1 EXECUTIVE SUMMARY

This Traffic Impact Analysis (TIA) has been prepared by EPD Solutions, Inc. (EPD) to analyze the potential traffic deficiencies of the proposed Harvest Landing Retail Center & Business Park (Project) located in the western central portion of the City of Perris, southeast of the intersection of W Placentia Avenue and I-215/E Frontage Road. The Project site encompasses an area of approximately 358.28 acres. The proposed Project would consist of demolishing all existing structures and constructing the Project in two phases. The Project includes a total of 358.28 acres and consists of three components: Commercial, Business Park Phase 1, and Business Park Phase 2. The following acreages and square footage (SF) are proposed across the three components:

- The following components will be developed in Opening Year I 2026 (Phase 1):
    - The Commercial component consists of lots totaling 46.72 acres south of Orange Avenue, east of Barrett Avenue, and west of Perris Boulevard. The 423,007 SF Commercial component includes retail anchor, shopping center, supermarket, fast casual restaurant, high turnover (sit-down) restaurant, fast Food restaurant with drive through and coffee/donut shop with drive-through window, a 5,500 SF medical office building, and a gasoline/service station with 12 vehicle fueling positions.
    - Business Park Phase 1 consists of lots totaling 140.70 acres south of Orange Avenue, east of I-215 Frontage Road, and west of Barrett Avenue. Business Park Phase 1 includes general light industrial uses including: 1,207,000 SF of high-cube warehouse use, 322,079 SF of parcel hub use, and 198,500 SF of other general light industrial use
- The following components will be developed in Opening Year II 2030 (Phase 1 + Phase 2):
    - Business Park Phase 2 consists of lots totaling 112.01 acres and an overlay zone of 10.66 acres north of Orange Avenue, east of I-215 Frontage Road and west of Barrett Avenue. Business Park Phase 2 is analyzed programmatically for future multiple business uses with no detailed site plan available. Business Park Phase 2 includes 3,659,693 SF of industrial park and 348,262 SF of industrial park overlays.

The trip generation for the proposed development was analyzed using the Institute of Transportation Engineers, *Trip Generation* (11th Edition) trip generation rates. The proposed Project is estimated to generate approximately 40,321 daily trips, 2,778 AM peak hour trips, and 3,106 PM peak hour trips. When converted to passenger car equivalent (PCE) trips, the proposed Project is estimated to generate approximately 44,542 daily PCE trips, 3,091 AM peak hour PCE trips, and 3,395 PM peak hour PCE trips.

The following study area intersections were evaluated during the AM and PM peak hours, which are defined as the hours with the highest traffic volumes during the 7 AM to 9 AM and 4 PM to 6 PM peak commute periods.

2 INTRODUCTION

This Traffic Impact Analysis (TIA) has been prepared by EPD Solutions, Inc. (EPD) to analyze the proposed Harvest Landing Retail Center & Business Park Project (Project) located in the western central portion of the City of Perris, southeast of the intersection of W Placentia Avenue and I-215/E Frontage Road. The TIA was prepared based on the approved scope of work which was reviewed and approved by the City of Perris and is provided in *Appendix A*. The TIA was prepared according to the approved scope of work using methodologies and significance criteria consistent with the City of Perris LOS Standards and Traffic Criteria for Traffic Studies.

2.1 Project Description

Regional access to the Project site is provided by the I-215 freeway, south of the Project through W Nuevo Road and North of the Project at Placentia Avenue. Local access to the site is via I-215 Frontage Road, Placencia Avenue, Orange Avenue, Barrett Avenue Perris Boulevard and Nuevo Road.

The Project includes a total of 358.28 acres and consists of three components: Commercial, Business Park Phase 1, and Business Park Phase 2. The following acreages and square footage (SF) are proposed across the three components:

- The following components will be developed in Opening Year I 2026 (Phase 1):
    - The Commercial component consists of lots totaling 46.72 acres south of Orange Avenue, east of Barrett Avenue, and west of Perris Boulevard. The 423,007 SF Commercial component includes retail anchor, shopping center, supermarket, fast casual restaurant, high turnover (sit-down) restaurant, fast Food restaurant with drive through and coffee/donut shop with drive-through window, a 5,500 SF medical office building, and a gasoline/service station with 12 vehicle fueling positions.
    - Business Park Phase 1 consists of lots totaling 140.70 acres south of Orange Avenue, east of I-215 Frontage Road, and west of Barrett Avenue. Business Park Phase 1 includes general light industrial uses including: 1,207,000 SF of high-cube warehouse use, 322,079 SF of parcel hub use, and 198,500 SF of other general light industrial use.
- The following components will be developed in Opening Year II 2030 (Phase 1 + Phase 2):
    - Business Park Phase 2 consists of lots totaling 112.01 acres and an overlay zone of 10.66 acres north of Orange Avenue, east of I-215 Frontage Road and west of Barrett Avenue. Business Park Phase 2 is analyzed programmatically for future multiple business uses with no detailed site plan available. Business Park Phase 2 includes 3,659,693 SF of industrial park and 348,262 SF of industrial park overlays.
- The remaining areas of 48.17 acres within the proposed Project are dedicated to a water quality retention basin and roadways along the development of Phase 1 and Phase 2.

The site consists of 111 parcels with Assessor's Parcel Numbers (APNs) shown in Table 2.1, Parcel Exhibit. The location of the Project is shown in *Figure 2.1,* and the Project site plan is shown in *Figure 2.2*.

The Project site would provide access for trucks and automobiles through a total of 27 driveways in Phase I: nine (9) driveways along Frontage Road, six (6) along Orange Avenue, five (5) along Barrett Avenue, four (4) along Harvest Landing Way, and three (3) along Perris Boulevard. Table 2.2 shows the identifies the signal control, vehicles allowed, and ingress/egress movement allowed at all 24 Project driveways.

Existing counts incorporate truck classifications (i.e., Class 1 – Passenger Vehicles, Class 2 – 2-axle work vehicles/trucks, Class 3 – 3-axle trucks, Class 4 – 4 or more axle trucks, Class 5 – recreational vehicles, and Class 6 – Busses). Passenger Car Equivalent (PCE) factors were applied to truck/bus trips to account for the fact that trucks and buses utilize more roadway capacity due to their size, reduced maneuverability and slower acceleration. The locations of the study area intersections are shown on *Figure 2.3,* and the study driveways are shown in *Figure 2.4*. Study area intersections and driveways were evaluated during the AM and PM peak hours, which are defined as the hour with the highest traffic volumes during the 7 AM to 9 AM and 4 PM to 6 PM peak commute periods. AM and PM peak hour traffic operations were evaluated for the following scenarios:

- Existing 2024 Traffic Conditions (Existing 2023 Counts + Ambient Growth)
- Opening Year I 2026 Without Project
- (Phase 1) Opening Year I 2026 with Project Traffic Conditions
- Opening Year II 2030 Without Project
- (Phase 1 + Phase 2) Opening Year II 2030 with Project Traffic Conditions
- General Plan 2045 Without Project
- General Plan 2045 With Project

EPD collected counts for most study intersections on Tuesday, May 16th, 2023. Traffic counts for intersection #39 were collected on Thursday, September 5th, 2024. Counts for three existing driveways on the north leg of intersections #46 and #47, and the east leg of intersection #59 were collected on Tuesday, July 30th, 2024. To account for the Existing 2024 traffic condition, a growth rate of three percent was applied to the counts collected in 2023. For the Opening Year I 2026 and Opening Year II 2030 traffic volumes were developed by applying an ambient growth rate of three percent per year to the counts collected and adding traffic from a nearby approved but not yet constructed developments or newly constructed developments (cumulative project) in 2024. General Plan 2045 traffic volume was forecasted by using the Riverside County travel demand forecasting model (RIVCOM), which assumes full buildout of the County of Riverside per approved General Plan of each jurisdiction within the County. All traffic volume data, RIVCOM model plots, RIVCOM volume outputs, National Cooperative Highway Research Program (NCHRP) 765 worksheets and volume adjustment worksheets are provided in Appendix B.

In addition, to the study area intersections, the following study area roadway segments were evaluated as shown on *Figure 2.3*:

1. Indian Ave between Water Ave and Orange Ave
2. Orange Ave between Indian Ave and Perris Blvd
3. Perris Blvd between Orange Ave and Citrus Ave
4. Barrett Ave between Placentia Ave and Orange Ave
5. Perris Blvd between Placentia Ave and Orange Ave
6. Perris Blvd between Rider St and Placentia Ave
7. Nuevo Rd between Perris Blvd and I-215 NB Ramps
8. I-215 Frontage Rd between Placentia Ave and Orange Ave
9. I-215 Frontage Rd between Orange Ave and Nuevo Rd
10. Orange Ave between I-215 Frontage Rd and Indian Ave
11. Nuevo Rd between I-215 NB Ramps and I-215 SB Ramps
12. Perris Blvd between Citrus Ave and Nuevo Rd
13. Placentia Ave between I-215 NB Ramps and I-215 SB Ramps
14. Placentia Ave between I-215 NB Ramps and Indian Ave
15. Placentia Ave between Indian Ave and Perris Blvd
16. Barrett Ave between Orange Ave and Harvest Landing Way
17. Barrett Ave between Harvest Landing Way and I-215 Frontage Rd
18. Harvest Landing Way between Barrett Ave and Perris Blvd
19. Indian Ave between Placentia Ave and Water Ave

EPD collected 24-Hour roadway segment counts for the study area roadway segments on December 4, 2024, when school was in session. Existing 2024 Average Daily Traffic (ADT) counts have incorporated truck classifications. Passenger Car Equivalent (PCE) factors from County of Riverside TA guidelines (2020) were applied to truck/bus trips to account for the fact that trucks and buses utilize more roadway capacity due to their size, reduced maneuverability and slower acceleration. Traffic counts are provided in *Appendix B*.

In addition to the study area intersections and study area roadway segments, queueing along Placentia Avenue & Nuevo Road at the I-215 Freeway ramp were evaluated for the following intersections:

15. I-215 NB Ramps/Placentia Ave
16. I-215 SB Ramps/Placentia Ave
28. I-215 NB Ramps/W Nuevo Rd
29. I-215 SB Ramps/W Nuevo Rd

2.3 Methodology

Intersection operations are evaluated using Level of Service (LOS), which is a measure of the delay experienced by drivers on a roadway facility. LOS A indicates free-flow traffic conditions and is generally the best operating condition. LOS F is an extremely congested condition and is the worst operating condition from the driver's perspective. In this report, LOS at signalized and unsignalized intersections is calculated using the *Highway Capacity Manual* (HCM), 7th Edition methodology.

LOS at signalized intersections is defined in terms of the weighted average control delay for the intersection as a whole. Control delay is a measure of the increase in travel time that is experienced due to traffic signal control and is expressed in terms of average control delay per vehicle (in seconds). Control delay is determined based on the intersection geometry and volume, signal cycle length, phasing and coordination along the arterial corridor. *Table 2.3* shows the relationship between control delay and LOS.

Table 2.3: Relationship between Control Delay and LOS at a Signalized Intersection

LOS	Delay (Seconds per Vehicle)
A	≤ 10
B	>10 – 20
C	>20 – 35
D	>35 – 55
E	>55 – 80
F	>80

Unsignalized intersections are categorized as either all AWSC or TWSC. LOS at AWSC intersections is determined by the weighted average control delay of the overall intersection. The HCM TWSC intersection methodology calculates LOS based on the delay experienced by drivers on the minor (stop-controlled) approaches to the intersection. For TWSC intersections, LOS is determined for each minor-street movement, as well as the major-street left-turns. The relationship between delay and LOS at unsignalized intersections is shown in *Table 2.4*.

Table 2.4: Relationship between Delay and LOS an Unsignalized Intersection

LOS	Delay (seconds)
A	0-10
B	>10 – 15
C	>15 – 25
D	>25 – 35
E	>35 – 50
F	>50

Daily Roadway Segments are evaluated using roadway segment capacities to determine LOS. The capacity of a roadway is dependent on the number of lanes and the type of roadway. The roadway capacities provided in Table CE-2 of the *City of Perris General Plan Circulation Element (2022)* are for planning purposes, as capacity is affected by factors such as spacing, configuration, etc. The relationship between capacity and LOS for roadway segments is shown in *Table 2.5*. The current adopted minimum LOS by the City of Perris is LOS "E".

2.4 Significance Criteria

City of Perris

Based on the *City of Perris General Plan Policy II.A*, the following target Levels of Service are to be maintained for study intersections:

- LOS "D" along all City maintained roads (including intersections) and LOS "D" along I-215 and SR 74 (including intersections with local streets and roads). An exception to the local road standard is LOS "E", at intersections of any Arterials and Expressways with SR 74, the Ramona-Cajalco Expressway or at I-215 freeway ramps.

- LOS "E" may be allowed within the boundaries of the Downtown Specific Plan Area to the extent that it would support transit-oriented development and walkable communities. Increased congestion in this area will facilitate an increase in transit ridership and encourage development of a complementary mix of land uses within a comfortable walking distance from light rail stations.

To determine whether the addition of project-generated trips (or alternative-generated trips) results in a project traffic impact, and thus requires improvements, the analysis shall evaluate traffic impacts of the project based on the following criteria:

- A project-related traffic impact is considered direct when a study intersection operates at an acceptable Level of Service for existing conditions (without the project) and the addition of 50 or more a.m. or p.m. peak hour project trips causes the intersection delay to increase by 2 seconds or more and causes the intersection to operate at an unacceptable Level of Service for existing plus project conditions.

- A project-related traffic impact is considered direct when a study intersection operates at an unacceptable Level of Service for existing conditions (without the project) and the addition of 50 or more a.m. or p.m. peak hour project trips causes the intersection delay to increase by 2 seconds or more.

- A cumulative impact is considered direct when a study intersection is forecast to operate at an acceptable Level of Service without the project and with the addition of 50 or more a.m. or p.m. peak hour project trips causes the intersection delay to increase by 2 seconds or more and causes the intersection to operate at an unacceptable Level of Service.

- A cumulative impact is considered an indirect traffic impact when a study intersection is forecast to operate at an unacceptable Level of Service with the addition of cumulative/background traffic and the project contributes 50 or more a.m. or p.m. peak hour project trips and causes the intersection delay to increase by 2 seconds or more.

City of Moreno Valley

Based on the City of Moreno Valley Circulation Element, City recognizes that an LOS of C is optimal. However, it also allows peak hour levels of service in the LOS "D" range in certain locations. These locations include areas of high employment concentration, north/south roads in the vicinity of SR-60 or other locations in already developed areas of the City with geometric constraints that prevent LOS "C" from being achieved. *Figure 5.2-7 from the City of Moreno Valley General Plan, Final Program EIR, July 2006* depicts the LOS standards that are applicable to all segments of the Circulation Element. According to this figure, LOS "D" is the level of service standard for the two studied intersections located in the City of Moreno Valley.

