒	☐
c. Would the project require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☒	☐
d. Would the project have sufficient water supplies available to serve the project from existing entitlements and resource, or are new or expanded entitlements needed?	☐	☐	☒	☐
e. Would the project result in a determination by the wastewater treatment provider, which serves or may serve the project, that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
f. Would the project be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs	☐	☐	☒	☐
g. Would the project comply with federal, State, and local statutes and regulations related to solid waste*?*	☐	☐	☒	☐

a. Less Than Significant Impact. A significant impact would occur if a project exceeds wastewater treatment requirements of the Los Angeles Regional Water Quality Control Board (RWQCB). A significant impact would also occur if the project would increase water consumption or wastewater generation to such a degree that it would exceed the capacity of facilities currently serving the project site. Section 13260 of the California Water Code states that persons discharging or proposing to discharge waste that could affect the quality of the waters of the state, other than into a community sewer system, shall file a Report of Waste Discharge containing information which may be required by the appropriate RWQCB. The RWQCB would then authorize a National Pollutant Discharge Elimination System (NPDES) permit that ensures compliance with wastewater treatment and discharge requirements. The Los Angeles RWQCB enforces wastewater treatment and discharge requirements for properties in the project area.

The Los Angeles County Sanitation District (LACSD) manages the wastewater collection and treatment system within the City. Wastewater generated within the City is conveyed to the Joint Water Pollution Control Plant (JWPCP) in Carson via interceptor sewers. The JWPCP provides both primary and secondary treatment for approximately 260 million gallons of wastewater per day (MGD) and has a total

permitted capacity of 400 MGD.[53] As such, the JWPCP has an excess capacity of 140,000,000 gallons per day and the project generated net increase in wastewater of 1,960 gallons per day would not exceed the capacity of the facility currently serving the site. Wastewater from the project site would be treated according to the wastewater treatment requirements enforced by the Los Angeles RWQCB. Therefore, a less than significant impact would occur.

Mitigation Measures: No mitigation measures are required.

b, d and e. Less Than Significant Impact. A significant impact may occur if a project would increase water consumption or wastewater generation to such a degree that the capacity of facilities currently serving the project site would be exceeded.

Existing Infrastructure and Projected Water Supplies

The City of Inglewood provides water to 86 percent of the residents and businesses in the City[54] and obtains its potable water supply from two sources: imported surface water purchased from the West Basin Municipal Water District (WBMWD) through Metropolitan Water District of Southern California (MWD) pipe connections and local groundwater produced from the West Coast Groundwater Basin (WCGB) via City wells. The imported water is treated at Sanford M. Anderson Water Treatment Plant and groundwater supplies are blended prior to entering the City's water distribution system.[55] Golden State Water Company and Cal America Water provide water to the additional areas. The City of Inglewood has 15,952 municipal water service connections and a total 9,554 acre-feet (AF) of water supplied to customers in their water service area in 2015.

According to the Inglewood 2015 Urban Water Management Plan (UWMP), the City can meet all normal year, single dry year, and multiple dry year water supply demands available through the Year 2040. Water supplies for the year 2020 for an average weather year are projected by the UWMP to be 11,191 acre feet per year (AFY).[56]

The project would include the construction of 20 residential units with 3 bedrooms and 3.5 bathrooms each, totaling 52,418.2 square feet. The project would remove 10 existing residential units consisting of approximately 11,287 square feet. **Table XVIII-1**, **Project Water Demand** shows the total increase in project water demand resulting from the buildout of the proposed project.

The net increase in water demand resulting from the demolition of existing uses and construction of the proposed project would be 2,600 gallons per day (gpd), or 2.9 AFY, which is a small fraction of one percent (i.e., 0.03 percent) of the City's projected water demand for the Year 2020. Further, the proposed project is consistent with the density allowed under the City General Plan and site Zoning, and within the City's population projections, which are used to plan for City water demands. Based on this, the project is not expected to require new or expanded water treatment facilities to serve project demand and would have sufficient water supplies. The project would have a less than significant impact on existing water demand and facilities.

[(a)] Los Angeles County Sanitation District, Table 1: Loadings for Each Class of Land Use.
[(b)] gpd = gallons per day

Wastewater Treatment Facilities and Existing Infrastructure

The LACSD manages the wastewater collection and treatment system within the City of Inglewood, and wastewater generated within the City is conveyed to the JWPCP in Carson via interceptor sewers. The dry-weather average design treatment capacity of the JWPCP is 400 MGD and maximum peak flow is 540 MGD. The JWPCP treats approximately 260 MGD and therefore has an excess capacity of 140 MGD available at the Plant. Treated wastewater is discharged into an ocean outfall on the Palos Verdes Peninsula.[57] **Table XVIII-2, Project Wastewater Generation**, shows the total increase in project wastewater generation resulting from the buildout of the proposed project.

Table XVIII-2
Project Wastewater Generation

Residential: Apt. – 3 Bedroom	20 du	200/du	4,000
Total Project Generation			**4,000**
Existing Uses	**Existing Units**	**Demand Rate**	**Wastewater Generation (gpd)**
Residential: Apt. – 2 Bedroom	4	160/du	640
Residential: Apt. – 3 Bedroom	1	200/du	200
Residential: Apt. – 4 Bedroom	5	240/du	1,200
Total Existing Generation			2,040
		Net Increase in Wastewater Generation	**1,960**

[(a)] City of Los Angeles CEQA Thresholds Guide (2006), Exhibit M.2-12.
[(b)] gpd = gallons per day

The project would produce approximately 0.004 MGD and a 0.002 MGD increase in wastewater generation. Therefore, the project would account for approximately 0.0005 percent of the total capacity available at the JWPCP and 0.001 percent of the excess capacity. As such, the project would only minimally reduce the remaining capacity. Wastewater from the project site would be treated according to the wastewater treatment requirements enforced by the Los Angeles RWQCB. Additionally, the project

[57] City of Inglewood, 2015 Urban Water Management Plan, August 2016, Accessed on April 18, 2018 at https://www.cityofinglewood.org/DocumentCenter/View/1061.

would be served by the existing sewer infrastructure on site and would not result in the construction of new sewer lines. Therefore, a less than significant impact would occur.

Mitigation Measures: No mitigation measures are required.

c. Less Than Significant Impact. A significant impact may occur if the volume of stormwater runoff would increase to a level exceeding the capacity of the storm drain system serving a project site, resulting in the construction of new stormwater drainage facilities. The proposed project would not result in a significant increase in site runoff or significant changes in the local drainage patterns as the project would be served by existing stormwater infrastructure. Existing stormwater drains that already currently receive surface water runoff would be maintained. Compared to existing conditions, the proposed project's addition of impervious surfaces would not substantially change the volume of stormwater runoff. Thus, the rate of post-development runoff would not exceed existing conditions per City requirements. The proposed project would not create or contribute water runoff that would exceed the capacity of existing or planned stormwater drainage systems. Impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

f- g. Less Than Significant Impact. A significant impact may occur if a project were to increase solid waste generation to a degree such that the existing and projected landfill capacity would be insufficient to accommodate the additional solid waste and if it was not disposed of in accordance with applicable regulations.

Solid waste generated within the County is disposed of at privately owned landfill facilities throughout Los Angeles County. While the Bureau of Sanitation provides waste collection services to single-family and some small multifamily developments, private haulers provide waste collection services for most multi-family residential and commercial developments within the City. Solid waste transported by both public and private haulers is recycled, reused, transformed at a waste-to-energy facility, or disposed of at a landfill. Sunshine Canyon Landfill is the nearest municipal waste landfill within the County that could serve the proposed project, and is permitted to accept residential, commercial, and construction nonhazardous waste. This landfill is currently permitted to receive up to 12,100 tons per day (tpd). Actual daily disposal rates for the year 2016 averaged 7,496 tpd, leaving a surplus daily capacity of 4,604 tpd.[58]

According to the Countywide Integrated Waste Management Plan 2016 Annual Report, the County would have surplus disposal capacity through the year 2037 under a status-quo planning scenario utilizing existing landfill facilities without expansions or permitting extensions, and existing waste export agreements.

Construction

Construction and demolition activities would generate solid waste consisting of materials from existing structures to be removed, and excess waste from construction materials and packaging associated with the proposed structure. Prior to diversion for recycling, demolition of the existing commercial structures, and construction of the proposed project would generate solid waste from the one-time demolition of 11 existing structures and approximately 6,500 cy of soil for construction of semi-subterranean parking. Exported soil is used as ground cover when deposited at landfills, and thus may be beneficial to landfill operations and are not considered further in this evaluation.

[58] County of Los Angeles Department of Public Works, Countywide Integrated Waste Management Plan 2016 Annual Report (September 2017).

Disposal of construction waste would occur over a limited period. Prior to diversion for recycling, the demolition of 13,203 sq. ft. of existing structures (11 existing residences totaling 11,287 sq. ft., garages totaling 1,745 sq. ft., and a 171 sq.-ft. laundry room) would generate an estimated total of 28.7 tons of solid waste; the construction of the proposed 52,616.2 sq. ft. building would generate an estimated total of 115.5 tons of solid waste.[59] Therefore, assuming a 50% diversion rate for compliance with Assembly Bill 939 solid waste requirements, the project would generate a total of 72.1 tons of combined demolition and construction waste. The total construction and demolition waste disposal from the project would represent approximately 1.6 percent of the excess daily disposal capacity at Sunshine Canyon Landfill based on average daily disposal rates in 2016. Project construction waste disposal would not exceed the daily permitted capacity of the Sunshine Canyon Landfill, even if all 72 tons of construction waste disposal were to occur on a single day. As such, solid waste disposal from construction activities would be less than significant.

Operations

As solid waste generation rate guidelines were not readily available for the City of Inglewood, rates from the adjacent City of Los Angeles (LA CEQA Thresholds Guide) were used to estimate solid waste generation prior to recycling, composting, or other waste diversion programs.[60] Proposed residential uses are estimated to generate 12.23 pounds per household per day, which would result in a total project generation of approximately 244.6 pounds per day. Existing residential uses are estimated to generate 122.3 pounds per household per day, generating a net increase of 122.3 pounds per day of solid waste.

AB 939 requires diversion of 50 percent of the solid waste stream for recycling would result in a total of 61.2 pounds per day (0.03 tpd) to be disposed in landfills, would represent approximately 0.0007 percent of the surplus permitted daily capacity of Sunshine Canyon Landfill reported in 2016. Operational solid waste impacts would be less than significant. Additionally, the proposed project would generate solid waste that is typical of residential and commercial uses and would comply with all federal, state, and local laws, statutes, and ordinances regarding the proper disposal of solid waste. Appropriate disposal of potentially hazardous construction materials from demolition of existing structures are discussed in Section VIII, Hazards and Hazardous Materials. Impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

[60] City of Los Angeles, L.A. CEQA Thresholds Guide, 2006, p. M.3-2.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XIX. MANDATORY FINDINGS OF SIGNIFICANCE.				
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects).	☐	☐	☒	☐
c. Does the project have environmental effects that cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

a. Potentially Significant Unless Mitigation Incorporated. For the purpose of this analysis, a significant impact could occur if a project would significantly degrade the quality of the environment, substantially reduce the habitat of fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory.

The project site is within an urbanized area of the City, surrounded by urban uses including a major arterial street, and adjacent residential and commercial uses, and would have a less than significant potential to degrade the quality of the environment, based on the analysis provided in this Initial Study. The project would be completely constructed within previously developed lots, which do not represent substantial habitat for fish or wildlife. The project would not eliminate a plant or animal community or restrict the range of any plant or animal. The project site contains no buildings that meet historic resource criteria, therefore, the project would not eliminate any known important examples of the major periods of California history or prehistory and would not eliminate any unknown important examples of California prehistory by through the implementation of the mitigation measures provided in response to checklist question IV. Cultural Resources. Impacts would be less than significant with mitigation incorporated.

b. Less Than Significant Impact. For the purpose of this analysis, a significant impact may occur if the project, in conjunction with other projects in the vicinity, would result in impacts that would be less than significant when viewed separately, but would be significant when viewed together. The proposed project would be constructed within an urbanized area of the City, on a previously developed site, and

would be consistent with existing General Plan land use designations and Zoning for the project site. A net increase of 10 residential units would represent a fraction of the projected citywide housing and population increases. Therefore, the scale of the project would be below projected growth levels and would not be anticipated to result in a cumulatively considerable contribution to regional impacts that could cause an adverse physical change in the environment. A review of related projects on the Murphy's Bowl Draft Related Project List provided by the City identified no related projects within the immediate vicinity 0.15-mile radius, of the proposed project site.[61] As concluded in this analysis, the project's incremental contribution to each evaluated issue would be less than significant, less than significant with mitigation, or would have no impact. As such, the project contribution to cumulative impacts would be less than significant.

c. Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the project has the potential to result in significant environmental effects, which would cause substantial adverse effects on human beings, either directly or indirectly. As discussed in the preceding environmental analysis, potential substantial adverse effects on human beings are limited to noise and vibration. Implementation of Mitigation Measures NOI-1 through NOI-6 and compliance with local, state, and federal regulations would ensure that the Project's impacts on human beings, both direct and indirect, would be less than significant.

[61] Murphy's Bowl Draft Related Project List, Provided by Bernard McCrumby, Planner, Economic and Community Development Department, City of Inglewood, Email to Envicom, August 22, 2018.

LOTS AREA	29,560.0 SQ.FT.
NEW OCCUPANCY	R- 1
TOTAL NO. OF HOUSING UNITS	20 HOUSES
NO. OF PARKING PROVIDED	2 PER EACH HOUSE
VISITOR PARKING PROVIDED	5 PARKING SPACES
BUILDING HEIGHT (AVERAGE)	33'-0"
HOUSES AREA (SEE SHEETS)	A-10, 11, 12, 13 & 14

● TYPE OF CONSTRUCTION:

BUILD. IS TYPE "V - A" - FIRE SPRINKLER SYSTEM WILL BE INSTALLED IN THIS BUILDING.

● EARTH WORK:

TOTAL AMOUNT OF EXCAVATION = Q.Y.
TOTAL AMOUNT OF COMP. FILL = Q.Y.

THIS PROJECT COMPLY WITH THE FOLLOWING APPLICABLE CODES ADOPTED BY CITY OF LOS ANGELES:

2013 CALIFORNIA BUILDING CODE
2013 CALIFORNIA MECHANICAL CODE
2013 CALIFORNIA ELECTRICAL CODE
2013 CALIFORNIA PLUMBING CODE
2013 CALIFORNIA ENERGY CODE
2013 RCPPD ORDINANCE 94

Egress & Areas for Evacuation Assistance

I certify that the building or facility has a supervised automatic sprinkler system. Note: A "supervised sprinkler system" means a permanent relay notification system or other mentioned system, and does not include an occasional oversight program.

Signature: Position:
Print Name: Date:

THIS PROJECT WILL REQUIRE / COMPLY WITH THE FOLLOWING :

ANY PLUMBING FIXTURES HAVING A FLOOD LEVEL RIM LOCATED BELOW THE NEXT UPSTREAM MANHOLE COVER, IS REQUIRED TO HAVE A BACK FLOW WATER VALVE INSTALLED PER ALL OF THE REQUIREMENTS OF CALIFORNIA PLUMBING CODE.

ALL WORK IN THIS PROJECT IS TO BE PERFORMED AND COMPLETED IN CONFORMITY WITH THE MOST RECENT EDITIONS OF CITY OF LA, BUILDING CODE, CALIFORNIA BUILDING, PLUMBING, MECHANICAL AND ELECTRICAL CODES. ALL WORK IS SUBJECT TO FIELD INSPECTION, ANY APPROVALS THAT APPEAR TO ALTHOUGH NON-CONFORMITY IN THE ADOPTED STANDARDS ARE NOT VALID.

THIS PROJECT COMPLY WITH THE CITY OF LOS ANGELES ADOPTED BUILDING CODES.

● SEPARATE APPLICATIONS / PLAN CHECK & PERMITS ARE REQUIRED FOR:
A) ELECTRICAL WORK
B) MECHANICAL WORK
C) PLUMBING WORK
D) BLOCK WALLS / FENCES
E) DEMOLITION

FOR SMALL LOT SUBDIVISION PURPOSES IN THE CITY OF INGLEWOOD

SHEET 1 OF 1 SHEET
Date 2/18/2020

Graphic Scale

17 0 17 42 83

1 INCH = 33 FEET

NOTES

1. LOTS 8, 10, 25, 26, 27, 28, AND 120 W. N. HAZELTA STREET, INGLEWOOD, CA 90303
2. REQUESTING SMALL LOT SINGLE FAMILY SUBDIVISION OF THE RS ZONE
3. NO GRADING
4. COMMUNITY TRASH RECEPTACLE PROVIDED IN NORTHEAST CORNER OF SUBJECT PROPERTY.
5. TOWING BIRDS, BIRD TREE TO BE BIRD NE.
6. ALL EXISTING BUILDINGS AND STRUCTURES SHALL BE DEMOLISHED. THERE ARE NO KNOWN EXISTING WELLS.
7. PROPOSED PARKING EACH SMALL LOT WILL HAVE TWO (2) PARKING SPACES (2-CAR GARAGE) 0 TOTAL GUEST PARKING SPACES; TOTAL PARKING SPACES =45
8. ALL LOTS SHALL BE SERVED BY PUBLIC WATER AND SEWER SYSTEMS AS WELL AS PUBLIC TREES ON SITE.
9. LOT 120 SHALL CONTAIN BOTH RMF-L-LOTNOTE NO. 1 AND RS-ALL ETTING LOT ON THE FINAL MAP
10. FINAL LOTS ARE TO BE BASED ON THE ARCHITECTONAL PLANS.
11. DEMOLISHED FOR ALL STRUCTURES ARE AVAILABLE AND EFFECTIVE TO SITE
12. BOUNDARY SHOWN PER RECORD OF SURVEY 513, 264 PG. 5 AND 15 CONTRADICT OF APPROVAL BY CITY ENGINEER OF CITY OF INGLEWOOD.
13. SITUS #S(S): 25 SITUS ST. 8 SA #(S)(S) SPECIES

Legal Description

Those portions of Lots 49 and 50 of Sunnyside Tract in the city of Inglewood, County of Los Angeles, State of California as per map filed in book 8 page 9(S) of maps, in the office of the County Recorder of Los Angeles County, California, in more particularly described in The 2021 Preliminary Report dated February 8, 2019 as Order No. 855-5509446-822-5509446-822-5509446-822-5509446-822, and 855-5509446-822.

APNs: 4016-024-022, 4016-024-023, 4016-024-025, 4016-024-032, 4016-025-013, 4016-025-022, and 4016-025-023.

Basis of Bearings

The bearing shown herein was based on the bearing N89°27'42"W a the centerline of Plymouth Street as shown on the map of Sunnyside Tract, in the city of Inglewood, County of Los Angeles, State of California on per map filed in book 8 page 9(S) of maps, in the office of the County Recorder of Los Angeles County, California.

SETBACK MATRIX

Measured from the front row and shown in feet not exact to the feet

Proposed Easements

1. 20' WIDE IRREGULAR PUBLIC UTILITY, PEDESTRIAN EASEMENT, DRIVEWAY ACCESS, COMMUNITY DRIVEWAY + FIRE LANE
2. 20' WIDE & VARIABLE WIDTH IRREGULAR PUBLIC UTILITY, & PEDESTRIAN EASEMENT, DRIVEWAY ACCESS, COMMUNITY DRIVEWAY + FIRE LANE, VERTICAL LIMITS OF EASEMENT
3. EASEMENT FOR RECREATIONAL AREA AND OPEN SPACE

LOT AREAS

Phase I Cultural Resources Assessment

APPENDIX D

April 25, 2018

Ward Schurr, Inc.
6565 Sunset Blvd Ste. #310
Los Angeles, CA 90028

Attn: Mr. James D. Ward, President

Subj: Phase I Cultural Resources Assessment of 113-133 West Plymouth Street, Inglewood, California (*Envicom Project #18-856-001)*

Dear Mr. Ward,

In April of 2018, Envicom Corporation (Envicom) completed a Phase I Cultural Resource Assessment (Phase I Assessment) of 113-133 West Plymouth Street in Inglewood. The Project Site currently contains residential buildings and outbuildings that will be re-developed to accommodate additional residential housing (**Figure 1** and **Figure 2)**. The Project proposes the demolition of ten existing residences and garages, and the construction and operation of twenty residences of varying size, each with three (3) stories above a basement, and ancillary features. Ancillary features would include a pool area and a playground, as well as landscaping. The project is fully contained on the Inglewood United States Geological Survey (USGS) quadrangle map. The general location is as follows:

Latitude: 33°58'29.14"N
Longitude: 118°21'31.47"W
Township: N/A
Range: N/A
Quad: Inglewood, CA

The Phase I Assessment included a cultural resource record search conducted by the South Central Coastal Information Center (SCCIC), and a Native American cultural resource record search conducted by the California Native American Heritage Commission (NAHC). Additional databases examined during the Phase I Assessment included historic regional maps, historic USGS maps, and historic Google Earth images. The purpose of the record searches is to identify any known cultural resources previously recorded within the proposed project area, to provide cultural resource context for the project, and to assess the overall cultural resource sensitivity of the project region. A cultural resource is often defined as any building, structure, object, or archaeological site older than 50-years in age and can include historic or prehistoric locations of human habitation.

The Phase I Cultural Resource Assessment of the Project also included a physical survey of the project property to determine if previously unrecorded cultural resources could be identified by surface observation. During the pedestrian field survey, any previously identified cultural resources identified by the SCCIC or the other databases are relocated and reassessed. If new cultural resources are identified during the field survey, or if older cultural resources need updated site records, the Project applicant is responsible for authorizing a qualified archaeologist to

complete a State of California Department of Parks and Recreation (DPR) cultural resource site form for each resource. The DPR form provides enough information on the cultural resource to present an adequate understanding of the site conditions, the site boundary, the general time period of the cultural resource, any visible major site features, and the types of artifacts or features present. Final site forms are submitted to the SCCIC to be added to the State of California database.

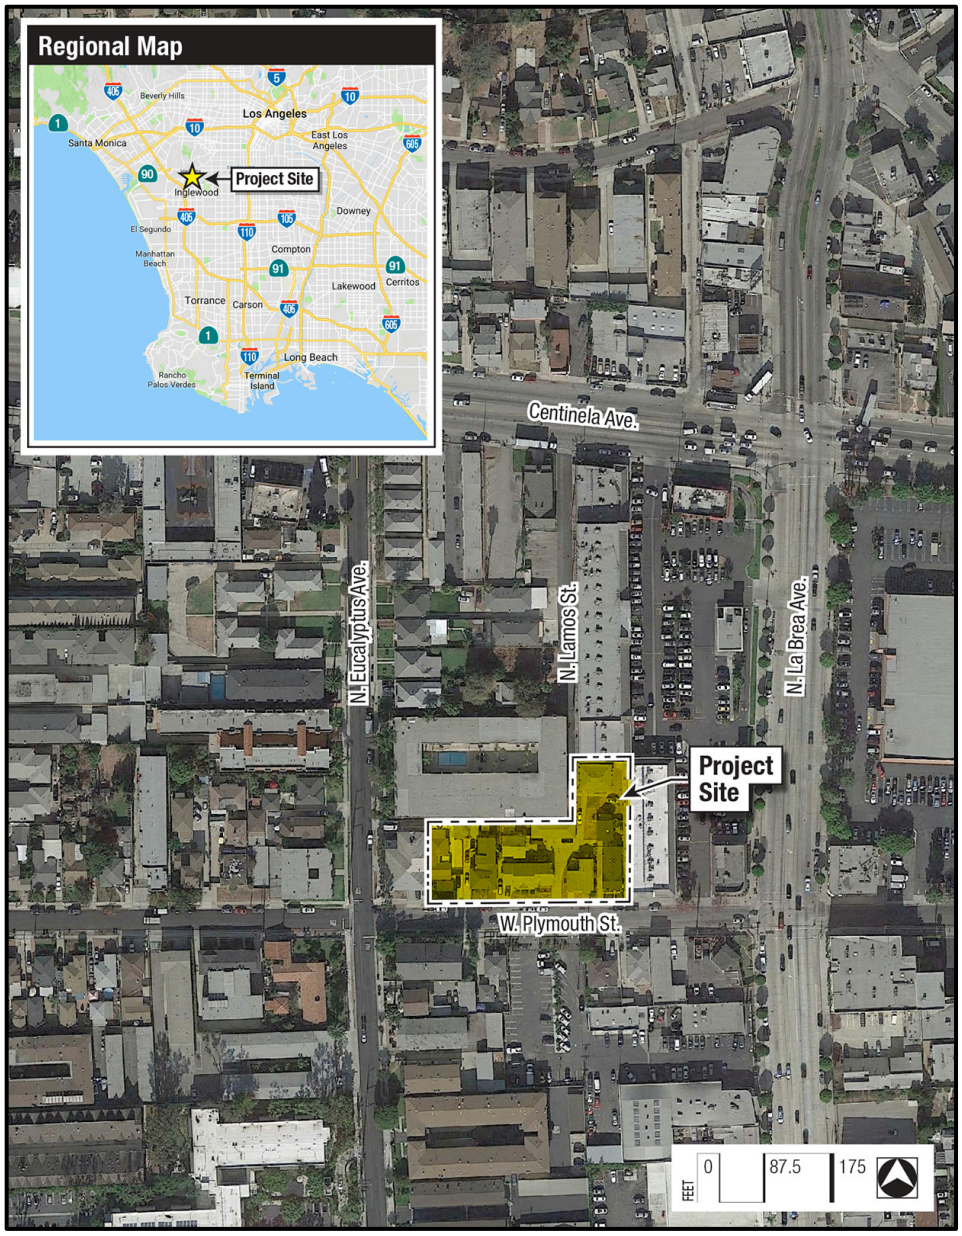

Figure 1: Project Property at 113 to 133 West Plymouth Street, Inglewood, California (2017 Google Earth Image).

