Subject: Phase I Environmental Site Assessment, Santa Maria Airport Rezoning Project, Santa Maria, California

Dear Ms. Ricci:

This report presents the findings of a Phase I Environmental Site Assessment (ESA) completed by Rincon Consultants, Inc. (Rincon) for the Santa Maria Airport Rezoning Project located in Santa Maria, California. The Phase I ESA was performed in accordance with our proposal dated May 25, 2023 and contract dated June 6, 2023.

The accompanying report presents our findings and provides an opinion regarding the presence of recognized environmental conditions in connection with the subject property. Our work program for this project, as referenced in our contract, is intended to meet the guidelines outlined in the American Society for Testing and Materials (ASTM), Standard Practice for Environmental Site Assessments: *Phase I Environmental Site Assessment Process* (ASTM Standard E1527-21). Our scope of services, pursuant to ASTM practice, did not include any inquiries with respect to asbestos-containing building materials unrelated to releases into the environment; biological agents; cultural and historic resources; ecological resources; endangered species; health and safety; indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment; industrial hygiene; lead-based paint unrelated to releases into the environment; lead in drinking water; mold or microbial growth conditions; polychlorinated biphenyl-containing building materials (e.g., interior fluorescent light ballasts, paint, and caulk); naturally-occurring radon; regulatory compliance; substances not defined as hazardous substances (including some substances sometimes generally referred to as emerging contaminants) unless or until such substances are classified as a Comprehensive Environmental Response, Compensation, and Liability Act hazardous substance; and wetlands.

Thank you for selecting Rincon for this project. If you have any questions, or if we can be of any future assistance, please contact us.

Sincerely,
Rincon Consultants, Inc.

1 Executive Summary

This report presents the findings of a Phase I Environmental Site Assessment (ESA) for the Santa Maria Airport Rezoning Project located at 1494 Fairway Drive in Santa Maria, California (subject property). The Phase I ESA was performed for RRM Design Group by Rincon Consultants, Inc. (Rincon). RRM Design Group has requested this assessment and will use the information for the purpose of rezoning. The subject property is currently a vacant 6.95-acre parcel that includes a City of Santa Maria drinking water well. It is our understanding that the proposed future use of the property includes rezoning for industrial uses, with no current redevelopment plans.

The research completed as part of this Phase I ESA is listed below:

Task	Completed	Date Reviewed	Concern Identified?
User-Provided – Title Report	Yes	06/20/2023	No
User-Provided – Lien Search Report	Requested	Not Applicable (N/A)	N/A

Interviews – Other	Yes	06/29/2023	No
Site Reconnaissance	Yes	06/29/2023	Yes
Vapor Migration Research	Yes	06/13/2023	No

Based on the findings of this Phase I ESA, it is our opinion that that no recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), or controlled recognized environmental conditions (CRECs) were identified for the subject property. However, there are environmental concerns in connection with the subject property as follows.

Notable Findings	1. The subject property is located within the Santa Maria Airport Per- and Polyfluoroalkyl Substances (PFAS) Investigation site, but is outside of a one-mile radius of identified PFAS sources and impacts. 2. An abandoned/remnant well structure is located in the southeastern portion of the subject property. 3. Historical use of the subject property as part of a military base and a golf course may be associated with unidentified subsurface debris and/or structures. 4. The former Santa Maria oil field is located between 0.5 and 1.5 miles north and east of the subject property.

Because we have no evidence indicating that the subject property has been impacted by hazardous materials or petroleum products, no additional assessment is recommended. However, based on the Notable Findings above, Rincon recommends preparation of a soil management plan prior to

activities that will disturb soil at the subject property. We also recommend proper abandonment of the well structure observed in the southeastern portion of the subject property.

2 Introduction

This report presents the findings of a Phase I Environmental Site Assessment (ESA) conducted for the Santa Maria Airport Rezoning Project located at 1494 Fairway Drive in Santa Maria, California (subject property; Figure 1). The Phase I ESA was performed by Rincon Consultants, Inc. (Rincon) for RRM Design Group in general conformance with American Society for Testing and Materials (ASTM) E1527-21, our proposal dated May 25, 2023, and our contract dated June 6, 2023. This report presents our findings and provides our opinion as to the presence of recognized environmental conditions (RECs) on the subject property.

