Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically

GATE GOURMET - SAN DIEGO UNIT (Continued) **1000268195**

collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Registry ID: 110002661584

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Alias Name: CAD9823599895
Alias Type: EPA Identification Number
Alias Name: 37510124
Alias Type: Envirostor ID Number

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 01/18/1983
Comments: FACILITY IDENTIFIED VIA 72 PHONE BOOK (IMP. CO)

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 06/01/1995
Comments: SD County Environmental Assessment Listing indicates that the County overseeing a Preliminary Assessment as of 12/04/91. Tank case, soil contamination only. Local oversight program. NFA for DTSC.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 05/02/1995
Comments: SD County Environmental Assessment history indicates that the county overseeing a Preliminary Assessment as of 12/04/91. Tank case, soil contamination only. Local oversight program. NFA for DTSC.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 02/08/1991
Comments: PA report was reviewed by Region 4 staff. The site consists of a 15,000 sf bldg., a paved storage area, & a concrete loading dock. 99% of chemicals handled were detergent, wax and window cleaner. Presently, the bldg is used as an auto parts warehouse by Volks Parts. A driveby in 1983 by SDDHS reported that concrete was eroded outside the bldg. No sampling was done to determine if there is a hazard at the site. Staff recommends PEARM to determine if there is a hazard DTSC should address.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening

CERS Description: Industrial Facility Storm Water

Violations:

Site ID: 541626
Site Name: San Diego Vessel Maintenance Facility
Violation Date: 10-02-2021
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Failure to meet NEC criteria
Violation Notes: Discharger failed to recertify the NEC by October 1, 2021
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS,

Site ID: 541626
Site Name: San Diego Vessel Maintenance Facility
Violation Date: 10-02-2020
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Failure to meet NEC criteria
Violation Notes: Failure to re-certify the NEC for 2020-2021 reporting year.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS,

Site ID: 541626
Site Name: San Diego Vessel Maintenance Facility
Violation Date: 10-02-2017
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Failure to Obtain Permit
Violation Notes: DISCHARGER FAILED TO RECERTIFY THE NEC BY OCTOBER 1, 2017
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS,

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-14-2015
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Inspection by Lucas Lima to verify No Exposure Certification. There were no issues found. Driving around was sufficient for this facility. Met NEC qualifications.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS,

Enforcement Action:

Site ID: 541626
Site Name: San Diego Vessel Maintenance Facility
Site Address: 4990 NAPLES STREET
Site City: SAN DIEGO
Site Zip: 92110
Enf Action Date: 01-03-2022
Enf Action Type: Notice of Violation
Enf Action Description: Notice of Violation
Enf Action Notes: Discharger did not re-certify NEC for the 2021/2022 reporting year after being sent the NOV via email on 10/18/2021. This NOV was issued via First Class Mail.

Site History:	The Former Texaco Site is located at the northeast corner of the intersection of Mission Bay Drive and Glendora Street in San Diego. The Texaco station operated from 1951 until it was demolished in 1970. An Unauthorized Release case H16027-002, was opened by the Department of Environmental Health (DEH) in September 1993, based on contamination found during a Phase II investigation at the Site. The

CHEVRON ENVIRONMENTAL MANAGEMENT COMPANY (FORMER TEXACO 21-1 (Continued) **S114458546**

investigation was conducted for Pacific Nissan, an automobile dealership located at the subject Site, and significant petroleum contamination was found in soil borings 1 and 7. The previous release case H16027-001 was opened in September 1990 from a waste oil underground storage tank (UST) removal inspection. Contaminated soil was excavated and properly disposed, and the case was closed by DEH on March 5, 1991. As part of a Phase II investigation which included nine soil borings in 1993, a geophysical survey was conducted and three suspected UST locations were identified. In 1998, a second geophysical survey was conducted by another consultant, and the three anomalies were marked for removal. Six temporary wells were installed to obtain groundwater samples and sample results indicated groundwater was impacted by gasoline. A DEH permit, AT4517, was obtained in August 1999 for the removal of USTs, however no tanks were uncovered, only piping. A remedial excavation was conducted in the area of the suspected waste oil UST to a depth of 13.5 feet below ground surface (bgs). On September 7, 1999, an estimated 85 cubic yards of impacted soil was removed from this area. Another remedial excavation was conducted in the vicinity of the suspected gasoline USTs on September 13, 14, & 15, 1999. The maximum depth was 15 feet bgs, and approximately 175 cubic yards of impacted soil was removed. After obtaining confirmation samples, both excavations were backfilled with pea gravel and restored to pre-excavation conditions. Five groundwater monitoring wells were initially installed in June 2000. At that time depth to groundwater was observed at 13 feet bgs. Groundwater flow is generally to the west or northwest, and Mission bay is located 1,700 feet to the southwest of the Site. No free product had been observed since monitoring began in 2000 until the August 2010 monitoring event. A Corrective Action Plan (CAP) was prepared in December 2005 and recommended quarterly over purging of wells for a year to limit off-site migration of dissolved contaminants and to enhance biodegradation. Seven enhanced fluid recovery or over purging events were performed between September and November 2008 to reduce elevated dissolved hydrocarbon concentrations in groundwater from wells MW-1 and MW-2. The Site was being evaluated for a low risk closure since it is located in a nonbeneficial use groundwater basin and the plume appeared stable. During the August 2010 monitoring event the depth to groundwater decreased approximately 5 feet across the Site. Free product was observed in monitoring wells MW-1 and MW-3 for the first time. The highest amount of free product observed on groundwater was 0.80 feet in MW-3. Monitoring well MW-3 historically had been a clean well. Upon review of all the historical data, it was determined that an artificial drawdown of groundwater began in January 2010. This was evident based on groundwater flow direction shift to the south, and lower groundwater elevations. It is believed that a local de-watering project initiated sometime before January 2010 and ended around October 2010, was responsible based on depth to water measurements. Two biweekly gauging events conducted in October 27, 2010, and November 5, 2010, showed a decrease in free product levels, and an increase in groundwater elevations. Due to the change in groundwater direction and an increase in dissolved benzene concentrations, DEH requested additional delineation in the new downgradient area in 2011. Due to access and liability issues, the new proposed wells were never installed. The groundwater gradient and elevation were observed to return to normal groundwater conditions based on monitoring events from February 2012 through August 2016. The concentrations in

