Hi Jim,

I got your email below. I was told that we only have 1 set of encore to use for the analyses you requested.

Here's what we can do 1) analyze 8015 TPHg using one encore 2) analyze 8260B+Oxygenates with 2nd encore 3) for dilutions, we can prioritize 8260B and use the 3rd encore 4) we will use the sample tube for any other reruns.

As for Ethanol, we are not set-up by method 8260B. We can analyze it by 8015B. Let me know if this will be a problem.

Enclosed is a copy of the coc for your reference.

Thanks,
Rachelle

Subject: Hertz - LAX project

All samples are to be ran as follows:

A State-certified laboratory will perform analyses of all collected soil and groundwater samples. Soil and

groundwater samples will be analyzed for TPH gasoline by EPA Method 8015/5035. In addition, the soil samples will be

analyzed for benzene, toluene, ethylbenzene, total xylenes (BTEX), fuel oxygenates including MTBE and

ethanol by EPA Method 8260B/5035. As requested by the RWQCB, groundwater samples will be analyzed by

Volatile Organic Compounds (full suite) including common aromatic and chlorinated volatile organic

compounds by EPA method 8260B/5035 for this sampling event.

Please let me know if there is a problem.

Best Regards,

RE: Hertz LAX, 52.75015.0006

Attention: Jim Madden

Enclosed are the results for sample(s) received on July 08, 2009 by Advanced Technology Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

Eddie F. Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.

CLIENT: ATC Associates Inc
Project: Hertz LAX, 52.75015.0006
Lab Order: 106302

CASE NARRATIVE

Results were J-Flag. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" Flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

All volatile analyses were performed using 5035 preservation requirements except sample MW-5/70'. Any high level dilutions were performed on a preserved methanol sample unless otherwise noted.

Hi Jim,

Please confirm if you want us to run all the samples collected on 7/8/09. The analyses requested on Page 1 of 2 do not have the lines drawn down to the last sample. Attached is the copy of the COCs for your reference.

Please advise.

Hi Jim,

I got your email below. I was told that we only have 1 set of encore to use for the analyses you requested.

Here's what we can do 1) analyze 8015 TPHg using one encore 2) analyze 8260B+Oxygenates with 2nd encore 3) for dilutions, we can prioritize 8260B and use the 3rd encore 4) we will use the sample tube for any other reruns.

As for Ethanol, we are not set-up by method 8260B. We can analyze it by 8015B. Let me know if this will be a problem.

Enclosed is a copy of the coc for your reference.

Thanks,
Rachelle

Subject: Hertz - LAX project

All samples are to be ran as follows:

A State-certified laboratory will perform analyses of all collected soil and groundwater samples. Soil and

groundwater samples will be analyzed for TPH gasoline by EPA Method 8015/5035. In addition, the soil samples will be

analyzed for benzene, toluene, ethylbenzene, total xylenes (BTEX), fuel oxygenates including MTBE and

ethanol by EPA Method 8260B/5035. As requested by the RWQCB, groundwater samples will be analyzed by

Volatile Organic Compounds (full suite) including common aromatic and chlorinated volatile organic

compounds by EPA method 8260B/5035 for this sampling event.

Please let me know if there is a problem.

25 Cupania Circle
Monterey Park, CA 91755

Report No.: 9080044
Project Name: Hertz-LAX, P.O. No. 52.75015.0006

Dear Mr. Jim Madden,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on August 06, 2009.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

SEMIANNUAL GROUNDWATER MONITORING REPORT – JULY 2012

Facility: **Hertz Facility**	Site Address: **9000 Airport Boulevard, Los Angeles California**
Responsible Party / Contact Person:	Hertz Corporation / Mr. Timothy Egan
Consulting Co. / Contact Person:	**ATC Associates Inc. /Jim Madden, Project Manager (323) 517-9780**
ATC Project No.:	52.75015.0006
Regulatory Agency/File No.:	Los Angeles Regional Water Quality Control Board / Release #900450670 (D-1)

WORK PERFORMED THIS QUARTER (July 1, 2012 to September 30, 2012]:

1. Performed second semi-annual groundwater monitoring and sampling.
2. Submit second semi-annual 2012 groundwater monitoring report

WORK PROPOSED FOR NEXT SEMI-ANNUAL EVENT [January 1, 2013 to March 30, 2013]:

1. Perform first semi-annual groundwater monitoring and sampling.
2. Prepare and submit first semi-annual 2013 groundwater monitoring report.

Current Phase of Project:	Assessment	(Assessment, Remediation, etc.)
Frequency of Sampling:	Semi-annual	(Semi-annual, etc.)
Frequency of Monitoring:	Semi-annual	(Semi-annual, etc.)
Liquid Phase Hydrocarbons Present On Site:	No	(Yes/No)
Cumulative PSH Recovered to Date:	None	(gallons)
PSH Recovered This Quarter:	None	(gallons)
Purge Water Removed This Quarter:	40	(gallons)
Permits for Discharge:	None	(NDPES, POTW, etc)
Current Remediation Techniques:	Natural attenuation	(SVES, PSH Recovery, Natural attenuation)
Approximate Depth to Groundwater:	73.47 to 84.92	(Measured Feet)
Groundwater Gradient:	0.06 ft/ft	(Magnitude)
Groundwater Flow Direction:	Northeast	(Direction)

Discussion: On July 12, 2012, ATC Associates, Incorporated (ATC) personnel visited the site to perform the second of two groundwater monitoring and sampling events **(Figure 1)**. Well construction details and survey data are in **Table 1**. ATC gauged five monitoring wells (**Figure 2**). Depth to groundwater during this gauging event ranged between 73.47 (MW-1) and 84.92 (MW-5) feet below ground surface (bgs). Groundwater monitoring wells MW-1 and MW-2 were observed to contain less than 1 foot of water during this sampling event, and the water was turbid, even after being purged. Due to the low water levels in groundwater monitoring well MW-2, a sample was not collected. Groundwater flow direction was northeast with a hydraulic gradient of approximately 0.06 ft/ft. No measurable phase-separated hydrocarbons (PSH) were recorded during this monitoring event. A groundwater elevation contour map is presented on **Figure 3**. The groundwater measurements in monitoring wells MW-1 and MW-2 are suspect based on the historical groundwater gradient and limited water column in the wells. Monitoring wells MW-1 and MW-2 were disregarded for groundwater elevation mapping purposes as shown in **Figure 3**. Groundwater monitoring and sampling procedures are provided in **Appendix A**.

ATC purged and collected groundwater samples from MW-1, MW-3, MW-4, and MW-5; field logs are in **Appendix B**. The samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg); benzene, toluene, ethylbenzene, and total xylenes (BTEX); fuel oxygenates methyl tert-butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), and tert-butyl alcohol (TBA), by EPA Test Method 8260 and gas chromatograph/mass spectrometer (GC/MS) combination.

TPHg was not present in concentrations above the laboratory practical quantitation limit (PQL= 100 µg/L) in groundwater samples collected from MW-1 and MW-3 through MW-5. BTEX were not detected at concentrations above the laboratory PQL of 1.0 µg/L in any of the groundwater samples collected during the current monitoring event. MTBE, TAME, DIPE, and ETBE were not present at concentrations above their respective laboratory PQLs.

However, it is ATC's opinion that the analytical results for monitoring wells MW-1 and MW-2 are not likely representative of

actual site conditions due to insufficient recharge of the wells. Dissolved oxygen readings were not available during this sampling event. Groundwater analytical results are presented in **Table 2**. The laboratory analytical report is in **Appendix C**.
Recommendations: Continue semi-annual groundwater monitoring
Summary of Unusual Activity: MTBE was not detected in any of the sampled groundwater monitoring wells during this sampling event.
Agency Directive Requirements: Continue semi-annual groundwater monitoring and sampling

Abbreviations/Definitions

MSL - Mean Sea Level
TOC - Top of Casing
LPH - Liquid-Phase Hydrocarbons
TPH-g - Total Petroleum Hydrocarbons by EPA Test Method 8015B for gasoline
µg/L - Micrograms per liter
MTBE - Methyl tert-butyl ether by EPA Test Method 8260
TAME - tert-Amyl methyl ether by EPA Test Method 8260
ETBE - Ethyl tert-Butyl Ether by EPA Test Method 8260
TBA - t-Butyl Alcohol by EPA Test Method 8260
DIPE - Di-isopropyl Ether by EPA Test Method 8260
Ethanol - By EPA Test Method 8015B
VOCs - Volatile Organic Compounds by EPA Test Method 8260
< - Less than the given laboratory Practical Quantitation Limit (PQL)
-- - Not sampled, measured, or analyzed
ND - No detectable VOCs above the PQL

GROUNDWATER MONITORING AND SAMPLING PROCEDURES

GROUNDWATER MONITORING AND SAMPLING PROCEDURES

Groundwater Monitoring and Decontamination Method

Prior to monitoring, a decontamination area is established. Decontamination procedures consist of scrubbing down-well equipment in a Liquidnox® solution wash (or equivalent degreasing compound), and rinsing in potable water and a final rinse of de-ionized (or distilled) water before and after each well. Any non-dedicated down-well equipment is decontaminated prior to use on site.

Prior to purging and sampling a well, the static water level is measured to the nearest 0.01 feet with an electronic interface probe and/or water level meter. Depth to bottom is typically measured every semi-annual event. The water level meter and tape will be decontaminated between each well. If floating phase-separated hydrocarbons (PSH) are suspected or previously confirmed, an electronic interface probe is used to measure the well fluids to the nearest 0.01 feet. PSH may alternatively be measured using a clear, open-ended product bailer, and the thickness is measured to the nearest 0.01 feet in the bailer. Any monitoring well containing a measurable thickness of PSH before or during purging is not additionally purged and no sample is collected from that well. Wells containing hydrocarbon sheen are sampled unless otherwise specified by the project manager. Field observations such as well integrity as well as water level measurements and PSH thickness are recorded in the field.

Well Purging

When well purging is required, each monitoring well to be sampled is purged using, a truck-mounted vacuum pump, a polyvinyl chloride (PVC) bailer or a submersible pump. Physical parameters (pH, temperature, and conductivity) of the purge groundwater are monitored during purging activities to assess if the water sample collected is representative of the aquifer. If required, parameters such as dissolved oxygen, turbidity, salinity etc. are also measured. Samples are considered representative if parameter stability is achieved. Stability is defined as a change of less than 0.25 pH units, less than 10% change in conductivity in micro mhos, and less than 1.0 degree centigrade (1.8 degrees Fahrenheit) change in temperature. Parameters are measured in a discreet sample decanted from the bailer separately from the rest of the purge groundwater. Parameters are measured during purging; initially, and at volume intervals of one well or borehole volume (dependent on local regulations). Purging continues until the required well or borehole volumes have been removed, until the well completely dewaters, or until measured parameters stabilize as indicated above. When wells dewater or demonstrate a slow recharge, wells may be sampled although fewer than required volumes have been removed. Well purging information is recorded on the Purge Data sheet. All meters used to measure parameters are calibrated daily. Purge water is sealed, labeled, and stored on site in D.O.T.-approved 55-gallon drums. After being chemically profiled, the water is transported to an appropriate disposal facility by a licensed waste hauler.

Groundwater Sample Collection

After purging, groundwater samples are collected after at least 80% of its static water level is recovered in the well. If recharge is extremely slow, the well is allowed to recharge until sufficient volume has accumulated for sample collection. **No-purge groundwater samples are collected when prior approval by the lead regulatory agency has been permitted**. **When no-purge samples are collected the same procedures are followed excluding well purging.** All groundwater samples are collected using polyethylene disposable bailers attached with new, clean string or rope. Groundwater samples being analyzed for compounds most sensitive to volatilization are collected first. Groundwater samples are placed in appropriate laboratory-supplied containers, labeled, place in zip-lock® plastic bags, documented on a chain of custody form and preserved on ice in a cooler for transport to a state-certified analytical laboratory. After collection, all samples are stored in a chilled cooler and refrigerated to approximately four degrees Celsius while a laboratory representative transports the samples to their facility. Analytical detection limits match or surpass standards required by local or regional guidelines.

QUALITY ASSURANCE / QUALITY CONTROL (QA/QC) PROCEDURES

Field Procedures

To prevent contamination of the samples and/or cross-contamination of monitoring wells ATC personnel adhere to the following procedures in the field:

- New, clean pair of appropriate disposable gloves is dawned prior to sampling each well.
- Wells are gauged and purged in the expected order of increasing degree of contamination based on historical analytical results.
- All purging equipment will be thoroughly decontaminated between each well using the procedures previously described at the beginning of this section.
- During sample collection for volatile organic analysis, the amount of air passing through the sample is minimized. This helps prevent the air from stripping the volatiles from the groundwater. Sample bottles are filled by slowly running the sample down the side of the bottle until there is a convex meniscus over the mouth of the bottle. The lid is carefully screwed onto the bottle such that no air bubbles are present within the bottle. If a bubble is present, the cap is removed and additional water is added to the sample container. After resealing the sample container, if bubbles still are present inside, the sample container is discarded and the procedure is repeated with a new container.

Sample Control

Laboratory and field handling procedures may be monitored, if required by the client or local regulatory agency, by including quality control (QC) samples for analysis with the groundwater samples. Examples of different types of QC samples are as follows:

- Trip blanks are prepared at the analytical laboratory, by laboratory personnel to check handling procedures while in the field, as required by site conditions and local regulations. Trip blanks are transported to the project site in the same manner as the laboratory-supplied sample containers to be filled. They are not opened, and are returned to the laboratory with the samples collected. Trip blanks are analyzed for purgable organic compounds.
- Equipment blanks are prepared in the field to determine if decontamination of field sampling equipment has been effective, as required by site conditions and local regulations. The sampling equipment used to collect the groundwater samples is rinsed with distilled water that is then decanted into laboratory-supplied containers. The equipment blanks are transported to the laboratory, and are analyzed for the same chemical constituents as the samples collected at the site.
- Duplicates (split samples) are collected at the same time that the standard groundwater samples are being collected and are analyzed for the same compounds in order to check the reproducibility of laboratory data. They are typically only collected from one well per sampling event, as required by site conditions and local regulations. The duplicate is assigned an identification number that will not associate it with the source well.

Generally, trip blanks and field blanks check field handling and transportation procedures. Duplicates check laboratory procedures. The configuration of QC samples is determined by ATC depending on site conditions and regulatory requirements.

July 18, 2012

Mr. Jim Madden
A.T.C. Associates Inc. [Monterey Park]
25 Cupania Circle
Monterey Park, CA 91755

Report No.: 1207079
Project Name: 043.75015.0016

Dear Mr. Jim Madden,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on July 12, 2012.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

Re: Workplan for Additional Groundwater Investigation
Hertz Facility
9000 Airport Boulevard
Los Angeles, California
ATC Project No. 52.75015.0006
I.D. # 900450670

Dear Mr. Huang:

ATC Associates Inc. (ATC) is pleased to provide you, on behalf of Hertz Corporation, with the following workplan to install groundwater monitoring wells to further evaluate the extent of petroleum hydrocarbons as gasoline and/or methyl tertiary butyl ether (MTBE) impacted groundwater associated with the subject site. This Work Plan was prepared in response to the Los Angeles Regional Water Quality Control Board (RWQCB) letter dated March 9, 2009, which is included in Appendix A. Based on the results of the Additional Site Assessment Report prepared by ATC and dated October 9, 2008, the RWQCB has requested that additional groundwater monitoring wells be installed to determine the extent of MTBE. This workplan outlines the assessment activities, sampling protocols, laboratory analysis, and management of wastes to be generated during the work. In addition, ATC will prepare a report that documents the findings of the assessment and presents recommendations for future action as appropriate.

SITE DESCRIPTION

The site is located at 9000 Airport Boulevard in Los Angeles California as shown in Figure 1 and is used for rental car operations. The site consists of five buildings, a car wash system, and refueling systems. The refueling system consists of four gasoline underground storage tanks (USTs), one split gasoline/diesel UST, fourteen fuel dispenser islands, and underground distribution lines. The UST system is generally located in the west central portion of the facility and is bordered to the west by Airport Boulevard and to the north by the main vehicle entryway into and out of the facility (Figure 2).

The site is composed of the two main fueling areas, the “eastern” fueling system and the “western” fueling system. The eastern system consists of the following:

- Two 12,000 gallon gasoline USTs, and
- Ten 10 dispenser islands.

Each island has one fuel dispenser, and the ten islands are covered by an overhead canopy. The USTs are located just south of the dispenser islands and are aligned north-south in a common excavation.

The western system consists of the following:

- One 20,000-gallon gasoline UST,
- One split UST consisting of an 8,000-gallon gasoline portion and a 12,000-gallon diesel portion, and
- Twenty dispensers.

The dispensers are covered by a metal canopy structure. The two USTs are located to the north of the dispenser islands and are aligned east west in a common excavation. The two 20,000-gallon USTs were installed in 2005 when the previous USTs were removed as discussed below.

Directly north of both the eastern and western systems is an eight foot cinderblock wall immediately adjacent, followed by a landscaped planter area immediately to the north, then the paved main entry into and out of the facility. To the west of the western system is an asphalt paved drive/parking area, followed by a traffic guard rail and an eight foot chain link fence, then a landscaped parkway with Airport Boulevard to the west. It should be noted that immediately to the west, and overhead of the canopy for the four dispenser islands related to the western system, exists a large commercial billboard placed for viewing from Airport Boulevard. Toward the east and south of the systems are asphalt paved parking area and maintenance areas for the Hertz facility, including car wash structures to the south and the main office/locker building for the facility to the southeast.

SITE HISTORY

In July 2003, ATC directed the advancement of 21 soil borings (B-1 through B-21) to depths ranging from 15 feet to 30 feet below ground surface (bgs). The purpose of the assessment was to evaluate soil quality prior to pending UST upgrades associated with Senate Bill SB 989. Soil impact was detected in the vicinity of the eastern dispenser islands.

The hydrocarbon contaminated soil around the western system was confined to the UST nest and around the dispenser island closest to those USTs. The horizontal extent of the hydrocarbon contamination in the western system was estimated to be 40 feet by 60 feet. At the completion of the initial soil characterization, the vertical extent was not known. The deepest area of impacted soil would be located along the western portion of the UST pit (between B-11 and B-14). It was in this area that an additional boring and monitoring well was recommended. The details of the soil assessment are found in ATC's "Site Assessment Report", dated August 25, 2003.

In September 2003, ATC directed and supervised the advancement of a soil boring and installation of one groundwater monitoring well (MW-1) at a location to the west of the western fueling system as shown on **Figure 2 – Site Plan**. The boring was advanced to a depth of 75 feet bgs, and soil samples were collected at five foot intervals. ATC selected five soil samples between 45 and 63 feet bgs for laboratory analysis. Soil samples collected between 45 and 55 feet bgs contained the highest levels of MTBE (ranging between 1,300 to 48,000 micrograms per kilogram (µg/kg)). The MTBE concentrations decreased between one to two orders of magnitude (to 8 and 18 µg/L) between 55 feet and 63 feet bgs. The remaining analytes were at trace levels. Monitoring well MW-1 was constructed using 45 feet (surface to 45 feet bgs) of blank 4-inch diameter Schedule 40 PVC casing, and 30 feet of slotted (0.020-inch slots) 4-inch diameter Schedule 40 PVC well screen. Subsequent to its installation, the well was purged and developed.

A groundwater sample was collected during a September 2003 investigation from MW-1 and the results indicated a total petroleum hydrocarbons as gasoline (TPHg) concentration of 61 µg/L. Tertiary butyl alcohol (TBA) and MTBE were reported at concentrations of 2,500 g/L, and 8,700 µg/L, respectively. All other analytes were below their respective detection limits.

Between March 24 and April 4, 2005, ATC oversaw the removal of impacted soil during the removal of four gasoline USTs and one diesel UST and associated dispenser islands at the western fueling area. Transportation manifests indicated that 1,000 tons of petroleum hydrocarbon-impacted soil was excavated, transported and disposed during the performance of excavation activities. Laboratory analytical results indicated that TPHg, total petroleum hydrocarbons as diesel (TPHd), benzene and MTBE concentrations of up to 150, 720, 0.006, and 0.67 mg/kg, respectively, were present in the remaining soil. The TPHg, TPHd, and benzene concentrations were below maximum soil screening levels established by the Los Angeles Regional Water Quality Control Board in the Interim Site Assessment and Cleanup Guidebook, May 1996, based on a depth to groundwater of approximately 53 feet as measured in well MW-1. Additionally, the benzene and MTBE concentrations were below the EPAs Preliminary Remediation Goals (PRGs) for industrial and residential soils. The remediation activities were presented in the Remedial Excavation Report prepared by ATC and dated May 8, 2006.

Between June 19 and 20, 2008, ATC installed two groundwater monitoring wells (MW-2 and MW-3) at the site using a hollow-stem auger drilling method. Groundwater monitoring well MW-2 was installed north of the eastern dispenser islands and MW-3 was installed east of the western dispenser islands. The borings were advanced to between 77 and 89 feet bgs and the monitoring wells were installed to total depths of 75 and 85 feet bgs with a 30 ft screen interval used for both wells. Well locations are shown on **Figure 2**. Results of the additional well installations are presented as **Figure 3 – Groundwater Summary Map**.

SCOPE OF WORK

This workplan to install groundwater wells involves the following scope of work:

1. Updating the existing Site Health & Safety Plan (H&SP);
2. Obtaining necessary drilling permits from the County of Los Angeles;
3. Construct two groundwater wells at the locations shown on Figure 2;
4. Collect soil samples from the boreholes, and then convert the borings into 4-inch diameter groundwater monitoring wells. Develop the monitoring wells. Collect groundwater samples from the completed monitoring wells;
5. Survey all well elevations to allow for accurate groundwater elevation measurements and to further evaluate groundwater flow direction;
6. Prepare a “Soil and Groundwater Investigation Report”

Prepare Site Health & Safety Plan

A H&SP has been prepared for the proposed activities to ensure the personal health and safety of all ATC employees (see attached). The H&SP defines safety practices and procedures to be instituted in all ATC work places, as applicable. The program meets, and often exceeds, the requirements promulgated by the Occupational Safety and Health Administration (OSHA). As part of the H&SP, all ATC personnel are appropriately trained and under a Medical Surveillance Program in accordance with OSHA 40 CFR 1910.120.

Permitting

ATC will obtain the proper permits and any necessary agreements. ATC anticipates that permitting activities will require approximately two to three weeks.

Proposed Locations

The proposed well locations are to the north of MW-1 and southeast of MW-2 as shown on Figure 2. These locations were selected to attempt to further characterize the observed MTBE at the site. The groundwater flow direction is anticipated to be to the south or southeast based on the Additional Site Assessment Report prepared by ATC and dated October 9, 2008.

Drilling and Sampling
Prior to drilling, ATC will contact Underground Service Alert (USA) and a private utility locator service to identify possible subsurface utilities in the vicinity of the proposed boring locations. Following utility clearance, drilling will be scheduled. ATC plans to utilize a hollow stem auger drill rig to install the two wells.

The borings will be advanced, and undisturbed soil samples will be collected at approximate five foot intervals. The boring will be advanced approximately 15 feet below the anticipated groundwater table and completed as a groundwater monitoring well. The existing onsite wells will be measured prior to placement and the screened interval adjusted to attempt to be 15 feet above and below the groundwater table. Each well is anticipated to be constructed using 60 feet (surface to 60 feet bgs) of blank 4-inch, Schedule 40 PVC casing, and 30 feet of slotted (0.020-inch slots) 4-inch Schedule 40 PVC well screen. The well heads will be completed within traffic rated well vaults and surveyed by a state licensed land surveyor.

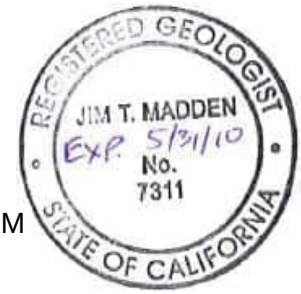
Following installation, the wells will be developed and sampled per RWQCB regulations. The groundwater samples will be collected from each of the wells using a disposable bailer and transferred to the appropriate laboratory-supplied containers. All samples will be labeled, logged onto a chain-of-custody form and placed into a chilled cooler for subsequent transport to a State-certified laboratory for analysis.

All soil and/or groundwater wastes generated during the advancement of the soil borings will be placed into Department of Transportation (DOT)-approved 55-gallon drums and will remain onsite pending proper disposition.

Organic Vapor Monitoring
To obtain data regarding the petroleum hydrocarbon-impact to soil and for health and safety concerns, samples will be field screened for volatile organic vapors utilizing a hand held photo-ionization detector (PID). PID readings will be recorded on the boring logs.

Well Survey
Following the completion of groundwater monitoring well installation, the wells will be surveyed by a State-licensed surveyor. The well head elevations will be tied into the existing well (MW-1) and an existing benchmark elevation. The surveyed well elevations will allow for the accurate determination of groundwater flow direction.

Analytical Testing
A State-certified laboratory will perform analyses of all collected soil and groundwater samples. Soil and groundwater samples will be analyzed for TPHg by EPA Method 8015. In addition, the soil samples will be analyzed for benzene, toluene, ethylbenzene, total xylenes (BTEX), fuel oxygenates including MTBE and ethanol by EPA Method 8260B. As requested by the RWQCB, groundwater samples will be analyzed by Volatile Organic Compounds (full suite) including common aromatic and chlorinated volatile organic compounds by EPA method 8260B for this sampling event.



Soil and Groundwater Investigation Report
A summary report documenting the procedures and findings of the investigation activities will be prepared and submitted to the RWQCB. The report will contain tabulated analytical results, figures showing the locations of the groundwater monitoring wells, non-hazardous waste manifests for soil and groundwater, and will be reviewed and signed by State of California registered Geologist. The report will be written and compiled in accordance with the most recent guidelines set by the RWQCB. The report will be submitted to the State Geotracker Internet Database.

