RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Michelle Heredia-Cordova, Chairperson of the Table Mountain Rancheria

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

Project Name: The Aquaterra Groundwater Bank Project, Fresno County, California

Location: The Proposed Project is located on approximately 5,174 acres of agricultural land within the MAGSA management area boundary. The Proposed Project is west and southwest of the City of Fresno, east of the Fresno Slough, west of Kerman, and near Raisin City. All the land is within a primarily rural agricultural developed region. A large variety of crops are grown in the area including annual crops (e.g., peppers, onions, tomatoes, carrots), perennial crops (e.g., almonds, walnuts, pistachios, vineyards), and pasture and dairy land are also found there.

BOARD OF DIRECTORS
Seat 1, Brian Pacheco • Seat 2, Don Cameron • Seat 3, Jonathon DeGroot • Seat 4, Ariel Namvar • Seat 5, Matt Abercrombie

OFFICERS
Don Cameron, Chair • Matthew Hurley, Secretary/Treasurer

- The Project overlaps with several United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle maps, Townships, Ranges, and Sections (Enclosure 1).

Proposed Project: The Proposed Project is under design. Land to be used for the groundwater bank will be a subset of the total acreage of the MAGSA management area. Farmers will voluntarily participate in this program and agricultural fields will also continue to remain active as the banking program is compatible with farming practices (e.g., planting, fallowing, harvesting). The Proposed Project is within an agricultural environment (row crops, orchards, paved roadways, water conveyance systems) that has been historically disturbed (disced, tilled) and flooded for agricultural purposes.

Cultural Resource Review to Date: A California Historical Resources Information Center records search of the Project and surrounding 0.5 mile radius was conducted via the Southern San Joaquin Valley Information Center (SSJVIC), Division of Anthropology, California State University, Bakersfield, on June 1, 2021 (Records Search File No.: 21-189) and on February 20, 2023 (File no.: 23-042. The SSJVIC records search identified 14 previously conducted cultural resource studies that overlap with the Project and 5 previously recorded historic era-built environment cultural resources that overlap with the Project. These cultural resources consist of two transmission lines, a railroad right of way, a farming community, and a water conveyance system. The built environment resources will be avoided by the Project.

A Native American Heritage Commission (NAHC) Sacred Lands File Search was requested on January 21, 2023. The NAHC responded on February 17, 2023, that the Sacred Lands File Search record search results were positive. The NAHC provided a list of tribal representatives and recommended contacting those listed for information regarding known tribal cultural resources within or near the Project (Enclosure 2).

In the time period since the previous letter was sent, our cultural resources field team has performed an archaeological survey for the Proposed Project, which resulted in the identification of five historic era archaeological sites, eight historic era isolates (glass, metal, or ceramic fragments), and four precontact isolated pieces of debitage (lithic flake). A geoarchaeological field study was recently performed and while the reporting is still in process, no significant resources were identified.

Conclusion: We respectfully request your participation in this local planning process, as tribal knowledge and participation regarding the Proposed Project is important. If you possess any information or knowledge regarding tribal cultural resources or other resources of importance to the tribe in and around the Proposed Project, please reply via email to mhurley@mcmullinarea.org. If you have any questions or need additional information, please feel free to call me at (559) 515-3339 or email me.

Very truly yours,

Matt Hurley

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Bob Pennell, Cultural Resource Director of the Table Mountain Rancheria

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

Project Name: The Aquaterra Groundwater Bank Project, Fresno County, California

Location: The Proposed Project is located on approximately 5,174 acres of agricultural land within the MAGSA management area boundary. The Proposed Project is west and southwest of the City of Fresno, east of the Fresno Slough, west of Kerman, and near Raisin City. All the land is within a primarily rural agricultural developed region. A large variety of crops are grown in the area including annual crops (e.g., peppers, onions, tomatoes, carrots), perennial crops (e.g., almonds, walnuts, pistachios, vineyards), and pasture and dairy land are also found there.