2.2 Purpose and Definitions

RRM Design Group has requested this assessment and will use the information for the purpose of rezoning the subject property. The purpose of this Phase I ESA was to determine if there are RECs on the subject property, taking into account commonly and reasonably ascertainable information, and to qualify for Landowner Liability Protections under the Brownfields Amendments to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

A **Recognized Environmental Condition (REC)** is defined pursuant to ASTM E1527-21 as, "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment." As stated in ASTM E1527-21, "**likely** is that which is neither certain nor proved, but can be expected or believed by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinions given therein."
A **Controlled REC** is defined pursuant to ASTM E1527-21 as, "recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."
A **Historical REC** is defined pursuant to ASTM E1527-21 as, "a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition."
A ***de minimis*** condition is defined pursuant to ASTM E1527-21 as, "a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition."
A **Property Use Limitation (PUL)** is defined pursuant to ASTM E1527-21 as, "a limitation or restriction on current or future use of a property in connection with a response to a release, in accordance with the applicable regulatory authority or authorities that allows hazardous substances or petroleum products to remain in place at concentrations exceeding unrestricted use criteria."
A **Significant Data Gap** is defined pursuant to ASTM E1527-21 as, "a data gap that affects the ability of the environmental professional to identify a recognized environmental condition."

2.2.1 Notable Finding

Although not defined by ASTM E1527-21, Rincon utilizes the term *Notable Finding* for potential environmental concerns present at or possibly present at a property that do not specifically fit one of the above ASTM-defined situations, yet may impact current or future use of the subject property.

2.3 Scope of Services

The scope of services conducted during this study is outlined below:

- Performed a reconnaissance of the subject property to identify obvious indicators of the existence of hazardous materials.
- Observed adjacent or nearby properties from public thoroughfares in an attempt to see if such properties are likely to use, store, generate, or dispose of hazardous materials.
- Obtained and reviewed an environmental records database search to obtain information about the potential for hazardous materials to exist at the subject property or at properties located in the vicinity of the subject property.
- Reviewed files for the subject property and immediately adjacent properties as identified in the database report, as applicable.
- Reviewed the current United States Geological Survey (USGS) topographic map to obtain information about the subject property and regional topography and uses of the subject property and surrounding sites.
- Reviewed additional pertinent record sources (e.g., California Geologic Energy Management Division [CalGEM] records, online databases of hazardous substance release sites), as necessary, to identify the presence of RECs at the subject property.
- Reviewed the California State Water Resources Control Board (SWRCB) Statewide Per- and Polyfluoroalkyl Substances (PFAS) Investigation online Public Map Viewer regarding current PFAS orders issued to facilities located in the vicinity of the subject property.
- Reviewed reasonably ascertainable historical resources (e.g., aerial photographs, topographic maps, fire insurance maps, city directories) to assess the historical land use of the subject property and adjacent properties.
- Provided a user interview questionnaire to a representative of RRM Design Group, the user of the Phase I ESA.
- Provided a property owner interview questionnaire to the property owner or a designated subject property representative identified to Rincon by RRM Design Group.
- Conducted interviews with other property representatives (e.g., key site manager, occupants), as applicable.
- Reviewed available RRM Design Group-provided information (e.g., previous environmental reports, title documentation).
- Requested Title Search Information Reports and environmental lien search information from the user of the report.

2.4 Significant Assumptions, Limitations, Deviations, Exceptions, Special Terms, and Conditions

This work is intended to adhere to good commercial, customary, and generally accepted environmental investigation practices for similar investigations conducted at this time and in this geographic area. No guarantee or warranties, expressed or implied, are provided. The findings and opinions conveyed in this report are based on findings derived from a site reconnaissance, review of an environmental database report, specified regulatory records and historical sources, and comments made by interviewees. This report is not intended as a comprehensive site characterization and should not be construed as such. Standard data sources relied upon during the completion of Phase I ESAs may vary with regard to accuracy and completeness. Although Rincon believes the data sources are reasonably reliable, Rincon cannot and does not guarantee the

authenticity or reliability of the data sources it has used. Additionally, pursuant to our contract, the data sources reviewed included only those that are practically reviewable without the need for extraordinary research.