CHEVRON ENVIRONMENTAL MANAGEMENT COMPANY (FORMER TEXACO 21-1 (Continued) **S114458546**

monitoring well MW-3 now show a decreasing trend. Fate and Transport modeling was conducted by the consultant and the results indicated that the benzene plume was stable and benzene would reach maximum contaminant levels (MCLs) in the source area in 2 to 4 years. The consultant recommended closure under the State s Low Threat UST Case Closure Policy (LTCP). DEH did not accept the trend analysis provided, and believed it underestimated the time it would take for benzene to reach MCLs. DEH conducted another trend analysis using the historical data and determined it will take 77 years for benzene at the source to reach MCLs. Additionally, the two down gradient wells MW-2 and MW-3, are calculated to have benzene naturally degrade to the MCL by the end of 2020 and 2024, respectively. DEH concurred with the recommendation for closure based on LTCP criteria, and the new trend analysis. A 60-day public notification of the proposed closure was sent out October 27, 2017, and DEH received one comment. DEH responded to the comment on January 5, 2018. Currently there is no building located at the Site which is used as a parking lot, and vapor intrusion is not an issue. Be advised, the Site address in recent reports is listed as 4433 Mission Bay Drive, which is the address of the dealership, instead of 4409. The Site meets the LTCP criteria. However, if there is any redevelopment proposed for this Site, management of contaminated soil and a health risk evaluation must be addressed by entry into the Voluntary Assistance Program. A permit application has been submitted, DEH2017-LMWP-002933, to destroy the monitoring wells.

Inspection Date: 2016-09-02T13:42:00.000
Violation Code: 2030036 (RP) Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity; and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 23 CCR 2635(b)(2), 2665

FINDS:
Registry ID: 110002690035

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RWQCB Region:	SAN DIEGO RWQCB (REGION 9)
Site History:	The subject site (Site) consists of two parcels of land totaling 1.28 acres, located on the southeast corner of Mission Bay Drive and Glendora Street within a mixed residential and commercial area of San Diego. The Site is 25 feet above mean sea level, and the local topography slopes gently to the Southwest. The Site was developed around 1949 with a motel building on the eastern portion; in

FAIRFIELD MISSION BAY DRIVE (Continued) **S123302326**

addition, an apparent gasoline station was located within the northwestern corner of the property from at least 1949 until about 1953. Several buildings (commercial, motels etc.) have been located at the Site since then up to 2019, when all buildings were demolished and the Site was graded for the current redevelopment, a hotel. The consultant (Partner) submitted an August 2019 Phase II that discussed the installation of four soil borings (B1- B4) in the location of the former gas station. Total Petroleum Hydrocarbons as gasoline (TPHg) were detected in the borings. In addition, a grab groundwater sample was taken from boring B4 and trace volatile organic compounds (VOCs) were detected. The only contaminants of concern (COC) that exceeded the maximum contaminant levels (MCL) were benzene and 1,1-DCA, with concentrations of 8.9 ug/l and 5 ug/l, respectively. These concentrations exceed the MCLs of 1 ug/l (benzene) and 5 ug/l (1,1-DCA). The Phase II also discussed the results of a geophysical survey that identified one large anomaly in the northwest portion of the site, another to the northwest of the current site building, and a smaller anomaly to the west of the current building, suggesting possible underground storage tanks (USTs). Based on the soil and groundwater exceedances noted in the Phase II, Partner submitted an October 2019 Additional Subsurface Investigation (ASI). The ASI discussed the installation of four additional soil borings (B5 - B8), whereby both soil and soil gas (SG) samples were taken at 5-feet and 10-feet below grade surface (bgs). In addition, three permanent monitoring wells (MWs) were installed. Soil samples from the borings had detectable concentrations of TPHg above the laboratory reporting limit and a few trace VOCs. Moreover, groundwater samples collected from the MWs were below the MCLs for COCs. Finally, SG samples exceeded environmental screening levels (ESLs) for benzene, ethylbenzene, and PCE in several SG samples. As a result of these exceedances, a passive venting system (PVS) was proposed and approved for the new structure. A Soil Management Plan (SMP) and Community Health & Safety Plan (CHSP) were submitted and approved on November 19, 2019. Demolition of the above-ground structures occurred in October 2019 and continued through November 2019. Ten test pits (TP) on were dug on November 22, 2019 throughout the Site. Samples from each TP were ND for TPH, VOCs, and lead. On January 26, 2020, six USTs were discovered in the northwestern corner of the property. The USTs were removed on March 13, 2020. Concentrations of COCs were low in all soil samples from the UST removal except one sample, T1-11.5, with a TPHg concentration of 2,401 milligrams per kilogram (mg/kg). Based on this result, DEH approved a plan to over-excavate the area around T1-11.5 and take a deeper soil and/or groundwater sample. On March 24, 2020, over-excavation was completed and a confirmation soil sample (PES-T1-14.5) was taken from the floor of the excavation at approximately 14.5 feet bgs. Groundwater was not encountered. The results for PES-T1-14.5 were 48 mg/kg for TPHg and 18 mg/kg for TPHd, respectively. Based on this, the UST removal permit with was closed. A June 25, 2020 Summary Report for Preliminary Certification of Completion of Installation of Sub-Slab Vapor Mitigation System was submitted by GeoKinetics and detailed the installation and testing of the approved PVS. A June 29, 2020 Final Remedial Actions and Closure Request states that based on the low concentrations of COCs in soil, the mitigation measures performed at the Site, the lack of significant groundwater impacts, and the installation of the PVS, there is de minimus risk to human health and the environment. DEH concurs with these conclusions. Permit LMWP-004264 was issued for the

FAIRFIELD MISSION BAY DRIVE (Continued) **S123302326**

destruction of the three onsite MWs, which were destroyed on November 22, 2019.

