## SIGNATURE AND ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

# 1. SUMMARY OF CONCLUSIONS

Ramboll US Corporation (Ramboll) was retained by Northgate Gonzalez RE, LLC. (Northgate) to perform a Phase I Environmental Site Assessment (ESA) of the property located at 2200 North Rosemead Boulevard in South El Monte, California (herein referred to as the "site" or the "facility;" Figures 1 and 2). Ramboll's assessment was conducted in connection with potential purchase of the site. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard") and All Appropriate Inquiries (AAI) Final Rule 40 CFR Part 312, was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 2.1).

## 1.1 Site Summary

The approximately 2.06-acre (89,640 square foot) site is occupied by Ditty Container, Inc. (Ditty or Ditty Container), a company that reconditions steel drums and plastic totes, and DreamWorks Auto Center, an auto body repair shop.

The site comprised agricultural land from at least 1928 until 1948. The first commercial use of the site was for storage of construction equipment from approximately 1948 until 1959, at which time Pacific Coast Drum (PCD) developed the site and adjoining properties as a drum cooperage facility (for reconditioning of steel drums).

Ditty took over occupancy of the eastern portion of the site in 1996 and has reportedly continued similar operations as PCD performed on the site. From 1996 until the present time, various auto body shops have occupied the western portion of the site. The current owner of the auto body repair shop is DreamWorks Auto Center. Both Dreamworks Auto and Ditty lease the site from the site owner, PCD. It should be noted that Ditty also operates on the property located immediately to the north of the site at 2226 North Rosemead Boulevard (Figure 2). Additionally, the property located at 2310 N. Rosemead (presently occupied by 168 Ace Lumber and Supply), which is the subject of some of the investigations referenced in this report, was formerly occupied by PCD and was sold in 2018.

## 1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no evidence of RECs in connection with the site, except for the following:

- **Location of Facility within San Gabriel Valley Superfund Site**. The site is located within an area of contaminated groundwater underlying the San Gabriel Valley designated by the United States Environmental Protection Agency (USEPA) as the San Gabriel Valley Superfund site (Area 1, including the South El Monte Operable Unit), in which groundwater is contaminated with volatile organic compounds (VOCs), in particular, trichloroethene (TCE), perchloroethene (PCE), and carbon tetrachloride; perchlorate; 1,4-dioxane; and n-nitrosodimethylamine (NDMA). The San Gabriel Valley Superfund site is listed on numerous databases in the EDR, Inc. (EDR) database report. According to the EDR database report, the site (former occupant PCD) and numerous surrounding properties and other properties in the vicinity listed on the Spills, Leaks, Investigation, and Cleanup (SLIC) and Well Investigation Program Case List (WIP) databases are located within San Gabriel Valley Area 1 and are listed as potentially responsible parties (PRPs) for contributing to the groundwater contaminant plume, comprising an area of approximately 11 square miles.

Numerous subsurface investigations consisting of soil, soil vapor, and groundwater sampling were conducted in connection with the WIP at the site and adjoining properties historically occupied by PCD. The investigations revealed contamination that was determined by the Regional Water Quality Control Board – Los Angeles Region (LARWQCB) to be sourced on-site. However, site-specific cleanup actions were not required by the LARWQCB, administrator of the WIP program. As a result of PCD demonstrating stable or declining concentrations of VOCs in soil vapor, the LARWQCB did not require additional investigation or remediation work at the site. The case was closed with a no Further Action (NFA) designation on March 17, 1998 and is listed as "case closed" in the Geotracker database as of November 17, 2014. However, the closure letter made it clear that PCD was considered a PRP with regard to the South El Monte Operable Unit and was urged to continue to cooperate with USEPA's requirements.

A consent agreement between USEPA/California Department of Toxic Substances Control (DTSC) and various parties in the area (including PCD) was signed in 2012 pertaining to the South El Monte Operable Unit of the San Gabriel Valley Area 1 Superfund site**.** The consent agreement stated that contaminant concentrations exceed maximum contaminant levels (MCLs) throughout a large portion of the South El Monte Operable Unit, including areas used for sources of drinking water, and filed a complaint seeking reimbursement of response costs incurred for response action taken in connection with releases of hazardous substances in the South El Monte Operable Unit; the defendants (including PCD) entered into this agreement to protect public health but did not admit liability arising out of any previous or current releases.

Cleanup actions performed in relation to the San Gabriel Valley Area 1 Superfund site, including the South El Monte Operable Unit, are ongoing. Remediation of impacted groundwater within the area-wide plume commenced in 2008 with the installation and operation of four separate groundwater pump and treat systems. Based on the current status of the response action and the continuing use of the site as a drum recycling facility, Ramboll considers this issue to be a REC.

- **Onsite Soil, Soil Vapor, and Groundwater Contamination and Historical Industrial Uses of the Site.** Investigations conducted from the 1980s through early 2000s have revealed the presence of soil, soil vapor, and groundwater contamination at the site, which was found to consist of generally low to moderate concentrations of VOCs (specifically, chlorinated solvents) and other compounds. Detected concentrations of various compounds detected in soil, soil vapor, and groundwater exceed current regulatory thresholds.

  The site and adjoining property to the north (2226 North Rosemead Boulevard) have a long history of use as a steel drum and tote reconditioning business, which operated since 1959 by PCD and continues to operate at the site as Ditty Container. In addition, the western portion of the site has been used by auto body shops which have occupied the site since 1996. Both operations have involved the use and storage of a variety of chemicals (e.g., paints, resins, varnishes, cleaners, degreasers, etc.) and generated a variety of hazardous wastes (solvents, oils). Ramboll cannot rule out the potential that historical and current uses of the site have resulted in subsurface impacts to the site. In addition, Pacific Coast Drums/Ditty Container is listed in the Leaking Underground Storage Tank (LUST) database with a status of "Pollution Characterization" regarding solvents, with no additional information reported. Ramboll's assessment has identified the presence of several areas of environmental concern at the site, including the following: the wastewater treatment system (including three sumps/underground storage tanks [USTs] and several aboveground storage tanks [ASTs]), a 3-stage clarifier, paint storage areas, drum and tote storage areas, a waste oil storage area, areas of surficial staining, and a former hazardous waste storage area.

Because no soil, soil vapor, or groundwater sampling activities reportedly have been conducted at the site for approximately 15 - 20 years (while aforementioned industrial uses were ongoing), current subsurface conditions are not known. As a result, and because concentrations of various compounds detected in soil, soil vapor, and groundwater historically exceed current regulatory thresholds, this issue is characterized as a REC. Furthermore, the potential that on-site soil vapor concentrations present a possible vapor encroachment condition (VEC), cannot be ruled out at this time.

- **Adjoining Property Uses.** The properties to the north of the site (2226 and 2310 North Rosemead Boulevard) historically were occupied by PCD and have had documented releases of hazardous substances that impacted soil and soil vapor beneath the properties. In addition, the property located at 2128 North Rosemead Boulevard, identified as the former Chemrite facility, was found to have soil and groundwater impacts that appeared to be sourced on that property. Prior correspondence with the LARWQCB suggested that the 2128 North Rosemead Boulevard property could be a possible source of chlorinated solvent contamination detected beneath the site. Based on the long-term industrial use and known/suspected sources of contamination, these facilities are considered to present a REC in connection with the site.

## 1.3 Other Findings

Although not considered to be RECs, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Sump/UST Closed-in-Place.** One 3,300-gallon sump/UST located in the southcentral portion of the site was closed in place in 2004. The sump/UST (Tank No. 3), which formerly was used to contain cooling water for the wastewater treatment system, was cleaned out in 1993 and covered with a metal plate [the Los Angeles County Department of Public Works (DPW) treated the sump as a UST for closure purposes]. In order to assess any potential subsurface impacts, soil samples were collected and analyzed for VOCs, benzene, toluene, ethylbenzene, xylenes (BTEX), and TPH. Because the historical use of the sump/UST was for a cooling water sump and results indicated only minor impacts to soil, no additional sampling was recommended by the consultant and closure was requested. Decommissioning of the sump/UST was completed on September 4, 2004 when the tank was filled with slurry and new concrete poured over concrete sump. Closure was granted by the Los Angeles DPW on September 8, 2004.
- **Wastewater Treatment System and Clarifier.** Wastewater generated from the cleaning of drums is treated in the onsite wastewater treatment system and clarifier and is subsequently discharged to the municipal sanitary sewer system. The wastewater treatment system comprises a 400-gallon wastewater sump/UST (Tank No. 2), a 1,500-gallon wastewater AST (Tank No 1), three empty ASTs, an 1,800-gallon hydrochloric acid AST, and a clarifier. Based on a visual inspection conducted during the site visit, no specific environmental concerns were noted apart from noting that the facility was old and that surface coverings were in poor to fair condition. However, during a soil gas survey conducted in the vicinity in 1991 (as described above), a "hot spot" of elevated concentrations of vinyl chloride was identified just south of the wastewater treatment system. As noted above, no sampling activities are known to have been conducted at the site for approximately 15 - 20 years. As a result, current subsurface conditions are not known. Furthermore, compliance audits reviewed under operation by Ditty revealed the potential for spillage and infiltration in the areas of surface drainage and beneath the processing areas of the facility.

- **Groundwater Monitoring Wells.** At the time of the site visit**,** Ramboll observed two monitoring wells on the southern portion of the site, MW-1 inside the waste oil storage area and MW-2 located to the south of the wastewater treatment system (it is noted that a third monitoring well associated with PCD [MW-3] referenced throughout this report was located upgradient of the site at the formerly PCD-occupied property located at 2310 North Rosemead Boulevard). The on-site wells reportedly were installed in 1988 pursuant to requirements from the County of Los Angeles DPW and subsequently were sampled several times between 1988 and 2002. The 1998 closure letter issued for the site by the LARWQCB stated that the property owner was required to maintain the wells in good condition in anticipation of possible future sampling requirements from the USEPA. However, given the length of time since the wells were in use, and as the wells present a potential conduit to the subsurface, it is recommended that they should be properly abandoned/decommissioned.
- **Asbestos, Lead-Based Paint and Universal Wastes.** Based age of the facility and likelihood of past modifications and/or additions, it is likely that asbestos and lead-based paint are present within interior and exterior building surfaces and building materials. Additionally, the facility is likely to contain universal wastes, such as light ballasts and window putty containing compounds such as polychlorinated biphenyls (PCBs). An evaluation of such materials is outside the scope of work for a Phase I ESA. However, given the size of the facility, Ramboll recommends that a pre-demolition survey for these materials be conducted in order to evaluate the potential abatement costs associated with these issues.

# 2. INTRODUCTION

## 2.1 Purpose

Ramboll was retained by Northgate to conduct a Phase I ESA of the site located in South El Monte, California. Ramboll's assessment was conducted in connection with potential purchase of the site. The purpose of the assessment was to identify RECs, which are defined in the ASTM Standard as follows:

> "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions."

## 2.2 Scope of the Assessment

Ramboll consulted the references noted below and performed the following tasks, in completion of the Phase I ESA of the site:

- A visit to the site by Denisse Hernandez of Ramboll on June 26 and 29, 2020 to observe the exterior and interior features of the site and to identify the uses and conditions specified in the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during the site visit with the property manager, Mr. Gary Mearns, who has been the facility operations manager since 1993. The aforementioned individual is referred to herein as "facility personnel." The facility personnel interviewed by Ramboll was identified by the Company as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - A radius report prepared by EDR (see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
  - The USEPA's Envirofacts database, which provides site information contained in multiple USEPA regulatory databases.
  - The State Water Resources Control Board (SWRCB) GeoTracker database (GeoTracker), which provides information regarding groundwater assessments and cleanups.
  - The DTSC EnviroStor database (EnviroStor), which provides information regarding property investigations and clean-ups.
  - The California Geologic Energy Management Division (CalGEM) mapping system, which provides locations of oil and gas wells in California.
- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources (as identified in Section 4.2 of this report and included as Appendix C) to develop a history of the previous uses of the site and surrounding area.

  - Historical and site-specific information obtained from the following local agencies: the Los Angeles County Assessor's Office (Assessor's Office), City of El Monte Building Department (Building Department), and Los Angeles County Public Works – Waste Management Division (Public Works). Additionally, Ramboll requested information from the Los Angeles County Fire Department – Health Hazardous Materials Division (Fire Department); however, the Fire Department indicated that no records were available for the site. Finally, Ramboll requested information from the Los Angeles County Public Health Investigator (PHI); however, the agency referred Ramboll to the Fire Department for records.

- Ramboll was provided with numerous environmental assessment reports, permits, audit reports, and soil, soil vapor, and groundwater analytical reports in connection with the site and the adjoining properties occupied by PCD. Key documents reviewed are summarized in Section 4.4 and are included as Appendix D. Information obtained from other documents reviewed has been incorporated into the applicable sections of this report. It should be noted that, due to the nature of the PCD operations that encompassed several properties, the environmental reports reviewed cover the address of the site (2200 North Rosemead Boulevard) as well as the other addresses occupied by PCD (2226 and 2310 North Rosemead Boulevard) that are no longer part of the drum reconditioning facility operated by Ditty.
- A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report and in the previous environmental reports for the site, as listed above.

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and Northgate in June 2020. Asbestos and lead-based paint surveys of the site buildings were performed concurrently with the Phase I ESA, the results of which will be provided under separate cover.

## 2.3 Significant Assumptions

In conducting this review, no significant assumptions were made.

## 2.4 Reliance and General Limitations

This report has been prepared for the exclusive use of Northgate Gonzalez RE, LLC and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must consult publicly available information, information provided by the client, and information provided by third parties. Ramboll can neither warrant nor guarantee the accuracy or completeness of such information, however. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this

report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

Other issues considered outside the scope of the ASTM Standard and this review include regulatory compliance, asbestos, lead-based paint, radon, mold, lead in drinking water, wetlands, PCBs in building materials, cultural and historic resources, ecological resources, endangered species, and high voltage power lines. Asbestos and lead-based paint surveys were performed as a separate scope of work concurrent with this Phase I ESA report, the results of will be provided under separate cover.

# 3. SITE DESCRIPTION

## 3.1 Site Setting

The site is currently occupied by Ditty and DreamWorks Auto Center, both of which conduct commercial and light industrial activities, located at 2200 North Rosemead Boulevard in South El Monte, Los Angeles County, California. The approximately 2.06-acre (89,640 square foot) site is located approximately 13 miles east of downtown Los Angeles, California (Figure 1).

According to the Assessor's Office, the assessor's parcel number (APN) for the site is 8102-039-035.

