Air Quality and Greenhouse Gas Emissions Analysis

MEMORANDUM

To: Prathna Maharaj, Kimley-Horn

From: Noemi Wyss AICP, Air Quality and Noise Manager, Kimley-Horn
Tanay Pradhan, Environmental Planning Analyst, Kimley-Horn

Date: March 6, 2023

Subject: City of Rio Vista Wastewater Plant Consolidation Project– Air Quality and Greenhouse Gas Emissions Analysis

1.0 PURPOSE

The purpose of this memorandum is to identify the air quality and greenhouse gas (GHG) emissions of the proposed Rio Vista Wastewater Plant Consolidation Project (project), located in the City of Rio Vista, California. This analysis has been undertaken to analyze whether the proposed project would result in any significant air quality or GHG emissions impacts associated with construction and operation of the project.

2.0 PROPOSED PROJECT DESCRIPTION

The proposed project would enable the transfer of wastewater treatment services to the Northwest Wastewater Treatment Plant (WWTP) and cease all operations at the Beach WWTP. The proposed project would include approximately 3.5 miles of new force mains between 3” and 14” from the Beach WWTP to the Northwest WWTP and includes four lift stations (two new and two improved). The lift stations would pump wastewater through the new force mains to the Northwest WWTP. Additional treatment and process improvements would be made at the Northwest WWTP to add to the efficiencies of the existing process. Improvements would be made, to the extent feasible, to existing wastewater lines within existing roadways and previously disturbed right-of-way, urbanized areas, and to minimize alterations to undeveloped areas. The proposed project is needed to enable the City to improve and rehabilitate the existing wastewater service capacities and protect water quality and beneficial uses of the Sacramento River. The project is intended to enable transfer of service from the Beach WWTP and would not increase the overall capacity beyond what was previous planned.

The project would include new recycled water infrastructure at the Trilogy development to the west of the Northwest WWTP. These new recycled water lines would be approximately 0.5 miles in length and would run through the residential community. These recycled water lines would lead to the Northwest WWTP which would include construction of a new clarification pond on-site.

Construction of the proposed project is anticipated to approximately begin at the end of 2023 and end in late 2024 or 2025. The proposed improvements would occur within existing roadways, and one

proposed utility easement would occur through private property (CPN Pipeline Company). The installation of the new pipes, lift stations, and clarification pond would require soil import and export. For the clarification pond, approximately 16,000 cubic yards (cy) would be moved from the Northwest WWTP to the surrounding on-site area or the vacant land adjacent to Rio Vista Airport approximately one mile away. The new piping and lift stations would require the excavation of 14,080 cy of export. Half the of the export volume would be left on-site and used as backfill. The other half would be exported off-site and approximately 7,040 cy of new material would be imported on-site for the remaining backfill.

3.0 THRESHOLDS AND SIGNIFICANCE CRITERIA

Based upon the criteria derived from Appendix G of the CEQA Guidelines, a project normally would have a significant effect on the environment if it would:

1. Conflict with or obstruct implementation of the applicable air quality plan,
2. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or State ambient air quality standard,
3. Expose sensitive receptors to substantial pollutant concentrations, or
4. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people,
5. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment,
6. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

4.0 IMPACT ANALYSIS

4.1 Air Quality

Threshold (a) Conflict with or obstruct implementation of the applicable air quality plan.

The proposed project is located within the Sacramento Valley Air Basin (SVAB), which is under the jurisdiction of the Yolo-Solano County Air Quality Management District (YSAQMD). The SVAB is designated nonattainment for State and federal health-based air quality standards for ozone. The SVAB is designated nonattainment for State PM_{2.5}. To meet Federal Clean Air Act (CAA) requirements, the YSAQMD has prepared an Air Quality Attainment Plan (AQAP), which was adopted in 1992 and updated in 2003 and would be applicable to the proposed project.

YSAQMD developed advisory emission thresholds to assist CEQA lead agencies in determining the level of significance of a project's emissions. These are outlined in its CEQA Handbook (YSAQMD 2007). The Sacramento Federal Nonattainment Area (SFNA) is a subset of the SVAB and has adopted the Sacramento Regional 2008 8-Hour Ozone Attainment and Reasonable Further Progress Plan (2017 Ozone Plan). The YSAQMD is one of the air districts in the SFNA. The 2017 Ozone Plan outlines how

the region continues to meet federal progress requirements and demonstrates that the SFNA would meet the 75 parts per billion (ppb) 8-hour ozone NAAQS.¹

YSAQMD also prepares a triennial report discussing the progress it has made towards improving the air quality and reducing ozone concentrations in its jurisdiction. The 2015 Triennial Assessment was adopted in July 2016; the draft 2018 Triennial Assessment was released in March 2019. YSAQMD's specific CEQA air quality thresholds are presented in *Table 1: Thresholds of Significance for Criteria Pollutants of Concern*.

Table 1: Thresholds of Significance for Criteria Pollutants of Concern

Pollutant	Threshold of Significance
ROG	10 tons/year
NO _x	10 tons/year
PM ₁₀	80 lbs/day
CO	Violation of the CAAQS
Source: Yolo Solano Air Quality Management District 2007.	
CAAQS = California Ambient Air Quality Standards; CO = carbon monoxide; NO _x = nitrogen oxide; PM ₁₀ = particulate matter no more than 10 microns in diameter; ROG = reactive organic gases.	
Thresholds apply to construction and operational emissions generated within the YSAQMD. a Thresholds apply to construction and operational emissions generated within the YSAQMD.	

A project is deemed inconsistent with air quality plans if it results in regional population, employment, or vehicle-miles-traveled (VMT) growth that exceeds estimates used to develop the applicable air quality plans. The air quality plans are based on growth projections from the Sacramento Area Council of Governments (SACOG) and local plans, including the general plans of city and county. Projects that propose development that are consistent with the growth anticipated by SACOG's Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) and the Cities and Counties general plans would be consistent with YSAQMD's AQAP.

The proposed project involves the installation of new waterlines, lift stations, and a clarification pond at the Northwest WWTP. The project site would constantly move in multiple areas around the City of Rio Vista and would not be concentrated in one area. The proposed project would be constructed in one phase. The anticipated construction duration for the proposed project would be approximately 12 to 16 months. Stationary sources, such as structures and businesses, would comply with YSAQMD rules and regulations and are generally not considered to have a significant air quality impact. The proposed project is not considered a stationary source and would not directly induce growth in the county or result in long-term development that would conflict with the County's general plan growth forecast.

Regarding construction, the proposed project would be subject to Regulation II, Rule 2.8 (Particulate Matter Concentrations), of the YSAQMD. The purpose of Regulation II, Rule 2.8 is to limit the

¹ Sacramento Metropolitan Air Quality Management District, *Sacramento Regional 2008 8-Hour Ozone Attainment and Reasonable Further Progress Plan*, 2017.

emissions of particulate matter (PM) from any source operation which emits, or may emit, dust fumes, or total suspended PM.

As shown in the discussion below, construction and operation of the proposed project would not exceed any established YSAQMD thresholds. Therefore, implementation of the proposed project would not obstruct implementation of an air quality plan and impacts would be less than significant.

Mitigation Measure: Compliance with General Plan Policies and applicable state and local law would reduce air quality impacts to a less than significant level. No additional site-specific mitigation measures are required.

Level of Significance: Less than significant impact.

Threshold (b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or State ambient air quality standard.

Construction Emissions

Project construction activities would generate short-term emissions of criteria air pollutants. The criteria pollutants of primary concern within the project area include ozone-precursor pollutants (i.e., reactive organic gases [ROG] and nitrogen oxides [NO_x]) and particulate matter 10 microns in size or less (PM₁₀) and particulate matter 2.5 microns in size or less (PM_{2.5}). Construction-generated emissions are short term and temporary, lasting only while construction activities occur, but would be considered a significant air quality impact if the volume of pollutants generated exceeds the YSAQMD's thresholds of significance.

Construction results in the temporary generation of emissions during site preparation, site grading, road paving, motor vehicle exhaust associated with construction equipment and worker trips, and the movement of construction equipment, especially on unpaved surfaces. Emissions of airborne particulate matter are largely dependent on the amount of ground disturbance associated with site preparation activities, as well as weather conditions and the appropriate application of water.

The duration of construction activities associated with the project are estimated to last approximately 12 to 16 months. The project's construction-related emissions were calculated using the YSAQMD-approved California Emissions Estimator Model (CalEEMod), version 2020.4.0., which is designed to model emissions for land use development projects, based on typical construction requirements. The exact construction timeline is not known for the project. Therefore, the calculated CalEEMod construction schedule defaults were used for the analysis. This modeling estimated construction for the project to take approximately 11.5 months for the water lines and lift stations and 6 months for the clarification pond at the Northwest WWTP. See [Appendix A: Air Quality and GHG Data](#) for additional information regarding the construction assumptions used in this analysis. *Table 2: Construction Related Emissions* displays the combined maximum daily emissions that are expected to be generated from the construction of the proposed project in comparison to the daily thresholds established by the YSAQMD.

Short-Term Construction Emissions

Construction-generated emissions are short-term and temporary, lasting only as long as construction activities occur, but have the potential to represent a significant air quality impact. Temporary emissions from site preparation and excavation, as well as from motor vehicle exhaust associated with construction equipment and the movement of equipment across unpaved surfaces, worker trips, etc., would occur. Emissions of airborne particulate matter are largely dependent on the amount of ground disturbance associated with site preparation activities.

Table 2: Construction Related Emissions presents construction emissions generated by the proposed project in the YSAQMD in tons per year and pounds per day.

Table 2: Construction Related Emissions

Construction Year	Pollutant				
	Reactive Organic Gases (ROG) tons/yr	Nitrogen Oxide (NO _x) tons/yr	Carbon Monoxide (CO) tons/yr	Coarse Particulate Matter (PM ₁₀) lbs/day	Particulate Matter (PM _{2.5}) tons/yr
2023	0.07	0.66	0.68	15.78	0.04
2024	0.16	1.14	1.32	1.18	0.05
<i>YSAQMD Significance Threshold</i> ^{1, 2}	10	10	-	80	-
Exceed YSAQMD Threshold?	No	No	-	No	-
<p>YSAQMD = Yolo Solano Air Quality Management District; CO = carbon monoxide; NO_x = nitrogen oxide; PM_{2.5} = particulate matter no more than 2.5 microns in diameter; PM₁₀ = particulate matter no more than 10 microns in diameter; ROG = reactive organic gases; - = no threshold.</p> <p>1. In developing these thresholds, YSAQMD considered levels at which project emissions are cumulatively considerable. Consequently, exceedances of project-level thresholds would be cumulatively considerable.</p> <p>2. YSAQMD considers violations of the CO ambient air quality standard significant. Refer to Impact AQ-c.</p> <p>3. Source: Refer to the CalEEMod outputs provided in Appendix A, <i>Air Quality and GHG Data</i>.</p>					

As shown in *Table 2*, the proposed project would not exceed YSAQMD thresholds. Therefore, emissions associated with construction of the Project are less than significant.

Long-Term Operational Emissions

As mentioned previously, the project would construct new wastewater and recycled water lines, install two new lift stations, update two existing lift stations, and add a clarification pond and improvements at the Northwest WWTP. The project does not propose any new significant sources of air pollutants, would not generate a substantial amount of additional traffic on nearby roadways, and would not generate any additional population growth. Therefore, the operation of the project would not generate significant pollutant emissions and impacts would be less than significant. No mitigation is required.

Mitigation Measures: Compliance with General Plan Policies and applicable state and local law would reduce construction and operational air quality impacts to a less than significant level. No additional site-specific mitigation measures are required.

Level of Significance: Less than significant impact.

Threshold (c) Expose sensitive receptors to substantial pollutant concentrations.

Sensitive land uses are defined as facilities or land uses that include members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples of these sensitive receptors are residences, schools, hospitals, and daycare centers. The State CEQA Guidelines indicate that a potentially significant impact could occur if a project would expose sensitive receptors to substantial pollutant concentrations. There are single-family residential communities to the surrounding different portions of the construction site.

Construction Toxic Air Contaminants

The proposed project would not create a significant hazard to surrounding residents and other sensitive receptors through exposure to substantial pollutant concentrations such as particulate matter during construction activities and/or other toxic air contaminants (TACs).

Construction equipment and associated heavy-duty truck traffic generate diesel exhaust, which is a known TACs. Diesel exhaust from construction equipment operating at the site poses a health risk to nearby sensitive receptors. The closest sensitive receptors to the project site are the mobile home residences to the southwest of the project site. YSAQMD provides guidance for evaluating impacts from TACs in its CEQA Air Quality Handbook document. As noted therein, an incremental cancer risk of greater than 10 cases per million at the Maximally Exposed Individual (MEI) would result in a significant impact.

Project construction would generate diesel particulate matter (DPM) emissions from the use of off-road diesel equipment required for grading and excavation, paving, and other construction activities. For construction activity, DPM is the primary toxic air contaminant of concern. On-road diesel-powered haul trucks traveling to and from the construction area to deliver materials and equipment are less of a concern because they would not stay on the site for long durations. Diesel exhaust from construction equipment operating at the site poses a health risk to nearby sensitive receptors.

The amount to which the receptors are exposed (a function of concentration and duration of exposure) is the primary factor used to determine health risk (i.e., potential exposure to TAC emission levels that exceed applicable standards). On-road diesel-powered haul trucks traveling to and from the construction area to deliver materials and equipment are less of a concern because they would not stay on the site for long durations. Construction is temporary and would be transient throughout the site (i.e. move from location to location) and would not generate emissions in a fixed location for extended periods of time.

Construction is subject to and would comply with California regulations (e.g., California Code of Regulations, Title 13, Division 3, Article 1, Chapter 10, Sections 2485 and 2449), which reduce DPM and criteria pollutant emissions from in-use off-road diesel-fueled vehicles and limit the idling of heavy-duty construction equipment to no more than five minutes. These regulations would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions. Given the temporary and intermittent nature of construction activities likely to occur within specific locations in the project site (i.e., construction is not likely to occur in any one location for an extended time), the dose of DPM of any one receptor is exposed to would be limited. Therefore, impacts related to construction TACs would be less than significant and no mitigation is required.

Operational Toxic Air Contaminants

The project does not include residential dwelling units, additional traffic, or any new stationary sources. The project is not anticipated to generate truck traffic and additional DPM that would impact sensitive receptors. Therefore, operational TAC impacts would be less than significant.

Mobile Sources

The project would not place sensitive receptors within 1,000-feet of a major roadway (mobile TAC source). Additionally, the project would have no effect on existing vehicle distribution and travel speeds. As mentioned previously, the project would construct install additional water lines, lift stations, and improvements at the Northwest WWTP. Therefore, the project would not generate additional traffic in the surrounding area and impacts associated with mobile sources would be less than significant.

Carbon Monoxide Hotspots

The primary mobile-source criteria pollutant of local concern is carbon monoxide (CO). Concentrations of CO are a direct function of the number of vehicles, length of delay, and traffic flow conditions. Transport of this criteria pollutant is extremely limited; CO disperses rapidly with distance from the source under normal meteorological conditions. Under certain meteorological conditions, however, CO concentrations close to congested intersections that experience high levels of traffic and elevated background concentrations may reach unhealthy levels, affecting nearby sensitive receptors. Areas of high CO concentrations, or "hot spots," are typically associated with intersections that are projected to operate at unacceptable levels of service during the peak commute hours. CO concentration modeling is therefore typically conducted for intersections that are projected to operate at unacceptable levels of service during peak commute hours. As mentioned previously, the project would not generate additional traffic on nearby roadways and would, therefore, not impact nearby intersections. Therefore, the project would not have the potential to create a CO hotspot and impacts would be less than significant.

Mitigation Measures: Compliance with General Plan Policies and applicable state and local law would reduce impacts conflicting with exposing sensitive receptors to a less than significant level. No additional site-specific mitigation measures are required.

Significance Impact: Less than significant.

Threshold (d) Create objectionable odors affecting a substantial number of people.

The occurrence and severity of odor impacts depends on numerous factors, including the nature, frequency, and intensity of the source; wind speed and direction; and the sensitivity of the receptors. While offensive odors rarely cause any physical harm, they can be unpleasant, leading to distress among members of the public and can generate citizen complaints to local governments and regulatory agencies. Projects with the potential to frequently expose people to objectionable odors would have a significant impact.

Project construction would use a variety of gasoline- or diesel-powered equipment that would emit exhaust fumes. While exhaust fumes, particularly diesel exhaust, may be considered objectionable by some people, construction-generated emissions would occur intermittently throughout the workday and would dissipate rapidly within increasing distance from the source.

According to YSAQMD, land uses associated with odor include wastewater treatment facilities, chemical manufacturing, sanitary landfills, fiberglass manufacturing, transfer stations, painting/coating operations, composting facilities, food processing facilities, petroleum refineries, feed lots/dairy, asphalt batch plants, and rendering plants. The project does include the operation of a clarification pond which is classified as a wastewater facility and is located within one mile of sensitive receptors which would require a full odor analysis under Section 5.5.7 of the YSAQMD CEQA Handbook. The Pond would be located within the existing Northwest WWTP area located more than 2,000 feet away from the closest sensitive receptor. The existing facility is required to adhere to the YSAQMD Regulation 2, Rule 2.5 which states that a person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or persons to the public or which endanger the comfort, repose, health, or safety of any such persons or the public or which cause to have a natural tendency to cause injury or damage to business or property. The existing facilities are not producing significant odors at the closest sensitive receptors. The operation of the clarification pond would not produce a substantial level of odor and would not alter the treatment plant's compliance with Rule 2.5. The other wastewater lines, recycled water lines, and lift stations would not substantially produce any emissions with odors. Therefore, impacts associated with odor would be less than significant and no mitigation is required.

Mitigation Measures: Compliance with General Plan Policies and applicable state and local law would reduce impacts associated with odors to a less than significant level. No additional site-specific mitigation measures are required.

Level of Significance: Less than significant.

4.2 Greenhouse Gas Emissions

Background

Global climate change refers to changes in average climatic conditions on Earth as a whole, including temperature, wind patterns and precipitation. Global temperatures are moderated by naturally occurring atmospheric gases, including water vapor, carbon dioxide (CO₂), methane (CH₄), and nitrous oxide (N₂O), as well as hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF₆). These “greenhouse” gases (GHGs) allow solar radiation (sunlight) into the Earth’s atmosphere but prevent radiative heat from escaping, thus warming the Earth’s atmosphere. GHGs are emitted by both natural processes and human activities. Concentrations of GHG have increased in the atmosphere since the industrial revolution. Human activities that generate GHG emissions include combustion of fossil fuels (CO₂ and N₂O); natural gas generated from landfills, fermentation of manure and cattle farming (CH₄); and industrial processes such as nylon and nitric acid production (N₂O).

GHGs have varying global warming potential (GWP). The GWP is the potential of a gas or aerosol to trap heat in the atmosphere; it is the “cumulative radiative forcing effect of a gas over a specified time horizon resulting from the emission of a unit mass of gas relative to a reference gas.” The reference gas for GWP is CO₂; therefore, CO₂ has a GWP factor of 1. The other main GHGs that have been attributed to human activity include CH₄, which has a GWP factor of 28, and N₂O, which has a GWP factor of 265. When accounting for GHGs, all types of GHG emissions are expressed in terms of CO₂ equivalents (CO₂e) and are typically quantified in metric tons (MT) or million metric tons (MMT).

The Greenhouse Gas (GHG) Emissions section is primarily based on information, guidance, and analysis protocol provided by the YSAQMD. In addition, the section utilizes information obtained from the County of Solano Climate Action Plan², and the CalEEMod.

The proposed project’s GHG emissions would occur over the short term from construction activities, consisting primarily of emissions from equipment exhaust. There would also be long-term regional emissions associated with new vehicular trips and indirect source emissions, such as electricity usage for manufacturing equipment.

Addressing GHG generation impacts requires an agency to make a determination as to what constitutes a significant impact. The CEQA Guidelines specifically allow lead agencies to determine thresholds of significance that illustrate the extent of an impact and are a basis from which to apply mitigation measures. This means that each agency is left to determine if a project’s GHG emissions would have a significant impact on the environment. The guidelines direct that agencies are to use “careful judgment” and “make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate” the development’s GHG emissions (14 CCR Section 15064.4[a]). Determining a threshold of significance for climate change impacts poses a special difficulty for lead agencies. Much of the science in this area is new and is evolving constantly. At the same time, neither the State nor local agencies are specialized in this area, and there are currently no

² County of Solano. *Solano County Climate Action Plan*. February 2010.

local, regional, or state thresholds for determining whether a residential development has a significant impact on climate change. The CEQA Amendments do not prescribe specific significance thresholds but instead leave considerable discretion to lead agencies to develop appropriate thresholds to apply to projects within their jurisdiction.

Senate Bill 32 (SB 32), signed into law in September 2016, codifies a GHG reduction target of 40 percent below 1990 levels by 2030 and authorizes CARB to adopt an interim GHG emissions level target to be achieved by 2030 and to adopt rules and regulations in an open public process to achieve the maximum, technologically feasible, and cost-effective GHG reductions. With SB 32, the California Legislature passed companion legislation AB 197, which provided additional direction for developing an updated Scoping Plan. CARB released the second update to the Scoping Plan to reflect the 2030 target set by SB 32 in November 2017.

Additionally, signed into law in September 2018, SB 100 increased California's renewable electricity portfolio from 50 to 60 percent by 2030. SB 100 also established a further goal to have an electric grid that is entirely powered by clean energy by 2045.

Various local, regional, State and federal agencies share the responsibility for air quality management in Solano County. The YSAQMD operates at the local level and is tasked with enforcing the implementation of federal and State programs and regulations. The YSAQMD works jointly with the USEPA, CARB, SACOG, other air districts in the region, county and city transportation and planning departments, and various non-governmental organizations to work towards improving global climate change through a variety of programs. Programs include the adoption of regulations, policies and guidance, extensive education and public outreach programs, as well as emission reducing incentive programs.

Nearly all development projects in the region have the potential to generate air pollutants that may increase global climate change. Therefore, for most projects, evaluation of air quality impacts is required to comply with CEQA. The YSAQMD has not adopted thresholds of significance for GHG emissions. In absence of thresholds of significance, the YSAQMD is currently recommending GHG analysis consistent with Sacramento Metropolitan Air Quality Management District (SMAQMD) approach.

Threshold (a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.

Construction of the proposed project would result in direct emissions of CO₂, N₂O, and CH₄ from the operation of construction equipment and the transport of materials and construction workers to and from the project site.

The electricity provider for the City of Rio Vista, Pacific Gas and Electric Company (PG&E), is subject to California's Renewables Portfolio Standard (RPS). The RPS requires investor-owned utilities, electric service providers, and community choice aggregators to increase procurement from eligible renewable energy resources to 33 percent of total procurement by 2020, which would have the effect of reducing GHG emissions generated during energy production. As of 2021 (latest available), Pacific

Gas and Electric's (PG&E) power mix was at 50 percent renewable energy³ and shall be required to achieve the 60 percent renewable energy goal by 2030 established by SB 100.

The proposed project would result in direct GHG emissions from construction related activities. Total GHG emissions generated during construction are presented in *Table 3: Construction Greenhouse Gas Emissions*. The CalEEMod outputs are contained within the Appendix A, Air Quality and GHG Data.

Table 3: Construction Greenhouse Gas Emissions

Construction Year and Season	CO ₂ e Emissions, metric tons/year
Total (2023, 2024)	333.30
Emissions amortized over 30 years	11.11
Source: CalEEMod version 2020.4.0. Refer to Appendix A for model outputs.	

As shown in *Table 3*, project construction-related activities would generate approximately 333.3 MTCO₂e of GHG emissions over the course of construction. One-time, short-term construction GHG emissions are typically summed and amortized over the project's lifetime (assumed to be 30 years).⁴ It is reasonable to look at a 30-year time frame for buildings since this is a typical interval before a new building requires the first major renovation.⁵ The amortized project emissions would be approximately 11 MTCO₂e per year. Once construction is complete, the generation of construction related GHG emissions would cease.

YSAQMD does not have a threshold for construction GHG emissions, which are one-time, short-term emissions and therefore would not significantly contribute to long-term cumulative GHG emissions impacts of the proposed project. In absence of thresholds of significance, the YSAQMD is currently recommending GHG analysis consistent with SMAQMD approach. Emissions from construction are below the SMAQMD construction phase threshold of 1,100 MTCO₂e/year. Therefore, project construction GHG impacts are less than significant.

Long-Term Operational Greenhouse Gas Emissions

Operational or long-term emissions occur over the life of a project. The majority of GHG emissions associated with the operation of the would be the lift stations which produce GHG emissions due to their use of off-site electricity generation. Minor operational GHG emissions would also result from other sources, such as the energy required to convey water to, and wastewater from the project. Operation of the project would not generate any mobile trips, produce waste, or require water usage to operate.

³ PG&E, 2022, *Exploring Clean Energy Solutions*. https://www.pge.com/en_US/about-pge/environment/what-we-are-doing/clean-energy-solutions/clean-energy-solutions.page?WT.mc_id=Vanity_cleanenergy.

⁴ The project lifetime is based on the standard 30-year assumption of the South Coast Air Quality Management District (South Coast Air Quality Management District, *Minutes for the GHG CEQA Significance Threshold Stakeholder Working Group #13*, August 26, 2009).

⁵ International Energy Agency, *Energy Efficiency Requirements in Building Codes, Energy Efficiency Policies for New Buildings*, March 2008.

Total GHG emissions associated with the proposed project are summarized in *Table 4: Project Greenhouse Gas Emissions*. As shown in *Table 4*, the project would generate approximately 130.76 MTCO₂e annually from both construction and operations.

Table 4: Project Greenhouse Gas Emissions

Emissions Source	MTCO ₂ e ¹ per Year
Construction (amortized over 30 years)	11.11
Area	0.001
Energy	119.65
Mobile	0.00
Stationary	0.00
Waste	0.00
Water	0.00
Total Annual Project GHG Emissions²	130.76
<i>Threshold³</i>	1,100
<i>Exceed Threshold?</i>	<i>No</i>
<p>Note:</p> <p>¹ Emissions were calculated using CalEEMod version 2020.4.0.</p> <p>² Total values are from CalEEMod and may not add up due to rounding.</p> <p>³ YSAQMD does not have a GHG operational threshold, therefore SMAQMD threshold of 1,100 MTCO₂e was utilized.</p> <p>Source: CalEEMod version 2020.4.0. Refer to Appendix A for model outputs.</p>	

Table 4 shows that the proposed project would result in approximately 130.76 MTCO₂e per year from amortized construction, area, energy, mobile, waste, and water usage. YSAQMD does not have a GHG threshold, therefore the neighboring SMAQMD threshold of 1,100 MTCO₂e was utilized. The proposed project would not exceed the numeric threshold of 1,100 MTCO₂e. Thus, the proposed project would have a less than significant impact with respect to GHG emissions. In addition, with continued implementation of various statewide measures, the proposed project's operational energy source emissions (approximately 92 percent of total project emissions) would continue to decline in the future. GHG operational emissions would be less than significant.

Mitigation Measure: Compliance with General Plan Policies and applicable state and local law would reduce greenhouse gases to a less than significant level. No additional site-specific mitigation measures are required.

Level of Significance: Less than significant impact.

Threshold (b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

In 2011, the County of Solano adopted its Climate Action Plan (CAP). The CAP provides additional guidance for the County's ongoing efforts to reduce GHG emissions. The CAP contains policies/goals related to agriculture, energy, transportation/land use, waste, and water.

Goals in the section on energy focus on increasing energy efficiency and increasing the usage of renewable sources. Actions include implementing green building ordinances and programs, community outreach, renewable energy policies, and partnerships with local energy producers.

The CAP identifies the County's emissions at 960,000 MTCO₂e per year. The CAP establishes a communitywide emissions reduction goal of 20 percent below 2005 levels by 2020. This goal is more aggressive than the State's reduction goal. The CAP identifies numerous GHG reduction measures in the agriculture, transportation and land use, energy use, water use, and solid waste sectors.

The proposed project would help implement the goals set forth in the CAP improving energy efficiency of the County's infrastructure operations. As mentioned previously, the project would not generate substantial GHG emissions and would remain consistent with the GHG emissions reduction goals and strategies established by the CAP. Furthermore, the project would not interfere with the State's goals of 40 percent GHG emissions reduction below 1990 levels by 2030 as noted in SB 32, an 80 percent reduction in below 1990 levels by 2050 as stated in EO S-3-05, and the implementation of the goals and policies listed in SACOG's MTP/SCS. Therefore, the proposed project would be consistent with all applicable plans and policies and would have a less than significant impact.

Cumulative Impacts

As discussed above, the proposed project would not cause a new greenhouse gas impact to occur. Therefore, the proposed project would not cause either a new cumulative impact to occur, nor an increase in the severity of a cumulative impact previously disclosed.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	0.99	Acre	0.99	43,200.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	55
Climate Zone	4			Operational Year	2024
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MW hr)	203.98	CH4 Intensity (lb/MW hr)	0.033	N2O Intensity (lb/MW hr)	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - 240ft * 180ft = 43,200ft for Clarification Pond

Construction Phase - Construction starts in late 2023 and would end in 2024 or 2025

Trips and VMT - One mile to the hailing site

Grading -

Vehicle Trips - No operational trips

Water And Wastewater - No outdoor water usage

Solid Waste - No Solid waste generation

Construction Off-road Equipment Mitigation - Basic Dust Control Measures

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	0.99	Acre	0.99	43,200.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	55
Climate Zone	4			Operational Year	2024
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	203.98	CH4 Intensity (lb/MWhr)	0.033	N2O Intensity (lb/MWhr)	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - 240ft * 180ft = 43,200ft for Clarification Pond

Construction Phase - Construction starts in late 2023 and would end in 2024 or 2025

Trips and VMT - One mile to the hailing site

Grading -

Vehicle Trips - No operational trips

Water And Wastewater - No outdoor water usage

Solid Waste - No Solid waste generation

Construction Off-road Equipment Mitigation - Basic Dust Control Measures

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	0.99	Acre	0.99	43,200.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	55
Climate Zone	4			Operational Year	2024
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	203.98	CH4 Intensity (lb/MWhr)	0.033	N2O Intensity (lb/MWhr)	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - 240ft * 180ft = 43,200ft for Clarification Pond

Construction Phase - Construction starts in late 2023 and would end in 2024 or 2025

Trips and VMT - One mile to the hailing site

Grading -

Vehicle Trips - No operational trips

Water And Wastewater - No outdoor water usage

Solid Waste - No Solid waste generation

Construction Off-road Equipment Mitigation - Basic Dust Control Measures

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	1.50	1000sqft	0.03	1,500.00	0
Other Non-Asphalt Surfaces	63.36	1000sqft	1.45	63,360.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	55
Climate Zone	4			Operational Year	2024
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MW hr)	203.98	CH4 Intensity (lb/MW hr)	0.033	N2O Intensity (lb/MW hr)	0.004

1.3 User Entered Comments & Non-Default Data

- Project Characteristics -
- Land Use - Industrial for the lift stations abd Non-asphalt surfaces for the pipelines (wastewater and recycled)
- Construction Phase - Construction to start in late 2023 and end 2024 or 2025
- Trips and VMT -
- Demolition -
- Grading - 7,040 backfilled on site and 7,040 exported offsite
- Vehicle Trips - No Operational Trips
- Energy Use - Per Energy Calculations
- Water And Wastewater - No water use
- Solid Waste - No Solid Waste Generation
- Construction Off-road Equipment Mitigation - Basic Dust Control Measures

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	1.50	1000sqft	0.03	1,500.00	0
Other Non-Asphalt Surfaces	63.36	1000sqft	1.45	63,360.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	55
Climate Zone	4			Operational Year	2024
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MW hr)	203.98	CH4 Intensity (lb/MW hr)	0.033	N2O Intensity (lb/MW hr)	0.004

1.3 User Entered Comments & Non-Default Data

- Project Characteristics -
- Land Use - Industrial for the lift stations abd Non-asphalt surfaces for the pipelines (wastewater and recycled)
- Construction Phase - Construction to start in late 2023 and end 2024 or 2025
- Trips and VMT -
- Demolition -
- Grading - 7,040 backfilled on site and 7,040 exported offsite
- Vehicle Trips - No Operational Trips
- Energy Use - Per Energy Calculations
- Water And Wastewater - No water use
- Solid Waste - No Solid Waste Generation
- Construction Off-road Equipment Mitigation - Basic Dust Control Measures

BIOLOGICAL RESOURCE ASSESSMENT (MIGRATORY BIRDS, NESTING BIRDS, AND WESTERN BURROWING OWL) FOR THE WASTEWATER PLANT CONSOLIDATION PROJECT AND RECYCLED WATER IMPROVEMENTS PROJECT, CITY OF RIO VISTA, SOLANO COUNTY, CALIFORNIA. KIMLEY-HORN PROJECT NUMBER 197369011.

