**Surrogate Legend**

# Surrogate Summary

Client: Leighton and Associates Inc
Job ID: 570-62332-1
Project/Site: Rosemead Holding LLC /13111.001

TCX = Tetrachloro-m-xylene (Surr)
DCB = DCB Decachlorobiphenyl (Surr)

## Method: 8260B - Volatile Organic Compounds (GC/MS)

**Lab Sample ID: MB 570-159363/6**
**Matrix: Solid**
**Analysis Batch: 159363**

**Client Sample ID: Method Blank**
**Prep Type: Total/NA**

# Definitions/Glossary

Client: Leighton and Associates Inc
Project/Site: Rosemead Holding LLC /13111.001

Job ID: 570-62332-2

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ¤ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

## Job ID: 570-62332-2

### Laboratory: Eurofins Calscience LLC

**Narrative**

**Job Narrative**
**570-62332-2**

**Comments**
No additional comments.

**Receipt**
The samples were received on 6/21/2021 5:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.6º C and 2.8º C.

**HPLC/IC**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

**Metals**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

# Detection Summary

Client: Leighton and Associates Inc
Project/Site: Rosemead Holding LLC /13111.001

Job ID: 570-62332-2

## Client Sample ID: LV-12-1 — Lab Sample ID: 570-62332-7

No Detections.

## Client Sample ID: LV-15-1 — Lab Sample ID: 570-62332-12

| Analyte | Result | Qualifier | RL | | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Chromium, hexavalent | 22000 | | 390 | | ug/Kg | 10 | | 7199 | Total/NA |

## Client Sample ID: LV-19-1 — Lab Sample ID: 570-62332-27

No Detections.

## Client Sample ID: LV-19-10 — Lab Sample ID: 570-62332-31

| Analyte | Result | Qualifier | RL | | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Chromium, hexavalent | 2200 | | 390 | | ug/Kg | 10 | | 7199 | Total/NA |

## Client Sample ID: LV-20-0.5 — Lab Sample ID: 570-62332-32

No Detections.

## Client Sample ID: LV-18-1 — Lab Sample ID: 570-62332-33

No Detections.

## Client Sample ID: LV-10-1 — Lab Sample ID: 570-62332-39

| Analyte | Result | Qualifier | RL | | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Chromium, hexavalent - DL | 73000 | | 2000 | | ug/Kg | 50 | | 7199 | Total/NA |

This Detection Summary does not include radiochemical test results.

**Creator: Patel, Jayesh**

**List Source: Eurofins Calscience LLC**

| Question | Answer | Comment |
|---|---|---|
| Radioactivity wasn't checked or is </= background as measured by a survey meter. | N/A | |
| The cooler's custody seal, if present, is intact. | True | |
| Sample custody seals, if present, are intact. | True | |
| The cooler or samples do not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | True | |
| Cooler Temperature is recorded. | True | |
| COC is present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Is the Field Sampler's name present on COC? | True | |
| There are no discrepancies between the containers received and the COC. | True | |
| Samples are received within Holding Time (excluding tests with immediate HTs) | True | |
| Sample containers have legible labels. | True | |
| Containers are not broken or leaking. | True | |
| Sample collection date/times are provided. | True | |
| Appropriate sample containers are used. | True | |
| Sample bottles are completely filled. | True | |
| Sample Preservation Verified. | True | |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True | |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4"). | True | |
| Multiphasic samples are not present. | True | |
| Samples do not require splitting or compositing. | True | |
| Residual Chlorine Checked. | N/A | |

Job ID: 570-62513-1

## Qualifiers

### GC Semi VOA

| Qualifier | Qualifier Description |
|---|---|
| F1 | MS and/or MSD recovery exceeds control limits. |
| F2 | MS/MSD RPD exceeds control limits |
| S1- | Surrogate recovery exceeds control limits, low biased. |

### Metals

| Qualifier | Qualifier Description |
|---|---|
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |
| F1 | MS and/or MSD recovery exceeds control limits. |
| L | A negative instrument reading had an absolute value greater than the reporting limit |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ¤ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

**List Number: 1**
**Creator: Ramos, Maribel**

**List Source: Eurofins Calscience LLC**

| Question | Answer | Comment |
|---|---|---|
| Radioactivity wasn't checked or is </= background as measured by a survey meter. | N/A | |
| The cooler's custody seal, if present, is intact. | True | |
| Sample custody seals, if present, are intact. | True | |
| The cooler or samples do not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | True | |
| Cooler Temperature is recorded. | True | |
| COC is present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Is the Field Sampler's name present on COC? | True | |
| There are no discrepancies between the containers received and the COC. | True | |
| Samples are received within Holding Time (excluding tests with immediate HTs) | True | |
| Sample containers have legible labels. | True | |
| Containers are not broken or leaking. | True | |
| Sample collection date/times are provided. | True | |
| Appropriate sample containers are used. | True | |
| Sample bottles are completely filled. | True | |
| Sample Preservation Verified. | True | |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True | |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4"). | True | |
| Multiphasic samples are not present. | True | |
| Samples do not require splitting or compositing. | True | |
| Residual Chlorine Checked. | N/A | |

# Definitions/Glossary

Client: Leighton and Associates Inc
Project/Site: Rosemead Holding LLC /13111.001

Job ID: 570-62513-2

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ¤ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

# Case Narrative

Client: Leighton and Associates Inc
Project/Site: Rosemead Holding LLC /13111.001

Job ID: 570-62513-2

## Job ID: 570-62513-2

### Laboratory: Eurofins Calscience LLC

**Narrative**

**Job Narrative**
**570-62513-2**

**Comments**
No additional comments.

**Receipt**
The samples were received on 6/22/2021 6:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.4º C.

**HPLC/IC**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

**Metals**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

# Detection Summary

Client: Leighton and Associates Inc
Job ID: 570-62513-2
Project/Site: Rosemead Holding LLC /13111.001

## Client Sample ID: LV-9-5 — Lab Sample ID: 570-62513-2

No Detections.

## Client Sample ID: LV-9-10 — Lab Sample ID: 570-62513-3

| Analyte | Result | Qualifier | RL | | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Chromium, hexavalent | 3600 | | 400 | | ug/Kg | 10 | | 7199 | Total/NA |

## Client Sample ID: LV-7-1 — Lab Sample ID: 570-62513-5

| Analyte | Result | Qualifier | RL | | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Chromium, hexavalent | 700 | | 400 | | ug/Kg | 10 | | 7199 | Total/NA |

## Client Sample ID: LV-7-5 — Lab Sample ID: 570-62513-6

No Detections.

## Client Sample ID: LV-7-10 — Lab Sample ID: 570-62513-7

| Analyte | Result | Qualifier | RL | | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Chromium, hexavalent | 480 | | 400 | | ug/Kg | 10 | | 7199 | Total/NA |

## Client Sample ID: LV-3-1 — Lab Sample ID: 570-62513-8

No Detections.

## Client Sample ID: LV-3-5 — Lab Sample ID: 570-62513-9

No Detections.

## Client Sample ID: LV-3-10 — Lab Sample ID: 570-62513-10

No Detections.

This Detection Summary does not include radiochemical test results.

## Qualifiers

### Metals

| Qualifier | Qualifier Description |
|---|---|
| F1 | MS and/or MSD recovery exceeds control limits. |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ¤ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

## Job ID: 570-62552-1

### Laboratory: Eurofins Calscience LLC

**Narrative**

**Job Narrative**
**570-62552-1**

**Comments**
No additional comments.

**Receipt**
The samples were received on 6/23/2021 11:22 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.3º C.

**GC/MS VOA**
Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-159773.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GC VOA**
Method 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-160174.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GC Semi VOA**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

**Metals**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

**Organic Prep**
Method 3550C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 570-160306. LCS/LCSD was performed to meet QC requirement.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**VOA Prep**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

06 July 2021

Mr. Robin Ferber
Leighton Consulting, Inc. - Santa Clarita
26074 Ave Hall, Ste 21
Santa Clarita, CA 91355

H&P Project: LC062821-SB2
Client Project: 13111.001/ N Rosemead Blvd

Dear Mr. Robin Ferber:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 6/28/2021 -6/29/2021 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Lisa Eminhizer
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP and the National Environmental Laboratory Accreditation Conference (NELAC) for the fields of proficiency and analytes listed on those certificates. H& P is approved as an Environmental Testing Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs for the fields of proficiency and analytes included in the certification process and to the extent offered by the accreditation agency . Unless otherwise noted, accreditation certificate numbers, expiration of certificates, and scope of accreditation can be found at: www.handpmg.com/about/certifications. Fields of services and analytes contained in this report that are not listed on the certificates should be considered uncertified or unavailable for certification.

June 28, 2021

The percent recovery for Bromobenzene fell below the method criteria in the continuing calibration verification. Any result for this analyte, for samples analyzed on this date, may be biased low.

## Notes and Definitions

| | |
|---|---|
| S-04 | The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. |
| J- Report | This sample is reported to the MDL or LOD determined for this method. All confirmed hits above the listed MDL or LOD value and below the RL/LOQ, will be flagged with a "J" result. If an MDL or LOD is not listed, the analyte is ND at the RL. |
| J | Detected but below the RL/LOQ; therefore, result is an estimated concentration. |
| J | Detected but below the RL/LOQ; therefore, result is an estimated concentration. |
| LCC | Leak Check Compound |
| ND | Analyte NOT DETECTED at or above the reporting limit |
| MDL | Method Detection Limit |
| %REC | Percent Recovery |
| RPD | Relative Percent Difference |

All soil results are reported in wet weight.

## Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs through PJLA, accreditation number 69070 for EPA Method TO-15, EPA Method 8260B and H&P 8260SV.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743 & 2745.

H&P is approved by the State of Louisiana Department of Environmental Quality under the National Environmental Laboratory Accreditation Conference (NELAC) certification number 04138.

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at www.handpmg.com/about/certifications.

FAX (213) 266-7600

March 17, 1998

Mr. Gary Mearns
Former Pacific Coast Drum Co.
P.O. Box 3593
South El Monte, CA 91733

SAN GABRIEL VALLEY CLEANUP PROGRAM - NO FURTHER REQUIREMENTS, FORMER PACIFIC COAST DRUM CO., 2200 ROSEMEAD BLVD., SOUTH EL MONTE, CA (FILE NO. 107.0266)

Recent review of files and documents pertaining to this case revealed the following:

1. Based on past inspections by Regional Board staff, areas of concern at the site included: 1) a former gasoline underground storage tank (UST); 2) a drum storage area along the eastern portion of the site; 3) a drum storage area along the southern portion of the site; 4) one clarifier and three sumps; and 5) a drum storage area in the northeast corner of the site.

2. The 12,000-gallon UST was removed and closed by Los Angeles County Department of Public Works in October 1986.

3. In November 1988, a soil assessment was performed and results were submitted by Conservtech in a report dated December 5, 1988. Three borings to a maximum depth of 50 feet below ground surface (bgs) were drilled near the clarifier and sumps area. Maximum concentrations of acetone (1,150 ug/kg) were detected to five feet bgs; and TPH (60 mg/kg) was detected to 40 feet bgs. Two borings were converted to monitoring wells (MW-1 and 2).

4. In August 1990, one monitoring well (MW-3) was installed in the former drum storage area in the northeast corner of the site, and results were submitted by Conservtech in a report dated September 4, 1990. Maximum concentrations of 1,2-DCA (780 ug/kg) and methylene chloride (900 ug/kg) were detected in soil to 30 feet bgs.

5. In September 1991, a soil gas survey was performed and results were submitted by Inland Empire Environmental Service in a report dated October 7, 1991. A total of eighty-five (85) 5-foot probes were installed. Low concentrations of methane and vinyl chloride were detected in the probes. However, QA/QC problems were found in the survey data and results are questionable.

Recycled Paper

6. In August 1994, a soil assessment was performed and results were submitted by Conservtech in a report dated January 12, 1995. A total of sixteen (16) 10-foot borings were drilled in the entire site. Maximum concentrations of 1,1-DCA (5 ug/kg), PCE (150 ug/kg), and TCE (20 ug/kg) were detected to five feet bgs near the **sumps and clarifier area**.

7. In March 1995, a soil gas survey was performed and results were submitted by EST in a report dated April 5, 1995. Four nested probes, each with probes at 1, 15, and 25 feet bgs, were installed near the **sumps and clarifier area**. Maximum concentrations of 1,1-DCA (50 ug/l), c-1,2-DCE (55 ug/l), PCE (134 ug/l), and TCE (38 ug/l) were detected in the probes.

8. In August 1995, a soil gas survey was performed and results were submitted by EST in a report dated September 6, 1995. Four nested probes, each with probes at 1, and 15 feet bgs, were installed in the **former drum storage area to the northeast corner of the site**. Maximum concentrations of DCE (12 ug/l), PCE (241 ug/l) and TCE (21 ug/l) were detected in the probes.

9. In January 1996, a soil gas survey was performed and results were submitted by EST in a report dated February 14, 1996. Four nested probes, each with probes at 1, and 15 feet bgs, were installed in the **former drum storage area to the northeast corner of the site**. Maximum concentrations of BTEX (466 ug/l of total xylenes), PCE (117 ug/l) and TCE (14 ug/l) were detected in the probes.

10. Between April 18, 1997 and January 29, 1998, a total of four nested probes, each with probes at approximately 15 and 20 feet bgs, were sampled to monitor the trend of VOC vapor concentrations in the vadose zone. Based on a total of four sets of vapor monitoring data, PCE, the compound detected at the highest concentrations, reduced from 241 ug/l to 38 ug/l and became stabilized over the monitoring period.

11. Three monitoring wells have been installed and sampled seven times since September 1990. Maximum concentrations of 1,1-DCA (592 ug/l), 1,1-DCE (28 ug/l), 1,2-DCE (1,050 ug/l), PCE (285 ug/l), TCA (89 ug/l), and TCE (215 ug/l) were detected in the groundwater. Highest VOC concentrations were detected in the monitoring well near the **sumps and clarifier area** (MW-2). Depth to groundwater was measured in February 1997 at approximately 21 feet bgs.

12. The subject facility has been notified by the United States Environmental Protection Agency (USEPA) to join the regional groundwater cleanup program.

The above site assessment data demonstrated that releases of liquid wastes from the subject site impacted the soil and groundwater beneath the site. A soil cleanup was not required. Instead, four nested soil vapor probes were sampled four times between April 1997 and January 1998 to monitor the trend of VOC vapor concentrations in the vadose zone between over a year. Such monitoring data suggested that residual VOC concentrations in the vadose zone stabilized or declined over the monitoring period. Therefore, we do not believe that further vapor monitoring is warranted. To date, the subject site has completed Regional Board staff requirements and we will not require any further remedial and investigative work with regarding to the soil contamination.

**Because past operations have impacted groundwater beneath this facility, you remain a potentially responsible party for the regional groundwater cleanup which is being led by USEPA. This Regional Board encourages you to continue to participate and cooperate in the ongoing regional groundwater cleanup. Sampling of the three existing groundwater monitoring wells required by this Regional Board can be discontinued. However, all monitoring wells must be properly maintained and made available for possible future sampling that may be required by USEPA.**

The jurisdiction requirements of other agencies, such as the USEPA, are not affected by this Regional Board's "no further requirement" decision. Such agencies may choose to make their own decisions regarding the groundwater contamination in the region.

