Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U122
Waste Description: FORMALDEHYDE

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

S121745644

Violation Division: Solano County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 146450
Site Name: Ramos Oil - Rio Vista
Violation Date: 12-08-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 05/24/2018.
Violation Division: Solano County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 146450
Site Name: Ramos Oil - Rio Vista
Violation Date: 02-04-2016
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description: Failure of the pressurized piping to meet one or more of the following requirements: monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour, and will restrict the flow of product through the piping or trigger an alarm when a release occurs.
Violation Notes: Returned to compliance on 02/04/2016. Corrected on site.
Violation Division: Solano County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 146450
Site Name: Ramos Oil - Rio Vista
Violation Date: 01-27-2020
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit the Business Activities Page and/or Business Owner Operator Identification Page.
Violation Notes: Returned to compliance on 03/10/2020.
Violation Division: Solano County Environmental Health
Violation Program: HMRRP

TOMS UNION 76, FORMER (Continued)

S101304668

Local Case Number: 70030
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: The site was previously used as a retail gasoline station Union 76-labeled gasoline until the removal of two 10,000 gallon USTs in 1999. A bait and tackle store called Freeport Bait and Tackle currently operates out of the former station building. As of 1999, no USTs exist at the site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 08/15/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/17/2022	Telephone: 703-603-0695
Date Made Active in Reports: 10/24/2022	Last EDR Contact: 11/16/2022
Number of Days to Update: 68	Next Scheduled EDR Contact: 03/06/2023
	Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

TPH-g	Total petroleum hydrocarbons as gasoline

1.0 EXECUTIVE SUMMARY

The Gordon Hanson Site (Site) is located at 135 North Front Street, Rio Vista, California. The site is owned by Mr. Everett Upham who is the currently identified Responsible Party. Mr. Upham received a directive letter dated April 24, 2017 from Solano County Department of Resource Management (SCDRM) directing Mr. Upham to conduct additional site assessment investigative work at the site under and adjacent to his building (Appendix 1). Data gaps existing at the Site at that time precluded closure consideration using State of California Water Resource Control Board (SWRCB) Low Threat Closure Program (LTCP) criteria.

Stephen G. Muir Consulting Geologist and Geophysicist (Muir) conducted a soil and soil gas subsurface investigation of the area at the Gordon Hanson property that was under the Upham building during the time period of August to October 2017 for Everett Upham. The main objectives of the 2017 investigation were to: (1) Determine if areas under the building cement slab floor and along the sides of Warehouse #3 contained petroleum hydrocarbons in shallow soil above a depth of 5 feet bgs and; (2) Determine if volatile organic compound (VOC) concentrations in shallow soil gas in targeted areas at the Gordon Hanson site have total petroleum hydrocarbon (TPH) concentrations greater than 100 milligrams per kilogram (mg/kg) present at depths of less than five feet below ground surface (bgs).

The information obtained from this investigation is designed to provide additional subsurface soil and soil gas analytical information that may allow the site to be further evaluated for potential site closure consideration using LTCP criteria.

Four hand augur soil borings were advanced through the building cement slab and into the subsurface to a maximum of 4.5 feet during August 2017. The cement slab was found to be approximately 8 to 10 inches thick where the soil borings were drilled.

An additional three hand augur soil borings were advanced to depths of 2.5 to 4.5 feet into the site soil outside of the building foot print but immediately adjacent to the building. One soil

sample was collected from each of the soil borings. All seven soil borings were completed as temporary shallow soil gas wells with traffic boxes in accordance with procedures described in the California Environmental Protection Agency (Cal-EPA) Department of Toxic Substances Control (DTSC) *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion into Indoor Air* dated April, 2012 except for Soil Gas Well GH-SB17-6 that was not completed because of shallow groundwater at 2.5 feet bgs. The traffic boxes were designed to allow for multiple or repeated soil gas sampling events in the future.

The soil samples collected from the seven soil borings were submitted to Pace Analytical Services, LLC (Pace) laboratory in Sacramento, California under chain of custody and analyzed by USEPA Test method 8015M for total petroleum hydrocarbons as TPH-motor oil and TPH-diesel and USEPA Test Method 8260B for volatile organic compounds.

Subslab soil gas samples were collected on October 20, 2017 from five of the seven onsite soil gas wells using DTSC *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion into Indoor Air* dated April 2012 procedures. Soil gas wells GH-17-4 and GH-17-6 were found to have submerged soil gas implants during the vapor purging effort. The ground water level had apparently risen sufficiently to flood the filter pack sand in both of these vapor wells since the wells were established in August 2017.

Two surface air samples (Ambient Air #1 and Indoor Air Sample #1) were also collected on October 20, 2017. Ambient Air #1 was placed outside the office area of the building. Indoor Air Sample #1 (IAS-1) was placed adjacent to chemical and paint storage area within 10 feet of the location of GH-SB17-5.

Seven air samples were collected using 1liter Summa canisters. An untouched 1 liter Summa canister was used as a trip blank. All eight Summa canisters were delivered under chain of custody forms to Eurofins-Air Toxics laboratory in Folsom, California for analysis by USEPA Test Method TO-15 plus TPH-gasoline.

The soil sample analytical results reported by Pace Analytical from soil borings GH-SB17-1, -3, -4, -5, -6 and -7 soil samples were all reported to contain concentrations of TPH greater than 100 mg/kg that were collected from depths less than five feet below ground surface or cement slab surface. An area of at least 1,800 square feet in areal extent has TPH hydrocarbon concentrations in soil that exceed 100 mg/kg was identified to be present beneath the Gordon Hanson building. Most of this area has elevated TPH motor oil and diesel constituents in the soil column but there are also TPH-gasoline at elevation levels in the soil.

The analytical laboratory report from Eurofins-Airtoxics reported five sub-slab air samples, a single indoor air sample and a single ambient air sample. An unused trip blank was also included as with the Summa canisters.

The results of the sub-slab air samples were reported as follow regarding maximum concentrations:

- GH-SG1: No analytes were reported that exceeded Tier 1 ESLs or Non-Cancer/Industrial concentrations.
- GH-SG2: Cis-1,3-Bromodichloromethane was reported at a concentration of 25 µg/m³ and exceeded the Tier 1 sub-slab concentration of 2.5µg/m³.
- GH-SG3. No analytes were reported that exceeded Tier 1 ESLs or Non-Cancer/Industrial concentrations.
- GH-SG5. The following analytes were reported that exceeded sub-slab Tier 1 ESLs: bromomethane (<17,000 µg/m³); 1,2-Dichloroethene (<4,300 µg/m³); Carbon Tetrachloride (<6900 µg/m³); Benzene (88,000 µg/m³); 1,2-Dichloroethane (<4,400 µg/m³); Trichloroethene (<5,900 µg/m³); 1,2-Dichloropropane (<5,100 µg/m³); 1,4-Dioxane (<16,000 µg/m³); Cis-1,3-Dichloropropene (<5,000 µg/m³); Toluene (<23,000 µg/m³); 1,1,2-Trichloroethane µg/m³); Tetrachloroethene (<7,400 µg/m³); Ethyl Benzene (15,000 µg/m³); m,p-Xylene (45,000 µg/m³); 1,2,4-Trichlorobenzene (<32,000 µg/m³); Hexachlorobutadiene (<47,000 µg/m³); Napthalene (<23,000 µg/m³); TPH-gasoline (88,000,000 µg/m³).

Note: The underlined constituents have analytical laboratory high detection limits

and may not actually exceed ESLs.

GH-SG7. No analytes were reported that exceeded Tier 1 ESLs or Non-Cancer/Industrial concentrations.

GH-IAS-1 The indoor air sample was found to not exceed Tier 1 concentrations for commercial indoor air.

GH-Ambient #1 The ambient air sample reported all TO-15 analytes concentrations were below analytical method detection limits.

Conclusions of the investigation include:

1. An area of approximately 1,800 square feet beneath the Gordon Hanson building was defined as exceeding 100 mg/kg in shallow soil that was less than 5 feet below ground or slab surface.
2. An area of approximately 800 square feet beneath the Gordon Hanson building was defined by soil gas analytical results that exceeded Tier 1 sub-slab soil gas concentrations.
3. Additional shallow soil sampling should be conducted in the southeast portion of the Gordon Hanson property where it has not been historically sampled soil petroleum hydrocarbons in the shallow subsurface. This area of the site probably has groundwater elevations that are within several feet of the ground surface but is relatively close to the west bank of the Sacramento River.

Recommendations include:

1. Consider conducting an SVE pilot test using a horizontal SVE piping system below the cement slab of the Gordon Hanson building. Because of the limited extent of the greater than 100 mg/kg TPH contaminated soil a horizontal system may be the most cost effective manner to reduce petroleum hydrocarbon concentrations in the subsurface to below concentrations that may allow LTCP criteria consideration to be reevaluated.
2. Continue annual ground water monitoring of the groundwater monitoring wells on site.
3. Consider replacement of GH-MW4 to help define northern extent of petroleum hydrocarbon plume in groundwater.

2.0 INTRODUCTION

2.1 Project History

The Gordon Hanson Site is located in north central California and is contained within the Sacramento River Groundwater Basin and the Solano Groundwater Subbasin (Figures 1 and 2). Mr. Everett Upham is the current property owner and purchased the property in 2002. Mr. Upham is the identified Responsible Party for the current petroleum hydrocarbon soil and groundwater plume present on his property .

Figure 3 is a site location map showing the location of the City of Rio Vista. Figure 4 is a topographic map of the site and immediate surrounding area. Ground elevations at the site range from approximately 8.5 to 13 feet mean sea level (msl). The site is bordered by Logan Street to the north, North Front Street to the west, an unnamed ally to the south, and the Sacramento River to the east (Figure 5).

The address of the Gordon Hanson site is 135 North Front Street, and is located within the city limits of Rio Vista, Solano County, California (Figure 5). The Gordon Hanson site address has been previously reported erroneously as 101 North Front Street in previous reports and by Solano County Department of Resource Management (SCDRM). The Gordon Hanson site is comprised of two (2) Solano County Assessor's parcel numbers identified as Solano County APN-178-13-01 and 178-13-02. The parcels are contiguous and form a 0.7 acre site.

The City of Rio Vista is shown as owner of North Front Street, Logan Street and the unnamed ally located south of the Gordon Hanson site and in between APN. 178-13-001 and 178-13-003.

The Gordon Hanson site currently contains one building identified as Warehouse #3 (Figure 5). APN 178-13-002 previously had a wood frame warehouse or storage building with a dirt floor that was demolished in the early 1980s.

The Gordon Hanson site previously contained a third parcel (APN 178-13-03) that is located at a street address of 101 North Front Street (Figure 5) . This property was sold to a third party in 2020.

Underground Storage Tanks

Three unknown subsurface objects were identified within the sidewalk located in front of the 135 North Front Street property during a 1996 site Phase 1 environmental inspection (Harding Lawson and Associates (HLA), 1996). The HLA report identified the three objects as possible fuel spouts that were potentially related to onsite underground fuel storage tanks (UST's). No UST were ever identified to have been registered or operated at the site before or during the Gordon Hanson property ownership period from 1976 to 2002. Everett Upham purchased the property in 2002 from the Gordon Hanson Company.

Historical Investigative Work

Initial investigative work was conducted by James J. Hoblitzell and Associates (JHA) for Everett Upham during April 2002 that reportedly included exploratory excavation and the subsequent confirmation of the presence of three USTs by direct investigation. Two single wall 500-gallon and one 1000-gallon UST were found to be present during the JHA April, 2002 investigation. Both of the 500 gallon USTs were reportedly located on either side of the 1,000- gallon UST (Figure 5). After confirmation of the presence of the USTs a permit for their removal was obtained from SCDRM in 2002.

Soil samples were collected from each end of the USTs approximately one and a half foot below the base of each UST during the removals. A groundwater grab sample was also collected from the center of the tank pit from the accumulated groundwater.

Analytical laboratory results indicated elevated concentrations of TPH-Gas (2,100 mg/kg) and TPH-Diesel (880 mg/kg) to be present in the soil samples collected from the tank excavation. A petroleum sheen was reportedly observed on the groundwater surface within the excavation during the tank removals. Analytical laboratory results from the grab water sample collected

from the tank excavation were reported to contain 24,000 micrograms/liter ($\mu\text{g/l}$) as TPH-D and 7,900 $\mu\text{g/l}$ as TPH-Gas. In addition, total lead was reported to be present at a concentration of 140 $\mu\text{g/l}$ in the groundwater grab sample.

The petroleum hydrocarbon contaminated soil was reportedly excavated by JHC for the UST removal was stockpiled in the excavation and subsequently removed from the site during January 2003. Verification soil sampling was reportedly conducted within the UST excavation sidewalls after the tanks were removed. Soil samples were reported to contain TPH-D at 230 mg/kg and TPH-Gas at 1,100 mg/kg.

An Unauthorized Release Form was initiated by SCDRM staff on May 2, 2002. SCDRM subsequently directed that the Gordon Hanson Company conduct a site assessment investigation to determine the nature and extent of petroleum hydrocarbons in the site soil and groundwater.

Site assessment work was conducted by John Cummings and Associates (JCA) during 2003 and 2004. This work included the drilling and completion of three onsite groundwater monitoring wells (GH-MW1, 2 and 3). JCA also conducted a soil survey using Goresorbers provided by W. L. Gore Company in 2004. A map of TPH soil gas concentrations is shown as Figure 6 in this report. The maximum concentrations of TPH soil gas anomalies are located at the intersection of North Front Street and Logan Street and an area north of Warehouse #3 adjacent to the former Shell Oil Company terminal property.

Stephen G. Muir Consulting Geologist and Geophysicist was retained to complete the site assessment investigative activities during June 2004. A site assessment workplan, dated July 5, 2004, was submitted to SCDRM for review and approval. SCDRM approved the workplan on July 14, 2004. Investigations that included soil borings and groundwater monitoring wells were completed by Muir from 2005 to 2017. Groundwater monitoring has been conducted since 2003 at the site. A total of 30 monitoring events have been conducted at the site to date.

2.2 Past Property Ownership and Tenant History

The ownership of the property was researched using both historical title reports and persons knowledgeable about early California historical development of Rio Vista. The property history dates back to the 1860's when it was jointly owned by the McWorthy and Gardiner families. The property was known at the time as the Pine and Palmer Warehouse. The main building was reportedly part of the grain warehouse storage buildings during the 1870's to 1880's.

The Ish family owned the property from an unknown period during the 1890's until 1975 when it was sold to the Gordon Hansen Company, Inc. In 2004, the property was sold to Everett Upham.

Parcel Use History

The use history of the property has been as a warehouse used by Pine and Palmer Warehouses (1870's to 1880's) and as a storage warehouse used by California Transportation Company (1880's to 1929). During the 1930's and 1940's the property was reportedly operated as a service station (Roy Ish Service Station). It is believed that the three underground fuel storage tanks were placed into service and operated during the 1930's and 1940's by the Ish Service Station business.

According to knowledgeable long-time residents, the fuel pumps were removed after Ish Service Station closed operations in 1955 and the site became operated as the Bauman Motor Company (reportedly owned by Jack Bauman). During this time period no identified fuel storage or sales occurred according to knowledgeable residents. The tanks would not have been used to store fuel because no pumps were reportedly present.

Bauman Motor Company reportedly operated the property from about 1955 until 1963. Wallace Ford occupied the property from 1963 to 1966. Rex Smith Ford reportedly operated the property from 1968 to 1983. M & G Welding (Mike Lopez) reportedly occupied the front portion of the site from about 1970 to 1980. In 1980, the Gordon Hanson Company occupied the total site and

used it to store equipment and conduct maintenance.

The site is contained within the downtown section of Rio Vista. This portion of Rio Vista has existed as a heavy-industry area for well over 160 years.

Sanborn Fire Insurance Maps

The Sanborn fire insurance map catalog was reviewed for the available years covering the site in Rio Vista. Sanborn maps for the site were available for the following years: 1896, 1908, 1921, and 1946 (Muir, 2005). The 1896 Sanborn map indicates that a swamp occupied the northwest portion of the site along Front Street. The southeastern portion of the site along the Sacramento River was occupied by a wharf in the south built around a grain warehouse owned by the California Transportation Company. The northeast portion of the site was the J. H. Gardiner's grain warehouse. Both buildings were reportedly open underneath and built on posts six feet above the ground to allow rising flood water from damaging the structure or contents.

A planked drive extended from Front Street to the wharf. Small dwellings were located across Front Street to the north and to the northeast of the Gordon Hansen site (Muir, 2005).

In 1908, both warehouses and the wharf were still present onsite. The Arcata Creamery, with an above ground fuel tank and dispenser, was reportedly present along Front Street and located to the southwest of the Gordon Hanson site. The dispenser straddled what would today be the boundary with Sacramento Street. A dwelling was present onsite along Front Street to the north of the site. In the southwest portion of the site, across the future location of Sacramento Street and along the Sacramento River, a crude oil tank was reported to be present (Muir, 2005). The same dwellings that were present on the Gordon Hanson site and west of and across Front Street from the Gordon Hanson site were still present in 1908.

In 1926 the wharf had been extended along the Sacramento River to the northeastern property boundary and the plank drive widened and extended to Front Street (Muir, 2005). Both open warehouses and the dwelling along Front Street were present onsite.

Three Standard Oil Company steel, 10,000 gallon or larger above-ground, oil storage tanks (ASTs), were reported to be present to the southwest of the Gordon Hanson Site across Sacramento Street (33 North Front Street) (Muir, 2005). The Standard Oil Company ASTs were located about halfway between the Sacramento River and Front Street. Also present near the Sacramento River were two buildings (truck storage and oil storage), a storage building along Sacramento Street, and a building consisting of three offices on the corner of Sacramento and Front Streets (Muir, 2005).

Two Shell Oil Company 10,000 gallon or larger ASTs and a garage were reportedly present north of the site across Logan Street in 1926 (Muir, 2005). This site has an unknown street address and is within the 200 block of North Front Street. A probable dispenser or filling location was also found to be present about 15 feet south of the ASTs, straddling the northeast edge of Logan Street (Muir, 2005). The Arcata Creamery and the crude oil tank reported to be present in 1908 were reportedly no longer present. Northwest of the intersection of Logan and Front Street to the north of the Site, the Kerner Motor Company auto sales and service facility was present (Muir, 2005).

In 1941, a tractor sales and service facility (northern portion of Warehouse #1) was present along North Front Street at the Gordon Hanson site (Muir, 2005). An auto sales and repair building (northern part of Warehouse #3) replaced the dwelling along Front Street. A fourth Standard Oil Company AST and an oil pump are also reported to be present across Sacramento Street to the southwest of the Site (33 North Front Street) (Muir, 2005). A third Shell Oil AST and an oil pump are reported to be present adjacent to the other two ASTs (present in the 1926 map) across Logan Street to the northeast of the Gordon Hanson site (Muir, 2005). The auto sales and service facility on the north corner of the intersection of North Front Street and Logan Street was reportedly named the Thor-Kofod Motor Company (Muir, 2005).

No Sanborn maps were found to be available after the 1941 map.

3.0 SCOPE OF WORK

3.1 Workplan Submission

A workplan was submitted to SCDRM on July 18, 2017 that included: (1) descriptions of how soil samples will be obtained from soil borings beneath the building concrete slab at 135 North Front Street and surrounding area outside the building (2) installation of soil gas wells; (3) collection of soil gas samples; (4) analytical laboratory methods to identify petroleum hydrocarbon constituents within the soil and soil gas samples and; (5) preparation of a report of findings. A Health and Safety Plan was followed that had been previously reviewed and approved by SCDRM in 2005. SCDRM approved the Soil and Soil Gas Investigation workplan in a letter addressed to Everett Upham dated July 20, 2017 (Appendix 1).

The soil and soil gas investigation report was prepared in accordance with the RWQCB-Central Valley Region guidelines for investigations of UST sites.

3.2 Soil Boring Advancement

The Third Quarter 2017 groundwater monitoring report for the Gordon Hanson site was conducted on July 27, 2017. The groundwater depths at the Gordon Hanson site were reviewed to determine where to place the soil borings outside of the building and to best avoid shallow groundwater conditions.

Prior to drilling any borings Underground Service Alert (USA) of Northern California was notified to clear the soil boring sites located outside the building. No utility conflicts were reported to exist with the soil borings.

On August 18, 21, 22 and 23, 2017 soil borings GH-SB17-1, -2, -3, -4, -5 and -7 were drilled and completed as shallow soil vapor wells. GH-SB17-6 was drilled and had a soil sample collected but was not completed as a soil gas well because of the presence of a very shallow groundwater table.

A concrete coring contractor was used to cut 8-inch diameter holes in the interior portion of the building where the concrete slab was present. The concrete slab was determined to range in thickness from 8 to 10 inches. Artificial fill comprised of fine-grained sand was present below the concrete slab.

The soil borings were advanced using a 4-inch diameter hand augur that advanced the borings to depths of 2.5 to 4.5 feet bgs. The soil borings were planned in advance to not be completed within the groundwater table. Soil conditions encountered in each boring were identified using the Unified Soil Classification System (Table 1). Soil samples collected were logged for lithology by a California-licensed professional geologist. Pertinent information for each soil boring is tabulated in Table 2.

3.3 Soil Sample Collection

Soil samples were collected from the borings using a 2-inch diameter drive hammer connected to a sampler. Individual soil samples were collected in 2-inch diameter brass sleeves that were 6-inches long. Appendix 2 and 3 describe the soil sampling procedures and sample handling procedures used for this investigation.

A calibrated Mini-Rae 3000 PID (#2190) was used to determine volatile organic compound (VOC) concentrations. All cuttings were drummed in 55-gallon USDOT drums and labeled and maintained onsite pending disposal evaluation.

All soil samples collected were logged into a manifest and were submitted to Pace Analytical LLC, Sacramento, California under sample handling procedures outlined in Appendix 3. All soil samples were analyzed for: TPH-gas, benzene, ethylbenzene, toluene and xylene (BTEX), MTBE, 5-oxygenated compounds, lead scavengers and naphthalene by USEPA Test Method 8260B. All soil samples were also analyzed for TPH-d and motor oil by USEPA Test Method 8015M.

3.4 Vapor Point Installation

All of the soil borings (except GH-SB17-6) were converted to soil gas wells in general accordance with the Department of Toxic Substances Control (DTSC) *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* dated April 2012. expendable soil gas implant probe at the bottom of each soil boring were be connected to a ¼-inch diameter polyethylene tubing that extended to the top of the ground surface plus an additional one foot. The soil gas implant probe was lowered to the bottom of the soil boring while the open end of the tubing was held above the ground surface.

A filter pack of #212 Monterey sand was placed in the base of the boring to approximately one half foot above and below the probe implant. Total filter pack thickness was 1.0 foot with the probe centered within the filter pack. A ½ foot interval of dry bentonite crumbles were placed above the sand filter pack. Bentonite slurry grout was placed on top of the dry bentonite crumble layer to the center of the traffic box. The traffic box for each soil gas well was kept in place using cement outside of the traffic box. Sufficient room was left inside the traffic box to secure the tubing inside the box. A metal end point was placed on the tubing end. Appendix 4 contains soil gas well completion logs. Appendix 5 presents photographs of the Soil Gas Wells.

The void space within the 1-foot thick sandpack within each soil gas well was calculated to be approximately 650 ml when using dry Monterey #212 sand.

3.5 Soil Vapor Sample Collection

Muir retained Advanced Geo-Environmental, Stockton, California to provide soil gas sampling services at the Gordon Hanson site during October 20, 2017. The soil gas wells and an Ambient Air #1 and Indoor Air Sample #1 were collected. A soil gas blank was also provided which made for a total of eight Summa canisters provided by Eurofins-Airtoxics.

The SCDRM-approved workplan called for 6-liter Summa canisters to be used. However, Eurofins-Airtoxics Folsom laboratory did not have sufficient numbers of 6-liter Summa canisters

available and subsequently Muir only used the 1-liter Summa canisters provided.

A syringe was attached to the polyethylene tubing at the surface at each soil gas well and was used to draw soil gas through the tubing to purge the tubing prior to gas sample collection. A minimum of approximately 3 volumes of air filling the pore space of the filter pack was withdrawn from each soil gas well prior to sampling.

Once the soil gas wellbore and tubing had been purged a tightness test of the sampling train was conducted. The sampling train was tested in order to insure that a reliable soil-vapor sample was collected with no ambient air breakthrough down the tubing or into the fittings of the sampling equipment. All sample points passed a five-minute tightness test.

A flow regulator that limited the volume of air sample to be collected to 200 ml/minute was used. The AGE personnel placed an shroud enclosure over each vapor point to be sampled, using a clear plastic box with sufficient size to contain the sampling train. A metal bowl was placed under the clear plastic box and was filled with cotton balls that had been saturated with isopropyl alcohol acting as a gas tracer. The liquid alcohol was exposed to the air inside the enclosure, allowing the alcohol to volatilize and be in contact with the sampling equipment during operation.

The 1-liter Summa cannister was connected to the tubing within the shroud and a soil gas sample was collected at each sample point. The time and vacuum readings from each Summa canister were recorded. The sample label for each Summa canister was filled out on the chain of custody form along with the Summa canister and soil gas sample regulator. This information was provided with each Summa canister sample identification and delivered under chain-of-custody procedures to Eurofins, Folsom, California, a California certified laboratory for analyses.

3.6 Equipment Decontamination

Soil sampling equipment and hand auger pieces were thoroughly cleaned between each boring using laboratory-grade, non-phosphate detergent and hydrocarbon-free water and double rinsed with hydrocarbon-free water. The rinsate from this activity was placed in a 55-gallon drum, labeled and retained on site pending proper disposition.

4.0 FINDINGS

Past and current boring logs were utilized to prepare two cross-sections through the Gordon Hanson site. Table 3 presents a cumulative tabulation of soil sample data. Figure 9 depicts the past soil borings, monitoring well locations and soil sample locations. Figures 10 and 11 are cross sections A-A' and B-B'. The hydrocarbon-impact to subsurface soils was inferred from laboratory analysis of soil and soil-vapor samples, and from field observations.

4.1 Soil Profile

I

n general the following soils were encountered at the Gordon Hanson site: (1) dry to moist silty fine sand (artificial fill) to a depth of 4.5 feet bgs encountered in soil borings GH-SB17-1, -2, -3, 4, -5 and -7 to a depth of 4.5 feet bgs. Moist to very moist fine to medium grained sand was encountered in GH-SB17-6. Soil boring logs are presented for the seven borings in Appendix 4. Geologic cross-sections A-A' and B-B' are presented in Figures 10 and 11.

4.2 Analytical Laboratory Results of Soil Samples

Table 3 tabulates soil sample analytical laboratory results for all of the soil borings.

A total of seven soil samples were submitted to Pace Analytical by Muir. These samples were analyzed by USEPA Test method 8015M for total petroleum hydrocarbons, TPH-motor oil, TPH-diesel and USEPA Test Method 8260B for volatile organic compounds. Pace Analytical provided report 1295337 dated September 5, 2017 to Muir which is included as Appendix 6. The soil sample analytical results reported by Pace Analytical are tabulated in Table 3.

Soil samples from soil borings GH-SB17-1, -3, -4, -5, -6 and -7 were all reported to contain concentrations of TPH greater than 100 mg/kg that were collected from depths less than five feet below ground surface or cement slab surface. An area of at least 1,800 square feet in areal extent with TPH hydrocarbon concentrations exceeding 100 mg/kg was identified to be present beneath the Gordon Hanson building.

4.3 Analytical Laboratory Results of Soil Gas Samples

A total of five sub-slab soil-gas samples were collected from soil gas wells along with an indoor air sample, an outdoor ambient air sample and a lab blank sample. All eight samples were collected in 1-liter Summa canisters and delivered to Eurofins Airtoxics, Folsom, California laboratory. An initial report was issued to Muir on 11/06/2017 that did not include analysis of TPH-Gas. A final soil gas sample analytical report #1710414R2 was issued by Eurofins-Airtoxics to Muir on January 4, 2018 that did include TPH-Gas. A copy of the analytical laboratory report is presented in Appendix 7.

The results of the sub-slab air samples were reported the following results:

- GH-SG1: No analytes were reported that exceeded Tier 1 ESLs or Non-Cancer/Industrial concentrations.
- GH-SG2: cis-1,3-Bromodichloromethane was reported at a concentration of 25 µg/m³ and exceeded the Tier 1 sub-slab concentration of 2.5 µg/m³.
- GH-SG3. No analytes were reported that exceeded Tier 1 ESLs or Non-Cancer/Industrial concentrations.
- GH-SG5. The following analytes were reported that potentially exceeded sub-slab Tier 1 ESLs: bromomethane (<17,000 µg/m³); 1,2-Dichloroethene (<4,300 µg/m³); Carbon Tetrachloride (<6900 µg/m³); Benzene (88,000 µg/m³); 1,2-Dichloroethane (<4,400 µg/m³); Trichloroethene (<5,900 µg/m³); 1,2-Dichloropropane (<5,100 µg/m³); 1,4-Dioxane (<16,000 µg/m³); cis-1,3-Dichloropropene (<5,000 µg/m³); Toluene (<23,000 µg/m³); 1,1,2-Trichloroethane µg/m³); Tetrachloroethene (<7,400 µg/m³); Ethyl Benzene (15,000 µg/m³); m,p-Xylene ((45,000 µg/m³); 1,2,4-Trichlorobenzene (<32,000 µg/m³); Hexachlorobutadiene (<47,000 µg/m³); Napthalene (<23,000 µg/m³); TPH-gasoline (88,000,000 µg/m³).
- GH-SG7. No analytes were reported that exceeded Tier 1 ESLs or Non-Cancer/Industrial concentrations.

