## **INTRODUCTION**

The purpose of this study is to evaluate the potential traffic impacts of a proposed truck parking facility located on south and east of the Union Avenue and White Lane intersection in the City of Bakersfield, California. A vicinity map is presented in Figure 1 and a location map is presented in Figure 2.

The scope of the study includes eight intersections (all signalized) and was developed in coordination with staff from the City of Bakersfield Traffic Department. The proposed project will expand the current facility to 1,202 truck parking spaces and provide long-term and short-term parking for trucks and trailers.

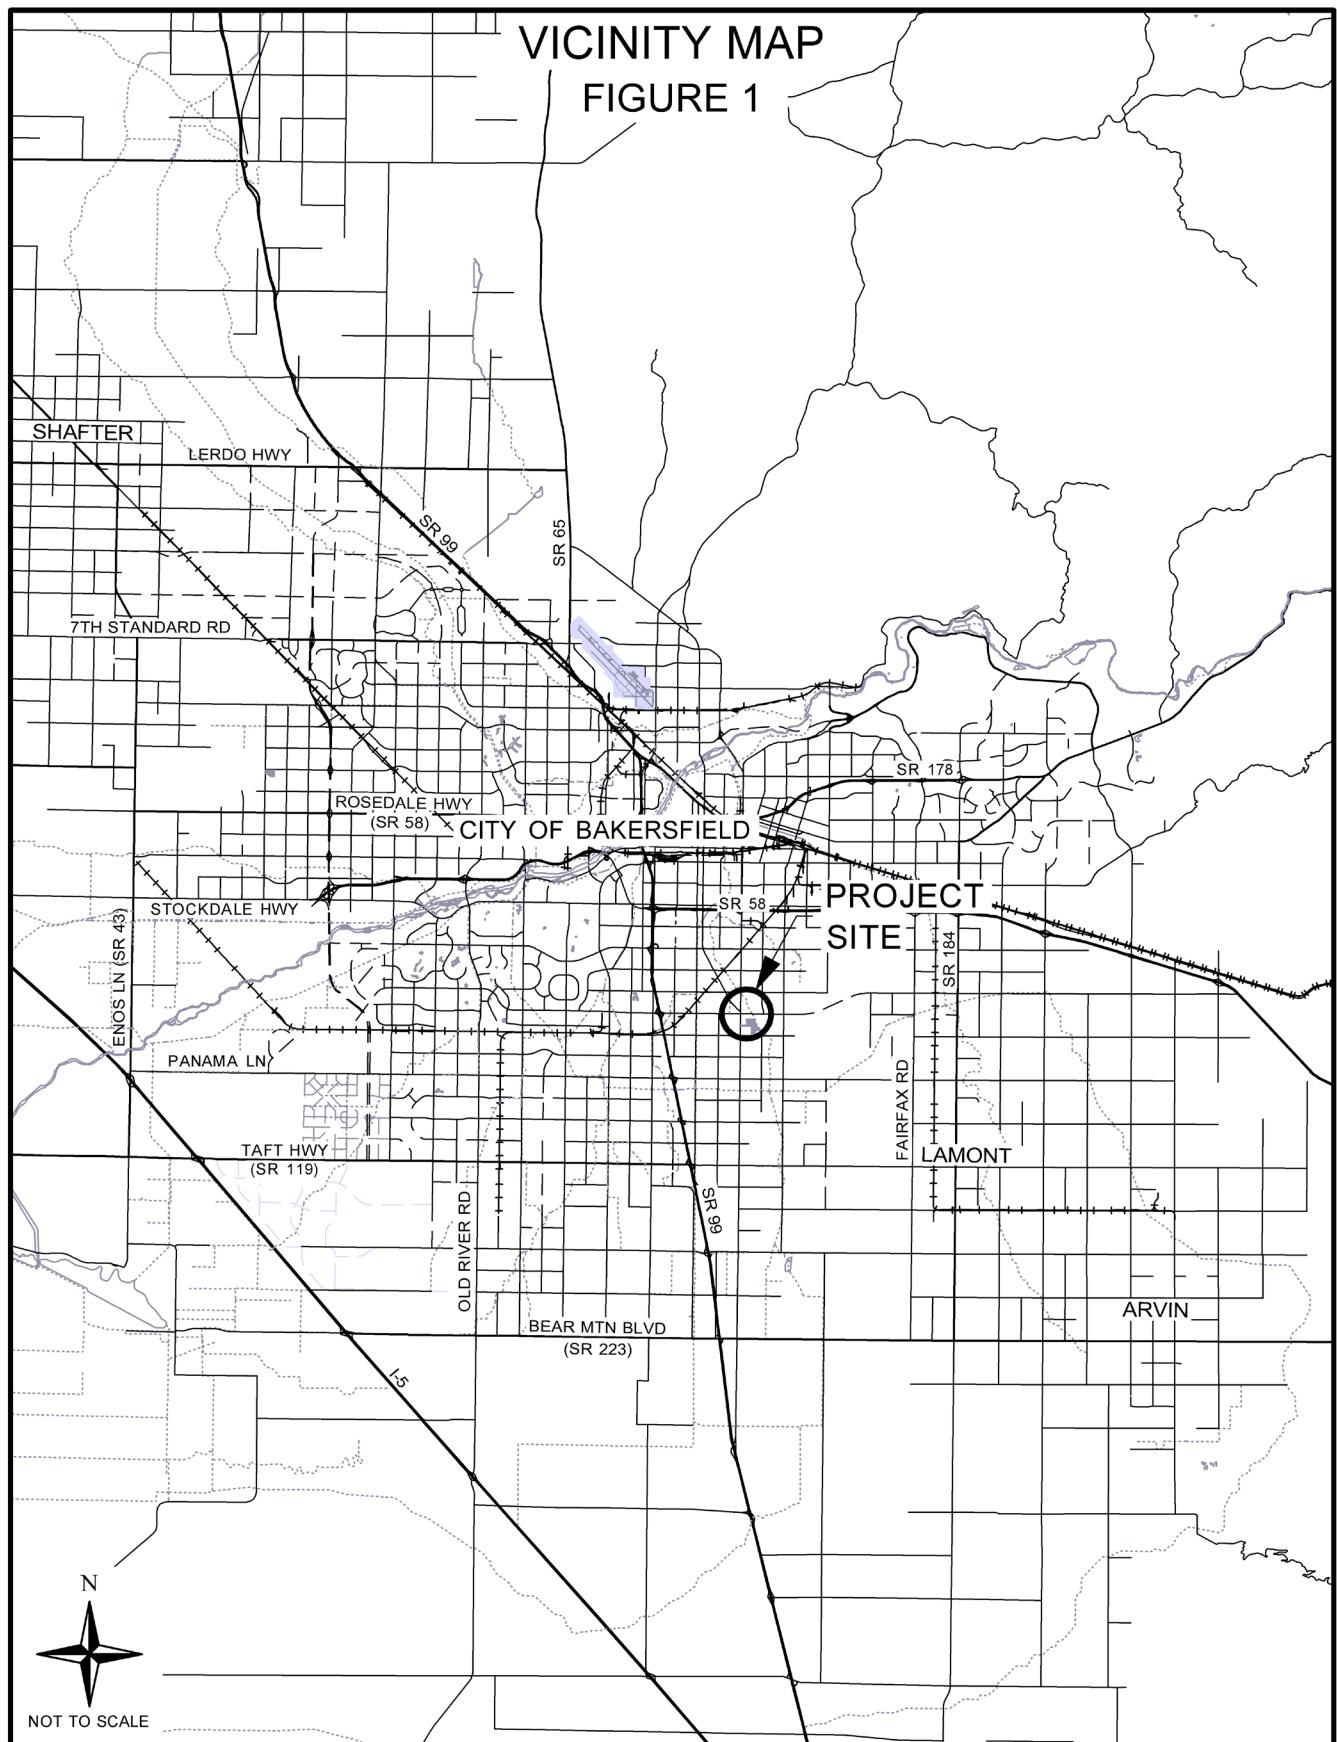

### **A. Project Land Use and Site Access**

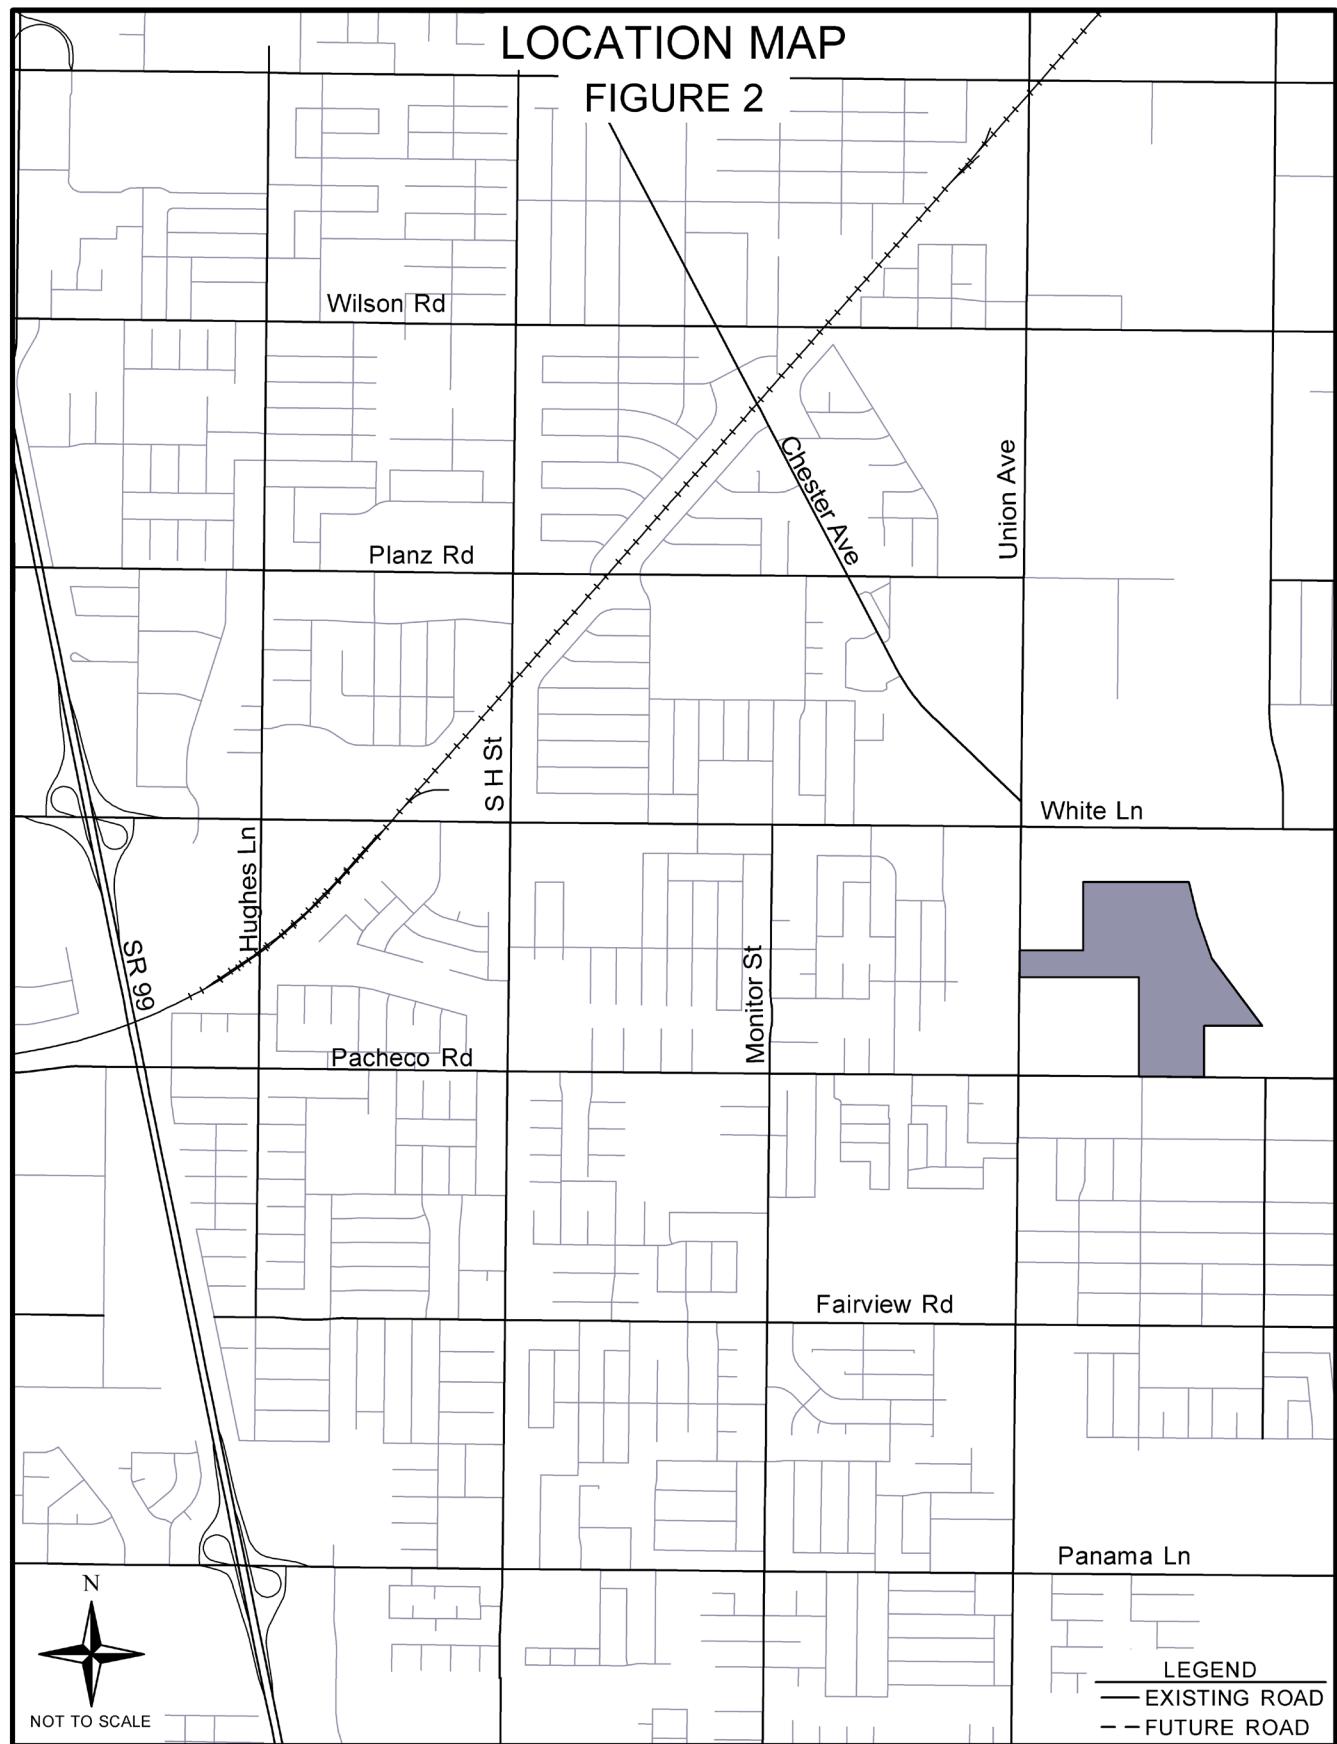

The project site is situated on approximately 69 acres of undeveloped vacant land. The property is currently zoned M-3. A site plan is provided in Figure 3.