ARTHUR G. HEATH, Ph.D.
Environmental Specialist IV

# APPENDIX E

## SCAQMD Rule 1466

(Adopted August 5, 1988)(Amended July 14, 1995)(Amended May 11, 2001)

# RULE 1166. VOLATILE ORGANIC COMPOUND EMISSIONS FROM DECONTAMINATION OF SOIL

(a) Applicability

This rule sets requirements to control the emission of Volatile Organic Compounds (VOC) from excavating, grading, handling and treating VOC-contaminated soil as a result of leakage from storage or transfer operations, accidental spillage, or other deposition.

(b) Definitions

(1) EXCAVATION is the process of digging out and removing materials, including any material necessary to that process such as the digging out and removal of asphalt or concrete necessary to expose, dig out and remove known VOC contaminated soil.

(2) GRADING is the process of leveling off to produce a smooth surface including the removal of any material necessary to that process such as asphalt and concrete necessary to expose known VOC contaminated soil.

(3) SOIL DECONTAMINATION MEASURE is any process approved by the Executive Officer to remediate, destroy, remove, or encapsulate VOC and VOC-contaminated soil.

(4) UNDERGROUND STORAGE TANK means any one or combination of tanks, including pipes connected thereto, which is used for the storage of organic liquid which is more than 50% beneath the surface of the ground.

(5) VOC CONTAMINATED SOIL is a soil which registers a concentration of 50 ppm or greater of Volatile Organic Compounds as measured before suppression materials have been applied and at a distance of no more than three inches from the surface of the excavated soil with an organic vapor analyzer calibrated with hexane.

(6) VOC CONTAMINATED SOIL MITIGATION PLAN is a plan to minimize VOC emissions to the atmosphere during excavation and any subsequent handling of VOC-contaminated soil.

(7) VOLATILE ORGANIC COMPOUND (VOC) is any volatile compound of carbon, excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, ammonium carbonate, and exempt compounds. Exempt compounds are defined in Rule 102—Definition Of Terms.

(8) VOLATILE ORGANIC MATERIALS include gasoline, diesel, crude oil, lubricant, waste oil, adhesive, paint, stain, solvent, resin, monomer, and/or any other material containing VOC.

(c) Requirements

(1) A person excavating an underground storage tank and/or transfer piping storing or previously storing VOC materials, or excavating or grading soil containing VOC materials shall:

(A) Apply for, obtain and operate pursuant to a mitigation plan approved by the Executive Officer prior to commencement of excavation or handling. The mitigation plan general requirement and application requirements are found in Attachment A to this rule. A copy of the approved plan must be on site during the entire excavation period.

(B) Notify the Executive Officer at least 24 hours prior to excavation using a form approved by the Executive Officer which is fully completed.

If the excavation does not commence on start date, renotification is required.

An alternative notification procedure may be authorized for multiple excavations within a single facility, with prior written approval from the Executive Officer.

(C) Monitor for VOC contamination pursuant to subdivision (e), at least once every 15 minutes commencing at the beginning of excavation or grading and record all VOC concentration readings in a format approved by the Executive Officer; and

(D) When VOC-contaminated soil is detected during excavation or grading:

(i) Implement the approved mitigation plan (Attachment A).

(ii) Notify the Executive Officer within 24 hours of detection of VOC-contaminated soil.

(iii) Monitor and record VOC concentration readings as prescribed in the plan. Monitoring records must be kept available on site.

(iv) Keep calibration records for all monitoring instruments available on site.

(2) A person handling VOC-contaminated soil at or from an excavation or grading site shall:

(A) Segregate VOC-contaminated stockpiles from non-VOC contaminated stockpiles such that mixing of the stockpiles does not take place.

(B) Spray VOC-contaminated soil stockpiles with water and/or approved vapor suppressant and cover them with plastic sheeting for all periods of inactivity lasting more than one hour.

(C) Conduct a daily visual inspection of all covered VOC contaminated soil stockpiles to ensure the integrity of the plastic covered surfaces. A daily inspection record must be maintained on site.

(D) Comply with the provisions in subparagraph (c) (1)(A) and clause (c)(1)(D)(i).

(E) Maintain a record of the identification and business addresses of the generator, transporter and storage/treatment facilities. Such record shall be signed by each party at the time custody is transferred.

(F) Treat or remove contaminated soil from an excavation or grading site within 30 days from the time of excavation.

(3) If the VOC concentration in the excavated soil is measured at greater than 1000 ppm, spray the soil with water or vapor suppressant and:

(A) As soon as possible, but not more than 15 minutes, place the soil in sealed containers, or

(B) As soon as possible, but not more than 15 minutes, load into trucks, moisten with additional water, cover and transport off site, or

(C) Implement other alternative storage methods approved in writing by the Executive Officer.

(4) A person treating VOC-contaminated soil shall:

(A) Obtain a permit to construct and operate treatment equipment, as applicable, from the Executive Officer, and

(B) Implement VOC-contaminated soil decontamination measures, as approved by the Executive Officer in writing, which result in Best Available Control Technology applied during all segments, and which include, but are not limited to, at least one of the following:

(i) Installation and operation of an underground VOC collection system and a disposal system prior to excavation.

(ii) Collection and disposal of the VOC from the excavated soil on-site using equipment approved by the Executive Officer.

(iii) Any equivalent VOC-contaminated soil control measure previously approved in writing by the Executive Officer.

(5) A person shall not engage in or allow any on-site or off-site spreading, grading or screening of VOC-contaminated soil, which results in uncontrolled evaporation of VOC to the atmosphere.

(6) Loading trucks for contaminated soil must meet the following:

(A) The truck and trailer shall be adequately tarped prior to leaving the site; no excavated materials shall extend above the sides or rear of the truck or trailer to prevent soil spillage during transport, and

(B) The exterior of the truck, trailer and tires shall be cleaned off prior to the truck leaving the site.

(d) Exemptions

(1) The provisions of this rule shall not apply to the following:

(A) Excavation, handling, and treating of less than one (1) cubic yard of contaminated soil.

(B) Removal of soil for sampling purposes.

(C) Accidental spillage of five (5) gallons or less of VOC containing material.

(2) The provisions of paragraphs (c)(1) and (c)(2) shall not apply to soil excavation or handling as a result of an emergency as declared by an authorized health officer, agricultural commissioner, fire protection officer, or other authorized agency officer. Whenever possible, the Executive Officer shall be notified by telephone prior to commencing such excavation. The Executive Officer shall be notified in writing no later than 48 hours following such excavation. Written notification shall include written emergency declaration from the authorized officer.

(e) Test Methods

(1) A person shall measure excavated soils for volatile organic compounds to determine contamination by:

(A) Using an organic vapor analyzer calibrated with hexane, complying with 40 CFR Part 60 Appendix A, EPA Reference Method 21 Section 3 or any equivalent method with prior approval in writing by the Executive Officer. If other calibrating gases are used, then the measured readings shall be correlated to and expressed as hexane.

(B) Placing the probe inlet at a distance of no more than three inches from the surface of the excavated soil and while slowly moving the probe across the soil surface, observe the instrument readout. If an increased meter reading is observed, continue to sample the excavated soil until the maximum meter reading is obtained. Leave the probe inlet at this maximum reading location for approximately double the instrument response time. If the maximum observed meter reading is greater than the 50 ppm standard in the regulation, record and report the results.

(2) The presence of VOC in stored or spillage materials shall be determined by SCAQMD Method 313 [Determination of Presence of Volatile Organic Compounds (VOC) in Headspace] and/or Method 304 (Determination of Volatile Organic Compounds in Various Materials) contained in the SCAQMD "Laboratory Methods of Analysis for Enforcement Samples" manual.

(f) Enforcement

(1) Violation of any provision of this rule or the violation of the approved mitigation plan shall be grounds for the Executive Officer to amend or revoke the mitigation plan, in addition to penalties provided by the Health & Safety Code.

(2) If the owner or operator is served with a Notice of Violation for creating a public nuisance, the owner or operator shall suspend operation until the public nuisance is mitigated to the satisfaction of the Executive Officer.

ATTACHMENT A
GENERAL MITIGATION PLANS REQUIREMENTS

VOC Contaminated Soil Mitigation Plans shall be written to minimize VOC emissions to the atmosphere during excavation, grading, handling and treatment of VOC contaminated soil. VOC Contaminated Soil Mitigation Plans shall consist of three types: Various Locations, Site Specific and Facility Treatment.

(1) General Requirements

(A) A plan is not transferable.

(B) A person responsible for the excavation, grading or handling of VOC contaminated soil must be completely familiar with the plan and must adhere to the plan requirement. The Executive Officer may require that the plan be signed by the owner and/or operator.

(C) A plan may be amended upon renewal.

(D) Permission to excavate, grade or handle VOC contaminated soil may be withdrawn by the District upon a finding by the Executive Officer that the excavation, grading or handling of the VOC contaminated soil is causing a public nuisance or violating other AQMD rules or regulations.

(2) Various Location Plans:

(A) Shall be limited to the excavation of 2000 cubic yards or less of VOC contaminated soil in any consecutive 12 month period at the same site.

(B) Shall not be used in conjunction with any other various location plan at the same site within a consecutive 12-month period.

(C) Shall expire after one year from issuance unless renewed.

(D) Shall not be issued for nor used for operations that involve grading, soil treatment or remediation, or landfills.

(3) Site Specific Plans:

(A) Shall be for excavation of greater than 2000 cubic yards of VOC contaminated soil.

(B) Shall be issued for specific excavation or grading locations for a period not to exceed two years.

(C) Shall not be renewable.

(4) Facility Treatment Plans:

(A) Shall be issued for a treatment facility at a permanent location.

(B) Shall expire after one year from issuance unless renewed.

(5) Applications for Site Specific Plans shall contain as a minimum:

(A) Reasons for excavation or grading.

(B) Cause of VOC soil contamination and history of the site.

(C) Description of tanks or piping associated with the soil contamination.

(D) An estimate of the amount of contaminated soil.

(E) The operating schedule for excavation and removal.

(F) Description of how the excavation or grading will be conducted.

(G) Description of mitigation measures for dust, odors and VOC.

(H) Details of disposal of VOC contaminated soil, including the ultimate receptor.

(I) Description of monitoring equipment and techniques.

(J) A map showing the facility layout, property line, and surrounding area up to 2500 feet away, and including any schools, residential areas or other sensitive receptors such as hospitals or locations where children or elderly people live or work.

(K) Designation of a person who can conduct a site inspection with the Executive Officer prior to issuance of the plan.

(6) Applications for Facility Treatment Plans shall at a minimum:

(A) Include a list of all AQMD permits to construct or operate which have been issued for that treatment and control equipment.

(B) Provide for the implementation of VOC-contaminated soil decontamination measures, as approved by the Executive Officer in writing, which result in Best Available Control Technology during all operations.

(C) Provide a map showing the facility layout including the location of all proposed VOC and non-VOC contaminated soil stockpiles.

(D) Specify the total amount of VOC contaminated soil proposed to be stockpiled on site.

(E) Provide for VOC contaminated soil stockpiles to be kept moist with water or suppressant and be covered to prevent fugitive emissions.

(F) Provide for VOC contaminated soil stockpiles to be segregated from non-VOC contaminated soil stockpiles.

(G) Provide for maintenance of records for stockpiles according to the source name, address and dates of reception.

(H) Provide for records of the generator, transporter and storage/treatment facilities and indicate their identification and business addresses. Such records shall be signed by each party at the time custody is transferred.

(I) Provide a map showing the facility layout, property line, and surrounding area up to 2500 feet away, and including any schools, residential area or other sensitive receptors such as hospitals, or locations where children or elderly people live or work.

(J) Designation of a person who can conduct a site inspection with the Executive Officer prior to issuance of the plan.

(K) Specify the operating schedule and maximum amount of VOC-contaminated soil proposed to be remediated on a daily basis.

(7) In approving a plan, the Executive Officer require reasonable conditions deemed necessary to ensure the operations comply with the plan and AQMD rules. The conditions may include, but shall not be limited to, procedures for ensuring responsibility for the implementation of the plan, accessibility to the site for AQMD staff, notification of actions required by the plan, identification of emission receptors, monitoring and testing, suppression and covering of stockpiles, prevention of public nuisance from VOC or dust emissions, prevention of fugitive emissions of VOC contaminated soil, loading of truck trailers, and disposal and treatment.

(8) In approving a plan, the Executive Officer may require any records deemed necessary to be maintained by the operator to demonstrate compliance with the plan. Such records shall be retained for at least 2 years and be made available to the Executive officer upon request.

# 1. Introduction

This Limited Soil Remediation Work Plan Addendum (Work Plan Addendum) was prepared by Haley & Aldrich, Inc. (Haley & Aldrich) on behalf of Rosemead Holding, LLC for the former industrial property located at 2200-2226 N. Rosemead Boulevard in South El Monte, California (Site; Figure 1). Environmental investigations and proposed soil removal are being conducted under the oversight of the Los Angeles Regional Water Quality Control Board (LARWQCB).

Assessments were conducted at the Site in 2020 in support of an anticipated sale of the property to Rosemead Holdings, LLC (Ramboll, 2020a and 2020b; EFI, 2020; EEC, 2020). Based on the results of the pre-due diligence assessments, Leighton conducted a follow-up limited subsurface investigation to further characterize metals, polychlorinated biphenyls (PCBs), and volatile organic compounds (VOCs) in soil and soil vapor. The results of the limited investigation were submitted to the LARWQCB in September 2021 (Leighton, 2021). The LARWQCB provided comments on the Limited Soil and Soil Vapor Site Investigation Report on 17 August 2022. Leighton submitted a Limited Soil Remediation Work Plan (LSRWP) for the Eastern Portion of 2200 North Rosemead Boulevard and a Limited Soil Investigation Report to the LARWQCB on 25 April 2023 (Leighton, 2023a and 2023b). In June 2023, Leighton completed an additional investigation to further characterize PCBs in soil. Results of that investigation are included in Table 1.

In January 2024, Haley & Aldrich collected additional soil samples from the eastern portion of the Site to supplement the existing data and further characterize chemicals of potential concern (COPCs) in shallow soil. This Work Plan Addendum supplements the LSRWP with the newly collected data and addresses LARWQCB and Office of Environmental Health Hazard Assessment (OEHHA) comments including those made in a 20 December 2023 conference call with LARWQCB staff. A response to the formal LARWQCB and OEHHA's comments are provided in Appendix A.

Soil vapor investigations were conducted in August/September 2020, June 2021, and March/April 2023 to characterize sub-surface soil vapor conditions. The soil vapor results are summarized in reports by EEC and Leighton (EEC, 2020; Leighton, 2021; EEC, 2023a).

Groundwater assessments were conducted in the 1990s and resulted in a No Further Requirements determination being issued for groundwater by the LARWQCB in March 1998. To support the property sale in 2020, four hydropunch groundwater samples were collected and analyzed for VOCs and select metals. More recently, groundwater sampling was completed in January and May 2023 on three new wells that were installed in December 2022 at the direction of the LARWQCB. Details of the well installation and a summary of the 2020 and 2023 groundwater data are provided in the Well Installation and Sampling Report that was submitted to the LARWQCB in July 2023 (EEC, 2023b).

## 1.1 OBJECTIVES

The objectives of this Work Plan Addendum are to:

- Summarize the supplemental soil sample results;
- Update the human health risk assessment based on OEHHA's comments and new data collected;
- Define remedial action goals for chemicals of concern (COCs) in shallow soil;

- Update the LSRWP remedial excavation implementation plan; and
- Provide a conceptual vapor intrusion pathway mitigation plan for the future on-Site industrial building.