GH-IAS-1 The indoor air sample was found to not exceed Tier 1 concentrations for commercial indoor air.

GH-Ambient #1 The ambient air sample reported all TO-15 analytes concentrations were below analytical method detection limits.

4.4 Vapor Intrusion Potential Evaluation

To determine a potential health risk from soil vapor intrusion the California Regional Water Quality Control Board, Region 2, Environmental Screening Levels (ESLs) from the current version tables with a use date of January, 2019 for commercial exposure were reviewed.

The soil vapor concentrations of soil gas samples collected from sub-slab soil gas wells GH-SB17-1, -2, -3, -4, -6, and -7 are presented in Table 4. Indoor Air Sample (IAS-1) and Ambient Air Sample 1 (Ambient Air 1) were also reviewed.

Soil Gas Well Constituent

GH-SG1: Chloroform
Ethanol
Tetrahydrofuran
Toluene
Xylene

GH-SG2: Bromodichloromethane
Chloroform
Ethanol
Tetrahydrofuran
Xylene

GH-SG3: Ethanol
Tetrahydrofuran
Xylene

Soil Gas Well Constituent

GH-SG4: None

GH-SG5: Benzene
 Ethylbenzene
 Toluene
 Xylene
 Total Petroleum Hydrocarbon as Gasoline

GH-SG7: Chloroform
 Ethanol
 Tetrahydrofuran
 Toluene
 Xylene

IAS-1: Acetone
 Ethanol
 Toluene
 Xylene

Ambient Air1 No detections

The area around soil gas well GH-17-5 appears to have the highest concentrations of petroleum hydrocarbons and volatile organic compounds.

4.5 Geotracker Data Submission

A .pdf image of this report has been submitted to the California State Water Resources Control Board (SWRCB) -Geotracker website site in electronic format. The electronic data will be entered into the SWRCB Geotracker website for Site # T0609576083.

5.0 CONCLUSIONS

1. An area of approximately 1,800 square feet beneath the Gordon Hanson building was defined by subslab soil samples shallower than five feet bgs as exceeding a concentration of TPH over 100 mg/kg.
2. An area of approximately 800 square feet beneath the Gordon Hanson building was defined by soil gas analytical results that exceeded Tier 1 sub-slab soil gas concentrations.
3. Additional shallow soil sampling should be considered to be conducted in the southeast portion of the Gordon Hanson property that has not been sampled. However, this area has shallow groundwater that will prevent any soil gas sampling.

6.0 RECOMMENDATIONS

1. Consider conducting an SVE pilot test using a horizontal SVE piping system below the cement slab of the Gordon Hanson building centered around GH-SB17-5. Because of the limited extent of the greater than 100 mg/kg TPH contaminated soil a horizontal system may be the most cost effective manner to reduce petroleum hydrocarbon concentrations in the subsurface to below concentrations that may allow LTCP criteria consideration to be reevaluated.
2. Continue annual ground water monitoring of the groundwater monitoring wells on site.
3. Consider replacement of GH-MW4 to help define northern extent of petroleum hydrocarbon plume in groundwater.

7.0 LIMITATIONS AND PROFESSIONAL SIGNATURE

The work summarized or proposed in this document is for the sole use of Mr. Everett Upham. Any reliance on this report or data contained therein by a third party is at such party's own sole risk. Others who seek to rely on the findings have a duty to determine the adequacy of the report for their intended use, time, and location.

Stephen G. Muir Consulting Geologist & Geophysicist makes no warranties or guarantees as to the accuracy or completeness of information provided or compiled by others and used by Mr. Everett Upham. It is possible that information exists beyond the scope of this investigation. As with all subsurface soil and groundwater sampling, there is no guarantee that the work conducted has identified any and all sources or locations of petroleum hydrocarbons or other hazardous substances or chemicals in the soil or groundwater.

This document is issued with the understanding that Mr. Everett Upham is responsible for ensuring the information contained in this report is brought to the attention of the appropriate regulatory agency, if any. Also, changes in Site use may have occurred sometime in the past or during the course of the investigation due to variations in rainfall, temperature, water usage, economic, agricultural, or other factors. Additional information that was not found or available to Stephen G. Muir Consulting Geologist & Geophysicist at the time of the preparation of this report may result in a modification of the conclusions presented. This report is not a legal opinion.

Stephen G. Muir Consulting Geologist & Geophysicist has strived to perform his services in a proper and professional manner with reasonable care and competence, but is not infallible. Stephen G. Muir Consulting Geologist & Geophysicist is unable to eliminate all risk or to provide insurance. Therefore, Stephen G. Muir Consulting Geologist & Geophysicist is unable to guarantee or warrant the results of the work. Stephen G. Muir's Consulting Geologist & Geophysicist professional services were performed consistent with generally-accepted environmental assessment principles and practices in California at the time the services were performed. This warranty is in lieu of all other warranties, either expressed or implied.

If you have any questions please do not hesitate to contact me at (209) 369-9421. Thank you very much.

Sincerely,

Stephen G. Muir

Professional Geologist #3769

TABLES

UNIFIED SOIL CLASSIFICATION

PT	OH	CH	MH	OL	CL	ML	SC	SM	SP	SW	GC	GM	GP	GW
Highly organic soils	Silts and clays Liquid limit greater than 50			Silts and clays Liquid limit less than 50			Sands with fines > 12% fines	Clean sands < 5% fines	Gravels with fines > 12% fines		Clean gravels < 5% fines			
							Sands - more than 50% of coarse fraction is smaller than No. 4 sieve		Gravels - more than 50% of coarse fraction is larger than No. 4 sieve					
Fine grained soils (More than 50% is smaller than No. 200 sieve)							Coarse grained soils (More than 50% is larger than No. 200 sieve)							

LABORATORY CLASSIFICATION CRITERIA

GW and SW-C_u $\frac{D_{60}}{D_{10}}$ greater than 4 for GW & 6 for SW: C_c = $\frac{(D_{30})^2}{D_{10} \times D_{60}}$ between 1 & 3.

GP and SP-Clean gravel or sand not meeting requirements for GW & SW.
GM and SM-Atterberg limits below "A" line or P.I. less than 4.

GC and SC-Atterberg limits above "A" line with P.I. greater than 7.

Fines (silt or clay)	Fine sand	Medium sand	Coarse sand	Fine gravel	Coarse gravel	Cobbles	Boulders
Sieve Sizes	200	9	10	4	3/4	3	10

Classification of Earth materials shown on this sheet is based on field inspection and should not be construed to imply laboratory analysis so stated.

MATERIAL SYMBOLS

	Gravel		Peat or organic matter
	Sand		Fill material
	Silt		Shale
	Clay		Sandstone
	Sandy clay or clayey sand		Limestone
	Sandy silt or silty sand		Metamorphic rock
	Silty clay or clayey silt		Igneous rock

CONSISTENCY CLASSIFICATION FOR SOILS

According to the Standard Penetration Test

No. of Blows	Granular	No. of Blows	Cohesive
0-4	Very loose	< 2	Very soft
5-10	Loose	3-4	Soft
11-20	Semicompact	5-8	Medium
21-30	Compact	9-15	Stiff
31-50	Dense	16-30	Very stiff
> 50	Very dense	> 30	Hard

Where standard penetration test has not been performed, consistencies shown on logs are estimated.

Table 2 Tabulation of Soil Boring and Monitoring Well Details
Gordon Hansen Site, 135 North Front Street, Rio Vista

Soil Boring or Monitoring Well	Date Drilled	Total Depth (feet bgs)	Drilling Method and Rationale for Placement	Summary
B-1	11/11/2003	11.0	Hollow stem augur boring. Placement at NE corner Front Street and Montezuma Street. Background investigation.	Minor TPH-d discovered at 5.0' bgs.
B-2	11/11/2003	6.5	Hollow stem augur boring. Placement at intersection of Montezuma Street and Sacramento River. Background investigation.	Minor TPH-d discovered at 5.0' bgs
B-3	11/11/2003	6.5	Hollow stem augur boring. Placement at intersection of alley and Sacramento River. Background investigation.	Minor TPH-d discovered at 5.0' bgs
B-4	11/11/2003	16.5	Hollow stem augur boring. Placement at intersection of Front Street and alley. Background investigation.	Significant TPH-g and TPH-d discovered at 5.0' bgs
B-5	11/11/2003	8.0	Hollow stem augur boring. Placement at intersection of Logan Street and Sacramento River. Background investigation.	Significant TPH-g discovered at 5.0' bgs
MW1	11/11/2003	15.5	Hollow stem augur, down-gradient of UST locations, confirms minimum horizontal identification of groundwater petroleum hydrocarbon contamination	No indication of petroleum hydrocarbon contamination reported in boring or in analytical samples.
MW2	11/11/2003	19.5	Hollow stem augur, located in former UST locations, confirms minimum vertical identification of soil petroleum hydrocarbon contamination	No petroleum hydrocarbon contamination reported until 14' bgs. Strong petroleum hydrocarbon contamination from 14' to 18' bgs. No base of contamination identified.
MW3	11/11/2003	15.5	Hollow stem augur, down-gradient of UST locations, confirms minimum horizontal identification of groundwater petroleum hydrocarbon contamination	Strong petroleum hydrocarbon contamination reported from 5' to 12' bgs. Base of contamination reported at about 12.5' bgs.
SB05-1	07/28/2005	20.0	Geoprobe soil boring, continuous core, cross-gradient from former UST locations.	Strong TPH-g contamination from 9.0 to 14' bgs. Base of contamination at 14.0' bgs.
SB05-2 (MW6)	07/28/2005	20.0	Geoprobe soil boring, continuous core, down-gradient from former UST locations. Completed as GH-MW6	Strong TPH-g contamination from 7.0 to 11' bgs. Base of contamination at 14.0' bgs.
SB05-3 (MW5)	07/28/2005	20.0	Geoprobe soil boring, continuous core, down-gradient from former UST locations. Completed as GH-MW5	Strong TPH-g and TPH-d contamination from 6.0 to 11' bgs. Base of contamination at 14.0' bgs.
SB05-4	07/28/2005	20.0	Geoprobe soil boring, continuous core, cross-gradient from former UST locations. Adjacent to former Shell Oil bulk plant.	Strong TPH-g and TPH-d contamination from 5.0 to 10' bgs. Base of contamination at 14.0' bgs.
SB05-5	07/28/2005	20.0	Geoprobe soil boring, continuous core, cross-gradient from former UST locations. Adjacent to former Shell Oil bulk plant.	Strong TPH-g and TPH-d contamination from 5.0 to 10' bgs. Base of contamination at 14.0' bgs.
SB05-6	07/28/2005	20.0	Geoprobe soil boring, continuous core, cross-gradient from former UST locations. North side of Warehouse #3 and adjacent to former Shell Oil bulk plant.	Strong TPH-g and TPH-d contamination from 5.0 to 10' bgs. Base of significant contamination at 8.0' bgs.
GH-SB8	08/20/2005	12.0	Hand augur soil boring. North side of Logan Street adjacent to former Shell Oil bulk plant.	Strong TPH-g and TPH-d contamination from 3.0 to 10' bgs. Base of significant contamination at 8.0' bgs.
GH-SB9	08/20/2005	12.0	Hand augur soil boring. North side of Logan Street adjacent to former Shell Oil bulk plant.	Very Strong TPH-g and TPH-d contamination from 3.0 to 7.0' bgs. Base of significant contamination at 9.0' bgs.

Table 2 Tabulation of Soil Boring and Monitoring Well Locations (Continued)

Soil Boring or Monitoring Well	Date Drilled	Total Depth (feet bgs)	Drilling Method and Rationale for Placement	Summary
GH-SB10	08/20/2005	12.0	Hand augur soil boring. North side of Logan Street adjacent to former Shell Oil bulk plant.	Significant TPH-d contamination from 3.0 to 5.0' bgs. Base of significant contamination at 5.0' bgs.
SB-05-7	10/31/2005	20.0	Geoprobe soil boring, continuous core, downgradient from former UST locations. Adjacent to former hydraulic lift in Warehouse #3.	Strong TPH-d and TPH-mo from 6.0 to 9.0' bgs. Base of significant contamination at 10.0' bgs.
SB-05-8 (MW4)	10/31/2005	20.0	Geoprobe soil boring, continuous core, cross-gradient from former UST locations. North side of Logan Street adjacent to former Shell Oil bulk plant. Completed as GH-MW4	Strong TPH-d and TPH-mo from 6.0 to 9.0' bgs. Base of significant contamination at 10.0' bgs.
SB-05-11 (MW7)	11/01/2005	20.0	Geoprobe soil boring, continuous core, upgradient from former UST locations. West side of Front Street. Completed as GH-MW7	No significant petroleum hydrocarbon contamination encountered.
SB-05-12	11/01/2005	20.0	Geoprobe soil boring, continuous core, cross-gradient from former UST locations. Placement at intersection of Front Street and alley. Background investigation.	Significant TPH-g and TPH-d discovered at 5.0' to 10.0' bgs. Base of contamination at 12.0' bgs.
GH-SB17-1	08/18/2017	4.5	Hand augur soil boring for GH-SG1. Southwest corner of 135 N. Front Street property.	Moderate TPH-DRO and TPH-MO at 4.5 feet bgs. USEPA 8260B results all ND. Base of contamination is about 8 feet bgs.
GH-SB17-2	08/18/2017	4.5	Hand augur soil boring for GH-SG2. Boring is located near former hydraulic lift station.	Minor TPH-DRO (2.9 mg/kg) at 4.5 feet bgs. USEPA 8260B results all ND. Base of soil contamination is about 8 to 10 feet bgs.
GH-SB17-3	08/21/2017	4.5	Hand augur soil boring for GH-SG3. Boring is located near front of machine shop bay door.	Minor TPH-DRO (5.0 mg/kg) and TPH-MO (11.4 mg/kg) at 4.5 feet bgs. USEPA 8260B results all ND.
GH-SB17-4	08/22/2017	4.5	Hand augur soil boring for GH-SG4. Boring is located near front of machine shop bay door. Groundwater in bottom of boring. No soil gas sample collected.	TPH-DRO (1060 mg/kg) and TPH-MO (3410 mg/kg) at 4.5 feet bgs. USEPA 8260B results all ND.
GH-SB17-5	08/22/2017	4.5	Hand augur soil boring for GH-SG5. Boring is located near drum storage and welding area near north wall of building. Moderate odor of petroleum product in site air. PID shows 0 ppmv for atmosphere.	TPH-DRO (3100 mg/kg) and TPH-MO (3630 mg/kg) at 4.5 feet bgs. USEPA 8260B results all ND.
GH-SB17-6	08/23/2017	2.5	Hand augur soil boring for GH-SG6. Boring located on east side of building. Groundwater encountered at 2.5 feet bgs. No soil gas sample collected.	TPH-DRO (2320 mg/kg) and TPH-MO (10,600 mg/kg) at 2.5 feet bgs. USEPA 8260B results all ND.
GH-SB17-7	08/23/2017	3.5	Hand augur soil boring for GH-SG7. Boring located on southside of building.	TPH-DRO (46.9 mg/kg) and TPH-MO (113 mg/kg) at 4.5 feet bgs. USEPA 8260B results all ND.

Mr. Everett Upham
Upham & Hutchinson Investments, LLC
113 Main Street
Rio Vista, CA 94571

Dear Mr. Upham:

The purpose of this letter is to notify the Responsible Party of a review conducted by the Solano County Department of Resource Management (SCDRM) for the site located at 101 North Front Street in Rio Vista, California. SCDRM has reviewed the documents pertaining to this site to determine its eligibility for case closure in accordance with the State Water Board's Low Threat Closure Policy. SCDRM has the following comments. Based on review of the site conditions and the most recent groundwater monitoring, conducted in 2015, the site does **not** meet the requirements set forth in the Low-Threat Underground Storage Tank (UST) Closure Policy. As such, the following comments and requests are made:

- Soil contamination from total petroleum hydrocarbons (TPH) was reported at concentrations greater than 100 mg/kg in several samples taken at or above five feet below ground surface and shallow groundwater at the site (MW4 and MW5) is less than five feet below ground surface. Based on the site conditions, there is insufficient *bioattenuation zone* that would minimize the potential for vapor intrusion to indoor air. A bioattenuation zone is an area of soil at least five feet thick with conditions that promote the biodegradation of petroleum hydrocarbons.
- To adequately assess the extent of residual impacted soil, and potential associated risks to human health, shallow soil samples and soil vapor samples shall be taken in areas that previously reported elevated concentrations of constituents.
- By **May 23, 2017** submit a workplan to conduct additional soil and soil vapor sampling to assess the residual impacts remaining in shallow soil at the site. The work shall be initiated by June 15, 2017.
- **The report of findings shall be submitted no later than August 30, 2017** and shall include assessment of residual remaining impact in the shallow (<5 feet deep) soil, potential for vapor intrusion, and groundwater monitoring results for the first quarter 2017.

If you have any questions regarding this letter, please contact me at (707) 784-3178.

Sincerely,

A handwritten signature in black ink, appearing to read "A Morgan".

***Re: Letter Workplan for Soil Boring and Soil Gas Sample Points
Gordon Hansen Site, 101 North Front Street, Rio Vista California
SCDRM Site #29-70319***

Dear Ms. Kaltreider:

This letter workplan for soil boring and/or Soil Gas Sample Points for the Gordon Hansen Site (Site) located at 101 North Front Street, Rio Vista, California is in response to Solano County Department of Resource Management (SCDRM) directive letter dated April 24, 2017 instructing Mr. Everett Upham to conduct additional site assessment investigative work at the site (Appendix 1). Identified data gaps exist at the Site that preclude closure consideration using SWRCB LTCP criteria (Appendix 1).

The most significant data gaps that may be closed by additional limited site assessment investigation include:

- (1) Determining if areas under the building floor cement slab and along the sides of Warehouse #3 that remain uninvestigated to date that may contain petroleum hydrocarbons in shallow soil above a depth of 5 feet bgs;
- (2) Determining volatile organic compound (VOC) concentrations in shallow soil gas in areas at the Site that have identified total petroleum hydrocarbon (TPH) concentrations greater than 100 mg/kg at depths of less than five feet bgs.

This letter workplan describes the proposed soil boring and soil gas investigation.

1.0 PROPOSED ACTIVITIES

1. A series of seven (7) shallow, 4" diameter hand augur soil borings are proposed to be drilled in locations shown on Figure 1. The purpose of these soil borings is to determine the presence of petroleum hydrocarbons in the vadose zone of the soil column below and adjacent to Warehouse #3. None of the borings will be advanced into the groundwater table. We expect these soil borings to be no deeper than about 5 feet below ground surface (bgs) based on groundwater levels determined at the Site in 2015.

The existing SCDRM-approved Health and Safety Plan (HASP) developed in 2010 for site investigative work will be used to ensure safety for all workers and public health during this investigation. Prior to drilling any borings Underground Service Alert (USA) of Northern California will be notified to locate any utilities.

Appendix 4 of Muir (2010) describes procedures how each soil boring will be drilled, samples collected and completion techniques. Soil samples will be collected every 2.5 feet bgs and logged for lithology by a professional geologist. A calibrated photoionization device (PID) (MiniRae 2000) will be used to screen soil samples for indications of the presence of volatile organic compounds.

Soil collection procedures and sampling handling procedures are described in Appendix 2 (Muir, 2010). All cuttings will be drummed in 55-gallon USDOT drums and labeled appropriately. Disposal options will be evaluated at a later date.

It is anticipated that approximately 14 soil samples will be collected and will be submitted to Pace Analytical LLC, a State of California certified analytical laboratory for analysis of: TPH-gas, benzene, ethylbenzene, toluene and xylene (BTEX), MTBE and naphthalene by USEPA Test Method 8260B. All soil samples will also be analyzed for TPH-d by USEPA Test Method 8015M.

2. Soil gas borings to be sampled will be constructed in general accordance with the Department of Toxic Substances Control (DTSC) *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* dated April, 2012. expendable soil gas implant probe at the bottom of each soil boring will be connected to a 1/4-inch diameter polyethylene tubing that will extend to the top of the ground surface plus and additional one foot. The probe will be lowered to the bottom of the soil boring while the open end of the tubing is held above the ground surface.

A filter pack of #3 Monterey sand will be placed in the base of the boring to approximately one foot above the probe implant. Bentonite pellets will be placed in the boring from the top of the sand in the soil boring to the ground surface. The bentonite will be hydrated with potable water.

Each soil boring will have a PVC pipe placed in the upper 6 inches of the soil boring and will extend approximately 2 inches above ground surface. The extra length of tubing will be coiled inside the PVC casing and capped with a plug to prevent surface air and/or dirt from getting inside the tubing. A PVC cap will be placed on the PVC pipe to provide access to the polyethylene tubing. Each soil boring will be allowed to sit for a minimum of 48 hours in order for the subsurface soil gas to equilibrate.

Soil sampling equipment and hand auger pieces will be thoroughly cleaned between each boring using laboratory-grade, non-phosphate detergent and hydrocarbon-free water and double rinsed with hydrocarbon-free water.

A syringe will be attached to the polyethylene tubing at the surface and will be used to draw soil gas through the tubing to purge the tubing prior to gas sample collection. It is anticipated that using a 4-inch diameter soil boring with 12 inches of same will yield a soil gas volume of about 1 liter. It is anticipated that a total approximately three volumes of gas (3 liters) will be removed from each soil boring prior to sampling.

Once the tubing has been purged, a 6-liter Mini-Summa will be connected to the tubing and a soil gas sample will be collected. One air sample will be collected from each boring. Each Summa will be labeled for sample identification and delivered under chain-of-custody procedures to Eurofins, Folsom, California, a California certified laboratory for analyses.

During soil gas sample collection, a leak-detection compound (difluoroethane, isobutane, butane, or similar compound) will be utilized to determine if leakage has occurred related to the soil boring or sampling equipment. It is anticipated that a specific leak detection compound will be placed in a small dish within the soil boring PVC wellhead. This effort will allow confirmation that no leakage has occurred as a result of a problem with the soil boring completion.

The soil gas samples will be analyzed by USEPA Test Method TO-15 for benzene, toluene, ethylbenzene, xylene, TPH-gas and naphthalene in accordance with California Human Health Screening Levels (CHHSL). We understand that the detection limits for the USEPA TO-15 method using the 6-liter Summas will provide sufficient sample volume to provide analytical method detection limits sufficiently low enough to provide acceptable compound detection limits that will provide valid analyses for benzene (280 $\mu\text{g}/\text{m}^3$); ethylbenzene (3600 $\mu\text{g}/\text{m}^3$); naphthalene (310 $\mu\text{g}/\text{m}^3$) soil gas concentrations.

- (3) A report of findings for the investigation will be prepared and signed by a professional geologist. The analytical laboratory results will be evaluated with a light to determine if the Gordon Hansen site meets minimum LTCP site closure criteria. If the site does not meet LTCP closure criteria a discussion will be made with SCDRM staff regarding what other elements of work may be necessary to effect a potential closure.
- (4) All of the site data will be uploaded to the SWRCB Geotracker website. Hard copies of the report will be provided to both SCDRM and RWQCB if requested.
- (5) City of Rio Vista will be notified of this operation prior to the start and after the conclusion of field work.

2.0. LIMITATIONS AND PROFESSIONAL SIGNATURE

The work summarized or proposed in this document is for the sole use of Mr. Everett Upham. Any reliance on this report or data contained therein by a third party is at such party's own sole risk. Others who seek to rely on the findings have a duty to determine the adequacy of the report for their intended use, time, and location.

Stephen G. Muir Consulting Geologist & Geophysicist makes no warranties or guarantees as to the accuracy or completeness of information provided or compiled by others and used by Mr. Everett Upham. It is possible that information exists beyond the scope of this investigation. As with all subsurface soil and groundwater sampling, there is no guarantee that the work conducted has identified any and all sources or locations of petroleum hydrocarbons or other hazardous substances or chemicals in the soil or groundwater.

This document is issued with the understanding that Mr. Everett Upham is responsible for ensuring the information contained in this report is brought to the attention of the appropriate regulatory agency, if any. Also, changes in Site use may have occurred sometime in the past or during the course of the investigation due to variations in rainfall, temperature, water usage, economic, agricultural, or other factors. Additional information that was not found or available to Stephen G. Muir Consulting Geologist & Geophysicist at the time of the preparation of this report may result in a modification of the conclusions presented. This report is not a legal opinion.

Stephen G. Muir Consulting Geologist & Geophysicist has strived to perform his services in a proper and professional manner with reasonable care and competence, but is not infallible. Stephen G. Muir Consulting Geologist & Geophysicist is unable to eliminate all risk or to provide insurance. Therefore, Stephen G. Muir Consulting Geologist & Geophysicist is unable to guarantee or warrant the results of the work. Stephen G. Muir's Consulting Geologist & Geophysicist professional services were performed consistent with generally-accepted environmental assessment principles and practices in California at the time the services were performed. This warranty is in lieu of all other warranties, either expressed or implied.

If you have any questions please do not hesitate to contact me at (209) 369-9421. Thank you very much.

