EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) was performed in accordance with Terracon Proposal No. PLA227536 and Agreement for Services, dated December 9, 2022, and was conducted consistent with the procedures included in ASTM E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. The ESA was conducted under the supervision or responsible charge of Jennifer S. Van, Environmental Professional. Baylie R. Vincent performed the site reconnaissance on June 22, 2023.

Findings and Opinions

A summary of findings is provided below. It should be recognized that details were not included or fully developed in this section, and the report must be read in its entirety for a comprehensive understanding of the items contained herein.

Site Description and Use

The site is located at 956 Seward Street in Los Angeles, Los Angeles County, California 90038, and consists of an approximately 1.46-acre parcel of land, identified by Los Angeles County Assessor Identification Numbers (AINs): 5533-023-018, 5533-023-017, 5533-023-026, 5533-023-001, 5533-023-002, 5533-023-003, and the northwestern portion of 5533-023-027. The site is further improved with a two-story, approximately 30,000-square-foot light commercial facility, developed between 1952 and 1967, paved parking, and utilities. At the time of the visual reconnaissance, the site was observed to be occupied by Avon Rent A Car/Truck/Van and Editing Film Center. On-site operations consisted of truck/car rentals and wash-downs, and film storage.

Historical Information

Based on review of the historical information, the site consisted of undeveloped land from as early as 1894, until the commencement of residential development by 1919 through the 1920s. By 1950, the dwelling addressed as 956 Seward Street (on the northwestern portion of the site) was depicted as a ”Day Nursery”, and by 1955, the “Day Nursery” appeared to have been removed, and a TV and movie, office and storage facility and parking lot were depicted on the northwestern portion of the site; film cutting rooms were depicted on the western portion of the site, and film vaults were depicted on the central portion of the site. By 1957, portions of the film vault area was depicted as film cutting rooms; a portion of the film cutting area (on the western portion of the site) was depicted as a sheet metal shop; and the dwellings on the northeastern portion of the site appeared to have been removed. By 1968, the dwellings on the southern portion of the site appeared to have been removed, and the northeastern portion of the site was depicted as a TV, and movie supply storage area. By 2016, the

office, supply and storage buildings appeared to have been removed from the northern portion of the site, and the area appeared as vehicle/trailer storage lot. The site has remained consistent through the present.

The surrounding properties consisted of undeveloped land, with a road to the east (Hudson Avenue), and west (Seward Street), by as early as 1894. By 1919, a road (Romaine Street) and residential dwellings were depicted on the adjacent north, and residential dwellings and/or multi-family residential/apartments were depicted on the adjacent east and southeast. Residential development appeared to continue on the adjacent land to the south throughout the 1920s. By 1924, Consolidated Film Industries (CFI) film laboratory/developing plant was depicted on the adjacent west, until it's demolition, by 2005. The adjacent land to the west was subsequently redeveloped with large multi-tenant commercial buildings and parking garage, by 2014-2015. By 1938, a radio equipment warehouse and laboratory were depicted on the adjacent north, and a commercial office building was depicted on the adjacent northwest. By 1989, dwellings appeared to have been removed from the northern adjacent property, and the land appeared as a parking lot. The dwellings on the adjacent south appeared to have been removed (from 1955 through 1968), and the properties were depicted as a parking lots. By 1983, a commercial building (sound/media studio) appeared developed, and the adjacent properties have since remained consistent. The CFI plant is further discussed in Section 4.1. Recognized environmental conditions (RECs) were not identified in connection with the site and adjoining properties.

Prior Report

ODIC Environmental (ODIC) completed a Phase I ESA in May 2022. The area assessed consisted of the same general area as the current site. ODIC stated that the site was occupied by Avon Rent a Car, Truck and Van (a vehicle rental company) and the building consisted of climate controlled vaults for film storage. ODIC identified hazardous substances and petroleum products which included 55-gallon drums used for storage of waste diesel fuel and diesel exhaust fluid. RECs were not identified from ODIC's site reconnaissance. Based on a review of the findings and conclusions, ODIC did not identify RECs, Historical RECs and/or Controlled RECs associated with the site. ODIC did not recommend additional investigation.

Records Review

Selected federal and state environmental regulatory databases as well as responses from state and local regulatory agencies were reviewed. The site was listed in the EDR Exclusive Historical Auto Stations (EDR HIST Auto), Enforcement and Compliance History Information (ECHO), Facility Index System/Facility Registry System (FINDS), Facility and Manifest Data (HAZNET), Hazardous Waste Tracking System (HWTS), and Resource Conservation and Recovery Act Non-Generators/No Longer Regulated (RCRA NonGen/NLR) regulatory databases. Based on review of databases, Avon Rent a

Car/Truck/Van was identified with FINDS Registry ID No. 110070490148; ECHO ENVID ID No. 1024701754; and EPA ID No. CAL000440666, as a facility with "Universal Waste", and with "Other Hazardous Waste Activities", and having waste streams that consisted of "Unspecified organic liquids", (dated from 2018 through 2020). The 1X Legion Productions Inc., listings identified the facility with EPA ID No. CAC000279625, and having waste streams that consisted of "Paint Sludge", and "Empty containers less than 30 gallon" (dated from 1990 through 2000). Logie E S listing identified the facility as an automobile repairing facility in 1924. No further listing was reported for the Logie E S operations. History of violations were not reported in the databases. Release or chlorinated solvent usage were not reported in the regulatory databases. Based on review of the regulatory databases, short duration of the automotive repairing facility (~1 year), and the absence of reported violations and chlorinated solvent usage or chemical release listings, the above database listings do not represent a REC.

The remaining listed facilities do not constitute RECs based upon facility characteristics, distance, and/or topographic gradient in relation to the site.

Based on a review of the City of Los Angeles ZIMAS website (http://zimas.lacity.org), the site is identified within the "methane buffer zone." Although not identified as a REC, the site is located within a methane buffer zone, which represents a business environmental risk (BER) to the site. Therefore, if the site is planned for future development, all proposed building designs should conform to the City of Los Angeles Ordinance No. 175790 (refer to Appendix C), "An Ordinance amending Section 91.106.4.1 of Article 1, Chapter IX of the Los Angeles Municipal Code to establish citywide methane requirements and include more current construction standards to control methane intrusion into buildings."

Site Reconnaissance

During the visual reconnaissance, Terracon observed a vehicle wash-down area, an air compressor, a hydraulic elevator, eight plastic poly totes and approximately twelve 5-gallon buckets of car cleaning solution, two solid waste disposal bins, and a pole-mounted transformer. RECs were not identified.

