Violation Date: 11-16-2015
Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Description: Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information: (1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed; (2) Hazardous characteristics of the waste(s) to be handled; (3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of: (A) Factors affecting the potential for corrosion, including but not limited to: 1. Soil moisture content; 2. Soil pH; 3. Soil sulfides level; 4. Soil resistivity; 5. Structure to soil potential; 6. Influence of nearby underground metal structures (e.g., piping); 7. Stray electric current; and, 8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and (B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following: 1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic; 2. Corrosion-resistant coating (such as epoxy or f
Violation Notes: Returned to compliance on 12/15/2015. Inspection Sequence ID:4890685

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Date:	08-30-2017
Citation:	22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

AAMCO TRANSMISSIONS (Continued) **S104228333**

Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Waste Code: D011
Waste Description: Silver

Waste Code: D018
Waste Description: Benzene

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents

SOUTHERN CALIFORNIA EDISON SAN ONOFRE PLANT (Continued) **1000921580**

Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Year: 2019
Gepaid: CAL000056697
TSD EPA ID: CAD044429835
CA Waste Code: 213 - Hydrocarbon solvents (benzene, hexane, Stoddard, Etc.)
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.09250

Year: 2017
Gepaid: CAL000056697
TSD EPA ID: CAD044429835
CA Waste Code: 331 - Off-specification, aged or surplus organics
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.415

Year: 2017
Gepaid: CAL000056697
TSD EPA ID: CAD044429835
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 1.325

Year: 2017
Gepaid: CAL000056697
TSD EPA ID: NED981723513
CA Waste Code: 331 - Off-specification, aged or surplus organics
Disposal Method: H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons: 0.02

Year: 2017
Gepaid: CAL000056697
TSD EPA ID: UTD991301748
CA Waste Code: 331 - Off-specification, aged or surplus organics
Disposal Method: H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons: 0.02

Year: 2015
Gepaid: CAL000056697

EBERHARD BENTON ROOFING (Continued) **S113043820**

TSD EPA ID: CAD028409019
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.1

Year: 2013
Gepaid: CAL000056697
TSD EPA ID: CAD028409019
CA Waste Code: 343 - Unspecified organic liquid mixture
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.75

Year: 2013
Gepaid: CAL000056697
TSD EPA ID: CAD028409019
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.25

Year: 2013
Gepaid: CAL000056697
TSD EPA ID: CAD028409019
CA Waste Code: 331 - Off-specification, aged or surplus organics
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.35

Year: 2013
Gepaid: CAL000056697
TSD EPA ID: CAT080013352
CA Waste Code: 134 - Aqueous solution with total organic residues less than 10 percent
Disposal Method: H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons: 0.105

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE

TRIPLE A AUTO BODY AND PAINT (Continued) **1006826312**

STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

Violation Code:	2030036 (TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 5. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. 6. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. 7. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. 8. Inspected within 30 days after a repair to the overfill prevention equipment. 9. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. 10. Inspected by a certified UST service technician. 11. Maintain records of overfill prevention equipment inspection for 36 months. 23 CCR 2635(c)(1), 2635(d), 2637.2(a-c), 2665, 2712(b)(1)(G)

Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 09/30/2019. Inspection Sequence ID:6241430;Tank ID:19146,19147,19148,19149;Violation Description:(TCR 9b) Failure to comply with one or more of the following overfill

Comments: CalSites Validation Program confirms NFA for DTSC.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 02/08/1991
Comments: The PA Report was reviewed by Region 4 staff. The property was purchased in the '70s by Wilber & Betty Hanger. In 1980 they built a commercial building with 4 small warehouses for rent. From 1980 to 1983, Sackett & Pendlebury Boat Builders rented office space. The boat building was done accross the street at Clark Custom Boats. No evidence of any handling of hazardous substances at the site. Staff recommends NFA.

RWQCB Region:	SAN DIEGO RWQCB (REGION 9)
Site History:	The subject property consists of an approximately 0.14-acre parcel that is located on the northeast corner of the intersection of Morena Boulevard and Napier Street in the City of San Diego. The Site comprises an approximately 1,000-square foot, single-story, automotive service garage building located in the northeastern portion of the parcel, with concrete- and asphalt-paved driveways and parking areas to the west and south of the building. Voluntary Assistance Program (VAP) Case DEH2018-LSAM-000461 was opened in November 2017 as part of a February 2015 Phase II submitted by PIC Environmental (PIC). The Phase II revealed elevated levels of gasoline-range total petroleum hydrocarbons (TPHg), benzene, toluene, ethylbenzene, and xylenes (BTEX), in soil, soil vapor, and groundwater samples. The soil vapor results from the Phase II indicated there was not a health risk to the current structure. However, soil and groundwater TPH/BTEX results were present within the area of former underground storage tanks (USTs) which were removed in August 1986 (Permit AT-0296). Odors were noted during the UST removal, however; no samples were taken. Moreover, the UST removal report stated that no further action was necessary with regards to AT-0296. This LOP case, DEH2018-LSAM-000481, was opened to establish the extent of hydrocarbons from the former USTs removed in