SDCTY-ROSE CANYON OPERATIONS (Continued) **S104745614**

RWQCB Region: SAN DIEGO RWQCB (REGION 9)
Site History: Please see "Site Documents" under H03133-003 for additional information on the gasoline release. Information on a previous waste oil release at the site can be found by searching on case H03133-003. Four 10,000 gallon gasoline underground storage tanks (USTs) and one 20,000 gallon diesel UST were removed from the site on January 5, 1996. During removal of the five tanks (T001 through T005), soil discoloration and odors were noted on the north ends of gasoline tank T002 and diesel tank T003. Soil samples were collected at the bottom of each tank excavation and analyzed for total petroleum hydrocarbons as gasoline (TPH-g) and as diesel (TPH-d). A concentration of 2,700 milligrams per kilogram (mg/kg) TPH-g was reported in the sample collected at the north end of the T002 excavation. Concentrations of 120 mg/kg TPH-g and 84 mg/kg TPH-d were reported in the sample collected at the north end of the T003 excavation. TPH-g and TPH-d were not reported in samples collected from the southern end of the T002 and T003 tank pits or in samples collected below the other gasoline USTs (T001, T004, and T005). On April 28, 2008, one soil boring, PB2, was drilled at the north end of the former UST T002 excavation, which is adjacent to the former T003 excavation. The boring was drilled to a depth of 19.5 feet below ground surface (bgs). Soil samples were collected from the boring at depths of 2.5 feet, 5 feet, 10 feet, 12 feet, and 15 feet. The samples were analyzed for TPH-g, TPH-d, and volatile organic compounds (VOCs), including chlorinated hydrocarbons, naphthalene, fuel oxygenates, and benzene, toluene, ethylbenzene, and xylenes (BTEX). TPH-g was detected only in the sample collected at 12 feet bgs, at a concentration of 2.4 mg/kg. TPH-d was detected in the all five of the soil samples collected from the boring at concentrations ranging from 27 mg/kg to 210 mg/kg. The TPH-d concentration in the deepest sample collected from 15 feet bgs was 33 mg/kg. The only other detected analyte was naphthalene, which was reported at a concentration of 17 micrograms per kilogram in the 12-foot sample. Groundwater was not encountered in the boring. Groundwater at the site has no designated existing or potential beneficial uses. Surface water in the area has designated existing (REC1, REC2, WARM, WILD) and potential (IND) beneficial uses. However, the nearest surface water, Rose Canyon Creek, is located approximately 1400 feet west of the site. Based on the results of the investigation, the consultant concluded that 1) residual impacts on the soil at the site appear minimal and do not pose a threat to human health or the environment, 2) the site has been adequately assessed and remediated, and 3) closure of the unauthorized release is justified.

Site History:	Please see "Site Documents" for additional information on the waste oil tank releases. Information on a subsequent release (gasoline) at the site can be found by searching on case H03133-004. Three 550 gallon waste oil underground storage tanks (USTs) were removed from the site on September 25, 1995. Multiple holes were observed in two of the USTs (T006 and T007), along with associated soil staining and odors. Soil samples collected from the base of the T006 excavation had maximum total petroleum hydrocarbons as diesel (TPH-d) and total recoverable petroleum hydrocarbons (TRPH) concentrations of 4870

SDCTY-ROSE CANYON OPERATIONS (Continued) **S104745614**

milligrams per kilogram (mg/kg) and 6740 mg/kg, respectively. Soil samples collected from the base of the T007 excavation had a maximum TRPH concentration of 19,900 mg/kg. No holes or staining were observed during removal of the third UST (T008), and a maximum concentration of 24 mg/kg TRPH was reported in soil samples collected from the excavation. Based on the elevated petroleum hydrocarbon concentrations observed in the T006 and T007 soil samples, an unauthorized release case was opened for the site. Two soil borings, PB1 and PB3, were drilled at the site on April 28, 2008. Boring PB1 was placed in the vicinity of former UST T006. Because T006 was replaced with a new waste oil UST, the soil boring was located approximately 8 feet east of the former tank excavation to avoid damaging the current tank. PB3 was placed within the boundaries of the former UST T007 excavation. Both borings were drilled to a depth of 19.5 feet below ground surface (bgs). Soil samples were collected from PB1 and PB3 at depths of 2.5 feet, 5 feet, 10 feet, and 15 feet. The samples were analyzed for TRPH and volatile organic compounds (VOCs), including chlorinated hydrocarbons, naphthalene, fuel oxygenates, and benzene, toluene, ethylbenzene, and xylenes (BTEX). None of these analytes were detected at concentrations above their respective method reporting limits in the PB1 samples. Only TRPH was detected in any PB3 soil samples. Concentrations of 180 mg/kg and 220 mg/kg TRPH were reported in the samples collected from PB3 at depths of 2.5 feet and 5.0 feet, respectively. However, TRPH was not reported in the two successively deeper samples collected at 10 feet and 15 feet bgs. Groundwater was not encountered in the two borings. Groundwater at the site has no designated existing or potential beneficial uses. Surface water in the area has designated existing (REC1, REC2, WARM, WILD) and potential (IND) beneficial uses. However, the nearest surface water, Rose Canyon Creek, is located approximately 1400 feet west of the site. Based on the results of the investigation, the consultant concluded that 1) residual impacts on the soil at the site appear minimal and do not pose a threat to human health or the environment, 2) the site has been adequately assessed, and 3) closure of the unauthorized release is justified.