Adjoining Properties

Romaine Street abuts the site to the north, followed by a multi-tenant, multi-story commercial/retail building (which includes Jean 4 Bar, 6601 Romaine) to the north-northwest; The Post Group (1000 Seward Street) and parking lot (1007 North Hudson Avenue) to the north; and residential apartment complex (1002 North Hudson Avenue) to the north-northeast. North Hudson Avenue abuts the site to the east, followed by multi-family and single-family residences. North Hudson Avenue abuts the site to the east, followed by multi-family and single-family residences. Seward Street abuts the site to the west, followed by a multi-tenant, multi-story commercial building (which includes Formosa Group; 959 Seward Street). RECs were not identified.

Significant Data Gaps

No significant data gaps were identified.

Conclusions

We have performed a Phase I ESA consistent with the procedures included in ASTM Practice E1527-21 of the Proposed Self-Storage Facility – Hollywood, located at 956 Seward Street in Los Angeles, Los Angeles County, California 90038, the site. RECs, CRECs and/or Significant Data Gaps (SDGs) were not identified in connection with the site.

Recommendations

Based on the scope of services, limitations, and conclusions of this assessment, Terracon did not identify RECs, CRECs, or SDGs in connection with the site. As such, no additional investigation is warranted at this time.

Based on a review of the City of Los Angeles ZIMAS website (http://zimas.lacity.org), the site is identified within the "methane buffer zone." Although not identified as a REC, the site is located within a methane buffer zone, which represents a BER to the site. Therefore, if the site is planned for future development, all proposed building designs should conform to the City of Los Angeles Ordinance No. 175790 (refer to Appendix C), "An Ordinance amending Section 91.106.4.1 of Article 1, Chapter IX of the Los Angeles Municipal Code to establish citywide methane requirements and include more current construction standards to control methane intrusion into buildings."

The location of the site is depicted on Exhibit 1 of Appendix A, which was reproduced from a portion of the Hollywood, California, USGS 7.5-minute series topographic map (2018). The site and adjoining properties are depicted on the Site Diagram, which is included as Exhibit 2 of Appendix A. Acronyms and terms used in this report are described in Appendix F.

1.2 Scope of Services

This Phase I ESA was performed in accordance with Terracon Proposal No. PLA227536 and Agreement for Services, dated December 9, 2022, and was conducted consistent with the procedures included in ASTM E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. The purpose of this ESA was to assist the client in developing information to identify RECs in connection with the site as reflected by the scope of this report. Recognized environmental conditions are defined by ASTM E1527-21 as "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment." A de minimis condition is not a recognized environmental condition.

This purpose was undertaken through user-provided information, a regulatory database review, historical and physical records review, interviews (including local government inquiries, as applicable), and a visual noninvasive reconnaissance of the site and adjoining properties. Limitations, ASTM deviations, and significant data gaps (if identified) are noted in the applicable sections of the report.

1.3 Standard of Care

This ESA was performed in accordance with generally accepted practices of this profession, undertaken in similar studies at the same time and in the same geographical area. We have endeavored to meet this standard of care, but may be limited by conditions encountered during performance, a client-driven scope of work, or inability to review information not received by the report date. Where appropriate, these limitations are discussed in the text of the report, and an evaluation of their significance with respect to our findings has been conducted.

Phase I ESAs, such as the one performed at this site, are of limited scope, are noninvasive, and cannot eliminate the potential that hazardous, toxic, or petroleum substances are present or have been released at the site beyond what is identified by the limited scope of this ESA. In conducting the limited scope of services described herein, certain sources of information and public records were not reviewed. It should be recognized that environmental concerns may be documented in public records that were not reviewed. No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs. No warranties, express or implied, are intended or made. The limitations herein must be considered when the user of this report formulates opinions as to risks associated with the site or otherwise uses the report for any other purpose. These risks may be further evaluated – but not eliminated – through additional research or assessment. We will, upon request, advise you of additional research or assessment options that may be available and associated costs.

1.4 Additional Scope Limitations, ASTM Deviations, and Data Gaps

Based upon the agreed-on scope of services, this ESA did not include subsurface or other invasive assessments, vapor intrusion assessments or indoor air quality assessments (i.e., evaluation of the presence of vapors within a building structure), business environmental risk evaluations, or other services not particularly identified and discussed herein. Credentials of the company (Statement of Qualifications) have not been included in this report but are available upon request. Pertinent documents are referred to in the text of this report, and a separate reference section has not been included. Reasonable attempts were made to obtain information within the scope and time constraints set forth by the client; however, in some instances, information

requested is not, or was not, received by the issuance date of the report. Information obtained for this ESA was received from several sources that we believe to be reliable; nonetheless, the authenticity or reliability of these sources cannot and is not warranted hereunder. This ESA was further limited by the following:

- At the issuance of this report, an interview with the site owner has not been conducted. Based on a review of historical information and local agency responses (Sections 3.1, 3.2, 4.1, and 4.2), the absence of an interview with the owner does not appear to represent a significant data gap.

An evaluation of the significance of limitations and missing information with respect to our findings has been conducted, and where appropriate, significant data gaps are identified and discussed in the text of the report. However, it should be recognized that an evaluation of significant data gaps is based on the information available at the time of report issuance, and an evaluation of information received after the report issuance date may result in an alteration of our conclusions, recommendations, or opinions. We have no obligation to provide information obtained or discovered by us after the issuance date of the report, or to perform any additional services, regardless of whether the information would affect any conclusions, recommendations, or opinions in the report. This disclaimer specifically applies to any information that has not been provided by the client.

This report represents our service to you as of the report date and constitutes our final document; its text may not be altered after final issuance. Findings in this report are based upon the site's current utilization, information derived from the most recent reconnaissance and from other activities described herein; such information is subject to change. Certain indicators of the presence of hazardous substances, petroleum products or PFAS compounds may have been latent, inaccessible, unobservable, or not present during the most recent reconnaissance and may subsequently become observable (such as after site renovation or development). Further, these services are not to be construed as legal interpretation or advice.

1.5 Reliance

This ESA report is prepared for the exclusive use and reliance of Baranof Holdings Storage, LLC. Use or reliance by any other party is prohibited without the written authorization of Baranof Holdings Storage, LLC. and Terracon Consultants, Inc. (Terracon).

Reliance on the ESA by the client and all authorized parties will be subject to the terms, conditions and limitations stated in the proposal, ESA report, and Terracon's Agreement. The limitation of liability defined in the Agreement is the aggregate limit of Terracon's liability to the client and all relying parties.

Continued viability of this report is subject to ASTM E1527-21 Section 4.6. If the ESA will be used by a different user (third party) than the user for whom the ESA was originally prepared, the third party must also satisfy the user's responsibilities in Section 6 of ASTM E1527-21.