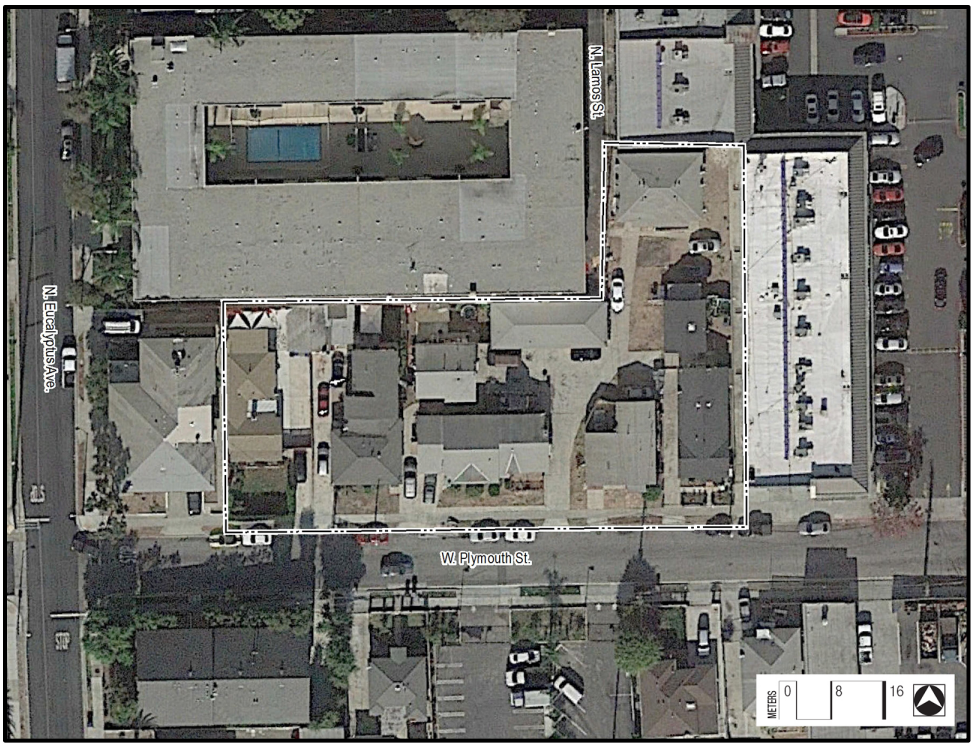

Figure 2: Project Location at 113 to 133 West Plymouth Street, Inglewood, California (2017 Google Earth Map).

RECORD SEARCH RESULTS

On April 6, 2018, Envicom contacted the SCCIC with a request to search their database for cultural resources within the project property, plus a 0.25-mile study area for regional context (**Figure 3**). The record search included a request for all complete site records for cultural resources within the project property, as well as copies of any cultural resource technical reports that intersect the property location. The NAHC was also contacted on April 6th, 2018, with a similar record search request.

Envicom received the cultural resource records search results from the SCCIC on April 17, 2018. The record search results provided a map of all known cultural resources located within the project property and within the 0.25-mile study area, as well as all previously published cultural resource reports within both areas. The SCCIC report determined that ***no previously identified cultural resources*** were located within the project property boundary. Additionally, the SCCIC record search result indicated that no cultural resources existed within the 0.25-mile Project study area.

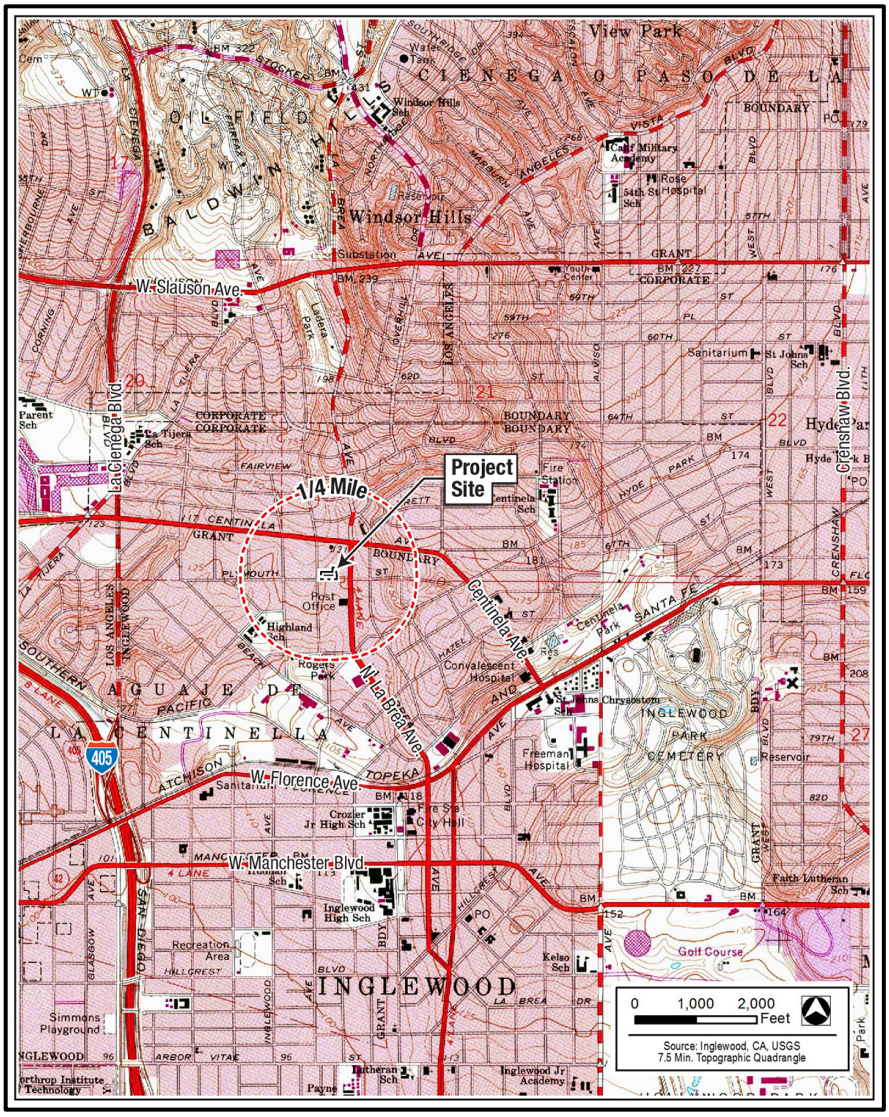

Figure 3: Project Property at 113 to 133 West Plymouth Street, Inglewood, California, including 0.25-mile study area (1981 USGS Malibu Beach Quadrangle Topographic Map).

The SCCIC record search results indicated that no cultural resource reports involved the Project property. However, the following three (3) cultural resource reports involved properties that are located within the surrounding 0.25-mile Project study area, or the general Project area.

LA-05106
Lapin, Phillippe

2013 *Cultural Resources Records Search and Site Visit Results for T-Mobile West, LLC Candidate LA02922 (LA922 806 N La Brea) 806 North La Brea Avenue, Inglewood, California.* MBA.

The results from the NAHC record search were received on April 18, 2018, with negative findings. The SCCIC and NAHC findings, therefore, support the conclusion that the project property is located in an area that is ***not-sensitive for prehistoric or older historic (roughly 1840 to 1940 for the region) cultural resources.*** This finding would also be reflected in any final regulatory compliance recommendations.

Examination of historic maps that contain the project property included fifteen (15) historic USGS maps, dating between 1895 and 1981, and two (2) local Inglewood maps from 1896 and 1944. No houses were shown in the project area until the 1924 Inglewood USGS map, which showed limited residential development in the local area, but not in the subject Project properties (**Figure 4**).

The 1930 USGS Inglewood map showed similar conditions, though residential development was first shown on the south side of Plymouth Street across from the Project properties. The 1948 USGS Inglewood map again showed no residential development in the Project properties, which was the last map that did not just show the area as being "fully urban."

Examination of historic aerial imagery on Google Earth dating back to 1994, show the current residential structures in the same location with no modifications since that time (**Figure 5**). No known changes have taken place between that time and the current date.

The conclusion of an examination of historic maps and imagery was that the Project property existed within an area that should be considered "**sensitive for older historic resources**," since the first development of the Project region dates back to the 1920s. However, the Project properties themselves were not developed until after 1948, meaning that they fell within the post-war period, which is not considered to be sensitive for historic cultural resources in Southern California.

Copies of the request letter to the SCCIC and to the NAHC are included in **Appendix B** of this report. The response letter from the NAHC is also included in Appendix B. The author's resume is provided in **Appendix C**. Envicom did not contact Native American groups on the NAHC list, as communication with Tribal Group representative under Assembly Bill-52 is the responsibility of the Lead/Permitting Agency (in this case the City of Inglewood) if required as part of this project. SCCIC findings provided to lead agencies regarding a cultural resource's physical location and details are considered confidential by state law and are, therefore, not included in this report.

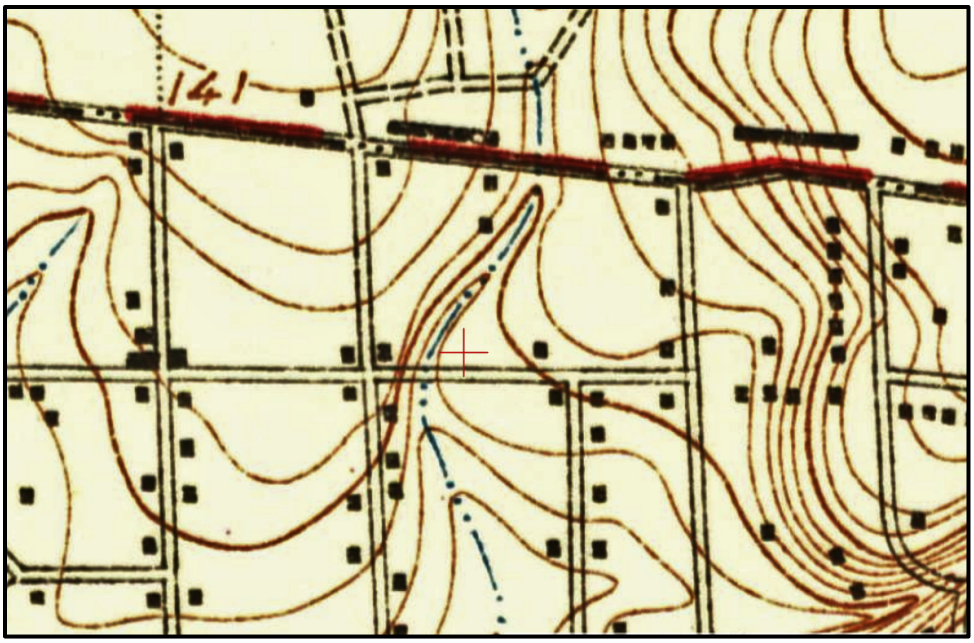

Figure 4: Project location (red cross in center) on the 1924 USGS Inglewood map.

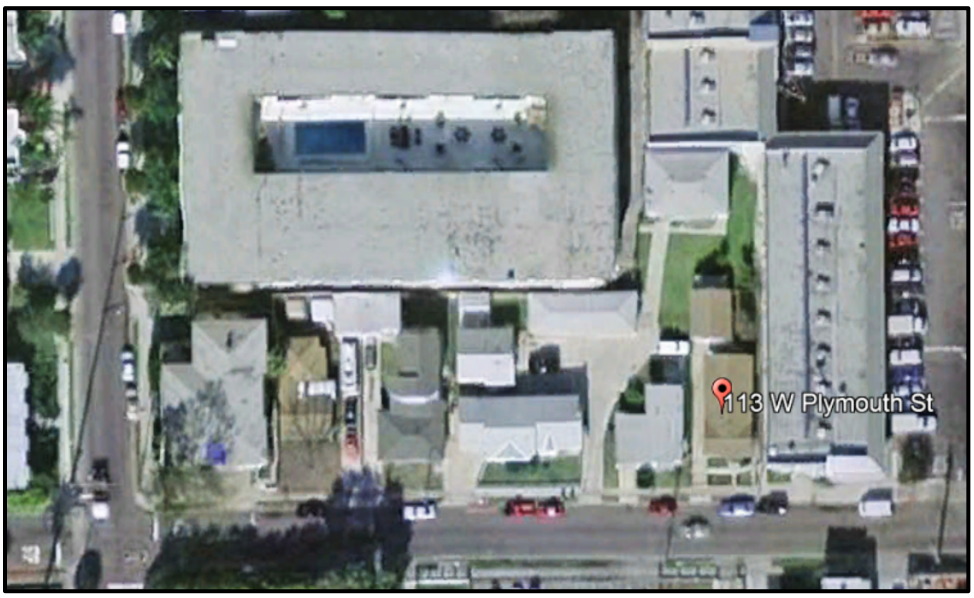

Figure 5: General Project location on the historic 2003 Google Earth map.

PEDESTRIAN SURVEY RESULTS

Ms. Samantha Whittington and Mr. Charlie Fazzone, two (2) Envicom archaeologists, surveyed the Project properties on April 24, 2018. The Project properties were confirmed to be fully urbanized with post 1940s residential buildings and outbuildings, with extensive landscaping and cement/asphalt paving (**Figure 6, Figure 7, Figure 8**, **Figure 9**, and **Figure 10**).

Figure 6: 113 West Plymouth.

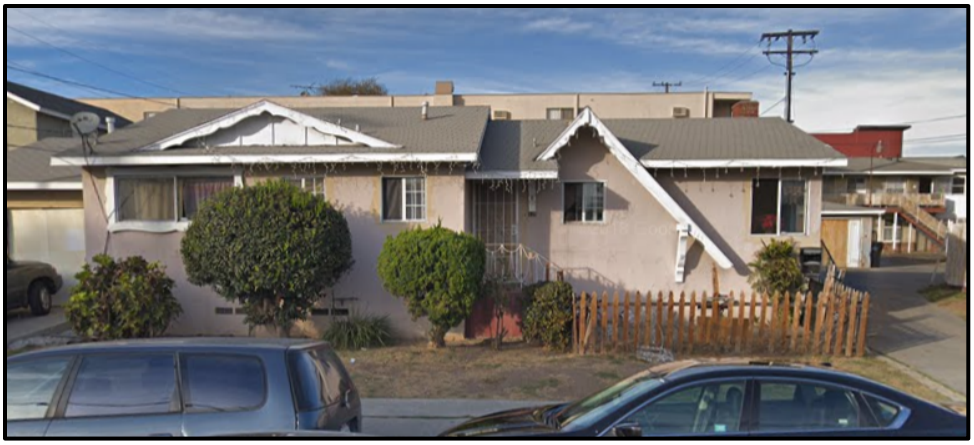

Figure 7: 129 West Plymouth (Google Streets image).

Figure 8: 115 West Plymouth.

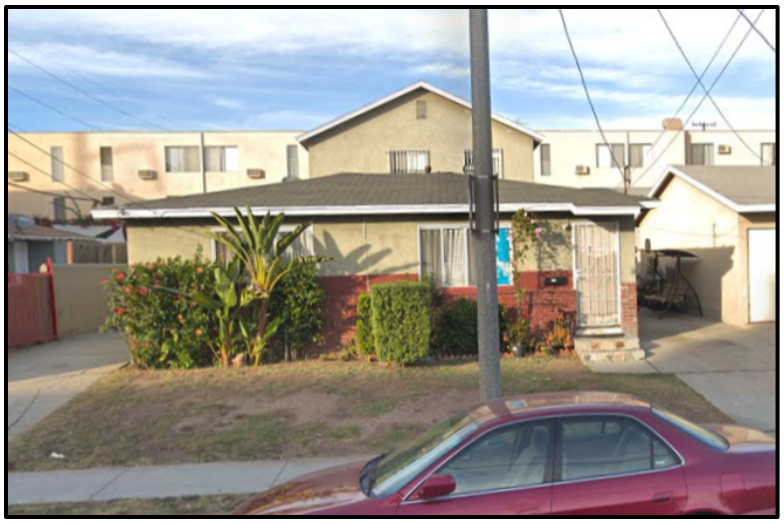

Figure 9: 133 West Plymouth (Google Streets image).

Figure 10: One of the interior houses, showing general landscape.

All the houses located on the Project properties were confirmed to date to the late 1940s/early 1950s, which is a time period that is considered to not be sensitive in Southern California due to numerous existing examples. The architecture of the houses was also not unique, being mostly simplified and derivative versions of Mid-Century Modern or Storybook architectural styles.

Ground visibility was good in some of the front yards, but not consequential as the amount of grading and filling, paving, landscaping, and historic use of the properties did not allow for any significant understanding of the subsurface soils that have not been impacted by residential building construction. No surface features older than the existing structures were encountered. The conclusion of the surface survey was that no visible evidence of cultural resources older than the existing residential structures was present within the Project properties.

PALEONTOLOGICAL ASSESSMENT

The project is located south of the Transverse Ranges of Southern California, which consist of generally east-west trending mountains and valleys created by north-south compressive deformation linked to the movement of the San Andreas Fault and the motion of the Pacific Plates. More specifically, the project is located within the Los Angeles Basin, which is a large, flat plain created by the outflow of the Los Angeles River and other water sources. Compacted alluvial material from the surrounding Transverse Ranges makes up most of the underlying material of the Los Angeles Basin.

Examination of the 1993 Thomas W. Dibblee, Jr. Inglewood geological map for the project area identified that the entire project area is within older alluvial material (Qoa) and more recent alluvial material (Q{a}) (**Figure 9**). Recent alluvial material is not considered sensitive for fossil resources, however, older alluvial material is considered "sensitive" for fossil resources. The project property is, therefore, located within an area that should be considered ***sensitive for paleontological fossil resources***. Paleontological monitoring and a paleontological discovery contingency, therefore, should be included in the final planning documents.

CONCLUSION

The results of the SCCIC and the NAHC record searches were negative for cultural resources within, adjacent, or near to the project property, nor was the surrounding area found to be sensitive for cultural resources. Due to the early age (1920s) of development in the Inglewood area, the Project region is considered "sensitive for older historic cultural resources," however, the examination of numerous historic maps was negative for older historic cultural resources directly within the Project property. Finally, the surface survey was negative for prehistoric or older cultural resources within the project property. Given there is a possibility of encountering unknown older historic archaeological resources during construction excavation, this report recommends spot-check monitoring by a qualified archaeologist during construction grading and earth moving within native soils (not fill) to ensure previously unidentified older cultural resources are not impacted. However, due to the lack of such resources being identified by the record search immediately within the Project properties, full-time monitoring is not recommended unless a discovery is made during construction.

An examination of geological maps for the Project area indicated that the Project properties are located within an area that should be considered sensitive for paleontological resources, due to the bedrock consisting of compacted older alluvial material. This report therefore recommends spot-check monitoring by a qualified paleontologist during construction grading and earth moving within native soils to ensure previously unidentified fossil resources are not impacted.

RECOMMENDATIONS

Based on the findings above, Envicom Corporation makes the following recommendations:

Archaeological Monitoring

To reduce the impact of grading and earth moving on any potentially present archaeological resources beneath the subject property, a Lead Agency-approved archaeologist that meets the Secretary of Interior qualifications will be on site on a ***spot-check basis*** during project grading and earth moving within native soils until bedrock is encountered. Spot-check monitoring will include a kick-off meeting to introduce the archaeologist to the construction leadership team, and three (3) weekly on-site inspections of no greater than 4-hours in duration to assess the subsurface materials being encountered site during grading and excavating tasks.

The archaeological monitor will collect any prehistoric or older (pre-1940s) cultural material uncovered through excavation, and can halt construction within 50-feet of a potentially significant cultural resource if necessary. If potentially significant intact deposits are encountered, then a cultural resource "discovery" protocol will be followed (see below).

Native American monitoring is not recommended due to the lack of prehistoric cultural resources being identified by the SCCIC record search within the Project properties and the surrounding region. If, however, archaeological monitoring identifies prehistoric cultural resources in the Project properties to the level that "discovery" protocols are triggered, then a Native American monitor may be required to protect Native American cultural interests. Adding a Native American

monitor will only take place after consultation and approval by the Project proponent and the Lead Agency.

Paleontological Monitoring.

To reduce the impact of grading on any potentially present paleontological resources beneath the subject property, a Lead Agency-approved qualified paleontologist will be on site on a ***spot-check basis*** during construction grading and earth moving within native soils. Spot-check monitoring will include a kick-off meeting to introduce the paleontologist to the construction leadership team, and three (3) weekly on-site inspections of no greater than 4-hours in duration to assess the subsurface materials being encountered site during excavation grading tasks.

The paleontological monitor will collect any fossil material uncovered through excavation, and can halt construction within 50-feet of a potentially significant fossil resource if necessary. If potentially significant intact deposits are encountered, then a paleontological resource "discovery" protocol will be followed as described in the following recommendation.

Inadvertent Discovery Protocol for Archaeological or Paleontological Resources

The inadvertent discovery of archaeological resources is always a possibility during ground disturbances; California Penal Code Section 622.5 addresses these findings. Older alluvial material can also lead to the discovery of paleontological resources during ground disturbance. If buried materials of potential significance are inadvertently discovered within an undisturbed context during any earth-moving operation associated with the proposed project, then all work in that area shall be halted or diverted away from the discovery to a distance of 50-feet until a qualified senior archaeologist/paleontologist can evaluate the nature and/or significance of the find(s). If, upon assessment by a qualified senior archaeologist/paleontologist, the find is not determined to be significant, then construction may resume.

If the find is determined to be potentially significant, then the Lead Agency will be immediately notified of the discovery. Construction will not resume in the locality of the discovery until consultation between the senior archaeologist/paleontologist, the project manager, the Lead Agency, the Applicant's representative, and all other concerned parties, takes place and a reaches a conclusion approved by the Lead Agency.

If a significant cultural or paleontological resource is discovered during earth-moving, complete avoidance of the find is preferred. However, further survey work, evaluation tasks, or data recovery of the significant resource may be required by the Lead Agency if the resource cannot be avoided. In response to the discovery of significant cultural or paleontological resources, the Lead Agency may also add additional regulatory compliance for use during further site development, which may include Native American monitoring (if appropriate).

Any monitoring required will be outlined in a Construction Phase Monitoring Plan, which will also be submitted to the Lead Agency for review prior to the recommencement of ground-disturbance activities. Any Evaluation, Data Recovery, Site Management, or Monitoring Plans or Reports generated in response to the discovery of a significant cultural resource will be submitted to the

Lead Agency for review and final curation as part of the project record. All such documents associated with the discovery of cultural resources will be transmitted to the appropriate State of California information centers at the end of the Project.

Inadvertent Discovery of Human Remains

The inadvertent discovery of human remains is always a possibility during ground disturbances; State of California Health and Safety Code Section 7050.5 addresses these findings. This code section states that in the event human remains are uncovered, no further disturbance shall occur until the County Coroner has made a determination as to the origin and disposition of the remains pursuant to PRC Section 5097.98. The Coroner must be notified of the find immediately, together with the Lead Agency and the property owner.

If the human remains are determined to be prehistoric, the Coroner will notify the NAHC, which will determine and notify a Most Likely Descendant (MLD). The MLD shall complete the inspection of the site within 48 hours of notification and may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials and an appropriate re-internment site. The Lead Agency and a qualified archaeologist shall also establish additional appropriate measures for further site development, which may include archaeological and Native American monitoring or subsurface testing, conducted and paid for by the applicant. All responses to the discovery of human remains will be outlined in a Recovery and/or Management Plan submitted to the Lead Agency for review. Any required monitoring will be outlined in a Construction Phase Monitoring Plan, which will also be submitted to the Lead Agency for review prior to the recommencement of ground-disturbance activities.

Envicom appreciates the opportunity to complete this Phase I Cultural Resource Assessment for the Project. Should you have any questions, don't hesitate to contact me.

Sincerely,

Dr. Wayne Bischoff
Director of Cultural Resources

Greetings,

Envicom is requesting a review of your records for cultural resources for the Project area, plus a **0.25-mile** study area. We also request a list of Tribal Group representatives for the area in case we need to contact their offices.

The Project is located at:

Latitude: 33°58'29.14"N
Longitude: 118°21'31.47"W
Township: N/A
Range: N/A
Quad: Inglewood, CA

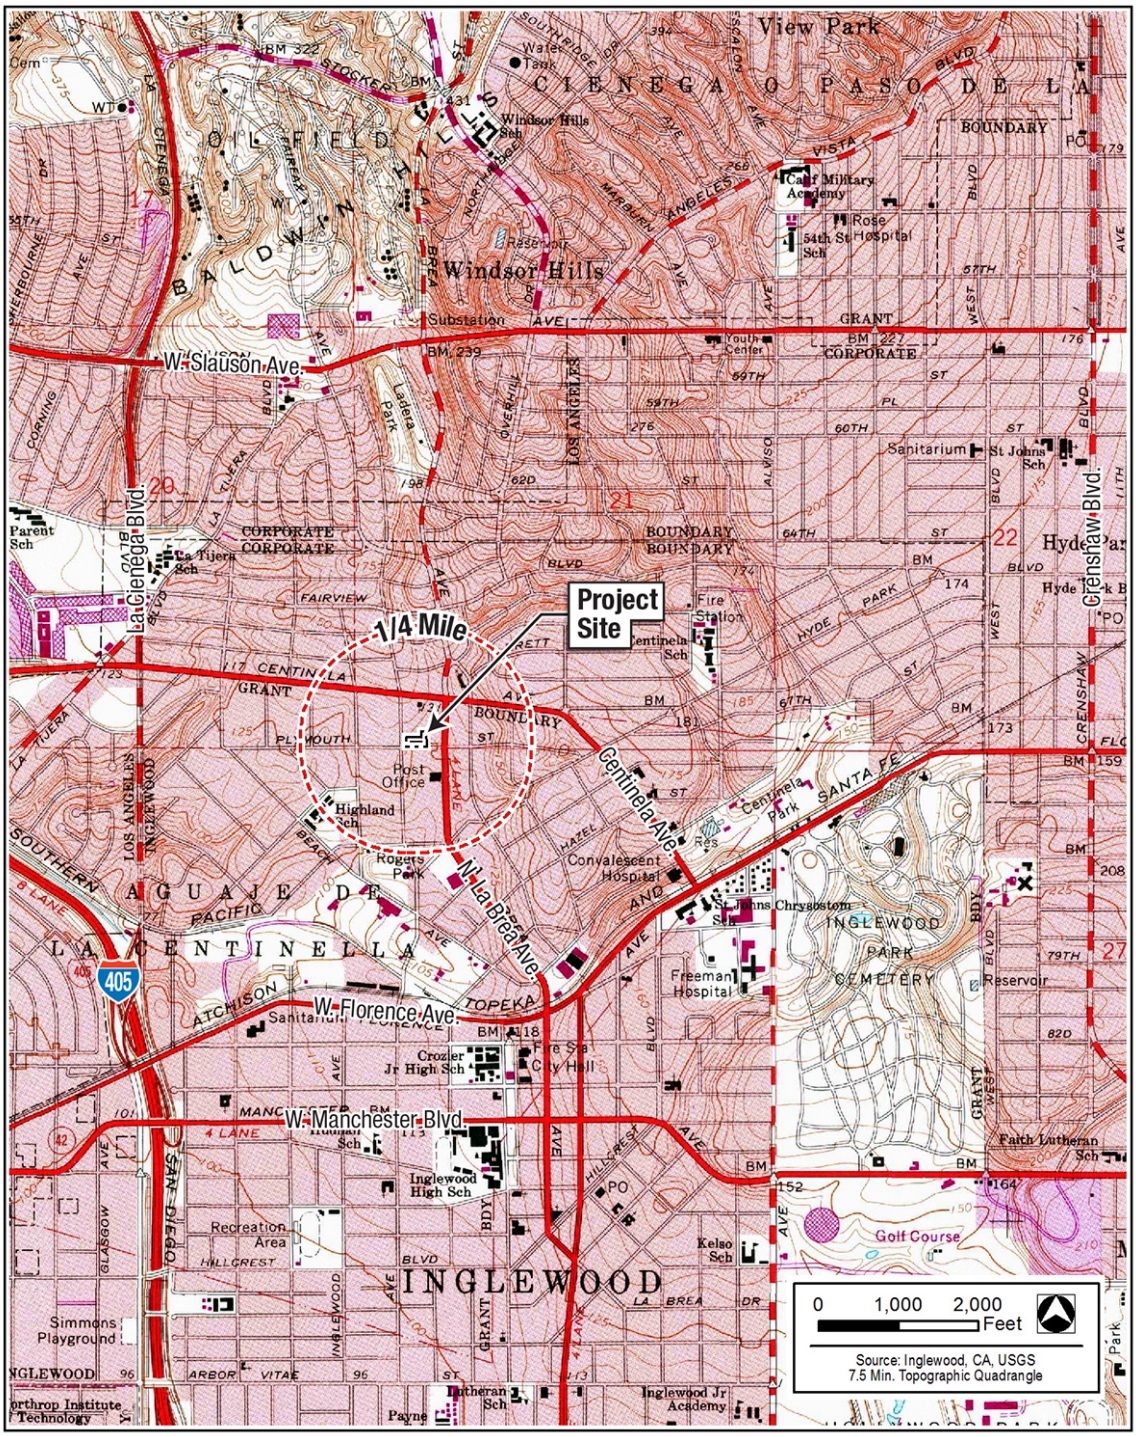

Envicom appreciates the NAHC's help with this request. For correspondence or questions regarding this Project, please contact Wayne Bischoff at 818-879-4700 (wbischoff@envicomcorporation.com).

