Phase 2 Max Daily	3	17	15
Exceed Threshold?	**No**	**No**	**No**

Construction Mass Emissions, Unmitigated and Mitigated

Unmitigated Construction Max Daily Emissions (lbs/day) by Phase, Unmitigated — Data Supporting EIR Table 3.3-4

Component #	Construction Component	ROG	NOx	PM10	PM10D	PM10E
1	Project Earthwork	5.5	31.4	31.4	29.9	1.5
2	RRTO phase 1	3.4	16.9	7.6	7.0	0.7
3	EU Service Facility	3.6	19.3	10.3	9.5	0.7
4	Fleet Service Equip Maint	4.2	23.9	11.3	10.4	0.9
5	Vendor Lease Area	3.0	13.9	7.7	7.1	0.6
6	Phillips Rd and Forcemain	4.8	26.7	25.5	24.3	1.2
7	Electrical Substation	2.9	12.8	3.0	2.5	0.6
8	RRTO Final Buildout	2.8	12.5	7.5	7.0	0.5
9	Compost/Biomass	3.5	17.1	8.0	7.4	0.7

Mitigated Construction Max Daily Emissions (lbs/day) by Phase, with Tier 4 Engine Implementation

Component #	Construction Component	ROG	NOx	PM10	PM10D	PM10E
1	ROG Identified from Col A	2.5	9.3	30.2	29.9	0.3
2	RRTO phase 1	1.8	10.3	7.1	7.0	0.1
3	EU Service Facility	1.9	12.6	9.7	9.5	0.1
4	Fleet Service Equip Maint	2.1	13.9	10.6	10.4	0.2
5	Vendor Lease Area	1.7	6.7	7.2	7.1	0.1
6	Phillips Rd and Forcemain	2.4	17.9	24.5	24.3	0.2
7	Electrical Substation	1.6	5.7	2.6	2.5	0.1
8	RRTO Final Buildout	1.6	6.1	7.1	7.0	0.1
9	Compost/Biomass	1.8	10.6	7.5	7.4	0.1

Notes: ROG = reactive organic gas; NOX = oxides of nitrogen; PM10 = respirable particulate matter; lb/day = pounds per day; PCAPCD = Placer County Air Pollution Control District. Daily emissions for overlapping components are calculated by summing the daily emissions of each individual component.

Exceed Threshold?	**Yes**	**Yes**	**Yes**		

Notes: ROG = reactive organic gas; NOx = oxides of nitrogen; PM = particulate matter; lb/day = pounds per day; PCAPCD = Placer County Air Pollution Control District. Area source refers to the reapplication of architectural coating every 10 years. These unmitigated emissions include the project-specific VMT provided by Kittelson & Associates (2025). For Phase 2, the projected biomass feedstock quantities for the composting and gasification facilities at full operation (2058) were used, providing a conservative estimate of criteria air pollutant emissions. Note that the emissions for Phase 1 and Phase 2 are not additive as components associated with each project phase were modeled separately, based on the anticipated phasing of development.

1Consistent with CalEEMod, "building energy" refers to energy use associated with building operations such as space heating, water heating. Because buildings would be all electric (no natural gas boiler, furnaces or engines), there would be no onsite (direct) emissions of air pollutants. Indirect emissions of air pollutants from power plants are generally associated with the permitted stationary source (the power plant itself), not the individual buildings.

Summary of Unmitigated Maximum Construction-Generated Emissions of Greenhouse Gas Emissions -- Data supporting EIR Table 3.4-3 and Table 3.4-5

Construction Component	MTCO2e, Unmitigated
Phase 1 (2027-2038)	
Project Earthwork	798
RRTO phase 1	523
EU Service Facility	758
Fleet Service Equip Maint	1,008
Vendor Lease Area	280
Phillips Rd and Forcemain Improvements	849
Electrical Substation	229
Phase 1 Total	**4,445**
Phase 2 (2039-2040)	
RRTO Final Buildout	513
Compost/Biomass	594
Phase 2 Total	**1,106**
Project over 30 years	**185**
Bright-Line Threshold of Significance	**10,000**
Exceeds Threshold of Significance?	**No**

Notes: Totals may not add due to rounding; GHG = greenhouse gas; $MTCO_2e$ = metric tons of carbon dioxide equivalent.

Project-Generated Operational Greenhouse Gas Emissions, Unmitigated -- Data Supporting EIR Table 3.4-4 and Table 3.4-6

Significance Threshold	10,000		
Exceed Threshold?	**Yes**		

Notes: Totals may not add due to rounding; GHG = greenhouse gas; MTCO2e/year = metric tons of carbon dioxide equivalent per year.

[1]Based on the Roseville Electric Power Content Label, approximately 34 percent of the electricity supply is non-renewable. Accordingly, GHG emissions from project electricity use were estimated by multiplying the project's annual electricity demand (MWh) by Roseville Electric's reported GHG emission intensity factor and applying the 34-percent non-renewable proportion.

2.Only fossil-based CO_2 is treated as a net increase in GHG emissions. Biogenic CO_2, which results from the natural decomposition of organic material, is not counted toward a project's net GHG increase as these do not result in net increases in anthropogenic GHG emissions into the atmosphere. For composting operations, the net GHG increase is driven by methane (CH_4) and nitrous oxide (N_2O), which could be generated during organic materials processing and storage. Accordingly, the project's 8,047 MTCO2e represents emissions of CH4 and N2O. [DB1.1][JQ1.2]Although the composting process also emits 10,726 MT CO2, these emissions are not included in the project's net GHG emissions under CEQA. Detailed composting GHG emission breakdowns are included Appendix A.

3.CO_2 emissions from the gasification process—estimated at approximately 455 metric tons of CO_2e per year at Ultimate Build—originate from renewable organic feedstock and are considered biogenic. As such, these emissions are not counted toward the project's net increase in GHG emissions.

GHG emission factor using Roseville Electric Power Label

Year	GHG emission intensity factor (lbs CO2e/MWh)
2024	357
2028	**289**

Retail sales covered by retired unbundled RECs	4%	0%	

■ This label does not reflect compliance with the Renewables Portfolio Standard (RPS), which measures the use of tracking instruments called Renewable Energy Credits (RECs) over the course of multi-year compliance periods. RECs that are purchased separately from the renewable energy ("Unbundled RECs") can be used for RPS compliance, but they do not factor into the power mixes or GHG emissions intensities above.

■ GHG intensity figures exclude biogenic CO_2 and emissions from geothermal sources and grandfathered imports of firmed-and-shaped energy. For detailed information about all GHG emissions from California's retail electricity suppliers, visit the CEC webpage at the link below.

■ Unspecified power is electricity purchased from a genericized pool on the open market.

Mobile - Trucks	0	657,656	149,296	0
Mobile - Worker Commute	46,932	15	0	2,006
Building Energy	0	0	0	8,769
Onsite Equipment	0	90,202	0	63,685
Total Annual Energy Demand	46,932	747,873	149,296	74,460

Notes:

1.Compressed natural gas (CNG) used by on-road trucks is assumed to have an energy content of 114,000 British thermal units (Btu) per gallon.

2.The project's total anticipated electricity demand for each phase was estimated as the annual output of the substation at its full capacity (5 MW for Phase 1 operation and 17 MW for Phase 2 and Full operation, assuming 50 percent actual output and continuous operation (8,760 hours per year). Electricity demand from mobile sources was estimated based on anticipated worker commute trips. Building energy demand was estimated using default demand factors for industrial/office buildings in CalEEMod. Mobile energy demand was combined with building energy demand and the sum was subtracted from the project's total energy demand to obtain electricity demand associated with the on-site equipment.

Construction Energy Consumption Summary

Project Component	Gasoline	Diesel	Electricity
	gal	gal	MWh
Off-Road Equipment	0	2,369	0
Mobile Trucks	0	142,664	0
Mobile Workers	86,025	63	318

Notes: At this stage of the analysis, the on-site equipment inventory for each phase is not available for a more accurate estimation of electricity demand. Thus, the total demand of electricity at each phase is estimated as the annual output of the substation at its full capacity (5 MW for Phase 1 operation and 17 MW for Phase 2 and Full operation, assuming continuous operation (8,760 hours per year). The on-site equipment electricity demand is estimated as the difference between the substation's total output and the electricity demand summed from all other categories.

Substation phase 1 peak capacity	5	MW
Substation phase 2 peak capacity	17	MW
Phase 1 avg annual output	21,900	MWh/year
Phase 2 avg annual output	74,460	MWh/year
Annual Average/Peak	50%	
Hours/day	24	
Days/year	365	
Unit conversion	1000	KWh/MWh

CONSTRUCTION EMISSION ANALYSIS

Construction Off-Road Equipment Emissions, Unmitigated

Unmitigated Off-Road Equipment Emissions

Emission factors were calculated from OFFROAD Emission Inventory.
CalEEMod default diesel engine horsepower and load factors were assumed for equipment.

Off-Road Equipment Activities										Emission Factor for Specific Year and Equipment (grams/hp-hr)								Emissions (lbs/day)

Construction Off-Road Equipment Emissions, Mitigated

Off-Road Equipment Emissions, Mitigated with Tier 4 Engine Implementation

Emission factors were calculated from CalEEMod Tier 4 Emission Factors.
CalEEMod default diesel engine horsepower and load factors were assumed for equipment.

Off-Road Equipment Activities										Emission Factor (grams/hp-hr)					Emissions (lbs/day)				
Project component	**Construction Phase**	**Workdays**	**Modeled Equipment Name**	**#/day**	**Hours per day**	**HP**	**LF**	**HP Bin**	**Daily Hp-hr**	**ROG**	**NOx**	**CO**	**PM10**	**PM2.5**	**ROG**	**NOx**	**CO**	**PM10**	**PM2.5**

Emission factors calculated following AP-42 unpaved road (tab "Fugitive Dust EF").

Vehicle speeds were engineering estimates for average speeds of onsite operation.

Equipment weights are estimated operating weights from manufacturer model specs.

Onsite equipment assumed to be moving 50% of its operation time, except scrapers, dozers, and graders which assumed to travel 100% of its operation time.

BMP watering twice daily 75% dust removal (Page 3-9, SMAQMD 2020)

Energy Demand

Vehicle	Gasoline gal	Diesel gal	Natural Gas gal	Electricity Kwh
Trucks	0	253,206	51,688	0
Worker Vehicles	213,009	222	0	197,651

One-way trip length

Material Truck	13.971	mi
Worker	10.935	mi

Notes:

Average one-way trip length of worker is from State Travel Demand Model TAZ-level trip length Nonresidential trip length for Home-Work.

Average one-way truck trip length is estimated using traffic study data as follows:

Project Daily VMT	10644	mi
Worker Daily Trips	549	
Worker Daily VMT	6003.315	mi
Truck Daily VMT	4640.685	mi
Avg truck one-way trip length	13.97149259	mi

Assume the truck trip length stays the same during operation

Table G-18. 2015 California Statewide Travel Demand Model TAZ-Level Trip Lengths and Purpose Splits by Trip Type

CSTDM TAZ	Residential Trip Length (miles per trip)			Nonresidential Trip Length (miles per trip)			Residential Trip Purpose			Nonresidential Trip Purpose		
	Home-Work	Home-Shop	Home-Other	Home-Work	Work-Other	Other-Other	Home-Work	Home-Shop	Home-Other	Home-Work	Work-Other	Other-Other
848	15.069	6.657	6.471	10.973	7.321	5.460	29%	13%	58%	24%	14%	63%

Table 20. Total VMT for the Project TAZ (848)

Scenario	VMT From	VMT To	Total VMT
Existing Conditions No Project	289	289	578
Existing Conditions With Project	5,627	5,595	11,222

The Project VMT is then calculated as the difference in the Project TAZ VMT for the Existing Conditions with Project and Existing Conditions No Project scenarios.

$$Project\ VMT = Total\ VMT_{(Existing\ Conditions\ with\ Project)} - Total\ VMT_{(Existing\ Conditions\ No\ Project)}$$

Project VMT = 11,222 – 578 = 10,644.

Operating Weight

5 CY Font End Loader 33.4 tons, reference equipment Caterpillar 980M

Font End Loader 22 tons, reference equipment Cat 950M, Komatsu WA380

Emission factors calculated following AP-42 unpaved road (tab "Fugitive Dust EF").

Vehicle speeds were engineering estimates for average speeds of onsite operation.

Equipment weights are estimated operating weights from manufacturer model specs.

Onsite equipment assumed to be moving 50% of its operation time, except scrapers, dozers, and graders which assumed to travel 100% of its operation time.

BMP watering twice daily 75% dust removal (Page 3-9, SMAQMD 2020)

PM2.5 to PM10 Mass Emission Ratio used in Calculation

Fugitive Dust Source	PM2.5/PM10	Reference
Paved road	0.25	EPA. AP-42. Analysis of the Fine Fraction of Particulate Matter in Fugitive Dust, Final Report, Oct 2005.
Unpaved road	0.15	EPA. AP-42. Analysis of the Fine Fraction of Particulate Matter in Fugitive Dust, Final Report, Oct 2005.

Onsite Material Process Emissions

Onsite Material Process Emissions

Dust from Material Handling at MRF

Year	Total Facility Throughput (tons)	PM10 (lbs/yr)	PM2.5 (	PM10 (lbs/	PM2.5 (lbs/day)
2028	268,000	210.65	16.88	0.81	0.06
2040	507,000	398.50	31.94	1.53	0.12
2058	660,000	518.76	41.58	2.00	0.16

260 workdays/year

Dust Emissions Factors, provided

Material Handling Activities inside the MRF		
Process	Emission factor value	unit
Conveyor System/Loading/Unloading	4.60E-05	lb PM10 per ton
	1.30E-05	lb PM2.5 per ton
Screens	7.40E-04	lb PM10 per ton
	5.00E-05	lb PM2.5 per ton
Total	**7.86E-04**	lb PM10 per ton
	6.30E-05	lb PM2.5 per ton

Notes:
Material Handling Activities inside the Material Recovery Facility (MRF)
Use of Western Placer Waste Management Authority's emission factors use in the 2022 Renewable Placer Environmental Impact Report for material handling activities inside the MRF which use the EPA AP-42 Section 11.19.2 Table 11.19.2-2 emission factors.

Offroad Equipment Emission Summary

Operational Phase	Onsite Location	Material quantity (tons)	Ratio to 2058	ROG (lbs/day)	NOx (lbs/day)	PM10 (lbs/day)	CO2e (MT)	Diesel (gallons)
2028	Material Transfer Station	268000	0.4061	0.429448	1.739154	0.05894	154.73	15,184
2040		507000	0.7682	0.812426	3.2901159	0.11149	292.71	28,725
2058		660000	1	1.057596	4.2829911	0.14514	381.04	37,394
2040	Compost Facility	111,000	0.5286	0.56879	3.1000179	0.09455	287.78	47,678
2058		210,000	1	1.076089	5.8648987	0.17887	544	52,808

Phase	Diesel (gallons)
2028	15,184
2040	76,403
2058	90,202

Note: The phased emissions are based on ratio of throughput to Full Build and the estimated emissions for the Full Build where equipment were provided.

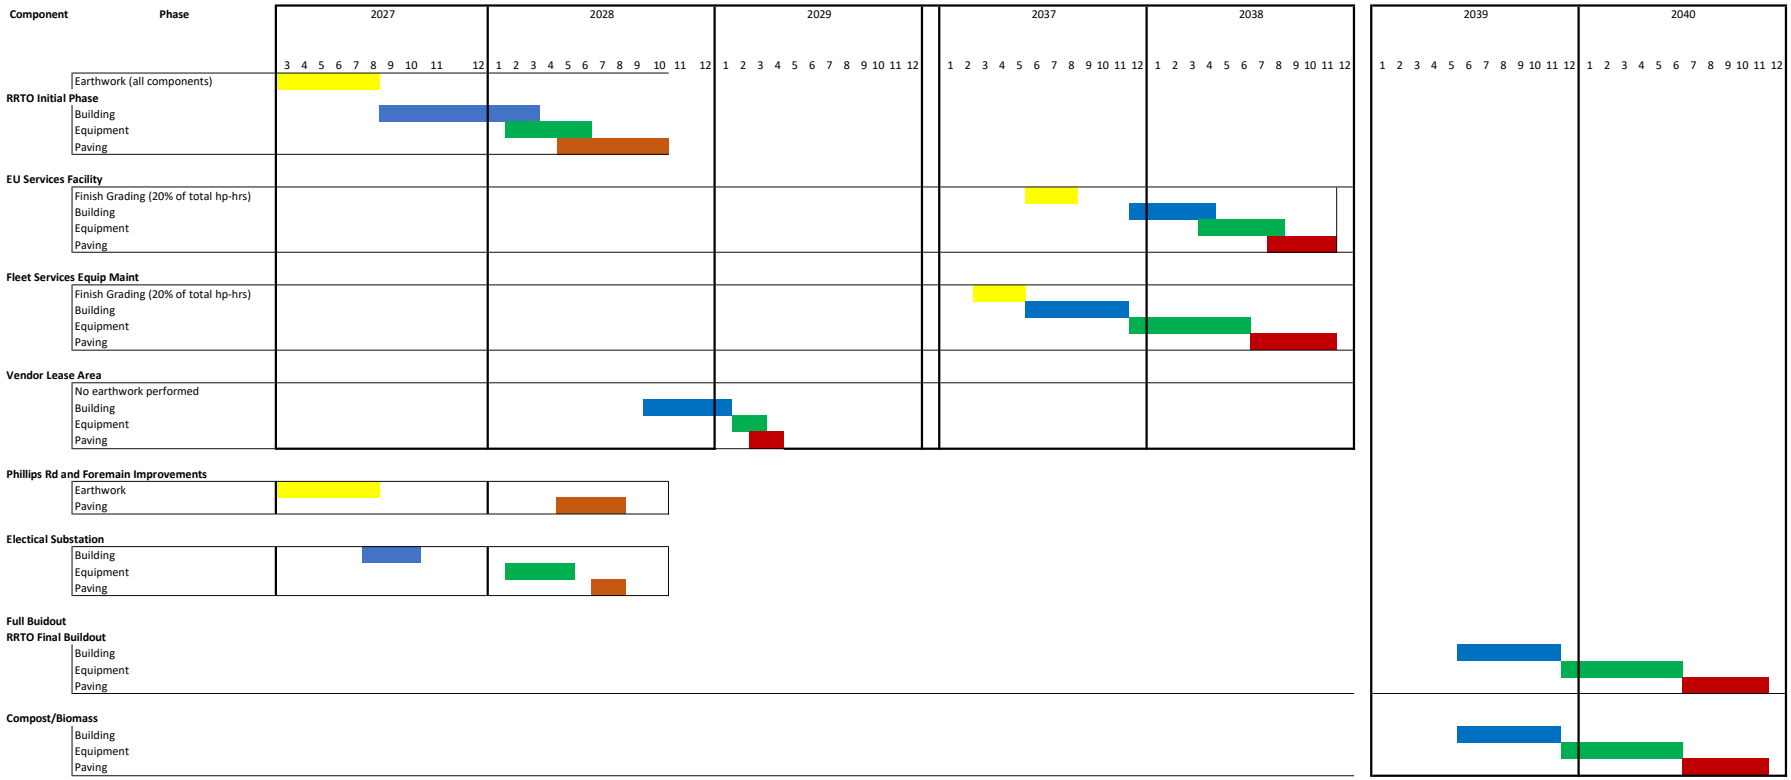
INPUTS AND ASSUMPTIONS

General Project Information and Assumptions

General Project Information and Modeling Assumptions

Construction General Input and Assumptions



Category	Value	Source
Construction phases	Provided	HDR
Offroad Equipment	CalEEMod fleet default	HDR 4.15.25
	Model will assume 8 hrs./day for each piece of equipment specified in "Construction Equipment" Tab unless more detail is provided	CalEEMod Default
Dust Control	Water exposed area twice per day	CalEEMod Option
	Water unpaved roads twice daily	CalEEMod Option
	Apply dust suppressants to unpaved roads	CalEEMod Option
	Limit vehicle speeds on unpaved roads to 25 mph	CalEEMod Option
	Sweep paved roads once per month	CalEEMod Option
On-road Travel	Percentage travel on paved road: Onsite truck = 0 %, worker commute = 100%, vendor delivery = 100%, hauling = 100%	CalEEMod Default
Trips length (one-way) and vehicle mix	Vendor delivery: 8.8 mi, 50% MHDT + 50% HHDT	CalEEMod Default
	Demolition waste hauling: 9.8 mi, 100% HHDT	Dump site: Western Placer Waste Management Authority
	Worker: 14.3 mi, 25% LDA + 50% LDT1 + 25% LDT2	CalEEMod Default
Architectural Coating	Interior VOC content: interior = 50 g/L, exterior = 100 g/L, office/admin bldg. = default and for all industrial assume 5% of square footage	CalEEMod Default + HDR data
Paving	The entire linear acres will be paved with 100% Asphalt	CalEEMod Default
Construction hours	7 am to 7 pm, Monday- Friday, model assumes 8 hours active construction activities	CalEEMod Default Equip. Hrs
Construction workers	40-60	PD

Ultimate Plan Operation General Input and Assumptions

Category	Value	Source
Operational Year	2058	
Facility Operation hours		Project Description
overall	24/7, 7 days/week	
onsite mobile equipment	16 hrs/day 5 days/week	
onsite stationary (gasification)	24/7, 7 days/week	
composting	24/7, 7 days/week	
Waste Delivery	6am-3pm, M-F	
EU service staff	6 am to 8 pm M-F	City
Fleet Service	6 am to 10:30 pm, M-F	City
Fuel Island	Given that collection vehicles fuel daily at the end of their routes, and considering the Fleet Services staff shifts extend until 10:30 p.m. on weekdays, it is implied that the fuel island would need to be accessible at least from the early morning (around 5:30 a.m. or 6:00 a.m.) until at least 10:30 p.m. on Monday through Friday to accommodate fleet service and end-of-route fueling needs	
Offroad Equipment	Diesel engine average Tier unless specified otherwise (e.g., Tier 4)	CalEEMod Default
Architectural Coating	Reapply every 10 years. Interior VOC content: interior = 50 g/L, exterior = 100 g/L	CalEEMod Default
Composting Type	Covered Aerated Static Piles (CASP)	BACT
Biomass Type	Assumed 2.5 MW gasification	HDR/City
Energy Use		
Building	No NG boiler, assume all-electrical building for heating/cooling	HDR
Onsite stationary equipment	electric	HDR
backup power	No onsite diesel generator	HDR
gasoline dispensing	47057 gallons/yr (Scale down for buildout?)	HDR/City
diesel dispensing	192944 gallons/yr (scale down for buildout?)	HDR/City
Visualization of Emissions Sources	Source Location Tab	HDR
Onsite Stationary	Bio gasification facility stack	
Onsite Diesel Equipment Areas	Material transfer/loading	
Onsite Truck Circulation	Ascent to draw in AERMOD using centroid of facilities	
Offsite Haul Route	see updated map	
Building/Facility Energy Demand	17 mw capacity	
truck fleet fuel conversion assumption	use data provided in ops sheet	

Construction Phase Schedule

Project Phase and Schedule

Construction Truck Trips

Construction Trips

Building Size and Truck Trips, provided by HDR

Project Phase	Project Component 1	Construction 2	Building sf 3	Rough Grading 4 (sq yd)	Fine Grading 5 (sq yd)	# of Truck Trips for Each Phase, by Trip Type 6						Paving (sq yards) 7	
						Import Earthwork	Building Materials	Concrete and Base	Asphalt and Base	Demo	Total	Asphalt	Concrete
Phase 1	RRTO Initial Phase	March 2027 through October 2028	200,000	7	3	0	1,748	741	484	0	**2,973**	110,000	3,000

	Vendor Lease Area		10,000	30,000	30,000	0	141	444	2,130	10	**2,725**	30,008	30,008
			1,245,540										
	EU Services Facility	Constructed on an as-needed basis starting in 2031 through 2040	132,400	194,000	130,000	976	557	461	11,061	0	**13,055**	150,000	20,000
	Fleet Service Maintenance Facility		60,000	145,000	100,000	14,139	1,123	1,177	39	0	**16,478**	130,000	100,000
			192,400							0	0		
Phase 2	RRTO Final Buidout	Constructed on an as-needed basis through 2040	120,000	199,993	99,997	2,238	1,331	473	309	0	**4,351**	3,300,000,000	90,000,000
	Compost/Biomass	Beginning in 2035 through 2040	37,000	145,200	145,200	4,425	225	712	39	0	**5,401**	0	0
			157,000										

Notes:

1 Project components are assumed to be constructed sequentially within each subphase.

2 The total workdays for Offsite Improvement is set to 50 days (See table Wokrdays Calculation for workdays assigned for each component). Update if needed.

3 The proportion of each project component is estimated as the ratio of sf of the component to the total sf of all components in that subphase, except for linear construction Offsite Improvement.

4 The total grading of RRTO of 200,000 sq yd is split between RRTO Phase 1 and RRTO Phase 2, proportional to building sf.

5 Missing grading area (Vendor Lease Area and Potential Future Organics Processing Facility) is estimated as 2 x area, aka one round of Rough Grading and one round of Fine Grading. Update if needed.

6 All trucks assumed to be HHDT, 14 cy per load.

7 Paved area of Offsite Improvement are estimated in the table below. Paving area for Vendor Lease Area were estimated as 6 acres using project plan.

Future Organic Processing Facility

30 acres

145,200 sqyd

Vendor Lease Area

6.2 acres

30,008 sqyd

Supplement Calculation

Offsite improvement

Operational Water Use

Operational Emission CalEEMod Input for Water Use

Phase	Water	Gallons per day	Gallons per year	Water demand
Phase 1	Potable	21,000	7,665,000	17,385,000
	Non-potable	24,000	8,760,000	
	Fire water storage		960,000	
Phase 2	Potable	29,000	10,585,000	23,225,000
	Non-potable	32,000	11,680,000	
	Fire water storage		960,000	
Full Operation*	Potable	38,011	13,874,124	36,931,422
	Non-potable	60,541	22,097,297	
	Fire water storage		960,000	

Notes:

Operational days 365 days/year

*Nonpotable water demand was scaled based on Phase 2 projection by compostable throughput, and potable water demand by employee count.

Nonpotable: ratio of full operation to phase2 = composting throughput_ultimate operation/composting throughput_phase2 = 1.89189189

Potable: ratio of full operation to phase2 = # of employees_ultimate operation/# of employees_phase2 = 1.310734463

Phase	Composting tons	# of Employee
Phase 2	111,000	531
Full Operation	210,000	696

# of Employee (Phase 1 and 2): PD, Ultimate Operation: Roseville EU Center - Traffic Impact Analysis Dec 5 2025

Fugitive Dust Emission Factors

Fugitive Dust Emission Factors

Travel on Unpaved Roads (Heavy Duty Trucks)

E(lbs/VMT)=(k)(s/12)^a (W/3)^b

Where:	PM10	Unit	Source
k= Particle Size Multiplier:	1.5	dimensionless	AP-42 Chapter 13.2.2-2, PM10 emissions; industrial roads
s= Silt Content (%)	6.4	constant	AP-42 Chapter 13.2.2-1, municipal solid waste landfills disposal routes
a=	0.9	constant	AP-42 Chapter 13.2.2-2, industrial roads
b=	0.45	constant	AP-42 Chapter 13.2.2-2, industrial roads
W=Vehicle Weight	40.0	tons	Avg HHDT Vehicle Weight, 1/2(empty weight + max weight)
PM10 Emission factor	2.733	lbs/VMT	For above weight truck

Correction for Natural Precipitation

E(ext)=E[(365-P)/365]

Where:		Unit	Source
P=#days/yr with >=0.01 inch precipitation during	58	days	AP-42 Chapter 13.2.2, Figure 13.2.2-1
Corrected EF PM10	**2.299**	lbs/VMT	

Travel on Paved Roads

E(lbs/VMT)=(k)(sL)^.91 (W)^1.02

Where:	PM10	Unit	Source
k= Particle Size Multiplier:	0.0022	lb/VMT	AP-42 Chapter 13.2.1, Table 13.2.1-1, PM10 emissions
sL= road surface silt loading	0.1	g/m^2	Public Road, Caleemod default
W= average weight of the vehicles traveling the roa	2.4	tons	Statewide average vehicle weight in CA
PM10 Emission factor	0.00066	lbs/VMT	Public roads

Correction for Natural Precipitation

E(ext)=E[(1-P/4N)]

Where:		Unit	Source	
Eext = annual or other long-term average emission factor		dimensionless		
P=#days/yr with >=0.01 inch precipitation during	58	days	Western Regional Climate Center	SACRAMENTO EXECUTIVE AP, CALIFORNIA - Climate Summary
N=# days in averaging period	365	days		
Corrected EF PM10	**0.00063**	lbs/VMT	Public roads	

Bulldozing

Equation is applied to scraper and dozers to estimate fugitive dust from equipment activity
Emissions factors for PM10 from bulldozing are scaled from those of PM15

E(lbs/hr)=1*s^1.5/M^1.4

EPA. AP 42, Fifth Edition, Volume I Chapter 11: Mineral Products Industry, 11.9 Mineral Products Industry, Table 11.9-1 Bulldozing

Where
E(PM10)=E(PM15)*F

Where:			PM15 Unit	Source
M=	material moisture content	7.9	%	AP-42 Table 11.9-3,Overburden
s=	material silt content	6.9	%	AP-42 Table 11.9-3,Overburden
F=	scaling factor	0.75	constant	AP-42 Table 11.9-1, PM10
	PM15	1.00	lbs/hr	
	PM10	**0.75**	lbs/hr	

Grading

Equation is applied to grader to estimate fugitive dust emission from grading activity
Emissions factors for PM10 from grading are scaled from those of PM15

E(lbs/mile)=0.051*s^2.0

EPA. AP 42, Fifth Edition, Volume I Chapter 11: Mineral Products Industry, 11.9 Mineral Products Industry, Table 11.9-1 Grading

Where
E(PM10)=E(PM15)*F

Where:			PM15 Unit	Source
s=	material silt content	6.9	%	AP-42 Table 11.9-3,Overburden
F=	scaling factor	0.6	constant	AP-42 Table 11.9-1, PM10
	PM15	2.43	lbs/mi	
	PM10	**1.46**	lbs/mi	

ON-ROAD AND OFF-ROAD EMISSION FACTORS

Construction On-Road Vehicle Emission Factors

Construction On-road Emission Factors, VMT-based

Emission factors are sum of emissions from all vehicle processes (running exhaust, idling exhaust, engine start exhaust, evaporative loss due to hot soak, running, and diurnal, and brake wear and tire wear) per unit mile traveled.

Operational On-Road Vehicle Emissions Factors

VMT-based Emission factors

VMT-based Emission factors are calculated using EMFAC2025 Annual Emission Dataset for Placer County

Emission factors are sum of emissions from all vehicle processes (running exhaust, idling exhaust, engine start exhaust, evaporative loss due to hot soak, running, and diurnal, and brake wear and tire wear) per unit mile traveled.