1.6 Client Provided Information

Prior to the site visit, Mr. Nolan Borden, client's representative, was asked to provide the following user questionnaire information as described in ASTM E1527-21 Section 6.

3.0 HISTORICAL USE INFORMATION

Terracon reviewed the following historical sources to develop a history of the previous uses of the site and surrounding area, in order to help identify RECs associated with past uses. Copies of selected historical documents are included in Appendix C.

3.1 Historical Topographic Maps, Aerial Photographs, and Sanborn Maps

Readily available historical USGS topographic maps, selected historical aerial photographs (at approximately 10-to-15-year intervals) and historical fire insurance maps produced by the Sanborn Map Company were reviewed to evaluate land development and obtain information concerning the history of development on and near the site. Reviewed historical topographic maps, aerial photographs, and Sanborn maps are summarized below.

Historical fire insurance maps produced by the Sanborn Map Company were requested from Environmental Data Resources, Inc. (EDR) to evaluate past uses and relevant characteristics of the site and surrounding properties. Based upon inquiries to the above-listed Sanborn provider, Sanborn maps were available for the site.

3.3 Site Ownership

According to information from the Los Angeles County Property Information System, EDR, and local agency records, the site is currently owned by Pure Silver Enterprises, Inc. (AINs: 5533-023-018, 5533-023-017, 5533-023-026, 5533-023-001, 5533-023-002, and 5533-023-003), and 900 Seward LLC. (AIN: 5533-023-027).

3.4 Title Search

At the direction of the client, a title search was not included as part of the scope of services. Unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.5 Environmental Liens and Activity and Use Limitations

The EDR regulatory database report included a review of both Federal and State Engineering Control (EC) and Institutional Control (IC) databases. Based on a review of the database report, the site was not listed on the EC or IC databases. Please note that in addition to these federal and state listings, AULs can be recorded at the county and municipal level that may not be listed in the regulatory database report. Environmental lien and activity and use limitation records recorded against the site were not provided by the client. At the direction of the client, performance of a review of these records was not included as part of the scope of services and unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.6 Interviews Regarding Current and Historical Site Uses

At the issuance of this report, an interview with the site owner has not been conducted. Based on a review of historical information and local agency responses (Sections 3.1, 3.2, 4.1, and 4.2), the absence of an interview with the owner does not appear to represent a significant data gap.

3.7 Prior Report Review

Terracon requested the client provide any previous environmental reports, permits, registrations, and geotechnical reports they are aware of for the site. A previous report was provided by the client to Terracon for review.

- Phase I ESA
  956 Seward Street. Los Angeles, CA 90038
  Dated: May 17, 2022
  Prepared by: ODIC Environmental
  For: Nelson Silver

ODIC Environmental (ODIC) completed a Phase I ESA in May 2022. The area assessed consisted of the same general area as the current site. ODIC stated that the site was occupied by Avon Rent a Car, Truck and Van (a vehicle rental company) and the building consisted of climate controlled vaults for film storage. ODIC identified hazardous substances and petroleum products which included 55-gallon drums used for storage of waste diesel fuel and diesel exhaust fluid. RECs were not identified from ODIC's site reconnaissance. Based on a review of the findings and conclusions, ODIC did not identify RECs, HRECs and/or CRECs associated with the site. ODIC did not recommend additional investigation.

4.0 RECORDS REVIEW

Regulatory database information was provided by EDR, a contract information services company in a report dated June 9, 2023. The purpose of the records review was to identify RECs in connection with the site. Information in this section is subject to the accuracy of the data provided by the information services company and the date at which the information is updated. The scope herein did not include confirmation of facilities listed as "unmappable" by regulatory databases.

In some of the following subsections, the words up-gradient, cross-gradient, and down-gradient refer to the topographic gradient in relation to the site. As stated previously, the groundwater flow direction and the depth to shallow groundwater, if present, would likely vary depending upon seasonal variations in rainfall and the depth to the soil/bedrock interface. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the site cannot be directly ascertained.

Avon Rent a Car/Truck/Van; 1X Legion Productions Inc; Logie E S (956 Seward Street)

The above listed facility, identified as the site, was listed in the EDR Exclusive Historical Auto Stations (EDR HIST Auto), Enforcement and Compliance History Information (ECHO), Facility Index System/Facility Registry System (FINDS), Facility and Manifest Data (HAZNET), Hazardous Waste Tracking System (HWTS), and Resource Conservation and Recovery Act Non-Generators/No Longer Regulated (RCRA NonGen/NLR) regulatory databases. Based on review of databases, Avon Rent a Car/Truck/Van was identified with FINDS Registry ID No. 110070490148; ECHO ENVID ID No. 1024701754; and EPA ID No. CAL000440666, as a facility with "Universal Waste", and with "Other Hazardous Waste Activities", and having waste streams that consisted of "Unspecified organic liquids", (dated from 2018 through 2020). The 1X Legion Productions Inc., listings identified the facility with EPA ID No. CAC000279625, and having waste streams that consisted of "Paint Sludge", and "Empty containers less than 30 gallon" (dated from 1990 through 2000). Logie E S listing identified the facility as an automobile repairing facility in 1924. No further listing was reported for the Logie E S operations. History of violations were not reported in the databases. Release or chlorinated solvent usage were not reported in the regulatory databases. Based on review of the regulatory databases, short duration of the automotive repairing facility (~1 year), and the absence of reported violations and chlorinated solvent usage or chemical release listings, the above database listings do not represent a REC.

Consolidated Film Industries, LLC (959 Seward Street)

Consolidated Film Industries, LLC, located to the adjacent west (approximately 70 feet across Seward Street) of the site, and in a topographic down -gradient position relative to the site, was listed in the Facility Inventory Database (CA FID UST), "Cortese" Hazardous Waste & Substances Site List (Cortese), Statewide SLIC Cases (GEOTRACKER) (CPS-SLIC), Cleaner Facility (Drycleaners), Hazardous Materials facility (HAZMAT), Hazardous Waste & Substances Site List (HIST Cortese), Leaking Underground Storage Tanks (LUST), and RCRA-Large Quantity Generator (RCRA-LQG) regulatory databases. The facility was identified as a Los Angeles County CUPA Permitted Facility; Facility ID No. FA0003271, dated 2022; with an inactive status. The Drycleaner listing identified the facility as an "Adsorber" dry cleaning "Regenerative" and Building Code Adoption Tracking (BCAT) description of "plastics and resins cleaning", dated from 1970 through 1990. Typical adsorbents used most likely consisted of Perchloroethylene (PCE) and Trichlorotrifluoroethane drycleaning solvents. The facility was further identified with CERS ID No. 110000831280 and Site ID No. 462140; and EPA ID No. CAD088378245, as Large Quantity Generator of Waste, with waste streams identified as spent halogenated solvents: PCE, Methylene Chloride, Trichloroethylene (TCE), 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, and 1,1,2, and Trichloroethane (TCA)(dated from 1992 through 2006).