Rincon has not found evidence that hazardous materials or petroleum products exist at the subject property at levels likely to warrant mitigation. Rincon does not under any circumstances warrant or guarantee that not finding evidence of hazardous materials or petroleum products means that hazardous materials or petroleum products do not exist on the subject property. Additional research, including surface or subsurface sampling and analysis, can reduce RRM Design Group's risks, but no techniques commonly employed can eliminate these risks altogether.

In addition, pursuant to ASTM E1527-21 practice, our scope of services did not include any inquiries with respect to asbestos-containing building materials unrelated to releases into the environment; biological agents; cultural and historic resources; ecological resources; endangered species; health and safety; indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment; industrial hygiene; lead-based paint unrelated to releases into the environment; lead in drinking water; mold or microbial growth conditions; polychlorinated biphenyl (PCB)-containing building materials (e.g., interior fluorescent light ballasts, paint, and caulk); naturally-occurring radon; regulatory compliance; substances not defined as hazardous substances (including some substances sometimes generally referred to as emerging contaminants) unless or until such substances are classified as a CERCLA hazardous substance; and wetlands.

2.5 ASTM Deviations

Deviations from ASTM E1527-21 practice were not encountered during the completion of this Phase I ESA. An environmental lien search was not completed as part of this assessment; however, one was requested from the user.

2.6 User Reliance

RRM Design Group has requested this assessment and will use the information for the purpose of rezoning the subject property. This Phase I ESA was prepared for use solely and exclusively by RRM Design Group, the City of Santa Maria, the Santa Maria Airport District, the project consultant team, environmental review consultants, and the future property owner/developer. No other use or disclosure is intended or authorized by Rincon. Also, this report is issued with the understanding that it is to be used only in its entirety. It is intended for use only by RRM Design Group, the City of Santa Maria, the Santa Maria Airport District, the project consultant team, environmental review consultants, and the future property owner/developer, and no other person or entity may rely upon the report without the express written consent of Rincon.

3 User-Provided Information and Responsibilities

3.1 Review Land Title Records and Judicial Records for Environmental Liens and Activity and Use Limitations

Rincon requested title search information reports from the user of the report. Pursuant to ASTM E1527-21,

> "the title search information reports shall identify environmental covenants, environmental easements, land use covenant and agreements, declaration of environmental land use restrictions, environmental land use controls, environmental use controls, environmental liens, or any other recorded instrument that restricts, affects, or encumbers the title to the subject property due to restrictions or encumbrances associated with the presence of hazardous substances or petroleum products. Title search information reports shall review land title records for documents recorded between 1980 and the present. If judicial records are not reviewed, the title search information report shall include a statement providing that the law or custom in the jurisdiction at issue does not require a search for judicial records in order to identify environmental liens."
>
> As stated in ASTM E1527-21 it is the "user's responsibility to search for environmental liens and activity and land use limitations (AULs)." This is in "addition to the environmental professional's search of institutional control and engineering control registries described in" ASTM E1527-21 Section 8.2.

A copy of the title search information records provided by the user is included in Appendix A and described in Section 3.3.

3.2 User Questionnaire

As described in ASTM E1527-21 Section 6, a User Questionnaire as provided by ASTM E1527-21 Appendix X3 was provided to RRM Design Group. The purpose of the User Questionnaire is for the user of the Phase I ESA to provide actual knowledge pertaining to the subject property to help identify RECs. Pamela A. Ricci, Principal Planner with RRM Design Group, completed the User Questionnaire on June 19, 2023. A copy of the completed questionnaire is included as Appendix A.

Based on our review of the completed questionnaire, the user indicated the following:

- The Phase I ESA is required/being performed as requested by the City of Santa Maria as part of the pre-application review process for a rezoning of the subject property from Open Space to Light Manufacturing (M-1).
- The Airport District will be rezoning the property to market the subject property for light industrial development.