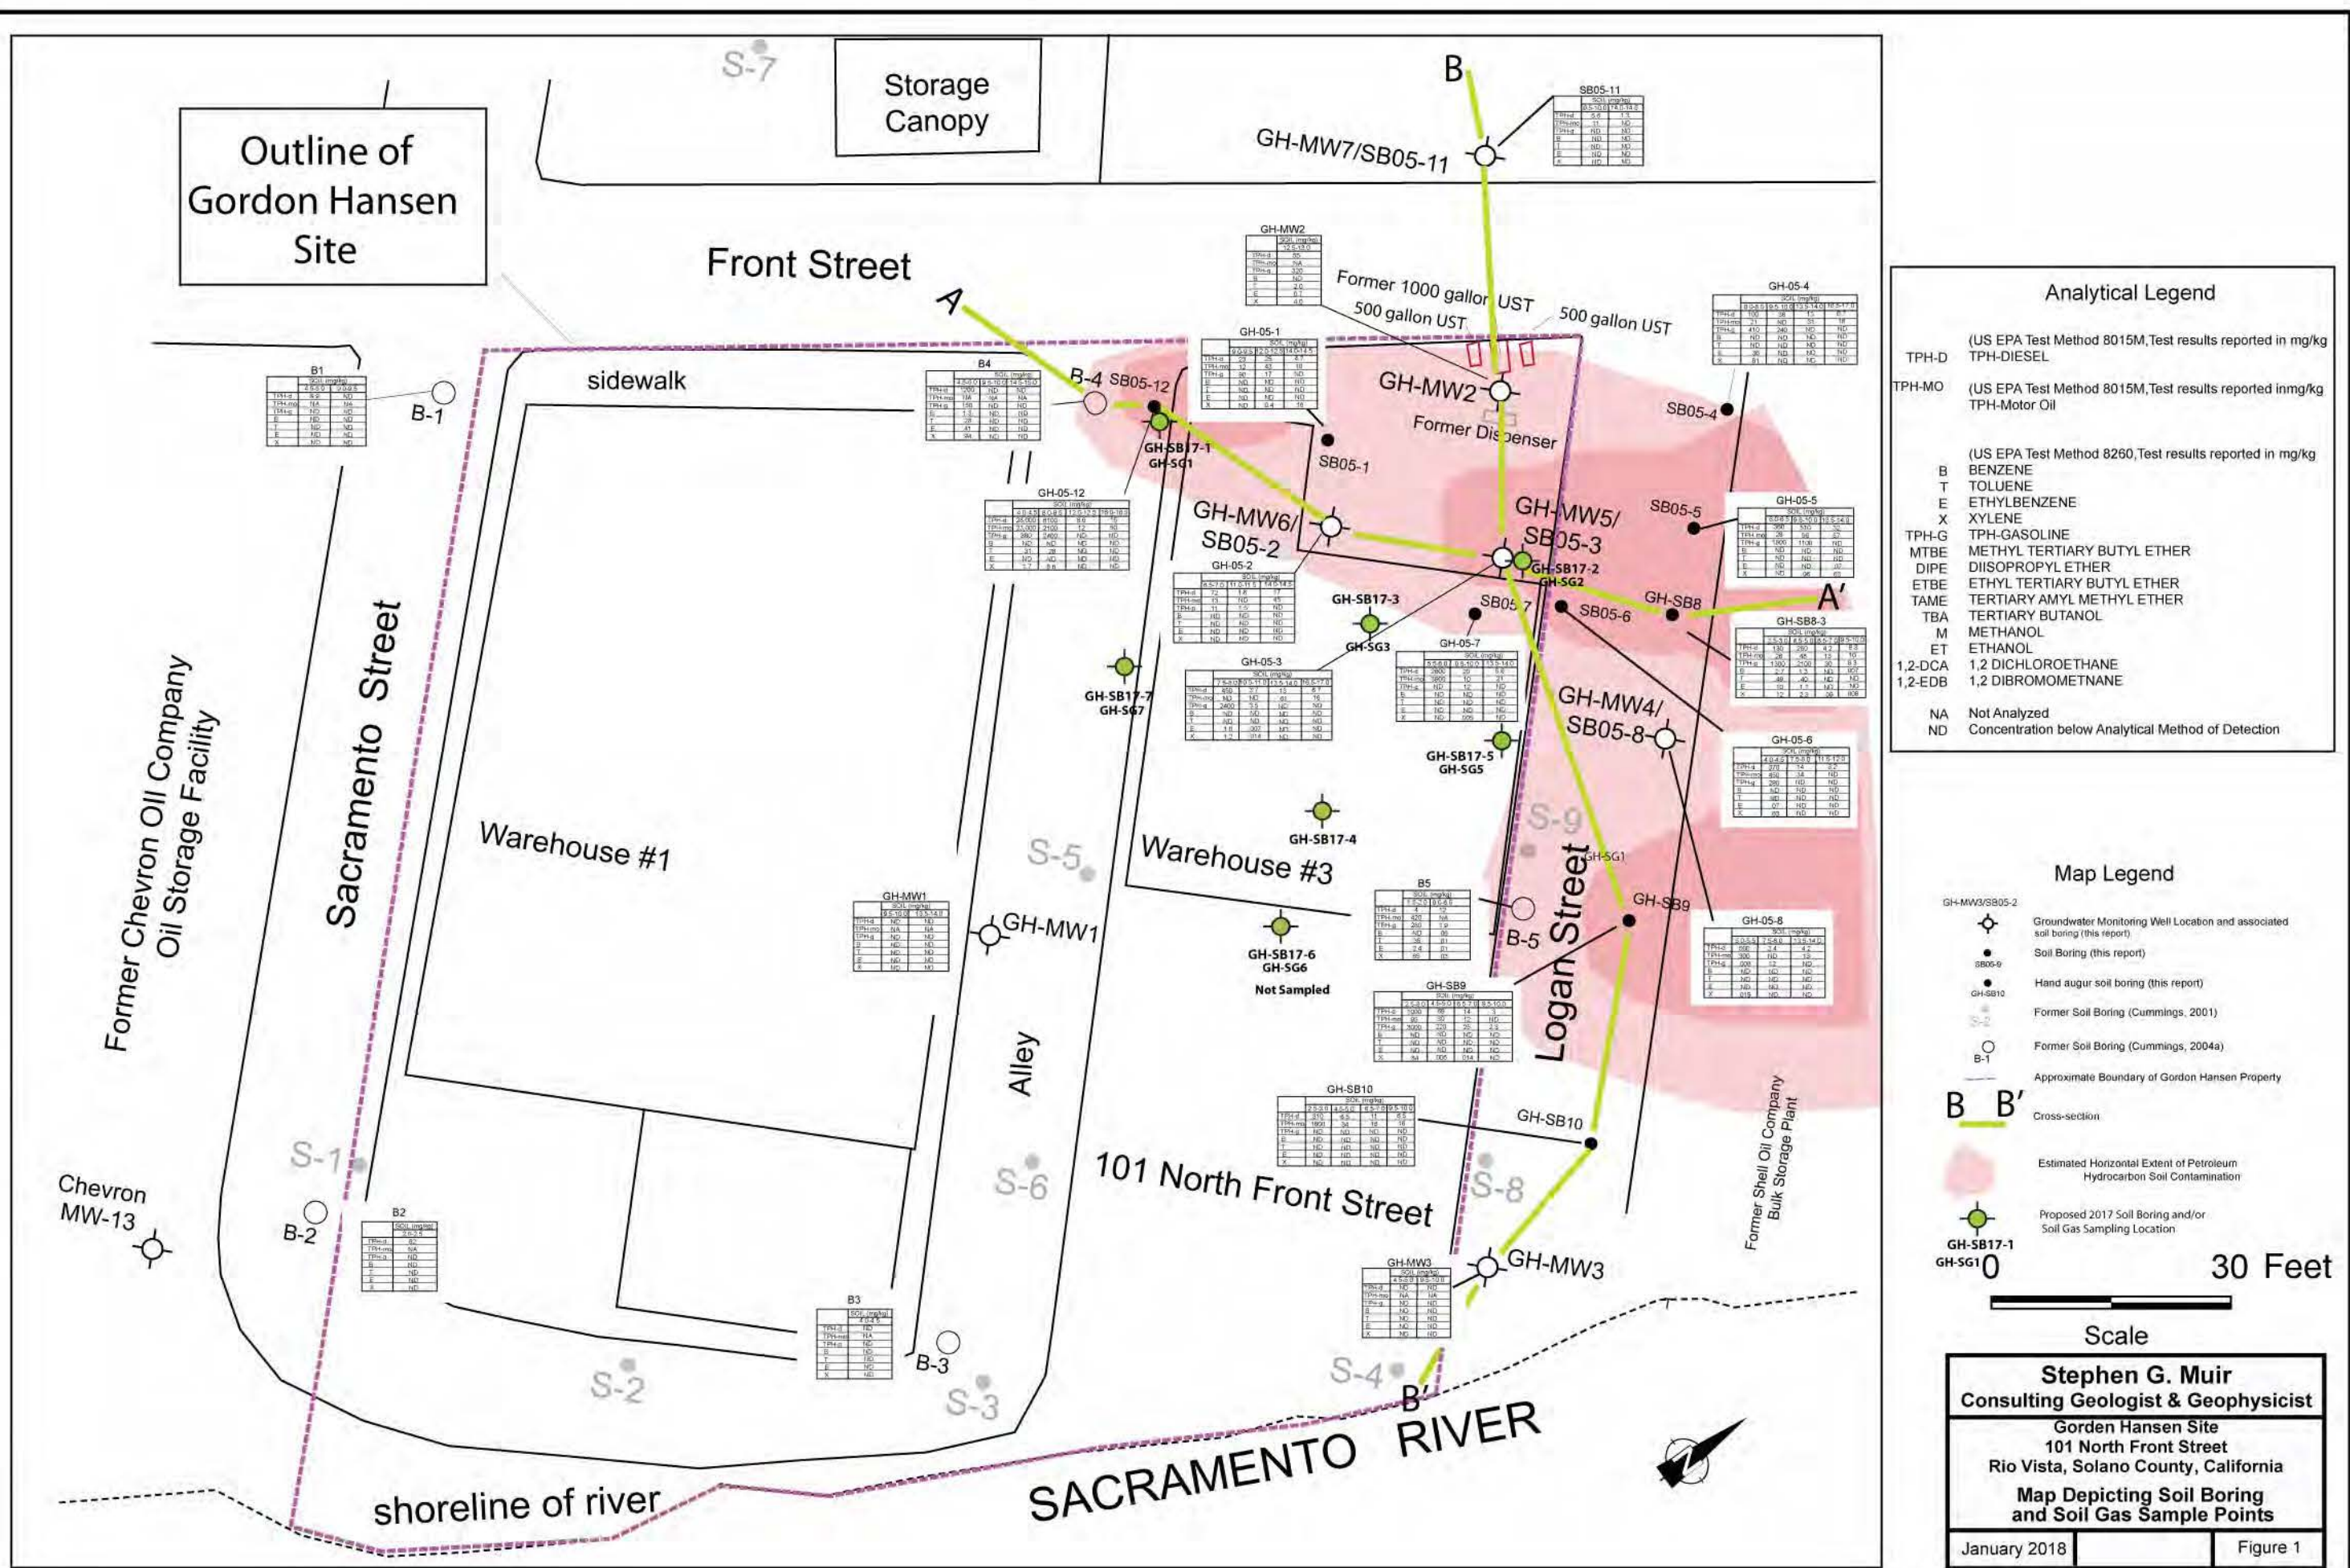

Sincerely,

Stephen G. Muir
Certified Engineering Geologist #1224

LTCP CHECKLIST AS OF 7/17/2017 [VIEW PATH TO CLOSURE PLAN](#) [BACK TO CASE SUMMARY](#)
General Criteria - The site satisfies the policy general criteria
YES

a. Is the unauthorized release located within the service area of a public water system?

Name of Water System : City of Rio Vista

YES

b. The unauthorized release consists only of petroleum [\(info\)](#).

YES

c. The unauthorized (primary) release from the UST system has been stopped.

YES

d. Free product has been removed to the maximum extent practicable [\(info\)](#).

YES

e. A conceptual site model that assesses the nature, extent, and mobility of the release has been developed [\(info\)](#).

YES

f. Secondary source has been removed to the extent practicable [\(info\)](#).

YES

g. Soil or groundwater has been tested for MTBE and results reported in accordance with Health and Safety Code Section 25296.15.

YES

h. Does a nuisance exist, as defined by [Water Code section 13050](#).

NO
1. Media-Specific Criteria: Groundwater - The contaminant plume that exceeds water quality objectives is stable or decreasing in areal extent, and meets all of the additional characteristics of one of the five classes of sites listed below.
NO

EXEMPTION - Soil Only Case (Release has not Affected Groundwater - [Info](#))

NO

Does the site meet any of the Groundwater specific criteria scenarios?

NO

ADDITIONAL QUESTIONS - The following conditions exist that do not meet the policy criteria:

Nearest Surface Water Body (From Plume Boundary) :

- ≤ 250 Feet

2. Media Specific Criteria: Petroleum Vapor Intrusion to Indoor Air - The site is considered low-threat for the vapor-intrusion-to-air pathway if site-specific conditions satisfy items 2a, 2b, or 2c
NO

EXEMPTION - Active Commercial Petroleum Fueling Facility

NO

Does the site meet any of the Petroleum Vapor Intrusion to Indoor Air specific criteria scenarios?

NO

ADDITIONAL QUESTIONS - The following conditions exist that do not meet the policy criteria:

Exposure Type :

- Commercial

TPH in the Bioattenuation Zone :

- ≥ 100 mg/kg

Bioattenuation Zone Thickness :

- < 5 Feet (No BioZone)

O2 Data in Bioattenuation Zone :

- No O₂ Data

Soil Gas Benzene :

- Unknown

Soil Gas EthylBenzene :

- Unknown

Soil Gas Naphthalene :

- Unknown

3. Media Specific Criteria: Direct Contact and Outdoor Air Exposure - *The site is considered low-threat for direct contact and outdoor air exposure if it meets 1, 2, or 3 below.*

YES

EXEMPTION - The upper 10 feet of soil is free of petroleum contamination

NO

Does the site meet any of the Direct Contact and Outdoor Air Exposure criteria scenarios?

YES

3(a) - Maximum concentrations of petroleum constituents in soil are less than or equal to those listed in the following table [\(LINK\)](#) for the specified depth below ground surface.

YES**Additional Information**

Should this case be closed in spite of NOT meeting policy criteria?

Mr. Everett Upham
Upham & Hutchinson Investments, LLC
113 Main Street
Rio Vista, CA 94571

Dear Mr. Upham:

The purpose of this letter is to notify the Responsible Party of a review conducted by the Solano County Department of Resource Management (SCDRM) for the site located at 101 North Front Street in Rio Vista, California. SCDRM has reviewed the documents pertaining to this site to determine its eligibility for case closure in accordance with the State Water Board's Low Threat Closure Policy. SCDRM has the following comments. Based on review of the site conditions and the most recent groundwater monitoring, conducted in 2015, the site does **not** meet the requirements set forth in the Low-Threat Underground Storage Tank (UST) Closure Policy. As such, the following comments and requests are made:

- Soil contamination from total petroleum hydrocarbons (TPH) was reported at concentrations greater than 100 mg/kg in several samples taken at or above five feet below ground surface and shallow groundwater at the site (MW4 and MW5) is less than five feet below ground surface. Based on the site conditions, there is insufficient *bioattenuation zone* that would minimize the potential for vapor intrusion to indoor air. A bioattenuation zone is an area of soil at least five feet thick with conditions that promote the biodegradation of petroleum hydrocarbons.
- To adequately assess the extent of residual impacted soil, and potential associated risks to human health, shallow soil samples and soil vapor samples shall be taken in areas that previously reported elevated concentrations of constituents.
- By **May 23, 2017** submit a workplan to conduct additional soil and soil vapor sampling to assess the residual impacts remaining in shallow soil at the site. The work shall be initiated by June 15, 2017.
- **The report of findings shall be submitted no later than August 30, 2017** and shall include assessment of residual remaining impact in the shallow (<5 feet deep) soil, potential for vapor intrusion, and groundwater monitoring results for the first quarter 2017.

If you have any questions regarding this letter, please contact me at (707) 784-3178.

Sincerely,

A handwritten signature in black ink, appearing to read "Andrew Morgan".

Subject: Soil Vapor Sampling - Rio Vista

Hi Steve - I wanted to confirm the soil vapor sampling event scheduled at 101. North Front St., Rio Vista CA for this Friday (10/13). The event will consist of sampling five (5) soil vapor wells. You will supply the purge and sampling canisters, and sampling manifolds. Our technician (Keith) will be prepared to sample the wells with AGE's shroud kit(s) and PID calibrated to ppbv. Keith will plan on meeting you at our office and ready to depart by 7:30 AM.

I need to set-up this project internally for billing purposes. The name of the project is **Gordon-Hanson**, correct? You will be our client for this project and we will be invoice our technician at time & materials (\$81/hour). Anything over 8-hours will be billed at time and a half.

Please let me know if I omitted anything or if you have any questions. Thanks,

RE: The Gordon Hanson Company, LTD 135 North Front Street, Rio Vista, CA 94571 Solano County Case #70391,
GeoTracker Global ID: T0609576083

Dear Mr. Upham:

The purpose of this letter is to clarify the location of the Release Case and request updated information regarding the cleanup site status. In previous correspondences, the former underground storage tank (UST) for the Gordon Hanson Company site was identified on Assessor's Parcel 0278-137-010. The original tank report identified the UST site address as 101 North Front Street, Rio Vista. Based on subsequent review, actual address of the former UST is 135 N. Front Street. The information in GeoTracker has been updated to reflect the correct address that housed the former USTs, 135 N. Front Street, Rio Vista.

In previous correspondences from this office and discussions with your consultant, this Department has requested updated status of the site and evaluation of case closure. Based on review of SCDRM files, the most recent report received was the Third Quarter 2017 Quarterly Status and Groundwater Monitoring Report, dated September 22, 2017, prepared by Steve Muir. Currently, the status of case remains open pending evaluation of residual impacts compared to the State Water Resources Control Board Low Threat Closure Policy (LTCP) criteria. In order to assess the site for closure, all documents and monitoring reports for work performed since 2017 shall be uploaded to GeoTracker by **April 15, 2019**.

Please note that SCDRM is discontinuing the Local Oversight Program. As such, on **June 30, 2019**, any active cases currently overseen by Solano County will be transferred to the respective Regional Water Quality Control Board (RWQCB) for continued oversight.

For sites pending closure evaluation, Solano County advises responsible parties expedite any outstanding directives and submit reports documenting well destruction prior to **June 1, 2019**.

If you have any questions call 707 784-3311, e-mail me at mkaltreider@solanocounty.com.

Sincerely,

A handwritten signature in black ink, appearing to read "Misty C. Kaltreider".

RE: **Case Transfer;** Gordon Hanson Company facility, 135 North Front Street, Rio Vista, CA 94571 Solano County Case #70391, GeoTracker Global ID: T0609576083

Dear Mr. Upham:

Solano County, Department of Resource Management (SCDRM) is discontinuing the Local Oversight Program on **June 30, 2019**. All active site mitigation cases currently overseen by Solano County will be transferred to the respective Regional Water Quality Control Board (RWQCB) for continued oversight on July 1, 2019. Pending case transfer, it is advised that the responsible parties coordinate with the Central Valley RWQCB on next steps to move the case toward closure. Case information and previous correspondence are posted on GeoTracker. The RWQCB contact is presented below.

Rio Vista, CA 94571

***REQUEST FOR SOIL AND SOIL GAS SAMPLING REPORT, THE GORDEN
HANSON COMPANY, 135 NORTH FRONT STREET, RIO VISTA, SOLANO COUNTY***

Central Valley Regional Water Quality Control Board (Central Valley Water Board) staff reviewed the case file for the unauthorized underground storage tank (UST) release of petroleum hydrocarbons at 135 North Front Street in Rio Vista, Solano County (Site). In a letter dated 20 July 2017, Solano County approved the work as described in the 18 July 2017 Workplan for Soil Boring and Soil Gas Sample Points (*Work Plan*). Solano County has since discontinued its local oversight program and has referred this case to the Central Valley Regional Water Quality Control Board for regulatory oversight.

Central Valley Water Board staff requests that you complete the work as described in the *Work Plan*. By **31 December 2020**, please submit a report documenting the results the results of this additional investigation. If you have any questions or concerns regarding this letter, please contact Benjamin Lehmann at (916) 464-4760 or via e-mail at benjamin.lehmann@waterboards.ca.gov.

Rio Vista, CA 94571

***REQUEST FOR SOIL AND SOIL GAS SAMPLING REPORT,
UST CASE: THE GORDEN HANSON COMPANY (T0609576083),
135 NORTH FRONT STREET, RIO VISTA, SOLANO COUNTY***

You are the current subject property owner and a responsible party for the unauthorized underground storage tank (UST) release of petroleum hydrocarbons at 135 North Front Street in Rio Vista, Solano County (Site). As a responsible party you are required to follow directives set forth by the Central Valley Regional Water Quality Control Board (Central Valley Water Board). Central Valley Water Board staff requested that you submit a report documenting the results of the work as described in the 18 July 2017 *Workplan for Soil Boring and Soil Gas Sample Points (Work Plan)*. Central Valley Water Board staff has not received the report as of the date of this letter. If the report is not submitted within 30 days, Central Valley Water Board staff will recommend this Site for an enforcement order for non-compliance with directives.

In a letter dated 20 July 2017, Solano County approved the work as described in the 18 July 2017 *Workplan for Soil Boring and Soil Gas Sample Points (Work Plan)*. Solano County has since discontinued its local oversight program and has referred this case to the Central Valley Water Board for regulatory oversight. In a 2 October 2020 letter, Central Valley Water Board staff requested that you submit the results of this investigation by 31 December 2020. In a 24 March 2022 email your consultant, Stephen G. Muir Consulting, stated that the report would be submitted within 30 days. As stated above, Central Valley Water Board staff has not received this report.

Additionally, groundwater monitoring has not been conducted at the Site since July 2017. Please resume semiannual groundwater monitoring during the fourth quarter of 2022.

By **9 October 2022**, please submit a report documenting the results of this additional investigation. By **31 January 2022**, please submit a report documenting the results of a fourth quarter 2022 groundwater sampling event.

MARK BRADFORD, CHAIR | PATRICK PULUPA, ESQ., EXECUTIVE OFFICER

Staff recommends that you apply for funding through the State Water Board Orphan Site Cleanup Fund (Orphan), which may reimburse you for incurred, eligible investigation and cleanup costs associated with this leaking UST case. Please contact Orphan with questions.

If you have any questions or concerns regarding this letter, please contact Benjamin Lehmann at (916) 464-4760 or via e-mail at benjamin.lehmann@waterboards.ca.gov.

LTCP CHECKLIST AS OF 9/12/2022[VIEW PATH TO CLOSURE PLAN](#)[BACK TO CASE SUMMARY](#)**General Criteria** - The site satisfies the policy general criteria**YES**

a. Is the unauthorized release located within the service area of a public water system?

Name of Water System : City of Rio Vista

YES

b. The unauthorized release consists only of petroleum (info).

YES

c. The unauthorized (primary) release from the UST system has been stopped.

YES

d. Free product has been removed to the maximum extent practicable (info).

YES

e. A conceptual site model that assesses the nature, extent, and mobility of the release has been developed (info).

YES

f. Secondary source has been removed to the extent practicable (info).

YES

g. Soil or groundwater has been tested for MTBE and results reported in accordance with Health and Safety Code Section 25296.15.

YES

h. Does a nuisance exist, as defined by Water Code section 13050.

NO

1. Media-Specific Criteria: Groundwater - The contaminant plume that exceeds water quality objectives is stable or decreasing in areal extent, and meets all of the additional characteristics of one of the five classes of sites listed below.**NO****EXCEPTION - Soil Only Case (Release has not Affected Groundwater - info)****NO**

Does the site meet any of the Groundwater specific criteria scenarios?

NO

ADDITIONAL QUESTIONS - The following conditions exist that do not meet the policy criteria:

Nearest Surface Water Body (From Plume Boundary) :

- ≤ 250 Feet

2. Media Specific Criteria: Petroleum Vapor Intrusion to Indoor Air - The site is considered low-threat for the vapor-intrusion-to-air pathway if site-specific conditions satisfy items 2a, 2b, or 2c**NO****EXCEPTION - Active Commercial Petroleum Fueling Facility****NO**

Does the site meet any of the Petroleum Vapor Intrusion to Indoor Air specific criteria scenarios?

NO

ADDITIONAL QUESTIONS - The following conditions exist that do not meet the policy criteria:

Exposure Type :

- Commercial

TPH in the Bioattenuation Zone :

- ≥ 100 mg/kg

Bioattenuation Zone Thickness :

- < 5 Feet (No BioZone)

O2 Data in Bioattenuation Zone :

- No O₂ Data

Soil Gas Benzene :

- Unknown

Soil Gas EthylBenzene :

- Unknown

Soil Gas Naphthalene :

- Unknown

3. Media Specific Criteria: Direct Contact and Outdoor Air Exposure - *The site is considered low-threat for direct contact and outdoor air exposure if it meets 1, 2, or 3 below.*

YES

EXCEPTION - The upper 10 feet of soil is free of petroleum contamination

NO

Does the site meet any of the Direct Contact and Outdoor Air Exposure criteria scenarios?

YES

3(a) - Maximum concentrations of petroleum constituents in soil are less than or equal to those listed in the following table ([LINK](#)) for the specified depth below ground surface.

YES

Additional Information

Should this case be closed in spite of NOT meeting policy criteria?

NO

APPENDIX 2
STANDARD OPERATING PROCEDURES FOR SOIL BORINGS
AND WELL CONSTRUCTION PROCEDURES

STANDARD OPERATING PROCEDURES FOR SOIL BORING AND WELL CONSTRUCTION PROCEDURES

Revised 06/30/09

1. Pre-Drilling Protocol

Prior to the start of drilling, necessary permits, site access agreements, and/or encroachment permits are obtained. "As-built" drawings are obtained if possible. At least 48 hours prior to drilling, Underground Service Alert or an equivalent utility notification service is notified. A geophysical survey may be conducted to locate subsurface utilities by either Consultant or other outside third party geophysical contractors.

Site plans and/or "as-built" drawings are compared to actual conditions observed at the site. The property owner/retailer is interviewed to gain information about locations of former UST systems including dispensers, product lines, and vent lines. A visual inspection is made of the locations of the existing UST system, and scars and patches in pavement are noted. The emergency shut-off switch is located for safety purposes. The critical zone, which is defined as 10 feet from any part of the UST system, is identified, and any proposed drilling locations within the critical zone may be subject to special hole clearance techniques. Drilling locations within the critical zone are avoided if possible.

Notifications are made at least 2 weeks in advance of drilling to the property owner, client representative, on-site facility manager, regulatory agency, and/or other appropriate parties.

A site-specific, worker health and safety plan for the site is available on site at all times during drilling activities. Prior to commencing drilling, a health and safety meeting is held among all on-site personnel involved in the drilling operation, including subcontractors and visitors, and is documented with a health and safety meeting sign-in form. A traffic control plan is developed prior to the start of any drilling activities for both on-site and off-site drilling operations. The emergency shut-off switch for the service station is located prior to the start of the drilling activities. A fire extinguisher and "No Smoking" signs (and Proposition 65 signs in California) are present at the site prior to the start of the drilling activities).

The first drilling location is the one located furthest from any suspected underground improvements in order to determine the natural subsurface conditions, to be able to better recognize fill conditions, and to prevent cross contamination. For monitoring wells, a 2 x 2-foot square or 2-foot diameter circle is the minimum removal. For soil borings and push-type samplers, the minimum pavement removal is 8-inches. When pea gravel, sand, or other non-indigenous material is encountered, the drilling location will be abandoned unless the absence of subsurface facilities can be demonstrated and client approval to proceed is obtained. If hole clearance activities are conducted prior to the actual day of drilling, the clearance holes are covered with plates and/or backfilled.

The minimum hole clearance depths are 4 feet below ground surface (bgs) outside the critical

zone and 8 feet bgs within the critical zone and are conducted as follows:

- 0 to 4 bgs: The area to be cleared exceeds the diameter of the largest tool to be advanced and is sufficiently large enough to allow for visual inspection of any obstructions encountered. The first 1 to 2 feet is delineated by hand digging to remove the soil, then the delineated area is probed to ensure that no obstructions exist anywhere near the potential path of the drill auger or push-type sampler.

Probing is extended laterally as far as possible. Hand augering or post-hole digging then proceeds, but only to the depth that has been probed. If subsurface characteristics prohibit effective probing, a hand auger is carefully advanced past the point of probing. In this case, sufficient hand augering or post-hole digging is performed to remove all the soil in the area to be delineated. For soil borings located outside of the critical zone, an attempt should be made to probe an additional 4 feet.

- 4 to 8 bgs: For the soil borings located inside the critical zone, probing and hand clearing an additional 4 feet is performed. If probing is met with refusal, then trained personnel advance a hand auger without excessive force. An alternate or additional subsurface clearance procedures may also be employed, as required by clients, permit conditions, and/or anticipated subsurface conditions (for example, near major utility corridors or in hard soils). Alternate clearance techniques may include performing a geophysical investigation or using an air knife or water knife. If subsurface conditions prevent adequate subsurface clearance, the drilling operation is ceased until the client approves a procedure for proceeding in writing. If any portion of the UST system is encountered, or if there is any possibility that it has been encountered, the work ceases, and the client is notified immediately. If there is reason to believe that the product system has been damaged, the emergency shut-off switch is activated. The client will decide if additional uncovering by hand is required. If it is confirmed that the UST system has been encountered, tightness tests are performed. The hole is backfilled only with client approval.

2 Drilling and Soil Sampling Procedures

Soil boring are drilled using one of the following methods:

- Manual or Hand Auger Drilling: Manual or hand auger drilling utilizes a 2-inch-OD, hand auger manufactured by Xitech Industries, Art's Manufacturing Company, or similar equipment. Soil samples are collected with a drive sampler, which is outfitted with 1.5-inch by 3-inch steel or brass sleeves. The specific equipment used is noted on a soil boring log.
- Truck-mounted, powered drilling: Truck-mounted, powered drilling utilizes hollow-stem flight auger drilling, air rotary drilling, or percussion hammer drilling, or similar technologies. Soil samples are collected in steel or brass

sleeves with a California-modified, split-spoon sampler or, for specific projects, a continuous sampler. The specific drill system and equipment used is noted on a soil boring log.

- Direct push sampling: Direct push sampling utilizes Geoprobe, cone penetrometer testing rigs (CPT), or similar technologies. Soil samples are collected with a drive sampler, which is outfitted with steel or brass sleeves. The specific equipment used is noted on a soil boring log.

Before each soil sampling episode, the sampling equipment is decontaminated using a non-phosphate soap wash, a tap-water rinse, and a deionized water rinse. The drill string of all systems is decontaminated with a steam cleaner between each soil boring.

Soil samples that are collected in steel or brass sleeves are covered with aluminum foil or Teflon tape followed by plastic caps. If U.S. Environmental Protection Agency (USEPA) Test Method 5035 is required, then 5 to 20 grams of soil is extracted from the sample and placed in methanol-preserved containers supplied by the laboratory, or sub samples are collected using Encore samplers. During the drilling process, soil samples and cuttings are field screened for volatile organic compounds (VOCs) using a photoionization detector calibrated to 100 parts per million by volume (ppmv) isobutylene. Any soil staining or discoloration is visually identified.

Soils are classified according to the Unified Soil Classification System. Specific geologic and hydro geologic information collected includes grading, plasticity, density, stiffness, mineral composition, moisture content, soil structure, grain size, degree of rounding, and other features that could affect contaminant transport. All data is recorded on a soil boring log under the supervision of a geologist registered in the state in which the site is located. The samples are labeled, sealed, recorded on a chain-of-custody record, and chilled to 4 ° Celsius in accordance with the procedures outlined in the California State Water Resources Control Board's Leaking Underground Fuel Tank Field Manual (CSWRCB, 1987) and the Arizona Department of Environmental Quality's Leaking Underground Storage Tank Site Characterization Manual. Sample preservation, handling, and transportation procedures are consistent with Consultants's quality assurance/quality control procedures. The samples are transported in a chilled container to a state-certified, hazardous waste testing laboratory .

Cuttings from the soil borings are stored in 55-gallon, U.S. Department of Transportation (DOT)-approved drums, roll-off bins, or other appropriate containers, as approved by the client. Each container is labeled with the number of the soil boring(s) from which the waste was derived, the date the waste was generated, and other pertinent information. The drums are stored at the site of generation until sample laboratory analytical results are obtained, at which time the soil is disposed of appropriately. A soil boring log is completed for each soil boring and

includes the following minimum information:

- date of drilling;
- location of soil boring;
- project name and location;

- soil sample names and depths;
- soil descriptions and classifications;
- standard penetration counts (rigs);
- photoionization detector readings;
- drilling equipment;
- soil boring diameter;
- sampling equipment;
- depth to groundwater in soil boring;
- name of person performing logging;
- name of supervising registered geologist; and
- name of drilling company (rigs and direct push)

3 Soil Boring Completion Procedures

All soil borings are either properly abandoned or completed as a well.