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Roseville EU Phase 1 Operation
Operational Year	2028
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.50000
Precipitation (days)	7.80000
Location	8150 Phillip Rd, Roseville, CA 95747, USA
County	Placer-Sacramento
City	Roseville
Air District	Placer County APCD
Air Basin	Sacramento Valley
TAZ	432
EDFZ	4
Electric Utility	Roseville Electric
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.37

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Unrefrigerated Warehouse-No Rail	200.000	1000sqft	40.0000	200,000	0.00000	—	—	RRTO Facility (Phase 1)

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	26.4100	annual days of extreme heat
Extreme Precipitation	5.30000	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00000	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	0	0	0	N/A
Extreme Precipitation	0	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	0	0	0	N/A
Flooding	0	0	0	N/A
Drought	0	0	0	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	1	1	1	2
Sea Level Rise	N/A	N/A	N/A	N/A

Wildfire	1	1	1	2
Flooding	1	1	1	2
Drought	1	1	1	2
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	63.6590
AQ-PM	15.0591
AQ-DPM	14.0884
Drinking Water	39.6528
Lead Risk Housing	5.49464
Pesticides	84.3448
Toxic Releases	16.8167
Traffic	5.90000
Effect Indicators	—
CleanUp Sites	40.8361
Groundwater	76.5731

Haz Waste Facilities/Generators	78.7558
Impaired Water Bodies	86.9593

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	29.0000
Healthy Places Index Score for Project Location (b)	63.0000
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
Land Use	Provided
Operations: Energy Use	Buildings are electrical. Zeroed out natural gas demand and converted natural gas to electricity demand using 0.293 kWh/kBTU and added to default electricity demand.
Operations: Water and Waste Water	To be conservative, potable: 21,000 gals per day, Non-potable: 24,000 gals per day, fire wter 960,000 gals per year are combined as indoor water use for phase 1 operation.

8.3. Land Use

Model Parameter	Units	Default Value	New Value
Lot Area	acre	4.59137	40.0000
Landscape Area	sq. ft	—	0.00000

8.5. Operations

8.5.3. Energy Usage

Land Use	Model Parameter	Units	Default Value	New Value
Unrefrigerated Warehouse-No Rail	Electricity	kWh/yr	2,086,936	2,412,450
Unrefrigerated Warehouse-No Rail	Electricity (Subject to Title 24)	kWh/yr	723,201	836,004
Unrefrigerated Warehouse-No Rail	Electricity (Not Subject to Title 24)	kWh/yr	1,363,735	1,576,446
Unrefrigerated Warehouse-No Rail	Natural Gas	kBTU/yr	1,110,967	0.00000
Unrefrigerated Warehouse-No Rail	Natural Gas (Subject to Title 24)	kBTU/yr	941,816	0.00000
Unrefrigerated Warehouse-No Rail	Natural Gas (Not Subject to Title 24)	kBTU/yr	169,151	0.00000

8.5.4. Water and Waste Water

Land Use	Model Parameter	Units	Default Value	New Value
Unrefrigerated Warehouse-No Rail	Indoor Water	gal/year	46,250,000	17,385,000

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—
Unrefrigerated Warehouse-No Rail	—	—	—	—	—	—	—	—	—	—	6,661.77

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	26.4100	annual days of extreme heat
Extreme Precipitation	5.30000	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00000	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	0	0	0	N/A
Extreme Precipitation	0	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A

Wildfire	0	0	0	N/A
Flooding	0	0	0	N/A
Drought	0	0	0	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	1	1	1	2
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	1	1	1	2
Drought	1	1	1	2
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	63.6590
AQ-PM	15.0591
AQ-DPM	14.0884
Drinking Water	39.6528
Lead Risk Housing	5.49464
Pesticides	84.3448
Toxic Releases	16.8167
Traffic	5.90000
Effect Indicators	—
CleanUp Sites	40.8361
Groundwater	76.5731
Haz Waste Facilities/Generators	78.7558
Impaired Water Bodies	86.9593
Solid Waste	97.9152
Sensitive Population	—
Asthma	26.1216
Cardio-vascular	64.2572
Low Birth Weights	9.63562
Socioeconomic Factor Indicators	—
Education	26.9425
Housing	10.8365
Linguistic	27.2567
Poverty	30.9296
Unemployment	22.5664

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	73.68150905
Employed	52.68831002
Median HI	80.45682022
Education	—
Bachelor's or higher	68.40754523
High school enrollment	5.671756705
Preschool enrollment	30.89952521
Transportation	—
Auto Access	54.54895419
Active commuting	15.8475555
Social	—
2-parent households	79.26344155
Voting	94.30257924
Neighborhood	—
Alcohol availability	92.66007956
Park access	11.4718337
Retail density	3.06685487
Supermarket access	2.399589375
Tree canopy	10.02181445
Housing	—
Homeownership	81.9196715
Housing habitability	62.8127807
Low-inc homeowner severe housing cost burden	58.02643398
Low-inc renter severe housing cost burden	14.53868857

Uncrowded housing	58.74502759
Health Outcomes	—
Insured adults	93.45566534
Arthritis	71.8
Asthma ER Admissions	71.5
High Blood Pressure	85.1
Cancer (excluding skin)	40.8
Asthma	65.7
Coronary Heart Disease	85.5
Chronic Obstructive Pulmonary Disease	81.8
Diagnosed Diabetes	91.2
Life Expectancy at Birth	75.3
Cognitively Disabled	96.3
Physically Disabled	86.7
Heart Attack ER Admissions	61.3
Mental Health Not Good	73.6
Chronic Kidney Disease	90.3
Obesity	70.2
Pedestrian Injuries	44.4
Physical Health Not Good	87.1

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	29.0000
Healthy Places Index Score for Project Location (b)	63.0000
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
Land Use	Provided
Operations: Energy Use	Buildings are electrical. Zeroed out natural gas demand and converted natural gas to electricity demand using 0.293 kWh/kBTU and added to default electricity demand.
Operations: Water and Waste Water	To be conservative, potable: 29,000 gals per day, Non-potable: 32,000 gals per day, fire wter 960,000 gals per year are combined as indoor water use.

8.3. Land Use

Model Parameter	Units	Default Value	New Value
Lot Area	acre	7.34619	40.0000
Landscape Area	sq. ft	—	0.00000
Lot Area	acre	1.37741	34.0000
Landscape Area	sq. ft	—	0.00000
Lot Area	acre	3.03949	37.0000
Landscape Area	sq. ft	—	0.00000
Lot Area	acre	0.22957	6.00000
Landscape Area	sq. ft	—	0.00000

8.5. Operations

8.5.3. Energy Usage

Land Use	Model Parameter	Units	Default Value	New Value

Unrefrigerated Warehouse-No Rail	Electricity	kWh/yr	3,339,098	3,859,919
Unrefrigerated Warehouse-No Rail	Electricity (Subject to Title 24)	kWh/yr	1,157,122	1,337,606
Unrefrigerated Warehouse-No Rail	Electricity (Not Subject to Title 24)	kWh/yr	2,181,976	2,522,313
Unrefrigerated Warehouse-No Rail	Natural Gas	kBTU/yr	1,777,547	0.00000
Unrefrigerated Warehouse-No Rail	Natural Gas (Subject to Title 24)	kBTU/yr	1,506,906	0.00000

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	26.4100	annual days of extreme heat
Extreme Precipitation	5.30000	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00000	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	0	0	0	N/A
Extreme Precipitation	0	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A

Wildfire	0	0	0	N/A
Flooding	0	0	0	N/A
Drought	0	0	0	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	1	1	1	2
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	1	1	1	2
Drought	1	1	1	2
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	63.6590
AQ-PM	15.0591
AQ-DPM	14.0884
Drinking Water	39.6528
Lead Risk Housing	5.49464
Pesticides	84.3448
Toxic Releases	16.8167
Traffic	5.90000
Effect Indicators	—
CleanUp Sites	40.8361
Groundwater	76.5731
Haz Waste Facilities/Generators	78.7558
Impaired Water Bodies	86.9593
Solid Waste	97.9152
Sensitive Population	—
Asthma	26.1216
Cardio-vascular	64.2572
Low Birth Weights	9.63562
Socioeconomic Factor Indicators	—
Education	26.9425
Housing	10.8365
Linguistic	27.2567
Poverty	30.9296
Unemployment	22.5664

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	73.68150905
Employed	52.68831002
Median HI	80.45682022
Education	—
Bachelor's or higher	68.40754523
High school enrollment	5.671756705
Preschool enrollment	30.89952521
Transportation	—
Auto Access	54.54895419
Active commuting	15.8475555
Social	—
2-parent households	79.26344155
Voting	94.30257924
Neighborhood	—
Alcohol availability	92.66007956
Park access	11.4718337
Retail density	3.06685487
Supermarket access	2.399589375
Tree canopy	10.02181445
Housing	—
Homeownership	81.9196715
Housing habitability	62.8127807
Low-inc homeowner severe housing cost burden	58.02643398
Low-inc renter severe housing cost burden	14.53868857

Uncrowded housing	58.74502759
Health Outcomes	—
Insured adults	93.45566534
Arthritis	71.8
Asthma ER Admissions	71.5
High Blood Pressure	85.1
Cancer (excluding skin)	40.8
Asthma	65.7
Coronary Heart Disease	85.5
Chronic Obstructive Pulmonary Disease	81.8
Diagnosed Diabetes	91.2
Life Expectancy at Birth	75.3
Cognitively Disabled	96.3
Physically Disabled	86.7
Heart Attack ER Admissions	61.3
Mental Health Not Good	73.6
Chronic Kidney Disease	90.3
Obesity	70.2
Pedestrian Injuries	44.4
Physical Health Not Good	87.1

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	29.0000
Healthy Places Index Score for Project Location (b)	63.0000
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
Characteristics: Utility Information	Zeroed out to account for California's statewide goal of achieving 100% clean electricity by 2045.
Land Use	Provided
Operations: Energy Use	Buildings are all electrical
Operations: Water and Waste Water	To be conservative, potable 38,011 gals per day, Non-potable 60,541 gals per day, fire water 960,000 gals per year are combined as indoor water use for Ultimate operation. *onpotable water demand was scaled based on Phase 2 projection by compostable throughput, and potable water demand by employee count.

8.2. Project Characteristics

8.2.2. Utility Information

Model Parameter	Units	Default Value	New Value
CO2	lb/MWh	528.465	0.00000
CH4	lb/MWh	0.03300	0.00000
N2O	lb/MWh	0.00400	0.00000

8.3. Land Use

Model Parameter	Units	Default Value	New Value
Lot Area	acre	7.34619	40.0000
Landscape Area	sq. ft	—	0.00000
Lot Area	acre	1.37741	34.0000

Landscape Area	sq. ft	—	0.00000
Lot Area	acre	3.03949	37.0000
Landscape Area	sq. ft	—	0.00000
Lot Area	acre	0.22957	6.00000
Landscape Area	sq. ft	—	0.00000

8.5. Operations

8.5.3. Energy Usage

Number of Hours				
		24		
L_{dn}	52.7	CNEL	52.9	

Notes:
[1] Computation of Sound Power are based on equation 7-1 on pg. 7-9 of Caltrans 2013
[2] Computation of the L_{dn} based on 1-hour L_{eq} measurements for each hour of a day are based on equation 2-23 on pg. 2-52 of Caltrans 2013.
[3] Computation of the CNEL based on 1-hour L_{eq} measurements for each hour of a day are based on equation 2-24 on pg. 2-53 of Caltrans 2013.
[4] Log factors for the L_{dn} and CNEL penalties are provided in Table 2-11 on pg. 2-48 of Caltrans 2013.
[5] Average noise level descriptors were logarithmicly averaged over the total number of hours

Construction Equipment Average Noise Levels

Project Name: Roseville Environmental Utilities

KEY: Orange cells are for input.

Grey cells are intermediate calculations performed by the model.

Green cells are data to present in a written analysis (output).

Location	Distance to Nearest Receptor in feet	Combined Predicted Noise Level (dBA L_{eq})
Thresholds		
Daytime Standard	835	50.0
Sensitive Receptors		
Nearest Property Line	650	52.9

Equipment[1]	Reference Emission Noise Levels (dBA L_{max}) at 50 feet[2]	Usage Factor[2]
Grader	85	0.4
Compactor (ground)	83	0.2

Ground Type	Soft
Source Height	8
Receiver Height	5
Ground Factor[3]	0.63

Predicted Noise Level [4]	dBA L_{eq} at 50 feet[4]
Grader	81.0
Compactor (ground)	76.0

Combined Predicted Noise Level (dBA L_{eq} at 50 feet)
82.2

Sources:

[1] Where measured values are not available, noise levels based on the Construction Noise Control Specifiction 721.560 were used.

[2] Obtained from the FHWA Roadway Construction Noise Model, January 2006. Table 1.

[3] Based on Figure 4-26 from the Federal Transit Noise and Vibration Impact Assessment, 2018 (pg 86).

[4] Based on the following from the Federal Transit Noise and Vibration Impact Assessment, 2018 (pg 177).

$L_{eq}(equip) = E.L.+10*\log(U.F.) - 20*\log(D/50) - 10*G*\log(D/50)$

Where: E.L. = Emission Level;

U.F.= Usage Factor;

G = Constant that accounts for topography and ground effects (FTA 2018: pg 86); and

D = Distance from source to receiver.

Construction Equipment Average Noise Levels

Project Name: Roseville Environmental Utilities

KEY: Orange cells are for input.

Grey cells are intermediate calculations performed by the model.

Green cells are data to present in a written analysis (output).

Location	Distance to Nearest Receptor in feet	Combined Predicted Noise Level (dBA L_{eq})

[3] Based on the following from the Federal Transit Noise and Vibration Impact Assessment, 2018 (pg 177).

L_{eq}(equip) = E.L.+10*log (U.F.) - 20*log (D/50) - 10*G*log (D/50)

Where: E.L. = Emission Level;

U.F.= Usage Factor, assumed to be 1 for the purposes of the calculation of maximum noise levels;

G = Constant that accounts for topography and ground effects (FTA 2018: pg 86); and

D = Distance from source to receiver.

Equipment Description	Acoustical Usage Factor (%)	Spec 721.560 Lmax @ 50ft (dBA slow)	Actual Measured Lmax @ 50ft (dBA slow)	No. of Actual Data Samples (count)	Spec 721.560 LmaxCalc	Spec 721.560 Leq	Distance	Actual Measured LmaxCalc	Actual Measured Leq

Summary

Kittelson & Associates, Inc. (Kittelson) prepared the Transportation Impact Analysis (TIA) for the proposed Roseville Environmental Utilities (EU) Operations Center (proposed project). The proposed project is being led by the City of Roseville (city) and includes developing a 150-acre portion of a 243-acre parcel at 8100 Phillip Road in Roseville, California. The proposed project would contain new facilities and services that would allow the city to cost effectively meet state-level waste management legislation requirements and city sustainability goals, while providing space to grow for those services as well as relocating staff and services currently operating at the city's corporation yard, located at 2020 Hilltop Circle in Roseville, California.

Kittelson used the VMT thresholds that are set forth in the VMT guidelines for evaluating the VMT of the proposed project. For evaluating traffic operations, i.e., level of service (LOS) for identifying operational deficiencies within the study area, Kittelson complied with the LOS goals and policies outlined in the City of Roseville General Plan[1].

PROJECT DESCRIPTION

The project site is currently owned by the city and is largely agricultural and leased for rice and hay farming. The proposed project is located east of South Brewer Road, between Pleasant Grove Creek to the north and Phillip Road to the south. Vehicular access to the project site will be provided via Phillip Road.

The proposed project would include two primary components:

- a Resource Recovery and Transfer Operations (RRTO) facility to manage the city's waste, recycling, and organics materials; and
- a Corporation Yard that would house various EU Services and an Equipment Maintenance Facility relocated from the existing Hilltop Circle Corporation Yard.

The project is planned to be developed in two phases. Phase 1, expected to be completed by 2028, will include the initial construction of the RRTO building, consisting of a large multipurpose facility and an administration building to support RRTO staff and management functions. This phase will also include an entrance/exit scale plaza, an administrative office with employee parking, and a Vendor Lease Area.

The entire project, including the Corporation Yard (EU Service Center and Equipment Maintenance Facility), is assumed to be fully constructed by 2040.

Site Access

The project would provide two access points on Phillip Road, one designated for passenger vehicles and the other for trucks. Based on the findings of the analysis in this report, the passenger vehicle driveway should include two outbound lanes (one left-turn and one right-turn) and would be stop-controlled for opening day but would require a signal in the future. The truck

[1] https://cdnsm5-hosted.civiclive.com/UserFiles/Servers/Server_7964838/File/Government/Departments/Development%20Services/Planning/City%20of%20Roseville%20GP.pdf

driveway can have a single outbound lane and stop-controlled but would operate at LOS D in the future scenario unless Phillip Road is widened to four lanes.

TRIP GENERATION

The information on the trip generation rates for RRTO facilities is not readily available from the Institute of Transportation Engineers (ITE) Trip Generation Manual. Therefore, Kittelson used the trip generation on the number of employees and the number of trucks anticipated for the project. The ITE Trip Generation Manual Land Use Code 710 (General office building) rates were used to estimate the number of trips made by employees and truck trips were estimated based on average truck tonnage. The truck trips and employee trips were combined to obtain the total number of daily trips generated by the project. The proposed project is expected to generate 2,250 daily trips with 320 AM (272 inbound and 48 outbound) peak hour trips and 296 PM (58 inbound and 238 outbound) peak hour trips in 2028. At full buildout in 2040, the project is expected to generate 2,904 daily trips with 400 AM (330 inbound and 70 outbound) peak hour trips and 372 PM (83 inbound and 289 outbound) peak hour trips.

CEQA TRANSPORTATION ANALYSIS

The proposed project would have less than significant environmental impacts in three of the four categories in the CEQA checklist for transportation impacts (conflicts with policies, hazards, and emergency access).

For the category of vehicle-miles of travel (VMT) in terms of VMT per service population, the project would exceed the City's impact thresholds for non-residential land uses and is deemed to have a **significant impact**.

The following mitigation measures are proposed to reduce the project's VMT impact:

1. Implement a Commute Trip reduction program
2. Provide an employee sponsored Vanpool program.
3. Contribute to implementation of extending transit network coverage and hours in Roseville, including potential transit service to the Project area

The feasibility and effectiveness of the VMT mitigation measures is either insufficient or unknown at this time. The project cannot demonstrate definitively that implementation of these policies would achieve VMT reductions to meet the VMT per service population thresholds. With implementation of the project and the recommended mitigation measures, this impact would remain **significant and unavoidable** under project and cumulative conditions.

LOCAL TRANSPORTATION ANALYSIS

The local transportation analysis identifies the effects of the project on traffic operations in terms of vehicle delay and level of service (LOS), queuing issues and signal warrants. Where adverse intersection operations are found because of the project, improvements are recommended to the intersections to reduce the effect of the project on the local transportation system.

Study Area

The City of Roseville confirmed the inclusion of 36 study intersections for the traffic operations analysis. These intersections represent key locations for site access and signalized intersections along corridors likely to be used by project-related traffic. In scenarios with the project, the two project driveways were also evaluated.

Traffic Operations Analysis Scenarios

The local transportation analysis examined traffic operations at the study intersections for the following scenarios in the AM and PM peak hours:

- Existing Conditions
- Opening Year (2028) No Project Conditions[2]
- Opening Year (2028) Plus Project Conditions
- Cumulative Year (2040) No Project Conditions
- Cumulative Year (2040) Plus Project Conditions

Existing Traffic Operations

- Of the 32 currently signalized intersections, 8 intersections operate at LOS D or worse during the AM peak hour and 6 intersections operate at LOS D or worse during the PM peak hour. Additionally, all the all-way stop-controlled Intersections currently operate at LOS C or better during both peak hours.

Opening Year No Project Traffic Operations

- With the planned lane configurations and traffic volumes for the opening year, 9 intersections operate at LOS D or worse during the AM peak hour, and 8 are projected to operate at LOS D or worse during the PM peak hour.

Opening Year Plus Project Traffic Operations

- All intersections operate at LOS C or better in this scenario, with two exceptions:
  - Intersection 3 (Fiddyment Road & Blue Oaks Boulevard) is projected to degrade from LOS C to LOS D during the PM peak hour.
  - Intersection 12 (Westbrook Boulevard & Pleasant Grove Boulevard) is also expected to degrade from LOS C to LOS D during the PM peak hour.
- Two stop-controlled project driveway intersections are projected to operate at LOS C during both the AM and PM peak hours.
- Modifications to the intersection of Westbrook Boulevard & Pleasant Grove Boulevard to restore operations to LOS C or better are provided in the Recommendations section.
- For Fiddyment Road & Blue Oaks Boulevard, an overlap phase to provide northbound right-turn movements with a green arrow during westbound left-turns was analyzed and found to improve operations to LOS C for the PM peak. However, this would restrict westbound U-turns which currently are desired to maintain circulation for the larger roadway network.

[2] Opening year volumes are calculated by adding Panattoni project trips to the existing count data. Opening year plus project volumes include existing counts, Panattoni project trips, and the proposed project trips as well.

Therefore, no improvements are recommended, and this location would degrade to LOS D during the PM peak hour.

Cumulative Year No Project Traffic Operations

- With the proposed lane configurations and traffic volumes, all intersections are expected to be signalized, with 19 intersections projected to operate at LOS D or worse during the AM and PM peak hours.

Cumulative Year With Project Traffic Operations

- All intersections are projected to operate at the same LOS as under the Cumulative No Project scenario.
- The unsignalized intersection of Phillip Road at the Passenger Vehicle Driveway is expected to operate at LOS D in the AM peak hour and LOS F in the PM peak hour. The intersection at the Truck Driveway is projected to operate at LOS C (AM) and LOS F (PM).
- Under cumulative plus project conditions, the Phillip Road/Passenger Vehicle Driveway meets the peak hour signal warrant, while the Truck Driveway intersection does not.

Recommendations

Recommendations are provided for changes in lanes for Westbrook Blvd & Pleasant Grove Blvd intersection.

RECOMMENDATIONS FOR OPENING YEAR PLUS PROJECT CONDITIONS

ID	Intersection	Lane Changes	Traffic Control Change
12	Westbrook Blvd & Pleasant Grove Blvd	Add an additional southbound left turn lane	No

Source: Kittelson & Associates, Inc., 2025

With the recommended improvements, the intersection is projected to operate at acceptable LOS in the opening year with the project. All queues are expected to be accommodated within the available storage and taper lengths without interfering with through traffic.

RECOMMENDATIONS FOR CUMULATIVE YEAR PLUS PROJECT CONDITIONS

ID	Intersection	Lane Changes	Traffic Control Change
37	Phillip Road & Passenger Vehicle Driveway	Add a southbound right turn storage pocket	Add a signal

Source: Kittelson & Associates, Inc., 2025

With the improvements, the Phillip Road/Passenger Vehicle Driveway intersection is expected to operate at LOS A (AM) and LOS D (PM). No feasible mitigation to achieve LOS C (PM) is identified for the Truck Driveway intersection unless Phillip Road is widened to four lanes in the future.

Introduction

Kittelson & Associates, Inc. (Kittelson) has prepared this Transportation Impact Analysis (TIA) for the proposed Roseville Environmental Utilities (EU) Operations Center project to determine the expected transportation-related effects of the project. The scope of the study was developed in coordination with the City of Roseville (city). The project encompasses a 150-acre portion of a 243-acre site located at 8100 Phillip Road in Roseville, California. The project site (regionally located as shown in Figure 1) is located east of S Brewer Road between Pleasant Grove Creek to the north and Phillip Road to the south. It is designed to include new facilities and services to help the city efficiently comply with state waste management legislation and achieve its sustainability goals. Additionally, the project will provide room for future growth and accommodate the relocation of staff and services currently based at the city's corporation yard at 2020 Hilltop Circle in Roseville.

The contents of the transportation impact analysis are consistent with policies provided in the City of Roseville Traffic Impact Study Standards (from the Design and Construction Standards section 4) and the General Plan, including two major components:

- The California Environmental Quality Act (CEQA) requires that the transportation analysis evaluate impacts using vehicle miles traveled (VMT) pursuant to Senate Bill 743 and State CEQA Guidelines Section 15064.3(a). In addition, for CEQA, this TIA addresses the project's potential to increase hazards due to project design features, consistency with circulation system plans and policies, impacts to bike/pedestrian/transit facilities, and impacts to emergency access.
- The Local Transportation Analysis (LTA) has been prepared for the City of Roseville for planning purposes. The LTA portion of this report evaluates other transportation issues such as intersection capacity and operations, which are not part of the environmental evaluation under CEQA, to support City's decision making around transportation facilities.

This introduction includes descriptions of the Roseville EU Operations Center, transportation study area and analysis methodologies.

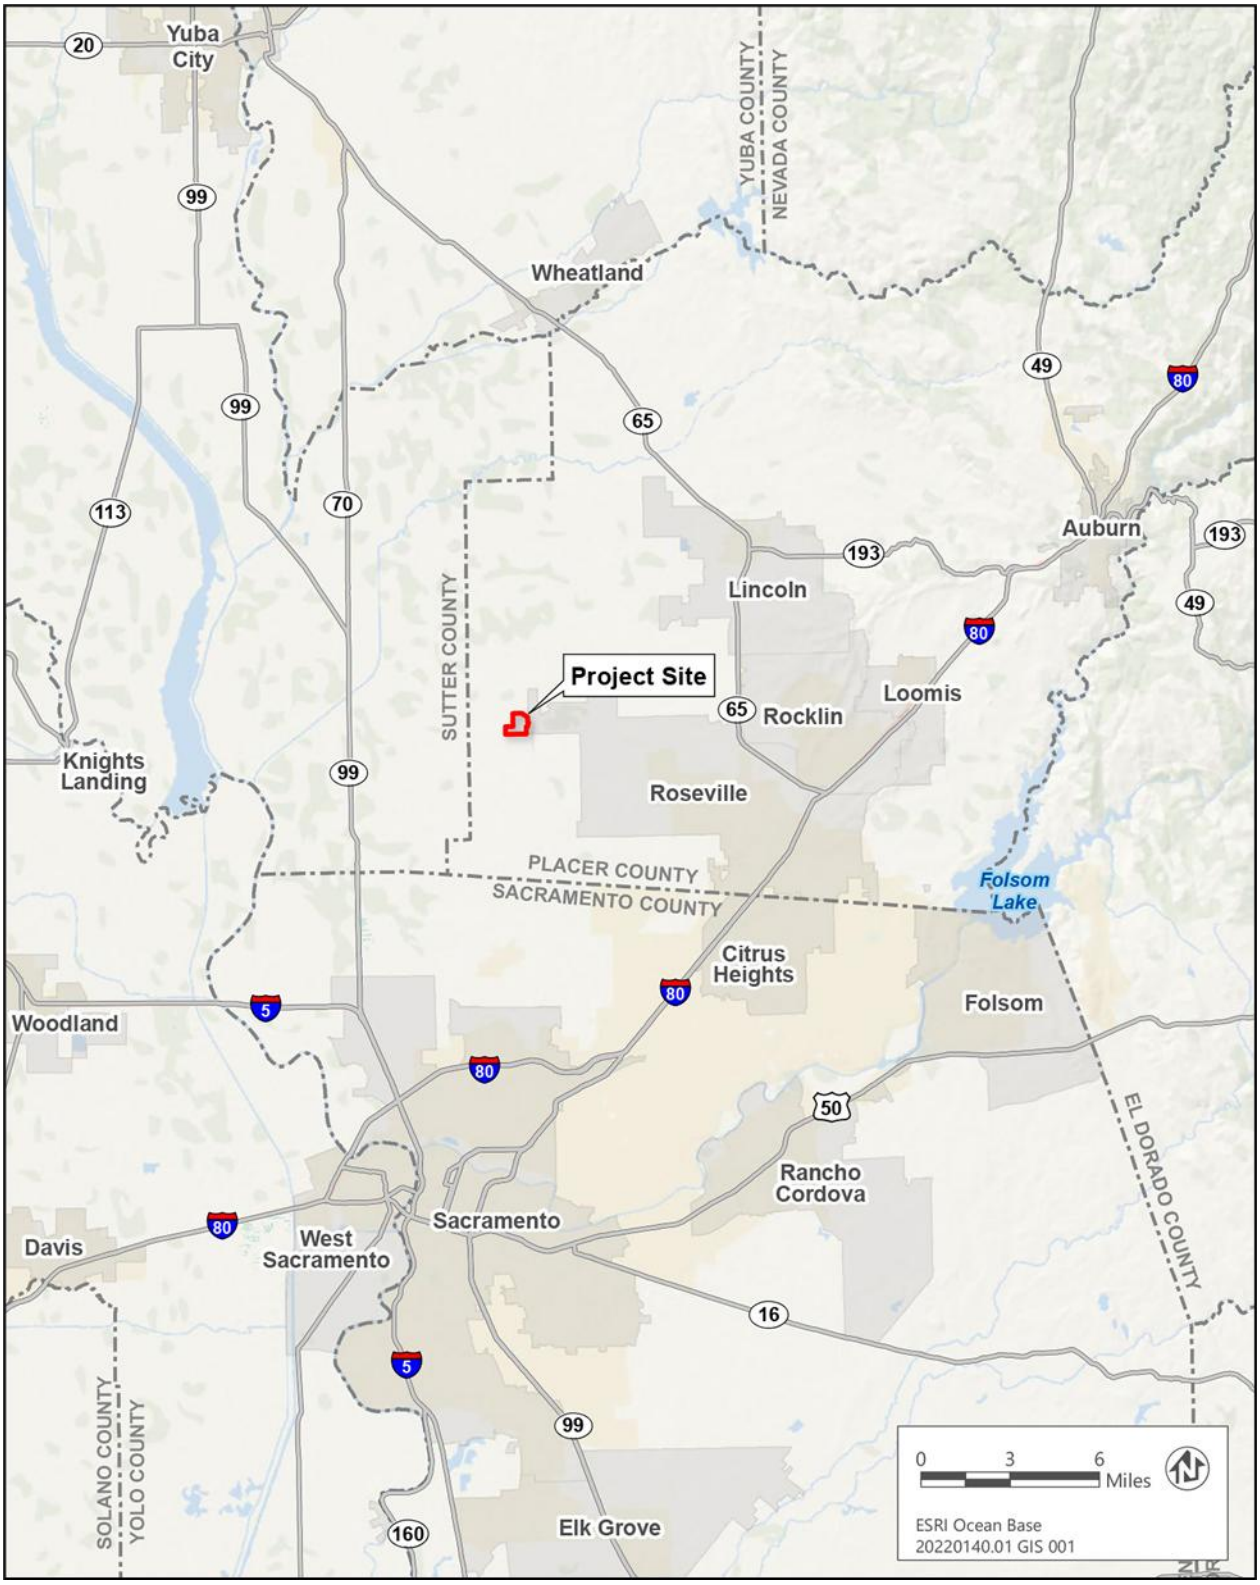
The project would be located on Phillip Road on 243 acres of undeveloped land along the northwest boundary of Roseville, in the City of Roseville, Placer County. This project is approximately 9.0 miles from State Route (SR) 99, 7.0 miles from SR 65 and 10.0 from Interstate (I) 80. The city proposes to construct and operate a new Environmental Utilities (EU) Operations Center to address the City's growing demands for municipal services, State requirements to electrify the city's waste collection vehicles, as well as changing solid waste regulations. The project includes two primary components: a Resource Recovery and Transfer Operations facility, to manage the city's waste, recycling, and organics materials; and a Corporation Yard that would house various EU divisions that would be relocated from the existing Corporation Yard on Hilltop Drive. The project would be developed in phases over the next 12 years (2028-2040).

