Dear Mr. Jones:

The enclosed report presents the results of a Phase I Environmental Site Assessment (Phase I) conducted at the above-referenced property, located at the northwest block at Madrona Avenue and West Carson Street, in Torrance, California (herein referred to as the "subject property"). This work was performed by Haley & Aldrich, (Haley & Aldrich), in accordance with a request from Lennar Homes of California on 16 April 2024 ("Agreement"). This Phase I was conducted in conformance with the scope and limitations of the ASTM International (ASTM) E1527-21 Standard Practice for Environmental Site Assessments.[1]

The objective of a Phase I is to assess whether known and/or suspect recognized environmental conditions (RECs), controlled RECs (CRECs), or historical RECs (HRECs) are associated with the subject property, as defined in the ASTM E1527-21 Standard.

Thank you for the opportunity to perform these services for you. Please do not hesitate to contact us if you have any questions or comments.

Executive Summary

Haley & Aldrich, Inc. (Haley & Aldrich) has performed a Phase I Environmental Site Assessment (Phase I) of the property located at the northwest block at Madrona Avenue and West Carson Street in Torrance, California (herein referred to as the "subject property"). This Phase I was performed for Lennar Homes of California to support the proposed property transfer and future plans for residential redevelopment. This Phase I was performed in conformance with the scope and limitations of the ASTM International (ASTM) E1527-21 Standard and All Appropriate Inquiries (AAI) Rule.

SUBJECT PROPERTY DESCRIPTION

The subject property consists of three (3) parcels that total approximately 16.3 acres and is identified as the entire city block located northwest of Madrona Avenue and West Carson Street in the City of Torrance, California. Assessor's Parcel Numbers (APNs) are currently identified as 7366-019-123, 7366-019-082, and 7366-019- 183.

OBJECTIVE

The objective of a Phase I is to assess whether recognized environmental conditions (RECs), controlled RECs (CRECs), or historical RECs (HRECs) are associated with the subject property. Our conclusions are intended to help the user evaluate the business environmental risk associated with the subject property. Our opinion regarding a REC's potential impact on the subject property is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, our experience evaluating similar sites, and on our understanding of the client's intention to support the proposed property transfer and future plans for residential redevelopment.

SIGNIFICANT DATA GAPS

Our ability to identify and evaluate RECs at the subject property is conditioned upon significant data gaps identified as part of this Phase I. The ASTM E1527-21 Standard defines a significant data gap as a data gap that affects the ability of the Environmental Professional to identify a REC.

No significant data gaps were identified during the performance of this Phase I. Thus, it is our opinion that sufficient information was obtained to identify subject property conditions indicative of releases or threatened releases of hazardous substances and petroleum hydrocarbons. Our opinion is limited by the conditions prevailing at the time our work is performed and the applicable regulatory requirements in effect.

RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E1527-21 Standard defines a REC as: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

The following RECs listed below were identified in connection with the subject property.

REC #1: Underground Storage Tank

Historical records indicate a 500-gallon waste oil underground storage tank (UST) was located at the former Montgomery Ward Auto Express in 1971. A large resurfaced concrete patch located west of the building was visible during the site visit indicating the feature was likely removed. Conditions of the tank and analytical results of the excavation samples at the time of removals are unknown.

REC #2: Aboveground Storage Tank Waste Oil Release

Los Angeles County Fire Department (LACoFD) records indicate an above ground storage tank (AST) containing waste oil was located on the northern exterior of the former Montgomery Ward Auto Express. On 4 August 1997, a plume of oil originating from the hazardous waste storage enclosure was observed to be ponded on the paved surface in the parking area. The LACoFD issued a Notice of Violation (NOV) on 5 August 1997. Documents provided did not mention any further regulatory actions and it is possible residual petroleum remains at the subject property.

CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E1527-21 Standard defines a CREC as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

CRECs were not identified in connection with the subject property.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E1527-21 Standard defines an HREC as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls. A historical recognized environmental condition is not a recognized environmental condition.

The following HRECs listed below were identified in connection with the subject property.

HREC #1: Four Hydraulic Hoists

In 2003, four hydraulic hoists were removed from the northern portion of the former Montgomery Ward Service Center. The LACoFD issued a No Further Action (NFA) letter dated 19 June 2003, stating the hoist area has been satisfactorily mitigated for the current use and no further requirements or restriction relating to the site.

HREC #2: Onsite Clarifier

In 2003, a clarifier was excavated from the southwest side of the former Montgomery Ward Service Center. The LACoFD issued a No Further Action (NFA) letter dated 18 June 2003, stating the clarifier area

has been satisfactorily mitigated for the current use and no further requirements or restriction relating to the site.

DE MINIMIS CONDITIONS

The ASTM E1527-21 Standard defines a *de minimis* condition as a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. The ASTM E1527-21 Standard notes that conditions determined to be *de minimis* are not recognized environmental conditions.

The following *de minimis* conditions listed below were identified in connection with the subject property.

De Minimis #1: Oil Stained Concrete/Asphalt in Poor Condition

Areas of oil stained concrete/asphalt in poor condition was observed across the subject property. Should future redevelopment occur in the area, the removal of the concrete/asphalt should be handled with care in this area.

OTHER FINDINGS

Other findings are those notable items encountered as part of the Phase I Environmental Assessment that are not considered RECs. They may be considered out-of-scope items or compliance issues. Four other findings were identified associated with the subject property:

Other Finding #1: Re-abandonment of Onsite Abandoned Del Amo #2

The City of Torrance, in consultation with CalGEM, may require that Del Amo #2 be re-abandoned by the well owner to meet current oil well destruction standards. The current well owner is Kelt California, Inc. according to CalGEM records. Prior to re-abandonment, the former oil well will need to be located and may require a specialized geophysical survey and/or coordination with CalGEM. The City may also require setbacks from the oil well be maintained and/or the installation of a vent cap at the former well location.

Other Finding #2: Active Petroleum Distribution Pipelines are Located on or Adjacent to the Property

A pipeline easement is located along the landscaped area on the eastern property margin of the subject property. The pipeline is active and operated by Chevron Pipeline Co. and reportedly contain jet fuel and crude oil. Pipelines under Madrona Avenue are active and owned by Shell Pipeline Co., Plains Marketing, L.P., Phillips 66 Pipeline LLC, and Crimson Pipeline, L.P. and contain multiple petroleum products including crude oil. Based on the unknown age and unknown condition of the subsurface pipelines, the pipeline easement has the potential to adversely affect the subject property. No known releases have been reported.

Other Finding #3: Abundance of Debris

An abundance of construction debris and waste staging debris piles were located across the subject property. Should future redevelopment occur in this area, the removal of the waste and construction

debris should be handled with care. Care should also be taken when removing the debris should be properly containerized and disposed of at an appropriate recycling or disposal facility.

Other Finding #4: Historical Railroad Tracks and Historical Buildings

Three sections of railroad tracks and a number of historical buildings were located on the subject property associated with the Chanslor-Canfield Midway Oil Company operations. Former industrial operations may have included the use of petroleum products, solvents, adhesives, and/or other chemicals. It is possible that former industrial operations may have adversely affected subsurface conditions at the subject property. Based on the time that has elapsed since industrial use, two previous instances of subject property redevelopment, and no identified records of historical spills or environmental response actions, it does not appear that significant chemical impacts remain in the vicinity of the former rail tracks or the former buildings.

The remainder of this report contains additional information regarding the Phase I, the resulting findings summarized above, and limitations affecting this report.

SUMMARY AND RECOMMENDATIONS

In summary, we identified two RECs during this Phase I.

To address the RECs listed above, we recommend the following:

- Following building demolition and during subject property excavation and grading, any impacted soil that may be present could be identified and addressed via procedures outlined in a soil management plan.

The remainder of this report contains additional information regarding the Phase I, the resulting findings summarized above, and limitations affecting this report.

Continued Viability of Environmental Site Assessment

In accordance with the ASTM E1527-21 Standard, the following components of the Phase I Report must be conducted or updated within 180 days prior to the date of acquisition or prior to the date of the transaction:

1. Interviews with owners, operators, and occupants. Completed on: 30 April 2024.
2. Searches for recorded environmental cleanup liens (a user responsibility). Completed on: Lennar Homes of California LLC has not provided a date of completion.
3. Reviews of federal, tribal, state, and local government records. Completed on: 19 April 2024.
4. Visual inspections of the subject property and of adjoining properties. Completed on: 30 April 2024.
5. The declaration by the Environmental Professional responsible for the assessment or update (refer to Section 9). Completed on 5 June 2024.

1. Introduction

This report presents the results of an ASTM International (ASTM) Phase I Environmental Site Assessment (Phase I) conducted at the northwest block at Madrona Avenue and West Carson Street in Torrance, California (herein referred to as the "subject property"). The approximately 16.3 acres subject property is predominantly paved with asphalt concrete with one rectangular-shaped section of unpaved land in the central portion of the property. There are two buildings located in the northeast and southeast corners of the subject property and are shown on the Project Locus, Figure 1. This Phase I was conducted in consideration of Lennar Homes of California's intention to support the proposed property transfer and future plans for residential redevelopment the property.

1.1 OBJECTIVE

The objective of a Phase I is to assess whether recognized environmental conditions (RECs), controlled RECs (CRECs), or historical RECs (HRECs) are associated with the subject property by evaluating site history, interviews, existing observable conditions, current site use, and current and former uses of adjoining properties, as well as potential releases at surrounding properties that may impact the subject property. Our conclusions are intended to help the user evaluate the business environmental risk associated with the subject property.

The ASTM E1527-21 Standard defines a REC as: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. The definitions of RECs, CRECs, and HRECs are included in the Glossary section of this report.

1.2 SCOPE OF SERVICES

This Phase I was performed by Haley & Aldrich, (Haley & Aldrich) in conformance with the scope and limitations of the ASTM E1527-21 Standard and All Appropriate Inquiries (AAI) Rule. The Phase I limitations and Agreement are attached hereto as Appendix A.

As part of this Phase I, Haley & Aldrich conducted visual observations of site conditions and of abutting property use, and interviewed a key site manager and applicable tenant representatives (subject property reconnaissance); reviewed federal, state, tribal, and local environmental database information, federal and state environmental files, previous reports (if identified and provided), and site historical use records; and formulated conclusions regarding the potential presence and impact of RECs.

1.3 NON-SCOPE CONSIDERATIONS

The ASTM E1527-21 Standard includes the following list of "additional issues" that are non-scope considerations outside of the scope of the ASTM Phase I practice: asbestos-containing materials, biological agents, cultural and historic resources, ecological resources, endangered species, health and safety, indoor air quality related to release of hazardous substances or petroleum products into the environment, industrial hygiene, lead-based paint unrelated to releases into the environment, lead in drinking water, mold or microbial growth conditions, polychlorinated biphenyl (PCB)-containing

materials, naturally-occurring radon, regulatory compliance, substances not defined as hazardous substances (emerging compounds), and wetlands. These items were not included in this Phase I of the subject property.

The assessment of the presence of PCBs is limited to those potential sources specified in the ASTM E1527-21 Standard as "electrical or hydraulic equipment known or likely to contain PCBs…to the extent visually and or physically observed or identified from the interview or records review."

Note that PCBs may be present in miscellaneous building materials, such as caulking, sealants, insulation and sound dampening materials, paint, gaskets, roofing and siding materials, waterproofing compounds, enamel coatings, and other chemical products manufactured prior to 1979. Evaluating the subject property building for potential PCB-containing building materials and possible PCB-containing materials other than "electrical or hydraulic equipment known or likely to contain PCBs" was outside the scope of this Phase I.

1.4 LIMITING CONDITIONS/DEVIATIONS

Haley & Aldrich completed this Phase I in substantial conformance with the ASTM E1527-21 Standard. In our opinion, no additions were made to, or deviations or deletions made from, the ASTM work scope in completing this Phase I.

1.5 USER RESPONSIBILITIES

The completion of this Phase I is only one component of the process required to satisfy the AAI Rule. In addition, the user must adhere to a set of user responsibilities as defined by the ASTM E1527-21 Standard and the AAI Rule. User responsibilities are discussed in Section 6.6 of this report. A user seeking protection from Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability as an innocent landowner, bona fide prospective purchaser, or contiguous property owner must complete all components of the AAI process in addition to meeting ongoing obligations. AAI components, CERCLA liability relief, and ongoing obligations are discussed in the AAI Rule and in Appendix X1 of the ASTM E1527-21 Standard.

3. Previous Reports

The following reports previously prepared for the subject property were reviewed for this Phase I. Relevant excerpts from these reports are included in Appendix B.

The previously prepared reports and documents listed below were reviewed as part of this Phase I. Pertinent issues identified in those reports are summarized below.

- *Limited Phase II Subsurface Investigation* prepared by ATC Associates, Inc. (ATC), for the Torrance Company, dated 1 April 2003.

  This Phase II was completed to assess and evaluate the potential environmental impairments defined as RECs identified in the Draft Phase I Environmental Site Assessments (ESA) provided to ATC.

  - REC: The concrete clarifier associated with the Montgomery Ward Auto Express was approximately 30 years old and due to the age, the clarifier may have been weakened allowing oil to leak through, and potentially impact the property.

    ATC Response: ATC noted during the investigation that the clarifier currently contains oil and fluid, which should be disposed of via a licensed recycling petroleum waste hauler. Additionally, the clarifier should be pressure washed and cleaned and then closed to meet the standards of the oversight agency, Los Angeles Department of Public Works. In order to address the potential of leakage from the clarifier into subsurface soil, ATC drilled four soil borings around the clarifier and analyzed soil samples to identify potential leakage from the sides of the concrete-lined clarifier. Four soil samples (B-4 at 1.5 feet, B-5 at 7 feet, B-6 at 14 feet and B-7 at 13 feet) were collected from the borings advanced around the oil/water separator. Laboratory analytical results indicated low-level concentrations of total recoverable petroleum hydrocarbon (TRPH) and diesel range organics (DRO) in soil samples B-5 at 7 (6.6 parts per million [ppm]) and B-6 at 14 feet (15 ppm).
  - REC: Reported gasoline fueling at the former Montgomery Ward Auto Express.

    ATC Response: According to representatives from The Torrance Company, and a site plan reviewed at The Torrance Company's office by ATC; fueling facilities were never associated with this Ward's facility. Subject property facilities do not reflect evidence of vent pipes, canopies, or other indicators of a former fueling facility. Based on overall ESA research, findings, interviews and observed conditions, no additional investigation was conducted.
  - REC: A large retention pond for storm run-off located on the northwest corner of Plaza Del Amo and Madrona Avenue. Based on the age of the subject property and the use of the retention pond for stormwater run-off collection that it represented a recognized environmental condition.