The site is developed with an approximately 1,200-square foot building on the western side of the site, which is occupied by DreamWorks Auto Center as an auto body shop, and an approximately 11,562-square foot structure on the central portion of the site that is occupied by Ditty Container, where the refurbishing of drums is conducted (Figure 2). Other site features on the Ditty Container portion of the site include drum storage areas for both cleaned/reconditioned drums and drums ready to be reconditioned, truck trailer parking along the eastern and southeastern portions of the site, and a wastewater treatment system on the southcentral portion of the site. The primary site access is via North Rosemead Boulevard at the western site boundary. The site is fully paved with asphalt and surrounded with fencing along the exterior. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

**Table 1: Physical Setting and Utility Information**

| Conditions | Source | Description |
|---|---|---|
| **Topography** | | |
| Elevation [(AMSL (above mean sea level)] | USGS topographic map; Google Earth | Ranges from approximately 226 to 228 feet AMSL. |
| Topographic Gradient | USGS topographic map; visual observations | Relatively flat on-site, with a gentle downward slope to the southwest. Regional topography slopes gently downward to the southwest. |
| **Hydrology** | | |
| Storm Water Runoff | Visual observations | Run off discharges to the municipal storm sewer system. Water treated in the wastewater treatment system is processed in the onsite clarifier and then released into the public sanitary sewer system. |
| Nearest Surface Water Body to the Site | Google Earth; USGS topographic map | The Rio Hondo River is located approximately 2,400 feet west of the site. |
| Flood Plain | FEMA* | The site is not located within a 500-year flood zone. No incidents of flooding were reported. |

**Table 1: Physical Setting and Utility Information**

| Conditions | Source | Description |
|---|---|---|
| Wetlands | NWI*; Visual observations | There are no federally designated wetlands on-site. |
| **Geology and Hydrogeology** | | |
| Presumed Direction of Shallow Groundwater Flow | 2019 Annual Groundwater Monitoring Report** | Based on data from a 2019 groundwater monitoring report for a property located approximately 1,280 feet to the southeast of the site, groundwater flow direction was calculated to be to the south-southwest but reportedly also has been calculated to be to the south-southeast historically. |
| Depth to Groundwater | 2002 Technical Report | Based on water level measurements, shallow groundwater was encountered between approximately 32 and 34 feet below ground surface (bgs) in the onsite wells. |
| On-site Wells | Visual observations; Historical data; CalGEM | Based on the historical data and visual observations, there are two onsite monitoring wells (MW-1 and MW-2). There are no oil or gas wells onsite. |
| Nearest Groundwater Supply Wells | EDR database report | Two state-registered private or municipal wells that may be used for water supply are located between ½ and 1 mile to the southwest and southeast of the site, respectively. |
| Geologic Conditions | 1991 Soil Gas Survey report; NCSS | Site soils are described as recent and older alluvium, which includes interbedded layers of clays, silts, sands, pebbles, gravel, cobbles, and boulders.<br>NCSS classifies regional soils as "urban land," with no additional information regarding soil components and/or types provided. |
| **Site Utility Information** | | |
| Heating and Cooling Equipment | Facility personnel | Heating, ventilation, and air conditioning units are located on the rooftop of the DreamWorks Auto Center building on the western portion of the site. |
| Natural Gas Service | Facility personnel | The site is provided with natural gas service. |
| Use of Fuel Oil for Building Heat | Facility personnel | No current or former use of fuel oil reported. |
| Water Supply | San Gabriel Valley Water Department website | San Gabriel Valley Water Company. |
| Sanitary Sewer | Facility personnel | The facility discharges wastewater to the municipal sanitary sewer system. |

**Table 1: Physical Setting and Utility Information**

| Conditions | Source | Description |
|---|---|---|
| Septic Systems | Facility personnel | No identified current or former septic systems. |

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory

* - Source was provided in the EDR database report.

** - *Annual Groundwater Monitoring Report, Ted Levine Drum Company, 1729, 1807, 1817 Chico Avenue, South El Monte*, California, dated May 24, 2019.

## 3.2 Current Use of Site

### 3.2.1 Current Operations

The site is occupied by two light industrial/commercial businesses, Ditty Container on the eastern portion of the site and DreamWorks Auto Center on the western portion of the site. Pacific Coast Drum Company owns the entire site and the adjacent property to the north located at 2226 North Rosemead Boulevard; DreamWorks Auto Center and Ditty lease their respective portions of the site from Pacific Coast Drum Ditty reconditions used plastic totes and steel drums on both the site and the 2226 North Rosemead Boulevard property and some operations are shared between the site and that property. Currently the 2226 North Rosemead property contains office space, a warehouse, and empty drum/tote storage areas associated with Ditty Container operations.

The major operations conducted at the site are described in more detail below.

Ditty Container:

The reconditioning process includes the cleaning and painting of totes and drums in the main structure on the central portion of the site. The different operations include:

- Receiving - Drums and totes to be reconditioned are received in the northern portion of the production area, which is located on the adjacent property to the north (2226 North Rosemead Boulevard). The drums and totes to be reconditioned are empty. The majority come from oil field operations and other facilities involved in the storage, generation, and/or use of petroleum products; the rest come from food grade facilities. As such, most drums and totes that come into the site for reconditioning contain oils of some kind.
- Main Processing - The cleaning process occurs on the northeastern portion of the production building on the site. Drums and totes are cleaned manually and by placing them on a conveyor belt that pass though washing and rinsing machines. This washing process uses hot water and caustic solution. The cleaning process generates a large amount of wastewater, which passes through the wastewater treatment system and clarifier located in the southcentral portion of the site where oil is separated from the wastewater before the wastewater is discharged to the sanitary sewer system. Because most drums and totes that come into the site for reconditioning contain oils, the liquid wastewater contains a significant amount of oil. In addition, excess oil removed from drums and totes prior to cleaning is stored onsite as hazardous waste pending offsite disposal.

- Finishing - Once the drums and totes are cleaned and inspected, they are painted in an onsite spray paint booth located in the western portion of the production building, then staged at other locations onsite prior to offsite sale and distribution.
- Wastewater Treatment – The facility conducts onsite wastewater treatment prior to discharging process wastewater to the municipal sewer. Wastewater generated from the cleaning of drums is routed via a drainage channel on the northern portion of the site and sumps to a wastewater treatment system and clarifier on the southcentral portion of the site. Prior to discharge to the sanitary sewer, the flow and pH of the wastewater are continuously metered and monitored. Pretreatment chemicals used in the process include hydrochloric acid for pH control. As stated above, the wastewater contains a significant amount of oil; this oil is contained and staged onsite pending offsite disposal.
- Based on site visit observations and documents reviewed for the site, hazardous materials used and/or stored (and the related wastes) by Ditty at the site include the following (in addition to general janitorial cleaning agents). Chlorinated solvents are not currently used in Ditty Container operations; facility personnel were unaware of the historical use of chlorinated solvents at the site.
  - Drum processing area
    - Antifoam (mineral oil/kerosene)
    - Sludge (ethylene glycol, lead, and copper)
    - Waste oil
  - Maintenance and Machinery Areas
    - Mineral Oil
  - Maintenance Shop
    - Oxygen difluoride (cylinders)
  - Outdoor Storage Area
    - Caustic soda beads
    - Dry mixture of organic compounds (crystalline quartz)
    - Various paints (n-propanol, n-butanol, and acetone solvent)
    - Sodium nitrate
    - Waste solids from baghouse
  - Outside Building
    - Liquid petroleum gas (cylinders)
  - Paint Storage Area
    - Acetone
  - Water Treatment Area
    - Sodium nitrate
    - Muriatic acid

<u>DreamWorks Auto Center</u>

- DreamWorks Auto Center performs automotive body repair work and painting in a spray paint booth. DreamWorks Auto Center shares space with the adjoining property to the north of the site at 2212 North Rosemead Boulevard and the spray paint booth and paint and solvent storage area for the DreamWorks Auto Center are located on that property. No engine repairs or oil changes are conducted onsite. DreamWorks Auto Center chemical use at the site (in addition to general

janitorial cleaning agents) include various oils, slippage agents, paints, thinners, and degreasers. Chlorinated solvents are not currently used in Ditty Container operations; facility personnel were unaware of the historical use of chlorinated solvents at the site.

### 3.2.2 Waste Management

Hazardous waste currently generated at the site includes oily wastewater which is generated from the cleaning of drums as described in Section 3.2.1. Ramboll observed six 550-gallon totes containing oily wastewater within secondary containment on the northern portion of the site and in the waste oil storage area on the southern portion of the site. Although minor staining was observed in these areas, the pavement appeared to be in good condition and no stains appeared to reach drains. Facility personnel indicated that the wastewater is transported for offsite disposal.

Nonhazardous waste generated at the site consists of general trash. General facility trash is collected in an on-site covered dumpster owned by United Dumping Services, Inc. pending offsite removal and disposal by Waste Management. The dumpster is positioned on pavement in the northern portion of the site.

### 3.2.3 Wastewater and Storm Water

Sanitary wastewater, which includes wastewater from bathroom and sink areas, and wastewater generated from drum cleaning operations performed by Ditty Container, is discharged into the municipal sanitary sewer system. Wastewater generated from the drum cleaning process is treated in the wastewater treatment system where excess oil is separated from the water in the onsite clarifier before its discharge into the public sewer system.

Storm water at the site runs off into the street on North Rosemead Boulevard from where it drains into the municipal storm sewer system.

### 3.2.4 Air Emissions

Based on field observations, air emissions at the site consist primarily of particulate matter (PM) and VOCs from fumes from spray booths and combustion products from the facility's natural gas-powered boilers and comfort heating system. South Coast Air Quality Management District (SCAQMD) records reviewed online on the Facility Information Detail (F.I.N.D.) website (https://xappprod.aqmd.gov/find) for the site, listed various active permits for Ditty to operate solvent and high-water paint, permits to operate boiler with natural gas, and other permits to conduct activities related to the refurbishing of drums.

## 3.3 Current Uses of Adjoining Properties

The site is located in a mixed commercial/light industrial and residential land use area. The nearest residential areas are located adjacent to the site to the south. Based on discussions with facility personnel, Ramboll's visual observations from the site boundary and public rights-of-way, and a limited review of publicly available information, a general evaluation of the current use of adjacent properties was developed, as described Table 2.

**Table 2: Current Use of Adjacent Properties**

| Direction | Property/Land Use | Ramboll's Observations |
|---|---|---|
| North | Ditty Container, Inc. | In addition to the site, Ditty Container operates on the adjoining property to the north at 2226 North Rosemead Boulevard, where some of the associated drum reconditioning operations are conducted. Currently the 2226 North Rosemead property contains office space, a warehouse, and empty drum/tote storage areas associated with Ditty Container operations . |
| East | Commercial and light industrial businesses (Hai Yuan Sea Food Products and House of Graphics) | No environmental concerns were noted. |
| South | Commercial (John B. Moore Corp. Western/Chemrite and Rosemead Auto Recycler) and mobile home park | No environmental concerns were noted based on field observations. However, the John B. Moore Corporation property is listed as "Open—inactive" status in the Cleanup Program Sites - Spills, Leaks, Investigations, and Cleanups (CPS-SLIC) database, as described in the ensuing sections of this report. |
| West | Beyond North Rosemead Boulevard, commercial businesses (Title Depot, Highway Machinery, Inc.) | No environmental concerns were noted. |

Notes:

During the site visit, Ramboll walked or drove by the borders of these properties that are adjacent to the site. Ramboll did not enter the neighboring properties.

# 4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

## 4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in June 2020 to prepare a summary of listings in federal and state agency databases for the site and facilities within applicable radii of the site, as specified by the ASTM standard.[1] A copy of the EDR database search report is presented in Appendix B.

### 4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by EDR (see Appendix B) and also reviewed information available in the California GeoTracker and EnviroStor databases. According to the EDR database report, the site is located in an "area of concern" designated by the LARWQCB as such as a result of historical industrial uses in the site vicinity and PCE and TCE releases that have impacted groundwater. The site is also listed as being within the San Gabriel Valley Superfund site (Area 1) and is listed on several environmental databases, as discussed in Table 3.

**Table 3: Summary of Environmental Database Listings for the Site**

| Summary of Information Contained in Database | Ramboll's Comments |
|---|---|
| The site is listed as being located within Area 1 of the San Gabriel Valley Superfund site. The San Gabriel Valley Superfund site is listed on the National Priorities List (NPL) (as of May 1984), Superfund Enterprise Management System (SEMS), Engineering Controls Sites List (US ENG Controls), Record of Decision (ROD), Potentially Responsible Party (PRP), and Superfund (CERCLA) Consent Decrees (Consent) databases for a plume of groundwater impacted with TCE, PCE, and carbon tetrachloride at concentrations exceeding regulatory thresholds. The groundwater plume is approximately 4 miles long by 1.5 miles wide and is present along the axis of the Rio Hondo Wash and the Sand Pit Wash and parallels the San Gabriel River.<br><br>Remediation of impacted groundwater within the area-wide plume commenced in 2008 with the installation and operation of four separate groundwater pump and treat systems. According to the *First Five-Year Review Report for San Gabriel Valley Area 1 Superfund Site*, *South El Monte Operable Unit (SEMOU, OU5), Richwood Operable Unit (ROU, OU3), Suburban Operable Unit (SOU, OU4), Whittier Narrows Operable Unit (WNOU, OU2), and El Monte Operable Unit (EMOU, OU1, OU08, and OU09)* (the most recent Five-Year Review report available on USEPA's website), prepared by the USEPA, and dated September 11, 2013, PCE was detected in the closest well to the site (SEMMW05; located approximately 1,000 feet to the northeast of the site) at a concentration of 96 µg/l in the upper intermediate aquifer and at a concentration of 67 µg/l in the intermediate aquifer in 2012. No current groundwater monitoring data were available for review on the USEPA website. According to | This issue is discussed further in the ensuing sections of this report. |

[1] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

**Table 3: Summary of Environmental Database Listings for the Site**

| Summary of Information Contained in Database | Ramboll's Comments |
|---|---|
| the First Five-Year Review report, USEPA was in the process of conducting a vapor intrusion investigation at and near source areas throughout Area 1 at that time, an evaluation that was anticipated to take three years to complete. The results of the vapor intrusion investigation also were not available for review on the USEPA website. | |
| Pacific Coast Drums is listed in the Statewide Environmental Evaluation and Planning System and Underground Storage Tank (SWEEPS UST UST) databases and lists three tanks onsite. The Cleanup Program Sites - Spills, Leaks, Investigations, and Cleanups (CPS-SLIC) database lists the site with a "Completed – Case Closed" status as of 11/17/2014 as part of the cleanup program. The Recovered Government Archive (RGA)[1] Leaking Underground Storage Tank (LUST) database lists the site but with no additional information. Additionally, the site is listed in the Hazardous Waste Manifests (HAZNET) database as generating the following waste in the mid-1990s: adhesives, waste oil and mixed oil, paint sludge, sludge waste, and other organic solids.<br><br>Pacific Cost Drums/Ditty Container is listed in the California Environmental Reporting System (CERS), CERS Hazardous Waste, and Resource Conservation and Recovery Act – Small Quantity Generator (RCRA-SQG) databases as a hazardous waste generator; no violations were reported. Pacific Cost Drums/Ditty Container is also listed in the LUST database with a status of "Pollution Characterization" regarding solvents, with no additional information was reported. Pacific Coast Drums/Ditty Container is listed in the RCRA Non-generator/NLR database as a non-generator, with no violations listed. The Integrated Compliance Information System (ICIS) database lists Pacific Cost Drums/Ditty Container as having various administrative enforcement actions in 2003, 2004, and 2008 due to air quality concerns but no additional information was provided.<br><br>Certified Auto Collision is listed in the Historical (HIST) UST database with no additional information. The HAZNET database lists the site as generating the following waste: waste oil in 2000 and 2001, and unspecified solvent in 1999, 2001, 2002, and 2003.<br><br>Ranz Motor Sports is listed in the Facility Index System/Facility Registration System (FINDS) database as a body and upholstery repair shop and paint shop. The business was listed as being part of the hazardous waste program in 2013. The Hazardous Waste Tracking System (HWTS) and HAZNET databases list the business as generating the following wastes: unspecified solvents in 2006; unspecified organic liquids in 2008; unspecified solvents in 2009; and oxygenated solvents (acetone butanol, ethyl acetate) in 2011.<br><br>DreamWorks Automotive is listed in the RCRA Nongen/NLR database as a non-generator, no violations were listed. | Although the site is listed in the CPS-SLIC database, the case was closed with no Further Action Letter dated March 17, 1998 and is listed as case closed in the Geotracker database as of November 17, 2014.<br><br>The open LUST database with a status of "Pollution Characterization" remains open with no other information provided. |

| Table 3: Summary of Environmental Database Listings for the Site | |
|---|---|
| **Summary of Information Contained in Database** | **Ramboll's Comments** |
| Notes:<br>* The site is also listed on the following databases related to regulatory compliance: HWTS, Environmental Compliance History Online (ECHO), Historical CORTESE, and Air Emissions (EMI). Listings on these databases, by themselves, are not necessarily indicative of contamination.<br>The database search report includes listings for past site occupants that may indicate past use or storage of chemicals or petroleum products.<br>[1] The RGA databases are EDR proprietary databases that identify prior versions of the database in which a property is listed. | |