According to the Transportation Impact Analysis Preparation Guide for Vehicle Miles Traveled and Level of Service Assessment, June 2020, improvements at a signalized intersection shall be identified if either of the following are met:

- Any signalized study intersection operating at acceptable LOS without project traffic in which the addition of project traffic causes the intersection to degrade to unacceptable LOS shall identify improvements to provide acceptable LOS; OR

- Any signalized study intersection that is operating at unacceptable LOS without project traffic where the project increases delay by 5.0 or more seconds shall identify improvements to offset the increase in delay.

3 BASELINE CONDITIONS

This section discusses the baseline (without Project) conditions. Baseline conditions are those conditions that exist within the study area in the without project conditions.

3.1 Existing Transportation System and Access

The characteristics of each regional access and local access to the site Project are discussed in *Table 3.1*. The existing traffic control and intersection geometrics at study area intersections are shown in *Figure 3.2*.

3.2 Existing 2024 Traffic Volumes and Intersection Operations

Traffic counts were collected for most study intersections on Tuesday, May 16th, 2023, while schools were in session. Traffic counts for intersection #39 were collected on Thursday, September 5th, 2024, while schools were in session. Counts for three existing driveways on the north leg of intersections #46 and #47, and the east leg of intersection #59, which belong to a commercial plaza and Walmart, were collected on Tuesday, July 30th, 2024, while schools were not in session. It is to be noted that since the driveways belong to commercial land uses, they are not affected by school trips when schools are in session, as their locations are not a part of typical routes used for school pick-up/drop-off. Additionally, the volumes for the eastbound and westbound trips at intersections #46 and #47 were determined based on volume balancing between two adjacent intersections, #18 (Barrett Ave/Orange Ave) and #19 (Perris Blvd/Orange Ave), for which traffic counts were conducted while schools were in session. Traffic count sheets are provided in *Appendix B*. The north legs of intersections #46 and #47 serve as driveways for Discount Mini Mall, located in the northwest corner of Perris Boulevard and Orange Avenue. Therefore, intersections #46 and #47 were analyzed as a three-legged intersection. The north leg does not exist for intersection #59, which has no conflicting movement and would not be analyzed under baseline conditions.

Existing counts incorporate truck classifications (i.e., Class 1 – Passenger Vehicles, Class 2 – 2-axle work vehicles/trucks, Class 3 – 3-axle trucks, Class 4 – 4 or more axle trucks, Class 5 – recreational vehicles, and Class 6 – Busses). Passenger Car Equivalent (PCE) factors were applied to truck/bus trips to account for the fact that trucks and buses utilize more roadway capacity due to their size, reduced maneuverability and slower acceleration. To account for the Existing 2024 traffic condition, a growth rate of three percent was applied to the counts collected in 2023. Existing 2024 AM and PM peak hour traffic volumes at the study area intersections are shown in *Figure 3.2* and *Figure 3.3* respectively. The LOS at the existing study area intersections were determined using the HCM methodology, described previously in *Section 2.3 Methodology*. The existing LOS at the study area are shown in *Table 3.2*. All LOS calculations are provided in *Appendix C*. As shown in *Table 3.2*, no intersections would operate at an unsatisfactory LOS in the Existing Year 2024 condition:

3.2.1 Existing 2024 Intersection Queueing Analysis

A queueing analysis was conducted at four study intersections during AM and PM peak hour involving ramps along the I-215. These intersections include Intersection #15 at I-215 Northbound Ramps and Placentia Avenue, Intersection #16 at I-215 Southbound Ramps and Placentia Avenue, Intersection #28 at I-215 Northbound Ramps and West Nuevo Road, and Intersection #29 at I-215 Southbound Ramps and West Nuevo Road. The required queuing length at the study area intersections were determined using 95-percentile queue length analysis. *Table 3.3* shows the queue lengths at each intersection approach. As shown in *Table 3.3*, no queueing deficiencies were observed under Existing 2024 conditions.

3.2.2 Existing 2024 Roadway Segment Analysis

Traffic counts at the existing roadway segments were collected on December 4, 2024, when school was in session. Existing counts incorporate truck classifications (i.e., Class 1 – Passenger Vehicles, Class 2 – 2-axle work vehicles/trucks, Class 3 – 3-axle trucks, Class 4 – 4 or more axle trucks, Class 5 – recreational vehicles, and Class 6 – Busses). Passenger Car Equivalent (PCE) factors from County of Riverside TA guidelines (2020) were applied to truck/bus trips to account for the fact that trucks and buses utilize more roadway capacity due to their size, reduced maneuverability and slower acceleration.

Note that following three roadway segments do not exist under baseline conditions:

- #16. Barrett Ave between Orange Ave and Harvest Landing Way
- #17. Barrett Ave between Harvest Landing Way and I-215 Frontage Rd
- #18. Harvest Landing Way between Barrett Ave and Perris Blvd

It is to be noted that a portion of Segment #17 currently exists north of I-215 Frontage Rd. However, the segment only provides access to the existing commercial development between I-215 Frontage Rd and Perris Blvd and does not contribute to the traffic circulation within the City of Perris.

The LOS at the existing study roadway segments were determined using the methodology described previously in *Section 2.3 Methodology*. The existing LOS at the study roadway segments are shown in *Table 3.4*. As shown in *Table 3.4*, no roadway segments would operate at an unsatisfactory LOS in the Existing 2024 condition.

3.3 Opening Year I 2026 Without Project Traffic Conditions

Opening Year I 2026 Without Project traffic volumes were developed by applying a growth rate of three percent per year to the existing condition volume and adding traffic generated by cumulative projects, which are approved and pending development or newly constructed projects in 2024 that would impact the study area. The location of the cumulative projects is shown in Figure 3.4. A two-mile radius was utilized for determining which cumulative projects will be included in the cumulative projects list. The trip generation for cumulative projects shown in Table 3.5 was generated using ITE Trip Generation Manual 11th edition rates and are based on the project list provided by the City of Perris.

The AM and PM traffic volumes generated by the cumulative projects were distributed to the study area based on engineering judgment and are shown in Figure 3.5 and Figure 3.6. The Opening Year I 2026 Without Project traffic volumes are shown in Figure 3.7 and Figure 3.8.

The Opening Year I 2026 Without Project lane geometry is the analyzed with the same intersection lane configuration post-project completion to compare the impacts accurately. Intersection lane configuration and traffic control post-project completion can be found in Figure 4.8.

The Opening Year I 2026 Without Project levels of service at the study area intersections were determined using the HCM methodology, described previously in Section 2.3 - Methodology. Table 3.6 shows the Opening Year I 2026 Without Project AM and PM peak hour levels of service at study area intersections. As shown in Table 3.6, the following intersection would operate at an unsatisfactory LOS under the Opening Year I 2026 Without Project condition:

- #1. Perris Blvd/Iris Ave (LOS E during AM peak hour)

3.3.1 Opening Year I 2026 Without Project Intersection Queueing Analysis

A queueing analysis was conducted at four study intersections during AM and PM peak hour involving ramps along the I-215. These intersections include Intersection #15 at I-215 Northbound Ramps and Placentia Avenue, Intersection #16 at I-215 Southbound Ramps and Placentia Avenue, Intersection #28 at I-215 Northbound Ramps and West Nuevo Road, and Intersection #29 at I-215 Southbound Ramps and West Nuevo Road. The required queuing length at the study area intersections were determined using 95-percentile queue length analysis. *Table 3.7* shows the queue lengths at each intersection approach. As shown in *Table 3.7*, queueing deficiencies were observed under Opening Year I 2026 Without Project conditions, for the following approaches:

- #15. I-215 Northbound Ramps/Placentia Avenue – westbound right-turn lane (AM and PM peak hour)
- #28. I-215 Northbound Ramps/West Nuevo Road – eastbound left-turn lane (PM peak hour)
- #28. I-215 Northbound Ramps/West Nuevo Road – westbound right-turn lane (AM and PM peak hour)
- #29. I-215 Southbound Ramps/West Nuevo Road – westbound left-turn lane (PM peak hour)

Even though the queue length for the northbound right (NBR) and northbound left (NBL) at intersection #28 exceeds the available storage length, it can still be safely accommodated. This is due to the fact that the queue falls within the additional 260 feet of storage provided beyond the back of the striping storage pocket that extends past the NBR and NBL lanes. Similarly, an additional 360 feet of storage is provided for the southbound left (SBL) at intersection #29, ensuring that the queue can also be safely accommodated there.

3.3.2 Opening Year I 2026 Without Project Roadway Segment Analysis

Opening Year I 2026 Without Project roadway segments volumes were developed by applying a growth rate of three percent per year to the roadway segments counts collected on December 4, 2024, when school was in session, and by adding traffic generated by cumulative projects, which are approved and pending development that would impact the study area.

The following three roadway segments do not exist under baseline conditions:

- #16. Barrett Ave between Orange Ave and Harvest Landing Way
- #17. Barrett Ave between Harvest Landing Way and I-215 Frontage Rd
- #18. Harvest Landing Way between Barrett Ave and Perris Blvd

The LOS at the Opening Year I 2026 study roadway segments were determined using the methodology described previously in *Section 2.3 Methodology*. The Opening Year I 2026 LOS at the study roadway segments are shown in *Table 3.8*. As shown in *Table 3.8*, the following six (6) roadway segments would operate at an unsatisfactory LOS in the Opening Year I 2026 Without Project condition:

- #3. Perris Blvd between Orange Ave and Citrus Ave
- #5. Perris Blvd between Placentia Ave and Orange Ave
- #6 Perris Blvd between Rider St and Placentia Ave
- #11. Nuevo Rd between I-215 NB Ramps and I-215 SB Ramps
- #13. Placentia Ave between I-215 NB Ramps and I-215 SB Ramps
- #14. Placentia Ave between I-215 NB Ramps and Indian Ave

3.4 Opening Year II 2030 Without Project Traffic Conditions

Opening Year II 2030 Without Project traffic volumes were developed by applying a growth rate of three percent per year to the existing condition volumes and adding traffic generated by cumulative projects, which are approved and pending development or newly constructed projects in 2024 that would impact the study area. The Opening Year II 2030 Without Project volumes are shown in Figure 3.9 and Figure 3.10.

The Opening Year II 2030 Without Project lane geometry is the analyzed with the same intersection lane configuration post-project completion to compare the impacts accurately. Intersection lane configuration and traffic control post-project completion can be found in Figure 4.8.

The Opening Year II 2030 Without Project levels of service at the study area intersections were determined using the HCM methodology, described previously in Section 2.3 - Methodology. Table 3.9 shows the Opening Year II 2030 Without Project AM and PM peak hour levels of service at study area intersections. As shown in Table 3.9, the following six (6) intersections would operate at an unsatisfactory LOS under the Opening Year II 2030 Without Project condition:

- #1. Perris Blvd/Iris Ave (LOS F during AM peak hour and LOS E during PM peak hour)
- #2. Perris Blvd/Krameria Ave (LOS E during AM and PM peak hour)
- #5. Perris Blvd/Ramona Expy (LOS F during AM peak hour)
- #21. I-215 Frontage Rd/Orange Ave (LOS F during PM peak hour)
- #27. I-215 Frontage Rd/W Nuevo Rd (LOS F during PM peak hour)
- #46. Commercial Driveway 9/Existing Plaza Driveway and Orange Ave (LOS E during PM peak hour)

3.4.1 Opening Year II 2030 Without Project Intersection Queueing Analysis

A queueing analysis was conducted at four study intersections during AM and PM peak hour involving ramps along the I-215. These intersections include Intersection #15 at I-215 Northbound Ramps and Placentia Avenue, Intersection #16 at I-215 Southbound Ramps and Placentia Avenue, Intersection #28 at I-215 Northbound Ramps and West Nuevo Road, and Intersection #29 at I-215 Southbound Ramps and West Nuevo Road. The required queuing length at the study area intersections were determined using 95-percentile queue length analysis. *Table 3.10* shows the queue lengths at each intersection approach. As shown in *Table 3.10*, queueing deficiencies were observed under Opening Year II 2030 Without Project conditions, for the following approaches:

- #15. I-215 Northbound Ramps/Placentia Avenue – westbound right-turn lane (PM peak hour)
- #28. I-215 Northbound Ramps/West Nuevo Road – eastbound left-turn lane (AM and PM peak hour)
- #28. I-215 Northbound Ramps/West Nuevo Road – westbound right-turn lane (AM and PM peak hour)

Even though the queue length for the NBR and NBL at intersection #28 exceeds the available storage length, it can still be safely accommodated. This is due to the fact that the queue falls within the additional 260 feet of storage provided beyond the back of the striping storage pocket that extends past the NBR and NBL lanes. Similarly, an additional 360 feet of storage is provided for the SBL at intersection #29, ensuring that the queue can also be safely accommodated there.

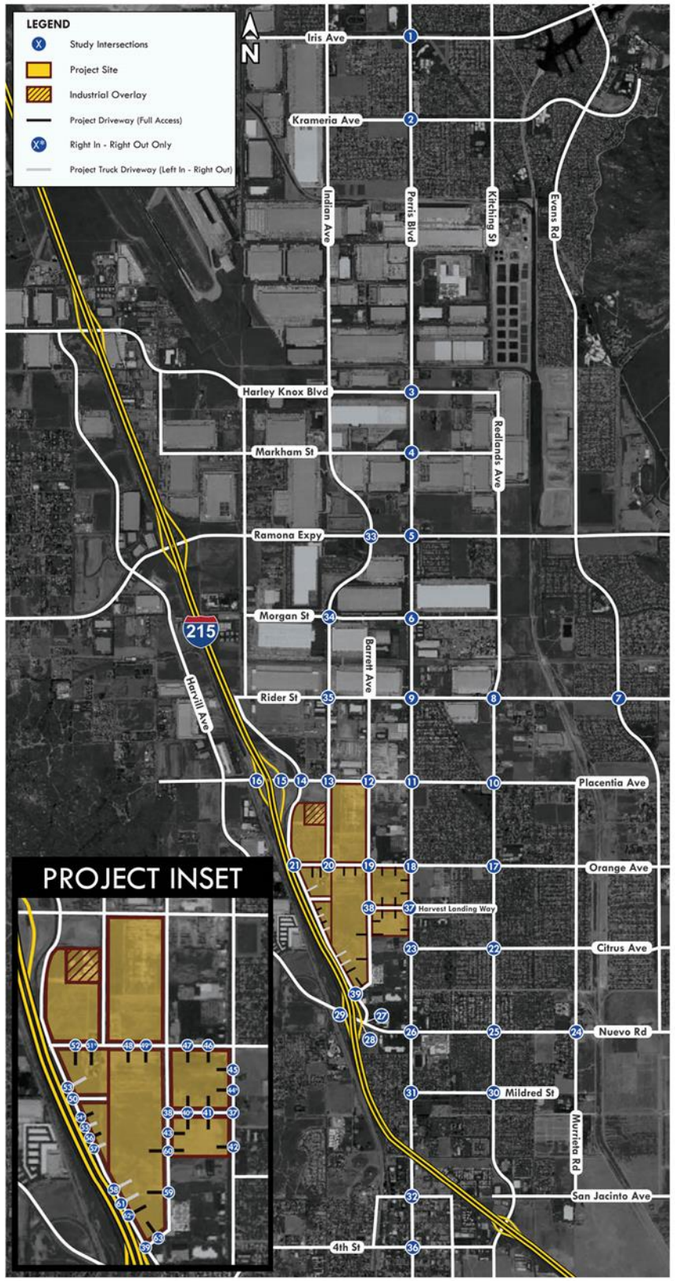
3.4.2 Opening Year II 2030 Without Project Roadway Segment Analysis

Opening Year II 2030 Without Project roadway segments volumes were developed by applying a growth rate of three percent per year to the roadway segments counts collected on December 4, 2024, when school was in session, and by adding traffic generated by cumulative projects, which are approved and pending development that would impact the study area.