# 2. Site Background and Description

The following sections summarize and update applicable information that was provided in Section 3 of the LSRWP.

## 2.1 SITE LOCATION AND SETTING

The Site is 5.1 acres and consists of Los Angeles County parcel numbers 8102-039-031, 8102-039-035, 8102-039-029, and 8102-039-030. The Site is currently vacant (Figure 2).

## 2.2 SITE HISTORY AND HISTORIC OPERATIONS

As described in the LSRWP, the Site was developed for agricultural purposes from about 1928 through 1948. The Site was then used for the storage of construction equipment until 1959 when Pacific Coast Drum Company redeveloped the Site as a steel drum reconditioning facility. Pacific Coast Drum stopped operations in 1996 and leased the property to Ditty Container, Inc. From 1996 to 2020, the western portion of the Site was occupied by various auto body and repair shops, and the eastern portion of the Site was used for metal drum and plastic tote cleaning and reconditioning operations that included underground storage tanks (USTs), aboveground storage tanks (ASTs), and sumps. Historical operations and recognized environmental conditions are summarized in the Phase I Environmental Site Assessments for 2200 North Rosemead Boulevard and 2212, 2218, 2226 North Rosemead Boulevard (Ramboll, 2020a and 2020b).

Rosemead Holding, LLC acquired the property in December 2020. Demolition of the former buildings was completed in February 2022. The former building concrete slabs and pavement remain intact with limited areas of exposed soil in the southern portion of the Site. The Site is secured with a chain link fence surrounding the property. Access is available via locked gates on the fence.

## 2.3 TOPOGRAPHY

The Site topography is generally flat, with a slight southwesterly slope due to the grading associated with the former buildings and parking lots. The property elevation is approximately 230 feet above mean sea level.

## 2.4 GEOLOGICAL DESCRIPTION

Generally, the soils encountered in the subsurface of the Site consisted primarily of light brown, brown, or dark brown poorly graded sand and clay with varied gravel content, sandy clay, silt, silty sand, and clayey sand ranging between two (2) inches and 4.5 feet in thickness.

Regional geologic setting is described in detail in the LSRWP.

## 2.5 HYDROGEOLOGICAL DESCRIPTION

### 2.5.1 Regional

The Site is located within the San Gabriel Valley Groundwater Basin and within the South El Monte Operable Unit (SEMOU) of the San Gabriel Valley Area 1 Superfund site and includes groundwater

underlying the City of South El Monte and portions of the cities of El Monte and Rosemead. Pacific Coast Drum previously entered into a Consent Agreement with the United States Environmental Protection Agency (USEPA) in 2012 addressing the South El Monte Operable Unit groundwater.

### 2.5.2 Site

Depth to groundwater in the unconsolidated, uppermost water-bearing zone, as measured in monitoring wells installed on-Site in 2023, ranged from 48.30 to 51.40 feet below top of well casing. The groundwater flow direction was determined to be generally south, fluctuating between southwest and southeast (EEC, 2023b). Recent groundwater sampling shows VOCs at or below the maximum contamination levels for drinking water.

## 2.6 SURROUNDING LAND USE

The Site is bounded by the following properties and land uses:

- North: Commercial use – 168 Ace Lumber & Supply (2310 Rosemead Boulevard)
- East: Commercial and industrial uses, including Golden Bee's Transportation (2315 Chico Avenue), LGM Soil Amendments (2213 Chico Avenue), Sierra Landscape Development (2209 ½ Chico Avenue), Porter Manufacturing & Supply Corp (2215 Chico Avenue), and C&H Metal Products (2207 Chico Avenue)
- South: Residential and commercial use, including a trailer park and Kitchen & Bath Direct USA (2128 Rosemead Boulevard).
- West (across North Rosemead Boulevard): Commercial and industrial use, including Tile Depot (2129 Rosemead Boulevard), Highway Machinery Inc. (2207 Rosemead Boulevard), Asia Building Supply (2213 Rosemead Boulevard), and QT Auto Repair & Collision Center (2305 Rosemead Boulevard)

According to the publicly available City of South El Monte Zoning Map, accessed 15 February 2024, the Site and surrounding areas are zoned Commercial-Manufacturing, with nearby areas to the east, south, and west zoned Manufacturing. Other than the trailer park south of the Site, the nearest area zoned for residential use is approximately 1,500 feet southeast of the Property, near the corner of Potrero Avenue and Rush Street.

## 2.7 HISTORICAL PROPERTY-WIDE INVESTIGATIONS

Historical Site investigations and assessments are described in Section 3.4 of the LSRWP. Supplemental investigations completed in 2024 are presented in Section 3.

# 3. Supplemental Soil Investigation Sampling

COPCs in shallow soil were defined in the LSRWP as those constituents detected at greater than the laboratory reporting limit. COCs were defined as COPCs that exceed risk thresholds. COCs were identified in the LSRWP as hexavalent chromium and lead (Leighton, 2023a). Other COPCs that were evaluated as potential risk drivers in this Work Plan Addendum include PCBs, arsenic, and total petroleum hydrocarbons (TPH).

As PCB-impacted soil is regulated by the USEPA 40 Code of Federal Regulations (CFR) §761, a Toxic Substances Control Action (TSCA) Application for Risk-Based Cleanup Approval (TSCA Cleanup Plan) was submitted to the USEPA on 11 March 2024. The proposed cleanup will include the removal and disposal of soil with PCBs exceeding 1 mg/kg, which is consistent with self-implementing cleanup levels established in 40 CFR §761.61(a).

In January 2024, Haley & Aldrich completed soil sampling to further characterize COPCs in shallow soil. The goal of this supplemental soil sampling program was to further delineate the lateral and vertical extent of soil impacts to support remediation planning and Site redevelopment. The characterization program included the collection and laboratory analysis of 82 soil samples from 23 soil boring locations, some of which included locations that were previously sampled. Supplemental soil sample locations are shown on Figures 3 through 7.

Previous PCB soil analytical results are summarized in Table 1 and corrected for dry weight. Previous arsenic, hexavalent chromium, and lead soil analytical results are summarized in Table 2. Previous TPH soil analytical results are summarized in Table 3.

The following activities were completed as part of the supplemental soil sampling program.

## 3.1 PREMOBILIZATION AND PLANNING

The following work was completed prior to the start of soil sampling activities:

- Coordinated Site access and marked out boring locations in the field;
- Prepared a Site-specific Health and Safety Plan (HASP); and
- Notified Underground Service Alert 72 hours prior to mobilization and retained an independent geophysical utility locator to clear boring locations prior to sub-surface drilling activities.

## 3.2 SOIL BORING ADVANCEMENT, SAMPLING, AND ANALYSIS

### 3.2.1 Soil Sample Collection

Soil borings were advanced using hand-auger and direct-push drilling methods as appropriate given subsurface conditions. Hand auger samples were collected using a dedicated liner for each sample, which was also used as a sample container for transport to the lab for analysis. Where direct-push drilling techniques were used, soil samples were collected using an acrylic liner inside the core barrel. The soil core was logged using the Unified Soil Classification System. Non-dedicated tooling was decontaminated between boreholes using a three-rinse wash.

Samples were placed in a cooler on ice and shipped under standard chain-of-custody protocol to Eurofins' Cleveland laboratory located in Barberton, Ohio for PCB analysis and Eurofins Calscience in Tustin, California for other analyses.

### 3.2.2 Laboratory Analysis

Soil samples were analyzed for one or more of the following COPCs:

- PCBs by USEPA Methods 8082A and 3540C (Soxhlet Extraction);
- Moisture Content by USEPA Method 2540G;
- Arsenic and Lead by USEPA Method 6010B;
- Hexavalent Chromium by USEPA Method 7196A and 3060A (Alkaline Digestion);
- Total Petroleum Hydrocarbons, Diesel Range Organics (TPH-D) by USEPA Method 8015B; and
- pH by USEPA Method 9045D.

## 3.3 SUPPLEMENTAL SOIL INVESTIGATION ANALYTICAL RESULTS

Supplemental soil investigation analytical results are summarized below. Laboratory reports are included in Appendix B and a Data Usability Summary Report is included as Appendix C. Field forms are included in Appendix D.

### 3.3.1 PCB Results

PCBs were detected in 17 out of 82 samples originating from 12 of 23 locations sampled. Detected concentrations of total PCBs ranged from 0.24J mg/kg at LV-9 (a resample of a prior sampling location) at 1 ft below ground surface (bgs) to 65 mg/kg at HA-SB-07 at 0.5 ft bgs. PCB soil sample laboratory results are summarized in Table 4 and shown on Figure 3.

### 3.3.2 Lead Results

Lead was detected in all 16 samples collected from all 12 locations. Detected concentrations of lead ranged from 2.78 mg/kg at LV-15-02-E at 1 ft bgs to 2,540 mg/kg at HA-SB-25 at 2 ft bgs. Lead soil sample laboratory results are summarized in Table 5 and shown on Figure 4.

### 3.3.3 Arsenic Results

Arsenic was detected in 17 of 20 samples originating from 13 of 14 locations sampled. Detected concentrations of arsenic ranged from 2.68 mg/kg at LV-15-01-W at 7.5 ft bgs to 10 mg/kg at LV-15-03-S at 7.5 ft bgs. Arsenic soil sample laboratory results are summarized in Table 5 and shown on Figure 5.

### 3.3.4 Hexavalent Chromium Results

Hexavalent chromium was detected in one of two samples. Hexavalent chromium was detected at 8.31 mg/kg at HA-SB-16 at 1 ft bgs. Hexavalent chromium soil sample laboratory results are summarized in Table 5 and shown on Figure 6.

### 3.3.5 TPH Results

TPH-D was detected in two samples originating from two locations. TPH-D concentrations were 25 mg/kg at HA-SB-18 at 5 ft bgs and 150 mg/kg at HA-SB-27 at 2 ft bgs. TPH-D soil sample laboratory results are summarized in Table 6 and shown on Figure 7.

### 3.3.6 Moisture Content and pH

Moisture content was analyzed to correct the PCB results for dry weight and pH was used to update the Technical Memorandum for the Evaluation and Development of a Site-Specific Screening Level for Protecting Groundwater from Lead Impacts and Shallow Soil (Appendix E).

# 4. Human Health Risk Evaluation Summary

A risk assessment for the Site was previously submitted to the LARWQCB on 18 November 2022, as part of a Preliminary Endangerment Assessment (PEA) Report (ENVIRO-TOX Services, 2022). An update to the human health risk evaluation was prepared by Haley & Aldrich to address specific comments regarding the PEA Report that were provided by the OEHHA on 12 July 2023. The OEHHA comments and responses to those comments are provided in Appendix A. The human health risk evaluation is provided as Appendix F. This section summarizes the approach, findings, and conclusions from the human health risk evaluation conducted for the Site.

## 4.1 APPROACH

The primary purpose of the human health risk evaluation is to determine whether the levels of chemicals detected in soil and soil vapor at the Site would pose a potential risk to human health based on the current and potential future property uses of the Site. The human health risk evaluation for the Site includes potential subsurface excavation scenarios and reasonably anticipated future land use scenarios. The results of the risk evaluation will be used to assist in identifying areas of the Site where remediation, or other forms of risk management, may be appropriate, with the overall goal of long-term protection of human health and the environment.

The methodology used in this human health risk evaluation is consistent with risk assessment guidelines provided by the USEPA's "Risk Assessment Guidance for Superfund, Volume I, Human Health Evaluation Manual (Part A), Interim Final" (USEPA, 1989) and by the DTSC's "Preliminary Endangerment Assessment Manual" (DTSC, 2015). Human health risks were evaluated for hypothetical future on-Site receptors, which include construction workers assumed to be involved in the redevelopment of the Site and on-Site non-intrusive (commercial/industrial) workers assumed to be present following such redevelopment.

The environmental data, COPCs, potentially exposed populations, and exposure pathways evaluated in the human health risk evaluation are discussed in the following sections.

### 4.1.1 Data Evaluation and Selection of Chemicals of Potential Concern

As mentioned in the LSRWP, environmental investigations at the Site date back to the 1980s with multiple soil, soil vapor, and groundwater investigations being conducted between 1986 and 1998; followed by additional soil and soil vapor investigations in 2020 and 2021 to evaluate site conditions in advance of planned demolition and industrial redevelopment. These Site investigation data, as presented in the previous PEA Report for the Site, were included in the human health risk evaluation in addition to soil and soil vapor data collected as part of the groundwater and soil vapor investigations that were completed in March/April 2023 and January 2024. Data collected during these investigations were included in the datasets used in the human health risk evaluation with exceptions noted in the sections below.

#### *4.1.1.1 Soil*

Soil data considered relevant for a human health risk evaluation for the Site (including potential subsurface excavation and reasonably anticipated future land use) typically include data for soil samples

from depths up to and including 10 feet bgs, as 10 feet is generally considered the maximum depth for excavation activities associated with subsurface maintenance work or site redevelopment.

Site soil data sets were provided in summary tables with results reported only for VOCs that were detected in soil at the Site. Therefore, non-detect VOC results for certain soil samples collected between October 2020 and February 2023 were not included in the human health risk evaluation.

DTSC guidance (1997, 2015) calls for the exclusion of inorganic compounds, specifically metals, from the quantitative risk assessment if they are detected at levels within the local background/ambient concentrations (hereafter referred to as simply "background"). As described in the PEA Report previously prepared for this Site (2022), the background metal data set was obtained from soil metal data collected from California Air Force facilities (Hunter, Davis, and Roach, 2004). Maximum detected soil metal concentrations at the Site were compared to the 95th percentile concentration obtained from the California Air Force facilities. Any metal detected in soil at concentrations higher than the 95th percentile background concentration were retained as COPCs. As a result, antimony, arsenic, barium, cadmium, total chromium, hexavalent chromium, cobalt, copper, mercury, molybdenum, nickel, silver, and zinc were included as COPCs in the human health risk evaluation. The selection of metal COPCs is presented in Table 1 of the human health risk evaluation (Appendix F).

The chemicals detected in on-Site soil (0 to 10 feet bgs) included in the human health risk evaluation as COPCs consist of: various VOCs; TPH-D, TPH-gasoline range organics (GRO), TPH-motor oil (MO), various PAHs, metals determined to be above background/ambient levels, and PCBs Aroclor-1242, Aroclor-1248, Aroclor-1254, Aroclor-1260, Aroclor-1262, and Aroclor-1268 (Table 1 of Appendix F).

#### *4.1.1.2 Soil Vapor*

Historical soil vapor data was reviewed in the context of more current soil vapor data, where available, to determine if historical results were no longer representative of current subsurface soil vapor conditions. All soil vapor data collected prior to the 2020 sampling event are no longer considered representative of current conditions and were not used in the human health risk evaluation. In addition, because targeted soil vapor extraction was conducted by EEC, the following soil vapor sample results collected in October 2020 and June 2021 from within the radius of influence of the SVE system are not considered to be representative of current subsurface soil vapor conditions and were not included in the human health risk evaluation: HP-1, HP-2, HP-3, SB-26, SB-27, SB-28, SB-29, SB-30, SB-31, SB-32, SB-33, LV-3, LV-5, LV-6, LV-7, and LV-9. All VOCs detected in soil vapor samples collected at the Site were included in the human health risk evaluation (Table 2 of Appendix F).