Sincerely,

Wayne Bischoff

Attn: Ms. St. James

Subj: **Proposal for a Phase I(a) Cultural Resources Assessment and Biological Inventory of Plymouth Street, Inglewood, California (*Envicom Project #18-856-001)***

Dear Ms. St. James:

Envicom is requesting an **EXPEDITED** record search of the SCCIC database for cultural resources within the attached Project area, plus a **0.25-mile** study area. The Project is located at:

Latitude: 33°58'29.14"N
Longitude: 118°21'31.47"W
Township: N/A
Range: N/A
Quad: Inglewood, CA

We are requesting to receive the following: Resource Database Printout (list), Resource Database Printout (details), Resource Digital Database (spreadsheet), Report Database Printout (list), Report Database Printout (details), Historical Maps.

We also request the complete reports and/or site records for any cultural resources found within the project area only.

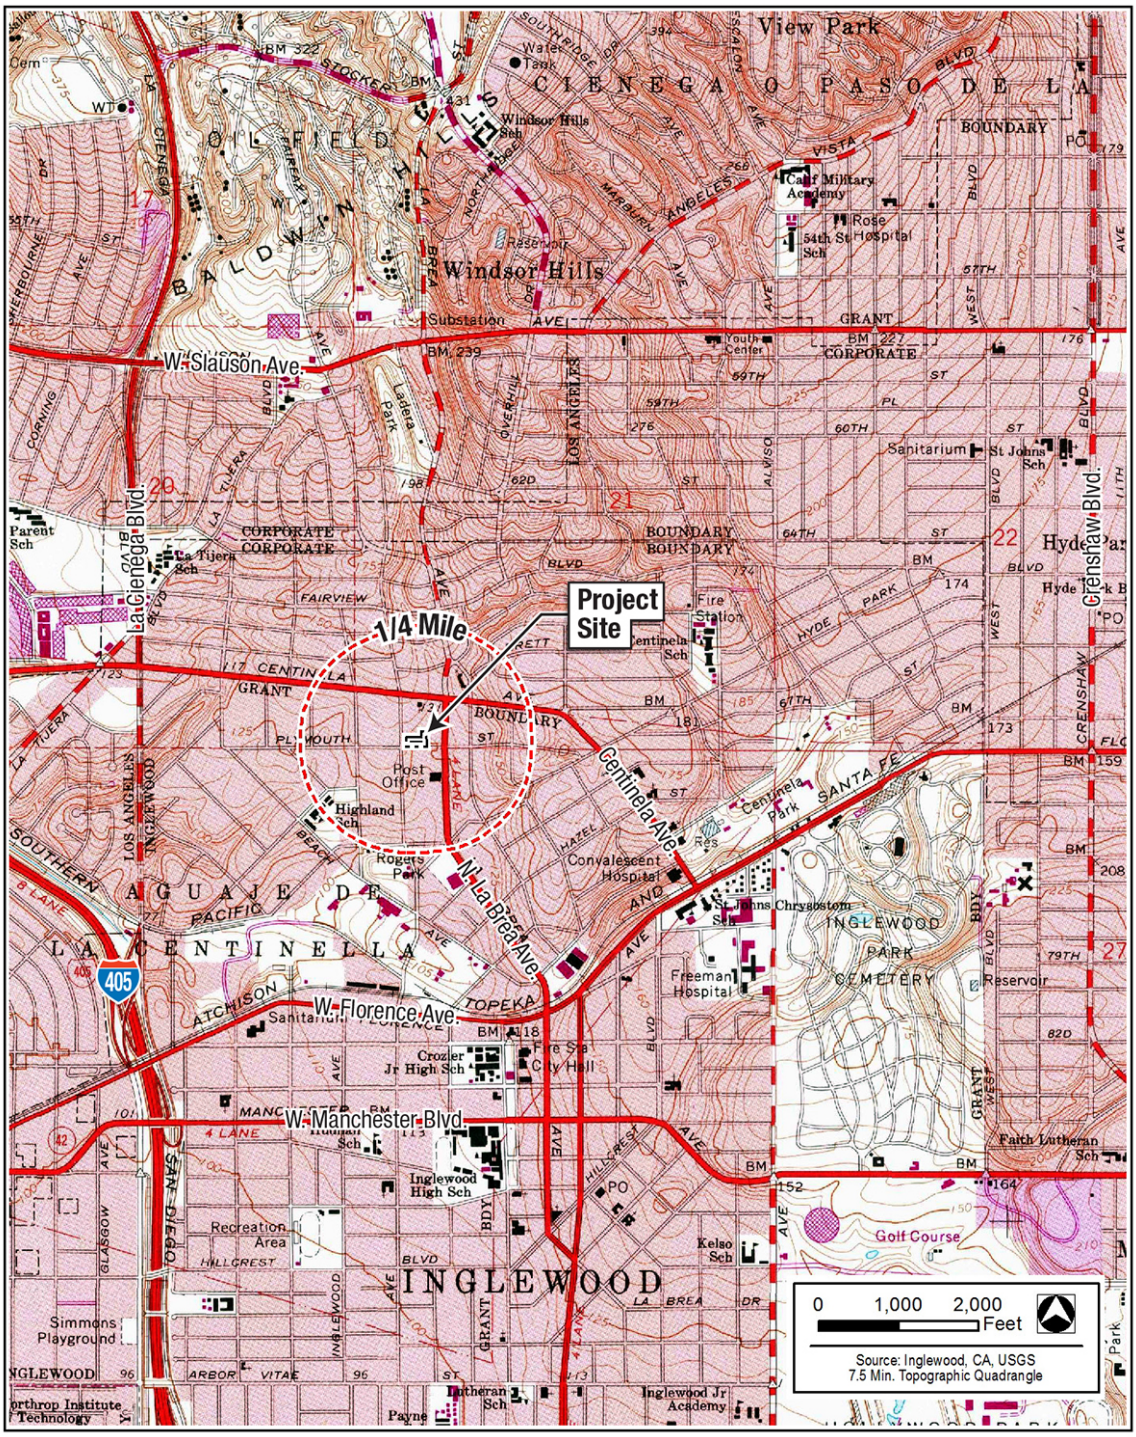

Envicom appreciates the SCCIC's help with this request. For correspondence or questions regarding this Project, please contact Wayne Bischoff at 818-879-4700 (wbischoff@envicomcorporation.com).

Sincerely,

Wayne Bischoff

Dr. Wayne Bischoff
Director of Cultural Resources

RE: Proposed Plymouth Street Project, City of Inglewood; Inglewood USGS Quadrangle, Los Angeles County, California

Dear Dr. Bischoff:

A record search of the Native American Heritage Commission (NAHC) *Sacred Lands File* was completed for the area of potential project effect (APE) referenced above with negative results. Please note that the absence of specific site information in the *Sacred Lands File* does not indicate the absence of Native American cultural resources in any APE.

Attached is a list of tribes culturally affiliated to the project area. I suggest you contact all of the listed Tribes. If they cannot supply information, they might recommend others with specific knowledge. The list should provide a starting place to locate areas of potential adverse impact within the APE. By contacting all those on the list, your organization will be better able to respond to claims of failure to consult. If a response has not been received within two weeks of notification, the NAHC requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact via email: gayle.totton@nahc.ca.gov.

Sincerely,

Gayle Totton

Gayle Totton, M.A., PhD.

This list is only applicable for contacting local Native Americans with regard to cultural resources assessment for the proposed Plymouth Street Project, Los Angeles County.

Appendix B
Resume of Dr. Wayne Bischoff (author)

Wayne Bischoff, Ph.D.

Director of Cultural Resources

Dr. Bischoff has over 20 years of experience managing cultural resource projects and ensuring compliance with Section 106 of the National Historic Preservation Act (NHPA), the California Environmental Quality Act (CEQA), the National Environmental Protection Act (NEPA), and state, county, city, and local government cultural laws, guidelines, and procedures. He has managed cultural, paleontological, and built environment projects throughout Southern California, including the Counties of Los Angeles, Kern, Ventura, Imperial, San Diego, Orange, Santa Barbara, Riverside, and San Bernardino. Dr. Bischoff has been the principal or project manager for hundreds of cultural resource projects in California, including literature searches, surveys, evaluations, and data recoveries, built environment and historic architectural inventories, HABS projects, paleontological surveys, and historic structure evaluations.

Dr. Bischoff's project experience includes extensive experience with transmission lines, renewable energy projects, and public works projects, including storm and sewer projects, recharge basins, wetlands restoration, highways and bridges, dams and levees, park and trail development, and educational facilities. He also has broad experience with residential and commercial developments projects, Department of Defense projects (Army, Navy, Marines, and National Guard), telecommunication lines, and projects with Army Corps of Engineers (ACOE) and California Coastal Commission (CCC) oversight.

Dr. Bischoff's experience includes consultation with state and federal agencies, including the State Historic Preservation Office, the Bureau of Land Management (BLM), the GSA, the USDA, Fish and Wildlife, the California Public Utilities Commission (CPUC), the National Park Service (NPS), the U.S. Forest Service (USFS), Federal Highway Administration (FHA), and CALTRANS. He has also written sections of CEQA and NEPA documents, MNDs, and Memorandums of Agreements/Understanding (MOA/MOU), and is a Native American AB-52/SB-18 consultation expert. Dr. Bischoff has worked with all the Tribal Groups Southern California, and has provided Native American consultation for the City of Los Angeles, numerous project clients, and many cities and municipalities throughout Southern California.

Development Projects

- **Conrad N. Hilton Foundation Trails Project Cultural Assessment, Agoura Hills, Los Angeles County, CA.** Project Manager for the assessment of new pedestrian access trails linking off-site office space with the Foundation campus buildings. (Spring 2016)
- **Pepperdine University Campus Life Project: Cultural Resource Monitoring, Los Angeles, CA.** Principal and Project Manager for cultural resource monitoring of Phase I of the Pepperdine Campus Life housing, facilities, and trail development project. (Spring 2016)
- **Deer Lake Residential Development Cultural Monitoring, Los Angeles, CA.** Principal and Project Manager for the cultural monitoring of eight cultural resources within the project development boundary. Included the writing of a Construction Phase Management and Monitoring Plan. (Spring 2016)
- **Canyon Park Homes, Sylmar, Los Angeles County, CA.** Native American Tribal Group consultation and pre-construction monitoring for this 80-acre residential property development, as well as EIR section writing. (February 2015 – Current)

- **Paradise Valley Development Project Environmental Impact Report and Impact Statement, Riverside County, CA.** Author of the cultural section for this EIR for a housing and mixed use development of over 2200-acres east of Indio, California. Also reviewed original technical documents, and incorporated legal and agency comments. Mitigation measures included the management and monitoring of dozens of cultural resources, sensitive soils, and paleontological resources. (October 2014 – Current)
- **Floral Canyon Residential Development Cultural Resource Survey, North Hollywood, CA.** Principal and Project Manager for this Phase Ia cultural resource survey of an 8-acrea property. (September – December 2015).
- **Lynn Road Residential Development Project, Newbury Park, CA.** Principal and Project Manager for the Phase Ia and Phase Ib survey of this 10-acre parcel. A large Middle-Period seasonal settlement was discovered, which required subsurface testing and extensive mapping of surface hearths, yucca roasters, and dwelling features. (September – October 2015).
- **Marinette Road Residential Development, Pacific Palisades, Los Angeles County, CA.** Principal and project manager for this development project, which included a record search, site survey, Tribal Group scoping letters, and agency consultation. The major challenge was that the project property was within the Will Rogers State Monument and National Register site boundary. (February 2015 – May 2015)
- **Village at Los Carneros, City of Goleta, Santa Barbara County, CA.** Reviewed all previous technical studies and wrote part of the cultural sections of the Environmental Impact Report for this residential house development project. (March 2014 – April 2014)
- **3121 Old Topanga Canyon Road Phase I Survey and Literature Search, City of Calabasas, Los Angeles County, CA.** Principal and Project manager for this residential development project, including NAHC letters, literature review, site survey, paleontological survey and literature search, final technical report, and the writing of the cultural resources section of the Environmental Impact Report. (March 2013 – April 2013)
- **Newport Beach Yacht Club Evaluation, Community Development Department, City of Newport Beach, Orange County, CA.** Principal for this historic architecture project involving the built environment evaluation of the Newport Beach Yacht House. (October 2013 – October 2013)
- **Blossom Plaza Historic Structure Evaluation, China Town, City of Los Angeles, CA.** Principal for this historic architecture project involving the updating of technical reports and a standing structure evaluation. (July 2013 – September 2013)
- **Moreno Valley Residential Building Evaluation, City of Moreno Valley, Riverside, CA.** Principal for the architectural assessment of the J. Langdon Ranch located at 11761 Davis Street, in the city of Moreno Valley, Riverside County, California. (April 2013)
- **Scripps Hospital Paleontological and Archaeological Monitoring, Worley-Parsons, City of Encinitas, CA.** Principal Investigator. Dr. Bischoff managed QA/QC review, budgets, and professional standards for the cultural and paleontological monitoring of this large development project. (2011 - 2013)

Energy Projects

- **East Kern Wind Resource Area (EKWRA) Power Pole Replacement Project, Environmental Intelligence / Southern California Edison, Kern County, CA.** Principal and Project Manager. This two-year project included cultural resource surveys, the evaluation of numerous cultural sites, and cultural and paleontological monitoring for the construction of over 130-miles of new power poles and fiber optics lines to service Tehachapi Mountain wind farms. (January 2013 – October 2013)
- **Pure Source Power, Victorville, San Bernardino, CA.** Principal and Project Manager for a cultural survey and record search of 140-acres north of Palm Springs for solar development. (September 2013 – October 2013)
- **Dry Ranch Solar Project, Silverado Power, Los Angeles County, CA.** Principal. Dr. Bischoff managed this 64-acre solar project near Lancaster, which included a record search, field survey, and cultural report to meet CEQA compliance. This project included coordination with Southern California Edison for a gen-tie line and telecom attachments. (March - April 2013)
- **Plainview Solar Project, Silverado Power, Los Angeles County, CA.** Principal. Dr. Bischoff managed this 114-acre solar project near Lancaster, which included a record search, field survey, and cultural report to meet CEQA compliance. (April - May 2013)
- **Silverleaf Solar Project, Cultural and Paleontological Survey, Agile Energy, Imperial County, CA.** Principal and Project Manager. Dr. Bischoff provided general review and quality control for a large solar project south of San Diego. This project involved an over 2,000-acre survey of proposed solar fields and 5-miles of electrical transmission gen-tie lines. The Bureau of Land Management was the principal federal agency. (November 2011 - July 2012)
- **Desert Harvest Solar Project, Build Environment Survey, eneXco Energy, Riverside County, CA.** Project Manager. Dr. Bischoff was the project manager for the built environment survey of 1,600-acre solar field and 12-miles of electrical transmission gen-tie lines. This included the production of a separate technical report for the Bureau of Land Management that included a historic structure inventory, assessment of significance, and an indirect effects analysis. (November 2011 - June 2012)
- **Silverleaf Solar Project, Built Environment Survey, Agile Energy, Imperial County, CA.** Project Manager. Dr. Bischoff was the project manager for the built environment survey of 2,000-acre solar field and 5-miles of electrical transmission gen-tie lines. This included the production of a separate technical report for the Bureau of Land Management that included a historic structure inventory, assessment of significance, and an indirect effects analysis. (November 2011 - July 2012)
- **IVSC2 Solar Project, County of Imperial, Imperial County, CA.** Principal and Project Manager. Dr. Bischoff provided oversight of the 140-acre solar project east of the Salton Sea. This project was notable for the quick response time required to field a survey crew and complete a draft report for the County. (Sept-Oct 2012)
- **Tehachapi Renewable Transmission Project (TRTP), Southern California Edison, Kern, Los Angeles, and San Bernardino Counties, CA.** Principal and Project Manager. Dr. Bischoff was responsible for all office and field operations that ensured the successful inventory and management of cultural resources related to this 300-mile transmission line project, including the management of standing historical structures and paleontological resources. He managed an annual budget in excess of $4 million, a staff of up to 40 persons, wrote compliance documents (Programmatic Agreement Appendices, ARPA permits, Project Agency Yearly Reports, and Management Plans), and managed

hazmat situations. Dr. Bischoff completed over 150 individual projects in southern California including survey, evaluation, mitigation, and resource monitoring. (November 2009 - June 2011)

- **East Kern Wind Resource Area (EKWRA) Power Pole Replacement Project, Southern California Edison, Kern County, CA.** Principal and Project Manager. Dr. Bischoff managed original technical studies for a project designed to replace hundreds of power poles in the Tehachapi Mountains area in support of new wind farm construction. He conducted large area surveys, some on BLM properties, and developed a management plan for dozens of archaeological sites. Bureau of Land Management was the principal federal agency. (February 2010 - June 2011)
- **Operations and Maintenance Contract, Southern California Edison. Southern California.** I acted as the Principal for all work orders issued to our office under the O/M contract. A major task under this contract was the response to the Crown Fire in 2010. I worked directly with SCE during and immediately after the fire to evaluate and protect cultural resources. (Jan 2010 - June 2011)

Telecommunication Projects

- **AT&T Fiber-optics Renewal Project, Evaluations, Mitigations, and Monitoring, AT&T, San Bernardino County, CA.** Cultural Principal and Project Manager. Dr. Bischoff will provide project management, technical writing, and quality control for the cultural and paleontological evaluations, data recoveries, and monitoring efforts for the AT&T fiber renewal project. This project involved the survey of over 90 miles of proposed new fiber-optic line between Barstow and Las Vegas, NV, and the management of over 100-cultural sites. Bureau of Land Management and Mojave National Preserve were the principal federal agencies. (July 2013 – October)
- **San Diego Churches and Public Building Historic Structure Evaluations, DePratti Inc., City of San Diego, CA.** Principal Investigator. Dr. Bischoff acted as Principal and QA/QC manager for this project, which involved the evaluation of dozens of historic structures as part of the DePratti Communication telecommunication attachment project in the City of San Diego. (November 2011 – October 2013)
- **AT&T Fiber-optics Renewal Project, Surveys, Literature Searches, and Technical Studies, AT&T, San Bernardino County, CA.** Cultural Principal and Project Manager. Dr. Bischoff provided general project management and quality control for the cultural, paleontological, and ethnographic surveys, literature searches, and technical studies. This project involved the survey of over 90 miles of proposed new fiber-optic line between Barstow and Las Vegas, NV, and the management of over 100-cultural sites. Bureau of Land Management and Mojave National Preserve were the principal federal agencies. (April 2012 – July 2013)
- **Digital 395 Broadband Stimulus Project, Praxis and California Broadband Corporation, California and Nevada.** Cultural Director. Dr. Bischoff acted as the California report manager of the cultural division, directed fieldwork, and authored management documents and reports. This project involved the new installation of over 650 miles of fiber-optic line across California and Nevada. The programmatic agreement of this complex project included 10 federal, state, and tribal agencies, with another seven acting as interested parties, and the management, evaluation, and monitoring of over 170 cultural sites. NTIAA was the principal federal agency, but also involved twelve other California and Nevada state and federal agencies and Tribal Groups. (November 2011 – April 2012)

Defense Projects

- **Edwards Airforce Base Telecommunication Cultural Monitoring, Team Fischel Company, Edwards AFB, Kern County, CA.** Project Manager and Principal for the cultural monitoring of 40-miles of telecommunication trenching on Edwards AFB, including pre-construction meetings and a final monitoring report. (May 2013 – Sept. 2013)
- **Fort Irwin Cell Tower Surveys and Monitoring, Northrop-Grumman and Fort Irwin Army Post, San Bernardino County, CA.** Principal. This project involves the cultural and paleo survey of over 24 new cell tower locations and associated access roads on Fort Irwin, as well as construction phase monitoring. (April 2013 – October 2013)
- **Marine Corps Base, Camp Pendleton, Cultural Resources Consultation, Marine Corps Base, Pendleton, San Diego County, CA.** On-Call Senior Cultural Resources Consultant. Dr. Bischoff provided senior-level cultural resource consultation related to Camp Pendleton's Basewide Utilities Infrastructure Improvements project. He provided consulting on cultural resource management for several waste treatment and utility line systems as part of the Camp's "Grow the Force" initiative. (2011 – October 2013)

Water Projects

- **Pacoima Spreading Grounds Improvement Project, LACDPW, Los Angeles County, CA.** Cultural Principal. Dr. Bischoff managed the cultural resources record search and CEQA cultural section mitigation measures of an EIR for the improvement of the Pacoima spreading grounds and related canal resources. (April 2013 – October 2013)
- **Devil's Gate Reservoir Sediment Removal and Management Project, LACDPW, Los Angeles County, CA.** Principal of Cultural Resources. This project involved removal of sediment within the Devil's Gate Reservoir area, which required a preliminary cultural survey and record search under CEQA, as well as an EIR. Dr. Bischoff served as the cultural principal for the project and provided a recommended plan for dealing with sedimentary soils vs. native soils, monitoring criteria, and potential discovery situations. Dr. Bischoff helped write Environmental Impact Report sections, and worked with the Gabrieliño Tribal Group in the protection of archaeological and tribal cultural resources. (2011 – October 2013)
- **Peck Road Spreading Basin Improvement Project, LACDPW, Los Angeles County, CA.** Cultural Principal. Dr. Bischoff managed the cultural resources record searches, field survey, paleontological survey, and CEQA cultural section mitigation measures of an MND for the improvement of the Peck Road Spreading Basin, including a related new water discharge pipe. (June 2013 – September 2013)
- **Marina Del Rey Waterline Replacement Project Cultural Monitoring, LACDPW, Los Angeles County, CA.** Cultural Principal. This project with the Los Angeles Department of Public Works involved the cultural monitoring for the Marina Del Rey 18-inch Waterline Replacement. Chambers Group also provided a qualified archaeological monitor at the project site during excavation activities during construction. (March - May 2013)
- **Dieguito Wetlands Restoration Monitoring, Southern California Edison, Del Mar, San Diego County, CA.** Principal Investigator and Project Manager. This project involved the extensive rehabilitation of Southern California Edison property as part of the Dieguito Wetlands Restoration project. (April 2012 - January 2013)

- **Los Penasquitos Wetlands Monitoring, AMEC, Del Mar, San Diego County, CA.** Principal Investigator. Dr. Bischoff managed the monitoring tasks, budgets, and professional standards for this project near the City of Del Mar as part of the Torrey Pines State Nature Reserve restoration. (October - December 2012)
- **San Gorgonio Creek Water Recharge Basin Construction Monitoring, Beaumont Cherry Valley Water District, Cherry Valley, Riverside County, CA.** Principal and Project Manager. This project involved paleontological and archaeological construction monitoring during construction, including emergency evaluation and monitoring when early 19Th Century structures and materials were unexpectedly encountered during earth moving. (February 2012 – April 2012)
- **Penmar Golf Course Water Quality Improvement Project, Pacific Hydrotech and City of Santa Monica, Santa Monica, CA.** Principal Investigator. Dr. Bischoff managed QA/QC review, budgets, and professional standards for the project in the City of Venice. Penmar was a multi-year waterline and tank improvement project in which evidence of ethnic Japanese barrios and fossil Pleistocene animal bones were discovered. (November 2011 - November 2012)
- **Oxford Retention Basin Flood Protection Project, LACDPW, Los Angeles County, CA.** Principal and Project Manager. The Oxford Basin in Marina Del Rey was receiving enhancement, and Dr. Bischoff managed the completion of the cultural survey, literature review, and construction monitoring for the project. (2011 - 2012)
- **San Jose Salt Barge HAER Documentation Project, USACE and Santa Clara Valley Water District, City of San Jose, CA.** Principal. Dr. Bischoff consulted on the excavation and evaluation of a shallow-water shipwreck discovered during a wetlands rehabilitation project. This project involved USACE, San Francisco District as lead agency and the Water District as client. (January – February 2011)

Public Works Projects

- **Oakwood Schools Built Environment and Archaeological Assessment.** Principal and Project Manager for the Phase I built environment and archaeological assessment of the project property prior to the construction of a new middle and high school campus. Challenging tasks were assessing indirect effects of the project on an adjacent historic district, and addressing a modern human cremation garden in the report. (November 2015 – February 2016)
- **CEQA Services for Improvements to Polytechnic and Wilson High Schools, LBUSD, City of Long Beach, CA.** Cultural Principal. Dr. Bischoff provided oversight and incorporation of the historic architecture technical reports into the project CEQA documents. (June 2013 – August 2013)
- **Mill Creek Crew Room Cultural Monitoring, Angeles National Forest (ANF), Los Angeles County, CA.** The County of Los Angeles Department of Public Works proposed to replace the crew room building within the Angeles Forest Mill Creek Summit Maintenance Yard facility. This CEQA/NHPA project involved the preparation of a treatment and discovery plan document, ARPA permitting, constant consultation with the ANF, construction monitoring, and a final monitoring report. (April – July 2013)
- **Roosevelt School, LBUSD, City of Long Beach, CA.** Cultural Principal. Dr. Bischoff provided oversight, authorship, and counsel on the EIR for the demolition of the Roosevelt Elementary School in Long Beach. This proved to be a complex project, involving an historic built environment resource evaluation and mitigation plan, legal investigation, and extensive responses to public comments. This process resulted in a HABS/HAER mitigation project. (November 2011 - June 2012)

Transportation Projects

- **Foothill Toll Road Cultural and Paleontological Monitoring, Ghiradelli and Associates, Orange County, CA.** Principal and Project Manager for cultural monitoring related to the upgrade of all toll road payment stations in Orange County. (October 2013 – October 2013)
- **9th Street Extension Historic Structure Inventory and Evaluation, City of Holtville, Imperial County, CA.** Principal and Project Manager. Dr. Bischoff managed and provided QA/QC for this project involving a Caltrans inventory of project APE historic built environment resources, and the historic evaluation of a canal feature. Final deliverables included a Historic Resources Evaluation Report and a Historic Property Survey Report to CALTRANS standards. (June 2013 – August 2013)
- **Francisquito Bridges Replacement (3-Total), LADWP/CALTRANS, Los Angeles County, CA.** Principal. Dr. Bischoff managed and oversaw the completion of this project in the Angeles Forest. This project involved the replacement of three existing bridges on San Francisquito Canyon Road over San Francisquito Canyon Creek. The proposed improvement project involved widening the two lane bridges, improvement of approachment roadway, and the placement and installation of retaining walls, concrete barriers with tubular-steel handrails, and metal beam guardrails. (2011 – September 2013)
- **Murrieta Whitewood Road Extension, City of Murrieta, Riverside County, CA.** Principal and Project Manager. This road extension project involved a cultural resource survey and records search, a paleontological field study, and Native American Consultation due to the historic use of the nearby Murrieta Hot Springs by local Native Americans. (April – June 2012)

PRELIMINARY SOILS ENGINEERING INVESTIGATION FOR PROPOSED 20 RESIDENTIAL UNITS WITH SEMI-SUBTERRANEAN GARAGE AND POOL 113-133 W. PLYMOUTH STREET INGLEWOOD, CALIFORNIA

1. INTRODUCTION

This report presents the results of our preliminary soils engineering investigation performed at the site located at 113-133 W. Plymouth street in the City of Inglewood. The report includes a description and an evaluation of the subsurface materials, discusses the soil conditions, and provides soils engineering recommendations for the proposed development at the subject site.

