Mr. Patrick Schlehuber
Rexford Industrial Realty, L.P.
11620 Wilshire Boulevard, Suite 1000
Los Angeles, California 90025

Subject: Phase I Environmental Site Assessment
9000 Airport Boulevard
Los Angeles, California 90045
Partner Project No. 23-399900.1
Client Reference No. 00-v0000737-230001

Dear Mr. Schlehuber:

Partner Engineering and Science, Inc. (Partner) is pleased to provide this *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 and E1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process and Client Agreement, and with All Appropriate Inquiries (AAI) Final Rule 40 CFR Part 312.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate your trust in Partner and the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (310) 765-7243.

Sincerely,

Jenny Redlin
National Client Manager

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM E1527-13 and E1527-21, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and the requirements in the Master Services Agreement between Partner and Rexford Industrial Realty, L.P. (the "MSA") for the property located at 9000 Airport Boulevard in Los Angeles, Los Angeles County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Rexford Industrial Realty, L.P. with an assessment concerning the environmental condition of the subject property. The services set forth herein are governed by the MSA.

Property Description

The subject property is located on the east side of Airport Boulevard and the north side of West Arbor Vitae Street within a residential, commercial, retail, and industrial area of Los Angeles County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address(es):	9000 Airport Boulevard, Los Angeles, California
Property Use:	Commercial – Car Rental Facility
Land Acreage (Ac):	18.28 Ac
Number of Buildings:	Two
Number of Floors:	One-story
Gross Building Area (SF):	38,680 SF
Date of Construction:	1981 with an improvement in 1996
Parcel Number:	4125-010-016
Type of Construction:	Concrete tilt-up
Current Tenants:	Hertz Car Rental
Site Assessment Performed By:	Tomo Demers
Site Assessment Conducted On:	February 23, 2023
Regulatory Radius Report Date:	February 21, 2023
Report Date:	March 9, 2023
FOIAs Date:	February 2023

The subject property is currently occupied by Hertz Car Rental for commercial/industrial use. Onsite operations consist of car rental services, automotive service operations, fueling stations, and administrative office use. The subject property consists of a one-story automotive service/office building located on the central portion of the subject property and an additional one-story automotive service building located on the northern portion of the subject property. In addition to the current structures, the subject property is also improved with concrete-paved parking areas, two fueling station canopies, a car wash, various carport canopies located throughout the property, and associated landscaping.

According to available historical sources, the subject property was formerly undeveloped as early as 1896; consisted of vacant graded land between 1947 and circa 1952; developed with Airport Junior High School from 1955 to 1981; and redeveloped with the current structures in 1981. Tenants on the subject property have included Airport Junior High School (1955-1966) and Hertz Rent A Car (1981-Present).

The adjoining properties are tabulated below:

Adjoining Properties	
North:	Interceptor Street, beyond which are apartments (5875 Interceptor Street, 8730 and 8815 Belford Avenue, 5838 West 88th Street)
Northeast:	Interceptor Street, beyond which are apartments (8911, 8921, 8927, 8931, and 8937 Ramsgate Avenue)
East:	Apartments (9001, 9007, 9017, 9023, 9027, 9033, 9037, 9043, and 9051 Ramsgate Avenue) and a light manufacturing building (5745 Arbor Vitae Street)
Southeast:	West Arbor Vitae Street, beyond which is a warehouse building (5760 Arbor Vitae Street)
South:	West Arbor Vitae Street, beyond which is an area undergoing redevelopment (5812, 5820, 5826, 5832, 5838, 5844, and 5850 Arbor Vitae Street), a motel (5860 Arbor Vitae Street), and a car wash (9200 and 9204 Airport Boulevard)
Southwest:	West Arbor Vitae Street and Airport Boulevard intersection, beyond which is a car rental facility (9217 and 9419 Airport Boulevard)
West:	Airport Boulevard, beyond which is a parking lot and car detailing service (9029 Airport Boulevard/9100 Jenny Avenue)
Northwest:	Airport Boulevard, beyond which are single-family residences (8920, 8926, 8940, and 8960 Lilienthal Avenue)

According to a previous subsurface investigation conducted on the subject property, the physical setting features of the subject property identify the terrain as sloping to the northeast with the depth to groundwater in the vicinity of the subject property inferred to be approximately 73 to 84 feet below ground surface (bgs) and groundwater flow inferred to be toward the northeast.

Findings and Opinions

Recognized Environmental Condition

A *recognized environmental condition (REC)* refers to the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. The following was identified:

- The subject property is currently equipped with four underground storage tanks (USTs) located on the northwest portion of the subject property, to the northwest of the auto service and office building. The USTs consist of one 20,000-gallon gasoline UST, one compartmentalized 20,000-gallon gasoline/diesel UST, and two 12,000-gallon gasoline USTs. The USTs are connected via underground piping to approximately twenty-one dispensers situated on concrete islands beneath

two canopied areas. The 20,000-gallon USTs were installed in 2005 and the 12,000-gallon USTs were installed in 1993. All of the USTs and associated piping are of double-walled fiberglass reinforced plastic (FRP) construction and are continuously monitored for leak detection via a Veeder Root system. No releases have been reported in connection with the current UST systems; however, as discussed in the CREC segment, a release was historically reported for the prior generation of USTs that received regulatory closure in 2013. Partner reviewed the most recent tank integrity tests which included the monitoring system certification and Vapor Recovery Equipment Test. The Monitoring System Certification Forms, dated September 2022, indicated the monitoring system is operational and showed passing results for all criteria (i.e., sensor testing results, line leak detector testing, and in-tank gauge testing). As such, the USTs appear to be tight and in compliance with current regulations. The environmental risk associated with USTs increases over time, as these systems age. Furthermore, no subsurface investigations have been conducted in connection with the USTs at the subject property since 2012 (~11 years). Therefore, based on the age of the USTs and lack of recent subsurface investigations, the onsite UST systems represent a REC.

- Partner observed the presence of fifteen (15) below-grade hydraulic lifts within the southern subject property building, in the automotive repair area. Additionally, Partner observed concrete patching in the northern portion of the southern subject property building indicative of former below-grade lifts. The dates of installation for the lifts (current and former) are unknown; however, these features were presumably installed in the 1980s or early-1990s in connection with onsite automotive repair operations for the Hertz fleet of vehicles. As such, it is unlikely polychlorinated biphenyls (PCBs) are present in the hydraulic oil. However, based on the subgrade nature and long-term duration of use, Partner cannot rule out potential releases of hydraulic fluid to the subsurface beneath the current and former lifts. As such, the current and former below-ground hydraulic hoists at the subject property represent a REC.
- Three clarifiers, also referred to as oil/water separators, were installed in 1982 at the subject property. One clarifier was installed and connected to drains within the onsite car wash and is utilized to treat wastewater streams consisting of detergents, wash water and residual oils generated from car washing operations. The remaining two clarifiers are connected to floor/trench drains within each of the onsite automotive repair buildings, respectively, and are utilized to treat wastewater streams consisting of floor wash water, new/used oil, solvents, and various automotive fluids (e.g., brake fluid, antifreeze etc.) generated from the automotive repair operations. Furthermore, based on review of historical permits, historical onsite operations included the use of spray booths and solvents from 1982 to 2008. The clarifiers and associated floor/trench drain systems have the potential to impact the subsurface of the subject property should the systems become compromised. Based on the age of the clarifier and trench/floor drain systems (41 years) and hazardous nature of the waste streams, Partner cannot rule out the potential for a release of hazardous substances to the subsurface in connection with these features. As such, the clarifiers and associated floor/trench drain system represent a REC.

Controlled Recognized Environmental Condition

A *controlled recognized environmental condition (CREC)* refers to a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous

substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations). The following was identified:

- Partner did not identify any CRECs.

Historical Recognized Environmental Condition

A *historical recognized environmental condition (HREC)* refers to a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). The following was identified:

- Based on review of documentation provided by the Regional Water Quality Control Board (RWQCB), the subject property was identified as a Leaking Underground Storage Tank (LUST) site for a release occurring on or before September 10, 2003, that reportedly impacted soil and groundwater with petroleum and non-petroleum hydrocarbons. The release was identified in connection with the historical generation of USTs at the subject property, which included four 10,000-gallon gasoline USTs and one 7,000-gallon diesel UST. Twenty-one soil borings were advanced in a 2003 in preparation for UST upgrades and removals associated with Senate Bill SB 989. Minor soil impacts were detected in the vicinity of the eastern dispenser islands. Petroleum hydrocarbons were also detected in soil associated with the western fueling system. The hydrocarbon contaminated soil around the western system was reportedly confined to the UST area and around the dispenser island closest to those USTs. Total petroleum as gasoline (TPHg) and methyl tert-butyl ether (MTBE) were detected up to 0.036 milligrams per kilogram (mg/kg) and 2.0 mg/kg, respectively, while aromatic hydrocarbons, namely, benzene, toluene, ethylbenzene and xylene (BTEX) were not detected above laboratory reporting limits; however, at the completion of the initial soil characterization, the vertical extent was unknown. The deepest area of impacted soil was anticipated to be located along the western portion of the UST pit (between B-11 and B-14), and additional boring and monitoring well were advanced to evaluate vertical extent of impacts in this area.

  In September 2003, ATC, the environmental consultant for Hertz Corporation, directed the advancement of a soil boring and installation of one groundwater monitoring well (MW-1) at a location to the west of the western fueling system. Soil samples collected between 45 and 55 feet bgs contained the highest levels of MTBE (ranging between 1.3 to 48 micrograms per kilogram (µg/kg). MTBE and tert-Butyl alcohol (TBA) were detected up to 8,700 micrograms per liter (µg/L) and 2,500 µg/L, respectively, while BTEX were not detected above laboratory reporting limits. Between March 24 and April 4, 2005, ATC oversaw the excavation of impacted soil during the removal of the prior generations of USTs, including four gasoline USTs and one diesel UST, and the associated dispenser islands at the western fueling area. Approximately 1,000 tons of contaminated soil were excavated and transported offsite.

  In June 2008 and July 2009, additional groundwater monitoring wells (MW-2 through MW-5) were installed. Confirmation soil sampling conducted in 2009 indicated concentrations of TPHg, TPHd

and BTEX were below laboratory detection limits in the soil samples. Soil samples collected in well MW-4 detected elevated concentrations of MTBE and TBA up to 28,000 mg/kg and 61,000 mg/kg, respectively, which are above established applicable screening levels. The high concentrations of MTBE and TBA were reportedly detected in a clay layer between 45 bgs and 60 bgs. Groundwater monitoring reportedly began in July 2008 and the latest groundwater monitoring data collected in July 2012 indicated that TPHg, BTEX, MTBE and TBA were non-detectable in all five wells. Subsequently, a no further action (NFA) letter was issued to Hertz Corporation on September 24, 2013, as groundwater concentrations met criteria components of the Low Threat UST Closure Policy. Therefore, based on review of the analytical data indicating residual soil impacts were left in place at 45 to 60 feet bgs, removal of the prior generation of UST systems and associated impacted soil, and regulatory oversight and closure, the closed LUST case and prior generation of USTs represent a HREC and no further investigation is recommended.

Business Environmental Risk

A *Business Environmental Risks (BER)* is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. The following was identified:

- Partner did not identify any BERs.

Significant Data Gaps

No significant data gaps were encountered.

Conclusions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM E1527-13 and E1527-21 of 9000 Airport Boulevard in Los Angeles, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of RECs and an HREC in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- Additional investigation should be conducted at the subject property to evaluate potential subsurface impacts as a result of historical onsite operations.

Appendix B: Historical/Regulatory Documentation
Appendix C: Regulatory Database Report
Appendix D: Qualifications

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM E1527-13 and E1527-21 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 9000 Airport Boulevard in Los Angeles, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13 and E1527-21) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "landowner liability protections," or "LLPs"). ASTM Standard E1527-13 constitutes "all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements set forth in the ASTM Standard E1527-13 and E1527-21. This assessment included: 1) a property and adjoining site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments to obtain readily ascertainable information to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched readily available information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-21, AULs include both legal (that is, institutional) and physical (that is, engineering) controls that may include legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil

vapor, groundwater, or surface water on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property. Partner also followed the scope of work set forth in the Master Services Agreement (MSA) between Client and Partner.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete, but Partner did evaluate the thoroughness and reliability of such materials. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services. No other warranties are implied or expressed, except as set forth in the MSA.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiries provisions of the LLPs. Further, this report does not intend to address all of the compliance and safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues except to the extent required to be addressed pursuant to the terms of the MSA. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

In the event of any conflict between the terms and conditions of this report and the terms and conditions of the MSA, the MSA shall control.

1.4 User Reliance

The enclosed ESA has been performed for the exclusive use of Rexford Industrial Realty, L.P., and/or its subsidiaries and assigns, as their interests may appear, for the transaction at issue concerning the subject property located at 9000 Airport Boulevard in Los Angeles, California. In the event of any conflict between the terms and conditions of this report and the terms and conditions of the MSA, the MSA shall control.

1.5 Limiting Conditions

Rexford Industrial Realty, L.P. engaged Partner to perform this assessment pursuant to the MSA. All reports, both verbal and written, are for the sole use and benefit of Rexford Industrial Realty, L.P., its subsidiaries and assigns, and other third parties designated by Rexford Industrial Realty, L.P. pursuant to the terms of the MSA. Third parties other than those designated by Rexford Industrial Realty, L.P. to receive reliance on Partner's work shall have no rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns.

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13 and E1527-21.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past or current owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources, this data gap is not expected to alter the findings of this assessment and is not considered significant.
- Partner was unable to determine the property use at 5-year intervals, which constitutes a data gap. Except for property tax files and recorded land title records, which were not considered to be sufficiently useful, Partner reviewed all standard historical sources and conducted appropriate interviews. Based on information obtained from other historical sources, this data gap is not expected to alter the findings of this assessment and is not considered significant.
- Partner submitted Freedom of Information Act (FOIA) requests to Los Angeles Fire Department (LAFD) for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property. As of this writing, this agency has not responded to Partner's request. Based on information obtained from other historical resources, this data gap is not expected to alter the overall findings of this assessment and is not considered significant; however, if pertinent records are provided, Partner will issue an addendum to this report.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 9000 Airport Boulevard in Los Angeles, California is located on the east side of Airport Boulevard and the north side of West Arbor Vitae Street. According to the Los Angeles County Assessor, the subject property is legally described as *P M 115-64-65 FOR DESC SEE ASSESSOR'S MAPS POR OF LOT 2*. According to Los Angeles County Assessor, ownership is currently vested in Hertz Realty Corp since 2005.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently occupied by Hertz Car Rental for commercial/industrial use. Onsite operations consist of car rental services, automotive service operations, fueling stations, and administrative office use. The subject property consists of a one-story automotive service/office building located on the central portion of the subject property and an additional one-story automotive service building located on the northern portion of the subject property. In addition to the current structures, the subject property is also improved with concrete-paved parking areas, two fueling station canopies, a car wash, various carport canopies located throughout the property, and associated landscaping.

The subject property is designated for "M1" for limited industrial development by the City of Los Angeles.

The subject property was identified as a Los Angeles County- City of Los Angeles Hazardous Materials Facilities (HAZMAT LA CITY), Los Angeles County- City of Los Angeles UST List (UST LA CITY), Los Angeles County- City of Los Angeles AST List (AST LA CITY), Envirostor Database (ENVIROSTOR), Toxic Pollutant Emissions Facilities (EMISSIONS), Facility Registry Service/Facility Index (FINDS/FRS), Leaking Underground Storage Tank (LUST), California Hazardous Material Incident Report System (CHMIRS), Historical Hazardous Substance Storage Information Database (HHSS), Historical Hazardous Waste Manifest Data (HIST MANIFEST), Active UST Facilities (UST), California Environmental Reporting System Tanks (CERS TANK), Historical Hazardous Substance Storage Container Information (HIST TANK), Los Angeles County- CUPA Program Records (CUPA LA COUNTY), Resource Conservation and Recovery Act Large Quantity Generators (RCRA LQG), Statewide Environmental Evaluation and Planning System (UST SWEEPS), Generators from Hazardous Waste Manifest Data (HAZ GEN), and Delisted Storage Tanks (DELISTED TNK) site in the regulatory database report of Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a residential, commercial, retail, and industrial area of Los Angeles County. During the vicinity reconnaissance, Partner observed the land uses on adjoining properties as defined in ASTM E1527-13 and E1527-21 as any real property or properties the border of which is contiguous or partially contiguous with that of the property, or that would be contiguous or partially contiguous with that of the property but for a street, road, or other public thoroughfare separating them. The adjoining properties are tabulated below:

Adjoining Properties	
North:	Interceptor Street, beyond which are apartments (5875 Interceptor Street, 8730 and 8815 Belford Avenue, 5838 West 88th Street)
Northeast:	Interceptor Street, beyond which are apartments (8911, 8921, 8927, 8931, and 8937 Ramsgate Avenue)
East:	Apartments (9001, 9007, 9017, 9023, 9027, 9033, 9037, 9043, and 9051 Ramsgate Avenue) and a light manufacturing building (5745 Arbor Vitae Street)
Southeast:	West Arbor Vitae Street, beyond which is a warehouse building (5760 Arbor Vitae Street)
South:	West Arbor Vitae Street, beyond which is an area undergoing redevelopment (5812, 5820, 5826, 5832, 5838, 5844, and 5850 Arbor Vitae Street), a motel (5860 Arbor Vitae Street), and a car wash (9200 and 9204 Airport Boulevard)
Southwest:	West Arbor Vitae Street and Airport Boulevard intersection, beyond which is a car rental facility (9217 and 9419 Airport Boulevard)
West:	Airport Boulevard, beyond which is a parking lot and car detailing service (9029 Airport Boulevard/9100 Jenny Avenue)
Northwest:	Airport Boulevard, beyond which are single-family residences (8920, 8926, 8940, and 8960 Lilienthal Avenue)

The adjoining property to the north is identified as a LUST, FINDS/FRS, Resource Conservation and Recovery Act Small Quantity Generators (RCRA SQG), HHSS, HIST MANIFEST, Clandestine Drug Laboratories (CDL), HIST TANK, UST SWEEPS, HAZ GEN, HAZMAT LA CITY, and UST LA CITY site in the regulatory database report of Section 4.2.

The adjoining property to the south is identified as a Hazardous Waste Manifest Data (HAZNET) and HAZ GEN site in the regulatory database report of Section 4.2.

The adjoining property to the southeast is identified as a Resource Conservation and Recovery Act Non-Generators (RCRA NON-GEN) site in the regulatory database report of Section 4.2.

The adjoining property to the south is identified as a LUST, HAZNET, HIST MANIFEST, FINDS/FRS, and UST SWEEPS site in the regulatory database report of Section 4.2.

The adjoining property to the east is identified as a HAZMAT LA CITY, RCRA NON-GEN, and CUPA LA COUNTY site in the regulatory database report of Section 4.2.

The adjoining property to the south is identified as a LUST, HHSS, HIST TANK, UST SWEEPS, and UST LA CITY site in the regulatory database report of Section 4.2.

The adjoining property to the southwest is identified as a LUST, HHSS, UST, CERS TANK, Los Angeles County - City of Los Angeles AST List (AST LA CITY), HAZMAT LA CITY, UST LA CITY, HIST TANK, RCRA NON-GEN, CUPA LA COUNTY, State Water Resource Control Board Historical Aboveground Storage Tanks (AST SWRCB), and UST SWEEPS site in the regulatory database report of Section 4.2.

The adjoining property to the southwest is identified as a HAZMAT LA CITY, UST LA CITY, Resource Conservation and Recovery Act non-CORRACTS TSD Facilities (RCRA TSD), RCRA NON-GEN, Delisted Storage Tanks (DELISTED TNK), Delisted Leaking Storage Tanks (DELISTED LST), HHSS, HIST TANK, CUPA LA COUNTY, and UST SWEEPS site in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The 2021 United States Geological Survey (USGS) Venice/Inglewood, California Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 104 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently towards the northeast.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

According to a previous subsurface investigation conducted on the subject property, the physical setting features of the subject property identify the terrain as sloping to the northeast with the depth to groundwater in the vicinity of the subject property inferred to be approximately 73 to 84 feet below ground surface (bgs) and groundwater flow inferred to be toward the northeast. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the Los Angeles Department of Water and Power serves the subject property vicinity. The sources of public water for the City of Los Angeles are surface water and groundwater from the State Water Project Los Angeles Aqueduct San Fernando Valley Groundwater Basin located the City of Los Angeles.

2.4.3 Geology/Soils

The subject property is located within the Los Angeles Basin in a physiographic unit called the El Segundo Sand Hills. The El Segundo Sand Hills extend from the Ballona Gap south to Torrance and the Palo Verdes Hills, and approximately three to four miles inland from the Pacific Ocean. Remnants of similar hills are found on the western edge of Ocean Park Plain. The Sand Hills consist of a narrow strip of active or recent dunes along the coast an older stabilized sand dune inland. The subject property is located over the older stabilized Pleistocene-aged dunes called the Older Sand Dunes. Since deposition, the Older Sand Dunes have been tilted, weathered, eroded, and further altered by cementation and leaching processes. Surface water percolates into the dunes from closed depressions after heavy rains, and some perched water bodies may occur. In several areas of the El Segundo Sand Hills, fossils and sedimentary features in excavations indicate that these older sand dunes were originally beach deposits which have been altered in form by wind action and deeply weathered. One to three miles inland, the older sand dunes overlie silts and clays which apparently were deposited on the landward side of the beach sands, and which now form a portion of the Torrance Plain. Weathering and associated stabilizing processes have removed all but the gross features of dune topography in the older sand dune area

Based on information obtained from the United States Department of Agriculture (USDA) Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Urban land-Windfetch-Typic Haploxerolls complex. The term urban soil refers to soils in areas of high population density in the largely built environment. These soils can be significantly changed human-transported materials, human-altered materials, or minimally altered or intact native soils. The Windfetch series consists of well

drained soils that formed in a thin, discontinuous layer of human transport materials overlying uplifted alluvium from marine and other mixed rock sources. Windfetch soils are on uplifted alluvium and terraces. Slopes range from 0 to 2 percent.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06037C1760F, dated September 26, 2008, the subject property appears to be located in Zone X (unshaded); defined as minimal risk areas outside the 1-percent and 0.2-percent-annual-chance floodplains.

A copy of the reviewed flood map is included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Years	**Resource**	**Description/Use**
1896-1938	Topographic Maps, Aerial Photographs	Unimproved/Undeveloped Land
1947-1952	Aerial Photographs	Vacant graded land
1955-1981	Aerial Photographs, Topographic Maps	Airport Junior High School
1981-Present	Aerial Photographs, Assessor Records, City Directories, Topographic Maps	Hertz Rent A Car

According to available historical sources, the subject property was formerly undeveloped as early as 1896; consisted of vacant graded land between 1947 and circa 1952; developed with Airport Junior High School from 1955 to 1981; and redeveloped with the current structures in 1981. Tenants on the subject property have included Airport Junior High School (1955-1966) and Hertz Rent A Car (1981-Present).

Potential environmental concerns were identified in association with the current or former use of the subject property, as further discussed in Sections 4.0 and 6.0.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Risk Information Services (ERIS) on February 22, 2023. The inferred uses of the subject property and adjoining properties as interpreted from the aerial photographs in Appendix B are tabulated below:

Date:	***1928, 1938***	***Scale:***	***1"=500'***
Subject Property:	Appears to be undeveloped land (dirt)		
North:	Appears to be undeveloped land (dirt)		
Northeast:	Appears to be undeveloped land (dirt)		
East:	Appears to be undeveloped land (dirt)		
Southeast:	Appears to be undeveloped land (dirt)		
South:	Appears to be undeveloped land (dirt)		
Southwest:	Appears to be undeveloped land (dirt)		
West:	Appears to be undeveloped land (dirt)		
Northwest:	Appears to be undeveloped land (dirt)		

Date:	1947	Scale:	1"=500'
Subject Property:	Appears to be vacant graded land		
North:	Appears to be vacant graded land		
Northeast:	Appears to be vacant graded land

West:	No significant changes visible		
Northwest:	No significant changes visible		

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner reviewed the collection of Fire insurance maps (FIMS) from ERIS on February 22, 2023. The following inferred uses of the subject property and adjoining properties interpreted from the FIMs in Appendix B are tabulated below:

Date:	***1969***
Subject Property:	Depicted as developed with several classroom buildings comprising Airport Junior High School on the eastern portion of the property (no historical/previous addresses depicted), while the remaining area appears unmapped
North:	Depicted as developed with apartment buildings across a roadway, while the remaining area appears unmapped
Northeast:	Depicted as developed with apartment buildings across a roadway
East:	Depicted as developed with apartment buildings
Southeast:	Unmapped
South:	Unmapped
Southwest:	Unmapped
West:	Unmapped
Northwest:	Unmapped

Copies of reviewed FIMs are included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from ERIS on February 27, 2023 for past names and businesses that were listed for the subject property and adjoining properties. The findings are tabulated below:

City Directory Search for 9000 Airport Blvd (Subject Property)	
Year(s)	**Occupant Listed**
1955	Airport Jr High Schl
1960	Airport Jr High Schl
1964	Airport Jr High Schl
1966	Airport Jr High Schl

According to the city directory review, the adjoining properties have been occupied by various commercial/industrial and residential tenants from at least 1955. Please refer to Section 4.2.3 for further discussion.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from ERIS on February 22, 2023. The following inferred uses of the subject property and adjoining properties interpreted from topographic maps in Appendix B and are tabulated below:

Date:	***1896***
Subject Property:	Depicted as undeveloped land
North:	Depicted as undeveloped land across a roadway
Northeast:	Depicted as undeveloped land across a roadway
East:	Depicted as undeveloped land
Southeast:	Depicted as undeveloped land across a roadway
South:	Depicted as undeveloped land across a roadway
Southwest:	Depicted as undeveloped land across a roadway
West:	Depicted as undeveloped land
Northwest:	Depicted with an outlined structure across a roadway

Date:	***1924, 1930, 1944***
Subject Property:	No significant changes visible
North:	Depicted as undeveloped land
Northeast:	Depicted as undeveloped land
East:	Depicted as undeveloped land
Southeast:	Depicted as undeveloped land
South:	Depicted as undeveloped land
Southwest:	Depicted as undeveloped land
West:	Depicted as undeveloped land
Northwest:	Depicted as undeveloped land

Date:	***1948***
Subject Property:	No significant changes visible
North:	No significant changes visible
Northeast:	No significant changes visible
East:	No significant changes visible
Southeast:	No significant changes visible

South:	No significant changes visible
Southwest:	No significant changes visible
West:	No significant changes visible
Northwest:	Shaded to depict urban development across a roadway

Date:	***1950***
Subject Property:	No significant changes visible
North:	Shaded to depict urban development
Northeast:	Shaded to depict urban development
East:	Shaded to depict urban development
Southeast:	Depicted as undeveloped land across a roadway
South:	Depicted as undeveloped land across a roadway
Southwest:	Shaded to depict urban development across a roadway
West:	Shaded to depict urban development across a roadway
Northwest:	Shaded to depict urban development across a roadway

Date:	***1964, 1972, 1981***
Subject Property:	Depicted with several outlined structures comprising Airport Junior High School
North:	No significant changes visible
Northeast:	No significant changes visible
East:	No significant changes visible
Southeast:	Shaded to depict urban development across a roadway
South:	Shaded to depict urban development across a roadway
Southwest:	No significant changes visible
West:	No significant changes visible
Northwest:	No significant changes visible

Date:	***2015, 2018, 2021***
Subject Property:	Shaded to depict urban development
North:	No significant changes visible
Northeast:	No significant changes visible
East:	No significant changes visible
Southeast:	No significant changes visible
South:	No significant changes visible
Southwest:	No significant changes visible
West:	No significant changes visible

Northwest:	No significant changes visible

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 State Department

Regulatory Agency Data	
Name of Agency:	California Environmental Protection Agency (CalEPA)
Point of Contact:	CalEPA Regulated Sites Portal- https://siteportal.calepa.ca.gov/nsite/
Agency Address:	1001 I Street, Sacramento, California 95814
Agency Phone Number:	(916) 323-2514
Date of Contact:	March 07, 2023
Method of Communication:	Online
Summary of Communication: According to records reviewed, the subject property (Hertz Rent-A-Car) is identified on the CalEPA Regulated Sites Portal as a permitted hazardous waste generator/chemical storage facility, underground storage tank (UST), and aboveground petroleum storage tank facility reporting to the California Environmental Reporting System (CERS). No violations were noted within these respective listings. An additional listing identified the subject property, Hertz Corporation, on the CalEPA Regulated Sites Portal as a Leaking Underground Storage Tank (LUST) Cleanup site. Further discussion pertaining to the LUST Cleanup site identified on the subject property is located in Section 4.2.2. Records pertaining to hazardous waste are maintained by the Los Angeles Fire Department (LAFD) and/or Department of Toxic Substance Control (DTSC) as discussed in further sections of this report.	

4.1.2 Health Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Department of Public Health (LADPHI)
Point of Contact:	http://publichealth.lacounty.gov/phi/prrpolicy.htm
Agency Address:	5555 Ferguson Drive, Suite 120-04, Commerce, California 90022
Agency Phone Number:	(323) 659-6148
Date of Contact:	March 07, 2023
Method of Communication:	Online
Summary of Communication: UST/Hazmat records are handled by the LAFD as discussed below.	

4.1.3 Fire Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Fire Department (LAFD)
Point of Contact:	https://lacity.nextrequest.com/

Agency Address:	200 N Main Street #1700, Los Angeles, California 90012
Agency Phone Number:	(213) 978-3680
Date of Contact:	February 27, 2023
Method of Communication:	Online
Summary of Communication: As of the date of this report, Partner has not received a response from the LAFD for inclusion in this report.	

4.1.4 Building Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Department of Building and Safety (LADBS)
Point of Contact:	https://ladbsdoc.lacity.org/
Agency Address:	201 North Figueroa Street, Los Angeles, California 90012
Agency Phone Number:	(213) 473-3231
Date of Contact:	February 27, 2023
Method of Communication:	Online
Summary of Communication: Records were available for review, as further discussed in the following table.	

Building Records Reviewed for 9000 Airport Boulevard (Subject Property)		
Year(s)	**Owner/Applicant**	**Description**
1954	Los Angeles City High School District	New school buildings
1980	The Hertz Corp	New repair garage
1992	Hertz Rent A Car	New guard booth
1992	The Hertz Corp	Grading permit for excavation, remove, and recompact soils
1995	Hertz Realty Corp	Install new free-standing canopy
1996	The Hertz Corp	New office building
2001	Hertz Realty Corp	Demolish office building
2002	Hertz Realty Corp	New steel canopy cover
Year(s)	**Owner/Applicant**	**Description**
1954	Los Angeles City High School District	New school buildings
1980	The Hertz Corp	New repair garage
1992	Hertz Rent A Car	New guard booth
1992	The Hertz Corp	Grading permit for excavation, remove, and recompact soils
1995	Hertz Realty Corp	Install new free-standing canopy
1996	The Hertz Corp	New office building

2001	Hertz Realty Corp	Demolish office building
2002	Hertz Realty Corp	New steel canopy cover

4.1.5 Planning Department

Regulatory Agency Data	
Name of Agency:	City of Los Angeles Planning Department (CLAPD)
Point of Contact:	http://zimas.lacity.org/
Agency Address:	201 North Figueroa Street, 4th Floor, Los Angeles, California 90012
Agency Phone Number:	(213) 482-7077
Date of Contact:	March 07, 2023
Method of Communication:	Online
Summary of Communication: According to records reviewed, the subject property is zoned as a limited industrial zone by the City of Los Angeles.	

4.1.6 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Department of Conservation Geologic Energy Management Division (CalGEM)
Point of Contact:	https://maps.conservation.ca.gov/
Agency Address:	5816 Corporate Avenue, Suite 200, Cypress, California 90630
Agency Phone Number:	(714) 816-6847
Date of Contact:	March 07, 2023
Method of Communication:	Online
Summary of Communication: According to CalGEM, no oil or gas wells are located on or adjacent to the subject property.	

4.1.7 Assessor's Office

Regulatory Agency Data	
Name of Agency:	Los Angeles County Assessor (LACA)
Point of Contact:	https://maps.assessor.lacounty.gov/m/
Agency Address:	500 West Temple Street, Room 225, Los Angeles, California 90012
Agency Phone Number:	(213) 974-3211
Date of Contact:	March 07, 2023
Method of Communication:	Online
Summary of Communication: According to records reviewed, the subject property is identified by Assessor Parcel Number (APN) 4125-010-016.	

4.1.8 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	South Coast Air Quality Management District (AQMD)
Point of Contact:	FINDS Database- https://xappprod.aqmd.gov/find
Agency Address:	21865 Copley Drive, Diamond Bar, California 91765
Agency Phone Number:	(909) 396-2000
Date of Contact:	March 07, 2023
Method of Communication:	Online
Summary of Communication: According to the records reviewed, The Hertz Corp (Facility ID: 35881) at 9000 Airport Boulevard was identified with active Permits to Operate (PTOs) for "service station/dispensing gasoline", which was issued in 2014. Several other inactive PTOs were identified for "service station/dispensing gasoline", "storage tank gasoline", "spray paint booth and solvent" which were issued between 1982 to 2008. No outstanding violations or notices of compliance was noted within Partner's review of AQMD records for the subject property.	

4.1.9 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	Regional Water Quality Control Board (RWQCB)
Point of Contact:	http://geotracker.waterboards.ca.gov/
Agency Address:	320 W. 4th Street, Suite 200, Los Angeles, California 90013
Agency Phone Number:	(213) 576-6600
Date of Contact:	March 07, 2023
Method of Communication:	Online
Summary of Communication: According to records reviewed, the subject property is listed on the GeoTracker database as Hertz Corporation with RWQCB Case #: 900450670. The historical use of the subject property and LUST cleanup case is further discussed in Section 4.2.2.	

4.1.10 Department of Toxic Substances Control

Regulatory Agency Data	
Name of Agency:	California Department of Toxic Substances Control (DTSC)
Point of Contact:	http://www.envirostor.dtsc.ca.gov/public/ http://hwts.dtsc.ca.gov/report_search.cfm?id=5
Agency Address:	1001 I Street, Sacramento, California 95814
Agency Phone Number:	(800) 728-6942
Date of Contact:	March 07, 2023
Method of Communication:	Online

Summary of Communication:

According to records reviewed, a Military Evaluation/Formerly Used Defense Sites (FUDS) was identified within the boundaries of the subject property. However, upon further review, it appears the FUDS site, "Los Angeles AFD Annex No. 1", is associated with the southeast adjoining property parcel located at 5760 Arbor Vitae Street, and the EnviroStor database system appears to have plotted the FUDS facility identifier erroneously.

No records regarding hazardous substance use, storage or releases, or the presence of USTs, AULs were listed on the EnviroStor database. However, manifest records pertaining to hazardous materials/USTs handled and/or generated at the subject property are discussed further in Section 4.2.2 and Section 6.2.1.

4.1.11 Sanitation Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Sanitation & Environment (LASE)
Point of Contact:	https://www.lacitysan.org/
Agency Address:	1149 S Broadway 9th Floor, Los Angeles, California 90015
Agency Phone Number:	(800) 773-2489
Date of Contact:	February 27, 2023
Method of Communication:	Online

Summary of Communication:

According to records reviewed, LASE provided Partner with permit documentation pertaining to connection to the public sewer in 1981 and for three (3) multi-compartment clarifiers permitted in 1982. No violations were noted within the documentation provided to Partner.

Copies of pertinent documents are included in Appendix B of this report.

4.2 Mapped Database Records Search

The regulatory database report provided by ERIS documents the listing of sites identified on federal, state, county, city, and tribal (when applicable) standard source environmental databases within the approximate minimum search distance (AMSD) specified by ASTM E1527-13 and E1527-21. The data from these sources are updated as these data are released and integrated into one database. The information contained in this report was compiled from publicly available sources.

The environmental database information is used to identify environmental concerns in connection with the subject property. The listings also serve to identify the known indications of the storage, use, generation, disposal, or release of hazardous substance at the subject property and the potential for contaminants to migrate onto the subject property from off-site sources in groundwater or soil in the form of liquids or vapor.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

The following table lists the number of sites as categorized by the regulatory database within the prescribed AMSD. The locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Database Report Data				
Database	**AMSD Radius (mile)**	**Listings Identified**		
Federal NPL	1.00	**Subject Property**	**Adjoining Properties**	**Surrounding Area Sites of Concern**
Delisted NPL Site	0.50	N	N	N

4.2.2 Subject Property Listings

The subject property is identified as a HAZMAT LA CITY, UST LA CITY, AST LA CITY, ENVIROSTOR, EMISSIONS, FINDS/FRS, LUST, CHMIRS, HHSS, HIST MANIFEST, UST, CERS TANK, HIST TANK, CUPA LA COUNTY, RCRA LQG, UST SWEEPS, HAZ GEN, and DELISTED TNK site in the regulatory database report, as discussed below:

Subject Property Database Listing	
Database:	HAZMAT LA CITY, UST LA CITY, AST LA CITY, EMISSIONS, FINDS/FRS, HIST MANIFEST, UST, CERS TANK, CUPA LA COUNTY, RCRA LQG, HAZ GEN
Site Name:	Hertz Rent-A-Car 11015/The Hertz Corporation
Address:	9000 South Airport Boulevard
Substance Involved:	Aqueous solution with metals, aqueous solution with organic residues, off-spec/aged/surplus inorganics, other inorganic solid wastes, hydrocarbon solvents, unspecified solvent mixture, waste oil and mixed oil, oil/water separation sludge, tank bottom waste, latex waste, off-spec/aged/surplus organics, organic liquids with metals, unspecified organic liquid mixture, other organic solids, unspecified sludge waste, contaminated soils from site clean-up, liquids with halogenated organic compounds
Years of Operation:	1985 to Present
Status:	Active
Concern:	Based on Partner's review of the regulatory database report, it appears that the current subject property tenant, Hertz Rent-A-Car 11015/The Hertz Corporation, has handled/generated hazardous waste from at least 1985 to Present. No violations or compliance deficiencies were noted within the specified listings. The current USTs, clarifiers and other onsite features of potential environmental concern are discussed further in Section 6.0.

Subject Property Database Listing	
Database:	ENVIROSTOR
Site Name:	Los Angeles AFS Annex No. 1
Address	Westchester, CA
Substance Involved:	Not specified
Years of Operation:	1955 to 1975
Status:	Inactive - Needs Evaluation as of July 1, 2005
Concern:	No; As previously discussed in Section 4.1.6, it appears the FUDS site, "Los Angeles AFD Annex No. 1", is associated with the southeast adjoining property parcel located at 5760

	Arbor Vitae Street, and the EnviroStor database system appears to have plotted the FUDS facility identifier erroneously. As such, this listing does not represent an environmental concern to the subject property.

Subject Property Database Listing	
Database:	LUST, HHSS, HIST TANK, UST SWEEPS, DELISTED TNK
Site Name:	Hertz Corporation
Address	9000 Airport Boulevard
Date of Release:	On or before September 10, 2003
Substance Released:	Other solvent or non-petroleum hydrocarbon
Media Impacted:	Soil and Groundwater
Date of Closure:	September 24, 2013
Responsible Party:	Hertz Corporation
Substance Involved:	Other solvent or non-petroleum hydrocarbon from a LUST
Years of Operation:	2003 to 2013
Status:	Cleanup Status listed as "Completed - Case Closed as of September 24, 2013"

Concern:

According to the regulatory database report and client-provided documentation, the subject property contained two 2,000-gallon new/waste oil USTs that were reportedly installed in 1981 and located adjacent to the northern maintenance garage. The subject property was also equipped with two 8,000-gallon waste/new oil USTs located adjacent to the southern maintenance building. According to the UST removal report dated May 1, 2006 by ATC Associates, Inc. (ATC) for the LAFD, the four USTs and associated underground piping were removed from the ground on October 18 and 20, 2005. Following removal, soil samples were collected from beneath the former tanks and piping and analyzed for total petroleum hydrocarbons as gasoline (TPHg) and volatile organic compounds (VOCs) including oxygenates. According to the analytical data, no constituents of concern were detected above laboratory reporting limits and as such, no evidence of a release was identified. Based on the removal of the USTs and associated piping, review of the analytical results, and regulatory oversight, the former new/used oil USTs are not considered a REC and no further investigation is recommended.

Based on review of documentation provided by the Regional Water Quality Control Board (RWQCB), the subject property was identified as a Leaking Underground Storage Tank (LUST) site for a release occurring on or before September 10, 2003, that reportedly impacted soil and groundwater with petroleum and non-petroleum hydrocarbons. The release was identified in connection with the historical generation of USTs at the subject property, which included four 10,000-gallon gasoline USTs and one 7,000-gallon diesel UST. Twenty-one soil borings were advanced in a 2003 in preparation for UST upgrades and removals associated with Senate Bill SB 989. Minor soil impacts were detected in the vicinity

of the eastern dispenser islands. Petroleum hydrocarbons were also detected in soil associated with the western fueling system. The hydrocarbon contaminated soil around the western system was reportedly confined to the UST area and around the dispenser island closest to those USTs. Total petroleum as gasoline (TPHg) and methyl tert-butyl ether (MTBE) were detected up to 0.036 milligrams per kilogram (mg/kg) and 2.0 mg/kg, respectively, while aromatic hydrocarbons, namely, benzene, toluene, ethylbenzene and xylene (BTEX) were not detected above laboratory reporting limits; however, at the completion of the initial soil characterization, the vertical extent was unknown. The deepest area of impacted soil was anticipated to be located along the western portion of the UST pit (between B-11 and B-14), and additional boring and monitoring well were advanced to evaluate vertical extent of impacts in this area.

In September 2003, ATC, the environmental consultant for Hertz Corporation, directed the advancement of a soil boring and installation of one groundwater monitoring well (MW-1) at a location to the west of the western fueling system. Soil samples collected between 45 and 55 feet bgs contained the highest levels of MTBE (ranging between 1.3 to 48 micrograms per kilogram (µg/kg). MTBE and tert-Butyl alcohol (TBA) were detected up to 8,700 micrograms per liter (µg/L) and 2,500 µg/L, respectively, while BTEX were not detected above laboratory reporting limits. Between March 24 and April 4, 2005, ATC oversaw the excavation of impacted soil during the removal of the prior generations of USTs, including four gasoline USTs and one diesel UST, and the associated dispenser islands at the western fueling area. Approximately 1,000 tons of contaminated soil were excavated and transported offsite.

In June 2008 and July 2009, additional groundwater monitoring wells (MW-2 through MW-5) were installed. Confirmation soil sampling conducted in 2009 indicated concentrations of TPHg, TPHd and BTEX were below laboratory detection limits in the soil samples. Soil samples collected in well MW-4 detected elevated concentrations of MTBE and TBA up to 28,000 mg/kg and 61,000 mg/kg, respectively, which are above established applicable screening levels. The high concentrations of MTBE and TBA were reportedly detected in a clay layer between 45 bgs and 60 bgs. Groundwater monitoring reportedly began in July 2008 and the latest groundwater monitoring data collected in July 2012 indicated that TPHg, BTEX, MTBE and TBA were non-detectable in all five wells. Subsequently, a no further action (NFA) letter was issued to Hertz Corporation on September 24, 2013, as groundwater concentrations met criteria components of the Low Threat UST Closure Policy. Therefore, based on review of the analytical data indicating residual soil impacts were left in place at 45 to 60 feet bgs, removal of the prior generation of UST systems and associated impacted soil, and regulatory oversight and closure, the closed LUST case and prior generation of USTs represent a HREC and no further investigation is recommended.

Subject Property Database Listing	
Database:	CHMIRS

Site Name:	Hertz Corp
Address	9000 Airport Boulevard
Date of Release:	July 19, 2013
Substance Released:	Oil - hydraulic fluid
Media Impacted:	Concrete
Date of Closure:	NA
Responsible Party:	Hertz Corp
Substance Involved:	Oil - hydraulic fluid released from a ruptured in ground hydraulic lift
Years of Operation:	2013
Status:	Unknown
Concern:	No; According to the regulatory database report, the subject property tenant, Hertz Corporation, is listed on the CHMIRS database for an incident occurring on July 19, 2013, which involved a release of approximately 5 to 10 gallons of hydraulic oil, which reportedly occurred as a result of a return line rupture. The release reportedly flowed onto the concrete and a third-party contractor was hired to handle the containment and clean up. Based on the surficial nature of this release, subsequent cleanup actions, and regulatory oversight, this specific listing does not represent an environmental concern.

Subject Property Database Listing	
Database:	CHMIRS
Site Name:	Hertz
Address	9000 Airport Boulevard
Date of Release:	October 15, 2017
Substance Released:	Gasoline
Media Impacted:	Concrete/pavement
Date of Closure:	NA
Responsible Party:	Hertz
Substance Involved:	Gasoline
Years of Operation:	2017
Status:	Unknown
Concern:	No; According to the regulatory database report, the subject property tenant, Hertz, is listed on the CHMIRS database for an incident occurring on October 15, 2017, which involved a release of approximately 4 to 5 gallons of gasoline, which reportedly occurred as a result of a driver crashing into a fuel dispenser. The release reportedly flowed onto the concrete and into under dispenser containment, which reportedly was all recovered. A third-party contractor was hired to perform the associated clean up and no waterways or storm drains were reportedly impacted. Based on the surficial nature of this release, subsequent cleanup

	actions, and regulatory oversight, this specific listing does not represent an environmental concern.

4.2.3 Adjoining Property Listings

The adjoining property to the north is identified as a LUST, FINDS/FRS, RCRA SQG, HHSS, HIST MANIFEST, CDL, HIST TANK, UST SWEEPS, HAZ GEN, HAZMAT LA CITY, and UST LA CITY site in the regulatory database report, as discussed below.

The adjoining property to the south is identified as a HAZNET and HAZ GEN site in the regulatory database report, as discussed below.

The adjoining property to the southeast is identified as a RCRA NON-GEN site in the regulatory database report, as discussed below.

The adjoining property to the south is identified as a LUST, HAZNET, HIST MANIFEST, FINDS/FRS, and UST SWEEPS site in the regulatory database report, as discussed below.

The adjoining property to the southwest is identified as a DELISTED TNK site in the regulatory database report, as discussed below.

The adjoining property to the east is identified as a HAZMAT LA CITY, RCRA NON-GEN, and CUPA LA COUNTY site in the regulatory database report, as discussed below.

The adjoining property to the south is identified as a LUST, HHSS, HIST TANK, UST SWEEPS, and UST LA CITY site in the regulatory database report, as discussed below:

Adjoining Property Database Listing	
Property Name:	Hertz LAX Customer Facility
Address:	9029 Airport Boulevard
Direction:	West
Hydrological Gradient:	Cross-Gradient
Database Listing:	LUST, FINDS/FRS, RCRA SQG, HHSS, HIST MANIFEST, CDL, HIST TANK, UST SWEEPS, HAZ GEN, HAZMAT LA CITY, UST LA CITY
Date of Release:	On or before December 1, 1992
Substance Released:	Gasoline
Media Impacted:	Groundwater
Date of Closure:	December 2, 1998
Responsible Party:	Hertz 1131
Substance Involved:	Gasoline from a LUST
Years of Operation:	1992 to 1998
Status:	Cleanup Status listed as "Completed - Case Closed as of December 2, 1998"

Concern:	No; The property, identified as Hertz LAX Customer Facility at 9029 Airport Boulevard, is located adjoining to the west of the subject property. This site reported a release of gasoline on or before December 1, 1992, which reportedly impacted groundwater. The release occurred as a result of LUST and was reported to the lead agency (City of Los Angeles) on December 1, 1992. No specific cleanup or investigative actions were noted within the listing; however, the responsible party is identified as Hertz 1131. Following the oversight of the City of Los Angeles, regulatory closure was obtained on December 2, 1998. Based on the regulatory oversight and closure, onsite groundwater data from 2012 indicating no groundwater impacts, and duration of time elapsed, these listings do not represent an environmental concern.

Adjoining Property Database Listing	
Property Name:	LA International Airport/Los Angeles World Airport
Address:	5820, 5838, and 5844 Arbor Vitae Street
Direction:	South
Hydrological Gradient:	Up-Gradient
Database Listing:	HAZNET, HAZ GEN
Substance Involved:	Asbestos-containing waste
Years of Operation:	2007 to 2009
Status:	Inactive
Concern:	No; Based on the relatively small quantities of materials listed, lack of outstanding violations or compliance deficiencies noted, and regulatory oversight, these listings do not represent an environmental concern to the subject property.

Adjoining Property Database Listing	
Property Name:	LA Airport Industrial Owner LP
Address:	5760 Arbor Vitae Street
Direction:	Southeast
Hydrological Gradient:	Cross-Gradient
Database Listing:	RCRA NON-GEN
Substance Involved:	Not specified
Years of Operation:	2022
Status:	Inactive
Concern:	No; Based on the lack of outstanding violations or compliance deficiencies noted, and regulatory oversight, this listing does not represent an environmental concern to the subject property.

Adjoining Property Database Listing

Property Name:	Neutrogena Facility/Neutrogena Corp/Northrop University
Address:	5800 Arbor Vitae Street
Direction:	Southeast
Hydrological Gradient:	Cross-Gradient
Database Listing:	LUST, HAZNET, HIST MANIFEST, FINDS/FRS, and UST SWEEPS
Date of Release:	On or before April 28, 1993
Substance Released:	Diesel
Media Impacted:	Groundwater
Date of Closure:	January 14, 1997
Responsible Party:	Neutrogena Corporation
Substance Involved:	Diesel from a LUST
Years of Operation:	1993 to 1997
Status:	Cleanup Status listed as "Completed - Case Closed as of January 14, 1997"
Concern:	No; The property, identified as Neutrogena Facility at 5800 Arbor Vitae Avenue, is located adjoining to the southeast of the subject property. This site reported a release of diesel on or before April 28, 1993, which reportedly impacted groundwater. The release occurred as a result of LUST and was reported to the lead agency (RWQCB) on April 28, 1993. No specific cleanup or investigative actions were noted within the listing; however, the responsible party is identified as Neutrogena Corporation. Following the oversight of the RWQCB, regulatory closure was obtained on January 14, 1997. Based on the regulatory oversight and closure, onsite groundwater data from 2012 indicating no groundwater impacts, and duration of time elapsed, these listings do not represent an environmental concern.

Adjoining Property Database Listing	
Property Name:	Velocity Collision Center, LLC/Dent-ology Inc
Address:	5745 Arbor Vitae Street
Direction:	East
Hydrological Gradient:	Down-Gradient
Database Listing:	HAZMAT LA CITY, RCRA NON-GEN, and CUPA LA COUNTY
Substance Involved:	Unspecified solvent mixture
Years of Operation:	2015 to 2020
Status:	Inactive
Concern:	No; Based on the relatively small quantities of materials listed, lack of outstanding violations or compliance deficiencies noted, and regulatory oversight, these listings do not represent an environmental concern to the subject property.

Adjoining Property Database Listing

Property Name:	National Car Sales
Address:	9204 Airport Boulevard
Direction:	South
Hydrological Gradient:	Up-Gradient
Database Listing:	LUST, HHSS, HIST TANK, UST SWEEPS, and UST LA CITY
Date of Release:	On or before September 21, 1988
Substance Released:	Gasoline
Media Impacted:	Soil and Groundwater
Date of Closure:	July 23, 2019
Responsible Party:	Marlow Management Co, LLC
Substance Involved:	Gasoline from a LUST
Years of Operation:	1988 to 2019
Status:	Cleanup Status listed as "Completed - Case Closed as of July 23, 2019"
Concern:	No; The property, identified as National Car Sales at 9204 Airport Boulevard, is located adjoining to the south of the subject property. This site reported a release of gasoline on or before September 21, 1988, which reportedly impacted soil and groundwater. The release occurred as a result of LUST and was reported to the lead agency (RWQCB) on October 4, 1988. According to Partner's review of documentation on the GeoTracker database, it appears that various site assessments including soil excavation and the implementation of a soil vapor extraction system (SVE) has occurred from 1988 to 2018. The responsible party is identified as Marlow Management Co, LLC. Following the remedial actions and assessments and oversight of the RWQCB, regulatory closure was obtained on July 23, 2019. Based on the regulatory oversight and closure, onsite groundwater data from 2012 indicating no groundwater impacts, and duration of time elapsed, these listings do not represent an environmental concern.

Adjoining Property Database Listing	
Property Name:	Avis Rent-A-Car
Address:	9217 Airport Boulevard
Direction:	Southwest
Hydrological Gradient:	Up-Gradient
Database Listing:	LUST, HHSS, UST, CERS TANK, AST LA CITY, HAZMAT LA CITY, UST LA CITY, HIST TANK, RCRA NON-GEN, CUPA LA COUNTY, AST SWRCB, UST SWEEPS
Date of Release:	On or before June 1, 1990
Substance Released:	Gasoline
Media Impacted:	Soil and Groundwater

Date of Closure:	September 28, 2012
Responsible Party:	Avis Rental Car
Substance Involved:	Gasoline from a LUST
Years of Operation:	1990 to 2012
Status:	Cleanup Status listed as "Completed - Case Closed as of September 28, 2012"
Concern:	No; The property, identified as Avis Rent-A-Car at 9217 Airport Boulevard, is located adjoining to the southwest of the subject property. This site reported a release of gasoline on or before June 1, 1990, which reportedly impacted soil and groundwater. The release occurred as a result of LUST and was reported to the lead agency (RWQCB) on June 1, 1990. According to Partner's review of documentation on the GeoTracker database, it appears that various site assessments including groundwater monitoring and the implementation of a SVE system occurred from 1990 to 2018. The responsible party is identified as Avis Rental Car. Following the remedial actions and assessments and oversight of the RWQCB, regulatory closure was obtained on September 28, 2012. Based on the regulatory oversight and closure, onsite groundwater data from 2012 indicating no groundwater impacts, and duration of time elapsed, these listings do not represent an environmental concern.

Adjoining Property Database Listing	
Property Name:	Avis Rent A Car
Address:	9419 Airport Boulevard
Direction:	Southwest
Hydrological Gradient:	Up-Gradient
Database Listing:	HAZMAT LA CITY, UST LA CITY, RCRA TSD, RCRA NON-GEN, DELISTED TNK, DELISTED LST, HHSS, HIST TANK, CUPA LA COUNTY, UST SWEEPS
Date of Release:	On or before August 13, 1992
Substance Released:	Gasoline, Per- and per-and polyfluoroalkyl substances (PFAS), total petroleum hydrocarbons (TPH), trichloroethylene (TCE)
Media Impacted:	Soil, groundwater, and soil vapor
Date of Closure:	NA
Responsible Party:	Not listed
Substance Involved:	Gasoline, PFAS, TPH, TCE from a LUST
Years of Operation:	1992 to Present
Status:	Cleanup Status listed as "Open -Eligible for Closure as of October 12, 2021"
Concern:	No; The property, identified as Avis Rent-A-Car at 9419 Airport Boulevard, is located adjoining to the southwest of the subject property. This site appears to be a secondary release associated with the southwest adjoining property that involved a release of gasoline,

	PFAS, TPH, and TCE on or before August 13, 1992, which reportedly impacted soil, groundwater, and soil vapor. The release occurred as a result of LUST and was reported to the lead agency (RWQCB) on August 13, 1992. According to Partner's review of documentation on the GeoTracker database, it appears that various site assessments including a soil excavation and the implementation of a SVE system has occurred from 1998 to 2009. Partner's review of the most recent groundwater plume maps, dated May 2021, indicated contaminant concentrations under 2019 RWQCN Environmental Screening Levels (ESLs), with the exception of 1,1-dichloroethane, which was observed at concentrations of 140 µg/L at monitoring well, GW-4, located approximately 773 feet southwest of the subject property. However, based on the distance of the subject property to the impacted media, remedial actions performed, regulatory oversight associated with this facility, and eligibility for closure, these listings do not represent an environmental concern.

Based on the findings, vapor migration is not a significant environmental concern.

4.2.4 Surrounding Area Listings of Concern to Subject Property

The properties to the east are identified as GeoTracker Cleanup Program Sites (CLEANUP SITES) sites in the regulatory database report, as discussed below:

Surrounding Area Database Listing	
Property Name:	Princeland Property/Aviation Inglewood (Formerly Bodycote Hinderliter)/Honeywell International Corp
Address:	1237 West Arbor Vitae Street
Direction:	East
Hydrological Gradient:	Down-Gradient
Database Listing:	CLEANUP SITES
Date of Release:	Not specified
Substance Released:	Chlorinated hydrocarbons, tetrachloroethylene (PCE), TCE
Substance Involved:	Chlorinated hydrocarbons, PCE, TCE from historical operations
Years of Operation:	1940s to 1990s
Status:	Cleanup Statuses listed as "Open - Remediation" from 2000 to 2016
Concern:	No; The properties, identified as Princeland Property/Aviation Inglewood (Formerly Bodycote Hinderliter)/Honeywell International Corp, located approximately 1,439 feet east of the subject property, are a grouping of cleanup sites listed within the GeoTracker database that appear to share a co-mingled contaminant plume of chlorinated hydrocarbons (PCE and TCE) resulting from historical operations of the respective facilities. Partner's review of the most recent soil vapor plume maps, dated February 2016, indicated contaminant concentrations of PCE and TCE under 2019 RBQCN Environmental Screening Levels (ESLs). Based on the distance of the subject property to the impacted media, remedial actions performed, regulatory oversight associated with these facilities, and ongoing remedial investigations, these listings do not represent an environmental concern.