MASONS (Continued) **1000339486**

1986. From October 2018 to April 2020, six groundwater monitoring wells (MWs) were installed, at which time the soil and groundwater plume was delineated with the majority of the groundwater impacts limited to the southern portion of the Site within the general vicinity of the former USTs, and a small portion off-Site extending southwesterly beneath Morena Boulevard. Figure 5 from the May 2020 Site Assessment Report (SAR) provides the most recent distribution of dissolved contamination levels at the Site. Based on this investigation, it has been determined that a release of dissolved hydrocarbons related to the USTs removed in 1986 did occur. However, the impacts are limited and pose no health or groundwater risks. PIC states that the dissolved plume of residual gasoline-impacted groundwater at the subject property does not pose a risk of adverse impacts with respect to public health or hydrologic resources, as it is located within a zone where groundwater is designated as non-beneficial. PIC is proposing natural attenuation because: Trenches for utilities would not be affected since they would be above the groundwater level with is between 10 to 12 feet below grade surface (bgs). There are no health risks based on the June 2017 Phase II soil vapor sampling results. There are no supply wells within + mile of the site. The dissolved hydrocarbon groundwater plume is minimal. Groundwater has no designated beneficial uses. No Liquid Phase Hydrocarbons (LPH) have been detected on the groundwater. MtBE has never been detected at the Site. DEH concurs with the consultant s conclusions and approves case closure. Approximately 175 cubic yards of soil remain on site with concentrations over 100 mg/kg TPH. This impacted soil was limited to an inferred area of roughly 1,100 square feet, located in the southern portion of the property from 8 18 feet bgs, per Figures 3 and 4 of the May 2020 SAR. ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME.

The soil vapor results indicated there was not a health risk to the current structure. However, TPH, benzene, toluene, ethylbenzene, and xylenes were present in soil and groundwater within the area of former underground storage tanks (USTs). As a result, Local Oversight Program (LOP) case #DEH2018-LSAM-000481 was opened in May 2018 to continue the assessment of the Site. The LOP case was closed on June 11, 2020 based on a lack of health or groundwater risks. Following the closure of the LOP case, closure for this VAP was also requested as no further Site development is currently planned at this time.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide

SEA WORLD INC (Continued) **1000136668**

consistent regulatory activities for six state and federal environmental programs.
The RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "best available" air pollution technologies that have been required to reduce the emission of air pollutions from stationary sources. RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