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Stanley Cox, Cultural Resources Director of the Tuolumne Band of Me-Wuk

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

Project Name: The Aquaterra Groundwater Bank Project, Fresno County, California

Location: The Proposed Project is located on approximately 5,174 acres of agricultural land within the MAGSA management area boundary. The Proposed Project is west and southwest of the City of Fresno, east of the Fresno Slough, west of Kerman, and near Raisin City. All the land is within a primarily rural agricultural developed region. A large variety of crops are grown in the area including annual crops (e.g., peppers, onions, tomatoes, carrots), perennial crops (e.g., almonds, walnuts, pistachios, vineyards), and pasture and dairy land are also found there.

BOARD OF DIRECTORS
Seat 1, Brian Pacheco • Seat 2, Don Cameron • Seat 3, Jonathon DeGroot • Seat 4, Ariel Namvar • Seat 5, Matt Abercrombie

OFFICERS
Don Cameron, Chair • Matthew Hurley, Secretary/Treasurer

- The Project overlaps with several United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle maps, Townships, Ranges, and Sections (Enclosure 1).

Proposed Project: The Proposed Project is under design. Land to be used for the groundwater bank will be a subset of the total acreage of the MAGSA management area. Farmers will voluntarily participate in this program and agricultural fields will also continue to remain active as the banking program is compatible with farming practices (e.g., planting, fallowing, harvesting). The Proposed Project is within an agricultural environment (row crops, orchards, paved roadways, water conveyance systems) that has been historically disturbed (disced, tilled) and flooded for agricultural purposes.

Cultural Resource Review to Date: A California Historical Resources Information Center records search of the Project and surrounding 0.5 mile radius was conducted via the Southern San Joaquin Valley Information Center (SSJVIC), Division of Anthropology, California State University, Bakersfield, on June 1, 2021 (Records Search File No.: 21-189) and on February 20, 2023 (File no.: 23-042. The SSJVIC records search identified 14 previously conducted cultural resource studies that overlap with the Project and 5 previously recorded historic era-built environment cultural resources that overlap with the Project. These cultural resources consist of two transmission lines, a railroad right of way, a farming community, and a water conveyance system. The built environment resources will be avoided by the Project.

A Native American Heritage Commission (NAHC) Sacred Lands File Search was requested on January 21, 2023. The NAHC responded on February 17, 2023, that the Sacred Lands File Search record search results were positive. The NAHC provided a list of tribal representatives and recommended contacting those listed for information regarding known tribal cultural resources within or near the Project (Enclosure 2).

In the time period since the previous letter was sent, our cultural resources field team has performed an archaeological survey for the Proposed Project, which resulted in the identification of five historic era archaeological sites, eight historic era isolates (glass, metal, or ceramic fragments), and four precontact isolated pieces of debitage (lithic flake). A geoarchaeological field study was recently performed and while the reporting is still in process, no significant resources were identified.

Conclusion: We respectfully request your participation in this local planning process, as tribal knowledge and participation regarding the Proposed Project is important. If you possess any information or knowledge regarding tribal cultural resources or other resources of importance to the tribe in and around the Proposed Project, please reply via email to mhurley@mcmullinarea.org. If you have any questions or need additional information, please feel free to call me at (559) 515-3339 or email me.

Very truly yours,

Matt Hurley

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Tracey Hopkins, Chairperson of the Picayune Rancheria of Chukchansi Indians

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

Project Name: The Aquaterra Groundwater Bank Project, Fresno County, California

Location: The Proposed Project is located on approximately 5,174 acres of agricultural land within the MAGSA management area boundary. The Proposed Project is west and southwest of the City of Fresno, east of the Fresno Slough, west of Kerman, and near Raisin City. All the land is within a primarily rural agricultural developed region. A large variety of crops are grown in the area including annual crops (e.g., peppers, onions, tomatoes, carrots), perennial crops (e.g., almonds, walnuts, pistachios, vineyards), and pasture and dairy land are also found there.

BOARD OF DIRECTORS
Seat 1, Brian Pacheco • Seat 2, Don Cameron • Seat 3, Jonathon DeGroot • Seat 4, Ariel Namvar • Seat 5, Matt Abercrombie

OFFICERS
Don Cameron, Chair • Matthew Hurley, Secretary/Treasurer

- The Project overlaps with several United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle maps, Townships, Ranges, and Sections (Enclosure 1).