Based on the findings, vapor migration is not a significant environmental concern at this time.

4.2.5 Unplottable Listings

No unplottable listings are identified in the regulatory database report.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13 and E1527-21, Partner requested the following site information from Rexford Industrial Realty, L.P. (User of this report).

User Responsibilities		
Item	**Provided By User**	**Not Provided By User**
AAI User Questionnaire	**X**	
Title Records, Environmental Liens, and AULs	**X**	
Specialized Knowledge		**X**
Actual Knowledge		**X**
Valuation Reduction for Environmental Issues		**X**
Identification of Key Site Manager	**Section 5.1.3**	
Reason for Performing Phase 1 ESA	**Section 1.1**	
Prior Environmental Reports	**Section 5.2.6**	
Other		**X**

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property was not available to be interviewed at the time of the assessment; however, Partner did interview Mr. Karan Karapetyan, Maintenance Supervisor with Hertz, as discussed below in Section 5.1.3.

5.1.2 Interview with Report User

Mr. Felix Vollrath, report user, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

A copy of the completed AAI questionnaire is provided in Appendix B.

5.1.3 Interview with Key Site Manager

Mr. Karan Karapetyan, key site manager, indicated that they had no information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

The key site manager further stated that there are no issues pertaining to USTs, ASTs, clarifiers, oil/water separators, groundwater monitoring wells, or hazardous substance use/storage/generation on the subject property to the best of their knowledge.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was provided with title records for review as part of this assessment.

Chicago Title Company prepared a Preliminary Chain of Title Report for the subject property.

Title Records Reviewed for 9000 Airport Boulevard (Subject Property)		
Year Purchased	**Volume/Page**	**Owner**
2023	BOOK 56 PAGE 49	The Hertz Corporation, a Delaware corporation, successor by merger to Hertz Realty Corporation, a Delaware corporation

A specific search for environmental liens and activity and use limitations was not included in the scope of work for this ESA. However, based on information obtained from the User, preliminary title report, and ERIS database, no evidence of environmental liens recorded against the Property was found. In addition, according to the ERIS-provided information for the Property, no evidence of institutional controls, land use restrictions and/or engineering control requirements recorded against the Property has been reported.

Copies of pertinent pages are included in Appendix B of this report.

5.2.2 Specialized Knowledge

The User did not have specialized knowledge of environmental conditions associated with the subject property at the time of the assessment.

5.2.3 Actual Knowledge of the User

The User was not aware of environmental liens and/or AULs encumbering the subject property or in connection with the subject property at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

The User was not aware of any reductions in property value due to environmental issues.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did provide information that is commonly known or reasonably ascertainable within the local community about the subject property at the time of the assessment. The User provided Partner with documentation pertaining to the LUST cleanup, which is publicly available via the GeoTracker online database. Refer to Section 4.2.2 for a summarization of activities associated with these reports.

5.2.6 Previous Reports and Other Provided Documentation

The User provided Partner with documentation pertaining to the new/used oil UST removals, LUST cleanup, which is publicly available via the GeoTracker online database, and with compliance documentation pertaining to active on-site USTs. Refer to Section 4.2.2 for a summarization of activities associated with these reports and Section 6.2.2 for a summary of compliance information reviewed by Partner.

Copies of pertinent pages reviewed are included in Appendix B of this report.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Tomo Demers
Site Assessment Conducted On:	February 23, 2023

The table below provides the subject property personnel interviewed during the field reconnaissance:

Site Visit Personnel for the Subject Property			
Name	**Title/Role**	**Contact Number**	**Site Walk* Yes/No**
Mr. Karan Karapetyan	Maintenance Supervisor	Not provided	Yes

Environmental concerns were identified during the onsite reconnaissance related to current USTs, storage/use/generation of hazardous substances or petroleum products, and indications of former subsurface investigations, as further discussed in Sections 6.1 and 6.2.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters located on the east side of the subject property. The City of Los Angeles removes solid waste from the subject property. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Los Angeles services the subject property vicinity. No septic systems were observed or reported on the subject property.

6.1.3 Stormwater and Surface Water Drainage

Stormwater is removed from the subject property primarily by sheet flow action across the paved surfaces towards stormwater drains located throughout the property and in the public right of way. On-site storm water drains discharge to municipal owned and maintained storm sewer system. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity and natural gas provided by Los Angeles Department of Water and Power and Southern California Edison. The mechanical system is comprised of rooftop mounted packaged electrical HVAC units located on rooftops. Hot water is provided by individual natural gas water heaters.

6.1.5 Wells and Cisterns

During the site inspection, Partner observed two groundwater monitoring wells on the northwestern portion of the subject property, near the active fueling dispenser canopies. The site escorts were unaware of the presence of these monitoring wells at the subject property; however, the wells appear to be associated with the closed LUST from 2013, which is discussed in Section 4.2.2.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. Refer to Section 6.2.7 for discussion of on-site clarifiers.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

Partner identified hazardous substances or petroleum products used, stored, and/or generated on the subject property as noted in the following table:

Hazardous Substances and/or Petroleum Products Noted Onsite				
Substance	**Container Size**	**Location**	**Nature of Use**	**Disposal Method**
Car Wash Thinner	Metal Tore	4x 5-gallon	Northeast Corner of Northern Auto Service Building	Car Wash Activities
Cleaner/Degreaser	Plastic Drum	2 x 55-gallon	Eastern portion of subject property in outdoor storage area	Car Wash Activities
Used Antifreeze	Metal Drum	1 x 55-gallon	Northern side of Northern Auto Service Building	Auto Repair Activities
Waste cleaning solution	Metal Drums	4x 55-gallon	Eastern side of Northern Auto Service Building	Car Wash Activities

The materials were found to be properly labeled and store at the time of the assessment with no signs of leaks, stains, or spills. Secondary containment is not provided. Additionally, small quantities of general maintenance supplies were found to be properly labeled and stored at the time of the assessment with no

signs of leaks, stains, or spills. The storage and use of these chemicals does not pose a significant threat to the environmental integrity of the subject property. Onsite ASTs and USTs are discussed further below in Section 6.2.2.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

Partner observed one 2,000-gallon, one 1,800-gallon, and two unknown capacity belly tanks (contained within two emergency fuel generators) aboveground storage tanks (ASTs) for the storage of motor oil, used motor oil, and diesel on the subject property. The ASTs are located on the central and northern portions of the property to the central of the building. According to Key Site Manager, the ASTs were installed in 2005 and are equipped with secondary containment. No staining, leaks or spills were noted in the vicinity of the ASTs. Based on observations, the onsite ASTs do not represent a REC.

The property is equipped with four underground storage tanks (USTs) located on the northwest portion of the subject property, to the northwest of the auto service and office building. Please refer to the table below for information pertaining to the current UST(s) located on the subject property:

UST Data for the subject property			
Tank ID Number:	T-1	T-2	T-3
Tank Capacity (Gallons):	20,000	8,000 (Split compartment)	12,000 (Split compartment)

Compliance with UST Regulations:	Yes, See Section 4.2.2	Yes, See Section 4.2.2

Note: This information was obtained from client provided information.

The subject property is currently equipped with four underground storage tanks (USTs) located on the northwest portion of the subject property, to the northwest of the auto service and office building. The USTs consist of one 20,000-gallon gasoline UST, one compartmentalized 20,000-gallon gasoline/diesel UST, and two 12,000-gallon gasoline USTs. The USTs are connected via underground piping to approximately twenty-

one dispensers situated on concrete islands beneath two canopied areas. The 20,000-gallon USTs were installed in 2005 and the 12,000-gallon USTs were installed in 1993. All of the USTs and associated piping are of double-walled fiberglass reinforced plastic (FRP) construction and are continuously monitored for leak detection via a Veeder Root system. No releases have been reported in connection with the current UST systems; however, as discussed in the CREC segment, a release was historically reported for the prior generation of USTs that received regulatory closure in 2013. Partner reviewed the most recent tank integrity tests which included the monitoring system certification and Vapor Recovery Equipment Test. The Monitoring System Certification Forms, dated September 2022, indicated the monitoring system is operational and showed passing results for all criteria (i.e., sensor testing results, line leak detector testing, and in-tank gauge testing). As such, the USTs appear to be tight and in compliance with current regulations. The environmental risk associated with USTs increases over time, as these systems age. Furthermore, no subsurface investigations have been conducted in connection with the USTs at the subject property since 2012 (~11 years). Therefore, based on the age of the USTs and lack of recent subsurface investigations, the onsite UST systems represent a REC.

Copies of pertinent documents are included in Appendix B of this report.

6.2.3 Evidence of Releases

No spills, stains, or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – "Non-PCB;" 2) 50 ppm-500 ppm – "PCB-Contaminated;" and, 3) Greater than 500 ppm – "PCB-Containing." The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after July 2, 1979.

Transformers and Hydraulic Equipment				
Type of Equipment	**Location**	**Number**	**PCB Containing**	**Concern**
Pad-Mounted Transformers	Northwest of the northern auto service building and south of the southern auto service and office building	Two	Unlikely	No
Hoists or Lifts	Southern auto service building	Fifteen	Unlikely	Yes

The on-site reconnaissance addressed indoor and outdoor transformers that may contain PCBs. Two pad-mounted transformers were observed on the subject property. The transformers are not labeled indicating PCB content. No staining or leakage was observed in the vicinity of the transformer. Based on the good condition of the equipment, the transformer does not represent an environmental concern.

Partner observed the presence of fifteen (15) below-grade hydraulic lifts within the southern subject property building, in the automotive repair area. Additionally, Partner observed concrete patching in the northern portion of the southern subject property building indicative of former below-grade lifts. The dates of installation for the lifts (current and former) are unknown; however, these features were presumably installed in the 1980s or early-1990s in connection with onsite automotive repair operations for the Hertz fleet of vehicles. As such, it is unlikely polychlorinated biphenyls (PCBs) are present in the hydraulic oil. However, based on the subgrade nature and long-term duration of use, Partner cannot rule out potential releases of hydraulic fluid to the subsurface beneath the current and former lifts. As such, the current and former below-ground hydraulic hoists at the subject property represent a REC.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

Partner observed the following drains, sumps, and/or clarifiers located on the subject property:

Drains, Sumps, and Clarifiers Observed Onsite				
Drain/Sump/Clarifier	**Number Observed**	**Location**	**Point of Discharge**	**Sealed/Bermed**
Clarifiers with associated floor/trench drains	Three	West of the northern auto service building, west of the southern auto service building, and southeast of the car washing station	Sanitary Sewer	No

Three clarifiers, also referred to as oil/water separators, were installed in 1982 at the subject property. One clarifier was installed and connected to drains within the onsite car wash and is utilized to treat wastewater streams consisting of detergents, wash water and residual oils generated from car washing operations. The remaining two clarifiers are connected to floor/trench drains within each of the onsite automotive repair buildings, respectively, and are utilized to treat wastewater streams consisting of floor wash water, new/used oil, solvents, and various automotive fluids (e.g., brake fluid, antifreeze etc.) generated from the automotive repair operations. Furthermore, based on review of historical permits, historical onsite operations included the use of spray booths and solvents from 1982 to 2008. The clarifiers and associated floor/trench drain systems have the potential to impact the subsurface of the subject property should the systems become compromised. Based on the age of the clarifier and trench/floor drain systems (41 years) and hazardous nature of the waste streams, Partner cannot rule out the potential for a release of hazardous substances to the subsurface in connection with these features. As such, the clarifiers and associated floor/trench drain system represent a REC.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds, or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building that have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property buildings were constructed in 1981. Partner has conducted a limited, visual evaluation of accessible areas for the presence of suspect ACM at the subject property. The objective of this visual survey was to note the presence and condition of suspect ACM observed. Please refer to the table below for identified suspect ACM:

Suspect ACMs			
Suspect ACM	**Location**	**Friable Yes/No**	**Physical Condition**
Drywall Systems	Throughout Building Interior	No	Good
Floor Tiles	Throughout Building Interior	No	Good
Floor Tile Mastic	Throughout Building Interior	No	Good

Based on this building's date of construction, prior to disturbance, Partner recommends a comprehensive asbestos survey of the property be completed to determine the presence, condition, friability and likely future condition of suspect or confirmed ACM. All suspect materials must be handled as ACM according to local, state and federal regulations until the results of sampling and analysis indicate the material is a non-ACM. According to the US EPA, ACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X," to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be

monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

It is unlikely that LBP is present in buildings constructed after 1977. Therefore, due to the age of the subject property buildings, it is unlikely that LBP is present.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	**Average Predicted Radon Levels**	**Potential**
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon does not represent an environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Los Angeles Department of Water and Power serves the subject property vicinity. The sources of public water for the City of Los Angeles are surface water and groundwater from the State Water Project Los Angeles Aqueduct San Fernando Valley Groundwater Basin. According to the 2021 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

No obvious indications of water damage or mold growth were observed during Partner's visual assessment.

6.3.6 Wetlands

The subject property does not appear to be a designated wetland area based on information obtained from the United States Department of Agriculture; however, a comprehensive wetlands survey would be required

in order to formally determine actual wetlands on the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

6.4 Adjacent Property Reconnaissance

The adjoining property reconnaissance consisted of observing the adjoining properties from the subject property premises. No items of environmental concern were identified on the adjoining properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 VAPOR ENCROACHMENT CONDITIONS

Partner conducted a limited non-intrusive vapor screening on the subject property to identify, to the extent feasible, the potential for vapor encroachment conditions (VECs) in connection with the subject property. This included consideration of chemicals of concern (COC) that may migrate as vapors into the subsurface of the subject property as a result of contaminated soil and groundwater on or near the property.

This screening utilized readily available data sources previously discussed in this Phase I ESA that includes:

- the physical setting of the subject property (Section 2.4),
- standard historical sources for the subject property, adjoining, and surrounding area (Section 3.0),
- known or potentially contaminated sites as identified from information from regulatory agencies and sites on Federal, State, tribal and local databases (Section 4.0), and
- information from the site reconnaissance (Section 6.0) of the subject property and observations of the surrounding properties.

The results of our data collection, reconnaissance, and analysis are tabulated below:

Potential for Vapor Encroachment to Impact the Subject Property	
Area of Concern	***Likely or Known VEC to Subject Property***
Subject Property Existing Operations or Conditions	The current on-site fueling operations, lifts and clarifiers coupled with hazardous waste usage at the subject property have the potential to impact the subsurface. As such a VEC cannot be ruled out.
Historical Uses of the Subject Property	The current on-site fueling operations, lifts and clarifiers coupled with hazardous waste usage at the subject property have the potential to impact the subsurface. As such a VEC cannot be ruled out.
Adjoining Property Operations or Existing Conditions	None identified.
Historical Uses of Adjoining Properties or Nearby Properties	None identified.
Regulatory Review of sites identified on Federal, State, tribal and Local Environmental Databases which were located in the AMSD	The current on-site fueling operations, lifts and clarifiers coupled with hazardous waste usage at the subject property have the potential to impact the subsurface. As such a VEC cannot be ruled out.

Based on the findings of the limited non-intrusive vapor screening, vapor intrusion is an issue of concern in connection with the existing structures on the subject property. As such, additional assessment is recommended.

8.0 FINDINGS AND CONCLUSIONS

Findings and Opinions

Recognized Environmental Condition

A *recognized environmental condition (REC)* refers to the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. The following was identified:

- The subject property is currently equipped with four underground storage tanks (USTs) located on the northwest portion of the subject property, to the northwest of the auto service and office building. The USTs consist of one 20,000-gallon gasoline UST, one compartmentalized 20,000-gallon gasoline/diesel UST, and two 12,000-gallon gasoline USTs. The USTs are connected via underground piping to approximately twenty-one dispensers situated on concrete islands beneath two canopied areas. The 20,000-gallon USTs were installed in 2005 and the 12,000-gallon USTs were installed in 1993. All of the USTs and associated piping are of double-walled fiberglass reinforced plastic (FRP) construction and are continuously monitored for leak detection via a Veeder Root system. No releases have been reported in connection with the current UST systems; however, as discussed in the CREC segment, a release was historically reported for the prior generation of USTs that received regulatory closure in 2013. Partner reviewed the most recent tank integrity tests which included the monitoring system certification and Vapor Recovery Equipment Test. The Monitoring System Certification Forms, dated September 2022, indicated the monitoring system is operational and showed passing results for all criteria (i.e., sensor testing results, line leak detector testing, and in-tank gauge testing). As such, the USTs appear to be tight and in compliance with current regulations. The environmental risk associated with USTs increases over time, as these systems age. Furthermore, no subsurface investigations have been conducted in connection with the USTs at the subject property since 2012 (~11 years). Therefore, based on the age of the USTs and lack of recent subsurface investigations, the onsite UST systems represent a REC.
- Partner observed the presence of fifteen (15) below-grade hydraulic lifts within the southern subject property building, in the automotive repair area. Additionally, Partner observed concrete patching in the northern portion of the southern subject property building indicative of former below-grade lifts. The dates of installation for the lifts (current and former) are unknown; however, these features were presumably installed in the 1980s or early-1990s in connection with onsite automotive repair operations for the Hertz fleet of vehicles. As such, it is unlikely polychlorinated biphenyls (PCBs) are present in the hydraulic oil. However, based on the subgrade nature and long-term duration of use, Partner cannot rule out potential releases of hydraulic fluid to the subsurface beneath the current and former lifts. As such, the current and former below-ground hydraulic hoists at the subject property represent a REC.
- Three clarifiers, also referred to as oil/water separators, were installed in 1982 at the subject property. One clarifier was installed and connected to drains within the onsite car wash and is

utilized to treat wastewater streams consisting of detergents, wash water and residual oils generated from car washing operations. The remaining two clarifiers are connected to floor/trench drains within each of the onsite automotive repair buildings, respectively, and are utilized to treat wastewater streams consisting of floor wash water, new/used oil, solvents, and various automotive fluids (e.g., brake fluid, antifreeze etc.) generated from the automotive repair operations. Furthermore, based on review of historical permits, historical onsite operations included the use of spray booths and solvents from 1982 to 2008. The clarifiers and associated floor/trench drain systems have the potential to impact the subsurface of the subject property should the systems become compromised. Based on the age of the clarifier and trench/floor drain systems (41 years) and hazardous nature of the waste streams, Partner cannot rule out the potential for a release of hazardous substances to the subsurface in connection with these features. As such, the clarifiers and associated floor/trench drain system represent a REC.

Controlled Recognized Environmental Condition

A *controlled recognized environmental condition (CREC)* refers to a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations). The following was identified:

- Partner did not identify any CRECs.

Historical Recognized Environmental Condition

A *historical recognized environmental condition (HREC)* refers to a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). The following was identified:

- Based on review of documentation provided by the Regional Water Quality Control Board (RWQCB), the subject property was identified as a Leaking Underground Storage Tank (LUST) site for a release occurring on or before September 10, 2003, that reportedly impacted soil and groundwater with petroleum and non-petroleum hydrocarbons. The release was identified in connection with the historical generation of USTs at the subject property, which included four 10,000-gallon gasoline USTs and one 7,000-gallon diesel UST. Twenty-one soil borings were advanced in a 2003 in preparation for UST upgrades and removals associated with Senate Bill SB 989. Minor soil impacts were detected in the vicinity of the eastern dispenser islands. Petroleum hydrocarbons were also detected in soil associated with the western fueling system. The hydrocarbon contaminated soil around the western system was reportedly confined to the UST area and around the dispenser island closest to those USTs. Total petroleum as gasoline (TPHg) and methyl tert-butyl ether (MTBE) were detected up to 0.036 milligrams per kilogram (mg/kg) and 2.0 mg/kg, respectively, while aromatic hydrocarbons, namely, benzene, toluene, ethylbenzene and xylene (BTEX) were not detected above laboratory reporting limits; however, at the completion of the initial soil characterization, the vertical extent was unknown. The deepest area of impacted soil was

anticipated to be located along the western portion of the UST pit (between B-11 and B-14), and additional boring and monitoring well were advanced to evaluate vertical extent of impacts in this area.

In September 2003, ATC, the environmental consultant for Hertz Corporation, directed the advancement of a soil boring and installation of one groundwater monitoring well (MW-1) at a location to the west of the western fueling system. Soil samples collected between 45 and 55 feet bgs contained the highest levels of MTBE (ranging between 1.3 to 48 micrograms per kilogram (µg/kg). MTBE and tert-Butyl alcohol (TBA) were detected up to 8,700 micrograms per liter (µg/L) and 2,500 µg/L, respectively, while BTEX were not detected above laboratory reporting limits. Between March 24 and April 4, 2005, ATC oversaw the excavation of impacted soil during the removal of the prior generations of USTs, including four gasoline USTs and one diesel UST, and the associated dispenser islands at the western fueling area. Approximately 1,000 tons of contaminated soil were excavated and transported offsite.

In June 2008 and July 2009, additional groundwater monitoring wells (MW-2 through MW-5) were installed. Confirmation soil sampling conducted in 2009 indicated concentrations of TPHg, TPHd and BTEX were below laboratory detection limits in the soil samples. Soil samples collected in well MW-4 detected elevated concentrations of MTBE and TBA up to 28,000 mg/kg and 61,000 mg/kg, respectively, which are above established applicable screening levels. The high concentrations of MTBE and TBA were reportedly detected in a clay layer between 45 bgs and 60 bgs. Groundwater monitoring reportedly began in July 2008 and the latest groundwater monitoring data collected in July 2012 indicated that TPHg, BTEX, MTBE and TBA were non-detectable in all five wells. Subsequently, a no further action (NFA) letter was issued to Hertz Corporation on September 24, 2013, as groundwater concentrations met criteria components of the Low Threat UST Closure Policy. Therefore, based on review of the analytical data indicating residual soil impacts were left in place at 45 to 60 feet bgs, removal of the prior generation of UST systems and associated impacted soil, and regulatory oversight and closure, the closed LUST case and prior generation of USTs represent a HREC and no further investigation is recommended.

Business Environmental Risk

A *Business Environmental Risks (BER)* is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. The following was identified:

- Partner did not identify any BERs.

Significant Data Gaps

No significant data gaps were encountered.

Conclusions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM E1527-13 and E1527-21 of 9000 Airport Boulevard in Los Angeles, Los Angeles County,

California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of RECs and an HREC in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- Additional investigation should be conducted at the subject property to evaluate potential subsurface impacts as a result of historical onsite operations.

9.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 9000 Airport Boulevard in Los Angeles, Los Angeles County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

RE: CITY DIRECTORY RESEARCH
9000 Airport Boulevard
LOS ANGELES,CA 90045

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:
8650-9425 of Airport Blvd
8800-9400 of Belford Ave
ALL of Interceptor St
8830-8975 of Lilienthal Ave
5760-5765 of Morley St
8900-9100 of Ramsgate Ave
5835-5875 of W 88th St
5700-5900 of W Arbor Vitae St

CALIFORNIA
Water Boards

EDMUND G. BROWN JR.
GOVERNOR

MATTHEW RODRIQUEZ
SECRETARY FOR
ENVIRONMENTAL PROTECTION

Los Angeles Regional Water Quality Control Board

September 24, 2013

Mr. Timothy Egan
The Hertz Corporation
225 Brae Boulevard
Park Ridge, New Jersey 07656

UNDERGROUND STORAGE TANK PROGRAM – CASE CLOSURE
HERTZ CAR RENTAL FACILITY
9000 AIRPORT BOULEVARD, LOS ANGELES, CA
(CASE FILE NO. 900450670)

Dear Mr. Egan:

This letter confirms the completion of a site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground tank(s) site is in compliance with the requirements of subdivision (a) and (b) of section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of section 25296.10 of the Health and Safety Code.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or

Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

Because the subject site is currently an active gasoline service station, we recommend that you properly maintain all or some existing monitoring wells onsite, so that they would be available should further monitoring be deemed necessary. However, if you choose to abandon these wells, you must comply with the following:

1. All wells must be located and properly abandoned.

2. Well abandonment permits must be obtained from the Los Angeles County Department of Public Health, Environmental Health Division, and all other necessary permits must be obtained from the appropriate agencies prior to the start of work.

3. You must submit a report on the abandonment of the wells to this office by **January 15, 2014**. This report must include, at a minimum, a site map, a description of the well abandonment process, copies of all signed permits, and documentation of legal disposal of waste generated during the site assessment and remediation from the site.

If you have any questions regarding this matter, please contact Mr. Jay C. Huang at (213) 576-6711 or send him an email at jhuang@waterboards.ca.gov.

Sincerely,

Samuel Unger

VII. GROUNDWATER REMEDIATION

Method: **N/A**	Duration of remediation: **N/A**
	Mass removal: **N/A**

VIII. COMMENTS AND JUSTIFICATION FOR RECOMMENDED ACTION

SITE HISTORY:

The site is a car rental facility located at the northeast corner of the intersection of Arbor Vitae Street and Airport Boulevard in Los Angeles, California. The case was referred to the Regional Board in April, 2004 by the Los Angeles City Fire Department.

DATA SUMMARY:

In July 2003, twenty-one soil borings were advanced to the maximum depth of 30 feet below ground surface (bgs). TPHg and MTBE were detected up to 0.036 mg/kg and 2.0 mg/kg, respectively. Aromatic hydrocarbons (BTEX) were not detected.

In September 2003, one groundwater monitoring well (MW1) was installed. MTBE and TBA were detected up to 8,700 ug/L and 2,500 ug/L, respectively. BTEX was non-detectable.

In March 2005, four gasoline USTs and one diesel UST were replaced from the site. Approximately 1,000 tons of contaminated soil were excavated and transported offsite. TPHg, TPGd, benzene and MTBE were detected up to 150mg/kg, 720 mg/jg, 0.006 mg/kg and 0.67 mg/kg, respectively.

In June 2008 and July 2009, additional groundwater monitoring wells (MW-2 through MW-5) were installed. Soil samples collected in well MW-4 detected elevated concentrations of MTBE and TBA up to 28,000 mg/kg and 61,000 mg/kg, respectively. Aromatic hydrocarbons BTEX were not detected. The high concentrations of MTBE and TBA were detected in a clay layer between 45' bgs and 60' bgs.

Groundwater monitoring began in July 2008. The depth to groundwater ranges from approximately 73 feet to 85 feet bgs. The groundwater flow direction is northeast. The latest groundwater monitoring data collected in July 2012 showed that TPHg, BTEX, MTBE and TBA were non-detectable in all five wells.

LOW THREAT UST CLOSURE POLICY CRITERIA EVALUATION:

General Criteria:

The site meets all General Criteria components of the Low Threat Policy.

a. The water purveyor within the area of the LA DPW.
b. The site is an auto-fueling facility.
c. The unauthorized release from the UST system has been stopped.
d. Free product was never detected at the site.
e. A site conceptual model was submitted.
f. Site remediation was conducted by remedial excavation.
g. Soil and groundwater samples were tested for MTBE.
h. The site does not create a nuisance.

Groundwater:

The groundwater fits the criteria 2 of the low threat policy (Plume length <250 ft., distance to production well >1000 ft. Benzene <3,000 ug/L and MTBE <1,000 ug/L).

Vapor Intrusion To Indoor Air:

The Low Threat Policy for Vapor Intrusion to Indoor Air is not applicable because the site is currently an active fuel dispensing station.

Direct Contact And Outdoor Air Exposure:

The subject site fulfills the criteria in scenario (a). Benzene and ethylbenzene were not detected. They do not exceed their respective values (8.2 mg/kg benzene and 89 mg/kg ethylbenzene) for Commercial/Industrial facility in Table 1 of the Low Threat Closure Policy. Naphthalene and PAH were not analyzed for the site.

Site Name/Address: **Hertz Car Rental Facility, 9000 Airport Boulevard, Los Angeles, CA 90301**	Staff Initial: **JH**

FACTORS SUPPORTING LOW RISK CLOSURE:

- Free product was not reported at the site.
- Soil contamination has been mitigated with remedial excavation during tank replacement, and the residual concentrations are below their respective EPA screening levels.
- The high concentrations of MTBE and TBA were detected only in one boring and in a clay layer between 45' bgs and 60' bgs.. The clay layer retards the downward migration of contaminants and unlikely to impact groundwater quality.
- TPHg, BTEX, MTBE, and TBA are not detected in the latest groundwater samples in July 2012.
- Case closure is consistent with the Low Threat UST Closure Policy.
- Additional soil and groundwater characterization, monitoring, and/or cleanup are not required.

IX. MTBE FATE & TRANSPORT PLUME LENGTH MODELING ANALYSIS

The MTBE Plume Length Model is not applicable because MTBE was not detected in groundwater samples during the last sampling event in July 2012.

X. ELECTRONIC DELIVERABLE FORMAT (EDF) SUBMISSION

Has electronic data reporting requirement been met? **Yes**

XI. AB 681 REQUIREMENT (Land Owner Notification)

Verify property ownership http://assessor.lacounty.gov/extranet/DataMaps/Pais.aspx (date) : **July 10, 2013**
Has landowner or impacted site notification requirements been met? **Yes**
Owner: The Hertz Corporation
Responsible party: Mr. Timothy Egan, The Hertz Corporation
Pre-closure letter sent date:

(August 2012)

Site Name/Address: **Hertz Car Rental Facility, 9000 Airport Boulevard, Los Angeles, CA 90301**	Staff Initial: **JH**

Table 4-1: Maximum Soil Screening Levels (mg/kg) for TPH, BTEX and MTBE above Drinking Water Aquifers

	Distance Above Groundwater	Carbon Range		
		C4-C12	C13-C22	C23-C32
TPH	>150 feet	1,000	10,000	50,000

- TPH = Total petroleum hydrocarbons.
- BTEX = benzene, toluene, ethylbenzene, and xylenes, respectively. MTBE = methyl tertiary butyl ether.
- Respective MCLs (ppm): B = 0.001, T = 0.15, E = 0.7, X = 1.75, MTBE = 0.013.
- BTEX screening concentrations determined per the attenuation factor method as described in RWQCB Guidance for VOC Impacted Sites (March 1996), with a natural degradation factor of 11 for BTEX and of 3 for MTBE. Table values can be linearly interpolated between distances above groundwater and are proportional to fraction of each lithological thickness.
- Values in Table 4-1 are for soils above drinking water aquifers. All groundwater is considered as drinking water resources unless exempted by one of the criteria as defined under SWRCB Resolution 88-63 (TDS>3000 mg/L, or deliverability <200 gal/day, or existing contamination that cannot be reasonably treated). Regional Board staff will make a determination of potential water use at a particular site considering water quality objectives and beneficial uses. For non-drinking water aquifers, regardless of depth, TPH for ">150 feet" category in the table should be used;
- Distance above groundwater must be measured from the highest anticipated water level. Lithology is based on the USCS scale.
- In areas of naturally-occurring hydrocarbons, Regional Board staff will make determinations on TPH levels.

Abbreviations/Definitions

TPH-g - Total Petroleum Hydrocarbons by EPA Test Method 8260 for gasoline
mg/kg - Milligrams per kilogram
MTBE - Methyl tert-butyl ether by EPA Test Method 8260
TAME - tert-Amyl methyl ether by EPA Test Method 8260
ETBE - Ethyl tert-Butyl Ether by EPA Test Method 8260
TBA - t-Butyl Alcohol by EPA Test Method 8260
DIPE - Di-isopropyl Ether by EPA Test Method 8260
Ethanol - By EPA Test Method 8260
VOCs - Volatile Organic Compounds by EPA Test Method 8260
ND - No detectable concentrations above the laboratory Practical Quantitation Limit (PQL)
<1.0 - Less than the laboratory PQL shown

Abbreviations/Definitions

MSL - Mean Sea Level
TOC - Top of Casing
LPH - Liquid-Phase Hydrocarbons
TPH-g - Total Petroleum Hydrocarbons by EPA Test Method 8015B for gasoline
TPH-d - Total Petroleum Hydrocarbons by EPA Test Method 8015B for diesel
TPH-o - Total Petroleum Hydrocarbons by EPA Test Method 8015B for motor/heavy oils
µg/L - Micrograms per liter
MTBE - Methyl tert-butyl ether by EPA Test Method 8260
TAME - tert-Amyl methyl ether by EPA Test Method 8260
ETBE - Ethyl tert-Butyl Ether by EPA Test Method 8260
TBA - t-Butyl Alcohol by EPA Test Method 8260
DIPE - Di-isopropyl Ether by EPA Test Method 8260
Ethanol - By EPA Test Method 8015B
VOCs - Volatile Organic Compounds by EPA Test Method 8260
< - Less than the given laboratory Practical Quantitation Limit (PQL)
-- - Not sampled, measured, or analyzed
ND - No detectable VOCs above the PQL

SUBJECT: ADDITIONAL SITE ASSESSMENT REPORT
HERTZ LAX FACILITY
9000 AIRPORT BLVD, LOS ANGELES, CA 90045
ATC PROJECT NO. 52.75015.0006
(I.D. # 900450670) (D-1)

Dear Mr. Huang,

ATC Associates Inc. (ATC), on behalf of The Hertz Corporation (Hertz), is submitting this Additional Site Assessment Report for the above-referenced project located in Los Angeles, CA. This report includes a description of field activities and analytical results. Should you have questions or require additional information, please do not hesitate to contact us at (323) 517-9780.

Sincerely,
ATC Associates, Inc.

4.0 SITE BACKGROUND INFORMATION

4.1 SITE DESCRIPTION AND SURROUNDING LAND USE

The site is located at 9000 Airport Boulevard in Los Angeles California (**Figure 1 - Vicinity Map and Figure 2 – Site Plan**) and is used for rental car operations. The site consists of five buildings, a car wash system, and refueling systems. The refueling system consists of gasoline underground storage tanks (USTs), one diesel UST, fourteen fuel dispenser islands, and underground distribution lines. The UST system is located in the western, central portion of the facility and is bordered to the west by Airport Boulevard and to the north by the main vehicle entryway into and out of the facility.

The site is composed of the two main fueling areas; the "eastern" fueling system and the "western" fueling system.

- The eastern system consists of two 12,000-gallon gasoline USTs and 10 dispenser islands. Each island is equipped with one dispenser, and the ten islands are covered by an overhead canopy. The USTs are located just south of the dispenser islands and are oriented north-south in a common excavation.

- The western system consists of one 20,000-gallon gasoline UST, one split UST consisting of 8,000-gallon gasoline and 12,000-gallon diesel, and four dispenser islands. Three gasoline USTs and one diesel UST are located just north of the dispenser islands and are oriented east-west in a common excavation. Each dispenser island in the western system is equipped with two to three dispensers, and is also covered by a metal overhead canopy structure. The two 20,000 gallon USTs were installed in 2005 when the previous USTs were removed as discussed below

Directly north and adjacent to both the eastern and western systems is an eight-foot high cinderblock wall, with a landscaped planter area immediately to the north, and a paved main entry into and out of the facility. To the west of the western system is an asphalt paved drive/parking area, with a traffic guard rail, eight-foot high chain link fence, and a landscaped parkway with Airport Boulevard to the west. It should be noted that a large V-shaped commercial billboard placed for viewing from Airport Boulevard is located immediately to the west and above the canopy for the four western system dispenser islands. Toward the east and south of the systems are an asphalt paved parking area and maintenance areas for the Hertz facility, including car wash structures to the south and the main office/locker building for the facility to the southeast.

4.2 PRIOR SITE ASSESSMENT ACTIVITY

In July 2003, ATC directed the advancement of 21 soil borings (B-1 through B-21) to depths ranging from 15 feet to 30 feet below ground surface (bgs) at the locations shown on **Figure 6 - Geologic Cross Section Lines and Previous Soil Borings**. The purpose of the assessment was to evaluate soil conditions prior to pending UST upgrades associated with Senate Bill SB 989. Minor soil impact was detected in the vicinity of the eastern dispenser islands. Based on the results of soil samples collected in this area, it appears that this impact is limited in extent and attributable to minor surface spills at the eastern dispensers.

Petroleum hydrocarbons were detected in soil associated with the western fueling system. The hydrocarbon contaminated soil around the western system is confined to the UST area and around the dispenser island closest to those USTs. The horizontal extent of the hydrocarbon contamination in the western system was estimated to be 40 feet by 60 feet. At the completion of the initial soil characterization, the vertical extent was not known. The deepest area of impacted soil was anticipated

to be located along the western portion of the UST pit (between B-11 and B-14). It was in this area that an additional boring and monitoring well was recommended. The details of the soil assessment are found in ATC's *Site Assessment Report*, dated August 25, 2003. A summary of soil sample analytical results is included in Table 5.

In September 2003, ATC directed the advancement of a soil boring and installation of one groundwater monitoring well (MW-1) at a location to the west of the western fueling system. The boring was advanced to a depth of 75 feet bgs and soil samples were collected at five foot intervals. ATC selected five soil samples between 45 and 63 feet bgs for laboratory analysis. Soil samples collected between 45 and 55 feet bgs contained the highest levels of MTBE (ranging between 1.3 to 48 micrograms per kilogram (µg/kg). The MTBE concentrations decreased between 55 feet and 63 feet bgs. Monitoring well MW-1 was constructed using 45 feet of solid 4-inch diameter Schedule 40 PVC casing from surface to 45 feet bgs, and 30 feet of 0.020-inch slotted, 4-inch diameter Schedule 40 PVC well screen from 45 to 75 feet bgs. Subsequent to its installation, the well was developed via purging.

A groundwater sample collected from well MW-1 during a September 2003 investigation was submitted for laboratory analysis, and was reported to contain total petroleum hydrocarbons - gasoline range (TPHg) at a concentration of 61 micrograms per liter (µg/L). Tert-butyl alcohol (TBA) and MTBE were also reported in the September 2003 groundwater sample at concentrations of 2,500 µg/L and 8,700 µg/L, respectively. All other analytes were below their respective detection limits.

Between March 24 and April 4, 2005 ATC oversaw the excavation of impacted soil during the removal of four gasoline USTs and one diesel UST, and the associated dispenser islands at the western fueling area. Transportation manifests indicated that 1,000 tons of petroleum hydrocarbon-impacted soil was excavated, transported and disposed during the excavation activities. Laboratory analytical results from soil samples collected during the excavation indicated that TPHg, total petroleum hydrocarbons - diesel range (TPHd), benzene and MTBE concentrations of up to 150, 720, 0.006, and 0.67 mg/kg, respectively, were still present in the remaining soil. The TPHg, TPHd, and benzene concentrations were below maximum soil screening levels established by the Los Angeles Region California Regional Water Quality Control Board (*Interim Site Assessment and Cleanup Guidebook*, May 1996), based on a depth to groundwater of approximately 53 feet as originally measured in well MW-1. Additionally, the benzene and MTBE concentrations were below the EPAs Preliminary Remediation Goals (PRGs) for industrial and residential soils. The remediation activities were presented in ATC's August 18, 2005 *Remedial Excavation Report* prepared for the facility.

ATC conducted a field investigation from June 19 through July 11, 2008. Site assessment activities were conducted per the request of the RWQCB in accordance with the *Workplan for Additional Soil and Groundwater Investigation* (ATC Associates, February 29, 2008) approved by the State Water Resources Control Board - Los Angeles Region on March 5, 2008. ATC supervised the installation of two groundwater wells, MW-2 and MW-3, at the site in an attempt to further delineate the lateral extent of the MTBE plume. MW-2 was installed northeast of MW-1 just north of the first fuel dispenser on the western edge of the 'eastern fueling station'. MW-3 was installed east of the third fuel dispenser island of the 'western fueling station' (see **Figure 2 – Site Plan** for groundwater monitoring well locations).

MW-2 was advanced to a depth of 75 feet bgs and soil samples were collected at five foot intervals. MTBE, tert-amyl methyl ether (TAME), and TBA concentrations of 5.67, 0.025, 2.70 milligrams per kilograms (mg/kg) were detected at a depth of 55-feet bgs, respectively. MTBE and TBA concentrations of 0.188 and 0.051 mg/kg were also detected at 60 feet bgs.

MW-3 was advanced to a depth of 85 feet bgs, and soil samples were collected at five foot intervals. The soil samples were analyzed and were found to contain no VOC concentrations above laboratory detection limits with the exception of the five-foot sample which contained a MTBE concentration of 0.043 mg/kg.

A summary of the groundwater and soil analytical data is provided in **Table 3 and 5**.

4.3 SITE AND AREA LITHOLOGY

The site is located within the Los Angeles Basin in a physiographic unit called The El Segundo Sand Hills (California Department of Water Resources [DWR], 1961). The El Segundo Sand Hills extend from the Ballona Gap south to Torrance and the Palo Verdes Hills, and approximately three to four miles inland from the ocean. Remnants of similar hills are found on the western edge of Ocean Park Plain. The sand hills consist of a narrow strip of active or recent dunes along the coast with older stabilized sand dunes inland.

The Site is located over the older stabilized Pleistocene-aged dunes called the Older Sand Dunes. Since deposition, the Older Sand Dune has been tilted, weathered, eroded, and further altered by cementation and leaching processes. Surface water percolates into the dunes from closed depressions after heavy rains, and some perched water bodies may occur. In several areas of the El Segundo Sand Hills, fossils and sedimentary features in excavations indicate that these older sand dunes were originally beach deposits which have been altered in form by wind action and deeply weathered. One to three miles inland, the older sand dunes overlie silts and clays which apparently were deposited on the landward side of the beach sands and which now form a portion of the Torrance Plain. Weathering and associated stabilizing processes have removed all but the gross features of dune topography in the older sand dune area (DWR, 1961).

Based on soil boring data from previous investigations at the site (ATC, 2003) and the current additional site assessment, site lithology from the ground surface to approximately 80 feet below ground surface (bgs) consists predominantly of fine to coarse sand interbedded with silt and clay. Based on the DWR (1961) description of the regional units, it is likely that the units described above are within the undifferentiated sediments of the Lakewood Formation.

Cross sections describing soil lithology and soil sample analysis are shown in **Figures 6, 7, and 8**.

4.4 AREA HYDROLOGY AND HYDROGEOLOGY

The Site lies within the West Coast (groundwater) Basin, which is part of the larger Los Angeles Coastal Basin (DWR, 1961). The physical boundaries of the West Coast Basin include the Ballona Escarpment to the north; the Rosecrans Hills to the east; and the Pacific Ocean to the west and south. The Palos Verdes Hills form the boundary of the West Coast Basin to the southeast. The water-bearing stratum within the West Coast basin includes middle Miocene to Oligocene-aged marine and continental sediments. The principal aquifers (water-producing formations) beneath the site include (in youngest to oldest stratigraphic order) the Old Dune Sand, Gage-Gardena, Lynwood, Silverado, and Sunnyside aquifers (DRW, 1961).

Many of the aquifers located in the western portion of the West Coast Basin are not currently used as practical sources of potable water due to general degradation of the upper groundwater zone resulting from historical industrial activity, oil production, and seawater intrusion. It is unknown at the present time whether the aquifer underlying the subject site is currently in use. The regional direction of groundwater flow is interpreted to be to the northeast.

5.0 RECENT ASSESSMENT ACTIVITIES

Prior to commencement of field activities, ATC obtained well permits from the County of Los Angeles Water & Sewage/Mountain & Rural Programs Environmental Health Division. A copy of the well permit is included in **Appendix A**. The investigation activities are summarized in the following sections, and the field procedures are detailed in **Appendix B**. Also prior to drilling the well borings, ATC contacted Underground Service Alert (USA) and subcontracted with a private utility locator service to verify the presence of any utilities in the vicinity of the proposed well boring locations. Following the utility clearance, drilling was scheduled.

ATC contracted with ABC Liovin Drilling for the well installations. A CME-85 Limited Access Drill rig equipped with 10-inch diameter hollow-stem augers was utilized to complete the monitoring wells. Additional details are provided below.

5.1 GROUNDWATER MONITORING WELL INSTALLATION

Based on the depth to water measurements and the analytical laboratory results of the July & September 2003 and June-July 2008 investigations, ATC selected the two locations for installation of groundwater monitoring wells. The investigation objective was to establish onsite locations for collecting groundwater data; including groundwater hydraulic head measurements and dissolved petroleum constituent concentrations.

On July 7 and 8, 2009, ATC installed two groundwater monitoring wells (MW-4 and MW-5) at the site using a hollow-stem auger drilling method. Groundwater monitoring well MW-4 was installed north of the western dispenser islands and MW-5 was installed south of the eastern dispenser islands. Well MW-5 had to be relocated due to underground PVC piping that was encountered. The borings were advanced to between 95 and 96 feet bgs and the monitoring wells were installed to total depths of 95 feet bgs with a 20 ft screen interval used for both wells. Well locations are shown on **Figure 2**. Well installation activities are summarized below, and daily records are presented in **Appendix C**.

5.1.1 Soil Sampling

At each location, soil samples were collected at 5-foot intervals from ground surface to the total depth of the boring. The borings were drilled, sampled and completed as a groundwater monitoring wells in general accordance with ATC's Standard Operating Procedures, which are included in **Appendix B**.

To obtain preliminary data regarding potential petroleum hydrocarbon-impacted soil, a representative sample was collected at each soil sampling location and field screened for volatile organic vapors in general accordance ATC's Standard Operating Procedures, which are included in **Appendix B**. Organic vapor meter readings were collected using a RAE Systems Mini-RAE 2000 photo-ionization detector (PID) and were recorded in the boring logs.

All soil samples collected during the investigation were submitted for laboratory analysis. The details of the analysis are presented in **Section 5.1.5** and a discussion of the results is included in **Section 6.3.1**.

An ATC geologist completed lithologic logs for each boring in general accordance with ASTM Method D 2488-90. ATC selected all soil samples from each boring for chemical analysis. Soil characteristics (observations of staining or odor), Unified Soil Classification System (USCS) designation, and depth to groundwater were recorded on the boring logs provided in **Appendix C**.

5.1.2 Well Specifications and Construction

Following soil sampling, groundwater monitoring wells were installed using 4-inch-diameter, Schedule 40 PVC casing. Groundwater monitoring well MW-4 was constructed using 75 feet of solid PVC casing, and 20 feet of 0.020 inch slotted well screen. The annulus of the screened portions of monitoring well MW-4 was backfilled with a #3 Monterey sand filter pack from approximately 95 to 72 feet bgs. An approximate three-foot thick layer of medium bentonite chips were placed on top of the upper filter pack and hydrated to form an annular seal. The remaining annular space to the bottom of the concrete seal (approximately 68 feet) was filled with bentonite grout. Based upon groundwater measurements that were collected upon the completion of monitoring well MW-4, it was determined that the static groundwater level was approximately equal to the observed in the lithologic logging.

Groundwater monitoring well MW-5 was advanced to 95 feet below ground surface. The screened interval of monitoring well MW-5 was back filled with #3 Monterey sand (or equivalent) filter pack from 95 to 72 bgs. An approximate three-foot layer of medium bentonite chips were placed on top of the upper filter pack and hydrated to form an annular seal. The remaining annular space from the bentonite chips seal to the bottom of the concrete seal (approximately 68 feet) was filled with bentonite grout.

Each well was completed with a two-foot deep surface seal that was placed above the bentonite grout and a traffic-rated well box was placed within a circular two-foot diameter perimeter seal. A summary of the final monitoring well construction details is provided in **Table 1** and locations of the monitoring wells are shown on **Figure 2**.

5.1.3 Well Development

On July 17, 2009, ATC developed monitoring wells MW-4 and MW-5 using a combination of surging and bailing methods. Well MW-4 went dry after removing approximately eight bailers of water, so the field personnel allowed the well to recharge. After an additional four bailers of water were removed, the well went dry. At this point ATC terminated well development, since the purged water was relatively clear and free of suspended sediment. Well MW-5 went dry after removing approximately seven bailers of water, so the field personnel ceased bailing and allowed the well to recharge. After an additional six bailers of water were removed, the well went dry again. At this point ATC terminated well development, since the purged water was relatively clear and free of suspended sediment.

After well development, ATC measured static depth to groundwater and the total well depth in each well. The depths to water measured in wells MW-3, MW-4, and MW-5 were 81.19, 85.43, and 85.94 ft bgs, respectively. Wells MW-1 and MW-2 were dry. Total well depth at wells were 85.15, 93.36, and 95.48 feet below top of casing at wells MW-3, MW-4, and MW-5, respectively.

Groundwater purged during well development was contained in 55-gallon drums and remained on site pending proper disposition. The groundwater monitoring wells were developed in general accordance with ATC's Standard Operating Procedures, which are included in **Appendix B**.

5.1.4 Well Surveying

On July 17, 2009, a California-licensed Professional Land Surveyor (W.M. Meagher Surveyors) surveyed the lateral locations and elevations of the newly installed groundwater monitoring wells. The locations and elevations of measuring marks on the north side of each wellhead were surveyed. Each well was surveyed to the nearest 0.01-foot by the surveyor in order to more accurately determine the local groundwater flow direction beneath the site. Survey data is provided in **Appendix F**.

5.1.5 Laboratory Analysis

ATC submitted the soil samples to a State of California-certified laboratory under chain-of-custody procedures. The laboratory analyzed a total of 31 soil samples for:

- Total Petroleum Hydrocarbon – gasoline (TPHg) using EPA Method 8260B;
- Ethanol (by direct injection) using EPA Method 8260B;
- BTEX (benzene, toluene, ethylbenzene, and xylenes) and fuel oxygenates MTBE, di-isopropyl ether (DIPE), ethyl-t-butyl ether (ETBE), TAME, and TBA using EPA Method 8260B;
- Volatile organic compounds (VOCs) using EPA Method 8260B.

The analytical results are summarized in **Table 4,** and a discussion is included in **Section 6.3.1**. The laboratory analytical reports are provided in **Appendix E**.

5.2 GROUNDWATER MONITORING

ATC gauged all wells (MW-1 through MW-5) and sampled groundwater monitoring wells (MW-3 through MW-5) at the site on August 6, 2009, after allowing wells MW-4 and MW-5 to sit undisturbed for 19 days. Groundwater monitoring activities are summarized in the following sections, with well sampling logs included in **Appendix D**.

5.2.1 Downhole Parameter and Groundwater Level Measurements

On August 6, 2009, prior to commencement of purging and sampling activities, ATC gauged and inspected the monitoring wells for separate-phase hydrocarbons and depth to groundwater. During this event, measurable groundwater was not present in wells MW-1 and MW-2. The total depth of groundwater wells MW-1 and MW-2 are 75 feet bgs. The depth to groundwater in well MW-3 was 81.19 ft below top of casing, and the depths to groundwater in newly installed wells MW-4 and MW-5 were 85.43 and 85.94 feet below top of casing, respectively. **Table 1** summarizes well identifications and casing elevations, **Table 2** includes groundwater depths and groundwater elevations. Well sampling records are provided in **Appendix D**.

5.2.2 Purging and Sampling Procedures

ATC used a low-flow purging method to sample the groundwater monitoring wells utilizing a three-inch Grundfos pump with cooling shroud. During purging, ATC monitored temperature, pH, conductivity, turbidity, and dissolved oxygen (DO). Purge volumes for the sampled monitoring wells were 7.72 gallons (MW-3), 7.93 gallons (MW-4), and 18.60 gallons (MW-5).

Following gauging and purging, groundwater samples were collected from the newly installed monitoring wells (MW-4 and MW-5) and the pre-existing groundwater well (MW-3). Field parameter measurements were recorded on the well sampling records, which are included in **Appendix D**.

5.2.3 Laboratory Analysis

ATC submitted the groundwater samples to Advanced Technology Laboratory, a State of California ELAP-certified laboratory, under chain-of-custody procedures. Three groundwater samples were analyzed for:

- TPHg (c4-c10) using EPA Method 8015B;
- Ethanol using EPA Method 8015B;

- BTEX (benzene, toluene, ethylbenzene, and xylenes) and fuel oxygenates MTBE, di-isopropyl ether (DIPE), ethyl-t-butyl ether (ETBE), TAME, and TBA using EPA Method 8260B;
- VOCs using EPA Method 8260B.

The analytical results are discussed in **Section 6**; the laboratory analytical reports are provided in **Appendix E**.

5.3 WASTE MANAGEMENT

Drilling and sampling activities generated thirty-one 55-gallon drums of soil cuttings and non-hazardous decon and sample water. The drums were removed from the site on August 24th, 2009 after soil analysis was performed as part of the assessment and was used to characterize the waste for disposal. Copies of waste disposal manifests will be forwarded upon receipt by The Hertz Corporation. Soil cuttings were managed in accordance with the County of Los Angeles regulations.

6.0 RESULTS

The cumulative findings of the additional site assessment described in **Section 5** are summarized below.

6.1 Drilling Observations

Consistent with previous investigations at the site, ATC observed unconsolidated alluvial sediments with grain sizes ranging from clays to gravels. Drilling observations are presented on the boring logs in **Appendix C**. The lithologic units logged and described by ATC can generally be classified within the six soil units described in **Section 4.3** above as sand, silty sand, and clayey silt. ATC detected no VOC PID readings above background levels in the soil samples collected during drilling activities.

Soil samples were collected every five-feet in both borings and all samples were analyzed. In the two monitoring wells, saturated soil was generally encountered from approximately 75 to 95 feet bgs. Due to high moisture content in the samples, water level was initially judged to be approximately 81 feet bgs in both monitoring wells. Water levels dropped significantly after drilling to total depth, with static groundwater levels stabilizing at approximately 85 feet bgs.

Groundwater elevation was calculated for each well by subtracting the depth-to-water measurement from the surveyed casing elevation. The survey data for the groundwater monitoring wells is provided in **Appendix F**. Groundwater elevations from the monitoring wells gauged on August 6, 2009 were used to prepare a groundwater elevation contour map (**Figure 4**). The groundwater elevation contours indicate groundwater flow to the northeast at an approximate gradient of 0.05 feet per foot (ft/ft).

6.2 MONITORING WELL OBSERVATIONS

No separate-phase hydrocarbons were observed in any of the wells. Depth-to-water measurements ranged from 81.19 to 85.94 feet below top of casing (**Table 2**); groundwater elevation contours are depicted on **Figure 4**.

6.3 ANALYTICAL RESULTS

The analytical results for soil and groundwater samples collected during this field investigation are summarized in **Tables 2 and 3**. Groundwater analytical results are also shown on **Figure 3**. Analytical laboratory reports and chain-of-custody forms are provided in **Appendix E**.

6.3.1 Soil Analysis

During the additional site assessment activities, completed from July 7 and 8, 2009, 31 soil samples were submitted for analytical testing. None of the soil samples collected during the installation of well MW-5 on July 8, 2009 contained detectable concentrations of petroleum hydrocarbons.

Soil samples collected during the installation of well MW-4 on July 7, 2009 did not contain detectable concentrations of petroleum hydrocarbons, with the following exceptions:

- MW-4-5’ - MTBE and TBA concentrations of 9.7 and 18 µg/kg, respectively;
- MW-4-10’ - TPHg, MTBE and TBA concentrations of 0.92, 310, and 1800 µg/kg, respectively;
- MW-4-15’ - MTBE and TBA concentrations of 1.6 and 150 µg/kg, respectively;
- MW-4-20’ - TPHg and MTBE concentrations of 0.18 and 0.95 µg/kg respectively;

- MW-4-25' - TPHg, Chloromethane, MTBE, and TBA concentrations of 0.36, 1.5, 13, and 7700 µg/kg, respectively;
- MW-4-30' - TPHg, MTBE, and TBA concentrations of 0.59, 2.7, and 20,000 µg/kg, respectively;
- MW-4-35' - TPHg, MTBE, and TBA concentrations of 0.40, 72, and 18,000 µg/kg, respectively;
- MW-4-40' - TPHg, TAME, MTBE, and TBA concentrations of 3.6, 25, 16,000 and 61,000 µg/kg, respectively;
- MW-4-45' - TPHg, ETBE, TAME, MTBE and TBA concentrations of 2.1, 4.4, 43, 20,000 and 10,000 µg/kg, respectively;
- MW-4-50' - TPHg, ETBE, TAME, MTBE and TBA concentrations of 13, 6.6, 65, 28,000 and 15,000 µg/kg, respectively;
- MW-4-55' - TPHg, ETBE, TAME, MTBE and TBA concentrations of 6.0, 1.1, 9.6, 6,500 and 16,000 µg/kg, respectively;
- MW-4-60' - TPHg, TAME, MTBE, and TBA concentrations of 1.6, 3.2, 1,500 and 180 µg/kg, respectively;
- MW-4-65' - TPHg, MTBE, and TBA concentrations of 2.1, 5.4, and 11 µg/kg, respectively;
- MW-4-70' - TPHg, TAME, MTBE, and TBA concentrations of 0.57, 2.7, 980 and 6,300 µg/kg, respectively;
- MW-4-75' - TPHg, MTBE, and TBA concentrations of 0.94, 9.9, and 650 µg/kg, respectively;
- MW-4-80' - TPHg and TBA concentrations of 0.39 and 21 µg/kg, respectively.