### 4.1.2 Potentially Exposed Populations and Exposure Pathways

The Site is currently unoccupied and is located within an industrialized area of South El Monte, California. Proposed industrial development of the Site consists of one three-story building, with a total building footprint of approximately 122,555 $ft^2$. Planned future use of the first floor includes approximately 112,405 $ft^2$ of warehouse space, 8,200 $ft^2$ of retail space, and 1,950 $ft^2$ of office space. Based on the proposed development plans, hypothetical future land use at the Site was assumed to consist only of commercial/industrial use. Accordingly, the focus of the human health risk evaluation is on those exposure pathways that realistically would be considered complete for the commercial/industrial land use scenario should the subsurface COPCs be brought to the surface during redevelopment where exposure could occur. A construction scenario was also included to evaluate

potential exposure during redevelopment of the Site and/or short-term intrusive activities associated with utility-line work. For these scenarios, it was assumed that existing ground cover including all hardscape would be removed, and that redevelopment of the Site could result in significant disturbance of the existing topography in which excavated soil is left at the surface, such that hypothetical future receptors would be potentially exposed to COPCs in on-Site soil (0 to 10 feet bgs). The potentially complete pathways through which hypothetical future on-Site populations may be exposed to COPCs in on-Site soil (0 to 10 feet bgs) or on-Site soil vapor include the following:

***Hypothetical Future On-Site Non-Intrusive Worker***

- incidental soil ingestion;
- dermal contact with soil;
- inhalation of particulates in outdoor air; and
- inhalation of volatiles migrating from soil up through the soil column (as soil vapor) into indoor and outdoor air.

***Hypothetical Future On-Site Construction Worker***

- incidental soil ingestion;
- dermal contact with soil;
- inhalation of particulates in outdoor air; and
- inhalation of volatiles migrating from soil up through the soil column into outdoor air.

Exposure pathways considered incomplete and/or insignificant were not included in the risk evaluation. Exposure pathways considered incomplete and/or insignificant are discussed below:

- **Exposures related to groundwater:** The LARWQCB issued a NFR letter in March 1998 related to groundwater at the Site. As such, consistent with the 2022 PEA Report, potential exposure to groundwater is not evaluated as part of this human health risk evaluation; and
- **Exposures related to the surface water runoff pathway:** Surface water runoff from the Site flows into a storm water collection system before discharging to a city storm drain, and therefore presents no exposure opportunities. Thus, the surface water runoff pathway is considered incomplete under current or future conditions and is not evaluated in the human health risk evaluation.

## 4.2 FINDINGS AND CONCLUSIONS OF THE RISK EVALUATION

This human health risk evaluation was conducted to determine whether the levels of chemicals detected at the Site would pose a potential risk to human health based on the current and potential future property uses at the Site. The results of the human health risk evaluation will be used to assist in identifying areas of the Site where remediation, or other forms of risk management, may be appropriate to reduce risks to levels that would be fully protective of human health and the environment.

In sum, the results of the human health risk evaluation support the following:

- VOCs detected in soil vapor may require remediation, mitigation, or other form of risk management (e.g., institutional controls) prior to the redevelopment of the Site for future commercial/industrial land use purposes.
- Levels of PCBs, lead, arsenic, and hexavalent chromium in soil at the Site may require some remediation, mitigation, or other form of risk management (e.g., institutional controls) prior to the redevelopment of the Site for future commercial/industrial land use purposes.
- Levels of PCBs, lead, arsenic, and hexavalent chromium in soil at the Site may require some remediation, mitigation, or other form of risk management to protect the health of hypothetical future on-Site construction workers involved in the redevelopment of the Site for commercial/industrial land use purposes.

# 5. Remedial Action Goals for Shallow Soil

Site characterization activities indicate the presence of COPCs in soil at the Site, which warrant some sort of risk management to be fully protective of human health and the environment. Remedial Action Objectives (RAOs) have been developed based on current environmental conditions and the planned future use of the Site. The RAOs established for the Site include:

- Protect human health and the environment by limiting exposures to COPCs in soil through inhalation, dermal contact, and ingestion.
- Reduce human health-based risks associated with the COPCs in soil to a level that is acceptable for future commercial development with minimized restrictions.
- Ensure that concentrations of COPCs remaining in soil are protective of human health and the environment to the extent practicable.
- Prevent future impacts to groundwater through source removal, reduction, and/or containment.

RAOs were designed to protect human health and the environment by addressing 1) the contaminant and media of concern; 2) the exposure route(s) and receptor(s); and 3) the cleanup goal. The RAOs are based on the results of the human health risk evaluation summarized in Section 4.0.

Based on the RAOs, cleanup goals were developed that establish specific concentrations of chemicals in environmental media that are protective of both human health and the environment.

As concluded in the human health risk evaluation, levels of PCBs, lead, arsenic, and hexavalent chromium in soil may require remediation or other form of risk management (e.g., institutional controls) prior to the redevelopment of the Site for future commercial/industrial land use purposes. In order to meet the overall RAO, soil remedial action goals (RAGs) were developed.

## 5.1 SOIL REMEDIAL ACTION GOALS

The proposed soil RAGs are used to identify areas of the Site where some form of mitigation is required to meet the RAOs. The soil RAGs proposed for the COCs in soil were developed based on ambient-based (background) screening concentrations (ABSCs) or risk-based screening concentrations (RBSCs) developed in the human health risk evaluation (see Appendix F) that are considered safe and protective of future on-site uses, namely commercial populations. The methodology used to derive the ABSCs and RBSCs are described in detail in the human health risk evaluation (Appendix F).

For lead, a soil screening level (SSL) for the protection of groundwater was also considered in selecting a soil RAG for lead. An SSL for the protection of groundwater of 1,500 mg/kg for lead impacts in shallow soil was developed for the Site. The methodology and Site-specific parameters and assumptions used to develop the SSL are described in detail in a technical memorandum (see Appendix E). The RBSC for lead of 500 mg/kg is lower than SSL and, therefore, will be protective of soil leaching to groundwater pathway for lead. As such, the RBSC for lead of 500 mg/kg is selected as the soil RAG for lead.

Ambient (or "background") soil concentrations of arsenic commonly exceed concentrations corresponding to incremental lifetime excess cancer risk of one-in-one million ($1 \times 10^{-6}$). Because it is not usually possible or practical to reduce concentrations below background levels, the risk management objective normally imposed by regulatory agencies in these situations is to remediate a site to ambient levels. The ABSC for arsenic is 11 mg/kg based on (i.e., rounded up from) the upper bound of the Site-specific soil arsenic concentration of 10.63 mg/kg developed in the PEA Report (ENVIRO-TOX Services, Inc., 2022) and is selected as the soil RAG for the Site.

For PCBs, an RBSC of 0.6 mg/kg was developed for each of the individual Aroclors detected in soil at the Site, i.e., Aroclors-1242, -1248, -1254, -1260, -1262, and -1268. As indicated previously, PCB impacted soil is regulated by the USEPA 40 CFR §761. A TSCA Cleanup Plan was submitted to the USEPA on 11 March 2024. The proposed cleanup will include the removal and disposal of soil with PCBs exceeding 1 mg/kg. The proposed TSCA cleanup level of 1 mg/kg for total PCBs is lower than the sum of the RBSCs for all the Aroclors detected in soil and therefore, would be considered safe and protective of future on-site commercial populations. As such, the TSCA cleanup level of 1 mg/kg is selected as the soil RAG for total PCBs.

As discussed in the human health risk evaluation (see Appendix F), overly conservative exposure assumptions are used in the particulate inhalation pathway evaluation for the hypothetical future construction worker scenario. Remediation to the RBSC for the hypothetical future on-Site non-intrusive worker for hexavalent chromium of 6.2 mg/kg would be protective of the hypothetical future construction worker. As such, the RBSC for the hypothetical future on-Site non-intrusive worker of 6.2 mg/kg is selected as the soil RAG for hexavalent chromium.

Although TPH was not identified as a primary risk driver in the human health risk evaluation, elevated levels of TPH were detected in limited areas at the Site (see Figure 7). The RBSCs for the hypothetical future on-Site non-intrusive worker of 1,100 mg/kg, 1,900 mg/kg, 79,000 mg/kg are selected as the soil RAGs for TPH-D, TPH-GRO, and TPH-MO, respectively.

The soil RAGs for this Site are summarized below and in Table 7:

- Total PCBs: 1 mg/kg
- Lead: 500 mg/kg
- Arsenic: 11 mg/kg
- Hexavalent chromium: 6.2 mg/kg
- TPG-D: 1,100 mg/kg
- TPH-GRO: 1,900 mg/kg
- TPH-MO: 79,000 mg/kg

RAGs are a starting point for making risk management decisions and a tool for defining and guiding the extent and depths of the soil remediation. Following completion of the remediation activities, soil data representing post-remediation conditions at the Site, including results of confirmation soil samples discussed in Section 7.2.3, will be evaluated to confirm attainment of the RAOs. A post-remediation risk evaluation will be conducted, as described in Section 7.3, to evaluate the overall effectiveness of the remediation in achieving the stated RAOs. The post-remediation risk evaluation will assess whether the RAOs have been attained and will provide the basis for any additional mitigation measures and

institutional controls that will be appropriate to ensure the long-term protection of human health associated with residual impacts that remain at the Site.

# 6. Nature and Extent of Chemicals of Concern

A summary of the nature and extent of COCs based on previous investigation and assessments and the most recent supplemental soil investigation is provided below.

## 6.1 PCBS

PCB sample results are summarized below and in Tables 1 and 4 and shown on Figure 3.

### 6.1.1 Surface Concrete

PCBs were detected in four of 42 surface concrete samples that were collected on a 50-foot grid. PCBs were not detected in the remaining surface concrete samples. The maximum concentration detected was 0.263 mg/kg at location LP-29. PCBs were not detected greater than the RAG of 1 mg/kg in any concrete surface samples.

### 6.1.2 Soil

The soil characterization dataset for PCBs from previous and recent investigations includes a total of 411 soil samples collected from the surface to depths up to 20 ft bgs. PCB concentrations exceeded 50 mg/kg in four samples and are between 50 mg/kg and the RAG of 1 mg/kg in 49 samples. The maximum PCB concentration detected was 116 mg/kg at soil boring LP-15.

The soil sampling results indicate that concentrations of PCBs exceeding the RAG of 1 mg/kg are limited to shallow soils less than 5 ft bgs. Results regarding the characterization of PCBs and subsequent remedial activities have been presented to USEPA as part of a TSCA application to address PCBs in shallow soil.

## 6.2 METALS

### 6.2.1 Soil

The soil characterization dataset from previous and recent investigations for metals includes a total of 260 soil samples collected between depths of 0.5 to 20 ft bgs. Lead was identified in 243 soil samples at depths ranging from 0.5 to 20 ft bgs and exceeded the RAG of 500 mg/kg in 26 samples. Arsenic was identified in 188 soil samples at depths ranging from 0.5 to 20 ft bgs and exceeded the RAG of 11 mg/kg in ten samples. Hexavalent chromium was identified in 13 soil samples at depths ranging from 0.5 to 10 ft bgs and exceeded the RAG of 6.2 mg/kg in three samples.

The soil sampling results indicate that concentrations of metals exceeding RAGs are limited to shallow soils less than 7.5 ft bgs (5 samples) and a majority of the exceedances are less than 3 feet deep. The vertical extent of metals impacts have been adequately characterized. The horizontal extent of metals impacts have been characterized except for limited data gaps at one location on the southeast portion of the site at sample HA-SB-15 for lead and the southern portion of the Site at sample HA-SB-16 for hexavalent chromium as shown on Figures 4 and 6. Additional soil data will be collected during the confirmation sampling program to fill these data gaps.

## 6.3 TPH

### 6.3.1 Soil

The soil characterization dataset from previous and current investigations for TPH includes a total of 201 soil samples. Of those, TPH-D concentrations exceeded the RAG of 1,100 mg/kg in ten samples and TPH-GRO concentrations exceeded the RAG of 1,900 mg/kg in three samples. No exceedances of the RAG for TPH-MO were reported in soil samples collected at the Site.

The soil sampling results indicate that concentrations of TPH exceeding RAGs are limited to shallow soils less than 5 ft bgs, and that the vertical extent of TPH impacts at the Site has been adequately characterized. The horizontal extent of TPH impacts have not been fully delineated in the western portion of the site at LV-7 as shown on Figure 7. Additional soil data will be collected during the confirmation sampling program to fill this data gap.

# 7. Remedial Excavation Implementation Plan

Site remediation activities will include the excavation and disposal of COC-impacted soils. The following sections supplement the remedial excavation implementation plan that was included in the LSRWP.

As presented earlier, PCB-impacted soil is regulated by the USEPA 40 CFR §761 and will be managed with the USEPA as the lead agency in accordance with the TSCA Cleanup Plan that was submitted to the USEPA on 11 March 2024. Other COCs are generally co-located with PCB shallow soil impacts and will therefore be removed during the TSCA remedial excavation program. Planned excavation locations for each COC that are within and outside of the proposed PCB excavation limits are shown on Figure 8. Planned remedial soil excavation volumes are shown by depth and COC in Tables 8 and 9.

## 7.1 PRE-EXCAVATION ACTIVITIES

### 7.1.1 Site Preparation

Activities prior to mobilization to the Site will include coordinating Site access, inspections, surveying, demarcating proposed excavation limits, and installing temporary fencing around the proposed excavations, if required.

Trees, shrubs, bushes, and vegetation on the Site will be cleared to allow access for construction work to take place.

A tracking control (mud mat) and an access/haul road will be constructed to reduce the tracking of soil off-site. Street cleaning will be conducted as needed.

The topography of the Site is relatively flat. Erosion control equipment including a silt fence will be installed around the perimeter of the Site in accordance with a Site-specific SWPPP. Erosion control measures will remain in place and maintained until Site improvements are complete.

### 7.1.2 Utility Clearance

Utility clearance will include notification of the local Underground Services Alert at least 72-hours prior to mobilization and a geophysical survey to identify shallow-buried utilities or obstructions at each excavation location.

### 7.1.3 Permits

See Section 7.0 in the LSRWP.

### 7.1.4 CEQA

The City of South El Monte is in the process of finalizing an Initial Study in accordance with the California Environmental Quality Act (CEQA) requirements. The Initial Study concluded that a Mitigated Negative Declaration (MND) was appropriate for the proposed Site improvements. The CEQA Initial Study public notice and comment period is expected to occur in April/May 2024.

### 7.1.5 HASP

Work activities involving excavation or soil disturbance in areas potentially impacted with chemicals at concentrations greater than the removal criteria will be conducted in accordance with health and safety protocols in the OSHA Title 29 CFR §1910.120 (Hazardous Waste Operations and Emergency Response) and the CCR Title 8, Sections §5144 and §5192. The Site-specific health and safety plan (HASP) will be updated prior to mobilization. On-site staff will be required to comply with the HASP. Daily site safety meetings will be attended by all on-Site staff and will be held at the start of each workday. Personnel visiting the Site will also review and comply with the HASP. Safety meeting attendance will be documented using a daily tailgate meeting sign-in sheet.

### 7.1.6 Air Monitoring

See Section 5.3 of the LSRWP.

### 7.1.7 Site Security

Site security and control of access to the construction area will be maintained to control unauthorized entry, injury, vandalism, and theft. Access gates to the work area will be closed and locked at the end of each workday for security purposes. Gates shall not be left open or unattended.

### 7.1.8 Notifications

The USEPA and LARWQCB will be notified a minimum of two weeks prior to mobilization.