Work Schedule

Upon receipt of approval of this Work Plan from the RWQCB, ATC can initiate the project immediately. ATC will coordinate well permitting and any necessary private property access. Monitoring well installation fieldwork is anticipated to be completed within approximately 10-15 working days, following approved permitting. Groundwater monitoring well installation, development and sampling will require approximately 3-4 working days to complete. Laboratory analytical test results should be received within 5-7 working days of sample receipt. Data interpretation and report preparation are expected to take 20 to 30 working days. The estimated project schedule does not include allowances for delays due to inclement weather, site access problems or other factors beyond the control of ATC.

Thank you for your time and consideration of this workplan. Our client would like to initiate this work as soon as possible. If you have any questions, or if you need any additional information or clarification, please contact either of the undersigned at (323) 517-9780.

Sincerely,
ATC Associates Inc.

UNDERGROUND STORAGE TANK PROGRAM -- DIRECTIVE TO TAKE CORRECTIVE ACTION IN RESPONSE TO UNAUTHORIZED UNDERGROUND STORAGE TANK RELEASE PURSUANT TO HEALTH AND SAFETY CODE SECTION 25296.10 AND TITLE 23, CALIFORNIA CODE OF REGULATIONS, SECTIONS 2720-2727
ADDITIONAL SITE ASSESSMENT
HERTZ FACILITY, 9000 AIRPORT BOULEVARD, LOS ANGELES (I.D. # 900450670) (D-1)

Dear Mr. Egan:

Pursuant to Health and Safety Code section 25296.10, Hertz Corporation (Hertz) is required to take corrective action (i.e., Preliminary Site Assessment, Soil and Water Investigation, Corrective Action Plan Implementation, and Verification Monitoring) to ensure protection of human health, safety and the environment. Corrective action requirements are set forth in California Code of Regulations (CCR), title 23, Chapter 16, sections 2720 through 2727.

We have reviewed the document entitled "Additional Site Assessment Report (Report)," dated October 9, 2008, prepared by ATC Associates Inc. (ATC) on behalf of Hertz Corporation (Hertz), for the above-referenced site.

Workplan for Additional Groundwater Investigation (Per CCR, title 23, §2722(d) and §2725)

In June and July 2008, ATC installed two groundwater monitoring wells (MW-2 and MW-3) to determine the direction of groundwater flow and investigate the extent of groundwater contamination at the site. In reference to the Report, we have the following comments:

1. Groundwater was encountered at approximately 73 to 76 feet below ground surface (bgs). Methyl tertiary butyl ether (MTBE) was detected up to 2,740 ug/L in well MW-2. All other constituents were not detected in groundwater samples. The extent of MTBE contmaination in soil and groundwater has not been delineated. Hertz is required to submit a Workplan for additional soil and groundwater investigation. At a minimum, two additional groundwater monitoring wells, one upgradient and one downgradient to well MW-2 must be installed. The Workplan is due by **May 15, 2009**.

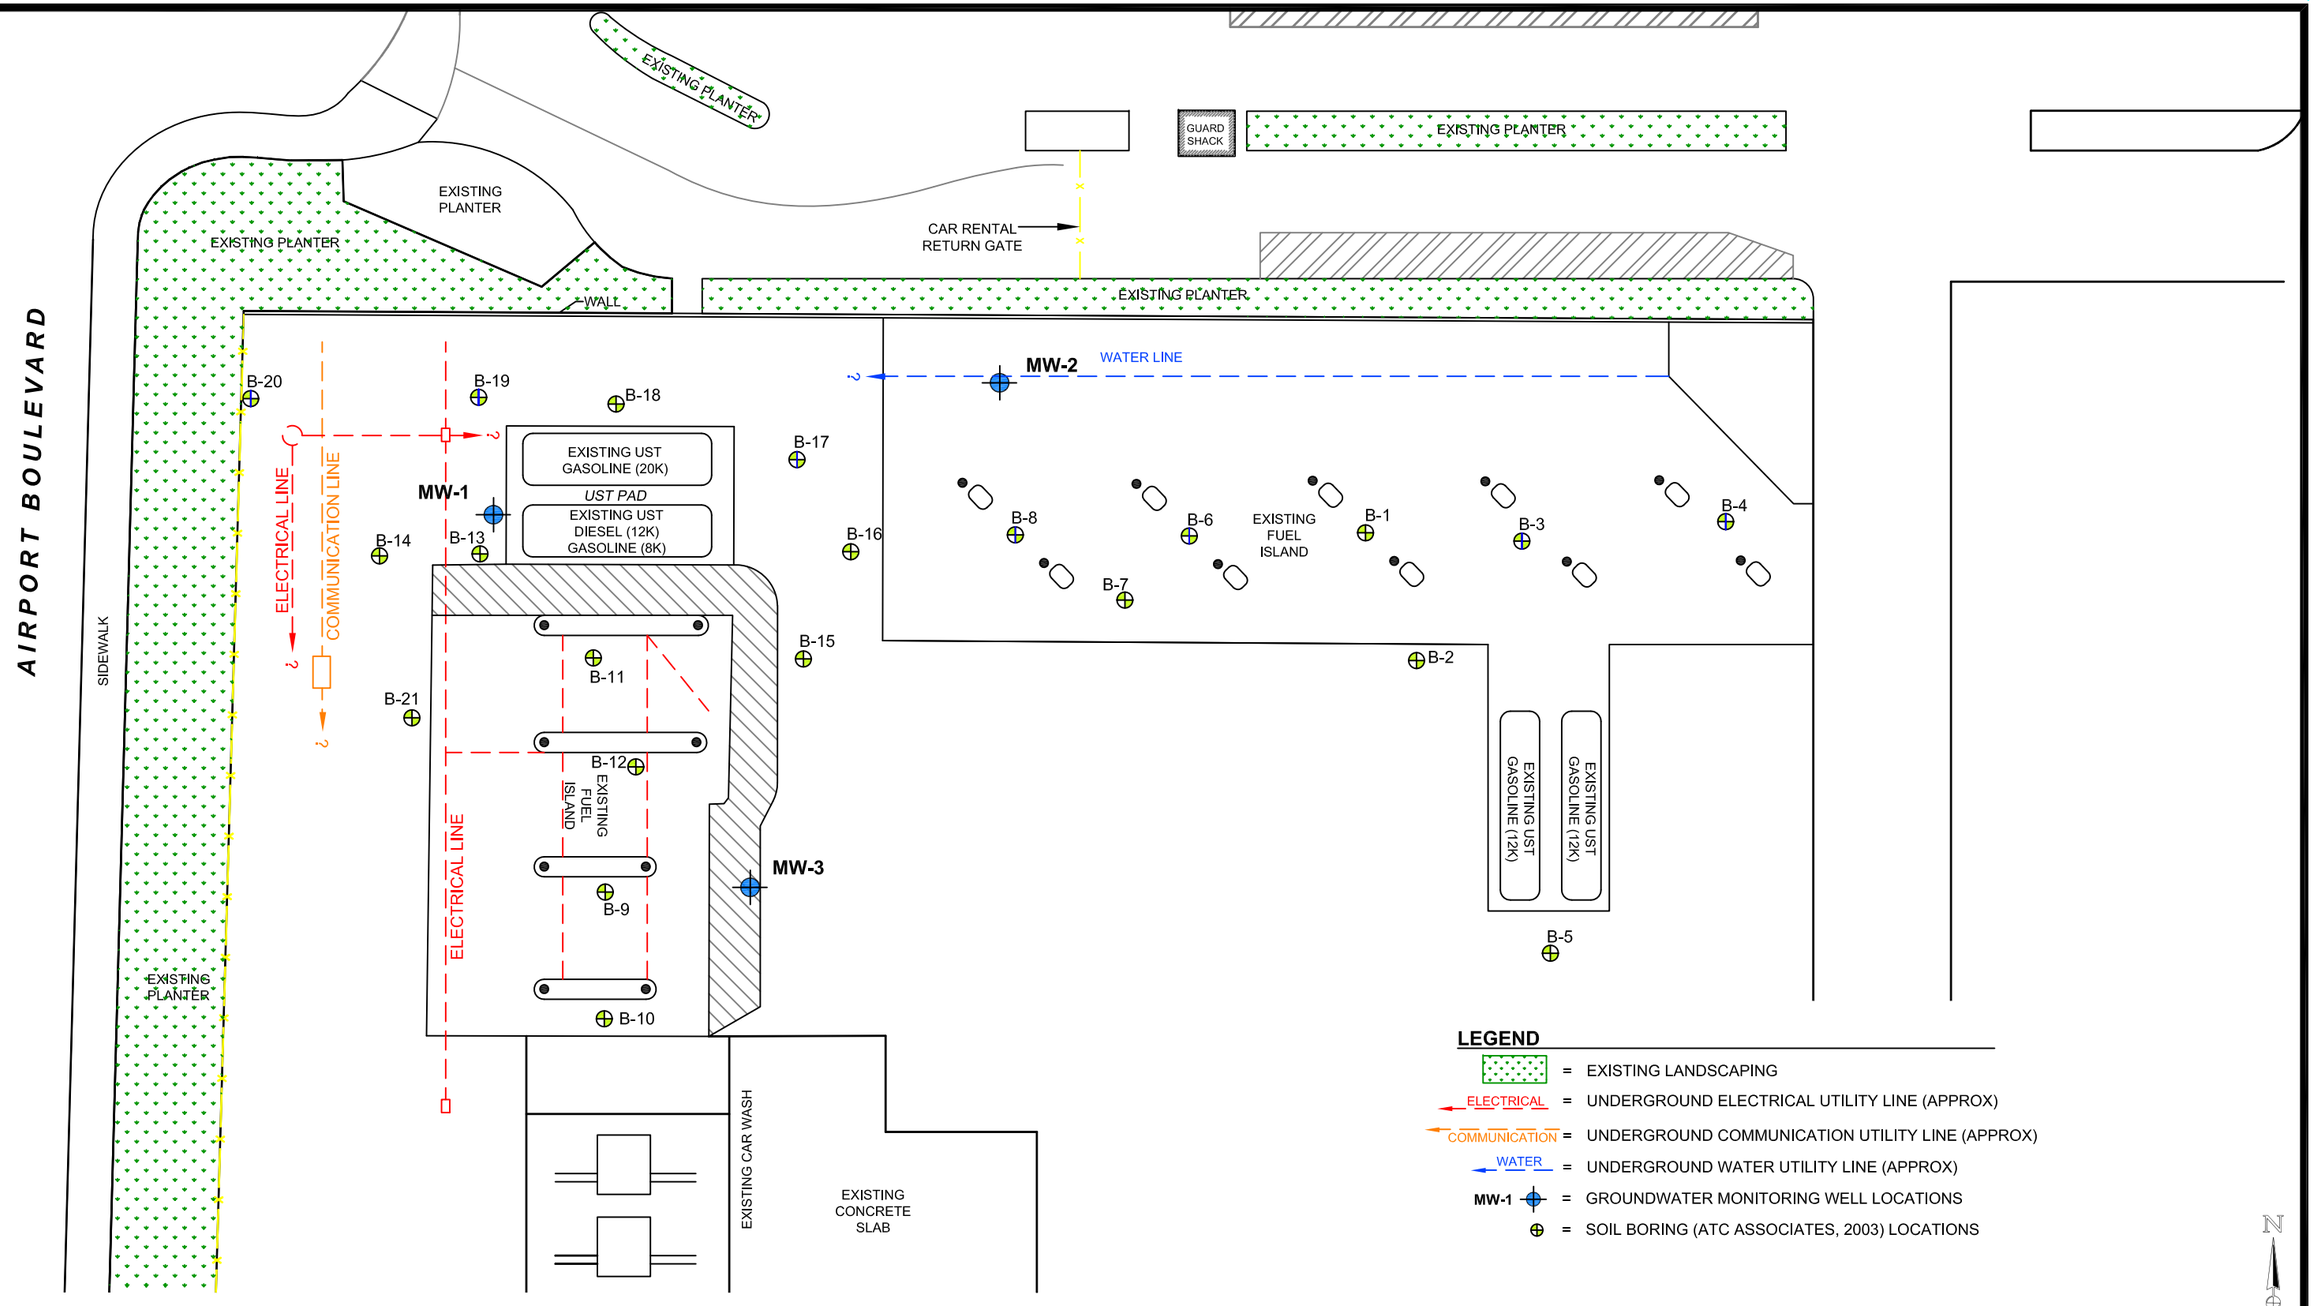
2. All reports submitted to this office must conform to the "Guidelines for Report Submittals," (June 1993) published by the Los Angeles County Department of Public Works.

3. Pursuant to State Water Resources Control Board Resolution No. 92-49, under Water Code Section 13304, all fieldwork related to subsurface investigation including well installation must be conducted by, or under the direct responsible supervision of, a licensed California Professional Geologist (PG) or Civil Engineer (PE). All technical documents submitted to this Regional Board must be reviewed and signed and/or stamped by a licensed California PG or PE with preferably five years subsurface hydrogeologic experience.

4. Soil and groundwater samples must be analyzed by Cal-LUFT GC/FID or Cal-LUFT GC/MS Method for total petroleum hydrocarbons as gasoline (TPH_G), and by EPA Method 8260B for BTEX, and fuel oxygenate compounds including methyl tertiary butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), and tertiary butyl alcohol (TBA). Ethanol is also required and shall be analyzed by either method above. The analytical detection limits must conform to the Regional Board General Laboratory Testing Requirements (9/06) (http://www.waterboards.ca.gov/losangeles/publications_forms/forms/ust/lab_forms/labreq9-06.pdf). All respective analytical methods must be certified by the California Environmental Laboratory Accreditation Program (ELAP). All analytical data must be reported by a California-certified laboratory. Prior to consideration of case closure, responsible party must analyze at least one round of groundwater samples including all common aromatic and chlorinated volatile organic compounds per EPA Method 8260B. If the site has a waste oil tank, the full suite of aromatic and chlorinated analytes must also be tested and reported per EPA Method 8260B.

5. The existing groundwater monitoring well must be sampled quarterly and incorporated into the groundwater monitoring program. You are required to implement a quarterly groundwater monitoring program. All the groundwater monitoring wells must be sampled quarterly according to the following groundwater monitoring schedule:

Reporting Period	Report Due Date
January-March	April 15
April-June	July 15
July-September	October 15
October-December	January 15



The First Quarter 2009 Groundwater Monitoring Report is due by **April 15, 2009**. The Workplan for additional groundwater investigation is due by **May 15, 2009**.

If you have any questions, please contact me at (213) 576-6711 or send me an email at jhuang@waterboards.ca.gov.

Sincerely,

Jay C. Huang, P.G., C.E.G.

Statement of Compliance [Pursuant to Rule 461 (e)(3)(E)]

The undersigned declares, under penalty of perjury under the laws of the state of California that the above checked tests were conducted at the location identified above, the attached data form(s) include all data obtained during the test(s) which show the system or component meets the required standards, and that the information provided in this submittal are true, accurate, and complete.

SIGNATURE OF TESTER: Robbie Bramhall DATE: 4/27/2022

Instructions: This form must be signed and submitted along with completed specific test data forms and **all** raw data obtained during the test(s).

Rule 461 Vapor Recovery System Test Results Summary

Your gasoline dispensing facility (GDF) has **passed** one or more of the following California Air Resources Board (**CARB**) performance tests on your gasoline vapor recovery system :

☐	**TP-201.3**	**Static Pressure Performance (Leak Decay) Test**	☑	**TP-201.1B**	**Static Torque of Rotatable Phase I Adaptors**
☑	**TP-201.3C**	**Piping Connections to UST's (Tie-Tank Test)**	☐	**TP-201.1C**	**Leak Rate Of Drop Tube/Drain Valve Assembly**
☐	**TP-201.4**	**Dynamic Back Pressure Test**	☑	**TP-201.1D**	**Leak Rate Of Drop Tube Overfill Prevention Device and Drain Valve**
☐	**TP-201.5**	**Air to Liquid Ratio Test**	☑	**TP-201.1E**	**Leak Rate and Cracking Pressure Of Pressure/Vacuum Vent Valves**
☐	**TP-201.6C**	**Liquid Removal Rate Test**	☐	**Other**	

Your GDF has **failed** to pass one or more of the following required CARB performance tests on your gasoline vapor recovery system :

☐	**TP-201.3**	**Static Pressure Performance (Leak Decay) Test**	☐	**TP-201.1B**	**Static Torque of Rotatable Phase I Adaptors**
☐	**TP-201.3C**	**Piping Connections to UST's (Tie-Tank Test)**	☐	**TP-201.1C**	**Leak Rate Of Drop Tube/Drain Valve Assembly**
☐	**TP-201.4**	**Dynamic Back Pressure Test**	☐	**TP-201.1D**	**Leak Rate Of Drop Tube Overfill Prevention Device and Drain Valve**
☐	**TP-201.5**	**Air to Liquid Ratio Test**	☐	**TP-201.1E**	**Leak Rate and Cracking Pressure Of Pressure/Vacuum Vent Valves**
☐	**TP-201.6C**	**Liquid Removal Rate Test**	☐	**Other**	

Rule 461 (e)(5) states that the owner/operator shall not operate or resume operation of a gasoline transfer and dispensing facility, unless the facility has successfully passed the applicable performance and reverification tests.

Continued operation of your GDF without passing tests is a violation of South Coast AQMD regulations and California Health and Safety Code. You may be subject to substantial financial and other legal penalties.

Notwithstanding the above, when a dispenser associated with any equipment that fails a reverification test, it must be isolated and shut down. The owner/operator may continue operation of the remaining equipment if the test results demonstrate that the remaining equipment is functioning in good operating condition. All test results and the method of isolating the defective equipment shall be documented in the test reports to be submitted to the Executive Officer pursuant to subparagraph (e)(7)(C), and also maintained/logged in the O & M manual on site.

You may seek administrative relief from the regulations through the South Coast AQMD Hearing Board. **Be aware that filing a petition for relief does not authorize you to dispense gasoline;** you must wait until the Hearing Board reviews your case. Information concerning the Hearing Board can be obtained by calling the Clerk of the Board at 909 396-2500 from 7:30 A.M. to 5:30 P.M., Tuesday through Friday.

Rule 461 Vapor Recovery System Test Results Summary

Your gasoline dispensing facility (GDF) has **passed** one or more of the following California Air Resources Board (**CARB**) performance tests on your gasoline vapor recovery system :

☐	**TP-201.3**	**Static Pressure Performance (Leak Decay) Test**	☑	**TP-201.1B**	**Static Torque of Rotatable Phase I Adaptors**
☑	**TP-201.3C**	**Piping Connections to UST's (Tie-Tank Test)**	☐	**TP-201.1C**	**Leak Rate Of Drop Tube/Drain Valve Assembly**
☐	**TP-201.4**	**Dynamic Back Pressure Test**	☑	**TP-201.1D**	**Leak Rate Of Drop Tube Overfill Prevention Device and Drain Valve**
☐	**TP-201.5**	**Air to Liquid Ratio Test**	☑	**TP-201.1E**	**Leak Rate and Cracking Pressure Of Pressure/Vacuum Vent Valves**
☐	**TP-201.6C**	**Liquid Removal Rate Test**	☐	**Other**	

Your GDF has **failed** to pass one or more of the following required CARB performance tests on your gasoline vapor recovery system :

☐	**TP-201.3**	**Static Pressure Performance (Leak Decay) Test**	☐	**TP-201.1B**	**Static Torque of Rotatable Phase I Adaptors**
☐	**TP-201.3C**	**Piping Connections to UST's (Tie-Tank Test)**	☐	**TP-201.1C**	**Leak Rate Of Drop Tube/Drain Valve Assembly**
☐	**TP-201.4**	**Dynamic Back Pressure Test**	☐	**TP-201.1D**	**Leak Rate Of Drop Tube Overfill Prevention Device and Drain Valve**
☐	**TP-201.5**	**Air to Liquid Ratio Test**	☐	**TP-201.1E**	**Leak Rate and Cracking Pressure Of Pressure/Vacuum Vent Valves**
☐	**TP-201.6C**	**Liquid Removal Rate Test**	☐	**Other**	

Rule 461 (e)(5) states that the owner/operator shall not operate or resume operation of a gasoline transfer and dispensing facility, unless the facility has successfully passed the applicable performance and reverification tests.

Continued operation of your GDF without passing tests is a violation of South Coast AQMD regulations and California Health and Safety Code. You may be subject to substantial financial and other legal penalties.

Notwithstanding the above, when a dispenser associated with any equipment that fails a reverification test, it must be isolated and shut down. The owner/operator may continue operation of the remaining equipment if the test results demonstrate that the remaining equipment is functioning in good operating condition. All test results and the method of isolating the defective equipment shall be documented in the test reports to be submitted to the Executive Officer pursuant to subparagraph (e)(7)(C), and also maintained/logged in the O & M manual on site.

You may seek administrative relief from the regulations through the South Coast AQMD Hearing Board. **Be aware that filing a petition for relief does not authorize you to dispense gasoline;** you must wait until the Hearing Board reviews your case. Information concerning the Hearing Board can be obtained by calling the Clerk of the Board at 909 396-2500 from 7:30 A.M. to 5:30 P.M., Tuesday through Friday.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

UST Monitoring Site Plan

Site Address: Hertz 1101-15 RAC LAX ~ 9000 Airport Blvd, Los Angeles, CA 90045

Date map was revised: 07/19/22

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locationsof the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps,dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

8. COMMENTS

Describe all answers marked "Other," "No," or "Fail" and each proposed remedy.

* Mark here if:

☐ Spill containers do not have a minimum capacity of five gallons and require replacement.

Additional copies of this page may be attached.

ing requirements stated in this recommended practice are general statements and may vary. Recommended pressure levels and test durations are addressed in Section 5.7. Piping manufacturers' test procedures may differ.

This test can be conducted in sections or as one continuous pipe depending on the installation. Care should be taken to ensure that the entire secondary containment of the piping system is tested.

5.6 Test Equipment. Test equipment shall include:

- inert gas source (nitrogen, helium, etc.);
- stopwatch or other time-measurement device capable of measuring a 1-second increment;
- test tubing assemblies (Tubing assemblies provide access to the beginning and end of the interstitial space.);
- pressure gauge with a 15 psig maximum pressure reading with 0.5 increments.

5.7 Test Procedure.

1. If necessary, re-install termination (test) boots at piping terminations.
2. If necessary, connect the tubing assemblies to the secondary containment termination fitting on each end of the section of piping to be tested.
3. Connect the inert gas source and pressure gauge.
4. Gradually pressurize the interstitial space to 5 psig. Close the valve and allow the pressure to stabilize. Repressurize to the specified test pressure if necessary.
5. Observe the pressure for a period of 1 hour.
6. If the piping pressure after 1 hour is less than the test pressure, check termination fittings and test assemblies for leaks.
7. Release the pressure on the system slowly.
8. Remove the test equipment.
9. Restore the piping to its normal operating condition.

5.8 Pass/Fail Criteria. If no pressure change occurs during the test period, the piping system passes the secondary containment integrity test.

If there is any drop in pressure over the test period, the piping fails the secondary containment integrity test. If there is any increase in pressure over the test period, repeat the test.

6. SPILL BUCKET AND CONTAINMENT SUMP TESTING

6.1 General. Spill buckets and containment sumps for tank systems are neither intended nor designed for the storage of petroleum products, but rather to contain small leaks and spills for short periods of time. This section describes the procedures used to test the integrity of spill buckets and containment sumps to ensure that they do not leak.

6.2 Spill Bucket Integrity Testing — Hydrostatic Test Method.

WARNING: Do not use fuels such as gasoline, E85 or diesel as a test fluid because they present a serious fire and safety hazard. Gasoline vapors are flammable and can explode if exposed to an ignition source such as a spark or open flame. If a tank or containment area is not tight, using fuel as the test fluid will cause a release into the soil or groundwater.

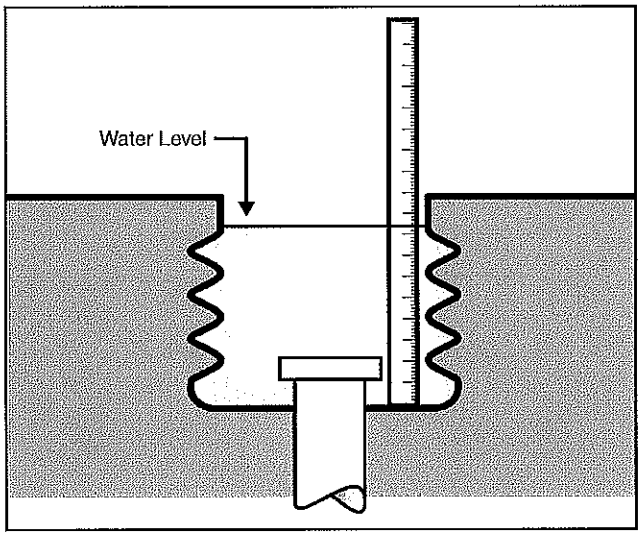

FIGURE 6-1. *The hydrostatic method of determining spill bucket integrity uses water to detect leaks. The measuring stick must be placed in the same location at the beginning and end of the test period to ensure accurate water level readings.*

6.2.1 Purpose. This method is used to test the integrity of single-walled spill buckets or the primary containment of secondarily contained spill buckets.

6.2.2 Description of Test. The spill bucket is filled with water. The water level is measured at the beginning and end of the test.

6.2.3 Test Equipment. Test equipment shall include:

- water;
- measuring stick that is accurate to within 1/16 (0.063) inch and of sufficient length;
- plumber's plug (appropriate size, if used);
- stopwatch or other time-measurement device capable of measuring a 1-second increment.

6.2.4 Preparation.

1. Care should be taken when conducting the test in the rain or during freezing weather conditions.
2. Remove and properly dispose of any liquid and debris (leaves, sediment and trash) in the spill bucket. Clean the spill bucket and examine it for damage, defects or improperly installed components. If there are loose components (e.g., loose band clamps or bolts), tighten these items before conducting the integrity test. If there are items that must be repaired or replaced (e.g., deteriorated gaskets/seals or drain valves), notify the owner/operator.
3. Examine the fill cap and adapter fitting for loose, missing or damaged parts, and make necessary repairs. Complete any repairs before putting water in the spill bucket. Make sure that the seal on the fill cap is present and in good condition. The cap must fit securely and be leak-tight on the riser. The water level during the test typically will be above the cap, so a leaking cap will result in a failed test. As an alternative to a tight fill cap, use a plumber's plug in the fill riser if approved by the authority having jurisdiction (AHJ) and tank owner.
4. The spill-bucket drain valve, if present, must be leak-tight to pass the test. If it is not leak-tight, it may be possible to simply remove and permanently plug the drain valve. However, if you choose to permanently plug, ensure that the local regulations allow this modification.
5. If the spill bucket is found to have cracks, loose parts or separation of the bucket from the fill pipe, it is not considered to be liquid-tight. This visually indicates a test failure.