Proposed Project: The Proposed Project is under design. Land to be used for the groundwater bank will be a subset of the total acreage of the MAGSA management area. Farmers will voluntarily participate in this program and agricultural fields will also continue to remain active as the banking program is compatible with farming practices (e.g., planting, fallowing, harvesting). The Proposed Project is within an agricultural environment (row crops, orchards, paved roadways, water conveyance systems) that has been historically disturbed (disced, tilled) and flooded for agricultural purposes.

Cultural Resource Review to Date: A California Historical Resources Information Center records search of the Project and surrounding 0.5 mile radius was conducted via the Southern San Joaquin Valley Information Center (SSJVIC), Division of Anthropology, California State University, Bakersfield, on June 1, 2021 (Records Search File No.: 21-189) and on February 20, 2023 (File no.: 23-042. The SSJVIC records search identified 14 previously conducted cultural resource studies that overlap with the Project and 5 previously recorded historic era-built environment cultural resources that overlap with the Project. These cultural resources consist of two transmission lines, a railroad right of way, a farming community, and a water conveyance system. The built environment resources will be avoided by the Project.

A Native American Heritage Commission (NAHC) Sacred Lands File Search was requested on January 21, 2023. The NAHC responded on February 17, 2023, that the Sacred Lands File Search record search results were positive. The NAHC provided a list of tribal representatives and recommended contacting those listed for information regarding known tribal cultural resources within or near the Project (Enclosure 2).

In the time period since the previous letter was sent, our cultural resources field team has performed an archaeological survey for the Proposed Project, which resulted in the identification of five historic era archaeological sites, eight historic era isolates (glass, metal, or ceramic fragments), and four precontact isolated pieces of debitage (lithic flake). A geoarchaeological field study was recently performed and while the reporting is still in process, no significant resources were identified.

Conclusion: We respectfully request your participation in this local planning process, as tribal knowledge and participation regarding the Proposed Project is important. If you possess any information or knowledge regarding tribal cultural resources or other resources of importance to the tribe in and around the Proposed Project, please reply via email to mhurley@mcmullinarea.org. If you have any questions or need additional information, please feel free to call me at (559) 515-3339 or email me.

Very truly yours,

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Ms. Airey, Tribal Historic Preservation Officer of the Picayune Rancheria of Chukchansi Indians

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Patti Dunton, Tribal Administrator of the Salinan Tribe of Monterey, San Luis Obispo Counties

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Kyle Cox, Cultural Resource Manager of the Tuolumne Band of Me-Wuk

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

Project Name: The Aquaterra Groundwater Bank Project, Fresno County, California

Location: The Proposed Project is located on approximately 5,174 acres of agricultural land within the MAGSA management area boundary. The Proposed Project is west and southwest of the City of Fresno, east of the Fresno Slough, west of Kerman, and near Raisin City. All the land is within a primarily rural agricultural developed region. A large variety of crops are grown in the area including annual crops (e.g., peppers, onions, tomatoes, carrots), perennial crops (e.g., almonds, walnuts, pistachios, vineyards), and pasture and dairy land are also found there.

BOARD OF DIRECTORS
Seat 1, Brian Pacheco • Seat 2, Don Cameron • Seat 3, Jonathon DeGroot • Seat 4, Ariel Namvar • Seat 5, Matt Abercrombie

OFFICERS
Don Cameron, Chair • Matthew Hurley, Secretary/Treasurer

- The Project overlaps with several United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle maps, Townships, Ranges, and Sections (Enclosure 1).

Proposed Project: The Proposed Project is under design. Land to be used for the groundwater bank will be a subset of the total acreage of the MAGSA management area. Farmers will voluntarily participate in this program and agricultural fields will also continue to remain active as the banking program is compatible with farming practices (e.g., planting, fallowing, harvesting). The Proposed Project is within an agricultural environment (row crops, orchards, paved roadways, water conveyance systems) that has been historically disturbed (disced, tilled) and flooded for agricultural purposes.