1.0. INTRODUCTION

On behalf of the City of Rio Vista Wastewater Plant Consolidation (WPCP) and the Recycled Water Improvements Projects, Marcus H. Bole & Associates (MHBA) conducted a biological resource assessment (BRA) along approximately 3.5 miles of project alignment (wastewater line installation), within areas designated for upgrades and construction of lift stations, within areas designated for improvements within the Northwest Waste Water Treatment Plant (WWTP), and within alignments designated for recycled water lines associated with the City of Rio Vista Recycled Water Project. A Biological Resource Assessment (BRA) is required for construction projects (or other undertakings having similar physical impacts) that require state or federal review of impacts significantly affecting the quality of the human environment, or affect listed or proposed species and/or designated or proposed critical habitat.

1.1. Project Setting

The Wastewater Plant Consolidation Project is located in the City of Rio Vista in Solano County in the State of California. Solano County is located east of the San Francisco Bay area and is bound by Yolo County to the north, Napa County to the north and west, the San Francisco Bay and Contra Costa Counties to the west and south, and Sacramento County to the south and east. The City is located approximately 44 miles southwest of the City of Sacramento and approximately 61 miles east of the City of San Francisco. Rio Vista has direct access to three Highways (Hwy) that run through the City, Hwy-12 (which provides connectivity to the easterly side of the Sacramento River), and Hwy 160, which connects to Interstate 80 (I-80) on to the northwest and Hwy 113 that connects to Interstate-5 (I-5) to the northeast.

1.2. Purpose of this Biological Resources Assessment

This report presents the results of a reconnaissance-level biological resource assessment conducted by MHBA within 500 feet either side of the above referenced project alignments and impacts (the study area). The study area comprises several linear miles and approximately 480 acres. The purpose of the assessment was to identify and describe existing biological resources,

evaluate the project study area's potential to support special-status plant and/or animal species, and determine if any other sensitive resources are present. This letter report includes the following: (1) a description of the methods used to conduct the evaluation; (2) a brief description of existing habitat conditions within the project area; and (3) an analysis of special-status plant and animal species and other sensitive biological resources potentially present.

1.3. Project Description

The proposed project is intended to result in the abandonment of the Beach Wastewater Treatment Plant (Beach WWTP) and the transfer of all sewage that would be treated at the Beach WWTP to the Northwest Wastewater Treatment Plant (Northwest WWTP). The result of this project would have the Northwest WWTP treating all of the wastewater generated in the City of Rio Vista.

The Beach WWTP is planned to be abandoned/decommissioned. The U.S. Army Corps of Engineers owns the property at 1000 Beach Drive on which Beach WWTP is located and has granted the City of Rio Vista a right of way in order to operate and maintain the Beach WWTP on this property. The City contracts Veolia Water Company to operate the Beach WWTP. The Beach WWTP treatment system consists of bar screening and grit removal, two primary clarifiers, two activated sludge reactors, three secondary clarifiers, and chlorination/di-chlorination for disinfection. Disinfected wastewater is discharged through a diffuser to the Sacramento River. Sludge is dewatered off-site at the Northwest WWTP.

The City has indicated that significant upgrades to the Beach WWTP are required to continue to operate and maintain the Beach WWTP in accordance with its effluent discharge limitations. Instead of upgrading the Beach WWTP to reliably meet these discharge limitations, the projects intent is to utilize existing available capacity at the Northwest WWTP to treat sewage from the Beach WWTP shed. Upgrades to the Northwest WWTP, including a new clarifier(s), extension of recycled water lines, and other upgrades to accommodate the flows from the Beach WWTP would be the only upgrades contemplated by the City. The Beach WWTP would be closed and abandoned. No additional work, demolition, or reuse of the Beach WWTP is proposed at this time.

A study was prepared by HydroScience to evaluate a series of alternative arrangements of sewer lines and lift stations to facilitate the transfer of sewage from the Beach WWTP shed to the Northwest WWTP sewer shed. After evaluation, a preferred alternative was chosen that would be the most efficient and minimize potential for impacts to occur. The project alignment would result in the construction of new sewer force mains between the Beach WWTP at 1000 Beach Drive and the terminal manhole located near the intersection of Airport Road and Church Road, a distance of approximately 3.5 miles.

Improvements would generally result in the upgrade of two lift stations to redirect sewage into a new force main, the construction of new force mains that would pump north and west towards the Northwest WWTP, and various collection system improvements to facilitate the redirection of sewage from the Beach WWTP to the Northwest WWTP. Additional improvements to the treatment process at the Northwest WWTP to upgrade the existing process and upgrade the process to treat additional sewage from the Beach WWTP would also be required.

The proposed improvements would occur within existing roadways, one proposed utility easement through private property used by the CPN Pipeline Company, and an approximately 1,200-foot segment within a portion of an undeveloped previously disturbed parcel (Figure 1).

Northwest WWTP and Recycled Water Improvements

In addition to excavations for the Wastewater Plant Consolidation Project, the City of Rio Vista is proposing recycled water line improvements. Recycled water lines from the Northwest WWTP would be extended westerly to tie into existing lines within the Trilogy development on the westerly side of Airport Road. Existing lines, as shown in Figure 2 – *Recycled Water Improvements*, are located within Airport Road from Church Road on the south to Liberty Island Road, within Liberty Island Road extending west, within Palisades Drive, Summerset Drive, Black Diamond Drive, Waterwood Drive, and Belvedere Drive. New lines would be installed leading from the Northwest WWTP to tie into the existing lines in Airport Road. Within the Trilogy development new recycled water line would be installed in an uncompleted segment of Summerset Drive to complete the existing system. It is estimated that this system will utilize approximately 400-acre feet of recycled water per year (AFY) thus saving a comparable volume of potable water. Within the Northwest WWTP a 700,000-gallon storage tank would be installed, a recycled water pump station, chlorination facility, and pipeline appurtenances and connections also would be included to the improvements. Excavations would take place within existing roadways and within the golf course.

2.0. REGULATORY SETTING

2.1. Federal Regulations

2.1.1. Endangered Species Act

The Endangered Species Act (ESA) protects plants and animals that are listed as endangered or threatened by the U.S. Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service (NMFS). Section 9 of ESA prohibits, without authorization, the taking of listed wildlife, where take is defined as “harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in such conduct” (50 Code of Federal Regulations [CFR] 17.3). For plants, this statute governs removing, possessing, maliciously damaging, or destroying any listed plant under federal jurisdiction and removing, cutting, digging up, damaging, or destroying any listed plant in any other area in knowing violation of state law (16 U.S. Code [USC] 1538). Under Section 7 of ESA, federal agencies are required to consult with USFWS and/or NMFS if their actions, including permit approvals and funding, could adversely affect a listed (or proposed) species (including plants) or its critical habitat. Through consultation and the issuance of a biological opinion, USFWS and NMFS may issue an incidental take statement allowing take of the species that is incidental to an otherwise authorized activity provided the activity will not jeopardize the continued existence of the species. Section 10 of ESA provides for the issuance of Incidental Take Permits (ITPs) where no other federal actions are necessary provided a habitat conservation plan is developed.

Critical Habitat

Critical Habitat is defined in Section 3 of ESA as:

1. The specific areas within the geographical area occupied by a species, at the time it is listed in accordance with the ESA, on which are found those physical or biological features essential to the conservation of the species and that may require special management considerations or protection; and
2. The specific areas outside the geographical area occupied by a species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

For inclusion in a Critical Habitat designation, habitat within the geographical area occupied by the species at the time it was listed must first have features essential to the conservation of the species (16 USC 1533). Critical Habitat designations identify, to the extent known and using the best scientific data available, habitat areas that provide essential life cycle needs of the species (areas on which are found the primary constituent elements). Primary constituent elements are the physical and biological features that are essential to the conservation of the species and that may require special management considerations or protection. These include but are not limited to the following:

1. Space for individual and population growth and for normal behavior;
2. Food, water, air, light, minerals, or other nutritional or physiological requirements;
3. Sites for breeding, reproduction, or rearing (or development) of offspring; and
4. Habitats that are protected from disturbance or are representative of the historic, geographical, and ecological distributions of a species.

2.1.2. Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) implements international treaties between the U.S. and other nations devised to protect migratory birds, any of their parts, eggs, and nests from activities such as hunting, pursuing, capturing, killing, selling, and shipping, unless expressly authorized in the regulations or by permit. As authorized under the MBTA, USFWS issues permits to qualified applicants for the following types of activities: falconry, raptor propagation, scientific collecting, special purposes (rehabilitation, education, migratory game bird propagation, and salvage), take of depredating birds, taxidermy, and waterfowl sale and disposal. The regulations governing migratory bird permits can be found in 50 CFR part 13 General Permit Procedures and 50 CFR part 21 Migratory Bird Permits. The State of California has incorporated the protection of non-game birds in § 3800, migratory birds in § 3513, and birds of prey in § 3503.5 of the California Fish and Game Code.

2.1.3. Clean Water Act

The purpose of the federal Clean Water Act (CWA) is to “restore and maintain the chemical, physical, and biological integrity of the nation’s waters.” Section 404 of the CWA prohibits the discharge of dredged or fill material into “Waters of the U.S.” without a permit from the U.S. Army Corps of Engineers (USACE). The Environmental Protection Agency (USEPA) and the USACE will assert jurisdiction over Waters of the U.S. according to the Supreme Court’s

decision in the consolidated cases *Rapanos v. United States* and *Carabell v. United States* (Rapanos). In summary, Waters of the U.S. under Rapanos include traditional navigable waters (TNW), wetlands adjacent to TNW, non-navigable tributaries of TNW that are relatively permanent where the tributaries typically flow at least seasonally (e.g. typically three months), and wetlands that directly abut such tributaries. Pursuant to Rapanos, the USEPA and USACE will decide jurisdiction over the following waters based on a fact-specific analysis to determine whether they have a significant nexus with a traditional navigable water over the following: non-navigable tributaries that are not relatively permanent, wetlands adjacent to non-navigable tributaries that are not relatively permanent, and wetlands adjacent to but that do not directly abut a relatively permanent non-navigable tributary (USEPA and USACE 2008). Wetlands are defined as those areas “that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions” (33 CFR 328.3 7b). USEPA also has authority over wetlands, including the authority to veto permits issued by USACE under CWA Section 404.

Projects involving activities that have no more than minimal individual and cumulative adverse environmental effects may meet the conditions of one of the Nationwide Permits already issued by USACE (Federal Register 82:1860, January 6, 2017). If impacts on wetlands could be substantial, an individual permit is required. A Water Quality Certification or waiver pursuant to Section 401 of the CWA is required for Section 404 permit actions. This certification or waiver is issued by the Regional Water Quality Control Board (RWQCB).

2.2. State and Local Regulations

2.2.1. California Endangered Species Act (ESA)

The California ESA (California Fish and Game Code §§ 2050-2116) protects species of fish, wildlife, and plants listed by the State as endangered or threatened. Species identified as candidates for listing may also receive protection. Section 2080 of the California ESA prohibits the taking, possession, purchase, sale, and import or export of endangered, threatened, or candidate species, unless otherwise authorized by permit. Take is defined in Section 86 of the California Fish and Game Code as “hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill.” The California ESA allows for take incidental to otherwise lawful projects under permits issued by California Department of Fish and Wildlife (CDFW).

2.2.2. Fully Protected Species

The State of California first began to designate species as “fully protected” prior to the creation of the federal and California ESAs. Lists of fully protected species were initially developed to provide protection to those animals that were rare or faced possible extinction and included fish, amphibians and reptiles, birds, and mammals. Most fully protected species have since been listed as threatened or endangered under the federal and/or California ESAs. Fully protected species are identified in the California Fish and Game Code § 4700 for mammals, § 3511 for birds, § 5050 for reptiles and amphibians, and § 5515 for fish.

These sections of the California Fish and Game Code provide that fully protected species may not be taken or possessed at any time, including prohibition of CDFW from issuing ITPs for

fully protected species under the California ESA. CDFW will issue licenses or permits for take of these species for necessary scientific research or live capture and relocation pursuant to the permit and may allow incidental take for lawful activities carried out under an approved NCCP within which such species are covered.

2.2.3. Native Plant Protection Act

The Native Plant Protection Act (NPPA) of 1977 (California Fish and Game Code §§ 1900-1913) was established with the intent to “preserve, protect and enhance rare and endangered plants in this state.” The NPPA is administered by CDFW. The Fish and Game Commission has the authority to designate native plants as “endangered” or “rare”. The NPPA prohibits the take of plants listed under the NPPA, but the NPPA contains a number of exemptions to this prohibition that have not been clarified by regulation or judicial rule. In 1984, the California ESA brought under its protection all plants previously listed as endangered under NPPA. Plants listed as rare under NPPA are not protected under the California ESA, but are still protected under the provisions of NPPA. The Fish and Game Commission no longer lists plants under NPPA, reserving all listings to the California ESA.

2.2.4. California Fish and Game Code Special Protection of Birds

In addition to protections contained within the California ESA and California Fish and Game Code § 3511 described above, the California Fish and Game Code includes a number of sections that specifically protect certain birds.

Section 3800 states that it is unlawful to take nongame birds, such as those occurring naturally in California that are not resident game birds, migratory game birds, or fully protected birds, except when in accordance with regulations of the California Fish and Game Commission or a mitigation plan approved by CDFW for mining operations.

Section 3503 prohibits the take, possession, or needless destruction of the nest or eggs of any bird.

Section 3503.5 protects birds of prey (which includes eagles, hawks, falcons, kites, ospreys, and owls) and prohibits the take, possession, or destruction of any birds and their nests

Section 3505 makes it unlawful to take, sell, or purchase egrets, ospreys, and several exotic nonnative species, or any part of these birds.

Section 3513 specifically prohibits the take or possession of any migratory nongame bird as designated in the MBTA.

2.2.5. Lake or Streambed Alteration Agreements

Pursuant to Business and Professional Code 26060.1(b)(3), every license for cultivation issued by the Department of Cannabis Control (DCC) must comply with §1602 of the Fish and Game Code or receive written verification that CDFW that an LSA is not required. Additionally,

Section 1600-1616 of the California Fish and Game Code requires individuals or agencies to provide a Notification of Lake or Streambed Alteration (LSA) to CDFW for “any activity that may substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake.” CDFW reviews the proposed actions and, if necessary, proposed measures to protect affected fish and wildlife resources. The final proposal mutually agreed upon by CDFW and the applicant is the LSA Agreement. The project does not border a riparian corridor or any stream, lake or intermittent tributaries.

2.2.6. Porter-Cologne Water Quality Act

The RWQCB implements water quality regulations under the federal CWA and the Porter-Cologne Water Quality Act. These regulations require compliance with the National Pollutant Discharge Elimination System (NPDES), including compliance with the California Storm Water NPDES General Construction Permit for discharges of stormwater runoff associated with construction activities. General Construction Permits for projects that disturb one or more acres of land require development and implementation of a Storm Water Pollution Prevention Plan. Under the Porter-Cologne Water Quality Act, the RWQCB regulates actions that would involve “discharging waste, or proposing to discharge waste, with any region that could affect the water of the state” (Water Code 13260(a)). Waters of the State are defined as “any surface water or groundwater, including saline waters, within the boundaries of the state” (Water Code 13050 (e)). The RWQCB regulates all such activities, as well as dredging, filling, or discharging materials into Waters of the State, that are not regulated by USACE due to a lack of connectivity with a navigable water body. The RWQCB may require issuance of a Waste Discharge Requirements for these activities.

2.2.7. California Environmental Quality Act Species Criteria

In accordance with California Environmental Quality Act (CEQA) Guidelines § 15380 (Guidelines), a species or subspecies not specifically protected under the federal or California ESAs or NPPA may be considered endangered, rare, or threatened for CEQA review purposes if the species meets certain criteria specified in the Guidelines. These criteria include definitions similar to definitions used in ESA, the California ESA, and NPPA. Section 15380 was included in the CEQA Guidelines primarily to address situations in which a project under review may have a significant effect on a species that has not been listed under ESA, the California ESA, or NPPA, but that may meet the definition of endangered, rare, or threatened. Animal species identified as species of special concern (SSC) by CDFW, and plants identified by the California Native Plant Society (CNPS) as rare, threatened, or endangered may meet the CEQA definition of rare or endangered.

Species of Special Concern

SSC are defined by CDFW as a species, subspecies, or distinct population of an animal native to California that are not legally protected under ESA, the California ESA, or the California Fish and Game Code, but currently satisfies one or more of the following criteria:

- The species has been completely extirpated from the state or, as in the case of birds, it has been extirpated from its primary seasonal or breeding role;

- The species is listed as federally (but not State) threatened or endangered, or meets the State definition of threatened or endangered but has not formally been listed;
- The species has or is experiencing serious (noncyclical) population declines or range retractions (not reversed) that, if continued or resumed, could qualify it for State threatened or endangered status;
- The species has naturally small populations that exhibit high susceptibility to risk from any factor that if realized, could lead to declines that would qualify it for State threatened or endangered status; and
- SSC are typically associated with habitats that are threatened.

Depending on the policy of the lead agency, projects that result in substantial impacts to SSC may be considered significant under CEQA.

USFWS Birds of Conservation Concern

The 1988 amendment to the Fish and Wildlife Conservation Act mandates USFWS “identify species, subspecies, and populations of all migratory nongame birds that, without additional conservation actions, are likely to become candidates for listing under ESA.” To meet this requirement, USFWS published a list of birds of conservation concern (BCC) (USFWS 2008) for the U.S. The list identifies the migratory and non-migratory bird species (beyond those already designated as federally threatened or endangered) that represent USFWS’s highest conservation priorities. Depending on the policy of the lead agency, projects that result in substantial impacts to BCC may be considered significant under CEQA.

Sensitive Natural Communities

The CDFW maintains the California Natural Community List (CDFW 2021), which provides a list of vegetation alliances, associations, and special stands as defined in the *Manual of California Vegetation* (Sawyer et al. 2009), along with their respective State and global rarity ranks. Natural communities with a State rarity rank of 1, 2, or 3 are considered sensitive natural communities. Depending on the policy of the lead agency, impacts to sensitive natural communities may be considered significant under CEQA.

California Rare Plant Ranks

The CNPS maintains the Inventory of Rare and Endangered Plants of California (CNPS 2022), which provides a list of plant species native to California that are threatened with extinction, have limited distributions, and/or low populations. Plant species meeting one of these criteria are assigned to one of six California Rare Plant Ranks (CRPRs). The rank system was developed in collaboration with government, academia, non-governmental organizations, and private sector botanists, and is jointly managed by CDFW and the CNPS. The CRPRs are currently recognized in the California Natural Diversity Database (CNDDB). The following are definitions of the CNPS CRPRs:

Rare Plant Rank 1A – presumed extirpated in California and either rare or extinct elsewhere.

Rare Plant Rank 1B – rare, threatened, or endangered in California and elsewhere.
Rare Plant Rank 2A – presumed extirpated in California, but more common elsewhere.
Rare Plant Rank 2B – rare, threatened, or endangered in California but more common elsewhere.
Rare Plant Rank 3 – a review list of plants about which more information is needed.
Rare Plant Rank 4 – a watch list of plants of limited distribution.

Additionally, CNPS has defined Threat Ranks that are added to the CRPR as an extension. Threat Ranks designate the level of threat on a scale of 1 through 3, with 1 being the most threatened and 3 being the least threatened. Threat Ranks are generally present for all plants ranked 1B, 2B, or 4, and for the majority of plants ranked 3. Plant species ranked 1A and 2A (presumed extirpated in California), and some species ranked 3, which lack threat information, do not typically have a Threat Rank extension. The following are definitions of the CNPS Threat Ranks:

Threat Rank 0.1 – Seriously threatened in California (over 80 percent of occurrences threatened/high degree and immediacy of threat).
Threat Rank 0.2 – Moderately threatened in California (20-80 percent of occurrences threatened/moderate degree and immediacy of threat).
Threat Rank 0.3 – Not very threatened in California (less than 20 percent of occurrences threatened/low degree and immediacy of threat or no current threats known).

Factors, such as habitat vulnerability and specificity, distribution, and condition of occurrences, are considered in setting the Threat Rank; differences in Threat Ranks do not constitute additional or different protection (CNPS 2021).

Depending on the policy of the lead agency, substantial impacts to plants ranked 1A, 1B, or 2, and 3 are typically considered significant under CEQA Guidelines § 15380. Significance under CEQA is typically evaluated on a case-by-case basis for plants ranked 4 and at the discretion of the CEQA lead agency.

CEQA Significance Criteria

Sections 15063-15065 of the CEQA Guidelines address how an impact is identified as significant. Generally, impacts to listed (rare, threatened, or endangered) species are considered significant. Assessment of "impact significance" to populations of non-listed species (e.g., SSC) usually considers the proportion of the species' range that will be affected by a project, impacts to habitat, and the regional and population level effects.

Specifically, §15064.7 of the CEQA Guidelines encourages local agencies to develop and publish the thresholds that the agency uses in determining the significance of environmental effects caused by projects under its review. However, agencies may also rely upon the guidance provided by the expanded Initial Study checklist contained in Appendix G of the CEQA Guidelines. Appendix G provides examples of impacts that would normally be considered significant.

An evaluation of whether or not an impact on biological resources would be substantial must consider both the resource itself and how that resource fits into a regional or local context.

Substantial impacts would be those that would diminish, or result in the loss of, an important biological resource, or those that would obviously conflict with local, State, or federal resource conservation plans, goals, or regulations. Impacts are sometimes locally important but not significant under CEQA. The reason for this is that although the impacts would result in an adverse alteration of existing conditions, they would not substantially diminish or result in the permanent loss of an important resource on a population-wide or region-wide basis.

3.0. METHODS

For the purposes of this BRA, special-status species are defined as plants or animals that:

- are listed or are proposed for listing as threatened or endangered under the ESA;
- are candidates for future listing as threatened or endangered under the California ESA;
- are identified as an SSC by the CDFW;
- are considered by the CNPS with a CRPR of 1A, 1B, 2A, 2B, 3, or 4;
- are fully protected in California in accordance with the California Fish and Game Code, 3511 (birds), 4700 (mammals), 5050 (amphibians and reptiles), and 5515 (fishes)

3.1. Literature Review

Prior to field studies, special-status biological resources present or potentially present within or near the study area were identified through queries of the various state and federal databases based on the U.S. Geological Survey 7.5-minute quadrangle where the study area is located (Rio Vista) and eight surrounding quadrangles (Isleton, Bouldin Island, Jersey Island, Antioch North, Birds Landing, Liberty Island and Dozier), (see Enclosure B).

3.2. Methodology

Surveys were conducted by MHBA's Senior Biologist Marcus H. Bole, M.S., and Senior Biologist (Ornithologist) Charlene J. Bole, M.S., on January 23, 2023. During this field assessment sensitive biological resources (primarily trees supporting avian nests) were identified and mapped for future evaluations. Nesting avian species surveys were conducted outside the normal nesting season (February 1 to September 15) for all species of concern. All observed nests were unoccupied. If construction activities take place during then nesting season, preconstruction surveys will be required. If active nests are observed within the study area, biological monitoring will be initiated.

3.3. Evaluation of Special-Status Species

Based on the species accounts, species occurrence information from the literature review, and the field assessment, a list of special-status plant and animal species considered to have the potential to occur within the study area was generated. Each of the species that were considered as potentially occurring within the study area or vicinity were evaluated based on the following criteria:

- **Present** – Species was observed during field surveys or is known to occur within the study area based on documented occurrences within the CNDDDB, other literature, and

site assessments.

- **Potential to Occur** – Habitat (including soil and elevation requirements) for the species occurs within the study area based on site assessment and literature research.
- **Low Potential to Occur** – Marginal or limited amounts of habitat occur, and/or the species is not known to occur within the vicinity of the study area based on CNDDDB records other available documentation, and site assessments.
- **Absent** – No suitable habitat (including soils and elevation requirements) and/or the species is not known to occur within the vicinity of the study area based on CNDDDB records, other documentation, and site assessments.

4.0. RESULTS & FINDINGS

4.1. Site Characteristics and Land Use

The study area is situated at elevations that range from 10 to 30 feet above mean sea level (MSL) along the wastewater pipeline installation route to 40 feet MSL within the Trilogy subdivision. The majority of the excavation for wastewater pipeline installation is within existing paved roadways with a small amount of excavation within upland habitats characterized as non-native grasslands. The majority of the excavation for the recycled pipeline installation within the Trilogy subdivision is within existing roadways with a small amount of excavation within the landscaped features of the subdivisions golf course. Upgrades within the Northwest WWTP are within previously disturbed open areas characterized by ruderal grasses and forbs.

4.1.1. Urban Land

Three urban categories relevant to wildlife are represented in onsite surveys and evaluations conducted during the January field investigations.

Downtown: heavily-developed downtown areas were represented within the study areas along Beach Street, South 2nd Street, South Front Street, and North Front Street all of which exhibited extremely limited species richness. Street trees and adjacent residential landscaped features were evaluated for nests that would support raptors and other protected avian species. None of the trees within 500 feet either side of the project alignment were found to have nests. Surveys were conducted during a time when all leaves were absent from deciduous tree species allowing unrestricted views of limbs and trunks. Evergreen tree species required more detailed observations. The weather was clear and warm; however, there were few bird species observed during onsite observations. Pedestrian surveys with static observation posts were established. Trees were evaluated using high powered binoculars and spotting scopes. Observations were as follows:

Date	Survey Number	Start/End Time	Temperature (Start/End [°F])	Wind Speed (mph)	% Cloud Cover	Surveyor
1/23/2023 1.0 miles	#1 (120 ac.)	0640– 0840	45–48	10–15	0	M. Bole, C. Bole
1/23/2023 0.5 miles)	#2 (60 ac.)	0900– 1100	48–55	10–15	0	M. Bole, C. Bole

The information gathered during these observations suggest that the trees within 500 feet of either side of the alignment are not currently occupied by nesting raptors or migratory birds. A few bird species were observed overflying the study area, and occasionally attempting to forage within the landscaped habitats. Most, if not all, foraging attempts were unsuccessful due to the lack of available seed or prey base due to winter conditions. Species observed included the mourning dove (*Zenaida macroura*), western gull (*Larus occidentalis*), California towhee (*Melospiza crissalis*), black phoebe (*Sayornis nigricans*), house finch (*Carpodacus mexicanus*), and California scrub jay (*Aphelocoma californica*).

Suburban: Suburban areas with mature vegetation closely approximate the natural environment. The habitats associated within the vicinity of the CPN Pipeline property, the open field adjacent to the West Wind Mobile Home Park, and sparsely populated areas along Saint Francis Way and Airport Road exhibit a limited amounts of mature oak, walnut, and eucalyptus trees interspersed among non-native grassland habitats. Within the CPN Pipeline Property are several large native black walnuts one of which supports a sizable stick nest characteristic of a raptor nest. Mature eucalyptus trees adjacent to the sports fields south of Saint Francis Way provide nesting habitat for raptors and other avian species. The open non-native grasslands along Airport Road provide habitat for the burrowing owl. The study areas along Francis Way and Airport Road were the subject of an initial non-breeding season (1 September to 31 January) wintering burrowing owl survey in accordance with guidance set forth in the *Staff Report on Burrowing Owl Mitigation*, Department of Fish and Game, March 7, 2012. A thorough evaluation of the study area did not reveal evidence of the burrowing owl within or near any segment of the overall study area including the open non-native grasslands along Saint Francis Way and Airport Road. The open grassland habitats within these suburban habitats were also evaluated for the presence of seasonal wetlands and vernal pool habitats. Significant rains during the December and early January time period would normally produce ponding within the grassland habitats. The soils within the study area were saturated; however, no ponding or pooling was observed and no seasonal wetland or vernal pools were observed.

Industrial: Surveys were conducted within the open areas associated with the fenced-in Northwest WWTP. Highly disturbed and graded areas proposed for the construction of a clarification pond were thoroughly evaluated for the seasonal wetland, vernal pools, and protected plant and wildlife species. There was no evidence of sensitive habitats within the Northwest WWTP. Although outside of the normal blooming cycle for all plant species of concern, there was little evidence that the disturbed habitats would support special status plant species.

Trees were evaluated using high powered binoculars and spotting scopes. Ground surfaces within the study area non-native grasslands were surveyed by walking transects that provided 100% coverage. Observations were as follows:

Date	Survey Number	Start/End Time	Temperature (Start/End [°F])	Wind Speed (mph)	% Cloud Cover	Surveyor
1/23/2023 1.0 miles	#3 (120 ac.)	1130– 1330	55–60	10-15	0	M. Bole, C. Bole
1/23/2023 1.5 miles)	#4 (180 ac.)	1345– 1550	60–61	10–15	0	M. Bole, C. Bole

Subdivision: Approximately 0.7 miles of roadway and golf course habitat have been proposed for the construction of Recycled Water Improvements. An evaluation of the proposed recycled water pipeline was conducted within 500 feet of either side of the alignment. The Trilogy subdivision was construction over a several year period beginning in the mid-1990s. The landscaped features including the residential and street trees are relative young and do not support habitat for nesting avian species. All trees within the study area associated with the alignment were surveyed with no nests observed

Date	Survey Number	Start/End Time	Temperature (Start/End [°F])	Wind Speed (mph)	% Cloud Cover	Surveyor
1/23/2023 0.7 miles	#5 (80 ac.)	1600– 1800	61–56	10-15	0	M. Bole, C. Bole

The information gathered during these observations suggest that the trees within 500 feet of either side of the alignment are not currently occupied by nesting raptors or migratory birds. A few bird species were observed overflying the study area, and occasionally attempting to forage within the non-native grassland habitats. Most, if not all, foraging attempts were unsuccessful due to the lack of available seed or prey base due to winter conditions. Onsite sandy soils do not support small mammal burrows or burrow surrogates, and no burrows that would support the Western Burrowing Owl were observed within or near the study area alignment. Vegetation within the non-native grasslands consists of brome grass, *Hordeum spp.*, lupines *Lupinus spp.*, wild oats, *Avena spp.*, storksbill, *Erodium cicutarium*, Italian thistle, *Cardus pycnocephalus*, fennel, *Foeniculum vulgare*, and winter vetch, *Vicia villosa*. Species observed included the mourning dove (*Zenaida macroura*), western gull (*Larus occidentalis*), California towhee (*Melospiza crissalis*), black phoebe (*Sayornis nigricans*), house finch (*Carpodacus mexicanus*), and California scrub jay (*Aphelocoma californica*).