## 7.2 EXCAVATION ACTIVITIES

As shown in Table 8, 4,999 in-place cubic yards of COC-impacted soil will be excavated to a maximum depth of 8.5 feet. Remedial excavation limits are shown on Figure 8. The excavated soil will be segregated, stockpiled, sampled, profiled, and disposed at an appropriate waste disposal facility in accordance with the LSRWP.

### 7.2.1 Soil Removal

PCB impacted soil that exceeds the RAG of 1 mg/kg will be managed according to the TSCA Cleanup Plan under the oversight of the USEPA. Approximately 93.5% of the planned excavation volume (4,670 in-place cubic yards) is PCB-related and 6.5% (329 in-place cubic yards) is related to other COCs that are located outside of the lateral and vertical limits of the planned PCB-related excavation. The planned excavation volume for other COCs (lead, arsenic, hexavalent chromium, TPH) totals 623 in-place cubic yards. Of that total volume, 295 in-place cubic yards is co-located with PCB impacted soil and will be managed in accordance with the TSCA Cleanup Plan. The remainder of the planned excavation volume (329 in-place cubic yards) will be managed in accordance with this LSRWP Addendum. The planned excavation volume, co-located volume, and total depth for each COC is shown in Table 9.

### 7.2.2 Confirmation Sampling

Confirmation sampling for PCB-impacted soil will be completed in accordance with the TSCA Cleanup Plan. Confirmation samples for other COCs will be collected from the side wall and floor of the excavations after the excavation limits have been reached. Lead, arsenic, hexavalent chromium, and TPH confirmation sampling will be completed as prescribed in Section 6.2 of the LSRWP.

### 7.2.3 Deep Excavations

In accordance with OSHA requirements (29 CFR §1926.650, 29 CFR §1926.651, and 29 CFR §1926-652) excavations will not be entered when depths exceed four feet without:

- Sloping, benching, shoring, or trench boxes;
- A safe way to enter and exit the excavation; and
- Daily inspections by a trained Excavation Competent Person.

When excavations depths exceed 4 feet, confirmation samples will be collected from the sidewall and floor of the excavation using the bucket of the excavator.

### 7.2.4 Stockpiled Soil and Waste Soil Management

#### *7.2.4.1 Stockpile Management*

In addition to the stockpile management procedures described in Section 5 of the LSRWP, the following sampling and soil re-use requirements will be followed. The planned remedial excavations will be completed prior to the start of Site-wide grading activities. If previously unidentified potentially impacted soil is encountered during soil removal or grading activities, it will be segregated and tested according to the DTSC's Information Advisory on Clean Imported Fill Material. Stockpiled soil that exceeds the RAGs will not be re-used onsite. If stockpiled soil sampling results indicate RAGs are not exceeded, the stockpiled soil may be re-used on-Site. Previously unidentified potentially impacted stockpile soil sampling will be completed as follows:

| **Volume of Stockpile** | **Samples per Volume** |
|---|---|
| Up to 1,000 cubic yards | 1 sample per 250 cubic yards |
| 1,000 to 5,000 cubic yards | 4 samples for the first 1,000 cubic yards and 1 sample for each additional 500 cubic yards |
| More than 5,000 cubic yards | 12 samples for the first 5,000 cubic yards and 1 sample for each additional 1,000 cubic yards |

Soil samples will be analyzed for Site-specific COCs or as indicated by field observations. See Section 6.1 in the LSRWP for more information on stockpile management.

#### *7.2.4.2 Waste Classification and Disposal*

See Section 6.5 in the LSRWP.

### 7.2.5 Backfill

Excavations will be backfilled with clean on-Site overburden soil or stockpiled soil that meets RAGs. If excavation volumes increase based on confirmation sample results and import soil is required, the import soil will be from a clean source and test results will be provided to LARWQCB. Alternatively, if import soil does not have test results available, sampling and analysis will be coordinated with the LARWQCB and test results will be provided for review and concurrence.

## 7.3 POST-REMEDIATION RISK EVALUATION

A post-remediation human health risk evaluation will be conducted to document the overall effectiveness of the remediation activities in reducing the concentrations of residual chemicals in Site soil, thereby reducing potential future risks to human health and the environment. The post-remediation human health risk evaluation provides the technical basis for the proposed mitigation measures (i.e., a cap) and proposed institutional controls (i.e., deed restrictions in the form of an LUC) appropriate to ensure long-term protection of human health associated with residual levels of chemicals that are remaining in soil.

## 7.4 REPORTING

See reporting requirement in Section 8.0 of the LSRWP.

## 7.5 SCHEDULE

The anticipated implementation schedule for the remedial work is presented below.

| TASK | SCHEDULE AND DURATION |
|---|---|
| USEPA and LARWQCB Notification | Minimum 2 weeks prior to mobilization |
| Preparation and Mobilization | 10 Days |
| Remedial Soil Excavation Implementation | Approximately 45 Days |
| Reporting | 90 days following remedial construction completion. |

# 8. Vapor Intrusion Pathway Mitigation Plan

## 8.1 SOIL VAPOR ANALYTICAL RESULTS

Numerous soil vapor assessments have been conducted at the Site since 1991. More recently, soil vapor investigations were completed in August/September 2020, June 2021, and March 2023. Sample results indicate residual VOCs including tetrachloroethene (PCE), trichloroethene (TCE), and vinyl chloride are present in soil vapor at concentrations that may require remediation or risk management (Figure 9). Maximum concentrations of VOCs detected in soil vapor since 2020 are presented below:

| VOC | Depth (ft bgs) | Maximum Concentrations (µg/m3) | Location | Comment |
|---|---|---|---|---|
| PCE | 5 | 18,000 | HP-2 | Prior to SVE |
| | 15 | 100,000 | SB-30 | Prior to SVE |
| | >15 | 25,000 | HP-2 | Prior to SVE |
| TCE | 5 | 6,000 | SB-21 | Prior to SVE |
| | 14 | 10,000 | LV-4 | Prior to SVE |
| | >15 | 8,600 | HP-2 | Prior to SVE |
| Vinyl Chloride | 5 | 17,000 | HP-4 | Prior to SVE |
| | 15 | 20,000 | SB-29 | Prior to SVE |
| | >15 | 11,000 | HP-4 | Post-SVE |

The most recent soil vapor analytical results are presented in a Soil Vapor Assessment Report dated April 2023 (EEC, 2023a).

## 8.2 SOIL VAPOR EXTRACTION

Following demolition of the former on-Site structures, a soil vapor extraction (SVE) pilot test was conducted to address VOC soil vapor impacts. The SVE system consisted of six dual-nested soil vapor extraction wells, a 500 standard cubic feet per minute blower, a knockout vessel, two 1,000-pound granular activated carbon vessels and associated conveyance piping. The SVE system layout is shown on Figure 9. The SVE pilot test was conducted from July to December 2022. The system removed approximately 28.8 pounds of VOC mass during operation. As noted in a letter to the LARWQCB from EEC Environmental, SVE operations were shut down in December 2022, because the system could not effectively remediate on-Site VOC impacts due to the continued migration of off-Site VOCs from the adjacent Chemrite site (EEC, 2023c).

## 8.3 VAPOR INTRUSION MITIGATION

The findings and conclusion of the risk assessment stated that VOCs detected in soil vapor may require some remediation or other form of risk management (e.g., institutional controls) prior to the redevelopment of the Site for future commercial/industrial land use purposes. The following sections summarize the use of a vapor intrusion mitigation system (VIMS) to meet the RAOs.

### 8.3.1 Property Use

As mentioned, Site redevelopment is proposed as an industrial three-story building, with a total building footprint of approximately 122,555 $ft^2$. Planned future use of the first floor includes approximately 112,405 $ft^2$ of warehouse space, 8,200 $ft^2$ of retail space, and 1,950 $ft^2$ of office space. Based on the proposed development plans, hypothetical future land use at the Site is assumed to consist only of commercial/industrial use. To mitigate potential vapor intrusion risks associated with VOCs in soil and soil vapor, it is proposed that VIMS components be incorporated into the future building design.

### 8.3.2 Conceptual VIMS

The installed VIMS will consist of an SSV system and an impervious vapor control barrier. The equipment and material used to construct the VIMS are described in further detail in the subsections below.

The VIMS will operate as a passive system (i.e., without mechanical ventilation). A conceptual VIMS layout is provided in Figure 10 of this Report. A plan set and equipment manufacturer specification sheets will be provided following approval of the conceptual VIMS. The VIMS features described in the following sections are representative of the conceptual VIMS (e.g., SSV system, vapor control barrier, sub-slab vapor sampling probes) and include the additional typical components of VIMS (e.g., seals at conduits and penetrations, vent risers, utility trench vapor cut-off barriers). The details of the conceptual VIMS are summarized in the following sections and may be modified during development of the final VIMS design.

#### *8.3.2.1 Sub-slab Ventilation*

The VIMS will include a venting system located beneath the vapor control barrier. The venting system will consist of a 3-inch gravel layer, low-profile collection pipe located within the gravel layer, and vent risers. The gravel layer will underlie the entire building's footprint apart from column footings, interior grade beams, and exterior footings. The low-profile collection pipe will consist of GeoVent™ or equivalent. The SSV system will passively vent through fourteen 3-inch-diameter Schedule 40 polyvinyl chloride solid vent risers located on the perimeter walls of the building. The vent riser pipes will be enclosed in a wall and accessible from the building's interior walls through a lockable access box and gas-tight plug installed in the vent riser pipe. The vent risers will terminate a minimum of 24 inches above the roofline of the building and will be equipped with non-restrictive rain caps. The layout of the passive SSV system is depicted in the conceptual VIMS layout provided in Figure 10.

The SSV system will operate passively and will have the option of being converted to active operation depending on the system performance monitoring results to be obtained as specified in Section 8.3.4 of this Work Plan Addendum.

#### *8.3.2.2 Vapor Control Barrier*

The vapor control barrier will include a Liquid Boot® system, or equivalent, comprising a 20-mil-thick Liquid Boot® VI-20 base fabric geotextile, 40-mil dry thickness Liquid Boot® geomembrane (which is a cold, water-based, seamless, monolithic spray-applied membrane), and a protective 10-ounce Ultrashield™ G-1000 protective geotextile. The vapor control barrier will underlie the entire building footprint except for interior grade beams and exterior footings. The vapor control barrier terminations will be sealed to the exterior footings and interior grade beams per the manufacturer's requirements.

The vapor control barrier will be placed directly over the SSV. The components of the vapor control barrier will be shown in the final VIMS design drawings, and the extent of the vapor control barrier is shown in the conceptual VIMS layout provided in Figure 10.

#### *8.3.2.3 Penetrations*

Penetrations through the vapor control barrier will be completed in accordance with the Liquid Boot® manufacturer recommendations for sealing around penetrations. The vapor control barrier will extend a minimum of 4.5-inches up the pipe penetration and will have a cable tie securing the vapor control barrier to the penetration embedded in the concrete slab. The vapor control barrier penetration seal details will be shown on the final VIMS design drawings.

#### *8.3.2.4 Sub-slab Vapor Sampling Probes*

Sub-slab vapor sampling probes will be installed for monitoring VOC concentrations below the vapor control barrier. Four vapor probes will terminate beneath the interior of the warehouse and occupied enclosed portions of the building. The probes are spaced across the building at varying distances toward the building interior and away from the low-profile venting system where feasible based on other building features.

The below-barrier vapor sampling probe will be located within a 3-inch-thick gravel layer beneath the vapor control barrier. Each sub-slab vapor sampling probe will be constructed of ¼-inch-diameter Teflon tubing fitted with a porous polypropylene or stainless-steel tip. The components of the sub-slab vapor sampling probes will be shown on the final VIMS design drawings, and the locations of the sub-slab vapor sampling probes are shown in the conceptual VIMS layout provided in Figure 10.

#### *8.3.2.5 Conduit Seals*

The dry utility conduits (e.g., electrical, telecommunication, sub-slab vapor sampling probe conduits) entering the building from below the vapor control barrier will be sealed with a closed-cell expanding polyurethane foam sealant to limit the migration of sub-slab vapor to the interior of the building. Details for the conduit seals will be provided in the final VIMS design drawings.

#### *8.3.2.6 Utility Trench Vapor Cut-off Barrier*

The utility trench dams will be installed at utility trench locations for piping and/or conduit that extend beneath the building foundation from areas outside the perimeter of the building to mitigate the migration of potentially harmful vapors along relatively permeable trench backfill materials. The utility trench dams will consist of a relatively impermeable materials located immediately adjacent to the exterior perimeter of the foundation and have a minimum length of twice the width of the trench or 36 inches, whichever is greater, will extend at least 6 inches above the base of the foundation, and will extend laterally and vertically into native material surrounding the trench. The components of the utility trench dam will be shown the final VIMS design drawings.

### 8.3.3 Construction Quality Assurance

A construction quality assurance (CQA) program will be developed and implemented during construction of the VIMS. The proposed CQA program will include a pre-construction meeting and routine meetings

during construction of the system, observations of construction and testing activities, and pre-occupancy (post-construction) system inspection and performance monitoring.

The VIMS will be subject to a CQA verification process that entails the inspection of SSV system components, including (but not limited to) subgrade preparation and placement of SSV piping and risers, sloping of SSV components to limit condensate build-up in the piping system, sub-slab vapor sampling probe installation, vapor control barrier installation and repairs, and verification of conduit seal and utility trench dam construction. In addition, the spray-applied geomembrane portion of the vapor control barrier will be tested during installation for thickness and continuity by smoke testing in accordance with manufacturers' specifications and recommended procedures.

The potential VOC contribution from sub-slab vapor sampling probe materials will be evaluated using field blank samples. Prior to sampling, an assembled sub-slab vapor sampling probe, tip, and tubing will be blank tested at a frequency of one analysis per sampling event.

The CQA program will be summarized on the final VIMS design drawings and detailed in a CQA Plan.

A VIMS Construction Completion Summary Report (CCSR) will also be prepared and submitted to the LARWQCB within 60 days of construction completion. The CCSR will include a summary of the CQA and VIMS installation activities, as-built drawings, and VIMS Engineer certification that the VIMS was installed in general accordance with the design.

### 8.3.4 VIMS Operation, Maintenance, and Monitoring

The SSV system will initially be operated passively following requirements in an Operation, Maintenance, and Monitoring OMM Plan that will be submitted as a draft to the LARWQCB under separate cover. The OMM Plan will include a summary of the VIMS components, operating details, and requirements for routine and non-routine integrity inspections, performance monitoring, and data evaluation. A final OMM Plan will be submitted to the LARWQCB after the VIMS construction has been completed and will include as-built drawings.

A construction completion summary report will also be prepared and submitted to the LARWQCB within 90 days of completing the construction of the VIMS. The construction completion summary report will include a summary of the CQA and VIMS installation activities, as-built drawings, and VIMS Engineer certification that the VIMS was installed in general accordance with the design.