PROJECT DESCRIPTION

Project Location

As shown in Figure 2, the proposed project site is located on Phillip Road (near its western terminus at South Brewer Road) on 243 acres of undeveloped land along the northwest limit line

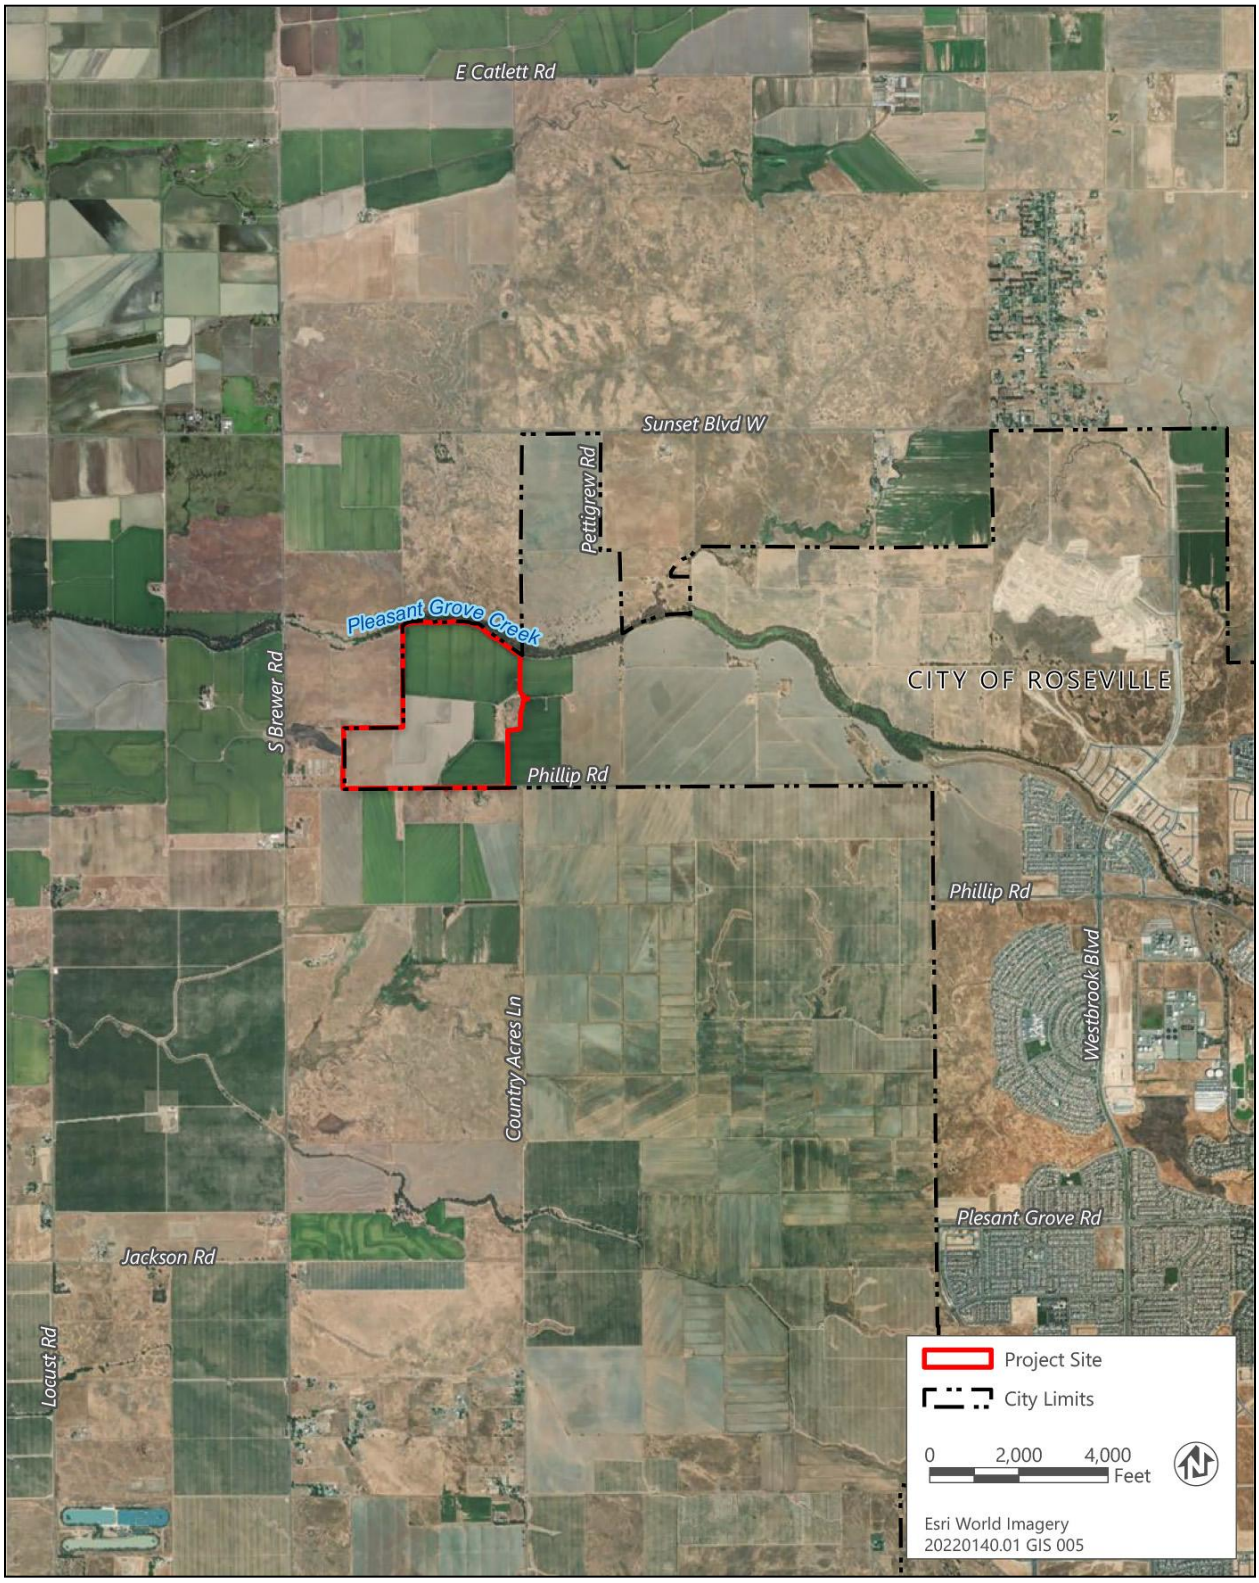
of the City of Roseville, in Placer County is located east of S Brewer Road between Pleasant Grove Creek to the north and Phillip Road to the south. Vehicular access to the project site will be provided via Phillip Road.



The proposed project would include the following components:

- The Resource Recovery and Transfer Operations (RRTO), which include the following:
  - A MRF to segregate recyclables into their source commodity,
  - MSW receipt and transfer, and
  - Organic waste receipt, pre-processing, and transfer.
- An EU Operations Facility Corporation Yard (Corporation Yard) consisting of the following two functions:
  - EU Services, which would include:
    - Business Services and Management,
    - Technical Services,
    - Stormwater Division,
    - Water Utilities, and
    - Storage (covered and uncovered) for Water Utilities, Refuse and Stormwater Division, Technical Services.
  - An Equipment Maintenance Facility for all EU divisions, which would include:
    - Equipment maintenance facilities,
    - Equipment washing facilities,
    - Equipment fueling facilities,
    - Equipment charging facilities, and
    - Administrative offices for Equipment Maintenance,
- A Vendor Lease Area for prospective Vendors to commit materials to the RRTO to improve economies of scale.
- A Potential Future Organic Processing Facility, which would consist of:
  - Potential Future Compost Facility, if deemed necessary, and/or
  - Potential Future Biomass Facility, if deemed necessary.

The project would be developed in two phases. The initial phase would include the first phase of the RRTO building, which will include one large multipurpose building that would serve all three waste streams (recyclables, municipal solid waste, and organic waste) along with an administration building to serve the RRTO's employee and management needs. The initial phase will also include an entrance/exit scale plaza, an administration office with employee parking, and a Vendor Lease Area.



The Corporation Yard (EU Service Center and Equipment Maintenance Facility) is anticipated to be built in phases with full construction buildout assumed to occur by 2040.

Figure 1: Regional Location

Source: Adapted by Ascent in 2024

Figure 2: Project Location

Source: Roseville Environmental Utilities Operations Center Project Description by HDR, January 16, 2025.

Existing Site Uses

The proposed project site owned by the city is currently largely agricultural and is leased for rice and hay farming. Several structures are located on the site, which are remnants from a past pheasant club, farm uses, and former residence. These structures may be demolished prior to development or some of them may be repurposed. For example, the former residence may be used as a temporary office or could be used by a vendor as the Vendor Lease office.

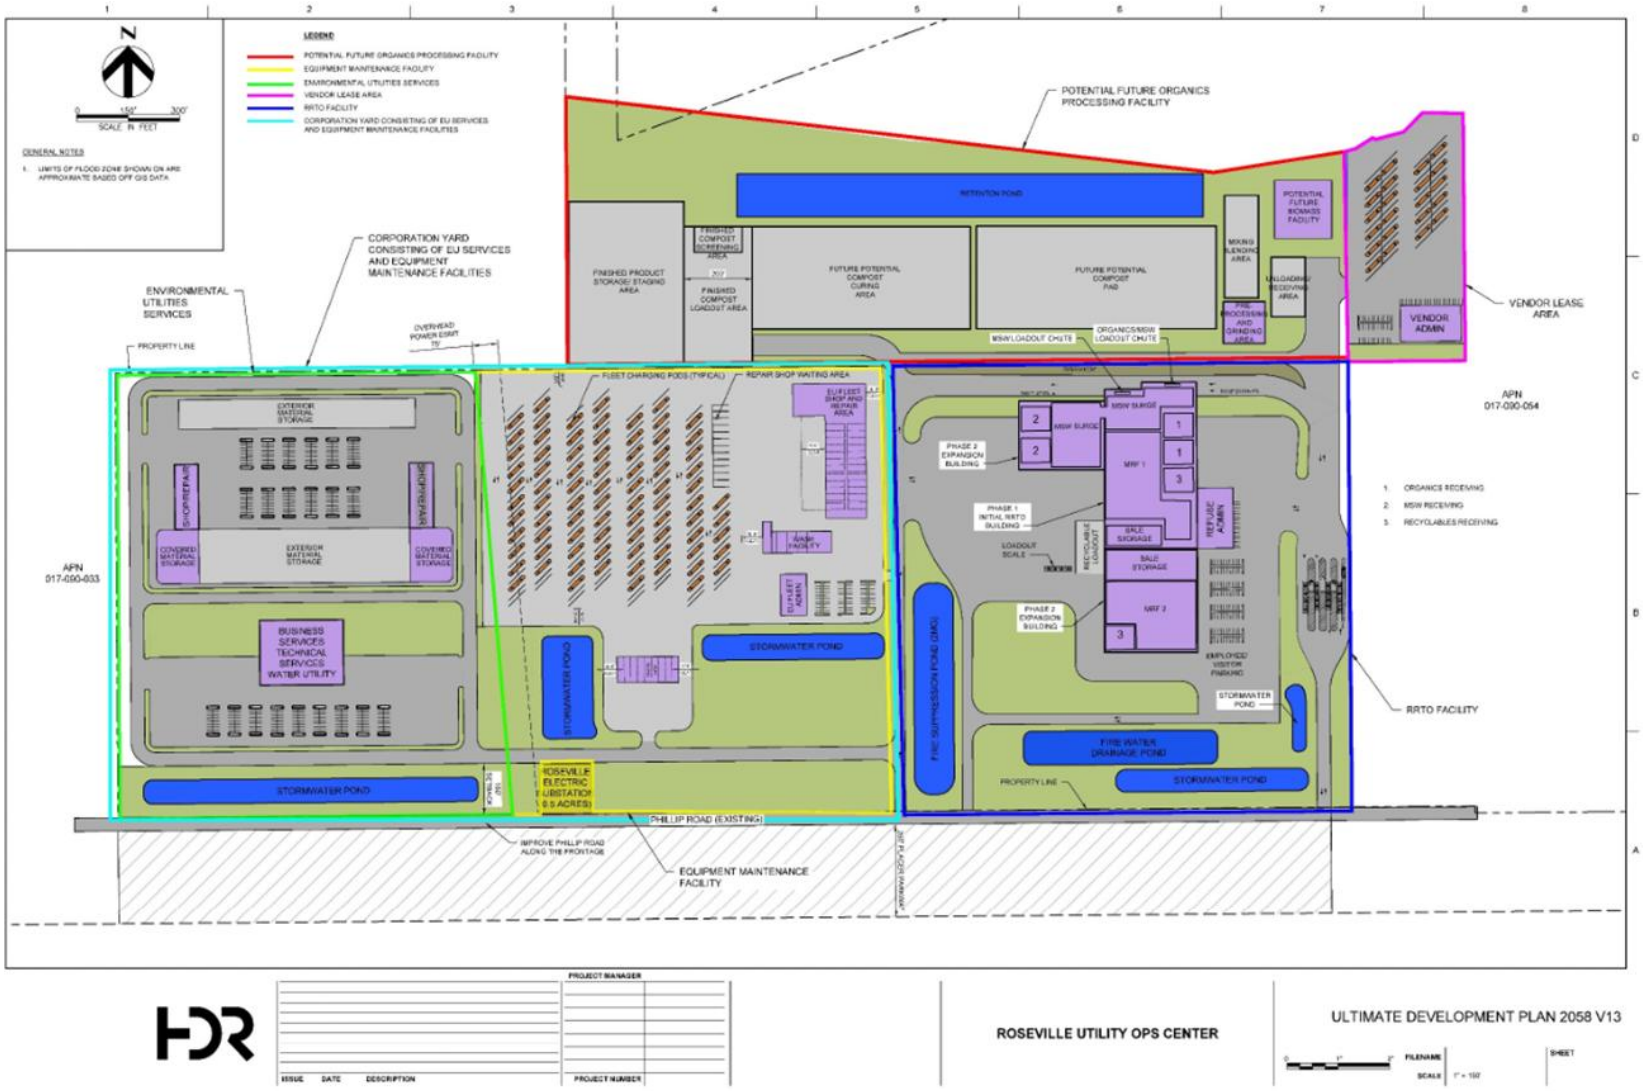
The site is within an area of city-owned property known as the Warnick or Plunkette property, adjacent to Reason Farms. The Al Johnson Wildlife Area is located to the east of the site and is part of an area planned to accommodate the city's stormwater Regional Retention facility and potential recreation uses. Pleasant Grove Creek is located along the site's northern boundary. Other surrounding land uses include agriculture. The Creekview Specific Plan, West Roseville Specific Plan, the Regional University and Community, and Amoruso Ranch Specific Plan areas are located near or within a two-mile radius and are in various stages of development. These surrounding land uses represent a total of 13,630 residential units at buildout.

Proposed Site Uses

The proposed project is to be constructed on approximately 150 acres on the south end of a 243-acre city-owned parcel that is bordered by Phillip Road on the south and Pleasant Grove Creek on the north. The proposed project groups site components into five primary service/facility functional areas, Table 1 shows the estimated building and site areas for each of the functional areas at ultimate build-out, which is estimated to be in 2040.

Table 1: Proposed Project Summary of Components at Build-out in 2040

Facility Component	Approximate Building Area (SF)	Approximate Site Area (acres)
RRTO	322,000	40
EU Services Center	132,400	37
Equipment Maintenance Facility	60,000	34
Vendor Lease Area	10,000	5
Potential Future Organics Facility	37,000	34
Total	**561,400**	**150**



Source: Roseville Environmental Utilities Operations Center Project Description by HDR, January 16, 2025.

Project Access

As shown in the proposed site plan in Figure 3. The main entry to the project site for passenger vehicles and RRTO material arrivals would be located on Phillip Road, at the southeast corner of the site. A separate driveway for truck access would be located west of the main entry. Both driveways were assumed to have a single inbound lane, single outbound shared left-right turn lane, and be stop-controlled at the driveways.

Phillip Road is planned to be improved from its current condition along the frontage of the project site and east to the westerly terminus of Blue Oaks Boulevard. The improvements are expected to meet the City's standard for 48-foot right-of-way collector/commercial street requirements, with a sidewalk construction along the north side. The project would also include an internal vehicular circulation system providing access to a surface parking lot.

Figure 3: Project Site Plan

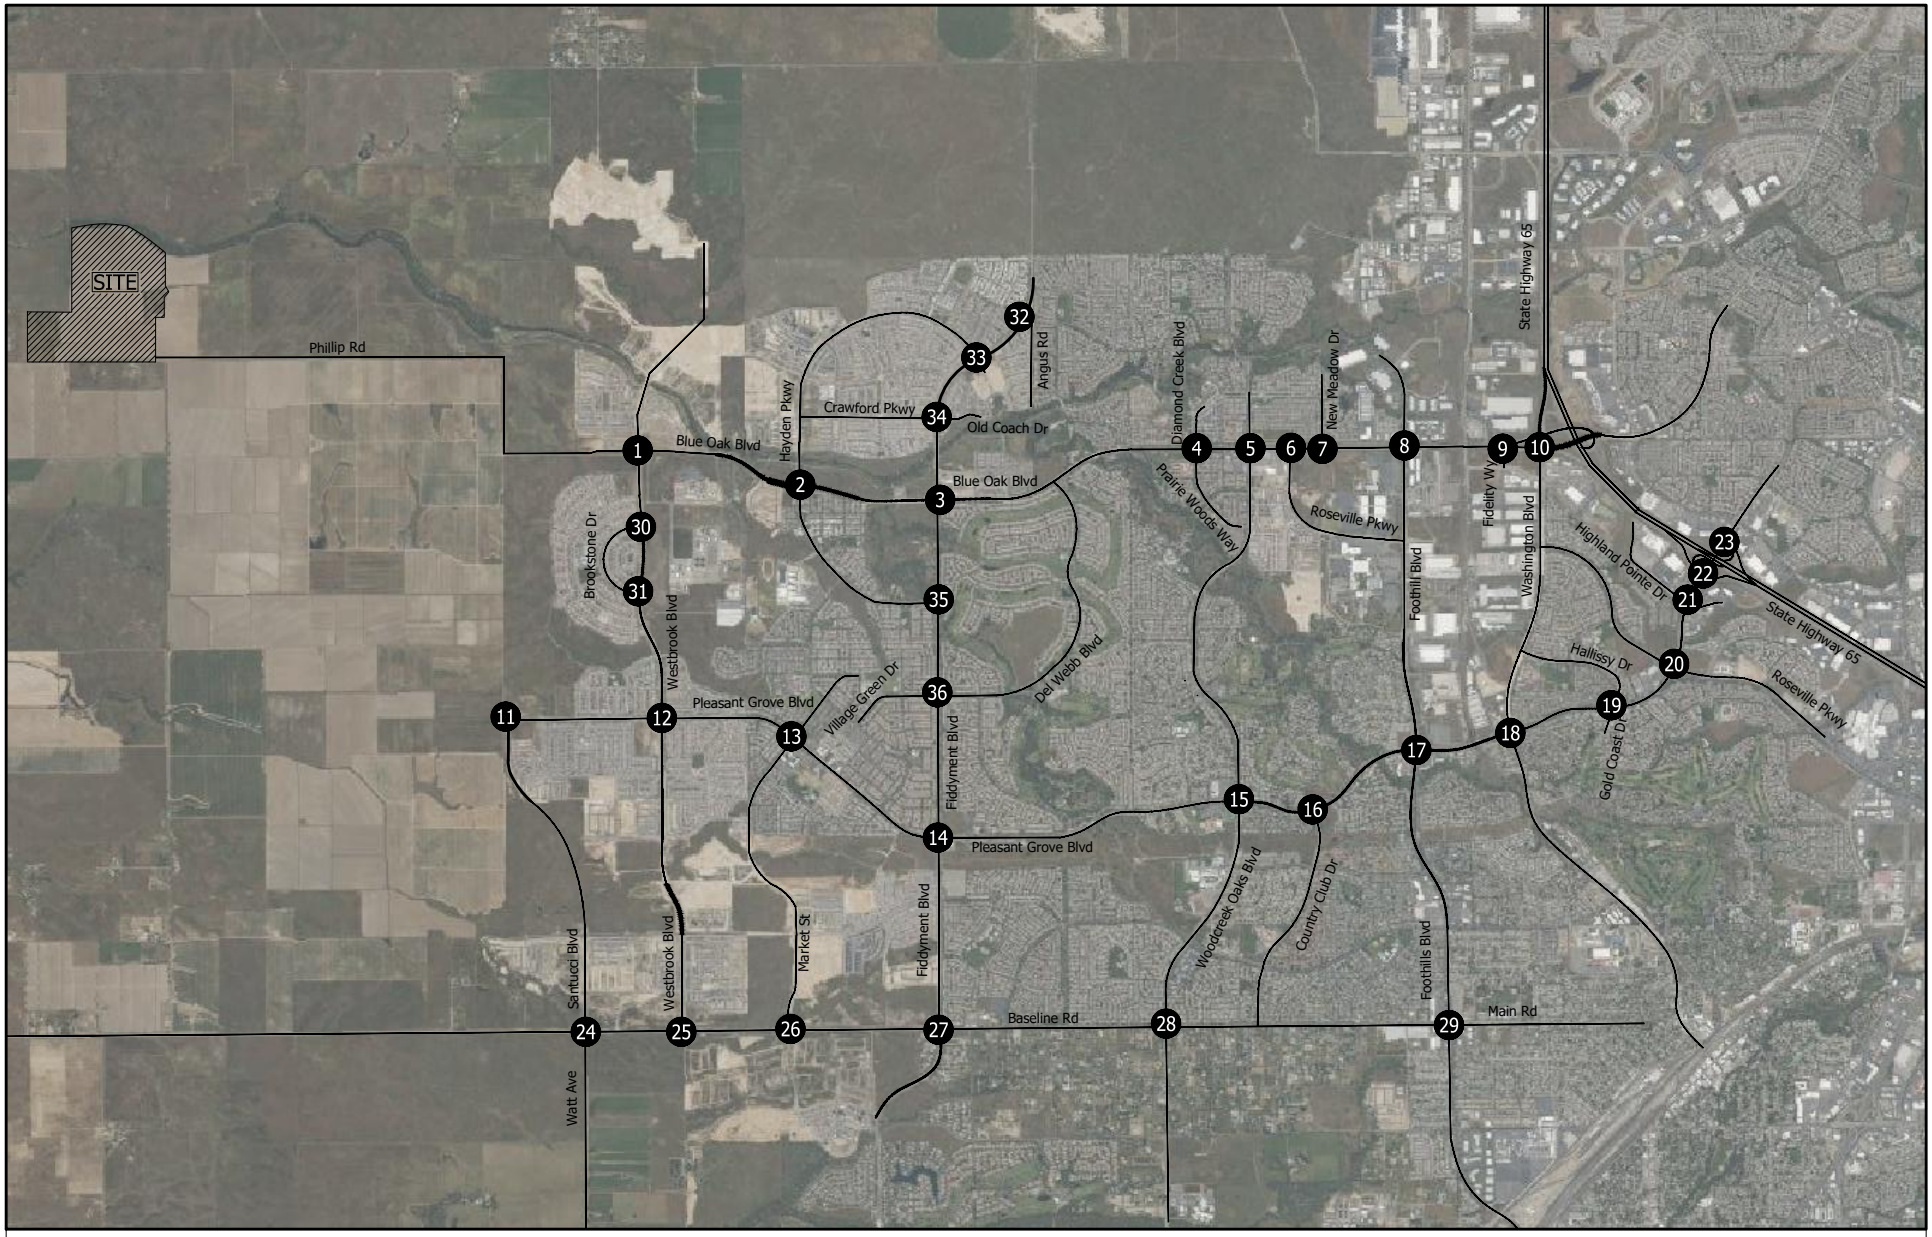
Source: Roseville Environmental Utilities Operations Center Project Description by HDR, January 16, 2025.

STUDY AREA

The study area for the project includes transportation facilities that would be expected to be affected by the development of the project. The study area includes:

- Project access driveways on Phillip Road
- Signalized intersections along routes likely used by project traffic
- Future intersections planned to be built by cumulative conditions
- Pedestrian, bicycle and transit facilities in the vicinity of the proposed Roseville EU Operations Center development

Study Intersections



The Roseville EU Operations Center local transportation analysis (LTA) evaluates peak hour traffic operations at 36 study intersection locations (Figure 4). The study intersections include:

1. Blue Oaks Boulevard and Westbrook Boulevard*
2. Blue Oaks Boulevard and Hayden Parkway
3. Blue Oaks Boulevard and Fiddyment Road
4. Blue Oaks Boulevard and Diamond Creek Blvd/Prairie Woods Way
5. Blue Oaks Boulevard and Woodcreek Oaks Boulevard
6. Blue Oaks Boulevard and Walgreens Driveway/Roseville Parkway
7. Blue Oaks Boulevard and New Meadow Drive
8. Blue Oaks Boulevard and Foothills Boulevard
9. Blue Oaks Boulevard and Fidelity Way
10. Blue Oaks Boulevard and Washington Boulevard
11. Pleasant Grove Boulevard and Santucci Boulevard
12. Pleasant Grove Boulevard and Westbrook Boulevard
13. Pleasant Grove Boulevard and Market Street
14. Pleasant Grove Boulevard and Fiddyment Road
15. Pleasant Grove Boulevard and Woodcreek Oaks Boulevard
16. Pleasant Grove Boulevard and Country Club Drive
17. Pleasant Grove Boulevard and Foothills Boulevard
18. Pleasant Grove Boulevard and Washington Boulevard
19. Pleasant Grove Boulevard and Hallissy Drive/Gold Coast Drive
20. Pleasant Grove Boulevard and Roseville Parkway
21. Pleasant Grove Boulevard and Highland Point Drive
22. Pleasant Grove Boulevard and SR 65 SB Ramps

23. Pleasant Grove Boulevard and SR 65 NB Ramps
24. Baseline Road and Santucci Boulevard/Watt Avenue
25. Baseline Road and Westbrook Boulevard
26. Baseline Road and Market Street
27. Baseline Road and Fiddyment Road
28. Baseline Road and Woodcreek Oaks Boulevard
29. Baseline Road and Foothills Boulevard
30. Westbrook Boulevard and North Brookstone*
31. Westbrook Boulevard and South Brookstone*
32. Fiddyment Road and Angus Road/Parkland Way
33. Fiddyment Road and North Hayden Parkway
34. Fiddyment Road and Crawford Parkway/Old Coach Drive
35. Fiddyment Road and South Hayden Parkway
36. Fiddyment Road and Village Green Drive/Del Webb Boulevard

The intersections marked with an asterisk (*) were stop-controlled when the data collection was done in 2024 and analyzed accordingly under existing conditions. These intersections have been signalized in 2025 and are analyzed as signal control for Opening Year and Buildout conditions.

In addition, project driveway intersections on Phillip Road are included in the with project scenarios.

KITTELSON & ASSOCIATES

Existing Conditions

This section provides a description of the existing roadway, transit, bicycle, and pedestrian components of the transportation system within the project study area.

ROADWAY NETWORK

The existing roadway network in the project study area is composed of state highways and local streets.

State Routes

California State Route 65 (SR 65) provides regional access to the project study area.

SR 65 is a north-south highway in California that passes through multiple counties, including Placer County, where it runs through the city of Roseville. In Roseville, SR 65 serves as a crucial transportation corridor, linking the city to Interstate 80, Lincoln County, and Yuba County. It plays a key role in regional traffic flow and development by providing access to commercial centers, residential areas, and shopping destinations such as the Westfield Galleria at Roseville. Within Roseville, it is typically a four-lane road with a posted speed limit of 65 mph.

Local Streets

In addition to state routes, several major arterials and local streets provide access to or serve the project site in the study area.

Blue Oaks Boulevard serves as a major east-west arterial connecting the cities of Roseville and Rocklin. It starts at Westbrook Boulevard in western Roseville and spans 6.5 miles, terminating at Sunset Boulevard in Rocklin. Between Westbrook Boulevard and Fiddyment Road, the roadway comprises one lane in each direction, separated by a two-way turn lane, with posted speed limits ranging from 45 to 50 mph. East of Fiddyment Road, Blue Oaks transitions into a six-lane, median-divided arterial with a posted speed limit of 45 mph. The SR 65/Blue Oaks Boulevard interchange is located approximately eight miles east of the project site, providing access to Interstate 80—a major east-west freeway that stretches from the Bay Area into Nevada—just three miles to the south.

Westbrook Boulevard is a north-south arterial beginning slightly north of Blue Oaks Boulevard and extending 1.8 miles to Pleasant Grove Boulevard. In the future, the roadway will connect from Baseline Road in the south to Sunset Boulevard West in the north, within the unincorporated Placer County. The completed section features two lanes in each direction, separated by a landscaped median, with a posted speed limit of 40 mph.

Fiddyment Road is another north-south arterial, starting at Baseline Road and extending north through Roseville into unincorporated Placer County and the City of Lincoln. Between Pleasant Grove Boulevard and the northern city limits (1.5 miles north of Blue Oaks Boulevard), Fiddyment consists of two lanes in each direction, with a posted speed limit of 45 mph. Beyond the city limits, the roadway transitions into a two-lane, undivided rural road.

Pleasant Grove Boulevard is an east-west arterial traversing the city of Roseville. It begins at Santucci Boulevard in the west and extends approximately 9 miles to the city limit and becomes

Park Drive. West of Wood Creek Oaks Boulevard, the roadway typically features two lanes in each direction, separated by a landscaped median. East of Wood Creek Oaks Boulevard, it transitions into a six-lane road with a raised median. The posted speed limit of the entire corridor is 45 mph. It intersects State Route 65 approximately 5 miles east of Fiddyment Road, offering direct access to regional destinations and connecting to Interstate 80 further south.

Baseline Road is a major east-west arterial serving Roseville and the surrounding areas of Placer County. It starts from Lincoln Street in the east and becomes Riego Road passing the west limit of Placer County. The roadway functions as a primary connector between rural, suburban, and urban areas, providing access to residential neighborhoods, agricultural lands, and commercial developments. In Roseville, Baseline Road typically consists of one eastbound lane and two westbound lanes, along with a center two-way left-turn lane. However, the segment between Santucci Boulevard and Market Street is being widened to two lanes in each direction with a center two-way left-turn lane. In addition, the segment between Market Street and Fiddyment Road is expected to be widened to two lanes in each direction by October 2026. The posted speed limit is 45 mph. This roadway plays a crucial role in facilitating east-west travel and supporting regional mobility across multiple jurisdictions.

Woodcreek Oaks Boulevard is a north-south arterial in Roseville, serving as a key corridor for residential and local traffic. It begins in a single-family area north of Blue Oaks Boulevard and extends south to Baseline Road. The roadway typically features two lanes in each direction, separated by a landscaped median, with a posted speed limit of 40 to 45 mph. Woodcreek Oaks provides access to several residential neighborhoods, parks, and schools. It serves as an important alternative route to more heavily traveled north-south roadways like Foothills Boulevard and Fiddyment Road, enhancing connectivity between suburban areas and major east-west corridors.

Foothills Boulevard is a major north-south arterial that connects residential, commercial, and industrial areas within Roseville. The roadway begins at Pleasant Grove Boulevard in the north and extends southward, passing through commercial centers, industrial zones, and business parks before connecting Baseline Boulevard/Main Street near the city's southern boundary. North of Pleasant Grove Boulevard, Foothills Boulevard generally consists of two lanes in each direction with a landscaped median, while south of Pleasant Grove, it expands to three lanes in each direction to accommodate higher traffic volumes. The posted speed limit is generally 45 mph.

Washington Boulevard is a key north-south corridor running through central Roseville, providing access to historic districts, downtown Roseville, and major employment centers. The roadway begins at Blue Oaks Boulevard in the north and extends southward through the city, where it intersects with key arterials such as Pleasant Grove Boulevard, Main Street, and Junction Boulevard. Washington Boulevard provides two lanes in each direction and has a posted speed limit of 45 mph.