Based on review of databases and GeoTracker online database, Consolidated Film Industries, LLC was identified as a facility with a history of film processing operations, from 1926 through 2002, which consisted of the chemical use of isopropyl alcohol, acetone, TCA, PCE, ammonium thiosulfate, and proprietary development solutions. The facility (under the business name of Consolidated Film Industries), was identified as a closed LUST case (Global ID No. T0603700917, dated from May 30, 1986), which originated with the closure of a 25,000-gallon diesel UST. During UST closure, soil and groundwater were analyzed for the presence of diesel Total Petroleum Hydrocarbons (TPH), Benzene, Toulene, Ethybenzene, Xylenes, Methyl tert-Butyl Ether (MTBE), and Volatile organic Compounds (VOCs), from 1986 through 1991. Due to the low amount of diesel (234 mg/kg in soil), Toluene (0.044 mg/kg in soil; 0.0092 µg/L in groundwater), Ethylbenzene (0.02 mg/kg in soil), and Xylenes (0.064 mg/kg in soil and 0.0006 µg/L in groundwater), the LUST case, as it pertained to the diesel fuel, was closed on September 30, 1996. However, based on groundwater impact of PCE, TCA, DCA, and TCE, the case was transferred to the Site Cleanup Unit at the State Water Resources Control Board. The Site Cleanup Case (CPS-SLIC listing; Global ID No. SL0603716222) identified the facility, as having an open site status. The facility was evaluated for TCA, Acetone, PCE, and TCE in groundwater, from December 2005 through October 2015. According to records obtained from the GeoTracker online database, eleven buildings that formerly operated with film processing activities, were demolished in 2005. Remediation activities included the excavation and disposal of halogenated solvent impacted soils and concrete, from below the buildings/basements, and over excavation, from below the groundwater table. The land was backfilled with crushed concrete (generated from the demolished buildings), and subsequently remediated for having halogenated solvent impacted backfill material. A No Further Action Letter for Soil was issued by the Regional Water Boards, on October 5, 2007, upon remediation completion. The land was since redeveloped in 2014-2015, with commercial businesses.

According to records obtained via GeoTracker, groundwater and vapor monitoring activities were conducted by NSN Engineering, Inc., (Groundwater Monitoring Report, Second Half 2022 and Soil Gas and Methane Monitoring Report, Second Half 2022; both reports dated January 13, 2023), with the latest groundwater monitoring dated November 2 and 3, 2022, and depth to groundwater measured from approximately 13 feet to 17 feet bgs, and the latest vapor monitoring dated 1 and 2 December, 2022. According to the analytical soil gas monitoring samples, PCE was detected in the samples, and NSN recommended continued semi-annual monitoring.

Based on the analytical groundwater data obtained within close proximity to the site, halogenated solvents were not detected (ND) in the groundwater monitoring wells closet to the site (MW-4, MW-9, and MW-16), located approximately 70 feet to the west of the site, after remediation activities were completed. Based on the facility's hydrogeologic down-gradient position relative to the site, groundwater analytical data closest to the site, documented release and cleanup oversight by the Los Angeles Regional Water Quality

Control Board, the former off-site former Consolidated Film Industries, LLC facility does not appear to represent a REC to the site, at this time.

The remaining facilities listed in the database report do not appear to represent RECs to the site at this time based upon regulatory status, apparent topographic gradient, and/or distance from the site.

Unmapped facilities are those that do not contain sufficient address or location information to evaluate the facility listing locations relative to the site. The report listed one facility in the unmapped section. Determining the location of unmapped facilities is beyond the scope of this assessment; however, the facility was not identified as the site or adjacent properties.

4.3 Local Area Knowledge

Based on a review of the California Department of Conservation, Geologic Energy Management Division well finder website (CalGEM GIS), the site is not identified within an oil field and there are no active or plugged oil production wells located at the site or adjoining properties.

Terracon researched on-line at the State Resources Water Control Board (SRWCB) GeoTracker database – Land Disposal Sites and landfills were not identified on-site or in the site vicinity.

Based on a review of the City of Los Angeles ZIMAS website (http://zimas.lacity.org), the site is identified within the "methane buffer zone." Although not identified as a REC, the site is located within a methane buffer zone, which represents a BER to the site. Therefore, if the site is planned for future development, all proposed building designs should conform to the City of Los Angeles Ordinance No. 175790 (refer to Appendix C), "An Ordinance amending Section 91.106.4.1 of Article 1, Chapter IX of the Los Angeles Municipal Code to establish citywide methane requirements and include more current construction standards to control methane intrusion into buildings."

Site Operations, Processes, and Equipment

Elevators

One hydraulic operated elevator was observed on the central portion of the on-site 2-story building. The hydraulic reservoir and base pit for the elevator were not observed. Based on site observations, the elevator is not a REC to the site.

Wash-down areas or carwashes

A wash-down area for rental vans was observed on the northern portion of the site. The vans are washed on a plastic containment tarp where the wastewater is collected and stored in plastic poly totes. Based on the containment of the wash-down area, the wash-down area is not a REC to the site.

Site Operations, Processes, and Equipment

Air compressors

One air compressor was observed outside the northern portion of the on-site building. The air compressor was located on a wooden platform. Surficial staining or releases were not observed in the vicinity of the air compressor at the time of the site reconnaissance. Based on visual observations, the air compressor is not a REC to the site.

Aboveground Chemical or Waste Storage

Drums, barrels, and/or containers ≥ 5 gallons

Eight plastic poly totes and approximately twelve 5-gallon buckets of car cleaning solution were observed outside the northern portion of the on-site building. The plastic poly totes contained car wash wastewater. Additionally, approximately fifteen 55-gallon drums of car wash cleaning solution and four 5-gallon containers of gasoline were observed outside the northwestern portion of the on-site building. Staining and/or releases were not observed in the vicinity of the plastic totes, 5-gallon buckets of car cleaning solution, 55-gallon drums, or 5-gallon gasoline containers. Based on visual observations, the above listed containers are not a REC to the site.

Releases or Potential Releases

Trash, debris and/or other waste materials

Two solid waste dumpsters serviced by the Waste Management, were observed on the northern and western portions of the site. No evidence of staining, noxious odors or hazardous waste disposal was observed within or in the vicinity of the on-site garbage bins. Based on visual observations, the solid waste dumpsters are not a REC to the site.