3.1 Abandonment

Each soil boring that is not completed as a well is backfilled with bentonite grout, neat cement, concrete, or bentonite chips with a permeability less than that of the surrounding soils, and/or soil cuttings, depending on local regulatory requirements or client instructions. Grout is placed by the tremie method. Backfilling is performed carefully to avoid bridging. The type of backfill material is noted on the soil boring log.

3.2 Well Installation

Wells are designed according to applicable state and local regulations as well as project needs. Details of the well design and construction are recorded on the soil boring log and include the following minimum information (in addition to the items noted above for soil borings):

- detailed drawing of well;
- type of well (groundwater, vadose, or air sparging);
- casing diameter and material;
- screen slot size;
- well depth and screen length (± 1 foot);
- filter pack material, size, and placement depths;
- annular seal material and placement depths;
- surface seal design/construction;
- well location ($(\pm 0.5$ foot horizontal in State Plane and latitude and longitude coordinates and ± 0.01 foot vertical tied to the nearest vertical datum);
- well development procedures.

Groundwater monitoring wells are generally designed with 30 feet of slotted casing centered on the water table, unless site conditions, project needs, or local regulations dictate a different well design. The sand pack is placed at least two feet above the top of the screen, and at least 3 feet of low permeability seal material is placed between the sand pack and the surface seal. The sand pack and low permeability seal material are placed in the annular space from the bottom up using the tremie method. When drilling in asphalt, a 24-inch round cut is made for the well pad. When drilling on concrete, a 2 x 2-foot square is saw cut. The well cover is traffic-rated and has a white

lid with a black triangle painted on it (3 inches per side) or a black lid with a white triangle (3 inches per side). The completed well pad should be concrete of matching color with the existing surface. The well number is labeled on the outside of the well box/pad and the inside of the well box. The number on the outside is painted on with a stencil, stamped, or attached to the well with a metal plate. The number on the inside is written on the well cap with waterproof ink. The casing has a notch or indication on its north side indicating a unique measuring/surveying point.

Well development is conducted by simple pumping if bridging of the screen does not occur. If bridging occurs, well surging is conducted for adequate well production. Well surging is created by the use of surge blocks, bailers, or pumps, whichever method is most appropriate for the well use. Only formation water is used for surging the well. Well development continues until non-turbid groundwater is produced or turbidity stabilizes. All purged groundwater is held on site in covered 55-gallon DOT -approved drums or other appropriate containers until water sample analytical results are received. The elevation of the north side of the top of well casing (or other appropriate reference point from which the depth to groundwater can be measured) is surveyed to an accuracy of ± 0.01 foot. All measurements are reproduced to assure validity. Surveying is conducted by a California state-licensed surveyor or California state Registered Civil Engineer with a registration prior to 1988 if required by state or local regulations. In the State of California, wells are surveyed in accordance with AB2886.

4. Data Reduction

The data compiled from the soil borings is summarized and analyzed. A narrative summary of the soil characteristics is also presented. The soil boring logs are checked for the following information:

- correlation of stratigraphic units among borings;
- identification of zones of potentially high hydraulic conductivity;
- identification of the confining layer;
- indication of unusual/unpredicted geologic features (fault zones, fracture traces, facies changes, solution channels, buried stream deposits, cross-cutting structures, pinchout zones, etc.);
- continuity of petrographic features such as sorting, grain-size distribution, cementation, etc.

Soil boring/well locations are plotted on properly scaled map. If appropriate, soil stratigraphy of the site is presented in a scaled cross section. Specific features that may impact contaminant migration, (fault zones or impermeable layers) are discussed in narrative form and supplemented with graphical presentations as deemed appropriate.

APPENDIX 3
GROUNDWATER MONITORING WELL, SAMPLING,
AND SAMPLE MANAGEMENT PROCEDURES

APPENDIX 3

GROUNDWATER MONITORING, SAMPLING, AND SAMPLE MANAGEMENT PROCEDURES

1. Notifications

Prior to performing any field work, the client, regulatory agency, and property owner/manager with jurisdiction over the subject site are notified. Notifications are made a minimum of 48 hours prior to sampling, or as required by the client or regulator.

2. Water Level Measurements

Prior to performing purge or no-purge sampling, water level measurements are collected according to the following procedures:

- All wells are checked for phase-separated hydrocarbons with an acrylic bailer or oil/water interface meter.
- To avoid cross contamination, water levels are measured starting with the historically "cleanest" wells and proceeding to the historically "dirtiest."
- Water levels within each well are measured to an accuracy of ± 0.01 foot using an electric measuring device and are referenced to the surveyed datum (well cover or top of casing). When measuring to top of casing, measurements are made to the notched (or otherwise marked) point on casing. If no marking is visible, the measurement is made to the northern side of the casing.
- If possible, all wells are gauged within a short time interval on the same day to obtain accurate measurements of the potentiometric surface.
- All measurements are reproduced to assure validity, and measuring equipment is decontaminated between wells.

3. Phase Separated Hydrocarbon

If phase-separated hydrocarbon (PSH) is encountered, its thickness in the well and the depth to the interface between the PSH and the water in the well are measured using one or both of the following methods:

- an electronic oil-water interface meter is used to measure the depths to the top of the PSH and to the top of the water, and/or
- an electronic water level meter is used to measure the depth to the top of the water and a clear bailer is used to measure the PSH thickness.

The potentiometric surface elevation is calculated as:

$$\text{TOC} - \text{DTW} + 0.74\text{PT}$$

Where TOC = top-of-casing elevation, DTW = depth to water (interface), and PT = PSH thickness.

If PSH thickness is less than 0.02 foot, and the well is planned for purging prior to sample collection, the well is purged and sampled in accordance with the sample collection section of this SOP. If the PSH thickness is 0.02 foot or greater, the PSH is bailed from the well, and left onsite in a labeled and sealed container. No sample is collected for analysis from wells having a PSH thickness of greater than 0.02 foot.

4. No-Purge Sampling

Well purging is not conducted prior to sampling if purging is not needed to meet technical and/or regulatory project requirements. Following collection of water level measurements, wells that are not purged are sampled according to the protocol in the sample collection section of this SOP.

5. Purging Procedures

Well purging is conducted prior to sampling if purging is needed to meet technical and/or regulatory project requirements. If purging is conducted, the monitoring wells are purged using a vacuum truck, submersible electric pump, bailer, hand pump, or bladder pump, as appropriate for site conditions. A surge block may be used if it becomes apparent during purging that the well screen has become bridged with sediment or the produced groundwater is overly turbid. During the purging process, groundwater is monitored for temperature, pH, conductivity, turbidity, odor, and color. These parameters are recorded on a water sample log. Purging continues until all stagnant water within the wells is replaced by fresh formation water, as indicated by removal of a minimum number of well volumes and/or stabilization of the above-outlined parameters. Sampling is performed after the well recharges to at least 80 percent of hydrostatic.

Purge water is stored on site in Department of Transportation-approved, 55-gallon drums until water sample analytical results are received from the laboratory. If active groundwater treatment is occurring at the site, purge water may be disposed of through the treatment system, or the purge water may be transported off site as non-hazardous waste to an approved off-site disposal facility. If permanent pumps are installed in the wells for groundwater remediation, purging may be accomplished by operating the pumps for at least 24 hours before sampling to ensure adequate purging.

6. Sample Collection Procedures

Groundwater samples are collected as follows:

- A 1-liter Teflon bailer is lowered and partially submerged into the well water to collect a groundwater sample.
- If visible PSH is present in the sample bailer, PSH thickness is recorded on the field log, and no sample is collected for laboratory analysis.
- For volatile organic analyses, groundwater samples are collected in chilled, 40-milliliter, VOA vials having Teflon-lined caps. Hydrochloric acid preservative is added to all vials by the laboratory to lower sample pH to 2. Samples are held at 2 to 4 ° Celsius while in the field and in transit to the laboratory. Other appropriate containers, preservatives, and holding protocols are used for non-volatile analyses.
- VOA vials are filled completely so that no headspace or air bubbles are present within the vial. Care is taken so that the vials are not overfilled and the preservative is not lost.
- Sample containers are immediately labeled and sealed after collection to prevent confusion. For VOA vials, the label is placed to overlap the edge of the cap as a custody seal, unless a separate custody seal is being used.
- Samples are stored in a cooler while on site and in transport to the laboratory or office. The cooler has sufficient ice to maintain appropriate temperature prior to collecting samples. The VOA vials are kept cool both prior to and after filling. Hot or warm containers are not used when volatile compounds are the target analytes.

7. Decontamination Procedures

Decontamination of monitoring and sampling equipment is performed prior to all monitoring and sampling activities. Decontamination procedures utilize a three-step process as described below:

- The initial decontamination is performed using a non-phosphate soap, such as Simple Green or Alconox, in tap water in a 5-gallon bucket. A soft-bristle bottlebrush is used to thoroughly clean the inside and outside of the equipment.
- A second 5-gallon bucket of tap water is used as a first rinse.
- A third 5-gallon bucket of deionized water is used as a final rinse.
- The brush is used in the first bucket only; it does not travel from bucket to bucket with the equipment. This minimizes any transport of the contaminants that should stay in the first bucket.

8. Quality Assurance/Quality Control Samples

At a minimum, a trip blank and a temperature blank are maintained for QA/QC purposes.

- A trip blank sample (TRIP) is kept with any samples being analyzed for VOCs. This is a sample of clean water that is supplied by the laboratory and is transported to and from the field and to the laboratory with the field samples. The designation "QCTRIPBK" or "QCTB" is used for sample name on the field label. Samplers record the date that the TRIP is taken to the field for sampling, not the date that the TRIP was prepared by the laboratory on the chain-of-custody (COC). One TRIP per cooler per day is collected.
- Unused trip blank samples are stored at the consulting office in a cooler dedicated to this purpose. The trip blank cooler is not refrigerated, but is kept in a clean location away from possible VOC contaminants.
- Temperature blank sample containers are supplied by the laboratory and kept in a cooler used to transport samples. The temperature blank is placed in the cooler prior to going to the field and kept there until the cooler is delivered to the laboratory.

9. Completion of Chain of Custody

- A separate COC is completed for each day of sampling. If samples are collected on separate days for the same site, a separate COC is completed for each sampling day, and the COC is always kept with the samples. If samples are shipped off site for laboratory analysis, individual coolers with separate COCs are sent for each day/cooler shipped.
- All fields/spaces on the COC are filled out completely, and all persons having control of the samples sign the COC to show transfer of sample control between individuals. At times when the field sampler is not delivering samples directly to the laboratory, the samples may be turned over to a sample manager for shipping. In this instance, the sample manager takes custody of the samples, and both the sampler and sample manager sign and date the COC to clearly show custody transfer.
- The COC is placed inside the cooler, and a custody seal is placed on the outside of the cooler prior to shipping. The receiving laboratory indicates if the cooler was received with the custody seal intact.
- If samples are sent to the laboratory via UPS, FEDEX, etc., this is indicated on the COC, and the sample manager indicates the date and time custody seal is placed on cooler for delivery to the shipping agent (shipping agent does not sign the COC).
- For trip blanks, the COC indicates the date the TRIP was taken to the field for sampling, not the date the TRIP was prepared by the laboratory, which may appear on the VOA label.
- New electronic deliverable format (EDF) requirements of California AB2886 mandate that COCs and laboratory reports maintain consistent and unique names between sites (Global ID) and sample location/well names (Field Point ID). This information must be consistent with the initial information supplied to Geotracker, and for each subsequent quarterly sampling event.

10. Sample Handling

10.1 Refrigerator Storage and Temperature Log

Samples may be stored in a refrigerator at the consulting office prior to transport to the laboratory. Refrigerator storage is maintained under the following conditions:

- Refrigerators used for sample storage are dedicated for that usage only (no food or other materials are stored in sample refrigerators).
- Refrigerators can be locked from the outside by a sample manager, and only the sample manager has access to samples while in storage.
- Refrigerators are maintained at temperatures between 2 to 4° C, and are adjusted daily depending on thermometer readings.
- Each refrigerator contains a dedicated, reliable thermometer. The thermometer is designed for use in a refrigerator and is fixed/secured to the inside of the unit. The thermometer range is specific for measuring temperatures in the 2 to 4 ° C range.
- A temperature log is kept on the outside of the refrigerator in a lightweight, three-ring binder, or similar logbook. Temperatures are recorded daily or when the refrigerator is open for sample management.
- Completed COCs are kept with the samples stored in the refrigerators. The COCs may be held on a clipboard outside the refrigerator, or may be placed inside the cooler if the entire cooler is placed inside the refrigerator.
- If a cooler is placed in the refrigerator, the cooler lid remains open to insure that samples are maintained at the refrigerator temperature.

10.2 Cooler Packing

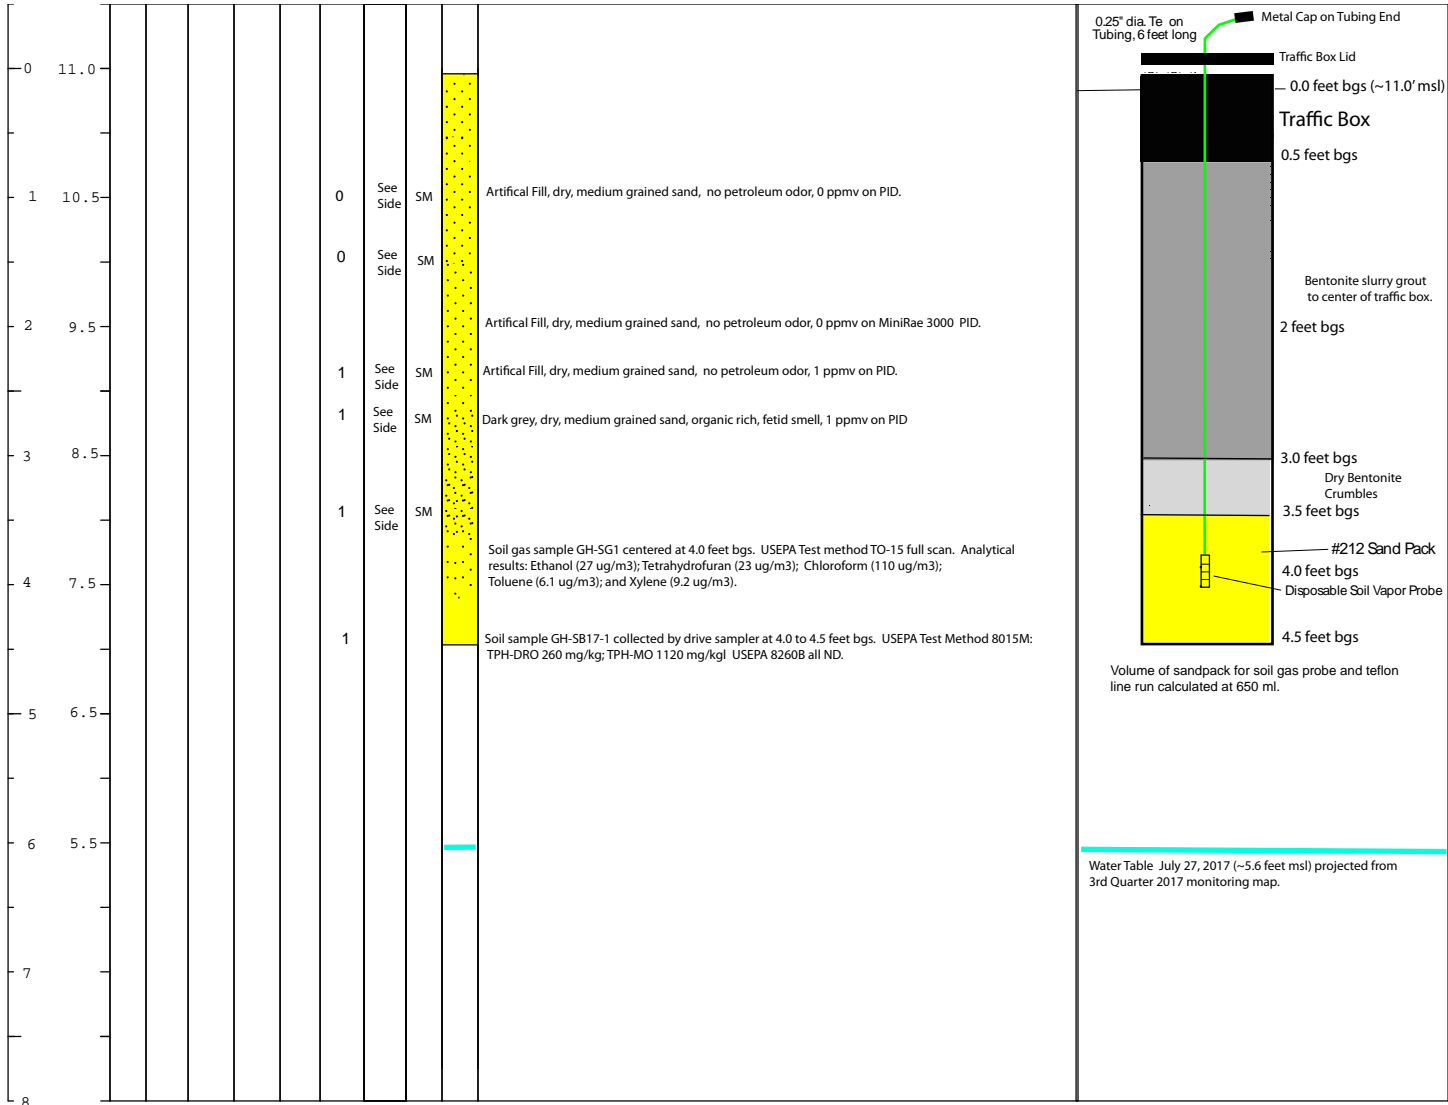

The sample coolers are packed as directed by the receiving laboratory. Standard procedures for cooler packing include:

- The cooler contains enough ice to maintain the required temperature of 2 to 4° C (roughly 20 percent of the volume of the cooler).
- Water ice (not dry ice or ice packs) is used for shipping.
- The ice is placed above and below the samples in at least two sealable plastic bags. This requires that the packing/divider material is removed and replaced.
- The COC is placed in the cooler in a sealed plastic bag, and the cooler lid is taped closed to secure it for transport and to minimize loss of temperature. A custody seal is placed vertically across the seam of the cooler lid.

APPENDIX 4
SOIL GAS WELL COMPLETION LOGS

APPENDIX 6
SOIL SAMPLE ANALYTICAL LABORATORY REPORT

September 05, 2017

Stephen G. Muir
Consulting Geologist & Geophysicist
P.O. Box 152
Woodbridge, CA 95258

RE: Project: Gordon Hansen
Pace Project No.: 1295337

Dear Stephen G. Muir:

Enclosed are the analytical results for sample(s) received by the laboratory on August 29, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Scott M Forbes

QUALIFIERS

Project: Gordon Hansen

Pace Project No.: 1295337

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-DAV Pace Analytical Services - Davis

ANALYTE QUALIFIERS

DE Discrete peaks present, atypical for Diesel Fuel.

DK Lower and higher boiling hydrocarbons present, atypical for Diesel Fuel.

DM Higher boiling hydrocarbons present, atypical for Diesel Fuel.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

S4 Surrogate recovery not evaluated against control limits due to sample dilution.

Project Manager Review: Scott Jones

Date: 8/30/17

Note: Whenever there is a discrepancy affecting North Carolina compliance samples, a copy of this form will be sent to the North Carolina DEHNR Certification Office (i.e. out of hold, incorrect preservative, out of temp, incorrect containers)

	Document Name: Soil Checklist	Document Revised: 24Apr2017 Page 1 of 1
	Document No.: F-DAV-C-028-Rev.02	Issuing Authority: Pace Davis Quality Office

Client: Steve Muir SOIL CHECKLIST Work Order: 1295337 Initials/Date: 0829/17

Are samples soil or other regulated material? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No		If no, matrix description:
Sample Origin (circle one):	FOREIGN (including non-continental U.S.)	<u>DOMESTIC</u>
If Foreign, list Country of Origin:		(regulated, proceed to Requirements)
If Domestic, circle State of Origin:	<input checked="" type="radio"/> CA <input type="radio"/> ID <input type="radio"/> NM <input type="radio"/> NY <input type="radio"/> OR – Indicate County of Origin <u>Solano</u> <i>Site address must be confirmed against quarantine areas in these states. If unknown, contact PM. Project cannot be received until this is determined.</i>	
	Are samples from a quarantine zone? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <i>(If No, proceed with receipt, samples are not regulated, If yes, proceed to depth question.)</i>	
	AL AR FL GA LA MS NC OK SC TN TX VA (Regulated, proceed to depth question)	
	<input type="checkbox"/> NONE OF THE ABOVE (Proceed to receipt, samples are not regulated.)	
Are any samples from a depth of ≤ 6 ft?		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not indicated
Is sub analysis requested?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No (If No to both questions, proceed to receipt, samples are not regulated.)

REQUIREMENT	ACTION	COMPLETED		
Domestic soils from a depth of >6 feet are exempt from classification as regulated soil per California APHIS /USDA guidelines.	Were samples segregated by depth ≤ or > 6 feet?	YES	<u>NO</u>	N/A
	If samples are to be subcontracted outside of California, treat sub samples as regulated soil.			
Samples must be double contained to prevent accidental release. Anything that comes into contact with loose soil must be treated as regulated.	Were there any signs of breakage or leakage (check for broken glass and/or loose soil in the cooler)?	YES	<u>NO</u>	
	If YES, were ice and melt water sterilized by adding enough bleach to achieve a 10% concentration and sitting for ≥ 30 minutes before disposing.	YES	NO	<u>N/A</u>
	If YES, was any broken glass and/or loose soil placed in the USDA Regulated soil drum or Regulated satellite container?	YES	NO	<u>N/A</u>
Samples must be segregated and stored in designated bins and coolers.	Were samples placed in a designated container and cooler?	<u>YES</u>	NO	
Yellow stickers identify regulated soil samples.	Did yellow stickers get placed on all sample containers?	<u>YES</u>	NO	
Equipment and supplies that have come into contact with samples must be decontaminated or disposed of properly.	Were the cooler(s) and/or countertop(s) decontaminated using a fresh 10% bleach solution? Were gloves, disposable lab supplies or shipping materials disposed of in the SR USDA Regulated satellite container?	<u>YES</u>	NO	

To Be Completed by PM/PC for Regulated Soils:

Sample Analysis to be conducted at (circle all that apply):

Davis

Subcontract Lab

Name of Subcontract Lab(s):

REQUIREMENT	ACTION	COMPLETED		
USDA / APHIS rep must be informed by email when regulated soils are received and prior to shipping to any subcontract lab, including IR Pace Labs.	Notification to Anthony Jackson, USDA APHIS PPQ indicated on California Regulated Soil Notification form.	<u>YES</u>	NO	
Sub shipments must include a valid copy of the receiving lab's permit along with all required forms.	Is a copy of all needed paperwork included with the COC? (SR cannot ship samples until all necessary paperwork is compiled.)	<u>YES</u>	NO	N/A

APPENDIX 7
SOIL GAS SAMPLE ANALYTICAL LABORATORY REPORT

1/4/2018

Mr. Stephen Muir

Stephen G. Muir Consulting Geologist & Geophysicist

PO Box 152

Woodbridge CA 95258

Project Name: GORDEN HANSEN

Project #:

Workorder #: 1710414R2

Dear Mr. Stephen Muir

The following report includes the data for the above referenced project for sample(s) received on 10/20/2017 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Rachel Selenis at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Rachel Selenis

Project Manager

LABORATORY NARRATIVE**EPA Method TO-15****Stephen G. Muir Consulting Geologist & Geophysicist****Workorder# 1710414R2**

Eight 1 Liter Summa Canister samples were received on October 20, 2017. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

The recovery of surrogate 1,2-Dichloroethane-d4 in sample GH-SG5 was outside laboratory control limits due to high level hydrocarbon matrix interference. The surrogate recovery is flagged.

The workorder was reissued on 11/06/17 to report TPHg referenced to gasoline per client's request.

A single point calibration for TPH referenced to gasoline was not performed in the analytical batch associated with the samples.

As a result, the TPHg values were calculated using the calibration analyzed on 09/19/17 for samples GH-SG1, GH-SG7, GH-SG2, and GH-SG3 and on 10/20/17 for sample GH-SG5. Results are reported as estimated.

Recovery for TPH referenced to gasoline is reported as not spiked in the associated CCV.

The workorder was reissued on 01/04/18 to report TPHg referenced to gasoline per client's request.

A single point calibration for TPH referenced to gasoline was not performed in the analytical batch associated with the samples. As a result, the TPHg values were calculated using the calibration analyzed on 09/19/17 for samples GH-IAS-1, GH-Ambient-1 and GH-TRIP BLANK. Results are reported as estimated.

Recovery for TPH referenced to gasoline is reported as not spiked in the associated CCV.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Subject:
Semi-Annual Status Report, Second Half 2022

Dear Mr. Hughes,

On behalf of Chevron Environmental Management Company (CEMC), Arcadis has prepared the attached *Semi-Annual Status Report, Second Half 2022* for the following facility:

Date:
October 31, 2022

Contact:
Sean Gehlke

Phone:
925-296-7852

Email:
Sean.Gehlke@arcadis.com

Our ref:
30063697

<u>Former Chevron</u> <u>Bulk Terminal No.</u>	<u>Case No.</u>	<u>Location</u>
206148	SL185412913	33 North Front Street Rio Vista, CA

If you have any questions, please do not hesitate to contact me.

Sincerely,

Arcadis U.S., Inc.

SEMI-ANNUAL STATUS REPORT
Second Half 2022
October 31, 2022

Facility No:	<u>Former Chevron Bulk Terminal No. 206148</u>	Address:	<u>33 North Front Street, Rio Vista, California</u>
Arcadis Contact Person / Phone No.:	<u>Sean Gehlke / (925) 296 7852</u>		
Arcadis Project No.:	<u>30063697</u>		
Primary Agency/Regulatory ID No.:	<u>Central Valley Regional Water Quality Control Board (RWQCB) / Jeremy Hughes / Case No. SL185412913</u>		

WORK CONDUCTED THIS PERIOD [Second Half 2022]:

1. Conducted semi-annual groundwater monitoring activities on September 26, 2022.
2. Prepared and submitted the *Semi-Annual Status Report, Second Half 2022*, presented herein.

WORK PROPOSED NEXT PERIOD [First Half 2023]:

1. Conduct semi-annual groundwater monitoring activities during the first half 2023.
2. Prepare the *Semi-Annual Status Report, First Half 2023*.

Current Phase of Project:	Groundwater Monitoring	
Frequency of Monitoring / Sampling:	<u>Semi-Annual (1Q/3Q) in accordance with Monitoring and Reporting Program (MRP) R5-2007-0822</u>	
Is Light Non-Aqueous Phase Liquid (LNAPL) Present On-site:	<u>No</u>	
Cumulative LNAPL Recovered to Date:	<u>None</u>	(gallons)
Approximate Depth to Groundwater:	<u>1.40 (MW-22) to 4.76 (MW-2)</u>	(feet below top of casing)
Approximate Groundwater Elevation:	<u>3.76 (MW-2) to 4.73 (MW-22)</u>	(feet relative to corresponding datum)

Groundwater Flow Direction	West-northwest
Groundwater Gradient	0.004 (feet per foot)
Current Remediation Techniques:	None
Permits for Discharge:	None
Summary of Unusual Activity:	None
Agency Directive Requirements:	None

DISCUSSION

In accordance with MRP R5-2007-0822, Blaine Tech Services Inc. (BTS) conducted semi-annual groundwater monitoring activities on September 26, 2022. Thirteen (13) monitoring wells were gauged, and groundwater samples were collected. The groundwater monitoring field data sheets and general procedures are included as Attachment A.

Groundwater samples were submitted to Pace Analytical under standard chain-of-custody protocol. Gauging data obtained by BTS and analytical results for this event are summarized in Table 1. Historical gauging and analytical data are summarized in Table 2 and Attachment B. The site location and layout are presented on Figures 1 and 2, respectively. The groundwater elevation contours are presented on Figure 3. Constituent of concern concentrations are presented on Figure 4. Isoconcentration contours for total petroleum hydrocarbons as gasoline range (TPH-g) and total petroleum hydrocarbons as diesel range (TPH-d) are presented on Figures 5 and 6, respectively. A copy of the laboratory analytical report and chain-of-custody documentation are included as Attachment C.

The calculated groundwater flow direction was to the west-northwest. Historical groundwater flow direction has varied, likely due to tidal influence from the Sacramento River. The groundwater analytical results are summarized below.

- TPH-g was detected in wells MW-2, MW-20, MW-22, and MW-23, at concentrations up to 730 µg/L (MW-23).
- TPH-d was detected in all sampled wells except MW-2 and MW-16, at concentrations up to 546 µg/L (MW-13).

- TPH-d with silica gel cleanup (w/ Si gel) was reported in wells MW-7, MW-17, MW-23, and MW-24, at concentrations up to 203 µg/L (MW-23). TPH-d concentrations were typically lower after silica gel cleanup, which suggest that some of the detected hydrocarbons represent non-petroleum sources.

CONCLUSIONS AND RECOMMENDATIONS

The highest TPH-g and TPH-d concentrations have historically occurred in wells in the southeastern part of the Site, including areas adjacent to the Sacramento River, near the former crude oil above ground storage tank and former petroleum loading dock, east of the 39 Sacramento Street residence, and to the north along Sacramento Street. Impacted soil in these areas could not be removed during the 2005 soil excavation due to proximity of existing buildings and infrastructure.