NOTE: If the fill cap is not included in the spill bucket test and/or the cap is not tight, it could be the source of potential fuel contamination from water intrusion.

NOTE: Before permanently plugging, ensure that local regulations allow the drain valve to be permanently plugged.

6.2.5 Test Procedure.

1. Add water to the spill bucket to a level within 1.5 inches of the top of the spill bucket. Allow the water to settle for 5 minutes before the initial water level measurement is taken.
2. Place the measuring stick vertically at the lowest point in the spill bucket and extending above the water level to allow for an accurate measurement to be taken. The location of the measuring stick must remain the same for each water level measurement. Document the initial water level measurement as measured from the bottom of the spill bucket. Alternative measurement methods may be used provided that measurement to 1/16 (0.063) inch can be made.
3. Take all precautions to prevent the water level from being disturbed during the duration of the test.
4. After 1 hour, document the ending water level measurement.
5. Upon completion of the test, remove and dispose of the water according to Section 6.7, and dry the inside of the spill bucket before returning it to service.

6.2.6 Pass/Fail Criteria. If the water level has dropped less than 1/8 (0.125) inch, the spill bucket passes the integrity test.

If the water level has dropped 1/8 (0.125) inch or greater, the spill bucket fails the integrity test.

6.3 Spill Bucket Integrity Testing — Vacuum Test Method.

6.3.1 Purpose. This method is used to test the integrity of single-walled spill buckets or the pri-

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

UST Monitoring Site Plan

Site Address: Hertz 1101-15 RAC LAX ~ 9000 Airport Blvd, Los Angeles, CA 90045

Date map was revised: 07/19/22

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locationsof the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps,dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Underground Storage Tank
Monitoring System Certification Form

5. MONITORING SYSTEM AND PROGRAMMING		
A separate Monitoring System Certification Form must be prepared for each control panel.		
Make of Monitoring System Control Panel Veeder-Root	Model of Monitoring System Control Panel TLS-350	Software Version Installed 134.00

Attach the post-certification reports if the monitoring system is capable of generating either; ☑Monitoring System Set-up ☑ Alarm History Report	Yes	No	NA
All monitoring equipment is operational per manufacturer's specifications?	☑	☐	
Secondary containment systems are free of damage, debris, or liquid?	☑	☐	
Are the audible and visual alarms operational?	☑	☐	
All sensors have been: 1) visually inspected for wiring kinks, breaks and residual buildup on floats; and 2) tested for functionality and confirmed operational?	☐	☐	☑
Are all sensors installed to detect a release at the earliest opportunity in the secondary containment?	☐	☐	☑
The monitoring system set-up was reviewed, and proper settings confirmed?	☑	☐	☐
Was the monitoring control panel's backup battery visually inspected, functionally tested, and confirmed operational?	☑	☐	☐
Does the flow of fuel stop at the dispenser if a release is detected in the under-dispenser containment?	☐	☐	☑
Does the turbine automatically shut down if the piping secondary containment monitoring system fails to operate or is electrically disconnected?	☐	☐	☑
Does the turbine automatically shut down if the piping secondary containment monitoring system detects a release? Which sensors initiate positive shut down? (Check all that apply) ☐ Sump ☐ UDC	☐	☐	☑
If monitoring system alarms are relayed to a remote monitoring center, is all communication equipment operational?	☐	☐	☑

*Describe all answers marked "No" or "Fail" and proposed remedy in **Section 9**.*
*List all monitoring equipment either replaced or repaired in **Section 9***

6. SENSOR TESTING RESULTS

*List only sensors tested on date of this certification. List "**Sensor ID**" as labeled in system programming. Additional copies of this page may be attached to accommodate all sensors tested.*

8. COMMENTS

Describe all answers marked "Other," "No," or "Fail" and each proposed remedy.

* Mark here if:

☐ Spill containers do not have a minimum capacity of five gallons and require replacement.

Additional copies of this page may be attached.

ing requirements stated in this recommended practice are general statements and may vary. Recommended pressure levels and test durations are addressed in Section 5.7. Piping manufacturers' test procedures may differ.

This test can be conducted in sections or as one continuous pipe depending on the installation. Care should be taken to ensure that the entire secondary containment of the piping system is tested.

5.6 Test Equipment. Test equipment shall include:

- inert gas source (nitrogen, helium, etc.);
- stopwatch or other time-measurement device capable of measuring a 1-second increment;
- test tubing assemblies (Tubing assemblies provide access to the beginning and end of the interstitial space.);
- pressure gauge with a 15 psig maximum pressure reading with 0.5 increments.

5.7 Test Procedure.

1. If necessary, re-install termination (test) boots at piping terminations.
2. If necessary, connect the tubing assemblies to the secondary containment termination fitting on each end of the section of piping to be tested.
3. Connect the inert gas source and pressure gauge.
4. Gradually pressurize the interstitial space to 5 psig. Close the valve and allow the pressure to stabilize. Repressurize to the specified test pressure if necessary.
5. Observe the pressure for a period of 1 hour.
6. If the piping pressure after 1 hour is less than the test pressure, check termination fittings and test assemblies for leaks.
7. Release the pressure on the system slowly.
8. Remove the test equipment.
9. Restore the piping to its normal operating condition.

5.8 Pass/Fail Criteria. If no pressure change occurs during the test period, the piping system passes the secondary containment integrity test.

If there is any drop in pressure over the test period, the piping fails the secondary containment integrity test. If there is any increase in pressure over the test period, repeat the test.

6. SPILL BUCKET AND CONTAINMENT SUMP TESTING

6.1 General. Spill buckets and containment sumps for tank systems are neither intended nor designed for the storage of petroleum products, but rather to contain small leaks and spills for short periods of time. This section describes the procedures used to test the integrity of spill buckets and containment sumps to ensure that they do not leak.

6.2 Spill Bucket Integrity Testing — Hydrostatic Test Method.

WARNING: Do not use fuels such as gasoline, E85 or diesel as a test fluid because they present a serious fire and safety hazard. Gasoline vapors are flammable and can explode if exposed to an ignition source such as a spark or open flame. If a tank or containment area is not tight, using fuel as the test fluid will cause a release into the soil or groundwater.

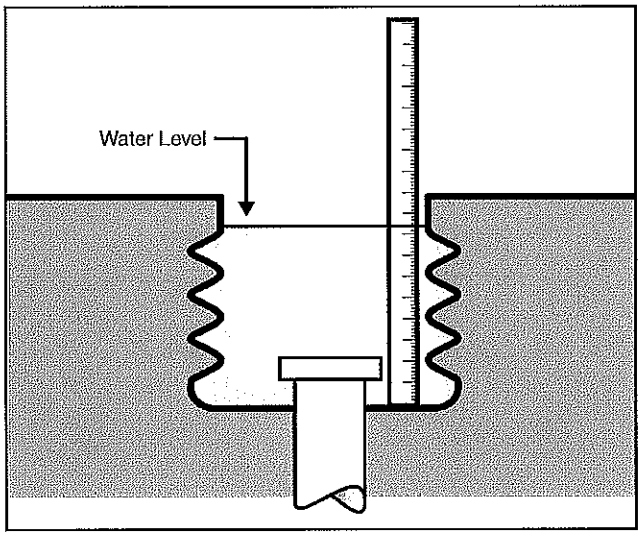

FIGURE 6-1. *The hydrostatic method of determining spill bucket integrity uses water to detect leaks. The measuring stick must be placed in the same location at the beginning and end of the test period to ensure accurate water level readings.*

6.2.1 Purpose. This method is used to test the integrity of single-walled spill buckets or the primary containment of secondarily contained spill buckets.

6.2.2 Description of Test. The spill bucket is filled with water. The water level is measured at the beginning and end of the test.

6.2.3 Test Equipment. Test equipment shall include:

- water;
- measuring stick that is accurate to within 1/16 (0.063) inch and of sufficient length;
- plumber's plug (appropriate size, if used);
- stopwatch or other time-measurement device capable of measuring a 1-second increment.

6.2.4 Preparation.

1. Care should be taken when conducting the test in the rain or during freezing weather conditions.
2. Remove and properly dispose of any liquid and debris (leaves, sediment and trash) in the spill bucket. Clean the spill bucket and examine it for damage, defects or improperly installed components. If there are loose components (e.g., loose band clamps or bolts), tighten these items before conducting the integrity test. If there are items that must be repaired or replaced (e.g., deteriorated gaskets/seals or drain valves), notify the owner/operator.
3. Examine the fill cap and adapter fitting for loose, missing or damaged parts, and make necessary repairs. Complete any repairs before putting water in the spill bucket. Make sure that the seal on the fill cap is present and in good condition. The cap must fit securely and be leak-tight on the riser. The water level during the test typically will be above the cap, so a leaking cap will result in a failed test. As an alternative to a tight fill cap, use a plumber's plug in the fill riser if approved by the authority having jurisdiction (AHJ) and tank owner.
4. The spill-bucket drain valve, if present, must be leak-tight to pass the test. If it is not leak-tight, it may be possible to simply remove and permanently plug the drain valve. However, if you choose to permanently plug, ensure that the local regulations allow this modification.
5. If the spill bucket is found to have cracks, loose parts or separation of the bucket from the fill pipe, it is not considered to be liquid-tight. This visually indicates a test failure.

NOTE: If the fill cap is not included in the spill bucket test and/or the cap is not tight, it could be the source of potential fuel contamination from water intrusion.

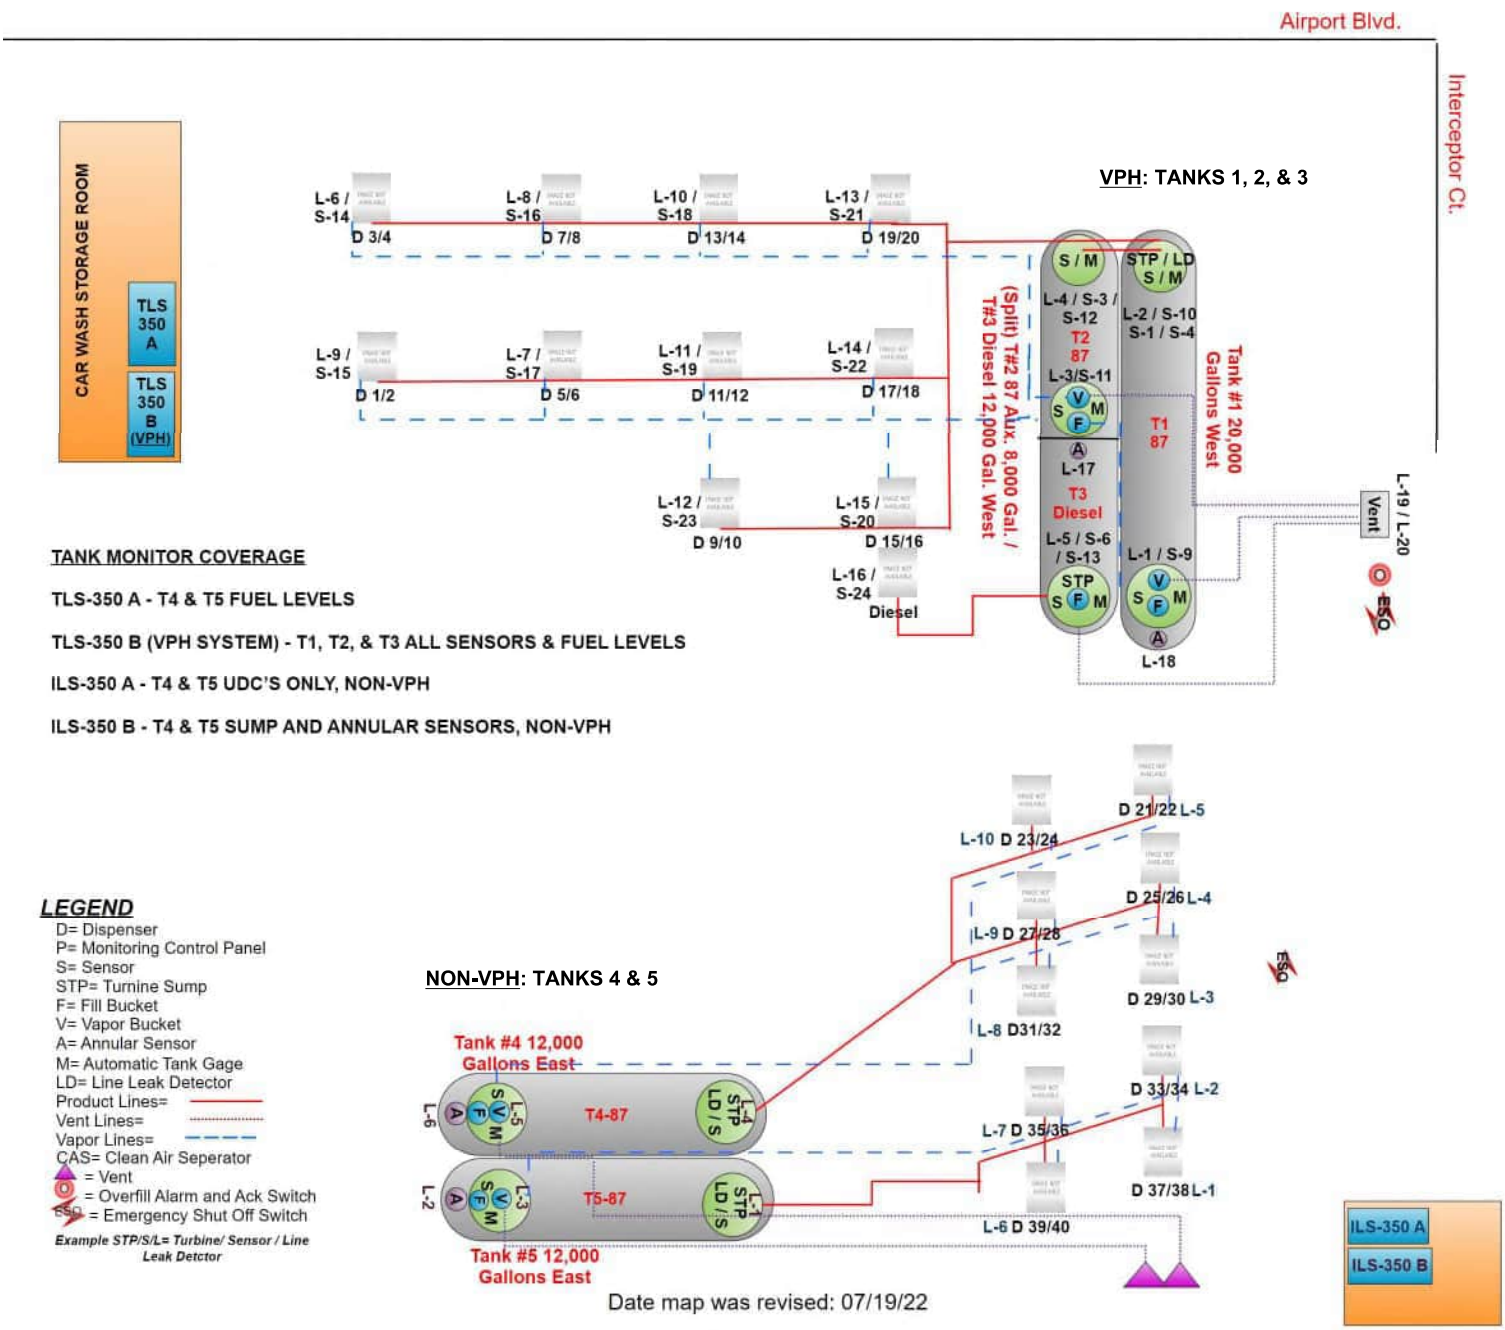
NOTE: Before permanently plugging, ensure that local regulations allow the drain valve to be permanently plugged.

6.2.5 Test Procedure.

1. Add water to the spill bucket to a level within 1.5 inches of the top of the spill bucket. Allow the water to settle for 5 minutes before the initial water level measurement is taken.
2. Place the measuring stick vertically at the lowest point in the spill bucket and extending above the water level to allow for an accurate measurement to be taken. The location of the measuring stick must remain the same for each water level measurement. Document the initial water level measurement as measured from the bottom of the spill bucket. Alternative measurement methods may be used provided that measurement to 1/16 (0.063) inch can be made.
3. Take all precautions to prevent the water level from being disturbed during the duration of the test.
4. After 1 hour, document the ending water level measurement.
5. Upon completion of the test, remove and dispose of the water according to Section 6.7, and dry the inside of the spill bucket before returning it to service.

6.2.6 Pass/Fail Criteria. If the water level has dropped less than 1/8 (0.125) inch, the spill bucket passes the integrity test.

If the water level has dropped 1/8 (0.125) inch or greater, the spill bucket fails the integrity test.



6.3 Spill Bucket Integrity Testing — Vacuum Test Method.

6.3.1 Purpose. This method is used to test the integrity of single-walled spill buckets or the pri-

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

UST Monitoring Site Plan

Site Address: Hertz 1101-15 RAC LAX ~ 9000 Airport Blvd, Los Angeles, CA 90045

Date map was revised: 07/19/22

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locationsof the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps,dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	**Yes**

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	**Yes**

Hazardous Waste

Is your facility a Hazardous Waste Generator?	**Yes**
Does your facility treat hazardous waste on-site?	**No**
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	**No**
Does your facility consolidate hazardous waste generated at a remote site?	**No**
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	**No**
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month greater than 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	**No**
Is your facility a Household Hazardous Waste (HHW) Collection site?	**No**

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	**No**
Does your facility own or operate ASTs above these thresholds? Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers.	**Yes**
Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	**No**

Additional Information

No additional comments provided.

TYPE OF BUSINESS (e.g., Painting Contractor) A8.	INCIDENTAL OPERATIONS (e.g., Fleet Maintenance) A9.
Vehicle Rental	Fleet Maintenance, Fueling

THIS PLAN COVERS CHEMICAL SPILLS, FIRES, AND EARTHQUAKES INVOLVING (Check all that apply): A10.

☒ 1. HAZARDOUS MATERIALS; ☒ 2. HAZARDOUS WASTES

B. INTERNAL RESPONSE

INTERNAL FACILITY EMERGENCY RESPONSE WILL OCCUR BY (Check all that apply): B1.

☒ 1. CALLING PUBLIC EMERGENCY RESPONDERS (e.g., 9-1-1)
☒ 2. CALLING HAZARDOUS WASTE CONTRACTOR
☐ 3. ACTIVATING IN-HOUSE EMERGENCY RESPONSE TEAM

C. EMERGENCY COMMUNICATIONS, PHONE NUMBERS AND NOTIFICATIONS

In the event of an emergency involving hazardous materials and/or hazardous waste, all facilities must IMMEDIATELY:
1. Notify facility personnel and evacuate if necessary in accordance with the Emergency Action Plan (Title 8 California Code of Regulations §3220);
2. Notify local emergency responders by calling 9-1-1;
3. Notify the local Unified Program Agency (UPA) at the phone number below; and
4. Notify the State Warning Center at (800) 852-7550.

Facilities that generate, treat, store or dispose of hazardous waste have additional responsibilities to notify and coordinate with other response agencies. Whenever there is an imminent or actual emergency situation such as an explosion, fire, or release, the Emergency Coordinator must follow the appropriate requirements for the category of facility and type of release involved:
1. Title 22 California Code of Regulations §66265.56. Emergency Procedures for generators of 1,000 kilograms or more of hazardous waste in any calendar month.
2. Title 22 California Code of Regulations §66265.196. Response to Leaks or Spills and Disposition of Leaking or Unfit-for-Use Tank Systems.
3. Title 40 Code of Federal Regulations §302.6. Notification requirements for a release of a hazardous substance equal to or greater than the reportable quantity.
4. Title 22 California Code of Regulations §66262.34(d)(2) and Title 40 Code of Federal Regulations §262.34(d)(5)(ii) for generators of less than 1000 kilograms of hazardous waste in any calendar month.

Following notification and before facility operations are resumed in areas of the facility affected by the incident, the Emergency Coordinator shall notify the local UPA and the local fire department's hazardous materials program, if necessary, that the facility is in compliance with requirements to:
1. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from an explosion, fire, or release at the facility; and
2. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.

EMERGENCY RESPONSE PHONE NUMBERS:		
	AMBULANCE, FIRE, POLICE AND CHP	9-1-1
	CALIFORNIA STATE WARNING CENTER (CSWC)/CAL OES.	(800) 852-7550
	NATIONAL RESPONSE CENTER (NRC)	(800) 424-8802
	POISON CONTROL CENTER	(800) 222-1222
	LOCAL UNIFIED PROGRAM AGENCY (UPA)	2139783680 C1.
	OTHER (Specify): C2.	C3.

NEAREST MEDICAL FACILITY / HOSPITAL NAME: Reliant Medical Center C4. 3106734660 C5.

AGENCY NOTIFICATION PHONE NUMBERS:		
	CALIFORNIA DEPT. OF TOXIC SUBSTANCES CONTROL (DTSC)	(916) 255-3545
	REGIONAL WATER QUALITY CONTROL BOARD (RWQCB).	2135766600 C6.
	U.S. ENVIRONMENTAL PROTECTION AGENCY (US EPA)	(800) 300-2193
	CALIFORNIA DEPT. OF FISH AND WILDLIFE (CDFW)	(916) 358-2900
	U.S. COAST GUARD (USCG)	(202) 267-2180
	CAL OSHA	(916) 263-2800
	CAL FIRE OFFICE OF THE STATE FIRE MARSHAL (OSFM)	(916) 323-7390
	OTHER (Specify): C7.	C8.
	OTHER (Specify): C9.	C10.

INTERNAL FACILITY EMERGENCY COMMUNICATIONS OR ALARM NOTIFICATION WILL OCCUR BY (Check all that apply): C11.

- ☑ 1. VERBAL WARNINGS;
- ☑ 2. PUBLIC ADDRESS OR INTERCOM SYSTEM;
- ☑ 3. TELEPHONE;
- ☐ 4. PAGERS;
- ☑ 5. ALARM SYSTEM;
- ☐ 6. PORTABLE RADIO

NOTIFICATIONS TO NEIGHBORING FACILITIES THAT MAY BE AFFECTED BY AN OFF-SITE RELEASE WILL OCCUR BY (Check all that apply): C12.

- ☑ 1. VERBAL WARNINGS;
- ☐ 2. PUBLIC ADDRESS OR INTERCOM SYSTEM;
- ☑ 3. TELEPHONE;
- ☐ 4. PAGERS;
- ☐ 5. ALARM SYSTEM;
- ☐ 6. PORTABLE RADIO

EMERGENCY COORDINATOR CONTACT INFORMATION: C13.

PRIMARY EMERGENCY COORDINATOR NAME: Karen Karapetyan PHONE NO.: 3105685157 PHONE NO.: 5104096094

ALTERNATE EMERGENCY COORDINATOR NAME: Dennis Robbins PHONE NO.: 3103415745 PHONE NO.: 3105683434

☐ Check if additional Emergency Coordinator contact and address information is available onsite or by calling PHONE NO.:

Note: If more than one alternate emergency coordinator is designated, attach a list in order of responsibility.

D. EMERGENCY CONTAINMENT AND CLEANUP PROCEDURES

Check the applicable boxes to indicate your facility's procedures for containing spills and preventing and mitigating releases, fires and/or explosions.

D1.

- ☑ 1. MONITOR FOR LEAKS, RUPTURES, PRESSURE BUILD-UP, ETC.;
- ☐ 2. PROVIDE STRUCTURAL PHYSICAL BARRIERS (e.g., Portable spill containment walls, built-in berms);
- ☑ 3. PROVIDE ABSORBENT PHYSICAL BARRIERS (e.g., Pads, spill pigs, spill pillows);
- ☑ 4. COVER OR BLOCK FLOOR AND/OR STORM DRAINS;
- ☐ 5. LINED TRENCH DRAINS AND/OR SUMPS;
- ☑ 6. AUTOMATIC FIRE SUPPRESSION SYSTEM;
- ☑ 7. ELIMINATE SOURCES OF IGNITION FOR FLAMMABLE HAZARDS;
- ☑ 8. STOP PROCESSES AND/OR OPERATIONS;
- ☑ 9. AUTOMATIC / ELECTRONIC EQUIPMENT SHUT-OFF SYSTEM;
- ☑ 10. SHUT OFF WATER, GAS, ELECTRICAL UTILITIES;
- ☑ 11. CALL 9-1-1 FOR PUBLIC EMERGENCY RESPONDER ASSISTANCE AND/OR MEDICAL AID;
- ☑ 12. NOTIFY AND EVACUATE PERSONS IN ALL THREATENED AND/OR IMPACTED AREAS;
- ☑ 13. ACCOUNT FOR EVACUATED PERSONS IMMEDIATELY AFTER EVACUATION;
- ☑ 14. PROVIDE PROTECTIVE EQUIPMENT FOR ON-SITE EMERGENCY RESPONSE TEAM;
- ☑ 15. REMOVE CONTAINERS AND/OR ISOLATE AREAS;
- ☑ 16. HIRE LICENSED HAZARDOUS WASTE CONTRACTOR;
- ☑ 17. USE ABSORBENT MATERIAL FOR SPILL CONTAINMENT;
- ☐ 18. VACUUM SUCTION USING APPROPRIATE VACUUM (e.g., Intrinsically safe) FOR SPILL CONTROL AND/OR CLEANUP;
- ☐ 19. DECONTAMINATE PERSONNEL AND EQUIPMENT WITHIN DESIGNATED AREA AND DISPOSE OF WASTEWATER AS HAZARDOUS WASTE;
- ☑ 20. PROVIDE SAFE TEMPORARY STORAGE OF HAZARDOUS WASTE GENERATED DURING EMERGENCY ACTIONS;
- ☐ 21. OTHER (Specify): D2.