Truck Facilities

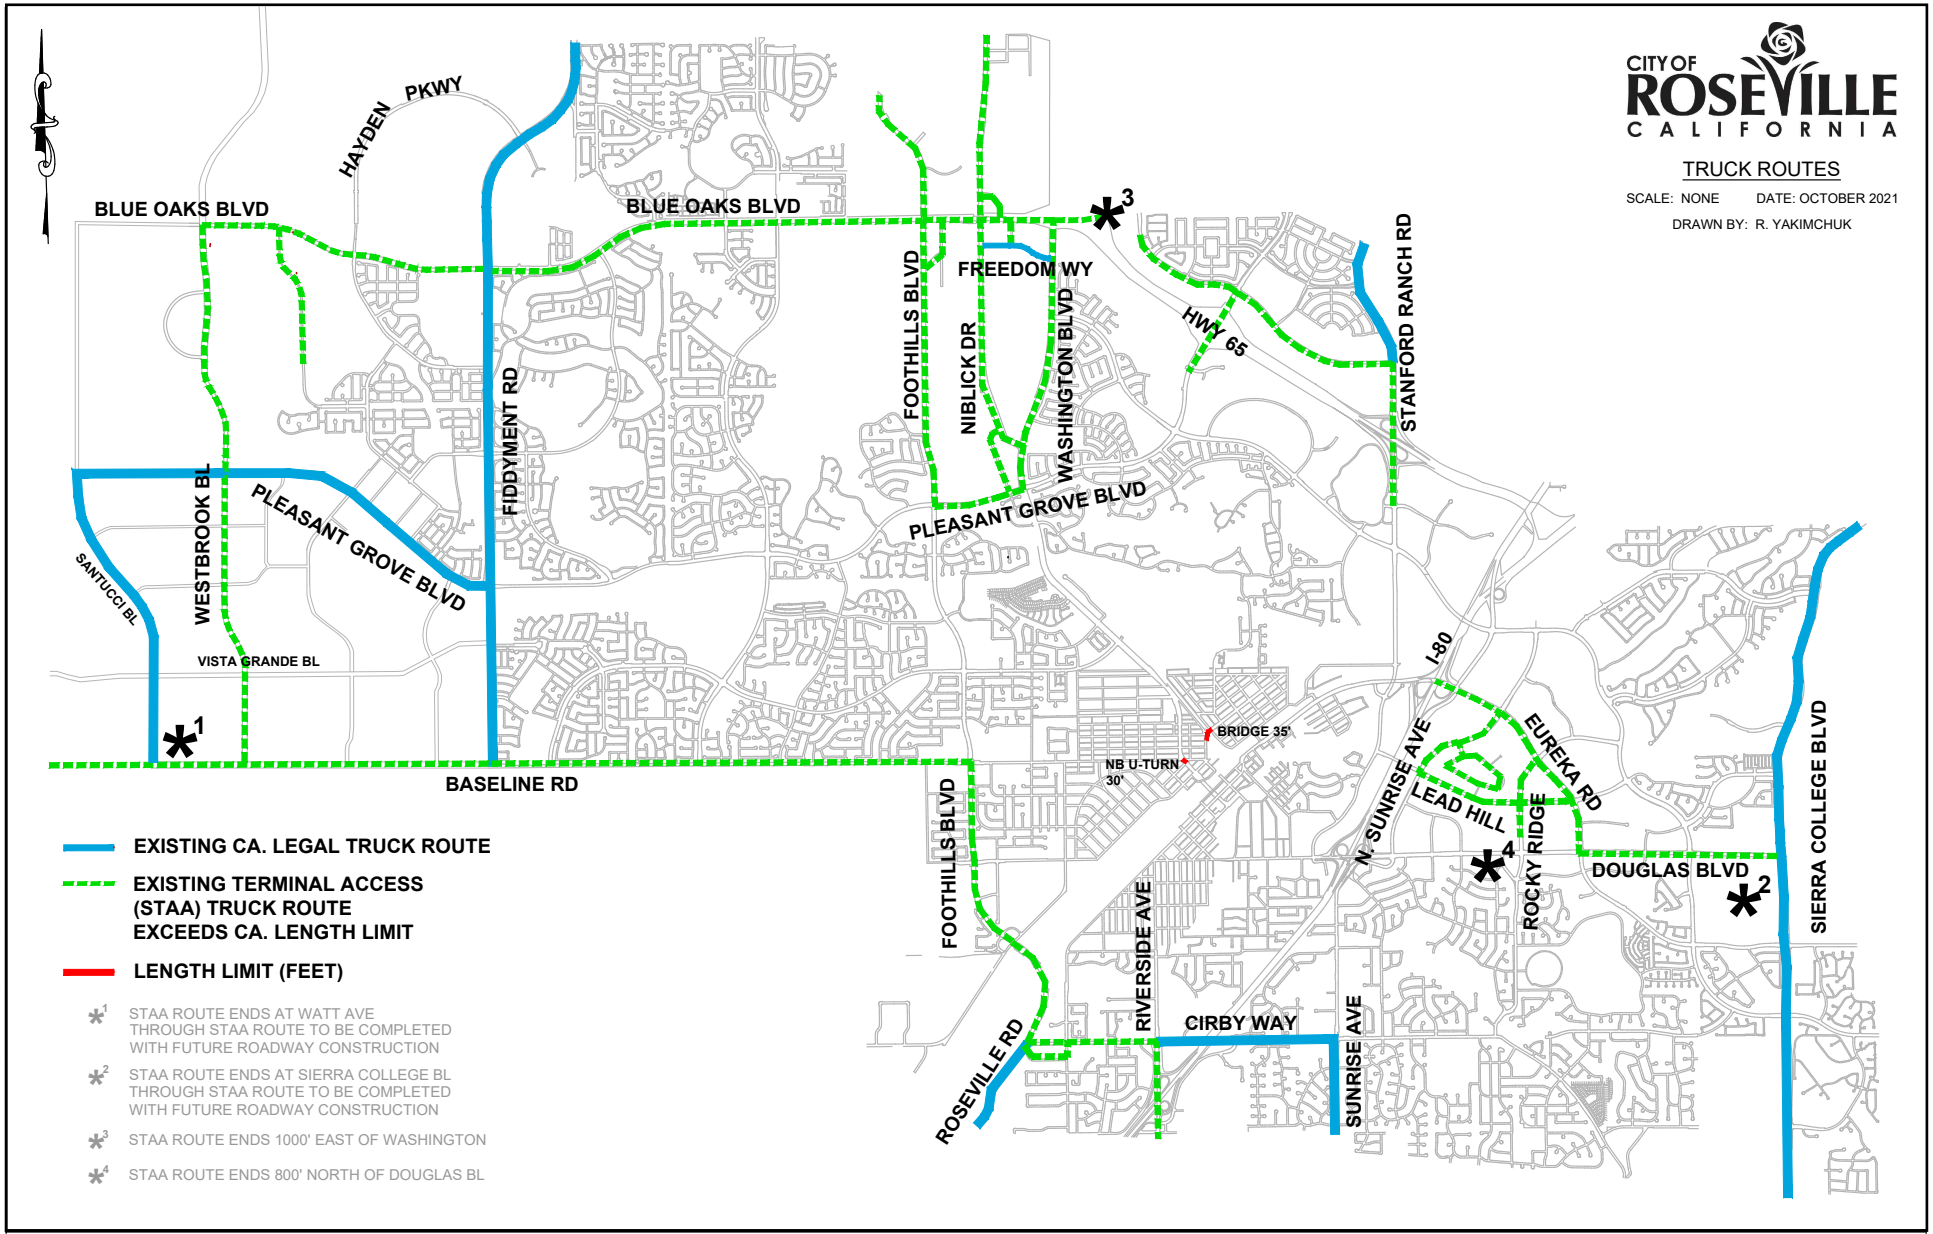
According to the City of Roseville Truck Routes Map shown in Figure 5, Santucci Boulevard and Pleasant Grove Boulevard (between Santucci Boulevard and Fiddyment Road) are designated as existing California legal truck routes. Blue Oaks Boulevard, Westbrook Boulevard, Baseline Road (west of Foothills Boulevard), Foothills Boulevard (north of Pleasant Grove Boulevard and south of Baseline Road), Washington Boulevard (between Blue Oaks Boulevard and Pleasant Grove Boulevard), and Pleasant Grove Boulevard (between Foothills Boulevard and Washington Boulevard) are classified as existing terminal access (STAA) truck routes, permitting both "Green" STAA trucks and "Black" California legal trucks.

TRANSIT FACILITIES

The following section describes existing transit services near the study area.

Public Transit

The City of Roseville Transit system provides public transportation services within Roseville, California, offering fixed-route buses and dial-a-ride options for residents. Each local route is identified by a letter, and the system is designed to enhance mobility and reduce traffic congestion by serving key destinations such as shopping centers, schools, and employment hubs. Roseville Transit also collaborates with regional transit agencies, such as Placer County Transit and Sacramento Regional Transit, to provide seamless regional travel options for commuters.



Routes D, M, R, and S use the roadways within the study area.

Route D provides service between the Civic Center Transfer Point and Hughes Park, traveling along Woodcreek Oaks Avenue, Foothills Boulevard, Junction Boulevard, and Pleasant Grove Boulevard, with connections to schools and residential areas. Weekday service operates from 5:42 AM to 6:35 PM with hourly departures. Saturday service runs from 7:42 AM to 4:35 PM, also on an hourly schedule.

Route M connects the Galleria Transfer Point to Pleasant Grove and Market Street, serving key locations along Pleasant Grove Boulevard. Weekday service operates from 5:56 AM to 9:52 PM on an hourly basis. Saturday service runs from 7:56 AM to 4:56 PM, also on an hourly schedule.

Route R runs between the Louis Orlando Transit Center and Foothills at PRIDE Industries, traveling along Foothills Boulevard. This route connects employment centers and residential areas but operates only twice in the morning and twice in the afternoon on weekdays. It does not operate on weekends.

Route S provides service between the Galleria Transfer Point and the Santucci Justice Center. Service is available during peak hours: 7:35 – 9:25 AM, 11:05 AM – 2:25 PM, and 4:10 – 5:25 PM. This route does not operate on weekends or on days when the justice center is closed.

KITTELSON & ASSOCIATES

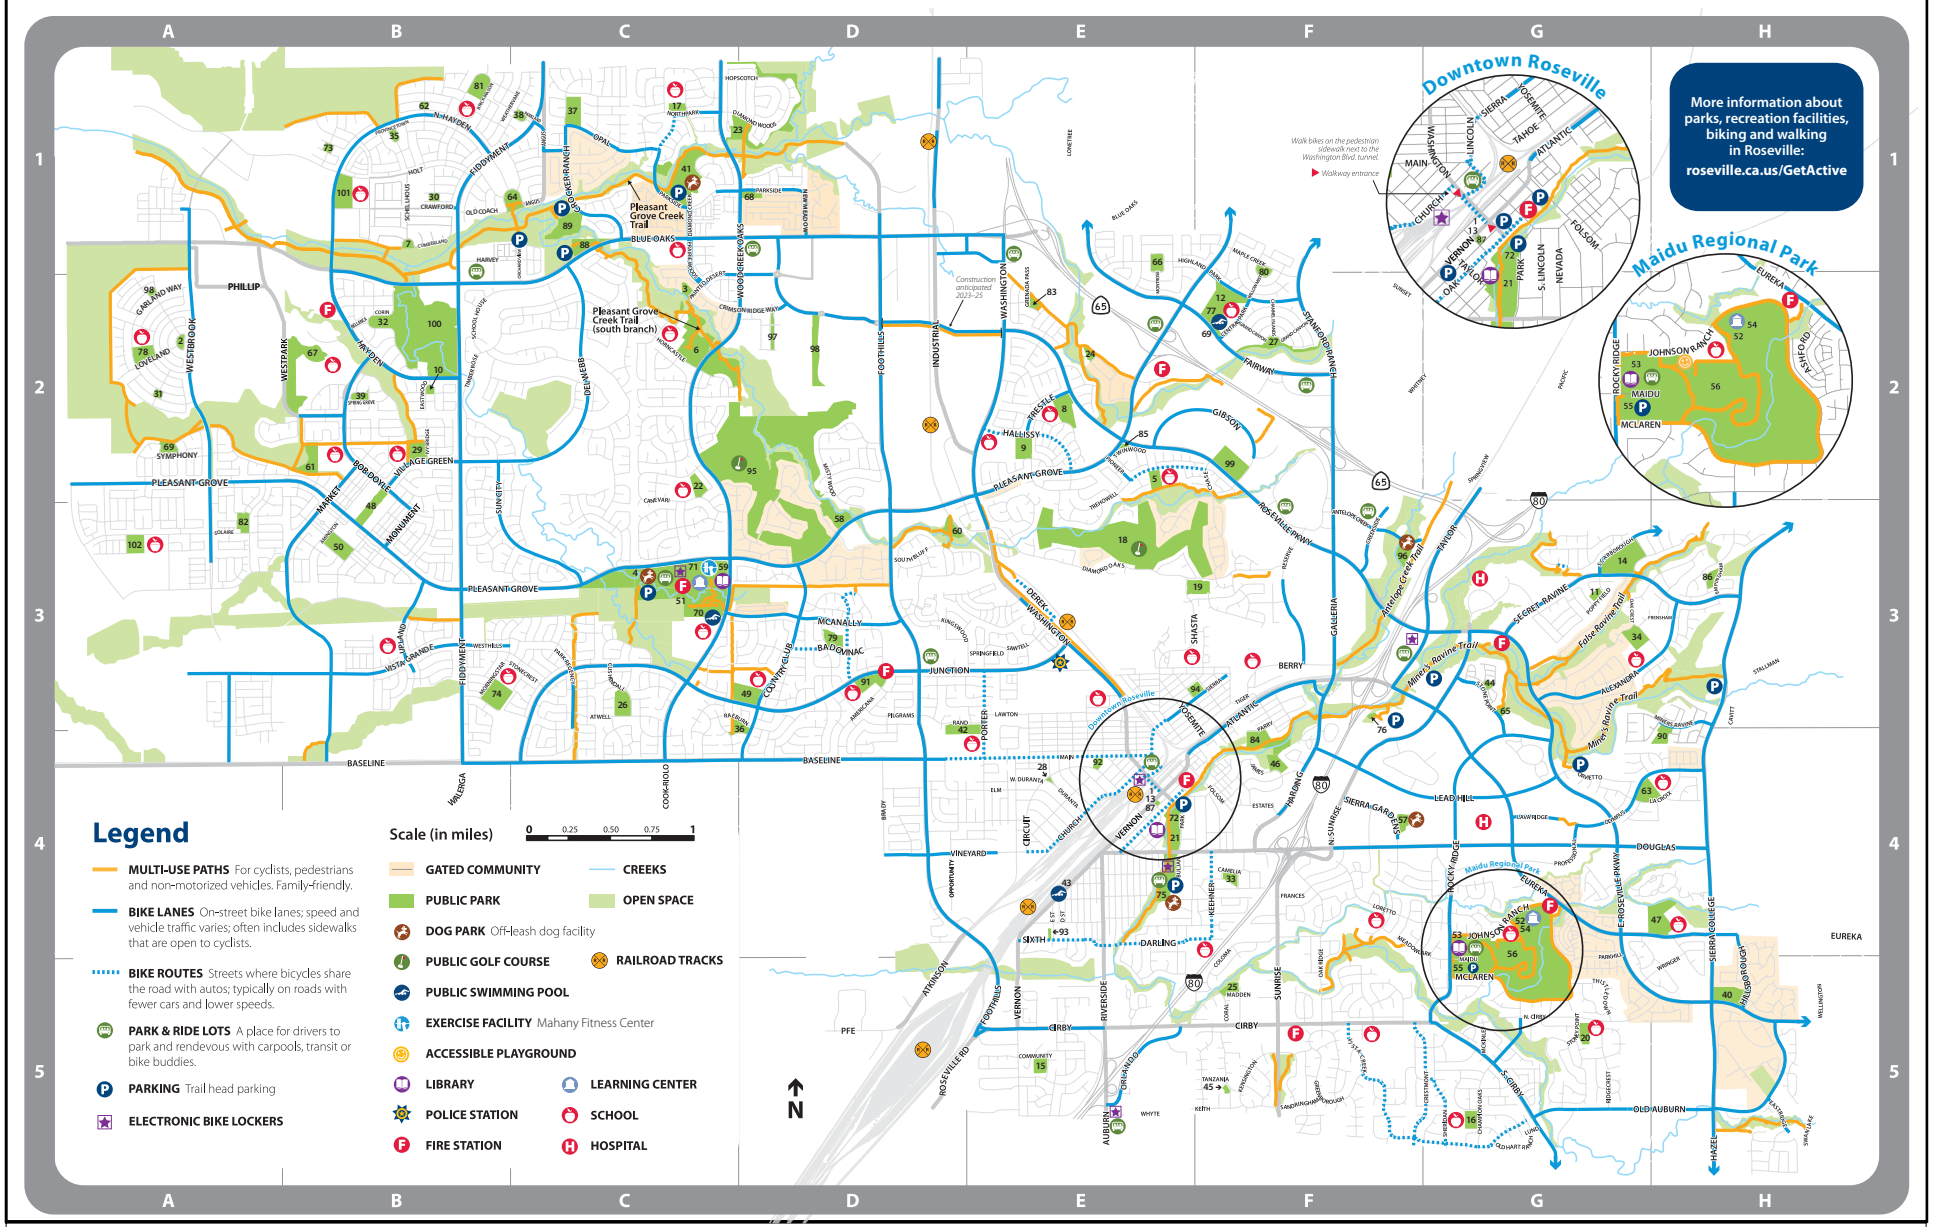
BICYCLE AND PEDESTRIAN FACILITIES

The active transportation network consists of both pedestrian and bicycle infrastructure that work together to provide mobility options for all those that live, work, study, or play in Roseville. Bicycle and pedestrian facilities are important components of the transportation network in the study area. They not only offer non-vehicular opportunities for both commute and recreational trips but also provide connections to the region's transit network.

Existing Bicycle Facilities

The City of Roseville Parks, Trails & Bikeways Map classifies bicycle facilities into three categories:

- Multi-use Paths – Designed for cyclists, pedestrians, and non-motorized vehicles; family-friendly.
- Bike Lanes– On-street lanes for cyclists; speed and traffic levels vary; often accompanied by sidewalks open to cyclists.
- Bike Routes – Shared roadways for bicycles and vehicles, typically on streets with lower traffic volumes and speeds.



As shown in Figure 6, a multi-use path exists on Highland Pointe Drive north of Pleasant Grove Boulevard and bike routes are designated along Hallissy Drive/Gold Coast Drive. Bike lanes are present along all the roadway segments included in the study area.

CRASH HISTORY

The crash history analysis for the project was based on the most recent five years of data covering fatal and injury crashes in Placer County along Philip Road near the project frontage. The crash data spans from January 1, 2019, to December 31, 2023. The Transportation Injury Mapping System (TIMS), which is maintained by SafeTREC at the University of California, Berkeley,[3] was utilized to obtain the crash data and perform a crash analysis. TIMS only includes reports on fatal and injury crashes (severe injury other visible injury and complaint of pain) and excludes crashes that are property damage-only.

Philip Road had a total of two reported crashes during the period between January 1, 2019, to December 31, 2023. Both the crashes were reported as other visible injury crashes and occurred with a fixed object. While one crash had a primary crash factor of driving under the influence of alcohol or drugs, the other crash involved unsafe speed. Both the crashes did not involve a pedestrian/bicyclist/motorcyclist.

KITTELSON & ASSOCIATES

CEQA Evaluation

The California Environmental Quality Act (CEQA) transportation analysis for the proposed project, evaluates the transportation impact areas that may be considered in environmental documentation for the project. A separate Local Transportation Analysis (LTA) evaluates other transportation issues such as roadway and intersection capacity which are not part of the environmental evaluation under CEQA.

State CEQA Guidelines Appendix G, XVII. Transportation identifies the following factors that were evaluated:

1. Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?
2. Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b) (vehicle miles of travel (VMT) assessment)?
3. Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?
4. Would the project result in inadequate emergency access?

The following sections include regulations and policies which apply to the CEQA evaluation, and an assessment of each of the factors identified above.

REGULATORY SETTING

This section summarizes applicable federal, state, regional, and local plans, laws, and regulations that are relevant to this analysis. The information from these regulations provide context for the discussion related to the project's consistency with applicable policies, plans, laws, and regulations. The details of the plans and policies identified are provided in Appendix A.

Federal

No federal plans, policies, regulations or laws are applicable to the provision of land use or resources of the proposed project.

State

SENATE BILL 743

Senate Bill 743 (SB 743) was signed into law in September 2013 and took full effect in July 2020. Senate Bill 743 (Steinberg, 2013) required changes to the California Environmental Quality Act (CEQA) Guidelines regarding the analysis of transportation impacts. The purpose of SB 743 is to promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses.

CALIFORNIA TRANSPORTATION PLAN 2050 (2021) [4]

The California Transportation Plan 2050 is a long-range transportation roadmap to achieve a safe, resilient and universally accessible transportation system that supports vibrant communities,

[4] *https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/ctp-2050-v3-a11y.pdf*

advances racial and economic justice, and improves public and economic health in the State of California.

Regional

SACOG NEXT GENERATION TRANSIT STRATEGY (2021)[5]

SACOG's Next Generation Transit Strategy builds upon its 2020 MTP-SCS vision for a high quality, resilient and sustainable public transit system. The objectives of the strategy are as follows:

- Getting around by transit is fast, reliable and competitive with driving.
- Reduced disparities in travel time and cost; more travel options for disadvantaged communities.
- Improved transit access to top employment centers and destinations.
- Transit feels easy, seamless, and safe for all users.
- More coordination between agencies leads to better service for all.
- Makes the best use of public dollars by minimizing costs while maintaining or increasing ridership.
- Service is adequately and consistently funded.
- Meets or exceeds targets for renewable energy, emissions and VMT.

SACOG MTP/SCS (2020) [6]

SACOG's Metropolitan Transportation Plan and Sustainable Communities Strategy (MTP/SCS) outlines a transportation and land use strategy to support regional prosperity, enhance access to jobs and economic opportunities, and provide transportation options and affordable housing for all. The Plan is based on four priority policy areas:

- Build vibrant places for today's and tomorrow's residents.
- Foster the next generation of mobility solutions.
- Modernize the way we pay for transportation infrastructure.
- Build and maintain a safe, reliable, and multimodal transportation system.

SACOG CONGESTION MANAGEMENT PROCESS UPDATE (2020) [7]

Congestion management involves implementing strategies to enhance transportation system performance and reliability by minimizing the negative effects of congestion on the movement of people and goods. Congestion Management Process (CMP) provides updated data on transportation system performance and evaluates alternative strategies that address both state and local needs. The following are the objectives outlined in the CMP:

- Maintain or improve travel time reliability for freight and passenger vehicles
- Reduce traffic congestion for freight and passenger vehicles.
- Promote development that encourages making trips by public transit.
- Support proactive and innovative education and transportation demand management programs, covering all parts of the urbanized area, to offer a variety of choices to driving alone.

[5] *https://www.sacog.org/home/showpublisheddocument/308/638218230960130000*

[6] *https://www.sacog.org/home/showpublisheddocument/76/638212804736270000*

[7] *https://www.sacog.org/home/showpublisheddocument/1810/638376412235970000*

- Prioritize investments in transit, bike, and pedestrian improvements that reduce greenhouse gas emissions and vehicle miles traveled (VMT).
- Implement pilot projects aimed at making micromobility (such as bike and scooter share) work for urban, suburban, and low-income areas of the region.

SACOG REGIONAL MOBILITY HUB DESIGN GUIDANCE[8]

Mobility hubs provide a seamless connection between different transportation options, enabling people to easily transition between modes to reach their destinations. The vision of SACOG's Regional Mobility Hub Design Guidance is to establish a network of regional hubs that prioritize people, focusing on universal accessibility, safety, and community integration. These hubs are to be designed to seamlessly connect two or more transportation modes, including transit, biking, walking, shared mobility services, carpooling/vanpooling, and on-demand services and provide integrated, equitable mobility through flexible and user-friendly design.

PLACER COUNTY REGIONAL TRANSPORTATION PLAN (2019) [9]

The Placer County Regional Transportation Plan is a document developed to provide policy and funding guidelines for short-range and long-range transportation needs for the county's transportation system over the next twenty years. The Plan's goal is to support well-planned growth and land use patterns while improving environmental quality through better management of the transportation system. Additionally, the Plan seeks to improve access and mobility for all individuals, ensure viable travel options to jobs, services, and housing across the county.

PLACER COUNTY GENERAL PLAN (2013 UPDATE) [10]

Placer County General Plan (last updated in May 2013) serves as a guiding document for land use and development in the County. Several goals and policies of the Plan are applicable to the proposed project.

PLACER COUNTY SUSTAINABILITY PLAN (2020) [11]

The Placer County Sustainability Plan puts forward the analyzes and recommendations for GHG reduction and climate adaptation strategies in the unincorporated county. It sets GHG emission reduction targets for the years 2030 and 2050 for the county in MTCO2e/person and includes strategies to reduce transportation-related GHG emissions.

PLACER COUNTY REGIONAL BIKEWAY PLAN (2018) [12]

The Placer County Regional Bikeway Plan updates the prior Regional Bikeway Plan adopted in 2002 and establishes a vision to promote safe, convenient, and enjoyable bicycling by establishing a comprehensive system of bikeways that link the communities throughout the county. The Plan develops a regional system of bikeways that connect six incorporated cities and other unincorporated areas of the county and proposes bikeways in the unincorporated

[8] *https://www.sacog.org/planning/transportation/sustainable-mobility-program/mobility-hubs*

county or bikeways requiring multijurisdictional coordination. The Plan aims to enhance bicycling for commuter and recreational use in the county through policies in three categories: safety, mobility and preservation.

The Plan proposes the following bikeways in the project's study area:

- Baseline Road between Fiddyment Road and West County limits – Buffered Bike Lane
- Pleasant Grove Road between Baseline Road and Moore Road – Shared Use Path/Side Path

Local

CITY OF ROSEVILLE GENERAL PLAN (2020) [13]

The City of Roseville General Plan 2035, adopted in 2020, acts as a policy guide for the city's future development and growth. The Plan is intended to be long-range, comprehensive and community focused. The Plan designates land use categories throughout the city, defining each land use category, including general uses, development, intensity, siting and compatibility standards.

The Circulation Element of the General Plan outlines Roseville's objectives for its circulation system, including the overall framework, level of service standards, design requirements, and policies that align with the city's broader planning, economic, social, and environmental goals. The objective of this element is to ensure accessibility to key destinations for all modes of travel, enhance travel options for residents, workers, and visitors, and maintain the transportation network in optimal condition.

The General Plan notes the LOS policy as "maintain a LOS "C" standard at a minimum of 70 percent of all signalized intersections and roadway segments in the City during the a.m. and p.m. peak hours. Exceptions to the LOS "C" standard may be considered where improvements required to achieve the standard would adversely affect pedestrian, bicycle, or transit access, and where feasible LOS improvements and travel demand reducing strategies have been exhausted."

CITY OF ROSEVILLE PEDESTRIAN MASTER PLAN (2011) [14]

The City of Roseville's Pedestrian Master Plan focuses on improving the design and development of public pedestrian pathways to create a safe, efficient, and visually appealing environment for all pedestrians. The Plan aims to establish a well-connected network of sidewalks and street crossings, providing Roseville residents with diverse transportation options, including walking, biking, transit, and driving. It prioritizes inclusive design, incorporating policies, projects, and programs to promote walking as a fundamental mode of transportation, while also supporting health and recreation for people of all ages and abilities. Additionally, it proposes the creation of Pedestrian Overlay Districts in areas where increased pedestrian activity is desired through the provision of enhanced pedestrian facilities.

[14] *https://cdnsm5-hosted.civiclive.com/UserFiles/Servers/Server_7964838/File/Government/Departments/Public%20Works/Biking%20&%20Walking/Planning/2-2011_Pedestrian%20Master%20Plan_WEB.pdf*

CITY OF ROSEVILLE COMMUNITYWIDE SUSTAINABILITY ACTION PLAN (2010) [15]

The City of Roseville Communitywide Sustainability Action Plan (SAP) outlines key objectives aimed at implementing transportation measures that reduce Vehicle Miles Traveled (VMT) and associated Greenhouse Gas (GHG), NOx and PM10 emissions. The objectives of the Plan aim to reduce the overall environmental footprint of the transportation system and serve as guidelines in setting VMT reduction strategies for the proposed project.

CITY OF ROSEVILLE BICYCLE MASTER PLAN (2008) [16]

The City of Roseville Bicycle Master Plan aims to achieve a balanced, multi-modal transportation system by developing a well-connected, safe, and accessible bikeway network that serves bicyclists of all levels and provides Roseville residents a variety of transportation choices, including automobile, transit, bicycle, and pedestrian options. The Plan also focuses on creating bikeway support facilities such as bike racks and repair stations to encourage both commuter and recreational cycling. The plan sets a goal to increase bicycle use in the City by 50 percent by 2020, promoting cycling for work, school, play and other destinations through incentives and encouragement efforts.

CITY OF ROSEVILLE COMMUNITY DESIGN GUIDELINES (2008) [17]

The Community Design Guidelines establishes design and technical guidelines including a list of specific recommendations and requirements for each land use category including commercial, office and industrial, multi-family and compact residential, for including in project design.

CITY OF ROSEVILLE DESIGN STANDARDS (2023) [18]

Section 4 of the Design Standards document establishes guidelines for the preparation of traffic studies to ensure consistency of analysis and adequate information to aid City staff and decision makers in the consideration of project approval regarding impacts to the City's transportation system.

CEQA TRANSPORTATION ANALYSIS

The transportation analysis assesses how the study area's transportation system would operate with the implementation of the proposed project. This analysis includes effects that would result in significant impacts under the State California Environmental Quality Act (CEQA) guidelines.

[18] *https://cdnsm5-hosted.civiclive.com/UserFiles/Servers/Server_7964838/File/Government/Departments/Development%20Services/Engineering/Transportation%20Planning/Traffic%20Impact%20Study%20Standards/DS-SECTION%204_2016%20100%20percent.pdf*

Thresholds of Significance

The Project's impact is considered significant if it would:

a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.
b) Conflict or be inconsistent with CEQA Guideline section 15064.3, subdivision (b).
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).
d) Result in inadequate emergency access.

CEQA Project Impacts and Proposed Mitigations

TRAF-1	The proposed Project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. **(Finding: Less than significant)**

The project will not require substantial modifications to the transportation network except for Phillip Road along the project frontage. The modifications would not explicitly conflict with any program, plan, ordinance, or policy addressing the circulation system, including those relating to transit, bicycle, or pedestrian facilities. The project is not located within the Pedestrian Overlay Districts outlined in the City or Roseville's Pedestrian Master Plan (2011). The project does not prohibit implementation of bicycle facilities planned in the City of Roseville's Bicycle Master Plan (2008. Additionally, the project site is not directly served by any transit routes.

Therefore, the project impact due to a conflict with existing plans, ordinances, or policies will be **less than significant**.

TRAF-2	Project implementation may result in VMT metrics that are greater than the applicable thresholds (15 percent below the City's Baseline VMT metric) **(Finding: Significant and Unavoidable)**

Table 2 shows the City of Roseville's established VMT thresholds derived from Table 4.3-5 of the General Plan Update Environmental Impact Report (certified on August 5, 2020).[19] These thresholds are based on the City of Roseville travel forecasting model using 2016 land use assumptions and the VMT threshold is 15% below the Citywide baseline VMT metric.