Electrical Transformers/ PCBs

Transformers and/or capacitors

During Terracon's site visit, one pole-mounted transformer, owned and serviced Los Angeles Department of Water and Power, was observed on the central portion of the site; however, no information with regard to PCB content of the transformer fluids was observed. Some transformers contain mineral oil which may contain PCBs.

Los Angeles Department of Water and Power maintains responsibility for the transformers, and if the transformers were "PCB contaminated," Los Angeles Department of Water and Power is not required to replace the transformer fluids until a release is identified. However, evidence of current or prior releases was not observed in the vicinity of the electrical equipment during the site reconnaissance.

6.0 ADJOINING PROPERTY RECONNAISSANCE

Visual observations of adjoining properties (from site boundaries) are summarized below.

Adjoining Properties

✓ No ___ Yes (If yes, explain below)

4) Does the purchase price being paid for this site reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the site?

✓ No ___ Yes ___ Not applicable (If yes or Not applicable, explain below)

5) Are you aware of commonly known or reasonably ascertainable information about the site that would help the environmental professional to identify conditions indicative of releases or threatened releases (40 CFR 312.30)? For example, (a.) Do you know the past uses of the site? (b.) Do you know of specific chemicals that are present or once were present at the site? (c.) Do you know of spills or other chemical releases that have taken place at the site? (d.) Do you know of any environmental cleanups that have taken place at the site?

✓ No ___ Yes (If yes, explain below)

6) Based on your knowledge and experience related to the site, are there any obvious indicators that point to the presence or likely presence of releases at the site (40 CFR 312.31)?

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

Site History:	The site, located at the northwest corner of Seward Street and Barton Avenue in Hollywood, was formerly used for film processing activities from 1926 until 2002. The site was occupied by approximately eleven structures (Buildings 1 through 11), parking lots, and an interior courtyard. Film processing and associated activities were conducted in three main buildings; Buildings 1, 2 and 3. The majority of the chemicals that had been used in film processing were stored in the basement of Buildings 2 and 3. Historically, the chemicals used for film processing included isopropyl alcohol, acetone, 1,1,1-Trichloroethane (1,1,1-TCA), Perchloroethlylene (PCE), ammonium thiosulfate, and proprietary development solutions. The remaining buildings were used as offices and for other purposes, such as general storage, a maintenance shop, an electrical shop, and for archiving films. Buildings 1 through 11 were demolished between April and August of 2005. The site is presently vacant and awaiting commercial redevelopment.

Military DOD Site:	No
RWQCB Region:	LOS ANGELES RWQCB (REGION 4)
Site History:	The site is owned by Laser-Pacific Media Corporation, a subsidiary of Eastman Kodak Company, and is located on the western side of the 800 block of North Seward Street in Los Angeles, California. The approximately 39,000 sq. ft. site includes three parcels. The northernmost parcel is developed with two buildings located at 823 - 835 North Seward Street. The southern two parcels are used as a parking area but one of the parcels is not owned by Laser-Pacific. The two buildings house a sound editing facility and a motion picture film developing and finishing facility, respectively. The properties and two buildings were developed as a one-story building by Technicolor in 1927 for use as a film laboratory. Use of photofinishing and other chemicals, including halogenated solvents, has been documented for the site. The use of tetrachloroethene (PCE) in a wet-gate printer located at 835 North Seward Street has been documented. According to site investigation reports submitted to the Regional Board, subsurface site investigations have been conducted since 2002. However, a Phase I environmental site assessment (ESA) was reportedly conducted in 1992. The site investigations involved

soil gas survey, soil and groundwater sampling and groundwater monitoring well installation and indicated that the soil and groundwater beneath the site are contaminated with PCE, trichloroethene (TCE) and other volatile organic compounds (VOCs), heavy metals, aromatic hydrocarbons such as xylenes, diesel range petroleum hydrocarbons and inorganic anions such as nitrate, cyanide and sulfate. The concentrations of most of the contaminants in the soil matrix are below the Regional Board's soil screening levels. Groundwater monitoring has also been conducted at the site since 2005 and has shown that the concentrations of contaminants are decreasing. The site has been closed with a deed restriction to limit future land use on the property to commercial/industrial.

Site History:	The Site was occupied by a motion picture post-production facility where titles, visual effects and special effects were applied onto motion picture film. The former Pacific Title and Art Studio (PTAS) was a post-production motion picture facility that operated from approximately 1946 to 2009. Operations in the main building included internal film developing and associated film cleaning and optical printing to support post-production processes. The main building housed office space, film developing, printing and film cleaning process units, studios and film viewing theaters. The garage-like structure in the southwest portion of the subject property was used for storage of equipment, paints, janitorial chemicals and other materials. In 2009, the Amidi Group acquired ownership of the property from PTAS for re- development of the main building into an executive office complex. The redevelopment was completed in June 2013.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

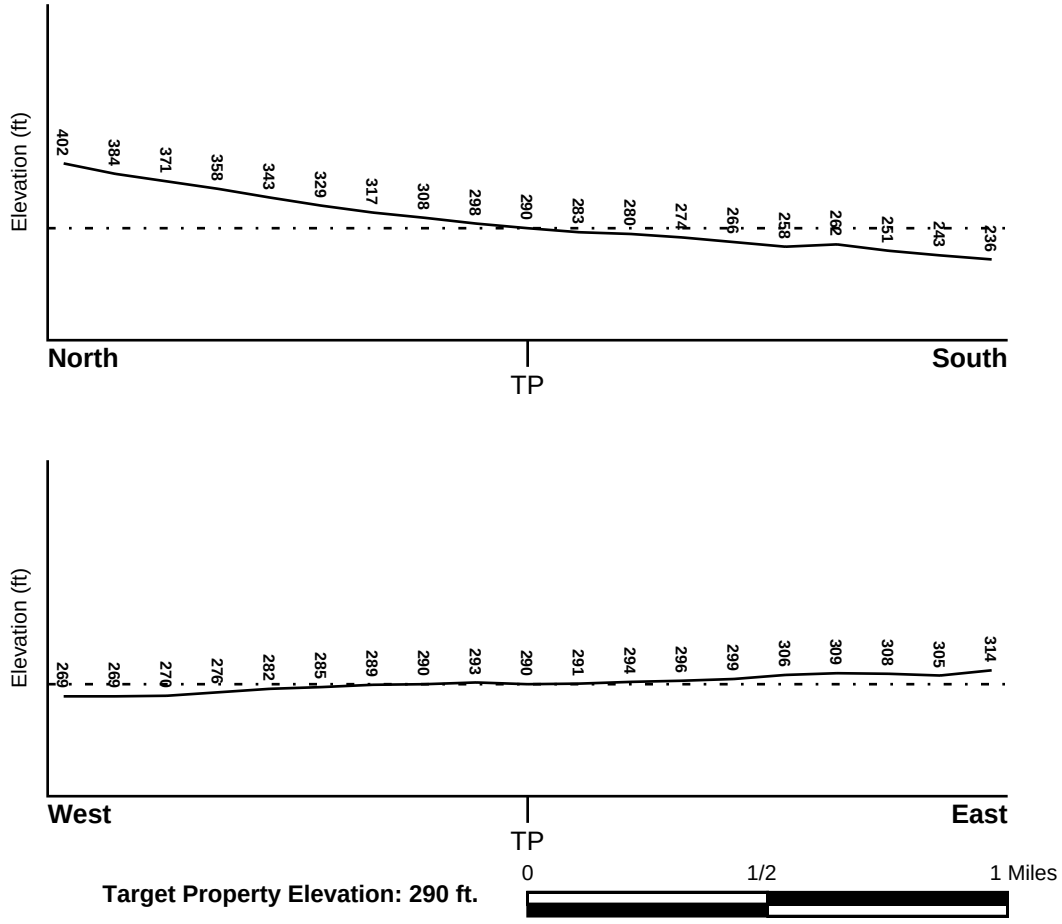
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX F