E. FACILITY EVACUATION

THE FOLLOWING ALARM SIGNAL(S) WILL BE USED TO BEGIN EVACUATION OF THE FACILITY (Check all that apply): E1.

E2.

- ☐ 1. BELLS;
- ☐ 2. HORNS/SIRENS;
- ☑ 3. VERBAL (i.e., Shouting);
- ☑ 4. OTHER (Specify): Intercom/PA System; telephones

THE FOLLOWING LOCATION(S) WILL BE USED FOR AN EMERGENCY ASSEMBLY AREA(S) (e.g., Parking lot, street corner): E3.

Southwest property corner

Note: The Emergency Coordinator must account for all onsite employees and visitors after evacuation.

EVACUATION ROUTE S AND ALTERNATE EVACUATION ROUTES ARE DESCRIBED AS FOLLOWS: E4.

- ☐ 1. WRITTEN PROCEDURES DESCRIBING ROUTES, EXITS, AND ASSEMBLY AREAS;
- ☑ 2. EVACUATION MAP(S) DEPICTING ROUTES, EXITS, AND ASSEMBLY AREAS;
- ☐ 3. OTHER (Specify): E5.

Note: Evacuation procedures and/or maps should be posted in visible facility locations and must be included in the Contingency Plan.

F. ARRANGEMENTS FOR EMERGENCY SERVICES

ADVANCE ARRANGEMENTS FOR LOCAL EMERGENCY SERVICES (Check one of the following): F1.

- ☑ 1. HAVE BEEN DETERMINED NOT NECESSARY;
- ☐ 2. THE FOLLOWING ARRANGEMENTS HAVE BEEN MADE (Specify): F2.

Note: Advance arrangements with local fire and police departments, hospitals, state and local emergency response teams, and/or emergency services contractors should be made for your facility, if necessary. Large Quantity Generators must describe arrangements in the Contingency Plan.

G. EMERGENCY EQUIPMENT

Check the applicable boxes to list emergency response equipment available at the facility, identify the location(s) where the equipment is kept, and indicate the equipment's capability, if applicable.

TYPE	EQUIPMENT AVAILABLE G1.	LOCATION G2.	CAPABILITY G3.
EXAMPLE	☒ *CHEMICAL PROTECTIVE GLOVES*	*SPILL RESPONSE KIT*	*SINGLE USE, OIL RESISTANT ONLY*
Safety and First Aid	1. ■ CHEMICAL PROTECTIVE SUITS, APRONS, AND/OR VESTS	Spill Kits	
	2. ■ CHEMICAL PROTECTIVE GLOVES	Spill Kits	
	3. ■ CHEMICAL PROTECTIVE BOOTS	Spill Kits	
	4. ■ SAFETY GLASSES, GOGGLES, AND FACE SHIELDS	Spill Kits	
	5. ☐ HARD HATS		
	6. ☐ AIR-PURIFYING RESPIRATORS		
	7. ☐ SELF-CONTAINED BREATHING APPARATUS (SCBA)		
	8. ■ FIRST AID KITS	Throughout buildings	
	9. ■ PLUMBED EYEWASH FOUNTAIN AND/OR SHOWER	Throughout buildings	
	10. ☐ PORTABLE EYEWASH KITS AND/OR STATION		
	11. ☐ OTHER		
Fire Fighting	12. ■ PORTABLE FIRE EXTINGUISHERS	Throughout facility	
	13. ■ FIXED FIRE SUPPRESSION SYSTEMS AND/ OR SPRINKLERS	Throughout buildings	Automatic sprinkler system
	14. ☐ FIRE ALARM BOXES		
	15. ☐ OTHER		
Spill Control and Clean-Up	16. ☐ ALL-IN-ONE SPILL KIT		
	17. ■ ABSORBENT MATERIAL	Spill Kits	
	18. ■ CONTAINER FOR USED ABSORBENT	Fuel Islands / ASTs	
	19. ■ BERM AND/OR DIKING EQUIPMENT	Fuel Islands	
	20. ■ BROOM	Maintenance Shops	
	21. ■ SHOVEL	Maintenance Shops	
	22. ☐ VACUUM		
	23. ☐ EXHAUST HOOD		
	24. ☐ SUMP AND/OR HOLDING TANK		
	25. ☐ CHEMICAL NEUTRALIZERS		
	26. ☐ GAS CYLINDER LEAK REPAIR KIT		
	27. ☐ SPILL OVERPACK DRUMS		
	28. ■ OTHER		Storm drain cover mats
Communi-cations and Alarm Systems	29. ■ TELEPHONES (e.g., Cellular)	Assigned to personnel	
	30. ■ INTERCOM AND/OR PA SYSTEM	Throughout facility	
	31. ☐ PORTABLE RADIOS		
	32. ■ AUTOMATIC ALARM CHEMICAL MONITORING EQUIPMENT	Multiple USTs	Veeder-Root ATGs = gasoline/diesel
Other	33. ☐ OTHER		
	34. ☐ OTHER		

H. EARTHQUAKE VULNERABILITY

Identify areas of the facility that are vulnerable to hazardous materials releases due to seismic motion. These areas require immediate isolation and inspection.

VULNERABLE AREAS (Check all that apply): H1.	LOCATIONS (e.g., Shop, outdoor shed, lab): H2.
☑ 1. HAZARDOUS MATERIALS AND/OR WASTE STORAGE AREAS	ASTs/USTs
☑ 2. PROCESS LINES AND PIPING	UST piping, AST hose reels
☐ 3. LABORATORY	
☐ 4. WASTE TREATMENT AREA	

Identify mechanical systems vulnerable to releases / spills due to earthquake-related motion. These systems require immediate isolation and inspection.

VULNERABLE SYSTEMS AND/OR EQUIPMENT (Check all that apply): H3.	LOCATIONS: H4.
☐ 1. SHELVES, CABINETS AND/OR RACKS	
☑ 2. TANKS AND SHUT-OFF VALVES	ASTs/USTs
☐ 3. PORTABLE GAS CYLINDERS	
☑ 4. EMERGENCY SHUT-OFF AND/OR UTILITY VALVES	electric, water, natural gas
☑ 5. SPRINKLER SYSTEMS	Throughout buildings
☐ 6. STATIONARY PRESSURIZED CONTAINERS (e.g., Propane tank)	

I. EMPLOYEE TRAINING

Employee training is required for all employees and/or contractors handling hazardous materials and/or hazardous wastes during normal and/or emergency operations. Most facilities will need to submit a separate Training Plan. However, your CUPA may accept this section as the Training Plan for some small facilities.
Employee training plans may include the following content:

- Applicable laws and regulations;
- Emergency response plans and procedures;
- Safety Data Sheets;
- Hazard communication related to health and safety;
- Methods for safe handling of hazardous substances;
- Hazards of materials and processes (e.g., fire, explosion, asphyxiation);
- Hazard mitigation, prevention and abatement procedures;
- Coordination of emergency response actions;
- Notification procedures for local emergency responders, CUPA, Cal OES, and onsite personnel;
- Communication and alarm systems;
- Personal protective equipment;
- Use and maintenance of emergency response equipment and supplies (e.g. Fire extinguishers, respirators, spill control materials);
- Decontamination procedures;
- Evacuation procedures and evacuation staging locations;
- Identification of facility areas, equipment, and systems vulnerable to earthquakes and other natural disasters.
- OTHER (Specify):

Check the applicable boxes below to indicate how the employee training program is administered.

☐ 1. FORMAL CLASSROOM ☐ 2. VIDEOS ☐ 3. SAFETY MEETINGS ☐ 4. STUDY GUIDES / MANUALS I1.

☑ 5. OTHER (Specify): Hertz online training program I2.

☐ 6. NOT APPLICABLE SINCE FACILITY HAS NO EMPLOYEES

☐ 7. CHECK IF A SEPARATE EMPLOYEE TRAINING PLAN IS USED AND UPLOADED TO CERS AS A PDF DOCUMENT I3.

☐ 8. CHECK IF EMPLOYEE TRAINING IS COVERED BY THE ABOVE REFERENCED CONTENT AND OTHER DOCUMENTS ONSITE I4.

EMPLOYEE TRAINING FREQUENCY AND RECORDKEEPING TRAINING MUST BE:

- Provided initially for new employees as soon as possible following the date of hire. New employees should not work in an unsupervised position that involves hazardous materials handling and/or hazardous waste management without proper training;
- Provided within six months from the date of hire for new employees at a large quantity generator;
- Ongoing and provided at least annually;
- Amended prior to a change in process or work assignment;
- Given upon modification to the Emergency Response/Contingency Plan.

Large Quantity Generator Training: Large quantity generators (1,000 kg or more) must retain written plan and documentation of employee training which includes:

- A written description of the type and amount of both initial and ongoing training that will be given to persons filling each job position having responsibility for hazardous waste management and/or emergency response.
- The name, job title and job description for each position at the facility related to hazardous waste management.
- Current employee training records must be retained until closure of the facility and former employee training records must be retained for at least three years after termination of employment.

Small Quantity Generator Training: Small quantity generators (less than 1,000 kg) must include basic hazardous waste management and emergency response procedures but a written employee training plan and training records are not required. In order to show that the facility has met the small quantity generator employee training requirement, an employee training plan and training records may be made available.

Hazardous Materials Business Plan Training: Businesses must provide initial and annual employee training that includes the content referenced above. The training may be based on the job position and training records must be made available for a period of at least three years.

J. LIST OF ATTACHMENTS

Check one of the following: J1.

☑ 1. NO ATTACHMENTS ARE REQUIRED; or

☐ 2. THE FOLLOWING DOCUMENTS ARE ATTACHED: J2.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

UST Monitoring Site Plan

Site Address: Hertz 1101-15 RAC LAX ~ 9000 Airport Blvd, Los Angeles, CA 90045

Date map was drawn: 10/4/2011

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locationsof the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps,dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

ATTN: UST Financial Responsibility Coordinator

RE: 2022-2023 Financial Responsibility Submission
Various Hertz & Dollar/Thrifty Locations

Dear Sir or Madam,

Attached, please find the financial surety for April 5, 2022 through April 5, 2023 for underground storage tanks operated in California by The Hertz Corporation, including those operated by our subsidiaries, Hertz Rent-A-Car, Dollar Rent-A-Car and Thrifty Rent-A-Car, as listed below and on the site list included as part of the attached submission.

Anaheim	Downtown Anaheim	221 West Katella Ave
Burbank	Bob Hope Airport	4521 Empire Ave
Burlingame	DOLLAR San Francisco International Airport (South)	1815 Bayshore Hwy
Los Angeles	Los Angeles International Airport	9000 Airport Blvd
Newport Beach	John Wayne-Orange County Airport	4000 Campus Dr
Ontario	Ontario International Airport	3450 East Airport Dr
Palm Springs	Palm Springs International Airport	3400 East Tahquiz
Palm Springs	DOLLAR Palm Springs International Airport	325 North Civic Dr
Sacramento	Sacramento International Airport	6130 McNair Cir
Sacramento	Sacramento Downtown	1025 16th St
San Diego	San Diego International Airport	3202 North Harbor Dr
San Francisco	San Francisco International Airport	780 McDonnell Rd
San Francisco	DOLLAR San Francisco (Downtown)	364 O'Farrell St
South San Francisco	San Francisco International Airport	177 South Airport Blvd

If there are any questions regarding this submission, or should you require further information, please contact me at 239-301-7248 or gl.walters@hertz.com.

Sincerely,

Gordon L. Walters Jr.
Environmental Program Manager - NA

(Instructions on reverse side)

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY

FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in California Code of Regulations (CCR), Title 23, Division 3, Chapter 18, Section 2807.

☐ 500,000 dollars per occurrence
or
☒ 1 million dollars per occurrence

AND

☐ 1 million dollars annual aggregate
or
☒ 2 million dollars annual aggregate

B. The Hertz Corporation *hereby certifies that it is in compliance with the requirements of Section 2807,*
(Name of Tank Owner or Operator)
California Code of Regulations, Title 23, Division 3, Chapter 18, Article 3, Section 2807.
The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp
Surety Bond	Westchester Fire Ins. Co.	K13560468	$1M USD per occurrence, $2M per aggreg	4/5/2022 to 4/5/2023	Yes	Yes

Note:

Funds secured in standby trust dated 4-28-2009.

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance and shall maintain compliance with all conditions for participation in the Fund. See instructions.

D. Facility Name	Facility Address
Multiple - see Exhibit A	
Facility Name	Facility Address
Facility Name	Facility Address

E. Signature of Tank Owner or Operator	Date	Name and Title of Tank Owner or Operator
Gordon L. Walters Jr.	3/31/22	Gordon L. Walters Jr., Environmental Program Manager
Signature of Witness or Notary	Date	Name of Witness or Notary
	3/31/22	Timothy Egan

CONTINUATION CERTIFICATE

WESTCHESTER FIRE INSURANCE COMPANY , Surety upon

a certain Bond No. K13560468

dated effective April 5, 2018
(MONTH-DAY-YEAR)

on behalf of THE HERTZ CORPORATION AND DTG OPERATIONS, INC.
(PRINCIPAL)

and in favor of UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
(OBLIGEE)

does hereby continue said bond in force for the further period

beginning on 4/5/2022
(MONTH-DAY-YEAR)

and ending on 4/5/2023
(MONTH-DAY-YEAR)

Amount of bond $2,000,000.00

Description of bond Environmental Bond

Premium: $ 25,000.00

PROVIDED: That this continuation certificate does not create a new obligation and is executed upon the express condition and provision that the Surety's liability under said bond and this and all Continuation Certificates issued in connection therewith shall not be cumulative and that the said Surety's aggregate liability under said bond and this and all such Continuation Certificates on account of all defaults committed during the period (regardless of the number of years) said bond had been and shall be in force, shall not in any event exceed the amount of said bond as hereinbefore set forth.

Signed and dated on March 24, 2022

Winsted of Chicago, Illinois----------

each as their true and lawful Attorney-in-Fact to execute under such designation in their names and to affix their corporate seals to and deliver for and on their behalf as surety thereon or otherwise, bonds and undertakings and other writings obligatory in the nature thereof (other than bail bonds) given or executed in the course of business, and any instruments amending or altering the same, and consents to the modification or alteration of any instrument referred to in said bonds or obligations.

In Witness Whereof, said **FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, PACIFIC INDEMNITY COMPANY, WESTCHESTER FIRE INSURANCE COMPANY and ACE AMERICAN INSURANCE COMPANY** have each executed and attested these presents and affixed their corporate seals on this **22nd day of September, 2021.**

Dawn M. Chloros

Dawn M. Chloros, Assistant Secretary

Stephen M. Haney

Stephen M. Haney, Vice President

STATE OF NEW JERSEY
County of Hunterdon ss.

On this **22nd day of September, 2021** before me, a Notary Public of New Jersey, personally came Dawn M. Chloros and Stephen M. Haney, to me known to be Assistant Secretary and Vice President, respectively, of FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, PACIFIC INDEMNITY COMPANY, WESTCHESTER FIRE INSURANCE COMPANY and ACE AMERICAN INSURANCE COMPANY, the companies which executed the foregoing Power of Attorney, and the said Dawn M. Chloros and Stephen M. Haney, being by me duly sworn, severally and each for herself and himself did depose and say that they are Assistant Secretary and Vice President, respectively, of FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, PACIFIC INDEMNITY COMPANY, WESTCHESTER FIRE INSURANCE COMPANY and ACE AMERICAN INSURANCE COMPANY and know the corporate seals thereof, that the seals affixed to the foregoing Power of Attorney are such corporate seals and were thereto affixed by authority of said Companies; and that their signatures as such officers were duly affixed and subscribed by like authority.

Notarial Seal

KATHERINE J. ADELAAR
NOTARY PUBLIC OF NEW JERSEY
No. 2316686
Commission Expires July 16, 2024

Notary Public

CERTIFICATION

Resolutions adopted by the Boards of Directors of FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, and PACIFIC INDEMNITY COMPANY on August 30, 2016; WESTCHESTER FIRE INSURANCE COMPANY on December 11, 2006; and ACE AMERICAN INSURANCE COMPANY on March 20, 2009:

"RESOLVED, that the following authorizations relate to the execution, for and on behalf of the Company, of bonds, undertakings, recognizances, contracts and other written commitments of the Company entered into in the ordinary course of business (each a "Written Commitment"):

(1) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized to execute any Written Commitment for and on behalf of the Company, under the seal of the Company or otherwise.

(2) Each duly appointed attorney-in-fact of the Company is hereby authorized to execute any Written Commitment for and on behalf of the Company, under the seal of the Company or otherwise, to the extent that such action is authorized by the grant of powers provided for in such person's written appointment as such attorney-in-fact.

(3) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized, for and on behalf of the Company, to appoint in writing any person the attorney-in-fact of the Company with full power and authority to execute, for and on behalf of the Company, under the seal of the Company or otherwise, such Written Commitments of the Company as may be specified in such written appointment, which specification may be by general type or class of Written Commitments or by specification of one or more particular Written Commitments.

(4) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized, for and on behalf of the Company, to delegate in writing to any other officer of the Company the authority to execute, for and on behalf of the Company, under the Company's seal or otherwise, such Written Commitments of the Company as are specified in such written delegation, which specification may be by general type or class of Written Commitments or by specification of one or more particular Written Commitments.

(5) The signature of any officer or other person executing any Written Commitment or appointment or delegation pursuant to this Resolution, and the seal of the Company, may be affixed by facsimile on such Written Commitment or written appointment or delegation.

FURTHER RESOLVED, that the foregoing Resolution shall not be deemed to be an exclusive statement of the powers and authority of officers, employees and other persons to act for and on behalf of the Company, and such Resolution shall not limit or otherwise affect the exercise of any such power or authority otherwise validly granted or vested."

I, Dawn M. Chloros, Assistant Secretary of FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, PACIFIC INDEMNITY COMPANY, WESTCHESTER FIRE INSURANCE COMPANY and ACE AMERICAN INSURANCE COMPANY (the "Companies") do hereby certify that

(i) the foregoing Resolutions adopted by the Board of Directors of the Companies are true, correct and in full force and effect,
(ii) the foregoing Power of Attorney is true, correct and in full force and effect.

Given under my hand and seals of said Companies at Whitehouse Station, NJ, this 24th day of March 2022

Dawn M. Chloros

Dawn M. Chloros, Assistant Secretary

THIS BOND REPLACES WESTCHESTER FIRE INSURANCE COMPANY BOND NO. K08306151 EFFECTIVE 04/05/2018

PERFORMANCE BOND

Bond No. K13560468

Date bond executed:	04/26/2018
Period of coverage:	04/05/2018 – 04/05/2019
Principal:	The Hertz Corporation and DTG Operations Inc. 8501 Williams Road Estero, FL 33928
Type of Organization:	Corporation
State of incorporation (if applicable):	Delaware

Surety(ies): Westchester Fire Insurance Company
436 Walnut Street
Philadelphia, PA 19106

Scope of Coverage: The tanks covered by the Bond are listed in Exhibit A, which is made part of this agreement. The coverage guaranteed by the Bond shall include: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases" "arising from operating the underground storage tank".

Penal sums of bond:

Per occurrence $	$1,000,000
Annual aggregate $	$2,000,000
Surety's bond number:	**K13560468**

Know All Persons by These Presents, that we, the Principal and Surety(ies), hereto are firmly bound to the United States Environmental Protection Agency and the state agencies listed in Exhibit B, in the above penal sums for the payment of which we bind ourselves, our heirs, executors, administrators, successors, and assigns jointly and severally; provided that, where the Surety(ies) are corporations acting as co-sureties, we, the Sureties, bind ourselves in such sums jointly and severally only for the purpose of allowing a joint action or actions against any or all of us, and for all other purposes each Surety binds itself, jointly and severally with the Principal, for the payment of such sums only as is set forth opposite the name of such Surety, but if no limit of liability is indicated, the limit of liability shall be the full amount of the penal sums.

Whereas said Principal is required under Subtitle I of the Solid Waste Disposal Act, as amended, to provide financial assurance for "taking corrective action" and/or "compensating

third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; arising from operating the underground storage tanks identified above, and

Whereas said Principal shall establish a standby trust fund as is required when a surety bond is used to provide such financial assurance;

Now, therefore, the conditions of the obligation are such that if the Principal shall faithfully "take corrective action, in accordance with 40 CFR part 280, subpart F and the Director of the state implementing agency's instructions for," and/or "compensate injured third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases" arising from operating the tank(s) identified above, or if the Principal shall provide alternate financial assurance, as specified in 40 CFR part 280, subpart H, within 120 days after the date the notice of cancellation is received by the Principal from the Surety(ies), then this obligation shall be null and void; otherwise it is to remain in full force and effect.

Such obligation does not apply to any of the following:

(a) Any obligation of The Hertz Corporation and DTG Operations Inc. under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;

(b) Bodily injury to an employee of The Hertz Corporation and DTG Operations Inc. arising from, and in the course of, employment by The Hertz Corporation and DTG Operations Inc.;

(c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;

(d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by The Hertz Corporation and DTG Operations Inc. that is not the direct result of a release from a petroleum underground storage tank;

(e) Bodily injury or property damage for which The Hertz Corporation and DTG Operations Inc. is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 40 CFR 280.93.

The Surety(ies) shall become liable on this bond obligation only when the Principal has failed to fulfill the conditions described above.

Upon notification by the Directors of the United States Environmental Protection Agency and/or Director of those agencies listed in Exhibit B that the Principal has failed to "take corrective action, in accordance with 40 CFR part 280, subpart F and the Director's instructions," and/or "compensate injured third parties" as guaranteed by this bond, the Surety(ies) shall either perform "corrective action in accordance with 40 CFR part 280 and the Director's instructions," and/or "third-party liability compensation" or place funds in an amount up to the annual aggregate penal sum into the standby trust fund as directed by the Director under 40 CFR 280.112.

Upon notification by the Director that the Principal has failed to provide alternate financial assurance within 60 days after the date the notice of cancellation is received by the Principal

from the Surety(ies) and that the Director has determined or suspects that a release has occurred, the Surety(ies) shall place funds in an amount not exceeding the annual aggregate penal sum into the standby trust fund as directed by the Director under 40 CFR 280.112.

The Surety(ies) hereby waive(s) notification of amendments to applicable laws, statutes, rules, and regulations and agrees that no such amendment shall in any way alleviate its (their) obligation on this bond.

The liability of the Surety(ies) shall not be discharged by any payment or succession of payments hereunder, unless and until such payment or payments shall amount in the annual aggregate to the penal sum shown on the face of the bond, but in no event shall the obligation of the Surety(ies) hereunder exceed the amount of said annual aggregate penal sum.

The Surety(ies) may cancel the bond by sending notice of cancellation by certified mail to the Principal, provided, however, that cancellation shall not occur during the 120 days beginning on the date of receipt of the notice of cancellation by the Principal, as evidenced by the return receipt.

The Principal may terminate this bond by sending written notice to the Surety(ies).

In Witness Thereof, the Principal and Surety(ies) have executed this Bond and have affixed their seals on the date set forth above.

The persons whose signatures appear below hereby certify that they are authorized to execute this surety bond on behalf of the Principal and Surety(ies) and that the wording of this surety bond is identical to the wording specified in 40 CFR 280.98(b) as such regulations were constituted on the date this bond was executed.

The State of Vermont / Vermont Department of Environmental Conservation
The State of Washington / Washington Department of Ecology
The State of Wisconsin / Wisconsin Department of Natural Resources

Power of Attorney

WESTCHESTER FIRE INSURANCE COMPANY

Know all men by these presents: That WESTCHESTER FIRE INSURANCE COMPANY, a corporation of the Commonwealth of Pennsylvania pursuant to the following Resolution, adopted by the Board of Directors of the said Company on December 11, 2006, to wit:

"RESOLVED, that the following authorizations relate to the execution, for and on behalf of the Company, of bonds, undertakings, recognizances, contracts and other written commitments of the Company entered into the ordinary course of business (each a "Written Commitment"):

(1) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized to execute any Written Commitment for and on behalf of the Company, under the seal of the Company or otherwise.

(2) Each duly appointed attorney-in-fact of the Company is hereby authorized to execute any Written Commitment for and on behalf of the Company, under the seal of the Company or otherwise, to the extent that such action is authorized by the grant of powers provided for in such persons written appointment as such attorney-in-fact .

(3) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized, for and on behalf of the Company, to appoint in writing any person the attorney-in-fact of the Company with full power and authority to execute, for and on behalf of the Company, under the seal of the Company or otherwise, such Written Commitments of the Company as may be specified in such written appointment, which specification may be by general type or class of Written Commitments or by specification of one or more particular Written Commitments.

(4) Each of the Chairman, the President and Vice Presidents of the Company is hereby authorized, for and on behalf of the Company, to delegate in writing any other officer of the Company the authority to execute, for and on behalf of the Company, under the Company's seal or otherwise, such Written Commitments of the Company as are specified in such written delegation, which specification may be by general type or class of Written Commitments or by specification of one or more particular Written Commitments.

(5) The signature of any officer or other person executing any Written Commitment or appointment or delegation pursuant to this Resolution, and the seal of the Company, may be affixed by facsimile on such Written Commitment or written appointment or delegation.

FURTHER RESOLVED, that the foregoing Resolution shall not be deemed to be an exclusive statement of the powers and authority of officers, employees and other persons to act for and on behalf of the Company, and such Resolution shall not limit or otherwise affect the exercise of any such power or authority otherwise validly granted or vested.