4.1.2. Soils

According to the Web Soil Survey (Natural Resources Conservation Service [NRCS] 2021), one soil type dominates the majority of the wastewater pipeline route and associated study area (Natural Resources Conservation Service Soil Types): Tujunga fine sand. The Tujunga series consists of nearly level, excessively drained soils in dredge spoil areas. These soils consist of mixed dredged alluvium. The vegetation is very sparse annual grasses and forbs. The average annual temperature is 58° to 60° F., the average rainfall is 16 to 18 inches, and the frost-free season is 250 to 270 days. Permeability is rapid. These soils are not classified as “hydric” and no hydric soils were found within the study area. The soil type associated with the Northwest WWTP is predominately Antioch-San Ysidro complex, 0 to 2 percent slopes. The Antioch-San Ysidro series consists of moderately well drained soils on terraces. These soils formed in alluvium from sedimentary sources. The average annual temperature is 59° to 61° F., the average rainfall is 16 to 18 inches, and the frost-free season is 260 to 280 days. Permeability is very slow. These soils are not classified as “hydric” and no hydric soils were found within the study area. The soil type associated with the Trilogy subdivision is predominately Diablo-Ayar clays, 2 to 9 percent slopes. The Diablo-Ayar clays series consists of well drained soils on dissected terraces. The average annual temperature is 58° to 60° F., the average rainfall is 16 to

18 inches, and the frost-free season is 260 to 280 days. Permeability is slow. These soils are not classified as “hydric” and no hydric soils were found within the study area.

4.1.3. Wildlife

Wildlife use of the study area is expected to be low due to the sparse, ruderal nature for the vegetation and the developed surroundings. Bird species observed during the January 2023 onsite evaluations included the mourning dove (*Zenaida macroura*), western gull (*Larus occidentalis*), California towhee (*Melospiza crissalis*), black phoebe (*Sayornis nigricans*), house finch (*Carpodacus mexicanus*), California scrub jay (*Aphelocoma californica*), western bluebird (*Sialia mexicana*), house finch (*Haemorhous mexicanus*), white-crowned sparrow (*Zonotrichia leucophrys*), yellow-rumped warbler (*Setophana coronata*), house sparrow, *Passer domesticus*, American crow, *Corvus brachyrhynchos*, Western meadowlark, *Sturnella neglecta*, turkey vulture, *Cathartes aura*, and Northern mocking bird, *Mimus polyglottos*, among others. Urban-adapted wildlife found in this setting included raccoon (*Procyon lotor*), striped skunk (*Mephitis mephitis*), and jackrabbit, *Lepus californicus*.

4.2. Evaluation of Special-Status Species

Based on an analysis of literature review, 9-Quad CNDDDB occurrences, USFWS listed species, professional expertise and observations in the field, a list of special-status plant and animal species that have the potential to occur within the study area was generated. Each of these species’ potential to occur onsite was assessed using the criteria listed in Section 3.3. Sensitive habitats include those that are of special concern to resource agencies and those that are protected under CEQA, Section 1600 of the California Fish and Game Code, or Section 404 of the Clean Water Act. The study area included the proposed alignment and adjacent 500 foot buffer zone on either side of the alignment and was systematically surveyed to ensure total search coverage, with special attention given to identifying those portions of the study area with the potential for supporting special-status species and sensitive habitats. Pedestrian surveys and observation points covering all trees within the study area were conducted to determine the presence of stick nests (raptors), burrows or burrow surrogates (Western Burrowing Owl) and other nests capable of supporting migratory birds and passerines. No special status species or their sensitive habitat were found on or near the study area (see Table 1 below).

Table 1. Listed and Proposed Species potentially occurring on or near the City of Rio Vista Wastewater Plant Consolidation Project, Northwest WWTP and Trilogy subdivision.

Common Name (<i>Scientific Name</i>)	Status Fed/State/ CNPS	General Habitat Description	Species Present or Absent/ Habitat Present or Absent	Rationale
INVERTEBRATES				
California linderiella (<i>Linderiella occidentalis</i>)	_/S2S3/_	Vernal pools, swales, and ephemeral freshwater habitat.	A/HA	Absent. There are no vernal pools within or near the study area. No impact.
Conservancy fairy shrimp (<i>Branchinecta conservatio</i>)	FE/_/_	Moderately turbid, deep, cool-water vernal pool.	A/HA	Absent. There are no vernal pools within or near the study area. No impact.
Valley elderberry longhorn beetle (<i>Desmocerus californicus dimorphus</i>)	FT/_/_	Blue elderberry shrubs usually associated with riparian areas.	A/HA	Absent. There are no elderberry shrubs within or near the study area. No Impact.
Vernal pool fairy shrimp (<i>Branchinecta lynchi</i>)	FT/_/_	Moderately turbid, deep, cool-water vernal pool.	A/HA	Absent. There are no vernal pools within or near the study area. No impact.
Vernal pool tadpole shrimp (<i>Lepidurus packardi</i>)	FE/_/_	Vernal pools, swales, and ephemeral freshwater habitat.	A/HA	Absent. There are no vernal pools within or near the study area. No impact.
Antioch Dunes anthicid beetle, (<i>Anthicus antiochensis</i>)	_/_/_	Restricted to sand dune areas.	A/HA	Absent. There is no habitat (sand dunes) to support this species within the study area. No impact.
Sacramento anthicid beetle (<i>anthicus sacramento</i>)	_/_/_	Restricted to sand dune areas.	A/HA	Absent. There is no habitat (sand dunes) to support this species within the study area. No impact.
Western bumble bee (<i>Bombus occidentalis</i>)	_/_/_	Sandy Point Beach, Rio Vista.	A/HM	Low Potential to Occur. There is marginal habitat to support this species within the study area. No impact is anticipated; however, recommend preconstruction surveys during spring –

Common Name (Scientific Name)	Status Fed/State/ CNPS	General Habitat Description	Species Present or Absent/ Habitat Present or Absent	Rationale
				summer time period.
Delta green ground beetle (<i>Elaphurs viridis</i>)	T/_/_	Restricted to the margins of vernal pools in the grassland area between Jepson Prairie and Travis AFB. Prefers the sandy mud substrate where it slopes gently into the water.	A/HA	Absent. There is no habitat to support this species within the study area. No impact.
San Bruno elfin butterfly (<i>Callophrys mossil bayensis</i>)	E/_/_	Colonies are located on steep, north-facing slopes with the fog belt, larval host plant is <i>sedum spathulifolium</i> .	A/HA	Absent. There is no habitat to support this species within the study area. No impact.
REPTILES AND AMPHIBIANS				
California tiger salamander (<i>Ambystoma californiense</i>)	FT/ST/SSC	Needs underground refuges, especially ground squirrel burrows & vernal pools or other seasonal water sources for breeding.	A/HA	Absent. There are no vernal pools within or near the study area. No suitable habitat. No impact.
Giant garter snake (<i>Thamnophis gigas</i>)	T/T/_	Prefers freshwater marsh and low gradient streams. Has adapted to drainage canals & irrigation ditches	A/HA	Absent. There is no habitat to support this species within the study area. No impact.
California red-legged frog (<i>Rana draytonii</i>)	T/_/SCC	Lowland & foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian habitat.	A/HA	Absent. There is no habitat to support this species within the study area. No impact.
MAMMALS				
Western red bat (<i>Lasiurus blossevilli</i>)	_/_/SSC	Roosts primarily in trees 2-40 feet above ground. Prefers habitat edges and mosaics with trees that are protected from above an open below.	A/MH	Low Potential to Occur. The study area supports marginal habitat for this species. Onsite surveys did not reveal the presence of this species. No impact is anticipated with adherence to BIO-3 (see Section 5.0).
Hoary bat (<i>Lasiurus cinereus</i>)	_/_/_	Roosts in dense foliage of medium to large trees, feeds primarily on moths, requires water	A/MH	Low Potential to Occur. The study area supports marginal habitat for this species. Onsite surveys did not reveal the presence of this species. No impact is anticipated with adherence to BIO-3 (see Section 5.0).

Common Name (Scientific Name)	Status Fed/State/ CNPS	General Habitat Description	Species Present or Absent/ Habitat Present or Absent	Rationale
BIRDS				
Burrowing owl, (<i>Athene cunicularia</i>)	_/_/SSC	Open, dry annual or perennial grasslands, deserts & scrublands characterized by low-growing vegetation.	A/MH	Low Potential to Occur. The study area does not support habitat for this species (no burrows or burrow surrogates). Onsite surveys did not reveal the presence of this species. No impact is anticipated with adherence to BIO-1 (see Section 5.0).
American peregrine falcon (<i>Falco peregrinus anatum</i>)	MBTA/_/_ CDFW Fully Protected	Near wetlands, lakes, rivers, or other water; on cliffs, banks, dunes, mounds; also human made structures.	A/MH	Low Potential to Occur. No potential nesting habitat within the study area. CNDDDB records one historic nest under drawbridge over river. None observed during surveys. No impact is anticipated with adherence to BIO-2 (see Section 5.0).
Swainson's hawk (<i>Buteo swainsoni</i>)	MBTA/ST/_	Breeds in grasslands with scattered trees, riparian areas and agricultural fields.	A/MH	Low Potential to Occur. No nesting habitat identified on or within ¼ mile of the study area. None observed during surveys. No impact is anticipated with adherence to BIO-2 (see Section 5.0).
Song sparrow (Modesto population) (<i>Melospiza melodia</i>)	_/_/_ CDFW Species of Concern	Habitat described as riparian and marsh.	A/HM	Low Potential to Occur. The CNDDDB has identified this species within 10 miles of the study area. None observed during surveys. No impact is anticipated with adherence to BIO-2 (see Section 5.0).
California clapper rail (<i>Rallus longirostris obsoletus</i>)	E/E/_	Salt-water & brackish marshes traversed by tidal sloughs. Associated with abundant growths of pickleweed.	A/HA	Absent. No suitable habitat present within or near the study area. None observed during surveys. No impact.
PLANTS				
San Joaquin Spearscale (<i>Extriplex joaquinana</i>)	_/_/1B.2	Alkali playa, valley and foothill grassland, vernal pools and chenopod scrub habitat.	A/HA	Absent. No suitable habitat present within or near the study area. None observed during surveys. No impact is anticipated with adherence to BIO-4 (see Section 5.0).
Woolly rose-mallow (<i>Hibiscus</i>)		Marshes and swamps (freshwater).	A/HA	Absent. No suitable habitat present within or near the study area. None observed

Common Name (<i>Scientific Name</i>)	Status Fed/State/ CNPS	General Habitat Description	Species Present or Absent/ Habitat Present or Absent	Rationale
<i>lasiocarpus</i> var. <i>occidentalis</i>)	_/_/1B.2			during surveys. No impact is anticipated with adherence to BIO-4 (see Section 5.0).
Northern California Black Walnut (<i>Juglans hindsii</i>)	_/_/1B.1	Riparian forest, riparian woodlands	A/HP	Present. Numerous black walnut trees in the vicinity of the CPN Pipeline property. No black walnut trees are proposed for removal. No impact.
Delta tule pea (<i>Lathyrus jepsonii</i> var. <i>jepsonii</i>)	_/_/1B.2	Marshes and swamps (freshwater and brackish).	A/HA	Absent. No suitable habitat present within or near the study area. None observed during surveys. No impact is anticipated with adherence to BIO-4 (see Section 5.0).
Manson's lilaepsis (<i>Lilaeopsis masonii</i>)	_/_/Rare/1B.1	Freshwater and brackish marshes, riparian scrub.	A/HA	Absent. No suitable habitat present within or near the study area. None observed during surveys. No impact is anticipated with adherence to BIO-4 (see Section 5.0).
Delta mudwort (<i>Limosella australis</i>)	_/_/2B.1	Riparian scrub, marshes and swamps.	A/HA	Absent. No suitable habitat present within or near the study area. None observed during surveys. No impact is anticipated with adherence to BIO-4 (see Section 5.0).
Suisun Marsh Aster (<i>Symphyotrichum lentum</i>)	_/_/1B.2	Marshes and swamps (freshwater and brackish).	A/HA	Absent. No suitable habitat present onsite. CNDDB identifies this species ½ mile south of study area along the banks of Sacramento River. No impact is anticipated with adherence to BIO-4 (see Section 5.0).
Sanford's arrowhead (<i>Sagittaria sanfordii</i>)	FC/_/_/1B.2	Marshes and swamps. In standing or slow-moving freshwater ponds & ditches.	A/HA	Absent. No suitable habitat present within or near the study area. None observed during surveys. No impact is anticipated with adherence to BIO-4 (see Section 5.0).

CODE DESIGNATIONS	
FE = Federally-listed Endangered	A = Species Absent
FT = Federally-listed Threatened	P = Species Present
FC = Federal Candidate Species	HA = Habitat Absent
SC = State Candidate Species	HP = Habitat Present
BCC = Federal Bird of Conservation Concern	CH = Critical Habitat
MBTA = Protected by the federal Migratory Bird Treaty Act	MH = Marginal Habitat
SE = State-listed Endangered	CNPS 1B = Rare or Endangered in California or elsewhere
ST = State-listed Threatened	CNPS 2 = Rare or Endangered in California, more common elsewhere
SR = State-listed Rare	CNPS 3 = More information is needed
SSC = State Species of Special Concern	CNPS 4 = Plants with limited distribution
S1 = State Critically Imperiled	0.1 = Seriously Threatened
S2 = State Imperiled	0.2 = Fairly Threatened
S3 = State Vulnerable	0.3 = Not very Threatened
S4 = State Apparently Secure	
SSC = CDFW Species of Special Concern	
FP = CDFW Fully Protected Species	
SNC = CDFW Sensitive Natural Community	

4.2.1. Special-Status Plants

A small number of federal and state listed special-status plant species were evaluated as having the potential to occur in the study area. However, upon further analysis and after the 2023 onsite evaluations, all were considered to be absent from the study area due to the lack of suitable habitat. Surveys conducted in the January time frame are outside the normal blooming cycle for all species of concern. Special status plant species are generally associated with wetlands and vernal pools. No wetlands or vernal pools were observed within the study area. However, if construction activities occur during the normal blooming cycle (April to July) a preconstruction survey should be accomplished. Surveys should also include any special status wildlife species that are typically active during the spring and summer time periods.

4.2.2. Invertebrates

Ten special status invertebrate species were evaluated as being absent from the site due to unsuitable habitat. One unlisted species of bumble bee has been observed within a close proximity to the study area; however, there is only a marginal amount of food plant genera (foraging habitat) consisting of *Ceanothus*, *Centaurea*, *Chrysothamnus*, *Cirsium*, *Geranium*, *Grindellia*, *Lupinus*, *Melilotus*, *Monardella*, *Rubus*, *Solidago*, and *Trifolium* (Williams et al. 2014) within the study area to support this species.

4.2.3. Reptiles & Amphibians

One special-status reptile and two special status amphibian species were evaluated as being absent from the study area due to unsuitable habitat. The study area does not support vernal pools.

4.2.4. Burrowing Owls

The burrowing owl is a small, long-legged, ground-dwelling bird species, well-adapted to open, relatively flat expanses. In California, preferred habitat is generally typified by short, sparse vegetation with few shrubs, level to gentle topography and well-drained soils. Grassland, shrub steppe, and desert are naturally occurring habitat types used by the species. In addition, burrowing owls may occur in some agricultural areas, ruderal grassy fields, vacant lots and pastures if the vegetation structure is suitable and there are useable burrows and foraging habitat in proximity. Unique amongst North American raptors, the burrowing owl requires underground burrows or other cavities for nesting during the breeding season and for roosting and cover, year round. Burrows used by the owls are usually dug by other species termed host burrowers. In California, California ground squirrel (*Spermophilus beecheyi*) and round-tailed ground squirrel (*Citellus tereticaudus*) burrows are frequently used by burrowing owls but they may use dens or holes dug by other fossorial species including badger (*Taxidea taxus*), coyote (*Canis latrans*), and fox. Natural rock cavities, debris piles, culverts, and pipes also are used for nesting and roosting. Burrowing owls have been documented using artificial burrows for nesting and cover.

The study area was evaluated by walking evenly spaced intervals to ensure total visual coverage of the ground surfaces. No burrows or burrow surrogates were found within the study area or within the 500 foot buffer around either side of the pipeline alignment. The study area and nearby surrounding areas do not have debris piles, culverts or pipes suitable for ground nesting species. No California ground squirrels or other small rodents were observed during intensive onsite surveys. Although burrowing owls have been documented within three miles of the study area, no suitable habitat to support burrowing owls was found during onsite surveys conducted during the non-breeding winter season.

Although the future presence of the Western Burrowing Owl is unlikely, it is recommended that preconstruction surveys be accomplished if construction activities are scheduled during the February 1 to August 31 time frame. In accordance with guidance set forth in the *Staff Report on Burrowing Owl Mitigation*, a qualified biologist should conduct four survey visits: 1) at least one site visit between 15 February and 15 April, and 2) a minimum of three site visits, at least three week apart, between 15 April and 15 July with at least one visit after 15 June for unoccupied burrows or burrow surrogates within 500 feet of the construction site no-less-than 14 days prior to the beginning of project construction, with a final survey conducted within 24 hours prior to ground disturbance.

4.2.5. Swainson's hawk

The Swainson's hawk (*Buteo swainsoni*) is a state-listed threatened species in California that occurs throughout much of the Central Valley. Solano County is within the region of the Central Valley – which includes Sacramento, Yolo, and San Joaquin Counties that supports the largest concentration of nesting Swainson's hawks in the state. Associated with large, open agricultural and grassland landscapes, the Swainson's hawk is closely tied to an agricultural pattern in the Central Valley that provides high value foraging opportunities. This pattern, an agricultural landscape matrix of hay, grain, and row crops; irrigated pasture; seasonal wetlands; and uncultivated grassland habitats is characteristic of this region. Surveys were conducted by Senior Biologist Marcus H. Bole, M.S., and Senior Biologist (Ornithologist) Charlene J. Bole on

January 23, 2023. Surveys during the January time period represents the non-breeding (nesting season) for raptors, owls and passerines. Surveys generally focused on the presence of stick nests within the study area that could support raptors. Only a few stick nests were observed within and near the CPN Pipeline property. These stick nests should be the focus for additional surveys during the nesting season (February – September). A qualified biologist should conduct two surveys for nesting raptors within the study area, and for the Swainson's hawk, within ¼ mile of the study area no-less-than 14 days prior to the beginning of project construction activities with a final survey conducted within 24 hours prior to ground disturbance. A qualified biologist will map any suspected occupied stick nests and appropriate buffers shall be established. The CDFW shall be notified and appropriate avoidance and minimization coordinated with the CDFW.

4.2.6. Roosting bat species

Bat surveys were conducted in January, 2023, by Marcus H. Bole, Senior Wildlife Biologist, and Charlene J. Bole, Senior Wildlife Biologist, Marcus H. Bole & Associates, Wheatland, California. A "Presence/Not detected & Relative Abundance" survey protocol was selected using night visual observations (Famous Trails 380 Marauder Night-Vision Monocular FT-380), and ultrasonic (Baton Bat Detector, frequency division with sonogram) bat pass detections in real time. Unlike netting and trapping, no handling is involved during ultrasonic detection, and therefore disturbance is minimized. However, positive species identification is not usually possible, nor is assessment of age, sex, or reproductive condition. Instead, ultrasonic detection are used to determine levels of bat activity in different habitats. Surveys were conducted to determine potentially-suited bat habitat using bat detection as one parameter of habitat determination. The chosen protocol recommends sampling between the beginning of May and end of August. Sampling was conducted outside the recommended time frame for successful determination of bat presence. The California Natural Diversity Data Base (CNDDB) has no record of the presence of special status bats including the pallid bat (*Antrozous pallidus*), Townsend's big-eared bat (*Corynorhinus townsendii*), or the Yuma myotis bat (*Myotis yumanensis*) within 5 miles of the study area. Normally, the optimal habitats for these bats are open forests and woodlands with sources of water over which to feed. The study area trees were examined with no evidence of bat roosts or potential areas that would support bat roosts. Due to the time of year that bat surveys were conducted, preconstruction bat surveys are recommended.

4.2.7. Wildlife Movement/Corridors

The study area is predominately urban in nature and is characterized by commercial/residential properties and major roadways. As such, wildlife use is expected to be relatively low. The study area does not fall within an Essential Habitat Connectivity area mapped by the CDFW.

4.2.8. Sensitive Natural Communities

There are no sensitive natural communities within or near the study area. Due to the built up nature of the study area, there is little evidence that the study area would support sensitive natural communities.

4.2.9. Determination of Waters of the United States

The intent of this determination is to identify wetlands and “Other Waters of the United States” that are present within the study area that could fall under the regulatory jurisdiction of the U. S. Army Corps of Engineers (Corps) pursuant to Section 404 of the Clean Water Act. The *1987 Corps of Engineers Wetlands Delineation Manual* identifies several methodologies and combinations of methodologies that can be utilized in making jurisdictional determinations. Bole & Associates has employed the Routine On-Site Determination methodology for this study (as supplemented by the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region*, dated September 2008). The Routine On-Site Determination method uses a three-parameter approach (vegetation, soils and hydrology) to identify and delineate the boundaries of jurisdictional wetlands. To be considered a wetland, all three positive wetland parameters must be present. These parameters include (1) a dominance of wetland vegetation, (2) a presence of hydric soils, and (3) hydrologic conditions that result in periods of inundation or saturation on the surface from flooding or ponding. Further description of these parameters is provided below:

1) **Vegetation.** Wetland vegetation includes those plants that possess physiological traits that allow them to grow and persist in soils subject to inundation and anaerobic soil conditions. Plant species are classified according to their probability of being associated with wetlands. Obligate (OBL) wetland plant species almost always occur in wetlands (more than 99 percent of the time), facultative wetland (FACW) plant species occur in wetlands most of the time (67 to 99 percent), and facultative (FAC) plant species have about an equal chance (33 to 66 percent) of occurring in wetlands as in uplands. For this study, vegetation was considered to meet the vegetation criteria if more than 50% of the vegetative cover was FAC or wetter. No wetland habitats were identified on or near the study area. Vegetation throughout the study area consisted of urban land features (paved roads and residential properties) and upland plants associated with areas of non-native grasslands including slender wild oats, *Avena barbata*, ripgut brome, *Bromus diandrus*, yellow star thistle, Bermuda grass, *Cynodon dactylon*, and cut-leaved geranium, *Geranium dissectum*.

2) **Hydric Soils.** Hydric soils are saturated, flooded, or ponded in the upper stratum long enough during the growing season to develop anaerobic conditions and favor the growth of wetland plants. Hydric soils include gleyed soils (soils with gray colors), or usually display indicators such as low chroma values, redoximorphic features, iron, or manganese concretions, or a combination of these indicators. Low chroma values are generally defined as having a value of 2 or less using the Munsell Soil Notations (Munsell, 1994). For this study a soil was considered to meet the hydric soil criteria for color if it had a chroma value of one or a chroma of two with redoximorphic features, or if the soil exhibited iron or manganese concretions. Redoximorphic features (commonly referred to as mottles) are areas in the soils that have brighter (higher chroma) or grayer (lower chroma) colors than the soil matrix. Redoximorphic features are the result of the oxidation and reduction process that occurs under anaerobic conditions. Iron and manganese concretions form during the oxidation-reduction process, when iron and manganese in suspension are sometimes segregated as oxides into concretions or soft masses. These accumulations are usually black or dark brown. Concretions 2 mm in diameter occurring within 7.5 cm of the surface are evidence that the soil is saturated for long periods near the surface. Soil pits were excavated throughout the study area within the following soil series:

Tujunga fine sand. The Tujunga series consists of nearly level, excessively drained soils in dredge spoil areas. These soils consist of mixed dredged alluvium. The vegetation is very sparse annual grasses and forbs. The average annual temperature is 58° to 60° F., the average rainfall is 16 to 18 inches, and the frost-free season is 250 to 270 days. Permeability is rapid. These soils are not classified as “hydric” and no hydric soils were found within the study area.

Antioch-San Ysidro complex, 0 to 2 percent slopes. The Antioch-San Ysidro series consists of moderately well drained soils on terraces. These soils formed in alluvium from sedimentary sources. The average annual temperature is 59° to 61° F., the average rainfall is 16 to 18 inches, and the frost-free season is 260 to 280 days. Permeability is very slow. These soils are not classified as “hydric” and no hydric soils were found within the study area.

Diablo-Ayar clays, 2 to 9 percent slopes. The Diablo-Ayar clays series consists of well drained soils on dissected terraces. The average annual temperature is 58° to 60° F., the average rainfall is 16 to 18 inches, and the frost-free season is 260 to 280 days. Permeability is slow. These soils are not classified as “hydric” and no hydric soils were found within the study area.

3) **Hydrology.** Wetlands by definition are seasonally inundated or saturated at or near the surface. In order for an area to have wetland hydrology, it has to be inundated or saturated for 5% of the growing season (approximately 12 days) (USDA, 1967). Indicators include visual soil saturation, flooding, watermarks, drainage patterns, encrusted sediment and plant deposits, cryptogammic lichens, and algal mats. There are no natural hydrological features within the study area.

Wetland Determination Results

Using the methodologies described in the *1987 Wetland Delineation Manual*, Bole & Associates found no evidence of seasonal or perennial wetland habitats within the study area.

5.0. Recommendations and Mitigation Measures

Onsite surveys for nesting raptors, burrowing owls and passerines were conducted outside of the normal nesting season for all species of concern. Therefore, it is recommended that preconstruction surveys be accomplished if construction activities are scheduled during the February 1 to September 15 time frame. The following mitigation measures are recommended:

BIO-1. Burrowing Owl. If construction activities are scheduled during the February 1 to August 31 time frame. In accordance with guidance set forth in the *Staff Report on Burrowing Owl Mitigation*, a qualified biologist should conduct four survey visits: 1) at least one site visit between 15 February and 15 April, and 2) a minimum of three site visits, at least three week apart, between 15 April and 15 July with at least one visit after 15 June for unoccupied burrows or burrow surrogates within 500 feet of the construction site no-less-than 14 days prior to the

beginning of project construction, with a final survey conducted within 24 hours prior to ground disturbance.

BIO-2. Nesting raptors, protected avian species and the Swainson's hawk. If construction activities are scheduled during the February 1 to August 31 time frame, a qualified biologist should conduct two surveys for nesting raptors within the study area, and for the Swainson's hawk, within ¼ mile of the study area no-less-than 14 days prior to the beginning of project construction activities with a final survey conducted within 24 hours prior to ground disturbance. A qualified biologist will map any suspected occupied stick nests and appropriate buffers shall be established. The CDFW shall be notified and appropriate avoidance and minimization coordinated with the CDFW.

BIO-3. Roosting bats. If construction occurs during the normal active bat season (April to October) preconstruction surveys for roosting bats will be required prior to disturbance or removal of onsite trees.

BIO-4. Sensitive plant species. Surveys conducted in the January time frame are outside the normal blooming cycle for all species of concern. Special status plant species are generally associated with wetlands and vernal pools. No wetlands or vernal pools were observed within the study area. However, if construction activities occur during the normal blooming cycle (April to July) a preconstruction survey should be accomplished.

This concludes our biological resource assessment of the City of Rio Vista Wastewater Plant Consolidation Project, a ±480-acre study area, and the Recycled Water Improvements Project, a ±80-acre study area, located in Rio Vista, Solano County, California. If you have any questions concerning our findings or recommendations please feel free to contact me directly at: Marcus H. Bole & Associates, Attn: Marcus H. Bole, 104 Brock Drive, Wheatland, CA 95692, phone 530-633-0117, fax 530-633-0119, email: marcus@mhbole.com.

Respectfully submitted,

Marcus H. Bole, M.S., Principal
Senior Wildlife Biologist
Senior Environmental Scientist

Project Code: 2022-0056966

Project Name: City of Rio Vista Waste Water Pipeline Replacement

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)).

(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

<http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF>

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts see <https://www.fws.gov/birds/policies-and-regulations.php>.

The MBTA has no provision for allowing take of migratory birds that may be unintentionally killed or injured by otherwise lawful activities. It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures see <https://www.fws.gov/birds/bird-enthusiasts/threats-to-birds.php>.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit <https://www.fws.gov/birds/policies-and-regulations/executive-orders/e0-13186.php>.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Code in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Note: IPaC has provided all available attachments because this project is in multiple field office jurisdictions.

Project Summary

Project Code: 2022-0056966

Event Code: None

Project Name: City of Rio Vista Waste Water Pipeline Replacement

Project Type: Government / Municipal (Non-Military) Construction

Project Description: Route from Beach Street Waste Water Treatment plant to new airport, Rio Vista, CA

Project Location:

Approximate location of the project can be viewed in Google Maps: <https://www.google.com/maps/@38.17376015,-121.6990263957648,14z>

Counties: Sacramento and Solano counties, California

Endangered Species Act Species

There is a total of 11 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries¹, as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

1. [NOAA Fisheries](#), also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the [National Wildlife Refuge](#) system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

Migratory Birds

Certain birds are protected under the Migratory Bird Treaty Act¹ and the Bald and Golden Eagle Protection Act².

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described [below](#).

-
1. The [Migratory Birds Treaty Act](#) of 1918.
 2. The [Bald and Golden Eagle Protection Act](#) of 1940.
 3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

The birds listed below are birds of particular concern either because they occur on the [USFWS Birds of Conservation Concern \(BCC\)](#) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ [below](#). This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the [E-bird data mapping tool](#) (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found [below](#).

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
Bald Eagle <i>Haliaeetus leucocephalus</i> This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Jan 1 to Aug 31
California Thrasher <i>Toxostoma redivivum</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Jan 1 to Jul 31

NAME	BREEDING SEASON
Clark's Grebe <i>Aechmophorus clarkii</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/2084	Breeds Jun 1 to Aug 31
Common Yellowthroat <i>Geothlypis trichas sinuosa</i> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/2084	Breeds May 20 to Jul 31
Golden Eagle <i>Aquila chrysaetos</i> This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1680	Breeds Jan 1 to Aug 31
Long-eared Owl <i>asio otus</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3631	Breeds Mar 1 to Jul 15
Nuttall's Woodpecker <i>Picoides nuttallii</i> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9410	Breeds Apr 1 to Jul 20
Short-billed Dowitcher <i>Limnodromus griseus</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9480	Breeds elsewhere
Tricolored Blackbird <i>Agelaius tricolor</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3910	Breeds Mar 15 to Aug 10
Yellow-billed Magpie <i>Pica nuttalli</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9726	Breeds Apr 1 to Jul 31

Probability Of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is $0.25/0.25 = 1$; at week 20 it is $0.05/0.25 = 0.2$.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

Breeding Season (■)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

No Data (—)

A week is marked as having no data if there were no survey events for that week.

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

■ probability of presence ■ breeding season | survey effort — no data

SPECIES JAN FEB MAR APR MAY JUN JUL AUG SEP OCT NOV DEC

Additional information can be found using the following links:

- Nationwide conservation measures for birds <https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf>

Migratory Birds FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

[Nationwide Conservation Measures](#) describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in

the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. [Additional measures](#) or [permits](#) may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS [Birds of Conservation Concern \(BCC\)](#) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the [Avian Knowledge Network \(AKN\)](#). The AKN data is based on a growing collection of [survey, banding, and citizen science datasets](#) and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle ([Eagle Act](#) requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the [AKN Phenology Tool](#).

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the [Avian Knowledge Network \(AKN\)](#). This data is derived from a growing collection of [survey, banding, and citizen science datasets](#).

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go to the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: [The Cornell Lab of Ornithology All About Birds Bird Guide](#), or (if you are unsuccessful in locating the bird of interest there), the [Cornell Lab of Ornithology Neotropical Birds guide](#). If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are [Birds of Conservation Concern](#) (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the [Eagle Act](#) requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the [Northeast Ocean Data Portal](#). The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the [NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf](#) project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the [Diving Bird Study](#) and the [nanotag studies](#) or contact [Caleb Spiegel](#) or [Pam Loring](#).

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to [obtain a permit](#) to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of

certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Wetlands

Impacts to [NWI wetlands](#) and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local [U.S. Army Corps of Engineers District](#).

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Sacramento County, California

Survey Area Data: Version 22, Sep 1, 2022

Soil Survey Area: Solano County, California

Survey Area Data: Version 17, Sep 1, 2022

Your area of interest (AOI) includes more than one soil survey area. These survey areas may have been mapped at different scales, with a different land use in mind, at different times, or at different levels of detail. This may result in map unit symbols, soil properties, and interpretations that do not completely agree across soil survey area boundaries.