Based on our review of the completed questionnaire, the user did not review the following sources of information and is unaware of information regarding the following:

- Recorded land title records (or judicial records, where appropriate) that identify any environmental liens filed or recorded against the subject property
- Recorded land title records (or judicial records, where appropriate) that identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the subject property under federal, tribal, state, or local law
- Title Report that identifies information pertaining to environmental cleanup liens or AULs for the subject property

Based on our review of the completed questionnaire, the user is unaware of information regarding the following:

- Specialized knowledge or experience related to the subject property or nearby properties
- Reduction in value for the subject property relative to any known environmental issues
- Commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases
- Obvious indicators that point to the presence or likely presence of releases at the subject property
- Pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the subject property
- Pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property
- Notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products

Based on our review of the completed questionnaire, the user identified information pertaining to the subject property that may help identify RECs in connection with the subject property. This information is summarized below:

- The past use of the subject property was as part of a golf course.

3.3 User-Provided Document Review

The following document regarding the subject property was provided by RRM Design Group:

- *Fidelity National Title Company, Preliminary Report, State Highway 135 & Skyway Drive, Santa Maria, California, dated April 20, 2023.*

  The title report indicates that the subject property includes an easement in the eastern-central portion for “discharge and drainage of potable water associated with the start-up of City well 10-S”, recorded on 04/22/1997. An easement for a water line enters the eastern-central portion of the subject property, dated from 12/20/1979.

4 Physical Setting Resources and Government Records

4.1 Physical Setting Resources

4.1.1 Topography

The current USGS topographic map (Santa Maria Quadrangle 2018) indicates that the subject property is situated at an elevation of approximately 213 feet above mean sea level with topography sloping gently to the southwest. The adjacent topography slopes gently to the west. A copy of the current USGS topographic map is included in Appendix D (EDR 2023e, page 6).

4.1.2 Geology and Hydrogeology

Based on information provided by RRM Design Group and the property owner, there are no site-specific geotechnical or geologic reports available for the subject property.

According to the Geologic Map of California (Jennings et al 2010), the subject property is underlain by Quaternary deposits consisting of extensive marine and nonmarine sand deposits.

During the preparation of this Phase I ESA, we reviewed the California SWRCB's online GeoTracker database to determine groundwater flow direction in the vicinity of the subject property. File reviews conducted for surrounding release sites indicate that regional groundwater is typically encountered at depths greater than 140 feet below ground surface and shallow/perched groundwater occurs at depths between approximately 4 and 13 feet bgs. Based on information from one source, groundwater in the vicinity of the subject property generally flows to the northwest. The information obtained regarding groundwater in the vicinity of the subject property is listed below:

Source Address, Distance, and Direction from Subject Property	Groundwater Depth (feet below ground surface)	Groundwater Flow Direction	Source
Unocal, 1500 W. Betteravia Rd., Santa Maria – 0.4 mile north	>80 feet	No data	GeoTracker (Harding ESE Inc. 2002)
MacDonnell No. 3 Sump, 2337 Thompson Way, Santa Maria – 0.5 mile northeast	140 feet	Northwest	GeoTracker (Santa Barbara County Fire Department 2001)
Santa Maria Airport, 3217 Terminal Dr., Santa Maria – 1.25 miles southeast	4 to 10 feet (shallow/perched)	No data	GeoTracker (SCS Engineers 2021)

A City of Santa Maria Water Department drinking water well is located in the eastern portion of the subject property, and is identified as Well 10S, State Well #CA4210011_010_010. The well is reported to have a total depth of 507 feet bgs and a screened interval of 291 feet bgs to 507 feet bgs (GeoTracker 2023). Additional information regarding water quality data for this well is provided in Section 4.6.

4.2 Government Record Sources and Agency Records Review

Rincon outsourced with a regulatory database search contractor, Environmental Data Resources (EDR), to obtain records of sites that generate, store, treat, or dispose of hazardous materials and sites for which a hazardous material release incident has occurred. The regulatory database search was conducted for the subject property and included data from surrounding sites within specified radii of the subject property. A copy of the database report, which specifies the ASTM E1527-21 search distance for each public list, is included as Appendix B. As shown on the June 8, 2023 database report, federal, state, and county lists were reviewed as part of the research effort. Please refer to Appendix B for a complete listing of sites reported by EDR and a description of the databases reviewed.

The Map Findings Summary, included in the database report, provides a summary of the databases searched, the number of reported facilities within the search radii, and whether the facility is located onsite or adjacent to the subject property.