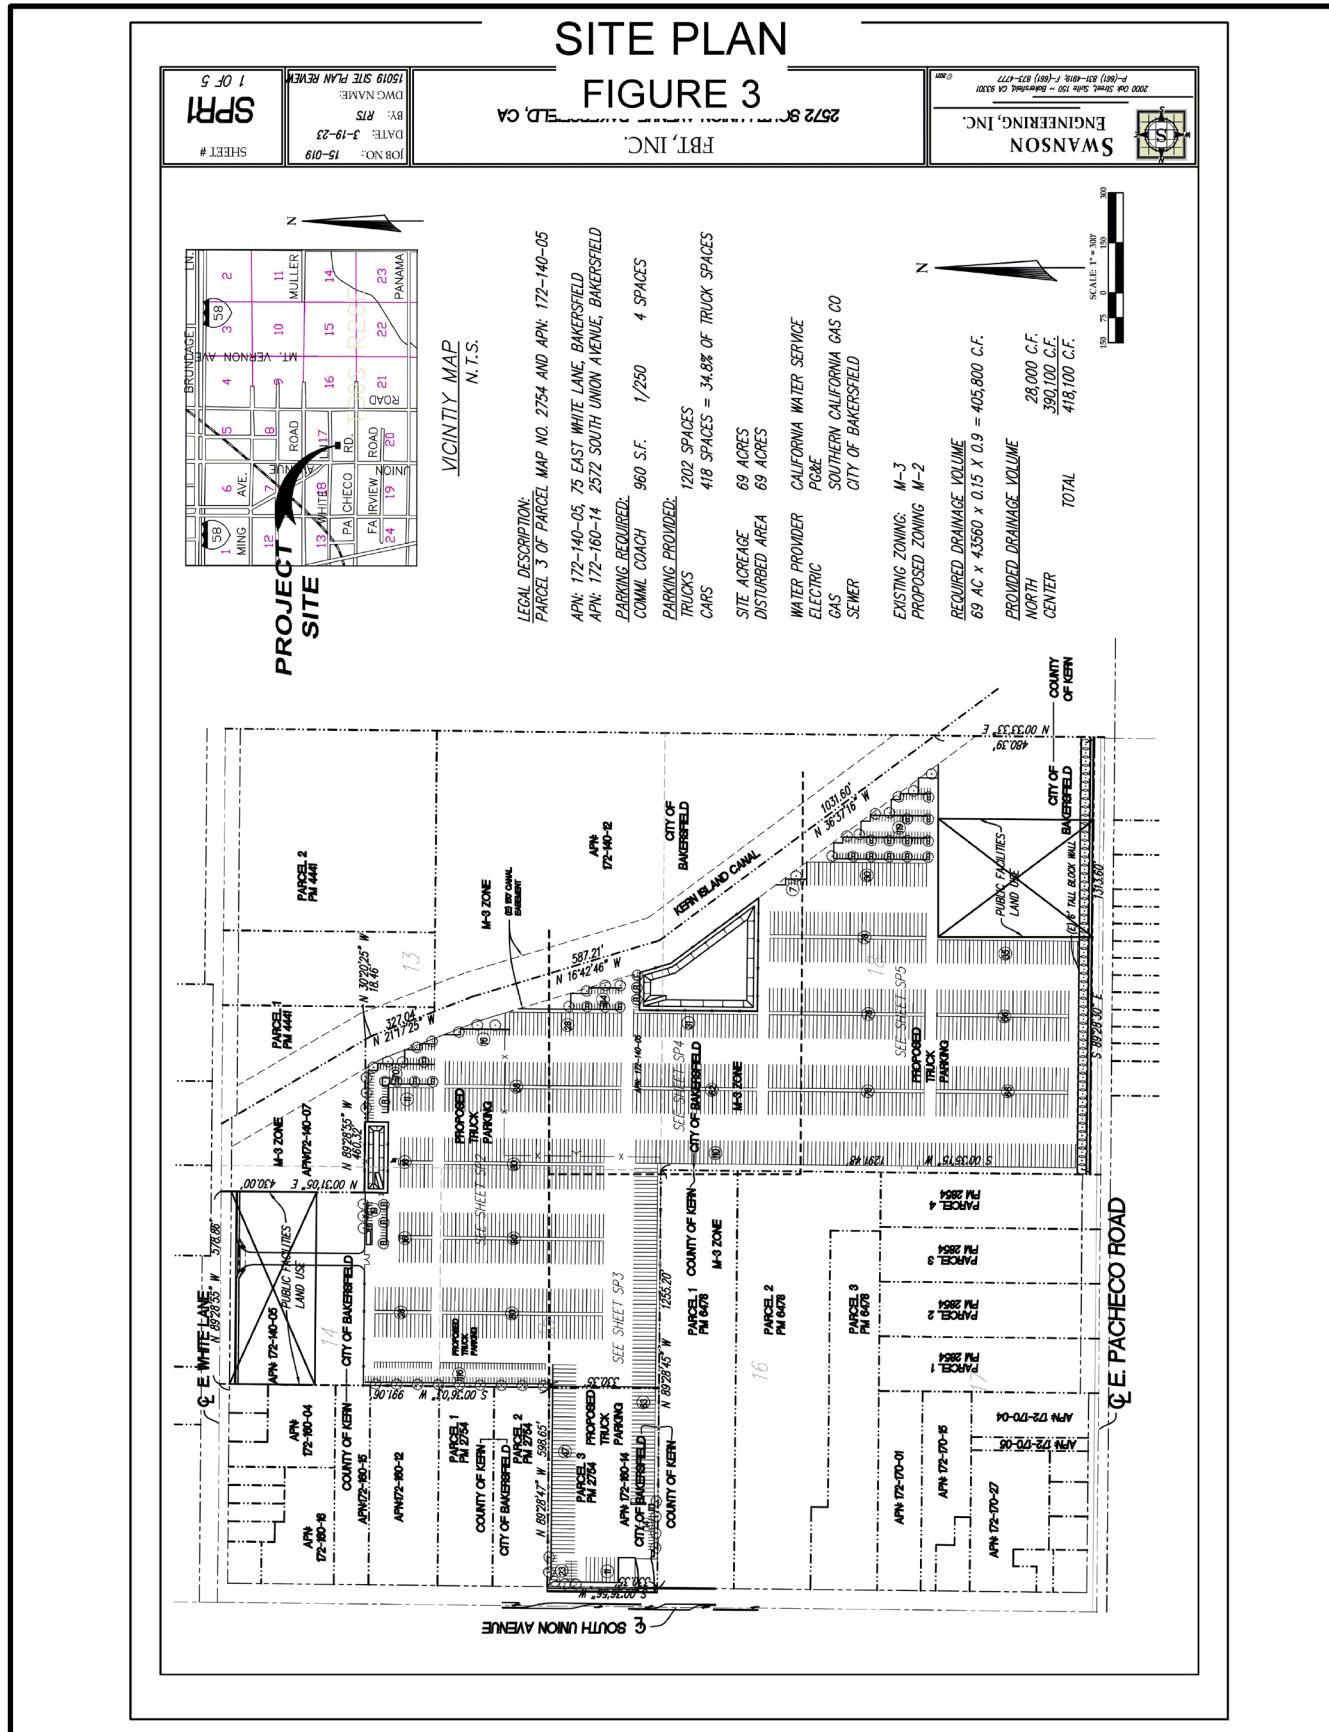

Access to the project site is proposed along White Lane and Union Avenue.

### **B. Existing Land Uses in Project Vicinity**

Industrial land uses are located immediately to the south and east of the project site. Residential and commercial developments are located to the north and west. South High School is located approximately one mile to the northwest and Prosperity Elementary School lies approximately one-half mile to the northwest.

## D. Roadway Descriptions

Hughes Lane is a north-south roadway located midway between Wible Road and South H Street. It is designated as a collector and currently exists as an improved two-lane roadway. Hughes Lane provides access to residential and commercial land uses within the study area.

Monitor Street is a four-lane north-south collector that extends from Hosking Avenue to Merrimac Avenue. In the vicinity of the project it provides access to residential and educational land uses.

Pacheco Road is an east-west collector that extends from Stine Road to east of Dr. Martin Luther King Jr. Boulevard. In the vicinity of the project it exists as a two-lane roadway with curb and gutter and provides access to residential and commercial land uses.

Planz Road is an east-west collector. It extends east from Wilson Road in Southwest Bakersfield to the Bakersfield Municipal Airport just east of Union Avenue. It continues east from Madison Avenue as a local roadway. It provides access from residential and commercial areas to north-south arterials.

South H Street is a north-south arterial which extends from Taft Highway to Brundage Lane and continues northward through downtown Bakersfield as H Street. It exists as a two-lane roadway, with some areas improved to three or four lanes, south of Panama Lane and as a four-lane roadway north of Panama Lane.