This report is intended for submittal to the appropriate governmental authorities that control the issuance of necessary permits and provides recommendations for the proposed development at the subject site.

1545 VICTORY BLVD. 2ND FLOOR, GLENDALE CALIFORNIA 91201-9240 PH. 818 - 500 - 9533 FAX 818 - 500 - 0134

1.1 Objective

The primary objective of this investigation was to provide our best estimate of the geotechnical factors that pertain to the gross stability of the site, and to evaluate alternatives for the foundation systems for the proposed structure.

1.2 Location

The property is located at 113-133 W. Plymouth Street between North La Brea Avenue and North Eucalyptus Avenue, in the City of Inglewood, California 90302 (Thomas Guide page 703, grid C1).

2. SCOPE

The scope of our investigation involved the completion of the following:

2.1 Review of available geotechnical data for the area.

2.2 Excavation and detailed logging of eight (8) exploratory truck-mounted hollow stem auger and hand auger borings to a maximum depth of 50-feet below existing grade.

2.3 Sampling of representative earth materials.

2.4 Laboratory testing.

2.5 Geotechnical analysis of field and laboratory data.

2.6 Preparation of Plot Plan, Regional Geologic Map, Seismic Hazard Map, and various graphs.

2.7 Presentation of our procedures, findings, and recommendations.

3. PROPOSED DEVELOPMENT

The findings and recommendations contained in this report are based on preliminary plans provided by the client's representative and our subsurface exploration in the general area of the proposed development.

The proposed development consists of 20 residential units with semi-subterranean garage and a detached pool. Proposed residences will consists of three-story buildings over semi-subterranean garage, which will be located approximately 7-feet below adjacent street grade. The approximate proposed building layouts are depicted on the attached Geotechnical Map, Plate 1 and Cross Sections, Plate CS-1 through CS-3.

4. SITE CONDITIONS

The subject site is a L-shaped lot which measures approximately 250-feet wide along W. Plymouth Street and approximately 100-feet deep in the western portion and 174-feet deep in the eastern portion. The site is essentially level with total relief of about 4-feet and currently occupied with single family residences, multi-story multi tenant residences, and detached garages. Existing structures will be removed. Neighboring properties consists of commercial buildings to the east, single-story single family residence to the south, and multi-story multi tenant apartment buildings to the north and west of the property. Drainage is by sheet flow towards the street and partially by percolation through on-site soils.

5. FIELD INVESTIGATION

The site was explored by this firm on March 7, 2018 by excavating and detailed logging of four (4) deep borings utilizing truck mounted hollow-stem auger to a maximum depth of 50-feet below existing grade. The site was revisited on March 13, 2018 to excavate four (4) additional hand auger borings to a maximum depth of 15-feet below existing grade. The approximate boring locations are shown on Plate 1.

The "Standard Penetration Test" was conducted by driving a 2-inch O.D. split spoon into the soil using blows from a 140-pound hammer dropped 30-inches. The number of blows

required to advance the split spoon the final 12-inches of a 18-inch drive is defined as the "Standard Penetration Resistance, " N-value, and is shown on the attached Boring Logs. The N-value can generally be correlated with some significant physical properties of the soil encountered especially for coarse-grained material.

Soil samples were obtained for laboratory testing. The earth materials were logged in detail and are presented in the Log of Borings (Plates B-1 through B-8). Perched groundwater was encountered approximately from a depth of 30- to 35-feet in our exploratory boring B-6 located on the eastern portion of the property, no groundwater was encountered below these depths to a depth of 50-feet. Groundwater was not encountered in the rest of our exploratory boring to a maximum depth of 50-feet below the existing grade.

6. SUBSURFACE CONDITIONS

6.1 Earth Materials

The earth materials encountered at the site consist of artificial fill and alluvium.

Artificial Fill (Af)

Artificial fill was encountered to be up to 11-feet within our test borings, although the thickness may be vary elsewhere on the site. The artificial fill consists of silty-clayey sands (SM/SC) and sand with traces of silt (SP) with debris consisting of nails and broken glasses. The artificial fill is not considered suitable for support of foundations, concrete slabs, or as a base for new compacted fill. The deepest fill encountered appears to be within the previously backfilled Los Angeles flood control easement as shown on the Geotechnical Map, Plate 1.

Alluvium (Qoa/Qya2)

The alluvium encountered at the site consists of silty-clayey sand (SM), sands with traces of silt (SP), and silty sands along the western portion of the lot. Alluvium along the western portion of the lot are slightly moist to moist and medium dense to dense. The alluvium encountered on the central and eastern portion of the lot are composed of sandy clay (CL), clayey sand (SC), and silty sands (SM). These soils are sightly moist to wet, soft to medium stiff and become denser with depth. The alluvium is considered suitable for support of foundations, concrete slabs, or as a base for new compacted fill.

6.2 Groundwater

Perched groundwater was encountered approximately from a depth of 30- to 35-feet in our exploratory boring B-6 located on the eastern portion of the property, no groundwater was encountered below these depths to a depth of 50-feet. Groundwater was not encountered in the rest of our exploratory boring to a maximum depth of 50-feet below the existing grade. However, it must be noted that local fluctuation in groundwater level may occur due to tidal variations, seasonal variations in rainfall, irrigation and water line leak. The historical highest water level in the area is located approximately at 10-feet as depicted on Plate 2.

7. FAULTING AND SEISMICITY

7.1 Ground Rupture

No known faults with potential for surface rupture underlie the site. Nor is the site located within any Alquist Priolo Special Studies Zone. Based on the Earthquake Zones of Required Investigation map (Plate 4), the closest fault zone is the Inglewood fault which is approximately 150 meters to the east of the site.

7.2 Seismic Design

It is our opinion that future structures should be designed in accordance with the current seismic building code as determined by the structural engineer. The subject site is located within **Site Class D** per the 2016 California Building Code. The following values of short and long period accelerations, based on the ASCE 7-10 Standard (2010), are recommended for the Maximum Considered Earthquake (MCE) and the Design Basis Earthquake (DBE). The printed output from the calculation are provided as Plates CBC-1 through CBC-11.

Site Location (latitude, longitude) : (33.97471°, -118.35877°)				
Spectral Period, T (seconds)	Site Class B MCE spectral acceleration (g)	Site Class D MCE spectral acceleration (g)		**Site Class D DBE spectral acceleration (g)**
0.2	$S_s = 1.790$	Fa = 1.0	$S_{MS} = 1.790$	$\mathbf{S_{DS} = 1.193}$
1.0	$S_1 = 0.655$	$F_V = 1.5$	$S_{M1} = 0.982$	$\mathbf{S_{D1} = 0.655}$

Note: Values calculated using the USGS website: https://earthquake.usgs.gov/hazards/designmaps/usdesign.php

The Peak Ground Acceleration (PGA) of the mapped MCE_G (Maximum Considered Earthquake Geometric Mean) is 0.649 g and the adjusted site peak ground acceleration (PGA_M) is 0.649 g, as indicated on Plate CBC-6.

7.3 Ground shaking

Ground shaking resulting from a moderate to major earthquake (Magnitude 6.0 or greater) can be expected during the lifespan of the proposed structure. Property owners and the general public should be aware that any structure or slope in the southern California region could

be subject to significant damage as a result of a moderate or major earthquake. The potential exists throughout southern California for strong ground motion similar to that which struck the Los Angeles region during the January 17, 1994, Northridge Earthquake. Several such destructive earthquakes have struck southern California during the span of recorded history.

Present building codes and construction practices, and the recommendations presented in this report are intended to minimize structural damage to buildings and loss of life as a result of a moderate or a major earthquake. They are not intended to totally prevent damage to structures, graded slopes and natural hillsides due to moderate or major earthquakes. While it may be possible to design structures and graded slopes to withstand strong ground motion, the construction costs associated with such designs are usually prohibitive, and the design restrictions may be severely limiting. Earthquake insurance is often the only economically feasible form of protection for your property against major earthquake damage. Damage to sidewalks, steps, decks, patios and similar exterior improvements can be expected as these are not normally controlled by the building code.

At your request, this firm could conduct a site specific strong motion study to provide ground response data for use by a structural engineer to design structures to withstand a major earthquake. Such a study is not required by present building codes, and is beyond the scope of this investigation.

Major foundation problems are not anticipated as a result of earthquake induced liquefaction and differential settlement of natural earth-materials, provided the foundation system is constructed as herein recommended, within the limitations presented above.

7.4 Liquefaction Potential

Liquefaction potential analysis based on a 2% probability of exceedance in 50 years (2475-year return period) was conducted based on the following conditions. *1)* soil type, *2)* in-situ standard penetration test, *3)* anticipated highest groundwater level at a depth of 10-feet (Plate 2), *4)* predominant earthquake magnitude of 6.77 (Plate CBC-10), and *5)* peak ground accelerations of 0.433g (2/3 PGAm, Plate CBC-6).

Based on our liquefaction analysis results (Plates LQ 1-1 through LQ 1-10 and LQ 2-1 through LQ 2-10) utilizing data from Boring B-2 and B-6, soil layers between a depth of 10- to 23-feet exhibit a factor of safety less than 1.3. This suggests that liquefaction is likely to occur during a major earthquake event.

7.5 Seismically Induced Settlement

We have conducted a quantitative analysis of seismically induced sand settlement based on the following site conditions: soil type, standard penetration test (SPT) data, and historically highest water level at the site. Based on the attached analysis on Plates LQ 1-1 through LQ 1-10 and LQ 2-1 through LQ 2-10 utilizing data from Boring B-2 and B-6, the total and differential anticipated amount of seismically induced saturated and un-saturated settlement is 2.7" and 1.4", respectively. The seismically induced settlement analysis at the subject site was analyzed utilizing Tokimatsu and Seed (1987) method, predominant earthquake magnitude M_w=6.77, and a peak ground acceleration of 0.433g. The project structural engineer should design the foundation system considering the anticipated earthquake-induced saturated sand and un-saturated sand settlements.

8. LABORATORY TESTING

Laboratory tests were conducted on representative samples to determine certain physical properties of the earth materials. Field moisture content, in-situ density, shear strength characteristics, consolidation potential, particle size distribution, Atterberg Limits, and soil corrosivity were determined from these tests.

8.1 Moisture-Density Determination

The in-situ moisture content and dry density of the earth materials sampled were determined from the recovered samples and are included in the boring logs.

8.2 Direct Shear

Direct shear tests were conducted on representative undisturbed samples of the alluvium to determine its shear strength characteristics. The samples were saturated under normal load before testing. Shear loads were applied at a rate of 0.05-inch per minute in accordance with the undrained shear test procedure. Residual shear strength values for the samples tested are shown in Table 1 and are provided as Plate DS-1.

TABLE 1

Sample Location	Depth (ft)	Soil Type	Dry Unit Weight (pcf)	Moisture Content (percent)	Cohesion (psf)	Friction Angle (degrees)
B-7	7.5	SM	104.2	11.7	125	23

8.3 Consolidation Potential

Consolidation tests were performed on in-situ moisture and saturated specimens of the alluvium. The consolidometer is designed to receive the specimens in the field condition. Porous stones placed at the top and bottom of the specimens permit free flow of water into and from the specimens during the test. Successive load increments are applied to the top of the specimens and progressive and final settlements under each load increment are recorded to an accuracy of 0.0001-inch. The consolidation curves of the test results are shown on Plates C-1 through C-8.

8.4 Particle Size Distribution

Sieve analyses were performed on the representative materials to verify field classification and aid in evaluation of the shear strength parameters and liquefaction potential of the soils. The test results are attached in the Appendix (Plates SV-1 through SV-9).

8.5 Atterberg Limits

Atterberg Limit tests were performed to aid in classification and evaluation of the liquefaction potential of the on-site soils. Atterberg Limit results are shown in Table 2 and are provided as Plates PC-1 through PC-3.

TABLE 2

Sample Location	Depth (feet)	Soil Type	Dry Density (pcf)	Moisture Content (percent)	*Saturated Moisture Content (percent)	Liquid Limits (percent)	Plastic Limits (percent)	Plastic Index (percent)	80% Liquid Limit (percent)
B-6	12.5	CL	106.8	13.0	21.4	27	15	12	21.6
B-6	17.5	CL	99.1	19.4	25.9	29	15	14	23.2
B-6	22.5	CL	95.5	16.8	28.3	30	15	15	24

**Based on specific gravity of 2.7*

8.6 Chemical Characteristics

Chemical tests for pH, chloride content, sulfate content, and minimum resistivity were performed per the California Test Method (CTM) on a sample of the surficial materials in the area of the proposed development. Minimum resistivity testing was conducted on a saturated sample of the material. The laboratory test results based on CTM are presented below:

Sample Location	Depth (ft)	Soil Type	pH CTM 643	Chloride Content CTM 422 (ppm)	Sulfate Content CTM 417 (ppm)	Minimum Resistivity CTM 643 (ohm-cm)
B-2	0-10	SC	8.2	160.0	92.5	15,105

The following determinations of soil corrosivity are based on the Los Angeles County Manual for Preparation of Geotechnical Reports (LA County, 2013). An engineer specializing in corrosion protection and concrete design should be consulted if additional protection is desirable.

1) Soils are considered corrosive when the pH gets down around 5.5.

2) Large concentrations of chlorides will adversely affect ferrous materials, such as iron and steel. When chloride concentrations exceeds 500 parts per million (ppm), mitigation measures must be taken to protect any steel reinforcing within concrete and any steel pipe or cast iron that serve the development.

3) When soluble sulfate concentrations are greater than 2,000 ppm in soil and 1,000 ppm in groundwater, mitigation measures must be taken to protect any concrete structures in contact with the soils.

4) The relationship between soil resistivity and corrosivity is shown in the following table. As the soil resistivity decreases the corrosivity increases. Mitigation must be recommended when test results indicate the soil to be moderately corrosive or worse.

Corrosivity Category	Severely Corrosive	Corrosive	Moderately Corrosive	Mildly Corrosive
Soil Resistivity (ohm-cm)	0 - 1,000	1,000 - 2,000	2,000 - 10,000	over 10,000

Based on the results of the resistivity testing, the on-site soils are considered mildly corrosive to ferrous metals. No special mitigation measures are considered necessary for ferrous metal in contact with the on-site soils. If additional protection is desired, we recommend underground steel utilities be given a high quality protective coating such as 40 mil extruded polyethylene, 20 mil plastic tape over primer per AWWA Standard C209, or hot applied coal tar enamel or tape per AWWA Standard C203.

In addition, cathodic protection is recommended for underground steel utilities. No special precautions are required for copper, asbestos-cement or plastic utilities placed underground from a corrosion viewpoint. However, any iron valves or fittings should be protected as mentioned above.

Based on the sulfate and chloride content of the material, standard construction practices and concrete mixes may be used for concrete in contact with the on-site soils using types I, II or III cement.

9. RECOMMENDATIONS

Based on the findings of our investigation, the site is considered to be suitable from a soils engineering standpoint for the proposed 20 residential units with semi-subterranean garage and pool provided the recommendations included herein are followed and integrated into the final foundation and building plans.

9.1 Site Clearance/Site Preparation

Demolition debris and other unsuitable materials should be stripped and removed from the site. Water lines or other old utility lines or installations to be abandoned should be removed or crushed in place. Holes resulting from removal of buried obstructions which extend below finished site grades should be backfilled with compacted soils.

Based on our field observations, artificial fills were encountered to be up to 11-feet within the proposed development area, although fill thickness may be vary elsewhere. These materials are not suitable for foundation or slab support at the current condition and will require mitigation for all proposed on-grade development. On-site materials are considered suitable for compaction provided that all deleterious materials are removed prior to compaction. These materials should be removed and re-compacted to a minimum of 90 percent of maximum compaction at about **2 percent** above optimum moisture content for slab support. The bottom of the exposed competent alluvium should be inspected and approved by the soils engineer prior to compaction work.

The proposed buildings and pool should be supported entirely on native alluvium. Deeper foundation might be expected along the previously backfilled easement area.

9.2 Expansive Soils

Based on our on-site soil classification and laboratory testing results, the clayey sand/sandy clay (SC/CL) located in the area of the proposed development are considered to be low in expansion potential. Design criteria is provided in Plate EI-1 for reinforcement and pre-saturation recommendations for foundations and concrete slabs.

9.3 Foundations

Mat Foundation

Based on liquefaction potential analysis, seismically induced settlement is expected during a major earthquake event, therefore, a mat foundation system should be used for support of the proposed structures. The mat foundation should be supported entirely on native alluvium or certified compacted fill with a minimum 12-inch embedment. A bearing capacity of 1500 psf and modulus of subgrade reaction of 40 pci should be used for design.

The foundation should be designed within a tolerable deflection determined by structural engineer for the combined differential settlement, both seismically induced settlement (1.4") plus static settlement (0.25").

The bearing pressure given is for the total of dead and frequently applied live loads and may be increased by one-third for short duration loading which includes the effects of wind or seismic forces.

9.4 Lateral Design

Resistance to lateral loading may be provided by friction acting at the base of foundations and by passive earth pressure within native alluvium or certified compacted fill. An allowable coefficient of friction of 0.3 may be used with the dead load forces.

Passive earth pressure may be computed as an equivalent fluid having a density of 300 pcf with a maximum earth pressure of 4500 psf. When combining passive and friction for lateral resistance, the passive component should be reduced by one-third.

9.5 Foundation Settlement (Static)

Settlement of the foundation system bearing entirely in native alluvium or certified compacted fill is expected to occur on initial load application. The maximum settlement is expected to be ½-inch. Differential settlement is not expected to exceed ¼-inch within a span of 30-feet. These estimates may be exceeded in the event of strong or severe ground shaking resulting from a moderate to major earthquake.

9.6 Retaining Walls

Restrained retaining wall (subterranean garage walls) should be designed with at-rest condition utilizing a trapezoidal distribution of 48 H psf, where H is the height of retaining wall in feet as shown in the attached Plate PD-1. Free standing retaining wall should be designed utilizing equivalent fluid of 47 pcf (Plate AP-1) as active pressure for walls up to 9-feet. The proposed retaining walls should be designed for surcharge condition due to sloping ground, building or vehicular surcharge.

In accordance with 2016 California Building code, an additional active load of 11.2 H^2 pounds should be added to the retaining wall design for free standing walls and an additional active load of 17.9 H^2 pounds should be added to the retaining wall design for restrained walls. Our earth pressure distribution diagrams are presented on Plate PD-1.

All walls should be effectively waterproofed, provided with an adequate subdrainage system, and backfilled in accordance with the attached retaining wall backfill and subdrain details (Plates RD-1 and RD-2). If space is limited, Miradrain may be used (Plates SD-1 and SD-2).

We recommend you hire a waterproofing expert to determine your waterproofing requirements. Waterproofing details, application methods or effectiveness in preventing moisture

intrusion are beyond the scope of our work authorization and not the responsibility of GeoSystems, Inc. The subdrainage system, including outlet locations, should be clearly shown on the building and/or grading plans. The contractor is responsible to insure that all subdrain outlets are constructed per plan.

9.7 Retaining Wall Deflection

All walls should be designed by the structural engineer within a tolerable deflection as determined by the project structural engineer and the owner. Non-restrained (freestanding) retaining walls designed for active pressure will typically deflect approximately one percent of their height over time in response to loading (depending on the stiffness of the wall). This deflection is normal and reduces the pressure on the wall. To accommodate this deflection, structures or slabs should not be tied to freestanding retaining walls. Freestanding walls should be provided with vertical construction joints at corners. Should excessive wall deflection be undesirable, at-rest earth pressure recommendations presented herein, which will reduce wall deflection significantly, may be used for retaining wall design. Our recommendations for at-rest earth pressure distribution for the design of restrained retaining walls are provided on Plate PD-1.

Slabs should not be tied to walls unless designed as a structural slab. The space between the wall and the slab will require periodic caulking to prevent moisture instruction into retaining wall backfill.

9.8 Temporary Excavations

The vertical excavation required for the lowering of the pad grade for the proposed semi-subterranean garage and removal and recompaction for the proposed foundation excavation are anticipated to be a maximum of 11-feet in vertical height and are expected to expose artificial fill

and native alluvium. The maximum recommended height of unsurcharged temporary vertical excavation is 4-feet (Plate TS-1). Excavation exceeding 4 vertical feet or exposing loose soils should be trimmed to a 1:1 ratio backslope where space is available or shored. All excavations which remove lateral support of neighboring structures and property lines should be shored.

A representative of **GEOSYSTEMS, INC.**, should observe the temporary excavations to verify that the geologic conditions being exposed in the cuts are as anticipated. Additional or revised recommendations will be made as field conditions warrant.

All excavations shall be made in accordance with the regulations of State of California, Division of Occupational Safety and Health (Cal/OSHA). These recommended temporary excavation slopes do not preclude local raveling and sloughing. All excavation should be stabilized within 30 days of initial excavation. Water should not be allowed to pond on the top of the excavation nor flow towards it. No vehicular surcharge should be allowed within 11-feet of the top of cut. It is recommended that a pre-excavation site meeting be attended by the grading contractor, the soils engineer and an agency representative to discuss methods and sequence of subterranean excavation.

9.9 Temporary Shoring

The temporary vertical excavations for the removal and recompaction will require special consideration due to proximity to property boundaries which remove lateral support of neighboring property lines and existing neighboring residential buildings. The excavations should be temporarily shored utilizing a shoring system consisting of soldier piles and lagging. The piles should be spaced no greater than 8-feet on center exhibiting a minimum embedment 11-feet below the bottom of the excavation. In order to avoid sloughing and/or caving between the proposed

piles, we recommend that wood lagging be placed to support the material exposed between the piles. The wood lagging should be extended down to the bottom of the temporary excavations. Lagging between the piles should be in contact with the exposed soils, voids due to over-excavation should be backfilled. An active earth pressure of 41 pcf can be used for temporary shoring design (Plate AP-2).

9.10 Floor Slabs

Concrete floor slabs should be supported entirely on new certified compacted fill, and should be reinforced with a minimum of #4 rebar spaced at a minimum distance of 16-inches on center each way. Slabs to be covered with flooring should be protected by an acceptable plastic vapor retarder/barrier (minimum 10 mil thickness). To prevent punctures and aid in the concrete cure, the barrier should be covered with a 4-inch layer of sand per ACI Manual of Concrete Practice.

A minimum 4-inch-thick capillary break consisting of compacted clean graded 3/4-inch gravel should be placed below the vapor retarder/barrier if the slab level is below the surrounding finished grade.

If moisture vapor transmission is a concern to the facility owner, an expert should be consulted to provide additional recommendations for the design and construction of slabs in moisture sensitive flooring areas.

9.11 Pre-Saturation

Maintaining the subgrade at a "moist" condition prior to placing concrete will minimize the shrink/swell potential of the soil. The subgrade to receive concrete slabs-on-grade should be pre-saturated to at least 120 percent of the optimum moisture content for at least 24 hours prior to

placing concrete. The pre-saturation depth should be at least 24-inches deep. Pre-saturation of the subgrade should be conducted well before concrete is scheduled for placement. The effectiveness of the pre-saturation should be tested by our firm prior to pouring concrete.

9.12 Patio Slabs and Hardscape

It may be desirable to support new patio slabs and hardscape (patios, steps, walkways, etc.) on the existing surficial soils which are not considered to be suitable for structural support. These structures are not normally subject to building code requirements for structural support. In order to reduce the potential for distress, it may be desirable to provide additional subgrade preparation and additional steel and concrete thickness for the proposed patio slabs and hardscape at the site. At a minimum, we recommend that patio slabs and hardscape be reinforced with a minimum of #4 rebar placed at 16-inches on center each way. The upper 12-inches of existing surficial soils to be used for slab support should be removed and recompacted to 90 percent of the maximum dry density, as determined by ASTM Method D1557. It should be noted that patio slabs/hardscape constructed to the preceding specification may be subject to distress over time. Periodic maintenance or replacement may be necessary.

9.13 Pavement Design

Prior to placing pavement, the subgrade should be scarified to a depth of 6-inches, moistened or dried out to optimum moisture content, and recompacted to at least 90 percent of the maximum dry density, as determined by ASTM Method D1557.

A flexible pavement section consisting of 3-inches of asphalt concrete over 4-inches of base material should be used. The base material may be crushed aggregate.

As an alternative, a rigid pavement section consisting of Portland Cement Concrete (PCC) can be used. The traffic loading is expected to be primarily light vehicles. Recommendations for rigid concrete pavement design is provided herein in the following Table 3:

TABLE 3

Compressive Strength of Concrete @ 28 days	3500 psi
Modulus of Rupture of Concrete @ 28 days	550 psi
Concrete Thickness	4 inches
90 Percent Compacted Subbase	12 inches
Contraction Joint Spacing	10 ft.
Depth of Joint	1 inch

Concrete slabs should be separated from other structures or fixed objects within or abutting the paved area by isolation joints. This serves to offset the effects of the differential horizontal and vertical movements of the structures which may fracture the concrete slab.
When isolation joints are located where wheel and other loads are applied, the pavement edge at the joint should be thickened by 20 percent or 2-inches, whichever is greater.

A joint filler should be applied to any new isolated joints within the concrete slab. The joint filler should extend through the slab thickness and should be recessed below the pavement surface so that the joint can be sealed with joint sealant material. The types of joint filler materials recommended include bituminous mastic, bituminous impregnated cellulose or cork,

sponge rubber, or resin-bound cork. Joint filler materials should be installed in accordance with the recommendations of the manufacturer.