### 4.1.2 Database Review for Adjoining Properties

Based on a review of the EDR database search report, Ramboll identified the adjoining properties listed in Table 4 on databases indicative of a potential contamination concern.

| Table 4: Contamination-Related Database Listings for Adjoining Properties [1] | | |
|---|---|---|
| **Listing Name or Address and Location Relative to the Site** | **Summary of Information Contained in Database** | **Ramboll's Comments** |
| L.G.M Company<br>2211 Chico Avenue<br>(Adjoining to the east) | The property is listed in the Historical UST database as historically having one tank containing product (unspecified). The property is also listed on the SWEEP UST, Los Angeles County Hazardous Materials System (Los Angeles Co. HMS), CERS, and WIP databases. The CERS database lists the property as a chemical storage facility, with various administrative violations noted for not having/submitting a hazardous material business plan. Other pertinent information was not provided. | Based on the listings, this information does not represent a contamination concern to the site. |

**Table 4: Contamination-Related Database Listings for Adjoining Properties [1]**

| Listing Name or Address and Location Relative to the Site | Summary of Information Contained in Database | Ramboll's Comments |
|---|---|---|
| John B. Moore Corp. Western/Chemrite Corporation/Moore John Corporation<br>2128 N Rosemead Blvd<br>(Adjoining to the southwest) | The property is listed in the SWEEPS UST, Los Angeles Co. HMS, WIP, CPS-SLIC, Historical UST, EMI, ENF, RCRA-SQG, FINDS, and CERS databases. The property is part of the CPS-SLIC Cleanup Program but with a status of "Open-Inactive." Two product tanks (unspecified) were reported to be onsite. A notice of violation was listed in 1999 for not submitting a preliminary groundwater investigation workplan. No other pertinent information was provided.<br>Based on information provided on Geotracker, a groundwater sample was collected beneath the property on June 2002 and groundwater was encountered at approximately 55 feet bgs. Compounds detected in groundwater included: 1,4 dioxane with a concentration of 1.1 µg/l, slightly exceeding the LARWQCB's notification level of 1 µg/l and total chromium at a concentration of 42 µg/l, as compared to the MCL of 100 µg/l. Hexavalent chromium and perchlorate reported non-detect concentrations. | The database lists the property with an "Open—inactive" status in the CPS-SLIC database. Based on this listing, and additional information available for this property from the environmental records provided to Ramboll in connection with the LARWQCB file, this property presents a potential environmental concern to the site due to its proximity to the site (adjacent, immediately downgradient). |
| Rosemead Machinery<br>2129 N Rosemead Blvd<br>(Adjoining to the west) | The property is listed in the WIP database with no additional information. | This listing alone does not represent an environmental concern to the site. |
| Pacific Coast Drums<br>2112 N Rosemead Blvd<br>(Adjoining to the north-northwest) | The property is listed in the HAZNET and HWTS databases as generating asbestos-containing waste in 2015. No other information is provided. | These listings alone do not represent an environmental concern to the site. |
| Rosemead Truck Tire<br>2118 N Rosemead Blvd<br>(Adjoining to the west) | The property is listed in the EMI and WIP databases with no pertinent information available. | These listings alone do not represent an environmental concern to the site. |

**Table 4: Contamination-Related Database Listings for Adjoining Properties [1]**

| Listing Name or Address and Location Relative to the Site | Summary of Information Contained in Database | Ramboll's Comments |
|---|---|---|
| Ditty Container Inc.<br>2226 N Rosemead Blvd<br>(Adjoining to the north) | The property is listed in the Los Angeles Co. HMS, CIWQS, CERS, EMI, NPDES, CERS Hazardous waste, WDS, FINDs, and UST databases. This property is listed as an industrial machinery and equipment facility, with an industrial facility storm water permit. Various administrative violations were reported for not submitting annual reports, not implementing spill prevention control measures, as well as for poor housekeeping practices, failure to provide secondary containment to storage containers, maintaining proper information regarding chemicals to manage waste accordingly, failure to separate incompatible materials, failure to determine if wastes generated were hazardous waste by using generator knowledge or applying testing method. The property is also listed as a hazardous waste generator and as having above ground petroleum storage tanks; however, the number of tanks is not listed. Other pertinent information was not provided. | These listings alone do not represent an environmental concern to the site. |

Notes:

[1] Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the site.

### 4.1.3 Database Review for Other Surrounding Properties

Ramboll has identified a number of non-adjoining properties that represent a potential contamination concern to the site due to past releases on these properties and possible migration onto the site, as detailed in Table 5.[2]

[2] In its evaluation, Ramboll considered only non-adjoining properties listed on databases indicative of contamination, with open status, located potentially upgradient of the site to represent a potential risk for contamination to the site (as the issuance of regulatory closure suggests that impacts to the site from the noted off-site property are unlikely).

**Table 5: Summary of Environmental Database Listings for Surrounding Properties that Represent a Potential Contamination Concern**

| Listing Name or Address and Location Relative to the Site | Summary of Information Contained in Database | Ramboll's Comments |
|---|---|---|
| Various historical and recent Dry Cleaners<br>(2411 & 2461 Chico Avenue) | A number of properties are listed on EDR's Historical and Recent Dry Cleaners databases as locations having conducted dry cleaning operations, with no other information provided. | These properties are not listed on other databases indicative of a release(s). |
| Monterey Casket Co., Inc.<br>2461 Chico Ave<br>(807 feet northeast of the site) | THE CPS-SLIC database lists this property with an "Open – Inactive" status as of 10/29/2014 and as part of the cleanup program site. No other pertinent information is provided. | Due to the distance from this property to the site, and the inactive status of the listing, this property does not appear to present a significant environmental concern to the site. |
| American General Business System<br>2430 Chico Ave<br>(1,066 feet northeast of the site) | THE CPS-SLIC database lists this property with an "Open – Inactive" status as of 10/29/2014 and as part of the cleanup program site. No other pertinent information is provided. | Due to the distance from this property to the site, and the inactive status of the listing, this property does not appear to present a significant environmental concern to the site |

The database report indicates that poor or inadequate address information was available for three properties located in the vicinity of the site; therefore, these properties could not be readily mapped by EDR. Because the location of these properties with respect to the site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped properties identified by EDR; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the site.

## 4.2 Historical Uses of the Site and Adjacent Properties

### 4.2.1 Past Uses of the Site

The site was agricultural land from at least 1923 until 1948. The first commercial use of the site was for storage of construction equipment from at least 1948 until 1959, when Pacific Coast Drum first occupied the entire site (and adjacent property to the north) for reconditioning of steel drums. Ditty took over occupancy of the eastern portion of the site in 1996 and has continued similar operations as PCD performed until the present time.

From 1996 until the present time, various auto body shops have occupied the western portion of the site.

A summary of Ramboll's key observations from the available historical sources is presented in Table 6.

**Table 6: Summary of Key Observations from Historical Sources for the Site**

| Historical Source | Key Observations Regarding Site History |
|---|---|
| Aerial Photographs<br>(1928, 1938, 1948, 1952, 1964, 1977, 1979, 1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016)<br>Satellite Imagery [1]<br>(1994 to 2019) | The site appears as agricultural land from 1928 until at least 1948 when a rectangular structure is first observed on the western portion of the site. By 1964, a small structure and parking area are observed on the western portion of the site, and a bigger structure has been constructed expanding the original rectangular-shaped structure; from 1964 until 1983 the structure continued to expand. From 1983 to present, the structure on the eastern portion has remained the same. Starting in 2005, two canopy areas are observed on the western portion of the site. |
| Topographic Maps<br>(1984 to 2012) | No development or specific structures are depicted at the site from 1984 through 2012. By 1923, Rio Hondo Avenue to the west and Rush Avenue to the south are visible; a few scattered structures are observed to the east and southeast of the site. By 1948, the areas to the west, north, and east appear developed; Rio Hondo Avenue is now North Rosemead Boulevard. |
| City Directory Abstracts<br>(1920, 1921, 1923-1940, 1942, 1944-1952,1954-1958,1960-1972, 1975, 1976, 1980, 1981, 1985, 1986,1990, 1991, 1992, 1994, 1995, 1996, 1999, 2001, 2000, 2003, 2004, 2006, 2009, 2014) | The occupants of the site are listed as:<br>• Gene S Cooperage Co South El Monte (1981, 1986, 1990);<br>• Pacific Coast Drum Co South EL Monte (1981, 1986,1990)<br>• Genes Cooperage Co, Pac Coast Drum DBA Gene S Cooperage Co, Genesco Steel Drum Co (1985);<br>• Genesco Steel Drum Co South El Monte (1986, 1990);<br>• Genesco Steel Drum Co (1994)<br>• A&D Auto Body Incorporated, V United Auto Transport Incorporated (1999)<br>• Certified Auto Collision Inc (1999, 2004)<br>• JV Auto Sales, Lokwerkz, Custom, Fabrications (2006)<br>• Lokwerks Custom Fabrications, Phils Certified Auto Center (2009)<br>• Ranz Motorsports (2014) |

Notes:

[1] In addition to aerial photographs provided by EDR, Ramboll viewed historical satellite imagery provided via Google Earth and www.historicaerials.com. Printed copies were not obtained, and imagery dates were not independently verified.

EDR reported that Sanborn fire insurance map coverage is not available for the site.

### 4.2.2 Past Uses of Adjacent Properties

The site vicinity appears as agricultural land prior to 1923. By 1923, Rio Hondo Avenue to the west and Rush Avenue to the south are visible, and a few scattered structures are observed to the east and southeast of the site. By 1948, the areas to the west, north, and east appear developed; Rio Hondo Avenue is now North Rosemead Boulevard.

## 4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in Table 7.

**Table 7: Local Agency Information for the Site**

| Agency Contacted/ Document Reviewed | Information Obtained |
|---|---|
| Los Angeles County Assessor's Office (Assessor's Office) | Based on information available online from the Assessor's Office, the site consists of one parcel with Assessor's Parcel Number (APN) 8102-039-035. The primary address for the parcel is listed as 2200 North Rosemead Boulevard, and the property type is listed as "commercial/industrial." Building improvements listed at the site include one 1,200 square foot building constructed in 1962 and one 11,562 square foot building constructed between 1948 and 1954. |
| City of South El Monte Building Department (Building Department) | Ramboll received and reviewed records from the Building Department related to the site dated between 1959 through 2019. Key documents included:<br>• A 1959 permit application to build a shelter for a drum cleaning plant.<br>• A 1962 permit application to build an area for cleaning of drums.<br>• A 1981 permit application to cement foundation for a furnace.<br>Other documents reviewed pertained to building upgrades and tenant improvements. |
| Los Angeles County Public Works – Waste Management Division (Public Works) | Ramboll received records from Public Works related to the site. These included permits/registrations, inspections, testing records, reports, and correspondence dated from 1984 through 1995. Key documents reviewed included:<br>• An official Registration Form for a Hazardous Substance Storage Statement in 1984 for a 12,000-gallon single walled gasoline UST.*<br>• An official Registration Form for a Hazardous Substance Storage Statement in 1984 for a 1,500-gallon alkaline cleaning solution sump (installed 1976); 400-gallon alkaline cleaning solution sump (installed 1976); and a 3,300-gallon water, ash, and sludge sump/UST (installed 1980).<br>• A permit application (undated) to operate the following USTs: 1,500-gallon alkaline cleaning solution UST (installed 1976 and listed as a sump); 400-gallon alkaline cleaning solution sump/UST (installed 1976); and 3,300-gallon water, ash sludge sump/UST (installed 1980).<br>• A permit application for an existing UST in 1985 with no other information provided.<br>• Application for Closure in 1986 of a 12,000-gallon gasoline UST.*<br>• A Site Integrity Report dated September 29, 1986 (Closure Permit No. 1862-B) for the removal of the 12,000-gallon gasoline UST in September 1986. The report described the tank removal, tank inspections, and soil sampling. Two soil samples were collected and analyzed for total petroleum hydrocarbons (TPH). The two soil samples reported non-detect concentrations.<br>• A "no further action" letter from the County of Los Angeles, Department of Public Works, dated October 6, 1986 regarding the 12,000-gallon UST removal (Closure permit 1862-B).* |

**Table 7: Local Agency Information for the Site**

| Agency Contacted/ Document Reviewed | Information Obtained |
|---|---|
| | • A 1989 letter from Public Works, referring the case (unspecified) to the Regional Water Quality Control Board as a result of contamination at the site.<br>• A 1995 letter from the LARWQCB requesting soil vapor sampling around the areas of the USTs and clarifier associated with the wastewater treatment system on the southern portion of the site.<br>Key reports identified in the records are discussed in Section 4.4. |
| Los Angeles County Fire Department – Health Hazardous Materials Division (Fire Department) | Ramboll requested information from the Fire Department; however, the Fire Department indicated that no records were available for the site address. |
| Los Angeles County Public Health Investigator (PHI) | Ramboll requested information from PHI; however, the agency referred Ramboll to the Fire Department. |
| City of South El Monte Industrial Waste Department | Ramboll received and reviewed records from the City of South El Monte related to the site. These included wastewater discharge permits, inspections, testing records, and records of violations. Key documents included:<br>• A 1980 Notice of violation (NOV) for discharge of wastewater with chlorinated hydrocarbons or organic phosphorous type compounds.<br>• A 1981 NOV for discharge of wastewater with high metal concentrations.<br>• A 1990 NOV for: a) discharge of wastewater with nonbiodegradable oil and petroleum oil and (b) discharge of wastewater with high lead concentrations.<br>• A 2005 NOV for discharge of wastewater with excessive heavy metal concentrations, specifically zinc with a concentration of 33 milligrams per liter (mg/l) (maximum permit level allowed 33 mg/l).<br>• A 2006 and 2007 NOV for discharge of wastewater with high pH levels exceeding permit limits. |

Notes:

*Although a 12,000-gallon gasoline UST is listed as being located on the 2200 N Rosemead address, it is located on the 2226 North Rosemead property adjacent to the north of the site.

mg/l – milligrams per liter.

## 4.4 Previous Environmental Assessments and Activities

Ramboll was provided with numerous environmental assessment reports, permits, audit reports, and soil, soil vapor, and groundwater analytical reports in connection with the site and the adjoining properties occupied by PCD. Key documents reviewed are summarized below and are included as Appendix D. Information obtained from other documents reviewed has been incorporated into the applicable sections of this report. It should be noted that, due to the nature of the PCD operations that encompassed several properties, the environmental reports reviewed cover the address of the site (2200 North Rosemead Boulevard) as well as the other addresses occupied by PCD (2226 and 2310

North Rosemead Boulevard) that are no longer part of the drum reconditioning facility operated by Ditty.