As a follow-up to the database search, Rincon reviewed regulatory information for the subject property and nearby listings that were interpreted to have the potential to impact the subject property, based on one or more of the factors listed below:

- Reported distance of the facility from the subject property;
- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes;
- Reported case type (e.g., soil only, failed underground storage tank [UST] test only);
- Reported substance released (e.g., chlorinated solvents, gasoline, metals);
- Reported regulatory agency status (e.g., case closed, “no further action”); and,
- Location of the facility with respect to the reported groundwater flow direction (discussed in Section 4.1 of this report).

Facilities/properties that were interpreted by Rincon to be of potential environmental concern to the subject property, based on one or more of the factors listed above, are summarized below. In accordance with ASTM E1527-21, contamination migration pathways in soil, groundwater, and soil vapor were considered in our analysis of offsite properties of potential environmental concern.

The following sections include a summary of our review of the database report and the regulatory information obtained from online sources (e.g., SWRCB GeoTracker database, Department of Toxic Substances Control [DTSC] EnviroStor database, local fire department) and/or files requested from the applicable regulatory agency.

4.2.1 Orphan Listings

The EDR database report identified six orphan or unmapped site listings, which were unable to be plotted due to insufficient address information. Based on Rincon’s review of the limited address information or site descriptions for the orphan listings, none of the listings are expected to impact the subject property.

4.2.4 Nearby Release Sites within 1/3 Mile

The Santa Maria Airport property, which includes the subject property, was associated with nine release listings in the databases searched. No other release sites were listed within 1/3 mile of the subject property. Agency records for releases associated with the Santa Maria Airport site were reviewed online at GeoTracker and EnviroStor, and are summarized in Table 3 below.

There are numerous release sites associated with the Santa Maria oil field located approximately 0.5 to 1.5 miles north and east of the subject property. Due to their distance, these release sites are unlikely to pose a risk to the subject property.

4.3 Review of State of California Geologic Energy Management Division (CalGEM) Records

A review of the CalGEM Online Mapping System indicates that no oil wells are located on the subject property or adjacent properties, or within 0.25 mile of the subject property (CalGEM 2023).

4.4 Review of National Pipeline Mapping System Records

A review of the National Pipeline Mapping System (NPMS) online Public Map Viewer indicates that no natural gas transmission pipelines or hazardous liquid pipelines are located on the subject property or adjacent properties. Additionally, no pipeline-related accidents or incidents are mapped within 0.25 mile of the subject property (United States Department of Transportation 2023).

4.5 Review of California Statewide PFAS Investigation

Beginning in 2019, the SWRCB sent assessment requirements to property owners of sites that may be potential sources of PFAS. These sites currently include select airports, chrome plating facilities, DoD) sites, landfills, publicly owned treatment works facilities, and bulk fuel storage terminals and refineries. According to the SWRCB, "PFAS are a large group of human-made substances that do not occur naturally in the environment and are resistant to heat, water, and oil" (SWRCB 2023b). There are 57 known classes of PFAS comprising hundreds of individual PFAS compounds that were, or still are commercially produced. Only two PFAS compounds have undergone sufficient toxicological testing to have been assigned United States Environmental Protection Agency (USEPA) Health Advisory Levels: perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS). Other PFAS compounds are transformed into PFOA and PFOS in the environment (USEPA 2023).

Our June 9, 2023 review of the California PFAS Investigations online map viewer indicates that there are no current chrome plating, DoD, landfill, publicly owned treatment works facilities, or bulk fuel storage terminals and refineries with PFAS orders listed as located within 0.5 mile of the subject property (SWRCB 2023c).

The Santa Maria Airport is an open PFAS investigation site being overseen by the Central Coast RWQCB. The subject property is located within the Santa Maria Airport PFAS investigation site boundary; however, the subject property is located outside of a 1-mile radius of identified PFAS contamination sources (Appendix C) (SCS Engineers 2021).

Our June 9, 2023 review of the online GeoTracker PFAS Map viewer and the PFAS Investigation Report prepared for the Santa Maria Airport (SCS Engineers 2021) indicates that PFOA was detected at a concentration of 2.1 nanograms per liter (ng/L), less than the notification level of 5.1 ng/L, in the Santa Maria Water Department drinking water well (ID 10S) located on the subject property during the most recent sampling event in February 2020. PFOS was not detected Well 10S. Well 10S is tested periodically as part of a PFAS investigative order (SWRCB 2023c, SCS Engineers 2021). PFOA and PFOS were not detected in five other drinking water wells located within 1 mile of the subject property.