Cultural Resource Review to Date: A California Historical Resources Information Center records search of the Project and surrounding 0.5 mile radius was conducted via the Southern San Joaquin Valley Information Center (SSJVIC), Division of Anthropology, California State University, Bakersfield, on June 1, 2021 (Records Search File No.: 21-189) and on February 20, 2023 (File no.: 23-042. The SSJVIC records search identified 14 previously conducted cultural resource studies that overlap with the Project and 5 previously recorded historic era-built environment cultural resources that overlap with the Project. These cultural resources consist of two transmission lines, a railroad right of way, a farming community, and a water conveyance system. The built environment resources will be avoided by the Project.

A Native American Heritage Commission (NAHC) Sacred Lands File Search was requested on January 21, 2023. The NAHC responded on February 17, 2023, that the Sacred Lands File Search record search results were positive. The NAHC provided a list of tribal representatives and recommended contacting those listed for information regarding known tribal cultural resources within or near the Project (Enclosure 2).

In the time period since the previous letter was sent, our cultural resources field team has performed an archaeological survey for the Proposed Project, which resulted in the identification of five historic era archaeological sites, eight historic era isolates (glass, metal, or ceramic fragments), and four precontact isolated pieces of debitage (lithic flake). A geoarchaeological field study was recently performed and while the reporting is still in process, no significant resources were identified.

Conclusion: We respectfully request your participation in this local planning process, as tribal knowledge and participation regarding the Proposed Project is important. If you possess any information or knowledge regarding tribal cultural resources or other resources of importance to the tribe in and around the Proposed Project, please reply via email to mhurley@mcmullinarea.org. If you have any questions or need additional information, please feel free to call me at (559) 515-3339 or email me.

Very truly yours,

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Shana Powers, Cultural Director of the Santa Rosa Rancheria Tachi Yokut Tribe

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

Project Name: The Aquaterra Groundwater Bank Project, Fresno County, California

Location: The Proposed Project is located on approximately 5,174 acres of agricultural land within the MAGSA management area boundary. The Proposed Project is west and southwest of the City of Fresno, east of the Fresno Slough, west of Kerman, and near Raisin City. All the land is within a primarily rural agricultural developed region. A large variety of crops are grown in the area including annual crops (e.g., peppers, onions, tomatoes, carrots), perennial crops (e.g., almonds, walnuts, pistachios, vineyards), and pasture and dairy land are also found there.

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Benjamin Charley, Chairman of Dunlap Band of Mono Indians

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Robert Ledger, Chairperson of Dumna Wo-Wah Tribal Government

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

Project Name: The Aquaterra Groundwater Bank Project, Fresno County, California

Location: The Proposed Project is located on approximately 5,174 acres of agricultural land within the MAGSA management area boundary. The Proposed Project is west and southwest of the City of Fresno, east of the Fresno Slough, west of Kerman, and near Raisin City. All the land is within a primarily rural agricultural developed region. A large variety of crops are grown in the area including annual crops (e.g., peppers, onions, tomatoes, carrots), perennial crops (e.g., almonds, walnuts, pistachios, vineyards), and pasture and dairy land are also found there.

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Lloyd Mathiesen, Chairperson of Chicken Ranch Rancheria of Me-Wuk Indians

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

Project Name: The Aquaterra Groundwater Bank Project, Fresno County, California

Location: The Proposed Project is located on approximately 5,174 acres of agricultural land within the MAGSA management area boundary. The Proposed Project is west and southwest of the City of Fresno, east of the Fresno Slough, west of Kerman, and near Raisin City. All the land is within a primarily rural agricultural developed region. A large variety of crops are grown in the area including annual crops (e.g., peppers, onions, tomatoes, carrots), perennial crops (e.g., almonds, walnuts, pistachios, vineyards), and pasture and dairy land are also found there.

BOARD OF DIRECTORS
Seat 1, Brian Pacheco • Seat 2, Don Cameron • Seat 3, Jonathon DeGroot • Seat 4, Ariel Namvar • Seat 5, Matt Abercrombie

OFFICERS
Don Cameron, Chair • Matthew Hurley, Secretary/Treasurer

- The Project overlaps with several United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle maps, Townships, Ranges, and Sections (Enclosure 1).