- **1981 Official Notice, County of Los Angeles Department of Health Services, March 25** – Official Notice directing PCD to "*Discontinue all deposits of chemical and other hazardous materials on the ground in the empty drum storage area. Eliminate all contaminated material from your premises. Present a clean-up plan and state how future spills will be controlled.*" Report cites "*Extensive spillage of hazardous chemicals on the ground in the empty drum storage a yard.*" Report indicates that raw materials include sodium hydroxide, L.15 Product, epoxy-modified phenolic, and drum enamel. Disposal method indicated is "*run through settling tanks. Over-flow discharged into sewer (San District) under permit. Sludge pumped by Chandler & Ogden Disposal. Wet sludge stored in bins and picked up by El Monte Disposal Co and manifested to BKK landfill*."
- **1981 Results of Soil Sampling of Drum Storage Areas, Associated Laboratories, August 14 -** Associated Laboratories performed a survey of the area where drums were stored at the site prior to being cleaned and recycled**.** The storage area was divided into five sections for sampling purposes: (1) a drum storage area that had been used since 1975 to store drums that had been used for food storage, (2) a drum storage area for drums historically used to store chemicals (paint, resin, varnish), (3) a drum storage area used since 1971 where drums formerly contained chemicals such as paints and perfumes, and food products, (4) an area used by "L. Rubin" (no other information provided), and (5) an area used for drum storage of food products (not accessible during sampling). Composite soil samples collected from the surface to 1.5 feet bgs and were laboratory-analyzed for a suite of chemicals listed by the USEPA Protocols (Federal Register, Vol 45, No. 98, 5/19/80, Pages 33127 et seq.) for evaluating hazardous wastes including metals, organics (including dieldrin, lindane, methoxychlor, toxaphene, 2,4-dichlorophenoxyacetic acid, 2,4,5-trichlorophenoxyacetic acid but excluding volatile organic compounds), and PCBs. Elevated concentrations of the listed constituents were not reported, except for low detections of PCBs (non-detect to 29 mg/kg) in areas of chemical storage but at concentrations below screening levels. At the time, a screening threshold for PCBs in soil had not been established and as a result, the screening threshold of 50 mg/kg for transformer oil was used for comparison purposes. However, a screening threshold for PCBs in soil assuming commercial/industrial land use has now been established with a DTSC-SL[3] of 0.58 mg/kg and as such, the maximum detected concentration of 4.38 mg/kg exceeds the PCB screening level for soil.
- **1981 Letter, Pacific Coast Drum Company, Drum Storage, Conservtech, September 17 –** Report to Los Angeles County DPW providing the results of the Associated Laboratories independent soil sampling activities and procedures implemented to address the concerns of the 1981 Official Notice. Conservtech had the following conclusions: "*a) there appears to be no deposits of chemical or hazardous materials on the ground in the empty drum storage area; b) there was no evidence that contaminated materials mentioned in your official Notice No. 2257 needed to be removed from the premises; c) PCD has instigated an effective program for containment and disposal of any accidental spills*."

[3] Human Health Risk Assessment (HHRA) Note Number 3, DTSC Modified Screening Levels (DTSC-SLs), Updated April 2019.

- **1988 LDP/TMP Interim Report, Conservtech, December 5** - Report issued by PCD's consultant to Los Angeles County DPW as a status update on the LDP portion of the program under the tanks program. Conservtech oversaw the completion of three soil borings and the installation of two monitoring wells (MW-1 and MW-2). Conservtech concluded that the analysis of soils " *do not indicate that the underground tanks at this property have created problems in the subsurface*" and that "*concentrations of TPH, toluene, total xylenes and ethylbenzene….have been found to be substantially below the guidelines [of the Leaking Underground Fuel Tank Manual].*"
- Conservtech also stated that the compounds found occur near the surface and that there is a 15-foot separation between those compounds detected in the soil and the water table. Conservtech then states that concentrations of several of the compounds found in the groundwater samples were not found in soils immediately above the water table and that those compounds have reached the water table from a source other than the underground tanks at this site. The report also copies the LARWQCB indicating that it was done "*in accordance with earlier discussions with the LARWQCB and the Waste Management Division.*"
- **1989 LACDPW Site Investigation Report, August 7 –** referral of the site to the LARWQCB with the box checked "*There is significant contamination at this site…we are referring the matter to the State Water Quality Control Board*".
- **1990 LARWQCB Correspondence, March 29 –** Letter to PCD citing that TPH was "*pervasive to forty feet…in soil borings performed in October 1988.*" Groundwater beneath the site was reported to be impacted by methylene chloride, trans-1,2-dichloroethylene, TCE, toluene, PCE, 1,4-dichlorobenzene, 1,2-dichlorobenzene, benzene, cis-1,3-dichloropropene, chlorobenzene, ethylbenzene, and a variety of trihalomethanes. LARWQCB states "*many of these compounds are not common groundwater contaminants and may be emanating from the confirmed soil contamination at your facility.*" The report references a March 22, 1990 inspection by LARWQCB staff where the following areas of concern were noted: 1)integrity of the waste clarifier or collection sump, 2) a drainage trench at the north edge of the open drum reconditioning area which drains runoff from the operation to the street, possibly "*acting as a conduit to soils, groundwater and surface waters*," 3) an outlet pipe from the southwest bermed area surrounding the compressor drains overflow from the compressor and sump to open soils under the conveyor, possibly impacting soils and groundwater, and 4) "empty" drums awaiting reconditioning are stored on asphalt paving or on open ground. A work plan was required to be prepared to determine if these areas of concern have impacted groundwater.
- **1990 Subsurface Investigation/Ground Water Monitoring Program, Conservtech, May 22 -** In response to a March 29,1990 letter from the LARWQCB requesting additional site investigation, Conservtech sampled existing monitoring wells MW-1 and MW-2. The LARWQCB's request followed a site visit it conducted on March 22, 1990 to identify possible sources of contamination to regional groundwater. MW-1 and MW-2 were first installed in 1988, as noted above. Results were as follows: nondetectable concentrations of BTEX, 8 to 20 µg/l TCE in MW-2, and a maximum concentration of 100 µg/l PCE in MW-2.
- **1990 Groundwater Results Report, Conservtech, July 16 -** Monitoring wells MW-1 and MW-2 were sampled and the results indicated 2,900 to 3,500 µg/l hydrocarbons in MW-2, nondetectable concentrations to 10 µg/l PCE in MW-2, 2 to 10 µg/l TCE concentrations in MW-2, nondetectable to 2 µg/l benzene concentrations in MW-2, and nondetectable to 3 µg/l toluene concentrations in MW-2.

- **1990 LARWQCB Correspondence, July 13 –** Review of work plan for installation of upgradient monitoring well (MW-3) and requiring soil vapor survey before commencing with the soil boring program proposed in the referenced July 6, 1990 work plan.
- **1990 Well Investigation Program Letter, Conservtech, October 1 -** On August 21, 1990, Conservtech conducted a site investigation, during which upgradient monitoring well MW-3 (installed on the property formerly operated by PDC and now property to the north of the site) was installed to a depth of approximately 55 feet bgs (it is noted that the parcel on which this well was installed is not part of the current site). Depth to groundwater was measured at 34.5 feet bgs. Soil samples were collected at 2.5, 5, 10, and 30 feet and analyzed for TPH (hydrocarbon range not provided). Soil samples reported nondetectable concentrations of TPH and BTEX, non-detect to 900 µg/kg methyl chloride, and non-detect to 780 µg/kg 1,2-dichloroethane (DCA). Groundwater concentrations reported maximum TCE concentrations of 37 µg/l, 91 µg/l PCE, 180 cis-1,2 dichloroethene (DCE), and 9.1 µg/l vinyl chloride in MW-2. A fourth monitoring well was recommended to further characterize impacted groundwater.
- **1991 Soil Gas Survey, November 29 -** Inland Empire Environmental Services (IEES)oversaw the installation and sampling of 85 soil vapor probes at the site (and properties to the north of the site that are no longer part of the site) in September 1991, in response to the July 13, 1990 LARWQCB directive. The results indicated the following: methane concentrations ranged from non-detect to 43 µg/l and vinyl chloride concentrations ranged from non-detect to 30 µg/l. Methane and vinyl chloride were the most prevalently detected compounds. Other detection compounds included: TCE (2 µg/l), methylene chloride (2 to 13 µg/l), benzene (non-detect to 17 µg/l), and bromodichloromethane (1.5 to 4 µg/l). It was noted that the presence of chlorinated hydrocarbons in groundwater is common within the San Gabriel Valley and that the most common chlorinated solvent detected in soil and groundwater in the San Gabriel Valley is TCE. Based on the results of the soil vapor sampling, areas of elevated chlorinated VOCs were identified at the site in the vicinity of soil vapor point 85 (vicinity of MW-3, property to the north of the site), vicinity of vapor point 44 (adjacent property to the north of the site), MW-2 (southern portion of the site), and vapor point 58 (southeastern portion of the site). Based on the results, Conservtech recommended targeted shallow soil sampling in the suspect areas, and analyzing soil samples for chlorinated hydrocarbons.
- **1992 Letter RE Potential Sources of 1,2-DCE from Properties in the Vicinity of 2200 N. Rosemead Ave., Conservtech, February 28 -** Conservtech investigated potential sources of 1,2 DCE as it was determined to be of particular concern because it was found at elevated concentrations in various groundwater samples, but was not found in soils immediately above the water table in the vicinity of the in-ground storage tanks. Conservtech indicated that 1,2-DCE and other compounds have been detected in groundwater throughout this area of South El Monte. The report a) illustrated the presence of leaking UST sites within a ¼ mile and ½ mile radius of the site, b) shows the site location in relation to the nearest upgradient facility with groundwater wells, c) presents the groundwater flow gradient as being to the southeast based on groundwater elevations measured from September to November 1987, d) presents groundwater flow direction in the vicinity of the upgradient property known as Champ Corporation to be to the southwest, e) indicates that soil samples collected on June 6, 1990 at the 2828 North Rosemead Boulevard property to the southwest of the site, approximately 75 feet from MW-2, were found to have concentrations of trans-1,2-DCE of 190 µg/kg, and f) provides inspection information from the LARWQCB regarding the adjacent 2828 North Rosemead Boulevard property indicating that the property had a long history of solvent usage and had areas of deteriorated flooring and conduits for contaminants to reach the subsurface.

- **1992 LARWQCB Correspondence, March 6 –** Letter from the LARWQCB concurring with the recommendations from Conservtech to submit a work plan for additional soils work. LARWQCB indicated that 1) all areas that displayed elevated VOC levels should be included in the sampling plan, 2) site wide soil sampling for metals and other non- or semi-volatile contaminants was still required, 3) the work plan needs to address LARWQCB requirements for conducting initial subsurface engineering/geological investigation and 4) LARWQCB disagreed with Conservtech's conclusion that vinyl chloride detected in soil vapor was off-gassing from groundwater and suggested that it was likely associated with soil contamination at the site.
- **1992 Work Plan, Subsurface Investigations, Conservtech, May** - Presents work plan for requested soil investigation.
- **1992 Letter to LARWQCB from Bartolotti Family Trust** - Letter to LARWQCB from owner of site explaining the intent to redevelop the site in light of new metal building ordinance from the City of South El Monte. The letter seeks LARWQCB guidance in moving forward and requests LARWQCB "*to review our file and evaluate our situation relative to our need to comply with the metal building ordinance.*"
- **1994 LARWQCB Correspondence, April 13 –** Letter regarding Chemrite property located at 2128 North Rosemead Boulevard (adjacent, southwest) requiring that Chemrite prepare a work plan for further delineation of soil and soil vapor impacts of PCE and methylene chloride, which were detected at maximum concentrations of 120 µg/kg and 170 µg/kg, respectively.
- **1994 LARWQCB Correspondence, May 11 –** Letter stating that the LARWQCB could not find the results of the required investigations in its files and requested submittal of the results.
- **1994 Letter to RWQCB, Conservtech, June 8** – Letter providing rationale for why the Chemrite work plan was not implemented. Letter clarifies that the property owner, Mr. Bartolotti, had sought guidance from the LARWQCB regarding the timing and scope of remediation in relation to the planned redevelopment of the site.
- **1994 LARWQCB Correspondence, June 23 –** Letter memorializing June 14, 1994 telephone conversation with Conservtech providing verbal authorization to implement the work plan for the additional soil borings.
- **1994 Internal Memorandum of Monitoring Well Water Quality Comparisons, Conservtech to Gary Mearns, August 31 –** Provides a summary of groundwater contaminants measured in the three on-site wells (MW-1 through MW-3 [not present on the current site]) over the reporting period spanning from October 1993 through July 1994. Concentrations of various constituents are present in groundwater at concentrations above the maximum contaminant levels (MCLs). While some reduction in several constituents were noted, Conservtech indicated that "*overall....it does not appear that there has been any substantial change in concentrations of regulated compounds in the three MWs over the period of reporting*."
- **1995 LARWQCB Correspondence, Additional Soil Gas Survey and Groundwater Sampling, Conservtech, February 23 -** Letter presents LARWQCB's review of the January 2015 report. Letter states that sixteen 25-foot soil borings were drilled at the site. 1,1-DCA (5 µg/kg), PCE (150 µg/kg), and TCE (20 µg/kg) were detected near the USTs to a depth of 3 feet bgs. LARWQCB concluded that the USTs and clarifier at the site have caused VOC contamination in the soil, and that the vertical and lateral extent of the contamination has not yet been fully defined. LARWQCB required that a multi-depth survey be conducted. In addition, LARWQCB disagreed with Conservtech's conclusion that that the observed groundwater contamination underlying the site

resulted from the regional groundwater contamination, citing that VOCs in groundwater in the two downgradient wells (MW-1 and MW-2) are two orders of magnitude higher than that of the upgradient well MW-3. LARWQCB required continued quarterly groundwater monitoring.

- **1995 LARWQCB Correspondence, Additional Soil Gas Survey, July 12** – Letter responding to transmittal of an April 5, 1995 soil gas survey by Environmental Support Technologies (EST). Based on information reviewed, LARWQCB identified the following areas as not having been adequately addressed: 1) former 12,000 gallon gasoline UST – former probes installed only at 5 feet bgs, 2) northeast corner of the site (now property to the north of the site near MW-3) where 1,2 DCA was detected in soil at depths up to 30 feet bgs and at a maximum concentration of 780 µg/kg, 3) the open dirt area south of MW-1 and MW-2 and east of Chemrite. LARWQCB indicated that the area was used for drum storage and reference was made that the area may have been used for chlorinated solvents prior to being received by PCD, and 4) the paint booth in the open top processing department.
- **1995 Letter to LARWQCB, Loeb and Loeb, August 8 –** Letter indicating that Pacific Coast Drum is a likely source of PCE and that prior investigations of the site has confirmed release of PCE to soil. Letter indicates that Chemrite was not named as a PRP in the South El Monte OU. Loeb and Loeb requested an extension to implement the additional work required by the LARWQCB.
- **1995 LARWQCB Correspondence, August 18 –** Letter granting extension request but warned that "*that the status of the Chemrite site should not be used as an excuse by your company to delay the required investigation of identified potential sources of contamination at your site.*"
- **1995 LARWQCB Correspondence, October 26 –** Response to letter from PCD's attorney requesting reconsideration/reductions of certain sampling requirements, based on additional information submitted for consideration. In particular, PCD petitioned to not sample three of the four areas targeted for additional sampling by the LARWQCB in the July 12 letter: a) the former UST, b) the paint booth and c) the former food drum storage area. LARWQCB concurred with some of the requested changes to the sampling program but required sampling of the paint booth area and the vicinity of MW-3.
- **1996 LARWQCB Correspondence, July 22 – LARWQCB review of soil gas surveys dated September 6, 1995 and February 14, 1996 -** LARWQCB concluded that based on the soil vapor surveys performed, 1) the active paint booth/painting operation did pose a threat to the environment, 2) the soil gas survey in the vicinity of MW-3 (now property to the north of the site) confirmed VOC contamination is present to a depth of at least 15 feet bgs and 3) lateral and vertical delineation is required by completion of an additional soil gas survey.
- **1996 LARWQCB Correspondence, December 9 – LARWQCB review of November 1, 1996 soil gas survey -** Based on the results, LARQCB provided 3 options with regard to the soil vapor plume identified in the vicinity of MW-3 (now upgradient of the site), including 1) submitting a remedial action plan, 2) submitting a work plan to monitoring the soil vapor concentration for a period of 1 year, and 3) performing a risk assessment and/or fate and transport modeling to demonstrate that the existing VOC concentrations in the soil will not impact the underlying groundwater.
- **1995-1998 Soil Vapor Sampling Events.** Various soil vapor sampling events took place from 1995 to 1998 throughout the entire site and on the adjacent two properties to the north (including the 2226 North Rosemead Boulevard property and a property to the north of that property, 2310 North Rosemead Boulevard. During the most recent round of sampling conducted in January 1998

for which data were provided, PCE and TCE were detected at maximum concentrations of 38 µg/l and 4.6 µg/l, respectively, in the soil vapor samples collected on the offsite property located at 2310 North Rosemead Boulevard. On February 21, 2018, citing stable and decreasing concentration trends, the consultant recommended that the LARWQCB case be closed with no further action.