South Union Avenue is designated as an arterial. Formerly a segment of State Route 99, South Union Avenue extends from State Route 99 to Brundage Lane and continues north to Columbus Street as Union Avenue. (The segment of Union Avenue between Brundage Lane and Golden State Highway is part of State Route 204.) Within the project vicinity, South Union Avenue operates with four lanes and has a raised median and graded shoulders. It provides access to residential, commercial and industrial areas.

State Route 99 is a major north-south route through the central valley of California, extending from Interstate 5 south of Bakersfield to Sacramento. State Route 99 operates as an eight lane freeway from Wilson Road to Airport Drive with six lanes elsewhere in Kern County.

White Lane is an arterial which extends east from Allen Road to Dr. Martin Luther King Jr. Boulevard. In the vicinity of the project it exists as a six-lane roadway with curb and gutter. White Lane provides access to residential and commercial land uses across central areas of Metropolitan Bakersfield.

## **PROJECT TRIP GENERATION**

A search of the ITE land use codes did not produce a similar type of use as the proposed project. Therefore, driveway counts were taken at the existing driveways on Union Avenue and on White Lane to determine the current trip generation of the project. From the count data, the average rates for Daily Traffic (ADT) as well as AM and PM peak hour traffic were calculated based on the number of existing truck parking spaces. Table 1 shows the project trips that will be generated from the proposed additional truck parking spaces.

