**EXEMPTION FINDING** (Check one)

This project is exempt from CEQA because:

- Activity is not a project
- Activity is Ministerial (Sec.21080(b)(1); Guideline 15268)
- Activity is a Declared Emergency (Sec.21080(b)(3); Guideline 15269(a))
- Activity is an Emergency Project (Sec.21080(b)(4); Guideline 15269(b)(c))
- Activity is Categorically Exempt Under Guideline 15301
- Activity is Statutorily Exempt Under Guideline \_\_\_\_\_
- Reasons why project is exempt:  
This project is exempt under Guideline 15301 because it involves the repair of an existing structure (e.g. roof swale). The project will have no significant environmental effects relative to location, cumulative impacts, or significant effects due to unusual circumstances, hazardous waste, or historical resources pursuant to Section 15300.2 of the EQA guidelines.

**ATTACHMENT A**  
**EAST BAY MUNICIPAL UTILTIY DISTRICT**  
**DUNSMUIR RESERVOIR ROOF SWALE SEALANT PROJECT**

**Overview and Background**

The Project will repair the approximately 300-foot-long asphalt drainage swale that runs west to east along the entire length of the roof at the boundary between the north and south basins. The purpose of the Project is to seal the 3- to 6-inch interfaces at edges of the swale between the north and south basins with polyurethane sealant to prevent rainwater infiltration into the underlying backfill beneath the swale. The Project is located within Alameda County in Oakland, California (see Figure 1).

**Project Purpose and Objectives**

In EBMUD's May 2020 Dam Inspection Reports, it was observed that there were signs of settlement in the roof swale which drains water off of the concrete roof structure of the Dunsmuir Reservoir. The purpose of the project is to replace and seal the roof swale to ensure rainwater does not leak into the underlying soil backfill beneath the swale.

**Project Location**

Dunsmuir Reservoir is an open cut distribution reservoir constructed in 1968 and is located within Alameda County in Oakland, California. The site is on the east side of the MacArthur Freeway (I-580) in the East Bay Hills close to San Leandro's northern border with the City of Oakland at the end of Covington Drive in Oakland.

**Project Characteristics**

An asphalt drainage swale runs west to east along the entire length of the roof at the boundary between the north and south basins of the Dunsmuir Reservoir. The project will clean out vegetation, demolish the existing asphalt swale, level and construct a new swale with cementitious mortar, and seal the interfaces at edges of the swale to prevent rainwater infiltration into the underlying soil backfill beneath the swale. This will entail bringing the edges of the cementitious mortar back up to grade (it has settled up to 4 inches) and completely sealing the north and south edges of the new swale where it meets the concrete roof (approximately 300 linear feet on each side) using polyurethane sealant.

## **Permits and Approvals**

All work will be on EBMUD property. Encroachment permits are not required since there is no work within the public right-of-way. Any necessary permits from the regulatory agencies will be obtained, to complete the Project.

## **Schedule and Work Hours**

The construction is anticipated to start in 2024 and will take approximately 4 months to complete. Construction activities will be limited to the daytime weekday hours (7:00 a.m. to 7:00 p.m.) to the extent feasible.