- **1997 Environmental Audit Report, Ditty Container, Michael Wolff, Inc., December 4** – Report states that the site is owned by Pacific Coast Drum, Inc. and the Batolotti Family Trust and is leased to Ditty Container. The scope of the environmental audit was focused on those issues which could affect the physical property; e.g., practices which could lead to contamination of the site improvements, or the underlying soil or groundwater. The audit also intended to serve as a baseline on the apparent site condition as of the date of the audit and to identify existing conditions such that Ditty and the owner could agree on responsibility for conditions existing at the time of the audit. The audit describes the process for processing incoming drums. Observations:
  - Drums a tight-head drums, open drums are not accepted.
  - Some evidence of minor spillage and staining was observed.
  - Drums are exposed to weather.
  - Asphalt driveway at the rear of 2226 North Rosemead was badly broken, exposing the underlying soil.
  - Refurbishing operations are conducted above ground level.
  - Residues from flushing are collected in above-ground bins, which when full are moved to the waste storage area.
  - No solvents are reportedly used in the cleaning process (limited to caustic soda).
  - Extensive etching was observed – reportedly from operations pre-dating Ditty's operations (PCD previously used acid washing for many years).
  - Paint removal from drums is by "blasting" – shot dust observed in several areas. Recommendation was made to test shallow soil in areas where shot dust accumulates.
  - Drums are painted; thinning of paint is reportedly not conducted. However, the audit reported the presence of thinners and other solvents in use at the site.
  - Wastewater treatment area comprises two sub-grade tanks. Tank No. 1 collects wastewater from drains in the process area and is pumped to the wastewater treatment system. The smaller tank (Tank No. 2) is for the sole purpose of collecting boiler blowdown water. The audit notes that these tanks have secondary containment, but that these systems do not meet new regulations for USTs and should be considered for replacement with flow-through devises rather than USTs.
  - No chlorinated solvents are used in any maintenance operations.
  - Oil drum was observed on top of a drainage trench that dumps out onto the ground in front of the property.
  - Waste storage area is a fenced area and is bermed to contain spills but has been notched apparently to allow rain water to escape. The area is uncovered at the time of the audit.

- Tank No. 3 was identified as not being in-use by Ditty and does not meet regulations; therefore, was recommended for closure.

- **1998 LARWQCB Correspondence - No Further Requirements, March 17 -** LARWQCB issued the No Further Requirements letter in connection with the former PCD Co. property, which included property addresses to the north of the site for those properties occupied by PCD's operations. The letter presents the chronology of the investigations conducted at the site. The letter states that "*the above site assessment data demonstrated that releases of liquid wastes from the subject site impacted the soil and groundwater beneath the site. A soil cleanup was not required. Instead, four nested soil vapor probes were sampled four times between April 1997 and January 1998 to monitor the trend of VOC vapor concentrations in the vadose zone over a year [refers to the property to the north of the site, previously occupied by PCD]. Such monitoring data suggested that residual VOC concentrations in the vadose zone stabilized or declined over the monitoring period. Therefore, we do not believe that further vapor monitoring is warranted. To date, the subject site has completed Regional Board staff requirements and we will not require any further remedial and investigative work with regard to the soil contamination. Because past operations have impacted groundwater beneath this facility, you remain a responsible party for the regional groundwater cleanup which is being led by USEPA. This Regional Board encourages you to continue to participate and cooperate in the ongoing regional groundwater cleanup. Sampling of the three existing monitoring wells required by this Regional Board can be discontinued. However, all monitoring wells must be property maintained and made available for possible future sampling that may be required by USEPA*."

- **1999 Soil Assessment Report -** Environmental Support Technologies conducted a soil assessment onsite to assess potential impact of previous site usage in the vicinity of the 3,300-gallon sump/UST and to assess depth to groundwater. The sump/UST (Tank No. 3), which was part of the cooling water system historically used by PCD, was cleaned out in 1993 and covered with a metal plate [the Los Angeles County DPW treated the sump as a UST for closure purposes]. In order to assess any potential subsurface impacts, two borings were advanced in proximity to the UST in March 1999 to 21 feet bgs. Samples were collected at 5, 10, and 20 feet bgs; select soil samples were analyzed for TPH and VOCs. Total recoverable petroleum hydrocarbons (TRPH; not the same analysis as TPH) reportedly was detected in one sample at 273 milligrams per kilogram (mg/kg) at 20 feet bgs. One sample indicated a toluene concentration of 6,300 µg/kg at 5 feet, and xylene concentrations in two samples at 43,000 µg/kg at 5 feet and 8,100 µg/kg at 20 feet.

- **2002 LARWQCB Correspondence regarding directive on emergent chemical sampling, July 19 -** LARWQCB responded to PCD's letter claiming that it should not be required to conduct sampling for emergent chemicals on account of financial hardship and the fact that none of the emergent chemicals were ever detected on the site. LARWQCB reiterated its requirement to perform the testing of groundwater for emergent chemicals.

- **2002 Technical Report, Emergent Chemical Sampling, SCS Engineers, August 29** - In August 2002, SCE Engineers sampled the three onsite wells for emerging compounds perchlorate, NDMA, 1,4-dioxane, and total and hexavalent chromium. Results are as follow: nondetectable concentrations for perchlorate and hexavalent chromium, non-detect to 0.0024 µg/l NDMA in MW-2 (MCL of 0.2 µg/L), 4 to 22 µg/l 1,4-dioxane in MW-1 (MCL of 3 µg/l), and non-detect to 1.8 µg/l total chromium in MW-2 (MCL of 50 µg/l). The detected concentration of 1,4-dioxane exceeds current regulatory thresholds.

- **2004 Site Assessment Report, EST, March 8 -** EST conducted additional sampling (pursuant to the 1999 sampling program described above) to fulfill requirements by the Los Angeles County DPW to close "in place" the 3,300-gallon sump/UST (Tank No 3), located in the southeastern portion of the Site in the vicinity of MW-1. One boring (DCSB-3) was advanced to 40 feet bgs. Soil samples were collected at 5-foot intervals and analyzed for VOCs, BTEX, and TPH. Reported concentrations of TPHg ranged from non-detect to 0.079 mg/kg at 35 feet bgs. TPHd was non-detect and toluene concentrations ranged from non-detect to 5.5 µg/kg at 20 feet. Because the historical use of the UST was as a cooling water sump and analytical results "indicated only minor impact to soil and groundwater,"[4] no additional sampling was recommended by the consultant, and closure was requested. Closure in place was completed on September 4, 2004 when the tank was filled with slurry. New concrete was poured over the concrete sump. Closure of the sump/UST was granted by the Los Angeles County DPW on September 8, 2004.
- **2012 Partial Consent Agreement -** A consent agreement between USEPA/DTSC and various parties in the area (including PCD) was signed in 2012 pertaining to the San Gabriel Valley Superfund site, South El Monte Operable Unit**.** The consent agreement stated contaminant concentrations exceed MCLs throughout a large portion of the South El Monte Operable Unit, including groundwater regions used for sources of drinking water. The USEPA determined that actual or threatened releases of hazardous substances at the various party properties, if not addressed, may present an imminent and substantial endangerment to the public and the environment. The DTSC filed a complaint seeking reimbursement of response costs incurred for response action taken in connection with releases of hazardous substances in the South El Monte Operable Unit; the defendants (including PCD) entered into this agreement to protect public health but did not admit liability arising out of any previous or current releases. The Consent Agreement indicates that USEPA will be implementing a remedial action which will not entail an actual mass removal, but instead focuses on the following objectives:
  - Prevent exposure of contaminated groundwater to the public;
  - Contain further migration of contaminated groundwater from more highly contaminated portions of the aquifer;
  - Reduce impact of continued contaminant migration on downgradient water supply wells; and
  - Protect future uses of less contaminated and uncontaminated groundwater.
- **2018 Environmental Compliance Recommendations for Ditty Container, Inc., SCS Engineers, March 9 -** On January 27, 2017 SCS conducted an environmental compliance audit of the Ditty facility. The observations and compliance recommendations made include the following:
  - Steel and plastic drums and storage totes are reconditioned at the facility, with 95% consisting of drums that formerly contained petroleum product, with the remainder reportedly comprising drums containing food-grade chemical materials.
  - Production areas are surrounding by spill containment berm/cur or designed with concrete flooring that slopes towards collection sumps. Concrete floor was observed to have cracks, joints, and degraded concrete that could present potential pathways for liquids to infiltrate to the subsurface. SCS recommended routine inspections and consider application of a sealer or other materials to the surface or concrete.

[4] It is noted that it does not appear that groundwater samples were collected; no groundwater sampling results were provided in the information reviewed.

- Numerous drums were observed in areas of the site outside of secondary containment areas, including areas where rainwater accumulates. A sump on the northern side of the bermed paint area was filled with rainwater. SCS recommended implementation of stricter management procedures for drums to be stored within bermed areas and for rainwater that contacts paint to be pumped to the wastewater treatment facility.
- Ditty had removed a secondary containment wall as part of its improvements to the wastewater treatment facility. SCS recommend that the secondary containment be put back into place following completion of the improvements.
- Poor housekeeping was observed in the area of the hazardous and non-hazardous waste storage area, and stormwater and spills from this area flow overland to trenches and sumps and ultimately to the wastewater treatment facility.
- Universal waste management was identified to an issue requiring implementation of a formal management program.
- The facility generates a monthly volume of 1,660,000 gallons of industrial wastewater. Based on the self-monitoring reports reviewed for 2016, the facility appeared to be in compliance for measured discharges that have a permit limit.
- During 2016, Ditty exceeded stormwater discharge exceedances for total suspended solids (TSS) at both of its discharge points. The facility reportedly prepare a stormwater pollution prevention plan (SWPPP) Addendum and a Level 1 Exceedance Response Action (ERA) report. The facility employed additional employee training and improved best management practices (BMPs) to address the sources of the TSS. The current status of SWPPP compliance is unknown.
- Los Angeles County Fire Department had requested, based on reported higher pH testing results, that the facility implement changes to the wastewater treatment plant and comply with DTSC Permit by Rule (PBR) as an operator of a fixed treatment unit (FTU). According to SCS, Ditty was out of compliance by not previously operating under a PBR tiered permit. At the time of the audit, Ditty was preparing the PBR tiered permit application. As part of the PBR application, Ditty would have to provide financial assurance, tank integrity testing and an assessment and possible remediation of any existing contamination that poses risk to public health or the environment, prior to being issued a permit. The status of the PBR tiered permit is unknown.

## 4.5 User-Provided Information

Ramboll provided the Client with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, AULs, specialized knowledge of the site, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. Based on the responses to the User Questionnaire, Northgate Gonzalez RE, LLC does not have specialized knowledge of the site environmental conditions other than being aware that the site has had a history of environmental issues and is part of the South El Monte OU. Northgate is not aware of any AULs or liens filed against the site. Northgate is in the process of evaluating the cost of the environmental liabilities in relation to the purchase price.

## 4.6 Interviews

**Interview with Mr. Gary Mearns – Facility Operations Manager**

Ramboll conducted an interview with facility personal during the site reconnaissance on June 26 and 29, 2020. Mr. Gary Mearns, facility manager who has been working in his position since 1993 and has been the addressee for much of the regulatory correspondence between PCD and the LARWQCB. Mr. Mearns escorted Ms. Hernandez throughout the site and pointed out drum storage areas, monitoring wells, the wastewater treatment system, and paint booth areas. Mr. Mearns was not aware of previous spills at or violations for the site.

**Interview with Ms. Malissa McKeith, Environmental Advisor to PCD/Bartolotti Trust**

Ramboll interviewed Ms. Malissa McKeith who has been involved with the environmental aspects of the site since the early to mid-1990s. Ms. McKeith was familiar with the USEPA South El Monte Operable Unit issues and the site's involvement. Ms. McKeith indicated that her recollection of the details were vague in light of the nearly 30 years that have lapsed since the matter was being addressed by the LARWQCB and the USEPA. She indicated that extensive soil vapor investigations were conducted during the 1990s in connection with the site and that, to the best of her recollection, some contamination was found but that it did not rise to a level of significant concern that required immediate response actions. Ms. McKeith indicated that she has not been involved with the site since Ditty began operating at the site in 1996 and is not able to comment with regard to the nature of Ditty's operations or tenure at the site.

# 5. SITE RECONNAISSANCE

## 5.1 Methodology and Limiting Conditions

Ramboll conducted a visit to the site on June 26 and June 29, 2020. During the site visit, observations of the exterior portions of the buildings and interior portions of the buildings, were made to evaluate if any RECs, as defined in Section 2, are present. Ramboll did not observe the roofs of the buildings.

## 5.2 General Site Setting and Observations

Ramboll made observations concerning all of the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 8. Additional information regarding observed and historical items is provided in the sections following the table.

**Table 8: Summary of Site Reconnaissance Observations**

| ASTM Section | Issue | Observation |
|---|---|---|
| **Interior and Exterior Issues** | | |
| 9.4.2.1 | Current use(s) of the site | See Section 3.2 |
| 9.4.2.2 | Past use(s) of the site | See Section 4.2 |
| 9.4.2.3 | Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses | **Present** (see Section 5.2.1) |
| 9.4.2.4 | Storage tanks:<br>Underground storage tanks (fill ports, vent pipes, manholes)<br>Aboveground storage tanks | (see Sections 5.2.2 and 5.2.3)<br>**Present**<br>**Present** |
| 9.4.2.5 | Odors (strong, pungent or noxious) | Absent |
| 9.4.2.6 | Pools of liquid, standing surface water or sumps | **Present** (see Section 5.2.4) |
| 9.4.2.7 | Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes) | **Present** (see Section 5.2.1) |
| 9.4.2.8 | Hazardous substance and petroleum product containers (not necessarily in connection with identified uses) | Absent |
| 9.4.2.9 | Unidentified substance containers suspected of containing hazardous substances or petroleum products | Absent |

**Table 8: Summary of Site Reconnaissance Observations**

| ASTM Section | Issue | Observation |
|---|---|---|
| 9.4.2.10 | Polychlorinated biphenyls (PCBs)<br>Electrical equipment on-site (e.g., transformers, capacitors)<br>Electrical equipment known or likely to contain PCBs<br>Hydraulic equipment on-site (e.g., elevators, truck dock lifts)<br>Hydraulic equipment known or likely to contain PCBs | <br>Absent<br>**Possible** (See Section 5.2.5)<br>Absent<br>Unlikely |
| **Interior Issues** | | |
| 9.4.3.1 | Heating/cooling systems | **Present** (see Table 1) |
| 9.4.3.2 | Stains or corrosion on interior floors, walls or ceilings (except for staining from water) | Not identified |
| 9.4.3.3 | Floor drains and interior sumps | Not identified |
| **Exterior Issues** | | |
| 9.4.4.1 | Pits, ponds or lagoons on site or adjacent properties | Absent |
| 9.4.4.2 | Stained soil or pavement | **Present** (see Section 5.2.6) |
| 9.4.4.3 | Stressed vegetation (from other than insufficient water) | Absent |
| 9.4.4.4 | On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal | Absent |
| 9.4.4.5 | Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the site | **Present** (see Section 3.2.3) |
| 9.4.4.6 | Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells) | **Present** (see Section 5.2.7) |
| 9.4.4.7 | Septic systems or cesspools | Absent |

Notes:

Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.

See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.

Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.

N/A – Not applicable.