Does hereby nominate, constitute and appoint Cori Riddle, Francis J Curran, Marina A Kenney, Sally Phillips all of the City of Philadelphia, Pennsylvania, each individually if there be more than one named, its true and lawful attorney-in-fact, to make, execute, seal and deliver on its behalf, and as its act and deed any and all bonds, undertakings, recognizances, contracts and other writings in the nature thereof in penalties not exceeding SEVENTY FIVE MILLION DOLLARS & ZERO CENTS ($75,000,000.00) and the execution of such writings in pursuance of these presents shall be as binding upon said Company, as fully and amply as if they had been duly executed and acknowledged by the regularly elected officers of the Company at its principal office,

IN WITNESS WHEREOF, the said Stephen M. Haney, Vice-President, has hereunto subscribed his name and affixed the Corporate seal of the said WESTCHESTER FIRE INSURANCE COMPANY this 6 day of September 2017

WESTCHESTER FIRE INSURANCE COMPANY

Stephen M. Haney , Vice President

COMMONWEALTH OF PENNSYLVANIA
COUNTY OF PHILADELPHIA ss.

On this 6 day of September, 2017 before me, a Notary Public of the Commonwealth of Pennsylvania in and for the County of Philadelphia came Stephen M. Haney ,Vice-President of the WESTCHESTER FIRE INSURANCE COMPANY to me personally known to be the individual and officer who executed the preceding instrument, and he acknowledged that he executed the same, and that the seal affixed to the preceding instrument is the corporate seal of said Company; that the said corporate seal and his signature were duly affixed by the authority and direction of the said corporation, and that Resolution, adopted by the Board of Directors of said Company, referred to in the preceding Instrument, is now in force.

IN TESTIMONY WHEREOF, I have hereunto set my hand and affixed my official seal at the Cityof Philadelphia the day and year first above written.

COMMONWEALTH OF PENNSYLVANIA
NOTARIAL SEAL
KAREN E. BRANDT, Notary Public
City of Philadelphia, Phila. County
My Commission Expires Sept. 26, 2018

Notary Public

I, the undersigned Assistant Secretary of the WESTCHESTER FIRE INSURANCE COMPANY, do hereby certify that the original POWER OF ATTORNEY, of which the foregoing is a substantially true and correct copy, is in full force and effect.

In witness whereof, I have hereunto subscribed my name as Assistant Secretary, and affixed the corporate seal of the Corporation, this 16th day of April 20 18.

Dawn M. Chloros, Assistant Secretary

THIS POWER OF ATTORNEY MAY NOT BE USED TO EXECUTE ANY BOND WITH AN INCEPTION DATE AFTER SEPTEMBER 06, 2019.

DocuGard #04546 contains a security pantograph, blue background, heat-sensitive ink, coin-reactive watermark, and microtext printing on border.

HEAT SENSITIVE SHIELD

AMENDMENT TO TRUST AGREEMENT DATED [MARCH 25, 2022]

THIS Amendment, dated this 25th day of March, 2022 ("Amendment"), amends the Trust Agreement (the "Agreement"), dated April 28, 2009, and revised on October 15, 2013, by and between The Hertz Corporation, a Delaware corporation (the "Grantor") and The Bank of New York Mellon, a New York banking corporation (the "Trustee"),

WHEREAS, the United States Environmental Protection Agency has established certain regulations applicable to the Grantor, requiring that an owner or operator of a hazardous waste management facility shall provide assurance that funds will be available when needed for closure and/or post-closure car of the facility,

WHEREAS, the Grantor has elected to obtain a Surety Bond and has established a standby trust fund to provide all or part of such financial assurance for the facility identified herein,

WHEREAS, the parties desire to amend the Agreement as set forth herein, and

NOW, THEREFORE, the Grantor and Trustee agree as follows:

1. The existing Exhibit A is replaced with the attached revised Exhibit A.

2. The existing Exhibit B is replaced with the attached revised Exhibit B.

3. Representations and Warranties.

Grantor hereby represents and warrants with respect to itself as of the date of this Amendment, that:

i. It is duly organized and existing under the laws of the jurisdiction of its organization, with full power to cany on its business as now conducted, to enter into this Amendment and to perform its obligations hereunder; and

ii. This Amendment has been duly authorized, executed and delivered by it, constitutes a valid and legally binding obligation of it, enforceable in accordance with its terms, and no statute, regulation, rule, order, judgment or contract binding on it prohibits it's execution or, performance of this Amendment.

4. Governing Law.

This Amendment shall be administered, construed and enforced according to the laws of the State of New Jersey.

5. Successors and Assigns.

This Amendment shall extend to and shall be binding upon the Panics hereto and their respective successors and permitted assignees.

6. Ratification.

Except as hereby amended, the provisions of the Agreement are hereby ratified and confirmed and shall remain in full force and effect.

7. Severability.

In the event that any provision of this Amendment shall be declared invalid or unenforceable by any regulatory body or court having jurisdiction, such invalidity or unenforceability shall not affect the validity or enforceability of the remaining portions of this Amendment, and the invalid, illegal or unenforceable provision shall be replaced by a valid, legal and enforceable provision that comes closest to the intent of the parties underlying the invalid, illegal or unenforceable provision.

8. Headings.

The headings of the Sections have been inserted for convenience of reference only and shall not be deemed to constitute a part of this Amendment.

9. Counterparts.

This Amendment is executed in triplicate original, each of which shall be deemed an original, but which shall each constitute but one Agreement, with each party retaining an executed original. The parties may sign and deliver this Amendment by electronic transmission, including PDF. All the parties agree that the delivery of the Amendment by electronic transmission shall have the same force and effect as delivery of original signatures and that each party may use such electronic signatures as evidence of the execution and delivery of this Amendment by both parties to the same extent that an original signature could be used.

IN WITNESS, whereof the parties have caused this Amendment to be executed by their respective officers duly authorized and their corporate seals, if applicable, to be hereunto affixed and attested as of the date first written above.

STANDBY TRUST AGREEMENT

Trust agreement, the "Agreement," entered into as of **April 28, 2009** by and between The Hertz Corporation ("Hertz"), a Delaware corporation, the "Grantor," and The Bank of New York, a New York banking corporation, the "Trustee."

Whereas, the United States Environmental Protection Agency, an agency of the United States Government, various state environmental agencies, the "Implementing Agencies" and the specific agencies known as the "State of Alaska Department of Environmental Conservation" and "State of Maryland" have established certain regulations applicable to the Grantor, requiring that an owner or operator of an underground storage tank shall provide assurance that funds will be available when needed for corrective action and third-party compensation for bodily injury and property damage caused by sudden and nonsudden accidental releases arising from the operation of the underground storage tank. The attached Exhibit A lists the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located that are covered by the standby trust agreement.

Whereas, the Grantor has elected to establish a surety bond, to provide all or part of such financial assurance for the underground storage tanks identified herein and is required to establish a standby trust fund able to accept payments from the instrument.

Whereas, the Grantor, acting through its duly authorized officers, has selected the Trustee to be the trustee under this agreement, and the Trustee is willing to act as trustee;

Now, therefore, the Grantor and the Trustee agree as follows:

Section 1. Definitions

As used in this Agreement:

(a) The term "Grantor" means the owner or operator who enters into this Agreement and any successors or assigns of the Grantor.

(b) The term "Trustee" means the Trustee who enters into this Agreement and any successor Trustee.

Section 2. Identification of the Financial Assurance Mechanism

This Agreement pertains to the surety bond.

Section 3. Establishment of Fund

The Grantor and the Trustee hereby establish a trust fund, the "Fund," for the benefit of the **Implementing Agencies**. The Grantor and the Trustee intend that no third party have access to the Fund except as herein provided. The Fund is established initially as a

standby to receive payments and shall not consist of any property. Payments made by the provider of financial assurance pursuant to the **Director of the Implementing Agencies'** instruction are transferred to the Trustee and are referred to as the Fund, together with all earnings and profits thereon, less any payments or distributions made by the Trustee pursuant to this Agreement. The Fund shall be held by the Trustee, IN TRUST, as hereinafter provided. The Trustee shall not be responsible nor shall it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the Grantor as provider of financial assurance, any payments necessary to discharge any liability of the Grantor established by the Implementing Agencies.

Section 4. Payment for "Corrective Action" and/or Third-Party Liability Claims"

The Trustee shall make payments from the Fund as the Director of the Implementing Agencies shall direct, in writing, to provide for the payment of the costs of taking corrective action and/or compensating third parties for bodily injury and property damage caused by either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases" arising from operating the tanks covered by the financial assurance mechanism identified in this Agreement.

The Fund may not be drawn upon to cover any of the following:

(a) Any obligation of Hertz under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;

(b) Bodily injury to an employee of Hertz arising from, and in the course of employment by Hertz;

(c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;

(d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by Hertz that is not the direct result of a release from a petroleum underground storage tank;

(e) Bodily injury or property damage for which Hertz is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 40 CFR 280.93.

The Trustee shall reimburse the Grantor, or other persons as specified by the Director of the Implementing Agency, from the Fund for corrective action expenditures and/or third-party liability claims in such amounts as the Director of the Implementing Agency shall direct in writing. In addition, the Trustee shall refund to the Grantor such amounts as the Director of the Implementing Agency specifies in writing. Upon refund, such funds shall no longer constitute part of the Fund as defined herein.

Section 5. Payments Comprising the Fund

Payments made to the Trustee for the Fund shall consist of cash and securities acceptable to the Trustee.

Section 6. Trustee Management

The Trustee shall invest and reinvest the principal and income of the Fund and keep the Fund invested as a single fund, without distinction between principal and income, in accordance with general investment policies and guidelines which the Grantor may communicate in writing to the Trustee from time to time, subject, however, to the provisions of this Section. In investing, reinvesting, exchanging, selling, and managing the Fund, the Trustee shall discharge his duties with respect to the trust fund solely in the interest of the beneficiaries and with the care, skill, prudence, and diligence under the circumstances then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

(i) Securities or other obligations of the Grantor, or any other owner or operator of the tanks, or any of their affiliates as defined in the Investment Company Act of 1940, as amended, 15 U.S.C. 80a-2(a), shall not be acquired or held, unless they are securities or other obligations of the federal or a state government;

(ii) The Trustee is authorized to invest the Fund in time or demand deposits of the Trustee, to the extent insured by an agency of the federal or state government; and

(iii) The Trustee is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment

The Trustee is expressly authorized in its discretion:

(a) To transfer from time to time any or all of the assets of the Fund to any common, commingled, or collective trust fund created by the Trustee in which the Fund is eligible to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and

(b) To purchase shares in any investment company registered under the Investment Company Act of 1940, 15 U.S.C. 80a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the Trustee. The Trustee may vote such shares in its discretion.

Section 8. Express Powers of Trustee

Without in any way limiting the powers and discretions conferred upon the Trustee by the other provisions of this Agreement or by law, the Trustee is expressly authorized and empowered:

(a) To sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the Trustee shall be bound to see to the application of the purchase money or to inquire into the validity or expediency of any such sale or other disposition;

(b) To make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;

(c) To register any securities held in the Fund in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the Trustee in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depository even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depository with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States Government, or any agency or instrumentality thereof, with a Federal Reserve bank, but the books and records of the Trustee shall at all times show that all such securities are part of the Fund;

(d) To deposit any cash in the Fund in interest-bearing accounts maintained or savings certificates issued by the Trustee, in its separate corporate capacity, or in any other banking institution affiliated with the Trustee, to the extent insured by an agency of the federal or state government; and

(e) To compromise or otherwise adjust all claims in favor of or against the Fund.

Section 9. Taxes and Expenses

All taxes of any kind that may be assessed or levied against or in respect of the Fund and all brokerage commissions incurred by the Fund shall be paid from the Fund. All other expenses incurred by the Trustee in connection with the administration of this Trust, including fees for legal services rendered to the Trustee, the compensation of the Trustee to the extent not paid directly by the Grantor, and all other proper charges and disbursements of the Trustee shall be paid from the Fund.

Section 10. Advice of Counsel

The Trustee may from time to time consult with counsel, who may be counsel to the Grantor, with respect to any questions arising as to the construction of this Agreement or any action to be taken hereunder. The Trustee shall be fully protected, to the extent permitted by law, in acting upon the advice of counsel.

Section 11. Trustee Compensation

The Trustee shall be entitled to reasonable compensation for its services as agreed upon in writing from time to time with the Grantor.

Section 12. Successor Trustee

The Trustee may resign or the Grantor may replace the Trustee, but such resignation or replacement shall not be effective until the Grantor has appointed a successor trustee and this successor accepts the appointment. The successor trustee shall have the same powers and duties as those conferred upon the Trustee hereunder. Upon the successor trustee's acceptance of the appointment, the Trustee shall assign, transfer, and pay over to the successor trustee the funds and properties then constituting the Fund. If for any reason the Grantor cannot or does not act in the event of the resignation of the Trustee, the Trustee may apply to a court of competent jurisdiction for the appointment of a successor trustee or for instructions. The successor trustee shall specify the date on which it assumes administration of the trust in writing sent to the Grantor and the present Trustee by certified mail 10 days before such change becomes effective. Any expenses incurred by the Trustee as a result of any of the acts contemplated by this Section shall be paid as provided in Section 9.

Section 13. Instructions to the Trustee

All orders, requests, and instructions by the Grantor to the Trustee shall be in writing, signed by such persons as are designated in the attached Exhibit B or such other designees as the Grantor may designate by amendment to Exhibit B. The Trustee shall be fully protected in acting without inquiry in accordance with the Grantor's orders, requests, and instructions. All orders, requests, and instructions by the Director of the Implementing Agency to the Trustee shall be in writing, signed by the Director of the Implementing Agency, and the Trustee shall act and shall be fully protected in acting in accordance with such orders, requests, and instructions. The Trustee shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the Grantor or the Director of the Implementing Agency hereunder has occurred. The Trustee shall have no duty to act in the absence of such orders, requests, and instructions from the Grantor and/or the Director of the Implementing Agency, except as provided for herein.

Section 14. Amendment of Agreement

This Agreement may be amended by an instrument in writing executed by the Grantor and the Trustee, or by the Trustee and the Director of the Implementing Agency if the Grantor ceases to exist.

Section 15. Irrevocability and Termination

Subject to the right of the parties to amend this Agreement as provided in Section 14, this Trust shall be irrevocable and shall continue until terminated at the written direction of the Grantor and the Trustee, or by the Trustee and the Director of the Implementing

Agency, if the Grantor ceases to exist. Upon termination of the Trust, all remaining trust property, less final trust administration expenses, shall be delivered to the Grantor.

Section 16. Immunity and Indemnification

The Trustee shall not incur personal liability of any nature in connection with any act or omission, made in good faith, in the administration of this Trust, or in carrying out any directions by the Grantor or the Director of the Implementing Agency issued in accordance with this Agreement. The Trustee shall be indemnified and saved harmless by the Grantor, from and against any personal liability to which the Trustee may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the Grantor fails to provide such defense.

Section 17. Choice of Law

This Agreement shall be administered, construed, and enforced according to the laws of the state of New Jersey, or the Comptroller of the Currency in the case of National Association banks.

Section 18. Interpretation

As used in this Agreement, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each section of this Agreement shall not affect the interpretation or the legal efficacy of this Agreement.

In Witness where of the parties have caused this Agreement to be executed by their respective officers duly authorized and their corporate seals (if applicable) to be hereunto affixed and attested as of the date first above written. The parties below certify that the wording of this Agreement is identical to the wording specified in 40 CFR 280.103(b)(1) as such regulations were constituted on the date written above.

RESPONSE PLAN – PAGE 1

(One form per facility)

TYPE OF ACTION ☐ 1. NEW PLAN ☐ 2. CHANGE OF INFORMATION R01.

I. FACILITY INFORMATION

FACILITY ID # *(Agency Use Only)*

BUSINESS NAME (Same as FACILITY NAME) R02.
Hertz Rent-A-Car (1101-15)

BUSINESS SITE ADDRESS R03.	CITY R04.
9000 Airport Blvd	Los Angeles

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: (Complete only if applicable)

EQUIPMENT	LOCATION	AVAILABILITY
R10.	R20.	R30.
R11.	R21.	R31.
R12.	R22.	R32.
R13.	R23.	R33.
R14.	R24.	R34.
R15.	R25.	R35.

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME	TITLE
R40. James E. Philpot	R50. Sr. Director - Operations
R41. Kaleo Cuaresma	R51. Compliance Manager
R42. Andrew Lazazzera	R52. Program Manager - Fuel Systems
R43. Timothy B. Egan	R53. Sr. Program Manager - Compliance & Remediation

V. MONITORING INDICATORS

IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE, STEPS TO VERIFY THE RELEASE WILL BE MADE AS FOLLOWS:
☑ Additional system testing or data collection ☑ Inspection by qualified persons ☑ Recalibration of equipment
Other:

R60.

UST Response Plan – Instructions

Complete one UST Response Plan for each UST facility. This form must be submitted with your initial UST Operating Permit Application and within 30 days of changes in the information it contains. It supplements the Emergency Response Plans and Procedures in the facility's Hazardous Materials Business Plan. (Note: Numbering of these instructions follows the data element numbers on the form.)

R01. TYPE OF ACTION – Check the appropriate box to indicate why this plan is being submitted.
FACILITY ID NUMBER – This space is for agency use only.

R02. BUSINESS NAME – Enter the complete Facility Name.

R03. BUSINESS SITE ADDRESS – Enter the street address where the facility is located, including building number, if applicable. Post office box numbers are not acceptable. This information must provide a means to locate the facility geographically.

R04. CITY – Enter the city or unincorporated area in which the facility is located.

R10. EQUIPMENT – If you have spill control or clean-up equipment kept off-site, list that equipment in sections R10 through R15. If no equipment is kept off-site, leave this section blank.

R20. LOCATION – If you have spill control or clean-up equipment kept off-site, list the equipment location(s) sections R20 through R25. If no equipment is kept off-site, leave this section blank.

R30. AVAILABILITY – If you have spill control or clean-up equipment kept off-site, list the equipment availability in sections R30 through R35. If no equipment is kept off-site, leave this section blank.

R40. NAME – At least one person responsible for authorizing any work necessary under this UST Response Plan must be identified. Use sections R40 through R43 to list the name(s) of the responsible person(s).

R50. TITLE – At least one person responsible for authorizing any work necessary under this UST Response Plan must be identified. Use sections R50 through R53 to list the job title(s) of the responsible person(s).

R60. MONITORING INDICATORS Briefly describe the steps that will be taken to verify the presence or absence of a release if the tank monitoring system indicates the possibility of a release.

OWNER/OPERATOR SIGNATURE – The owner/operator shall sign in the space provided. This signature certifies that the signer believes that all information submitted is true, accurate, and complete.

R70. DATE – Enter the date the plan was signed.

R71. OWNER/OPERATOR NAME – Print or type the name of the person signing the plan.

R72. OWNER/OPERATOR TITLE – Enter the title of the person signing the plan.

UNDERGROUND STORAGE TANK

RESPONSE PLAN – PAGE 2

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

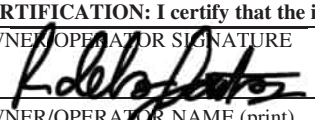
- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the California Emergency Management Agency at (800) 852-7550.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.



We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

VII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

UNDERGROUND STORAGE TANK
STATEMENT OF UNDERSTANDING AND COMPLIANCE FORM (Page 1 of 1)

Every underground storage tank (UST) facility must submit a one-time statement indicating that the owner or operator understands and is in compliance with all applicable UST requirements. A copy of this completed form must be submitted via either the California Environmental Reporting System (CERS) or an equivalent local Unified Program Agency electronic reporting portal within 30 days of: 1) an installation of a UST; or 2) a change in owner or operator of the UST, as applicable. [California Code of Regulations, Title 23, Division 3, Chapter 16, Section 2715(a).]

Aboveground Petroleum Storage Act: Tank Facility Statement Instructions

Each owner or operator of a tank facility that is subject to the Aboveground Petroleum Storage Act (APSA) is required to submit a Tank Facility Statement annually into the California Environmental Reporting System (CERS). A Hazardous Materials Business Plan (HMBP) submittal into CERS satisfies the requirement to file the Tank Facility Statement.

A tank facility is subject to APSA if any of the following apply:

(a) The tank facility is subject to the oil pollution prevention regulations specified in Part 112 (commencing with §112.1) of Subchapter D of Chapter I of Title 40 of the Code of Federal Regulations; **OR**

(b) The tank facility has a storage capacity of 1,320 gallons or more of petroleum; **OR**

(c) The tank facility has a storage capacity of less than 1,320 gallons of petroleum **AND** has one or more tanks in an underground area meeting the conditions specified in paragraph (1) of subdivision (o) of HSC §25270.2. If this subdivision is applicable, only tanks meeting the conditions specified in paragraph (1) of subdivision (o) of HSC §25270.2 shall be included as storage tanks and subject to APSA.

I. FACILITY INFORMATION

3. FACILITY NAME – Enter the full legal name of the tank facility. (Same as BUSINESS NAME or DBA–Doing Business As.)
102. FACILITY PHONE - Enter the phone number, area code first, and any extension.
103. FACILITY ADDRESS – Enter the street address where the tank facility is located. No post office box numbers are allowed. This information must provide a means to locate the facility geographically.
104. CITY – Enter the city or unincorporated area in which the tank facility is located.
105. ZIP CODE – Enter the zip code of the tank facility. The extra 4 digit zip code may also be added.
117a. CONTACT NAME – Enter the name of the person, who receives aboveground storage tank correspondences.
118a. CONTACT PHONE – Enter the phone number, area code first, and any extension.

II. TOTAL FACILITY STORAGE CAPACITY

937. TOTAL FACILITY STORAGE CAPACITY – Enter the facility's total aboveground petroleum storage tank capacity (in gallons). Using the table below, enter the **shell capacity** of each aboveground petroleum storage tank and container, including each tank in an underground area, greater than or equal to 55 gallons. Do not enter the actual volume stored in the tank. To calculate the capacity of 55 gallon drums on site, use the **maximum** number of drums that would typically be stored at your facility.

Total Facility Storage Capacity (in gallons) = A + B + C

Total Facility Storage Capacity *in gallons* = Sum of Shell Capacity of All Aboveground Petroleum Storage Tanks and Containers (≥55 gallons) (e.g., 6 X 55 gal. = 330 gal.; 1 X 2,000 gal. = 2,000 gal.; 1 X 10,000 gal. = 10,000 gal.; Total = 330 + 2,000 + 10,000 = 12,330 gallons)					
A		B		C	
____ x 55 gal.	= _____	____ x 1,000 gal.	= _____	____ x _____ gal.	= _____
____ x 100 gal.	= _____	____ x 2,000 gal.	= _____	____ x _____ gal.	= _____
____ x 250 gal.	= _____	____ x _____ gal.	= _____	____ x _____ gal.	= _____
____ x 500 gal.	= _____	____ x _____ gal.	= _____	____ x _____ gal.	= _____
Subtotal A = _____ gallons		Subtotal B = _____ gallons		Subtotal C = _____ gallons	

III. TANK AND CONTAINER DETAILS

Provide details of each aboveground petroleum storage tank and container greater than 10,000 gallons in shell capacity (attach additional forms if needed) at your facility. If your facility does not have an aboveground storage tank or container with shell capacity greater than 10,000 gallons, you can skip data fields 938 – 941.

938. TANK OR CONTAINER ID NUMBER – Enter a unique identification number for each aboveground petroleum storage tank and container at your facility. You may create your own numbering system.
939. CONTENTS – Enter the contents (i.e. DIESEL, GASOLINE, OIL, etc.) of each aboveground petroleum storage tank and container at your facility.
940. SHELL CAPACITY – Enter the shell capacity (in gallons) of each aboveground petroleum storage tank and container at your facility.
941. LOCATION OF TANK OR CONTAINER – Enter the general location of each aboveground petroleum storage tank or container at your facility (e.g., at north end of facility; inside maintenance shop).

IV. SIGNATURE

SIGNATURE OF TANK FACILITY OWNER OR OPERATOR – The form must be signed, in the space provided, by the owner or operator.
PRINT NAME OF TANK FACILITY OWNER OR OPERATOR – Print or type the full name of the person signing the form.
DATE – Enter the date (MM/DD/YYY) the form was signed.

DEFINITIONS

TANK FACILITY – Any one or more aboveground storage tanks, including any piping that is integral to the tanks that **contain petroleum** and that are used by an owner or operator at a single location or site.
ABOVEGROUND STORAGE TANK (AST) – A tank (or container) with the capacity to store 55 gallons or more of petroleum that is substantially or totally above the surface of the ground, including a tank in an underground area. Some AST exceptions exist; they are specified in HSC §25270.2(a). An AST includes drums, totes, oil-filled operational or manufacturing equipment, etc.
PETROLEUM – Crude oil, or a fraction thereof, that is liquid at 60°F temperature and 14.7 pounds per square inch absolute pressure. Petroleum includes gasoline, diesel, E85, motor oil, waste oil, etc., but does NOT include antifreeze, propane, or natural gas.
STORAGE – Containment, handling, or treatment of petroleum, for any period of time, including standby storage, seasonal storage, and temporary storage.
STORAGE CAPACITY (of a facility) – The aggregate shell capacity of all aboveground storage tanks (including containers 55 gallons and greater) at a tank facility. For example, if a facility has two 500-gallon capacity diesel ASTs and a 600-gallon capacity waste oil AST, but only keeps each AST half full, then the storage capacity for this facility is 1,600 gallons (calculated by adding the shell capacity of each tank/container).

Appendix XIII
Underground Storage Tank
Designated UST Operator Visual Inspection Report

1. FACILITY INFORMATION

CERS ID	Inspection Date
10029802	12/9/2022

Facility Name
Hertz 1101-15

Facility Address	City	ZIP Code
9000 Airport Blvd.	Los Angeles	90045

2. DESIGNATED UST OPERATOR INFORMATION

Name of Designated UST Operator	Phone
Robert Bramhall	(888) 972-7581
ICC Certification	**Certification Expiration Date**
8206958	6/9/2024

3. COMPLIANCE ISSUES

Identify by number all compliance issues listed

L-2 Alarmed on 11/22,11/26 and 11/29 Jones Covey responded to alarms WO# 2258211 and 2258025

L-5 alarmed on 11-25 and 12-7. Inspected diesel fill and found no problems at this time.