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Apr 23, 2022—Apr 24, 2022

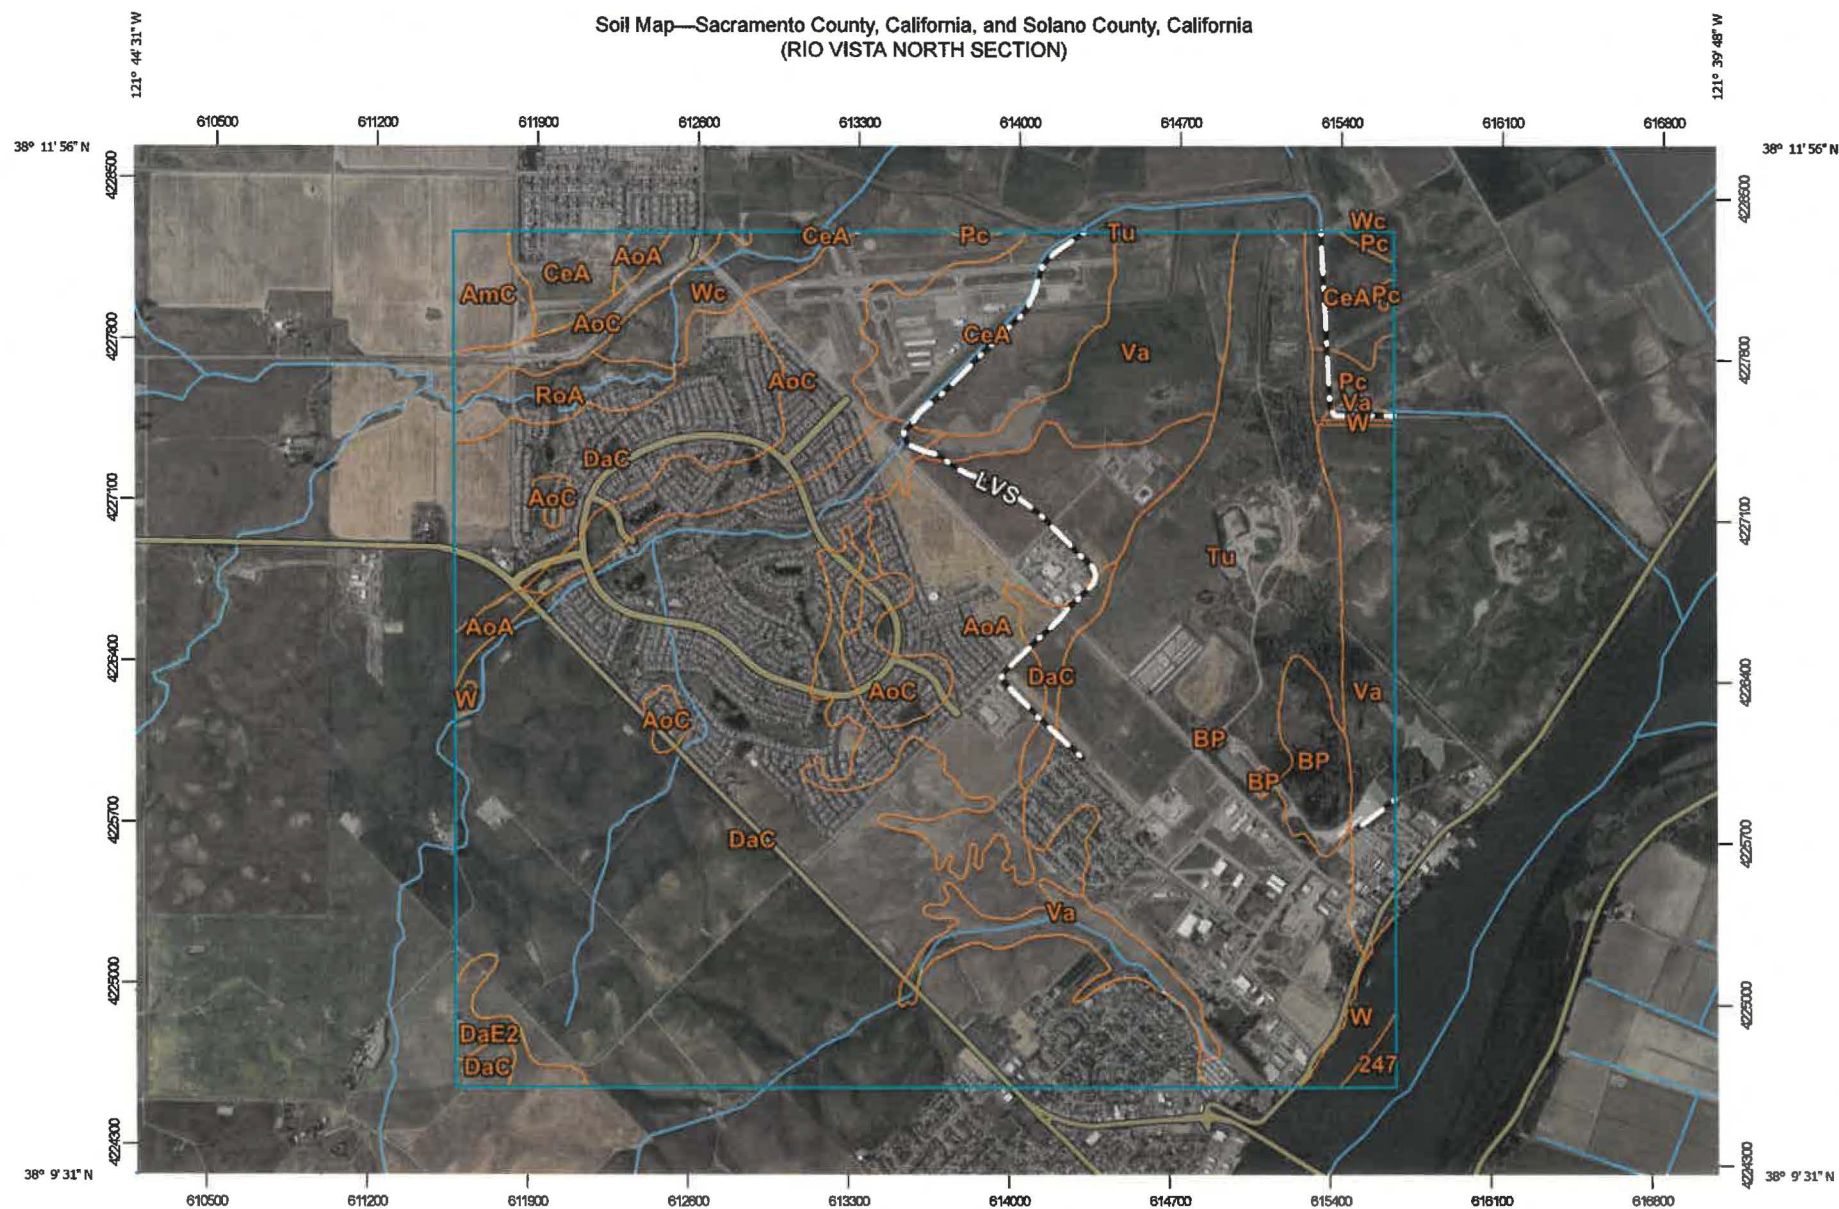

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

SWCA Cultural Resources Report No. 23-43

March 2023

Archaeological and other heritage resources can be damaged or destroyed through uncontrolled public disclosure of information regarding their location. This document contains sensitive information regarding the nature and location of archaeological sites, which should not be disclosed to the general public or unauthorized persons.

Information regarding the location, character, or ownership of a cultural resource is exempt from the Freedom of Information Act pursuant to 54 USC 307103 (National Historic Preservation Act) and 16 USC Section 470(h) (Archaeological Resources Protections Act)

MANAGEMENT SUMMARY

Purpose and Scope: SWCA Environmental Consultants (SWCA) was retained by Kimley-Horn and Associates, Inc. (Kimley-Horn) to prepare a combined California Environmental Quality Act (CEQA)/CEQA-Plus technical report for the City of Rio Vista (City) Wastewater Plant Consolidation Project (project) in the city of Rio Vista, Solano County, California. The project is considered an undertaking subject to compliance with National Historic Preservation Act (NHPA) Section 106 (36 Code of Federal Regulations [CFR] 800) due to the pursuit of federal funding from the U.S. Department of Agriculture (USDA) Rural Utility Services (RUS) grant. The project also requires environmental review under CEQA. The purpose of this cultural resources study is for compliance with both NHPA Section 106 and CEQA. The RUS is the lead agency for NHPA Section 106 compliance, and the City is the lead agency for CEQA.

Proposed Project: The proposed project is intended to result in the abandonment of the Beach Wastewater Treatment Plant (Beach WWTP) and the transfer of all sewage that would be treated at the Beach WWTP to the Northwest Wastewater Treatment Plant (Northwest WWTP). The result of this project would have the Northwest WWTP treating all the wastewater generated in the city of Rio Vista.

A study was prepared by HydroScience to evaluate a series of alternative arrangements of sewer lines and lift stations to facilitate the transfer of sewage from the Beach WWTP sewer shed to the Northwest WWTP sewer shed. After evaluation, a preferred alternative was chosen that would be the most efficient and minimize potential for impacts to occur. The project alignment would result in the construction of new sewer force mains between the Beach WWTP at 1000 Beach Drive and the terminal manhole located near the intersection of Airport and Church Roads, approximately 3.5 miles.

Improvements would generally result in the upgrade of two lift stations to redirect sewage into a new force main, the construction of new force mains that would pump north and west towards the Northwest WWTP, and various collection system improvements to facilitate the redirection of sewage from the Beach WWTP to the Northwest WWTP. Additional improvements to the treatment process at the Northwest WWTP to upgrade the existing process and upgrade the process to treat additional sewage from the Beach WWTP would also be required.

The proposed improvements would occur within existing roadways, one proposed utility easement through private property used by the CPN Pipeline Company, and an approximately 1,200-foot segment within a portion of an undeveloped previously disturbed parcel.

Dates of the Investigation: SWCA conducted an in-house records search at the California Historical Resources Information System (CHRIS) Northwest Information Center (NWIC) on January 17, 2023. No previously recorded archaeological sites were identified in the Area of Potential Effects (APE).

SWCA performed an intensive archaeological survey of the APE on January 19, 2023.

SWCA contacted the California Native American Heritage Commission (NAHC) on December 28, 2022, requesting a search of its Sacred Lands File for traditional cultural resources. SWCA sent letters to NAHC-identified Native American contacts via email and post on January 31, 2023. Examples of tribal outreach letters and details regarding tribal correspondence is presented in Appendix A. Follow-up telephone calls were made on February 15, 2023. On a call placed for Chairperson Lloyd Mathiesen of the Chicken Ranch Rancheria of Me-Wuk Indians, the receptionist suggested emails be directed instead to Environmental Scientist Joanna Portillo-Hsu and Cultural Coordinator Cynthia Reyes; outreach emails were sent to both the same day. Ms. Portillo-Hsu responded stating that the Tribe would contact SWCA if they had any comments. The remainder of the telephone calls went unanswered, and voice messages were

left for all but one contact, whose number was disconnected. Consultation under Assembly Bill (AB) 52 remains the responsibility of the CEQA lead agency, and formal consultation under NHPA Section 106 will be performed by the federal lead agency.

Investigation Constraints: None.

Number and Types of Identified Cultural Resources: There are no previously recorded cultural resources within the APE, and no resources were reported during intensive archaeological survey.

Report Format: The format of this report follows *Archaeological Resource Management Reports (ARMR): Recommended Contents and Format* (California Office of Historic Preservation 1990).

Conclusions: There are no previously recorded cultural resources and no newly identified cultural resources within the APE. With implementation of conditions to comply with regulatory compliance measures related to the inadvertent discovery of archaeological resources and human remains, SWCA finds that the proposed project will have a less-than-significant impact to archaeological resources under CEQA. For the purposes of compliance for NHPA Section 106, SWCA recommends that there are *no historic properties affected*.

Recommendations: No cultural resources or historic properties were noted on the ground surface during intensive archaeological pedestrian survey. However, the possibility of encountering cultural resources during excavation remains. If cultural materials are uncovered during project work, the Inadvertent Discovery procedures provided at the end of this report should be followed.

Disposition of Data: This report will be filed with the NWIC and the Sacramento, California, office of SWCA. Field notes, photographs, and records related to the current study are on file at SWCA's Sacramento office.

INTRODUCTION

SWCA Environmental Consultants (SWCA) was retained by Kimley-Horn and Associates, Inc. (Kimley-Horn) to conduct a cultural resources investigation for the City of Rio Vista (City) Wastewater Plant Consolidation Project (project) in the city of Rio Vista, Solano County, California (Figures 1 and 2). The project is considered an undertaking subject to compliance with Section 106 of the National Historic Preservation Act (NHPA) (36 Code of Federal Regulations [CFR] 800), due to the pursuit of federal funding from the U.S. Department of Agriculture (USDA) Rural Utility Services (RUS) grant. The project also requires environmental review under the California Environmental Quality Act (CEQA). The purpose of this cultural resources study is for compliance with both NHPA Section 106 and CEQA, and this report was prepared in accordance with NHPA Section 106 and CEQA. The RUS is the lead federal agency for the NHPA Section 106 portion of the undertaking, and the City is the lead agency for CEQA.

SWCA archaeologist Brandon Foster, M.A., Registered Professional Archaeologist (RPA), conducted the fieldwork and authored the report for this project. These efforts were carried out under the direction of and reviewed for quality assurance/quality control by SWCA Cultural Resources Principal Investigator Joshua Peabody, M.A., RPA. Mr. Foster and Mr. Peabody meet and exceed the requirements of the Secretary of the Interior Professional Qualification Standards in Archaeology (National Park Service 1983). All work was completed under the provisions of NHPA Section 106 (36 CFR 800).

Project Description

Proposed Undertaking

As defined in 36 CFR 800.16(y), an *Undertaking* is:

... a project, activity, or program funded in whole or in part under the direct or indirect jurisdiction of a Federal agency, including those carried out by or on behalf of a Federal agency; those carried out with Federal financial assistance; and those requiring a Federal permit, license or approval.

The proposed project is intended to result in the abandonment/decommissioning of the Beach Wastewater Treatment Plant (Beach WWTP) and the transfer of all sewage that would be treated at the Beach WWTP to the Northwest Wastewater Treatment Plant (Northwest WWTP). The result of this project would have the Northwest WWTP treating all the wastewater generated in the city of Rio Vista.

The U.S. Army Corps of Engineers (USACE) owns the property at 1000 Beach Drive on which the Beach WWTP is located and has granted the City right-of-way to operate and maintain the Beach WWTP on this property. The City contracts Veolia Water Company to operate the Beach WWTP. The Beach WWTP treatment system consists of bar screening and grit removal, two primary clarifiers, two activated sludge reactors, three secondary clarifiers, and chlorination/dichlorination for disinfection. Disinfected wastewater is discharged through a diffuser to the Sacramento River, and sludge is dewatered off-site at the Northwest WWTP.

The City has indicated that significant upgrades to the Beach WWTP are required to continue to operate and maintain the Beach WWTP in accordance with its effluent discharge limitations. Instead of upgrading the Beach WWTP to reliably meet these discharge limitations, the project's intent is to utilize existing available capacity at the Northwest WWTP to treat sewage from the Beach WWTP shed.

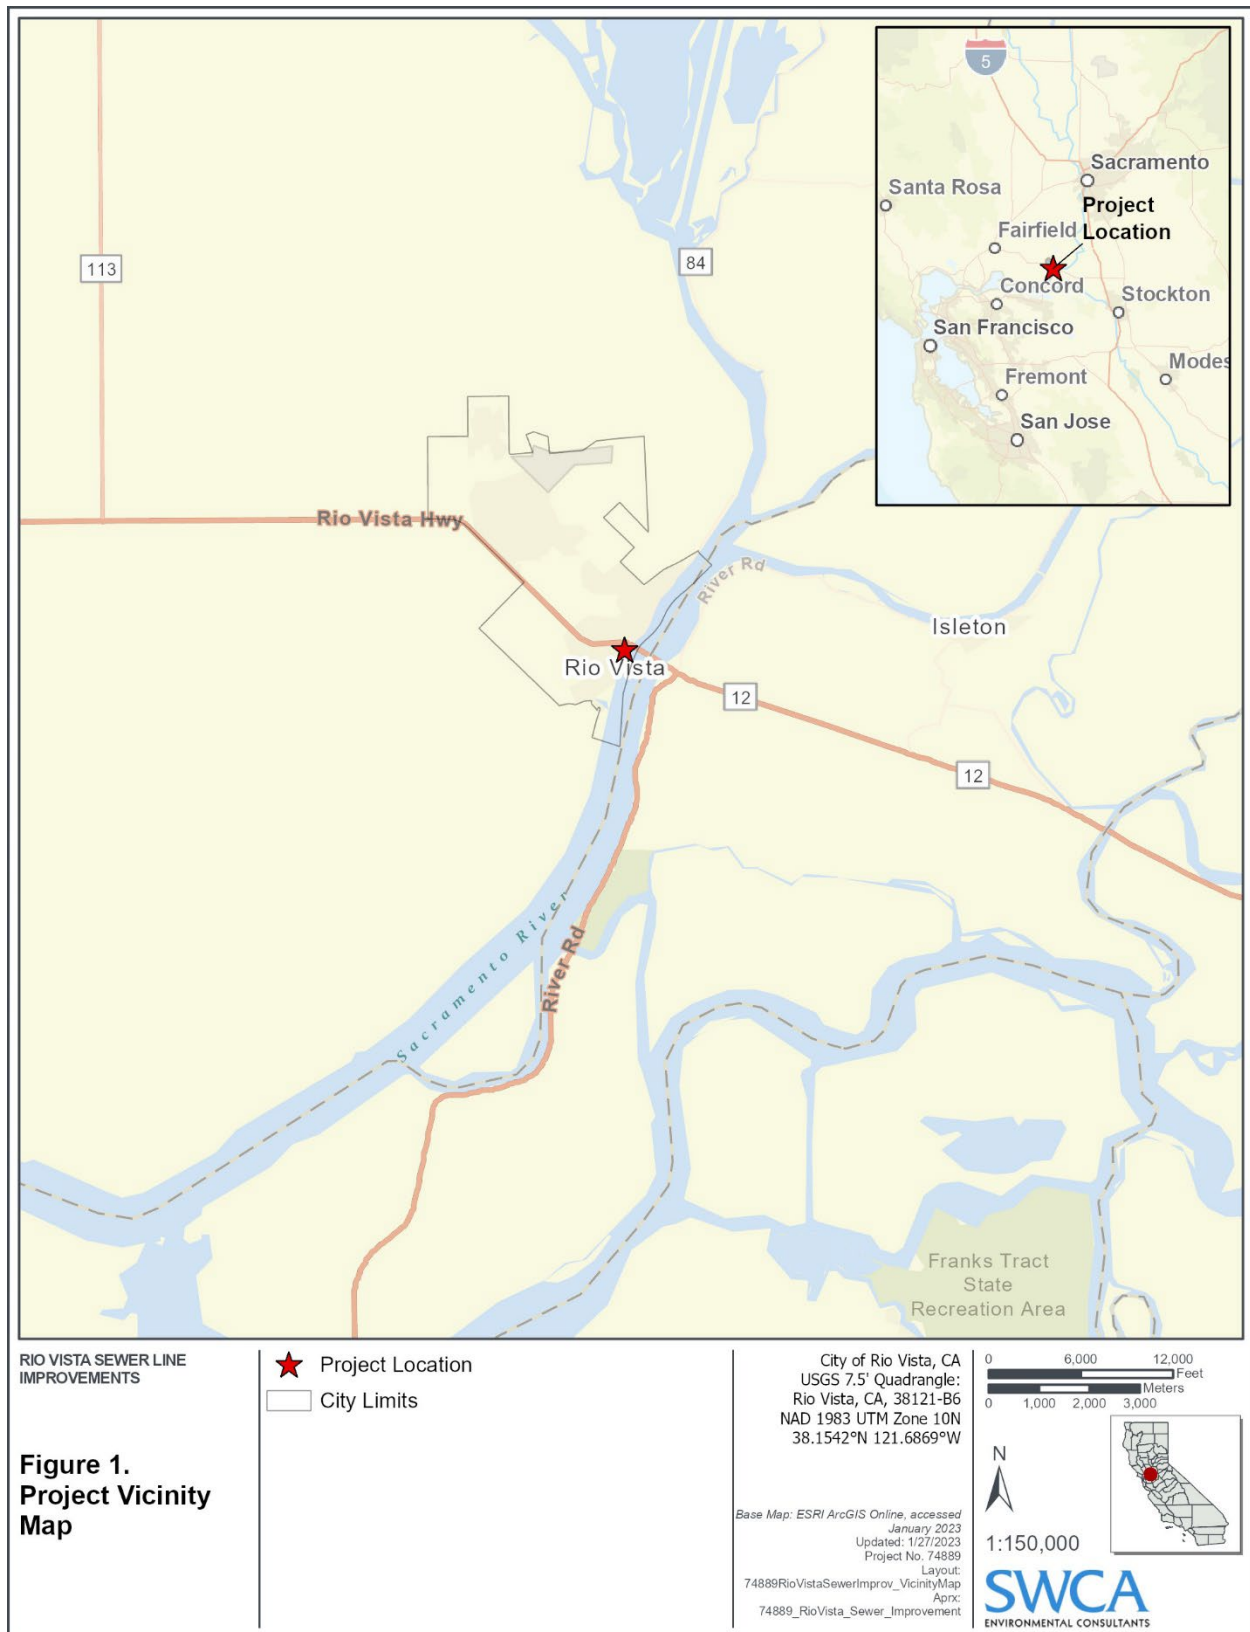

Figure 1. Project vicinity.

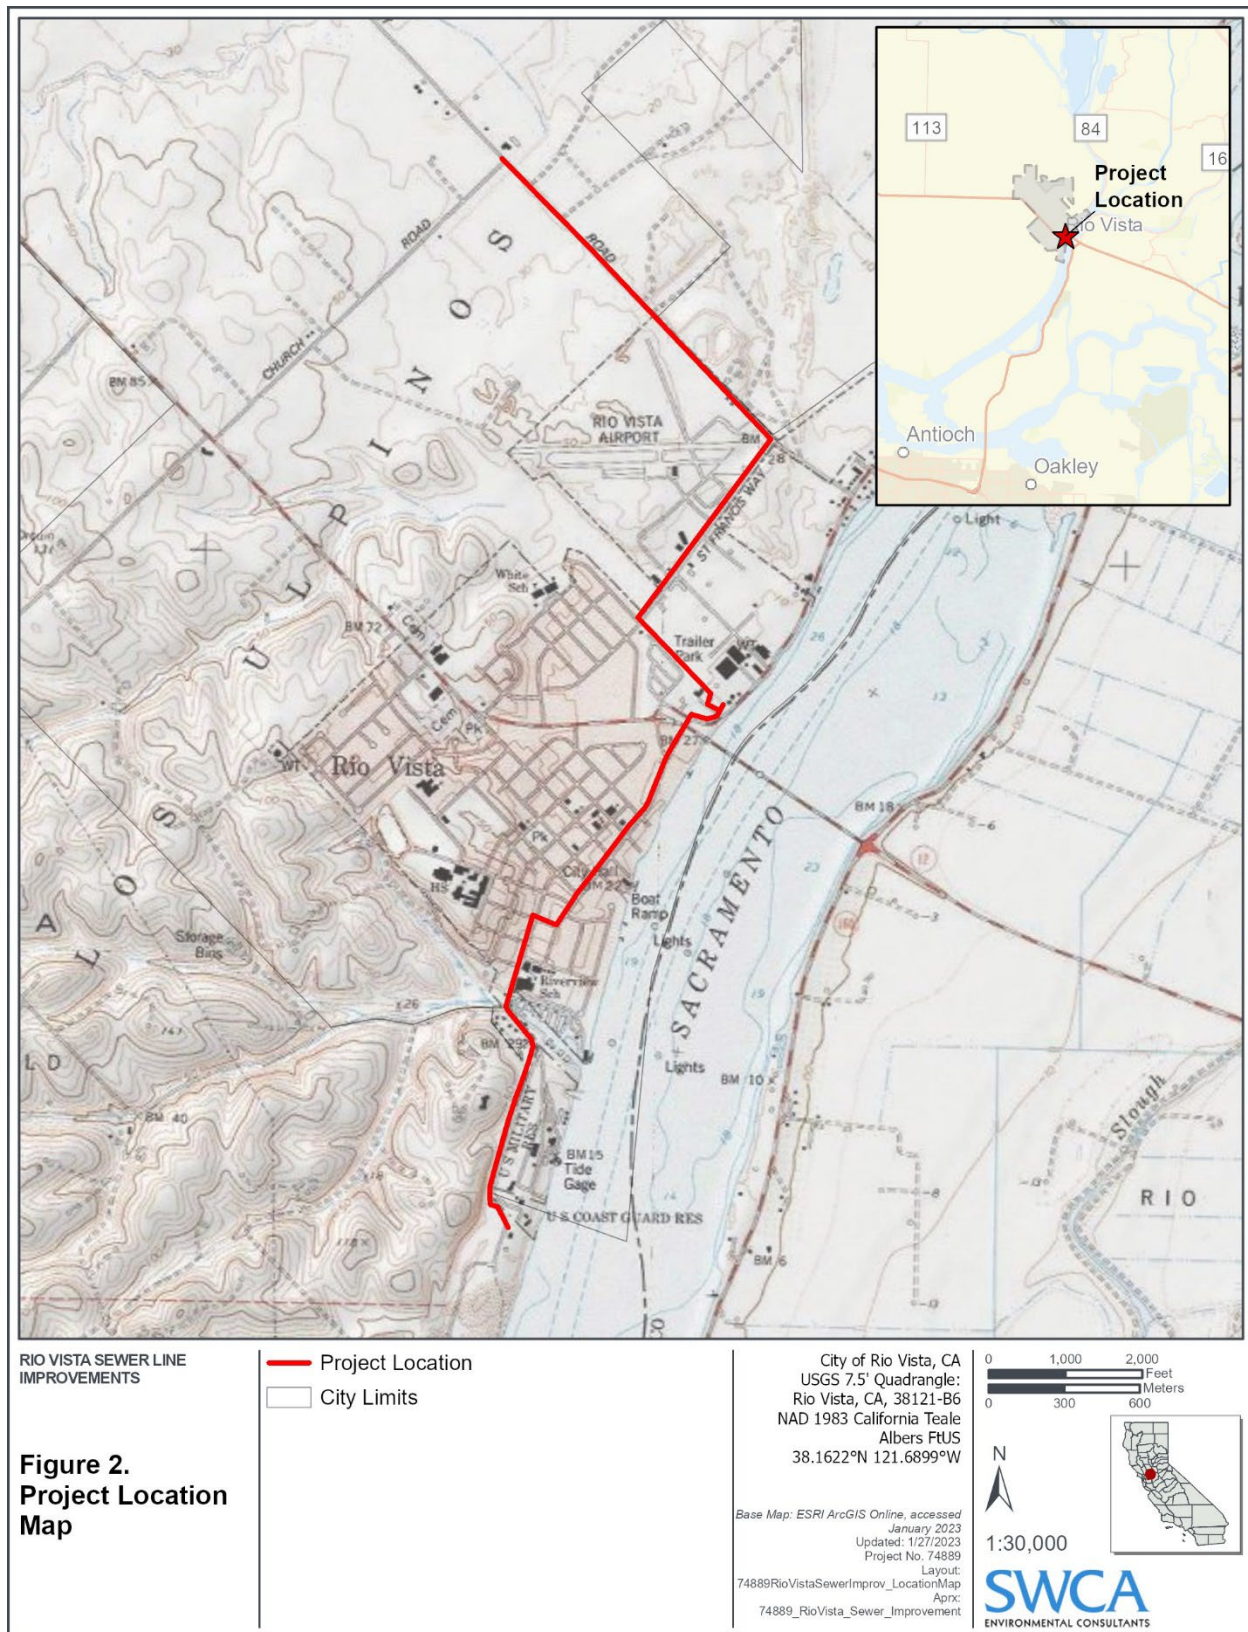

Figure 2. Project location.

Upgrades to the Northwest WWTP, including a new clarifier(s), extension of recycled water lines, and other minor upgrades to accommodate the flows from the Beach WWTP, would be the only upgrades considered by the City. The improvements would not increase the overall treatment capacity of the Northwest WWTP. The Beach WWTP would be closed and abandoned, and no additional work, demolition, or reuse of the Beach WWTP is proposed at this time.

A study was prepared by HydroScience to evaluate a series of alternative arrangements of sewer lines and lift stations to facilitate the transfer of sewage from the Beach WWTP sewer shed to the Northwest WWTP sewer shed. After evaluation, a preferred alternative was chosen that would be the most efficient and minimize potential for impacts to occur. The project alignment would result in the construction of new sewer force mains between the Beach WWTP at 1000 Beach Drive and the terminal manhole located near the intersection of Airport and Church Roads, approximately 3.5 miles.

Improvements would generally result in the upgrade of two lift stations to redirect sewage into a new force main, the construction of new force mains that would pump north and west towards the Northwest WWTP, and various collection system improvements to facilitate the redirection of sewage from the Beach WWTP to the Northwest WWTP. Additional improvements to the treatment process at the Northwest WWTP to upgrade the existing process and upgrade the process to treat additional sewage from the Beach WWTP would also be required.

The proposed improvements would occur within existing roadways, one proposed utility easement through private property used by the CPN Pipeline Company, and an approximately 1,200-foot segment within a portion of an undeveloped previously disturbed parcel.

Area of Potential Effects/Permit Area

The Area of Potential Effects (APE) is defined as the geographical space within which the project may impact, directly or indirectly, significant cultural resources. The project is located along Beach Drive, South 2nd Street, Bruning Avenue, South and North Front Streets, St. Francis Way, and Airport Road and on CPN Pipeline property in Rio Vista, Solano County, California, in Township 4 North, Range 2 East and Township 4 North, Range 3 East of the 2022 Rio Vista, California U.S. Geological Survey (USGS) 7.5-minute quadrangle (see Figure 2). Section 106 of the NHPA defines an APE as:

The geographic area or areas within which an undertaking may directly or indirectly cause alterations in the character or use of historic properties, if any such properties exist. The area of potential effects is influenced by the scale and nature of an undertaking and may be different for different kinds of effects caused by the undertaking.

The APE boundary represents portions of the APE that will be directly affected by the undertaking and includes the proposed areas of direct ground disturbance (Figure 3). The project site is generally flat and would occur within existing roadways, areas with existing wastewater infrastructure, and other areas that have been previously disturbed.

Installation of the new force mains and lift stations would require removals of the existing hardscape, minimal grading, and removal of underlying materials to reach grade and enable installation of the new sewer lines and equipment. Excavation for the new force mains is anticipated to reach a maximum depth of approximately 10 feet. The majority of the excavation is anticipated to be to a depth of approximately 6 feet in a trench approximately 3 feet wide.

Figure 3. Project APE map.

Two of the existing lift stations would be replaced with new lift stations. Construction activities would involve removal of the existing utilities (pumps, pipes, etc.) as needed and replacement with new pumps and equipment. The two new lift stations that would be installed would require minor excavations and removal of existing soils and installation of retaining walls and placement of the new lift station equipment. The depth of excavation is anticipated to be approximately 10 feet at a maximum and 6 feet on average, and the trenches would be approximately 3 feet wide, resulting in the removal of approximately 1,368 cubic yards of material. It should be noted that most of the materials would be replaced in trenches requiring minimal export. Removed hardscape would be transported off-site and recycled/crushed for reuse as materials such as road base.

A new equalization basin would be constructed at the Northwest WWTP. Construction of this area would be to a depth of approximately 8 feet. Soils would be reused/spread on-site or transported off-site. Materials may be reused to create a berm to temporarily contain the wastewater.

Construction activities would involve the use of heavy equipment for ground preparation, trenching, staking and flagging, and installation of force mains and lift stations. Needed equipment for construction would include bulldozers, backhoes, loaders, dump trucks, saws, jackhammers, skidsters, scrapers, and excavators to enable removals and create grade and needed contours. Other equipment would include pavers or concrete trucks and rollers to complete repaving activities. Not all equipment would be required in all project areas as for example, backhoes would be needed more frequently to dig the trenches for the new sanitary sewer force main (SSFM) line and scrapers and bulldozers would be needed to excavate the equalization pond.