    ATC Response: At the time of site reconnaissance, the retention pond appeared to be dry and full of healthy vegetation, including flowers and trees.
  - REC: Based upon aerial review the northern portion of the property, north of Carson Street, appeared to be industrial and had at least two railroad loading/distribution areas.

ATC Response: The metal fabricator was located in the current vicinity of the Montgomery Ward retail store. The area was covered by a building; therefore, ATC drilled two soil borings east of the Montgomery Ward building to address this potential issue. Two soil samples (B-8 at 17.5 feet and B-9 at 4 feet) were collected from the borings advanced east of the reported former industrial facility. Laboratory analytical results indicated low-level concentrations of TRPH and DRO in the soil sample collected and analyzed at B-9 at 4 feet below grade (32 ppm). Concentrations of total metals detected in this soil sample were all below California Administrative Code Title 22 Total Threshold Limit Concentration (TTLC) values for metals.

- REC: Seventeen hydraulic lifts, approximately 30 years of age in the former Ward's auto service center.

  ATC Response: The hydraulic lift reservoirs are all located on the first level (basement) of the former automotive service center with no apparent below-grade components. The hydraulic tanks are exposed and significant oil leakage was not observed in the basement around any of the lifts. ATC does not consider these closed systems as an REC. ATC does recommend removal of the hydraulic fluid and proper disposal of all equipment at the time that the facility is dismantled.

- REC: Historically, the subject property was developed with numerous oil wells and oil sumps.

  ATC Response: 25 oil wells were drilled on the property between 1925 and 1927, according to the California Division of Oil and Gas, all wells were properly abandoned.[2] Oil sumps were typically unlined pits that were used to collect production fluid and drilling mud at the time of oil exploration and pump testing. Typical oil sumps are relatively small in size, and shallow in nature, as they usually served only one well, Sumps often contained brine water, crude oil, and barium based drilling mud. Beginning in the 1950s, the subject property started to be developed as a retail shopping center. Oil wells located on the property were presumably abandoned according to the Division of Oil and Gas abandonment requirements at the time of development. Oil sumps that were associated with the oil wells were likely backfilled, or excavated at the time of redevelopment and construction. Given the small size of the sumps compared to the overall area of the site and its full redevelopment, exact locations of the sumps would be difficult to determine. Possible residual impacts are typically localized due to the low viscosity of crude oil and drill mud (i.e., crude oil is typically heavy and is generally not mobile). Additionally, a significant amount of time has elapsed since oil well drilling was conducted at the subject property. Oil well records should indicate exact locations of oil wells (but will not illustrate related sumps). If building demolition is planned and oil wells are known to be located beneath structures, ATC recommended that the wells be evaluated and/or re-abandoned during that time to current abandonment requirements. ATC did not agree that subsurface investigation for the oil sumps or wells was warranted at this time due to the current development status and undetermined location of potential historic oil sumps. However, prior to future development, demolition, or construction at the Del Amo Fashion Center, well records should be

[2] The ATC 2003 Phase II report was for a larger area incorporating the Del Amo Fashion Mall bounded by Hawthorne Boulevard to the west, Sepulveda Boulevard to the south, Fashion Way to the north, and Madrona Avenue and Del Amo Circle to the East and not for the smaller subject property of this report.

reviewed and potential well locations identified in the vicinity of new buildings to allow for re-abandonment and possible methane mitigation systems installed, if necessary, to address former oil wells and associated oil sumps. ATC recommended conducting soil monitoring during any future excavations, but no immediate action or investigation was warranted.

- *Clarifier Closure Report Former Montgomery Ward Auto Center. Prepared by American* Integrated Services, Inc., (AIS) prepared for The Torrance Company, dated 22 December 2003.

  This report summarizes closure activities for a three-stage clarifier completed at a former Montgomery Ward Auto Center. On April 28, 2003, upon completion of the clarifier removal, AIS personnel collected soil samples per the Los Angeles County Department of Public Works (LACDPW) sampling protocols. A total of two soil samples were collected at approximately 12 feet below grade (ft bgs) at each end of the clarifier using the bucket of a backhoe. No TPH-GRO, TPH-DRO, TPH-ORO, TRPH, VOC, oxygenates or SVOC were detected in the soil samples collected from under the former clarifier at or above the laboratory detection limits.

- *Hydraulic Lift Closure Report Former Montgomery Ward Auto Center,* prepared by ATC Associates Inc., Prepared for The Torrance Company, dated 13 June December 2003.

  This report summarizes closure activities associated with four former in-ground hydraulic lifts at the former Montgomery Ward Auto Center. The four in-ground hydraulic lifts located in the northern portion of the building were excavated on 13 May 2003. Soil samples collected beneath the removed lifts indicated concentrations of TRPH ranged between 150 milligrams per kilogram (mg/kg) and 4,500 mg/kg. The LACoFD the cleanup criteria for the hydraulic oil-impacted soil for petroleum hydrocarbons is 1,000 mg/kg. Concentrations of TRPH below Lift #1 (2,200 mg/kg) and Lift #3 (4,500 mg/kg) exceeded this cleanup criteria. The LAFD requested soil beneath the lifts be analyzed for volatile organic hydrocarbons and polychlorinated biphenyl's (PCBs). One soil sample, from beneath Lift #3, was analyzed for PCBs and VOCs. No VOCs or PCBs were detected in the soil sample analyzed from beneath Lift #3. A 2 by 2-foot concrete pad was located beneath each hydraulic lift at an approximate depth of 7 feet below surface grade (bsg). The concrete pads were removed from beneath each of the four former hydraulic lifts. Soil surrounding and below the concrete pads was excavated to a total depth of approximately 10 feet bsg in each of the four hydraulic lifts. 12 June 2003, a total of 8 excavation sidewall and base soil samples were collected during the course of the remedial excavation. All of the soil samples were collected from approximately 10 feet bsg. None of the samples collected contained concentrations of hydraulic oil above the method detection limit. During excavation activities a total of 51.56 tons of soil were removed from the excavation in the vicinity of the former hydraulic lifts.

- *Report for Phase II Investigation; Former Oil Production Sump in Southwest Corner of 16-Acre Parcel located at Northwest Corner of Carson Street and Madrona Avenue, Torrance*. Prepared by Environ, prepared for SunCal Companies, dated 15 December 2005.

  The Phase II investigation was designed to provide subsurface soil and soil vapor data in an area formerly identified to have been used for oil production activities. An aerial photograph review

of the property by Environ indicated that an oil production sump was located in the southwest corner of the property and west of the abandoned oil well located north the existing Black Angus restaurant. The sump appeared to be approximately 250 feet long (north to south) and 150 feet wide (east to west) and contained fluids in a 1958 aerial photograph. The sump was not visible on a 1970 or later photographs.

Fifteen soil vapor samples (SVE-1-5 through SVE-15-5) were collected from 5 feet bgs. Environ concluded only trace levels of toluene and methane are present in the former oil sump area. Indicating that the former sump either never contained significant quantities of production fluids including crude oil or that it was properly excavated and removed between 1958 and 1970. In addition, methane concentrations were less than 26 parts per million by volume (ppmv). In general, methane concentrations less than 1,000 ppmv are not considered significant and mitigation measures are usually not required. Environ did not recommend any further investigative actions.

4. Subject Property History

Haley & Aldrich assessed past usage of the subject property and adjoining properties through a review of:

- Topographic Maps dated 1896, 1924, 1934, 1941, 1948, 1951, 1964, 1972, 1981, 2012, 2015, 2018, 2021;
- Aerial Photographs dated 1928, 1947, 1954, 1963, 1970, 1977, 1981, 1989, 1994, 2002, 2005, 2009, 2012, 2016, 2020;
- City Directories dated 1946-2020;
- Previous Reports;
- Municipal records; and
- Interviews with key site representatives.

No historical Sanborn fire insurance industry map coverage was found for the subject property and surrounding area. This data gap does not alter the conclusions of this report, since adequate historical aerial photograph coverage was obtained.

Copies of information obtained from historical references reviewed are included in Appendix C. Unless otherwise noted below, per the ASTM standard, sources were reviewed dating back to 1940 or first developed use, whichever is earlier, and at 5-year intervals if the use of the property has changed within the time period.

5.3 DETAILED DESCRIPTION OF RELEVANT INFORMATION

5.3.1 Subject Property

The subject property was listed in several databases in the database report including Hist UST, Sweeps UST, CA FID UST, RCRA-SQG, ECHO, and Los Angeles Co. HMD. In addition, several files were obtained from regulatory agencies. Pertinent combined findings are summarized in the table below.

Listing	Description	Potential Impact
HIST UST SWEEPS UST CA FID UST RCRA-SQG, FINDS, ECHO	The subject property is listed in the database as Torrance Montgomery Ward located at 21405 Madrona Ave for a waste oil underground storage tank (UST) installed in 1971. No records are on file with the LACoFD on its removal or regulatory closure approval letters associated with this UST. LA County Fire Complaint form dated 4 August 1997 noted used oil across the parking lot near Montgomery Ward Car Center. A LACoFD Health Hazard Materials Division inspection record from 5 August 1997 notes an oil spill originated from the hazardous waste enclosure with gallons of waste oil migrating across the paved surface. The notes say the 600 gallon AST system was leaking and the facility was working to resolve the problem. The inspection lists nine 55 gallon drums of used oil, filters, antifreeze, spent batteries, twenty gallon paint cans, shop floor cleaning oily/water drums, and spent parts cleaning solvent. The notes say the clean-up of the hazardous waste storage area is in progress by the contractor Hydroclean. A Notice of Violation (NOV) was issued by the LACoFD. On 7 August 1997 records indicate the hazardous waste storage area had been cleaned of	Conditions of the tank and analytical results of the excavation samples at the time of removal are unknown. Based on the lack of regulatory information regarding the UST and the noted oil spill from LACoFD the listings have the potential to adversely impact the subject property and are considered a REC.

Listing	Description	Potential Impact
	the oil spill/release and contaminated absorbents had been removed. An inspection record dated 5 March 1998 noted antifreeze on floor near storage drums, an open solvent wash tank, debris and used car parts laying around, an open used oil AST, open lids on drums, and general poor housekeeping. Inspection records from 2000 indicate inventory consisting of a 300-gallon waste oil AST, four hazardous waste drums containing waste oil filters, a Safety Kleen parts washer and a Safety Kleen brake fluid washer, car batteries, and a clarifier. Building records from the City of Torrance include the Montgomery Ward Auto Service Station foundation, plumbing, and electrical permits from 1970, a sump pump installation in 1971, a permit to remove a clarifier in 2003. In 2003, four hydraulic hoists were removed from the northern portion of the former Montgomery Ward Service Center. The LACoFD issued a No Further Action (NFA) letter dated 18 June 2003 with no further requirements or restriction relating to the site. LA County Sanitation district Inspection reports from 2003 lists the clarifier as removed and the connection capped and sealed by American Integrated Services. The clarifier was located on the southwest side of the former service center. The LACoFD issued a No Further Action (NFA) letter dated 19 June 2003 with no further requirements or restriction relating to the site. Montgomery Ward Auto Express had a 64 square foot key shop listed at 21515 Madrona Ave southeast of the Montgomery Ward Auto Express from 1970-1979.	
SCAQMD	Black Angus Restaurant located at 3405 Carson Street has an active Permit to Operate (PTO) and equipment listing on file with the SCAQMD to operate a Char broiler using natural gas. No violations are listed.	This listing is not likely to adversely affect the subject property.
Pipeline Easement located on eastern property margin along Madrona Ave. Pipeline is owned and operated by third parties.	A pipeline easement is located along the landscaped areas on the eastern property margin of the subject property. The pipeline located on the subject property is active and operated by Chevron Pipeline Co. and reportedly contain jet fuel and crude oil. Pipelines under Madrona Avenue are active and owned by Shell Pipeline Co., Plains Marketing, L.P., Phillips 66 Pipeline LLC, and Crimson Pipeline, L.P. and contain multiple petroleum products including crude oil. No known releases have been reported.	Based on the unknown age and unknown condition of the subsurface pipelines, the pipeline easement has the potential to adversely affect the subject property.

5.3.2 Nearby Sites

Several sites were listed in the database report within the applicable search radii or identified in regulatory records reviews. Due to their location with respect to the subject property (on the opposite

side of a hydrogeologic barrier, distance from the site, location of the site relative to inferred groundwater flow, subsurface utilities and building levels, etc. or their status (closed-out release, etc.), several of the sites are not likely to adversely affect the subject property and are not discussed herein. Only those sites adjacent to the subject property and sites with a potential to have impacted the subject property are discussed below. The complete database report and relevant records review information is included in Appendix E.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Property

This site has the potential to adversely impact the subject property.
PF Changs 3525 W Carson Ave. Ste 166 Approximately 140 feet to the west and cross gradient of the subject property.	CERS	Listed in the database as a chemical storage facility. It has multiple administrative violations regarding its hazardous materials business plan (HMBP).	This site is unlikely to adversely affect the subject property.
Mobile Gas Station 3328 W Carson St. Approximately 263 feet southeast and down gradient of the subject property.	HWTS RCRA/Non Gen/NLR UST Finder UST EDR Hist Auto	This address has been listed in the database as a gasoline service station since 1969. The facility has multiple registered USTs utilized for fuel and waste oil storage.	Based on the distance from the subject property and the site being down gradient from the subject property. This site is unlikely to adversely affect the subject property.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Property
Kelt Oil & Gas Inc./Del Amo Energy Co. Approximately 961 feet to the north-northeast and up gradient of the subject property.	HIST UST CERS	Records indicate that this facility was involved in crude oil production. The facility had multiple registered USTs utilized for fuel and waste oil storage.	Based on the distance from the subject property and the site being down gradient from the subject property. This site is unlikely to adversely affect the subject property.