S-1 To S-8 12-3 and 12-4 setup data warning. Inspected sensors and foound no problems at this time. Advised site to call in if problem continues

S-15 UDC 7/8 had a communication alarm on 12/9 Inspected UDC and found no problems at this time.

4. CERTIFICATION BY DESIGNATED UST OPERATOR CONDUCTING INSPECTION

I hereby certify that the visual inspection was performed in compliance with California Code of Regulations, title 23, division 3, chapter 16, section 2716 and all information provided herein is accurate.

Designated UST Operator Signature	Date Inspection Report Provided to Owner
Robbie Bramhall	12/9/2022

CERS = California Environmental Reporting System, ICC = International Code Council, ID = Identification, NA = Not Applicable, UDC = Under-Dispenser Containment, UST = Underground Storage Tank

Underground Storage Tank
Designated UST Operator Visual Inspection Report

5. OWNER/OPERATOR DESCRIPTION OF FOLLOW-UP ACTION

Number the follow up actions to correspond to appropriate compliance issues from Section 3.

6. OWNER / OPERATOR ACKNOWLEDGEMENT OF INSPECTION RESULTS

I have reviewed the results of the designated UST operator inspection report and provided a description of the action(s) taken or to be taken to correct any compliance issues discovered.

Name of UST Owner / Operator (print)

KENNY FISHER

UST Owner/Operator Signature	Date Signed
	12/9/22

7. INSPECTION HISTORY

	Yes	No	NA
Has each follow-up action of Section 3 from the previous Designated UST Operator Inspection Report been completed appropriately? *(Attach documentation verifying appropriate service to this report.)*	☐	☐	☑

8. RELEASE DETECTION ALARM HISTORY

Attach a copy of the alarm history report/log to this report.	Yes	No	NA
Is the monitoring system powered on and in proper operating mode?	☑	☐	
Has each alarm since the previous inspection been responded to appropriately? *(Attach documentation verifying appropriate service to this report.)*	☐	☑	☐
Have all containment sumps, that have had an alarm since the previous designated UST operator inspection report, been responded to by a qualified service technician?	☐	☑	☐

All answers marked "No" must be described by the designated UST operator in Section 3.

Underground Storage Tank
Designated UST Operator Visual Inspection Report

9. UST SYSTEM INSPECTION

List below and in Section 3 all containment sumps that have had a release detection alarm since the previous Designated UST Operator Inspection Report and have not been responded to by a qualified service technician. Containment sumps listed below require a visual inspection for damage, water, debris, hazardous substance, and proper sensor location.

*Is the **containment sump** free of damage, water, debris, and hazardous substances?*

Containment Sump ID	Yes	No	Containment Sump ID	Yes	No
L-5 Diesel Fill Sump	☑	☐		☐	☐
	☐	☐		☐	☐

Are all sensors in visually inspected **containment sumps** located to detect a release at the earliest opportunity?	☐	☐

*Is the **spill containment** free of damage, water, debris, and hazardous substances? Is the fill pipe free of obstructions? Is fill cap securely on the fill pipe?*

Spill Containment ID	Yes	No	Spill Containment ID	Yes	No
T-187	☑	☐	T-2 87	☑	☐
T-3 Diesel	☑	☐	T-4 87	☑	☐
T-5 87	☑	☐		☐	☐
	☐	☐		☐	☐
	☐	☐		☐	☐

*Is the **UDC** free of damage, water, debris, and hazardous substances and all sensors located to detect a release at the earliest opportunity?* ☐ No UDC(s) at this facility

UDC ID	Yes	No	UDC ID	Yes	No
Dispenser 1/2	☑	☐	Dispenser 3/4	☑	☐
Dispenser 5/6	☑	☐	Dispenser 7/8	☑	☐
Dispenser 9/10	☑	☐	Dispenser 11/12	☑	☐
Dispenser 13/14	☑	☐	Dispenser 15/16	☑	☐
Dispenser 17/18	☑	☐	Dispenser 19/20	☑	☐
Dispenser 21/22	☑	☐	Dispenser 23/24	☑	☐
Dispenser 25/26	☑	☐	Dispenser 27/28	☑	☐

☐ Mechanical float mechanisms used in UDCs.

All answers marked "No" must be described by the designated UST operator in Section 3.

Underground Storage Tank
Designated UST Operator Visual Inspection Report

9. UST SYSTEM INSPECTION

List below and in Section 3 all containment sumps that have had a release detection alarm since the previous Designated UST Operator Inspection Report and have not been responded to by a qualified service technician. Containment sumps listed below require a visual inspection for damage, water, debris, hazardous substance, and proper sensor location.

*Is the **containment sump** free of damage, water, debris, and hazardous substances?*

Containment Sump ID	Yes	No	Containment Sump ID	Yes	No
L-5 Diesel Fill Sump	☑	☐		☐	☐
	☐	☐		☐	☐

Are all sensors in visually inspected **containment sumps** located to detect a release at the earliest opportunity?	☐	☐

*Is the **spill containment** free of damage, water, debris, and hazardous substances? Is the fill pipe free of obstructions? Is fill cap securely on the fill pipe?*

Spill Containment ID	Yes	No	Spill Containment ID	Yes	No
T-187	☑	☐	T-2 87	☑	☐
T-3 Diesel	☑	☐	T-4 87	☑	☐
T-5 87	☑	☐		☐	☐
	☐	☐		☐	☐
	☐	☐		☐	☐

*Is the **UDC** free of damage, water, debris, and hazardous substances and all sensors located to detect a release at the earliest opportunity?* ☐ No UDC(s) at this facility

UDC ID	Yes	No	UDC ID	Yes	No
Dispenser 29/30	☑	☐	Dispenser 31/32	☑	☐
Dispenser 33/34	☑	☐	Dispenser 35/36	☑	☐
Dispenser 37/38	☑	☐	Dispenser 39/40	☑	☐
Dispenser Diesel	☑	☐		☑	☐
	☑	☐		☑	☐
	☑	☐		☑	☐
	☑	☐		☑	☐

☐ Mechanical float mechanisms used in UDCs.

All answers marked "No" must be described by the designated UST operator in Section 3.

Underground Storage Tank
Designated UST Operator Visual Inspection Report

10. TESTING AND MAINTENANCE	Yes	No	NA	Date last performed
Has monitoring system certification been completed within the past 12 months?	☑	☐		10/5/2021
Has spill container testing been completed within the past 12 months?	☑	☐		10/5/2021
Has overfill prevention equipment inspection been completed within the past 36 months?	☑	☐	☐	4/27/2021
Has secondary containment testing been completed within the past 36 months?	☑	☐	☐	6/28/2021
Has tank tightness testing been completed within required timeframes?	☐	☐	☑	
Has line tightness testing been completed within the required timeframes?	☐	☐	☑	
Other Test / Maintenance: Overfill Retest	☑	☐	☐	7/21/2021
Other Test / Maintenance:	☐	☐	☑	
Other Test / Maintenance:	☐	☐	☑	

11. FACILITY EMPLOYEE TRAINING	Yes	No
Have all individuals performing facility employee duties received the required facility employee training within the past 12 months?	☑	☐

13. COMMENTS

This section may be used to record comments or observations that are not current compliance deficiencies.

All answers marked "No" must be described by the designated UST operator in Section 3.

(I.D. # 900450670) (D-1)

Dear Mr. Huang,

ATC Associates Inc. (ATC), on behalf of The Hertz Corporation (Hertz), is submitting this Additional Site Assessment Report for the above-referenced project located in Los Angeles, CA. This report includes a description of field activities and analytical results. Should you have questions or require additional information, please do not hesitate to contact us at (323) 517-9780.

Sincerely,
ATC Associates, Inc.

4.0 SITE BACKGROUND INFORMATION

4.1 SITE DESCRIPTION AND SURROUNDING LAND USE

The site is located at 9000 Airport Boulevard in Los Angeles California (**Figure 1 - Vicinity Map**) and is used for rental car operations. The site consists of five buildings, a car wash system, and refueling systems. The refueling system consists of gasoline underground storage tanks (USTs), one diesel UST, fourteen fuel dispenser islands, and underground distribution lines. The UST system is generally located in the western, central portion of the facility and is bordered to the west by Airport Boulevard and to the north by the main vehicle entryway into and out of the facility.

The site is composed of the two main fueling areas; the "eastern" fueling system and the "western" fueling system.

- The eastern system consists of two 12,000 gallon gasoline USTs and 10 dispenser islands. Each island is equipped with one dispenser, and the ten islands are covered by an overhead canopy. The USTs are located just south of the dispenser islands and are oriented north-south in a common excavation.

- The western system consists of one 20,000 gallon gasoline UST, one split UST consisting of 8,000 gallon gasoline and 12,000 gallon diesel, and four dispenser islands. Three gasoline USTs and one diesel UST are located just north of the dispenser islands and are oriented east-west in a common excavation. Each dispenser island in the western system is equipped with two to three dispensers, and are also covered by a metal overhead canopy structure. The two 20,000 gallon USTs were installed in 2005 when the previous USTs were removed as discussed below

Directly north and adjacent to both the eastern and western systems is an eight foot cinderblock wall, followed by a landscaped planter area immediately to the north, then the paved main entry into and out of the facility. To the west of the western system is an asphalt paved drive/parking area, followed by a traffic guard rail and an eight foot chain link fence, then a landscaped parkway with Airport Boulevard west. It should be noted that immediately to the west, and overhead of the canopy for the four dispenser islands related to the western system, exists a large V-shaped commercial billboard placed for viewing from Airport Boulevard. Toward the east and south of the systems are an asphalt paved parking area and maintenance areas for the Hertz facility, including car wash structures to the south and the main office/locker building for the facility to the southeast.

4.2 PRIOR SITE ASSESSMENT ACTIVITY

In July 2003, ATC directed the advancement of 21 soil borings (B-1 through B-21) to depths ranging from 15 feet to 30 feet below ground surface (bgs) at the locations shown on **Figure 2 - Site Plan**. The purpose of the assessment was to evaluate soil quality prior to pending UST upgrades associated with Senate Bill SB 989. Minor soil impact was detected in the vicinity of the eastern dispenser islands. Based on the results of soil samples collected in this area, it appears that this impact is contained and attributed to minor surface spills at the associated dispensers.

Petroleum hydrocarbons were detected in soil associated with the western fueling system. The hydrocarbon contaminated soil around the western system is confined to the UST area and around the dispenser island closest to those USTs. The horizontal extent of the hydrocarbon contamination in the western system was estimated to be 40 feet by 60 feet. At the completion of the initial soil characterization, the vertical extent was not known. The deepest area of impacted soil would be located along the western portion of the UST pit (between B-11 and B-14). It was in this area that an additional boring and monitoring well was recommended. The details of the soil assessment are found

in ATC's *Site Assessment Report*, dated August 25, 2003. A summary of soil sample analytical results is included in Table 5.

In September 2003, ATC directed and supervised the advancement of a soil boring and installation of one groundwater monitoring well (MW-1) at a location to the west of the western fueling system. The boring was advanced to a depth of 75 feet bgs and soil samples were collected at five foot intervals. ATC selected five soil samples between 45 and 63 feet bgs for laboratory analysis. Soil samples collected between 45 and 55 feet bgs contained the highest levels of MTBE (ranging between 1.3 to 48 micrograms per kilogram (mg/kg). The MTBE concentrations decreased between 55 feet and 63 feet bgs. Monitoring well MW-1 was constructed using 45 feet (surface to 45 feet bgs) of solid 4-inch diameter Schedule 40 PVC casing, and 30 feet of slotted (0.020-inch slots) 4-inch diameter Schedule 40 PVC well screen. Subsequent to its installation, the well was purged and developed.

A groundwater sample was collected during a September 2003 investigation from the onsite monitoring well MW-1 and the results indicated total petroleum hydrocarbons - gasoline range (TPHg) was detected at a concentration of 61 micrograms per liter (µg/L). TBA and MTBE were reported at concentrations of 2,500 µg/L, and 8,700 µg/L, respectively. All other analytes were below their respective detection limits. Depth to water was measured on September 16, 2003 at 71.25 feet below ground surface.

Between March 24 and April 4, 2005 ATC oversaw the excavation of impacted soil during the removal of four gasoline USTs and one diesel UST, and the associated dispenser islands at the western fueling area. Transportation manifests indicated that 1,000 tons of petroleum hydrocarbon-impacted soil was excavated, transported and disposed during the performance of excavation activities. Laboratory analytical results from soil samples collected during the excavation, indicated that TPHg, total petroleum hydrocarbons - diesel range (TPHd), benzene and methyl tert-butyl ether (MTBE) concentrations of up to 150, 720, 0.006, and 0.67 mg/kg, respectively, were still present in the remaining soil. The TPHg, TPHd, and benzene concentrations were below maximum soil screening levels established by the Los Angeles Region California Regional Water Quality Control Board (*Interim Site Assessment and Cleanup Guidebook*, May 1996), based on a depth to groundwater of approximately 53 feet as originally measured in well MW-1. Additionally, the benzene and MTBE concentrations were below the EPAs Preliminary Remediation Goals (PRGs) for industrial and residential soils. The remediation activities were presented in ATC's August 18, 2005 *Remedial Excavation Report* prepared for the facility.

A summary of the historical groundwater and soil analytical data is provided in **Table 3 and 5**.

4.3 SITE AND AREA LITHOLOGY

The site is located within the Los Angeles Basin in a physiographic unit called The El Segundo Sand Hills (California Department of Water Resources [DWR], 1961). The El Segundo Sand Hills extend from Ballona Gap south to Torrance and the Palo Verdes Hills, and approximately three to four miles inland from the ocean. Remnants of similar hills are found on the western edge of Ocean Park Plain. The sand hills consist of a narrow strip of active or recent dunes along the coast with older stabilized sand dunes inland.

The Site is located over the older stabilized Pleistocene-aged dunes called the Older Sand Dunes. Since deposition, the Older Dune Sand has been tilted, weathered, eroded, and further altered by cementation and leaching processes. Surface water percolates into the dunes from closed depressions after heavy rains, and some perched water bodies may occur. In several areas of the El Segundo Sand Hills, fossils and sedimentary features in excavations indicate that these older sand dunes were originally beach deposits which have been altered in form by wind action and deeply weathered. One to three miles inland, the older sand dunes overlie silts and clays which apparently were deposited on the landward side of the beach sands and which now form a portion of the Torrance Plain. Weathering

and associated stabilizing processes have removed all but the gross features of dune topography in the older sand dune area (DWR, 1961).

Based on soil boring data from previous investigations at the site (ATC, 2003c) and the current additional site assessment, site lithology from the ground surface to approximately 80 feet below ground surface (bgs) consists predominantly of fine to coarse sand interbedded with silt and clay. ATC identified four generalized soil units beneath the site:

1. an upper fine-grained unit from ground surface to approximately 15 to 20 feet bgs;
2. an upper sand unit beginning between 15 and 20 feet bgs and extending to approximately 30 ft bgs;
3. a lower fine-grained unit from approximately 30 feet bgs extending to between 50 and 55 feet bgs;
4. a lower sand unit from between approximately 50 and 55 feet bgs to at least 75 feet bgs.

Base on the DWR (1961) description of the regional units, it is likely that the units described above are within the undifferentiated sediments of Lakewood Formation.

Cross sections describing soil lithology and soil sample analysis are shown in **Figures 5, 6, and 7**.

4.4 AREA HYDROLOGY AND HYDROGEOLOGY

The Site lies within the West Coast (groundwater) Basin, which is part of the larger Los Angeles Coastal Basin (DWR, 1961). The physical boundaries of the West Coast Basin include the Ballona Escarpment to the north; the Rosecrans Hills to the east; and the Pacific Ocean to the west and south. The Palos Verdes Hills form the boundary of the West Coast Basin to the southeast. Water-bearing strata within the West Coast basin includes mid-Miocene to Oligocene-aged marine and continental sediments. The principal aquifers (water-producing formations) beneath the site include (in youngest to oldest stratigraphic order) the Old Dune Sand, Gage-Gardena, Lynwood, Silverado, and Sunnyside aquifers (DRW, 1961). Many of the aquifers located in the western portion of the West Coast Basin are not currently used as practical sources of potable water due to general degradation of the upper groundwater zone due to historical industrial activity, oil production, and seawater intrusion. The regional direction of groundwater flow is toward the south-southwest.

5.0 RECENT ASSESSMENT ACTIVITIES

ATC conducted a field investigation from June 19 through July 11, 2008. Site assessment activities were conducted per the request of the RWQCB in accordance with the *Workplan for Additional Soil and Groundwater Investigation* (ATC Associates, February 29, 2008) approved by the State Water Resources Control Board - Los Angeles Region on March 5, 2008.

Prior to commencement of field activities, ATC obtained well permits from the County of Los Angeles Water & Sewage/Mountain & Rural Programs Environmental Health Division. A copy of the well permit is included in **Appendix A**. The investigation activities are summarized in the following sections, and the field procedures are detailed in **Appendix B**. Also prior to drilling the well borings, ATC contacted Underground Service Alert (USA) and subcontracted with a private utility locator service to verify the presence of any utilities in the vicinity of the proposed well boring locations. Following the utility clearance, drilling was scheduled.

ATC contracted with Martini Drilling for the well installations. A CME-85 drilling rig equipped with 10-inch diameter hollow-stem augers was utilized to complete the monitoring wells. Additional details are provided below.

5.1 GROUNDWATER MONITORING WELL INSTALLATION

Based on the depth to water measurements and the analytical laboratory results of the July & September 2003 investigations, ATC selected the two locations for installation of groundwater monitoring wells. Our objective was to establish onsite locations for collecting groundwater data; including groundwater hydraulic head measurements and dissolved petroleum constituent concentrations. Between June 19 and 20, 2008, ATC installed two groundwater monitoring wells (MW-2 and MW-3) at the site using a hollow-stem auger drilling method. Groundwater monitoring well MW-2 was installed north of the eastern dispenser islands and MW-3 was installed east of the western dispenser islands. The borings were advanced to between 77 and 89 feet bgs and the monitoring wells were installed to total depths of 75 and 85 feet bgs with a 30 ft screen interval used for both wells. Well locations are shown on **Figure 2**. Well installation activities are summarized below and daily records are presented in **Appendix C**.

5.1.1 Soil Sampling

At each location, soil samples were collected at 5-foot intervals from ground surface to the total depth of the boring. The well borings were drilled, sampled and completed as a groundwater monitoring wells in general accordance with ATC's Standard Operating Procedures, which are included in **Appendix B**.

To obtain preliminary data regarding potential petroleum hydrocarbon-impacted soil, a representative sample was collected at each soil sampling location and field screened for volatile organic vapors in general accordance ATC's Standard Operating Procedures, which are included in **Appendix B**. Organic vapor meter readings were collected using a RAE Systems MiniRAE 2000 photo-ionization detector (PID) and were recorded in the boring logs.

All soil samples collected during the investigation were submitted for laboratory analysis. The details of the analysis are presented in **Section 5.1.5** and a discussion of the results is included in **Section 6.3.1**.

An ATC Geologist completed lithologic logs for each boring in general accordance with ASTM Method D 2488-90. ATC selected all soil samples from each boring for chemical analysis. Soil characteristics (observations of staining or odor), Unified Soil Classification System (USCS) designation, and depth to groundwater were recorded on the boring logs provided in **Appendix C**.

5.1.2 Well Specifications and Construction

Following soil sampling, groundwater monitoring wells were installed using 4-inch-diameter, Schedule 40 PVC casing. Groundwater monitoring well MW-2 was constructed using forty-five (45) feet casing, and thirty feet of well screen. The annulus of the screened portions of monitoring well MW-2 was backfilled with a #3 Monterey sand (or equivalent) filter pack from approximately 75 to 45 feet bgs. An approximate 2-foot layer of medium bentonite chips were placed on top of the upper filter pack and hydrated to form an annular seal. The remaining annular space to the bottom of the concrete seal (approximately 40 feet) was filled with bentonite grout.

Based upon groundwater measurements that were collected upon the completion of monitoring well MW-2 it was determined that groundwater was deeper than had been observed in the lithologic logging and as measured during previous monitoring events. It was determined to extend monitoring well MW-3 to 85 feet below ground surface to compensate for the increased depth to groundwater. The screened portions of monitoring well MW-3 was back filled with #3 Monterey sand (or equivalent) filter pack from 85 to 55 bgs. An approximate 2-foot layer of medium bentonite chips were placed on top of the upper filter pack and hydrated to form an annular seal. The remaining annular space of the bentonite chips seal was filled with bentonite grout.

Each well was completed with a two-foot deep surface seal was placed above the bentonite grout and a traffic-rated well box was placed within a circular two-foot diameter perimeter seal. A summary of the final monitoring well construction details is provided in **Table 1** and locations of the monitoring wells are shown on **Figure 2**.

5.1.3 Well Development

On July 3, 2008, ATC developed monitoring wells MW-2 and MW-3 using a combination of surging and bailing methods. Well MW-2 went dry after removing approximately one bailer (less than a casing volume), so the field personnel allowed the well to recharge. Again after removing approximately one casing volume, the well went dry. At this point ATC terminated well development with purged water relatively clear and free of suspended sediment. Well MW-3 went dry after removing approximately one casing volume, so the field personnel allowed the well to recharge. Again after removing approximately one casing volume, the well went dry. At this point ATC terminated well development with purged water relatively clear and free of suspended sediment.

After well development, ATC measured static depth to groundwater and the total well depth in each well. Depth to water was measured (in ft bgs) at 73.68, 74.21, and 76.40 for wells MW-1, MW-2, and MW-3, respectively. Total well depth was recorded in MW-1 at 77.00, MW-2 at 75.00, and in MW-3 at 85.00.

Groundwater purged during well development was contained in 55-gallon drums and remain onsite pending proper disposition. The groundwater monitoring wells were developed in general accordance with ATC's Standard Operating Procedures, which are included in **Appendix B**.

5.1.4 Well Surveying

On July 3, 2008, a California-licensed Professional land Surveyor surveyed the lateral locations and elevations of the newly installed groundwater monitoring wells. Due to an apparent lack of survey data for MW-1, ATC also had MW-1 surveyed. The location and elevation of measuring marks on the north side of each wellhead were surveyed to the nearest 0.01-foot by the licensed surveyor in order to more accurately determine the local groundwater flow direction beneath the site. Survey data is provided in both **Table 1** and **Appendix F**.

5.1.5 Laboratory Analysis

ATC submitted the soil samples to a State of California-certified laboratory, under chain-of-custody procedures. The laboratory analyzed a total of 31 soil samples for:

- TPHg using EPA Method 8260B;
- Ethanol (by direct injection) using EPA Method 8260B;
- BTEX (benzene, toluene, ethylbenzene, and xylenes) and fuel oxygenates methyl tert-butyl ether (MTBE), diisopropyl ether (DIPE), ethyl-t-butyl ether (ETBE), t-amyl methyl ether (TAME), and t-butyl alcohol (TBA) using EPA Method 8260B;
- VOCs (full list) using EPA Method 8260B.

The analytical results are summarized in **Table 4,** and a discussion is included in **Section 6.3.1**. The laboratory analytical reports are provided in **Appendix E**.

5.2 GROUNDWATER MONITORING

ATC gauged and sampled all groundwater monitoring wells (MW-1 through MW-3) at the site on July 11, 2008, after sitting undisturbed for eight days. Groundwater monitoring activities are summarized in the following sections, with well sampling logs included in **Appendix D**.

5.2.1 Downhole Parameter and Groundwater Level Measurements

On July 11, 2008, prior to commencement of purging and sampling activities, ATC gauged and inspected the monitoring wells for phase-separate hydrocarbons and depth to groundwater. During this event, the depth to groundwater in well MW-2 was recorded at 74.10 ft bgs. The depth to groundwater in well MW-3 was recorded at 79.70 ft bgs. The previously installed groundwater well MW-1 depth to water was recorded at 73.63 ft bgs. **Table 1** summarizes well identifications and casing elevations, **Table 2** includes groundwater depths and groundwater elevations. Well sampling records are provided in **Appendix D**.

5.2.2 Purging and Sampling Procedures

ATC used a low-flow purging method to sample the groundwater monitoring wells. During purging, ATC monitored temperature, pH, conductivity, turbidity, and DO. Purge volumes for the monitoring wells were 0.80 gallons (gals), 0.80 gals, and 15 gals for MW-1, MW-2, and MW-3, respectively. Also recorded were the times the purging was commenced and when completed, and when each parameter reading was recorded. Total time to purge the above-mentioned amounts was 30 minutes (mins), 35 mins, and 45 mins for MW-1, MW-2, and MW-3, respectively.

Following purging, groundwater samples were collected from the newly installed monitoring wells (MW-2 and MW-3) and the preexisting groundwater well (MW-1). Field parameter measurements were recorded on the well sampling records, which are included in **Appendix D**.

5.2.3 Laboratory Analysis

ATC submitted the groundwater samples to Enviro-Chem, Inc., a State of California ELAP-certified laboratory, under chain-of-custody procedures. Three groundwater samples were analyzed for:

- TPH - full carbon chain (gasoline, c4-c10; diesel, c11-c22; motor/heavy oils, c23-c35) using EPA Method 8015B;
- Ethanol (by direct injection) using EPA Method 8260B;
- BTEX (benzene, toluene, ethylbenzene, and xylenes) and fuel oxygenates methyl tert-butyl ether (MTBE), diisopropyl ether (DIPE), ethyl-t-butyl ether (ETBE), t-amyl methyl ether (TAME), and t-butyl alcohol (TBA) using EPA Method 8260B;
- VOCs (full list) using EPA Method 8260B.

The analytical results are discussed in **Section 6**; the laboratory analytical reports are provided in **Appendix E**.

5.3 WASTE MANAGEMENT

Drilling and sampling activities generated twenty-six 55-gallon drums of soil cuttings, which await final disposal. Soil analysis performed as part of the assessment will be used to characterize the waste for disposal. Copies of waste disposal manifests will be forwarded upon receipt by The Hertz Corporation. Soil cuttings were managed in accordance with the County of Los Angeles Regulations.

6.0 RESULTS

The cumulative findings of the additional site assessment described in **Section 5** are summarized below.