9.14 Swimming Pool

The proposed swimming pool should be supported entirely in native alluvium or certified compacted fill. The pool shell should be designed for free standing conditions and moderately expansive soils. All pool walls should be designed for a minimum equivalent fluid pressure of 65 pcf.

9.15 Swimming Pool Subdrainage

The proposed pool should be provided with a subdrainage system designed by the pool engineer to collect any pool leakage. At a minimum, the subdrain should consist of a bottom blanket of impermeable geo-fabric (10 mil visqueen or equivalent) embedded in a 4-inch-thick layer of clean sand below a 6-inch-thick blanket of clean, compacted 3/4-inch gravel or Caltrans Class II permeable material. A 4-inch-diameter perforated PVC pipe (Schedule 40, SDR 35, or equivalent), wrapped in filter fabric, should be embedded in the central portion of the gravel so as to collect any water within the gravel. The subdrain pipe should be provided with a cut-off wall and outletted via solid pipe to an approved dispersal area or to a sump pump. A typical pool subdrain detail is attached herein as Plate PS-1.

9.16 Drainage Control

Final grading shall provide positive drainage away from the foundations and from the lot. Proper drainage shall also be provided away from the building foundations and from the lot during construction. Maintaining a proper drainage system will minimize the shrink/swell potential of the subsoils.

9.17 Drainage Protection

We recommend that all pad and roof drainage should be collected and transferred to an approved area in non-erosive drainage devices. Drainage should not be allowed to pond on the pad or against any foundation.

It is the responsibility of the contractor and ultimately the developer and/or property owner to insure that all drainage devices are installed and maintained in accordance with the approved plans, our recommendations, and the requirements of all applicable municipal agencies. This includes installation and maintenance of all subdrain outlets and surface drainage devices.

10. APPROVAL

A set of building/grading plans should be submitted to this office for review and approval prior to initiation of construction.

It is recommended that all foundation excavations be approved by this firm prior to placing concrete or steel. Any fill which is placed should be tested for compaction if used for engineering purposes. All cut-slopes and temporary excavations should be observed by a representative of this firm. Should the observation reveal any geologic hazard, appropriate treatment will be recommended.

It is advised that the client contact **GEOSYSTEMS, INC.,** at least **1 week** in advance of commencing grading to allow for contractual agreements for geotechnical services during the construction phases of your project.

Please advise this office at least **24 hours** prior to any required observation.

Representatives of **GEOSYSTEMS, INC.,** will observe work in progress, perform tests on soil, and observe excavations and trenches. It should be understood that the contractor or others shall supervise and direct the work, and they shall be solely responsible for all construction means, methods, techniques, sequences, and procedures, and shall be solely and completely responsible for conditions of the job site, including safety of all persons and property during the performance of the work. Periodic observation by **GEOSYSTEMS, INC.,** is not intended to include verification of dimensions or review of the adequacy of the contractor's safety measures in, on, or near the construction site.

11. REMARKS

The conclusions and recommendations contained herein are based on the findings and observations made at the boring locations. While no great variations in fill or soil conditions are anticipated, if conditions are encountered during construction which appear to differ from those disclosed, **GEOSYSTEMS, INC.,** should be notified so as to consider the need for modifications.

This report has been compiled for the exclusive use of **EXIT REAL ESTATE GROUP** and their authorized representatives. It shall not be transferred to, or used by, a third party, to another project or applied to any other project on this site, other than as described herein, without consent and/or thorough review by this facility.

Should the project be delayed beyond the period of **one year** after the date of this report, the site should be observed and the report reviewed to consider possible changed conditions.

This report is issued with the understanding that it is the responsibility of the owner, or his representative, to assure that the information and recommendations contained herein are called to the attention of the designers and builders for the project.

The limits of our liability for data contained in this report and our warranty is presented on the following page.

LIMITATIONS

This report is based on the development plans provided to our office. In the event that any significant changes in the design or location of the structure(s), as outlined in this report, are planned, the conclusions and recommendations contained in this report may not be considered valid unless the changes are reviewed and the conclusions of this report are modified or approved by the soil engineer and geologist.

The subsurface conditions, excavations, characteristics, and geologic structure described herein and shown on the enclosed cross-section(s) have been projected from individual test pits and/or borings placed on the subject property. The subsurface conditions and excavation characteristics, and geologic structure shown should in no way be construed to reflect any variations which may occur between these excavations

It should be noted that fluctuations in the level of the groundwater may occur due to variations in rainfall, temperature, and other factors not evident at the time measurements were made and reported herein. **GEOSYSTEMS, INC.,** assumes no responsibility for variations which may occur across the site.

If conditions encountered during construction appear to differ from those disclosed, this office shall be notified so as to consider the need for modifications. No responsibility for construction compliance with the design concepts, specifications, or recommendations is assumed unless on-site construction review is performed during the course of construction which pertains to the specific recommendations contained herein.

This report has been prepared in accordance with generally accepted practice. No warranties, either expressed or implied, are made as to the professional advice provided under the terms of the agreement and included in this report.

GRADING GUIDELINES

Site Clearing

Any existing brush, loose fill, and porous soils shall be excavated to competent native materials. Prior to the placement of any fill soils, the exposed surface shall be scarified, cleansed of debris, and recompacted to at least 90 percent of the laboratory standard under the direction of the Soils Engineer in accordance with the following "Placing, Spreading, and Compacting Fill Materials".

Preparation

After the foundation for the fill has been cleared and scarified, it shall be brought to a proper moisture content and compacted to not less than 90 percent of the maximum dry density in accordance with the latest ASTM D1557 standard.

Materials

On-site materials may be used in the fill if cleansed of debris. Imported fill materials shall be approved by the Soils Engineer and may be obtained from any other approved source. The materials used should be free of excessive organic matter and other deleterious substances, and shall not contain rocks or lumps greater than 6 inches in maximum dimension.

Placing, Spreading and Compacting Fill Materials

Fill materials shall be placed in layers which when compacted shall not exceed 6 inches in thickness. Each layer shall be spread evenly and shall be thoroughly mixed during the spreading to ensure uniformity of material and moisture of each layer.

Where the moisture content of the fill material is below the optimum value determined by the Soils Engineer, water shall be uniformly added to obtain the approximate optimum moisture content.

Where the moisture content of the fill materials is higher than the optimum value determined by the Soils Engineer, the fill materials shall be aerated by blading, disking, or mixing with dry materials until the optimum moisture content is obtained.

After each layer has been placed, mixed, and spread evenly, it shall be thoroughly compacted to not less than 90 percent of the maximum dry density in accordance with ASTM D1557. Soils having less than 15 percent finer than 0.005 millimeters shall be compacted to a minimum of 95 percent of the maximum dry density.

Compaction shall be by sheepsfoot roller, track rolling, or other types of acceptable compaction equipment of such design that they will be able to compact the fill material to the specified density. Rolling shall be accomplished while the fill material is at the specified moisture content to ensure that the desired density has been obtained. The final surface of the areas to receive slabs-on-grade should be rolled to a dense, smooth surface.

GRADING GUIDELINES *(Continued)*

Field density tests shall be made by the Soils Engineer at intervals not to exceed 2 feet of fill height. Where sheepsfoot rollers are used, the soil may be disturbed to a depth of several inches and density readings shall be taken in the compacted material below the disturbed surface. When these readings indicate the density of any fill or portion thereof is below the required minimum compaction percentage, the particular layer or portion shall be reworked until the required density has been obtained.

The grading specifications should be a part of the project specifications.

The Soils Engineer shall review the grading plan prior to grading.

USGS Design Maps Summary Report

User-Specified Input

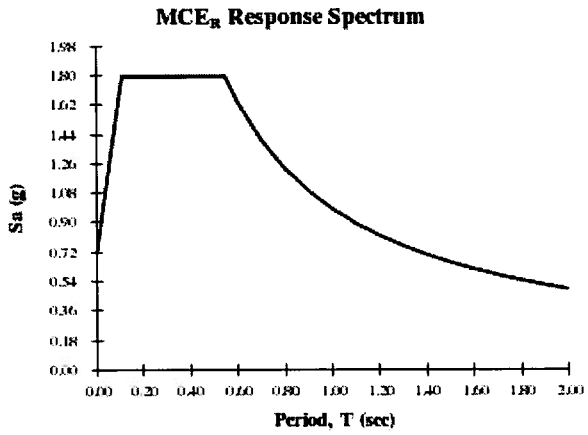

Report Title	113-133 W. Plymouth Street Fri March 30, 2018 16:26:29 UTC
Building Code Reference Document	ASCE 7-10 Standard (which utilizes USGS hazard data available in 2008)
Site Coordinates	33.97471°N, 118.35877°W
Site Soil Classification	Site Class D – "Stiff Soil"
Risk Category	I/II/III

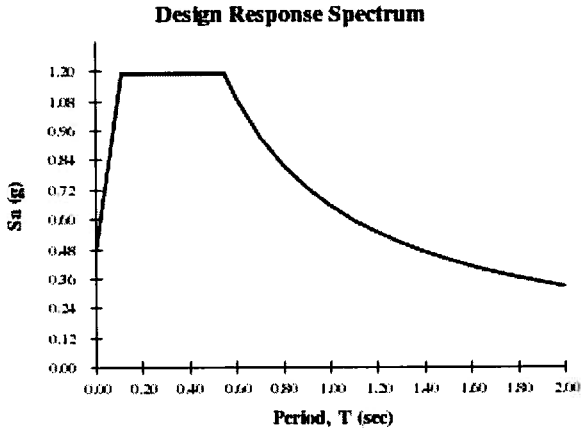

USGS-Provided Output

S_S =	1.790 g	S_{MS} =	1.790 g	S_{DS} =	1.193 g
S_1 =	0.655 g	S_{M1} =	0.982 g	S_{D1} =	0.655 g

For information on how the SS and S1 values above have been calculated from probabilistic (risk-targeted) and deterministic ground motions in the direction of maximum horizontal response, please return to the application and select the "2009 NEHRP" building code reference document.

For PGA_M, T_L, C_{RS}, and C_{R1} values, please view the detailed report.

Although this information is a product of the U.S. Geological Survey, we provide no warranty, expressed or implied, as to the accuracy of the data contained therein. This tool is not a substitute for technical subject-matter knowledge.

USGS Design Maps Detailed Report

ASCE 7-10 Standard (33.97471°N, 118.35877°W)

Site Class D – "Stiff Soil", Risk Category I/II/III

Section 11.4.1 — Mapped Acceleration Parameters

Note: Ground motion values provided below are for the direction of maximum horizontal spectral response acceleration. They have been converted from corresponding geometric mean ground motions computed by the USGS by applying factors of 1.1 (to obtain S_S) and 1.3 (to obtain S_1). Maps in the 2010 ASCE-7 Standard are provided for Site Class B. Adjustments for other Site Classes are made, as needed, in Section 11.4.3.

From Figure 22-1 [1]	S_S = 1.790 g
From Figure 22-2 [2]	S_1 = 0.655 g

Section 11.4.2 — Site Class

The authority having jurisdiction (not the USGS), site-specific geotechnical data, and/or the default has classified the site as Site Class D, based on the site soil properties in accordance with Chapter 20.

Table 20.3–1 Site Classification

Site Class	$\bar{v}_s$	$\bar{N}$ or $\bar{N}_{ch}$	$\bar{s}_u$
A. Hard Rock	>5,000 ft/s	N/A	N/A
B. Rock	2,500 to 5,000 ft/s	N/A	N/A
C. Very dense soil and soft rock	1,200 to 2,500 ft/s	>50	>2,000 psf
D. Stiff Soil	600 to 1,200 ft/s	15 to 50	1,000 to 2,000 psf
E. Soft clay soil	<600 ft/s	<15	<1,000 psf
	Any profile with more than 10 ft of soil having the characteristics: • Plasticity index PI > 20, • Moisture content w ≥ 40%, and • Undrained shear strength $\bar{s}_u$ < 500 psf		
F. Soils requiring site response analysis in accordance with Section 21.1	See Section 20.3.1		

For SI: 1ft/s = 0.3048 m/s 1lb/ft² = 0.0479 kN/m²

Plate CBC-2

Section 11.4.3 — Site Coefficients and Risk-Targeted Maximum Considered Earthquake (MCE_R) Spectral Response Acceleration Parameters

Table 11.4-1: Site Coefficient F_a

Site Class	Mapped MCE_R Spectral Response Acceleration Parameter at Short Period				
	$S_S \leq 0.25$	$S_S = 0.50$	$S_S = 0.75$	$S_S = 1.00$	$S_S \geq 1.25$
A	0.8	0.8	0.8	0.8	0.8
B	1.0	1.0	1.0	1.0	1.0
C	1.2	1.2	1.1	1.0	1.0
D	1.6	1.4	1.2	1.1	1.0
E	2.5	1.7	1.2	0.9	0.9
F	See Section 11.4.7 of ASCE 7				

Note: Use straight-line interpolation for intermediate values of S_S

For Site Class = D and S_S = 1.790 g, F_a = 1.000

Table 11.4-2: Site Coefficient F_v

Site Class	Mapped MCE_R Spectral Response Acceleration Parameter at 1-s Period				
	$S_1 \leq 0.10$	$S_1 = 0.20$	$S_1 = 0.30$	$S_1 = 0.40$	$S_1 \geq 0.50$
A	0.8	0.8	0.8	0.8	0.8
B	1.0	1.0	1.0	1.0	1.0
C	1.7	1.6	1.5	1.4	1.3
D	2.4	2.0	1.8	1.6	1.5
E	3.5	3.2	2.8	2.4	2.4
F	See Section 11.4.7 of ASCE 7				

Note: Use straight-line interpolation for intermediate values of S_1

For Site Class = D and S_1 = 0.655 g, F_v = 1.500

Equation (11.4-1): $S_{MS} = F_a S_S = 1.000 \times 1.790 = 1.790$ g

---

Equation (11.4-2): $S_{M1} = F_v S_1 = 1.500 \times 0.655 = 0.982$ g

---

Section 11.4.4 — Design Spectral Acceleration Parameters

Equation (11.4-3): $S_{DS} = \frac{2}{3} S_{MS} = \frac{2}{3} \times 1.790 = 1.193$ g

---

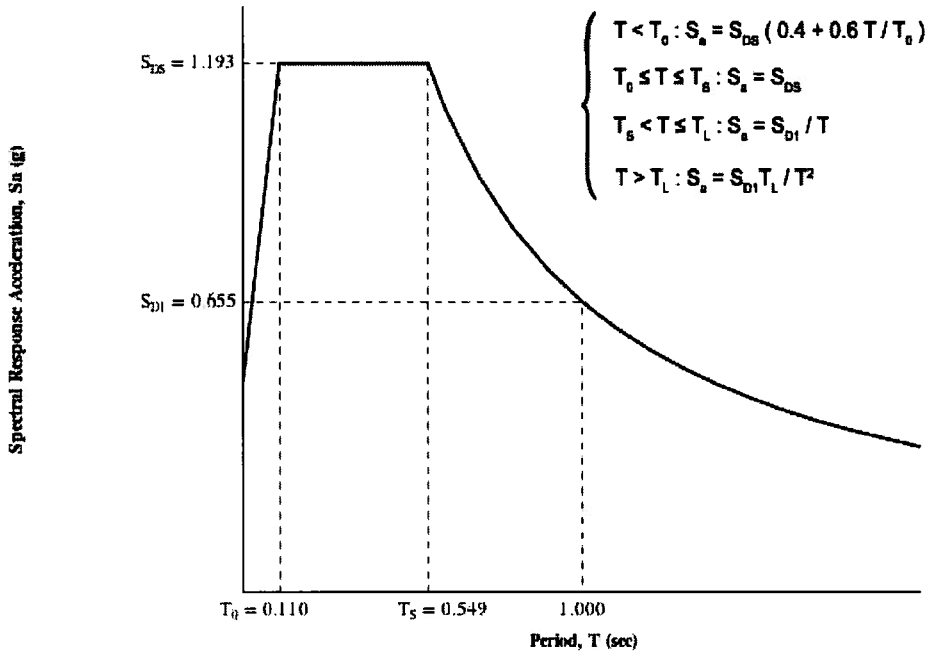

Equation (11.4-4): $S_{D1} = \frac{2}{3} S_{M1} = \frac{2}{3} \times 0.982 = 0.655$ g

---

Section 11.4.5 — Design Response Spectrum

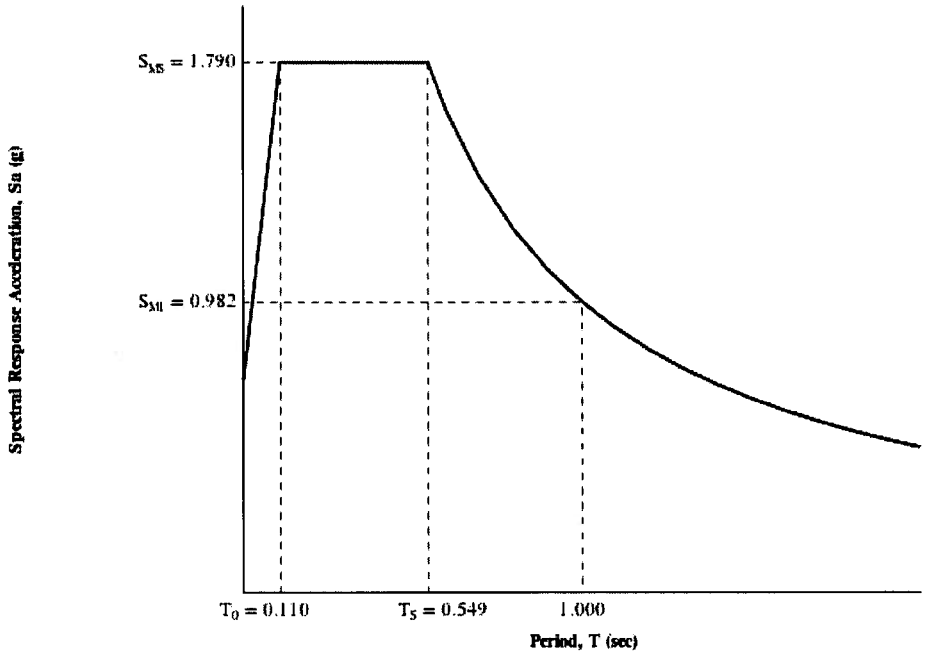

From Figure 22-12 [3] $T_L = 8$ seconds

Figure 11.4-1: Design Response Spectrum

Section 11.4.6 — Risk-Targeted Maximum Considered Earthquake (MCE_R) Response Spectrum

The MCE_R Response Spectrum is determined by multiplying the design response spectrum above by 1.5.

Section 11.8.3 — Additional Geotechnical Investigation Report Requirements for Seismic Design Categories D through F

From Figure 22-7 [4] PGA = 0.649

Equation (11.8-1): $PGA_M = F_{PGA}PGA = 1.000 \times 0.649 = 0.649$ g

Table 11.8-1: Site Coefficient F_{PGA}

Site Class	Mapped MCE Geometric Mean Peak Ground Acceleration, PGA				
	PGA ≤ 0.10	PGA = 0.20	PGA = 0.30	PGA = 0.40	PGA ≥ 0.50
A	0.8	0.8	0.8	0.8	0.8
B	1.0	1.0	1.0	1.0	1.0
C	1.2	1.2	1.1	1.0	1.0
D	1.6	1.4	1.2	1.1	1.0
E	2.5	1.7	1.2	0.9	0.9
F	See Section 11.4.7 of ASCE 7				

Note: Use straight-line interpolation for intermediate values of PGA

For Site Class = D and PGA = 0.649 g, F_{PGA} = 1.000

Section 21.2.1.1 — Method 1 (from Chapter 21 - Site-Specific Ground Motion Procedures for Seismic Design)

From Figure 22-17 [5] C_{RS} = 0.998

From Figure 22-18 [6] C_{R1} = 1.005

Section 11.6 — Seismic Design Category

Table 11.6-1 Seismic Design Category Based on Short Period Response Acceleration Parameter

VALUE OF S_{DS}	RISK CATEGORY		
	I or II	III	IV
$S_{DS} < 0.167g$	A	A	A
$0.167g \leq S_{DS} < 0.33g$	B	B	C
$0.33g \leq S_{DS} < 0.50g$	C	C	D
$0.50g \leq S_{DS}$	D	D	D

For Risk Category = I and S_{DS} = 1.193 g, Seismic Design Category = D

Table 11.6-2 Seismic Design Category Based on 1-S Period Response Acceleration Parameter

VALUE OF S_{D1}	RISK CATEGORY		
	I or II	III	IV
$S_{D1} < 0.067g$	A	A	A
$0.067g \leq S_{D1} < 0.133g$	B	B	C
$0.133g \leq S_{D1} < 0.20g$	C	C	D
$0.20g \leq S_{D1}$	D	D	D

For Risk Category = I and S_{D1} = 0.655 g, Seismic Design Category = D

Note: When S_1 is greater than or equal to 0.75g, the Seismic Design Category is **E** for buildings in Risk Categories I, II, and III, and **F** for those in Risk Category IV, irrespective of the above.

Seismic Design Category ≡ "the more severe design category in accordance with Table 11.6-1 or 11.6-2" = D

Note: See Section 11.6 for alternative approaches to calculating Seismic Design Category.

Input File Name: G:\GS18\GS18-0203_Plymouth Street (GS)\Design & Analysis\Liquefaction\18-0203_LQ-1 (B-2).liq
Title: 113-133 W. Plymouth Street
Subtitle: GS18-0203

Input Data:
Surface Elev.=
Hole No.=B-2
Depth of Hole=50.00 ft
Water Table during Earthquake= 10.00 ft
Water Table during In-Situ Testing= 50.00 ft
Max. Acceleration=0.43 g
Earthquake Magnitude=6.77
No-Liquefiable Soils: Based on Analysis
1. SPT or BPT Calculation.
2. Settlement Analysis Method: Tokimatsu/Seed
3. Fines Correction for Liquefaction: Idriss/Seed
4. Fine Correction for Settlement: During Liquefaction*
5. Settlement Calculation in: All zones*
6. Hammer Energy Ratio, Ce = 1.25
7. Borehole Diameter, Cb= 1
8. Sampling Method, Cs= 1.2
9. User request factor of safety (apply to CSR) , User= 1.3
Plot two CSR (fs1=1, fs2=User)
10. Average two input data between two Depths: Yes*
* Recommended Options

In-Situ Test Data:

Depth ft	SPT	Gamma pcf	Fines %
5.00	16.00	120.00	44.30
10.00	26.00	120.00	44.30
15.00	33.00	120.00	44.30
20.00	48.00	120.00	4.10
25.00	44.00	120.00	4.10
30.00	43.00	120.00	4.10
35.00	51.00	120.00	57.70
40.00	34.00	120.00	57.70
45.00	40.00	120.00	28.20
50.00	72.00	120.00	28.20

Output Results:
Calculation segment, dz=0.050 ft
User defined Print Interval, dp=0.50 ft

Peak Ground Acceleration (PGA), a_max = 0.43g

Settlement of Unsaturated Sands=0.007 in.
dsz is per each segment, dz=0.05 ft
dsp is per each print interval, dp=0.50 ft
S is cumulated settlement at this depth

Total Settlement of Saturated and Unsaturated Sands=0.007 in.
Differential Settlement=0.004 to 0.005 in.

Units: Unit: qc, fs, Stress or Pressure = atm (1.0581tsf); Unit Weight = pcf; Depth = ft; Settlement = in.

---

1 atm (atmosphere) = 1.0581 tsf(1 tsf = 1 ton/ft2 = 2 kip/ft2)
1 atm (atmosphere) = 101.325 kPa(1 kPa = 1 kN/m2 = 0.001 Mpa)

SPT	Field data from Standard Penetration Test (SPT)
BPT	Field data from Becker Penetration Test (BPT)
qc	Field data from Cone Penetration Test (CPT) [atm (tsf)]
fs	Friction from CPT testing [atm (tsf)]
Rf	Ratio of fs/qc (%)
gamma	Total unit weight of soil
gamma'	Effective unit weight of soil
Fines	Fines content [%]
D50	Mean grain size
Dr	Relative Density
sigma	Total vertical stress [atm]
sigma'	Effective vertical stress [atm]
sigC'	Effective confining pressure [atm]
rd	Acceleration reduction coefficient by Seed
a_max.	Peak Ground Acceleration (PGA) in ground surface
mZ	Linear acceleration reduction coefficient X depth
a_min.	Minimum acceleration under linear reduction, mZ
CRRv	CRR after overburden stress correction, CRRv=CRR7.5 * Ksig
CRR7.5	Cyclic resistance ratio (M=7.5)
Ksig	Overburden stress correction factor for CRR7.5
CRRm	After magnitude scaling correction CRRm=CRRv * MSF
MSF	Magnitude scaling factor from M=7.5 to user input M
CSR	Cyclic stress ratio induced by earthquake
CSRfs	CSRfs=CSR*fs1 (Default fs1=1)
fs1	First CSR curve in graphic defined in #9 of Advanced page
fs2	2nd CSR curve in graphic defined in #9 of Advanced page
F.S.	Calculated factor of safety against liquefaction F.S.=CRRm/CSRsf
Cebs	Energy Ratio, Borehole Dia., and Sampling Method Corrections
Cr	Rod Length Corrections
Cn	Overburden Pressure Correction
(N1)60	SPT after corrections, (N1)60=SPT * Cr * Cn * Cebs
d(N1)60	Fines correction of SPT
(N1)60f	(N1)60 after fines corrections, (N1)60f=(N1)60 + d(N1)60
Cq	Overburden stress correction factor

qc1	CPT after Overburden stress correction
dqc1	Fines correction of CPT
qc1f	CPT after Fines and Overburden correction, qc1f=qc1 + dqc1
qc1n	CPT after normalization in Robertson's method
Kc	Fine correction factor in Robertson's Method
qc1f	CPT after Fines correction in Robertson's Method
Ic	Soil type index in Suzuki's and Robertson's Methods
(N1)60s	(N1)60 after settlement fines corrections
CSRm	After magnitude scaling correction for Settlement calculation CSRm=CSRsf / MSF*
CSRfs	Cyclic stress ratio induced by earthquake with user inputed fs
MSF*	Scaling factor from CSR, MSF*=1, based on Item 2 of Page C.
ec	Volumetric strain for saturated sands
dz	Calculation segment, dz=0.050 ft
dsz	Settlement in each segment, dz
dp	User defined print interval
dsp	Settlement in each print interval, dp
Gmax	Shear Modulus at low strain
g_eff	gamma_eff, Effective shear Strain
g*Ge/Gm	gamma_eff * G_eff/G_max, Strain-modulus ratio
ec7.5	Volumetric Strain for magnitude=7.5
Cec	Magnitude correction factor for any magnitude
ec	Volumetric strain for unsaturated sands, ec=Cec * ec7.5
NoLiq	No-Liquefy Soils

Title: 113-133 W. Plymouth Street
Subtitle: GS18-0203

Input Data:

Surface Elev.=
Hole No.=B-6
Depth of Hole=50.00 ft
Water Table during Earthquake= 10.00 ft
Water Table during In-Situ Testing= 30.00 ft
Max. Acceleration=0.43 g
Earthquake Magnitude=6.77
No-Liquefiable Soils: Based on Analysis
1. SPT or BPT Calculation.
2. Settlement Analysis Method: Tokimatsu/Seed
3. Fines Correction for Liquefaction: Idriss/Seed
4. Fine Correction for Settlement: During Liquefaction*
5. Settlement Calculation in: All zones*
6. Hammer Energy Ratio, Ce = 1.25
7. Borehole Diameter, Cb= 1
8. Sampling Method, Cs= 1.2
9. User request factor of safety (apply to CSR) , User= 1.3
Plot two CSR (fs1=1, fs2=User)
10. Average two input data between two Depths: Yes*
* Recommended Options

In-Situ Test Data:

(N1)60s has been fines corrected in liquefaction analysis, therefore d(N1)60=0.
Fines=NoLiq means the soils are not liquefiable.