VALVOLINE INSTANT OIL CHANGE GN0166 (Continued) **U003789824**

Military DOD Site: No
Facility Project Subtype: Not reported
RWQCB Region: SAN DIEGO RWQCB (REGION 9)
Site History: Comments: The Site was previously developed as Bay View Plaza, which included vacant retail tenant spaces, a fast food restaurant, a hotel, and an automobile service facility. Burgener-Clark LLC owns the eastern portion of the Site (APNs 430-030-57 and 430-030-60) and is proposing to sell this property to SA Marina LLC, the owner of the western portion of the Site, for proposed redevelopment to include mixed use (commercial/retail). In December 2007, groundwater sampling activities were conducted at the Site to assess the possible presence and concentrations of constituents of concern (CoCs) in groundwater beneath the Site associated with known and reported releases from two upgradient adjacent gasoline service stations. Groundwater contamination was detected beneath the Site. Upon receipt and review of the drilling report, DEH issued a letter to Burgener-Clark LLC, dated March 5, 2008, indicating that they may be considered a responsible party and requesting further information and evaluation. On June 14, 2008, Burgener-Clark LLC entered the Voluntary Assistance Program (VAP) and VAP Case H26447-001 was opened. Initially the case covered APNs 430-030-57, 430-030-59, and 430-030-60. Later, SA Marina LLC purchased parcel 430-030-59. The environmental case for parcel 430-030-59 is being managed under VAP Case DEH2014-LSAM-000251. Subsequently, the property owner requested that the lessee remove its billboard sign pole, located at the northeast area of the Site. During the lessee s attempt to remove the sign pole by cutting the pole, combustible vapors, which were trapped inside the pole, ignited. The vapors burned themselves out without further incident. Later, after the groundwater assessment activities were completed, the billboard sign was removed. On June 2, 2008, prior to the removal of the sign pole, an oil water interphase probe was inserted inside the pole to measure the observed depth to water below the level of the planter (the planter is approximately 5 feet above the parking lot ground level), the presence and thickness of any free product, the height of the groundwater inside the pole, and the depth to the bottom of the pole. Approximately 0.14 foot of free product was observed at a depth of 18.80 feet below the level of the planter, approximately 5.96 feet of groundwater was present inside the pole, and the depth to bottom inside the pole was measured at 24.90 feet below the level of the planter. On July 9 and 10, 2008, a soil vapor survey was conducted at the Site to access the potential for soil vapor intrusion into occupied structures. Four soil vapor probes were installed on the subject Site. All ten foot samples were non-detect for volatile organic contaminants. Eleven soil samples were analyzed for petroleum hydrocarbons. Concentrations of petroleum hydrocarbons were not detected in the soil samples analyzed. In July and August 2008, five soil borings were advanced at the site using a direct push drilling rig. Hydropunch sampling was conducted at the Site. A groundwater sample from boring SCS5, located adjacent to the aforementioned pole, had total petroleum hydrocarbons as gasoline (TPHg) concentrations of 3,970 ug/l. Former 76 Station No. 6411 (Unauthorized Release Case H12985-002), located at 2576 Clairemont Drive, was evaluated as a source of the sign pole contamination. Subsequent assessment, including the installation of a monitoring well in Clairemont Drive, indicated that Former 76 Station No. 6411 was not the source of contamination. Unauthorized Release Case H12985-002 was closed on January 19, 2012. In addition, South

VALVOLINE INSTANT OIL CHANGE GN0166 (Continued) **U003789824**

Clairemont Shell (Unauthorized Release Case H13510-001), located at 2606 Clairemont Drive, was evaluated as a source of the impacts observed at the Site. DEH concurred with the conclusion that the contaminants detected at the Shell property are not indicative of being a source of the contaminants at the Site. On April 15, 2014, DEH issued a No Further Action letter to Shell regarding the unauthorized release case at their service station. DEH also requested a site status report. On June 25, 2014, the Client and SCS met with the DEH to discuss the status of the Site. The potential for off-Site impacts was discussed and the Site data were reviewed in light of the closure of the cases at the two adjacent service stations. DEH raised concerns about the lack of information regarding the potential for petroleum hydrocarbons, possibly including phase-separated hydrocarbons or free product, in the area of the billboard sign at the former EZ Lube property at the northeast corner of the Site Figure 2). The installation of one new monitoring well near the signpost was proposed as the best approach to evaluating the potential contamination, in particular the possible presence of free product, in this part of the Site. On July 23, 2014, a well was installed at a location approximately 15 feet southwest (downgradient) from the former billboard sign at the EZ Lube property. No petroleum hydrocarbon odors were observed in the soil samples and cuttings during drilling and no PID readings above 0.0 parts per million were measured. Moist soil was encountered at approximately 15 feet below ground surface (bgs). Results of the laboratory analysis indicated that, with the exception of TPHo in sample MW1-5 at a concentration of 625 milligrams per kilogram (mg/kg), no detectable concentrations of TPH were reported in the soil samples collected from MW1. No detectable concentrations of VOCs were reported in soil sample MW1-5. Sampling of the well was conducted on July 28, 2014. No free product was measured in the well and the depth to groundwater was measured as 13.89 feet bgs. Results of the laboratory analysis of the groundwater sample reported TPHg at a concentration of 148 micrograms per liter (8g/l). VOCs reported included 1,2-dichlorethane, MTBE, and TBA at concentrations of 3.45 8g/L, 2.50 8g/L, and 103 8g/L, respectively. No detectable concentrations of VOCs were reported in soil sample MW1-5. No indications of the presence of free product were observed during the drilling, development, and monitoring of well MW1. Results of the laboratory analysis of the groundwater sample reported TPHg at a concentration of 148 micrograms per liter. On September 10, 2014, groundwater was measured in monitoring well MW1 yesterday. There was no free product, and no petroleum hydrocarbon odor. The depth to water was 13.97 feet below top of casing, compared to 13.89 feet during the July monitoring/sampling event. The historical presence of free product in the sign pole continues to be anomalous. However, based on the installation, monitoring and sampling of MW1, free product is not present immediately downgradient of the sign pole. Based on the conclusions listed above, the environmental consultant recommends closure of the VAP case for this portion of the Site. DEH concurs with this recommendation.