The following three roadway segments does not exist under baseline conditions:

- #16. Barrett Ave between Orange Ave and Harvest Landing Way
- #17. Barrett Ave between Harvest Landing Way and I-215 Frontage Rd
- #18. Harvest Landing Way between Barrett Ave and Perris Blvd

The LOS at the Opening Year II 2030 study roadway segments were determined using the methodology described previously in *Section 2.3 Methodology*. The Opening Year II 2030 LOS at the study roadway segments are shown in *Table 3.11*. As shown in *Table 3.11*, the following seven (7) roadway segments would operate at an unsatisfactory LOS in the Opening Year II 2030 Without Project condition:



- #3. Perris Blvd between Orange Ave and Citrus Ave
- #5. Perris Blvd between Placentia Ave and Orange Ave
- #6. Perris Blvd between Rider St and Placentia Ave
- #7. Nuevo Rd between Perris Blvd and I-215 NB Ramps

3.5 General Plan 2045 Without Project Traffic Conditions

In accordance with the approved scope of work by the City of Perris, the General Plan 2045 conditions were forecasted using RIVCOM traffic model, which assumes full buildout of the County of Riverside per approved General Plan of each jurisdiction within the County. Link volumes growth rate were obtained from RIVCOM. The growth rates were then post-processed to compute intersection turning movement volumes using the Iterative Directional Volume Estimation Methodology from NCHRP Report 765, based on methodology outlined in NCHRP Report 255.

Some of the post-processed General Plan 2045 turning movement volumes were observed to be lower than the corresponding Opening Year II 2030 volumes at certain intersections. In such cases, the General Plan 2045 turning movement volumes were adjusted by holding the volumes to Opening Year II 2030 turning movement volumes, so that no General Plan 2045 volumes are lower than the corresponding Opening Year II 2030 volumes. The General Plan 2045 Without Project traffic volumes are shown in Figure 3.11 and Figure 3.12. All traffic counts, RIVCOM model plots, RIVCOM volume outputs, NCHRP 765 worksheets and volume adjustment worksheets are provided in Appendix B.

The General Plan 2045 Without Project lane geometry is analyzed with the same intersection lane configuration as post-project completion to compare the impacts accurately. Intersection lane configuration and traffic control post-project completion can be found in Figure 4.8.

The General Plan 2045 Without Project condition levels of service at the study area intersections were determined using the HCM methodology, described previously in Section 2.3 - Methodology. Table 3.12 shows the General Plan 2045 Without Project AM and PM peak hour levels of service at study area intersections. As shown in Table 3.12, the following 14 intersections would operate at an unsatisfactory LOS under the General Plan 2045 Without Project condition:

- #2. Perris Blvd/Krameria Ave (LOS F during AM and PM peak hour)

3.5.2 General Plan 2045 Without Project Roadway Segment Analysis

General Plan 2045 Without Project roadway segments volumes were developed by was forecasted by applying the growth rates from RIVCOM travel demand forecasting model to the roadway segments counts collected on December 4, 2024, when school was in session. Roadways were assumed to be built out to their full capacity as stated in the *City of Perris General Plan Circulation Element (2022)*.

The following three roadway segments do not exist under baseline conditions:

- #16. Barrett Ave between Orange Ave and Harvest Landing Way
- #17. Barrett Ave between Harvest Landing Way and I-215 Frontage Rd
- #18. Harvest Landing Way between Barrett Ave and Perris Blvd

The LOS at the General Plan 2045 study roadway segments were determined using the methodology described previously in *Section 2.3 Methodology*. The General Plan 2045 LOS at the study roadway segments are shown in *Table 3.14*. As shown in *Table 3.14*, the following three (3) roadway segments would operate at an unsatisfactory LOS in the General Plan 2045 Without Project condition:

- #7. Nuevo Rd between Perris Blvd and I-215 NB Ramps
- #12. Perris Blvd between Citrus Ave and Nuevo Rd
- #14. Placentia Ave between I-215 NB Ramps and Indian Ave

4 PROPOSED PROJECT

4.1 Project Trip Generation

The vehicle trips were generated for the proposed development as described in Section 2, using trip rates from the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (11th Edition, 2021) and the *Transportation Uniform Mitigation Fee (TUMF) High-Cube Warehouse Trip Generation Study* by Fehr & Peers (2023). The Project trip generation is shown in *Table 4.1*.

As shown in *Table 4.1*, the proposed Project is estimated to generate approximately 40,321 daily trips, 2,778 AM peak hour trips, and 3,106 PM peak hour trips. Passenger Car Equivalent (PCE) factors were added to truck trips to account for the fact that trucks and utilize more roadway capacity due to their size, reduced maneuverability and slower acceleration. When converted to PCE, the proposed Project is estimated to generate approximately 44,542 daily PCE trips, 3,091 AM peak hour PCE trips, and 3,395 PM peak hour PCE trips.

4.2 Project Trips

The Project proposes to remove 2,700 feet of Indian Avenue between Orange Avenue and I-215 Frontage Road South. The Project would also construct the planned segment of Barrett Ave south of Orange Avenue from Orange Avenue to the existing southern portion of Barrett Avenue that connects to I-215 Frontage Road. The proposed realignment is shown in Figure 4.1. Project trips were distributed to the study area intersections based on the location of the Project and logical routes of travel to and from the site and approved by City staff. Truck trip distribution for Opening Year I 2026 and Opening Year II 2030 are shown in *Figure 4.2* and *Figure 4.3* respectively. Industrial automobile inbound and outbound trip distribution are shown in *Figure 4.4* and *Figure 4.5* respectively. Commercial automobile inbound and outbound trip distribution are shown in *Figure 4.6* and *Figure 4.7* respectively. Project trips were assigned to the study area intersections by multiplying the proposed Project trip generation by the trip distribution percentage at each location.

4.3 Project Site Access and General Recommendations

As previously mentioned in Section 2.1, the Project site would provide access for trucks and automobiles through a total of 27 driveways in Phase I: nine (9) driveways along Frontage Road, six (6) along Orange Avenue, five (5) along Barrett Avenue, four (4) along Harvest Landing Way, and three (3) along Perris Boulevard Street. A queueing analysis is conducted under the With Project conditions in Section 5 for all Project driveways, to ensure that no queueing deficiencies or safety concerns occur at any Project driveways, and no alternative access configurations are needed. Intersection lane configuration and traffic control post-project completion is shown in *Figure 4.8*.

As shown in Figure 4.8, the traffic control for the following existing intersection would be modified post-project completion:

- #45. Commercial Driveway 8/N. Perris Blvd
    - The east leg of the intersection, which is the driveway for the existing carwash, would be modified from full access to RI/RO, due to a median being installed on Perris Boulevard. The RI/RO east leg would have no impact on the LOS of the intersection. Therefore, the analysis did not include the carwash driveway as part of the TIA.
- #47. Commercial Driveway 10/Existing Plaza Driveway and Orange Ave
    - The north leg of the intersection, which is the driveway for the existing plaza would be modified from full access to RI/RO. The left-in and left-out trips would be utilizing Intersection #46, which would be realigned with the cross street on the opposite side.

No detailed site plan is available for Phase II of the Project at the time of this analysis. The Project will be conditioned to conduct a Trip Generation Comparison Assessment and Site Access Analysis for the Phase 2 industrial parcels once detailed site plans are prepared. Additionally, the project would be conditioned to perform on-site queuing analyses for all proposed drive-through pads and gas station operations once tenants are identified.

Truck turning templates for all Phase I truck driveways and driveway access spacing measurements for all Phase I driveways in accordance with Riverside County Standard Plan No. 114 are attached in the Appendix F.

5 WITH PROJECT CONDITIONS

5.1 Opening Year I 2026 With Project Traffic Conditions

Opening Year I 2026 With Project Traffic were determined by adding the Project trips to the Opening Year 2026 I Without Project traffic volumes. The Opening Year I 2026 With Project AM and PM peak hour traffic volumes at the study area intersections are shown in Figure 5.1 and Figure 5.2 respectively. The Opening Year I 2026 Project trip assignments for the AM and PM peak hours are shown in Figure 5-3 and Figure 5-4, respectively.

The Project proposes to remove 2,700 feet of Indian Avenue between Orange Avenue and I-215 Frontage Road South. The Project would also construct the planned segment of Barrett Ave south of Orange Avenue from Orange Avenue to the existing southern portion of Barrett Avenue that connects to I-215 Frontage Road. As part of the analysis for this scenario, the inbound trips to Indian Avenue at intersection #20 (Indian Avenue/Orange Avenue) were redirected to intersection #21 (I-215 Frontage Rd/Orange Ave) and ultimately to intersection #39 (Barrett Ave/I-215 Frontage Road). Additionally, the outbound trips originating from Indian Avenue were rerouted from intersection #39 (Barrett Ave/I-215 Frontage Road) to intersection #19 (Barrett Ave/Orange Ave), and finally to intersection #20 (Indian Avenue/Orange Ave) as a westbound right-turn.

An intersection operations analysis was conducted for the study area to evaluate the Opening Year I 2026 With Project AM and PM peak hour conditions. Intersection operations were calculated using the LOS methodology described previously in *Section 2.3 - Methodology*. Table 5.1 provides a comparison between the Opening Year I 2026 Without and With-Project scenarios.

As shown in Table 5.1, the following seven (7) intersections would operate at an unsatisfactory LOS under the Opening Year I 2026 With Project conditions:

- #1. Perris Blvd/Iris Ave (LOS E during AM peak hour)
- #12. Barrett Ave/W Placentia Ave (LOS F during AM peak hour and LOS E during PM peak hour)
- #18. N Perris Blvd/Orange Ave (LOS E during AM peak hour)
- #19. Barrett Ave/Orange Ave (LOS F during AM and PM peak hour)
- #26. N Perris Blvd/ W Nuevo Rd (LOS E during AM and PM peak hour
- #27. I-215 Frontage Rd/W Nuevo Rd (LOS F during PM peak hour)
- #46. Commercial Driveway 9/Existing Plaza Driveway and Orange Ave (LOS F during PM peak hour)

Recommended improvements for the significantly deficient intersections can be found in *Section 6*

5.1.1 Opening Year I 2026 With Project Intersection Queueing Analysis

A queueing analysis was conducted at four study intersections during AM and PM peak hour involving ramps along the I-215. These intersections include Intersection #15 at I-215 Northbound Ramps and Placentia Avenue, Intersection #16 at I-215 Southbound Ramps and Placentia Avenue, Intersection #28 at I-215 Northbound Ramps and West Nuevo Road, and Intersection #29 at I-215 Southbound Ramps and West Nuevo Road. The required queuing length at the study area intersections were determined using 95-percentile queue length analysis. *Table 5.2* shows the queue lengths at each intersection approach. As shown in *Table 5.2*, queueing deficiencies were observed under Opening Year I 2026 With Project Conditions, for the following approaches:

- #15. I-215 Northbound Ramps/Placentia Avenue – westbound right-turn lane (AM and PM peak hour)
- #28. I-215 Northbound Ramps/West Nuevo Road – eastbound left-turn lane (PM peak hour)
- #28. I-215 Northbound Ramps/West Nuevo Road – westbound right-turn lane (AM and PM peak hour)
- #29. I-215 Southbound Ramps/West Nuevo Road – westbound left-turn lane (PM peak hour)

Even though the queue length for the NBR and NBL at intersection #28 exceeds the available storage length, it can still be safely accommodated. This is due to the fact that the queue falls within the additional 260 feet of storage provided beyond the back of the striping storage pocket that extends past the NBR and NBL lanes. Similarly, an additional 360 feet of storage is provided for the SBL at intersection #29, ensuring that the queue can also be safely accommodated there.

5.1.2 Opening Year I 2026 With Project Driveways Queueing Analysis

A full queueing analysis was conducted at all the Project driveways under the Opening Year I 2026 With Project Conditions to ensure that queueing remains within acceptable storage limits. Driveway access spacing is in accordance with Riverside County Standard Plan No. 114, and the driveway spacing measurements have been provided in Appendix F.

The required queuing length at the study area intersections were determined using 95-percentile queue length analysis. *Table 5.3* shows the queue lengths at each Project driveway approach. As shown in *Table 5.3*, queueing deficiencies were not observed under Opening Year I 2026 With Project Conditions. Therefore, no alternative access configurations are needed, as the driveway queueing analysis indicates no queueing deficiencies or safety concerns at any Project driveways.

5.1.3 Opening Year I 2026 With Project Roadway Segment Analysis

With the addition of the Project, segment of Indian Avenue between Orange Ave and I-215 Frontage Road South would not be utilized and would be removed. As part of the analysis for this scenario, which considers the removal of this street, the Without Project roadway segments volumes on northbound Indian Avenue between Orange Ave and I-215 Frontage Road[1] are added to Barrett Ave, which includes the following segments:

- #16. Barrett Ave between Orange Ave and Harvest Landing Way
- #17. Barrett Ave between Harvest Landing Way and I-215 Frontage Rd

The southbound Without Project roadway segments volumes on Indian Avenue between Orange Ave and I-215 Frontage Road are already accounted for on segment #9. I-215 Frontage Rd between Orange Ave and Nuevo Rd and would not require any volume adjustment.

Opening Year I 2026 With Project roadway segments volumes were developed by adding the Project trips to the Opening Year 2026 I Without Project roadway segments volumes, with the adjustments noted above.