Moe Shell2 3318 Antonio St. Approximately 200 feet to the east and cross gradient of the subject property.	EDR Hist Auto	Listed in the database a gasoline service station from 2009 to 2014. No additional information available. The aerial images of this address show the address has been located within a residential development since 1963. It is likely an address error.	This site is likely an address error. This site is unlikely to adversely affect the subject property.
Mobile Service Station/Exxon/7-Eleven 3401 Torrance Blvd Approximately 1030 feet north and upgradient of the subject property.	HIST UST UST LUST CERZ Haz Waste CERS TANKS RCRA/Non Gen/NLR	Records indicate that the facility operates as a gasoline service station. A UST tank release (gasoline) was reported in 1992 and an environmental case was opened with the Regional Water Quality Control Board (RWQCB). The case was closed in 1999.	Based on the distance from the subject property and the release was addressed, it is not anticipated to have adverse impact to the subject property.

5.4 VAPOR MIGRATION

The ASTM E1527-21 Standard states that "for the purposes of this practice, "migrate" and "migration" refer to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." Thus, this section specifies whether or not we perceive a risk of vapor migration to the subject property.

To assess a vapor migration risk, Haley & Aldrich conducted a detailed review and analysis of the site-specific environmental database report and/or other reasonably ascertainable records to assess whether:

1. Off-site properties have documented chlorinated volatile organic compound (VOC) contamination located, specifically, the edge of the contamination plume, within 100 feet of the subject property boundary; or
2. Off-site properties have a documented volatile petroleum hydrocarbon (VPH) contamination plume within 30 feet of the subject property boundary.

Based on our records review, it is unlikely that a source of vapor migration currently exists beneath the subject property.

Oil and gas drilling activities have the potential to be sources of subsurface soil contamination and potential migration pathways for subsurface methane and/or hydrogen sulfide gas. The 2005 investigation by Environ included 15 soil vapor locations collected from the former sump area associated with Del Amo #2, only trace levels of toluene and methane were detected in the former oil sump area. Methane concentrations were less than 26 ppmv. In general, methane concentrations less than 1,000 ppmv are not considered significant. The potential is unlikely for soil vapor to migrate below the subject property and present a vapor intrusion risk for occupants in onsite buildings.

6. Subject Property Reconnaissance and Key Personnel Interview(s)

A site visit to observe subject property conditions was conducted by Kathleen Staff of Haley & Aldrich on 30 April 2024. Access to the subject property was provided by Nima Vazin, CFO at Farrona LLC.

Haley & Aldrich personnel observed accessible interior areas of the subject property building, including common areas, basement areas, mechanical spaces, and tenant spaces. The Black Angus restaurant property interior areas were inaccessible. Haley & Aldrich also observed the exterior portions of the subject property, including the property boundaries, and observed adjoining property conditions from the subject property boundaries and/or public thoroughfares. No weather-related conditions or other conditions that would limit our ability to observe the subject property or adjoining properties occurred during our site visit.

An interview with Nima Vazin of Farrona LLC, the key site manager, was performed in conjunction with the site visit. Per the ASTM Standard, past owners, operators, and occupants of the subject property who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. Haley & Aldrich was not provided with contact information to interview past owners and/or operators at the subject property. Based upon historical data collected from other sources, this potential data gap is not expected to adversely impact the results of this assessment.

The findings of the site visit and interviews are discussed below. Subject property photographs are included in Appendix E.

ASTM E1527-21 Standard Section 10.8 requires that, prior to the site visit**,** the current subject property owner or key site manager and user, if different from the current owner or key site manager, be asked if there are any helpful documents that can be made available for review.

6.1 CURRENT USE OF THE SUBJECT PROPERTY

The subject property consists of approximately 16.3 acres of commercial property. The subject property is predominantly paved with asphalt concrete with one rectangular-shaped section of unpaved land in the central portion of the property. There are two commercial buildings located in the northeast and southeast corners of the subject property. The building in the northeast corner is currently vacant and the building in the southeast corner is occupied by Black Angus Steakhouse restaurant.

6.6 USER RESPONSIBILITIES

The AAI Rule requires that the user of the report consider the following:

Whether the user has specialized knowledge about previous ownership or uses of the subject property that may be material to identifying RECs;

Whether the user has determined that the subject property's title contains environmental liens or other information related to the environmental condition of the property, including engineering and institutional controls and Activity and Use Limitations (AULs), as defined by ASTM;

Whether the user is aware of commonly known or reasonably ascertainable information about the subject property including whether or not the presence of contamination is likely on the subject property and to what degree it can be detected; and

Whether the user has prior knowledge that the price of the subject property has been reduced for environmentally-related reasons.

While such information is not required to be provided by the Environmental Professional(s), the information can assist the Environmental Professional in identifying RECs. The AAI Final Rule (Code of Federal Regulations Title 40 [40 CFR] Part 312) requires that these tasks be performed by or on behalf of a party seeking to qualify for one of the Landowner Liability Protections (LLPs) to CERCLA liability.

A completed user responsibilities questionnaire was not provided. However, based on the information obtained during the interviews, the absence of information in the questionnaire would not indicate a significant data gap or alter the conclusions of this Phase I.

7. Findings and Opinions

7.1 SIGNIFICANT DATA GAPS

Our ability to identify and evaluate RECs at the subject property is conditioned upon significant data gaps identified as part of this Phase I. The ASTM E1527-21 Standard defines a significant data gap as a data gap that affects the ability of the Environmental Professional to identify a REC.

No significant data gaps were identified during the performance of this Phase I. Thus, it is our opinion that sufficient information was obtained to identify subject property conditions indicative of releases or threatened releases of hazardous substances and petroleum hydrocarbons. Our opinion is limited by the conditions prevailing at the time our work is performed and the applicable regulatory requirements in effect.

7.2 RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E1527-21 Standard defines a REC as: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

Our opinion regarding a REC's potential impact on the subject property is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, our experience evaluating similar sites, and on our understanding of the client's intended use for the subject property.

The following RECs listed below were identified in connection with the subject property.

REC #1: Underground Storage Tank

Historical records indicate a 500-gallon waste oil UST was located at the former Montgomery Ward Auto Express in 1971. A large resurfaced concrete patch located west of the building was visible during the site visit indicating the feature was likely removed. Conditions of the tank and analytical results of the excavation samples at the time of removals are unknown.

REC #2: Aboveground Storage Tank Waste Oil Release

LACoFD records indicate an AST containing waste oil was located on the northern exterior of the former Montgomery Ward Auto Express. On 4 August 1997, a plume of oil originating from the hazardous waste storage enclosure was observed to be ponded on the paved surface in the parking area. The LACoFD issued a Notice of Violation (NOV) on 5 August 1997. Documents provided did not mention any further regulatory actions and it is possible residual petroleum remains at the subject property.

7.3 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E1527-21 Standard defines a CREC as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

CRECs were not identified in connection with the subject property.

7.4 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E1527-21 Standard defines an HREC as "a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls. A historical recognized environmental condition is not a recognized environmental condition.

The following HRECs listed below were identified in connection with the subject property.

HREC #1: Four Hydraulic Hoists

In 2003, four hydraulic hoists were removed from the northern portion of the former Montgomery Ward Service Center. The LACoFD issued a No Further Action (NFA) letter dated 19 June 2003, stating the hoist area has been satisfactorily mitigated for the current use and no further requirements or restriction relating to the site.

HREC #2: Onsite Clarifier

In 2003, a clarifier was excavated from the southwest side of the former Montgomery Ward Service Center. The LACoFD issued a No Further Action (NFA) letter dated 18 June 2003, stating the clarifier area has been satisfactorily mitigated for the current use and no further requirements or restriction relating to the site.

7.5 DE MINIMIS CONDITIONS

The ASTM E1527-21 Standard defines a *de minimis* condition as a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. The ASTM E1527-21 Standard notes that conditions determined to be *de minimis* are not recognized environmental conditions.

The following *de minimis* conditions listed below were identified in connection with the subject property.

De Minimis #1: Oil stained Concrete/asphalt in Poor Condition

Areas of oil stained concrete/asphalt in poor condition was observed across the subject property. Should future redevelopment occur in this area, the removal of concrete/asphalt should be handled with care in this area.

7.6 OTHER FINDINGS

Other findings are those notable items encountered as part of the Phase I Environmental Assessment that are not considered RECs. They may be considered out-of-scope items or compliance issues. Four other findings were identified associated with the subject property:

Other Finding #1: Re-abandonment of Onsite Abandoned Del Amo #2

The City of Torrance, in consultation with CalGEM, may require that Del Amo #2 be re-abandoned by the well owner to meet current oil well destruction standards. The current well owner is Kelt California, Inc. according to CalGEM records. Prior to re-abandonment, the former oil well will need to be located and may require a specialized geophysical survey and/or coordination with CalGEM. The City may also require setbacks from the oil well be maintained and/or the installation of a vent cap at the former well location.

Other Finding #2: Active Petroleum Distribution Pipelines are Located on or Adjacent to the Property

A pipeline easement is located along the landscaped area on the eastern property margin of the subject property. The pipeline is active and operated by Chevron Pipeline Co. and reportedly contain jet fuel and crude oil. Pipelines under Madrona Avenue are active and owned by Shell Pipeline Co., Plains Marketing, L.P., Phillips 66 Pipeline LLC, and Crimson Pipeline, L.P. and contain multiple petroleum products including crude oil. Based on the unknown age and unknown condition of the subsurface pipelines, the pipeline easement has the potential to adversely affect the subject property. No known releases have been reported.

Other Finding #3: Abundance of Debris

An abundance of construction debris and waste staging debris piles were located across the subject property. Should future redevelopment occur in this area, the removal of the waste and construction debris should be handled with care. Care should also be taken when removing the debris should be properly containerized and disposed of at an appropriate recycling or disposal facility.

Other Finding #4: Historical Railroad Tracks and Historical Buildings

Three sections of railroad tracks and a number of historical buildings were located on the subject property associated with the Chanslor-Canfield Midway Oil Company operations. Former industrial operations may have included the use of petroleum products, solvents, adhesives, and/or other chemicals. It is possible that former industrial operations may have adversely affected subsurface conditions at the subject property. Based on the time that has elapsed since industrial use, two previous instances of subject property redevelopment, and no identified records of historical spills or environmental response actions, it does not appear that significant chemical impacts remain in the vicinity of the former rail tracks or the former buildings.

8. Conclusions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of the ASTM Practice E1527 of the property located at the northwest block at Madrona Avenue and West Carson Street, in Torrance, the subject property. Any exceptions to or deletions from this practice are described in Section 1.4 of this report.

This assessment has revealed no evidence of RECs in connection with the subject property, except for the following:

REC #1: Underground Storage Tank

REC #2: Aboveground Storage Tank Waste Oil Release

Refer to Section 7.2 above for our opinion regarding the RECs listed above. To further address the RECs listed above, we recommend the following:

- Following building demolition and during Site excavation and grading, any impacted soil that may be present could be identified and addressed via procedures outlined in a soil management plan.

11. Glossary and Other Descriptions

11.1 GLOSSARY

All Appropriate Inquiry (AAI) — that inquiry constituting "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in CERCLA, 42 U.S.C. §9601(35)(B), that will qualify a party to a commercial real estate transaction for one of threshold criteria for satisfying the LLPs to CERCLA liability (42 U.S.C. §9601(35)(A) & (B), §9607(b)(3), §9607(q); and §9607(r)), assuming compliance with other elements of the defense.

Business Environmental Risk — a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

Controlled Recognized Environmental Condition (CREC) — a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

Significant Data Gap — a data gap that affects the ability of the Environmental Professional to identify a recognized environmental condition.

De Minimis Conditions — a condition related to a release that generally does not present those conditions which "do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." The ASTM E1527-21 Standard notes that conditions determined to be *de minimis* are not recognized environmental conditions.

Environmental Professional — a person meeting the education, training, and experience requirements as set forth in 40 CFR §312.10(b).

Historical Recognized Environmental Condition (HREC) — a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls. A historical recognized environmental condition is not a recognized environmental condition.

Key Site Manager — the person identified by the owner or operator of a subject property as having good knowledge of the uses and physical characteristics of the subject property.

Material Threat — an obvious threat which is likely to lead to a release and that, in the opinion of the Environmental Professional, would likely result in impact to public health or the environment.

Orphan Site — (not ASTM E1527-21 definition) — sites that could not be mapped due to poor or inadequate address information.

Recognized Environmental Condition (REC) — (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not RECs.

11.2 DESCRIPTIONS OF DATABASES SEARCHED

Numerous regulatory databases were searched during this Phase I. Each database reviewed is described in the database report presented in Appendix E. Those databases required by the E1527-21 Standard are identified below.

1. **NPL Sites:** The National Priorities List (NPL) is a list of contaminated sites that are considered the highest priority for cleanup by the U.S. Environmental Protection Agency (USEPA).
2. **Delisted NPL Sites:** The Delisted NPL is a list of formal NPL sites formerly considered the highest priority for cleanup by the USEPA that met the criteria of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) for deletion from the NPL because a no further response was appropriate.
3. **CERCLIS Sites:** The Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS) list identifies sites which are suspected to have contamination and require additional investigation to assess whether they should be considered for inclusion on the NPL.
4. **CERCLIS-NFRAP Sites:** CERCLIS-NFRAP status indicates that a site was once on the CERCLIS List but has No Further Response Actions Planned (NFRAP). Sites on the CERCLIS-NFRAP List were removed from the CERCLIS List in February 1995 because, after an initial investigation was performed, no contamination was found, contamination was removed quickly, or the contamination was not significant enough to warrant NPL status.
5. **Federal ERNS:** The Federal Emergency Response Notification System (ERNS) list tracks information on reported releases of oil and hazardous materials.
6. **RCRA non-CORRACTS TSD facilities:** The Resource Conservation and Recovery Act (RCRA) non-CORRACTS TSD Facilities List tracks facilities which treat, store, or dispose of hazardous waste and are not associated with corrective action activity.
7. **RCRA CORRACTS TSD facilities:** The RCRA CORRACTS TSD Facilities list catalogues facilities that treat, store, or dispose of hazardous waste and have been associated with corrective action activity.
8. **RCRA Generators:** The RCRA Generator list is maintained by the USEPA to track facilities that generate hazardous waste.
9. **Federal Institutional Controls/Engineering Controls:** The Federal Institutional Control list and Engineering Control list are maintained by the USEPA. Some Institutional Control and Engineering Control information may not be made publicly available and therefore will not be included on this registry.

10. **State and Tribal Equivalent NPL/CERCLIS Sites:** The ASTM E1527-21 Standard requires searching "State and Tribal Equivalent NPL Sites." In California, the equivalent NPL is the Response, which is maintained by the Department of Toxic Substances Control.