Inspection Date: 02/11/2008
Violation Code: 6HV1601
Violation: HAZWASTE TANKS W/O P.E. ASSESSMENT
Violation Citation: Failed to obtain a P.E. assessment for hazardous waste tank system. 66265.191(a) or 66265.192(a)
Activity: Inactive Permit

UST:
UST Name: UNDERGROUND TANK 126447 T001
Last Update: 2012-11-02 14:17:38
Permit Number: 126447

VALVOLINE INSTANT OIL CHANGE GN0166 (Continued) **U003789824**

Tank Type: DOUBLE WALL
Additional Id: AT4827
Capacity Gallons: 500
UST Contents: Not reported
Other Content Info: WASTE OIL
Reg Status: REMOVED
Remove Close Date: 2002-12-03 00:00:00
Year Installed: 1988-01-01 00:00:00
Pipe Type: Not reported
Delivery System: Not reported
Monitor Code: 21
UST Monitor Method: DW TANK DW SUCTION AND/ OR GRAVITY PIPING WITH INTERSTITIAL MONITORS: INTERSTITIAL.

SHELL (Continued) **S106874920**

RWQCB Region: SAN DIEGO RWQCB (REGION 9)
Site History: Comments: The Site is currently an active Shell-branded Service Station located on the southern corner of the intersection of Morena Boulevard and Tecolote Road in San Diego, California. Current station facilities include two gasoline underground storage tanks (USTs), five dispenser islands with associated product piping, and a station building. Development in the vicinity of the Site consists of commercial and residential properties. Tecolote Creek flows through a concrete lined channel along the northwest side of Tecolote Road. In May 2003, the County of San Diego Department of Environmental Health (DEH) oversaw the removal of the three fuel USTs, three dispenser islands, and product piping. Approximately 609 tons (~904 yd3) of hydrocarbon/oxygenate-impacted soil were over-excavated in the vicinity of the dispenser islands and beneath portions of the tank zone. DEH opened Unauthorized Release Case No. H03190 -001 in July 2003 based on field observations of soil staining and odors. In August 2003, the 550-gallon waste-oil UST was removed. Due to the presence of hydrocarbons in soil samples collected from beneath the UST, the waste-oil UST cavity was remedially excavated to 14 feet below grade. Approximately 36 tons (~53 yd3) of hydrocarbon-impacted soil were removed from the Site and transported for recycling. Subsequent assessment demonstrated that soil contamination from this release is localized around the USTs and dispenser islands; however remedial excavation removed the majority of impacted soil from the Site. The total residual petroleum hydrocarbon mass of TPH greater than 100 mg/kg in soil is estimated to be approximately 149 cubic yards. The risk to station workers from vapor intrusion to indoor air was evaluated using the DEH Site Assessment and Mitigation Vapor Risk Model to estimate the potential risk to human health from benzene, ethylbenzene, naphthalene and MTBE vapors volatilizing and migrating into the station building. The model estimated the potential carcinogenic risk to occupants based on concentrations of hydrocarbons and oxygenates in soil. The model predicted that the carcinogenic risk is 1.33 x 10-9, which is less than the 10-6 target. It was concluded that soil vapor intrusion to indoor air does not pose a risk to human health for the station building employees. Ten groundwater monitoring wells have been installed at the Site. Groundwater was monitored and sampled at the Site between July 2005 and December 2012. Separate-phase hydrocarbons have never been present at the Site. Groundwater in the vicinity of the Site is designated as non-beneficial. Benzene concentrations in groundwater have generally been low to non-detect in all site wells since January 2009 and is adequately assessed. Benzene is not considered a constituent of concern in groundwater at this Site. Dissolved phase MTBE is located cross-gradient of the southern dispenser islands at MW-6 and down-gradient of the USTs. It appears that concentrations of MTBE observed in well MW-6 are localized to the vicinity of that well. TBA concentrations are mainly located in the western portion of the Site and extend under Tecolote Road. A Corrective Action Plan (CAP) was submitted on November 14, 2012 requesting case closure. The Public Participation process for the above-referenced CAP was completed. The public comment period ended on June 28, 2013. DEH received no comments. According to the environmental consultant s registered professional, the Site presents no significant risk to human health and the environment. DEH concurs with this conclusion.