DESCRIPTION OF TERMS AND ACRONYMS

Description of Selected General Terms and Acronyms

Term/Acronym	Description
ACM	Asbestos Containing Material. Asbestos is a naturally occurring mineral, three varieties of which (chrysotile, amosite, crocidolite) have been commonly used as fireproofing or binding agents in construction materials. Exposure to asbestos, as well as ACM, has been documented to cause lung diseases including asbestosis (scarring of the lung), lung cancer and mesothelioma (a cancer of the lung lining). Regulatory agencies have generally defined ACM as a material containing greater that one (1) percent asbestos, however some states (e.g., California) define ACM as materials having 0.1% asbestos. In order to define a homogenous material as non-ACM, a minimum number of samples must be collected from the material dependent upon its type and quantity. Homogenous materials defined as non-ACM must either have 1) no asbestos identified in all of its samples or 2) an identified asbestos concentration below the appropriate regulatory threshold. Asbestos concentrations are generally determined using polarized light microscopy or transmission electron microscopy. Point counting is an analytical method to statistically quantify the percentage of asbestos in a sample. The asbestos component of ACM may either be friable or non-friable. Friable materials, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure and have a higher potential for a fiber release than non-friable ACM. Non-friable ACM are materials that are firmly bound in a matrix by plastic, cement, etc. and, if handled carefully, will not become friable. Federal and state regulations require that either all suspect building materials be presumed ACM or that an asbestos survey be performed prior to renovation, dismantling, demolition, or other activities that may disturb potential ACM. Notifications are required prior to demolition and/or renovation activities that may impact the condition of ACM in a building. ACM removal may be required if the ACM is likely to be disturbed or damaged during the demolition or renovation. Abatement of friable or potentially friable ACM must be performed by a licensed abatement contractor in accordance with state rules and NESHAP. Additionally, OSHA regulations for work classification, worker training and worker protection will apply.
AHERA	Asbestos Hazard Emergency Response Act
AST	Aboveground Storage Tanks. ASTs are generally described as storage tanks less than 10% of which are below ground (i.e., buried). Tanks located in a basement, but not buried, are also considered ASTs. Whether, and the extent to which, an AST is regulated, is determined on a case-by-case basis and depends upon tank size, its contents and the jurisdiction of its location.
BGS	Below Ground Surface
Brownfields	State and/or tribal listing of Brownfield properties addressed by Cooperative Agreement Recipients or Targeted Brownfields Assessments.

Description of Selected General Terms and Acronyms

Term/Acronym	Description
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes. BTEX are VOC components found in gasoline and commonly used as analytical indicators of a petroleum hydrocarbon release.
CERCLA	Comprehensive Environmental Response, Compensation and Liability Act (a.k.a. Superfund). CERCLA is the federal act that regulates abandoned or uncontrolled hazardous waste sites. Under this Act, joint and several liability may be imposed on potentially responsible parties for cleanup-related costs.
CERCLIS	Comprehensive Environmental Response, Compensation and Liability Information System. An EPA compilation of sites having suspected or actual releases of hazardous substances to the environment. CERCLIS also contains information on site inspections, preliminary assessments and remediation of hazardous waste sites. These sites are typically reported to EPA by states and municipalities or by third parties pursuant to CERCLA Section 103.
CESQG	Conditionally Exempt Small Quantity Generators
CFR	Code of Federal Regulations
CREC	Controlled Recognized Environmental Condition is defined in ASTM E1527-21 as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority) , with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report."
DOT	U.S. Department of Transportation
EPA	U.S. Environmental Protection Agency
ERNS	Emergency Response Notification System. An EPA-maintained federal database which stores information on notifications of oil discharges and hazardous substance releases in quantities greater than the applicable reportable quantity under CERCLA. ERNS is a cooperative data-sharing effort between EPA, DOT, and the National Response Center.
ESA	Environmental Site Assessment
FRP	Fiberglass Reinforced Plastic

Description of Selected General Terms and Acronyms

Term/Acronym	Description
Hazardous Substance	As defined under CERCLA, this is (A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title; (C) any hazardous waste having characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Act (with some exclusions); (D) any toxic pollutant listed under section 1317(a) of Title 33; (E) any hazardous air pollutant listed under section 112 of the Clean Air Act; and (F) any imminently hazardous chemical substance or mixture with respect to which the EPA Administrator has taken action under section 2606 of Title 15. This term does not include petroleum, including crude oil or any fraction thereof which is not otherwise listed as a hazardous substance under subparagraphs (A) through (F) above, and the term include natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).
Hazardous Waste	This is defined as having characteristics identified or listed under section 3001 of the Solid Waste Disposal Act (with some exceptions). RCRA, as amended by the Solid Waste Disposal Act of 1980, defines this term as a "solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may (A) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed."
HREC	Historical Recognized Environmental Condition is defined in ASTM E1527-21 as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time of the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."
IC/EC	A listing of sites with institutional and/or engineering controls in place. IC include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. EC include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.
ILP	Innocent Landowner/Operator Program