5.3 Gaps in Historical Sources

Several gaps of greater than 5 years were identified in the historical records reviewed: from 1905 to 1938, 1948 to 1954, 1960 to 1967, 1967 to 1974, and 1982 to 1990. These gaps are considered insignificant because the subject property use appears to be similar prior to and following the gaps.

6 Interviews

Rincon performed interviews regarding the subject property and surrounding areas. The purpose of the interviews was to discuss current and historical conditions and to obtain information indicating the presence of RECs in connection with the subject property.

6.1 Interview Summaries

6.1.1 Interview with Owner

An interview questionnaire was provided to the property owner, the Santa Maria Public Airport, prior to the site reconnaissance. Ric Tokoph, the Operations Manager, completed the Owner Questionnaire on June 15, 2023. A copy of the completed questionnaire is included in Appendix A. The following information is based on our review of the completed owner questionnaire.

The representative of the property owner indicated the following:

- The subject property is currently an open field and includes a City of Santa Maria Water Well.
- The subject property was formerly used as part of a golf course until approximately 2018, and previously as part of an airport and a DoD facility.
- Santa Maria Public Airport obtained ownership of the subject property in 1964.
- The former owner of the subject property was the City of Santa Maria, County of Santa Barbara, and the DoD.
- There are no hazardous materials or petroleum products stored or used on the subject property.
- No hazardous wastes are generated at the subject property.
- Fill dirt was used to fill a former cement pond that was part of the former golf course on the southern portion of the subject property

The representative of the property owner indicated that he unaware of the presence of industrial drums, storage tanks (above or below ground), pits, ponds, lagoons, sumps, clarifiers, solvent degreasers, stained soil, vent pipes, fill pipes, or access ways, stained surfaces, private wells, non-public water systems, transformers, capacitors, or hydraulic equipment, records indicating the presence of PCBs, or records indicating the presence of pesticides or herbicides at the subject property.

The representative of the property owner indicated that he is not aware of any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property. In addition, he is not aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products at the subject property.

6.1.2 Interview with Site Manager

A site reconnaissance interview was completed on June 29, 2023 with Martin Pehl, General Manager of the Santa Maria Airport. Mr. Pehl indicated the following:

- The drinking water well was drilled in 1968 and was subsequently rehabilitated (date unknown); the well and pump housing structures were built in 1992.
- The Santa Maria Airport obtained ownership in approximately 1964.
- The former owners of the subject property were the City of Santa Maria and the County of Santa Barbara (joint ownership).

Patricia Herod with the City of Santa Maria was also onsite to provide access to the well portion of the subject property. Ms. Herod presented the following information regarding hazardous material and petroleum hydrocarbon storage and waste generation at the subject property:

- Two 100-gallon chlorine storage tanks are located in the well pump housing and are filled approximately every two months.
- Lubricating oil is used in the pump.
- No hazardous wastes are generated at the subject property.

Mr. Pehl indicated that he is not aware of any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property. In addition, he is not aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products at the subject property.

6.1.3 Interviews with Occupants

Because the subject property is unoccupied, no occupants were interviewed as part of this research effort.

6.1.4 Interviews with Local Government Officials

Rincon submitted file review requests pertaining to wells located at the subject property to the following agencies:

- City of Santa Maria
- County of Santa Barbara
- California Department of Water Resources (DWR)

The City of Santa Maria and DWR did not have records pertaining to wells at the subject property. Santa Barbara County Public Health Department provided a copy of an approved Well Construction Permit Application for the “Sunset Ridge Well” dated February 7, 2006 submitted by the Santa Maria Airport (Appendix C). The well was proposed to be constructed of PVC, with a total depth of 300 feet bgs and a boring diameter of 8-inches. The proposed location or other information for this well was not provided and it is unknown whether this well was ever installed at the subject property.

6.1.5 Interviews with Others

Rincon did not attempt to interview neighboring property owners or others as part of this Phase I ESA.