Table 2: City of Roseville VMT Thresholds

Measure	Non-Residential Projects	Residential Projects
VMT Produced	5,459,700	1,822,100
No. of Residents	120,812	120,812
No. of Employees	67,530	--

[19] *https://cdnsm5-hosted.civiclive.com/UserFiles/Servers/Server_7964838/File/Government/Departments/Development%20Services/Engineering/Design%20and%20Construction%20Standards/2023%20City%20of%20Roseville%20Design%20and%20Construction%20Standards.pdf (page 62 of 630).*

Measure	Non-Residential Projects	Residential Projects
Service Population	188,342	--
Base year VMT Metric	29.0 VMT per service population	15.1 VMT per capita
VMT Threshold (15% below Base year VMT Metric)	24.5 VMT per service population	12.8 VMT per capita

The City uses VMT per service population as an efficiency metric to determine VMT impacts for non-residential projects. The service population is the sum of residents and employees. As shown in Table 2, the VMT per service population threshold for non-residential projects for the City of Roseville is 24.5.

Kittelson prepared a VMT calculation citywide and the project using the 2020 City of Roseville travel forecasting model to reflect the most recent baseline year and model. Table 3 shows the Existing Citywide Conditions and Project TAZ VMT for the full build-out of the project. The detailed methodology to calculate the Project TAZ VMT is discussed in Appendix B.

Table 3. Project TAZ VMT and Citywide Baseline VMT

Measure	Existing Citywide Conditions (2020) [1]	Project TAZ VMT with Project
VMT Produced	7,172,610	29,805[2]
Number of Residents	140,629	18[3]
Number of Employees	80,350	696[4]
Service Population	220,979	714
VMT Metric (VMT per service population)	32.5	41.7

1. Obtained using the City of Roseville travel forecasting model for the year 2020.
2. Reported VMT is the sum of "VMT From" and "VMT To" from the Project TAZ (Traffic Analysis Zone). The VMT Produced for Project TAZ includes the VMT from residents, employees and trucks.
3. The 2020 land use in the model includes 5 single family and 2 multifamily homes for the Project TAZ. As provided in Table VMT-1, Section 4 Traffic Impact Studies of the City of Roseville's Design Standards, the number of residents per dwelling unit in the Project TAZ is calculated based on the conversion factor of 2.68 for single-family homes and 2.32 for multi-family homes.
4. The number of employees is based on the trip generation for the full build-out of the project.

The VMT per service population with the project is greater than the City's VMT per service population threshold of 24.5 for non-residential projects. Therefore, the proposed project would be considered to have a **significant** VMT impact. Further, as shown in Table 3, The Project TAZ VMT for the full build-out of the project is greater than the Existing Citywide conditions for the base year 2020.

Mitigation

Mitigation for VMT impacts for employment uses would include mitigation measures TRAF-2-1 through TRAF-2-3. The potential effectiveness of mitigation measures for VMT has been estimated using the CAPCOA *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity*[20]. It should be noted that the total

[20] *California Air Pollution Control Officers Association (CAPCOA), Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity, December, 2021, https://www.airquality.org/ClimateChange/Documents/Final%20Handbook_AB434.pdf*

project VMT includes discretionary VMT (commute VMT from employees) and mandatory VMT (truck trips). Mitigation measures TRAF-2-1 through TRAF-2-3 are identified to reduce the discretionary commute VMT from employees, which represents only a portion of the total project VMT.

Mitigation Measure TRAF-2-1: Based on the City of Roseville's Transportation System Management (TSM) Ordinance, all businesses or common work locations (such as office building/complex, commercial/retail center, industrial building/park) with 50 or more employees are required to have a TSM Plan and designate a Site TSM Coordinator who serves as a liaison between the City of Roseville and employees/businesses at the site. The goals of the TSM Ordinance are to reduce vehicle emissions, vehicle miles traveled and traffic congestion, improve air quality and transportation efficiency. Accordingly, the proposed project shall implement a commute trip reduction program consistent with other trip reduction strategies in the City of Roseville,[21] which would include the alternative transportation options as the following:

- Bicycling and walking,
- Carpooling,
- Flexible Work hours,
- Riding the bus to work,
- Vanpooling.

The CAPCOA Handbook Measure T-4 estimates that a voluntary commute trip reduction program can reduce Greenhouse Gas (GHG) emissions commute VMT by up to 4.0 percent with full participation of all eligible employees.

Mitigation Measure TRAF-2-2: Provide an employee sponsored Vanpool program. The CAPCOA Handbook Measure T-10 estimates that provision of employee-sponsored vanpool can reduce GHG emissions from the commute VMT by up to 20.4 percent. Vanpooling is a flexible form of public transportation that provides groups of 5 to 15 people with a cost-effective and convenient rideshare option for commuting.

Mitigation Measure TRAF-2-3: Contribute to implementation of extending transit network coverage and hours in Roseville, including potential service to the Project area. Implementation of an expanded transit service would require both capital expenditures for support facilities, including construction of transit stops and facilitating extensions of future transit routes. The CAPCOA Handbook Measure T-24 estimates that extending transit network and coverage can reduce GHG emissions from VMT by up to 4.6 percent. Note that these VMT reductions would occur citywide and would not exclusively affect Project trips.

SIGNIFICANCE AFTER MITIGATION

VMT reduction depends on factors such as actual implementation of planned land use development, demographic change, the cost of fuel, infrastructure changes such as addition of bike lanes, and the competitiveness of transit relative to driving, which relates to congestion along vehicular commute routes that are not under the project's jurisdiction, as well as transit provided by parties other than the project or the City of Roseville.

[21] *https://cdnsm5-hosted.civiclive.com/UserFiles/Servers/Server_7964838/File/Government/Departments/Public%20Works/TSM/TSM%20Handbook%20-%20Section%20IV.pdf*

The feasibility and effectiveness of the mitigation measures for the proposed project is unknown at this time, and even if implemented to the estimated percentages would not obtain the target VMT levels. The project cannot demonstrate definitively that implementation of these policies would achieve VMT reductions to meet the VMT per service population thresholds. Therefore, the VMT impact for the proposed project would remain **significant and unavoidable**.

TRAF-3	The proposed Project would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment). **(Finding: Less Than Significant)**

Hazards are typically assessed at the individual project level when an actual design and construction of a circulation facility is proposed. The potential impacts associated with the proposed project would be analyzed and evaluated in detail through the city review process when the design plans become available. The City's Design and Construction Standards[22] provide for coordinated and standardized development of city facilities, including roadways.

To provide access to the project site, Phillip Road would be improved from its current condition along the frontage of the project site and east to the westerly terminus of Blue Oaks Boulevard. The improvements to Phillip Road are expected to reflect the City's Street Geometric Requirements (Table 7-1 of the City of Roseville Design Standards), 48-foot right of way Collector/Industrial Street requirements, with sidewalk constructed along the north side.

The proposed project driveways will be required to follow the City's design standards as they apply to, regulate, and guide the design and preparation of plans, and the construction of streets, highways, alleys, drainage, traffic signals, site access, and related public improvements.

The project will include a public driveway connecting to Phillip Road. Based on Section 5-4 of the City of Roseville's Design Standards, "*the number of driveways serving a parcel or site for land uses other than single family residential or duplex land uses, shall be minimized but not to a point that could cause local congestion within the public right-of-way. For projects requiring a Traffic study, the study shall evaluate the proposed site access for the project. The study shall discuss balancing the number of driveways for the project, so the number of driveways is minimized, while still providing enough access points to minimize congestion and delay.*"

The local transportation analysis for the proposed project includes analysis of the project driveways on Phillip Road in the Cumulative with Project scenario to confirm the geometry is appropriate to serve anticipated volumes.

Section 7-14 of the City of Roseville's Design Standards requires that "*all new driveways for Office/Commercial/Industrial land uses have a minimum throat width of 35 feet. The minimum width may be reduced to 25 feet if the driveway is a secondary access or restricted to right turn movements.*" The City of Roseville will review the design and connection of new driveways and would ensure that the design and construction of new driveways would meet the City's Design Standards and would not interfere with the movement of vehicles along existing roads.

The roadway connections to the project will meet the City's design standards and does not include any unusual geometric designs or hazards. The project is located in an area that is

22 *https://www.roseville.ca.us/government/departments/development_services/engineering_land_development/construction_management_inspection/design_construction_standards*

compatible with its surroundings for its use, bringing larger vehicles away from the urban areas of the City and providing separate access for larger vehicles to access the site. Therefore, potential impacts related to hazards due to a geometric design feature or incompatible uses would be **less than significant**, and no mitigation measures would be required.

TRAF-4	The proposed Project would not result in inadequate emergency access. **(Finding: Less than Significant)**

Emergency response requires a balance of emergency response time and evacuation needs with other community concerns, such as urban design and traffic calming. The proposed project would implement components of the roadway consistent with the City's Design and Construction standards to ensure adequate emergency access is provided. The project does not create any constraints to access or evacuation along the roadway network. Therefore, impacts related to inadequate emergency access would be **less than significant**, and no mitigation measures would be required.

Local Transportation Analysis

The local transportation analysis identifies the effects of the project on traffic operations in terms of vehicle delay and level of service (LOS), queuing issues and signal warrants. Recommendations are provided for locations where traffic operations would be deficient relative to the City of Roseville standards.

ANALYSIS METHODOLOGIES

The traffic operations analyses were conducted based on the methodologies described below.

Traffic Volumes

Traffic volumes for existing conditions were determined using intersection turn movement data collected at the study intersections in October 2024.

The opening year (2028) baseline conditions added the estimated trips generated by Phillip Road Site project to the existing counts.

The cumulative year (2040) baseline traffic volumes were based on projections developed by Fehr & Peers which used the city's 2035 model and added the estimated trips generated by Philip Road Site project in 2028, assuming that the model represents buildout of all the planned developments in the study area, and that those would be completed by that time.

For both the opening year plus project and cumulative year plus project scenarios, project-generated traffic was added to the respective opening year scenario or cumulative year scenario's traffic volumes.

Intersection Delay and Level of Service (LOS)

Level of service (LOS) describes the operating conditions experienced by motorists. LOS is a qualitative measure of the effect of a number of factors, including speed and travel time, traffic interruptions and delay, freedom to maneuver, driving comfort, and convenience. LOS A through LOS F covers the entire range of traffic operations that might occur. Motorists using a facility that operates at a LOS A experience very little delay, while those using a facility that operates at a LOS F will experience long delays.

Table 4 presents the relationship of average delay to level of service for both signalized and unsignalized intersections.

The City of Roseville Design Standard Section 4 - Traffic Impact Studies (2023) contains standards to be used in conducting an intersection LOS analysis. The city requires the latest version of the Transportation Research Board, Highway Capacity Manual (HCM) methodology to evaluate peak hour LOS at both signalized and unsignalized intersections. For signalized intersections or all-way stop-controlled intersections, the HCM procedure calculates a weighted average control delay in seconds per vehicle at a signalized intersection and assigns a level of service designation based upon the delay. For unsignalized two-way stop-controlled intersections, the HCM methodology calculates a weighted average control delay in seconds per vehicle for each controlled intersection leg; the LOS for the worst approach is used as the LOS performance measure.

Study intersections were evaluated for the AM peak hour, occurring between 7-9 AM, and the PM peak hour, occurring between 4-6 PM. Intersection LOS for these peak hours is calculated using the Highway Capacity Manual (HCM) 7th Edition methodologies as implemented by the Synchro traffic analysis software.

Table 4: Level of Service Definitions for Intersections

LOS	Description of Traffic Conditions	Signalized Intersection Average Delay Per Vehicle (Seconds)	Unsignalized Intersection Average Delay Per Vehicle (Seconds)
A	Free flowing. Most vehicles do not have to stop.	≤10.0	≤10.0
B	Minimal delays. Some vehicles have to stop, although waits are not bothersome.	>10.0 and ≤20.0	>10.0 and ≤15.0
C	Acceptable delays. Significant numbers of vehicles have to stop because of steady, high traffic volumes. Still, many pass without stopping.	>20.0 and ≤35.0	>15.0 and ≤25.0
D	Tolerable delays. Many vehicles have to stop. Drivers are aware of heavier traffic. Cars may have to wait through more than one red light. Queues begin to form, often on more than one approach.	>35.0 and ≤55.0	>25.0 and ≤35.0
E	Significant delays. Cars may have to wait through more than one red light. Long queues form, sometimes on several approaches.	>55.0 and ≤80.0	>35.0 and ≤50.0
F	Excessive delays. Intersection is jammed. Many cars have to wait through more than one red light, or more than 60 seconds. Traffic may back up into "up-stream" intersections.	>80.0	>50.0

Source: Transportation Research Board, Highway Capacity Manual 7th Edition (Washington D.C., 2022)

CITY OF ROSEVILLE LOS STANDARDS

Per the City of Roseville Traffic Impact Studies (2016), the peak hour design objective shall be a minimum intersection Level of Service (LOS) "C." A comparison of LOS with and without project conditions shall be provided for all signalized intersections (both existing and future). Intersections where LOS degrades from acceptable to unacceptable, as defined by the City's current LOS policy, must be identified, along with feasible recommended improvements. An "impact" refers to a violation of the City's intersection LOS policy, which requires maintaining a minimum LOS C at 70% or more of all signalized intersections and roadway segments during the PM peak hour, or causing an intersection operating at LOS "C" to degrade to worse than LOS C.

Exceptions to the LOS C standard may be considered if the city determines that the necessary improvements are unacceptable based on established implementation criteria. Additionally, Pedestrian Districts may be exempt from the LOS standard.

Recommended Improvements

Intersection LOS without and with the project are compared for all analysis scenarios to determine operational deficiencies based on the LOS standards and criteria for the city. Where deficiencies were found, recommendations are made for changes to improve the intersection to a non-deficient condition, where improvements are feasible. Peak hour signal warrant analyses are conducted as necessary to assess whether an unsignalized intersection meets the peak hour signal warrant.

PROJECT TRAFFIC

Project-related trip estimates were calculated to assess the project's potential impact on traffic operations for the roadway network.

Trip Generation

For the RRTO facilities, trucks are the primary trip generator and estimated based on the tonnage of materials being processed, including but not limited to collection vehicles, self-haul vehicles, and transfer trucks. The type of collection vehicles and the weights per load values were associated with the amount of tonnage to be processed to estimate likely trip generation, i.e., total daily trips, incoming and outgoing AM and PM peak hour trips. Based on the provided project description, the assumed payload for the refuse/recycling collection trucks is 9 tons and the assumed payload for the transfer/commodity shipment trucks is 20 tons. The annual truck trips for 2028 are 30,000 for refuse or recycling collection trucks and 13,500 for transfer or commodity shipment trucks. The annual truck trips for 2040 are 74,000 for refuse or recycling collection trucks and 33,000 for transfer or commodity shipment trucks. Since trucks are larger and less maneuverable than typical vehicles within the local circulation system, a Passenger Car Equivalent (PCE) factor of 2 has been applied to the project trucks. The resulting number of trips would be used in the local transportation analysis. Additionally, the AM and PM peak hour rates were estimated based on a similar project in San Juan Capistrano, California, assuming AM and PM trips account for 10% of daily trips, respectively. The number of total facility throughout tons and the project annual truck trips are shown in Table 5.

Table 5: Estimated Quantity of Annual Materials Managed at the RRTO and Project Annual Tributary Traffic for Materials Receipt and Removal

Year	Total Facility Throughput Tons	Refuse or Recycling Collection Trucks	Transfer or Commodity Shipment Trucks
2028	270,000	30,000	13,500
2040	660,000	74,000	33,000

Based on the combined RRTO and EU Operations Facility Corporation Yard sizing efforts, the staffing levels, i.e., the number of employees by each construction phase are shown in Table 6. As per the table, the net new employees to be accommodated at the proposed project would

be 58 (in 2028), and 529 (in 2040). The trips generated by the existing 165 employees at the Hilltop Circle Corporation Yard would be added to each of the analysis scenarios to establish total employees using the site.

For estimating the number of trips made by employees for the proposed project, Kittelson used the ITE Trip Generation Manual Land Use Code 710 (General office building) rates, shown in Table 7. Kittelson calculated the employee trip generation estimates for use in the local transportation analysis, they are shown in Table 8.

Table 6: Number of Employees during each phase of construction for combined RRTO and EU Operations Facility Corporation Yard

Functional Use	Existing Conditions	2028	2058

710	Employees	3.33	88%	12%	0.49	17%	83%	0.45

The truck trips and employee trips are combined to obtain the total number of daily trips generated by the project. As shown in Table 8, the proposed project is expected to generate 981 daily trips with 133 AM (108 inbound and 25 outbound) peak hour trips and 124 PM (29 inbound and 95 outbound) peak hour trips in the opening year of 2028. At full buildout in 2040, the project is expected to generate 2,898 daily trips with 399 AM (329 inbound and 70 outbound) peak hour trips and 372 PM (83 inbound and 289 outbound) peak hour trips.

[23] Existing employees provided for informational purposes.
[24] The employee estimates for RRTO facility and corporation yard include the existing and the proposed project employee estimates.

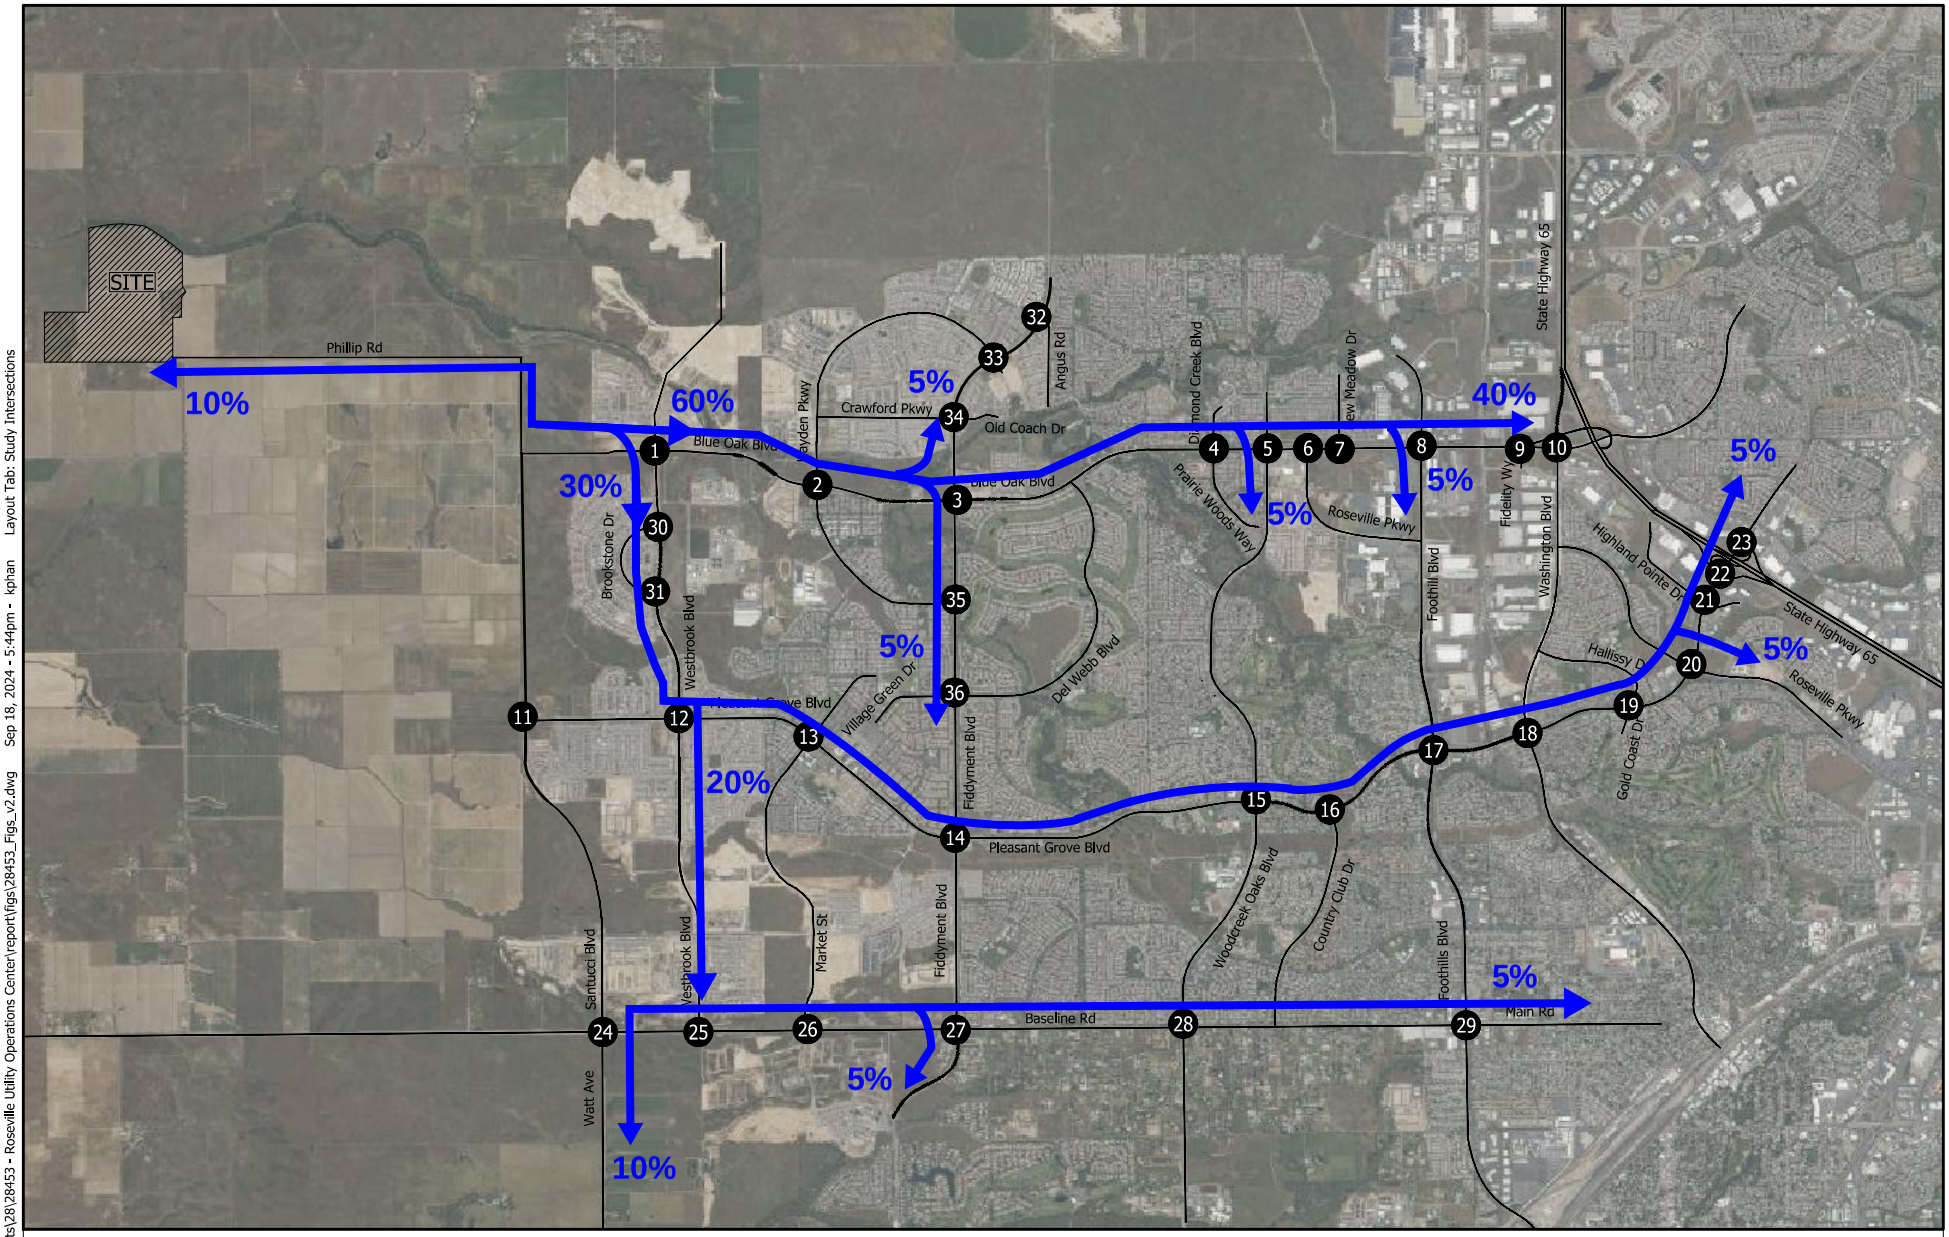
Trip Distribution

For the new proposed project trips, Kittelson considered the travel time comparison for travel between the project site using city roadways to state highway system, i.e., SR 65 and interstate 80 (I-80) when developing trip distribution. This was supplemented by information on the expected distribution of the proposed project trips using the City of Roseville base year (2020) travel demand model.

The trip distribution assumptions in the opening year and cumulative year are shown in Figure 7 and Figure 8, respectively, include:

- Approximately 50 percent of trips would use Blue Oaks Boulevard to access SR 65 via the interchange. In the cumulative year, once Placer Parkway is built, 30 percent of trips would shift from Blue Oaks Boulevard to Placer Parkway to access SR 65.
- Approximately 5 percent would take Fiddyment Road to access SR 65.
- Approximately 30 percent would use Westbrook Boulevard to Pleasant Grove Boulevard, to either travel to/from the east on Pleasant Grove Boulevard to access I-80 or to/from the south on Fiddyment Road.
- Approximately 10 percent would use S Brewer Road to travel on Baseline Road to access SR-99 or I-80.
- The remaining 5 percent would remain within the area west of Fiddyment Road and south of Blue Oaks Boulevard.

The trip distribution for trucks generally follows a similar pattern, however, the truck routes being used today for these purposes and proposed project site driveways are considered for determining the truck trip assignment separately.



Study Scenarios

The LTA will examine traffic operations at study intersections for the following scenarios in the AM and PM peak hours:

- Existing Conditions
  - Provides an overview of intersection operations as of October 2024, based on the turning movement counts collected at that time.
- Opening Year No Project Conditions (2028)
  - Represents traffic conditions in the year 2028 assuming the Philip Road Site Project is built, but without project-generated traffic.
  - Includes roadway improvements on Blue Oaks Boulevard and Phillip Road implemented after the traffic volumes were collected in October 2024.
- Opening Year Plus Project Conditions (2028)
  - Evaluates how the transportation network will operate in 2028 with the proposed project.
  - Assumes the same lane configurations and traffic control measures as the Opening Year No Project scenario.
- Cumulative Year No Project Conditions (2040)
  - Projects transportation network performance in 2040 based on area buildout, excluding project-generated traffic.

  - Reflects network changes identified in the Roseville Housing Element Synchro files developed by Fehr & Peers, as detailed in the Cumulative Year No Project Traffic Volume section.

- Cumulative Year Plus Project Conditions (2040)
  - Assesses future transportation operations in 2040 with the proposed project in place.
  - Maintains the same lane configurations and traffic control types as the Cumulative No Project scenario.

KITTELSON & ASSOCIATES

EXISTING TRAFFIC OPERATIONS

Existing Traffic Volumes

Weekday intersection vehicle turning movement counts were collected during the AM (7:00 AM to 9:00 AM) and PM (4:00 PM to 6:00 PM) peak periods on Thursday, October 24, 2024, at the study intersections. The existing counts for the study intersections in the AM and PM peak hour are shown in Figure 9 and Figure 10, respectively. The intersection turning movement count data are provided in Appendix C. The existing lane configurations and traffic control types are shown in Figure 11.

Existing Intersection Operations

Table 9 summarizes the operational performance of the study intersections during the AM and PM peak hours under existing conditions. Most of the intersections currently operate at LOS C or better during both AM and PM peak hours.

The signalized intersections operating at LOS D or worse in the AM peak hour are:

- Intersection 14: Fiddyment Road & Pleasant Grove Boulevard – LOS D
- Intersection 15: Woodcreek Oaks Boulevard & Pleasant Grove Boulevard – LOS D
- Intersection 17: Foothills Boulevard & Pleasant Grove Boulevard – LOS D
- Intersection 18: Washington Boulevard & Pleasant Grove Boulevard – LOS E
- Intersection 19: Hallissy Drive/Gold Coast Drive & Pleasant Grove Boulevard – LOS D
- Intersection 20: Pleasant Grove Boulevard & Roseville Parkway – LOS E
- Intersection 27: Fiddyment Road & Baseline Road – LOS D
- Intersection 28: Woodcreek Oaks Boulevard/Cook Riolo Road & Baseline Road – LOS D

The signalized intersections operating at LOS D or worse in the PM peak hour are:

- Intersection 17: Foothills Boulevard & Pleasant Grove Boulevard – LOS D
- Intersection 18: Washington Boulevard & Pleasant Grove Boulevard – LOS D
- Intersection 20: Pleasant Grove Boulevard & Roseville Parkway – LOS E
- Intersection 27: Fiddyment Road & Baseline Road – LOS D
- Intersection 29: Foothills Boulevard & Baseline Road/Main Street – LOS D

Additionally, each of the all-way stop-controlled intersections currently operate at LOS C or better. The LOS calculation sheets for existing conditions are shown in Appendix D.