Settlement of Saturated Sands:
Settlement Analysis Method: Tokimatsu/Seed

Settlement of Unsaturated Sands=0.048 in.
dsz is per each segment, dz=0.05 ft
dsp is per each print interval, dp=0.50 ft
S is cumulated settlement at this depth

Total Settlement of Saturated and Unsaturated Sands=2.672 in.
Differential Settlement=1.336 to 1.763 in.

Units: Unit: qc, fs, Stress or Pressure = atm (1.0581tsf); Unit Weight = pcf; Depth = ft; Settlement = in.

1 atm (atmosphere) = 1.0581 tsf(1 tsf = 1 ton/ft2 = 2 kip/ft2)
1 atm (atmosphere) = 101.325 kPa(1 kPa = 1 kN/m2 = 0.001 Mpa)

SPT	Field data from Standard Penetration Test (SPT)
BPT	Field data from Becker Penetration Test (BPT)
qc	Field data from Cone Penetration Test (CPT) [atm (tsf)]
fs	Friction from CPT testing [atm (tsf)]
Rf	Ratio of fs/qc (%)
gamma	Total unit weight of soil
gamma'	Effective unit weight of soil
Fines	Fines content [%]
D50	Mean grain size

Dr	Relative Density
sigma	Total vertical stress [atm]
sigma'	Effective vertical stress [atm]
sigC'	Effective confining pressure [atm]
rd	Acceleration reduction coefficient by Seed
a_max.	Peak Ground Acceleration (PGA) in ground surface
mZ	Linear acceleration reduction coefficient X depth
a_min.	Minimum acceleration under linear reduction, mZ
CRRv	CRR after overburden stress correction, CRRv=CRR7.5 * Ksig
CRR7.5	Cyclic resistance ratio (M=7.5)
Ksig	Overburden stress correction factor for CRR7.5
CRRm	After magnitude scaling correction CRRm=CRRv * MSF
MSF	Magnitude scaling factor from M=7.5 to user input M
CSR	Cyclic stress ratio induced by earthquake
CSRfs	CSRfs=CSR*fs1 (Default fs1=1)
fs1	First CSR curve in graphic defined in #9 of Advanced page
fs2	2nd CSR curve in graphic defined in #9 of Advanced page
F.S.	Calculated factor of safety against liquefaction F.S.=CRRm/CSRsf
Cebs	Energy Ratio, Borehole Dia., and Sampling Method Corrections
Cr	Rod Length Corrections
Cn	Overburden Pressure Correction
(N1)60	SPT after corrections, (N1)60=SPT * Cr * Cn * Cebs
d(N1)60	Fines correction of SPT
(N1)60f	(N1)60 after fines corrections, (N1)60f=(N1)60 + d(N1)60
Cq	Overburden stress correction factor
qc1	CPT after Overburden stress correction
dqc1	Fines correction of CPT
qc1f	CPT after Fines and Overburden correction, qc1f=qc1 + dqc1
qc1n	CPT after normalization in Robertson's method
Kc	Fine correction factor in Robertson's Method
qc1f	CPT after Fines correction in Robertson's Method
Ic	Soil type index in Suzuki's and Robertson's Methods
(N1)60s	(N1)60 after settlement fines corrections
CSRm	After magnitude scaling correction for Settlement calculation CSRm=CSRsf / MSF*
CSRfs	Cyclic stress ratio induced by earthquake with user inputed fs
MSF*	Scaling factor from CSR, MSF*=1, based on Item 2 of Page C.
ec	Volumetric strain for saturated sands
dz	Calculation segment, dz=0.050 ft
dsz	Settlement in each segment, dz
dp	User defined print interval
dsp	Settlement in each print interval, dp
Gmax	Shear Modulus at low strain
g_eff	gamma_eff, Effective shear Strain
g*Ge/Gm	gamma_eff * G_eff/G_max, Strain-modulus ratio
ec7.5	Volumetric Strain for magnitude=7.5
Cec	Magnitude correction factor for any magnitude
ec	Volumetric strain for unsaturated sands, ec=Cec * ec7.5
NoLiq	No-Liquefy Soils

Note: Print Interval you selected does not show complete results. To get complete results, you should select 'Segment' in Print Interval (Item 12, Page C).

STABILITY OF TEMPORARY EXCAVATIONS

Unit weight of soil, γ =	125.0	pcf
Cohesion of soil, C =	125.0	psf
Friction angle of soil, ϕ =	23.0	degrees
Back slope angle, α =	0.0	degrees
Slope angle, β =	90.0	degrees
Factor of Safety, F.S. =	1.25	
Design cohesion, C_d =	*100.0*	psf
Design friction angle, ϕ_d =	*18.8*	degrees
Stability factor, N_s =	5.2	(from Chart)
Critical Height, $H_c = \frac{N_s C_d}{\gamma}$ =	*4.2*	feet

The recommended height of vertical temporary excavations is 4-feet
The portion of excavation over 4-feet should be trimmed to a 1:1 gradient.

TYPICAL POOL SUBDRAIN SYSTEM DETAIL

PLATE PS-1

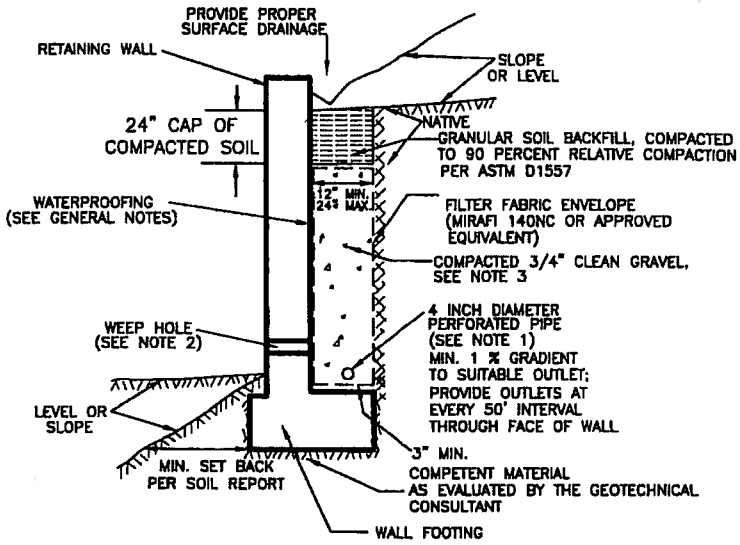

CONFINED BACKFILL AND SUBDRAIN OPTIONS FOR RETAINING WALLS

(Space between back of wall and face of excavation is less than 24–inches)

OPTION 1: PIPE SURROUNDED WITH CLASS 2 PERMEABLE MATERIAL

OPTION 2: GRAVEL WRAPPED IN FILTER FABRIC

GENERAL NOTES:

*Retaining wall plans should be reviewed and approved by the geotechnical engineer.

*These details apply only to retaining walls not surcharged by adjacent structures or adverse geology. See text of report for specific backfill recommendations if these conditions exist.

*Walls over 12 feet in height are subject to a special review by the geotechnical engineer and modifications to the above requirements may be necessary (see text of report).

*Waterproofing should be provided where moisture intrusion through the wall is undesirable.

*Waterproofing of the walls is not under purview of the geotechnical engineer or geologist.

*All drains should have a gradient of 1 percent minimum.

*Outlet portion of the subdrain should have a 4–inch diameter solid pipe discharged into a suitable disposal area designed by the project engineer. The subdrain pipe should be accessible for maintenance (rodding) and must remain clear at all times.

*Other subdrain/backfill options are subject to the review by the geotechnical engineer and modification of design parameters.

*Additional or revised backfilling and compaction procedures may be required by the local governing agency.

NOTES:

1) The following plastic subdrain pipes are acceptable. All pipe should be SDR35:
   a. Acrylonitrile Butadiene Styrene (ABS): ASTM D2661, D2680 and D2751;
   b. Polyvinyl Chloride (PVC): ASTM D2665, D2729, D3033 and D3034;
   c. Polyethylene (PE): ASTM D2239, D3035 and F810.

   Pipe should be installed with perforations down. Perforations should be 3/8 inch in diameter placed at the ends of a 120–degree arc in two rows at 3–inch on center (staggered).
2) Weepholes should be 3–inch minimum diameter and provided at 10–foot maximum intervals. If exposure is permitted, weepholes should be located 12–inches above finished grade. If exposure is not permitted, such as for a wall adjacent to a sidewalk/curb, a pipe under the sidewalk discharging through the curb face or equivalent should be provided. For a basement–type wall, a proper subdrain outlet system should be provided.
3) All gravel or Class 2 Filter Material should be compacted at every 2–feet of vertical elevation rise using vibratory compaction equipment. All placement and compaction of backfill should be observed and verified by our field representative.
4) Gradation: Caltrans Class 2 Filter Permeable Material Gradation Per Caltrans Specifications

RETAINING WALL BACKFILL AND SUBDRAIN DETAIL FOR WALLS 15 FEET OR LESS IN HEIGHT WITH CONFINED BACKFILL CONDITIONS

PLATE RD-1

UNCONFINED BACKFILL AND SUBDRAIN OPTIONS FOR RETAINING WALLS

(Space between back of wall and face of excavation is greater than 24–inches)

GENERAL NOTES:

*Retaining wall plans should be reviewed and approved by the geotechnical engineer.

*These details apply only to retaining walls not surcharged by adjacent structures or adverse geology. See text of report for specific backfill recommendations if these conditions exist.

*Walls over 12 feet in height are subject to a special review by the geotechnical engineer and modifications to the above requirements may be necessary (see text of report).

*Waterproofing should be provided where moisture intrusion through the wall is undesirable.

*Waterproofing of the walls is not under purview of the geotechnical engineer or geologist.

*All drains should have a gradient of 1 percent minimum.

*Outlet portion of the subdrain should have a 4–inch diameter solid pipe discharged into a suitable disposal area designed by the project engineer. The subdrain pipe should be accessible for maintenance (rodding) and must remain clear at all times.

*Other subdrain/backfill options are subject to the review by the geotechnical engineer and modification of design parameters.

*Additional or revised backfilling and compaction procedures may be required by the local governing agency.

NOTES:

1) The following plastic subdrain pipes are acceptable. All pipe should be SDR35:
   a. Acrylonitrile Butadiene Styrene (ABS): ASTM D2661, D2680 and D2751;
   b. Polyvinyl Chloride (PVC): ASTM D2665, D2729, D3033 and D3034;
   c. Polyethylene (PE): ASTM D2239, D3035 and F810.

   Pipe should be installed with perforations down. Perforations should be 3/8 inch in diameter placed at the ends of a 120–degree arc in two rows at 3–inch on center (staggered).

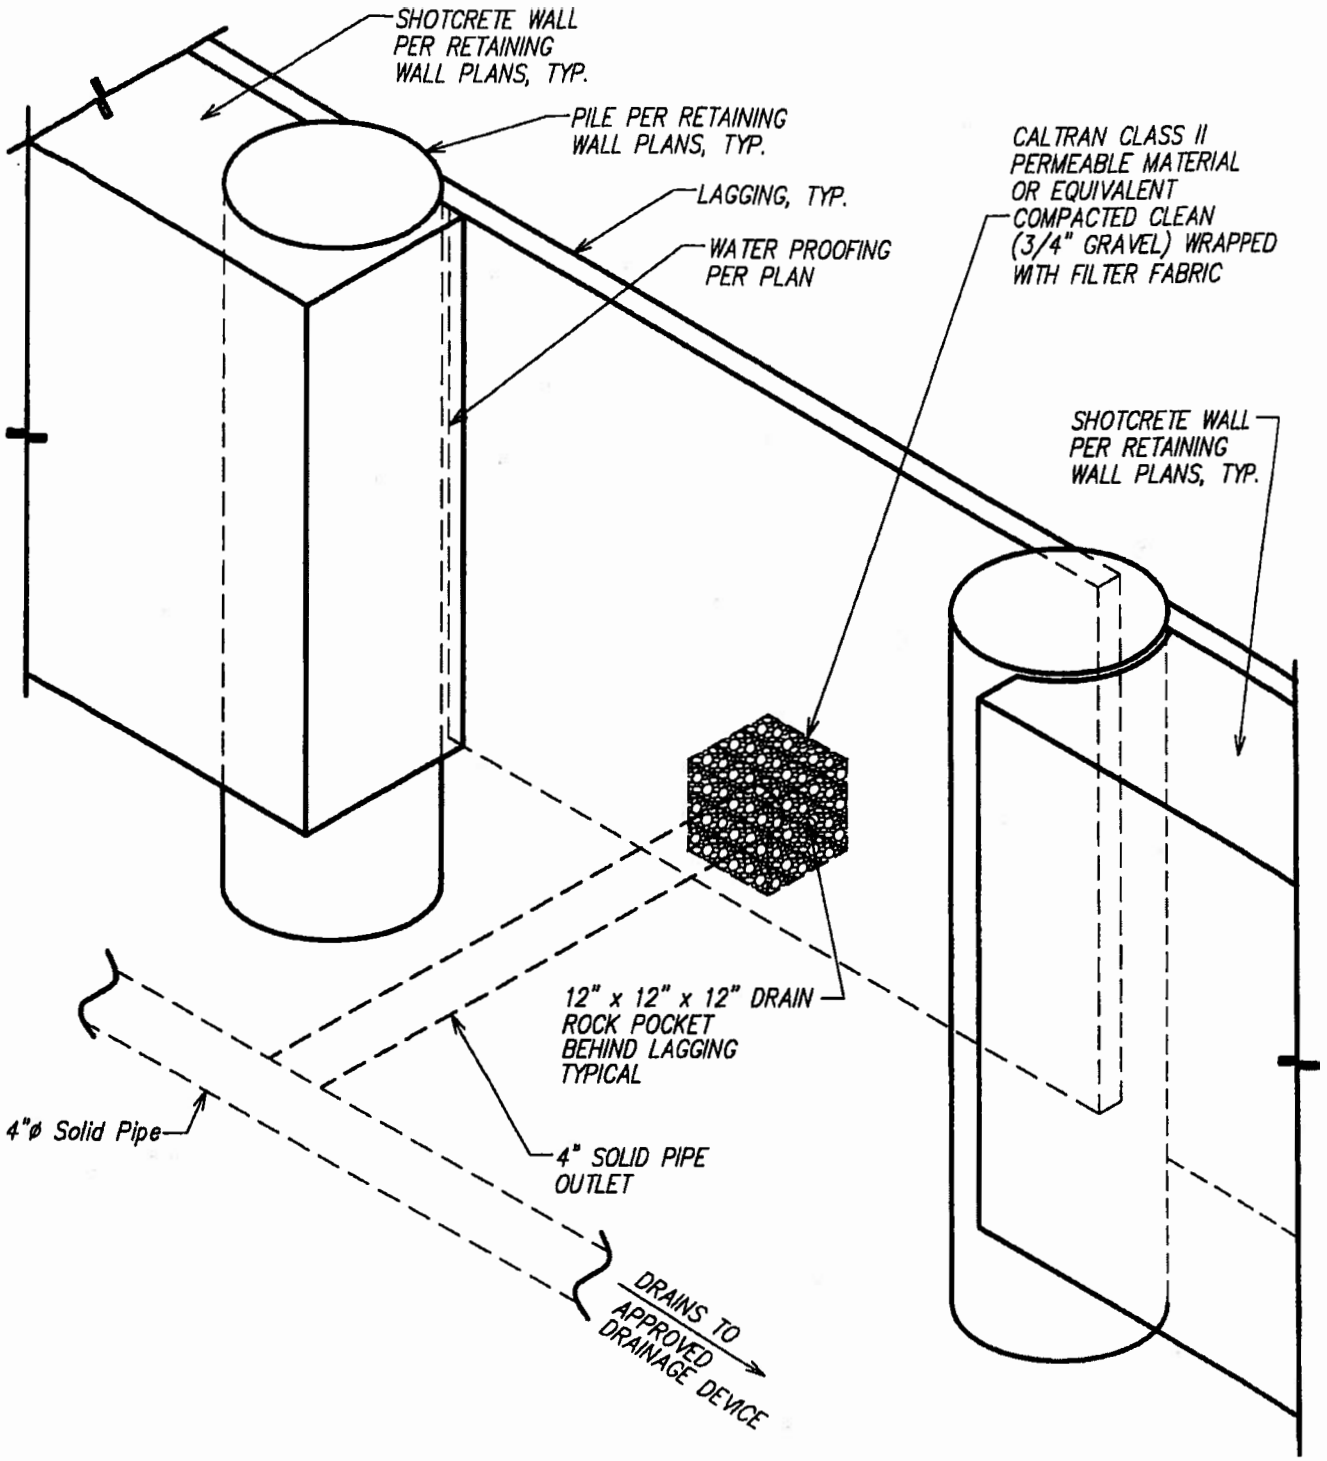

2) Weepholes should be 3–inch minimum diameter and provided at 10–foot maximum intervals. If exposure is permitted, weepholes should be located 12–inches above finished grade. If exposure is not permitted, such as for a wall adjacent to a sidewalk/curb, a pipe under the sidewalk discharging through the curb face or equivalent should be provided. For a basement–type wall, a proper subdrain outlet system should be provided.

3) All gravel or Class 2 Filter Material should be compacted at every 2–feet of vertical elevation rise using vibratory compaction equipment. All placement and compaction of backfill should be observed and verified by our field representative.

113-133 W. PLYMOUTH STREET

INGLEWOOD, CALIFORNIA

INTRODUCTION

Mr. James D. Ward of EXIT Real Estate Group retained GeoSystems, Inc. to perform a Phase I Environmental Site Assessment for property located at 113-133 W. Plymouth Street, Inglewood, Los Angeles County, California (AIN 4016-004-002, -003, -020, and -021 and 4016-005-019, -020 and -021) (Plates 1 and 2 and Appendix A). The purpose of this assessment was to provide a preliminary assessment of the potential for subsurface contamination beneath the sites, whether as a result of past or present site use or as a result of activities associated with nearby properties. This report presents the assessment findings per our contract with EXIT Real Estate Group dated January 12, 2018. This report was prepared in general accordance with the federal All Appropriate Inquiries regulation and with ASTM E1527-13.

SCOPE OF WORK

The scope of this investigation included review of available historical documents, review of geologic and hydrologic site conditions, and a review of available public records to evaluate the presence and location of known (documented) contaminant sources that might affect the site, and a visual inspection of the site. The work scope did not include subsurface exploration or the collection and analysis of any soil, air, groundwater, or building material samples. Such sampling is outside of the scope of the authorized work scope.

The findings of this assessment are based on observations of existing conditions at the site and vicinity by qualified personnel at the time of the site visit, review of documents identified in this report, and interviews with personnel associated with the site as identified in this report. The findings, conclusions and recommendations contained in this report are subject to the limitations provided at the end of this report.

GEOLOGY AND HYDROGEOLOGY

Regional Geology and Hydrogeology

Physiographically, the site is located on the Coastal Plain of Los Angeles County approximately one mile south of the Baldwin Hills. The elevation of the site is approximately 127 feet above mean sea level (AMSL), and surface topography in the site vicinity generally slopes to the south (Plate 1). The historical topographic maps show that an ephemeral tributary to Centinela Creek formerly traversed across the site (Appendix B).

The site is underlain by Quaternary alluvium (Dibblee and Minch, 2007). The inferred trace of the Inglewood fault lies approximately 0.1 mile to the east. According to the California

Geological Survey, the site is not located within an Alquist-Priolo fault zone, but part of the site is located within a liquefaction area identified as a seismic hazard zone (1999).

Information on regional groundwater was taken from publicly available documents. Hydrologically, the site is located within the West Coast Basin. The site lies near the boundary of the area where the Bellflower Aquiclude is known to lie at depth. The shallowest significant aquifer in the site vicinity is the Gage Aquifer, which lies approximately 100 feet below grade (CDWR, 1990).

Local Soil and Groundwater Conditions

Information on local geology and groundwater conditions was obtained from review of publicly available files available from the state's Geotracker database (2018), which is maintained locally by the Regional Water Quality Control Board, Los Angeles Region (RWQCB). Facilities that undergo investigation of soil and/or groundwater conditions under the RWQCB's jurisdiction are required to submit both reports and raw data to this system. The low risk case closure form for the Mobile Service Station No. 18GJ4, located at 1007 N. La Brea Avenue, approximately 0.1 mile northeast of the site, indicated that it was underlain by sand (RWQCB, 2009). Groundwater monitoring wells formerly installed at this facility indicated that depth to groundwater ranged from approximately 123 to 124 feet below grade, when last gauged in November 2009, and that groundwater appeared to flow to the southeast (Kleinfelder, 2009).

SITE DESCRIPTION AND OBSERVATIONS

The subject site is an L-shape and occupies approximately 0.68 acres (Los Angeles County Tax Assessor, 2016, and Plate 2) in the city of Inglewood. The site is bounded to the north by residential property, to the north and east by commercial property (La Brea Plaza), to the south by W. Plymouth Street, and to the west by residential property. The site is zoned for residential use and nearby properties along W. Plymouth Street appear to be occupied by both single- and multi-family residences and parking lots. The occupants of adjacent and nearby properties are summarized in Table 1.

The Los Angeles County Tax Assessor's website did not identify any alias addresses for the site, but did provide information regarding building sizes and construction dates (Table 2).

Ms. Rachel Fischer of GeoSystems, Inc. performed a visual site inspection of the site on January 19, 2018, with Mr. James Ward of EXIT Real Estate Group. At the time of the site visit, the buildings were occupied by residents. Hence, the site visit was restricted to the building exteriors. Site photographs are provided as Appendix C.

The site is occupied by eight residential buildings, two garages, a shed, asphalt-paved parking areas, and limited landscaping (Appendix A and Photos 1 through 6). At the time of the site visit, the residences were occupied by tenants and generally appeared to be used for residential purposes. One of the garages appeared to have been converted for residential use. GeoSystems did not enter building interiors to inspect either the residences or garages. Exterior building conditions appeared to be good to fair.

Hazardous Materials Use and Waste Generation

GeoSystems, Inc., anticipates that hazardous materials used and/or stored on site are restricted to typical household quantities of household cleaning chemicals and substances used for building or automotive maintenance (e.g. motor oil, paint). In quantities typically used for residential purposes and when disposed of properly, these substances are not anticipated to represent a significant threat to subsurface soils or groundwater.

Underground and Aboveground Storage Tanks

No underground storage tanks (USTs) or aboveground storage tanks (ASTs) were observed to be or reported to be present on site.

Asbestos

Potential asbestos-containing building materials (ACBMs) typically include pipe insulation, drop-in ceiling tiles, spray acoustic ceiling material, vinyl floor tiles, linoleum flooring, and roofing materials. As building structures were originally constructed in the 1940s and 1950s, it is anticipated that ACBM may be present in roofing materials, office areas, etc. Sampling of suspect ACBM was not included in the scope of work, and GeoSystems, Inc. understands that such testing has not been done in the past.

As ACBMs may remain in ceiling, flooring or insulation materials at the site, asbestos is an issue of concern for this site. An asbestos survey would be required to identify, quantify and confirm the locations of ACBM. Friable ACBMs would be of the highest concern at the site, as they could impact worker health and safety at the site. Non-friable ACBMs are of lesser concern as long as they remain intact and undisturbed. Prior to renovation or demolition of the current structure or to disturbing older building materials suspected of containing asbestos, an asbetos

survey should be performed. The survey should to identify potential ACBM, evaluate whether ACBM are present on site, and determine what types and quantities of ACBM are present. Appropriate measures should then be taken to ensure that potential ACBM are not disturbed or removed from the site without proper identification and testing. Appropriate ACBM-abatement measures should be taken during future building demolition or renovation activities to protect worker health and safety and to ensure proper disposal of ACBMs.

Polychlorinated Biphenyls

Electrical equipment typically suspected to contain polychlorinated biphenyls (PCBs) includes industrial capacity transformers and light ballasts that were manufactured prior to the 1980s. In the past, oil-cooled machinery also typically contained PCBs in the cooling fluid. In 1977, the United State Environmental Protection Agency (USEPA) classified PCBs as carcinogenic. Subsequently, all PCB-designated transformers were required to be replaced with non-PCB-designated transformers. Transformers are currently classified as PCB-containing if their cooling oils contain greater than 50 milligrams per liter total PCBs.

No pad- or pole-mounted transformers were observed to be present on or immediately adjacent to the site.

Older fluorescent light ballasts (if present) and other electrical equipment at the site may contain PCBs; however, the potential for significant subsurface contamination from these light ballasts (if present) is mitigated by the relatively small quantities of potential PCBs within them.

The potential for subsurface contamination of the site due to significant quantities of potential PCB-containing fluids currently present on the site does not appear to be a concern. However, care should be taken during future building demolition or renovation activities to

protect worker health and safety and to ensure proper identification and disposal of potential PCBs.

Lead-Based Paint

The buildings at the site were constructed prior to the bans on lead-based paint. Testing for lead-based paint was not included in the work scope. The potential for lead-based paint to be present on historically painted surfaces appears to be an issue of concern for the site. Care should be taken during future building demolition or renovation activities to protect worker health and safety and to ensure proper identification and disposal of lead-based paint from building surfaces.

Radon

According to the Radon Potential Zone Map for Southern Los Angeles County, California (Churchill, 2005), the site is located within an area with low potential for indoor radon levels in excess of 4 pCi/L. According to a survey conducted by the California Department of Health Services (DHS, 1991), the site is located in an area where only approximately 2 percent of homes are predicted to have more than 4 pico curies of radon per liter of air (pCi/l). The value of 4 pCi/l is the level at which the USEPA recommends action be taken to reduce radon levels. According to the California EPA, Los Angeles County is classified as a zone 2 county. Zone 2 counties have a predicted average screening level between 2-4 pCi/l. When 4 sites in the 90302 zip code were tested, none of them had a value of greater than 4 pCi/l for the first floor.

Hence, radon is not an issue of concern for this site.

Other Concerns

The following items of potential environmental concern were not observed during the site visit or reported to be historically present at the site, and hence are not considered to be issues of concern:

- Pits, ponds, or lagoons
- Septic tanks or cesspools
- Wells or cisterns
- Grease interceptors, and
- Industrial equipment

Drinking Water

The City of Inglewood supplies municipal drinking water to the site.