A summary of soil sample analytical results is provided in **Table 4** and **Figure 5**. The Geologic Cross-Section Lines & Previous Soil Borings Map is presented as **Figure 6**, with Geologic Cross-Section A-A' is presented as **Figure 7**, and Geologic Cross-Section B-B' as **Figure 8**.

6.3.2 Groundwater Analysis

The groundwater sampling event for all monitoring wells (MW-3 through MW-5), took place on August 6, 2009. None of the groundwater samples submitted for laboratory analysis contained detectable concentrations of petroleum hydrocarbons.

A summary of the groundwater sample analytical results is provided in **Table 2**, and historical groundwater analytical results are in **Table 3**. Laboratory reports and chain-of-custody documentation is included in **Appendix E**.

7.0 FINDINGS AND RECOMMENDATIONS

Monitoring wells MW-1 and MW-2 were dry during this event. The groundwater samples collected from monitoring wells MW-3 through MW-5 did not contain detectable concentrations of petroleum hydrocarbons, BTEX, or fuel oxygenates.

Soil samples during the installation of MW-5 did not contain detectable concentrations of fuel oxygenates or VOCs, which indicates that the MTBE and hydrocarbon plume does not extend laterally to the east-southeast of the USTs and eastern fueling islands.

Soil sampling results for newly-installed well MW-4 indicated concentrations of fuel oxygenates, however, the levels decreased below 50-feet below ground surface and were not impacting groundwater based upon the groundwater analytical results. Based on the groundwater monitoring and soil results for this quarter, additional quarterly monitoring is recommended.

8.0 LIMITATIONS

Our professional services have been performed, our findings obtained, and our recommendations prepared in accordance with customary principles and practices in the fields of environmental science and engineering. This warranty is in lieu of all other warranties either expressed or implied. This company is not responsible for the independent conclusions, opinions, or recommendations made by others based on the records review, site inspection, field exploration, and laboratory test data presented in this report.

It should be noted that all surficial environmental assessments are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and site evaluation. For these types of evaluations, it is often necessary to use information prepared by others and ATC cannot be responsible for the accuracy of such information. In addition, the passage of time may result in a change in the environmental characteristics at this site and surrounding properties. This report does not warrant against future operations or conditions, nor does it warrant operations or conditions present of a type or at a location not investigated. This report is not a regulatory compliance audit and is not intended to satisfy the requirements of any state, federal, or local real estate transfer laws.

It must be noted that no investigation can absolutely rule out the existence of any hazardous materials at a given site. This assessment has been based upon prior site history, observable conditions, and the subsurface soil sampling described in this report. Existing hazardous materials and contaminants can escape detection using these methods.

This report is for the use and benefit of, and may be relied upon by, Hertz, and any affiliates, and third parties authorized in writing by Hertz and ATC, including the lender(s) in connection with a secured financing of the property, and their respective successors and assigns. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the property that were not discovered within the authorized scope of the assessment.

ATC makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either express or implied. Unless otherwise agreed upon in writing by ATC and a third party, ATC's liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall be limited to a maximum of $100,000.

9.0 SIGNATURES

This report was prepared by the staff of ATC Associates, Inc., under the supervision of the Senior Geologist whose signature appears hereon. The findings, recommendations, specifications, or professional opinions are presented within the limits described by the client, in accordance with generally accepted practices, using the degree of skill and care ordinarily exercised by environmental consultants under similar circumstances. No warranty is expressed or implied.

Abbrreviations/Definitions

TPH-g - Total Petroleum Hydrocarbons by EPA Test Method 8260 for gasoline
mg/kg - Milligrams per kilogram
MTBE - Methyl tert-butyl ether by EPA Test Method 8260
TAME - tert-Amyl methyl ether by EPA Test Method 8260
ETBE - Ethyl tert-Butyl Ether by EPA Test Method 8260
TBA - t-Butyl Alcohol by EPA Test Method 8260
DIPE - Di-isopropyl Ether by EPA Test Method 8260
Ethanol - By EPA Test Method 8260
VOCs - Volatile Organic Compounds by EPA Test Method 8260
ND - No detectable concentrations above the laboratory Practical Quantitation Limit (PQL)
<1.0 - Less than the laboratory PQL shown

ATTENTION: WORK PLAN MODIFICATIONS MAY BE REQUIRED IF WELL AND GEOLOGIC CONDITIONS ENCOUNTERED AT THE SITE INSPECTION ARE FOUND TO DIFFER FROM THE SCOPE OF WORK PRESENTED TO THIS DEPARTMENT.

I hereby agree to comply in every respect with all the regulations of the County Environmental Health Division and with all ordinances and laws of the County of Los Angeles and the State of California pertaining to well construction, reconstruction, and decommissioning data deemed necessary by the County Environmental Health Division Of Los Angeles County.

Signature of Applicant: Michele Berisford Printed Name: Michele Berisford

THIS PERMIT IS NOT COMPLETE UNTIL ALL OF THE FOLLOWING REQUIREMENTS ARE SIGNED OFF BY THE DEPUTY HEALTH OFFICER. WELL CONSTRUCTION OR DECOMMISSIONING CANNOT BE INITIATED WITHOUT A WORK PLAN APPROVAL FROM THIS DEPARTMENT.

********** (DEPARTMENT USE ONLY) **********

WORK PLAN APPROVAL (This Approval is Valid for 180 Days)	REHS	DATE
Conditions: On 6/09/09 $402.00 was paid for permit # 9065 for install 2 monitoring wells (MW-4, MW-5). Maintain all setbacks. Please notify me at least 48 HRS prior to starting fieldwork to schedule on-site inspection. MTSIEBOS @ PH.LACOUNTY.GOV (213) 351-5145	MICHELLE TSIEBOS	6/11/09
FINAL INSPECTION The placement of the annular seal must be witnessed by a Deputy Health Officer for the permit to be valid. Contact this Department to arrange for an appointment	REHS	DATE
	Erich.	7/08/09

NOTICE

This well permit approval is limited to compliance with the California Well Standards and the Los Angeles County Code and does not grant any rights to construct, reconstruct, or decommission any well. The applicant is responsible for securing all other necessary permits.

6/11/09

APPENDIX B

STANDARD OPERATING PROCEDURES

STANDARD OPERATING PROCEDURE

SOIL BOREHOLE DRILLING, MONITOR WELL INSTALLATION AND DEVELOPMENT, AND SOIL SAMPLING

Drilling and Soil Sampling

Permits, Site Safety Plan. Utility Clearance

ATC Associates Inc. (ATC) obtains all the required permits, unless otherwise contractually directed. ATC prepares a site specific Site Safety Plan detailing site hazards, site safety and control, decontamination procedures, and emergency response procedures to be employed throughout the defined phase of work. At least 48 hours prior to drilling. Underground Service Alert (USA) or an equivalent agency is notified of the planned work. ATC attempts to locate all underground and above ground utilities by site inspection (in conjunction with its' subcontractors and knowledgeable site managers, if available), and review of site as-built drawings. ATC may employ a private, professional utility locator to refine the site utility inspection.

Drilling Equipment

All soil borings are drilled using a truck-mounted hollow-stem auger drill rig, unless site conditions warrant a different drilling method. Subsurface conditions permitting, the first five feet of each boring is advanced using a hand-auger or post-hole digger. All drilling equipment is inspected daily and maintained in safe working condition by the operator. All down-hole drilling equipment is steam cleaned prior to arriving on site. Working components of the drill rig near the borehole, as well as augers and drill rods are thoroughly steam cleaned between each boring location. All ATC drilling and sampling methods are consistent with ASTM Method D-1452-80 and local, stale and federal regulations.

Soil Sampling and Lithologic Description

Whenever possible and approved by the appropriate regulatory agency, the first ATC boring to be drilled at a site is continuously cored to obtain a complete lithologic description. Otherwise, soil samples are typically collected every 5 feet to the total depth explored, using brass tubes fitted in a California-modified split spoon sampler. If copper or zinc contamination is the subject of the investigation, stainless steel liners are used instead of brass. Additional soil samples may be collected based upon significant changes in lithology or in areas of obvious soil contamination. During soil sample collection, the split spoon sampler is driven 18 to 24 inches past the lead auger by a 140-pound hammer falling a minimum of 30 inches. The number of blows necessary to drive the sampler and the amount of soil recovered is recorded on the Field Exploratory Soil Boring Log. The soil sampler and liners are cleaned with an Alconox® solution and rinsed with tap water prior to each sampling event. New liners are used whenever a soil sample may be retained for laboratory analysis.

Soil samples selected for laboratory analysis are sealed on both ends with Teflon® tape and plastic end caps. The samples are labeled, documented on a chain-of-custody form and placed in a cooler for transport to a state-certified analytical laboratory. Soil contained in remaining liners is removed for lithologic descriptions (according to the Unified Soil Classification System). Additional soil is screened for organic vapors by placing approximately 30 grams of soil in a sealed plastic bag or a glass jar sealed with aluminum foil. The bag or jar is left undisturbed for approximately 15 minutes, in the sun if possible. The head space in the bag is accessed in a manner to minimize entry of outside air, and is tested for total organic vapor using a calibrated photo ionization detector (PID). The results of the field screening are noted with the lithologic descriptions on the Field Exploratory Soil Boring Log.

On encountering an impermeable (clayey) layer three feet or more in thickness below a saturated permeable layer, where the impermeable layer is considered to be a possible confining layer for an

underlying aquifer, drilling is halted until a decision to proceed is obtained from the project manager. This process minimizes the chance of introducing contamination to an underlying, clean aquifer.

Soil Waste Management

Soil cuttings are stockpiled on and covered with plastic sheeting to control runoff, or contained in 55-gallon D.O.T.-approved drums on site. Waste soil is sampled to chemically profile it for disposable, and hauled by a licensed waste hauler to an appropriate landfill or certified treatment facility. All waste stored on site is properly labeled at the time of production.

Soil Boring Abandonment

Soil borings which are not to be converted into monitor wells are sealed to the ground surface using neat cement, sand-cement slurry, or hydrated bentonite pellets or chips in accordance with federal, state and local regulations. Native soil may be used to fill the top two to three feet for cosmetic purposes, as permitted.

Monitor Well Installation

Well Casing. Screen and Filter Pack Construction

All well construction is performed in accordance with Department of Water Resources "California Well Standards" and all requirements of local oversight agencies. Soil borings to be converted into single-cased monitor wells are a minimum of eight inches in diameter for 2-inch diameter wells, and a minimum of ten inches in diameter for 4-inch diameter wells. Monitor wells are constructed with schedule 40, threaded. polyvinyl chloride (PVC) casing unless site geochemistry or contamination necessitates an alternative regulatory agency approved material. The wells are constructed with factory-slotted screen and threaded end caps.

The screened interval is placed such that it extends approximately ten feet into the water bearing zone, and at least five feet above the expected maximum water level. The screened interval may extend less than five feet above the maximum water level, only to prevent intersection of the screened interval with the top of the confining layer of a confined aquifer, or where the water table is too shallow to allow this construction. A graded sand filter pack is placed in the annular space across the screened interval and extended approximately one to two feet above the screen, as site conditions permit, so as to prevent extension of the sand pack into an overlying water-bearing unit. The well screen slot size is the maximum size capable of retaining 90% of the filter pack. Typically, 0.010-inch screen is used where the formation is predominantly clay and/or silt or poorly graded fine sand. 0.020-inch screen is used where the formation is predominantly well-graded or medium to coarse sand and/or gravel.

The filter pack grade (mean grain size) is selected according to native sediment type as follows: a) for poorly graded fine sand or silt/clay - 4 times the 70% retained grain size of the formation b) for medium to coarse sand, gravel or well graded sediments - 6 times the 70% retained grain size. Since results of particle size analysis are not always available, ATC often selects screen size and filter pack on the basis of general site stratigraphy, and specifically the finest significantly thick layer of sediment to be screened. Commonly selected grades are Lone Star® 3, 2/12 or 2/16 (or equivalent) with 0.020-inch slotted screen and Lone Star® 1/20 with 0.010-inch slotted screen.

Well Seal and Completion

A minimum two-foot seal of bentonite is placed above the sand pack. The bentonite seal is hydrated by either formation water or potable water. Neat cement or a cement/bentonite grout mixture seals the remaining annular space to the surface. If bentonite is used in the grout mixture, it does not exceed 5% by weight. The grout is placed using a tremie pipe, if the top of the bentonite is more than 20 feet below grade, or if water is present in the boring above the bentonite seal. A watertight locking cap and protective traffic-rated vault box is installed on top of each well. Well construction details are presented on the Field Exploratory Soil Boring Log. Following completion of a well, ATC completes and submits,

or ensures that the driller has sufficient information to complete and submit, the state-required Well Completion Report or equivalent document.

Well Development

All newly installed wells are developed prior to sampling to remove fine grained sediments from the well and stabilize the filter pack and the disturbed aquifer materials. Development takes place prior to or at least 24 hours after setting the seal on the well, unless otherwise directed by a local oversight agency. Well development consists of surging with a surge block and removing water from the well with either a pump or bailer, until the well is free of sediment, or until at least 10 well casing volumes have been removed. Depth to bottom is measured to determine casing volume. If the well is sampled immediately following development, temperature, pH, specific conductance and turbidity (qualitative) are monitored during well development (see section "Groundwater Sampling"). All development equipment is cleaned prior to use and between wells with an Alconox® solution, then rinsed in potable water. All data collected during development are recorded on the Well Development Data Sheet and, if necessary, the Purging Data Sheet.

Well Surveying

All well elevations are surveyed at the north side of the top of casing to the nearest ±0.01 foot. The exact survey point (at the center of the survey rod or, if the casing stub is uneven, the point of contact between casing and rod) is clearly marked and maintained on the casing rim. Elevations are referenced either to mean sea level or to a project datum. A project datum is typically chosen so as to minimize the possibility of its' later disturbance. For instance, fire hydrants are commonly selected. When required, the wells are surveyed, relative to mean sea level, by a licensed land surveyor.

STANDARD OPERATING PROCEDURE

FIELD SOIL VAPOR MONITORING

A representative soil sample will be collected from each sample interval and placed in a Ziplock® plastic bag. The bag will be sealed and the soil disaggregated. At least ten minutes will be allowed for the soil to be heated by direct sunlight and for any VOCs in the soil to accumulate in the head space of the bag. Subsequently, volatile gases are monitored and recorded by inserting the probe of a Photovac 2020 photoionization detector (PID) into the head space. The PID is equipped with a 10.6 eV lamp which is capable of detecting VOCs at concentrations of 0.1 parts per million (ppm). The PID will be calibrated on-site using 100 ppmV isobutylene-in-air span gas (equivalent to benzene) prior to drilling operations. PID readings will be recorded in the boring logs.

STANDARD OPERATING PROCEDURE

GROUNDWATER MONITORING, WELL PURGING, AND SAMPLING

Groundwater Monitoring

Prior to beginning, a decontamination area is established. Decontamination procedures consist of scrubbing downhole equipment in an Alconox® solution wash (wash solution is pumped through any purging pumps used), and rinsing in a first rinse of potable water and a second rinse of potable water or deionized water if the latter is required. Any non-dedicated downhole equipment is decontaminated prior to use.

Prior to purging and sampling a well the static water level is measured to the nearest 0.01 feet with an electronic water sounder. Depth to bottom is typically measured once per year, at the request of the project manager, and during ATC's first visit to a site. The water sounder and tape will be decontaminated between each well. If floating phase-separated hydrocarbons (PSH) are suspected or observed, PSH is collected using a clear, open-ended product bailer, and the thickness is measured to the nearest 0.01 feet in the bailer. PSH may alternatively be measured with an electronic interface probe once the presence of PSH has been established at a site. Any monitoring well containing a measurable thickness of PSH before or during purging is not additionally purged and no sample is collected from that well. Wells containing hydrocarbon sheen are sampled unless otherwise specified by the project manager. Field observations such as well integrity as well as water level measurements and floating product thicknesses are noted on the Gauging Data/Purge Calculations form.

Well Purging

Each monitoring well to be sampled is purged using a stainless steel bailer, a PVC bailer or a submersible pump. Physical parameters (pH, temperature, and conductivity) of the purge water are monitored during purging activities to assess if the water sample collected is representative of the aquifer. If required, parameters such as dissolved oxygen, turbidity, salinity etc. are also measured. Samples are considered representative if parameter stability is achieved. Stability is defined as a change of less than 0.25 pH units, less than 10% change in conductivity in micro mhos, and less than 1.0 degree centigrade (1.8 degrees Fahrenheit) change in temperature. Parameters are measured in a discreet sample decanted from the bailer separately from the rest of the purge water. Parameters are measured at least four times during purging; initially, and at volume intervals of one well volume. Purging continues until three well casing volumes have been removed, until the well completely dewaters, or until measured parameters stabilize as indicated above. Wells that dewater or demonstrate a slow recharge, may be sampled although fewer than three well volumes have been removed. Well purging information is recorded on the Purge Data sheet. All meters used to measure parameters are calibrated daily. Purge water is sealed, labeled, and stored on site in D.O.T.-approved 55-gallon drums. After being chemically profiled, the water is removed to an appropriate disposal facility by a licensed waste hauler.

Groundwater Sample Collection

Groundwater samples are collected immediately after purging or, if purging rate exceeds well recharge rate, when the well has recharged to at least 80% of its static water level. If recharge is extremely slow, the well is allowed to recharge for at least two hours, if practicable, or until sufficient volume has accumulated for sampling. The well is sampled within 24 hours of purging or re-purged. Samples are collected using polyethylene bailers, either disposable or dedicated to the well. Samples being analyzed for compounds most sensitive to volatilization are collected first. Water samples are placed in appropriate laboratory-supplied containers, labeled, documented on a chain of custody form and placed on ice in a cooler for transport to a state-certified analytical laboratory. Analytical detection limits match or surpass standards required by relevant local or regional guidelines.

Quality Assurance Procedures

To prevent contamination of the samples ATC personnel adhere to the following procedures in the field:

- A new, clean pair of latex gloves are put on prior to sampling each well.
- Wells are gauged, purged and groundwater samples are collected in the expected order of increasing degree of contamination based on historical analytical results.
- All purging equipment will be thoroughly decontaminated between each well using the procedures previously described at the beginning of this section.
- During sample collection for volatile organic analysis, the amount of air passing through the sample is minimized. This helps prevent the air from stripping the volatiles from the water. Sample bottles are filled by slowly running the sample down the side of the bottle until there is a convex meniscus over the mouth of the bottle. The lid is carefully screwed onto the bottle such that no air bubbles are present within the bottle. If a bubble is present, the cap is removed and additional water is added to the sample container. After resealing the sample container, if bubbles still are present inside, the sample container is discarded and the procedure is repeated with a new container.

Laboratory and field handling procedures may be monitored, if required by the client or regulators, by including quality control (QC) samples for analysis with the groundwater samples. Examples of different types of QC samples are as follows:

- Trip blanks are prepared at the analytical laboratory by laboratory personnel to check field handling procedures. Trip blanks are transported to the project site in the same manner as the laboratory-supplied sample containers to be filled. They are not opened, and are returned to the laboratory with the samples collected. Trip blanks are analyzed for purgable organic compounds.
- Equipment blanks are prepared in the field to determine if decontamination of field sampling equipment has been effective. The sampling equipment used to collect the groundwater samples is rinsed with distilled water that is then decanted into laboratory-supplied containers. The equipment blanks are transported to the laboratory, and are analyzed for the same chemical constituents as the samples collected at the site.
- Duplicates are collected at the same time that the standard groundwater samples are being collected and are analyzed for the same compounds in order to check the reproducibility of laboratory data. They are typically only collected from one well per sampling event. The duplicate is assigned an identification number that will not associate it with the source well.

Generally, trip blanks and field blanks check field handling and transportation procedures. Duplicates check laboratory procedures. The configuration of QC samples is determined by ATC depending on site conditions and regulatory requirements.

ATC Branch: Los Angeles	Date: 7.8.09	Page 1 of 2
ATC Representative(s): Michele Berisford, Frank Roanhorse	Project: LAX/Hertz	
Role: Project Geologist, Proj. Eng.	Location: 9000 Airport Blvd.	
Contact Information: Jim Madden / Chris Averling	Project No: 52.75015.0006	Task No: 6
Scope of Work: Install MW-5. Hertz	Weather: Cloudy → Sunny	Temperature: 70°-75°F
X Monitoring __ Assessment __ Remediation __ Closure	Contractor: ~~None~~ ABC / TW	

Time:	Comments:
0530	Stop to get ice for drinks + Samples.
0547	Get to office, load supplies / coolers.
0601	Leave for Site
0650	Arrive @ Site, pull on + park - Note conditions
	- Main turned on / leaking - ground wet.
	- MW-4 ok.
0704	ABC on site, mobe to MW-4 to finish well. (Justin, Matt, Raoul)
0715	Morning tailgate.
0745	Grout/Bentonite the remaining 8' of hole, - begin.
0801	Cement the hole, Have cars removed from new MW-5 location (~40' East of last due to spatial constraints), Driller checks on location (Sewer might be issue)
0818	Mobe to new MW-5 location, set up Chase truck, drop trailer + move Rig into hole.
1030	~~Encounter~~ Knock out Poddy ~~Knockout~~ untwisted Sitting @ bottom of hole ~ 50'.
1040	Water System Inspector stopped by to inspect UST covers
1056	Poddy recovered, resume drilling
1159	Last sample @ 80', drilled to 85'.
1209	Stop for water to charge, take a lunch.
1206	Frank Roanhorse onsite
1301	Tag MW-5 (81.40').
1400	Began well placement (PVC total length 95')

Equipment Used: Co. truck, PID, Cooler, ice, Gatorade, Nitriles, Encores

Contractor Hours (per Person): ABC (7am to)	Staff / Technician Hours: FRO(8) - JMB(6-1)	Mileage:

CSDLAC No.: 10196

Workorder No.: 106293

RE: Hertz LAX

Attention: Jim Madden

Enclosed are the results for sample(s) received on July 08, 2009 by Advanced Technology Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

Eddie F. Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.

Results were J-Flag. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" Flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

EPA 8260B analysis was performed using 5035 preservation requirements except sample MW-4/70'. Any high level dilutions were performed on a preserved methanol sample unless otherwise noted.

Analytical Comments for EPA 8260B

Sample 106293-005B, Tert-Butanol was reported with "E" qualifier (value above quantitation range). The sample was ran at 50x with result less than PQL.

Samples 106293-014AMS and 106293-014AMSD, Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria. Also, MTBE was reported with "E" qualifier (value above quantitation range) possibly due to high concentration of MTBE. The analytical batch was validated by the Laboratory Control Sample (LCS).

Hi Jim,

I got your email below. I was told that we only have 1 set of encore to use for the analyses you requested.

Here's what we can do 1) analyze 8015 TPHg using one encore 2) analyze 8260B+Oxygenates with 2nd encore 3) for dilutions, we can prioritize 8260B and use the 3rd encore 4) we will use the sample tube for any other reruns.

As for Ethanol, we are not set-up by method 8260B. We can analyze it by 8015B. Let me know if this will be a problem.

Enclosed is a copy of the coc for your reference.

Thanks,
Rachelle

Subject: Hertz - LAX project

All samples are to be ran as follows:

A State-certified laboratory will perform analyses of all collected soil and groundwater samples. Soil and

groundwater samples will be analyzed for TPH gasoline by EPA Method 8015/5035. In addition, the soil samples will be

analyzed for benzene, toluene, ethylbenzene, total xylenes (BTEX), fuel oxygenates including MTBE and

ethanol by EPA Method 8260B/5035. As requested by the RWQCB, groundwater samples will be analyzed by

Volatile Organic Compounds (full suite) including common aromatic and chlorinated volatile organic

compounds by EPA method 8260B/5035 for this sampling event.

Please let me know if there is a problem.

Best Regards,

RE: Hertz LAX, 52.75015.0006

Attention: Jim Madden

Enclosed are the results for sample(s) received on July 08, 2009 by Advanced Technology Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

Eddie F. Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.

CLIENT: ATC Associates Inc
Project: Hertz LAX, 52.75015.0006
Lab Order: 106302

CASE NARRATIVE

Results were J-Flag. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" Flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

All volatile analyses were performed using 5035 preservation requirements except sample MW-5/70'. Any high level dilutions were performed on a preserved methanol sample unless otherwise noted.

Hi Jim,

Please confirm if you want us to run all the samples collected on 7/8/09. The analyses requested on Page 1 of 2 do not have the lines drawn down to the last sample. Attached is the copy of the COCs for your reference.

Please advise.

Hi Jim,

I got your email below. I was told that we only have 1 set of encore to use for the analyses you requested.

Here's what we can do 1) analyze 8015 TPHg using one encore 2) analyze 8260B+Oxygenates with 2nd encore 3) for dilutions, we can prioritize 8260B and use the 3rd encore 4) we will use the sample tube for any other reruns.

As for Ethanol, we are not set-up by method 8260B. We can analyze it by 8015B. Let me know if this will be a problem.

Enclosed is a copy of the coc for your reference.

Thanks,
Rachelle

Subject: Hertz - LAX project

All samples are to be ran as follows:

A State-certified laboratory will perform analyses of all collected soil and groundwater samples. Soil and

groundwater samples will be analyzed for TPH gasoline by EPA Method 8015/5035. In addition, the soil samples will be

analyzed for benzene, toluene, ethylbenzene, total xylenes (BTEX), fuel oxygenates including MTBE and

ethanol by EPA Method 8260B/5035. As requested by the RWQCB, groundwater samples will be analyzed by

Volatile Organic Compounds (full suite) including common aromatic and chlorinated volatile organic

compounds by EPA method 8260B/5035 for this sampling event.

Please let me know if there is a problem.

August 17, 2009

Mr. Jim Madden
A.T.C. Associates Inc. [Monterey Park]
25 Cupania Circle
Monterey Park, CA 91755

Report No.: 9080044
Project Name: Hertz-LAX, P.O. No. 52.75015.0006

Dear Mr. Jim Madden,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on August 06, 2009.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

14. APPLICATION COMMENTS

In the event that any box (i.e. 1-16) is filled to capacity, it is possible that additional information that has been captured electronically is not printed. Nevertheless, the information printed herein exceeds that required by Section 19825 of the Health and Safety Code of the State of California.

15. Building Relocated From:

16. CONTRACTOR, ARCHITECT, & ENGINEER NAME

		ADDRESS		CLASS	LICENSE#	PHONE #
(E) Peyton	David	15346 Hayford St,	La Mirada, CA 90638		S3288	714-245-4930
(A) Smith	Leland	3452 West 170th Street,	Torrance, CA 90504		C16864	310-530-6313
(C) Daytona Construction Inc		P O Box 91071,	Los Angeles, CA 90009	B	338599	562-402-5777

Unless a shorter period of time has been established by an official action, plan check approval expires one and a half years after the plan check fee has been paid. This permit expires two years after the building permit fee has been paid or 180 days after the fee has been paid and construction has not commenced or if work is suspended, discontinued or abandoned for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by the Dept. of Building & Safety (Sec. 22.12 & 22.13 LAMC).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. The following applies to B contractors only: I understand the limitations of Section 7057 related to my ability to take prime contracts or subcontracts involving specialty trades. (For 1 or 2 family dwellings, use the declaration attachment if separate general, electrical, plumbing, and/or HVAC contractor's & workers' comp. declarations are desired.)

License Class: B Lic. No.: 338 399 Print: THOMAS W Roe Sign:

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

☐ I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☒ I have and will maintain workers's compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are: Carrier: STATE FUND Policy Number: 0006255

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Sign: Date: 1/19/99 ☐ Contractor ☐ Authorized Agent ☐ Owner

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES

19. CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).

Lender's name: Lender's address:

20. ASBESTOS REMOVAL

Notification of asbestos removal: ☒ Is not applicable ☐ Letter was sent to the AQMD or EPA Sign: Date: 1/19/99

21. OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reason (Section 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 commencing with Sec. 7000 of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year from completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale)

☐ I, as the owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

☐ I am exempt under Sec. Bus. & Prof. Code for the following reason:

Print: Sign: Date: / / ☐ Owner ☐ Authorized Agent

22. FINAL DECLARATION

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein. Also that it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, that neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

15. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date 8.3.92 Lic. Class B-1 Lic. No. 503224 Contractor's Signature

Contractor's Mailing Address

OWNER-BUILDER DECLARATION

16. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason

Date _____ Owner's Signature

WORKERS' COMPENSATION DECLARATION

17. I hereby affirm that I have a certificate of consent to self-insure or a certificate of Worker's Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.).

Unless a shorter period of time has been established by an official action, plan check approval expires one and a half years after the plan check fee has been paid. This permit expires two years after the building permit fee has been paid or 180 days after the fee has been paid and construction has not commenced or if work is suspended, discontinued or abandoned for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by the Dept. of Building & Safety (Sec. 22.12 & 22.13 LAMC).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. The following applies to B contractors only: I understand the limitations of Section 7057 related to my ability to take prime contracts or subcontracts involving specialty trades. (For 1 or 2 family dwellings, use the declaration attachment if separate general, electrical, plumbing, and/or HVAC contractor's & workers' comp. declarations are desired.)

License Class: B Lic. No.: 338599 Print: Thomas W Ra Sign: _____

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

☐ I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers's compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are: Carrier: STATE FUND Policy Number: 2006255

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Sign: _____ Date: 1/19/99 ☐ Contractor ☐ Authorized Agent ☐ Owner

WARNING FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).

Lender's name: _____ Lender's address: _____

20. ASBESTOS REMOVAL

Notification of asbestos removal: ☐ Is not applicable ☐ Letter was sent to the AQMD or EPA Sign: _____ Date: 1/19/99

21. OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reason (Section 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 commencing with Sec. 7000 of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year from completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale)

☐ I, as the owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

☐ I am exempt under Sec. _____ Bus. & Prof. Code for the following reason: _____

Print: _____ Sign: _____ Date: / / ☐ Owner ☐ Authorized Agent

22. FINAL DECLARATION

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein. Also that it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, that neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

LICENSED CONTRACTORS DECLARATION

X 15. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date 5/18/92 Lic. Class B Lic. No. 503224 Contractor's Signature Hillman & W Peck

Contractor's Mailing Address 10866 WILSHIRE BLVD. LOS ANGELES CA 90024

OWNER-BUILDER DECLARATION

16. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

OWNER-BUILDER DECLARATION

I hereby affirm, under penalty of perjury, that I am exempt from the Contractors License Law for the following reason (Sec. 7031.5, Business & Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chap. 9 commencing with Sec. 7000 of Div. 3 of the Business & Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Sec. 7031.5 by any applicant for a permit, subjects the applicant to a civil penalty of not more than five hundred dollars ($500):

☐ I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to the owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not intend to improve for the purpose of sale).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law).

☐ I am exempt under Sec. _____ , Bus. & Prof. Code for the following reason _____

FINAL DECLARATION

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein. Also, that it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, that neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed.

14. APPLICATION COMMENTS

In the event that any box (i.e. 1-16) is filled to capacity, it is possible that additional information that has been captured electronically is not printed. Nevertheless, the information printed herein exceeds that required by Section 19825 of the Health and Safety Code of the State of California.

15. Building Relocated From:

16. CONTRACTOR, ARCHITECT, & ENGINEER NAME	ADDRESS		CLASS	LICENSE#	PHONE #
(C) Parada Robert	1920 Lorain Rd,	San Marino, CA 91108	B	309494	
(C) Parada Robert Construction Compan	11920 Goldring Rd Ste A,	Arcadia, CA 91006	A	327430	

Unless a shorter period of time has been established by an official action, plan check approval expires one and a half years after the plan check fee has been paid. This permit expires two years after the building permit fee has been paid or 180 days after the fee has been paid and construction has not commenced or if work is suspended, discontinued or abandoned for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by the Dept. of Building & Safety (Sec. 22.12 & 22.13 LAMC)

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. If doing work on a residential property, I certify that I hold a valid certification as a Home Improvement contractor per B&P Code, Section 7150.2c. The following applies to B contractors only: I understand the limitations of Section 7057 related to my ability to take prime contracts or subcontracts involving specialty trades.

License Class: B Lic. No.: 309494 Print: Robert Parada Sign: Robert Parada

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

☐ I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers's compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: _____ Policy Number: _____

☑ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Sign: Robert Parada Date: 11/29/01 ☐ Contractor ☑ Authorized Agent ☐ Owner

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES

19. CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).

Lender's name: _____ Lender's address: _____

20. ASBESTOS REMOVAL

Notification of asbestos removal: ☑ Is not applicable ☐ Letter was sent to the AQMD or EPA Sign: Robert Parada Date: 11/29/01

21. OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reason (Section 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 commencing with Sec. 7000 of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year from completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale)

☐ I, as the owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

☐ I am exempt under Sec. _____, Bus. & Prof. Code for the following reason: _____

Print: _____ Sign: _____ Date: / / ☐ Owner ☐ Authorized Agent

22. FINAL DECLARATION

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein. Also that it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, that neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

LICENSED CONTRACTORS DECLARATION

X 15. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date 5/18/92 Lic. Class B Lic. No. 503224 Contractor's Signature Helmut Dietz

Contractor's Mailing Address 10866 WILSHIRE BLVD. LOS ANGELES CA 90024

OWNER-BUILDER DECLARATION

16. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

Date _____ Owner's Signature _____

Unless a shorter period of time has been established by an official action, plan check approval expires one and a half years after the plan check fee has been paid. This permit expires two years after the building permit fee has been paid or 180 days after the fee has been paid and construction has not commenced or if work is suspended, discontinued or abandoned for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by the Dept. of Building & Safety (Sec. 22.12 & 22.13 LAMC).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. If doing work on a residential property, I certify that I hold a valid certification as a Home Improvement contractor per B&P Code, Section 7150.2c. The following applies to B contractors only: I understand the limitations of Section 7057 related to my ability to take prime contracts or subcontracts involving specialty trades.

License Class: B Lic. No.: 309494 Print: Robert Parada Sign: Robert Parada

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

☐ I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers's compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: _____ Policy Number: _____

☑ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Sign: Robert Parada Date: 11/29/01 ☐ Contractor ☑ Authorized Agent ☐ Owner

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).

Lender's name: _____ Lender's address: _____

20. ASBESTOS REMOVAL

Notification of asbestos removal: ☑ Is **not** applicable ☐ Letter **was sent** to the AQMD or EPA Sign: Robert Parada Date: 11/29/01

21. OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reason (Section 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 commencing with Sec. 7000 of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year from completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale)

☐ I, as the owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

☐ I am exempt under Sec. _____, Bus. & Prof. Code for the following reason: _____

Print: _____ Sign: _____ Date: ___/___/___ ☐ Owner ☐ Authorized Agent

22. FINAL DECLARATION

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein. Also that it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, that neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

X 15. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date 5/18/92 Lic. Class B Lic. No. 503224 Contractor's Signature Chester Smith Assoc

Contractor's Mailing Address 10866 WILSHIRE BLVD LOS ANGELES CA 90024

OWNER-BUILDER DECLARATION

16. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

PERMIT EXPIRATION

This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by the Dept. of Building & Safety (Sec. 22.12 & 22.13 LAMC).

17. OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the following reason (Section 7031.5, Business and Professions Code:
Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

( ) I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year from completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale).

OR

(X) I, as the owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

( ) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

( ) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier:_____ Policy Number:_____

(X) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION

I certify that notification of asbestos removal is either not applicable or was sent to the AQMD or EPA as per section 19827.5 of the Health and Safety Code.

20. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Owner-Builder Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration and Final Declaration; and

(2) This permit is being obtained with the consent of the legal owner of the property.

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

15. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section [illegible]) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date 8-17-80 Lic. Class A Lic No 86393 Contractor's OLTMANS CONST CO,

Contractor's Mailing Address 516 MONTEREY PASS RD. MONTEREY PARK CA 91754

OWNER-BUILDER DECLARATION

16. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

Subject: Authorization to Sign Business Licenses and Permits
Hertz Rent-a-Car

Gentlemen:

Peck/Jones Construction Corporation (Peck/Jones) authorizes the following person to act on the corporation's behalf in obtaining business licenses and permits from the Building Department and to sign permit applications. Peck/Jones is properly licensed as required by the State of California.

Peck/Jones assumes full responsibility under the law for business licenses and permits taken by person authorized to act on its behalf.

Peck/Jones understands notarization is required and is included.

This authorization shall continue until the Building Department of the City of Los Angeles is notified in writing that such authorization is canceled by its contractor.

PERSON AUTHORIZED TO SIGN PERMITS AND HIS SIGNATURE

Unless a shorter period of time has been established by an official action, plan check approval expires one and a half years after the fee has been paid. This permit expires two years after the fee has been paid or 180 days after the fee has been paid and construction has not commenced; or if work is suspended, discontinued or abandoned for a continuous period of 180 days (Sec. 98.0603 L.A.M.C.). Claims for refund of fees paid on permits must be filed within one year from the date of expiration for building permits granted by the Department of Building and Safety (Sec. 22.12 & 22.13 L.A.M.C.).

OWNER-BUILDER DECLARATION

I hereby affirm, under penalty of perjury that I am exempt from the Contractors License Law for the following reason (Sec. 7031.5, Business & Professions Code. Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chap. 9 commencing with Sec. 7000 of Div. 3 of the Business & Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).

☐ I as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to the owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not intend to improve for the purpose of sale.)

☐ I as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

☐ I am exempt under Sec. _____, Bus. & Prof. Code for the following reason _____

Print _____ Sign _____ Date _____ ☐ OWNER ☐ AUTHORIZED AGENT

(5)

FINAL DECLARATION

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein. Also, that it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, that neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed.

PERMIT EXPIRATION

This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by the Dept. of Building & Safety (Sec. 22.12 & 22.13 LAMC).

17. OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the following reason (Section 7031.5, Business and Professions Code:
Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

(__) I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year from completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale).

OR

(X) I, as the owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

(__) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

(__) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier:_____ Policy Number:_____

(X) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION

I certify that notification of asbestos removal is either not applicable or was sent to the AQMD or EPA as per section 19827.5 of the Health and Safety Code.

20. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Owner-Builder Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration and Final Declaration; and

(2) This permit is being obtained with the consent of the legal owner of the property.

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

16. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect
Date 4-21-92 Lic. Class A B-1 Lic No 50224 Contractor PECK-JONES (Signature)

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031 5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

Unless a shorter period of time has been established by an official action, plan check approval expires one and a half years after the plan check fee has been paid. This permit expires two years after the building permit fee has been paid or 180 days after the fee has been paid and construction has not commenced or if work is suspended, discontinued or abandoned for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by the Dept. of Building & Safety (Sec. 22.12 & 22.13 LAMC).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. If doing work on a residential property, I certify that I hold a valid certification as a Home Improvement contractor per B&P Code, Section 7150.2c. The following applies to B contractors only: I understand the limitations of Section 7057 related to my ability to take prime contracts or subcontracts involving specialty trades.

License Class: B Lic. No.: 338599 Print: DAYTONA CONSTRUCTION THOMAS W ROE Sign: _____

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

☐ I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☒ I have and will maintain workers's compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:
Carrier: STATE FUND Policy Number: 046-01-000 6255

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Sign: _____ Date: 2 27 01 ☒ Contractor ☐ Authorized Agent ☐ Owner

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).

Lender's name: _____ Lender's address: _____

20. ASBESTOS REMOVAL

Notification of asbestos removal: ☒ is not applicable ☐ Letter was sent to the AQMD or EPA Sign: _____ Date: 2 27 01

21. OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reason (Section 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 commencing with Sec. 7000 of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year from completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale)

☐ I, as the owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

☐ I am exempt under Sec. _____, Bus. & Prof. Code for the following reason: _____

Print: _____ Sign: _____ Date: / / ☐ Owner ☐ Authorized Agent

22. FINAL DECLARATION

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein. Also that it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, that neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

OWNER-BUILDER DECLARATION

I hereby affirm, under penalty of perjury, that I am exempt from the Contractors License Law for the following reason (Sec. 7031.5, Business & Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chap. 9 commencing with Sec. 7000 of Div. 3 of the Business & Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Sec. 7031.5 by any applicant for a permit, subjects the applicant to a civil penalty of not more than five hundred dollars ($500):

☐ I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to the owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not intend to improve for the purpose of sale)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law)

☐ I am exempt under Sec. _____ Bus. & Prof. Code for the following reason _____

FINAL DECLARATION

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein. Also, that it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, that neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

15. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date _____ Lic. Class _____ Lic. No. _____ Contractor's Signature _____

Contractor's Mailing Address _____

OWNER-BUILDER DECLARATION

16. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☒ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

4 OWNER-BUILDER DECLARATION

I hereby affirm, under penalty of perjury, that I am exempt from the Contractors License Law for the following reason (Sec. 7031.5, Business & Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chap. 9 commencing with Sec. 7000 of Div. 3 of the Business & Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Sec. 7031.5 by any applicant for a permit, subjects the applicant to a civil penalty of not more than five hundred dollars ($500):

☐ I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to the owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not intend to improve for the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

☐ I am exempt under Sec. _____, Bus. & Prof. Code for the following reason _____

Print _____ Sign _____ Date _____ ☐ OWNER ☐ AUTHORIZED AGENT

5 FINAL DECLARATION

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein. Also, that it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, that neither the City of Los Angeles nor any board, department officer, or employee thereof, makes any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed.

I. Statement of Purpose

A. Management Action Plan

The Management Action Plan (MAP) is to outline the total multi-year environmental cleanup program for a Formerly Used Defense Site (FUDS) property. The plan will define the cleanup program requirements and propose a comprehensive approach and associated costs to conduct future investigations and response action at each cleanup site.

B. Formerly Used Defense Sites Program

During the past two centuries, the Department of Defense (DOD) has used land throughout the United States to both train Soldiers, Airmen, Sailors and Marines, and test new weapons to ensure the nation's military readiness. As training and testing needs changed, DOD obtained property or returned it to private or public uses. When no longer needed, many of these properties were cleaned up according to the best practices available at the time and then transferred to other owners such as private individuals or federal, state, tribal, or local government entities.

Today, DOD is responsible for the environmental restoration (cleanup) of properties that were formerly owned by, leased to or otherwise possessed by the United States and under the jurisdiction of the Secretary of Defense prior to October 1986.Such properties are known as Formerly Used Defense Sites or FUDS. The U.S. Army is DOD's lead agent for the FUDS Program. The U.S. Army Corps of Engineers executes the FUDS Program on behalf of the U.S. Army and DOD. The U.S. Army and DOD are dedicated to protecting human health and the environment by investigating and, if required, cleaning up potential contamination or munitions that may remain on these properties from past DOD activities.

The scope and magnitude of the FUDS Program are significant, with more than 10, 000 properties identified for potential inclusion in the program. Information about the origin and extent of contamination or munitions, land transfer issues, past and present property ownership, applicable laws and DOD policies must be evaluated before DOD considers a property eligible for Defense Environment Restoration Account funding under the FUDS Program. Environmental cleanup at FUDS properties is conducted under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

C. Installation Restoration Program (IRP)

Installation Restoration Program (IRP) category projects include sites that require response actions to address releases of: (a) Hazardous substances and pollutants or contaminants; (b) Petroleum, Oil, and Lubricants (POLs); (c) Hazardous wastes or hazardous waste constituents; and (d) Explosive compounds released to soil, surface water, sediment, or groundwater as a result of ammunition or explosives production or manufacturing at ammunition plants.

The relative risk site evaluation (RRSE) framework is a methodology used by all DoD Components to evaluate the relative risk posed by a site in relation to other sites. It is a tool used across all of DoD to group sites into high, medium, and low categories based on an evaluation of site information using three factors: the contaminant hazard factor (CHF), the migration pathway factor (MPF), and the receptor factor (RF).Factors are based on a quantitative evaluation of Comprehensive Environmental Response, Compensation and Liability Act(CERCLA) hazardous substances, pollutants, or contaminants and a qualitative evaluation of pathways and human and ecological receptors in the four media most likely to result in significant exposure groundwater, surface water, sediment, and surface soils.

D. Military Munitions Response Program (MMRP)

In 2001, DoD established the Military Munitions Response Program (MMRP). The MMRP addresses munitions response sites (MRSs) at Formerly Used Defense Site locations. MRSs are sites that are known or suspected to contain unexploded ordnance, discarded military munitions, or munitions constituents (MC). Through the MMRP, DoD complies with environmental cleanup laws, such as the Comprehensive Environmental Response, Compensation, and Liability Act, also known as Superfund.

To prioritize funding and cleanup of MRSs that pose the greatest threat to safety, human health, and the environment, DoD uses the Munitions Response Site Prioritization Protocol (MRSPP). The MRSPP consists of three separate modules to evaluate hazards associated with explosives, chemical warfare materiel, MC, and other incidental environmental contaminants. The MRSPP scores affect how DoD sequences MRSs for cleanup. In addition to relative risk, DoD considers other factors such as economic, programmatic, and stakeholder concerns, as well as reuse and redevelopment plans, when prioritizing sites for cleanup.

III. Property Information

FUDS Number: J09CA0453
FFID: CA99799F550800
Name: LOS ANGELES AFS ANNEX NO.1

A. Property Description

The site was located on 5.27 acres 10 miles southwest of downtown Los Angeles, in the proximity of the Los Angeles International Airport. A report dated 18 December 1975 indicated that 3.12 acres of the 4.27 acre parcel were disposed to the General Services Administration (GSA) and then assigned to the Health, Education, and Welfare Department who transferred it to Northrop University by quit claim deed dated 1 August 1977. The remaining 1.15 acres of the 4.27 acres were purchased by Northrop University in 1984 through a government auction. The 1-acre parcel lease was terminated 25 October 1966 and the site is currently under private ownership.

B. Locale

City: 10 miles SW of Los Angeles
State: CA
Latitude: 33.951801
Longitude: -118.383003
Congressional District: 43
Size (Acreage): No acreage reported

C. Organization

Division: South Pacific Division
District: Los Angeles District
Phone: 213-452-3920

Current Owners:

Type	Name
Private	PRIVATE NORTHROP UNIVERSITY

D. National Priorities List Status

The National Priorities List (NPL) is the list of national priorities among the known

releases or threatened releases of hazardous substances, pollutants, or contaminants throughout the United States and its territories. The NPL is intended primarily to guide the EPA in determining which sites warrant further investigation.

National Priorities List (NPL) Status: Not on the NPL

E. Project Summaries

The below table outlines all projects that have been identified on this FUDS property. The table provides information on the category of project, the legal driver, the RRSE or MRSPP score that is used for prioritization, the total funding for the project, the status of work on the project, and the actual or anticipated remedy in place and response complete dates.

Project Number	Category	Name	Legal Driver	RRSE	MRSPP	Status	RIP	RC
0	PA/INPR	PA/INPR Funding				Complete		
01	CON/HTRW	Los Angeles AFS UST	State			Complete	05/2002 Actual	05/2002 Actual

IV. Cleanup Program Summary

A. Historic Activity

The site was used by the Air Force between 1955 and 1975 as a printing plant and as headquarters for the Space and Missile Systems Organization.

2021 Funding ($K): $0
CTC ($K): $0

There are no MMRP project costs on this installation.
*Past costs are approximate and not inflated to reflect current year fiscal dollars.

VII. Community Involvement

Since 1993, the Department of Defense (DOD) has supported the development, implementation, and maintenance of the Restoration Advisory Board (RAB) program. Through the RAB program, communities provide input into the decision - making process of DOD's environmental cleanup program. A RAB is a group, equally co - chaired by a DOD representative and a community member, that serves as a forum for exchange of information between government officials and members of the local community on property cleanup issues. In addition to regular RAB meetings, a combination of activities may be conducted to enhance this process. Such activities may include coordinating installation site tours or providing interactive presentations with the use of cleanup technology models. Members of a RAB may include local citizens and representatives of the U.S. Environmental Protection Agency (EPA) and state, local, and tribal governments. The RAB team should reflect the diverse interests of the community and help identify possible issues associated with an installation's environmental cleanup program. RABs provide a link between the community and cleanup decision makers, and should complement other community involvement activities, such as holding public meetings, distributing informative mailings to the public on installation cleanup activities, and establishing local information repositories.

In fiscal year 1998 (FY98), DOD continued to build trust with local communities surrounding military installations by strengthening the RAB program and making new resources available; including the implementation of the Technical Assistance for Public Participation (TAPP) program. The TAPP program was designed to help community members of RABs and TRCs better understand the scientific and engineering issues underlying their properties' environmental cleanup activities. Under TAPP, the installation may contract for an independent technical consultant to advise the RAB on a specific project, which must be identified in the TAPP application. Typical projects may involve reviewing proposed remedial technologies, interpreting health and environmental effects data, or reviewing cleanup documents.

No RAB has been reported

APPENDIX I
IRP Project Descriptions

1. Identification

Project ID: 01
Project Name: Los Angeles AFS UST
Legal Driver: State
Closeout
RIP Date: 05/2002 Actual
RC Date: 05/2002 Actual

2. Project Description

Removal and disposal of two USTs; one 2,000 and one 4,000 gallons. Sample tank contents and surrounding soils.

3. Restoration History

Completed. tanks were already removed by current owner Neutrogena Corporation. (POC Senaka Nanayakara, 310-216-5295).

4. Cleanup/Exit Strategy

No cleanup/exit strategy reported.

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

The following questionnaire is required by the ASTM Standard E 1527-13, which adheres to the All Appropriate Inquiries (AAI) Rule (United States Environmental Protection Agency) (40 CFR 312).

As defined by ASTM, the User of the report is the *"party seeking to use Practice E 1527 to complete an environmental site assessment of the property. A user may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. The user has specific obligations for completing a successful application of this practice."*

PROPERTY ADDRESS:	9000 Airport Blvd.
PROPERTY CITY, STATE ZIP:	9000 Airport Blvd, Los Angeles, CA 90045

1. Environmental liens that are filed or recorded against the property (40 CFR 312.25)

Did a search of recorded land title records (or judicial records) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

[ ] YES [x] NO

2. Activity and use limitations (AULs) that are in place on the property or that have been filed or records against the property (40 CFR 312.26(a)(1)(v) and (vi))

Did a search of recorded land title records (or judicial records) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

[ ] YES [x] NO

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)

Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

[ ] YES [x] NO

DocuSign Envelope ID: B832CD25-7A0F-4A56-84EF-27DEF514F33A

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29)

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

[x] YES [ ] NO

---

5. Commonly known or reasonably ascertainable information about the Property (40 CFR 312.30)

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?

[ ] YES [x] NO

---

a. Do you know the past uses of the property?

[ ] YES [x] NO

---

b. Do you know of specific chemicals that are present or once were present at the property?

[ ] YES [x] NO

---

c. Do you know of spills or other chemical releases that have taken place at the property?

[ ] YES [x] NO

---

d. Do you know of any environmental cleanups that have taken place at the property?

[ ] YES [x] NO

---

e. Do you have any prior knowledge that the property was developed as a gas station, dry cleaner, manufacturing/industrial facility in the past?

[ ] YES [x] NO

---

f. Are you aware of historical use of hazardous materials or petroleum products used or present on the property?

[ ] YES [x] NO

DocuSign Envelope ID: B832CD25-7A0F-4A56-84EF-27DEF514F33A

g. Do you know if the property is currently or was formerly equipped with underground storage tanks (USTs) or septic tanks?

[ ] YES [x] NO

h. Do you know of any past, threatened or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substance or petroleum products involving the property by any owner or occupant of the property?

[ ] YES [x] NO

6. The degree of obviousness of the presence or likely presence of contamination at the property**, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)**

Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

[ ] YES [x] NO

PRELIMINARY REPORT

In response to the application for a policy of title insurance referenced herein, ***Chicago Title Company*** *hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Chicago Title Insurance Company, a Florida corporation.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

County:	Los Angeles
Taxpayer:	The Hertz Corp dba Hertz Rental Car
Amount:	$236.14
Recording Date:	December 13, 2022
Recording No:	20221160118, of Official Records

23. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

24. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

PLEASE REFER TO THE "INFORMATIONAL NOTES" AND "REQUIREMENTS" SECTIONS WHICH FOLLOW FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION.

END OF EXCEPTIONS

REQUIREMENTS SECTION

1. Unrecorded matters which may be disclosed by an Owner's Affidavit or Declaration. A form of the Owner's Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

   The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

2. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance by the corporation named below:

   Name of Corporation: The Hertz Corporation, a Delaware corporation

   a) A Copy of the corporation By-laws and Articles of Incorporation

   b) An original or certified copy of a resolution authorizing the transaction contemplated herein

   c) If the Articles and/or By-laws require approval by a 'parent' organization, a copy of the Articles and By-laws of the parent

   The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

END OF REQUIREMENTS

INFORMATIONAL NOTES SECTION

1. None of the items shown in this report will cause the Company to decline to attach ALTA Endorsement Form 9 to an Extended Coverage Loan Policy, when issued.

2. The Company is not aware of any matters which would cause it to decline to attach CLTA Endorsement Form 116 indicating that there is located on said Land Commercial properties, known as 9000 Airport Boulevard, located within the city of Los Angeles, California, , to an Extended Coverage Loan Policy.

3. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

4. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

5. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

6. The following Exclusion(s) are added to preliminary reports, commitments and will be included as an endorsement in the following policies:

   A. 2006 ALTA Owner's Policy (06-17-06).

      6. Defects, liens, encumbrances, adverse claims, notices, or other matters not appearing in the Public Records but that would be disclosed by an examination of any records maintained by or on behalf of a Tribe or on behalf of its members.

   B. 2006 ALTA Loan Policy (06-17-06).

      8. Defects, liens, encumbrances, adverse claims, notices, or other matters not appearing in the Public Records but that would be disclosed by an examination of any records maintained by or on behalf of a Tribe or on behalf of its members.

      9. Any claim of invalidity, unenforceability, or lack of priority of the lien of the Insured Mortgage based on the application of a Tribe's law resulting from the failure of the Insured Mortgage to specify State law as the governing law with respect to the lien of the Insured Mortgage.

   C. ALTA Homeowner's Policy of Title Insurance (12-02-13) and CLTA Homeowner's Policy of Title Insurance (12-02-13).

      10. Defects, liens, encumbrances, adverse claims, notices, or other matters not appearing in the Public Records but that would be disclosed by an examination of any records maintained by or on behalf of a Tribe or on behalf of its members.

   D. ALTA Expanded Coverage Residential Loan Policy - Assessments Priority (04-02-15).

      12. Defects, liens, encumbrances, adverse claims, notices, or other matters not appearing in the Public Records but that would be disclosed by an examination of any records maintained by or on behalf of a Tribe or on behalf of its members.

      13. Any claim of invalidity, unenforceability, or lack of priority of the lien of the Insured Mortgage based on the application of a Tribe's law resulting from the failure of the Insured Mortgage to specify State law as the governing law with respect to the lien of the Insured Mortgage.

INFORMATIONAL NOTES
(Continued)

E. CLTA Standard Coverage Policy 1990 (11-09-18).

7. Defects, liens, encumbrances, adverse claims, notices, or other matters not appearing in the public records but that would be disclosed by an examination of any records maintained by or on behalf of a tribe or on behalf of its members.

8. Any claim of invalidity, unenforceability, or lack of priority of the lien of the insured mortgage based on the application of a tribe's law resulting from the failure of the insured mortgage to specify state law as the governing law with respect to the lien of the insured mortgage.

7. Note: There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the filed rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for such discount. These discounts only apply to transactions involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

Not all discounts are offered by every FNF Company. The discount will only be applicable to the FNF Company as indicated by the named discount.

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Effective January 1, 2023

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (e.g., name, address, phone number, email address);
- demographic information (e.g., date of birth, gender, marital status);
- identity information (e.g. Social Security Number, driver's license, passport, or other government ID number);
- financial account information (e.g. loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to affiliated or nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;

Copyright © 2023. Fidelity National Financial, Inc. All Rights Reserved

- to affiliated or nonaffiliated third parties with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information
Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: We are providing this notice pursuant to state law. You may be placed on our internal Do Not Call List by calling FNF Privacy at (888) 714-2710 or by contacting us via the information set forth at the end of this Privacy Notice. For further information concerning Nevada's telephone solicitation law, you may contact: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: aginquiries@ag.state.nv.us.
For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

For Virginia Residents: For additional information about your Virginia privacy rights, please email privacy@fnf.com or call (888) 714-2710.

Information From Children
The FNF Websites are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes
By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The Privacy Notice's effective date will show the

Copyright © 2023. Fidelity National Financial, Inc. All Rights Reserved

last date changes were made. If you provide information to us following any change of the Privacy Notice, that signifies your assent to and acceptance of the changes to the Privacy Notice.