CHILCOTE (Continued) **S106915951**

RWQCB Region: SAN DIEGO RWQCB (REGION 9)
Site History: This case was opened in 1992 after odorous soil was encountered during installation of a sewer tunnel. The soil was excavated and sampled and HMMD granted the City permission to reuse the stockpiled soils at the Rose Canyon Operations Facility with the condition they provide a map showing its final location. (Soil sample results were ND for Fuel Hydrocarbons, VOCs, Pest/PCBs). This case can be closed since the soil was ND and we DEH approved reuse.

Description:	According to NRC #1208142, Caller stated that they observed an unknown sheen from an unknown source on the waters of the San Diego Bay. The length and width of the sheen is unknown, however the sheen has a rainbow coloration with a diesel odor. Per the RP, The size of the sheen is covering the entire 209 foot marina and the sheen

SEA WORLD MARINA (Continued) **S105694533**

appears to be coming in from the bay. The marinas environmental manger and the USCG Pollution Responders are enroute to the scene. No remedial action is being taken at this time, due to the sheen being to large to contain.

RWQCB Region:	SAN DIEGO RWQCB (REGION 9)
Site History:	The site is located on the northwestern corner of the intersection of Clairemont Drive and Denver Street in San Diego, California. The property is currently under construction with plans to develop the property as commercial/retail space. On February 8, 2005, TRC advanced five soil borings as part of a real estate transaction. Boring depths ranged from approximately 30 to 40 feet below grade (fbg). Concentrations of Total Petroleum Hydrocarbons as Gasoline (TPHg) in soil were detected in six samples, and methyl tert-butyl ether (MTBE) was detected in two. Grab groundwater samples were collected from each boring. TPHg in groundwater was detected in each of five samples. Benzene was detected in four samples, and MTBE was detected in three samples. Groundwater was encountered at depths ranging from approximately 17 to 29 fbg. Based on these results, the Department of Environmental Health (DEH) opened unauthorized release case H12985-002 on June 13, 2005, and requested additional assessment. In March 2007, the underground storage tanks (USTs) and associated piping were removed from the site. Soil samples were collected in several locations beneath the USTs, former dispensers, and former product piping at the direction of DEH. TPHg concentrations in soil samples collected beneath the former USTs were

76 PRODUCTS #256411 (Continued) **S103296815**

up to 3,360 mg/kg. Soil samples collected beneath the former dispenser islands reported maximum TPH concentrations of 7,640 and 8,640 mg/kg. In April and May 2008, URS observed the excavation of hydrocarbon-impacted soils beneath the location of the former dispenser islands where the elevated concentrations were detected during UST removal activities. Approximately 188 cubic yards of soil were excavated from the areas of the former dispensers. A vapor risk assessment was conducted to evaluate potential risk to occupants of the proposed commercial building using soil sample analytical data collected from the excavation. Results of the vapor risk assessment indicated that the cumulative potential excess lifetime cancer risk using the SAM Manual's Vapor Risk Model was 5.29 x 10-7, which was less than the SAM Manual's threshold for significance of 1 x 10-6. A small volume of contaminated soil exists beneath the eastern limit of the former UST excavation. The total contaminant mass greater than 100 mg/kg is estimated to be approximately 19 pounds or approximately 3 gallons. The subject property is located within the Miramar Hydrologic Area of the Penasquitos Hydrologic Unit. Groundwater within this hydrologic area has been identified as having no beneficial uses. A total of six groundwater monitoring wells were installed for this case. Groundwater was monitored and sampled between May 2006 and September 2011. In May 2008, groundwater monitoring well MW-2 was destroyed in preparation for redevelopment of the site. A replacement well (MW-2A) was ultimately constructed when redevelopment did not occur. LPH has not been present in the monitoring wells since groundwater monitoring/sampling began. The dissolved-phase plume has been adequately assessed and concentrations of contaminants are below the MCLs. Tert-butyl alcohol (TBA) is still present above California Action Levels. Apart from TBA concentrations offsite, the dissolved phase groundwater plume is largely confined to the Site. A Corrective Action Plan (CAP) was submitted on July 29, 2011. The CAP concluded that remediation of residual hydrocarbon concentrations in soil and groundwater were expected to achieve the targeted cleanup goals through the natural attenuation process. The Public Participation process for the above-referenced CAP has been completed. The public comment period ended on December 8, 2011. The Site Assessment and Mitigation Program (SAM) received comments from four members of the public upgradient of the Site. DEH addressed the comments in the CAP Concurrence letter. No active supply wells were identified within + mile of the Site. According to the environmental consultant s registered professional, the Site presents no significant risk to human health and the environment. DEH concurs with this conclusion.
