Vanessa,

I received this email a little while ago from the metals dept:

**"Unfortunately, there are two samples from which there is no more usable sample mass. Numbers 37 and 53 seem to have had all of the soil used, and there are only a couple of rocks left in the bottom of the jars."**

This corresponds to samples **"SB-10-2'"** and **"SB-14-2'"**. Is there any way for you to obtain more sample from those locations?

Please let me know as soon as you can.

Thanks,

Ranjit

Vanessa,

The lab informed me that we do not have enough sample left to perform the PCBs analysis on sample SB-10-2'. We only have a small stone, so we can't even use a smaller aliquot of soil for extraction. Please let me know if you wish to replace this sample with another sample.

Thanks,

Ranjit