11. **State and Tribal Equivalent CERCLIS Sites:** The ASTM E1527-21 Standard requires searching "State and Tribal Equivalent CERCLIS Sites." In California, the equivalent CERCLIS is the ENVIROSTOR database, which is maintained by the Department of Toxic Substances Control.

12. **State and Tribal Registered Storage Tanks:** The LARWCB maintains a list of aboveground and underground storage tanks registered with the LARWCB.

13. **State and Tribal Landfills and Solid Waste Disposal Sites:** DTSC maintains a list of regulated waste disposal sites.

14. **State and Tribal Leaking Storage Tanks:** LARWCB maintains a list of Leaking Storage Tanks (LUST/LAST). The LUST/LAST lists are a listing of release sites that have an Underground or Aboveground Storage Tank listed as the source.

15. **State and Tribal Institutional Controls/Engineering Controls:** DTSC maintains a list of sites with Institutional or Engineering controls in place.

16. **State and Tribal Voluntary Cleanup Sites:** DTSC maintains a list of Voluntary Cleanup sites.

1.0 INTRODUCTION

1.1 Site Description

The site is currently developed as a retail shopping mall complex known as Del Amo Fashion Center, located northeast of the intersection of Hawthorne and Sepulveda Boulevards in the City of Torrance, Los Angeles County, California (site). The site and surrounding vicinity are depicted on the Site Vicinity Map, Figure 1. The Del Amo Fashion Center perimeter is bounded by Hawthorne Boulevard to the west, Fashion Way to the north, Madrona Avenue to the east and Sepulveda Boulevard to the south. Carson Street bisects the mall in an east-west direction. A Site Plan depicting the entire Del Amo Fashion Center mall buildings and perimeter streets in included as Figure 2.

This Phase II Subsurface Investigation was conducted to address specific recognized environmental conditions (RECs) identified by others in the vicinity of the former Montgomery Wards Auto Express and a historical recognized environmental condition (HREC), the former metal fabrication facility that was reportedly previously located beneath the vacated Montgomery Wards retail building. A map of the area addressed during this investigation is included, Boring Location Map, Figure 3.

Photographs taken on the day of the investigation are provided in Appendix A. According to several environmental reports, including a Phase I Environmental Site Assessment (ESA) report completed by Dames and Moore in October 1999, the shopping center comprises approximately 3,000,000 square feet, and construction began on the mall in the late 1950s and continued through the 1990s with satellite buildings. Prior to the development of the Del Amo Fashion Center in the late 1950s and early 1960s, the site and vicinity were primarily used for oil production.

1.2 Purpose and Scope

The purpose of the Limited Phase II Subsurface Investigation was to evaluate the potential presence of subsurface impact to soil in specific areas previously defined as RECs by others. The areas defined as RECs include the former Montgomery Wards Auto Express oil/water separator (grease and sand interceptor) and a removed waste oil tank. In addition, two soil borings were drilled in the general vicinity of the area that was reported as a former metal fabrication facility. However, according to Mr. James Jones, President of The Torrance Company, the former metal fabrication facility was located beneath the existing unoccupied Montgomery Wards retail building. Therefore, soil borings were advanced east of this building.

ATC's scope of work for this project included the following:

1.2.1 Review three Phase I ESAs performed at the Del Amo Fashion Center in March and October 1999, and March 2003.

1.2.2 Conduct a site walk on the property to evaluate the identified RECs prior to conducting the subsurface investigation.

1.2.3 Contact the underground utility service (Dig Alert) 48 hours prior to initiating the field investigation, and meet with The Torrance Company staff regarding the utilities on the property prior to drilling.

1.2.4 Direct push a total of nine (9) soil borings using a Geoprobe® truck mounted hydraulically driven rig to collect continuous core samples to depths between 10 and 20 feet below surface grade or to the depth of refusal.

1.2.5 Prepare lithologic logs for each soil boring describing the soil types encountered, sampling data and significant features related to the presence of subsurface impact from petroleum hydrocarbons or other potentially hazardous compounds.

1.2.6 Drill four (4) soil borings around the former Montgomery Wards oil/water separator (sand and grease trap), three (3) soil borings around the removed 550-gallon waste oil tank, and two (2) soil borings east of the vicinity of the reported metal fabricating facility (the nine (9) borings referred to in 1.2.4.).

1.2.7 Decontaminate all sampling equipment between borings and backfill the borings with cuttings and bentonite chips. Surficial materials were replaced with asphaltic concrete (cold patch).

1.2.8 Submit selected soil samples to a California-certified laboratory for analysis using one or more the following EPA Methods: Total Recoverable Petroleum Hydrocarbons using EPA Method 418.1, Modified 8015 for diesel range and gasoline range hydrocarbons, CAM metals (CAC 17), volatile organic compounds using EPA Method 8260B, polychlorinated biphenyls (PCBs) using EPA Method 8082 and semi-volatile organic compounds using EPA Method 8270.

1.2.9 Obtain photographs of the investigation and the inside of the former Montgomery Wards Auto Express basement in the vicinity of reported hydraulic oil spillage.

1.2.10 Prepare a report based on field observations and laboratory analytical results with findings, conclusions and recommendations.

2.0 BACKGROUND

This Phase II ESA was completed to assess and evaluate the potential for environmental impairment of soil at specific areas previously defined as RECs at the Del Amo Fashion Center in Torrance, California. The RECs were identified in three "Draft" Phase I ESAs provided to ATC by the client. The Phase I ESAs provided in the following reports entitled "Draft Phase I Environmental Site Assessment for the Del Amo Fashion Center," prepared by Professional Service Industries, Inc. (PSI) dated March 18, 1999; "Draft Phase I Environmental Site Assessment, Del Amo Fashion Center," prepared by Dames & Moore dated October 14, 1999; and "Draft Phase I Environmental Site Assessment Update, Del Amo Fashion Center," prepared by ENVIRON International Corporation (ENVIRON) dated March 10, 2003.

2.1 Discussion of Previous Identified Recognized Environmental Conditions

The RECs identified by others are addressed in the following paragraphs. This discussion provides an explanation of the REC, and ATC's opinion and rationale for either conducting further investigation of the REC or ATC's reasoning for not conducting further investigation.

On-Site RECs described in PSI's report include:

- ***REC:*** *PSI noted that the concrete clarifier associated with the Montgomery Ward Auto Express was approximately 30 years old and due to the age, the clarifier may have been weakened allowing oil to leak through, and potentially impact the property.*

- ***ATC's Response:*** *ATC concurred with PSI's conclusion and noted during the investigation that the clarifier currently contains oil and fluid, which should be disposed of via a licensed recycling petroleum waste hauler. Additionally, the clarifier should be pressure washed and cleaned and then closed to meet the standards of the oversight agency, Los Angeles Department of Public Works. In order to address the potential of leakage from the clarifier into subsurface soil, ATC*

drilled four (4) soil borings around the clarifier and analyzed soil samples to identify potential leakage from the sides of the concrete-lined clarifier.

- ***REC:** Reported gasoline fueling at the former Montgomery Ward Auto Express.*

- ***ATC's Response:** According to representatives from The Torrance Company, and a site plan reviewed at The Torrance Company's office by ATC; fueling facilities were never associated with this Ward's facility. Mr. Jim Jones stated that retail fueling was a lease option that was never exercised. Site facilities do not reflect evidence of vent pipes, canopies, or other indicators of a former fueling facility. Based on overall ESA research, findings, interviews and observed conditions, no additional investigation was conducted.*

- ***REC:** PSI noted a large retention pond for storm run-off located on the northwest corner of Plaza Del Amo and Madrona Avenue. PSI indicated that based on the age of the subject property and the use of the retention pond for stormwater run-off collection that it represented a recognized environmental condition.*

- ***ATC's Response:** At the time of ATC's site reconnaissance, the retention pond appeared to be dry and full of healthy vegetation, including flowers and trees. Based upon the use of a retention collection for routine stormwater run-off and the fact that the vegetation appear healthy and not distressed ATC disagreed with PSI recommendation to conduct hand auger borings to 10 feet below grade.*

- ***REC:** PSI noted that based upon aerial review the northern portion of the property, north of Carson Street, appeared to be industrial and had a least two railroad loading/distribution areas. The Torrance Company representative indicated to PSI that the facility was utilized for distribution of steel products. PSI recommended drilling 10 Geoprobes in this location to address the former industrial facility.*

- ***ATC's Response:** ATC discussed the former industrial facility with Mr. James Jones, President of the Torrance Company prior to conducting the Geoprobe investigation. Mr. Jones indicated that the metal fabricator was located in the current vicinity of the Montgomery Ward retail store. The area is currently covered by a building; therefore, ATC drilled two (2) soil boring, east of the Montgomery Ward building to address this potential issue.*

Off-site RECs described in PSI's report include:

- ***REC:** According to PSI, an area south of Carson Street, currently developed with the west parking structure had a building operated by the Broadway retail store as an automotive repair facility. PSI could not identify documentation from the Torrance Fire Department as to the existence of this facility. PSI identified it as an off-site REC based upon its upgradient location.*

- ***ATC's Response:** ATC did not address this issue as an REC due to the fact that the former location is located off-site and that area has since been redeveloped into a parking structure. Extensive excavation likely occurred during the construction of the parking structure and the existence of the parking garage, would inhibit subsurface investigation. Given that there are not regulatory records of concern, the off-site location, and the complete development of the area, no additional investigation was deemed warranted.*

- ***REC:** PSI noted an Aboveground Storage Tank (AST) in a 1928 aerial photograph with an estimated 15,000 to 20,000 gallon capacity adjacent to the subject property, east of Del Amo Circle.*

- ***ATC's Response:*** *According to the PSI report, the AST was not present in the 1941 aerial photograph reviewed. Based upon the duration of elapsed time since the AST was present, the viscosity of crude oil related to oil production, the fact that it is an off-site REC and the known past use of the entire vicinity of the site and adjacent property for oil exploration and production, ATC did not feel that subsurface investigation was warranted.*

On-Site RECs described in Dames & Moore's report include:

- ***REC:*** *Dames & Moore observed oil staining on the pavement in the northern storage area outside the Montgomery Ward Auto Express building. They also indicated that transmission fluid, leaking on the concrete inside the building was running into a floor drain. The drain line from the floor drain empties into the onsite clarifier.*

- ***ATC's Response:*** *The Montgomery Ward Auto Express is no longer in operation. ATC did not observe significant staining on the interior of the building that would warrant further subsurface investigation below the basement concrete. ATC recommends that the oil containers located outside the northern portion of the building be removed, the clarifier be pumped and closed according to current Los Angeles County Department of Public Works standards, and the surficial oil staining be cleaned off the concrete adequately throughout the former Ward's facility especially outside the building on the north side and in the small room located south of the stairs in the basement of the facility. ATC did address the oil/water separator (sand and grease interceptor) by installing four (4) soil borings around the clarifier.*

- ***REC:*** *Dames and Moore observed seventeen (17) hydraulic lifts, approximately 30 years of age in the former Ward's auto service center. Dames & Moore noted that leaking lifts pose a REC.*

- ***ATC's Response:*** *The hydraulic lift reservoirs are all located on the first level (basement) of the former automotive service center with no apparent below-grade components. The hydraulic tanks are exposed and significant oil leakage was not observed in the basement around any of the lifts. ATC does not consider these closed systems as an REC. ATC does recommend removal of the hydraulic fluid and proper disposal of all equipment at the time that the facility is dismantled.*

- ***REC:*** *Dames and Moore agreed with PSI regarding the potential REC associated with the reported Broadway auto service center; however, they were not able to identify records confirming the use of the facility as an automobile service center. The former Broadway facility is located on the Federated Inc. site.*

- ***ATC's Response:*** *Same as previous response to PSI's concern.*

- ***REC:*** *Dames & Moore noted that historically the subject property was developed with numerous oil wells and oil sumps and that Dames & Moore considered this an REC.*

- ***ATC's Response:*** *ENVIRON noted in their recent Phase I ESA, that 25 oil wells were drilled on the property between 1925 and 1927. According to the California Division of Oil and Gas, all wells were properly abandoned. ENVIRON was not able to obtain information regarding methane barriers or vent systems during their Phase I ESA. Oil sumps were typically unlined pits that were used to collect production fluid and drilling mud at the time of oil exploration and pump testing. Typical oil sumps are relatively small in size, and shallow in nature, as they usually served only one well. Sumps often contained brine water, crude oil, and barium based drilling mud. Beginning in the 1950s, the subject property started to be developed as a retail*

shopping center. Oil wells located on the property were presumably abandoned according to the Division of Oil and Gas abandonment requirements at the time of development. Oil sumps that were associated with the oil wells were likely backfilled, or excavated at the time of re-development and construction. Given the small size of the sumps compared to the overall area of the site and its full redevelopment, exact locations of the sumps would be difficult to determine. Possible residual impacts are typically localized due to the low viscosity of crude oil and drill mud (i.e., crude oil is typically heavy and is generally not mobile). Additionally, a significant amount of time has elapsed since oil well drilling was conducted at the site. Oil well records should indicate exact locations of oil wells (but will not illustrate related sumps). If building demolition is planned and oil wells are known to be located beneath structures, ATC recommends that the wells be evaluated and/or re-abandoned during that time to current abandonment requirements. ATC did not agree that subsurface investigation for the oil sumps or wells was warranted at this time due to the current development status and undetermined location of potential historic oil sumps. However, prior to future development, demolition, or construction at the Del Amo Fashion Center, well records should be reviewed and potential well locations identified in the vicinity of new buildings to allow for re-abandonment and possible methane mitigation systems installed, if necessary, to address former oil wells and associated oil sumps. ATC recommends conducting soil monitoring during any future excavations, but no immediate action or investigation is warranted at this time.