***Notes:***

*1. Results in **bold** were detected.*

*2. < - Not detected above the reporting limit*
*J - Estimated value*
*'-- - Not applicable.*

*3. Results in **red** exceed the screening criteria of 1 mg/kg.*

*4. June 2023 results were reported by the analytical laboratory in dry-weight basis; samples designated as 'Surface' are concr*

**SOIL REMEDIAL ACTION GOALS**
ROSEMEAD HOLDING, LLC
SOUTH EL MONTE, CALIFORNIA

| COPC | Media | Remedial Action Goal (mg/Kg) |
|---|---|---|
| PCB | Soil (0-10 feet bgs) | 1 |
| Lead | | 500 |
| Arsenic | | 11 |
| Hexavalent Chromium | | 6.2 |
| TPH-D | | 1,100 |
| TPH-GRO | | 1,900 |
| TPH-MO | | 79,000 |

***Notes:***

1. *COPC - Chemical of Potential Concern*
2. *PCB - Polychlorinated Biphenyl*
3. *TPH - Total Petroleum Hydrocarbon*
4. *D - Deisel*
5. *GRO - Gasoline Range Organics*
4. *MO - Motor Oil*
4. *mg/Kg - Milligram per Kilogram*

**TABLE 8**
**SOIL REMEDIAL EXCAVATION VOLUMES**
ROSEMEAD HOLDING, LLC
SOUTH EL MONTE, CALIFORNIA

| Depths (ft bgs) | Surface Area (sf) | Volume (cy) |
|---|---|---|
| 1 | 12,654 | 469 |
| 1.5 | 0 | 0 |
| 2 | 14,283 | 1,058 |
| 2.5 | 5,861 | 543 |
| 3 | 8,163 | 907 |
| 3.5 | 200 | 26 |
| 4 | 7,707 | 1,142 |
| 5 | 3,969 | 735 |
| 6 | 400 | 89 |
| 8.5 | 100 | 31 |
| | **TOTAL EXCAVATION VOLUME** | **4,999** |

***Notes:***

*1. ft bgs - feet below ground surface*
*2. sf - square feet*
*3. cy - cubic yard*

**TABLE 9**
**SOIL REMEDIAL EXCAVATION VOLUMES BY COC**
ROSEMEAD HOLDING, LLC
SOUTH EL MONTE, CALIFORNIA

| COC | Maximum Depth (ft bgs) | Initial Volume (cy) | Co-Located Volume (cy) | Planned Excavation Volume (cy) |
|---|---|---|---|---|
| PCB | 5 | 4670 | NA | 4670 |
| Lead | 4 | 355 | 191 | 164 |
| Arsenic | 8.5 | 144 | 22 | 122 |
| Hexavalent Chromium | 2 | 22 | 15 | 7 |
| TPH-D | 6 | 78 | 43 | 35 |
| TPH-GRO | 3.5 | 24 | 24 | 0 |

***Notes:***

1. *ft bgs - feet below ground surface*
2. *cy - cubic yard*
3. *PCB - Polychlorinated Biphenyl*
4. *TPH-D - Total Petroleum Hydrocarbons Deisel*
5. *TPH-GRO - Total Petroleum Hydrocarbon Gasoline Range Organics*

## LEGEND

- SOIL BORING
- NOT DETECTED
- DETECTED BUT BELOW CRITERIA
- DETECTED ABOVE CRITERIA
- SITE BOUNDARY
- ADJACENT PROPERTY BOUNDARIES

## NOTES

1. ALL LOCATIONS ARE APPROXIMATE.
2. RESULTS SHOWN IN MG/KG.
3. RESULTS IN RED ARE GREATER THAN THE FOLLOWING CRITERIA:
   - TPH-DIESEL: 1100 MG/KG -TPH-MOTOR OIL:79000 MG/KG
   - TPH-GASOLINE: 1900 MG/KG
4. ND (#) - NOT DETECTED ABOVE THE REPORTING LIMIT (SHOWN IN PARENTHESIS).
5. AERIAL IMAGERY SOURCE: NEARMAP, 9/12/23.
6. DATABOXES WITH LIGHT BLUE BACKGROUND SAMPLED IN 2024 BY HALEY & ALDRICH.

**NOTES**

1. ALL LOCATIONS AND DIMENSIONS ARE APPROXIMATE.

2. SITE PLAN SOURCE: AO, XEBEC BUILDING COMPANY 2023

## FLOOR GENERAL NOTES

1. ALL EXITS SHALL HAVE EXIT SIGNS AND ALL BLIND CORRIDOR TURNS SHALL HAVE DIRECTIONAL EXIT SIGNS.
2. REFER NOTE PLUMBING, CIVIL, AND SITE PLANS FOR SIZE AND ROUTING OF ROOF DRAINAGE CONNECTION TO UNDERGROUND STORM DRAIN OR JOIN TO DOWNSPOUT AS SHOWN.
3. PROVIDE SOUND INSULATION AT PERIMETER WALLS OF RESTROOMS, LOBBY, AND ADDRESS CEILING OF REST ROOMS TO CREATE AN ACOUSTIC ENVELOPE.
4. ALL ENCLOSED PORTIONS OF BUILDINGS CUSTOMARILY OCCUPIED BY HUMAN BEINGS SHALL BE PROVIDED WITH NATURAL VENTILATION BY MEANS OF OPENABLE EXTERIOR OPENINGS WITH AN AREA NOT LESS THAN 5.0% OF THE TOTAL FLOOR AREA OR SHALL BE PROVIDED WITH A MECHANICALLY OPERATED VENTILATION SYSTEM. (CBC SECTION 1203.2.1.)
5. ALL DIMENSIONS ARE TO FACE OF CONCRETE, FACE OF FRAMING, OR CENTERLINE OF GRID UNLESS NOTED OTHERWISE.
6. FINISH FLOOR ELEVATIONS ARE TO TOP OF CONCRETE, UNLESS NOTED OTHERWISE.
7. THE GENERAL CONTRACTOR SHALL MAINTAIN THE JOB SITE IN A CLEAN AND ORDERLY CONDITION, FREE OF DEBRIS AND LITTER, UPON COMPLETION. ALL CONTRACTORS SHALL REMOVE THEIR TRASH AND DEBRIS FROM THE PREMISES. ALL AREAS TO BE BROOM CLEANED.
8. ALL CONDUIT PIPING, IN ELECTRICAL ROOM TO BE CONCEALED WITHIN THE WALL CONSTRUCTION WHERE ELECTRICAL, MECHANICAL, AND/OR PLUMBING ITEMS, SUCH AS LIGHTS, DUCTS, PIPING, DOWNSPOUTS, ETC. ARE SHOWN TO PENETRATE OR CONFLICT WITH ANY BUILDING FOOTINGS, SLABS, FLOORS, STRUCTURAL FRAMING, WALL PARTITIONS, CEILINGS, ETC., IT IS REQUIRED THAT AN APPROPRIATELY SIZED OPENING OR CLEARANCE BE FURNISHED. THE CONTRACTOR SHALL COORDINATE THE INSTALLATION OF ALL ITEMS WITH THE CONSTRUCTION DOCUMENTS PRIOR TO THE INSTALLATION. ANY CONFLICT OR DISCREPANCY SHALL BE BROUGHT TO THE ARCHITECTS ATTENTION FOR CLARIFICATION.
9. DOOR OPENING IN PARTITIONS NOT DIMENSIONED ARE TO BE LOCATED WITHIN 4" OF ADJACENT PERPENDICULAR PARTITION. PROVIDE 18" CLEAR AT STRIKE SIDE OF INTERIOR DOORS AND 24" CLEAR AT EXTERIOR DOORS.
10. ALL INTERIOR PARTITIONS SHALL BE TAPED AND SANDED SMOOTH TO RECEIVE PAINT OR WALL FINISH MATERIAL.
11. USE WATER RESISTANT GYPSUM BOARD AT ALL AREAS SUBJECT TO MOISTURE OR WHERE TILE IS USED.
12. FURNISH AND INSTALL 16 GAUGE GALVANIZED METAL WALL BACKING AT BOTH IN MILLWORK LAVATORIES, DOOR STOPS, HANGING WALL EQUIPMENT, ETC. VERIFY EXACT BACKING LOCATIONS PRIOR TO INSTALLATION.
13. FIELD MEASURE AS REQUIRED FOR ALL GLAZING AND MILLWORK PRIOR TO FABRICATION.
14. ALL HOT WATER LINES SHALL BE PROPERLY INSULATED. SEE PLUMBING DRAWINGS.
15. CONTRACTOR SHALL VERIFY SIZES AND LOCATION OF DUCT OPENINGS AND PLUMBING RUNS WITH MECHANICAL SUB-CONTRACTOR BEFORE FRAMING OPENINGS IN WALLS, FLOORS, ROOF, ETC.
16. PROVIDE AND LOCATE ACCESS DOORS AND PANELS IN THE WALL AND CEILING CONSTRUCTION AS REQUIRED TO PROVIDE ACCESS TO MECHANICAL, FIRE SPRINKLER, PLUMBING AND ELECTRICAL WORK. THE CONTRACTOR SHALL SUBMIT A PLAN OF ALL PROPOSED LOCATIONS TO THE ARCHITECT FOR APPROVAL PRIOR TO INSTALLATION.
17. PROVIDE AND INSTALL SUPPLEMENTS, BRACING, BACK UP PLATES AND/OR SUPPORTING BRACKETS AS REQUIRED FOR THE INSTALLATION OF WALL MOUNTED OR SUSPENDED MECHANICAL, ELECTRICAL AND / MISCELLANEOUS EQUIPMENT.
18. P.J. = PANEL JOINT
19. F.O.C. = FACE OF CONCRETE.
20. PORTABLE FIRE EXTINGUISHERS SHALL BE INSTALLED AND MAINTAINED AT SUCH LOCATIONS AS REQUIRED BY CFC CHAPTER 9, SECTION 906. NOTE: THE FINAL NUMBER AND LOCATION OF ALL FIRE EXTINGUISHERS SHALL BE DETERMINED BY THE DISTRICT FIRE INSPECTOR.
21. THE MEANS OF EGRESS TRAVEL, INCLUDING THE EXIT DISCHARGE, SHALL BE ILLUMINATED AT ALL TIMES THE BUILDING SPACE SERVED BY THE MEANS OF EGRESS IS OCCUPIED WITH A LIGHT INTENSITY OF NOT LESS THAN 1 FT-CANDLE AT THE WALKING SURFACE AS REQUIRED BY CBC CHAPTER 10, SECTIONS 1008.1 AND 1008.3.4.
22. IN THE EVENT OF A POWER SUPPLY FAILURE, AND EMERGENCY ELECTRICAL SYSTEM SHALL ILLUMINATE EXIT SIGNS FOR A DURATION OF NOT LESS THAN 90 MINUTES IN ACCORDANCE WITH THE PROVISIONS SET FORTH IN CBC CHAPTER 10, SECTION 1011.6.3.
23. APPROVED EXIT SIGNS SHALL BE LOCATED AS NECESSARY TO CLEARLY INDICATE THE DIRECTION OF EGRESS TRAVEL AS REQUIRED BY CALIFORNIA BUILDING CODE 1013.1, AND SHALL BE INTERNALLY OR EXTERNALLY ILLUMINATED AS REQ. BY SECTION 1013.6 IN ACCORDANCE WITH THE PROVISIONS SET FORTH IN SECTIONS 1013.5 AND NOTE. ADDITIONAL EXIT SIGNS MAY BE REQUIRED AT TIME OF FIELD INSPECTION.
25. EGRESS DOORS SHALL BE READILY OPENABLE FROM THE EGRESS SIDE WITHOUT THE USE OF A KEY OR SPECIAL KNOWLEDGE OR EFFORT. CBC 1010.1.9

The first quarterly remedial progress report, dated 31 October 2022, was submitted to the LARWQCB for review. As reported in the 4Q2022 Remedial Progress Report, dated 31 January, 2023, the SVE system was shut down on 8 December 2022 in preparation for an upcoming Site wide soil vapor sampling event scheduled for the first quarter of 2023.</td></tr>
</table>

| LARWQCB COMMENTS AND REQUIREMENTS, DATED AUGUST 17, 2022 | HALEY & ALDRICH, INC. RESPONSE |
|---|---|
| 2. The SVE system should be operated until the system reaches asymptotic levels, instead of for the proposed six months, to remove as much VOC mass as possible. A request/recommendation must be submitted in writing to the Los Angeles Water Board staff, justifying the need for a rebound testing once the SVE system reaches asymptotic levels, and the testing must be approved. Los Angeles Water Board staff may require a rebound testing work plan. | See response to Comment #3 above. |
| 3. The Los Angeles Water Board may require optimization of the SVE system during the operation of the system to enhance VOC mass removal, focus on less treated areas, and continue operation of the system for mass removal. | See response to Comment #3 above. |
| 4. Before operation of the SVE system is terminated, a request/recommendation must be submitted to Los Angeles Water Board staff, justifying the need for termination of the SVE operation, and an approval must be obtained for system shutdown. Los Angeles Water Board staff may require a confirmation soil and soil vapor sampling work plan before approving the request for system shutdown. | See response to Comment #3 above. |

| LARWQCB COMMENTS AND REQUIREMENTS, DATED AUGUST 17, 2022 | HALEY & ALDRICH, INC. RESPONSE |
|---|---|
| | |
| 5. The State Water Resource Control Board (State Water Board) adopted Resolution No.92-49, the Policies and Procedures for Investigation and Cleanup and Abatement of Discharges Under Water Code Section 13304 (Resolution 92- 49). Resolution 92-49 sets policies and procedures to be used during investigation or cleanup of contaminated sites and requires cleanup levels to be consistent with State Water Board Resolution 68-16, the Statement of Policy with Respect to Maintaining High Quality of Waters in California. Resolution 92-49 and the Water Quality Control Plan Los Angeles Region – Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties (Basin Plan), establish the cleanup levels to be achieved. Resolution 92-49 requires the waste to be cleaned up to background, or if that is not reasonable, to an alternative level that is the most stringent level that is economically and technologically feasible. | Comment noted. |
| 6. Prior to occupation of any new structures, baseline indoor air sampling involving at least two rounds of sampling is required to account for seasonal fluctuation of contaminants in the indoor air. | Comment noted. |

| OEHHA COMMENTS DATED JULY 12, 2023 | HALEY & ALDRICH, INC. RESPONSE |
|---|---|
| **Chemical of Potential Concern (COPCs)**<br><br>Environmental assessments indicated the presence of metals, polychlorinated biphenyls (PCBs), petroleum hydrocarbons (TPH) , and volatile organic compounds (VOCs) in soil. COPCs are organic compounds detected in soil at concentrations above laboratory reporting limits and inorganic compounds detected at concentrations exceeding both background levels and screening levels. OEHHA does not recommend comparisons with screening levels as a basis for exclusion of chemicals as COPCs.<br><br>The only elements selected in soil as COPCs were antimony, arsenic, hexavalent chromium (Cr+6), cobalt, lead, and molybdenum. In addition to these, barium, cadmium, chromium, copper, mercury, nickel, silver, and zinc also exceeded background levels and should be evaluated as COPCs. | Comment noted. Barium, cadmium, chromium, copper, mercury, nickel, silver, and zinc along with antimony, arsenic, hexavalent chromium (Cr+6), cobalt, lead, and molybdenum shall be evaluated as soil COPCs in an updated health risk screening evaluation that will be included in an addendum to the Limited Soil Remediation Work Plan. |
| **Exposure Concentrations (EPCs)**<br><br>For arsenic and molybdenum, all Arochlors, and TPH-g, the reported 95% upper confidence limits (UCLs) are less than the mean concentrations for detects. | Comment noted. |
| **Conceptual Site Model**<br><br>Leighton evaluated soil exposure and associated risks and hazards to onsite outdoor workers and onsite construction workers. Soil gas exposure was not evaluated. | Comment noted. An evaluation of soil gas exposure will be included in an updated health risk screening evaluation that will be included in an addendum to the Limit Soil Remediation Work Plan. |

**Soil Risk Assessment**

Leighton

In their baseline soil risk assessment, Leighton used the UCL as the exposure concentration when it could be calculated, otherwise the maximum detected concentration. Exposure parameters were standard values from HHRA Note 1 (DTSC, 2019a) except that the exposure duration for the construction worker was 91 days rather than the usual 1 year, resulting in a four-fold reduction in risk. No site-specific basis for this departure from standard exposure parameters was provided. This

The calculated risk for outdoor workers exposed to contaminants in soil and dust through the ingestion, dermal, and inhalation pathways was 2E-5, exceeding the benchmark of 1E-5. The calculated risk for construction workers exposed to contaminants in soil and dust through these pathways was 1E-5, equaling the benchmark of 1E-5. The risk driver identified in soil was Cr+6. Although not widely dispersed throughout the site, Cr+6 contributed 97% and 67% of the estimated cancer risk for construction workers and outdoor workers, respectively. The hazard index (HI) for construction workers exceeded the benchmark of 1. The lead UCL was 1443 mg/kg, exceeding the DTSC screening level of 500 mg/kg.