Accessing and Correcting Information; Contact Us

If you have questions or would like to correct your Personal Information, visit FNF's Privacy Inquiry Website or contact us by phone at (888) 714-2710, by email at privacy@fnf.com, or by mail to:

ATTACHMENT ONE (Revised 05-06-16)

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

{Except as provided in Schedule B - Part II,{ t{or T}his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

{PART I

{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.}

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:}

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:
{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown in the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and that are not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records. }
7. {Variable exceptions such as taxes, easements, CC&R's, etc. shown here.}

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY – ASSESSMENTS PRIORITY (04-02-15)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

This material is being furnished as an aid in locating the herein described Land in relation to adjoining streets, natural boundaries and other land, and not a survey of the land depicted. Except to the extent a policy of title insurance is expressly modified by endorsement, if any, the Company does not insure dimensions, distances, location of easements, acreage or other matters shown thereon.

OWNER'S DECLARATION

Escrow No.: 00189122-994-LT2-JC
Property Address: 9000 Airport Boulevard
Los Angeles, CA

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)

   a. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at 9000 Airport Boulevard, Los Angeles, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

   b. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at 9000 Airport Boulevard, Los Angeles, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

2. (Fill in the applicable paragraph and strike the other)

   a. During the period of six months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.

   b. During the period of six months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Chicago Title Company against any and all claims arising therefrom.

3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.

4. Except as shown in the above-referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, regular assessments, special assessments, periodic assessments or any assessment from any source, claims of lien, special assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records. There are no violations of the covenants, conditions and restrictions as shown in the above-referenced Preliminary Report/Commitment.

5. The Land is currently in use as _____; _____ occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____

6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.

7. There are no outstanding options to purchase or rights of first refusal affecting the Land.

8. Between the most recent Effective Date of the above-referenced Preliminary Report/Commitment and the date of recording of the Insured Instrument(s), Owner has not taken or allowed, and will not take or allow, any action or inaction to encumber or otherwise affect title to the Land.

This declaration is made with the intention that Chicago Title Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on _____ at _____.

2021

Water Quality Report

Clean, Safe Water That Our Customers Can Trust

The State Water Resources Control Board Division of Drinking Water (DDW) requires community water systems to publish and make available an annual Consumer Confidence Report to provide background on the quality of your water and to show compliance with federal and state drinking water standards.

This 2021 Annual Water Quality Report is a snapshot of the quality of local water supplies in the Santa Clarita Valley during 2020. Included are details about where your water comes from, what it contains and how it compares to strict Federal and State standards. We are committed to providing you with information because informed customers are our best allies.

Our Promise to Our Customers:

Clean, Safe Water That You Can Trust

Dear Customer:

The past year has brought all of us challenges and uncertainty. One thing that our customers can rest assured about is that our team of essential workers continues to provide you with clean, safe water day and night.

SCV Water and Los Angeles Waterworks District #36 have worked together to provide you with our 2021 Water Quality Report that explains:

Where your water comes from

How we treat and monitor it thousands of times per year

How we ensure its safety when it reaches your tap

As you read this report, you'll also find important information on our Agency's future planning efforts, programs and initiatives.

We appreciate playing such a large role in the fabric of the Santa Clarita Valley and being a trusted source for your water supply.

Matthew G. Stone
General Manager | SCV Water

Russ Bryden
Assistant Deputy Director | LACWD #36

SCV WATER

WHERE DOES OUR WATER COME FROM?

SANTA CLARITA VALLEY SUPPLY PORTFOLIO

SCV Water's water supply comes from four main sources, imported water, groundwater, recycled water and water banking (storage). Leveraging multiple sources of water ensures our customers always have water when they need it.

GROUNDWATER

More than a quarter (17,300 acre-feet) of our water comes from local, sustainable groundwater sources. These underground water aquifers store water that naturally comes from precipitation.

RECYCLED WATER

Less than one percent of our water currently comes from recycled water. Future plans will expand our recycled water use for outdoor irrigation to ensure our customers have a reliable water source for years to come.

IMPORTED WATER

We rely on imported water from the State Water project for nearly 75 percent (48,300 acre-feet) of our water needs. This water journeys hundreds of miles from the Sierra Nevada's in Northern California before reaching the Santa Clarita Valley.

STORED (BANKED) WATER

Our Agency also stores (banks) 141,000 acre-feet of water in nearby Kern County. This water is available to us in times of need, such as during a drought or emergency.

SCV WATER SNAPSHOT

Serving our community safe, reliable water that meets or surpasses rigorous state and federal standards is a hallmark of our agency. It takes a lot of testing, storage reservoirs, and pipes, along with our talented team of water professionals, to make sure water is delivered to your homes 24/7.

879 Miles
Pipeline

Water Talk: How much water is in an acre-foot?

One acre-foot of water equals 325,851 gallons of water. That's enough water to cover a football field one foot deep; combined, our water sources equal 206,870 acre-feet!

PLANNING FOR OUR FUTURE

SCV Water is undertaking several multi-year water planning efforts to ensure our customers have access to reliable water today and tomorrow. These water plans and programs will enhance our water reliability, quality, environmental sustainability and delivery

Visit yourSCVwater.com/planning for more info.

GROUNDWATER SUSTAINABILITY PLAN

The Santa Clarita Valley Groundwater Sustainability Agency (SCV-GSA) responsibly manages our vital groundwater, which is stored underground in the Santa Clara River Valley East Subbasin. By 2022, our team will finalize our Groundwater Sustainability Plan (as required by the Sustainable Groundwater Management Act) that is tailored to the resources and needs of our community to maintain and improve resource management. The goal of this plan is to demonstrate sustainable groundwater management within 20 years.

RECYCLED WATER PLANNING

Recycled water is a renewable resource and has been used for outdoor irrigation in our service area since 2003. Using recycled water extends our drinking water supply, reduces our reliance on costly imported water and expands our local water supply. Our team is working on a recycled water management plan to guide future efforts.

URBAN WATER MANAGEMENT PLAN

SCV Water's team is preparing our Urban Water Management Plan (UWMP) update. This state-required update will direct our long-term resource planning to guarantee adequate water supplies are available to meet future water needs.

WATER SHORTAGE CONTINGENCY PLAN

To ensure that we have adequate water supplies now and in the future, SCV Water is preparing our Water Shortage Contingency Plan. This plan is required by the state and will improve water conservation and water shortage planning, especially during a drought or catastrophic event.

PFAS TREATMENT

Like many communities throughout the nation, very small amounts of PFAS (per- and polyfluoralkyl substances) are in our water. SCV Water, and other agencies, did not put these chemicals in our water but over time these chemicals enter our water supply through manufacturing, product use and wastewater discharge – which are all potential sources for PFAS. When it comes to addressing PFAS in our water supply, SCV Water is using a three-pronged approach:

- **TESTING**: SCV proactively monitors the quality of the water from our wells to ensure it meets the state's regulations for PFAS, which are some of the most stringent in the nation.
- **TREATMENT**: Using new, innovative strategies and proven treatment options, SCV Water is taking immediate steps to address PFAS in our groundwater.
- **TRANSPARENCY**: From our website to social media and community meetings to direct mail, SCV Water is making sure our customers have the most current information.

WATER YOU CAN TRUST

SCV Water's 2021 Water Quality Report

Your health and safety is our top priority. Before reaching your tap, our water must withstand rigorous rounds of treating, monitoring and testing thousands of times per year.

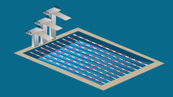
Protecting Our Water Source

We regularly sample where our water comes from (called a Source Water Assessment). We work with scientists and experts from the state to ensure that any contaminants found in our water are proactively addressed.

Cleaning Our Water

Once water travels from the source to one of our treatment plants, we use multiple processes to treat and clean our water. Here harmful organisms, like viruses and bacteria, are removed or inactivated.

Sampling and Testing Our Water



To ensure our water system is working as it should and that water meets or surpasses all state and federal health and safety standards, we conduct more than 20,000 water tests each year.

Water Talk: What is a PPM, PPB, PPT?

Throughout our water quality report, you will see contaminants measured by parts per million or Milligrams/Liter (mg/L), parts per billion or Micrograms/Liter (µg/L), and parts per trillion or Nanogram/Liter (ng/L). Here's a breakdown of what these measurements translate to in real life.

Part Per Million or Milligrams/Liter = 1 drop in a hot tub

Part Per Billion or Micrograms/Liter = 1 drop in an Olympic size swimming pool

Part Per Trillion or Nanogram/Liter = 1 drop in a 6-acre lake

IMPORTANT INFO FROM THE EPA ON DRINKING WATER

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. The U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the U.S. EPA's Safe Drinking Water Hotline (800) 426-4791.

NOTE: All of the test results in this report were analyzed in 2020 unless noted otherwise. Any chemical not listed in this report was not detected or was detected below the detection level for purposes of reporting. Your local water supplier is in compliance with all drinking water regulations unless a specific violation is noted.

MICROBIOLOGICAL

Microbial contaminants, such as viruses and bacteria, can be naturally occurring or result from urban storm water runoff, sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

Drinking water is tested throughout the distribution systems weekly for Total Coliform (TC) bacteria. TC are naturally occurring in the environment and are indicators for finding possible disease-causing contamination of a drinking water system. The MCL for TC is 5% of all monthly tests showing positive results for larger systems and two positive samples per month in smaller systems. If TC is positively identified through routine testing, the water is further analyzed for Escherichia coli (E. coli) which indicates the potential of fecal contamination. No E. coli was detected in any drinking water system in the Santa Clarita Valley (SCV) last year and no water system was out of compliance with the Total Coliform Rule. Additional tests did not detect the water-borne parasites Cryptosporidium parvum or Giardia lamblia in any sample of treated imported surface water.

All water systems are required to comply with the state Total Coliform Rule as well as the federal Revised Total Coliform Rule that took effect April 1, 2016. The new federal rule protects public health by ensuring the integrity of the drinking water distribution system and monitoring for the presence of microbials (i.e., TC and E. coli bacteria). The U.S. Environmental Protection Agency (USEPA) anticipates greater public health protections as the new rule requires water systems that are vulnerable to microbial contamination to identify and fix problems. Water systems that exceed a specified frequency of total coliform occurrences are required to conduct an assessment to determine if any sanitary defects exist, and to correct them.

METALS AND SALTS

Metals and salts are required to be tested in groundwater once every three years and in surface water every month. Naturally occurring salts are found in both surface and groundwater. These include chloride, fluoride, nitrate, nitrite, calcium, magnesium, potassium and sodium. Collectively, these are referred to as Total Dissolved Solids (TDS). Calcium and magnesium make up what is known as water hardness which can cause scaling from the precipitates. Fluoride is not added to your drinking water. Any fluoride detection is naturally occurring in the groundwater.

Nitrate in drinking water at levels above 10 mg/L (as nitrogen) is a health risk for infants less than six months of age. These levels can interfere with the capacity of the infant's blood to carry oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. These same nitrate levels may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant woman and those with certain enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should ask advice from your health care provider. Nitrate was not detected above the MCL in any sample.

LEAD AND COPPER

Every three years, each water system is required to sample for lead and copper at specific customer taps as part of the Lead and Copper Rule. Lead and copper are also tested in source water supplies (i.e., groundwater and surface water). In 2019, SCV Water also tested all public K-12 schools in the service area. No traces of lead were detected in any source waters in the Santa Clarita Valley by any of the local water systems.

Infants and young children are typically more vulnerable to lead in drinking water than the general population, and serious health problems could result. Your water system is responsible for providing high quality drinking water but cannot control the materials used in customer plumbing components. It is possible that lead levels at your home may be higher than at other homes in the community as a result of materials used in your home's plumbing.

If you are concerned about elevated lead levels in your home's water, you may wish to have your water tested by a private laboratory. If your water has been sitting for several hours, you can flush your tap for 30 seconds to 2 minutes before using tap water. Additional information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the USEPA's Safe Drinking Water Hotline (800) 426-4791 or at www.epa.gov/lead.

DRINKING WATER SOURCE ASSESSMENT AND PROTECTION

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides that may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application and septic systems.
- Radioactive contaminants that can be naturally occurring or be the result of oil and gas production and mining activities.

To ensure that tap water is safe to drink, the USEPA and the State Water Resources Control Board (SWRCB) Division of Drinking Water (DDW) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide protection for public health. Additional information on bottled water is available on the California Department of Public Health website (cdph.ca.gov/programs/CEH/DFDCS/Pages/fdbprograms/foodsafetyprogram/water.aspx).

Every water division completed the Drinking Water Source Assessment and Protection (DWSAP) program for existing groundwater sources in 2002. DWSAPs are also completed for each new groundwater well placed into service by water systems. Each DWSAP looks at vulnerability to contamination and assesses potential sources of contamination from sources such as: dry cleaners, auto repair shops, gas stations, medical facilities, schools and other facilities located in the vicinity of each groundwater source.

An assessment of the drinking water source, Well E17, for the Valencia Water Division's service area was completed May 2020 as part of the permitting process for the new well. There are no known contaminant sources detected in the water supply. Well E17 is considered most vulnerable to chemical/petroleum pipeline and electrical/electronic manufacturing that is not associated with any detectable contaminants. The well is located west of The Old Road and north of Highway 126, off Commerce Center Drive. For more information regarding DWSAPs, contact your local supplier or visit the following website: waterboards.ca.gov/drinking_water/certlic/drinkingwater/DWSAP.html. You may request a summary of the assessment be sent to you by contacting the SWRCB DDW district engineer at (818) 551-2004.

ORGANIC COMPOUNDS

Organic chemical contaminants including synthetic and volatile organic compounds (VOC) are by-products of industrial processes and petroleum production. Treated imported surface water and local groundwater wells are tested at least annually for VOCs. Trichloroethylene (TCE) and Tetrachloroethylene (PCE) were found in trace amounts (below the MCL) at a few locations. Consumption of water containing TCE or PCE in excess of the MCL over many years may lead to liver problems and an increased risk of cancer.

TURBIDITY

Turbidity is a measure of the cloudiness of the water. We monitor it because it is a good indicator of water quality. High turbidity can hinder the effectiveness of disinfectants. Furthermore, at the treatment plants, turbidity is monitored because it is a good indicator of the effectiveness of our filtration systems.

SCV WATER SOURCES OF WATER SUPPLY

SCV Water provides drinking water from multiple sources. State Water Project water is imported from Northern California, is treated through one of our two treatment plants and then enters the distribution system. Groundwater is pumped from two natural underground aquifers, the Alluvial and the Saugus Formation. Recycled water is also provided for some irrigation uses. These sources are served in various proportions to service areas within the Newhall Water Division (NWD), Santa Clarita Water Division (SCWD), and Valencia Water Division (VWD). In addition, SCVWA provides treated water to Los Angeles County Waterworks District #36.

LOS ANGELES COUNTY WATERWORKS DISTRICT #36 serves approximately 5,200 customers located in Hasley Canyon and Val Verde, through 1,350 metered connections. The District's water supply is composed of 100% groundwater from one well pumping from the Saugus formation beneath the District's service area and 0% of imported water.

District 36 will begin work to replace an aged water main in the unincorporated community of Val Verde, on Del Valle Road, Hasley Canyon Road to Lincoln Avenue. Crews will install a new water main to enhance water conservation and improve water supply throughout the district. The work is scheduled to begin October 2021 through March 2022.

SCV WATER - NEWHALL WATER DIVISION serves customers located in the Castaic, Newhall, Pinetree and Tesoro del Valle areas. In 2020, Castaic customers received 29% imported water and 71% local groundwater, Newhall customers received 26% imported water and 74% local groundwater. Pinetree customers received 100% imported water, and Tesoro del Valle customers received 100% imported water.

SCV WATER - SANTA CLARITA WATER DIVISION provides water to a portion of the City of Santa Clarita and unincorporated areas of Los Angeles County including Saugus, Canyon Country, and Newhall. Customers received approximately 84% imported water and 16% local groundwater in 2020.

SCV WATER - VALENCIA WATER DIVISION supplies water to customers in Valencia, Stevenson Ranch, and parts of Castaic, Saugus, and Newhall. In 2020, customers received 73% imported water, 25% local groundwater and 2% recycled water (delivered to large landscape customers).

CHEMICALS IN THE NEWS

PERCHLORATE

Perchlorate is an inorganic chemical used in solid rocket propellant, fireworks, explosives and a variety of industries. It usually gets into drinking water as a result of environmental contamination from historic industrial operations that used, stored, or disposed of perchlorate and its salts. Perchlorate has been shown to interfere with uptake of iodide by the thyroid gland, and thereby reduce the production of thyroid hormones leading to adverse effects associated with inadequate hormone levels.

A known perchlorate contaminant plume has been identified and several wells have tested positive for perchlorate. In October 2007, the DDW adopted an MCL of 6 ug/L for perchlorate. DDW issued an amendment to SCVWA – Imported Division's Domestic Water Supply Permit on December 30, 2010, authorizing the use of the perchlorate-treatment facility and, on January 25, 2011, SCVWA – Imported Division introduced the treated water into the distribution system in full compliance with the requirements of its amended water-supply permit.

PER- AND POLYFLUOROALKYL SUBSTANCES (PFAS) Per- and polyfluoroalkyl substances (PFAS) are a group of chemicals that are resistant to heat, water, and oil. PFAS have been classified by the United States Environmental Protection Agency (USEPA) as an emerging contaminant on the national landscape.

The EPA has not yet established enforceable drinking water standards, called maximum contaminant levels (MCL), for these substances, but they have issued a Health Advisory Level of 70 nanograms per liter (ng/L) for a combined level of two of the more prevalent PFAS substances, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS). In addition, the California State Water Resources Control Board – Division of Drinking Water (DDW) has set notification and response levels for PFOA and PFOS. A notification level (NL) is a health based advisory level for constituents lacking an MCL and requires public notification for constituents exceeding these values. A response level (RL) is a non-regulatory, precautionary, health-based measure, where DDW recommends removing a water source from service, blend or provide treatment if that option is available.

In June 2018, DDW set initial NLs for PFOA (14 ng/L) and PFOS (13 ng/L) and a combined response level for PFOA and PFOS of 70 ng/L. In March 2019, DDW issued a series of orders related to the sampling for PFAS chemicals. After an initial round of monitoring, SCV Water voluntarily removed one well from service, which exceeded the combined RL. Then in February 2020, DDW revised the NLs and adopted individual RLs for PFOA (10 ng/L) and PFOS (40 ng/L) based on a running annual average. SCV Water responded by voluntarily removing 14 additional wells from service.

Since February 2020, additional wells were voluntarily removed from service as ongoing monitoring revealed PFOA concentrations approaching the RL. In December, 2020 SCV Water brought the first ion exchange treatment for PFAS online, bringing three wells back into service. Currently, SCV Water is in various stages of design and construction for PFAS treatment plants to return more of these wells back into service.

Sample results tabulated in the table of this report are for the 2020 calendar year. However, SCV Water is continuing PFAS monitoring in wells. Data in the table may reflect wells that are no longer in service. For more information and resources on PFAS, visit yourSCVwater.com/pfas.

ABBREVIATIONS

AL = Action Level

DLR = Detection Limit for Reporting

MRL = Minimum Reporting Level

ESFP = Earl Schmidt Filtration Plant

MCL = Maximum Contaminant Level

MCLG = Maximum Contaminant Level Goal

mg / L = milligrams / Liter

ug / L = micrograms / Liter

uS / cm = microsiemens / centimeter

NA = Not Analyzed / Not Applicable

NTU = Nephlometric Turbidity Units

pCi / L = picocuries / Liter

PHG = Public Health Goal

RVWTP = Rio Vista Water Treatment Plant

TT = Treatment Technique

RL = Response Level

* SWRCB considers 50 pCi/L to be the level of concern for Beta particles

[1] Refer to the first Import column for values left blank in Pinetree and Tesoro, except in the specific rows shown

[2] Depending on annual temperatures

[3] There are three MCLs for this parameter:

The first is the recommended long term MCL

The second is the upper long term MCL

The third is the short term MCL

[4] The NL for Boron = 1000 ug/L or 1 mg/L

[5] There is currently no MCL for hexavalent chromium. The previous MCL of 10ug/L was withdrawn on September 11, 2017.

RADIOLOGICAL TESTS

Radioactive compounds can be found in both ground and surface waters and can be naturally occurring or be the result of oil and gas production and mining activities. Testing is conducted for two types of radioactivity: alpha and beta. If none is detected at concentrations above five picoCuries per liter (pCi/L) no further testing is required. If it is detected above 5 pCi/L, the water must be checked for uranium and/or radium. Monitoring for radionuclides can be different for each groundwater well. Because of this, not all data may be from the 2020 calendar year.

WATER QUALITY DEFINITIONS

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. The USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants and are available from the USEPA's Safe Drinking Water Hotline (800) 426-4791.

USEPA, DDW and the California Environmental Protection Agency (CalEPA) set goals and legal standards for the quality of drinking water. These standards are intended to protect consumers from contaminants in drinking water. Most of the standards are based on the concentration of contaminants, but a few are based on a Treatment Technique (TT), a required process intended to reduce the level of a contaminant in drinking water. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (800) 426-4791.

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG) or Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by Cal/EPA. MCLGs are set by the USEPA.

Primary Drinking Water Standard (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Detection Limit for Purposes of Reporting (DLR): The smallest concentration of a contaminant that can be measured and reported. DLRs are set by the DDW (same as MRL, Minimum Reporting Level, set by USEPA).

Consumer Confidence Report Detection Level (CCRDL): The smallest concentration of a contaminant that can be measured and reported, taking into consideration changes in analytical methods.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Notification Level (NL): State guidelines developed by DDW that address the concentration of a contaminant which, if exceeded, triggers public notification.

Response Level (RL): If a chemical is present in drinking water that is provided to consumers at concentrations considerably greater than the notification level, DDW recommends that the drinking water system take the source out of service.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Primary Drinking Water Contaminants: Contaminants associated with the protection of public health and that have enforceable standards.

Secondary Drinking Water Contaminants: Contaminants associated with aesthetic considerations such as taste, color and odor, and that have non-enforceable guidelines.

DISINFECTION BY-PRODUCTS

SCV Water - Imported Division uses ozone and chloramine to disinfect its water while the water divisions use various forms of chlorine and chloramine to disinfect their groundwater sources. Disinfection By-Products (DBPs), which include Total Trihalomethanes (TTHMs) and Haloacetic Acids (HAA5), are generated by the interaction between naturally occurring organic matter and disinfectants such as chlorine. TTHMs and HAA5 are measured at multiple locations throughout the distribution system. Each location is averaged once per quarter and reported as a running average by location. The DBP bromate is formed when the primary disinfectant ozone is applied converting bromide to bromate. Bromate is measured weekly in the surface water treatment plant and compliance is based on a running annual average.

UNREGULATED CONTAMINANT MONITORING RULE

The USEPA requires utilities to sample for emerging contaminates as part of the Unregulated Contaminant Monitoring Rule (UCMR). Every five (5) years the USEPA prepares a list of unregulated contaminants for drinking water suppliers to analyze. UCMR results are then used to assist in the development of future drinking water regulations. We recently completed the fourth round of UCMR sampling (UCMR 4) between 2018-2020. UCMR5 monitoring will occur between 2023-2025. For more information, please contact your local water supplier or visit the USEPA website epa.gov/dwucmr/learn-about-unregulated-contaminant-monitoring-rule.

DEVELOPING A DROUGHT-RESILENT WATER SUPPLY TO MEET OUR NEEDS

Our SCV Water team is hard at work developing strategies for drought-resilient water supplies and water-wise initiatives to ensure we can meet our community's water needs today and for years to come.

But we need your help! We must all must do our part to save Mother Nature's finest resource: H20. We thank you for your continued stewardship of our water supply, and we're committed to being a resource to our customers, so we can all work together to reduce our water use.

Visit yourSCVwater.com for tips, tools and information on how you can be more water-efficient.

Subject: **Case Closure Request and Conceptual Site Model Update**
9419 Airport Boulevard, Los Angeles, California
Los Angeles World Airports, Former National Car Rental Facility
RWQCB Case #1325B

Dear Ms. Sood:

Orion Environmental Inc., on behalf of Polytechnique Environmental, Inc., has prepared this case closure request for the subject site. The case closure request was prepared in accordance with the California State Water Resources Control Board Low-Threat Underground Storage Tank Case Closure Policy.

If you have questions or comments regarding this report, please call either Maclyn O'Donnell or Jeff Gwinn at 562/988-2755.

Very truly yours,

ORION ENVIRONMENTAL INC.

Maclyn O'Donnell
Project Engineer

Jeffrey P. Gwinn, P.E.
President

EXECUTIVE SUMMARY

Orion Environmental Inc. (Orion) has prepared this Case Closure Request for the Los Angeles World Airports Former National Car Rental Facility located at 9419 Airport Boulevard, Los Angeles, California (site) on behalf of Polytechnique Environmental, Inc. (Polytechnique). This document presents an update to the conceptual site model (CSM) and includes the following information:

- Site background and physical setting
- Sensitive receptor survey
- Historical and current site conditions
- Applicable action levels for impacted media
- Exposure pathway assessment
- Closure evaluation under the California Low-Threat Underground Storage Tank Case Closure Policy (LTCP)
- Conclusions and recommendations for site closure.

The site has been under the oversight of the Los Angeles Regional Water Quality Control Board (RWQCB) since 1992, when subsurface impacts were discovered from leaks attributed to up to nine former underground storage tanks (USTs). All USTs were removed between 1998 and 2004. The primary chemicals of concern (COCs) for the site include total petroleum hydrocarbons as diesel (TPHd), total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl tert-butyl ether (MTBE).

Numerous site assessment, monitoring, and remedial actions have been conducted between 1992 to 2021. The most recent site activities were performed by Orion in October 2021 and included drilling and sampling of confirmation soil borings south and east of the former UST source area. The confirmation borings were drilled to a maximum depth of 80 feet below ground surface (bgs). The CSM presented in this document has been updated to incorporate recent soil data collected in November 2020 and October 2021.

The following observations and conclusions are based on the results of the updated CSM:

Sensitive Receptors and Exposure Pathway Assessment

1. There are no schools, hospitals, public water wells, or surface water bodies within 1,500 feet of the site and nearby residents and businesses use a public water system.

2. Subsurface utilities are not suspected to be conduits for COCs because of (1) the large separation distance to receptors such as groundwater (deeper than 90 feet bgs) and (2) remedial actions that have reduced COCs in the shallow vadose zone.

3. Potentially complete exposure pathways for the site include (1) direct contact or ingestion of soil by onsite workers during construction activities and (2) inhalation of air by commercial building occupants. However, COC concentrations in shallow soil and soil vapor are below regulatory screening levels indicating that there is no significant risk to the receptors.

Source Characterization and Nature of Impacted Media

1. The primary source of COCs at the site was caused by a historical release from a fuel storage area containing nine USTs. The USTs were removed by 2004, and there have been no additional onsite sources or releases of COCs.

2. Since April 2016, no measurable light non-aqueous phase liquid (LNAPL) has been observed in onsite monitoring wells.

3. The lateral and vertical extent of residual petroleum hydrocarbons in soil has been reasonably assessed.

4. Groundwater concentrations for BTEX and fuel oxygenates including MTBE and tert-butyl alcohol (TBA) have been below maximum contaminant levels (MCLs) since April 2016. TPHd and TPHg are present in groundwater at low concentrations.

5. Groundwater at the site also contains chlorinated volatile organic compounds, semi-volatile organic compounds, perfluorooctanoic acid, and perfluorooctanesulfonic acid. These compounds are not associated with historical site uses or known onsite sources and likely originate from offsite source(s) upgradient of the site.

Remediation Activities

1. USTs and impacted soil directly under the USTs were excavated and removed in 1998 and 2004.

2. Soil vapor extraction (SVE) systems were operated at the site during two time periods from 2006 to 2009 and from 2018 to 2019. SVE operation ceased in 2019 after influent hydrocarbon concentrations reached low levels with an asymptotic trend.

3. After remediation, soil vapor concentrations were detected below regulatory screening levels including (1) California Department of Toxic Substances Control Soil Screening Levels for Commercial/Industrial Air and (2) the U.S. Environmental Protection Agency Regional Screening Levels for industrial air. Based on these results, soil and soil vapor remediation is complete.

Site Closure Evaluation

The California State Water Resources Control Board (SWRCB) has established cleanup and closure criteria for petroleum UST releases in its LTCP. Orion reviewed the LTCP requirements and concluded that the site meets the following criteria for closure:

1. *General Criteria:*
   a. The release is located within the service area of a public water system.
   b. The unauthorized release consists only of petroleum.
   c. The unauthorized ("primary") release for the UST system has been stopped.
   d. Free product has been removed to the maximum extent practicable.
   e. A CSM that assesses the release has been developed.
   f. The secondary source has been removed to the extent practicable.
   g. Soil or groundwater has been tested for MTBE.
   h. Nuisance, as defined by Water Code Section 10350, does not exist at the site.

2. *Groundwater-Specific Criteria:* Groundwater concentrations of benzene and MTBE have not exceeded MCLs or LTCP screening levels in the last 5 years and free product is not present.

3. *Petroleum Vapor Intrusion Criteria:* Soil vapor samples for existing or future buildings are below the LTCP commercial soil gas criteria for benzene, ethylbenzene, and naphthalene.

4. *Direct Contract and Outdoor Air Exposure to Soil:* Hydrocarbon concentrations in the upper 10 feet of soil are below the LTCP requirements.

Recommendations

Based on the remedial actions and the current site conditions, the site does not pose a significant risk to human health or the environment in accordance with the LTCP. Orion recommends regulatory case closure with the RWQCB.

1.0 INTRODUCTION

Orion Environmental Inc. (Orion), on behalf of Polytechnique Environmental, Inc. (Polytechnique), has prepared this closure evaluation for the Los Angeles World Airports (LAWA) Former National Car Rental Facility located at 9419 Airport Boulevard, Los Angeles, California (site; Figure 1). This document presents an update to the conceptual site model (CSM) and includes the following information:

- Site background and physical setting
- Sensitive receptor survey
- Historical and current site conditions
- Applicable action levels for impacted media
- Exposure pathway assessment
- Closure evaluation under the California State Water Resources Control Board (SWRCB) Low-Threat Closure Policy (LTCP) for underground storage tanks (USTs)
- Conclusions and recommendations for site closure.

This CSM update and closure request incorporates historical data as well as data collected during recent soil boring programs conducted in November 2020 and October 2021.

1.1 Site Background

The site is located east of the Los Angeles International Airport (LAX) northern runway complex, and north of the southern runway complex and cargo/airline maintenance areas. The site is in the south-central portion of an approximately 28-acre property which is used by Avis Rent a Car (Avis) as a public rental area. Avis also uses the property for staging, fueling, and washing of rental vehicles (Figure 2).

In August 1990, an unauthorized release of petroleum hydrocarbon-based compounds was documented, presumably linked to a release or releases from leaking USTs and/or product piping related to the rental car fueling activities. The main fueling area for the facility was located north of and adjacent to the former National Car Rental administrative office building. An active case was opened with the Los Angeles Regional Water Quality Control Board (RWQCB) in 1992. Nine USTs and one aboveground storage tank (AST) were removed from the site between November 1998 and January 2004.

General Motors (GM) was the owner of National Car Rental until 1995 at which time GM sold some assets of National Car Rental, including operations at this facility. The "new'' National Car Rental continued to operate at the site until ceasing operations and removing the remaining USTs and fuel systems in January 2004.

In May 2004, Avis (and its successors) entered into a lease with LAWA; however, Avis did not have liability for pre-existing contamination discovered at the site. A subsidiary of GM known as Remediation and Liability Management Company, Inc. (REALM), retained environmental liability until 2010 when GM and REALM began seeking relief under the bankruptcy code.

The site currently contains one 10,000-gallon unleaded gasoline AST located within the northern section of the site and several smaller-sized, used oil and fuel ASTs located around a Fuel Building, Carwash, and Garage Areas (Figure 2). A site background summary with a detailed chronology of site assessment, investigation, and remediation activities is presented in Appendix A.

1.2 Site Vicinity

The site is located on the west side of Airport Boulevard and north of 96th Street in Los Angeles, California (Figure 1), and is bounded by the following properties and land uses:

- To the north is a portion of the Avis rental facility, beyond which is Westchester Parkway, a U.S. Postal office, and a LAX parking lot.
- To the south is a portion of the Avis rental facility, beyond which is West 96th Street, a former Burger King restaurant, Budget Car Rental, and a LAX parking lot
- To the east is a portion of the Avis rental facility, beyond which is Airport Boulevard and a vacant lot.
- To the west, is a portion of the Avis rental facility, beyond which is Jenny Avenue and several LAX parking lots.

1.3 Adjacent Environmental Cases

Nearby environmental cases were identified using the GeoTracker website operated by the California State Water Resources Control Board (SWRCB) and the EnviroStor website operated by the California Department of Toxic Substances Control (DTSC). These websites

showed six environmental cases within 1,500 feet of the site. These environmental cases include two open and three closed leaking underground storage tank (LUST) cases under the oversight of the RWQCB, and one inactive cleanup program case under the oversight of the DTSC. Below is a summary of the information available on the GeoTracker and EnviroStor websites:

Case	Location from Site	Chemicals of Concern (COCs)	Activities Performed and Case Status
Avis Rent A Car System facility (RWQCB case 900450343)	Adjacent to and north	Total petroleum hydrocarbons (TPH), Volatile organic compounds (VOCs), and chlorinated VOCs	▪ Soil and groundwater evaluations, groundwater monitoring and sampling events, and soil and soil vapor remediation ▪ Closed in September 2012
Former National Car Sales facility (RWQCB case 900450761)	650 feet northeast	TPH and VOCs	▪ Soil evaluation following UST removal activities ▪ Soil and groundwater investigation report and request for low-threat closure submitted on 31 December 2018 ▪ Pre-notification granting low-threat closure issued by RWQCB on 21 February 2019
Budget Car Rental location (RWQCB case 900450125)	900 feet south	TPH and VOCs	▪ Soil and groundwater evaluations; groundwater monitoring and sampling events; pilot testing; and soil, soil vapor, and groundwater remediation ▪ Facility directed to conduct additional remediation activities (dual-phase extraction) by RWQCB in 2018
Hertz LAX Customer facility (RWQCB case 900450298)	1,400 feet north-northeast	TPH	▪ Closed LUST case
Hertz LAX facility (RWQCB case 900450670)	1,500 feet northeast	TPH and VOCs	▪ Soil and groundwater evaluations and groundwater monitoring and sampling events ▪ Case closed in September 2013
Los Angeles AFS Annex No. 1 (EnviroStor identification number 80000413)	1,500 feet northeast	Unknown	▪ Facility used by the Air Force between 1955 and 1975 as a printing plant and as headquarters for the Space and Missile Systems Organization ▪ Inactive DTSC cleanup case as of 2005

1.4 Geology

The site is located within the Southwestern Block of the Los Angeles Basin, a complex structural zone defined by a transition between the strike-slip tectonics of the Peninsular Ranges to the south and the convergent tectonics of the Transverse Ranges to the north. Stratigraphy beneath the site includes recent alluvium underlain by Pleistocene marine deposits. Recent alluvium generally consists of gravels and sands deposited by the ancestral Los Angeles River, which historically flowed through the site vicinity toward the Pacific Ocean (Yerkes et al., 1965). Based on review of the U.S. Geological Survey (USGS) Venice, California, 7.5--minute quadrangle, the site elevation is approximately 100 feet above mean sea level (MSL; USGS, 2012).

Based on field observations during previous site assessments, lithology at the site generally consists of interbedded sands, silts, and clays to a depth of approximately 90 feet below ground surface (bgs). The variable lithology is consistent with an alluvial depositional environment. Fill material including pea gravel has been encountered to depths up to 14 feet bgs at soil borings SB8, BV-1, and CB-1, advanced near the former UST excavation in the southwest corner of the UST pit (Figure 2).

1.5 Hydrogeology

The site is located within the Coastal Plain of Los Angeles Basin, West Coast Subbasin (4-011.03; California Department of Water Resources [DWR], 2016). Based on the Los Angeles RWQCB Basin Plan, groundwater in this subbasin is designated as having existing beneficial uses for municipal and domestic supply, industrial service and process supply, and agricultural supply (RWQCB, 2014).

Groundwater flow in the West Coast Sub-basin is generally to the west toward the Pacific Ocean (DWR, 2016). However, a north-south trending groundwater ridge is present in the central portion of LAX and groundwater flow east of this ridge is toward the east/southeast. The ridge is created by the West Coast Basin Barrier Project, which includes over 150 injection wells along 13 miles of the Los Angeles coast to prevent saltwater intrusion from ocean water (DWR, 2012).

The groundwater flow direction in the vicinity of the site has fluctuated between the southeast and northeast. Recently, the general trend has been towards the northeast with a hydraulic gradient of approximately 0.0014 foot per foot (Figure 3).

Depth to groundwater at site wells GW-1 and GW-4 has historically ranged from approximately 92 to 94 feet bgs. Recent depth-to-water measurements and groundwater elevations are summarized in Table 1. Well locations are shown on Figure 2.

2.0 SENSITIVE RECEPTORS

A sensitive receptor survey was conducted for the site and area within 1,500 feet of the site. Sensitive receptors may include water supply wells, surface water bodies, public water systems, schools, hospitals, and subsurface utilities. The following is a summary of nearby receptors.

2.1 Public Water Wells

There are no public water wells within 1,500 feet of the site, according to the Los Angeles Department of Public Works (LADPW, 2021). A review of the facilities listed above on GeoTracker also did not report public water wells within 1,500 feet of the site. According to the LADPW Groundwater Wells Website, the nearest municipal groundwater well is located approximately 2 miles to the north of the site (Well #1312).

2.2 Surface Water Bodies

Based on a Google Earth search and a review of the online Wetlands Mapper, no surface water bodies were observed within 1,500 feet of the site (U.S Fish and Wildlife Service, 2021).

2.3 Public Water Systems

The local businesses and residents use public water systems provided by the City of Los Angeles Department of Water and Power and the Metropolitan Water District. Private systems, including water wells, are not used for the public water supply in the area.

2.4 Schools and Hospitals

Based on a Google search, no schools or hospitals were observed within 1,500 feet of the site.

2.5 Subsurface Utilities

Sewers, storm drains, or other subsurface utilities could potentially enhance the migration of COCs in soil vapor and groundwater toward potential sensitive receptors. Utilities associated with the buildings in the area may be present and trenching associated with the soil vapor extraction (SVE) system could act as possible conduits for soil vapor. A storm

drain exists to the north of the site traversing from east to west, but no drains are located on the site.

Due to the large separation distance (approximately 80 feet) between subsurface utilities and groundwater, potential impacts from COCs via subsurface utilities are not expected to affect groundwater. Potential impact from soil vapor migration via utility trenches to offsite sensitive receptors is not likely considering the distance between the utilities and the source of the COCs. The potentially complete pathway of vapor migration to onsite receptors has been addressed by soil remediation (as discussed in Section 3.0).

3.0 INVESTIGATION/REMEDIATION HISTORY AND APPLICABLE ACTION LEVELS

Detailed results of historical investigation and remediation activities have been previously submitted to the RWQCB in routine monitoring and remediation reports. The following sections summarize investigation and remediation history at the site as well as applicable action levels for impacted media.

3.1 Investigation and Remediation History

Historical investigation results indicate that the primary COCs for the site include TPH as diesel (TPHd), TPH as gasoline (TPHg), benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl tert-butyl ether (MTBE). The following paragraphs describe the major assessments and remedial actions. A detailed chronology of site assessment, investigation, and remediation activities is presented in Appendix A.

Source Zone Assessment (1997 and 2002)

Numerous soil borings have been drilled and sampled to assess the release(s) from the former UST source area including borings SB-1 through SB-4 (1997) and borings/vapor wells VE1 through VE3 (2002). The 1997 results showed elevated concentrations of TPHd, TPHg, benzene, and MTBE to the west of the former USTs. TPHg and TPHd were detected up to 1,100 and 7,700 milligrams per kilogram (mg/kg), respectively. Benzene and MTBE were detected up to 14 and 35 mg/kg, respectively. Elevated hydrocarbon concentrations were primarily detected between 18 and 67.5 feet bgs (EnecoTech, 2005).

Initial Vadose Zone Remediation (2006-2009)

From November 2006 through June 2009, an SVE system was operated to remediate vadose zone soil and soil vapor. A total of 28 individual vapor extraction wells with well screens installed in three primary depth zones (shallow, intermediate, and deep) were connected to the system. The SVE system extracted 6,356 pounds of hydrocarbons during this operating period (Groundwater Environmental Services [GES], 2009). SVE operation was stopped due to the responsible party's bankruptcy. Due to the abrupt end of remediation, an SVE rebound test and post-SVE confirmation soil borings were not performed.

Mass removal rates before system shutdown indicated that SVE was nearing the point of possible conclusion. Vapor concentrations from the shallow screened wells suggested that

remediation was successful to 30 feet bgs. Higher concentrations were still present in the intermediate screened wells from approximately 43 to 51 feet bgs. Hydrocarbon levels were variable in the deep screened wells from 70 bgs to the water table. Soil vapor analytical results and SVE remediation system data are presented in Appendices B and C, respectively.

Site Assessment Prior to Second Vadose Zone Remediation (2016-2018)

In 2016, soil vapor samples were collected from four SVE wells screened from 46 to 51 feet bgs (i.e., intermediate zone). Concentrations of benzene, chloroform, and dibromomethane exceeded industrial air screening criteria published by the DTSC and/or U.S. Environmental Protection Agency (EPA; Ninyo & Moore, 2016a).

In 2017, soil and soil vapor samples were collected from nine borings, advanced to approximately 40 feet bgs, that were used to install vapor probes SV-1 through SV-9. Soil results showed that TPHg, BTEX, and MTBE concentrations were below EPA regional screening levels (RSLs). TPHd concentrations were above the screening levels in two samples collected from one soil boring. Soil vapor results for TPHg, BTEX, and MTBE were below screening criteria (Ninyo & Moore, 2017b). The 2017 soil and soil vapor results indicated that previous remedial actions had successfully reduced TPHg, benzene, and MTBE concentrations in both soil and soil vapor. After this sampling event, subsequent investigations and remediation were focused on the residual TPHd.

In 2018, soil samples were collected from one boring between 10 and 80 feet bgs during installation of a bioventing well. The results showed that only one sample from 50 feet contained TPHg exceeding EPA RSLs. TPHd concentrations exceeded the EPA RSL in samples between 20 and 50 feet (Table 2). The highest concentrations of TPHg and TPHd were 437 and 6,550 mg/kg, respectively (Ninyo & Moore, 2019).

Second Vadose Zone Remediation (2018-2019)

From June 2018 to April 2019, a second SVE system was operated to complete the remediation of vadose zone soil and soil vapor. The TPHg removal rate decreased from approximately 20 pounds/day at the start of remediation to 1.5 pounds/day in April 2019. The SVE system removed approximately 1,325 pounds of TPHg, and 250 pounds of VOCs. Influent hydrocarbon concentrations reached low concentrations with an asymptotic trend, and the system was shut down in April 2019 for 30 days to conduct a rebound test.

Soil Vapor Rebound Testing (2019)

A rebound test was conducted in May 2019 to evaluate the completeness of soil remediation. TPHg concentrations in SVE influent at the end of SVE operations were 40 to 97 micrograms per liter (µg/l), while rebound concentrations were 111 to 153 µg/l. These results demonstrated that the SVE system had reached the practical limits of the technology. After the rebound test, individual wells were sampled later in May 2019 to confirm this determination. Maximum soil vapor concentrations were below LTCP screening levels. The SVE system was removed from the site in May 2019.

Confirmation Soil Sampling after Soil Remediation (2019-2021)

In 2019, one confirmation boring (CB-1) was drilled adjacent to the former USTs to assess the residual soil hydrocarbon concentrations. The results showed maximum TPHg and TPHd concentrations of 1,100 and 8,060 mg/kg, respectively. These concentrations were present at 65 feet bgs, which was not included in the screened intervals of the deep SVE wells. The soil results are summarized in Table 2.

Between January 2020 and October 2021, nine soil borings (VE-13 through VE-21) were drilled to assess the hydrocarbon-impacted soil around confirmation boring CB-1. The highest concentrations of petroleum hydrocarbons were generally found in two focused depth intervals: 50 to 53 feet bgs and 60 to 65 feet bgs. The results are summarized in Table 2 and the following table shows the range of maximum TPHd and TPHg concentrations in the two intervals.

Depth Interval (feet bgs)	Soil Type	Maximum TPHd (mg/kg)	Maximum TPHg (mg/kg)
50 to 53	Sand, silty sand	43,000	2,100
60 to 65	Sandy silt, sand	8,900	3,100

Low permeability soil layers (silt and clay) were present beneath both of these depth intervals and hydrocarbon concentrations decreased significantly below 65 feet bgs (Table 2). These borings defined the horizontal extent of residual hydrocarbons to be an area of approximately 10,300 square feet (Figure 2). The vertical extent of hydrocarbons was also defined at approximately 28 feet above the water table.

The results of the soil investigations conducted between 2019 and 2021 are shown on geologic cross-sections A-A' (east to west; Figure 4) and B-B' (north to south; Figure 5). The cross-section locations are shown on Figure 2, and historical soil analytical results are presented in Appendix D.

3.2 Applicable Action Levels

Orion reviewed federal and State regulatory documents for applicable screening and action levels for the soil vapor, soil, and groundwater at the site. These screening and action levels are used to assess sites for potential human health concerns associated with contamination. Some of the reviewed levels are not intended for use to require remediation of contaminated soil vapor, soil, or groundwater. However, these values can be used as a reference to estimate the degree of effort that may be necessary to remediate a contaminated site.

Orion has summarized the applicable regulatory action levels along with the current COC concentrations on a RWQCB Case Review Form. It also includes a summary of the site characteristics and environmental remediation actions. A copy of the Case Review Form is in Appendix E.

3.2.1 Soil

1996 RWQCB Soil Screening Levels (SSLs)

The RWQCB *Interim Site Assessment & Cleanup Guidebook* contains SSLs for TPHd, TPHg, and VOCs (RWQCB, 1996). The action levels in the table below were selected from Table 4-1 of the guidebook assuming that (1) groundwater is 20 to 80 feet below the impacted soil and (2) impacted soil is present within or above clay soil. For UST sites, the 1996 Guidebook has been replaced by the LTCP.

COC	RWQCB SSL 1996 (mg/kg)
TPHg	500
TPHd	1,000

2012 LTCP

The California SWRCB has evaluated the risks from petroleum UST releases and established cleanup and closure criteria in its LTCP (SWRCB, 2012b). The LTCP limits for the hydrocarbons in soil are listed below. A more detailed evaluation of closure criteria under the LTCP is presented in Section 6.0.

Scenario	Benzene (mg/kg)	Ethylbenzene (mg/kg)	Naphthalene (mg/kg)	Polycyclic Aromatic Hydrocarbons (mg/kg)
0 to 5 feet Commercial	8.2	89	45	0.063
5 to 10 feet Commercial	12	134	45	NA
0 to 5 feet Residential	1.9	21	9.7	0.68
5 to 10 feet Residential	2.8	32	9.7	NA

2021 EPA RSLs

The EPA publishes risk-based RSLs for total exposure or protection of groundwater (EPA, 2021). The RSLs for the COCs are listed below:

COC	EPA RSLs November 2021 (mg/kg)	
	Direct Exposure Residential/ Industrial	Protection of GW SSL Risk-based/ Maximum Contaminant Level (MCL)-based
TPHg	520/ 2,200	8.8/ --
TPHd	96/ 440	1.5/ --
Benzene	1.2/ 5.1	0.00023/ 0.0026
Toluene	4,900/ 47,000	0.76/ 0.69
Ethylbenzene	5.8/ 25	0.0017 / 0.78
Xylenes	580/ 2,500	0.19 / 9.9
MTBE	47/ 210	0.0032 / --

2019 San Francisco Bay RWQCB Environmental Screening Levels (ESLs)

ESLs were published by the San Francisco Bay RWQCB for shallow and deep soils where groundwater is a potential source of drinking water (RWQCB, 2019). The ESLs for the COCs are listed below:

COC	RWQCB-SFB ESLs January 2019 (mg/kg)	
	Direct Exposure: Residential/Commercial/ Construction	Leaching to Groundwater: Drinking Water/ Non- Drinking Water Aquifer
TPHg	430/ 2,000/ 1,800	1,100/ 4,900
TPHd	260/ 1,200/ 1,100	1,100/ 7,300
Benzene	0.33/ 1.4/ 33	0.025/ 0.025
Toluene	1,100/ 5,300/ 4,700	3.2/ 10
Ethylbenzene	5.9/ 26/ 540	0.43/ 0.43
Xylenes	580/ 2,500/ 2,400	2.1/ 10
MTBE	47/ 210/ 4,100	0.028/ 2.5

3.2.2 Soil Vapor

2020 DTSC Soil Screening Levels

The DTSC publishes risk-based soil screening levels for total exposure (DTSC, 2020). The soil vapor screening levels for the COCs are listed below:

COC	DTSC Screening Levels June 2020	
	Residential ($\mu g/m^3$)	Industrial ($\mu g/m^3$)
TPHg	--	--
TPHd	--	--
Benzene	0.097	0.42
Toluene	310	1,300
Ethylbenzene	--	--

2021 EPA RSLs

The EPA publishes risk-based RSLs for total exposure (EPA, 2021). The soil vapor RSLs for the COCs are listed below:

COC	EPA RSLs Nov 2021	
	Residential ($\mu g/m^3$)	Industrial ($\mu g/m^3$)
TPHg	630	2,600
TPHd	100	440
Benzene	0.36	1.6
Toluene	5,200	22,000
Ethylbenzene	1.1	4.9

2012 LTCP

The LTCP provides four scenarios that describe acceptable site conditions and maximum concentrations to mitigate the risk of petroleum vapor intrusion to indoor air. Scenario 4 (No Bioattenuation Zone) includes the following soil vapor concentrations. The rationale for selecting Scenario 4 is explained in Section 6.0.

Contaminant	SWRCB LTCP (2012) Scenario 4 - No Bioattenuation Zone	
	Residential ($\mu g/l$)	Commercial/ Industrial ($\mu g/l$)
TPHg	--	--
Benzene	85	280
Toluene	--	--
Ethylbenzene	1,100	3,600
Xylenes	--	--
MTBE	--	--

3.2.3 Groundwater

MCLs are the highest concentration of a contaminant that is allowed in drinking water as determined by EPA and California Division of Drinking Water (DDW). MCLs are an enforceable standard for drinking water (EPA, 2018). The MCLs for the COCs are listed below:

Contaminant	MCL (µg/l)
TPHg	--
TPHd	--
Benzene	1
Toluene	150
Ethylbenzene	300
Xylenes	1,750
MTBE	13

4.0 CURRENT SITE CONDITIONS

As discussed previously, soil and soil vapor testing in 2017 indicated that remedial actions had successfully reduced benzene and MTBE concentrations to below regulatory screening levels. Benzene and MTBE are below laboratory detection limits in Groundwater. Therefore, recent investigations have been focused on assessing the concentrations and extent of the residual TPHg and TPHd. The following sections discuss the current site conditions for hydrocarbons in soil and groundwater.

4.1 Hydrocarbon Distribution in Soil

As described in Section 3.1, LAWA drilled and sampled 10 confirmation soil borings (CB-1, VE-13 through VE-21) south, east, and west of the former USTs between 2019 and 2021. The objective of the work was to assess the presence and distribution of residual TPHg and TPHd after the completion of soil remediation.

The soil encountered during drilling generally consisted of interbedded silt, sand, and clay. Petroleum hydrocarbons were generally encountered in two focused depth intervals: 50 to 53 feet bgs and 60 to 65 feet bgs (Figures 4 and 5).

The vertical extent of residual TPH-impacted soil was limited to approximately 28 feet above the water table. The horizontal extent of TPH-impacted soil was defined to the north by boring BV-1 (just north of CB-1), west by VE-18, south by VE-19 and VE-20, and east by VE-21.

Borings VE-18 and VE-19 contained slightly elevated TPH concentrations in a sand layer between 51.5 and 53 feet bgs. At both locations, there was clay soil above and below this layer with low hydrocarbon concentration. The highest concentrations at borings VE-18 and VE-19 were an order of magnitude lower than the next boring closer to the center of the impacts and were the same order of magnitude as the screening levels in Section 3.2.1. Based on these results, the horizontal extent of TPH-impacted soil has been adequately assessed.

The cross sections on Figures 4 and 5 show TPHd and TPHg concentrations for the current and historical soil borings. Table 2 summarizes the soil analytical results. The laboratory reports and chain-of-custody forms are in Appendix F.

4.2 Light Non-Aqueous Phase Liquid (LNAPL)

In March 2016, approximately 0.23 inches of LNAPL was measured in well GW-1 and the well was bailed to remove the LNAPL. LNAPL was not encountered during the subsequent sampling events between April 2016 and July 2021 (Table 1). These observations indicate that the LNAPL detected in well GW-1 was of limited extent that was removed through bailing the well.

4.3 Hydrocarbon Distribution in Groundwater

Groundwater monitoring was initially performed between 2000 and 2009 at the four onsite monitoring wells (GW-1 through GW-4). In April 2009, concentrations of TPHg and BTEX exceeded laboratory reporting limits (RLs) in a majority of the groundwater samples. The concentrations of TPHg ranged from 150 to 700 µg/l. The concentrations of benzene ranged from non-detect to 24 µg/l and exceeded the California MCL of 1 µg/l in three of the four wells. Fuel oxygenates, including MTBE, were not detected above their respective RLs. Other reported concentrations of petroleum-derived VOCs that were detected including 1,2-dichloroethane (1,2-DCA, a fuel lead scavenger), n-propylbenzene, trimethylbenzene, and naphthalene.

In 2016, LAWA took over management of environmental cleanup of the site and, in October 2016, the RWQCB recommended quarterly groundwater monitoring. Wells GW-1 through GW-4 were redeveloped in 2016 and periodic monitoring resumed.

The groundwater flow direction measured between 2016 and 2021 has generally fluctuated between southeast and northeast at a hydraulic gradient of approximately 0.001 ft/ft. Figure 3 shows water level elevations and the groundwater gradient for the second quarter 2021.

TPHg and TPHd have been detected at low concentrations since 2016 with the highest detection of TPHd at 5,300 µg/l (GW-1, November 2020) and TPHg at 82 µg/l (GW-4, December 2017). Concentrations of BTEX and MTBE have been below laboratory RLs or MCLs in the groundwater samples. Table 3 summarizes the groundwater results from 2016 through 2021 and Figure 6 shows the most recent TPHd and TPHg concentrations.

Chlorinated VOCs including 1,1-DCE, 1,2-DCA, and TCE have been detected at concentrations exceeding MCLs (Table 3). 1,4-dioxane (a chlorinated VOC stabilizer) has

been detected above the DDW notification level. Figure 6 shows the most recent 1,1-DCE, 1,2-DCA, TCE, and 1,4-dioxane concentrations in groundwater at the site.

Concentrations of perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) have exceeded the most recent (March 2020) DDW response levels of 10 and 40 parts per trillion (ppt), respectively, in the four wells (Table 3).

Reported concentrations of chlorinated VOCs, 1,4-dioxane, PFOA, and PFOS in groundwater samples collected at the site can be attributed to the regional plume that exists in the vicinity of the site. The absence of BTEX or MTBE in groundwater samples indicates that historical impacts from the site have naturally attenuated to levels below MCLs.

5.0 EXPOSURE PATHWAYS AND MEDIA OF CONCERN

This CSM and closure request includes an evaluation of potential source and release mechanisms that could create pathways of exposure to sensitive receptors (human and biota) at the site. A complete exposure pathway for COCs on site requires the following three elements. A pathway is not considered to be complete unless all elements are present.

- Chemical sources (primary or secondary)
- Migration pathway (i.e., environmental transport)
- Exposure routes (i.e., oral, dermal, inhalation) and receptors (i.e., human or biota).

It should be noted that even if an exposure pathway is complete, it does not necessarily mean there is excess risk. For example, the site is currently being used by Avis as an active fueling facility, and exposure routes from this activity are likely greater than exposure from subsurface contamination associated with the former UST fueling system.

An exposure pathway assessment showing these elements was developed for the site using the 2012 SWRCB Leaking Underground Fuel Tank Guidance Manual (Figure 7).

5.1 Onsite Source Characterization

The primary source(s) of petroleum hydrocarbon-based compounds released at the site were the nine USTs and/or their associated product piping. The largest of these releases has been linked to the pit containing the four former 20,000-gallon USTs (see Appendix A for more details). Because the sources were removed by 2004, the current concentrations of COCs related to the release(s) at the site are residual and there are no active sources.

The impacted soil and soil vapor from the initial releases are potential secondary sources to ambient air and groundwater. As discussed in Section 3.1, the secondary sources have been remediated by two SVE remediation events. Since the primary and secondary sources have been removed there are no chemical sources, associated with the former UST fueling system operated by National Car Rental, remaining at the site.