- ***REC:** Dames & Moore noted surficial oil staining in several locations within common areas (elevator shafts) and tenant spaces within the mall.*

- ***ATC's Response:** Mall maintenance staff should periodically assess the common areas and tenant spaces for housekeeping practices and ensure that hazardous material storage and petroleum related products are properly stored, contained and disposed of in accordance with state and federal regulations. Minor leakage or spillage should be cleanup immediately and the equipment repaired to prevent further leakage and potential impact to the subsurface, and to prevent potential safety hazards to workers and the public The condition as it is described does not constitute a REC and does not warrant additional investigation..*

- ***Non REC Issue:** Both PSI and Dames & Moore noted asbestos-containing building materials from limited asbestos sampling conducted during the Phase I ESAs. Dames & Moore detected asbestos in joint compound and homogenous acoustical plaster throughout the buildings. Both consultants conducted limited asbestos sampling; therefore, prior to demolition or renovation of specific common areas or a tenant suite, a comprehensive asbestos survey should be conducted to identify all asbestos-containing materials, and an Operations and Maintenance Plan for asbestos should be completed and remain on file for future tenant renovations. If demolition is occurring, ATC recommends that asbestos- containing materials be abated by a licensed contractor, and third party monitoring of the abatement operations be conducted in accordance with regulatory requirements.*

Off-Site RECs described in Dames & Moore's report include:

- ***REC:** Dames & Moore identified current oil production located north of the subject property as a REC.*

- ***ATC's Response:** Oil production has occurred throughout the vicinity of the Del Amo Fashion Center and on the subject site. Current production is being conducted by known entities that can be identified as a Principal Responsible Party in the event that impact occurs to the subject property from off-site. Furthermore, product pipelines are apparently running either through the mall property or beneath the street along Madrona Avenue, according to the utility locator*

and a conversation that ATC had with Conoco/Phipps. Again, a known entity is responsible for maintenance and impact from leakage or breaches occurring within these lines. ATC does not believe that additional investigation is warranted to address the oil well production off-site given the history of the area, documented regulatory research findings, and commercial use.

On-Site RECs described in ENVIRON's report include:

- ***REC:** ENVIRON identified the former Montgomery Ward clarifier as a REC because of the age of the structure.*

- ***ATC's Response:** ATC addressed the clarifier as indicated above by installing borings around the unit. Additionally, ATC did observe fluid and oil within the concrete stages and recommends that the clarifier be pumped by an oil recycler and properly abandoned.*

- ***REC:** ENVIRON identified the former Broadway automotive service center as an REC and noted that the west parking structure was apparently constructed in the vicinity of the former automotive service center.*

- ***ATC's Response:** ATC did not address this issue as an on-site REC due to the fact that the former location is reported to be off-site, and that the area has since been redeveloped into a parking structure. Excavation likely occurred during the construction of the parking structure and the existence of the garage would inhibit subsurface investigation. Given that there were no referenced regulatory records of concern, the off-site location, and the complete redevelopment of the area, no additional investigation was deemed warranted.*

- ***Non REC Issue:** ENVIRON recommended that further investigation be conducted to ascertain the abandonment status and concern relative to methane issues surrounding the previous oil wells at the property.*

- ***ATC's Response:** ATC concurs with ENVIRON's recommendation to further investigate the abandoned oil well status prior renovation, construction or demolition of any onsite structure. Possible well re-abandonment and methane issues should be addressed at that time. Given the current developed nature of the site, no immediate action is warranted.*

The areas defined as RECs that ATC's Limited Phase II Subsurface Investigation addresses include, the former Montgomery Wards Auto Express grease and sand interceptor (oil/water separator), the removed waste oil tank identified by ATC on the site plan at The Torrance Company and apparently removed due to observation of an asphalt patch at the site, and the reported former metal fabrication industrial facility.

3.0 DRILLING AND SOIL INVESTIGATION

3.1 Soil Investigation Methods

On March 18, 2003, ATC mobilized to the site along with Global Probe, Inc. (Global) to advance nine (9) soil borings (B-1 through B-9) at predetermined locations. Soil boring locations are depicted on the Boring Location Map, Figure 3. Three borings (B-1 through B-3) were drilled in the vicinity of the removed waste oil tank. Four soil borings (B-4 through B-7) were advanced around the existing grease and sand interceptor/oil-water separator. Two soil borings (B-8 and B-9) were drilled east of the vacant Montgomery Ward retail building to address the reported industrial usage of the property north of Carson Street. Global utilized a truck-mounted Geoprobe® unit to advance the soil borings and obtained continuous core soil samples.

Soil samples were collected by Global in acrylic-lined 4-foot 2-inch drill rods, hydraulically advanced into the subsurface. Soil samples were obtained continuously for screening every 2 feet with a Photovac Microtip. Concentrations identified during field screening are recorded on the boring logs in parts per million (ppm). Boring logs are contained in Appendix B. Soil samples were selected from each boring for analysis. Soil samples were transferred to containers including laboratory-provided glass jars with Teflon™-lined lids and Encore extraction samplers. Soil samples were then placed in a cooler chilled with "blue ice" for subsequent transport under proper Chain-of-Custody procedure to a California-state certified laboratory for rapid turnaround.

The soil samples were transported to Del Mar Analytical located in Irvine, California for analysis on March 18, 2003. Selected soil samples collected from the vicinity of the removed waste oil tank (B-1 through B-3) were analyzed for the presence of Total Recoverable Petroleum Hydrocarbons (TRPH) using EPA Method 418.1, Gasoline Range Hydrocarbons/Volatile Fuel Hydrocarbons using EPA Method CADHS/8015M, Diesel Range Hydrocarbons/Extractable Fuel Hydrocarbons using CADHS/8015M, volatile organic compounds using Method 5035/EPA Method 8260B, Polynuclear Aromatic Hydrocarbons using EPA Method 8270, and CAM Metals using EPA Method 6010B or 7471A (mercury only).

Select soil samples collected from the vicinity of the oil/water separator were analyzed for analyzed for the presence of Total Recoverable Petroleum Hydrocarbons (TRPH) using EPA Method 418.1, Gasoline Range Hydrocarbons/Volatile Fuel Hydrocarbons using EPA Method CADHS/8015M, Diesel Range Hydrocarbons/Extractable Fuel Hydrocarbons using CADHS/8015M, and Volatile Organic Compounds using Method 5035/EPA Method 8260B.

Select soil samples for borings drilled east of the vicinity of the reported metal fabrication industry were analyzed for Total Recoverable Petroleum Hydrocarbons (TRPH) using EPA Method 418.1, Gasoline Range Hydrocarbons/Volatile Fuel Hydrocarbons using EPA Method CADHS/8015M, Diesel Range Hydrocarbons/Extractable Fuel Hydrocarbons using CADHS/8015M, and CAM Metals EPA Method 6010B or 7471A (mercury only).

3.2 Soil Conditions

The soil encountered generally consisted of fine-to medium-grained sand with silt fill, reddish brown in color, underlain by silty sand and fine-grained sand with a trace of silt. Refusal (i.e., the probe could not be advanced further) was encountered in borings (B-6 at 14 feet bsg, B-8 at 17.5 feet bsg, and B-9 at 13 feet bsg). Some gravel and red brick fragments were observed in soil indicating fill material. No ground water or saturated soil conditions were encountered in any of the soil borings. Boring logs are included in Appendix B.

3.3 Soil Analytical Results

The laboratory analytical results for the soil samples are summarized in Table 1. The analytical reports and chain-of-custody documentation are included in Appendix C. Locations of borings are depicted on the Boring Location Map, Figure 3.

Three soil samples (B-1 at 12 feet, B-2 at 9 feet, and B-3 at 6 feet) were collected from the vicinity of the removed waste oil tank and analyzed for the presence of TRPH using EPA Method 418.1, Gasoline Range Hydrocarbons/Volatile Fuel Hydrocarbons using EPA Method CADHS/8015M, Diesel Range Hydrocarbons/Extractable Fuel Hydrocarbons using CADHS/8015M, volatile organic compounds using Method 5035/EPA Method 8260B, Polynuclear Aromatic Hydrocarbons using EPA Method 8270,

Polychlorinated Biphenyls (PCBs) using EPA Method 8082, and CAM Metals using EPA Method 6010B or 7471A for mercury only.

Since no visual or olfactory evidence of soil impact was observed during drilling and sample collection, soil samples were analyzed from a varying range of depths. Laboratory analysis did not detect concentrations of TRPH, GRO, DRO, PAHs, or PCBs above the laboratory reporting limits in the soil samples collected for analysis. Concentrations of total metals detected in soil samples (B-1 at 12 feet and B-3 at 6 feet) were all below California Administrative Code Title 22 Total Threshold Limit Concentration (TTLC) values for metals.

Four soil samples (B-4 at 11.5 feet, B-5 at 7 feet, B-6 at 14 feet and B-7 at 13 feet) were collected from the borings advanced around the oil/water separator. Soil samples were analyzed for the presence of TRPH using EPA Method 418.1, Gasoline Range Hydrocarbons/Volatile Fuel Hydrocarbons using EPA Method CADHS/8015M, Diesel Range Hydrocarbons/Extractable Fuel Hydrocarbons using CADHS/8015M, and Volatile Organic Compounds using Method 5035/EPA Method 8260B.

Laboratory analytical results indicated low-level concentrations of TRPH and DRO in soil samples B-5 at 7 (6.6 parts per million [ppm]) and B-6 at 14 feet (15 ppm). Concentrations detected were below the soil screening criteria established by the California Regional Quality Control Board in the "Interim Guidance Document for Remediation of Petroleum Sites," dated May 1996 for soil in areas above drinking water aquifers less than 40 feet from the aquifer. This criteria is the most conservative in the table. The applicable "clean-up" criteria for this site would be higher because ATC estimates that the distance to groundwater is between 40 and 150 feet below surface grade. Soil screening criteria is defined in the Analytical Summary, Table 1.

Two soil samples (B-8 at 17.5 feet and B-9 at 4 feet) were collected from the borings advanced east of the reported former industrial facility. Select soil samples were analyzed for TRPH using EPA Method 418.1, Gasoline Range Hydrocarbons/Volatile Fuel Hydrocarbons using EPA Method CADHS/8015M, Diesel Range Hydrocarbons/Extractable Fuel Hydrocarbons using CADHS/8015M, and CAM Metals EPA Method 6010B or 7471A (mercury only).

Laboratory analytical results indicated low-level concentrations (below the soil screening clean-up criteria) of TRPH and DRO in the soil sample collected and analyzed at B-9 at 4 feet below grade (32 ppm). Concentrations of total metals detected in this soil sample were all below California Administrative Code Title 22 Total Threshold Limit Concentration (TTLC) values for metals. Soil screening criteria is defined in the Analytical Summary, Table 1.

4.0 CONCLUSIONS AND RECOMMENDATIONS

4.1 Findings and Conclusions

The findings and conclusions of this Limited Phase II Subsurface Investigation are summarized as follows:

- No evidence of chemical parameters typically associated with the former usage of the facilities explored during this investigation were detected above the California Regional Water Quality Control Board Soil Screening Levels for petroleum hydrocarbons or the TTLC values for metals. Additionally, no detectable volatile organic compounds were identified.

4.2 Recommendations

Based on the findings and conclusions of this Limited Phase II Subsurface Investigation, the following recommendations are made:

- No further subsurface investigation regarding the on-site removed waste oil tank, oil/water separator or the reported industrial facility is recommended.

- If the oil/water separator is not anticipated to be used in the future, ATC recommends that it be properly cleaned out, decommissioned in place, or removed.

- Oily staining noted on the north side of the former Montgomery Ward Auto Express should be cleaned from the concrete surface.

- Drums and the AST should be removed from the facility. Additionally, if the Ward's facility is not going to be used for automotive repair purposes, the hydraulic lifts should be properly removed, the hydraulic reservoir fluid recycled, and the systems decommissioned.

- If building demolition or future construction is planned at the facility, oil well records should be checked and wells located to determine if previously abandoned wells may be in the vicinity or under the planned development. Wells may need to be re-abandoned at that time in accordance with the California Division of Oil and Gas requirements. Methane mitigation systems may also need to be evaluated for installation during construction. However, no immediate action is warranted.

1.0 INTRODUCTION

This report summarizes closure activities for a three-stage clarifier completed at a former Montgomery Ward Auto Center located at 21405 Madrona Avenue in the City of Torrance, California (subject site) (see *Figure 1* in *Appendix I*). The Torrance Company (TTC) retained the services of American Integrated Services, Inc. (AIS) for permitting and closing of the clarifier, under the oversight of the City of Torrance Building and Safety Department (TBSD). This report was prepared to document clarifier closure activities.

2.0 FIELD ACTIVITIES

2.1 PERMITTING

Prior to commencement of field work, AIS obtained a sewer cap permit (#PLM03-00398) dated April 21, 2003 from TBSD on behalf of TTC for the removal of the clarifier. The clarifier was located on the west side of the former Montgomery Ward Auto Center and was no longer in service (See *Figure 2* in *Appendix 1*). A copy of the sewer cap permit is provided in *Appendix 2*.

2.2 CLARIFIER PREPARATION AND REMOVAL

On April 25, 2003, the contents of the clarifier and associated lines were pressure washed with water into the clarifier until satisfactory lower explosive limits and total oxygen readings were obtained. Approximately 1,600 gallons of the clarifier rinseate were recovered with a vacuum truck (Ancon Marine of Wilmington, California) and transported as non-RCRA hazardous waste to Crosby and Overton's facility in Long Beach, California. A copy of the hazardous waste manifest is provided in *Appendix 3*.

AIS proceeded to demolish the clarifier on same day and disposed of the concrete debris at Shamrock Base Corporation located in Los Angeles, California. The inlet and outlet of the clarifier were filled with concrete, capped and approved by a TTC plumbing inspector on April 30, 2003.

2.3 SAMPLING OPERATIONS

Upon completion of the clarifier removal, AIS personnel collected soil samples per the Los Angeles County Department of Public Works (LACDPW) sampling protocols on April 28, 2003. A total of two soil samples were collected at approximately 12 feet below grade (ft bg) at each end of the clarifier using the bucket of a backhoe. The locations of the collected samples are shown on *Figure 2* in *Appendix 1*.

The soil samples were collected in laboratory grade glass jars with Teflon™-lined plastic lids, and in En-Core™ containers (for the volatile and semi-volatile organic portions of the required analyses). Each sample was immediately labeled and placed in a cooler. The samples were submitted to American Scientific Laboratories, LLC, a California state-certified laboratory, for testing. Laboratory results and chain-of-custody documents are included in *Appendix 4*.

2.4 SITE RESTORATION

Site restoration activities were conducted starting on May 5, 2003. Following the receipt of the laboratory analytical results of the confirmation soil samples, the excavation was backfilled and compacted using clean import fill material to the original soil level. AIS resurfaced the excavated area with asphalt to match the existing surface conditions on May 9, 2003. The work area was clean prior to demobilizing.

3.0 ANALYTICAL RESULTS

3.1 METHODOLOGY OF LABORATORY ANALYSIS

Soil samples were collected, maintained, prepared and analyzed according to Test Methods for Evaluating Solid Waste, (SW-846). The chemical analyses were conducted by American Scientific Laboratories, LLC, a laboratory certified by the State of California Department of Health Services.