Table 1: Leighton Risk and Hazard Estimates

| Exposure Scenarios | Estimated Risk | Estimated HI |
|---|---|---|
| Construction Worker | 1E-5 | 2 |
| Outdoor Worker | 2E-5 | 0.6 |

Table Notes: Risk estimates are presented in scientific notation. For example, a cancer risk of 1 in a million (0.000001) is written as 1E-6. HI is the estimated hazard index.

Comment noted.

OEHHA

To calculate cumulative risk and hazard for chemicals in soil, OEHHA used the equations from DTSC's Preliminary Endangerment Assessment Manual (DTSC 2015, Section 2.5). Values for exposure parameters were taken from DTSC's HERO Note 1 (DTSC 2019a) and toxicity values were from Note 10 (DTSC 2019b). This was done for all metals detected, except lead. Exposure concentrations were the UCLs. OEHHA entered the petroleum hydrocarbon data as TPH gasoline, TPH diesel, and TPH motor oil, rather than converting these values to assumed fractions. OEHHA's results differed from Leighton's results, as shown in Table 2:

Table 2: OEHHA's Partial Risk and Hazard Estimates

| Exposure Scenarios | Estimated Risk | Estimated HI |
|---|---|---|
| Construction Worker | 3.4E-6 | 6.8 |
| Outdoor Worker | 2.3E-5 | 1.9 |

Table Notes: Risk estimates are presented in scientific notation. For example, a cancer risk of 1 in a million (0.000001) is written as 1E-6. HI is the estimated hazard index. The modifier "partial" is in the title to indicate that some COPCs were omitted due to lack of statistical analysis.

OEHHA Both Leighton and OEHHA predicted construction worker risks below 1E-5 and outdoor worker risks exceeding 1E-5. Both Leighton and OEHHA predicted HIs above 1 for construction workers. OEHHA's HI for outdoor workers exceeded 1. Risk drivers were arsenic, Arochlor 1248, tetrachloroethene, and naphthalene. OEHHA did not assess the metals that were rejected as COPCs because no statistics were supplied for these metals. Risk and hazard estimates would be higher if all the metals that were detected above background were included.

| OEHHA COMMENTS DATED JULY 12, 2023 | HALEY & ALDRICH, INC. RESPONSE |
|---|---|
| **Risk-based Concentrations (RBCs)**<br><br>Leighton's Table 13 lists RBCs five metals five Arochlors, and six TPH ranges plus a background-based goal for arsenic. OEHHA has the following comments:<br>• OEHHA agrees that the RBCs for antimony, cobalt, hexavalent chromium, molybdenum, and the Arochlors yield risk estimates of 1E-5 or hazard quotients (HQs) of 1 when used as EPCs in a one-at-a-time forward calculation. But see comment below regarding additivity.<br>• The TPH RBCs yield HQs ranging from 0.41 to 1200. Only the RBC for TPH aliphatic high is less than 1.<br>• The construction worker risk estimates at the RBCs meet the target of 1E-5 only because of the shorter-than-usual exposure duration. If the standard exposure duration is used the RBC for hexavalent chromium would be 21 mg/kg.<br>• The Work Plan does not state what exposure metric (e.g. UCL or maximum) will be compared to the RBCs. This should be discussed with the Water Board.<br>• Since the RBC for arsenic (10.63 mg/kg) is based on the 95th percentile of background, the 95th percentile of current and post-remedial arsenic concentrations should be the metric to be compared to the clean-up goal for comparison, not the UCL. | Comment noted for all bullets listed in comment. |

| OEHHA COMMENTS DATED JULY 12, 2023 | HALEY & ALDRICH, INC. RESPONSE |
|---|---|
| • The RBCs should be applied in an additive manner, i.e., the ratios of the exposure concentrations to the respective RBCs for all carcinogens and other chemicals that may act in an additive manner should be added and the total compared to 1 (unity). An example follows:<br>o Risk index = EPCa/RBCa + EPCb/RBCb + EPCn/RBCn<br>o Risk index should be less than or equal to 1.<br>o Hazard index = EPCa/RBCa + EPCb/RBCb + EPCn/RBCn<br>o Hazard index should be less than or equal to 1.<br>• Lead is considered separately; it may be compared directly to the DTSC (2022) screening level of 500 mg/kg.<br>• Verification of post-remedial risk and hazards should be conducted in a manner similar to baseline risk assessment, i.e., the assessment should include all chemicals remaining on-site, not just those that were COPCs. Risk should be the cumulative risk from remaining concentrations of all carcinogens. The hazard index should be the combined HQs of all compounds that have the same target organ or the same mechanism of action. | |
| **Risk Management**<br>The request notes that the USEPA lead RSL for protection of groundwater is 14 mg/kg, lower than the San Francisco Bay Regional Water Quality Control Board's 320 mg/kg Environmental Screening Level (ESL, SFBRWQCB, 2019) for direct exposure to soil for protection | Comment noted. |

| OEHHA COMMENTS DATED JULY 12, 2023 | HALEY & ALDRICH, INC. RESPONSE |
|---|---|
| of human health. OEHHA defers to the Los Angeles Regional Water Quality Control Board regarding protection of groundwater. Leighton proposes to remove contaminated soil until the lead UCL concentration is 500 mg/kg or less. OEHHA agrees with this approach.<br><br>Leighton discusses risk management in Section 7.0 of Appendix B. OEHHA defers to the Los Angeles Regional Water Quality Control Board regarding risk management. | |
| **Conclusions**<br>• OEHHA cannot support Leighton's baseline risk assessment because it does not include all metals that were detected above background. Risk and hazard estimates would be higher if all the metals that were detected above background were included.<br>• RBCs will be needed for all metals detected above background. DTSC (2022) Note 3 screening levels may be used.<br>• Leighton should provide the basis for the reduced exposure duration for construction workers if this value is to be used in the verification assessment.<br>• OEHHA cannot support Leighton's RBCs for TPH.<br>• RBCs should be employed in an additive manner as noted above.<br>• Verification of post-remedial risk and hazards should include all remaining chemicals, not just those that were COPCs and should be based on cumulative risk and hazard indices. | An updated health risk screening evaluation that will be included in an addendum to the Limit Soil Remediation Work Plan and will address these comments as follows:<br>• All metals detected above background will be included as COPCs in the risk evaluation.<br>• RBCs will be developed for all metals above background.<br>• The basis for the reduced exposure duration for the construction worker will be provided.<br>• TPH will be evaluated as a mixture (i.e., TPH as gasoline, diesel, and motor oil) and RBCs will be developed for TPH as a mixture.<br>• It will be clarified that RBCs will be employed in an additive manner.<br>• It will be clarified that verification of post-remedial risk and hazards will include all remaining chemicals and will be based on cumulative risks and hazard indices. |

**RESPONSE TO LARWQCB COMMENTS**
**ADDITIONAL COMMENTS ON LIMITED SOIL REMEDIATION WORK PLAN**
**FOR THE EASTERN PORTION OF PACIFIC COAST DRUM COMPANY SITE**
FORMER PACIFIC DRUM COMPANY (ROSEMEAD HOLDING LLC)
2200-2226 N. ROSEMEAD BLVD
SOUTH EL MONTE, CALIFORNIA
(WIP NO. 107.0266, SITE ID NO. 2040647)

| LARWQCB COMMENTS<br>UN-DATED | HALEY & ALDRICH, INC. RESPONSE |
|---|---|
| 1. We concur with OEHHA that contaminants should not be excluded from the COPC list just based on screening levels. For example, VOCs were detected in soil in the eastern portion of the site, but not RBCs were proposed for those VOCs. The revised work plan must address this issue. | Chemicals detected in soil above background levels are include as COPCs in the Updated Risk Evaluation and risk-based concentrations have been developed for the COPCs. The Limited Soil Remediation Work Plan Addendum will include a discussion of numeric soil remedial goals for risk drivers in soil as well as for other COPCs in soil with limited exceedances of the risk-based concentrations. |
| 2. The RBCs must also consider risk through leaching to groundwater for the protection of groundwater quality. However, the work plan proposes to use leachable concentrations (TCLP and TTLC thresholds) using the California Waste Extraction Test (CA-WET) method. This is usually used for waste characterization to determine leachability of waste at landfills. For cleanup sites this one, we do not use TCLP and TTLC thresholds. You must propose to use either regulatory screening levels for the protection for groundwater quality or some other alternate methods such as modeling.<br><br>As OEHHA stated in its memo, this is outside the scope of their review. The revised work plan must address this issue to propose RBCs which protect both human health and groundwater quality. | The Limited Soil Remediation Work Plan Addendum will include a discussion of a Site-specific soil screening level for lead for the protection of groundwater. |

| LARWQCB COMMENTS<br>UN-DATED | HALEY & ALDRICH, INC. RESPONSE |
|---|---|
| 3. As OEHHA stated in the memo, the revised work plan must outline how the RBCs would be used, i.e. comparisons would be made with the UCL or the maximum concentration of COCs in confirmation samples. | Risk-based concentrations developed in the Updated Risk Evaluation for chemicals of potential concern in soil at the Site will be used in the Limited Soil Remediation Work Plan Addendum to define the depths and extent of soil excavation and to guide soil excavation during the remediation.<br><br>A post-remediation human health risk evaluation will be conducted to document the overall effectiveness of the remediation activities in reducing the concentrations of residual chemicals in Site soil, thereby reducing potential future risks to human health and the environment. The post-remediation human health risk evaluation provides the technical basis for the proposed mitigation measures (i.e., a cap) and proposed institutional controls (i.e., deed restrictions in the form of an LUC) appropriate to ensure long-term protection of human health associated with residual levels of chemicals that are remaining in soil. |
| 4. The work plan states that excavated soil would be re-used at the site if it meets the RBCs or leachable concentrations using CA-WET. Soil re-use criteria must be proposed either using regulatory screening levels which are protective of human health and groundwater or other acceptable methods. The work plan proposes stockpile sampling and analysis protocols for waste characterization. However, it does not propose stockpile sampling and analysis protocols for soil re-use. | See Section 7.2.4.1 Stockpile Management for information on stockpile sampling. |

| **LARWQCB COMMENTS UN-DATED** | **HALEY & ALDRICH, INC. RESPONSE** |
|---|---|
| The following sampling schedule is suggested to estimate the minimum number of samples necessary to meet the statistical requirements set forth in EPA SW-846 for soil re-use:<br><br>o Stockpiles less than 500 cubic yards: One sample for every 25 cubic yards;<br><br>o Stockpiles from 500 to 1,000 cubic yards: Twenty samples plus one sample for every 100 cubic yards in excess of the initial 500 cubic yards;<br><br>o Stockpiles from 1,000 to 10,000 cubic yards: Twenty-five samples plus one sample for every 500 cubic yards in excess of the initial 1,000 cubic yards; and<br><br>o Stockpiles greater than 10,000 cubic yards: Forty-three samples plus one sample for every 5,000 cubic yards in excess of the initial 10,000 cubic yards. | |
| 5. The revised work plan must clearly specify the depth and extent of soil excavation for soil cleanup in the eastern portion of the Site. Based on the site assessment data, lead and arsenic, VOCs, and TPH have been detected in the upper 5 feet of soil at concentrations exceeding screening levels. The revised work plan should propose excavation and removal of all impacted soils in the upper 5 feet of the vadose zone for soil cleanup within the area designated for soil | The depth and extent of soil excavation for soil cleanup in the eastern portion of the Site will be presented in the Limited Soil Remediation Work Plan Addendum. |

| LARWQCB COMMENTS<br>UN-DATED | HALEY & ALDRICH, INC. RESPONSE |
|---|---|
| cleanup as shown in Figure 4 of the work plan. | |

# ANALYTICAL REPORT

## PREPARED FOR

Attn: Chris Tsiatsios
Haley & Aldrich, Inc.
3187 Red HIll Avenue
Suite 155
Costa Mesa, California 92626

Generated 1/17/2024 9:12:25 PM

## JOB DESCRIPTION

Rosemead PCB Sampling / 209476-003

## JOB NUMBER

570-166963-1

Eurofins Calscience
2841 Dow Avenue, Suite 100
Tustin CA 92780

See page two for job notes and contact information.

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Calscience Project Manager.

## Authorization

## Qualifiers

### GC Semi VOA

| Qualifier | Qualifier Description |
|---|---|
| F1 | MS and/or MSD recovery exceeds control limits. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| p | The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported. |
| S1+ | Surrogate recovery exceeds control limits, high biased. |

### Metals

| Qualifier | Qualifier Description |
|---|---|
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |
| F2 | MS/MSD RPD exceeds control limits |

### General Chemistry

| Qualifier | Qualifier Description |
|---|---|
| F3 | Duplicate RPD exceeds the control limit |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ¤ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

**Job Narrative**
**570-166963-1**

**Receipt**
The samples were received on 1/4/2024 4:40 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.8º C.

**GC Semi VOA**
Method 8082A: The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: LV-9-2.0-010424-01 (570-166963-12), HA-SB-10-0.5-010424-01 (570-166963-13), HA-SB-07-0.5-010424-01 (570-166963-15), HA-SB-07-1.0-010424-01 (570-166963-16), HA-SB-07-2.0-010424-01 (570-166963-17) and HA-SB-06-1.0-010424-01 (570-166963-19).

Method 8082A: The %RPD between the primary and confirmation column exceeded 40% for Aroclor-1254 for the following sample: HA-SB-10-0.5-010424-01 (570-166963-13). The lower value has been reported and qualified in accordance with the laboratory's SOP.

Method 8082A: The DCB Decachlorobiphenyl surrogate recovery for the following samples was outside acceptance limits (high biased) on the primary column due to matrix interference: HA-SB-07-0.5-010424-01 (570-166963-15). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control.

Method 8082A: The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: LV-9-2.0-010424-01 (570-166963-12) and HA-SB-06-2.0-010424-01 (570-166963-20).

Method 8082A: The following sample required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: HA-SB-05-0.5-010424-01 (570-166963-21).

Method 8082A: The matrix spike (MS) recoveries for preparation batch 240-599958 and analytical batch 240-600201 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**Metals**
Method 6010B: The method blank for preparation batch 570-399904 and analytical batch 570-400108 contained Lead above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 6010B: The matrix spike duplicate (MSD) recoveries and precision of Lead for preparation batch 570-399904 and analytical batch 570-400108 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**General Chemistry**
Method Moisture - 2540: The sample duplicate (DUP) precision for analytical batch 570-399588 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**Organic Prep**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

# Detection Summary

Client: Haley & Aldrich, Inc.
Project/Site: Rosemead PCB Sampling / 209476-003

Job ID: 570-166963-1

## Client Sample ID: HA-SB-13-0.5-010424-01 — Lab Sample ID: 570-166963-1

No Detections.