The LOS at the Opening Year I 2026 With Project study roadway segments were determined using the methodology described previously in *Section 2.3 Methodology*. The Opening Year I 2026 With Project LOS at the study roadway segments are shown in *Table 5.4*. As shown in *Table 5.4*, the following eight (8) roadway segments would operate at an unsatisfactory LOS in the Opening Year I 2026 With Project condition:

- #3. Perris Blvd between Orange Ave and Citrus Ave
- #5. Perris Blvd between Placentia Ave and Orange Ave
- #6. Perris Blvd between Rider St and Placentia Ave
- #7. Nuevo Rd between Perris Blvd and I-215 NB Ramps
- #11. Nuevo Rd between I-215 NB Ramps and I-215 SB Ramps
- #12. Perris Blvd between Citrus Ave and Nuevo Rd
- #13. Placentia Ave between I-215 NB Ramps and I-215 SB Ramps
- #14. Placentia Ave between I-215 NB Ramps and Indian Ave

[1] Counts were not taken for roadway segments volumes on Indian Avenue between Orange Ave and I-215 Frontage Road. Only peak hour turning movement counts are available for the intersection of Indian Ave/Orange Ave (Int #20). The northbound ADT volume is estimated as 10*PM peak hour northbound volume at the intersection of Indian Ave/Orange Ave. Traffic counts are provided in *Appendix B*.

5.2 Opening Year II 2030 with Project Traffic Conditions

Opening Year II 2030 With Project traffic volumes were determined by adding the Project trips to the Opening Year II 2030 Without Project traffic volumes. The Opening Year II 2030 With Project AM and PM peak hour traffic volumes at the study area intersections are shown in Figure 5.7 and Figure 5.8 respectively. The Opening Year II 2030 Project trip assignments for the AM and PM peak hour are shown in Figure 5.5 and Figure 5.6, respectively.

The Project proposes to remove 2,700 feet of Indian Avenue between Orange Avenue and I-215 Frontage Road South. The Project would also construct the planned segment of Barrett Ave south of Orange Avenue from Orange Avenue to the existing southern portion of Barrett Avenue that connects to I-215 Frontage Road. As part of the analysis for this scenario, the inbound trips to Indian Avenue at intersection #20 (Indian Avenue/Orange Avenue) were redirected to intersection #21 (I-215 Frontage Rd/Orange Ave) and ultimately to intersection #39 (Barrett Ave/I-215 Frontage Road). Additionally, the outbound trips originating from Indian Avenue were rerouted from intersection #39 (Barrett Ave/I-215 Frontage Road) to intersection #19 (Barrett Ave/Orange Ave), and finally to intersection #20 (Indian Avenue/Orange Ave) as a westbound right-turn.

An intersection operations analysis was conducted for the study area to evaluate the Opening Year II 2030 With Project AM and PM peak hour conditions. Intersection operations were calculated using the LOS methodology described previously in *Section 2.3 - Methodology*. Table 5.5 provides a comparison between the Opening Year II 2030 Without and With-Project scenarios.

As shown in Table 5.5, the following 18 intersections would operate at an unsatisfactory LOS under the Opening Year II 2030 With Project conditions:

- #1. Perris Blvd/Iris Ave (LOS F during AM and LOS E during PM peak hour)
- #2. Perris Blvd/Krameria Ave (LOS E during AM and PM peak hour)
- #5. Perris Blvd/Ramona Expy (LOS F during AM peak hour)
- #11. N Perris Blvd/Placentia Ave (LOS E during PM peak hour)
- #12. Barrett Ave/W Placentia Ave (LOS F during AM and PM peak hour)
- #13. Indian Ave/W Placentia Ave (LOS E during AM and PM peak hour)
- #14. I-215 Frontage Rd/W Placentia Ave (LOS E during AM peak hour and LOS F during PM peak hour)
- #18. N Perris Blvd/Orange Ave (LOS E during AM peak hour and LOS F during PM peak hour)
- #19. Barrett Ave/Orange Ave (LOS F during AM and PM peak hour)
- #20. Indian Ave/Orange Ave (LOS F during AM peak hour)
- #21. I-215 Frontage Rd/Orange Ave (LOS F during AM and PM peak hour)
- #24. Murrieta Rd/E Nuevo Rd (LOS E during AM peak hour)
- #26. N Perris Blvd/ W Nuevo Rd (LOS F during AM and PM peak hour)
- #27. I-215 Frontage Rd/W Nuevo Rd (LOS F during AM and PM peak hour)
- #30. Redlands Ave/Midred St (LOS E during AM peak hour)
- #36. Perris Blvd/4th St (LOS F during AM and PM peak hour)
- #39. Barrett Ave/I-215 Frontage Road (LOS E during PM peak hour)
- #46. Commercial Driveway 9/Existing Plaza Driveway and Orange Ave (LOS E during AM peak hour and LOS F during PM peak hour)

Recommended improvements for the intersections with an unsatisfactory LOS can be found in *Section 6*.

5.2.1 Opening Year II 2030 With Project Intersection Queueing Analysis

A queueing analysis was conducted at four study intersections during AM and PM peak hour involving ramps along the I-215. These intersections include Intersection #15 at I-215 Northbound Ramps and Placentia Avenue, Intersection #16 at I-215 Southbound Ramps and Placentia Avenue, Intersection #28 at I-215 Northbound Ramps and West Nuevo Road, and Intersection #29 at I-215 Southbound Ramps and West Nuevo Road. The required queuing length at the study area intersections were determined using 95-percentile queue length analysis. *Table 5.6* shows the queue lengths at each intersection approach. As shown in *Table 5.6*, queueing deficiencies were observed under Opening Year II 2030 With Project conditions, for the following approaches:

- #15. I-215 Northbound Ramps/Placentia Avenue – westbound right-turn lane (PM peak hour)
- #28. I-215 Northbound Ramps/West Nuevo Road – eastbound left-turn lane (AM and PM peak hour)
- #28. I-215 Northbound Ramps/West Nuevo Road – westbound right-turn lane (AM and PM peak hour)
- #29. I-215 Southbound Ramps/West Nuevo Road – southbound left-turn lane (PM peak hour)
- #29. I-215 Southbound Ramps/West Nuevo Road – westbound left-turn lane (PM peak hour)

Even though the queue length for the NBR at intersection #15 exceeds the available storage length, it can still be safely accommodated. This is due to the fact that the queue falls within the additional 100 feet of storage provided beyond the striped storage lane that extends past the NBR lane. Similarly, an additional 260 feet of storage is provided beyond the NBR and NBL at intersection #28, an additional 360 feet of storage is provided for the SBL at intersection #29, as well as an additional 600 feet beyond the SBL at intersection #16, ensuring that the additional queue can also be safely accommodated.

5.2.2 Opening Year II 2030 With Project Driveways Queueing Analysis

A full queueing analysis was conducted at all the Project driveways under the Opening Year II 2030 With Project Conditions to ensure that queueing remains within acceptable storage limits. Driveway access spacing is in accordance with Riverside County Standard Plan No. 114, and the driveway spacing measurements have been provided in Appendix F.

The required queuing length at the study area intersections were determined using 95-percentile queue length analysis. *Table 5.7* shows the queue lengths at each Project driveway approach. As shown in *Table 5.7*, queueing deficiencies were not observed under Opening Year I 2026 With Project Conditions. Therefore, no alternative access configurations are needed, as the driveway queueing analysis indicates no queueing deficiencies or safety concerns at any Project driveways.

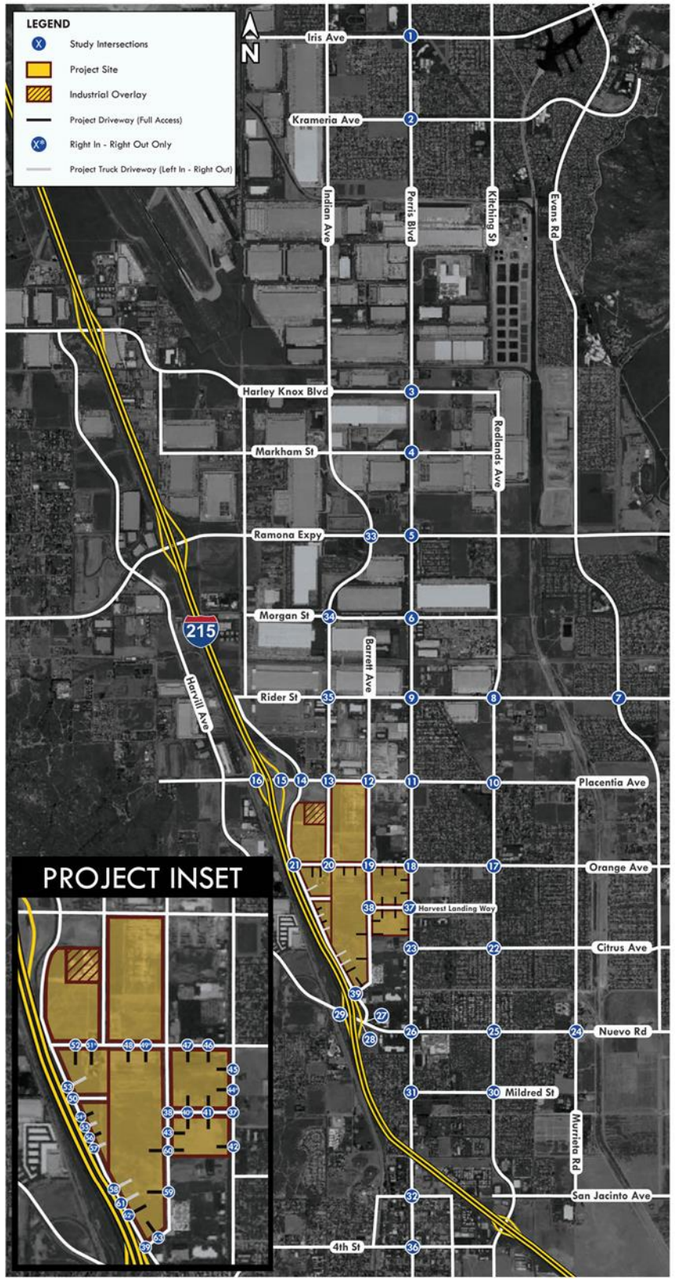
5.2.3 Opening Year II 2030 With Project Roadway Segment Analysis

Opening Year II 2030 With Project Without Project roadway segments volumes were developed by adding the Project trips to the Opening Year II 2030 Without Project roadway segments volumes, with the adjustments noted in Section 5.1.2.

The LOS at the Opening Year II 2030 With Project study roadway segments were determined using the methodology described previously in *Section 2.3 Methodology*. The Opening Year II 2030 With Project LOS at the study roadway segments are shown in *Table 5.8*. As shown in *Table 5.8*, the following eight (8) roadway segments would operate at an unsatisfactory LOS in the Opening Year II 2030 With Project condition:



- #3. Perris Blvd between Orange Ave and Citrus Ave
- #5. Perris Blvd between Placentia Ave and Orange Ave
- #6. Perris Blvd between Rider St and Placentia Ave
- #7. Nuevo Rd between Perris Blvd and I-215 NB Ramps

5.3 General Plan 2045 With Project Traffic Conditions

General Plan 2045 With Project traffic volumes were determined by adding the Project trips to the General Plan 2045 Without Project traffic volumes. Intersection lane configuration and traffic control under General Plan 2405 is shown in *Figure 5.9*. The General Plan 2045 With Project AM and PM peak hour traffic volumes at the study area intersections are shown in Figure 5.10 and Figure 5.11 respectively.

The Project proposes to remove 2,700 feet of Indian Avenue between Orange Avenue and I-215 Frontage Road South. The Project would also construct the planned segment of Barrett Ave south of Orange Avenue from Orange Avenue to the existing southern portion of Barrett Avenue that connects to I-215 Frontage Road. As part of the analysis for this scenario, the inbound trips to Indian Avenue at intersection #20 (Indian Avenue/Orange Avenue) were redirected to intersection #21 (I-215 Frontage Rd/Orange Ave) and ultimately to intersection #39 (Barrett Ave/I-215 Frontage Road). Additionally, the outbound trips originating from Indian Avenue were rerouted from intersection #39 (Barrett Ave/I-215 Frontage Road) to intersection #19 (Barrett Ave/Orange Ave), and finally to intersection #20 (Indian Avenue/Orange Ave) as a westbound right-turn.

An intersection operations analysis was conducted for the study area to evaluate the General Plan 2045 With Project AM and PM peak hour conditions. Intersection operations were calculated using the LOS methodology described previously in *Section 2.3 - Methodology*. Table 5.9 provides a comparison between the General Plan 2045 Without and With-Project scenarios. As shown in Table 5.9, the following 27 intersections would operate at an unsatisfactory LOS under the General Plan 2045 With Project condition:

- #1. Perris Blvd/Iris Ave (LOS F during AM and PM peak hour)
- #2. Perris Blvd/Krameria Ave (LOS F during AM and PM peak hour)
- #3. N Perris Blvd/Harley Knox Blvd (LOS F during PM peak hour)
- #4. N Perris Blvd/W Markham St (LOS F during AM peak hour and LOS E during PM peak hour)
- #5. Perris Blvd/Ramona Expy (LOS F during AM peak hour)
- #10. Redlands Ave/Placentia Ave (LOS F during AM and PM peak hour)
- #11. N Perris Blvd/Placentia Ave (LOS F during PM peak hour)
- #12. Barrett Ave/W Placentia Ave (LOS F during AM and PM peak hour)
- #14. I-215 Frontage Rd/W Placentia Ave (LOS F during PM peak hour)
- #15. I-215 NB Ramps/Placentia Ave (LOS F during PM peak hour)
- #17. Redlands Ave/Orange Ave (LOS E during AM peak hour)
- #18. N Perris Blvd/Orange Ave (LOS F during PM peak hour)
- #19. Barrett Ave/Orange Ave (LOS F during AM and PM peak hour)
- #20. Indian Ave/Orange Ave (LOS F during AM peak hour)
- #21. I-215 Frontage Rd/Orange Ave (LOS F during AM and PM peak hour)
- #22. Redlands Ave/Citrus Ave (LOS F during AM and PM peak hour)
- #23. N Perris Blvd/Citrus Ave (LOS E during PM peak hour)
- #24. Murrieta Rd/E Nuevo Rd (LOS E during AM peak hour)
- #25. Redlands Ave/E Nuevo Rd (LOS E during AM peak hour and LOS F during PM peak hour)
- #26. N Perris Blvd/ W Nuevo Rd (LOS E during AM and PM peak hour)
- #27. I-215 Frontage Rd/W Nuevo Rd (LOS F during PM peak hour)
- #28. I-215 NB Ramps/W Nuevo Rd (LOS F during AM peak hour)
- #29. I-215 SB Ramps/W Nuevo Rd (LOS F during PM peak hour)
- #30. Redlands Ave/Midred St (LOS E during AM peak hour)
- #32. N Perris Blvd/E San Jacinto Ave (LOS F during AM and PM peak hour)
- #39. Barrett Ave/I-215 Frontage Road (LOS E during PM peak hour)
- #46. Commercial Driveway 9/Existing Plaza Driveway and Orange Ave (LOS F during AM and PM peak hour)

Recommended improvements for the intersections with an unsatisfactory LOS can be found in Section 6.