The compounds and respective analytical methods for the collected samples are provided in *Table 1*. The samples were analyzed per LACDPW's sampling protocols. Analysis included the following:

- Total Petroleum Hydrocarbons as Gasoline Range Organics (TPH-GRO [C_4-C_{12}]), analysis performed by EPA Method 8260B;
- Total Petroleum Hydrocarbons as Diesel Range Organics (TPH-DRO [C_{13}-C_{22}]), analysis performed by EPA Method 8015 Modified;
- Total Petroleum Hydrocarbons as Oil Range Organics (TPH-ORO [C_{22+}]), analysis performed by EPA Method 8015 Modified;
- Total Recoverable Petroleum Hydrocarbons (TRPH), analysis performed by EPA Method 418.1;
- Volatile Organic Compounds (VOC), analysis performed by EPA Method 8260B;
- Oxygenates, analysis performed by EPA Method 8260B; and
- Semi-Volatile Organic Compounds (SVOC), analysis performed by EPA Method 8270C.

Refer to *Appendix 4* for laboratory and quality assurance/quality control (QA/QC) reports and chain-of-custody records.

3.2 RESULTS AND INTERPRETATION OF LABORATORY ANALYSIS

The analytical results are summarized in *Table 1*. No TPH-GRO, TPH-DRO, TPH-ORO, TRPH, VOC, Oxygenates or SVOC were detected in the soil samples collected from under the former influent or effluent of the clarifier at or above the laboratory detection limits.

4.0 GEOLOGY AND HYDROGEOLOGY

4.1 GEOLOGY

The main physiographic feature associated with the subject site is the Torrance anticline. The Torrance anticline, located in the southerly part of the Hawthorne-Long Beach depression, is a gentle fold which trends southeast from Redondo Beach and contains the Torrance oil field. In sediments of Tertiary age, several faults trend diagonally across the principal fold, dividing it into three elements. The water-bearing formations are affected by the broad, gentle folding, but available evidence indicates that faulting does not offset them (from: *Geology of California, Robert M. Norris and Robert W. Webb, Second Edition, 1990*).

The site is located at an elevation of approximately 90 feet above mean sea level (msl), according to the topographic map generated by TOPO! Version 2.7.5 (®©2002 National Geographic). Surface topographic slopes gently to the southwest. (See *Figure 1* in *Appendix 1*).

During clarifier removal activities, type of soil encountered consisted of light brown to dark reddish brown colored sandy silt with some clay.

4.2 HYDROGEOLOGY

The subject site overlies alluvial sediments consisting of brown to gray, fine to medium grained silty sand. According to Bulletin No. 104, Planed Utilization of the Groundwater Basins of The Coastal Plain of Los Angeles County, May 1990, soils beneath the site are made up of recent alluvium which the Gaspur Aquifer is contained within. In addition, the Lakewood formation underlies the Recent alluvium. The Lakewood formation includes the Exposition aquifer and the Gage aquifer, which represent shallower groundwater beneath the subject site.

For hydrologic purposes, the property is located approximately 2½ miles east of Redondo Beach, approximately 7 miles northeast of Harbor Lake and approximately 4 miles southeast of Dominguez Channel. The LACDPW, Hydrologic Records Division, was contacted regarding the groundwater depth in the vicinity of the site. The closest well currently in the database is located approximately ½ mile to the southwest of the property in the Del Amo Financial Center located between Del Amo Circle North, Hawthorne Boulevard, Carson Street and Del Amo Circle West. This well (Well No. 746) is at an elevation of 100.6 feet above msl. The well was last gauged on April 23, 2002, at which time groundwater was measured at a depth of 104.4 ft bg.

No groundwater was encountered during clarifier removal activities.

5.0 SUMMARY AND RECOMMENDATION

The Torrance Company (TTC) retained the services of American Integrated Services (AIS) for permitting and closing of a three-stage clarifier located at a former Montgomery Ward Auto Center located at 21405 Madrona Avenue in the City of Torrance, California under the oversight of the City of Torrance Building and Safety Department (TBSD). The clarifier was located on the west side of the former auto center and was no longer in service. A sewer cap permit was obtained from the TBSD for capping the inlet and outlet of the clarifier.

AIS collected soil samples after the clarifier removal activities. The purpose of the samplings was to determine whether contents previously stored in the clarifier had impacted the surrounding subsurface soils. The number of collected samples and the chemical analyses were consistent with the Los Angeles County Department of Public Works (LACDPW) sampling protocols. A total of two soil samples were collected and analyzed for Total Petroleum Hydrocarbons as Gasoline (TPH-GRO) using EPA Method 8260B, Total Petroleum Hydrocarbons as Diesel (TPH-DRO) using EPA Method 8015 Modified, Total Petroleum Hydrocarbons as Oil (TPH-ORO) using EPA Method 8015 Modified, Total Recoverable Petroleum Hydrocarbons (TRPH) using EPA Method 418.1, Volatile Organic Compounds (VOC) using EPA Method 8260B, Oxygenates using EPA Method 8260B and Semi-Volatile Organic Compounds (SVOC) using EPA Method 8270C. The clarifier excavation was backfilled and the surface was restored to match existing conditions.

No TPH-GRO, TPH-DRO, TPH-ORO, TRPH, VOC, Oxygenates or SVOC were detected in the soil samples collected from under the former influent or effluent of the clarifier at or above the laboratory detection limits.

Based on the analytical laboratory results, AIS requests that closure be granted for this site.

6.0 LIMITATIONS

American Integrated Services (AIS) has conducted the activities described herein in conformance with the scope-of-work requested by The Torrance Company (TTC). RE: **Report of Geotechnical Observation and Testing of Excavation Backfill Operations** – Located at 21405 Madrona Avenue, in the City of Torrance, California

Dear Sirs:

Pursuant to your request, this firm has provided this geotechnical report to summarize the observation and testing performed by this firm for the excavation backfill operations at the above referenced project. Our geotechnical services pertaining to the backfill of the excavation are summarized in the subsequent sections of this report.

Backfill Operations

The fill area consisted of an excavation approximately 24 feet by 28 feet with a maximum depth of 11 feet below ground surface. The excavation was cleansed of all demolition debris and low density soils to expose competent native soils. The excavation bottom was observed and approved by this firm prior to placement of fill. Fill material placed was compacted to a minimum 90% of the laboratory standard in lifts not in excess of eight inches in thickness. A backhoe mounted sheepsfoot wheel was utilized for compaction control. A water hose provided moisture control.

Laboratory/Field Testing

The relative compaction was determined by Sand Cone Method (ASTM: D1556-00) and by the Drive Tube Method (ASTM: D2937-00). The maximum density of the fill soils was obtained by the laboratory standard (ASTM: D1557-00) and results are shown on Table I. Tests were performed a minimum of every 500 cubic yards placed and every two feet in depth of fill placed. A summary of the compaction tests of the backfill operations is given in Table II with locations shown on the accompanying plan.

No chemical analysis of soils was performed by this firm and is not within the scope of our services.

Limitations

It should be noted that our work does not warrant or guarantee that the contractor responsible for each phase of the project has performed his work in accordance with the project specifications.

We appreciate this opportunity to be of service to you. If you have any further questions, please do not hesitate to contact the undersigned.

1.0 INTRODUCTION AND PURPOSE

This report summarizes closure activities associated with four former in-ground hydraulic lifts at the former Montgomery Ward Auto Center located at 21405 Madrona Avenue in Torrance, California (site). The vicinity of the site is shown on the Site Vicinity Map, Figure 1. A Site Plan depicting the former location of the removed lifts is included as Figure 2.

The purpose of work documented in this report was to excavate and legally dispose of hydraulic oil-impacted soil from beneath the former in-ground lifts in accordance with ATC's Work Plan dated May 30, 2003, approved by County of Los Angeles Fire Department. A copy of the approval letter is included as Appendix A.

For the purposes of this report, hydraulic oil-impacted soil is defined as in-place soil with detected total extractable hydrocarbons (as hydraulic oil) at concentrations exceeding the County of Los Angeles Fire Department required action level of 1,000 milligrams per kilogram (mg/Kg). Assessment of other potential contaminants or other areas of the site are not addressed in this report.

2.0 BACKGROUND

The former Montgomery Ward Auto Center housed four in-ground hydraulic lifts in the northern portion of the building. The Torrance Company contracted with Excell Excavating (Excell) to remove the lift equipment.

Excell excavated and collected soil samples from beneath four in-ground hydraulic lifts on May 15, 2003. A summary of the chemical analytical results from this soil sampling is included as Table 1. Analytical results obtained from soil samples collected by Excell, beneath the removed lifts indicated that concentrations of total recoverable petroleum hydrocarbon (TRPH) ranged between 150 milligrams per kilogram (mg/Kg) and 4,500 mg/Kg.

Based upon a conversation between ATC and the County of Los Angeles, Fire Department (LAFD), the cleanup criteria for the hydraulic oil-impacted soil for petroleum hydrocarbons is 1,000 mg/Kg. Concentrations of TRPH below Lift #1 (2,200 mg/Kg) and Lift #3 (4,500 mg/Kg) exceeded this cleanup criteria. According to Ms. Nourishad, Site Mitigation Supervisor with the LAFD, soil beneath the lifts must also be analyzed for volatile organic hydrocarbons and polychlorinated biphenyl's (PCBs). One soil sample, from beneath Lift #3, was analyzed for PCBs and VOCs. No VOCs or PCBs were detected in the soil sample analyzed from beneath Lift #3.

Based upon the results of the analytical results obtained by Excell Excavating (Excell), The Torrance Company requested a proposal from ATC Associates Inc. to prepare a Work Plan for the LAFD and to perform oversight and closure activities associated with the removed in-ground lifts. ATC was authorized by The Torrance Company on May 28, 2003 to complete closure activities. LAFD approved ATC's Work Plan in a letter dated June 10, 2003. A copy of LAFD's approval letter is contained in Appendix A.

3.0 SCOPE OF WORK

ATC's scope of work for this project included:

- Review analytical data provided by Excell and consult with the County of Los Angeles, Fire Department regarding initiating agency oversight in order to obtain closure on the removal of 4 hydraulic lifts from the former Montgomery Wards Auto Center. Prepare a letter and send to the County of Los Angeles, Fire Department requesting agency oversight.
- Prepare a Health and Safety Plan prior to commencement of fieldwork. A copy of the signed site Health and Safety Plan is included as Appendix B.
- Coordinate with the Excell Excavating contracted directly by The Torrance Company prior to conducting field work.
- Mobilize a mobile laboratory to the site along with the contractor and ATC's representative to conduct soil excavation. The County of Los Angeles, Fire Department representatives were contacted to coordinate the agency site visit on the day of excavation.
- ATC observed the excavation by Excell. Soil samples were analyzed for Extractable Hydrocarbons (hydraulic oil) using EPA Method 8015B (modified). One soil sample will be analyzed by the mobile laboratory using Method 5035B for total petroleum hydrocarbons. ATC informed Excell of areas where soil exceeded 1,000 mg/Kg in the vicinity of former Lift #1 and Lift #3 (termed Tank #1 and #3).
- Appropriate equipment decontamination procedures were conducted decontaminating of all sampling equipment prior to sampling and between samples using a laboratory-grade detergent solution wash, tap-water rinse, followed by distilled or de-ionized water rinse. Methods for the collection of rinse water were documented in the event that rinse water contains hazardous substances.
- Field quality assurance (QA) procedures were maintained and documented during the project. Samples collected were appropriately labeled and given a unique sample identification number. Sampling description, location and depth are documented. Samples were accompanied by a Chain-of-Custody Record from collection until the samples were submitted to a laboratory for analysis.
- Review and assess all laboratory analytical results.
- Photographs were taken during the different phases of the excavation. Copies of Photographs obtained from the site are included in Appendix C.

4.0 FIELD ACTIVITIES

4.1 Soil Excavation

Excavation activities were initiated at the site on June 12, 2003 and backfilling activities were concluded on June 13, 2003. Excell conducted the remedial excavation activities utilizing a rubber-tired backhoe and a Bob Cat.

Hydraulic oil-impacted soils were screened for by observations for staining or odors, and use of a portable photo-ionization detector (PID) to monitor for the presence of volatile organic compounds (VOCs) in soil and ambient air. Ambient air in the downwind direction from the excavation area was monitored approximately every 30 minutes during the removal of the impacted soil in general accordance with ATC Standard Operating Procedures included in Appendix D.

A 2 by 2-foot concrete pad was located beneath each hydraulic lift at an approximate depth of 7 feet below surface grade (bsg). The initial soil samples collected by Excell originally obtained immediately after hydraulic lift equipment removal were collected above this concrete pad.

ATC requested that Excell removed the concrete pads from beneath each of the four former hydraulic lifts. Soil surrounding and below the concrete pads was excavated to a total depth of approximately 10 feet bsg in each of the four hydraulic lifts. Excavated soil was staged outside along the east side of the building on plastic sheeting for subsequent loading and transportation off site.

During excavation activities a total of 51.56 tons of soil were removed from the excavation in the vicinity of the former hydraulic lifts. The soil was loaded by Excell onto transport trucks provided by JW Trucking for delivery under non-hazardous waste manifest to American Remedial Technologies, (a state certified disposal facility) located in Lynwood, California. Copies of the soil transportation manifests are included in Appendix C.

4.2 Soil Sampling

Soil was field screened periodically during excavation using the PID. Results of field screening did not reveal any headspace concentrations above the detection limit of the PID. ATC collected three soil samples each from the base of the excavation for Lift #1 and Lift #3. Soil sample locations are indicated on Figure 2. One soil sample was collected from beneath Lift #2 and Lift #4 for analysis.

Soil samples were collected in laboratory-supplied 4-ounce glass jars with Teflon™ lined screw caps from soil within the excavator bucket. Soil samples were transported by ATC personnel and subsequently relinquished under chain-of-custody protocol to the mobile laboratory at the site,

Positive Lab Service, based in Los Angeles, California. Soil samples were analyzed by the mobile laboratory for analysis of Total Petroleum Hydrocarbons – Extractable (hydraulic oil) using EPA Method 8015B. One soil sample, collected in an Encore® soil sampler from relatively undisturbed soil in the backhoe bucket, was analyzed for Method 5035B from Lift #2, as requested by the County of Los Angeles Fire Department. Since no samples provided any indication of hydraulic oil-impact by visual staining, odor or PID readings, the soil sample from Lift #2 was randomly selected for analysis by Method 5035B.