### 5.2.1 Hazardous Substances and Petroleum Products

Ramboll did not observe significant chemical storage or usage at the site.

Ramboll observed six 550-gallon totes containing hazardous oily wastewater in secondary containment. Facility personnel indicated that the processed water would be transported for offsite disposal.

### 5.2.2 Underground Storage Tanks

One 400-gallon wastewater sump/UST currently is located at the site adjoining the wastewater treatment area on the southcentral portion of the site. This sump/UST was installed in 1976. The 400-gallon wastewater sump is registered as a UST with the County of Los Angeles Department of Public Works, under Facility Identification Number I-04601-3U, as indicated in a UST notification form dated 1985.

Additionally, one decommissioned/closed "in place" 3,300-gallon sump/UST is located in the southcentral portion of the site. This sump/UST was first decommissioned in 1993 but backfilled with slurry in 2004 as part of closure activities when new concrete was poured over the concrete sump. Pertinent information regarding the 3,300-gallon closed-in-place UST is provided in Table 9. Information related to the closure activities of this UST/sump, including sampling conducted as part of closure activities, is provided in Section 4.4.

**Table 9: Underground Storage Tanks**

| Number and Size (gal.) | Contents | Location | Key Dates | Regulatory Closure Granted? | Notes |
|---|---|---|---|---|---|
| **In Use** | | | | | |
| 1 x 400 | Wastewater | Adjacent to wastewater treatment system | Installed 1976 | N/A (sump/UST is in active use) | Active single-walled, non-vaulted, concrete UST/sump in use as part of the wastewater treatment system |
| **Decommissioned/Closed-in-Place/Removed** | | | | | |
| 1 x 3,300 | Cooling water | Southeastern portion of the site | Installed in 1980 and closed-in-place in place in 2004 | Yes | Closure letter issued by Los Angeles County Public Works on September 8, 2004. |

### 5.2.3 Aboveground Storage Tanks

Five aboveground storage tanks (ASTs) are maintained at the site and are part of the onsite wastewater treatment system. AST information is summarized in the table below.

**Table 10: Aboveground Chemical and Petroleum Storage Tanks and Bulk Containers**

| Location | # of tanks | Contents | Sizes | Observations |
|---|---|---|---|---|
| Southern portion of the site | 1 | wastewater | 1,500 gal | Tanks are maintained within a secondary containment area constructed on concrete block. This area comprises the wastewater treatment system. No visual evidence of significant spills or releases was observed. |
| | 3 | wastewater; 3 empty tanks (formerly contained treated wastewater from the wastewater treatment system | 10,000 gal (empty) | |
| | | | 10,000 gal (empty) | |
| | | | 5,000 gal (empty) | |
| | 1 | hydrochloric acid | 1,800 gal | |

### 5.2.4 Pools of Liquid, Standing Surface Water, or Sumps

Minor standing water was observed near the drum cleaning/washing area on the northeastern portion of the site; no sheen or oil residue was observed was on the surface of the water. One active 400-gallon wastewater sump, which is registered as a UST, is present onsite and described above in Section 5.2.2.

### 5.2.5 PCBs

Facility personnel were not aware of on-site equipment that is known to contain PCBs. Because the buildings were constructed prior to the 1979 federal ban on the manufacture of PCBs, it is possible that hydraulic oils or other types of electrical equipment, such as capacitors or light ballasts if present, contain PCBs. Ramboll observed no visual indication of significant leaks or releases from electrical equipment during the site visit.

### 5.2.6 Stained Soil or Pavement

Ramboll observed staining in several locations onsite, including (i) near the tote storage areas on the northeastern portion of the site, (ii) on the northwestern portion of the site, and (iii) near the clarifier on the southwestern portion of the site. Pavement onsite was in fair condition with some visual evidence of cracking. The stains were limited in areal extent, and no stains appeared to reach floor drains or storm water drains.

### 5.2.7 Wells

At the time of the site visit**,** Ramboll observed two monitoring wells on the southern portion of the site, MW-1 inside the waste oil storage area and MW-2 located to the south of the wastewater treatment system. The on-site wells reportedly were installed in 1988 pursuant to requirements from

the County of Los Angeles DPW and subsequently were sampled several times between 1988 and 2002. The 1998 closure letter issued for the site by the LARWQCB stated that the property owner was required to maintain the wells in good condition in anticipation of possible future sampling requirements from the USEPA. Facility personnel were not aware any other monitoring wells on the site, nor were any additional monitoring wells observed at the time of the site visit.

# 6. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the site located at 2200 North Rosemead Boulevard in South El Monte, California in June 2020. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Section 7 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

## 6.1 Findings, Opinions, and Conclusions

### 6.1.1 Recognized Environmental Conditions

Ramboll has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the site located at 2200 North Rosemead Boulevard in South El Monte, California. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no evidence of RECs in connection with the site, except for the following.

- **Location of Facility within San Gabriel Valley Superfund Site**. The site is located within an area of contaminated groundwater underlying the San Gabriel Valley designated by the USEPA as the San Gabriel Valley Superfund site (Area 1, including the South El Monte Operable Unit), in which groundwater is contaminated with VOCs, in particular, TCE, PCE, and carbon tetrachloride; perchlorate; 1,4-dioxane; and NDMA. The San Gabriel Valley Superfund site is listed on numerous databases in the EDR database report. According to the EDR database report, the site (former occupant PCD) and numerous surrounding properties and other properties in the vicinity listed on the SLIC and WIP databases are located within San Gabriel Valley Area 1 and are listed as PRPs for contributing to the groundwater contaminant plume, comprising an area of approximately 11 square miles.

  Numerous subsurface investigations consisting of soil, soil vapor, and groundwater sampling were conducted in connection with the WIP at the site and adjoining properties historically occupied by PCD. The investigations revealed contamination that was determined by the LARWQCB to be sourced on-site. However, site-specific cleanup actions were not required by the LARWQCB, administrator of the WIP program. As a result of PCD demonstrating stable or declining concentrations of VOCs in soil vapor, the LARWQCB did not require additional investigation or remediation work at the site. The case was closed with a no NFA designation on March 17, 1998 and is listed as "case closed" in the Geotracker database as of November 17, 2014. However, the closure letter made it clear that PCD was considered a PRP with regard to the South El Monte Operable Unit and was urged to continue to cooperate with USEPA's requirements.

  A consent agreement between USEPA/DTSC and various parties in the area (including PCD) was signed in 2012 pertaining to the South El Monte Operable Unit of the San Gabriel Valley Area 1 Superfund site**.** The consent agreement stated that contaminant concentrations exceed MCLs throughout a large portion of the South El Monte Operable Unit, including areas used for sources of drinking water, and filed a complaint seeking reimbursement of response costs incurred for response action taken in connection with releases of hazardous substances in the South El Monte Operable Unit; the defendants (including PCD) entered into this agreement to protect public health but did not admit liability arising out of any previous or current releases.

  Cleanup actions performed in relation to the San Gabriel Valley Area 1 Superfund site, including the South El Monte Operable Unit, are ongoing. Remediation of impacted groundwater within the area-wide plume commenced in 2008 with the installation and operation of four separate

groundwater pump and treat systems. Based on the current status of the response action and the continuing use of the site as a drum recycling facility, Ramboll considers this issue to be a REC.

- **Onsite Soil, Soil Vapor, and Groundwater Contamination and Historical Industrial Uses of the Site.** Investigations conducted from the 1980s through early 2000s have revealed the presence of soil, soil vapor, and groundwater contamination at the site, which was found to consist of generally low to moderate concentrations of VOCs (specifically, chlorinated solvents) and other compounds. Detected concentrations of various compounds detected in soil, soil vapor, and groundwater exceed current regulatory thresholds.

  The site and adjoining property to the north (2226 North Rosemead Boulevard) have a long history of use as a steel drum and tote reconditioning business, which operated since 1959 by PCD and continues to operate at the site as Ditty Container. In addition, the western portion of the site has been used by auto body shops which have occupied the site since 1996. Both operations have involved the use and storage of a variety of chemicals (e.g., paints, resins, varnishes, cleaners, degreasers, etc.) and generated a variety of hazardous wastes (solvents, oils). Ramboll cannot rule out the potential that historical and current uses of the site have resulted in subsurface impacts to the site. In addition, Pacific Coast Drums/Ditty Container is listed in the LUST database with a status of "Pollution Characterization" regarding solvents, with no additional information reported. Ramboll's assessment has identified the presence of several areas of environmental concern at the site, including the following: the wastewater treatment system (including three sumps/USTs and several ASTs), a 3-stage clarifier, paint storage areas, drum and tote storage areas, a waste oil storage area, areas of surficial staining, and a former hazardous waste storage area.

  Because no soil, soil vapor, or groundwater sampling activities reportedly have been conducted at the site for approximately 15 - 20 years (while aforementioned industrial uses were ongoing), current subsurface conditions are not known. As a result, and because concentrations of various compounds detected in soil, soil vapor, and groundwater historically exceed current regulatory thresholds, this issue is characterized as a REC. Furthermore, the potential that on-site soil vapor concentrations present a possible VEC, cannot be ruled out at this time.

- **Adjoining Property Uses.** The properties to the north of the site (2226 and 2310 North Rosemead Boulevard) historically were occupied by PCD and have had documented releases of hazardous substances that impacted soil and soil vapor beneath the properties. In addition, the property located at 2128 North Rosemead Boulevard, identified as the former Chemrite facility, was found to have soil and groundwater impacts that appeared to be sourced on that property. Prior correspondence with the LARWQCB suggested that the 2128 North Rosemead Boulevard property could be a possible source of chlorinated solvent contamination detected beneath the site. Based on the long-term industrial use and known/suspected sources of contamination, these facilities are considered to present a REC in connection with the site.

### 6.1.2 Other Findings

In addition to RECs identified above, the following additional findings related to potential contamination concerns were identified:

- **Sump/UST Closed-in-Place.** One 3,300-gallon sump/UST located in the southcentral portion of the site was closed in place in 2004. The sump/UST (Tank No. 3), which formerly was used to contain cooling water for the wastewater treatment system, was cleaned out in 1993 and covered with a metal plate [the Los Angeles County DPW treated the sump as a UST for closure purposes]. In order to assess any potential subsurface impacts, soil samples were collected and analyzed for

VOCs, BTEX, and TPH. Because the historical use of the sump/UST was for a cooling water sump and results indicated only minor impacts to soil, no additional sampling was recommended by the consultant and closure was requested. Decommissioning of the sump/UST was completed on September 4, 2004 when the tank was filled with slurry and new concrete poured over concrete sump. Closure was granted by the Los Angeles DPW on September 8, 2004.

- **Wastewater Treatment System and Clarifier.** Wastewater generated from the cleaning of drums is treated in the onsite wastewater treatment system and clarifier and is subsequently discharged to the municipal sanitary sewer system. The wastewater treatment system comprises a 400-gallon wastewater sump/UST (Tank No. 2), a 1,500-gallon wastewater AST (Tank No 1), three empty ASTs, an 1,800-gallon hydrochloric acid AST, and a clarifier. Based on a visual inspection conducted during the site visit, no specific environmental concerns were noted apart from noting that the facility was old and that surface coverings were in poor to fair condition. However, during a soil gas survey conducted in the vicinity in 1991 (as described above), a "hot spot" of elevated concentrations of vinyl chloride was identified just south of the wastewater treatment system. As noted above, no sampling activities are known to have been conducted at the site for approximately 15 - 20 years. As a result, current subsurface conditions are not known. Furthermore, compliance audits reviewed under operation by Ditty revealed the potential for spillage and infiltration in the areas of surface drainage and beneath the processing areas of the facility.
- **Groundwater Monitoring Wells.** At the time of the site visit**,** Ramboll observed two monitoring wells on the southern portion of the site, MW-1 inside the waste oil storage area and MW-2 located to the south of the wastewater treatment system (it is noted that a third monitoring well associated with PCD [MW-3] referenced throughout this report was located upgradient of the site at the formerly PCD-occupied property located at 2310 North Rosemead Boulevard). The on-site wells reportedly were installed in 1988 pursuant to requirements from the County of Los Angeles DPW and subsequently were sampled several times between 1988 and 2002. The 1998 closure letter issued for the site by the LARWQCB stated that the property owner was required to maintain the wells in good condition in anticipation of possible future sampling requirements from the USEPA. However, given the length of time since the wells were in use, and as the wells present a potential conduit to the subsurface, it is recommended that they should be properly abandoned/decommissioned.
- **Asbestos, Lead-Based Paint and Universal Wastes.** Based age of the facility and likelihood of past modifications and/or additions, it is likely that asbestos and lead-based paint are present within interior and exterior building surfaces and building materials. Additionally, the facility is likely to contain universal wastes, such as light ballasts and window putty containing compounds such as PCBs. An evaluation of such materials is outside the scope of work for a Phase I ESA. However, given the size of the facility, Ramboll recommends that a pre-demolition survey for these materials be conducted in order to evaluate the potential abatement costs associated with these issues.

### 6.1.3 *De Minimis* Conditions

*De minimis* conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll identified the following de minimis conditions during the course of this assessment.

- **Historical Agricultural Use of the Site**. Based on Ramboll's review of historical information sources, the site historically may have been used for agricultural purposes from 1928 until 1948. Ramboll was not provided with any specific information regarding historical agricultural chemical use, but pesticides or other agricultural chemicals may have been applied on the site. It is possible that residual concentrations of agricultural chemicals may be present in the subsurface. If residual concentrations of these chemicals are present, it is unlikely that they would be the subject of regulatory scrutiny in the context of a non-residential land use scenario. As such, Ramboll characterizes this finding as a de minimis condition, provided the site use remains industrial (commercial) and the site is not re-zoned for residential use. As a result, Ramboll characterizes this issue as a *de minimis* condition.
- **Pavement and Floor Staining**. Ramboll observed several areas of exterior pavement where stains were apparent. The stains were limited in areal extent, and no stains appeared to reach floor drains or storm water drains. As such, Ramboll considers this matter to represent a *de minimis* condition.

## 6.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- As it is a User requirement, Ramboll did not conduct a review of records to identify whether any environmental liens or activity and use limitations (AULs) have been imposed on the site. However, based on the document research, environmental liens or land use restrictions have not been filed against the site.
- Facility personnel did not have current contact information for representatives of former site owners/occupants. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions. However, Ramboll conducted an interview with the representative of the site management company with tenure at the site dating back to 1993 and reviewed other historical sources regarding former uses of the site.
- Historical information, such as aerial photographs, was not readily available to characterize the site from the present back to the site's obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is an aerial photograph dated 1928, which shows that at least a portion of the site was already developed for agricultural uses. ASTM defines agricultural site use as a "developed" site use.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

# 7. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

**REC - Recognized Environmental Condition:**

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

**CREC - Controlled Recognized Environmental Condition:**

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

**HREC - Historical Recognized Environmental Condition:**

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

**Data Gap / Significant Data Gap:**

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

*Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.*

# APPENDIX B
# ENVIRONMENTAL DATABASE REPORT

## NOTES ON ENVIRONMENTAL DATABASE REPORT

The third-party provider conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology "approximate minimum search distance" to refer to the radii searched in the environmental database report.