5.3.1 General Plan 2045 With Project Intersection Queueing Analysis

A queueing analysis was conducted at four study intersections during AM and PM peak hour involving ramps along the I-215. These intersections include Intersection #15 at I-215 Northbound Ramps and Placentia Avenue, Intersection #16 at I-215 Southbound Ramps and Placentia Avenue, Intersection #28 at I-215 Northbound Ramps and West Nuevo Road, and Intersection #29 at I-215 Southbound Ramps and West Nuevo Road. The required queuing length at the study area intersections were determined using 95-percentile queue length analysis. *Table 5.10* shows the queue lengths at each intersection approach. As shown in *Table 5.10*, queueing deficiencies were observed under General Plan 2045 With Project conditions, for the following approaches:

- #15. I-215 Northbound Ramps/Placentia Avenue – westbound right-turn lane (AM and PM peak hour)
- #28. I-215 Northbound Ramps/West Nuevo Road – northbound left-turn and right-turn lane (AM peak hour)
- #28. I-215 Northbound Ramps/West Nuevo Road – eastbound left-turn lane (AM peak hour)
- #28. I-215 Northbound Ramps/West Nuevo Road – westbound right-turn lane (AM and PM peak hour)
- #29. I-215 Southbound Ramps/West Nuevo Road – southbound left-turn lane (PM peak hour)
- #29. I-215 Southbound Ramps/West Nuevo Road – westbound left-turn lane (PM peak hour)

Even though the queue length for the SBL at intersection #16 exceeds the available storage length, it can still be safely accommodated. This is due to the fact that the queue falls within the additional 600 feet of storage provided beyond the striped storage lane that extends past the SBL lane. Similarly, an additional 260 feet of storage is provided beyond the NBR and NBL at intersection #28, an additional 360 feet of storage is provided for the SBL at intersection #29, ensuring that the additional queue can also be safely accommodated.

5.3.2 General Plan 2045 With Project Driveways Queueing Analysis

A full queueing analysis was conducted at all the Project driveways under the General Plan 2045 With Project Conditions to ensure that queueing remains within acceptable storage limits. Driveway access spacing is in accordance with Riverside County Standard Plan No. 114, and the driveway spacing measurements have been provided in Appendix F.

The required queuing length at the study area intersections were determined using 95-percentile queue length analysis. *Table 5.11* shows the queue lengths at each Project driveway approach. As shown in *Table 5.11*, queueing deficiencies were not observed under General Plan 2045 With Project Conditions. Therefore, no alternative access configurations are needed, as the driveway queueing analysis indicates no queueing deficiencies or safety concerns at any Project driveways.

5.3.3 General Plan 2045 With Project Roadway Segment Analysis

General Plan 2045 With Project Without Project roadway segments volumes were developed by adding the Project trips to the General Plan 2045 Without Project roadway segments volumes, with the adjustments noted in Section 5.1.2.

The LOS at the General Plan 2045 With Project study roadway segments were determined using the methodology described previously in *Section 2.3 Methodology*. The General Plan 2045 With Project LOS at the study roadway segments are shown in *Table 5.12*. As shown in *Table 5.12*, the following four (4) roadway segments would operate at an unsatisfactory LOS in the General Plan 2045 With Project condition:

- #3. Perris Blvd between Orange Ave and Citrus Ave
- #7. Nuevo Rd between Perris Blvd and I-215 NB Ramps
- #12. Perris Blvd between Citrus Ave and Nuevo Rd
- #14. Placentia Ave between I-215 NB Ramps and Indian Ave

6 PROJECT IMPROVEMENTS

6.1 Opening Year I 2026 With Project Improvements

6.1.1 Recommendation for LOS Improvement

As previously shown in Section 5.1, the addition of the Project trips to the Opening Year I 2026 Without Project volumes would result in an unsatisfactory LOS at 7 of the 63 study intersections.

The following improvements would improve the LOS to a satisfactory level or better than baseline in the Opening Year I 2026 Plus Project condition for 6 of the 7 intersections with an unsatisfactory LOS under Opening Year I 2026 With Project conditions, as shown in Table 6.1 and figure 6.1:

- #1. Perris Blvd/Iris Ave
  - Change Protected WBL Phase to Protective-Permissive (Prot-Perm).
- #12. Barrett Ave/W Placentia Ave
  - This intersection passes signal warrant. Install Traffic Signal.
- #18. N Perris Blvd/Orange Ave
  - Optimize Traffic Signal
- #19. Barrett Ave/Orange Ave
  - This intersection passes all-way stop warrant. Install all-way stop.
- #26. N Perris Blvd/ W Nuevo Rd
  - Add right-turn overlap to NBR, SBR, EBR and WBR movement
- #46. Commercial Driveway 9/Existing Plaza Driveway and Orange Ave
  - This intersection passes signal warrant. Install Traffic Signal.

For Intersection #27 I-215 Frontage Rd/W Nuevo Rd, the intersection passes signal warrant. However, the intersection is approximately 200 feet from the I-215 NB Ramps/W Nuevo Road intersection to the west and around 330 feet from the existing Perris Plaza/W Nuevo Road intersection to the east. A queuing study between these intersections is conducted using SimTraffic to evaluate the feasibility of a traffic signal at this location. Based on the results from the study, a traffic signal is not feasible at this location. No feasible improvements would result in the intersection operating with satisfactory LOS. However, the following improvement will improve the safety at this intersection:

- #27. I-215 Frontage Rd/W Nuevo Rd
  - Install "Keep Clear" sign at the westbound and southbound approaches.

Traffic signal warrant sheets and all-way stop warrants are provided in *Appendix D*. SimTraffic outputs are provided in *Appendix G*.

6.1.2 Recommendations for Queueing Improvements

As previously discussed in Section 5.1.1, the addition of Project trips to the Opening Year I 2026 Without Project volumes would result in queuing deficiencies at intersections #15 and #29. Although a deficiency was noted at intersection #28, this deficiency existed in the Opening Year 2026 Without Project. The Project would either not contribute to this deficiency or would add less than one car length (25 feet); therefore, the project is not required to provide improvement for this intersection.

The following improvements would result in satisfactory queueing approach as shown in Table 6.2 for the Opening Year I 2026 Plus Project condition:

- #15. I-215 NB Ramps/Placentia Ave
    - Optimize signal control with cycle length of 60 seconds.
- #29. I-215 SB Ramps/W Nuevo Rd
    - Optimize signal control to split phases for all approaches with cycle length of 60 seconds.

6.1.3 Recommendations for Segment Improvements

As previously discussed in Section 5.1.2, the following eight (8) roadway segments would operate at an unsatisfactory LOS in the Opening Year I 2026 With Project condition.

- #3. Perris Blvd between Orange Ave and Citrus Ave
- #5. Perris Blvd between Placentia Ave and Orange Ave
- #6. Perris Blvd between Rider St and Placentia Ave
- #7. Nuevo Rd between Perris Blvd and I-215 NB Ramps
- #11. Nuevo Rd between I-215 NB Ramps and I-215 SB Ramps
- #12. Perris Blvd between Citrus Ave and Nuevo Rd
- #13. Placentia Ave between I-215 NB Ramps and I-215 SB Ramps
- #14. Placentia Ave between I-215 NB Ramps and Indian Ave

As shown in Table 6.3, the following North-South segments on are over capacity:

- #3. Perris Blvd between Orange Ave and Citrus Ave by 12,029 ADT trips
- #5. Perris Blvd between Placentia Ave and Orange Ave by 1,122 ADT trips
- #6. Perris Blvd between Rider St and Placentia Ave by 11,150 ADT trips
- #12. Perris Blvd between Citrus Ave and Nuevo Rd by 4,356 ADT trips

In total, the North-South segment of Perris Blvd between Rider St and Nuevo Rd is over capacity by 12,029 ADT trips. These 12,029 ADT trips can be redistributed to parallel North-South roads, such as Barrett Ave and I-215 Frontage Rd, which have sufficient capacity under the following split:

- 8,269 ADT Trips would utilize I-215 Frontage Rd
- 3,760 ADT Trips would utilize Barrett Ave

Given their lower resistance, road users are likely to divert to these alternative routes.

Similarly, as shown in Table 6.3, the following East-West segments on are over capacity:

- #7. Nuevo Rd between Perris Blvd and I-215 NB Ramps by 5,629 ADT trips
- #14. Placentia Ave between I-215 NB Ramps and Indian Ave by 23,697 ADT trips

In total, the East-West segments of Nuevo Rd between Perris Blvd and I-215 NB Ramps is over capacity by 5,629 ADT trips, while the East-West segments of Placentia Ave between Indian Ave and I-215 SB Ramps is over capacity by 23,697 ADT trips. These ADT trips can be redistributed to parallel East-West roads, such as Orange Ave, under the following split:

- 23,697 ADT Trips from Placentia Ave would utilize Orange Ave between I-215 Frontage Rd and Indian Ave
- 3,760 ADT Trips from Nuevo Rd would utilize Orange Ave between Indian Ave and Perris Blvd

Given their lower resistance, road users are likely to divert to these alternative routes.

The volume on segments between I-215 SB Ramps and I-215 NB Ramps cannot be redistributed to other segments. However, as previously discussed in Section 6.1.2, there would be no deficiencies at the I-215 Ramps intersections with the recommended improvements and the traffic on these segments can be safely accommodated.

As shown in Table 6.3, after redistributing and adjusting the over-capacity ADT trips, all segments besides the segments between I-215 SB Ramps and I-215 NB Ramps are projected to operate within the acceptable level of service as per the City's threshold, with a V/C ratio of 0.9 or less.

6.1.4 Project Fair Share

The Project's fair share percentage for each recommended improvement for LOS and queueing is identified in Table 6.4 below. The percentage of Project fair share at affected intersections was calculated using the total trips generated by the Project divided by the total "new" traffic, which is the net increase in traffic volume under the Opening Year I 2026 as a result of all other proposed projects using the formula below:

- Fair share percentage = Project Trips/(Total Trips with Project-Existing Trips)*100%

In addition to the fair share contributions, the Project would do the following to ensure that these improvements are implemented:

- The Project would front the cost of the improvements and be reimbursed later for the improvements at Intersections #23 (N. Perris Blvd/Citrus Ave) and #27 (I-215 Frontage Rd/W. Nuevo Rd).

- The Project would explore funding options for the required Improvements and available funding opportunities, including existing funding programs and others that can be utilized to fund the improvements are identified in the TIA. Additional funding information can be found in Appendix H.

[1]Fair share contribution percentage for improvements where the project is not directly responsible is calculated by the formula: Fair share percentage = Project Trips/(Total Trips with Project-Existing Trips)*100%

[2]The Project would front the cost of the improvements and be reimbursed later for the improvements at Intersection.

6.2 Opening Year II 2030 With Project Improvements

6.2.1 Recommendation for LOS Improvement

As previously shown in Section 5.2, the addition of the Project trips to the Opening Year II 2030 Without Project volumes would result in an unsatisfactory LOS at 18 of the 63 study intersections.

The following improvements would improve the LOS to a satisfactory level in the Opening Year II 2030 Plus Project condition, as shown in Table 6.5 and Figure 6.2:

- #5. Perris Blvd/Ramona Expy
  - Right-turn overlap on SBR; Change NBR to NBTR
- #11. N Perris Blvd/Placentia Ave
  - Restripe EBL, EBT, EBT, EBR to EBL, EBL, EBT, EBR.
- #12. Barrett Ave/W Placentia Ave
  - This intersection passes signal warrant. Install Traffic Signal with protected WBL and protected EBL.
- #13. Indian Ave/W Placentia Ave
  - Restripe NBL, NBT, NBR to NBL, NBL, NBTR.
- #14. I-215 Frontage Rd/W Placentia Ave
  - Restripe to remove south leg shoulder and accommodate an additional NBL lane;
  - Change WBR to WBTR,
  - Remove protected phase from WBL and change to permissive.
- #18. N Perris Blvd/Orange Ave
  - Change NBL, SBL, EBL, and WBL from protected to prot-perm left-turn phasing
- #19. Barrett Ave/Orange Ave
  - This intersection passes signal warrant. Install Traffic Signal.
- #20. Indian Ave/Orange Ave
  - This intersection passes signal warrant. Install Traffic Signal.
- #21. I-215 Frontage Rd/Orange Ave
  - Restripe NBL, NBT, NBTR to NBL, NBL, NBTR.
- #24. Murrieta Rd/E Nuevo Rd
  - Optimize Traffic Signal.
- #26. N Perris Blvd/ W Nuevo Rd
  - Add right-turn overlap to SBR and EBR movement.
  - Change NBR to NBTR.
  - Change WBR to WBTR
- #30. Redlands Ave/Midred St
  - Restripe SBL, SBT, SBTR to SBTL, SBT, SBR
- #36. Perris Blvd/4th St
  - Change protected NBL, SBL, EBL and WBL to prot-perm left-turn phasing.
- #39. Barrett Ave/I-215 Frontage Road
  - This intersection passes all-way stop warrant. Install all-way stop.
- #46. Commercial Driveway 9/Existing Plaza Driveway and Orange Ave
  - This intersection passes signal warrant. Install Traffic Signal