Proposed Project: The Proposed Project is under design. Land to be used for the groundwater bank will be a subset of the total acreage of the MAGSA management area. Farmers will voluntarily participate in this program and agricultural fields will also continue to remain active as the banking program is compatible with farming practices (e.g., planting, fallowing, harvesting). The Proposed Project is within an agricultural environment (row crops, orchards, paved roadways, water conveyance systems) that has been historically disturbed (disced, tilled) and flooded for agricultural purposes.

Cultural Resource Review to Date: A California Historical Resources Information Center records search of the Project and surrounding 0.5 mile radius was conducted via the Southern San Joaquin Valley Information Center (SSJVIC), Division of Anthropology, California State University, Bakersfield, on June 1, 2021 (Records Search File No.: 21-189) and on February 20, 2023 (File no.: 23-042. The SSJVIC records search identified 14 previously conducted cultural resource studies that overlap with the Project and 5 previously recorded historic era-built environment cultural resources that overlap with the Project. These cultural resources consist of two transmission lines, a railroad right of way, a farming community, and a water conveyance system. The built environment resources will be avoided by the Project.

A Native American Heritage Commission (NAHC) Sacred Lands File Search was requested on January 21, 2023. The NAHC responded on February 17, 2023, that the Sacred Lands File Search record search results were positive. The NAHC provided a list of tribal representatives and recommended contacting those listed for information regarding known tribal cultural resources within or near the Project (Enclosure 2).

In the time period since the previous letter was sent, our cultural resources field team has performed an archaeological survey for the Proposed Project, which resulted in the identification of five historic era archaeological sites, eight historic era isolates (glass, metal, or ceramic fragments), and four precontact isolated pieces of debitage (lithic flake). A geoarchaeological field study was recently performed and while the reporting is still in process, no significant resources were identified.

Conclusion: We respectfully request your participation in this local planning process, as tribal knowledge and participation regarding the Proposed Project is important. If you possess any information or knowledge regarding tribal cultural resources or other resources of importance to the tribe in and around the Proposed Project, please reply via email to mhurley@mcmullinarea.org. If you have any questions or need additional information, please feel free to call me at (559) 515-3339 or email me.

Very truly yours,

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Kerri Vera, Director Department of Environmental Protection of the Tule River Indian Tribe

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Elizabeth Kipp, Chairperson of Big Sandy Rancheria of Western Mono Indians

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

Project Name: The Aquaterra Groundwater Bank Project, Fresno County, California

Location: The Proposed Project is located on approximately 5,174 acres of agricultural land within the MAGSA management area boundary. The Proposed Project is west and southwest of the City of Fresno, east of the Fresno Slough, west of Kerman, and near Raisin City. All the land is within a primarily rural agricultural developed region. A large variety of crops are grown in the area including annual crops (e.g., peppers, onions, tomatoes, carrots), perennial crops (e.g., almonds, walnuts, pistachios, vineyards), and pasture and dairy land are also found there.

BOARD OF DIRECTORS
Seat 1, Brian Pacheco • Seat 2, Don Cameron • Seat 3, Jonathon DeGroot • Seat 4, Ariel Namvar • Seat 5, Matt Abercrombie

OFFICERS
Don Cameron, Chair • Matthew Hurley, Secretary/Treasurer

- The Project overlaps with several United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle maps, Townships, Ranges, and Sections (Enclosure 1).

Proposed Project: The Proposed Project is under design. Land to be used for the groundwater bank will be a subset of the total acreage of the MAGSA management area. Farmers will voluntarily participate in this program and agricultural fields will also continue to remain active as the banking program is compatible with farming practices (e.g., planting, fallowing, harvesting). The Proposed Project is within an agricultural environment (row crops, orchards, paved roadways, water conveyance systems) that has been historically disturbed (disced, tilled) and flooded for agricultural purposes.

Cultural Resource Review to Date: A California Historical Resources Information Center records search of the Project and surrounding 0.5 mile radius was conducted via the Southern San Joaquin Valley Information Center (SSJVIC), Division of Anthropology, California State University, Bakersfield, on June 1, 2021 (Records Search File No.: 21-189) and on February 20, 2023 (File no.: 23-042. The SSJVIC records search identified 14 previously conducted cultural resource studies that overlap with the Project and 5 previously recorded historic era-built environment cultural resources that overlap with the Project. These cultural resources consist of two transmission lines, a railroad right of way, a farming community, and a water conveyance system. The built environment resources will be avoided by the Project.