RWQCB Region:	SAN DIEGO RWQCB (REGION 9)
Site History:	The site consists of an approximately 2.9-acre triangular shaped tract of land. The prior buildings at the site were demolished in early March 2017 and the site was excavated to accommodate subterranean parking. The improvements included multifamily residential, retail and creative office space, including a

MONICA PERLMAN MD INC DBA PERLMAN CLINIC (Continued) **S119085663**

subterranean parking garage. Tetra Tech advanced a total of five borings (TT-1 through TT-5) to a maximum depth of 36 feet bgs in October/November 2014. A total of 14 soil samples were analyzed for Total Petroleum Hydrocarbons (TPH) by EPA Method 8015M and Volatile Organic Compounds (VOCs) by EPA Method 8260B. A total of six grab groundwater samples were collected and also analyzed for TPH and VOCs. Based on a review of the groundwater analytical data, a TPH concentration of 2,400 8g/L was detected at B-3 and low-level concentrations of VOCs were reported for groundwater samples collected from B-1, B-2 and B-3. Between January 16 and March 1, 2017, Terracon provided oversight during the removal of 14 inground hydraulic lift systems, consisting of twenty-eight (28) hydraulic hoists (two at each location), fourteen (14) steel reservoir tanks, and associated piping (collectively referred to as the hydraulic lift systems). Subsequent to the removal of each hydraulic lift system, Terracon collected fourteen (14) confirmation soil samples, one soil sample at each location where in-ground hydraulic lift equipment was removed. Based on remedial soil excavation at the seven (7) locations identified to be impacted by TPH and/or polychlorinated biphenyls (PCBs) at concentrations above their respective laboratory reporting limits, additional excavation was conducted from April 16 to 19, 2017. Confirmation soil sample results were still elevated at locations F-6 and F10. Additional remedial excavation was performed, and final confirmation samples showed that soil containing TPHs and PCBs above the laboratory method reporting limits has been removed and properly disposed off-site, with the exception of the soil sample collected from the east wall of the excavated cavity at location at F-10 (at the edge of the property and I-5). However, TPH and PCB concentrations detected in confirmation soil sample F-10 east/conf remain below the applicable ESLs. On July 10, 2017 a Soil Mitigation Plan (SMP) and Community Health and Safety Plan (CHSP) were submitted and approved by DEH. Excavation occurred between August 2017 to January 2018. Three distinct areas of impacted soil were noted. A total of 60,355 tons of soil was excavated, including 4,961 tons of impacted soil; the rest was reused offsite per RWQCB Waiver R9-2014-0041. A total of 40 confirmation soil samples were collected with a maximum concentration of 1,000 mg/kg TPHg was detected in confirmation soil sample FL-2, collected at planned finished grade elevation from the central-eastern portion of the site. The maximum concentration of TPHd (860 mg/kg) was detected in soil sample FL-7, also collected at planned finished grade elevation from the central-eastern portion of the site. The detected metals concentrations were below the commercial and residential screening levels except for 14 mg/kg or arsenic in sample FL-2, which is slightly above the background value. Approximately 1.4 million gallons of groundwater was dewatered and disposed to sewer per City of San Diego Industrial Wastewater Control Program Permit 04-0512-01-A. The consultant states that based upon the results of the assessment and mitigation activities and the proposed site uses, the residual petroleum hydrocarbon and arsenic affected soil in the subsurface does not pose a significant risk to the health of future site occupants and users. This conclusion is further supported since there is no complete exposure pathway as remaining contaminated soil is in subsurface areas that are covered by concrete. DEH concurs with these conclusions.

PACIFIC HIGHWAY LVTO (Continued) **S105558051**

Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.
Complexity:	Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

RWQCB Region:	SAN DIEGO RWQCB (REGION 9)
Site History:	The site property owners entered the DEH Voluntary Assistance Program (VAP) with a request that DEH staff review the results of environmental assessments conducted at the property in 1998 and 2014, and determine whether further action is required. The site consists of a multi-tenant retail strip mall located at 1080 to 1096 Garnet Avenue in San Diego. A 1998 Phase I/ Phase II environmental site assessment report stated that the subject property was occupied by a service station from 1936 to 1978. Historical aerial photographs indicated that the underground storage tanks (USTs) and dispensers were located in the southeast portion of the property. In June 1998, four soil gas sample probes were advanced in the vicinity of the former USTs and dispenser islands. Soil vapor samples were collected from depths of four to six feet below ground surface (bgs) and

STRIP MALL (Continued) **S118172397**

analyzed for Total Petroleum Hydrocarbons as gasoline (TPH-g). No hydrocarbon contaminants were detected. Based on the results, the consultant concluded that no potential threat to the environment existed and recommended no further work at the subject property. In December 2014, additional soil vapor samples were collected at three feet below ground surface at three on-site locations. The soil vapor samples were analyzed for TPH-g, benzene, toluene, ethylbenzene, xylenes (BTEX), and oxygenates. Only toluene was detected, with a maximum concentration of 0.9 micrograms per liter. Seven soil borings were also advanced in the suspected area of the former USTs and dispenser islands. Soil samples were collected at depths ranging from five to nineteen feet bgs, and selected soil samples were analyzed for TPHg, BTEX, and oxygenates. The maximum TPHg concentration (1,350 milligrams per kilogram [mg/kg]) and BTEX concentrations (4.34 mg/kg, 73.8 mg/kg, 42.5 mg/kg, and 219 mg/kg, respectively) were reported in a soil sample collected at a depth of nineteen feet bgs. Oxygenates were not detected in the soil samples. Groundwater sampling was not conducted at the site. According to the State s Basin Plan, groundwater beneath the site has no designated beneficial uses and is exempt from municipal use. The consultant concludes that the December 2014 investigation results probably reflect a historical release of gasoline at the site when the property operated as a fuel station. The consultant also concludes that, with respect to the potential intrusion of petroleum-impacted vapor to the buildings on the property, there is no apparent vapor intrusion health risk to the building occupants.