6.1 DRILLING OBSERVATIONS

Consistent with previous investigations at the site, ATC observed unconsolidated alluvial sediments with grain sizes ranging from clays to gravels. Drilling observations are presented on the boring logs in **Appendix C**. The lithologic units logged and described by ATC can generally be classified within the six soil units described in **Section 4.3**, above. ATC observed PID readings above typical background concentrations in the following:

- MW-2-55' with a PID reading of 327.0 part per million (ppm);
- MW-3-35' at 21.2 ppm;
- MW-3-45' at 24.3 ppm.

Soil samples were collected every 5-feet and all samples were analyzed. In the two monitoring wells, saturated soil was generally encountered from approximately 55 to 70 feet bgs, Due to high moisture content in the samples, water level was initially judged to be around 55-60 ft bgs, in monitoring well MW-2. Water levels dropped significantly after drilling to total depth, with static groundwater levels stabilizing at approximately 73-74 feet bgs.

Groundwater elevation was calculated for each well by subtracting the depth-to-water measurement from the surveyed casing elevation. The survey data for the groundwater monitoring wells is provided in **Appendix F**. Groundwater elevations from the monitoring wells gauged on July 11, 2008 were used to prepare a groundwater elevation contour map (**Figure 3**). The groundwater elevation contours indicate a southeastward flow direction with an approximate hydraulic gradient of 0.005 ft/ft.

6.2 MONITORING WELL OBSERVATIONS

No phase–separate hydrocarbons were observed in any of the wells. Depth-to-water measurements ranging from 73.63 to 79.70 bgs are presented in **Table 2**; groundwater elevation contours are depicted on **Figure 3**.

6.3 ANALYTICAL RESULTS

The analytical results for soil and groundwater samples collected during this field investigation are summarized in **Tables 2 and 3**. Groundwater analytical results are also shown on **Figure 3**. Analytical laboratory reports and chain-of-custody forms are provided in **Appendix E**.

6.3.1 Soil Analysis

During the additional site assessment activities, completed from June 19 through July 11, 2008, thirty-one (31) soil samples were submitted for analytical testing. None of the soil samples submitted for laboratory analysis were reported to contain petroleum hydrocarbon constituent concentrations above their respective laboratory practical quantitation limits (PQL), with the following exceptions:

- MW-2-55' - MTBE, TAME, and TBA concentrations of 5.67, 0.025, 2.70 milligrams per kilograms (mg/kg), respectively;
- MW-2-60' - MTBE and TBA concentrations of 0.188 and 0.051 mg/kg, respectively;
- MW-3-5' - MTBE concentration of 0.043 mg/kg

A summary of soil sample analytical results from the additional site assessment is provided in **Table 4**.

6.3.2 Groundwater Analysis

The groundwater sampling event for all monitoring wells (MW-1 through MW-3), took place on July 11th, 2008. None of the groundwater samples submitted for laboratory analysis were reported to contain petroleum hydrocarbon constituent concentrations above their respective laboratory PQL, with the following exceptions:

- MW-1 MTBE and acetone concentrations of 4.03 and 13.0 µg/l, respectively;
- MW-2 MTBE concentration of 2,740 µg/l

A summary of the groundwater sample analytical results is provided in **Table 2**, and historical groundwater analytical results are in **Table 3**. Laboratory reports and chain-of-custody documentation is included in **Appendix E**.

7.0 FINDINGS AND RECOMMENDATIONS

Based on the laboratory analytical results, it is ATC's opinion that an additional monitoring well is recommended in the area of monitoring well MW-2 based on the elevated concentrations of MTBE. Additional assessment is also recommended in the area of MW-1 due to the elevated levels of MTBE observed in the soil samples at 50 feet. The groundwater samples collected from monitoring well MW-1 and MW-2 indicated detectable concentrations of petroleum hydrocarbon and/or fuel oxygenate constituents. The MTBE and TAME levels in monitoring well MW-1 has decreased significantly. Based on the groundwater monitoring results for this quarter additional quarterly monitoring is recommended.

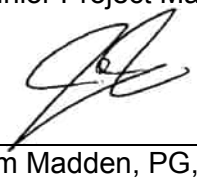
8.0 LIMITATIONS

Our professional services have been performed, our findings obtained, and our recommendations prepared in accordance with customary principles and practices in the fields of environmental science and engineering. This warranty is in lieu of all other warranties either expressed or implied. This company is not responsible for the independent conclusions, opinions, or recommendations made by others based on the records review, site inspection, field exploration, and laboratory test data presented in this report.

It should be noted that all surficial environmental assessments are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and site evaluation. For these types of evaluations, it is often necessary to use information prepared by others and ATC cannot be responsible for the accuracy of such information. In addition, the passage of time may result in a change in the environmental characteristics at this site and surrounding properties. This report does not warrant against future operations or conditions, nor does it warrant operations or conditions present of a type or at a location not investigated. This report is not a regulatory compliance audit and is not intended to satisfy the requirements of any state, federal, or local real estate transfer laws.

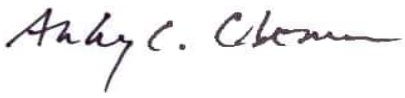
It must be noted that no investigation can absolutely rule out the existence of any hazardous materials at a given site. This assessment has been based upon prior site history, observable conditions, and the subsurface soil sampling described in this report. Existing hazardous materials and contaminants can escape detection using these methods.

This report is for the use and benefit of, and may be relied upon by, Hertz, and any affiliates, and third parties authorized in writing by Hertz and ATC, including the lender(s) in connection with a secured financing of the property, and their respective successors and assigns. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the property that were not discovered within the authorized scope of the assessment.



ATC makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either express or implied. Unless otherwise agreed upon in writing by ATC and a third party, ATC's liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall be limited to a maximum of $100,000.

9.0 SIGNATURES



This report was prepared by the staff of ATC Associates, Inc., under the supervision of the Senior Geologist whose signature appears hereon. The findings, recommendations, specifications, or professional opinions are presented within the limits described by the client, in accordance with generally accepted practices, using the degree of skill and care ordinarily exercised by environmental consultants under similar circumstances. No warranty is expressed or implied.

TPH-g - Total Petroleum Hydrocarbons by EPA Test Method 8260 for gasoline
mg/kg - Milligrams per kilogram
MTBE - Methyl tert-butyl ether by EPA Test Method 8260
TAME - tert-Amyl methyl ether by EPA Test Method 8260
ETBE - Ethyl tert-Butyl Ether by EPA Test Method 8260
TBA - t-Butyl Alcohol by EPA Test Method 8260
DIPE - Di-isopropyl Ether by EPA Test Method 8260
Ethanol - By EPA Test Method 8260
VOCs - Volatile Organic Compounds by EPA Test Method 8260
ND - No detectable concentrations above the laboratory Practical Quantitation Limit (PQL)
<1.0 - Less than the laboratory PQL shown

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Site History:

FROM THE CORPS PUBLIC GIS SYSTEM: Property Description - The site was located on 5.27 acres 10 miles southwest of downtown Los Angeles, in the proximity of the Los Angeles International Airport. A report dated 18 December 1975 indicated that 3.12 acres of the 4.27 acre parcel were disposed to the General Services Administration (GSA) and then assigned to the Health, Education, and Welfare Department who transferred it to Northrop University by quit claim deed dated 1 August 1977. The remaining 1.15 acres of the 4.27 acres were purchased by Northrop University in 1984 through a government auction. The 1-acre parcel lease was terminated 25 October 1966 and the site is currently under private ownership.

Property History - The site was used by the Air Force between 1955 and 1975 as a printing plant and as headquarters for the Space and Missile Systems Organization.

Violations

Violation Date:	10/07/2015	**Violation Source:**	CERS
Violation Program:	APSA	**Violation Division:**	Los Angeles City Fire Department
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)		
Violation Notes:			

Returned to compliance on 06/28/2016.

Violation Description:

1. Failure to prepare a SPCC plan that follows a sequence of rule and/or cross-reference.
2. Failure of the owner or operator of a facility subject to this part to prepare a SPCC plan in accordance with good engineering practices.
3. Failure to have the full approval of management at a level of authority to commit the necessary resources to fully implement the SPCC plan.
4. Failure to prepare the Plan in writing. AND
5. Failure to prepare a SPCC plan that addresses additional procedures/methods/equipment not yet fully operational.

Violations

Violation Date:	05/14/2019	**Violation Source:**	CERS

Violation Program: APSA ***Violation Division:*** Los Angeles City Fire Department
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 12/04/2019. OBSERVATION: Failure to maintain SPCC plan onsite if facility is manned at least four (4) hours per day, or at the nearest field office if the facility is not so attended. CORRECTIVE ACTION: Maintain SPCC plan onsite If facility staffed 4 hrs/day, or at the nearest field office if the facility is not so attended.

Violation Description:

Failure to maintain a complete copy of the SPCC Plan at the facility if the facility is normally attended at least four hours per day, or at the nearest field office if the facility is not so attended.

Violation Program: UST ***Violation Division:*** Los Angeles City Fire Department
Citation: 23 CCR 16 2712(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(i)
Violation Notes:

Returned to compliance on 06/28/2016. OBSERVATION: Owner/Operator did not submit and/or maintain an approved response plan. CORRECTIVE ACTION: Submit and maintain an approved response plan.

Violation Description:

Failure to submit, obtain approval, or maintain a complete/accurate response plan.

Violations

Violation Date: 10/04/2016 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Los Angeles City Fire Department
Citation: 23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Notes:

Returned to compliance on 02/02/2018. OBSERVATION: The [87 FILL SUMP SENSOR/WEST] stayed in alarm when tested and the only way it was able to get out of alarm was manually. Float would not drop down to start position. Sensor must be fully functional when tested to ensure continuous monitoring of the tank system. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. CORRECTIVE ACTION: Correct immediately by having a properly licensed, trained, and certified contractor replace the failed component with a functional component (LG 113-x listed, if applicable) and obtain a permit within 1 business day from the CUPA. If the failed component can't be replaced immediately, there is a possibility that the [87 Fill] UST system may be red tagged to prevent fuel inputs.

Violation Description:

Failure of the double-walled pressurized piping to be continuously monitored with a system that activates an audible and visual alarm or stops flow at the dispenser when a leak is detected.

Eval Division: Los Angeles City Fire Department
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Consent to enter, inspect and take photographs was given by: Eric Aleman The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS and field verified. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA **** Annual submission of a Hazardous Materials Business Plan into CERS is required between January 1 and March 1 of every year. Please remember that any change in inventory of greater than 100 percent will require new submission within 30 days of that change. As a reminder, you must complete all [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

Inspector Husband LAFD, on site this date to conduct routine inspection of underground storage tank. Consent to enter, inspect and take photographs was given on this date by Chaeles Miura. Monitoring system certification (was) conducted at this time. Monitoring certification was performed by (Brandon McDaniel of Jones Covey). Tester provided the following certifications: ICC: 8714802 Exp. 2/5/2021 Veeder-Root: B4 8917 Exp 9/27/21 VMI: 4180 Exp. 10/2/19 Other: The UST monitoring panel showed all functions normal. The monitoring set up and alarm history were provided for review. The sumps and UDCs were opened for inspection and the sensors were observed positioned to detect a leak at the earliest opportunity. The spill buckets were also visually inspected. The Monitoring Plan was compared to the equipment onsite. The operation of the UST system was compared to the conditions of the operating permit. Property Owner: The Hertz Corporation Tank Owner/ [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

Second Notice of Violation Inspection Report Indicated previously in this report are violations, originally issued on 03/08/2019, that have not been resolved by the original COMPLY BY date. These violations have been re-issued and the violation class upgraded. Review and correct all violations indicated in this report, on or before the new COMPLY BY date associated with each violation. Failure to resolve these violations will result in this facility being subject to formal enforcement. NOTE: The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. The California Health and Safety Code (CHAPTER 6.67 SECTION 25270) requires that facilities meeting either of the following requirements be added to the APSA (Aboveground Petroleum Storage Act) program and comply with the [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Due to Covid, the inspection report is not signed by the business representative.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 04/01/2019
Violations Found: Yes
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: Los Angeles City Fire Department
Eval Program: APSA
Eval Source: CERS
Eval Notes:

On site to conduct a re-inspection of the APSA program. On arrival I met with Mr. Brian Burke. He was informed that the LAFD did not have any report status on deficiencies. Mr. Burke indicated that he still had no updates since their consultant took over the issues. Issues still outstanding: 1. No SPCC plan certified by a professional engineer 2. No employee training records for the APSA prom 3. No AST tank inspections or tank integrity testing. ; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 01/10/2019
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Los Angeles City Fire Department
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

"Consent to enter, inspect and take photographs was given by:Joe Buccheri. The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS and field verified. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA **** Annual submission of a Hazardous Materials Business Plan into CERS is required between January 1 and March 1 of every year. Please remember that any change in inventory of greater than 100 percent will require new submission within 30 days of that change. As a reminder, you must complete all the [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violations

Violation Date: 01/31/2022 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Los Angeles City Fire Department
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Notes:

Returned to compliance on 03/18/2022. Review, update and resubmit the site map in CERS to include the following required missing elements; Add storm/sewer drains to the map. You can download detailed SITE MAP INSTRUCTIONS at https://www.lafd.org/fire-prevention/cupa/hazardous-materials

Violation Description:

Failure to complete and electronically submit a site map with all required content.

Violations

Violation Date: 01/31/2022 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Los Angeles City Fire Department
Citation: HSC 6.95 25508(a)(3 - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3
Violation Notes:

Returned to compliance on 03/18/2022. Review, update and resubmit the Business Owner/Operator Identification page in CERS. Please correct the following; Correct the Environmental Contact to a facility representative. It can NOT be a 3rd Party Contractor. Bobby Canales is listed as the ENV Contact for the building across the street. .

Violation Description:

Failure to report program data electronically.

Violations

Violation Date: 01/31/2022 ***Violation Source:*** CERS
Violation Program: APSA ***Violation Division:*** Los Angeles City Fire Department
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 03/18/2022. OBSERVATION: Failure to provide the appropriate general containment/diversionary structures/equipment for the following: bulk storage containers, piping and related appurtenances, and transfer areas. Table 2-5 lists Actions that needed to be taken to provide proper containment. No completion date was indicated for 3 of the action items. All items were listed as either requiring immediate correction or no later than 8/30/19. Spill kits were NOT observed in the locations listed. The damaged concrete berm did not look to be repaired. CORRECTIVE ACTION: Immediately complete the action items listed in table 2-5 or provide documentation that the items have been corrected.

Violation Description:

Failure to provide appropriate secondary containment and/or diversionary structures or equipment for the following: bulk storage containers, mobile or portable containers, oil-filled equipment, piping and related appurtenances, mobile refuelers or non-transportation-related tank cars, and transfer areas, equipment and activities and ensure that the entire containment system, including walls and floor, are capable of containing oil and constructed so that any discharge will not escape the containment system before cleanup occurs.

Violations

Violation Date: 01/31/2022 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Los Angeles City Fire Department
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Notes:

Returned to compliance on 03/18/2022. Review, update and resubmit the Hazardous Materials Inventory into CERS to include all hazardous material stored in a capacity equal to or greater than 55 gallons of liquid, 200 cubic feet of compressed gas or 500 pounds in weight of a solid. Please correct the following; The facility inventory lists 3000 gallons of diesel fuel. The APSA submittal lists 3350. Confirm the correct volume and either amend the chemical inventory or APSA submittal so they match

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Evaluations

Eval Date: 01/31/2022
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Los Angeles City Fire Department
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Consent to enter, inspect and take photographs was given by: Bobby Canales The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS and field verified. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA **** Annual submission of a Hazardous Materials Business Plan into California Environmental Reporting System (CERS) is required between January 1 and March 1 of every year. Per L.A.M. C. 57.121.3.5, failure to submit the required hazardous material business plan (HMBP) information annually into [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 03/18/2022
Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: Los Angeles City Fire Department
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan sections were reviewed in CERS today and the facility is found to have complied with all Hazardous Materials Business Plan violations originally issued on 1/31/22. CERS has been ACCEPTED and all NOVs and NTCs have been cleared. ; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 03/18/2022
Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: Los Angeles City Fire Department
Eval Program: APSA
Eval Source: CERS
Eval Notes:

A spill kit was provided for the emergency generator located at 9035 Bellanca Ave. All open violations have been cleared.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 01/31/2022
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Los Angeles City Fire Department
Eval Program: APSA
Eval Source: CERS
Eval Notes:

Consent to enter, inspect, and take photographs was given by: Bobby Canales Documents uploaded to CERS were reviewed and field verified. The Spill Prevention Control and Countermeasure plan and related inspection and testing logs were reviewed on site. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. The California Health and Safety Code (CHAPTER 6.67 SECTION 25270) requires that facilities meeting either of the following requirements be added to the APSA (Aboveground Petroleum Storage Act) program and comply with the regulations set forth in the CHSC. Storage of any liquid petroleum based product stored in above ground 55 [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

RB Case No: 1325B
Local Case No:
Begin Date: 8/13/1992
Lead Agency: LOS ANGELES RWQCB (REGION 4)
Local Agency:
CUF Case: NO
CalEnvScreen Score:
EPA Region: 9
Qty Rlsd Gallons:
Potential COC: Trichloroethylene (TCE), Per- and Polyfluoroalkyl Substances (PFAS), Gasoline, Total Petroleum Hydrocarbons (TPH)
How Discovered: Other Means
Stop Method:
Stop Description:
Case Worker: CMC
Military DoD Site: No
Leak Reported Dt: 1992-08-19 00:00:00
No Further Action Dt:
Potential Media of Concern: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
How Discovered Description:
Calwater Watershed Name: Dominguez Channel (411.01)

DWR GW Subbasin Name: Coastal Plain Of Los Angeles - West Coast (4-011.03)
Disadvantaged Community: Severely Disadvantaged Community
Coordinate Source: Google Map Move
Discharge Cause: Spill
Discharge Source: Other
Facility Project Sub Type:
Calenviroscreen 3 Score: NA
Calenviroscreen 4 Score: NA
File Location: Regional Board
Site History:

Case transferred from Underground Storage Tank (UST) Pprogram to Site Cleanup Program (SCP) for regional Board oversight as requested by Los Angeles World Airports letter dated November 17, 2015.

WDR File No:
WDR Order No:
File Location: REGIONAL BOARD
User Defined Beneficial Use:
Designated Beneficial Use: MUN, AGR, IND, PROC, 4 - Note: No MYN underlying ports of LA, LBeach - Note: No MYN underlying ports of LA, LBeach, or ElSug
Designated Beneficl Use Desc: Municipal and Domestic Supply, Agricultural Supply, Industrial Service Supply, Industrial Process Supply, 4 - Note: No MYN underlying ports of LA, LBeach - Note: No MYN underlying ports of LA, LBeach, or ElSug
Project Oversight Agencies:
Report Link: https://geotracker.waterboards.ca.gov/profile_report?global_id=T0603701065
Cleanup Status Detail: OPEN - ELIGIBLE FOR CLOSURE AS OF 10/12/2021
Potential COC: GASOLINE, PER- AND POLYFLUOROALKYL SUBSTANCES (PFAS), TOTAL PETROLEUM HYDROCARBONS (TPH), TRICHLOROETHYLENE (TCE)
Potential Media of Concern: OTHER GROUNDWATER (USES OTHER THAN DRINKING WATER), SOIL, SOIL VAPOR
Groundwater Monitoring Freq: # OF WELLS MONITORED - SEMI-ANNUALLY : 4
DWR GW Sub Basin: Coastal Plain Of Los Angeles - West Coast (4-011.03)
CalWater Watershed Name: Dominguez Channel (411.01)
Post Closure Site Management:
Future Land Use:
Cleanup Oversight Agencies: LOS ANGELES RWQCB (REGION 4) (LEAD) - CASE #: 1325B
CASEWORKER: CURT M. CHARMLEY
LOS ANGELES, CITY OF
Cleanup History Link: https://geotracker.waterboards.ca.gov/profile_report_include?global_id=T0603701065&tabname=regulatoryhistory
Site History:

Case transferred from Underground Storage Tank (UST) Pprogram to Site Cleanup Program (SCP) for regional Board oversight as requested by Los Angeles World Airports letter dated November 17, 2015.

Sites from GeoTracker Search - Cleanup Action Report (as of Oct 17, 2022)

RB Case No: 1325B
Local Case No:
Begin Date: 8/13/1992
CUF Case: NO
CalEnvScreen Score: NA
EPA Region: 9
Qty Released Gallons:
Potential COC: Trichloroethylene (TCE), Per- and Polyfluoroalkyl Substances (PFAS), Gasoline, Total Petroleum Hydrocarbons (TPH)
How Discovered: Other Means
Stop Method:
Stop Description:
Caseworker: CMC
Military DoD Site: No
Leak Reported Dt: 1992-08-19 00:00:00
No Further Action Dt:
Lead Agency: LOS ANGELES RWQCB (REGION 4)
Local Agency:
Potential Media of Concern: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
How Discovered Desc:
Calwater Watershed Name: Dominguez Channel (411.01)
DWR GW Subbasin Name: Coastal Plain Of Los Angeles - West Coast (4-011.03)
Disadvantaged Community: Severely Disadvantaged Community
Coordinate Source: Google Map Move
Discharge Cause: Spill
Discharge Source: Other
File Location: Regional Board
Site History:

Case transferred from Underground Storage Tank (UST) Pprogram to Site Cleanup Program (SCP) for regional Board oversight as requested by Los Angeles World Airports letter dated November 17, 2015.

Violations

Violation Date: 02/23/2018 **Violation Source:** CERS
Violation Program: APSA **Violation Division:** Los Angeles City Fire Department
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 09/05/2019.

Violation Description:

"Failure to test or inspect each aboveground container for integrity based on industry standards as discussed in the SPCC Plan:
1. On a regular schedule.
2. After making material repairs.
3. Use non-destructive testing.
4. Inspect each container's supports, foundations, and outside for signs of deterioration, discharges, or accumulation of oil inside diked areas."

Violations

Violation Date: 02/23/2018 **Violation Source:** CERS
Violation Program: APSA **Violation Division:** Los Angeles City Fire Department
Citation: HSC 6.67 25270.4.5 (a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5 (a)
Violation Notes:

Returned to compliance on 03/23/2018.

Violation Description:

Failure to maintain adequate records of drainage when there is drainage of uncontaminated rainwater from liked areas into a storm drain or open watercourse; for example, records required under NPDES permit.

Violations

Violation Date: 02/23/2018 **Violation Source:** CERS
Violation Program: APSA **Violation Division:** Los Angeles City Fire Department
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 09/05/2019.

Violation Description:

Failure to adequately discuss in the SPCC Plan facility drainage or drainage controls such as secondary containment around containers and other structures, equipment, and procedures for the control of a discharge.

Violations

Violation Date: 04/15/2019 ***Violation Source:*** CERS
Violation Program: APSA ***Violation Division:*** Los Angeles City Fire Department
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 05/15/2019. OBSERVATION: Failure to complete and maintain at the facility the Substantial Harm Criteria certification form when the owner or operator determined that the facility could not be reasonably expected to cause substantial harm to the environment. CORRECTIVE ACTION: Complete and maintain at the facility the Substantial Harm Criteria certification form.

Violation Description:

Failure to complete and maintain at the facility the Substantial Harm Criteria certification form when owner or operator determines that the facility could not be reasonably expected to cause substantial harm to the environment.

Violations

Violation Date: 08/31/2015 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 10/08/2015. OBSERVATION: All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Observed four 55-gallon drums of oil--related waste with hazardous waste label affixed, however, missing the accumulation start date. CORRECTIVE ACTION: Ensure all hazardous waste labels affixed to containers are marked with all the required information, with specific start date of accumulation.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 02/23/2018 ***Violation Source:*** CERS
Violation Program: APSA ***Violation Division:*** Los Angeles City Fire Department
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 09/05/2019.

Violation Description:

Failure to ensure the following before allowing drainage of uncontaminated rainwater from diked area into a storm drain or discharge of an effluent into an open watercourse, lake, or pond, bypassing the facility treatment system:

1. Keep bypass valve normally sealed closed.

2. Inspect the retained rainwater

3. Open and reseal bypass valves under responsible supervision.

Violations

Violation Date: 04/15/2019 ***Violation Source:*** CERS
Violation Program: APSA ***Violation Division:*** Los Angeles City Fire Department
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 09/05/2019. OBSERVATION: SPCC plan has not been prepared in accordance with the template in Appendix G as required for a Tier I facility. CORRECTIVE ACTION: Prepare the faciltiy SPCC plan using the template in Appendix G pursuant to 40 CFR 112.6(a)(3).

Violation Description:

Failure to prepare a Spill Prevention, Control, and Countermeasures (SPCC) Plan.

Violations

Violation Date: 02/23/2018 ***Violation Source:*** CERS
Violation Program: APSA ***Violation Division:*** Los Angeles City Fire Department
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 03/23/2018.

Violation Description:

Failure to comply with one or more of the following requirements:
1. Have record of inspections and integrity tests signed by the appropriate supervisor or inspector.
2. Keep written procedures and records of inspections and integrity tests for at least three years.
3. Keep comparison records.

Violations

Violation Date: 02/23/2018 ***Violation Source:*** CERS
Violation Program: APSA ***Violation Division:*** Los Angeles City Fire Department
Citation: HSC 6.67 25270.6(a)(1), 25270.6(a)(2) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.6(a)(1), 25270.6(a)(2)
Violation Notes:

Returned to compliance on 03/23/2018.

Violation Description:

Failure to submit a tank facility statement on or before January 1 annually unless a current Business Plan has been submitted.

Violation Date: 02/23/2018 ***Violation Source:*** CERS
Violation Program: APSA ***Violation Division:*** Los Angeles City Fire Department
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 03/23/2018.