7 Site Reconnaissance

Rincon performed a reconnaissance of the subject property on June 29, 2023 accompanied by of Martin Pehl, General Manager of the Santa Maria Airport. The purpose of the reconnaissance was to observe existing subject property conditions and to obtain information indicating the presence of RECs in connection with the subject property.

7.1 Methodology and Limiting Conditions

The site reconnaissance was conducted by:

1. Observing the subject property from public thoroughfares,
2. Observing the adjacent properties from public thoroughfares,
3. Walking the subject property,
4. Observing the interior of the onsite structures,
5. Observing the exterior of the structures,
6. Backtracking to correlate exterior features with interior features, as necessary, and
7. Observing the subject property from driveways, dirt and paved roads, and sidewalks.

7.2 General Subject Property Information

7.2.1 Current Use of Subject Property and Adjacent Properties

The subject property is currently a vacant, vegetated, approximately 6.95-acre parcel with a City of Santa Maria water well and pump house that occupies approximately 0.42 acre in the eastern portion. Adjacent properties include commercial businesses, vegetated land to the south, and agricultural land to the west.

7.2.2 Past Use of Subject Property and Adjacent Properties

Based on our site reconnaissance, past uses at the subject property and adjacent properties are not readily apparent.

7.2.3 Current or Past Uses in the Surrounding Areas

8 Potential Vapor Migration

The database report and other resources were reviewed to identify nearby known or suspect contaminated sites that have the potential for contaminated vapor originating from the nearby sites to migrate beneath the subject property. Based on the ASTM E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, the following minimum search distances were initially used to determine if contaminated soil vapors from a nearby known or suspect contaminated site have the potential to be migrating beneath the subject property:

- 0.1 mile (528 feet) for petroleum hydrocarbons
- 0.3 mile (1,760 feet) for other contaminants of concern (COCs)

Groundwater depth and flow direction are also utilized to determine risk of vapor migration. Groundwater in the vicinity of the subject property is reportedly present at greater than 140 feet bgs and flows to the northwest, but may be varied (Section 4.1). Areas of shallow perched groundwater has been identified at the Santa Maria Airport site, approximately 1 to 1.25 miles southeast of the subject property, at depths between 4 feet bgs and 13 feet bgs.

Online agency resources are reviewed to determine the extent of the contaminated soil or groundwater plume at known or suspect contaminated sites as specified below:

- Onsite or adjacent to the subject property,
- Within 100 feet, or
- Within the above referenced distances from the subject property and upgradient or crossgradient to the subject property.

Contaminated soil, soil vapor, and/or groundwater plumes of petroleum hydrocarbons (within 528 feet of the subject property) and other COCs (within 1,760 feet of the subject property) were not identified during the completion of this Phase I ESA.

9 Evaluation

Rincon has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 for the Santa Maria Airport Rezoning Project located at 1494 Fairway Drive in Santa Maria, California. Any exceptions to, or deletions from, this practice are described in Section 2.5 of this report.

9.1 Significant Data Gaps

No significant data gaps were identified during the preparation of this report.

9.2 Findings, Opinions, Conclusions, and Recommendations

This assessment has revealed environmental concerns in connection with the subject property, as detailed in Table 6.

Table 6 Findings, Opinions, Conclusions, and Recommendations

No.	Finding	Opinion	Conclusion	Recommendations
1	The subject property is located within the Santa Maria Airport PFAS Investigation site	PFOA was detected in the drinking water well located at the subject property at a concentration of 2.1 ng/L, less than the notification level of 5.1 ng/L. The subject property is located outside of a 1-mile radius of identified PFAS source areas at the Santa Maria Airport site (SCS Engineering 2021), and are not likely to be found in soil at the subject property.	Notable Finding	None
2	Abandoned/remnant well structure in the southeastern portion of the subject property	Site representatives were unaware of the presence of this well. Rincon completed additional research pertaining to wells at the subject property. Santa Barbara County Public Health Department provided a copy of an approved Well Construction Permit Application for the "Sunset Ridge Well" dated February 7, 2006 submitted by the Santa Maria Airport. The well was proposed to be constructed of PVC, with a total depth of 300 feet bgs and a boring diameter of 8-inches. No other information for this well was provided and it is unknown whether this well was ever installed at the subject property.	Notable Finding	Possible abandonment if well structures are encountered during future development
3	Historical use of the subject property as part of a military base and a golf course	The subject property appears to have been a vacant parcel used as part of the military base/airport property between the 1940s through the 1960s, and was part of a golf course in the 1990s through approximately 2015. Unidentified structures were observed on the property during the site reconnaissance, including a concrete pad, an abandoned well, and subsurface utilities. Unknown subsurface features or debris associated with historical uses may be present at the subject property.	Notable Finding	Preparation of a soil management plan prior to activities that will disturb soil at the subject property
4	The former Santa Maria oil field is located between 0.5 and 1.5 miles north and east of the subject property	Due to the distance of the former oil field from the subject property, it is not likely to impact soil, soil vapor, or groundwater at the subject property.	Notable Finding	None