5.2 Migration Pathways

Orion evaluated the potential migration pathways through groundwater, surface water, air, soil, sediments, and biota of the site COCs from the source area. The potential migration

pathways are listed below and shown on Figure 7:

- Migration of LNAPL and dissolved COCs from the source area through soil to groundwater
- Direct contact to exposed contaminated soil
- Exposed sediment migration from wind to create dust emissions
- Vapor migration of COCs from soil, groundwater, or LNAPL
- Migration of COCs with groundwater and discharging of COCs to surface water.

5.3 Exposure Routes and Receptors

A point of exposure is where a receptor comes into contact with contamination. The exposure point may, or may not, be at the same location as the source. Exposure points include potential future uses of the land including adjacent land if there is a potential for exposure to offsite receptors. Some examples of points of exposure include: surface soil contact during construction activities, air inside a commercial/industrial building, and outdoor (ambient) air from volatilization from surface soil to air.

Exposure routes are the mechanisms by which receptors may come into contact with contamination. Exposure routes include: dermal contact with contaminated soil, ingestion of contaminated soil, inhalation of indoor or outdoor air impacted by volatile emissions, ingestion of contaminated groundwater, and dermal contact with impacted surface water and/or sediments.

The receptor can be a human or other living organism with the potential to become exposed to and affected by COCs as a result of contact with media along the migration pathway. The following evaluates the exposure for receptors potentially affected by the site.

5.3.1 Surface Soil

The site and its vicinity are primarily paved with no exposed soils. Therefore, migration pathways through exposed sediments are incomplete for the general public and biota. Dust emissions from exposed sediments are also an incomplete migration pathway due to the impervious surface cover above site soils. The biota exposure pathway is incomplete because aboveground animals (birds, etc.) do not have access to eat subsurface animals (worms, etc.) due to the impervious surface cover onsite.

During intrusive activities such as excavation, workers could be exposed to adsorbed contaminants in soil and dust. Therefore, the exposure pathway for ingestion or direct contact with surface soil is potentially complete (Figure 7). However, concentrations of COCs in shallow soils at the site are well below applicable regulatory action levels.

5.3.2 Outdoor and Indoor Air

The petroleum release occurred below grade and migrated through the soil to groundwater. Vapor migration is a potential pathway for exposure through volatilization into outdoor and indoor air. COCs in soil can volatilize and migrate (as a vapor phase) both laterally and vertically from the site source area. Additionally, the former remediation trenches and utility trenches are potentially zones of higher relative permeability and can potentially provide conduits for vapor transport.

Changes in the barometric pressures, water levels, and/or subsurface vapor flux also create the potential for migration of soil vapor. Vapor-phase COCs will also reach equilibrium with groundwater as the constituent moves from vapor phase to dissolved phase at the water table interface. The rate of propagation varies relative to: (1) the scale of the release, (2) the types and mixtures of contaminants, (3) the properties of the soil, and (4) the soil moisture.

Exposure pathways to outdoor air from surface soil and groundwater to the general public and biota are incomplete because the site is primarily paved with no exposed soils. The migration pathway to outdoor air from the site is complete for construction workers if the paved surface is removed.

The migration pathway from soils to indoor air of existing or future buildings is potentially complete (Figure 7). However, the results of soil vapor surveys at the site indicate that the risks to indoor air from subsurface contamination are minimal.

5.3.3 Groundwater

The groundwater migration pathway involves the transport of dissolved-phase COCs in groundwater from the source in the direction of groundwater flow. Additionally, diffusion of contaminants into and through the saturated zone may occur, as well as smearing from groundwater into vadose zone soils as groundwater levels fluctuate. As downward migrating COCs reach the underlying groundwater, they dissolve into the groundwater and are transported as an aqueous solution in the direction of groundwater flow. Groundwater

flow is not likely to transport COCs sourced from the site (i.e., TPH and non-chlorinated VOCs) to downgradient, offsite sources due to factors such as degradation, retardation, molecular diffusion, and attenuation. These factors generally slow the rate of solute transport. COCs sourced from upgradient facilities (i.e., chlorinated VOCs) will likely continue to travel in the direction of groundwater flow as dissolved-phase contaminants.

Vapor migration from COC-impacted groundwater is a potentially complete exposure pathway for current or future occupants of buildings at the site (Figure 7). However, the results of soil vapor surveys indicate that the risks to indoor air from subsurface contamination are minimal.

The groundwater migration pathway for ingestion of offsite COC-impacted groundwater from the site by the general public is unlikely due to the fact that the public uses a public water supply system and there are no nearby public or private water wells.

The groundwater migration pathway is incomplete for dermal contact by the general public, construction workers, and biota based on the depth to groundwater and the use of a public water supply system.

5.3.4 Surface Water

There are no nearby surface water bodies in the site vicinity. Therefore, the surface water exposure pathway is incomplete. Additionally, very little percolation of rainwater or introduced surface water (hose/sprinkler water) can occur due to the impervious surface cover above soils beneath the site.

6.0 LOW-THREAT UST CASE CLOSURE EVALUATION

The California SWRCB has evaluated the risks from petroleum UST releases and established cleanup and closure criteria in its LTCP (SWRCB, 2012b). In general, releases from USTs can impact human health and the environment through contact with contaminated media including groundwater, surface water, soil, and soil vapor. The most common drivers of health risk are ingestion of groundwater from drinking water wells, inhalation of vapors accumulated in buildings, contact with near surface contaminated soil, and inhalation of vapors in the outdoor environment.

Contaminant migration pathways and receptors were evaluated in more detail in Section 5.0 but are revisited and addressed in this section specifically for the LTCP. To simplify implementation, the LTCP combines the media and most common exposure scenarios into three media-specific criteria:

- Groundwater
- Vapor Intrusion to Indoor Air
- Direct Contact and Outdoor Air Exposure.

Sites that meet the "general" and "media-specific" criteria described in the LTCP pose a low threat to human health, safety, or the environment, and are appropriate for closure pursuant to the California Health and Safety Code §25296.10 (SWRCB, 2012b). This section establishes why the site meets the criteria for being considered under the policy, then goes through how the site meets the criteria for closure.

6.1 General Criteria

The following tables summarizes the LTCP list of general criteria for case closure and presents the justification for site compliance with the criteria:

General Criteria Requirement	Site Compliance with Criteria
The unauthorized release is located within the service area of a public water system.	The release is located within the service area of the Los Angeles's public water system. New water supply wells are unlikely to be installed in the shallow water near the site.
The unauthorized release consists only of petroleum.	Based on historical file review and laboratory analytical results, the unauthorized release consists only of petroleum. Any chlorinated solvents in groundwater are from offsite sources.

General Criteria Requirement	Site Compliance with Criteria
The unauthorized ("primary") release for the UST system has been stopped.	Nine former USTs and one former AST have been identified as potential historical source areas. The USTs and AST were removed from the site between 1998 and 2004.
Free product has been removed to the maximum extent practicable.	Free product has not been observed at the site since April 2016.
A conceptual site model that assesses the nature, extent, and mobility of the release has been developed.	This document presents an updated CSM for the site.
The secondary source has been removed to the extent practicable.	The impacted soil below the former USTs and AST was remediated by SVE technology as described in Section 3.0.
Soil or groundwater has been tested for MTBE and results reported in accordance with the Health and Safety Code section 25296.15.	Soil and groundwater have been tested for MTBE and results have been included in assessment and monitoring reports submitted to the RWQCB.
Nuisance, as defined by Water Code section 10350, does not exist at the site.	Nuisance does not exist on site. Water Code section 13050 defines "nuisance" as anything which meets all of the following requirements: (1) Is injurious to health, or is indecent or offense to the senses, or an obstruction to the free use of property so as to interfere with the comfortable enjoyment of life or property. (2) Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal. (3) Occurs during, or as a result of, the treatment or disposal of the petroleum release.

6.2 Media-Specific Criteria

The most common exposure pathways associated with UST releases are contact with groundwater, exposure to vapors in buildings or outdoor air, and contact with shallow soil. The following sections address the risk of exposure through each of these media.

6.2.1 Groundwater

The LTCP establishes Groundwater-Specific Criteria to determine if threats to existing and anticipated beneficial uses of groundwater have been mitigated or are de minimis. The LTCP recognizes the regulatory authority of existing Water Quality Control Plans for the Los Angeles Region and establishes alternative water quality goals that will satisfy the water quality objectives through natural attenuation in a reasonable time.

To satisfy the LTCP, a contaminant plume that exceeds water quality objectives for groundwater must be stable or decreasing in lateral and vertical extent. The plume must also comply with additional criteria including plume length, status of LNAPL removal, and distance to receptors (water supply wells and surface water bodies).

The LTCP defines five groundwater plume classes, and a site must meet the characteristics of one of the classes to satisfy the LTCP Groundwater-Specific Criteria. Class 2 criteria are most applicable to the site and include the following characteristics:

- There is no free product
- The nearest existing water supply or surface water body is greater than 1,000 feet from the defined plume boundary
- The dissolved concentration of benzene is less than 3,000 µg/l and the dissolved concentration of MTBE is less than 1,000 µg/l
- The contaminant plume that exceeds water quality objectives is less than 250 feet in length.

The data presented in this closure request indicate that the site meets LTCP Groundwater-Specific Criteria for the following reasons:

1. Free product is not present.
2. There are no water supply wells or surface water bodies within 1,000 feet.
3. Concentrations of petroleum hydrocarbons in groundwater do not exceed water quality objectives; therefore, there is no contaminant plume.

6.2.2 Petroleum Vapor Intrusion to Indoor Air

The LTCP provides four scenarios that describe acceptable site conditions and maximum concentrations to mitigate the risk of petroleum vapor intrusion to indoor air. Scenarios 1 through 3 describe site conditions that, if met, will indicate that exposure to petroleum vapors in indoor air will not pose unacceptable health risks (SWRCB, 2012b). Scenario 4 describes acceptable site conditions based on direct measurement of soil gas concentrations.

The site data most closely match Scenario 4 ("Direct Measurement of Soil Gas Concentrations"). Under this scenario, soil vapor samples must be collected at least 5 feet

beneath the foundation of an adjacent building or anywhere on site for potential future buildings. The soil vapor concentrations of benzene, ethylbenzene, and naphthalene must be below 280, 3,600, and 310 µg/l, respectively, for commercial land use.

The soil vapor results from the 2017 and 2019 soil vapor surveys were compared to these criteria. The 2017 soil vapor survey was conducted before SVE operation and benzene, ethylbenzene, and naphthalene concentrations were below the Scenario 4 criteria. The 2019 soil vapor survey was conducted after SVE operation and the concentrations were not detected above laboratory RLs for the three compounds. Based on these results, the site meets the LTCP Petroleum Vapor Intrusion to Indoor Air criteria.

6.2.3 Direct Contact and Outdoor Air Exposure

The LTCP provides soil concentration limits for benzene, ethylbenzene, naphthalene, and polycyclic aromatic hydrocarbons (PAHs) below which residual soil concentrations would not pose a significant risk to human health (SWRCB, 2012b). The table below summarizes (1) the maximum soil concentrations specified in the LTCP and (2) the most recent (2017) maximum site concentrations for these hydrocarbons. As shown in the table, shallow soil concentrations were below the LTCP maximum concentrations for the direct contact and outdoor air exposure pathways. Human health risk with regard to direct contact and outdoor air exposure is considered low and meets the LTCP requirements.

Scenario	Benzene (mg/kg)	Ethylbenzene (mg/kg)	Naphthalene (mg/kg)	PAHs (mg/kg)
LTCP Requirements				
0 to 5 feet Commercial	8.2	89	45	0.063
5 to 10 feet Commercial	12	134	45	NA
0 to 5 feet Residential	1.9	21	9.7	0.68
5 to 10 feet Residential	2.8	32	9.7	NA
Maximum Concentrations Detected (2017)				
0 to 10 feet	0.00043 J	ND<0.0045	ND<0.00415	NA

7.0 CONCLUSIONS AND RECOMMENDATIONS

This closure request document presents an updated CSM including (1) the current characteristics and conditions at the site, (2) an evaluation of potential risks associated with residual COC concentrations, and (3) a comparison of the site conditions to the closure requirements under the California UST LTCP. The results of this evaluation support the following conclusions:

1. Applicable exposure pathways and receptors have been evaluated. There are no sensitive receptors on or near the site.

2. The primary source of COCs has been characterized and the extent of impacted media has been defined horizontally and vertically. LNAPL is not present in soil or groundwater at the site. The primary source has been removed.

3. Soil remediation activities have removed the secondary source of COCs.

4. Current COC concentrations in soil vapor are below LTCP criteria.

5. Soil COC concentrations are below LTCP criteria.

6. Groundwater COC concentrations are below MCLs.

7. Based on the remedial actions and the current site conditions, the site does not pose a significant risk to human health or the environment in accordance with the LTCP.

Based on these conclusions, Orion has determined that this site meets the closure requirements under the California UST LTCP. Orion recommends that the RWQCB close the case for this site.

(a) Sample depth in feet below ground surface (bgs).
(b) Total petroleum hydrocarbons quantified as diesel (TPHd) analyzed using modified EPA Method 8015M; reported in milligrams per kilogram (mg/kg) with a C13 to C22 carbon range.
(c) Total petroleum hydrocarbons quantified as gasoline (TPHg) analyzed using modified EPA Method 8015B; reported in mg/kg

TABLE 2

SOIL ANALYTICAL RESULTS
FORMER NATIONAL RENTAL CAR FACILITY
9419 AIRPORT BOULEVARD

Location ID	Sample Depth (feet bgs)[a]	Sample Date	Total Petroleum Hydrocarbons (mg/kg)	
			TPHd[b]	TPHg[c]

with a C6 to C12 carbon range.

(d) Concentration not detected above the detection limit listed (ND).

(e) Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value (J).

(f) Duplicate sample (DUP).

(g) TPHg result over upper calibration range, but EPA Method 5035 dilution result for sample was not detected due to higher reporting limit. Estimated undiluted result reported (E).

(h) Contamination found in associated Method Blank (B).

(a) Volatile organic compounds (VOCs) analyzed by EPA Method 8260C and 1,4-Dioxane analyzed by EPA Method 8270M; reported in micrograms per liter (µg/l) including:
cis-1,2-DCE = cis-1,2-Dichloroethene 1,1-DCE = 1,1-Dichloroethene MTBE = Methyl-t-butyl-ether
TCE = Trichloroethene 1,1-DCA = 1,1-Dichloroethane TBA = tert-Butyl Alcohol
PCE = Tetrachloroethene 1,2-DCA = 1,2-Dichloroethane

(b) Polyfluoroalkyl substances (PFASs) analyzed by EPA Method 537; reported in parts per trillion (ppt) including:
PFHxS - perfluorohexanesulfonic acid
PFOS - perfluorooctanesulfonic acid
PFOA - perfluorooctanoic acid
PFBS - perfluorobutanesulfonic acid
Other PFASs - 4:2-fluorotelomersulfonic acid, 6:2-fluorotelomersulfonic acid, 8:2-fluorotelomersulfonic acid, n-ethyl perfluorooctanesulfonamidoacetic acid, n-methyl perfluorooctanesulfonamidoacetic acid, perfluorobutanoic acid, perfluorodecanesulfonic acid, perfluorodecanoic acid, perfluorododecanic acid, perfluoroheptanesulfonic acid, perfluoroheptanoic acid, perfluorohexanoic acid, perfluorohnonanoic acid, perfluorooctanesulfonamide, perfluorooctanesulfonamide, perfluoropentanesulfonate, perfluoropentanoic acid, perfluorotetradecanoic acid, perfluorotridecanoic acid, and perfluoroundecanoic acid.

(c) Total petroleum hydrocarbons quantified as diesel (TPHd) analyzed using modified EPA Method 8015M; reported in micrograms per liter (µg/l) with a C_8 to C_{22} carbon range.

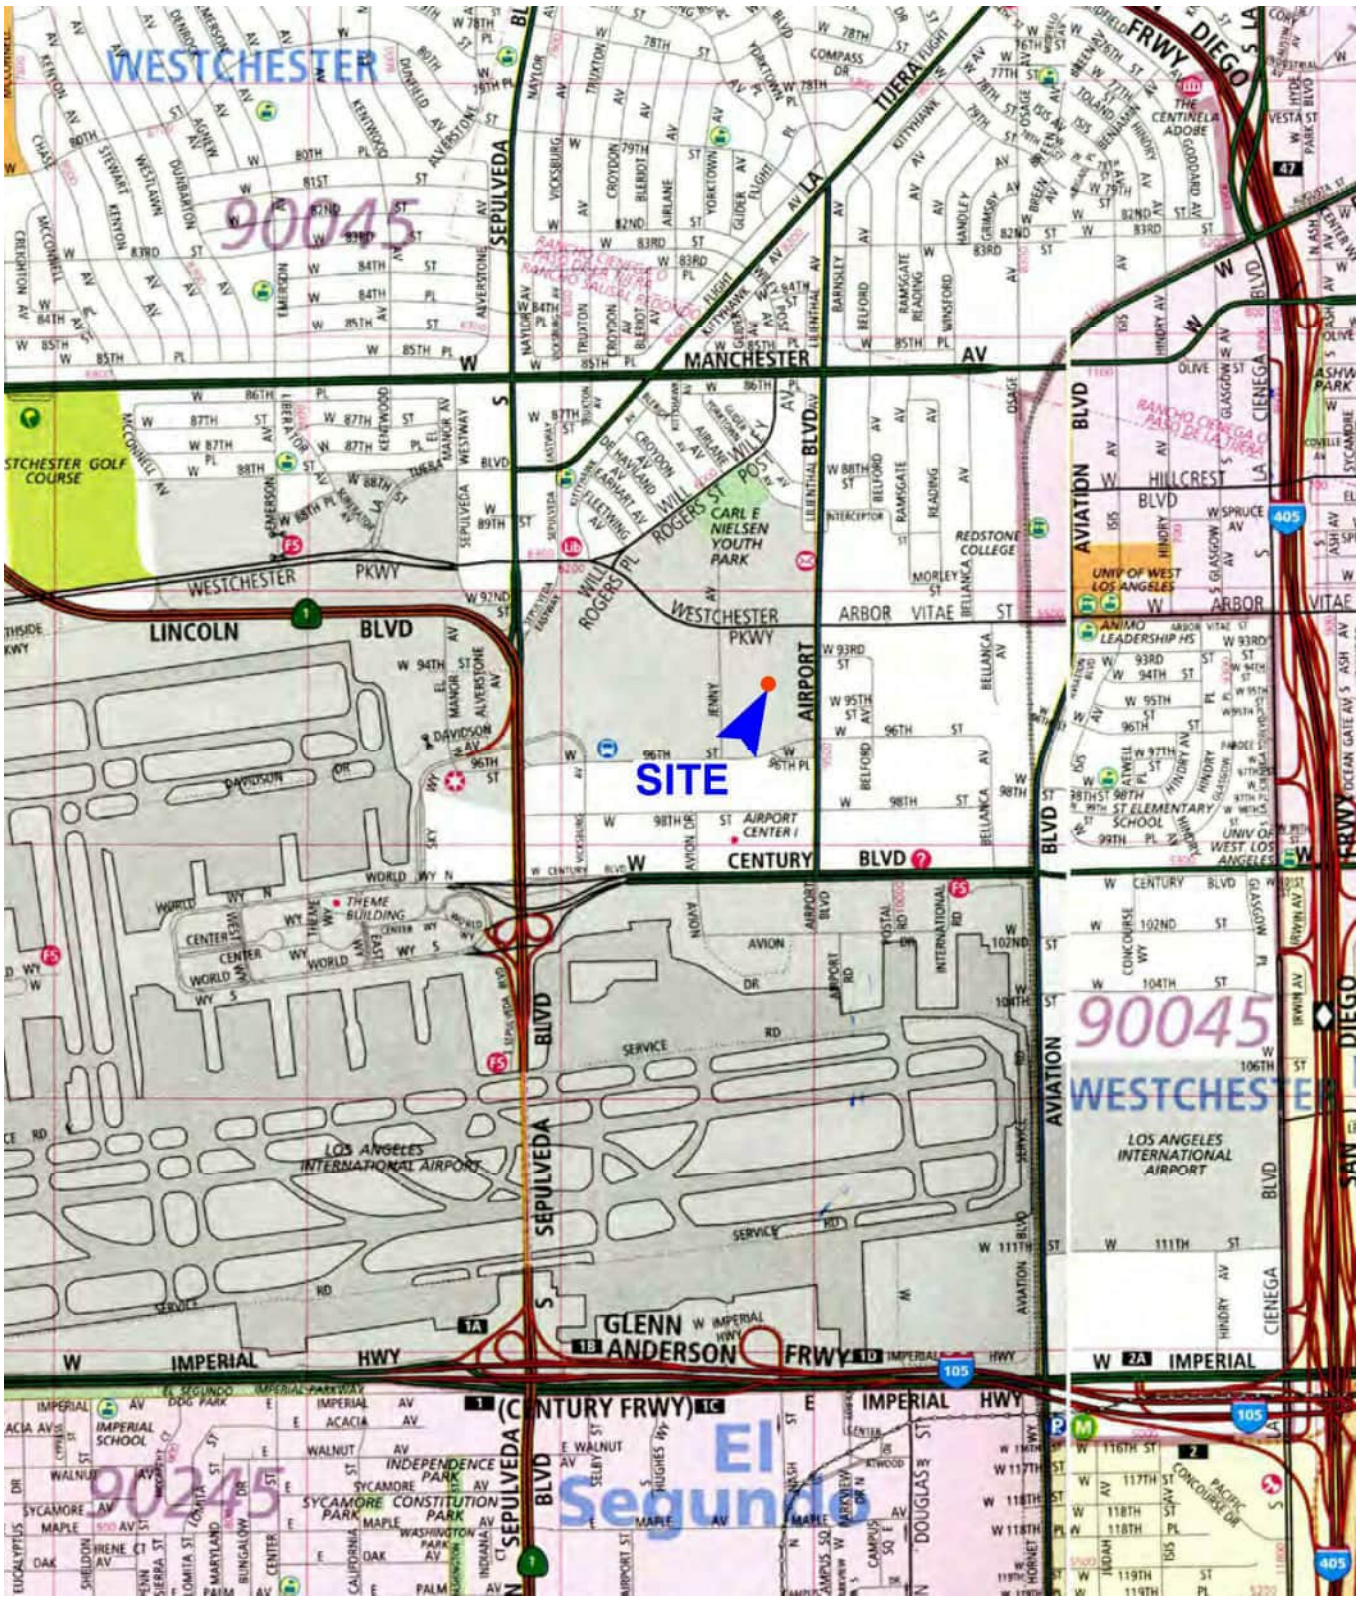
(d) Total petroleum hydrocarbons quantified as gasoline (TPHg) analyzed using modified EPA Method 8260B or EPA Method 8015M; reported in µg/l with a C_6 to C_{12} carbon range.

(e) Regulatory screening criteria, values exceeding a criteria are indicated in bold.
CA Primary MCLs - California Environmental Protection Agency Maximum Contaminant Levels for drinking water adopted by the California Department of Health Services, updated on September 29, 2016.
PHPC - Public Health Protective Concentration, Office of Environmental Health Hazard Assessment Level for drinking water, revised August 2016.
CA SWRCB DDW RLs - California State Water Resources Control Board, Division of Drinking Water Response Levels, March 2020 (March 2021 for PFBS).
CA SWRCB DDW NLs - California State Water Resources Control Board, Division of Drinking Water Notification Levels, August 2019 (March 2021 for PFBS).

(f) Regulatory screening criteria not established (NE).

(g) Concentration not detected above the detection limit listed (ND).

(h) Analyte was not analyzed at this time (NA).



(i) Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value (J).

(j) Analyzed using EPA Method 8260SIM.

(k) Due to high concentration of target analyte, a reduced sample volume was extracted and analyzed. Detection limit was adjusted accordingly.

(l) PFAS samples collected on 5/26/21.

(m) Duplicate sample taken (DUP).

APPENDIX A

SITE BACKGROUND

APPENDIX A
SITE BACKGROUND

Site Description

The site is in the south-central portion of an approximately 28-acre property which is used by Avis Rent a Car (Avis) for staging, fueling, and washing of rental vehicles. The site currently contains one 10,000-gallon above ground storage tank (AST) that contains unleaded gasoline, located within the northern portion of the site.

In August 1990, an unauthorized release of petroleum hydrocarbon-based compounds was documented, presumably linked to a potential release or releases from leaking underground storage tanks (USTs) and/or product piping related to the rental car fueling activities. The main UST area for the facility was located north of and adjacent to the former National Car Rental administrative office building. Since 1990, chlorinated solvent-based compounds such as tetrachloroethene (PCE), trichloroethene (TCE), and 1,1-dichloroethene (DCE) have been detected in groundwater. The site elevation is approximately 100 feet above mean sea level (MSL).

General Motors (GM) was the owner of National Car Rental until 1995 at which time GM sold some assets of National Car Rental, including operations at this facility. The "new'' National Car Rental continued to operate at the subject site until ceasing operations and removing the remaining USTs and fuel systems in January 2004. In May 2004 Avis (and its successors) entered into a lease with Los Angeles World Airports (LAWA); however, Avis would have no liability for pre-existing contamination discovered at the site which would continue to undergo remediation through Remediation and Liability Management Company, Inc. (REALM), a subsidiary of GM. In 2010, GM and REALM began seeking relief under the bankruptcy code.

According to previous assessment reports, the following USTs and one AST were at one time in use and have since been removed from the subject site.

- Three 20,000-gallon capacity former USTs used for unleaded gasoline (removed in January 2004).
- One 20,000-gallon capacity former UST used for diesel fuel (removed in January 2004).

- Two 12,000-gallon capacity former USTs used for diesel fuel from 1981 to 1991 then used for gasoline after 1991 (removed November 1998).
- One 550-gallon capacity former UST used for bulk motor oil (removed in January 2004).
- One 1,000-gallon capacity former UST used for waste oil (removed December 1998).
- One 1,100-gallon capacity former UST used for bulk motor oil (removed in January 2004).
- One 550-gallon capacity former AST used for waste oil (removed in January 2004).

This site is currently under the oversight of the Los Angeles Regional Water Quality Control Board (RWQCB) case number 1325B.

Soil and Soil Vapor Site Summary

1990: MJA Consulting performed a leak detection investigation (report dated 30 October 1990), which consisted of the installation of seventeen vapor monitoring wells. The wells were reportedly constructed of 4-inch-diameter casings screened over all but the top 2.5 feet to approximately 5 feet below ground surface (bgs) with total depths varying from 7.5 feet to 60 feet bgs. Five wells were 7.5 feet to 8.5 feet bgs, seven wells were 20 feet to 25 feet bgs, four wells were 40 feet to 45 feet bgs, and one well was 60 feet bgs. Groundwater was reportedly not encountered in wells. Twenty-three soil samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) and benzene, toluene, ethylbenzene, and xylenes (BTEX). Thirteen soil samples were analyzed for total petroleum hydrocarbons as diesel (TPHd). Additionally, six soil samples from the bulk oil and waste oil USTs were analyzed for total recoverable petroleum hydrocarbons (TRPH) by U.S. Environmental Protection Agency (EPA) Method 418.1. In the soil samples collected near the gasoline USTs, the highest concentration of benzene at 65 milligrams per kilogram (mg/kg) and TPHg at 11,000 mg/kg were encountered at a depth of approximately 50 feet in Boring B-10 (MW-10). In the soil samples collected near the diesel USTs, the highest concentration of TPHg was 12,000 mg/kg at a depth of 30 feet in Boring B-3 (MW-3). In the soil samples collected near the bulk oil and waste oil USTs, the highest concentration of TRPH was 12 mg/kg at a depth of approximately 20 feet in Boring B-14 (MW-14). No TRPH was detected at the bulk

oil UST borings. The majority of impacted soil encountered was below approximately 10 feet bgs.

1996: ENSR Consulting and Engineering (ENSR) conducted a soil vapor investigation which consisted of sampling five pre-existing vapor monitoring wells and installing two soil gas probes, SG-1 and SG-2. Twenty-two soil vapor samples (plus one duplicate) were analyzed for total volatile hydrocarbons (TVH, reportedly equivalent to TPHg). Concentrations of TVH ranged from 50,000 micrograms per liter (µg/l) to 170,000 µg/l, while benzene concentrations ranged from 2,890 µg/l to 5,300 µg/l and toluene concentrations ranged from 52 µg/l to 8,900 µg/l. Elevated cumulative levels of BTEX and TVH compounds were detected in vapor samples from MW-10 and SG-2 collected at 50 feet bgs (SG-2 was installed 5 feet south of MW-10).

1997/1998: McLaren Hart drilled four soil borings SB-1 through SB-4 using a hollow stem auger drill rig. Soil samples were collected for analysis of TPH (full range), BTEX, and methyl-tert-butyl ether (MTBE) at depths of approximately 15 feet and 20 feet bgs, and every 10 feet bgs thereafter, to a total depth of 100 feet bgs. TPHg was detected in 7 of 39 soil samples ranging from 2.2 mg/kg to 150 mg/kg. TPHd was detected in 18 of 39 soil samples at concentrations ranging from 1.9 mg/kg to 6,800 mg/kg. Benzene was detected in 16 of 39 soil samples at concentrations ranging from 7.6 µg/kg to 3,200 µg/kg. Elevated benzene, TPHg, and EFH concentrations in soil occurred at depths between 50 feet and 60 feet bgs.

1998: Blymer Engineers, Inc., removed two 12,000-gallon USTs. Reportedly, these USTs stored diesel fuel from 1981 to 1991, but were used for gasoline storage since 1991. Additionally, a 1,000-gallon waste oil UST was removed on 1 December 1998. In six soil samples collected at depths ranging from approximately 13 feet to 14 feet bgs from beneath the removed two 12,000-gallon USTs, TPHd was detected at concentrations ranging from 4,600 mg/kg to 8,500 mg/kg; TPHg concentrations ranged from 22 mg/kg to 1,300 mg/kg; BTEX and MTBE were detected above the respective reporting limits, and; total lead concentrations ranged from 4.0 mg/kg to 8.7 mg/kg. TRPH (418.1) was detected at 1,600 mg/kg in a soil sample collected at approximately 6.5 feet bgs from the waste oil UST excavation. Excavated soils were transported offsite for disposal.

1999: EnecoTech advanced soil borings GW-1 through GW-4 on 29 November 1999 to be converted as groundwater monitoring wells. The borings were advanced to approximately

125 feet bgs besides GW-1 which was installed at approximately 121.5 feet bgs. The borings were advanced adjacent to the location of previous soil borings SB-1, SB-2, SB-3, and SB-4 as required by the RWQCB. EnecoTech collected one soil sample from each boring for analysis for bioattenuation potential. These soil samples for bioattenuation analysis were taken from the depth with highest benzene impact as reported from previous sampling: near SB-1 (GW-1) from a depth of 60 feet; near SB-2 (GW-2) from a depth of 50 feet; near SB-3 (GW-3) from a depth of 50 feet; and near SB-4 (GW-4) from a depth of 40 feet. The selected soil samples were analyzed using general microbial count, selective microbial count, and bio-nutrient assessment methods. Soil samples were collected from boring GW-3 from above, within, and below the first aquiclude at depths of 34, 40 and 60 feet bgs. These samples were analyzed for volatile organic compounds (VOCs) and TPH via EPA Methods 8260B and 8015M respectively. TPHg was detected in 1 of the 3 soil samples at a concentration of 5.18 mg/kg. TPHd was detected in 2 of the 3 soil samples at concentrations ranging from 33 mg/kg to 156 mg/kg. Benzene was detected in 2 of the 3 soil samples at concentrations ranging from 0.0315 mg/kg to 0.045 mg/kg. Elevated BTEX, TPHg and TPHd concentrations in soil occurred at depths between 34 feet and 40 feet bgs.

2000: EnecoTech performed vapor monitoring of the onsite vadose zone vapor wells in March 2000. The monitoring consisted of purging the vapor wells of two or three calculated well volumes with an electric vacuum pump then using a photo ionization detector (PID) to detect organic vapors. The PID detected organic vapors ranging from 0.0 parts per million (ppm) to 115.3 ppm.

2002: EnecoTech submitted a work plan for additional site assessment dated 29 June 2001, which was approved by the RWQCB. On 10 June 2002, access for the fieldwork was granted from LAWA Engineering Division, and the Los Angeles County well permit was obtained. Site assessment activities were performed in June 2002, which included soil sampling, the installation of three additional vapor wells for potential use in a vapor extraction pilot test (VEPT; VE1/B5-VE3/B7) and vapor and groundwater risk assessment. TPHg concentrations in soil ranged from below the laboratory detection limit of 0.42 mg/kg in several samples to 1,100 mg/kg. TPHd concentrations ranged from below the laboratory detection limit of 5.0 mg/kg to 7,700 mg/kg. Benzene concentrations ranged from below the laboratory detection limit of 0.0042 mg/kg in several samples up to 14 mg/kg. Findings of the additional site assessment activities, including the evaluation of risk to groundwater from impacted soil and human health from vapor migration, were submitted in a report to

the RWQCB and LAWA on 9 August 2002. Evaluations presented in that report indicated that the risk posed by the impacted soil was acceptable based on regulatory guidelines. The data from the site assessment activities indicated that petroleum-impacted soil was present below, south and west of the former tank pit at concentrations lower than found in these areas in previous evaluations. Based upon these and other findings, EnecoTech supported closure for the case at that time.

2003: EnecoTech submitted a work plan to perform a VEPT on 13 January 2003. This work plan was approved by the RWQCB on 17 January 2003. EnecoTech was granted permission by the LAWA to access the site on 15 September 2003, and performed the VEPT on 18 through 23 September 2003. The results of the VEPT found that vapor extraction was reported to be a viable option for active remediation at the site.

2004: EnecoTech observed the removal of the four 20,000-gallon capacity USTs, one 550-gallon UST, and one 100-gallon capacity UST, as well as associated piping and fuel dispensers in January 2004. EnecoTech noted significant petroleum impact at the bottom of the UST excavation that had contained the four 20,000-gallon USTs. Laboratory results of soil samples collected indicated TPHg concentration as high as 2,500 mg/kg. As a result of the UST removal activities, wells MW-9 and MW-16 were abandoned and completely removed during the UST removal. Additionally, MW-10 was capped-off at approximately 10 feet bgs during backfill of the excavation to facilitate construction activities. MW-10 was to be abandoned when site closure had been achieved.

The RWQCB approved a remedial action plan (RAP) submitted by EnecoTech on 17 February 2004. EnecoTech was contracted by REALM, a wholly-owned subsidiary of GM, to undertake site remediation activities, including the installation and operation of a soil vapor extraction (SVE) system and the monitoring of groundwater monitoring wells starting on December 20, 2004. The right of entry gave REALM/EnecoTech permission to enter the former National premises (now leased by Avis) to remediate the contamination.

2005: Groundwater and Environmental Services, Inc. (GES) began installation of the SVE wells on 19 December 2005 as proposed in the approved 2003 work plan submitted by EnecoTech. Construction of the full SVE remediation system was delayed until the fourth quarter of 2006 due to access issues with LAWA and the current tenant, Avis.

2006: GES received access to the site from the LAWA and current tenant, Avis, to install an SVE system to remediate hydrocarbon-impacted soil beneath the site in October 2006. The system was installed successfully and began operation on 14 November 2006. The system continuously, except for the month of March 2007 when it was not operational due to a damaged blower. Ninyo and Moore understands, based on review, the SVE system continued to operate until April 2010. Since operation ceased, the aboveground remediation equipment has been removed from the site; however, the vapor extraction wells, vapor monitoring wells, groundwater monitoring wells, and subsurface and surface SVE piping manifold remain in place and may be capable of being employed as part of a future remediation system.

Geomatrix Consultants Inc. (Geomatrix), conducted soil sampling on behalf of Avis in the future location of an AST fueling system at the former National Car Rental facility in December 2006. Geomatrix collected 14 soil samples (AST-1 through AST-14) plus one duplicate soil sample and analyzed for TPHg, methanol and TPHd using EPA Method 8015 and VOCs using EPA Method 8260B/5035. Soil samples were collected from approximately 6 inches beneath the exposed soil surface. Maximum soil concentrations were reported as follows; TPHd at 236 mg/kg, TPHg at 2,270 mg/kg and BTEX at 0.73 mg/kg, 30.1 mg/kg, 15.8 mg/kg and 248 mg/kg respectively. During a field screening, the PID detected organic vapor in soil samples AST-7, AST-9, AST-13, and AST 14 at concentrations of 1,898, 385, 1,189, and 480 ppm, respectively.

2008: The RWQCB sent a letter to REALM requiring them to take corrective action for the contamination at the site. GES was retained by REALM to perform the remediation work in December 2008.

2009: Based on Ninyo and Moore's review of the State Water Resources Control Board's (SWRCB's) GeoTracker database (on 15 February 2016), a report dated 15 July 2009 prepared by GES represents the final semi-annual report submitted to the RWQCB regarding remedial progress and environmental site conditions. The GES report presented SVE operational data from 2004 through May 2009. Apparently, the incremental remedial progress from June 2009 through April 2010 has not been documented in a submittal to the RWQCB.

GES reported that the concentration of TPHg, and mass of hydrocarbons removed, both were approaching asymptotic levels. Vapor readings from the shallow screened wells suggested that remediation had been successful to a depth of approximately 30 feet bgs. However, field vapor readings and analytical data collected from the intermediate screened wells suggested that petroleum hydrocarbon impact remained at the depth interval of approximately 46 to 51 feet bgs. Field readings and lab data from VE-6I and VE-8I continued to exhibit the highest vapor concentrations on the site, suggesting remediation efforts should continue to focus in these areas. Analytical data and vapor readings from the deep screened wells were variable, although, they indicated significant progress.

GES recommended that the SVE unit be operated until vapor concentrations from the intermediate screened wells are further reduced to asymptotic levels (indicated by field and laboratory data) and to continue groundwater monitoring on a semi-annual basis.

2010: GM notified the RWQCB that REALM could not continue to remediate the contamination and that GMC and REALM were seeking relief under the bankruptcy code in January 2010.

2016: Ninyo & Moore conducted a site reconnaissance in March 2016 to document current site conditions; including: storage tank materials; locations and volumes of materials stored; groundwater and soil vapor extraction and monitoring well locations, depths, and conditions; waste drum locations and conditions; groundwater water levels; and light non-aqueous phase liquid (LNAPL) levels in March 2016. Ninyo & Moore made repairs to damaged well vaults including, replacing missing and broken bolts and rubber gaskets. During the site reconnaissance, four groundwater wells, 12 soil vapor monitoring wells, and 21 soil vapor extraction wells were observed.

Ninyo & Moore also conducted a groundwater monitoring and limited soil vapor sampling activities at the site in April 2016. Reported concentrations of benzene, chloroform, and dibromomethane in the soil vapor samples (wells VE-6I, VE-7I, VE-8I, and VE-9I) analyzed, exceeded their respective screening criteria (Ninyo & Moore, 2016a).

2017: The well casing elevations of soil vapor probes (SV-1 though SV-9), and vapor extraction wells (VE-1 though VE-12) located onsite were surveyed on April 20, 2017 by Dulin & Boynton.

In accordance with the RWQCB approved Work Plan for Additional Environmental Site Assessment and Remedial Activities (Ninyo & More 2016b), Ninyo & Moore conducted a baseline soil and soil vapor study. TPHg concentrations in the soil samples analyzed did not exceed the screening levels. TPHd concentrations were above the screening levels in two samples collected from one soil boring. Strong hydrocarbons odors were noted in the soils at approximately 20 feet below ground surface in boring SB8. Detected VOCs concentrations in the soil samples analyzed did not exceed EPA Regional Screening Levels (RSLs; Ninyo & Moore, 2017b).

VOC and TPHg concentrations reported in the soil vapor samples analyzed did not exceed their respective screening criteria. The soil sample results from the 2017 baseline study and the soil vapor sample results are presented in Appendices B and C, respectively.

2018-2019: In accordance with the RWQCB approved Work Plan for Additional Environmental Site Assessment and Remedial Activities (Ninyo & Moore, 2016b) and the Work Plan Addendum (Ninyo & More 2018), a bioventing vapor well (BV-1) was installed on 8 February 2018 with slotted screens installed between 21 and 31 feet bgs and 41 and 51 feet bgs. BV-1 was then connected to the piping from the nearest existing well (VE-1) by trenching and installing isolation valves in a well box below ground so that the bioventing system could be operated from inside the existing SVE compound.

A mobile SVE pilot test was conducted at the site by Ninyo & Moore in April 2018 using a remediation unit with a South Coast Air Quality Management District (SCAQMD) various locations permit. The unit was capable of producing a flowrate of 50 scfm at a vacuum of 5 inches of mercury and equipped with two 200-pound carbon vessels connected in series for vapor treatment. The system was hooked up to the power and connected to the existing piping manifold within the SVE compound. Three existing extraction wells that are screened in the intermediate zone (VE-7I, VE-8I and VE-9I) were connected to the SVE system.

Ninyo & Moore started operation of the SVE pilot test system on 13 April 2018. An influent vapor sample was collected within the first hour of operation to establish a baseline concentration. VOC concentrations measured using a PID measured approximately 1,050 ppmv in the influent. To comply with the SCAQMD permit limits for the SVE unit (influent VOC concentration <510 ppmv and effluent VOC concentration <5 ppmv), the influent concentration was decreased to <510 ppmv by blending ambient air.

Based on the influent concentrations, operation of the SVE system (using carbon for treatment) at these elevated influent VOC concentrations was not cost effective because the high, sustained VOC concentrations would break through the carbon frequently and replacement/disposal of the spent carbon would be expensive. In light of the unforeseen observations at the site, Ninyo & Moore evaluated the VOC concentrations in the individual existing vapor extraction wells by collecting vapor stream samples and analyzing them with a mobile lab on 16 May 2018. Based on the VOC concentrations measured at the wells and the estimated total influent concentration, operation of an SVE unit with a higher flowrate/vacuum and equipped with a thermal/catalytic oxidizer (Catox) for vapor treatment was recommended.

On 12 June 2018, Polytechnique's SVE and treatment system vendor, Mako Environmental Solutions (Mako), delivered a trailer-mounted SVE mobile unit with an electric Catox treatment unit connected to a 500 cubic feet per minute blower capable of 28 inches of mercury vacuum. The system is equipped with a knockout air/water separator with automatic pump-out, automatic temperature and dilution controllers. The system was started on 19 June 2018, under the SCAQMD various locations Permit No. F97267. The system was connected to the manifold consisting of ten vapor extraction wells screened within the shallow (S) zone between approximately 0 and 35 feet bgs (VE-1S, VE-4S, VE-5S, VE-6S, VE-7S, VE-8S, VE-11S, MW-7, MW-8, MW-15), nine vapor extraction wells screened within the intermediate (I) zone between approximately 35 and 70 feet bgs (VE-3I, VE-5I, VE-6I, VE-7I, VE-8I, VE-9I, VE-10I, VE-11I, VE 12I), and eight extraction wells screened within the deep (D) zone between approximately 70 and 125 feet bgs (VE-2D, VE-7D, VE-9D, VE-12D, GW-1, GW-2, GW 3, GW-4). In addition, newly installed dual-nested bioventing wells BV-S (shallow screen) and BV-D (intermediate screen) were connected to the system via trenching.

In compliance with the SCAQMD permit, Ninyo & Moore performed weekly inspections and monitoring of the SVE and treatment unit between June 2018 and March 2019. Ninyo & Moore monitored the influent and effluent sampling ports of the SVE system using a MiniRAE® 3000 PID calibrated to 100 ppmv hexane. Additional parameters such as power usage, blower vacuum, vacuum readings of individual wells, and catalyst and system temperatures were also measured and recorded. Ninyo & Moore collected the influent and effluent vapor samples in monthly intervals from the SVE system using a vacuum box and pump to extract the vapor stream into 1-liter Tedlar bags. Following sample collection, the

Tedlar bags were submitted to Jones Environmental, Inc. of Santa Fe Springs, California, for chemical analysis of VOCs and TPHg by EPA Method 8260B. TPHg and VOC concentrations reported by laboratory analysis were used to calculate the TPHg and VOC mass removals. Estimated lbs of VOCs and TPHg removed from the subsurface are shown in Appendix D. Approximately 1,325 lbs of TPHg and 250 lbs of VOCs have been removed between June 2018 and April 2019. Based on the results of PID measurements and laboratory analysis of influent samples, concentrations of VOCs appeared to have reached asymptotic levels during the first quarter of 2019. The system was shut down on 4 April 2019 for a rebound test.

During the SVE rebound test on 6 May 2019, PID readings were collected every 3 to 4 hours from the individual extraction wells in the intermediate zone. The results indicate that only a slight rebound occurred. The results of the rebound test and VOC data show that the SVE system has reached asymptotic levels after operating the system for approximately 10 months. Continuing to operate an SVE system under the current conditions would not be cost effective.

Confirmation soil and soil vapor sampling was conducted at the site to address data gaps before site closure could be requested. The confirmation sampling consisted of two parts: a soil vapor survey and the advancement of one confirmation soil boring (CB-1) south of the former UST pit in the vicinity of soil boring SB-8 (converted to soil vapor probe SV-8) where elevated levels of TPHd and TPHg were reported in soil and soil vapor samples at depths of approximately 20 and 30 feet bgs respectively, during the baseline soil vapor sampling.

The following is a summary of the results of the confirmation soil boring:

- Soils encountered during the advancement of confirmation boring CB-1 included pea gravel from the UST excavation to 13 feet bgs, followed by alluvium consisting of layers of silty sand, clay, poorly graded sand, clayey silt, and sandy silt to the maximum depth explored of 80 feet bgs. Petroleum hydrocarbon odors ranging from light to strong were observed between 40 and 65 feet bgs.

- VOC concentrations measured with a PID ranged from 0.0 to 15,000+ ppmv calibrated to hexane. The VOC concentrations exceeded the measurable range of 15,000 ppmv on the PID for soil samples collected from 65 feet bgs.

- TPHg and TPHd concentrations were below the Maximum Soil Screening Levels (MSSLs) from Table 4-1 of the RWQCB Interim Site Assessment and Cleanup Guidebook (RWQCB, 1996) for protection of groundwater in SVE treated zones.

- TPHg and TPHd were detected at 1,100 and 8,060 mg/kg, respectively, at 65 feet bgs. These concentrations exceed the MSSLs for the protection of groundwater for distance to groundwater between 20 to 150 feet. Contamination at 65 feet bgs had not been discovered in previous assessments at the site (typically, the highest TPH-g and TPH-d concentrations were found around 50 feet bgs).

The following is a summary of the results of the confirmation soil vapor survey:

- VOCs detected in vapor probes during the soil vapor survey included chloroform, PCE, toluene, and xylene. Concentrations of these VOCs were well below vapor intrusion screening levels.

- TPH-g was detected in soil vapor at vapor probe SV-8 at 25 and 30 feet bgs. TPH-g concentrations were detected at 93.6 and 27.5 µg/l, respectively.

- TPH-g was detected in the bioventing well shallow and intermediate screens (BV-1-S and BV-1-D, respectively) at 48.7 and 8.01 µg/l, respectively.

2020 to 2021: Orion drilled and sampled nine borings (VE-13 through VE-21) to assess the lateral and vertical extent of hydrocarbon-impacted soil around previous confirmation soil boring CB-1 in January 2020. Petroleum hydrocarbons were detected in soil samples collected between 41.5 and 64.5 feet bgs. The highest soil impacts were encountered in two layers at approximately 52 and 65 feet bgs. Low-permeability soil was observed beneath each impacted layer. Hydrocarbon concentrations decreased significantly at the bottom of each boring, defining the vertical extent of impact. The lithology encountered was consistent with previous investigations and generally consisted of interbedded silts, sands, and clays. Vapor wells were installed within the borings with screen intervals across the areas of impact.

Groundwater Site Summary

1997/1998: McLaren Hart drilled four soil borings (SB-1 through SB-4) using a hollow stem auger drill rig in December 1997 through March 1998. Grab groundwater samples were collected with a Hydropunch at depths of approximately 105 feet bgs and analyzed for BTEX and MTBE. Benzene was detected in the four groundwater samples at concentrations

ranging from 0.42 µg/l to 14 µg/l. MTBE concentrations were detected in the four groundwater samples at concentrations ranging from 5 µg/l to 88 µg/l. The McLaren Hart data (report dated April 30, 1998) indicate that the hydrocarbon impact from gasoline may be concentrated in the upper 70 feet of the soil column, and the silty clays occurring between 35 feet and 70 feet may be retarding further downward migration. Analyses of groundwater samples collected by McLaren Hart using Hydropunch equipment indicated relatively minor impact to groundwater.

1999: EnecoTech installed, developed and sampled groundwater monitoring wells GW-1 through GW-4 from 29 November through 3 December 1999. The wells were constructed of schedule 40 PVC with a screened interval extending from approximately 90 feet bgs to the total depth of each well, which is approximately 125 feet bgs (121.5 for GW-1). During the installation, groundwater was found to have stabilized at a depth of approximately 96 feet bgs. The groundwater samples from the evaluation did not detect TPH, BTEX or MTBE above the respective laboratory detection limits (5.0 µg/l). No free product was measured in any of the four wells and groundwater flow was measured at 0.0096 to 0.012 feet per foot to the south.

2004: Enecotech measured the depth to groundwater in monitoring wells GW-1 through GW-4 on 15 September 2004. Groundwater elevation during this time ranged between 6.53 and 8.98 feet MSL which corresponds to approximately 93.47 and 91.02 feet bgs, and flowed to the southeast. No free product was measured in any of the four wells.

2005: Enecotech measured the depth to groundwater in monitoring wells, GW-1 through GW-4, on 28 March 2005. Groundwater elevation during this time ranged between 6.45 and 8.91 feet MSL which corresponds to approximately 93.55 and 91.09 feet bgs, and flowed to the southeast. No free product was measured in any of the four wells.

2006-2008: GES collected groundwater data from the four groundwater monitoring wells, GW-1 through GW-4, on a semi-annual basis. Groundwater elevation during this time ranged between 5.58 and 7.09 feet MSL which corresponds to approximately 94.42 and 92.91 feet bgs, and flowed to the east/northeast. No free product was measured in any of the four wells.

2009-2013: AECOM gauged one monitoring well (GW-1) on a semi-annual basis. During these events, the apparent thickness of free product in the well ranged from a fine sheen to

approximately 0.10 feet. Groundwater elevation during this time ranged from 6.50 feet to 8.52 feet MSL which corresponds to approximately 93.5 and 91.48 feet bgs, and flowed to the east/northeast.

2013-2015: URS gauged one monitoring well (GW-1) on a semi-annual basis. During these events, the apparent thickness of free product in the well ranged from a fine sheen to approximately 0.15 feet. Groundwater elevation during this time ranged from 7.25 feet to 8.05 feet MSL , which corresponds to approximately 92.75 and 91.95 feet bgs, and flowed to the east/northeast.

2016: Ninyo & Moore conducted a site reconnaissance in March of 2016 to document current site conditions; including: storage tank materials; locations and volumes of materials stored; groundwater and soil vapor extraction and monitoring well locations, depths, and conditions; waste drum locations and conditions; groundwater water levels; and LNAPL levels in March, 2016. Ninyo & Moore made repairs to damaged well vaults including, replacing missing and broken bolts and rubber gaskets. During the site reconnaissance, four groundwater wells, 12 soil vapor monitoring wells, and 21 soil vapor extraction wells were observed. On March 2, 2016, approximately 0.23 inches of LNAPL was measured in well GW-1, using a Solinst interphase probe. The LNAPL was removed using a bailer and was placed into a labeled Department of Transportation (DOT)-compliant 55-gallon drum and stored onsite within the SVE treatment compound.

On 9 March 2016, Ninyo & Moore conducted a site visit to further evaluate the status of the well lids and vaults, the condition of the old drums inside the remediation compound, and to bail and remove LNAPL in well GW-1. Measurable LNAPL was not detected when using an interphase probe; however, a sheen and hydrocarbon odor was observed.

Ninyo & Moore redeveloped groundwater monitoring wells GW-1 through GW-4, to address well inactivity and build-up of sediments. On 16 March 2016, the wells were redeveloped using surge and bail methods deployed from a well development rig. The surge and bail method was ineffective due to high turbidity levels. On April 14 and 15, 2016, the monitoring wells were again redeveloped using the air lift method. This method was performed on each of the four wells until water quality parameters stabilized, turbidity levels fell to or below 110 Nephelometric Turbidity Units, and the discharge water became visibly free of settable solids and relatively clear.

Ninyo & Moore also conducted a groundwater monitoring and limited soil vapor sampling activities at the site in April 2016. The groundwater flow direction was measured to the east-southeast, at a hydraulic gradient of 0.023 foot per foot. The absence of reported total petroleum hydrocarbon concentrations in well GW-1 indicated that the light non-aqueous phase liquid detected was a limited condition that may have been remediated through well development activities and may no longer be present at the site. Reported concentrations of trichloroethene, 1,1-dichloroethene, and 1,2-dichloroethane in the groundwater samples collected exceed the California maximum contaminant levels. Other reported concentrations of volatile organic compounds were either non-detect or below the California maximum contaminant levels.

2017: The well casing elevations of existing groundwater monitoring wells (GW-1 through GW-4) and monitoring wells (MW-2, MW-3, MW-7, MW-8, MW 15, and MW-17), located onsite were surveyed on April 20, 2017 by Dulin & Boynton.

Ninyo & Moore conducted three groundwater monitoring events (1Q 2017, 2Q 2017, and 4Q 2017) in 2017. LNAPL was not present in measurable quantities in the four groundwater monitoring wells. No odors or sheen were observed during the sampling event. The groundwater flow direction was measured to the east-southeast, at a hydraulic gradient of 0.001 foot/foot in the 4th quarter of 2018. The hydraulic gradient decreased by an order of magnitude compared to the first quarter 2017 event and was attributed to the well elevation survey conducted at the site. Concentrations of TPHg and TPHd detected in the wells in 2017 were below their respective maximum contaminant levels (MCLs). Concentrations of TPHg was not detected in the wells in the first quarter 2017 sampling event, but was detected in wells GW-1 and GW-3 in the second quarter 2017 sampling event and in wells GW-1 though GW-4 in the fourth quarter 2017 sampling event. TPHd was not detected in the wells in the first and fourth quarter 2017 sampling events, but was detected in wells GW-1 though GW-3 in the second quarter 2017 sampling event. Reported concentrations of 1,4-dioxane in groundwater samples collected exceeded the Public Health Protective Concentration (PHPC). Reported concentrations of perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS) compounds in the groundwater samples collected during the first quarter 2017 sampling event exceeded the EPA Health Advisory screening level for drinking water (Ninyo & Moore, 2017a, 2017b, 2018).

2018-2019: Ninyo & Moore conducted six recent groundwater monitoring events (1Q - 4Q 2018, 1Q, 2Q 2019). LNAPL was not present in measurable quantities in the four groundwater monitoring wells for these events. Odors were noted primarily in well GW-1 during the sampling events. Sheen was not observed in the four wells during the sampling event. The groundwater flow direction was measured to the east-southeast, at a hydraulic gradient of 0.001 foot/foot in the last four quarters. Concentrations of TPHg were detected in wells GW-1 through GW-4 during the first and second quarters of 2018 and the first quarter of 2019, but was not detected in the third and fourth quarters of 2018. TPHd was not detected in the wells in the first quarter 2018 sampling event, but was detected in wells GW-1 and GW-2 in the second quarter 2018 sampling event. Reported concentrations of trichloroethene, 1,1-dichloroethene, and 1,2-dichlorethane in the groundwater samples collected exceeded their respective MCLs during the six sampling events between 2018 and 2019, with the exception of some major decreases in concentrations in wells GW-1 and GW-3 in the second quarter of 2019. Reported concentrations of 1,4-dioxane in groundwater samples collected exceeded the Public Health Protective Concentration (PHPC) during the six sampling events between 2018 and 2019, with the exception of some major decreases in concentrations in wells GW-1 and GW-3 in the second quarter of 2019. Reported concentrations of PFOA and PFOS compounds in the groundwater samples collected during the second quarter 2018 sampling event exceeded the EPA Health Advisory screening level for drinking water. Reported concentrations of PFOA and PFOS compounds in the groundwater samples collected during the second quarter 2019 sampling event exceeded the EPA Health Advisory screening level for drinking water, with the exception of well GW-1.

2020-2021: Orion conducted quarterly groundwater monitoring event from February 2020 to June 2021. Sheen was not observed in the monitoring wells during the sampling events. The groundwater flow direction was measured to the east-southeast to north-east, at a hydraulic gradient of approximately 0.001 foot/foot. Concentrations of TPHg have been below laboratory reporting limits and TPHd concentrations have been observed to fluctuate somewhat in wells GW-1 and GW-2, but are "J-flagged" as they are low or close to the laboratory method detection limit. Reported concentrations of trichloroethene, 1,1-dichloroethene, and 1,2-dichlorethane in the groundwater samples collected continued to exceeded their respective MCLs. Reported concentrations of 1,4-dioxane in groundwater samples continued to exceed the PHPC. Reported concentrations of PFOA and PFOS

compounds in the groundwater samples t exceeded the EPA Health Advisory screening level for drinking water.