Description of Selected General Terms and Acronyms

Term/Acronym	Description
LQG	Large Quantity Generators
LUST	Leaking Underground Storage Tank. This is a federal term set forth under RCRA for leaking USTs. Some states also utilize this term.
MCL	Maximum Contaminant Level. This Safe Drinking Water concept (and also used by many states as a ground water cleanup criteria) refers to the limit on drinking water contamination that determines whether a supplier can deliver water from a specific source without treatment.
MSDS	Material Safety Data Sheets. Written/printed forms prepared by chemical manufacturers, importers and employers which identify the physical and chemical traits of hazardous chemicals under OSHA's Hazard Communication Standard.
NESHAP	National Emissions Standard for Hazardous Air Pollutants (Federal Clean Air Act). This part of the Clean Air Act regulates emissions of hazardous air pollutants.
NFRAP	Facilities where there is "No Further Remedial Action Planned," as more particularly described under the Records Review section of this report.
NOV	Notice of Violation. A notice of violation or similar citation issued to an entity, company or individual by a state or federal regulatory body indicating a violation of applicable rule or regulations has been identified.
NPDES	National Pollutant Discharge Elimination System (Clean Water Act). The federal permit system for discharges of polluted water.
NPL	The NPL is the EPA's database of uncontrolled or abandoned hazardous waste facilities that have been listed for priority remedial actions under the Superfund Program.
OSHA	Occupational Safety and Health Administration or Occupational Safety and Health Act
PACM	Presumed Asbestos-Containing Material. A material that is suspected of containing or presumed to contain asbestos but which has not been analyzed to confirm the presence or absence of asbestos.
PCB	Polychlorinated Biphenyl. A halogenated organic compound commonly in the form of a viscous liquid or resin, a flowing yellow oil, or a waxy solid. This compound was historically used as dielectric fluid in electrical equipment (such as electrical transformers and capacitors, electrical ballasts, hydraulic and heat transfer fluids), and for numerous heat and fire sensitive applications. PCB was preferred due to its durability, stability (even at high temperatures), good chemical resistance, low volatility, flammability, and conductivity. PCBs, however, do not break down in the environment and are classified by the EPA as a suspected carcinogen. 1978 regulations, under the Toxic Substances Control Act, prohibit manufacturing of PCB-containing equipment; however, some of this equipment may still be in use today.

Description of Selected General Terms and Acronyms

Term/Acronym	Description
pCi/L	picoCuries per Liter of Air. Unit of measurement for Radon and similar radioactive materials.
PLM	Polarized Light Microscopy (see ACM section of the report, if included in the scope of services)
PST	Petroleum Storage Tank. An AST or UST that contains a petroleum product.
Radon	A radioactive gas resulting from radioactive decay of naturally-occurring radioactive materials in rocks and soils containing uranium, granite, shale, phosphate, and pitchblende. Radon concentrations are measured in picoCuries per Liter of Air. Exposure to elevated levels of radon creates a risk of lung cancer; this risk generally increases as the level of radon and the duration of exposure increases. Outdoors, radon is diluted to such low concentrations that it usually does not present a health concern. However, radon can accumulate in building basements or similar enclosed spaces to levels that can pose a risk to human health. Indoor radon concentrations depend primarily upon the building's construction, design and the concentration of radon in the underlying soil and ground water. The EPA recommended annual average indoor "action level" concentration for residential structures is 4.0 pCi/l.
RCRA	Resource Conservation and Recovery Act. Federal act regulating solid and hazardous wastes from point of generation to time of disposal ('cradle to grave"). 42 U.S.C. 6901 et seq.
RCRA Generators	The RCRA Generators database, maintained by the EPA, lists facilities that generate hazardous waste as part of their normal business practices. Generators are listed as either large (LQG), small (SQG), or conditionally exempt (CESQG). LQG produce at least 1000 kg/month of non-acutely hazardous waste or 1 kg/month of acutely hazardous waste. SQG produce 100-1000 kg/month of non-acutely hazardous waste. CESQG are those that generate less than 100 kg/month of non-acutely hazardous waste.
RCRA CORRACTS/ TSDs	The USEPA maintains a database of RCRA facilities associated with treatment, storage, and disposal (TSD) of hazardous materials which are undergoing "corrective action". A "corrective action" order is issued when there is a release of hazardous waste or constituents into the environment from a RCRA facility.
RCRA Non-CORRACTS/ TSDs	The RCRA Non-CORRACTS/TSD Database is a compilation by the USEPA of facilities which report storage, transportation, treatment, or disposal of hazardous waste. Unlike the RCRA CORRACTS/TSD database, the RCRA Non-CORRACTS/TSD database does not include RCRA facilities where corrective action is required.
RCRA Violators List	RAATS. RCRA Administrative Actions Taken. RAATS information is now contained in the RCRIS database and includes records of administrative enforcement actions against facilities for noncompliance.
RCRIS	Resource Conservation and Recovery Information System, as defined in the Records Review section of this report.

Description of Selected General Terms and Acronyms

Term/Acronym	Description
REC	Recognized Environmental Conditions are defined by ASTM E1527-21 as 1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition.

SPCC	Spill Prevention, Control and Countermeasures. SPCC plans are required under federal law (Clean Water Act and Oil Pollution Act) for any facility storing petroleum in tanks and/or containers of 55-gallons or more that when taken in aggregate exceed 1,320 gallons. SPCC plans are also required for facilities with underground petroleum storage tanks with capacities of over 42,000 gallons. Many states have similar spill prevention programs, which may have additional requirements.

Description of Selected General Terms and Acronyms

Term/Acronym	Description
UST	Underground Storage Tank. Most federal and state regulations, as well as ASTM E1527-21, define this as any tank, incl., underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10% or more beneath the surface of the ground (i.e., buried).
VCP	State and/or Tribal facilities included as Voluntary Cleanup Program sites.
VOC	Volatile Organic Compound
Wetlands	Areas that are typically saturated with surface or ground water that creates an environment supportive of wetland vegetation (i.e., swamps, marshes, bogs). The Corps of Engineers Wetlands Delineation Manual (Technical Report Y-87-1) defines wetlands as areas inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. For an area to be considered a jurisdictional wetland, it must meet the following criteria: more than 50 percent of the dominant plant species must be categorized as Obligate, Facultative Wetland, or Facultative on lists of plant species that occur in wetlands; the soil must be hydric; and, wetland hydrology must be present. The federal Clean Water Act which regulates "waters of the US," also regulates wetlands, a program jointly administered by the USACE and the EPA. Waters of the U.S. are defined as: (1) waters used in interstate or foreign commerce, including all waters subject to the ebb and flow of tides; (2) all interstate waters including interstate wetlands; (3) all other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, etc., which the use, degradation, or destruction could affect interstate/ foreign commerce; (4) all impoundments of waters otherwise defined as waters of the U. S., (5) tributaries of waters identified in 1 through 4 above; (6) the territorial seas; and (7) wetlands adjacent to waters identified in 1 through 6 above. Only the USACE has the authority to make a final wetlands jurisdictional determination.