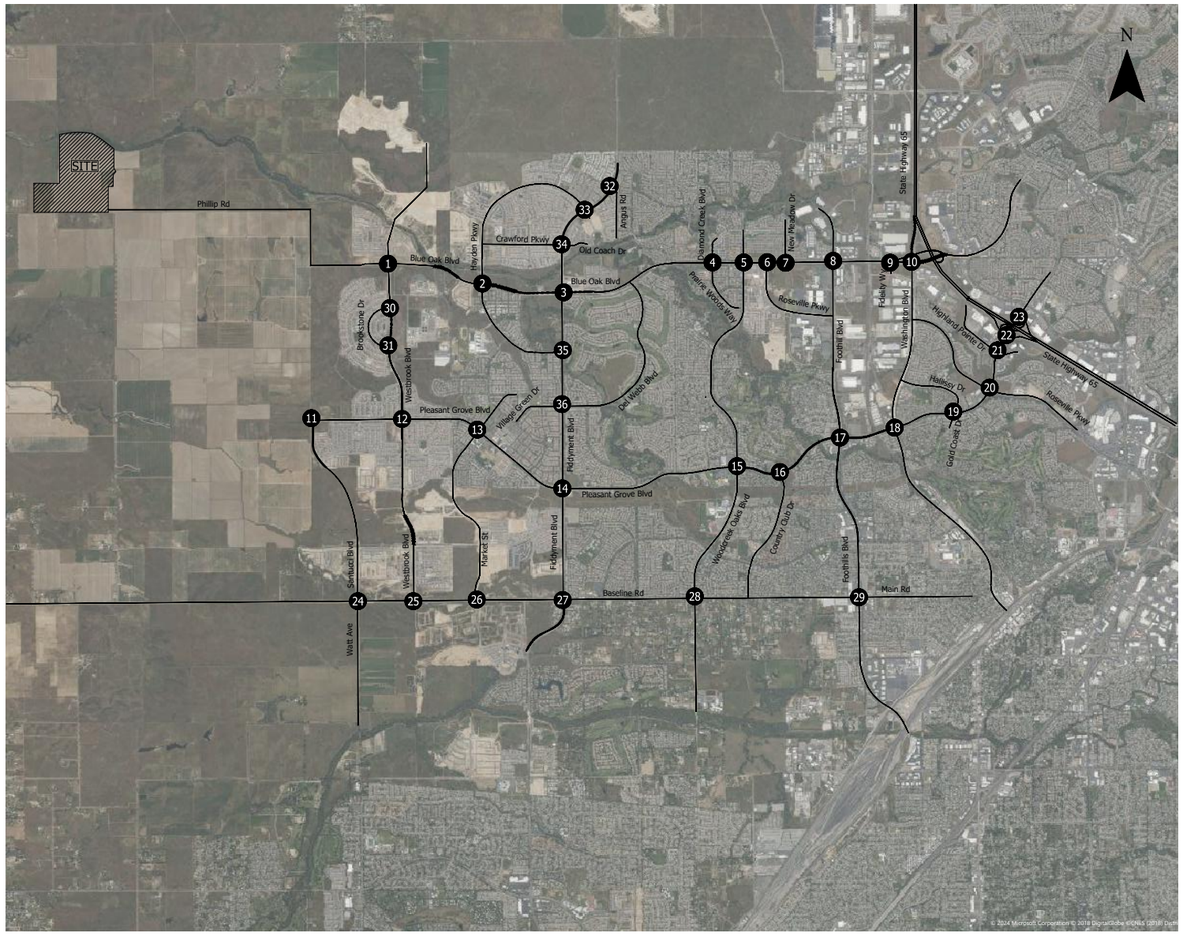

Table 9: Existing Traffic Operations

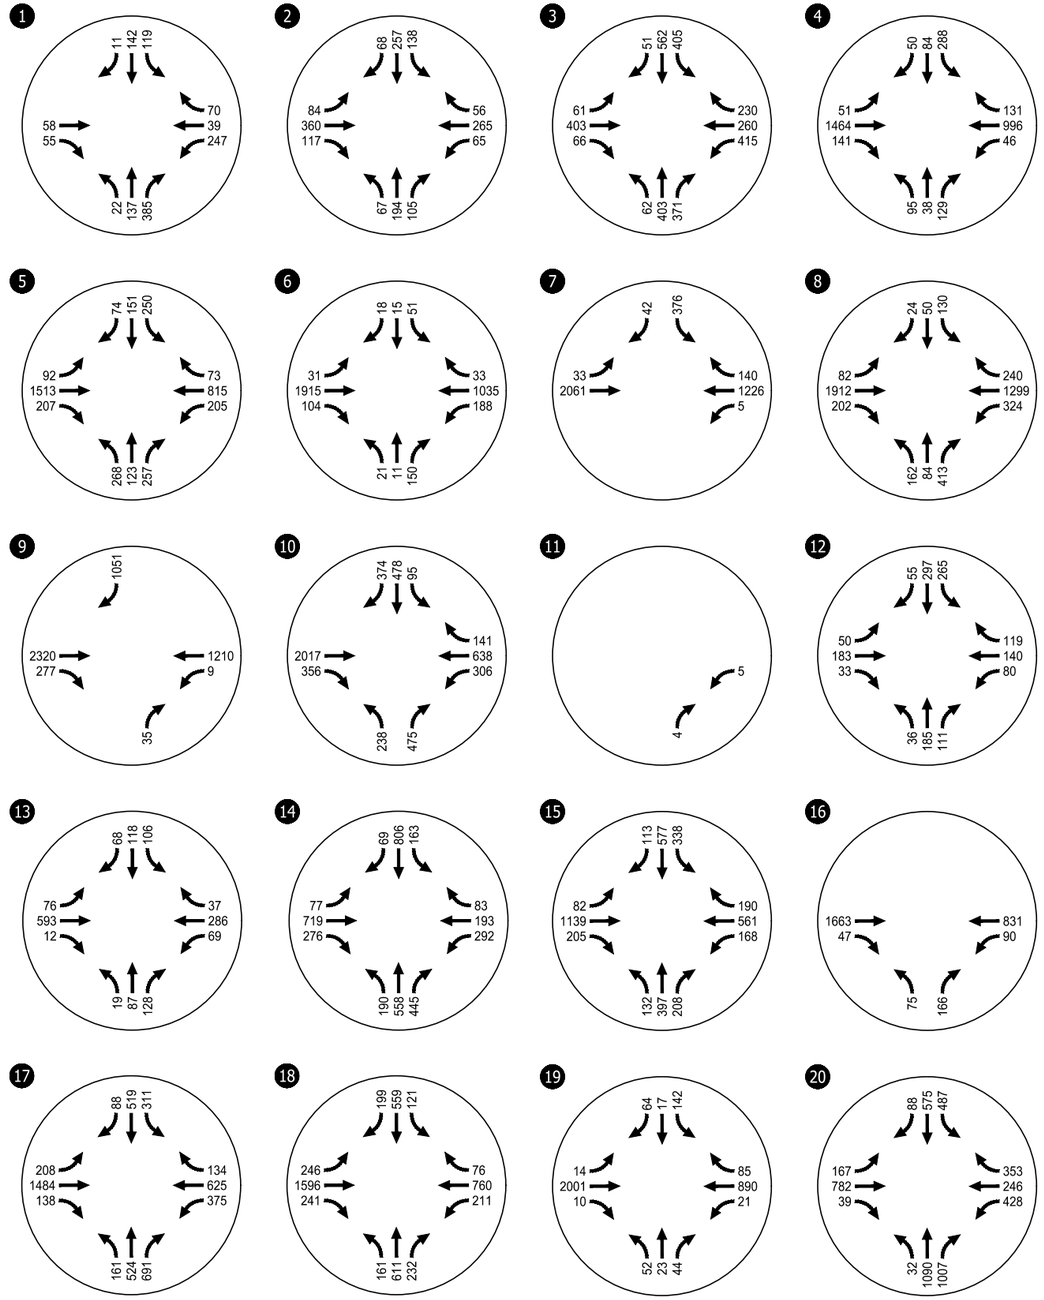

ID	North-South Street	East-West Street	Control Type	Existing AM		Existing PM	
				Delay	LOS	Delay	LOS

Notes:
* These intersections were unsignalized when turning movement counts were collected in October 2024 but were signalized in early 2025. As a result, the existing conditions analysis does not reflect the updated signalization; however, the 2028 opening year scenarios will incorporate these changes.
AWSC = All-way stop control. Delay = Average vehicle delay in seconds
[1] The HCM 7th Edition methodology for all-way stop-controlled intersections does not support configurations with more than three lanes per leg; therefore, LOS is reported based on the ICU method.
[2] The HCM 7th Edition methodology for all-way stop-controlled intersections does not support configurations with more than three lanes per leg. However, since some movements have zero volume, lane configurations were modified to allow delay and LOS to be reported.
[3] The study area includes a portion of all signalized intersections citywide.

KITTELSON & ASSOCIATES

OPENING YEAR TRAFFIC OPERATIONS

The opening year is identified as 2028, when Phase 1 of the project will be constructed and operational. Phase 1 will include the initial phase of the RRTO building, consisting of a large multipurpose facility designed to handle all three waste streams (recyclables, municipal solid waste, and organic waste), along with an administration building to support RRTO employee and management needs. Phase 1 will also include the development of an entrance/exit scale plaza, an administration office with employee parking, and the Vendor Lease Area.

Opening Year No Project Traffic Volumes

Based on discussions with the city, the opening year no project scenario assumes existing traffic volumes plus traffic generated by the Phillip Road Site Project, located at 6382 Phillip Road, approximately two miles east of the Roseville EU Operations Center project site. The Phillip Road Site Project is a mixed-use industrial development that includes manufacturing, warehousing, and distribution uses. The site will be internally connected by a bridge spanning Pleasant Grove Creek and the Pleasant Grove Creek Bypass Channel. The project also includes parks, utility extensions, and roadway improvements along Blue Oaks Boulevard and Phillip Road. Off-site roadway connections will be provided via Blue Oaks Boulevard and Benchmark Drive.

Trip generation for the Phillip Road Site Project was estimated using ITE land use trip generation rates, with the detailed land use breakdown and trip generation calculations provided in Appendix E. The trip distribution assumptions are consistent with the draft environmental impact report that Ascent provided in February 2023 related to this project).[25] Project-generated trips were added to existing volumes to establish the opening year no project scenario volumes at each study intersection during the AM and PM peak hours, as shown in Figure 12 and Figure 13, respectively.

This scenario reflects the roadway improvements on Blue Oaks Boulevard and Phillip Road, including the signalization of the intersections along Westbrook Boulevard at Blue Oaks Boulevard and Brookstone Drive, which were implemented after the turning movement counts were collected in October 2024. The lane configurations and traffic control types at the study intersections under opening year conditions are illustrated in Figure 14.

Opening Year No Project Intersection Operations

Table 10 summarizes the operational performance of the study intersections during the AM and PM peak hours under opening year no project conditions. With the planned lane configurations and traffic volumes for the opening year, 9 of the 36 signalized intersections are projected to operate at LOS D or worse during the AM peak hour, and 8 are projected to operate at LOS D or worse during the PM peak hour.

The signalized intersections operating at LOS D or worse in the AM peak hour are:

- Intersection 12: Westbrook Boulevard & Pleasant Grove Boulevard – LOS D (from LOS C in the existing conditions)
- Intersection 14: Fiddyment Road & Pleasant Grove Boulevard – LOS D (same as existing conditions)

[25] Draft Environmental Impact Report for the Panattoni Project by Ascent, February 2023.

- Intersection 15: Woodcreek Oaks Boulevard & Pleasant Grove Boulevard – LOS E (from LOS D in the existing conditions)
- Intersection 17: Foothill Boulevard & Pleasant Grove Boulevard – LOS D (same as existing conditions)
- Intersection 18: Washington Boulevard & Pleasant Grove Boulevard – LOS E (same as existing conditions)
- Intersection 19: Hallissy Drive/Gold Coast Drive & Pleasant Grove Boulevard – LOS D (same as existing conditions)
- Intersection 20: Pleasant Grove Boulevard & Roseville Parkway – LOS E (same as existing conditions)
- Intersection 27: Fiddyment Road & Baseline Road – LOS D (same as existing conditions)
- Intersection 28: Woodcreek Oaks Boulevard/Cook Riolo Road & Baseline Road – LOS D (same as existing conditions)

The signalized intersections operating at LOS D or worse in the PM peak hour are:

- Intersection 8: Foothills Boulevard & Pleasant Grove Boulevard – LOS D (from LOS C in the existing conditions)
- Intersection 10: Foothills Boulevard & Pleasant Grove Boulevard – LOS D (from LOS C in the existing conditions)
- Intersection 14: Foothills Boulevard & Pleasant Grove Boulevard – LOS D (same as existing conditions)
- Intersection 17: Foothills Boulevard & Pleasant Grove Boulevard – LOS D (same as existing conditions)
- Intersection 18: Washington Boulevard & Pleasant Grove Boulevard – LOS D (same as existing conditions)
- Intersection 20: Pleasant Grove Boulevard & Roseville Parkway – LOS E (same as existing conditions)
- Intersection 27: Fiddyment Road & Baseline Road – LOS D (same as existing conditions)
- Intersection 29: Foothills Boulevard & Baseline Road/Main Street – LOS D (same as existing conditions)

The LOS calculation sheets for opening year no project conditions are shown in Appendix F.

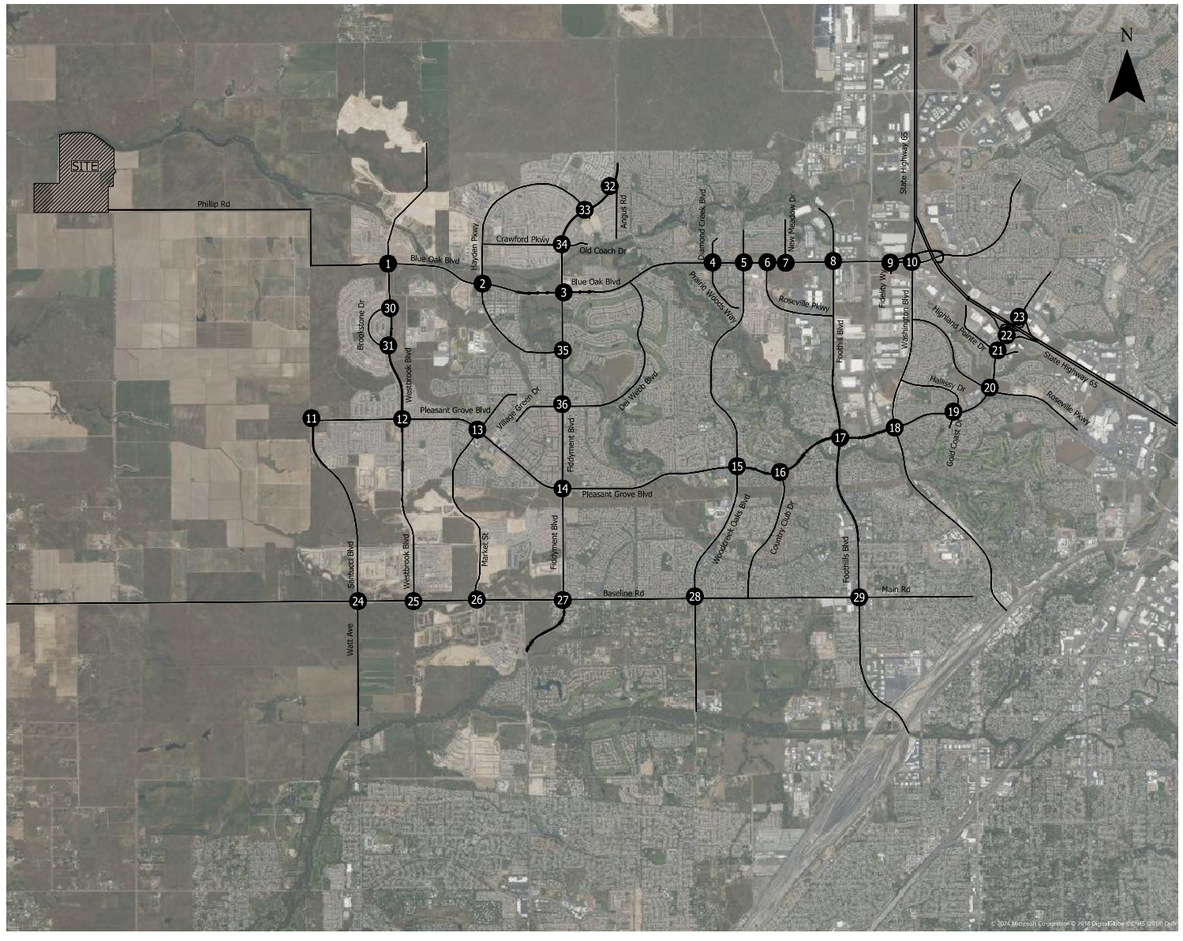
Opening Year Plus Project Traffic Volumes

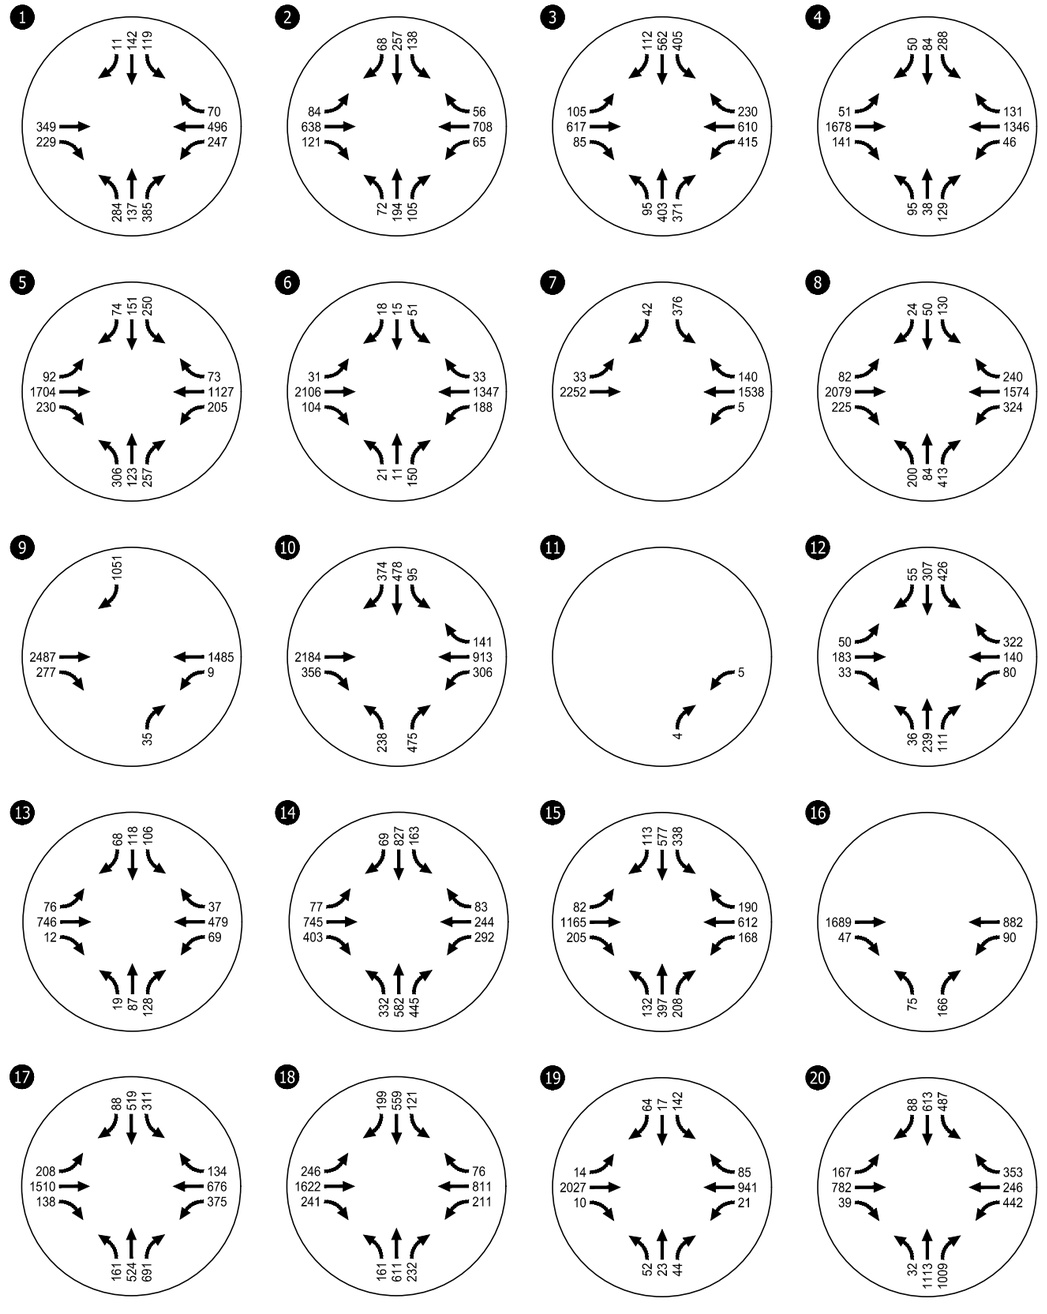
The opening year plus project conditions combine the opening year no project volumes with the project-generated volumes, which are estimated based on the trip generation and trip distribution assumptions for Phase 1 described in the sections above.

The opening year plus project traffic operations are evaluated for AM and PM peak hours. This scenario assumes the opening year no project intersection lane configurations and traffic control types. The opening year plus project volumes for the study intersections in the AM and PM peak hour are shown in Figure 15 and Figure 16, respectively. The lane configurations and traffic control types under opening year plus project conditions are the same as those under the no project scenario, shown in Figure 14.



Opening Year Plus Project Intersection Operations

Table 11 summarizes the operational performance of the study intersections during the AM and PM peak hours under opening year plus project conditions. Most of the intersections would continue to operate at LOS C or better during both AM and PM peak hours.



All intersections are expected to maintain the same level of service (LOS) as under the no project scenario, with two exceptions:

- Intersection 3 (Fiddyment Road & Blue Oaks Boulevard) is projected to degrade from LOS C to LOS D during the PM peak hour.
- Intersection 12 (Westbrook Boulevard & Pleasant Grove Boulevard) is also expected to degrade from LOS C to LOS D during the PM peak hour.

Improvements to address the impacts caused by project traffic are discussed in the Improvement Recommendations section. The LOS calculation sheets for opening year plus project conditions are provided in Appendix G.

IMPROVEMENT RECOMMENDATIONS

Recommendations for lane modifications and traffic control changes are provided to address operational deficiencies under opening year plus project conditions. Table 12 lists the recommended improvements for opening year traffic associated with the development of Phase 1 of the Roseville EU Operations Center Project. Table 13 shows the traffic operational changes with and without the recommended improvements.

For the intersection of Fiddyment Road and Blue Oaks Boulevard, an overlap phase to provide northbound right-turn movements with a green arrow during westbound left-turns was analyzed and found to improve operations to LOS C for the PM peak. However, this would restrict westbound U-turns which currently are desired to maintain circulation for the larger roadway network. Therefore, no improvements are recommended, and this location would degrade to LOS D during the PM peak hour.

The synchro operational result reports for opening year plus project conditions with improvements are shown in Appendix H.

Table 12: Recommended Improvements

ID	Intersection	Lane Changes	Traffic Control Change
3	Fiddyment Rd & Blue Oaks Blvd	None	None
12	Westbrook Blvd & Pleasant Grove Blvd	Add an additional southbound left turn lane	None

Table 13: Intersection Operations with Recommended Improvements – Opening Year Plus Project

ID	Intersection	Peak Hour	Opening Year Plus Project		Recommended Improvements	Opening Year Plus Project With Improvement	
			Delay	LOS		Delay	LOS
12	Westbrook Blvd & Pleasant Grove Blvd	AM	53.3	D	Add an additional southbound left turn lane	38.0	D
		PM	39.5	D		27.0	C

Table 14: 95th percentile queues Results with Recommended Improvements – Opening Year Plus Project

#	Intersection	Cumulative Plus Project Scenario	Eastbound		Westbound		Northbound		Southbound	
			L	R	L	R	L	R	L	R
12	Westbrook Blvd & Pleasant Grove Blvd	Planned Storage	240	250	240	250	240	250	240	250
		AM	52	0	75	28	80	35	**286**	6
		PM	21	0	79	24	74	0	**294**	0

The results are as follows:

- As shown in Table 13, the recommended roadway improvements would provide acceptable operations (LOS C or better) at the intersection of Westbrook Boulevard and Pleasant Grove Boulevard in the PM peak hour but it doesn't change the LOS in the AM peak hour.
- As shown in Table 14, the 95th percentile queue analysis indicates that all queues can be accommodated within the planned storage lengths, with the exception of the southbound left-turn movements at Westbrook Boulevard and Pleasant Grove Boulevard. These queues are expected to be contained within the taper lengths and are not anticipated to interfere with through traffic.

CUMULATIVE YEAR TRAFFIC OPERATIONS

Cumulative conditions refer to the full buildout of the project and the surrounding area, anticipated by the year 2040. To represent cumulative conditions with the project, the full trip generation associated with the Roseville EU Operations Center Project was added to the cumulative no project volumes.

Cumulative No Project Traffic Volumes

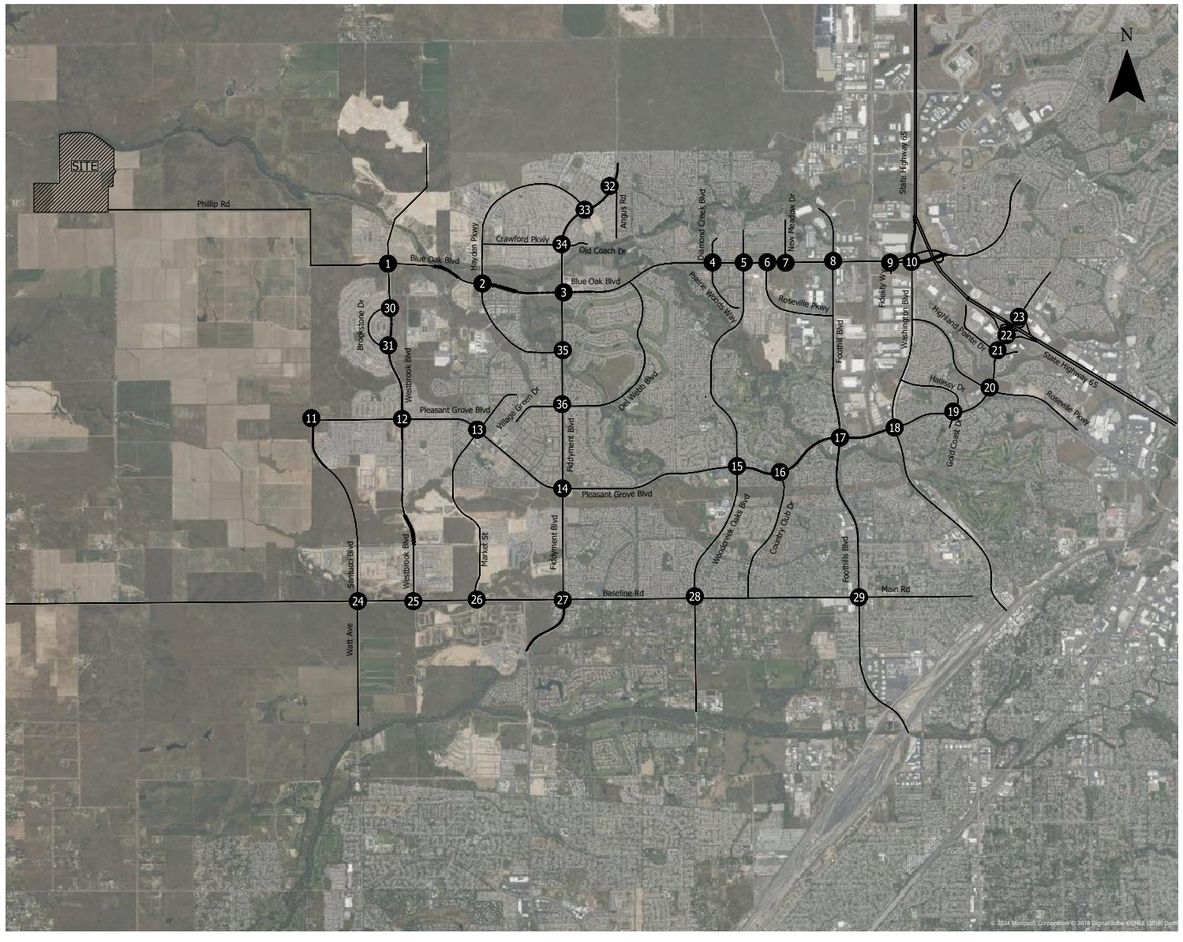
Cumulative no project traffic volumes were obtained from the Roseville Housing Element Synchro files developed by Fehr & Peers. These volumes were based on the City's 2035 travel demand model, which assumes the Phillip Road Site Project is not developed. The trips generated by the Phillip Road Site Project were then added to these volumes. The resulting cumulative volumes for the study intersections during the AM and PM peak hours are shown in Figure 17 and Figure 18, respectively.

Cumulative no project traffic operations were evaluated for both the AM and PM peak hours. This scenario uses the intersection lane configurations and traffic control types identified in the Roseville Housing Element Synchro files and changes compared to existing conditions are attached in Appendix I. The proposed lane configurations and traffic control types are illustrated in Figure 19.

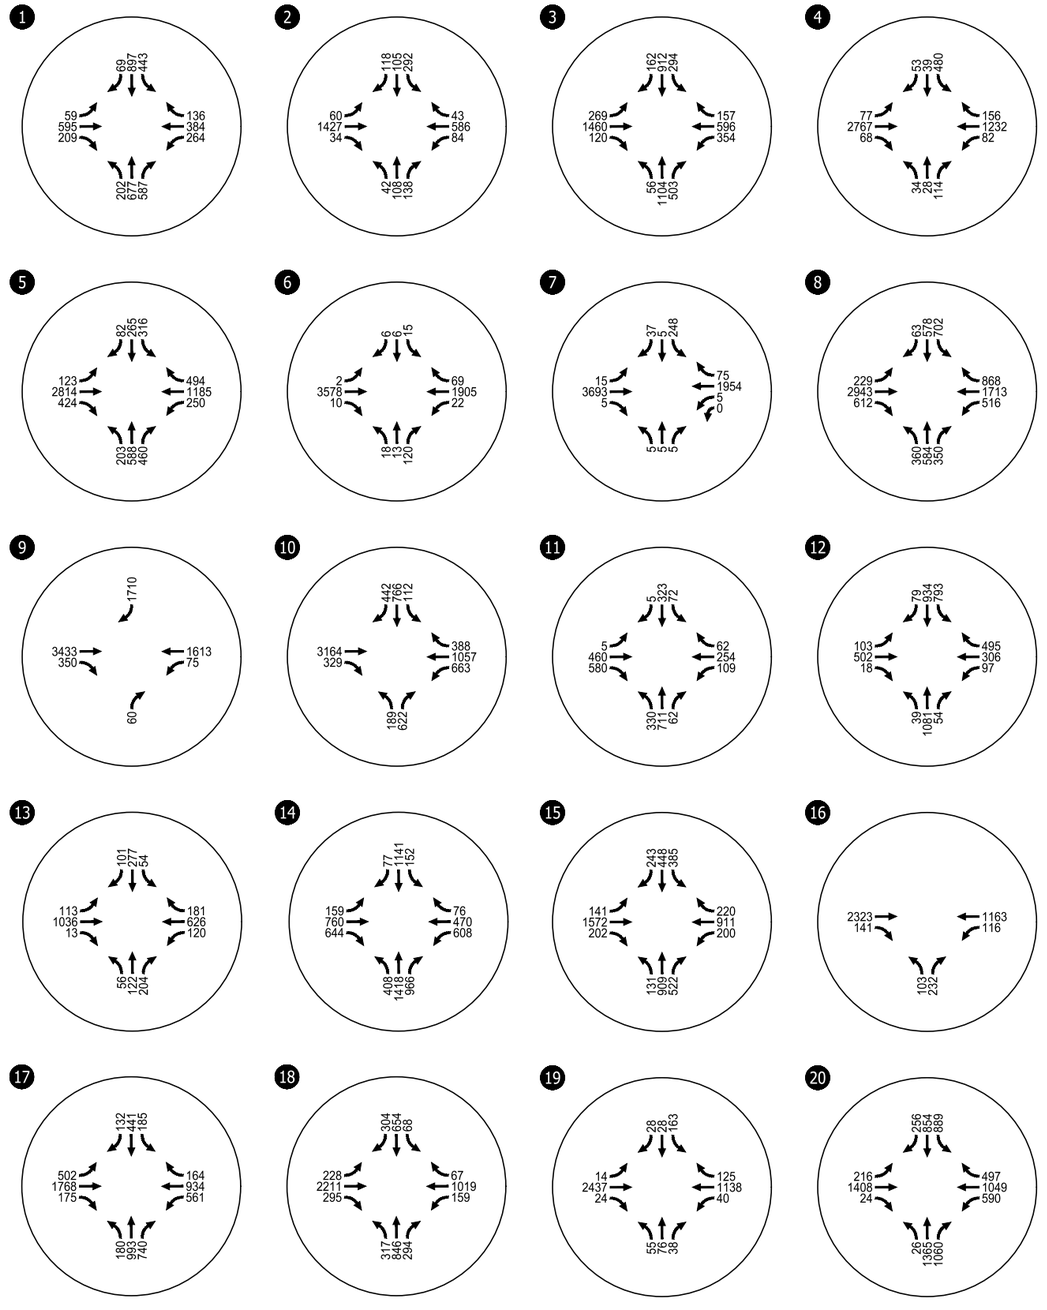
Cumulative No Project Intersection Operations

Table 17 summarizes the operations of the study intersections during the AM and PM peak hours under Cumulative No Project conditions. With the proposed lane configurations and traffic volumes, all intersections are expected to be signalized, with 19 intersections projected to operate at LOS D or worse during the AM peak hour and the PM peak hour.