4.3 Site Restoration

On June 13, 2003, following receipt of excavation confirmation soil sample analyses, each former hydraulic lift location was backfilled with import fill (¾" gravel) obtained from Robertsons Star Plant. ATC was not retained to provide testing or a compaction report on the backfilling procedures. Excell contracted with Norcal Engineering to provide a soil compaction report for the excavations.

5.0 SOIL ANALYTICAL RESULTS

A total of 8 excavation sidewall and base soil samples were collected during the course of the remedial excavation. Sampling procedures were completed in accordance with ATC Standard Operating Procedures.

One soil sample initially collected by Excell Excavating was also analyzed for VOCs using EPA Method 8260B and PCBs using EPA Method 8080. No VOCs or PCBs were detected in the soil sample analyzed from beneath Lift #3. Soil analysis were performed by Cal Tech

All of the soil samples were collected from approximately 10 feet below surface grade. None of the samples collected contained concentrations of hydraulic oil above the method detection limit.

Soil sample analytical results are summarized in Table 1. Copies of the laboratory report and chain of custody are provided in Appendix E.

The soil encountered during the excavation consisted of fine-to medium grained sand with silt, reddish brown in color, underlain by silty sand and fine-grained sand with a trace of silt at the base of the excavation. Some gravel and brick fragments were observed in the excavation.

ATC did not observe visual signs of staining or discoloration of the soil during the excavation.

No groundwater or saturated soil was encountered during the excavation procedures.

7.0 SUMMARY AND CONCLUSIONS

ATC observed excavation procedures at the former Montgomery Ward Auto Center of four previously removed hydraulic lifts. The following is a summary of the remedial excavation activities performed on site:

- ATC collected and analyzed soil samples in accordance with the County of Los Angeles Fire Department sampling protocol.
- Three soil samples were collected from beneath each lift which previously exhibited concentrations of total recoverable petroleum hydrocarbons (TRPH) above the County cleanup criteria of 1000 mg/kg.(Lifts #1 and #3). Soil samples were analyzed for total petroleum hydrocarbons – extractable fuel (hydraulic oil) using EPA Method 8015B. No concentrations above the method detection limits for hydraulic oil were detected in any of the soil samples collected and analyzed.
- Additionally, ATC collected and analyzed one soil sample from beneath Lifts #2 and #4 which did not exhibit concentrations above the clean up criteria. No concentrations of hydraulic oil were detected in these soil samples above the method detection limit.
- One soil sample was collected and analyzed for total petroleum hydrocarbons using Method 5035B. Concentrations of petroleum hydrocarbon constituents were not detected above the method detection limits.
- Transportation manifests indicate that 51.56 tons of soil was excavated, transported and disposed during this remedial excavation.

Based upon the laboratory analytical results, ATC requests that closure be granted for this site.

- The Site Health and Safety Officer (HSO) will confirm Attachments 9-10 are completed the first day of on-site work.
- The Site HSO will implement the Plan. He/she has the authority to stop work or prohibit any personnel from working on the site at any time for not complying with any aspect of the Plan.
- The Subcontractor Field Supervisor is directly responsible for implementing this health and safety plan for his/her own employees. This health and safety plan may also be used as a guidance document for ATC contractors.
- Everyone on-site has the responsibility for their own health and safety, as well as assisting others in carrying out the Plan. Any person observed to be in violation of the Plan should be assisted in complying with the Plan, or reported to the Site HSO or the Subcontractor Field Supervisor for field report documentation.
- Any site personnel may shut down field activities if there is a real or perceived immediate danger to life or health.

B. Minimum Training and Medical Surveillance Requirements for Site Personnel

- 40 hr. Health and Safety Training for hazardous waste workers
- 8 hr. Annual Refresher Training
- 8 hr. Supervisor Training for Site HSO
- First Aid and CPR Training for Site HSO
- Medical Surveillance
- Respirator Fit Test

C. Initial Site Entry

ATC has conducted a site walk prior to beginning field activities.

D. Purpose of Field Work

Field activities are required for remedial soil excavations directed by local regulatory agencies. All excavating and confirmation sampling will be conducted per local guidelines.

E. **Planned Work Tasks**

1. Conduct on-site Utility mark-out/clearance meeting with Utility Reps and subcontractors prior to initiating drilling activities.

2. Conduct Daily Health and Safety Briefing prior to initiating excavating or sampling.

3. Mobilize sampling equipment and set up exclusion/work zones and use safety barricades where necessary.

4. Perform organic vapor air monitoring during all excavating, soil segregating and stockpiling.

5. Oversee excavation of soil in the base of each former hydraulic lift area and field screen soil samples once the limits of impacted soil appear to be reached. (subcontractor or client contractor will be conducting actual digging; **NOTE: ATC EMPLOYEES WILL NOT ENTER AN EXCATION GREATER THAN 5 FEET BELOW GROUND SURFACE (BGS),** ***unless the excavation has been properly shored and/or signed and permitted by required professionals per OSHA requirements.***

6. Place the excavated soil on visqueen and stage the soil stockpile in an area that can easily facilitate transportation and disposal offsite.

7. Collect confirmation soil per local regulatory guidelines.

8. Decontaminate and demobilize equipment and personnel.

Excavation

ATC employees, subcontractors, or anyone signing this Site Specific Health and Safety Plan is prohibited from entering any excavation (including trenches, vaults or boreholes) that are greater than 5 feet bgs without the signed approval of a licensed professional that may include shoring and dewatering technologies to ensure slope stability.

G. **Landfills and Other Areas Potentially Containing Explosive Gas or Vapor**

None

H. **Background Information**

Beginning on May 13, 2003, hydraulic lift equipment was removed from the former Montgomery Wards TBA by Excell Excavating. Following excavation and removal of the equipment, Excell collected four soil samples below the lifts for analysis of TRPH by CAL Tech Environmental Laboratories. Concentrations of TRPH above the CoLAFD cleanup criteria of 1,000 mg/Kg were detected in two of the four soil samples collected and analyzed

II. SITE CHARACTERISTICS

A. Facility Description

ATC visited the site in February of 2003 and observed that the majority of hydraulic lifts reservoir tanks associated with the former Montgomery Wards Automotive Service Center were located in the basement of the building. However, four hydraulic lifts located in the northern most bay of the facility were in-ground lifts.

B. Site Map

Refer to Attachment.

C. Utility Clearance

Underground Service Alert (USA) must be called at least 48 hours prior to initiating digging. ATC personnel are encouraged to meet notified USA parties for an on-site utility mark-out meeting. ATC will contract a subsurface locator company to mark-out underground structures on private property.

D. Unusual Site Features

On-site conditions: parking lot with incoming and outgoing traffic.

E. Contaminant Description

Hydraulic oil impacted soil beneath the former location of the two removed hydraulic lifts.

F. Site Status

Vacant – Existing Building.

III. WASTE CHARACTERISTICS

A. Waste Generation

Types: Liquid ____ Solid __X__ Sludge ____ Other (describe)

Quantity (Expected Volume):

Soil: Approximately 30 cubic yards (yd^3).

B. Characteristics

Corrosive ____ Flammable/Ignitable _____ Radioactive ____ Toxic_____

Reactive ____ Unknown ____ Other (specify) Non-Hazardous Non-Regulated Waste

C. Handling Requirements for Waste Material

Soil will be stockpiled on-site for characterization or pre-analyzed and arranged for transportation and disposal on behalf of Del Amo Fashion Center, to a Torrance Company-approved facility.

D. Disposal and/or Treatment Methods Proposed

All impacted soil will be transported and disposed under manifest, according to local, state, and federal regulatory guidelines

DAILY HEALTH AND SAFETY BRIEFING LOG

Date: 6/12/03

Start Time: 7:30 AM

Issues Discussed:

Site activities include soil excavation and confirmation soil sampling for remediation purposes. Impacted soil and groundwater is expected, chemicals of concern include petroleum hydrocarbons and BTEX and fuel oxygenates constituents. Personal PPE will include hard hats, safety glasses, hearing protection, steel toed boots, gloves (nitrile™ when possibly contacting free product), other gloves may be appropriate for other tasks (decontaminating equipment), and respirators with organic vapor cartridges, as necessary. Air monitoring will be conducted periodically of the breathing zones when necessary. Hospital identification has been confirmed.

STANDARD OPERATING PROCEDURES

STANDARD OPERATING PROCEDURE

FIELD SOIL VAPOR MONITORING

A representative soil sample will be collected from each sample interval and placed in a Ziplock® plastic bag. The bag will be sealed and the soil disaggregated. At least ten minutes will be allowed for the soil to be heated by direct sunlight and for any VOCs in the soil to accumulate in the headspace of the bag. Volatile gases will then be monitored by inserting the probe of a Photovac 2020 photo ionization detector (PID). The PID is equipped with a 10.6 eV lamp which is capable of detecting VOCs at concentrations of 0.1 parts per million (ppm). The PID will be calibrated on-site using 100-ppmV isobutylene-in-air span gas (equivalent to benzene) prior to drilling operations. PID readings will be recorded in the boring logs.

EXCAVATION SOIL SAMPLING PROCEDURES

(Includes Soil Management and Waste Characterization Methods)

Sample Collection and Field Screening

Soil samples are collected from all excavation sidewalls and the excavation bottom during remedial excavation to evaluate and verify lateral and vertical limits of subsurface impacted soil. Soil samples for laboratory analysis are selected based on photo-ionization detection (PID) readings, visual field observations, and as soil lithology and contaminant fate and transport warrants. As soil excavation progresses, soil sample collection is continued at depths and locations based on preliminary on-site analytical results. At a minimum, one soil sample for every hundred square feet at the floor of the excavation and along the walls is collected for laboratory analysis. Representative soil samples are collected from the excavator bucket by ATC personnel equipped with latex or Nitrile™ disposable gloves. Soil samples are placed in 4-ounce glass jars, immediately sealed with Teflon™-lined lids, labeled, and delivered to an on-site state-certified mobile laboratory for soil analysis. Samples unable to be prepared without delay are stored in a refrigerator.

Soil cuttings adjacent to the representative soil samples are collected and used for classification and color characterization according to the Munsell™ Color Classification System. Soil cuttings are also screened for the presence of organic vapors by placing a small portion of soil (typically 28 to 42 grams) into a re-sealable bag, sealing the bag, and permitting the bag of sealed material to stand for several minutes. Subsequently the bag headspace vapors are measured with a PID instrument. PID readings are recorded for the project file. The PID instrument is calibrated to 100 parts per million (ppm) with isobutylene gas at the beginning of each field day.

Geologic Observations and Interpretations

Field interpretation of site geology, specifically soil and rock types encountered during site investigations is conducted by an RG, CEG, RCE, or CHG who is registered with the State of California and employed by ATC Associates Inc., (ATC). ATC staff, project team members, or technicians working on this project are trained and experienced under the direct supervision and review of one of the registered professionals cited. Soil descriptions are classified according to the Unified Soil Classification System (USCS) as rock types are described utilizing a list classification system. Additional field observations are recorded, including but not limited to the visual presence of free product, organic odor readings utilizing a PID instrument, encountered depths of water-bearing zones, and interpretation between fill and native soil materials and their contact depths.

Soil Management

As soil is excavated, it is monitored with a PID instrument and segregated as 1) petroleum hydrocarbon impacted soil or 2) non-impacted soil. Only non-impacted soil will be stockpiled during soil excavation activities. ATC will not stockpile petroleum hydrocarbon impacted soil during this remedial soil excavation project beyond daily work hours. ATC loads impacted soil directly into D.O.T. approved transport vehicles, under manifest, for proper off-site disposal. ATC will minimize fugitive dust and vapors by implementing administrative and engineering controls as stated in the *Community Health and Safety Plan*. Displaced non-impacted soil is stockpiled according to local guidelines and environmental management practices. Non-impacted soil is typically reused to backfill the upper portion of the excavation cavity and compacted to an estimated 90 percent Relative Compaction. All impacted and non-impacted soil removed off-site or reused will be documented and reported as required by local and State of California regulations and guidelines.

Waste Characterization

All petroleum hydrocarbon impacted soil generated during field activities are managed as hazardous waste unless field observations or laboratory analysis deem otherwise. Waste characterization may be assisted with a field instrumental PID, but PID readings are not acceptable quantifying concentrations for waste classification of excavated soil. Representative impacted and non-impacted soil samples are collected as soil is removed from the excavation. Laboratory results of these soil samples collected during the excavation are used to determine proper soil characterization and disposal requirements. Petroleum hydrocarbon impacted soil is characterized according California Code of Regulations (Title 22) and local waste disposal guidelines.

Re: Report for Phase II Investigation; Former Oil Production Sump in Southwest Corner of 16-Acre Parcel Located at Northwest Corner of Carson Street and Madrona Avenue, Torrance, California

Dear Mr. Shuckhart:

ENVIRON International Corporation (ENVIRON) is pleased to present you with this report of Phase II investigation at the above referenced property (Figures 1 and 2). The Phase II investigation was designed to provide subsurface soil and soil vapor data in an area formerly identified to have been used for oil production activities. An aerial photograph review of the property by ENVIRON indicated that an oil production sump was located in the southwest corner of the property and west of the abandoned oil well located north the existing Black Angus restaurant. The sump appeared to be approximately 250 feet long (north to south) and 150 feet wide (east to west) and contained fluids in a 1958 aerial photograph. The sump was not visible on a 1970 or later photographs.

The investigation was initiated on December 12 and completed on December 13, 2005. ENVIRON subcontracted Vironex Environmental Field Services (Vironex) to perform the sampling; Centrum Analytical Laboratories (Centrum) was retained to provide mobile analytical laboratory services. Additional sample analyses was completed by CalScience Environmental Laboratories and by Positive Lab Services. All investigation activities were performed under the direction of a State of California Professional Geologist.