	6/18/2009		3011.0	PID

Notes:

A - Reported as Total Volatile Hydrocarbons C4-C9

LAB - Result reported by laboratory analysis

PID - Result reported by field measurement with a photo-ionization detector organic vapor monitor

FID - Result reported by field measurement with a flame-ionization detector organic vapor monitor

NM Not Measured

NA - Not Applicable

feet bgs - Feet below ground surface, Valve Closed - Valve Closed at SVE Manifold

Notes:
* noncancer endpoint value
% - percent
-- - not sampled due to no vapor flow
$\mu g/m^3$ - micrograms per cubic meter
ASTM - American Society for Testing and Materials International
bgs - below ground surface
DTSC - Department of Toxic Substances Control
DTSC HERO - Department of Toxic Substances Control Human and Ecological Risk Office screening levels for Commercial/Industrial Air - Cancer Endpoint (using attenuation factor of 0.001, EPA OSWER, 2015), updated January 2018.
DUP - duplicate sample
EPA - United States Environmental Protection Agency
ID - identification
MTBE - methyl tert butyl ether
ND - not detected above the Practical Quantitation Limit
NL - not listed
REP - replicate sample
RSLs - Regional Screening Level for industrial air (using attenuation factor of 0.001) EPA OSWER, 2015, updated November 2017
TPHg - total petroleum hydrocarbons as gasoline
VOCs - volatile organic compounds

Table 5 – Results for Soil Vapor Samples – VOCs (Vapor Extraction Wells)

Well ID	Screened Interval	Date	VOCs by EPA Method 8260B (µg/)																									TPHg by EPA Method 8260B (µg/L)

Notes:
* - 1,2 - Dichloroethane-d4 surrogate recovery used
µg/l - micrograms per liter
bgs - below ground surface
BV - biovent well
EPA - United States Environmental Protection Agency
GW - groundwater monitoring well
ID - identification
J – concentration detected as greater than the method detection limit but less than the reporting limit, value is estimated
MW - monitoring well
NA - not analyzed
ND - not detected above the reporting detection limit
NL - not listed
NS - not sampled because of broken sample port
REP - replicate sample
TBA - tert-butyl alcohol
TPHg - total petroleum hydrocarbons as gasoline
VE - vapor extraction well
VOCs - volatile organic compounds

Notes:

* dilution for these concentrations

** Historical Mass Removed based on values reported by GES in Remediation Progress Report and Semi-Annual Groundwater and System Operation Maintenance Report, dated July 15, 2009 (GES, 2009)

*** The monthly influent and effluent samples were collected on April 4, 2019 due to a system failure and subsequent repair that occurred the week of March 28, 2019.

-- not reported

µg/l - micrograms per liter

cfm - cubic feet per minute

EPA - United States Environmental Protection Agency

GRO - gasoline range organics

ID - identification

lbs - pounds

NA - not applicable

ND - not detected above the reporting detection limits

SVE - soil vapor extraction

TPH - total petroleum hydrocarbons

VOCs - volatile organic compounds

Mass of VOCs and TPH as GRO removed have been calculated separately. Note that there are several analytes reported that are common to both analytical methods.

APPENDIX D

HISTORICAL SOIL ANALYTICAL RESULTS

Geomatrix

TABLE 1

SOIL ANALYTICAL RESULTS
PRE-AST INSTALLATION SAMPLING
December 5, 2006
Former National Car Rental System Facility
9419 Airport Boulevard
Los Angeles, California

Results reported in milligrams per kilogram (mg/Kg).

ABBREVIATIONS:

1,2,4-TMB = 1,2,4-trimethylbenzene
1,3,5-TMB = 1,3,5-trimethylbenzene
MTBE = methyl tert-butyl ether
TEPH = total extractable petroleum hydrocarbons as diesel
TBA = tertiary butyl alcohol
TPHg = total petroleum hydrocarbons as gasoline

< = Analyte not detected at or above the laboratory reporting limit shown.
AST = Aboveground storage tank
(D) = Field duplicate sample
J = Estimated value; analyte detected above the laboratory method detection limit but below the laboratory reporting limit.
ND = Compounds not detected at or above their respective laboratory reporting limits. Refer to the laboratory reports for individual reporting lim
VOCs = Volatile organic compounds

(1) mg/kg = milligrams per kilogram. (2) Remediation Guidance for Petroleum and VOC Impacted Sites, Section II, 1996. (3) Risk-based screening levels for total exposure or protection of groundwater are obtained from the *USEPA Region 9's Regional Screening Table*, dated May 2021 and using "Aliphatic Low, C5-C8" for TPHg and "Aliphatic Medium, C9-C18" for TPHd. (4) Environmental Screening Levels (ESLs) from the San Francisco Bay Regional Water Quality Control Board's *Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater, Tier 1 ESL Tables*, January 2019. ESLs for direct contact exposure and groundwater resource protection for groundwater as a current or potential source of drinking water. (5) Ohio EPA Soil Leaching to Ground Water Evaluation for Total Petroleum Hydrocarbons (TPH) Guidance, January 2014 . (6) Direct contact and outdoor exposure action levels from California Low-Threat Underground Storage Tank Case Closure policy (LTCP).

V. MAXIMUM DOCUMENTED CONTAMINANT CONCENTRATIONS IN GROUNDWATER

Contaminant	Groundwater (µg/L) [1]		Maximum Contaminant Level [2] (µg/L)
	Earliest	Latest	
TPHg	ND<200 GW-3 Jan 2000	ND <50 GW-1 May 2021	NE
TPHd	ND<1,400 GW-3 6/3/2004	77 GW-1 May 2021	NE
Benzene	14 SB-3 Dec 1997	ND<1.0 GW-1 May 2021	1
Toluene	1.7 SB-3 Dec 1997	ND<5.0 GW-1 May 2021	150
Ethylbenzene	2.6 SB-3 Dec 1997	ND<5.0 GW-1 May 2021	300
Xylenes	13 SB-3 Dec 1997	ND<5.0 GW-1 May 2021	1,750
MTBE	88 SB-3 Dec 1997	ND<1.0 GW-1 May 2021	13

(1) µg/L = micrograms per liter (2) Maximum Contaminant Levels (MCLs) obtained from the State Water Resources Control Board's table, *Maximum Contaminant Levels and Regulatory dates for Drinking Water, USEPA vs California, October 2018*.

VI. SOIL REMEDIATION

Method:	**Duration of remediation:**
From November 2006 to June 2009, an SVE system was operated to remediate vadose zone soil and soil vapor. A total of 28 individual vapor extraction wells with well screens installed in three depth zones (shallow, intermediate, and deep) were connected to the system. The SVE system recovered 6,356 pounds of hydrocarbons during this operating period. SVE operation was stopped due to the responsible party's bankruptcy. Due to the abrupt end of remediation, an SVE rebound test and post-SVE confirmation soil borings were not performed. Mass removal rates before system shutdown indicated that SVE was nearing the point of possible conclusion. Vapor concentrations from the shallow screened wells suggested that remediation was successful to 30 feet bgs. Higher concentrations were still present in the intermediate screened wells from approximately 43 to 51 feet bgs. Hydrocarbon levels were variable in the deep screened wells from 70 bgs to the water table.	November 2006 to June 2009
From June 2018 to April 2019, a second SVE system was operated to complete the remediation of vadose zone soil and soil vapor. The TPHg removal rate decreased from approximately 20 lbs/day at the start of remediation to 1.5 lbs/day in April 2019. The SVE system removed approximately 1,325 lbs of TPHg, and 250 lbs of VOCs. Influent hydrocarbon concentrations reached low concentrations with an asymptotic trend, and the system was shut down in April 2019 for 30 days to conduct a rebound test. Final soil vapor concentrations were below CHHSLs and LTCP screening levels. See Section X (Case Summary) for description of soil vapor rebound testing and confirmation soil boings.	June 2018 to April 2019

VII. GROUNDWATER REMEDIATION

Method: **None**	Duration of remediation: **N/A**

VIII. FREE PRODUCT:

Was free product encountered? **Yes**	Has free product been totally recovered? Yes
When was free product recovery project completed? In March 2016, approximately 0.23 inch of LNAPL was measured in well GW-1 and the well was bailed to remove the LNAPL. LNAPL was not encountered during the subsequent sampling events between April 2016 and February 2020. These observations indicate that the LNAPL detected in well GW-1 was of limited extent that was removed through bailing the well.	

IX. RECOMMENDED ACTION:

Soil Closure only: **No**	Case Closure: **Pending**	Solvent Case: **No**
Additional Action Required (i.e.: additional site assessment, remediation, monitoring): **None**		

X. CASE SUMMARY AND JUSTIFICATION FOR RECOMMENDED ACTION:

SITE DESCRIPTION

The site is located east of the Los Angeles International Airport (LAX) northern runway complex, and north of the southern runway complex and cargo/airline maintenance areas. The site is in the south-central portion of an approximately 28-acre property which is used by Avis Rent a Car (Avis) as a public rental area. Avis also uses the property for staging, fueling, and washing of rental vehicles.

GEOLOGY AND HYDROGEOLOGY

The site is located within the Southwestern Block of the Los Angeles Basin, a complex structural zone defined by a transition between the strike-slip tectonics of the Peninsular Ranges to the south and the convergent tectonics of the Transverse Ranges to the north. Stratigraphy beneath the site includes recent alluvium underlain by Pleistocene marine deposits. Recent alluvium generally consists of gravels and sands deposited by the ancestral Los Angeles River, which historically flowed through the site vicinity toward the Pacific Ocean. The site elevation is approximately 100 feet above mean sea level.

Based on field observations during previous site assessments, lithology at the site generally consists of interbedded sands, silts, and clays to a depth of approximately 90 bgs. The variable lithology is consistent with an alluvial depositional environment. Fill material including pea gravel has been encountered to depths up to 14 feet bgs at soil borings SB8, BV-1, and CB-1, advanced near the former UST excavation in the southwest corner of the UST pit.

The site is located within the Coastal Plain of Los Angeles Basin, West Coast Subbasin. Based on the Los Angeles RWQCB Basin Plan, groundwater in this subbasin is designated as having existing beneficial uses for municipal and domestic supply, industrial service and process supply, and agricultural supply. Groundwater is encountered at the site at about 93 feet bgs. Groundwater flows toward the east-southeast at a hydraulic gradient of approximately 0.001 ft/ft.

OFFSITE SOURCES

A regional plume with multiple contaminants is migrating underneath the site. Groundwater samples have reported multiple compounds that are not associated with historical site uses or known onsite sources including 1,1-dichloroethene (1,1-DCE), trichloroethene (TCE), 1,4-dioxane, PFOS, and PFAS. These compounds originate from upgradient offsite source(s); however, identifying one particular offsite source is difficult because there are multiple nearby sources and the groundwater flow direction fluctuates. Chlorinated VOCs in the soil vapor samples from the site can be attributed to off-gassing from the regional groundwater plume.

A potential upgradient offsite source for chlorinated VOCs and 1,4-dioxane in groundwater is the Honeywell Sepulveda facility, which is approximately 3,000 feet west-southwest of the site. In August 2019, maximum concentrations of 1,1- DCE, TCE, and 1,4 dioxane at this facility were 2,600, 83, and 7,500 µg/l. Figure 4 shows the 1,1-DCE plume along with the Honeywell Sepulveda facility and the site.

PFOS and PFOAs has been detected in groundwater samples at the LAX Terminal 2 facility, which is west-southwest of the site. PFOS and PFOAs in the onsite groundwater wells may also be from numerous offsite sources. As emerging compounds, sampling for PFOS and PFOAs is not well represented in the site vicinity and the source of these compounds is not well defined.

SITE HISTORY

Unauthorized release(s) of petroleum hydrocarbon-based compounds at the site have been associated with the nine USTs and/or their associated product piping. The largest of these releases has been linked to the pit containing the four former 20,000-gallon USTs. The USTs and associated product piping were used as part of the rental car fueling activities. The primary COCs for the site are petroleum hydrocarbons including TPHd, TPHg, BTEX, and MTBE.

Because the sources were removed by 2004, the current concentrations of COCs related to the release(s) at the site are residual and there are no active sources. Additionally, no measurable LNAPL has been observed in groundwater monitoring wells since 2016.

SOIL AND SOIL VAPOR (VADOSE ZONE)

Source Zone Assessment
In 2002, three soil borings were drilled to investigate the petroleum hydrocarbon impacts remaining after removal of the USTs. The results showed elevated concentrations of TPHg, TPHd, benzene, and MTBE to the west of the former USTs. TPHg and TPHd were detected up to 1,100 and 7,700 mg/kg, respectively. Benzene and MTBE were detected up to 14 and 35 mg/kg, respectively. Elevated hydrocarbon concentrations were primarily detected between 18 and 67.5 feet bgs.

The extent of COCs was originally defined during investigations conducted in 1996 and 2002. The 1996 investigation advanced soil borings SB-1 through SB-4 and the 2002 investigation installed vapor wells VE1 through VE3. The lateral extent of COCs was bounded by SB-1 and SB-3 to the north/south and VE3 and SB-4 to the east/west.

Initial Vadose Zone Remediation

See Section VI (Soil Remediation) for description of initial SVE system operation from 2006 to 2009.

Site Assessment Prior To Second Vadose Zone Remediation

In 2016, soil vapor samples were collected from four SVE wells screened from 46 to 51 feet bgs (i.e., intermediate zone). Concentrations of benzene, chloroform, and dibromomethane exceeded industrial air screening criteria published by the DTSC and/or USEPA.

In 2017, soil and soil vapor samples were collected from nine borings drilled to install vapor probes SV-1 through SV-9. Soil results showed that TPHg, BTEX, and MTBE concentrations were below USEPA RSLs. TPHd concentrations were above the LARWQCB SSLs in two samples collected from one soil boring. Soil vapor results for TPHg, BTEX, and MTBE were below screening criteria.

The 2017 soil and soil vapor results indicated that previous remedial actions had successfully reduced TPHg, benzene, and MTBE concentrations in both soil and soil vapor. After this sampling event, subsequent investigations and remediation was focused on the residual TPHd.

In 2018, soil samples were collected from one boring between 10 and 80 feet bgs during installation of a bioventing well (BV-1). TPHg concentrations were below the LARWQCB SSL. TPHd concentrations exceeded the SSL in one sample at 50 feet. The highest concentrations of TPHg and TPHd were 437 and 6,550 mg/kg, respectively.

Second Vadose Zone Remediation

See Section VI (Soil Remediation) for description of second SVE system operation from 2018 to 2019.

Soil Vapor Rebound Testing

A rebound test was conducted in May 2019 to evaluate the completeness of soil remediation. TPHg concentrations in SVE influent at the end of SVE operations were 40 to 97 µg/l, while rebound influent concentrations were 111 to 153 µg/l. These results demonstrated that the SVE system had reached the practical limits of the technology. In addition, individual wells were sampled after the rebound test later in May 2019 to confirm this determination. Maximum soil vapor concentrations were below CHHSLs and LTCP screening levels. The SVE system was removed from the site in May 2019.

Confirmation Soil Sampling After Soil Remediation

In 2019, one confirmation boring (CB-1) was drilled adjacent to the former USTs to assess the residual soil hydrocarbon concentrations. The results showed maximum TPHg and TPHd concentrations of 1,100 and 8,060 mg/kg, respectively. These concentrations were present between 62 and 67 feet, which was deeper than the screened intervals of the deep SVE wells.

In January 2020, three soil borings (VE-13, VE-14, and VE-15) were drilled to assess the hydrocarbon-impacted soil around confirmation boring CB¬1. The highest concentrations of petroleum hydrocarbons were generally found in two focused depth intervals: 50 to 53 feet bgs and 64 to 65 feet bgs. The results are summarized in Table 2.

Low permeability soil layers (silt and clay) were present beneath both of these depth intervals and hydrocarbon concentrations decreased significantly below 65 feet bgs (Table 2). These borings defined the vertical extent of residual hydrocarbons, which was approximately 28 feet above the water table. Borings VE-13, VE-14, and VE-15 were completed as vapor extraction wells.

GROUNDWATER

Groundwater monitoring was initially performed between 2000 and 2009 at the four onsite monitoring wells (GW-1 through GW-4). In April 2009, concentrations of TPHg and BTEX exceeded laboratory reporting limits (RLs) in a majority of the groundwater samples. The concentrations of TPHg ranged from 150 to 700 µg/l. The concentrations of benzene ranged from non-detect to 24 µg/l and exceeded the California MCL of 1 µg/l in three of the four wells. Fuel oxygenates, including MTBE, were not detected above their respective RLs. Other reported concentrations of petroleum VOCs were detected in the groundwater samples collected including 1,2-dichloroethane (1,2-DCA, a fuel lead scavenger), n-propylbenzene, trimethylbenzene, and naphthalene. In addition, chlorinated VOCs were detected including 1,1-DCA, 1,1-DCE, PCE, and TCE.

In 2016, LAWA took over management of environmental cleanup of the site and, in October 2016, the RWQCB recommended quarterly groundwater monitoring. Wells GW-1 through GW-4 were redeveloped in 2016 and periodic monitoring resumed.

The groundwater flow direction measured between 2016 and 2020 was generally to the east-southeast at a hydraulic gradient of approximately 0.001 ft/ft.

TPHg and TPHd have been detected at low concentrations since 2016 with the highest detection of TPHd at 2,200 µg/l (GW-1, February 2020) and TPHg at 81.5 µg/l (GW-4, December 2017). Concentrations of BTEX and MTBE have been below laboratory RLs or MCLs in the groundwater samples. Table 3 summarizes the groundwater results from 2016 through 2020 and Figure 6 shows the most recent TPHd and TPHg concentrations.

Chlorinated VOCs including 1,1-DCE, 1,2-DCA, and TCE have been detected at concentrations exceeding MCLs. 1,4-dioxane (a chlorinated VOC stabilizer) has been detected above the California Division of Drinking Water (DDW) notification level. PFOS and PFAS have been detected above the DDW response levels.

Reported concentrations of chlorinated VOCs, 1,4-dioxane, PFOA, and PFOS in groundwater samples from the site can be attributed to the regional plume that exists in the vicinity of the site. The absence of reported BTEX or MTBE in groundwater samples indicate that historical impacts have naturally attenuated to levels below MCLs.

LOW-THREAT CLOSURE POLICY EVALUATION

The California State Water Resources Control Board (SWRCB) has established cleanup and closure criteria for petroleum UST releases in its LTCP. Orion reviewed the LTCP requirements and concluded that the site meets the criteria for closure as summarized below:

1. General Criteria:
   a. The release is located within the service area of a public water system.
   b. The unauthorized release consists only of petroleum.
   c. The unauthorized (“primary”) release for the UST system has been stopped.
   d. Free product has been removed to the maximum extent practicable.
   e. A conceptual site model that assesses the nature, extent, and mobility of the release has been developed.
   f. The secondary source has been removed to the extent practicable.
   g. Soil or groundwater has been tested for MTBE.
   h. Nuisance, as defined by Water Code Section 10350, does not exist at the site.

2. Groundwater-Specific Criteria: Groundwater concentrations of benzene and MTBE no longer exceed MCLs or LTCP screening levels and free product is not present.

3. Petroleum Vapor Intrusion Criteria: Soil vapor samples for existing or future buildings are below the LTCP commercial soil gas criteria for benzene, ethylbenzene, and naphthalene.

4. Direct Contact and Outdoor Air Exposure to Soil: Hydrocarbon concentrations in the upper 10 feet of soil are below the LTCP requirements.

Based on the remedial actions and the current site conditions, the site does not pose a significant risk to human health or the environment in accordance with the LTCP.

CLOSURE DETERMINATION

A Conceptual Site Model (CSM) Update report was submitted describing (1) the current characteristics and conditions at the site, (2) an evaluation of potential risks associated with the site, and (3) a comparison of the site conditions to the closure requirements under the California Low-Threat Underground Storage Tank Case Closure policy (LTCP). The results of this evaluation indicate the following conclusions:

1. Exposure pathways and receptors have been evaluated. There are no sensitive receptors on or near the site.
2. The primary source of COCs has been characterized and the extent of media impacted by BTEX and MTBE has been defined. LNAPL is not present.
3. Soil remediation activities have removed a secondary source of COCs.
4. Current soil and soil vapor concentrations of BTEX and MTBE are below regulatory screening levels.
5. Groundwater concentrations for site COCs are below MCLs. Chlorinated VOCs (1,1-DCE, 1,2-DCA, and TCE), 1,4-dioxane, PFOS, and PFAS in groundwater are from offsite sources.
6. Based on the remedial actions and the current site conditions, the site does not pose a significant risk to human health or the environment in accordance with the LTCP.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: ORION ENVIRONMENTAL Project: GS NAT GAS NAT.

Date Received: 11/18/20 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 6.5 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 3.7 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Explanation

- B18 — Soil boring/temporary well
- B24 — Groundwater monitoring well
- B7 — Abandoned groundwater monitoring well
- GW-4 — Monitoring well located on the former National Car Rental property
- B18 — Soil boring/temporary well (previous groundwater investigation)
- 5/25/12 — Sample date
- 19 — 1,1-Dichloroethene (1,1-DCE) concentration in groundwater in micrograms per Liter
- 107.0-117.0 — Sample depth interval in feet below ground surface
- * — Duplicate sample
- Approximate direction of groundwater flow
- x — Fence

Horizontal Groundwater Flow Direction and Frequency
(September 2005 to Present)

Basemap modified from site survey conducted by Cal Vada Surveying, Inc., September 20, 2005

5. MONITORING SYSTEM AND PROGRAMMING		
A separate Monitoring System Certification Form must be prepared for each control panel.		
Make of Monitoring System Control Panel Veeder-Root	Model of Monitoring System Control Panel ILS-350	Software Version Installed 329753-002-A

Attach the post-certification reports if the monitoring system is capable of generating either; ☐Monitoring System Set-up ☐ Alarm History Report	Yes	No	NA
All monitoring equipment is operational per manufacturer's specifications?	☑	☐	
Secondary containment systems are free of damage, debris, or liquid?	☑	☐	
Are the audible and visual alarms operational?	☑	☐	
All sensors have been: 1) visually inspected for wiring kinks, breaks and residual buildup on floats; and 2) tested for functionality and confirmed operational?	☑	☐	☐
Are all sensors installed to detect a release at the earliest opportunity in the secondary containment?	☑	☐	☐
The monitoring system set-up was reviewed, and proper settings confirmed?	☑	☐	☐
Was the monitoring control panel's backup battery visually inspected, functionally tested, and confirmed operational?	☑	☐	☐
Does the flow of fuel stop at the dispenser if a release is detected in the under-dispenser containment?	☐	☐	☑
Does the turbine automatically shut down if the piping secondary containment monitoring system fails to operate or is electrically disconnected?	☑	☐	☐
Does the turbine automatically shut down if the piping secondary containment monitoring system detects a release? Which sensors initiate positive shut down? (Check all that apply) ☑ Sump ☐ UDC	☑	☐	☐
If monitoring system alarms are relayed to a remote monitoring center, is all communication equipment operational?	☐	☐	☑

*Describe all answers marked "No" or "Fail" and proposed remedy in **Section 9**.*
*List all monitoring equipment either replaced or repaired in **Section 9***

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

UST Monitoring Site Plan

Site Address: Hertz 1101-15 RAC LAX ~ 9000 Airport Blvd, Los Angeles, CA 90045

Date map was revised: 07/19/22

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locationsof the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps,dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

8. COMMENTS

Describe all answers marked "Other," "No," or "Fail" and each proposed remedy.

* Mark here if:

☐ Spill containers do not have a minimum capacity of five gallons and require replacement.

Additional copies of this page may be attached.

ing requirements stated in this recommended practice are general statements and may vary. Recommended pressure levels and test durations are addressed in Section 5.7. Piping manufacturers' test procedures may differ.

This test can be conducted in sections or as one continuous pipe depending on the installation. Care should be taken to ensure that the entire secondary containment of the piping system is tested.

5.6 Test Equipment. Test equipment shall include:

- inert gas source (nitrogen, helium, etc.);
- stopwatch or other time-measurement device capable of measuring a 1-second increment;
- test tubing assemblies (Tubing assemblies provide access to the beginning and end of the interstitial space.);
- pressure gauge with a 15 psig maximum pressure reading with 0.5 increments.

5.7 Test Procedure.

1. If necessary, re-install termination (test) boots at piping terminations.
2. If necessary, connect the tubing assemblies to the secondary containment termination fitting on each end of the section of piping to be tested.
3. Connect the inert gas source and pressure gauge.
4. Gradually pressurize the interstitial space to 5 psig. Close the valve and allow the pressure to stabilize. Repressurize to the specified test pressure if necessary.
5. Observe the pressure for a period of 1 hour.
6. If the piping pressure after 1 hour is less than the test pressure, check termination fittings and test assemblies for leaks.
7. Release the pressure on the system slowly.
8. Remove the test equipment.
9. Restore the piping to its normal operating condition.

5.8 Pass/Fail Criteria. If no pressure change occurs during the test period, the piping system passes the secondary containment integrity test.

If there is any drop in pressure over the test period, the piping fails the secondary containment integrity test. If there is any increase in pressure over the test period, repeat the test.

6. SPILL BUCKET AND CONTAINMENT SUMP TESTING

6.1 General. Spill buckets and containment sumps for tank systems are neither intended nor designed for the storage of petroleum products, but rather to contain small leaks and spills for short periods of time. This section describes the procedures used to test the integrity of spill buckets and containment sumps to ensure that they do not leak.

6.2 Spill Bucket Integrity Testing — Hydrostatic Test Method.

WARNING: Do not use fuels such as gasoline, E85 or diesel as a test fluid because they present a serious fire and safety hazard. Gasoline vapors are flammable and can explode if exposed to an ignition source such as a spark or open flame. If a tank or containment area is not tight, using fuel as the test fluid will cause a release into the soil or groundwater.

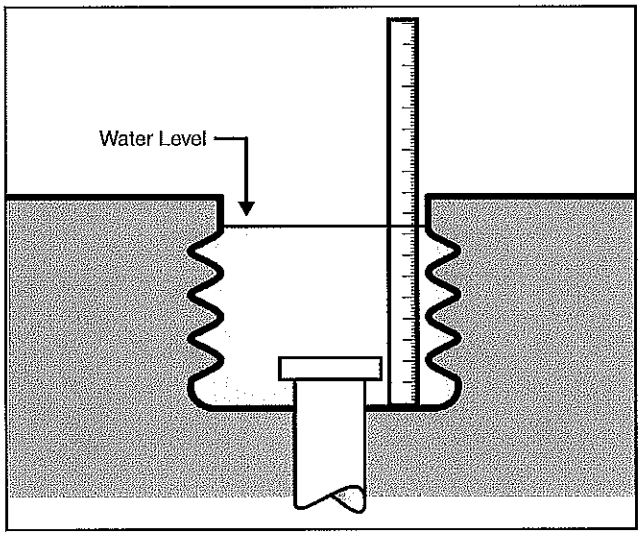

FIGURE 6-1. *The hydrostatic method of determining spill bucket integrity uses water to detect leaks. The measuring stick must be placed in the same location at the beginning and end of the test period to ensure accurate water level readings.*

6.2.1 Purpose. This method is used to test the integrity of single-walled spill buckets or the primary containment of secondarily contained spill buckets.

6.2.2 Description of Test. The spill bucket is filled with water. The water level is measured at the beginning and end of the test.

6.2.3 Test Equipment. Test equipment shall include:

- water;
- measuring stick that is accurate to within 1/16 (0.063) inch and of sufficient length;
- plumber's plug (appropriate size, if used);
- stopwatch or other time-measurement device capable of measuring a 1-second increment.

6.2.4 Preparation.

1. Care should be taken when conducting the test in the rain or during freezing weather conditions.
2. Remove and properly dispose of any liquid and debris (leaves, sediment and trash) in the spill bucket. Clean the spill bucket and examine it for damage, defects or improperly installed components. If there are loose components (e.g., loose band clamps or bolts), tighten these items before conducting the integrity test. If there are items that must be repaired or replaced (e.g., deteriorated gaskets/seals or drain valves), notify the owner/operator.
3. Examine the fill cap and adapter fitting for loose, missing or damaged parts, and make necessary repairs. Complete any repairs before putting water in the spill bucket. Make sure that the seal on the fill cap is present and in good condition. The cap must fit securely and be leak-tight on the riser. The water level during the test typically will be above the cap, so a leaking cap will result in a failed test. As an alternative to a tight fill cap, use a plumber's plug in the fill riser if approved by the authority having jurisdiction (AHJ) and tank owner.
4. The spill-bucket drain valve, if present, must be leak-tight to pass the test. If it is not leak-tight, it may be possible to simply remove and permanently plug the drain valve. However, if you choose to permanently plug, ensure that the local regulations allow this modification.
5. If the spill bucket is found to have cracks, loose parts or separation of the bucket from the fill pipe, it is not considered to be liquid-tight. This visually indicates a test failure.

NOTE: If the fill cap is not included in the spill bucket test and/or the cap is not tight, it could be the source of potential fuel contamination from water intrusion.

NOTE: Before permanently plugging, ensure that local regulations allow the drain valve to be permanently plugged.

6.2.5 Test Procedure.

1. Add water to the spill bucket to a level within 1.5 inches of the top of the spill bucket. Allow the water to settle for 5 minutes before the initial water level measurement is taken.
2. Place the measuring stick vertically at the lowest point in the spill bucket and extending above the water level to allow for an accurate measurement to be taken. The location of the measuring stick must remain the same for each water level measurement. Document the initial water level measurement as measured from the bottom of the spill bucket. Alternative measurement methods may be used provided that measurement to 1/16 (0.063) inch can be made.
3. Take all precautions to prevent the water level from being disturbed during the duration of the test.
4. After 1 hour, document the ending water level measurement.
5. Upon completion of the test, remove and dispose of the water according to Section 6.7, and dry the inside of the spill bucket before returning it to service.

6.2.6 Pass/Fail Criteria. If the water level has dropped less than 1/8 (0.125) inch, the spill bucket passes the integrity test.

If the water level has dropped 1/8 (0.125) inch or greater, the spill bucket fails the integrity test.

6.3 Spill Bucket Integrity Testing — Vacuum Test Method.

6.3.1 Purpose. This method is used to test the integrity of single-walled spill buckets or the pri-

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

UST Monitoring Site Plan

Site Address: Hertz 1101-15 RAC LAX ~ 9000 Airport Blvd, Los Angeles, CA 90045

Date map was revised: 07/19/22

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locationsof the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps,dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Underground Storage Tank
Monitoring System Certification Form

5. MONITORING SYSTEM AND PROGRAMMING		
A separate Monitoring System Certification Form must be prepared for each control panel.		
Make of Monitoring System Control Panel Veeder-Root	Model of Monitoring System Control Panel TLS-350	Software Version Installed 134.00

Attach the post-certification reports if the monitoring system is capable of generating either; ☑Monitoring System Set-up ☑ Alarm History Report	Yes	No	NA
All monitoring equipment is operational per manufacturer's specifications?	☑	☐	
Secondary containment systems are free of damage, debris, or liquid?	☑	☐	
Are the audible and visual alarms operational?	☑	☐	
All sensors have been: 1) visually inspected for wiring kinks, breaks and residual buildup on floats; and 2) tested for functionality and confirmed operational?	☐	☐	☑
Are all sensors installed to detect a release at the earliest opportunity in the secondary containment?	☐	☐	☑
The monitoring system set-up was reviewed, and proper settings confirmed?	☑	☐	☐
Was the monitoring control panel's backup battery visually inspected, functionally tested, and confirmed operational?	☑	☐	☐
Does the flow of fuel stop at the dispenser if a release is detected in the under-dispenser containment?	☐	☐	☑
Does the turbine automatically shut down if the piping secondary containment monitoring system fails to operate or is electrically disconnected?	☐	☐	☑
Does the turbine automatically shut down if the piping secondary containment monitoring system detects a release? Which sensors initiate positive shut down? (Check all that apply) ☐ Sump ☐ UDC	☐	☐	☑
If monitoring system alarms are relayed to a remote monitoring center, is all communication equipment operational?	☐	☐	☑

*Describe all answers marked "No" or "Fail" and proposed remedy in **Section 9**.*
*List all monitoring equipment either replaced or repaired in **Section 9***

6. SENSOR TESTING RESULTS

*List only sensors tested on date of this certification. List "**Sensor ID**" as labeled in system programming. Additional copies of this page may be attached to accommodate all sensors tested.*

8. COMMENTS

Describe all answers marked "Other," "No," or "Fail" and each proposed remedy.

* Mark here if:

☐ Spill containers do not have a minimum capacity of five gallons and require replacement.

Additional copies of this page may be attached.

ing requirements stated in this recommended practice are general statements and may vary. Recommended pressure levels and test durations are addressed in Section 5.7. Piping manufacturers' test procedures may differ.

This test can be conducted in sections or as one continuous pipe depending on the installation. Care should be taken to ensure that the entire secondary containment of the piping system is tested.

5.6 Test Equipment. Test equipment shall include:

- inert gas source (nitrogen, helium, etc.);
- stopwatch or other time-measurement device capable of measuring a 1-second increment;
- test tubing assemblies (Tubing assemblies provide access to the beginning and end of the interstitial space.);
- pressure gauge with a 15 psig maximum pressure reading with 0.5 increments.

5.7 Test Procedure.

1. If necessary, re-install termination (test) boots at piping terminations.
2. If necessary, connect the tubing assemblies to the secondary containment termination fitting on each end of the section of piping to be tested.
3. Connect the inert gas source and pressure gauge.
4. Gradually pressurize the interstitial space to 5 psig. Close the valve and allow the pressure to stabilize. Repressurize to the specified test pressure if necessary.
5. Observe the pressure for a period of 1 hour.
6. If the piping pressure after 1 hour is less than the test pressure, check termination fittings and test assemblies for leaks.
7. Release the pressure on the system slowly.
8. Remove the test equipment.
9. Restore the piping to its normal operating condition.

5.8 Pass/Fail Criteria. If no pressure change occurs during the test period, the piping system passes the secondary containment integrity test.

If there is any drop in pressure over the test period, the piping fails the secondary containment integrity test. If there is any increase in pressure over the test period, repeat the test.

6. SPILL BUCKET AND CONTAINMENT SUMP TESTING

6.1 General. Spill buckets and containment sumps for tank systems are neither intended nor designed for the storage of petroleum products, but rather to contain small leaks and spills for short periods of time. This section describes the procedures used to test the integrity of spill buckets and containment sumps to ensure that they do not leak.

6.2 Spill Bucket Integrity Testing — Hydrostatic Test Method.

WARNING: Do not use fuels such as gasoline, E85 or diesel as a test fluid because they present a serious fire and safety hazard. Gasoline vapors are flammable and can explode if exposed to an ignition source such as a spark or open flame. If a tank or containment area is not tight, using fuel as the test fluid will cause a release into the soil or groundwater.

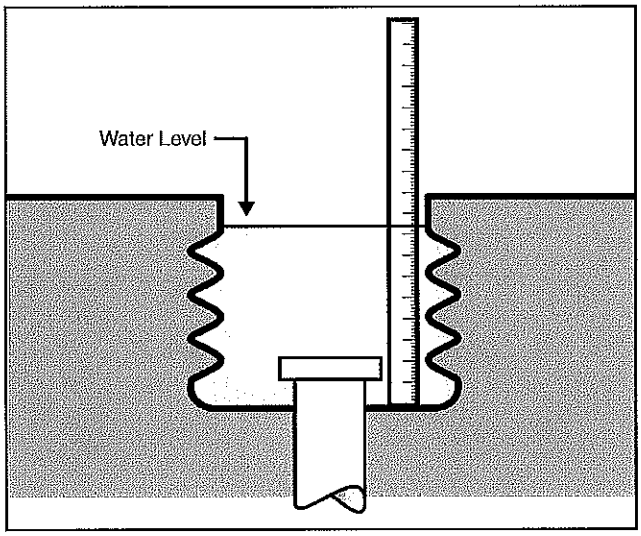

FIGURE 6-1. *The hydrostatic method of determining spill bucket integrity uses water to detect leaks. The measuring stick must be placed in the same location at the beginning and end of the test period to ensure accurate water level readings.*

6.2.1 Purpose. This method is used to test the integrity of single-walled spill buckets or the primary containment of secondarily contained spill buckets.

6.2.2 Description of Test. The spill bucket is filled with water. The water level is measured at the beginning and end of the test.

6.2.3 Test Equipment. Test equipment shall include:

- water;
- measuring stick that is accurate to within 1/16 (0.063) inch and of sufficient length;
- plumber's plug (appropriate size, if used);
- stopwatch or other time-measurement device capable of measuring a 1-second increment.

6.2.4 Preparation.

1. Care should be taken when conducting the test in the rain or during freezing weather conditions.
2. Remove and properly dispose of any liquid and debris (leaves, sediment and trash) in the spill bucket. Clean the spill bucket and examine it for damage, defects or improperly installed components. If there are loose components (e.g., loose band clamps or bolts), tighten these items before conducting the integrity test. If there are items that must be repaired or replaced (e.g., deteriorated gaskets/seals or drain valves), notify the owner/operator.
3. Examine the fill cap and adapter fitting for loose, missing or damaged parts, and make necessary repairs. Complete any repairs before putting water in the spill bucket. Make sure that the seal on the fill cap is present and in good condition. The cap must fit securely and be leak-tight on the riser. The water level during the test typically will be above the cap, so a leaking cap will result in a failed test. As an alternative to a tight fill cap, use a plumber's plug in the fill riser if approved by the authority having jurisdiction (AHJ) and tank owner.
4. The spill-bucket drain valve, if present, must be leak-tight to pass the test. If it is not leak-tight, it may be possible to simply remove and permanently plug the drain valve. However, if you choose to permanently plug, ensure that the local regulations allow this modification.
5. If the spill bucket is found to have cracks, loose parts or separation of the bucket from the fill pipe, it is not considered to be liquid-tight. This visually indicates a test failure.

NOTE: If the fill cap is not included in the spill bucket test and/or the cap is not tight, it could be the source of potential fuel contamination from water intrusion.

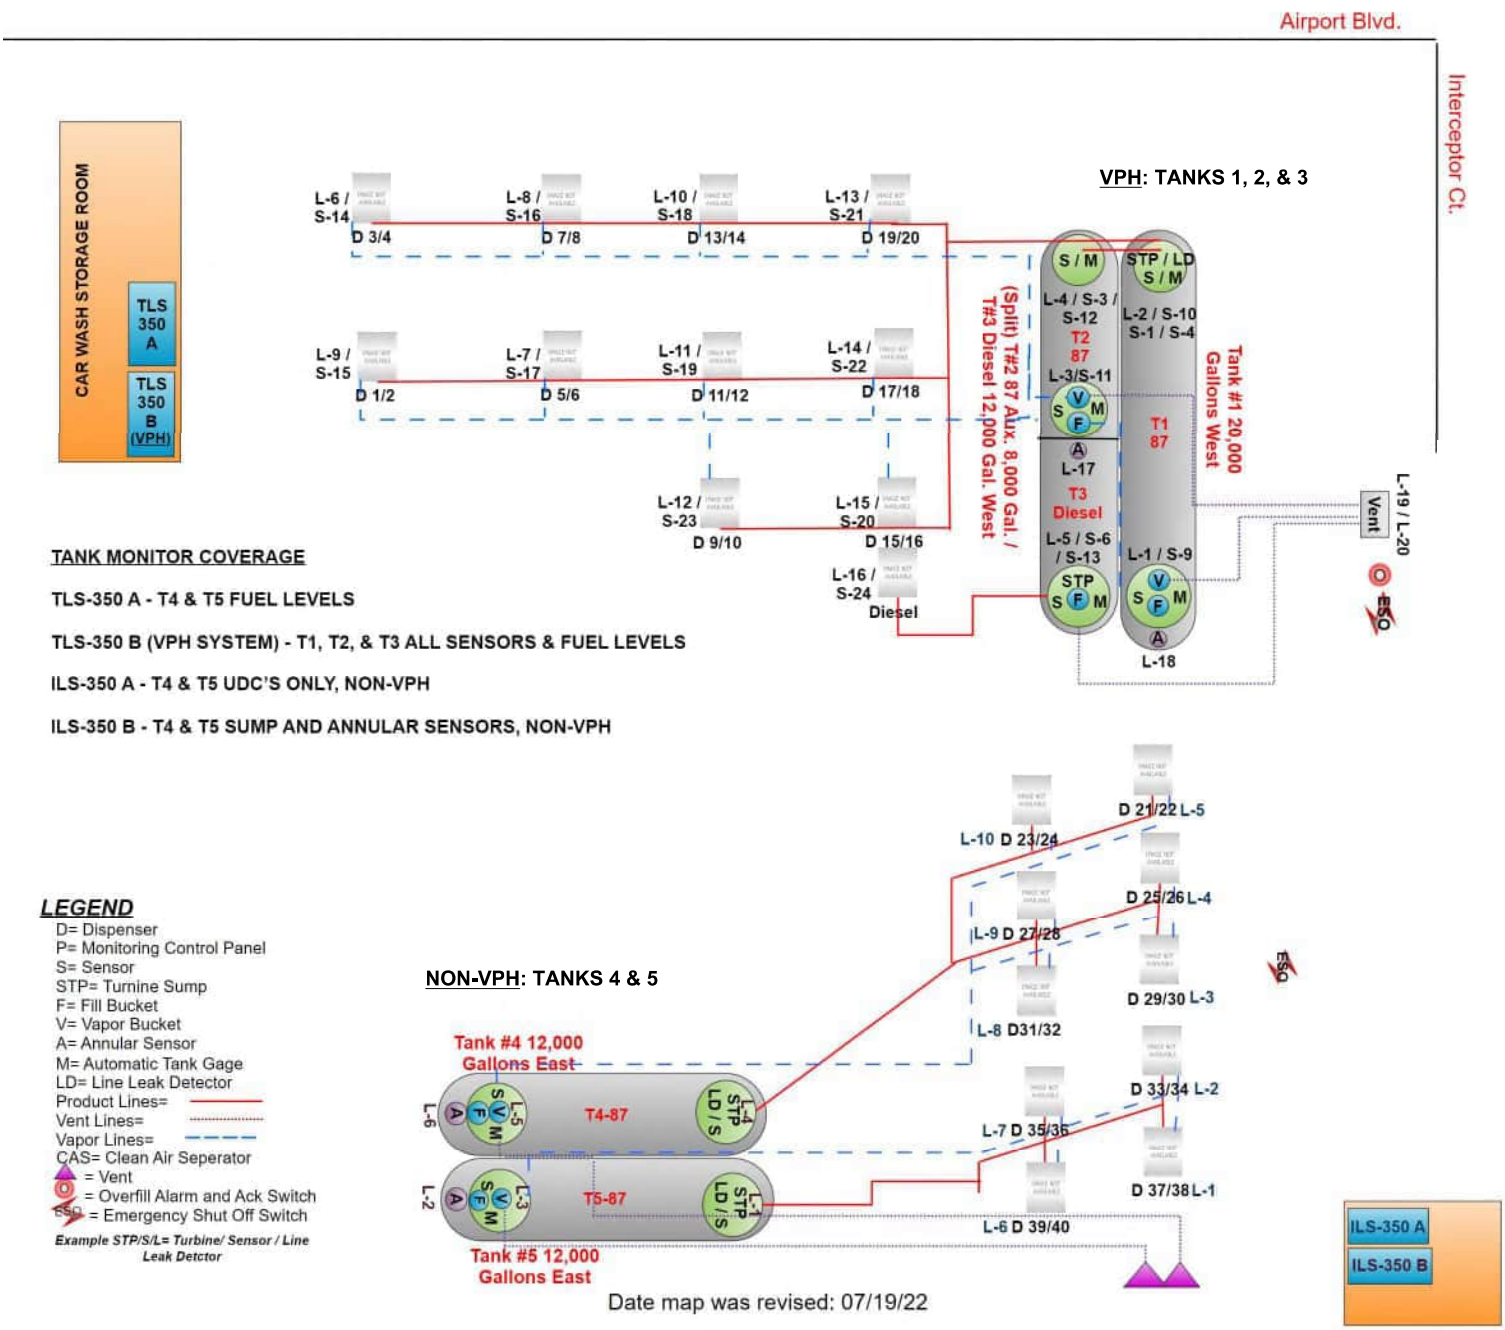
NOTE: Before permanently plugging, ensure that local regulations allow the drain valve to be permanently plugged.

6.2.5 Test Procedure.

1. Add water to the spill bucket to a level within 1.5 inches of the top of the spill bucket. Allow the water to settle for 5 minutes before the initial water level measurement is taken.
2. Place the measuring stick vertically at the lowest point in the spill bucket and extending above the water level to allow for an accurate measurement to be taken. The location of the measuring stick must remain the same for each water level measurement. Document the initial water level measurement as measured from the bottom of the spill bucket. Alternative measurement methods may be used provided that measurement to 1/16 (0.063) inch can be made.
3. Take all precautions to prevent the water level from being disturbed during the duration of the test.
4. After 1 hour, document the ending water level measurement.
5. Upon completion of the test, remove and dispose of the water according to Section 6.7, and dry the inside of the spill bucket before returning it to service.

6.2.6 Pass/Fail Criteria. If the water level has dropped less than 1/8 (0.125) inch, the spill bucket passes the integrity test.

If the water level has dropped 1/8 (0.125) inch or greater, the spill bucket fails the integrity test.



6.3 Spill Bucket Integrity Testing — Vacuum Test Method.

6.3.1 Purpose. This method is used to test the integrity of single-walled spill buckets or the pri-

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

UST Monitoring Site Plan

Site Address: Hertz 1101-15 RAC LAX ~ 9000 Airport Blvd, Los Angeles, CA 90045

Date map was revised: 07/19/22

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locationsof the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps,dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	**Yes**

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	**Yes**

Hazardous Waste

Is your facility a Hazardous Waste Generator?	**Yes**
Does your facility treat hazardous waste on-site?	**No**
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	**No**
Does your facility consolidate hazardous waste generated at a remote site?	**No**
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	**No**
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month greater than 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	**No**
Is your facility a Household Hazardous Waste (HHW) Collection site?	**No**

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	**No**
Does your facility own or operate ASTs above these thresholds? Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers.	**Yes**
Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	**No**

Additional Information

No additional comments provided.

CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS)

CONSOLIDATED EMERGENCY RESPONSE / CONTINGENCY PLAN

Prior to completing this Plan, please refer to the INSTRUCTIONS FOR COMPLETING A CONSOLIDATED CONTINGENCY PLAN

A. FACILITY IDENTIFICATION AND OPERATIONS OVERVIEW

FACILITY ID # A1.	CERS ID # A2. 10029802	DATE OF PLAN PREPARATION/REVISION (MM/DD/YYYY) A3. 04/02/2019

BUSINESS NAME *(Same as Facility Name or DBA - Doing Business As)* A4.
Hertz Rent-A-Car (1101-15)

BUSINESS SITE ADDRESS A5.
9000 Airport Boulevard

BUSINESS SITE CITY A6. Los Angeles	CA	ZIP CODE A7. 90045

TYPE OF BUSINESS (e.g., Painting Contractor) A8. Vehicle Rental	INCIDENTAL OPERATIONS (e.g., Fleet Maintenance) A9. Fleet Maintenance, Fueling

THIS PLAN COVERS CHEMICAL SPILLS, FIRES, AND EARTHQUAKES INVOLVING (Check all that apply): A10.

☒ 1. HAZARDOUS MATERIALS; ☒ 2. HAZARDOUS WASTES

B. INTERNAL RESPONSE

INTERNAL FACILITY EMERGENCY RESPONSE WILL OCCUR BY (Check all that apply): B1.

☒ 1. CALLING PUBLIC EMERGENCY RESPONDERS (e.g., 9-1-1)
☒ 2. CALLING HAZARDOUS WASTE CONTRACTOR
☐ 3. ACTIVATING IN-HOUSE EMERGENCY RESPONSE TEAM

C. EMERGENCY COMMUNICATIONS, PHONE NUMBERS AND NOTIFICATIONS

In the event of an emergency involving hazardous materials and/or hazardous waste, all facilities must IMMEDIATELY:
1. Notify facility personnel and evacuate if necessary in accordance with the Emergency Action Plan (Title 8 California Code of Regulations §3220);
2. Notify local emergency responders by calling 9-1-1;
3. Notify the local Unified Program Agency (UPA) at the phone number below; and
4. Notify the State Warning Center at (800) 852-7550.

Facilities that generate, treat, store or dispose of hazardous waste have additional responsibilities to notify and coordinate with other response agencies. Whenever there is an imminent or actual emergency situation such as an explosion, fire, or release, the Emergency Coordinator must follow the appropriate requirements for the category of facility and type of release involved:
1. Title 22 California Code of Regulations §66265.56. Emergency Procedures for generators of 1,000 kilograms or more of hazardous waste in any calendar month.
2. Title 22 California Code of Regulations §66265.196. Response to Leaks or Spills and Disposition of Leaking or Unfit-for-Use Tank Systems.
3. Title 40 Code of Federal Regulations §302.6. Notification requirements for a release of a hazardous substance equal to or greater than the reportable quantity.
4. Title 22 California Code of Regulations §66262.34(d)(2) and Title 40 Code of Federal Regulations §262.34(d)(5)(ii) for generators of less than 1000 kilograms of hazardous waste in any calendar month.

Following notification and before facility operations are resumed in areas of the facility affected by the incident, the Emergency Coordinator shall notify the local UPA and the local fire department's hazardous materials program, if necessary, that the facility is in compliance with requirements to:
1. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from an explosion, fire, or release at the facility; and
2. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.

EMERGENCY RESPONSE PHONE NUMBERS:		
	AMBULANCE, FIRE, POLICE AND CHP	9-1-1
	CALIFORNIA STATE WARNING CENTER (CSWC)/CAL OES.	(800) 852-7550
	NATIONAL RESPONSE CENTER (NRC)	(800) 424-8802
	POISON CONTROL CENTER	(800) 222-1222
	LOCAL UNIFIED PROGRAM AGENCY (UPA)	2139783680 C1.
	OTHER (Specify): C2.	C3.
NEAREST MEDICAL FACILITY / HOSPITAL NAME:	Reliant Medical Center C4.	3106734660 C5.

AGENCY NOTIFICATION PHONE NUMBERS:		
	CALIFORNIA DEPT. OF TOXIC SUBSTANCES CONTROL (DTSC)	(916) 255-3545
	REGIONAL WATER QUALITY CONTROL BOARD (RWQCB).	2135766600 C6.
	U.S. ENVIRONMENTAL PROTECTION AGENCY (US EPA)	(800) 300-2193
	CALIFORNIA DEPT. OF FISH AND WILDLIFE (CDFW)	(916) 358-2900
	U.S. COAST GUARD (USCG)	(202) 267-2180
	CAL OSHA	(916) 263-2800
	CAL FIRE OFFICE OF THE STATE FIRE MARSHAL (OSFM)	(916) 323-7390
	OTHER (Specify): C7.	C8.
	OTHER (Specify): C9.	C10.

INTERNAL FACILITY EMERGENCY COMMUNICATIONS OR ALARM NOTIFICATION WILL OCCUR BY (Check all that apply): C11.

☑ 1. VERBAL WARNINGS; ☑ 2. PUBLIC ADDRESS OR INTERCOM SYSTEM; ☑ 3. TELEPHONE;
☐ 4. PAGERS; ☑ 5. ALARM SYSTEM; ☐ 6. PORTABLE RADIO

NOTIFICATIONS TO NEIGHBORING FACILITIES THAT MAY BE AFFECTED BY AN OFF-SITE RELEASE WILL OCCUR BY (Check all that apply): C12.

☑ 1. VERBAL WARNINGS; ☐ 2. PUBLIC ADDRESS OR INTERCOM SYSTEM; ☑ 3. TELEPHONE;
☐ 4. PAGERS; ☐ 5. ALARM SYSTEM; ☐ 6. PORTABLE RADIO

EMERGENCY COORDINATOR CONTACT INFORMATION: C13.

PRIMARY EMERGENCY COORDINATOR NAME: Karen Karapetyan PHONE NO.: (310) 568-5157 PHONE NO.: (510) 409-6094

ALTERNATE EMERGENCY COORDINATOR NAME: Dennis Robbins PHONE NO.: (310) 341-5745 PHONE NO.: (310) 568-3434

☐ Check if additional Emergency Coordinator contact and address information is available onsite or by calling PHONE NO.:

Note: If more than one alternate emergency coordinator is designated, attach a list in order of responsibility.

D. EMERGENCY CONTAINMENT AND CLEANUP PROCEDURES

Check the applicable boxes to indicate your facility's procedures for containing spills and preventing and mitigating releases, fires and/or explosions.

D1.

☑ 1. MONITOR FOR LEAKS, RUPTURES, PRESSURE BUILD-UP, ETC.;
☐ 2. PROVIDE STRUCTURAL PHYSICAL BARRIERS (e.g., Portable spill containment walls, built-in berms);
☐ 3. PROVIDE ABSORBENT PHYSICAL BARRIERS (e.g., Pads, spill pigs, spill pillows);
☐ 4. COVER OR BLOCK FLOOR AND/OR STORM DRAINS;
☐ 5. LINED TRENCH DRAINS AND/OR SUMPS;
☐ 6. AUTOMATIC FIRE SUPPRESSION SYSTEM;
☐ 7. ELIMINATE SOURCES OF IGNITION FOR FLAMMABLE HAZARDS;
☐ 8. STOP PROCESSES AND/OR OPERATIONS;
☐ 9. AUTOMATIC / ELECTRONIC EQUIPMENT SHUT-OFF SYSTEM;
☐ 10. SHUT OFF WATER, GAS, ELECTRICAL UTILITIES;
☐ 11. CALL 9-1-1 FOR PUBLIC EMERGENCY RESPONDER ASSISTANCE AND/OR MEDICAL AID;
☐ 12. NOTIFY AND EVACUATE PERSONS IN ALL THREATENED AND/OR IMPACTED AREAS;
☐ 13. ACCOUNT FOR EVACUATED PERSONS IMMEDIATELY AFTER EVACUATION;
☐ 14. PROVIDE PROTECTIVE EQUIPMENT FOR ON-SITE EMERGENCY RESPONSE TEAM;
☐ 15. REMOVE CONTAINERS AND/OR ISOLATE AREAS;
☐ 16. HIRE LICENSED HAZARDOUS WASTE CONTRACTOR;
☐ 17. USE ABSORBENT MATERIAL FOR SPILL CONTAINMENT;
☐ 18. VACUUM SUCTION USING APPROPRIATE VACUUM (e.g., Intrinsically safe) FOR SPILL CONTROL AND/OR CLEANUP;
☐ 19. DECONTAMINATE PERSONNEL AND EQUIPMENT WITHIN DESIGNATED AREA AND DISPOSE OF WASTEWATER AS HAZARDOUS WASTE;
☐ 20. PROVIDE SAFE TEMPORARY STORAGE OF HAZARDOUS WASTE GENERATED DURING EMERGENCY ACTIONS;
☐ 21. OTHER (Specify): D2.

E. FACILITY EVACUATION

THE FOLLOWING ALARM SIGNAL(S) WILL BE USED TO BEGIN EVACUATION OF THE FACILITY (Check all that apply): E1.

☐ 1. BELLS; E2.
☐ 2. HORNS/SIRENS;
☐ 3. VERBAL (i.e., Shouting);
☐ 4. OTHER (Specify): Intercom/PA System; telephones

THE FOLLOWING LOCATION(S) WILL BE USED FOR AN EMERGENCY ASSEMBLY AREA(S) (e.g., Parking lot, street corner): E3.

Southwest property corner

Note: The Emergency Coordinator must account for all onsite employees and visitors after evacuation.

EVACUATION ROUTE S AND ALTERNATE EVACUATION ROUTES ARE DESCRIBED AS FOLLOWS: E4.

☐ 1. WRITTEN PROCEDURES DESCRIBING ROUTES, EXITS, AND ASSEMBLY AREAS;
☐ 2. EVACUATION MAP(S) DEPICTING ROUTES, EXITS, AND ASSEMBLY AREAS;
☐ 3. OTHER (Specify): E5.

Note: Evacuation procedures and/or maps should be posted in visible facility locations and must be included in the Contingency Plan.

F. ARRANGEMENTS FOR EMERGENCY SERVICES

ADVANCE ARRANGEMENTS FOR LOCAL EMERGENCY SERVICES (Check one of the following): F1.

☐ 1. HAVE BEEN DETERMINED NOT NECESSARY;
☐ 2. THE FOLLOWING ARRANGEMENTS HAVE BEEN MADE (Specify): F2.

Note: Advance arrangements with local fire and police departments, hospitals, state and local emergency response teams, and/or emergency services contractors should be made for your facility, if necessary. Large Quantity Generators must describe arrangements in the Contingency Plan.

G. EMERGENCY EQUIPMENT

Check the applicable boxes to list emergency response equipment available at the facility, identify the location(s) where the equipment is kept, and indicate the equipment's capability, if applicable.