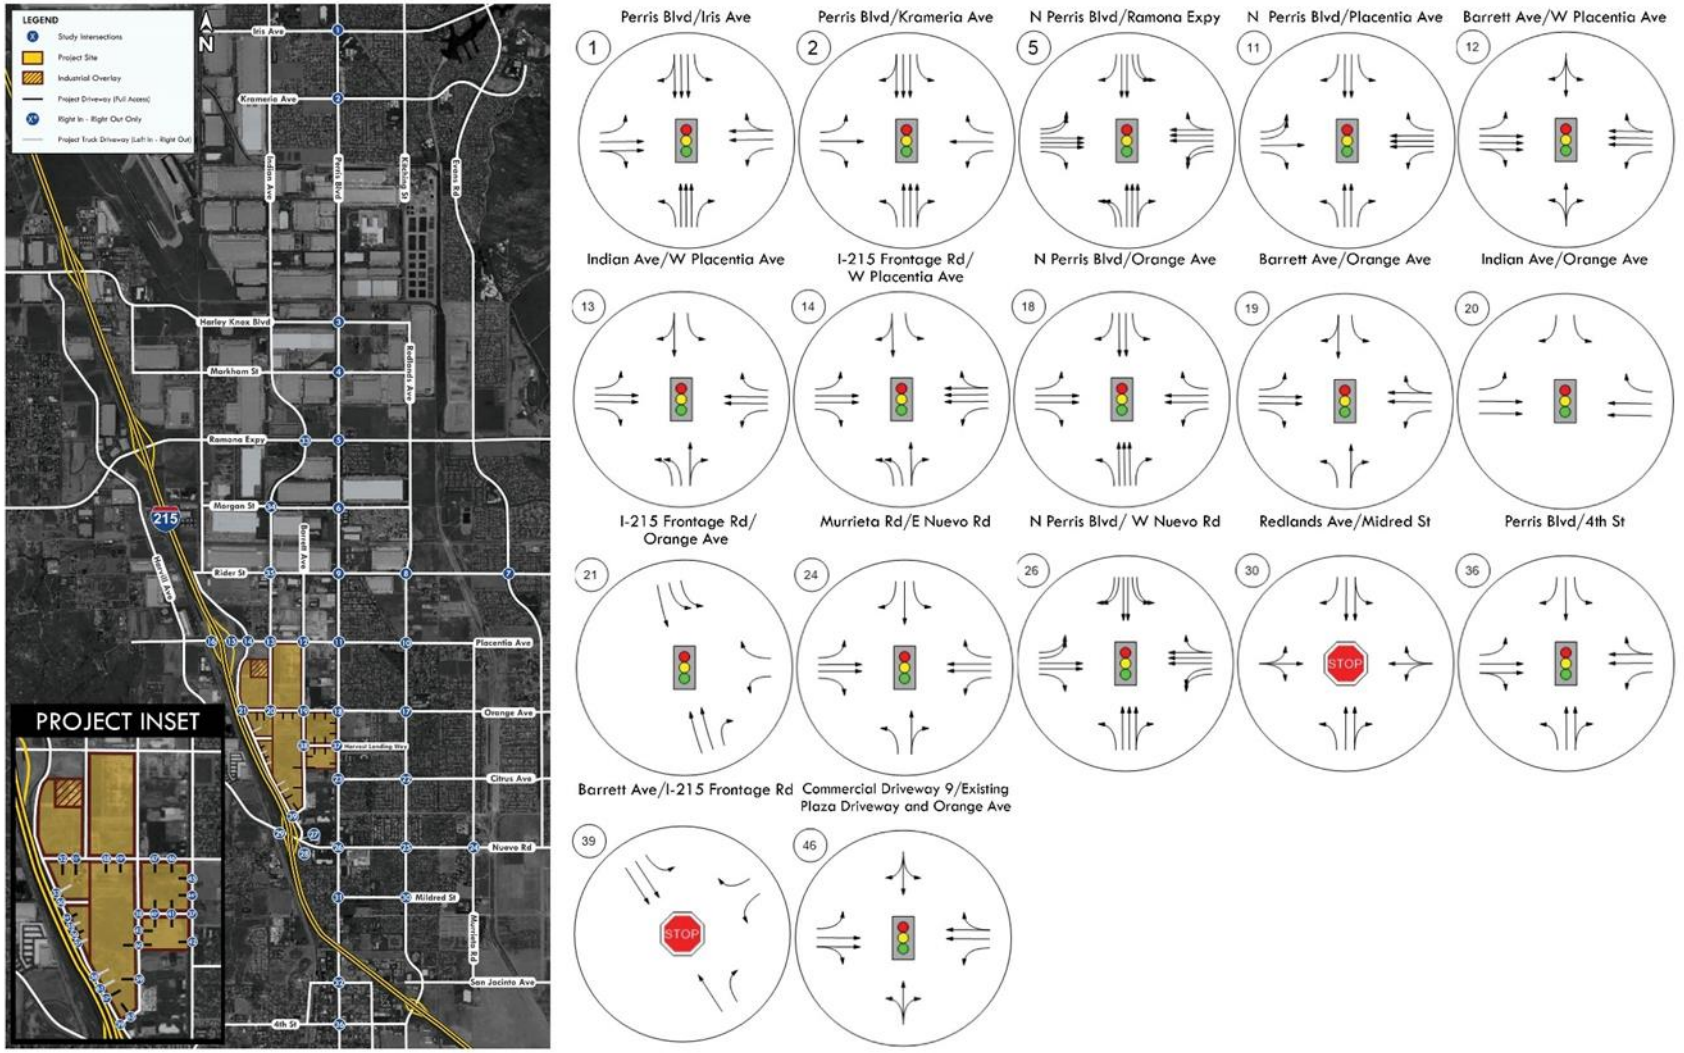
Traffic signal warrant sheets and all-way stop warrants are provided in *Appendix D*.

No feasible improvements would result in the following intersections operating with satisfactory LOS. However, the following improvement will improve the intersection to a lower delay and a better LOS as compared to the Opening Year II 2030 Without Project condition:

- #1. Perris Blvd/Iris Ave
    - Change Protected WBL Phasing to Prot-Perm Phasing.
- #2. Perris Blvd/Krameria Ave
    - Change WB and EB Split Phase to Prot-Perm Phasing.

For Intersection #27 I-215 Frontage Rd/W Nuevo Rd, the intersection passes signal warrant. However, the intersection is approximately 200 feet from the I-215 NB Ramps/W Nuevo Road intersection to the west and around 330 feet from the existing Perris Plaza/W Nuevo Road intersection to the east. A queuing study between these intersections is conducted using SimTraffic to evaluate the feasibility of a traffic signal at this location. Based on the results from the study, a traffic signal is not feasible at this location. No feasible improvements would result in the intersection operating with satisfactory LOS. However, the following improvement will improve the safety at this intersection:

- #27. I-215 Frontage Rd/W Nuevo Rd
    - Install "Keep Clear" sign at the westbound and southbound approaches.



SimTraffic outputs are provided in *Appendix G*.

6.2.2 Recommendations for Queueing Improvements

As previously discussed in Section 5.2.1, the addition of project trips to the Opening Year II 2030 Without Project volumes would result in queuing deficiencies at intersections #15 and #29. Although a deficiency was noted at intersection #28, this deficiency existed in the Opening Year II 2030 Without Project. The project would either not contribute to this deficiency or would add less than one car length (25 feet); therefore, the project is not required to provide improvement for this intersection.

The following improvements would result in satisfactory queueing as shown in Table 6.6 for the Opening Year II 2030 Plus Project condition:

- #29. I-215 SB Ramps/W Nuevo Rd
    - Optimize signal control to split phases for all approaches with cycle length of 60 seconds.

No feasible improvements would result in the following intersections operating with satisfactory queueing. However, the following improvements will improve the intersection to a lower queue length compared to the Opening Year II 2030 Without Project condition:

- #15. I-215 NB Ramps/Placentia Ave
    - Restripe WBT, WBT, WBR to WBT, WBTR, WBR.

Queueing Impacts

LT = Left-turn Lane, RT = Right-turn Lane

Queue length reported in feet for the AM(PM) peak periods and are rounded up to the nearest increment of 5 feet.

**Even though the queue length exceeds the available storage length, it can still be safely accommodated. This is due to the fact that the queue falls within the additional 360 feet of storage provided beyond the back of the striping storage pocket that extends past the SBL lanes.

6.2.3 Recommendations for Segment Improvements

As previously discussed in Section 5.2.2, the following eight (8) roadway segments would operate at an unsatisfactory LOS in the Opening Year II 2030 With Project condition.

- #3. Perris Blvd between Orange Ave and Citrus Ave
- #5. Perris Blvd between Placentia Ave and Orange Ave
- #6. Perris Blvd between Rider St and Placentia Ave
- #7. Nuevo Rd between Perris Blvd and I-215 NB Ramps
- #11. Nuevo Rd between I-215 NB Ramps and I-215 SB Ramps
- #12. Perris Blvd between Citrus Ave and Nuevo Rd
- #13. Placentia Ave between I-215 NB Ramps and I-215 SB Ramps
- #14. Placentia Ave between I-215 NB Ramps and Indian Ave

As shown in Table 6.7, the following North-South segments on are over capacity:

- #3. Perris Blvd between Orange Ave and Citrus Ave by 16,339 ADT trips
- #5. Perris Blvd between Placentia Ave and Orange Ave by 4,224 ADT trips
- #6. Perris Blvd between Rider St and Placentia Ave by 15,733 ADT trips
- #12. Perris Blvd between Citrus Ave and Nuevo Rd by 8,591 ADT trips

In total, the North-South segment of Perris Blvd between Rider St and Nuevo Rd is over capacity by 16,339 ADT trips. These 16,339 ADT trips can be redistributed to parallel North-South roads, such as Barrett Ave and I-215 Frontage Rd, which have sufficient capacity under the following split:

- 14,293 ADT Trips would utilize I-215 Frontage Rd
- 2,047 ADT Trips would utilize Barrett Ave

Given their lower resistance, road users are likely to divert to these alternative routes.

Similarly, as shown in Table 6.7, the following East-West segments on are over capacity:

- #7. Nuevo Rd between Perris Blvd and I-215 NB Ramps by 10,560 ADT trips

These ADT trips can be redistributed to parallel East-West roads, such as Orange Ave, under the following split:

- 10,560 ADT Trips from Placentia Ave would utilize Orange Ave between I-215 Frontage Rd and Perris Blvd

Given their lower resistance, road users are likely to divert to these alternative routes.

The v/c ratio on Segment #14. Placentia Ave between I-215 NB Ramps and Indian Ave is 1.979, the segment is over capacity by 35,134 ADT trips. Additional roadway capacity analysis for the Phase 2 industrial parcels once detailed site plans are prepared, to provide the appropriate recommendation for roadway segment improvements.

The volume on segments between I-215 SB Ramps and I-215 NB Ramps cannot be redistributed to other segments. However, as previously discussed in Section 6.2.2, there would be no deficiencies at the I-215 Ramps intersections with the recommended improvements and the traffic on these segments can be safely accommodated.

As shown in Table 6.7, after redistributing and adjusting the over-capacity ADT trips, all segments besides the segments between I-215 SB Ramps and I-215 NB Ramps, and Segment #14 Placentia Ave between I-215 NB Ramps and Indian Ave are projected to operate within the acceptable level of service as per the City's threshold, with a V/C ratio of 0.9 or less.

6.2.4 Project Fair Share

The Project's fair share percentage for each recommended improvement is identified in Table 6.8 below. The percentage of Project fair share at affected intersections was calculated using the total trips generated by the Project divided by the total "new" traffic, which is the net increase in traffic volume under the Opening Year II 2030 as a result of all other proposed projects using the formula below:

- Fair share percentage = Project Trips/(Total Trips with Project-Existing Trips)*100%

In addition to the fair share contributions, the Project would do the following to ensure that these improvements are implemented:

- The Project would front the cost of the improvements and be reimbursed later for the improvements at Intersections #23 (N. Perris Blvd/Citrus Ave) and #27 (I-215 Frontage Rd/W. Nuevo Rd).

- The Project would explore funding options for the required Improvements and available funding opportunities, including existing funding programs and others that can be utilized to fund the improvements are identified in the TIA. Additional funding information can be found in Appendix H.

6.3 General Plan 2045 With Project Improvements

6.3.1 Recommendation for LOS Improvement

As previously shown in Section 5.3, the addition of the Project trips to the General Plan 2045 Without Project volumes would result in an unsatisfactory LOS at 27 of the 63 study intersections.

The following improvements would improve the LOS to a satisfactory level in the General Plan 2045 Plus Project condition, as shown in Table 6.9 and Figure 6.3:

- #5. Perris Blvd/Ramona Expy (LOS F during AM peak hour)
  - Add right-turn overlap phasing on SBR.
  - Change NBR to NBTR
- #12. Barrett Ave/W Placentia Ave (LOS F during AM and PM peak hour)
  - This intersection passes signal warrant.
  - Install Traffic Signal with protected WBL and protected EBL phasing.
- #14. I-215 Frontage Rd/W Placentia Ave (LOS F during PM peak hour)
  - Restripe to remove south leg shoulder and accommodate an additional NBL lane.
  - Restripe WBL, WBT, WBT, WBT, WBR to WBTL, WBT, WBT, WBT, WBTR.
  - Remove protected phase from EBL, WBL and change to permissive.
- #15. I-215 NB Ramps/Placentia Ave (LOS F during AM and PM peak hour)
  - Change NB from Split phasing to Permissive phasing, add overlap phasing to WBR.

  - Restripe SBL, SBT, SBT, SBT, SBR to SBL, SBL, SBT, SBT, SBTR.
  - Restripe WBL, WBT, WBT, WBR to WBL, WBL, WBT, WBTR.
- #19. Barrett Ave/Orange Ave (LOS F during AM and PM peak hour)
  - This intersection passes signal warrant. Install Traffic Signal.
- #20. Indian Ave/Orange Ave
  - This intersection passes signal warrant. Install Traffic Signal.
- #21. I-215 Frontage Rd/Orange Ave (LOS F during AM and PM peak hour)
  - Restripe NBL, NBT, NBTR to NBL, NBL, NBTR.
- #22. Redlands Ave/Citrus Ave (LOS F during AM and PM peak hour)
  - This intersection passes signal warrant. Install Traffic Signal.
- #23. N Perris Blvd/Citrus Ave (LOS E during PM peak hour)
  - Restripe SBL, SBT, SBT, SBT, SBR to SBL, SBL, SBT, SBT, SBTR.
- #24.Murrieta Rd/E Nuevo Rd (LOS E during AM peak hour)
  - Optimize Traffic Signal.
- #25.Redlands Ave/E Nuevo Rd (LOS E during AM peak hour and LOS F during PM peak hour)

  - Restripe SBL to SBTL.
- #39. Barrett Ave/I-215 Frontage Road (LOS E during PM peak hour)
  - This intersection passes all-way stop warrant. Install all-way stop.

- #46. Commercial Driveway 9/Existing Plaza Driveway and Orange Ave
    - This intersection passes signal warrant. Install Traffic Signal.

Traffic signal warrant sheets and all-way stop warrants are provided in *Appendix D*.

No feasible improvements would result in the following intersections operating with satisfactory LOS. However, the following improvements to the intersection will result in a lower delay and a better LOS as compared to the General Plan 2045 Without Project condition:

- #1.Perris Blvd/Iris Ave (LOS F during AM and PM peak hour)
    - Change EBL and WBL from protected phasing to prot-perm phasing
- #2.Perris Blvd/Krameria Ave (LOS F during AM and PM peak hour)
    - Change WB and EB Split Phasing to Prot-Perm Phasing.
- #3.N Perris Blvd/Harley Knox Blvd (LOS F during PM peak hour)
    - Add right-turn overlap phasing on WBR.
- #4.N Perris Blvd/W Markham St (LOS F during AM peak hour)
    - Change NBL and SBL from protected phasing to prot-perm phasing
- #10. Redlands Ave/Placentia Ave (LOS F during AM and PM peak hour)
    - This intersection passes signal warrant. Install Traffic Signal.
    - Restripe SBL, SBT, SBT, SBR to SBL, SBL, SBT, SBR.
- #11. N Perris Blvd/Placentia Ave (LOS F during PM peak hour)
    - Restripe NBL, NBT, NBT, NBT, NBR to NBL, NBL, NBT, NBT, NBTR.
    - Restripe SBL, SBT, SBT, SBR to SBL, SBT, SBT, SBTR.
- #32. N Perris Blvd/E San Jacinto Ave (LOS F during AM and PM peak hour)
    - Restripe NBR to NBTR.