Investigation Scope f Work

Specific elements of this investigation included the following:

- Installed fifteen soil vapor sampling locations (SVE-1 through SVE-15) on approximately 50-foot centers to a depth of approximately 5 feet below ground surface (bgs); analyzed collected soil vapor samples (SVE-1-5 through SVE-15-5) for methane, and volatile organic compounds (VOCs) using a mobile laboratory. Also, submitted four selected samples (SVE-1-5, SVE-6-5, SVE-7-5, and SVE-8-5) to stationary laboratory for analysis for fixed gases;
- Installed four soil vapor sampling locations (SVE-1-15, SVE-6-15, SVE-7-15, and SVE-8-15) to a depth of approximately 15 feet bgs; analyzed collected samples for methane, and volatile organic compounds (VOCs) using a mobile laboratory;

- Installed four soil sampling borings (SB-1 through SB-4) and collected soil samples at 5, 10, and 15 feet bgs; analyzed selected samples for total petroleum hydrocarbons (TPH), polycyclic aromatic hydrocarbons (PAHs), and metals; and
- Sealed and capped all sampling locations;

Results

Fifteen soil vapor samples (SVE-1-5 through SVE-15-5) were collected from 5 feet bgs on December 12 and 13, 2005 (Figure 3). The analytical results are summarized on Table 1 and laboratory analytical reports are provided in Attachment A. The results indicate that low concentrations of one VOC, toluene, were detected in samples SVE-1-5, SVE-6-5, SVE-7-5, and SVE-8-5 at concentrations ranging from 1.3 micrograms/liter (µg/L or parts per billion (ppb)) to 4.7 µg/L. Methane was detected in samples SVE-1-5, SVE-5-5, SVE-7-5, SVE-9-5, SVE-10-5, and SVE-15-5 at concentrations ranging from 18 ppmv or parts per million per volume to 25 ppmv.

Based on these initial results, four locations (SVE-1, SVE-6, SVE-7, and SVE-8) were selected for additional deeper sampling at 15 feet bgs (SVE-1-15, SVE-6-15, SVE-7-15, and SVE-8-15), for soil sampling and analyses (SB-1 through SB-4) and for fixed gases analyses. The soil vapor analytical results indicated that no detectable concentrations of toluene were present at 15 feet bgs. Methane was detected in samples SVE-1-15 and SVE-7-5 at concentrations ranging from 22 ppmv to 26 ppmv. Fixed gases analyses did not yield any unusual gas ratios or methane.

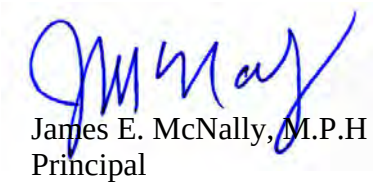

Four borings (SB-1 through SB-4) were advanced at locations adjacent to SVE-1, SVE-6, SVE-7, and SVE-8, respectively. Field boring logs are provided as Attachment B. Soil samples were collected at depths of 5, 10, and 15 feet bgs. Soil was identified as brown silt, silty sand, and sandy silt; no groundwater was detected to a depth of 15 feet bgs. No staining, odors or other indications of petroleum or other contaminants were observed in the selected soil samples. Four samples SB-6-10, SB-6-15, SB-7-10, and SB-7-15 were selected for chemical analysis for total petroleum hydrocarbons (TPH), polycyclic aromatic hydrocarbons (PAHs), and metals. The laboratory analytical results for soil samples are provided in Attachment C. No detectable concentrations of TPH or PAHs were reported. No significant metals were reported in the samples.

Conclusions and Recommendations

Based on the soil vapor, soil analytical results, and field observations, only trace levels of toluene and methane are present in the former oil sump area. This indicates that the former sump either never contained significant quantities of production fluids including crude oil or that it was properly excavated and removed between 1958 and 1970. In addition, methane concentrations were less than 26 ppmv. In general, methane concentrations less than 1,000 ppmv are not considered significant and mitigation measures are usually not required. Given the above, ENVIRON does not recommend any further investigative actions.

Glossary of Terms and Qualifiers

Work Order Number: 05-12-0646

Qualifier	Definition
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike or Matrix Spike Duplicate compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
N	Nontarget Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

Division of Oil and Gas Reports

Dear Mr. Crowder:

We are in receipt of your letter and questionnaire directed to Mr. Harold Streight. The forms which you have furnished are somewhat ambiguous; therefore, I thought a letter might clarify the situation.

Petroleum Lakes-Glazer Co. is a partnership composed of Great Lakes Properties, Inc. and Glazer Oil Corp. It is the owner of the wells as enumerated on the enclosed list. This is a partnership organization and as such does not have a president or other officer per se. Any correspondence concerning its affairs should be directed to me. From time to time there may be various attorneys, engineers, geologists, drilling contractors and superintendents.

We acquired these properties on April 30, 1964 and the transfer was recorded May 1, 1964 and the reading on the tanks was taken as of that morning. The operator is Miller Oil Operations which is headed by Mr. Norman P. Miller, 544 Avenue "A", Redondo Beach. I suggest that you contact him concerning his type of organization, employees, et cetera. All matters pertaining to the wells, the day-to-day operation of the same, and any reports or questions will be handled by Mr. Miller and we suggest that you contact him. He, of course, keeps us fully advised constantly as to the operations at the field.

If there is any further question or any additional information which you desire, please contact me.

Yours very truly,

J. M. Moore

SAFETY PRECAUTIONS AND UNSAFE EXCAVATIONS

CAUTION! Oil and gas wells may produce hydrogen sulfide gas, which is highly poisonous and will accumulate and concentrate in low areas such as excavations. Before entering an excavation area, test to ensure that there is sufficient oxygen and that the flammable/toxic gas readings are within safe limits.

Division of Oil and Gas Reports

Dear Mr. Crowder:

We are in receipt of your letter and questionnaire directed to Mr. Harold Streight. The forms which you have furnished are somewhat ambiguous; therefore, I thought a letter might clarify the situation.

Petroleum Lakes-Glazer Co. is a partnership composed of Great Lakes Properties, Inc. and Glazer Oil Corp. It is the owner of the wells as enumerated on the enclosed list. This is a partnership organization and as such does not have a president or other officer per se. Any correspondence concerning its affairs should be directed to me. From time to time there may be various attorneys, engineers, geologists, drilling contractors and superintendents.

We acquired these properties on April 30, 1964 and the transfer was recorded May 1, 1964 and the reading on the tanks was taken as of that morning. The operator is Miller Oil Operations which is headed by Mr. Norman P. Miller, 544 Avenue "A", Redondo Beach. I suggest that you contact him concerning his type of organization, employees, et cetera. All matters pertaining to the wells, the day-to-day operation of the same, and any reports or questions will be handled by Mr. Miller and we suggest that you contact him. He, of course, keeps us fully advised constantly as to the operations at the field.

If there is any further question or any additional information which you desire, please contact me.

Yours very truly,

J. M. Moore

Dear Requestor:

On April 18, 2024, the Department of Toxic Substances Control (DTSC) received your email of April 18, 2024 requesting records under the Public Records Act. After a thorough review of our files, no site records were found pertaining to the sites/facilities referenced above.

DTSC's Hazardous Waste Tracking System (HWTS) may have records that pertain to this request. This unit tracks toxic waste generators, transporters (manifests), and disposal facilities. If you are interested in this type of information, it can be identified by accessing the HWTS database at http://hwts.dtsc.ca.gov. If you are interested in retrieving detailed reports, additional charges may apply. Please contact the HWTS unit by email at hwtsreports@dtsc.ca.gov or by phone at (800) 618-6942 for further information. For copies of manifests, please send an email to mcr@dtsc.ca.gov.

A large number of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSCs data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste

facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me at (916) 255-3611 or via email at PubReqAct@dtsc.ca.gov.

Sincerely,

Nancy Fang

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/29/2024 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/22/2024 has revealed that there are 10 ENVIROSTOR sites within approximately 1 mile of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Eval Notes: SB 989 testing conducted by Belshire. Violations: Vapor line failes testing due to a bad boot. Noted: TFD was not notified of this inspection or violation by Belshire. The facility was not due for SB 989 testing. Ted from Belshire claims that the inspection was done a year ahead of time and TFD wasn't notified because it was a special request from a prospective buyer. However, it appear that LADPW was notified of the inspection by Belshire.

Quarterly Update:	Northrop Corporation Aircraft Division (NCAD) is a K8 facility that mainly inspects wing structures. According to their variance request dated 12/05/1985, they accumulate a small amount of hazardous waste but they do not store is for more than 90 days before it is shipped off to their main facility in Hawthorn EPA ID CAD008268302. Since they operate in such a manner that does not require a permit, their permit was withdrawn on 09/18/1987 and the Department of Toxic Substances Control changed NCAD to generator only status. As explained in the RCRA Facility Assessment dated 04/01/2004, it states the site is currently owned by Aztec Tents and Events.

Quarterly Update:	CURRENT STATUS: December 16 2008: DTSC requested Northrop Grumman to prepare a Response to Comments provided in Attachment 2 of the Corrective Action Letter Agreement dated October 30, 2008. SITE HISTORY: The site located at 640 Alaska Avenue, Torrance, Los Angeles County, California is currently owned and operated by VOUGHT AIRCRAFT INDUSTRIES, INC. (VAII) and referred to as the Vought Torrance Facility. NORTHROP GRUMMAN SYSTEMS CORPORATION (NGSC) owned and operated the Torrance Facility that was formerly referred to by NGSC as K6 Facility from 1968 until 2000, when it was purchased by VAII. This is an industrial manufacturing facility in a light industrial area of Torrance that was used by NGSC to manufacture aluminum skins for Boeing 747 aircraft beginning in 1968 and VAII continues to use the facility for similar activities. The facility consists of approximately 72,280 square foot manufacturing warehouse building, five outside storage racks and parking lots on a 5.91 acre parcel. The current K6 building was constructed in 1966 and prior to development of the site, the property was vacant. 1981: DTSC issued an Interim Status Document to NGSC on March 30, 1981 1989: The Hazardous Waste Drum Storage Unit on site was closed on May 23, 1989 1990: Underground Storage Tank was removed and certified closed by City of Torrance Fire Department on December 18, 1990. This was a fiberglass 6,000 gallon tank used for storing waste coolant oil; located in Areas of Concern (AOC) 10. 1992: RCRA permitted storage facility until it was closed under DTSC oversight. NGSC voluntarily closed its RCRA-permitted container storage where multiple 55 gallon drums containing solvents, cleaners, degreasers, base oil and hydraulic oil in order to change to a large quantity generator. 1993: Revised Environmental Site Assessment and Subsurface Investigation completed. 2000: VAII and NGSC have an Asset Purchase Agreement for the property. 2003: Phase I

Quarterly Update:	Files for this facility is limited and much of the files for historical information are missing. Upjohn Company operated as polyurethane foam manufacturer. Dow Chemical purchased the property from Upjohn on 8/1/85. Upjohn's operation ceased on 11/30/85. The facility was then sold to Edelbrock (CAD000019588) on 10/30/87. Part A and Interim Status Documents could not be found in files. Permit information is derived from a PA conducted by USEPA dated 8/2/91 and DHS's Inspection report dated 6/16/89. Per PA conducted by USEPA on 8/2/91, Upjohn had three Hazardous Waste Units. 1) Hazardous Waste Accumulation Area 2) Hazardous Waste Treatment Facility 3) Hazardous Waste Drum Storage Area. However, specific unit information is not available. Upjohn submitted Part A on 11/17/80. ISD was issued by DHS on 4/6/81. The facility was verified closed by DHS on 4/7/88. Only corrective action event seems to be the PA conducted by USEPA on 8/2/91.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

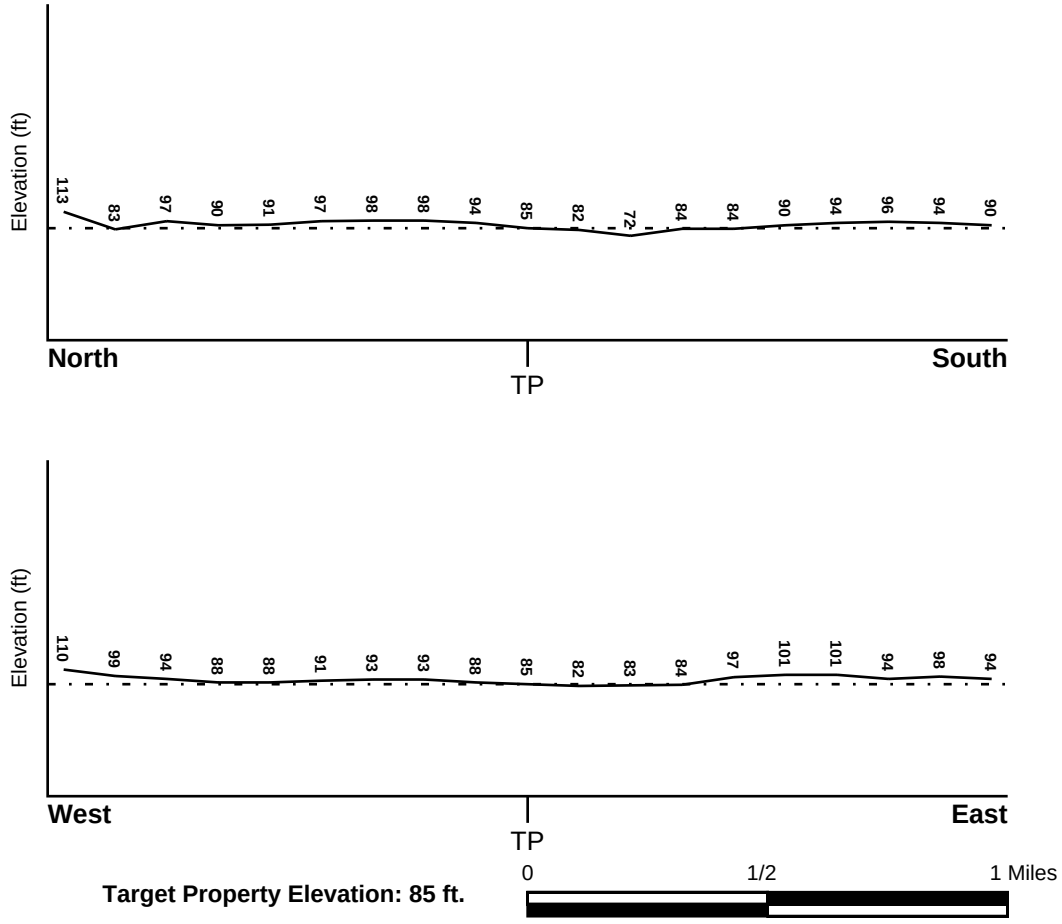

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 85 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	DELHI
Soil Surface Texture:	sand
Hydrologic Group:	Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.
Soil Drainage Class:	Somewhat excessive. Soils have high hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