REGULATORY FRAMEWORK

This regulatory framework section identifies the federal, state, and local laws, statutes, guidelines, and regulations that govern the identification and treatment of cultural resources, as well as the analysis of potential impacts to cultural resources. The lead agency must consider the provisions and requirements of this regulatory framework when rendering decisions on projects that have the potential to affect cultural resources.

Federal Regulations

National Historic Preservation Act of 1966

State Regulations

The California Office of Historic Preservation (OHP), a division of the California Department of Parks and Recreation (DPR), is responsible for carrying out the duties described in the California Public Resources Code (PRC) and maintaining the California Register of Historical Resources (CRHR). The state-level regulatory framework also includes CEQA, which requires the identification and mitigation of substantial adverse impacts that may affect the significance of eligible historical and archaeological resources.

California Environmental Quality Act

CEQA requires a lead agency to analyze whether historical and/or archaeological resources may be adversely affected by a proposed project. Under CEQA, a “project that may cause a substantial adverse

change in the significance of a historic resource is a project that may have a significant effect on the environment” (PRC Section 21084.1). Answering this question is a two-part process: first, the determination must be made as to whether the proposed project involves cultural resources. Second, if cultural resources are present, the proposed project must be analyzed for a potential “substantial adverse change in the significance” of the resource.

HISTORICAL RESOURCES

According to State CEQA Guidelines Section 15064.5, for the purposes of CEQA, historical resources are as follows:

- A resource listed in, or formally determined eligible . . . for listing in the CRHR (PRC Section 5024.1; Title 14 California Code of Regulations [CCR] Section 4850 et seq.).
- A resource included in a local register of historical resources, as defined in PRC Section 5020.1(k), or identified as significant in a historic resources survey meeting the requirements of Section PRC 5024.1(g).
- Any object, building, structure, site, area, place, record, or manuscript that the lead agency determines to be eligible for national, state, or local landmark listing; generally, a resource shall be considered by the lead agency to be historically significant (and therefore a historic resource under CEQA) if the resource meets the criteria for listing in the CRHR (as defined in PRC Section 5024.1; 14 CCR Section 4852).

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity (as defined above) does not meet the National Register of Historic Places (NRHP) criteria may still be eligible for listing in the CRHR.

According to CEQA, the fact that a resource is not listed in or determined eligible for listing in the CRHR or is not included in a local register or survey shall not preclude the lead agency from determining that the resource may be a historical resource (PRC Section 5024.1). Pursuant to CEQA, a project with an effect that may cause a substantial adverse change in the significance of a historical resource may have a significant effect on the environment (State CEQA Guidelines Section 15064.5(b)).

Substantial Adverse Change and Indirect Impacts to Historical Resources

The State CEQA Guidelines specify that a “substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired” (Section 15064.5). Material impairment occurs when a project alters in an adverse manner or demolishes “those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion” or eligibility for inclusion in the NRHP, the CRHR, or a local register. In addition, pursuant to State CEQA Guidelines Section 15126.2, the “direct and indirect significant effects of the project on the environment shall be clearly identified and described, giving due consideration to both the short-term and long-term effects.”

Pursuant to State CEQA Guidelines Section 15378, study of a project under CEQA requires consideration of “the whole of an action, which has the potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment.” State CEQA Guidelines Section 15064(d) further defines direct and indirect impacts as follows:

- (1) A direct physical change in the environment is a physical change in the environment which is caused by and immediately related to the project.

- (2) An indirect physical change in the environment is a physical change in the environment, which is not immediately related to the project, but which is caused indirectly by the project. If a direct physical change in the environment in turn causes another change in the environment, then the other change is an indirect physical change in the environment.
- (3) An indirect physical change is to be considered only if that change is a reasonably foreseeable impact which may be caused by the project. A change which is speculative or unlikely to occur is not reasonably foreseeable.

ARCHAEOLOGICAL RESOURCES

In terms of archaeological resources, PRC Section 21083.2(g) defines a “unique archaeological resource” as an archaeological artifact, object, or site about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- (1) Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
- (2) Has a special and particular quality such as being the oldest of its type or the best available example of its type.
- (3) Is directly associated with a scientifically recognized important prehistoric or historic event or person.

If it can be demonstrated that a proposed project will cause damage to a unique archaeological resource, the lead agency may require that reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (PRC Sections 21083.2(a)–(c)). CEQA notes that, if an archaeological resource is neither a unique archaeological resource nor a historical resource, the effects of the project on those resources shall not be considered to be a significant effect on the environment (State CEQA Guidelines Section 15064.5(c)(4)).

CALIFORNIA REGISTER OF HISTORICAL RESOURCES

Created in 1992 and implemented in 1998, the CRHR is “an authoritative guide in California to be used by state and local agencies, private groups, and citizens to identify the state’s historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change” (PRC Sections 21083.2 and 21084.1). Certain properties, including those listed in or formally determined eligible for listing in the NRHP, and California Historical Landmarks numbered 770 and higher are automatically listed in the CRHR. Other properties recognized under the California Points of Historical Interest program, identified as significant in historical resources surveys, or designated by local landmarks programs may be nominated for listing in the CRHR. According to PRC Section 5024.1(c), a resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the following criteria, which are modeled on NRHP criteria:

- **Criterion 1:** It is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage.
- **Criterion 2:** It is associated with the lives of persons important in our past.

- **Criterion 3:** It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
- **Criterion 4:** It has yielded, or may be likely to yield, information important in history or prehistory.

As previously stated, resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance, and resources whose historic integrity does not meet NRHP criteria may still be eligible for listing in the CRHR.

PROJECT SETTING

Environmental Setting

The project APE is in the Sacramento-San Joaquin Delta (Delta), the largest freshwater tidal estuary of its kind in western North America. The Delta is formed by the south-flowing Sacramento River as it meets the north-flowing San Joaquin River just south of the city of Sacramento, where the river is joined by smaller tributaries and tidal flows. The rivers' combined freshwater flows through the Carquinez Strait and into San Francisco Bay's northern arm, forming the San Francisco Bay Delta. The Delta has undergone significant transformation after over a century's worth of reclamation. Farmers began building a network of levees to drain and reclaim what was once a marsh. Progressively higher levees were built to keep the surrounding waters out, lands were pumped dry, and the marsh was transformed into productive island farms, most of which are below sea level (Water Education Foundation 2022).

Prior to its reclamation, the APE would have been characterized as a wet meadow and seasonal wetland. This environment was characterized by temporary or seasonally flooded, herbaceous communities characterized by poorly drained, clay rich soils often comprising the upland edge of perennial wetlands. Today, the APE falls into the urban/barren category, which is described as developed, built-up land that includes riprap bordering channels. Areas with this habitat type often include non-native/invasive vegetation (Robinson et al. 2014).

More than 750 species of plants and animals characterize the Delta. Mammals found in the Delta include beaver, river otter, muskrat, and shrew, which generally live in riparian habitats and feed on aquatic and woody vegetation, other mammals such as rodents and rabbits, and invertebrates such as crayfish and insects. Many of the species of fish inhabiting the Delta are found in slower waters, including those characterizing the northern area of the Delta. These include catfish, sunfish, and shad, and anadromous fish, like salmon and green sturgeon. California Delta fish typically eat smaller fish, insect larvae, shrimp, plankton, and clams. As an important part of the Pacific Flyway, the Delta is home to several species of water birds, including ducks, geese, swans, pelicans, and herons (Davidson Communities 2022).

General lithology within the immediate vicinity of the APE consists of marine sedimentary rocks comprised of Quaternary (Pleistocene and Holocene) older alluvium, lake, playa and terrace deposits (Jennings et al. 2010). The USDA National Resources Conservation Service (NRCS) indicates that the APE is comprised of Tujunga fine sand, which is found on the toeslope of flood plains up to depths of 60 inches (NRCS 2022).

Cultural Setting

The following sections provide background for the cultural and historical contexts of the APE, including a synopsis of the archaeological record in the greater region, summary of available ethnographic literature and current status for tribal groups and native inhabitants of the region, and a summary of regional and local histories.

Prehistoric Setting

The APE is situated in what is generally described as the San Francisco Bay Region, which is one of eight arbitrary organizational divisions of the state (Moratto 1984). This region includes all of today's San Francisco, San Mateo, and Marin Counties and portions of Alameda, Contra Costa, Napa, Santa Clara, Santa Cruz, Solano, and Sonoma Counties. Beginning in 1948, the Central California Taxonomic System (CCTS) was the primary temporal classification system being used and focused on burial practices and grave goods in the Early, Middle, and Late periods. This system, while outdated, became the building blocks for the current temporal schemes associated with California archaeology. The prehistory of this region is currently divided into six periods: Early Holocene (Lower Archaic; 8000–3500 B.C.), Early period (Middle Archaic; 3500–500 B.C.), Lower Middle period (Initial Upper Archaic; 500 B.C.–A.D. 430), Upper Middle period (Late Upper Archaic, A.D. 430–1050), Initial Late period (Lower Emergent; A.D. 1050–1550), and Terminal Late period (A.D. 1550–1776) (Milliken et al. 2007:101, 114–118). The San Francisco Bay area is where three different systems for organizing the archaeological record meet: the Early-Middle-Later Period, the Archaic-Emergent, and a hybrid system (Milliken et al. 2007). Therefore, a variety of period names within each section are mentioned below. Table 1 provides a short synopsis of the varying time schemes for the East Bay Region.

Table 1. East Bay Interior/Central Bay Shore Region Periods, Patterns, and Aspects

Geologic Period	Early Holocene		Mid-Holocene						Late Holocene						
Economic Period	Paleo		Lower Archaic		Middle Archaic				Upper Archaic			Emergent

Source: Summarized from Milliken et al. (2007)

EARLY PERIOD/MIDDLE ARCHAIC (3500–500 B.C.)

Archaeological sites characteristic of the Early period/Middle Archaic in the Solano County area date to as early as 5,500 years ago and as late as 2,500 years ago (3500–500 B.C.). At the north end of the San Francisco Bay, generalized mobile foraging persisted through much of this period. Such sites often contain manos and metates (grinding stones), as well as many mortar fragments, indicating that acorns and/or various seeds formed an important part of the diet (Moratto 1984:201). The mortar and pestle were first documented circa 4000 B.C., and pestles utilized with wooden mortars have been dated to 3800 B.C. in the Los Vaqueros reservoir area (CCO-637; Meyer and Rosenthal 1997; Milliken et al. 2007:115). By 1500 B.C., cobble mortars and pestles overtook milling slabs and hand stones at the West Berkeley site on the eastern shore of San Francisco Bay (Wallace and Lathrop 1975:19; Milliken et al. 2007:115) and in deeply buried components at CCO-308 in the San Ramon Valley (Fredrickson 1966) and ALA-483 in the Livermore Valley (Wiberg 1996:3783). The period is marked by the first cut bead, the grooved *Olivella biplicata* rectangle bead (Vellanoweth 2001), which was identified at San Bruno Mound and found to date to 3400 to 2500 B.C. (Clark 1998:127, 156). Also on the peninsula coast, *Olivella* rectangular beads with drilled perforations (type L1) and Rossi square-stemmed (e.g., at SCR-7 and SCR-9; Milliken et al. 2007:121) and large side-notched projectile points are diagnostic of the Early period (Hylkema 2002:250).

LOWER MIDDLE PERIOD/INITIAL UPPER ARCHAIC (500 B.C.–A.D. 430)

People inhabiting the San Francisco Bay region during the Lower Middle period (also known as the Berkeley period) practiced a maritime hunting and gathering economy. Large accumulations of shellfish remains, or “shell mounds,” formed over hundreds, or even thousands, of years through accretion at village sites fronting the Bay that were reused seasonally or year-round (Lightfoot 1997:135). These numerous shell mounds contain hundreds of burials as well as ceremonial items, house floors, hearths, and storage pits, indicating they were used as burial, ceremonial, and residential places (Lightfoot 1997:131–136; Lightfoot and Luby 2002:276–277).

Artifacts typical of the Lower Middle period include spire-lopped *Olivella*, *Olivella* saucer beads, and circular abalone (*Haliotis* spp.) ornaments (Milliken et al. 2007:115). Assemblages generally have a relatively small frequency of flaked stone points; projectile points are commonly contracting stemmed and lanceolate types, some of which are made from obsidian (Hylkema 2002). Burials are variable-flexed and semi-flexed with inconsistent orientation.

Milling implements include large and small boulder or cobble mortars and various types of pestles, indicating that acorns formed an important part of the diet. In the South Bay, processing of hard seeds continued to be important throughout this period, as evidenced by the number of milling slabs and handstones in the artifact assemblages from that area (Hylkema 2002:244–245, 252). Other plant resources included hazel nuts, cattail seeds, grass, and soaproot bulbs; the latter were roasted in earth ovens.

UPPER MIDDLE PERIOD/LATE UPPER ARCHAIC (A.D. 430–1050)

The Upper Middle period/Late Upper Archaic period is marked by the collapse of the *Olivella* saucer bead trade network at circa A.D. 430 in the Bay Region (Milliken et al. 2007:116). The period is also marked by shifts and changes in subsistence practices, foraging, and land use patterns that begin to reflect patterns known from Historic-period Native American groups in the area. A substantial increase in the intensity of subsistence exploitation, including fishing, hunting, and gathering (particularly the acorn), evidenced in the archaeological record, correlates directly with population growth (Moratto 1984:211–214). Bow and arrow technology, the use of harpoons, and tubular tobacco pipes appear during this period. However, a greater emphasis is placed on the procurement and processing of vegetal foods,

especially acorns, as evidenced in the increase of milling tools, especially the mortar and pestle. Both coiled and twined basketry were used as domestic and ceremonial items. Population size and the number of settlements increased during this period, although the large shell mound villages of the Lower Middle period were apparently no longer favored residential places (Lightfoot and Luby 2002:264, 277). There appears to be an increase in grave goods, particularly during the Upper Middle period, compared with fewer grave goods identified during the Lower Middle period components in Bay Area sites.

During the Upper Middle period, the climate fluctuated between cooler, wetter periods, and warmer, drier periods. During cooler, wetter periods, alluvial deposition increased, with comparatively little deposition occurring in the drier intervals. Extended periods of relatively little rainfall, referred to as the Medieval Climatic Anomaly (MCA), produced droughts across the West between about A.D. 650 and 850 and again in the Late period between about A.D. 1150 and 1250. The dry conditions during the MCA may be related to the abandonment of shell mound villages as primary residential locations, which began around A.D. 700 (Lightfoot and Luby 2002:277, 279). Settlement strategies were apparently reorganized and focused on a more dispersed pattern, with the establishment of both coastal and interior habitation areas, coinciding with the exploitation of seasonally available resources.

INITIAL LATE PERIOD/LOWER EMERGENT (A.D. 1050-1550)

The Late period ushers in a time of status differentiation and the rise of secret societies and cults and associated traits. Exchange networks, with the use of clamshell disk beads as a form of currency, expanded during this period. Exchange items included magnesite, steatite, *Olivella* beads, and obsidian. Compared with the Middle period, the use and occurrence of shell beads with burials blossomed (Milliken and Bennyhoff 1993). Abalone (*Haliotis* spp.) banjo pendants may represent the introduction and spread of the Kuksu cult, which began during the transition from the Middle to Late period in the Bay Area (Hylkema 2002:260). Such ornaments have been identified at CC0-308 (Fredrickson 1973), ALA-42 (Wiberg 1997), and SCL-690 (Hylkema 2006). The magnitude of non-dietary *Olivella* shells in coastal sites during the Late period, coupled with a concomitant increase of the shells in mortuary contexts throughout central California during this period, attests to the rise of both exchange networks and status differentiation, with coastal peoples supplying the shells to interior groups. Partial cremation appears or reappears during this time and also marks an increase in social stratification along with an increased diversity of grave goods in the wealthiest of graves (Milliken et al. 2007:217).

During the Late period along the peninsula coast, site assemblages indicate there is an increase in hunting of birds and marine mammals, especially sea otters. At the same time, there is a decrease in terrestrial fauna in the archaeological record (Hylkema 2002:254–255). Further inland at large residential sites, both dense shell middens and abundant assemblages of deer and elk bone are present, showing diversity in subsistence practices between different areas and possibly suggesting these areas were continuously reoccupied on a seasonal basis.

TERMINAL LATE PERIOD/PROTOHISTORIC AMBIGUITIES (A.D. 1550–1776)

The Terminal Late period is marked by the abrupt disappearance of the *Olivella* sequin and cup beads circa A.D. 1500 to 1550 (Milliken et al. 2007:117). During this period and before the Spanish arrived in full force, a cultural shift was occurring. The North Bay began to take a more dominant role in the production of new technology and trade items, including clamshell disk beads (the earliest of which was identified at CCO-309 dating to A.D. 1670; Fredrickson 1968), the toggle harpoon, hopper mortar (originating on the Santa Rosa Plain and Napa Valley), corner-notched projectile points, and magnesite tube beads. The precise reason for this cultural shift is unknown but could have been driven by conflict between groups or the spread of European diseases northward from Mexico prior to A.D. 1776 (Milliken et al. 2007:117–118).

Ethnographic Overview

The area surrounding the project was historically occupied by the Bay Miwok, a subgroup of the Eastern Miwok (Kroeber 1925; Levy 1978). The Bay Miwok occupied the south shore of Suisun Bay (an extension of San Francisco Bay into the California River Delta region) and the northern end of the Diablo (Coastal) Range, including Mt. Diablo itself (Levy 1978:99). The distinction between Coast and Bay Miwok differs between sources, with some including the areas of Bodega, Tomales, and San Pablo Bays, inland to Sonoma, as belonging to the Coast Miwok (Patterson 1994). Sources also differ regarding occupation of lands now within the city of Rio Vista. Kroeber (1925) and Milliken and Johnson (2010) depict Rio Vista as Plains Miwok territory. Levy (1978) shows Rio Vista as the northeastern extent of Bay Miwok territory with the area just east belonging to the Plains Miwok. Golla (2011) makes no distinction between Miwokian subgroups and portrays the area as Eastern Miwok only.

Spanish mission records, diaries, and journals have provided anecdotal notes and descriptions of the Miwok, which have been analyzed most recently by Milliken (1995). Some ethnographical studies conducted in the first half of the twentieth century on related Miwok groups provides a generalized cultural background, most notably the ethnographic records of Isabel Kelly, who recorded a series of interviews with Coast Miwok descendants in the early 1930s (Bennyhoff 1977; Levy 1978:399; Patterson 1994:349). Most of the history of the Coast/Bay Miwok, however, is incomplete as the area was heavily impacted by Europeans as early as the late 1500s, when the voyages of Sir Francis Drake and Sebastián Rodríguez Cermeño initiated the severe disruption of indigenous lifeways in the region (Patterson 1994).

The Miwok are part of the Penutian language family (Kroeber 1925). The word Miwok does not correspond to a distinctive tribal group name but rather is the native word for “people / person” (Kroeber 1925:443). Bay Area Miwok tribelets consisted of the *Julpun* and *Chupcan* on the south edge of Suisun Bay, and the *Saclan*, *Tatcan* and *Volvon* in the Diablo Mountain foothills (Milliken 1995:229).

Miwok were divided into “tribelets,” political units that were also structured by similarities in language and ethnicity. The tribelets averaged 300 to 500 persons, and each held claim to a designated portion of territory, which also extended to the natural resources within each territory and averaged about 8 to 10 square miles (Levy 1978:410). Each tribelet’s territory contained a main village and smaller satellite villages. Within a tribelet’s main village was an assembly or dance house, either a large semi-subterranean structure or a simpler circular brush structure (Kroeber 1925:447). Other structures included semi-subterranean or aboveground conical houses made with tule-matting, conical sweathouses, winter grinding houses, and acorn granaries (Levy 1978:408–409). The Miwok practiced cremation, similar to several neighboring tribal groups, though not exclusively (Kroeber 1925:452).

The rich resources of the Delta and San Francisco Bay region provided the Miwok with food and material needs. The primary food staple was the acorn, supplemented by waterfowl, fish, shellfish, and large and small mammals (Bennyhoff 1977; Levy 1978). The Miwok are best described as seasonally mobile hunter-gatherers with semi-permanent villages. The Delta islands were also used regularly for hunting and fishing base camps. Permanent Miwok settlements were located on ridges or knolls near watercourses or on the sandy islands and shoreline in the Delta (Levy 1978:399).

The Miwok collected plant greens and roots in the spring; seeds and nuts in the spring, summer, and early fall; and acorns in the late fall/early winter (Levy 1978:402–403). Acorns, particularly from the prevalent valley oak (*Quercus lobata*) could be stored for some time in the conical-shaped granaries prior to processing. Tule elk, pronghorn antelope, and mule deer, as well as smaller mammals such as jackrabbits, cottontails, beaver, squirrels, and woodrats, were regularly hunted. Game birds included many types of waterfowl, mountain and valley quail, pigeons, jays, and woodpeckers. In addition to salmon, the Miwok fished for sturgeon and lamprey (Levy 1978:402–403).

A wide array of tools, implements, and enclosures were used by the Miwok for hunting and gathering of natural resources. Among those used for hunting land mammals and birds were the bow and arrow, traps and snares, nets, and enclosures/blinds. Communal hunting drives were employed for both large and small mammals. Many plants were collected using wooden tools: long poles for dislodging acorns and pinecones, fire-hardened digging sticks for roots, and beaters for dislodging seeds. Once collected, seeds, roots, and nuts were placed in burden baskets and transported for processing or storage (Levy 1978:403–404).

The Miwok used a variety of tools to process food resources. These included portable stone mortars and pestles, bedrock mortars, anvils, woven strainers and winnowers, leaching and boiling baskets, woven drying trays, and knives. Bedrock milling slabs were used to ground acorns and other hard seeds with pestles without use of a basketry hopper (Kroeber 1925:448). Unprocessed acorns were stored in the conical granaries, which is an outdoor cache created with sticks and brush lined with grass, placed roughly 1 foot aboveground, and thatched over (Kroeber 1925:447). Various foods were baked in earth ovens. They used bolsa rafts to navigate the islands of the Delta and to cross Suisun Bay (Levy 1978:406).

Missions were first established in the region in the late 1700s, with the first baptisms of Miwok people occurring in 1794 and proselytizing lasting until 1827 (Levy 1978:401). Traditional lifeways continued to be drastically altered during the early to mid-1800s as Mexican land grants removed hunting parks and harvesting fields from the Native American communities. The California Gold Rush of 1849 and the continuing influx of Euro-Americans into formerly remote regions of California were the final cultural blow for many California Indians, including the Miwok bands near the project area. With the loss of most of their traditional lands, as well as enslavement, slaughter, and disease, surviving Miwok people often found work laboring for the growing ranching and farming industries (Levy 1978:401).

During the first half of the twentieth century, acquisitions of land by the federal government (from 2 acres to more than 300 acres) created several small reservations, or *rancherias*, for interior Miwok groups. By this time, however, it appears that the few remaining Miwok had dispersed from their traditional lands and were generally living among interior Native peoples, in the foothills of the Sierra Nevada.

Historic Overview

Post-contact history for the state of California is divided into three specific periods: the Spanish Period (1769–1822), the Mexican Period (1822–1848), and the American Period (1848–present).

SPANISH PERIOD (1769–1822)

The beginning of Spanish settlement in California, which marked the devastating disruption of the culture of indigenous Californians, occurred in the spring of 1769. Despite being sited within the territory claimed by Spain, exploration between 1529 and 1769 of Alta (upper) California was limited. During this nearly 250-year span, there were only brief visits by Spanish, Russian, and British explorers.

In 1769 Gaspar de Portolá established the first Spanish settlement in Alta California at San Diego, and with Father Junípero Serra, founded the first (Mission Basilica San Diego de Alcalá) of 21 missions that would be built by the Spanish and the Franciscan Order between 1769 and 1823. Portolá continued north, reaching San Francisco Bay on October 31, 1769. Later expeditions to Alta California by Pedro Fages (1772), who was seeking a site for a mission, and Juan Bautista De Anza (1776), who was seeking a site for a presidio and mission, explored the land east of San Francisco Bay and viewed the vast plains to the east (Grunsky 1989:2–3).

In 1808 Spanish Lieutenant Gabriel Moraga led the first expedition into the Sacramento Valley and traveled northward along the Sacramento River. The expedition was scouting for new mission locations and also searching for runaway Indian neophytes from the coastal missions. They traveled south as far as the Merced River and explored parts of the American, Calaveras, Cosumnes, Feather, Mokelumne, and Stanislaus Rivers to the north. In 1817 the final Spanish expedition into the interior of Alta California was led by Luis Arguello, who traveled up the Sacramento River, past the future site of the city of Sacramento to the mouth of the Feather River, before returning to the coast (Beck and Haase 1974:18, 20; Grunsky 1989:3–4).

MEXICAN PERIOD (1822–1848)

Mexico revolted against the Spanish crown in 1822. After the Revolution of 1822, all Spanish holdings in North America (including both Alta and Baja California) became part of the new Mexican republic. With the onset of the Mexican Period, an era of extensive land grants began, in contrast to the Spanish colonization through missions and presidios. Most of the land grants to Mexican citizens in California (Californios) were in the interior, granted to increase the population away from the more settled coastal areas where the Spanish had concentrated their settlements.

With the opening by Mexico of California to Americans after the 1822 revolution, the fur trappers, also known as “mountain men,” began exploring west of the Sierra Nevada. The first trapper to enter California was Jedediah Smith, whose small party trapped and explored along the Sierra Nevada in 1826. They entered the Sacramento Valley in 1827, traveling along the Cosumnes and American Rivers and camping near Wilton and the Rosemont section of modern-day Sacramento. As a result of the explorations by Smith and other trappers, maps of the Sacramento Valley were created and circulated in the 1830s (Grunsky 1989:9–11).

Between 1830 and 1833, large numbers of the indigenous population in the Sacramento Valley died from disease, likely introduced by the American trappers and/or the local Mexican population. Disease exterminated whole tribes along the American, Merced, Tuolumne, and Yuba Rivers (Cook 1955). In 1837 the Sacramento Valley was hit by a second epidemic, which further decimated indigenous Californians. The issuance of numerous land grants, accompanied by population increases, contributed to the continuing introduction of foreign diseases for which Native Americans had no immunity.

Several land grants were issued in the Sacramento area, starting in 1833 with John Rogers Cooper, a British sea captain who married into an established Californio family (Grunsky 1989:14). John Sutter received the two largest land grants in the Sacramento Valley. In 1839 Sutter founded a trading and agricultural empire called New Helvetia, which was headquartered at Sutter’s Fort near the divergence of the Sacramento and American Rivers, in Valley Nisenan territory.

AMERICAN PERIOD (1848–PRESENT)

Victory in the Mexican–American War (1846–1848) resulted in Mexico releasing its northern territories (now the states of California, Arizona, Colorado, New Mexico, and part of Utah) to the United States under the Treaty of Guadalupe Hidalgo in 1848. Even though California became a territory of the United States, the full impact of “Americanization” would not occur until the discovery of gold in 1848. The discovery of gold on the American River at Sutter’s Mill had a devastating impact on the lives of indigenous Californians in the Central Valley and all along the foothills of the Sierra Nevada (Chartkoff and Chartkoff 1984:296). The mass introduction and concentration of diseases, the loss of land and territory (including traditional hunting and gathering locales), violence, malnutrition, and starvation accompanied the tens of thousands of gold seekers (Grunsky 1989).

One year after the discovery of gold, nearly 90,000 people had journeyed to the gold fields of California, and a portion of Sutter's Mexican land grant became the bustling Gold Rush boomtown of Sacramento. Largely resulting from the Gold Rush, California became the thirty-first state in 1850. By 1853 the population of the state exceeded 300,000, and in 1854, Sacramento became the state capital.

As the surface gold (i.e., placer gold) disappeared along the rivers and other waterways, mining shifted toward more industrialized methods of extraction, including hydraulic and dredge mining. Hydraulic mining was outlawed in the 1880s, although dredge mining continued at a smaller scale than during the Gold Rush in the western Sierra foothills into the 1950s. Extensive dredge tailings along the American River bear witness to this environmentally destructive mining method.

With the completion of the transcontinental railroad in 1869, thousands of new settlers and immigrants poured into the state during the second half of the nineteenth century. California was fast becoming a national leader in the production of agricultural products. The vast Central Valley's fertile soil, combined with numerous irrigation canals, promoted the growth of large amounts of fruits, vegetables, and nuts, as well as vineyards (introduced early in the Spanish and Mexican Periods), livestock (cattle and sheep), and field crops, such as hay, cotton, rice, and barley (Beck and Haase 1974).

LOCAL HISTORY

The city of Rio Vista is located along the Sacramento River, in the Delta, and set along the eastern edge of an area of wheat farming country in the Montezuma Hills (City of Rio Vista 2010). Since the 1850s, the region has supported agricultural productivity, owing to the Delta's fertile soils. Until the California Gold Rush of the late 1840s, the Delta was a large network of waterways and natural islands of sand and peat. Levees were under construction by the early 1860s and opened agricultural lands around Rio Vista, which enabled the community to prosper. Fruit orchards became commonplace in the Delta by the late 1860s, especially along the Sacramento River corridor (Peters et al. 2004:233). By 1900 most marshlands were eliminated by levee construction and hydraulic gold mining operations (City of Rio Vista 2010).

The origins of the community of Rio Vista lay with General John Bidwell, who, in 1844, petitioned for a land grant on the Sacramento River from Governor Micheltorena. Bidwell was permitted the 17,726-acre Rancho Los Ulpinos land grant, which he sold off on December 3, 1855, on the steps of the Benicia Courthouse. One of the purchasers was Colonel N. H. Davis, who purchased six lots for \$440. Davis sought to subdivide part of the land into a town near the Patwin village of *Hale-che-muk* (Pezzaglia 2022), which meant "nothing to eat," a name which may have originated from the harsh winter of 1846 to 1847 (Robertson 2020).

The original town laid out by Davis in 1857, known as Brazos del Rio (Arms of the River), was located several miles to the north of the current town of Rio Vista, on the upper end of the Los Ulpinos land grant near the junction of Cache Slough and the Sacramento River. In 1858 a post office was approved with the caveat that the name of the settlement be changed. The name Visto del Rio was soon adopted but was short-lived (Pezzaglia 2022). In the same year, Davis constructed a wharf that was sold in 1859 to the California Steam Navigation Company, which doubled the size of the wharf to accommodate large steamers, including those that carried Pony Express Mail (Kyle 2022; The Historical Marker Database 2022). The wharf also provided the only landing between Benicia and Sacramento (City of Rio Vista 2010).

The Great Flood of 1862 swept away portions of the original town, prompting residents to look for a better location. Negotiations were entered with Joseph Bruning for a location on the upper edge on the Montezuma Hills at the northeast corner of his ranch. More property was purchased on part of an adjoining ranch owned by T.J. McWorthy. Rio Vista's current main street runs between the sites of these two old farms (Kyle 2002). Rio Vista's growth was steady into the 1890s, but around 75 buildings in the

downtown were destroyed by a fire in 1892. Rio Vista was incorporated in 1893, and reconstruction commenced, with many new buildings utilizing brick for increased fire resilience (Pezzaglia, 2005). The Counties of Solano and Sacramento shared the cost of constructing the first Rio Vista Bridge between 1918 and 1919; the bridge was mostly replaced by a new structure in 1946 (Pezzaglia, 2005).

By the mid-1930s, lands to the immediate west of Rio Vista were primarily used for grain production, and for sheep and cattle ranges during winters. Brannan Island, opposite the Sacramento River, was known for its vast acreage of asparagus, celery, tomato, bean, and fruit fields. The California Packing Corporation's canning plant, built in 1921, was located along the river and to the north of the downtown. The plant employed hundreds of residents and was reported to be the largest asparagus cannery in the world (*Sacramento Bee* 1922, 1936). Rio Vista's riverside location supported agriculture and shipping industries, and also encouraged the development of recreational tourism, particularly for sport fishing contemporaneously. Planning for a yacht harbor began in 1932 (*Sacramento Bee* 1932). Natural gas was discovered near Rio Vista in 1936. The industry expanded during World War II, and the Rio Vista Gas Field remains the largest natural gas area in California.