**Table 1**  
**Project Trip Generation**

General Information			Daily Trips		AM Peak Hour Trips			PM Peak Hour Trips		
ITE Code	Development Type	Variable	ADT RATE	ADT	Rate	In % Split/Trips	Out % Split/Trips	Rate	In % Split/Trips	Out % Split/Trips
-	Truck Parking Facility	1202 Truck Parking Spaces	1.75	2106	0.094	64% 72	36% 41	0.123	57% 85	43% 63
Total				2,106		72	41		85	63

## **PROJECT TRIP DISTRIBUTION AND ASSIGNMENT**

The distribution of project peak hour trips is shown in Table 2 and represents the movement of traffic accessing the project site by direction. The project trip distribution was developed based on site location and travel patterns anticipated for the proposed land uses.

**Table 2**  
**Project Trip Distribution**

Direction	Percent
North	35
East	10
South	20
West	35

Project peak hour trips were assigned to the study intersections as shown in Figure 4. Project trip assignment was developed based on trip generation, trip distribution and likely travel routes for traffic accessing the project site.

## **EXISTING AND FUTURE TRAFFIC**

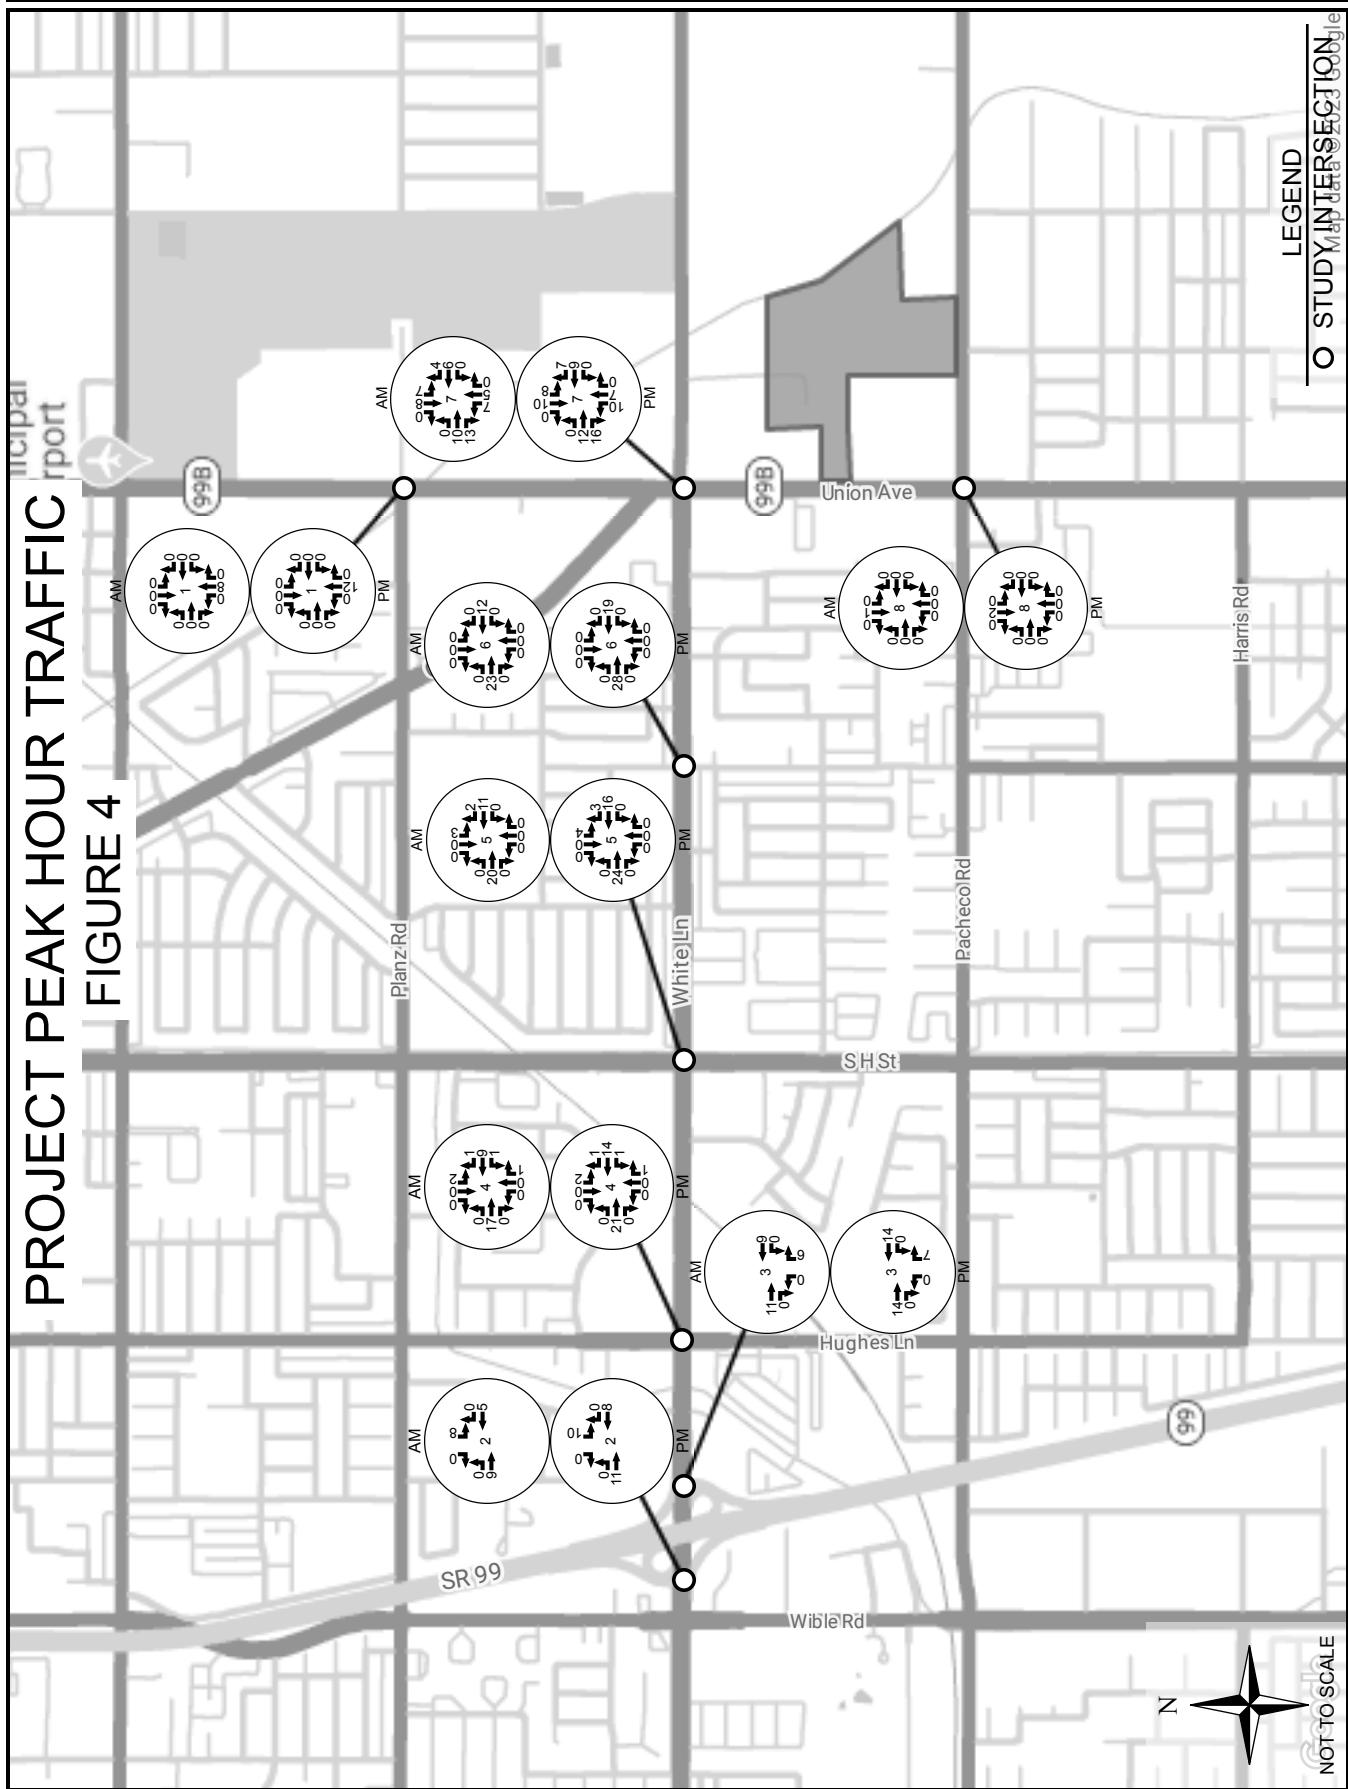

Existing peak hour turning movement counts were field collected in June 2023. The intersection of Union Avenue & Pacheco Road was collected in July 2021 and grown out to 2023 for the use of this study. Peak hour turning movement counts are shown in the appendix.

Average annual growth rates ranging between 0.08 and 2.41 percent were applied to the 2023 peak hour volumes to estimate peak hour volumes for the year 2043. These growth rates were developed based on a review of historical count data and output from KCOG's regional travel demand model.

Existing peak hour volumes are shown in Figure 5, and existing plus project peak hour volumes are shown in Figure 6. Peak hour volumes for the year 2043, both without and with project traffic, are shown in Figures 7 and 8, respectively.

## **INTERSECTION ANALYSIS**

A capacity analysis of the study intersections was conducted using Synchro software from Trafficware. The analysis was performed for each of the following traffic scenarios:

- Existing (2023)
- Existing (2023) + Project
- Future (2043)
- Future (2043) + Project

Criteria for intersection level of service (LOS) are shown in the tables below. The City of Bakersfield generally utilizes three performance criteria for determining whether a traffic forecast to be generated by a project would cause a significant impact and therefore require mitigation. First, a significant impact is found where the addition of project traffic causes the level of service of an intersection or roadway segment to drop below LOS C. Second, a significant impact is found if an intersection or roadway segment operates below LOS C in the base year prior to the addition of project traffic, and the added project traffic lowers the level of service below its pre-project status. Third, mitigation is required if the addition of the project traffic creates an additional control or average delay per vehicle of more than five seconds to the existing or projected congestion at an intersection already or projected to operate at LOS D, E, or F. Peak hour level of service for the study intersections is presented in Tables 3a and 3b.