The third-party provider conducted the search of environmental databases in August 2019. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

# EXECUTIVE SUMMARY

## TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

## DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

## STANDARD ENVIRONMENTAL RECORDS

### *Federal NPL site list*

Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

### *Federal Delisted NPL site list*

Delisted NPL ---------- National Priority List Deletions

### *Federal CERCLIS list*

FEDERAL FACILITY ---------- Federal Facility Site Information listing

### *Federal RCRA CORRACTS facilities list*

CORRACTS ---------- Corrective Action Report

### *Federal RCRA generators list*

RCRA-VSQG ---------- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

### *Federal institutional controls / engineering controls registries*

LUCIS ---------- Land Use Control Information System
US INST CONTROLS ---------- Institutional Controls Sites List

### *Federal ERNS list*

ERNS ---------- Emergency Response Notification System

### *State and tribal leaking storage tank lists*

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land

### *State and tribal registered storage tank lists*

FEMA UST ---------- Underground Storage Tank Listing

INDIAN UST ---- Underground Storage Tanks on Indian Land

***State and tribal voluntary cleanup sites***

INDIAN VCP ---- Voluntary Cleanup Priority Listing
VCP ---- Voluntary Cleanup Program Properties

***State and tribal Brownfields sites***

BROWNFIELDS ---- Considered Brownfieds Sites Listing

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Brownfield lists***

US BROWNFIELDS ---- A Listing of Brownfields Sites

***Local Lists of Landfill / Solid Waste Disposal Sites***

WMUDS/SWAT ---- Waste Management Unit Database
SWRCY ---- Recycler Database
HAULERS ---- Registered Waste Tire Haulers Listing
INDIAN ODI ---- Report on the Status of Open Dumps on Indian Lands
DEBRIS REGION 9 ---- Torres Martinez Reservation Illegal Dump Site Locations
ODI ---- Open Dump Inventory
IHS OPEN DUMPS ---- Open Dumps on Indian Land

***Local Lists of Hazardous waste / Contaminated Sites***

US HIST CDL ---- Delisted National Clandestine Laboratory Register
SCH ---- School Property Evaluation Program
CDL ---- Clandestine Drug Labs
Toxic Pits ---- Toxic Pits Cleanup Act Sites
US CDL ---- National Clandestine Laboratory Register
PFAS ---- PFAS Contamination Site Location Listing

***Local Lists of Registered Storage Tanks***

CA FID UST ---- Facility Inventory Database

***Local Land Records***

LIENS ---- Environmental Liens Listing
LIENS 2 ---- CERCLA Lien Information
DEED ---- Deed Restriction Listing

***Records of Emergency Release Reports***

HMIRS ---- Hazardous Materials Information Reporting System
CHMIRS ---- California Hazardous Material Incident Report System
LDS ---- Land Disposal Sites Listing
MCS ---- Military Cleanup Sites Listing
SPILLS 90 ---- SPILLS 90 data from FirstSearch

***Other Ascertainable Records***

DOD ---- Department of Defense Sites

# EXECUTIVE SUMMARY

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP---------- EDR Proprietary Manufactured Gas Plants

**EDR RECOVERED GOVERNMENT ARCHIVES**

***Exclusive Recovered Govt. Archives***

RGA LF---------- Recovered Government Archive Solid Waste Facilities List

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Federal NPL site list***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 04/27/2020 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

| Equal/Higher Elevation | Address | Direction / Distance | Map ID | Page |

***Federal CERCLIS list***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains

data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/27/2020 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

| ***PARAGON PRESS*** Site ID: 0903369 EPA Id: CAD008246746 | ***9323 RUSH ST*** | ***WSW 1/8 - 1/4 (0.155 mi.)*** | ***R204*** | ***725*** |

***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/23/2020 has revealed that there is 1

RCRA-TSDF site within approximately 0.5 miles of the target property.

***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 23 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/27/2020 has revealed that there are 10 ENVIROSTOR sites within approximately 1 mile of the target property.

***State and tribal landfill and/or solid waste disposal site lists***

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

# EXECUTIVE SUMMARY

***State and tribal leaking storage tank lists***

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 20 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 50 CPS-SLIC sites within approximately 0.5 miles of the target property.

***State and tribal registered storage tank lists***

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 9 UST sites within

approximately 0.25 miles of the target property.

***Local Lists of Registered Storage Tanks***

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 28 SWEEPS UST sites within approximately 0.25 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/23/2020 has revealed that there are 40 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, has revealed that there is 1 US AIRS site within approximately 0.001 miles of the target property.

# EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/03/2020 has revealed that there are 5 FINDS sites within approximately 0.001 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2017 has revealed that there are 5 HAZNET sites within approximately 0.001 miles of the target property.

HWT: A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

A review of the HWT list, as provided by EDR, and dated 01/06/2020 has revealed that there is 1 HWT site within approximately 0.25 miles of the target property.

LOS ANGELES CO LF METHANE: This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

A review of the LOS ANGELES CO LF METHANE list, as provided by EDR, and dated 04/30/2012 has revealed that there is 1 LOS ANGELES CO LF METHANE site within approximately 0.5 miles of the target property.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 7 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.25 miles of the target property.

**EDR RECOVERED GOVERNMENT ARCHIVES**

***Exclusive Recovered Govt. Archives***

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a

list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 3 RGA LUST sites within approximately 0.001 miles of the target property.

Scoring: 2

NPL:
EPA ID: CAD980677355
Summary: Conditions at listing September 1983): San Gabriel Valley Area 1) is a ground water plume that runs along the axis of the Rio Hondo Wash and the Salt Pit Wash in the San Gabriel ground water basin in El Monte, Los Angeles County, California

EPA ID: CAD980677355
Summary: . The plume also parallels the San Gabriel River to the east. It is approximately 4 miles long and 1.5 miles wide. Ground water is contaminated with trichloroethylene TCE), perchloroethylene PCE), and carbon tetrachloride CTC) accord

EPA ID: CAD980677355
Summary: ing to analyses by State agencies and local water companies. Many public wells in this area exceed the EPA Suggested No Adverse Response Levels SNARL) for TCE and PCE. Approximately 200,000 people are affected. Cities and public water compan

EPA ID: CAD980677355
Summary: ies in the area have tested to ensure that their water supplies contain less than 5 parts per billion ppb) of TCE and 4 ppb PCE, levels considered safe for human consumption. When alternative methods of reducing the TCE and PCE levels below su

EPA ID: CAD980677355
Summary: ch levels are not effective, wells are removed from service. Currently, three small mutual water companies have no alternate water supply and have advised their customers to use bottled water. Status June 1984): As a result of EP

**SAN GABRIEL VALLEY (AREA 1) (Continued)** **1000114959**

EPA ID: CAD980677355
Summary: A s analysis of initial remedial measures, completed in December l983, EPA will install water treatment systems to provide clean water to two of the three companies that have no alternate supply. The third company has already purchased a treat

EPA ID: CAD980677355
Summary: ment system and will begin operation of the system soon. A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are

EPA ID: CAD980677355
Summary: preparing to initiate a remedial investigation/feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to iden

EPA ID: CAD980677355
Summary: tify sources of contamination. This site, along with the three other San Gabriel Valley sites, was added to the NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

Environmental Interest/Information System:
SUPERFUND NPL
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

FINDS:
Registry ID: 110009529616
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110009529616

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violations:
Site ID: 111789
Site Name: DITTY CONTAINER INC
Violation Date: 08-26-2019
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to provide bulk storage containers with adequate secondary containment large enough to contain the entire capacity of the largest container plus additional capacity to contain precipitation when applicable, and/or failure to position/locate mobile or portable containers to prevent a discharge.
Violation Notes: Returned to compliance on 11/12/2019. OBSERVATION: Bulk storage containers do not have adequate secondary containment. Tote bins were found in the oil-water separation area and behind the storage cage without secondary containment. CORRECTIVE ACTION: Provide secondary containment for each bulk storage container or relocate them within containment berms. Submit photos within 30 days.

Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 09/08/2016. OBSERVATION: Sludge (resin waste) from treatment tank and stripper; wastewater from collection sump (2,000-gal below-grade sump); shot blast dust; and wastewater from hard-flush collection sumps did not have any recent analysis or hazardous waste determination. Any person who generates a waste shall determine if the waste is a hazardous waste and keep a record of any test results, waste analyses, or other determinations made in accordance with hazardous waste regulations for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal. CORRECTIVE ACTION: Immediately make a hazardous waste determination for pH, %-weight of base in the wastewater, and Title 22 heavy metals using TTLC/STLC as applicable and manage it according the Title 22 hazardous waste regulations. Submit a statement and supporting documentation explaining how this waste was managed 30 days from now.

Address: 2226 N ROSEMEAD BLVD
City,State,Zip: SOUTH EL MONTE, CA 91733-1520
Site ID: 111789
CERS ID: 91733DTTYC2226N
CERS Description: Toxic Release Inventory

Violations:
Site ID: 111789
Site Name: DITTY CONTAINER INC
Violation Date: 08-26-2019
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to provide bulk storage containers with adequate secondary containment large enough to contain the entire capacity of the largest

**DITTY CONTAINER INC (Continued)** **U002279495**

container plus additional capacity to contain precipitation when applicable, and/or failure to position/locate mobile or portable containers to prevent a discharge.

Violation Notes: Returned to compliance on 11/12/2019. OBSERVATION: Bulk storage containers do not have adequate secondary containment. Tote bins were found in the oil-water separation area and behind the storage cage without secondary containment. CORRECTIVE ACTION: Provide secondary containment for each bulk storage container or relocate them within containment berms. Submit photos within 30 days.

Citation: HSC 6.95 Multiple - California Health and Safety Code, Chapter 6.95, Section(s) Multiple
Violation Description: Business Plan Program - Operations/Maintenance - General
Violation Notes: OBSERVATION: Owner/Operator failed to separate incompatible hazardous materials in storage pursuant to UFC 5003.9.8. CORRECTIVE ACTION: Incompatible materials in storage and storage of materials that are incompatible with materials in use shall be separated where the stored materials are in containers having a capacity of more than 5 pounds (2 kg) or 0.5 gallon (2 L). Separation shall be accomplished by one or more of the following methods: 1. Segregating incompatible materials in storage by a distance of not less than 20 feet (6096 mm). 2. Isolating incompatible materials in storage by a non-combustible partition extending not less than 18 inches (457 mm) above and to the sides of the stored material. 3. Storing liquid and solid materials in hazardous material storage cabinets. 4. Storing compressed gases in gas cabinets or exhausted enclosures in accordance with Sections 5003.8.5 and 5003.8.6. Materials that are incompatible shall not be stored within the same [Truncated]

**DITTY CONTAINER INC (Continued)** **1005775808**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
STATE MASTER
UORS (California - Used Oil Recycling System). California Integrated Waste Management Board (CIWMB) helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

CERS HAZ WASTE:
Name: D & C AUTO BODY SHOP
Address: 2121 N ROSEMEAD BLVD
City,State,Zip: SOUTH EL MONTE, CA 91733
Site ID: 128652
CERS ID: 10298038
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 128652
Site Name: D & C AUTO BODY SHOP
Violation Date: 06-16-2016
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 05/23/2019. OBSERVATION: Waste waterborne paint solution and solvent- based waste (30-gal each) were found stored >180 days. Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA 30 days from now.

| Citation: | 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f) |
| Violation Description: | Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date. |
| Violation Notes: | Returned to compliance on 12/15/2015. OBSERVATION: Three out of four HW containers did not have HW labels; 4th container was missing an accumulation date. All hazardous waste containers shall be marked with the following information: 1) the words G Hazardous WasteG ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. |

Citation: 22 CCR 31 67100.8 - California Code of Regulations, Title 22, Chapter 31, Section(s) 67100.8
Violation Description: Failure of the generator to prepare a hazardous waste management performance report every four years. The report shall contain sufficient detail to convey an understanding of the hazardous waste management approaches used at the site, using narratives, photographs, illustrations, figures or data as necessary, which includes, at a minimum, all of the following: 1) Name and location of the site 2) Four digit SIC code(s) for the site 3) All of the following information for each waste stream identified: A) An estimate, in pounds, of the quantity of hazardous waste generated and the quantity of hazardous waste managed, both onsite and offsite, during the current reporting year and the baseline year; B) A description of current hazardous waste management approaches and identification of all approaches implemented since the baseline year; C) An assessment

**KIM SE'S AUTO (Continued)** **S123518357**

| | |
|---|---|
| | of the effect, since the baseline year, of each implemented hazardous waste management approach on the weight of hazardous waste generated, the properties which cause it to be classified as a hazardous waste and/or the onsite and offsite management of hazardous waste. The report shall consider, but shall not be limited to all of the following approaches: 1. Source reduction; 2. Onsite or offsite recycling; 3. Onsite or offsite treatment; and D) A description of factors during the current reporting year that have affected hazardous waste generation and onsite and offsite hazardous waste management since the baseline year, including, but not limited to, any of the following: 1. Changes in business activity; 2. Changes in waste classification; 3. Natural phenomena and; 4. Other factors that have affected either the quantity of hazardous waste generated or onsite and offsite hazardous waste management requirements. |
| Violation Notes: | Returned to compliance on 08/10/2017. OBSERVATION: Waste coolant and waste paint thinner drums were missing Hazardous Waste labels. All hazardous waste containers shall be marked with the following information: 1) the words G Hazardous WasteG ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. |

| Violation Description: | Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities. |
| Violation Notes: | Returned to compliance on 08/10/2017. OBSERVATION: A business plan has not been received by the CUPA. The facility was previously sent a notice/request from the CUPA for the submittal of a business plan. CORRECTIVE ACTION: Submit the business plan electronically in the California Environmental Reporting System (CERS) and implement immediately. REPORTABLE HAZ MAT: used oil - 1x200-gal container; waste coolant - 2x55-gal drums; waste paint thinner - 1x55-gal drum |

6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a site map with all required content.
Violation Notes: Returned to compliance on 01/08/2018. OBSERVATION: The business failed to complete and electronically submit a site map with all required content including: north orientation, loading area, internal roads, adjacent streets, storm and sewer drains, access and exit points, emergency shut offs, evacuation staging area, hazardous materials/waste storage areas and emergency response equipment. CORRECTIVE ACTION: Complete and electronically submit a site map with all required content.
Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 143636
Site Name: PHIL'S CERTIFIED AUTO CENTER
Violation Date: 10-18-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.
Violation Notes: Returned to compliance on 01/08/2018. OBSERVATION: The business failed to establish and electronically submit adequate emergency response procedures for a release or threatened release of a hazardous material. CORRECTIVE ACTION: Establish and electronically submit adequate emergency response procedures for a release or threatened release of a hazardous material within 30 days.
Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 143636
Site Name: PHIL'S CERTIFIED AUTO CENTER
Violation Date: 10-18-2017
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 01/08/2018. OBSERVATION: 6 x 55 gallon steel drums of used oil located at the hazarodus waste storage area was observed without a hazardous waste label which shall include an accumulation start date and a manifest/receipt demonstrating disposal within the past 180 days was not available. CORRECTIVE ACTION: Dispose of the 6 x 55 gallon steel drums of used oil and submit a copy of the manifest/receipt to the CUPA.

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 01/08/2018. OBSERVATION: 6 x 55 gallon steel drums of used oil located at the hazarodus waste storage area was observed without proper hazardous waste labels which shall include the accumulation start date. Label all empty containers as "empty". Observed 5 empty 55 gallon steel drums without an "empty" label. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the container listed above has been properly labeled.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002656983

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| Violation Description: | Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months. |

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided

**CHUN AND JUNG LEE DBA CLJ SHELL (Continued)** **S104538044**

the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

CERS Description: Hazardous Waste Generator

Violations:

Site ID: 3159
Site Name: Advance Automotive Group
Violation Date: 08-11-2017
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: OBSERVATION: The business failed to establish and implement a business plan when handling hazardous materials at or above the reportable threshold quantities. CORRECTIVE ACTION: Establish and implement a business plan for the facility. Submit documentation of correction to the unified program agency. REPORTABLE HAZ MAT: used oil - 2 x 55gal drums
Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 3159
Site Name: Advance Automotive Group
Violation Date: 08-11-2017
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: Returned to compliance on 01/12/2018. OBSERVATION: The generator's EPA ID number is inactive. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without an active EPA ID number. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that you have reactivated the facility's EPA ID number.