INTERVIEWS AND CLIENT-PROVIDED INFORMATION

GeoSystems, Inc. interviewed Mr. Ward during the course of the current investigation. Mr. Ward was not aware of any past, threatened, or pending litigation lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substance or petroleum products involving the property by any owner or previous occupant of the property. No information regarding environmental conditions at the site was provided.

HISTORICAL SITE USE

GeoSystems, Inc. reviewed the following sources for information regarding historical site use: title documentation, the Sanborn fire insurance map collection, aerial photographs, historical topographic maps, city directories, city of Inglewood building department records, Los Angeles County Fire Department (LACFD) records, statewide Geotracker database (RWQCB files), FINDS (SCAQMD) database, and documents obtained during previous investigation of the site. For convenience, historical site usage information from multiple sources is summarized in Table 3.

Title Documentation and Environmental Lien Review

The client did not provide GeoSystems, Inc. with title documentation for review. Environmental liens are generally applied to sites that have undergone regulatory investigation and have been found to contain contaminants above levels of concern that will not be addressed by remediation. In California, the Department of Toxic Substances Control (DTSC) maintains the EnviroStor database, which lists sites with voluntary cleanup programs. Environmental liens are often associated with such sites. GeoSystems, Inc. reviewed the DTSC's EnviroStor and RWQCB's Geotracker databases and did not find the site listed in either database. This finding is consistent with historical use of the site for residences.

Sanborn Fire Insurance Maps

GeoSystems, Inc. contacted EDR Sanborn for information regarding historical fire insurance maps for the site. The Sanborn Company historically generated fire insurance maps areas of Los Angeles County with historical land development prior to the 1950s. EDR maintains a proprietary database of the Sanborn maps. EDR reviewed their Sanborn map collection and

located three maps for the site and vicinity dating from 1923 through 1966. The map dated 1923 indicates that the site was undeveloped. Adjacent properties to the indicate east and west (109 and 137 W. Plymouth St.) were occupied by single-family residences with associated structures, including "numerous small hen houses." A small, elongated structure was located immediately north of APN 4016-004-003. Additional properties in the general site vicinity consisted of single-family residences and hen houses. The map indicates that N. La Brea Avenue was formerly called N. Commercial Avenue, which did not continue north of Plymouth St.

The map dated 1950 shows that single-family residences were present at 113, 117, 125, 129, and 133 W. Plymouth St. An adjacent property to the northwest (908 Eucalyptus Ave.) Was occupied by a single-family residence, and additional residential development was present in the greater site vicinity. The map indicates "gas-oil in yard" at a nearby property at 913 La Brea Avenue. Additional commercial development was present along La Brea Avenue, which had been developed east of the site.

The map dated 1966 shows that five single-family residences and an associated garage were present at 113-133 W. Plymouth St. The adjacent properties to the west at 137 W. Plymouth St. and north at 908 Eucalyptus Ave. had been redeveloped as multi-family residences. Two additional residences were present at 109 W. Plymouth St. Nearby properties to the east at 101 W. Plymouth St., 901 La Brea Ave., and 915 La Brea Ave. were occupied by motor bicycle sales, auto service, and auto repair operations, respectively. Additional properties along La Brea Avenue were used for commercial purposes.

A copy of the EDR Sanborn report is included in Appendix D.

Aerial Photographs

GeoSystems, Inc. obtained historical aerial photographs of the site vicinity from EDR Aerial Photography Service, and a copy of these photographs is provided in Appendix E. The reviewed historical photos date from 1928 through 2012. Table 4 lists the historical aerial photographs that showed the site and provides comments regarding site conditions.

The photos dated 1928 through 1938 shows that the site appears to have been largely vacant and fallow with a creek crossing the site from southwest to northeast. A hen house may have been located in the north part of the site (123 W. Plymouth Avenue). Neighboring and nearby properties appear to have been either vacant and fallow or used for residences with limited agriculture (e.g. hen houses, orchards, and gardens).

Photos show that residences were present at 113, 115, 129, and 133 W. Plymouth Avenue by 1947; at 125 W. Plymouth Street by 1952; and at 123 W. Plymouth Street by 1963. From 1970 through 2012, site use appears to have remained residential.

From 1947 through 2012, commercial development occurred along La Brea Avenue and Centinela Avenue. La Brea Plaza (915 N. La Brea Avenue) was developed by 1989. The adjacent property to the northwest at 914 Eucalyptus Avenue was redeveloped as a multi-family residence by 1970. In general, properties south and west of the site remained residential in nature from 1947 through 2012.

Topographic Maps

GeoSystems, Inc. reviewed USGS topographic maps dated 1896, 1924, 1930, 1948, 1950, 1952, 1964, 1972, 1981, and 2012. Maps dating from 1896 and 1924 do not indicate that streets had been developed in the site vicinity. The maps dated 1930 and 1948 show that the current streets had been developed and small structures were present on nearby properties, but the site

appeared to have remain void of development, and that a stream was present on site. The maps dating from 1952 through 1982 indicate that urban development was present in the site vicinity, but does not indicate whether buildings were present on site. The map dated 2012 does not show cultural features. A copy of the EDR Historical Topographic Map Report is included in Appendix B.

Oil and Gas Maps

Based on a review of maps provided by the State of California Department of Conservation Division of Oil, Gas, & Geothermal Resources (DOGGR) and the EDR Radius Map Report (Appendix F), the nearest oil wells are located approximately 0.3 mile to the southwest, in the vicinity of Rogers Park. DOGGR reports that these wells are plugged and abandoned.

City Directories

On behalf of GeoSystems, Inc., EDR reviewed historical city directories dating back to 1920 for information about the subject site and nearby sites. A copy of the EDR city directory report is provided in Appendix G. City directories indicate the following historical occupants of the site:

- 113 W. Plymouth Street: residents (1957), Arise Shine Haven Social Svcs (2014).
- 115 W. Plymouth Street: residents (1950-1970), JAI Construction (2010-2014).
- 119 W. Plymouth Street: resident (1950-1954).
- 123 W. Plymouth Street: residents (1960-2001).
- 129 W. Plymouth Street: residents (1950-2000).
- 131 W. Plymouth Street: resident(1950-1954).

- 133 W. Plymouth Street: residents (1950-2001).
- 125 W. Plymouth Street: residential (1950-1990).

Selected city directories listings for adjacent and nearby properties are provided as follow:

- 901 N. La Brea Avenue: Continental Motor Sales (1954-1957), DS Peterson, Jr. (1960), Harley Davidson of Inglewood (1964-1975), Discount Beds (1980), The Vase (1990).
- 903 N. La Brea Avenue: John & Hank S Wheel Alignment (1954), Pacific Radiator (1980), Tint Masters Glass Coatings (1980-1981), various check cashing businesses (1990-2014).
- 905 N. La Brea Avenue: Deenas Delicatessen & Market (1990), La Brea Sea Food (1995-2001).
- 907 N. La Brea Avenue: Rent-A-Center, Inc. (2010-2014).
- 909 N. La Brea Avenue: various upholstering businesses (1950-1957), Universal Electronics (1960).
- 911 N. La Brea Avenue: Francis D. White (1954), Personal Termite Control (1970), Neal Rinaldi/Allstate Extermination (1975-1980), Colortyme (1990-1995), Rent-A-Center (2000-2001).
- 913 N. La Brea Avenue: Lowry & Son Serv Stn (1950), Richard's Carburetor Shop (1954), Ken's Serv Auto Rpr/Towing Serv (1957), James & Shafer Automotive (1960), Alex Garage/Elsie Jacoby (1964), Ginos Garage (1970-1975), Harold's Auto Repair (1980), La Brea Nail Shop (200-2014).
- 915 N. La Brea Avenue: Just Cut N Up (2010), Holiday Fashion Cleaners (1990-2014).
- 914 N. Eucalyptus Avenue: residents (1967-2001), Elevator Line/RCI Home Inspections (2010), RCI Home Inspections/Help Enrich Loves Posi (2014).

City Building Department Records

GeoSystems, Inc. reviewed the available building department records on line for the city of Inglewood, Building Safety Division. Permit files were available for the addresses of 113, 115, 123, 125, 125½, 129, 129½ or 129 #B, and 133 W. Plymouth Street. Pre-Sale Inspection Reports

were available for 113, 115, 123,125, 129, and 133 W. Plymouth Street. These reports summarize the historical permits issued for these addresses, confirm building construction dates, and confirm that the buildings present on site were constructed for residential purposes. The report for 125 W. Plymouth Street indicates the earliest construction date of 1939 for "frame garage." Copies of selected documents are included in Appendix H.

County Fire Department Records

Historically, the Los Angeles County Fire Department (LACFD) has maintained jurisdiction over regulatory compliance for hazardous materials use and USTs in the city of Inglewood. GeoSystems, Inc., reviewed the following on-line LACFD databases to evaluate whether information regarding the site is available through the LACFD: Active CUPA Program Records, Inactive CUPA Program Records, Site Mitigation Unit Case Records, and CalARP Program Records. The site addresses did not appear in these databases. This finding is consistent with historical use of the site for residences.

County Department of Public Works

The Los Angeles County Department of Public Works maintains an on-line database of industrial waste, underground storage tanks, and stormwater permits. GeoSystems was unable to locate information regarding any of the seven site addresses in the county database. This finding is consistent with historical use of the site for residences.

South Coast Air Quality Management District Files

GeoSystems, Inc. reviewed on-line information maintained by the SCAQMD in the FINDS database regarding the subject site. No information regarding the site addresses were

listed in the FINDS database. This finding is consistent with historical use of the site for residences.

Summary of Activity and Use Limitations

Activity and Use Limitations (AULs) are defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested. Specifically AULs are comprised of engineering controls (EC) and institutional controls (IC). During the course of this investigation, GeoSystems, Inc. reviewed publicly available files at local and state agencies to evaluate whether ECs or ICs have been established for the site.

ECs include physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or groundwater on the property. ICs are defined as a legal or administrative restriction on the use of, or access to, a site or facility to either reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. No ECs or ICs were identified for the site. This finding is consistent with historical use of the site for residences.

ENVIRONMENTAL DATABASE RECORDS

GeoSystems, Inc. contracted EDR to review government databases for information regarding hazardous chemical use and reported environmental conditions at the site and areas within a one-mile radius of the site. The greatest potential for subsurface *soil* contamination on site would result from historical use of hazardous chemicals either at the site or adjacent

properties. The potential for contamination of *groundwater* beneath the site could result not only from activities historically performed on site or at adjacent properties, but also from properties located further away. Hence, the search radius selected for each of the reviewed databases was based on ASTM and AAI standards. A copy of the resulting EDR-Radius Map with GeoCheck™ report is provided in Appendix F.

None of the site addresses appear on the reviewed government databases. Approximately 98 nearby facilities located within a one-mile radius of the site appear on the reviewed government databases.

Database Findings for Nearby Facilities

The database report identified one facility at the adjacent La Brea Plaza (915 N. La Brea Avenue) and a number of other facilities within a one-quarter mile radius of the site that have identified environmental conditions. Details of these facilities are provided in the EDR Radius report (Appendix F). None of these facilities have been documented as having negatively impacted soil or groundwater conditions beneath the site.. The following discussion addresses the facility that has the highest potential to impact subsurface conditions beneath the site.

Holiday Fashion Cleaners at 915 N. La Brea Avenue, Inglewood, appears on the EDR's proprietary list of dry cleaning facilities. This facility does not appear in any of the reviewed databases as a location where significant quantities of hazardous waste are generated or as a location that has been investigated for potential soil or groundwater contamination.

A number of other facilities in the site vicinity are reported to be locations where historical dry cleaning or automotive service or repair operations have occurred. A number of leaking UST facilities in the site vicinity have undergone investigation for soil and/or

groundwater contamination. Additional information regarding these facilities is available at the GeoTracker database and in the EDR Radius Map Report.

VAPOR ENCROACHMENT SCREENING

Vapor encroachment screening was added to the ASTM Standard in 2013. Vapor-phase, man-made volatile chemicals from sources such as solvents and petroleum fuel hydrocarbons are known to migrate in the subsurface independent of the original release areas. According to the USEPA, "vapor intrusion" is defined as the migration of volatile chemicals from contaminated groundwater or soil into an overlying building. Hence, evaluation of vapor intrusion typically identifies on-site contamination sources. "Vapor encroachment" is defined as the migration of vapor-phase chemicals beneath the site from off-site soil and/or groundwater plumes of volatile chemicals. By definition, vapor encroachment screening does not consider the migration of naturally-occurring vapors (e.g. radon or methane) in the subsurface. Also note that not all hydrocarbon mixtures have high concentrations of volatile chemicals (e.g., gasoline has higher volatility than diesel fuel).

The purpose of vapor encroachment screening is to identify off-site releases in the near vicinity of the subject site and evaluate the likelihood of man-made vapors migrating beneath the subject site. The presence or likely presence of vapors of any chemical of concern (COC) constitutes a vapor encroachment condition (VEC). The ASTM standard for this screening (E2600-10) uses a two-tiered approach. Tier 1 of vapor encroachment screening uses state and federal database records to identify those sites with the potential to affect subsurface vapor conditions. If a VEC cannot be ruled out, a Tier 2 screening is warranted. Tier 2 begins with a

non-invasive records review; however, if plume information is not available or if a VEC cannot be ruled out non-invasively, a Phase II subsurface investigation is required to resolve the question.

The USEPA has found that the distribution of vapor-phase (non-chlorinated) petroleum hydrocarbons in the subsurface differs greatly from that of vapor-phase chlorinated hydrocarbons due to natural biodegradation within the subsurface. In the presence of oxygen, petroleum hydrocarbon vapors can rapidly biodegrade, and they bioattenuate to much lower concentrations in soil gas than chlorinated hydrocarbon vapors. Hence, screening methodologies for chlorinated hydrocarbons are more conservative than those for petroleum hydrocarbons. The USEPA has found that at most sites with petroleum hydrocarbon vapors, the benzene level within the soil gas attenuates to acceptable human risk-based levels within a maximum vertical clean soil thickness ranging from approximately 13.5 feet or less at typical leaking UST facilities to approximately 20 feet at larger hydrocarbon storage facilities (e.g. refineries) (USEPA, 2013). Hence, sites with petroleum hydrocarbons in the subsurface are less likely to result in vapor intrusion or vapor encroachment conditions than sites with chlorinated hydrocarbons.

For VEC evaluation, GeoSystems, Inc. used the EDR VEC App to assist with the Tier 1 screening; however, GeoSystems, Inc. changed the default groundwater flow direction to southeast based on local groundwater flow information (see "Local Soil and Groundwater Conditions" section of this report). Database information was reviewed, and closed LUST cases were removed from consideration as potential sources for VECs. A copy of the EDR Vapor Encroachment Screen is provided as Appendix G.

Based on the Tier 1 screening information provided by EDR as well as GeoSystems, Inc.'s Tier 2 review of historical plumes in the site vicinity, a **VEC cannot be ruled out** because some potential sources for potential VEC investigation have not been investigated. However, due to the depth of groundwater in the site vicinity, the reported southeast groundwater flow direction, and the distance of the site from the potential contamination sources, it is more likely than not that vapor encroachment is not an issue of concern for the site.

In addition, vapor intrusion is not currently identified as an issue of concern for the site because of historical residential site use.

DATA GAPS

No significant data gaps have been identified during the course of this investigation. Based on the findings of this investigation, GeoSystems, Inc. believes that the most significant potential sources for on-site contamination have been identified.

SUMMARY AND CONCLUSIONS

Prior to the 1940s, the site appears to have been vacant and fallow. The site appears to have been used for single- and multi-family residences since development in the 1940s and 1950s.With the exception of relatively small quantities for domestic use, significant quantities of hazardous and/or regulated materials are not used or stored at the site and significant quantities of hazardous and/or regulated materials are not disposed of from the site. No engineering controls or institutional controls are required for current site use. Due to the age of building construction, ACBMs, lead-based paint, and limited amounts of PCBs in electrical light ballasts and electrical

equipment may be present on site. USTs, aboveground storage tanks, radon, pits, ponds, lagoons, septic tanks, cesspools, wells and cisterns do not appear to be issues of concern for the site. No oil or gas wells have reportedly been drilled on the site.

Nearby properties are presently used for residential and commercial operations, and have historically been used for similar operations. Several facilities located within a 0.25-mile radius have been identified as places where soil and/or groundwater has been contaminated, and several locations within a 0.25-mile radius of the site have been identified as places with historical use for automotive service stations and dry cleaners (including 901, 913, and 915 N. La Brea Avenue). While a VEC cannot be ruled out for the site, it is more likely than not a VEC does not exist at the site. Vapor intrusion does not appear to be an issue of concern.

DISCUSSION AND RECOMMENDATIONS

Based on the findings of this investigation, GeoSystems, Inc. did not identify recognized environmental conditions (RECs), historical RECs (HRECs), or controlled RECs (CRECs) for the site. GeoSystems, Inc. does not recommend further investigation of subsurface conditions at the site to evaluate for RECs. While a VEC cannot be ruled out for the site, it is more likely than not a VEC does not exist at the site. GeoSystems, Inc. does not recommend further investigation of subsurface conditions to evaluate for VEC at the site.

A plan should be established for future site renovation or demolition. At a minimum, this plan should address identification and management of potential ACBMs, PCB-containing electrical equipment, and surfaces with lead-based paint, as well as potential disposal of household hazardous or regulated materials and/or waste.

LIMITATIONS

This report has been prepared in accordance with generally accepted practice for similar studies of this type. The conclusions presented in this report are professional opinions based solely upon visual observations of the site and vicinity, and interpretation of the reviewed available historical information and documents as described in this report. These conclusions are intended solely for the site and exclusively for the purpose as described herein.

This study in not intended to be a definitive investigation of potential contamination at the subject property. Since the scope of services is limited to those activities specifically described in our contract and no subsurface exploration, soil sampling, groundwater sampling, building material sampling, air sampling, or analytical testing was conducted, it is possible that currently unrecognized contamination may exist at the site and that the levels of this potential contamination may vary across or imply any warranty or representation that the site is free of contamination or that it complies with all applicable regulatory and statutory requirements.

The opinions and recommendations contained herein apply to the site conditions existing at the time of our investigation. Necessarily, these opinions and recommendations do not apply to changes in site conditions of which this office is unaware, has not had the opportunity to evaluate, or which may occur as a result of future site usage.

This report has been compiled for the exclusive use of **EXIT Real Estate Group,** and their authorized representatives. It shall not be transferred to, or used by, a third party, to another project or applied to any other project on this site, other than as described herein, without consent and/or thorough review by this facility.

Please do not hesitate to call should you have any questions.

TABLE 3

Summary of Historical Data

Date	Site Address/Use	Data Source/Comments
1896 - circa 1939, 1940s or 1950s	Vacant	Topographic map, aerial photos
1939	garage at 125 W. Plymouth Street	Building department records
1941 - present	113 and 115 W. Plymouth Street and APN 4016-004-021/residential	Aerial photos, building department files, city directories, tax assessor's records, Sanborn maps, site visit
1946 - present	129 and 133 W. Plymouth Street/ residential (with second structure at 129 W. Plymouth Street added in 1959)	Aerial photos, building department files, city directories, tax assessor's records, Sanborn maps, site visit
1947 - present	125 W. Plymouth Street/residential (with second structure added in 1959)	Aerial photos, building department files, city directories, tax assessor's records, Sanborn maps, site visit
1959 - present	123 W. Plymouth Street/residential	Aerial photos, building department files, city directories, tax assessor's records, Sanborn maps, site visit

Notes:
Building department records indicate that the residences at 113 and 115 W. Plymouth were moved in 1945 after foundation repairs.

TABLE 4

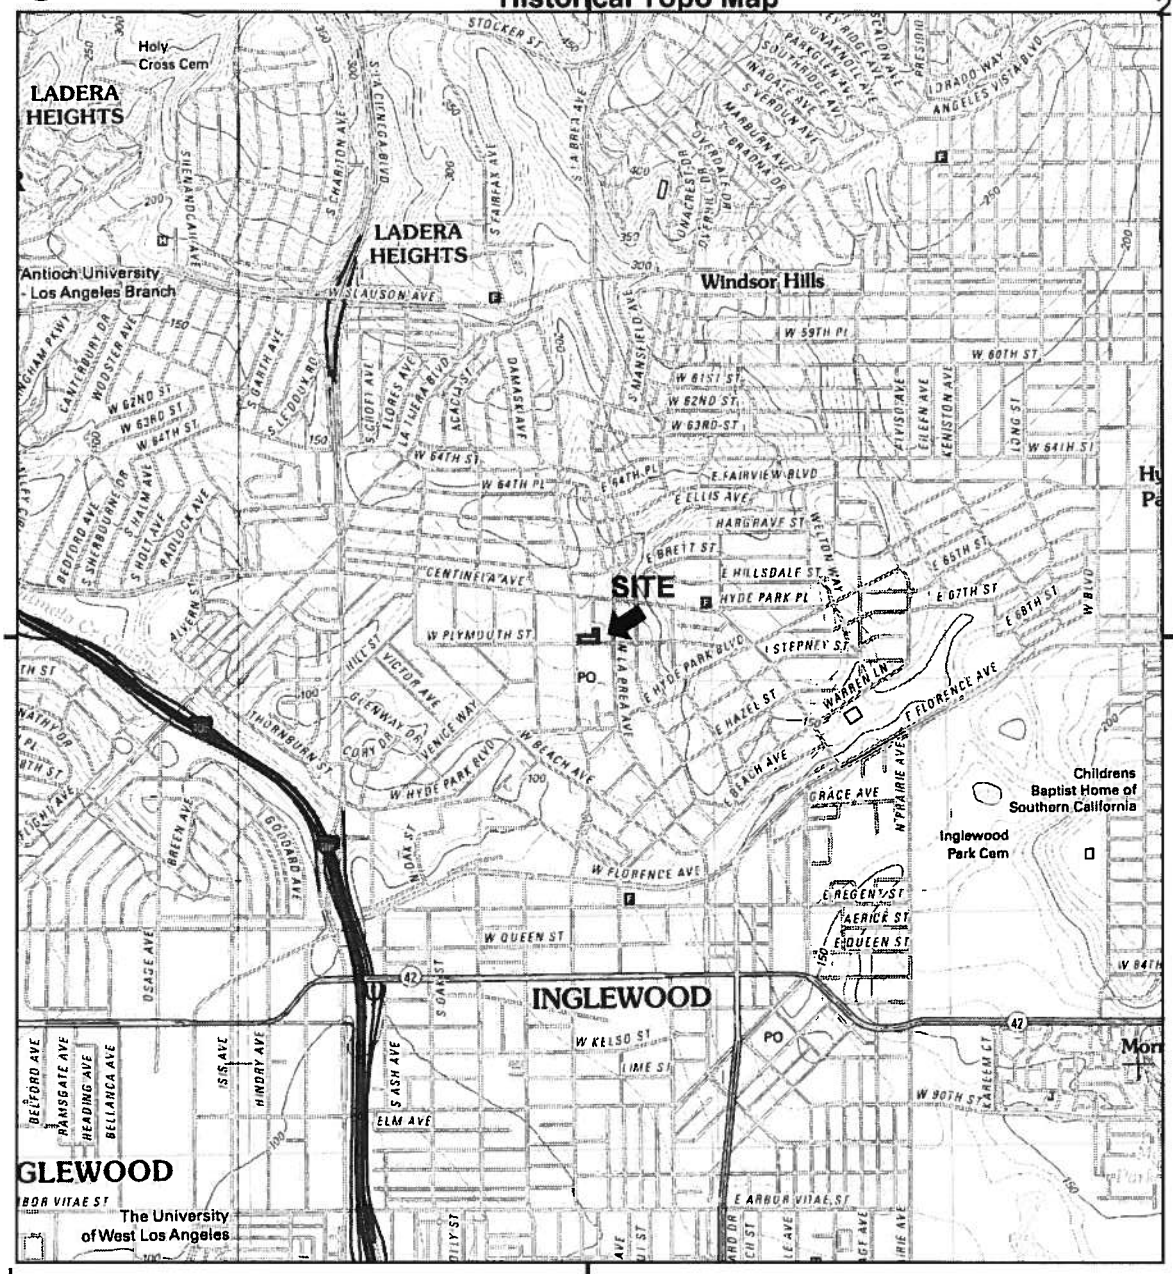

Aerial Photographs

Photograph Flyer	Date	Comments
Fairchild USGS USDA	1923 1928 1938	The site appears to be vacant and fallow. A creek runs from the southwest to the northeast across the site, and Plymouth Street was developed prior to 1923. Trees line the southern property boundary. Adjacent property to the west appears to be residential with the small structures (hen houses) (1923); one such structure is present in the northernmost part of the site (1923-1938?). Adjacent property to the northwest appears to be vacant and fallow, and property immediately north of 123 W. Plymouth Street appears to have been developed for residences. Property further east of 113 W. Plymouth Street appears to have been used for either residences or small businesses. Nearby properties appear to be occupied by residences with some agricultural features (i.e. hen houses, orchards, gardens). In 1923, Commercial Avenue ended at W. Plymouth Street; this street appears to have been redeveloped as La Brea Avenue by 1928 with a continuation north to Centinela Avenue. The general site vicinity appears to have remained largely residential with some open space for agriculture during this period.
USGS USDA	1947 1952	Residential structures appear to be present at 113, 115, 129, and 133 W. Plymouth Street in 1947, and also at 125 W. Plymouth Street in 1952. View of the site is partially obscured by trees. By 1947, commercial development was present east of the site along La Brea Avenue and further north along Centinela Avenue. Additional urban development appears to have occurred.
USGS	1963	The site (including 123 W. Plymouth Street) appears to be occupied by the current residential structures and trees are no longer present along the southern property boundary. The adjacent property to the east is occupied by three residences, and property further east and northeast of the site (currently La Brea Plaza) have been developed for commercial use. Additional commercial development has occurred along La Brea Avenue and Centinela Avenue, and more multi-family residences have been developed in the greater site vicinity.
Brewster Pacific Brewster Pacific Brewster Pacific	1970 1979 1981	Site use appears to be unchanged. Adjacent property north of 123 W. Plymouth Street appears to have been used as an unpaved parking area (1970) or fallow area (1979 and 1981) associated with the nearby commercial development. Adjacent property to the northwest (914 Eucalyptus Avenue) was developed with the current multi-family residence. By 1981, additional commercial redevelopment had occurred along the east side of La Brea Avenue north of W. Plymouth Street.
USDA USGS/DOQQ USDA USDA/NAIP USDA/NAIP USDA/NAIP USDA/NAIP	1989 1994 2002 2005 2009 2010 2012	Site use appears to be unchanged. Adjacent properties to the east and northeast appear to have been re-developed as La Brea Plaza (commercial). Properties further south and west of the site appear to have remained residential.

ELEVATION = 4032ft YEST. Datum (NAD 88) DATUM, 2000 ADJUSTMENT.