MISSION BAY AUTOMOTIVE (Continued) **U001572849**

Military DOD Site: No
Facility Project Subtype: Not reported
RWQCB Region: SAN DIEGO RWQCB (REGION 9)
Site History: Four USTs were removed from the site in 1989 (4,000-gallon gasoline; 4,000-gallon diesel; 1,000-gallon diesel; and 550-gallon waste oil). Soil sampling conducted during tank removal indicated total petroleum hydrocarbons as gasoline and diesel up to 50 mg/kg and 13,000 mg/kg respectively. A site assessment reprot was subitted in January 1990, which documented additional investigation and limited over excavation. Five groundwater monitoring wells were intalled in June 1990. Five additional wells were installed in 1991 to delineat the extent of free product. In January 1992 bailing was initiated to remove free product. Additional soil excavation was conducted in March 1994.

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Violation Code:	2030036 (TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 5. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. 6. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. 7. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. 8. Inspected within 30 days after a repair to the overfill prevention equipment. 9. Inspected using an applicable manufacturer guidelines, industry codes,

RWQCB Region:	SAN DIEGO RWQCB (REGION 9)
Site History:	This Site is currently a 7-Eleven convenience store on the eastern side of the property, and a restaurant on the western side. This case was opened in January 2009 due to elevated soil samples with petroleum hydrocarbons noted during a Phase II site investigation. From June 2010 to July 2012, six groundwater monitoring wells (MWs) were installed, at which time the groundwater plume was delineated with the majority of the groundwater impacts limited to the northeastern portion of the Site and a small portion of West Point Loma Blvd. Figures 3 and 4 from the April 2019 First-Half 2019 Semi-Annual Groundwater Monitoring and Site Progress Report provide the most recent distribution of dissolved contamination levels at the Site. Between 2010 and August 2015, separate-phase hydrocarbons (SPH) were observed periodically in wells MW-2 and/or MW-6. During that time interval, approximately 15 gallons of SPH was removed and disposed off-site. From April to August 2015, as part of trenching activities for storm drain and sewer improvements in Chapman Street and West Point Loma Boulevard, 498 cubic yards of soil and 165 gallons of groundwater was removed and disposed off-site. In addition, 744,240 gallons of treated groundwater, from trench dewatering, was discharged to the sanitary sewer by the developer under a City of San Diego permit. During August and September 2015, a 14-day multi-phase extraction (MPE) remediation event was performed using wells MW-2, MW-4, MW-5, and MW-6 as extraction wells. An estimated 1,919 pounds of vapor-phase gasoline-range organics (GRO) was removed from the subsurface by MPE. An on-site soil vapor assessment in June 2017 revealed no detections of any volatile organic compounds (VOCs). Therefore, there were no excess cancer

FORMER ARCO FACILITY #169 (Continued) **S109517580**

risks at the Site. Using the detection limit, benzene was calculated to have an excess carcinogenic risk of 1.1 x 10-8 and ethylbenzene was calculated to have an excess carcinogenic risk of 4.83 x 10-11, which are less than the acceptable 1.0 x 10-6 excess carcinogenic risk. A February 2018 Corrective Action Plan (CAP) and a September 2018 Corrective Action Plan Addendum (CAPA) were submitted for natural attenuation and approved by DEH. The public comment period ended on May 13, 2019. The Site Assessment and Mitigation Program (SAM) received no comments. The consultant proposed natural attenuation because: The plume is stable and decreasing. No SPH has been detected on the groundwater since August 2015. There are no supply wells within + mile of the site. Groundwater has no designated beneficial uses. There are no health risks based on the June 2017 soil vapor sampling report. A trend analysis estimates that that benzene in groundwater will degrade to the Maximum Contaminant Level (MCL) of 1 ug/l by 2024. MtBE has never been detected at the Site. Trenches for utilities, particularly sewer, can be below the groundwater surface, which is an average of 6-feet to 8-feet below grade surface (bgs) at the Site. However, the consultant states that the existing plume only extends a few feet laterally into West Point Loma Boulevard. In addition, the plume is shrinking and it estimated to degrade by 2024. Based on this, utilities would not act as a conduit for plume migration. DEH concurs with the consultant s conclusions and approves case closure. Approximately 1,258 cubic yards of soil remain on site with concentrations over 100 mg/kg TPH. This soil is located in the northeastern portion of the property from 3 15 feet bgs, per Figures 1, 2 and 3 of the September 2018 CAPA. Permit DEH2019-LMWP-004250 was issued by DEH for destruction of 12 wells, including 6 Soil Vapor Probes associated with the Site. The wells were destroyed on November 26 to December 6, 2019. ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME.