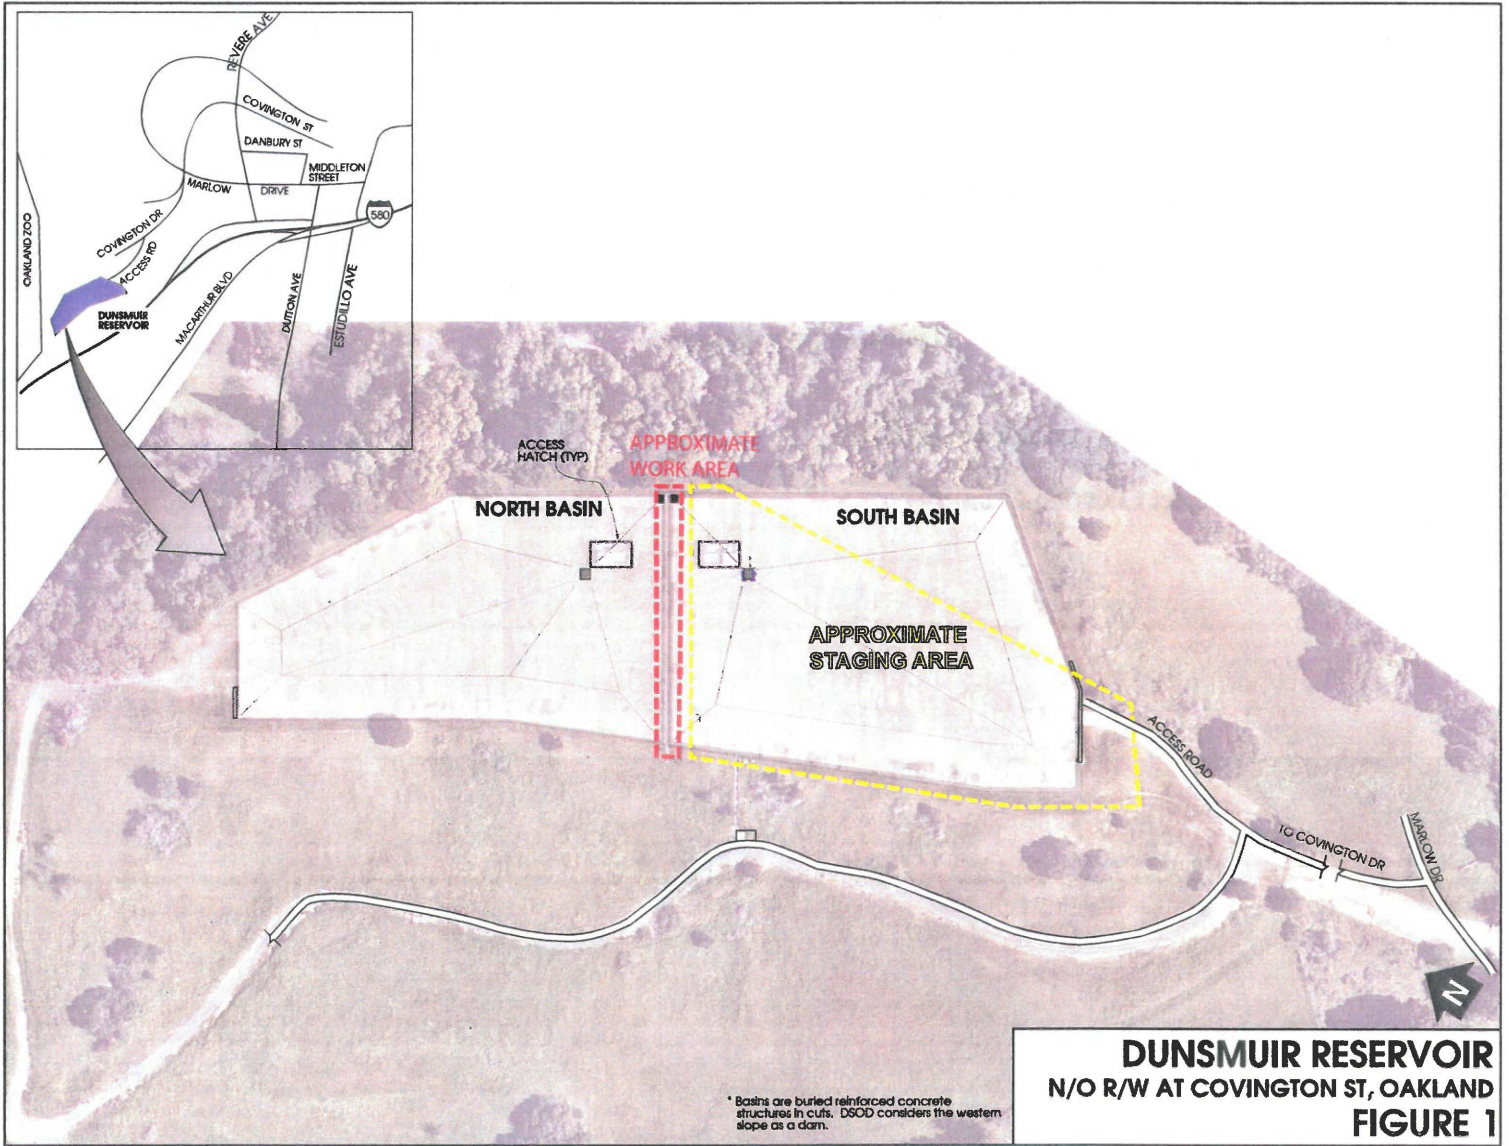

## **EBMUD Practices and Procedures**

Standard construction environmental and safety practices applicable to all EBMUD construction projects have been incorporated into the Project. These standard practices minimize impacts to the public resulting from EBMUD construction projects.