## Client Sample ID: HA-SB-13-1.0-010424-01 — Lab Sample ID: 570-166963-2

# Accreditation/Certification Summary

Client: Haley & Aldrich, Inc.
Job ID: 570-166963-1
Project/Site: Rosemead PCB Sampling / 209476-003

## Laboratory: Eurofins Calscience

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

| Authority | Program | Identification Number | Expiration Date |
|---|---|---|---|
| California | State | 3082 | 07-31-24 |

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

| Analysis Method | Prep Method | Matrix | Analyte |
|---|---|---|---|
| 2540G | | Solid | Percent Moisture |

| | | | |

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Calscience.

# ANALYTICAL REPORT

## PREPARED FOR

Attn: Chris Tsiatsios
Haley & Aldrich, Inc.
3187 Red HIll Avenue
Suite 155
Costa Mesa, California 92626

Generated 1/22/2024 11:56:53 AM

## JOB DESCRIPTION

Rosemead PCB Sampling / 209476-003

## JOB NUMBER

570-167110-1

Eurofins Calscience
2841 Dow Avenue, Suite 100
Tustin CA 92780

See page two for job notes and contact information.

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Calscience Project Manager.

## Authorization

Project/Site: Rosemead PCB Sampling / 209476-003

## Qualifiers

### GC Semi VOA

| Qualifier | Qualifier Description |
|---|---|
| F1 | MS and/or MSD recovery exceeds control limits. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

### General Chemistry

| Qualifier | Qualifier Description |
|---|---|
| F3 | Duplicate RPD exceeds the control limit |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ¤ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

## Job ID: 570-167110-1 Eurofins Calscience

**Job Narrative**
**570-167110-1**

**Receipt**
The samples were received on 1/5/2024 3:36 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.0º C.

**GC Semi VOA**
Method 8082A: The %RPD between the primary and confirmation column exceeded 40% for Aroclor-1262 for the following sample: HA-SB-04-1.0-010524-01 (570-167110-2). The lower value has been reported and qualified in accordance with the laboratory's SOP.

Method 8082A: The matrix spike (MS) recoveries for preparation batch 240-599958 and analytical batch 240-600201 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8082A: The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: (570-167861-B-3-A), (570-167861-B-3-B MS) and (570-167861-B-3-C MSD).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**General Chemistry**
Method Moisture - 2540: The sample duplicate (DUP) precision for analytical batch 570-399588 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**Organic Prep**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

# Detection Summary

Client: Haley & Aldrich, Inc.
Job ID: 570-167110-1
Project/Site: Rosemead PCB Sampling / 209476-003

## Client Sample ID: HA-SB-02-0.5-010524-01 — Lab Sample ID: 570-167110-1

| Analyte | Result | Qualifier | RL | MDL | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Aroclor-1260 | 12000 | F1 | 490 | 220 | ug/Kg | 1 | ☼ | 8082A | Total/NA |

## Client Sample ID: HA-SB-04-1.0-010524-01 — Lab Sample ID: 570-167110-2

No Detections.

## Client Sample ID: HA-SB-04-0.5-010524-01 — Lab Sample ID: 570-167110-3

| Analyte | Result | Qualifier | RL | MDL | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Aroclor-1254 | 1100 | | 410 | 190 | ug/Kg | 1 | ☼ | 8082A | Total/NA |

## Client Sample ID: HA-SB-03-0.5-010524-01 — Lab Sample ID: 570-167110-4

| Analyte | Result | Qualifier | RL | MDL | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Aroclor-1254 | 1800 | | 460 | 210 | ug/Kg | 1 | ☼ | 8082A | Total/NA |

## Client Sample ID: HA-SB-01-0.5-010524-01 — Lab Sample ID: 570-167110-5

| Analyte | Result | Qualifier | RL | MDL | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Aroclor-1254 | 330 | J | 460 | 210 | ug/Kg | 1 | ☼ | 8082A | Total/NA |

## Client Sample ID: HA-SB-02-1.0-010524-01 — Lab Sample ID: 570-167110-6

| Analyte | Result | Qualifier | RL | MDL | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Aroclor-1254 | 5700 | | 460 | 210 | ug/Kg | 1 | ☼ | 8082A | Total/NA |

## Client Sample ID: HA-SB-13-2.0-010524-01 — Lab Sample ID: 570-167110-7

No Detections.

## Client Sample ID: HA-SB-13-4.0-010524-01 — Lab Sample ID: 570-167110-8

No Detections.

## Client Sample ID: HA-SB-13-3.0-010524-01 — Lab Sample ID: 570-167110-9

No Detections.

## Client Sample ID: HA-SB-13-5.0-010524-01 — Lab Sample ID: 570-167110-10

No Detections.

## Client Sample ID: HA-SB-11-1.0-010524-01 — Lab Sample ID: 570-167110-11

No Detections.

## Client Sample ID: HA-SB-11-2.0-010524-01 — Lab Sample ID: 570-167110-12

No Detections.

## Client Sample ID: HA-SB-11-3.0-010524-01 — Lab Sample ID: 570-167110-13

No Detections.

## Client Sample ID: HA-SB-11-4.0-010524-01 — Lab Sample ID: 570-167110-14

No Detections.

This Detection Summary does not include radiochemical test results.

Eurofins Calscience

## Method: SW846 8082A - Polychlorinated Biphenyls (PCBs) by Gas Chromatography

# Accreditation/Certification Summary

Client: Haley & Aldrich, Inc.
Job ID: 570-167110-1
Project/Site: Rosemead PCB Sampling / 209476-003

## Laboratory: Eurofins Calscience

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

| Authority | Program | Identification Number | Expiration Date |
|---|---|---|---|
| California | State | 3082 | 07-31-24 |

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

| Analysis Method | Prep Method | Matrix | Analyte |
|---|---|---|---|
| 2540G | | Solid | Percent Moisture |

| | | | |
|---|---|---|---|
| Oregon | NELAP | 4175 | 02-02-24 |

## Laboratory: Eurofins Cleveland

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

| Authority | Program | Identification Number | Expiration Date |
|---|---|---|---|
| California | State | 2927 | 02-27-24 |
| Georgia | State | 4062 | 02-27-24 |
| Illinois | NELAP | 200004 | 07-31-24 |

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Calscience.

**18. CHAIN OF CUSTODY & SAMPLE DISCREPANCIES** ☐ additional next page

Samples processed by:

Received sample #9 not listed on COC

**19. SAMPLE CONDITION**

Sample(s) _____ were received after the recommended holding time had expired.

Sample(s) _____ were received in a broken container.

Sample(s) _____ were received with bubble >6 mm in diameter. (Notify PM)

**20. SAMPLE PRESERVATION**

Sample(s) _____ were further preserved in the laboratory.

Time preserved: _____ Preservative(s) added/Lot number(s):_____

VOA Sample Preservation - Date/Time VOAs Frozen: _____

| Question | Answer | Comment |
|---|---|---|
| Radioactivity wasn't checked or is </= background as measured by a survey meter. | N/A | |
| The cooler's custody seal, if present, is intact. | True | |
| Sample custody seals, if present, are intact. | True | |
| The cooler or samples do not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | True | |
| Cooler Temperature is recorded. | True | |
| COC is present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Is the Field Sampler's name present on COC? | True | |
| There are no discrepancies between the containers received and the COC. | True | |
| Samples are received within Holding Time (excluding tests with immediate HTs) | True | |
| Sample containers have legible labels. | True | |
| Containers are not broken or leaking. | True | |
| Sample collection date/times are provided. | True | |
| Appropriate sample containers are used. | True | |
| Sample bottles are completely filled. | True | |
| Sample Preservation Verified. | True | |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True | |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4"). | True | |
| Multiphasic samples are not present. | True | |
| Samples do not require splitting or compositing. | True | |
| Residual Chlorine Checked. | N/A | |

# ANALYTICAL REPORT

## PREPARED FOR

Attn: Chris Tsiatsios
Haley & Aldrich, Inc.
3187 Red HIll Avenue
Suite 155
Costa Mesa, California 92626

Generated 1/28/2024 3:23:55 PM

## JOB DESCRIPTION

Rosemead PCB Sampling / 209476-003

## JOB NUMBER

570-167861-1

Eurofins Calscience
2841 Dow Avenue, Suite 100
Tustin CA 92780

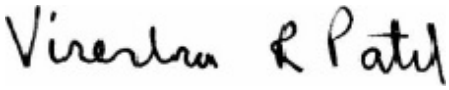
See page two for job notes and contact information.

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Calscience Project Manager.

## Authorization



Generated
1/28/2024 3:23:55 PM

Authorized for release by
Virendra Patel, Project Manager I
Virendra.Patel@et.eurofinsus.com

## Qualifiers

### GC Semi VOA

| Qualifier | Qualifier Description |
|---|---|
| F2 | MS/MSD RPD exceeds control limits |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

### General Chemistry

| Qualifier | Qualifier Description |
|---|---|
| H | Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements. |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ¤ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

**Job Narrative**
**570-167861-1**

**Receipt**
The samples were received on 1/11/2024 6:30 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.0º C.

**HPLC/IC**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

**GC Semi VOA**
Method 8082A: The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: HA-SB-01-1.0-011124-01 (570-167861-3), HA-SB-01-1.0-011124-01 (570-167861-3[MS]) and HA-SB-01-1.0-011124-01 (570-167861-3[MSD]).

Method 8082A: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 240-600698 and analytical batch 240-600831 was outside control limits. The associated MS/MSD and laboratory control sample (LCS) recoveries were within acceptance limits, indicating a proper extraction process for the batch.

Method 8082A: The following sample was diluted due to the nature of the sample matrix: HA-SB-08-1.0-011124-01 (570-167861-5). Elevated reporting limits (RLs) are provided.

Method 8082A: The following sample was diluted due to the nature of the sample matrix: HA-SB-08-1.0-011124-01 (570-167861-5). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8082A: The following sample required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: B-5-7.0--011124-01 (570-167861-7).

Method 8082A: The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: HA-SB-03-4.0-011124-01 (570-167861-13), HA-SB-05-4.0-011124-01 (570-167861-19) and HA-SB-05-3.0-011124-02 (570-167861-21).

Method 8082A: The following sample required a Silica Gel clean-up, via EPA Method 3630C, to reduce matrix interferences: HA-SB-08-1.0-011124-01 (570-167861-5).

Method 8082A: The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: HA-SB-08-1.0-011124-02 (570-167861-6) and HA-SB-05-3.0-011124-01 (570-167861-20).

Method 8082A: The following samples required a Silica Gel clean-up, via EPA Method 3630C, to reduce matrix interferences: HA-SB-08-1.0-011124-02 (570-167861-6) and HA-SB-05-3.0-011124-01 (570-167861-20).

Method 8082A: The following sample was diluted due to the nature of the sample matrix: HA-SB-08-1.0-011124-02 (570-167861-6). As such, elevated reporting limits (RLs) are provided.

Method 8082A: The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: HA-SB-10-4.0-011124-02 (570-167861-32), HA-SB-09-1.0-011124-02 (570-167861-35), LV-8-4.0-011124-01 (570-167861-42) and LV-8-4.0-011124-02 (570-167861-43).

Method 8082A: The continuing calibration verification (CCV) associated with batch 240-600980 recovered above the upper control limit for the surrogate Decachlorobiphenyl. The Aroclors in the opening CCVs passed criteria and all the samples passed surrogate. After careful evaluation the data is reported.

Method 8082A: The closing continuing calibration verification (CCVC) associated with batch 240-600980 recovered above the upper control limit for Aroclor-1268. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**Metals**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Job ID: 570-167861-1 (Continued) Eurofins Calscience

**General Chemistry**
Methods 9045C, 9045D: The following sample(s) was received with less than 2 days remaining on the holding time or less than one shift (8 hours) remaining on a test with a holding time of 48 hours or less. As such, the laboratory had insufficient time remaining to perform the analysis within holding time: HA-SB-01-3.0-011124-01 (570-167861-1), HA-SB-01-2.0-011124-01 (570-167861-2), HA-SB-01-1.0-011124-01 (570-167861-3), HA-SB-01-4.0-011124-01 (570-167861-4), B-5-7.0--011124-01 (570-167861-7), HA-SB-05-3.0-011124-01 (570-167861-20), HA-SB-09-0.5-011124-01 (570-167861-33), HA-SB-09-2.0-011124-01 (570-167861-36) and HA-SB-09-4.0-011124-01 (570-167861-38).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**Organic Prep**
Method 3510C: A portion of the following sample was used for analysis, rather than testing the entire sample amount in the original container, due to the sample container not being the appropriate size: EB-011124-01 (570-167861-49). As such, the required solvent rinse of the original container could not be performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Client Sample ID: LV-10-2.0-011124-01 — Lab Sample ID: 570-167861-39

No Detections.

## Client Sample ID: LV-10-3.0-011124-01 — Lab Sample ID: 570-167861-40

No Detections.

## Client Sample ID: LV-10-4.0-011124-01 — Lab Sample ID: 570-167861-41

No Detections.

## Client Sample ID: LV-8-4.0-011124-01 — Lab Sample ID: 570-167861-42

No Detections.

This Detection Summary does not include radiochemical test results.

Eurofins Calscience

# Detection Summary

Client: Haley & Aldrich, Inc.
Project/Site: Rosemead PCB Sampling / 209476-003

Job ID: 570-167861-1

## Client Sample ID: LV-8-4.0-011124-02 — Lab Sample ID: 570-167861-43

No Detections.

## Client Sample ID: LV-15-02-E-1.0-011124-01 — Lab Sample ID: 570-167861-44

| Analyte | Result | Qualifier | RL | MDL | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Lead | 2.78 | | 2.00 | 1.32 | mg/Kg | 2 | | 6010B | Total/NA |

## Client Sample ID: LV-15-02-E-5.0-011124-01 — Lab Sample ID: 570-167861-45

No Detections.

## Client Sample ID: LV-15-02-E-7.5-011124-01 — Lab Sample ID: 570-167861-46

No Detections.

## Client Sample ID: LV-15-03-S-5.0-011124-01 — Lab Sample ID: 570-167861-47

| Analyte | Result | Qualifier | RL | MDL | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Arsenic | 7.56 | | 3.13 | 2.02 | mg/Kg | 2 | | 6010B | Total/NA |

## Client Sample ID: LV-15-03-S-7.5-011124-01 — Lab Sample ID: 570-167861-48

| Analyte | Result | Qualifier | RL | MDL | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Arsenic | 10.0 | | 2.78 | 1.80 | mg/Kg | 2 | | 6010B | Total/NA |

## Client Sample ID: EB-011124-01 — Lab Sample ID: 570-167861-49

| Analyte | Result | Qualifier | RL | MDL | Unit | Dil Fac | D | Method | Prep Type |
|---|---|---|---|---|---|---|---|---|---|
| Aroclor-1254 | 0.57 | | 0.40 | 0.31 | ug/L | 1 | | 8082A | Total/NA |

This Detection Summary does not include radiochemical test results.

## Method: SW846 8082A - Polychlorinated Biphenyls (PCBs) by Gas Chromatography