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
Registry ID: 110071797853

RWQCB Region:	SAN DIEGO RWQCB (REGION 9)
Site History:	An unauthorized release was discovered during removal of two underground storage tanks (USTs) associated with a pest control business on October 29, 1998. Each of the USTs had a 10,000-gallon capacity and had contained gasoline to service company vehicles. The former USTs were located adjacent to a two-story building that parallels the southeastern property boundary. The concrete block building is occupied by a garage on the first floor with office space located on the second floor. Upon removal of the USTs, the County DEH inspector noted the presence of groundwater that had accumulated at the base of the excavation. A hydrocarbon sheen was observed on the water and staining was present on excavation soils. Analytical results for soil samples collected during the removal inspection indicated that an unauthorized release of gasoline had occurred. Five hundred gallons of a product/water mixture were removed from the excavation by vacuum truck and transported offsite for disposal. Approximately 423 tons of petroleum hydrocarbon-impacted soil were then removed from the excavation and disposed of at recycling facility. The former tanks were replaced with a 12,000-gallon capacity UST. Donan Environmental Services, Inc (DES) submitted a UST closure report to DEH in March 2001. DEH Case #H11498-002 was opened following review of the reported soil sample analytical results. DES subsequently estimated that 699 tons (approximately 466 cubic yards) of petroleum hydrocarbon-impacted soil remained in place at the site. Five groundwater monitoring wells were installed at the site in November 2002 to depths of 20 feet below ground surface (bgs). Analytical results for groundwater samples collected in January 2003 indicated that the chemicals of concern (COCs) at the site were benzene, toluene, ethylbenzene, and xylene (BTEX) and the fuel oxygenates methyl-tert-butyl ether (MTBE) and tert-amyl-methyl ether (TAME). Soil vapor samples were collected at three locations below the foundation slab of the garage in December 2004. None of the COCs were detected in the soil vapor samples. Two additional on-site groundwater monitoring wells were installed in August 2005 and three were installed in November 2007. A well was installed immediately west of the subject property in November 2009. Groundwater sampling of this off-site well in January 2010 indicated the detection of MTBE at a concentration of 111 micrograms per liter (g/l). In order to assess the lateral extent of dissolved MTBE, four borings were

LLOYD PEST CONTROL (Continued) **1000441289**

advanced in the Custer Street right-of-way, approximately 250 to 300 feet west of the off-site well. Groundwater grab samples were collected from the borings and analyzed by a mobile laboratory. MTBE was detected in three of the grab samples and the most westerly boring was converted to a monitoring well. MTBE was detected at a concentration of 3 g/l when the well was sampled in February 2012. Based on the MTBE result, the consultant concluded that the dissolved contaminant plume had been adequately delineated. DES submitted a Corrective Action Plan (CAP) for the site on August 1, 2012. Analytical results for the February 2012 groundwater monitoring and sampling round indicated that benzene was not detected in groundwater samples. Trend analyses presented in the CAP show decreasing trends for MTBE concentrations. DES estimates that MTBE concentrations will fall below its Primary Maximum Contaminant Level (MCL, 13 g/l) in 13 years and its Secondary MCL in 20 years. Although groundwater beneath the site is designated for potential municipal use, it flows into a non-beneficial use basin approximately 1,500 feet downgradient of the site. Based on the lack of detection of benzene in the most recently collected groundwater samples, the lack of human health risk, and the decreasing concentrations of MTBE in groundwater, DES has recommended no further action and case closure. DEH concurs with these recommendations.

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

RWQCB Region:	SAN DIEGO RWQCB (REGION 9)
Site History:	Report of a leaking vapor assist hose at the gasoline station located at 1083 Morena Boulevard, San Diego, resulted in the opening of DEH Case #04834-002 on April 5, 1993. Initial site assessment activities were performed in September 1993 and entailed the drilling and sampling of four borings. The analytical result for a soil sample collected beneath a heavily-corroded product line near the southern dispenser island confirmed that a release of petroleum hydrocarbons had occurred. The detected concentration of petroleum hydrocarbons in the soil sample was 1,500 milligrams per kilogram (mg/kg). Three underground storage tanks (USTs) that had stored gasoline were removed from the site on June 24, 1994. Two of the USTs had 10,000-gallon capacities and one had a capacity of 6,000 gallons. Soil samples collected during the removal inspection from the tank

ULTRAMAR STATION #1-740 (Continued) **S104578171**

excavation, the product piping trenches, and an oil/water separator indicated petroleum hydrocarbon impacts. Additional borings were drilled around the perimeter of the site in April 1996 that indicated petroleum hydrocarbon impacts at the capillary fringe to concentrations up to 22,000 mg/kg. Impacts to the capillary fringe (located at approximately 18 feet below ground surface [bgs]) were reported to extend offsite beneath Morena Boulevard. Seventeen groundwater monitoring wells were installed at the site from July 1994 through June 2008. Free product was detected in one of the wells installed in 1994 with an apparent thickness of 0.76 feet. However, the apparent thickness decreased to a sheen which was last observed in February 2003. Analytical results for groundwater samples indicated that the chemicals of concern (COCs) for the site are gasoline, the aromatic hydrocarbons benzene, toluene, ethylbenzene, and xylenes (BTEX), naphthalene, and the fuel oxygenate methyl-tert-butyl ether (MTBE). These wells were monitored and sampled on a quarterly basis until a semi-annual schedule was initiated in 2009. Two additional monitoring wells were installed in May 2010 to complete delineation of the dissolved plume. Although the site is in an area excepted from use for municipal supply purposes, groundwater beneath flows southwesterly into a hydrologic area that is designated for potential municipal use. Four soil vapor extraction (SVE) wells and one groundwater recovery well/SVE well were installed at the site in July 1994. A Corrective Action Plan (CAP) is currently being prepared for the site.

SDUSD, CORREIA JR HIGH (Continued) **S100873086**

Completed Date: 01/04/2008
Comments: Groundwater well installation fieldwork schedule: Dec. 26, 2007 to Jan. 4, 2008. Three wells are to be installed on site.