Arcadis will prepare a comprehensive case closure request for the Site and a Soil and Groundwater Management Plan to address future construction or earthmoving activities that may impact areas of non-excavated soil around and beneath site infrastructures.

LIMITATIONS

This report was prepared in accordance with the scope of work outlined in Arcadis' contract and with generally accepted professional engineering and environmental consulting practices existing at the time this report was prepared and applicable to the location of the site. It was prepared for the exclusive use of Chevron Environmental Management Company, for the express purpose stated above. Any re-use of this report for a different purpose or by others not identified above shall be at the user's sole risk without liability to Arcadis. To the extent that this report is based on information provided to Arcadis by third parties, Arcadis may have made efforts to verify this third-party information, but Arcadis cannot guarantee the completeness or accuracy of this information. The opinions expressed and data collected are based on the conditions of the site existing at the time of the field investigation. No other warranties expressed or implied are made by Arcadis.

Notes:

ID = Identification
TOC = Top of casing
DTW = Depth to groundwater
ft bTOC = Feet below top of casing
ft = Feet
LNAPL = Light Non-Aqueous Phase Liquid
GW Elev = Groundwater elevation
µg/L = Micrograms per liter
NAVD88 = North American Vertical Datum of 1988
<1.00 = Not detected at or above the reported detection limit (RDL)
Bold = Detected result including estimated values
J = Estimated value between the method detection limit and the RDL

TPH-g = Total petroleum hydrocarbons, gasoline range by LUFT GC/MS according to United States Environmental Protection Agency (USEPA) Method 8015
TPH-d = Total petroleum hydrocarbons, diesel range by LUFT GC/MS according to USEPA Method 8015
TPH-d w/ Si Gel = Total petroleum hydrocarbons, diesel range with silica gel cleanup
LUFT = Leaking Underground Fuel Tank
GC/MS = Gas Chromatography/ Mass Spectrometry
Analytes by Method 8260B:
Benzene
Toluene
Ethylbenzene
Total Xylenes

Table 2. Historical Groundwater Gauging and Analytical Results
Former Chevron Bulk Terminal No. 206148
33 North Front Street
Rio Vista, California

	Sample	Screen Interval	TOC	DTW	LNAPL thickness	GW Elev	TPH-g	TPH-d	TPH-d w/ Si Gel	Benzene	Toluene	Ethyl-benzene	Total Xylenes	Naphthalene	Comments
Well ID	Date	(ft bTOC)	(ft)	(ft bTOC)	(ft)	(ft relative to datum ¹)	(µg/L)	(µg/L)	(µg/L)	(µg/L)	(µg/L)	(µg/L)	(µg/L)	(µg/L)	

Notes:

ID = Identification

MW = Groundwater monitoring well

TOC = Top of casing

DTW = Depth to groundwater

ft bTOC = Feet below top of casing

ft = Feet

LNAPL = Light Non-Aqueous Phase Liquid

GW Elev = Groundwater elevation

µg/L = Micrograms per liter

¹NAVD88 = North American Vertical Datum of 1988

<17 = Not detected at or above the method detection limit (MDL)

Bold = Detected result including estimated values

J = Estimated value between MDL and limit of quantitation

-- = Not sampled/not measured

* Well went dry during purging, sample collected on 9/22/2021

The laboratory changed from Eurofins Lancaster Laboratories Environmental to Pace Analytical during 3Q2020.

TPH-g = Total petroleum hydrocarbons, gasoline range by LUFT GC/MS according to United States Environmental Protection Agency (USEPA) Method 8015

TPH-d = Total petroleum hydrocarbons, diesel range by LUFT GC/MS according to USEPA Method 8015

TPH-d w/ Si Gel = Total petroleum hydrocarbons, diesel range with silica gel cleanup

LUFT = Leaking Underground Fuel Tank

GC/MS = Gas Chromatography/ Mass Spectrometry

Analytes by USEPA Method 8260B:

Benzene

Toluene

Ethylbenzene

Total Xylenes

Naphthalene

Notes:

ID = Identification

MW = Groundwater monitoring well

TOC = Top of casing elevation (feet above mean sea level)

fbg = Feet below grade

-- = Unknown

¹ = Elevations are based on GPS observations using University of CA Bay Area Deformation CORS Stations UCD1 and SUTB, Reference Epoch 2000.35, NAVD 88.

² = Coordinates are California State Plan Zone 2 coordinates from GPS observations using University of California Bay Area CORS Station observation files and based on the California Spatial Reference Center datum, reference Epoch 2000.35; coordinate datum is NAD 83 (1986); datum ellipsoid is GRS80; reference GEOID is NGS99.

³ = Casing material: Schedule 40 PVC

⁴ = Elevations are based on a bolt and washer benchmark stamped "BM 11" located on the top of curb, north side of Second and Logan Streets with an elevation of 15.81 (NGVD 29). Surveyed on July 12, 2002.

Blaine Tech Services, Inc. Groundwater Monitoring Event 220926CB-1

This submission covers the routine monitoring of groundwater wells conducted on September 26, 2022 at this location. Thirteen monitoring wells were measured for depth to groundwater (DTW) and presence of separate-phase hydrocarbons (SPH). Thirteen monitoring wells were sampled. All sampling activities were performed in accordance with local, state, and federal guidelines.

Water levels and separate-phase measurements were collected using an electronic water or oil-water interface detector. Subsequent sample collection and sample handling was performed in accordance with EPA protocols. Alternately, where applicable, wells were sampled utilizing no-purge methodology. All reused equipment was decontaminated in an integrated stainless steel sink with de-ionized water supplied Hotsy pressure washer and Liquinox or equivalent.

Samples were delivered under chain-of-custody to Pace Analytical for analysis. If samples cannot be delivered to Pace on the same day of collection, samples will be stored and secured in a locked refrigerator on Blaine Tech Services, Inc.'s facility until they can be delivered to Pace Analytical. Monitoring well purgewater and equipment rinsate water was collected and transported under bill of lading to Blaine Tech Services, Inc.'s yard in Sacramento, California, and bulked for future transportation.

Third Quarter 2022 Groundwater Monitoring at Chevron 20-6148, 33 N. Front St., Rio Vista, CA

SAN JOSE SACRAMENTO LOS ANGELES SAN DIEGO SEATTLE
1680 ROGERS AVENUE SAN JOSE, CA (408) 573-0555 FAX (408) 573-7771 LIC. 746684 WWW.BLAINETECH.COM

Enclosed documentation from this event includes copies of the Well Gauging Sheet, Well Monitoring Data Sheets, Bill of Lading and Chain-of-Custody.

Blaine Tech Services, Inc.'s activities at this site consisted of objective data and sample collection only. No interpretation of analytical results, defining of hydrogeologic conditions or formulation of recommendations was performed.

Please call if you have any questions.

Thank you,

SOURCE RECORD BILL OF LADING

FOR PURGEWATER RECOVERED FROM GROUNDWATER WELLS AT CHEVRON FACILITIES IN THE STATE OF CALIFORNIA. THE PURGE- WATER WHICH HAS BEEN RECOVERED FROM GROUND- WATER WELLS IS COLLECTED BY THE CONTRACTOR AND HAULED TO THEIR FACILITY IN SAN JOSE, CALIFORNIA FOR TEMPORARILY HOLDING PENDING TRANSPORT BY OTHERS TO FINAL DESTINATION.

The contractor performing this work is BLAINE TECH SERVICES, INC. (BLAINE TECH), 1680 Rogers Ave. San Jose CA (408) 573-0555). BLAINE TECH. is authorized by Chevron Environmental Management Company (CHEVRON EMC) to recover, collect, apportion into loads, and haul the purgewater that is drawn from wells at the CHEVRON EMC facility indicated below and to deliver that purgewater to BLAINE TECH for temporarily holding. Transport routing of the purgewater may be direct from one CHEVRON EMC facility to BLAINE TECH; from one CHEVRON EMC facility to BLAINE TECH via another CHEVRON EMC facility; or any combination thereof. The well purgewater is and remains the property of CHEVRON EMC.

This **Source Record BILL OF LADING** was initiated to cover the recovery of Non-Hazardous Well Purgewater from wells at the Chevron facility described below:

Pre-Job Safety Review

1. JMP reviewed, site restrictions and parking/access issues addressed.

Reviewed ☒

2. Special Permit Required Task Review

Are there any conditions or tasks that would require:

Yes No

Confined space entry ☐ ☒

Working at height ☐ ☒

Lock-out/Tag-out ☐ ☒

Excavations greater than 4 feet deep ☐ ☒

Excavations within 3 feet of a buried active electrical line or product piping
or within 10 feet of a high pressure gas line. ☐ ☒

Use of overhead equipment within 15 feet of an overhead electrical power
line or pole supporting one ☐ ☒

Hot work ☐ ☒

If "Yes" was the answer to any of the Special Permit Required Tasks above, the Project Manager will contact the client and arrange to modify the Scope of Work so that the Special Permit Required Tasks are not required to be performed by Blaine Tech Services employees.

3. Is a Traffic Control Permit required for today's work?

Yes No

☐ ☒

If so is it in the folder? ☐ ☐

Is it current? ☐ ☐

Do you understand the Traffic Control Plan and what equipment you will need? ☐ ☐

On site Pre-Job Safety Review

1. Reviewed and signed the site specific HASP. ☒
2. Route to hospital understood. ☒
3. Reviewed "Groundwater Monitoring Well Sampling General Job Safety Analysis included in the HASP. ☒
4. Exceptional circumstances today that are not covered by the HASP, JSA or JMP have been addressed and mitigated. ☒
5. Understands procedure to follow, if site circumstances change, to address new site hazards. ☒
6. There are no unexpected conditions which would make your task a Special Permit Required Task. If there is, contact your Project Manager. ☒
7. All site hazards have been communicated to all necessary onsite personnel during tailgate safety meeting. ☒
8. After lunch tailgate safety meeting refresher conducted. ☒

If Checklist Task cannot be completed, explain:

Table 1
Groundwater Monitoring Data and Analytical Results
Former Chevron Station #206148 (Rio Vista BP)
33 North Front Street
Rio Vista, California

EXPLANATIONS:

Groundwater monitoring data and laboratory analytical results prior to June 7, 2000, were compiled from reports prepared by Blaine Tech Services, Inc.

TOC = Top of Casing
(ft.) = Feet

GWE = Groundwater Elevation
(msl) = Mean sea level

DTW = Depth to Water

SPHT = Separate Phase Hydrocarbons Thickness

TPH-G = Total Petroleum Hydrocarbons as Gasoline

TPH = Total Petroleum Hydrocarbons

DRO = Diesel Range Organics

GRO = Gasoline Range Organics

B = Benzene

T = Toluene

E = Ethylbenzene

X = Xylenes

MTBE = Methyl Tertiary Butyl Ether

D. Lead = Dissolved Lead

(µg/L) = Micrograms per liter

-- = Not Measured/Not Analyzed

QA = Quality Assurance/Trip Blank

ND = Not Detected

NP = No Purge

* TOC elevations were surveyed on July 6, 2005, by Morrow Surveying Land Surveying.

TOC elevations were surveyed on July 12, 2002, by Virgil Chavez Land Surveying. The benchmark used for the survey was a bolt and washer stamped "BM 11" located on the top of curb, north side of Second and Logan Streets, (Elevation = 15.81 ft. NGVD 29).

** GWE corrected due to the presence of SPH; correction factor: $[(TOC - DTW) + (SPHT \times 0.80)]$.

1 Chromatogram pattern indicates an unidentified hydrocarbon.

2 Chromatogram pattern indicates an unidentified hydrocarbon and weathered diesel.

3 Chromatogram pattern indicates an unidentified hydrocarbon and weathered gas.

4 Chromatogram pattern indicates a weathered gas.

5 Chromatogram pattern indicates weathered diesel.

6 Chromatogram pattern indicates diesel and an unidentified hydrocarbon.

7 Laboratory report indicates unidentified hydrocarbons C9-C24.

8 Laboratory report indicates unidentified hydrocarbons <C16.

9 Laboratory report indicates gasoline C6-C12.

10 Laboratory report indicates unidentified hydrocarbons C6-C12.

11 Laboratory report indicates diesel C9-C24.

12 Product + water removed.

13 Laboratory report indicates unidentified hydrocarbons >C8.

14 Laboratory report indicates unidentified hydrocarbons C9-C40.

15 Analyzed with silica gel cleanup.

16 Laboratory report indicates diesel C9-C24 + unidentified hydrocarbons <C16.

17 Laboratory report indicates TPH-G is quantitated from C6 to C12.

18 Laboratory report indicates diesel C9-C24 + unidentified hydrocarbons >C16.

19 Laboratory report indicates gasoline C6-C12 + unidentified hydrocarbons C6-C12.

20 Laboratory report indicates gasoline C6-C12 + unidentified hydrocarbons >C10.

21 Laboratory report indicates discrete peaks.

22 MTBE by EPA Method 8260 was at a raised detection limit due to laboratory instrument limitation; please see laboratory report for modified detection limits.

23 MTBE by EPA Method 8260.

24 BTEX and MTBE by EPA Method 8260.

Table 1
Groundwater Monitoring Data and Analytical Results
Former Chevron Station #206148 (Rio Vista BP)
33 North Front Street
Rio Vista, California

EXPLANATIONS:

- 25 Unable to bail and remove SPH due to thick viscosity of product in the well.
- 26 Well development performed.
- 27 Laboratory report indicates the observed sample pattern is not typical of diesel/#2 fuel oil.
- 28 Removed 30 milliliters of SPH + water from well.
- 29 Initial report listed the incorrect TOC; GWE has been updated.
- 30 SPH present after two case volumes were purged.
- 31 Laboratory report indicates the observed sample pattern includes #2 fuel/diesel and an additional pattern which elutes later in the DRO range.
- 32 Laboratory report indicates the observed sample pattern is not typical of #2 fuel/diesel. It elutes in the DRO range earlier than #2 fuel.
- 33 Laboratory report indicates the observed sample pattern includes #2 fuel/diesel and an additional pattern which elutes earlier and later in the DRO range.
- 34 No Purge, unable to access well with truck due to flooding.
- 35 BTEX by EPA Method 8260.
- 36 Laboratory report indicates DRO was detected in the method blank at a concentration of 30 ($\mu\text{g/L}$). The sample was reextracted. DRO was detected in the reextracted method blank at 65 ($\mu\text{g/L}$). The hold time had expired prior to the reextraction so all results are reported from the original extract. Similar results were obtained in both extracts. The surrogate recovery for the associated LCS/LCSD is below the OC limit. Since the LCS/LCSD spike recoveries are within the QC limits, the sample results are reported.
- 37 Laboratory report indicates estimated value.

Table 2
Groundwater Analytical Results - Oxygenate Compounds
Former Chevron Station #206148 (Rio Vista BP)
33 North Front Street
Rio Vista, California

EXPLANATIONS:

Groundwater laboratory analytical results prior to July 17, 2001, were compiled from reports prepared by Blaine Tech Services, Inc.

TBA = t-Butyl alcohol

MTBE = Methyl Tertiary Butyl Ether

DIPE = di-Isopropyl ether

ETBE = Ethyl t-butyl ether

TAME = t-Amyl methyl ether

1,2-DCA = 1,2-Dichloroethane

EDB = 1,2-Dibromoethane

(µg/L) = Micrograms per liter

-- = Not Analyzed

SPH = Separate Phase Hydrocarbons

¹ Raised detection limits due to laboratory instrument limitations; please see laboratory report for modified detection limits.

Table 3
Groundwater Analytical Results
Former Chevron Station #206148 (Rio Vista BP)
33 North Front Street
Rio Vista, California

EXPLANATIONS:

(µg/L) = Micrograms per liter

(cfu/ml) = Colony forming units per milliliter

ANALYTICAL METHODS:

Methane by EPA Method 8015B

Sulfate and Nitrate Nitrogen by EPA Method 300.0

Ferrous Iron by SM20 3500

- ^a Laboratory report indicates this sample was originally analyzed within the 48 hour holding time for nitrate nitrogen, however the continuing calibration standard bracketing the sample was outside of the 90% to 110% acceptance window with a recovery of 111%. The analysis was repeated on February 15, 2009. The result of the repeat trial was 440 ug/l.
- ^b Laboratory report indicates due on interfering peaks on the chromatogram, the value reported for methane represents the lowest reporting limits attainable.

Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier Description

J	The identification of the analyte is acceptable; the reported value is an estimate.

Professional Resumes

JASON SHEASLEY, P.G.

Jason has 23 years' experience involving water resources, hydrogeology, and geology. He has managed geologic and hydrogeologic investigations for the characterization of subsurface contamination at commercial and industrial sites nationwide. His experience includes due diligence; Phase I and Phase II environmental site assessment reporting; the development of Brownfield sites and environmentally-impacted properties; and environmental compliance under RCRA, CERCLA, and state hazardous waste programs. Jason has directed and managed projects relating to the characterization and remediation of soil and groundwater contamination, provided technical oversight for the development of regional groundwater management policies.

Acoustical Analysis

MEMORANDUM

To: Prathna Maharaj, Kimley-Horn

From: Noemi Wyss AICP, Air Quality and Noise Manager, Kimley-Horn
Tanay Pradhan, Environmental Planning Analyst, Kimley-Horn

Date: March 6, 2023

Subject: City of Rio Vista Wastewater Plant Consolidation Project – Acoustical Analysis

1.0 PURPOSE

The purpose of this memorandum is to report the results of an Acoustical Assessment associated with construction and operations of the proposed City of Rio Vista Wastewater Plant Consolidation Project (project), located in the City of Rio Vista, California. This analysis has been undertaken to determine the level of impact the project would have on the environment and to analyze whether the proposed project would result in a significant environmental impact.

2.0 PROPOSED PROJECT DESCRIPTION

The proposed project would enable the transfer of wastewater treatment services to the Northwest Wastewater Treatment Plant (WWTP) and cease all operations at the Beach WWTP. The proposed project would include approximately 3.5 miles of new force mains between 3” and 14” from the Beach WWTP to the Northwest WWTP and includes four lift stations (two new and two improved). The lift stations would pump wastewater through the new force mains to the Northwest WWTP. Additional treatment and process improvements would be made at the Northwest WWTP to add to the efficiencies of the existing process. Improvements would be made, to the extent feasible, to existing wastewater lines within existing roadways and previously disturbed right-of-way, urbanized areas, and to minimize alterations to undeveloped areas. The proposed project is needed to enable the City to improve and rehabilitate the existing wastewater service capacities and protect water quality and beneficial uses of the Sacramento River. The project is intended to enable transfer of service from the Beach WWTP and would not increase the overall capacity beyond what was previous planned.

The project would include new recycled water infrastructure at the Trilogy development to the west of the Northwest WWTP. These new recycled water lines would be approximately 0.5 miles in length and would run through the residential community. These recycled water lines would lead to the Northwest WWTP which would include construction of a new clarification pond on-site.

Construction of the proposed project is anticipated to approximately begin at the end of 2023 and end in late 2024 or 2025. The proposed improvements would occur within existing roadways, and one

proposed utility easement would occur through private property (CPN Pipeline Company). The installation of the new pipes, lift stations, and clarification pond would require soil import and export. For the clarification pond, approximately 16,000 cubic yards (cy) would be moved from the Northwest WWTP to the surrounding on-site area or the vacant land adjacent to Rio Vista Airport approximately one mile away. The new piping and lift stations would require the excavation of 14,080 cy of export. Half the of the export volume would be left on-site and used as backfill. The other half would be exported off-site and approximately 7,040 cy of new material would be imported on-site for the remaining backfill.

3.0 THRESHOLDS AND SIGNIFICANCE CRITERIA

Based upon the criteria derived from Appendix G of the CEQA Guidelines, a project normally would have a significant effect on the environment if it would:

1. Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
2. Generate excessive groundborne vibration or groundborne noise levels; and
3. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels.

4.0 IMPACT ANALYSIS

Fundamentals of Sound and Environmental Noise

Sound is technically described in terms of amplitude (loudness) and frequency (pitch). The standard unit of sound amplitude measurement is the decibel (dB). The decibel scale is a logarithmic scale that describes the physical intensity of the pressure vibrations which make up any sound. The pitch of the sound is related to the frequency of the pressure vibration. Because the human ear is not equally sensitive to a given sound level at all frequencies, a special frequency-dependent rating scale has been devised to relate noise to human sensitivity. The A-weighted decibel scale (dBA) provides this compensation by discriminating against frequencies in a manner approximating the sensitivity of the human ear.

Noise, on the other hand, is typically defined as unwanted sound because of its potential to disrupt sleep, to interfere with speech communication, and to damage hearing. A typical noise environment consists of a base of steady “background” noise that is the sum of many distant and indistinguishable noise sources. Superimposed on this background noise is the sound from individual local sources. These can vary from an occasional aircraft or train passing by to virtually continuous noise from, for example, traffic on a major highway.

Addition of Decibels

Because decibels are logarithmic units, sound levels cannot be added or subtracted through ordinary arithmetic. Under the decibel scale, a doubling of sound energy corresponds to a 3 dB increase. In other words, when two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be 3 dB higher than one source under the same conditions. Under the decibel scale, three sources of equal loudness together would produce an increase of 5 dB.

Sound Propagation and Attenuation

Sound spreads (propagates) uniformly outward in a spherical pattern, and the sound level decreases (attenuates) at a rate of approximately 6 dB for each doubling of distance from stationary or point source. Sound from a line source, such as a highway, propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of approximately 3 dB for each doubling of distance from a line source, such as roadway noise, depending on ground surface characteristics. No excess attenuation is assumed for hard surfaces like a parking lot or body of water. Soft surfaces, such as soft dirt or grass, can absorb sound, so an excess ground-attenuation value of 1.5 dB per doubling of distance is normally assumed. For line sources, an overall attenuation rate of 3 dB per doubling of distance is assumed.

Noise levels may also be reduced by intervening structures; generally, a single row of buildings between the receptor and the noise source reduces the noise level by about 5 dBA, while a solid wall or berm reduces noise levels by 5 to 10 dBA. The manner in which older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dBA with closed windows. The exterior-to-interior reduction of newer residential units is generally 30 dBA or more.

Noise Descriptors

The decibel scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Several rating scales have been developed to analyze the adverse effect of community noise on people. Because environmental noise fluctuates over time, these scales consider that the effect of noise upon people is largely dependent upon the total acoustical energy content of the noise, as well as the time of day when the noise occurs. The L_{eq} is a measure of ambient noise, while the L_{dn} and CNEL are measures of community noise. Each is applicable to this analysis and defined below.

- L_{eq} , the equivalent energy noise level, is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.

- L_{dn} , the Day-Night Average Level, is a 24-hour average L_{eq} with a 10 dBA “weighting” added to noise during the hours of 10:00 PM to 7:00 AM to account for noise sensitivity in the nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.4 dBA L_{dn} .
- CNEL, the Community Noise Equivalent Level, is a 24-hour average L_{eq} with a 5 dBA “weighting” during the hours of 7:00 PM to 10:00 PM and a 10 dBA “weighting” added to noise during the hours of 10:00 PM to 7:00 AM to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.7 dBA CNEL.
- L_{min} is the minimum instantaneous noise level experienced during a given period of time.
- L_{max} is the maximum instantaneous noise level experienced during a given period of time.
- Percentile Noise Level (L_n) is the noise level exceeded for a given percentage of the measurement time. For example, L_{10} is the noise level exceeded for 10 percent of the measurement duration, and L_{50} is the noise level exceeded for 50 percent of the measurement duration.

Sensitive Receptors

Table 1: Nearby Sensitive Receptors

Sensitive Receptors	Distance from Project Site
<i>Wastewater Lines, Recycled Water Line, and Lift Station</i>	
Residences	15 feet
Churches	40 feet
Riverview Middle School	40 feet
<i>Northwest Wastewater Treatment Plant</i>	
Residences	>2,000 feet

There are existing noise sensitive land uses in the immediate project vicinity. The nearest sensitive is the West Wind Mobile home park located 15 feet away from the project site. Other nearby receptors are various residential uses, churches, and a school located approximately 40 feet away from the project site.

The City of Rio Vista General Plan identifies an exterior noise standard of 65 dBA L_{dn} for residential land uses. Noise mitigation measures are required for projects that would result in a substantial increase (i.e., 3 dBA, or greater) in ambient noise levels that would exceed the City’s exterior noise level of 65 dBA L_{dn} for residential land uses. The City also limits typical construction activities to between the hours of 7:00 AM and 7:00 PM Monday through Friday. Construction is not allowed on weekends. Project construction would be required to comply with these hours.

The City’s Noise Ordinance (Title 17, Noise Control, Chapter 17.52) identifies prohibitions and noise standards intended to protect citizens from unnecessary and unusually loud noises that could

adversely affect the peace, health, and safety of community residents. For noise sources affecting residential districts, noise levels may not exceed 50 dBA L_{eq} .

4.1 Acoustical Analysis

Threshold (a) Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

Construction

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g. land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. Project construction would occur directly adjacent to commercial uses, residential uses, schools, and churches. Noise impacts for mobile construction equipment are typically assessed as emanating from the center of the equipment activity or construction site. For the proposed project, this center point would be approximately 25 feet from the nearest sensitive receptor property line to the roadway centerline. Noise levels typically attenuate (or drop off) at a rate of 6 dB per doubling of distance from point sources, such as industrial machinery.

Construction activities associated with development of the proposed project would include site preparation, minor grading, paving, construction of the SSFMs, lift stations, and Northwest Treatment Plant additions, and architectural coating. Such activities would require graders, scrapers, and tractors during site preparation; graders, dozers, and tractors during grading; cranes, forklifts, generators, tractors, and welders during building construction; pavers, rollers, mixers, tractors, and paving equipment during paving; and air compressors during architectural coating. Grading and excavation phases of project construction tend to be the shortest in duration and create the highest construction noise levels due to the operation of heavy equipment required to complete these activities. It should be noted that only a limited amount of equipment can operate near a given location at a particular time. Equipment typically used during this stage includes heavy-duty trucks, backhoes, bulldozers, excavators, and front-end loaders. Operating cycles for these types of construction equipment may involve one or two minutes of full-power operation followed by three to four minutes at lower power settings. Other primary sources of noise would be shorter-duration incidents, such as dropping large pieces of equipment or the hydraulic movement of machinery lifts, which would last less than one minute. No pile-driving would be required during construction. Project construction would not use large heavy-duty pieces of construction equipment such as a cranes, pile-driving, or scrapers, and noise levels would be less intense than typical construction projects. Since the project is installing new water lines and lift stations, equipment would move in a linear fashion as opposed to operating adjacent to any one sensitive receptor for an extended period of time. The loudest equipment (used during demolition phase) would produce a noise level of 94 dBA at 25 feet. The other construction phases would utilize equipment that would produce a lower level of noise.

The City of Rio Vista does not have construction noise standards. However, as stated in Section 17.52.060 of the City municipal code, public construction project or the maintenance or repair of public property is exempt from the noise limits listed in Section 17.52.050 of the municipal code. The project would be classified as a public project would, therefore, be exempt from the City's noise standards. Therefore, the project's construction noise would result in a less than significant and no mitigation is required.

Operational

Project operations, including new water lines and lift stations, would occur below ground and would not produce noise levels that impact sensitive receptors. The operation of the clarification pond and Northwest WWTP would be more than 2,000 feet away from the nearest sensitive receptor. No significant noise sources are predicted or planned for these uses. Operation of the project would not generate a substantial amount of traffic and would, therefore, not generate additional traffic noise on the surrounding roadways. As a result, operational impacts would be less than significant.

Mitigation Measure: Compliance with General Plan Policies and applicable state and local law would reduce impacts to a less than significant level. No additional site-specific mitigation measures are required.

Level of Significance: Less than significant impact.

Threshold (b) Generate excessive groundborne vibration or groundborne noise levels.

There are no federal, state, or local regulatory standards for groundborne vibration. However, various criteria have been established to assist in the evaluation of vibration impacts. For instance, the California Department of Transportation (Caltrans) has developed vibration criteria based on human perception and structural damage risks. For most structures, Caltrans considers a peak particle velocity (ppv) threshold of 0.2 inches per second (in/sec) to be the level at which architectural damage (i.e., minor cracking of plaster walls and ceilings) to normal structures may occur. Below 0.10 in/sec ppv there is virtually no risk of 'architectural' damage to normal buildings. Levels above 0.4 in/sec ppv may possibly cause structural damage.¹

In terms of human annoyance, continuous vibrations in excess of 0.1 in/sec ppv are identified by Caltrans as the minimum level perceptible level for ground vibration. Short periods of ground vibration in excess of 0.2 in/sec ppv can be expected to result in increased levels of annoyance to people within buildings.¹

¹ California Department of Transportation, *Transportation and Construction Vibration Guidance Manual*, 2020.