For Intersection #27 I-215 Frontage Rd/W Nuevo Rd, the intersection passes signal warrant. However, the intersection is approximately 200 feet from the I-215 NB Ramps/W Nuevo Road intersection to the west and around 330 feet from the existing Perris Plaza/W Nuevo Road intersection to the east. A queuing study between these intersections is conducted using SimTraffic to evaluate the feasibility of a traffic signal at this location. Based on the results from the study, a traffic signal is not feasible at this location. No feasible improvements would result in the intersection operating with satisfactory LOS. However, the following improvement will improve the safety at this intersection:

- #27. I-215 Frontage Rd/W Nuevo Rd
    - Install “Keep Clear” sign at the westbound and southbound approaches.

SimTraffic outputs are provided in *Appendix G*.

6.3.2 Recommendations for Queueing Improvements

As previously discussed in Section 5.3.1, the addition of project trips to the General Plan 2045 Without Project volumes would result in queuing deficiencies at intersections #15, #28 and #29.

The following improvements would result in satisfactory queueing approach as shown in Table 6.10 for General Plan 2045 Plus Project condition:

- #15. I-215 NB Ramps/Placentia Ave
    - Change NB from Split phasing to Permissive phasing, add overlap phasing to WBR.

No feasible improvements would result in the following intersections operating with satisfactory queueing. However, the following improvements will improve the intersection to a lower queue length compared to the General Plan 2045 Without Project condition:

- #28. I-215 NB Ramps/W Nuevo Rd
    - Restripe an EBT lane to an EBL lane.
- #29. I-215 SB Ramps/W Nuevo Rd
    - Optimize signal control to split phases for all approaches with cycle length of 60 seconds.

Queueing Impacts

LT = Left-turn Lane, RT = Right-turn Lane

Queue length reported in feet for the AM(PM) peak periods and are rounded up to the nearest increment of 5 feet.

**Even though the queue length exceeds the available storage length, it can still be safely accommodated. This is due to the fact that the queue falls within the additional 360 feet of storage provided beyond the back of the striping storage pocket that extends past the SBL lanes.

6.3.3 Recommendations for Segment Improvements

As previously discussed in Section 5.3.2, the following four (4) roadway segments would operate at an unsatisfactory LOS in the General Plan 2045 With Project condition.

- #3. Perris Blvd between Orange Ave and Citrus Ave
- #7. Nuevo Rd between Perris Blvd and I-215 NB Ramps
- #12. Perris Blvd between Citrus Ave and Nuevo Rd
- #14. Placentia Ave between I-215 NB Ramps and Indian Ave

As shown in Table 6.11, the following North-South segments on are over capacity:

- #3. Perris Blvd between Orange Ave and Citrus Ave by 8,232 ADT trips
- #12. Perris Blvd between Citrus Ave and Nuevo Rd by 13,202 ADT trips

In total, the North-South segment of Perris Blvd between Rider St and Nuevo Rd is over capacity by 13,202 ADT trips. These 13,202 ADT trips can be redistributed to parallel North-South roads, such as Barrett Ave and I-215 Frontage Rd, which have sufficient capacity under the following split:

- 12,433 ADT Trips would utilize I-215 Frontage Rd
- 769 ADT Trips would utilize Barrett Ave

Given their lower resistance, road users are likely to divert to these alternative routes.

Similarly, as shown in Table 6.11, the following East-West segments on are over capacity:

- #7. Nuevo Rd between Perris Blvd and I-215 NB Ramps by 10,560 ADT trips

These ADT trips can be redistributed to parallel East-West roads, such as Orange Ave, under the following split:

- 10,560 ADT Trips from Placentia Ave would utilize Orange Ave between I-215 Frontage Rd and Perris Blvd

Given their lower resistance, road users are likely to divert to these alternative routes.

The v/c ratio on Segment #14. Placentia Ave between I-215 NB Ramps and Indian Ave is 1.318, the segment is over capacity by 17,134 ADT trips. Additional roadway capacity analysis for the Phase 2 industrial parcels once detailed site plans are prepared, to provide the appropriate recommendation for roadway segment improvements.

As shown in Table 6.11, after redistributing and adjusting the over-capacity ADT trips, all segments besides Segment #14 Placentia Ave between I-215 NB Ramps and Indian Ave are projected to operate within the acceptable level of service as per the City's threshold, with a V/C ratio of 0.9 or less.

6.3.4 Project Fair Share

The Project's fair share percentage for each recommended improvement is identified in Table 6.12 below. The percentage of Project fair share at affected intersections was calculated using the total trips generated by the Project divided by the total "new" traffic, which is the net increase in traffic volume under the General Plan 2045 as a result of all other proposed projects using the formula below:

- Fair share percentage = Project Trips/(Total Trips with Project-Existing Trips)*100%

In addition to the fair share contributions, the Project would do the following to ensure that these improvements are implemented:

- The Project would front the cost of the improvements and be reimbursed later for the improvements at Intersections #23 (N. Perris Blvd/Citrus Ave) and #27 (I-215 Frontage Rd/W. Nuevo Rd).

- The Project would explore funding options for the required Improvements and available funding opportunities, including existing funding programs and others that can be utilized to fund the improvements are identified in the TIA. Additional funding information can be found in Appendix H.

B. Trip Geographic Distribution

Project truck and automobile trip distributions are shown in Figures 4 to 9. Industrial auto and commercial auto trip distribution is based on RIVCOM model forecast with minor adjustments based on engineering judgment as shown in Figures 10, 11 and 12. Truck trip distribution is based on the city of Perris truck routes with engineering judgment.

If so, name of City or Jurisdiction County of Riverside

G. Site Plan Please see Figure 1 - Site Plan.

H. Specific Issues to be addressed in the Study (in addition of the standard analysis described in the Guidelines) - To be filled out by transportation department. Note: If the traffic study states that a "traffic signal is warranted" or "a traffic signal appears to be warranted" , or similar statement, at an existing unsignalized intersection, under existing conditions, 8-hour approach traffic volume information must be submitted in addition to the peak hourly turning movement counts for that intersection. Please see Table 2 below.

	Table 2. Specific Issues to be Addressed in the Study
1	Truck turning templates at all truck driveways.
2	Queuing analysis along Placentia Avenue & Nuevo Road at the I-215 Freeway ramp intersections.
3	Traffic signal warrants at unsignalized intersections where deficiencies are determined.
4	Driveway access spacing based upon Riverside County Standard Plan No. 114.
5	Driveway access spacing of the easternmost driveway serving Building 2 along Orange Avenue (with respect to its location to Indian Avenue).
6	Driveway access spacing of the easternmost driveway serving Building 1 along Orange Avenue (with respect to its location to Barrett Avenue).
7	Text and/or exhibits that explain the proposed access (full or restricted) for each project driveway, and whether each driveway is designated for truck or passenger car traffic.
8	Justify the deletion of Indian Avenue south of Orange Avenue in buildout analysis of the project's study area.
9	On-site queuing for all proposed drive-through gas station pads.

I. Existing Conditions

Traffic count data must be new or recent. Provide traffic count dates if using other than new counts.

In 2023, while schools were in session, new counts were collected at the study intersections and roadway segments which include truck classifications.

2023 Counts would be escalated by a 3% Annual Ambient Growth Rate for Existing 2024 conditions.

Note: Traffic Study Submittal Form and appropriate fee must be submitted with, or prior to submittal of this form. Transportation Department staff will not process the Scoping Agreement prior to the fee.

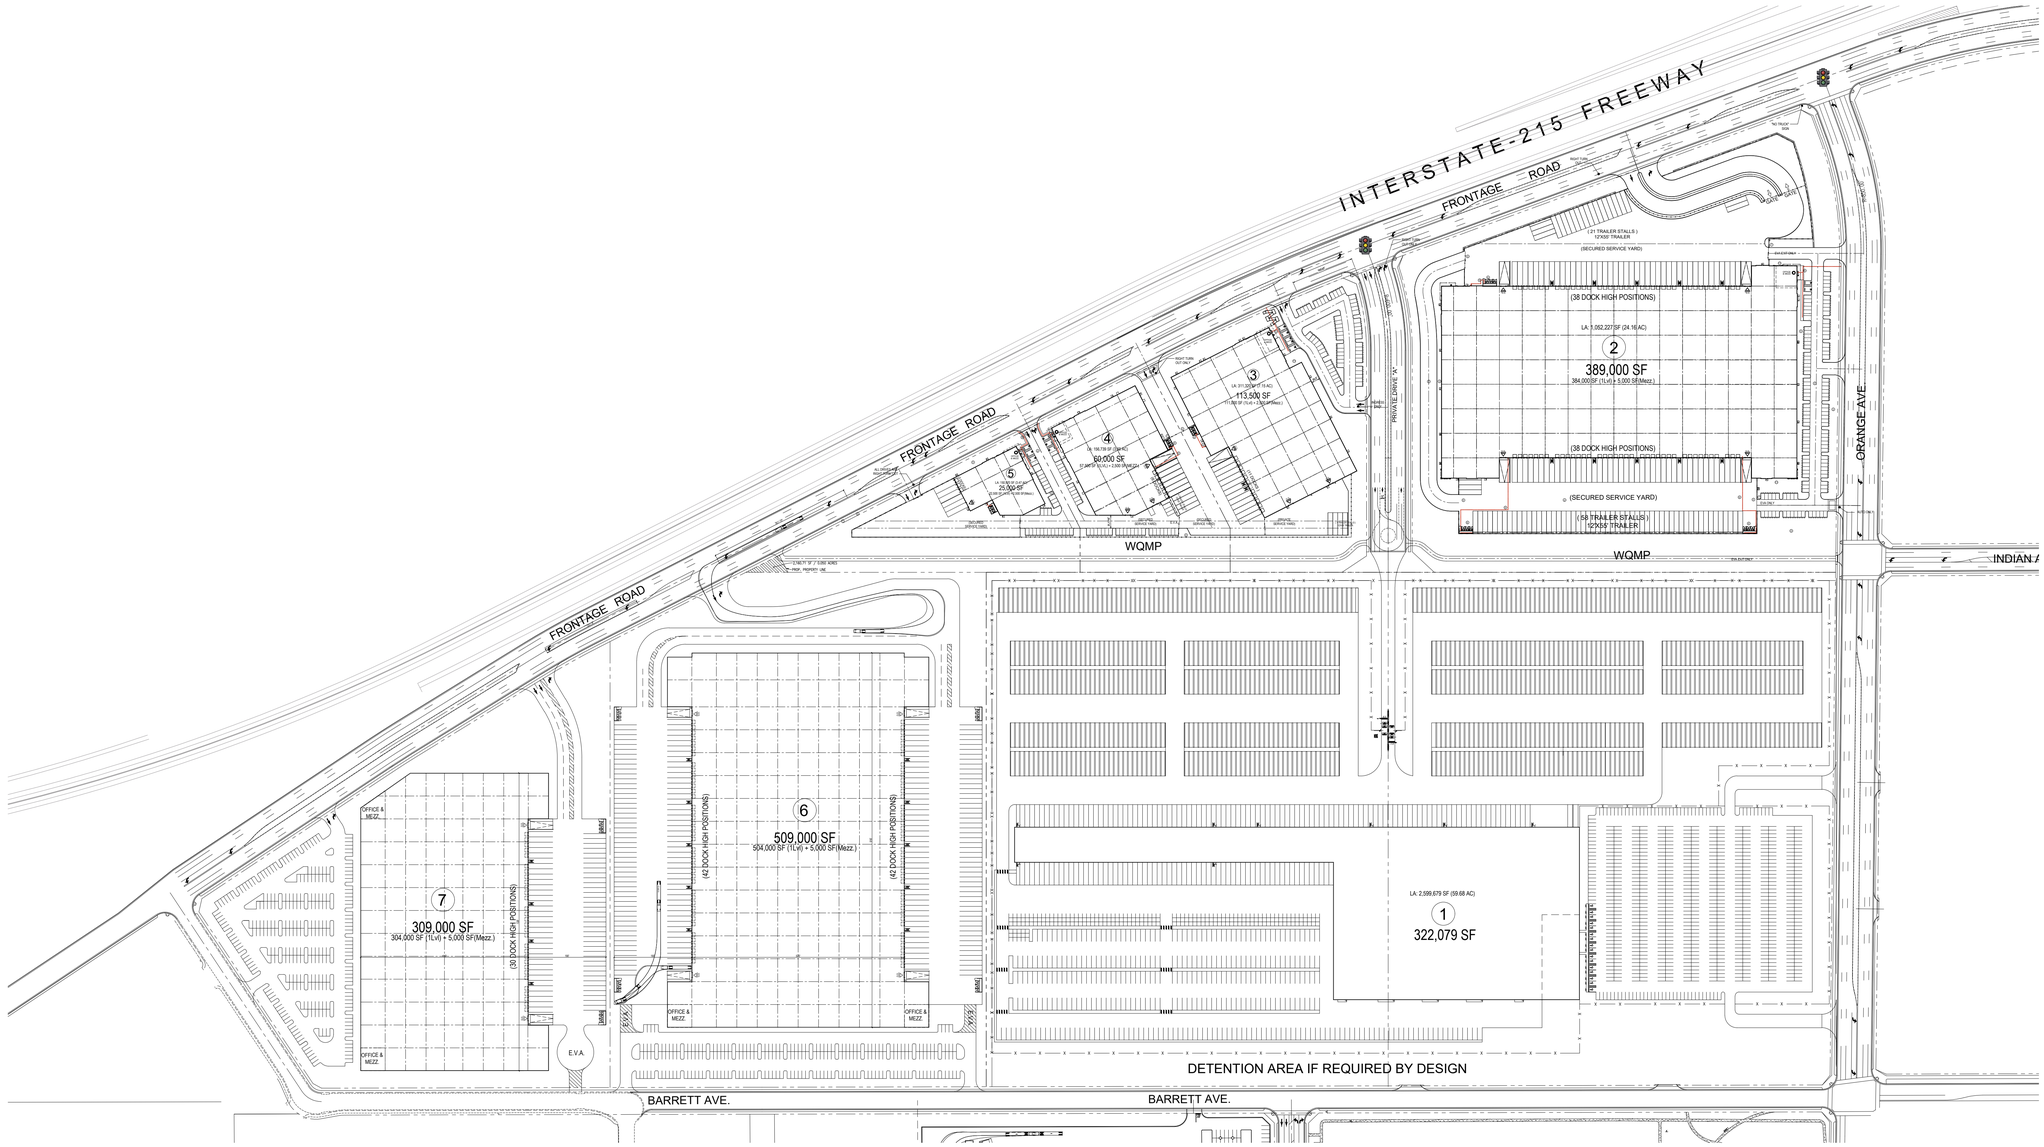
Project Description

Project Description:



The Harvest Landing Retail Center and Business Park Project is a proposed retail and business park development for the City of Perris's Harvest Landing Specific Plan. The project includes a General Plan Amendment, Specific Plan Amendment, and development reviews of the proposed project's Phase 1. The Project consists of two Phases, Phase 1 and Phase 2.