Surveyor's Notes

Boundary locations shown hereon are the result of a boundary survey, and are pending possible comments from the Los Angeles County Surveyor's Office following their review of the Record of Survey to be submitted.

Any hardscape and contours shown hereon without survey point ties are interpolated between the closest shown survey points and should be considered approximate.

N.C. Hansen, Inc. accepts no responsibility for any items which may be omitted from this map due to any obstructions at time of survey including, but not limited to, locked gates and parked vehicles. There were several obstructions encountered at time of survey. Overhead lines and cross subject property were located by Eleven Underground Service Alert. Underground utilities shown hereon are based on plans by others including adjacent properties were located as observable. Due to steady wind during the course of the survey, some overhead lines were not observable.

[redacted]

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RALPHS GROCERY CO NO	***950 N LA BREA***	***ENE 0 - 1/8 (0.055 mi.)***	***B10***	***14***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/30/2017 has revealed that there are 12 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 7 UST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SO CAL GAS/INGLEWOOD	700 WARREN LANE	ESE 1/2 - 1 (0.694 mi.)	L70	133

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 11 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 5 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110002797064

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110064466117

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002919888

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

FINDS:

Registry ID: 110002742649

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002793898

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 07/08/1992
Comments: The Department completed review of the PEA on July 8, 1992. The Department concurred with the recommendation that Further Action was needed at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 04/07/1992
Comments: The 1.4 acre of total 58 acre park was used by the Gas Co. for the production of "manufactured gas" in the early 1900s. Currently the site is used as a city owned rec- reational park. The manufactured gas was made at the site from coal and oil. The byproducts from this operation were tars, oils, sludges, lampblack etc, which were sold to various industrial uses. Some of these byproduct residues have been found in soils at former towne gas plant sites. Out of these polycyclic aromatic hydrocarbons (PAH) are hazardous. Also, elevated levels of heavy metals such as lead and arsenic were found at a few sites. A PEA is required at the site to determine, if any emergency removal action is required to reduce the potential threat to public health and the environment. The Dept received a Notice of Intent dated March 20, 1992 to initiate PEA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 03/02/1995
Comments: The remediation was accomplished by the excavation of 5,824 tons of

SO CAL GAS/INGLEWOOD MGP (Continued) **S101480993**

soil contaminated from former MGP operations. Sampling verified the achievement of cleanup goals. Clean soil was imported, backfilled, compacted and resodded. Excavated soil was recycled by thermal treatment.

Completed Document Type:	* Remedial or Removal Design
Completed Date:	08/30/1994
Comments:	The Department reviewed and approved the Removal Action Implementation and Design (RAID) Plan and Responsiveness Summary for the Inglewood MGP site.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	07/08/1992
Comments:	The Department completed review of the PEA on July 8, 1992. The Department concurred with the recommendation that Further Action was needed at the site.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	04/07/1992
Comments:	The 1.4 acre of total 58 acre park was used by the Gas Co. for the production of "manufactured gas" in the early 1900s. Currently the site is used as a city owned rec- reational park. The manufactured

[redacted]

SO CAL GAS/INGLEWOOD MGP (Continued) **S101480993**

gas was made at the site from coal and oil. The byproducts from this operation were tars, oils, sludges, lampblack etc, which were sold to various industrial uses. Some of these byproduct residues have been found in soils at former towne gas plant sites. Out of these polycyclic aromatic hydrocarbons (PAH) are hazardous. Also, elevated levels of heavy metals such as lead and arsenic were found at a few sites. A PEA is required at the site to determine, if any emergency removal action is required to reduce the potential threat to public health and the environment. The Dept received a Notice of Intent dated March 20, 1992 to initiate PEA.

Manufactured Gas Plants:

A 1.4 acre former, early 1900's, manufactured gas plant site that was dismantled in 1913. The site is currently part of an 18 acre city-owned park. A PEA identified some contamination (lampblack PAH's) in the subsurface soils. A removal action was coompleted in February of 1995 and this section of the public park returned to use.

FINDS:

Registry ID: 110002666927

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/11/2017
Date Data Arrived at EDR: 12/22/2017

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017

Next Scheduled EDR Contact: 04/16/2018
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/11/2017

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

[redacted]

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

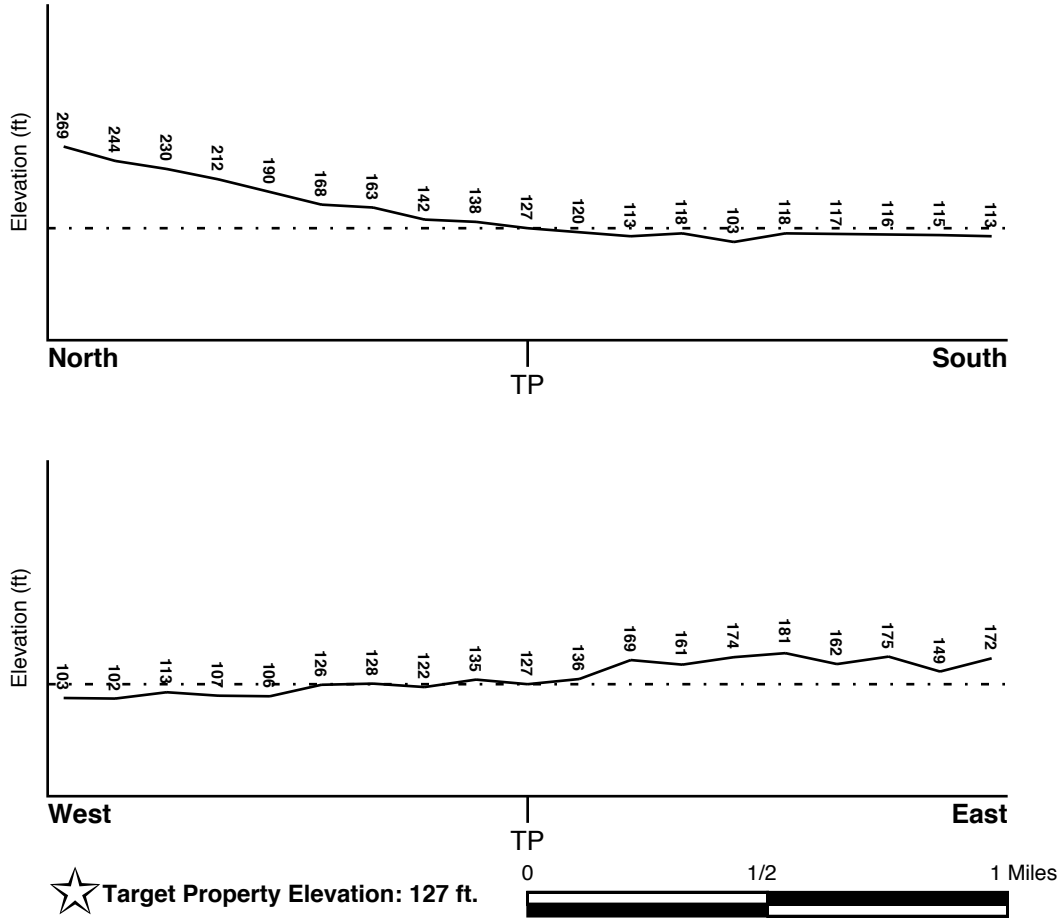

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

[redacted]

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1780F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1760F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
INGLEWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

[redacted]

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Eocene
Code:	Te *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

[redacted]

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILDFAX® PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of GeoSystems on Jan 19, 2018.

TARGET PROPERTY

113-133 W. Plymouth Street
Inglewood, CA 90302

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

WORKERS' COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self insure, or a certificate of Workers' Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.)

Policy No. _____ Company _____

☐ Certified copy is hereby furnished.

☐ Certified copy is filed with the City building inspection department.

Date _____ Applicant _____

CERTIFICATE OF EXEMPTION FROM WORKER'S COMPENSATION INSURANCE

(This section need not be completed if the permit is for one hundred dollars ($100) or less.)

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws.

Date 9-25-92 Applicant Bilton Duhon JR

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

LICENSED CONTRACTORS DECLARATION

I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is if full force and effect.

License Number 401447 Lic. Class B

Contractor Duhon Construction Date 9-25-92

☐ I am exempt from the licensing requirements as I am a licensed architect or a registered professional engineer acting in my professional capacity (Section 7051, Business and Professions Code).

Lic. or Reg. No. _____ Date _____

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work and the structure is not intended or offered for sale (Section 7044, Business and Professions Code).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code).

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____

Lender's Address _____

I certify that I have read this application and state that the above information is correct. I agree to comply with all City ordinances and State laws relating to building construction, and hereby authorize representatives of this City to enter upon the above-mentioned property for inspection purposes.

APPENDIX G

Noise and Vibration Calculations

Appendix G

Noise and Vibration Calculations for the
113-133 W. Plymouth Street Residential Project (Project #18-856-001)

August 30, 2018

This technical appendix provides the calculations for the noise and groundborne vibration impact analysis presented in the Initial Study/Mitigated Negative Declaration.

CONSTRUCTION NOISE

Acoustical Usage Factor Methodology
The Federal Highway Administration published the Construction Noise Handbook and released the first Roadway Construction Noise Model in 2006 that includes a national database of construction equipment reference noise emissions levels. The database provides an acoustical usage factor to estimate the fraction of time each piece of construction equipment is operating at full power during construction activity. The acoustical usage factor (U.F.) is a key input used to calculate average sound levels over time expressed as Leq.

Table 1 identifies highest (Lmax) sound pressure levels published in the Construction Noise Handbook and used in the Roadway Construction Noise Model associated with each type of equipment anticipated for use in project construction, then adjusts this level for U.F. and attenuation, or spreading loss, based on the distance to the closest sensitive receptor. The sound level prediction equation is expressed as follows for the hourly average sound level (Leq) at distance D between the source and receiver.

$$Leq = Lmax\ @\ 50' - 20 \bullet \log (D/50') + 10 \bullet \log (U.F./100) - I.L.$$

Where:

Lmax @ 50' is the published reference noise level at 50 feet
U.F. is the acoustical usage factor for full power operation per hour
I.L. is the insertion loss for intervening barriers

Table 1
Acoustical Usage Factor and Hourly Leq Calculations

Auger drilling rig	84	20%	10 • log (20/100)	-6.99	77
Backhoe	78	40%	10 • log (40/100)	-3.98	74
Chain saw	84	20%	10 • log (20/100)	-6.99	77
Dump truck	76	40%	10 • log (40/100)	-3.98	72
Dozer	82	40%	10 • log (40/100)	-3.98	78
Grader	85	40%	10 • log (40/100)	-3.98	81

[2] Based on an eight-hour work day.

Sound Pressure Level Attenuation Methodology

The following provides the formula used to calculate the sound pressure level L in dB depending on distance r based on a reference value. For example, L_1 is the reference sound pressure level of 81 dB and r_1 is a distance of 50 ft. from the source.

$$L_2 = L_1 - \left| 20 \cdot \log\left(\frac{r_1}{r_2}\right) \right|$$

The following shows a calculation for the expected sound pressure level at the existing multi-family residences adjacent to the project site where r_2 is 5 ft. The formula requires addition rather than subtraction because the distance between the source and receptor of 5 ft. is closer than the reference distance of 50 ft. as shown in the following equation:

L_2 = 81 dB + [20 • log (50ft/5ft)]
L_2 = 81 dB + [20 • log (10ft)]
L_2 = 81 dB + [20 • 1]
L_2 = 81 dB + 20
L_2 = 101 dB

Based on the hourly Leq from the loudest piece of construction equipment shown in Table 1, a grader, **Table 2** provides the expected outdoor construction sound levels at the nearest noise sensitive receptors.

Table 2
Outdoor Construction Noise Levels at Nearest Sensitive Receptors

Multi-family residences adjacent to the project site	81	5 ft	L_2 = 81 dB + [20 • log (50ft/5ft)] L_2 = 81 dB + [20 • log (10ft)] L_2 = 81 dB + [20 • 1] L_2 = 101 dB
Single and multi-family residences to the south across Plymouth Street	81	50 ft	L_2 = 81 dB - [20 • log (50ft/50ft)] L_2 = 81 dB - [20 • log (1ft)] L_2 = 81 dB - [20 • 0] L_2 = 81 dB
Single- and multi-family residences to	81	100 ft	L_2 = 81 dB - [20 • log (50ft/100ft)] L_2 = 81 dB - [20 • log (0.5ft)]

the west along Eucalyptus Ave			L_2 = 81 dB - 6.02 L_2 = 75 dB
Wilder's preparatory academy	81	270 ft	L_2 = 81 dB - [20 • log (50ft/270ft)] L_2 = 81 dB - [20 • log (0.19ft)] L_2 = 81 dB – 14.65 L_2 = 66.35 dB
[a] Measured from the edge of the project site to the property line of the nearest sensitive receptor [b] Calculations by Envicom Corporation, August 30, 2018.			

As shown in Table 2, sound pressure levels attenuate at approximately 6 dB per doubling of distance based on the law of inverse squares.

OPERATIONAL NOISE

Heating, Ventilation, and Air Conditioning Units
The attenuation for the use of the proposed rooftop Heating, Ventilation, and Air Conditioning (HVAC) units was calculated using the same formula used to calculate the sound pressure level L in dB depending on distance r based on a reference value.

$$L_2 = L_1 - \left| 20 \cdot \log\left(\frac{r_1}{r_2}\right) \right|$$

The attenuation calculations provided in **Table 3** were based on a reference sound pressure level of 64.7 Leq (L_1) measured at a distance of 10 ft (r_1) from the source.[1]

Table 3
Attenuation Calculations for Estimated Operational HVAC Noise

Multi-family residence at 137 W. Plymouth Street	64.7	7.7	L_2 = 64.7 dB + [20 • log (10ft/7.7ft)] L_2 = 64.7 dB + [20 • log (1.3ft)] L_2 = 64.7 dB + 2.3 L_2 = 67 dB	62
Multi-family residences at 914 N. Eucalyptus Ave	64.7	35	L_2 = 64.7 dB - [20 • log (10ft/35ft)] L_2 = 64.7 dB - [20 • log (0.29ft)] L_2 = 64.7 dB - 10.9 L_2 = 53.8 dB	48.8
Single- and multi-family residences south of Plymouth Street	64.7	50	L_2 = 64.7 dB - [20 • log (10ft/50ft)] L_2 = 64.7 dB - [20 • log (0.2ft)] L_2 = 64.7 dB - 14 L_2 = 50.7 dB	45.7
Wilder's	64.7	280	L_2 = 64.7 dB - [20 • log (10ft/280ft)]	30.8

[1] Reference noise level measurement of an existing Eubank HVAC model W24CF05B1R11B. Noise Impact Analysis for Vista Towers, Eilar Associates, Acoustical & Environmental Consulting, October 3, 2007.

preparatory academy			L_2 = 64.7 dB - [20 • log (0.04ft)] L_2 = 64.7 dB - 28.9 L_2 = 35.8 dB	
[a] Reference noise level measurement of an existing Eubank HVAC model W24CF05B1R11B. Noise Impact Analysis for Vista Towers, EILAR ASSOCIATES, Acoustical & Environmental Consulting, October 3, 2007. [b] Distance measured from the proposed HVAC equipment on the roof of the proposed building to the property line of the sensitive receptor. [c] Applies an insertion loss of 5 dB for the HVAC screening shown in the project Architectural Plans, Sheet A-5.				

As shown in Table 3, the sound pressure levels from HVAC unit operation were reduced by 5 dB to account for insertion loss due to the screening shown in the project architectural plans.

Decibel Addition for Ambient Noise Increase

Given decibels are expressed in logarithmic units, they cannot be added or subtracted arithmetically. The following formula was used to convert the decibels from logarithmic units to linear units for addition of the decibels and to calculate the increase in ambient noise.

$$L = 10 \log_{10} \left(\sum_{i=1}^{n} 10^{(L_i / 10)} \right)$$

Using the HVAC Leq from Table 3, **Table 4** provides the decibel addition calculations used to find the increase in the ambient noise level due to the HVAC use in project operations.

Table 4
Decibel Addition Calculations for Ambient Noise Increase

62	69.8	$10 \cdot \log_{10} (10^{6.2} + 10^{6.98}) = 70.5$
48.8	69.8	$10 \cdot \log_{10} (10^{4.88} + 10^{6.98}) = 69.8$
45.7	69.8	$10 \cdot \log_{10} (10^{4.57} + 10^{6.98}) = 69.8$
30.8	69.8	$10 \cdot \log_{10} (10^{3.08} + 10^{6.98}) = 69.8$
[a] City of Inglewood General Plan, Noise Element, Noise Measurement at Site #8.		

As shown in Table 4, the addition of the Leq from HVAC unit operation to the ambient Leq would result in an increase of 0.7 dB in ambient noise for only the nearest sensitive receptor, the multi-family residence at 137 W. Plymouth Street.

Playground Noise

An expected sound pressure level from the proposed children's play area was based on reference measurements in a noise study for a comparable project feature.[2] As reported in this study, the average Leq (L_1) noise level was 60 dBA at a distance of 40 ft. (r_1) from the play area. **Table 5** provides the expected sound pressure level from the proposed children's play area based on this

[2] Edward L. Pack Associates. Inc., Acoustical Consultants, Noise Assessment Study for Rocketship School, San Jose, July 26, 2013. Study involved noise measurements for 30 children, ages 5-6, at a distance of 40 ft. from the play area.

reference value. Given the proposed children's play area would be surrounded by the concrete walls on the back of existing commercial structures to the north and east and the proposed residences to the south, Table 5 provides attenuation calculations for the distance to the nearest sensitive receptor, the east-facing private balconies overhanging N. Lamos St. on the existing multi-family residential building at 914 N. Eucalyptus Ave.

Table 5
Attenuation Calculations for Playground Noise

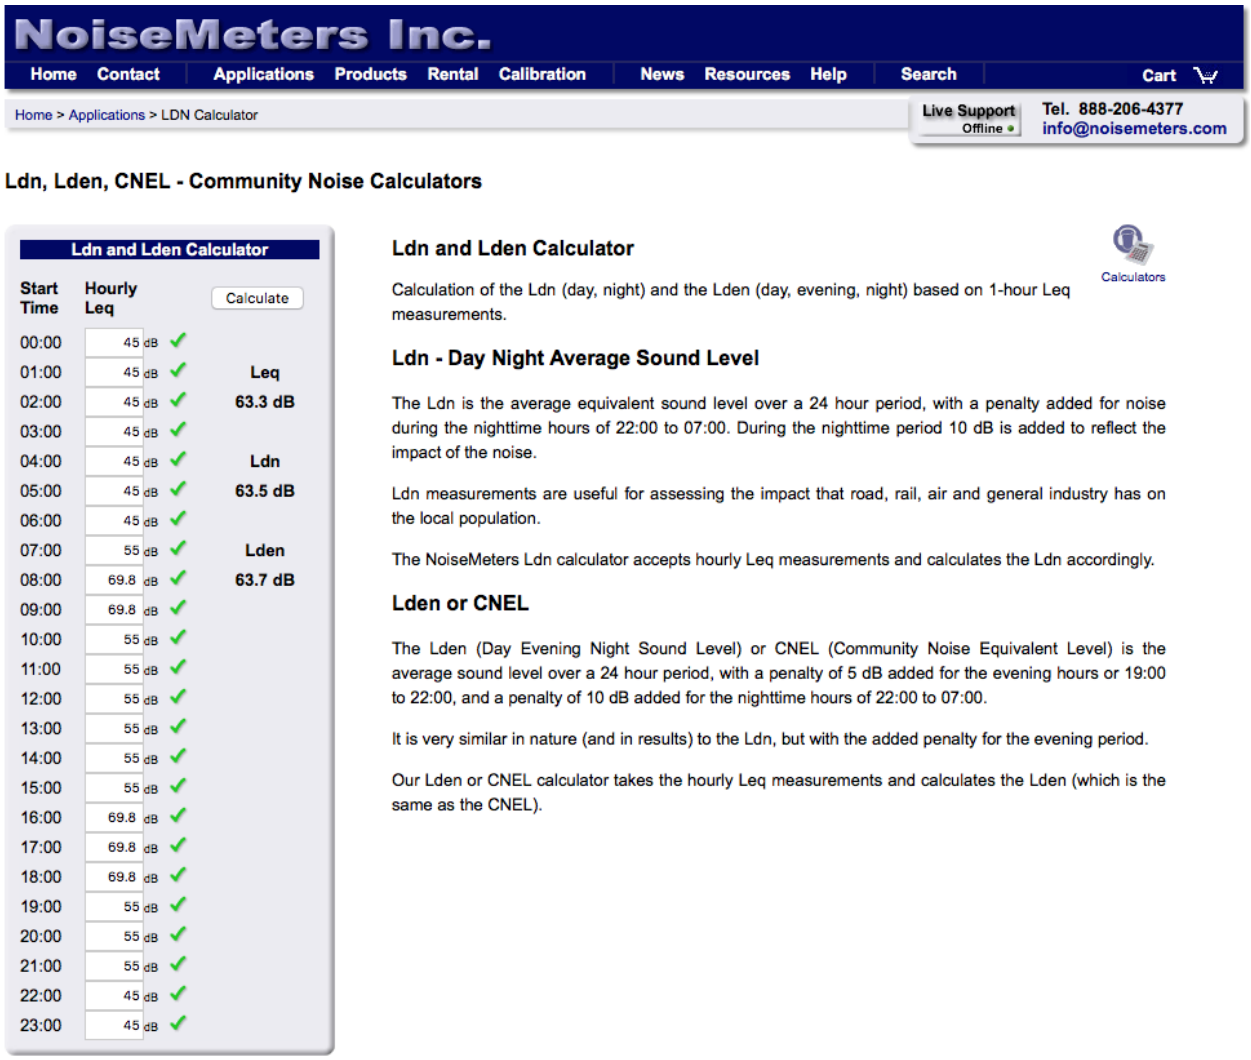

914 N. Eucalyptus Ave.	60	13	$L_2 = 60\ dB + [\ 20 \bullet \log (40ft/13ft)]$ $L_2 = 60\ dB + [\ 20 \bullet \log (3.08ft)]$ $L_2 = 60\ dB + 9.8$ $L_2 = 69.8\ dB$
[a] Noise Assessment Study for Rocketship School, Edward L. Pack Associates, Nov. 4, 2013. [b] Distance measured from the western edge of the project site to the east-facing balconies overhanging N. Lamos Street.			

As shown in Table 5, a distance of 13 feet would attenuate expected play area noise to 69.8 dB.

Community Noise Equivalent Level Calculation for Children's Play Area

Community Noise Equivalent Level (CNEL) is a 24-hour average noise level that assigns a 5 dB penalty for noise in the evenings and a 10 dB penalty to noise at nighttime when the ambient noise level is lower, making receptors more sensitive to noise changes. To calculate what CNEL resulting from operation of the children's play area, ambient daytime and nighttime CNEL values from the Inglewood Municipal Code were input to an online CNEL calculator adding the expected noise from the proposed children's play area, assuming the play area is operational for five full hours per day. Using these inputs, Figure 1 provides a screenshot of from this online calculator.

Figure 1
CNEL for Children's Play Area Noise

CONSTRUCTION GROUNDBORNE VIBRATION

Peak Particle Velocity Calculations
The predicted vibration levels generated by various types of construction equipment are provided in terms Peak Particle Velocity (PPV) measured in inches per second (in/sec) in **Table 6, Estimated Groundborne Vibration Levels During Project Construction**.

Table 6
Estimated Groundborne Vibration Levels During Project Construction

Large Bulldozer	0.995	0.191	0.089	0.031	0.011	0.003
Loaded trucks	0.850	0.152	0.076	0.027	0.010	0.002
Jackhammer	0.391	0.070	0.035	0.012	0.004	0.000
Small Bulldozer	0.034	0.006	0.003	0.001	0.000	0.000
Data Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment, May						

The reference vibration levels at 25 feet between the source and receptor shown in Table 6, from the Federal Transit Administration Noise and Vibration Impact Assessment report, may be used in the following formula[3] to calculate PPV at a given distance.

PPVdistance = PPVref • (25/D)^1.5

Where:

PPVdistance = PPV in inches/second of the equipment adjusted for distance
PPVref = the reference vibration level in inches/second at 25 feet
D = the distance from the equipment to the receiver.

Peak Particle Velocity Calculations at a distance of 5 feet
PPVdistance = 0.089 • (25/5)^1.5 = 0.995
PPVdistance = 0.076 • (25/5)^1.5 = 0.850
PPVdistance = 0.035 • (25/5)^1.5 = 0.391
PPVdistance = 0.003 • (25/5)^1.5 = 0.034

Peak Particle Velocity Calculations at a distance of 100 feet
PPVdistance = 0.089 • (25/100)^1.5 = 0.011
PPVdistance = 0.076 • (25/100)^1.5 = 0.010
PPVdistance = 0.035 • (25/100)^1.5 = 0.004
PPVdistance = 0.003 • (25/100)^1.5 = 0.000

Peak Particle Velocity Calculations at a distance of 270 feet
PPVdistance = 0.089 • (25/270)^1.5 = 0.003

[3] Federal Transit Administration, Transit Noise and Vibration Impact Assessment, May 2006, pg. 12-11.

PPVdistance = 0.076 • (25/270)^1.5 = 0.002
PPVdistance = 0.035 • (25/270)^1.5 = 0.000
PPVdistance = 0.003 • (25/270)^1.5 = 0.000

AB 52 Tribal Notification Letter

APPENDIX H

CITY OF INGLEWOOD

ECONOMIC AND COMMUNITY DEVELOPMENT DEPARTMENT

PLANNING DIVISION

Christopher E. Jackson, Sr.

West Hills, CA 91307

RE: AB 52 Notification for a 20-unit Residential Subdivision at 113-133 Plymouth Street

Dear Tribal Representative:

In conformance with the tribal consultation requirements of Assembly Bill (AB) 52, this letter is to inform you that the City of Inglewood is preparing an Initial Study in accordance with the California Environmental Quality Act (CEQA) for a proposed 20-unit residential subdivision. The 29,593-square-foot (0.67-acre) project site encompasses seven parcels at 113-133 Plymouth Street, (AINs: 4016-004-002, 4016-004-003, 4016-004-020, 4016-004-021, 4016-005-019, 4016-005-020, 4016-005-021) in the City Inglewood. The project site is on Plymouth Street between Eucalyptus Avenue and La Brea Avenue in the northern portion of the City of Inglewood, California. A map illustrating the location of the project site is attached.

The proposed project consists of the demolition of eleven existing residences totaling 11,287 square feet, 1,916 square feet of accessory structures and the construction and operation of twenty (20) 3-story townhouses totaling 52,616.2 square feet. The General Plan Land Use designation for the project site is commercial/residential and project site is zoned R-3 (Residential Multiple Family) and P-1 (Automobile Parking). The total area of the project site is 29,593 sq. ft.

Please notify us within 30 days of receiving this letter if you wish to consult on the proposed Project. If you require any additional information or have any questions, I can be reached via e-mail at mwilcox@cityofinglewood.org Thank you for your attention to this matter.

Sincerely,

Mindy Wilcox, AICP
Planning Manager