The signalized intersections operating at LOS D or worse in the AM peak hour are:



- Intersection 1: Westbrook Boulevard & Blue Oaks Boulevard – LOS D
- Intersection 3: Fiddyment Road and Blue Oaks Boulevard – LOS E
- Intersection 4: Diamond Creek Boulevard/Prairie Woods Way & Blue Oaks Boulevard – LOS D
- Intersection 5: Woodcreek Oaks Boulevard & Blue Oaks Boulevard – LOS D
- Intersection 8: Foothills Boulevard & Blue Oaks Boulevard – LOS F
- Intersection 10: Washington Boulevard & Blue Oaks Boulevard – LOS F
- Intersection 12: Westbrook Boulevard & Pleasant Grove Boulevard – LOS E
- Intersection 13: Market Street & Pleasant Grove Boulevard – LOS D
- Intersection 14: Fiddyment Road & Pleasant Grove Boulevard – LOS F
- Intersection 15: Woodcreek Oaks Boulevard & Pleasant Grove Boulevard – LOS E
- Intersection 17: Foothills Boulevard & Pleasant Grove Boulevard – LOS E
- Intersection 18: Washington Boulevard & Pleasant Grove Boulevard – LOS D
- Intersection 19: Hallissy Drive/Gold Coast Drive & Pleasant Grove Boulevard – LOS D
- Intersection 20: Pleasant Grove Boulevard & Roseville Parkway – LOS F
- Intersection 24: Santucci Boulevard/Watt Avenue & Baseline Road – LOS D
- Intersection 25: Westbrook Boulevard & Baseline Road – LOS E
- Intersection 27: Fiddyment Road & Baseline Road – LOS E



- Intersection 28: Woodcreek Oaks Boulevard/Cook Riolo Road & Baseline Road – LOS F
- Intersection 29: Foothills Boulevard & Baseline Road/Main Street – LOS E

The signalized intersections operating at LOS D or worse in the PM peak hour are:

- Intersection 1: Westbrook Boulevard & Blue Oaks Boulevard – LOS F
- Intersection 3: Fiddyment Road and Blue Oaks Boulevard – LOS F
- Intersection 4: Diamond Creek Boulevard/Prairie Woods Way & Blue Oaks Boulevard – LOS F
- Intersection 5: Woodcreek Oaks Boulevard & Blue Oaks Boulevard – LOS F
- Intersection 8: Foothills Boulevard & Blue Oaks Boulevard – LOS F
- Intersection 10: Washington Boulevard & Blue Oaks Boulevard – LOS D
- Intersection 13: Market Street & Pleasant Grove Boulevard – LOS D
- Intersection 14: Fiddyment Road & Pleasant Grove Boulevard – LOS F
- Intersection 15: Woodcreek Oaks Boulevard & Pleasant Grove Boulevard – LOS D
- Intersection 17: Foothills Boulevard & Pleasant Grove Boulevard – LOS E
- Intersection 18: Washington Boulevard & Pleasant Grove Boulevard – LOS E
- Intersection 19: Hallissy Drive/Gold Coast Drive & Pleasant Grove Boulevard – LOS D
- Intersection 20: Pleasant Grove Boulevard & Roseville Parkway – LOS F
- Intersection 21: Pleasant Grove Boulevard & Highland Pointe Drive – LOS E
- Intersection 24: Santucci Boulevard/Watt Avenue & Baseline Road – LOS E
- Intersection 25: Westbrook Boulevard & Baseline Road – LOS D
- Intersection 27: Fiddyment Road & Baseline Road – LOS E
- Intersection 28: Woodcreek Oaks Boulevard/Cook Riolo Road & Baseline Road – LOS F
- Intersection 29: Foothills Boulevard & Baseline Road/Main Street – LOS E

The LOS calculation sheets for cumulative no project conditions are shown in Appendix J.

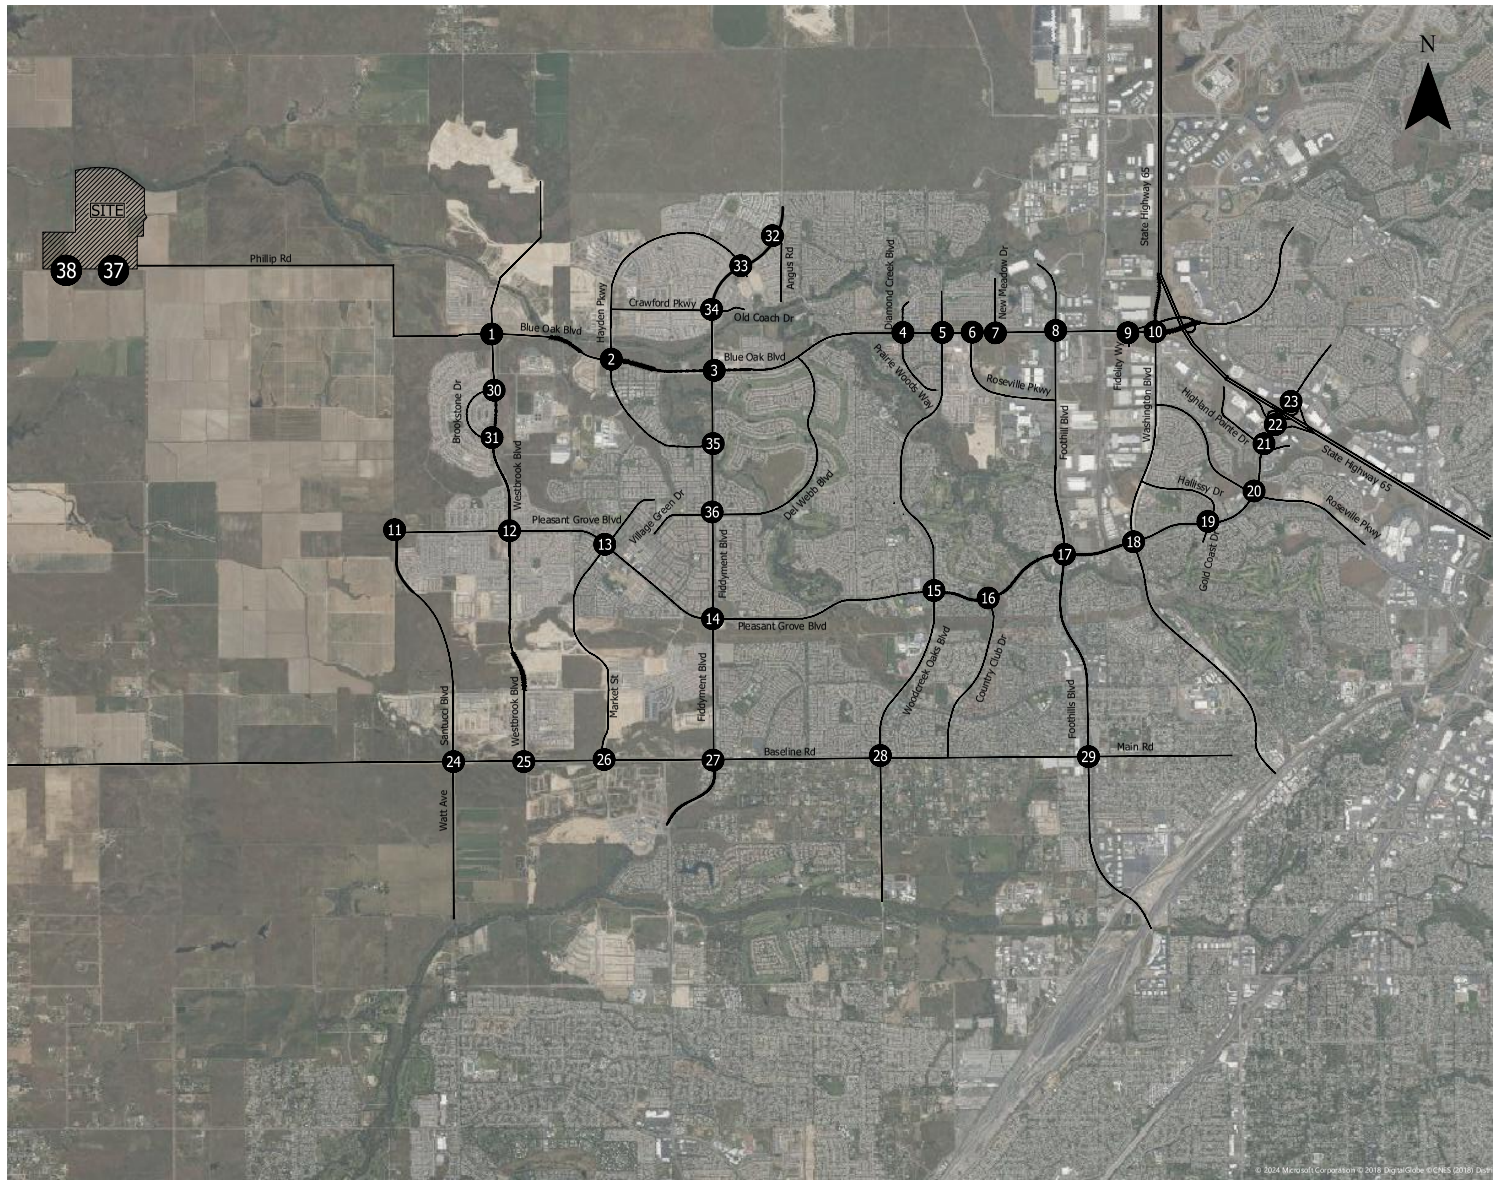
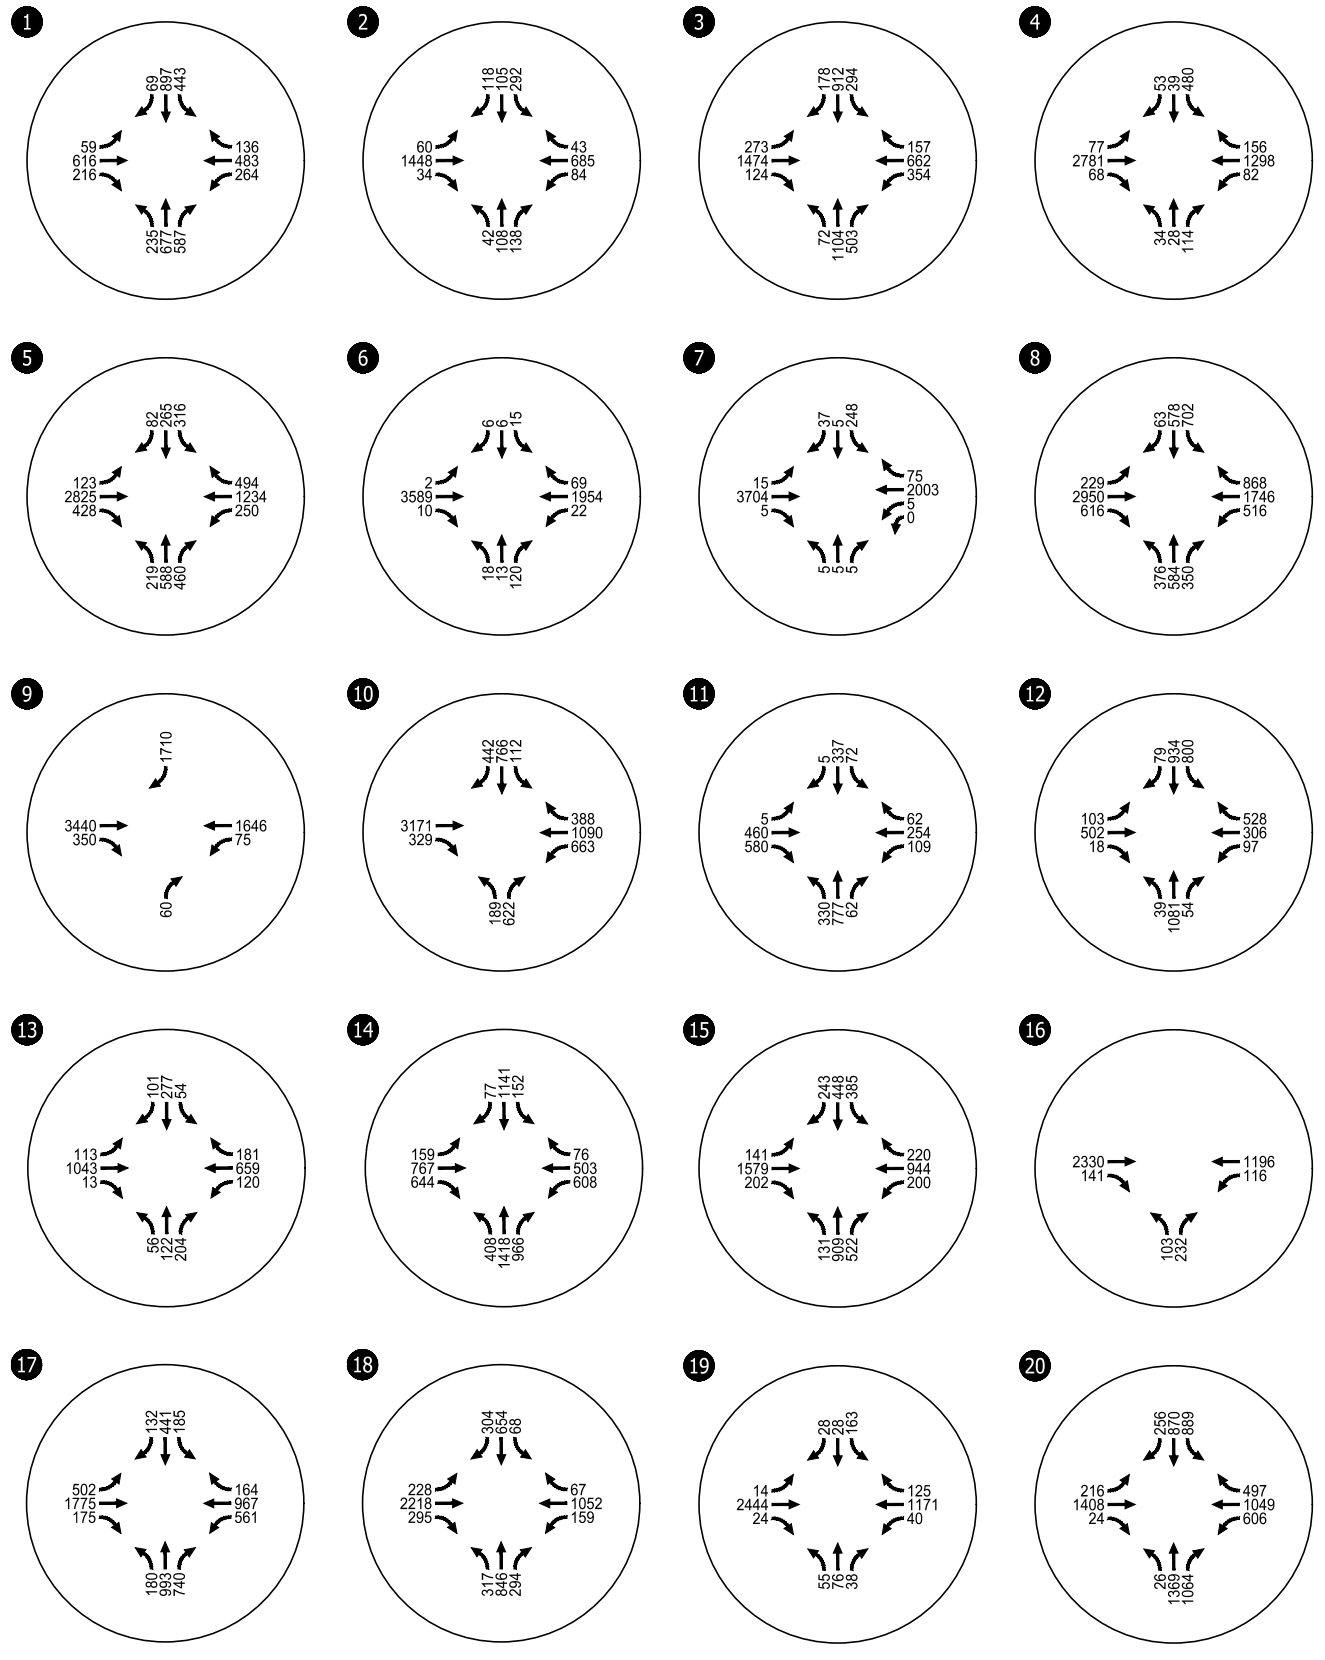
Cumulative Plus Project Traffic Volumes



The cumulative plus project conditions reflect cumulative no project traffic volumes combined with proposed project generated trips, estimated based on the trip generation and distribution assumptions described in earlier sections. Traffic operations under these conditions were evaluated for both the AM and PM peak hours. This analysis assumes the same intersection lane configurations and traffic control types as in the cumulative no project scenario, as shown in Figure 19 previously. The cumulative plus project volumes for the study intersections in the AM and PM peak hour are shown in Figure 20 and Figure 21, respectively.



Cumulative Plus Project Intersection Operations

Table 16 summarizes the operations of the study intersections during the AM and PM peak hours in cumulative plus project conditions. All intersections are projected to operate at the same LOS as under the Cumulative No Project scenario. Therefore, the project is not anticipated to result in significant impacts on the roadway network in the cumulative year.

The unsignalized intersection of Phillip Road at the Passenger Vehicle Driveway is expected to operate at LOS D during the AM peak hour and LOS F during the PM peak hour. Similarly, the unsignalized intersection of Phillip Road at the Truck Driveway is projected to operate at LOS C in the AM peak hour and LOS F in the PM peak hour. Signal warrant analyses and recommended improvements for these two driveway intersections are presented in the following sections.

The LOS calculation sheets for cumulative year with project conditions are shown in Appendix K.

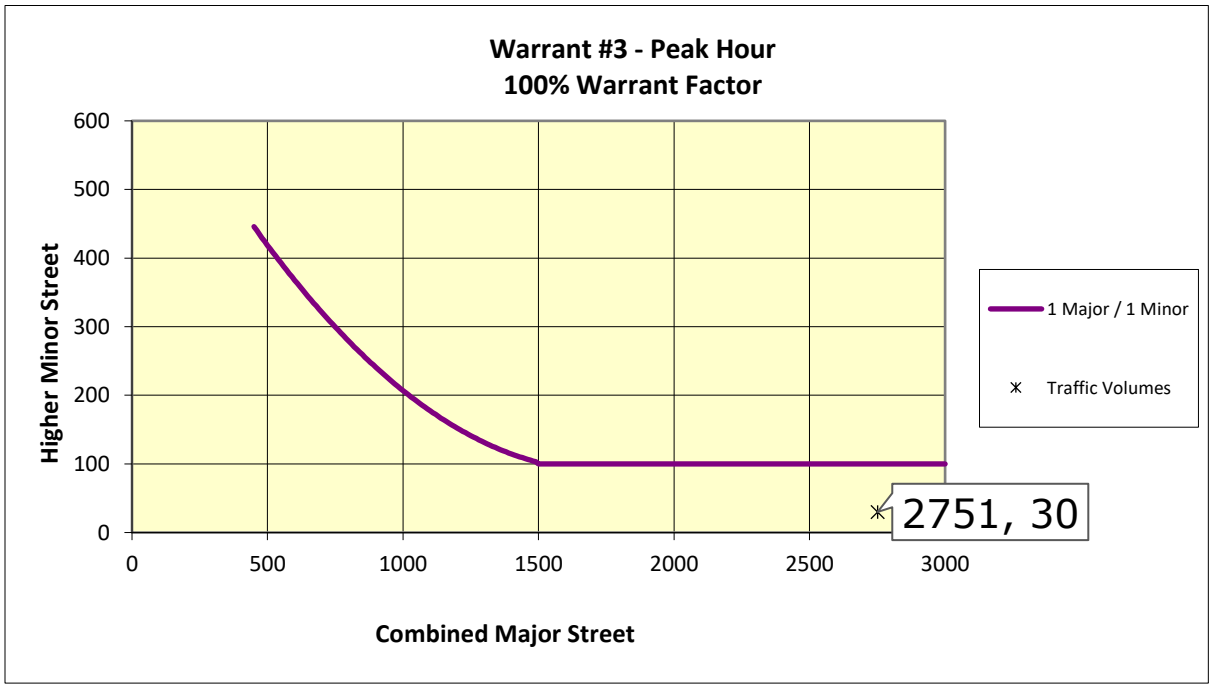
SIGNAL WARRANT ANALYSIS



A signal warrant analysis was conducted for peak hour study periods using the procedures outlined in the 2014 California Manual on Uniform Traffic Control Devices (CA MUTCD). The Peak Hour Signal Warrant is intended to determine where traffic conditions suggest that, for at least one hour of an average day, minor-street traffic experiences undue delay when entering or crossing the major street. Peak Hour Signal Warrant analyses were conducted for two project driveway intersections under cumulative year conditions, which are one lane per direction on all roads. Figure 22 presents the warrant analysis results for the intersection of Phillip Road and the Passenger Vehicle Driveway, while Figure 23 shows the findings for the intersection of Phillip Road and the Truck Driveway. The plotted point, representing the total vehicles per hour on Phillip Road (both approaches combined) and the vehicles per hour on the Passenger Vehicle Driveway approach, falls above the applicable curve for the combination of approach lanes. Therefore, The intersection at Phillip Road and the Passenger Vehicle Driveway meets the peak hour signal warrant under cumulative plus project conditions, whereas the intersection at Phillip Road and the Truck Driveway does not meet the warrant criteria.

Figure 22: Peak Hour Signal Warrant Analysis for Intersection of Phillip Road and Passenger Vehicle Driveway

IMPROVEMENT RECOMMENDATIONS

Recommendations are provided for lane modifications and traffic control improvements at the project driveway intersections to address level of service (LOS) deficiencies under cumulative plus project conditions.

As shown in Table 17, it is recommended that a traffic signal be installed at the intersection of Phillip Road and Passenger Vehicle Driveway, along with the addition of a southbound right-turn pocket on the driveway.

Since the intersection of Phillip Road and the Truck Driveway does not meet signal warrant criteria, no feasible mitigation is identified to improve its operations, unless Phillip Road is widened from two lanes to four lanes.

Table 18 summarizes the traffic operations with and without the recommended improvements. With these improvements, the intersection of Phillip Road and the Passenger Vehicle Driveway is expected to improve from LOS D to LOS A during the AM peak hour, and from LOS F to LOS D during the PM peak hour. Achieving LOS C in the PM peak hour would require widening Phillip Road to four lanes.

Table 17: Recommended Improvements Under Cumulative Year Plus Project Conditions

ID	Intersection	Lane Changes	Traffic Control Change
37	Phillip Road & Passenger Vehicle Driveway*	Add a southbound right turn storage pocket	Add a signal

*-The City noted that they will need to take this item to the City Council for adoption as an allowable signal that does not meet the City's General Plan LOS policy (i.e., LOS C or better).

Table 18: Intersection Operations with Recommended Improvements – Cumulative Year Plus Project

ID	Intersection	Control Type	Peak Hour	Cumulative Year Plus Project		Recommended Improvements	Cumulative Year Plus Project With Improvement	
				Delay	LOS		Delay	LOS
37	Phillip Road & Passenger Vehicle Driveway	Signalized	AM	**27.3**	**D**	Add a southbound right turn storage pocket Add a signal	6.7	A
			PM	**887.3**	**F**		**42.6**	**D**

The LOS calculation sheets for cumulative plus project conditions with improvements are shown in Appendix L.

SITE ACCESS

Visitors to the site will primarily be accessed by vehicles based on the proposed land use. Employees working may access the site by driving, taking transit, or bicycling. It is unlikely walking trips will be a reasonable way to reach the site due to its proximity to residential areas. Access to the site by personal vehicle, transit, bicycling, and walking were considered.

Vehicle

There are two driveways provided for vehicle access – one for personal vehicles and one for trucks. The analysis performed in this report identified the following configurations for the driveways should be included in site design.

- The Phillip Road / Passenger Vehicle Driveway should include two outbound lanes (one left turn and one right turn) for outbound traffic and a single inbound lane that can be accessed from both directions via a shared westbound through-right lane and an eastbound left-turn lane. The driveway is anticipated to need a traffic signal in the future, but would not need it for opening year. Widening of Phillip Road to four lanes would be beneficial in the future to achieve LOS C or better during both peak hours.
- The Phillip Road / Truck Driveway should include a single outbound lane and a single inbound lane that can be accessed from both directions via a shared westbound through-right lane and an eastbound left-turn lane. The driveway should be wide enough to account for larger truck movements in and out of the driveway. The intersection can be stop-controlled for the driveway (free flowing on Phillip Road). Widening of Phillip Road to four lanes would be needed in the future to achieve LOS C or better during both peak hours.

Transit

A transit stop adjacent to the site is not anticipated and would not have demand generated the project for use by opening year. Additionally, no transit routes are planned along Phillip Road, as outlined in the Circulation Element of the General Plan 2035 adopted by the City Council in August 2020. Future evaluation of transit stops may be considered as the area further builds out around the site. It is not anticipated that taking transit will be a reasonable option for people accessing the site.

Bicycle

Although no specific bikeways are identified near the site in the city's Bicycle Master Plan, it is recommended that the site provide locker room facilities for employees who choose to commute by bicycle.

Walking

The project would develop sidewalks adjacent to the site according to the City's Design Standards. Further sidewalk connections from the site to other areas of the City will be dependent on future development and is not anticipated to be available by opening year or in the near term. It is not anticipated that walking will be a reasonable option for people accessing the site.

CEQA Transportation Analysis – Document Review

State

SENATE BILL 743

Senate Bill 743 (SB 743) was signed into law in September 2013 and took full effect in July 2020. Senate Bill 743 (Steinberg, 2013) required changes to the California Environmental Quality Act (CEQA) Guidelines regarding the analysis of transportation impacts. The purpose of SB 743 is to promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses.

Prior to implementation of SB 743, CEQA transportation analyses of individual projects typically determined impacts on the circulation system in terms of roadway delay and/or capacity usage at specific locations, such as street intersections or freeway segments. SB 743 changes include the elimination of auto delay, level of service (LOS), and other similar measures of vehicular capacity or traffic congestion as a basis for determining significant impacts.

Under SB 743, a project's effect on automobile delay shall not constitute a significant environmental impact. Therefore, level of service (LOS) and other similar vehicle delay or capacity metrics can no longer serve as transportation impact metrics for CEQA analysis. The California Office of Planning and Research (OPR) updated the CEQA Guidelines and provided a final technical advisory in December 2018[26] (OPR Technical Advisory), which recommends Vehicle Miles Traveled (VMT) as the most appropriate measure of transportation impacts under CEQA. The California Natural Resources Agency certified and adopted the CEQA Guidelines including the Guidelines section implementing SB 743. The changes have been approved by the Office of Administrative Law and are now in effect.

Revisions to CEQA transportation analysis requirements do not preclude the application of local general plan policies, municipal and zoning codes, conditions of approval, or any other planning requirements through a city's planning approval process. These requirements aim to ensure adequate operation of the transportation system in terms of transportation congestion measures related to vehicular delay and roadway capacity.

Other key guidance includes:

- VMT is the most appropriate metric to evaluate a project's transportation impact.
- OPR recommends tour- and trip-based travel models to estimate VMT but ultimately defers to local agencies to determine the appropriate tools.
- OPR recommends measuring VMT for residential and office projects on a "per rate" basis. Specifically, OPR recommends VMT per capita for residential projects and VMT per employee for office projects.
- OPR recommends that a per capita or per employee VMT that is fifteen percent below that of existing development may be a reasonable threshold (page 10). In other words, an office project that generates VMT per employee that is more than 85 percent of the regional VMT per employee could result in a significant impact. OPR notes that this threshold is supported by evidence that connects this level of reduction to the State's emissions goals (pages 10-11).

[26] *California Governor's Office of Planning and Research, "Technical Advisory on Evaluating Transportation Impacts in CEQA," December 2018.*

- For retail projects, OPR recommends measuring the net decrease or increase in VMT in the planning area with and without the project. The recommended impact threshold is any increase in total VMT.
- Lead agencies ultimately have the discretion to set or apply their own significance thresholds, provided they are based on significant evidence.
- Cities and counties still have the ability to use measures of delay such as LOS for other plans, studies, or network monitoring. However, according to CEQA section 15064.3, Determining the Significance of Transportation Impacts, "effect on automobile delay shall not constitute a significant environmental impact."

CALIFORNIA TRANSPORTATION PLAN 2050 (2021) [27]

The California Transportation Plan 2050 is a long-range transportation roadmap to achieve a safe, resilient and universally accessible transportation system that supports vibrant communities, advances racial and economic justice, and improves public and economic health in the State of California. The Plan emphasizes implementation and puts forward goals, policies and recommendations to meet the future multimodal mobility needs and reduce greenhouse gas emissions (GHGs). The following are the goals are applicable to the proposed project:

- ***Safety***: Provide a safe and secure transportation system.
    - Eliminate fatalities and serious injuries on the transportation system.
    - Improve personal security and infrastructure security on the transportation system.
    - Improve emergency preparedness, response, and recovery on the transportation system.
- ***Climate***: Achieve statewide GHG emission reduction targets and increase resilience to climate change.
    - Advance a clean, carbon neutral transportation system.
    - Increase climate resiliency.
- ***Equity***: Eliminate transportation burdens for low-income communities, communities of color, people with disabilities and other disadvantaged groups.
    - Improve transportation-related economic, environmental, and public health outcomes for disadvantaged communities.
    - Improve access to a range of high-quality, safe, and affordable mobility options within disadvantaged communities.
    - Support disadvantaged communities in playing an active and direct role in transportation decision making.
- ***Accessibility***: Improve multimodal mobility and access to destinations for all users.
    - Increase access to destinations.
    - Increase the competitiveness of transit, shared mobility, and active transportation options.
    - Provide integrated and seamless travel connections.
    - Optimize system performance for all modes.
- ***Quality of life and public health***: Enable vibrant, healthy communities.
    - Expand access to healthy transportation options.
    - Reduce household transportation costs.
    - Improve transportation-related public health outcomes.
    - Support enjoyable trip experiences and vibrant public spaces.

[27] *https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/ctp-2050-v3-a11y.pdf*

- ***Environment***: Enhance environmental health and reduce negative transportation impacts.
    - Improve air quality and minimize pollutants from transportation.
    - Protect and enhance California's natural resources and ecosystems.
    - Protect and enhance California historic and cultural resource.
- ***Economy***: Support a vibrant, resilient economy.
    - Support diverse, equitable, and sustained economic growth.
    - Facilitate efficient, reliable, and sustainable goods movement.
    - Support local and regional economic development.
- ***Infrastructure***: Maintain a high-quality, resilient transportation system.
    - Preserve and maintain existing multimodal transportation assets in a state of good repair.
    - Increase infrastructure resiliency to climate change and natural disasters.

CALIFORNIA DEPARTMENT OF TRANSPORTATION

The California Department of Transportation (Caltrans) is the primary State agency responsible for transportation issues. As owner/operator of the State Highway System, Caltrans may review projects and plans as a commenting agency or responsible agency under the California Environmental Quality Act (CEQA). In relation to this role, Caltrans published the Vehicle Miles Traveled-Focused Transportation Impact Study Guide" in May 2020. This replaced the "Guide for the Preparation of Traffic Impact Studies" (December 2002), which established Measures of Effectiveness based on level of service targets.