Violation Description:

Failure to provide the following training to all oil-handling personnel:

1. Operation and maintenance of equipment to prevent discharges.

2. Discharge procedure protocols.

3. Applicable pollution control laws, rules, and regulations.

4. General facility operations.

5. Contents of the SPCC Plan.

Violations

Violation Date: 08/31/2015 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Notes:

Returned to compliance on 10/08/2015. OBSERVATION: All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Observed four 55-gallon drums of oil--related waste with hazardous waste label affixed, however, missing the accumulation start date. CORRECTIVE ACTION: Ensure all hazardous waste labels affixed to containers are marked with all the required information, with specific start date of accumulation.

Violation Description:

Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.

Violations

Violation Date: 02/23/2018 ***Violation Source:*** CERS

Eval Division: Los Angeles City Fire Department
Eval Program: APSA
Eval Source: CERS
Eval Notes:

This facility, 9130 Bellanca Ave, was issued a Class II forthwith violation on 1/31/22 for not implementing the following; Violation Comments: OBSERVATION: Failure to provide the appropriate general containment/diversionary structures/equipment for the following: bulk storage containers, piping and related appurtenances, and transfer areas. Table 2-5 lists Actions that needed to be taken to provide proper containment. No completion date was indicated for 3 of the action items. All items were listed as either requiring immediate correction or no later than 8/30/19. Spill kits were NOT observed in the locations listed. No berms or spill booms were observed outside of the generator. CORRECTIVE ACTION: Immediately complete the action items listed in table 2-5 or provide documentation that the items have been corrected. The facility has not responded to this violation as of 3/18/22. A status inquiry was emailed to Bobby Canales with Merle Norman. No response has [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Location Longitude:	-118.385866

Violation/Evaluation Summary

Note: NO RECORDS: As of Nov 2022, there are no Compliance Monitoring and Enforcement (violation) records associated with this facility (EPA ID).

Handler Summary

Importer Activity:	No
Mixed Waste Generator:	No
Transporter Activity:	No
Transfer Facility:	No
Onsite Burner Exemption:	No
Furnace Exemption:	No
Underground Injection Activity:	No
Commercial TSD:	No
Used Oil Transporter:	No
Used Oil Transfer Facility:	No
Used Oil Processor:	No
Used Oil Refiner:	No
Used Oil Burner:	No
Used Oil Market Burner:	No
Used Oil Spec Marketer:	No

Violations

Violation Date: 04/16/2019
Violation Source: CERS
Violation Program: APSA
Violation Division: Los Angeles City Fire Department
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 08/05/2019. OBSERVATION: Failure to implement SPCC. CORRECTIVE ACTION: Implement SPCC.

Violation Description:

Failure to implement the SPCC Plan.

Violations

Violation Date: 11/16/2015 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Los Angeles County Fire Department
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Notes:

Returned to compliance on 01/28/2016. OBSERVATION: All hazardous waste containers shall be closed at all times except when adding or removing waste. Observed 5-gallon bucket of unknown material stored within secondary containment of 400-gallon used oil tank. Per operator, it is likely oily water collected from compressor. Also observed 8-gallon bucket of MaxiLube Red mixed with water uncovered stored upon secondary containment grate of 180-day container storage area. CORRECTIVE ACTION: Immediately close these containers and ensure all hazardous waste containers are closed when not adding or removing waste.

Violation Description:

Failure to properly close hazardous waste containers when not in active use.

Violations

Violation/Evaluation Summary

Note: NO RECORDS: As of Nov 2022, there are no Compliance Monitoring and Enforcement (violation) records associated with this facility (EPA ID).

Handler Summary

Importer Activity: No

Mixed Waste Generator:	No
Transporter Activity:	No
Transfer Facility:	No
Onsite Burner Exemption:	No
Furnace Exemption:	No
Underground Injection Activity:	No
Commercial TSD:	No
Used Oil Transporter:	No
Used Oil Transfer Facility:	No
Used Oil Processor:	No
Used Oil Refiner:	No
Used Oil Burner:	No
Used Oil Market Burner:	No
Used Oil Spec Marketer:	No

Waste Code Description: BARIUM

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: 725
Waste Code Description: Liquids with mercury > 20 mg/l

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Handler Details

Sequence No: 1

Receive Date: 20220302
Handler Name: JOHNSON & JOHNSON CONSUMER INC.
Source Type: Deactivation
Federal Waste Generator Code: N
Generator Code Description: Not a Generator, Verified

Hazardous Waste Handler Details

Sequence No: 4
Receive Date: 20060220
Handler Name: NEUTROGENA CORPORATION
Source Type: Annual/Biennial Report
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator

Waste Code Details

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 311
Waste Code Description: Pharmaceutical waste

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: P030
Waste Code Description: CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Handler Details

Waste Code Description: MERCURY

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19990707
Handler Name: NEUTROGENA CORP
Source Type: Notification
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: F005

Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Handler Details

Sequence No: 3
Receive Date: 20040226
Handler Name: NEUTROGENA
Source Type: Annual/Biennial Report
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator

Waste Code Details

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: P030
Waste Code Description: CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE

CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Violations

Violation Date:	02/17/2021	***Violation Source:***	CERS
Violation Program:	UST	***Violation Division:***	Los Angeles City Fire Department
Citation:	23 CCR 16 2666(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2666(f)		
Violation Notes:			

Returned to compliance on 03/30/2021.

Violation Description:

Failure of the functional line leak detector (LLD) to monitor at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 pounds per square inch and restrict or shut off the flow of product through the piping or triggers a visual and audible alarm.

Violations

Violation Date:	02/21/2018	***Violation Source:***	CERS
Violation Program:	UST	***Violation Division:***	Los Angeles City Fire Department

Citation: 23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Notes:

Returned to compliance on 02/21/2018. OBSERVATION: The [Dispenser 15/16 and transtion sump] sensor failed to activate an audible and visual alarm when tested to ensure continuous monitoring of the tank system. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. The [transition] sensor failed to activate an audible and visual alarm when tested to ensure continuous monitoring of the tank system. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. The sensor was replaced and retested during the inspection. The [208] in the [UDC #15/16] sump failed to stop the flow of product at the dispenser when tested. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. The sensor was replaced and retested during the [Truncated]

Violation Description:

Failure of the leak detection equipment to have an audible and visual alarm as required.

Violations

Violation Date: 03/09/2016 ***Violation Source:*** CERS

Citation: 23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Notes:

Returned to compliance on 02/17/2021. OBSERVATION: The [transition sump] sensor failed to activate an audible and visual alarm when tested to ensure continuous monitoring of the tank system. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. The sensor was replaced and retested during the inspection. * A 'like for like " permit was issued in the field

Violation Description:

Failure of the leak detection equipment to have an audible and visual alarm as required.

Violations

Violation Date: 02/23/2022 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Los Angeles City Fire Department
Citation: HSC 6.7 25299(a)(9) - California Health and Safety Code, Chapter 6.7, Section(s) 25299(a)(9)
Violation Notes:

Returned to compliance on 03/04/2022. OBSERVATION: Owner/Operator tampered with and/or disabled leak detection equipment in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak. CORRECTIVE ACTION: Owner/Operator shall not disable or tamper with monitoring equipment. Repair/replace equipment so that it functions per manufacturer's specifications. Submit verification. **Dispenser15/16 has been in alarm multiple times due to low or no brine. Adding Brine to the Interstice interferes with the UST system's ability to detect a leak at the earliest opportunity, and will be considered tampering if the purpose of adding the brine is for stopping the alarm and not troubleshooting. CORRECTIVE ACTION: Testing of the UDC interstitial space (Interstice) per manufacturer guidelines is required to be conducted FORTHWITH to identify the source of the Brine loss in the UDC 15-16 Interstice and that a permit from LAFD Plan Check will be required to repair the source [Truncated]

Violation Description:

Leak detection equipment disabled or tampered with in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak.

CLEARED NOV AND REVIEWED CERS. SINCE BRINE WAS ADDED BY ICC CERTIFIED TECH, THERE IS NO TAMPERING. ADDING BRINE WAS PART OF TROUBLESHOOTING. SITE WILL STILL NEED TO FIND OUT WHERE IS BRINE GOING. Please find below the summary of the actions taken to address the low brine issue at the Enterprise facility referenced above: On 3/24/2022 Charles E. Thomas Co (CET) arrived at the facility to review the low brine alarm, perform pressure testing, and perform vacuum testing. The results of the review and tests are summarized below: Inspected UDC 15/16 – Found brine reservoir had a hose broken and not connected to bottom fitting Dispenser plumbing removed to gain access to UDC Performed Pressure and Vacuum test for an hour – ALL PASSED Installed new hose from reservoir to the bottom fitting on the UDC New brine was added to UDC We will continue monitoring the UDC to ensure that the repair completed by CET solved the issue.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violations

Violation Date: 09/16/2022 **Violation Source:** CERS
Violation Program: HMRRP **Violation Division:** Los Angeles City Fire Department
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Notes:

Review, update and resubmit the Site Map in CERS to include the following required missing elements; Indicate the Hazardous Materials Storage and Handling areas and the map. This should include the Chemical Storage Room, The mobile and fixed emergency generator, the Oil and used oil ASTs, the welding shop, the 3 Breakthrough storage locations and the chemicals in the car wash area. You can download detailed SITE MAP INSTRUCTIONS at https://www.lafd.org/fire-prevention/cupa/hazardous-materials

Violation Description:

Failure to complete and electronically submit a site map with all required content.

Violations

Violation Date: 09/16/2022 **Violation Source:** CERS
Violation Program: APSA **Violation Division:** Los Angeles City Fire Department
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

OBSERVATION: Failure to address in the SPCC Plan the type of oil and storage capacity for each fixed container, or, for portable and/or mobile containers, either provide the type of oil and storage capacity, or an estimate of the potential number of portable or mobile containers, the types of oil, and anticipated storage capacities. A trailer mounted emergency generator is stored on site but not included in the SPCC plan. CORRECTIVE ACTION: Amend the SPCC Plan to properly address the trailer mounted emergency generator.

Violation Description:

Failure to address in the SPCC Plan the type of oil and storage capacity for each fixed container.
For mobile or portable containers, either provide the type of oil and storage capacity, or an estimate of the potential number of mobile or portable containers, the types of oil, and anticipated storage capacities.

Violations

Violation Date: 09/16/2022 **Violation Source:** CERS
Violation Program: HMRRP **Violation Division:** Los Angeles City Fire Department
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Notes:

Review, update and resubmit the Hazardous Materials Inventory into CERS to include all hazardous material stored in a capacity equal to or greater than 55 gallons of liquid, 200 cubic feet of compressed gas or 500 pounds in weight of a solid. Please correct the following; -Increase the MAX DAILY AMOUNT of Breakthrough to 330 gallons -Add the volume of Diesel stored in the portable emergency generator to the MAX DAILY AMOUNT of Diesel

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Evaluations

Eval Date: 09/16/2022
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Los Angeles City Fire Department
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Consent to enter, inspect and take photographs was given by: Ron White The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS and field verified. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA **** Annual submission of a Hazardous Materials Business Plan into California Environmental Reporting System (CERS) is required between January 1 and March 1 of every year. Per L.A.M.C. 57.121.3.5, failure to submit the required hazardous material business plan (HMBP) information annually into CERS [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Discharge Cause:

Discharge Source:
Facility Project Sub Type:
Calenviroscreen 3 Score: 86-90%
Calenviroscreen 4 Score: 95-100% (highest scores)
File Location: Regional Board
Site History:

The site was formerly used for degreasing operations, plastic extrusion and furniture distribution between the 1940s and the early 1990s. The industrial buildings were demolished in 1993 and since that time, the Site has been used for rental car parking. A Soil Vapor Extraction (SVE) system has been operational at the Site since November 3, 2004, to address chlorinated solvent contamination detected in soil beneath the Site during prior assessments. A different SVE system had operated at the Site between August 25, 1999 and April 28, 2000, after which it was shut down. Soil and groundwater investigations have been in progress at the Site since 1997 under the oversight of the Regional Board. Based upon the information provided in the technical reports submitted to the Regional Board, the previous chemical use, storage and/or disposal practices at this Site during former manufacturing, degreasing and spray painting operations have contaminated the underlying soil and groundwater. The potential source areas identified in prior studies include the cinder block vault area, former degreasing room, and former spray painting areas, two former manholes, former hydraulic lift tank, a former clarifier and an east-west trending drainage line. The Volatile Organic Compounds (VOCs) present in groundwater beneath the Site, at concentrations above their respective Maximum Contaminant Levels (MCLs) established by the California Department of Health Services, have degraded the beneficial uses of the State's groundwater resources.

Site History:

The site was formerly used for degreasing operations, plastic extrusion and furniture distribution between the 1940s and the early 1990s. The industrial buildings were demolished in 1993 and since that time, the Site has been used for rental car parking. A Soil Vapor Extraction (SVE) system has been operational at the Site since November 3, 2004, to address chlorinated solvent contamination detected in soil beneath the Site during prior assessments. A different SVE system had operated at the Site between August 25, 1999 and April 28, 2000, after which it was shut down.

Soil and groundwater investigations have been in progress at the Site since 1997 under the oversight of the Regional Board. Based upon the information provided in the technical reports submitted to the Regional Board, the previous chemical use, storage and/or disposal practices at this Site during former manufacturing, degreasing and spray painting operations have contaminated the underlying soil and groundwater. The potential source areas identified in prior studies include the cinder block vault area, former degreasing room, and former spray painting areas, two former manholes, former hydraulic lift tank, a former clarifier and an east-west trending drainage line. The Volatile Organic Compounds (VOCs) present in groundwater beneath the Site, at concentrations above their respective Maximum Contaminant Levels (MCLs) established by the California Department of Health Services, have degraded the beneficial uses of the State's groundwater resources.

Sites from GeoTracker Search - Cleanup Action Report (as of Oct 17, 2022)

Action Type: SOIL VAPOR EXTRACTION (SVE)
Begin Date: 3/30/2010
End Date:
Phase: Other (See Description)
Contaminant Mass Removed: 340 Pounds
Description: A Soil Vapor Extraction (SVE) system had been operational at the site from November 2004 through October 2005, to address chlorinated solvent contamination detected in soil beneath the site during prior assessments. A different SVE system had operated at the site between August 25, 1999 and April 28, 2000, after which it was shut down. The SVE system removed approximately 340 pounds of VOCs during its operation. No soil remediation has been performed since October 2005. Semiannual groundwater monitoring has been in progress at the site.

Discharge Cause: Unknown
Discharge Source: Other
Facility Project Sub Type:
Calenviroscreen 3 Score: 76-80%
Calenviroscreen 4 Score: 80-85%
File Location: Regional Board
Site History:

The Site is a 9-acre commercial property located at the southwest corner of Aviation Boulevard and Arbor Vitae Street within a mixed commercial and residential area of Los Angeles, California. From the mid-1950s to the early 1990s,the Site was used as an aerospace manufacturing facility for the production of turbochargers and heat exchangers for aircraft and other vehicles. During that period there were four industrial buildings, underground storage tanks (USTs), solvent degreasers and clarifiers. In 1996, the buildings, USTs, degreasers and clarifiers were demolished and the property was sold to the Hertz Corporation (Hertz). The Site was redeveloped into a receiving yard for rental vehicles. Current operations include routine vehicle maintenance and car washing. Due to the former aerospace operations, soil, soil vapor and groundwater have been impacted with halogenated volatile organic compounds (VOCs) including primarily tetrachloroethene (PCE), trichloroethene (TCE), and 1,1-dichloroethene (1,1-DCE); and 1,4-dioxane. Petroleum hydrocarbon-related VOCs including benzene, toluene, ethylbenzene and xylenes (BTEX) are also detected in groundwater but are attributed to an offsite upgradient source. The Site lies within the West Coast Groundwater Basin of the Los Angeles Coastal Plain. According to the California Department of Water Resources (DWR) Bulletin 104, the Site is underlain by non-marine alluvial sediments of the Upper Pleistocene Lakewood Formation, which includes unconsolidated coarse-grained sands and gravels of the Semiperched aquifer and poorly sorted sands, silty clays and clays of the Bellflower aquiclude. The Bellflower aquiclude is underlain by the Gage aquifer, which extends from approximately 140 to 200 feet below ground surface (bgs) and consists primarily of fine-to medium sand with variable amounts of gravel, sandy silt and clay. The Lakewood Formation is underlain by alluvial and marine deposits of the San Pedro Formation, which includes the Lynwood Aquifer (290-340 ft bgs) and the Silverado Aquifer (420-620 ft bgs). Subsurface lithology generally consists of interbedded sand, silty sand, silt and clay from the surface to 140 feet (ft) below ground surface (bgs), the total depth investigated. Groundwater at the Site occurs within discontinuous, perched fine-grained sand zones at 55 to 65 ft bgs primarily in the northwest, eastern and southern portions of the Site and within a laterally continuous sandy zone extending from approximately 92 to 96 ft bgs, which may coincide with the upper Semi-Perched aquifer of the Lakewood Formation. Groundwater flow within the Semi-Perched aquifer zone is generally toward the east and southeast with relatively shallow gradients of 0.0004 to 0.001. The Site has been under environmental investigation since 1989 and under Regional Board regulatory oversight since 1995. During the 1990s, ENSR Consulting and Engineering conducted multiple Site investigations including soil investigations, soil vapor surveys and installation of six groundwater monitoring wells (MW-1 through MW-6). In 2001, Parsons Engineering installed 16 soil vapor monitoring points (SVP-1 through SVP-16) and a groundwater monitoring well (MW-7). Based on results of these investigations, three main areas of the Site were identified with relatively high levels of VOCs in the vadose zone. In 2004, Montgomery Watson Harza installed four groundwater monitoring wells (MW-8 through MW-11), 26 shallow soil gas probes (SG-1 to SG-26) and evaluated vapor intrusion risk. In 2005, Mactec installed five soil vapor monitoring points (SVP-17 through SVP-21) to further investigate vadose zone lithology. Pilot tests conducted in 1993, 2002 and 2006 were used to evaluate SVE as preferred cleanup method for soil. In 2006, Mactec conducted limited SVE remediation as part of an interim remedial action approved by the Regional Board. Currently, there are seven groundwater monitoring wells screened in the perched zone and 23 monitoring wells screened in the upper Semi-Perched aquifer. Semi-annual groundwater monitoring has been conducted since 1993. Groundwater sampling at the Site is conducted using the Snap Sampler™ method, which has previously been approved and incorporated into the groundwater monitoring program. Results from historical site investigations and groundwater monitoring to date indicate that groundwater characterization within the perched zones and Semi-Perched aquifer beneath the Site is essentially complete. However, based on historical and recent groundwater monitoring data, the lateral and vertical extent of dissolved-phase VOCs and 1,4-dioxane in groundwater upgradient and downgradient has not been fully delineated and the onsite vertical extent of contamination has not been evaluated. During the Fall of 2014, Honeywell plans to conduct an investigation to assess groundwater impacts (if any) from potential offsite sources and to further delineate the lateral and vertical extent of VOCs and 1,4-dioxane in groundwater offsite. Regional Board staff is currently in the process of reviewing a remedial action plan (RAP) for soil. Based on the site lithology, the contaminants of concern (primarily VOCs) in soil and soil vapor, Honeywell is proposing the use of soil vapor extraction (SVE) as the primary remedy for soil remediation. Once the soil remediation is under way and groundwater characterization is complete, Honeywell will start evaluating remedies for the treatment of groundwater impacted with VOCs and 1,4-dioxane.

The Lakewood Formation is underlain by alluvial and marine deposits of the San Pedro Formation, which includes the Lynwood Aquifer (290-340 ft bgs) and the Silverado Aquifer (420-620 ft bgs). Subsurface lithology generally consists of interbedded sand, silty sand, silt and clay from the surface to 140 feet (ft) below ground surface (bgs), the total depth investigated. Groundwater at the Site occurs within discontinuous, perched fine-grained sand zones at 55 to 65 ft bgs primarily in the northwest, eastern and southern portions of the Site and within a laterally continuous sandy zone extending from approximately 92 to 96 ft bgs, which may coincide with the upper Semi-Perched aquifer of the Lakewood Formation. Groundwater flow within the Semi-Perched aquifer zone is generally toward the east and southeast with relatively shallow gradients of 0.0004 to 0.001.

The Site has been under environmental investigation since 1989 and under Regional Board regulatory oversight since 1995. During the 1990s, ENSR Consulting and Engineering conducted multiple Site investigations including soil investigations, soil vapor surveys and installation of six groundwater monitoring wells (MW-1 through MW-6). In 2001, Parsons Engineering installed 16 soil vapor monitoring points (SVP-1 through SVP-16) and a groundwater monitoring well (MW-7). Based on results of these investigations, three main areas of the Site were identified with relatively high levels of VOCs in the vadose zone. In 2004, Montgomery Watson Harza installed four groundwater monitoring wells (MW-8 through MW-11), 26 shallow soil gas probes (SG-1 to SG-26) and evaluated vapor intrusion risk. In 2005, Mactec installed five soil vapor monitoring points (SVP-17 through SVP-21) to further investigate vadose zone lithology. Pilot tests conducted in 1993, 2002 and 2006 were used to evaluate SVE as preferred cleanup method for soil. In 2006, Mactec conducted limited SVE remediation as part of an interim remedial action approved by the Regional Board.

Currently, there are seven groundwater monitoring wells screened in the perched zone and 23 monitoring wells screened in the upper Semi-Perched aquifer. Semi-annual groundwater monitoring has been conducted since 1993. Groundwater sampling at the Site is conducted using the Snap Sampler™ method, which has previously been approved and incorporated into the groundwater monitoring program. Results from historical site investigations and groundwater monitoring to date indicate that groundwater characterization within the perched zones and Semi-Perched aquifer beneath the Site is essentially complete. However, based on historical and recent groundwater monitoring data, the lateral and vertical extent of dissolved-phase VOCs and 1,4-dioxane in groundwater upgradient and downgradient has not been fully delineated and the onsite vertical extent of contamination has not been evaluated. During the Fall of 2014, Honeywell plans to conduct an investigation to assess groundwater impacts (if any) from potential offsite sources and to further delineate the lateral and vertical extent of VOCs and 1,4-dioxane in groundwater offsite.

Regional Board staff is currently in the process of reviewing a remedial action plan (RAP) for soil. Based on the site lithology, the contaminants of concern (primarily VOCs) in soil and soil vapor, Honeywell is proposing the use of soil vapor extraction (SVE) as the primary remedy for soil remediation. Once the soil remediation is under way and groundwater characterization is complete, Honeywell will start evaluating remedies for the treatment of groundwater impacted with VOCs and 1,4-dioxane.

Aviation Inglewood is the current owner of the property located between 9007-9021 Aviation Boulevard in Inglewood. National Heat Treating (NHT) formerly leased and operated a metal treating facility on a portion of the property, located at 9117-9121 Aviation Boulevard from approximately 1954 until 1970. Public records indicate that the site was primarily improved between 1945 and 1960 with commercial and industrial buildings. The site was also utilized for auto service & repair, truck delivery and air cargo services, a lumber yard, warehousing and for light manufacturing. Prior to 1945, the site was vacant land. Numerous tenants occupied the site from the time it was developed until 1995, when all site structures were demolished and the entire property was leased to Alamo for storage and rental of their auto fleet. The site continues to be a rental parking lot.

Sites from GeoTracker Search - Cleanup Action Report (as of Oct 17, 2022)

Action Type: SOIL VAPOR EXTRACTION (SVE)
Begin Date: 3/24/2010
End Date:
Phase: Soil
Contaminant Mass Removed: 15,902 Pounds
Description: An SVE system was operational at the site in the site. to remove adsorbed phase contaminants from the vadose zone. The SVE system consisted of the following: 39 vapor extraction wells, a well header manifold, a 55-gallon vapor/liquid separator with transfer pump, a 700 SCFM positive displacement extraction blower, a heat exchanger and two 10,000-pound capacity vessels containing GAC. Aproximately, 15,902 pounds of VOCs were removed from the vadose zone in March 2003, since system start-up on August 30, 2000.

Title Description Comments:

COMMENTS AND REQUIREMENTS UPON REVIEW OF GROUNDWATER MONITORING REPORTS

Action Type: Cleanup Action
Action: Soil Vapor Extraction (SVE)
Action Date: 3/24/2010
Received Issue Date:
Doc Link:
Title Description Comments:

An SVE system was operational at the site in the site. to remove adsorbed phase contaminants from the vadose zone. The SVE system consisted of the following: 39 vapor extraction wells, a well header manifold, a 55-gallon vapor/liquid separator with transfer pump, a 700 SCFM positive displacement extraction blower, a heat exchanger and two 10,000-pound capacity vessels containing GAC. Aproximately, 15,902 pounds of VOCs were removed from the vadose zone in March 2003, since system start-up on August 30, 2000.

Action Type: Cleanup Action
Action: Soil Vapor Extraction (SVE)
Action Date: 3/23/2010
Received Issue Date:

Site History:

Aviation Inglewood is the current owner of the property located between 9007-9021 Aviation Boulevard in Inglewood. National Heat Treating (NHT) formerly leased and operated a metal treating facility on a portion of the property, located at 9117-9121 Aviation Boulevard from approximately 1954 until 1970. Public records indicate that the site was primarily improved between 1945 and 1960 with commercial and industrial buildings. The site was also utilized for auto service & repair, truck delivery and air cargo services, a lumber yard, warehousing and for light manufacturing. Prior to 1945, the site was vacant land. Numerous tenants occupied the site from the time it was developed until 1995, when all site structures were demolished and the entire property was leased to Alamo for storage and rental of their auto fleet. The site continues to be a rental parking lot.

Sites from GeoTracker Search - Cleanup Action Report (as of Oct 17, 2022)

Action Type: SOIL VAPOR EXTRACTION (SVE)
Begin Date: 3/24/2010
End Date:
Phase: Soil
Contaminant Mass Removed: 15,902 Pounds
Description: An SVE system was operational at the site in the site. to remove adsorbed phase contaminants from the vadose zone. The SVE system consisted of the following: 39 vapor extraction wells, a well header manifold, a 55-gallon vapor/liquid separator with transfer pump, a 700 SCFM positive displacement extraction blower, a heat exchanger and two 10,000-pound capacity vessels containing GAC. Aproximately, 15,902 pounds of VOCs were removed from the vadose zone in March 2003, since system start-up on August 30, 2000.