Subject: Methane Investigation Report
Scope of Work: The construction of a self-storage facility
Project Address: 956 Seward St., Los Angeles, CA 90038
Findings: This project does not require a methane mitigation system

Methane Specialists is pleased to submit this report with the results of our subsurface methane investigation for the above-mentioned project. The main purpose of the investigation was to measure sub-surface concentrations of methane at the subject site to determine site-specific methane mitigation requirements prescribed by the City of Los Angeles Department of Building and Safety. This investigation was conducted in accordance with our proposal dated 6-13-2023.

Project Information

The proposed project is the construction of a construction of a self-storage facility. Probes were bored down to clear at least 1 foot above refusal and groundwater levels for gas readings to remain unaffected by water vapor. Groundwater nor refusal was not met while drilling down at either probe set below surface grade (bsg). A geotechnical report was not provided to us prior to writing this report.

The site is within the City of Los Angeles designated Methane Buffer Zone. (Source: ZIMAS Parcel Profile Report (enclosed)).

City of Los Angeles Methane Requirements

Requirements for control of methane intrusion in the City of Los Angeles are specified in Division 71 Methane Seepage Regulations Section 91.7101 of the Los Angeles Municipal Code ("Division 71"). Since the project is within the methane zone, the Department of Building and Safety has the authority to withhold permits for construction unless detailed plans for adequate protection against methane are submitted.

The level of methane protection required depends upon the "design methane concentration," which is defined in Division 71 as "the highest concentration of methane gas found during site testing." Site testing is required to determine the design concentration unless the developer accepts the most stringent methane mitigation requirements ("Level V"). If site testing is performed (e.g., to document that a lower level of mitigation is justified), then it must follow the protocols published by the Department of Building and Safety, "Site Testing Standards for Methane" (P/BC 2020-101, January 1, 2020).

P/BC 2020-101 prescribes a three-step process for methane evaluation:

(1) Scheduling site testing either before or 30 days after any site grading;
(2) Conducting shallow soil gas tests (not less than 4 feet bgs); and
(3) Installing and using multiple-depth gas probe sets where the highest concentrations of soil gases are expected to be found

For the second step, P/BC 2020-101 requires one sampling location for every 10,000 square feet, or portion thereof, of site area with a minimum of two shallow soil gas probe locations. Since the parcel(s) total in area is approximately 56,253.9 square feet, six (6) shallow sampling locations were required.

The third step in the City's methane evaluation process is to collect a minimum of two samples at multiple depths regardless of the total parcel area, and at least one per every 20,000 square feet. We therefore needed three (3) multi-depth gas probe sets.

Test locations needed to be cleared for the presence of underground utilities. Methane Specialists notified Underground Service Alert of Southern California to mark the site for underground utilities. The utilities were marked and cleared prior to performing the methane investigation at the subject site.

Shallow Soil Gas Probe Testing

Following P/BC 2020-101 requirements, six (6) shallow methane probes (SP-1, SP-2, SP-3, SP-4, SP-5 and SP-6), were installed at a depth of 4 feet bsg at different locations of the site (see attached Probe Location Map). Methane Specialists conducted the drilling and installation of the shallow soil gas probes and performed the soil gas analyses. The shallow gas probes were installed and sampled on 6-20-2023. Methane Specialists used a direct push drill rig to hydraulically drive a 1.50 inch rod into the ground to a depth of approximately 4 feet bsg. A ¼" polyethylene probe was then inserted into the boreholes. Approximately one foot of sand was placed in the boreholes above and below the tubing to provide a sampling area. Hydrated bentonite crumbles were then placed above the sand in the boreholes to form a seal.

For the field data collection, Methane Specialists measured these probes for methane, oxygen and carbon monoxide with a RKI Eagle. The RKI Eagle is a portable, four gas-sampling instrument. The methane-reporting limit for the RKI Eagle is 500 ppmv. The RKI Eagle was

calibrated prior to the start of the survey each day. The unit is regularly calibrated against standard calibrant samples by trained Methane Specialists staff members.

The probe pressure was measured with a Dwyer Magnehelic Differential Pressure Gauge with a minimum scale division of 0.1 inch of water (H2O).

Multiple-Depth Gas Probe Set Testing

Based on the results of this test, City Guidelines require that one multiple-depth probe be installed for every 20,000 square feet of site area where the highest concentration of soil gas is found, with a minimum of two multiple gas probes regardless of the total area of the site. Since the parcel(s) total in area is approximately 56,253.9 square feet, Methane Specialists installed the required three (3) multiple depth probes near the locations of the (SP-1, SP-2 and SP-3) shallow test probes.

The three (3) multi-depth gas probes sets were installed using direct push drilling equipment. Methane Specialists conducted the drilling and installation of the multi-depth gas probes. The (DP-1, DP-2 and DP-3) multiple-depth gas probes were drilled and installed on the same day 6-20-2023 and in the same manner as the shallow gas probes except that the probes were installed in a triple well cluster terminating at 5 feet, 10 feet and 20 feet bsg. Refusal was not met below surface grade (bsg). At each probe depth, approximately one foot of sand was placed in the borehole around the probe. Hydrated bentonite chips were then placed into the borehole above the sand to form a seal. Another foot of sand followed by bentonite was then added at the next sampling elevation.

Methane Specialists conducted the sampling and analysis. Two sequential sets of gas samples, separated by a minimum of 24 hours, were collected at each combination of location and depth following placement of the gas probe sets. The first set of samples was collected on 6-20-2023 and the second set was collected on 6-21-2023.

For the field data collection, Methane Specialists measured these probes for methane, oxygen and carbon monoxide with a RKI Eagle. The RKI Eagle is a portable, four gas-sampling instrument. The methane-reporting limit for the RKI Eagle is 500 ppmv. The RKI Eagle was calibrated prior to the start of the survey each day. The unit is regularly calibrated against standard calibrant samples by trained Methane Specialists staff members. The probe pressure was measured with a Dwyer Magnehelic Differential Pressure Gauge with a minimum scale division of 0.1 inch of water (H2O).

After completion of the Gas Probe tests, the gas probes were abandoned on 6-21-2023. Boreholes were backfilled with either bentonite grout or hydrated bentonite chips.

Results of Shallow Gas Probe and Multiple Gas Probe Analysis

The attached Form 1 shows the results of the shallow and the multiple depth deep gas probe sets.

Recommendations

In summary, for this project located in the Methane Buffer Zone, detectable levels were not encountered while testing at this site. Therefore, according to Table 1B (enclosed), for the Methane Buffer Zone, this project falls under Design Level II, with less than 2 inches of water-column gas-pressure. In accordance with said Methane Code Table 1B, this project does not require a methane mitigation system.