TYPE	EQUIPMENT AVAILABLE G1.	LOCATION G2.	CAPABILITY G3.
EXAMPLE	☒ *CHEMICAL PROTECTIVE GLOVES*	*SPILL RESPONSE KIT*	*SINGLE USE, OIL RESISTANT ONLY*
Safety and First Aid	1. ■ CHEMICAL PROTECTIVE SUITS, APRONS, AND/OR VESTS	Spill Kits	
	2. ■ CHEMICAL PROTECTIVE GLOVES	Spill Kits	
	3. ■ CHEMICAL PROTECTIVE BOOTS	Spill Kits	
	4. ■ SAFETY GLASSES, GOGGLES, AND FACE SHIELDS	Spill Kits	
	5. ☐ HARD HATS		
	6. ☐ AIR-PURIFYING RESPIRATORS		
	7. ☐ SELF-CONTAINED BREATHING APPARATUS (SCBA)		
	8. ■ FIRST AID KITS	Throughout buildings	
	9. ■ PLUMBED EYEWASH FOUNTAIN AND/OR SHOWER	Throughout buildings	
	10. ☐ PORTABLE EYEWASH KITS AND/OR STATION		
	11. ☐ OTHER		
Fire Fighting	12. ■ PORTABLE FIRE EXTINGUISHERS	Throughout facility	
	13. ■ FIXED FIRE SUPPRESSION SYSTEMS AND/ OR SPRINKLERS	Throughout buildings	Automatic sprinkler system
	14. ☐ FIRE ALARM BOXES		
	15. ☐ OTHER		
Spill Control and Clean-Up	16. ☐ ALL-IN-ONE SPILL KIT		
	17. ■ ABSORBENT MATERIAL	Spill Kits	
	18. ■ CONTAINER FOR USED ABSORBENT	Fuel Islands / ASTs	
	19. ■ BERM AND/OR DIKING EQUIPMENT	Fuel Islands	
	20. ■ BROOM	Maintenance Shops	
	21. ■ SHOVEL	Maintenance Shops	
	22. ☐ VACUUM		
	23. ☐ EXHAUST HOOD		
	24. ☐ SUMP AND/OR HOLDING TANK		
	25. ☐ CHEMICAL NEUTRALIZERS		
	26. ☐ GAS CYLINDER LEAK REPAIR KIT		
	27. ☐ SPILL OVERPACK DRUMS		
	28. ■ OTHER		Storm drain cover mats
Communi-cations and Alarm Systems	29. ■ TELEPHONES (e.g., Cellular)	Assigned to personnel	
	30. ■ INTERCOM AND/OR PA SYSTEM	Throughout facility	
	31. ☐ PORTABLE RADIOS		
	32. ■ AUTOMATIC ALARM CHEMICAL MONITORING EQUIPMENT	Multiple USTs	Veeder-Root ATGs = gasoline/diesel
Other	33. ☐ OTHER		
	34. ☐ OTHER		

H. EARTHQUAKE VULNERABILITY

Identify areas of the facility that are vulnerable to hazardous materials releases due to seismic motion. These areas require immediate isolation and inspection.

VULNERABLE AREAS (Check all that apply): H1.	LOCATIONS (e.g., Shop, outdoor shed, lab): H2.
☑ 1. HAZARDOUS MATERIALS AND/OR WASTE STORAGE AREAS	ASTs/USTs
☑ 2. PROCESS LINES AND PIPING	UST piping, AST hose reels
☐ 3. LABORATORY	
☐ 4. WASTE TREATMENT AREA	

Identify mechanical systems vulnerable to releases / spills due to earthquake-related motion. These systems require immediate isolation and inspection.

VULNERABLE SYSTEMS AND/OR EQUIPMENT (Check all that apply): H3.	LOCATIONS: H4.
☐ 1. SHELVES, CABINETS AND/OR RACKS	
☑ 2. TANKS AND SHUT-OFF VALVES	ASTs/USTs
☐ 3. PORTABLE GAS CYLINDERS	
☑ 4. EMERGENCY SHUT-OFF AND/OR UTILITY VALVES	electric, water, natural gas
☑ 5. SPRINKLER SYSTEMS	Throughout buildings
☐ 6. STATIONARY PRESSURIZED CONTAINERS (e.g., Propane tank)	

I. EMPLOYEE TRAINING

Employee training is required for all employees and/or contractors handling hazardous materials and/or hazardous wastes during normal and/or emergency operations. Most facilities will need to submit a separate Training Plan. However, your CUPA may accept this section as the Training Plan for some small facilities.
Employee training plans may include the following content:

- Applicable laws and regulations;
- Emergency response plans and procedures;
- Safety Data Sheets;
- Hazard communication related to health and safety;
- Methods for safe handling of hazardous substances;
- Hazards of materials and processes (e.g., fire, explosion, asphyxiation);
- Hazard mitigation, prevention and abatement procedures;
- Coordination of emergency response actions;
- Notification procedures for local emergency responders, CUPA, Cal OES, and onsite personnel;
- Communication and alarm systems;
- Personal protective equipment;
- Use and maintenance of emergency response equipment and supplies (e.g. Fire extinguishers, respirators, spill control materials);
- Decontamination procedures;
- Evacuation procedures and evacuation staging locations;
- Identification of facility areas, equipment, and systems vulnerable to earthquakes and other natural disasters.
- OTHER (Specify):

Check the applicable boxes below to indicate how the employee training program is administered.

☐ 1. FORMAL CLASSROOM ☐ 2. VIDEOS ☐ 3. SAFETY MEETINGS ☐ 4. STUDY GUIDES / MANUALS I1.

☑ 5. OTHER (Specify): Hertz online training program I2.

☐ 6. NOT APPLICABLE SINCE FACILITY HAS NO EMPLOYEES

☐ 7. CHECK IF A SEPARATE EMPLOYEE TRAINING PLAN IS USED AND UPLOADED TO CERS AS A PDF DOCUMENT I3.

☐ 8. CHECK IF EMPLOYEE TRAINING IS COVERED BY THE ABOVE REFERENCED CONTENT AND OTHER DOCUMENTS ONSITE I4.

EMPLOYEE TRAINING FREQUENCY AND RECORDKEEPING TRAINING MUST BE:

- Provided initially for new employees as soon as possible following the date of hire. New employees should not work in an unsupervised position that involves hazardous materials handling and/or hazardous waste management without proper training;
- Provided within six months from the date of hire for new employees at a large quantity generator;
- Ongoing and provided at least annually;
- Amended prior to a change in process or work assignment;
- Given upon modification to the Emergency Response/Contingency Plan.

Large Quantity Generator Training: Large quantity generators (1,000 kg or more) must retain written plan and documentation of employee training which includes:

- A written description of the type and amount of both initial and ongoing training that will be given to persons filling each job position having responsibility for hazardous waste management and/or emergency response.
- The name, job title and job description for each position at the facility related to hazardous waste management.
- Current employee training records must be retained until closure of the facility and former employee training records must be retained for at least three years after termination of employment.

Small Quantity Generator Training: Small quantity generators (less than 1,000 kg) must include basic hazardous waste management and emergency response procedures but a written employee training plan and training records are not required. In order to show that the facility has met the small quantity generator employee training requirement, an employee training plan and training records may be made available.

Hazardous Materials Business Plan Training: Businesses must provide initial and annual employee training that includes the content referenced above. The training may be based on the job position and training records must be made available for a period of at least three years.

J. LIST OF ATTACHMENTS

Check one of the following: J1.

☑ 1. NO ATTACHMENTS ARE REQUIRED; or

☐ 2. THE FOLLOWING DOCUMENTS ARE ATTACHED: J2.

California Environmental Reporting System (CERS) — Underground Storage Tank - Facility Information

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

UST Monitoring Site Plan

Site Address: Hertz 1101-15 RAC LAX ~ 9000 Airport Blvd, Los Angeles, CA 90045

Date map was drawn: 10/4/2011

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locationsof the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps,dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

ATTN: UST Financial Responsibility Coordinator

RE: 2022-2023 Financial Responsibility Submission
Various Hertz & Dollar/Thrifty Locations

Dear Sir or Madam,

Attached, please find the financial surety for April 5, 2022 through April 5, 2023 for underground storage tanks operated in California by The Hertz Corporation, including those operated by our subsidiaries, Hertz Rent-A-Car, Dollar Rent-A-Car and Thrifty Rent-A-Car, as listed below and on the site list included as part of the attached submission.

Anaheim	Downtown Anaheim	221 West Katella Ave
Burbank	Bob Hope Airport	4521 Empire Ave
Burlingame	DOLLAR San Francisco International Airport (South)	1815 Bayshore Hwy
Los Angeles	Los Angeles International Airport	9000 Airport Blvd
Newport Beach	John Wayne-Orange County Airport	4000 Campus Dr
Ontario	Ontario International Airport	3450 East Airport Dr
Palm Springs	Palm Springs International Airport	3400 East Tahquiz
Palm Springs	DOLLAR Palm Springs International Airport	325 North Civic Dr
Sacramento	Sacramento International Airport	6130 McNair Cir
Sacramento	Sacramento Downtown	1025 16th St
San Diego	San Diego International Airport	3202 North Harbor Dr
San Francisco	San Francisco International Airport	780 McDonnell Rd
San Francisco	DOLLAR San Francisco (Downtown)	364 O'Farrell St
South San Francisco	San Francisco International Airport	177 South Airport Blvd

If there are any questions regarding this submission, or should you require further information, please contact me at 239-301-7248 or gl.walters@hertz.com.

Sincerely,

Gordon L. Walters Jr.
Environmental Program Manager - NA

(Instructions on reverse side)

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY

FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in California Code of Regulations (CCR), Title 23, Division 3, Chapter 18, Section 2807.

☐ 500,000 dollars per occurrence
or
☒ 1 million dollars per occurrence

AND

☐ 1 million dollars annual aggregate
or
☒ 2 million dollars annual aggregate

B. The Hertz Corporation *hereby certifies that it is in compliance with the requirements of Section 2807,*
(Name of Tank Owner or Operator)
California Code of Regulations, Title 23, Division 3, Chapter 18, Article 3, Section 2807.
The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp
Surety Bond	Westchester Fire Ins. Co.	K13560468	$1M USD per occurrence, $2M per aggreg	4/5/2022 to 4/5/2023	Yes	Yes

Note:

Funds secured in standby trust dated 4-28-2009.

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance and shall maintain compliance with all conditions for participation in the Fund. See instructions.

D. Facility Name	Facility Address
Multiple - see Exhibit A	
Facility Name	Facility Address
Facility Name	Facility Address

E. Signature of Tank Owner or Operator	Date	Name and Title of Tank Owner or Operator
Gordon L. Walters Jr.	3/31/22	Gordon L. Walters Jr., Environmental Program Manager
Signature of Witness or Notary	Date	Name of Witness or Notary
	3/31/22	Timothy Egan

Know All by These Presents, that **FEDERAL INSURANCE COMPANY**, an Indiana corporation, **VIGILANT INSURANCE COMPANY**, a New York corporation, **PACIFIC INDEMNITY COMPANY**, a Wisconsin corporation, **WESTCHESTER FIRE INSURANCE COMPANY** and **ACE AMERICAN INSURANCE COMPANY** corporations of the Commonwealth of Pennsylvania, do each hereby constitute and appoint Corinne Chapman, Samantha Chierici, Jessica B. Dempsey, Derek J. Elston, Rachel Fore, Kristin L Hannigan, Jennifer L. Jakaitis, Nicholas Kertesz, Judith A. Lucky-Eftimov, James B. McTaggart, Sandra M. Nowak, Diane M. O'Leary, Nicholas Pantazis, Roger Paraison, Christina L. Sandoval, Bartlomiej Siepierski, Jean Torres, Christopher P. Troha, Aerie Walton, Susan A. Welsh and Sandra M. Winsted of Chicago, Illinois----------

each as their true and lawful Attorney-in-Fact to execute under such designation in their names and to affix their corporate seals to and deliver for and on their behalf as surety thereon or otherwise, bonds and undertakings and other writings obligatory in the nature thereof (other than bail bonds) given or executed in the course of business, and any instruments amending or altering the same, and consents to the modification or alteration of any instrument referred to in said bonds or obligations.

In Witness Whereof, said **FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, PACIFIC INDEMNITY COMPANY, WESTCHESTER FIRE INSURANCE COMPANY and ACE AMERICAN INSURANCE COMPANY** have each executed and attested these presents and affixed their corporate seals on this **22nd day of September, 2021.**

Dawn M. Chloros

Dawn M. Chloros, Assistant Secretary

Stephen M. Haney

Stephen M. Haney, Vice President

STATE OF NEW JERSEY
County of Hunterdon ss.

On this **22nd day of September, 2021** before me, a Notary Public of New Jersey, personally came Dawn M. Chloros and Stephen M. Haney, to me known to be Assistant Secretary and Vice President, respectively, of FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, PACIFIC INDEMNITY COMPANY, WESTCHESTER FIRE INSURANCE COMPANY and ACE AMERICAN INSURANCE COMPANY, the companies which executed the foregoing Power of Attorney, and the said Dawn M. Chloros and Stephen M. Haney, being by me duly sworn, severally and each for herself and himself did depose and say that they are Assistant Secretary and Vice President, respectively, of FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, PACIFIC INDEMNITY COMPANY, WESTCHESTER FIRE INSURANCE COMPANY and ACE AMERICAN INSURANCE COMPANY and know the corporate seals thereof, that the seals affixed to the foregoing Power of Attorney are such corporate seals and were thereto affixed by authority of said Companies; and that their signatures as such officers were duly affixed and subscribed by like authority.

Notarial Seal

No. 2316686
Commission Expires July 16, 2024

Notary Public

CERTIFICATION

Resolutions adopted by the Boards of Directors of FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, and PACIFIC INDEMNITY COMPANY on August 30, 2016; WESTCHESTER FIRE INSURANCE COMPANY on December 11, 2006; and ACE AMERICAN INSURANCE COMPANY on March 20, 2009:

"RESOLVED, that the following authorizations relate to the execution, for and on behalf of the Company, of bonds, undertakings, recognizances, contracts and other written commitments of the Company entered into in the ordinary course of business (each a "Written Commitment"):

(1) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized to execute any Written Commitment for and on behalf of the Company, under the seal of the Company or otherwise.

(2) Each duly appointed attorney-in-fact of the Company is hereby authorized to execute any Written Commitment for and on behalf of the Company, under the seal of the Company or otherwise, to the extent that such action is authorized by the grant of powers provided for in such person's written appointment as such attorney-in-fact.

(3) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized, for and on behalf of the Company, to appoint in writing any person the attorney-in-fact of the Company with full power and authority to execute, for and on behalf of the Company, under the seal of the Company or otherwise, such Written Commitments of the Company as may be specified in such written appointment, which specification may be by general type or class of Written Commitments or by specification of one or more particular Written Commitments.

(4) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized, for and on behalf of the Company, to delegate in writing to any other officer of the Company the authority to execute, for and on behalf of the Company, under the Company's seal or otherwise, such Written Commitments of the Company as are specified in such written delegation, which specification may be by general type or class of Written Commitments or by specification of one or more particular Written Commitments.

(5) The signature of any officer or other person executing any Written Commitment or appointment or delegation pursuant to this Resolution, and the seal of the Company, may be affixed by facsimile on such Written Commitment or written appointment or delegation.

FURTHER RESOLVED, that the foregoing Resolution shall not be deemed to be an exclusive statement of the powers and authority of officers, employees and other persons to act for and on behalf of the Company, and such Resolution shall not limit or otherwise affect the exercise of any such power or authority otherwise validly granted or vested."

I, Dawn M. Chloros, Assistant Secretary of FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, PACIFIC INDEMNITY COMPANY, WESTCHESTER FIRE INSURANCE COMPANY and ACE AMERICAN INSURANCE COMPANY (the "Companies") do hereby certify that

(i) the foregoing Resolutions adopted by the Board of Directors of the Companies are true, correct and in full force and effect,
(ii) the foregoing Power of Attorney is true, correct and in full force and effect.

Given under my hand and seals of said Companies at Whitehouse Station, NJ, this 24th day of March 2022

Dawn M. Chloros

Dawn M. Chloros, Assistant Secretary

THIS BOND REPLACES WESTCHESTER FIRE INSURANCE COMPANY BOND NO. K08306151 EFFECTIVE 04/05/2018

PERFORMANCE BOND

Bond No. K13560468

Date bond executed:	04/26/2018
Period of coverage:	04/05/2018 – 04/05/2019
Principal:	The Hertz Corporation and DTG Operations Inc. 8501 Williams Road Estero, FL 33928
Type of Organization:	Corporation
State of incorporation (if applicable):	Delaware

Surety(ies): Westchester Fire Insurance Company
436 Walnut Street
Philadelphia, PA 19106

Scope of Coverage: The tanks covered by the Bond are listed in Exhibit A, which is made part of this agreement. The coverage guaranteed by the Bond shall include: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases" "arising from operating the underground storage tank".

Penal sums of bond:

Per occurrence $	$1,000,000
Annual aggregate $	$2,000,000
Surety's bond number:	**K13560468**

Know All Persons by These Presents, that we, the Principal and Surety(ies), hereto are firmly bound to the United States Environmental Protection Agency and the state agencies listed in Exhibit B, in the above penal sums for the payment of which we bind ourselves, our heirs, executors, administrators, successors, and assigns jointly and severally; provided that, where the Surety(ies) are corporations acting as co-sureties, we, the Sureties, bind ourselves in such sums jointly and severally only for the purpose of allowing a joint action or actions against any or all of us, and for all other purposes each Surety binds itself, jointly and severally with the Principal, for the payment of such sums only as is set forth opposite the name of such Surety, but if no limit of liability is indicated, the limit of liability shall be the full amount of the penal sums.

Whereas said Principal is required under Subtitle I of the Solid Waste Disposal Act, as amended, to provide financial assurance for "taking corrective action" and/or "compensating

third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; arising from operating the underground storage tanks identified above, and

Whereas said Principal shall establish a standby trust fund as is required when a surety bond is used to provide such financial assurance;

Now, therefore, the conditions of the obligation are such that if the Principal shall faithfully "take corrective action, in accordance with 40 CFR part 280, subpart F and the Director of the state implementing agency's instructions for," and/or "compensate injured third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases" arising from operating the tank(s) identified above, or if the Principal shall provide alternate financial assurance, as specified in 40 CFR part 280, subpart H, within 120 days after the date the notice of cancellation is received by the Principal from the Surety(ies), then this obligation shall be null and void; otherwise it is to remain in full force and effect.

Such obligation does not apply to any of the following:

(a) Any obligation of The Hertz Corporation and DTG Operations Inc. under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;

(b) Bodily injury to an employee of The Hertz Corporation and DTG Operations Inc. arising from, and in the course of, employment by The Hertz Corporation and DTG Operations Inc.;

(c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;

(d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by The Hertz Corporation and DTG Operations Inc. that is not the direct result of a release from a petroleum underground storage tank;

(e) Bodily injury or property damage for which The Hertz Corporation and DTG Operations Inc. is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 40 CFR 280.93.

The Surety(ies) shall become liable on this bond obligation only when the Principal has failed to fulfill the conditions described above.

Upon notification by the Directors of the United States Environmental Protection Agency and/or Director of those agencies listed in Exhibit B that the Principal has failed to "take corrective action, in accordance with 40 CFR part 280, subpart F and the Director's instructions," and/or "compensate injured third parties" as guaranteed by this bond, the Surety(ies) shall either perform "corrective action in accordance with 40 CFR part 280 and the Director's instructions," and/or "third-party liability compensation" or place funds in an amount up to the annual aggregate penal sum into the standby trust fund as directed by the Director under 40 CFR 280.112.

Upon notification by the Director that the Principal has failed to provide alternate financial assurance within 60 days after the date the notice of cancellation is received by the Principal

from the Surety(ies) and that the Director has determined or suspects that a release has occurred, the Surety(ies) shall place funds in an amount not exceeding the annual aggregate penal sum into the standby trust fund as directed by the Director under 40 CFR 280.112.

The Surety(ies) hereby waive(s) notification of amendments to applicable laws, statutes, rules, and regulations and agrees that no such amendment shall in any way alleviate its (their) obligation on this bond.

The liability of the Surety(ies) shall not be discharged by any payment or succession of payments hereunder, unless and until such payment or payments shall amount in the annual aggregate to the penal sum shown on the face of the bond, but in no event shall the obligation of the Surety(ies) hereunder exceed the amount of said annual aggregate penal sum.

The Surety(ies) may cancel the bond by sending notice of cancellation by certified mail to the Principal, provided, however, that cancellation shall not occur during the 120 days beginning on the date of receipt of the notice of cancellation by the Principal, as evidenced by the return receipt.

The Principal may terminate this bond by sending written notice to the Surety(ies).

In Witness Thereof, the Principal and Surety(ies) have executed this Bond and have affixed their seals on the date set forth above.

The persons whose signatures appear below hereby certify that they are authorized to execute this surety bond on behalf of the Principal and Surety(ies) and that the wording of this surety bond is identical to the wording specified in 40 CFR 280.98(b) as such regulations were constituted on the date this bond was executed.

The State of Wisconsin / Wisconsin Department of Natural Resources

Power of Attorney

WESTCHESTER FIRE INSURANCE COMPANY

Know all men by these presents: That WESTCHESTER FIRE INSURANCE COMPANY, a corporation of the Commonwealth of Pennsylvania pursuant to the following Resolution, adopted by the Board of Directors of the said Company on December 11, 2006, to wit:

"RESOLVED, that the following authorizations relate to the execution, for and on behalf of the Company, of bonds, undertakings, recognizances, contracts and other written commitments of the Company entered into the ordinary course of business (each a "Written Commitment"):

(1) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized to execute any Written Commitment for and on behalf of the Company, under the seal of the Company or otherwise.

(2) Each duly appointed attorney-in-fact of the Company is hereby authorized to execute any Written Commitment for and on behalf of the Company, under the seal of the Company or otherwise, to the extent that such action is authorized by the grant of powers provided for in such persons written appointment as such attorney-in-fact .

(3) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized, for and on behalf of the Company, to appoint in writing any person the attorney-in-fact of the Company with full power and authority to execute, for and on behalf of the Company, under the seal of the Company or otherwise, such Written Commitments of the Company as may be specified in such written appointment, which specification may be by general type or class of Written Commitments or by specification of one or more particular Written Commitments.

(4) Each of the Chairman, the President and Vice Presidents of the Company is hereby authorized, for and on behalf of the Company, to delegate in writing any other officer of the Company the authority to execute, for and on behalf of the Company, under the Company's seal or otherwise, such Written Commitments of the Company as are specified in such written delegation, which specification may be by general type or class of Written Commitments or by specification of one or more particular Written Commitments.

(5) The signature of any officer or other person executing any Written Commitment or appointment or delegation pursuant to this Resolution, and the seal of the Company, may be affixed by facsimile on such Written Commitment or written appointment or delegation.

FURTHER RESOLVED, that the foregoing Resolution shall not be deemed to be an exclusive statement of the powers and authority of officers, employees and other persons to act for and on behalf of the Company, and such Resolution shall not limit or otherwise affect the exercise of any such power or authority otherwise validly granted or vested.

Does hereby nominate, constitute and appoint Cori Riddle, Francis J Curran, Marina A Kenney, Sally Phillips all of the City of Philadelphia, Pennsylvania, each individually if there be more than one named, its true and lawful attorney-in-fact, to make, execute, seal and deliver on its behalf, and as its act and deed any and all bonds, undertakings, recognizances, contracts and other writings in the nature thereof in penalties not exceeding SEVENTY FIVE MILLION DOLLARS & ZERO CENTS ($75,000,000.00) and the execution of such writings in pursuance of these presents shall be as binding upon said Company, as fully and amply as if they had been duly executed and acknowledged by the regularly elected officers of the Company at its principal office,

IN WITNESS WHEREOF, the said Stephen M. Haney, Vice-President, has hereunto subscribed his name and affixed the Corporate seal of the said WESTCHESTER FIRE INSURANCE COMPANY this 6 day of September 2017

WESTCHESTER FIRE INSURANCE COMPANY

Stephen M. Haney , Vice President

COMMONWEALTH OF PENNSYLVANIA
COUNTY OF PHILADELPHIA ss.

On this 6 day of September, 2017 before me, a Notary Public of the Commonwealth of Pennsylvania in and for the County of Philadelphia came Stephen M. Haney ,Vice-President of the WESTCHESTER FIRE INSURANCE COMPANY to me personally known to be the individual and officer who executed the preceding instrument, and he acknowledged that he executed the same, and that the seal affixed to the preceding instrument is the corporate seal of said Company; that the said corporate seal and his signature were duly affixed by the authority and direction of the said corporation, and that Resolution, adopted by the Board of Directors of said Company, referred to in the preceding Instrument, is now in force.

IN TESTIMONY WHEREOF, I have hereunto set my hand and affixed my official seal at the Cityof Philadelphia the day and year first above written.

COMMONWEALTH OF PENNSYLVANIA
NOTARIAL SEAL
KAREN E. BRANDT, Notary Public
City of Philadelphia, Phila. County
My Commission Expires Sept. 26, 2018

Notary Public

I, the undersigned Assistant Secretary of the WESTCHESTER FIRE INSURANCE COMPANY, do hereby certify that the original POWER OF ATTORNEY, of which the foregoing is a substantially true and correct copy, is in full force and effect.

In witness whereof, I have hereunto subscribed my name as Assistant Secretary, and affixed the corporate seal of the Corporation, this 16th day of April 20 18.

Dawn M. Chloros, Assistant Secretary

THIS POWER OF ATTORNEY MAY NOT BE USED TO EXECUTE ANY BOND WITH AN INCEPTION DATE AFTER SEPTEMBER 06, 2019.

DocuGard #04546 contains a security pantograph, blue background, heat-sensitive ink, coin-reactive watermark, and microtext printing on border.

HEAT SENSITIVE SHIELD

AMENDMENT TO TRUST AGREEMENT DATED [MARCH 25, 2022]

THIS Amendment, dated this 25th day of March, 2022 ("Amendment"), amends the Trust Agreement (the "Agreement"), dated April 28, 2009, and revised on October 15, 2013, by and between The Hertz Corporation, a Delaware corporation (the "Grantor") and The Bank of New York Mellon, a New York banking corporation (the "Trustee"),

WHEREAS, the United States Environmental Protection Agency has established certain regulations applicable to the Grantor, requiring that an owner or operator of a hazardous waste management facility shall provide assurance that funds will be available when needed for closure and/or post-closure car of the facility,

WHEREAS, the Grantor has elected to obtain a Surety Bond and has established a standby trust fund to provide all or part of such financial assurance for the facility identified herein,

WHEREAS, the parties desire to amend the Agreement as set forth herein, and

NOW, THEREFORE, the Grantor and Trustee agree as follows:

1. The existing Exhibit A is replaced with the attached revised Exhibit A.

2. The existing Exhibit B is replaced with the attached revised Exhibit B.

3. Representations and Warranties.

Grantor hereby represents and warrants with respect to itself as of the date of this Amendment, that:

i. It is duly organized and existing under the laws of the jurisdiction of its organization, with full power to cany on its business as now conducted, to enter into this Amendment and to perform its obligations hereunder; and

ii. This Amendment has been duly authorized, executed and delivered by it, constitutes a valid and legally binding obligation of it, enforceable in accordance with its terms, and no statute, regulation, rule, order, judgment or contract binding on it prohibits it's execution or, performance of this Amendment.

4. Governing Law.

This Amendment shall be administered, construed and enforced according to the laws of the State of New Jersey.

5. Successors and Assigns.

This Amendment shall extend to and shall be binding upon the Panics hereto and their respective successors and permitted assignees.

6. Ratification.

Except as hereby amended, the provisions of the Agreement are hereby ratified and confirmed and shall remain in full force and effect.

7. Severability.

In the event that any provision of this Amendment shall be declared invalid or unenforceable by any regulatory body or court having jurisdiction, such invalidity or unenforceability shall not affect the validity or enforceability of the remaining portions of this Amendment, and the invalid, illegal or unenforceable provision shall be replaced by a valid, legal and enforceable provision that comes closest to the intent of the parties underlying the invalid, illegal or unenforceable provision.

8. Headings.

The headings of the Sections have been inserted for convenience of reference only and shall not be deemed to constitute a part of this Amendment.

9. Counterparts.

This Amendment is executed in triplicate original, each of which shall be deemed an original, but which shall each constitute but one Agreement, with each party retaining an executed original. The parties may sign and deliver this Amendment by electronic transmission, including PDF. All the parties agree that the delivery of the Amendment by electronic transmission shall have the same force and effect as delivery of original signatures and that each party may use such electronic signatures as evidence of the execution and delivery of this Amendment by both parties to the same extent that an original signature could be used.

IN WITNESS, whereof the parties have caused this Amendment to be executed by their respective officers duly authorized and their corporate seals, if applicable, to be hereunto affixed and attested as of the date first written above.

STANDBY TRUST AGREEMENT

Trust agreement, the "Agreement," entered into as of **April 28, 2009** by and between The Hertz Corporation ("Hertz"), a Delaware corporation, the "Grantor," and The Bank of New York, a New York banking corporation, the "Trustee."

Whereas, the United States Environmental Protection Agency, an agency of the United States Government, various state environmental agencies, the "Implementing Agencies" and the specific agencies known as the "State of Alaska Department of Environmental Conservation" and "State of Maryland" have established certain regulations applicable to the Grantor, requiring that an owner or operator of an underground storage tank shall provide assurance that funds will be available when needed for corrective action and third-party compensation for bodily injury and property damage caused by sudden and nonsudden accidental releases arising from the operation of the underground storage tank. The attached Exhibit A lists the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located that are covered by the standby trust agreement.

Whereas, the Grantor has elected to establish a surety bond, to provide all or part of such financial assurance for the underground storage tanks identified herein and is required to establish a standby trust fund able to accept payments from the instrument.

Whereas, the Grantor, acting through its duly authorized officers, has selected the Trustee to be the trustee under this agreement, and the Trustee is willing to act as trustee;

Now, therefore, the Grantor and the Trustee agree as follows:

Section 1. Definitions

As used in this Agreement:

(a) The term "Grantor" means the owner or operator who enters into this Agreement and any successors or assigns of the Grantor.

(b) The term "Trustee" means the Trustee who enters into this Agreement and any successor Trustee.

Section 2. Identification of the Financial Assurance Mechanism

This Agreement pertains to the surety bond.

Section 3. Establishment of Fund

The Grantor and the Trustee hereby establish a trust fund, the "Fund," for the benefit of the **Implementing Agencies**. The Grantor and the Trustee intend that no third party have access to the Fund except as herein provided. The Fund is established initially as a

standby to receive payments and shall not consist of any property. Payments made by the provider of financial assurance pursuant to the **Director of the Implementing Agencies'** instruction are transferred to the Trustee and are referred to as the Fund, together with all earnings and profits thereon, less any payments or distributions made by the Trustee pursuant to this Agreement. The Fund shall be held by the Trustee, IN TRUST, as hereinafter provided. The Trustee shall not be responsible nor shall it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the Grantor as provider of financial assurance, any payments necessary to discharge any liability of the Grantor established by the Implementing Agencies.

Section 4. Payment for "Corrective Action" and/or Third-Party Liability Claims"

The Trustee shall make payments from the Fund as the Director of the Implementing Agencies shall direct, in writing, to provide for the payment of the costs of taking corrective action and/or compensating third parties for bodily injury and property damage caused by either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases" arising from operating the tanks covered by the financial assurance mechanism identified in this Agreement.

The Fund may not be drawn upon to cover any of the following:

(a) Any obligation of Hertz under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;

(b) Bodily injury to an employee of Hertz arising from, and in the course of employment by Hertz;

(c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;

(d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by Hertz that is not the direct result of a release from a petroleum underground storage tank;

(e) Bodily injury or property damage for which Hertz is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 40 CFR 280.93.

The Trustee shall reimburse the Grantor, or other persons as specified by the Director of the Implementing Agency, from the Fund for corrective action expenditures and/or third-party liability claims in such amounts as the Director of the Implementing Agency shall direct in writing. In addition, the Trustee shall refund to the Grantor such amounts as the Director of the Implementing Agency specifies in writing. Upon refund, such funds shall no longer constitute part of the Fund as defined herein.

Section 5. Payments Comprising the Fund

Payments made to the Trustee for the Fund shall consist of cash and securities acceptable to the Trustee.

Section 6. Trustee Management

The Trustee shall invest and reinvest the principal and income of the Fund and keep the Fund invested as a single fund, without distinction between principal and income, in accordance with general investment policies and guidelines which the Grantor may communicate in writing to the Trustee from time to time, subject, however, to the provisions of this Section. In investing, reinvesting, exchanging, selling, and managing the Fund, the Trustee shall discharge his duties with respect to the trust fund solely in the interest of the beneficiaries and with the care, skill, prudence, and diligence under the circumstances then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

(i) Securities or other obligations of the Grantor, or any other owner or operator of the tanks, or any of their affiliates as defined in the Investment Company Act of 1940, as amended, 15 U.S.C. 80a-2(a), shall not be acquired or held, unless they are securities or other obligations of the federal or a state government;

(ii) The Trustee is authorized to invest the Fund in time or demand deposits of the Trustee, to the extent insured by an agency of the federal or state government; and

(iii) The Trustee is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment

The Trustee is expressly authorized in its discretion:

(a) To transfer from time to time any or all of the assets of the Fund to any common, commingled, or collective trust fund created by the Trustee in which the Fund is eligible to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and

(b) To purchase shares in any investment company registered under the Investment Company Act of 1940, 15 U.S.C. 80a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the Trustee. The Trustee may vote such shares in its discretion.

Section 8. Express Powers of Trustee

Without in any way limiting the powers and discretions conferred upon the Trustee by the other provisions of this Agreement or by law, the Trustee is expressly authorized and empowered:

(a) To sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the Trustee shall be bound to see to the application of the purchase money or to inquire into the validity or expediency of any such sale or other disposition;

(b) To make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;

(c) To register any securities held in the Fund in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the Trustee in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depository even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depository with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States Government, or any agency or instrumentality thereof, with a Federal Reserve bank, but the books and records of the Trustee shall at all times show that all such securities are part of the Fund;

(d) To deposit any cash in the Fund in interest-bearing accounts maintained or savings certificates issued by the Trustee, in its separate corporate capacity, or in any other banking institution affiliated with the Trustee, to the extent insured by an agency of the federal or state government; and

(e) To compromise or otherwise adjust all claims in favor of or against the Fund.

Section 9. Taxes and Expenses

All taxes of any kind that may be assessed or levied against or in respect of the Fund and all brokerage commissions incurred by the Fund shall be paid from the Fund. All other expenses incurred by the Trustee in connection with the administration of this Trust, including fees for legal services rendered to the Trustee, the compensation of the Trustee to the extent not paid directly by the Grantor, and all other proper charges and disbursements of the Trustee shall be paid from the Fund.

Section 10. Advice of Counsel

The Trustee may from time to time consult with counsel, who may be counsel to the Grantor, with respect to any questions arising as to the construction of this Agreement or any action to be taken hereunder. The Trustee shall be fully protected, to the extent permitted by law, in acting upon the advice of counsel.

Section 11. Trustee Compensation

The Trustee shall be entitled to reasonable compensation for its services as agreed upon in writing from time to time with the Grantor.

Section 12. Successor Trustee

The Trustee may resign or the Grantor may replace the Trustee, but such resignation or replacement shall not be effective until the Grantor has appointed a successor trustee and this successor accepts the appointment. The successor trustee shall have the same powers and duties as those conferred upon the Trustee hereunder. Upon the successor trustee's acceptance of the appointment, the Trustee shall assign, transfer, and pay over to the successor trustee the funds and properties then constituting the Fund. If for any reason the Grantor cannot or does not act in the event of the resignation of the Trustee, the Trustee may apply to a court of competent jurisdiction for the appointment of a successor trustee or for instructions. The successor trustee shall specify the date on which it assumes administration of the trust in writing sent to the Grantor and the present Trustee by certified mail 10 days before such change becomes effective. Any expenses incurred by the Trustee as a result of any of the acts contemplated by this Section shall be paid as provided in Section 9.

Section 13. Instructions to the Trustee

All orders, requests, and instructions by the Grantor to the Trustee shall be in writing, signed by such persons as are designated in the attached Exhibit B or such other designees as the Grantor may designate by amendment to Exhibit B. The Trustee shall be fully protected in acting without inquiry in accordance with the Grantor's orders, requests, and instructions. All orders, requests, and instructions by the Director of the Implementing Agency to the Trustee shall be in writing, signed by the Director of the Implementing Agency, and the Trustee shall act and shall be fully protected in acting in accordance with such orders, requests, and instructions. The Trustee shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the Grantor or the Director of the Implementing Agency hereunder has occurred. The Trustee shall have no duty to act in the absence of such orders, requests, and instructions from the Grantor and/or the Director of the Implementing Agency, except as provided for herein.

Section 14. Amendment of Agreement

This Agreement may be amended by an instrument in writing executed by the Grantor and the Trustee, or by the Trustee and the Director of the Implementing Agency if the Grantor ceases to exist.

Section 15. Irrevocability and Termination

Subject to the right of the parties to amend this Agreement as provided in Section 14, this Trust shall be irrevocable and shall continue until terminated at the written direction of the Grantor and the Trustee, or by the Trustee and the Director of the Implementing

Agency, if the Grantor ceases to exist. Upon termination of the Trust, all remaining trust property, less final trust administration expenses, shall be delivered to the Grantor.

Section 16. Immunity and Indemnification

The Trustee shall not incur personal liability of any nature in connection with any act or omission, made in good faith, in the administration of this Trust, or in carrying out any directions by the Grantor or the Director of the Implementing Agency issued in accordance with this Agreement. The Trustee shall be indemnified and saved harmless by the Grantor, from and against any personal liability to which the Trustee may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the Grantor fails to provide such defense.

Section 17. Choice of Law

This Agreement shall be administered, construed, and enforced according to the laws of the state of New Jersey, or the Comptroller of the Currency in the case of National Association banks.

Section 18. Interpretation

As used in this Agreement, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each section of this Agreement shall not affect the interpretation or the legal efficacy of this Agreement.

In Witness where of the parties have caused this Agreement to be executed by their respective officers duly authorized and their corporate seals (if applicable) to be hereunto affixed and attested as of the date first above written. The parties below certify that the wording of this Agreement is identical to the wording specified in 40 CFR 280.103(b)(1) as such regulations were constituted on the date written above.

RESPONSE PLAN – PAGE 1

(One form per facility)

TYPE OF ACTION ☐ 1. NEW PLAN ☐ 2. CHANGE OF INFORMATION R01.

I. FACILITY INFORMATION

FACILITY ID # *(Agency Use Only)*

BUSINESS NAME (Same as FACILITY NAME) R02.
Hertz Rent-A-Car (1101-15)

BUSINESS SITE ADDRESS R03.	CITY R04.
9000 Airport Blvd	Los Angeles

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: (Complete only if applicable)

EQUIPMENT	LOCATION	AVAILABILITY
R10.	R20.	R30.
R11.	R21.	R31.
R12.	R22.	R32.
R13.	R23.	R33.
R14.	R24.	R34.
R15.	R25.	R35.

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME	TITLE
R40. James E. Philpot	R50. Sr. Director - Operations
R41. Kaleo Cuaresma	R51. Compliance Manager
R42. Andrew Lazazzera	R52. Program Manager - Fuel Systems
R43. Timothy B. Egan	R53. Sr. Program Manager - Compliance & Remediation

V. MONITORING INDICATORS

IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE, STEPS TO VERIFY THE RELEASE WILL BE MADE AS FOLLOWS:
☑ Additional system testing or data collection ☑ Inspection by qualified persons ☑ Recalibration of equipment
Other:

R60.

UST Response Plan – Instructions

Complete one UST Response Plan for each UST facility. This form must be submitted with your initial UST Operating Permit Application and within 30 days of changes in the information it contains. It supplements the Emergency Response Plans and Procedures in the facility's Hazardous Materials Business Plan. (Note: Numbering of these instructions follows the data element numbers on the form.)

R01. TYPE OF ACTION – Check the appropriate box to indicate why this plan is being submitted.
FACILITY ID NUMBER – This space is for agency use only.

R02. BUSINESS NAME – Enter the complete Facility Name.

R03. BUSINESS SITE ADDRESS – Enter the street address where the facility is located, including building number, if applicable. Post office box numbers are not acceptable. This information must provide a means to locate the facility geographically.

R04. CITY – Enter the city or unincorporated area in which the facility is located.

R10. EQUIPMENT – If you have spill control or clean-up equipment kept off-site, list that equipment in sections R10 through R15. If no equipment is kept off-site, leave this section blank.

R20. LOCATION – If you have spill control or clean-up equipment kept off-site, list the equipment location(s) sections R20 through R25. If no equipment is kept off-site, leave this section blank.

R30. AVAILABILITY – If you have spill control or clean-up equipment kept off-site, list the equipment availability in sections R30 through R35. If no equipment is kept off-site, leave this section blank.

R40. NAME – At least one person responsible for authorizing any work necessary under this UST Response Plan must be identified. Use sections R40 through R43 to list the name(s) of the responsible person(s).

R50. TITLE – At least one person responsible for authorizing any work necessary under this UST Response Plan must be identified. Use sections R50 through R53 to list the job title(s) of the responsible person(s).

R60. MONITORING INDICATORS Briefly describe the steps that will be taken to verify the presence or absence of a release if the tank monitoring system indicates the possibility of a release.

OWNER/OPERATOR SIGNATURE – The owner/operator shall sign in the space provided. This signature certifies that the signer believes that all information submitted is true, accurate, and complete.

R70. DATE – Enter the date the plan was signed.

R71. OWNER/OPERATOR NAME – Print or type the name of the person signing the plan.

R72. OWNER/OPERATOR TITLE – Enter the title of the person signing the plan.

UNDERGROUND STORAGE TANK

RESPONSE PLAN – PAGE 2

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

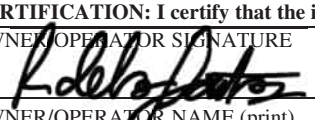
- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the California Emergency Management Agency at (800) 852-7550.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.



We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

VII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

Aboveground Petroleum Storage Act: Tank Facility Statement Instructions

Each owner or operator of a tank facility that is subject to the Aboveground Petroleum Storage Act (APSA) is required to submit a Tank Facility Statement annually into the California Environmental Reporting System (CERS). A Hazardous Materials Business Plan (HMBP) submittal into CERS satisfies the requirement to file the Tank Facility Statement.

A tank facility is subject to APSA if any of the following apply:

(a) The tank facility is subject to the oil pollution prevention regulations specified in Part 112 (commencing with §112.1) of Subchapter D of Chapter I of Title 40 of the Code of Federal Regulations; **OR**

(b) The tank facility has a storage capacity of 1,320 gallons or more of petroleum; **OR**

(c) The tank facility has a storage capacity of less than 1,320 gallons of petroleum **AND** has one or more tanks in an underground area meeting the conditions specified in paragraph (1) of subdivision (o) of HSC §25270.2. If this subdivision is applicable, only tanks meeting the conditions specified in paragraph (1) of subdivision (o) of HSC §25270.2 shall be included as storage tanks and subject to APSA.

I. FACILITY INFORMATION

3. FACILITY NAME – Enter the full legal name of the tank facility. (Same as BUSINESS NAME or DBA–Doing Business As.)
102. FACILITY PHONE - Enter the phone number, area code first, and any extension.
103. FACILITY ADDRESS – Enter the street address where the tank facility is located. No post office box numbers are allowed. This information must provide a means to locate the facility geographically.
104. CITY – Enter the city or unincorporated area in which the tank facility is located.
105. ZIP CODE – Enter the zip code of the tank facility. The extra 4 digit zip code may also be added.
117a. CONTACT NAME – Enter the name of the person, who receives aboveground storage tank correspondences.
118a. CONTACT PHONE – Enter the phone number, area code first, and any extension.

II. TOTAL FACILITY STORAGE CAPACITY

937. TOTAL FACILITY STORAGE CAPACITY – Enter the facility's total aboveground petroleum storage tank capacity (in gallons). Using the table below, enter the **shell capacity** of each aboveground petroleum storage tank and container, including each tank in an underground area, greater than or equal to 55 gallons. Do not enter the actual volume stored in the tank. To calculate the capacity of 55 gallon drums on site, use the **maximum** number of drums that would typically be stored at your facility.

Total Facility Storage Capacity (in gallons) = A + B + C

Total Facility Storage Capacity *in gallons* = Sum of Shell Capacity of All Aboveground Petroleum Storage Tanks and Containers (≥55 gallons) (e.g., 6 X 55 gal. = 330 gal.; 1 X 2,000 gal. = 2,000 gal.; 1 X 10,000 gal. = 10,000 gal.; Total = 330 + 2,000 + 10,000 = 12,330 gallons)					
A		B		C	
____ x 55 gal.	= _____	____ x 1,000 gal.	= _____	____ x _____ gal.	= _____
____ x 100 gal.	= _____	____ x 2,000 gal.	= _____	____ x _____ gal.	= _____

____ x 500 gal.	= _____	____ x _____ gal.	= _____	____ x _____ gal.	= _____
Subtotal A = _____ gallons		Subtotal B = _____ gallons		Subtotal C = _____ gallons	

III. TANK AND CONTAINER DETAILS

Provide details of each aboveground petroleum storage tank and container greater than 10,000 gallons in shell capacity (attach additional forms if needed) at your facility. If your facility does not have an aboveground storage tank or container with shell capacity greater than 10,000 gallons, you can skip data fields 938 – 941.

938. TANK OR CONTAINER ID NUMBER – Enter a unique identification number for each aboveground petroleum storage tank and container at your facility. You may create your own numbering system.
939. CONTENTS – Enter the contents (i.e. DIESEL, GASOLINE, OIL, etc.) of each aboveground petroleum storage tank and container at your facility.
940. SHELL CAPACITY – Enter the shell capacity (in gallons) of each aboveground petroleum storage tank and container at your facility.
941. LOCATION OF TANK OR CONTAINER – Enter the general location of each aboveground petroleum storage tank or container at your facility (e.g., at north end of facility; inside maintenance shop).

IV. SIGNATURE

SIGNATURE OF TANK FACILITY OWNER OR OPERATOR – The form must be signed, in the space provided, by the owner or operator.
PRINT NAME OF TANK FACILITY OWNER OR OPERATOR – Print or type the full name of the person signing the form.
DATE – Enter the date (MM/DD/YYY) the form was signed.

DEFINITIONS

TANK FACILITY – Any one or more aboveground storage tanks, including any piping that is integral to the tanks that **contain petroleum** and that are used by an owner or operator at a single location or site.
ABOVEGROUND STORAGE TANK (AST) – A tank (or container) with the capacity to store 55 gallons or more of petroleum that is substantially or totally above the surface of the ground, including a tank in an underground area. Some AST exceptions exist; they are specified in HSC §25270.2(a). An AST includes drums, totes, oil-filled operational or manufacturing equipment, etc.
PETROLEUM – Crude oil, or a fraction thereof, that is liquid at 60°F temperature and 14.7 pounds per square inch absolute pressure. Petroleum includes gasoline, diesel, E85, motor oil, waste oil, etc., but does NOT include antifreeze, propane, or natural gas.
STORAGE – Containment, handling, or treatment of petroleum, for any period of time, including standby storage, seasonal storage, and temporary storage.
STORAGE CAPACITY (of a facility) – The aggregate shell capacity of all aboveground storage tanks (including containers 55 gallons and greater) at a tank facility. For example, if a facility has two 500-gallon capacity diesel ASTs and a 600-gallon capacity waste oil AST, but only keeps each AST half full, then the storage capacity for this facility is 1,600 gallons (calculated by adding the shell capacity of each tank/container).

Appendix XIII
Underground Storage Tank
Designated UST Operator Visual Inspection Report

1. FACILITY INFORMATION

CERS ID	Inspection Date
10029802	12/9/2022

Facility Name
Hertz 1101-15

Facility Address	City	ZIP Code
9000 Airport Blvd.	Los Angeles	90045

2. DESIGNATED UST OPERATOR INFORMATION

Name of Designated UST Operator	Phone
Robert Bramhall	(888) 972-7581
ICC Certification	**Certification Expiration Date**
8206958	6/9/2024

3. COMPLIANCE ISSUES

Identify by number all compliance issues listed

L-2 Alarmed on 11/22,11/26 and 11/29 Jones Covey responded to alarms WO# 2258211 and 2258025

L-5 alarmed on 11-25 and 12-7. Inspected diesel fill and found no problems at this time.

S-1 To S-8 12-3 and 12-4 setup data warning. Inspected sensors and foound no problems at this time. Advised site to call in if problem continues

S-15 UDC 7/8 had a communication alarm on 12/9 Inspected UDC and found no problems at this time.

4. CERTIFICATION BY DESIGNATED UST OPERATOR CONDUCTING INSPECTION

I hereby certify that the visual inspection was performed in compliance with California Code of Regulations, title 23, division 3, chapter 16, section 2716 and all information provided herein is accurate.

Designated UST Operator Signature	Date Inspection Report Provided to Owner
Robbie Bramhall	12/9/2022

CERS = California Environmental Reporting System, ICC = International Code Council, ID = Identification, NA = Not Applicable, UDC = Under-Dispenser Containment, UST = Underground Storage Tank

Underground Storage Tank
Designated UST Operator Visual Inspection Report

5. OWNER/OPERATOR DESCRIPTION OF FOLLOW-UP ACTION

Number the follow up actions to correspond to appropriate compliance issues from Section 3.

6. OWNER / OPERATOR ACKNOWLEDGEMENT OF INSPECTION RESULTS

I have reviewed the results of the designated UST operator inspection report and provided a description of the action(s) taken or to be taken to correct any compliance issues discovered.

Name of UST Owner / Operator (print)

KENNY FISHER

UST Owner/Operator Signature	Date Signed
	12/9/22

7. INSPECTION HISTORY

	Yes	No	NA
Has each follow-up action of Section 3 from the previous Designated UST Operator Inspection Report been completed appropriately? *(Attach documentation verifying appropriate service to this report.)*	☐	☐	☑

8. RELEASE DETECTION ALARM HISTORY

Attach a copy of the alarm history report/log to this report.	Yes	No	NA
Is the monitoring system powered on and in proper operating mode?	☑	☐	
Has each alarm since the previous inspection been responded to appropriately? *(Attach documentation verifying appropriate service to this report.)*	☐	☑	☐
Have all containment sumps, that have had an alarm since the previous designated UST operator inspection report, been responded to by a qualified service technician?	☐	☑	☐

All answers marked "No" must be described by the designated UST operator in Section 3.

Underground Storage Tank
Designated UST Operator Visual Inspection Report

9. UST SYSTEM INSPECTION

List below and in Section 3 all containment sumps that have had a release detection alarm since the previous Designated UST Operator Inspection Report and have not been responded to by a qualified service technician. Containment sumps listed below require a visual inspection for damage, water, debris, hazardous substance, and proper sensor location.

*Is the **containment sump** free of damage, water, debris, and hazardous substances?*

Containment Sump ID	Yes	No	Containment Sump ID	Yes	No
L-5 Diesel Fill Sump	☑	☐		☐	☐
	☐	☐		☐	☐

Are all sensors in visually inspected **containment sumps** located to detect a release at the earliest opportunity?	☐	☐

*Is the **spill containment** free of damage, water, debris, and hazardous substances? Is the fill pipe free of obstructions? Is fill cap securely on the fill pipe?*

Spill Containment ID	Yes	No	Spill Containment ID	Yes	No
T-187	☑	☐	T-2 87	☑	☐
T-3 Diesel	☑	☐	T-4 87	☑	☐
T-5 87	☑	☐		☐	☐
	☐	☐		☐	☐
	☐	☐		☐	☐

*Is the **UDC** free of damage, water, debris, and hazardous substances and all sensors located to detect a release at the earliest opportunity?* ☐ No UDC(s) at this facility

UDC ID	Yes	No	UDC ID	Yes	No
Dispenser 1/2	☑	☐	Dispenser 3/4	☑	☐
Dispenser 5/6	☑	☐	Dispenser 7/8	☑	☐
Dispenser 9/10	☑	☐	Dispenser 11/12	☑	☐
Dispenser 13/14	☑	☐	Dispenser 15/16	☑	☐
Dispenser 17/18	☑	☐	Dispenser 19/20	☑	☐
Dispenser 21/22	☑	☐	Dispenser 23/24	☑	☐
Dispenser 25/26	☑	☐	Dispenser 27/28	☑	☐

☐ Mechanical float mechanisms used in UDCs.

All answers marked "No" must be described by the designated UST operator in Section 3.

Underground Storage Tank
Designated UST Operator Visual Inspection Report

9. UST SYSTEM INSPECTION

List below and in Section 3 all containment sumps that have had a release detection alarm since the previous Designated UST Operator Inspection Report and have not been responded to by a qualified service technician. Containment sumps listed below require a visual inspection for damage, water, debris, hazardous substance, and proper sensor location.

*Is the **containment sump** free of damage, water, debris, and hazardous substances?*

Containment Sump ID	Yes	No	Containment Sump ID	Yes	No
L-5 Diesel Fill Sump	☑	☐		☐	☐
	☐	☐		☐	☐

Are all sensors in visually inspected **containment sumps** located to detect a release at the earliest opportunity?	☐	☐

*Is the **spill containment** free of damage, water, debris, and hazardous substances? Is the fill pipe free of obstructions? Is fill cap securely on the fill pipe?*

Spill Containment ID	Yes	No	Spill Containment ID	Yes	No
T-187	☑	☐	T-2 87	☑	☐
T-3 Diesel	☑	☐	T-4 87	☑	☐
T-5 87	☑	☐		☐	☐
	☐	☐		☐	☐
	☐	☐		☐	☐

*Is the **UDC** free of damage, water, debris, and hazardous substances and all sensors located to detect a release at the earliest opportunity?* ☐ No UDC(s) at this facility

UDC ID	Yes	No	UDC ID	Yes	No
Dispenser 29/30	☑	☐	Dispenser 31/32	☑	☐
Dispenser 33/34	☑	☐	Dispenser 35/36	☑	☐
Dispenser 37/38	☑	☐	Dispenser 39/40	☑	☐
Dispenser Diesel	☑	☐		☑	☐
	☑	☐		☑	☐
	☑	☐		☑	☐
	☑	☐		☑	☐

☐ Mechanical float mechanisms used in UDCs.

All answers marked "No" must be described by the designated UST operator in Section 3.

Underground Storage Tank
Designated UST Operator Visual Inspection Report

10. TESTING AND MAINTENANCE	Yes	No	NA	Date last performed
Has monitoring system certification been completed within the past 12 months?	☑	☐		10/5/2021
Has spill container testing been completed within the past 12 months?	☑	☐		10/5/2021
Has overfill prevention equipment inspection been completed within the past 36 months?	☑	☐	☐	4/27/2021
Has secondary containment testing been completed within the past 36 months?	☑	☐	☐	6/28/2021
Has tank tightness testing been completed within required timeframes?	☐	☐	☑	
Has line tightness testing been completed within the required timeframes?	☐	☐	☑	
Other Test / Maintenance: Overfill Retest	☑	☐	☐	7/21/2021
Other Test / Maintenance:	☐	☐	☑	
Other Test / Maintenance:	☐	☐	☑	

11. FACILITY EMPLOYEE TRAINING	Yes	No
Have all individuals performing facility employee duties received the required facility employee training within the past 12 months?	☑	☐

13. COMMENTS

This section may be used to record comments or observations that are not current compliance deficiencies.

All answers marked "No" must be described by the designated UST operator in Section 3.