### **LEVEL OF SERVICE CRITERIA UNSIGNALIZED INTERSECTION**

Level of Service	Average Control Delay (sec/veh)	Expected Delay to Minor Street Traffic
A	$\leq 10$	Little or no delay
B	$> 10 \text{ and } \leq 15$	Short delays
C	$> 15 \text{ and } \leq 25$	Average delays
D	$> 25 \text{ and } \leq 35$	Long delays
E	$> 35 \text{ and } \leq 50$	Very long delays
F	$> 50$	Extreme delays

### **LEVEL OF SERVICE CRITERIA SIGNALIZED INTERSECTIONS**

Level of Service	Average Control Delay (sec/veh)	Volume-to-Capacity Ratio
A	$\leq 10$	$< 0.60$
B	$> 10 \text{ and } \leq 20$	0.61 - 0.70
C	$> 20 \text{ and } \leq 35$	0.71 - 0.80
D	$> 35 \text{ and } \leq 55$	0.81 - 0.90
E	$> 55 \text{ and } \leq 80$	0.91 - 1.00
F	$> 80$	$> 1.00$

Intersection delay in seconds per vehicle is shown within parentheses for intersections operating at or below LOS C.

**Table 3a**  
**Intersection Level of Service**  
**Weekday PM Peak Hour**

#	Intersection	Control Type	2023	2023+ Project	2043	2043+ Project

## **ROADWAY ANALYSIS**

Published ADT information and future projected traffic, as shown in Table 4a, were used to calculate the volume-to-capacity ratios shown in Table 4b.

A volume-to-capacity ratio (v/c) of greater than 0.80 corresponds to a LOS of less than “C”, as defined in the Highway Capacity Manual. As mentioned previously, a level of service “C” is an accepted standard in the City of Bakersfield within the metropolitan Bakersfield areas. A significant impact is generally defined as a condition where the addition of project traffic reduces the LOS to below LOS C, or where the pre-existing condition of the roadway is below LOS C, and the LOS degrades below the pre-existing level of service with the addition of the project.

**Table 4a**  
**Roadway ADT & Capacity**

Roadway Segment	2023 <sup>1</sup>	Project ADT	2022+Proj ADT	2043 ADT	2043+ Project ADT
White Ln: SR 99 SB - SR 99 NB	29,756	413	30,169	31,737	32,150
White Ln: SR 99 NB - Hughes Ln	29,827	498	30,325	30,324	30,822

Union Ave: White Ln - Pacheco Rd	40,000	0.54	0.55	0.69	0.71

## **VEHICLE MILES TRAVELED (VMT) ANALYSIS**

An evaluation of vehicle miles traveled (VMT) for project traffic was conducted based on applicable California Environmental Quality Act (CEQA) guidelines. The analysis involved comparing an estimate of VMT attributable to the project to a baseline VMT for the greater Bakersfield area and assessing whether project VMT would result in a significant transportation impact. As of June 2023, the City of Bakersfield has not yet formally adopted any policies. However, the Governor's Office of Planning and Research (OPR) has issued a Technical Advisory, which recommends 15% reduction in VMT below baseline as the threshold for significant impacts for residential development.

VMT data was obtained from the Kern Council of Governments (KernCOG) in order to establish a baseline for daily vehicle miles traveled in the Kern County area. Based on household and employment populations in the greater Kern County area, as well as travel patterns throughout the region, KernCOG data shows an average VMT per trip of 9.76 miles.

Several factors were taken into consideration when estimating project VMT, including project trip generation and distribution, trip type and probable trip destination. It is important to note that heavy trucks are not included in VMT analysis per OPR guidelines; therefore, analysis was only done for the passenger vehicles. As shown in Table 5, it is anticipated that the project would result in an average VMT per trip of 5.65 miles.

**Table 5**  
**VMT Analysis**

Vehicle Type	Direction	Percentage of Total Trips (%)	Ave Trip Length <i>Passenger Vehicles</i> (Miles)	Total Trips <sup>1</sup>	Weighted Average Trip Length (Miles)
Passenger Vehicles	North	35	7.38	737	5.65
	East	10	4.75	211	
	South	20	3.05	421	
	West	35	5.65	737	

<sup>1</sup>Based on 2106 total daily vehicle trips as shown in Table 1.

The project average VMT of 5.65 miles is approximately 42% lower than the average regional VMT of 9.76 miles. Therefore, the project will not result in a significant transportation impact under CEQA.

## **SUMMARY AND CONCLUSIONS**

The purpose of this study is to evaluate the potential traffic impacts of a proposed truck facility located on the southeast corner of Union Avenue and White Lane in Bakersfield, California. The study included both level of service (LOS) and vehicle miles traveled (VMT) analyses.

### **Level of Service Analysis**

All intersections are anticipated to operate at an acceptable level of service prior to, and with the addition of project traffic in the existing year.

The intersections of Union Avenue & White Lane and Union Avenue & Pacheco Road are anticipated to operate below an acceptable level of service in 2043 prior to the addition of project traffic. However, it is important to note that the project does not create more than a five second delay at these intersections. All other intersections are anticipated to continue to operate at an acceptable level of service.

### **Roadway Capacity**

All roadway segments within the scope of the study currently operate at or above LOS C and are expected to continue to do so through the year 2043, both with and without the project. Therefore, no improvements are required.

### **VMT**

It was determined that project VMT is less than the threshold of significance, therefore the project does not create a significant impact.