After World War II, several municipal and civic projects took place. In 1951 Rio Vista became the first municipality in California to provide fluoridated water; however, the City abandoned this practice around 1956 due to protests concerned with the safety of the process, despite a growing trend of fluoridation nationwide (*Record Searchlight* 1951). In the same year, the City established a small airstrip to provide a means for hunters to access the region's excellent waterfowl hunting. The original airstrip encompassed 108 acres and included a single runway for small aircraft. The subject site appears to have been located within the 108-acre airport site prior to its redevelopment as a corporation yard between 1964 and 1965. By 1968 an additional runway was built, and the original runway was enlarged to accommodate larger aircraft. By 1987 around 52 aircraft operated out of the airport, with nearly 45,000 annual operations conducted (Freeman 2022). In 1995 the original airport was vacated to allow its site to be redeveloped with commercial and different municipal uses. A new airport, Rio Vista Municipal Airport, was built roughly 2 miles to the northwest. The site of the original airport is occupied by the Rio Vista Police Department among several other uses and contains new roads that overlap remaining portions of the original airport's runways and aprons.

By the 1960s, agriculture was still a major component of the local economy, and recreation, especially sports fishing, drew tourism (Lantis et al. 1963:381). The city expanded since the 1970s with residential subdivisions located to the northeast of the downtown and northwest of the subject site. The Delta agricultural area has raised approximately 10 percent of the agricultural output of the Central Valley, becoming a leading source of tomatoes, pears, asparagus, and corn. Despite the region's abundance, mechanization has replaced much of the seasonal field labor required for planting and harvesting. As such, the populations of many Delta communities have been reduced, especially after the automobile permitted agricultural personnel to reside in larger cities that provide most services, such as Antioch, Stockton, and Sacramento. Rio Vista is currently the largest Delta municipality, and it is the principal community of the lower Delta.

METHODS

Previous Cultural Resources Studies

On January 17, 2023, SWCA conducted an in-house records search at the California Historical Resources Information System (CHRIS) Northwest Information Center (NWIC) at Sonoma State University in Rohnert Park, California, to identify known resources and previous cultural resource studies within 0.25 mile of the APE. The CHRIS search identified 31 cultural resource studies that had been conducted

within 0.25 mile of the APE. Of those, 14 reports included archaeological field studies (S-005055, S-011115, S-015793, S-016745, S-027048, S-027856, S-027857, S-029351, S-030907, S-038066, S-038284, S-038635, S-038637, and S-047932); however, none of these reports was written within the last 10 years. The results of the CHRIS records search for previous studies conducted within a 0.25-mile radius of the APE are listed in Table 2.

Previously Recorded Cultural Resources

The CHRIS records search identified 10 previously recorded cultural resources within a 0.25-mile radius of the APE. No previously recorded cultural resources intersect with the APE; however, 10 historic-era resources are located within the 0.25-mile radius. The results of the CHRIS records search for previously recorded archaeological sites identified within a 0.25-mile radius of the APE are listed in Table 3.

Historic Research

Research methodology focused on review of a variety of primary and secondary source materials relating to the history and development of the project APE. Sources included, but were not limited to, historic maps, aerial photographs, and written histories of the area.

According to the U.S. Bureau of Land Management (BLM) General Land Office (GLO) 1866 land patent, the APE and vicinity is located within the *Los Ulpinos* Mexican land grant claim (BLM 1866). The grant encompassed some 17,726 acres of land located on the west bank of the Sacramento River at its junction with Cache Slough. It also included parts of the Montezuma hills and the present-day community of Rio Vista (Online Archive of California 2007).

The earliest topographic map of the region, dating to 1910 (Figure 4) (NETR Online 2023a [1910]), depicts little development outside the heart of Rio Vista. Airport Road, which straddles the northernmost portion of the APE, was in place at that time, and it intersected North Front Street/River Road/California Highway 84 along the western edge of the Sacramento River. The northernmost road characterizing Rio Vista proper aligned closely with the current configuration of Logan Street. Bruning Avenue, oriented west–northwest/east–southeast, intersected with North Front Street to demarcate the southern edge of Rio Vista. South Second Street branched from Bruning Avenue and trended southwest to the intersection of Montezuma Hills Road and Beach Drive. Unlike its current alignment, Beach Drive was depicted as a two-track dirt road that trended southeast before terminating near the Sacramento River. The contemporary orientation of Beach Drive, located at the southeastern foot of the Montezuma Hills, as well as all the modern development located east, appears to have been marshland.

Figure 4. 1910 topographic map of Rio Vista, CA.

No new development is depicted in the APE on the 1936 topographic map (NETR Online 2023b [1936]). The 1955 topographic map (Figure 5) (NETR Online 2023c [1955]) depicts the current alignment of South Second Street, Bruning Avenue, North Front Street, and Airport Road. The CPN Pipeline property and its associated road that emanates from River Road also appear in place. The current California Highway 12/84 interchange is not yet in place. Finally, while Beach Drive approximates its current alignment, it is still depicted as a two-track dirt road. The earliest aerial photograph of the APE, dating to 1964 (NETR Online 2023d [1964]), reflects all the contemporary roadways associated with the project, including the California Highway 12/84 interchange absent from the 1955 topographic map.

Sacred Lands File Search and Initial Native American Coordination

A search of the California Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was requested on December 28, 2022, with the intent of identifying culturally sensitive areas and obtaining a list of Native American contacts who may have specific knowledge of the vicinity. The NAHC response was received on January 31, 2023, with a negative result and providing a list of 14 Native American tribes and individuals who may have knowledge of cultural resources in the APE. SWCA sent outreach letters via email and post to all Native American contacts on January 31, 2023. Examples of tribal outreach letters and details regarding tribal correspondence is presented in Appendix A. Follow-up telephone calls were made on February 15, 2023. On a call placed for Chairperson Lloyd Mathiesen of the Chicken Ranch Rancheria of Me-Wuk Indians, the receptionist suggested emails be directed instead to Environmental Scientist Joanna Portillo-Hsu and Cultural Coordinator Cynthia Reyes; outreach emails were sent to both the same day. Ms. Portillo-Hsu responded stating that the Tribe would contact SWCA if they had any comments. The remainder of the telephone calls went unanswered, and voice messages were left for all but one contact, whose number was disconnected. Consultation under Assembly Bill (AB) 52 remains the responsibility of the CEQA lead agency, and formal consultation under NHPA Section 106 will be performed by the federal lead agency.

Archaeological Resource Fieldwork

Archaeological Survey

Two transects spaced 15 feet apart were conducted on either side of the project APE. One began at the Beach WWTP and ended at the Northwest WWTP. The other began at the Northwest WWTP and ended the Beach Drive WWTP. Periodic boot scrapes were employed to expose soils when vegetation obscured the ground surface. The entirety of the APE was subject to intensive pedestrian survey.

RESULTS

Archaeological Survey Results

SWCA archaeologist Brandon Foster visited the APE on January 19, 2023. The APE includes portions of Beach Drive, South 2nd Street, Bruning Avenue, South and North Front Streets, St. Francis Way, and Airport Road; all are paved, two-lane roads. Only the portion of the APE on CPN Pipeline property (approximately 1,400 feet) was not paved, representing approximately 7.5 percent of the total APE. Due to recent heavy rains, the CPN Pipeline property was characterized by tall, grassy hummocks of muddy soils. As a result, ground visibility varied between zero and 5 percent. Due to this segment's proximity to the West Wind Mobile Home Park located just southwest, modern refuse was found throughout this corridor.

SUMMARY AND CONCLUSIONS

This cultural resources inventory included an SLF search through the NAHC, a records search of the CHRIS, a buried site sensitivity analysis, a review of historic aerials and relevant literature, and an intensive pedestrian survey. The pedestrian survey of the APE conducted on January 19, 2023, produced negative results.

SWCA sent an email with a map depicting the APE to the NAHC on December 28, 2022, requesting a review of the SLF. The NAHC response was received on January 31, 2023, indicating results of the SLF search were negative and providing a list of Native American tribes and individuals who may also have knowledge of cultural resources in the APE. SWCA sent outreach letters via email and post to all provided Native American contacts on January 31, 2023. Follow-up telephone calls were made on February 15, 2023. On a call placed for Chairperson Lloyd Mathiesen of the Chicken Ranch Rancheria of Me-Wuk Indians, the receptionist suggested emails be directed instead to Environmental Scientist Joanna Portillo-Hsu and Cultural Coordinator Cynthia Reyes; outreach emails were sent to both the same day. Ms. Portillo-Hsu responded stating that the Tribe would contact SWCA if they had any comments. The remainder of the telephone calls went unanswered, and voice messages were left for all but one contact, whose number was disconnected. Consultation under AB 52 remains the responsibility of the CEQA lead agency, and formal consultation under NHPA Section 106 will be performed by the federal lead agency.

The results of the CHRIS records search indicated that no known cultural resources are located within the APE. A review of historic maps and aerial photographs failed to indicate the presence of historic structures or features within the APE, and there is a low potential to encounter intact buried archaeological deposits within the APE.

With implementation of conditions to comply with regulatory compliance measures related to the inadvertent discovery of archaeological resources and human remains, SWCA finds that the proposed project will have a less-than-significant impact to archaeological resources. For the purposes of compliance for NHPA Section 106, SWCA recommends that there are *no historic properties affected*. Although no cultural resources were noted on the ground surface during this pedestrian survey, the possibility of encountering cultural resources during excavation remains. If cultural materials are uncovered during project work, the Inadvertent Discovery procedures noted below should be followed.

Inadvertent Discoveries

In the event that unanticipated cultural resources are exposed during disturbance activities, work within 15 meters (50 feet) of the find must stop and a Secretary of the Interior-qualified archaeologist (SWCA Principal Investigator Joshua Peabody [503-966-3766]) must be notified immediately. Work may not resume until a qualified archaeologist can evaluate the significance of the find. Disturbance activities may continue in other areas. If the discovery proves significant, additional work such as archaeological testing, data recovery, or consultation with stakeholders may be warranted.

Discovery of Human Remains

The discovery of human remains is always a possibility during ground disturbances. State of California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Solano County coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. The county coroner must be notified of the find immediately. If the human remains are determined to be prehistoric, the processes established by the Native American Graves Protection and Repatriation Act (25 United States Code [USC] 3001 et seq.) shall be followed to ensure appropriate treatment of remains

and proper communication protocols. This should include contacting a qualified archaeologist, notifying Native American tribes likely culturally affiliated with the remains, and conducting government-to-government consultation between the lead agency responsible for the project and relevant Native American representatives.

Re: Rio Vista Sewer Improvement Project, Solano County

Dear Mr. Foster:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Pricilla.Torres-Fuentes@nahc.ca.gov.

Sincerely,

Pricilla Torres-Fuentes

Re: Cultural Resources Support for Rio Vista Sewer Line Improvements, Rio Vista, Solano County, California / SWCA Project No. 74889

Dear Chairperson Anthony Roberts,

SWCA Environmental Consultants (SWCA) was retained by Kimley-Horn and Associates, Inc. (Kimley-Horn) to prepare a combined CEQA/Section 106 technical report for the City of Rio Vista's Wastewater Plant Consolidation Project (WPCP) in the City of Rio Vista (project). The City is proposing to abandon the Beach Wastewater Treatment Plant (Beach WWTP) and the transfer of all sewage that would be treated at the Beach WWTP to the Northwest Wastewater Treatment Plant (Northwest WWTP). The result of this project would have the Northwest WWTP treating all the wastewater generated in the City of Rio Vista.

A study was prepared by HydroScience to evaluate a series of alternatives arrangements of sewer lines and lift stations to facilitate the transfer of sewage from the Beach WWTP shed to the Northwest WWTP sewer shed. After evaluation, a preferred alternative was chosen that would be the most efficient and minimize potential for impacts to occur. The project alignment would result in the construction of new sewer force mains between the Beach WWTP at 1000 Beach Drive and the terminal manhole located near the intersection of Airport Road and Church Road, approximately 3.5 miles.

Improvements would generally result in the upgrade of two lift stations to redirect sewage into a new force main, the construction of new force mains that would pump north and west towards the Northwest WWTP, and various collection system improvements to facilitate the redirection of sewage from the Beach WWTP to the Northwest WWTP. Additional improvements to the treatment process at the Northwest WWTP to upgrade the existing process and upgrade the process to treat additional sewage from the Beach WWTP would also be required.

The proposed improvements would occur within existing roadways, one proposed utility easement through private property used by the CPN Pipeline Company, and an approximately 1,200-foot segment within a portion of an undeveloped previously disturbed parcel.

Re: Cultural Resources Support for Rio Vista Sewer Line Improvements, Rio Vista, Solano County, California / SWCA Project No. 74889

Dear Chairperson Corrina Gould,

SWCA Environmental Consultants (SWCA) was retained by Kimley-Horn and Associates, Inc. (Kimley-Horn) to prepare a combined CEQA/Section 106 technical report for the City of Rio Vista's Wastewater Plant Consolidation Project (WPCP) in the City of Rio Vista (project). The City is proposing to abandon the Beach Wastewater Treatment Plant (Beach WWTP) and the transfer of all sewage that would be treated at the Beach WWTP to the Northwest Wastewater Treatment Plant (Northwest WWTP). The result of this project would have the Northwest WWTP treating all the wastewater generated in the City of Rio Vista.

A study was prepared by HydroScience to evaluate a series of alternatives arrangements of sewer lines and lift stations to facilitate the transfer of sewage from the Beach WWTP shed to the Northwest WWTP sewer shed. After evaluation, a preferred alternative was chosen that would be the most efficient and minimize potential for impacts to occur. The project alignment would result in the construction of new sewer force mains between the Beach WWTP at 1000 Beach Drive and the terminal manhole located near the intersection of Airport Road and Church Road, approximately 3.5 miles.

Improvements would generally result in the upgrade of two lift stations to redirect sewage into a new force main, the construction of new force mains that would pump north and west towards the Northwest WWTP, and various collection system improvements to facilitate the redirection of sewage from the Beach WWTP to the Northwest WWTP. Additional improvements to the treatment process at the Northwest WWTP to upgrade the existing process and upgrade the process to treat additional sewage from the Beach WWTP would also be required.

The proposed improvements would occur within existing roadways, one proposed utility easement through private property used by the CPN Pipeline Company, and an approximately 1,200-foot segment within a portion of an undeveloped previously disturbed parcel.

SWCA conducted an in-house records search at the California Historical Resources Information System (CHRIS) Northwest Information Center (NWIC) on January 17, 2023. Re: Cultural Resources Support for Rio Vista Sewer Line Improvements, Rio Vista, Solano County, California / SWCA Project No. 74889

Dear Director of Cultural Resources Laverne Bill,

SWCA Environmental Consultants (SWCA) was retained by Kimley-Horn and Associates, Inc. (Kimley-Horn) to prepare a combined CEQA/Section 106 technical report for the City of Rio Vista's Wastewater Plant Consolidation Project (WPCP) in the City of Rio Vista (project). The City is proposing to abandon the Beach Wastewater Treatment Plant (Beach WWTP) and the transfer of all sewage that would be treated at the Beach WWTP to the Northwest Wastewater Treatment Plant (Northwest WWTP). The result of this project would have the Northwest WWTP treating all the wastewater generated in the City of Rio Vista.

A study was prepared by HydroScience to evaluate a series of alternatives arrangements of sewer lines and lift stations to facilitate the transfer of sewage from the Beach WWTP shed to the Northwest WWTP sewer shed. After evaluation, a preferred alternative was chosen that would be the most efficient and minimize potential for impacts to occur. The project alignment would result in the construction of new sewer force mains between the Beach WWTP at 1000 Beach Drive and the terminal manhole located near the intersection of Airport Road and Church Road, approximately 3.5 miles.

Improvements would generally result in the upgrade of two lift stations to redirect sewage into a new force main, the construction of new force mains that would pump north and west towards the Northwest WWTP, and various collection system improvements to facilitate the redirection of sewage from the Beach WWTP to the Northwest WWTP. Additional improvements to the treatment process at the Northwest WWTP to upgrade the existing process and upgrade the process to treat additional sewage from the Beach WWTP would also be required.

The proposed improvements would occur within existing roadways, one proposed utility easement through private property used by the CPN Pipeline Company, and an approximately 1,200-foot segment within a portion of an undeveloped previously disturbed parcel.

Sound Science. Creative Solutions.®

SWCA conducted an in-house records search at the California Historical Resources Information System (CHRIS) Northwest Information Center (NWIC) on January 17, 2023. No previously recorded archaeological sites were identified within the APE. A search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed on January 31, 2023, with **negative** results.

SWCA is requesting any additional information you may have regarding properties, features, or cultural materials within the Project APE (see attached) that may be of concern to local Native Americans.

Any comments you may have regarding cultural resources in this area would be greatly appreciated. Please feel free to contact me with any concerns, or if you have additional questions about the project. You may reach me by phone at (925) 399-9220 or email me at christina.alonso@swca.com.

Thank you for your time and assistance in this matter, I look forward to hearing from you.

Sincerely,

Christina Alonso
Senior Project Manager

1. EXECUTIVE SUMMARY

Kimley-Horn and Associates, Inc. (Kimley-Horn) was retained by the City of Rio Vista (the “Client”) to conduct a Phase I Environmental Site Assessment (ESA) for approximately seven-miles of new wastewater and recycled water line improvements in the City of Rio Vista, Solano County, California (referred to herein as the “Subject Property”). This Phase I ESA was performed in general accordance with (1) the United States Environmental Protection Agency (USEPA) Standards and Practices for All Appropriate Inquiries (AAI), 40 CFR Part 312 and (2) guidelines established by the American Society for Testing and Materials (ASTM) in the *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process/Designation E 1527-21* (ASTM Standard Practice E 1527-21). The ESA was conducted under the supervision or responsible charge of Jennifer Steen, Environmental Professional.

The Phase I ESA summary is provided below. Specific details were not included or fully developed in this section, and the Phase I ESA must be reviewed in its entirety for a comprehensive understanding of the results. This report represents our services as of the report date and constitutes our final document; its text may not be altered after final issuance. Findings in this report are based upon the Subject Property’s current utilization, information derived from the most recent reconnaissance and from other activities described herein; such information is subject to change. Certain indicators of the presence of hazardous substances or petroleum products may have been latent, inaccessible, unobservable, or not present during the most recent reconnaissance and may subsequently become observable (such as after property renovation or development). Further, these services are not to be construed as legal interpretation or advice.

Viability of this report is subject to ASTM E1527-21 Sections 4.6 and 4.8. This Phase I ESA is presumed viable for up to 180 days from the first date the component listed in Section 4.6 of the ASTM Standard Practice E1527-21 were conducted, which is December 5, 2022 (**Table 1.1**).

Table 1.1 Summary Phase I ESA Component Dates

Phase I ESA Component	Date
Interviews	N/A
Review of Government Records	December 7, 2022
Visual Inspection	December 5, 2022
Declaration by Environmental Professional	April 6, 2023

Standard and other historical sources of information suggest that the Subject Property was used for road pavement along residential, industrial/commercial, agricultural land (row crops), and undeveloped land on or before 1937. This appears to be the first developed use of the Subject Property. It appears agricultural activities ceased around the time residential neighborhoods rapidly developed in the area during the early 2000s. The pipeline corridor was developed as roadways that connect from Liberty Island Road to what is now Beach Drive in the 1930s and continuously to present day.

Table 1.2: Property Use Summary

Item	Comments
Number of Parcels and Acreage	The line spans approximately seven-miles from the western terminus of Liberty Island Road to the eastern terminus of Beach Drive (Beach Wastewater Treatment Plant). There is an approximately 1700 linear foot segment of wastewater line that will be installed within an easement on private property between S. Front Street and St. Francis Way.
Number of Building(s) and Square Footage	The wastewater and recycled waterlines do not feature buildings; the proposed alignment is within public right-of-way.
Current Property Use	Water treatment line

Kimley-Horn has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-21 of the Subject Property located in the City of Rio Vista, Solano County, California. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

Recognized Environmental Conditions

A recognized environmental condition (REC) is defined in the ASTM Standard *as the presence or likely presence of a hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.* Kimley-Horn identified the following REC in association with the Subject Property:

- The **Gordon Hanson Co.** located at 135 N. Front Street is the subject of an open site assessment case with the State Water Resource Control Board (SWRCB). According to the readily available documents, significant petroleum hydrocarbon contaminated soil was found to be present during removal of USTS in 2002, and the documentation suggests contamination resulting from the LUSTs have impacted soils within Front Street, which is a portion of the Subject Property. Therefore, the Gordon Hanson Co. is a REC associated with the subject property.

Historical Recognized Environmental Conditions

A historical REC (HREC), as defined in the ASTM Standard, *is a past release of any hazardous substance and/or petroleum product that has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria.* No known past releases were associated with the Subject Property and no HRECs were identified by Kimley-Horn during this investigation.

Controlled Recognized Environmental Conditions

A controlled REC (CREC), as defined in the ASTM Standard, *is a REC resulting from a past release of hazardous substances and/or petroleum products in which the regulatory agency has allowed contamination to remain in place at the property which is subject to the implementation of required controls and/or restrictive use.* Kimley-Horn has not identified any evidence of CRECs in association with the Subject Property.

Business Environmental Risks

A Business Environmental Risk (BER), as defined in the ASTM Standard, *is a risk which can have a material environmental or environmentally-driven impact on the business associated with the use of a commercial site, and which does not require further investigation to the same degree as a REC.* Kimley-Horn identified one area potential concern associated with business environmental risks in connection with the Subject Property during the completion of this Phase I ESA:

- The routine and legal application of pesticides, herbicides, and fertilizers is anticipated to occur at the gold course; this is a BER associated with the subject property.

2. INTRODUCTION

2.1 SUBJECT PROPERTY OVERVIEW

The Subject Property consists of a pipeline corridor situated within an existing right-of-way. The following table provides a concise overview of the Subject Property (**Table 2.1**).

Table 2.1 Subject Property Overview	
Site Name	Rio Vista Recycled Water and Wastewater Treatment Line
Site Location/Address	The Subject Property is within the City of Rio Vista and CPN Pipeline Company R/W. The proposed improvements will not require the acquisition of property.
Land Area	<p>For the purpose of this report, Kimley-Horn has divided the Subject Property into three zones:</p> <p>Zone 1: Residential Neighborhoods between Liberty Island Road, Airport Road, and Church Road</p> <p>Zone 2: 3000 Airport Road to Intersection of N Front Street and Rio Vista Bridge</p> <p>Zone 3: South of Rio Vista Bridge to Beach Drive (38.143345, -121.695912)</p> <p>Note: The Subject Property is limited to only the proposed wastewater line alignment within the noted right-of-way. There is an approximately 1700 linear foot segment of wastewater line that will be installed within an easement on private property between S. Front Street and St. Francis Way.</p>
Existing Use/Condition	The Subject Property is predominantly comprised of public streets. A portion of the Subject Property is situated in landscaped open space within a residential subdivision.

The Subject Property location is depicted on Figure 1 and the corresponding topography is depicted on Figure 2 and 3. The Subject Property adjoining properties may be seen on the Aerial Photograph, **Figure 4**. Figures are included in **Appendix A**. Photographs of the Subject Property are included in **Appendix B**.

2.2 PURPOSE AND SCOPE OF SERVICES

This Phase I ESA was performed in general accordance with (1) the United States Environmental Protection Agency (USEPA) Standards and Practices for All Appropriate Inquiries {(AAI), 40 CFR Part 312} and (2) guidelines established by the American Society for Testing and Materials (ASTM) in the *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process/Designation E 1527-21* (ASTM Standard Practice E 1527-21).

The purpose of this Phase I ESA was to evaluate the current and historical conditions of the Subject Property in an effort to identify *recognized environmental conditions* (RECs), *controlled recognized environmental conditions* (CRECs) and *historical recognized environmental conditions* (HRECs) in

connection with the Subject Property. This Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs, CRECs and HRECs in connection with the Subject Property.

Additionally, this Phase I ESA was designed to assist the client in developing information to identify RECs in connection with the Subject Property as reflected by the scope of this report. This purpose was undertaken through user-provided information, a regulatory database review, historical and physical records review, interviews, including local government inquiries, as applicable, and a visual, noninvasive reconnaissance of the Subject Property and adjoining properties. Limitations, ASTM deviations, and significant data gaps (if identified) are noted in the applicable sections of the report.

ASTM E1527-21 defines "migrate/migration," as "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." By including this explicit reference to migration in ASTM E1527-21, the Standard clarifies that the potential for vapor migration should be addressed as part of a Phase I ESA. This Phase I ESA has considered vapor migration in evaluation of RECs associated with the Subject Property.

2.3 USER RELIANCE

This Phase I ESA report represents the product of Kimley-Horn's expertise and judgment in the environmental consulting industry. This report is certified to, can be relied upon by, and has been prepared for the exclusive use of the following entities: Kimley-Horn and Associates, Inc. (Kimley-Horn); and the City of Rio Vista, and their respective successors, assigns, affiliates, and subsidiaries. Kimley-Horn acknowledges that these parties may rely on the contents and conclusions presented in this report. Unless stated otherwise in writing, Kimley-Horn makes no other warranty, representation, or extension of reliance upon the findings of this report to any other entity or third party.

Reliance on the Phase I ESA by the client and all authorized parties will be subject to the terms, conditions and limitations stated in the proposal with Kimley-Horn and Associates, Inc. Standard Provisions and the Phase I ESA report. The limitation of liability defined in the Standard Provisions is the aggregate limit of Kimley-Horn's liability to the client and all relying parties.

Continued viability of this report is subject to ASTM E1527-21 Sections 4.6 and 4.8. If the Phase I ESA will be used by a different user (third party) than the user for whom the Phase I ESA was originally prepared, the third party must also satisfy the user's responsibilities in Section 6 of ASTM E1527-21.

2.4 SIGNIFICANT ASSUMPTIONS

Pursuant to ASTM Standard Practice E 1527-21, Kimley-Horn assumes that the information provided by all sources and parties, including the User, is accurate and complete, except where obvious inconsistencies or inaccuracies were identified.

2.5 LIMITATIONS, DEVIATIONS, AND SPECIAL TERMS AND CONDITIONS

There were no deviations from the ASTM Standard during the preparation of this report. Any physical limitations identified during the completion of this report are referenced in Section 4.0.

This Phase I ESA is presumed viable for up to 180 days from the first date the component listed in Section 4.6 of the ASTM Standard Practice E1527-21 were conducted, which is December 5, 2022.

Based upon the agreed-on scope of services, this Phase I ESA did not include subsurface or other invasive assessments, vapor intrusion assessments or indoor air quality assessments (i.e., evaluation of the presence of vapors within a building structure), or other services not particularly identified and discussed herein. Credentials of the company (Statement of Qualifications) have not been included in this report but are available upon request. Reasonable attempts were made to obtain information within the scope and time constraints set forth by the client; however, in some instances, information requested is not, or was not, received by the issuance date of the report. Information obtained for this ESA was received from several sources that we believe to be reliable; nonetheless, the authenticity or reliability of these sources cannot and is not warranted hereunder. This ESA was further limited by the following:

- Title records were not provided during this investigation.
- No interview(s) with the owner or owner representative(s) of the Subject Property.

Based on other available resources, these data gaps are not likely to affect the conclusions of this report and are not significant.

An evaluation of the significance of limitations and missing information with respect to our findings has been conducted, and where appropriate, significant data gaps are identified and discussed in the text of the report. However, it should be recognized that an evaluation of significant data gaps is based on the information available at the time of report issuance, and an evaluation of information received after the report issuance date may result in an alteration of our conclusions, recommendations, or opinions. We have no obligation to provide information obtained or discovered by us after the issuance date of the report, or to perform any additional services, regardless of whether the information would affect any conclusions, recommendations, or opinions in the report. This disclaimer specifically applies to any information that has not been provided by the client.

3. USER PROVIDED INFORMATION

The ASTM Standard defines a User as “the party seeking to use Practice E 1527-21 to complete an environmental site assessment of the Subject Property. A User may include, without limitation, a potential purchaser of Subject Property, a potential tenant of Subject Property, an owner of the Subject Property, a lender, or a property manager.” For the purpose of this Phase I ESA, the User is considered the City of Rio Vista, California. The User has specific obligations for completing a successful application of this practice as outlined in Section 6 of the ASTM Standard Practice E 1527-21.

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfield’s Revitalization Act of 2001 (the “Brownfield’s Amendments”), the User must provide certain information (if available) identified in the User Questionnaire to the Environmental Professional (EP). Failure to provide this information could result in a determination that “all appropriate inquiry” is not complete. The majority of the proposed improvements are located within public right of way that the City owns. A small portion of the proposed improvements will occur in an a single easement across undeveloped land. There is no pending real estate transaction that would require “all appropriate inquiry.” Therefore, a us

3.2 RECORDED LAND TITLE RECORDS

A 50-year chain of title search was not conducted for the Subject Property by Kimley-Horn. Furthermore, the User did not provide Kimley-Horn with a 50-year chain of title. Unless notified otherwise, we assume that the User is evaluating this information outside the scope of this report. As such, this is considered a limiting condition; however, based on the other data reviewed for the Subject Property, it is not considered a significant data gap.

3.3 ENVIRONMENTAL LIENS, ACTIVITY AND USE LIMITATIONS, AND GOVERNMENT INSTITUTIONAL AND ENGINEERING CONTROLS

An Environmental Lien/Activity and Use Limitations Search was not provided for the Subject Property for review. Unless notified otherwise, we assume that the User is evaluating this information outside the scope of this report. As such, this is considered a limiting condition; however, based on the other data reviewed for the Subject Property, it is not considered a significant data gap.

4. SITE RECONNAISSANCE

Information contained in this section is based on a visual reconnaissance conducted while walking through the Subject Property (**Table 4**). There are no buildings located on or within the Subject Property. The Subject Property and adjoining properties are depicted on the Aerial Photograph Map, which is included in Figure 4 of **Appendix A**. Photo documentation of the Subject Property at the time of the visual reconnaissance is provided in **Appendix B**.

Table 4 Summary of General Site Information

Site Reconnaissance	
Field Personnel	Jennifer Steen and Cassie Bretschger
Date	December 7, 2022
Weather Conditions	60 °F
Subject Property Contact/Title	Greg Malcolm, City of Rio Vista, arranged for and was contacted upon arrival to the Wastewater Treatment Plant. The City did not provide escorts for any portion of the site reconnaissance.

4.1 SITE OBSERVATIONS

The following table summarizes the Subject Property observations (**Table 4.1**). Affirmative responses are discussed in more detail following the table.