MONTHLY ABOVEGROUND STORAGE SYSTEM INSPECTION CHECKLIST

Facility ID#	Facility Name/Address	Qualified Person Signature	Date
1101-15	9000 Airport Blvd Los Angeles CA, 90045	Robert Bramhall	12/9/2022

If any problem is found, contact:		Contact information:	(888) 972-7581

CATEGORY	DESCRIPTION	TANK #	13	14			
		PRODUCT	WO	MO			
TANK COMPONENTS							
Condition of Tank	Are all tank surfaces (and paint) in good condition and free from corrosion? Are there any visible signs of cracking or water/product leakage?		Yes	Yes			
	Concrete pad or dike in good condition? Are there any visible signs of staining?		Yes	Yes			
	Tank has vehicle protection?		Yes	Yes			
	Piping in good shape, no leaks and properly supported?		Yes	Yes			
Tank Gauge	Is the tank gauge accurate and working properly? Is it easily readable		Yes	Yes			
Tank Ladders or Stairs	Is the tank ladder in good condition?		Yes	Yes			
Secondary Containment Areas	Check to confirm secondary is dry.		Yes	Yes			
Leaks	Confirm that there is no leaks. Are there signs of leakage in the interstice, surrounding soil/concrete, or secondary containment?		Yes	Yes			
Vent	Is the primary and emergency vent unrestricted and working properly?		No	No			
Signage	Does the tank have proper signage: Hazard Diamond, product, gallonage, driver delivery instructions and tank number?		No	No			
TANK FILL AREA							
Fill Cover or Door	Fill cover or door present, not broken or damaged.		Yes	Yes			
	Fill covers are identified by color and located on the correct tank.		NA	NA			
Spill Containment Manhole/box (Spill Bucket)	No dirt, trash, water or product in spill containment manhole/box.		Yes	Yes			
	No cracks, bulges or holes in spill containment manhole/box.		Yes	Yes			
Containment Drain Valve	Are the valves operable and in a closed position?		Yes	Yes			
Fill Pipe	Fill cap in good condition, seals tightly.		Yes	Yes			
	No obstruction inside the fill pipe.		Yes	Yes			
DISPENSER AREA							
Insde Dispenser Cabinets	Is dispenser cabinet area free of leaks?		NA	NA			
Shear Valve/Impact Valves	Is hose equipped with a shear valve?		NA	NA			
Breakaways	Is hose equipped with a breakaway?		NA	NA			
Hoses and Nozzles	Are hoses and nozzles in good condition with no leaks?		NA	NA			
PUMPING SYSTEMS							
Used Oil Evacation Pumps	Is the pump equipped with a shut-off device or alarm that can be heard in the collection areas?		Yes	NA			
Used Oil Collection Areas	Is the Used Oil collection area clean, free of spills with no open buckets of oil?		Yes	NA			
Lube Oil Pumps	Is the Lube oil pump working properly and free of leaks?		Yes	NA			

DESCRIBE ANY DEFICIENCIES HERE:

Tanks levels are monitored by a monitoring system.

Instructions: Mark each tank where no problem is observed with a checkmark). If certain equipment is not required and/or not present, make notation in the column. If a defect is found, mark the checklist with an "X", describe the problem in the DEFICIENCIES section, and notify the appropriate person.

If any problem is found, contact:		**Contact information:**	

CATEGORY	DESCRIPTION	TANK #	13	14			
		PRODUCT	WO	MO	Drums		
CRITICAL SAFETY LEAK AND PREVENTION DEVICES							
Spill Kits	Are all of the required spill kits in place and properly stocked (at the AST(s) and Fueling Island(s))?		Yes	Yes	Yes		
Overfill Prevention Equipment	Is the overfill alarm for the tank working properly?		Yes	Yes	NA		
	Is the tank equipped with a functioning overfill prevention valve?		NA	NA	NA		
Anti-Siphon/Solenoid	Is the piping equipped with a solenoid or anti-siphon valve?		NA	NA	NA		
Emergency Stop	Has the E-Stop been tested to ensure it shuts off the dispensers?		NA	NA	NA		
ABOVEGROUND PIPING							
Piping Supports	Is the aboveground piping properly supported?		NA	Yes	NA		
Fittings and Joints	Is there any visual evidence of leaks at fittings, joints or along piping?		NA	Yes	NA		
MONITORING UNDERGROUND PIPING							
Pressurized Product Line Leak Detectors (LLD)	Is the undergound piping equipped with a line leak defector that is working? If electronic, print out monthly line result and attach to form.		NA	NA	NA		
Slow Flow/No Flow	Verify that there has not been a complaint about "slow flow." If yes, check the fuel filters and the line leak detector.		NA	NA	NA		
Monthly Compliance	If the underground piping has a semp with a sensor, confirm there are no alarms on the Veeder-Root. Print out a liquid status report and attach test results to this form.		NA	NA	NA		
DRUM STORAGE							
Drums	Are the drums in good condition?		NA	NA	Yes		
Secondary Containment	Are the drums located on spill pallets?		NA	NA	Yes		
Drum Areas	Is the drum area clean with no evidence of spills?		NA	NA	Yes		
Labels	Are proper labels on each drum?		NA	NA	Yes		
Dates	Are drums covered and accumulation dates less than 90 days?		Yes	NA	Yes		
OTHER							
Paperwork	Are hazardous material tank daily inspection forms being kept and are filled out?		No	No	Yes

Statement of Compliance [Pursuant to Rule 461 (e)(3)(E)]

The undersigned declares, under penalty of perjury under the laws of the state of California that the above checked tests were conducted at the location identified above, the attached data form(s) include all data obtained during the test(s) which show the system or component meets the required standards, and that the information provided in this submittal are true, accurate, and complete.

SIGNATURE OF TESTER: Robbie Bramhall DATE: 4/27/2022

Instructions: This form must be signed and submitted along with completed specific test data forms and **all** raw data obtained during the test(s).

Rule 461 Vapor Recovery System Test Results Summary

Your gasoline dispensing facility (GDF) has **passed** one or more of the following California Air Resources Board (**CARB**) performance tests on your gasoline vapor recovery system :

☐	**TP-201.3**	**Static Pressure Performance (Leak Decay) Test**	☑	**TP-201.1B**	**Static Torque of Rotatable Phase I Adaptors**
☑	**TP-201.3C**	**Piping Connections to UST's (Tie-Tank Test)**	☐	**TP-201.1C**	**Leak Rate Of Drop Tube/Drain Valve Assembly**
☐	**TP-201.4**	**Dynamic Back Pressure Test**	☑	**TP-201.1D**	**Leak Rate Of Drop Tube Overfill Prevention Device and Drain Valve**
☐	**TP-201.5**	**Air to Liquid Ratio Test**	☑	**TP-201.1E**	**Leak Rate and Cracking Pressure Of Pressure/Vacuum Vent Valves**
☐	**TP-201.6C**	**Liquid Removal Rate Test**	☐	**Other**	

Your GDF has **failed** to pass one or more of the following required CARB performance tests on your gasoline vapor recovery system :

☐	**TP-201.3**	**Static Pressure Performance (Leak Decay) Test**	☐	**TP-201.1B**	**Static Torque of Rotatable Phase I Adaptors**
☐	**TP-201.3C**	**Piping Connections to UST's (Tie-Tank Test)**	☐	**TP-201.1C**	**Leak Rate Of Drop Tube/Drain Valve Assembly**
☐	**TP-201.4**	**Dynamic Back Pressure Test**	☐	**TP-201.1D**	**Leak Rate Of Drop Tube Overfill Prevention Device and Drain Valve**
☐	**TP-201.5**	**Air to Liquid Ratio Test**	☐	**TP-201.1E**	**Leak Rate and Cracking Pressure Of Pressure/Vacuum Vent Valves**
☐	**TP-201.6C**	**Liquid Removal Rate Test**	☐	**Other**	

Rule 461 (e)(5) states that the owner/operator shall not operate or resume operation of a gasoline transfer and dispensing facility, unless the facility has successfully passed the applicable performance and reverification tests.

Continued operation of your GDF without passing tests is a violation of South Coast AQMD regulations and California Health and Safety Code. You may be subject to substantial financial and other legal penalties.

Notwithstanding the above, when a dispenser associated with any equipment that fails a reverification test, it must be isolated and shut down. The owner/operator may continue operation of the remaining equipment if the test results demonstrate that the remaining equipment is functioning in good operating condition. All test results and the method of isolating the defective equipment shall be documented in the test reports to be submitted to the Executive Officer pursuant to subparagraph (e)(7)(C), and also maintained/logged in the O & M manual on site.

You may seek administrative relief from the regulations through the South Coast AQMD Hearing Board. **Be aware that filing a petition for relief does not authorize you to dispense gasoline;** you must wait until the Hearing Board reviews your case. Information concerning the Hearing Board can be obtained by calling the Clerk of the Board at 909 396-2500 from 7:30 A.M. to 5:30 P.M., Tuesday through Friday.

Instructions: This form must be signed and submitted along with completed specific test data forms and **all** raw data obtained during the test(s).

Rule 461 Vapor Recovery System Test Results Summary

Your gasoline dispensing facility (GDF) has **passed** one or more of the following California Air Resources Board (**CARB**) performance tests on your gasoline vapor recovery system :

☐	**TP-201.3**	**Static Pressure Performance (Leak Decay) Test**	☑	**TP-201.1B**	**Static Torque of Rotatable Phase I Adaptors**
☑	**TP-201.3C**	**Piping Connections to UST's (Tie-Tank Test)**	☐	**TP-201.1C**	**Leak Rate Of Drop Tube/Drain Valve Assembly**
☐	**TP-201.4**	**Dynamic Back Pressure Test**	☑	**TP-201.1D**	**Leak Rate Of Drop Tube Overfill Prevention Device and Drain Valve**
☐	**TP-201.5**	**Air to Liquid Ratio Test**	☑	**TP-201.1E**	**Leak Rate and Cracking Pressure Of Pressure/Vacuum Vent Valves**
☐	**TP-201.6C**	**Liquid Removal Rate Test**	☐	**Other**	

Your GDF has **failed** to pass one or more of the following required CARB performance tests on your gasoline vapor recovery system :

☐	**TP-201.3**	**Static Pressure Performance (Leak Decay) Test**	☐	**TP-201.1B**	**Static Torque of Rotatable Phase I Adaptors**
☐	**TP-201.3C**	**Piping Connections to UST's (Tie-Tank Test)**	☐	**TP-201.1C**	**Leak Rate Of Drop Tube/Drain Valve Assembly**
☐	**TP-201.4**	**Dynamic Back Pressure Test**	☐	**TP-201.1D**	**Leak Rate Of Drop Tube Overfill Prevention Device and Drain Valve**
☐	**TP-201.5**	**Air to Liquid Ratio Test**	☐	**TP-201.1E**	**Leak Rate and Cracking Pressure Of Pressure/Vacuum Vent Valves**
☐	**TP-201.6C**	**Liquid Removal Rate Test**	☐	**Other**	

Rule 461 (e)(5) states that the owner/operator shall not operate or resume operation of a gasoline transfer and dispensing facility, unless the facility has successfully passed the applicable performance and reverification tests.

Continued operation of your GDF without passing tests is a violation of South Coast AQMD regulations and California Health and Safety Code. You may be subject to substantial financial and other legal penalties.

Notwithstanding the above, when a dispenser associated with any equipment that fails a reverification test, it must be isolated and shut down. The owner/operator may continue operation of the remaining equipment if the test results demonstrate that the remaining equipment is functioning in good operating condition. All test results and the method of isolating the defective equipment shall be documented in the test reports to be submitted to the Executive Officer pursuant to subparagraph (e)(7)(C), and also maintained/logged in the O & M manual on site.

You may seek administrative relief from the regulations through the South Coast AQMD Hearing Board. **Be aware that filing a petition for relief does not authorize you to dispense gasoline;** you must wait until the Hearing Board reviews your case. Information concerning the Hearing Board can be obtained by calling the Clerk of the Board at 909 396-2500 from 7:30 A.M. to 5:30 P.M., Tuesday through Friday.

1.0 SITE DESCRIPTION

Release Number(s):	(I.D. # 900450670) (D-1)
Facility Name:	Hertz LAX
Facility Street Address:	9000 Airport Boulevard
City, Zip:	Los Angeles, 90045
County:	Los Angeles
Phone:	(310) 568-3434
Describe occupancy of the facility:	The Hertz Corporation
Describe current property use:	Car Rental Facility

2.0 INVOLVED PARTIES

Responsible Party:
The Hertz Corporation
Attn: Mr. Tim Egan
225 Brae Boulevard
Park Ridge, New Jersey 07656-0713
Phone: (201) 307-2526

Facility Contact:
The Hertz Corporation
Attn: Mr. Todd Cuffaro
9000 Airport Boulevard
Los Angeles, California 90045
Phone: (310) 568-3434

3.0 CONSULTANT INFORMATION

Company Name:	ATC Associates, Inc.
Contact:	Jim Madden, P.G.
Title:	Senior Project Manager
Address:	25 Cupania Circle Monterey Park, CA 91755
Phone:	(323) 517-9780
Fax:	(323) 517-9781

4.0 SITE BACKGROUND INFORMATION

4.1 SITE DESCRIPTION AND SURROUNDING LAND USE

The site is located at 9000 Airport Boulevard in Los Angeles California (**Figure 1 - Vicinity Map and Figure 2 – Site Plan**) and is used for rental car operations. The site consists of five buildings, a car wash system, and refueling systems. The refueling system consists of gasoline underground storage tanks (USTs), one diesel UST, fourteen fuel dispenser islands, and underground distribution lines. The UST system is located in the western, central portion of the facility and is bordered to the west by Airport Boulevard and to the north by the main vehicle entryway into and out of the facility.

The site is composed of the two main fueling areas; the "eastern" fueling system and the "western" fueling system.

- The eastern system consists of two 12,000-gallon gasoline USTs and 10 dispenser islands. Each island is equipped with one dispenser, and the ten islands are covered by an overhead canopy. The USTs are located just south of the dispenser islands and are oriented north-south in a common excavation.

- The western system consists of one 20,000-gallon gasoline UST, one split UST consisting of 8,000-gallon gasoline and 12,000-gallon diesel, and four dispenser islands. Three gasoline USTs and one diesel UST are located just north of the dispenser islands and are oriented east-west in a common excavation. Each dispenser island in the western system is equipped with two to three dispensers, and is also covered by a metal overhead canopy structure. The two 20,000 gallon USTs were installed in 2005 when the previous USTs were removed as discussed below

Directly north and adjacent to both the eastern and western systems is an eight-foot high cinderblock wall, with a landscaped planter area immediately to the north, and a paved main entry into and out of the facility. To the west of the western system is an asphalt paved drive/parking area, with a traffic guard rail, eight-foot high chain link fence, and a landscaped parkway with Airport Boulevard to the west. It should be noted that a large V-shaped commercial billboard placed for viewing from Airport Boulevard is located immediately to the west and above the canopy for the four western system dispenser islands. Toward the east and south of the systems are an asphalt paved parking area and maintenance areas for the Hertz facility, including car wash structures to the south and the main office/locker building for the facility to the southeast.

4.2 PRIOR SITE ASSESSMENT ACTIVITY

In July 2003, ATC directed the advancement of 21 soil borings (B-1 through B-21) to depths ranging from 15 feet to 30 feet below ground surface (bgs) at the locations shown on **Figure 6 - Geologic Cross Section Lines and Previous Soil Borings**. The purpose of the assessment was to evaluate soil conditions prior to pending UST upgrades associated with Senate Bill SB 989. Minor soil impact was detected in the vicinity of the eastern dispenser islands. Based on the results of soil samples collected in this area, it appears that this impact is limited in extent and attributable to minor surface spills at the eastern dispensers.

Petroleum hydrocarbons were detected in soil associated with the western fueling system. The hydrocarbon contaminated soil around the western system is confined to the UST area and around the dispenser island closest to those USTs. The horizontal extent of the hydrocarbon contamination in the western system was estimated to be 40 feet by 60 feet. At the completion of the initial soil characterization, the vertical extent was not known. The deepest area of impacted soil was anticipated

to be located along the western portion of the UST pit (between B-11 and B-14). It was in this area that an additional boring and monitoring well was recommended. The details of the soil assessment are found in ATC's *Site Assessment Report*, dated August 25, 2003. A summary of soil sample analytical results is included in Table 5.

In September 2003, ATC directed the advancement of a soil boring and installation of one groundwater monitoring well (MW-1) at a location to the west of the western fueling system. The boring was advanced to a depth of 75 feet bgs and soil samples were collected at five foot intervals. ATC selected five soil samples between 45 and 63 feet bgs for laboratory analysis. Soil samples collected between 45 and 55 feet bgs contained the highest levels of MTBE (ranging between 1.3 to 48 micrograms per kilogram (µg/kg). The MTBE concentrations decreased between 55 feet and 63 feet bgs. Monitoring well MW-1 was constructed using 45 feet of solid 4-inch diameter Schedule 40 PVC casing from surface to 45 feet bgs, and 30 feet of 0.020-inch slotted, 4-inch diameter Schedule 40 PVC well screen from 45 to 75 feet bgs. Subsequent to its installation, the well was developed via purging.

A groundwater sample collected from well MW-1 during a September 2003 investigation was submitted for laboratory analysis, and was reported to contain total petroleum hydrocarbons - gasoline range (TPHg) at a concentration of 61 micrograms per liter (µg/L). Tert-butyl alcohol (TBA) and MTBE were also reported in the September 2003 groundwater sample at concentrations of 2,500 µg/L and 8,700 µg/L, respectively. All other analytes were below their respective detection limits.

Between March 24 and April 4, 2005 ATC oversaw the excavation of impacted soil during the removal of four gasoline USTs and one diesel UST, and the associated dispenser islands at the western fueling area. Transportation manifests indicated that 1,000 tons of petroleum hydrocarbon-impacted soil was excavated, transported and disposed during the excavation activities. Laboratory analytical results from soil samples collected during the excavation indicated that TPHg, total petroleum hydrocarbons - diesel range (TPHd), benzene and MTBE concentrations of up to 150, 720, 0.006, and 0.67 mg/kg, respectively, were still present in the remaining soil. The TPHg, TPHd, and benzene concentrations were below maximum soil screening levels established by the Los Angeles Region California Regional Water Quality Control Board (*Interim Site Assessment and Cleanup Guidebook*, May 1996), based on a depth to groundwater of approximately 53 feet as originally measured in well MW-1. Additionally, the benzene and MTBE concentrations were below the EPAs Preliminary Remediation Goals (PRGs) for industrial and residential soils. The remediation activities were presented in ATC's August 18, 2005 *Remedial Excavation Report* prepared for the facility.

ATC conducted a field investigation from June 19 through July 11, 2008. Site assessment activities were conducted per the request of the RWQCB in accordance with the *Workplan for Additional Soil and Groundwater Investigation* (ATC Associates, February 29, 2008) approved by the State Water Resources Control Board - Los Angeles Region on March 5, 2008. ATC supervised the installation of two groundwater wells, MW-2 and MW-3, at the site in an attempt to further delineate the lateral extent of the MTBE plume. MW-2 was installed northeast of MW-1 just north of the first fuel dispenser on the western edge of the 'eastern fueling station'. MW-3 was installed east of the third fuel dispenser island of the 'western fueling station' (see **Figure 2 – Site Plan** for groundwater monitoring well locations).

MW-2 was advanced to a depth of 75 feet bgs and soil samples were collected at five foot intervals. MTBE, tert-amyl methyl ether (TAME), and TBA concentrations of 5.67, 0.025, 2.70 milligrams per kilograms (mg/kg) were detected at a depth of 55-feet bgs, respectively. MTBE and TBA concentrations of 0.188 and 0.051 mg/kg were also detected at 60 feet bgs.

MW-3 was advanced to a depth of 85 feet bgs, and soil samples were collected at five foot intervals. The soil samples were analyzed and were found to contain no VOC concentrations above laboratory detection limits with the exception of the five-foot sample which contained a MTBE concentration of 0.043 mg/kg.

A summary of the groundwater and soil analytical data is provided in **Table 3 and 5**.

4.3 SITE AND AREA LITHOLOGY

The site is located within the Los Angeles Basin in a physiographic unit called The El Segundo Sand Hills (California Department of Water Resources [DWR], 1961). The El Segundo Sand Hills extend from the Ballona Gap south to Torrance and the Palo Verdes Hills, and approximately three to four miles inland from the ocean. Remnants of similar hills are found on the western edge of Ocean Park Plain. The sand hills consist of a narrow strip of active or recent dunes along the coast with older stabilized sand dunes inland.

The Site is located over the older stabilized Pleistocene-aged dunes called the Older Sand Dunes. Since deposition, the Older Sand Dune has been tilted, weathered, eroded, and further altered by cementation and leaching processes. Surface water percolates into the dunes from closed depressions after heavy rains, and some perched water bodies may occur. In several areas of the El Segundo Sand Hills, fossils and sedimentary features in excavations indicate that these older sand dunes were originally beach deposits which have been altered in form by wind action and deeply weathered. One to three miles inland, the older sand dunes overlie silts and clays which apparently were deposited on the landward side of the beach sands and which now form a portion of the Torrance Plain. Weathering and associated stabilizing processes have removed all but the gross features of dune topography in the older sand dune area (DWR, 1961).

Based on soil boring data from previous investigations at the site (ATC, 2003) and the current additional site assessment, site lithology from the ground surface to approximately 80 feet below ground surface (bgs) consists predominantly of fine to coarse sand interbedded with silt and clay. Based on the DWR (1961) description of the regional units, it is likely that the units described above are within the undifferentiated sediments of the Lakewood Formation.

Cross sections describing soil lithology and soil sample analysis are shown in **Figures 6, 7, and 8**.

4.4 AREA HYDROLOGY AND HYDROGEOLOGY

The Site lies within the West Coast (groundwater) Basin, which is part of the larger Los Angeles Coastal Basin (DWR, 1961). The physical boundaries of the West Coast Basin include the Ballona Escarpment to the north; the Rosecrans Hills to the east; and the Pacific Ocean to the west and south. The Palos Verdes Hills form the boundary of the West Coast Basin to the southeast. The water-bearing stratum within the West Coast basin includes middle Miocene to Oligocene-aged marine and continental sediments. The principal aquifers (water-producing formations) beneath the site include (in youngest to oldest stratigraphic order) the Old Dune Sand, Gage-Gardena, Lynwood, Silverado, and Sunnyside aquifers (DRW, 1961).

Many of the aquifers located in the western portion of the West Coast Basin are not currently used as practical sources of potable water due to general degradation of the upper groundwater zone resulting from historical industrial activity, oil production, and seawater intrusion. It is unknown at the present time whether the aquifer underlying the subject site is currently in use. The regional direction of groundwater flow is interpreted to be to the northeast.

5.0 RECENT ASSESSMENT ACTIVITIES

Prior to commencement of field activities, ATC obtained well permits from the County of Los Angeles Water & Sewage/Mountain & Rural Programs Environmental Health Division. A copy of the well permit is included in **Appendix A**. The investigation activities are summarized in the following sections, and the field procedures are detailed in **Appendix B**. Also prior to drilling the well borings, ATC contacted Underground Service Alert (USA) and subcontracted with a private utility locator service to verify the presence of any utilities in the vicinity of the proposed well boring locations. Following the utility clearance, drilling was scheduled.

ATC contracted with ABC Liovin Drilling for the well installations. A CME-85 Limited Access Drill rig equipped with 10-inch diameter hollow-stem augers was utilized to complete the monitoring wells. Additional details are provided below.

5.1 GROUNDWATER MONITORING WELL INSTALLATION

Based on the depth to water measurements and the analytical laboratory results of the July & September 2003 and June-July 2008 investigations, ATC selected the two locations for installation of groundwater monitoring wells. The investigation objective was to establish onsite locations for collecting groundwater data; including groundwater hydraulic head measurements and dissolved petroleum constituent concentrations.

On July 7 and 8, 2009, ATC installed two groundwater monitoring wells (MW-4 and MW-5) at the site using a hollow-stem auger drilling method. Groundwater monitoring well MW-4 was installed north of the western dispenser islands and MW-5 was installed south of the eastern dispenser islands. Well MW-5 had to be relocated due to underground PVC piping that was encountered. The borings were advanced to between 95 and 96 feet bgs and the monitoring wells were installed to total depths of 95 feet bgs with a 20 ft screen interval used for both wells. Well locations are shown on **Figure 2**. Well installation activities are summarized below, and daily records are presented in **Appendix C**.

5.1.1 Soil Sampling

At each location, soil samples were collected at 5-foot intervals from ground surface to the total depth of the boring. The borings were drilled, sampled and completed as a groundwater monitoring wells in general accordance with ATC's Standard Operating Procedures, which are included in **Appendix B**.

To obtain preliminary data regarding potential petroleum hydrocarbon-impacted soil, a representative sample was collected at each soil sampling location and field screened for volatile organic vapors in general accordance ATC's Standard Operating Procedures, which are included in **Appendix B**. Organic vapor meter readings were collected using a RAE Systems Mini-RAE 2000 photo-ionization detector (PID) and were recorded in the boring logs.

All soil samples collected during the investigation were submitted for laboratory analysis. The details of the analysis are presented in **Section 5.1.5** and a discussion of the results is included in **Section 6.3.1**.

An ATC geologist completed lithologic logs for each boring in general accordance with ASTM Method D 2488-90. ATC selected all soil samples from each boring for chemical analysis. Soil characteristics (observations of staining or odor), Unified Soil Classification System (USCS) designation, and depth to groundwater were recorded on the boring logs provided in **Appendix C**.

5.1.2 Well Specifications and Construction

Following soil sampling, groundwater monitoring wells were installed using 4-inch-diameter, Schedule 40 PVC casing. Groundwater monitoring well MW-4 was constructed using 75 feet of solid PVC casing, and 20 feet of 0.020 inch slotted well screen. The annulus of the screened portions of monitoring well MW-4 was backfilled with a #3 Monterey sand filter pack from approximately 95 to 72 feet bgs. An approximate three-foot thick layer of medium bentonite chips were placed on top of the upper filter pack and hydrated to form an annular seal. The remaining annular space to the bottom of the concrete seal (approximately 68 feet) was filled with bentonite grout. Based upon groundwater measurements that were collected upon the completion of monitoring well MW-4, it was determined that the static groundwater level was approximately equal to the observed in the lithologic logging.

Groundwater monitoring well MW-5 was advanced to 95 feet below ground surface. The screened interval of monitoring well MW-5 was back filled with #3 Monterey sand (or equivalent) filter pack from 95 to 72 bgs. An approximate three-foot layer of medium bentonite chips were placed on top of the upper filter pack and hydrated to form an annular seal. The remaining annular space from the bentonite chips seal to the bottom of the concrete seal (approximately 68 feet) was filled with bentonite grout.

Each well was completed with a two-foot deep surface seal that was placed above the bentonite grout and a traffic-rated well box was placed within a circular two-foot diameter perimeter seal. A summary of the final monitoring well construction details is provided in **Table 1** and locations of the monitoring wells are shown on **Figure 2**.

5.1.3 Well Development

On July 17, 2009, ATC developed monitoring wells MW-4 and MW-5 using a combination of surging and bailing methods. Well MW-4 went dry after removing approximately eight bailers of water, so the field personnel allowed the well to recharge. After an additional four bailers of water were removed, the well went dry. At this point ATC terminated well development, since the purged water was relatively clear and free of suspended sediment. Well MW-5 went dry after removing approximately seven bailers of water, so the field personnel ceased bailing and allowed the well to recharge. After an additional six bailers of water were removed, the well went dry again. At this point ATC terminated well development, since the purged water was relatively clear and free of suspended sediment.

After well development, ATC measured static depth to groundwater and the total well depth in each well. The depths to water measured in wells MW-3, MW-4, and MW-5 were 81.19, 85.43, and 85.94 ft bgs, respectively. Wells MW-1 and MW-2 were dry. Total well depth at wells were 85.15, 93.36, and 95.48 feet below top of casing at wells MW-3, MW-4, and MW-5, respectively.

Groundwater purged during well development was contained in 55-gallon drums and remained on site pending proper disposition. The groundwater monitoring wells were developed in general accordance with ATC's Standard Operating Procedures, which are included in **Appendix B**.

5.1.4 Well Surveying

On July 17, 2009, a California-licensed Professional Land Surveyor (W.M. Meagher Surveyors) surveyed the lateral locations and elevations of the newly installed groundwater monitoring wells. The locations and elevations of measuring marks on the north side of each wellhead were surveyed. Each well was surveyed to the nearest 0.01-foot by the surveyor in order to more accurately determine the local groundwater flow direction beneath the site. Survey data is provided in **Appendix F**.

5.1.5 Laboratory Analysis

ATC submitted the soil samples to a State of California-certified laboratory under chain-of-custody procedures. The laboratory analyzed a total of 31 soil samples for:

- Total Petroleum Hydrocarbon – gasoline (TPHg) using EPA Method 8260B;
- Ethanol (by direct injection) using EPA Method 8260B;
- BTEX (benzene, toluene, ethylbenzene, and xylenes) and fuel oxygenates MTBE, di-isopropyl ether (DIPE), ethyl-t-butyl ether (ETBE), TAME, and TBA using EPA Method 8260B;
- Volatile organic compounds (VOCs) using EPA Method 8260B.

The analytical results are summarized in **Table 4,** and a discussion is included in **Section 6.3.1**. The laboratory analytical reports are provided in **Appendix E**.

5.2 GROUNDWATER MONITORING

ATC gauged all wells (MW-1 through MW-5) and sampled groundwater monitoring wells (MW-3 through MW-5) at the site on August 6, 2009, after allowing wells MW-4 and MW-5 to sit undisturbed for 19 days. Groundwater monitoring activities are summarized in the following sections, with well sampling logs included in **Appendix D**.

5.2.1 Downhole Parameter and Groundwater Level Measurements

On August 6, 2009, prior to commencement of purging and sampling activities, ATC gauged and inspected the monitoring wells for separate-phase hydrocarbons and depth to groundwater. During this event, measurable groundwater was not present in wells MW-1 and MW-2. The total depth of groundwater wells MW-1 and MW-2 are 75 feet bgs. The depth to groundwater in well MW-3 was 81.19 ft below top of casing, and the depths to groundwater in newly installed wells MW-4 and MW-5 were 85.43 and 85.94 feet below top of casing, respectively. **Table 1** summarizes well identifications and casing elevations, **Table 2** includes groundwater depths and groundwater elevations. Well sampling records are provided in **Appendix D**.

5.2.2 Purging and Sampling Procedures

ATC used a low-flow purging method to sample the groundwater monitoring wells utilizing a three-inch Grundfos pump with cooling shroud. During purging, ATC monitored temperature, pH, conductivity, turbidity, and dissolved oxygen (DO). Purge volumes for the sampled monitoring wells were 7.72 gallons (MW-3), 7.93 gallons (MW-4), and 18.60 gallons (MW-5).

Following gauging and purging, groundwater samples were collected from the newly installed monitoring wells (MW-4 and MW-5) and the pre-existing groundwater well (MW-3). Field parameter measurements were recorded on the well sampling records, which are included in **Appendix D**.

5.2.3 Laboratory Analysis

ATC submitted the groundwater samples to Advanced Technology Laboratory, a State of California ELAP-certified laboratory, under chain-of-custody procedures. Three groundwater samples were analyzed for:

- TPHg (c4-c10) using EPA Method 8015B;
- Ethanol using EPA Method 8015B;

- BTEX (benzene, toluene, ethylbenzene, and xylenes) and fuel oxygenates MTBE, di-isopropyl ether (DIPE), ethyl-t-butyl ether (ETBE), TAME, and TBA using EPA Method 8260B;
- VOCs using EPA Method 8260B.

The analytical results are discussed in **Section 6**; the laboratory analytical reports are provided in **Appendix E**.

5.3 WASTE MANAGEMENT

Drilling and sampling activities generated thirty-one 55-gallon drums of soil cuttings and non-hazardous decon and sample water. The drums were removed from the site on August 24th, 2009 after soil analysis was performed as part of the assessment and was used to characterize the waste for disposal. Copies of waste disposal manifests will be forwarded upon receipt by The Hertz Corporation. Soil cuttings were managed in accordance with the County of Los Angeles regulations.

6.0 RESULTS

The cumulative findings of the additional site assessment described in **Section 5** are summarized below.

6.1 Drilling Observations

Consistent with previous investigations at the site, ATC observed unconsolidated alluvial sediments with grain sizes ranging from clays to gravels. Drilling observations are presented on the boring logs in **Appendix C**. The lithologic units logged and described by ATC can generally be classified within the six soil units described in **Section 4.3** above as sand, silty sand, and clayey silt. ATC detected no VOC PID readings above background levels in the soil samples collected during drilling activities.

Soil samples were collected every five-feet in both borings and all samples were analyzed. In the two monitoring wells, saturated soil was generally encountered from approximately 75 to 95 feet bgs. Due to high moisture content in the samples, water level was initially judged to be approximately 81 feet bgs in both monitoring wells. Water levels dropped significantly after drilling to total depth, with static groundwater levels stabilizing at approximately 85 feet bgs.

Groundwater elevation was calculated for each well by subtracting the depth-to-water measurement from the surveyed casing elevation. The survey data for the groundwater monitoring wells is provided in **Appendix F**. Groundwater elevations from the monitoring wells gauged on August 6, 2009 were used to prepare a groundwater elevation contour map (**Figure 4**). The groundwater elevation contours indicate groundwater flow to the northeast at an approximate gradient of 0.05 feet per foot (ft/ft).

6.2 MONITORING WELL OBSERVATIONS

No separate-phase hydrocarbons were observed in any of the wells. Depth-to-water measurements ranged from 81.19 to 85.94 feet below top of casing (**Table 2**); groundwater elevation contours are depicted on **Figure 4**.

6.3 ANALYTICAL RESULTS

The analytical results for soil and groundwater samples collected during this field investigation are summarized in **Tables 2 and 3**. Groundwater analytical results are also shown on **Figure 3**. Analytical laboratory reports and chain-of-custody forms are provided in **Appendix E**.

6.3.1 Soil Analysis

During the additional site assessment activities, completed from July 7 and 8, 2009, 31 soil samples were submitted for analytical testing. None of the soil samples collected during the installation of well MW-5 on July 8, 2009 contained detectable concentrations of petroleum hydrocarbons.

Soil samples collected during the installation of well MW-4 on July 7, 2009 did not contain detectable concentrations of petroleum hydrocarbons, with the following exceptions:

- MW-4-5’ - MTBE and TBA concentrations of 9.7 and 18 µg/kg, respectively;
- MW-4-10’ - TPHg, MTBE and TBA concentrations of 0.92, 310, and 1800 µg/kg, respectively;
- MW-4-15’ - MTBE and TBA concentrations of 1.6 and 150 µg/kg, respectively;
- MW-4-20’ - TPHg and MTBE concentrations of 0.18 and 0.95 µg/kg respectively;

- MW-4-25' - TPHg, Chloromethane, MTBE, and TBA concentrations of 0.36, 1.5, 13, and 7700 µg/kg, respectively;
- MW-4-30' - TPHg, MTBE, and TBA concentrations of 0.59, 2.7, and 20,000 µg/kg, respectively;
- MW-4-35' - TPHg, MTBE, and TBA concentrations of 0.40, 72, and 18,000 µg/kg, respectively;
- MW-4-40' - TPHg, TAME, MTBE, and TBA concentrations of 3.6, 25, 16,000 and 61,000 µg/kg, respectively;
- MW-4-45' - TPHg, ETBE, TAME, MTBE and TBA concentrations of 2.1, 4.4, 43, 20,000 and 10,000 µg/kg, respectively;
- MW-4-50' - TPHg, ETBE, TAME, MTBE and TBA concentrations of 13, 6.6, 65, 28,000 and 15,000 µg/kg, respectively;
- MW-4-55' - TPHg, ETBE, TAME, MTBE and TBA concentrations of 6.0, 1.1, 9.6, 6,500 and 16,000 µg/kg, respectively;
- MW-4-60' - TPHg, TAME, MTBE, and TBA concentrations of 1.6, 3.2, 1,500 and 180 µg/kg, respectively;
- MW-4-65' - TPHg, MTBE, and TBA concentrations of 2.1, 5.4, and 11 µg/kg, respectively;
- MW-4-70' - TPHg, TAME, MTBE, and TBA concentrations of 0.57, 2.7, 980 and 6,300 µg/kg, respectively;
- MW-4-75' - TPHg, MTBE, and TBA concentrations of 0.94, 9.9, and 650 µg/kg, respectively;
- MW-4-80' - TPHg and TBA concentrations of 0.39 and 21 µg/kg, respectively.

A summary of soil sample analytical results is provided in **Table 4** and **Figure 5**. The Geologic Cross-Section Lines & Previous Soil Borings Map is presented as **Figure 6**, with Geologic Cross-Section A-A' is presented as **Figure 7**, and Geologic Cross-Section B-B' as **Figure 8**.

6.3.2 Groundwater Analysis

The groundwater sampling event for all monitoring wells (MW-3 through MW-5), took place on August 6, 2009. None of the groundwater samples submitted for laboratory analysis contained detectable concentrations of petroleum hydrocarbons.

A summary of the groundwater sample analytical results is provided in **Table 2**, and historical groundwater analytical results are in **Table 3**. Laboratory reports and chain-of-custody documentation is included in **Appendix E**.

7.0 FINDINGS AND RECOMMENDATIONS

Monitoring wells MW-1 and MW-2 were dry during this event. The groundwater samples collected from monitoring wells MW-3 through MW-5 did not contain detectable concentrations of petroleum hydrocarbons, BTEX, or fuel oxygenates.

Soil samples during the installation of MW-5 did not contain detectable concentrations of fuel oxygenates or VOCs, which indicates that the MTBE and hydrocarbon plume does not extend laterally to the east-southeast of the USTs and eastern fueling islands.

Soil sampling results for newly-installed well MW-4 indicated concentrations of fuel oxygenates, however, the levels decreased below 50-feet below ground surface and were not impacting groundwater based upon the groundwater analytical results. Based on the groundwater monitoring and soil results for this quarter, additional quarterly monitoring is recommended.

8.0 LIMITATIONS

Our professional services have been performed, our findings obtained, and our recommendations prepared in accordance with customary principles and practices in the fields of environmental science and engineering. This warranty is in lieu of all other warranties either expressed or implied. This company is not responsible for the independent conclusions, opinions, or recommendations made by others based on the records review, site inspection, field exploration, and laboratory test data presented in this report.

It should be noted that all surficial environmental assessments are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and site evaluation. For these types of evaluations, it is often necessary to use information prepared by others and ATC cannot be responsible for the accuracy of such information. In addition, the passage of time may result in a change in the environmental characteristics at this site and surrounding properties. This report does not warrant against future operations or conditions, nor does it warrant operations or conditions present of a type or at a location not investigated. This report is not a regulatory compliance audit and is not intended to satisfy the requirements of any state, federal, or local real estate transfer laws.

It must be noted that no investigation can absolutely rule out the existence of any hazardous materials at a given site. This assessment has been based upon prior site history, observable conditions, and the subsurface soil sampling described in this report. Existing hazardous materials and contaminants can escape detection using these methods.

This report is for the use and benefit of, and may be relied upon by, Hertz, and any affiliates, and third parties authorized in writing by Hertz and ATC, including the lender(s) in connection with a secured financing of the property, and their respective successors and assigns. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the property that were not discovered within the authorized scope of the assessment.

ATC makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either express or implied. Unless otherwise agreed upon in writing by ATC and a third party, ATC's liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall be limited to a maximum of $100,000.

9.0 SIGNATURES

This report was prepared by the staff of ATC Associates, Inc., under the supervision of the Senior Geologist whose signature appears hereon. The findings, recommendations, specifications, or professional opinions are presented within the limits described by the client, in accordance with generally accepted practices, using the degree of skill and care ordinarily exercised by environmental consultants under similar circumstances. No warranty is expressed or implied.

Michele Berisford
Junior Project Manager

Jim Madden, PG, LEED AP, CEM
Professional Geologist / Program Manager

Andy Coleman,
National Client Manager

ATTENTION: WORK PLAN MODIFICATIONS MAY BE REQUIRED IF WELL AND GEOLOGIC CONDITIONS ENCOUNTERED AT THE SITE INSPECTION ARE FOUND TO DIFFER FROM THE SCOPE OF WORK PRESENTED TO THIS DEPARTMENT.

I hereby agree to comply in every respect with all the regulations of the County Environmental Health Division and with all ordinances and laws of the County of Los Angeles and the State of California pertaining to well construction, reconstruction, and decommissioning data deemed necessary by the County Environmental Health Division Of Los Angeles County.

Signature of Applicant: Michele Berisford Printed Name: Michele Berisford

THIS PERMIT IS NOT COMPLETE UNTIL ALL OF THE FOLLOWING REQUIREMENTS ARE SIGNED OFF BY THE DEPUTY HEALTH OFFICER. WELL CONSTRUCTION OR DECOMMISSIONING CANNOT BE INITIATED WITHOUT A WORK PLAN APPROVAL FROM THIS DEPARTMENT.

********** (DEPARTMENT USE ONLY) **********

WORK PLAN APPROVAL (This Approval is Valid for 180 Days)	REHS	DATE
Conditions: On 6/09/09 $402.00 was paid for permit # 9065 for install 2 monitoring wells (MW-4, MW-5). Maintain all setbacks. Please notify me at least 48 HRS prior to starting fieldwork to schedule on-site inspection. MTSIEBOS @ PH.LACOUNTY.GOV (213) 351-5145	MICHELLE TSIEBOS	6/11/09
FINAL INSPECTION The placement of the annular seal must be witnessed by a Deputy Health Officer for the permit to be valid. Contact this Department to arrange for an appointment	REHS	DATE
	Erich.	7/08/09

NOTICE

This well permit approval is limited to compliance with the California Well Standards and the Los Angeles County Code and does not grant any rights to construct, reconstruct, or decommission any well. The applicant is responsible for securing all other necessary permits.

6/11/09

APPENDIX B

STANDARD OPERATING PROCEDURES

STANDARD OPERATING PROCEDURE

SOIL BOREHOLE DRILLING, MONITOR WELL INSTALLATION AND DEVELOPMENT, AND SOIL SAMPLING

Drilling and Soil Sampling

Permits, Site Safety Plan. Utility Clearance

ATC Associates Inc. (ATC) obtains all the required permits, unless otherwise contractually directed. ATC prepares a site specific Site Safety Plan detailing site hazards, site safety and control, decontamination procedures, and emergency response procedures to be employed throughout the defined phase of work. At least 48 hours prior to drilling. Underground Service Alert (USA) or an equivalent agency is notified of the planned work. ATC attempts to locate all underground and above ground utilities by site inspection (in conjunction with its' subcontractors and knowledgeable site managers, if available), and review of site as-built drawings. ATC may employ a private, professional utility locator to refine the site utility inspection.

Drilling Equipment

All soil borings are drilled using a truck-mounted hollow-stem auger drill rig, unless site conditions warrant a different drilling method. Subsurface conditions permitting, the first five feet of each boring is advanced using a hand-auger or post-hole digger. All drilling equipment is inspected daily and maintained in safe working condition by the operator. All down-hole drilling equipment is steam cleaned prior to arriving on site. Working components of the drill rig near the borehole, as well as augers and drill rods are thoroughly steam cleaned between each boring location. All ATC drilling and sampling methods are consistent with ASTM Method D-1452-80 and local, stale and federal regulations.

Soil Sampling and Lithologic Description

Whenever possible and approved by the appropriate regulatory agency, the first ATC boring to be drilled at a site is continuously cored to obtain a complete lithologic description. Otherwise, soil samples are typically collected every 5 feet to the total depth explored, using brass tubes fitted in a California-modified split spoon sampler. If copper or zinc contamination is the subject of the investigation, stainless steel liners are used instead of brass. Additional soil samples may be collected based upon significant changes in lithology or in areas of obvious soil contamination. During soil sample collection, the split spoon sampler is driven 18 to 24 inches past the lead auger by a 140-pound hammer falling a minimum of 30 inches. The number of blows necessary to drive the sampler and the amount of soil recovered is recorded on the Field Exploratory Soil Boring Log. The soil sampler and liners are cleaned with an Alconox® solution and rinsed with tap water prior to each sampling event. New liners are used whenever a soil sample may be retained for laboratory analysis.

Soil samples selected for laboratory analysis are sealed on both ends with Teflon® tape and plastic end caps. The samples are labeled, documented on a chain-of-custody form and placed in a cooler for transport to a state-certified analytical laboratory. Soil contained in remaining liners is removed for lithologic descriptions (according to the Unified Soil Classification System). Additional soil is screened for organic vapors by placing approximately 30 grams of soil in a sealed plastic bag or a glass jar sealed with aluminum foil. The bag or jar is left undisturbed for approximately 15 minutes, in the sun if possible. The head space in the bag is accessed in a manner to minimize entry of outside air, and is tested for total organic vapor using a calibrated photo ionization detector (PID). The results of the field screening are noted with the lithologic descriptions on the Field Exploratory Soil Boring Log.

On encountering an impermeable (clayey) layer three feet or more in thickness below a saturated permeable layer, where the impermeable layer is considered to be a possible confining layer for an

underlying aquifer, drilling is halted until a decision to proceed is obtained from the project manager. This process minimizes the chance of introducing contamination to an underlying, clean aquifer.

Soil Waste Management

Soil cuttings are stockpiled on and covered with plastic sheeting to control runoff, or contained in 55-gallon D.O.T.-approved drums on site. Waste soil is sampled to chemically profile it for disposable, and hauled by a licensed waste hauler to an appropriate landfill or certified treatment facility. All waste stored on site is properly labeled at the time of production.

Soil Boring Abandonment

Soil borings which are not to be converted into monitor wells are sealed to the ground surface using neat cement, sand-cement slurry, or hydrated bentonite pellets or chips in accordance with federal, state and local regulations. Native soil may be used to fill the top two to three feet for cosmetic purposes, as permitted.

Monitor Well Installation

Well Casing. Screen and Filter Pack Construction

All well construction is performed in accordance with Department of Water Resources "California Well Standards" and all requirements of local oversight agencies. Soil borings to be converted into single-cased monitor wells are a minimum of eight inches in diameter for 2-inch diameter wells, and a minimum of ten inches in diameter for 4-inch diameter wells. Monitor wells are constructed with schedule 40, threaded. polyvinyl chloride (PVC) casing unless site geochemistry or contamination necessitates an alternative regulatory agency approved material. The wells are constructed with factory-slotted screen and threaded end caps.

The screened interval is placed such that it extends approximately ten feet into the water bearing zone, and at least five feet above the expected maximum water level. The screened interval may extend less than five feet above the maximum water level, only to prevent intersection of the screened interval with the top of the confining layer of a confined aquifer, or where the water table is too shallow to allow this construction. A graded sand filter pack is placed in the annular space across the screened interval and extended approximately one to two feet above the screen, as site conditions permit, so as to prevent extension of the sand pack into an overlying water-bearing unit. The well screen slot size is the maximum size capable of retaining 90% of the filter pack. Typically, 0.010-inch screen is used where the formation is predominantly clay and/or silt or poorly graded fine sand. 0.020-inch screen is used where the formation is predominantly well-graded or medium to coarse sand and/or gravel.

The filter pack grade (mean grain size) is selected according to native sediment type as follows: a) for poorly graded fine sand or silt/clay - 4 times the 70% retained grain size of the formation b) for medium to coarse sand, gravel or well graded sediments - 6 times the 70% retained grain size. Since results of particle size analysis are not always available, ATC often selects screen size and filter pack on the basis of general site stratigraphy, and specifically the finest significantly thick layer of sediment to be screened. Commonly selected grades are Lone Star® 3, 2/12 or 2/16 (or equivalent) with 0.020-inch slotted screen and Lone Star® 1/20 with 0.010-inch slotted screen.

Well Seal and Completion

A minimum two-foot seal of bentonite is placed above the sand pack. The bentonite seal is hydrated by either formation water or potable water. Neat cement or a cement/bentonite grout mixture seals the remaining annular space to the surface. If bentonite is used in the grout mixture, it does not exceed 5% by weight. The grout is placed using a tremie pipe, if the top of the bentonite is more than 20 feet below grade, or if water is present in the boring above the bentonite seal. A watertight locking cap and protective traffic-rated vault box is installed on top of each well. Well construction details are presented on the Field Exploratory Soil Boring Log. Following completion of a well, ATC completes and submits,

or ensures that the driller has sufficient information to complete and submit, the state-required Well Completion Report or equivalent document.

Well Development

All newly installed wells are developed prior to sampling to remove fine grained sediments from the well and stabilize the filter pack and the disturbed aquifer materials. Development takes place prior to or at least 24 hours after setting the seal on the well, unless otherwise directed by a local oversight agency. Well development consists of surging with a surge block and removing water from the well with either a pump or bailer, until the well is free of sediment, or until at least 10 well casing volumes have been removed. Depth to bottom is measured to determine casing volume. If the well is sampled immediately following development, temperature, pH, specific conductance and turbidity (qualitative) are monitored during well development (see section "Groundwater Sampling"). All development equipment is cleaned prior to use and between wells with an Alconox® solution, then rinsed in potable water. All data collected during development are recorded on the Well Development Data Sheet and, if necessary, the Purging Data Sheet.

Well Surveying

All well elevations are surveyed at the north side of the top of casing to the nearest ±0.01 foot. The exact survey point (at the center of the survey rod or, if the casing stub is uneven, the point of contact between casing and rod) is clearly marked and maintained on the casing rim. Elevations are referenced either to mean sea level or to a project datum. A project datum is typically chosen so as to minimize the possibility of its' later disturbance. For instance, fire hydrants are commonly selected. When required, the wells are surveyed, relative to mean sea level, by a licensed land surveyor.

STANDARD OPERATING PROCEDURE

FIELD SOIL VAPOR MONITORING

A representative soil sample will be collected from each sample interval and placed in a Ziplock® plastic bag. The bag will be sealed and the soil disaggregated. At least ten minutes will be allowed for the soil to be heated by direct sunlight and for any VOCs in the soil to accumulate in the head space of the bag. Subsequently, volatile gases are monitored and recorded by inserting the probe of a Photovac 2020 photoionization detector (PID) into the head space. The PID is equipped with a 10.6 eV lamp which is capable of detecting VOCs at concentrations of 0.1 parts per million (ppm). The PID will be calibrated on-site using 100 ppmV isobutylene-in-air span gas (equivalent to benzene) prior to drilling operations. PID readings will be recorded in the boring logs.

STANDARD OPERATING PROCEDURE

GROUNDWATER MONITORING, WELL PURGING, AND SAMPLING

Groundwater Monitoring

Prior to beginning, a decontamination area is established. Decontamination procedures consist of scrubbing downhole equipment in an Alconox® solution wash (wash solution is pumped through any purging pumps used), and rinsing in a first rinse of potable water and a second rinse of potable water or deionized water if the latter is required. Any non-dedicated downhole equipment is decontaminated prior to use.

Prior to purging and sampling a well the static water level is measured to the nearest 0.01 feet with an electronic water sounder. Depth to bottom is typically measured once per year, at the request of the project manager, and during ATC's first visit to a site. The water sounder and tape will be decontaminated between each well. If floating phase-separated hydrocarbons (PSH) are suspected or observed, PSH is collected using a clear, open-ended product bailer, and the thickness is measured to the nearest 0.01 feet in the bailer. PSH may alternatively be measured with an electronic interface probe once the presence of PSH has been established at a site. Any monitoring well containing a measurable thickness of PSH before or during purging is not additionally purged and no sample is collected from that well. Wells containing hydrocarbon sheen are sampled unless otherwise specified by the project manager. Field observations such as well integrity as well as water level measurements and floating product thicknesses are noted on the Gauging Data/Purge Calculations form.

Well Purging

Each monitoring well to be sampled is purged using a stainless steel bailer, a PVC bailer or a submersible pump. Physical parameters (pH, temperature, and conductivity) of the purge water are monitored during purging activities to assess if the water sample collected is representative of the aquifer. If required, parameters such as dissolved oxygen, turbidity, salinity etc. are also measured. Samples are considered representative if parameter stability is achieved. Stability is defined as a change of less than 0.25 pH units, less than 10% change in conductivity in micro mhos, and less than 1.0 degree centigrade (1.8 degrees Fahrenheit) change in temperature. Parameters are measured in a discreet sample decanted from the bailer separately from the rest of the purge water. Parameters are measured at least four times during purging; initially, and at volume intervals of one well volume. Purging continues until three well casing volumes have been removed, until the well completely dewaters, or until measured parameters stabilize as indicated above. Wells that dewater or demonstrate a slow recharge, may be sampled although fewer than three well volumes have been removed. Well purging information is recorded on the Purge Data sheet. All meters used to measure parameters are calibrated daily. Purge water is sealed, labeled, and stored on site in D.O.T.-approved 55-gallon drums. After being chemically profiled, the water is removed to an appropriate disposal facility by a licensed waste hauler.

Groundwater Sample Collection

Groundwater samples are collected immediately after purging or, if purging rate exceeds well recharge rate, when the well has recharged to at least 80% of its static water level. If recharge is extremely slow, the well is allowed to recharge for at least two hours, if practicable, or until sufficient volume has accumulated for sampling. The well is sampled within 24 hours of purging or re-purged. Samples are collected using polyethylene bailers, either disposable or dedicated to the well. Samples being analyzed for compounds most sensitive to volatilization are collected first. Water samples are placed in appropriate laboratory-supplied containers, labeled, documented on a chain of custody form and placed on ice in a cooler for transport to a state-certified analytical laboratory. Analytical detection limits match or surpass standards required by relevant local or regional guidelines.

Quality Assurance Procedures

To prevent contamination of the samples ATC personnel adhere to the following procedures in the field:

- A new, clean pair of latex gloves are put on prior to sampling each well.
- Wells are gauged, purged and groundwater samples are collected in the expected order of increasing degree of contamination based on historical analytical results.
- All purging equipment will be thoroughly decontaminated between each well using the procedures previously described at the beginning of this section.
- During sample collection for volatile organic analysis, the amount of air passing through the sample is minimized. This helps prevent the air from stripping the volatiles from the water. Sample bottles are filled by slowly running the sample down the side of the bottle until there is a convex meniscus over the mouth of the bottle. The lid is carefully screwed onto the bottle such that no air bubbles are present within the bottle. If a bubble is present, the cap is removed and additional water is added to the sample container. After resealing the sample container, if bubbles still are present inside, the sample container is discarded and the procedure is repeated with a new container.

Laboratory and field handling procedures may be monitored, if required by the client or regulators, by including quality control (QC) samples for analysis with the groundwater samples. Examples of different types of QC samples are as follows:

- Trip blanks are prepared at the analytical laboratory by laboratory personnel to check field handling procedures. Trip blanks are transported to the project site in the same manner as the laboratory-supplied sample containers to be filled. They are not opened, and are returned to the laboratory with the samples collected. Trip blanks are analyzed for purgable organic compounds.
- Equipment blanks are prepared in the field to determine if decontamination of field sampling equipment has been effective. The sampling equipment used to collect the groundwater samples is rinsed with distilled water that is then decanted into laboratory-supplied containers. The equipment blanks are transported to the laboratory, and are analyzed for the same chemical constituents as the samples collected at the site.
- Duplicates are collected at the same time that the standard groundwater samples are being collected and are analyzed for the same compounds in order to check the reproducibility of laboratory data. They are typically only collected from one well per sampling event. The duplicate is assigned an identification number that will not associate it with the source well.

Generally, trip blanks and field blanks check field handling and transportation procedures. Duplicates check laboratory procedures. The configuration of QC samples is determined by ATC depending on site conditions and regulatory requirements.

ATC Branch: Los Angeles	Date: 7.8.09	Page 1 of 2
ATC Representative(s): Michele Berisford, Frank Roanhorse	Project: LAX/Hertz	
Role: Project Geologist, Proj. Eng.	Location: 9000 Airport Blvd.	
Contact Information: Jim Madden / Chris Averling	Project No: 52.75015.0006	Task No: 6
Scope of Work: Install MW-5. Hertz	Weather: Cloudy → Sunny	Temperature: 70°-75°F
X Monitoring __ Assessment __ Remediation __ Closure	Contractor: ~~None~~ ABC / TW	

Time:	Comments:
0530	Stop to get ice for drinks + Samples.
0547	Get to office, load supplies / coolers.
0601	Leave for Site
0650	Arrive @ Site, pull on + park - Note conditions
	- Main turned on / leaking - ground wet.
	- MW-4 ok.
0704	ABC on site, mobe to MW-4 to finish well. (Justin, Matt, Raoul)
0715	Morning tailgate.
0745	Grout/Bentonite the remaining 8' of hole, - begin.
0801	Cement the hole, Have cars removed from new MW-5 location (~40' East of last due to spatial constraints), Driller checks on location (Sewer might be issue)
0818	Mobe to new MW-5 location, set up Chase truck, drop trailer + move Rig into hole.
1030	~~Encounter~~ Knock out Poddy ~~Knockout~~ untwisted Sitting @ bottom of hole ~ 50'.
1040	Water System Inspector stopped by to inspect UST covers
1056	Poddy recovered, resume drilling
1159	Last sample @ 80', drilled to 85'.
1209	Stop for water to charge, take a lunch.
1206	Frank Roanhorse onsite
1301	Tag MW-5 (81.40').
1400	Began well placement (PVC total length 95')

Equipment Used: Co. truck, PID, Cooler, ice, Gatorade, Nitriles, Encores

NEVADA.: CA-401
CSDLAC No.: 10196

Workorder No.: 106293

RE: Hertz LAX

Attention: Jim Madden

Enclosed are the results for sample(s) received on July 08, 2009 by Advanced Technology Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

Eddie F. Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.

Results were J-Flag. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" Flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

EPA 8260B analysis was performed using 5035 preservation requirements except sample MW-4/70'. Any high level dilutions were performed on a preserved methanol sample unless otherwise noted.

Analytical Comments for EPA 8260B

Sample 106293-005B, Tert-Butanol was reported with "E" qualifier (value above quantitation range). The sample was ran at 50x with result less than PQL.

Samples 106293-014AMS and 106293-014AMSD, Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria. Also, MTBE was reported with "E" qualifier (value above quantitation range) possibly due to high concentration of MTBE. The analytical batch was validated by the Laboratory Control Sample (LCS).