Construction

Increases in groundborne vibration levels from the proposed project would be associated with short-term construction-related activities. Project construction would require the use of off-road equipment, such as tractors, concrete mixers, and haul trucks. The proposed project is not expected to use major groundborne vibration-generating construction equipment, such as pile drivers. The nearest off-site sensitive structures are the homes on the eastern edge of the West Wind Mobile Home Park located 15 feet to the west of a section of the new SSFM. The ground beside the homes is undisturbed and would not require substantial demolition or site preparation. Therefore, the use of large vibration generating equipment listed in *Table 2: Typical Construction Equipment Vibration Levels* would not be required, and vibration levels would be less than significant at these receptors. Beside the mobile homes located in the West Wind Mobile Home Park, the closest sensitive receptors that would be near vibration-generating equipment are located 40 feet away from the new SSFMs on 2nd Street, Bruning Avenue, and Front Street, and residences near the new recycled water lines on Summerset Drive, Laurel Place, and Edgewood Drive. The closest off-site structure that would be located near vibration-generating equipment would be commercial uses located 15 feet from construction that would occur on North Front Street. As shown in *Table 2: Typical Construction Equipment Vibration Levels*, vibration levels at the nearest on- and off-site structures (15 feet for non-residential structures and 25 feet for residential structures) would not exceed the minimum recommended criteria for structural damage (0.20 in/sec ppv).

Table 2: Typical Construction Equipment Vibration Levels

Equipment	Peak Particle Velocity At 15 feet (in/sec)	Peak Particle Velocity At 25 feet (in/sec)
Large Bulldozer	0.1915	0.089
Loaded Trucks	0.1635	0.076
Rock Breaker	0.1269	0.059
Jackhammer	0.0753	0.035
Small Bulldozer/Tractors	0.0065	0.003
1. Calculated using the following formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$, where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance; PPV_{ref} = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, 2018; D = the distance from the equipment to the receiver.		
Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, September 2018.		

Furthermore, as mentioned above, construction would move in a linear fashion and would not occur adjacent to any one receptor for an extended period of time. As a result, this impact would be less than significant.

Operation

The project operation does not include any equipment or facilities that would generate significant groundborne vibration. The lift stations would generate groundborne vibration. However, the stations would be located underground, and any vibration generated would dissipate quickly due to the surrounding earth/soils. Furthermore, the lift stations are located 120 feet away from the closest sensitive receptor and the vibration would not reach levels that cause human annoyance. Therefore, vibration impacts associated with project operation would be less than significant.

Mitigation Measure: Compliance with General Plan Policies and applicable state and local law would reduce impacts to a less than significant level. No additional site-specific mitigation measures are required.

Level of Significance: Less than significant impact.

Threshold (c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels?

Sections of the proposed project are within two miles of the Rio Vista Municipal Airport. However, the project does not include any new permanent residences or places of work that are sensitive to aircraft noise. The proposed project would not be within the direct flight path of aircraft. Therefore, the proposed project would have a less than significant impact.

Cumulative Impacts

As discussed above, the proposed project would not cause a new noise impact to occur, nor an increase in the severity of a noise impact. Therefore, the proposed project would not cause either a new cumulative impact to occur, nor an increase in the severity of a cumulative impact previously disclosed.

Mitigation Measure: Compliance with General Plan Policies and applicable state and local law would reduce impacts to a less than significant level. No additional site-specific mitigation measures are required.

Level of Significance: Less than significant impact.

Appendix F

Collection System Evaluation Technical Memorandum

To: Rob Hickey, Cecil Dillon, Robin Borre (City of Rio Vista)
From: Robert Le, PE; Navina Venugopal, EIT
Reviewed By: Curtis Lam, PE
Subject: TM #2 – Collection System Evaluation
Date: April 27, 2022

This Technical Memorandum (TM) is the second in a series of TMs that will be completed in support of the City of Rio Vista Wastewater Plant Consolidation Project.

INTRODUCTION

The City of Rio Vista (City) has retained HydroScience Engineers (HydroScience) to develop a feasibility study and long-term plan for the Wastewater Consolidation Project (Project). The City currently operates two wastewater treatment plants, the Beach and Northwest Wastewater Treatment Plants (WWTP).

HydroScience worked with the City to develop and evaluate potential options for the transfer of flows from the Beach WWTP collection system to the Northwest WWTP. This TM summarizes the collection system evaluation, the key findings, and the recommendations.

EXISTING COLLECTION SYSTEM

Figure 1 shows the existing Rio Vista sewer collection system, including the two treatment plants and the existing lift stations. The ‘Core Area’ of the City is mostly built-out in terms of development and growth. Sewage flow in the Core Area generally flows from west to east towards the Sacramento River, and from north to south with treatment occurring at the Beach WWTP. The collection system currently has multiple pump stations that pump into the shed of other pump stations. Pump stations upstream of the Marina Lift Station that pump into its shed include the Second Street, Airport Road, River Road, and City Hall pump stations. The Marina Lift Station is the largest lift station in the Core Area and is therefore a critical part of the collection system. Several of the lift stations, including River Road Lift Station, Second Street Lift Station, and Marina Lift Station are located within the 100-year floodplain¹.

To facilitate the collection system evaluation, the current average and peak flows were estimated for each existing sewer-shed in the Core Area. Total flow from the Core Area is equivalent to total inflow to the Beach WWTP, which was analyzed using the California Integrated Water Quality System (CIWQS) database in *TM #1 – Flows and Loads Evaluation*.

¹ As defined by FEMA based on the latest FIRM or FIRMette maps available on the FEMA website.

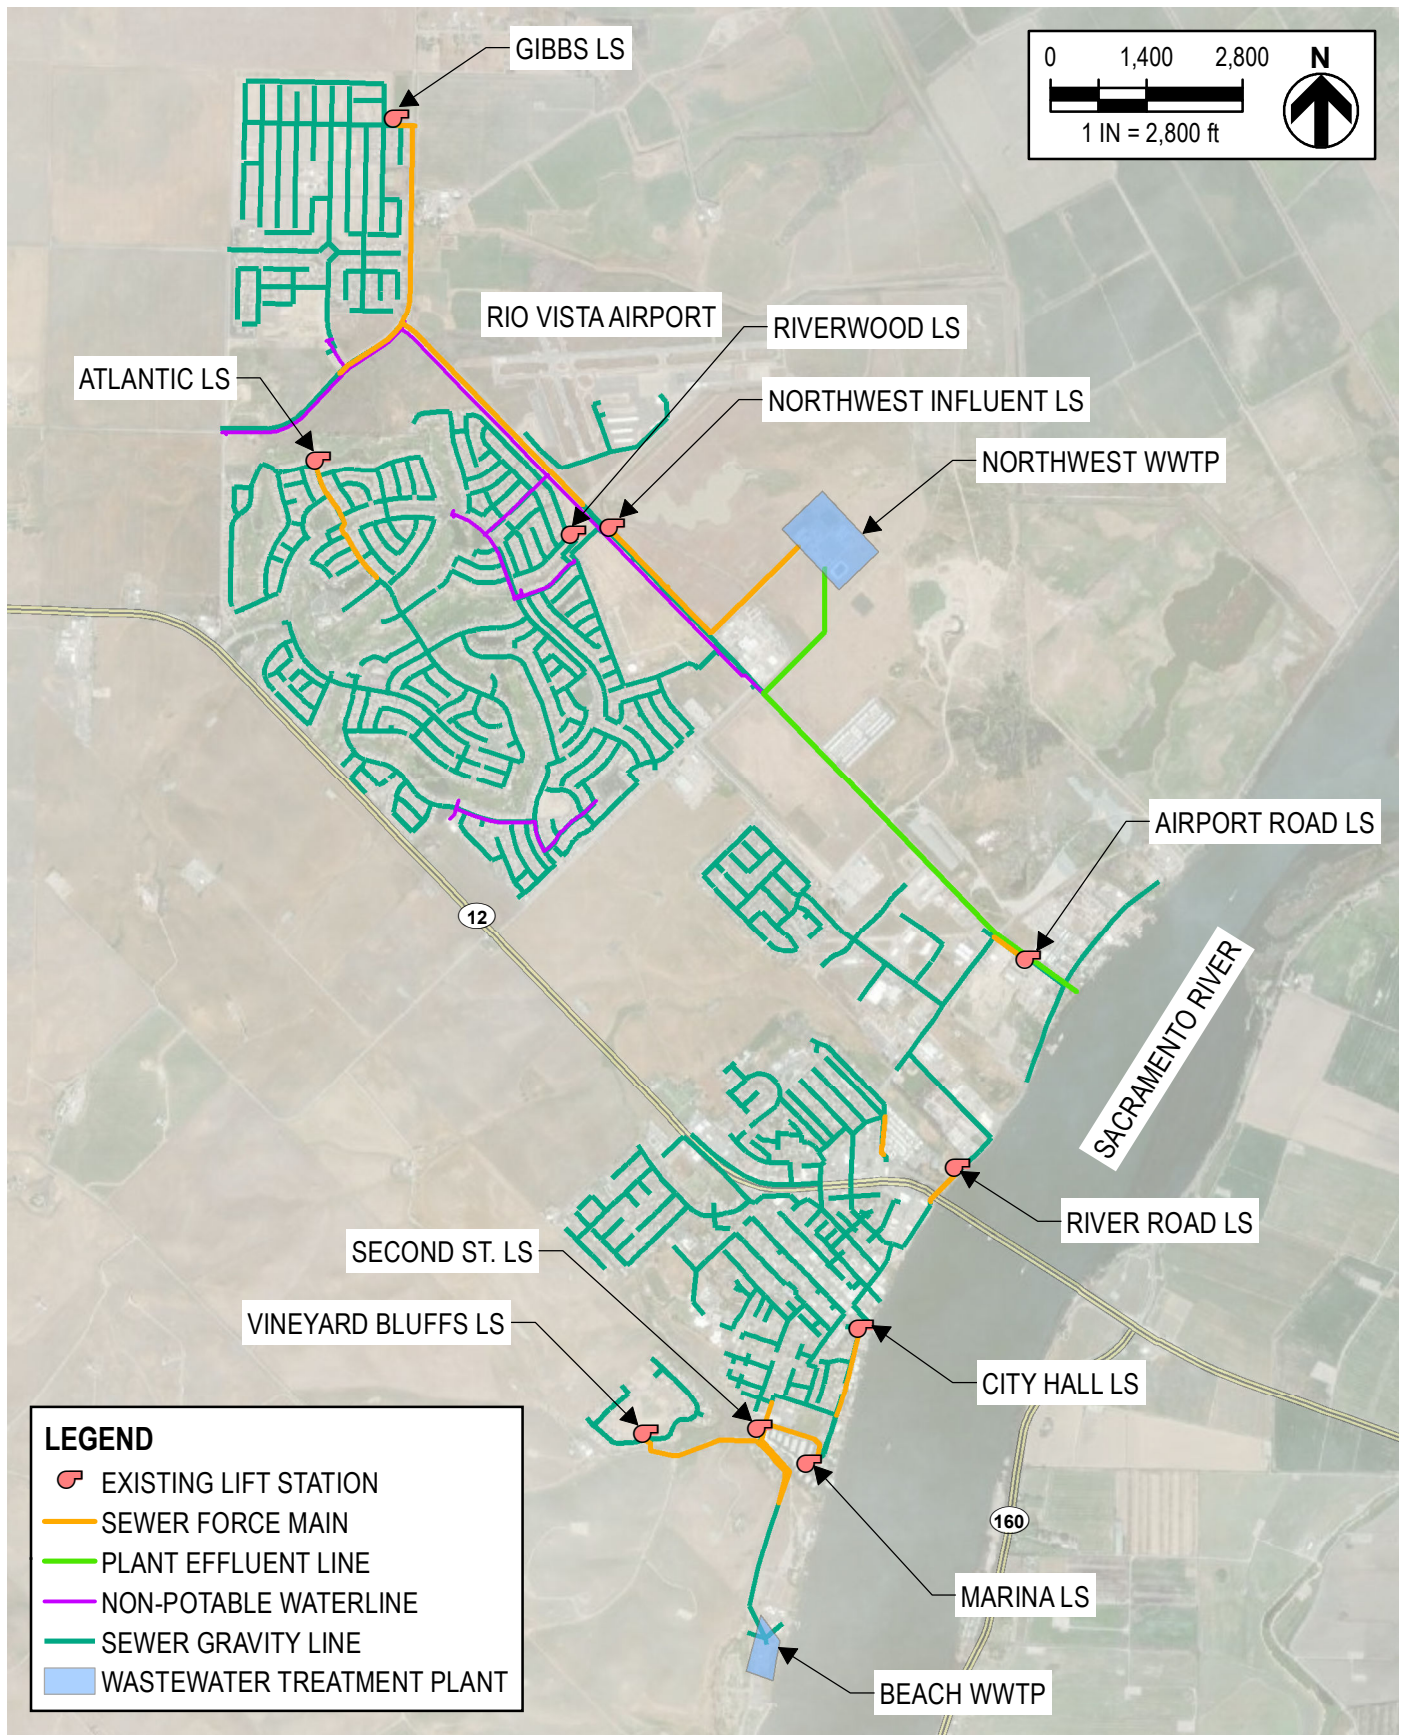

FIGURE 1
CITY OF RIO VISTA
EXISTING SEWER SYSTEM

Flows were distributed to each shed based on the shed's proportional peak inflow contribution to the total flow, calculated using City-provided data. The sewer-shed flow estimates and lift station capacities are outlined in **Table 1**.

Table 1: Sewer-Shed and Lift Station Flow Summary

Sewer Shed	Estimated Flow from Individual Shed		Estimated Total Flow to Lift Station		Current Lift Station Capacity ¹ (gpm)
	Average Flow (gpm)	Peak Flow (gpm)	Average Flow (gpm)	Peak Flow (gpm)	
Vineyard Bluffs	7	32	7	32	140
Beach	7	30	N/A, currently drains to Beach WWTP		N/A
Second Street	0.5	2	0.5	2	unknown
Airport Road	19	84	19	84	230
River Road	82	354	101	438	320
City Hall	122	526	223	964	497
Marina	74	321	298	1,285	1,800

Notes:

1. From System Evaluation Capacity Assurance Plan, Table 2-1, City of Rio Vista Lift Station Information, (Stantec, 2011)

ALTERNATIVES EVALUATION

Due to the topography and the general flow direction of the existing collection system, transferring flow from the Core Area to the Northwest shed by gravity is not feasible. Therefore, one or multiple lift stations are required to convey flow to the Northwest shed.

This new or retrofitted lift station needs to be located at either at the Beach WWTP or near the Marina Lift Station. **Figure 2** shows the potential lift station sites that were identified. Alternatively, the Marina Lift Station could be retrofit to have the downstream lift stations (south of Marina) pump into a tributary of the Marina Lift Station. Both options are further discussed below.

Option 1A (Delta Marina Second Street Storage Yard): The Delta Marina Second Street Storage Yard on Second Street was identified as a potential site for a new lift station. One advantage of locating the new station along this stretch of Second Street is the ability to abandon the existing Second Street LS, which is located within the 100-yr floodplain. The flows to Second Street LS could be diverted to the new lift station, which would be located nearby.

During the City's initial outreach to the property owner, the owner stated that the Storage Yard is planned for future residential development. Although the owner expressed a willingness to work with the City in terms of an easement, identifying a workable site at this location is a challenge. The southernmost third of the site is within the FEMA 100-yr floodplain. Siting the station just north of the floodplain extents, in the middle third of the site, would obstruct site access for the planned development, according to the owner.

FIGURE 2
CITY OF RIO VISTA
POTENTIAL LIFT STATION SITES

A moderately sloping ground elevates the northern third of the parcel, from an elevation of 14 ft at the toe of slope, up to a maximum elevation of approximately 32 ft. The elevations in this portion of the site would make it challenging and costly to tie-in the surrounding sewer infrastructure. The site layout of the proposed development is a critical factor in identifying a suitable lift station location.

Option 1B (Delta Marina Property): Across Second Street from the Delta Marina Second Street Storage Yard is the Delta Marina and RV Park, which is also owned by the same person who owns the boat storage yard. Two potential sites were identified on the Marina property.

One site is immediately across the street from the existing Second Street LS. Subsequently, the City stated that a future Marine research facility may be located here. The site is relatively constrained with an existing 6-inch gas line to the west, the Marina waterway to the east, and an existing 15-inch storm drain crossing the northeast corner. In addition, a portion of the site appears to be within the 100-yr floodplain. The site's footprint is approximately 2,000 square feet. Construction at this site would require replacing the Delta Marina entrance sign, and the lift station's new emergency generator would likely need to be shielded from public view with a fence or wall.

The other location is on the southwestern corner of the Marina parcel, near the intersection of Second Street and Beach Drive. The second site is also relatively constrained with the waterway to the northeast and an existing gas line along the southwest edge. The site's footprint is approximately 2,300 square feet, and slopes towards the water to the northeast. This location may result in adverse traffic impacts during construction. A majority of the site appears to be within the 100-yr floodplain. For this reason, this site is not considered feasible.

Option 1C (Riverview Middle School): Within the footprint of the school, a new lift station could be located either in the sports field or adjacent to the school maintenance building. The sports field was noted to have an existing grade several feet higher than Marina Drive, which would result in a deeper wet well and buried infrastructure. Either location would also require odor control and noise attenuation to minimize impacts to students and neighboring residents. An easement would be needed at these two sites.

Option 1D (Near Beach WWTP): Locating the new lift station at the Beach WWTP would not require modifications to the existing collection system lift stations. These stations would continue to pump as they were, and the City would be required to pump sewage multiple times to convey sewage to the Northwest WWTP. As the existing lift stations continue to pump as there are designed, a new lift station would be located near the Beach WWTP in currently undeveloped land near the plant. It is expected that wastewater would be pumped from the terminal manhole where sewage last enters the collection system, which is the manhole immediately north of the influent screen.

The City and Veolia have noted that the Beach WWTP and the surrounding parcels are located on federal government land. It is anticipated that right-of-way would be required for the new lift station.

Compared to the other options evaluated, the overall force main length would be longer by approximately 4,000 feet. Trenchless construction may be needed to cross underneath the existing 36-inch storm drain connecting the Delta Marina to the wetlands to the west.

Option 2 (Retrofit Marina Lift Station): If a new lift station were to be constructed, there would be two relatively large lift stations pumping the majority of the flow originating from the City's Core Area: the existing Marina Lift Station and the new lift station. The two lift stations would be located relatively close to each other, which would result in increased O&M responsibilities and costs. An option was explored to retrofit and repurpose the existing Marina Lift Station to pump sewage from the Core Area to the Northwest shed. The Marina Lift Station was originally built in 1954 and is nearing 70 years of operation. The main disadvantages of this option include the age of the station, and its location in the 100-year floodplain. Although a structure of this age would typically be replaced in the near to medium term, visual observation and anecdotal comments from the City suggest that the structure is in good condition.

Upgrading the Marina Lift Station to allow it to convey swage to the Northwest shed would consist of replacing and upgrading the mechanical and electrical components, including the pumps, valves, piping, electrical and control equipment, and power supply. The emergency generator would need to be replaced with a higher capacity unit. The replacement of these components would help modernize the station. **Figure 3** illustrates several of the recommendations within the existing motor and pump rooms.

Veolia staff noted that during their tenure, the worst flooding occurred during king tide and reached the top of the existing flood barrier but did not overtop it. Subsequent design should include an assessment of the impacts of future sea level rise on the 100-yr flood elevation at this site. Replacing the existing flood barrier system with a taller system could be warranted. It is also recommended that code compliance be checked for the final proposed upgrades and modifications to the station. There could be building code provisions that trigger additional improvements thereby increasing construction cost.

The existing wet well is relatively small. To prevent excessive pump starts, Variable-Frequency Drives (VFDs) could be installed to ramp down the pump flowrates. The consequence of this is that self-cleaning velocity of 3 ft/s would not be achieved on a daily basis. To compensate for low velocities, pigging stations should be considered along the force main alignment to facilitate force main cleaning if and when needed.

In terms of flow rerouting, the Beach and Vineyard Bluffs sewer-sheds would need to be redirected to the Marina sewer shed.

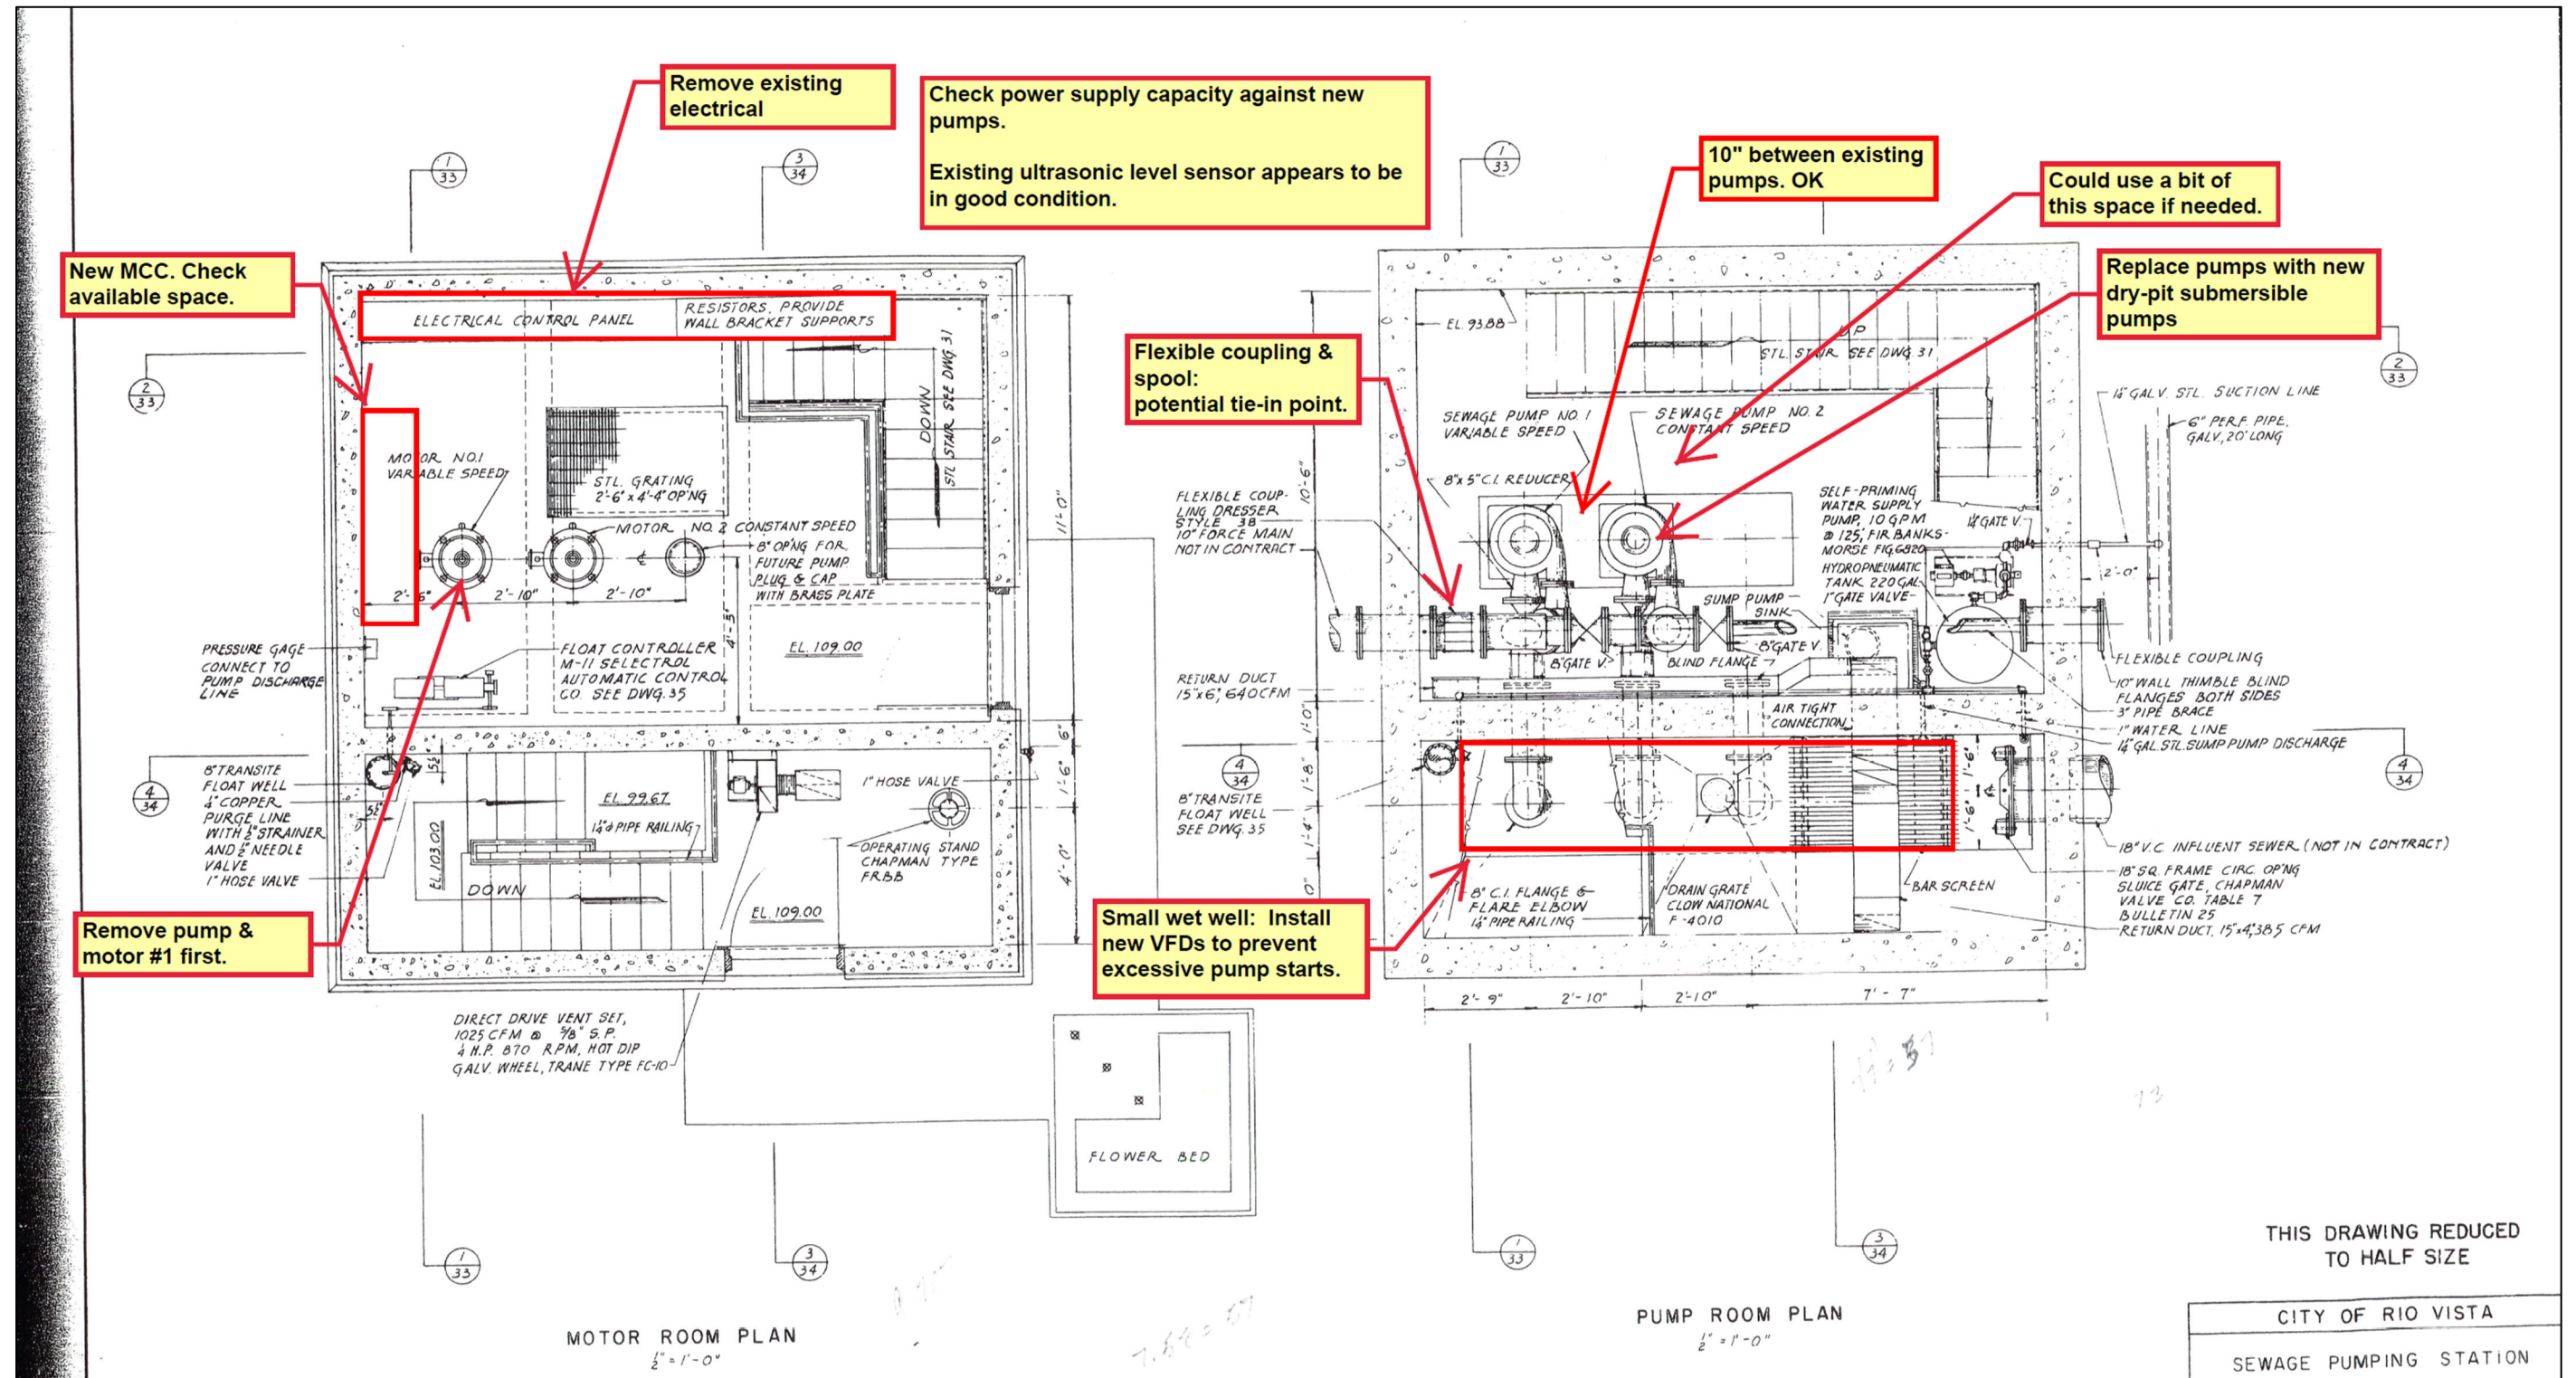

Figure 3: Marina Lift Station – Excerpt of Retrofit Recommendations

The main advantages of this option are:

- Significant construction cost savings – constructing a new lift station would be more costly than upgrading the existing Marina Lift Station.
- Reduction of O&M costs - There would be one less station to operate and maintain. Modern mechanical and electrical equipment would also facilitate station efficiency.
- Favorable schedule – the transfer of flows from the Core Area to the northwest area could be implemented on a shorter timeframe in comparison to the other options.
- Safety improvements – Veolia noted concerns relating to maintenance of the existing dry pit pumps, with the shafts extending up to the motor room. Replacing the pumps with new dry pit submersible-type pumps would alleviate the safety concerns because the motor is an integral part of the pump. It is anticipated that the new pumps would also require less maintenance, thereby reducing the need for personnel to enter the station and pump room.