Phase 1 consists of lots south of Orange Avenue. Phase 1 is consistent with a development application for a mix of multiple business uses, a retail center and a water quality retention basin. Phase 1 includes: 1,207,000 SF TUMF High Cube, 322,079 SF Parcel Hub, 198,500 SF General Light Industrial, 423,000 SF Commercial uses, 5,500 SF medical office building, and a gasoline/service station with 10 vehicle fueling positions.

Phase 2 consists of lots north of Orange Avenue. Phase 2 is analyzed for future multiple business uses. No detailed site plan is available for Phase 2. Phase 2 includes: 3,659,693 SF industrial park and 348,262 industrial park overlay.

The proposed Project acreage totals 358.28 acres and consists of the following acreages and SF across the three proposed zones. 252.73 acres of the project will be zoned Multiple Business Use (MBU) and will consist of an anticipated SF of 5,735,534 across the Project's two Phases. A MBU overlay is included within the project that analyzes 10.66 acres to the projects north and would potentially include 348,262 SF of MBU uses. 46.72 acres of the project will be zoned Commercial (COMM) and will be developed during Phase 1 with an anticipated maximum SF of 428,507 of commercial and retail use including 5,500 SF medical office building and a gasoline/service station with 10 vehicle fueling positions. The remaining areas of 48.17 acres within the proposed project are dedicated to a water quality retention basin and roadways.

Foreword

This spreadsheet automates the Iterative Directional Volume Estimation Method originally developed and documented in NCHRP Report 255. The method is included in the body of materials developed and refined under NCHRP Project 08-83, which provides an update to NCHRP Report 255. The software does not represent a change to the original methodology; rather, its purpose is to provide a transparent

Instructions

This spreadsheet is intended for application on four-legged intersections. The following volumes are input by the user: 1) known turning movements; and 2) estimated or forecasted approach and departure volumes for each intersection leg. The spreadsheet performs the computations through six row and column iterations. Typically this will results in a desired closure within ± 10 percent. The user may desire to modify the spreadsheet to perform additional iterations by unprotecting the spreadsheet and copying the formulas into additional rows and columns. The user also may desire to modify the

With the exception of the designated cells where user input is required, all other cells are protected but

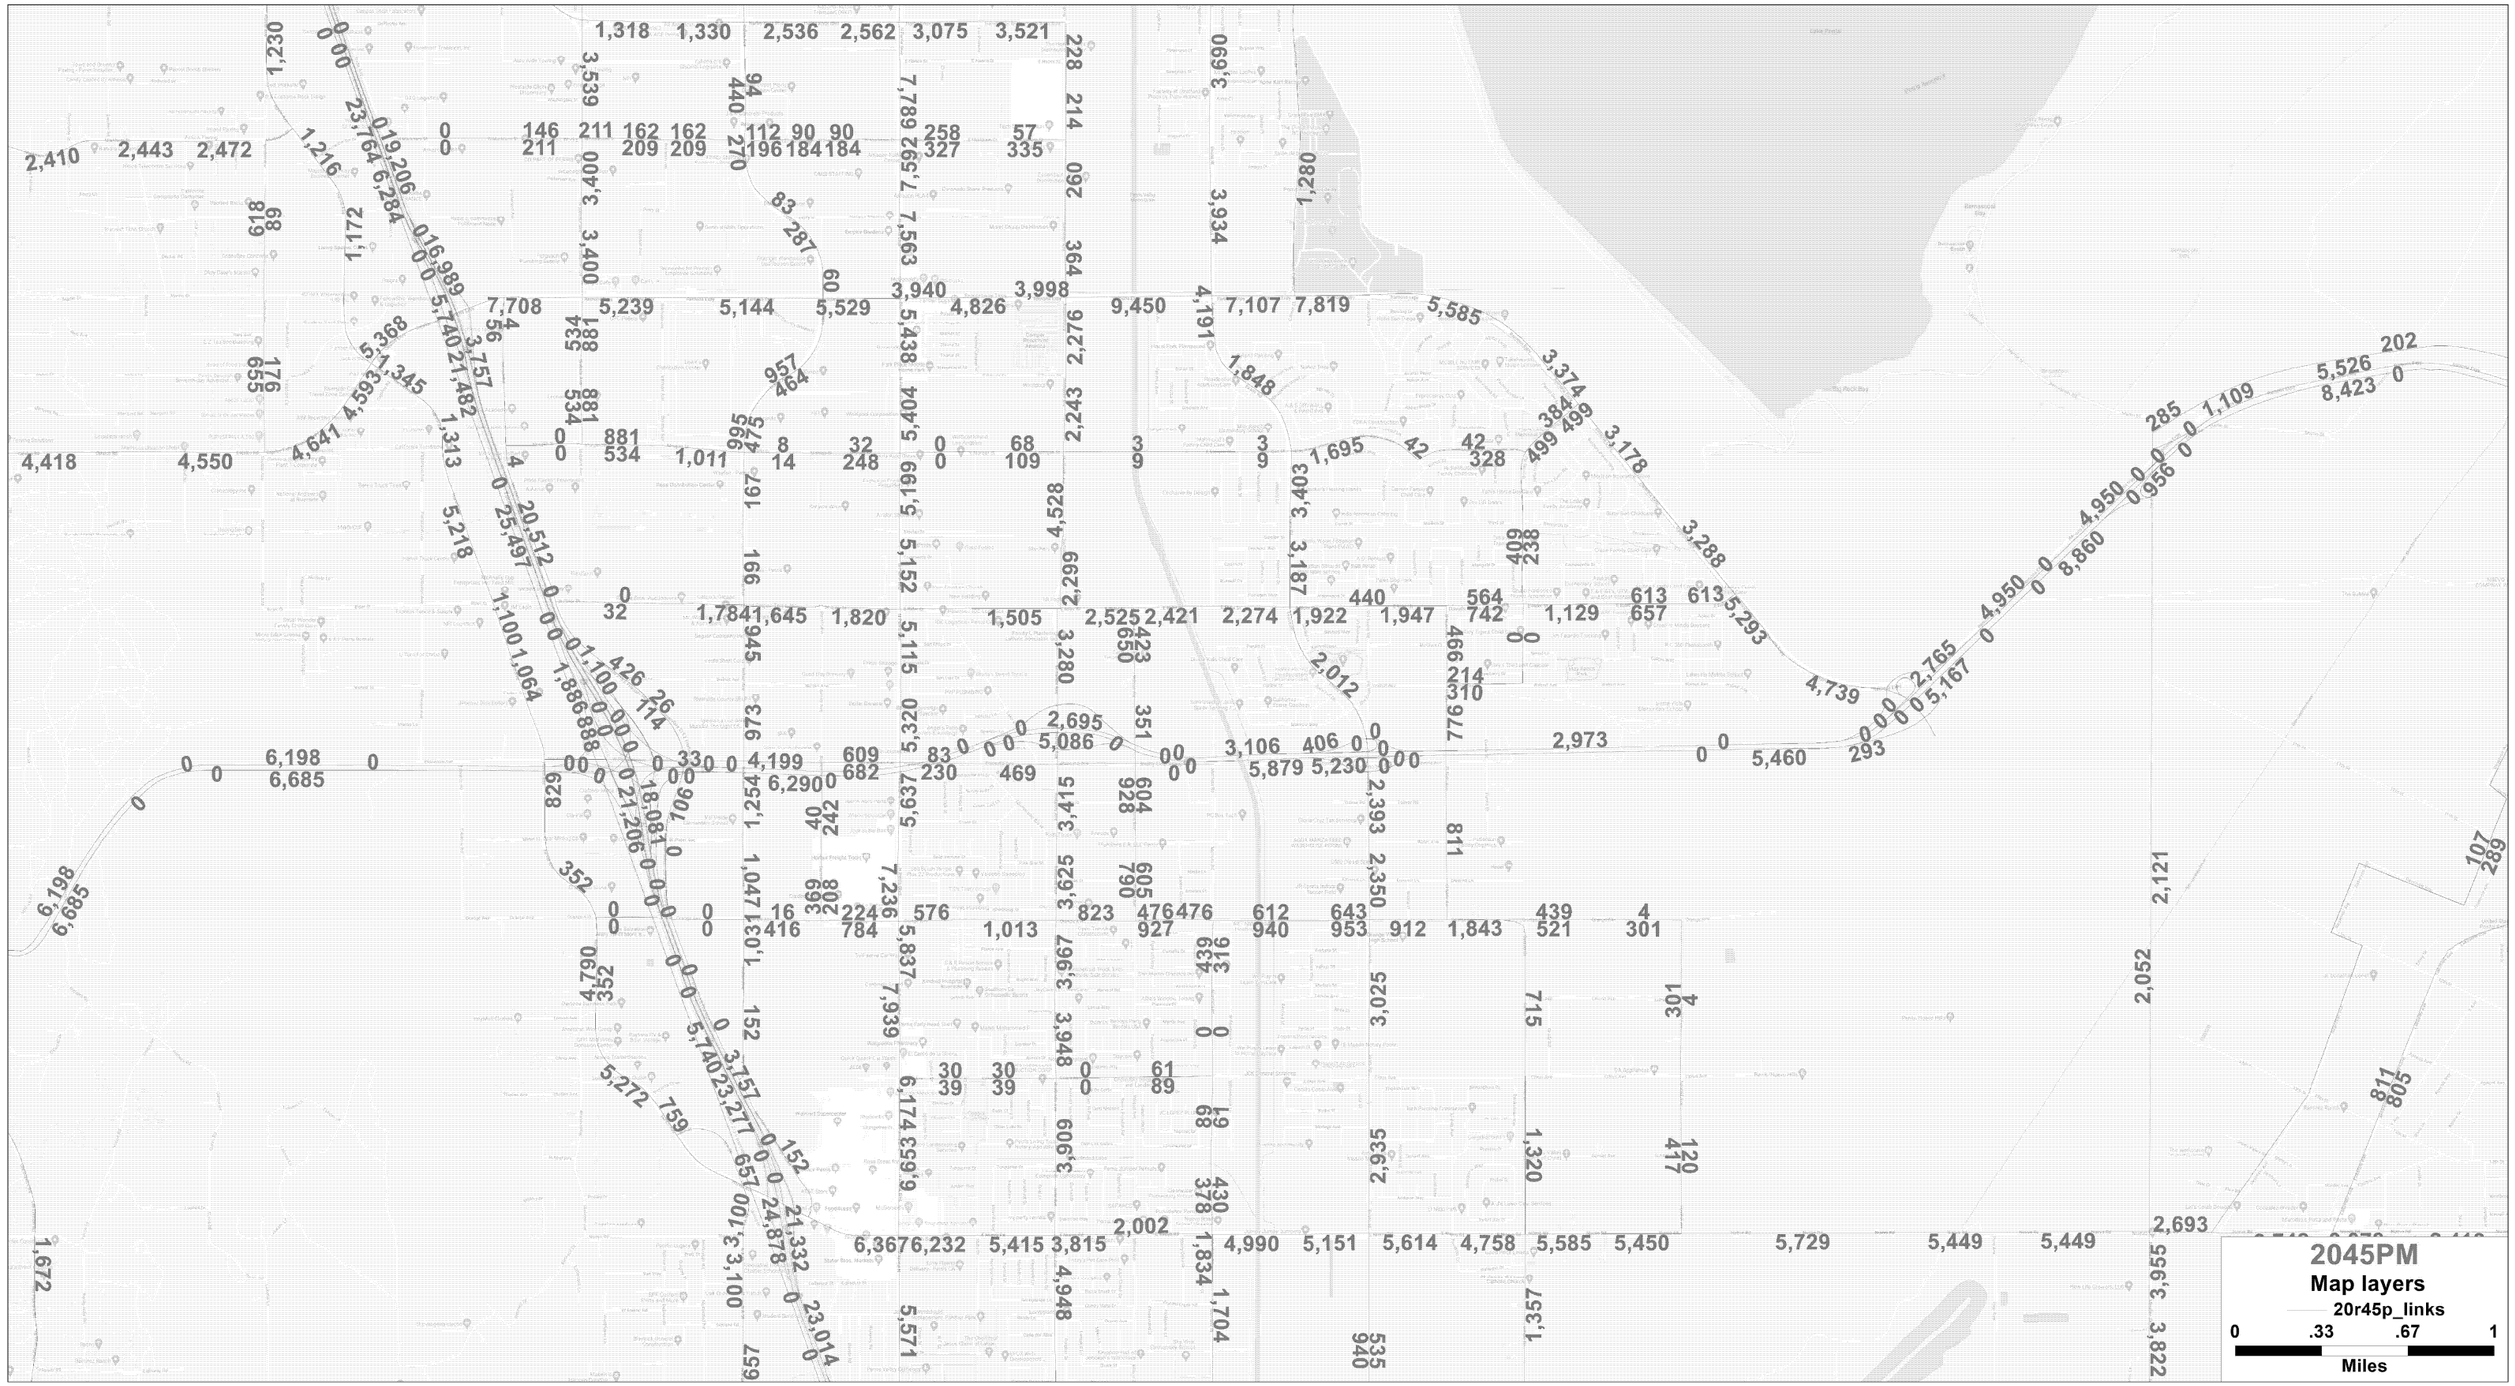
Foreword



This spreadsheet automates the Iterative Directional Volume Estimation Method originally developed and documented in NCHRP Report 255. The method is included in the body of materials developed and refined under NCHRP Project 08-83, which provides an update to NCHRP Report 255. The software does not represent a change to the original methodology; rather, its purpose is to provide a transparent

Instructions

This spreadsheet is intended for application on four-legged intersections. The following volumes are input by the user: 1) known turning movements; and 2) estimated or forecasted approach and departure volumes for each intersection leg. The spreadsheet performs the computations through six row and column iterations. Typically this will results in a desired closure within ± 10 percent. The user may desire to modify the spreadsheet to perform additional iterations by unprotecting the spreadsheet and copying the formulas into additional rows and columns. The user also may desire to modify the

With the exception of the designated cells where user input is required, all other cells are protected but