Table 4.1 Summary of Site Observations

Category	Item or Feature	Observed or Identified
Site Operations, Processes, and Equipment	Emergency generators	No
	Elevators	No
	Air compressors	No
	Hydraulic lifts	No
	Dry cleaning	No
	Photo processing	No
	Ventilation hoods and/or incinerators	No
	Waste treatment systems and/or water treatment systems	No
	Heating and/or cooling systems	No
	Paint booths	No
	Sub-grade mechanic pits	No

Table 4.1 Summary of Site Observations

Category	Item or Feature	Observed or Identified
	Wash-down areas or carwashes	No
	Pesticide/herbicide production or storage	No
	Printing operations	No
	Metal finishing (e.g., electroplating, chrome plating, galvanizing, etc.)	No
	Salvage operations	No
	Oil, gas or mineral production	No
	Other processes or equipment	No
Aboveground Chemical or Waste Storage	Aboveground storage tanks	No
	Drums, barrels and/or containers ≥ 5 gal	No
	MSDS or SDS	No
Underground Chemical or Waste Storage, Drainage or Collection Systems	USTs or ancillary UST equipment	No
	Sumps, cisterns, French drains, catch basins and/or dry wells	No
	Grease traps	No
	Septic tanks and/or leach fields	No
	Oil/water separators, clarifiers, sand traps, triple traps, interceptors	No
	Pipeline markers	No
	Interior floor drains	No
Electrical Transformers/PCBs	Transformers and/or capacitors	No
	Other equipment	No
Releases or Potential Releases	Stressed vegetation	No
	Stained soil	No
	Stained pavement or similar surface	No
	Leachate and/or waste seeps	No
	Trash, debris and/or other waste materials	No

Table 4.1 Summary of Site Observations

Category	Item or Feature	Observed or Identified
	Dumping or disposal areas	No
	Construction/demolition debris and/or dumped fill dirt	No
	Surface water discoloration, odor, sheen, and/or free-floating product	No
	Strong, pungent or noxious odors	No
	Exterior pipe discharges and/or other effluent discharges	No
Other Notable Site Features	Surface water bodies	No
	Quarries or pits	No
	Wastewater lagoons	No
	Wells	No

For the purpose of this report, Kimley-Horn has divided the Subject Property into three zones:

Zone 1: Right of way corridors within the gated residential neighborhood between Liberty Island Road, Airport Road, and Church Road

Zone 2: Right of way corridors within 3000 Airport Road to Intersection of N Front Street and Rio Vista Bridge

Zone 3: Right of way corridors within Front Street South of Rio Vista Bridge to Beach Drive (38.143345, -121.695912)

Note: The Subject Property is limited to only the proposed wastewater line alignment within the noted right-of-way. There is an approximately 1700 linear foot segment of wastewater line that will be installed within an easement on private property between S. Front Street and St. Francis Way.

Photographs taken within the right-of-way corridor are included in Appendix B. The site reconnaissance was limited to the R/W areas which will potentially be affected by the proposed improvements. Kimley-Horn did not access the buildings and structures immediately adjacent to and outside of the R/W areas.

- Zone 1: Residential Neighborhoods between Liberty Island Road, Airport Road, and Church Road*

The residential neighborhood is a gated community. Kimley-Horn did not have access to the neighborhood during the site reconnaissance. This constitutes a data failure, which is a type of data gap; however, the data gap is not considered significant because other information and/or personal experience did not raise reasonable concerns involving the data gap.

Kimley-Horn drove along Airport Road, Liberty Island Road, and Park Place. With the exception of approximately 1450 linear feet of screening wall and residences, the properties immediately surrounding the roadways are undeveloped, vacant land.

No RECs were identified via the site reconnaissance in Zone 1.

- *Zone 2: 3000 Airport Road to Intersection of N Front Street and Rio Vista Bridge*

Kimley-Horn drove through the City of Rio Vista Wastewater Treatment Plant. There are five enclosed buildings, four structures used to process waste and two settling ponds were noted at the treatment plant.

Pad mounted transformers, electrical equipment, and backup generators were observed. An above ground storage tank (AST) containing diesel fuel was observed next to the generator. No staining was observed in conjunction with either of these devices.

The City of Rio Vista Public Works and Water Department operate facilities located at 690-700 St. Francis Way. At the time of the site reconnaissance, Kimley-Horn staff observed a series of soil vapor probes installed in turf areas between the public works building and sidewalk. According to Ms. Robin Borre, Director of Public Works, a private developer encouraged the City to complete soil vapor testing to evaluate for impacts stemming from abandoned oil wells in the vicinity. Ms. Borre stated that no contamination was identified, and a report documenting the findings of the soil vapor sampling was not prepared. Ms. Borre indicated no other testing was proposed. The sampling effort is reportedly not associated with hazardous materials present at the Subject Property for this ESA, nor was a release or likely release of hazardous materials identified, therefore, the sampling observed is not a REC associated with the Subject Property.

Kimley-Horn drove along Airport Road, St. Francis Way, and Virginia Drive. Agricultural, Industrial, and residential uses were noted along this portion of the corridor.

There is an approximately 1700 linear foot segment of wastewater line that will be installed within an easement on private property between S. Front Street and St. Francis Way. Kimley-Horn did not enter the easement area, however, portions of the area were visible from adjacent roads. The proposed easement area is undeveloped, with dense native grasses present. No evidence of dumping was observed, nor were ponds, pits, or signs of stressed vegetation seen.

No RECs were identified via the site reconnaissance in Zone 2.

- *Zone 3: South of Rio Vista Bridge to Beach Drive*

Kimley-Horn drove along N. Front Street, Bruning Avenue, S 2nd Street, and Beach Drive to the Beach Wastewater Treatment Plant.

Industrial uses including Abel Chevrolet, Kubota Tractor Dealer were noted on N. Front Street. Commercial uses including restaurants, retail stores, and a museum were also observed. Bruning Avenue and S. Front Street are residential streets. The Delta Bay Yacht Harbor and businesses that provide boat repair and service were noted along Beach Drive. None of these uses encroach upon the proposed wastewater line.

A portion of the wastewater line would traverse a property, by right of easement, owned by CPN Pipeline. The CPN property is undeveloped.

No RECs were identified via the site reconnaissance in Zone 3.

4.2 CURRENT OPERATIONS

The Site Subject Property is predominantly comprised of public streets. A portion of the Subject Property is situated within landscaped open space area in a residential subdivision. There are no buildings or permanent structures within the Subject Property with the exception of public streets and underground utilities.

4.3 ADJOINING PROPERTIES

The following section provides information about the adjoining properties obtained during the Subject Property reconnaissance and through review of reasonably ascertainable information. Visual observations of adjoining properties (from Subject Property boundaries) are summarized below.

Table 4.3 Summary of Adjoining Properties

Street		Description	REC/BER
Zone 1	Triology at Rio Vista	Single family residences line the streets on which work is proposed.	No
	The Golf Club at Rio Vista	A portion of the proposed improvements will occur within the golf course area. These areas are primarily turf, with some ornamental landscaping. The golf course opened in 1996. The routine and legal application of pesticides, herbicides, and fertilizers is anticipated to occur at the gold course. Pesticides, herbicides, and fertilizers may be found in near surface soils and can have a material environmental or environmentally-driven impact during construction of the proposed improvements. However, this does not require further investigation to the same degree as a REC. Therefore, The routine and legal application of pesticides, herbicides, and fertilizers is a BER associated with the subject property.	No
Zone 2	Airport Road	Airport Road is adjacent to the old Rio Vista Municipal Airport on the west and undeveloped land further to the north. The easterly side of the road is largely undeveloped with the exception of the Astra Sand Pit across from the old airport, a self-storage facility. There are wooden power poles along the westerly side of the street.	No
	St. Francis Way	Land uses adjacent to the alignment of the proposed force main in St. Francis Way consist of industrial, commercial, and City utilities. This includes a City Corp yard, former Rio Vista Municipal Airport reuse area on the west and industrial construction and storage yards adjacent on the east. There are powerlines on wooden power poles on the westerly side of the street. Landscaping is sparse.	No
	North Front Street	North of Logan Street, the uses along North Front Street transition to industrial and consist of storage, construction yards, and two used car lots. On the eastern side of the North Front Street there are fewer structures and there are previously paved lots now vacant, but views of the Sacramento River are	No

Table 4.3 Summary of Adjoining Properties

Street		Description	REC/BER
		afforded. Wooden power poles line the easterly side of the roadway	
	CPN Pipeline Property Project Segment	The CPN property is adjacent to a mobile home community and a drainage channel.	No
Zone 3	Beach Drive	Beach Drive is a paved two-lane road that terminates just west of the Beach WWTP at the Sandy Beach County Park. Within the project area, Beach Drive is adjacent to the existing decommissioned Rio Vista Army Depot on the east. Adjacent to Beach Drive on the east there is an approximate 12-foot grassy vegetated swale and an existing but abandoned paved road approximately 18 feet in width. Adjacent to the road, there is an approximate six-foot chain linked and barbed wire fence delineating Army base property. The fence runs the length of the property. There also is an above ground power line that is generally aligns with the fencing. The east side of beach Drive is undeveloped and consists of a grassy shoulder that slopes slightly downward. The powerline does cross the road and appears to provide power to a single large residence on the adjacent property to the west. At the terminus of the Army Base property, Beach Drive bends to the north for a distance of approximately 620 feet. On the easterly side of the roadway (between the project site and Sacramento River) prior to the intersection with S 2nd Street there is a single-family residence home and the Sierra West Boat Works facility. On the westerly side of the street there are single family residential uses.	No
	S 2 nd Street	Development along the project alignment along South 2 nd Street immediately north of Beach Drive consists of an undeveloped boat storage yard on the west and a portion of the Sierra West Boat Works Facility on the east and adjacent to the Sacramento River. Further north on the western side of the street the uses consist of single-family residential development that continue to the intersection with Bruning Avenue. The eastern side of South	No

Table 4.3 Summary of Adjoining Properties

Street		Description	REC/BER
		2 nd Street in this location consists mostly of single-family residential uses but adjacent to the intersection (northeast corner) with Marina Drive is the Riverview Middle School. The eastern side of South 2 nd Street in this location has wooden power poles with lines occasionally crossing perpendicular to the roadway. South 2 nd Street is striped for two-way traffic and on-street parking is allowed in both directions. Vegetation in this area is characterized by landscaped parkways and ornamental trees between the sidewalks and roadway.	
	Bruning Avenue	The southern side of Bruning Street contains a dentist office and single family residential. The northern side of the street contains single family uses. Wooden power poles are located on the southerly side of the street.	No
South Street	Front	At the intersection of Bruning Avenue and South Front Street and on the eastern side of the street there are two single family residential units. Further north is the Raintree Condominiums, and single-story commercial uses that continues north to the intersection with Logan Street (approximately 1,400 feet away). The western side of the street is characterized by similar single-family uses, a small worship center, and local commercial uses. There are wooden power poles along the easterly side of the street with a few perpendicular aerial crossings to power adjacent areas. In this location South Front Street is striped for two-way traffic and parallel parking allowed on both sides of the street. [It should be noted that at Main Street (three blocks south of Logan Street) South Front Street becomes North Front Street]. Vegetation along North and South Front Streets is limited to a few ornamental trees and vegetative landscape is largely absent.	No

5. RECORDS REVIEW

5.1 PHYSICAL SETTING

The following is a summary of the physical setting of the Subject Property (**Table 5.1**).

Table 5.1 Summary of Physical Setting of the Subject Property

Physical Setting Information		Source
Topography		
Site Elevation	36.71 feet above sea level	United States Geological Survey Division (U.S.G.S.) 7.5-Minute Topographic Map Rio Vista Quadrangle, California, 2018.
Topographic Gradient/ Surface Water Runoff	General East to Southwest towards Rio Vista Bridge	
Closest Surface Water	The Sacramento River is located approximately 0.03 feet west of the most western point.	
Soil Characteristics		
Soil Description	Type; AoA – Antioch-San Ysidro complex, 0 to 2 percent slopes; Characterized by a parent material of alluvium derived from sediment. They are moderately well-drained with a very high runoff class. Not frequently ponded and does not have a hydric soil rating. CeA – Clear Lake Clay, 0 to 2 percent slopes, MLRA 17; Characterized by a parent material of basin alluvium derived from sedimentary rock. They are poorly drained and hydric. High runoff class and frequently ponded. DaC – Diablo-Ayar clays, 2 to 9 percent slopes; Characterized by a parent material of residuum weathered from sediments. They are well-drained with a very high runoff class. Not frequently ponded and not hydric. DaE2 – Diablo-Ayar clays, 9 to 30 percent slopes, eroded; Characterized by a parent material of residuum weathered from sediments. They are well-drained with a very high runoff class. Not frequently ponded and not hydric.	Natural Resources Conservation Service (NRCS) Web Soil Survey (Appendix C) http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx , Accessed November 5, 2022.

Table 5.1 Summary of Physical Setting of the Subject Property

Physical Setting Information		Source
	<p>Tu – Tujunga fine sand; Characterized by a parent material of mixed dredged alluvium. They are excessively drained with a negligible runoff class. Not frequently ponded and not hydric.</p> <p>Va – Valdez silt loam, drained, 0 to 2 percent slopes, MLRA 16; Characterized by a parent material of fine-silty alluvium derived from metamorphic and sedimentary rock. They are poorly drained with a low runoff class. Not frequently ponded and hydric.</p>	
Geology/Hydrogeology		
Geologic Formation; Description	The site is situated in the Pacific Border physiographic province of California. Geology occurring within the site vicinity is part of Qoal – Older Alluvium, which is characterized as mainly flood-plain and alluvial-fan deposits adjacent to mountainous areas, sand, gravel, silt, and clay irregularly interstratified, commonly unconsolidated. The Rio Vista fault is a quaternary fault that underlies the site along Beach Drive in Zone 3.	Sims, J.D., Fox, K.F., Bartow, J.A., and Helley, E.J., 1973, Preliminary geologic map of Solano County and parts of Napa, Contra Costa, Marin, and Yolo Counties, California, U.S. Geological Survey, Miscellaneous Field Studies Map MF-484, 1:62,500.
Hydrogeology	Groundwater depth for wells information provided by SGMA ranges from 128 to 522 feet bgs.	Department of Water Resources Sustainable Groundwater Management Act (SGMA) Data Viewer (Appendix D), https://sgma.water.ca.gov/webgis/?appid=SGMADataViewer#qwlevels , Accessed February 6, 2023.
Oil and Gas Wells		
Current Oil and Gas Wells on Subject Property	<p>No wells were found on the Subject Property.</p> <p>The following wells were found near the Subject Property: Zone 2/3: Dry Gas Well 17, Dry Gas Well 220, Well 107, Well 89, Plugged Gas Well 105, Plugged Dry Gas Well 2, Plugged Gas Well 130</p>	State of California Department of Conservation Division of Geologic Energy Management (CalGEM) online mapping application (maps.conservation.ca.gov), accessed January 25, 2023.
Historical Oil and Gas Wells on Subject Property	There were no historical oil or gas wells found on Site.	

5.2 HISTORICAL RECORDS REVIEW

Kimley-Horn reviewed reasonably ascertainable records to identify obvious uses of the Subject Property from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. Reasonably ascertainable records reviewed as part of this Phase I ESA documented the use of the property back to at least 1940.

Readily available historical selected historical aerial photographs USGS topographic maps, city directories (at approximately 5-year intervals), (at approximately 10 to 15-year intervals), city directories, and historical fire insurance maps produced by the Sanborn Map Company were requested from Environmental Resource Information Services (ERIS) of Toronto, Canada to evaluate past uses and relevant characteristics of the Subject Property and surrounding properties.

Reviewed historical topographic maps, city directories, and aerial photographs are summarized below (Table 5.2, Table 5.3 and Table 5.4). The sources and years reviewed are identified below.

Table 5.2: Aerial Photograph Summary for Zone 1 (Appendix E)	
Zone 1: Liberty Island Road to Airport Road (Northwest Wastewater Treatment Facility) Palisades Drive, Summerset Drive, Black Diamond Drive, Marks Road/Belvedere Drive	
Year and Source	Summary of Information
1937 EDR	The Subject Property appears to be used for paved roads and agricultural purposes, specifically row crops. There are three buildings and roadways associated with agricultural use on southern half of the Subject Property and two agricultural buildings in the northern half in Zone 1. There is what appears to be a basin along the paved road on the Subject Property towards the east. To the north and east of the Subject Property are the Watson Hollow intermittent streams. There appears to be a basin at the corner of paved roadways south of the Subject Property.
1952 EDR	The basin seen in the 1937 aerial photograph is no longer in the Subject Property. There are now only two buildings associated with agricultural use on the southern half of the Subject Property.
1957 EDR	There appears to be additional paved roads that connect the agricultural buildings in the south of the Subject Property. No significant changes to surrounding properties were observed since the 1952 aerial photograph.
1968 EDR	No significant changes to the Subject Property were observed since the 1957 aerial photograph. There is an increase in agricultural development and agricultural or industrial buildings to the north of the Subject Property. There are also additional buildings to the south of the Subject Property with paved roadways that connect to the Subject Property.
1972 EDR	No significant changes to the Subject Property and surrounding properties were observed since the 1968 aerial photograph.
1984 EDR	There are additional industrial/commercial buildings and asphalt pavement along the southern roadways of the Subject Property. There is increased

Table 5.2: Aerial Photograph Summary for Zone 1 (Appendix E)

*Zone 1: Liberty Island Road to Airport Road (Northwest Wastewater Treatment Facility)
Palisades Drive, Summerset Drive, Black Diamond Drive, Marks Road/Belvedere Drive*

Year and Source	Summary of Information
	industrial/agricultural development and a basin to the north of the Subject Property.
1993 EDR	The building located at the northwest corner of the Subject Property seen since the 1937 aerial photograph is no longer featured in the 1993 aerial photograph. The Rio Vista Municipal Airport is now seen to the northeast of the Subject Property.
2005 EDR	The Subject Property is no longer used for agricultural purposes and is developed with residential neighborhood development with associated ponds, parks, and roadways. There is grading for additional neighborhood development in the Subject Property. Properties to the south of the Subject Property are no longer used for agricultural purposes. There is a residential neighborhood with single-family residential homes and associated roadways to the south of the Subject Property.
2009 EDR	There is an increase in residential homes, paved roads, and amenities such as tennis courts, throughout the Subject Property. There are homes built and neighborhood road pavement to the north of the Subject Property.
2012 EDR	There are additional paved roads in the southern portion of the Subject Property. No significant changes to the surrounding properties were observed since the 2009 aerial photograph.
2016 EDR	There are additional residential homes and associated paved roads along the western and southern boundaries of the Subject Property in Zone 1. Rio Vista Municipal Airport has additional roadways.
2020 EDR	Residential development continues along the southern boundary of the Subject Property. There is an increase in residential home development to the north of the Subject Property.

Table 5.3: Aerial Photograph Summary for Zone 2 (Appendix E)

<i>Zone 2: Airport Road (Northwest Wastewater Treatment Facility) to Saint Francis Way, Saint Francis Way towards east (CPN Property) to Route 84</i>	
Year and Source	Summary of Information
1937 EDR	There appears to be buildings associated with industrial or storage use north of Route 12. Route 12 is paved and connects to the Rio Vista Bridge across the Sacramento River. Along Route 12 towards the west are buildings for what appears to be residential uses, industrial uses, such as storage yards, and a basin. There is a natural stream that flows towards the west and grading associated with residential development in Zone 2 north of Route 12.
1952 EDR	The Subject Property is along a paved roadway that connects Zone 1 to the Sacramento River. Along Sacramento River are additional residential, commercial, and industrial buildings with unimproved roadways. There is increased residential neighborhood development north of Route 12 that have unpaved roadways that connect to industrial buildings and yards towards Sacramento River.
1957 EDR	There is a landing strip south of the Subject Property (Airport Road). Residential neighborhood development seen in the 1952 aerial photograph continues to expand towards Airport Road. There is a baseball field east of Saint Francis Way.
1968 EDR	There are additional residential and commercial buildings surrounding the Subject Property north of Rio Vista Bridge and south of the baseball field.
1972 EDR	No significant changes to the Subject Property were observed since the 1968 aerial photograph. The landing strip has additional runway pavement and associated roads and building.
1984 EDR	There are additional residential and commercial buildings and roads built surrounding Route 12 and along Sacramento River, east of the Subject Property. There appears to be increased grading surrounding the Subject Property. There is an additional building and paved lot along Church Road.
1993 EDR	There is increased residential neighborhood development to the west of Saint Francis Way and increased commercial buildings to the east. There is an additional paved yard with storage north of the airport. There are unpaved roads to the northeast of the Subject Property.
2005 EDR	There is grading associated with the construction of the Wastewater Treatment Facility on the northern end of the Subject Property (Zone 2). A self-storage facility now appears along Airport Road, the Subject Property. The landing strip appears to no longer be paved and is partially covered by new residential neighborhood development.
2009 EDR	No significant changes to the Subject Property were observed since the 2005 aerial photograph. There is an increase in paved roads for residential homes north of the Subject Property in Zone 2. The Wastewater Treatment Facility seen in the 2005 aerial photograph has finished construction and includes buildings and water treatment structures.

Table 5.3: Aerial Photograph Summary for Zone 2 (Appendix E)

<i>Zone 2: Airport Road (Northwest Wastewater Treatment Facility) to Saint Francis Way, Saint Francis Way towards east (CPN Property) to Route 84</i>	
Year and Source	Summary of Information
2012 EDR	No significant changes to the Subject Property were observed since the 2009 aerial photograph. Residential homes and roads continue to develop north of the Subject Property in Zone 2. The storage facility along Airport Road and commercial/industrial buildings west of Saint Francis Way have more asphalt pavement.
2016 EDR	No significant changes to the Subject Property in Zone 2 were observed since the 2012 aerial photograph. There is grading to the northeast of the Subject Property along Airport Road. Residential development continues in Zone 1.
2020 EDR	No significant changes to the Subject Property in Zone 2 were observed since the 2016 aerial photograph. The storage facility north of Airport Road has more storage buildings. There is an increase in paved roads west of Saint Francis Way, connecting to residential neighborhoods south of Airport Road. Residential development continues in Zone 1.

Table 5.4: Aerial Photograph Summary for Zone 3 (Appendix E)

<i>Zone 3: Route 84 towards N Front Street, S Front Street, Bruning Ave to S 2nd Street, Beach Drive until Beach Drive Wastewater Treatment Facility</i>	
Year and Source	Summary of Information
1937 EDR	The Subject Property appears to be paved roadway connected to Route 12 and Rio Vista Bridge into residential neighborhoods with single-family homes and green spaces to the west of the Subject Property and commercial/industrial buildings and Sacramento River to the east. Past the residential neighborhoods, the Subject Property is an unpaved road that follows the Sacramento River towards the south; the surrounding properties on the west of the Subject Property include a marina and vacant land and surrounding properties on the east appear to be used for agricultural purposes, specifically row crops. There appears to be a basin at the southern terminus of the Subject Property.
1952 EDR	The Beach Drive segment of the Subject Property appears to now be paved roadway connecting to S 2 nd Street. There are additional paved roads throughout Saint Francis Way that connect to the Subject Property. There is increased residential development along Saint Francis Road and S 2 nd Street, specifically on the west. Along the Subject Property segment of Beach Drive, there is an increase in buildings along Sacramento River.
1957 EDR	There is an increase in unpaved roads connecting to the Beach Drive segment of the Subject Property. The unpaved roads lead to additional buildings to the east that are associated with boat activity on the Sacramento River. Some industrial/commercial buildings to the east of S 2 nd Road and Saint Francis Way no longer appear and are replaced by graded land. There is increased grading associated with residential development north of the Subject Property in Zone 3.

Table 5.4: Aerial Photograph Summary for Zone 3 (Appendix E)

Zone 3: Route 84 towards N Front Street, S Front Street, Bruning Ave to S 2nd Street, Beach Drive until Beach Drive Wastewater Treatment Facility

Year and Source	Summary of Information
	There appears to be a well or basin to the west of Beach Drive with associated roadways.
1968 EDR	No significant changes to the Subject Property in Zone 3 were observed since the 1957 aerial photograph. The grading east of South 2 nd Road and Saint Francis Way is replaced with additional residential and commercial buildings. There is increased residential development, including homes, roads, and green spaces, towards the northwest. The harbor between South 2 nd Road and Beach Drive appears to have expanded to include buildings associated with boat usage. The well seen in the 1957 aerial photograph appears to have additional road pavement. There appears to be a wastewater treatment facility east of the Subject Property Beach Drive segment.
1972 EDR	No significant changes to the Subject Property and surrounding properties in Zone 3 were observed since the 1968 aerial photograph. There is increased grading to the east of the Subject Property past the Sacramento River.
1984 EDR	No significant changes to the Subject Property in Zone 3 were observed since the 1972 aerial photograph. There is an increase in grading associated with residential development south of the Route 12 segment and west of the Saint Francis Way segment of the Subject Property. It appears that some open green spaces are replaced with commercial buildings, residential housing, and asphalt pavement. There is an increase in buildings associated with the Coastal Guard and the wastewater treatment facility and road pavement south of the Beach Drive segment.
1993 EDR	No significant changes to the Subject Property were observed since the 1984 aerial photograph. Residential development continues north of Route 12.
2005 EDR	No significant changes to the Subject Property were observed since the 1993 aerial photograph. There is grading and residential homes built northwest of Beach Drive.
2009 EDR	No significant changes to the Subject Property and surrounding properties were observed since the 2005 aerial photograph.
2012 EDR	No significant changes to the Subject Property were observed since the 2009 aerial photograph. There is additional road pavement that connects to the Subject Property and residential homes built northwest of Beach Drive.
2016 EDR	No significant changes to the Subject Property and surrounding properties were observed since the 2012 aerial photograph.
2020 EDR	No significant changes to the Subject Property and surrounding properties were observed since the 2020 aerial photograph.

The following table summarizes observations made during Kimley-Horn's review of the historical topographic maps for the Subject Property (**Table 5.5**)

Table 5.5: Topographic Map Summary (Appendix F)

Year	Summary of Information
1910	The Subject Property in Zone 1 and Zone 2 appears to run along improved roads and undeveloped land. Zone 3 appears to feature neighborhood development, including buildings and improved roads, east of the Sacramento River. The majority of surrounding properties are undeveloped and include unimproved roads and intermittent streams. There are buildings that run along the improved roadways to the west and south of the Subject Property in Zone 1. There is a marsh/swamp east of Zone 3 and west of the Sacramento River.
1952	Two intermittent streams, Watson Hollow, flow east to west on the Subject Property (Zone 1). There is a landing strip, unimproved roads that lead to gas wells on the Subject Property (Zone 1), and improved roads. Zone 2 runs along Route 12, which is now a secondary highway. There is an increase in buildings and unimproved roads that are adjacent to the Subject Property in Zone 2. There is an increase in improved roads, two schools, cemetery, military reservation, and unimproved roads in Zone 3. The marsh/swamp seen in the 1910 topographic photograph is no longer in Zone 3. There is a landing strip and additional buildings and gas wells to the east of Zone 2 and north of Zone 3.
1953	No significant changes to the Subject Property and surrounding properties in Zone 1, Zone 2, and Zone 3 were observed since the 1952 topographic map. There is an additional water tank in Zone 3 in the neighborhood south of Route 12.
1968	No significant changes to the Subject Property in Zone 1 were observed since the 1953 topographic map. For Zone 1, there are additional buildings in the surrounding properties to the east. Airport Road and Liberty Island Road are labeled as secondary highways. There is an increase in buildings and roadways in Zone 2, including a school and a paved addition to the landing strip. In Zone 3, there is an increase in unimproved roads and improved roads leading towards additional buildings.
1978	In Zone 1, Airport Road and Liberty Island Road are no longer labeled as secondary highways. No significant changes were observed to the Subject Property and surrounding properties in Zone 1. In Zone 2, there are additional paved roadways that extend towards the west. The landing strip to the north of Zone 2 is now Rio Vista Airport. In Zone 3, there is additional roadway and building development, including City Hall and a trailer park. There are storage bins west of Riverview School in Zone 3.
1993	No significant changes were observed to the Subject Property and surrounding properties in Zones 1, 2, and 3 since the 1978 topographic map.
2012	In Zone 1, there are residential neighborhood roads built west of Airport Road and south/east of Liberty Island Road. Bauman Road is now connected to Airport Road. Rio Vista Municipal Airport is to the north of Airport Road in Zone 1. The Cache Slough Gas Field is northeast of the Subject Property and Rio Vista Municipal Airport. Rio Vista Airport is no longer in Zone 2 and is replaced by neighborhood development, including Anderson Way, Poppy House Road, Virginia Drive, a police station, and a school. Route 84 is now labeled. In Zone 3, there is an addition of a fire station south of Logan Street.
2015	In Zone 1, there is additional neighborhood road development, including an extension of Liberty Island Road towards the north of the Subject Property. No

Table 5.5: Topographic Map Summary (Appendix F)

Year	Summary of Information
	significant changes were observed to the Subject Property and surrounding properties in Zones 2 and 3. There is a gaging station south of Route 12 and west of the Sacramento River.
2018	In Zones 1 and 3, no significant changes were observed to the Subject Property since the 2015 aerial photograph. There are additional roads to the north of the Subject Property. In Zone 2, there are additional roads that extends from the Subject Property to the northeast. There are additional gaging stations to the east of the Subject Property in Zone 3.

Kimley-Horn attempted to review reasonably ascertainable Sanborn Fire Insurance Maps for the Subject Property. EDR searched for available Sanborn Fire Insurance and stated that no coverage was available for the Subject Property. The corresponding no coverage letter is included in **Appendix G**.

The city directories used in this study were made available through EDR (selected years reviewed: 1977-2017) and were reviewed at approximate five-year intervals, if readily available (**Appendix H**). The city directory report was prepared for properties located on Airport Road, N Front Street, South 2nd Street, Saint Francis Way, South Front Street, and throughout the surrounding area. For Airport Road, many listings are associated with residential homes and industrial/commercial uses, including Rio Vista City Dump, Rio Vista Airport/Aviation, Wilson Tool Company, excavation, trucking, dredging equipment, Aeroplane Works, Delta Oil Tools, crane services, welding services, Delta Fire Apparatus and Equipment, construction, and storage. For N Front Street, many listings are associated with commercial services, such as museums, thrift stores, fabric companies, event design, Chevrolet parts, real estate, tire services, and RV storage as well as names associated with residential addresses. In 1986, Shell Oil Distributor, Ramous Oil Company, Inc., and Asta Construction Yard were associated with the subject street of N Front Street. For S 2nd Street, many listings were associated with names associated with residential addresses, schools associated with Rio Vista Unified School District, and commercial/industrial services, including attorney services, beauty salons, Hearing Services of Rio Vista, Anderson Painting and Building, Mills Dick Tire Service, and Shell Oil Jobber. For Saint Francis Way, many listings were associated with residential addresses, government agencies such as City of Rio Vista and County of Solano, construction companies, Alan Farmer Trucking Local, Asta Construction Company, and Love Grows Christian Day Care. For S Front Street, many listings were associated with residential addresses, Citizens Utilities, Western Union Tele, River News Herald, and Chamber of Commerce.

There were no RECs identified during the review of the City Directories information.

5.3 REGULATORY RECORDS REVIEW

An environmental database search for the Subject Property and the surrounding area was performed by ERIS, a contract information services company, using ASTM E1527-21 standard radii. The purpose of the records review was to identify RECs in connection with the Subject Property. Information in this section is subject to the accuracy of the data provided by the information services company and the date at which the information is updated, and the scope herein did not include confirmation of facilities listed as "unmappable" by regulatory databases. A copy of the EDR Database Report is attached in its entirety in **Appendix I**.

In some of the following subsections, the words up-gradient, cross-gradient and down-gradient refer to the topographic gradient in relation to the Subject Property. The groundwater flow direction and the depth to shallow groundwater, if present, would likely vary depending upon seasonal variations in rainfall and the depth to the soil/bedrock interface. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the Subject Property cannot be directly ascertained.

5.3.1 Federal and State/Tribal Databases

Listed below are the facility listings identified on federal and state/tribal databases within the ASTM-required search distances from the approximate Subject Property boundaries. Database definition, descriptions, and the database search report are included in **Appendix I**.