Force Main – Core Area to Northwest

A new force main is required to convey sewage from the new lift station location to the Northwest shed. For this analysis, we have assumed that the lift station conveying sewage would be the upgraded Marina Lift Station. The force main would discharge to an existing manhole located at the intersection of Church Road and Airport Road. This existing manhole was installed with a 15-inch PVC pipe stub for future connection.

South of Highway 12, it is expected that the force main would be located on Second Street and Front Street, as it is the most direct route to proceed north. North of Highway 12, the force main would be located on St. Francis Way and Airport Road, which are the only public roads outside of the Caltrans right-of-way connecting to Airport Road and Church Road. Between those areas, a key consideration for locating the force main is how to cross Highway 12. Four alignment alternatives have been identified to cross Highway 12 and these are shown on **Figure 4**. The alternatives are only different in the way they traverse across the downtown area, the Highway 12 crossing location, and the immediate route north of Highway 12.

The alternatives all converge onto St. Francis Way and the downstream route is identical between them. For the purposes of comparing alignment alternatives, it was assumed that the force main diameter would be in the range of 12 to 14 inches, which was determined to be hydraulically compatible with the anticipated design flows.

Alternative 1 (Hillside Terrace): From the Second Street/Marina Dr intersection, the alignment continues on Second Street then turns northwest onto Montezuma St. The alignment continues onto 7th St., then northwest onto Main Street until it reaches Bruna Vista Park. This park is a City-owned parcel and could be utilized as a construction staging area as well as a location for the trenchless jacking pit. From the Park, the alignment turns northeast onto Hillside Terrace, where it crosses Highway 12 to Hillside Terrace, and then traverses Flores Way and Gardiner Way before reaching St Francis Way. This alignment has a total length of 15,200 linear feet, which is the longest length out of the four alternatives evaluated.

Alternative 2 (Gardiner Way): From the Second Street/Marina Dr intersection, the alignment continues on Second Street until Logan St. It runs northwesterly on Logan St until it reaches 90 N. 6th Street. The alignment runs along the north side of this residential lot to reach the Lira's Supermarket property, where it then crosses Highway 12 onto Gardiner Way. The alignment continues on Gardiner Way until reaching St Francis Way. This alignment has a total length of 14,700 linear feet.

This alternative requires acquiring two easements: one on the private residential lot, and the other on the supermarket property. The trenchless crossing of Highway 12 would take several weeks to complete, and the work area would obstruct the supermarket loading docks during that period. Therefore, the impacts to the supermarket would be significant.

Alternative 3 (Virginia Drive): To reach the Highway 12 / Virginia Dr crossing location from the east side, the alignment would navigate St Gertrudes Ave in order to reach Front St. It would then run along Front St until it turns west onto the Highway 12 offramp, which is Caltrans right-of-way, and then run for several hundred feet until reaching the crossing location. This type of Caltrans encroachment requires a longitudinal encroachment permit, which typically has a processing time of over 12 months. Considering the time-critical nature of the consolidation project, a Caltrans longitudinal encroachment permit is not preferable.

After crossing Highway 12 onto Virginia Dr, the alignment continues on Virginia Dr until it intersects with St Francis Way. This alignment has a total length of 14,200 linear feet, which represents the shortest length of the four alternatives.

Alternative 4 (Front Street): The alignment runs along Second Street until it turns east down St Gertrudes Ave to reach Front St. It then continues on Front St, crosses underneath the bridge deck of Highway 12, and then intersects with Highway 84. Subsequently, the alignment runs along the outer edge of two undeveloped private parcels along a "U" shaped path, and then continues northwest on a straight alignment along the edge of a third parcel to reach St Francis Way. The City would need to acquire three easements in total. The City has reached out to the landowner, who owns all three parcels, to coordinate easement needs. The owner expressed a willingness to work with the City and stated their plan to develop the parcel fronting Highway 84.

Both Caltrans crossings are transverse encroachments which are preferable over longitudinal encroachments. The Caltrans right-of-way spans across both highways with no gap in between. It is anticipated that Caltrans would require a single trenchless crossing across Highway 84 and likely allow an open trench crossing under the Highway 12 bridge. The traffic volumes are relatively low along this section of Front St. Therefore, the traffic and community impacts would likely be less disruptive in comparison to the other alignment alternatives. This alignment has a total length of 14,700 linear feet.

This alternative could be combined with a potential new location for the River Road LS, which the City expressed an interest in relocating. If the City decides to locate the new River Road LS adjacent to the new force main, there is an opportunity for the River Road LS to pump into the force main. The pipeline would become a common force main between Marina Lift Station and River Road LS. A dedicated River Road LS force main would be avoided, resulting in considerable cost savings. This concept was evaluated and is discussed later in this TM.

Downstream Connection Point: A potential option to shorten the length of the transfer force main was identified. The new force main would terminate at a high-point located halfway along Airport Road near 1604 Airport Road (self-storage facility). From this point a new gravity sewer pipe would be installed to transport flows downhill and would connect to the existing pipe stub at the Church Road/Airport Road intersection. This option would reduce the total force main length by approximately 1,700 ft. This would reduce the required pumping head, minimize the size and horsepower of the pumps, as well as the annual operating power costs.

An additional benefit of this option is that the existing gravity collection system would be extended along Airport Road, thereby facilitating the provision of sewer service to future development within the area. The nearby self-storage facility, which is reported to be served by an onsite septic system, could connect to this new sewer pipe, and then abandon its existing septic system.

River Road Lift Station

The City would like to relocate the River Road LS as part of the wastewater consolidation project. The River Road LS is reported to be unreliable and is located in a poor location within Caltrans right-of-way and the 100-yr floodplain. The relocation of River Road LS presents an opportunity to break up the multiple-pumping chain in the collection system. Instead of the River Road LS pumping to City Hall LS, and then to Marina Lift Station, implementation of this alternative would result in the River Road LS diverting flow into the proposed force main flowing north to the Northwest WWTP. This would reduce pumping requirements for both the City Hall and Marina Lift Stations, reducing O&M costs.

Three options for the River Road sewer-shed were developed in collaboration with the City, and these are discussed in the following paragraphs.

Re-Sewer the Sewer-shed: An option was evaluated to ‘re-sewer’ the River Road LS sewer-shed to direct the flows towards the northwest, which would match the objective of the consolidation project to redirect Core Area flows in the same direction. This option involves abandoning the existing River Road LS, constructing a new gravity sewer flowing northwesterly through the Dutra Materials property to a new lift station on Oak Tree Alley. This station would then pump to St Francis Way, where the new force main would either discharge to another new lift station, or it would connect into the new force main.

If the flows are redirected, then the existing sewer running along Highway 84, which is Caltrans right-of-way, could be abandoned. The new gravity sewer through the Dutra Materials property would flow against the slope of the existing ground profile, resulting in a deeper sewer further to the northwest.

Additionally, redirecting the sewer in this manner would make it difficult for the City to provide sewer service to two parcels: the Calpine Pipeline Facility (60 River Road), and the undeveloped parcel abutting the Calpine facility to the south. The City would need to find an alternative means of providing sewer service and it is unclear at this time if a pumped or gravity system would be more cost-effective.

Relocate to Poppy House Road: Poppy House Road is another potential area to relocate the River Road LS and force main. The parcels abutting Poppy House Road appear to be undeveloped and could provide a clear corridor for new sewer infrastructure. A new gravity sewer would be installed and it would connect to an existing sewer manhole at the eastern end of the Dutra Materials property, and then traverse north towards Poppy House Rd. The new sewer pipe would discharge into the new River Road LS, located on Poppy House Road, and the new force main would continue on to St Francis Way.

Easement acquisition would be needed through three parcels in total. If an easement can be acquired, then the existing sewer along Highway 84 could be relocated out of Caltrans right-of-way and into this easement. After this alternative was conceptualized, the City noted that construction had commenced on a new boat storage yard on Poppy House Rd and that acquiring the easement through the property would be a challenge.

Co-locate with the Proposed Force Main: As discussed earlier, there is an opportunity to relocate the River Road LS to a site adjacent to the new force main alignment. The River Road LS would pump into the new force main, and there would be cost savings involved with not constructing a separate force main. An easement would be required for the lift station and associated pipelines. Initial outreach to the landowner noted that they expressed a willingness to provide the City with an easement. In addition to most of the parcel being located within the FEMA 100-yr floodplain, a regulatory floodway runs through the property as well. The preferred site is located outside of the floodplain and adjacent to the Calpine Facility at 60 River Road. The existing paved access drive for the Calpine facility could also serve as site access to the new station.

This option facilitates the City's need to provide sewer service to the Calpine Facility and the adjacent lot. Because the adjacent lot has the same owner as the lot in which the new River Road LS would be located, demonstrating the City's commitment to providing local sewer service would facilitate easement negotiations. As part of the new River Road LS installation, a sewer connection stub could be provided to serve the future development.

Based on discussions with the City, the City preferred a common force main concept over the construction of two separate force mains. As part of this study, the proposed common force main system was analyzed to check its feasibility. It was determined that the proposed system is feasible but is highly dependent on the flow characterization at each sewer-shed, the design pumping rates, and available storage (operational and/or emergency) at each station during peak flow conditions. Based on this analysis, emergency storage is recommended at the new River Road LS to accommodate a worst-case scenario where all pumps at the Marina Lift Station pump continuously and River Road LS would be unable to pump into the common force main. Veolia staff noted at least one instance in the past in which all three pumps at Marina Lift Station were pumping simultaneously to handle peak inflows. Therefore, this worst-case scenario is based on an actual historical event. VFDs would be needed at each station to alter the flowrates according to operational conditions. Pending further engineering analysis, a SCADA system may be warranted to prevent River Road LS from pumping when both of the Marina Lift Station pumps are pumping (peak flow conditions). Without this control, the pumping head required for each station could become excessive. If the required head is too high, then the pumps would be considerably oversized for normal conditions. The cost savings associated with a common force

main would likely offset the costs of emergency storage at River Road LS and the additional electrical and control equipment required to operate the system.

Figure 5 is a draft conceptual site plan that has been prepared for the new River Road LS location adjacent to the Calpine Facility.

Vineyard Bluffs and Beach Sewer-sheds

The improvements needed at these two sewer-sheds are dependent on the selected modifications to Second Street LS (described in a subsequent section) as well as the location of the new lift station. The Vineyard Bluffs sewer-shed is located at the edge of the City limits and is relatively isolated. The existing Vineyard Bluffs LS pumps to the Beach WWTP. The flow would need to be diverted towards the location of the new lift station. Whether this flow is routed through Second Street LS depends on how Second Street LS is modified (or not) and if Second Street LS will be relocated. Based on initial flow estimates, the peak inflow into Vineyard Bluffs LS is 32 gpm. However, based on City records the current pumps are rated for 140 gpm. If the Vineyard Bluffs development is fully built out, then replacing the pumps with smaller capacity pumps could be warranted, and this would benefit the downstream infrastructure by reducing flows.

The Beach sewer-shed currently drains to the Beach WWTP. For the consolidation project, the inflows would need to be pumped to a different sewer-shed. The exception is if the new lift station is located within the Beach sewer-shed, in which case the new 'Beach LS' would be the new lift station. Based on initial flow estimates, the peak flow into Beach LS would be approximately 30 gpm, representing a relatively small amount of flow. To achieve self-cleaning velocities through a new 3-inch force main, it is recommended that the design pump rate be increased to 60 gpm.

Second Street Lift Station

The options for Second Street LS are: upgrade in place, relocate, or relocate and upgrade. These options are described in the following paragraphs.

Upgrade in Place: Both the Vineyard Bluffs LS and the new Beach LS could be pumped to the existing Second Street LS. The station would be upgraded to approximately 205 gpm to accommodate the additional flow. According to City records, the existing station has one pump. This pump would need to be replaced with two new, larger capacity pumps (1 duty + 1 standby). The existing wet well needs to be checked to ensure there is sufficient space to fit the new pumps, as well as to check that the pump-starts per hour are not excessive. If the wet well is undersized, then it would need to be replaced with a larger wet well. As discussed earlier, there is a potential opportunity to replace the existing pumps at Vineyard Bluffs LS with smaller capacity pumps that more closely match the estimated peak inflow. Doing so would allow a reduction in capacity, and reduce the required upgrades for the Second Street LS.

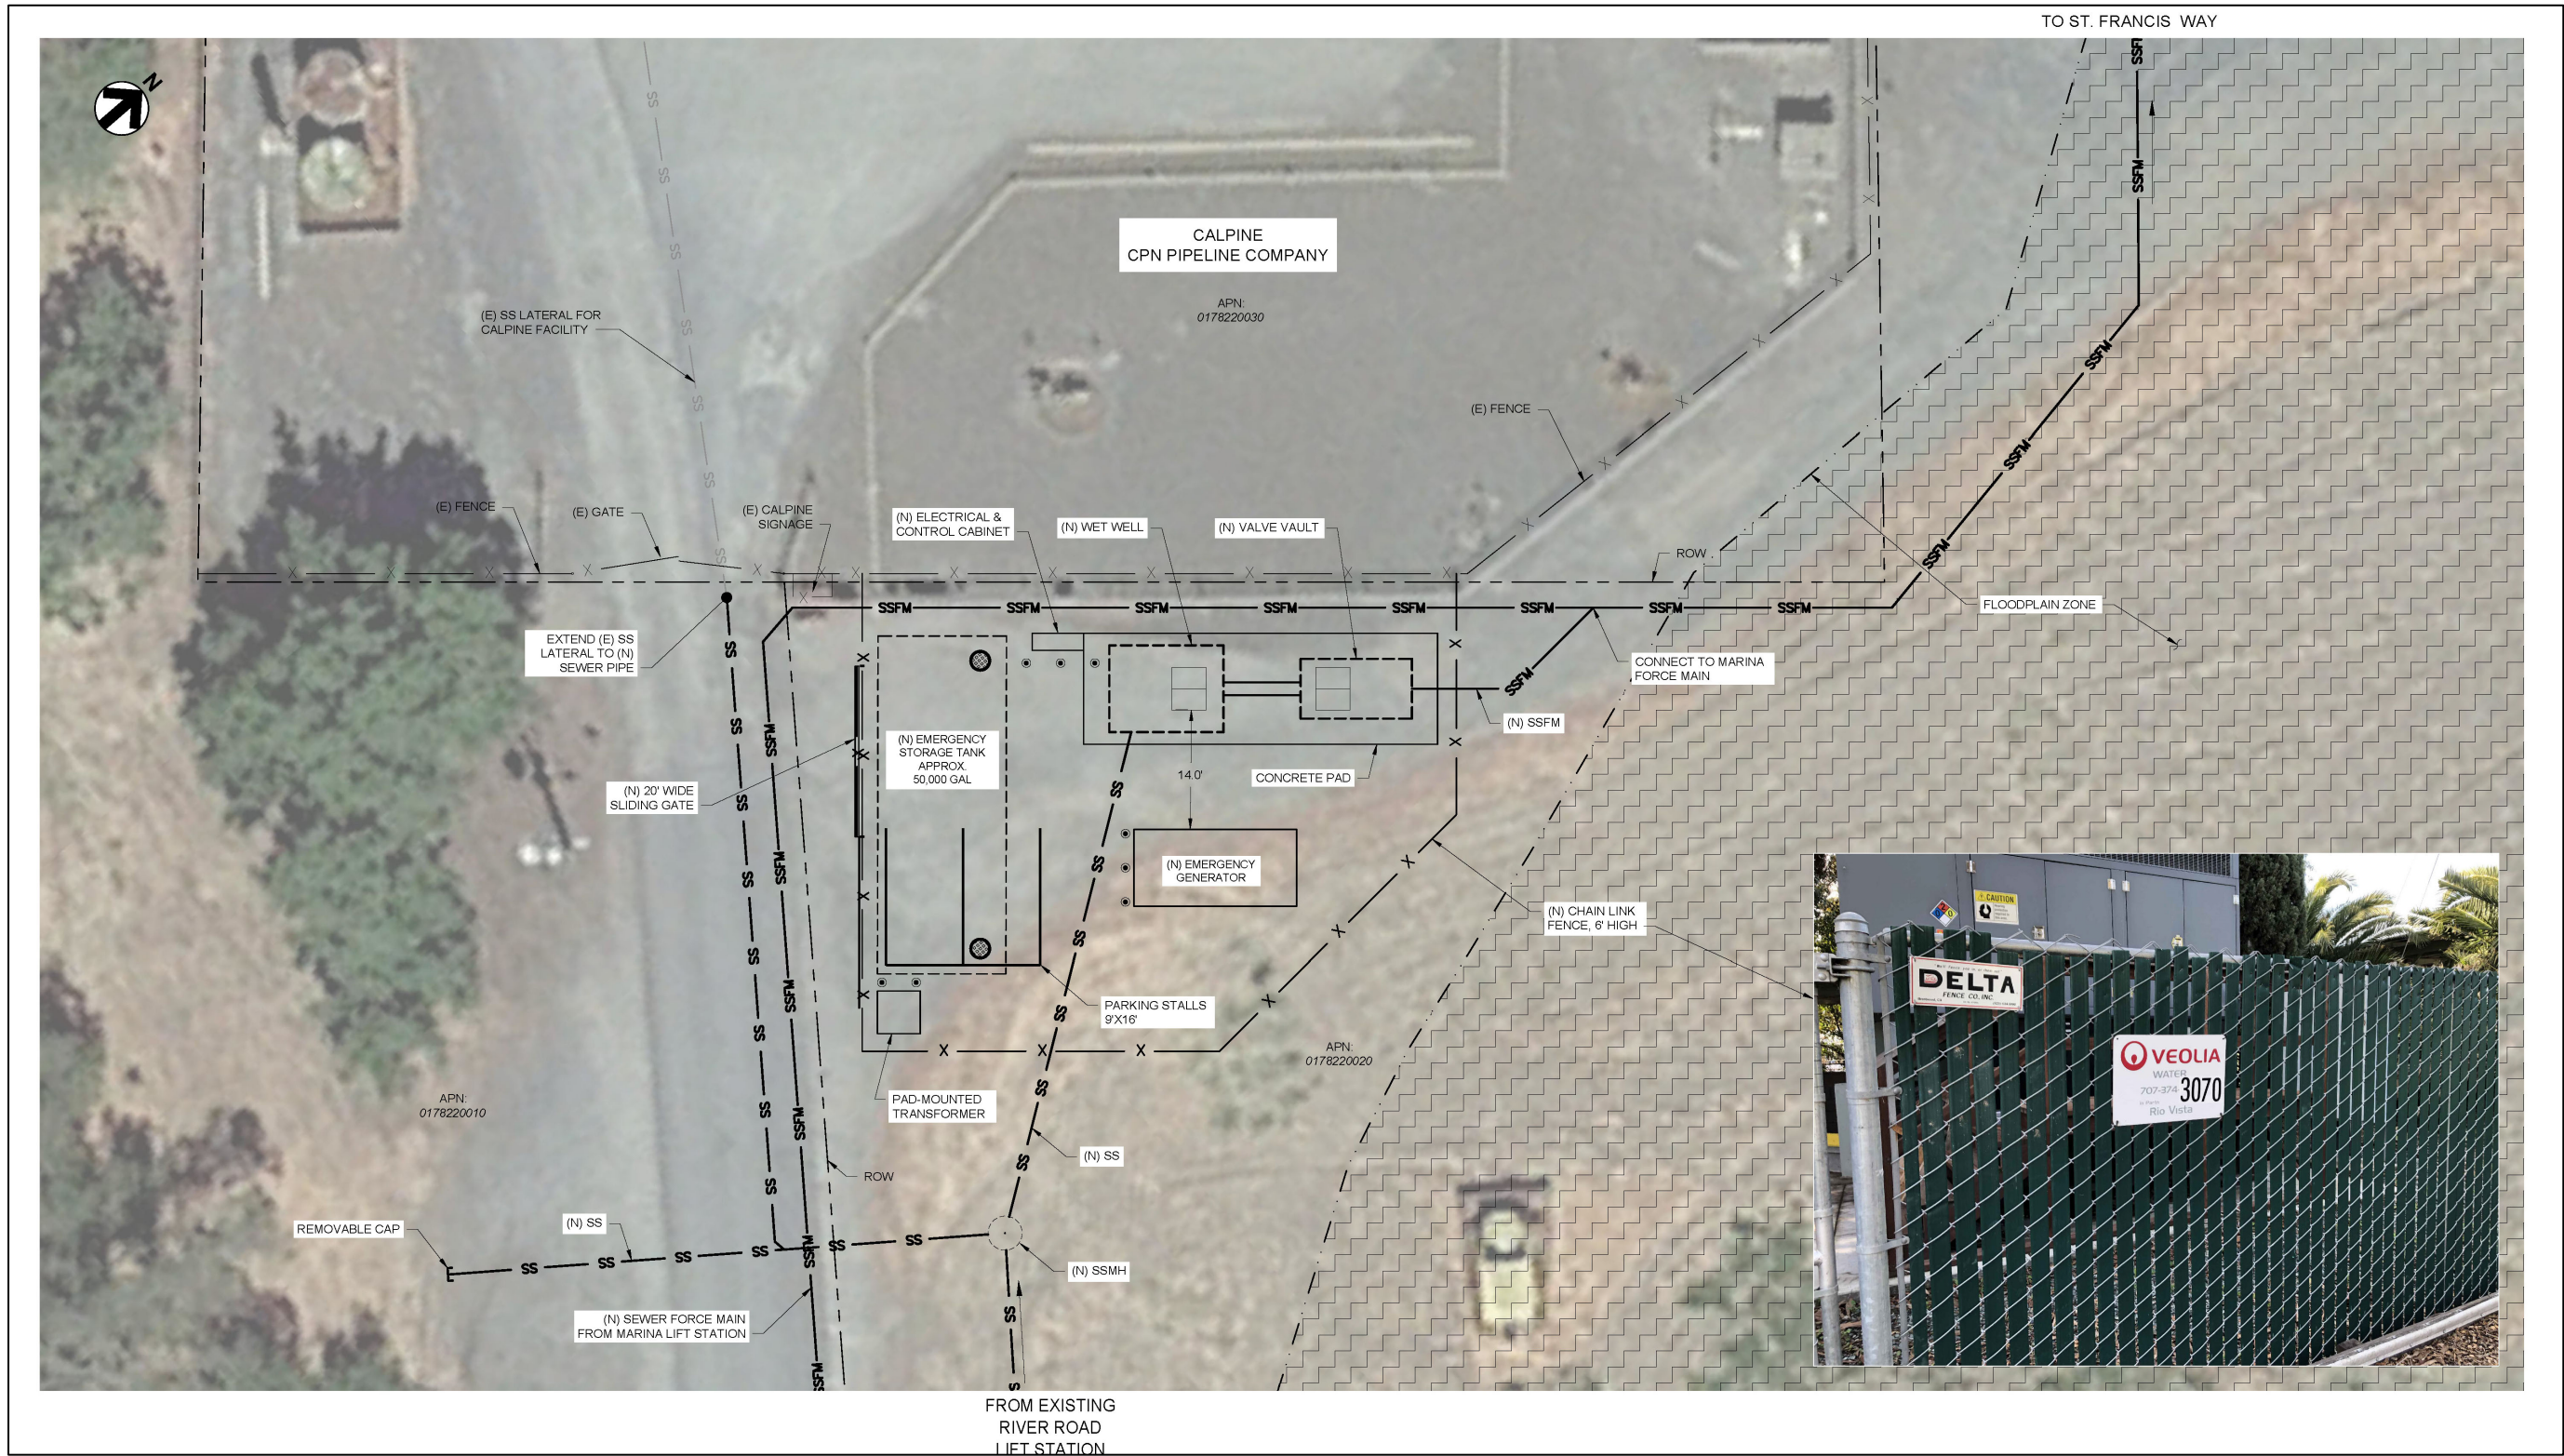

Figure 5: River Road Lift Station Relocation – Draft Conceptual Site Plan

Relocate: The potential sites discussed earlier for the new lift station could also serve as potential sites for a relocated Second Street LS. In addition to those four locations, a fifth site has been identified at the existing sewer manhole located at the intersection of Beach Dr and Montezuma Hills Road that is serving the Second Street LS sewer-shed.

Based on FEMA flood maps, this manhole is located just outside of the 100-yr floodplain. The existing manhole could be removed and the new Second Street LS wet well could be installed in its place. Due to the small inflows (less than 5 gpm), a prepackaged “grinder pump station” could be installed. A new 2-inch force main would be routed to the Marina Lift Station sewer-shed.

If the relocated station is not upgraded in capacity, then Vineyard Bluffs LS and the new Beach LS would not pump into it. The force mains for those two stations would need to bypass the Second Street LS to reach the new lift station. Alternatively, they could pump into the Marina Lift Station sewer-shed, which is only a few hundred feet away from the Beach Dr/Montezuma Hills Rd intersection. Depending on the selected collection system improvements, there could be up to two existing pipes along Second Street that would be abandoned and hence available for sliplining.

Relocate and Upgrade: This option is similar to the “upgrade” option except the City would relocate the station out of the 100-yr floodplain. The station would be upgraded to approximately 205 gpm to accommodate the additional flow from Vineyard Bluffs and Beach sewer-sheds. If the Second Street LS is not combined with the New Lift Station, then two sites would need to be identified in the area: one for each new station. This would be very challenging and the construction costs as well as ongoing O&M costs would be significantly higher than the other options. Relocating and upgrading the Second Street LS in addition to constructing a New Lift Station is not considered cost-effective.

RECOMMENDATIONS

The recommended collection system improvements for the consolidation project have been developed based on the evaluation described in this TM and the initial feedback provided by the City. These recommendations are described in the following paragraphs and are shown on **Figure 6** and **Figure 7**.

New Lift Station – To implement the consolidation project in an expeditious manner, it is recommended that the existing Marina Lift Station be upgraded and re-purposed into the Core Area Lift Station. Modernizing the Marina Lift Station would extend its remaining useful life and make it safer to operate and maintain. The basic scope of work for the Marina Lift Station upgrade would consist of the following:

- Replace the three existing pumps with new dry pit submersible pumps. Stage the work and replace one pump at a time.
- Install a new Motor Control Center (MCC) and VFDs in the existing motor room. As part of design, determine if the available space is adequate.
- Upgrade the power supply system including a new transformer and emergency generator.