Hazardous Waste Summary:

. Waste code: 121
. Waste name: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 132
. Waste name: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

. Waste code: 135
. Waste name: Unspecified aqueous solution

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: 792
. Waste name: Liquids with pH < 2 with metals

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D005
. Waste name: BARIUM

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 75823.2

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 75823.2

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

FINDS:
Registry ID: 110008267295
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110008267295

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

TSD EPA ID: CAD981397417
CA Waste Code: 211 - Halogenated solvents (chloroforms, methyl chloride, perchloroethylene, etc)
Disposal Method: 01 -
Tons: 0.3753

Year: 1992
Gepaid: CAD981396294
TSD EPA ID: CAD009452657
CA Waste Code: 741 - Liquids with halogenated organic compounds >= 1,000 Mg./L
Disposal Method: R01 - Recycler
Tons: 0.1167

Year: 1991
Gepaid: CAD981396294
TSD EPA ID: CAD042245001
CA Waste Code: -
Disposal Method: 01 -
Tons: 0.1251

| Violation Description: | Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days. |
| Violation Notes: | Returned to compliance on 10/19/2016. OBSERVATION: Seven drums of waste hydraulic oil were found stored >180 days. Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA 30 days from now. |

| Citation: | 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11 |
| Violation Description: | Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method. |
| Violation Notes: | Returned to compliance on 09/25/2017. OBSERVATION: The wiping rags used to dry the newly plated metal parts located across from the brass and copper solution sinks are, according to Mr. Perez, being disposed of in the trash. A proper waste determination has not been made. Hazardous waste determination required on sand blast media and paint spray filters prior to disposal. If a waste determination is not obtained the waste shall be classified as hazardous waste and disposed of as hazardous waste. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the brass and copper solution saturated wiping rags, the sand blast media, and the paint filters have been properly characterized to determine if it is a hazardous waste. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future. |

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

|---|---|
| Citation: | 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f) |
| Violation Description: | Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date. |
| Violation Notes: | Returned to compliance on 10/17/2016. OBSERVATION: There were no labels on the used oil drum and waste ink in the Safety Kleen parts washing equipment (approx 20-gal tank). All hazardous waste containers shall be marked with the following information: 1) the words G Hazardous WasteG ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. |

| Violation Description: | Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month. |
| Violation Notes: | Returned to compliance on 10/17/2016. OBSERVATION: Waste ink in a 55-gal drum from 2012 was observed inside the printing shop next to the Safety Kleen parts washing equipment (sink). Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA 30 days from now. |

Site Name: GOLDEN COLOR PRINTING INC
Violation Date: 02-02-2016
Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description: Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes: Returned to compliance on 05/04/2016. OBSERVATION: Approximately 20 empty 55-gal steel previously containing MRC/Blanket Wash were stored outside next to trash enclosure and did not have labels. CORRECTIVE ACTION: Each empty container larger than 5 gallons that previously held a hazardous material must be marked with the date it was emptied and be shipped for recycling, reconditioning, or reclamation of its scrap value G or managed on site in such a manner G within one year of being emptied. 22CCR 11 66261.7 OBSERVATION: Facility failed to properly manage contaminated textiles. One 55-gal drum for contaminated rags was not properly labeled "Reusable Solvent-Contaminated Textile". CORRECTIVE ACTION: Properly manage all contaminated textiles as hazardous wastes or have them made reusable by laundering or comparable methods of cleaning (e.g commercial laundry) with a Contingency Plan for handling both on-site and off-site emergencies involving the materials and which maintains records of the date, type, [Truncated]

Hazardous Waste Summary:

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 221
. Waste name: Waste oil and mixed oil

. Waste code: 222
. Waste name: Oil/water separation sludge

. Waste code: 223
. Waste name: Unspecified oil-containing waste

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 491

**TED LEVINE DRUM CO (Continued)** **1000122184**

. Waste name: Unspecified sludge waste

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D004
. Waste name: ARSENIC

. Waste code: D005
. Waste name: BARIUM

. Waste code: D006
. Waste name: CADMIUM

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: D018
. Waste name: BENZENE

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED

**TED LEVINE DRUM CO (Continued)** **1000122184**

SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F004
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F007
. Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 178585.3

Waste code: D018

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
OSHA ESTABLISHMENT
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002839153

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

FINDS:
Registry ID: 110002885851
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002885851

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| Violation Date: | 06-25-2015 |
| Citation: | HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507 |
| Violation Description: | Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities. |
| Violation Notes: | Returned to compliance on 07/20/2015. OBSERVATION: Owner/Operator failed to establish and implement a Hazardous Materials Business Plan when storing hazardous materials at or above the thresholds quantities of 55 gallons/500 lbs/200 cubic feet. There were four cylinders of acetylene (a total of 385 cubic feet) and three cylinders of propane for forklifts (a total of 768 cubic feet) found during routine inspection. CORRECTIVE ACTION: Establish and implement a Hazardous Materials Business Plan when storing hazardous materials at or above the thresholds quantities of 55 gallons/500 lbs/200 cubic feet. |

**FLEXFIRM PRODS (Continued)** **1000439271**

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110000477724

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

|---|---|
| Citation: | HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1) |
| Violation Description: | Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities. |
| Violation Notes: | Returned to compliance on 10/26/2016. OBSERVATION: The facility has not submitted the Hazardous Materials Inventory Chemical Description page for 100 plus 55 gallon drums of coating materials, 10-55 gallon plasticize, 2 - 8 gallon Propane for the forklift & approximately 10,000 lbs of PVC resin on the CERS. CORRECTIVE ACTION: Complete and submit the Hazardous Materials Inventory Chemical Description page for all materials listed above electronically in the California Environmental Reporting System (CERS). |

| | |
|---|---|
| | 11, Section(s) 66261.7 |
| Violation Description: | Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied. |
| Violation Notes: | Returned to compliance on 01/03/2019. OBSERVATION: 5+ empty 55 gallon drums were observed near building 1 an 2 without proper labels. CORRECTIVE ACTION: Submit photos/documentation to this department demonstrating that the empty containers listed above have been marked with the date they were emptied and are being properly managed pursuant to 22 CCR 11 66261.7. |

CERS ID: 10286299
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 116886
Site Name: FLEXFIRM HOLDINGS, LLC
Violation Date: 09-19-2016
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 10/26/2016. OBSERVATION: The facility has not submitted the Hazardous Materials Inventory Chemical Description page for 100 plus 55 gallon drums of coating materials, 10-55 gallon plasticize, 2 - 8 gallon Propane for the forklift & approximately 10,000 lbs of PVC resin on the CERS. CORRECTIVE ACTION: Complete and submit the Hazardous Materials Inventory Chemical Description page for all materials listed above electronically in the California Environmental Reporting System (CERS).
Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 116886
Site Name: FLEXFIRM HOLDINGS, LLC
Violation Date: 12-17-2018
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 12/17/2018. OBSERVATION: 1 x 55 gallon drum Methyl Ethyl Ketone hazardous waste located in building 2 was observed without a hazardous waste label. Labels provided and corrected on site. CORRECTIVE ACTION: Submit a photo to the CUPA demonstrating that the container listed above has been properly labeled.

Registry ID: 110002677540
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002677540

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:
Registry ID: 110002630742
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002630742

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 390271
Site Name: COAST MACHINERY MOVERS
Violation Date: 10-02-2015
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 01/12/2016. OBSERVATION: Clarifier sludge-3x55-gal drums, used absorbent G 1x55-gal drum; transmission oil G 2 x 55-gal drums; diesel - 2 x 55-gal were stored in a white storage trailer. The containers were not properly labeled as HW or HM. The sludge was placed in the drums in 2014. All hazardous waste containers shall be marked with the following information: 1) the words G Hazardous WasteG ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information.

| Violation Description: | Failure to ensure employees are familiar with the handling and compliance of hazardous waste regulations and emergency response. |
| Violation Notes: | Returned to compliance on 01/12/2016. OBSERVATION: At the time of inspection, it could not be demonstrated (not necessarily documented) that employees who handle hazardous waste were properly trained. HW drums inside a HW trailer did not have proper labels and were stored greater than 180 days; no employee training records were available. The generator must ensure that all employees who handle hazardous waste are thoroughly familiar with proper waste handling and emergency procedures. CORRECTIVE ACTION: Immediately provide training to all employees who handle hazardous waste and submit a copy of the training records to the CUPA 30 days from now. |

| Site Name: | EUROPEAN AUTOMOTIVE TECHNOLOGY |
| Violation Date: | 10-16-2017 |
| Citation: | 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d) |
| Violation Description: | Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days. |
| Violation Notes: | Returned to compliance on 01/03/2018. OBSERVATION: 3 x 55 gallon steel drums of used transmission fluid located at the rear hazardous waste storage area was observed without an accumulation start date. Observed 1 x 55 gallon steel drum of used oil filter mssing a hazardous waste label and a manifest/receipt demonstrating disposal within the past 180 days was not available. CORRECTIVE ACTION: Dispose of used oil filters and submit a copy of the manifest/receipt to the CUPA. |

FINDS:
Registry ID: 110002841391
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002841391

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

| Violation Date: | 06-25-2015 |
| Citation: | 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f) |
| Violation Description: | Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date. |
| Violation Notes: | Returned to compliance on 01/03/2017. OBSERVATION: Observed four 55 gallon containers of waste oil without a labels. CORRECTIVE ACTION: Owner/Operator shall immediately comply with the Title 22 regulations with regards to the proper handling, management, labeling and recycling of used oil. Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. Label information shall include: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date. If the materials is used oil, the containers, above ground storage tanks, and fill pipes used to transfer oil into underground storage tanks shall also be labeled and clearly marked with the words G Used OilG . The operator corrected the violation on site by attaching a properly filled out label at the time of the inspection. Properly fill out labels. . |

feet, Maximum Daily Amount = 827 cubic feet b) Oxygen - Largest Container = 337 cubic feet, Maximum Daily Amount = 788 cubic feet c) Acetylene - Largest container = 145 cubic feet, Maximum daily amount = 263 cubic feet d) Waste oil - Largest container = 55 gallon, Maximum daily amount = 220 gallon CORRECTIVE ACTION: Go to the California Environmental Reporting System (CERS) internet website (http://cers.calepa.ca.gov/) to provide additions/corrections to the Hazardous Material Inventory Chemical Description page for all materials listed above. Resubmit this section/page. If you need assistance, contact the Los Angeles County Fire Department Data Operations section at 323-890-4000.

Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 400628
Site Name: REMINGTON ROLL FORMING INC
Violation Date: 06-25-2015
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to properly close hazardous waste containers when not in active use.
Violation Notes: Returned to compliance on 01/03/2017. OBSERVATION: Observed two 55 gallon waste oil without being properly covered/capped. CORRECTIVE ACTION: Immediately close these containers and ensure all hazardous waste containers are closed when not adding or removing waste. Provide a tightly sealed cover/cap for hazardous waste containers. Waste containers are considered closed when all caps or lids with rings are in place. .
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 400628
Site Name: REMINGTON ROLL FORMING INC
Violation Date: 06-25-2015
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Description: Failure to annually review and electronically certify that the business plan is complete, accurate, and up-to-date.
Violation Notes: OBSERVATION: This facility has not annually reviewed and certified that the business plan is complete, accurate, and up-to-date. A review of CERS, revealed that the last submittal of HMBP was done on 06/11/2013. The due date for the annual submittal for the HMBP to CERS was 04/01/2015. CORRECTIVE ACTION: Go to CERS internet website (http://cers.calepa.ca.gov/) and provide updates to your Hazardous Materials Business Plan - (Business Activities, Business Owner/Operator Identification). If you need assistance, contact the Los Angeles County Fire Department Data Operations section at 323-890-4000. .

| File Location: | Regional Board |
| Potential Media Affected: | Aquifer used for drinking water supply, Soil, Under Investigation |
| Potential Contaminants of Concern: | Tetrachloroethylene (PCE), Trichloroethylene (TCE) |
| Site History: | Soil vapor extraction (SVE) system consisted of three extraction well |

**TED LEVINE DRUM - GROUNDWATER (SITE 3) (Continued)** **S122853911**

zones (Well Unit 1, 2, and 3). Each unit contained three or four SVE/monitoring wells. All SVE/monitoring wells had a total depth of 15 feet below ground surface (bgs). The SVE system operated intermittently between January 1999 and March 2000. In Well Unit 1, the soil vapor concentrations from the SVE/monitoring wells ranged from 3 to 33 micrograms per liter ("g/L) of trichloroethene (TCE) and from 27 to 77 "g/L of tetrachloroethene (PCE) on December 15, 1998. On March 29, 2000, the soil vapor concentrations ranged from 5 to 59 "g/L of TCE and from 6 to 91 "g/L of PCE. In Well Unit 2, the soil vapor concentrations from the SVE/monitoring wells ranged from 6 to 29 "g/L of TCE and from 2 to 36 "g/L of PCE on December 15 and 16, 1998. On November 30, 2000, the soil vapor concentrations ranged from 10 to 31 "g/L of TCE and from 10 to 44 "g/L of PCE. In Well Unit 3, the soil vapor concentrations from the SVE/monitoring wells ranged from <1 to 12 "g/L of TCE and from 10 to 121 "g/L of PCE on December 14 and 15, 1998. On November 30, 2000, the soil vapor concentrations ranged from 5 to 19 "g/L of TCE and from 23 to 82 "g/L of PCE. Several soil gas monitoring probes were also installed in each extraction well zone. The depth of all SVE probes is 15 feet bgs, except for two probes in Unit 2 and one probe in Unit 3 whose depth is 5 feet bgs. In Well Unit 1, the soil gas concentrations from the soil gas monitoring probes ranged from <1 to 11 "g/L of TCE and from 2 to 38 "g/L of PCE on December 14, 15, and 16, 1998. On March 28, 2000, the soil gas concentrations ranged from 40 to 49 "g/L of TCE and from 57 to 61 "g/L of PCE. In Well Unit 2, the soil gas concentrations from the soil gas monitoring probes ranged from <1 to 112 "g/L of TCE and from <1 to 109 "g/L of PCE on December 14, 15, and 16, 1998. On November 30, 2000, the soil gas concentrations ranged from 106 to 207 "g/L of TCE and from 61 to 94 "g/L of PCE. In Well Unit 3, the soil gas concentrations from the soil gas monitoring probes ranged from <1 to 8 "g/L of TCE and from <1 to 77 "g/L of PCE on December 14, 15, and 16, 1998. On November 30, 2000, the soil gas concentrations ranged from 2 to 477 "g/L of TCE and from 27 to 3,390 "g/L of PCE. Annual groundwater monitoring and emergent chemical sampling activities were performed at the site on October 24, 2002. Groundwater samples were collected from wells LW-1, LW-4, LW-6, LW-7, LW-8, LW-9, and LW-10 and analyzed for VOCs using USEPA Test Method 8010B. Additionally, the sample collected from well LW-10 was analyzed for ammonium perchlorate using USEPA Test Method 314, NDMA using USEPA Test Method 1625M, 1,4-dioxane using USEPA Test Method 8270C, and total and hexavalent chromium using USEPA Test Methods 200.9 and 7199, respectively. The Groundwater Monitoring Report also indicated that groundwater was not present in monitoring wells LW-2 and LW-3, therefore, water levels were not obtained. Well LW-5 was not sampled due to an insufficient quantity of groundwater present in the well. Thus, no groundwater samples were collected from wells LW-2, LW-3, and LW-5. Significant VOCs concentration levels were detected in the groundwater samples. PCE concentrations ranged from 40 to 110 "g/L. TCE concentrations ranged from 15 to 230 "g/L. Cis-1,2-dichloroethylene (cis-1,2-DCE) concentrations ranged from 4.7 to 250 "g/L. 1,1-dichloroethane (1,1-DCA) concentrations ranged from 3.6 to 37 "g/L. The emergent chemical concentrations detected in groundwater samples were 0.012 "g/L of n-nitrosodimethylamine (NDMA), 1.7 "g/L of 1,4-dioxane, 4.6 "g/L of total chromium, and 3.8 .g/L of hexavalent chromium.