A Native American Heritage Commission (NAHC) Sacred Lands File Search was requested on January 21, 2023. The NAHC responded on February 17, 2023, that the Sacred Lands File Search record search results were positive. The NAHC provided a list of tribal representatives and recommended contacting those listed for information regarding known tribal cultural resources within or near the Project (Enclosure 2).

In the time period since the previous letter was sent, our cultural resources field team has performed an archaeological survey for the Proposed Project, which resulted in the identification of five historic era archaeological sites, eight historic era isolates (glass, metal, or ceramic fragments), and four precontact isolated pieces of debitage (lithic flake). A geoarchaeological field study was recently performed and while the reporting is still in process, no significant resources were identified.

Conclusion: We respectfully request your participation in this local planning process, as tribal knowledge and participation regarding the Proposed Project is important. If you possess any information or knowledge regarding tribal cultural resources or other resources of importance to the tribe in and around the Proposed Project, please reply via email to mhurley@mcmullinarea.org. If you have any questions or need additional information, please feel free to call me at (559) 515-3339 or email me.

Very truly yours,

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Mr. Alec,

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

Project Name: The Aquaterra Groundwater Bank Project, Fresno County, California

Location: The Proposed Project is located on approximately 5,174 acres of agricultural land within the MAGSA management area boundary. The Proposed Project is west and southwest of the City of Fresno, east of the Fresno Slough, west of Kerman, and near Raisin City. All the land is within a primarily rural agricultural developed region. A large variety of crops are grown in the area including annual crops (e.g., peppers, onions, tomatoes, carrots), perennial crops (e.g., almonds, walnuts, pistachios, vineyards), and pasture and dairy land are also found there.

RE: The Proposed Aquaterra Groundwater Bank Project, Fresno County, California

Dear Ron Goode, Chairperson of the North Fork Mono Tribe

The McMullin Area Groundwater Sustainability Agency (MAGSA) is proposing to develop infrastructure to capture excess water generated during flood flows and divert it to recharge basins as part of operations of the proposed Aquaterra Groundwater Bank Project (Proposed Project). The Proposed Project will be located in Fresno County and the Kings Subbasin, all within the 120,000-acre MAGSA management area (Enclosure 1). For more information regarding MAGSA please visit https://www.mcmullinarea.org/.

MAGSA sent information letters to area tribes on January 22, 2024 to inform them of the proposed project and to request any information they would like to provide us regarding tribal resources in the project area. This letter is being sent to update you on the project and to allow you to submit comments or information. MAGSA released a draft Initial Study under the California Environmental Quality Act (CEQA) in spring of 2024 and is subsequently preparing an Environmental Impact Report, which is scheduled for release to the public in summer of 2025.

As described in our previous letter, under the proposed Project, excess water that is spilled from San Luis Reservoir and then flows into the Mendota Pool will be diverted by pipes that will export water from the edges of the Mendota Wildlife Area and the northern end of the James Bypass into recharge basins located on the eastern edge of MAGSA's management area. These diverted waters will be used for direct groundwater recharge and stored as deposits on behalf of contract water users until such time as they request that the water is withdrawn. Withdrawn water will be pumped back into the Mendota Pool during dry periods to help sustain fish and wildlife habitat and to provide water for downstream users.

Project Name: The Aquaterra Groundwater Bank Project, Fresno County, California

Location: The Proposed Project is located on approximately 5,174 acres of agricultural land within the MAGSA management area boundary. The Proposed Project is west and southwest of the City of Fresno, east of the Fresno Slough, west of Kerman, and near Raisin City. All the land is within a primarily rural agricultural developed region. A large variety of crops are grown in the area including annual crops (e.g., peppers, onions, tomatoes, carrots), perennial crops (e.g., almonds, walnuts, pistachios, vineyards), and pasture and dairy land are also found there.