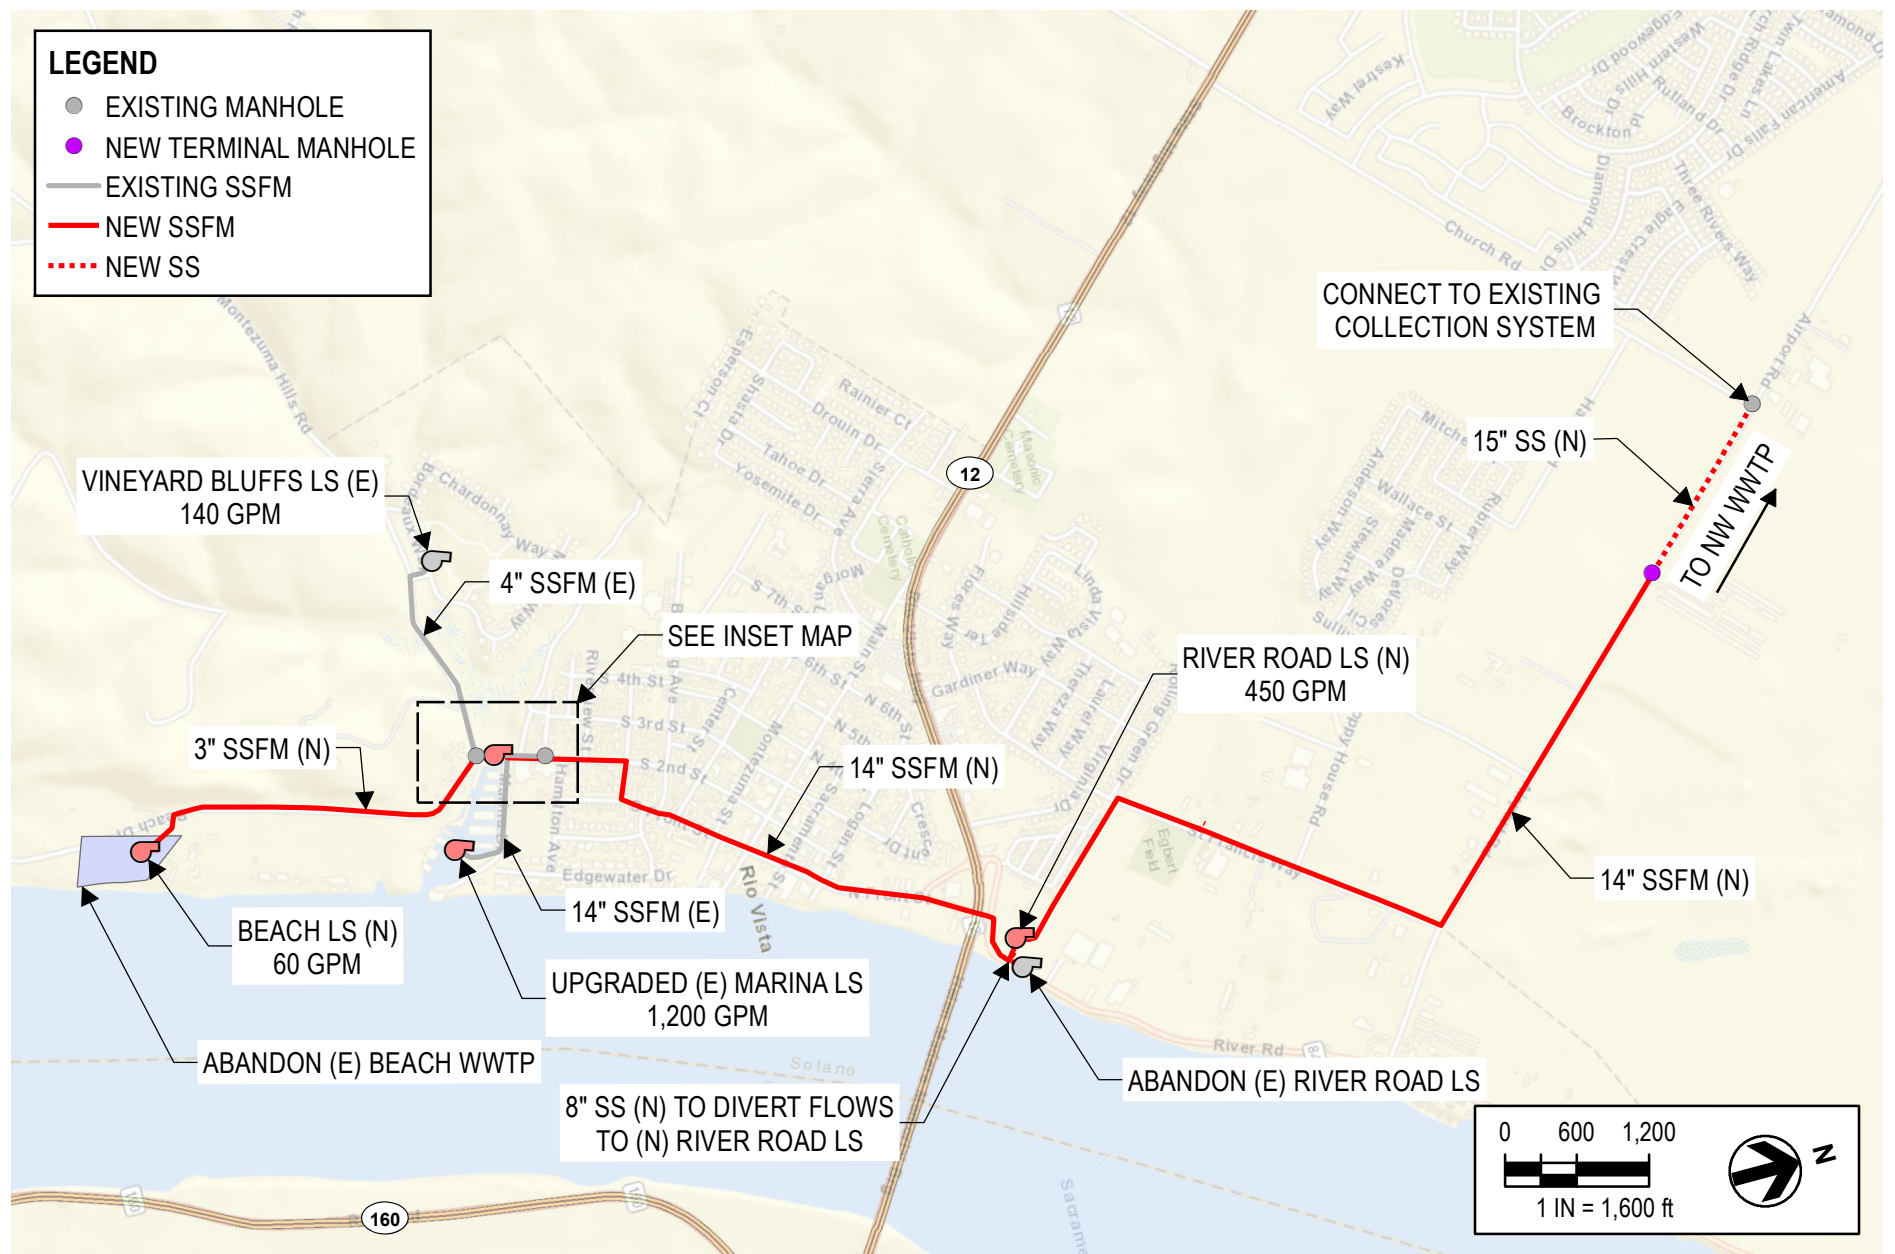

FIGURE 6
CITY OF RIO VISTA
RECOMMENDED COLLECTION SYSTEM IMPROVEMENTS

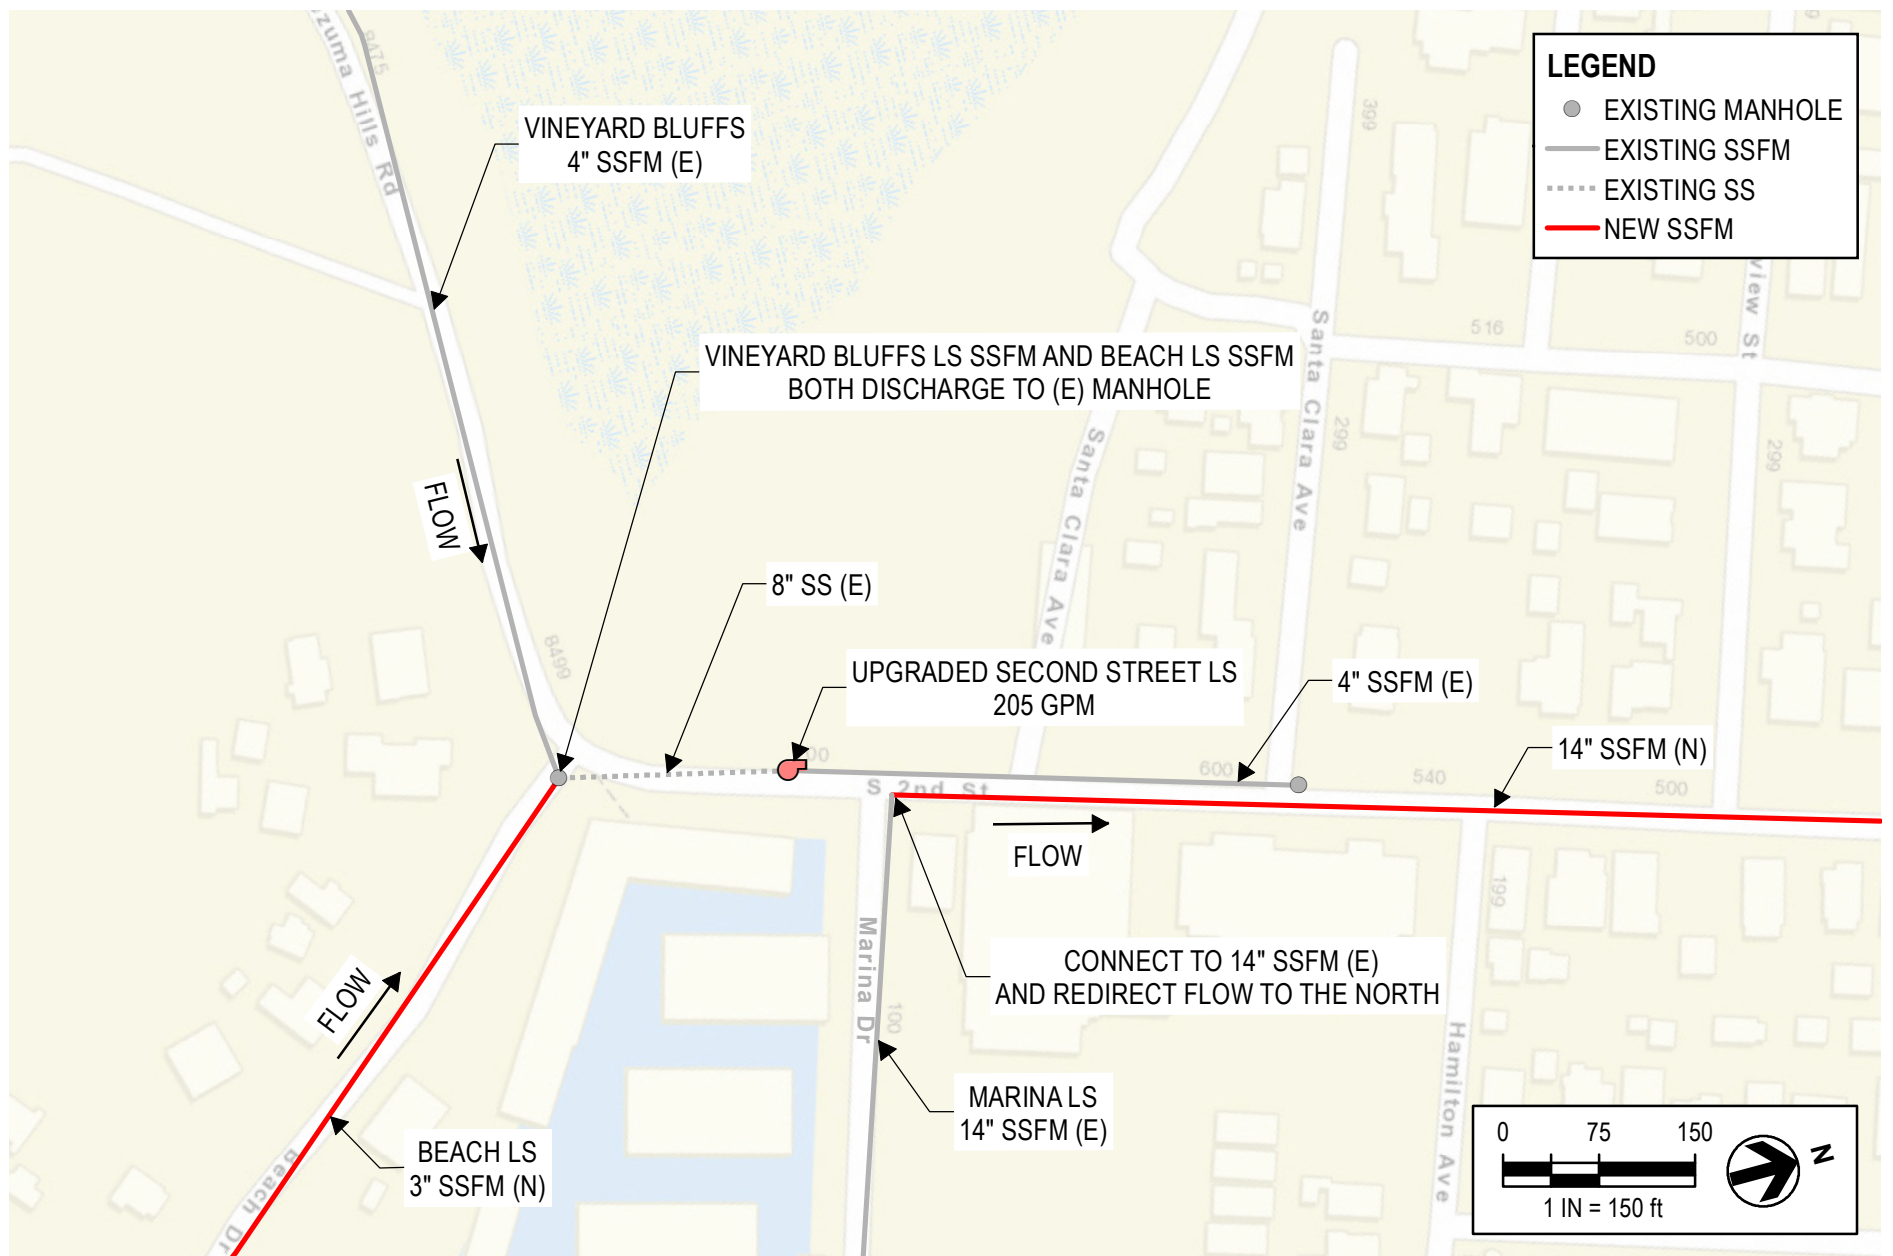

FIGURE 7
CITY OF RIO VISTA
RECOMMENDED COLLECTION SYSTEM IMPROVEMENTS - INSET MAP

- Replace the existing 8-inch discharge pipework with 10-inch and 12-inch pipework to reduce the required pumping head.
- Replace the existing swing check valves with ball-type check valves, and replace the gate valves with eccentric plug valves. Install an air release valve.
- Optimize the level setpoints according to the proposed operating conditions.
- Disconnect and remove the existing mechanical and electrical equipment being replaced.

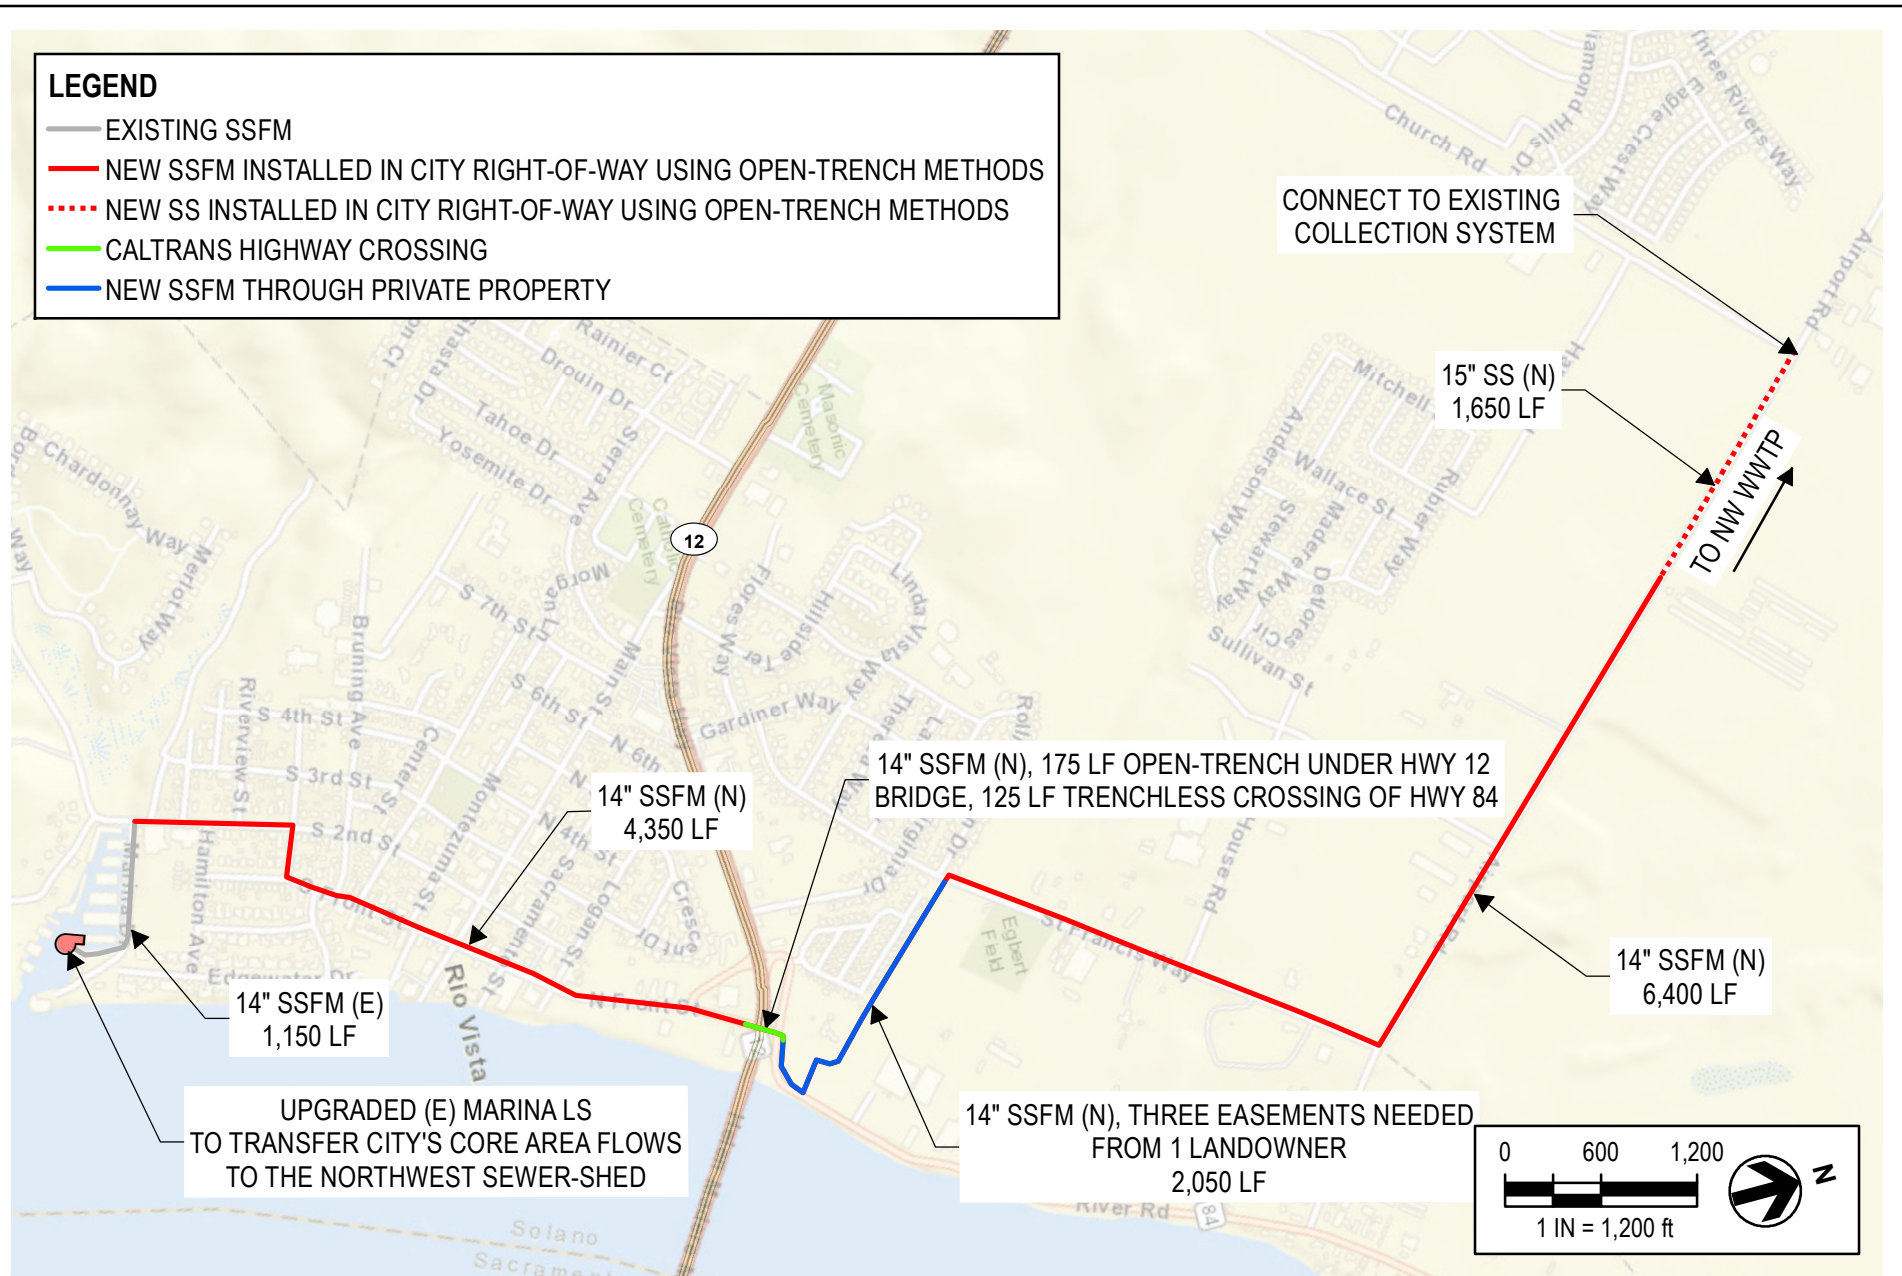

In addition to the primary upgrades outlined above, it is recommended that the following evaluations be undertaken:

- Evaluate the need for a bypass connection fitting to facilitate future maintenance, and pig-launching station(s) for periodic force main cleaning.
- Conduct a desktop flood risk review, including the approximation of future 100-yr flood elevations and any additional flood protection measures that may be needed.
- Conduct transient surge analysis for the lift station and force main system. A surge tank may be needed on the station site.

New Force Main – The recommended new force main alignment is shown on **Figure 8**. Approximately 1,200 linear ft of existing 14-inch force main would be reused, from the existing Marina Lift Station to the intersection of Marina Drive and Second Street. From this intersection, a new 12 to 14-inch force main would be constructed utilizing open-trench construction methods within the City's public road right-of-way. This reach of pipeline would traverse along Second Street, St Gertrudes Ave, and then Front St until it intersects with Caltrans right-of-way before crossing underneath the Highway 12 bridge.

The Caltrans right-of-way extends approximately 300 ft from the south side of Highway 12 to the north side of Highway 84. The Highway 12 encroachment would be crossed utilizing open-trench construction under the highway bridge. Highway 84 would be crossed utilizing trenchless construction methods. Depending on the soil conditions and other factors, auger bore-and-jack could be feasible. If the soils are unsuitable for auger boring, then microtunneling should be considered.

The trenchless crossing ends within private property. The force main would be constructed using open-trench methods along the outer edge of the property and set back from the Caltrans Highway 84 right-of-way as well as an existing gas main. The force main would then turn down the existing driveway for 60 River Road (Calpine facility), which is also within the same property. Once the force main reaches the Calpine facility, the alignment turns and wraps around the Calpine facility property line through additional private properties. As mentioned earlier, the same entity owns all three private properties that the pipeline would traverse through, and the City has already commenced owner outreach. From the Calpine facility, the pipeline turns and runs northwest until it reaches St Francis Way, which is City right-of-way. It would continue through City right-of-way and be constructed using open-trench methods for the remainder of the alignment, along St Francis Way and then on Airport Road.

The force main would terminate at a new discharge manhole located near 1604 Airport Road (self-storage facility). This manhole would flow into a new 15-inch gravity sewer running approximately 1,700 ft and discharge to an existing manhole located at the Church Road /Airport Road intersection. From this point the flow would continue on to the Northwest WWTP through the existing collection system. The total alignment length consists of approximately 12,950 ft of new 12 or 14-inch sewer force main and approximately 1,700 ft of new 15-inch gravity sewer pipe.

Other Lift Station Improvements – The River Road LS would be relocated to a site adjacent to 60 River Road (Calpine facility), where it would pump into the new force main. Therefore, the new force main downstream of this location would be a common force main. The existing River Road LS would be decommissioned and abandoned. The new River Road LS would have a capacity of approximately 450 gpm, and an underground emergency storage tank of approximately 55,000 gallons would be constructed near the station. The new station would operate with 2 pumps (1 duty + 1 standby), and controlled with VFDs to cater for the range of different operating conditions associated with the common force main system.

The sewer-shed surrounding the Beach WWTP would be directed to a new Beach LS with a capacity of approximately 60 gpm and a new 3-inch force main. At the intersection of Beach Dr and Montezuma Hills Rd, an existing sewer manhole would be utilized to receive flows from the new Beach LS force main and the existing Vineyard Bluffs force main. The existing Vineyard Bluffs 4-inch force main would be rerouted to this existing manhole. Wastewater would flow from this manhole, through an existing 8-inch sewer, to reach the upgraded Second Street LS, with a new capacity of 205 gpm. The Second Street LS would convey flow north through its existing 4-inch force main to its existing connection point on Second Street and Santa Clara Avenue, where it would then continue by gravity flow through the Marina sewer-shed. The potential to downsize the capacity of Vineyard Bluffs LS and the upgraded Second Street LS should be investigated.

Engineer's Opinion of Probable Construction Cost – Based on the recommendations outlined in this section, a conceptual-level opinion of probable construction cost has been developed and is presented in **Table 2**. With contingencies included, the estimated construction cost is \$14.4M. With soft costs included, the overall project total is approximately \$17.8M. This estimate was developed based on recent construction bid pricing in the region. The decommissioning of Beach WWTP is not included in this estimate.

Table 2 – Opinion of Probable Construction Cost

Item	Quantity	Unit	Unit Cost	Total
General				
Mobilization	1	LS	\$500,000	\$500,000
SWPPP Compliance	1	LS	\$80,000	\$80,000
Startup and Commissioning	1	LS	\$50,000	\$50,000
Traffic Control	1	LS	\$100,000	\$100,000
Pump Stations				
Beach LS Construction	1	LS	\$700,000	\$700,000
Marina Lift Station Upgrade	1	LS	\$1,000,000	\$1,000,000
Second Street LS Upgrade	1	LS	\$600,000	\$600,000
River Road LS Relocation	1	LS	\$1,300,000	\$1,300,000
Collection System				
Beach 3-inch SSFM	3,200	LF	\$150	\$480,000
Vineyard Bluffs SSFM Modification	1	LS	\$30,000	\$30,000
Marina 14-inch SSFM	13,000	LF	\$400	\$5,200,000
Special Trench Section (Highway 12)	1	LS	\$80,000	\$80,000
Bore and Jack under Highway 84	1	LS	\$180,000	\$180,000
Airport Road 15-inch SS	1,700	LF	\$450	\$770,000
Overall Subtotal				\$11,070,000
Contingency		30%		\$3,320,000
Estimated Construction Cost				\$14,390,000
Soft Costs				
Permitting/CEQA		2%		\$290,000
Right-of-way and Administration Costs		1%		\$140,000
Design		8%		\$1,150,000
Construction Management/Inspection		10%		\$1,440,000
ESDC		3%		\$430,000
Overall Project Total				\$17,840,000

Note: Pipeline costs include excavation, backfill, sheeting, shoring, pavement resurfacing, and grading.

This report shows the values for environmental and demographic indicators and EJSCREEN indexes. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air), and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state, EPA region, or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The years for which the data are available, and the methods used, vary across these indicators. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJSCREEN documentation for discussion of these issues before using reports.

Over Age 64	37%	14%	95	16%	94

*Diesel particulate matter, air toxics cancer risk, and air toxics respiratory hazard index are from the EPA's Air Toxics Data Update, which is the Agency's ongoing, comprehensive evaluation of air toxics in the United States. This effort aims to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that the air toxics data presented here provide broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. Cancer risks and hazard indices from the Air Toxics Data Update are reported to one significant figure and any additional significant figures here are due to rounding. More information on the Air Toxics Data Update can be found at: <https://www.epa.gov/haps/air-toxics-data-update>.

For additional information, see: www.epa.gov/environmentaljustice

EJScreen is a screening tool for pre-decisional use only. It can help identify areas that may warrant additional consideration, analysis, or outreach. It does not provide a basis for decision-making, but it may help identify potential areas of EJ concern. Users should keep in mind that screening tools are subject to substantial uncertainty in their demographic and environmental data, particularly when looking at small geographic areas. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJScreen documentation for discussion of these issues before using reports. This screening tool does not provide data on every environmental impact and demographic factor that may be relevant to a particular location. EJScreen outputs should be supplemented with additional information and local knowledge before taking any action to address potential EJ concerns.