Table 5.3-1 Summary of Federal and State Database Results		
Regulatory Agency Database	Search Distance (Miles)	Number of Sites
Federal Databases		
National Priority List (NPL)	1	0
Proposed NPL	1	0
NPL Liens	1	0
Delisted NPL	1	0
Federal Facility	0.5	0
Superfund Enterprise Management System (SEMS)	0.5	0
SEMS-ARCHIVE	0.5	0
Corrective Action Report (CORRACTS)	1	0
RCRA - Treatment, Storage and Disposal (RCRA-TSDF)	0.5	0
RCRA - Large Quantity Generators (RCRA-LQG)	0.25	3
RCRA - Small Quantity Generators (RCRA-SQG)	0.25	18
RCRA - Very Small Quantity Generators (RCRA-VSQG)	0.25	1
Land Use Control Information System (LUCIS)	0.5	0
Engineering Controls Sites List (US ENG CONTROLS)	0.5	0
Institutional Controls Sites List (US INST CONTROLS)	0.5	0
Emergency Response Notification System (ERNS)	Subject Property	6
State Databases		

Table 5.3-1 Summary of Federal and State Database Results		
Regulatory Agency Database	Search Distance (Miles)	Number of Sites
Solid Waste Facilities/Landfill Sites (SWF/LF)	0.5	1
Leaking Underground Storage Tank Sites (LUST)	0.5	40
Leaking Petroleum Storage Tanks (LTANKS)	0.5	0
FEMA Underground Storage Tank Listing (UST)	0.25	0
UST	0.25	45
Registered Petroleum Storage Tanks (AST)	0.25	21
Engineering Controls Sites Listing (ENG CONTROLS)	0.5	0
Voluntary Remediation Program (INST CONTROL)	0.5	0
Voluntary Cleanup Program (VCP)	0.5	0
Brownfields Site Specific Assessments (Brownfields)	0.5	0

In addition to the above ASTM-required listings, Kimley-Horn reviewed other federal, state, local, and proprietary databases provided by the database firm. A list of the additional reviewed databases is included in the regulatory database report included in **Appendix I**.

The following table summarizes the site-specific information provided by the database and/or gathered by this office for select facilities in the vicinity of the Subject Property. Kimley-Horn's review of the referenced databases also considered the potential or likelihood of contamination from adjoining and nearby facilities. To evaluate which of the adjoining and nearby facilities identified in the regulatory database report present an environmental risk to the Subject Property, Kimley-Horn considered the following criteria:

- The type of database on which the adjoining/nearby property is identified.
- The topographic position of the property relative to the Subject Property.
- The direction and distance of the identified facility from the Subject Property.
- Local soil conditions in the Subject Property area.
- The known and/or inferred groundwater flow direction in the Subject Property area.
- The status of the respective regulatory agency-required investigations and/or cleanup associated with the identified facility.
- Surface and subsurface obstructions and diversions (e.g., buildings, roads, sewer systems, utility service lines, rivers, lakes, and ditches) located between the identified facility and the Subject Property.

Only those facilities that are judged to present a potential environmental risk to the Subject Property and/or warrant additional clarification are further evaluated and discussed below. The facilities discussed below are listed in order of distance from the Subject Property.

Table 5.3-2 Summary of Listed Facilities

Facility Name and Location	Estimated Distance / Direction/Gradient	Database Listings	Is a REC, CREC, or HREC to the Subject Property
City of Rio Vista (also under the name of Galindo Construction plus other names at this address) 933 Airport Road Rio Vista, CA 94571	33 ft./adjacent to the south of the Site in Zone 2	CA CPS-SLIC, CA HWTS, CA UST, CA SWEEPS UST, CA HIST UST, FINDS, CA HAZNET, and CA HWTS	No
Rio Vista Army Reserve Training Area 900 Beach Drive Rio Vista, CA 94571	29 ft./adjacent to the east of the Site in Zone 3	RCRA-SQG, RCRA-VSQQ, ERNS, CA RESPONSE, CA ENVIROSTOR, CA LUST, CA UST, CA AST, CA HAULERS, CA HIST Cal-Sites, CA CDL, CA CERS HAZ WASTE, CA SWEEPS UST, CA HIST UST, CA CERS TANKS, CA CHMIRS, CA MCS, FINDS, ECHO, CA EMI, CA HIST CORTESE, CA HAZNET, CA CIWQS, CA CERS, CA HWTS, and CA RGA LUST	No
The Gordon Hanson Co. 135 N. Front Street Rio Vista, CA 94571	81 ft./adjacent to the southeast of the Site in Zone 3	CA LUST, CA CORTESE AND CA CERS	Yes
Chevron – Rio Vista 33 N. Front Street Rio Vista, CA 94571	82 ft./adjacent to the southeast of the Site in Zone 3	RCRA-LQG, CA HAZNET, CA HWTS, CA CPS-SLIC, CA LUST, CA UST, CA CERS, FINDS and ECHO	No
Northwest WWTF 3000 Airport Road Rio Vista, CA 94571	22 ft./adjacent to the northeast of the Site in Zone 1	CA AST, CA HAULERS, CA CERS, HAZ WASTE, CA CERS HAZ WASTE, CA CERS TANKS, RCRA NONGEN, ICIS, FINDS, ECHO, CA PFAS, CA EMI, CA ENF, CA HAZNET, CA NPDES, CA CIWQS, CA CERS, and CA HWTS	No

The **City of Rio Vista 933 Airport Road** is listed on the EDR databases above in Table 5.3-2. This facility is also listed on the Geotracker website (<https://geotracker.waterboards.ca.gov/> accessed February 8, 2023), as an open site assessment case as of March 1, 2019. According to a letter from the Central Valley Regional Water Quality Control Board (RWQCB) dated June 20, 2019, this site was part of the former Rio Vista Airport in the 1980's. An aerial pesticide applicator operated on this property until about 1994. The RWQCB observed that there was no apparent washdown area for planes and recommended that an assessment be conducted. As Phase I and Phase II Environmental Site Assessments were conducted in 2019 and indicated that pesticides have been released to the soil in concentrations that exceed human health screening levels. As of November 2022, site cleanup has not started. There is no evidence to suggest impacts from the pesticides encroach within the Subject Property, therefore this facility is not a REC for the subject Site.

Rio Vista Army Reserve Training Area located at 900 Beach Drive is listed on the EDR databases above in Table 5.3-2. This facility is also listed on the Geotracker website (<https://geotracker.waterboards.ca.gov/> accessed February 8, 2023) and Envirostor website (<https://www.envirostor.dtsc.ca.gov/> accessed February 8, 2023), as a case closed site and certified as of June 30, 2003. According to Envirostor, there are several cases associated with this facility and all are closed and certified with the State. According to Envirostor, past Army activities resulted in some release of contaminants into the environment. The site investigation data indicated that there were several petroleum contaminated sites, the result of underground storage tank leaks. There was metals contamination in soil at several sites and in the Marine Railway. Dioxin contamination was also detected in the vicinity of an incinerator. The U.S Army removed about 4,550 cubic yards of contaminated soil in October 2000. The Sacramento RWQCB and DTSC oversaw the remediation. The site was certified by DTSC in June 2003. Given that the facility has been remediated and certified by the State, this facility is not a REC for the subject Site.

The **Gordon Hanson Co.** located at 135 N. Front Street is listed on the EDR databases above in Table 5.3-2. This facility is also listed on the Geotracker website (<https://geotracker.waterboards.ca.gov/> accessed February 8, 2023), as an open site assessment case as of May 15, 2017. According to the *Problem Assessment Report for Petroleum Hydrocarbon Contaminated Soil and Groundwater, Gordon Hansen Site 101 North Front Street, Rio Vista, Solano County, California* dated March 2010, three USTs, dispensers and infrastructure associated with a former gas station were discovered in 2000 on the site. Significant petroleum hydrocarbon contaminated soil was found to be present during the USTs removal in 2002. Site investigation and sampling has been on-going as recently as October 2022. The Report of Soil and Soil Gas Sampling Investigation – Gordon Hanson Site (**Appendix J**) indicates contamination resulting from the LUSTs have impacted soils within Front Street, which is a portion of the Subject Property. Therefore, this facility is a REC for the subject Site.

Chevron – Rio Vista located at 33 N. Front Street is listed on the EDR databases above in Table 5.3-2. This facility is also listed on the Geotracker website (<https://geotracker.waterboards.ca.gov/> accessed February 8, 2023), as an open verification monitoring case as of July 5, 2018. According to Geotracker, Standard Oil Company (now Chevron) operated a petroleum product distribution facility at the site from the early 1920's until 1974. Since 1974, the site has been used for offices, limited residential use and storage of tractors and farm equipment. Site investigation and sampling has been on-going as recently as January 2022. The Semi-Annual Status Report, Second Half 2022 dated October 31, 2022, and prepared by Arcadis (**Appendix K**) suggests the petroleum hydrocarbon plume associated with the former Chevron facility is concentrated in the western portion of the property and does not encroach on the Subject Property. Therefore, this facility is not a REC for the subject Site.

Northwest Wastewater Treatment Facility (WWTF) located at 3000 Airport Road is listed on the EDR databases above in Table 5.3-2. This facility is also listed on the Geotracker website (<https://geotracker.waterboards.ca.gov/> accessed February 8, 2023), as an active case. According to a letter dated July 9, 2020, this facility is identified as a publicly owned treatment works that is a potential receiver of per- and polyfluoroalkyl substances (PFAS) and thereby a potential discharger to the environment. Order WQ-2020-0015-DWQ requires the City of Rio Vista to submit technical reports and analytical data electronically via Geotracker to investigate PFAS. There is limited information regarding PFAS data on this site; however, there are no violations listed in EDR or Geotracker for this facility. Thus, this facility is not a REC for the subject Site.

5.4 OTHER ENVIRONMENTAL RECORDS

Kimley-Horn reviewed information from the following agencies:

- EPA's Enforcement & Compliance History Online (ECHO)
- EPA's NEPAAssist Database
- USGS NWIS database

Kimley-Horn reviewed the U.S. EPA's Environmental Compliance History Online (ECHO) and these are the same facilities listed on the ECHO database in the EDR Report. There were no regulated facilities noted with significant hazardous waste violations in the vicinity. Kimley-Horn also reviewed NEPAAssist database for records of regulated facilities on and surrounding the Subject Property. There were no regulated facilities noted with significant violations or open cases in the vicinity of the Subject Property.

Kimley-Horn reviewed the USGS NWIS database for records of well construction permit (WCP) wells on the Subject Property. Review of the available documentation identified one public supply well adjacent to the Subject Property. The well is site number 381007121410501 and it is located along St. Francis Way in between Airport Road and Poppy House Road. The well is part of the Central Valley aquifer system. Available data for this well is limited but water quality samples were taken in September 1980. Data from 1980 is provided for parameters such as temperature, pH, carbon dioxide, nitrate, nitrite, hardness, sodium, calcium, magnesium, potassium and chloride. No information regarding contaminants is provided.

5.5 VAPOR EVALUATION

The ASTM E 1527-21 document standardizes the terms release and migration consistent with those used in CERCLA and AAI. As such, potentially harmful vapors must be evaluated during the completion of a Phase I ESA.

Kimley-Horn performed a Tier 1 Vapor Encroachment Screening (VES) in accordance with E2600-15 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* (2015) with the purpose of identifying if a Vapor Encroachment Condition (VEC) exists in association with the Subject Property. A VEC is defined as the presence or likely presence of contaminants of concern (COC) vapors in the subsurface of the Subject Property caused by a release of hazardous substances and/or petroleum compounds into soil and groundwater. Current and historical uses were evaluated within the Area of Concern (AOC) during the completion of the Tier 1 VES. As indicated in ASTM 2600-15, the radial distance of the AOC for non-petroleum hydrocarbon COCs (i.e., chlorinated VOCs) is 1/3-mile (1,760 ft.) and 1/10 mile (528 ft.) for petroleum hydrocarbons.

Table 5.5 Summary of Sites Identified

Site Identified	Address	Approximate Distance from Site	Chlorinated Solvent (CS) or Petroleum (P) Site	Information
Rio Vista Army Reserve Training Area	900 Beach Drive	29 ft./adjacent to the east of the Site in Zone 3	P	<528 ft.
The Gordon Hanson Co.	135 N. Front Street	81 ft./adjacent to the southeast of the Site in Zone 3	P	<528 ft.
Chevron – Rio Vista	33 N. Front Street	82 ft./adjacent to the southeast of the Site in Zone 3	P	<528 ft.

According to the reasonably ascertainable information reviewed during this screening process, Kimley-Horn has determined that a VEC is not likely to exist.

The Tier I VES does not include vapor intrusion and/or indoor air quality considerations associated with existing and/or proposed structures. No vapor sampling was conducted in association with this VES and the Subject Property.

¹ Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions

5.6 BUILDING DEPARTMENT/PROPERTY APPRAISER INFORMATION

Kimley-Horn did not obtain building records from Solano County. Furthermore, EDR indicated that it does not have access to building permits in Rio Vista, California

Kimley-Horn attempted to review reasonably ascertainable assessment information provided by the Solano County Assessor's office. The Assessor's office does not make records available on-line. Kimley-Horn staff consulted with Parcel Quest, an on-line database of assessor's information. Parcel Quest did not have any records associated with the property.

5.7 PRIOR REPORTS

Kimley-Horn was not provided any previous environmental reports for review.

6. INTERVIEWS

The objective of completing interviews with knowledgeable Subject Property contacts is to obtain information about the uses and physical characteristics of the property. The following individuals were interviewed regarding the current and historical use of the Subject Property.

Interviews

The Subject Property is owned by the City of Rio Vista. Owner representatives elected to not conduct an interview as part of this investigation. This constitutes a data failure, which is a type of data gap; however, the data gap is not considered significant because other information and/or personal experience did not raise reasonable concerns involving the data gap.

6.1 STATE AND/OR LOCAL AGENCY INQUIRES

Table 6.1 Summary of State and/or Local Agency Inquires

Agency Contacted/	Contact Method/Date	Response
Solano County Environmental Health – Hazardous Materials Section (CUPA)	Emailed 2/7/2023	Solano County Environmental Health does not make records readily available online. Kimley-Horn submitted an open records request to the Solano County Environmental Health Department to review records for the Subject Property. The Hazardous Materials section forwarded the request to Environmental Health, Building, and Planning. Kimley-Horn did not receive a response within the time constraints of this report. If Kimley-Horn does receive a response, and it changes the findings of the report, the client will be notified.
Rio Vista Building Department	Online Records search 2/7/2023	No building records associated with the Subject Property were readily available online. The Solano County Environmental Health – Hazardous Materials Section forwarded the open records request to the Building Department to review records for the Subject Property. Kimley-Horn did not receive a response within the time constraints of this report. If Kimley-Horn does receive a response, and it changes the findings of the report, the client will be notified.
Rio Vista Fire Department	Emailed 2/8/2023	The Rio Vista Fire Department does not make records readily available online. Kimley-Horn submitted an open records request to the City of Rio Vista Fire Department to review records for the Subject Property. Kimley-Horn did not receive a response within the time constraints of this report. If Kimley-Horn receives a response, and it changes the findings of the report, the client will be notified.
Solano County Assessor's Department	Online Records search 2/8/2023	Solano County Assessor's Department has an online public records search via the City's website. The search makes document numbers associated with deeds, grants, and agreements available online; the documents were not readily available. Documents related to the Subject

Table 6.1 Summary of State and/or Local Agency Inquires

Agency Contacted/	Contact Method/Date	Response
		Property were not readily available online. Kimley-Horn submitted an open records request to the Solano County Assessor's Department. Kimley-Horn did not receive a response within the time constraints of this report. If Kimley-Horn does receive a response, and it changes the findings of the report, the client will be notified.

7. FINDINGS AND OPINIONS

The logic and reasoning used by the environmental professional in evaluating information collected during the course of the assessment related to findings shall be discussed. The opinions shall specifically include the environmental professional's rationale for concluding that a finding is or is not a recognized environmental condition, controlled recognized environmental condition, historical recognized environmental condition, or de minimis condition insofar as the findings pertain to each of these conditions.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-21 for approximately 7-miles of wastewater and recycled water line improvements in the City of Rio Vista, Solano County, California, the Subject Property. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

7.2: RECOGNIZED ENVIRONMENTAL CONDITIONS (RECS)

A recognized environmental condition (REC) is defined in the ASTM Standard as *the presence or likely presence of a hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment*. This assessment has revealed evidence of recognized environmental conditions connected with the Subject Property:

- The **Gordon Hanson Co.** located at 135 N. Front Street is the subject of an open site assessment case with the State Water Resource Control Board (SWRCB). According to the readily available documents, significant petroleum hydrocarbon contaminated soil was found to be present during removal of USTS in 2002, and the documentation suggests contamination resulting from the LUSTs have impacted soils within Front Street, which is a portion of the Subject Property. Therefore, the Gordon Hanson Co. is a REC associated with the subject property.

7.3: CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

A CREC is a *recognized environmental condition that is being appropriately characterized and remediated in accord with, and under the supervision of, authorized governmental agency charged with oversight of such recognized environmental condition*. This assessment has not revealed evidence of controlled recognized environmental conditions connected with the Subject Property.

7.4: HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

A historical REC (HREC), as defined in the ASTM Standard, *is a past release of any hazardous substance and/or petroleum product that has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria*. This assessment has not revealed evidence of historical recognized environmental conditions connected with the Subject Property.

7.5 BUSINESS ENVIRONMENTAL RISK

A Business Environmental Risk (BER), as defined in the ASTM Standard, *is a risk which can have a material environmental or environmentally-driven impact on the business associated with the use of a commercial site, and which does not require further investigation to the same degree as a REC*. Kimley-Horn identified

one area of potential concern associated with business environmental risks in connection with the Subject Property during the completion of this Phase I ESA:

- The routine and legal application of pesticides, herbicides, and fertilizers is anticipated to occur at the gold course; this is a BER associated with the subject property.

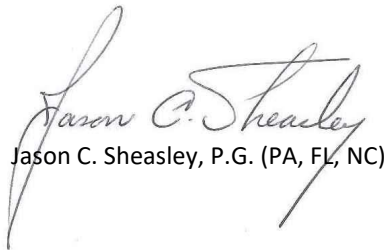

8. DECLARATION

8.1 STATEMENT OF COMPLIANCE

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. Environmental Professional resume(s) are included in **Appendix L**.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Sacramento County, California

Survey Area Data: Version 22, Sep 1, 2022

Soil Survey Area: Solano County, California

Survey Area Data: Version 17, Sep 1, 2022

Your area of interest (AOI) includes more than one soil survey area. These survey areas may have been mapped at different scales, with a different land use in mind, at different times, or at different levels of detail. This may result in map unit symbols, soil properties, and interpretations that do not completely agree across soil survey area boundaries.

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Apr 23, 2022—Apr 24, 2022

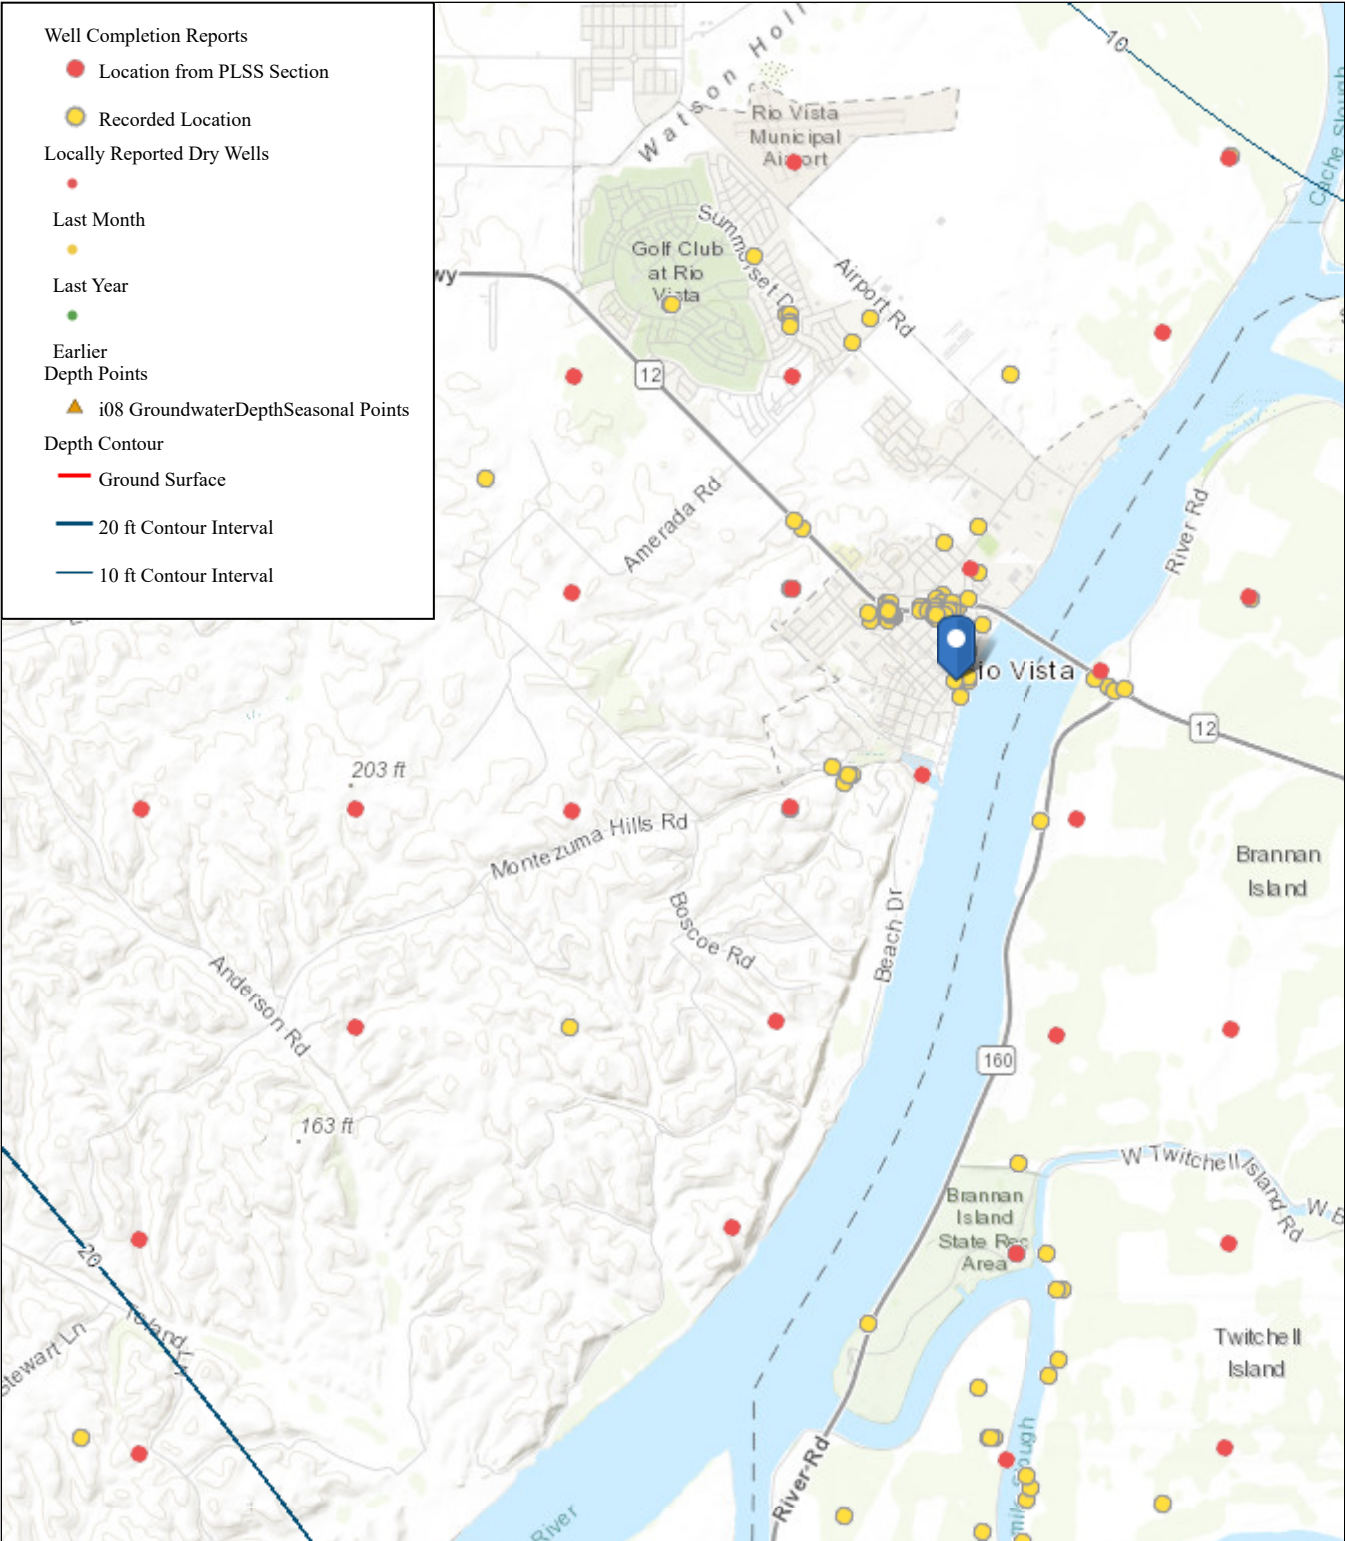

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
206	Sailboat silt loam, partially drained, 0 to 2 percent slopes, MLRA 16	2.9	0.1%
222	Scribner clay loam, partially drained, 0 to 2 percent slopes, MLRA 16	29.8	0.5%
244	Xeropsamments, 1 to 15 percent slopes	12.3	0.2%
247	Water	245.9	4.5%
Subtotals for Soil Survey Area		290.9	5.3%
Totals for Area of Interest		5,523.7	100.0%

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
AmC	Altamont-Diablo clays, 2 to 9 percent slopes	15.0	0.3%
AoA	Antioch-San Ysidro complex, 0 to 2 percent slopes	365.0	6.6%
AoC	Antioch-San Ysidro complex, 2 to 9 percent slopes	204.0	3.7%
BP	Borrow pit	45.3	0.8%
CeA	Clear Lake clay, 0 to 2 percent slopes, MLRA 17	170.8	3.1%
DaC	Diablo-Ayar clays, 2 to 9 percent slopes	2,081.9	37.7%
DaE2	Diablo-Ayar clays, 9 to 30 percent slopes, eroded	1,177.7	21.3%
Pc	Pescadero silty clay loam, 0 percent slopes, MLRA 17	6.9	0.1%
RoA	Rincon clay loam, 0 to 2 percent slope	49.8	0.9%
Tu	Tujunga fine sand	794.0	14.4%
Va	Valdez silt loam, drained, 0 to 2 percent slopes, MLRA 16	163.7	3.0%
W	Water	139.8	2.5%
Wc	Willows clay, 0 percent slopes, MLRA 17	18.9	0.3%
Subtotals for Soil Survey Area		5,232.7	94.7%

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Kimley Horn & Associates, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Provided with final report

Preliminary Report

This report contains the results of a preliminary search for the target property. A final EDR Sanborn Map Report will be delivered after quality review is conducted. Only a final report should be used in connection with a final site assessment.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☒ Library of Congress
- ☒ University Publications of America
- ☒ EDR Private Collection

UNMAPPED PROPERTY

This document certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client-supplied target property information, and fire insurance maps covering the target property were not found.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA) INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Page Numbers and Map Identifications refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

A review of the RCRA-LQG list, as provided by EDR, and dated 11/21/2022 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the requested target property.

CERS Description: Construction Storm Water

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-28-2018
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Grading activities. SWPPP was not located onsite. Deficiencies found: Storm drain inlets not protected as described in Project SWPPP, tracking on road. sediment deposited in gutter flow line, concrete washout was full. Response requested. Refer to email and inspection photo log sent to discharger found in Attachments Tab for more information.

WDS:

Name: TRILOGY WWTP/NORTHWEST WWTP
Address: 6001 AIRPORT RD
City: RIO VISTA
Facility ID: Sacramento River 480108001
Facility Type: Municipal/Domestic - Facility that treats sewage or a mixture of predominantly sewage and other waste from districts, municipalities, communities, hospitals, schools, and publicly or privately owned systems (excluding individual subsurface leaching systems disposing of less than 1,000 gallons per day).
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CA0083771 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 0
Facility Telephone: 7073746747
Facility Contact: FELIX AJAYI-DIR PUB WORKS
Agency Name: RIO VISTA CITY OF
Agency Address: PO BOX 745
Agency City,St,Zip: RIO VISTA 94571
Agency Contact: BRADLEY BAXTER
Agency Telephone: 7073746451
Agency Type: City
SIC Code: 4952
SIC Code 2: Not reported
Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste: DOMEST
Waste Type2: Not reported
Waste2: Domestic Sewage
Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Aesthetic impairment would include nuisance from a waste treatment facility.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Title: ACL R5-2013-0541 for Rio Vista City
Description: MMP Order issued in the amount of \$3,000 for effluent limitation violations from 07/01/2010 to 12/31/2012. There is one serious violation. This Order allows the \$3,000 penalty to be applied toward a compliance project for the violations specifically identified in Attachment A to this Order as subject to mandatory minimum penalties. The entire \$3,000 penalty has been satisfied through the completion of the compliance project, in accordance with CWC section 13385(k).

Title:	MMP Complaint R5-2008-0525 for Rio Vista City & Eco Resources Inc
Description:	MMP Complaint issued in the amount of \$1,005,000 for 270 serious Group 1 viols & 60 non-serious viols of effluent limitations under Orders R5-2002-0099 & R5-2004-0092 from 4/1/04 to 12/31/07. The discharger spent \$25.37 million for engineering design, enviro rvw, land acquisition, treatment plant construction, and outfall construction for the new Northwest WWTP to address effl viols. The RB considers payment of the above penalty satisfied through the completion of the compliance project.

Violation Notes: On 3/28/2003 effluent exceeded the turbidity daily average limit (to the reclamation pond) of 2NTU with a result of 9.4NTU. *** MMP Exempt Reason:Discharge to land

Violation Division: Water Boards
Violation Program: NPDUNIOTH
Violation Source: CIWQS,

Site ID: 52737
Site Name: Northwest WWTF
Violation Date: 01-24-2005
Citation: California Water Code
Violation Description: Not reported
Violation Notes: On November 19 the effluent discharged to the reclamation pond exceeded the daily max effluent turbidity limit of 10 NTU with a result of 14.3 NTU. *** MMP Exempt Reason:Discharge to land

Violation Division: Water Boards
Violation Program: NPDUNIOTH
Violation Source: CIWQS,

Site ID: 52737
Site Name: Northwest WWTF
Violation Date: 02-14-2005
Citation: California Water Code
Violation Description: Not reported
Violation Notes: On December 19 the effluent discharged to the stream exceeded the daily max turbidity limit of 10 NTU with a result of 17.3 NTU.

Violation Division: Water Boards
Violation Program: NPDUNIOTH
Violation Source: CIWQS,

Site ID: 52737
Site Name: Northwest WWTF
Violation Date: 08-02-2014
Citation: California Water Code
Violation Description: Not reported
Violation Notes: UV Violation: UV transmittance was <55% of max. It is required to be >55% of max at any time.

Violation Division: Water Boards
Violation Program: NPDUNILRG
Violation Source: CIWQS,

Site ID: 52737
Site Name: Northwest WWTF
Violation Date: 12-02-2014
Citation: California Water Code
Violation Description: Not reported
Violation Notes: Total Coliform 7-Day Median limit is 23 MPN/100 mL and reported value was 130 MPN/100 mL at EFF-001.

Violation Division: Water Boards
Violation Program: NPDUNILRG

Comments:
Description:

Not reported
A pump had an electrical problem. About 200
gallons on the release went into a creek, unknown
name, that flows to the Sacramento River.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency Case Number: Not reported
Latitude: 38.1718107124851
Longitude: -121.686530618034
Case Type: Cleanup Program Site
Case Worker: JJT
Local Agency: Not reported
RB Case Number: SLT5S507
File Location: Regional Board
Potential Media Affected: Soil
Potential Contaminants of Concern: Not reported
Site History: Aerial pesticide applicator utilizing 4 planes for work. Tanks are field rinsed, while planes exteriors are washed at a concrete tie-down area. In 1985 and 1987, site inspections showed that plane washwater pooled on soil. Sulfur residue found in gravel where washwater flows off the concrete pad to the gravel area. Staff recommended soil samples. In 1992, Mr. Alexander stated his intent to follow Fertilizer Waiver guidelines. In 2011, Steve Allen, owner of Alexander Ag Flying Service, died. The contents of the case file are on Geotracker. Two slides are in the case file. A Phase 1, II and Site assessment was done in 2019. Additional assessment needed to determine scope.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

FINDS:

Registry ID: 110002924676

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