Completed Area Name: Study Area 2
Completed Sub Area Name: Not reported
Completed Document Type: *Correspondence - Received
Completed Date: 08/11/2011
Comments: RAW approval. See RAW deliverable.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 12/24/2007
Comments: DTSC approved the Soil Management Plan on 12/24/2007.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 01/29/2008
Comments: Groundwater results were received on 01/22/2008. Data shows groundwater has not been impacted. Therefore, the RAW will move forward. The groundwater results including flow direction will be included in the RAW.

Completed Area Name: Study Area 1
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 10/24/2007
Comments: DTSC conditionally approved the engineering plans given that the District completes a soil management plan for the proper excavation and disposal of soil during the installation of the stormceptor which is the main part of the Storm Water Improvement Plan. The stormceptor will be installed in the parking lot area, eastern portion of the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 04/03/2007
Comments: A second round of groundwater sampling was conducted at the three onsite wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 05/19/2008
Comments: According to the Letter Report, lead was not detected in groundwater in any of the groundwater monitoring wells at the Site above the laboratory reporting limit. The Letter Report concluded that it does not appear that the burned waste present at the Site has impacted groundwater. The letter report further recommended that DTSC approves the elimination of the low permeability cap from the slope stabilization project located along the slope in Study Area 2 and that the monitoring wells may be abandoned. Based on review of the Letter Report, groundwater does not appear to have been impacted by lead from burned waste present at the Site. Therefore, DTSC concurred

SDUSD, CORREIA JR HIGH (Continued) **S100873086**

with the conclusions of the Letter Report that the utilization of a low permeability cap may be eliminated from the slope stabilization project located along the slope in Study Area 2 and that the monitoring wells may be abandoned.

Completed Info:

Completed Area Name: Study Area 1
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 09/30/2008
Comments: Consultant submitted email describing summary of field work activities. Resue and disposal of excavated soil.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 11/09/2007
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 01/04/2008
Comments: Groundwater well installation fieldwork schedule: Dec. 26, 2007 to Jan. 4, 2008. Three wells are to be installed on site.

Completed Area Name: Study Area 2
Completed Sub Area Name: Not reported
Completed Document Type: *Correspondence - Received
Completed Date: 08/11/2011
Comments: RAW approval. See RAW deliverable.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 12/24/2007
Comments: DTSC approved the Soil Management Plan on 12/24/2007.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 01/29/2008
Comments: Groundwater results were received on 01/22/2008. Data shows groundwater has not been impacted. Therefore, the RAW will move forward. The groundwater results including flow direction will be included in the RAW.

Completed Area Name: Study Area 1

SDUSD, CORREIA JR HIGH (Continued) **S100873086**

Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 10/24/2007
Comments: DTSC conditionally approved the engineering plans given that the District completes a soil management plan for the proper excavation and disposal of soil during the installation of the stormceptor which is the main part of the Storm Water Improvement Plan. The stormceptor will be installed in the parking lot area, eastern portion of the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 04/03/2007
Comments: A second round of groundwater sampling was conducted at the three onsite wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 05/19/2008
Comments: According to the Letter Report, lead was not detected in groundwater in any of the groundwater monitoring wells at the Site above the laboratory reporting limit. The Letter Report concluded that it does not appear that the burned waste present at the Site has impacted groundwater. The letter report further recommended that DTSC approves the elimination of the low permeability cap from the slope stabilization project located along the slope in Study Area 2 and that the monitoring wells may be abandoned. Based on review of the Letter Report, groundwater does not appear to have been impacted by lead from burned waste present at the Site. Therefore, DTSC concurred with the conclusions of the Letter Report that the utilization of a low permeability cap may be eliminated from the slope stabilization project located along the slope in Study Area 2 and that the monitoring wells may be abandoned.

Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets

SDUSD, CORREIA JR HIGH (Continued) **S100873086**

Completed Date:	12/19/2007
Comments:	DTSC has reviewed and approved the work notice (english and spanish).
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fact Sheets
Completed Date:	12/13/2006
Comments:	Fact sheet was completed but wasn't delivered to community. District chose to send out letter with District's heading to notify community of activities (see attached document).
Completed Area Name:	Study Area 3
Completed Sub Area Name:	Not reported
Completed Document Type:	Supplemental Site Investigation Report
Completed Date:	10/04/2007
Comments:	DTSC approved Study Area 3 for No Further Action
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fact Sheets
Completed Date:	01/24/2007
Comments:	Fact sheet was made available for participants during a parent meeting held by the District on January 24,2007 regarding the Preliminary Environmental Investigation at the site and the upcoming Removal Action Workplan.
Completed Area Name:	Study Area 3
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	06/12/2007
Comments:	Consultant performed housekeeping, pictures will be forwarded to DTSC along with lab sampling results. Consultant stated that according to XRF sampling results no sample exceeded 150 ppm.
Completed Area Name:	Study Area 3
Completed Sub Area Name:	Not reported
Completed Document Type:	Supplemental Site Investigation Tech Memo
Completed Date:	02/27/2007
Comments:	Wrote an email to District and Consultant to approve the Technical Memorandum for the new Study Area 3. In the email, one issue was noted which was the sampling method for PAHs, indicated that demonstration of equivalent reporting limits must be included for future data with different analytical method.
Completed Area Name:	PROJECT WIDE

Feature Description:	On March 25, 1942, This Site Was Acquired In Fee (Through A Declaration Of Taking) By The Department Of The Army As Agent For The Defense Plant Corporation. The Defense Plant Corporation Furnished All Funds Necessary For That Acquisition. Pursuant To A Directive Dated 21 February 1942, The Site Was Quitclaimed To The Defense Plant Corporation On 8 September 1943. This Site Was Used For The Manufacture Of Heavy Bombers. In A Declaration Of Taking Filed 16 June 1955, The Secretary Of The Air Force Acquired 70.39 Acres Of Land In The Vicinity Of And Adjacent To The Site. Careful Examination Of The Title Information For That Taking Reveals That The Site Of The Former San Diego Manufacturing Plant Was Not Included In That Air Force Action. The Site Is Currently Owned By The State Of California, Department Of Parks And Recreation, And Is Used For Parking Areas For Old Town State Park, A Ucsd Shuttle Lot, And Parks Department Equipment Storage.