Caltrans recommends following the guidance on methods of VMT assessment found in OPR's Technical Advisory. Caltrans comments on a CEQA document may note methodological deviations from those methods and may recommend that significance determinations and mitigation be aligned with state greenhouse gas reduction goals as articulated in OPR's guidance, the California Air Resources Board's Scoping Plan, and related documentation.

Caltrans facilities within the study area include State Route 65 (SR 65).

For projects that may physically affect facilities under its administration, Caltrans requires encroachment permits before any construction work may be undertaken.

Regional

SACOG NEXT GENERATION TRANSIT STRATEGY (2021)[28]

SACOG's Next Generation Transit Strategy builds upon its 2020 MTP-SCS vision for a high quality, resilient and sustainable public transit system. The strategy is organized around four key focus areas:

- Seamless User Experience
- Planning and Funding
- Transit Design and Delivery
- Reduce Mobility Disparities

The objectives of the strategy are as follows:

[28] *https://www.sacog.org/home/showpublisheddocument/308/638218230960130000*

- Getting around by transit is fast, reliable and competitive with driving.
- Reduced disparities in travel time and cost; more travel options for disadvantaged communities.
- Improved transit access to top employment centers and destinations.
- Transit feels easy, seamless, and safe for all users.
- More coordination between agencies leads to better service for all.
- Makes the best use of public dollars by minimizing costs while maintaining or increasing ridership.
- Service is adequately and consistently funded.
- Meets or exceeds targets for renewable energy, emissions and VMT.

SACOG MTP/SCS (2020) [29]

SACOG's Metropolitan Transportation Plan and Sustainable Communities Strategy (MTP/SCS) outlines a transportation and land use strategy to support regional prosperity, enhance access to jobs and economic opportunities, and provide transportation options and affordable housing for all. The Plan is based on four priority policy areas:

- Build vibrant places for today's and tomorrow's residents.
- Foster the next generation of mobility solutions.
- Modernize the way we pay for transportation infrastructure.
- Build and maintain a safe, reliable, and multimodal transportation system.

SACOG CONGESTION MANAGEMENT PROCESS UPDATE (2020) [30]

Congestion management involves implementing strategies to enhance transportation system performance and reliability by minimizing the negative effects of congestion on the movement of people and goods. Congestion Management Process (CMP) provides updated data on transportation system performance and evaluates alternative strategies that address both state and local needs. SACOG's CMP is an integral component of its MTP-SCS, with updates occurring every four years. The latest update to the CMP objectives in 2020 involved integrating updated MTP policies/objectives and collaborating with the CMP working group.

The following are the objectives outlined in the CMP:

- Maintain or improve travel time reliability for freight and passenger vehicles
- Reduce traffic congestion for freight and passenger vehicles.
- Promote development that encourages making trips by public transit.
- Support proactive and innovative education and transportation demand management programs, covering all parts of the urbanized area, to offer a variety of choices to driving alone.
- Prioritize investments in transit, bike, and pedestrian improvements that reduce greenhouse gas emissions and vehicle miles traveled (VMT).
- Implement pilot projects aimed at making micromobility (such as bike and scooter share) work for urban, suburban, and low-income areas of the region.

SACOG REGIONAL MOBILITY HUB DESIGN GUIDANCE[31]

Mobility hubs provide a seamless connection between different transportation options, enabling people to easily transition between modes to reach their destinations. The vision of SACOG's Regional Mobility Hub Design Guidance is to establish a network of regional hubs that prioritize people, focusing on universal accessibility, safety, and community integration. These hubs are to be designed to seamlessly connect two or more transportation modes, including transit, biking, walking, shared mobility services, carpooling/vanpooling, and on-demand services and provide integrated, equitable mobility through flexible and user-friendly design.

PLACER COUNTY REGIONAL TRANSPORTATION PLAN (2019) [32]

The Placer County Regional Transportation Plan is a document developed to provide policy and funding guidelines for short-range and long-range transportation needs for the county's transportation system over the next twenty years. The Plan's goal is to support well-planned growth and land use patterns while improving environmental quality through better management of the transportation system. Additionally, the Plan seeks to improve access and mobility for all individuals, ensure viable travel options to jobs, services, and housing across the county. The goals and objectives of the Plan relevant to the proposed project are:

Goal 1: Highways/Streets/Roadways - Maintain and upgrade a safe, efficient, and convenient countywide roadway system that meets the travel needs of people and the movement of goods through and within the region.

- **Objective A:** Identify and prioritize improvements to the roadway system.
- **Objective B:** Construct, maintain, and upgrade roadways to meet current safety standards.
- **Objective C:** To promote economic development, prioritize roadway maintenance and improvement projects on principal freight and tourist travel routes in Placer County.

Goal 2: Public Transit - Provide effective, convenient, regionally and locally coordinated transit service that connects residential areas with employment centers, serves key activity centers and facilities, and offers a viable option to the drive-alone commute.

- **Objective A:** Provide transit services that fulfill all "unmet transit needs that are reasonable to meet."
- **Objective B:** Tailor transit services and programs to the area's population characteristics and special needs.
- **Objective C:** Develop and encourage the use of public transit as a viable alternative to the automobile in order to maximize transit ridership.
- **Objective D:** Coordinate various transportation services to maximize efficiency and convenience and minimize duplication of services.

Goal 5: Goods Movement - Provide for the safe and efficient movement of goods through, within, and into Placer County.

- **Objective A:** Promote a balance of roads, rail, and airports for the improvement of goods transport.

---

[31] *https://www.sacog.org/planning/transportation/sustainable-mobility-program/mobility-hubs*

[32] *https://pctpa.specialdistrict.org/files/e9ce02f5b/Final_2040_RTP_Full_Document.pdf*

- **Objective B:** Mitigate conditions that transporters of goods and local jurisdictions deem dangerous or unacceptable.

Goal 6: Active & Alternative Transportation - Promote a safe, convenient, and efficient transportation system for bicyclists, pedestrians, and users of low-speed vehicles, as part of a balanced overall transportation system.

- **Objective A:** Plan and develop a continuous and easily accessible bicycle, pedestrian, and low-speed vehicle system within the region.
- **Objective B:** Provide a bicycle, pedestrian, and low-speed vehicle system that emphasizes the safety of people and property.
- **Objective C:** Integrate pedestrian, bicycle, and low-speed vehicle facilities into a multi-modal transportation system that encourages alternatives to driving alone.
- **Objective D:** Promote the development of multi-use trails in rural and open space areas.

Goal 7: Transportation Systems Management (TSM) - Provide an economical alternative to single-occupant vehicle travel through the use of alternative transportation methods.

- **Objective A:** Create a multi-modal transportation network between major residential areas, educational and recreational facilities, and employment centers.
- **Objective B:** Advance the use of Transportation Demand Management (TDM) in a thorough, cost-effective manner.
- **Objective C:** Promote the use of technology to reduce work-related, education related, and personal trips.

Goal 9: Integrated Land Use, Air Quality & Transportation Planning - By integrating land, air, and transportation planning, build and maintain the most efficient and effective transportation system possible while achieving the highest possible environmental benefit.

- **Objective A:** Provide information and support services to jurisdictions regarding the countywide transportation impacts of local land use decisions.
- **Objective B:** Provide transportation infrastructure that meets existing and future needs.

PLACER COUNTY GENERAL PLAN (2013 UPDATE) [33]

Placer County General Plan (last updated in May 2013) serves as a guiding document for land use and development in the County. The goals and policies of the Plan that are applicable to the proposed project:

Goal 3.B: To promote a safe and efficient mass transit system, including both rail and bus, to reduce congestion, improve the environment, and provide viable non-automotive means of transportation in and through Placer County.

- **Policy 3.B.1.** The County shall work with transit providers to plan and implement additional transit services within and to the County that are timely, cost-effective, and responsive to growth patterns and existing and future transit demand.
- **Policy 3.B.3.** The County shall consider the need for future transit right-of-way in reviewing and approving plans for development. Rights-of-way may either be exclusive or shared with other vehicles.

[33] *https://www.placer.ca.gov/DocumentCenter/View/8571/Introduction-PDF*

- **Policy 3.B.7.** The County shall continue to explore development of other rail systems, such as the Roseville to Marysville service, to serve Placer County residents, workers, and businesses.
- **Policy 3.B.11.** The County shall support efforts to provide demand-responsive service ("paratransit") and other transportation services for those unable to use conventional transit.

Goal 3.C: To maximize the efficient use of transportation facilities so as to: 1) reduce travel demand on the County's roadway system; 2) reduce the amount of investment required in new or expanded facilities; 3) reduce the quantity of emissions of pollutants from automobiles; and 4) increase the energy-efficiency of the transportation system.

- **Policy 3.C.1.** The County shall promote the use of transportation systems management (TSM) programs that divert automobile commute trips to transit, walking, and bicycling.
- **Policy 3.C.2.** The County shall promote the use, by both the public and private sectors, of TSM programs that increase the average occupancy of vehicles.

Goal 3.D: To provide a safe, comprehensive, and integrated system of facilities for non-motorized transportation.

- **Policy 3.D.1.** The County shall promote the development of a comprehensive and safe system of recreational and commuter bicycle routes that provide connections between the County's major employment and housing areas and between its existing and planned bikeways.
- **Policy 3.D.2.** The County shall work with neighboring jurisdictions to coordinate planning and development of the County's bikeways and multi-purpose trails with those of neighboring jurisdictions.
- **Policy 3.D.4.** The County shall promote non-motorized travel (bikeways, pedestrian, and equestrian) through appropriate facilities, programs, and information.
- **Policy 3.D.10.** Consider the accessibility and accommodation of cycle and pedestrian traffic, where appropriate, on and across major thoroughfares.
- **Policy 3.D.11.** The County shall work to achieve equality of convenience and choice among all modes of transportation – pedestrian, cycling, transit and motor vehicles, through a balanced and interconnected transportation system.
- **Policy 3.D.112.** Provide safe and comfortable routes for walking, cycling, and where feasible, public transportation, to encourage use of these modes of transportation, enable convenient and active travel as part of daily activities, reduce pollution, and meet the needs of all users of the roadway system.

PLACER COUNTY SUSTAINABILITY PLAN (2020) [34]

The Placer County Sustainability Plan puts forward the analyzes and recommendations for GHG reduction and climate adaptation strategies in the unincorporated county. It sets GHG emission reduction targets for the years 2030 and 2050 for the county in MTCO2e/person. The strategies identified in the Plan to reduce transportation-related GHG emissions are:

- **Strategy T-1:** Facilitate the installation of public electric vehicle (EV) charging stations at existing and new residential and non-residential uses.

[34] *https://www.placer.ca.gov/DocumentCenter/View/42940/PCSP-ADOPTION?bidId=*

- **Strategy T-4:** Partner with surrounding regional transit agencies to improve connectivity to regional transportation systems.
- **Strategy T-5:** Partner with incorporated communities and regional agencies to develop bikeways and trails between communities.
- **Strategy T-9:** Increase on-demand micro-transit opportunities in the county to provide reliable transit between underserved areas and major transportation hubs.
- **Strategy T-11:** Encourage active transportation use by increasing street and roadway safety through infrastructure improvements.
- **Strategy T-12:** Consider the feasibility of implementing bike share programs in developed areas of the county, in concert with incorporated communities and regional agencies.

PLACER COUNTY REGIONAL BIKEWAY PLAN (2018) [35]

The Placer County Regional Bikeway Plan updates the prior Regional Bikeway Plan adopted in 2002 and establishes a vision to promote safe, convenient, and enjoyable bicycling by establishing a comprehensive system of bikeways that link the communities throughout the county. The Plan develops a regional system of bikeways that connect six incorporated cities and other unincorporated areas of the county and proposes bikeways in the unincorporated county or bikeways requiring multijurisdictional coordination. The Plan aims to enhance bicycling for commuter and recreational use in the county through policies in three categories: safety, mobility and preservation.

The Plan proposes the following bikeways in the project's study area:

- Baseline Road between Fiddyment Road and West County limits – Buffered Bike Lane
- Pleasant Grove Road between Baseline Road and Moore Road – Shared Use Path/Side Path

Local

CITY OF ROSEVILLE GENERAL PLAN (2020) [36]

The City of Roseville General Plan 2035, adopted in 2020, acts as a policy guide for the city's future development and growth. The Plan is intended to be long-range, comprehensive and community focused. The Plan designates land use categories throughout the city, defining each land use category, including general uses, development, intensity, siting and compatibility standards.

The Circulation Element of the General Plan outlines Roseville's objectives for its circulation system, including the overall framework, level of service standards, design requirements, and policies that align with the city's broader planning, economic, social, and environmental goals. The objective of this element is to ensure accessibility to key destinations for all modes of travel, enhance travel options for residents, workers, and visitors, and maintain the transportation network in optimal condition.

---

[35] *https://www.placer.ca.gov/DocumentCenter/View/57938/Placer-County-Regional-Bikeway-Plan-FINAL-20180629?bidId=*

[36] *https://cdnsm5-hosted.civiclive.com/UserFiles/Servers/Server_7964838/File/Government/Departments/Development%20Services/Planning/City%20of%20Roseville%20GP.pdf*

The General Plan includes the following goals and policies related to transportation and circulation applicable to the proposed project:

Goal CIRC2 Maintain an appropriate level of transportation service for all of Roseville's residents, employees, and consumers through a balanced transportation system that considers automobiles, transit, bicyclists, and pedestrians.

- **Policy CIRC2.1** Maintain a LOS "C" standard at a minimum of 70 percent of all signalized intersections and roadway segments in the City during the a.m. and p.m. peak hours. Exceptions to the LOS "C" standard may be considered where improvements required to achieve the standard would adversely affect pedestrian, bicycle, or transit access, and where feasible LOS improvements and travel demand-reducing strategies have been exhausted.
- **Policy CIRC2.2** Strive to meet the level of service standard through a balanced transportation system that reduces the auto emissions that contribute to climate change, by providing alternatives to the automobile and avoiding excessive vehicle congestion through roadway improvements, Intelligent Transportation Systems, and transit improvements.
- **Policy CIRC2.3** Work with neighboring jurisdictions to provide acceptable and compatible levels of service on the roadways that cross the City's boundaries.
- **Policy CIRC2.4** Secure adequate funding for all components of the City's transportation system to ensure the level of service policy is maintained.
- **Policy CIRC2.5** Pedestrian, bicycle travel, and transit access have a higher priority than automobile travel in the City's Pedestrian Districts, and development projects in these areas are exempt from the City's LOS standard.
- **Policy CIRC2.6** Prioritize investments in pedestrian, bicycle, and transit access in Pedestrian Districts.

Goal CIRC3 Provide a safe, convenient, and efficient transit system to enhance mobility; reduce congestion; reduce auto emissions, including emissions that contribute to climate change; improve the environment; and provide viable non-automotive means of transportation in and through Roseville.

- **Policy CIRC3.1** Promote transit service that is convenient, cost-effective, and responsive to the challenges and opportunities of serving Roseville and surrounding communities and explore opportunities for transit innovation and service improvements.
- **Policy CIRC3.2** Pursue all available sources of funding for sustainable transit services.
- **Policy CIRC3.3** Continue to study options for introducing high quality transit and/or other regional transit linkages to Roseville and developing convenient connections to Sacramento Regional Transit light rail service.
- **Policy CIRC3.4** Support and remain actively involved in planning for the expansion of Capitol Corridor rail service, as well as other regional linkages.
- **Policy CIRC3.5** Consider access to health care, community services and employment, and the needs of persons who may be transit-dependent when making decisions regarding transit service.
- **Policy CIRC3.6** Identify opportunities to increase the number and/or capacity of park-and-ride lots as needed, to increase transit and carpool/vanpool use.
- **Policy CIRC3.7** Pursue transit routes that optimize ridership.

- **Policy CIRC3.8** Include transit improvements with new roadway or roadway expansion projects.

Goal CIRC4 Reduce vehicle miles traveled on the City's and regional roadway systems, while expanding mobility options for residents, employees, and visitors.

- **Policy CIRC4.1** The City will review and condition projects as appropriate, to reduce travel demand per capita and per employee by promoting increased density near transit, improving the quality of non-vehicular transportation options, providing incentives for non-vehicular travel, encouraging the mixing of complementary land uses in proximity to one another, and using other feasible methods.
- **Policy CIRC4.2** Work with appropriate agencies to develop implementation measures to reduce vehicular travel demand and total vehicle miles traveled and meet air quality and greenhouse gas emissions goals.
- **Policy CIRC4.3** Specific Plan Amendments and land use development projects not included in a Specific Plan shall be evaluated for consistency with the City's VMT Impact Standards.
- **Policy CIRC4.4** If the evaluation required by CIRC4.3 finds a Specific Plan Amendment or land use development project not included in an adopted Specific Plan is inconsistent with thresholds established within the City's VMT Impact Standards, on-site land use, transportation, and urban design-related VMT-reducing features should be prioritized to demonstrate consistency. If feasible on-site features cannot achieve the VMT threshold, Specific Plan Amendments and land use development projects outside Specific Plan Areas may demonstrate equivalent consistency through off-site actions or fair-share fee contributions, or if consistency cannot be achieved, shall implement all feasible measures.
- **Policy CIRC4.5** Policy CIRC4.3 does not apply to projects that propose residential or office uses in Transit Priority Areas or low-VMT areas. Low-VMT areas are those shown to have per-capita, per-employee, or per-service-population VMT rates that are at least 15 percent less than the baseline citywide or regional rate.
- **Policy CIRC4.6** Promote and incentivize Infill development, particularly affordable housing development, through assistance in obtaining outside grant funding and reductions or deferrals in impact fees.
- **Policy CIRC4.7** Continue to educate the public and business community about alternative modes of travel through Safe Routes to School, Transportation Systems Management, and other local and regional programs and events.

Goal CIRC5.1 Increase the percentage of all trips made by bicycles in Roseville.

Goal CIRC5.2 Establish and maintain a safe, comprehensive, and integrated bikeway and trail system that encourages the use of bikes and walking for commuting, recreational, and other trips.

Goal CIRC5.3 Maintain the Bicycle Friendly Community Designation from the League of American Bicyclists.

- **Policy CIRC5.1** Develop a comprehensive and safe system of recreational and commuter bicycle routes and trails that provides connections between the City's major destinations (including employment) and housing areas and between its existing and planned bikeways.
- **Policy CIRC5.2** Coordinate Roseville's bikeway and trail system with those of neighboring jurisdictions to provide both local and regional connections.
- **Policy CIRC5.3** Pursue available sources of funding for bikeways and trails.
- **Policy CIRC5.4** Enhance bicycle education, encouragement, and enforcement programs targeted at adult and child bicyclists and motorists.
- **Policy CIRC5.5** Specific Plans shall incorporate an off-street, Class I bicycle system as part of the comprehensive on-street and off-street bikeway plan.
- **Policy CIRC5.6** Educate, encourage, and enforce programs that increase bicyclist and motorist awareness of the rights and responsibilities of bicyclists in order to foster a climate of acceptance for bicycle riding.
- **Policy CIRC5.7** Include on-street and off-street bicycle improvements with new roadway and roadway expansion projects.

Goal CIRC6.1 Increase the percentage of pedestrian trips in Roseville.

- **Policy CIRC6.1** Establish and maintain a safe and continuous pedestrian network that provides connections between residential areas and commercial retail and services, employment, public services, parks, and public transit.
- **Policy CIRC6.2** Promote development patterns that encourage people to walk to destinations.
- **Policy CIRC6.3** Enhance pedestrian-friendly street environments and design public spaces and destinations in a way that encourages walking.
- **Policy CIRC6.4** Sidewalks shall be required in all new Specific Plan Areas, with new roadway construction, and with roadway expansion.
- **Policy CIRC6.5** In reviewing proposed development projects and implementing public projects, the City will incorporate standards designed to protect the security of pedestrians and minimize the potential for collisions involving pedestrians.
- **Policy CIRC6.6** In the Infill Area, the City will actively seek funding sources to complete and maintain sidewalk networks.

In addition to the Circulation Element, other elements in the General Plan including Chapter 4 Air Quality and Climate Change Element and Chapter 5 Open Space and Conservation Element include components relevant to the proposed project.

Chapter 4 Air Quality and Climate Change Element: The goals and policies in the Air Quality and Climate Element relevant to the proposed project are:

Goal AQ1.3 Coordinate all forms of public transport to decrease vehicle miles traveled, while encouraging an increase in the commute vehicle occupancy rate.

Goal AQ.4 Increase the capacity of the pedestrian, bicycle, and public transportation systems and promote vehicular transportation that uses less-polluting fuels, such as electricity.

Goal AQ1.5 Provide adequate pedestrian and bicycle facilities for present and future transportation needs.

Goal AQ1.6 Promote a well-designed and efficient transit system.

Goal AQ1.7 Improve transit, bicycle, and pedestrian access to lessen dependence on automobile travel and reduce household transportation costs.

- **Policy AQ1.12** Develop transportation systems that reduce vehicle emissions by improving the desirability of walking, bicycling, and public transportation relative to vehicular travel.
- **Policy AQ1.13** Identify feasible strategies to reduce transportation emissions from new projects and existing development within the Planning Area.
- **Policy AQ1.14** Encourage alternative modes of transportation, including pedestrian, bicycle, and transit use.
- **Policy AQ1.15** Promote and incentivize low-emissions vehicles and associated charging infrastructure and pursue funding from state programs and other sources to facilitate local purchase and use of electric vehicles.
- **Policy AQ1.16** Implement land use policies that maintain and improve air quality and expand opportunities for transit-oriented development, which allows residents to significantly reduce vehicular transportation and associated air pollutant emissions.
- **Policy AQ1.17** Conserve energy and reduce air pollutant emissions by encouraging energy efficient building designs and transportation systems and promoting energy efficiency retrofits of existing structures.
- **Policy AQ1.18** Promote building and transportation energy efficiency in new residential and commercial development by encouraging and incentivizing implementation measures early in the design and development process.

Chapter 5 Open Space and Conservation Element: The goals and policies in the Open Space and Conservation Element relevant to the proposed project are:

Goal OS1.3 Provide access to public open space areas through a network of pedestrian and bicycle trails that will be adequately managed and protected.

- **Policy OS1.1** Provide an interconnecting system of open space corridors that, where feasible, incorporate bikeways and pedestrian paths.
- **Policy OS1.2** Provide interconnected open space corridors between open space and habitat resources, recreation areas, schools, employment, commercial service, and residential areas.
- **Policy OS1.3** Work with adjacent jurisdictions to connect the City with regional open space and trail systems, providing a network of open space and habitat resources,

pathways, and, where feasible, equestrian trails through the City to link nearby communities.

- **Policy OS1.4** Require all new development to provide pedestrian and bicycle linkages to existing and planned open space systems. Where such access cannot be provided through the creation of open space connections, identify alternative linkages.

CITY OF ROSEVILLE PEDESTRIAN MASTER PLAN (2011) [37]

The City of Roseville's Pedestrian Master Plan focuses on improving the design and development of public pedestrian pathways to create a safe, efficient, and visually appealing environment for all pedestrians. The Plan aims to establish a well-connected network of sidewalks and street crossings, providing Roseville residents with diverse transportation options, including walking, biking, transit, and driving. It prioritizes inclusive design, incorporating policies, projects, and programs to promote walking as a fundamental mode of transportation, while also supporting health and recreation for people of all ages and abilities. Additionally, it proposes the creation of Pedestrian Overlay Districts in areas where increased pedestrian activity is desired through the provision of enhanced pedestrian facilities.

CITY OF ROSEVILLE COMMUNITYWIDE SUSTAINABILITY ACTION PLAN (2010) [38]

The City of Roseville Communitywide Sustainability Action Plan (SAP) outlines key objectives aimed at implementing transportation measures that reduce Vehicle Miles Traveled (VMT) and associated Greenhouse Gas (GHG), NOx and PM10 emissions. The objectives of the Plan relevant to the proposed project are:

- **Objective T-2**: Manage the availability and cost of parking to minimize driving demand, encourage alternatives to driving and reduce emissions.
- **Objective T-3**: Increase carpool and vanpool opportunities to increase the non-single occupancy vehicle mode share (by ~2%).
- **Objective T-4**: Enhance local and regional transit systems to increase transit ridership (~1% mode shift).
- **Objective T-5**: Expand and enhance the bikeway network and support facilities and encourage their use to increase bike ridership (~1% biking and walking combined mode shift).
- **Objective T-6**: Improve the pedestrian environment to increase walking.
- **Objective T-8**: Promote use of alternative fuel or high-fuel efficient vehicles to help reduce emissions.
- **Objective T-9**: Enhance efficiency of the City's roadway network to reduce vehicle delays and emissions while maintaining or enhancing the bicycle and pedestrian environment.

---

[37] *https://cdnsm5-hosted.civiclive.com/UserFiles/Servers/Server_7964838/File/Government/Departments/Public%20Works/Biking%20&%20Walking/Planning/2-2011_Pedestrian%20Master%20Plan_WEB.pdf*

[38] *https://cdnsm5-hosted.civiclive.com/UserFiles/Servers/Server_7964838/File/Government/Departments/Public%20Works/Roseville%20Transit/Air%20Quality/SAP010611.pdf*

The objectives of the Plan aim to reduce the overall environmental footprint of the transportation system and serve as guidelines in setting VMT reduction strategies for the proposed project.

CITY OF ROSEVILLE BICYCLE MASTER PLAN (2008) [39]

The City of Roseville Bicycle Master Plan aims to achieve a balanced, multi-modal transportation system by developing a well-connected, safe, and accessible bikeway network that serves bicyclists of all levels and provides Roseville residents a variety of transportation choices, including automobile, transit, bicycle, and pedestrian options. The Plan also focuses on creating bikeway support facilities such as bike racks and repair stations to encourage both commuter and recreational cycling. The plan sets a goal to increase bicycle use in the City by 50 percent by 2020, promoting cycling for work, school, play and other destinations through incentives and encouragement efforts.

Additionally, the Plan identifies existing and proposed bicycle routes in the City. The proposed bikeway system includes 28 miles of Class I trails, 27 miles of Class II bike lanes and 33 miles of proposed Class III bike routes, totaling approximately 95 miles of new bikeways. In the study area, the Plan proposes a Class II bike lane along Blue Oaks Boulevard between Fiddyment Road and Lower Bank Drive.

CITY OF ROSEVILLE COMMUNITY DESIGN GUIDELINES (2008) [40]

The Community Design Guidelines establishes design and technical guidelines including a list of specific recommendations and requirements for each land use category including commercial, office and industrial, multi-family and compact residential, for including in project design. The design goals for office and industrial development in relation to transportation are:

1. To seek site designs that preserve, enhance, and incorporate the natural features of a site as an element within the overall design.
2. To require project designs to incorporate pedestrian and transit linkages within the project, with adjacent properties, and with the City as a whole.
3. To establish a streetscape presence and appearance through setbacks, landscaping, building placement and architecture that defines the pedestrian and vehicle corridor, and presents an appealing and continuous theme along a sidewalk or street.

Appendix B

Methodology to Calculate Project VMT

APPENDIX B

METHODOLOGY TO CALCULATE PROJECT VMT

This section outlines the methodology followed to calculate Project VMT.

1. Based on the 2020 City of Roseville's travel forecasting model, the project is in Traffic Analysis Zone (TAZ) 848.
2. In the base year 2020, TAZ 848 includes 5 single-family homes and 2 multi-family homes.
3. The land use types in the model that are relevant to the project's trip generation are Office (for employee trips) and Industrial (for truck trips).
4. However, the Office and Industrial land use types are included as Thousand Square Feet (KSF) in the model, while the project trip generation is measured in units of the number of employee trips and number of truck trips.
5. To be compatible with the land use inputs in the model, the project employee and truck trips are converted to KSF units.
6. The project trip generation for employees and trucks is calculated based on the full build-out of the project.

Table 1. Project Trip Generation in units of Thousand Square Feet

Project Weekday Daily Vehicle Trips (full build-out)	Model Trip Generation Rates			Project Trip Generation to use in the model (KSF)
	Land Use Type	Units	Daily Vehicle Trip Rate	
2318 (Employees)	Office	KSF	17.7	130.94
586 (Trucks)	Industrial	KSF	7.6	77.1

*KSF – Thousand Square Feet

As shown in Table 1, the project trip generation (in KSF) is added to TAZ 848 to calculate the With Project VMT.

7. The 2020 City of Roseville travel forecasting model is run for the No Project and With Project scenarios.
8. Total VMT for TAZ 848 is the sum of "VMT From" and "VMT To" of the TAZ.

$$Total\ VMT = VMT_{From} + VMT_{To}$$

Table 2 shows the Total VMT for the Project TAZ 848 for the No Project and With Project scenarios. The Total VMT includes the VMT Produced from residents, employees and trucks.

Table 2. Total VMT for the Project TAZ (848)

Scenario	VMT From	VMT To	Total VMT
Project TAZ No Project	289	289	578
Project TAZ With Project (full build out)	15,153	15,230	30,383

9. The Project VMT is then calculated as the difference in the Project TAZ VMT for the No Project and With Project scenarios.

$$Project\ VMT = Total\ VMT_{(With\ Project)} - Total\ VMT_{(No\ Project)}$$

Project VMT = 30,383 – 578 = 29,805.

HCM 7th LOS	C

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.

HCM 7th Edition methodology does not support current ring-barrier structure.

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.

HCM 7th Edition methodology does not support current ring-barrier structure.

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR, EBR, WBR, SBR] is excluded from calculations of the approach delay and intersection delay.

HCM 7th Control Delay, s/veh	27.5
HCM 7th LOS	C

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.

HCM 7th Edition methodology does not support current ring-barrier structure.

HCM 7th LOS	D

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.

HCM 7th Edition methodology does not support current ring-barrier structure.

HCM 7th LOS	E

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR, EBR, WBR, SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 7th Control Delay, s/veh	23.8
HCM 7th LOS	C

Notes

User approved pedestrian interval to be less than phase max green.

Unsignalized Delay for [WBR, SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 7th Control Delay, s/veh	52.6
HCM 7th LOS	D

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR, EBR, WBR, SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

HCM 7th Control Delay, s/veh	32.4
HCM 7th LOS	C

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 7th Control Delay, s/veh	41.5
HCM 7th LOS	D

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary	
HCM 7th Control Delay, s/veh	60.8
HCM 7th LOS	E

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR, EBR, WBR, SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

HCM 7th Control Delay, s/veh	99.5
HCM 7th LOS	F

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary	
HCM 7th Control Delay, s/veh	168.4
HCM 7th LOS	F

Notes

User approved pedestrian interval to be less than phase max green.

Unsignalized Delay for [WBR, SBR] is excluded from calculations of the approach delay and intersection delay.

HCM 7th Control Delay, s/veh	6.7
HCM 7th LOS	A

Lane Group	EBL	EBT	WBT	SBL	SBR
Lane Group Flow (vph)	5	1553	1387	245	27
v/c Ratio	0.05	1.02	0.91	1.33	0.16
Control Delay (s/veh)	3.2	39.3	18.8	223.1	36.2
Queue Delay	0.0	0.0	0.0	0.0	0.0
Total Delay (s/veh)	3.2	39.3	18.8	223.1	36.2
Queue Length 50th (ft)	1	~1110	592	~246	11
Queue Length 95th (ft)	3	#1535	#1273	#411	41
Internal Link Dist (ft)		1100	762	437	
Turn Bay Length (ft)	200				50
Base Capacity (vph)	99	1529	1522	184	174
Starvation Cap Reductn	0	0	0	0	0
Spillback Cap Reductn	0	0	0	0	0
Storage Cap Reductn	0	0	0	0	0
Reduced v/c Ratio	0.05	1.02	0.91	1.33	0.16

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