WIRE SAFE™ | Inquire before you wire!

WIRE FRAUD ALERT

This Notice is not intended to provide legal or professional advice.
If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the number of relevant parties to the transaction as soon as an escrow account is opened.** DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 RCRA-LQG site within approximately 1 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/23/2023 has revealed that there are 5 ENVIROSTOR sites within approximately 1 of the target property.

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

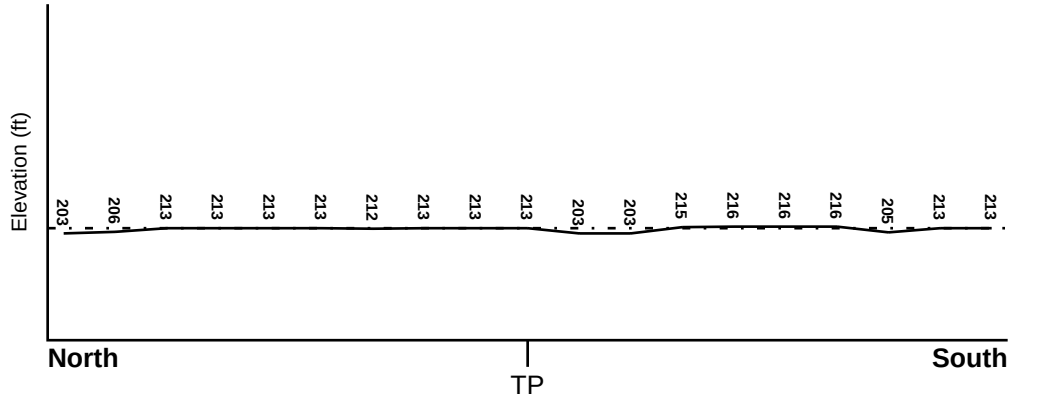

TOPOGRAPHIC INFORMATION

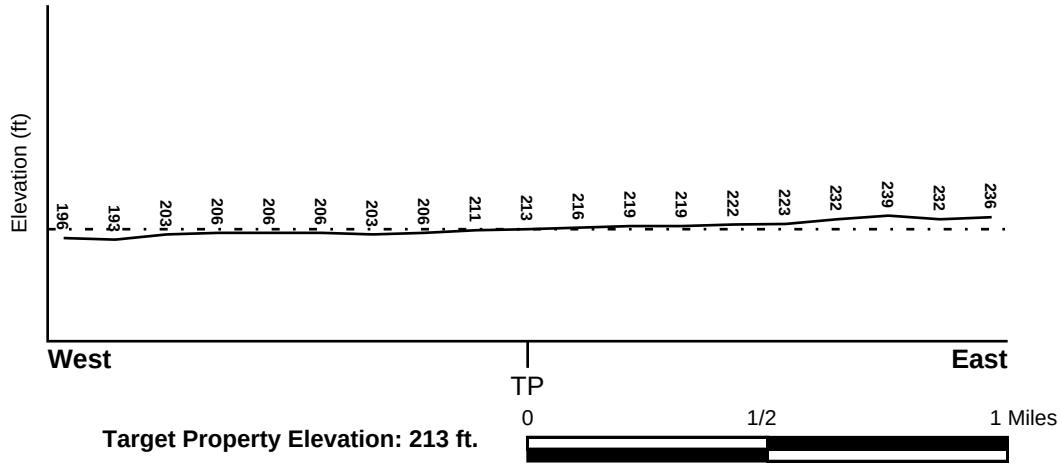

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

Target Property Elevation: 213 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