RWQCB Region:	SAN DIEGO RWQCB (REGION 9)
Site History:	Soil investigations were performed beneath a former transmission repair facility at 5251 Linda Vista Road, San Diego., in November 1999 and January 2014. The facility was located at the western end of a strip mall near the intersection of Linda Vista Road and Napa Street in Mission Valley. The strip mall is accessed from Linda Vista Road and an alley that adjoins its south side. Two underground storage tanks (USTs) had reportedly been located beneath or adjacent to the former repair facility. Waste oil had been stored in one of the tanks and the other had reportedly contained solvents. No information was available regarding the exact locations of the USTs at the time of the 1999 soil investigation. During the November 1999 investigation, eight angle borings and one vertical boring were advanced adjacent to the former transmission repair facility. The borings were located adjacent to the western and southern walls of the building and along the eastern wall shared with an adjoining unit. Petroleum hydrocarbon odors were noted at distances of 5 to 19 feet from the ground surface during advancement of four of the angle borings. These four borings originated at locations in the alley adjoining the southern wall of the facility. Analytical results indicated the detection of Total Recoverable Petroleum Hydrocarbons (TRPH) at a maximum concentration of 17,000 milligrams per kilogram (mg/kg). Halogenated volatile organic compounds (HVOCs), including solvents, were not detected in the soil samples. Groundwater was not encountered in the borings. Case #H13561-001 was opened under the Voluntary Assistance Program on November 30, 1999, based on the TRPH results for the soil samples. Additional subsurface investigation at the site was performed on January 7, 2014, to assess whether the former USTs were still present in the subsurface, the lateral extent of impacts from the release, the composition of the release, and to determine if groundwater was impacted. The former USTs were not detected in the subsurface by ground-penetrating radar. Seven borings were advanced within the building interior: one of the interior borings was advanced in the adjoining unit and two were advanced

AAMCO TRANSMISSIONS (Continued) **S104747892**

inside the former transmission repair facility. The three interior borings terminated at a depth of 9 feet. Four of the attempted borings encountered a condition of refusal at a depth of less than 3 feet. Four exterior borings were sampled to a depth of 20 feet. Groundwater was encountered at a depth of approximately 13 feet in the exterior borings. Analytical results indicated the highest gasoline and diesel concentrations were detected in soil samples collected from beneath a service bay in the south-central area of the former transmission repair facility. However, soil impacts did not extend beyond the building footprint to the north, east, or west. Gasoline- and diesel- range organics were detected in a soil sample collected near the capillary fringe from a boring located in the alley (i.e., south of the facility). The detected concentrations were 1,500 and 1,300 mg/kg, respectively. Gasoline-range and diesel-range organics were detected in a depth-discrete groundwater sample collected from the boring at concentrations of 1.0 and 0.55 milligrams per liter (mg/l), respectively. VOCs indicative of degraded gasoline (e.g., trimethlybenzenes, n-butylbenzene) and the fuel oxygenate TBA were detected at low concentrations in the groundwater sample. Metals concentrations in the groundwater sample were either not detected or were at low levels. The findings of the soil and groundwater investigations suggest that, prior to 1999, a petroleum hydrocarbon release occurred in the service bay of the former transmission repair facility. The release appears to have included gasoline, which has devolatilized and degraded, and diesel-range compounds. Analytical results for samples collected from two borings (located within the service bay and in the alley, respectively) suggest that the release migrated in a southerly direction but was of limited extent. Aromatic hydrocarbons, including benzene, were not detected in the downgradient groundwater sample. Degradation of volatile gasoline components indicates the lack of a health risk to occupants of the commercial space and limited potential to adversely impact potential water supply. Based on these considerations, the consultant has recommended no further action and case closure. DEH concurs with these recommendations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Tech Memo
Completed Date: 08/09/2012
Comments: In a letter, dated August 9, 2012, DTSC approved the PEA Technical Memorandum Workplan for the additional investigation of burned waste in the Area of Concern, which is a portion of the 44-acre Site, and requested a minimum of 48 hours notice of fieldwork schedule changes.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 08/19/2013
Comments: Via email on August 19, 2013, DTSC received a PDF file of the Work Notice regarding Notice of Environmental Soil Investigation. The soil investigation is scheduled for August 20 through August 22, 2013 during the summer break. The activities include excavating trenches and collecting soil samples regarding burned waste material.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/25/2024

Next Scheduled EDR Contact: 04/07/2025
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/20/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Date Data Arrived at EDR: 10/22/2024
Date Made Active in Reports: 01/10/2025
Number of Days to Update: 80
Source: Yuba County Environmental Health Department
Telephone: 530-749-7523
Last EDR Contact: 01/15/2025
Next Scheduled EDR Contact: 05/05/2025
Data Release Frequency: Varies

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/05/2024
Date Data Arrived at EDR: 08/06/2024
Date Made Active in Reports: 10/25/2024
Number of Days to Update: 80
Source: Department of Energy & Environmental Protection
Telephone: 860-424-3375
Last EDR Contact: 11/05/2024
Next Scheduled EDR Contact: 02/17/2025
Data Release Frequency: No Update Planned

NJ MANIFEST: Manifest Information
Hazardous waste manifest information.

Date of Government Version: 12/31/2018
Date Data Arrived at EDR: 04/10/2019

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
